Bird River	9/29/2020	3/15/2019	Right of entry acquisition	There are 3 assets (i.e. sewer and manholes) which represents approximately 60 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Bread & Cheese	9/29/2020 (Requested date: 3/6/2022)	5/28/2020 (Time extension request)	Right of entry acquisition	There are 127 asset (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
				agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system. Valve vault NS1039, which is located at the terminus of the Bread and Cheese force main, will be rehabilitated under a City of Baltimore sewer improvement project.
Bengies	9/29/2020	3/15/2019	Right of entry acquisition	There are 96 assets (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Cockeysville	9/29/2020	3/15/2019	Right of entry acquisition	There are 12 assets (i.e. sewer and manholes) which represents approximately 57 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system. Due to the nature of the work, the lining of the Cockeysville forcemain at the Texas Pump Stations has been separated as a stand alone project from the main Cockeysville Rehabilitation project. A Time Extension will be provided for this project.
Dead Run	9/6/2017			Substantially completed
Gwynns Falls	9/6/2018	2/14/2017	Right of way acquisition	On September 6, 2018, the County certified substantial completion for the implementation of the Gwynns Falls Sewershed SRRR Plan with the exception of 23 structural repairs for which a potential delay was

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
				submitted to EPA and MDE. The outstanding structural repairs have no effect on the performance of the collection system. To date, 6 repairs remain outstanding and will be completed concurrent with the Powder Mill Interceptor Phase1 project, which is currently in construction.
Herring Run	9/6/2018	8/15/2017 3/6/2018	Right of entry acquisition	There are 93 assets (i.e. sewer and manholes) which represents approximately 6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Jones Falls	9/6/2019			There are 10 assets (i.e. sewer and manholes) which represents approximately 0.6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Orems	9/29/2020	11/22/2019	Right of entry acquisition	Design is complete for the Orems Basin 3 Relief Sewer and the construction bid opening is scheduled for 2/25/2021. An accurate Time Extension request will be submitted once the County receives a Schedule from the successful contractor.
Tributary 26	2/11/2020			Substantially completed
Tributary 27	9/6/2017			Substantially completed
Tributary 43	2/11/2020			Substantially completed

Pursuant to Paragraph 20 of the Consent Decree entered between Baltimore County and the United States Environmental Protection Agency (EPA) and the Maryland Department of the Environment (MDE), this document constitutes the required Annual Report for the period **January 1, 2020** through **December 31, 2020**.

The annual report is a periodic review of Baltimore County activities related to the accomplishment of the Consent Decree general and specific requirements. The report is required to address:

i. Sanitary Sewer Overflow (SSO) structure elimination progress
ii. Rainfall and Flow Monitoring Plan compliance
iii. Evaluation of the rainfall and flow monitoring data
iv. Fats, Oils and Grease (FOG) Program updates
v. Illegal storm water discharges
vi. Pump station status
vii. Collection system model implementation status
viii. Supplemental collection system inspection progress
ix. Sewer cleaning progress
x. Collection system inventory progress
xi. Emergency Response Plan
xii. Building Backup Report
xiii. Annual update to the SSO characterization report

i. Sanitary Sewer Overflow (SSO) structure elimination progress

(a) Summarize progress in implementing approved schedules for the elimination of Non-Pump Station SSO structures

The listing of relief points is shown in Attachment A. Below is the status of the SSO elimination projects:

- 38 original SSOs (per CD Appendix A-2)
- 9 SSOs identified after CD effective date
- 3 SSOs reclassified as pump station SSOs
- 34 SSOs eliminated
- 10 SSOs scheduled for elimination

No SSO structures were eliminated during the reporting period.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

The original Consent Decree deadline for SSO elimination was March 22, 2017; however, on February 14, 2017, the County submitted a time extension request due to completing a required Phase II archaeological investigation for the Maryland Historical Trust and resulting delay in obtaining permit approval from the U.S. Army Corps of Engineers (ACOE). The requested SSO elimination date was undefined since the determination from the archaeological investigation may have required realignment and re-design of the new relief sewer. Subsequently, the County obtained ACOE's permit and, to expedite project completion, the County separated the project into two (2) construction contracts.

On September 3, 2019, the County issued the notice to proceed for the Phase I construction project, which is on-going. The Phase II construction project requires right-of-way acquisition and environmental permits. After the right-of-way easements have been acquired, the environmental permits obtained and the Phase II construction project notice to proceed has been issued, the County will submit a second SSO elimination time extension with a definitive date to eliminate the SSO structures.

Elimination of Non-Pump Station SSO Structures 41 and 129

The original Consent Decree deadline for SSO elimination was March 20, 2018; however on October 4, 2017 the County submitted a time extension request due to private property easement acquisition. As stated in the time extension request, the requested SSO elimination date was undefined since the time to negotiate and acquire the easements was unknown. Subsequently, the right-of-entry agreements were finalized and the County completed design work. On October 3, 2019 the County awarded the construction project On April 27, 2020 the County submitted a Time Extension Request to eliminate the overflow structures by August 3, 2023.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City. A summary of County/City coordination meetings and action items pertinent to SSO elimination is provided in the table below.

Meeting Date	Meeting action item
9/29/2020	Status of County SSO elimination activities
11/5/2020	None
11/23/2020	None
12/3/2020	City to revise hydraulic model for SSO 113 City improvements.
2/1/2021	None
2/4/2021	City to incorporate County's proposed SSO 113 relief sewer and develop possible City improvements.

A summary of all County and EPA/MDE communication in 2020 related to SSO structures is shown below:

Date of Correspondence	From	To	Control ID	SSO ID	SSO Name	Subject
2/11/2020	County	EPA/ MDE	293	113, 22, 23A, 23B, 24, 129	Marnat Road, Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 1/25/2020
4/30/2020	County	EPA/ MDE	305	113, 22, 23A, 23B, 24, 41, 129	Marnat Road, Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 4/13/2020
5/7/2020	County	EPA/ MDE	306	24	Patterson Avenue	Request to Waive Stipulated Penalties for Overflow Discharges on 4/30/2020
4/27/2020	County	EPA/ MDE	311	41, 129	Aiken Avenue, Queen Anne Drive	Time Extension Request
7/6/2020	County	EPA/ MDE	318	113, 24	Marnat Road, Patterson Avenue	Request to Waive Stipulated Penalties for Overflow Discharges on 6/22/2020
7/17/2020	County	EPA/ MDE	320	41, 129	Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 7/6/2020

Date of Correspondence	From	To	Control ID	SSO ID	SSO Name	Subject
8/5/2020	County	EPA/ MDE	324	41, 129	Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 7/22/2020 and 7/24/2020
8/18/2020	County	EPA/ MDE	325	113, 118, 22, 23A, 23B, 24, 41, 129	Marnat Road, Overbrook Road, Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 8/4/2020
8/20/2020	County	EPA/ MDE	327	118, 22, 23A, 23B	Overbrook Road, Alter Road, Southern Cross Drive, Southern Cross	Request to Waive Stipulated Penalties for Overflow Discharges on 8/13/2020 and 8/16/2020
11/19/2020	County	EPA/ MDE	337	113, 22, 23A, 23B	Marnat Road, Alter Road, Southern Cross Drive, Southern Cross	Request to Waive Stipulated Penalties for Overflow Discharges on 10/29/2020
12/23/2020	County	EPA/ MDE	340	41, 129	Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 11/30/2020

A summary of the County's 2020 SSO elimination and/or flow monitoring activity is provided in Attachment A.

(b) Summarize post-monitoring data after the elimination of a Non-Pump Station SSO structure

Flow monitoring activities will continue in accordance with Paragraph 7.C.v of the Consent Decree. Once sufficient flow monitoring data has been collected, the County will complete the hydraulic evaluation in accordance with Paragraph 7.C.v of the Consent Decree.

(c) Progress in implementing plans developed in response to certain discharges from Pump Station SSO structure(s)

The following pump stations discharged to their overflow structures:

Pump Station	Sewershed	Date of Overflow
Oak Forest	Patapsco	8/12/2020
Frederick Road	Patapsco	8/12/2020
McTavish	Patapsco	8/12/2020
Old Stemmers Run	Stemmers Run	11/30/2020
New Stemmers Run	Stemmers Run	11/30/2020
Orems	Orems	11/30/2020

According to CD Paragraph 7.C.vi, the County is required to submit an action plan and schedule for certain discharges from Pump Station SSO Structures that are caused by an event other than complete loss of pumping capacity of the pump station.

On October 19, 2020, the County submitted the Oak Forest Pump Station Action Plan as a result of the pump station SSO that occurred on August 12, 2020. On December 15, 2020, the County submitted a follow-up letter to rescind the proposed action plan and refer to the July 23, 2014 Action Plan for the Oak Forest Pump Station.

On October 6, 2020 the County submitted to EPA/MDE an action plan for the August 12, 2020 SSO at the Frederick Road Pump Station. As stated in the action plan, the County is in the design phase for a sewer rehabilitation improvement project to reduce wet weather flow to the pump station. The project is included in the EPA/MDE-approved Patapsco Sewershed Sewer

Repair, Rehabilitation and Replacement Plan. On October 28, 2018, the County submitted to EPA/MDE a potential delay notification for the improvement project due to private property right of way acquisition obstacles. The County will submit a time of performance extension request with a final finish date for the project after right-of-entry acquisition is completed and the County has issued the construction contract notice to proceed.

On August 20, 2020, the County submitted to EPA/MDA a waiver request letter for the sanitary sewer overflow that occurred on August 12, 2020 due to excessive wet weather flow at the McTavish Pump Station. As the excessive rain was a force majeure event, an action plan and schedule to prevent further SSO discharge arising from the same cause (pursuant to Paragraph 7.C.vi of the Consent Decree) is not needed for the McTavish Pump Station.

On January 19, 2021, the County submitted to EPA/MDE a letter stating that a post-SSO investigation of the November 30, 2020 SSO discharge that occurred at the Old Stemmers Run Pump Station was caused by a contractor who was working for the County and did not re-install an upstream manhole cover. During a rain event that occurred later in the day, an adjacent rising stream flowed into the open manhole and overwhelmed the pump station capacity. Since the SSO was caused by contractor negligence, no action plan, is required for the Old Stemmers Run Pump Station.

On January 19, 2021, the County submitted to EPA/MDE a letter stating that a post-SSO investigation of the November 30, 2020 SSO discharge that occurred at the New Stemmers Run Pump Station was caused by a contractor who was working for the County and did not re-install an upstream manhole cover. During a rain event that occurred later in the day, an adjacent rising stream flowed into the open manhole and overwhelmed the pump station capacity. Since the SSO was caused by contractor negligence, no action plan is required for the New Stemmers Run Pump Station.

On February 19, 2021, the County submitted to EPA/MDE an action plan for the November 30, 2020 SSO that occurred at the Orems Road Pump Station. As stated in the action plan, the County installed a flow monitor upstream of the station to confirm that stream water inflow from an open manhole cover has been eliminated.

ii. Rainfall and Flow Monitoring Plan Compliance

(a) Summarize results of annual evaluation of numbers and placement of rain gauges and flow monitors

In accordance with Paragraph 9.B.i, the County continued to collect rainfall data as necessary to allow the characterization of flow from sewershed service areas, the characterization of known SSOs, the development or improvement of hydraulic models for the sewersheds, and evaluate the effectiveness of measures implemented to reduce I/I and to increase system capacity.

(b) Report any changes to the locations of gauges or flow monitors

A summary of the flow monitoring locations as of December 31, 2020 is provided in Attachment B. Maps of flow monitoring and rain gauge locations are provided in Attachments 1 and 2.

(c) Report on any deviations from the approved plan

None.

iii. Evaluation of Rainfall and Flow Monitoring Data

(a) Inflow/infiltration (I/I) evaluation progress (due 60 days prior to date of SRRR plan submittal)

This task is complete.

(b) Long-term capacity/peak flow management evaluation (due 60 days prior to date of SRRR plan submittal)

This task is complete.

iv. Fats, Oils and Grease (FOG) Program Updates

(a) Provide the results of the annual evaluation of the effectiveness of the modified FOG control program

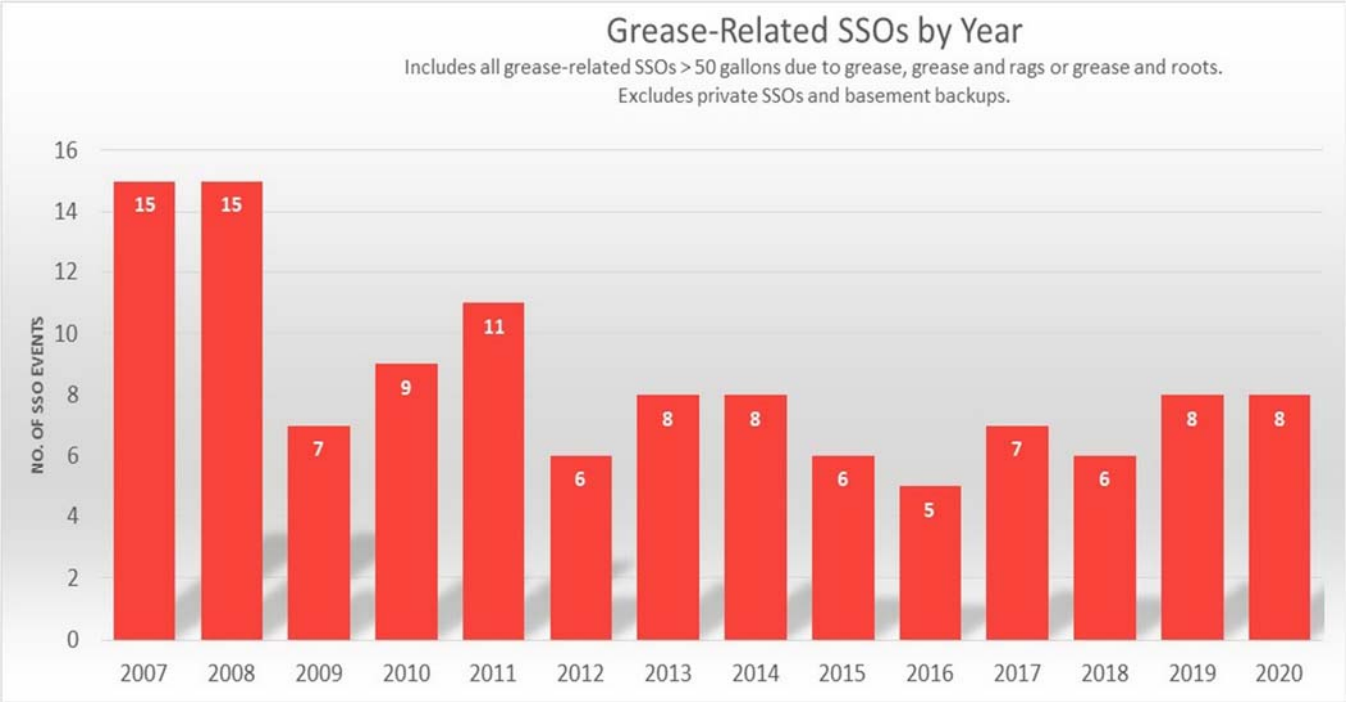
In accordance with Paragraph 11.I of the Consent Decree, the County continues to use the food service facility inspection results and the performance indicators to evaluate the effectiveness of the modified FOG Program. The evaluation results are summarized in Paragraph (c) below.

(b) Provide an updated database and map of grease generating facilities

A map and database of grease generating facilities are provided in Attachment 3.

(c) Evaluate the effectiveness of the modified FOG program

The evaluation of the modified FOG program attempted to determine a trend in the annual number of reportable FOG-related SSO discharges. Below are the analysis results:



The graph indicates a 47-percent decrease in the number of reportable FOG-related SSOs between 2007 and 2020. Since 2010, when the County implemented the modified FOG program, the number of reportable FOG-related SSOs has remained relatively stable; however, the County believes that there is an insignificant number of FOG-related SSOs to establish any trend.

v. Illegal stormwater discharges

During the reporting period, the County identified 23 illegal stormwater connections. A summary of the actions taken in response to each instance is provided in Appendix C.

vi. Pumping station status

(a) Report on the required annual evaluation of the backup power program

Baltimore County completed the evaluation of the effectiveness of its existing Pump Station backup power program, including the use of portable generators as backup power for multiple stations, in preventing SSOs relating to power outages.

During the reporting period, the fleet of six (6) portable generators that supplement on-site backup power at the County's stations was adequate to meet the emergency power needs. The percent of Pump Stations which are now equipped with on-site backup emergency power has been increased to ninety five percent (95%).

(b) Report on the development and implementation of any plans related to overflows due to power outages at pumping stations

None. The back-up power evaluation did not indicate any deficiencies in the portable generator fleet; therefore, no remedial plan is required.

(c) Pump station inspection deficiencies list

A report on the deficiencies discovered during the inspections of the County's pumping stations is provided in Attachment D.

(d) Pump station deficiencies discovered during Engineering Evaluation/Condition Assessments

This task is complete.

(e) Summarize the progress in implementing a pump station information management system

This task is complete.

vii. Collection System Model Implementation Status

This task is complete.

viii. Supplemental Collection System Inspection Progress

This task is complete.

ix. Sewer Cleaning Progress

This task is complete.

x. Collection System Inventory Progress

This task is complete.

xi. Emergency Response Plan

The County is updating the Emergency Response Plan and will submit to EPA/MDE the revised plan, when finalized.

xii. Building Backup Report

Maps of Building Backups since the last submission are provided in Attachment 4.

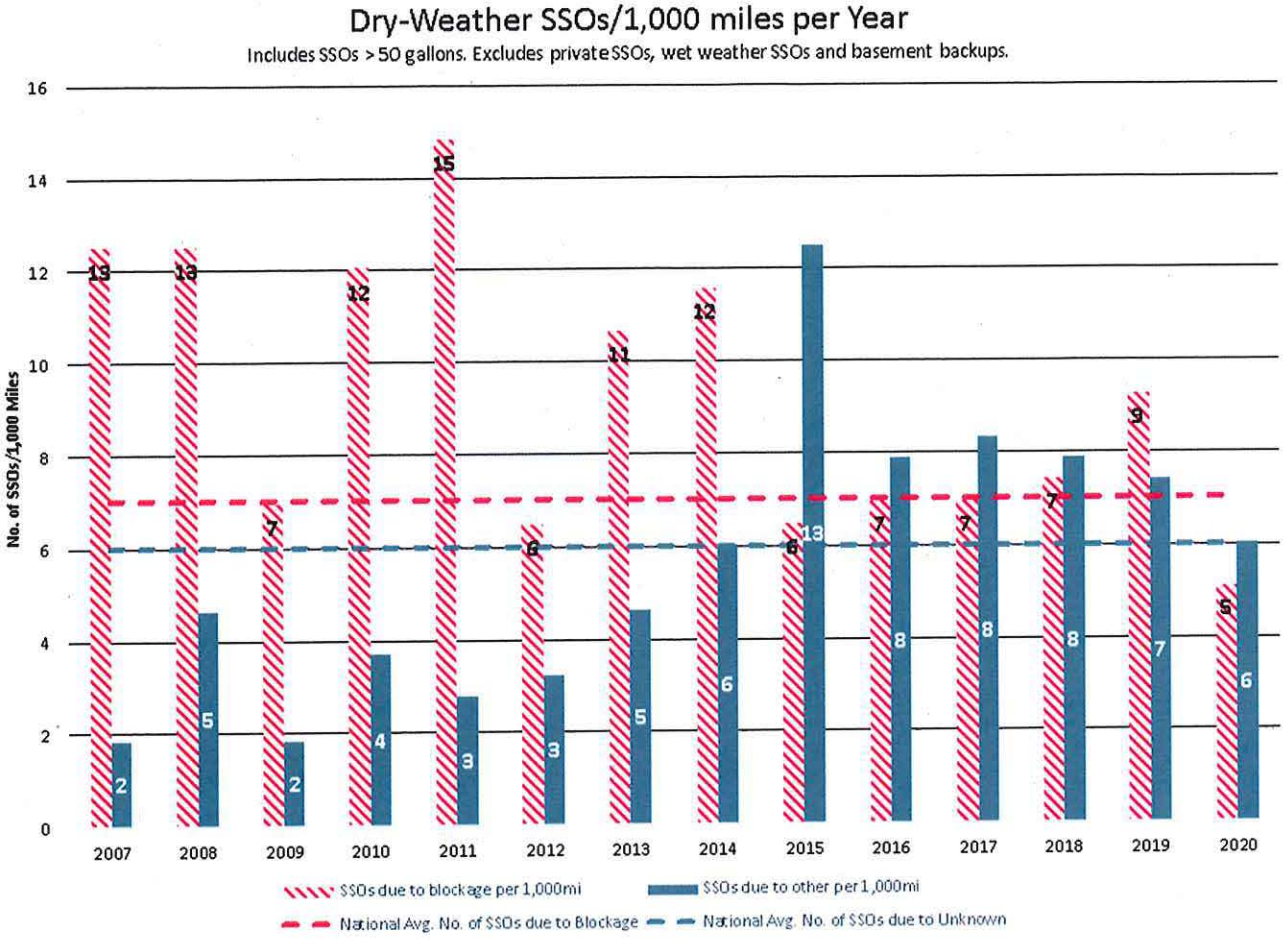
There were 119 reported building backups (including occurrences with zero gallon volumes) during the reporting period, as summarized in Attachment E. A summary of reported building backup history is provided below:

Year	Total Number of Reported Backups (ea.)	Percent Increase/Decrease from Previous Year (%)
2006	113	---
2007	48	-57.5
2008	77	60.4
2009	44	-42.9
2010	90	104.5
2011	241	167.8
2012	139	-42.3
2013	217	56.1
2014	346	59.5
2015	143	-58.6
2016	136	-4.9
2017	71	-47.8
2018	345	386
2019	80	-76.8
2020	119	48.75

xiii. Annual Update of SSO Characterization Report

In accordance with Paragraph 7.B.ii of the Consent Decree, the updated SSO characterization maps are provided in Attachment 5.

Based on the data available in EPA's report to Congress titled "Impacts and Control on CSOs and SSOs", dated August 2004, there are, on average, approximately 7 dry-weather SSOs due to pipeline blockages per 1,000 miles per year and an additional 6 dry-weather SSOs with unknown causes per 1,000 miles per year. Below is a summary per year of Baltimore County's dry-weather SSOs due to a pipeline blockage.



As shown in the above graph, since 2015, the number of SSOs per year due roots, grease and debris is approximately equal to the national average; however, in the same time period, the number of SSOs per year due to unknown/other causes, such as broken pipe, vandalism, etc. has increased compared to the prior 7 year (2007-2014).

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

(1) County coordinating with property owner to confirm stormwater discharge.

Attachment D – List of Deficiencies found during the Inspection of Pumping Stations

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Lynch Point	Delmar	2/10/2020	Pump 1	Seal failure	Repaired pump	7/8/2020	2	
Red House Run	Red House Run	3/8/2020	VFD 3	VFD malfunction	Installed new VFD	7/13/2020	2	
Stemmers Run Old	Stemmers Run	3/12/2020	Pump 1	Motor malfunction	Added oil to motor	10/27/2020	2	
Dundalk	Dundalk	5/8/2020	Pump 1	Pump malfunction	Installed new sensor	7/28/2020	2	
Stansbury Manor	Orems	5/11/2020	Pump 2	Replace front heads	Installed new front head	7/28/2020	2	
Red House Run	Red House Run	5/16/2020	VFD 2	VFD malfunction	Installed new VFD	7/13/2020	2	
Orems Road	Orems	5/31/2020	Pump 4	Wear rings need to be replaced	Replaced wear rings	9/15/2020	2	
Randallstown	Gwynns Falls	6/13/2020	Generator	Won't start	Tightened all connections	8/10/2020	2	
Montrose	Gwynns Falls	6/17/2020	Generator	Starter bolts sheared off	Thru-bolted the starter to the mounting plate	6/22/2020	2	
Lodge Forest Manor	Delmar	6/26/2020	Pump 1	Hole in discharge pipe	Installed correct bolts	6/29/2020	1	
Patapsco	Patapsco	7/24/2020	VFD 3	VFD malfunction	Cleared fault	8/1/2020	2	
Gunpowder	Gunpowder	7/27/2020	VFD 3	Circuit board defective	Installed new VFD	11/21/2020	2	
Marlyn Avenue	Essex	8/3/2020	Pump 2	Pump malfunction			3	Waiting for pump manufacturer to repair pump.
Dundalk	Dundalk	8/4/2020	Pump 4	Pump malfunction			3	Pump to be repaired after Pump1 is repaired.
Greenhill Cove	Gray Manor	8/7/2020	Pump 1	Pump malfunction	Repaired pump	10/5/2020	3	
Marlyn Avenue	Essex	8/8/2020	Pump 1	Pump malfunction	Repaired pump	11/10/2020	3	
Windlass Run	Bird River	9/25/2020	Cone Valve 1	Jammed in open position	Repaired bypass cylinder	10/13/2020	2	
Back River Neck	Duck Creek	9/30/2020	Pump 2	Pump malfunction	Replaced pump	12/3/2020	2	
Holly Neck	Duck Creek	10/7/2020	Pump 1	Vacuum dome cracked	Replaced vacuum dome	10/8/2020	2	
Duck Creek	Duck Creek	10/27/2020	Pump 1	VFD malfunction	Replaced fans in VFD	11/10/2020	2	
New Stemmers Run	Stemmers Run	11/13/2020	Pump 4	Pump malfunction	Replaced actuator control board inside	11/15/2020	2	
Rettmans Lane	Gray Manor	11/18/2020	Pump 1	Pump malfunction			2	
Dundalk	Dundalk	11/25/2020	Pump 1	Pump malfunction			3	
Stantonwood	Jones Falls	12/24/2020	Pump 1	Motor malfunction			2	

The pump station deficiencies listed below were outstanding in the 2019 Annual Report. The repair status and/or reason for repair delay are provided below.

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Gray Manor	Gray Manor	2/1/2019	Aux suction valve Pump 1	Cylinder needs replacement			2	New cylinder arrived but damaged during shipping. Waiting for manufacturer to finalize correct repair.
Stemmers Run (New)	Stemmers Run	7/1/2019	VFD 3	Replace VFD			2	VFD series is discontinued. Replacement work requires mechanical/electrical re-engineering. Engineer is finalizing design.
Dundalk	Dundalk	11/5/2019	Pump 1	Seal failure	Repaired pump	3/8/2020	2	
Long Quarter	Long Quarter	12/3/2019	Pump 3 suction gate	Missing sealing gasket			2	Sluice gate manufactured, to be delivered April 2021
Long Quarter	Long Quarter	12/3/2019	Pump 3	Pressure ring malfunction			2	Can't be repaired until suction gate is repaired.
Dundalk	Dundalk	12/13/2019	Pump 4	Seal failure	Repaired pump	Q1 2020	2	Pump was sent to repair shop
Long Quarter	Long Quarter	12/20/2019	Aux suction valve Pump 1	Positioner malfunction			2	Repair to be completed when station is on bypass for other repairs.

Attachment D - Status of SRRR Plan Implementation 16

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **January 1, 2021** through **March 31, 2021.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County’s recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Old Stemmers Run Pump Station Action Plan
On January 19, 2021, the County submitted to EPA/MDE a letter stating that a post-SSO investigation of the November 30, 2020 SSO discharge that occurred at the Old Stemmers Run Pump Station was caused by a contractor who was working for the County and did not re-install an upstream manhole cover. During a rain event that occurred later in the day, an adjacent rising stream flowed into the open manhole and overwhelmed the pump station capacity. Since the SSO was caused by contractor negligence, no action plan, is required for the Old Stemmers Run Pump Station.

New Stemmers Run Pump Station Action Plan
On January 19, 2021, the County submitted to EPA/MDE a letter stating that a post-SSO investigation of the November 30, 2020 SSO discharge that occurred at the New Stemmers Run Pump Station was caused by a contractor who was working for the County and did not re-install an upstream manhole cover. During a rain event that occurred later in the day, an adjacent rising stream flowed into the open manhole and overwhelmed the pump station capacity. Since the SSO was caused by contractor negligence, no action plan is required for the New Stemmers Run Pump Station.

Orems Road Pump Station Action Plan
On February 19, 2021, the County submitted to EPA/MDE an action plan for the November 30, 2020 SSO that occurred at the Orems Road Pump Station. As stated in the action plan, the County installed a flow monitor upstream of the station to confirm that stream water inflow from an open manhole cover had been eliminated.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Stansbury Manor Pump Station Rehabilitation

On March 31, 2021, the County submitted a revised time extension request to complete improvements to the Stansbury Manor Pump Station. Based on communication from the Maryland Aviation Administration, the requested revised consent decree deadline is April 20, 2024.

Delmar SRRR Plan

On March 31, 2021 the County submitted a potential delay notification for the Delmar Sewer Rehabilitation project. The potential delay is due to the time required to acquire rights of entry and regulatory permits.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Jeffrey S. Peluso, PE
Acting Chief, Bureau of Engineering and Construction

Control Document No. 347

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

None.

Non-Pump Station Overflow Structures – Metered

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date of Discharge	3/24/2021
Duration of Overflow	3 Hrs. 26 Mins.
Date of Relevant Weather Conditions	3/24/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	3,568
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet-weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	3/24/2021
Duration of Overflow	4 Hrs. 05 Mins.
Date of Relevant Weather Conditions	3/24/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	32,199
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	3/24/2021
Duration of Overflow	4 Hrs. 00 Mins.
Date of Relevant Weather Conditions	3/24/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	36,144
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	3/24/2021
Duration of Overflow	4 Hr. 53 Mins.
Date of Relevant Weather Conditions	3/24/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	93,853
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Dr & Hillcrest Ave
Date of Discharge	3/24/2021
Duration of Overflow	1 Hrs. 40 Mins.
Date of Relevant Weather Conditions	3/24/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	16,505
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	County submitted time extension request to eliminate overflow structure by 8/3/2023.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		3/24/2021
Rain (inches)		1.77” to 1.89“
SSO Name	**SSO ID**	
Alter Road	22	3,568
Southern Cross Drive	23A	32,199
Southern Cross	23B	36,144
Patterson Avenue	24	93,853
Aiken Avenue	41	
Marnat Road	113	
Queen Anne Drive	129	16,505

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined elimination date was submitted on 2/14/2017. A second Time Extension Request with a definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction. This project is 90% complete, achieving functional use on 1/26/2021.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined SSO elimination date was submitted on 2/14/2017. A second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023 (requested)	No	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023. This project is 42% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a Time Extension Request with an undefined SSO elimination date. A second Time Extension Request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Lodge Forest Manor	3/20/2020	Design (RoW)	1/30/2020	3/20/2025	DNR easement acquisition.
Stansbury Manor	3/20/2020	Design (Permit)	3/29/2021	4/20/2024	MAA property acquisition.

3/24/2021	3909 Southern Cross Drive		D
3/24/2021	3902 Patterson Avenue		D
3/24/2021	Queen Anne Drive & Hillcrest Avenue		D

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation

Pump Station Overflow Structures 7
Non-Pump Station Overflow Structures – Metered 7
Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring 9
Attachment B - Construction Projects Status 10
Non-Pump Station SSO Structures 11
Pump Station Rehabilitation, Repair and Replacement 12
Attachment C - CCTV in Response to an SSO 13
Attachment D - Status of SRRR Plan Implementation 15

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **April 1, 2021** through **June 30, 2021.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Jones Falls Performance Assessment Report

On June 3, 2021, the County submitted the Performance Assessment Report for the Jones Falls SRRR Plan.

Texas Pump Station Action Plan

On May 26, 2021, pump shutdown at the Texas Pump Station resulted in an SSO discharge of 213,000 gallons. A post-SSO analysis indicated intermittent power disruption of the primary pump station electrical feed, which caused the pumps to shut down and resulted in the SSO discharge. It is suspected that the power disruption was of such short duration that the station automatic transfer switch did not activate the secondary power feed. Since the separate and redundant power supply is the County- and MDE-approved backup power for this pump station, a plan to prevent further SSOs at the Texas Pump Station due to power outages is not needed.

Lodge Forest Pump Station Action Plan

As summarized in the County's June 22, 2021 plan to prevent further SSOs at the Lodge Forest Pump Station, on June 14, 2021, pump shutdown at the Lodge Forest Pump Station resulted in a sanitary sewer overflow (SSO) discharge of 83,000 gallons. County staff where alerted to possible station equipment failure and were dispatched to the station to inspect the equipment. When they arrived at the station, it appeared that the station's electrical power was functioning; however, none of the variable frequency drives (VFD) would operate. A crew chief was dispatched to the station and determined that the generator breaker located in the master control center had tripped; thereby preventing the generator from powering the station. The generator breaker was manually reset and the VFDs began operating as normal. A post-SSO analysis indicated that a possible power surge of the electrical feed disrupted power to the pump station and one of the three phases was faulted. The phase failure prevented the VFD's from operating until the generator breaker was reset so that the generator could power the station.

The County could not replicate the generator breaker trip and no other stations have experienced similar generator breaker tripping issues. As a preventive measure, the County will complete additional electrical training for pump station crews to improve station shutdown response. Since the station has a County- and MDE-approved backup power source and the generator breaker fault that resulted in the June 14, 2021 SSO could not be replicated and has not been experienced at other stations, a plan to prevent further SSOs at the Lodge Forest Pump Station due to power outages is not needed.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Lodge Forest Pump Station Rehabilitation

On June 4, 2021, the County submitted a revised time extension request to complete improvements to the Lodge Forest Pump Station. Based on communication from the Maryland Aviation Administration, the requested revised consent decree deadline is October 20, 2023.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

for Jeffrey S. Peluso, PE

Control Document No. 363

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Name	Texas
Address	10320 York Road
Date Of Discharge	05/26/2021
Duration Of Overflow	42 Min.
Date Of Relevant Weather Conditions	05/26/2021
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	213,000
Receiving Waters	Beaver Dam Run
Identified Cause	Power surges during storm caused all VFDs to fail resulting in pumps locking out.
Details Of Corrective Action Taken or Planned	VFDs were reset and put back online.

Name	Lodge Forest
Address	2315 Lodge Forest Road
Date Of Discharge	06/14/2021
Duration Of Overflow	1 Hr. 20 Mins.
Date Of Relevant Weather Conditions	06/14/2021
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	83,000
Receiving Waters	North Point Creek
Identified Cause	Disruption of the primary pump station electrical feed and backup generator breaker was tripped.
Details Of Corrective Action Taken or Planned	The generator breaker was reset.

Non-Pump Station Overflow Structures – Metered

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	6/10/2020
Duration of Overflow	3 Hr.
Date of Relevant Weather Conditions	6/10/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	46,525
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	6/10/2020
Duration of Overflow	3 Hrs. 7 Mins.
Date of Relevant Weather Conditions	6/10/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	78,101
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	County submitted time extension request to eliminate overflow structure by 8/3/2023.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	6/11/2020
Duration of Overflow	4 Hr. 57 Mins.
Date of Relevant Weather Conditions	6/11/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	43,688
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	6/11/2020
Duration of Overflow	5 Hrs. 34 Mins.
Date of Relevant Weather Conditions	6/11/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	67,196
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	County submitted time extension request to eliminate overflow structure by 8/3/2023.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		6/10/2021	6/11/2021
Rain (inches)		1.63"	2.20"
SSO Name	SSO ID		
Alter Road	22		
Southern Cross Drive	23A		
Southern Cross	23B		
Patterson Avenue	24		
Aiken Avenue	41	46,525	43,688
Marnat Road	113		
Queen Anne Drive	129	78,101	67,196

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined elimination date was submitted on 2/14/2017. A second Time Extension Request with a definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction. This project is achieved functional use on 1/26/2021.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined SSO elimination date was submitted on 2/14/2017. A second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023 (requested)	No	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023. This project is 42% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a Time Extension Request with an undefined SSO elimination date. A second Time Extension Request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Lodge Forest Manor	3/20/2020	Design (RoW)	1/30/2020	3/20/2025	DNR easement acquisition.
Stansbury Manor	3/20/2020	Design (Permit)	3/31/2021	4/20/2024	MAA property acquisition.
Hyde Park	6/1/2021	Construction			
Millers Island	6/1/2022	Construction			
Turkey Point	6/1/2022	Construction			
Penwood Terrace	6/1/2023	Construction			
Corsica	6/1/2023	Design			
Fort Howard	6/1/2023	Design			

Attachment C - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
4/27/2021	626 Hasting Road	5/5/2021	
5/14/2021	500 Compass Road	5/14/2021	
6/10/2021	7829 Aiken Avenue & Taylor Avenue		D
6/10/2021	Queen Anne Drive & Hillcrest Avenue		D
6/11/2021	7829 Aiken Avenue & Taylor Avenue		D
6/11/2021	Queen Anne Drive & Hillcrest Avenue		D
6/11/2021	2407 Cub Hill Road		B
6/23/2021	10803 Falls Road		B

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
Patapsco	9/6/2021	10/28/2018	Right of entry acquisition	
Delmar	4/18/2022	11/22/2019	Right of entry acquisition

Attachment D - Status of SRRR Plan Implementation 18

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **July 1, 2021** through **September 30, 2021.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County’s recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Red House Run Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary and secondary electrical feeds of the Red House Run Pump Station, thereby resulting in a 900,000 gallon discharge. Since the power loss to the primary and secondary pump station electrical feeds was caused by a storm event that is beyond the control of the County, a plan to prevent further SSOs at the Red House Run Pump Station due to power outages is not needed.

Gray Manor Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary and secondary electrical feeds of the Gray Manor Pump Station, thereby resulting in a 724,000 gallon discharge. Since the power loss to the primary and secondary pump station electrical feeds was caused by a storm event that is beyond the control of the County, a plan to prevent further SSOs at the Gray Manor Pump Station due to power outages is not needed.

Corsica Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary electrical feed of the Corsica Pump Station, which resulted in a 60,000 gallon discharge. The MDE- and County-approved backup electrical source for the station is a portable generator. When alerted of the power loss, a pump station crew was mobilized to the station with a portable generator; however, the power was restored and the station was operating normally by the time the crew arrived at the station. The action plan to prevent further SSOs at the Corsica Pump Station due to power outages is to install an on-site generator. Design work for the generator was included in the County's Corsica Pump Station rehabilitation construction project (County Contract 21162 SXO), which will be advertised on August 27, 2021 and bid opening is scheduled for October 28, 2021. The portable generator will remain the secondary power source until the permanent on-site generator is installed and the rehabilitation project is certified as complete.

New White Marsh Pump Station Action Plan

On August 7 and 11, 2021, power losses to the primary electrical feed of the New White Marsh Pump Station resulted in 772,000 and 901,000 gallon discharges, respectively. The MDE- and County-approved backup electrical source for the station is a secondary electrical feed; however, the station equipment did not automatically transfer to the secondary feed. A post-SSO investigation of the station's electrical system found that all of the station primary electrical breakers opened, which prevented the automatic transfer switch to transfer electrical power from the secondary feed. The County tested the breakers and programmable logic controllers (PLCs); however, all equipment was properly operating. As a precaution, County staff remained at the pump station during business hours to monitor station operation throughout the day. To simulate the power loss event, the County requested the Baltimore Gas & Electric company to stop the primary electrical service to the station. During the simulation, County crews identified a possible issue with the PLCs and further investigation and visual confirmation of equipment failure identified faulty PLCs; therefore, the action plan is to:

1. Replace the PLCs, which was completed on September 3, 2021
2. Have County staff remain at the pump station for 1 week after the PLC replacement is completed to confirm that the station is operating as normal

Texas Pump Station Action Plan

On August 19, 2021, the County submitted a revised Action Plan.

On May 26, 2021, pump shutdown at the Texas Pump Station resulted in an SSO discharge of 213,000 gallons. A post-SSO analysis indicated intermittent power disruption of the primary pump station electrical feed, which caused the four variable frequency drives (VFDs) to fault and shut down the pumps thereby resulting in the SSO discharge. The VFDs are set to automatically reset if they fault; however, due to a VFD's high consequence of failure, some VFD faults, such as those experienced on May 26, 2021, must be manually reset so that County crews can visually inspect the equipment before restarting the drives. It is suspected that the power disruption was of such short duration that the station's automatic transfer switch did not activate the secondary power feed. The County completed post-SSO equipment testing but could not replicate this type of power disruption to confirm the root cause of the VFD faults and the station has not experienced previous power disruptions that did not activate the secondary power feed. Since the separate and redundant power supply is the County- and MDE-approved backup power for this pump station and the County could not confirm the root cause of the power disruption, a plan to prevent further SSOs at the Texas Pump Station due to power outages is not needed.

Lodge Forest Pump Station Action Plan

On August 13, 2021, the County submitted a revised Action Plan.

On June 14, 2021, pump shutdown at the Lodge Forest Pump Station resulted in an SSO discharge of 83,000 gallons. When they arrived at the station, the County staff manually reset the master control center emergency generator breaker and returned the station to normal operation. A post-SSO analysis indicated that a possible power

surge of the electrical feed disrupted power to the station. The station's emergency generator automatically started; however, it is suspected that the power surge tripped the generator breaker in the master control center, which prevented power to the pumps and resulted in the SSO discharge. Since the emergency generator supply is the County- and MOE-approved backup power for this pump station, a plan to prevent further SSOs at the Lodge Forest Pump Station due to power outages is not needed.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

Patapsco SRRR

On September 2, 2021, The County submitted a time extension request for the Patapsco SRRR Plan Implementation. The Consent Decree deadline for completion certification of the Patapsco SRRR Plan is September 6, 2021 and the requested deadline is October 6, 2024.

Implementation certification of the Patapsco SRRR Plan is contingent upon completion of the projects listed below:

Project	Requested Time Extension Deadline	Project Status
Patapsco Basin 7 Sewer Rehabilitation	April 6, 2024	Design
Patapsco Basin 10 Sewer Rehabilitation	January 6, 2023	Design
Patapsco Cedar Branch North Fork Relief Sewer	September 6, 2022	Notice to Proceed (17150 SX0) issued on 8/18/2022
Patapsco Structural Improvements	October 6, 2024	Design

The Patapsco Structural Improvements project is the last project to be completed in the Patapsco sewershed; therefore, the County requests a 37-month time extension to certify implementation completion of the Patapsco SRRR Plan.

On September 6, 2021, the County completed implementation of all sewer and manhole cleaning/inspection maintenance work that was identified in the Patapsco SRRR Plan.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

On September 2, 2021, the County submitted a potential delay notification for the Essex Sewer Replacement Project. The potential delay is due to the additional design time needed to complete supplemental field investigations and an alternatives analysis and to revise the project scope of work accordingly.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Lisa K Eicholtz

Control Document No. 382

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Name	Red House Run
Address	1100 68th Street and Lake Drive
Date Of Discharge	07/17/2021
Duration Of Overflow	5 Hrs. 40 Mins.
Date Of Relevant Weather Conditions	07/17/2021
Description Of Relevant Weather Conditions	Wet
Gallons Discharged	900,000
Receiving Waters	Back River
Identified Cause	Pump Station lost the primary and secondary electrical service feeder
Details Of Corrective Action Taken or Planned	One feeder was restored and the pumps started and pumped down the wetwell and the overflow stopped.

Name	Gray Manor
Address	7825 Trappe Road
Date Of Discharge	07/17/2021
Duration Of Overflow	5 Hrs. 55 Mins.
Date Of Relevant Weather Conditions	07/17/2021
Description Of Relevant Weather Conditions	Wet
Gallons Discharged	724,000
Receiving Waters	Bear Creek
Identified Cause	Pump Station lost the primary and secondary electrical service feeder
Details Of Corrective Action Taken or Planned	One feeder was restored and the pumps started and pumped down the wetwell and the overflow stopped.

Name	Corsica Road
Address	2208 Corsica Road
Date Of Discharge	07/17/2021
Duration Of Overflow	11 Hrs.
Date Of Relevant Weather Conditions	07/17/2021
Description Of Relevant Weather Conditions	Wet
Gallons Discharged	60,000
Receiving Waters	Barren Point
Identified Cause	Pump Station lost electrical service power to the pump station. Crews were not able to get a generator to site.
Details Of Corrective Action Taken or Planned	Once electrical service power was restored, the pumps started and pumped down the wetwell and the overflow stopped.

Pump Station Overflow Structures (Continued)

Name	White Marsh
Address	1235 Reames Road
Date Of Discharge	08/07/2021
Duration Of Overflow	70 mins.
Date Of Relevant Weather Conditions	08/07/2021
Description Of Relevant Weather Conditions	Dry
Gallons Discharged	772,000
Receiving Waters	White Marsh Run
Identified Cause	Primary electrical service feeder was lost at the station and switchgear did not switch to secondary feeder.
Details Of Corrective Action Taken or Planned	Crew arrived onsite and manually closed in the breaker for the secondary feeder. The pumps turned on and stopped the overflow.

Name	White Marsh
Address	1235 Reames Road
Date Of Discharge	08/11/2021
Duration Of Overflow	1 Hr.
Date Of Relevant Weather Conditions	08/11/2021
Description Of Relevant Weather Conditions	Dry
Gallons Discharged	901,000
Receiving Waters	White Marsh Run
Identified Cause	Primary electrical service feeder was lost at the station and switchgear did not switch to secondary feeder.
Details Of Corrective Action Taken or Planned	Crew arrived onsite and manually closed in the breaker for the secondary feeder. The pumps turned on and stopped the overflow.

Non-Pump Station Overflow Structures – Metered

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date of Discharge	9/1/2021
Duration of Overflow	3 Hrs. 9 Mins.
Date of Relevant Weather Conditions	9/1/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	12,389
Receiving Waters	Maiden's Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	9/1/2021
Duration of Overflow	1 Hrs. 7 Mins.
Date of Relevant Weather Conditions	9/1/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	5,015
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	County submitted time extension request to eliminate overflow structure by 8/3/2023.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		9/1/2021
Rain (inches)		1.8”-2.4”
SSO Name	**SSO ID**	
Alter Road	22	
Southern Cross Drive	23A	
Southern Cross	23B	
Patterson Avenue	24	
Overbrook Road & Medwick Garth	118	12,389
Marnat Road	113	
Aiken Avenue	41	
Queen Anne Drive	129	5,015

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	On 1/26/21 the project achieved functional use. The Phase II project must be completed before eliminating the SSO structures.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	On 2/14/2017, the County submitted a time extension request with an undefined elimination date. A second time extension request with a definitive elimination date will be submitted after right-of-way acquisition and environmental permits are obtained and construction notice to proceed is issued for the Phase II project. Baltimore City is attempting to acquire an easement within the City that is needed for construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023	No	On 4/27/2020 the County submitted a time extension request to eliminate the overflow structure by 8/3/2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as 11/5/2019. On 9/23/2021, the County submitted a correction of records letter to confirm the new approved deadline of 8/3/2023. This project is 68% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a time extension request with an undefined SSO elimination date. A second time extension request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Lodge Forest Manor	3/20/2020	Design (RoW)	6/3/2021	10/20/2023	DNR easement acquisition.
Stansbury Manor	3/20/2020	Construction (Bid date 9/30/2021)	3/31/2021	4/20/2024	MAA property acquisition.
Millers Island	6/1/2022	Construction			
Turkey Point	6/1/2022	Construction			
Penwood Terrace	6/1/2023	Construction			
Corsica	6/1/2023	Design			
Fort Howard	6/1/2023	Design			

Attachment C - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
7/2/2021	1940 Winder Road	7/8/2021	
7/14/2021	1 Red Barn Court	7/15/2021	
7/21/2021	4980 Mercantile Rd		B
9/1/2021	1745 Ellinwood Road	9/3/2021	
9/1/2021	Queen Anne Drive & Hillcrest Avenue		D
9/1/2021	Overbrook Road and Medwick Garth		D

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation

Status of SRRR Plan Implementation				
Sewershed	**Original Consent Decree Deadline**	**Date of Potential Delay Notification**	**Reason for Delay**	**Comments**
Patapsco	9/6/2021 Requested Date: 10/6/2024	9/2/2021 (Time extension request)	Right of entry acquisition	On September 6, 2021, The County submitted a time extension request for the Patapsco SRRR Plan Implementation. The Consent Decree deadline for completion certification of the Patapsco SRRR Plan is September 6, 2021 and the requested deadline is October 6, 2024.
Delmar	4/18/2022	11/22/2019	Right of entry acquisition	
Duck Creek	4/18/2022	2/5/2020	Expanded project scope	
Dundalk	4/18/2022	11/22/2019	Right of entry acquisition	
East Point	4/18/2022	11/22/2019	Right of entry acquisition	
Essex	4/18/2022	12/10/2019	Right of entry acquisition/permits	
Gray Manor	4/18/2022	6/19/2019	State and Local Permitting	
Texas	4/18/2022	7/10/2019	Right of entry acquisition	
Longquarter	4/18/2024	11/26/2019	Right of entry acquisition	
Redhouse Run	4/18/2024			
Whitemarsh	4/18/2024			
Stemmers Run	9/6/2024			
Gunpowder	4/18/2026			

Substantially Completed SRRR Plan implementations [1]				
Sewershed	**Original Consent Decree Deadline**	**Date of Potential Delay Notification**	**Reason for Delay**	**Comments**
Bird River	9/29/2020	3/15/2019	Right of entry acquisition	There are 3 assets (i.e. sewer and manholes) which represents approximately 60 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Bread & Cheese	9/29/2020 Requested date: 3/6/2022	5/28/2020 (Time extension request)	Right of entry acquisition	There are 127 asset (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding. Notice to Proceed was February 27, 2021. The outstanding structural repairs have no effect on the performance of the collection system.
Bengies	9/29/2020	3/15/2019	Right of entry acquisition	There are 96 assets (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Cockeysville	9/29/2020	3/15/2019	Right of entry acquisition	There are 12 assets (i.e. sewer and manholes) which represents approximately 57 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.

Substantially Completed SRRR Plan implementations [1]				
Dead Run	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Gwynns Falls	9/6/2018	2/14/2017	Right of way acquisition	On September 6, 2018, the County certified substantial completion for the implementation of the Gwynns Falls Sewershed SRRR Plan with the exception of 23 structural repairs for which a potential delay was submitted to EPA and MDE. The outstanding structural repairs have no effect on the performance of the collection system. To date, 6 repairs remain outstanding and were completed with the Powder Mill Interceptor Phase 1 project, which achieved functional use on January 26, 2021.
Herring Run	9/6/2018	8/15/2017 3/6/2018	Right of entry acquisition	There are 93 assets (i.e. sewer and manholes) which represents approximately 6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. Two of these properties have entered the condemnation process. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Jones Falls	9/6/2019		Right of entry acquisition	There are 10 assets (i.e. sewer and manholes) which represents approximately 0.6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Orems	9/29/2020	9/7/2021 (Time extension request)	Right of entry acquisition	Design is complete for the Orems Basin 3 Relief Sewer. Contract 21144SX0 was awarded May 25, 2021. A time extension request was submitted on September 7, 2021.
Tributary 26	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.

Substantially Completed SRRR Plan implementations [1]				
Tributary 27	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Tributary 43	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.
Tributary 48	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Tributary 78	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.
West Low Level	9/6/2017			Substantially completed

[1] Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.

Attachment B - Construction Projects Status 12
Non-Pump Station SSO Structures 13
Pump Station Rehabilitation, Repair and Replacement 14
Attachment C - CCTV in Response to an SSO 15
Attachment D - Status of SRRR Plan Implementation 17

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **October 1, 2021** through **December 31, 2021.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Frederick Road Pump Station Action Plan

On November 4, 2021, the County submitted an action plan for the pump stations SSO due to loss of power.

On October 29, 2021, power loss to the primary electrical feed of the Frederick Road Pump Station resulted in a 43,000 gallon discharge. The MDE- and County-approved backup electrical source for the station is an on-site generator; however, the generator did not start when the primary electrical feed lost power. The power to the primary feed was restored within 16 minutes and the pump station resumed operation. A post-SSO investigation indicated an issue with the generator's start up system; however, after the primary electrical feed power was restored, the County successfully test started the generator and completed a second successful test start the next day. Similar start up issues have not previously occurred at the pump station including during the weekly pump station preventive maintenance inspections. As a precaution, County staff replaced the generator start up battery; however, the successful post-SSO generator test starts indicate that there was no issue with the battery. Since the power loss to the primary pump station electrical feed was caused by a storm that is beyond the control of the County and the County could not replicate the generator start up issue and has not previously experienced similar issues at the pump station, a plan to prevent further SSOs at the Frederick Road Pump Station due to power outages is not needed.

Springdale A Pump Station

On December 21, 2021, the County submitted an action plan for the pump stations SSO due to loss of power.

On December 13, 2021 power loss of the motor control center at the Springdale A Pump Station resulted in a 13,110-gallon discharge (reference enclosed SSO report). The MDE- and County-approved backup electrical source for the station is an on-site generator. A post-SSO investigation of the station determined that the electrical

terminal for Pump Motor 2 overheated and caused a small localized fire, which damaged other wiring and tripped the station's motor control center primary and secondary electrical feeds. Once they arrived on site, the pump station crew connected a mobile generator to restore power and stop the overflow. The most recent preventive maintenance inspection, which was completed on November 3, 2021 did not identify any issue with Pump Starter 2, the associated electrical wiring or terminal or Motor 2 and there has been no similar electrical issue at the station. The action plan is to remove the destroyed terminal, replace all damaged control wiring and install new wiring from Pump Starter 2 to Motor 2. The new wiring was installed and all critical wiring repairs were completed on December 14, 2021. The station is now operating as normal.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

On December 7, 2021, the County submitted a potential delay notification for the Texas Forcemain cathodic protection project. The Texas Force Main Cathodic Protection project requires highly specialized technical expertise to complete, which significantly limits contractor/consultant availability. Therefore, the County required additional time than originally anticipated to develop and advertise a contract to procure the specialized services.

On December 7, 2021, the County submitted a Time of Performance Extension request for the Corsica Forcemain project. The Corsica Force Main Replacement project is located in an area of the County with multiple existing buried infrastructure systems. Additional design time and buried infrastructure field investigations were needed to locate and avoid potential utility conflicts.

On December 7, 2021, the County submitted a Time of Performance Extension request for the Delmar Sewershed Rehabilitation project. Private property rights-of-entry negotiation and acquisition was required for the Delmar Sewershed Sewer Rehabilitation Project, which has delayed completion of the design work. Additionally, the project has been delayed due to the time required to receive a permit from the Department of Natural Resources (DNR) for work in North Point State Park. The County received the permit on March 15, 2021. Acquisitions are now complete and the project has been advertised and notice to proceed for construction was issued on October 12, 2021.

On December 7, 2021, the County submitted a Time of Performance Extension request for the Gwynns Falls ESA project. The Gwynns Falls Structural Sewer Rehabilitation in Environmental Sensitive Areas project is delayed due to rights-of-entry negotiation and acquisition. To mitigate the delay, the County separated the Gwynns Falls SRRR improvement projects; two of which are substantially complete; however, the Gwynns Falls Structural Sewer Rehabilitation in Environmental Sensitive Areas project has outstanding right-of-entry acquisitions. The County issued 15-day Notification letters to property owners of the outstanding right-of-entry agreements

regarding work to be performed. No responses were received so the County will move ahead with construction. To expedite this work, the County will utilize an on-call Contractor to complete the work. The work is expected to be completed by March 6, 2022.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Lisa K. Eicholtz, PE
Bureau Chief, Engineering and Construction

Control Document No. 408

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Pump Station Name	Frederick Road
Address	1809 Frederick Road
Date Of Discharge	10/29/2021
Duration Of Overflow	16 Mins.
Date Of Relevant Weather Conditions	10/29/2021
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	43,000
Receiving Waters	Tributary to Patapsco River
Identified Cause	Standby generator faulted during BGE power failure
Details Of Corrective Action Taken or Planned	Generator batteries were low. Replaced batteries.

Pump Station Name	Springdale A
Address	10508 Gateridge Road
Date Of Discharge	12/13/2021
Duration Of Overflow	1 Hrs. 9 Mins.
Date Of Relevant Weather Conditions	12/13/2021
Description Of Relevant Weather Conditions	Dry
Gallons Discharged	13,110
Receiving Waters	Lock Raven water shed
Identified Cause	Electrical failure
Details Of Corrective Action Taken or Planned	Electricians were able to bypass controls to get one pump operating and stop the overflow.

Non-Pump Station Overflow Structures – Metered

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date of Discharge	10/29/2021
Duration of Overflow	3 Hrs. 58 Mins.
Date of Relevant Weather Conditions	10/29/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	13,087
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet-weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	10/29/2021
Duration of Overflow	5 Hrs. 32 Mins.
Date of Relevant Weather Conditions	10/29/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	51,095
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	10/29/2021
Duration of Overflow	5 Hrs. 18 Mins.
Date of Relevant Weather Conditions	10/29/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	48,889
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	10/29/2021
Duration of Overflow	6 Hr. 34 Mins.
Date of Relevant Weather Conditions	10/29/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	223,283
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. Right-of-way and environmental permits are required for Phase II construction. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date of Discharge	10/29/2021
Duration of Overflow	3 Hrs. 39 Mins.
Date of Relevant Weather Conditions	10/29/2021
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	119,190
Receiving Waters	Maiden's Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		10/29/2021
Rain (inches)		2.94"-3.5"
SSO Name	SSO ID	
Alter Road	22	13,087
Southern Cross Drive	23A	51,095
Southern Cross	23B	48,889
Patterson Avenue	24	223,283
Overbrook Road & Medwick Garth	118	119,190
Marnat Road	113	
Aiken Avenue	41	
Queen Anne Drive	129	

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I (SSOs 22, 23A, 23B, 24) Contract 18180 SX0	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	On 1/26/21 the project achieved functional use. The Phase II project (Contract 20018 SX0) must be completed before eliminating the SSO structures.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24) Contract 20018 SX0	-	Gwynns Falls	3/22/2017	TBD	No	On 2/14/2017, the County submitted a time extension request with an undefined elimination date. A second time extension request with a definitive elimination date will be submitted after right-of-way acquisition and environmental permits are obtained and construction notice to proceed is issued for Contract 20018 SX0. Baltimore City is attempting to acquire an easement within the City that is needed for construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023	No	On 4/27/2020 the County submitted a time extension request to eliminate the overflow structure by 8/3/2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as 11/5/2019. On 9/23/2021, the County submitted a correction of records letter to confirm the new approved deadline of 8/3/2023. On January 4, 2022, the County submitted a Time Extension Request to eliminate the overflow structure by December 4, 2023. The time extension is necessary due to unanticipated construction site conditions. This project is 85% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a time extension request with an undefined SSO elimination date. A second time extension request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Millers Island	6/1/2022	Construction			
Turkey Point	6/1/2022	Construction			
Penwood Terrace	6/1/2023	Construction			
Stansbury Manor	3/20/2020	Construction (NTP 1/27/2022)	3/31/2021	4/20/2024	MAA property acquisition.
Corsica	6/1/2023	Construction			
Fort Howard	6/1/2023	Construction			
Lodge Forest Manor	3/20/2020	Bid Ready (Bid Opening 12/16/2021)	6/3/2021	10/20/2023	DNR easement acquisition.

Attachment C - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
10/22/2021	2 Railroad Avenue	10/27/2021	
10/29/2021	Alter Street and Southern Cross Drive		D
10/29/2021	Southern Cross Drive & Parsons Avenue		D
10/29/2021	3909 Southern Cross Drive		D
10/29/2021	3902 Patterson Avenue		D
10/29/2021	Overbrook Road and Medwick Garth		D
12/8/2021	5127 Clifford Road	12/9/2021	
12/8/2021	5001 Washington Boulevard		B
12/13/2021	4855 Carmella Drive	12/13/2021	
12/13/2021	3015 Delaware Avenue	12/21/2021	
12/16/2021	7008 Rockridge Road	12/17/2021	

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation

Status of SRRR Plan Implementation				
Sewershed	**Original Consent Decree Deadline**	**Date of Potential Delay Notification**	**Reason for Delay**	**Comments**
Patapsco	9/6/2021 Requested Date: 10/6/2024	9/2/2021 (Time extension request)	Right of entry acquisition	On September 6, 2021, The County submitted a time extension request for the Patapsco SRRR Plan Implementation. The Consent Decree deadline for completion certification of the Patapsco SRRR Plan is September 6, 2021 and the requested deadline is October 6, 2024. Implementation certification of the Patapsco SRRR Plan is contingent upon completion of the projects listed below: Patapsco Basin 7 Sewer Rehabilitation; April 6, 2024 Patapsco Basin 10 Sewer Rehabilitation; January 6, 2023 Patapsco Cedar Branch North Fork Relief Sewer; September 6, 2022; Notice to Proceed (17150 SX0) issued on 8/18/2022 Patapsco Structural Improvements; October 6, 2024
Delmar	4/18/2022	11/22/2019	Right of entry acquisition	On December 7, 2021, the County submitted a Time of Performance Extension request for the Delmar Sewershed Rehabilitation project. Private property rights-of-entry negotiation and acquisition was required for the Delmar Sewershed Sewer Rehabilitation Project, which has delayed completion of the design work. Additionally, the project has been delayed due to the time required to receive a permit from the Department of Natural Resources (DNR) for work in North Point State Park. The County received the permit on March 15, 2021. Acquisitions are now complete and the project has been advertised and notice to proceed for construction was issued on October 12, 2021.
Duck Creek	4/18/2022	2/5/2020	Expanded project scope	On December 7, 2021, the County submitted a Time of Performance Extension request for the Corsica Forcemain project. The Corsica Force Main Replacement project is located in an area of the County with multiple existing buried infrastructure systems. Additional design time and buried infrastructure field investigations were needed to locate and avoid potential utility conflicts.
Dundalk	4/18/2022	11/22/2019	Right of entry acquisition	
East Point	4/18/2022	11/22/2019	Right of entry acquisition	Post hoc: Potential Delay submitted January 4, 2021.
Essex	4/18/2022	12/10/2019	Right of entry acquisition/permits	
Gray Manor	4/18/2022	6/19/2019	State and Local Permitting	Post hoc: Potential Delay submitted for the Gray Manor Force Main Finite Element Assessment and Inspection. Project requires highly specialized

Status of SRRR Plan Implementation				
Sewershed	**Original Consent Decree Deadline**	**Date of Potential Delay Notification**	**Reason for Delay**	**Comments**
				equipment and technical expertise to complete, which significantly limits contractor/consultant availability.
Texas	4/18/2022	7/10/2019	Right of entry acquisition	On December 7, 2021, the County submitted a potential delay notification for the Texas Forcemain cathodic protection project. The Texas Force Main Cathodic Protection project requires highly specialized technical expertise to complete, which significantly limits contractor/consultant availability. Therefore, the County required additional time than originally anticipated to develop and advertise a contract to procure the specialized services.
Longquarter	4/18/2024	11/26/2019	Right of entry acquisition	
Redhouse Run	4/18/2024			
Whitemarsh	4/18/2024			
Stemmers Run	9/6/2024			
Gunpowder	4/18/2026			

Substantially Completed SRRR Plan implementations [1]				
Sewershed	**Original Consent Decree Deadline**	**Date of Potential Delay Notification**	**Reason for Delay**	**Comments**
Bird River	9/29/2020	3/15/2019	Right of entry acquisition	There are 3 assets (i.e. sewer and manholes) which represents approximately 60 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Bread & Cheese	9/29/2020 Requested date: 3/6/2022	5/28/2020 (Time extension request)	Right of entry acquisition	There are 127 asset (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding. Notice to Proceed was February 27, 2021. The outstanding structural repairs have no effect on the performance of the collection system.
Bengies	9/29/2020	3/15/2019	Right of entry acquisition	There are 96 assets (i.e. sewer and manholes) which represents approximately 100 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Cockeysville	9/29/2020	3/15/2019	Right of entry acquisition	There are 12 assets (i.e. sewer and manholes) which represents approximately 57 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Dead Run	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Gwynns Falls	9/6/2018	2/14/2017	Right of way acquisition	On September 6, 2018, the County certified substantial completion for the implementation of the Gwynns Falls Sewershed SRRR Plan with the exception

				of 23 structural repairs for which a potential delay was submitted to EPA and MDE. The outstanding structural repairs have no effect on the performance of the collection system. To date, 6 repairs remain outstanding and were completed with the Powder Mill Interceptor Phase 1 project, which achieved functional use on January 26, 2021. On December 7, 2021, the County submitted a Time of Performance Extension request for the Gwynns Falls ESA project. The Gwynns Falls Structural Sewer Rehabilitation in Environmental Sensitive Areas project is delayed due to rights-of-entry negotiation and acquisition. To mitigate the delay, the County separated the Gwynns Falls SRRR improvement projects; two of which are substantially complete; however, the Gwynns Falls Structural Sewer Rehabilitation in Environmental Sensitive Areas project has outstanding right-of-entry acquisitions. The County issued 15-day Notification letters to property owners of the outstanding right-of-entry agreements regarding work to be performed. No responses were received so the County will move ahead with construction. To expedite this work, the County will utilize an on-call Contractor to complete the work. The work is expected to be completed by March 6, 2022.
Herring Run	9/6/2018	8/15/2017 3/6/2018	Right of entry acquisition	There are 93 assets (i.e. sewer and manholes) which represents approximately 6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. Two of these properties have entered the condemnation process. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.
Jones Falls	9/6/2019		Right of entry acquisition	There are 10 assets (i.e. sewer and manholes) which represents approximately 0.6 percent of the total assets with structural repair recommendations that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed. The outstanding structural repairs have no effect on the performance of the collection system.

Orems	9/29/2020	9/7/2021 (Time extension request)	Right of entry acquisition	Design is complete for the Orems Basin 3 Relief Sewer. Contract 21144SX0 was awarded May 25, 2021. A time extension request was submitted on September 7, 2021. Post hoc: An updated time extension request was submitted on January 28, 2022.
Tributary 26	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.
Tributary 27	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Tributary 43	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.
Tributary 48	9/6/2017			Substantially completed; termination certification submitted May 18, 2021.
Tributary 78	2/11/2020			Substantially completed; termination certification submitted May 18, 2021.
West Low Level	9/6/2017			Substantially completed

[1] Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.

Pursuant to Paragraph 20 of the Consent Decree entered between Baltimore County and the United States Environmental Protection Agency (EPA) and the Maryland Department of the Environment (MDE), this document constitutes the required Annual Report for the period **January 1, 2021** through **December 31, 2021**.

The annual report is a periodic review of Baltimore County activities related to the accomplishment of the Consent Decree general and specific requirements. The report is required to address:

i. Sanitary Sewer Overflow (SSO) structure elimination progress
ii. Rainfall and Flow Monitoring Plan compliance
iii. Evaluation of rainfall and flow monitoring data
iv. Fats, Oils and Grease (FOG) Program updates
v. Illegal storm water discharges
vi. Pump station status
vii. Collection system model implementation status
viii. Supplemental collection system inspection progress
ix. Sewer cleaning progress
x. Collection system inventory progress
xi. Emergency Response Plan
xii. Building Backup Report
xiii. Annual update to the SSO characterization report

i. Sanitary Sewer Overflow (SSO) structure elimination progress

(a) Summarize progress in implementing approved schedules for the elimination of Non-Pump Station SSO structures

The listing of relief points is shown in Attachment A. Below is the status of the SSO elimination projects:

- 38 original SSOs (per CD Appendix A-2)
- 9 SSOs identified after CD effective date
- 3 SSOs reclassified as pump station SSOs
- 34 SSOs eliminated
- 10 SSOs scheduled for elimination

No SSO structures were eliminated during the reporting period.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

The original Consent Decree deadline for SSO elimination was March 22, 2017; however, on February 14, 2017, the County submitted a time of performance extension request due to completing a required Phase II archaeological investigation for the Maryland Historical Trust and resulting delay in obtaining permit approval from the U.S. Army Corps of Engineers (ACOE). The requested SSO elimination date was undefined since the determination from the archaeological investigation may have required realignment and re-design of the new relief sewer. Subsequently, the County obtained ACOE's permit and, to expedite project completion, the County separated the project into two (2) construction contracts.

On September 3, 2019, the County issued the notice to proceed for the Phase I construction project (18180 SX0). The project achieved functional use on January 26, 2021. The Phase II construction project requires right-of-way acquisition and environmental permits. After the right-of-way easements have been acquired, the environmental permits obtained and the Phase II construction project notice to proceed has been issued, the County will submit a second time of performance extension with a definitive date to eliminate the SSO structures.

Elimination of Non-Pump Station SSO Structures 41 and 129

The original Consent Decree deadline for SSO elimination was March 20, 2018; however on October 4, 2017 the County submitted a time of performance extension request due to private property easement acquisition. As stated in the time extension request, the requested SSO elimination date was undefined since the time to negotiate and acquire the easements was unknown. Subsequently, the right-of-entry agreements were finalized and the County completed design work. On October 3, 2019 the County awarded the construction project On January 4, 2022 the County submitted a second time of performance extension to eliminate the overflow structures by December 4, 2023.

Post hoc: On January 4, 2022, the County submitted a third time of performance extension due to unanticipated site conditions. The requested SSO elimination date was August 3, 2023.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

A summary of all County and EPA/MDE communication in during the reporting period related to SSO structures is shown below:

Date of Correspondence	From	To	Control ID	SSO ID	SSO Name	Subject
1/19/2021	County	EPA/ MDE	343	22, 23A, 23B, 24	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue	Request to waive stipulated penalties for 12/24/2020 discharges
4/12/2021	County	EPA/ MDE	350	22, 23A, 23B, 24, 129	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Queen Anne Drive	Request to waive stipulated penalties for 3/24/2021 discharges
6/23/2021	County	EPA/ MDE	359	41, 129	Aiken Avenue, Queen Anne Drive	Request to waive stipulated penalties for 6/11/2021 discharges
9/21/2021	County	EPA/ MDE	380	118, 129	Overbrook Road, Queen Anne Drive	Request to waive stipulated penalties for 9/1/2021 discharges
9/23/2021	County	EPA/ MDE	381	41, 129	Aiken Avenue, Queen Anne Drive	Correction of record for time of performance extension request
11/12/2021	County	EPA/ MDE	387	All		Response to 2018 SSO penalty invoice
11/29/2021	County	EPA/ MDE	388	22, 23A, 24A, 24 and 118	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Overbrook Road	Request to waive stipulated penalties for 10/29/2021 discharges

A summary of the County's SSO elimination and/or flow monitoring activities that were performed during the reporting period is provided in Attachment A.

(b) Summarize post-monitoring data after the elimination of a Non-Pump Station SSO structure

Flow monitoring activities will continue in accordance with Paragraph 7.C.v of the Consent Decree. Once sufficient flow monitoring data has been collected, the County will complete the hydraulic evaluation in accordance with Paragraph 7.C.v of the Consent Decree.

(c) Progress in implementing plans developed in response to certain discharges from Pump Station SSO structure(s)

New Stemmers Run Pump Station Action Plan
On November 30, 2020, a 2.1 million-gallon SSO discharge occurred at the New Stemmers Run Pump Station. A post-SSO field investigation determines that a contractor who was working for the County did not re-install an upstream manhole cover and, during a rain event that occurred later in the day, rising stream water flowed into the open manhole and overwhelmed the pump station. Since the SSO was caused by contractor negligence, no action plan is required.

Old Stemmer Run Pump Station Action Plan
On November 30, 2020, a 1.6 million-gallon SSO discharged occurred at the Old Stemmers Run Pump Station. A post-SSO field investigation determined that a contractor who was working for the County did not re-install an upstream manhole cover and, during a rain event that occurred later in the day, rising stream water flowed into the open manhole and overwhelmed the pump station. Since the SSO was caused by contractor negligence, no action plan is required.

Orems Road Pump Station Action Plan
On November 30, 2020, a 636,000-gallon SSO discharge occurred at the Orems Road Pump Station. A post-SSO investigation found a partially open manhole that may have resulted in the SSO discharge. The action plan was to install a temporary flow monitor upstream of the Orems Pump Station and review the recorded data to confirm that stream water inflow from an open manhole has been eliminated. The action plan has been implemented and the County is recording and reviewing the flow monitor data.

ii. Rainfall and Flow Monitoring Plan Compliance

(a) Summarize results of annual evaluation of numbers and placement of rain gauges and flow monitors

In accordance with Paragraph 9.B.i, the County continued to collect rainfall data as necessary to allow the characterization of flow from sewershed service areas, the characterization of known SSOs, the development or improvement of hydraulic models for the sewersheds, and evaluate the effectiveness of measures implemented to reduce I/I and to increase system capacity.

(b) Report any changes to the locations of gauges or flow monitors

A summary of the flow monitoring locations as of December 31, 2021 is provided in Attachment B. Maps of flow monitoring and rain gauge locations are provided in Map Attachments 1 and 2.

(c) Report on any deviations from the approved plan

None.

iii. Evaluation of Rainfall and Flow Monitoring Data

(a) Inflow/infiltration (I/I) evaluation progress (due 60 days prior to date of SRRR plan submittal)

This task is complete.

(b) Long-term capacity/peak flow management evaluation (due 60 days prior to date of SRRR plan submittal)

This task is complete.

iv. Fats, Oils and Grease (FOG) Program Updates

(a) Provide the results of the annual evaluation of the effectiveness of the modified FOG control program

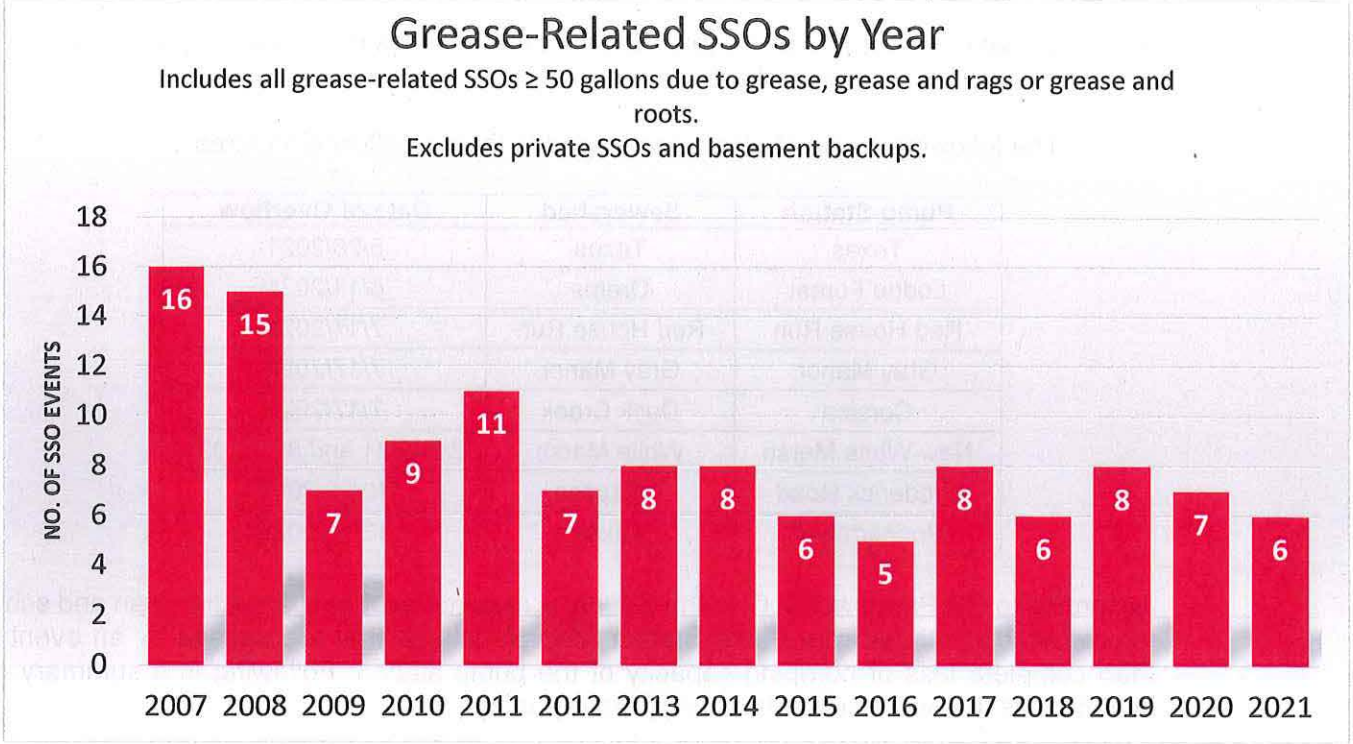
In accordance with Paragraph 11.I of the Consent Decree, the County continues to use the food service facility (FSF) inspection results and the performance indicators to evaluate the effectiveness of the modified FOG Program. The results of the modified FOG control program effectiveness are summarized in Paragraph (c) below. The County continues to use the FSF inspection results to identify and prioritize future inspection locations and frequency.

(b) Provide an updated database and map of grease generating facilities

A map and database of grease generating facilities with grease related sewer overflows are provided in Map Attachment 3.

(c) Evaluate the effectiveness of the modified FOG program

The evaluation of the modified FOG program attempted to determine a trend in the annual number of reportable FOG-related SSO discharges. Below are the analysis results:



The graph indicates a 63-percent decrease in the number of reportable FOG-related SSOs between 2007 and 2021. Since 2010, when the County implemented the modified FOG program, the number of reportable FOG-related SSOs has remained relatively stable; however, the County believes that there is an insignificant number of FOG-related SSOs to establish a trend.

v. Illegal stormwater discharges

During the reporting period, the County identified 8 potential illegal stormwater connections pending confirmation. There are also 6 potential illegal stormwater connections from previous reporting periods. A summary of the actions taken in response to each instance is provided in Appendix C.

vi. Pumping station status

(a) Report on the required annual evaluation of the backup power program

Baltimore County completed the evaluation of the effectiveness of its existing Pump Station backup power program, including the use of portable generators as backup power for multiple stations, in preventing SSOs relating to power outages.

During the reporting period, the fleet of six (6) portable generators that supplement on-site backup power at the County's stations was adequate to meet the emergency power needs. The percent of Pump Stations which are now equipped with on-site backup emergency power is ninety five percent (95%).

(b) Report on the development and implementation of any plans related to overflows due to power outages at pumping stations

The following pump stations discharged to their overflow structures:

Pump Station	Sewershed	Date of Overflow
Texas	Texas	5/26/2021
Lodge Forest	Orems	6/14/2021
Red House Run	Red House Run	7/17/2021
Gray Manor	Gray Manor	7/17/2021
Corsica	Duck Creek	7/17/2021
New White Marsh	White Marsh	8/7/2021 and 8/11/2021
Frederick Road	Patapsco	10/29/2021
Springdale A	Texas	12/13/0021

According to CD Paragraph 7.C.vi, the County is required to submit an action plan and schedule for certain discharges from Pump Station SSO Structures that are caused by an event other than complete loss of pumping capacity of the pump station. Following is a summary of the action plans that were submitted during the reporting period.

Texas Pump Station Action Plan

On August 19, 2021, the County submitted a revised Action Plan.

On May 26, 2021, pump shutdown at the Texas Pump Station resulted in an SSO discharge of 213,000 gallons. A post-SSO analysis indicated intermittent power disruption of the primary pump station electrical feed, which caused the four variable frequency drives (VFDs) to fault and shut down the pumps thereby resulting in the SSO discharge. The VFDs are set to automatically reset if they fault; however, due to a VFD's high consequence of failure, some VFD faults, such as those experienced on May 26, 2021, must be manually reset so that County crews can visually inspect the equipment before restarting the drives. It is suspected that the power disruption was of such short duration that the station's automatic transfer switch did not activate the secondary power feed. The County completed post-SSO equipment testing but could not replicate this type of power disruption to confirm the root cause of the VFD faults and the station has not experienced previous power disruptions that did not activate the secondary power feed. Since the separate and redundant power supply is the County- and MDE-approved backup power for this pump station and the County could not confirm the root cause of the power disruption, a plan to prevent further SSOs at the Texas Pump Station due to power outages is not needed.

Lodge Forest Pump Station Action Plan

On August 13, 2021, the County submitted a revised Action Plan.

On June 14, 2021, pump shutdown at the Lodge Forest Pump Station resulted in an SSO discharge of 83,000 gallons. When they arrived at the station, the County staff manually reset the master control center emergency generator breaker and returned the station to normal operation. A post-SSO analysis indicated that a possible power surge of the electrical feed disrupted power to the station. The station's emergency generator automatically started; however, it is suspected that the power surge tripped the generator breaker in the master control center, which prevented power to the pumps and resulted in the SSO discharge. Since the emergency generator supply is the County- and MDE-approved backup power for this pump station, a plan to prevent further SSOs at the Lodge Forest Pump Station due to power outages is not needed.

Red House Run Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary and secondary electrical feeds of the Red House Run Pump Station, thereby resulting in a 900,000 gallon discharge. Since the power loss to the primary and secondary pump station electrical feeds was caused by a storm event that is beyond the control of the County, a plan to prevent further SSOs at the Red House Run Pump Station due to power outages is not needed.

Gray Manor Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary and secondary electrical feeds of the Gray Manor Pump Station, thereby resulting in a 724,000 gallon discharge. Since the power loss to the primary and secondary pump station electrical feeds was caused by a storm event that is beyond the control of the County, a plan to prevent further SSOs at the Gray Manor Pump Station due to power outages is not needed.

Corsica Pump Station Action Plan

On July 17, 2021, a storm event caused power loss to the primary electrical feed of the Corsica Pump Station, which resulted in a 60,000 gallon discharge. The MDE- and County-approved backup electrical source for the station is a portable generator. When alerted of the power loss, a pump station crew was mobilized to the station with a portable generator; however, the power was restored and the station was operating normally by the time the crew arrived at the station. The action plan to prevent further SSOs at the Corsica Pump Station due to power outages is to install an on-site generator. Design work for the generator was included in the County's Corsica Pump Station rehabilitation construction project (County Contract 21162 SXO), which is in construction with a Notice to proceed date of January 27, 2022. The portable generator will remain the secondary power source until the permanent on-site generator is installed and the rehabilitation project is certified as complete.

New White Marsh Pump Station Action Plan

On August 7 and 11, 2021, power losses to the primary electrical feed of the New White Marsh Pump Station resulted in 772,000 and 901,000 gallon discharges, respectively. The MDE- and County-approved backup electrical source for the station is a secondary electrical feed; however, the station equipment did not automatically transfer to the secondary feed. A post-SSO investigation of the station's electrical system found that all of the station primary electrical breakers opened, which prevented the automatic transfer switch to transfer electrical power from the secondary feed. The County tested the breakers and programmable logic controllers (PLCs); however, all equipment was properly operating. As a precaution, County staff remained at the pump station during business hours to monitor station operation throughout the day. To simulate the power loss event, the County requested the Baltimore Gas & Electric company to stop the primary electrical service to the station. During the simulation, County crews identified a possible issue with the PLCs and further investigation and visual confirmation of equipment failure identified faulty PLCs; therefore, the action plan is to:

1. Replace the PLCs, which was completed on September 3, 2021
2. Have County staff remain at the pump station for 1 week after the PLC replacement is completed to confirm that the station is operating as normal

Frederick Road Pump Station Action Plan

On October 29, 2021, power loss to the primary electrical feed of the Frederick Road Pump Station resulted in a 43,000 gallon discharge. The MDE- and County-approved backup electrical source for the station is an on-site generator; however, the generator did not start when the

primary electrical feed lost power. The power to the primary feed was restored within 16 minutes and the pump station resumed operation. A post-SSO investigation indicated an issue with the generator's start up system; however, after the primary electrical feed power was restored, the County successfully test started the generator and completed a second successful test start the next day. Similar start up issues have not previously occurred at the pump station including during the weekly pump station preventive maintenance inspections. As a precaution, County staff replaced the generator start up battery; however, the successful post-SSO generator test starts indicate that there was no issue with the battery. Since the power loss to the primary pump station electrical feed was caused by a storm that is beyond the control of the County and the County could not replicate the generator start up issue and has not previously experienced similar issues at the pump station, a plan to prevent further SSOs at the Frederick Road Pump Station due to power outages is not needed.

Springdale A Pump Station

On December 13, 2021 power loss of the motor control center at the Springdale A Pump Station resulted in a 13,110-gallon discharge. The MDE- and County-approved backup electrical source for the station is an on-site generator. A post-SSO investigation of the station determined that the electrical terminal for Pump Motor 2 overheated and caused a small localized fire, which damaged other wiring and tripped the station's motor control center primary and secondary electrical feeds. Once they arrived on site, the pump station crew connected a mobile generator to restore power and stop the overflow. The most recent preventive maintenance inspection, which was completed on November 3, 2021 did not identify any issue with Pump Starter 2, the associated electrical wiring or terminal or Motor 2 and there has been no similar electrical issue at the station. The action plan is to remove the destroyed terminal, replace all damaged control wiring and install new wiring from Pump Starter 2 to Motor 2. The new wiring was installed and all critical wiring repairs were completed on December 14, 2021. The station is now operating as normal.

Due to the power outages experienced at multiple pump stations during the reporting period, the County is coordinating with Baltimore Gas & Electric Company to develop a post-SSO investigation process. The purpose of the investigation process is to better understand and improve the resiliency and sustainability of the pump station electrical power feeds.

(c) Pump station inspection deficiencies list

A report on the deficiencies discovered during the inspections of the County's pumping stations is provided in Attachment D.

(d) Pump station deficiencies discovered during Engineering Evaluation/Condition Assessments

This task is complete.

(e) Summarize the progress in implementing a pump station information management system

This task is complete.

vii. Collection System Model Implementation Status

This task is complete.

viii. Supplemental Collection System Inspection Progress

This task is complete.

ix. Sewer Cleaning Progress

This task is complete.

x. Collection System Inventory Progress

This task is complete.

xi. Emergency Response Plan

On April 28, 2021 the County submitted to EPA/MDE the 2021 Emergency Response Plan.

Post hoc: In response to EPA's review comments that were received on February 2, 2022, the County will submit to EPA/MDE the updated 2022 Emergency Response Plan, when finalized.

xii. Building Backup Report

Maps of Building Backups since the last submission are provided in Map Attachment 4.

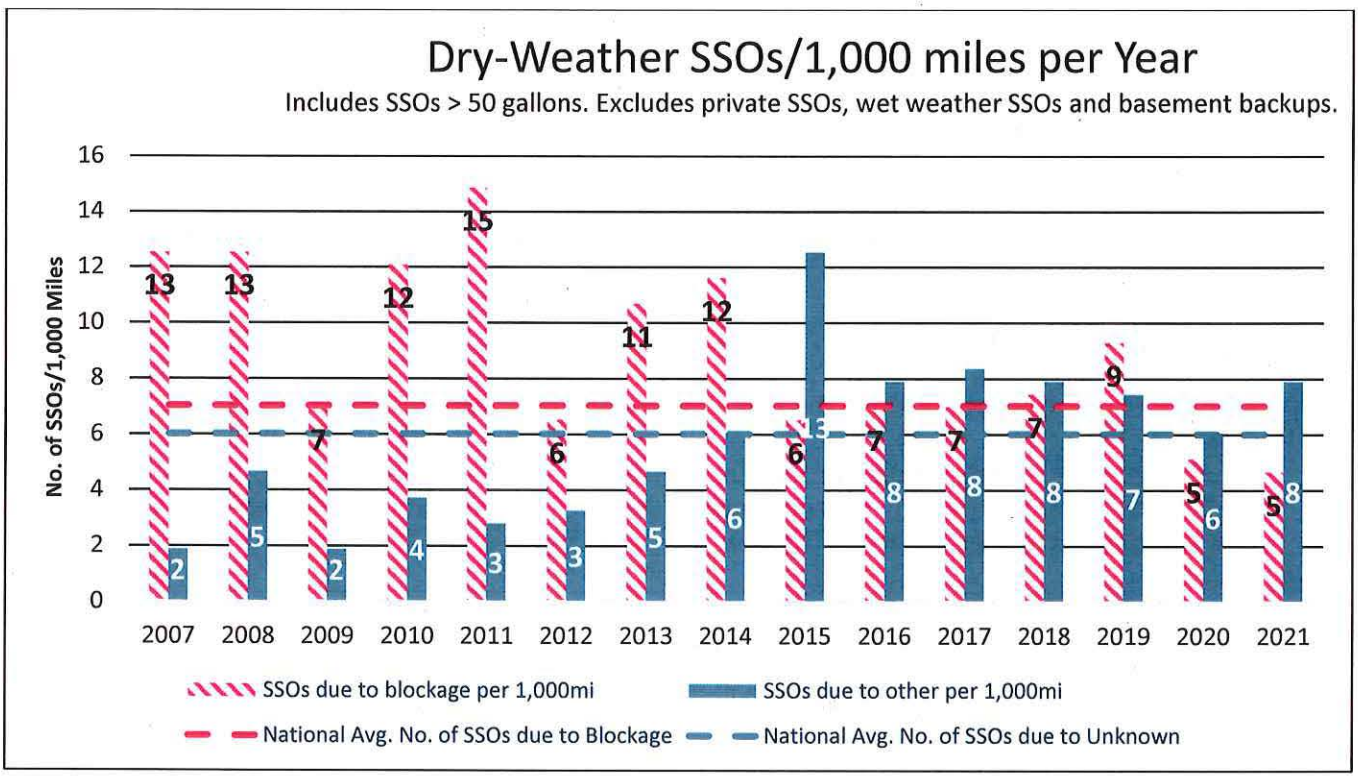
There were 63 reported building backups (including occurrences with zero gallon volumes) during the reporting period, as summarized in Map Attachment E. A summary of reported building backup history is provided below:

Year	Total Number of Reported Backups (ea.)	Percent Increase/Decrease from Previous Year (%)
2006	113	---
2007	48	-57.5
2008	77	60.4
2009	44	-42.9
2010	90	104.5
2011	241	167.8
2012	139	-42.3
2013	217	56.1
2014	346	59.5
2015	143	-58.6
2016	136	-4.9
2017	71	-47.8
2018	345	386
2019	80	-76.8
2020	119	48.75
2021	63	-47.1

xiii. Annual Update of SSO Characterization Report

In accordance with Paragraph 7.B.ii of the Consent Decree, the updated SSO characterization maps are provided in Map Attachment 5.

Based on the data available in EPA's report to Congress titled "Impacts and Control on CSOs and SSOs", dated August 2004, there are, on average, approximately 7 dry-weather SSOs due to pipeline blockages per 1,000 miles per year and an additional 6 dry-weather SSOs with unknown causes per 1,000 miles per year. Below is a summary per year of Baltimore County's dry-weather SSOs due to a pipeline blockage.



As shown in the above graph, since 2015, the number of SSOs per year due to roots, grease and debris is approximately equal to the national average; however, in the same time period, the number of SSOs per year due to unknown/other causes, such as broken pipe, vandalism, etc. has increased compared to the prior 7 year (2007-2014) time frame.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Attachment D - Status of SRRR Plan Implementation 26

i. Executive Summary

The County's corrective action recommendation plan is being implemented, is ongoing and continuing. This report documents progress made during the reporting period. Baltimore County (County) accomplished the following milestones for Consent Decree-related projects:

- Contract advertisements:
  - Bengies and Bird River Structural Improvements construction (21169 SXO)
  - Inspection/assessment contract for the Gray Manor Force Main Finite Element Assessment and Inspection
  - Cockeysville Force Main and Texas Pump Station Influent (21163 SXO)
  - Gray Manor Sewershed Relief Sewers (20130 SXO)
- Contract awards:
  - Essex Sewer Replacement construction (21136 SXO)
  - Assessment contract for the Texas Force Main Cathodic Protection
- Construction notice to proceed issuance:
  - Herring Run Relief Sewer, Basins 17 and 33 (16131 SXO)
  - Stansbury Manor Pumping Station Replacement (21135 SXO)
  - Corsica Pump Station Improvement (21162 SXO)
  - Fort Howard Pump Station Improvement (20175 SXO)
  - Lodge Forest Manor Pump Station Improvement (21003 SXO)

Additionally, the County continued the following work for Consent Decree-related projects:

- Construction for the:
  - Bread and Cheese Sewer Rehabilitation
  - Essex Structural Rehabilitation
  - Gray Manor Sewer Structural Rehabilitation
  - East Branch Herring Run Relief Sewer (14117 SXO)
  - Millers Island Pump Station Improvement
  - Turkey Point Pump Station Improvement
  - Penwood Terrace Pump Station Improvement
  - Essex Structural Sewer Rehabilitation
  - Gray Manor Sewer Rehabilitation
  - Gunpowder Sewer Structural Repairs–On Road
  - Cedar Branch North Fork Relief Sewer (17150 SXO)
  - Patapsco Basin 10 Sewer Rehabilitation
- Design work for the:
  - Cockeysville and Texas Structural Sewer Rehabilitation
  - Gray Manor Interceptor Rehabilitation
  - Stansbury Manor Force Main Replacement
  - Powder Mill Phase II and Phase III
  - Glen Echo Interceptor Relief Sewer
  - Duck Creek Structural Rehabilitation

    - Corsica Force Main Replacement
    - Dundalk Sewershed Sewer Rehabilitation
    - Eastpoint Force Main Relocation
    - Gunpowder Pump Station to White Marsh Pump Station System Improvements
    - Gunpowder Relief Sewer
    - Gunpowder Sewer Structural Repairs-Off Road
    - Herring Run Sewer Structural Rehabilitation Phase II
    - Long Quarter Force Main Replacement
    - Long Quarter South Interceptor Rehabilitation
    - Long Quarter North Sewer Rehabilitation
    - Long Quarter South Sewer Rehabilitation
    - Patapsco Basin 7 Rehabilitation-Road/Off Road
    - Patapsco Sewershed Structural Rehabilitation
    - Redhouse Run Interceptor Relief Sewer
    - Redhouse Run Rehabilitation Phase 2
    - Redhouse Run Rehabilitation Phase 3
    - Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation
    - Stemmers Run Basins 02B and 3 Rehabilitation/Off-Road
    - Whitemarsh Sewer Structural Rehabilitation (West)
    - Whitemarsh Structural Sewer Rehabilitation (East)
- Procuring a contractor for the:
    - Gwynns Falls Structural Lining in Environmentally Sensitive Areas
    - Redhouse Run Pipeline Rehabilitation Phase 1
- Advertisement preparation for the:
    - Trappe Road Sewer Main Replacement projects

ii. Introduction

Pursuant to Paragraph 19 of the Consent Decree between the County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **January 1, 2021** through **March 31, 2022.** The Quarterly Report includes historical information, work progress and contracts in place during the reporting period.

The quarterly report documents activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

- Non-Pump Station and Pump Station SSO Structure discharges
- Construction project status
- Collection system inspection
- SRRR plan implementation/progress
- FOG program
- Supplemental Environmental Project status, and
- Compliance issues
- Cleaning
- Performance Assessment Preparation

iii. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

iv. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

v. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

vi. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous capital improvement projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delays to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

vii. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

viii. Supplemental Environmental Project Status

Completed.

ix. Compliance Summary

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance project achievements:

a. **Consent Decree projects or requirements certified as complete during the reporting period:**

Cedar Beach/Back River Neck Force Main Transition Manhole Rehabilitation

Project certified as substantially completed on March 31, 2022.

Chesaco Park Force Main Repair Valve Vault Waterproofing

Project certified as substantially completed on February 28, 2022.

Delmar Force Main - Valve Vault Waterproofing

Project certified as substantially completed on March 1, 2022.

Eastpoint Relief Sewer

Project certified as substantially completed on January 14, 2022.

Essex and Duck Creek (Bridge) Force Main Exterior Cleaning

Project certified as substantially completed on January 4, 2022.

Miller Island Force Main Valve Vault Waterproofing

Project certified as substantially completed on March 1, 2022.

Turkey Point Force Main Valve Vault Waterproofing

Project certified as substantially completed on February 28, 2022.

Willow Avenue Force Main Valve Vault Waterproofing

Project certified as substantially completed on March 1, 2022.

Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

Bengies and Bird River Structural Improvements Project (Contract 21169 SXO)

On February 10, 2022, the County submitted a time of performance extension request for the Bengies and Bird River Structural Improvements Project. The Consent Decree deadline for completing the project was September 29, 2020. As described in the County's March 15, 2019 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. Acquisitions are now complete and the contract had a bid opening on April 25, 2022. The requested deadline to complete the project is September 6, 2023.

Bread and Cheese Sewer Rehabilitation Project

On March 3, 2022, the County submitted a second time of performance extension request for the Bread and Cheese Sewer Rehabilitation Project. The Consent Decree deadline for completing the project was September 29, 2020. As stated in the original May 28, 2020 time of performance extension request, the County acquired the last right of entry agreement and began procuring a contract

to complete the construction work. During construction, the contractor identified 54 sewers that were originally planned to have miscellaneous in-situ spot repairs. The original scope of work was expanded to include the rehabilitation of the entire length of the 54 sewers. The expanded scope of work slightly delayed completion of the project; therefore, the County has requested an additional 3 months to complete the project. The new requested deadline is June 6, 2022.

Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SXO)

On February 8, 2022, the County submitted a time of performance extension request for the Cockeysville (and Texas) Structural Sewer Rehabilitation project. The Consent Decree deadline for completing the project was September 29, 2020. As stated in the County's March 15, 2019 potential delay notification letter, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. Acquisitions are now completed and the projected will be advertised as soon as the permits have been acquired. The requested deadline is October 6, 2023.

Gwynns Falls Structural Lining in Environmentally Sensitive Areas Project

On March 3, 2022, the County submitted a second time of performance extension request for the Gwynns Falls Structural Lining in Environmentally Sensitive Areas project. The Consent Decree deadline for completing the project was September 6, 2018. As stated in the original December 7, 2021 time of performance extension request, the County issued 15-day notification letters to the property owners with the outstanding right-of-entry agreements. No responses were received; therefore, the County began procuring an on-call contractor to complete the construction work. The work was expected to be completed by May 6, 2022; however, contractor procurement has taken longer than originally anticipated, which has delayed completion of the construction work. The County is processing the construction contract procurement documents and, after complete, will issue notice to proceed to the on-call contractor. The new requested deadline is October 6, 2022.

Herring Run Relief Sewer, Basins 17 and 33 Project (Contract 16131 SXO)

On February 28, 2022, the County submitted a time of performance extension request for the Herring Run Relief Sewer, Basins 17 and 33 project. The Consent Decree deadline for completing the project was September 6, 2018. As described in the County's May 7, 2014 potential delay notification, the project may experience delays due to private property rights-of-entry negotiation and acquisition. The County has completed all right-of-entry negotiations except for one property that is now being acquired through the County's condemnation process and anticipated to be completed in November 2022. The County issued notice to proceed for construction work for on February 11, 2022 while condemnation is ongoing. The relief sewer will be constructed upstream and downstream of the planned condemned property. Once condemnation is

finalized, the County will complete construction of the portion of the relief sewer that is being delayed by condemnation. The requested deadline is September 6, 2023.

Orems Basin 03 Relief Sewer Project (Contract 21144 SXO)

On January 28, 2022, the County submitted a second time of performance extension request for the Orems Basin 03 Relief Sewer project. The Consent Decree deadline to complete the project was September 29, 2020. As stated in the original September 7, 2021 time of performance extension request, the construction contract notice to proceed for the project was issued on August 2, 2021. However, on October 12, 2021, the contractor informed the County that pipe material procurement may delay project completion. Despite the contractor's continued efforts to resolve the procurement issue, the County submitted the second time of performance extension request. During the 4th quarter of 2021, the low bidder defaulted on the contract. The bond holder is arranging with a contractor to complete this contract. The new requested deadline is June 22, 2022.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

i) Aiken Avenue and Queen Anne Drive SSO Elimination (Contract 14117 SXO)

On January 4, 2022, the County submitted a time of performance extension request to eliminate the Aiken Avenue (SSO 41) and Queen Anne Drive (SSO 129) sanitary sewer overflow structures. The Consent Decree deadline to complete the eliminations is August 3, 2023. The time extension request is needed due to unanticipated construction site conditions. The requested deadline is December 4, 2023.

ii) Long Quarter Force Main Testing Project

On January 18, 2022, the County submitted a potential delay notification for the Long Quarter Force Main Testing project. The Consent Decree deadline to complete the project is April 18, 2024. The project requires highly specialized equipment and technical expertise to complete, which significantly limits contractor/consultant availability. Therefore, the County required additional time than originally anticipated to develop and advertise a contract to procure the specialized services. The County will submit a time of performance request for the project, if needed.

iii) Turkey Point Pump Station Improvement Project (Contract 19159 SXO)

The Consent Decree deadline to complete the Turkey Point Pump Station Improvement Project is June 1, 2022. In March 2022, the County was informed by the construction contractor that supply chain issues will delay delivery of the

pump station's permanent backup generator and; therefore, substantial completion of the project. The pump station is anticipated to be operational by the June 1, 2022 deadline and will be powered by the primary electrical feed service; however, any electrical service disruption will be mitigated by a temporary backup generator until the permanent generator is installed, tested and the County issues substantial completion of the project. Since the pump station will be operational by the June 1, 2022 Consent Decree deadline, a time of performance extension request is not needed.

iv) Cockeysville SRRR Plan Implementation

Cockeysville Force Main Lining Project (Contract 21163 SXO)

On January 28, 2022, the County submitted a time of performance extension request for the Cockeysville Force Main Lining project. The Consent Decree deadline to complete the project was September 29, 2020. As described in the County's March 15, 2019 potential delay notification, the project requires additional time to complete the design work including adding to the project other sewer structural repair work, which is located in the same sewer service area. The County believes that expanding the design and construction scope of work maximizes the County's financial and contractor resource efficiencies; however, the expanded scope of work further delayed the project. The contract has a bid opening scheduled for May 3, 2022. The requested deadline is April 6, 2023.

v) Delmar SRRR Plan Implementation

Delmar SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Delmar SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Delmar Sewershed. The requested deadline is September 18, 2024.

The following projects are currently in design:

- Glen Echo Interceptor Relief Sewer – reference project summary below.

The following projects are currently in construction:

- Delmar Sewershed Sewer Rehabilitation – time of performance extension request submitted on December 7, 2021. The requested deadline is January 10, 2023.
- Lodge Forest Manor Force Main Transition Manhole Rehabilitation – work completed on March 22, 2022.

Glen Echo Interceptor Relief Sewer Project

On March 2, 2022, the County submitted a time of performance extension request for the Glen Echo Interceptor Relief Sewer. The Consent Decree deadline to complete the project is April 18, 2022. As described in the County's January 18, 2022 potential delay notification, the project has been delayed due to the time required to negotiate and acquire private property easements. After five (5) years of communication with the Maryland Department of Natural Resources (DNR), the County was recently informed that DNR is not the property owner. Since the property owner(s) are unknown, the County is proceeding with condemnation. The requested deadline is September 18, 2024.

Lodge Forest Manor Force Main Cleaning Project

On March 24, 2022 the County submitted a time of performance extension request for the Lodge Forest Manor Force Main Cleaning project. The Consent Decree deadline to complete the project is April 18, 2022. As stated in the County's September 2, 2021 potential delay notification, the County will complete supplemental inspection/testing of the Lodge Force Manor force main to confirm that force main cleaning is necessary. The supplemental inspection/testing will be performed after the County completes the Lodge Forest Manor Pump Station Improvement Project. On June 3, 2021, the County submitted a time of performance extension request for the Lodge Forest Manor Pump Station Improvement project to extend the Consent Decree deadline for the project to October 20, 2023. The County will complete supplemental inspection/testing of the Lodge Forest Manor force main to assess the condition of the force main. The supplemental inspection/testing will be performed after the County completes the Lodge Forest Manor Pump Station Improvement Project. The requested deadline to complete the Lodge Forest Manor Force Main Cleaning project is March 18, 2024.

vi) Duck Creek SRRR Plan Implementation

Duck Creek SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Duck Creek SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Duck Creek Sewershed. The requested deadline is May 18, 2024.

The following project is currently in design:

- Duck Creek Structural Rehabilitation – reference project summary below

Duck Creek Structural Rehabilitation Project

On February 1, 2022, the County submitted a time of performance extension request for the Duck Creek Structural Rehabilitation project. The Consent Decree

deadline to complete the project is April 18, 2022. As described in the County's February 5, 2020 potential delay notification, the project requires extra time to complete design work due to the addition of sewer structural repair work to the project, which is located in the same service area. The County believes that expanding the design and construction scope of work maximizes the County's financial and contractor resource efficiencies; however, the expanded scope of work delayed the project. The requested deadline is May 18, 2024.

vii) Dundalk SRRR Plan Implementation

Dundalk SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Dundalk SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Dundalk Sewershed. The requested deadline is September 18, 2027.

The following project is currently in design:

- Dundalk Sewershed Sewer Rehabilitation – reference project summary below

Dundalk Sewershed Sewer Rehabilitation Project

On March 3, 2022, the County submitted a time of performance extension request for the Dundalk Sewershed Sewer Rehabilitation project. The Consent Decree deadline to complete the project is April 18, 2022. As described in the County's November 22, 2019 potential delay notification, multiple private property rights-of-entry must be negotiated and acquired for the project, which has delayed completion of the project. Design work is complete; however, there are remaining outstanding right-of-entry acquisitions. The requested deadline is January 18, 2027.

viii) Eastpoint SRRR Plan Implementation

Eastpoint SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Eastpoint SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Eastpoint Sewershed. The requested deadline is June 18, 2024.

The following project is currently in design:

- Eastpoint Force Main Relocation – reference project summary below

The following project is currently in construction:

- Eastpoint Sewershed Sewer Rehabilitation – reference project summary below

Eastpoint Force Main Relocation Project

On February 10, 2022, the County submitted a time of performance extension request for the Eastpoint Force Main Relocation project. The Consent Decree deadline to complete the project is April 18, 2022. The project requires additional time to complete the design work and acquire anticipated regulatory permits. The requested deadline is June 18, 2024.

Eastpoint Sewershed Sewer Rehabilitation Project (Contract 18141 SXO)

On March 3, 2022, the County submitted a time of performance extension request for the Eastpoint Sewershed Sewer Rehabilitation Project. The Consent Decree deadline to complete the project is April 18, 2022. As described in the County's January 4, 2022 potential delay notification, private property right-of-entry negotiation and acquisition were required for the project, which delayed completion of the design work. Acquisitions are now complete. Notice to proceed was issued on December 1, 2021. The requested deadline is August 25, 2022.

ix) Essex SRRR Plan Implementation

Essex SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Essex SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Essex Sewershed. The requested deadline is April 18, 2023.

The following projects are currently in construction:

- Essex Sewer Replacement – reference project summary below
- Essex Structural Sewer Rehabilitation – reference project summary below
- Marlyn Manor Force Main Transition Manhole Rehabilitation – work completed on March 22, 2022

Essex Sewer Replacement Project (Contract 21136 SXO)

On February 10, 2022, the County submitted a time of performance extension request for the Essex Sewer Replacement project. The Consent Decree deadline to complete the project is April 18, 2022. As stated in the County's September 2, 2021 potential delay notification, additional time is needed to complete supplemental field investigations and alternatives analysis and to revise the project scope of work accordingly. Design work is complete. Notice to proceed was issued on February 4, 2022. The requested deadline is April 18, 2023.

Essex Structural Sewer Rehabilitation Project (Contract 18110 SXO)

On March 29, 2022, the County submitted a time of performance extension request for the Essex Structural Rehabilitation Project. The Consent Decree deadline to complete the project is April 18, 2022. Notice to proceed for the project was issued on August 2, 2021. On March 8, 2022, the contractor provided an updated project scheduled which informed the County that construction completion is anticipated on August 30, 2022 due to COVID-related delays and pipe material procurement issues. The requested deadline to complete the project is October 18, 2022.

Essex Force Main Replacement Projects

The Essex SRRR Plan included a recommendation to increase the size of the Essex (Submarine) and Essex (Bridge) force mains. In 2020, the force mains were relocated to accommodate the City of Baltimore Back River Wastewater Treatment Plant Headworks Project. The size of approximately half of both force mains was increased on that date. The force main work that has been completed is expected to change hydraulic conditions, reducing the likelihood of model-predicted sanitary sewer overflows at the Essex Pump Station. Additionally, the significant amount of recently-completed sewer rehabilitation work that is located in the pump station tributary area is expected to reduce the amount of flow to the Essex Pump Station, which may preclude further work on either force main. The County will analyze the actual and model-predicted hydraulic conditions of the Essex Pump Station and both force mains as part of the Essex Sewershed Performance Assessment to confirm that no additional force main work is needed.

x) Gray Manor SRRR Plan Implementation

Gray Manor SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Gray Manor SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Gray Manor Sewershed. The requested deadline is July 18, 2025.

The following project is currently in design:

- Gray Manor Interceptor Rehabilitation – reference project summary below

The following projects are currently in construction:

- Gray Manor Structural Sewer Rehabilitation – reference project summary below
- Old Battle Grove Force Main Transition Manhole Rehabilitation – work completed on March 22, 2022

The following projects are currently awaiting contract award:

- Gray Manor Force Main Finite Element Assessment (FEA) and Inspection – reference project summary below

The following projects have a contract awarded and are pending assignment to a consultant:

- Gray Manor Sewershed Relief Sewers – reference project summary below

Gray Manor Interceptor Rehabilitation Project

On March 2, 2022, the County submitted a time of performance extension request for the Gray Manor Interceptor Rehabilitation Project. The Consent Decree deadline to complete the project is April 18, 2022. Completing the design work has been delayed due to private property right-of-entry agreement acquisition and expanding the project's scope of work by moving some structural repair work from the Gray Manor Sewer Structural Rehabilitation project. The requested deadline is July 18, 2025.

Gray Manor Sewer Structural Rehabilitation Project (19003 SXO)

Notice to proceed was issued on January 4, 2021. On January 27, 2022, the County submitted a time of performance extension request for the Gray Manor Sewer Structural Rehabilitation project. The Consent Decree deadline to complete the project is April 18, 2022. The project requires additional time to clean and prepare the sewers for rehabilitation work. The cleaning efforts are taking longer to complete than anticipated due to excessive tuberculation that is suspected to originate from an upstream industrial discharger. The requested deadline is July 18, 2022.

Gray Manor Force Main Finite Element Assessment (FEA) and Inspection Project

On March 10, 2022, the County submitted a time of performance extension request for the Gray Manor Force Main FEA and Inspection project. The Consent Decree deadline to complete the project is April 18, 2022. As stated in the County's January 18, 2022 potential delay notification, additional time is needed to develop and advertise a contract to procure the specialized services for the project. The County has advertised a contract for inspection services and anticipates award in spring 2022. The first assignment under the contract will be an inspection and FEA of the Gray Manor force main. The requested deadline is February 18, 2023.

Gray Manor Sewershed Relief Sewers Project (Contract 20130 SXO)

On March 16, 2022, the County submitted a time of performance extension request for the Gray Manor Sewershed Relief Sewers project. The project has since been separated into three projects – (1) Lynch Road Sewer Replacement project, (2) North Point Boulevard Replacement project and (3) Trappe Road

Sewer Main Replacement project. The Consent Decree deadline to complete the projects is April 18, 2022. Design is complete for all three projects and the County is tentatively scheduled to advertise the construction contracts in March 2022. The projects have been delayed due to the time required to obtain the required environmental permits. The requested deadline for three relief sewer contracts is June 18, 2023.

xi) Orems SRRR Plan Implementation

Stansbury Manor Force Main Replacement

On March 16, 2022, the County submitted a time of performance extension request for the Stansbury Manor Force Main Replacement project. The Consent Decree deadline to complete the project was September 29, 2020. The project has been delayed due to the time required to obtain right-of-way access with various property owners. Contaminated soil along the preferred force main alignment was recently discovered. This requires that the alignment be re-designed. The requested deadline is March 9, 2025.

xii)Texas SRRR Plan Implementation

Texas SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Texas SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Texas Sewershed. The requested deadline is October 6, 2022.

The following projects are currently in design:

- Cockeysville and Texas Structural Rehabilitation – reference project summary below

The following projects have a contract awarded and are pending assignment to a consultant:

- Texas Force Main Cathodic Protection – reference project summary below

Cockeysville and Texas Structural Rehabilitation Project (Contract 21294 SXO)

On February 28, 2022, the County submitted a time of performance extension request for the (Cockeysville and) Texas Structural Rehabilitation project. The Consent Decree deadline to complete the project is April 18, 2022. As stated in the County's July 10, 2019 potential delay notification letter, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. Once the remaining permits are acquired, the project will be advertised. Advertisement is expected in May 2022. The requested deadline is October 6, 2023.

Texas Force Main Cathodic Protection Project

On February 22, 2022, the County submitted a time of performance extension request for the Texas Force Main Cathodic Protection project. The Consent Decree deadline to complete the project is April 18, 2022. As stated in the County's December 7, 2021 potential delay notification, the project requires highly specialized technical expertise to complete the work; therefore, the County advertised and recently awarded a contract to procure the specialized services needed for this analysis. One of the first studies to be assigned under the new contract is to evaluate the cathodic protection requirements for the Texas Force Main. The requested deadline is April 18, 2023.

Alter Road	22	0
Southern Cross Drive	23A	0
Southern Cross	23B	0
Patterson Avenue	24	0
Overbrook Road & Medwick Garth	118	0
Marnat Road	113	0
Aiken Avenue	41	0
Queen Anne Drive	129	0

Attachment B - Construction Non-Pump Station SSO Capital Project Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I (SSOs 22, 23A, 23B, 24) Contract 18180 SX0	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	On 1/26/21 the project achieved functional use. The Phase II project (Contract 20018 SX0) and Phase 3 project must be completed before eliminating the SSO structures.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24) Contract 20018 SX0	-	Gwynns Falls	3/22/2017	TBD	No	On 2/14/2017, the County submitted a time extension request with an undefined elimination date. A second time extension request with a definitive elimination date will be submitted after right-of-way acquisition and environmental permits are obtained and construction notice to proceed is issued for Contract 20018 SX0. Easement acquisition was unsuccessful so it is being redesigned.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023	No	On 4/27/2020 the County submitted a time extension request to eliminate the overflow structure by 8/3/2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as 11/5/2019. On 9/23/2021, the County submitted a correction of records letter to confirm the new approved deadline of 8/3/2023. On 1/4/2022, the County submitted a Time Extension Request to eliminate the overflow structure by 12/4/2023. The time extension is necessary due to unanticipated construction site conditions. This project is approximately 85% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a time extension request with an undefined SSO elimination date. A second time extension request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

QUARTERLY REPORT – SECOND QUARTER 2022
CONSENT DECREE CIVIL NO: AMD 05-2028
(Reference DOJ Case No. 90-5-1-1-4402/2)

Enclosed you will find our submittal of the referenced Quarterly Report. This is to advise that we have submitted this report by the due date as required by Chapter VI, REPORTING REQUIREMENTS, Section 19. A. of the Decree.

Please advise us of any questions you may have regarding this report.

Sincerely,

Lisa K Eicholtz

Non-Pump Station Overflow Structures – Metered 25
Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring 26
Attachment B - Construction Non-Pump Station SSO Capital Project Status 27
Non-Pump Station SSO Structures 28
Pump Station Rehabilitation, Repair and Replacement 29
Attachment C - CCTV in Response to an SSO 30
Attachment D - Status of SRRR Plan Implementation 32

i. Executive Summary

The County continues implementing the corrective action recommendation. This report documents progress made during the reporting period. Baltimore County (County) accomplished the following milestones for Consent Decree-related projects:

- Contract advertisements:
  - Corsica Force Main Replacement (21082 SX0)
  - Cockeysville and Texas Structural Repairs (21294 SX0)
- Contract awards:
  - Orems Basin 03 Relief Sewer (21140 SX0)

Additionally, the County continued the following work for Consent Decree-related projects:

- Construction for:
  - Cedar Branch North Fork Relief Sewer
  - Corsica Pump Station Improvement
  - Delmar Sewershed Sewer Rehabilitation
  - East Branch Herring Run Relief Sewer (SSOs 41 & 129)
  - Eastpoint Sewershed Sewer Rehabilitation
  - Essex Sewer Replacement
  - Essex Structural Sewer Rehabilitation
  - Fort Howard Pump Station Improvement
  - Gray Manor Structural Sewer Rehabilitation
  - Gunpowder Sewer Structural Repairs-On Road
  - Herring Run Relief Sewer, Basin 17 & 33
  - Lodge Forest Manor Pump Station Improvement
  - Lower Powder Mill Sewer Rehabilitation
  - Millers Island Pump Station Improvement
  - Patapsco Basin10 Sewer Rehabilitation
  - Penwood Terrace Pump Station Improvement
  - Redhouse Run Pipeline Rehabilitation Phase 1
  - Stansbury Manor Pumping Station Replacement
  - Turkey Point Pump Station Improvement
- Procuring a contractor for:
  - Bengies and Bird River Structural Repairs (Bengies)
  - Bengies and Bird River Structural Repairs (Bird River)
  - Cockeysville and Texas Structural Repairs (Cockeysville)
  - Cockeysville and Texas Structural Repairs (Texas)
  - Cockeysville Force Main & Texas Pump Station Influent
  - Corsica Force Main Replacement
  - Gray Manor Force Main FEA & Inspection
  - Gwynns Falls Structural Lining in Environmentally Sensitive Areas
  - Lynch Road Sewer Replacement
  - North Point Boulevard Sewer Replacement
  - Orems Basin 03 Relief Sewer

    - Texas Force Main Cathodic Protection
    - Trappe Road Sewer Main Replacement projects
- Design work for:
    - Duck Creek Structural Rehabilitation
    - Dundalk Sewershed Sewer Rehabilitation
    - Eastpoint Force Main Relocation
    - Glen Echo Interceptor Relief Sewer
    - Gray Manor Interceptor Rehabilitation
    - Gunpowder Relief Sewer
    - Gunpowder Structural Sewer Repairs - Off Road
    - Gunpowder PS to WM PS System Improvement (GP FM Replacement) Cowpens Relief
    - Herring Run Sewer Structural Rehabilitation Phase II
    - Jennifer Branch Relief Sewer
    - Long Quarter North Sewer Rehabilitation
    - Long Quarter South Sewer Rehabilitation
    - Long Quarter Force Main Replacement
    - Patapsco Basin 7 Rehabilitation – Roads/Off Road
    - Patapsco Sewershed Structural Rehabilitation
    - Powder Mill Relief Sewer Phase III
    - Redhouse Run Interceptor Relief Sewer
    - Redhouse Run Pipeline Rehab Phase 2
    - Redhouse Run Pipeline Rehab Phase 3
    - Stansbury Manor Force Main Replacement
    - Stemmers Run Basins 02B and 3 Rehabilitation Off Road
    - Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation
    - White Marsh Sewer Structural Rehabilitation – West
    - White Marsh Structural Sewer Rehabilitation – East
- Assessment work is planned for:
    - Redhouse Run Equalization Tank

ii. Introduction

Pursuant to Paragraph 19 of the Consent Decree between the County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **April 1, 2021** through **June 30, 2022.** The Quarterly Report includes historical information, work progress and contracts in place during the reporting period.

The quarterly report documents activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

- Non-Pump Station and Pump Station SSO Structure discharges
- Construction project status
- Collection system inspection
- SRRR plan implementation/progress
- FOG program
- Supplemental Environmental Project status, and
- Compliance issues
- Cleaning
- Performance Assessment Preparation

iii. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

iv. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

v. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

vi. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous capital improvement projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delays to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

i) Bengies SRRR Plan Implementation

ii) Bengies and Bird River Structural Repairs Project (21169 SX0)

On February 10, 2022, the County submitted a time of performance extension request for the Bengies and Bird River Structural Improvements Project. The Consent Decree deadline for completing the project was September 29, 2020. As described in the County's March 15, 2019 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. Acquisitions are now complete and the contract had a bid opening on April 25, 2022. The requested deadline to complete the project is September 6, 2023.

iii) Bird River SRRR Plan Implementation

iv) Bengies and Bird River Structural Repairs Project (21169 SX0)

On February 10, 2022, the County submitted a time of performance extension request for the Bengies and Bird River Structural Improvements Project. The Consent Decree deadline for completing the project was September 29, 2020. As described in the County's March 15, 2019 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. Acquisitions are now complete and the contract had a bid opening on April 25, 2022. The requested deadline to complete the project is September 6, 2023.

v) **Cockeysville SRRR Plan Implementation**

vi) **Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SX0)**

Private property acquisitions are now complete and the project bid opening occurred on July 21, 2022. The requested deadline is October 6, 2023.

vii) **Cockeysville Force Main & Texas Pump Station Influent Project (Contract 21163 SX0)**

The project award phase began on April 25, 2022. The requested deadline is April 6, 2023.

viii) **Delmar SRRR Plan Implementation**

ix) **Delmar Sewershed Sewer Rehabilitation Project (18034 SX0)**

The County is proceeding with construction and the requested deadline is January 10, 2023.

x) **Glen Echo Interceptor Relief Sewer Project (20196 SX0)**

The County is proceeding with property condemnation and the requested deadline is September 18, 2024.

xi) **Lodge Forest Manor Force Main Cleaning Project**

The County will complete supplemental inspection/testing of the Lodge Force Manor force main to confirm that force main cleaning is necessary. The supplemental inspection/testing will be performed after the County completes the Lodge Forest Manor Pump Station Improvement Project. The requested deadline is March 18, 2024.

xii) **Lodge Forest Manor Pump Station Improvement Project (21003 SX0)**

The project is currently in construction. The requested deadline is October 20, 2023.

xiii) **Millers Island Pump Station Improvement Project (19175 SX0)**

The project is currently in construction. The consent decree deadline is June 1, 2023.

xiv) **Penwood Terrace Pump Station Improvement Project (20040 SX0)**

The project is currently in construction. The consent decree deadline is June 1, 2023.

xv) Fort Howard Pump Station Improvement Project (20175 SX0)

The project is currently in construction. The consent decree deadline is June 1, 2023.

xvi) Duck Creek SRRR Plan Implementation

xvii) Corsica Force Main Replacement Project (21082 SX0)

The project award phase began on June 9, 2022. The requested deadline is August 18, 2023.

xviii) Corsica Pump Station Improvement Project (21162 SX0)

The project is currently in construction. The consent decree deadline is June 1, 2023.

xix) Duck Creek Structural Rehabilitation Project

The County expanded the design and construction scope of work to maximize the financial and contractor resource efficiencies; however, the expanded scope of work delayed the project. The requested deadline is May 18, 2024.

xx) Turkey Point Pump Station Improvement Project (Contract 19159 SX0)

On June 22, 2022, the County was informed by their engineering consultant that the contractor submitted insufficient information to accept material testing requirements for the project; therefore, the pump station was not activated for functional use. The requested deadline is October 6, 2022.

xxi) Dundalk SRRR Plan Implementation

xxii) Dundalk Sewershed Sewer Rehabilitation Project

Design work is complete; however, there are remaining outstanding right-of-entry acquisitions. The requested deadline is January 18, 2027.

xxiii) Eastpoint SRRR Plan Implementation

xxiv) Eastpoint Force Main Relocation Project

The County is completing design work and acquiring anticipated regulatory permits. The requested deadline is June 18, 2024.

xxv) Eastpoint Sewershed Sewer Rehabilitation Project (Contract 18141 SX0)

The contractor is completing sewer pre-construction closed circuit television inspection and cleaning work; however, due to the contractor's current work load

which has limited their availability, construction work has been delayed. The requested deadline is April 18, 2023.

xxvi) Essex SRRR Plan Implementation

xxvii) Essex Sewer Replacement Project (Contract 21136 SX0)

Notice to Proceed was issued on February 4, 2022. The requested deadline is April 18, 2023.

xxviii) Essex Structural Sewer Rehabilitation Project (Contract 18110 SX0)

Notice to proceed for the project was issued on August 2, 2021. On March 8, 2022, the contractor provided an updated project scheduled which informed the County that construction completion is anticipated on August 30, 2022 due to COVID-related delays and pipe material procurement issues. The requested deadline to complete the project is October 18, 2022.

xxix) Gray Manor SRRR Plan Implementation

xxx) Gray Manor Force Main Finite Element Assessment (FEA) and Inspection Project

The County has advertised a contract for inspection services and anticipates award in Fall 2022. The first assignment under the contract will be an inspection and FEA of the Gray Manor force main. The requested deadline is February 18, 2023.

xxxi) Gray Manor Interceptor Rehabilitation Project (21202 SX0)

Completing the design work has been delayed due to private property right-of-entry agreement acquisition and expanding the project's scope of work by moving some structural repair work from the Gray Manor Sewer Structural Rehabilitation project. The requested deadline is July 18, 2025.

xxxii) Gray Manor Sewer Structural Rehabilitation Project (19003 SX0)

Construction notice to proceed was issued on January 4, 2021. The pre-construction sewer cleaning efforts are taking longer to complete than anticipated due to excessive tuberculation that is suspected to originate from an upstream industrial discharger. The new requested deadline is November 18, 2022.

xxxiii) Gray Manor Sewershed Relief Sewers Project (Contract 20130 SX0, 20193 SX0)

The project has been separated into three projects:

xxxiii.i. Lynch Road Sewer Replacement Project (20130 SX0):

The project was advertised on April 11, 2022

xxxiii.ii. North Point Boulevard Replacement Project (20193 SX0):

The project was advertised on June 8, 2022

xxxiii.iii. Trappe Road Sewer Main Replacement Project (20130 SX0):

The project bid opening occurred on May 26, 2022.

The requested deadline for the three relief sewer contracts is June 18, 2023.

xxxiv) Gunpowder SRRR Plan Implementation

xxxv) Gunpowder PS to WM PS System Improvement (GP FM Replacement) Cowpens Relief Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2026.

xxxvi) Gunpowder Relief Sewer Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2026.

xxxvii) Gunpowder Sewer Structural Repairs-Off Road Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2026.

xxxviii) Gunpowder Sewer Structural Repairs-On Road Project (19198 SX0)

The County is proceeding with construction and the Consent Decree deadline is April 18, 2026.

xxxix) Jennifer Branch Relief Sewer Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2026.

xl) Gwynns Falls SRRR Plan Implementation

xli) Gwynns Falls Structural Sewer Rehabilitation in Environmentally Sensitive Areas Project (16059 SX0)

On December 7, 2021 the County submitted a time extension request to extend the deadline to March 6, 2022 due to the time required to negotiate and acquire private property right-of-entry agreements and on March 3, 2022, the County submitted a

second time extension request to extend the deadline to May 6, 2022 due to the unexpected time delay to procure a construction contractor. Contractor procurement has taken longer than originally anticipated, which has delayed the completion of the construction work. The new requested deadline is October 6, 2022.

xlii) Lower Powder Mill Sewer Rehabilitation Project (16169 SX0)

The County is proceeding with construction.

xliii) Powder Mill Relief Sewer Phase II Project (20118 SX0)

The project will be advertised in September of 2022.

xliv) Powder Mill Relief Sewer Phase III Project

The County is completing design work.

xlv) <u>Herring Run SRRR Plan Implementation</u>

Herring Run Relief Sewer, Basin 17 & 33 Project (16131 SX0)

One property is now in the condemnation process and anticipated to be completed in November 2022. The project is currently in construction and the requested deadline to complete the project is September 6, 2023.

xlvi) Herring Run Sewer Structural Rehabilitation Phase II

As described in the County's August 15, 2017 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project. To mitigate the delay, the County separated the project into two phases. Phase I was completed prior to the September 6, 2018 Consent Decree deadline. The County has completed all right-of-entry negotiations except for one property that is now being acquired through the County's condemnation process and anticipated to be completed in November 2022. The requested deadline to complete the project is November 6, 2025.

xlvii) East Branch Herring Run Relief Sewer, SSO 41 & 129 (14117 SX0)

On April 27, 2020 the County submitted a time extension request to eliminate the overflow structure by August 3, 2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as November 5, 2019. On September 23, 2021, the County submitted a correction of records letter to confirm the new approved deadline of August 3, 2023. On January 4, 2022, the County submitted a Time Extension Request to eliminate the overflow structure by December 4, 2023. The time extension is necessary due to unanticipated construction site conditions. This project is approximately 85% complete.

xlviii) Long Quarter SRRR Plan Implementation

xlix) Long Quarter Force Main Replacement Project

As described in the County's November 26, 2019 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. The project is currently in design and the Consent Decree deadline is April 18, 2024.

l) Long Quarter North Sewer Rehabilitation Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2024.

li) Long Quarter South Sewer Rehabilitation Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2024.

lii) Orems SRRR Plan Implementation

liii) Orems Basin 03 Relief Sewer Project (Contract 21144 SX0)

During the 4th quarter of 2021, the low bidder defaulted on the contract. A new contractor was identified to complete the construction work. Notice to Proceed was issued on July 1, 2022. The new requested deadline is May 29, 2023.

liv) Stansbury Manor Force Main Replacement Project

On March 16, 2022, the County submitted a time of performance extension request for the Stansbury Manor Force Main Replacement project. The Consent Decree deadline to complete the project was September 29, 2020. The project has been delayed due to the time required to obtain right-of-way access with various property owners. Contaminated soil along the preferred force main alignment was recently discovered. This requires that the alignment be re-designed. The project is currently in design and the requested deadline is March 9, 2025.

lv) Stansbury Manor Pumping Station Replacement

The project is currently in construction. The requested deadline is April 20, 2024.

lvi) Patapsco SRRR Plan Implementation

lvii) Cedar Branch North Fork Relief Sewer Project (17150 SX0)

On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's April 22, 2019 potential delay notification, private

property easement acquisitions were required for the project, which has delayed completion of the design work. Acquisitions were completed and the contract awarded. Notice to proceed was issue on August 18, 2021 and the project is currently in construction. The requested deadline to complete the project is September 6, 2023.

lviii) Patapsco Basin 7 Sewer Rehabilitation Project (17107 SX0)

On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's March 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. Following multiple attempts to contact property owners the County issued to each property owner a 15-day notification letter and requested response by July 29, 2021. The County has not received responses and, therefore, assumes owner consent and plans to advertise the contract in September 2022. The requested deadline to complete the project is April 6, 2024.

lix) Patapsco Basin 10 Sewer Rehabilitation Project (16037 SX0)

On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's March 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. All entry agreements have been acquired and the County has advertised and awarded the contract, which was issued notice to proceed on July 26, 2021 and is currently in construction. The requested deadline to complete the project is January 6, 2023.

lx) Patapsco Sewershed Structural Rehabilitation Project (19007 SX0)

On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's October 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. The County issued to each property owner a 15-day notification letter and requested response by October 21, 2021. Right-of-entry negotiations are ongoing. The requested deadline to complete the project is October 6, 2024.

lxi) <u>Redhouse Run SRRR Plan Implementation</u>

lxii) Redhouse Run Equalization Tank

The County will complete additional investigation/assessment to determine if the project is needed.

lxiii) Redhouse Run Interceptor Relief Sewer Project

The County is proceeding with design and the Consent Decree deadline is April 18, 2024.

lxiv) Redhouse Run Pipeline Rehab Phase 1 Project (21002 SX0)

Construction notice to proceed was issued on March 22, 2022 and Construction began on May 2, 2022. The Consent Decree deadline is April 18, 2024.

lxv) Redhouse Run Pipeline Rehab Phase 2 Project (21021 SX0)

Design is complete and the project had a bid opening date on July 28, 2022. The Consent Decree deadline is April 18, 2024.

lxvi) Redhouse Run Pipeline Rehab Phase 3 Project

The County is proceeding with design and is currently in right-of-entry negotiations and acquisitions. The Consent Decree deadline is April 18, 2024.

lxvii) Stemmers Run SRRR Plan Implementation

lxviii) Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation Project (19002 SX0)

The County is proceeding with design and is currently in right-of-entry negotiations and acquisitions. The Consent Decree deadline is September 6, 2024.

lxix) Stemmers Run Basins SR02B and 3 Rehabilitation/Off-Road Project (14207 SX0)

The County is proceeding with design and the Consent Decree deadline is September 6, 2024.

lxx) Texas SRRR Plan Implementation

lxxi) Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SX0)

The project bid opening was on July 21, 2022. The requested deadline is October 6, 2023.

lxxii) Texas Force Main Cathodic Protection Project

The County advertised and recently awarded a contract to procure the specialized services needed for this analysis. One of the first studies to be assigned under the new contract is to evaluate the cathodic protection requirements for the Texas Force Main. The requested deadline is April 18, 2023.

lxxiii) White Marsh SRRR Plan Implementation

lxxiv) White Marsh (Old) Force Main Repair Project

The White Marsh (Old) Force Main Repair project is in the award process for the force main assessment on-call contract and will assign the work to the consultant.

lxxv) White Marsh Sewer Structural Rehabilitation (West) Project

The County is proceeding with design and is currently in right-of-entry negotiations and acquisitions. The Consent Decree deadline is April 18, 2024.

lxxvi) White Marsh Sewer Structural Rehabilitation (East) Project

The County is proceeding with design and is currently in right-of-way negotiations and acquisitions. The Consent Decree deadline is April 18, 2024.

vii. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

viii. Supplemental Environmental Project Status

Completed.

ix. Compliance Summary

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance project achievements:

a. Consent Decree projects or requirements certified as complete during the reporting period:

None.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

i) Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SX0)

On February 8, 2022, the County submitted a time of performance extension request for the Cockeysville and Texas Structural Sewer Rehabilitation project. The Consent Decree deadline for completing the project was April 18, 2022. Private property rights-of-entry negotiation and acquisition were required for the project and bid opening occurred on July 21, 2022. The requested deadline is October 6, 2023.

ii) Orems Basin 03 Relief Sewer Project (Contract 21144 SX0)

On May 11, 2022, the County submitted a third time of performance extension request for the Orems Basin 03 Relief Sewer project. The Consent Decree deadline to complete the project was September 29, 2020. On September 7, 2021, the County submitted a time extension request to extend the deadline to December 22, 2021 due to delays resulting from property easement negotiation and acquisition and on January 28, 2022, the County submitted a second time extension request to extend the deadline to June 22, 2022 due to delays in procuring pipe material. During the 4th quarter of 2021, the low bidder defaulted on the contract. A new contractor has been identified to complete the construction work and Notice to Proceed was issued on July 1, 2022. The new requested deadline is May 29, 2023.

iii) Delmar SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Delmar SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Delmar Sewershed. The requested deadline is September 18, 2024.

iv) Glen Echo Interceptor Relief Sewer Project (20196 SX0)

On March 2, 2022, the County submitted a time of performance extension request for the Glen Echo Interceptor Relief Sewer. The Consent Decree deadline to complete the project was April 18, 2022. As described in the County's January 18, 2022 potential delay notification, the project was delayed due to the time required to negotiate and acquire private property easements. After five (5) years of communication with the Maryland Department of Natural Resources (DNR), the County was recently informed that DNR is not the property owner. Since the property owner(s) are unknown, the County is proceeding with condemnation. The requested deadline is September 18, 2024.

v) Lodge Forest Manor Force Main Cleaning Project

On March 24, 2022 the County submitted a time of performance extension request for the Lodge Forest Manor Force Main Cleaning project. The Consent Decree deadline to complete the project was April 18, 2022. As stated in the County's September 2, 2021 potential delay notification, the County will complete supplemental inspection/testing of the Lodge Force Manor force main to confirm that force main cleaning is necessary. The supplemental inspection/testing will be performed after the County completes the Lodge Forest Manor Pump Station Improvement Project. The requested deadline to complete the Lodge Forest Manor Force Main Cleaning project is March 18, 2024.

vi) Duck Creek SRRR Plan Implementation

On March 29, 2022, the County submitted a time of performance extension request for the Duck Creek SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Duck Creek Sewershed. The requested deadline is May 18, 2024.

vii) Duck Creek Structural Rehabilitation Project

On February 1, 2022, the County submitted a time of performance extension request for the Duck Creek Structural Rehabilitation project. The Consent Decree deadline to complete the project was April 18, 2022. As described in the County's February 5, 2020 potential delay notification, the project required extra time to complete design work due to the addition of sewer structural repair work to the project, which is located in the same service area. The requested deadline is May 18, 2024.

viii) Corsica Force Main Replacement Project (21082 SX0)

On December 7, 2021, the County submitted a time of performance extension request for the Corsica Force Main Replacement project. The Consent Decree deadline to complete the project was April 18, 2022. As described in the County's August 11, 2021 potential delay notification, the project required extra time to complete design work due to existing utility conflicts, critical area compliance, and coordination with other consultants working on the Corsica Pump Station upgrade design. The project is currently in the award phase and the bid opening occurred on June 9, 2022. The requested deadline is August 18, 2023.

ix) Turkey Point Pump Station Improvement Project (Contract 19159 SX0)

On July 5, 2022, the County submitted a time of performance extension request to complete the Turkey Point Pump Station Improvement project. The Consent Decree deadline to complete the project was June 6, 2022. On June 22, 2022, the County was informed by their engineering consultant that the contractor submitted insufficient information to accept material testing requirements for the project; therefore, the pump station was not activated for functional use. The requested deadline is October 6, 2022.

x) Dundalk SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Dundalk SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Dundalk Sewershed. The requested deadline is September 18, 2027.

xi) Dundalk Sewershed Sewer Rehabilitation Project

On March 3, 2022, the County submitted a time of performance extension request for the Dundalk Sewershed Sewer Rehabilitation project. The Consent Decree deadline to complete the project was April 18, 2022. As described in the County's November 22, 2019 potential delay notification, multiple private property rights-of-entry must be negotiated and acquired for the project, which has delayed completion of the project. Design work is complete; however, there are remaining outstanding right-of-entry acquisitions. The requested deadline is January 18, 2027.

xii) Eastpoint SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Eastpoint SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Eastpoint Sewershed. The requested deadline is June 18, 2024.

xiii) Eastpoint Force Main Relocation Project

On February 10, 2022, the County submitted a time of performance extension request for the Eastpoint Force Main Relocation project. The Consent Decree deadline to complete the project was April 18, 2022. The project requires additional time to complete the design work and acquire anticipated regulatory permits. The requested deadline is June 18, 2024.

xiv) Eastpoint Sewershed Sewer Rehabilitation Project (Contract 18141 SX0)

On March 3, 2022, the County submitted a time of performance extension request to extend the deadline to August 25, 2022 due to the time needed to acquire private property rights-of-entry. On June 23, 2022 the County submitted a second time of performance extension request. The new requested deadline to complete the project is April 18, 2023. On December 1, 2021, the County issued the notice to proceed for the project. The contractor is completing sewer pre-construction closed circuit television inspection and cleaning work; however, due to the contractor's

current work load which has limited their availability, construction work has been delayed.

xv) Essex SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Essex SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Essex Sewershed. The requested deadline is April 18, 2023.

xvi) Essex Sewer Replacement Project (Contract 21136 SX0)

On February 10, 2022, the County submitted a time of performance extension request for the Essex Sewer Replacement project. The Consent Decree deadline to complete the project was April 18, 2022. As stated in the County's September 2, 2021 potential delay notification, additional time was needed to complete supplemental field investigations and alternatives analysis and to revise the project scope of work accordingly. Design work is complete and the construction notice to proceed was issued on February 4, 2022. The requested deadline is April 18, 2023.

xvii) Essex Structural Sewer Rehabilitation Project (Contract 18110 SX0)

On March 29, 2022, the County submitted a time of performance extension request for the Essex Structural Rehabilitation Project. The Consent Decree deadline to complete the project was April 18, 2022. On March 8, 2022, the contractor provided an updated project schedule, which informed the County that construction completion is anticipated on August 30, 2022 due to COVID-related delays and pipe material procurement issues. The requested deadline to complete the project is October 18, 2022.

xviii) Gray Manor SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Gray Manor SRRR Plan Implementation certification. The Consent Decree deadline for certification was April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Gray Manor Sewershed. The requested deadline is July 18, 2025.

xix) Gray Manor Interceptor Rehabilitation Project

On March 2, 2022, the County submitted a time of performance extension request for the Gray Manor Interceptor Rehabilitation Project. The Consent Decree deadline to complete the project was April 18, 2022. Completing the design work was delayed due to private property right-of-

entry agreement acquisition and expanding the project's scope of work by moving some structural repair work from the Gray Manor Sewer Structural Rehabilitation project. The requested deadline is July 18, 2025.

xx) Gray Manor Sewer Structural Rehabilitation Project (19003 SX0)

On January 27, 2022, the County submitted a time of performance extension request for this project to extend the deadline to July 18, 2022 due to the additional time needed to clean and prepare the sewers for rehabilitation work. On June 22, 2022, the County submitted a second time of performance extension request as more time than originally requested was needed to clean and prepare the sewers for sewer rehabilitation work. The cleaning efforts are taking longer to complete than anticipated due to excessive tuberculation that is suspected to originate from an upstream industrial discharger. The new requested deadline is November 18, 2022.

xxi) Gray Manor Force Main Finite Element Assessment (FEA) and Inspection Project

On March 10, 2022, the County submitted a time of performance extension request for the Gray Manor Force Main FEA and Inspection project. The Consent Decree deadline to complete the project was April 18, 2022. As stated in the County's January 18, 2022 potential delay notification, additional time is needed to develop and advertise a contract to procure the specialized services for the project. The County has advertised a contract for inspection services and anticipates award in spring 2022. The first assignment under the contract will be an inspection and FEA of the Gray Manor force main. The requested deadline is February 18, 2023.

xxii) Gray Manor Sewershed Relief Sewers Project

On March 16, 2022, the County submitted a time of performance extension request for the Gray Manor Sewershed Relief Sewers project. The project has since been separated into three projects:

xxii.i. <u>Lynch Road Sewer Replacement Project (20130 SX0):</u>

The project was advertised on April 11, 2022

xxii.ii. <u>North Point Boulevard Replacement Project (20193 SX0):</u>

The project was advertised on June 8, 2022

xxii.iii. <u>Trappe Road Sewer Main Replacement Project (20130 SX0):</u>

The project bid opening occurred on May 26, 2022.

The requested deadline for the three relief sewer contracts is June 18, 2023.

xxiii) Texas SRRR Plan Implementation Certification

On March 29, 2022, the County submitted a time of performance extension request for the Texas SRRR Plan Implementation certification. The Consent Decree deadline for certification is April 18, 2022; however, certification is contingent upon completion of the outstanding improvement projects that are located in the Texas Sewershed. The requested deadline is October 6, 2022.

xxiv) Cockeysville and Texas Structural Rehabilitation Project (Contract 21294 SX0)

On February 28, 2022, the County submitted a time of performance extension request for the (Cockeysville and) Texas Structural Rehabilitation project. The Consent Decree deadline to complete the project was April 18, 2022. As stated in the County's July 10, 2019 potential delay notification letter, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. The remaining permits have been acquired, project advertisement is complete and the bid opening started on July 21, 2022. The requested deadline is October 6, 2023.

xxv) Texas Force Main Cathodic Protection Project

On February 22, 2022, the County submitted a time of performance extension request for the Texas Force Main Cathodic Protection project. The Consent Decree deadline to complete the project was April 18, 2022. As stated in the County's December 7, 2021 potential delay notification, the project requires highly specialized technical expertise to complete the work; therefore, the County advertised and recently awarded a contract to procure the specialized services needed for this analysis. One of the first studies to be assigned under the new contract is to evaluate the cathodic protection requirements for the Texas Force Main. The requested deadline is April 18, 2023.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

i) Herring Run Structural Sewer Rehabilitation Phase II

As described in the County's August 15, 2017 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project. To mitigate the delay, the County separated the project into two phases. Phase I was completed prior to the September 6, 2018 Consent

Decree deadline. The County has completed all right-of-entry negotiations except for one property that is now being acquired through the County's condemnation process and anticipated to be completed in November 2022. On April 8, 2022 the County submitted a time of performance extension request, the requested deadline to complete the project is November 6, 2025.

ii) Gwynns Falls Structural Sewer Rehabilitation in Environmentally Sensitive Areas Project (16059 SX0)

On December 7, 2021 the County submitted a time extension request to extend the deadline to March 6, 2022 due to the time required to negotiate and acquire private property right-of-entry agreements and on March 3, 2022, the County submitted a second time extension request to extend the deadline to May 6, 2022 due to the unexpected time delay to procure a construction contractor. Contractor procurement has taken longer than originally anticipated, which has delayed the completion of the construction work. On May 6, 2022 the County submitted a third time extension request, the new requested deadline is October 6, 2022.

iii) Orems Basin 03 Relief Sewer Project (Contract 21144 SX0)

During the 4th quarter of 2021, the low bidder defaulted on the contract. A new contractor was identified to complete the construction work and Notice to Proceed was issued on July 1, 2022. On May 11, 2022 the County submitted a time of performance extension request, the new requested deadline is May 29, 2023.

iv) Gray Manor Sewer Structural Rehabilitation Project (19003 SX0)

Construction notice to proceed was issued on January 4, 2021. The pre-construction sewer cleaning efforts are taking longer to complete than anticipated due to excessive tuberculation that is suspected to originate from an upstream industrial discharger. On June 22, 2022 the County submitted a time of performance extension request, the new requested deadline is November 18, 2022.

v) Eastpoint Sewershed Sewer Rehabilitation Project (Contract 18141 SX0)

The contractor is completing sewer pre-construction closed circuit television inspection and cleaning work; however, due to the contractor's current workload, which has limited their availability, construction work has been delayed. On June 23, 2022 the County submitted a time of performance extension request, the requested deadline is April 18, 2023.

vi) Aiken Avenue and Queen Anne Drive SSO Elimination (Contract 14117 SX0)

On May 17, 2022, the County submitted a second time of performance extension request to eliminate the Aiken Avenue (SSO 41) and Queen Anne Drive (SSO 129) sanitary sewer overflow structures. The Consent Decree deadline to complete the eliminations was August 3, 2023. The first and second time extension requests were due to unanticipated construction site conditions. The requested deadline was December 4, 2023, the second request is to extend the deadline to March 3, 2024.

vii) Long Quarter Force Main Testing Project

On January 18, 2022, the County submitted a potential delay notification for the Long Quarter Force Main Testing project. The Consent Decree deadline to complete the project is April 18, 2024. The project requires highly specialized equipment and technical expertise to complete, which significantly limits contractor/consultant availability. Therefore, the County required additional time than originally anticipated to develop and advertise a contract to procure the specialized services. The County will submit a time of performance request for the project, if needed.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Lisa K. Eicholtz, PE
Bureau Chief, Engineering and Construction

Control Document No. 445

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Name	Turkey Point
Address	726 Back River Neck Road
Date of Discharge	5/4/2022
Duration of Overflow	11 minutes
Date of Relevant Weather Conditions	5/4/2022
Description of Relevant Weather Conditions	Rain
Gallons Discharged	1,623
Receiving Waters	Back River at Muddy Gut
Identified Cause	Bypass system failed
Details of Corrective Action Taken or Planned	Bypass pumps turned back on. Pump enclosures were locked. Additional alarms added.

Non-Pump Station Overflow Structures – Metered

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	6/8/2022
Duration of Overflow	6 minutes
Date of Relevant Weather Conditions	6/8/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	585
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a time extension request to eliminate overflow structure by 8/3/2023.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date of Discharge	6/8/2022
Duration of Overflow	15 minutes
Date of Relevant Weather Conditions	6/8/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	10,001
Receiving Waters	Maiden's Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		6/8/2022
Rain (inches)		1.03-1.93
SSO Name	SSO ID	
Alter Road	22	0
Southern Cross Drive	23A	0
Southern Cross	23B	0
Patterson Avenue	24	0
Overbrook Road & Medwick Garth	118	10,001
Marnat Road	113	0
Aiken Avenue	41	585
Queen Anne Drive	129	0

Attachment B - Construction Non-Pump Station SSO Capital Project Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I (SSOs 22, 23A, 23B, 24) Contract 18180 SX0	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	On 1/26/2021 the project achieved functional use. The Phase II project (Contract 20018 SX0) and Phase 3 project must be completed before eliminating the SSO structures.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24) Contract 20018 SX0	-	Gwynns Falls	3/22/2017	TBD	No	On 2/14/2017, the County submitted a time extension request with an undefined elimination date. A second time extension request with a definitive elimination date will be submitted after right-of-way acquisition and environmental permits are obtained and construction notice to proceed is issued for Contract 20018 SX0. Easement acquisition was unsuccessful so the project is being redesigned.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023 (Requested)	No	On 4/27/2020 the County submitted a time extension request to eliminate the overflow structure by 8/3/2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as 11/5/2019. On 9/23/2021, the County submitted a correction of records letter to confirm the new approved deadline of 8/3/2023. On 1/4/2022, the County submitted a Time Extension Request to eliminate the overflow structure by 12/4/2023. The time extension is necessary due to unanticipated construction site conditions. This project is approximately 85% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a time extension request with an undefined SSO elimination date. A second time extension request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Contract No.	Consent Decree Deadline	Project Phase	Construction Notice to Proceed Date
Millers Island	19175 SX0	6/1/2023	Construction	1/6/2021
Turkey Point	19159 SX0	6/1/2022	Construction	1/16/2021
Penwood Terrace	20040 SX0	6/1/2023	Construction	5/3/2021
Stansbury Manor	21135 SX0	3/20/2020	Construction	1/27/2022
Corsica	21162 SX0	6/1/2023	Construction	1/27/2022
Fort Howard	20175 SX0	6/1/2023	Construction	1/26/2022
Lodge Forest Manor	21003 SX0	10/20/2023 (Requested)	Construction	3/23/2022

Attachment C - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
4/8/2022	11025 York Rd	4/11/2022	-
5/13/2022	8103 Beachwood Rd	5/16/2022	-
5/26/2022	69 Cedar Ave	6/1/2022	-

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral.
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole.
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action.
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

i. Executive Summary

The County's Corrective Action Recommendation Plans are ongoing and the County continues implementing the corrective action recommendation. This report documents progress made during the reporting period. In addition to the planning, design and construction work on capital projects, the asset management work continues. Notable accomplishments during Q3 of 2022 are listed below for Consent Decree related projects, including:

Contract advertisements:

- Patapsco Basin 7 Rehabilitation (Off-Road) (17107 SX0)
- Powder Mill Relief Sewer Phase 2 (20118 SX0)

Completed projects:

- Essex Structural Sewer Rehabilitation (Task 10)
- Lower Powder Mill Sewer Rehabilitation
- Cedar Branch North Fork Relief Sewer Project
- Turkey Point Pump Station Improvement

Construction work for:

- Cockeysville Force Main & Texas Pump Station Influent
- Corsica Pump Station Improvement
- Delmar Sewershed Sewer Rehabilitation
- East Branch Herring Run Relief Sewer
- Eastpoint Sewershed Sewer Rehabilitation
- Essex Sewer Replacement
- Fort Howard Pump Station Improvement
- Gray Manor Structural Sewer Rehabilitation
- Gunpowder Sewer Structural Repairs (On-Road)
- Gwynns Falls Task S Structural Lining in ESA
- Herring Run Relief Sewer, Basin 17 & 33
- Lodge Forest Manor Pump Station Improvement
- Millers Island Pump Station Improvement
- Orems Basin 03 Relief Sewer
- Patapsco Basin 10 Sewer Rehabilitation
- Penwood Terrace Pump Station Improvement
- Redhouse Run Pipeline Rehabilitation Phase 1
- Stansbury Manor Pumping Station Replacement

Procuring a contractor for:

- Bengies and Bird River Structural Repairs (Bengies)
- Bengies and Bird River Structural Repairs (Bird River)
- Cockeysville and Texas Structural Repairs (21294 SX0, Cockeysville Sewershed)

- Cockeysville and Texas Structural Repairs (21294 SX0, Texas Sewershed)
- Corsica Force Main Replacement
- Lynch Road Sewer Replacement (21092 SX0)
- North Point Boulevard Sewer Replacement (21093 SX0)
- Patapsco Basin 7 Rehabilitation (Off-Road)
- Redhouse Run Pipeline Rehabilitation Phase 2 (21021 SX0)
- Trappe Road Sewer Main Replacement (20130 SX0)

Design work for:

- Duck Creek Structural Rehabilitation
- Dundalk Sewershed Sewer Rehabilitation
- Eastpoint Force Main Relocation
- Glen Echo Interceptor Relief Sewer
- Gray Manor Interceptor Rehabilitation
- Gunpowder Relief Sewer
- Gunpowder Structural Sewer Repairs (Off-Road)
- Gunpowder PS to WM PS System Improvement (GP FM Replacement) Cowpens Relief
- Herring Run Sewer Structural Rehabilitation Phase II
- Jennifer Branch Relief Sewer
- Long Quarter North Sewer Rehabilitation
- Long Quarter South Sewer Rehabilitation
- Long Quarter South Interceptor Rehabilitation
- Long Quarter Force Main Replacement
- Patapsco Sewershed Structural Rehabilitation
- Powder Mill Relief Sewer Phase II
- Powder Mill Relief Sewer Phase III
- Redhouse Run Interceptor Relief Sewer
- Redhouse Run Pipeline Rehab Phase 3
- Stansbury Manor Force Main Replacement
- Stemmers Run Basins 02B and 3 Rehabilitation Off Road
- Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation
- White Marsh Sewer Structural Rehabilitation (West)
- White Marsh Structural Sewer Rehabilitation (East)

Assessment work is planned for:

- Redhouse Run Equalization Tank

ii. Introduction

Pursuant to Paragraph 19 of the Consent Decree between the County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report on the projects active during Q3 of 2022, for the period **July 1, 2022** through **September 30, 2022.** This Quarterly Report includes historical information, work progress and contracts in place during the reporting period.

This quarterly report documents activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree and documents only activity from the quarter being reported including:

- Non-Pump Station and Pump Station SSO Structure discharges
- Construction project status
- Collection system inspection
- SRRR plan implementation/progress
- FOG program
- Supplemental Environmental Project status, and
- Compliance issues
- Cleaning
- Performance Assessment Preparation

iii. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

iv. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

v. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

vi. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous capital improvement projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delays to complete the projects. There have been delays in receiving water and/or sewerage construction permits from MDE.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data. The County is using data from their asset management program to revise the scope of work for some SRRR-related projects.

When reporting on construction projects, the County uses the definition of substantial completion contained in the Consent Decree.

Bengies SRRR Plan Implementation

Bengies and Bird River Structural Repairs Project (21169 SX0): On October 11, 2022, the County resubmitted a time of performance extension request for the Bengies and Bird River Structural Improvements Project in response to the EPA's denial response received on August 18, 2022. The Consent Decree deadline for completing the project was September 29, 2020. The County has acquired all rights-of-entry agreements or sent to the property owners the 15-day right-of-entry notification letter, with the exception of two properties. In March 2021 the County implemented their standard operating procedures for sewer right-of-way and right-of-entry acquisitions and has followed the procedures since implementation; however, the Bengies and Bird River Structural Improvements Project began before implementation of the operating procedures. To expedite project completion the County advertised the construction contract on March 7, 2022 before receiving formal clearance from the County's Real Estate Compliance group and is planning to complete the work related to the two outstanding right-of-entry properties if/when the County obtains the right-of-entry agreements. The requested deadline to complete the project is November 6, 2023.

Bird River SRRR Plan Implementation

Bengies and Bird River Structural Repairs Project (21169 SX0): On October 11, 2022, the County resubmitted a time of performance extension request for the Bengies and Bird River Structural Improvements Project in response to the EPA's denial response received on August 18, 2022. The Consent Decree deadline for completing the project was September 29, 2020. The County has acquired all rights-of-entry agreements or sent to the property owners the 15-day right-of-entry notification letter,

with the exception of two properties. In March 2021 the County implemented their standard operating procedures for sewer right-of-way and right-of-entry acquisitions and has followed the procedures since implementation; however, the Bengies and Bird River Structural Improvements Project began before implementation of the operating procedures. To expedite project completion the County advertised the construction contract on March 7, 2022 before receiving formal clearance from the County's Real Estate Compliance group and is planning to complete the work related to the two outstanding right-of-entry properties if/when the County obtains the right-of-entry agreements. The requested deadline to complete the project is November 6, 2023.

Cockeysville SRRR Plan Implementation

Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SX0): On July 21, 2022, the County received construction bids and is in the process of awarding the construction contract. The requested deadline is October 6, 2023.

Cockeysville Force Main & Texas Pump Station Influent Project (Contract 21163 SX0): On August 10, 2022, the County issues the construction Notice to Proceed. The requested deadline is April 6, 2023.

Delmar SRRR Plan Implementation

Delmar Sewershed Sewer Rehabilitation Project (18034 SX0): On October 11, 2022, the County issues the construction Notice to Proceed. The requested deadline is January 10, 2023.

Glen Echo Interceptor Relief Sewer Project (20196 SX0): The County is proceeding with property condemnation and the requested deadline is September 18, 2024.

Lodge Forest Manor Force Main Cleaning Project: The County will complete supplemental inspection/testing of the Lodge Force Manor force main to confirm that force main cleaning is necessary. The supplemental inspection/testing will be performed after the County completes the Lodge Forest Manor Pump Station Improvement Project. The requested deadline is March 18, 2024.

Duck Creek SRRR Plan Implementation

Corsica Force Main Replacement Project (21082 SX0): The County is processing the award of the construction contract. The requested deadline is August 18, 2023.

Duck Creek Structural Rehabilitation Project (18317 SX0): The County expanded the design and construction scope of work to maximize the financial and contractor resource efficiencies; however, the expanded scope of work delayed the project. The requested deadline is May 18, 2024.

Dundalk SRRR Plan Implementation

Dundalk Sewershed Sewer Rehabilitation Project: Design work is complete; however, there are outstanding right-of-entry acquisitions. The requested deadline is January 18, 2027.

Eastpoint SRRR Plan Implementation

Eastpoint Force Main Relocation Project: The County is completing design work and acquiring anticipated regulatory permits. The requested deadline is June 18, 2024.

Eastpoint Sewershed Sewer Rehabilitation Project (Contract 18141 SX0): Construction work continues and the requested deadline is April 18, 2023.

Essex SRRR Plan Implementation

Essex Sewer Replacement Project (Contract 21136 SX0): Construction work continues and the requested deadline is April 18, 2023.

Essex Structural Sewer Rehabilitation Project (Contract 18110 SX0): Construction work continues. *Post hoc: the project was completed on October 18, 2022.*

Gray Manor SRRR Plan Implementation

Gray Manor Force Main Finite Element Assessment (FEA) and Inspection Project: On September 1, 2022, the County awarded a contract for force main inspection/assessment services. The County anticipates issuing Notice to Proceed for the Gray Manor Force Main Finite Element Assessment and Inspection Project in late October 2022. The requested deadline is February 18, 2023. *Post hoc: On October 27, 2022, the County issues the Notice to Proceed for the project.*

Gray Manor Interceptor Rehabilitation Project (21202 SX0): Completing the design work has been delayed due to private property right-of-entry agreement acquisition and expanding the project's scope of work by moving some structural repair work from the Gray Manor Sewer Structural Rehabilitation project. All right-of-entry agreement acquisitions have been finalized and advertisement of the construction contract is anticipated for February 2023. The requested deadline is July 18, 2025.

Gray Manor Structural Sewer Rehabilitation Project (19003 SX0): On January 27, 2022, the County submitted a time of performance extension request for this project to extend the deadline to July 18, 2022 due to the additional time needed to clean and prepare the sewers for rehabilitation work. On June 22, 2022, the County submitted a second time of performance extension request as more time than originally requested was needed to clean and prepare the sewers for sewer rehabilitation work. The cleaning efforts are taking longer to complete than anticipated due to excessive tuberculation that is suspected to originate from an upstream industrial discharger. The new requested deadline is November 18, 2022. *Post-hoc: Construction was completed on November 2, 2022.*

Gray Manor Sewershed Relief Sewers Project: The project has been separated into three projects. The County is processing award of the construction contracts. The requested deadline for the three relief sewer contracts is June 18, 2023:

- **Lynch Road Sewer Replacement Project (21092 SX0)**
- **North Point Boulevard Replacement Project (21093 SX0)**
- **Trappe Road Sewer Main Replacement Project (20130 SX0)**

Gunpowder SRRR Plan Implementation

Gunpowder PS to WM PS System Improvement (GP FM Replacement) Cowpens Relief Project: The County is proceeding with design and the Consent Decree deadline is April 18, 2026.

Gunpowder Relief Sewer Project: The County is continuing design work. The Consent Decree deadline is April 18, 2026.

Gunpowder Sewer Structural Repairs-Off Road Project: The County is continuing design work. The Consent Decree deadline is April 18, 2026.

Gunpowder Sewer Structural Repairs-On Road Project (19198 SX0): The County is continuing design work. The Consent Decree deadline is April 18, 2026.

Jennifer Branch Relief Sewer Project: The County is continuing design work. The Consent Decree deadline is April 18, 2026.

Gwynns Falls SRRR Plan Implementation

Gwynns Falls Structural Sewer Rehabilitation in Environmentally Sensitive Areas Project (16059 SX0): On December 7, 2021 the County submitted a time extension request to extend the deadline to March 6, 2022 due to the time required to negotiate and acquire private property right-of-entry agreements. On March 3, 2022, the County submitted a second time extension request to extend the deadline to May 6, 2022 due to the unexpected time delay to procure a construction contractor and on May 6, 2022 the County submitted a third time extension request to extend the deadline to October 6, 2022 due to the unexpected time delay to procure a construction contractor.

Since January 2022 the County has been processing the necessary funding approval requests to issue the construction contractor's Notice to Proceed. The County anticipated the funding to be approved and Notice to Proceed issued in May 2022; however, the County's planned replacement of their internal accounting system delayed the process. In September 2022 the County issued the Notice to Proceed. The new requested deadline is April 6, 2023.

Herring Run SRRR Plan Implementation

Herring Run Relief Sewer, Basin 17 & 33 Project (16131 SX0): Construction work continues and the requested deadline to complete the project is September 6, 2023.

Herring Run Sewer Structural Rehabilitation Phase II: As described in the County's August 15, 2017 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project. To mitigate the delay, the County separated the project into two phases. Phase I was completed prior to the September 6, 2018 Consent Decree deadline. The County has completed all right-of-entry negotiations except for one property that is now being acquired through the County's condemnation process and anticipated to be completed in November 2022. The requested deadline to complete the project is November 6, 2025.

Long Quarter SRRR Plan Implementation

Long Quarter Force Main Replacement Project: As described in the County's November 26, 2019 potential delay notification, private property rights-of-entry negotiation and acquisition were required for the project, which has delayed completion of the design work. The project is currently in design and the Consent Decree deadline is April 18, 2024.

Long Quarter North Sewer Rehabilitation Project: Right-of-entry acquisition work continues and the Consent Decree deadline is April 18, 2024.

Long Quarter South Sewer Rehabilitation Project: Right-of-entry acquisition work continues and the Consent Decree deadline is April 18, 2024.

Long Quarter South Interceptor Rehabilitation Project: Design work continues and the Consent Decree deadline is April 18, 2024.

Orems SRRR Plan Implementation

Orems Basin 03 Relief Sewer Project (21144 SX0): During the 4th quarter of 2021, the construction contractor defaulted on the contract and a new contractor was identified to complete the construction work. On July 1, 2022, the County issues Notice to Proceed to the new contractor. Construction recommenced on August 15, 2022 and the new requested deadline is May 29, 2023.

Stansbury Manor Force Main Replacement Project: On March 16, 2022, the County submitted a time of performance extension request for the Stansbury Manor Force Main Replacement project. The Consent Decree deadline to complete the project was September 29, 2020. The project has been delayed due to the time required to obtain right-of-way access with various property owners. Contaminated soil along the preferred force main alignment was recently discovered. This requires that the alignment be re-designed. The project is currently in design and the requested deadline is March 9, 2025.

Patapsco SRRR Plan Implementation

Cedar Branch North Fork Relief Sewer Project (17150 SX0): The project was completed on September 8, 2022.

Patapsco Basin 7 Sewer Rehabilitation Project (17107 SX0): On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's March 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. Following multiple attempts to contact property owners the County issued to each property owner a 15-day notification letter and requested response by July 29, 2021. The County has not received responses and, therefore, assumes owner consent and the project was advertised on September 23, 2022. The requested deadline to complete the project is April 6, 2024.

Patapsco Basin 10 Sewer Rehabilitation Project (16037 SX0): On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's March 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. All right-of-entry agreements have been acquired and, on July 26, 2021, the County issues the construction contract Notice to Proceed. The requested deadline to complete the project is January 6, 2023.

Patapsco Sewershed Structural Rehabilitation Project (19007 SX0): On September 2, 2021, the County submitted a time of performance extension request. The Consent Decree deadline for completing the project was September 6, 2020. As described in the County's October 28, 2018 potential delay notification, private property right-of-entry acquisitions were required for the project, which has delayed completion of the design work. Right-of-entry negotiations are ongoing. The requested deadline to complete the project is October 6, 2024.

Redhouse Run SRRR Plan Implementation

Redhouse Run Equalization Tank: The County will complete additional investigation/assessment to determine if the project is needed.

Redhouse Run Interceptor Relief Sewer Project: Design work continues, including coordination with the EPA 68th Street Superfund site mitigation plan. The Consent Decree deadline is April 18, 2024.

Redhouse Run Pipeline Rehab Phase 1 Project (21002 SX0): On March 22, 2022, the County issues the construction Notice to Proceed and construction work began on May 2, 2022. The Consent Decree deadline is April 18, 2024.

Redhouse Run Pipeline Rehab Phase 2 Project (21021 SX0): On July 28, 2022, the County received construction bids and is processing award of the construction contract. The Consent Decree deadline is April 18, 2024.

Redhouse Run Pipeline Rehab Phase 3 Project: Right-of-entry negotiations continue and the Consent Decree deadline is April 18, 2024.

Stemmers Run SRRR Plan Implementation

Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation Project (19002 SX0): Right-of-entry negotiations continue and the Consent Decree deadline is September 6, 2024.

Stemmers Run Basins SR02B and 3 Rehabilitation/Off-Road Project (14207 SX0): Design work continues and the Consent Decree deadline is September 6, 2024.

Texas SRRR Plan Implementation

Cockeysville and Texas Structural Sewer Rehabilitation Project (Contract 21294 SX0): On July 21, 2022, the County received bids for the construction project and is processing award of the contract. The requested deadline is October 6, 2023.

Texas Force Main Cathodic Protection Project: The County recently awarded a contract to procure the specialized services needed for this project. The County anticipates issuing the project Notice to Proceed in December 2022. The requested deadline is April 18, 2023.

White Marsh SRRR Plan Implementation

White Marsh (Old) Force Main Repair Project: On September 1, 2022, the County awarded a contract for force main inspection/assessment services. The County anticipates providing Notice to Proceed for the White Marsh (old) Force Main Repair project in early 2023. The Consent Decree deadline is April 18, 2024.

White Marsh Sewer Structural Rehabilitation (West) Project: Right-of-entry negotiations continue and the Consent Decree deadline is April 18, 2024.

White Marsh Sewer Structural Rehabilitation (East) Project: Right-of-entry negotiations continue and the Consent Decree deadline is April 18, 2024.

vii. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

viii. Supplemental Environmental Project Status

Completed.

ix. Compliance Summary

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance project achievements:

i) Consent Decree projects or requirements certified as complete during the reporting period:

Cedar Branch North Fork Relief Sewer (17150 SX0): The project was completed on September 8, 2022.

Essex Structural Sewer Rehabilitation Project (Contract 18110 SX0): The project was completed on November 18, 2022.

Lower Powder Mill Sewer Rehabilitation Project (16169 SX0): The project was completed on August 10, 2022.

Turkey Point Pump Station Improvement Project (Contract 19159 SX0): The project was completed on September 7, 2022.

ii) Consent Decree requirements due to be completed during the reporting period, but not completed:

Gray Manor Structural Sewer Rehabilitation Project (19003 SX0): On June 2, 2022 the County submitted a time extension with a requested date of November 11, 2022. The project was completed on November 2, 2022.

iii) Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Corsica Pump Station Improvement Project (21162 SX0): As noted in the letter of potential delay submitted on July 11, 2022 on July 6, 2022, the pump station contractor informed the County (reference enclosed correspondence) that additional time will be required to complete the construction work due to manufacturing delays for the variable frequency drives, which are a critical component of the motor control center unit. The County is coordinating with the contractor and will submit a time of performance extension request, if needed.

Redhouse Run Pipeline Rehab Phase 3 Project: As described in the letter of potential delay dated September 13, 2022, the construction work requires private property right-of-entry acquisitions and there are currently 178 outstanding acquisitions. The time to negotiate and acquire the rights-of-entry may delay completion of the project. The County has and will continue negotiating with the property owners and will submit a time of performance extension request, if needed.

Stemmers Run Basin SR05 and SR06 Sewer Rehabilitation Project: As described in the letter of potential delay dated September 13, 2022, the construction work required 73 right-of-entry acquisitions and permit approvals. One outstanding right-of-entry property owner has denied the County's request.

To expedite contract advertisement, the County designated the proposed work that is located at this property as contingent so that design work can be finalized and necessary permits obtained to finalize the design. The County will continue coordinating with the property owner to acquire the needed right-of-entry. The time spent to negotiate and acquire the right-of-entry has delayed completion of the design. The County will submit a time of performance extension request, if the described actions above prevent completion of the project prior to the Consent Decree deadline.

Gwynns Falls Structural Sewer Rehabilitation in Environmentally Sensitive Areas Project (16059 SX0): On December 7, 2021 the County submitted a time extension request to extend the deadline to March 6, 2022 due to the time required to negotiate and acquire private property right-of-entry agreements and on March 3, 2022, the County submitted a second time extension request to extend the deadline to May 6, 2022 due to the unexpected time delay to procure a construction contract and on May 6, 2022 the County submitted a third time extension request to extend the deadline to October 6, 2022 due to the unexpected time delay to procure a construction contractor. The new requested deadline is April 6, 2023.

Orems Basin 03 Relief Sewer Project (Contract 21144 SX0): During the 4th quarter of 2021, the low bidder defaulted on the contract. A new contractor was identified to complete the construction work and Notice to Proceed was issued on July 1, 2022. The project is currently under construction. On May 11, 2022 the County submitted a time of performance extension request, the new requested deadline is May 29, 2023.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/2/2022
Duration of Overflow	23 minutes
Date of Relevant Weather Conditions	7/2/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	124
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 5/17/2022, the County submitted a Time of Performance Extension request to eliminate the overflow structure by 3/3/2024.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	7/2/2022
Duration of Overflow	1 minute
Date of Relevant Weather Conditions	7/2/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	589
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The Notice to Proceed for Phase I construction contract was issued on 9/3/2019. County to submit a second SSO elimination time extension request when a date has been identified. Right of Way and environmental permits required for Phase II contract.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	7/2/2022
Duration of Overflow	2 minutes
Date of Relevant Weather Conditions	7/2/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	896
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	Construction for Phase 1 of the relief sewer is complete and the County will construct Phase 2 and 3 after right-of-way acquisition and environmental permits obtained. The County will submit a time of performance extension request for the elimination of the SSO structure when a definitive date has been determined.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	7/2/2022
Duration of Overflow	5 minutes
Date of Relevant Weather Conditions	7/2/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	82
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	Construction for Phase 1 of the relief sewer is complete and the County will construct Phase 2 and 3 after right-of-way acquisition and environmental permits obtained. The County will submit a time of performance extension request for the elimination of the SSO structure when a definitive date has been determined.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/5–6/2022
Duration of Overflow	17 hours 45 minutes
Date of Relevant Weather Conditions	7/5/2022
Description of Relevant Weather Conditions	Dry
Net Gallons Discharged	25,399
Receiving Waters	Herring Run
Identified Cause	Airline and rope for a plug in adjacent, out of service line drifted down the active pipe and caused debris to collect and block the sewer main.
Details of Corrective Action Taken or Planned	Ran line with nozzle to relieve blockage.

Name	Alter Road
SSO ID	22
Address	Alter Road & Southern Cross Drive
Date of Discharge	7/16/2022
Duration of Overflow	50 minutes
Date of Relevant Weather Conditions	7/16/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	3,442
Receiving Waters	Maiden's Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The Notice to Proceed for Phase I construction contract was issued on 9/3/2019. County to submit a second SSO elimination time extension request when a date has been identified. Right of Way and environmental permits required for Phase II contract.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	7/16/2022
Duration of Overflow	35 minutes
Date of Relevant Weather Conditions	7/16/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,337
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 5/17/2022, the County submitted a Time of Performance Extension request to eliminate the overflow structure by 3/3/2024.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	7/16/2022
Duration of Overflow	51 minutes
Date of Relevant Weather Conditions	7/16/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	6,905
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	The Notice to Proceed for Phase I construction contract was issued on 9/3/2019. County to submit a second SSO elimination time extension request when a date has been identified. Right of Way and environmental permits required for Phase II contract.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	7/16/2022
Duration of Overflow	1 hour 32 minutes
Date of Relevant Weather Conditions	7/16/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	30,681
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	Construction for Phase 1 of the relief sewer is complete and the County will construct Phase 2 and 3 after right-of-way acquisition and environmental permits obtained. The County will submit a time of performance extension request for the elimination of the SSO structure when a definitive date has been determined

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	8/4/2022
Duration of Overflow	3 minutes
Date of Relevant Weather Conditions	8/4/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	8,359
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a time extension request to eliminate overflow structure by 8/3/2023.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Dr. & Parsons Ave.
Date of Discharge	9/12/2022
Duration of Overflow	40 minutes
Date of Relevant Weather Conditions	9/12/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	6,912
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 5/17/2022, the County submitted a Time of Performance Extension request to eliminate the overflow structure by 3/3/2024.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	9/12/2022
Duration of Overflow	55 minutes
Date of Relevant Weather Conditions	9/12/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	9,628
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 5/17/2022, the County submitted a time of performance extension request to eliminate the overflow structure by 3/3/2024

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	9/12/2022
Duration of Overflow	1 hour 51 minutes
Date of Relevant Weather Conditions	9/12/2022
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	7,153
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	Construction for Phase 1 of the relief sewer is complete and the County will construct Phase 2 and 3 after right-of-way acquisition and environmental permits obtained. The County will submit a time of performance extension request for the elimination of the SSO structure when a definitive date has been determined

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		7/2/2022	7/16/2022	8/4/2022	9/12/2022
Rain (inches)		0.67-1.67	2.3	1.34	0.95

Attachment B - Construction Status for Elimination of SSO Structures and Pump Station Projects

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I (SSOs 22, 23A, 23B, 24) Contract 18180 SX0	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	On 1/26/2021 the project achieved functional use. The Phase II project (Contract 20018 SX0) and Phase 3 project must be completed before eliminating the SSO structures.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24) Contract 20018 SX0	-	Gwynns Falls	3/22/2017	TBD	No	On 2/14/2017, the County submitted a time extension request with an undefined elimination date. A second time extension request with a definitive elimination date will be submitted after right-of-way acquisition and environmental permits are obtained and construction Notice to Proceed is issued for Contract 20018 SX0. Easement acquisition was unsuccessful so the project is being redesigned.
Powder Mill Interceptor Relief Sewer Phase III (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	On 5/12/2022, the County issued Design Notice to Proceed. The design consultant is currently in preparation of the preliminary design memo.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	3/3/2024 (Requested)	No	On 4/27/2020 the County submitted a time extension request to eliminate the overflow structure by 8/3/2023. The extension request approval letter from the Maryland Department of Environment incorrectly identified the new deadline as 11/5/2019. On 9/23/2021, the County submitted a correction of records letter to confirm the new approved deadline of 8/3/2023. On 1/4/2022, the County submitted a Time Extension Request to eliminate the overflow structure by 12/4/2023. The time extension was necessary due to unanticipated construction site conditions. On May 17, 2022 the County submitted a subsequent Time Extension Request, as the unexpected site conditions continue to delay completion of the construction project. This project is approximately 95% complete.

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Current Consent Decree SSO Elimination Date	SSO Eliminated	Status
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a time extension request with an undefined SSO elimination date. A second time extension request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Contract No.	Consent Decree Deadline	Project Phase	Construction Notice to Proceed Date
Millers Island	19175 SX0	6/1/2023	Construction	1/6/2021

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral.
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole.
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action.
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Subject: RE: West Joppa Road - Sewer Capacity

Matt,

We've reviewed your request and determined the following 8" sewer segments do not have adequate capacity to accommodate the proposed 62 home subdivision at 2310 West Joppa Road:

Upstream MH	Downstream MH	Length	Diameter	Status
43794	43793	137.96	8"	
43793	43792	192.31	8"	
43792	43791	87.36	8"	Part of Hopkins project
43791	43790	60.00	8"	Part of Hopkins project
43790	43789	316.80	8"	Part of Hopkins project
43789	43788	232.57	8"	Part of Hopkins project
43788	43787	159.01	8"	Part of Hopkins project
43787	43786	76.00	8"	Part of Hopkins project

As noted in the table shown above, six of the segments are included in the Hopkins project which has not been constructed. As we discussed on the phone, my understanding is that there is an outstanding right-of-way issue that is holding up the project. Vishnu Desai from Development Plan Review may be able to offer more information on the status of that sewer replacement project.

Dave Bayer of Sewer Design had a copy of the drawing showing the work that was to be completed by Hopkins. The drawing is attached for your reference.

Thank you,

Lisa

Subject: West Joppa Road - Sewer Capacity

CAUTION: This message from Matt.Bishop@kimley-horn.com originated from a non Baltimore County Government or non BCPL email system. Hover over any links before clicking and use caution opening attachments.

Good afternoon Lisa,

As discussed we are in the middle of a feasibility study for the property located at 2310 West Joppa Road. Would you please let me know if there is adequate capacity in the downstream sewer system for 62 new single-family detached homes? We anticipate that the new sewer main for all of the new homes will tie into the existing sewer main located in West Joppa Road at or near Manhole #43819 as shown on the attached plan.

If you need any additional information please let me know.

Thank you,

Matt Bishop, PLA, LEED AP

WATER SAMPLING

Baltimore County has almost 200 miles of tidal coastline as well as public and privately owned and operated tidal and fresh water recreational bathing beaches. In addition, the availability of these recreational water resources supports a significant number of related activities such as commercial and recreational fishing, skiing, camping and boating.

Environmental Health Services (EHS) conducts recreational water sampling, provides water sampling in support of sewer overflow investigations and regulates bathing beaches and public swimming pools for the health and safety of the public.

Feedback

WATER QUALITY AND WATER CONTACT

Close All

— RECREATIONAL WATER QUALITY

Environmental Health Services (EHS) routinely conducts bacteriological sampling of many areas in an effort to provide information to the public on water quality and promote the safe use of these resources. View a map of the associated water sampling areas and locations.

This sampling utilizes the bacteriological indicator organism Enterococci for salt water and Escherichia coli (E. coli) for fresh water. These organisms are found in the intestines of all warm-blooded animals and are important chiefly because, when found in higher concentrations in conjunction with a known or suspected source of sewage contamination, the probable presence of other more pathogenic organisms is indicated.

MENU

A history of sampling helps to provide some of the background information needed to e long-term trends in water quality. Water conditions change constantly. It should d that any single sample or group of samples represents a “snap shot in time” and not be used without other supporting information to characterize the water quality of a particular river, lake or bay.

Water users should remember that all natural waters support many different microorganisms. Some of these organisms are pathogenic to humans; however, most are not. Water users should note that murky or debris-strewn water, which often occurs after violent storms or heavy rains, is a general indication of poor water quality. Excessive storm water runoff after heavy rains can carry pet waste, agricultural waste or fecal contaminants from brief sewage overflows as well as various chemicals including those associated with commercial and residential lawn care.

Swimmers, skiers, boaters or any one whose activities will bring them into close contact with natural waters should always take into consideration their own observations before entering the water. Natural waters should never be considered safe for ingestion.

WATER CONTACT ALERT

Should sampling by the County measure elevated bacteriological levels due to a known or suspected sewage overflow, that would make water activities unsafe or unhealthy at a particular location, a water contact alert will be issued. In the event that these conditions affect a public bathing beach, that beach will be closed. The Water Contact Alert will be posted and a press release will be issued to major media outlets. Signage may also be posted at points of greatest access to the affected body of water.

In open waters, the public will be advised to minimize water contact and the health risks associated with sewage contaminated waters will be explained. After a water contact alert has been issued, the conditions, which may have contributed to poor water quality, will be investigated. After those conditions have abated, sampling will resume to determine when the water quality has improved to an acceptable level. The water contact alert will then be lifted.

WATER QUALITY ADVISORIES

When monitoring in open areas of water indicates a widespread, abnormal rise in the concentration of bacteria and there is no known or suspected sewer overflow, a Water Quality Advisory may be issued. These conditions are typically associated with storm water runoff. Water Quality Advisories are non-regulatory and usually temporary in nature.

Feedback

MENU

Advisories are issued to provide recommended precautions for recreational water users
olicable public health recommendations will be noted on this web site.
ionary signage is not typically posted for Water Quality Advisories, however a press
may be issued if conditions are widespread and severe.

WATER QUALITY SIGNAGE

In an effort to inform the public regarding specific health related precautions, various types of signage may be found in and around access points to both fresh and tidal waters.

- Water Contact Alert—No Recreational Activities
- Recreational Water Quality Advisory
- Health Advisory—Back River
- Health Advisory—Baltimore Harbor

Feedback

OVERVIEW

Baltimore County is required by the United States Environmental Protection Agency (USEPA) and the Maryland Department of the Environment (MDE) to take routine bacteriological samples at public bathing beaches. Baltimore County also samples in larger areas of open water subject to frequent recreational use. Various chemical parameters such as temperature, salinity, and pH are also routinely measured.

Bathing beach monitoring consists of five samples taken in a pattern designed to represent the designated swimming area at the facility. Sample runs are made every two weeks for tidal water bathing beaches and monthly at fresh water bathing beaches.

Non-regulated open areas in tidal waters typically subject to recreational uses such as boating, fishing, skiing, or wind surfing that involve only occasional full body contact and occasional accidental ingestion of water are also sampled on a bi-weekly basis.

MENU

Sampling for tidal waters is typically conducted from early April through November, weather permitting. Sampling at fresh water beaches is performed from Memorial Day through Labor Day. Additional sampling may be initiated in response to unusual conditions or events that could negatively impact water quality and public health.

STANDARDS

Recreational water quality standards are used to determine the relative risk of illness for swimmers. Beach closures and associated Water Contact Alerts are based on consideration of the geometric mean of results for that beach or area and any known or suspected sewage contamination. The association of sewage contamination with elevated indicator organism concentrations is particularly important because sewage carries a significant array of human pathogens, greatly increasing the possibility of contracting a water borne illness. Elevated, naturally occurring bacteria concentrations due to water fowl, marsh decomposition, or normal ground surface runoff are, in general, not considered to have as great a public health significance.

The USEPA/MDE bacteriological standard for consideration of beach closure at tidal beaches is a geometric mean of 235 MPN, Enterococci. The USEPA/MDE bacteriological standard for fresh water beaches is a geometric mean of 126 MPN, E. coli.

Feedback

WATER QUALITY CHARACTERIZATION FOR OPEN WATER

The results for open recreational waters are considered individually and as a geometric mean. The geometric mean beach closure standards for Enterococci and E. coli are used for comparison purposes only in conjunction with information regarding known or suspected sewage contamination to evaluate the need for a Water Contact Alert.

In cases where there is no suspected sewage overflow, there are no mandated standards for evaluation. The County, therefore, considers sampling results, other sources of possible contamination, sampling history, and environmental factors to determine the need for increased concern, investigation, or public notification regarding water quality.

This evaluation also reflects the manner in which the public uses these waters. The majority of activities, which routinely occur in these areas, seldom involve the participation of very young children or immune-compromised individuals. In addition, activities do not typically consist of constant, complete repeated immersion in, or ingestion of water. This reduces both the opportunity for exposure and pathways for bacteria to enter the body. Occasional, reduced water quality in these areas therefore poses less of a risk to the general recreational population.

About

The Jones Falls watershed encompasses 40 square miles including rural segments of Baltimore County at its upper reaches. The headwaters of the Jones Falls begin in Greenspring Valley and the stream meanders east through several farms, country clubs and private schools, until it reaches Lake Roland. At Lake Roland the river merges with the eastern tributaries and then continues southward over the dam and through Baltimore City. It finally emerges from a tunnel in Baltimore City's Inner Harbor. More than 200,000 residents live in the Jones Falls watershed, 67,000 of whom live in the County.

This watershed is divided by the County's urban rural demarcation line (URDL) with rural countryside at the headwaters to the west and highly urbanized areas to the east. The URDL separates areas in the County that receive public water and sewer infrastructure, with those that rely on private well and septic systems. Areas inside the URDL can accommodate development, including employment, retail and residences while the areas outside are reserved for agricultural, natural resource protection and low density rural residential development.

Nearly two-thirds of this watershed is located in rural Baltimore County, which is predominantly cropland and low-density development outside the URDL. The most heavily developed areas are in the eastern and southern portions of the watershed where nearly one-third of the land area is covered by impervious surfaces such as parking lots, sidewalks and driveways.

This watershed offers an abundance of recreational opportunities including Lake Roland Park. Lake Roland features many paths and trails for hiking, birding and biking. It is home to many private and public golf courses and country clubs and medical and educational institutions including Towson University, Sheppard Pratt, Greater Baltimore Medical Center and University of Maryland St. Joseph Medical Center. Portions of the Jones Falls support a healthy, self-sustaining brown trout population.

ALERT/ADVISORY PROCEDURES

Feedback

The Baltimore County Department of Health, Environmental Health Services (EHS) closely monitors and samples beach areas for water quality, posts sampling results, and issues beach closure notices, Water Contact Alerts and Water Quality Advisories.

When recreational water conditions exceed standards and sewage contamination is suspected or evident sampling will occur and the results will be posted online, Water Contact Alerts are issued or public bathing beaches are closed. Contaminated conditions can be produced by storm water run-off from severe storms, sanitary sewage overflows, or marine accidents. After the storms have passed, local wind and tide conditions can result in the intermittent re-intensification of those conditions for extended periods in tidal waters. When water quality parameters are generally elevated or abnormal, but no sewage contamination is present, a Water Quality Advisory will be issued.

Recreational water users are reminded:

- Be observant for cloudy or discolored water in streams, rivers, or the bay, and of waters that are laden with debris. Water quality may have been negatively impacted.
- Do not drink stream water.
- Avoid contact with potentially contaminated water if you have open cuts or bandaged wounds. If accidental contact with contaminated water occurs, wash any damaged skin areas as soon as possible.
- Minimize hand to mouth contact and be sure to wash your hands thoroughly before eating.

OP-ED

A war on pollution, not rural Maryland

By Karen Hosler
Baltimore Sun • Jan 17, 2012 at 1:50 pm

Listen to this article

Don't be surprised if longtime "poop warriors" along theChesapeake Bay'sthickly populated Western Shore are not sympathetic to claims that builders in still-rural parts of the watershed should have unlimited use of septic tanks.

Those backyard sewage disposal devices send pollutants into the ground, where they can leach into waterways and sometimes drinking water supplies. In Maryland, at least, they are the fastest-growing source of bay pollution, so the long practice of one-by-one septic tank approvals, common throughout the bay area, doesn't make sense to those at the cleanup end.

Prosecutors' second 'alternative suspect' in Hae Min Lee's killing was man Baltimore Police pre...

"What we really need to be doing is taking a much more holistic view of the complete picture," said Ronald Bowen, public works director for Anne Arundel County. "How is it we can continue to co-exist, continue to grow economically, while at the same time working toward addressing the sins of the past?"

Maryland Gov.Martin O'Malley, who is waging an uphill battle to curb the use of septic tanks for new development, uses the county's plight to make his case. He says the sorry state of Anne Arundel's dirty rivers — where nearly one third of the pollution comes from septic tanks — provides a powerful warning to still-pristine areas.

SPONSORED CONTENT

Triplets Take the Same Picture for 36 Years. Don't Cry when You See the Last One

The same picture for 36 years, but it still gets to you.

By Taco Relish

"That's the future of this Chesapeake Bay if we don't get a handle on the proliferation of massive septic housing developments," Mr. O'Malley told reporters. "The chunk of pollution that will come from a growing population increasingly relying on septic systems, rather than wastewater treatment plants, will outstrip the progress that we are making in other areas."

To meet federal bay pollution cleanup requirements, Mr. Bowen proposes to retire half of the 40,000 septic tanks serving homes along his county's 530 miles of sensitive shoreline. The price tag of $760 million includes several techniques, such as the creation of new cluster treatment plants that serve only one community.

Mr. Bowen also needs $270 million to upgrade the county's seven sewage treatment plants and more than $1 billion to restore stream beds and otherwise deal with storm water runoff. Altogether, that's almost twice the annual county budget. Like most other watershed counties with similar needs, Anne Arundel doesn't have the money.

Mr. O'Malley hopes to help local governments meet at least some of these costs by persuading the state legislature to raise the "flush tax" on sewer and septic users.

Of course, no one's happy about tax or fee increases. But proposed curbs on septic tank use are also drawing fire for a different reason. Rural legislators assert their constituents have a right to seek profits from land development. They contend that curbs on septic tanks are a backdoor tactic to serve another O'Malley goal — limiting growth.

Those legislators don't seem troubled by the environmental damage that results from continued rural development and a reliance on septic tanks. Nor do they seem concerned that every taxpayer will share in the price of roads, schools and the other services new development needs.

It's easy to understand the complaint of bayside homeowners with failing septic systems who are suddenly confronted with a bill of $20,000 or more to connect to a sewer system or put in a new, state-of-the-art septic tank. But remember, the cost of septic tank pollution to the rest of us in terms of harmful bacteria in the water supply — we're talking about us now, not fish — is perhaps beyond calculation.

"If we want to continue the quality of life we have here ... it's going to be more expensive," said Robert Summers, Maryland's secretary of the environment. But without a clean water supply, "we have no economy."

Like Maryland, Virginia and Pennsylvania both have programs to encourage property owners to upgrade their septic waste technology to the newest nitrogen- and phosphorus-removing systems.

"I think it's momentous," said Allen Knapp, director of onsite sewage and water services for the Virginia Department of Health. "Instead of just issuing permits, we are now trying to achieve a potential outcome: a cleaner environment."

But Maryland is the most densely populated of the bay watershed states, and it seems to have made the most use of septic systems to serve summer cottages and now mini-mansions along the bay.

"There is nothing easy about what we're trying to do," Mr. Bowen said.

So, that's the dilemma. Most of us are selfish and short-sighted. We want what we want right now and choose not to think about the future. But just for the sake of argument, wouldn't it be a lot better to avoid the problem while we still can than to expect future generations to try to fix it?

Maybe that's too much to ask.

Karen Hosler, a former editorial writer for The Baltimore Sun, is a reporter, commentator and talk show host in Baltimore. This article is distributed by the Bay Journal News Service.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREES PLANTED WITHIN 10 FEET OF THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY OPERATIONS AND MUST BE APPROVED BY THE FIRE CODE OFFICIAL.
3. A FIREFIGHTER RUN ROAD FOR ACCESS TO BUILDINGS AND ADEQUATE WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDERWAY, ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.116.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.5.10.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS ON APPROXIMATELY 39.5 ACRES. THERE ARE VERY FEW STEEP SLOPES AND NO SOILS CLASSIFIED AS HIGHLY ERODIBLE ON THE SITE. THE SOILS ON THE SITE CONSIST OF SOIL GROUPS 1A(G) B, C, AND D. SEE APPENDIX A FOR THE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE IS WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE; HOWEVER, THE PROPOSED DEVELOPMENT EFFORTS WILL RESULT IN CHANGES TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS, PROPOSED ROADWAYS, AND WITHIN PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY 4 SUBMERGED GRAVEL WETLANDS. A SEPARATE FLOODPLAIN STUDY HAS BEEN PREPARED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 2 OF THE 3 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR PEAK RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

ADDITIONAL INFO

ANTICIPATED ACTIONS:
1. VARIANCES: NONE
2. SPECIAL VARIANCE: TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: C. Pete Gutwald
Director, Permits, Approvals and Inspections

DATE: 3/1/2021

FROM: Steve Lafferty
Director, Department of Planning

SUBJECT: CONCEPT PLAN CONFERENCE
Project Name: Greenspring Manor
PAI #VIII-0922

GENERAL INFORMATION:

Applicant Name: Atapco Properties, INC.
1 South Street, Suite 2800
Location: Baltimore, MD, 21202
Council District: Second
Growth Tier: I
Zoning: DR 1, DR 2
Acres: 39.4 gross acres ±

Surrounding Zoning and Land Use:

North:	DR 2	Residential
South:	DR 1	Residential
East:	DR 1, DR 2	Residential
West:	O3	Office

Project Proposal:

The project proposes 61 single-family homes to be built on 39.4 ±acres of land zoned DR 1 and DR 2. The site is mostly wooded and has environmental floodplains and wetlands. There is currently one existing house, which is to remain.

Project History:

The project exhibits no development history at this time.

MEETINGS

Post Submission Community Input Meeting:		Pre-Concept Plan Conference:	
Concept Plan Conference:	3/9/2021	Community Input Meeting:	
Development Plan Conference:		Administrative Law Judge's Hearing:	

ANALYSIS

Master Plan:
The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area. (CCA). Baltimore County's CCAs encompass the County's more densely populated, established communities. Nearly 75% of the County's residents live in CCAs, where there are a wide range of housing choices, small-town scale commercial centers and employment centers.
The CCA land management area designation is intended to protect and invest in these older communities, and revitalize their commercial hubs.

The "Proposed Land Use, Baltimore County Smart Coded" designation is T3 Sub-Urban. The T-3 transect is characterized by low-density residential areas, adjacent to higher zones that contain mixed-use. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

School Impact:
This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. A school impact analysis is required with development plan submittal. Information is available at the following web site:

www.baltimorecountymd.gov/Agencies/planning/devrevandlanduse/adequatepublicschoolfacilities.html

The proposal is within the boundaries of the following schools:

Riderwood Elementary School
Ridgley Middle School
Dulaney High School

EVALUATION AND RECOMMENDATION

The receipt of additional information from the Community Input Meeting or other sources may generate further comments at the Development Plan Conference.

Special Variance Request:

The applicant has requested the county to permit its development in an F level traffic shed as delineated on the 2020 Basic Services Map. This includes the intersection of West Joppa Road and Falls Road/I-83. The development access is within this failing traffic shed. The Department has received the applicant's memorandum regarding the traffic study analysis conducted in September 2020 which proposes improvements to mitigate the traffic in order to obtain a variance from the Basic Serves requirement.

The Department of Planning considers this site to be overdeveloped. Many of the lot sizes are not compatible to the surrounding neighborhoods. The number of lots should be decreased to allow for larger lots and would help achieve a design that could accommodate future improvements and yard space without the need for relief. As designed, the proposed development does not achieve the vision of the Master Plan 2020 nor the Comprehensive Manual of Development Policies. The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses. The site also would require extensive grading. The site should be redesigned to minimize cut and fill while using the natural features of the land pursuant to the Comprehensive Manual of Development Policies as well as Section 260 of the BCZR.

Residential Performance Standards:

The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to provide a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The applicant is to provide to the Department of Planning a pattern book for review. The development must be consistent with the spirit and intent of the entirety of §260 of the BCZR.

Additional Comments on the Plan:

1. Redesign the overall layout with uniform lot sizes that are more compatible with the surrounding developments and more compatible with the description of the Master Plan 2020 T3 Transect designation. Design road alignments in relation to existing topography. Minimize cutting and filling and avoid mass grading of large tracts of land where possible pursuant to the CMDP, Residential Guidelines, page 43. Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography pursuant to the Baltimore County Zoning Regulations section 260.2.A.3.
2. Remove lot 7 or reallocate it within the redesign of the site plan to avoid the awkward siting of this home.
3. Show front building orientations for all proposed dwellings.
4. Provide a landscape and lighting plan to the County Landscape Architect for review and approval. Proposed lighting should be designed at a pedestrian scale and not create light spillage onto adjacent properties.
5. Add a note to the plan stating that the maximum height for a dwelling in a DR 1/DR 2 zone is 50 feet.
6. Confirm with the Office of Zoning Review whether additional on street parking for overflow will be required.
7. Confirm by note on the plan that a minimum private yard area of 500 contiguous square feet with

a minimum 15-foot dimension is provided for each proposed lot to ensure adequate yard space pursuant to the Comprehensive Manual of Development Policies (CMDP) page 33.

8. The Department of Planning will require the proposed cul-de-sacs to be designed pursuant to Baltimore County Zoning Regulation section 260.4.B. Landscaped islands will be required unless an unforeseen hardship exists notwithstanding the proposed layout design.
9. Provide all architectural designs to the Department of Planning for review and approval. The architecture should be included in the required pattern book and show all proposed housing types. The proposed architecture should indicate proposed dimensions, materials, and colors to be used.
10. All proposed signage should be included in the pattern book and comply with section 450 of the Baltimore County Zoning Regulations. Signage should include proposed sign type, dimensions, materials, and colors.
11. Indicate in the required pattern book that Lots 2, 6, 8,15,36,46,47,52,53 and 61 are high visibility lots. It should be demonstrated in the required pattern book how these lots meet the higher quality of design pursuant to the Baltimore County Manual of Regulations Section 260.6. The pattern book should include square footage for the side facades with element count requirements.
12. The plan states that the proposed 52,000 sf HOA space will be an active recreation field. Cleary indicate whether this will be an open multi-use field, sports field, tot lot, or other open space. Clarify whether the proposed open space within the 100-year floodplain is acceptable per county open space standards.
13. Confirm with the Department of Environmental Protection and Sustainability that all wetland, floodplain and forest buffer setbacks are being met.
14. Make a clear distinction on the plan between the labeled forest buffer and forest conservation easement areas.
15. Indicate if there are any specimen trees on the site. These trees should be preserved to the fullest extent possible.
16. Any fencing around the storm water management ponds should be of high quality materials as approved by the Baltimore County Landscape Architect.
17. It is a policy of the Department of Planning that the homeowner should be able to have an open projection (i.e. rear decks) of at least 10' without requiring individual zoning relief.
18. Changes in building location or orientation, or proposed driveway location, at the time of building permit may require a determination from the zoning office of a possible amendment to the Final Development Plan (FDP). If, at the building permit stage, it is anticipated that dwelling footprints may be reversed, or that the location of garages may change from front- to side-loaded, or vice versa, a detailed alternative typical lot layout plan should be included in the pattern book.

MEETINGS

Concept Plan Conference:	3/9/2021	Community Input Meeting:	4/27/2021
Development Plan Conference:	8/11/2021	Administrative Law Judge's Hearing:	TBD

ANALYSIS

Master Plan:
The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area. (CCA). Baltimore County's CCAs encompass the County's more densely populated, established communities. Nearly 75% of the County's residents live in CCAs, where there are a wide range of housing choices, small-town scale commercial centers and employment centers.
The CCA land management area designation is intended to protect and invest in these older communities, and revitalize their commercial hubs.

The "Proposed Land Use, Baltimore County Smart Coded" designation is T3 Sub-Urban. The T-3 transect is characterized by low-density residential areas, adjacent to higher zones that contain mixed-use. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

The Department of Planning considers this site proposal consistent with the spirit and intent of the vision of the Master Plan 2020, the Comprehensive Manual of Development Policies (CMDP) and the Baltimore County Zoning Regulations (BCZR). The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses. The proposal has been redesigned to meet bulk regulations and accommodate future improvements and yard space to comply with the CMDP and BCZR without the need for relief. The lot sizes are compatible to the surrounding neighborhoods and do not adversely impact the established community. The proposal minimizes extensive grading and cut and fill, to the fullest extent possible, while using the natural features of the land pursuant to the Comprehensive Manual of Development Policies as well as Section 260 of the BCZR.

School Impact:
This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. The Department of Planning has reviewed the School Impact Analysis submitted on July 9, 2021 an offers the following comments:

- On all forms, the PAI number ought to be entered.
- On all forms, the official filing date should be July 9, 2021.
- On Form 1, there are 22 committed seats in the Riderwood Elementary School district. https://resources.baltimorecountymd.gov/Documents/Planning/apfo/committedseats.pdf
- On Form 3, the projected number of pupils (high school) is seven (7) instead of eight (8). Pupil yields from approved development in the past four (4) years ought to be selected and calculated against the official filing date of the referenced development plan.
- The above inaccuracies affect final results on Form 4.

SIA Approval Finding:

The Department of Planning finds that the subject Development Plan meets the requirements of BCC § 32-6-103 at the time of the filing date, July 9, 2021. The School Impact Analysis performed by the Department of Planning indicates that the projected enrollment for Riderwood Elementary School, Ridgely Middle School, and Dulaney High School is below 115% of the state rated capacity respectively. The projected number of students as a percentage of the state rated capacity is:

- Riderwood ES: 98.57%
- Ridgely MS: 103.55%
- Dulaney HS: 97.88%

EVALUATION AND RECOMMENDATION

The Department of Planning has reviewed the Development Plan submitted on July 9, 2021 and offers the following Comments.

Special Variance Request:

The applicant has requested the County to permit its development in an F level traffic shed as delineated on the 2020 Basic Services Map. This includes the intersection of West Joppa Road and Falls Road/I-83. The development access is within this failing traffic shed. The Department has received the applicant's memorandum regarding the traffic study analysis conducted in September 2020, which proposes improvements to mitigate the traffic in order to obtain a variance from the Basic Serves requirement.

With regard to the Special Variance request, the Department of Planning will defer and rely upon the expert judgement of the Department of Public Works and the final decision of the Administrative Law Judge.

Residential Performance Standards:

The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to provide a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The Department of Planning has reviewed the pattern book submit on July 9, 2021 and recommends approval pending the following comments below are addressed.

Additional Comments:

1. Clearly delineate and label on the plan all HOA open space areas.
2. To the extent possible, on all housing types that propose a water table, this treatment should be continued on all dwelling facades for continuity and to create a balance.
3. Show on the plan and in the pattern book the locations of all proposed signage.
4. Illustrate on the plan and in the pattern book the locations of all proposed trails, paths, and site amenities, such as the gazebo. Also, provide details and locations of all proposed trash receptacles.
5. Indicate in the required pattern book that Lots 2, 9, 10, 17, 23, 24, 37, 38, 48, 49, 54, 55 and 61 are high visibility lots. It should be demonstrated in the required pattern book how these lots meet the higher quality of design pursuant to the Baltimore County Manual of Regulations Section 260.6. The pattern book should include square footage for the side facades with element count requirements.
6. It is the position of the Department of Planning to ensure that every development in Baltimore County is aligned with the vision and goals of the Master Plan 2020, Comprehensive Manual of Development Polices and all applicable Community Plans. The vision of the Master Plan 2020 is to provide a network design that exemplifies walkability, a greater pedestrian experience, enhanced circulation, connectivity etc. The proposed Public Road "A" is proposed to provide connectivity to the adjacent community via sidewalks and a paved road that is gated and accessible by emergency vehicles only.
7. It is a policy of the Department of Planning that the homeowner should be able to have an open projection (i.e. rear decks) of at least 10' without requiring individual zoning relief.
8. Changes in building location or orientation, or proposed driveway location, at the time of building permit may require a determination from the zoning office of a possible amendment to the Final Development Plan (FDP). If, at the building permit stage, it is anticipated that dwelling footprints may be reversed, or that the location of garages may change from front- to side-loaded, or vice versa, a detailed alternative typical lot layout plan should be included in the pattern book.

BALTIMORE COUNTY, MARYLAND

SUBJECT: CONCEPT PLAN COMMENTS Date of Comments: March 5, 2021

TO: Jerry S. Chen Online via Webex; CPC DATE: March 9, 2021 @ 10:00 A.M.

FROM: PAI – ZONING REVIEW PAI No. 08-0922

PROJECT NAME: Greenspring Manor PLAN DATE: 2/15/2021

LOCATION: 2310 W. Joppa Road DISTRICTS: 08 ED / 02 CD

PROPOSAL: 61 Single-family detached dwelling units ZONING: DR-1 and DR-2

The plan has been reviewed by the staff at this level of detail and has been found to be in general compliance with the Baltimore County Zoning Regulations (BCZR) for Concept Plan approval. The following comments are offered as guide during the Concept Plan phase:

In General:

1. The existing lot area is split zoned as DR-1 and DR-2.
2. The Office of Zoning has "No Objections" to the concept of creating 61 lots with the proposal of 16 units within the 16.8 acres of DR-1 zoned property and with the proposal of 45 units within the 22.6 Acres of DR-2 zoned property.
3. Provide Owner's telephone number along with the Owner's name and address.
4. State on the plan print that the density calculation is pursuant to §1B02.2 of the BCZR.
5. The setback requirements are pursuant to the large tract table found in §1B01.2.C(1)(b) of the BCZR. Please state this section in the plan notes and on the typical lot plan layouts.
6. The minimum setback requirements in the BCZR for the proposed lots are confirmed as:
   Front yard = 25 ft. minimum
   Side yard = 30 ft. minimum between buildings or 25 ft. to a public ROW or 25 ft. to a tract boundary line
   Rear yard = 30 ft. minimum to a property line
   Front yard open porch = 18.75 ft. minimum

7. Verify and add to the notes on the plan print:
   "This property as shown on the plan has been held intact since 1971. The developer's engineer has confirmed that no part of the gross area of this property shown on the plan has ever been utilized, recorded or represented as density or area to support any off-site dwellings."

   If any adjacently owned property has been subdivided after this date, show this area as part of the overall tract boundary and adjust density calculations accordingly.

Existing Buildings and Plan Print:

8. Confirm and note on the plan print and in the notes all existing buildings to be razed, when razing will occur, and indicate who will be responsible for razing.

9. Note on the plan print and in the notes all existing buildings to remain and their uses.

10. Note on the plan the proposed Lot 1 setbacks for the existing residence. Show the front orientation of the existing residence on Lot 1.

Proposed Building and Plan Print:

11. Once established, show the height on all proposed dwellings in feet or stories in compliance with §1B02.2 of the BCZR or add to notes: "Maximum building height will not exceed is 50' in the DR Zones."

12. Show front orientation of all proposed dwelling units with arrows.

13. In regard to the typical lot layouts, provide this note:
    "Envelopes or typical dwellings as shown dictate a specific location and orientation which is intended to allow compliance with Baltimore County Zoning Regulations and policies. Should the location or orientation change or create conflicts with the regulations or policies, the location or orientation must be changed to alleviate the conflict."

14. Once established, label and dimension all access, HOA, and drainage and utility easements and clarify how they affect the residential lot where they occur. Provide a table if necessary.

15. Lot 7 shows an HOA label. Confirm and clarify if this is an HOA area or easement area.

16. Dimension the proposed ROW widths along with the paved road ROW areas.

17. Label and show the location of the bicycle parking.

18. Label and show any visitor or overflow parking that is not within the residential lots.

19. Confirm and label the forest conservation easement areas on Lots 28, 29, 30, 31, 32, 33, 60 and 61. If the forest conservation easement area has restrictions that affect the use of these lots for accessory structures, fencing, additions, and/or open projections, then clearly state those restrictions in the notes and list the lots that are affected by a protected easement area.

20. If any signs are proposed, the proposed location of all signs must be shown on the plan print and enough detail of proposed signs must be shown to determine location, size, area, underlying lot ownership and compliance with Section 450 of the BCZR.

21. If the property is the subject of a zoning hearing, list the case number, the decision and any conditions. Show the zoning case order on the plan. If no zoning history exists, add the note: "There is no zoning history for the property."

Final Requirements
A Final Development Plan (FDP) will be required and the above information may generate additional comments.

Final zoning approval is contingent firstly upon all plan comments being addressed on the Development Plan; secondly upon the final resolution of all comments; thirdly upon the outcome of any requested zoning hearings; and finally upon the inclusion of the FDP requirements and all notes and details specified above being included on the zoning FDP.

General Observations – these comments are offered based upon the current flurry of requests for building permits, additions, and zoning hearings.

1. Rear yard decks are currently being requested at 12-14 ft. deep minimum to allow for passage around a 3 ft. wide table and chairs.
2. Alterations to include:
   a. Dedicated home office space for at least 1 adult;
   b. Increased storage space to prevent renting space off-site;
   c. In-law living quarters;
   d. Swimming pool in the rear yard.

SUBJECT: CONCEPT PLAN COMMENTS — Date of Comments: August 10, 2021

TO: Jerry S. Chen — DPC DATE: August 11, 2021 @ 10:00 A.M.

FROM: PAI – ZONING REVIEW — PAI No. 08-0922

PROJECT NAME: Greenspring Manor — PLAN DATE: 9-9/2021

LOCATION: 2310 W. Joppa Road — DISTRICTS: 08 ED / 02 CD

PROPOSAL: 61 Single-family detached dwelling units — ZONING: DR-1 and DR-2

The following comments are offered as guide during the Development Plan phase:

1. Correction from Zoning: Please revise Zoning Note #4 to state that the density calculation is pursuant to §1B01.2.C.1(b) of the BCZR.
2. List in the Zoning Notes which lots are affected by an access easement. Add to the Zoning Notes that "Access Easements may not be fenced."
3. State in the Zoning notes and on typical lot layouts that "Typical open deck dimension of 10 ft. x 20 ft. shall provide the minimum rear deck setback of 22.5 ft." Show a dimension to decks on typical lot layouts.
4. Label and show the location of the bicycle parking on the plan print.
5. If any signs are proposed, the proposed location of all signs must be shown on the plan print and enough detail of proposed signs must be shown to determine location, size, area, underlying lot ownership and compliance with Section 450 of the BCZR.

A Final Development Plan (FDP) will be required. Final zoning approval is contingent firstly upon all plan comments being addressed on the Development Plan; secondly upon the final resolution of all comments; thirdly upon the outcome of any requested zoning hearings; and finally upon the inclusion of the FDP requirements and all notes and details specified above being included on the zoning FDP.

BALTIMORE COUNTY, MARYLAND

SUBJECT: Development Plan Review Comments
For CPC March 9, 2021

DATE: March 8, 2020

FROM: Vishnu K. Desai, Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 WEST JOPPA RD

DISTRICT: 8C2

We reviewed the subject plans received dated February 15, 2021 and have the following comments.

LANDSCAPE COMMENTS:

1. A Schematic Landscape Plan must be approved prior to Development Plan approval.
2. An approved Final Landscape Plan, cost estimate and security are required prior to permit approval.

SITE-SPECIFIC COMMENTS:

1. A Public Works Agreement is required for this project.
2. Provide additional details to the vicinity map like road network, road names and property boundaries.
3. Add Metropolitan District designations for sewer and water.
4. Add the Delinquent Account certification to the plan.
5. Provide additional labeling of the existing contours throughout the plan.
6. Provide note on the plan indicating if there are or are not wetlands on site. In accordance with *Baltimore County Code, Section 32-4-414*, dredging, filling or construction in any wetland is prohibited.
7. If the proposed Development is to be developed or designed in two (2) phases, please delineate phasing on the Development Plan.
8. Show the proposed first floor elevations.

9. West Joppa Road is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.
10. All proposed streets in this subdivision shall be improved with a 28-foot curb and gutter cross-section on a 50-foot right-of-way and shall be the Developer's full responsibility. Please label both the width of the road section and right-of-way on the plan.
11. The proposed cul-de-sac shall meet County standards, see Plate R-D, which requires a 60-foot turning radius.
12. **"No Parking"** signs shall be posted prohibiting parallel parking within the turnaround areas/cul-de-sac.
13. All sidewalks shall be a minimum of 5-feet wide and shall be installed in conformance with Baltimore County standards and to current Americans with Disabilities act (ADA) guidelines.
14. Developer shall extend proposed Public Road 'A' to connect to Mays Chapel Rd to the north via a 28-foot curb & gutter road section within a 50-foot right-of-way. The 50-foot right-of-way to be provided will replace the Emergency Access Easement shown on the plan.
15. Minimum width for all Drainage & Utility easements shall be 20-feet.
16. Engineer to show all existing sewer manhole numbers adjacent to the site on the plan.
17. The Developer shall provide a minimum 10-foot drainage and utility easement along all bordering property lines which are not adjacent to road right-of-way or storm drain reservations or where private easements or environmental easements border the property line.
18. The following existing 8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor

Upstream MH	Downstream MH	Length	Diameter	Status
43794	43793	137.96	8"	
43793	43792	192.31	8"	
43792	43791	87.36	8"	Part of Hopkins project
43791	43790	60.00	8"	Part of Hopkins project
43790	43789	316.80	8"	Part of Hopkins project
43789	43788	232.57	8"	Part of Hopkins project
43788	43787	159.01	8"	Part of Hopkins project
43787	43786	76.00	8"	Part of Hopkins project

Six of the segments noted above were to be addressed by the Johns Hopkins at Green Spring Station development prior to issuance of their use and occupancy permit. PAI did not enforce this requirement and the project was completed without the necessary sewer system improvements being completed.

The Greenspring Manor development may not connect to public sewer until the agreement with Johns Hopkins at Green Spring Station is enforced and all sewer improvements are completed, including the additional improvements to segments 43794-73793 and 43793-73792 noted in the above table.

19. Developer is responsible for acquisition of off-site easements for downstream sewer improvements.
20. All existing or proposed public utilities within W. Joppa Road and Mays Chapel Road shall be clearly labeled, type of utility and size. Provide the reference drawing numbers if the utility is existing.
21. Water and sanitary sewer service connections shall be shown on the Development Plan.
22. All site runoff must be conveyed to a suitable outfall without imposing adverse impacts to the receiving watercourse.
23. The existing storm drain system needs to be checked for adequacy and upgraded or provide stormwater management as needed.
24. Submit existing storm drain outfall study for review and approval.
25. Provide 100-year floodplain study for review and approval.
26. In accordance with *Baltimore County Code, Section 32-4-414*, filling within a floodplain is prohibited.
27. Developer shall investigate for adequate fire flow at the site and extend minimum 8-water main in all proposed roads serving the site.
28. Show all proposed Fire Hydrants along the proposed roads within the development. Coordinate with *Fire Protection Section* in regards to possible fire hydrants along Mays Chapel Road extension. Fire hydrant spacing and locations are subject to review and approval by the *Fire Protection Section* of the *Fire Department*.
29. Developer shall provide a **fee simple strip frontage on public road** for all meter services connected to public water main.
30. Developer shall investigate and provide pressure-reducing valve (PRV) when the static pressure exceeds 80-psi.
31. Developer's engineer has submitted a traffic impact study to Traffic Engineering Section. While the proposed development is located within a failing traffic shed, the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development.
32. This site is in a traffic deficient area with an 'F' level of service. Therefore, no building or grading permits will be issued unless allowed by the Administrative Law Judge at a Special Hearing. A traffic impact analysis will be required along with expert witness testimony at the Hearing. Approval of this development plan does not guarantee or warrant that a permit will be issued.

33. Sight lines are to be drawn from the centerline of the proposed access at a point ten feet behind the extension of the main road curb line to the centerline of the nearest approach lane on the main road.
34. The Developer shall be responsible for having all proposed street names in any new development approved by the Street Name and Address Section of the Department of Permits, Approvals and Inspections.
35. The Transportation Planning unit recommends that a multi-use path be constructed along the frontage of the property instead of the proposed sidewalk, as stated in Baltimore County's Western Bicycle and Pedestrian Master Plan.
36. Show proposed streetlights spaced per Baltimore County standards.
37. Prior to Development Plan approval, Development Plans Review (DPR, 410-887-3751) shall be contacted to schedule a field visit

* * * * *

The Development Plan when submitted will not be approved until all of the above comments, at a minimum, are properly addressed.

BALTIMORE COUNTY, MARYLAND

SUBJECT: Development Plan Review Comments
For DPC August 11, 2021

DATE: August 10, 2021

FROM: Vishnu Desai, Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 W. JOPPA ROAD

DISTRICT: 8C2

We reviewed the subject plans dated July 28, 2021 and have the following comments.

GENERAL COMMENTS:

All construction shall be accomplished in accordance with Baltimore County Standard Specifications and Details for Construction *(February, 2000, as amended)* and Baltimore City Standard Details.

Security shall be posted prior to the issuance of building permits unless the posting of said security is deferred. The security shall be posted prior to the recording of the plat.

A *Public Works Agreement* must be executed by the owner and Baltimore County for the required public ***(and/or private)*** improvements.

In accordance with *Baltimore County Code, Section 32-4-414*, dredging, filling or construction in any wetland is prohibited.

Any manmade embankment over 10-feet vertically shall be designed and/or approved by a soils engineer. The following note is to be placed on the sediment control plans and grading plans before approval will be given:

- *"All manmade embankments have been designed and/or certified for stability by a soils engineer".*

The Developer shall be responsible for damages to the County's facilities, such as water meters, manholes, curbs and gutters and inlets within his subdivision and for any damages caused by his construction equipment outside of his subdivision. Occupancy permits will be withheld until such damages have been corrected.

The contours on the plan reveal rather excessive grading. The Developer's engineer is cautioned not to exceed the maximum set by Baltimore County standards. Benching requirements shall be in accordance with *Section 41.02, Item 3* of the *1983 Maryland Standards and Specifications for Soil Erosion and Sediment Control.* Retaining walls that are proposed along road rights-of-way shall be located away from the right-of-way a distance that is at least equal to the height of the wall.

Offsite rights-of-way are necessary for roads, storm drains or other utilities. The Developer is hereby advised that the final plat and/or building permits will not be approved until the offsite right-of-way is acquired.

The Developer and his engineer shall be responsible for investigating the need for and obtaining the necessary permits for the facilities serving this site that may require a "*Corps of Engineer's Permit*," a "*Water Resources Permit*," a "*Water Quality Certification*," and any other federal or state permits.

The Developer shall not allow any cable television cables to be installed in this subdivision without the required County permits being obtained. Baltimore County will not assume any rights-of-way, easements, or maintenance of any public improvements, where such cables have been installed without a permit until the cables are satisfactorily located.

When an *Irrevocable Letter of Credit* is posted as security and the County's ability to draw on or otherwise call the *Letter of Credit* is negatively impacted for any reason (*bank default, receivership, etc.*), it shall be the sole responsibility of the Developer to obtain a replacement *Letter of Credit* under the same terms and conditions.

The Developer shall be responsible for having all proposed street names in any new development approved by the *Street Name and Address Section* of the *Department of Permits, Approvals and Inspections* prior to his engineer placing these names on the final record plat and/or construction drawings. All street name changes made after plat recordation must be approved by the *Street Name and Address Section* and the record plat and construction drawings revised accordingly. The method for changing street names after a plat has been recorded will vary by project, and guidance will be provided by the *Street Name and Address Section.*

Test pits within County roads require a utility cut permit obtained from the *Bureau of Highways and Equipment Maintenance.*

The coordinate system used on all County drawings must be based on the North American Datum of 1983 (NAD 83) with the readjustment date shown in parenthesis. A couple examples are: NAD 83(1991) and NAD 83(2007). The elevation system of all drawings must be based on the North American Vertical Datum of 1988 (NAVD 88).

All drainage and utility easements containing a sewer or storm drain shall be a minimum of twenty (20) feet wide.

HIGHWAY COMMENTS:

WEST JOPPA ROAD is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.

The Developer's responsibilities along the existing road frontage of the development shall be as follows:

a) The submission of detailed construction drawings to extend a minimum distance of 200 feet beyond the limits of the subdivision or as may be required to establish line and grade.

b) The submission of full cross sections is deemed necessary for design and/or construction purposes. The sections are to be taken at 25-foot intervals and are to be shown on standard cross-section paper at 1"=5' horizontal to 1"=5' vertical scale.

c) The preparation of the right-of-way plat for, and the dedication of, any widening and slope easements at no cost to the County.

d) The preparation of the right-of-way plats for any offsite road right-of-way required to make the necessary improvements.

e) The grading of the widening and the existing road to the established grade. Where adjacent properties are adversely affected by the improvements, the Developer shall be financially responsible for the necessary repairs to these properties.

f) The relocation of any utilities or poles as required by the road improvements.

g) The construction of combination curb and gutter in its ultimate location and a maximum of 28.5 feet of paving adjacent thereto along the frontage of the property. The paving thickness shall conform with Baltimore County standards.

All streets in this subdivision shall be improved with a 28-foot combination curb and gutter cross-section on a 50-foot right-of-way and shall be the Developer's full responsibility.

The paving thickness shall conform to Baltimore County standards and requirements.

It shall be the responsibility of the Developer's engineer to clarify all rights-of-way within the property and to initiate such action that may be necessary to abandon, widen or extend said

rights-of-way. The Developer shall be responsible for the submission of all necessary plats and for all costs of acquisition and/or abandonment of these rights-of-way.

Prior to the recording of this plat, a road closing hearing is required, and the road must be formally closed by the County Executive.

The Developer is responsible for the grading of the widening to the proposed cross section based on the grade of the existing road. Where adjacent properties are adversely affected by the improvements, the Developer shall be financially responsible for the necessary repairs to these properties.

Cul-de-sacs shall be improved with a/an 60-foot paving radius with combination curb and gutter on a/an 71-foot diameter right-of-way and shall be Developer's full responsibility. The Cul-de sacs shall conform to Baltimore County Standard R-E.

The contours on the plan reveal rather excessive grades. The Developer's engineer is cautioned not to exceed the maximum set by Baltimore County standards in the establishment of street grades.

The sharp curves must conform to Baltimore County standards for minimum length of curve, minimum radii and widening.

The Developer shall provide an in-fee right-of-way at no cost to Baltimore County to permit County maintenance forces to perform any necessary work in the SWM and/or storm drain reservation. This right-of-way shall be a minimum of 20 feet wide and shall have a grade less than 10% from the roadway to the reservation.

Guardrails are required along the public road and/or the storm drain reservation and shall be the Developer's responsibility. The guardrails shall be constructed in accordance with Baltimore County standards.

Monumental entrances shall consist of two 20-foot lanes divided by an 8-foot median with minimum 25-foot radii curb returns and shall be constructed in accordance with Baltimore County standards for concrete entrances.

Driveways shall be constructed in accordance with Baltimore County standards with depressed curb and 7-inch concrete aprons within the right-of-way.

The Developer shall grade to the ultimate cross section those areas where the driveways intersect West Joppa Road, so as to provide proper sight distance.

All driveway entrances shall conform to Standard Plates R-15, R-15A, or R-15B.

In accordance with *Baltimore County Code, Section 32-4-408*, streetlights are required along all road frontages of subdivisions. The Developer will be responsible for the full cost of installation of the cable, poles and fixtures. Along new roads, the County will assume the cost of the power

when the roads have been accepted for County maintenance. Along existing roads, the County will assume the cost of power after installation.

"**No Parking**" signs shall be posted prohibiting parallel parking on 24-foot-wide streets and within the turnaround area.

Ramps shall be provided for physically handicapped persons at all street intersections. The ramps shall have detectable warning areas and shall be constructed in accordance with Standard Details R-36A or R-36B.

Sidewalks are required on both sides of the streets within this subdivision and/or along the frontage of all existing streets including state roads. The walks shall be a minimum of **5**-feet wide and shall be installed to conform to Baltimore County standards and to current Americans with Disabilities (ADA) guidelines.

Screening shall be placed so as to prevent headlights within the parking areas from interfering with the traffic on the adjacent road.

Security must be posted prior to the issuance of a building permit to insure completion of any private improvement. Upon satisfactory completion of the private improvements and certification by a Professional Engineer that said improvements have been constructed in accordance with County standards and specifications, the security will be refunded.

STORM DRAIN AND SEDIMENT CONTROL COMMENTS:

The Developer is responsible for the total actual cost of drainage facilities required to carry the storm water runoff through the property to be developed to a suitable outfall. The Developer's cost responsibilities include the acquiring of easements and right-of-way both onsite and offsite and the deeding in-fee of said right-of-way at no cost to the County. Preparation of all construction, right-of-way and easement drawings, engineering and surveys, and payment of all actual construction costs including the County overhead both within and outside the development are also the responsibilities of the Developer.

Onsite drainage facilities serving only areas within the site are considered private. Therefore, construction and maintenance shall be the Developer's responsibility. However, a drainage area map, scale 1"=200', including all facilities and drainage areas involved, shall be shown on a plan and submitted to Baltimore County for review.

The Developer must provide necessary drainage facilities (*temporary or permanent*) to prevent creating any nuisances or damages to adjacent properties, especially by the concentration of surface waters. Correction of any problem that may result due to improper grading or improper installation of drainage facilities will be the full responsibility of the Developer.

Development of this property through stripping, grading and stabilization could result in a sediment pollution problem, damaging private and public holdings downstream of the property. A grading permit is, therefore, necessary for all grading, including the stripping of topsoil.

In accordance with *Baltimore County Code 33-5,* a grading plan shall be approved and a *Performance Bond* posted prior to issuance of a grading permit. A sediment control plan is required. The number of square feet of land disturbed shall be indicated on the sediment control drawing.

The Developer shall be responsible to stabilize the sidewalk areas and supporting slopes on all road rights-of-way following completion of the initial grading of the boxed-out subgrade. The stabilization shall be accomplished within the nearest period of optimum seeding as established in the *Baltimore County Sediment Control Manual.* Minimum acceptable stabilization measures will be as specified in the *Baltimore County Sediment Control Manual* under "*Critical Area Stabilization (With Semi-Permanent Seedings).*" Failure by the Developer to accomplish the stabilization as aforementioned will result in the termination of all processing phases of this development.

Floodplain studies will be necessary to be reviewed and approved prior to the recording of any record plat or issuance of any grading or building permits.

The Developer must furnish the *Bureau of Development Plans Review* with a *floodplain study* prepared by and sealed by a Professional Engineer. The study will be done in accordance with the latest version of the "Recommendations for Watershed Studies, Flood Plain Studies and Waterway Crossing Studies".

The 100-year floodplain shall be dedicated to Baltimore County in-fee or as an easement, at no cost to the County.

The rear of buildings may not be constructed within 20 feet of the floodplain as established for a 100-year flood level with a 1-foot freeboard. *See Plate DF-1 and DF-2 in the Baltimore County Design Manual.*

In conformance with *Federal Flood Insurance* requirements, the first floor or basement floor must be at least 1-foot above the floodplain elevation in all construction.

In accordance with *Baltimore County Code, Section 32-4-414*, filling within a floodplain is prohibited.

The Developer is responsible for the cost of temporary structures and measures required in the event of sectional development.
Temporary construction easements of adequate width are necessary adjacent to all offsite right-of-way or easements where utility construction is planned. They should be indicated on the right-of-way plats and construction drawings.

The record plat/building permit shall be withheld until offsite right-of-way and utility construction as required has been cleared and the contract for the utilities has been awarded.

The Developer shall provide a minimum 10-foot drainage and utility easement along all bordering property lines which are not adjacent to road right-of-way or storm drain reservations.

Where a new bridge or culvert adjoins a development or drainage reservation adjacent to a development, the Developer on each side is responsible for one-half the total Developer's responsibility as established by the method described in the preceding paragraph.

Where an existing bridge and/or culvert required replacement, widening or reconstruction, such work will be accomplished within the framework of the *Capital Improvement Program.* When a Developer wishes to proceed with a development requiring rebuilding or relocation of an existing bridge and/or culvert and funds have not been provided in the current *Capital Budget*, he may contribute the funds necessary or must delay development of that portion of the subdivision that would be adversely affected by the existing structure.

WATER AND SANITARY SEWER COMMENTS:

A preliminary print of this property has been referred to the *Baltimore City Water Division* for review and comment in regards to adequacy of water pressure in this development. If Baltimore City has any comment, it will be forwarded.

The Developer is responsible for any public water main extension and/or public sanitary sewer required to serve this property. He is responsible for the preparation and the cost of construction drawings and right-of-way plats required. He is further responsible for conveying any required right-of-way to Baltimore County at no cost to the County.

The Developer is responsible for the entire cost of any relocation of the existing public water main and/or sanitary sewer, including the preparation and the cost of construction drawings and right-of-way plats required, all right-of-way acquisition and/or release costs and recordation charges.

The Developer is responsible for the cost of capping or plugging any existing house connections not used to serve the proposed site.

The Developer will be given credit for one system connection charge for each existing house that is now connected into the public services.

Permission to connect to (*or to connect additional sanitary fixtures to*) the existing public sanitary sewer may be obtained from the *Department of Permits, Approvals and Inspections.*

Water and sanitary sewer service connections shall be installed by a utility contractor prior to the road improvements and shall be included in the *Public Works Agreement.*

The total water and/or sanitary sewer system connection charge is determined, and payable, upon application for the plumbing permit, or prior to the execution of a utility or right-of-way agreement.

The determination of the water system connection charges will be predicated on the established relationship using a 5/8-inch water meter at a cost of $575.00 per living unit. The sewer system connection charge, likewise, is based on a 5/8-inch water meter at a cost of $875.00 per living unit. Note: The same rate applies for 1-inch meters for sprinkler service.

Water mains outside of public right-of-way serving a proposed site improvement are considered private and shall be the Developer's full responsibility for construction and maintenance.

Fire hydrant spacing and location are subject to review and approval by the *Fire Protection Section* of the *Fire Department.*

Public sanitary sewers serving the individual lots/properties within the subdivision shall be located within the public roads serving those lots/properties, where practicable.

TRAFFIC ENGINEERING COMMENTS:

Confirm and then add this note to the development plan:

- *"Bureau of Traffic Engineering and Transportation Planning" has confirmed that the subject site* ***is/is not*** *within a traffic deficient area.*

Sight lines are to be drawn from the centerline of the proposed access at a point ten feet behind the extension of the main road curb line to the centerline of the nearest approach lane on the main road.

All subsequent plans, including record plats, must note that the areas between the sight line and the curb line must be cleared, graded, and kept free of any obstructions.

LANDSCAPE COMMENTS:

Schematic Landscape Plan(s) must be approved prior to Development Plan approval.

An approved Final Landscape Plan, cost estimate and security are required prior to permit approval.

SITE-SPECIFIC COMMENTS:

1. West Joppa Road is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.
2. The proposed cul-de-sac shall conform to County Standard Detail, Plate R-E, which requires a 60-foot turning radius.
3. Since the number of (off-site) units are over 100, Mays Chapel Road needs to be a full access road and not an emergency access road.
4. Remove the road label "Public Road A", if the road name is Foxwood Road. Please be consistent with road names and make sure all roads are labeled.

5. **"No Parking"** signs shall be posted prohibiting parallel parking along Mays Chapel Road extension and the cul-de-sac.
6. All designs and drawings shall be prepared in accordance with the latest design manual.
7. Provide additional labeling of the proposed contours on the plan, contours along the internal road network.
8. Note # 10 under the DPR notes indicates the proposed Development is to be developed/ designed in two (2) phases; please delineate phasing on the Development Plan. Also, provide a note detailing specific improvements completed under each phase of work.
9. All existing public utilities within West Joppa Road and Mays Chapel Road shall be clearly labeled, type of utility and size. Provide label all the utility as existing or proposed, if it is an existing utility provide the County reference drawing number.
10. Show proposed streetlights spaced per Baltimore County standards. Also, lights need to be provided along West Joppa Road as part of the frontage improvements, if there are no existing street lights.
11. Engineer should consider relocating the existing private drive and connecting it to Foxwood Drive beyond the Floodplain limits.
12. The Transportation Planning unit recommends that a multi-use path be constructed along the frontage of the property instead of the proposed sidewalk, as stated in Baltimore County's Western Bicycle and Pedestrian Master Plan.
13. Show all proposed Fire Hydrants along the proposed roads within the development. Coordinate with *Fire Protection Section* in regards to possible fire hydrants along Mays Chapel Road extension. Fire hydrant spacing and locations are subject to review and approval by the *Fire Protection Section* of the *Fire Department*.
14. Developer shall provide a **fee simple strip frontage on public road** for all meter services connected to public water main.
15. Developer shall investigate and provide pressure-reducing valve (PRV) when static pressure exceeds 80-psi.
16. Engineer to show and label all existing sewer manhole numbers adjacent to the site on the Development Plan.
17. All site runoff must be conveyed to a suitable outfall without imposing adverse impacts to the receiving watercourse.
18. The existing storm drain system needs to be checked for adequacy and upgraded or provide stormwater management as needed.
19. In accordance with *Baltimore County Code, Section 32-4-414*, filling within a floodplain is prohibited.
20. The following eight -8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor. Six of the segments noted are to be addressed by another developer. To date, these improvements have not been completed. This developer is required to complete the other two segments noted with a ☆. Issuance of Use and Occupancy permits for the residential units from the Greenspring Manor development should be subject to completion of the system improvements noted above, including those by the other developer. Currently the other developer is obligated to complete this by August 2023.

Upstream MH	Downstream MH	Length	Diameter	
43794	43793	137.96	8"	★
43793	43792	192.31	8"	★
43792	43791	87.36	8"	
43791	43790	60.00	8"	
43790	43789	316.80	8"	
43789	43788	232.57	8"	
43788	43787	159.01	8"	
43787	43786	76.00	8"	

21. Developer is responsible for acquisition of off-site easements for downstream sewer improvements they are required to complete.
22. Jones Falls is an inter-jurisdictional watershed. 100-year stormwater management is required.
23. The existing culvert crossing on Joppa Road, located at the southwest edge of the development, is Baltimore County Bridge No. B-0432. Reference is made to existing Drawings No. 1988-0930 through 0933_003. This feature should be labeled as Bridge No. B-0432 on all plan details. Any modifications to this structure should be in accordance Baltimore County's DPW&T Design Manual, Section 10-Structures. Please note, the freeboard requirement for bridge structures is prescribed in Section 7.IV.B.2.
24. Any proposed bridge structures (those with effective span lengths of 8' or greater) within the development that will be dedicated to the County for ownership and maintenance should meet the above referenced criteria.
25. Submit suitable storm drain outfall study for review and approval.
26. A revised Floodplain Study was submitted to DPR and is under review.
27. The developer has submitted to the County an updated traffic study, showing an increased scope of work that includes three 3 intersections along Falls Road from Seminary Avenue to Joppa Road. DPW&T has not completed their review of the updated Traffic Impact Study.
28. This site is in a traffic deficient area with an 'F' level of service. Therefore, no building or grading permits shall be issued unless allowed by the Administrative Law Judge at a Special Hearing. Approval of this development plan does not guarantee or warrant that a permit will be issued.

Development Review – Agenda and Approval

Date: 8/12/2021

DEVELOPMENT NAME	Greenspring Manor
ADDRESS OR ROAD INTERSECTION	Brooklandville - 2310 West Joppa Road and connecting through to Mays Chapel Road
SUBMISSION (DPC, CPC, Variance)	Culvert Freeboard (June 2021 rec.) Flood Plain (July 2021 rec.)
RESPONSE DUE TO PAI	Friday 8/6/2021
MISCELLANEOUS COMMENTS	These comments are coming in after the DPC. We are asking PAI to take these into consideration.

DPTW ENGINEERING DISCIPLINE REVIEW, DISCUSSION & APPROVAL: *By initialing next to each design section you are documenting that all issues from previous submission comments for your discipline have been resolved. If there are outstanding issues, those issues have been documented in response to the current review. If there are coordination issues between disciplines or that require a variance you are discussing them at this meeting and determining next steps.*

Comments:

Traffic

We have received and reviewed the Greenspring Station Development - Supplemental Traffic Impact Study. We offer the following comments:

A TIS needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the required connection to Mays Chapel Rd. This connection is required by DPWT due to amount of homes (over 100) in The Meadows of Green Spring community. It should be a traffic impact study not a "sensitivity analysis".

The report does not note that the proposed development is in LOS F Traffic Shed. It also fails to mention the 3 LOS F rated intersections along Falls Rd.

The analysis clearly shows a reduction of critical lane volumes at the subject intersections along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa. The benefits of the connection to Falls Rd is glossed over.

Furthermore, the conclusion stated on the cover letter says that the Mays Chapel connection is not recommended. It then is stated that Falls Rd is designed to handle significant volumes more than Mays Chapel which is obviously true. However, this development is currently in an 'F' traffic shed, which by definition is at capacity and cannot handle anymore volume. The initial report which did not have the Mays Chapel bypass accounted for, already showed an increase of CLV at Falls & Greenspring Valley at full build out conditions. The supplemental report does not address Falls & Seminary with the scenario of no bypass with full build out. In accordance to the ordinances tied with the basic service map, this development should have some improvements to result in 0 net critical volume trips added to the affected 'F' intersections along Falls Rd.

Public Works ZAC Comments

Subject: ZAC Agenda Case #2021-0250-SPH - W. Joppa Rd#2310

Good morning,

During my review of the ZAC Agenda for the distribution meeting of September 13, 2021, I reviewed a Special Hearing for case number 2021-0250-SPH for 2310 West Joppa Road. This request is to allow the development of the subject property within the Falls Road and Joppa Road and Greenspring Valley Road traffic sheds.

The Department of Public Works and Transportation (DPWT) Bureau of Traffic Engineering and Transportation Planning feels this request must be denied based on the following reasons. We have received and reviewed the Greenspring Station Development - Supplemental Traffic Impact Study. We offer the following comments:

1) A Traffic Impact Study needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the **required** connection to Mays Chapel Road. This connection is **required** by DPWT by regulation due to amount of homes(over 100) in The Meadows of Green Spring community. It should be a traffic impact study not a "sensitivity analysis".
2) The report does not note that the proposed development is in LOS F Traffic Shed. It also fails to mentioned the 3 LOS F rated intersections along Falls Road.
3) The analysis clearly shows a reduction of critical lane volumes at the subject intersections along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa. The benefits of the connection to Falls Rd is glossed over.
4) Furthermore, the conclusion stated on the cover letter says that the Mays Chapel connection is <u>not</u> recommended. It then is stated that Falls Road is designed to handle significant volumes more than Mays Chapel which is obviously true. However, this development is currently in an 'F' traffic shed, which by definition is at capacity and cannot handle anymore volume. The initial report which did not have the Mays Chapel bypass accounted for, already showed an increase of CLV at Falls & Greenspring Valley at full build out conditions. The supplemental report does not address Falls & Seminary with the scenario of no bypass with full build out. In accordance to the ordinances tied with the basic service map, this development should have some improvements to result in 0 net critical volume trips added to the affected 'F' intersections along Falls Rd.

COMMUNITY INPUT MEETING MINUTES

Project Name:	**Greenspring Manor**	**Date: April 27, 2021**
Location:	**Webex Event**	**PAI No.: 08-0922**
Law Firm:	**Venable, LLP**	**District: 8c2**
Engineer Firm:	**Kimley-Horn**	
Attendees:	**93 citizens from the community**	
	Mr. Matthew Bishop, Kimley Horn	
	Mr. Adam Rosenblatt, Esq., Venable, LLP	
	Mr. Ron Synder, Atapco	
	Mr. Bruce Oxley, Atapco	
	Mr. James Malico, Kimley Horn	
	Mr. Brian Biddle, Lenhart Traffic Consulting, Inc.	
	Mr. Jerry Chen, Project Manager, Balt. Co., PAI	

Mr. Chen opened the meeting at 7:00 pm and introduced himself. He stated that the meeting's purpose was for the developer to discuss the concept plan and stated the plan was not finalized. He stated that the Community Input Meeting [CIM] was to allow the public to review the concept plan and ask the developer questions. He further stated he will be taking minutes of the meeting. He stated the minutes are not a dictation but a summary of questions, answers, and explanations.

Mr. Chen discussed the County's development process and stated the following: a Concept Plan Conference [CPC] was held on March 9, 2021; at this conference, county agencies had reviewed the concept plan and provided written comments; the next stage of the development process is the CIM; after CIM, the developer has up to 12 months to submit a highly engineered and detailed development plan to the county for review; when this plan is submitted, a Development Plan Conference [DPC] is scheduled; reviewing agencies will review the plan and provide written comments at the DPC; a public hearing called the Developer's Plan Hearing [DPH] is scheduled before an Administrative Law Judge [ALJ]; the public will be able to provide testimony and statements at the DPH; within 15 days of the conclusion of the public hearing, the ALJ will provide a written order; and the public or applicant will have 30 days to appeal the Final Order to the Board of Appeals. He stated all attendees will receive future notifications of the DPC and DPH, a copy of the CIM minutes, and the final development plan through USPS mail or email. He concluded his statements and turned the meeting to the developer's attorney Mr. Adam Rosenblatt and the developer's engineer Mr. Matthew Bishop.

Mr. Bishop stated the following: The site is 39.4 acres in size; property is zoned DR-1 and DR-2; proposing 61 single family homes on quarter-acre lots; topography of the site is rolling land; site has minimal forest and does not have stormwater management; proposing three (3) stormwater facilities that will meet 100-year floodplain requirements; minimal forest to be removed in the installation of the stormwater management facilities; will be reforestation, landscaping, screening, and a berm along neighboring communities, roadside, and entrance; will be passive amenities; proposing one entrance to development; new homes to be connected to public utilities; sites with well and septic will be abandoned and properly removed; new roads will be public; the three homeowners association open space areas will

be connected by walking paths; on-site stream will be not be changed and plantings along stream will be installed to increase water filtration; there will be forest buffer and forest conservations easements; and there will be vehicle parking along one side of the road. Mr. Bishop concluded his comments.

Mr. Rosenblatt used a PowerPoint presentation (see CIM Exhibit #2) and stated the following: proposing 3 types of upscale NVR homes of modern design with multiple car garages varying in widths of 40 feet, 50 feet, and 54 feet; homes will be built using higher grade materials; lot sizes are consistent with surrounding communities; estimated price point of homes of $900,000.00 to $1,000,000.00 USD; road improvements to Falls Road and W. Joppa Road intersection which will comprise of adding additional turn lanes in each direction, realigning lanes for improved efficiencies, and signalization adjustments at the developer's expense; connection of Mays Chapel Road will be emergency use only with bollards installed; developer to have continued discussions with Department of Public Works [DPW] to keep this access as emergency use only; Riderwood Elementary and Ridgely Middle School are under capacity per state records; at developer's expense the 300 feet of existing 8-inch sewer line to be upgraded to 12-inch line; county and the developer are working with John Hopkins to resolved offsite sewer improvements; development will exceed open space requirements; and the developer will continue to maintain communication with neighboring associations. This concluded Mr. Rosenblatt's comments.

Mr. Chen read aloud the advanced statements and questions from the community which was sent by email to Development Management.

Submission:	See CIM Exhibit #1 (collectively) - Constituent statements and questions [67 entries].
Submission:	See CIM Exhibit #2 - Developer's PowerPoint presentation [10 pages].
Question:	Has a traffic study been performed?
Mr. Rosenblatt:	Yes.
Question:	Given that the proposal is for 61 homes. How can the currently stressed sewage system possibly handle the increased demand for such services? How can the environment handle the additional runoff created by this proposed development?
Mr. Rosenblatt:	The developer will be upgrading the sewer system from an 8-inch line to 12-inch line. We will be installing three stormwater management facilities to handle runoff. Currently, there is no stormwater management at this site.
Question:	The intersection of Joppa Road and Falls Road at the northern terminus of I-83 is so overcrowded that it is already categorized as a "failed intersection." With 61 new homes proposed in the immediate vicinity, how can this intersection possibly handle the increased traffic flow? Has a traffic study been commissioned and performed and if so by whom? What are the results of that study?
Mr. Rosenblatt:	A traffic study has been performed by Lenhart Traffic. The developer will be upgrading the intersection of Falls Road and W. Joppa Road.
Question:	The intersection of Seminary Avenue and Falls Road is a designated failed intersection. Given that westbound traffic on Seminary Avenue is bogged down particularly in morning rush hours as people attempt to access southbound Falls Road to head toward either the I-83 or I-695, will not the addition of many more drivers and vehicles at this intersection and the intersection of Joppa and Falls further stress the flow of traffic beyond the already maxed out capacity? This is particularly problematic due to the proposed development of the Krongard property on the north side of Seminary, near to Mays Chapel Road.
Mr. Rosenblatt:	The upgrade road improvements should alleviate the current situation.

Question:	What study has been done to create a new intersection at Seminary Avenue and Mays Chapel Road? With the additional flow of traffic, will it need a traffic light?
Mr. Rosenblatt:	No.
Question:	What will happen to the existing driveway?
Mr. Rosenblatt:	To remain.
Question:	Who is responsible for the wetlands once the project is completed?
Mr. Bishop:	The homeowners association will be responsible. The county will routinely inspect for compliance.
Question:	It's known that the Hopkins Project severely affected the sewer system and what has been done to increase this service?
Mr. Rosenblatt:	We are actively working with DPW and Hopkins to resolve this issue.
Question:	What type of trucks will use Tally Ho Road for construction?
Mr. Rosenblatt:	Unsure.
Question:	What will be done to curb noise and runoff during construction?
Mr. Rosenblatt:	We will do our best to reduce construction noise. The runoff will be controlled by sediment control devices.
Question:	Why doesn't the new proposed Road A connect into Mays Chapel Road?
Mr. Rosenblatt:	The current meetings and interactions with the community do not want the connection.
Question:	Mays Chapel Road was designed to extend to Joppa Road! Why isn't it in the plan?
Mr. Rosenblatt:	Current sentiment is to not extend it.
Question:	What will be done to mitigate traffic for Falls Road/Greenspring Valley Road and Falls Road /Seminary Avenue?
Mr. Rosenblatt:	We agreed to road improvements which will mitigate traffic congestion.
Question:	Will all the trees between the cornfield and the surrounding houses in Heatherfield and Seminary Ridge be preserved? Will additional trees be added as a buffer?
Matt Bishop:	We are adding trees and landscaping to the site along the community border, roadside, entrance, and stream buffer area.
Question:	Can heavy equipment construction traffic be restricted from using Tally Ho Road as a cut-through?
Mr. Rosenblatt:	Not sure.
Question:	Who will be responsible for the maintenance of submerged gravel wetlands and extended detention after the developer has left?
Mr. Bishop:	The homeowners association.
Statement:	The driveway for the exhorting house should be tied into Public Road A in the community and not directly across Joppa Road. This will eliminate another curb cut and make Joppa Road traffic safer for vehicles/pedestrians/bikes.
Question:	What will be done to mitigate the failing traffic intersections at Falls Road?
Mr. Rosenblatt:	As previously explained, the developer will be making improvements at that intersection.

Question:	What administrative or regulatory variances does developer intend to request in connection with the proposed development? Have any of these variances requests been filed? How will Baltimore County and/or the developer provide notice to interesting neighborhoods and property owners of any variance requests?
Mr. Rosenblatt:	No variances are being requested.
Question:	Is Baltimore County requiring the connection of Mays Chapel Road from Seminary Avenue to Joppa Road? If so, what is the basis for this? What is the developer's position and the position of neighboring properties on this issue?
Mr. Rosenblatt:	We are keeping it as an emergency use access only as requested.
Question:	Has the county or the developer prepared formal traffic studies showing the traffic impacts of the proposed development? If so, when will these be released to the public?
Mr. Rosenblatt:	We have performed a traffic study.
Question:	What if any trees will be removed in connection with the proposed development? What trees will be added as part of the proposed development?
Mr. Bishop:	Minimal amount of forest will be removed in the installation of the stormwater management facilities. We will be adding trees to the site.
Question:	What landscaping will be removed in connection with the proposed development? What landscaping will be added as part of the proposed development?
Mr. Bishop:	As mentioned before landscaping will be part of the development which will be approved by the county.
Question:	Please describe the order classification of the stream between the proposed development and Seminary Ridge and Heatherfield? What effect does this classification have on the developer's responsibilities? Please describe setback requirements.
Mr. Bishop:	Not aware of the order classification but we will add plantings along the stream to increase filtration as well as a buffer easement for protection.
Question:	Are you aware of the historic Cockey Family Cemetery that is immediately adjacent to Building Lots 28, 29, 30, and 31. It is a large graveyard, reportedly containing thirty to forty graves. Based upon the experience with the Cockey Family Cemetery, formerly at 400 W. Padonia Road, Lutherville-Timonium, MD 21093, there is a likelihood that unmarked graves are present on these Building Lots. How will the developer care for these graves?
Mr. Rosenblatt:	We are aware of the cemetery and it is off-site from this parcel. It is 100 feet from the property line and it won't be impacted.

Mr. Chen concluded the advance questions and statements from the public and moved to the next agenda item which was online chat questions and statements.

Question:	I am wondering if the developer has considered creating a series of neighborhood walking paths as we have in Seminary Ridge. It would be nice to see a keeping of that park-like concept and would feel less overwhelming to us as neighbors perhaps.
Mr. Bishop:	On site walk paths will be installed to connect the open space areas.

Statement:	Sewer capacity is inadequate. Period. The intersections are failing. Period. No more development.
Statement:	While many participants are suggesting that Mays Chapel Road be opened up to Seminary Road. What these people may not be aware of is that section of Mays Chapel is too narrow for 2 lanes of traffic as it is, ~20-22 ft. without any sidewalks. This would put all members of this community who walk, with or without their pets, in imminent danger. While I agree with much of the residents on Tally Ho Road are saying, at least they have sidewalks, stop signs, and a 50% wider road. Mays Chapel should stay closed.
Statement:	Great point. Our neighborhoods have taken the brunt of the county's inability to plan and say "no" to a developer.
Question:	Will the road out of the development be a right turn only, or will the residents there have to turn left across a widened Joppa Road?
Mr. Rosenblatt:	No restrictions.
Statement:	As you've correctly pointed out, the exact reason as to why your planned development has chosen to not open up Mays Chapel Road to the north, is the exact reason why a lot of homeowners on Seminary Ridge are expressing concern.
Statement:	Nothing in your plans/discussion so far addresses Tally Ho Road.
Question:	When was the traffic study conducted (during Covid times?) and was one conducted on Tally Ho Road?
Mr. Rosenblatt:	Traffic study was not performed during Covid times.
Question:	What are the plans for the old state highway's property? I feel this will have an effect on the area/traffic/etc., as well.
Mr. Rosenblatt:	Unaware of any state highway property.
Question:	Did this property not perk? Is this property similar to the size of Westwicke community?
Mr. Rosenblatt:	Plans are to connect to public water and sewer which will improve environmental conditions at this site.
Question:	The Michael Wyatt letter requesting who performed a traffic study and will it be released publicly.
Mr. Rosenblatt:	The traffic study was performed by Lenhart Traffic Consulting, Inc.
Question:	Will the Falls Road and Joppa Road intersection remain "failing" if the proposed improvements are made?
Mr. Rosenblatt:	The improvements will not change the rating.
Question:	What did you say the lot sizes would be? Neighboring properties are 24,000-30,000 square foot lots.
Mr. Rosenblatt:	A quarter acre.
Question:	Is the stream a brown trout stream?
Mr. Bishop:	Not sure.
Question:	Will the improvements to Joppa Road include any accommodation for pedestrians and/or bicyclists?
Mr. Bishop:	We are proposing a walking/biking path adjacent to Joppa Road.

Question:	Will the monument to the youth's death on Joppa Road be preserved at the entrance?
Mr. Rosenblatt:	We will look into that.
Question:	Help me understand when the Mays Chapel Road emergency use access would be used in an emergency situation? Jerome Jay Drive connection in Michaelsford Road originally started as emergency access however currently a through road. 2) How does that happen? 3) Was the 2310 W. Joppa Road property originally in a land trust? 4) With 60 additional homes how will the additional 120 cars (2/home) impact the three failing intersections in the immediate area?
Mr. Rosenblatt:	Bollards will be in place and emergency personnel will be able to remove the bollards when needed.
Question:	Who will be paying for the traffic improvements? How much will that cost?
Mr. Rosenblatt:	The developer.
Statement:	I believe that the area would prefer less density instead of the "42% green area" that you are touting. A density of 45 homes would make neighbors happier!!
Question:	How long do you anticipate the planning and approval process to take? If approved how long do you anticipate the full development to take? Will you address the Falls/Joppa Road intersection before developing houses?
Mr. Rosenblatt:	It can take a long period of time from approvals to construction. We are processing both the offsite intersection improvement plan and the offsite sewer improvement plan concurrently with our development plan so that the work can be accomplished before the neighborhood is completed.
Question:	Is there a market for one million dollar homes on such small lots?
Mr. Rosenblatt:	Yes.
Question:	How many trips per day in and out of Joppa Road were planned for?
Mr. Rosenblatt:	I don't have that data.
Question:	What county agency will make the final decision on this proposed project?
Mr. Rosenblatt:	This project will have to go to a public hearing for final approval.
Question:	The sketch of the improvements to the intersection only expanded through the Mooney Office. Would it extend further past Station Road?
Mr. Bishop:	No.
Question:	Is the right of way along the existing Mays Chapel Road wide enough for 2 lanes, if in fact, the existing paving is not already?
Mr. Bishop:	Yes.
Question:	Why not build the highly needed downsize community on this site? Less actual density!
Mr. Rosenblatt:	This is the developer's proposal.
Question:	How do the current plans on expanding the Joppa/Falls Road intersection impact left turns out of Green Spring Station and the gas station?
Mr. Rosenblatt:	It will not impact the turning movement. Improvements are closer to the intersection of Falls Road and Joppa Road.

Question:	What is the dotted line marked "UaD / ChB" that transects the Historic Cockey Family Cemetery?
Mr. Bishop:	The markings indicate soil designations.
Question:	How will the newly added 4-foot berm on the North East boundary affect present stormwater runoff?
Mr. Bishop:	We will design the berm so that it will not negatively impact stormwater leaving the neighboring offsite properties.
Question:	Will all the expenses of installing the septic and water be passed on to the landowners?
Mr. Rosenblatt:	No.
Statement:	In 1997, over 100 unmarked (surprise) graves were unearthed adjacent to the Cockey Family Cemetery at 400 W. Padonia Road, which had approximately 30 marked graves.
Question:	Has the fire department been consulted on the potential added call load? Station 14 is a small station and the neighboring station is a volunteer station which is not always attended.
Mr. Rosenblatt:	The fire department is a county agency that provides comments to all development projects.
Question:	Will the snowball stand run by kids be affected by the widening of this intersection?
Mr. Rosenblatt:	No. All road improvements will be performed in the road right of way.
Question:	No PUD to disclose for the new homeowners?
Mr. Rosenblatt:	This is not a PUD development.
Question:	Ridgeley Middle School is over capacity per 2018 report https://draa.bcps.org/UserFiles/Servers/Server_9046340/File/Department/Office%20of%20Strategic%20Planning/SC2018%20FINAL%20013019.pdf. This contradicts what Mr. Rosenblatt stated on page 33.
Mr. Rosenblatt:	The current enrollment numbers for Ridgely show it is at 102% State Rated Capacity (SRC). County law does not consider a school overcrowded until it is over 115% SRC. We comply with county law and will not require an adjacent capacity to develop this project.
Question:	Is there an EPA study going to be done regarding this development?
Mr. Bishop:	Not required.
Question	Mr. Chen. Should all concerned homeowners contact District 2 Baltimore Councilman Mr. Izzy Patoka to further press our concerns?
Mr. Chen:	Any constituent may reach out to their elected officials to express their concerns about any matters in the county.
Question:	Was a roundabout considered for the development access
Mr. Rosenblatt:	No.
Question:	Am I hearing that you are assuming cars traveling west on Seminary Avenue will not be turning on Tally Ho Road but rather proceeding to Falls Road and then to Joppa Road, making a left into the new development?
Mr. Rosenblatt:	I can't make any assumptions.

Question:	Per the traffic study, what improvements would need to be made for the intersection at Falls Road and Joppa Road to have a passing grade?
Mr. Rosenblatt:	As stated we will be adding additional turn lanes in both directions, new alignment of markings, and signalization adjustments to the new traffic pattern.
Question:	Will you consider the number of homes affected, and their vicinity (bordering) when deciding whether to open the road to May Chapel Road?
Mr. Rosenblatt:	After hearing comments about opening Mays Chapel Road connection, I will have to express this sentiment in future meetings with the county and communities that are opposed of this connection.
Question:	Will there be any private water and sewer development fees or assessments imposed by the developer to the homeowners?
Mr. Rosenblatt:	This has not been determined. County law does permit developers to charge front foot assessments.
Question:	Am I hearing correctly the only intersection the developer is improving is at Joppa Road and Falls Road and NOT to the other 2 failing intersections? Greenspring Manor traffic turning right on Falls Road will add traffic load to those intersections which are already failing?
Mr. Rosenblatt:	Yes.
Statement:	The County uses the loaded cycle method vs MDOT LOS and CLV as always the County Basic Services Map always trumps a traffic study.
Statement:	The president of the Heatherfield Community Association is Pat McGee. You may contact me, as I am on the board, Dean Merritt, Esq. - dean@merrittinc.net
Question:	What would it take for the developer NOT to move forward with this project?
Mr. Rosenblatt:	This is the project that is being proposed.

At this point, there were no further questions, Mr. Chen thanked the attendees and closed the meeting.

Respectfully submitted,

Jerry Chen, Project Manager
Development Management

Hello,

I am extremely concerned about the density of the development and the impact on our roads, intersections, sewage, schools, and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road especially with the failing traffic shed at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. I believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods especially to our homeowners on Tally Ho Road.

Sincerely,

-Matt Miller

I am extremely concerned about the density of the development and the impact on our roads, intersection, sewage, schools and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am especially concerned with the lack of connectivity on Mays Chapel Road between Seminary and Joppa Roads especially with the failing traffic shed at Falls and Seminary, Falls and Greenspring and Falls and Joppa Roads. As a homeowner on Tally Ho Road I have no doubt that Greenspring Manor homeowners traveling west on Seminary Road will opt to take Tally Ho Rd to Joppa and then take a right on Joppa to the development entrance rather than dealing with the three failing intersections mentioned above. It appears to me that Mays Chapel Road was originally intended to continue to on to Joppa Road given the continuation of the name and the simple barricade that exists now. Much has been documented about the traffic volume on Tally Ho Road now. Thank you for your consideration.

County leaders,

I am extremely concerned about the density of the development and the impact on our roads, intersections, sewage, schools, and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road especially with the failing traffic shed at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. I believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods especially to our homeowners on Tally Ho Road.

We live on the corner of Tally Ho and Lochmoor and already witness heavy traffic and people speeding through stop signs.

The community doesn't need more homes in this area without the appropriate infrastructure and roads to support.

Hello,

I am extremely concerned about the density of the pending Greenspring Manor development and the impact on our roads, intersections, sewage, schools and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Avenue, especially with the failing traffic shed at Falls & Seminary, Falls & Greenspring and Falls & Joppa Roads.

Additionally, there have been numerous studies done on these intersections over the years and these intersections have been shown to be some of the worst, most congested intersections in Baltimore County - and this is without an additional development causing further influx and congestion. We have already seen large increases in traffic throughout Tally Ho Road, with cars attempting to bypass the congestion in these intersections which has significantly impacted the Seminary Ridge and Heatherfield neighborhoods over the past few years. There has not only been an increase in traffic but also speeding, lack of stopping at our stop signs and following proper traffic protocols - that makes it a safety issue in addition to a congestion issue impacting our neighborhood.

I believe that this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods, especially to the homeowners on Tally Ho Road.

Thank you for your time,
Jessica Clayton

Jamming 61 homes into that space is absurd, not in keeping with the essence of the surrounding community. It will place undue strain on the environment and infrastructure. Development in this area must be carefully considered and not create a burden to those who have invested in their homes and neighborhood.

Seminary Ridge

Seminary Ridge Owners Association
Heatherfield Neighborhood Association

April 25, 2021

RE: Greenspring Manor Concept Plant and CIS Meeting Input

To Whom it May Concern,

The Seminary Ridge Owners Association is comprised of 167 homes. The Heatherfield neighborhood has 47 additional homes. Both neighborhoods connect via Tally Ho Road allowing access from West Seminary Avenue to West Joppa Road. Both Neighborhoods border the proposed new development at Greenspring Manor.

Our neighborhoods are extremely concerned about the density of the development and the impact on our roads, intersections, sewage, schools, and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, we are even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road especially with the failing traffic shed at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. We believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods especially to our homeowners on Tally Ho Road.

We have 81 homes on Tally Ho Road in the Seminary Ridge and Heatherfield neighborhoods. There are currently only 4 homes on Mays Chapel Road between Seminary Avenue and Joppa Road. Tally Ho Road already has a traffic and speed issue with a significant number of drivers who run our stop signs at speeds over 25 miles per hour. Drivers who are not homeowners in Seminary Ridge or Heatherfield use Tally Ho Road to access to I-695 and I-83 avoiding the failing traffic shed at Falls Road. We have seen the added lanes the Greenspring Manor developer plans to add at the intersections on Falls, but we do not feel that will have any impact on the traffic that uses Tally Ho Road.

We have been working with Baltimore County Traffic Engineer and the Planning Department because of traffic and speed on Tally Ho Road. We believe that if Mays Chapel Road is not opened for Greenspring Manor, the future homeowners will use Tally Ho Road daily to avoid the failing intersections. We have also been informed that another development with approximately 40 homes is in the planning stages on West Seminary Avenue directly across from Mays Chapel Road.

Connecting Mays Chapel Road between Joppa and Seminary would divert some of the cut through traffic on Tally Ho as well as ensure the new homeowners have access to Seminary without using Tally Ho Road. This would keep our communities safe without having any major impact to the homeowners on Mays Chapel Road. Please consider opening Mays Chapel Road as we do not see any reason why it would not connect.

Thank you in advance for your time & consideration.

Sincerely,

Blandy Becker, President Seminary Ridge Owners Association
Pat McGee, President Heatherfield Community Association

The area around Joppa Rd and Tallyho was a driving problem when there were only trees there (eventually taken down). What with trees, houses, fences the traffic only becomes more of traffic problem.

Greetings,

My name is Jill Drew and I live in the Heatherfield neighborhood.

I am not a supporter of any development in this area. I have lived here for 12 years and have watched the area become increasingly more congested with each passing year.

Car crashes at the Falls Road intersection are a constant and it is my understanding that it is a known failed intersection.

I am concerned about an increase in traffic on Tally Ho Road. Many people have young children that play outside as well as people that park and walk in this neighborhood. I am not interested in Tally Ho becoming more of a cut thru than it already is. It is my understanding that there is a road that is already in place that would provide straight access. It should NOT be up to our neighborhood to absorb the traffic pattern when an access already exists and just needs to be opened up.

Widening Joppa and all of the other things mean nothing to me, a resident of Tally Ho. We have enough traffic as it is. There is a more appropriate pattern and it should be utilized.

Thank you for listening to my concerns.

Kind Regards,

Jill Drew

To Whom It May Concern:

I am a resident living on Tally Ho Road and am emailing because I am opposed to the plans for the Greenspring Manor Development.

Specifically: we already have a HUGE through traffic and speeding issue on Tally Ho Road, affecting the safety of all residents of the Seminary Ridge and Heatherfield communities.

Any new residences bordering our neighborhood will exacerbate a well-known, dangerous problem that has plagued this neighborhood for over 25+ years. It is my understanding that there is not currently a plan in place to connect Mays Chapel Road to be a "through" street for the residents of this new neighborhood between Joppa and Seminary - which means even ***more*** people will be using Tally Ho as a cut-through than they already are (up to 200 cars per day by our calculations).

This is a completely unacceptable plan as it stands. Mays Chapel must be opened up as a fully connecting street between Joppa and Seminary if this new neighborhood is approved. There are many other traffic impacts related to all of the failing intersections that surround this proposed development, but the safety and speeding issue on Tally Ho is of specific concern to me as a homeowner and stakeholder for our property values.

The attached photo shows a visual of the issue as well.

Thank you,

Tina Beliveau - owner at 8344 Tally Ho Road, 21093, Seminary Ridge

I am extremely concerned about the high density of this development and the impact on our roads, intersections, sewage, schools, communities and more potential flooding that used to be common on Joppa Rd at that specific area. I am also very concerned that the Concept Plan shows only one entry/exit to the planned development, i.e. Joppa Rd ignoring Baltimore County plans to eventually have Mays Chapel continue to Joppa Rd.

We don't need any more homes in that area which cannot handle the current population. Tally Ho Rd is already a main thoroughfare for many commuters to avoid the havoc on Falls Rd. between Joppa and Seminary.
The proposed new lanes won't affect the wait for the lights at the intersection, it will only add more traffic and more destruction of the natural beauty in this area.

Subject: Greenspring Manor CIM.

CAUTION: This message from dsachse@dtslawoffices.com originated from a non Baltimore County Government or non BCPL email system. Hover over any links before clicking and use caution opening attachments.

I have been a resident of Seminary Ridge since 1984. During that time, I have watched several very nice housing project spring up very near my own neighborhood, but each time little or no care was taken to insure that there was not an unreasonable increase in the density of traffic flow on Tally-Ho Road or that the neighborhood schools (Riderwood and Ridgely) did not become over crowded. In fact, at one point in time, stops signs were place on every cross intersection on Tally-Ho Road in an attempt to slow the speed and density of the traffic on Tally-Ho Road. All the stop signs remain, but as they really are not working, recently there has been a survey to see if "calming speed humps" would be useful. It is a tragedy waiting to happen.

As a result, I am extremely concerned about the density of the Greenspring Manor CIM development and the impact on our roads, intersections, sewage, schools, and communities. It took many years to finally extend Tally-Ho from Joppa to Seminary and an equal amount of time for Thornton Road to be extended from Seminary to Timonium Road. It was if no one thought ahead. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road especially with the serious traffic overcrowding and density at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. As in the past, this will have a serious and detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods. It really should NOT be allowed to happen again. Time to plan ahead. Thanks.

Hi,

As a mom of two young boys (age 2 and 4), I am already extremely concerned about the traffic and speeding vehicles on Tally Ho Rd. I can't tell you how many times I have seen cars speed through the stop sign right in front of my house (I live at 8415 Tally Ho) without even slowing down. I have called the Baltimore County Police several times, especially during rush hour traffic when cars use Tally Ho as a through road to avoid the intersection at Falls Rd. The police come and sometimes park on Tally Ho, but the effect is always short lived. As a resident of Tally Ho, we already have a serious problem with this traffic. The addition of this new development will directly impact the safety of my children and many other children who live in this neighborhood and play on these neighborhood sidewalks. I am very disappointed that the proposed greenspring manor neighborhood will not be utilizing Mays Chapel Rd as a through street from Seminary to Joppa. I am completely opposed to this safety hazard and I hope you will take this into serious consideration.

I am also extremely concerned about the density of the development and the impact on our roads, intersections, sewage, schools, and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road especially with the failing traffic shed at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. I believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield

I am extremely concerned about the density of the proposed development and the impact on our already crumbling area infrastructure -- roads, intersections, water and sewage systems, and schools. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, I am even more concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road. The failing traffic shed encompassing Falls and Seminary, Falls and Greenspring, and Falls and Joppa Roads will be only more overburdened by the traffic engendered by this development. The lane widening and additional lanes proposed around the Falls and Joppa intersection are not nearly enough to relieve the problem this development presents. I believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods, especially as a homeowner on Tally Ho Road. We will see more through traffic, as drivers seek to avoid the failing intersections along Falls. The current level of through traffic and its average speed is already a topic of great concern in our community; the proposed Greenspring Manor development will only exacerbate the issue, and ultimately require more county intervention.

While I do not object to this parcel being used for housing, I think it would make more sense both to reduce the number of houses allowed on the parcel -- from the current proposed 61 to perhaps 45 -- and to require the developer to connect Mays Chapel Road to a road in the development, creating a new through road corridor that would allow traffic from the new community to have access to Seminary Avenue without resorting to Falls Road or Tally Ho Road. This would also provide some relief for the current through traffic issue on Tally Ho Road -- a gesture that would indicate that the planners and developers involved are concerned about existing communities and wish to be good neighbors.

I know you will consider carefully these and other thoughtful suggestions from the communities facing impacts from the proposed development, and I thank you for that consideration.

Yours truly,

Mark Mercer

To: Baltimore County Development Manager for Greenspring Manor

We are very concerned about the negative impacts to our home and neighborhood that will result from the Greenspring Manor development as currently proposed. We live on Tally Ho Road, as do many families with young children, whose safety will be at increased risk from the increase in traffic on our road. The disruption created by construction of this high-density development, along with the necessary infrastructure to provide sewage, water and utility service will be problematic as well. The already stressed intersection at Joppa and Falls Road will only get worse, both during construction and when more than 60 new families move into this area. Adding lanes to the involved roads won't do anything to relieve congestion at this intersection, which will still have to pass through a single traffic light. It is also clear that this development will result in increased traffic on Tally Ho Road since there is no plan to connect Mays Chapel Road between Seminary Avenue and Joppa Road. This will limit ingress and egress from the development to Joppa Road, which will necessitate having traffic from the development to Seminary Avenue run through our neighborhood along Tally Ho Road.

I would also point out that the area of Joppa Road in front of Greenspring Manor is prone to flooding after moderate rain, which would need to be mitigated in construction of this development. There are also streams in this area running to Jones Falls which would be subject to runoff from the paved surfaces of this development; I would hope this has been considered, due to the unavoidable negative impact this would have on the ecological balance of these streams.

Thank you for your time and attention.

Sincerely,
Michael and Mary Lois Ichniowski
Seminary Ridge

Hello All,
As a homeowner in Seminary Ridge who lives on Trelawny (adjacent to the proposed development), I find it hard to believe that we will move ahead on expansion even though we have overcrowded schools and three failing intersections (Falls at each of Joppa, Seminary and Greenspring) which would be impacted by more traffic. It's also clear that the developers of Green Spring Station STILL have NOT fulfilled their infrastructure upgrades asked for by the county (increased water lines etc). Also any traffic study done since the start of the pandemic in April 2020 is faulty since the public and private schools have not been attending in person schooling (which increases the traffic numerous times during the day), many of which cut through our neighborhood to escape the failing Falls road intersections.

I strongly suggest that this development be denied due to the above reasons.

Thanks you for your time,
James Gary

To Whom it Concerns:

I have read about the proposed Greenspring Manor residential development just west of the Seminary Ridge and Heatherfield neighborhoods. For nearly 58 years I have been a resident in this area, first moving into Village Green upon its origination in the early to mid 1960's, living in Thornleigh during the 1980's-1990's, and have since resided in Seminary Ridge since 2001. During this time I have witnessed and experienced the many changes in the area, some positive and others not so pleasant, such as Light Rail construction and the all day running of the trains basically just beyond my backyard fence In Jeffers Court (plus I was robbed twice within 2 years of the Light Rail opening when it was denied that crime increase would be an issue), the endless clanking of the trucks and cars upon the seams in the Charles St overpass, and the opening of neighborhoods to through traffic to Timonium Road via Longford North and Wellington Valley. While the proposed Greenspring Manor is a desirable location, what I have learned in my nearly 60 years in this area is that Baltimore County has consistently underplanned the future in the protection and vitality of the surrounding neighborhoods. Traffic has been steered into these neighborhoods as opposed to planning bypass type workarounds that do not have traffic finding the paths of least resistance. These neighborhood roads and the more major surrounding arteries of Joppa Road West and West Seminary are now simply already over-congested and dangerous for the safety of the families, and especially the children, to be utilized as quieter and safe places to reside as intended. I implore the County to consider that if a bypass cannot be established (and I recognize Falls Road and I83 are very close to being this bypass scenario - which unfortunately is already woefully inadequate) that any proceeding in further development surrounding Seminary Ridge, Heatherfield, Village Green, etc. include requirements that these new developments be required to have full cut through access to the larger non-neighborhood thoroughfares to minimize the increase in cut through traffic to the already existing neighborhoods that are already paying a heavy price by what was "planned" (allowed) to happen to them previously.

Notwithstanding the above, like many of my neighbors I do also share the significant concerns regarding infrastructure needs, from roads to sewer lines and utilities. I simply feel that if the County cannot address the safety and vitality of the surrounding neighborhoods as its first concern, then it really misses the point and abdicated its responsibilities.

Respectfully,

Peter J Engler (and family)

My family and I have been residents of the Heatherfield development for 40 years. Living on Tally Ho Road close to Joppa Road, we have observed a steady increase in traffic on Tally Ho and on Joppa Road. I have always expected some level of development of the property in question but never dreamed that 61 residences would be squeezed into that space. I am extremely concerned about the density of the development and the impact on our roads, intersections, sewage, schools, and communities. I have reviewed the Concept Plan Rendering for the Greenspring Manor Development and am even more concerned due to the lack of connectivity between Mays Chapel Road at Seminary Road south to Joppa Road. This is especially compelling due to the failing traffic shed at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. I believe this will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods, especially to homeowners, like us, on Tally Ho Road. Please strongly consider reducing the density of the development and creating access of Mays Chapel Road straight through to Joppa to reduce the heavy burden on Tally ho.

Please note that my wife and I have lived on Tally Ho Road for almost 30 years. We are extremely concerned about the proposed Greenspring Manor development project and the impact it will have on our roads, intersections, sewage, schools, and communities. After reviewing the Concept Plan Rendering for the Greenspring Manor Development, we are especially concerned with the lack of connectivity on Mays Chapel Road between Joppa Road and Seminary Road. Simply put, there already exists major traffic problems at Falls & Seminary, Falls & Greenspring, and Falls & Joppa Roads. As a result, a dramatic increase in traffic will be seen on Tally Ho Road as more drivers use it as a cut through between Seminary and Joppa Roads to avoid the backups on Falls Road. This will have a detrimental impact on both the Seminary Ridge and Heatherfield neighborhoods; especially to us as homeowners on Tally Ho Road. We have a young grandchild and the inevitable increase in traffic is also a safety concern as many kids play in the creek across the street from our house.

Ladies and gentlemen,

As a resident of the nearby Seminary Ridge community, I wonder how it would be possible to build a community of 60+ homes in a currently congested area with only one entrance/exit road? This community will significantly increase traffic in the area and that issue can only be addressed by providing at least two (2) options for entering or leaving the development.

Please consider requiring the developer to add another entrance/exit.

With regard to the proposed development "Greenspring Manor", I have the following questions:

1) Given that the proposal is for 61 homes, how can the currently stressed sewage system possibly handle the increased demand for such services, and how can the environment handle the additional runoff created by this proposed development?

2)The intersection of Joppa Road and Falls Road at the northern terminus of the JFX is so overcrowded that it is categorized already as a "failed intersection." With 61 new homes proposed in the immediate vicinity, how can this intersection possibly handle the increased traffic flow? Has a traffic study been commissioned and performed, and if so, by whom, and what are the results of that study?

3) The intersection of Seminary Avenue and Falls Road is also a "failed intersection." Given that westbound traffic on Seminary is bogged down particularly in morning rush hours as people attempt to access southbound Falls Road to head toward either the JFX or to access I-695, will not the addition of many more drivers and vehicles at this intersection and the intersection of Joppa and Falls further stress the flow of traffic beyond the already maxed out capacity? This is particularly problematic due to the proposed development of the Krongard property on the north side of Seminary, near to Mays Chapel Road.

4) What study has been done as to the proposal to create a new intersection at Seminary Avenue and Mays Chapel? Will the additional flow of traffic there present the need for a traffic light?

The following matters are a supplement to the already described huge concerns about the inadequate number of egresses (near Tally Ho Rd on W. Joppa should not be the only egress) for residents of the proposed Greenspring Manor development:

1)The enormous ramifications of the great increase in the routine car trips of new residents there on the surrounding old country roads. The backed-up, overloaded small country roads would be clogged with daily traffic radiating out from the already failed big Falls Road intersection (West Joppa, I-83, old Falls Rd south, the Greenspring Valley Rd, Falls Road north) in every Cardinal Direction. To the likely point of daily gridlock.
Examples of already overloaded spots:
To the East:
•the Riderwood Bridge on Joppa Rd intersecting with Bellona Avenue •Ruxton Village •Ruxton Bridge •Charles Street Extension area including Joppa Rd to TOWSON
To the South:
•Hillside Rd and Stevenson Village
•Ruxton Rd and Old Court Rd intersection at Falls Rd •Rockland Village •Lake Avenue and Falls Rd intersection
To the West:
•Greenspring Valley Rd
affecting 2 schools Maryvale and Greenspring Montessori Schools •Greenspring Avenue north and south •Park Heights Avenue •Quarry Lake development
To the North:
•old Falls Rd north including the 2 St Paul's schools at intersection of Falls Rd and Seminary •Broadway Rd East to Padonia Rd •all of old Falls Rd to up-county

A great number of long-settled and newer communities would be disturbed and disrupted by clogged traffic.

2)A second area of concern are the Health Ramifications of this proposed development ... in what is acknowledged as a 100-year old floodplain. Air quality, insect attraction and sewage problems are all likely:

• Increased automobile exhaust results in increased polluted particulate matter throughout the air that we breathe (and especially in a low-lying topography such as this proposal has) •the attractive nuisance of water retention ponds to flying insects, such as mosquitos, and the diseases that they can carry such as the Zika virus etc is very undesirable •and of course, seepage of sewer liquids into the underground water table and into our local streams negatively affecting every living thing around us and possibly the cleanliness of our Loch-Raven sourced drinking water is very possible

I grew up in Riderwood and have always cherished the quality of life here in Baltimore County. As a contented homeowner here, I urge Baltimore County to fully consider the many negative ramifications of increasing housing density by approving this proposal, which can result in so many future problems for so many of your contented residents,

Respectfully submitted,

To whom it math concern,

I would like to ask the following questions as per the development plans at green spring manor.

1. What will happen to the existing driveway?
2. Who is responsible for the wetlands once the project is completed?
3. What about sewer? It's know that the Hopkins project severely effected the sewer system and what has been done to increase this service?
4. What type of trucks will use Tally ho for construction?
5. What will be done to curb noise and runoff during construction?

Thanks,

Mark

Good Eveing,

I have a few more questions.

1. Why doesn't the new proposed road A connect into Mays chapel?
2. Mays chapel was designed to extend to Joppa! Why isn't it in the plan?
3. What will be done to mitigate traffic for falls/green valley road and falls/seminary?
4. Will all the trees between the corn field and the surrounding houses in Heatherfied and Seminary ridge be preserved?Will additional trees be added as buffer?
5. Can heavy equipment construction traffic be restricted from using Tally Ho as a cut through?
6. Who will be responsible for maintence of submerged gravel wetlands and extended detention wetvpomf after the developer is going?
7. The driveway for the exhorting house should be tied into public road A in the community and not directly across Joppa road. This will eliminate another curb cut and make Joppa traffic safer for vehicles/pedestrians/bikes?

8. What do a being done to mitigate the failing traffic intersections at falls road?

Thanks,

Mark

Mr. Chen: I was in court all day yesterday in Garrett Co. and was unable to focus on this matter until today. I am registered to attend tonight CIM and would like the following addressed:

1. What administrative or regulatory variances does Developer intend to request in connection with the proposed development? Have any of these variances requests been filed and if so, which ones? How will Baltimore County and/or the developer provide notice to interested neighborhoods and property owners of these variance requests?
2. Is Baltimore County requiring the connection of Mays Chapel Road from Seminary Avenue to Joppa Road? If so, what is the basis for this? What is developer's position and the position of neighboring properties on this issue?
3. Has Baltimore County or the Developer prepared formal traffic studies showing the traffic impacts of the proposed development? If so, when will these be released to the public?
4. What if any trees will be removed in connection with the proposed development? What trees will be added as part of the proposed development?
5. What landscaping will be removed in connection with the proposed development? What landscaping will be added as part of the proposed development?
6. Please describe the order classification of the stream between the proposed development and Seminary Ridge and Heatherfield? What effect does this classification have on developer's responsibilities? Please describe setback requirements.

Thank you.

To whom it may concern:
Are you aware of the historic Cockey Family Cemetery that is immediately adjacent to Building Lots 28, 29. 30, and 31. It is a large graveyard, reportedly containing thirty to forty graves.

Based upon the experience with the Cockey Family Cemetery, formerly at 400 W Padonia Rd, Lutherville-Timonium, MD 21093, there is a likelihood that unmarked graves are present on these Building Lots.

How will the developer care for these graves?
Respectfully submitted, Louis Witt

GREENSPRING MANOR- Seminary Farms

CIM EXHIBIT 2

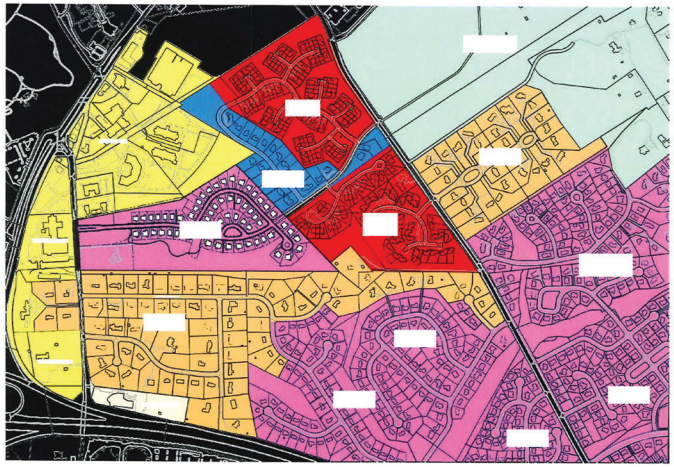
GREENSPRING MANOR

Project Product Hits Sweet Spot Within Overall Community

- Project lots are currently averaging 11-12,000 sf-¼ acre lots.
- Surrounding communities vary from 6,500-50,000 sf.
- Modern design, perfect for move down and new home buyers for this market.

GREENSPRING MANOR

Surrounding Communities By Lot Size



- RED areas:
  6,500 -12,500 sf
- PURPLE areas:
  10,000 -30,000sf
  Average 13,500 sf
- TAN areas:
  31,500 –50,000 sf

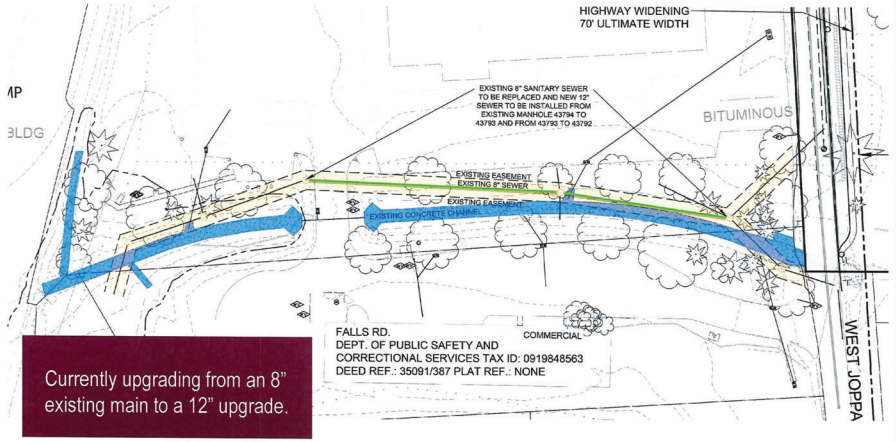
GREENSPRING MANOR

CURRENT SCENARIO

- 42% of the project is retained in open space. Only clearing 2% of project for SWM purposes.
- Project retains 100 yr flood with high water quality unlike open farm field.
- Offsite intersection improvements compensates for 700% projects traffic and makes a immense improvement over current conditions, some improvement to adjoining MD 130/131 intersections. Currently have approval and support from SHA and Baltimore County DPW.
- Working with Johns Hopkins to resolve offsite sewer that has been an issue for the community for some time.
- Existing home is retained on its own parcel, being connected to public services, existing well and septic system being remediated.
- Excellent buffer from Joppa Road to homes with open space at bifurcated entrance.
- Good landscape architecture and passive amenities.
- Joppa Road- deceleration lane and left turn bypass provided at entrance and emergency rear connection proposed for minimal impact to current traffic scenario.

GREENSPRING MANOR

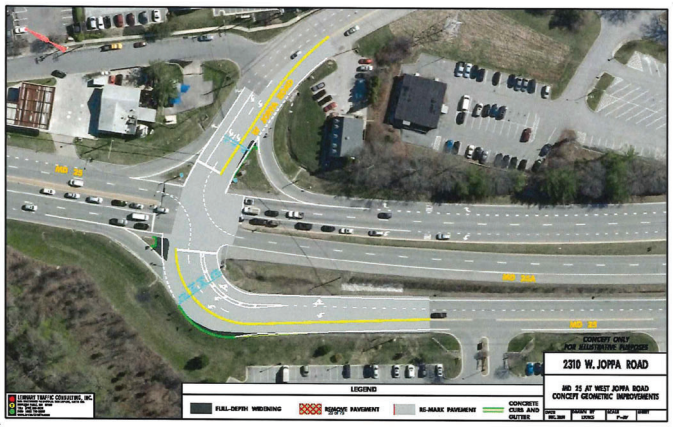
Offsite Sewer Improvements



Currently upgrading from an 8" existing main to a 12" upgrade.

GREENSPRING MANOR

Offsite Intersection Improvements



- Adding additional turning lanes in each direction.
- Realigning lanes for improved efficiencies.
- Signalization will be adjusted and modified for new traffic patterns.
- Will be able to keep improvements within current state right-of way.
- Compensates 700% of our traffic with large improvement to intersection efficiency.
- Improves intersections at MD 130 and 131 by 14% AM and 5% PM peak demands.

Baltimore County, Maryland

MASTER PLAN 2020

From the Baltimore County Executive and the Baltimore County Council

Master Plan 2020 is the guiding document that directs future development in Baltimore County over the next ten years and beyond. This plan embodies this County's broad goals of protecting the environment, preserving agriculture, and ensuring safe and attractive places to live and work. It combines the expertise and skill of Baltimore County's public servants with input from the people of our communities to help determine both where and how land development will occur throughout the next decade.

Master Plan 2020 is based on the concept of *sustainability*. We cannot meet our present needs and simultaneously preserve resources for future generations without implementing sustainable practices throughout Baltimore County. By reducing greenhouse gases in our air and pollutants in our streams and wetlands, we will improve not only the health of our entire County, but also the quality of life in all of our communities. We must maintain Baltimore County's tradition of smart growth by promoting policies that encourage compact, walkable, well-designed redevelopment of underused properties along commercial corridors and close to public transit. And by continuing to promote economic development in our historic neighborhoods and maintaining our highly skilled and well trained workforce, we can keep attracting and strengthening businesses that provide a wide variety of jobs for all our residents.

Many residents provided valuable assistance in the development of *Master Plan 2020*. The numerous comments and suggestions received at the public input meetings, from advisory committees, through the mail and emails, and through telephone calls and personal conversations, were greatly appreciated and critical to this plan's completion.

Master Plan 2020 is an effort to create and maintain safe and sustainable communities to achieve a sensible balance of economy, equity, and a healthy environment for people to reside, pursue careers, raise families, and enjoy the amenities of Baltimore County. This is an exciting opportunity for Baltimore County to continue working as partners with all its residents, businesses, and adjacent jurisdictions to develop a new direction for a brighter and healthier future.

County Executive

Kenneth N. Oliver, District 4

Recent Trends

In order to create sustainable communities, citizens and decision–makers must recognize the latest trends in housing choices and changes in family makeup. More homebuyers and renters desire to live in areas with shorter commutes to work, convenient access to shopping, dining, and other amenities. Traditional families, married couples with children, are becoming much less common. Young professionals, childless couples, empty nesters and single parents are replacing these traditional families. These consumers tend to prefer condominiums, townhouses and apartments in compact, mixed-use, walkable communities instead of single-family homes in the suburbs.

"Persons born after 1981 and baby boomers prefer to live in compact dense urban places."
Governing Magazine March 2009

"For 50 years, families with children drove America's housing industry. But now, married couples with children make up less than 25 percent of American households. And by 2025, less than 20 percent of households will be married couples with children."
"America's Families and Living Arrangements: 2003" U.S. Census Bureau (November 2004)

"When prospective homebuyers were asked if they would rather live in a large-lot neighborhood where they would depend entirely on cars to get around, or in more compact neighborhoods with schools, shops, and restaurants nearby, sixty percent chose the compact neighborhood."
Smart Growth America and National Association of Realtors. 2004 American Community Survey: National Survey on Communities, Washington, DC., October 2004

Land Management Areas

Master Plan 2020 designates "Land Management Areas" that organize the County into general policy areas. The purpose of these areas is to express the *general intention* of the County regarding development and provision of services. More specific details pertaining to these areas can be found in their respective sections of the plan. Additionally, many of these areas have specific community level plans adopted as part of *Master Plan 2020*. The Land Management Areas include the following:

Rural Areas

Agriculture Priority Preservation Areas – These areas are designated for preserving active agriculture activities, and as such are not suitable for dense residential, commercial, or institutional development. The County also designated areas for the Rural Legacy Program including the Coastal, Piney Run, Gunpowder, Long Green, and Manor areas.

Resource Preservation Areas – These areas are designed to protect environmental, historic, and cultural resources, while allowing only limited residential, commercial or institutional development. These areas include Patapsco/Granite, Prettyboy Reservoir, Gunpowder, Liberty Reservoir, Chesapeake Bay, Loch Raven Reservoir, and Soldiers Delight.

Rural Commercial Centers – The County has two rural commercial centers: Hereford and Jacksonville. Community plans have been prepared for each of these centers to help guide development.

Rural Residential Areas – Some areas of limited low-density development are established. These areas include Chestnut Ridge, Parkton, Patapsco/Granite, Hereford, Kingsville, and Jacksonville.

Urban Areas

Community Conservation Areas – These areas generally consist of lower to moderate density suburban residential neighborhoods. The neighborhoods are served with public water and sewer service. The preservation and stability of these communities is of paramount importance. The majority of these areas have community plans adopted as part of the Master Plan. They also contain a significant amount of commercial development, located primarily along the commercial corridors. Areas suitable for compact, mixed-use, walkable, transit oriented development are called Community Enhancement Areas (CEAs). Commercial Revitalization Districts (CRDs), and strip commercial corridors are also located within some of these areas.

Towson Urban Center – This urban center has been the subject of multiple studies. More specific detail

can be found within the *Towson Urban Area* section of the plan.

Owings Mills Growth Area – The last of the originally designated growth areas. See the *Owing Mills Growth Area* section for more information.

Middle River Redevelopment Area – The newest designated growth area. Details are provided in the *Middle River Redevelopment Area* section in the plan.

Employment Center – These areas generally consist of a variety of commercial uses predominantly employment-oriented, some with retail and housing. They may contain heavy industrial uses as well. These areas include CEAs, CRDs, and strip commercial areas. The preservation of family-supporting wage employment is the primary goal.

Proposed Land Use

The Proposed Land Use Map provides general recommendations for land use, based upon the policies provided in *Master Plan 2020*. The map is conceptual and general, and is intended to reflect land use patterns and support the land use objectives of *Master Plan 2020*, rather than identify land use of individual properties or parcels. The use of transects, and "T-zones", is designed to support compact mixed-use communities, while maintaining the stability of existing community conservation areas (Map 5). The proposed land use map will provide general direction for county land use decisions, and may be amended as needed.

Transect-Based Planning for the Built Environment

A "transect" of nature, first conceived by Alexander Von Humboldt at the close of the 18th century, is a geographical cross-section of a region intended to reveal a sequence of environments. Originally, it was used to analyze natural ecologies, showing varying characteristics through different zones such as shores, wetlands, plains and uplands. It helps study the many elements that contribute to habitats where certain plants and animals thrive in symbiotic relationships to the minerals and microclimate.

This same system can be used to demonstrate different human habitats. Some individuals prefer living on farms while others prefer living in cities. Before the automobile, American development patterns were walkable, and transects within towns and city neighborhoods reflected a variety of development patterns and uses. These degrees of urbanism are represented in a rural-to-urban transect has been developed which provides six "Transect Zones" (T-zones) for application on the proposed land use map.

The transect, as a framework, identifies a range of habitats from the most natural to the most urban (Map 5). Its continuum, when subdivided, lends itself to the creation of zoning categories. These categories include standards that encourage diversity. The standards overlap, reflecting the successional pattern of development and natural ecosystems. The transect thereby integrates environmental and zoning methodologies, enabling the design of compact, mixed-use, walkable communities that support the viability of natural ones.

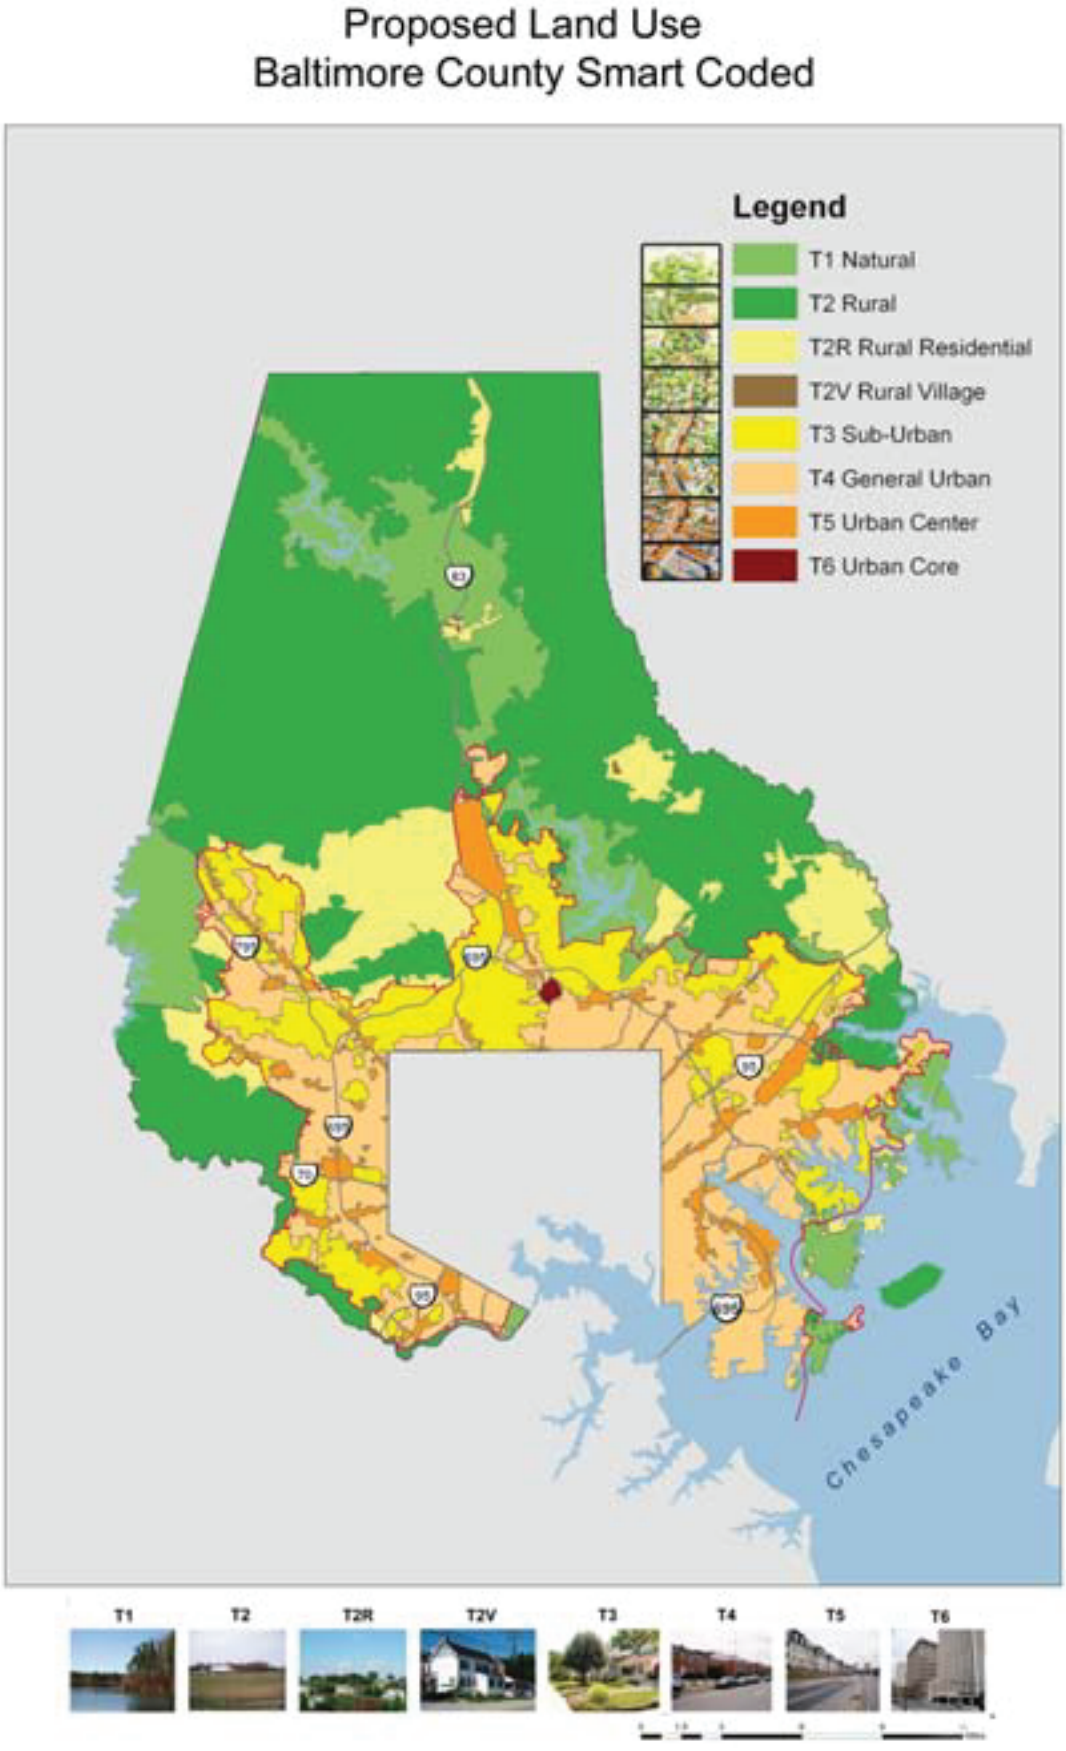
- **T-1 (Natural Zone)** contains lands approximating a natural condition, including lands unsuitable for settlement due to topography, hydrology, or vegetation.

- **T-2 (Rural Zone)** consists of sparsely settled lands in an open or cultivated state. These include woodlands, agricultural lands, and grasslands. Typical buildings may include farmhouses and agricultural buildings.

- **T-2 R (Rural Residential Zone)** consists of large lot single-family detached housing. Plantings are informal. All setbacks are generally 50+ feet. Lots are deep to accommodate a larger backyard. Density varies between 2 to 5 acres per dwelling.

- **T-2 V (Rural Village Zone)** takes into account the rural villages of Hereford and Jacksonville. This zone has a mix of smaller scale retail/ office and some residential uses. T-2 V preserves the rural village character featuring an attractive and traditional pattern of houses,

Map 5: Proposed Land Use



commercial establishments, open spaces and their relationship to roadways.

- **T-3 (Sub-Urban Zone)** includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

- **T-4 (General Urban Zone)** is characterized by mixed-use, but is primarily residential urban fabric. It may have a wide range of building types including single-family detached and attached houses, and townhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

- **T-5 (Urban Center Zone)** includes higher density mixed-use buildings that accommodate retail, offices, townhouses, and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

- **T-6 (Urban Core Zone)** has the highest density and height with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings set close to the wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

- **T-M (Manufacturing Zone)** includes certain industries and manufacturing processes that should not be combined with other uses. By their function, they require that their operations not be closely integrated with other uses (except those with similar characteristics).

- **T-I (Institutional Zone)** many institutional uses should be incorporated into the T-4 and T-5 transects, such as community centers, branch government offices, libraries, etc. However, certain institutions like medical complexes, educational campuses, and others that benefit from having all their functions in one location may need room to grow. That may make inclusion into a Community Enhancement Area impractical. Such facilities should be close enough to be walkable, and be mutually supportive.

The transect system replaces the conventional separate land use zoning system. The T-zones provide the basis for real neighborhood structure, which relies upon compact, walkable streets, mixed-use, transportation options, and housing diversity. The T-zones vary by the ratio and level of intensity of their natural, built, and social components. Uses may overlap between one T-zone and another. The ability of transects to clarify the compatibility among uses makes them particularly useful in planning the built environment.

They may be coordinated to all scales of planning, from the region through the community scale, down to the individual lot and building. However, any new zoning would be applied at the community scale, and it is important to note that each community will have to establish (calibrate) its own unique development criteria. Furthermore, T-zones should be balanced within a neighborhood structure based on pedestrian sheds (walksheds), so that residents of lower density neighborhoods may still walk to different habitats, such as a main street, or civic space.

Transect-based planning is used throughout the County to provide a solid foundation for all other planning. As Baltimore County moves towards compact, mixed-use, higher-density walkable communities, the successful implementation of transect-based planning will play a key role in further developing the T-4 and T-5 zones.

The Transect Zones and the following graphics for the Transect Zone descriptions and civic spaces were originated and developed by Duany Plater-Zyberk & Co.

Transect Zone Descriptions

T-1 NATURAL

T-1 Natural Zone consists of lands approximating or reverting to a wilderness condition, including lands unsuitable for settlement due to topography, hydrology or vegetation.

General Character:	Natural landscape with some agricultural use
Building Placement:	Not applicable
Frontage Types:	Not applicable
Typical Building Height:	Not applicable
Type of Civic Space:	Parks, Greenways

T-2 RURAL

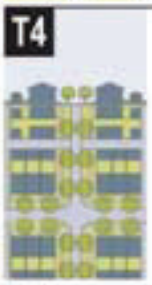
T-2 Rural Zone consists of sparsely settled lands in open or cultivated states. These include woodland, agricultural land, grassland, and irrigable desert. Typical buildings are farmhouses, agricultural buildings, cabins, and villas.

General Character:	Primarily agricultural with woodland & wetland and scattered buildings
Building Placement:	Variable Setbacks
Frontage Types:	Not applicable
Typical Building Height:	1- to 2-Story
Type of Civic Space:	Parks, Greenways

T-3 SUB-URBAN

T-3 Sub-Urban Zone consists of low density residential areas, adjacent to higher zones that some mixed use. Home occupations and outbuildings are allowed. Planting is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

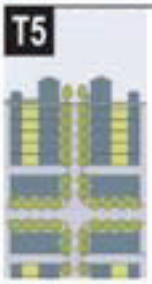
General Character:	Lawns, and landscaped yards surrounding detached single-family houses; pedestrians occasionally
Building Placement:	Large and variable front and side yard Setbacks
Frontage Types:	Porches, fences, naturalistic tree planting
Typical Building Height:	1- to 2-Story with some 3-Story
Type of Civic Space:	Parks, Greenways



T-4 GENERAL URBAN

T-4 General Urban Zone consists of a mixed use but primarily residential urban fabric. It may have a wide range of building types: single, sideyard, and rowhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

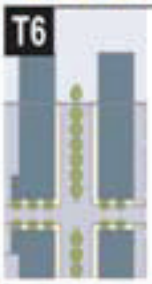
General Character:	Mix of Houses, Townhouses & small Apartment buildings, with scattered Commercial activity; balance between landscape and buildings; presence of pedestrians
Building Placement:	Shallow to medium front and side yard Setbacks
Frontage Types:	Porches, fences, Dooryards
Typical Building Height:	2- to 3-Story with a few taller Mixed Use buildings
Type of Civic Space:	Squares, Greens



T-5 URBAN CENTER

T-5 Urban Center Zone consists of higher density mixed use building that accommodate etail, offices, rowhouses and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

General Character:	Shops mixed with Townhouses, larger Apartment houses, Offices, workplace, and Civic buildings; predominantly attached buildings; trees within the public right-of-way; substantial pedestrian activit
Building Placement:	Shallow Setbacks or none; buildings oriented to street defining a street wall
Frontage Types:	Stoops, Shopfronts, Galleries
Typical Building Height:	3- to 5-Story with some variation
Type of Civic Space:	Parks, Plazas and Squares, median landscaping



T-6 URBAN CORE

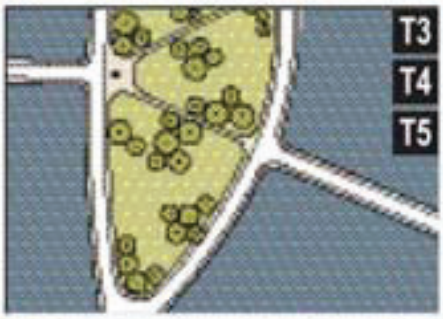
T-6 Urban Core Zone consists of the highest density and height, with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings are set close to wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

General Character:	Medium to high-Density Mixed Use buildings, entertainment, Civic and cultural uses. Attached buildings forming a continuous street wall; trees within the public right-of-way; highest pedestrian and transit activity
Building Placement:	Shallow Setbacks or none; buildings oriented to street, defining a street wall
Frontage Types:	Stoops, Dooryards, Forecourts, Shopfronts, Galleries, and Arcades
Typical Building Height:	4-plus Story with a few shorter buildings
Type of Civic Space:	Parks, Plazas and Squares; median landscaping

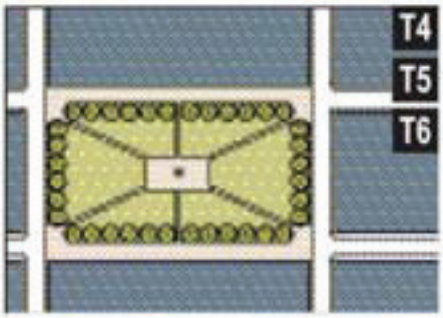
Civic Space Descriptions

a. Park: A natural preserve available for unstructured recreation. A park may be independent of surrounding building Frontages. Its landscape shall consist of Paths and trails, meadows, waterbodies, woodland and open shelters, all naturalistically disposed. Parks may be lineal, following the trajectories of natural corridors. The minimum size shall be 8 acres. Larger parks may be approved by Warrant as Special Districts in all zones.

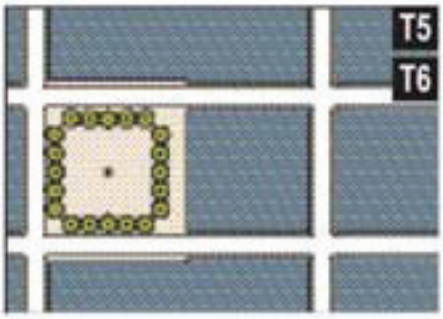
b. Green: An Open Space, available for unstructured recreation. A Green may be spatially defined by landscaping rather than building Frontages. Its landscape shall consist of lawn and trees, naturalistically disposed. The minimum size shall be 1/2 acre and the maximum shall be 8 acres.



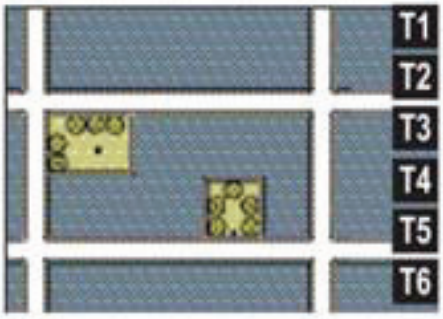
c. Square: An Open Space available for unstructured recreation and Civic purposes. A Square is spatially defined by building Frontages. Its landscape shall consist of paths, lawns and trees, formally disposed. Squares shall be located at the intersection of important Thoroughfares. The minimum size shall be 1/2 acre and the maximum shall be 5 acres.



d. Plaza: An Open Space available for Civic purposes and Commercial activities. A Plaza shall be spatially defined by building Frontages. Its landscape shall consist primarily of pavement. Trees are optional. Plazas should be located at the intersection of important streets. The minimum size shall be 1/2 acre and the maximum shall be 2 acres.



e. Playground: An Open Space designed and equipped for the recreation of children. A playground should be fenced and may include an open shelter. Playgrounds shall be interspersed within Residential areas and may be placed within a Block. Playgrounds may be included within parks and greens. There shall be no minimum or maximum size.



(3) Continue grass roots community-based organizing and information sharing through e-mail, the county website, e-blast updates, internet-based social networking, and meetings with civic, faith, business, educational leaders and other stakeholders.

(4) Continue to administer community-based planning to ensure conformance with the Master Plan, and that the resulting plans and projects address community concerns, and are successfully implemented.

Community Conservation Areas

Baltimore County's Community Conservation Areas (CCAs) encompass the County's more densely populated, established communities (Map 9). Nearly 75% of the county's residents live in these areas, where there is a wide range of housing choices. Many of these communities feature small-town scale commercial centers, a proud history and culture, and an urban dynamic. They also encompass some of the County's larger employment centers.

The CCAs were first delineated in the 1989-2000 Master Plan. By adopting these areas as a new land use designation, the County set precedent, and began a much-needed push to "conserve, revitalize and enhance our older residential communities." The move to protect and invest in the older communities, and revitalize their commercial hubs followed the previous period when most public investment went to the new designated Growth Areas.

Preserving CCAs is a fundamental component of the County's critical effort to effectively maintain, strengthen and manage its built environment. This priority grows in importance as our society continues to elevate principles of sustainability thereby reducing land consumption, and utilizing sustainable construction techniques to preserve resources.

Baltimore County is proud of the plans created and projects implemented to conserve its older communities. Collaborative planning efforts have been undertaken in communities throughout the county. These include four large-scale enterprises that employed the Urban Design Assistance Team (UDAT) planning model in Dundalk, Randallstown, Essex-Middle River, and Towson, and area community plans developed and adopted in the last ten years. Planning charrettes also helped craft a specific redevelopment plan for the former Kingsley Park apartments in Essex-Middle River, to create the Walkable Towson Plan, and to re-energize Turner Station. In addition, the Office of Community Conservation (OCC) developed a range of effective programs providing support to homeowners, homebuyers, and renters. Furthermore, the County made a major capital investment in streetscape enhancement projects in 12 of the 14 traditional commercial centers, designated as Commercial Revitalization Districts (CRDs), from Lansdowne on the west side to Essex-Middle River on the east side.

These planning efforts, and vigorous follow-through involving capital projects and public-private redevelopment produced visible improvements. In some cases, large-scale transformation was achieved. An inspiring review of community conservation activities in recent years can be found in the award-winning report, *Baltimore County Works*, published in 2008.

While the County is proud of its success, there are challenges to be met. Going forward, a sustainable community conservation strategy will include effective action in the following subject areas: Sustainable Housing, Homeownership, Workforce Housing, Rental Housing, and Green Housing.

Sustainable Housing

Baltimore County's CCAs have many advantages for residents, including convenience to shopping, recreation, and cultural amenities, housing affordability, good neighborhood schools, public transportation and community stability. However, it is also true that many of the houses in these areas lack amenities desired by today's homebuyers. Many communities consist of houses that are small, with too few bedrooms and bathrooms, and too little closet space. These houses can be expensive to maintain, with inadequate heating and cooling systems, poor or nonexistent insulation, leaky windows and

BALTIMORE COUNTY, MARYLAND
BUREAU OF TRAFFIC ENGINEERING AND TRANSPORTATION PLANNING
INTER-OFFICE CORRESPONDENCE

DATE: December 16, 2020 (Revised)

TO: D'Andrea Walker., Acting Director
Department of Public Works

FROM: Greg Carski. Bureau Chief
Bureau of Traffic Engineering and Transportation Planning

SUBJECT: 2021 Basic Service Map – Transportation:

Due to COVID-19, our bureau has restudied 30 out of 35 intersections currently on the Basic Services Map for 2020. These studies were completed prior to the Covid-19 effects on traffic volumes. Studies were suspended in mid March.

The following five intersections were not studied due to COVID-19 during 2020 and the rating below is based upon the 2020 Basic Service Maps.

Joppa Rd E & Loch Raven Blvd (MD 542)	LOS = F
Pulaski Hwy (US 40) & Rossville Blvd	LOS = D
Rolling Rd & Windsor Mill Rd	LOS = D
Seminary Ave (MD 131) & York Rd (MD 45)	LOS = D
Timonium Rd & York Rd (MD 45)	LOS = D

Based on the studies that were completed over the past year and prior years in some cases, we are recommending the following change to the Transportation Map for 2021:

CHANGES:

Beaver Dam Rd / Deerco Rd / Padonia Rd	F to C

There are twelve "F" level intersections and one "E" level intersection that are being proposed on the 2021 Basic Service Transportation Map that would control development. These intersections are:

Baltimore Nat'l Pike (US 40)/ Rolling Rd N	LOS = F
Bellona Ave / Charles St (MD 139) / Kenilworth Dr	LOS = F
Bloomsbury Ave / Frederick Rd (MD 144) / Ingleside Ave	LOS = F
Burke Ave / Burke Ave W / York Rd (MD 45)	LOS = F
Ebenezer Rd / Pulaski Hwy (US 40)	LOS = F
Falls Rd (MD 25) / Seminary Ave W (MD 131)	LOS = F
Falls Rd (MD 25) / Joppa Rd W	LOS = F
Falls Rd (MD 25) / Greenspring Valley Rd (MD 130)	LOS = F
Falls Rd (MD 25) & Shawan Rd & Tufton Ave *	LOS = F
Frederick Rd (MD 144) / Rolling Rd S (MD 166)	LOS = F

Joppa Rd E & Loch Raven Blvd (MD 542) – (COVID 19)	LOS = F
Perring Pkwy (MD 41) / Putty Hill Ave	LOS = F
Joppa Rd E / Perring Pkwy (MD 41)	LOS = E

* Note: Since the intersection of Falls Rd(MD25)/Shawan Rd and Tufton Rd is outside the URDL there will be no commuter shed associated with this intersection.

Beaver Dam Rd/Deerco Rd/Padonia Rd was LOS F on the Basic Services Map for 2020 per Bill 12-19, our engineering review results in a LOS C.

Enclosed is a list of the current D, E, and F intersections for your use. Should you have any questions in regard to the Basic Services Transportation Map for 2021, please contact me at ext. 3554.

BALTIMORE COUNTY, MARYLAND
BUREAU OF TRAFFIC ENGINEERING AND TRANSPORTATION PLANNING
INTER-OFFICE CORRESPONDENCE

DATE: February 4, 2022 (Revised)

TO: D'Andrea Walker., Acting Director
Department of Public Works and Transportation

FROM: Anthony Russell. Acting Bureau Chief
Bureau of Transportation

SUBJECT: 2022 Basic Service Map – Transportation:

In September of 2021, the schools in Baltimore County resumed full time in class instruction. With schools back in full session, the D, E, and F intersections on the transportation basic service map were studied for the 2022 Basic Service Map.

The following three intersections were not studied due to construction in the area

Harford Rd (MD 147) & Joppa Rd	LOS = D
Honeygo Blvd & White Marsh Blvd (MD 43)	LOS = D
Perring Pkwy (MD 41) / Putty Hill Ave	LOS = F

As of now the proposal is to retain their level of service from 2021.

Based on these studies over the past year, we are recommending the following change to the Transportation Map for 2022:

CHANGES:

Beaver Dam Rd / Deerco Rd / Padonia Rd	F to C

With the change above, there are twelve "F" level intersections and one "E" level intersection that are being proposed on the 2022 Basic Service Transportation Map that would control development. These intersections are:

Baltimore Nat'l Pike (US 40)/ Rolling Rd N	LOS = F
Bellona Ave / Charles St (MD 139) / Kenilworth Dr	LOS = F
Bloomsbury Ave / Frederick Rd (MD 144) / Ingleside Ave	LOS = F
Burke Ave / Burke Ave W / York Rd (MD 45)	LOS = F
Ebenezer Rd / Pulaski Hwy (US 40)	LOS = F
Falls Rd (MD 25) / Seminary Ave W (MD 131)	LOS = F

Falls Rd (MD 25) / Joppa Rd W	LOS = F
Falls Rd (MD 25) / Greenspring Valley Rd (MD 130)	LOS = F
Falls Rd (MD 25) & Shawan Rd & Tufton Ave *	LOS = F
Frederick Rd (MD 144) / Rolling Rd S (MD 166)	LOS = F
Joppa Rd E & Loch Raven Blvd (MD 542)	LOS = F
Perring Pkwy (MD 41) / Putty Hill Ave	LOS = F
Joppa Rd E / Perring Pkwy (MD 41)	LOS = E

* Note: Since the intersection of Falls Rd(MD25)/Shawan Rd and Tufton Rd is outside the URDL there will be no commuter shed associated with this intersection.

Beaver Dam Rd / Deerco Rd / Padonia Rd was level of service F on the Basic Services Map for 2021 per Bill 32-21.

Enclosed is a list of the current D, E, and F intersections for your use. Should you have any questions in regard to the Basic Services Transportation Map for 2022, please contact me at ext.3554.

SUBJECT: 2021 Basic Services Maps
Public Water and Sewer Status

In accordance with your request, we are furnishing an update for the 2021 Basic Services Map.

Water
No deficiencies are known to exist.

Sewer
All of the remaining sewer relief point locations are being metered. We have completed several rehabilitation projects and are now performing post-monitoring to determine the projects' effectiveness. In addition, we have projects still in design which will eventually eliminate the areas of concern.

Everyone should be aware that the removal of an area of special concern does not mean that an area has unlimited developmental potential. All developments are evaluated hydraulically on a case-by-case basis, and determinations are made to see if the development will need downstream supplementation.

TO: D'Andrea Walker, Acting Director
Department of Public Works and Transportation

FROM: Lisa Eicholtz, PE, Chief LKE
Bureau of Engineering & Construction

SUBJECT: 2022 Basic Services Maps
Public Water & Sewer Status

In accordance with your request, we are furnishing an update for the 2022 Basic Services Map.

Water
No deficiencies are known to exist.

Sewer
All of the 10 remaining sewer relief point locations are being metered. We have completed several rehabilitation projects and are now performing post-construction monitoring to determine the effectiveness of the projects. In addition, we have projects in design and also construction which will eventually allow the elimination of the areas of special concern.

Revisions to the Basic Services Maps to remove an area of special concern do not mean that an area has unlimited development potential. Computer modeling and simulations to assess the impacts on the County's sewer system resulting from development are completed on a case by case basis. Determinations are made to assess if the impacts from development will require downstream improvements to ensure adequate capacity in the sewer system.

Common Ownership or Controlled by Foxleigh Enterprises, Inc.	*	
Petitioner		**CASE NO. 2012-0060-SA**

* * * * * * * * * *

OPINION AND ORDER

This matter comes before the Office of Administrative Hearings for Baltimore County for consideration of a Petition for Special Variance filed by Priscilla K. Carroll, Esquire of Bowie & Jensen, LLC on behalf of the legal owner of the property, Common Ownership or Controlled by Foxleigh Enterprises, Inc. The Petitioner is requesting Variance relief under Baltimore County Zoning Regulations ("B.C.Z.R.") Section 4A.02.4.G to permit the proposed non-industrial development/renovations where it has been determined that the capacity of the public facilities necessary to accommodate same is less than necessary, and for such other and further relief as may be deemed necessary by Administrative Law Judge for Baltimore County. The subject property and requested relief is more fully depicted on the site plan that was marked and accepted into evidence as Petitioner's Exhibit 1.

Appearing at the public hearing in support of the variance request were Thomas L. Peddy, Vice President and Secretary for Foxleigh Enterprises, Inc., Herbert A. Fredeking for Foxleigh Enterprises, Inc., Matt Hjortsberg, Esquire, Priscilla K. Carroll, Esquire and Vincent M. Guida, Jr., Esquire of Bowie & Jensen, LLC, attorneys for the Petitioner. Protestants Thomas F. Mullan, III of Mullan Greenspring, LLLP, Mullan Pavilions, LP, and Norman Wilder, were represented by Richard C. Burch, Esquire of Mudd, Harrison & Burch, LLP. The Meadows of Greenspring Homeowners Association, Inc., and Michael Friedman, were represented by K. Donald Proctor of Proctor and McKee PA. The Valleys Planning Council and Falls Road Community Association were represented by Michael R. McCann, Esquire.

The file reveals that the Petition was properly advertized and the site was properly posted as required by the Baltimore County Zoning Regulations. The file contains correspondence from a number of individuals and businesses in the affected area of the subject site, both in favor and opposed to the relief requested by the Petitioner.

The Zoning Advisory Committee (ZAC) comments were received and are made a part of the record of this case. The only substantive comment was received from the Office of Planning, dated November 10, 2011. In that correspondence, the Office of Planning indicated it would not oppose the Petition if Petitioner agreed to install a sidewalk along a portion of the site. This comment does not pertain, strictly speaking, to the merits of the variance request, and is more appropriately considered in connection with the eventual development of the pad sites. Comments were received from the Bureau of Development Plans Review dated December 6, 2011, which states:

> The Director of Public Works and staff have reviewed the traffic impact analysis submitted by The Traffic Group in support of the proposed redevelopment of the Green Spring Racquet Club.
>
> The Green Spring Station developer is asking to be allowed to proceed with the proposed redevelopment in an 'F', or failing, trafficshed. If traditional (ITE) trip generation rates are assumed for this, the result will be a net increase in the traffic using the failing intersection.
>
> The Traffic Group's analysis assumes very specific uses of the proposed buildings, and utilizes non-traditional trip generation rates based on other sites they have studied or analyzed. They also suggest a strong synergy between the proposed development and the adjacent, remaining businesses in the Green Spring Station complex, which reduces the number of 'new' traffic trips on the adjacent road system. Based on these assumptions, the proposed development would result in no net increase in traffic.

Comments were received from the Department of Planning dated December 7, 2011 which states:

> "The Department of Planning has reviewed the petitioner's request and accompanying site plan. The petitioner owns the shopping center known as Greenspring Station, located in the traffic shed of Falls and Joppa Roads, which has been operating at an "F" Level of Service since 2003. It should be noted that 2012 Comprehensive Zoning Map Process (CZMP) Issue 2-020 has been filed to rezone 5.67 acres within limits of the requested special variance.
>
> The petitioner's request is to raze the two existing tennis barns, currently operating under a special exception for a community building (Case No. 76-167x) and construct an office building and wellness center on the approximate foot print of the rear tennis barn. Additionally, the petitioner proposes the addition of parking in the area occupied by the front tennis barn. Lastly, the submitted site plan also shows a 5,000 square foot retail addition to the front of the Joppa and Falls Concourse Building.
>
> The petition for special variance must demonstrate pursuant to Baltimore County Zoning Regulations (BCZR) § 4A02.4.G.1.a "*That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal*"; and b "*That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with BCZR § 4A02.3.G.2.b.*"
>
> The Department of Planning shall give a report on the petition to the Administrative Law Judge formerly known as the "Zoning Commissioner" prior to his consideration of the petition in accordance with BCZR § 4A02.4.G.2. As such this Department offers the aforementioned and the following:
>
> - The Department of Planning defers to the Department of Public Works' comment on the traffic impact analysis submitted by the Traffic Group in support of the proposed redevelopment of the Greenspring Racquet Club.
> - The Department of Planning has no record of any other application for reserve capacity use certification for any project within the traffic shed of the following intersections operating at an 'F' level of service: Falls and Joppa Roads, Falls and Greenspring Valley Roads and Seminary Avenue and Falls Road.

The Department of Planning issued amended comments on January 13, 2012, which state:

> The Department of Planning has reviewed the petitioner's request and accompanying site plan. The petitioner owns the shopping center known as Greenspring Station, located in the traffic shed of Falls and Joppa Roads, which has been operating at an "F" Level of Service since 2003. It should be noted that

> 2012 Comprehensive Zoning Map Process (CZMP) Issue 2-020 has been filed to rezone 5.67 acres within limits of the requested special variance.
>
> The petitioner has provided additional clarification as to its proposal. The petitioner's request for Special Variance is based on petitioner's plan to raze a portion of the existing tennis barn buildings, and to renovate the remaining building as a mixed use facility containing medical offices and a health fitness center. The mixed use facility all will be within the footprint of the existing building currently operating under a special exception for a community building (case No. 76-167x). Further, the petitioner's proposal is for the addition of off-street parking in the area occupied by the front of the razed tennis barn building. Lastly, the submitted site plan also shows a 5,000 square foot retail addition to the front of the Joppa and Falls Concourse Building.
>
> The petition for special variance must demonstrate pursuant to Baltimore County Zoning Regulations (BCZR) § 4A02.4.G.1.a "*That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal*"; and b "*That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with BCZR § 4A02.3.G.2.b.*"
>
> The Department of Planning shall give a report on the petition to the Administrative Law Judge formerly known as the "Zoning Commissioner" prior to his consideration of the petition in accordance with BCZR § 4A02.4.G.2. As such this Department offers the aforementioned and the following:
>
> - The Department of Planning defers to the Department of Public Works' comment on the traffic impact analysis submitted by the Traffic Group in support of the proposed redevelopment of the Greenspring Racquet Club.
> - The Department of Planning has no record of any other application for reserve capacity use certification for any project within the traffic shed of the following intersections operating at an 'F' level of service: Falls and Joppa Roads, Falls and Greenspring Valley Roads and Seminary Avenue and Falls Road.

As noted in the Planning Department comments, the subject site is within the traffic shed of Falls Road and Joppa Road, Falls Road and Greenspring Valley Road, and Falls Road and Seminary Avenue, all three intersections have been determined to operate at an "F" level of service. As such, further development such as that proposed by the Petitioner is not permitted absent a special variance.

In order to obtain a special variance as to transportation and the hear offending intersections, Petitioner must meet the two prong test set out in 4A02.4.G, which states:

The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's pursuant to a finding:

a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and

b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

As to subsection b above, Petitioner's Counsel presented a properly executed certificate of the Absence of Entry of a Public Record from the Office of Planning, noting that no other or pervious application for reserve capacity certificate or petition for special variance has been filed in this traffic shed.

Subsection a above, was the focus of the testimony presented before me. Mr. Herb Fredeking, co-owner of Petitioner Foxleigh Enterprises, Inc., described the existing Greenspring Station property and its various uses. He provided a verbal "tour" of the subject Greenspring Racquet Club facility, including its various facets and membership activities.

He then turned his attention to the proposed new project. He stated that one building of the existing racquet club would be razed and the remaining structure will be redeveloped to contain 35,000 square feet of health/fitness facilities, while 50,000 square feet would be devoted to medical offices, for a total of 85,000 square feet of space. In addition, 5,000 square feet of new retail space would be constructed on the north side of the Joppa and Falls Road concourse. He proposes to

create a new façade and "look" for the stores and to make the area more pedestrian friendly with the use of new sidewalks and paths.

He acknowledged the existing "F" intersections and their resultant effect on the future of the proposed project; and confirmed that Mr. Guckert and the Traffic Group were brought in to deal with that issue. He then reviewed with Counsel two booklets prepared regarding both the medical retail parts of the proposed project (Petitioner's Exhibits 5 and 6). He stated that there were as yet no architectural drawings of either, but that the Exhibits provided the "approximate outline" of the proposed uses. The site plan, referred to by the witness as a "conceptual schematic," was prepared by Site Resources and was meant to create the "spirit" of the project, and the "flavor" of the proposed project.

On cross examination and redirect, the witness confirmed that the subject racquet club is located in an O3 zone and agreed that he is converting an existing building into a medical office structure. He was questioned as to a number of specifics of the proposed project, but could not provide any detail beyond the "conceptual schematic." He does not know who the tenants will be if the new structure is built, nor what particular specialties will be located there. He acknowledged that no development plan or special exception request has been filed to this date. He could not say what percentage of the existing facility is used now by the medical community, nor what kinds of doctors will either have their offices or use the proposed facility for their patients. He did reiterate that the mixed use nature of the new construction was the goal, with rehabilitation services to be the main intended use.

Mr. Wes Guckert of the Traffic Group was qualified as an expert witness and testified that he was brought in by Petitioner to provide the traffic information necessary to support and obtain the requested special variance. He stated that he had visited the site on a number of occasions,

reviewed its uses with the Petitioner owners and did traffic generation analyses of the present traffic in the area of the site; as well as that which he believes will exist if the Petitioner's ultimate plans for the existing racquet club are approved and constructed.

He believes that the existing facility is "not just tennis courts" but is also an "athletic club," including a Lynn Bricks exercise facility and other athletic and social activities carried on now at the subject site. He presented a traffic volume exhibit (Petitioner's Exhibit 10), which he stated represents a comparison of traffic now and for the future if the site is developed as the Petitioner envisions.

He explained that the data contained thereupon was obtained from the Institute of Traffic Engineering (ITE) trip generation manual as well as software used in conjunction with it. He opined that at present the racquet club is classified as a land use 491 by the ITE. He also determined that, based upon the definition in the ITE manual, the property is otherwise an "athletic club" (land use 493). He then applied the calculations taken from the ITE manual to determine that which represents traffic volume at the site today, including so-called "internal trips," which is the use by drivers on the site of more than one facility in the Greenspring Station development. He also factored in patrons using the present facilities as they "pass by" the Greenspring Station development on their way to a primary destination. He pointed out that the result of internal trip and pass by calculations has the effect of reducing the number of individual trips.

He then described the process by which he determined what the traffic use would be if one of the two racquet court buildings were removed and the remaining structure redeveloped into a health/fitness club (ITE land use 492), medical office building, and additional retail shops (ITE land use 814).

After crafting the numbers for the prospective health/fitness club and retail uses, the witness explained that his calculations relative to the medical office building (MOB) portion of the redevelopment were based upon a study of traffic usage relative to the Osler Drive medical building adjacent to St. Joseph Hospital in Towson. He explained that in this instant he deemed the ITS materials not accurate, as he noted that in this situation in the Baltimore/Washington region it was the custom to use other numbers rather than the ITE figures; and offered that the ITE manual itself suggests the use of local data where appropriate.

Mr. Guckert related that he also spoke with the Petitioner as to the existing and proposed medical usage of his facility at Greenspring Station, including the ultimate goal of the "internal capture" attributable to the proposed facility by the various medical entities located in Greenspring Station. Focusing in on the issue of internal capture (also known as "synergy") and pass by factors for the new facility, the witness explained that the change from 5% to 15% (Petitioner's Exhibit 10) was based to a great extent on his discussion with the Petitioner who believed that "doc's in the Greenspring Station area will be anxious to be able to refer patients for rehabilitation and things of that nature" (T1-23-12 page 47). In addition, the witness opined that the change of the proposed facility to include health/fitness services and not as an athletic club, was also a sufficient basis for him to believe that the 15% "synergy" factor was a valid number.

On cross and redirect examination, Mr. Guckert acknowledged that the standard of proof for the granting of the requested special variance was a comparison of the traffic volumes and structures at the present time with that expected as a result of Petitioner's planned redevelopment. He acknowledged that if the projected use results in more traffic than that which now exists, the variance will not be granted.

He was questioned as to previous studies that had been undertaken, regarding both the Osler building as well as Johns Hopkins Hospital facilities at Greenspring Station and conceded that these numbers were different, with the Hopkins analysis abandoned and the Osler study utilized. He did note, however, that the Johns Hopkins Hospital analysis was carried out by another traffic consultant.

Much time was spent on the question of what the ITE manual/software calculations would be if different classifications were applied to the existing site. Most of the time was spent on the changes in the numbers that would result from whether or not the Lynn Bricks component would be classified today as an athletic club or a health/fitness facility. For instance, he conceded that the ITE trip factor for a health/fitness was considerably lower than the factor for an athletic club, so that if Lynn Bricks is classified a health/fitness center and the traffic impact thereby reduced, the proposed use would not likely qualify for the requested variance (T1-23-12 page 79-82).

Michael Friedman was called as a witness and his testimony was directed to the question of the "true identity" of Lynn Bricks. Protestants then called Barry King, who was accepted as an expert witness regarding the traffic issues herein. He too launched into a discussion of what category yielded what numbers as to traffic volumes and again what Lynn Bricks truly was and the effect of that facility on the existing traffic numbers. He opined that Mr. Guckert's use of the land use codes as he saw them resulted in a much higher number of vehicles to which to compare the projections for the proposed use. He then suggested the rationale for his own base numbers, revealing (not surprisingly) that in utilizing his view of the numbers, Petitioner would not qualify for the requested variance.

Robert Green was called by Protestants and qualified as an expert in development and zoning matters. He noted that the plan submitted by Petitioner was limited to the present request,

and opined that a development plan and accompanying zoning request would need to be further granted.

TIMELINESS OF REQUEST

Protestants initially complained that the Petitioner's request was, at best, precipitous. They offered that, without more detail as to the proposed redevelopment it would not be possible to properly determine what traffic volume would result from it. They suggested (and Mr. Green supported in his testimony) that the proper forum for the instant request would be as part of the development plan approval process, including requests for special exception and variance. In furtherance of this argument, Mr. Guckert was in fact reminded of a 1999 case in which he opined that the appropriate forum to raise this type of issue was "at the time of application for a building." Portions of his testimony or transcript in that matter were placed into evidence by the Protestants (Protestant's Exhibit 1).

I find nothing in the statutes or regulations that limits Petitioner's right to request a special variance at this time. However, the burden of proof in satisfying the requirements under Section 4A02.4.G.1.(a)(b) for the granting of a special variance remain unchanged, and Petitioner's request must stand or fall on information and evidence presently available and presented.

SPECIAL VARIANCE

As noted hereinabove, the test to be applied is to two fold. Turing to Section 4A02.4.G.1(b), I find that the uncontroverted documentation provided by Petitioner (Petitioner's Exhibit 2) is dispositive. Hence, subsection 1(b) is satisfied.

Subsection 1(a) however, is considerably more problematic.

In order to carry his burden of proof as to this section, Petitioner first needed to establish a current baseline of data to which he could compare the expected traffic volume of the proposed

redevelopment. The Petitioner did not offer as evidence any existing traffic count studies of the traffic shed to be affected by this project. Given that the existing shed already contains multiple "F" rated intersections, based upon and maintained at that status as a result of periodic examination by the County, "real" numbers were certainly available. Further, no additional traffic count studies were carried out on the Petitioner's behalf to produce "real" numbers or at least to focus, supplement or extend traffic count studies already available.

Instead, Petitioner's traffic expert created a structural definition on paper of what he opined to be the accurate description of the Petitioner's present facility. The resulting description was then fit into the ITE land use categories to which the ITE formulae and resulting numbers were applied. The ITE manual (and software programs utilized) are admittedly consisting of compilations and averages useful to a degree, especially in the absence of actual numbers. Unfortunately, even the ITE acknowledges that it is sometimes inapplicable and may not reflect actual use in a particular situation. Petitioner's own traffic expert even applied this caution in rationalizing his use of the "Osler building study" instead of the ITE numbers relative to the proposed medical office building facility.

Much testimony was heard from Mr. Guckert, Mr. King, Mr. Friedman and Mr. Fredkin regarding the issue of what ITE land use category to assign to the existing facility (including whether or not to utilize, in part, square footage vs. the number of tennis and other courts) for purposes of then "running the numbers" from the ITE materials. For more specific detail, the transcript may be consulted. Petitioner's expert agreed that, depending on the category assigned, the Petitioner's request would be denied. (Transcript 1-23-23 at 81).

The second prong of proof needed to satisfy the requirements of 1(b) requires the creation of a credible evaluation and estimate of the traffic expected to be generated if the Petitioner can

construct his new facility. The resulting estimate can then be compared to the baseline of existing traffic generation to determine if the requested new use will be less, or at least no worse, than that which already exists. To that end, Petitioner's traffic expert presented the results of a 10 year old study of the Osler Drive buildings instead of utilizing the ITE standards, for reasons he explained and I have already commented upon. He further based his opinion as to the future use and effect of the new project, including its all important issue of internal trips, or synergy, with other uses already at Greenspring Station, by speaking with the Petitioner property owner. (Transcript 1-23-12 at 49).

Petitioner's case is deficient in several ways. First, as to establishing the baseline of traffic use generation at the present time, Petitioner chose to construct and argue a methodology to arrive at the "identity" of the existing facility. He then applied that created identity to the ITE tables which the Petitioner himself did not utilize later due to its regional inaccuracy.

Why do so when real numbers already exist, trends can be identified, and if needed, supplemental real number use studies done? The present can be reasonably and objectively quantified and presented. Petitioner did not do so and that failure is fatal to any comparison required under subsection 1(b).

There are also difficulties as to the proof provided regarding the expected traffic effect of Petitioner's proposed project.

I grant that this second part of the comparison factors is admittedly speculative. I would point to the comment of the Department of Public Works, which notes not only the "non-traditional" trip generation rates, but the "suggestion" of strong synergy as a basic assumption of a no net increase result underlines the weakness of this portion of Petitioner's case. With all due respect, the Petitioner property owner is hardly an objective contributing source in crafting an expert opinion as to the future use and internal synergy, offering proof, which is essentially (with

apologies) "if you build it they will come." Nor do I think that the Osler buildings study, standing on its own, is sufficient to carry the day.

Even in a speculative situation such as this, a preponderance of evidence could be available and presented as to the future effect of the proposed project. Witnesses could include realtors, experts or consultants in medical marketing and administration, as well as economists. Moreover, a search could be made as to other like situations (to see what synergy can in reality exist). Finally, witnesses could have been presented from Johns Hopkins Hospital and other already existing medical practices in the Greenspring Station area to opine on the need and likelihood of the use and possible synergistic opportunities that Petitioner's proposed project would present. As a result, Petitioner's efforts to produce a credible estimation of the use and character of the proposed project fell far short of that necessary to sustain his position.

I find therefore, for the reasons above stated, that the Petitioner has failed to meet his burden under 4A02.4.G.1(a)(b).

Pursuant to the advertisement, posting of the property and public hearing on this Petition, and after considering the testimony and evidence offered by Petitioner, I find that Petitioner's special variance request should be denied.

THEREFORE, IT IS ORDERED, this 24th day of May, 2012 by this Administrative Law Judge that Petitioner's Variance request under Baltimore County Zoning Regulations ("B.C.Z.R.") Section 4A.02.4.G to permit the proposed non-industrial development/renovations where it has been determined that the capacity of the public facilities necessary to accommodate same is less than necessary, be and is hereby **DENIED**.

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

LAWRENCE M. STAHL
Managing Administrative Law Judge
for Baltimore County

IN RE: PETITION FOR SPECIAL VARIANCE NE side of Falls Road at intersection with Greenspring Valley Road 8th Election District 2nd Council District (10749, 10751, 10803, 10805 and 20089 Falls Rd) Foxleigh Enterprises, Inc. Petitioner	*	BEFORE THE BOARD OF APPEALS OF BALTIMORE COUNTY CASE NO. 12-060-SA

* * * * * * * * * * * * *

ORDER

This matter comes before this Board on appeal by the Petitioner, Foxleigh Enterprises, Inc. of the denial by Administrative Law Judge ("ALJ") of a Petition for Special Variance from the Basic Services Mapping Standards under Baltimore County Code ("BCC") §4A02.4.G. People's Counsel for Baltimore County filed a Motion to Dismiss this appeal for failure by the Petitioner to satisfy the prerequisite zoning and development law requirements. Protestants, Thomas F. Mullan, III and Mullan Greenspring, L.L.L.P., Mullan Pavilions, L.P. and Norman Wilder by their attorney Richard C. Burch, Esquire, and Mudd, Harrison & Burch, L.L.P. filed a Motion in Support of People's Counsel's Motion to Dismiss. Similarly, Protestants Valleys Planning Council and Falls Road Community Association by their attorney Michael R. McCann, Esquire, filed a Motion to join in and incorporate the Motion to Dismiss. In addition, Protestants, The Meadows of Greenspring Homeowners Association, Inc. and Michael Friedman, by their attorneys, K. Donald Proctor, Esquire and Proctor & McKee, P.A. joined in the Motion to Dismiss.

A hearing on the Motion was heard before this Board on June 6, 2013. A public deliberation was held on July 9, 2013.

The Petitioner is seeking a special variance from the transportation standards and maps in §4A02.4. Those standards are determined by the mathematic formulas set forth in §4A02.4.D.2.

The formulas are calculated by the vehicle-trip number generated by vehicles through the intersections surrounding the site where the development is located. In this case, there are three (3) intersections surrounding Greenspring Station. There is no dispute that each of these intersections is failing. At the hearing, Petitioner conceded that regardless of any other relief which may or may not be required for the proposed renovation and redevelopment, this traffic variance is needed. Petitioner points out that there is no provision in Article 4A which prohibits the Petitioner from requesting this traffic variance at this stage. Petitioner believes that its concept plan is sufficient to satisfy the elements in §4A02.4.G.

The positions of the Parties are set forth in their respective Motions, Memorandums and Responses. The hearing before this Board on the Petition for Special Variance is a *de novo* appeal. Petitioner contends that it has a right to appeal the denial by the ALJ and that this Board is without jurisdiction to dismiss the case on the merits.

People's Counsel requests that this Board dismiss the case on the merits because the current zoning on the property prohibits the Petitioner from constructing the proposed renovation and redevelopment. Collectively, the Protestants contend that the Petition for Special Variance can only be considered after the Petitioner has a final development plan and has requested special exception relief.

To make a decision on the merits under §4A02.4.G, this Board must first make a finding, based on the evidence, that the Petition for Special Variance does not violate, or is consistent with, the purpose and intent of the Growth Management, Basic Services Map set forth in §4A02.1. That Subsection requires a determination as to what "*...development would be permitted* under the regulations of the zones or commercial districts within which those areas lie." (Emphasis Added). It also reads that the purpose and intent of the Basic Services Map is to "regulate nonindustrial

development in those under-served areas....." *Id.* (Emphasis Added).

More specifically, the intent of the transportation standards and maps under §4A02.4.D is to "regulate...development where it has been determined that the capacity of certain intersections is less than the capacity that is necessary to accommodate traffic from both '***established uses***' and '***from uses likely to be built***...' ". The intent of the transportation standards and maps is not to restrict the 'development' unless there is a **'substantial probability'** that the intersections are failing (i.e. have an E or F rating). §4A02.4.D.1.

Second, §4A02.4.G.a requires this Board to make a "finding" that the "*demand or impact of the development proposed* will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the *development proposal*..." (Emphasis Added). Again, the district standards are determined by the formulas in §4A02.4.D.2 which formulas calculate vehicle trip numbers. Subsection D.3 indicates that the 'maximum level of development' cannot exceed that which would generate the number of daily peak-hour vehicle trips equal to the reserve capacity for the mapped area.

Finally, we note the language in §4A02.4.E reveals that, where a subdivision plan has been finally approved, or an application for building permit has been made, the mapping standards for water, sewer and transportation do not apply to developments in certain districts.

Given that the purpose of Article 4A is to "*regulate development*" so that the level of additional development in a mapped area does not exceed that which would generate the number of daily peak-hour vehicle trips equal to the reserve capacity of that mapped area, then fundamental to a decision on the merits before this Board must be review of a final development plan showing concretely what project is being proposed at Greenspring Station. We interpret the language contained throughout Article 4A (i.e. "*development would be permitted*"; "*.... uses likely to be*

built..."; making a "finding" that the "*demand or impact of the development proposed will be less than that assumed by the district standard*") as requiring a final development plan under BCC Article 32, Title 4, Subtitle 2 before this Board can conduct a hearing on the Special Variance.

Practically speaking, this Board would not be able to make an informed decision about the daily peak-hour vehicle trips without a final development plan. The request for a traffic variance is specific to this site - with these failing intersections - and with the increase or decrease in traffic volume which may result from the renovation and development proposed.

Said another way, under §4A02.4.D, the traffic generated by the current uses and the traffic generated by the proposed development (whether renovation or the creation of new space) is dictated by the specific development proposal and cannot be decided based on a concept plan. The concept plan is filed with the County prior to a community input meeting and is not decided by an ALJ. However, a final development plan would be reviewed by the ALJ.

We find that completion by the Petitioner of the development review process under BCC §32-4-211 *et seq.* and §32-4-221 *et seq.* is critical to obtaining a complete understanding of the project. As those Sections dictate, the development review process begins with the concept plan, and is followed by community input meeting(s); meeting(s) with County agencies; making changes to the plan(s) if needed; filing a development plan; attending development plan conference(s); concluding a hearing before the ALJ on development plan approval and if necessary, appealing the ALJ's decision to this Board, if needed.

We find that our interpretation is consistent with the exceptions to the basic services mapping standards found in §4A02.4.E. It is also consistent with BCC § 32-4-201 which provides that unless the development meets the exemptions §§ 32-4-105, 32-4-106, and 32-4-107, an approved Development Plan is required for any "development." BCC §32-4-101(p)

defines Development as:

(1) The improvement of property for any purpose involving building;

(2) The subdivision of property;

(3) The combination of any two or more lots, tracts, or parcels of property for any purpose;

(4) Subjecting property to the provisions of the Maryland Condominium Act; or

(5) The preparation of land for any of the purposes listed in this subsection.

Based on the Petitioner's representations contained in their Response to the Motion to Dismiss, even a vague understanding of the project being proposed would meet the definition of "development".

Notwithstanding that this Board has authority under Rule 3.b.I of the Rules of Practice and Procedure of County Board of Appeals (the "Board Rules") to dismiss an appeal prior to the conclusion of the hearing on the merits and, while the Chairman also has authority under Rule 4.b to rule on procedural matters such as Motions to Dismiss, we do not see that a dismissal on merits is appropriate at this stage.

For the reasons set forth herein, we will stay the Petition for Special Variance until the Petitioner has completed all necessary development review by the County and has a final development plan approved, or will simultaneously request this Board to review the final development plan after an ALJ opinion approving or denying the plan has been rendered. In the interest of judicial economy, the case will also be stayed pending all other county approvals which may be needed including, by way of example and not by limitation, all requests for zoning relief such as a request for special exception or other variance relief which may be required, if at all. The Board will then consolidate the Petition for Special Variance with the final development plan

approval (if any) and all other zoning relief (if any) and conducted a single hearing on the proposed project.

ORDER

Upon consideration of Petition for Special Variance and the Motion to Dismiss, it is this 31st day of July, 2013, by the Board of Appeals of Baltimore County

ORDERED, that the Motion to Dismiss is hereby **DENIED** but the case shall be **STAYED** until such time as the Petitioner has a final development plan approved, or one that this Board can approve, and has filed for all other zoning relief and approvals, if any, which are necessary for consideration by this Board of the development issues pertaining to all renovation, redevelopment and/or expansion at Greenspring Station in order that this Board shall conduct a single hearing on all the requested relief; and it is further,

ORDERED, that a final Opinion will be issued by this Board after a hearing on the merits and a public deliberation, with no further action to be taken on this Ruling until such time as the Board's final decision is issued.

IN THE MATTER OF THE THE PETITION OF FOXLEIGH ENTERPRISES – LEGAL OWNER FOR A VARIANCE ON PROPERTY LOCATED AT 10749, 10751, 10803, 10805 AND 20089 FALLS ROAD	*	BEFORE THE BOARD OF APPEALS OF BALTIMORE COUNTY
8th ELECTION DISTRICT 2nd COUNCILMANIC DISTRICT	*	CASE NO. 12-060-SA

* * * * * * *

ORDER ON PETITIONER'S MOTION FOR RECONSIDERATION

This matter comes before the Board on a Motion for Reconsideration filed by Petitioner, Foxleigh Enterprises, Inc. of this Board's Order denying the Motion to Dismiss filed by People's Counsel but staying the case until such time as the Petitioner has a final development plan approved or one that this Board can approve, and has filed for all zoning relief and approvals, if any, which are necessary for consideration by this Board of the development issues pertaining to all renovation, redevelopment and/or expansion at Greenspring Station in order that this Board shall conduct a single hearing on all the requested relief.

The Petitioners were represented by Priscilla K. Carroll, Esquire, Matthew G. Hjortsberg, Esquire, Vincent Guida, Esquire and Bowie and Jenson, LLC. People's Counsel, Peter Max Zimmerman, Esquire, filed a Reply on Motion for Reconsideration on September 11, 2013. Protestants, by and through their respective counsel namely, The Meadows of Greenspring Homeowners Association, Inc. and Michael Friedman, by K. Donald Proctor, Esquire and Proctor & McKee, P.A.; Valleys Planning Council and Falls Road Community Association by their attorney Michael R. McCann, Esquire; and Thomas F. Mullan, III and Mullan Greenspring, L.L.L.P., Mullan Pavilions, L.P. and Norman Wilder by their attorney, Richard C. Burch, Esquire

and Mudd, Harrison & Burch, L.L.P. filed a joint Opposition to the Motion for Reconsideration on September 30, 2013 The Board convened for a public deliberation on October 17, 2013.

In considering a Motion for Reconsideration, this Board has previously ruled that a Motion should only be necessary when there has been substantive new case law or enactment of a statute not previously available, which would clearly merit a modification of a Board's previous decision. In this case, there has not been any new substantive case law or the enactment of any new statutes in regard to the issues in this case. The Order which is the subject of the instant Motion to Reconsider is a procedural ruling to permit the Petitioner time to obtain the necessary final development plan.

Upon review of the Petitioner's issues raised in their Motion to Reconsider:

1 . The Board does not have the statutory authority to "stay" a case pending before the Board.

The Chairman of the Board, subject to the agreement of a majority of the Board, has the statutory authority under Rule 4b of the Rules of Practice and Procedure of County Board of Appeals (the "Board Rules") to rule on procedural matters such as Motions to Dismiss as follows:

> Rule 4.
>
> * * * *
>
> b. The chairman shall regulate the course of the hearing and shall rule upon procedural matters, applications, modifications and objections made during the course of the hearing, subject to the concurrence of a majority of the board conducting the hearing.
>
> c. A hearing may be adjourned from time to time for good cause shown and if the time and place of reconvening the hearing is announced at adjournment, no further notice of reconvening shall be required. If the time and place of reconvening is not announced at the adjournment, notice of time and place of reconvening shall be given as required in rule 2a.

Accordingly, this Board has the authority by its own rules to stay a case and/or adjourn a hearing. When the Petitioner obtains its final approved development plan, or one which this Board can approve, a hearing on the merits will be promptly scheduled in accordance with Rule 2a, with proper notice to all parties, in order that an informed decision on the Petition for Special Variance request can be made.

2. The Board's Order pronounces a substantive ruling on the merits without permitting the Petitioner the opportunity for a hearing.

Petitioner argues that, because Administrative Law Judge Stahl in his decision ruled that there was no provision in the county regulations which prohibited the Petitioner from requesting a special variance at this time, the Board's Order, in effect ruled on the merits without a hearing. Given that this is a *de novo* appeal, the decision of the Administrative Law Judge has no effect on the case before this Board. Moreover, the Board's Order made clear that the Board was not making a ruling on the merits and that a hearing would be held: "a final Opinion will be issued by this Board after a hearing on the merits and a public deliberation, with no further action to be taken on this Ruling until such time as the Board's final decision is issued."

3. The Renovation of the Green Spring Racquet Club is not subject to the Special Variance request under Baltimore County Zoning Regulations §4A02.4 and therefore this Board should exclude the Renovation from the Order.

Petitioners next assert that the Board erred in staying the Renovation of the Greenspring Racquet Club ("GCRC") pending the development plan approval because the renovation does not meet the definition of "development" under Baltimore County Code ("BCC") §32-4-101(p). In short, the Petitioner now argues in its Motion to Reconsider that the Renovation of the GSRC does not need a special traffic variance and is not subject to Baltimore County Zoning Regulations ("BCZR"), §4A02.4.

In reviewing the Petitioner's Opposition to People's Counsel's Motion to Dismiss (the "Petitioner's Opposition"), the Petitioner described the relief requested as follows:

> Foxleigh requests Special Variance relief from Section 4A02 of the BCZR to permit certain proposed nonindustrial commercial renovations and redevelopment ("Proposed Reduction, Renovation and Redevelopment"). The proposed Reduction, Renovation and Redevelopment comprise the redevelopment of the north façade of the existing Falls/Joppa Concourse including the addition of 5,000 square feet of commercial; and renovation of the existing GSRC by removing certain sections of the improvements and renovating the remaining portion of the building, all within the existing footprint.

The Petitioner's Opposition further explained why the "Proposed Reduction, Renovation and Redevelopment" (as they defined that term) was subject to the Basic Mapping Standards contained in BCZR, §4A02.4 and why Special Variance relief was needed:

> The Proposed Reduction, Renovation and Redevelopment was located in the vicinity of one failing traffic intersection and within an area designated as "Level of Service-F" according to the 2012 Basic Services Transportation Map and are therefore subject to the limitations set by the Basic Service Mapping Standards under Section 4A02.4 of the BCZR. Pursuant to Section 4A.02.4.G of the BCZR, Foxleigh requests relief from these regulations by Special Variance.....

Thus, the acknowledgement in the Petitioner's Opposition that because the Renovation is subject to BCZR, §4A02.4, a special variance is needed for not only the Redevelopment and Expansion but also for the Renovation, convinced this Board that a final development plan would need to be reviewed and is required under BCZR, §4A.02.4.G before this Board could make an informed decision on merits.

In addition, the Board notes that the Petition for Special Variance filed by the Petitioner with Baltimore County Permits, Approvals and Inspections verifies that the addresses listed

thereon include the Racquet Club lot. Further, in the Petition, the Petitioner described the special variance relief to include the Renovation:

> The Petition shall be filed with the Department of Permits and Development Management. The undersigned, legal owner(s) of the property situate in Baltimore County and which is described in the description and plat attached hereto and made a part hereof, hereby petition for a Special Variance from Section(s)
>
> 1. 4A.02.4 to permit the proposed nonindustrial development/renovations where it has been determined that the capacity of the public facilities necessary to accommodate same is less than necessary, pursuant to Section 4A.02.4.G; and
>
> * * * *

As a result, the Petitioner's current argument in the Motion for Reconsideration is contrary to the Petitioner's Opposition and their Petition for Special Variance.

4. The Board's Order prohibits all property owners in Greenspring Station from making any renovations even if those properties were not part of this case.

Finally, the Petitioner asserts that the Board's Order is overly broad and all-encompassing as it prohibits the renovation or development of other properties in Greenspring Station.

The Board finds no merit in this argument. The Board's Order is filed and only applies to the above captioned case number, which is the same case number referenced by the Administrative Law Judge before the case was appealed. This case refers only to the "Proposed Reduction, Renovation and Redevelopment" requested by the Petitioner in its Petition for Special Variance for the property owned by the Petitioner, as identified by the property addresses and deed references listed by the Petitioner thereon, along with any property description and plats attached by the Petitioner. Consequently, the Board is not convinced that its Order was

overly broad or that it applies to any property not listed by the Petitioner and not part of the Petitioner's Special Variance request.

Accordingly, having reviewed all of the Petitioner's arguments on the Motion for Reconsideration and the Oppositions filed by People's Counsel and the Protestants, the Board's Order dated July 31, 2013, staying the case until the Petitioner has met the necessary prerequisites as set forth therein shall remain the same.

IT IS THEREFORE ORDERED THIS 1st day of November, 2013 that the Petitioner's Motion for Reconsideration be, and it is hereby, **DENIED**; and it is further,

ORDERED, that a final Opinion will be issued by this Board after a hearing on the merits and a public deliberation, with no further action to be taken on this Order until such time as the Board's final decision is issued.

BOARD OF APPEALS
OF BALTIMORE COUNTY

Andrew M. Belt, Chairman

Maureen E. Murphy

David L. Thurston

PETITION OF FOXLEIGH ENTERPRISES, LLC	:	IN THE
	:	CIRCUIT COURT
FOR JUDICIAL REVIEW OF THE DECISION OF THE BOARD OF APPEALS OF BALTIMORE COUNTY	:	FOR
	:	BALTIMORE COUNTY
IN THE MATTER OF FOXLEIGH ENTERPRISES, LLC Case No: 12-060-SA	:	CASE NO. 03-C-13-013521

: : : : : : : : : : : : : : : : :

ORDER AFFIRMING BOARD OF APPEALS' ORDERS OF JULY 31, 2013 AND NOVEMBER 1, 2013

The Petition for Judicial Review filed by Foxleigh Enterprises LLC (Paper 1000) came on for oral argument before the undersigned on April 25, 2014. In its Petition, Foxleigh asks this Court to vacate Board of Appeals' orders which stayed proceedings on Foxleigh's Petition for Special Variance, under the following terms:

> "until such time as [Foxleigh] has a final development plan approved, or one that [the Board of Appeals] can approve, and has filed for all other zoning relief and approvals, if any, which are necessary for consideration by [the] Board of the development issues pertaining to all renovation, redevelopment and/or expansion at Greenspring Station in order that [the] Board shall conduct a single hearing on all the requested relief."

Foxleigh refers to this stay of proceedings as "indefinite", and argues that the Board of Appeals lacked statutory authority to enter the orders. It argues that the stay order, in reality, constituted a substantive ruling on the findings of the administrative law judge, which precludes forward motion on the development, and finally, that the Board decisions improperly exceed the scope of the issues presented on appeal.

Also parties to this Circuit Court proceeding are: People's Counsel for Baltimore County, and persons and entities who were designated "Protestants" below: The Meadows of Greenspring Homeowners Association, Inc. and Michael Friedman; Thomas F. Mullan, III and Mullan Greenspring L.L.L.P, Mullan Pavilians, L.P. and Norman Wilder; and the Valleys Planning Counsel and Falls Road Community Associaiton. These parties take the common position (amongst others), that the decision to stay proceedings by the Board was within the ambit of the Board's statutory authority, and was, under these circumstances, a logical and sensible decision designed to "require satisfaction of zoning/development prerequisites" before being taken up by the Board in a final proceeding, if necessary. People's Counsel Memorandum, p. 18.

This Court agrees and will AFFIRM the Board of Appeals' Orders of July 31, 2013 and November 1, 2013; DISMISS the Petition for Judicial Review; and REMAND the

matter to the Board of Appeals pending compliance with the terms of those Orders by Foxleigh Enterprises LLC.

The Court is satisfied that the Maryland Code, the County Charter and the Board of Appeals' Rules of Practice and Procedure authorize a stay under the circumstances presented here and it is plain generally that a stay of proceedings is permissible in administrative actions for "adjudicative economy". Powell v. Breslin, 430 Md. 52 (2013).

That said, it is also manifestly clear that the Board of Appeals' decisions were not final under our administrative law jurisprudence, articulated in Dorsey v. Bethel AME 375 Md 59 (2003), because these orders did not "leave nothing further for the agency to do". AFCO Credit Corp. v. Md. Ins. Admin. 198 Md App 218 (2011) does not compel a contrary conclusion because there, the stay was not conditioned upon action by the party seeking judicial review, as is the case here. There, the Court of Special Appeals determined that an administrative stay was improper because it was to expire only upon resolution of a related, but collateral proceeding and because, on the facts presented the stay was actually the equivalent of an appealable denial of relief. All Foxleigh Enterprises, Inc. need do here is prosecute approval of a final

development plan (even one that "this board can approve"), and file "for all other zoning relief and approvals . . . which are necessary for consideration by this Board of the development issues . . . "and the stay will, by its own terms, evaporate. The stay is not indefinite, nor is it appealable by way of a Petition for Judicial Review.

For these reasons, the orders of the Board of Appeals are AFFIRMED; the petition for judicial review is DENIED and the matter is REMANDED to the Board of Appeals, which is to lift the stay upon compliance, by Foxleigh Enterprises LLC, with the conditions set forth in the July 31, 2013 ORDER.

It is so ORDERED, this 30th day of April, 2014, by the Circuit Court for ~~Baltimore County~~.

ROBERT E. CAHILL, JR., JUDGE

IN RE: **DEVELOPMENT PLAN HEARING** 9th Election District 2nd Council District (6241 - 6247 Falls Road)	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS
CPC FALLS ROAD PROJECT **BLUESTEM** CPC Falls Road LLC, Owner Developer	*	FOR BALTIMORE COUNTY **CASE NO. 09-0861**

* * * * * * *

ADMINISTRATIVE LAW JUDGE'S ("ALJ")
DEVELOPMENT PLAN OPINION AND ORDER

This matter comes before the Office of Administrative Hearings ("OAH") for Baltimore County for a public hearing on a development proposal submitted in accordance with Article 32, Title 4, of the Baltimore County Code ("BCC"). CPC Falls Road LLC, *Owner/Developer*, (herein known as "Developer") submitted an eight (8) sheet redlined Development Plan ("Plan") prepared by Morris & Ritchie Associates, Inc., known as "CPC Falls Road Project / Bluestem."

The Developer proposes a mixed-use commercial and residential development with approximately 56,600 sq. ft. of restaurant/retail and office in several buildings and on the ground level of a multi-family residential building with 152 apartment units on 6.19 acres, more or less, of land zoned BM-CCC. The property is located in the Bare Hills section of Ruxton/Riderwood/Lake Roland area of Baltimore County, and is inside the Urban Rural Demarcation Line ("URDL"). A connection is proposed into the existing trail system of Lake Roland Park, and park visitors will be permitted to use the off-street parking provided for the project. In its current state, the site is developed with a mix of commercial uses along Falls Road and a large portion of the back half of the property is the mulch operation and storage yard for Hollins Organic Products.

This project is within the Ruxton-Riderwood-Lake Roland residential design area. Pursuant to BCC § 32-4-204, projects within design review areas must be reviewed by the Design Review Panel ("DRP"). The DPR reviewed this project on August 8, 2018, and final DRP approval was granted on September 12, 2018.

A Development Plan Conference ("DPC") was held between the Developer's consultants and various Baltimore County agencies, to consider the project. In this case, the DPC was held on November 21, 2018. At the DPC, the Baltimore County agencies responsible for the review of the Development Plan submit written comments regarding the proposed development. The Hearing Officer's Hearing ("HOH") was scheduled for Friday, January 25, 2019, at 10:00 AM, in Room 205 of the Jefferson Building, 105 West Chesapeake Avenue, Towson, Maryland. Additional hearings were held on several days spanning the next six months.

The property was posted with the Notice of Hearing on December 20, 2018 for 20 working days prior to the hearing, in order to inform all interested citizens of the date and location of the hearing. Appearing at the public hearings on behalf of the Developer was Len Weinberg and Joshua T. Sharon, professional engineer with Morris & Ritchie Associates, Inc., the engineering firm that prepared the Plan. Lawrence E. Schmidt, Esq. and David K. Gildea, Esq. with Smith, Gildea & Schmidt, LLC, appeared on behalf of the Developer. In attendance at the hearing and opposing the project were Michael R. McCann, Esq. representing several members of the community, Dino C. La Fiandra, Esq. representing Princeton Sports, Inc. and Lucile Real Estate LLC, and Robert Smith, Esq. representing the Rockland Ridge Homeowner's Assn.

Representatives of the various Baltimore County agencies who reviewed the Plan attended the hearing, including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Jerry S. Chen, Project Manager; Jos Venturina and Jim Hermann, Department of Public Works ("DPW")/Development Plans Review ("DPR"); Gary Hucik, Office of Zoning

Review ("OZR"), and Brad Knatz, Real Estate Compliance. Also appearing on behalf of the County were Jenifer G. Nugent, Department of Planning ("DOP"), and Jeff Livingston with the Department of Environmental Protection and Sustainability ("DEPS").

Agency Witnesses

All agency witnesses indicated the redlined Development Plan satisfied all Baltimore County rules and regulations and each reviewer recommended approval of the Plan. DEPS approved a concept stormwater management plan on October 25, 2018. A schematic landscape plan was approved on December 6, 2018 and Mr. Hermann stated the Developer will provide amenity open space and private/public amenities which pursuant to the BCC are considered offsets to Local Open Space ("LOS") requirements. He testified the Developer will provide certain on and off-site amenities and improvements which will more than offset a fee in the approximate amount of $352,000 which would otherwise be payable to the County in lieu of providing the open space.

According to the School Impact Analysis (Baltimore County Exhibit 1) enrollment at the West Towson Elementary School and Towson High School is projected to exceed 115% of State Rated Capacity ("SRC"). Even so, Ms. Nugent testified there is sufficient capacity at Riderwood Elementary School and Loch Raven High School, and thus that agency opined the Adequate Public Facilities Ordinance ("APFO") is satisfied. On the third day of the hearing (April 5, 2019) Developer submitted a revised school analysis (Developer's Exhibit 17) which used enrollment numbers for the 2017-18 school year, as requested by the DOP. Developer's counsel indicated 2016 enrollment figures were used initially, which was erroneous.

Developer's Case

The first witness in Developer's case was Len Weinberg, a principal in the entity owner of the property. Mr. Weinberg explained he started in 1987 a real estate development company known as Vanguard. The witness testified his firm primarily focuses on retail projects, and that he has constructed approximately 40-50 such projects in this area. Mr. Weinberg described the site and current uses, and explained the project is best described as a mixed-use "village." He also described the process by which the Developer entered into a declaration and covenant agreement with Ruxton Riderwood Lake Roland Area Improvement Association ("RRLRAIA"). Developer's Exhibit 3.

In response to questions on cross examination, the witness indicated he was aware of community opposition to the project, which primarily focused upon the number of apartments proposed. Mr. Weinberg testified his firm attempted to purchase the adjacent property owned by Princeton Sports and was also aware the proposed stormwater management system outfall was located on property owned by Baltimore City.

The next witness in Developer's case was Lawrence Rief, a partner in Continental Realty. Mr. Rief testified his office is located across the street from the site and that he and his employer "wholeheartedly" support the project. He explained the proposed restaurants and retail/service establishments are sorely needed in the area.

Professional engineer Josh Sharon was the next witness. Mr. Sharon, who was accepted as an expert, described the site and existing features and uses thereon. He reviewed the development plan, and explained the significant features (including redline revisions) on each page of the 8-sheet plan. Mr. Sharon testified the site is not within a deficient service area as shown on the County's Basic Services Maps, and he explained the proposed access to the

project from Falls Road, which would involve aligning the proposed access road with Clarkview Road, which is controlled by a traffic signal.

On cross examination, the witness was questioned about (among other things) off-street parking and amenity open space/LOS. Mr. Sharon testified that other than the upper level(s) of the parking structure which would be reserved (with gated access) for residents, there will be no reserved parking at the project. He explained the public will be permitted to park on the property to access Lake Roland, and he stated he had not analyzed how many spaces would be used on a regular basis by the general public. Mr. Sharon advised the open space exhibit (Developer's Exhibit 2) had been approved by the OZR but not by the County's landscape architect.

Mr. Sharon responded to several questions concerning the LOS requirements, and he opined it was not feasible for the Developer to provide the requisite open space on the subject property given the various site and environmental constrains as shown on the Plan. The witness testified Developer will be constructing both public and private amenities (on-site and off-site), the "verified" cost of which can be deducted from the fee required under the LOS regulations. Mr. Sharon explained the costs shown on the Plan are industry estimates, and that in the construction phase (*i.e.,* Phase II) of the project Baltimore County would analyze and verify expenses submitted by Developer in connection with the construction of the proposed amenities.

James Hermann, the Baltimore County landscape architect, was again called as a witness on the third day of the hearing, to discuss a redline amendment (Developer's Exhibit 13) to the Open Space exhibit (Protestant's Exhibit 1) submitted previously. Mr. Hermann testified the revised open space calculations (submitted in response to comments from the OZR) shown on

the revised plan are in compliance with all Baltimore County requirements. In the revised exhibit Developer did not include as amenity open space the portion of land on the bottom of the stormwater management features and the security or fee in lieu (pending offsets for on-site and off-site improvements) amount was increased to $371,811.30. Mr. Hermann also explained additional detail was added to the plan (Developer's Exhibit 13) to categorize how the funds would be used by the Lake Roland Nature Council. In response to questions on cross-examination, the witness stated "verification" on the cost of improvements would come "down the road" after the amenities are constructed.

Dean Hoover, a land planner with over 30 years of experience, was the final witness in Developer's case in chief. Mr. Hoover, who was accepted as an expert, first noted the property's BM-CCC zoning classification is one of the most intense zones in the BCZR. He next described in detail the recent changes to the County's open space law, as found in Bill 73-16. Developer's Exhibit 16. He testified the new law provides an incentive for the Developer to provide amenities instead of unimproved "open space." Mr. Hoover explained the Developer wants to take advantage of its proximity to the 500 acre Lake Roland Park rather than providing open space on this small development site.

In response to questions on cross-examination, he conceded Developer has not obtained approval from Baltimore City to complete any of the off-site improvements shown on that plan. He was asked several questions concerning the feasibility of providing on-site open space and opined that such an analysis is not required in this case since Developer is not paying to Baltimore County a "fee-in-lieu."

Community Concerns

Several neighbors who reside in the community expressed concern with the size and scale of the project. In addition, community members are concerned the project would cause existing traffic conditions to become even more congested as well as the potential impact upon water and sewer resources.

Peter Wiedmann, a volunteer at Lake Roland, described a "balloon test" he performed which he believes shows the project will be visible from the serpentine meadow area of the park. Other residents described the "beautiful trail system" at Lake Roland and feared this project would have a detrimental impact upon the peaceful and bucolic setting. Several neighbors testified traffic along Falls Road in this area is a "disaster" and they feel this project will only exacerbate that problem. Members of the community allege the RRLRAIA is working "behind the scenes with the developer" to secure project approval. Others argue that while the proposal might satisfy some minimal standard, it is poorly designed and is in essence a "glorified parking lot."

Paul Davis is one of the owners of Princeton Sports ("Princeton"), a family-run sporting goods business that started in 1936. Mr. Davis testified that Princeton opened its Falls Road location 50 years ago, and that the Plan proposed by the Developer would "cut off their access to the store." Mr. Davis testified that his customers would need to use the intersection at Racquet Road for ingress and egress, which he believes is unsafe. The witness testified that the proposed means of access would have a detrimental impact upon the business, and that Princeton wants to have continued access to the traffic signal. In response to a question on cross-examination, Mr. Davis indicated that he did not believe Princeton had any specific authorization in its deed to access the Developer's property.

The next witness was Larry Green, a professional engineer accepted as an expert. Mr. Green testified that he is a traffic engineer, and has over 33 years of experience. He performed a traffic study for Princeton and determined that 58% of their customers use the northern driveway, while 42% use Racquet Road for ingress and egress. Mr. Green also testified that 75% of Princeton's customers traveling southbound on Falls Road turn left into the aforementioned driveway, while 25% use Racquet Road. In concluding his testimony, Mr. Green opined that the proposed Plan creates an adverse impact upon Princeton, since traffic would be diverted to Racquet Road which has substandard and unsafe sight distances.

In response to cross-examination questions, Mr. Green stated that he visited the site 4 or 5 times, and agrees that there is a grade differential between the Princeton store and the Bluestem property. The witness also conceded that the current alignment of the Princeton driveway does not comply with State Highway Administration ("SHA") standards. Finally, the witness stated that the Developer could provide access to Clarkview Road extended, but he noted that he had not performed any analysis or investigation of that issue in any detail.

Jane Huth was the next witness in the Protestants' case, and she explained that she lives off of Lake Avenue approximately 2 miles from the site. Ms. Huth stated that her children attend Towson High School, which she stated was presently at 129% of SRC, and has 10 or more portable classrooms to accommodate the overcrowding. The witness also presented documents obtained from the Baltimore County Public Schools which show that the enrollment at Towson High School is anticipated to rise steadily in the next few years to more than 150% of SRC.

Al Barry, a former Assistant Planning Director for Baltimore City with over 30 years of experience, was accepted as an expert in planning and zoning. Mr. Barry testified he in collaboration with community members and other stakeholders prepared the Ruxton-

Riderwood/Lake Roland Community Plan ("RRLRCP") adopted by the County Council in 2011. Mr. Barry explained that Lake Roland Park was a crucial aspect of the Plan, and that one of the important features the community desired was to connect the east and west side of Falls Road to the park.

Mr. Barry explained that the west side of Falls Road in this vicinity was earmarked for more intense development while the east side was specified in the community plan to have low (2 to 3 story) scale buildings, other historic structures, and access to Lake Roland Park. In this regard, the witness explained that the Hollins Organic Company located at the rear of the CPC Falls Road site had already moved the bulk of its operations to Cockeysville, and the community was concerned with the ultimate disposition of this parcel. Mr. Barry testified that he reviewed the development plan and believes that the density, height of structures, lack of open space and the lack of access to Lake Roland Park are all prominent features which are at odds with the RRLRCP. The witness stated that the site has no designated parking spaces for park users, and that the green space at the site should be adjacent to the park, rather than in small parcels spread throughout the entire site.

On cross-examination, the witness stated he is not familiar with Baltimore County Master Plan 2020 ("MP 2020"), and did not review or study that document prior to his testimony. Mr. Barry also conceded that he did not know the current zoning of the property, although he was aware that it was rezoned in or about 2016 after adoption of the RRLRCP.

Barbara Hopkins, the Director of Baltimore County NeighborSpace, was the next witness in the Protestants' case. Ms. Hopkins explained that NeighborSpace is designed to improve the livability of communities inside the URDL. She stated she was familiar with the open space regulations, and believes it is accurate to say there is an open space "crisis" in Baltimore County.

Ms. Hopkins explained she is intimately familiar with and was involved in the revision of BCC Section 32-6-108 concerning open space requirements.

In connection with this case, Ms. Hopkins believed the Developer simply disregarded the "feasibility" of providing open space before it focused upon the fee which would be required for a waiver. She advised that a developer must first demonstrate that it is unfeasible to provide open space on site or off site, pursuant to BCC § 32-6-108(f)(1), before being approved for a fee-in-lieu waiver.

In response to questions on cross-examination, Ms. Hopkins stated that under the new law open space for this project could be provided anywhere within the 2nd council district. She also testified that the new open space law does not focus on any given project; rather, she believes the law requires the Developer and Baltimore County to consider the needs of the entire council district in question. Ms. Hopkins also expressed frustration that even though the local open space law was revised substantially in 2016, the Local Open Space Manual has not been updated, which means neither developers nor the community have guidance concerning the interpretation and application of these regulations.

Mark Behrens is the President of the Rockland Ridge Homeowners Association, a community with 75 single family homes. Mr. Behrens testified he is an architect and civil engineer, and he expressed concern with the following issues: traffic, water pressure, adequacy of the sewer system and potential overcrowding of Lake Roland Park. He also advised that although his community is within its boundaries, he does not think that the RRLRAIA represented their interests in connection with the covenant agreement that association entered into with the Developer.

Robert Smith, an attorney, is also a board member of the Rockland Ridge Homeowners Association, and he also expressed significant concerns with the project. Mr. Smith criticized the traffic study presented by the Developer, which he stated does not consider the impact of I-83, which when congested, funnels traffic onto Falls Road in both directions. The witness also stated that parking at the proposed project is deficient, since the Developer cannot have adequate parking for Lake Roland Park users and also comply with the requirements of BCZR Section 409. Mr. Smith also expressed concern with the visibility of the project from the serpentine barrens, a unique environmental feature near the site which may also contain asbestos according to research papers presented by the witness.

Daniel O'Leary, a professional engineer accepted as an expert, was the next witness in the Protestants' case. Mr. O'Leary explained that he reviewed the stormwater management plan for the project, and determined that the proposed outfall (as shown on sheet 4 of the Plan), was located on property owned by Baltimore City ("City"). Mr. O'Leary opined that this was unacceptable, and that the project might need to be significantly revised if the City at a later date refuses to approve the proposed stormwater outfall. Mr. O'Leary testified that as an alternative the stormwater could be directed "uphill" to Falls Road, although in response to a question on cross-examination the witness conceded that this would be a difficult engineering task given the 25 ft. grade differential between the site and Falls Road. In conclusion, Mr. O'Leary opined that a stormwater outfall should be established early on at the conceptual phase of a development project, and that the Developer's Plan "hinges on getting approval from someone else" for the proposed outfall on City property.

The next witness in the Protestants' case was Randy Grachek, an environmental engineer employed by NewFields, Inc. Mr. Grachek described his extensive background as a civil engineer

and explained that his work focuses upon designing and evaluating large sewer projects. Mr. Grachek explained that he visited the Lake Roland site and reviewed certain documents, primarily the many reports prepared by Rummel, Klepper & Kahl, LLP ("RK&K"), the contractor engaged by Baltimore County to comply with the reporting mandates of the 2010 Consent Decree with the Environmental Protection Agency ("EPA").

Based on his review of those documents, the witness stated the property is in a "red zone," and that in his professional opinion it was not acceptable to add any more sewage to the system, since it is over capacity at the present time. Mr. Grachek testified that the Lake Roland interceptor was installed in the 1950's, and is antiquated and unique, especially since it runs completely under Lake Roland. The witness noted that records submitted to the EPA indicate there are 541 defects detected in the Lake Roland interceptor sewer line, which he explained was a far greater number than in sewers at other segments throughout the county.

In response to cross examination questions, Mr. Grachek conceded that he did not know if the subject property was connected to a public sewer at the present time, and does not know how much sewage is being produced by the current users on site. Mr. Grachek also stated that he has not prepared any calculations concerning the expected sewage demand to be created by the proposed project, but he stated that in his opinion it would generate more sewage than the current industrial activity. He also testified that in preparing for his testimony he relied significantly on the RK&K reports, and did not conduct any independent analysis of the present or proposed conditions of the sewer system. In addition, Mr. Grachek testified he does not believe the improvements recommended by RK&K have been completed.

Beth Miller, a registered architect, was the next witness in the Protestants' case. Ms. Miller is a volunteer with the Green Towson Alliance, and she explained that she monitors new

development proposals in Baltimore County and advocates for environmental issues. With respect to this case, Ms. Miller testified she compiled a list of projects which will drain to the Jones Falls sewer shed, and she prepared a chart (Protestants' Exhibit 66) showing the total number of units constructed since 2012.

Jeffrey Budnitz is a volunteer with Lake Roland Nature Council, and he described his significant involvement with the Lake Roland property, including the process by which Baltimore County assumed responsibility from Baltimore City for the maintenance and administration of the park. Mr. Budnitz testified that he repeatedly attempted to have Baltimore County acquire the Hollins Organic property, and also explained to neighbors opposing the project that they should endeavor to purchase the site so that it would not be developed. At the same time, Mr. Budnitz stressed that the subject property is not a "virgin site," and that impervious surface covers nearly the entire property. In addition, Mr. Budnitz testified that the views from the serpentine meadows are already blocked by cell towers and high voltage lines, and that a visitor can see many commercial and industrial structures from the orange trail in the park. Finally, Mr. Budnitz testified that in his opinion the traffic in the area is dependent upon the private schools in the area, which can generate a significant volume of traffic when school is in session.

Developer's Rebuttal Case

Joshua T. Sharon was again called as a witness in the Developer's rebuttal case, and at this stage of the proceedings he focused upon two issues raised by the Protestants. First, with respect to the Princeton access issue, the witness stated that at present the subject property has three curb cuts, and that if the Plan was implemented there would be only one curb cut on Falls Road for ingress and egress from the site. In addition, Mr. Sharon noted that there is a significant grade

change between the Princeton property and the subject site which would complicate any contemplated access between the properties.

Mr. Sharon also addressed the testimony of professional engineer Daniel O'Leary. He stressed that the stormwater management outfall would essentially be in the same location as at present, but that the water would be released at the bottom of the slope on a flat area. The witness stated that the notion of pumping stormwater, as advocated by Mr. O'Leary, is unwise and is almost never recommended by civil engineers. With regard to the outfall on the city property, Mr. Sharon noted that the stormwater has for many years drained onto city property, and the plan is to keep doing just that, although the outfall will be slightly farther into the park with an upgraded plunge pool to reduce the velocity of the water. Mr. Sharon opined that the proposed system would be far superior to the existing stormwater outfall. Finally, Mr. Sharon identified several regulations and codes (*See* Developer's Exhibit 22) which in his opinion dictate that Baltimore City approval for the outfall is not required until permits are sought for this project.

Christopher Jakubiak, a professional land planner accepted as an expert, was the next witness in the Developer's rebuttal case. Mr. Jakubiak testified at the outset that the planning expert presented by the Protestants (Al Barry) focused solely upon the RRLRCP in reaching his conclusion that the project was inconsistent with MP 2020. Mr. Jakubiak testified that determining consistency requires one to examine MP 2020, the relevant community plans, as well as the zoning maps for the property.

In this regard, Mr. Jakubiak testified that the subject property has three significant attributes under MP 2020: (1) the site is within a "community conservation" area; (2) the site is within a "community enhancement" area; and (3) the site is located in a T-5 transect, which Mr. Jakubiak stated was a signal identifying that the most intense mixed-use development should be directed

into such areas. Mr. Jakubiak described the T-5 transect as a classic urban center, and he opined that the proposed project would "fit nicely" in light of the three land use parameters from MP 2020 identified above. Mr. Jakubiak also noted the zoning was changed during the Comprehensive Zoning Map Process ("CZMP") in 2016 to BM-CCC. He noted that the CZMP is designed to implement the recommendations and goals of the master plan, and that the 2016 rezoning of this site was also consistent with the three master plan attributes identified above.

Mr. Jakubiak also opined that the project was consistent with the 2011 RRLRCP, which he said focuses mainly upon the Bare Hills Community and its connection to Lake Roland Park. Mr. Jakubiak also opined that it was not feasible, given the constraints of the situation and what the MP 2020 indicates, to provide three acres of open space on the subject property, which would be required under the LOS regulations. Mr. Jakubiak stated that in his opinion it would make no sense to demand that a significant amount of open space be provided for this project given that the park is "next door."

In response to questions on cross examination, the witness agreed the proposed structures would not be close to Falls Road, which MP 2020 identifies as an attribute of properties in the T-5 transect. Mr. Jakubiak also opined that MP 2020, not the RRLRCP, should govern the analysis in this case. In support of that conclusion, he noted the RRLRCP is not nearly as detailed as some community plans, which contain specific recommendations for future actions and projects. In addition, Mr. Jakubiak testified the RRLRCP expressly states that future plans were contemplated yet have not been completed, which in his opinion is another factor establishing that the 2011 RRLRCP should not be considered a definitive reference.

The final witness in Developer's rebuttal case was Mickey Cornelius, a professional engineer accepted as an expert. Mr. Cornelius is a traffic engineer, and he testified that his firm

prepared a traffic impact study for this project. Based on instructions he received from the SHA, the study analyzed two signalized intersections; Falls and Clarkview Roads and Falls at Old Pimlico. Mr. Cornelius described the methodology used in his study, and explained that existing traffic conditions at the intersections identified were at a level of service B/C during the morning/evening peak hour. Based upon the projected amount of traffic generated by the new project, which was determined by using trip report data provided by the Institute of Transportation Engineers, Mr. Cornelius indicated that the study determined those intersections would continue to function at a level of service B/C after completion of the project. Mr. Cornelius testified that the study was submitted to the SHA, which approved the analysis and findings therein. *See* Developer's Exhibit 27.

Mr. Cornelius also discussed Racquet Road, the county road to the south of the project which would be used for ingress/egress from the Princeton property. The witness conceded that there is inadequate sight distance using American Society of Highway and Transportation Officials ("ASHTO") standards for motorists attempting to make a left out of Racquet Road onto southbound Maryland Route 25. He stated that while newly constructed roads must comply with ASHTO standards, for existing roads traffic engineers examined crash data to determine whether a particular roadway is safe. In that regard, Mr. Cornelius testified he examined Maryland State Police records for the years of 2015 – 2018 and determined there was only one single vehicle accident reported during that period at the Racquet Road/Falls Road location. As such, Mr. Cornelius opined that a motorist, including customers exiting the Princeton property could safely use Racquet Road as a point of ingress/egress.

With regard to whether access could be provided to the Princeton property, the witness opined that it would not be safe to attempt a two-way in/out access point in front of the store.

Provided the existing parking at the front of the store was reconfigured, Mr. Cornelius stated it might be possible to design a point of inbound access only, provided the driveway was angled in such a fashion that would allow for a 20 to 30 mile per hour design speed for motorists entering the site from Falls Road. Even so, Mr. Cornelius opined that it would not be safe or prudent to construct an access point at the front of the Princeton property, although he conceded a connection point could be engineered which would provide ingress/egress at the rear of the existing commercial structure.

Master Plan

The law is clear that the Master Plan is a binding, regulatory mechanism in development cases in Baltimore County. This was the holding of *HNS Dev. v. People's Counsel*, 425 Md. 436 (2012), and is based on that court's interpretation of BCC § 32-4-102(a)(1). The aforementioned statute requires "all development of land [to] conform to the Master Plan."

Protestants contend the plan does not conform to MP 2020, and in support of that argument they presented testimony from Al Barry, a certified planner who prepared the RRLRCP. Mr. Barry, an impressive and articulate witness, described the major aspects of that plan and opined the project proposed by Developer would not be in conformity therewith. Among other reasons he stressed the community plan called for low-scale, village style buildings along Falls Road and a parking area for Lake Roland. He testified the proposed development would not adhere to either of these requirements.

In rebuttal Christopher Jakubiak testified the property's T-5 transect, community conservation and community enhancement area designations. He explained those designations emphasize the need for "sustainable redevelopments that are compact, mixed use and walkable." MP 2020, p.32. He also explained a major feature of the RRLRCP was connectivity to the park,

which was provided in the plan. In addition, the property's zoning classification permits a variety of intense uses, as explained by Mr. Hoover.

Moreover Mr. Barry's testimony focused almost exclusively upon the community plan without considering the impact of MP 2020 or the property's zoning and transect classifications. This is allowing the tail to wag the dog, since the master plan itself is the primary document recognized and required by state law. Indeed, Mr. Barry conceded he was not familiar with MP 2020 or the property's zoning designation, which in my opinion undercuts the validity of his testimony. While the RRLRCP has been incorporated into MP 2020, a property's zoning classification and transect designation are without a doubt the primary land use controls in Baltimore County. In conclusion, Mr. Jakubiak was a credible and persuasive witness and I find based on his testimony as detailed herein the project is in conformity with MP 2020, as required by BCC § 32-4-102(a)(1).

Princeton Sports

The Falls Road access to the store is somewhat problematic since it is located on property owned by the Developer, CPC Falls Road, LLC. Though Princeton has enjoyed this means of access (which is used by more than 50% of its customers) for nearly 50 years, the Developer now proposes to construct a new entrance road into its project (which would align with current Clarkview Road) which will result in the elimination of Princeton's Falls Road access.

Developer is correct the ALJ has no authority to resolve real property disputes. But the County Code expressly provides the ALJ with authority to impose conditions when necessary to "alleviate an adverse impact on the health, safety, or welfare of the community." BCC § 32-4-229(d). As an adjoining property owner Princeton Sports specifically would experience an adverse impact if patrons could no longer access the store from Falls Road, as they have done for more

than 50 years. And the community at large (or at least the subset thereof which patronizes Princeton Sports) would suffer an adverse impact since they would be required to use Racquet Road as the exclusive means of access to the store. Forcing patrons to use Racquet Road would not simply be inconvenient, it could also pose a serious traffic safety issue.

Both Messrs. Green and Cornelius agreed there is inadequate sight distance for motorists exiting Racquet Road. Closing the Falls Road access would mean 100% of the store's customers (instead of approximately 42% at present) would be subjected to this potentially dangerous condition. To mitigate or alleviate this adverse impact a condition must be included in any final order approving the project requiring Developer to provide at no cost a means of access to the Princeton Sports property from the proposed new road (*i.e.*, Clarkview Road extended).

Suitable Outfall

Protestants contend the plan should be disapproved since the Developer has not obtained approval and a franchise ordinance from Baltimore City permitting the discharge of storm water onto city-owned property. I do not believe this argument has merit.

Ownership or title issues are largely irrelevant in the context of a zoning or development case. *Richard Roeser, Inc. v. Anne Arundel Co.*, 368 Md. 294 (2002). Both development and zoning cases can be initiated by individuals or entities which do not own the property in question. In this case, whether or not the plan shows a "suitable outfall" is determined by examining engineering principles not a license or franchise agreement. *See* BCC §§ 32-4-224(a); 33-4-108(b); and COMAR 26.17.02.09 D.

At this stage of the proceedings the Developer is required only to show on a conceptual plan preliminary computations, the size, type and location of the facility proposed and a suitable outfall. BCC §32-4-224(a)(10). As described by Mr. Sharon, the Developer will be obligated to

provide additional and more detailed stormwater management plans in later phases of the development process, and before permits can be issued the Developer would certainly need to establish the legal right to discharge water onto property owned by Baltimore City. The reality is surface water from the site has for many years been directed onto city property; the current proposal would merely continue to do so, albeit with a modern and properly designed outfall. Based on this testimony and the approval of the conceptual plan by DEPS, I find Developer has satisfied this requirement.

Parking

The plan indicates 581 off-street parking spaces are required, while 584 spaces will be provided. But Protestants contend that since the Developer has not specifically allocated spaces for Lake Roland Park, the Plan should be disapproved. Protestants note the Developer pledged in the RRLRAIA covenant agreement to provide designated parking for park users. *See* Developer's Exhibit 4, p.3. I do not believe this argument has merit, for two reasons.

First, the BCZR does not require any specific number of off-street parking spaces for a public park or facility. BCZR § 409.6. Also, a property owner is not obligated to provide parking for public or off-site uses. While the Developer may be contractually obligated to provide parking for park users, Baltimore County is not a party to and is therefore not bound by that agreement. *Blakehurst Life Care Community v. Baltimore County*, 146 Md. App. 509 (2002). The OZR approved the parking calculation shown on the plan, and for that reason, as well as those articulated above, I believe Developer has satisfied BCZR Section 409.

Local Open Space

As noted above, the County's landscape architect and the OZR both testified Petitioner satisfied the LOS regulations. Similar testimony was presented by Messrs. Sharon and Hoover.

Protestants contend the Developer failed to prove it was not "feasible" to provide open space on the subject property. As such, they argue, a fee-in-lieu analysis is premature.

As an initial matter, I believe Section 32-6-108 of the BCC requires an applicant to establish it is not feasible to provide open space on or off site, before a fee-in-lieu analysis (including permitted reductions for certain amenities) is reached. In this regard I am persuaded by the testimony of Ms. Hopkins to the effect that the Developer disregarded the question of feasibility and proceeded instead to the fee and offset analysis. Indeed, that is the only way to logically interpret the cited Code provision since the cost of certain amenities may be deducted from the "fee" which would otherwise be payable, and the Code clearly states a fee shall be paid only when it is not "feasible" to provide the open space. BCC § 32-6-108(i)(2). The reality is this issue is not frequently litigated in development cases, and waiver fees are routinely approved without any consideration of whether it would be feasible to provide the open space in the first instance.

Having said that, I also believe it is not feasible for the Developer to provide the requisite open space on or off site. While it is true, as Protestants argue, the Developer could scale back the scope of the project which would enable it to comply with the LOS regulations, that is not an appropriate rejoinder to whether something is feasible. If that were the standard, a developer could never prove it would not be feasible to provide open space, since it could always scale back its project. At the very least it would not in many instances be economically feasible for a developer to do so.

While not defined in the BCC, the plain meaning of "feasible" incorporates some element of whether the contingency is logical or likely. In this case, the subject property is simply too small to provide the required amount of open space and the neighborhood (and Council District) in which the project is located is established and built out, which in my opinion would not make it feasible

to provide the open space off-site. Finally, one cannot ignore the fact the project is located next to a 500 acre park, and in my opinion it would be superfluous for Developer to provide on-site a small open space parcel next to such an expansive resource.

Protestants also challenge whether the Developer has established with the requisite degree of certainty the "verified cost" of the proposed amenities. I agree Developer has provided only rough estimates, but that is all that is required at this juncture. As Mr. Hermann testified, the costs will be "verified" at a later date and Baltimore County will ensure that an offset against the fee is granted only for the documented costs associated with the amenities and improvements. It certainly does seem incongruous that a Developer would be entitled to an offset against the LOS fee for a swimming pool provided for the exclusive use of its tenants. But Section 32-6-108 of the BCC expressly allows for such reductions, and I am obligated to enforce the law as written, not as I or the community would like it to read. I would note the County Council has introduced Bill 37-19, which proposes to repeal this aspect of the Code which was enacted in 2016 by Bill 73-16. Developer's Exhibit 16.

Sewer System

Protestants contend the plan should be denied due to insufficient capacity of the sewer which would serve this project. Protestants presented testimony from Randy Grachek, a professional engineer accepted as an expert. Mr. Grachek provided extensive testimony concerning the sewer system "interceptor" which serves the subject property, and he stated that the Jones Falls and Lake Roland Park interceptors were severely over-capacity. The witness prepared an exhibit (Prot. Ex.57) which shows that - - depending on the volume of rainfall which would be experienced in a 2, 10 or 20 year storm -- the sewer would be anywhere from 103% to 589% over capacity. This is sobering testimony, especially considering the County's own Sewer

Design Manual (Prot. Ex. 59) unequivocally states that "trunk and interceptor sewers shall not be designed to flow at depths exceeding 90%."

Baltimore County's sewer system - - like that of nearly all major east coast cities - - is antiquated and in dire need of repair. So serious is the problem that Baltimore County entered into a consent decree with the Environmental Protection Agency ("EPA") which requires the County to undertake a comprehensive evaluation of its sewer system and take corrective action to repair or replace defective portions of this infrastructure. The County hired RK&K (an engineering firm) to evaluate the sewer system as required by the consent decree and it determined in a study the interceptors serving the subject property are severely over capacity. RK&K also determined the Lake Roland interceptor had 541 defects, more than any other pipe segment in the Jones Falls watershed. Also, the County's own testing shows the levels of E coli in Lake Roland far exceed safe levels set forth in state regulations.

The consultant recommended Baltimore County install "relief sewers" for the Lake Roland Park & Jones Falls interceptors, which could help to address the overcapacity issues in this area. There is no evidence in the record to suggest Baltimore County has undertaken such measures, and Mr. Grachek opined "the systemic problems identified does not warrant additional sewage being added to the systemic problem, even if it were just a little bit." (T8, p. 105). Developer correctly notes the witness did not undertake any independent evaluation of the sewer serving the site. He did not need to; he relied upon the findings of the County's consultant, an accepted practice for expert testimony in litigation matters. *Williams v. Illinois*, 567 U.S. 50, 60 (2012)("commonly accepted" practice for one expert to rely on records of another expert). RK&K was not hired by Protestants, and its findings were submitted to the EPA in connection with the Consent Decree. In

these circumstances I believe these reports are especially trustworthy and I place a great deal of reliance upon them.

The Developer did not cause and is not responsible for the deficient sewer system near the subject property. As noted by Mr. Grachek it is a County-wide problem and Baltimore County is responsible for providing and maintaining infrastructure such as sewers, drains and roads. Such infrastructure is aging; the Lake Roland Park sewer was constructed in the early 1950's and was designed to serve a much smaller population than it is at present. But the obvious truth is the County, like local governments across the country, does not have sufficient funds to undertake the necessary repairs to its roads, bridges and sewers.

The Developer did not contradict any of the substantial evidence presented on this point by Protestants and it did not present testimony from an engineer or sanitarian to the effect that the existing sewer is sufficient to accommodate existing and proposed demand. Instead, the Developer cites the fact the subject property is not identified as deficient on the County's basic services map. I believe such reliance is misplaced.

Neither the Maps nor the Growth Management Act ("Act") in section 4A02 of the BCZR state they shall be the decisive factor in determining whether the ALJ approves any particular development plan in a contested case. Instead, the Act provides only that no building permits shall be issued for any project in an area identified as deficient on the sewer, water or transportation basic services maps. BCZR §4A02.3.G. Indeed, developers in similar cases have argued (successfully) that a development plan can be approved for a project within a failing traffic shed; the only prohibition in the law is upon issuance of permits. As recognized by the court of special appeals an HOH is not a proceeding in which a building permit is sought; that occurs later during

Phase II of the development process. *Monkton Preserv. Assn. v. Gaylord Brooks Realty*, 107 Md. App. 573, 584-85 (1996).

And it is certainly understandable why the County would be reticent to include a property on one of the basic services maps. The effect of such inclusion is a legislative moratorium, during which the county is expected to undertake the necessary repairs to the deficient infrastructure. Should this state of affairs persist for longer than 18 months, it is likely a court would find the owner's property had been "taken," which requires the payment of just compensation under the state and federal constitutions. *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency*, 535 U.S. 302 (2002). This is yet another reason why I do not believe the maps are dispositive in any given case.

In this case I am persuaded by Mr. Grachek's testimony and the findings of the County's own consultant that the sewer system serving the subject property is woefully inadequate to handle existing demand, much less the additional inputs from recently approved development in the Towson area. As such, I believe the fact the property is not identified on the basic services map is plainly contradicted by the findings of the County's consultant.

Traffic

It is obvious, especially to residents, the traffic near the subject property during peak periods can be extremely congested. Of course the same can be said for many areas of the County. But the undisputed evidence in this case is that the signalized intersections near the project (which were selected by the SHA not the Developer) currently function at a level-of-service B/C during the A.M. and P.M. peak periods. The traffic study performed by Mr. Cornelius was approved by the SHA (Dev. Ex. 27) and indicated those intersections would continue to operate at a B/C level

after completion of the project. I believe this, along with the approval of DPR/DPW, is all the Developer was required to prove.

Schools

There is no dispute the elementary and high schools which would serve this project currently exceed SRC. And according to the Baltimore County Public Schools the situation is likely to get worse in coming years. But the plan cannot be disapproved on this basis.

Indeed, the BCC provides an exception which swallows the rule. If sufficient capacity exists at adjacent schools, the APFO is satisfied. BCC § 32-6-103(f)(3). Ms. Nugent testified sufficient capacity exists at adjacent schools, and that is all that is required by the cited BCC provision.

Forest Buffer

Mr. Sharon testified he prepared a plan delineating the forest buffers, which was approved by DEPS. Protestants did not present any evidence suggesting the buffers were not properly identified and mapped. Instead, Protestants contend Building F shown on the Plan intrudes upon the required setback. That building is residential in nature, but is set back only 25 feet, which would appear to be in violation of the 35 ft. setback for residential structures. I do not believe this is a basis upon which the plan should be disapproved, although if the project moves forward I believe the Developer would be required to obtain from DEPS a forest buffer variance.

CONCLUSION

The BCC provides that the "Hearing Officer shall grant approval of a development plan that complies with these development regulations and applicable policies, rules and regulations." BCC § 32-4-229. As discussed in detail above, I do not believe the plan is in compliance with the myriad state and county laws which require all residential projects to provide adequate and safe

sewage disposal systems. As such, the plan will be disapproved solely on this basis.

THEREFORE, IT IS ORDERED by this Hearing Officer/Administrative Law Judge this **30th** day of **August, 2019**, that the eight (8) sheet redlined Development Plan known as **"CPC FALLS ROAD PROJECT / BLUESTEM"** (Developer's Exhibit 1), be and is hereby **DISAPPROVED.**

Any appeal of this Order shall be taken in accordance with BCC §§ 32-3-401 and 32-4-281.

JOHN E. BEVERUNGEN
Administrative Law Judge
for Baltimore County

JEB:dlw

IN THE MATTER OF	*	BEFORE THE
CPC FALLS ROAD, LLC (CPC FALLS ROAD PROJECT/BLUESTEM) 6241-6247 Falls Road HOH Case No. 09-0861 9th Election District 2nd Councilmanic District	*	BOARD OF APPEALS OF BALTIMORE COUNTY
	*	CASE NO: CBA-20-006

* * * * * * * * * * * * *

OPINION

This case comes to the Board of Appeals from a final Opinion and Order dated August 30, 2019, issued by Administrative Law Judge John E. Beverungen (the "ALJ") wherein he disapproved the Development Plan known as "CPC Falls Road Project/Bluestem." The ALJ denied approval of the Plan as he found "the sewer system serving the property is woefully inadequate to handle existing demand, much less additional inputs from recently approved development in the Towson area," causing him to conclude the Plan was not in compliance "with the myriad [of] state and county laws which require all residential projects to provide adequate and safe sewage disposal systems." This was the sole basis for the disapproval. Petitioner/Developer, represented by Lawrence Schmidt, Esquire, appealed on that issue.

Protestants Robert Macht, Carol Macht, Thomas McCord, Richard and Tatiana North, Mark Fetting, Deidre Smith, Doug Carroll, and Cheryl Finnery were represented by Michael R. McCann, Esquire. They, along with Protestants Rockland Ridge Homeowners Association, Mark Behrens, Peter Broido, Esther Epstein, and Robert G. Smith, Esquire, who participated as a party and as counsel for this set of Protestants (the "Second Set of Protestants", as necessary), jointly

appealed on all other issues raised below, including, by way of example, parking, open space, and stormwater outfall.[1]

As part of the ALJ Opinion, the ALJ also found the adjacent property, namely, Princeton Sports, LLC (and Lucile Real Estate, LLC; Paul M. Davis, and Alan Davis) would experience an adverse impact if the Plan was approved. As such, the ALJ identified a condition to be included on any final order approving of the Plan that would require Petitioner/Developer to provide at no cost a means of access to the Princeton Sports property from the proposed new extension of Clarkview Road. The parties identified herein were represented by Dino La Fiandra, Esquire.

In advance of the Board hearing, Petitioner/Developer filed a Motion for Additional Evidence and Testimony, which the Board denied. This Opinion will briefly address the denial of that Motion. Following the resolution of that Motion, the Board heard argument on the substantive matters and, in advance of the December 19, 2019 deliberation, received post-hearing memoranda from the parties. Many of the issues identified by Protestants in their Petition for Appeal were not argued at the hearing or addressed in their post-hearing closing memoranda. The primary, and dispositive, issue concerns the ALJ's findings and conclusions regarding the deficiencies in the sewer system that would serve this Property after connection.

I. Property Description and Petition

The Property at issue is located at 6241-6247 Falls Road, adjacent to Lake Roland Park. The Property lies within the Urban-Rural Demarcation Line and receives public water and sewer services (and, thus, is within the Metropolitan district relating to the same). As set forth in the Master Plan 2020, the Property and the surrounding area (known as "Bare Hills") was designated as a T-5 (Urban Center Zone) transect zone, which permits a more intense use (the transect zones

[1] As there are cross appeals, this Opinion will not refer to any party as "Appellant" or "Appellee."

run from T-1 to T-6, with T-6 being the most intense). It is also designated as a Community Conservation Area, which encompass the County's "more densely populated, established communities," according to the Master Plan. Further, the Property is also in a Community Enhancement Area, described by the Master Plan, as "compact, mixed-use, and walkable" community, with retail, office, and residential uses. The Property had a recent change to its zoning (2016, as part of the Comprehensive Zoning Map Process) converting from BR-AS (Business Roadside --- Automotive Services) to BM-CCC (Business Major --- Commercial, Community Core).

Petitioner seeks to redevelop the Property to provide 56,600 square feet of commercial floor space and a 152-unit, multi-family residential building. The Plan introduced in the hearing below reflects the following buildings: Building A, 1-story retail/restaurant office; Building B, 2-story restaurant, retail, office; Building C, 3-story retail, restaurant, office; and Building D, ground floor retail/restaurant/office, with five stories above as residential. Building D consists of four structures (Buildings D, E, F, and G, designated in this fashion for emergency services). In addition to the retail and residential components, Petitioner also includes a structured parking garage and a point of entry from the Property to the Orange Trail of Lake Roland Park.

II. Authority of the ALJ and the Board of Appeals for this Matter

County Code §§32-4-227 through 32-4-229 identify the requirements and standards to guide the ALJ for the hearing on a development plan. Section 32-4-227(e) provides the ALJ "shall consider any comments and conditions submitted by a county agency…" and if no comments or conditions are received, "the Development Plan shall be considered to be in compliance with county regulations." Section 32-4-229(b)(1) states: the ALJ "shall grant approval of a Development Plan that complies with these development regulations and applicable policies, rules

and regulations adopted in accordance with Article 3, Title 7 of the Code, provided that the final approval of a plan shall be subject to all appropriate standards, rules, regulations, conditions, and safeguards set forth therein." If the Plan is approved, the ALJ has the authority to impose conditions if the conditions meet the criteria set forth in the Code. BCC §32-4-229(c).

The Board, in connection with this matter, has appellate jurisdiction. Section 32-4-281(e) of the Baltimore County Code ("BCC") authorizes the Board, in its appellate jurisdiction, to: (i) remand the case; (ii) affirm the decision; or (iii) reverse or modify the decision if the decision, (a) exceeds the statutory authority or jurisdiction of the ALJ; (b) results from an unlawful procedure; (c) is affected by any other error of law; (d) is unsupported by competent, material, and substantial evidence in light of the entire record as submitted; or (e) is arbitrary or capricious. The Board does not make independent findings of fact or substitute its judgment for that of ALJ below. As stated by the Court of Special Appeals, when reviewing a hearing officer's decision on the approval of a development plan, the Board is "not vested with broad visitorial power … but acts rather as a review board, to assure that lower agency decisions are in conformance with law and are supported by substantial evidence." People's Counsel for Balt. County v. Elm St. Dev., Inc., 172 Md. App. 690, 704; 917 A.2d 166, 174 (2007), quoting, Monkton Preservation Ass'n v. Gaylord Brooks Realty Corp., 107 Md. App. 573, 580; 669 A.2d 195 (1996).

Petitioner/Developer contends that the ALJ's Opinion, particular to the sewer issue and the ultimate outcome of the findings and conclusions relating thereto, require reversal as it: (1) exceeds the statutory authority or jurisdiction of the ALJ; (2) contains error(s) of law; (3) is unsupported by competent, material and substantial evidence in light of the entire record as submitted; and (4) is arbitrary or capricious. The Board will address the evidentiary record first.

III. Decision

Petitioner correctly states in its Closing Memorandum that a development plan is presumptively compliant with the development review regulations and BCC §32-4-227(e) requires that, in the absence of comments, "the Development Plan shall be considered to be in compliance with county regulations." Petitioner is not required, at that point, to produce additional evidence in support of the County agency determinations. People's Counsel for Balt. County v. Elm St. Dev., Inc., 172 Md.App. 690, 703; 917 A.2d 166, 174 (2007). There is nothing in the ALJ decision that indicates the ALJ did not afford Petitioner that presumption.

Once that presumption has been established, Protestants, as explained by the Court of Special Appeals in Elm St. Dev., have the burden to produce evidence rebutting the recommendations and determinations made. Id., citing Gough v. Board of Zoning Appeals, 21 Md.App. 697, 704; 321 A.2d 315 (1974). In fact, Protestants presented such evidence in sufficient quantity and quality that it not only rebutted the presumption afforded to Petitioner, but also persuaded the ALJ.

The evidence established that the Property sits in close proximity to the convergence point of the three main sewage interceptors in the area, Jones Falls from the west, Roland Run from the north, and Towson Run from the east. The convergence point for the interceptors is located adjacent to Lake Roland, and forms a fourth interceptor, the Lake Roland interceptor, which runs under Lake Roland.

Protestants also introduced the 2005 Consent Decree between the County and the Environmental Protection Agency (EPA) and Maryland Department of Environment (MDE) that concerned the County's sewer system, requiring a comprehensive examination and corrective actions. The Consent Decree remains in effect and runs through 2025.

In the matter of: CPC Falls Road, LLC - Legal Owner
(CPC Falls Road Project/Bluestem)
Case No: CBA-20-006

In 2012, the County's consultant RK&K conducted a study revealing the interceptors at issue are severely overcapacity and that the Lake Roland interceptor had 541 defects, more than any other segment of pipe in the Jones Falls watershed. Mr. Grachek compiled an exhibit to illustrate the burdens upon the Jones Falls and Lake Roland interceptors following 2-year, 10-year, and 20-year storms, resulting in an overcapacity range between 103%-589% at various points throughout those sewer runs. Judge Beverungen considered this evidence "sobering," especially in light of the County's Sewer Design Manual's requirement that interceptors shall not be designed to flow at depths exceeding 90%. The Jones Falls and Lake Roland interceptors would receive the sewage from the proposed development project.

As established by the Consent Decree, the inadequate flow capacity in these runs resulted in sewage discharges into the nearby water resources, including Towson Run, Lake Roland, and Jones Falls. As a consequence of those discharges, those water resources had elevated levels of E.coli bacteria, presenting a danger. While Petitioner characterizes the evidence as ancient history, the record evidences one or more recent overflow events at the interceptor convergence point. Most notably, nearly half the samples of the water quality at Lake Roland taken by the County between June 2016 and June 2019 revealed levels of E.coli bacteria that exceeded the permissible level for Class I waters established by COMAR 26.08.02.03-3, including some samples that exceeded the maximum measurable level.

The County's consultant recommended relief sewers for the Jones Falls and Lake Roland interceptors. Judge Beverungen, in his Opinion, noted the absence in the evidentiary record that such relief sewers are in place. The County certainly has the reports generated by its contractor, RK&K. The ALJ relied upon Mr. Grachek's testimony that "the systemic problems identified does not warrant additional sewage being added to the systemic problem, even if just a little bit."

Logically, with a more intense use at the subject site than that at present, additional sewage, even if just a little bit[2], will be added to the Jones Falls interceptor and Lake Roland interceptor.

Petitioner claims that the ALJ ignored Development Plan Review comments from 2018 regarding a relief sewer to dispute the ALJ's noting the absence of evidence regarding the existence of the relief sewers recommended by RK&K. However, Mr. Grachek made clear in his testimony that the sewer referred to in those comments was a 12" segment downstream, one not identified by RK&K as being overcapacity or recommended for repair. Further, Mr. Grachek testified the size of the segment reveals it was not intended to serve as relief for the interceptors. Clearly, Judge Beverungen, based on Mr. Grachek's testimony and related evidence, concluded that the 12" segment was unrelated to the relief sewers identified by RK&K and/or that it could not serve the function needed.

Therefore, the evidence presented was competent, material and substantial. The evidentiary record establishes a more than sufficient factual basis for the ALJ to reach his findings of fact and to serve as support for the conclusions drawn. The Consent Decree and related evidence are not too remote, and to the contrary, include reports as recent as six months ago (i.e. during the hearing below). Petitioner obviously did not cause the pre-existing problem, but Petitioner's Plan will contribute flow beyond the present-day amount from the Property. That increased flow adds to the already severely overburdened interceptors, exacerbating the existing conditions, which in turn enhances the risks of contamination of groundwater, surface water, and recreational facilities, as well as other consequences.

[2] Mr. Grachek did not calculate the added sewage flow from the proposed development, nor did Mr. Grachek need to in light of the obvious conclusion that the proposed project is a more intense use of the site than the existing, e.g., Hollins Organic Products store and will contribute additional sewage. Therefore, the need to quantify the amount is not required to reach the conclusions by the ALJ as there will be an additional amount added to the overburdened system, thus, increasing the risks.

(CPC Falls Road Project/Bluestem)
Case No: CBA-20-006

With the factual record reviewed, the other legal issues claimed by Petitioner can be evaluated as the remaining issues are intertwined with the factual record. Petitioner does not identify any challenge to the manner in which the hearing was conducted. Instead, Petitioner challenges the decision made following the hearing.

A. The ALJ Did Not Exceed His Statutory Authority and Jurisdiction

First, Petitioner argues the ALJ does not have the power or authority to deny the Plan unless there is a specific finding of fact that the proposed development will cause a sewer deficiency. The ALJ, however, did find the existence of a sewer deficiency and that the proposed development will add to that existing problem. The ALJ's Opinion expressly states "the sewer system serving the subject property is woefully inadequate to handle existing demand, much less the additional inputs from recently approved development in the Towson area." As noted above, Mr. Grachek testified this project would generate more sewage than the current industrial activity. Common sense dictates the same conclusion. The ALJ also addressed the absence of evidence that the existing sewer can accommodate the existing and proposed demand. Taken together, the ALJ found exactly what Petitioner contends was omitted. As such, this argument fails.

Next, Petitioner states that the ALJ exceeded the statutory authority and jurisdiction when concluding that the Jones Falls sewer shed is deficient, contending only the County Council has such authority, which is expressed in the Basic Services Map.

The Basic Services Map depicts areas of the County as being a concern or as being deficient, or neither a concern, nor deficient. To find that that the subject area is "woefully inadequate," according to Petitioner, is tantamount to overruling the Map, and therefore, the Council. In support, Petitioner focuses on the findings of the Department of Public Works and the

legislation enacted by the County Council in the 2018 and 2019 Basic Services Map, championing it, essentially, as dispositive.

Section 4A02.1 of the Baltimore County Zoning Regulations, the Growth Management Act, sets forth that the Act is "established to regulate nonindustrial development in those underserved areas to a degree commensurate with the availability of these facilities." In enacting these regulations, the County Council recognized that public facilities are inadequate to serve all development that would be permitted. The maps are required to incorporate a delineation of adequacy and availability of water, sewerage, transportation services and facilities according to the standards identified in the regulations. As a part of the Act, the Basic Services Maps are not permanent and are reviewed each year. The County Council, in connection with this legislation, stated it was the Council's intent that existing service deficiencies will be corrected in accordance with the Master Plan and capital improvements program. BCZR §4A02.3(F).

Under BCZR §4A02.4(C), which governs sewerage standards, the County Council intended for the standards and maps to regulate nonindustrial development where it has been determined that the county's share of public sewerage capacity is substantially less than the capacity necessary both to serve already established uses and to serve new uses likely to be established pursuant to Basic Services Map legislation. Sewerage capacity must be capable of serving already established uses and new uses likely to be established under the provisions in the Basic Services Map legislation. BCZR §4A02.4(C)(2). The regulations restrict building permits, absent special variances or other circumstances to depart from the standards. See, e.g., BCZR §4A02.3(F).

Unquestionably, the record establishes that the property is not depicted as deficient on the Basic Services Map. The ALJ, after considering this argument, concluded that the Basic Services

In the matter of: CPC Falls Road, LLC - Legal Owner
(CPC Falls Road Project/Bluestem)
Case No: CBA-20-006

Maps (or the Growth Management Act) does not control the outcome in this case. The Board agrees.

The Basic Services Map provision does not mandate approval or disapproval of a development plan at a development plan hearing. As such, whether or not an area is depicted on a map as deficient is not dispositive on the question as to whether a development plan complies with the development regulations and applicable policies, rules, and regulations.

Moreover, as further evidence that the Basic Services Map cannot have a dispositive effect, when County agencies have no comments about the development plan, Protestants may still rebut the presumption afforded to Petitioner. See also, People's Counsel for Balt. County v. Elm Street Dev., Inc., 172 Md.App. 690; 917 A.2d 166 (2007). It would be illogical to conclude that Protestants may rebut the presumption of compliance, but the Basic Services Map controls the outcome of a development plan hearing. If the Basic Services Map was dispositive, a public hearing on these issues would serve no purpose other than quasi-judicial theater.

Rather than simply deferring to the Map, Protestants presented their contradictory evidence about the condition on the relevant segments of the sewer system. The ALJ properly weighed the conflicting evidence and found that not only did the Protestants' evidence rebut any presumption, but that evidence persuaded him that the sewer system in the relevant area cannot handle the expected additional demand on the system. The conclusion aligns with the development policies and enumerated purposes for the development regulations, properly at issue for the ALJ's consideration. The ALJ did not usurp the County Council in reaching his findings and conclusions. As such, the ALJ neither exceeded his statutory authority, nor the jurisdiction of the office, in this matter.

B. The ALJ Did Not Commit Any Error of Law

Petitioner, in anticipation of the Board finding the ALJ operated within his statutory authority, suggests, in the alternative, that the ALJ's disapproval constitutes an error of law. Under Maryland law, "[g]enerally, a decision of an administrative agency, including a local zoning board, is owed no deference when its conclusions are based upon an error of law." People's Counsel for Balt. County v. Loyola College in Md., 406 Md. 54, 68; 956 A.2d 166, 174 (2008), citing, Belvoir Farms Homeowners Ass'n, Inc. v. North, 355 Md. 259, 267-68; 734 A.2d 227, 232 (1999). However, a reviewing court affords some deference to an administrative law judge's interpretation of a statute administered by a relevant agency. See, Motor Vehicle Admin. v. Gonce, 446 Md. 100, 109-110; 130 A.3d 436, 442 (2016) (citations omitted).

Petitioner claims the ALJ erred when he denied the Plan, rather than placing conditions upon approval of the Plan. Petitioner also claims the ALJ erred by making no findings that the Plan failed to comply with County standards or in application of standards in reaching the conclusion that the Jones Falls Sewer Shed is "woefully inadequate."

In furtherance of Petitioner's argument regarding the possible imposition of conditions, Petitioner relies upon the Adequate Public Facilities ordinance ("APFO") provision governing sewers, BCC §32-6-106, as instructive on the proper outcome. Section 32-6-106 prohibits the issuance of a building permit for non-compliance. Consequently, Petitioner states that the Plan should be approved with a condition that no building permit be issued until the sewer-shed deficiencies are remedied.

Certainly, the ALJ is neither compelled to approve the Plan in the face of evidence that it fails to comply with development laws, regulations, policies, or rules, nor is the ALJ compelled to impose conditions in lieu of denying approval. To the contrary, the Code mandates the ALJ's

decision in only one set of circumstances: where the ALJ finds the development plan complies with development laws, regulations, policies and/or rules. BCC §32-4-229(b)(1). The ALJ did not find that the Plan so complied, *ergo*, the ALJ had the discretion to deny approval. Similarly, the Code confines the ALJ's discretion when imposing conditions, requiring that the conditions be tethered to certain evidence and in furtherance of certain goals. BCC §32-4-229(d). On the other hand, the APFO neither identifies circumstances requiring approval of a development plan, nor does it mandate approval with conditions.[3]

In the section regarding the APFO legislative intent, the County Council stated its intent was to supersede and abrogate the rights to development which otherwise would accrue from the zoning or development regulations or other county laws. BCC §32-6-102. Its stated legislative purpose is to provide a predictable planning environment for the provision of adequate infrastructure, roads, public school facilities, and recreational space by requiring projects, such as this one, to pass certain tests as a condition of development approval. Id.

With the denial of a development plan, there are no development rights in connection with the disapproved plan. The APFO also does not establish a right to develop in accordance with a proposed plan. The ALJ may refer to and consider the APFO provisions in reaching a decision and may be satisfied that whatever concerns can and will be addressed prior to final approval at the end of the development plan process, but there is nothing in the APFO that requires the ALJ to make such a finding. Clearly, the ALJ did not conclude that the concerns raised would be addressed

[3] Notably, as will be identified later, the APFO authorizes, but does not mandate, the ALJ to conditionally approve of a development plan when it is determined that the development plan does not meet the requirements of the overcrowded schools provision (§32-6-103), but all other parts of the development plan comply with all other laws or regulations. BCC §32-6-109. Conversely, the APFO does not have an express provision authorizing conditional approval when a development plan does not meet the requirements for the sewer system if all other parts of the plan comply.

by final approval. Even if the Board were to agree with Petitioner that approval can be contingent or conditional, the Code establishes that the decision to impose conditions is within the province of the ALJ and the decision to do so is discretionary, bound in this context only by the requirements of BCC §32-4-229(c).

Petitioner argues that the ALJ offered contrary statements when discussing failing traffic sheds versus the outcome arising from the finding of a failing sewer shed. In discussing the same, the ALJ was illustrating that the Basic Services Map is not dispositive. The traffic shed statements and sewer shed findings are not inconsistent. To the contrary, the ALJ employs them harmoniously with respect to the resolution of the Basic Services Map question.

Petitioner's second alleged error of law concerns whether there are findings that the Plan failed to comply with County standards. As set forth by Petitioner, the ALJ is to review the Plan to ensure it satisfies the "General Design Standards and Requirements." Petitioner wishes to focus on the word *proposed* contained in §32-4-410(b) ("*proposed* public or private sewage facilities shall be designed and located to function safely and without danger of contaminating groundwater, surface water, or public or private water supplies" (emphasis added)) to distinguish the proposed facilities from the existing. Petitioner contends the ALJ erred by focusing on "the existing public sewer system as a whole."

First, leaving aside whether the ALJ is authorized to consider the sewer system as a whole, the ALJ did not base the decision on the sewer system as a whole. The ALJ only considered the segments of the sewer system that are adjacent and to which the proposed development will add flow. In other words, the ALJ appropriately evaluated the impact of the additional flow on the portions of the existing system that will be directly affected by the proposed Plan. There is no error in doing so.

In the matter of: CPC Falls Road, LLC - Legal Owner
(CPC Falls Road Project/Bluestem)
Case No: CBA-20-006

Pursuant to §32-4-410(b), the connection to the existing system must be designed and located to function safely without danger of contaminating groundwater, etc. Judge Beverungen found that additional flow to an already overburdened sewer system results in a system that cannot function safely. The ALJ interpreted the law, correctly, to consider more than the simple, mechanical attachment of pipe and layout emanating from the Property to the existing system to evaluate the impact upon the functioning of the existing system and the risk of contamination as a result of that connection. In fact, focusing only on the proposed addition without consideration of the impact on the system, as urged by Petitioner, would constitute an error of law.

Moreover, to focus solely on the point of origin in this context is nonsensical. Good engineering can design a flawless physical connection and layout with no apparent danger of contamination at the connection point or onsite. From a development perspective, however, if the consequence of the connection causes increased flow into a severely overburdened system, as found here, the risk of failure and contamination offsite also increases. See, Annapolis Market Place, LLC v. Parker, 369 Md. 689, 715; 802 A.2d 1029, 1044 (2002) (A statute should be "given a reasonable interpretation, not one that is illogical or incompatible with common sense."). As such, the ALJ's interpretation is squarely and appropriately within the ambit of BCC §32-4-410(b) and is fully consistent with the development policies and purposes set forth in §32-4-102 and §32-4-103.

For Petitioner's third alleged error of law, Petitioner contends the ALJ did not apply the proper and applicable standards to determine the Jones Falls sewer shed is woefully inadequate. More specifically, Petitioner complains the ALJ failed to identify an enacted standard or requirement to justify the denial. To the contrary, as set forth in the Opinion, the ALJ considered

the overcapacity ranges and compared them to County's Sewer Design Manual, which sets forth "trunk and interceptor sewers shall not be designed to flow at depths exceeding 90%."

The ALJ, however, did not limit his consideration to only the Design Manual. Judge Beverungen also relied upon the Consent Decree and the RK&K studies and reports, as well as the testimony of Mr. Grachek to conclude the interceptors serving the subject property "are severely over capacity." To the extent Petitioner argues that it was improper to consider the Consent Decree and other such evidence, the Board rejects that argument. The evidence was relevant to and probative of matters at issue. Again, Petitioner points to the Basic Services Map, but as noted above, the Board concludes that the Basic Services Map is not dispositive. This argument is easily dismissed. As such, there is no error of law.

C. The ALJ Opinion Is Not Arbitrary or Capricious

Next, Petitioner contends that the ALJ decision is arbitrary and capricious, claiming a lack of consistency with prior decisions as it used a "Consent Decree and a Report from more than [seven] years ago." Petitioner further raises the issue of consistency with prior decisions in furtherance of a constitutional right of due process. More specifically, Petitioner states no ALJ (or Zoning Commissioner) has ever endeavored to impose a building moratorium or denied a plan based upon a conclusion that County-wide infrastructure was failing. Petitioner further faults the ALJ for relying upon the Consent Decree and the related reports that are more than seven years old to support the ALJ's analysis.

The Court of Appeals, in Harvey v. Marshall, examined at length the nature of the arbitrary or capricious standard in an administrative or agency decision-making context. 389 Md. 243, 295-303; 884 A.2d 1171, 1203-1208 (2005). In its review of case law, the Harvey Court noted that the standard as expressed in case law "less than well-defined with respect to judicial review of

discretionary actions." Id., at 297; 884 A.2d at 1203. The Court concluded that the standard "is best understood as a reasonableness standard." Id. A decision is arbitrary and capricious if it is "made impulsively, at random, or according to individual preference rather than motivated by a relevant or applicable set of norms." Id., at 299. In Maryland Transportation Authority v. King, 369 Md. 274; 799 A.2d 1246 (2002), the Court of Appeals provided an explanation of the standard:

> As long as an administrative sanction or decision does not exceed the agency's authority, is not unlawful, and is supported by competent, material and substantial evidence, there can be no judicial reversal or modification of the decision based on disproportionality or abuse of discretion unless, under the facts of a particular case, the disproportionality or abuse of discretion was so extreme and egregious that the reviewing court can properly deem the decision to be "arbitrary or capricious."

369 Md. at 291. The Harvey Court also stated that an administrative decision may fail for being arbitrary or capricious if it ignores the expressly stated policy goals. Harvey, 389 Md. at 294; 884 A.2d at 1202.

The Board does not find the ALJ decision arbitrary and capricious. The decision reflects the impact of Protestants' evidence regarding the sewer system upon Judge Beverungen, so much so he referred to the testimony by Mr. Grachek as "sobering." While parts of that evidence may be seven years old, other parts are more recent (e.g. the E.coli samples from June 2016-June 2019). Moreover, during the testimony from Mr. Grachek, it was revealed that the cost to repair the Jones Falls sewer shed was in excess of $28 million. Nothing in the record established that the specific relief sewers and interceptor repairs relevant to the Property had been made. More to the point, the ALJ was not persuaded that the sewer system could safely accommodate the addition of even more sewage to the overburdened sewer system. The ALJ Opinion reflects the magnitude of the matter and the ALJ's careful consideration of the evidence.

As such, Judge Beverungen concluded that the Plan was not in compliance with the development regulations and policies, as well as other laws. Therefore, the ALJ could not approve

the Plan. BCC §32-4-229. Moreover, the ALJ decision rests upon a foundational purpose for development, zoning, and other land use laws and controls --- protection of public health, safety and welfare --- an unquestionably legitimate and primary matter of governmental interest and public concern.

To that end, the decision reached is in accord with the County development policies and purposes embodied in BCC §§ 32-4-102, 32-4-103. Section 32-4-102 establishes that the development regulations are intended to protect and promote public health, safety, and welfare and to ensure that public facilities, services, and amenities are provided. The County, in adopting the development regulations, identified numerous purposes, including: to protect and provide for the public health, safety, and general welfare of the county; and to provide adequate and efficient transportation, water, sewerage, drainage, schools, parks, street lights and sidewalks, open space tracts, playgrounds, and other recreation facilities and other public requirements and facilities. BCC §32-4-103. The regulations apply to the process of review for approval of all development (BCC §32-4-104(a)) and, as such, apply to the ALJ hearing.

So, contrary to Petitioner's argument, the ALJ decision fully aligns and harmonizes with the County's development policies, legislative intent, and scope of the development regulations. Furthermore, Protestants presented substantial evidence that contradicted the County agencies' positions and that evidence is more than sufficient to support the decision below. This case stands in stark contrast to Elm Street case, where no contradictory evidence was presented. 172 Md.App. at 703-705; 917 A.2d at 174-175. The decision cannot be considered unmoored to the law or facts of the case. The Board concludes that the findings and conclusions reached were reasonable and rational. There was nothing egregious or extreme. There is no basis to find that the ALJ decision was arbitrary or capricious.

D. The Moratorium Argument

Though not a specifically identified error, Petitioner repeatedly asserts the ALJ's finding the sewer shed deficient or "woefully inadequate" constitutes a building moratorium in Baltimore County. At the hearing, the Board expressed reservations as to the possible consequence of the ALJ's finding. By the conclusion of the deliberation, the Board felt comfortable that the impact of the ALJ decision did not present such wide-ranging consequences, but if unintended consequences result in a *de facto* "moratorium," the County Council would need to address it at that time. To be clear, the Board does not consider the ALJ Opinion to be a "moratorium."

First, particular to the Property, there is no preclusive effect from the denial of approval of the Plan at this time if there is a substantial or material change in fact or circumstances. See, e.g. Seminary Galleria, LLC v. Dulaney Valley Improvement Ass'n, 192 Md. App. 719, 738; 995 A.2d 1068, 1079 (2010). Though the Seminary Galleria case concerned zoning matters, the same principle applies in the development context.

Second, also particular to the Property, Petitioner still has the ability to redevelop the site in recognition of the sewer interceptor issues, even if not in the intense manner proposed at this time. Petitioner can also continue with the status quo, thus preserving the present economic benefits Petitioner derives from the Property which are not affected in any way by the ALJ decision, with redevelopment still a possibility.

As to a more widespread "moratorium," the Board is similarly not convinced that this is a realistic consequence of the ALJ Opinion. The cases rise and fall upon their own merits. The disapproval of this Plan is not solely tethered to the existence of the overburdened sewer system independent of other facts. Rather, the evidence presented below persuaded the ALJ that the existing system that would be directly affected could not safely accommodate the increased flow

attributable to the Plan's proposed uses. The Board fails to see how disapproval of this Plan, at this location, in these circumstances, at this time, would compel or result in disapproval of other development plans in different locations with different circumstances.

The Board does not interpret the ALJ Opinion as imposing a "building moratorium" in the County, in the Second District, or any part of either, including the subject Property. Further, this Opinion should not be interpreted in that manner. Here, the Board is required to determine the legality of the decision and whether there was substantial evidence from the record as a whole to support the decision. Annapolis Market Place, LLC, 369 Md. at 703-704; 80 A.2d at 1038. The Board has found no legal issue and has found sufficient supporting evidence for the ALJ decision on the sewer issue. For the foregoing reasons, the Board is not persuaded there will be a "moratorium."

E. Other Issues Raised on Appeal by Protestants

The Board's affirming of the ALJ's decision below regarding the sewer issue and outcome renders some issues moot and/or otherwise do not require any other action at this time.[4] Several issues raised by either Petitioner or Protestants would not be dispositive of this matter. Those issues only become significant in the event there is approval of the Plan and/or the sewer system is found to meet all requirements under the law.

More specifically, two matters concerned conditions identified by the ALJ in the event there would be approval: (1) access to/from Falls Road for Princeton Sports; and (2) a forest buffer setback variance specific to the proposed residential use of Building F. As such issues require

[4] One Board member found an error of law and other defects in the ALJ Opinion with respect to the APFO's school overcrowding provision. The other two Board members do not join as they find the matter moot, requiring no further discussion by the Board at this time. Those issues are addressed in the attached Concurring/Dissenting opinion.

In the matter of: CPC Falls Road, LLC - Legal Owner
(CPC Falls Road Project/Bluestem)
Case No: CBA-20-006

approval before they have any significance, there is no need to address either, unless and until there is approval.

Similarly, while the ALJ made findings on the overcrowded schools issue, the decision does not require review at this time because, even if reversed, BCC §32-6-109(b) permits conditional approval of a development plan that fails to conform to the requirements on overcrowded schools, but still manages to meet all other requirements under the law. As such, only until the sewer system is found to meet all requirements under the law, would there be a need to address the disposition on the overcrowded schools issue. With the affirming of the decision below regarding the sewers, the issue, again, is moot at the present time.

Nevertheless, other issues can be disposed of along with the sewer issue as they are ones that do not first require approval of the Plan or findings that the relevant segments of the sewer system comply with the requirements under law.[5] In fact, the parties placed a greater emphasis on some of the remaining issues, including the master plan and open space, and to a lesser degree, the outfall, parking, and traffic issues.

1. Master Plan and Community Plan

Under the County Code, all development of land shall conform to: (1) the Master Plan; (2) adopted community plans; and (3) Article 32, Title 4 of the Code. BCC §32-4-102(a). The Court of Appeals confirmed the binding nature of the Master Plan upon development in Baltimore County. HNS Dev. v. People's Counsel, 425 Md. 436; 42 A.3d 12 (2012) The record establishes that the 2010 Ruxton-Riderwood-Lake Roland Community Plan (RRLRCP) was adopted by the

[5] The second set of Protestants also raise the issue of the lack of a plan to address or contain disruption of the possible chrysotile asbestos that may or may not be present in the onsite serpentine rocks. The ALJ did not address this issue in his opinion and its absence causes the Board to conclude it was not only not dispositive to the ALJ, but also not material to the ALJ for the decision below. If such a risk exists, it is expected to be handled in accordance with federal and state laws that regulate the same. The Board finds no error.

County Council in 2011 and therefore, this Plan must not only conform with the Master Plan, but also the RRLRCP.

Protestants argue the community plan calls for low-scale, two-to-three-story buildings on the east and west sides of Falls Road. The RRLRCP identifies commercial uses along Falls Road as ones intended to complement use of the adjacent Lake Roland Park. The RRLRCP recommends County acquisition of several parts of the Property and other parcels so that such land can be dedicated as open space. For other parcels, the community plan recommends exploring easements for expansion of Lake Roland Park and a route connecting the Park to the NCR Trail, as well as easements to protect paths within the Park. The community plan further encourages "a mix of uses throughout the Bare Hills Village area by facilitating redevelopment through the use of PUD, Transect and Renaissance redevelopment processes," and exploring other avenues, in order "to become a more community-oriented retail, office, and residential 'village.'"

Protestants' expert witness, Al Barry, a certified planner and the drafter of the RRLRCP, opined that the Plan was inconsistent with the community plan due to its density, lack of open space, lack of clear and safe pedestrian access, and scale of the proposed buildings (six stories, rather than village-style, two-to-three story buildings contemplated). Mr. Barry's testimony highlighted the importance of the RRLRCP's focus on connectivity to Lake Roland Park, and the attempt to make the park more visible and a more prioritized feature of the area. The ALJ noted Mr. Barry's testimony, and found him to be "impressive and articulate."

In rebuttal, Petitioner called a land planning expert, Christopher Jakubiak, who relayed the significance of the Property's and area's zoning classification, including the change to BM-CCC, its location in a T-5 transect zone, and that it is part of a Community Conservation Area and Community Enhancement Area. From the zoning designations and land management designations,

Mr. Jakubiak concluded that the County Council intended for higher-density mixed uses. Mr. Jakubiak also addressed other factors that contributed to his conclusion that the Plan conforms to the Master Plan, including its location within a priority funding area and proximity to the Falls Road light rail station, as well as concluding that the Plan advances the concepts of sustainable urban planning and smart growth. The ALJ found Mr. Jakubiak "credible and persuasive." In addition, Mr. Jakubiak agreed with Mr. Barry in that a major feature of the RRLCRP was the connectivity to the park, which was accounted for in the Plan.

The ALJ concluded the project conforms to the Master Plan 2020 and distinguished Mr. Barry's testimony about the RRLRCP. The ALJ found that Mr. Barry's testimony focused "almost exclusively upon the community plan," without considering the effect of the Master Plan 2020 or the Property's zoning and transect classifications. The ALJ found that focusing upon the community plan without meaningful consideration of the Master Plan 2020 was akin to the "tail [wagging] the dog." As such, the ALJ found Mr. Jakubiak's testimony more persuasive than Mr. Barry's. There is no error in reaching that conclusion.

The error, as identified by Protestants, arises from the ALJ's conclusion that the Master Plan 2020 "is the primary document recognized and required by state law." To begin with, the Master Plan includes all community plans adopted by the County Council. See, e.g, Appendix B to the Master Plan 2020.[6] The Master Plan provides that the community plans "address goals and provide guidance in a responsive and detailed fashion that augments the broader goals." (Master Plan 2020, at p. 178).

[6] Appendix B notes that the RRLRCP was adopted in 2002, though Protestants' Exhibit No. 24 identifies February 22, 2011. There does not appear to be any dispute that Protestants' Exhibit No. 24 is the community plan and was properly adopted, even if not identified accurately in Appendix B to the Master Plan 2020.

Protestants assert that "the timing of the adoption of the Community Plan is important," noting its adoption occurred after the adoption of the Master Plan 2020. While Protestants cast their argument as the RRLRCP as more specific (and timely) than the Master Plan 2020, Protestants do not acknowledge that, at the time of the adoption of the RRLRCP, the Bare Hills community was already designated within a T-5 transect zone as identified in the Master Plan 2020. The RRLRCP also identifies the use of the transect zone designation as a tool that can be used for the Bare Hills community to become "a more community-oriented retail, office and residential 'village'." The Plan evidences conformity with the RRLRCP in its inclusion of several low-scale mixed-use buildings along or close to Falls Road, with the taller buildings (six stories) being located away from Falls Road. The ALJ Opinion reflects that Judge Beverungen found that the Plan provided additional connectivity with Lake Roland Park in furtherance of the RRLRCP, even if not in all facets recommended in the RRLRCP at this time.

In light of the above, the evidentiary record supports the conclusion that the Plan conforms to the Master Plan and the community plan.

2. Open Space

As noted by the ALJ, §32-6-108, which concerns the APFO provision on open space, is "not frequently litigated in development cases," with waiver fees "routinely approved without any consideration of whether it would be feasible to provide the open space in the first instance."

As constructed, the law provides a scheme to make sure that recreational space is provided as part of a development plan approval. BCC §32-6-102; §32-6-108. The provision identifies a baseline "minimum requirement" of 1,000 square feet of open space per residential dwelling unit, which such open space being provided on or off site. §§32-6-108(c), (e)(1). That minimum, however, can be adjusted based on use and other variables. If the proposed open space is to be

located off-site, the regulation establishes a preference for the open space to at least be within the same councilmanic district as the proposed development, but provides that if located outside of that district, approval is required from the councilperson in which the development is to occur. §32-6-108(e)(3)(i). Under subsection (f), a developer shall submit a fee-in-lieu proposal and pay a fee to the County in the event it is determined that meeting the open space requirement is not feasible. The fee is to be used within the same councilmanic district. §32-6-108(f)(2).

It should be noted that after the hearing below but before the hearing at the Board, the Open Space law was amended by Bill No. 37-19. One change concerned the effect of this Property's location within the CCC District, with the version in place at the time of the hearing requiring satisfaction of the open space requirements identified in the Baltimore County Zoning Regulations, specifically, §235A.4 and providing a reduction of the open space requirement calculated from application of the BCZR from the open space requirement under the APFO. Bill No. 37-19, was enacted and went into effect on September 16, 2019. No party appears to contend that the present-day regulation, which changed the law by removing the provision concerning CCC Districts, applies to the calculation required in this case.

Petitioner states that "amenity open space" and "open space" are not the same thing. "Amenity open space" refers to the requirement arising from the BCZR, defined as "the available open space on a lot minus the area used for vehicular traffic, maneuvering and parking." BCZR §101.1. The terms "amenity" and "open space" as defined in the APFO, when considered together, are defined differently in the APFO versus the definition in the zoning regulations. As relevant, under the APFO provision, an "amenity" means a feature, equipment, facility, installation, or structure that contributes to the enjoyment of area residents and visitors, with outdoor and indoor examples set forth. §32-6-108(a)(2). "Open space" means a parcel or parcels of land that is a

minimum average of 75 feet wide or has an average grade of no more than 15 percent (followed by an exception, not relevant here, applicable in the greater Towson area). §32-6-108(a)(5).

Petitioner's open space analysis was identified on its amended Open Space Exhibit:

1) For the amenity open space required by BCZR §235A.4 (required minimum ratio of 0.20), the amenity open space ratio provided is 78,374 sf, divided by 321,010 sf (adjusted gross floor area), resulting in a ratio of 0.24.

2) For the open space (OS) required under the APFO:

a) Total Residential Development Units --- 152

b) Total OS required, 1,000 sf/unit --- 152,000/3.49 ac.

c) Total OS provided --- 78,734 sf/1.88 ac.

d) Total OS balance --- 73,626 sf/1.60 ac

The applicable fee schedule provides $5.05/sf to calculate the fee for this project and thus, 73,626 multiplied by 5.05, provides the fee cost:

e) Fee Cost --- $371,811.30

Pursuant to §32-6-108(i)(2)(iii), a developer is entitled to a reduction by 100 percent of the verified cost of any outdoor public amenity provided onsite or offsite and 60 percent of the verified cost of any outdoor private amenity provided onsite or offsite, but not any indoor amenity.

3) Deductions:

a) Pool and associated amenities --- $186,000

b) Outdoor recreation (pickleball court) --- $39,750

c) Park signage, benches, trash cans, etc. --- $19,200

d) Walking trails, 800 lf @ 20 lf --- $260,550

e) Offsite outdoor public amenities at Lake Roland Park --- $92,389.45

According to Petitioner, the total onsite private amenities amount to $434,250.00. A 60 percent reduction, pursuant to §32-6-108(i)(2)(iii), is applied to the open space balance, resulting in a new balance of $111,261.30. Outdoor offsite public amenities, consisting of trail maintenance and improvements, a "Roger Latham Serpentine study implementation," and compactor/roller equipment, amounts to $111,500.00, leaving a negative balance of $238.70. As a result, Petitioner determined that no waiver/fee-in-lieu is required. A fee-in-lieu would result if a positive balance remained, but before that payment is required to be paid over to the County, according to Petitioner, a determination is made as to the feasibility to comply with the open space requirements.

Here, the ALJ concluded Petitioner disregarded the question of feasibility and proceeded instead to the fee and offset analysis. Nevertheless, the ALJ then found it is not feasible for Petitioner to provide the requisite open space on or off site. Protestants agree with the ALJ as to when a feasibility determination is made, but challenge the outcome reached below as to feasibility question in this context.

The Board concludes the ALJ's approach as to when a feasibility determination is required, particularly, as testified to by Barbara Hopkins, the Executive Director of NeighborSpace, is the correct one. Ms. Hopkins explained, first, she has substantial experience and familiarity with the open space requirements as NeighborSpace receives 20 percent of any cash fee collected by the County. §32-6-108(f)(3), as well as making recommendations to the County Council on prior revisions to the open space law. She was received as an expert in the open space law and requirements in Baltimore County.

Substantively, Ms. Hopkins established that, under the open space law, a developer must demonstrate that it cannot comply with the open space requirements onsite and that it cannot

comply with the open space requirements offsite before the question of the payment of a fee-in-lieu arises. As such, the Board concludes that the ALJ's interpretation of the open space law correct and the finding is adequately supported by sufficient evidence.

With respect to the second part, Judge Beverungen concluded it was not feasible for Developer to provide the requisite open space on or off site. The ALJ stated, while it was true the project could be scaled back in order to comply, scaling back a project, as a standard, would prevent a developer from proving a lack of feasibility to provide open space. The consequence of doing so would render "many" projects no longer economically feasible to a developer.

The Board is not required to fully agree with the reasoning employed. The Board is required to analyze the record to determine whether sufficient evidence exists regarding the ALJ's finding of lack of feasibility to provide open space on and off site. The record establishes Petitioner's engineer, Joshua Sharon, identified constraints caused by stormwater management, parking travel ways, utilities and landscaping as the items that preclude the provision of 73,000 square feet of open space onsite. Judge Beverungen also concluded that the Property's neighborhood and Council District "is established and built out," rendering the provision of off-site open space unfeasible. The ALJ also factored in the Property's proximity to Lake Roland Park, stating "it would be superfluous for Developer to provide on-site a small open space parcel next to such an expansive resource." The Board majority again believes this to be a matter for resolution by the ALJ and is supported by the evidence and findings.[7]

As to when a verified cost is required in the development process, the Board concludes that ALJ's statutory interpretation, supported by the testimony of County landscape architect, James Hermann, is correct. Section 32-6-108(e)(2) specifically calls for a cost estimate as part of the

[7] One Board member dissents on a part of the feasibility analysis.

development plan submission: " the applicant shall provide a design, layout, and if paying a fee, the applicable *cost estimate* for the amenity with the development plan submission." (emphasis added). There is no error on this point.

3. Remaining Issues: Outfall, Parking, and Traffic.

As noted above, the parties focused their efforts on appeal, both, at the hearing and in closing memoranda, on the sewer, master plan, and open space issues. Other issues, such as stormwater outfall, parking, and traffic study deficiencies were raised.

For the outfall issues, Protestants argued the Developer did not have approval and a franchise ordinance from Baltimore City to permit the discharge of stormwater onto city property.

Pursuant to BCC §32-4-224(10), a development plan is required to contain: stormwater management areas supported by preliminary hydrology computations, and proposed and existing storm drainage systems and verification of suitable outfall. Protestants seize upon the phrase "verification of suitable outfall," noting the absence of formal approval by the city and approval of a conceptual plan by DEPS is not tantamount to approving the suitability of the outfall. The ALJ concluded that the suitability of the outfall as identified on a plan is an engineering matter and not one of licensing or a franchise agreement, referencing BCC §§ 32-4-224(a), 33-4-108(b); and COMAR 16.17.02.09.D.

Much like the open space issue above, the ALJ applied a common sense analysis, as opposed to a rigid, technical reading of language, which is permissible. Annapolis Market Place, 369 Md. at 715; 802 A.2d at 1044-1045 (citations omitted). In addition, the ALJ is afforded deference in the interpretation and application of a law addressed by the ALJ. See, e.g. Elm Street, 172 Md.App. at 701; 917 A.2d at 172-173 (citations omitted).

The ALJ recognized that the surface water has been discharging on to city property for many years and the Plan continued that practice, albeit with a modern and properly designed outfall. Due to the history, the need to secure the legal right prior to any building permit, and approval of the conceptual plan by DEPS, the ALJ found Petitioner satisfied this requirement. The Board finds no error in interpretation or application of the law, and further finds the factual record is sufficient to sustain the conclusion reached below.

Next, Protestants take issue with the parking to be provided. The Plan calls for 584 spaces to be provided, three more than the 581 calculated as required under BCZR §409.6. The problem, according to Protestants, is that parking spaces will also be used by those accessing the Park from the parking lot. Without spots dedicated to public use, there is the risk of conflict between those spaces needed to serve the project uses and those that may avail themselves of open parking for Lake Roland Park, potentially creating a shortage. As such, Protestants contend Petitioner failed to satisfy its burden that the Plan complies with all applicable policies, rules, and regulations.

Judge Beverungen noted that BCZR §409.6 does not require any specific number of off-street parking spaces for the public park, a point acknowledged by Protestants. Developer entered into a covenant agreement with another nearby association, Riderwood Lake Roland Area Improvement Association, to open the parking onsite for public use associated with Lake Roland Park. Nothing in that agreement compels Petitioner to provide a dedicated number of spaces and the County is not party to that agreement. Petitioner provided a sufficient number of spaces as required by BCZR §409.6.The Board concludes that the ALJ's findings are without error.

Protestants also challenge the traffic findings. At the hearing, testimony was presented regarding traffic backups in the area, attributed to spillover and/or relief from I-83 backups and traffic to and from the private schools in the area. Falls Road is a state road. State Highway

Administration (SHA) required the completion of a traffic impact study of certain nearby intersections. Protestants take issue with the intersections selected, but, as noted by the ALJ, were specified for the study by SHA, not Petitioner. The study indicated the intersections would function at the same level following completion of the project. As such, the ALJ concluded that approval by SHA and the County agencies was sufficient at this stage for Petitioner to meet its burden and was not persuaded by the arguments from Protestants. Again, the Board finds no error.

IV. Motion for Additional Evidence

Petitioner filed a Motion for Additional Evidence and Testimony with the Board in advance of the argument on appeal. In response, Protestants filed a Motion to Strike the Motion for Additional Evidence and Testimony and/or an opposition thereto otherwise. After a hearing on the Motions, the Board unanimously denied the Motion to Strike in general, but a majority of the Board granted the Motion to Strike solely as to the affidavits attached to Petitioner's Motion. Clearly, for the Board to understand the nature of the Motion for Additional Evidence and testimony and to give consideration, the Board needed a proffer of what the evidence would be.

As for the Motion for Additional Evidence and Testimony, the Board concluded additional evidence was unnecessary as the some of the information proffered was already part of the record, particularly the County's comments on the sewer system and their recommended approval. Whether the County is presently compliant with the Consent Decree fails to address the ALJ's findings, reasoning or conclusions. The Consent Decree is in place through 2025. The interceptors or trunks relevant to this Plan can still be deficient though the County is compliant. The June 2016-June 2019 evidence regarding levels of E.coli bacteria reveal that, at times, the E.coli bacteria exceeds the threshold and at other times is under the standard. The Board also concluded that Petitioner had the opportunity to present this additional evidence on the sewer system in rebuttal,

but did not do so. Frankly, the Board highly doubts it would have made a difference if Petitioner did present the proposed evidence below.

The ALJ stated in his Opinion, "[t]he Developer did not contradict any of the *substantial evidence* presented on this point by Protestants and did not present testimony from an engineer or sanitarian" to show the sufficiency of the sewer system at present to accommodate existing and proposed demand. (emphasis added). The Opinion is quite clear as to the profound effect of Mr. Grachek's testimony, the reports from RK&K, and other documentary evidence upon the ALJ. The ALJ found the evidence, not only credible, but "sobering." The ALJ did so even after hearing the relevant County agency's recommendation to approve the Plan.

The Board neither found the ALJ's determination to constitute extraordinary circumstances, nor heard some other compelling reason to justify the exercise of the Board's discretion to receive the proposed additional evidence. See, BCC §32-4-281(d)(2) ("At the Board's discretion, additional evidence and testimony may be allowed."). As the Board found no reason to exercise the Board's discretion in this manner and deviate from the norm, the Board denied Petitioner's Motion for Additional Evidence and Testimony.

ORDER

THEREFORE, ON THIS 3rd day of January, 2020, by the Board of Appeals of Baltimore County, it is hereby:

ORDERED that the Administrative Law Judge's Development Plan Opinion and Order are hereby **AFFIRMED**, as to the sewer system, master plan, suitable outfall, parking, and traffic, and it is further,

ORDERED that the issues regarding overcrowded schools, forest buffer, and the condition imposed in favor of Princeton Sports, are hereby now **MOOT**.

Any petition for judicial review from this decision must be made in accordance with Rule 7-201 through Rule 7-210 of the *Maryland Rules*.

BOARD OF APPEALS
OF BALTIMORE COUNTY

Jason S. Garber, Chair

Kendra Randall Jolivet

Andrew M. Belt

IN THE MATTER OF	*	BEFORE THE
CPC FALLS ROAD, LLC (CPC FALLS ROAD PROJECT/BLUESTEM) 6241-6247 Falls Road HOH Case No. 09-0861 9th Election District 2nd Councilmanic District	*	BOARD OF APPEALS
	*	OF
	*	BALTIMORE COUNTY
	*	CASE NO: CBA-20-006

* * * * * * * * * * * * *

CONCURRING & DISSENTING OPINION

The undersigned writes separately to address two issues: (1) overcrowded schools; and (2) open space, particularly with respect to the off-site feasibility analysis and conclusion.

First, the undersigned dissents with the majority opinion to the extent that the majority opinion fails to address two errors regarding the overcrowded schools issue. Though the undersigned dissents on that basis, the undersigned, nevertheless, concurs in the result. There would be little need to address this issue at this time; however, given the similarity with the sewer issues, and what strikes the undersigned as a starkly plain error of law and a decision without substantial evidence in support, the undersigned feels compelled to identify those issues at this time.

The school system, much like the affected sewer system, has a significant overcrowding and lack of capacity issue. Much like the significantly overburdened segments of the sewer pipes, the undisputed evidence in this case established that Towson High School, the high school which students from the proposed project would be districted, is already significantly overcrowded without factoring in any additional students. As defined by law, if a school is 15% or more over its state-rated capacity (i.e: 115% capacity), it is considered to be "overcrowded" under the APFO. See BCC §32-6-103(a)(3).

Baltimore County Public School System issues an annual report on its schools' enrollment, capacity, utilization, and projections. The February 2019 Student Count report (Protestants Ex. 20) and related 2018-2019 APFO Report and Maps, dated May 9, 2019, (Protestants Ex. 22), both of which reveal Towson High School enrollment at 129.29% of its state-rated capacity. Remarkably, its present status of being 29.29% overcapacity is the least overcrowded Towson High School families can expect over the next ten years.[1] Each year, the student enrollment is projected to increase significantly, revealing that in five-years time, Towson High School is projected to be at 151% capacity, and in ten-years time, at 161% capacity. Towson High School certainly surpassed the overcrowded standard and frankly, has ventured or at least is projected to venture into dangerous territory.

Unquestionably, a school that exceeds 115% capacity presents numerous issues, some identified and others logically inferred, including scheduling, class availability, student/teacher ratios, staffing matters, and other problems. More to the point for this analysis, a school that exceeds 115% capacity presents safety issues, whether experienced in overcrowded common areas and hallway spaces, overcrowded bathrooms, overcrowded classrooms, overcrowded transportation, and/or as otherwise attendant to the use and proliferation of trailers (euphemistically referred to as "learning cottages" or "portable classrooms") on school grounds.

[1] County Exhibit 1 "School Impact Analysis", prepared by Jennifer Nugent, Chief of Development for the Department of Planning, identified Towson High School's enrollment as 123.25%. The filing date is identified as September 7, 2018. As such, it is understood that the numbers used reflect the prior year's (2016-2017) numbers, as it would not have captured the September 30 enrollment numbers as contemplated by §32-6-103(c) and other laws. A revised school analysis was submitted reflecting numbers from 2017-2018. Protestants introduced other exhibits establishing more up to date statistics from Baltimore County Public Schools revealing the overcrowding issue at Towson High School was worse and projected to be significantly worse than identified in the earlier exhibits. Similarly, the elementary school to which students from this project would be districted, West Towson Elementary, is also overcrowded (121%). The initial County exhibit did not identify it as such as the exhibit and testimony also relied on the prior year's numbers. The discussion concerning Towson High School is equally applicable to West Towson Elementary School in light of its status as an overcrowded school, even if the magnitude of the overcrowding at Towson High School is even more significant.

As set forth in the APFO provision on overcrowded school districts, development approval may not be granted in existing overcrowded schools or where development will result in creating an overcrowded school. BCC §32-6-103(e). There is, of course, an exception. Subsection (f) states that development approval may be granted in overcrowded school districts in certain circumstances, including, as relevant here, where an adjacent school has sufficient capacity to render the overcrowded school less than 115% of the state-rated capacity. In short, as long as another school can absorb more students to relieve the overcrowded school, development can proceed.

Jennifer Nugent, Chief of Development in the Department of Planning, provided testimony echoing the County's understanding of that exception. To that end, Ms. Nugent provided testimony and the related School Impact Analysis to reveal that neighboring Riderwood Elementary School and Loch Raven High School had sufficient available capacity.

However, when asked if students are actually redistricted for this purpose, Ms. Nugent testified that she does not know for certain. No evidence was presented revealing any plan was in place or being designed to reduce the existing overcrowding at, e.g., Towson High School, without even factoring in the additional students projected from this project. There is also no actual plan for relief to account for the additional students as well. In dispensing with the issue, the ALJ found the following: "Ms. Nugent testified sufficiently capacity exists at adjacent schools, and *that is all that is required by the cited BCC provision.*" (emphasis added).

The undersigned finds the ALJ's interpretation to be an error of law and finds the conclusion reached not supported by competent, material and substantial evidence in light of the entire record as submitted. The undersigned considers the error of law and findings in light of the evidentiary record such a departure that discussion of the same is still required at this time.

As set forth in Annapolis Market Place, LLC v. Parker, the Court of Appeals rejected similar boilerplate findings and limited evidence without factual support. 369 Md. 689, 718; 802 A.2d 1029, 1048 (2002). In that matter, the Court of Appeals concluded that the Anne Arundel County Board of Appeals erred in a zoning reclassification matter when it concluded that transportation facilities met the statutory requirements because the "accomplishment of the proposed traffic improvements was reasonably probable of fruition," when the Board was required to make a finding that adequate access roads existed or were programmed for construction. Id. The Court noted that findings of fact by an administrative agency "must be meaningful and cannot simply repeat statutory criteria, broad conclusory statements, or boilerplate resolutions." Id. The Court also relied on other cases, with one particularly asserting "It is arbitrary and unlawful for [an administrative agency] to make an essential finding without supporting evidence." Id., quoting Aaron v. City of Balt., 207 Md. 401, 406; 114 A.2d 639, 640 (1954).

The conclusion that "*all that was required*" was a statement that an adjacent school had extra capacity is precisely the type of evidence and finding rejected by the Court of Appeals. In fact, the finding here is even more egregious than that in the Annapolis Market Place case. Nothing in the evidentiary record can provide a foundation to conclude that the available capacity in adjacent schools will be used to solve the severe overcrowding in a substantial way or even to accommodate the extra students from this project to at least consider its impact.

Requiring only confirmation of the existence of those seats, as opposed to requiring utilization of those open seats to solve or at least reduce the overcrowding in the affected school, circumvents the purpose for this law and fails to effectuate the plain language in §32-6-103(e) and §32-6-103(f)(3). The consequence of interpreting the law in manner set forth in the ALJ Opinion simply results in even more school overcrowding without any plan for relief, again, increasing the

risks and problems. In addition, permitting the existence of these issues to linger falls far short of any "adequate public school facilities" standard for planning and development purposes, as well as important considerations for the County and its residents beyond that which must be considered and addressed by the Board.

Much like Mr. Grachek's testimony regarding the sewer system, for an already significantly overburdened system adding "even if just a little bit," is unwarranted, especially with no plan for relief in place or on the horizon. This is too important of an issue, especially in light of significant safety, health and welfare concerns, as well as other legitimate issues, to not address at this time even if the issues becomes moot in light of the Board affirming the ALJ decision with respect to the sewer issue.

Nevertheless, the undersigned concurs in the result because the APFO authorizes, but does not mandate, the ALJ to conditionally approve of a development plan that does not meet the requirements of the overcrowded schools provision (§32-6-103), but all other parts of the development plan comply with all other laws or regulations. BCC §32-6-109. Once conditionally approved, the Plan goes on a waiting list for development and may proceed when the Plan can meet the requirements. BCC §32-6-109(c), (e).

In other words, approval can be conditioned on, e.g., an overcrowding relief plan coming to fruition. As such, a conclusion that that development plan does not comply with the law is not necessarily fatal to this Plan. Because the ALJ found that this Plan does not comply with all other laws or regulations, the ALJ could not conditionally approve of the Plan on this basis. Therefore, the undersigned concludes the Board can safely, and should, address the legal errors on this issue at this time, even if the ultimate outcome cannot be addressed and would be rendered premature in light of the Board affirming the ALJ on the sewer issue.

With respect to the open space issue, the open space law provides that the developer "shall meet the open space requirement on-site or off-site." The ALJ Opinion notes that the Petitioner's expert testified Petitioner wants to take advantage of the Property's proximity to Lake Roland Park rather than provide open space onsite.

The undersigned concurs with the majority as to the ALJ's untangling of the open space law to interpret it as requiring Petitioner, in this instance, to establish the lack of feasibility to provide open space onsite or offsite. Petitioner failed to do so. Nevertheless, though the ALJ found that Petitioner failed to address the lack of feasibility, the ALJ still concluded it was not feasible to provide the open space onsite or offsite.

Leaving aside whether the ALJ's finding regarding the failure to address the feasibility issue and the consequences of that finding, the Board concluded the evidentiary record was still sufficient to substantiate the ALJ's conclusion as to the on-site open space. The undersigned, however, dissents as to the Board's affirming the ALJ's determination regarding the feasibility of providing off-site open space. The ALJ Opinion states that "the neighborhood (and Council District) in which the project is located is established and built out, which in my opinion would not make it feasible to provide the open space off-site."

To the undersigned it seems the ALJ has essentially eliminated the requirement to prove the lack of feasibility to provide open space offsite. Even assuming the neighborhood to be sufficiently built out to preclude the provision of offsite open space (to which, nothing is identified for support), the ALJ suggests *all* of the 2nd Council District is also too built out to provide offsite open space. Seemingly, such a finding may be applicable to most, if not all, Council Districts.

The finding does not appear to have any factual support and frankly, its recitation and inclusion without reference to the evidentiary record is of such a jarring nature, the undersigned

questions whether there is a misunderstanding of it. In any event, there still is nothing identified in the record to establish why open space cannot be provided offsite somewhere else in the 2nd Council District. The ALJ also suggests that the Property's proximity to Lake Roland Park cannot be ignored,[2] but neither can §32-6-108(e)(3)(i)) which even allows for the open space to be provided in any other Council District with approval of the relevant Councilperson. Therefore, even assuming that the 2nd Council District is too built out, to which the undersigned has significant doubt, nothing in the record has been identified that offsite open space cannot be provided somewhere, really anywhere in the County. Simply, as recognized by the ALJ, Petitioner simply did not want to do so. The undersigned would, at a minimum, remand on this issue as there is nothing that is apparent from the ALJ Opinion from which the undersigned can determine how the ALJ concluded that there was a lack of feasibility in providing offsite open space.

January 3, 2020
Date

Jason S. Garber, Chair

[2] The undersigned also takes issue with the notion that the requirement to provide onsite or offsite open space can be circumvented because of the property's proximity to a park or some other existing large open space area. The purpose of the law is to provide more open space and while common sense may dictate that a small onsite open space parcel does not have the same utility or importance when located next to a large park, the law still requires open space to be provided somewhere, absent a showing of a lack of feasibility.

SECTION 260

Residential Performance Standards
[Bill Nos. 34-2001; 58-2001[1]]

§ 260.1. Scope; statement of legislative intent of performance standards.

A. This section applies to all residential development of four or more lots in Baltimore County that is located within the urban/rural demarcation line.

B. Intent; evaluation of compliance.

1. These performance design standards are intended to ensure that residential development in Baltimore County conforms with a higher quality of design.

2. The evaluation of compliance shall occur as part of the review of development proposals.

3. The Department of Planning may require the submittal of sufficient information, such as building elevations and grading plans, from which a finding can be made on compliance of the project with the standards. **[Bill No. 55-2011]**

4. Deviation from the standards may be allowed only if clearly necessary to:

a. Comply with another standard;

b. Comply with environmental regulations or otherwise protect resources; or

c. Achieve the best possible development design, considering other goals in the Comprehensive Manual of Development Policies.

C. Consideration of findings; deviation from standards. **[Bill No. 122-2010]**

1. The Department of Planning's findings shall be made by the Director of Planning and submitted to the hearing officer or to the Director of Permits, Approvals and Inspections, as applicable. **[Bill No. 55-2011]**

2. The hearing officer or the Director of Permits, Approvals and Inspections, as applicable, shall consider the findings presented by the Director of Planning or the Director's designee before a development plan is approved.

3. After considering the findings, the hearing officer or the Director of Permits, Approvals and Inspections may deviate from the standards only in accordance with the requirements in Paragraph B.4 of this subsection.

---

1. **Editor's Note**—This bill provided that it would apply to:
1. A concept plan accepted for filing by the Department of Permits and Development Management on or after July 12, 2001; or
2. In the South Perry Hall — White Marsh area as defined in the official comprehensive Zoning Map accompanying Bill No. 33-01 as adopted by the County Council, a development plan approved on or after May 25, 2001.

§ 260.2. Site planning.[2]

A. A development proposal shall:

1. Retain the existing quality vegetation of the site to the fullest extent possible and protect the root systems of that vegetation during construction.
2. Integrate locally significant features of the site, such as distinctive buildings, vistas, topographic features, specimen trees, tree stands, hedgerows, monuments, landmarks, ruins and gardens, into the site design, and retain the character of the features and their settings.
3. Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography.
4. Provide a landscaped buffer between the rear yards of dwellings existing on May 25, 2001, and the rear yards of abutting new dwellings.
5. Provide for smooth transitions between neighborhoods by arranging and orienting the proposed buildings and site improvements to complement those in the surrounding neighborhood.
6. Provide transitions with respect to setbacks, street patterns, and building-to-street grade relationships.

B. Reverse-frontage lots are permitted only if the petitioner can demonstrate that adequate setbacks, topography, berming, landscaping or building design, will effectively screen private yard space and decks from the public view. Fences may not be located closer than 20 feet to a public right-of-way.

C. Panhandle lots are not permitted as a matter of right. Panhandles must conform to § 32-4-409 of the Baltimore County Code and to the standards in the Comprehensive Manual of Development Policies. Panhandle lots are not permitted in the South Perry Hall-White Marsh area. Panhandle lots are not permitted in the Middle River area, as defined in Bill No. 59-07, or in the Greenspring-East Pikesville area, as described in Resolution 20-11, unless each lot has a minimum size of two acres. Panhandle lots are not permitted in the Carney-Cub Hill-Parkville area, as described in the Carney-Cub Hill-Parkville Area Community Plan (Resolution No. 22-10). **[Bill Nos. 137-2004; 115-2006;[3] 60-2007; 21-2012; 12-2013]**

D. The minimum width for any single-family detached lot located in the South Perry Hall—White Marsh area is 75 feet as measured along both the front wall and rear wall of the dwelling unit. This subsection does not apply to alternative site design dwellings permitted in accordance with Section 1B01.1.A.1.b. **[Bill No. 74-2012]**

2. **Editor's Note**—Bill No. 49-2016 repealed the C.T. District of Towson. However, in regard to this district, Section 5 of Bill No. 49-2016 stated that the Act would be applied prospectively and have no application to any development plan or development approved by the hearing officer prior to the effective date of the Act, or to a development project for which a concept plan, limited exemption plan or planned unit development application was filed prior to 8-30-2016, or to any parking contract or lease associated with an approved development plan or development, but that a material amendment to a development plan, development, or parking contract or lease was required to be in compliance with the requirements of said Act.

3. **Editor's Note**—This bill was subsequently amended by Bill No. 140-2006 to provide that it would not apply to any development plan for which a hearing officer's hearing was scheduled prior to 11-1-2006.

E. Single-family detached lots in Middle River — Bird River area. **[Bill No. 3-2002[4]]**

1. For any single-family detached lot located in the Middle River — Bird River area, as defined in County Council Bill 122-01:
   a. The minimum width is 75 feet as measured along both the front wall and rear wall of the dwelling unit;
   b. The minimum front yard setback is 20 feet; and
   c. The minimum rear yard setback is 40 feet, except for:
      (1) Unroofed additions, including patios and decks; and
      (2) Roofed additions which do not exceed in width 50 percent of the dwelling unit, and which do not extend more than ten feet into the rear yard setback area.
2. This subsection does not apply to alternative site design dwellings permitted in accordance with Section 1B01.1.A.1.b.

F. Single-family detached lots in Middle River area. The Middle River area, described in the Middle River Community plan adopted by Council Resolution 77-07, is designated as a design review area. For any single-family detached lot in the area that is part of a development plan and is zoned D.R.3.5, the minimum required width is 75 feet as measured along both the front wall and rear wall of the dwelling unit, and the design review panel shall consider the design standards of this section when making a recommendation to the hearing officer. **[Bill Nos. 60-2007; 27-2008[5]]**

§ 260.3. Open space.

A development proposal shall:

A. Integrate open space areas into the proposed development by:
1. Creating focal points along streets;
2. Locating landscaped open green spaces in view of the development entrance or adjoining public street;
3. Planning a linked network of natural and landscaped open areas connected by pedestrian/bike trails; and
4. Orienting dwelling units around open areas or squares.

B. Incorporate significant features, such as stands of trees, into open areas.

C. Link the development's open areas to the surrounding neighborhood open areas, including public parks, walks, and bike trails, and create both functional and visual continuity, e.g., by matching the design of a bike trail in the proposed development to the bike trail located in the adjoining property.

4. **Editor's Note**—This bill was amended by Bill No. 44-2002 to provide that it would not apply to concept plans accepted for filing prior to 3-24-2002.
5. **Editor's Note**—This bill also provided that it would not apply to any development project for which the initial development plan approval was obtained prior to 9-19-2007.

§ 260.4. Streets and parking.

A. A development proposal shall:

1. Provide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation.
2. Design streets to slow traffic by offsetting alignments. Reducing street width, reducing the length of blocks, and employing the use of traffic management devices such as roundabouts, chokers, chicanes, etc., to accomplish traffic calming.
3. Allow on-street parking.
4. Provide pedestrian and bicycle access to commercial areas and community facilities on site within the development and to the surrounding neighborhood.
5. Provide street and parking accommodations which complement the surrounding neighborhood.

B. Culs-de-sac may be used if it is demonstrated that a street connection is not feasible due to site conditions such as severe grade transitions or sensitive natural features, or an alternative site layout is not feasible. If culs-de-sac are used, developments should consist of a balance of street patterns (culs-de-sac and connections). If culs-de-sac are used, design elements such as center landscaping and traffic circles shall be used.

C. Street widths and front yard setbacks may be reduced in accordance with traditional neighborhood design standards.

§ 260.5. Landscape design.

A. A development proposal shall:

1. Landscape public open spaces to invite users. Particularly emphasizing the intended entrance to the open space.
2. In addition to plant material, use fences, walls or earth forms to provide effective and attractive screens and buffers where necessary.
3. Provide for, or reinforce and maintain, a continuous street tree canopy by preserving healthy street trees or, if they are not present, planting new trees. The canopy shall be comprised of trees of the same species or trees with design characteristics and growth habits that are similar to those of the existing street trees.
4. Include the design for site signage on the schematic landscape plan. If this is not possible, the signage design may be included in the final development plan and shall be approved before issuance of any building permits.

§ 260.6. Buildings.

A. A development proposal shall:

1. Provide variety in housing type or design, while maintaining continuity in scale, rhythm, proportion and detail.

2. Orient the front of the dwelling toward the street and incorporate prominent entries and porches or stoops into front building facades.
3. Adhere to a consistent front building setback for all dwellings on the same street or square, so that the fronts of dwellings define a uniform street edge.
4. Design decks, balconies and porches as components of the building following dominant building lines, proportions and style, and in a scale appropriate to the available space on the site. Decks shall be screened to minimize visibility from a public street.
5. Design accessory structures at a scale appropriate to the dwelling and design storage buildings and garages with the same architectural theme as the principal building on the site, providing consistency in materials, colors, roof pitch, and style.
6. Extend the finish material of the exteriors of buildings to grade, or, if this is not possible, to within 12 inches of grade, on all sides of the building excluding foundation walls which shall use a finished quality material such as decorative concrete block, poured concrete with a brick pattern, or stucco, and provide landscaping along the foundation.
7. Use similar materials and design elements on all building facades and articulate all building facades using coordinated architectural features such as porches, windows, doors, chimneys, gables, and dormers.

B. Garages may not become the dominant street feature. Garage doors shall use items such as windows, decorative patterns, and color to relieve the visual impact of the house from the street.

§ 260.7. Adoption of regulations. [Bill Nos. 91-2006; 55-2011]

The Department of Planning may adopt a manual of regulations to implement the residential performance standards of this section and Section 1A04.4. The regulations shall be adopted in accordance with Article 3, Title 7 of the Baltimore County Code.

SECTION 4A00
Purpose and Definitions
[Bill No. 178-1979]

§ 4A00.1. Purpose.

The purpose and intent of this article is to implement the objectives of the county-wide Master Plan and to adopt standards and guidelines relative to new development in all areas of the county which would result in land use patterns, location of new growth and timing of growth and development that is consistent with preservation of the quality of life in existing neighborhoods, with the ability of the county to provide necessary public facilities and services to support new development, with the ability of the county to correct existing service and facility deficiencies, with the preservation of natural, agricultural and environmental resources and with the promotion of new growth and development in appropriate areas.

§ 4A00.2. Definitions.

For the purposes of this article, certain words and terms are defined as set forth below:

CAPITAL IMPROVEMENTS PROGRAM — A proposed schedule of all future projects listed in order of construction priority together with cost estimates and the anticipated means of financing each project. All major projects requiring the expenditure of public funds, over and above the annual budget, for the purchase, construction or replacement of the physical assets of the community are included as set forth in the Baltimore County Charter. "Capital improvements program" shall refer to the existing or any subsequently adopted CIP as defined herein.

MASTER PLAN — The comprehensive plan for orderly development of the county, adopted by the County Council, pursuant to the Baltimore County Charter and Code, and including all parts and elements thereof which shall serve as the basis for land use regulations in the county.

SECTION 4A01
(Reserved)[1]

1. **Editor's Note**—Former Section 4A01, Monitoring of Development Activity, adopted by Bill No. 178-1979, was repealed by Bill No. 5-1992.

SECTION 4A02

Basic Services Maps

[Bill Nos. 178-1979; 9-1980; 183-1980; 179-1981; 186-1981; 152-1982; 172-1983; 37-1984; 18-1986; 179-1986; 26-1990]

§ 4A02.1. Purpose and intent.

The County Council finds that important public facilities in certain predominantly urban areas of the county are inadequate to serve all of the development that would be permitted under the regulations of the zones or commercial districts within which those areas lie. Basic Services Maps are hereby established to regulate nonindustrial development in those under-served areas to a degree commensurate with the availability of these facilities. Basic Services Maps are not permanent and will be reviewed annually with reports to the County Council.

§ 4A02.2. Conflicts.

In the event that there is any conflict between the provisions of this article and any other provisions of these Zoning Regulations, the provisions of this article shall govern.

§ 4A02.3. Adoption of Basic Services Maps.

A. The following Basic Services Maps, which shall be in the custody of the Zoning Commissioner for Baltimore County and posted on the County's Internet website, are hereby adopted and made a part of this article: **[Bill Nos. 52-1991; 13-1999; 18-2000; 27-2001; 32-2002; 19-2003; 22-2004; 35-2005; 28-2006; 25-2007; 20-2008; 30-2009; 17-2010; 15-2011; 20-2012; 24-2013; 14-2014; 28-2015; 18-2016; 15-2017; 25-2018; 12-2019; 30-2020; 32-2021]**

1. 2021 Basic Services Sewerage Map;
2. 2021 Basic Services Water Supply Map; and
3. 2021 Basic Services Transportation Map, with the following amendments:
   a. The commuter shed located at the intersection of Ebenezer Road and Pulaski Highway shall be redrawn to exclude the area of land shown on the map attached as Exhibit "A" and more fully described herein as follows:

      Beginning for the same on the southeast side of Pulaski Highway, 150 feet wide, at a point designated with a Maryland State Coordinate Value of North 628782.41 and East 1478470.26 as shown on a plat entitled "Final Plat, Cecelia Schwaber, Exempt Trust U/A" and recorded among the land records of Baltimore County in Plat Book S.M. 78, Folio 368; thence binding on the southeast side of Pulaski Highway and on the outline of said plat (1) North 45 degrees 02 minutes 33 seconds East 1068.61; thence leaving said highway and binding on the outlines of said plat the following six courses and distances: (2) South 69 degrees 53 minutes 59 seconds East 70.16 feet; thence (3) South 06 degrees 21 minutes 02 seconds East 1947.07 feet; thence (4) South 82 degrees 05 minutes 22 seconds West 518.59 feet; thence (5) North 07 degrees 00 minutes 39 seconds

West 344.59 feet; thence (6) South 82 degrees 59 minutes 21 seconds West 365.35 feet; and thence (7) North 06 degrees 56 minutes 32 seconds West 985.35 feet to the place of beginning.

Containing 31.489 acres of land, more or less, with the courses based on the Maryland Coordinate System (NAD 83/91).

Being known and designated as #11301 Pulaski Highway - Parcel 27,230 as shown on a plat entitled "Final Plat, Cecelia Schwaber, Exempt Trust U/A" and recorded among the land records of Baltimore County in Plat Book S.M. 78, Folio 368.

Also being all of that land described in a deed dated January 4, 2010 and recorded among the land records of Baltimore County in Liber S.M. 29037, Folio 10 was conveyed by revocable trust agreement of Cecelia Schwaber DTD. December 9, 1985 and Cecelia Schwaber Exempt Trust U/A December 9, 1985 unto 11301 Pulaski Highway, LLC.

b. Padonia Road and Deerco Road/Beaver Dam Road at a 600-foot radius from the center of the intersection - level of service: F.

c. The commuter shed located at the intersection of Charles Street and Bellona Avenue/Kenilworth Drive shall be redrawn to exclude the area of land within the boundary of West Joppa Road, Greenwood Road, and Chestnut Road, as shown on the map attached as Exhibit "B" and more fully described herein as follows: Lot one and Lot two as shown on a plat entitled, 'Amended Subdivision Plat of Blakehurst Life Care community' dated March 18, 1992 and recorded among the land records of Baltimore County in Plat Book SM No. 64, Folio 34.

B. The three Basic Services Maps shall be prepared annually in accordance with the schedule set forth below, which maps shall incorporate a delineation of adequacy and availability of water supply, sewerage, transportation services and facilities according to the standards and requirements set forth in this section.

C. The individual Sewer, Water Supply and Transportation Basic Services Maps shall be adopted by the County Council in accordance with the procedures and requirements of this article, contrary provisions of Article 32 of the Baltimore County Code notwithstanding. **[Bill No. 137-2004]**

D. Boundaries as shown on the Basic Services Maps shall be interpreted in accordance with Section 100.4 of these Zoning Regulations.

E. Amendments.

1. On or before February 28 of each year, the Planning Board shall recommend to the County Council any proposed annual revisions to the Basic Services Maps. The Planning Board need not adopt a preliminary report or hold a public hearing with respect to its recommendations, although it shall allow the public a reasonable opportunity to comment before adopting the recommendations. **[Bill Nos. 117-2001; 99-2008]**

2. On or before May 31 of each year, the County Council shall take action on said maps after consideration of the recommendations of the Planning Board. The County Council shall hold one public hearing prior to adoption of said maps, which hearing shall be advertised and held in accordance with § 32-3-221 of the Baltimore County Code. **[Bill Nos. 117-2001; 137-2004; 99-2008]**

3. The Basic Services Maps may be amended only under the annual revision procedures set forth above, except in the following circumstances, after the Planning Board has been given an opportunity, at a regular meeting of the Board, to review and issue a report concerning the proposed amendment:

   a. Error. In the case of error, the maps may be corrected at any time by resolution of the County Council, provided that the Council finds that an error has, in fact, been made.

   b. Correction of deficiency. In the case of a deficiency which has been corrected by actual construction of adequate facilities, the maps may be amended, at any time, to reflect the correction, by resolution of the County Council after certification by the Department of Public Works, in the case of a water or sewer deficiency, or the Department of Traffic Engineering, in the case of a traffic deficiency, that the needed facility has been constructed and is performing so that the area no longer suffers a service deficiency. Where correction of the deficiency has been accomplished by means of private funding, the developer or developers paying the cost of correction shall have a preferred claim to any increase in the reserve capacity resulting from the correction irrespective of the requirements of Section 4A02.3.G.2.b. Absent a contrary agreement between the developers contributing to the cost of correction, the developers shall share in any increase in reserve capacity on a prorated basis in accordance with their percentage of contribution to the entire cost of correction.[1]

4. When amending the Basic Services Maps pursuant to the provisions of Section 4A02.3.E.3.a or b, the Planning Board and the County Council shall consider the purposes of the Zoning Regulations and Map and the factors set forth in § 32-3-510(a)(2) of the Baltimore County Code. Contrary provisions of § 32-3-221 of the Baltimore County Code notwithstanding, no hearing under the procedures of § 32-3-221 need be held before the County Council adopts an amendment pursuant to Subsection 4A02.3.E.3.a or b of these regulations. **[Bill No. 137-2004]**

1. **Editor's Note**—Under Bill No. 36-1987, the Department of Traffic Engineering was abolished and its duties and responsibilities were transferred to the Bureau of Traffic Engineering of the Department of Public Works. See Section 1 of the Laws of Baltimore County, 1999 (Bill No. 31-1999)

F. Basic Services Maps are not intended to permanently establish either areas of service deficiencies or areas of service availability and adequacy. Such maps will be reviewed annually, as it is the intent of the County Council that existing service deficiencies will be corrected in accordance with the Master Plan and capital improvements program. It is also recognized by the County Council that continuing development in certain areas may create service deficiencies in areas that presently have adequate levels of service. In some cases, changes in underlying zoning classifications may have to be made to better correlate development potential.

G. Reserve capacity use certificate.

1. Except as otherwise provided in this article, no building permit, pursuant to Subsection 500.1 of Article 5 of these Zoning Regulations and no final subdivision approval shall be issued or granted after the effective date of this Article within a Basic Services Mapped area, unless the Director of the Department of Planning has issued, upon appropriate application on forms prepared by the Director, a reserve capacity use certificate for that development in accordance with the following: **[Bill No. 55-2011]**

   a. With respect to all subdivisions recorded prior to the effective date of this article, no reserve capacity use certificate shall be issued which allows an extent of development exceeding that allowed in accordance with Paragraph 4 hereof.

   b. With respect to all subdivisions finally approved subsequent to the effective date of this article, the Department of Planning shall notify the applicant as part of any such final subdivision approval, the extent of development allowed pursuant to such reserve capacity use certificates applicable thereto as of the date of final subdivision approval issued in accordance with Paragraph 4 hereof.

   c. With respect to an application for a building permit for development which does not require subdivision approval, no reserve capacity use certificate shall be issued which allows an extent of development exceeding that allowed in accordance with Paragraph 4 hereof.

2. Application for certificate. **[Bill No. 55-2011]**

   a. Except as otherwise provided in Paragraph 3, an application for a reserve capacity use certificate shall be filed with the Director of the Department of Planning after the applicant has applied for a building permit (for development which does not otherwise require subdivision approval) or final subdivision approval for which the application for a reserve capacity use certificate is sought, and shall be acted upon by the Director within three working days after said filing.

   b. Applications may be acted upon only according to the order in which they are properly filed with the Department of Planning.

3. Prior to January 1, 1980, no applications for a reserve capacity use certificate shall be accepted by the Department of Planning[2], unless the applicant has a final subdivision plat covering the subject property recorded prior to the effective date of this article or the applicant has applied for a building permit for development for which subdivision approval is not otherwise required. **[Bill No. 55-2011]**

4. Formula.

   a. A reserve capacity use certificate shall authorize development only to the extent that it will meet the water supply standards of Section 4A02.4 and will not utilize more than the reserve capacity of the sewerage or the transportation network, as the case may be, of the Basic Services Mapped area within which the property is located. Before issuance of such a certificate, the sewerage or transportation capacity shall be determined under the formula:

   $$R = (N - A) + E$$

   in which:

   R = The reserve capacity at the time of application, in millions of gallons per day or peak hour trips per day, as the case may be.

   N = The numerical designation of the mapped area.

   A = The aggregate reserve capacity already authorized by certificate applications approved on or after the effective date of the Basic Services Map in question plus the aggregate reserve capacity that will be used for development for which certificates are not required but which has been authorized by building permits since that date.

   E = The aggregate reserve capacity so authorized by issuance of certificates that have expired, as provided in this Subsection G.

   b. In the event that any reserve capacity use certificate determination results in R equaling zero, such determination shall not prohibit the granting of final subdivision approval.

5. Except as otherwise provided in Paragraph 6, any reserve capacity use certificate for development of a subdivision tract shall expire nine months after that date it is issued, except to the extent that it applies to a tract or part of a tract on which substantial construction of the utilities or roads has taken place on that date or with respect to which a public works agreement has been both executed and funded in that there has been deposited with Baltimore County money or irrevocable security in an amount sufficient to secure the construction of the public improvements covered by that agreement.

6. A reserve capacity use certificate pertaining to development that has been authorized by a building permit does not expire unless and until the building permit expires.

---

2. **Editor's Note**—Formerly the "Office of Planning," this Department was renamed by Bill No. 55-2011, effective 10-16-2011.

7. For a development or section thereof, reserve capacity use certificates allowing an extent of development beyond that authorized by Paragraph 4 above shall be issued by the Director of the Department of Planning upon application, if there is prior to the effective date of the map or maps which would otherwise prohibit the proposed development, any of the following: **[Bill No. 55-2011]**

   a. A public works agreement, covering that section of the proposed development, that has been both executed and funded by the deposit of money or irrevocable security in an amount sufficient to secure construction of the public improvements covered by the public works agreement and which had been both executed and funded at a time when the area had no service deficiency; or

   b. Substantial construction of the utilities or roads has taken place in the proposed development or section thereof at a time when the area had no service deficiency.

   c. A reserve capacity use certificate issued under this paragraph is limited to the part of the proposed development that meets the requirements of subparagraphs a and b above.

§ 4A02.4. Basic services mapping standards.

A. Generally. The standards contained herein are intended to form the basis for the delineation of areas on the Basic Services Maps as well as for the evaluation of development applications in accordance with the requirements of this article.

B. Water supply standards.

   1. Intent. The water supply standards and maps are intended to regulate nonindustrial development where there are serious deficiencies in the public water supply system, as evidenced by county tests of water flows from a substantial sample of fire hydrants.

   2. Standard. Residual water pressure at the public fire hydrant nearest the site of the proposed nonindustrial development must meet the standards established by the National Board of Fire Underwriters fire flow test.

   3. Exception. This subsection does not apply to any development that will not be served by a public water supply system.

C. Sewerage standards.

   1. Intent. The sewerage standards and maps are intended to regulate nonindustrial development where it has been determined that the county's share of public sewerage capacity is substantially less than the capacity necessary both to serve already established uses and to serve new uses likely to be established pursuant to this legislation.

   2. Determination of reserve capacity. The county's share of public sewerage capacity must be capable of serving already established uses and new uses likely to be established under the provisions of this legislation.

3. Maximum level of nonindustrial development. The maximum level of nonindustrial development per sewerage area shall not be greater than that capable of being provided with available sewerage capacity based on the following:

   a. The county's share of the maximum reserve capacity of the sewerage in the area on the effective date of mapping of the area minus the daily quantity of sewerage from any industrial buildings for which construction permits are expected to be issued between that date and the time the "basic services" map is next revised, in millions of gallons of sewerage per day; and

   b. The maximum level of nonindustrial development allowable in the district as determined based on the following assumptions:

      (1) Each dwelling unit with three bedrooms or more shall be considered to result in a yield of 225 gallons of sewage per day.

      (2) Each dwelling unit with less than three bedrooms shall be considered to result in a yield of 200 gallons of sewage per day.

      (3) Each square foot of gross floor area of a building or a part of a building devoted principally to retail use shall be considered to result in a yield of 0.05 gallon of sewage per day.

      (4) Each square foot of gross floor area of a building or a part of a building devoted principally to office use shall be considered to result in a yield of 0.09 gallon of sewage per day.

   c. The quantity of sewage yielded by a building or a part of a building to be devoted principally to uses other than dwelling or retail or office uses shall be determined by the Department of Public Works.

4. Exception. This subsection does not apply to any development that will not be served by a public sewerage system.

D. Transportation.

1. Intent. The transportation standards and maps are intended to regulate nonindustrial development where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article. Such development is not intended to be restricted unless there is a substantial probability that an arterial and arterial collector intersection situated within the mapped area will, on the date the map becomes effective, be rated at level-of-service E or F under standards established by the Highway Capacity Manual, 1965, published by the Highway Research Board of the Division of Engineering and Industrial Research, National Academy of Sciences National Research Council.

2. Determination of critical vehicle-trip number.

   a. For the purpose of this paragraph, the "critical vehicle-trip number" of an intersection is determined by the formula:

      $C = F - E/2 + E$

      in which each letter represents a number of daily vehicle trips through a given intersection at peak hour and

C = The critical vehicle-trip number.
F = That number which if reduced by one would result in a change in the intersection's level of service from F to E.
E = That number which if reduced by one would result in a change in the intersection's level of service from E to D.

b. Determination of reserve capacity. It is intended that the reserve capacity be determined for each district by the formula:

$N = C - (T + I)$

in which

N = Reserve capacity.
C = The critical vehicle-trip number for the most congested arterial intersection in a transportation mapped area on the date the designation becomes effective.
T = The number of daily peak-hour vehicle trips, based on actual traffic counts taken by the Department of Traffic Engineering,[3] passing through the most congested arterial intersection in a transportation mapped area.
I = The projected number of additional daily peak-hour vehicle trips to be generated by nonindustrial developments that have been approved under the provisions of this article and have not yet been constructed and would most likely pass through that intersection. For partially completed nonindustrial developments, the amount of peak-hour vehicle trips shall be prorated based on number of completed units or square footage. However, if N is less than zero under the formula, the reserve capacity in the area shall be zero.

3. Maximum level of nonindustrial development.

a. The level of additional nonindustrial development in a mapped area, as provided above, may not exceed that which would generate the number of daily peak-hour vehicle trips equal to the reserve capacity of that mapped area, based on the following assumptions:

(1) Every 100 dwelling units, other than for the elderly, shall be considered to result in the generation of 85-peak-hour vehicle trips daily.

(2) Every 100 dwelling units in housing for the elderly shall be considered to result in the generation of 25-peak-hour vehicle trips daily.

3. **Editor's Note**—Under Bill No. 36-1987, the Department of Traffic Engineering was abolished and its duties and responsibilities were transferred to the Bureau of Traffic Engineering of the Department of Public Works. See Section 1 of the Laws of Baltimore County, 1999 (Bill No. 31-1999).

(3) Every 1,000 square feet of gross floor area of a building or a part of a building devoted principally to retail use shall be considered to result in the generation of 14.70 peak-hour vehicle trips daily.

(4) Every 1,000 square feet of gross floor area of a building or a part of a building devoted principally to office use shall be considered to result in the generation of 2.34 peak-hour vehicle trips daily.

b. The number of daily peak-hour vehicle trips generated by a building or a part of a building to be devoted principally to uses other than dwellings or retail or office uses shall be determined by the Department of Traffic Engineering.[4]

E. General exceptions to basic services mapping standards.

1. The provisions of Section 4A02.4.A, B, C and D do not apply to any of the following:

a. Any development of three or fewer single-family detached dwellings, or establishment of their accessory uses, on a lot of record as of November 19, 1979 (see Section 101).

b. To any development in a C.C.C. District for which, prior to January 21, 1980, a subdivision plan was finally approved or for which, prior to January 21, 1980, an application for a building permit had been made.

c. To any development in a C.S.A. District for which, prior to January 21, 1980, a subdivision plan was finally approved or for which, prior to January 21, 1980, an application for a building permit has been made.[5]

d. To any development in an R.A.E. Zone for which, prior to January 21, 1980, a subdivision plan was finally approved or for which, prior to January 21, 1980, an application for a building permit had been made.

e. To any development in a town center or community center for which an official detailed plan was approved by the Planning Board as of the effective date of Bill No. 178-1979. For purposes of this exception, an "official detailed plan" includes an official "revitalization" plan or similar plan prepared by the Department of Planning or a consultant to the county, but does not include a subdivision plan or other developer's plan. **[Bill No. 55-2011]**

f. On-site expansions of existing hospitals; any development of a "continuing care facility" as defined in Title 10, Subtitle 4 of the Human Services Article of the Annotated Code of Maryland. **[Bill No. 79-2015]**

g. Any development in an area for which an official detailed plan has been prepared that contains a recommendation that the area be exempted from basic services restrictions. For purposes of this exception, an "official detailed plan" includes an official "revitalization" plan or similar plan prepared by the Department of Planning or a consultant to the county and approved, subsequent

4. **Editor's Note**—Under Bill No. 36-1987, the Department of Traffic Engineering was abolished and its duties and responsibilities were transferred to the Bureau of Traffic Engineering of the Department of Public Works. See Section 1 of the Laws of Baltimore County, 1999 (Bill No. 31-1999).

5. **Editor's Note**—The former C.N.S., C.S.A., C.S.-1 and C.S.-2 Districts were consolidated into the A.S. District by Bill No. 172-1993, effective 1-27-1994. See Section 259.2.B.

to July 1, 1982, by the Planning Board and the County Council, but does not include a subdivision plan or other developer's plan. **[Bill No. 55-2011]**

h. Health-care and surgery center. **[Bill No. 37-2015]**

i. To any development located in a Commercial Revitalization District. **[Bill No. 79-2015[6]]**

j. To any development located in the Downtown Towson District. **[Bill No. 49-2016]**

F. South Perry Hall — White Marsh Area. No grading permit or other building permit shall be issued for development pursuant to a development plan approved after February 1, 2001, for any development project that will be accessed from Bucks School House Road or White Marsh Road, until all of the following road projects have been contracted for construction: **[Bill No. 35-2001[7]]**

1. Replace the box culvert under White Marsh Road that crosses the tributary of White Marsh Run located between Perry Ridge Court and Selwin Court.

2. Widen the paved section of White Marsh Road between Bucks School House Road and Selwin Court to 20 feet.

3. Widen the paved section of Bucks School House Road between Ridge Road and Perry Hall Boulevard to 20 feet.

4. Realign horizontal curves along Bucks School House Road so that the minimum radius of the center line for any horizontal curve is not less than 380 feet.

G. Petitions for special variance from provisions of this subsection.

1. The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's purpose, pursuant to a finding:

   a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and

   b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

2. The Department of Planning shall give a report on the petition to the Zoning Commissioner prior to his consideration of the petition. **[Bill No. 55-2011]**

3. The Zoning Commissioner may grant or deny the petition, or grant it subject to any conditions or limitations consistent with the criteria set forth in Paragraph 1 above.

---

6. **Editor's Note**—This bill also provided that it would apply to Commercial Revitalization Districts established by County Council resolution prior to the effective date of this Act.

7. **Editor's Note**—This bill provided for the renumbering of former Subsection F as Subsection G. It also stated that the provisions of this subsection shall expire and be of no further effect when all of the road projects listed have been contracted for construction, or May 25, 2004, whichever shall first occur.

4. An appeal may be filed with the County Board of Appeals within 30 days of the decision of the Zoning Commissioner.

SENT VIA EMAIL
Paul M. Mayhew, Managing Administrative Law Judge
The Jefferson Building
105 W. Chesapeake Avenue, Suite 103
Towson, Maryland 21204

RE: Greenspring Manor & Greenspring Joppa Falls LLC
2310 W. Joppa Road 2310 W. Joppa Road
Case No.: PAI # 08-0922 Case No.: 2021-250-SPH
Hearing Date: November 18, 2021

Dear Judge Mayhew:

Our office reviewed preliminarily these companion development and special variance cases. We note intense opposition of area citizens. This letter outlines apparent issues relating to master plan consistency, traffic impact, sewer capacity, and zoning in general.

I. The Proposed Subdivision

The proposed single-family detached home subdivision is in Lutherville. The 39-acre tract extends north from Joppa Road, with more depth than width. It is east of mixed-use Greenspring Station and adjacent office buildings near Joppa and Falls Roads. Other surroundings are residential, with single-family detached homes on fairly large lots. Seminary Ridge and Heatherfield are among neighboring residential communities.

The site plan has a dedication table relating to stormwater management, environmental protection, and highway widening areas dedicated to the county. While approximate, these amount to about 21 acres. There are 169,000 square feet (3.9 acres) of open space in different locations. This means the developed area, including lots, roads, and such comes down to about 14 acres. So, the effective density on the area with the homes is arguably about 4.4 lots per acre. There are 122 offstreet parking spaces provided, 2 for each lot.

The lots vary in size. The lot table shows 21 lots are about .2 acre, more or less; another 19 are about .25 acre or under .30 acre; and the remaining 21 are over .30 acre in varying sizes. These look to be a fair amount smaller than the lots in the neighborhood.

The setback chart shows the following:

Front building line to R/W or Property Line:	25'
Side building face to side building face:	30'
Side Building face to public street	25'
Rear Building Face to Rear Property Line and Public Street	30'

The only access to the proposed subdivision is from Joppa Road. There is no Mays Chapel Road connection. Three nearby signalized traffic intersections are rated "F" and failing: Falls Rd/Joppa Rd, Falls Rd/Greenspring Valley Rd., and Falls Rd/Seminary Ave.

II. Selected County Memoranda

As the Department of Planning (DOP) states in its memoranda,

> "The project proposes 61 single-family homes to be built on 39.4 ±acres of land zoned DR 1 and DR 2. The site is mostly wooded and has environmental floodplains and wetlands. There is currently one existing house, which is to remain."

Rosalie Johnson's Zoning Office March 5, 2021 Concept Plan Conference (CPC) Comments observe 16 lots are proposed on 16.8 acres zoned D.R. 1 and 45 lots are on 22.6 acres zoned D.R. 2. The proposal is thus for the maximum density permitted.

The DOP issued a CPC Memorandum on March 1, 2021 and a Development Plan Conference (DPC) Memorandum on August 11, 2021.

Here is the DOP's core statement in their CPC Memorandum:

> "The Department of Planning considers this site to be overdeveloped. Many of the lot sizes are not compatible to the surrounding neighborhoods. The number of lots should be decreased to allow for larger lots and would help achieve a design that could accommodate future improvements and yard space without the need for relief. As designed, the proposed development does not achieve the vision of the Master Plan 2020 nor the Comprehensive Manual of Development Policies. The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses. The site also would require extensive grading. The site should be redesigned to minimize cut and fill while using the natural features of the land pursuant to the Comprehensive Manual of Development Policies as well as Section 260 of the BCZR."

The DOP reversed course in their DPC Memorandum. They passed the project as consistent with MP 2020. The DOP did not cite any material changes in density or other factors to explain the turnaround.

Another concerning aspect is concluding Note 8. This says building location, footprints, garages, and driveways may be changed from those shown in the Pattern Book. This potential for

modifications implies there are other issues with the current plan. The correlative question is whether this uncertainty blurs or clouds the issues. There are no changes, however, to the proposed density.

The Development Plans Review (DPR) March 18, 2021 (inadvertently dated 2020) CPC Memorandum, Note 18, states there is not adequate sewer capacity and lists eight relevant segments. Six of these were to be improved by Johns Hopkins to support its recent medical office building expansion, but this was not done and not enforced. We do not see anything in DPR's subsequent August 11, 2021 Development Plan Conference memorandum to show these issues are resolved.

Terry Curtis of the Department of Public Works and Transportation (DPWT) on September 20, 2021 addressed problems with the special variance. Among other things, he discussed the need for a Mays Chapel Road connection between Joppa and Seminary Roads.

The DOP's CPC Memorandum mentions traffic improvements proposed by developer to mitigate impact. The memo does not describe the improvements, but goes on to say the site is overdeveloped. The DOP's DPC Memorandum defers to the expert DPW(T) judgment.

III. The Community Input Meeting

The CIM took place, as prescribed, in the interim between the concept plan conference and the development plan conference. The CIM had 93 attendees and 67 submissions, with strong opposing e-mails from Seminary Ridge Owners and Heatherfield Community Associations and individual residents. They raised specific concerns about density, traffic, schools, and sewer capacity. The developer's representatives suggested they could mitigate these problems with offsite infrastructure improvements.

IV. Master Plan Conflict

The proposed subdivision is located in the Master Plan 2020 (MP 2020) T-3 Sub-Urban Transect Zone, calling for low density and deep setbacks. Somewhat similar T-3 conflicts were evaluated in Woodley Park and Davis Farms. As in those cases, this project is at maximum density for the applicable zones. The proposed 61-lot/39-acre density here exceeds that of Davis Farms on a similar D.R. Zone composition: 19 lots on 21 acres. It is less than Woodley Park, 13 lots on 5 acres, then zoned D.R. 3.5.

In each of these situations, the lots are concentrated or squeezed on a fraction of the acreage because of the required local open space, forest conservation easements, and other environmental constraints. The 19 Davis Farms lots were concentrated on about half the 21-acre site. Both Woodley Park and Davis Farms show that staying within the maximum Density Residential zoning density does not necessarily satisfy separate and overlaying master plan Transect Zone criteria. Here, the 61 lots, mostly about one-quarter acre, with shallow setbacks, are pressed into about 14 acres.

Given the plain T-3 Transect Zone criteria, the Greenspring Manor project appears to present a clear master plan conflict. It tracks the same path as Woodley Park and Davis Farms. (The Planning

Board has voted 7-4, unconvincingly, that Davis Farms does not involve a conflict; but we believe that will be reversed sooner or later).

The DOP's CPC Memorandum definitely describes a conflict. But their DPC Memorandum backslides to pass the project. The DPC Memorandum, Page 2, refers to the low-density criterion but then compliments the plan on meeting bulk regulations, having lot sizes "compatible to surrounding neighborhoods" and minimizing grading. The favorable description of compatibility also contradicts their CPC memo and is at best debatable. Most important, the DOP does not apply or implement meaningfully the low density and deep setback criteria. It is as if the DOP goes its own way.

We saw in Davis Farms the DOP's mindset that if the development is within maximum zoning density and meets bulk regulations, then there is no master plan conflict. This is a non-sequitur and, to paraphrase an idiom, conflates apples with oranges. It is circular reasoning. Maybe they assume the master plan is advisory and doesn't have to be followed. It is confounding that when the case gets close to the hearing stage, the DOP short-circuits the Transect Zone criteria.

The DOP does not mention the cogent community association and area citizen CIM comments. The legislative purpose is for the CIM to perform an important function, with practical information and questions from members of the public. The area residents have knowledge and experience beyond that of developer's consultants. The CIM is not intended to be a desultory exercise to be ignored in the aftermath.

V. Residential Performance Standards

Baltimore County Zoning Regulation (BCZR) Sec. 260 provides Residential Performance Standards (RPS). They involve site planning, open space, streets and parking, landscaping, and buildings. There are a variety of procedures in subsection 260.1. These include findings made by the DOP to be submitted to the Hearing Officer for consideration. The Woodley Park and Davis Farms decisions found several RPS conflicts.

The DOP findings here raise more questions than they answer. Both DOP Memoranda recognize they must make findings. The DPC Memorandum goes on to say they have reviewed the pattern book and the DOP "... recommends approval pending the following comments are addressed (sic)." Page 3. There follow eight numbered comments, but the only reference to RPS is on page 4, paragraph 5, which asks the pattern book to demonstrate how specified high visibility lots meet the BCZR Sec. 260.6 design criteria. There is no discussion of any of the other RPS. Their conclusory finding is, therefore, insufficient.

It will be up to the Hearing Officer to determine if the plan meets all the RPS. The burden of proof is on the developer to meet each standard. There is no favorable presumption.

VI. The Special Variance Relating to Transportation

The growth management standards for transportation applicable to nonindustrial development are in BCZR Sec. 4A02.4.D. Among other things, they preclude a building permit in defined traffic sheds of signalized intersections rated "E" or "F". There are three such intersections nearby.

The 2021 Baltimore County Basic Services Map for Transportation, attached, shows the tripartite array of "F" level failing intersections at Falls/Joppa, Falls/Greenspring, and Falls/Seminary. This is the highest concentration of such intersections in the county. The attached December 16, 2020 Report from the Bureau of Traffic Engineering and Transportation Planning confirms these three intersections make up a quarter of the twelve such intersections countywide.

To obtain a special variance, it is necessary to prove the project will generate less traffic than assumed by the standard or that the standard is irrelevant. BCZR Sec. 4A02.4.G. The law provides a framework for analysis.

Suffice it to say that traffic from this development is likely to have a significant additional impact at peak hours and other hours on the three "F' intersections as drivers head to I-695, I-83, Falls Road, Greenspring Valley Road, and further destinations. This would be true even if there were a Mays Chapel Road connection. It is the more aggravated with the sole access at Joppa Road. The DPWT comment expresses heightened concern about the lack of a Mays Chapel Road connection.

Woodley Park and Davis Farms also presented traffic issues, each in their own way. Woodley Park involved the Dean Avenue vicinity off Reisterstown Road. Davis Farms dealt with the Maple Avenue and Frederick Road situation. The area citizens in those cases identified and described the problems. As serious as those problems are, they do not involve "F" intersections.

VII. Sewer Capacity

Maryland law requires and sets parameters for master water supply and sewer (WSS) plans. Md. Ann. Code Environment Article, Secs. 9-501-521. The County Council approves the WSS plan by resolution as part of the master plan. The function of the plan is to allocate and assure adequate water and sewerage countywide.

The growth management standards for sewage capacity applicable to nonindustrial development are in BCZR Sec. 4A02.4.C. The stated purpose is to assure that the county's share of sewage capacity must be capable of serving already established uses and uses likely to be established. Secs. 4A02.4.C.1, 4A02.4.C.2. There is then provided a method for calculation for the maximum level of nonindustrial development. Sec. 4A02.4.C.3.

We have not seen in the DPR memoranda any estimate of the sewage to be generated by Greenspring Manor. We have cited the DPR March 18, 2021 CPC Memorandum, Note 18, and the

apparent absence of resolution of the specified issues in their later DPC Memorandum. They do say, as noted, that the local sewer segments do not have adequate capacity to accommodate the proposed development. This by itself implies there may be a growth management deficiency.

Separately, the 2021 Baltimore County Basic Services Map for Sewerage, attached, identifies the Joppa/Falls area as located in one of just five "Areas of Concern." We also attach the Department of Public Works' January 6, 2021 Report, which describes in general terms that work is being done to address some areas of concern, but adds,

> "Everyone should be aware that the removal of an area of special concern does not mean that an area has unlimited developmental potential."

The growth management law does not specifically identify or define "Areas of Concern."

Area citizens identified similar problems with the development plan several miles down Falls Road in the Bare Hills area, which is in the same mapped "Area of Concern." This led to denial of that plan in CPC Falls Road Bluestem, 6241-47 Falls Road, Case No. 09-0861 (2019), Administrative Law Judge Opinion; affirmed CBA Case No. 20-006 (2020). As described in the CBA's January 3, 2020 opinion, agreeing with ALJ John Beverungen, there is an operative 2005 Consent Decree between the County, EPA, and MDE. The CBA cited the inadequate capacity in the Jones Falls and Lake Roland interceptors, resulting in discharges to Towson Run, Lake Roland, and Jones Falls, and so elevated contaminant levels.

It is reasonable to inquire of county staff the criteria and implications for "Areas of Concern." It is also reasonable to inquire why this area is not designated as deficient.

Here, area citizens also raised issues the sewer situation. The County's position on this issue is unclear. These issues should be addressed in depth here insofar as applicable.

Davis Farms also presented a sewer issue, of a more localized historic nature regarding the age and condition of the local system. The sewerage issues here appear to be of an order of magnitude much greater than in Davis Farms.

Conclusion

There may be other issues. This letter identifies and outlines our concerns at this juncture. The density is excessive and conflicts with the master plan. The RPS, traffic and sewer capacity issues are problematic and not acceptably resolved so far.

Because all sides are represented by counsel, we anticipate they will flesh out the facts and issues. As the case evolves, we would appreciate the opportunity to address the legal issues further in a memorandum if necessary and appropriate.

Sincerely,

Peter Max Zimmerman

BALTIMORE COUNTY, MARYLAND
BUREAU OF TRAFFIC ENGINEERING AND TRANSPORTATION PLANNING
INTER-OFFICE CORRESPONDENCE

DATE: December 16, 2020 (Revised)

TO: D'Andrea Walker., Acting Director
Department of Public Works

FROM: Greg Carski. Bureau Chief
Bureau of Traffic Engineering and Transportation Planning

SUBJECT: 2021 Basic Service Map – Transportation:

Due to COVID-19, our bureau has restudied 30 out of 35 intersections currently on the Basic Services Map for 2020. These studies were completed prior to the Covid-19 effects on traffic volumes. Studies were suspended in mid March.

The following five intersections were not studied due to COVID-19 during 2020 and the rating below is based upon the 2020 Basic Service Maps.

Joppa Rd E & Loch Raven Blvd (MD 542)	LOS = F
Pulaski Hwy (US 40) & Rossville Blvd	LOS = D
Rolling Rd & Windsor Mill Rd	LOS = D
Seminary Ave (MD 131) & York Rd (MD 45)	LOS = D
Timonium Rd & York Rd (MD 45)	LOS = D

Based on the studies that were completed over the past year and prior years in some cases, we are recommending the following change to the Transportation Map for 2021:

CHANGES:

Beaver Dam Rd / Deerco Rd / Padonia Rd	F to C

There are twelve "F" level intersections and one "E" level intersection that are being proposed on the 2021 Basic Service Transportation Map that would control development. These intersections are:

Baltimore Nat'l Pike (US 40)/ Rolling Rd N	LOS = F
Bellona Ave / Charles St (MD 139) / Kenilworth Dr	LOS = F
Bloomsbury Ave / Frederick Rd (MD 144) / Ingleside Ave	LOS = F
Burke Ave / Burke Ave W / York Rd (MD 45)	LOS = F
Ebenezer Rd / Pulaski Hwy (US 40)	LOS = F
Falls Rd (MD 25) / Seminary Ave W (MD 131)	LOS = F
Falls Rd (MD 25) / Joppa Rd W	LOS = F
Falls Rd (MD 25) / Greenspring Valley Rd (MD 130)	LOS = F
Falls Rd (MD 25) & Shawan Rd & Tufton Ave *	LOS = F
Frederick Rd (MD 144) / Rolling Rd S (MD 166)	LOS = F

Joppa Rd E & Loch Raven Blvd (MD 542) – (COVID 19)	LOS = F
Perring Pkwy (MD 41) / Putty Hill Ave	LOS = F
Joppa Rd E / Perring Pkwy (MD 41)	LOS = E

* Note: Since the intersection of Falls Rd(MD25)/Shawan Rd and Tufton Rd is outside the URDL there will be no commuter shed associated with this intersection.

Beaver Dam Rd/Deerco Rd/Padonia Rd was LOS F on the Basic Services Map for 2020 per Bill 12-19, our engineering review results in a LOS C.

Enclosed is a list of the current D, E, and F intersections for your use. Should you have any questions in regard to the Basic Services Transportation Map for 2021, please contact me at ext. 3554.

SUBJECT: 2021 Basic Services Maps
Public Water and Sewer Status

In accordance with your request, we are furnishing an update for the 2021 Basic Services Map.

Water
No deficiencies are known to exist.

Sewer
All of the remaining sewer relief point locations are being metered. We have completed several rehabilitation projects and are now performing post-monitoring to determine the projects' effectiveness. In addition, we have projects still in design which will eventually eliminate the areas of concern.

Everyone should be aware that the removal of an area of special concern does not mean that an area has unlimited developmental potential. All developments are evaluated hydraulically on a case-by-case basis, and determinations are made to see if the development will need downstream supplementation.

IN RE: DEVELOPMENT PLAN HEARING 4th Election District 2nd Council District **(18 Dean Avenue)**	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS FOR
WOODLEY PARK F.K.A. **DEAN AVENUE** Woodley Property Partners, LLC *Owner/Applicant*	*	BALTIMORE COUNTY **CASE NO. 04-0728**

* * * * * * *

ADMINISTRATIVE LAW JUDGE'S ("ALJ")
DEVELOPMENT PLAN OPINION & ORDER

This matter comes before the Office of Administrative Hearings ("OAH") for a public hearing pursuant on a development proposal submitted in accordance with Article 32, Title 4, of the Baltimore County Code ("BCC"). Woodley Property Partners, LLC, *Owner/Applicant* (herein known as "Developer") submitted for approval a one-sheet redlined Development Plan ("Plan") prepared by Little & Associates, Inc., known as "Woodley Park fka Dean Avenue".

The proposal is for thirteen (13) single family dwellings, eight (8) of which are semi-detached. The site is 3.97 gross acres and is zoned DR 3.5. It lies within the Urban Rural Demarcation Line ("URDL"). According to the site plan two (2) existing dwellings on the site will be razed. In 2012 a concept plan for 12 single family detached dwellings was filed but did not pass the concept plan phase.

In accordance with the Baltimore County Zoning Regulations ("BCZR"), the property was posted on August 29, 2019 with the Notice of Hearing Officer's Hearing ("HOH") for the September 27, 2019 hearing. In attendance at the HOH in support of the Plan was the developer, Michael Greenspun, and the engineer who prepared the site plan, John Motsco, with Little & Associates, Inc. Howard L. Alderman, Esq., with Levin & Gann, PA, appeared and represented the Developer. J. Carroll Holzer, Esq. appeared on behalf of numerous community members, who oppose the proposed development.

BACKGROUND

The neighborhood is approximately twenty acres in size and is accessed by and contained within three (3) streets: Stocksdale Avenue, which is a through street on the southern edge; and Woodley and Dean Avenues, which are each only a couple blocks long. Woodley Avenue is presently a one way one lane street with only westbound traffic permitted. Stocksdale Avenue is also unusually narrow. According to testimony from neighborhood witnesses these streets were formerly old unpaved farm roads. The neighborhood consists of single family detached residences on relatively large lots, with ample driveway and garage parking. On street parking is permitted only on Dean Avenue due to the narrow streets. There are no sidewalks. Some of the homes are quite old and some have been recently built. All appear well maintained. It is located near Historic Main Street in Reisterstown. To the north of the tract there is forest and wetlands protected by a forest conservation easement, a forest buffer easement and a greenway adjacent to Norris Run, a protected intermittent stream which is part of the Liberty Reservoir watershed. The parcel in question is essentially in the middle of this neighborhood.[1] It is mostly forested although there are two (2) vacant dwellings that are to be razed according to the Plan. According to the notes on the Plan, the property in question has been "held intact since 1971."

AGENCY WITNESSES

The undersigned conducted a public hearing in Room 205 of the Jefferson Building, 105 West Chesapeake Avenue, Towson, Maryland. The Hearing spanned parts of three (3) days: September 27, 2109, November 1, 2019, and November 7, 2019. On September 27, 2019 a redlined Development Plan was submitted for approval and was admitted into evidence as

[1] The boundaries of the described neighborhood are based on the parameters set forth in BCC § 32-4-402(a).

Developer's Exhibit 1. Numerous representatives of the various Baltimore County agencies which reviewed the Plan also attended the hearing, including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Jerry S. Chen, Project Manager; Jos Venturina and Jim Hermann, Department of Public Works ("DPW")/Development Plans Review ("DPR"); LaChelle Imwiko, Real Estate Compliance, and Aaron Tsui, from the Office of Zoning Review ("OZR"). Also appearing on behalf of the County were Marta Kulchytska, Department of Planning ("DOP"), and Jeff Livingston with the Department of Environmental Protection and Sustainability ("DEPS").

Aaron Tsui from OZR submitted a one page document captioned "Development Plan Comments," that was admitted as County Exhibit 3. Mr. Tsui testified that zoning recommends approval of the Plan. The exhibit states that this approval is subject to the DOP approval of the proposed panhandle driveway, and to final zoning approval. Mr. Holzer cross-examined Mr. Tsui as to whether DOP had, in fact, approved the proposed panhandle drive and lots since DOP's last written comments, as set forth in the DOP Hearing Officer Hearing Final Report" dated September 27, 2019, stated that DOP was "unable to recommend that the Development Plan be approved." Mr. Tsui testified that he had received nothing in writing from DOP but that he had spoken with Marta Kulchytska and she had told him that DOP was now recommending approval of the Plan.

Mr. Hermann testified next. He submitted a Schematic Landscape Plan that had been approved by DPR on September 20, 2019, which was admitted as County Exhibit 1. He testified on behalf of DPR that this agency recommended approval of the Plan. On behalf of the Department of Recreation and Parks Mr. Hermann submitted an approved Open Space Waiver, which was admitted as County Exhibit 2. Pursuant to this waiver the Developer will make a payment of $45,630.00 in lieu of providing any open space.

Mr. Livingston testified on behalf of DEPS that the groundwater and stormwater management concept plans were acceptable and he explained that a Forest Buffer easement had been approved so that the development could be connected to public sewer without the use of a grinder pump. An environmental "alternatives analysis" concerning this issue was admitted as Developer's Exhibit 2. Mr. Livingston further explained that a Special Variance to remove nine (9) of the 17 specimen trees on the site had been granted by the Director of DEPS, and that a fee in lieu will be made to the DEPS forest fund and will be used to plant trees elsewhere. This variance approval was admitted as Developer's Exhibit 3. In conclusion, Mr. Livingston stated that DEPS recommended approval of the Plan.

Ms. Kulchytska then testified on behalf of DOP. At the outset of her testimony she presented a School Impact Analysis ('SIA") (County Exhibit 4) demonstrating that the proposed development would comply with State-mandated requirements concerning the maximum number of students permitted to attend the elementary, middle and high school in the vicinity of the project. Ms. Kulchytska also stated that DOP had approved the pattern book for the development, which was admitted as County Exhibit 5, and which provides elevations and architectural details for the dwellings and other amenities to be located on the site. She then proffered an amended Hearing Officer Hearing Final Report from DOP, also dated September 27, 2019, which recommended approval of the Plan, subject to various comments. As noted above, Mr. Holzer had previously questioned Mr. Tsui about the prior version of the DOP Final Report, which had concluded that DOP could not support approval of the Plan. This prior Report was the only ones in the file prior to the hearing. The undersigned asked Ms. Kulchytska to provide copies of the amended Final Report to counsel for both parties, which she did. At this point counsel for protestants objected to the admission of the amended Final Report. Pursuant to BCC § 32-4-226(d), the Comments from

all the relevant County agencies, including DOP, are required to be submitted to the Hearing Officer "*at least 5 days before the Hearing Officer's hearing*" by the Director of PAI. This is so that all interested parties can review the comments prior to the Hearing so they are on notice of the County agencies' positions concerning the Development Plan. I therefore proposed that the Hearing be adjourned and continued so that the parties could review and digest the amended Final Report, and the significant change in position by DOP. Counsel for the Developer agreed this was appropriate. The hearing was therefore adjourned.

On November 1, 2019 the hearing resumed. The Developer's engineer, John Motsco, explained that they had made various amendments to the Site Plan based on DOP's amended Comments. The principal substantive changes were to add Note 21 indicating that Lots 1, 4, 5, 8, 9, and 10 would be treated as high visibility lots because of their site orientation. This amended Site Plan was admitted as Developer's Exhibit 1A.

Ms. Kulchytska then resumed her testimony. Mr. Holzer questioned her about the basis for DOP's change of position. He noted that in all the earlier DOP Comments during the development review process DOP had stated that it could not recommend approval of the Plan because it wanted the Developer to, among other things, *"[d]emonstrate alternative dwelling layout/locations in order to address some of the community's concerns and create a layout that more closely matches the existing pattern of the neighborhood, while also addressing traffic and ROW issues."* *See,* DOP Development Plan Conference, and initial Hearing Officer Hearing Report, dated July 3, 2019 and September 27, 2019, respectively.

Ms. Kulchytska stated that she and other planners from DOP had done "additional studies" and had visited the site and were now satisfied that the panhandle drive and lots, and the proposed duplex designs were acceptable. Mr. Holzer asked her when these additional studies and site visit

had occurred. She could not provide dates but stated that it had been before the initial Hearing date of September 27, 2019. Mr. Holzer asked her if she had seen any duplexes in the existing neighborhood and she stated she didn't recall seeing any. Mr. Holzer asked her if duplexes on small lots were consistent with the neighborhood and she responded that the proposed architectural features would be consistent. When pressed as to whether the duplex design is consistent with the neighborhood she stated: "That's a very good question, but I can't answer that." Mr. Holzer then questioned her about how DOP was now approving rear facing dwellings (Lots 9 and 10) on Dean Avenue when the DOP Comments from July 3, 2019 had noted that this orientation "is in conflict with the Comprehensive Manual of Design Policies ("CMDP") (page 22) and the Baltimore County Landscape Manual ("BCLM") (page 55) which state that rear facing dwellings are discouraged. The applicant must demonstrate that there are no other alternatives for situating the rear facing dwellings." *See, July* 3, 2019 DOP Development Plan Conference Comments. Ms. Kulchytska stated that the Site Plan now shows a privacy fence and landscape screening along Dean Avenue; however, she did not explain why the Developer was excused from demonstrating that there were no alternatives to this site orientation. She was then asked why the proposed privacy fences along Dean Avenue were permitted only 10 feet from the public right of way when BCZR § 260.2.B states that they may not be closer than 20 feet. She stated that the BCLM allows only 10 feet and that is what DOP went by. Finally, she was questioned about the adequacy of the screening for the proposed decks. Mr. Alderman then briefly questioned her about whether all the "high visibility" requirements were met in the Developer's pattern book and she stated that they were.

Jos Venturina from the Development Plans Review section then testified. He stated that DPR recommended approval of the Plan. He explained that all comments from the Bureau of

Highways had been addressed in the redlined Site Plan. He stated that the Developer will be required to pave only the sections of Dean and Woodley Avenues in front of the site. He testified that the fee dedication for the panhandle drive was only required to be 36 feet wide (with only 20 feet paved) because DPR interpreted it as only serving 3 lots – and that is because Lots 9 and 10 had access via Dean Avenue. When Mr. Holzer pointed out that this access was only theoretical, i.e., that the site plan shows the only access for Lots 9 and 10 is via the panhandle driveway, Mr. Venturina stated that he had consulted with an unnamed co-worker who told him this was okay. When questioned about where visitors and service people visiting the development would park he stated he didn't know. He did not know how many bedrooms were in the proposed duplexes or how long the driveways were. He then testified that all the Fire Department's comments had been addressed. Mr. Holzer asked specifically about the Fire Department's July 3, 2019 DPC Comment that the Developer must "*provide 35' minimum turning radius for the emergency vehicles to turn around in the corner of Woodley Avenue and Dean Avenue per NFPA 1. An offsite rite-of-way may need to be acquired from the property located at 20 Dean Avenue.*" Mr. Venturina stated that this property owner had not been contacted but that DPR had done a site visit and had concluded there was no problem. He was asked specifically whether a fire truck trying to turn that corner would be impeded by the hedge at 20 Dean Avenue. He replied "no sir." Mr. Alderman then questioned him to confirm DPR's interpretation that Lots 9 and 10 were not considered panhandle lots because of their frontage on Dean Avenue. Mr. Venturina also confirmed in questioning by Mr. Alderman that the paved part of the proposed panhandle drive was 20 feet wide, which conformed to the minimum width required by the Fire Department's Comment.

LaChelle Imwiko from Real Estate Compliance was the last County witness. She testified that all the required easements and dedications had been properly delineated on the Site Plan and that her agency therefore recommended approval of the Plan. Neither party questioned her.

THE DEVELOPER'S CASE

In its case in chief, the Developer presented one (1) witness: John Motsco, a professional engineer who was accepted as an expert. His *curriculum vitae* was admitted as Developer's Exhibit 4. Mr. Motsco discussed the project in general and described in detail the improvements planned for the site. Another redlined Site Plan was marked and admitted as Developer's Exhibit 1A. Mr. Motsco described the additional revisions that had been made in response to the amended DOP Comments received on the first day of the Hearing; namely: fencing and screening along Dean Avenue behind Lots 9 and 10, widening the panhandle drive and Woodley Avenue, and adding "no parking" signs on Woodley. He testified that because Lots 9 and 10 have "frontage" on Dean Avenue they should not be considered panhandle lots. He also described the "high visibility" changes made in the pattern book. In conclusion, Mr. Motsco opined that the proposed development satisfied all Baltimore County requirements and was in conformance with the BCC and BCZR.

PROTESTANTS' CASE

Numerous neighbors testified in opposition to the proposed development, as did Mary Molinaro, the 1st Vice President of the Reisterstown, Owings-Mills, Glyndon Coordinating Council ("ROG"), who presented a letter and Resolution from that organization in opposition. (Protestants' Exhibit 6). The protestants acknowledged that the Developer has the right to build homes on this parcel – they just believe this proposed development is too dense and is incompatible with the existing neighborhood. Their primary concerns are: density, traffic flow and volume,

parking, the use of panhandle driveway and lots, and public safety. Concerns about environmental impacts were also raised. Although these concerns are well-founded in this era of climate change, they are typical of those now raised in virtually every development case, and are not sufficient in and of themselves to warrant denial of the Plan. However, the other community concerns will be addressed below.

A. Panhandle and Density issues

The neighborhood witnesses testified and produced photographs (Protestants' Exhibit Nos. 2, 4, 7, and 9) showing that there are currently no semi-detached ("duplex") homes or panhandle lots in the neighborhood. They pointed out that the panhandle lots and duplexes will enable the Developer to obtain 100% of the possible density on this parcel at the expense of the aesthetics of the existing neighborhood and at a cost to public safety. The neighborhood witnesses; most notably, Patricia Gordon, her daughter Lauren Maynard, and Onaje Williams testified that the neighborhood has actively opposed this proposed development during the entire process to date, starting with the Community Input Meeting ("CIM"). They noted that after the CIM and the Development Plan Conference ("DPC"), and indeed even in its initial HOH Comments, the DOP had stated that it could not support approval of the Plan because it wanted the Developer to *"[d]emonstrate alternative dwelling layout/locations in order to address some of the community's concerns and create a layout that more closely matches the existing pattern of the neighborhood, while also addressing traffic and ROW issues." See,* DOP Development Plan Conference, and initial Hearing Officer Hearing Comments, dated July 3, 2019 and September 27, 2019. These witnesses and others pointed out that none of the County agency witnesses explained how it was that DOP had changed its position to recommend approval of the Plan without ever requiring the Developer to submit any alternative plan. Regarding the panhandle driveway, they testified that

they do not understand how DOP ultimately allowed the Developer to not count Lots 9 and 10 as panhandle lots based on the fact that they back to Dean Avenue. They pointed out that the Dean Avenue access is purely theoretical because, as proposed, the site plan shows that all five (5) of the detached dwellings rely on the panhandle driveway as their sole ingress and egress. They wonder, therefore, why the County did not require the Developer to abide by the width requirements of BCC § 32-4-409 (b) (2) (iii), which would have required a 50 foot wide panhandle drive to serve these five dwellings. They further explained that they believe the proposed panhandle driveway and lots do not conform with BCC § 32-4-409 (a) because: (1) as the site plan shows, this parcel is *not* "irregularly shaped," (2) the panhandle design *will* be detrimental to adjacent properties, and (3) this design *will* impact public safety and welfare. In their view, the proposed panhandle design will be detrimental to adjacent properties for lots of reasons, including the increased density it will allow, which will exacerbate an already problematic traffic flow situation. Numerous residents testified that the three (3) roads in the neighborhood are so narrow that they are essentially single lane streets. As a result, drivers approaching each other must pull onto residents' lawns or into their driveways in order to allow passage. Photos in Protestants' Exhibit 3 document this problem. Witnesses testified that many residents have lined their front property boundaries with large stones to prevent cars from traversing their lawns and hitting their mailboxes. The protestants believe that the estimated 130 additional daily car trips associated with the proposed development will push the traffic problem past the tipping point.

Owen Murphy resides with his wife, the aforementioned Lauren Maynard, at 24 Woodley Avenue. Their home is on almost an acre of property and is across the street and just west of the row of proposed duplexes. Mr. Murphy is a professional graphic designer. He created a graphic depiction of the existing neighborhood and proposed development. It was admitted as Protestants'

Exhibit 7 and 7A. He testified that he used the State Department of Assessment and Taxation ("SDAT") website and Google maps to create this exhibit. According to his unrebutted testimony and Exhibit 7 and 7A, there are 17 houses on approximately 20 acres in the existing neighborhood.[2] All are detached homes on an average lot size of .61 acres. By contrast, the proposed development will add 13 houses on less than 4 acres, with the houses all crowded onto approximately 2.5 acres of the site. But for the use of duplexes and panhandle lots this tract could not accommodate such density. The neighbors share DOP's earlier concern that this design does not "match the existing pattern of the neighborhood." Mr. Murphy and other witnesses also expressed concerns about the height of the proposed duplexes lining Woodley Avenue, which they feel will tower over the existing homes.

Lauren Maynard expressed frustration over DOP's decision to change its position and recommend approval of the Development Plan despite the fact that the Developer had never submitted any alternative site plan as requested. She noted that the 2020 Master Plan adopted the "transect zone" concept of zoning and development. She proffered a copy of an excerpt from the 2020 Master Plan that defines the characteristics of the various transects. (Protestants' Exhibit 11). Ms. Maynard stated that she believes the existing neighborhood is properly categorized as a T-3 "sub-urban" transect zone, but that if the proposed development were built it would transform the neighborhood into a T-4 "general urban" transect zone. Ms. Maynard noted that earlier DOP comments in the file had suggested putting single family detached homes on Woodley Avenue and moving the proposed duplexes to the interior of the parcel. She further noted that DOP had also advised that the Developer should consider having some of the proposed homes facing Dean Avenue with direct access to it, rather than having their back yards facing Dean Avenue since that

[2] Exhibit 7A lists a total of 23 homes but 6 of those homes are further down Stocksdale Avenue across the I-795 overpass so he did not consider them in calculating the density in the actual neighborhood.

orientation is discouraged by the BCZR. She questioned why the Developer was never required to submit site plans with these alternative layouts. Ms. Maynard had prepared a map of the existing neighborhood and the proposed new development site in the middle of it. (Protestants' Exhibit 5). According to this Exhibit (and the redlined site plan) there are currently only three (3) houses on Woodley Avenue between Dean and Stocksdale Avenues. They are all on sizable lots with ample parking. The proposed development would add thirteen homes whose sole ingress and egress would be on Woodley Avenue, which would change the entire feel of the neighborhood.

B. Traffic and parking

Numerous residents also raised concerns about traffic safety and parking. Onaje Williams owns a home on approximately two (2) acres at 23 Stocksdale Avenue. He testified that his young sons and other children in the neighborhood walk to the public schools. He stated that it is already dangerous for pedestrians in the neighborhood because there are no sidewalks and very narrow streets. He realizes that the site plan calls for sidewalks directly in front of the proposed duplexes on Woodley Avenue, and behind the lots backing to Dean Avenue, but there will still be no sidewalks in the rest of the neighborhood and the development will be creating an estimated 130 additional car trips. He also expressed frustration and concern about the effect this proposed development would have on the feel of the neighborhood, which he and his wife recently moved to because of its rural and historic feel.

Virtually every witness raised concerns about the limited parking provided in the proposed development because there is no street parking through most of the existing neighborhood due to the narrow streets. Woodley Avenue, where the sole entrance to the development will be, will have "no parking" signs installed. There will be no parking on the panhandle drive either, as it is only 20 feet wide, and the driveways for the proposed homes can accommodate only two (2)

vehicles at most, since they are only 35 feet long. The community is concerned about where the new residents' guests, delivery trucks, and service vehicles will park. They noted that the duplexes will have as many as four (4) bedrooms and it is unrealistic in this day and age to think that there will be only two (2) vehicles per family. They stressed that most the existing homes in the neighborhood have long, wide driveways and large lawns for overflow parking. Photos demonstrating this were admitted as Protestants' Exhibit 4.

C. Public safety and welfare

The community witnesses also raised concerns about the impact the proposed development would have on public safety. As noted above, they point out that there are presently only 17 houses in the neighborhood so the addition of 13 new homes will nearly double the density. Ms. Maynard testified that it is already extremely difficult to turn onto Reisterstown Road due to the volume and speed of traffic on it. She stated that there is often a line of six (6) or seven (7) cars backed up on both Woodley and Stockdale Avenues trying to leave the neighborhood, especially during morning rush hour. She is concerned that doubling the number of people in the neighborhood will create a very untenable traffic situation. She also submitted Police Department records showing the high volume of accidents on Reisterstown Road in the immediate vicinity of this neighborhood. (Protestants' Exhibit 10).

Witnesses also noted that this increase in population can be expected to generate a commensurate increase in emergency responses to the neighborhood. Because of the very narrow streets there is already a problem getting fire apparatus into the neighborhood, and once it is there the streets are then impassable. They note that according to the Plan, Woodley Avenue will still be only 20 feet wide even after it is widened in front of the proposed duplexes. Mr. Williams testified that he is considered essential personnel at his job and he was prevented from getting out

of the neighborhood on an earlier occasion when fire vehicles were called to a neighbor's home because there was no room to get around them. Ms. Maynard is an emergency room nurse and also expressed concern about her ability to get to work during such an event. Her father, Bryan Maynard, testified that he was a volunteer firefighter in Reisterstown for 19 years and that this neighborhood was notoriously difficult for fire apparatus to get in and out of.

As noted above, several new single family homes have been built along Stocksdale Avenue on the west side of the neighborhood. Witnesses testified that because of the tight turns and narrow roads construction vehicles for those projects had damaged existing properties as they travelled to those sites. A photo submitted as part of Protestants' Exhibit 3 shows a cement mixer running over the lawn and hedges of the home at the corner of Dean and Woodley Avenues as it tries to make that turn. This is the same corner that the County witness said a fire truck should be able to turn into with no problem. Other witnesses described delivery vehicles having to drive across lawns to make the turn from Stocksdale onto Woodley Avenue.

Finally, the community witnesses all voiced frustration about the County's development process and how they felt that their voices and concerns had fallen on deaf ears. Ms. Maynard pointed out that the 2020 Master Plan states that existing community members are supposed to have "an integral role in the creation of sustainable developments through collaborative efforts," and that in this case it feels to the community that only the Developer's profit margin has been considered. Mr. Williams testified that he felt the process puts "profit over people." They are upset that DOP had stated throughout the development process that it could not recommend approval of the project and wanted the Developer to submit alternative plans, but had then recommended approval at the HOH without sufficiently explaining its change of position. In sum, the community acknowledged the Developer's right to build houses on this parcel but they believe

those houses should be detached single family dwellings on lots that are similar in size to those in the existing neighborhood. Photos of new construction of this type in the neighborhood were admitted as Protestants' Exhibit 13.

DEVELOPER'S REBUTTAL

The Developer, Michael Greenspun, testified that in his experience new developments add vibrancy to an area and prevent stagnation. He stated that he could not make his necessary profit margin with fewer than the 13 proposed units in the development. He stated that he felt like the neighbors who are most strongly opposed to the project are those that moved into the neighborhood most recently and want to shut the door behind them.

Mr. Motsco was then re-called to the stand to address some of the protestant's testimony concerning stormwater runoff and environmental issues.

BRIEFS IN LIEU OF CLOSING ARGUMENT

At the close of all the evidence counsel agreed to submit written memoranda in lieu of closing argument. Those memoranda were filed by the agreed upon deadline of December 13, 2019 and have been considered fully. They will be made a part of the record.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

The BCC provides that the "Hearing Officer shall grant approval of a development plan that complies with these development regulations and applicable policies, rules and regulations." BCC § 32-4-229. In *People's Counsel v. Elm Street Development, Inc.*, 172 Md. App. 690 (2007), the Court of Special Appeals held that if the county agencies recommend approval of a development plan, it is "then up to [protestants] to provide evidence rebutting the Director's recommendations." Id. At 703. It should be noted that in the *Elm Street* case the protestants did not question the agency witnesses or submit evidence to rebut the agency recommendations. As

will be explained, the protestants in this case did so, and I believe the protestants in this case have met their burden of rebuttal.

In the Hearing before me the county agency witnesses did recommend approval of the Development Plan. Under the holding in *Elm Street Dev., supra,* the Developer was entitled to rest his case on these approvals, provided the agency testimony or the bases therefor were not debunked or rebutted. Other than calling Mr. Motsco to explain the Plan, and to offer his opinion that it meets all County laws and regulations, counsel for the Developer did just that. Mr. Alderman thanked each agency witness for that agency's recommendation and largely asked no further questions. The protestants, however, called numerous witnesses with firsthand knowledge of the immediate neighborhood and the surrounding communities, and these witnesses gave testimony and produced exhibits (without objection) that undermined the testimony of the agency witnesses and the Developer's engineer. Further, and perhaps more importantly, the protestants asked questions of the agency witnesses that were not satisfactorily answered. Finally, they pointed out that the Plan does not conform to various relevant provisions of County law.

The starting point for my analysis is BCC § 32-4-102, entitled "DEVELOPMENT POLICIES," which provides, in relevant part:

"(a) *Conformity with Master Plan required.*

(1) Subject to the limitations in the Charter and this Code, all development of land shall conform to:
(i) The Master Plan;

(b) *Intent of laws.*

(2) This title is intended to ensure that proposed development projects are safe, adequate, convenient and, where applicable, provide for the following:

(i) Conservation of existing communities and the promotion of the quality of development, site and building design, and compatibility."

The following two (2) Code sections are also applicable here, and state as follows:

"§ 32-4-103. - PURPOSES OF THE TITLE.

(a) *In general.* This title is adopted for the following purposes:

(1) To protect and provide for the public health, safety, and general welfare of the county;

(2) To implement the future growth and development of the county in accordance with the Master Plan;

(6) To protect the viability of the county's existing communities by ensuring that new development and redevelopment is compatible with the neighborhood and minimizes adverse environmental, traffic, and economic impacts on the surrounding community;"

"§ 32-4-104. - SCOPE OF TITLE.

(a) *Applicability of title.* This title shall apply to the process of review for approval of all development."

In his post-trial Brief the Developer contends that "the proposed development depicted on the Development Plan is not subject to compatibility review pursuant to § 32-4-402." Developer's Brief at 20. The Developer also urges that under County law a plan approval by the Hearing Officer is just the "first step" in the "ongoing [development] process." *Id., citing, Miller v. Forty West Builders,* 62 Md. App. 320 (1985), *Art Wood Enterprises v. Wiseburg Community Association, Inc.,* 88 Md. App. 723 (1991) and *Monkton Preservation Association, et al. v. Gaylord Brooks Realty Corporation,* 107 Md. App. 573 (1996).

First, I do not read BCC § 32-4-402 that narrowly. It states, in relevant part, as follows:

"§ 32-4-402. - COMPATIBILITY.

(a) *"Neighborhood" defined.* In this section, "neighborhood" means the existing buildings and land uses adjacent to and extending from the proposed development to:

(1) A definable boundary such as a primary collector street or arterial street;

(2) An area with a significant change in character or land use; or

(3) A major natural feature.

(b) *Exception.* This section does not apply to a research park.

(c) *Recommendations by Director of Planning.* The Director of Planning shall make compatibility recommendations to the Hearing Officer for:

(1) A cluster subdivision;

(2) A development in the RCC, R-O, OR-1, OR-2, O-3, SE, OT zones, the CR districts, or, except as provided for a development described in § 32-4-402.1, a Planned Unit Development; or

(3) Alternative site design dwellings as provided in the comprehensive manual of development policies.

(d) *Compatibility objectives.* Subject to subsection (c) of this section, development of property shall be designed to achieve the following compatibility objectives in accordance with the guidelines in the comprehensive manual of development policies:

(1) The arrangement and orientation of the proposed buildings and site improvements are patterned in a similar manner to those in the neighborhood;

(2) The building and parking lot layouts reinforce existing building and streetscape patterns and assure that the placement of buildings and parking lots have no adverse impact on the neighborhood."

It is noteworthy that in its post-trial Brief the Developer does not even argue that the proposed development *is* compatible with the existing neighborhood. Instead he argues that "there are only certain instances when the Director of Planning or the Design Review panel are *authorized* to conduct a § 34-4-102 compatibility review of a proposed development project." Developer's Brief at 20-21 (emphasis added). Counsel then quotes the language of § 34-4-102 (c). While it is true that this subsection enumerates the types of development projects where the DOP Director *shall* make compatibility recommendations to the Hearing Officer, it does *not* state that these development scenarios are the *only* types of development where the concept of compatibility should be considered. In enacting this Code provision the County Council may have reasoned that certain types of development are more technical or unique and that the DOP should therefore be required to assist the Hearing Officer with recommendations. Further, subsection (b) expressly states the *only* type of development to which the section does *not* apply are research parks. So the County Council knows how to exempt a type of development from compatibility review when it

wants to. Moreover, the Comprehensive Manual of Design Policies ("CMDP"), contains a "Residential Compatibility" Section that states that the BCZR and CMDP *"require* the Director of Planning to make compatibility recommendations for all development proposals other than certain single family housing in DR 5.5 zones." This "Compatibility" section lists five "compatibility objectives," including "Site Development Context," whose objective is to ensure that "[t]he arrangement and orientation of the proposed buildings and site improvements are patterned in a similar manner to those in the neighborhood." *See,* CMDP p. 66. Finally, and conclusively, BCC § 32-4-104, titled "Scope of Title," states that "[t]his title shall apply to the process of review for approval of *all* development." (emphasis added).

In sum, I believe that DOP is charged with making compatibility assessments on virtually all development projects, and I further believe that the Hearing Officer can and should consider compatibility in deciding whether a development plan should be approved.

And in the instant case, as noted above, DOP *did* in fact make compatibility assessments and comments throughout the development process. In its Concept Plan comments dated May 8, 2018 DOP noted that under the 2020 Master Plan the subject site is in a Community Conservation Area and was designated as a T-3 transect, that is "characterized by low-density residential areas, adjacent to higher zones that contain mixed use." Specific DOP comments in that CPC memo are relevant now, including paragraph 5, which asks the Developer to "[d]etail on the proposed plan how the existing Dean Avenue will be extended to allow vehicles to access proposed Lots 9 and 10." Further, paragraph 6, states that the Developer should "[p]rovide alternative plan layout options for Lots 11, 12, and 13. As stated in the Development Regulations of Baltimore County, the use of panhandle lots is not a matter of right and *may only be permitted in very limited situations.*" (emphasis added).

Later, at the Development Plan Conference (DPC) phase, DOP stated in its Memorandum dated July 3, 2019 that it was "*unable to recommend the Development Plan be approved*" until various comments were addressed. Among the specific "additional comments" listed under paragraph 3 were the following:

> "a. Demonstrate alternative dwelling layout/locations in order to address some of the community's concerns and create a layout that more closely matches the existing pattern of the neighborhood, while also addressing traffic and ROW issues.
>
> h. The submitted plan has the rear and side of proposed homes facing Dean Avenue. This is in conflict with the CMDP (Page 22) and the Baltimore County Landscape manual (BCLM) (Page 55) which states that rear facing dwellings are discouraged. The applicant must demonstrate there are no other alternatives for situating the rear facing dwellings. If unavoidable, the guidelines of the BCLM (Pages 55-57) shall be used."

Further, as detailed above in its *initial* Hearing Officer's Hearing "Final Report" dated September 27, 2019, DOP continued to state that it was "*unable to recommend the Development Plan be approved,"* because of the very same design issues; namely, that it still wanted the Developer to propose a modified plan that "*more closely matches the existing pattern of the neighborhood,* while also addressing traffic and ROW issues."

So it is clear that DOP voiced concerns about the compatibility of this Plan right up to the first day of the Hearing Office Hearing. However, as detailed above, during her testimony on the first day of the Hearing, the DOP witness produced an amended "Final Report," which for the first time now recommended that the Development Plan be approved. When asked how it was that DOP had changed its position – despite the fact that the Developer had never submitted any alternative site plan - the witness (perhaps understandably) could not offer a cogent explanation. This is detailed above in the recitation of the Hearing testimony, but of specific note, when asked Mr. Holzer the DOP representative if duplexes on small lots were consistent with the exiting neighborhood of detached homes on larger lots, she responded that the proposed *architectural*

features would be consistent. When pressed as to whether the duplex design itself is consistent with the neighborhood she stated: "That's a very good question, but I can't answer that." There was, likewise, no good answer for why DOP had allowed the Developer to maintain the site orientation of Lots 9 and 10 with their rears facing Dean Avenue and their sole ingress and egress by way of the panhandle drive without ever requiring the Developer to submit alternative layout proposals, as DOP had requested through the entire development process to that point.

I find that the design of this Development Plan is not compatible with the existing neighborhood. The testimony and exhibits offered by the neighborhood witnesses establish that the proposed eight 45 foot high duplexes along Woodley Avenue would change the essential character of this small neighborhood of two story detached homes set back on relatively spacious lots. Especially when considered together with the additional five detached dwellings whose sole ingress and egress is via a panhandle drive off of Woodley Avenue in the middle of these duplexes.

In addition, other than the conclusory statements of the agency witnesses and Mr. Motsco, the Developer failed to adduce evidence concerning several sections of the "performance standards" set forth at § 260 of the BCZR. Specifically, no explanation was offered for why the "reverse-frontage" Lots 9 and 10 were ultimately approved by the agencies in the final site plan without the Developer ever submitting the alternative layouts that DOP had requested. For instance, it was never explained why it was recommended that the Plan be approved without complying with § 260.4 which states, in relevant part, that a development proposal *shall*: "3. Allow on-street parking," and "5. Provide street parking and accommodations which complement the surrounding neighborhood." As explained above, the Plan in this case provides for *zero* on-street parking – a problem numerous neighborhood witnesses pointed out. Indeed, the residents voiced understandable concern about where people would park if the residents of the proposed

development hosted a party, or on a more daily basis, had delivery or service people come to their homes.

Finally, as described in detail above, the protestants produced testimony and exhibits showing the traffic flow problems this proposed new development would create, and how it would greatly exacerbate problems that already exist due to the narrow width of the streets and the existing volume of traffic. They described how construction vehicles working on other recent residential construction projects have damaged lawns and mailboxes. They testified that the roads are so narrow that drivers must go onto lawns or into driveways in order to get around each other. It is unrebutted that this proposed development is expected to generate an additional 130 daily car trips, yet the only road widening proposed in the Development Plan is along the one block of Woodley Avenue in front of the development and the one section of Dean Avenue behind Lot 9. And Woodley Avenue would still be only 20 feet wide.

As also detailed above, earlier plan comments expressed concern about the limited turning radius for emergency vehicles at the corner of Woodley and Dean Avenues. It was suggested that the Developer may have to obtain an off-site right of way from the owner of that corner lot in order to provide the requisite 35 foot turning radius. However, as also detailed above, the county witness from DPR acknowledged that this right of way had never been explored but that this issue had been resolved by a site visit in which it was determined that it should be "no problem" for a fire truck to make this turn. However, a photo in Protestants' Exhibit 3 shows a cement mixer truck having to drive over the lawn and bushes of this property. I can use lay experience to conclude that a cement mixer is a fraction of the length of a hook and ladder fire truck and substantially shorter than a standard fire engine. Further, even the redlined site plan admitted as Developer's

Exhibit 1A shows that the line of the adjusted turning radius at that corner crosses the corner of the lot at 20 Dean Avenue.

Numerous witnesses voiced their understandable concern that this development, which would nearly double the population of the existing neighborhood, will generate a commensurate increase in emergency responses and therefore a commensurate increase in potential public safety concerns due to these traffic issues. I note that if an emergency vehicle - or for that matter a delivery or service vehicle – had to go to Lots 1, 2, 3, or 4 that they would likely have to back out of Woodley Avenue (at least until they could back into the proposed panhandle driveway) in order to get out of the neighborhood. This would, at a minimum, cause congestion and delay for other neighbors, and could also create safety hazards. Indeed one of the witnesses described the dangerous conditions already affecting the neighborhood children walking to school. In sum, the problems the proposed development would create go beyond compatibility because they pose a real threat to public safety. Further they would certainly impact public welfare by intensifying the traffic congestion that already plagues the neighborhood.

I also find that the Developer has not met its burden of establishing that it is appropriate to use a panhandle drive and panhandle lots in this case. These are separate but obviously related issues. The development law and regulations disfavor panhandle driveways and lots. The code provisions governing panhandle lots state as follows:

"(a) *In general.*

(1) The county may *only* allow a panhandle lot:

(i) To achieve better use of irregularly shaped parcels;

(ii) To avoid development in environmentally sensitive areas;

(iii) Where the lot will not be detrimental to adjacent properties; and

(iv) Where the lot will not conflict with efforts to provide for public safety and general welfare." (emphasis added).

Further, the CMDP cautions that "panhandle lots can create a variety of design and aesthetic problems which, if not properly addressed, prove incompatible with neighboring dwellings and communities." The site plan (Developer's Exhibit 1A) shows that this is *not* an irregularly shaped parcel. It is a rectangle. The Developer urges in its Brief that it should be considered irregular in shape due to "the County Greenway, areas of Forest Conservation and Forest Buffer and the required stormwater management area for the proposed issues." Developer's Brief at 24. In my view this is a "bootstrap" argument because it is not the parcel itself that is irregularly shaped. It is the irregular shape caused by the project design – for the sake of achieving 100% density.

In addition, only Lots 11, 12, and 13 were considered panhandle lots by the Developer's expert and, ultimately by the county agencies. However, as these witnesses testified, Lots 9 and 10 would be considered panhandle lots but-for the fact that they have "frontage" on Dean Avenue. As mentioned above, these rear-facing lots were ultimately approved by DOP even though no alternative designs were ever submitted by the Developer. This was vital to the viability of the Plan because if these lots *were* considered panhandle lots then the "in-fee" access strip for access to Woodley Avenue would have had to be a minimum of 50 feet wide per BCC § 32-4-409(b)2(iii), which requires 10 feet for each lot. Mr. Motsco testified that Lots 9 and 10 should not be counted as panhandle lots because theoretically they could have driveway access off of Dean Avenue. I note, however, that the site plan calls for a retaining wall along Dean Avenue, which would presumably complicate if not preclude the construction of driveways. Further, the site plan would not allow feasible driveway access to the fronts of the proposed dwellings on Lots 9 and 10. In sum, all the design and safety concerns posed by panhandle lots and driveways are presented by these five proposed lots – no matter what they are called.

Finally, I agree with the protestants that this proposed development would take this neighborhood from a T-3 "sub-urban" transect classification to a T-4 "general urban" classification. While the 2020 Master Plan does not necessarily prohibit such a transformation it does state in its "Introduction" that "[m]any existing stable residential neighborhoods should not be disturbed for additional development." In my view this is one such neighborhood, at least with regard to the proposed development plan before me.

Unlike the protestants in *Elm Street Dev., supra,* who failed to questions the county witnesses, and failed to present evidence themselves, the protestants in this case did both. The unrebutted evidence produced by the protestants is that the existing neighborhood consist of 17 homes on approximately 20 acres, and that this proposed development would add 13 homes on less than four (4) acres by using a site design that achieves 100% of the possible zoning density. The Developer justified this by claiming that it was necessary to meet his profit margins. But he offered no evidence in support of that claim and the neighbors pointed out that the Developer's profit margins should not be seen as more important than their property values and their present quality of life. I agree. Further, I question whether a development that is more compatible with the existing neighborhood *is* in fact economically infeasible because the record evidence shows that several new detached homes have recently been built on lots similar in size to those in the existing neighborhood.[3]

CONCLUSION

I am mindful that continuing development is vital to Baltimore County for a myriad of reasons. However, under County law I must also consider the impact a proposed project will have

[3] In the event this Decision and Order is vacated, this is to confirm that the Director's Approval of the Special Variance under BCC § 33-6-116 for the removal of 9 specimen trees is hereby AFFIRMED.

on existing neighborhoods and residents. Indeed, as noted above, the "Purpose" clause of the Development law specifically states that one of the primary purposes is "[t]o protect the viability of the county's existing communities by ensuring that new development and redevelopment is compatible with the neighborhood and minimizes adverse environmental, traffic, and economic impacts on the surrounding community." With all this in mind, the record evidence in this case compels me to deny the proposed Development Plan.

THEREFORE, IT IS ORDERED by this Hearing Officer/Administrative Law Judge this 27th day of **December, 2019**, that the one-sheet redlined Development Plan known as **"WOODLEY PARK FKA DEAN AVENUE"** (Developer's Exhibit 1), be and is hereby **DENIED**.

Any appeal of this Order shall be taken in accordance with Baltimore County Code, § 32-4-281.

PAUL M. MAYHEW
Managing Administrative Law Judge
for Baltimore County

IN THE MATTER OF	*	BEFORE THE
WOODLEY PARK / DEAN AVENUE 18 Dean Avenue	*	BOARD OF APPEALS
HOH Case No. 04-0728 4th Election District	*	OF
2nd Councilmanic District	*	BALTIMORE COUNTY
	*	CASE NO: CBA-20-024

* * * * * * * * * * * *

OPINION

This case comes to the Board of Appeals ("CBA") as an "on the record" appeal from a final Opinion and Order dated December 27, 2019 by Administrative Law Judge Paul Mayhew (the "ALJ") wherein he disapproved the Development Plan known as Woodley Park (the "Plan"). The ALJ disapproved of the proposed plan as incompatible with the neighborhood in density and character, and presented an array of zoning and development problems with traffic flow, parking, emergency vehicle access, panhandle lots, and other issues. Developer, Woodley Park Partners, LLC (the "Developer") was represented by Howard L. Alderman, Jr., Esquire, of Levin & Gann, and appealed the ALJ's ruling to his Board.

Protestants, consisting of numerous community members, were represented by J. Carroll Holzer, Esquire. On March 10, 2020, the CBA granted Peter Max Zimmerman, People's Counsel's Motion to be Joined and/or to Intervene.

Property Description and Petition

Developer Woodley Park's subdivision plan proposes 13 dwellings (8 semi-detached/Duplex; 5 single-family homes) on 3.97 acres zoned Density Residential (D.R. 3.5). It lies within the Urban Rural Demarcation Line ("URDL") on the north side of Woodley Avenue,

west of Dean Avenue (the "Property"). Two existing dwellings on the Property presently are to be razed.

As noted by the ALJ, the neighborhood at issue is approximately 20 acres in size and is accessed by and contained within three streets: Stocksdale Avenue, a through street on the southern edge of the neighborhood; and Woodley and Dean Avenues, each being a couple of blocks long. Testimony before the ALJ described the neighborhood as consisting of single family, detached residences on relatively large lots, with ample driveway and garage parking. On street parking is permitted on Dean Avenue only. There are no sidewalks. The neighborhood is a mixture of old and new houses located near the Historic Main Street in Reisterstown. To the north of the Property there are forest and wetlands protected by a forest conversation easement, a forest buffer easement and a Greenway adjacent to Norris Run, a protected intermittent stream which is part of the Liberty Reservoir watershed.

The Developer notes the Plan includes in-fee dedicated areas of highway widening improvements, together with perpetual easements for drainage and utilities, forest buffer and forest conservation, and County Greenway and storm water management. A schematic landscape plan has been approved and a waiver of local open space has been granted by the Department of Recreation and Parks. An alternative analysis regarding the best means of providing a sewage outfall/connection was submitted for review and approval pursuant to BCC § 33-3-112 and was approved by the Department of Environmental Protection and Sustainability ("DEPS"). A forest conservation Special Variance allowing the removal of 9 of the 17 specimen trees on the Property was also reviewed and approved by DEPS.

Authority of the ALJ and the Board of Appeals for this Matter

BCC §32-4-227 through §32-4-229 identifies the requirements and standards to guide the ALJ for the hearing on a development plan. BCC §32-4-227(e) provides the ALJ "shall consider any comments and conditions submitted by a county agency…" and if no comments or conditions are received, "the Development Plan shall be considered to be in compliance with county regulations." BCC §32-4-229(b)(1) states: the ALJ "shall grant approval of a Development Plan that complies with these development regulations and applicable policies, rules and regulations adopted in accordance with Article 3, Title 7 of the Code, provided that the final approval of a plan shall be subject to all appropriate standards, rules, regulations, conditions, and safeguards set forth therein." If a plan is approved, the ALJ has the authority to impose conditions if the conditions meet the criteria set forth in the Code. BCC §32-4-229(c).

The Board, in connection with this matter, has appellate jurisdiction. BCC §32-4-281(e) authorizes the Board, in its appellate jurisdiction, to: (i) remand the case; (ii) affirm the decision; or (iii) reverse or modify the decision if the decision, (a) exceeds the statutory authority or jurisdiction of the ALJ; (b) results from an unlawful procedure; (c) is affected by any other error of law; (d) is unsupported by competent, material, and substantial evidence in light of the entire record as submitted; or (e) is arbitrary or capricious. The Board does not make independent findings of fact or substitute its judgment for that of ALJ below. As stated by the Court of Special Appeals, when reviewing a hearing officer's decision on the approval of a development plan, the Board is "not vested with broad visitorial power … but acts rather as a review board, to assure that lower agency decisions are in conformance with law and are supported by substantial evidence." *People's Counsel for Balt. County v. Elm St. Dev., Inc.,* 172 Md. App. 690, 704; 917

A.2d 166, 174 (2007), quoting, *Monkton Preservation Ass'n v. Gaylord Brooks Realty Corp.*, 107 Md. App. 573, 580; 669 A.2d 195 (1996).

The Developer contends that the ALJ's Opinion, requires reversal as it: (1) exceeds the statutory authority or jurisdiction of the ALJ; (2) contains error(s) of law; (3) is unsupported by competent, material and substantial evidence in light of the entire record as submitted; and (4) is arbitrary or capricious. The Developer here takes issue specifically with the ALJ findings regarding Compatibility Review pursuant to BCC §32-4-402, requirements governing Residential Panhandle Lots pursuant to BCC §32-4-409(a), alleged conflict with the Baltimore County Master Plan, and the Residential Performance Standards.

Testimony Presented Before the ALJ

Numerous representatives of various Baltimore County agencies which reviewed the Plan testified at the hearing before the ALJ including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Jerry S. Chen, Project Manager; Jos Venturina and Jim Herman, Department of Public Works ("DPW")/Development Plans Review ("DPR"); LaChelle Imwiko, Real Estate Compliance, and Aaron Tsui, from the Office of Zoning Review ("OZR"). Also appearing on behalf of the County were Marta Kulchytska, Department of Planning ("DOP"), and Jeff Livingston with the Department of Environmental Protection and Sustainability ("DEPS").

Aaron Tsui from OZR submitted a one-page document captioned "Development Plan Comments," that was admitted as County Exhibit 3. Mr. Tsui testified that zoning recommends approval of the Plan. The exhibit states that this approval is subject to the DOP approval of the proposed panhandle driveway, and to final zoning approval. Counsel for the Protestants cross-examined Mr. Tsui as to whether DOP had, in fact, approved the proposed panhandle drive and

lots since DOP's last written comments, as set forth in the "DOP Hearing Officer Hearing Final Report" dated September 27, 2019, which report stated that DOP was "unable to recommend that the Development Plan be approved." Mr. Tsui testified that he had received nothing in writing from DOP but he had spoken with Marta Kulchytska who told him that DOP was now recommending approval of the Plan.

Jim Herman submitted a Schematic Landscape Plan that had been approved by DPR on September 20, 2019 as County Exhibit 1. He testified on behalf of DPR that the agency recommended approval of the Plan. On behalf of the Department of Recreation and Parks, Mr. Herman submitted an approved Open Space Waiver, which was admitted as County Exhibit 2. Mr. Herman also explained how required planting units are calculated and evaluated.

Jeff Livingston testified on behalf of DEPS that the groundwater and stormwater management concept plans were acceptable and explained that a Forest Buffer easement had been approved. He opined that Conceptual Stormwater Management approval regarding preliminary hydrology, suitability of outfall, etc. is required for approval of the Plan. An environmental "alternative analysis" concerning this issue was admitted as Developers Exhibit 2. Mr. Livingston further explained that a Special Variance to remove 9 of the 17 specimen trees on the site had been granted by the Director of DEPS, and that a fee in lieu will be made to DEPS forest fund and will be used to plant trees elsewhere. Mr. Livingston concluded testified that DEPS recommended approval of the Plan.

Ms. Kulchytska testified on behalf of DOP. At the outset of her testimony she presented a School Impact Analysis ('SIA") (County Exhibit 4) as required by BCC §32-6-103, demonstrating the proposed development would comply with State-mandated requirements concerning the maximum number of students permitted to attend elementary, middle and high

school in the vicinity of the project. Ms. Kulchytska also stated that the DOP had approved the Pattern Book for the development, which was admitted as County Exhibit 5 and which provided elevations and architectural details for the dwellings and other amenities to be located on the Property. Ms. Kulchytska described the final changes made to the plan, including additional architectural elements on proposed lots determined by DOP to be high visibility lots. Other requirements that were incorporated into the Pattern Book changes in design to duplex units, limits on garage door frontage and relocation of proposed fence screening to comply with County's Landscape Manual. She then proffered an amended Hearing Officer Hearing Final Report from DOP, also dated September 27, 2019, which concluded that the Pattern Book complied with the applicable Residential Performance Standards of the Baltimore County Zoning Regulations ("BCZR") §260 and recommended approval of the Plan, subject to various comments.

Counsel for the Protestants previously questioned Mr. Tsui about the prior version of the DOP Final Report, which had concluded that DOP could not support the approval of the Plan. This prior Report was the only one in the file prior to the hearing. The ALJ asked Ms. Kulchytska to provide copies of the amended Final Report to counsel for all parties, which she did. Despite objections from Counsel for the Protestants, the ALJ admitted the Final Report into evidence. The ALJ then adjourned the hearing so that all parties could review the amended Final Report.

When the hearing reconvened on November 1, 2019, the Developer's Engineer, John Motsco testified to the various amendments that had been made based on the DOP's amended Comments. The most substantive change was Note 21 indicating that Lots 1, 4, 5, 8, 9, and 10 were to be treated as high visibility lots because of their site orientation. An amended Site Plan was admitted as Developer's Exhibit 1A.

Ms. Kulchytska then resumed her testimony. Counsel for the Protestants questioned her about the basis for DOP's change in position. He noted that in the earlier DOP Comments during the development review process, DOP had stated that it could not recommend approval of the Plan because it wanted the Developer to among other things, "demonstrate alternative dwelling layout/locations in order to address some of the community's concerns and create a layout that more closely matches the existing pattern of the neighborhood, while also addressing traffic and ROW issues." *See DOP Development Plan Conference, and initial Hearing Officer Hearing Report*, dated July 3, 2019 and September 27, 2019.

Ms. Kulchytska stated that she and the planners from the DOP had done "additional studies" and had visited the site and were now satisfied that the panhandle drive and lots, and the proposed duplex designs were acceptable. Counsel for the Protestants inquired as to when these additional studies and site visit had occurred. Although she was unable to give a specific date, she added that it had occurred before the initial hearing date of September 27, 2019. Counsel for the Protestants further inquired if she had seen any duplexes in the existing neighborhood and she stated she did not recall seeing any. Counsel inquired if duplexes on small lots were consistent with the neighborhood and she responded that the architectural features would be consistent, but was unable to opine as to whether the duplex design was consistent with the neighborhood. Ms. Kulchytska was questioned further regarding DOP approval regarding the rear-facing dwellings (Lots 9 and 10) on Dean Avenue. DOP Comments from July 3, 2019 noted that such an orientation "is in conflict with the Comprehensive Manual of Design Policies ("CMDP") and the Baltimore County Landscape Manual ("BCLM") which state that rear-facing dwellings are discouraged. The applicant must demonstrate that there are no other alternatives for situating the rear-facing dwellings." *See July 3, 2019 DOP Development Plan Conference*

Comments. Ms. Kulchytska testified that the Site Plan now shows a privacy fence and landscape screening along Dean Avenue; however, she did not explain why the Developer did not provide the alternatives as previously required. When questioned as to why the proposed privacy fences were permitted to be 10 feet from the public right of way instead of the required 20, she explained that the BCLM allows for 10 feet. Finally, Ms. Kulchytska testified that the Developer had met all "high visibility" requirements for screening proposed decks.

Jos Venturina from the Development Plans Review section testified next. He testified that DPR recommended approval of the Plan. He explained that all comments from the Bureau of Highways had been addressed in the redlined Site Plan. He testified that the road right of way for Dean and Woodley Avenues will be 25 feet from the centerline along the respective lot lines of the Property with no intrusion on other properties. He stated that Developer will be required to pave only the sections of Dean and Woodley Avenues in front of the Property. He testified that the fee dedication for the panhandle drive was only required to be 36 feet wide (with only 20 feet paved) because DPR interpreted the panhandle drive as only serving 3 lots due to Lots 9 and 10 having access via Dean Avenue. The ALJ notes in his Opinion and Order that when counsel for Protestants presented Mr. Venturina with the argument that this access was only theoretical in nature, in that the Plan shows the only access for Lots 9 and 10 is via the panhandle driveway, Mr. Venturina stated the had consulted with an unnamed co-worker who told him this was acceptable. Mr. Venturina was unable to comment on where visitors and service people visiting the development would park. He was also unable to comment on how many bedrooms were in the proposed duplexes and as to the length of the driveways. Mr. Venturina was further questioned about the July 3, 2019 DPC Comment that the Developer must provide a 35' minimum turning radius for the emergency vehicles to turn around in the corner if Woodley

Avenue and Dean Avenue. Mr. Venturina testified that the DPR had done a site visit and had concluded there was no problem. He further testified that the widening of Woodley Avenue required for the proposed development would obviate any current conditions that may restrict emergency vehicle access. He testified that a fire truck would not be impeded in trying to turn by the hedge at 20 Dean Avenue.

LaChelle Imwiko from Real Estate Compliance testified that all required easements and dedications had been properly delineated on the Site Plan and that her agency therefore recommended approval of the Plan.

Developer's Case

The Developer presented the expert testimony of its professional engineer, John Motsco, PE who was accepted as a professional engineer and an expert in land use, development and zoning issues. Mr. Motsco presented the Plan and discussed in detail the redline changes added as a result of the comments received at the Development Plan Conference and additional comments received from DOP. Mr. Motsco testified regarding the initial difference of opinion between the Developer and the Planning Department as to the number and type of architectural features required on the proposed homes. He testified that ultimately, the Developer accepted the Department's position and modified the Pattern Book accordingly. Mr. Motsco explained the general requirement for open space and the reasons why a waiver from those requirements was granted, as well as the location and extent of the mandatory Greenway area to be dedicated to the County. Mr. Motsco rendered his expert opinion that the Plan met all County laws, regulations and rules, polices and guidelines.

Upon cross-examination, Mr. Motsco described how proposed Lot Nos. 9 and 10 have legal access along its Dean Avenue frontage. Mr. Motsco opined that Lot Nos. 9 and 10 are not

panhandle lots even though they will have paved access to their common driveway pursuant to a Private Ingress, Egress Maintenance & Utility easement, which he testified would establish ingress/egress rights and maintenance and repair obligations. Mr. Motsco explained that, in accordance with the BCZR and the Zoning Commissioner's Policy Manual, front and rear yards of homes are determined by the orientation of the home. Regarding proposed residential subdivisions in Baltimore County, Mr. Motsco the described the evaluation of public water pressure during Phase II of the development process. He testified the pattern of development shown in the Plan may proceed if adequate water pressure exists. However, if a problem would develop in the future it would need to be remedied so that the development could be completed.

Protestants' Case

Numerous neighbors testified in opposition to the proposed development, as did Mary Molinaro, the 1st Vice President of the Reisterstown, Owings Mills, Glyndon Coordinating Council ("ROG"), who presented a letter and Resolution in opposition to the proposed development. In short, the Protestants believe that the proposed development is too dense and is incompatible with the existing neighborhood. Their primary concerns are: density, traffic flow and volume, parking, the use of the panhandle driveway and lots, and public safety. Concerns about environmental impacts were also raised.

Panhandle and Density Issue

The neighborhood witnesses testified and produced photographs supporting their contention that there are no semi-detached ('duplex') homes or panhandle lots in the neighborhood. They pointed out that the panhandle lots and duplexes will enable the Developer to obtain 100% of the possible density on this parcel, which they contend will be at the expense of the aesthetics of the existing neighborhood and at a cost of public safety. These witnesses

noted that the DOP had initially noted it wanted the Developer to "demonstrate alternative dwelling layout/locations in order to address some of the community's concerns and create a layout that more closely matched the existing pattern of the neighborhood, while also addressing traffic and ROW issues. *See DOP Development Plan Conference, and initial Hearing Officer Hearing Comments, dated July 3, 2019 and September 27, 2019.* These witnesses complained that County witnesses had not explained how it was that DOP had changed its position to recommend the approval of the Plan without requiring the Developer to submit any alternative plan. Regarding the issue of the panhandle driveway, they testified that they did not agree with the finding that lots 9 and 10 were not to be considered panhandle lots. They argue that the Dean Avenue access is purely theoretical because as proposed, the site plan shows that all five of the detached dwellings rely on the panhandle driveway as their sole ingress and egress. Consequently, they found it illogical that the County did not require the Developer to follow the width requirements of BCC §32-4-409(b)(2)(iii), which would have required a 50 foot wide panhandle drive to service these 5 single family homes. They further argued that the proposed panhandle driveway and lots do not conform with BCC §32-4-409(a) because (1) the parcel is not irregularly shaped, (2) the panhandle design will be detrimental to the adjacent properties, and (3) this design will impact public safety and welfare. In the Protestants view, the proposed panhandle design will be detrimental to the adjacent properties due to the increased density it will allow, which will exacerbate what they deem as an already problematic traffic flow situation.

Numerous residents raised concerns about traffic safety and parking. Onaje Williams owns a home on approximately two acres at 23 Stocksdale Avenue. He testified that his young sons and other children in the neighborhood walk to the public schools. He stated that it is already dangerous for pedestrians in the neighborhood because there are no sidewalks and very narrow

streets. He realizes that the Plan calls for sidewalks directly in front of the proposed duplexes on Woodley Avenue, and behind the lots backing to Dean Avenue, but there will still be no sidewalks in the rest if the neighborhood and the development will be creating an estimated 130 additional car trips.

A majority of the Protestants' witnesses raised concerns about the limited parking provided in the proposed development due to the fact there is no street parking through most of the existing neighborhood. Woodley Avenue, where the sole entrance to the development will be, will have "no parking" signs installed. There will be no parking on the panhandle drive either, as it is only 20 feet wide, and the driveways for the proposed homes can accommodate only two vehicles at most. The community is concerned about where the new residents guests, delivery trucks and service vehicles will park. They noted the duplexes will have as many as four bedrooms and therefore it is unrealistic to assume that there will be only 2 vehicles per family. They noted that most of the existing homes in the neighborhood have long, wide driveways and large lawns for overflow parking.

Community witnesses raised further concerns regarding the impact the proposed development would have on public safety. Due to the fact there are only 17 homes in the neighborhood presently, 13 additional hones would nearly double its density. A community witness noted that it is already extremely difficult to turn onto Reisterstown Road due to the volume and speed of traffic and that there was already a high volume of accidents on Reisterstown Road in the vicinity of this neighborhood.

Witnesses also noted that this increase in population can be expected to generate an increase in emergency responses to the neighborhood and, because of the very narrow streets there is already a problem getting fire apparatus into the neighborhood.

DECISION

Panhandle Lots

BCC § 32-4-409(a) states:

§ 32-4-409. - PANHANDLE DRIVEWAYS.

(a) *In general.*
(1) The county may only allow a panhandle lot:
(i) To achieve better use of irregularly shaped parcels;
(ii) To avoid development in environmentally sensitive areas;
(iii) Where the lot will not be detrimental to adjacent properties; and
(iv) Where the lot will not conflict with efforts to provide for public safety and general welfare.
(2) The county may only allow a panhandle driveway where necessary to provide access to interior lots where a public road is neither feasible nor desirable.

The ALJ concluded the Developer did not meet its burden of establishing that it is appropriate to use a panhandle drive and panhandle lots in this case. The ALJ concluded that the two issues were separate but obviously related. The ALJ noted that the CMDP cautions "panhandle lots can create a variety of design and aesthetic problems which, if not properly addressed, prove incompatible with neighboring dwellings and communities." After reviewing the evidence submitted, the ALJ concluded that the parcel at issue is not irregular in shape, but rather is a rectangle. The ALJ did not accept the Developer's assertion that the parcel is irregularly shaped due to the County Greenways, areas of Forest Conservation and Forest Buffer and the required stormwater management proposed, but rather concluded that it irregular shape was caused by project design in an effort to achieve 100% density.

The ALJ, did not agree with the Developer's expert and county agency finding that only Lots 11, 12, and 13 were considered to be panhandle lots. The Developers' Expert and County witnesses testified that Lots 9 and 10 would be considered panhandle lots but-for the fact they have frontage on Dean Avenue. The ALJ notes that these rear-facing lots were approved by DOP

despite the fact that alternative designs were never produced during the ALJ hearing, nor could County witnesses refer to their content with any specificity. The ALJ asserts that this detail was vital the viability of the Plan because if these lots were in fact considered panhandle lots then the 'in-fee" access strip for access to Woodley Avenue would have had to be a minimum of 50 feet wide pursuant to §32-4-409(b)(2)(iii) (10 feet for each lot). The ALJ mistakenly found that a retaining wall would run along Dean Avenue blocking access to Lots 9 and 10. However, he further found that the Plan would not allow feasible driveway access to the fronts of the proposed dwelling on Lots 9 and 10, causing the design and safety concerns to be the same for all 5 of the lots whether called 'panhandle lots' or not .

As there is no dispute between the parties as to what code sections apply when evaluating the appropriateness of panhandle lots, the only question before this Board is whether there was substantial evidence in the record for the ALJ to arrive at his finding on this issue. In doing so, the Board must examine the record as a whole to determine whether or not substantial evidence exists to support his findings, and if so, the Board may affirm those findings. Toward that end, the Board takes note that "substantive evidence" has been defined to mean more than a "scintilla of evidence." *Prince George's County v. Meininger*, 264 Md. 148, 152 (1972). If the ALJ's finding on this issue was based solely on his mistaken belief that a retaining wall would block access of Lots 9 and 10 to Dean Avenue, the Board would not be inclined to give the ALJ's factual finding its customary deference. However, the ALJ has also found that the Property is not irregular in shape, nor did he agree that Lots 9 and 10 are not panhandle lots for purposes of calculating the width of the access strip to Woodley Avenue. The Board concludes that these findings of fact are within the exclusive purview of the ALJ and are based on substantial evidence provided at the hearing before him. Consequently, it is not the place of this Board to question

such findings of fact and must defer to the ALJ's conclusion on the matter of panhandle lots. Thus, the Board affirms the ALJ's decision on this issue and for this reason, the Plan should be denied.

Residential Performance Standards

The ALJ concluded that the Developer failed to adduce evidence concerning several sections of the performance standards set forth at §260 of the BCZR. Specifically, the ALJ found that no explanation was offered for why the "reverse-frontage" Lots 9 and 10 were ultimately approved by the agencies in the final site plan without evidence being submitted regarding the alternative layouts requested by DOP. The ALJ also noted that it was never explained why the Plan was approved without compliance with §260.4 of BCZR which states, in relevant part, that a development proposal shall: "Allow on-street parking and Provide street parking and accommodations which complement the surrounding neighborhood." As explained above, the Plan provides for zero on-street parking – a problem numerous neighborhood witnesses pointed out. The ALJ found these witnesses to be credible and their testimony was supported by photographs submitted into evidence. (Protestants' Exhibits 2, 3, and 4)

Counsel for the Developer noted that the absence of off street parking was at the behest of DOP and that there is parking on Dean Avenue and on the existing two-way portions of both Woodley and Stocksdale Avenues. In addition, each of the proposed homes have garages and driveways. Counsel for the Developer further argues that the ALJ assumed no alternative layouts were submitted. Counsel asserts that the DOP would not have issued its final recommendation for approval of the Plan if Developer had not submitted (on September 18, 2019) to DOP, alternative layouts, demonstrating each was not feasible.

As noted by Counsel for the Developer, the BCC mandates that specific agencies review the Development Plan. BCC §32-4-226(b). County agency representatives typically appear and testify under oath as to the positions taken by their respective agency or department. As stated by the Court of Appeals in *Marzullo v. Kahl*, 366, Md. 158 (2001), "an administrative agency's interpretation and application of the statute which the agency administers should be ordinarily be given considerable weight by the reviewing courts." Additionally, a development plan is presumptively compliant with the development review regulations and BCC §32-4-227(e) requires that, in the absence of comments, "the Development Plan shall be considered to be in compliance with county regulations." Petitioner is not required, at that point, to produce additional evidence in support of the County agency determinations. *People's Counsel for Balt. County v. Elm St. Dev., Inc.,* 172 Md. App. 690, 703; 917 A.2d 166, 174 (2007). Once that presumption has been established, Protestants, as explained by the Court of Special Appeals in *Elm St. Dev.*, have the burden to produce evidence rebutting the recommendations and determinations made. *Id., citing Gough v. Board of Zoning Appeals*, 21 Md.App. 697, 704; 321 A.2d 315 (1974).

Although it is well-settled that the various county agencies providing reports approving a development plan, by presumption, creates a *prima facie* case for its approval by the ALJ, Protestants are not prohibited from rebutting that presumption by presenting additional evidence, or by cross-examining the County representatives, thus challenging their findings. If the Board were to accept the argument that the opinions of the County agencies were unimpeachable, it would be unnecessary to have a development plan approved by the ALJ in the first place. A majority of the fodder for the Protestants' cross-examination of the County representatives originated from Concept Plan Comments, and more specifically, the Comments requiring

alternatives to the reverse-frontage of lots 9 and 10. Counsel for the Developer correctly argues that the Concept Plan is not a matter before the ALJ, but an agency's documented concern about a specific issue that has not been specifically rectified in the Development Plan, is obviously fair game for cross-examination of a representative from that agency.

Applying the reasoning above to this matter, while the testimony from an agency representative such as DOP representative, Ms. Kulchytska, is given considerable weight, the fact finder may give her testimony less weight if he finds that her credibility on the issue has been impeached by her inability to explain certain matters and her lack of specific knowledge on such topics as alternative layouts for the reverse frontage lots. As it is the ALJ who is charged with the finding of fact and weighing the credibility of the witnesses who testify before him in Development Plan cases, it is not within this Board's power to supplant its judgment on such issues for that of the ALJ. Consequently, this Board defers to the fact finding of the ALJ on the issue of Residential Performance Standards and affirms his denial of the plan as to that issue.

Compatibility

The Developer argues that the ALJ has exceeded his statutory authority by making his own compatibility determination pursuant to BCC §32-4-402. This section states in pertinent part:

> § 32-4-402. - COMPATIBILITY.
>
> (a) *"Neighborhood" defined.* In this section, "neighborhood" means the existing buildings and land uses adjacent to and extending from the proposed development to:
> (1) A definable boundary such as a primary collector street or arterial street;
> (2) An area with a significant change in character or land use; or
> (3) A major natural feature.
> (b) *Exception.* This section does not apply to a research park.
> (c) *Recommendations by Director of Planning.* The Director of Planning shall make compatibility recommendations to the Hearing Officer for:
> (1) A cluster subdivision;

> (2) A development in the RCC, R-O, OR-1, OR-2, O-3, SE, OT zones, the CR districts, or, except as provided for a development described in § 32-4-402.1, a Planned Unit Development; or
> (3) Alternative site design dwellings as provided in the comprehensive manual of development policies.

The Developer argues that statutorily, there are specific instances in BCC, §32-4-402(c) in which such a compatibility review is called for, but this Plan, which includes single-family detached and single-family duplex dwellings, does not fall within one of those instances.

The ALJ found that both the BCZR and CMDP require the Director of Planning to make compatibility recommendations for all development proposals other than certain single family housing in DR 5.5 zones. The Developer notes, conversely that the CMDP requires a compatibility recommendation to the Hearing Officer for:

> Development other than single-family detached, semi-detached, or duplex hosing that occurs in the DR 5.5 zone.

See CMDP, Division II/Residential Compatibility at 66.

The Developer interprets this to mean that if a development is proposed in the DR 5.5 Zone, other than single-family detached, semi-detached, or duplex housing, a compatibility recommendation is required. The Developer further reasons that this provision is consistent with the BCZR, which in defining uses permitted a right in the DR zones, BCZR §1B01.1.A provides as follows:

> 1.a In all D.R. Zones, single family detached, semi-detached or duplex dwellings;
> 1.c In D.R. 5.5 Zones, subject to findings of compatibility by the hearing offer: group homes and multifamily buildings
> 1d. In D.R. 10.5 and DR 16 Zones: group houses and multifamily buildings.

The Developer contends this statutory language makes it clear that single-family detached, semi-detached and duplex dwellings are permitted as of right in all D.R. zones, without

a compatibility analysis. Counsel for the Developer further notes that the Board had addressed a similar issue *In the Matter of 11301 Pulaski Highway, LLC*, Case No. CBA-19-002. Although the facts in that case are quite distinguishable from the case at bar, the Board did find that the ALJ's power to make compatibility findings are limited by BCC, §32-4-402. In response to the Developer's argument, the ALJ stated in his Opinion and Order:

> . . . in sum, I believe the DOP is charged with making compatibility assessments on virtually all development projects, and I further believe that the Hearing officer can and should consider compatibility in deciding whether a development plan should be approved.

ALJ Opinion Order at 19.

In an effort to be consistent with this Board's prior decisions on the scope of BCC, §34-4-402, we cannot agree with the ALJ's broader interpretation as to his responsibility for making compatibility findings, and restate our position that the required compatibility analysis found in BCC, §32-4-402, is limited to statutorily defined circumstances, of which this development is not one.

Master Plan Conflict

As stated in BCC §32-4-215(a), any conflict between the concept plan of development and the Master Plan has to be identified and the concept plan shall be immediately transmitted to the Planning Board in accordance with BCC §32-4-231. If, during the development plan hearing, the Hearing Officer determines that a conflict exists between the development plan and the Master Plan, he shall refer the Development Plan to the Planning Board. BCC § 32-4-231(a)(1).

In his Opinion and Order, the ALJ stated:

> I agree with the protestants that this proposed development would take this neighborhood from a T-3 'sub-urban' transect classification to T-4 'general urban' classification. While the 2020 Master Plan does not necessarily prohibit such a transformation it does state in its 'Introduction that 'many existing stable residential neighborhoods should not be

> disturbed for additional development.' In my view this is one such neighborhood, at least with regard to the proposed development plan before me.

ALJ Opinion and Order at 25.

It appears the ALJ's comment on this issue is mere *dicta* regarding his opinion on the nature of this development and it is ambiguous to the Board as to whether he is definitively finding a conflict with the Master Plan. Consequently, the Board cannot not find with certainty that the ALJ found a Master Plan conflict that would merit remand to the Planning Board. The Board also finds that the ALJ's comment in this regard is harmless in that the Board has affirmed the ALJ's findings of facts on other matters precluding the approval of the Development Plan at issue.

CONCLUSION

Based on the analysis stated above, the Board finds that the ALJ's denial of the Development Plan based on the issues of the Panhandle Lots/Driveways and Residential Performance Standards is supported by competent, material, and substantial evidence in light of the entire record as submitted and is hereby AFFIRMED. The Board does not agree that the ALJ found a conflict with the Master Plan nor does it agree with the ALJ's opinion as to his requirement to make compatibility findings in all development cases. However, due to the Plan's failure on the previous noted issues of Panhandle Lots/Driveways and Residential Performance Standards, the Board finds questions concerning compatibility and a Master Plan conflict are MOOT.

ADMINISTRATIVE LAW JUDGE'S ORDER ON REMAND RE: COMBINED DEVELOPMENT PLAN AND ZONING PETITION

PROCEDURAL HISTORY

On February 12, 2021 the undersigned issued an Opinion and Order in this case denying approval of the Development Plans. One of the grounds upon which the Plan was denied was that it was in conflict with the 2020 Master Plan. The Developer appealed. By Opinion dated July 14, 2021 the Board of Appeals remanded the case to the undersigned with instructions to "immediately refer the matter to the Baltimore County Planning Board pursuant to Baltimore County Code § 32-4-231." The undersigned followed this directive. On October 12, 2021 Stephen Lafferty, the Director of the Department of Planning ("DOP") and Secretary to the Baltimore County Planning Board, authored a letter to the undersigned informing me that on October 7, 2021 the Planning Board, acting on the recommendation of the DOP, had voted to confirm that there was no Master Plan conflict, and that the Development Plan should be approved. *See,* Planning Board Decision and DOP Recommendation, attached collectively as Exhibit 1, and incorporated herein. This decision was forwarded to the undersigned and to the County Council pursuant to BCC § 32-4-232(b)(2) and (b)(3), respectively.

Pursuant to BCC § 32-4-232(f)(1) the Decision of the Planning Board is binding upon the Administrative Law Judge and shall be incorporated into the final Order unless the County Council overrules the Decision of the Planning Board pursuant to BCC § 32-4-232(f)(2). The County Council took the matter up and on November 15, 2021 Resolution No. 137-21 was introduced. *See,* County Council Resolution No. 137-21, attached as Exhibit 2, and incorporated herein. The Resolution required the Council to consider whether to affirm or overrule the Planning Board's Decision. The Parties and People's Counsel were informed that the Resolution would be considered at the County Council's November 29, 2021 Work Session; at which time the Parties and People's Counsel would be afforded the opportunity to present their respective positions. All were also afforded the right to submit written arguments.

At the November 29, 2021 Work Session counsel for the Parties, People's Counsel, and several neighbors argued their positions and answered questions posed by Councilmembers. Thereafter, on December 6, 2021 the County Council voted 7-0 to ADOPT the Resolution, thereby overruling the Planning Board's Decision and finding that the Development Plan *is* in conflict with the 2020 Master Plan. *See,* Adopted Resolution, Exhibit 2. By letter dated December 7, 2021, Thomas H. Bostwick, Legislative Counsel and Secretary to the County Council, sent a copy of Resolution 137-21 to the undersigned.

DECISION

Pursuant to BCC § 32-4-102(a)(1) "all development of land *shall* conform to the Master Plan." (emphasis added). In *HNS Development, Inc. v. People's Counsel*, 425 Md. 436, 451 (2012), the court of appeals closely analyzed the Baltimore County development law and held that a

PC Exh 18

development plan could not be approved if it did not conform to the Master Plan. As just explained, the County Council adopted Resolution 137-21, finding that the Development Plan in this case does not conform to the 2020 Master Plan. I shall therefore reaffirm my February 12, 2021 Opinion and Order, and it is hereby incorporated in full and attached hereto.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **14th** day of **December, 2021,** that the **"DAVIS FARMS"** Plan marked and accepted into evidence as Developer's Exhibit 2, be and hereby is **DENIED**; and,

IT IS FURTHER ORDERED that, in the event the denial of the Development Plan is reversed and the Plan is approved, the Petition for Special Hearing from the Baltimore County Zoning Regulations ("BCZR") § 500.7 to approve the density, house location, use areas and lot configurations for Lot Nos. 1, 2, 3, 4, 16, 17 & 19 as shown on the Plat to Accompany this Petition (and Development Plan for Davis Farms) as a Density Anomaly is **GRANTED**; and,

IT IS FURTHER ORDERED that, in the event the denial of the Development Plan is reversed and the Plan is approved, the Special Forest Variance, as approved by the Director of DEPS, is also, **GRANTED.**

Any appeal of this Order shall be taken in accordance with BCC § 32-4-281.

PAUL M. MAYHEW

OFFICE OF
ADMINISTRATIVE HEARINGS

October 12, 2021

Hon. Paul Mayhew
Managing Administrative Law Judge
Office of Administrative Hearings
105 West Chesapeake Avenue
Towson, Maryland 21204

Re: Davis Farms, PAI# 1-0606, Master Plan Conflict

Dear Judge Mayhew:

On August 16, 2021, pursuant to Baltimore County Code (BCC) Section 32-4-231(a)(1), you referred the above development plan to the Baltimore County Planning Board to determine whether this development plan was in conflict with the County's 2020 Master Plan.

The Davis Farms development plan was presented to the Planning Board at its regular meeting on September 2, 2021 as required by BCC Section 32-4-231(b). This meeting was advertised to allow for public comment. At this meeting, Jenifer Nugent of the Department of Planning presented the Department's Staff Report and recommendation. Counsel were present and afforded an equal amount of time to present their respective cases and points. Howard Alderman was present as representative for the developer; Michael McCann attended as the representative of the community; and, Peter Max Zimmerman participated as People's Counsel. Four community residents from Maple Avenue were present to speak before the Board: Ms. Christy Katz, Ms. Monica Simonsen, Mr. Albert Cunniff, and Ms. Eileen Lehman. Other community members also submitted similar comments of concern and opposition in the WebEx "chat", as well. The Board adjourned after these presentations and comments were made.

BCC Section 32-4-232(d)(1) requires the Planning Board to provide a written decision to the Hearing Officer and a written notification to the County Council within 45 days after the referral to the Board. However, Mr. Alderman advised that he would not be available at the Board's next regularly scheduled meeting on September 23, 2021. As Board Secretary, I consulted with Counsel who agreed that they could proceed at a subsequent meeting. I advised you of this time frame dilemma in light of the Code requirements. You advised that, since all counsel were in agreement and you still retained jurisdiction, the Board could take up the matter at its subsequent, regular meeting on October 7, 2021.

The Planning Board met at its regular meeting on October 7, 2021 to discuss and vote on the issue before them. Upon a motion to accept the Planning Department's recommendation that there is no Master Plan conflict, the Board voted in favor of the motion. The motion was:

> **Be It Moved,** that, for the reasons stated in the August 23, 2021 staff report and reports from the concept plan conference and development plan conference, the Planning Board's decision to the

Printed on recycled paper containing 30 percent post-consumer material

Exhibit 1

Administrative Law Judge is that the proposed development "Davis Farms" (PAI #: I-0606) does not constitute a "conflict" with the Master Plan.

The Staff Report, which is attached, provided these Findings and Recommendation:

Findings:

- The Department of Planning supported the proposed Development Plan without raising an issue of conformity with the Master Plan 2020.
- After reviewing the Master Plan 2020 Proposed Land Use Map, the Urban Rural Demarcation Line (URDL), and the zoning map at the time of the Master Plan 2020 adoption, the transect designation for the development proposal site was mapped to run coincident with the zoning classification. The transect designation of T3 for this property is appropriate as the general character description from the Master Plan 2020 states that areas should be comprised of "..Lawns and landscaped yards surrounding detached single family houses…" with "…variable front and side yard setbacks". The T3 transect and the DR zoning (DR 1, 2, and 3.5 on this site) support one another in that concept. Similarly, the T2R transect designation is described as "primarily agricultural character with woodland and wetland and scattered buildings" and "variable setbacks". The T-2R transect designation is located on a minor portion of the development site that is fully wooded and coincides with the RC 5 zoning adopted in the 2008 CZMP zoning cycle.
- The T-2R transect on the site does not, in itself, create a Master Plan Conflict as no development is proposed on that portion of the site and uses no density from that portion of the site.
- At the time Master Plan 2020 was adopted, a majority of the zoning for the proposed development proposal was DR. It remains DR. The combination of the DR classifications allows the number of density units proposed.
- The entire development proposal site falls completely within the urban portion of the URDL.
- The Land Management Area map from the Master Plan 2020 designates the site as Community Conservation Area, which describes this land use as low to moderate density residential neighborhoods served by public water and sewer services. This designation follows the residential zoning on the site inclusive of the RC 5 zoning.

Recommendation:

The Department of Planning recommends to the Baltimore County Planning Board that the Davis Farm PAI# 01-606 development proposal does not present a Master Plan conflict and that the Planning Board approve the single family detached development plan with the Master Plan 2020 T-2R transect designation on the Proposed Land Use map.

There was no discussion by Board members prior to the vote. Therefore, there are no additional reasons included in the record.

Please accept this letter as the Planning Board's written decision regarding the Davis Farms Development Plan. A copy of the Department of Planning's August 23, 2021 Memorandum to the Planning Board is enclosed to describe the Department's basis as reflected in the Motion and as presented on September 2, 2021.

If you have any questions regarding the report or the proposed recommendations, please direct them to me.

Sincerely,

Stephen Lafferty
Secretary to the Board

SUBJECT: Master Plan Conflict, Davis Farms PAI#01-606

BACKGROUND INFORMATION:

The proposal is to develop 21.17 ± acres of land accessed via Maple Avenue in Catonsville with 1 existing and 18 new single family detached homes. The site is currently zoned DR 1 (12.17 acres), DR 2 (2.95 acres), DR 3.5 (0.99 acres), RC 5 (4.94 acres) and RC 8 (0.12 acres). All of the proposed development is located within the DR 1, 2 and 3.5 zoned portions of the property is proposing only to use the density from the DR zones for the development as well. The portion at the rear of the site, zoned RC 5 and 4.94 acres, is wooded and will remain.

In developing the Master Plan 2020, the Proposed Land Use map was reformatted from specific land uses to a transect model. The transect model allows a delineation of degrees of intensity from rural to urban without associating a specific land use to a specific parcel. The ranges of intensity also include a variety of uses and habitats. The purpose of this reframing of the Proposed Land Use map was to strengthen the concept which guides land use decisions in a general manner rather than for specific properties. In a fashion similar to the Master Plan 2010, text from the Master Plan 2020 frames how the 'Proposed Land Use' map should be utilized. Master Plan 2020 states:

> "The map is conceptual and general, and is intended to reflect land use patterns and support the land use objectives of Master Plan 2020, rather than identify land use of individual properties or parcels. The use of 'T-zones', is designed to support compact mixed-use communities, while maintaining the stability of the existing community conservation areas (Map 5). The proposed land use map will provide general direction forum county land use decisions, and may be amended as needed." Page 27.
>
> "The T-zones vary by the ratio and level of intensity of their natural, built, and social components. Uses may overlap between one T-zone and another." Page 29.

The Master Plan 2020 Transect designations on the site are T2R and T3. The T-2 R (Rural Residential Zone) consists of large lot single-family detached housing. Plantings are informal. All setbacks are generally 50+ feet. Lots are deep to accommodate a larger backyard. Density varies between 2 to 5 acres per dwelling (page 27). The T-3 (Sub-Urban Zone) includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions (page 29). Further descriptions and graphics were originated and developed by Duany Plater-Zyberk & Co.and are on page 30 of the Master Plan 2020 document. Here the T2 Rural transect character is described as sparsely settled lands in an open or cultivated state including woodlands with variable setbacks. The T3 Sub-Urban transect character describes lawns and landscaped yards surrounding detached single-family houses with variable front and side yard setbacks.

As shown on the attached Zoning Maps, the property has been subject to zoning changes since 2008. The 2008 request, CZMP Issue #1-016, was to rezone the property from solely DR zoning to all RC 5 or RC 8 zoning. The Department of Planning did not support the request and the Planning Board adopted the Department's recommendation. The final decision by the County Council was to keep the DR zoning for most of the property and rezone 4.94 acres of the site to RC 5. Subsequent CZMPs have retained the RC 5 classification.

The Davis Farms project went through the normal major subdivision process, which included a Concept Plan Conference, a Community Input Meeting, a Development Plan Conference and a hearing before the Administrative Law Judge. The Department of Planning recommended to the Administrative Law Judge (ALJ) that the Development Plan be approved. ALJ Mayhew issued an Order on February 12, 2021 denying the Development Plan, stating that the proposed single family detached homes would not be in conformity with the Master Plan 2020 based on the Proposed Land Use transect designations. The decision was appealed to the Board of Appeals. On July 14, 2021, the Board remanded the case to the Administrative Law Judge with direction that he refer the case to the Planning board to determine if a Master Plan conflict exists in accordance with the process described in the Baltimore County Code.

REFERAL TO THE PLANNING BOARD:

ALJ Mayhew's referral is in accordance with BCC §§ 32-4-231 and 32-4-232. These two County Codes sections are attached as a reference. Significant points from these two sections are listed below with the code reference.

The Hearing Officer shall refer the Development Plan to the Planning Board when: The Development Plan conflicts with the Master Plan.	32-4-231(a)(1)
The Planning Board shall review a referred plan at its next scheduled meeting.	32-4-231(b)
The Planning Board shall only consider issues referred under 32-4-231(a)	32-4-232(a)(1)
The applicant, a person of an agency can submit oral or written comments to the Planning Board.	32-4-232(a)(2)
The Planning Board shall file a written decision to the ALJ that includes the reasons for the decision and file a recommendation with the County Council at the same time.	32-4-232(b)(2) 32-4-232(b)(3)

The Planning Board shall file its written decision no later than 45 days after the referral to the Planning Board.	32-4-232(c)
The decision of the Planning Board is binding upon the ALJ and shall be incorporated into the final order.	32-4-232(f)(1)
The decision of the Planning Board is not binding upon the ALJ if the decision is overruled by action of the County Council.	32-4-232(f)(2)

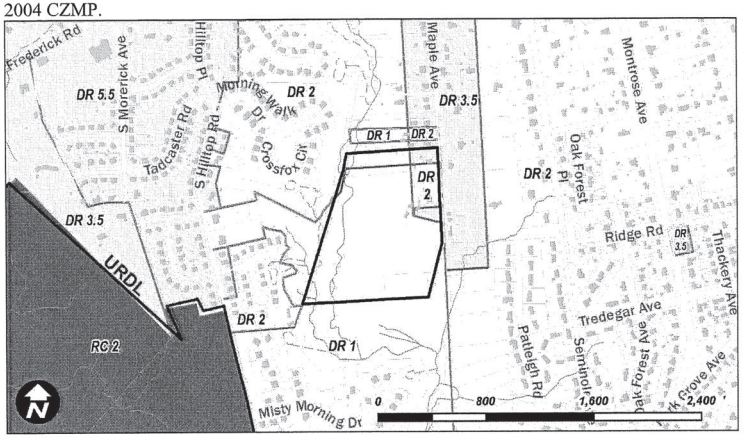
FINDINGS:

- The Department of Planning supported the proposed Development Plan without raising an issue of conformity with the Master Plan 2020.
- After reviewing the Master Plan 2020 Proposed Land Use Map, the Urban Rural Demarcation Line (URDL), and the zoning map at the time of the Master Plan 2020 adoption, the transect designation for the development proposal site was mapped to run coincident with the zoning classification. The transect designation of T3 for this property is appropriate as the general character description from the Master Plan 2020 states that areas should be comprised of "..Lawns and landscaped yards surrounding detached single family houses…" with "…variable front and side yard setbacks". The T3 transect and the DR zoning (DR 1, 2, and 3.5 on this site) support one another in that concept. Similarly, the T2R transect designation is described as "primarily agricultural character with woodland and wetland and scattered buildings" and "variable setbacks". The T-2R transect designation is located on a minor portion of the development site that is fully wooded and coincides with the RC 5 zoning adopted in the 2008 CZMP zoning cycle.
- The T-2R transect on the site does not, in itself, create a Master Plan Conflict as no development is proposed on that portion of the site and uses no density from that portion of the site.
- At the time Master Plan 2020 was adopted, a majority of the zoning for the proposed development proposal was DR. It remains DR. The combination of the DR classifications allows the number of density units proposed.
- The entire development proposal site falls completely within the urban portion of the URDL.
- The Land Management Area map from the Master Plan 2020 designates the site as Community Conservation Area, which describes this land use as low to moderate density residential neighborhoods served by public water and sewer services. This designation follows the residential zoning on the site inclusive of the RC 5 zoning.

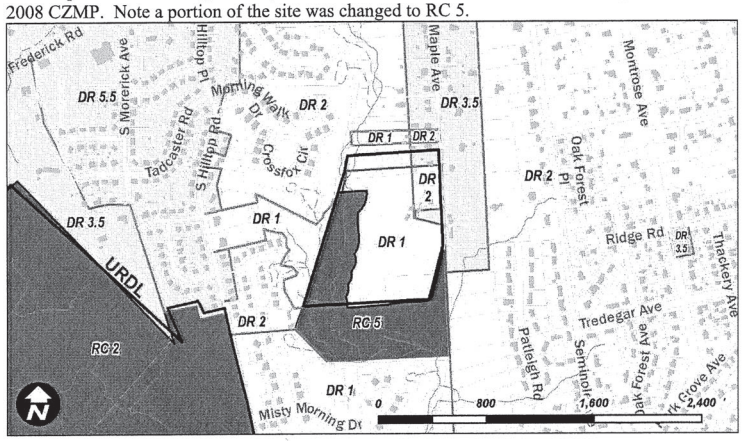
RECOMENDATION:

The Department of Planning recommends to the Baltimore County Planning Board that the Davis Farm PAI# 01-606 development proposal does not present a Master Plan conflict and that the Planning Board approve the single family detached development plan with the Master Plan 2020 T-2R transect designation on the Proposed Land Use map.

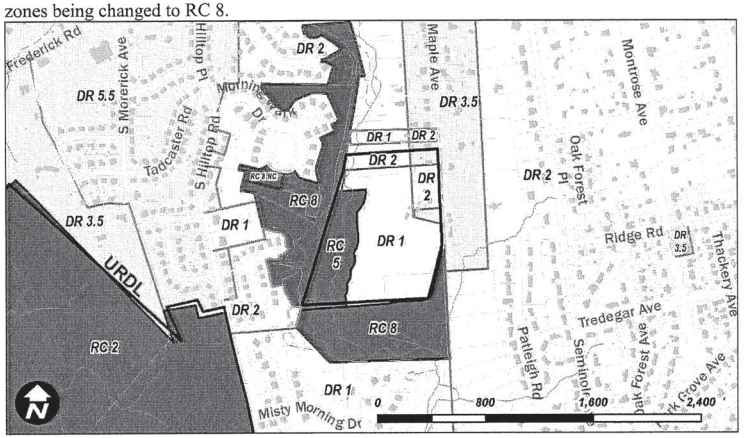
This map shows the zoning for the parcels associated with the Davis Farm Development after the 2004 CZMP.



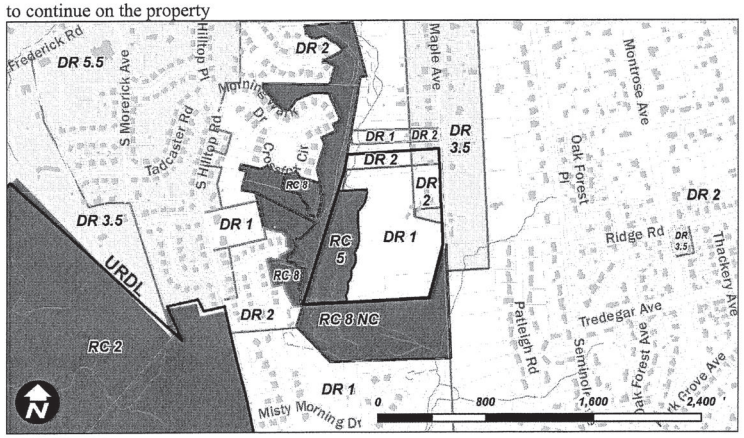
This map shows the zoning for the parcels associated with the Davis Farm Development after the 2008 CZMP. Note a portion of the site was changed to RC 5.



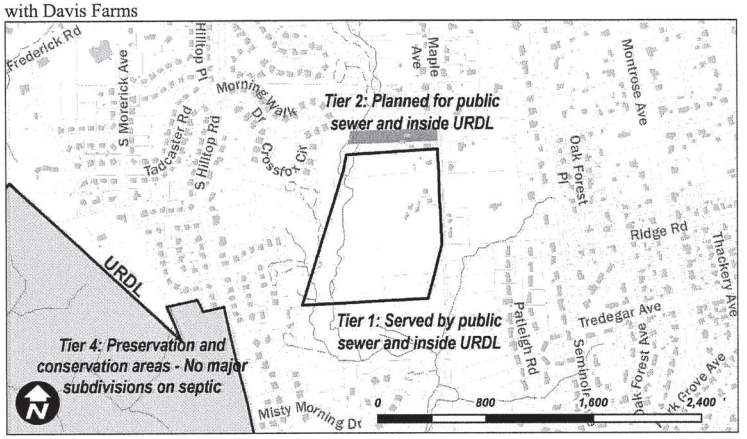
This map shows the zoning for the parcels associated with the Davis Farm Development after the 2012 CZMP. Note the RC 5 portion of the site remained unchanged despite the surrounding DR zones being changed to RC 8.



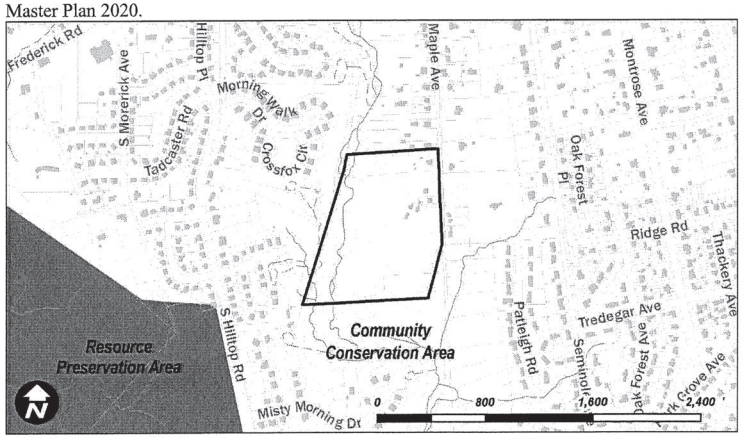
This map shows the current zoning on the land today. The adjacent RC 8 zone to the south was upgraded to RC 8 NC to further prevent development of that parcel. In allowing the RC 5 on the development site to remain, the county council was intentional in allowing some residential use to continue on the property



This map shows the location of the URDL and Growth Tiers relative to the parcels associated with Davis Farms



This map shows the Land Management Area from the Master Plan 2020 for the parcels associated with the Davis Farm Development. Note the parcels are designated Community Conservation Area, which would coincide with the zoning at the time of the development of the Master Plan 2020.



This map shows the Transects from the Master Plan 2020 for the parcels associated with the Davis Farm Development. When Master Plan 2020 introduced the Transect Based Land Use Model, the T2R classification was intended to run with the RC zoning on the site.

OFFICE OF
ADMINISTRATIVE HEARINGS

Dear Mr. Mayhew:

Attached please find a copy of Resolution 137-21 of the Baltimore County Council to determine whether to overrule the Baltimore County Planning Board in regard to the Planning Board's decision in the Tri-Star Development – Davis Farms development case ("Davis Farms"), in which the Planning Board found that the proposed Development Plan was not in conflict with the Baltimore County Master Plan.

This Resolution was approved by the County Council at its December 6, 2021 and is being forwarded to you for appropriate action.

Sincerely,

Thomas H. Bostwick
Legislative Counsel/Secretary

Exh. # 2

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2021, Legislative Day No. 20

Resolution No. 137-21

Mr. Tom Quirk, Councilman

By the County Council, November 1, 2021

A RESOLUTION of the Baltimore County Council to determine whether to overrule the Baltimore County Planning Board in regard to the Planning Board's decision in the Tri-Star Development – Davis Farms development case ("Davis Farms"), in which the Planning Board found that the proposed Development Plan was not in conflict with the Baltimore County Master Plan.

WHEREAS, on February 12, 2021, Administrative Law Judge Paul M. Mayhew issued an Opinion and Order in the Davis Farms combined Zoning and Hearing Officers Hearing case, Case No. 01-0606 and 2020-0105-SPH, denying approval of the Development Plan, in part, based on a finding that the Development Plan did not comply with the Master Plan; and

WHEREAS, after an appeal was filed by the Developer, the Board of Appeals of Baltimore County remanded the case back to the Administrative Law Judge in order for the case to be referred to the Planning Board for a decision on the issue of whether the Development Plan is in compliance with the Master Plan. Judge Mayhew referred the case to the Planning Board on August 16, 2021 pursuant to Baltimore County Code ("BCC") Section 32-4-231(a)(1); and

WHEREAS, the Davis Farms Development Plan was presented to the Planning Board at its regular meeting on September 2, 2021 as required by BCC Section 32-4-231(b). The meeting was advertised to allow for public comment, and representatives of the Department of Planning presented the Department's Staff Report and recommendation; and

WHEREAS, counsel for the Developer and the Community appeared and Peoples Counsel Peter Max Zimmerman participated and all were afforded an equal amount of time to present their respective cases and points; several members of the community also spoke before the Planning Board; and

WHEREAS, the Planning Board met at its regular meeting on October 7, 2021 to discuss and vote on the Master Plan issue before them. Upon a motion to accept the Planning Department's recommendation that the proposed development is not in conflict with the Master Plan, the Planning Board voted in favor of the motion and forwarded its decision to the Administrative Law Judge and its recommendation to the County Council pursuant to Sections 32-4-232(b)(2) and (b)(3), respectively; and

WHEREAS, pursuant to BCC Section 32-4-232(f)(1), the decision of the Planning Board is binding upon the Administrative Law Judge and shall be incorporated into the final order; and

WHEREAS, pursuant to BCC Section 32-4-232(f)(2), the decision of the Planning Board is not binding upon the Administrative Law Judge if the decision is overruled by action of the County Council; now therefore

BE IT RESOLVED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Baltimore County Council hereby overrules the decision of the Planning Board that the proposed development is not in conflict with the Master Plan, and the decision of the Planning Board is, therefore, not binding on the Administrative Law Judge; and

BE IT FURTHER RESOLVED, that a copy of this Resolution be sent to the Baltimore County Planning Board, the Department of Planning, and the Office of Administrative Hearings; and

AND BE IT FURTHER RESOLVED, that this Resolution shall take effect from the date of its passage by the County Council.

READ AND PASSED this ***6th*** day of ***DECEMBER, 2021***

BY ORDER

Thomas H. Bostwick

ADMINISTRATIVE LAW JUDGE'S
COMBINED DEVELOPMENT PLAN AND ZONING OPINION & ORDER

This matter comes before the Office of Administrative Hearings ("OAH") for a public hearing on a development proposal submitted in accordance with Article 32, Title 4, of the Baltimore County Code ("BCC"). Tri-Star Development, *Owner/Applicant* (herein known as "Developer") submitted for approval a 2-sheet redlined Development Plan ("Plan") known as "Davis Farms."

The Developer proposes 19 single family homes to be built on 21.17 acres of land under various zone classifications. The site is currently developed with existing vacant dwellings, accessory structures and ancillary buildings.

The Developer has also filed a Petition for Special Hearing under Section 500.7 of the Baltimore County Zoning Regulations ("BCZR") to approve the density, house location, use areas and lot configurations for Lot Nos. 1, 2, 3, 4, 16, 17 and 19 as shown on the Plat to Accompany this Petition (and Development Plan for Davis Farms) as a Density Anomaly that is within the spirit and intent of the BCZR.

The development and zoning cases were considered at a combined hearing as permitted by

BCC § 32-4-230. Details of the proposed development are more fully depicted on the Plan, which was marked and accepted into evidence as Developer's Exhibit 2. The property was posted with the Notice of Hearing Officer's Hearing ("HOH") and Zoning Notice, both on January 6, 2021, in compliance with the regulations. Due to the COVID-19 pandemic, the undersigned conducted a public virtual WebEx hearing in lieu of an in-person public hearing on January 29, 2021.

The Developer, William Holland, attended the HOH in support of the Plan but did not testify. Also in attendance were Aaron Kensinger of Little & Associates Engineers, the engineer who prepared and sealed the Plan; Mark Keeley of Traffic Concepts, Inc.; and Henry Leskinen of Eco-Science Professional, Inc. Their *curricula vitae* were admitted as Developer's Exhibits 3, 12, and 10, respectively. Howard Alderman, Esquire of Levin Gann, P.A. represented the Developer. Numerous neighbors attended to oppose the requested relief.

AGENCY WITNESSES

Numerous representatives of the various Baltimore County agencies who reviewed the Plan also attended the virtual hearing, including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Patrick Williams, the Project Manager, Jim Hermann of Development Plans Review ("DPR"), and Department of Recreation and Parks ("R&P"), LaChelle Imwiko from Real Estate Compliance, and Jason Seidelman, Office of Zoning Review ("OZR"). Also appearing on behalf of the County were Jeff Livingston from the Department of Environmental Protection and Sustainability ("DEPS"), Vishnu Desai from DPR, and Te-Sheng Huang and Kui Zhao from the Department of Planning ("DOP").

Each County agency representative testified briefly and indicated that the Plan addressed all comments submitted by their agency, and they each recommended approval of the Plan. First to testify was Jeff Livingston of DEPS, who testified that the Plan addresses all remaining

comments made by the Groundwater Management and Stormwater Management sections at the Development Plan Conference ("DPC"). He explained that the site is served by public water and sewer but that the public sewer does not currently extend beyond 27 and 28 Maple Avenue. Therefore, a "low pressure" sewer line will be installed to serve the 19 proposed homes, which will need to use "grinder pumps" to connect to the pressure sewer line because a gravity sewer line is not feasible. He explained that the maintenance of the stormwater management systems will be the responsibility of the homeowners association. He also testified that the Director of DEPS had approved the Developer's petition for a Special Forest Variance to allow for the removal of 22 specimen trees.

The next witness was Te-Sheng Huang from DOP. He identified the following exhibits: Final Hearing Report from DOP, which was admitted as County Exhibit 1; the approved Pattern Book, admitted as County Exhibit 2; and the approved School Impact Analysis ("SIA"), admitted as County Exhibit 3. Based on the Plan filing date of February 27, 2020 the SIA was based on the September 2019 school enrollment numbers. Mr. Huang was unable to say why the SIA was based on a proposal of 16 homes, when the Plan proposes 19 homes. This was explained later in the hearing by Kui Zhao, the demographer for DOP who actually approved the SIA. She testified that because there are three existing residential structures on the property that the SIA considered only the additional 16 homes. When community members pointed out that the three existing structures are vacant Ms. Zhao stated that even if the analysis was done using 19 additional homes none of the schools would exceed 115% capacity. Mr. Huang testified that the redlined Plan addresses all the DOP comments from the DPC and that DOP recommends approval.

Jim Hermann from DPR testified next. He identified Developer's Exhibit 4 as the approved Schematic Landscape Plan. He next explained that these 19 proposed residences require 19,000

square feet of Open Space and that the Plan provides 22,553 square feet of Open Space. He noted that a gazebo and two benches are being provided in response to DPC comments from Rec. & Parks. He too stated that the redlined Plan satisfies all DPR and Rec. & Parks comments and that these agencies recommend approval.

Jason Seidelman from the Office of Zoning Review testified next regarding the Special Hearing relief. As noted above, the subject parcel contains DR 1, DR 2, DR 3.5, RC-5, and RC-8 zones. This creates "density anomalies" on lots 1, 2, 3, 4, 13, 16, 17 and 19 because these lots each have more than one zoning classification. Mr. Alderman explained that this would technically generate a "density unit" for each zone in the lot. However, he further explained that the Special Hearing relief would not result in creating greater overall density for the tract because each lot on the Plan is supported by the density of the zone in which it is located. Mr. Seidelman confirmed that OZR supports the Special Hearing relief.

LaChelle Imwiko testified next on behalf of the office of Real Estate Compliance. She stated that the Developer must add a forest buffer access easement to the dedication table, but that other than that the Plan meets all requirements.

Vishnu Desai then testified on behalf of DPR and the Department of Public Works ("DPW"). He stated that he had done a site visit with Dennis Kennedy of Little & Associates on January 18, 2021, as documented by Developer's Exhibit 6. He stated that the redlined Plan addresses all DPW comments from the DPC. In response to questions from the community he explained that the individual homeowners will be financially responsible for any problems associated with the grinder pumps – just as homeowners are responsible for any septic system issues. He was asked whether he had observed the severe flood damage and erosion caused by recent flooding of the Sawmill Branch stream adjacent to the tract. He said he had not.

DEVELOPER'S CASE

The engineer, Aaron Kensinger, gave an overview of the development proposal, explaining that the existing structures on the parcel will be razed and that 19 single family detached homes are proposed to be built. Seventeen of the homes will be built on the "loop road" depicted as "Davis Farms Road" on the Plan. The other two homes are to be built directly on Maple Avenue. He identified the original site plan and the redlined Plan, which were admitted as Developer's Exhibit 1 and 2, respectively. He described a "blue line" amendment which will depict a forest buffer access easement between lots 8 and 9. He testified that Davis Farms Road will be a public road. He described the Schematic Landscape Plan which calls for 133 "planting units" as required by the Baltimore County Landscape Manual ("BCLM"). He identified Developer's Exhibit 5 as the Stormwater Management Conceptual Computations which were approved on April 22, 2020. He identified Developer's Exhibit 7 as the Groundwater Management Plan approval dated January 20, 2021. He also identified Developer's Exhibit 9 as the DOP recommendation of approval also dated January 20, 2021. Mr. Kensinger also discussed the density anomalies and offered the opinion that the Special Hearing relief could be granted within the spirit and intent of the BCZR. He identified Petitioner's Exhibit 3 as the DOP recommendation in favor of the density anomaly relief. In response to questions from neighbors Mr. Kensinger explained that he could not give a timeframe for the completion of the development because the Developer plans to build the houses as they are sold.

Developer's next witness was Mark Keeley of Traffic Concepts, Inc. He testified that he is licensed by the Institute of Transportation Engineers ("ITE"). He testified that he had read the minutes of the Community Input Meeting so he is aware of the neighborhood's concerns about the traffic and safety impacts of the additional 19 homes. He testified that the County's "ultimate"

road width for Maple Avenue calls for a paved width of 30 ft. and a right of way width of 50 ft. However, he agreed that this would require the county to exercise its eminent domain powers to purchase private land from the homeowners along Maple Avenue – and that the county has no plans to do so. He further acknowledged that the road is as narrow as 16 feet in places and that the only proposed road widening is along the frontage of the Davis Farms development. He testified that, per the county's regulations, each of the 19 proposed homes is expected to generate 10 "daily trips" for a total of 190 additional trips. He further explained that it is expected that the new homes will add 18 a.m. peak hour trips (7 a.m. to 9 a.m.) and 21 p.m. peak hour trips (4 p.m. to 6 p.m.). He suggested that the proposed loop road will actually improve the ability of larger vehicles to turn around without having to use private driveways on Maple Avenue as they must currently do. He acknowledged that there are approximately 45 existing homes on Maple Avenue so that these 19 additional homes will generate in excess of 40% more traffic on the street. However, he stated that he does not believe this would have a significant impact on the neighbors.

On cross examination Mr. Keeley acknowledged that he was hired by the Developer to perform this traffic study and to provide this testimony. He further acknowledged that he generally testifies on behalf of developers, not on behalf of community groups. He was asked whether these larger 4 to 5 bedroom homes would be more likely to generate more car trips than the smaller homes along Maple Avenue and he replied that he was not sure one way or the other. He acknowledged that Maple Avenue would remain at its current width except for the widening along the frontage of this development, and he acknowledged that there are no sidewalks along the length of Maple Avenue. In response to community questioning he explained that flaggers would be used to manage construction traffic and that the street would never be fully closed during construction. He also acknowledged that he had not done any traffic safety study on the intersection of Maple

Avenue and Frederick Road (Md. Rte. 144). He also acknowledged that the last "corridor" study of Frederick Road was done by the State Highway Administration back in 2013. He could not dispute the estimates of several neighbors that traffic along Frederick Road has increased approximately 50% since 2013. He further acknowledged that the two closest signalized intersections – North Rolling Road and Frederick Road, and South Rolling Road and Frederick Road have been rated "D" for several years. However, on re-direct he pointed out that this proposed development does not have any basic services map issues under county law.

The Developer's next witness was Henry Leskinen of Eco-Science Professionals, Inc. He testified that he had performed a Forest Stand Delineation and Forest Conservation Analysis of the tract as required by county law. In doing so he identified 22 specimen trees that would need to be removed in order to build the proposed development (under BCC § 33-6-111(b)(5) a specimen tree is defined as one having a diameter of 30 inches or greater at 4.5 feet above ground)). He explained that a significant percentage of the tract (11.2 of the 21.1 acres) is within a 100 year riverine floodplain, and therefore cannot be built on. The site also contains "steep slopes" (greater than 25% grade). He testified that of the 22 specimen trees proposed for removal 11 are in poor condition and one is non-native. He further explained that the Developer applied for and obtained from DEPS a forest conservation variance to remove these trees. He explained that the majority of the trees slated for removal are in open and unforested areas of the tract where the homes are proposed. He stressed that much of the contiguous forest on the tract will be protected by forest buffer and forest conservation easements. He identified Developer's Exhibit 11 as the DEPS approval of the special variance.

COMMUNITY TESTIMONY AND EVIDENCE

Numerous residents of Maple Road testified in opposition to the proposed development. In

addition, numerous letters, emails, videos, photos and a community petition were received expressing opposition. The primary concerns expressed are traffic increases, traffic and pedestrian safety, environmental impacts, and school crowding.

Eileen and Bruce Leaman testified that they have lived at 27 Maple Avenue for 39 years. They described the unique nature of this dead-end narrow road. Mrs. Leaman testified that this narrow street already gets burdened by overflow traffic from the church on the corner and from the adjacent Five Oaks Swim Club. She pointed out that the only ingress and egress for the 46 existing homes is the intersection of Maple Avenue and Frederick Road. She testified that in the morning rush hour cars back up from the intersection at South Rolling Road all the way down past Maple Avenue; and in the afternoon rush cars back up from North Rolling Road past Maple Avenue. She submitted two short videos showing the huge volume of traffic on Frederick Road, which were admitted, collectively, as Community Exhibit 5. She also submitted documents, maps and photos that were admitted as Community Exhibits 6, 7, 8, and 9. She testified that there are numerous auto accidents at the Maple Avenue and Frederick Road intersection every year, and that cars travelling westbound on Frederick Road travel at significant speeds down a steep hill which bottoms out right at Maple Avenue, creating significant hazards for cars stopped to turn left onto Maple, and to pedestrians trying to cross Frederick from Maple. She pointed out that Maple Avenue was finally repaved by the County last year and laments that it would need to be torn up again to install the sewer and other infrastructure needed for the proposed development. She testified that the existing terra cotta sewer main dates to 1930, and the neighbors are concerned about odors and leaks from the proposed grinder pump connections. Finally, she testified about the recent surge in flooding events caused by climate change, and described a recent flood that washed out the historic stone bridge over Saw Mill Branch adjacent to the proposed development.

See, Photo of flood damage (Community Exhibit 15). In conclusion the Leamans asked that no more than four new houses be allowed.

Maria Czajkowski testified next. She lives directly across Frederick Road from the Maple Avenue intersection. She testified that traffic in the area has gotten worse and worse and that it can take as much as 5 minutes to get onto Frederick Road during the morning and evening rush hours. She further testified that there are a lot of children in the area and that pedestrian and bike safety are real concerns. She described hearing auto accidents and the ensuing ambulance sirens on a regular basis.

Albert Cunniff testified next. He has lived on Maple Avenue since 1976. He stressed that Maple Avenue is unique among streets in the area because of its narrow width, rural feel, and its dead end at Patapsco State Park. He explained that there is already a high volume of pedestrians on Maple Avenue because people from many of the surrounding streets use Maple Avenue to access the park, either on foot or on bikes. Because there are no sidewalks this pedestrian traffic must use the road itself. He submitted a photo of three people spanning the width of Maple Avenue by simply standing abreast with their arms partially outstretched. (Community Exhibit 2). He echoed the concerns about the environmental and traffic impacts from the proposed development. He submitted a diagram of the existing homes on the street and the 19 proposed homes at the end (Community Exhibit 3), and likened the proposed development to "a watermelon hanging from the branch of an apple tree" – the branch being Maple Avenue.

Christy Katz testified that she lives at 7 Maple Avenue. She has young children and is concerned about their safety. She testified that there are approximately 30 young children on the street and that they must walk to the bus stop at the end of Maple Avenue because the street is too narrow for the school buses to traverse. She testified that over 100 community members attended

the Community Input Meeting and raised the same concerns that she and others are still expressing about traffic impacts, pedestrian safety, environmental impacts, and current and projected school crowding. She stated that she doesn't feel like the Developer has addressed any of these concerns. She questioned whether the county development regulations adequately address the realities of climate change. She pointed out that this site is only a couple miles west of Ellicott City, which has suffered devastating flood damage in two recent super storm events. She submitted photos of Maple Avenue which were admitted as Community Exhibit 10, and a petition opposing the development signed by more than 150 community members, which was admitted as Community Exhibit 11.

David Hunter testified next. He lives at 125 Maple, directly across from the proposed development. He stated that he understands the Developer's right to develop this land but he believes that the Developer can get a fair economic return without building all of the 19 proposed houses. He disagreed with Mr. Keeley's description of Maple Avenue as a "typical" Catonsville street because it is a very narrow, dead end street. He also does not understand how 190 additional daily car trips could be seen as insignificant.

Monica Simonsen testified next and echoed all these concerns. She lives at 17 Maple Avenue. She too has young children and is concerned about pedestrian safety and school crowding. She testified that she has reviewed BCPS projections showing overcrowding in all the district schools in the next couple years. She testified about the impacts caused by the construction of two new homes on either side of her, including flood damage and damage to her lawn caused by construction vehicles. She submitted a series of photos showing the condition of Maple Avenue and the effect of construction trucks on the street. (Community Exhibit 14). She pointed out that the proposed 19 home development will clog their street for years since the Developer plans to

build the development piecemeal as the lots are sold. Finally, she stated that there would have been more neighborhood opposition at this hearing but that many of the residents of Maple Avenue are older and not conversant with the technology needed to participate. She asked, therefore, for me to give weight to the number of persons who signed the petition opposing the project. She also submitted a written statement which was admitted as Community Exhibit 13.

Finally, Sarah Bennett, a 30 year resident of Maple Avenue testified about all these concerns. In addition, she raised concern about the presence of lead paint on the old existing structures on the property. She asked that proper measures be used to abate the lead issues when the structures are razed, especially given the large number of children living on this street. She submitted a photo of flood damage at the end of Maple Avenue which was admitted as Community Exhibit 15.

On cross-examination Mr. Alderman asked each of these witnesses whether they had sought to get this parcel rezoned via the quadrennial Comprehensive Zoning Map Process ("CZMP"). None had done so, although most did not seem clear about what the CZMP process is, or how they would have participated.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

The law is clear that the Master Plan is a binding, regulatory mechanism in development cases in Baltimore County. This was the holding of *HNS Dev. v. People's Counsel*, 425 Md. 436 (2012), and is based on that court's interpretation of BCC § 32-4-102(a)(1). The aforementioned statute requires "all development of land [to] conform to the Master Plan." The 2020 Master Plan states that existing community members are supposed to have "an integral role in the creation of sustainable developments through collaborative efforts."

Further, the introduction to the 2020 Master Plan document states that "[in]any existing stable residential neighborhoods should not be disturbed for additional development." Based on the record evidence I do not believe the construction of 19 homes on this bucolic street, adjacent to a 100 year floodplain and Patapsco State Park is consistent with the Master Plan's vision for T-2 Rural Residential and T-3 Sub-Urban transects applicable to this tract. As explained below, I find that a site plan with fewer homes on larger lots would be more consistent with that vision.[1]

Pursuant to BCC § 32-4-229, the "Hearing Officer *shall* grant approval of a development plan that complies with these development regulations and applicable policies, rules and regulations." (emphasis added). In *People's Counsel v. Elm Street Development, Inc.*, 172 Md. App. 690 (2007), the Court of Special Appeals held that if the county agencies recommend approval of a development plan, it is "then up to [protestants] to provide evidence rebutting the Director's recommendations." *Id.* at 703. It should be noted that in the *Elm Street* case the community opponents did not question the agency witnesses or submit evidence to rebut the agency recommendations. And, as will be explained, the community witnesses in this case *did* provide substantial testimony and evidence that undermines some of the agency recommendations on critical issues.

My analysis begins with the stated legislative intent of the Development Law and the Master Plan. BCC § 32-4-103, captioned "PURPOSES OF THE TITLE" provides in relevant part as follows:

"(a) *In general.* This title is adopted for the following purposes:

(1) To protect and provide for the public health, safety, and general welfare of the county;

[1] In the event this Opinion and Order is vacated and reversed, this is to confirm that the Director's Approval of the Special Variance under BCC § 33-6-116 for the removal of 22 specimen trees is hereby AFFIRMED.

(2) To implement the future growth and development of the county in accordance with the Master Plan;

(6) To protect the viability of the county's existing communities by ensuring that new development and redevelopment is compatible with the neighborhood and minimizes adverse environmental, traffic, and economic impacts on the surrounding community."

With these guiding principles in mind I will now address the material issues in this case topic by topic.

Tipping Point Issues

Some of the issues raised by the community are perhaps not, in and of themselves, enough to warrant a denial of the development Plan. For instance, the School Impact Study, based on enrollment numbers from September 2019, shows that none of the schools is currently over the 115% threshold. Yet as several of the community witnesses pointed out, the official Baltimore County Public School ("BCPS") projections show overcrowding in the immediate future – indeed before this planned development is anywhere near completion. The BCPS' "Educational Facilities Master Plan 2020" report states that for the Southwest Planning District "[t]here are no high schools in the region that are overcrowded (115% or above capacity) as of the 2019–2020 school year, *although Catonsville high school is projected to exceed 115 percent of capacity in 2022 and will remain severely overcrowded through 2029.*"

Likewise, the community is justifiably concerned about the environmental impacts from this proposed development – especially given the proximity of this project to a "100 year" floodplain, and to Patapsco State Park. As several neighbors pointed out, these "100 year" super storms now occur virtually every year. And the devastating flood damage in Ellicott City is a cautionary tale because it has been attributed in large part to the overdevelopment and resulting loss of forest buffer along the perimeter of that historic town.

Further, the unrebutted testimony is that the sewer main that will support this proposed development is a terra cotta pipe installed in 1930. That fact, combined with the 19 proposed grinder pump connections, are cause for legitimate concern. In Case No. 09-0861, the Administrative Law Judge observed that "Baltimore County's sewer system - - like that of nearly all major east coast cities - - is antiquated and in dire need of repair. So serious is the problem that Baltimore County entered into a consent decree with the Environmental Protection Agency ("EPA") which requires the County to undertake a comprehensive evaluation of its sewer system and take corrective action to repair or replace defective portions of this infrastructure." That work is far from complete, and obviously has not yet reached Maple Avenue, which still has numerous homes on septic systems.

In addition, the neighbors on Maple Avenue have good reason to lament the impact this development will have on their daily quality of life. They note that after decades of complaints to county officials Maple Avenue was finally repaved in the last couple years, and now it will be torn up again to facilitate the proposed development. Photos submitted by the community show that large construction vehicles associated with recent home construction obstruct nearly the entire width of Maple Avenue. *See,* Community Exhibits 4 and 14. The Developer's engineer and traffic expert testified that Maple Avenue will never actually be closed to traffic during these years of construction, but they acknowledge that traffic will have to be managed by "flaggers," and we all know how exasperating that system can be when we have someplace we need to be. And these substantial impacts can be expected to last several years, while the development is built out lot by lot, per the Developer's stated plan.

Further, the Plan raises other questions that are not addressed in the Pattern Book and which were not addressed at the hearing. The "performance standards" set forth in BCZR Sec. 260 provide, in relevant part, as follows:

§ 260.3. - Open space.

A development proposal shall:

A. Integrate open space areas into the proposed development by:

1. Creating focal points along streets;

2. Locating landscaped open green spaces in view of the development entrance or adjoining public street;

3. Planning a linked network of natural and landscaped open areas connected by pedestrian/bike trails; and

4. Orienting dwelling units around open areas or squares.

B. Incorporate significant features, such as stands of trees, into open areas.

C. Link the development's open areas to the surrounding neighborhood open areas, including public parks, walks, and bike trails, and create both functional and visual continuity, e.g., by matching the design of a bike trail in the proposed development to the bike trail located in the adjoining property.

§ 260.4. - Streets and parking.

A development proposal shall:

1. Provide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation.

2. Design streets to slow traffic by offsetting alignments. Reducing street width, reducing the length of blocks, and employing the use of traffic management devices such as roundabouts, chokers, chicanes, etc., to accomplish traffic calming.

3. Allow on-street parking.

4. Provide pedestrian and bicycle access to commercial areas and community facilities on site within the development and to the surrounding neighborhood.

5. Provide street and parking accommodations which complement the surrounding neighborhood.

With respect to § 260.3 this proposed development fails to incorporate several of these requirements. Most significantly it does not provide "a linked network of natural and landscaped open areas connected by pedestrian/bike trails." And there is no link to the surrounding neighborhood or to the adjacent State Park. And with respect to § 260.4, this proposed development does not satisfy the parking or connectivity requirements. In sum, these "tipping point" issues become significant in the aggregate and in my considered view the Plan as proposed cannot be approved, especially when considered with the issues discussed below.

Traffic Safety and Impacts

Perhaps more significant than the issues just discussed are the serious traffic issues raised by the community. First, the neighbors are understandably baffled by Mr. Keeley's testimony that a 40% or greater increase in traffic volume is "insignificant." It is not – especially on this narrow street with no sidewalks. Further, as discussed at the hearing, it seems clear that the estimate of 190 additional trips is low in this new age of incessant Amazon deliveries. Numerous residents of Maple Avenue described the already high levels of pedestrian traffic on Maple Avenue – some by children who live on the street, and some from the surrounding neighborhoods that use Maple to access the state park, including a high volume of mountain bikers. As noted, the children on this street must traverse the length of it at the beginning and end of every school day in order to reach the school bus stop on Frederick Road, since Maple Avenue is too narrow to accommodate the buses. In short, pedestrian safety is a real issue and would be substantially exacerbated by 19 additional homes at the very end of the street – since each of the estimated 190 trips will traverse the entire length of Maple Avenue.

Further, and of greater concern, are the automobile safety and traffic volume issues raised by the community. The videos, photos, and testimony all show beyond debate that the intersection of Maple Avenue and Frederick Road is already a nightmare. The neighbor who lives right on the corner described the familiar sounds of colliding vehicles, followed by ambulance sirens. The videos and photos show the dangerous conditions caused by vehicles traveling west down the long hill on Frederick Road toward its intersection with Maple Avenue at the bottom. And traffic volume and congestion are already horrible, even before the addition of 190 vehicle trips a day. The DOP noted that the two closest signalized intersections (Frederick and North and South Rolling Roads) are "D" intersections, and therefore not failing under the county regulations. But the testimony and photographic evidence show horrendous morning and evening rush hour backups on Frederick Road. One neighbor estimated that it takes approximately 5 minutes to get onto Frederick from Maple or Dutton Avenues during rush hour. As a former resident of Catonsville I recall evening rush hour traffic backing up on South Rolling Road from Frederick Avenue all the way back to the Community College, and sometimes to the ramp of I-195. The addition of 190 daily trips to this existing mess is just not tenable. I understand that this proposed development tract is not covered by any basic services maps, but it has previously been decided that the maps are not singularly dispositive. As the ALJ explained in Case No. 09-0861, *supra,* at p. 25:

> [I]it is certainly understandable why the County would be reticent to include a property on one of the basic services maps. The effect of such inclusion is a legislative moratorium, during which the county is expected to undertake the necessary repairs to the deficient infrastructure. Should this state of affairs persist for longer than 18 months, it is likely a court would find the owner's property had been "taken," which requires the payment of just compensation under the state and federal constitutions. *Tahoe-Sierra Preservation Council, Inc. v. Tahoe Regional Planning Agency,* 535 U.S. 302 (2002). This is yet another reason why I do not believe the maps are dispositive in any given case.

In my view this reasoning applies here.

Master Plan

As noted by the Planning Office in their Final HOH Report, this tract consists of TR 2 Rural Residential and TR 3 Sub-Urban transects. The GIS database indicates that the tract is primarily in the TR 3 transect. The TR 2 Rural Residential transect is described as consisting of "large lot single-family detached housing," with setbacks "generally 50 plus feet. Lots are deep to accommodate a larger backyard. Density varies between 2 to 5 acres per dwelling." And the TR 3 transect describes "low density residential areas, adjacent to higher zones that contain mixed use. Landscaping is naturalistic and setbacks are relatively deep."

In my view the development Plan in this case does not comply with the Master Plan vision for these transects. As the "Lot Area Table" on the Plan shows, the 19 proposed lots range from .27 acres to .63 acres, with the majority of lots falling in the .30 to .45 range. And the "Typical Lot Layou"t on the Plan for the lots in the DR 1 and DR 2 zones show front setbacks of as little as 25', and side building-to-building distances of as little as 30'. This is how 19 four to five bedroom homes are squeezed onto the buildable portion of this tract.

Conclusion

I am aware that the county agencies have attested that the Plan meets each agency's own minimum standards in isolation. However, it is my job to consider the global impacts of the Plan, in light of all the evidence, and with the Master Plan and Development Law in mind. As noted above, the Master Plan mandates that community members are to have "an integral role in the creation of sustainable developments through collaborative efforts." And one of the express legislative purposes of the Development Law is "[t]o protect the viability of the county's existing communities by ensuring that new development and redevelopment is compatible with the

neighborhood and minimizes adverse environmental, traffic, and economic impacts on the surrounding community." BCC § 32-4-103(a)(6). Likewise, the Master Plan provides that "[m]any existing stable residential neighborhoods should not be disturbed for additional development."

The community acknowledges that the owners of the subject property have the right to develop the tract to some reasonable degree. However, they are justifiably concerned about the "adverse environmental, traffic, and economic impacts" of this proposed project. Many in the community asked that I approve no more than four new homes at this site. The Developer did not provide any testimony or evidence concerning the economic viability of the project based on any specific number of units. In fact, the Developer did not testify at all. Certainly the owner of this parcel has the right to build some number of homes. However, my task is to approve or deny the plan that was submitted, and the Plan that was submitted – for 19 four to five bedroom houses - cannot in my view be approved without severely impacting the Maple Avenue neighborhood. I must therefore deny approval, as I believe I am bound to do by the Development Law and the Master Plan.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **12th** day of **February, 2021,** that the **"DAVIS FARMS"** Plan marked and accepted into evidence as Developer's Exhibit 2, be and hereby is **DENIED**; and,

IT IS FURTHER ORDERED that, in the event the denial of the Development Plan is reversed and the Plan is approved, the Petition for Special Hearing from the Baltimore County Zoning Regulations ("BCZR") § 500.7 to approve the density, house location, use areas and lot configurations for Lot Nos. 1, 2, 3, 4, 16, 17 & 19 as shown on the Plat to Accompany this Petition (and Development Plan for Davis Farms) as a Density Anomaly is **GRANTED**; and,

IT IS FURTHER ORDERED that, in the event the denial of the Development Plan is reversed and the Plan is approved, the Special Forest Variance, as approved by the Director of DEPS, is also, **GRANTED.**

Any appeal of this Order shall be taken in accordance with BCC § 32-4-281.

PAUL M. MAYHEW
Managing Administrative Law Judge
for Baltimore County

ZONING NOTICE

Sec. 522.1. - Duties of the department of planning; limitation of powers.

(a) The department of planning shall have the responsibility and duty of planning for Baltimore County, including:

(1) Preparing, at least every ten years, and revising, a master plan; monitoring the implementation of the master plan; and preparing at least every two years a report to the county executive and county council on the progress achieved toward implementation of the master plan.

(2) Preparing, at least every six years, recommending to the county council, and administering, a zoning map.

(3) Preparing and recommending to the county council rules and regulations governing the subdivision of land, and administering the subdivision rules and regulations as adopted.

(4) Preparing and recommending to the county council zoning rules and regulations which, together with the zoning map, shall constitute a zoning code.

(5) Administering the zoning code.

(b) The master plan shall be adopted as provided by section 523 of this Charter. All other plans, zoning maps, and rules and regulations recommended for adoption, amendment or repeal by the department of planning, the planning board or the zoning commissioner shall, prior to taking effect as law, be approved by legislative act of the county council.

(Bill No. 83, 1978, § 2; approved by voters Nov. 7, 1978; effective Dec. 8, 1978; Bill No. 128, 1990, § 1; approved by voters Nov. 6, 1990; effective Dec. 7, 1990; Bill No. 13-18 , § 1; approved by the voters Nov. 6, 2018; effective Dec. 6, 2018)

Editor's note— The publisher corrected a former reference to "offices" to read "office" in subsection (b). Bill 83-78, which originally enacted § 522.1, used the word "office". The annual cumulative supplements to the 1978 Code used the word "office" from 1979 to 1985. The change was made inadvertently in the 1986 cumulative supplement.

Bill No. 13-18 , § 1; approved by the voters Nov. 6, 2018; effective Dec. 6, 2018, changed the title of § 522.1 from "Duties of office of planning and zoning; limitation of powers" to read as herein set out.

Sec. 523. - The master plan and the zoning maps.

(a) *Definition and implementation of the master plan.* The master plan shall be a composite of mapped and written proposals setting forth comprehensive objectives, policies and standards to serve as a guide for the development of the county. Upon receipt of the master plan from the department of planning, the county council shall accept or modify and then adopt it by resolution.

(b) *Definition and implementation of the zoning maps.* The zoning maps shall show the boundaries of the proposed districts, divisions and zones into which the county is to be divided consistent with the master plan. Upon receipt of the zoning map from the department of planning, the county council shall accept or modify and then adopt it by legislative act.

(Bill No. 83, 1978, § 3; approved by voters Nov. 7, 1978; effective Dec. 8, 1978; Bill No. 13-18 , § 1; approved by the voters Nov. 6, 2018; effective Dec. 6, 2018)

§ 32-4-102. - DEVELOPMENT POLICIES.

(a) *Conformity with Master Plan required.*

(1) Subject to the limitations in the Charter and this Code, all development of land shall conform to:

(i) The Master Plan;

(ii) Adopted community plans; and

(iii) This title.

(2) (i) Land to be developed should be of such character that it can be used safely for building purposes without danger to health or peril from flood, fire, erosion or other menace.

(ii) The area of peril from flood is characterized as the riverine floodplain and tidal floodplain as defined in Title 8 of this article.

(b) *Intent of laws.*

(1) This title is intended to protect and promote public health, safety, and welfare and to ensure that public facilities, services, and amenities are provided.

(2) This title is intended to ensure that proposed development projects are safe, adequate, convenient and, where applicable, provide for the following:

(i) Conservation of existing communities and the promotion of the quality of development, site and building design, and compatibility;

(ii) Promotion of economic development to expand the tax base, provide employment, facilitate commercial activity, and house the citizens of the county;

(iii) Improved linkage between developments to enhance circulation of motor vehicles, bicycles, and pedestrians, including appropriate location and design of streets, foot paths, and transit facilities relative to their anticipated functions and to existing facilities;

(iv) Water supply, sewerage, stormwater drainage, street lighting, fire protection, and emergency services, including adequacy of water volume, water pressure, and emergency access to all parts of the property;

(v) Community services, including schools, parks and other open spaces, recreation areas and facilities, and other amenities for users or occupants of the property;

(vi) Prevention of environmental degradation and promotion of environmental enhancement, including adequacy of landscaping and energy conservation measures, and of protection of floodplains, steep slopes, watersheds, nontidal wetlands, tidal wetlands, vegetation, other natural features and historical sites or areas; and

(vii) Preservation of agricultural lands, including adequacy of protection of prime and productive soils from inappropriate development.

(1988 Code, § 26-166) (Bill No. 1, 1992, § 2, 3-2-1992; Bill No. 173-93, § 3, 11-17-1993; Bill No. 79-01, § 2, 7-1-2004; Bill No. 75-03, § 8, 7-1-2004; Bill No. 42-12, § 1, 6-18-2012)

§ 32-4-103. - PURPOSES OF THE TITLE.

(a) *In general.* This title is adopted for the following purposes:

(1) To protect and provide for the public health, safety, and general welfare of the county;

(2) To implement the future growth and development of the county in accordance with the Master Plan;

(3) To provide for adequate light, air, and privacy;

(4) To secure safety from fire, flood, and other danger;

(5) To prevent overcrowding of land;

(6) To protect the viability of the county's existing communities by ensuring that new development and redevelopment is compatible with the neighborhood and minimizes adverse environmental, traffic, and economic impacts on the surrounding community;

(7) To preserve and protect existing business and industry and provide a system of regulatory controls on development that will foster the growth of business, employment, and the economic tax base of the county;

(8) To provide adequate and efficient transportation, water, sewerage, drainage, schools, parks, street lights and sidewalks, open space tracts, playgrounds, and other recreation facilities and other public requirements and facilities;

(9) To provide the most beneficial relationships between the uses of land and buildings and the circulation of traffic throughout the county, having particular regard for:

(i) The avoidance of congestion in the streets and highways;

(ii) The provisions of access for firefighting and other emergency equipment; and

(iii) The pedestrian traffic movement appropriate to the various uses;

(10) To provide for the proper location and width of streets and building lines;

(11) To establish reasonable guidelines, standards of design, and procedures for development, in order to:

(i) Further the orderly and beneficial layout and use of land; and

(ii) Ensure that the same standards are applied to all applicants and developments;

(12) To ensure proper descriptions of property boundaries;

(13) To encourage the wise use and management of natural resources throughout the county in order to preserve the integrity, stability, and beauty of the community and the value of property;

(14) To preserve the natural beauty and topography of the county and ensure appropriate development with regard to these natural features;

(15) To provide for open spaces in order to:

(i) Offer recreational opportunities close to home;

(ii) Enhance the appearance of neighborhoods through the preservation of natural green spaces;

(iii) Counteract the effects of urban congestion; and

(iv) Encourage participation by all age groups in the use and care of local open space tracts;

(16) To ensure an adequate supply of land suitable for development; and

(17) To simplify and clarify the development review and approval process.

(b) *Fulfillment of development policies and purposes.* Compliance with this title and the Comprehensive Manual of Development Policies fulfills the development policies and purposes set forth in § 32-4-102 of this subtitle

and subsection (a) of this section, respectively.

(1988 Code, § 26-167) (Bill No. 1, 1992, § 2, 3-2-1992; Bill No. 79-01, § 2, 7-1-2004)

§ 32-4-229. - SAME - DECISION OF THE HEARING OFFICER.

(a) *Final decision.*

(1) (i) The Hearing Officer shall issue the final decision within 15 days after the conclusion of the final hearing held on the Development Plan.

(ii) The Hearing Officer shall file an opinion which includes the basis of the Hearing Officer's decision.

(2) If a final decision is not rendered within 15 days:

(i) The Development Plan shall be deemed approved as submitted by the applicant; and

(ii) The Hearing Officer shall immediately notify the participants that:

1. The Development Plan is deemed approved; and
2. The appeal period began on the fifteenth day after the conclusion of the final hearing.

(b) *Approval; Appeals.*

(1) The Hearing Officer shall grant approval of a Development Plan that complies with these development regulations and applicable policies, rules and regulations adopted in accordance with Article 3, Title 7 of the Code, provided that the final approval of a plan shall be subject to all appropriate standards, rules, regulations, conditions, and safeguards set forth therein.

(2) A final decision of the Hearing Officer on a Development Plan may be appealed to the Board of Appeals in accordance with Part VIII of this subtitle.

(c) *Copies of approved Development Plan to county agencies.* The Hearing Officer shall forward copies of the approved Development Plan to the directors of the Department of Permits, Approvals and Inspections, the Department of Public Works and Transportation, the Department of Planning, and the Department of Environmental Protection and Sustainability within 5 working days after the date of the Hearing Officer's decision granting approval of:

(1) The Development Plan as submitted; or

(2) The Development Plan as revised within the 5-day period in compliance with the Hearing Officer's requirements for any condition imposed upon the plan.

(d) *Conditions imposed by Hearing Officer.*

(1) This subsection does not apply to a Development Plan for a Planned Unit Development.

(2) In approving a Development Plan, the Hearing Officer may impose any conditions if a condition:

(i) Protects the surrounding and neighboring properties;

(ii) Is based upon a comment that was raised or a condition that was proposed or requested by a participant;

(iii) Is necessary to alleviate an adverse impact on the health, safety, or welfare of the community that would be present without the condition; and

(iv) Does not reduce by more than 20%:

1. The number of dwelling units proposed by a residential Development Plan in a DR 5.5., DR 10.5, or D
2. The square footage proposed by a non-residential Development Plan.

(3) The Hearing Officer shall base the decision to impose a condition on factual findings that are supported by evidence.

(e) *Agreements upon final approval; recordation required.*

(1) If required by the Hearing Officer, the owners, lessees, or tenants of the property for which a Development Plan is approved shall:

(i) Enter into an agreement in writing with the Hearing Officer stipulating to the conditions governing the final Development Plan approval; and

(ii) Record the agreement among the land records of the county.

(2) The participant requesting final Development Plan approval shall bear the cost of the agreement and the cost of recording the agreement.

(3) When recorded the agreement shall govern the exercise of the approved Development Plan by any person, firm, or corporation, regardless of subsequent sale, lease, assignment, or other transfer.

(f) *Restrictions on issuance of permit or plat.* A plat may not be recorded and the Department of Permits, Approvals and Inspections may not issue a permit or record a plat in connection with a Development Plan for a period of 30 days after a final decision by the Hearing Officer on the Development Plan if the case involved an unresolved comment or condition.

(g) *Subsequent Development Plans.* Subsequent detailed Development Plans shall be sealed and certified as being in accordance with the approved Development Plan, including:

(1) The final grading and erosion and sediment control plan;

(2) The stormwater management plan;

(3) The landscape plan; and

(4) The record plat.

(1988 Code, § 26-206) (Bill No. 1, 1992, § 2, 3-2-1992; Bill No. 29-95, §§ 1, 3, 5-21-1995; Bill No. 69-95, § 10, 7-1-1995; Bill No. 46-01, § 1, 8-4-2001; Bill No. 79-01, § 2, 7-1-2004; Bill No. 101-01, § 1, 1-24-2002; Bill No. 75-03, §§ 12, 13, 7-1-2004; Bill No. 42-05, § 1, 5-15-2005; Bill No. 122-10, §§ 12, 30, 1-16-2011; Bill No. 55-11, §§ 1, 2, 10-16-2011; Bill No. 72-12, § 1, 1-9-2013; Bill No. 33-21 , § 1, 5-3-2021)

§ 32-4-230. - COMBINED ZONING AND DEVELOPMENT PLAN APPROVAL HEARING.

(a) *In general.* If the Development Plan requires a special exception, variance, special hearing, or interpretation of the Baltimore County Zoning Regulations, the applicant may combine the public hearing required under Title 3, Subtitle 3 of this article and under the Baltimore County Zoning Regulations with the public hearing held by the Hearing Officer on the Development Plan.

(b) *Scheduling.* The scheduling of the combined hearing shall be subject to § 32-4-225 of this subtitle.

(1988 Code, § 26-206.1) (Bill No. 1, 1992, § 2, 3-2-1992; Bill No. 79-01, § 2, 7-1-2004; Bill No. 75-03, §§ 12, 13, 7-1-2004)

§ 32-4-231. - REFERRAL TO THE PLANNING BOARD.

(a) *In general.* The Hearing Officer shall refer the Development Plan to the Planning Board when:

(1) The Development Plan conflicts with the Master Plan;

(2) The Baltimore County Zoning Regulations require Planning Board consideration;

(3) The Development Plan involves a building, structure, or site included on the Landmarks Preservation Commission preliminary or final county landmarks list or is located within a county historic district; or

(4) The applicant has made a written request, under the authority of COMAR 27.01.11.01.A, for a variation from the standards provided under Article 33, Title 2 of the Code.

(b) *Review by the Planning Board at next meeting.* The Planning Board shall review a referred plan at its next scheduled meeting.

(c) *Continuation of hearing.* A hearing may be continued by the Hearing Officer.

(d) *Final action.* When applicable, the final action of the Hearing Officer is subject to action by the Planning Board and the County Council.

(1988 Code, § 26-207) (Bill No. 18, 1990, § 2, 3-30-1990; Bill No. 1, 1992, § 2, 3-2-1992; Bill No. 135-94, § 1, 10-13-1994; Bill No. 29-95, § 1, 5-21-1995; Bill No. 79-01, § 2, 7-1-2004; Bill No. 75-03, § 12, 7-1-2004; Bill No. 42-05, § 1, 5-15-2005; Bill No. 26-07, § 1, 4-29-2007; Bill No. 5-10, § 2, 4-4-2010)

§ 32-4-232. - SAME - PROCEDURE OF THE PLANNING BOARD.

(a) *Issues considered by Planning Board; comments.* When considering Development Plan issues, the Planning Board shall:

(1) Only consider those issues referred under § 32-4-231(a) of this subtitle; and

(2) Allow the applicant, a person, or an agency to submit oral or written comments concerning the issues referred under § 32-4-231(a) of this subtitle.

(b) *Master Plan conflicts; required procedures.* With respect to an issue referred to the Planning Board under § 32-4-231(a) of this Subtitle, the Planning Board shall:

(1) Act in accordance with Title 2, Subtitle 3 of this article;

(2) File a written decision with the Hearing Officer that includes the reasons for the decision; and

(3) File a recommendation with the County Council at the same time its decision is filed with the Hearing Officer.

(c) *Written decision; Master Plan required referral and landmark historic preservation.* With respect to issues referred under § 32-4-231(a) or (b) of this subtitle, the Planning Board shall file a written decision with the Hearing Officer that includes the reasons for the decision no later than 45 days after referral to the Planning Board.

(d) *Written decision; critical areas.*

(1) With respect to issues referred under § 32-4-231(a)(4) of this subtitle, the Planning Board shall file a written decision with the Hearing Officer no later than 45 days after the date of referral to the Planning Board.

(2) Consistent with state law or regulations, the Board's decision shall contain findings of fact whether:

(i) Special conditions or circumstances exist that are peculiar to the land or structure within the critical

area of the county;

(ii) Strict compliance with the critical area regulations would result in unwarranted hardship;

(iii) Strict compliance with the critical area regulations will deprive the applicant of rights commonly enjoyed by other properties in similar areas within the critical area of the county;

(iv) The granting of a variation will not confer upon an applicant any special privilege that would be denied by the critical area regulations to other lands or structures within the critical area of the county;

(v) The variation request is not based on conditions or circumstances that are the result of actions by the applicant;

(vi) The request does not arise from any condition relating to land or building use, either permitted or nonconforming, on any neighboring property;

(vii) The granting of a variation will be in harmony with the general spirit and intent of the critical area regulations of the county; and

(viii) The variation conforms to the requirements as stated in § 32-4-226(d) of this subtitle.

(e) *Referral date.* The date of the referral to the Planning Board is:

(1) The Hearing Officer's referral date; or

(2) In the case of a building permit, the date of the filing.

(f) *Planning Board decision is final; exceptions.*

(1) Except as provided under paragraph (2) of this subsection, a decision of the Planning Board on an issue referred under § 32-4-231 of this subtitle is binding upon the Hearing Officer and shall be incorporated as part of the Hearing Officer's final action on a plan.

(2) A decision of the Planning Board is not binding on the Hearing Officer if the decision of the Planning Board on an issue referred under § 32-4-231(a)(1) of this subtitle is overruled by action of the County Council.

(1988 Code, § 26-208) (Bill No. 18-90, § 3, 3-30-1990; Bill No. 1-92, § 2, 2-3-1992; Bill No. 135-94, § 1, 10-13-1994; Bill No. 29-95, § 1, 5-21-1995; Bill No. 79-01, § 2, 7-1-2004; Bill No. 75-03, §§ 12, 13, 7-1-2004; Bill No. 19-04, § 9, 5-29-2004)

GENERAL NOTES

1) THIS PLAT MAY EXPIRE IN ACCORDANCE WITH THE PROVISIONS OF THE BALTIMORE COUNTY CODE, SECTION 22-68.

2) THE RECORDING OF THIS PLAT DOES NOT GUARANTEE THE INSTALLATION OF STREETS ON UTILITIES BY BALTIMORE COUNTY.

3) THE INFORMATION SHOWN HEREON MAY BE SUPERSEDED WITH SUBSEQUENT UNRECORDED PLAT.

4) ADDITIONAL INFORMATION CONCERNING THIS PLAT MAY BE OBTAINED FROM THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING AND THE DEPARTMENT OF PUBLIC WORKS.

5) THE RECORDING OF THIS PLAT DOES NOT CONSTITUTE OR IMPLY ACCEPTANCE BY THE COUNTY OF ANY STREET, EASEMENT, PARK, OPEN SPACE OR OTHER PUBLIC AREA SHOWN ON THIS PLAT.

6) THE OWNER/DEVELOPER WILL COMPLY WITH THE BEST MANAGEMENT PRACTICES ADOPTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT.

7) THE APPROVAL OF THIS PLAT IS BASED UPON A REASONABLE EXPECTATION THAT THE WATER AND SEWER SERVICE WHICH IS PLANNED FOR THE DEVELOPMENT WILL BE AVAILABLE WHEN NEEDED. HOWEVER, BUILDING PERMITS MAY NOT BE ISSUED UNTIL THE PLANNED WATER AND SEWER FACILITIES ARE COMPLETED AND DETERMINED TO BE ADEQUATE TO SERVE THE PROPOSED DEVELOPMENT.

8) EXCEPT AS OTHERWISE INDICATED, ALL BUILDING RESTRICTION LINES SHOWN HEREON HAVE BEEN PLACED ON THE RESULT OF AN INTERPRETATION ONLY OF CURRENTLY APPLICABLE ZONING/BUILDING POLICIES OF THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING. EXCEPTIONS TO THESE RESTRICTIONS MAY APPLY. FOR EXAMPLE, THE MINIMUM SETBACK OF 22 FEET TO BE HELD FROM THE STREET RIGHT-OF-WAY TO THE GARAGE OR CARPORT DOORS FACING THE STREET.

9) TRASH COLLECTION, SNOW REMOVAL AND ROAD MAINTENANCE ARE TO BE PROVIDED TO THE JUNCTION OF THE DRIVEWAYS AND STREET RIGHTS-OF-WAY.

10) C.R.G. WAS APPROVED 9-15-88.

11) JONES FALLS DRAINAGE AREA.

12) DEED REFERENCE - S.M. 8334/47
TAX ACCOUNT NOS. 21-00-009573 & 21-00-014874

13) PRINCIPAL BUILDINGS ARE NOT ALLOWED IN AREA OF FORMER LOT 86 OF THE HILLSIDE AT SEMINARY.

14) ALL ACCESS TO LOTS 21, 22, 23, 24, 25, 26 & 30 BY WAY OF HUNTSPRING DRIVE AND NOT SEMINARY AVENUE.

THE BOUNDARY SHOWN HEREON IS BASED ON A SURVEY PREPARED BY S. J. MARTENET COMPANY, INC., LAND SURVEYORS IN JANUARY AND OCTOBER, 1989.

NOTE:
EASEMENTS AND RIGHTS-OF-WAY SHOWN, NOTE NUMBERS, DRAINAGE AND UTILITY EASEMENTS, ADDRESS NUMBERS, H.O.A. EASEMENT AREA FOR INGRESS, EGRESS, MAINTENANCE AND NO BUILDING SETBACK LINES ARE SHOWN WITH THE SAME SIZE AND STYLE AS APPEARS ON THE PLAN TO BALTIMORE COUNTY, MARYLAND. THE OWNER, HIS HEIRS AND ASSIGNS ARE RESPONSIBLE FOR THESE DETAILS EXISTING AND AREAS AS NEED, TO BALTIMORE COUNTY, MARYLAND, AT NO COST.

NOTE:
ALL STREETS ARE/ARE NOT PUBLIC AS SHOWN HEREON AND THE HUNTSPRING DEVELOPMENT CORPORATION, INC. HEREBY DEDICATES AS PUBLIC USE, THE RIGHT-OF-WAY FOR THE SAME AS IS INDICATED ON THE PLAT AND THE BEDS OF THE STREETS SHOWN THEREON AS IS NECESSARY FOR THE CONSTRUCTION OF PUBLIC ROADS THEREON.

NOTE:
THE DEDICATION OF THE BEDS OF THE STREETS AS SHOWN HEREON AND THE GRANTING OF EASEMENTS AS SHOWN HEREON ARE NOT INTENDED TO BE DEDICATION TO PUBLIC USE, BUT ARE SOLELY FOR THE BENEFIT OF THE OWNERS OF THE LOTS AND THE SETTLERS OF THE SUBDIVISION.

OWNERS CERTIFICATE:
I/WE HEREBY CERTIFY, OWNER OF THE LAND SHOWN ON THIS PLAT, HEREBY CERTIFIES THAT, TO THE BEST OF ITS KNOWLEDGE, THE REQUIREMENT OF SUBSECTION (D) OF SECTION 3-108 OF THE REAL PROPERTY ARTICLE OF THE ANNOTATED CODE OF MARYLAND, AND AMENDMENTS THEREOF AS AMENDED, CONCERNING THE MARKING OF THE PLAT AND THE SETTING OF THE MARKERS.
President

SURVEYORS CERTIFICATE:
I HEREBY CERTIFY THAT THE BOUNDARY SHOWN HEREON IS BASED ON A SURVEY PREPARED BY S. J. MARTENET COMPANY, INC., LAND SURVEYORS IN JANUARY AND OCTOBER, 1989. I FURTHER CERTIFY THAT ALL OF THE REQUIREMENTS OF THE PLAT AND THAT THE LAND SHOWN ON THIS PLAT HAS BEEN LAID OUT, AND THE PLAT THEREOF HAS BEEN PREPARED, IN CONFORMITY WITH THE REQUIREMENTS OF SECTION 3-108 OF THE REAL PROPERTY ARTICLE OF THE ANNOTATED CODE OF MARYLAND, AND AMENDMENTS THEREOF AS AMENDED, CONCERNING THE ORDERING OF PUBLIC LOT AND SETTING OF THE MARKERS.

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: Michael D. Mallinoff
Director, Department of Permits, Approvals and Inspections

DATE: 8/11/2020

FROM: C. Pete Gutwald
Director, Department of Planning

SUBJECT: **CONCEPT PLAN CONFERENCE**
Project Name: 1400 W Seminary Avenue
PAI #VIII-819

GENERAL INFORMATION:

Applicant Name: Alvin B. (Buzzy) Krongard
1400 W Seminary Avenue
Lutherville, MD 21093

Location: 1400 W Seminary Avenue
Council District: Third

Growth Tier: II

Zoning: DR.1

Acres: ±42.44

Surrounding Zoning and Land Use:

North:	RC 5 and DR 1	Permanent Preservation/Single Family Detached
South:	DR 2	Road
East:	DR 1	Single Family Detached
West:	RC 5	Road

Project Proposal:

The applicant proposes to develop the site with 32 single family detached dwellings on ±42.44 acres of land.

Project History:

During the Baltimore County Comprehensive Zoning Map Process in 2000 the site was rezoned to DR 1. The site is under review by the Planning Board as part of the Cycle 38 Water and Sewer amendment process. The Planning Board will hold a vote on September 3, 2020 on whether the Board will recommend a change to the water and sewer designation for this site from W-7 and S-7 (No Planned Community or Multi-Use Service) to W-3 and S-3 (Capital Facilities Areas).

MEETINGS

Concept Plan Conference: 8/11/2020

ANALYSIS

Master Plan:

The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area and Rural Residential Area.

a. Community Conservation Areas (CCAs) feature small-town scale commercial centers, a proud history and culture, and an urban dynamic. Therefore, preserving CCAs is a fundamental component of the County's critical effort to effectively maintain, strengthen and manage its built environment as a way to elevate principles of sustainability thereby reducing land consumption, and utilizing sustainable construction techniques to preserve resources.
b. Rural Residential Areas (RRA) are a mix of single-family residential development and woodlands, stream valleys and areas of significant historic and cultural value.

The "Proposed Land Use, Baltimore County Smart Coded (PLUBCSC)" designation is T-3 (Sub-Urban). The T-3 transect is described as follows: "low-density residential areas, adjacent to higher zones that contain mixed use" with landscaping that "is naturalistic and setbacks [that] are relatively deep" and "the roads [that are] irregular to accommodate natural conditions, page 29 of PLUBCSC.

Community Plan:

The development is located within the Hunt Valley and Timonium Master Plan (HV/T MP) which was adopted by Baltimore County Council as part of the Master Plan on October 19, 1998. The community plan designates residential and commercial areas. The mission, goals and objectives of the plan are to "insure that the future redevelopment of sites in the HV/T area does not create negative impacts on existing communities," pages 29 and 36.

The mission, goals, and objectives of the HV/T MP include the following:

- Establish community conservation strategies;
- Restore and protect environmental quality;
- Provide and improve opportunities for pedestrian and bicycle access throughout the HV/T area;
- Provide and improve opportunities for, and access to, parks and recreational facilities;
- Ensure an increase in open space/pervious area through the use of open concrete paver blocks in selected areas or sharing of parking facilities, page 34;
- Ensure open space parcels that are sizable, flat and open enough to support active recreational facilities, page 19;
- Ensure the use of natural features such as woodlands and stream valleys to provide visual breaks from the built environment and employ existing mechanisms such as environmental regulation and mandatory open space dedication, within the development process, to secure such areas without incurring the cost of fee-simple acquisition, page 35;
- Ensure that appropriate pedestrian and bicycle facilities are provided in new construction projects, and where appropriate, to the open space system, the light rail, and employee support uses, page 34.

Pedestrian and Bicycle Access Plan:

Based on the West Baltimore County Pedestrian and Bicycle Plan (WBCPBP), Seminary Avenue is one of three county road corridors that are designated as Signature Streets.

- For the County's future implementation, ensure the fulfilment of Shared Use Paths that "serve both pedestrian and bicyclists for both short and long distance trips" page 7.
- Ensure the inclusion of continuous facilities for bicycling and walking to enhance Seminary Avenue as a significant east-west connector serving a variety of destinations, page 44.

School Impact:

This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. A school impact analysis is required with development plan submittal. Information is available at the following web site:

www.baltimorecountymd.gov/Agencies/planning/devrevandlanduse/adequatepublicschoolfacilities.html

The proposal is within the boundaries of the following schools:

Riderwood Elementary School
Ridgely Middle School
Dulaney High School

EVALUATION AND RECOMMENDATION

The receipt of additional information from the Community Input Meeting or other sources may generate further comments at the Development Plan Conference.

1. **Residential Performance Standards:** The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to make a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The Department of Planning requires a pattern book to be submitted and for it to be consistent with the spirit and intent of Section 260 of the BCZR.

   260.2. Site planning.
   A development proposal shall:
   - Retain the existing quality vegetation of the site to the fullest extent possible and protect the root systems of that vegetation during construction.
   - Integrate locally significant features of the site, such as topographic features, specimen trees and hedgerows, into the site design, and retain the character of the features and their settings.
   - Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography.
   - Panhandle lots are not permitted as a matter of right. Panhandles must conform to § 32-4-409 of the Baltimore County Code and to the standards in the Comprehensive Manual pf Development Policies.

260.3. Open space.
A development proposal shall integrate open space areas into the proposed development by:

- Creating focal points along streets;
- Locating landscaped open green spaces in view of the development entrance or adjoining public street;
- Planning a linked network of natural and landscaped open areas connected by pedestrian/bike trails; and
- Orienting dwelling units around open areas or squares.
- Incorporate significant features, such as stands of trees, into open areas.
- Link the development's open areas to the surrounding neighborhood open areas, including public parks, walks, and bike trails, and create both functional and visual continuity, e.g., by matching the design of a bike trail in the proposed development to the bike trail located in the adjoining property.

260.5. Landscape design.
A development proposal shall:

- Landscape public open spaces to invite users, particularly emphasizing the intended entrance to the open space.
- Use fences, walls or earth forms to provide effective and attractive screens and buffers where necessary in addition to plant material
- Provide for, or reinforce and maintain, a continuous street tree canopy by preserving healthy street trees or, if they are not present, planting new trees. The canopy shall be comprised of trees of the same species or trees with design characteristics and growth habits that are similar to those of the existing street trees.

2. **Additional Comments to the Plan:**

a. The plan needs to clearly label all environmental features of the site, including forest conservation areas, a 100' stream setback, forest buffer, all specimen trees, and any other existing environmental features. The proposed dwellings should be designed around all of these features and respect their setbacks. See CMDP pages 41, 43, 46, and 50.
b. The Department of Planning advises to use the existing site access.
c. A comprehensive study should be done to document existing specimen trees on the site. The existing trees should be saved and incorporated into the layout design as much as possible. The design of the main entrance and main access to the site should incorporate the allee of the existing trees.
d. Provide a landscape plan to the County Landscape Architect and to the Department of Planning for review. The landscape plan should include a replacement plan for the existing vegetation along W. Seminary Avenue which is in poor condition.
e. Provide centralized open space and label on the plan all proposed amenity open spaces, such as gazebos, picnic areas, tot-lots, sitting areas and other.
f. W. Seminary is a Baltimore County scenic road. The existing building on W. Seminary Avenue located at the entrance to the site should be maintained. This building is a part of the scenic character of W. Seminary Ave. The proposed residential dwellings should be located as far as possible from W. Seminary Avenue and be screened with enhanced landscaping.

g. The rear elevations of the dwellings facing W. Seminary Ave shall provide a decorative high quality metal fence along W. Seminary Avenue in combination with berming and enhanced landscaping. Where the rear of the dwellings abut public or private street rights-of-way, the applicant must demonstrate that the visibility of the backs of the dwellings from the rights-of-way will be significantly diminished. In addition, show on the plan that fencing will not be located closer than 10 feet to the public street right-of-way. These requirements must be shown on the Landscape plan. See CMDP page 22 and the Baltimore County Landscape Manual, Condition M, pages 55-57.
h. Any sheds and play equipment should not be placed up against W. Seminary Avenue.
i. Avoid a panhandle lot layout. As stated in the Development Regulations of Baltimore County, the use of panhandle lots is not a matter of right and may only be permitted in very limited situations.
j. Provide shared path for bicyclist and pedestrians along W. Seminary Avenue that is within the site. (WBCPBP, pages 44, 55)
k. Clearly identify the access from the West Seminary Avenue side to the existing residence located to the north in the RC 5 zone.
l. Clarify what name and address will be used, since the existing 1400 W. Seminary Avenue residence has the same address as the proposed development.
m. Clearly label all existing structures to remain.
n. Rename the "buffer" area on the west of the subdivision to "Land Preservation Trust Easement Buffer".
o. Show location for all proposed light fixtures.
p. Provide community signage and label it on the plan. Signage must comply with § 450 of the BCZR.

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: C. Pete Gutwald
Director, Department of Permits, Approvals and Inspections

DATE: 11/1/2021

FROM: Stephen Lafferty
Director, Department of Planning

SUBJECT: DEVELOPMENT PLAN CONFERENCE
Project Name: Torch Hill aka. 1400 W Seminary Avenue
PAI #VIII-919

GENERAL INFORMATION:

Applicant Name: Alvin B. (Buzzy) Krongard
1400 W Seminary Avenue
Lutherville, MD 21093

Location: 1400 W Seminary Avenue
Council District: Third

Growth Tier: II

Zoning: DR.1

Acres: ±42.44

Surrounding Zoning and Land Use:

North:	RC 5 and DR 1	Permanent Preservation/Single Family Detached
South:	DR 2	Road
East:	DR 1	Single Family Detached
West:	RC 5	Road

Project Proposal:

The applicant proposes to develop ±42.44 acres of land with 31 new single family detached dwellings and leave one existing dwelling to remain on the site.

Project History:

The site was rezoned to DR 1 during the Baltimore County Comprehensive Zoning Map Process in 2000. In 2020, the site was reviewed by the Planning Board as part of the Cycle 38 Water and Sewer amendment process. In September 2020, the Planning Board recommended a change to the water and sewer designation for this site from W-7 and S-7 (No Planned Community or Multi-Use Service) to W-3

and S-3 (Capital Facilities Areas). On January 4, 2021 the County Council Resolution No. 1-21 was passed to amend the Baltimore County Water Supply and Sewerage Plan.

MEETINGS

Concept Plan Conference:	8/11/2020	Community Input Meeting:	9/17/2020
Development Plan Conference:	11/3/2021	Administrative Law Judge's Hearing:	TBD

ANALYSIS

Master Plan:

The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area and Rural Residential Area.

The "Proposed Land Use, Baltimore County Smart Coded (PLUBCSC)" designation is T-3 (Sub-Urban). The T-3 transect is described as follows: "low-density residential areas, adjacent to higher zones that contain mixed use" with landscaping that "is naturalistic and setbacks [that] are relatively deep" and "the roads [that are] irregular to accommodate natural conditions, page 29 of PLUBCSC.

Community Plan:

The development is located within the Hunt Valley and Timonium Master Plan (HV/T MP) which was adopted by Baltimore County Council as part of the Master Plan on October 19, 1998. The community plan designates residential and commercial areas. The mission, goals and objectives of the plan are to "insure that the future redevelopment of sites in the HV/T area does not create negative impacts on existing communities," pages 29 and 36.

Pedestrian and Bicycle Access Plan:

Based on the West Baltimore County Pedestrian and Bicycle Plan (WBCPBP), Seminary Avenue is one of three county road corridors that are designated as Signature Streets.

School Impact Analysis (SIA):

This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. The Department of Planning has reviewed the School Impact Analysis submitted on September 10, 2021 an offers the following comments:

- On all forms, the official filing date was September 14, 2021.
- On Form 1, the percentage for Dulaney High School District ought to be 97.28%.
- On Form 3, the projected number of pupil yields for high school is 8 instead of 7.
- The above affects the final results of Form 4.

SIA Approval Finding:

The Department of Planning finds that the subject Development Plan meets the requirements of BCC § 32-6-103 at the time of the filing date, September 14, 2021. The School Impact Analysis performed by the Department of Planning indicates that the projected enrollment for Riderwood Elementary School, Ridgely Middle School, and Dulaney High School are all below 115% of the state rated capacity respectively.

The projected number of students as a percentage of the state rated capacity is:

- Riderwood ES : 98.09%
- Ridgely MS: 103.36%
- Dulaney HS: 97.83%

Waiver Request from Public Works Standards:

Developer requests a waiver from Public Work Standards that sidewalks will not be provided along both sides of the proposed roads and along the frontage of West Seminary Avenue. A letter was issued back to the applicants that the Department of Planning is in support of the waiver requests as they resulted from design considerations worked through with the Department. The waivers help to achieve specific design requests by keeping the existing structure on Seminary Avenue along with a portion of the existing allee of trees at the existing entrance and some existing vegetation along Seminary Avenue.

EVALUATION AND RECOMMENDATION

1. **Residential Performance Standards:** The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to make a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line.

   The Department of Planning reviewed a pattern book dated September 10, 2021 and offers the following comments:
   a. Label on the plan and in the pattern book the following lots as high visibility lots: 1, 2, 3, 4, 10, 11, 12, 13, 21, 25, 30 and 31. Provide square footage for each high visibility elevation and indicate the required number of architectural elements.
   b. Provide front, back and side elevations for each type of unit. Include dimensions, building height, label all materials, and indicate colors.
   c. Provide elevations and sections for lots 1, 2, 3, 4, 29, and 30 to show enhanced screening from W Seminary Ave.
   d. The development plan and the landscape plan provided need to match the plans in the Pattern Book.

2. **Additional Comments to the Plan:**

   a. Provide a bike path along W. Seminary Ave. (WBCPBP, pages 44, 55)
   b. W. Seminary Ave. is a Baltimore County scenic road. Provide enhanced screening for lots 1, 2, 3, 4, 29, 30, and 31. Coordinate with DEPS and the Baltimore County Landscape Architect to provide mature trees for the reforestation area along W. Seminary Ave. to demonstrate adequate screening from the road.
   c. Provide a decorative high quality metal fence along W. Seminary Ave. in combination with enhanced landscaping. The applicant must demonstrate that the visibility of the backs of the dwellings will be significantly diminished where the rear of dwellings abut public or private street rights-of-way. In addition, show on the plan that fencing will not be located closer than 10 feet to the public street right-of-way. These requirements must be shown on the Landscape plan. See CMDP page 22 and the Baltimore County Landscape Manual, Condition M, pages 55-57.
   d. Label on the plan all proposed existing specimen trees to be removed.
   e. For each lot, clearly label on the plan all the setbacks, including the setbacks from all environmental features located on the site to demonstrate that all requirements are met and that the proposed dwellings do not impact any environmental features.
   f. Provide additional amenity open spaces, such as picnic areas, tot-lots, and sitting areas and provide walking paths to these spaces.

g. Any sheds and play equipment should not be placed up against W. Seminary Ave.
h. Clarify and label on the plan if the existing residence located to the north in the RC 5 zone will have access from the W. Seminary Ave. side.
i. Clarify if any light fixtures are proposed along W. Seminary Ave.
j. Clearly label on the plan all existing driveways to remain.
k. Label on the plan all proposed retaining walls and provide details and materials.

(Average Lot Size 10,454sf); (Median BTW.17 and .43 Acres = .30 Acres = 13,068sf)

Effective Density in Lots 2-61 Area: 60 lots / 14.4 Acres = 4.2 lots per Acre

PLANNING

1. TIER I: SERVED BY PUBLIC SEWER AND INSIDE URDL. PER BALTIMORE COUNTY MY NEIGHBORHOOD WEBSITE.
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA INCLUDED ON THE MARYLAND HISTORICAL TRUST INVENTORY (MHT), BALTIMORE COUNTY LANDMARKS LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.
4. A MINIMUM PRIVATE YARD AREA OF 500 CONTIGUOUS SQUARE FEET WITH A MINIMUM 15-FOOT DIMENSION IS PROVIDED FOR EACH LOT.

ZONING

1. EXISTING ZONING DR-1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), AND THE COUNTY LANDSCAPE MANUAL (SECTION 409.8.A.1). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL OF THE AFOREMENTIONED REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE PROPER RELIEF WILL BE REQUESTED.
3. ~~ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED.~~ ALL SIGNAGE WILL COMPLY WITH SECTION 450 OF THE BCZR.
4. THE DENSITY CALCULATION IS PURSUANT TO §~~1B02.2~~ OF THE BCZR.1B01.2.C.1(b)
5. THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN §1B01.2.C(1)(B) OF THE BCZR.
6. THIS PROPERTY AS SHOWN ON THE PLAN HAS BEEN HELD INTACT SINCE 1971. THE DEVELOPER'S ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
7. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
8. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 50' IN THE DR ZONES.
9. THERE IS NO ZONING CASE HISTORY FOR THE PROPERTY.
10. ACCESS EASEMENTS MAY NOT BE FENCED.
11. ACCESS EASEMENTS ARE PROPOSED ON THE FOLLOWING LOTS. 6,7 AND 11,12.
12. TYPICAL OPEN DECK DIMENSION OF 10 FT. X 20 FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 22.5 FT.

DESCRIPTION	ACRES
STORMWATER MANAGEMENT	2.15 ±
HOA/COA AREAS	1.75 ±
OTHER	12.55 ±
TOTAL PROVIDED	16.45 ±

1. OPEN SPACE REQUIRED - 60 UNITS (60 NEW + 1 EXISTING) X 1,000 S.F. = 60,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - ~~169,900~~ S.F.
   OPEN SPACE NOTES: 148,340
   ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
3. TEMPORARY OPEN SPACE BOUNDARY MARKERS, TREE PROTECTION DEVICES AND FOUR FOOT HIGH SNOW FENCING OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
4. WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.
5. ANY FILL PLACED IN OPEN SPACE AREAS WHICH WERE PREVIOUSLY 100-YEAR FLOODPLAIN SHALL BE DESIGNED AND OBSERVED BY A GEOTECHNICAL ENGINEER TO DISCOURAGE ISSUES THAT MIGHT ARISE FROM WET SOILS.
10. HOA/COA OPEN SPACE SHALL BE OWNED AND MAINTAINED BY A HOMEOWNERS ASSOCIATION.

OPEN SPACE CONT.

11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO, TELEPHONE, CABLE TELEVISION, GAS AND ELECTRIC, WATER, SEWER AND STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. THE DESIGN, CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.
13. THE PROPOSED OPEN SPACE AMENITIES INCLUDING THE WALKING PATHS SHALL BE CONSTRUCTED AFTER THE 30TH BUILDING PERMIT IS ISSUED BUT PRIOR TO THE 40TH.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE IS BEING SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND AREAS OF CONCERN.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. RAMPS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS, PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS WILL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. A CIM WAS HELD ON APRIL 27, 2021. ISSUES WERE RAISED REGARDING THE POTENTIAL EXTENSION OF MAYS CHAPEL ROAD THROUGH THE SUBJECT PROPERTY. THE PLAN PROPOSES TO EXTEND MAYS CHAPEL ROAD BUT TO GATE IT FOR EMERGENCY ACCESS ONLY, TO BE APPROVED BY THE ALJ.
8. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
9. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
10. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES.
11. TOTAL ADT GENERATED BY THE SITE= 600
12. THE SITE IS LOCATED WITHIN A W-1 AND S-1 (EXISTING SERVICE AREA) WATER AND SEWER SERVICE AREA.
13. THERE ARE WETLANDS PRESENT ON THE SITE.
14. "NO PARKING" SIGNS SHALL BE POSTED PROHIBITING PARALLEL PARKING WITHIN THE TURNAROUND AREAS/CUL-DE-SAC.
15. ALL SIDEWALKS SHALL BE A MINIMUM OF 5-FEET WIDE AND SHALL BE INSTALLED IN CONFORMANCE WITH BALTIMORE COUNTY STANDARDS AND TO CURRENT AMERICANS WITH DISABILITIES ACT (ADA) GUIDELINES.
16. A PRESSURE REDUCING VALVE WILL BE REQUIRED IF THE STATIC PRESSURE EXCEEDS 80-PSI.
17. AREAS BETWEEN THE SIGHT LINE AND THE CURB LINE MUST BE CLEARED, GRADED, AND KEPT FREE OF ANY OBSTRUCTIONS.
18. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES. GRADING, ESC, AND SWM WILL BE INSTALLED FOR THE ENTIRE PROJECT IN PHASE I. THE PAVING, WATER, SEWER, AND STORM DRAIN WILL BE INSTALLED IN TWO PHASES AS SHOWN ON THE SITE PLAN.

TO

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2010, Legislative Day No. 18

Resolution No. 94-10

All Councilmembers

By the County Council, November 1, 2010

A RESOLUTION to adopt a Master Plan as a guide for the development of the County for the next ten years.

WHEREAS, pursuant to provisions of the Charter and of the County Code, Baltimore County is responsible for planning for the future growth and development of the County, including the preparation of a Master Plan; and

WHEREAS, pursuant to Section 523 of the Baltimore County Charter, the Master Plan shall be a composite of mapped and written proposals setting forth comprehensive objectives, policies and standards to serve as a guide for the development of the County; and

WHEREAS, the Baltimore County Charter provides that the Office of Planning prepare and revise a Master Plan at least every ten years, the previous such revision having been accomplished in 2000; and

WHEREAS, pursuant to Section 523 of the Baltimore County Charter, the County Council has the responsibility to accept or modify, and then adopt a Master Plan which it receives from the Office of Planning; and

WHEREAS, the Office of Planning has prepared a Master Plan, containing objectives, policies and standards, and a composite of mapped and written proposals serving as a guide for the development of the County; and

WHEREAS, the Baltimore County Planning Board has held public hearings on the Master Plan and has recommended the adoption of the Plan; and

WHEREAS, the Office of Planning has submitted to the County Council a Master Plan, entitled "Master Plan 2020"; and

WHEREAS, the County Council held public hearings on the Master Plan on October 18, 2010 and October 26, 2010.

NOW, THEREFORE, BE IT RESOLVED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Master Plan submitted by the Office of Planning and adopted by the Baltimore County Planning Board, including mapped and written proposals, is hereby adopted to serve as a guide for the development of the County, subject to such further modifications as deemed advisable by the Baltimore County Council.

READ AND PASSED this ***15TH*** day of ***NOVEMBER***, 2010.

BY ORDER

Thomas J. Peddicord, Jr.
Secretary

ITEM: ***RESOLUTION 94-10***

STANDARD DESIGN MANUAL, COUNTY BILL NO. 65-10, SECTION 5.

4. THE FIRE HYDRANTS SHALL BE PAINTED "ORANGE" FOR PUBLIC HYDRANTS IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:18.5.10.5.
5. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING UNIT. THE SPRINKLER CONTRACTOR SHALL HAVE A MARYLAND SPRINKLER LICENSE THROUGH THE MARYLAND STATE FIRE MARSHAL'S OFFICE.
6. ALL RESIDENTIAL SPRINKLER SYSTEMS SHALL BE INSPECTED AND APPROVED BY THE BALTIMORE COUNTY MARSHAL'S OFFICE PRIOR TO OCCUPANCY.
7. THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE HAS REQUESTED THAT STREET SIGNS BE INSTALLED WHEN THE FIRST HOUSE IS UNDER ROOF.
8. ADDRESS NUMBERS SHALL BE A MINIMUM OF 3 INCHES IN SIZE PER THE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5.

STEEP SLOPES NOTE

THE DEVELOPMENT AS PROPOSED WILL INCLUDE PROTECTIVE MEASURES ADEQUATE TO PREVENT EROSION OR SLOUGHING OF ANY STEEP SLOPES AS DEFINED BY SECTION 32-4-101 OF THE BALTIMORE COUNTY CODE AND PROMOTE THE PRESERVATION OF THE NATURAL TOPOGRAPHIC FEATURES OF THE STEEP SLOPE. THIS WILL BE ACHIEVED BY PROVIDING EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE REQUIREMENTS OF THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT AND THE CURRENT STATE OF MARYLAND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL

SPECIAL HEARING

A COMBINED DEVELOPMENT PLAN & SPECIAL HEARING REQUEST CONFIRMING DENSITY HAVE BEEN FILED PURSUANT TO BCC § 32-4-221(C)(2).

GENERAL NOTES

1. THIS PLAT MAY EXPIRE IN ACCORDANCE WITH THE PROVISIONS OF THE BALTIMORE COUNTY CODE, SECTION 26-216.
2. THE RECORDING OF THIS PLAT DOES NOT GUARANTEE THE INSTALLATION OF STREETS OR UTILITIES BY BALTIMORE COUNTY.
3. THE INFORMATION SHOWN HEREON MAY BE SUPERSEDED BY A SUBSEQUENT OR AMENDED PLAT.
4. ADDITIONAL INFORMATION CONCERNING THIS PLAT MAY BE OBTAINED FROM THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING AND THE DEPARTMENT OF PUBLIC WORKS.
5. THE RECORDING OF THIS PLAT DOES NOT CONSTITUTE OR IMPLY ACCEPTANCE BY THE COUNTY OF ANY STREET, EASEMENT, PARK, OPEN SPACE OR OTHER PUBLIC AREA SHOWN ON THIS PLAT.
6. THE OWNER/DEVELOPER WILL COMPLY WITH THE BEST MANAGEMENT PRACTICES ADOPTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT.
7. THE PLAN FOR THE PROPERTY SHOWN ON THIS PLAT WAS APPROVED ON AUG. 1, 1991.
8. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT.
9. EXCEPT AS OTHERWISE INDICATED, ALL BUILDING RESTRICTION LINES SHOWN HEREON HAVE BEEN PLACED AS A RESULT OF AN INTERPRETATION ONLY OF CURRENTLY APPLICABLE REGULATIONS AND POLICIES OF THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING. EXCEPTIONS TO THESE RESTRICTIONS MAY APPLY, INCLUDING THE MINIMUM SETBACK OF 22 FEET TO BE HELD FROM THE STREET RIGHT-OF-WAY TO THE GARAGE OR CARPORT ENTERED DIRECTLY FROM THE STREET.
10. THE AREA DESIGNATED AS A FLOODPLAIN INCLUDES THE AREA INUNDATED BY THE 100-YEAR FREQUENCY STORM AND A MINIMUM OF 1 FOOT VERTICAL FREEBOARD. THE ELEVATIONS SHOWN ON THE FLOODPLAIN SECTIONS ARE THE 100-YEAR DESIGN FREQUENCY SURFACE ELEVATIONS.
11. TRASH COLLECTION, SNOW REMOVAL, AND ROAD MAINTENANCE ARE TO PROVIDED TO THE JUNCTION OF THE PANHANDLE AND STREETS RIGHT-OF-WAY.
12. THIS SITE IS LOCATED IN THE JONES FALLS SEWERSHED.
13. THE APPROVAL OF THIS PLAT IS BASED UPON A REASONABLE EXPECTATION THAT THE WATER AND SEWER SERVICE WHICH IS PLANNED FOR THE DEVELOPMENT WILL BE AVAILABLE WHEN NEEDED. HOWEVER, BUILDING PERMITS MAY NOT BE ISSUED UNTIL THE PLANNED WATER AND SEWER FACILITIES ARE COMPLETED AND DETERMINED TO BE ADEQUATE TO SERVE THE PROPOSED DEVELOPMENT.
14. ANY FOREST BUFFER SHOWN HEREON IS SUBJECT TO PROTECTIVE COVENANTS WHICH MAY BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICT DISTURBANCE AND USE OF THESE AREAS.
15. DEED REFERENCE: 8371/027 & 8371/030
16. PROPERTY NUMBER: 22-00001082, 22-00001083 & 22-00001084

GENERAL NOTES (CONT.)

17. PRIOR TO THE ISSUANCE OF ANY BUILDING PERMITS, A FENCE SHALL BE CONSTRUCTED ALONG THE OUTER EDGE OF THE FOREST BUFFER RESERVATION. THE FENCE SHALL BE CONSTRUCTED OF SPLIT RAIL, CHAIN LINK, OR SOLID BOARD, AT THE DISCRETION OF THE DEVELOPER.
18. ON JULY 29, 1991, A VARIANCE WAS GRANTED BY BALTIMORE COUNTY'S DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT FROM REGULATIONS FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS, AND FLOODPLAINS WHICH BECAME EFFECTIVE JANUARY 1, 1991. THE FOREST BUFFER RESERVATION SHOWN HEREON IS REFLECTIVE OF THE FACT THAT THIS VARIANCE WAS GRANTED.
19. 50' LANDSCAPE EASEMENT ALONG JENNIFER ROAD IS HEREBY RESERVED UNTO THE OWNERS, ITS PERSONAL REPRESENTATIVES AND ASSIGNS WHO WILL CONVEY SAID EASEMENT TO THE HOMEOWNERS ASSOCIATION.

OWNER/DEVELOPER

MAYFAIR LAND LIMITED PARTNERSHIP
1235 MT. ROYAL AVENUE
BALTIMORE, MARYLAND 21217
(410) 727-4586

NOTE: HIGHWAYS AND HIGHWAY WIDENINGS, SLOPE EASEMENTS, DRAINAGE AND UTILITY EASEMENTS, ACCESS EASEMENTS, FOREST BUFFER AREAS IN FEE OR EASEMENT, AND STORMWATER MANAGEMENT AREAS, NO MATTER HOW ENTITLED, SHOWN HEREON, ARE RESERVED UNTO THE OWNER AND, EXCEPT FOR THOSE INDICATED AS PRIVATE, ARE HEREBY OFFERED FOR DEDICATION TO BALTIMORE COUNTY, MARYLAND. THE OWNER, HIS PERSONAL REPRESENTATIVES AND ASSIGNS WILL CONVEY SAID AREAS BY DEED TO BALTIMORE COUNTY, MARYLAND, AT NO COST.

REASON FOR AMENDMENT:
THIS PLAT IS AN AMENDMENT OF PLATS ENTITLED "FIRST AMENDED PLAT TWO OF MAYFAIR (FORMERLY FRENCH PROPERTY)" DATED MAY 5, 1990, AND "FIRST AMENDED PLAT ONE OF MAYFAIR (FORMERLY FRENCH PROPERTY)" DATED MAY 5, 1990, AND RECORDED AMONG THE PLAT RECORDS OF BALTIMORE COUNTY, MARYLAND, IN PLAT BOOK S.M. 62, FOLIO 71 & 72. THE PLATS ARE BEING AMENDED TO REALIGN ROADS, TO REVISE FROM TOWNHOUSES TO SINGLE FAMILY LOTS AND TO CHANGE SOUTHERNMOST TRACT OUTLINE OF PLAT ONE.

NOTE: COORDINATES AND BEARINGS SHOWN ON THIS PLAT ARE REFERRED TO THE SYSTEM OF COORDINATES ESTABLISHED IN THE BALTIMORE COUNTY METROPOLITAN DISTRICT AND ARE BASED ON THE FOLLOWING TRAVERSE STATIONS.

HUB NO. 16435 N 52345.36 W 10842.09
HUB NO. 16436 N 52821.39 W 11102.57

NOTE: STREETS AND/OR ROADS SHOWN HEREON AND THE MENTION THEREOF IN DEEDS ARE FOR THE PURPOSE OF DESCRIPTION ONLY, AND THE SAME ARE NOT INTENDED TO BE DEDICATED TO PUBLIC USE; THE FEE SIMPLE TITLE TO THE BEDS THEREOF IS EXPRESSLY RESERVED IN THE GRANTORS OF THE DEED TO WHICH THIS PLAT IS ATTACHED, THEIR HEIRS AND ASSIGNS.

OWNER'S CERTIFICATE

THE UNDERSIGNED, OWNER OF THE LAND SHOWN ON THIS PLAT, HEREBY CERTIFIES THAT, TO THE BEST OF IT'S KNOWLEDGE, THE REQUIREMENT OF SUBSECTION (C) OF SECTION 3-108 OF THE REAL PROPERTY ARTICLE OF THE ANNOTATED CODE OF MARYLAND, HAS BEEN COMPLIED WITH, INSOFAR AS SAME CONCERNS THE MAKING OF THE PLAT AND THE SETTING OF THE MARKERS.

GENERAL NOTES

1. THIS PLAT MAY EXPIRE IN ACCORDANCE WITH THE PROVISIONS OF THE BALTIMORE COUNTY CODE, SECTION 26-216.
2. THE RECORDING OF THIS PLAT DOES NOT GUARANTEE THE INSTALLATION OF STREETS OR UTILITIES BY BALTIMORE COUNTY.
3. THE INFORMATION SHOWN HEREON MAY BE SUPERSEDED BY A SUBSEQUENT OR AMENDED PLAT.
4. ADDITIONAL INFORMATION CONCERNING THIS PLAT MAY BE OBTAINED FROM THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING AND THE DEPARTMENT OF PUBLIC WORKS.
5. THE RECORDING OF THIS PLAT DOES NOT CONSTITUTE OR IMPLY ACCEPTANCE BY THE COUNTY OF ANY STREET, EASEMENT, PARK, OPEN SPACE OR OTHER PUBLIC AREA SHOWN ON THE PLAT.
6. THE OWNER/DEVELOPER WILL COMPLY WITH THE BEST MANAGEMENT PRACTICES ADOPTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT.
7. THE PLAN FOR THE PROPERTY SHOWN ON THIS PLAT WAS APPROVED ON AUG. 1, 1991.
8. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT.
9. EXCEPT AS OTHERWISE INDICATED, ALL BUILDING RESTRICTION LINES SHOWN HEREON HAVE BEEN PLACED AS A RESULT OF AN INTERPRETATION ONLY OF CURRENTLY APPLICABLE REGULATIONS AND POLICIES OF THE BALTIMORE COUNTY OFFICE OF PLANNING AND ZONING. EXCEPTIONS TO THESE RESTRICTIONS MAY APPLY, INCLUDING THE MINIMUM SETBACK OF 22 FEET TO BE HELD FROM THE STREET RIGHT-OF-WAY TO THE GARAGE OR CARPORT ENTERED DIRECTLY FROM THE STREET.
10. THE AREA DESIGNATED AS A FLOODPLAIN INCLUDES THE AREA INUNDATED BY THE 100-YEAR FREQUENCY STORM AND A MINIMUM OF 1 FOOT VERTICAL FREEBOARD. THE ELEVATIONS SHOWN ON THE FLOODPLAIN SECTIONS ARE THE 100-YEAR DESIGN FREQUENCY SURFACE ELEVATIONS.
11. TRASH COLLECTION, SNOW REMOVAL, AND ROAD MAINTENANCE ARE TO BE PROVIDED TO THE JUNCTION OF THE PANHANDLE AND STREETS RIGHT-OF-WAY.
12. THIS SITE IS LOCATED IN THE JONES FALLS SEWERSHED.
13. THE APPROVAL OF THIS PLAT IS BASED UPON A REASONABLE EXPECTATION THAT THE WATER AND SEWER SERVICE WHICH IS PLANNED FOR THE DEVELOPMENT WILL BE AVAILABLE WHEN NEEDED. HOWEVER, BUILDING PERMITS MAY NOT BE ISSUED UNTIL THE PLANNED WATER AND SEWAGE FACILITIES ARE COMPLETED AND DETERMINED TO BE ADEQUATE TO SERVE THE PROPOSED DEVELOPMENT.
14. ANY FOREST BUFFER SHOWN HEREON IS SUBJECT TO PROTECTIVE COVENANTS WHICH MAY BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICT DISTURBANCE AND USE OF THESE AREAS.
15. DEED REFERENCE 8871/027 & 8871/080
16. PROPERTY NUMBER 22-00001092, 22-00001093 & 22-00001094
17. PRIOR TO THE ISSUANCE OF ANY BUILDING PERMITS, A FENCE SHALL BE CONSTRUCTED ALONG THE OUTER EDGE OF THE FOREST BUFFER RESERVATION. THE FENCE SHALL BE CONSTRUCTED OF SPLIT RAIL, CHAIN LINK, OR SOLID BOARD, AT THE DISCRETION OF THE DEVELOPER.
18. ON JULY 29, 1991, A VARIANCE WAS GRANTED BY BALTIMORE COUNTY'S DEPARTMENT OF ENVIRONMENTAL PROTECTION AND RESOURCE MANAGEMENT, FIRM REGULATIONS FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS, AND FLOODPLAINS WHICH BECAME EFFECTIVE JANUARY 1, 1991. THE FOREST BUFFER RESERVATION SHOWN HEREON IS REFLECTIVE OF THE FACT THAT THIS VARIANCE WAS GRANTED.

REASON FOR AMENDMENT:
THIS PLAT IS AN AMENDMENT OF PLATS ENTITLED "FIRST AMENDED PLAT TWO OF MAYFAIR (FORMERLY FRENCH PROPERTY)" AND FIRST AMENDED PLAT ONE OF MAYFAIR (FORMERLY FRENCH PROPERTY) DATED MAY 5, 1990, AND RECORDED AMONG THE PLAT RECORDS OF BALTIMORE COUNTY, MARYLAND, IN PLAT BOOK S.M. 62, FOLIO 71 & 72. THE PLATS ARE BEING AMENDED TO REALIGN ROADS AND TO REVISE FROM TOWNHOUSES TO SINGLE FAMILY LOTS.

NOTE:
HIGHWAYS AND HIGHWAY WIDENINGS, SLOPE EASEMENTS, DRAINAGE AND UTILITY EASEMENTS, ACCESS EASEMENTS, FOREST BUFFER AREAS IN FEE OR EASEMENT, AND STORMWATER MANAGEMENT AREAS, NO MATTER HOW ENTITLED, SHOWN HEREON, ARE RESERVED UNTO THE OWNER AND, EXCEPT FOR THOSE INDICATED AS PRIVATE, ARE HEREBY OFFERED FOR DEDICATION TO BALTIMORE COUNTY, MARYLAND. THE OWNER, HIS PERSONAL REPRESENTATIVES AND ASSIGNS WILL CONVEY SAID AREAS BY DEED TO BALTIMORE COUNTY, MARYLAND, AT NO COST.

NOTE:
COORDINATES AND BEARINGS SHOWN ON THIS PLAT ARE REFERRED TO THE SYSTEM OF COORDINATES ESTABLISHED IN THE BALTIMORE COUNTY METROPOLITAN DISTRICT AND ARE BASED ON THE FOLLOWING TRAVERSE STATIONS.

HUB NO. 16485 — N 52345.34, W 10842.09
HUB NO. 16486 — N 52821.39, W 11102.57

NOTE:
STREETS AND/OR ROADS SHOWN HEREON AND THE MENTION THEREOF IN DEEDS ARE FOR THE PURPOSE OF DESCRIPTION ONLY, AND THE SAME ARE NOT INTENDED TO BE DEDICATED TO PUBLIC USE; THE FEE SIMPLE TITLE TO THE BEDS THEREOF IS EXPRESSLY RESERVED IN THE GRANTORS OF THE DEED TO WHICH THIS PLAT IS ATTACHED, THEIR HEIRS AND ASSIGNS.

OWNER'S CERTIFICATE

THE UNDERSIGNED, OWNER OF THE LAND SHOWN ON THIS PLAT, HEREBY CERTIFIES THAT, TO THE BEST OF IT'S KNOWLEDGE, THE REQUIREMENT OF SUBSECTION (C) OF SECTION 3-108 OF THE REAL PROPERTY ARTICLE OF THE ANNOTATED CODE OF MARYLAND, HAS (ARE) COMPLIED WITH, INSOFAR AS SAME CONCERNS THE MAKING OF THE PLAT AND THE SETTING OF THE MARKERS.

Richard Davison — PARTNER — 5/5/92 DATE
Richard DAVISON

SURVEYOR'S CERTIFICATE

THE UNDERSIGNED, A REGISTERED LAND SURVEYOR OF THE STATE OF MARYLAND, DOES HEREBY CERTIFY THAT HE IS THE SURVEYOR WHO PREPARED THIS PLAT AND THAT THE LAND SHOWN ON THIS PLAT HAS BEEN LAID OUT, AND THE PLAT THEREOF HAS BEEN PREPARED, IN COMPLIANCE WITH SUBSECTION (C) OF SECTION 3-108 OF THE REAL PROPERTY ARTICLE OF THE ANNOTATED CODE OF MARYLAND, PARTICULARLY INSOFAR AS SAME CONCERNS THE MAKING OF THE PLAT AND THE SETTING OF THE MARKERS.

People's Counsel's Statistics for Greenspring Manor Lots 2-61
Based on Lot Table Sizes Listed in Developer's Exhibit 1B*
*(Not including Lot 1)

Average Lot Size Calculations

Sum of Lots 2-30: 6.985 Ac.
Sum of Lots 31-61: 7.41 Ac.
Combined: 6.985 + 7.41 = 14.381 Ac.
Average Lot Size: 14.38 / 60 = 0.24 Ac. = 10,454sf

Median (Midpoint) Lot Size Calculations

Between .17 (lot 9) and .495 (Lot 30) Ac. = .3325 Ac. = 14,483sf
More lots closer to .17 than .495, that is to say, below .3325 Ac. or 14,483sf
53 of the 60 new lots are below the median
7 above the median: Lots 18-21, 29-30, and 55

Mode (Value appearing most often in set of data values, most likely to be sampled or to occur) **and Distribution by Lot Size Segments (SF)**

(1) 8000sf- 9000sf --- 13 lots – 3, 7-8, 15-16, 39-40, 44-45, 57-59, 61
(2) 11,000-12,000sf --- 10 lots – 2, 22, 25, 32-33, 42-43, 49, 51, 54
(3) 12,000-13,000 – 9 lots – 10-14, 26, 28, 34, 53
(4) 9000-10,000sf – 8 lots --- 4, 6, 27, 38, 41, 50, 56, 60
(5) 13,000-14,000 – 6 lots --- 17, 23, 31, 35-36, 52
(6) 7000-8000sf – 3 lots --- 9, 46-47
(7) 14,000 – 15,000sf – 3 lots – 24, 37, 55
(8) 10,000 – 11,000sf – 2 lots – 5, 48
(9) 15,000 – 16,000sf – 2 lots – 18, 20
(10) 16,000-17,000sf – 1 lot -- 21
(11) 17,00-18,000sf – 1 lot – 29
(12) 18,000-19,000sf – 1 lot – 19
(13) 21,000-22,000sf – 1 lot – 30 **(Lots 2-61 all accounted for)**

Overview:

24 lots less than 10,000sf (.23 Ac.) 40% of lots
3-4, 6-9, 15-16, 27, 38-41, 44-47, 50, 56-61
36 lots (12 additional) less than 12,000sf (.275Ac.) 60% of lots
Additional 2, 5, 22, 25, 32-33, 42-43, 48-49, 51, 54
45 lots (9 additional) less than 13,000sf (.298 Ac.) 75% of lots

Effective lot density for Lots 2-61 Area

60 lots/14.4 Ac. = **4.2 lots per acre in the lot territory**

Effective lot density for Entire Tract

60 lots/39 Ac. = **1.54 lots per acre**
(If lot 1 added, 61/39 = 1.56 lots per acre)

People's Counsel's Davis Farms Lot Size Statistics Based on Site Plan Table for Lots 1-19
The Davis Farms Site Plan (PC Exh 29), Sheet 2 of 2, includes Lot Area Table at Upper Right and Zoning Array, Sheet 1 of 2, at Upper Left. These are reproduced in the present exhibit.

Average Lot Size Calculations

Sum of Lot 1-19 Areas = 8.0 Ac. (34,848sf)
Average Lot Size = 8.0/19 = .42 Ac. (18295sf)

Median (Midpoint)

In between .27 (Lot 13) and .68 (Lot 10) = .475 = 20,691sf
14 lots less than median – 2, 5-7, 9, 11-19
5 lots above median --- 1, 3, 4, 8, 10

Mode Value appearing most often in set of data values, most likely to be sampled or to occur) **and Distribution by Lot Size Segments (SF)**

13,000-14,000sf – 2 lots --- 14, 19
14,000-15,000sf – 2 lots – 15, 17
15,000 – 16,000sf -- 2 lots – 6, 18
16,000 – 17,000 – 2 lots -- 7, 9
17,000-18,000sf – 2 lots – 5, 12
19,000-20,000 --- 2 lots – 11, 16
18,000-19,000sf – 1 lot – 2
11,000-12,000 – 1 lot -- 13
20,000-21,000 – 1 lot – 1
21,000-22,000 – 1 lot – 4
22,000-23,000 – 1 lot -- 3
27,000-28,000 – 1 lot -- 8
29,000-30,000 – 1 lot -- 10 **(Lots 1-19 all accounted for)**

Overview

No lots under 11,000sf (.25 Ac.), only 1 lot under 12,000sf (.275 Ac.)
14 of the 19 lots between 11,000sf (.25 Ac.) and 20,000sf (.46 Ac.)
13 of the 19 lots evenly spread between 13,000sf (.298 Ac.) and 20,000sf (.46 Ac.)
5 of the 19 lots fairly evenly spread between 20,000sf (.46 Ac.) and 29,000sf (.68 Ac.)

Effective Lot Density for Lots 1-19 area of 8.0 acres

19 lots/8.0 Ac. = **2.4 lots per acre**

Effective Lot Density for Entire 21-acre Site

19 lots/21 Ac. = **.9 lots per acre**

Zoning Note: D.R. 1, 12.17 Ac.; R.C. 5, 4.94 Ac.; D.R. 2, 2.95 Ac.; D.R. 3.5, 0.99 Ac.; R.C. 8 NC, 0.12 Ac.

Traffic Engineering and Transportation Planning

Angelica Daniel, Bureau Chief

Submit a Request or Complaint

Submit a service request or complaint to Traffic Engineering online. We'll investigate your concern and contact you soon.

Responsibilities

This Bureau plans for anticipated County-wide transportation needs and ensures a safe, efficient operation of the Baltimore County highway system. It is divided into several divisions:

- Traffic Engineering maintains traffic regulations, develops traffic control needs and detours.
- Street Light Program handles requests for new or upgraded street lighting on existing or proposed County roadways.
- Transportation Planning provides technical assistance to the Department of Planning, and evaluates and recommends specific projects in anticipation of future transportation, land use and economic development needs.
- Traffic Signal installs and maintains all traffic signals, flashers, and signal systems along the County highway system and some of those on the State highway system in Baltimore County.
- Traffic Sign and Roadway Marking installs and maintains County traffic signs, paints and marks County roadways.
- Traffic Calming is a program for slowing traffic on residential roadways.
- Reserved Handicap Parking Program—Baltimore County jointly administers a Reserved Handicap Parking program with the Maryland Motor Vehicle administration.
- Residential Permit Parking Program—The intent of this program is to aid those areas where a heavy influx of nonresidents into the area constricts the available on-street parking spaces to the resident.

Report A Problem

Traffic signs and signals are maintained by either Baltimore County or State Highway Administration. For immediate safety issues, call 911. They will contact the appropriate agency for emergency response. Contact us for general concerns.

Responsibilities

Metropolitan District Financing and Petitions—Computes, processes and bills Metropolitan charges.

Flood Insurance Map Information, Basic Services Maps, and Master Plan Amendments have moved to the Bureau of Engineering and Construction.

Water Issues

Baltimore City is responsible for the water service in Baltimore County. There are a number of different issues related to the water service that are handled by Baltimore City, and some that are handled by Baltimore County.

Call Baltimore City for:

- Water billing or water rates—call 410-396-5398.
    - Look Up a Water Bill.
    - Pay Your Water Bill.
- Water meter issues—call 410-396-3100.
- Water quality, such as color, water pressure, etc.—call 443-263-2220.

Call Baltimore County for:

- Water leaks—call 410-887-7415.
- Water main breaks—call 410-887-7415. You can use Baltimore City's interactive map to view where breaks have occurred and the status of repairs.
- Water leaking from fire hydrants—call 410-887-7415.

Sanitary Sewer System Consent Decree

The Consent Decree was brought forth by the Environmental Protection Agency (EPA) and Maryland Department of the Environment (MDE) against Baltimore County, to force upgrades to the aging sewer infrastructure. This was necessary for compliance with the Clean Water Act and the Maryland water pollution control laws with the goal of eliminating sanitary sewer overflows.

Bureaus

- Utilities—For sewer emergencies, call 410-887-7415.
    - Permitting and monitoring of industrial and commercial wastewater discharge

- Highways and Equipment Maintenance
    - Performs snow removal
    - Road resurfacing
    - Pot hole repair
    - Roadside mowing and tree maintenance
    - Storm debris removal
    - Street sweeping
    - Driveway access and concrete replacement
    - Curb, gutter and sidewalk repair and replacement
    - Coordinates Emergency Management and Homeland Security with other agencies
    - Manages the Safety and Training program
    - Provides maintenance and repair of county equipment, large trucks, heavy equipment, fire apparatus, etc.
- Solid Waste Management
    - Coordinates and oversees Collection Connection for trash and Single Stream recycling
    - Oversees disposal of County's trash and recycling
    - Promotes recycling
- Traffic Engineering and Transportation Planning
    - Installs and maintains traffic signals; traffic signs; traffic calming program
    - Performs and coordinates line painting on county roads
    - Ensures safe and efficient operation of County's highway system
    - Plans for anticipated transportation needs
- Engineering and Construction
    - Designs County infrastructure
    - Administers prequalification and selection of engineers and contractors; bridge inspections
    - Administers construction contract bidding, processing and inspection for:
        - public roads
        - sewers
        - water lines
        - alleys

- storm drains
- bridges
- shoreline protection
- dredging and parks
- property surveys
- City and County project coordination

Public Rights-of-Way and Sidewalks

Baltimore County is a sub-recipient of federal funds disbursed through State Highway Administration (SHA), therefore the County is required to provide ADA facilities within its public rights-of-way that comply with the Americans with Disabilities Act (ADA) of 1990 and the Rehabilitation Act of 1973 (Section 504). The County's Transition Plan with documentation will outline related existing County programs, policies and procedures.

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2001, Legislative Day No. 8

Bill No. 34-01

Mr. Joseph Bartenfelder, Councilman

By the County Council, April 16, 2001

A BILL
ENTITLED

AN ACT concerning

~~South Perry Hall - White Marsh Area~~ Residential Performance Standards

FOR the purpose of amending the Baltimore County Zoning Regulations in order to provide performance design standards for residential development within the ~~South Perry Hall - White Marsh area of~~ Baltimore County; providing that the Office of Planning shall review development proposals for compliance with the standards and ~~make a recommendation~~ submit its findings to the Hearing Officer or the Director of Permits and Development Management; specifying standards for site planning, open space, streets and parking, landscape design, and buildings; and generally relating to performance design standards for residential development in ~~the South Perry Hall - White Marsh area of~~ Baltimore County.

EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.
[Brackets] indicate matter stricken from existing law.
~~Strike-out~~ indicates matter stricken from bill.
Underlining INDICATES AMENDMENTS TO BILL.

PC Exh. 35

BY adding

Section 260

Baltimore County Zoning Regulations, as amended

WHEREAS, the Baltimore County Council has received a final report, dated January 18, 2001 from the Baltimore County Planning Board concerning the subject legislation and has held a public hearing thereon on March 5, 2001; now therefore

SECTION 1. BE IT ENACTED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that Section 260 be and it is hereby added to the Baltimore County Zoning Regulations, as amended, to read as follows:

SECTION 260

~~SOUTH PERRY HALL - WHITE MARSH AREA~~ RESIDENTIAL PERFORMANCE STANDARDS

260.1 SCOPE; STATEMENT OF LEGISLATIVE INTENT FOR ~~SOUTH PERRY HALL - WHITE MARSH AREA~~ PERFORMANCE STANDARDS.

~~(A) THIS SECTION APPLIES TO THE SOUTH PERRY HALL - WHITE MARSH AREA DEFINED IN THE OFFICIAL COMPREHENSIVE ZONING MAP ACCOMPANYING BILL NO. 33-01 AS ADOPTED BY THE COUNTY COUNCIL.~~

(A) THIS SECTION APPLIES TO ALL RESIDENTIAL DEVELOPMENT IN BALTIMORE COUNTY.

(B) THESE PERFORMANCE DESIGN STANDARDS ARE INTENDED TO ENSURE

THAT RESIDENTIAL DEVELOPMENT IN ~~THE SOUTH PERRY HALL - WHITE MARSH AREA~~ BALTIMORE COUNTY CONFORMS WITH A HIGHER QUALITY OF DESIGN. THE EVALUATION OF COMPLIANCE SHALL OCCUR AS PART OF THE REVIEW OF DEVELOPMENT PROPOSALS, EITHER IN REVIEWING CONCEPT PLANS PURSUANT TO THE DEVELOPMENT REGULATIONS OF THE BALTIMORE COUNTY CODE OR BUILDING PERMIT APPLICATIONS SUBMITTED PURSUANT TO AN APPROVED DEVELOPMENT PLAN. THE OFFICE OF PLANNING MAY REQUIRE THE SUBMITTAL OF SUFFICIENT INFORMATION, SUCH AS BUILDING ELEVATIONS AND GRADING PLANS, FROM WHICH A ~~RECOMMENDATION~~ FINDING CAN BE MADE ON COMPLIANCE OF THE PROJECT WITH THE STANDARDS. DEVIATION FROM THE STANDARDS IS ALLOWED ONLY IF CLEARLY NECESSARY TO:

1. COMPLY WITH ANOTHER STANDARD;

2. COMPLY WITH ENVIRONMENTAL REGULATIONS OR OTHERWISE PROTECT RESOURCES; OR

3. ACHIEVE THE BEST POSSIBLE DEVELOPMENT DESIGN, CONSIDERING OTHER GOALS IN THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES.

(C) THE OFFICE OF PLANNING'S ~~RECOMMENDATION~~ FINDINGS SHALL BE MADE BY THE DIRECTOR OF PLANNING AND SUBMITTED TO THE HEARING OFFICER OR TO THE DIRECTOR OF PERMITS AND DEVELOPMENT MANAGEMENT, AS APPLICABLE. IF THE DIRECTOR FINDS THAT A DEVELOPMENT PROPOSAL

DOES NOT COMPLY WITH THE STANDARDS, THE PROPOSAL MAY NOT BE APPROVED. THE PLANNING DIRECTOR SHALL PROPOSE AND ADOPT REGULATIONS TO PROVIDE MINIMUM DUE PROCESS IN THE MAKING OF HIS FINDINGS UNDER THIS SECTION. THE DIRECTOR'S FINDINGS SHALL BE APPEALABLE TO THE BOARD OF APPEALS ONLY AS PART OF AN APPEAL FROM THE HEARING OFFICER OR DIRECTOR, AS APPLICABLE.

260.2 SITE PLANNING

(A) A DEVELOPMENT PROPOSAL SHALL:

1. RETAIN THE EXISTING QUALITY VEGETATION OF THE SITE TO THE FULLEST EXTENT POSSIBLE AND PROTECT THE ROOT SYSTEMS OF THAT VEGETATION DURING CONSTRUCTION.

2. INTEGRATE LOCALLY SIGNIFICANT FEATURES OF THE SITE, SUCH AS DISTINCTIVE BUILDINGS, VISTAS, TOPOGRAPHIC FEATURES, SPECIMEN TREES, TREE STANDS, HEDGEROWS, MONUMENTS, LANDMARKS, RUINS, AND GARDENS, INTO THE SITE DESIGN, AND RETAIN THE CHARACTER OF THE FEATURES AND THEIR SETTINGS.

3. COORDINATE BUILDING DESIGN, SITE LAYOUT, AND GRADING SO THAT GRADE TRANSITIONS ARE GRADUAL AND RESPECT THE EXISTING TOPOGRAPHY.

4. PROVIDE A LANDSCAPED BUFFER BETWEEN THE REAR YARDS OF DWELLINGS EXISTING ON MAY 25, 2001 AND THE REAR YARDS OF ABUTTING

NEW DWELLINGS.

5. PROVIDE FOR SMOOTH TRANSITIONS BETWEEN NEIGHBORHOODS BY ARRANGING AND ORIENTING THE PROPOSED BUILDINGS AND SITE IMPROVEMENTS TO COMPLEMENT THOSE IN THE SURROUNDING NEIGHBORHOOD.

6. PROVIDE TRANSITIONS WITH RESPECT TO SETBACKS, STREET PATTERNS, AND BUILDING-T0-STREET GRADE RELATIONSHIPS.

(B) REVERSE FRONTAGE LOTS ARE PERMITTED ONLY IF THE PETITIONER CAN DEMONSTRATE THAT ADEQUATE SETBACKS, TOPOGRAPHY, BERMING, LANDSCAPING, OR BUILDING DESIGN WILL EFFECTIVELY SCREEN PRIVATE YARD SPACE AND DECKS FROM THE PUBLIC VIEW. FENCES MAY NOT BE LOCATED CLOSER THAN 20 FEET TO A PUBLIC RIGHT OF WAY.

(C) PANHANDLE LOTS ARE NOT PERMITTED AS A MATTER OF RIGHT. PANHANDLES MUST CONFORM TO SECTION 26-266 OF THE BALTIMORE COUNTY CODE AND TO THE STANDARDS IN THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES.

(D) THE MINIMUM WIDTH FOR ANY SINGLE-FAMILY DETACHED LOT LOCATED IN THE SOUTH PERRY HALL - WHITE MARSH AREA ~~ON THE NORTH SIDE~~ NORTH OF RIDGE ROAD IS 75 FEET AS MEASURED ALONG BOTH THE FRONT WALL AND ~~REAR WALL OF THE DWELLING UNIT. THIS SUBSECTION DOES NOT APPLY TO A MINOR DEVELOPMENT.~~ REAR WALL OF THE DWELLING UNIT. THIS

SUBSECTION DOES NOT APPLY TO ALTERNATIVE SITE DESIGN DWELLINGS PERMITTED IN ACCORDANCE WITH SECTION 1BO1.1A.1.b., OR TO DEVELOPMENT PLANS APPROVED PRIOR TO FEBRUARY 1, 2001, OR TO MINOR DEVELOPMENTS.

260.3 OPEN SPACE

A DEVELOPMENT PROPOSAL SHALL:

(A) INTEGRATE OPEN SPACE AREAS INTO THE PROPOSED DEVELOPMENT BY:

1. CREATING FOCAL POINTS ALONG STREETS;

2. LOCATING LANDSCAPED OPEN GREEN SPACES IN VIEW OF THE DEVELOPMENT ENTRANCE OR ADJOINING PUBLIC STREET;

3. PLANNING A LINKED NETWORK OF NATURAL AND LANDSCAPED OPEN AREAS CONNECTED BY PEDESTRIAN/BIKE TRAILS; AND

4. ORIENTING DWELLING UNITS AROUND OPEN AREAS OR SQUARES.

(B) INCORPORATE SIGNIFICANT FEATURES, SUCH AS STANDS OF TREES, INTO OPEN AREAS.

(C) LINK THE DEVELOPMENT'S OPEN AREAS TO THE SURROUNDING NEIGHBORHOOD OPEN AREAS, INCLUDING PUBLIC PARKS, WALKS, AND BIKE TRAILS AND CREATE BOTH FUNCTIONAL AND VISUAL CONTINUITY, E.G., BY MATCHING THE DESIGN OF A BIKE TRAIL IN THE PROPOSED DEVELOPMENT TO THE BIKE TRAIL LOCATED IN THE ADJOINING PROPERTY.

260.4 STREETS AND PARKING

(A) A DEVELOPMENT PROPOSAL SHALL:

1. PROVIDE FOR AT LEAST ONE STREET CONNECTION TO AN ADJOINING NEIGHBORHOOD OR AN ADJOINING PROPERTY, NOT INCLUDING THE PRINCIPAL ACCESS TO THE SUBDIVISION, IN ORDER TO FACILITATE GOOD TRAFFIC CIRCULATION.

2. DESIGN STREETS TO SLOW TRAFFIC BY OFFSETTING ALIGNMENTS, REDUCING STREET WIDTH, REDUCING THE LENGTH OF BLOCKS, AND EMPLOYING THE USE OF TRAFFIC MANAGEMENT DEVICES SUCH AS ROUNDABOUTS, CHOKERS, CHICANES, ETC., TO ACCOMPLISH TRAFFIC CALMING.

3. ALLOW ON-STREET PARKING.

4. PROVIDE PEDESTRIAN AND BICYCLE ACCESS TO COMMERCIAL AREAS AND COMMUNITY FACILITIES ON SITE WITHIN THE DEVELOPMENT AND TO THE SURROUNDING NEIGHBORHOOD.

5. PROVIDE STREET AND PARKING ACCOMMODATIONS WHICH COMPLEMENT THE SURROUNDING NEIGHBORHOOD.

(B) CUL-DE-SACS MAY BE USED IF IT IS DEMONSTRATED THAT A STREET CONNECTION IS NOT FEASIBLE DUE TO SITE CONDITIONS SUCH AS SEVERE GRADE TRANSITIONS OR SENSITIVE NATURAL FEATURES, OR AN ALTERNATIVE SITE LAYOUT IS NOT FEASIBLE. IF CUL-DE-SACS ARE USED, DEVELOPMENTS SHOULD CONSIST OF A BALANCE OF STREET PATTERNS (CUL-DE-SACS AND CONNECTIONS). IF CUL-DE-SACS ARE USED, DESIGN ELEMENTS SUCH AS

CENTER LANDSCAPING AND TRAFFIC CIRCLES SHALL BE USED.

(C) STREET WIDTHS AND FRONT YARD SETBACKS MAY BE REDUCED IN ACCORDANCE WITH TRADITIONAL NEIGHBORHOOD DESIGN STANDARDS.

260.5 LANDSCAPE DESIGN

A DEVELOPMENT PROPOSAL SHALL:

1. LANDSCAPE PUBLIC OPEN SPACES TO INVITE USERS, PARTICULARLY EMPHASIZING THE INTENDED ENTRANCE TO THE OPEN SPACE.

2. IN ADDITION TO PLANT MATERIAL, USE FENCES, WALLS, OR EARTH FORMS TO PROVIDE EFFECTIVE AND ATTRACTIVE SCREENS AND BUFFERS WHERE NECESSARY.

3. PROVIDE FOR, OR REINFORCE AND MAINTAIN, A CONTINUOUS STREET TREE CANOPY BY PRESERVING HEALTHY STREET TREES OR, IF THEY ARE NOT PRESENT, PLANTING NEW TREES. THE CANOPY SHALL BE COMPRISED OF TREES OF THE SAME SPECIES OR TREES WITH DESIGN CHARACTERISTICS AND GROWTH HABITS THAT ARE SIMILAR TO THOSE OF THE EXISTING STREET TREES.

4. INCLUDE THE DESIGN FOR SITE SIGNAGE ON THE SCHEMATIC LANDSCAPE PLAN. IF THIS IS NOT POSSIBLE, THE SIGNAGE DESIGN MAY BE INCLUDED IN THE FINAL DEVELOPMENT PLAN, AND SHALL BE APPROVED BEFORE ISSUANCE OF ANY BUILDING PERMITS.

260.6 BUILDINGS

(A) A DEVELOPMENT PROPOSAL SHALL:

1. PROVIDE VARIETY IN HOUSING TYPE OR DESIGN, WHILE MAINTAINING CONTINUITY IN SCALE, RHYTHM, PROPORTION, AND DETAIL.

2. ORIENT THE FRONT OF THE DWELLING TOWARD THE STREET AND INCORPORATE PROMINENT ENTRIES AND PORCHES OR STOOPS INTO FRONT BUILDING FACADES.

3. ADHERE TO A CONSISTENT FRONT BUILDING SETBACK FOR ALL DWELLINGS ON THE SAME STREET OR SQUARE, SO THAT THE FRONTS OF DWELLINGS DEFINE A UNIFORM STREET EDGE.

4. DESIGN DECKS, BALCONIES, AND PORCHES AS COMPONENTS OF THE BUILDING FOLLOWING DOMINANT BUILDING LINES, PROPORTIONS, AND STYLE, AND IN A SCALE APPROPRIATE TO THE AVAILABLE SPACE ON THE SITE. DECKS SHALL BE SCREENED TO MINIMIZE VISIBILITY FROM A PUBLIC STREET.

5. DESIGN ACCESSORY STRUCTURES AT A SCALE APPROPRIATE TO THE DWELLING AND DESIGN STORAGE BUILDINGS AND GARAGES WITH THE SAME ARCHITECTURAL THEME AS THE PRINCIPAL BUILDING ON THE SITE, PROVIDING CONSISTENCY IN MATERIALS, COLORS, ROOF PITCH, AND STYLE.

6. EXTEND THE FINISH MATERIAL OF THE EXTERIORS OF BUILDINGS TO GRADE, OR, IF THIS IS NOT POSSIBLE, TO WITHIN 12 INCHES OF GRADE, ON ALL SIDES OF THE BUILDING EXCLUDING FOUNDATION WALLS WHICH SHALL USE A FINISHED QUALITY MATERIAL SUCH AS DECORATIVE CONCRETE BLOCK, POURED CONCRETE WITH A BRICK PATTERN, OR STUCCO, AND PROVIDE

LANDSCAPING ALONG THE FOUNDATION.

7. USE SIMILAR MATERIALS AND DESIGN ELEMENTS ON ALL BUILDING FACADES AND ARTICULATE ALL BUILDING FACADES USING COORDINATED ARCHITECTURAL FEATURES SUCH AS PORCHES, WINDOWS, DOORS, CHIMNEYS, GABLES, AND DORMERS.

(B) GARAGES MAY NOT BECOME THE DOMINANT STREET FEATURE. GARAGE DOORS SHALL USE ITEMS SUCH AS WINDOWS, DECORATIVE PATTERNS, AND COLOR TO RELIEVE THE VISUAL IMPACT OF THE HOUSE FROM THE STREET.

SECTION 2. AND BE IT FURTHER ENACTED, that this Act, having been passed by the affirmative vote of five members of the County Council, shall take effect on May 25, 2001, and shall apply to development plans approved after May 25, 2001.

b03401.wpd

READ AND PASSED this 21st day of May, 2001.

BY ORDER

Thomas J. Peddicord, Jr.
Secretary

PRESENTED to the County Executive for his approval this 22nd day of May, 2001.

Thomas J. Peddicord, Jr.
Secretary

APPROVED AND ENACTED:

C. A. Dutch Ruppersberger
County Executive

I HEREBY CERTIFY THAT BILL NO. 34-01 IS TRUE AND CORRECT AND TOOK EFFECT ON _____.

S. G. Samuel Moxley
Chairman, County Council

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2001, Legislative Day No. 12

Bill No. 58-01

Councilmembers Moxley, Bartenfelder, Kamenetz, Gardina & Olszewski

---

By the County Council, June 4, 2001

A BILL
ENTITLED

AN ACT concerning

Residential Performance Standards

FOR the purpose of providing that residential performance standards apply to certain developments and within certain areas of Baltimore County; requiring certain persons to consider certain findings before development plan approval; authorizing deviation from residential performance standards under certain circumstances; deleting certain requirements; providing for the application of this Act; and generally relating to residential performance standards.

BY repealing and reenacting, with amendments

Section 260
Baltimore County Zoning Regulations, as added by Bill 34-01

WHEREAS, the County Council finds that the South Perry Hall - White Marsh area is unique, and that the piecemeal approval of development plans will impede the County's ability to achieve its objectives in a manner consistent with the Master Plan and the County's

---

EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.
[Brackets] indicate matter stricken from existing law.
~~Strike out~~ indicates matter stricken from bill.
Underlining indicates amendments to bill.

land use policies; and

WHEREAS, the County Council had imposed a moratorium on the issuance of building permits in the South Perry Hall - White Marsh area and that moratorium expired on May 30, 2001; and

WHEREAS, the effective date of Council Bill No. 34-01, May 25, 2001, which would have established building standards in the South Perry Hall - White Marsh area, was delayed in order for the Office of Planning to adopt regulations establishing an appeals process for appeals relating to residential performance standards; and

WHEREAS, County Council Bill No. 33-01 and County Council Bill No. 35-01 established a coordinated approach in the planning and development of the South Perry Hall - White Marsh area and these bills were effective May 25, 2001; and

WHEREAS, the County Council believes that it is necessary to require certain developments in the South Perry Hall - White Marsh Area as defined in the official comprehensive zoning map accompanying Bill No. 33-01 to meet the residential performance standards when building permit applications are submitted on a date which coincides with the effective dates of the other legislation concerning the South Perry Hall - White Marsh area; now therefore

SECTION 1. BE IT ENACTED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that Section 260 of the Baltimore County Zoning Regulations, as added by Bill No. 34-01, be and it is hereby repealed and reenacted, with amendments, to read as follows:

Section 260

Residential Performance Standards

260.1 Scope; Statement of Legislative Intent for Performance Standards.

(a) This section applies to all residential development OF FOUR OR MORE LOTS in Baltimore County THAT IS LOCATED WITHIN THE URBAN/RURAL DEMARCATION LINE.

(b)(1) These performance design standards are intended to ensure that residential development in Baltimore County conforms with a higher quality of design.

(2) The evaluation of compliance shall occur as part of the review of development proposals[, either in reviewing concept plans pursuant to the development regulations of the Baltimore County Code or building permit applications submitted pursuant to an approved development plan].

(3) The Office of Planning may require the submittal of sufficient information, such as building elevations and grading plans, from which a finding can be made on compliance of the project with the standards.

(4) Deviation from the standards [is] MAY BE allowed only if clearly necessary to:

1. Comply with another standard;

2. Comply with environmental regulations or otherwise protect resources; or

3. Achieve the best possible development design, considering other goals in the comprehensive manual of development policies.

(c)(1) The Office of Planning's findings shall be made by the Director of Planning and submitted to the hearing officer or to the Director of Permits and Development Management, as applicable. [If the Director finds that a development proposal does not comply with the standards,

the proposal may not be approved. The Planning Director shall propose and adopt regulations to provide minimum due process in the making of his findings under this section. The Director's findings shall be appealable to the Board of Appeals only as part of an appeal from the hearing officer or director, as applicable.]

(2) THE HEARING OFFICER OR THE DIRECTOR ~~OR~~ OF PERMITS AND DEVELOPMENT MANAGEMENT, AS APPLICABLE, SHALL CONSIDER THE FINDINGS PRESENTED BY THE DIRECTOR OF PLANNING OR THE DIRECTOR'S DESIGNEE BEFORE A DEVELOPMENT PLAN IS APPROVED.

(3) AFTER CONSIDERING THE FINDINGS, THE HEARING OFFICER OR THE DIRECTOR OF PERMITS AND DEVELOPMENT MANAGEMENT MAY DEVIATE FROM THE STANDARDS ONLY IN ACCORDANCE WITH THE REQUIREMENTS IN PARAGRAPH (B)(4) OF THIS SUBSECTION.

260.2 Site Planning

(a) A development proposal shall:

1. Retain the existing quality vegetation of the site to the fullest extent possible and protect the root systems of that vegetation during construction.

2. Integrate locally significant features of the site, such as distinctive buildings, vistas, topographic features, specimen trees, tree stands, hedgerows, monuments, landmarks, ruins, and gardens, into the site design, and retain the character of the features and their settings.

3. Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography.

4. Provide a landscaped buffer between the rear yards of dwellings existing on may

25, 2001 and the rear yards of abutting new dwellings.

5. Provide for smooth transitions between neighborhoods by arranging and orienting the proposed buildings and site improvements to complement those in the surrounding neighborhood.

6. Provide transitions with respect to setbacks, street patterns, and building-to-street grade relationships.

(b) Reverse frontage lots are permitted only if the petitioner can demonstrate that adequate setbacks, topography, berming, landscaping, or building design will effectively screen private yard space and decks from the public view. Fences may not be located closer than 20 feet to a public right of way.

(c) Panhandle lots are not permitted as a matter of right. Panhandles must conform to section 26-266 of the Baltimore County Code and to the standards in the comprehensive manual of development policies.

(d) The minimum width for any single-family detached lot located in the south perry hall-white marsh area north of Ridge Road is 75 feet as measured along both the front wall and rear wall of the dwelling unit. This subsection does not apply to alternative site design dwellings permitted in accordance with section 1B01.1A.1.b.[, or to development plans approved prior to February 1, 2001, or to minor developments].

260.3 Open Space

A development proposal shall:

(a) Integrate open space areas into the proposed development by:

1. Creating focal points along streets;

2. Locating landscaped open green spaces in view of the development entrance or adjoining public street;

3. Planning a linked network of natural and landscaped open areas connected by pedestrian/bike trails; and

4. Orienting dwelling units around open areas or squares.

(b) Incorporate significant features, such as stands of trees, into open areas.

(c) Link the development's open areas to the surrounding neighborhood open areas, including public parks, walks, and bike trails and create both functional and visual continuity, e.g., by matching the design of a bike trail in the proposed development to the bike trail located in the adjoining property.

260.4 Streets and Parking

(a) A development proposal shall:

1. Provide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation.

2. Design streets to slow traffic by offsetting alignments. Reducing street width, reducing the length of blocks, and employing the use of traffic management devices such as roundabouts, chokers, chicanes, etc., to accomplish traffic calming.

3. Allow on-street parking.

4. Provide pedestrian and bicycle access to commercial areas and community facilities on site within the development and to the surrounding neighborhood.

5. Provide street and parking accommodations which complement the surrounding

neighborhood.

(b) Cul-de-sacs may be used if it is demonstrated that a street connection is not feasible due to site conditions such as severe grade transitions or sensitive natural features, or an alternative site layout is not feasible. If cul-de-sacs are used, developments should consist of a balance of street patterns (cul-de-sacs and connections). If cul-de-sacs are used, design elements such as center landscaping and traffic circles shall be used.

(c) Street widths and front yard setbacks may be reduced in accordance with traditional neighborhood design standards.

260.5 Landscape Design

A development proposal shall:

1. Landscape public open spaces to invite users. Particularly emphasizing the intended entrance to the open space.

2. In addition to plant material, use fences, walls or earth forms to provide effective and attractive screens and buffers where necessary.

3. Provide for, or reinforce and maintain, a continuous street tree canopy by preserving healthy street trees or, if they are not present, planting new trees. The canopy shall be comprised of trees of the same species or trees with design characteristics and growth habits that are similar to those of the existing street trees.

4. Include the design for site signage on the schematic landscape plan. If this is not possible, the signage design may be included in the final development plan, and shall be approved before issuance of any building permits.

260.6 Buildings

(a) A development proposal shall:

1. Provide variety in housing type or design, while maintaining continuity in scale, rhythm, proportion, and detail.

2. Orient the front of the dwelling toward the street and incorporate prominent entries and porches or stoops into front building facades.

3. Adhere to a consistent front building setback for all dwellings on the same street or square, so that the fronts of dwellings define a uniform street edge.

4. Design decks, balconies, and porches as components of the building following dominant building lines, proportions, and style, and in a scale appropriate to the available space on the site. Decks shall be screened to minimize visibility from a public street.

5. Design accessory structures at a scale appropriate to the dwelling and design storage buildings and garages with the same architectural theme as the principal building on the site, providing consistency in materials, colors, roof pitch, and style.

6. Extend the finish material of the exteriors of buildings to grade, or, if this is not possible, to within 12 inches of grade, on all sides of the building excluding foundation walls which shall use a finished quality material such as decorative concrete block, poured concrete with a brick pattern, or stucco, and provide landscaping along the foundation.

7. Use similar materials and design elements on all building facades and articulate all building facades using coordinated architectural features such as porches, windows, doors, chimneys, gables, and dormers.

(b) Garages may not become the dominant street feature. Garage doors shall use items such

as windows, decorative patterns, and color to relieve the visual impact of the house from the street.

SECTION 2. AND BE IT FURTHER ENACTED, That this Act shall apply to:

1. Except as provided in subsection 2. of this section, a ~~development~~ concept plan accepted for filing by the Department of Permits and Development Management on or after July 12, 2001; or

2. A development plan approved on or after May 25, 2001 in the South Perry Hall - White Marsh Area as defined in the official comprehensive zoning map accompanying Bill No. 33-01 as adopted by the County Council.

SECTION 3. AND BE IT FURTHER ENACTED, That this Act, having been passed by the affirmative vote of five members of the County Council, shall take effect July 12, 2001.

READ AND PASSED this 2nd day of July, 2001.

XII. STREET LIGHTS

A. GENERAL

1. This street light policy shall apply equally to all land used, or to be used, for residential purposes, including apartments, and to commercial, industrial, institutional or other types of public or non-public usage in Baltimore County. *(For street light policy, see Appendix C.)*

2. Provisions for street lighting must accompany plans for all residential development of two or more lots and all other developments as required.

3. In new residential development, streetlights shall be installed by the Baltimore Gas & Electric Company in the public street rights-of-way. The developer shall be completely responsible for the installation of streetlights in private street rights-of-way.

4. The developer shall pay the estimated costs for street lighting installation before approval of the Utility and/or Rights-of-Way Agreements.

XIII. TRAFFIC ENGINEERING DEVELOPMENT

A. GENERAL GUIDELINES

The following items are intended as general guidelines and may be recommended to be waived or made more stringent by the Director of the Department of Public Works as found to be reasonable for traffic safety or traffic operations.

1. Sight Distance Requirement – Use current AASHTO policy as a guideline. Improving sight distance may take precedence over the following other traffic engineering development regulations when in conflict. In addition to considering sight distance in criteria for points of access, the Department of Public Works also considers posted speed, operating speed, and horizontal and vertical alignment.

2. Street Widths, for Existing County Roads – Are determined by the Bureau of Engineering & Construction, Department of Public Works.

3. Internal Circulation Between Sites – On major collectors and arterials, internal circulation between sites should be provided in order to reduce short trips and turning movements on through streets.

4. Acceleration/Deceleration Lanes - Where a new street intersects an existing street without curb and gutter, and the traffic volume

on the existing street is approximately 5000 or more vehicles a day, an acceleration lane and a deceleration lane shall be provided. The length of these lanes may be reduced depending upon available rights-of-way and field conditions.

5. Intersection Spacing - Where possible, the distance between public or private street intersections shall be at least 100 feet, measured edge of road to edge of road. However, sight distance or traffic operation considerations may take precedence. The Department of Public Works may increase this distance requirement for arterial and major collector roads or to provide adequate stacking distance at traffic signals.

6. Median Breaks - New median breaks generally will be discouraged. However, when a new median break is necessary, a left-turn lane should be provided. When an entrance exists opposite a proposed median break, left-turn lanes should be provided in both directions. Where a new entrance is located at an existing median break, a left-turn lane should be provided.

7. Sidewalks - Sidewalks shall normally be provided along closed-section roadways in areas inside the URDL. In all other situations, the need for sidewalks shall be determined by the Director of the Department of Public Works.

8. Left Turn Lanes on Arterials - Where practical, road widening for left-turn lanes shall be provided on arterial roads where left-turning traffic would significantly impede straight-through traffic.

9. Traffic Impact Studies - A traffic impact study may be required as determined by the Director of the Department of Public Works. Upon the findings of the study, improvements along the property frontage and/or offsite may be required. The scope of the study will be determined on a case-by-case basis.

10. Perpendicular Parking – Where perpendicular parking is located on one side of a county road, maximum average daily trips is 800. Where perpendicular parking is on both sides of a county road, the maximum average daily trips is 600.

11. Traffic Calming – The use of traffic calming/management may be required where the Department of Public Works determines that such improvements are required.

B. ACCESS GUIDELINES

1. Maximum Number of Units with One Means of Access

a. Limits of Units

- 100 units with no future street extension proposed

- 150 units when a future street extension is proposed and is feasible

- >150↑ 2nd means of access must be constructed

b. Exception

These limits may be increased when restricted by a limited or controlled access highway or other physical barrier or limitation as advised by the Department of Public Works

c. Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances.

2. Number of Street Access Points - Along major collectors and arterials, access points exclusive of residential driveways generally shall be kept to a minimum of one access point for each public road bounding the property. However, additional access points may be permitted by the Director of the Department of Public Works. Minor roads may have more entrances as needed for subdivision layout.

3. Number of Driveway Access Points- The number of residential and commercial driveway access points generally shall be kept to a minimum on major collectors and arterials. This can be done by having a use-in-common driveway for adjacent lots, by having corner lots access off the minor street, or by having a private driveway for a group of lots to reduce or eliminate individual driveway access on major streets. Providing residential driveways on to major collectors and arterials should be avoided whenever possible, by instead fronting said lots onto internal subdivision roadways.

4. Use-In-Common Entrances- On major collectors and arterials, use-in-common entrances shall be considered where one property on a main street is being subdivided into several smaller parcels with frontage on the same street. Also, use-in-common entrances shall be placed on the edge of a developing property for use with an adjacent property.

C. PAYMENT FOR TRAFFIC CONTROL DEVICES.

1. Signals Operated and Maintained by Baltimore County

a. Where a traffic signal on a public street is justified on the basis of traffic from a private entrance, the developer shall

be responsible for the entire cost of designing and installing the entire signal with a county-approved private consultant and contractor. In addition, the developer shall be responsible for paying for the continuing monthly energy costs for operation of the signal.

b. When a private entrance is to be located opposite an existing traffic signal, the developer or property owner shall be responsible for the entire cost of designing and installing the necessary modifications by a County-approved private consultant and contractor.

c. Where a traffic signal at the intersection of two (2) public streets is justified on the basis of traffic generated by a proposed development, the developer shall be responsible for the entire cost of designing and installing the entire signal by a county-approved private consultant and contractor.

2. Traffic Signs & Markings - The developer shall be responsible for supplying and installing the traffic signs on public streets or rights-of-way which the traffic engineer determines are needed at the time the Plan is approved. Street name signs on private roads must have white letters on a blue background so that highway, police, and fire personnel know that the roads are private. Otherwise, the signs shall conform to and be installed according to the Manual of Uniform Traffic Control Devices (MUTCD), unless otherwise outlined in specifications supplied by the County.

The developer shall be responsible for the cost of street markings according to the Manual of Uniform Traffic Control Devices.

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2015, Legislative Day No. 8

Bill No. 37-15

Councilmembers Almond, Jones & Quirk

By the County Council, April 20, 2015

A BILL
ENTITLED

AN ACT concerning

Health Care and Surgery Center and Related Uses

FOR the purpose of defining a health care and surgery center; permitting a health care and surgery center in the OR-2 and B.M. Zones as a matter of right subject to certain requirements; permitting certain accessory commercial uses in the OR-2 Zone; specifying the permitted square footage of certain accessory commercial uses; exempting a health care and surgery center from open space requirements; providing that the performance standards for office buildings apply to a health care and surgery center; providing the off-street parking requirements for a health care and surgery center; exempting a health care and surgery center from basic services mapping standards; clarifying language; and generally relating to a health care and surgery center and related accessory uses.

EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.
[Brackets] indicate matter stricken from existing law.
~~Strike out~~ indicates matter stricken from bill.
Underlining indicates amendments to bill.

BY adding
Section 101.1, the definition of health care and surgery center, alphabetically, and Sections 206.3A.3.b.15, 16, and 17, 206.3.A.7, 206.4.E., 233.1.B, health care and surgery center, alphabetically, 409.6.A.2, health care and surgery center, alphabetically, 4A02.4.E.1.H., and 438
Baltimore County Zoning Regulations

BY repealing and re-enacting, with amendments
Sections 206.3.C.1.b. and 206.4.D.
Baltimore County Zoning Regulations

WHEREAS, a health care and surgery center brings together a variety of wellness care, surgical, diagnostic, and treatment services by providing these services within a centralized campus location; and

WHEREAS, a health care and surgery center provides better access, operational efficiencies, and integration for providers which results in conveniences for the patient; and

WHEREAS, a health care and surgery center is part of a fully integrated, patient centered health care delivery system; and

WHEREAS, the Affordable Care Act and the new All-Payer Demonstration provides momentum for the continuing shift from hospital inpatient to ambulatory settings; and

WHEREAS, the consolidation of services in a health care and surgery center creates an opportunity to improve efficiency and coordination of patients' outpatient clinical needs and reduce the need for higher cost inpatient services; now therefore

SECTION 1. BE IT ENACTED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Baltimore County Zoning Regulations read as follows:

Section 101. Definitions.

§101.1 Word usage; definitions

HEALTH CARE AND SURGERY CENTER. ONE OR MORE BUILDINGS AT WHICH COMPREHENSIVE HEALTH CARE SERVICES ARE PROVIDED THROUGH PERSONS OR ENTITIES LICENSED UNDER EITHER THE HEALTH GENERAL OR HEALTH OCCUPATIONS ARTICLE OF THE ANNOTATED CODE OF MARYLAND.

Section 206. OR-2 (Office Building - Residential) Zone.

§206.3. Use Regulations in OR-2 Zones.

A. Uses permitted by right. The following uses, only, are permitted by right:

3. Accessory uses or structures which are normally and customarily incidental to any permitted principal use, including the following, if within office buildings:

b. The following accessory commercial uses:

(15) WELLNESS, HEALTH AND FITNESS CENTER.

(16) FLORIST.

(17) OPTICIAN'S OR OPTOMETRIST'S ESTABLISHMENT.

§206.3. Use Regulations in OR-2 Zones.

A. Uses permitted by right. The following uses, only, are permitted by right:

7. HEALTH CARE AND SURGERY CENTER (see Section 438)

§206.3. Use Regulations in OR-2 Zones.

C. Supplementary use regulations (see also Section 208).

1. Accessory floor area limitations.

b. No single accessory commercial use other than a hotel, WELLNESS,

health and fitness [club] CENTER, conference facility, standard restaurant, carry-out restaurant or tavern, DRUGSTORE, OR OPTICIAN'S OR OPTOMETRIST'S ESTABLISHMENT may occupy more than 1,500 square feet of floor area.

§206.4. Performance standards in OR-2 Zones.

D. For the purpose of this subsection, a research institute or laboratory, AND A HEALTH CARE AND SURGERY CENTER, shall be considered an office building and shall be governed by the performance standards specified for office buildings in this subsection.

E. NOTWITHSTANDING THE PERFORMANCE STANDARDS IN SECTION 206.4.C, THERE IS NO MINIMUM AMENITY OPEN SPACE REQUIREMENT FOR A HEALTH CARE AND SURGERY CENTER.

Section 233. Business, Major (B.M.) Zone Use Regulations.

§233.1. Permitted Uses.

The following uses only are permitted (Section 233.2)

B. HEALTH CARE AND SURGERY CENTER (SEE SECTION 438)

Section 409. Off-Street Parking and Loading.

§409.6. Required number of parking spaces.

A. General Requirements. The standards set forth below shall apply in all zones unless otherwise noted. [Where] IF the required number of off-street parking spaces is not set forth for a particular type of use, the Director of Permits, Approvals and Inspections shall determine the basis of the number of spaces to be provided. [When] IF the number of spaces calculated in accordance with this section results in a number containing a fraction, the required number of

spaces shall be the next highest whole number.

2. Commercial and service uses.

Type of Use	Minimum Number of Required Off-Street Parking Spaces
HEALTH CARE AND SURGERY CENTER	4 PER 1,000 SQUARE FEET OF GROSS FLOOR AREA

§4A02.4. Basic services mapping standards.

E. General exceptions to basic services mapping standards.

1. The provisions of Section 4A02.4.A, B, C and D do not apply to any of the following:

H. HEALTH CARE AND SURGERY CENTER.

Article 4

Special Regulations

SECTION 438. HEALTH CARE AND SURGERY CENTER.

A HEALTH CARE AND SURGERY CENTER IS SUBJECT TO THE FOLLOWING REQUIREMENTS:

1. AMBULATORY SURGERY AND RADIOLOGY SERVICES SHALL BE PROVIDED;

2. AT LEAST 75% OF THE MEDICAL AND SURGICAL SPECIALITIES OR SUBSPECIALTIES RECOGNIZED BY THE AMERICAN BOARD OF MEDICAL SPECIALITIES SHALL BE PROVIDED;

3. HEALTH CARE SERVICES SHALL BE PROVIDED 7 DAYS PER WEEK AND 365 DAYS PER YEAR;

4. THE CENTER SHALL HAVE AT LEAST FOUR OPERATING ROOMS; AND

5. THE GROSS FLOOR AREA OF THE CENTER, WHICH INCLUDES ALL BUILDINGS, SHALL BE AT LEAST 150,000 SQUARE FEET, WITH A MINIMUM OF 10,000 SQUARE FEET OF RADIOLOGY SPACE, BUT NO MORE THAN 400,000 SQUARE FEET IN TOTAL.

SECTION 2. AND BE IT FURTHER ENACTED, that this Act, having been passed by the affirmative vote of five members of the County Council, shall take effect on June 1, 2015.

Bill No. 15-17

All Councilmembers

By the County Council, April 3, 2017

A BILL
ENTITLED

AN ACT concerning

Basic Services Maps

FOR the purpose of repealing the Basic Services Sewerage Map, the Basic Services Water Supply Map and the Basic Services Transportation Map; and adopting a new Basic Services Sewerage Map, a new Basic Services Water Supply Map and a new Basic Services Transportation Map.

By repealing and reenacting, with amendments
Subsection 4A02.3.A.1.,2. and 3.
Baltimore County Zoning Regulations, as amended

BY repealing
2016 Basic Services Sewerage Map
2016 Basic Services Water Supply Map
2016 Basic Services Transportation Map, all as adopted by Bill No. 18-16

BY adopting the new
2017 Basic Services Sewerage Map
2017 Basic Services Water Supply Map
2017 Basic Services Transportation Map

EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.
[Brackets] indicate matter stricken from existing law.
~~Strike out~~ indicates matter stricken from bill.
Underlining indicates amendments to bill.

WHEREAS, in accordance with Subsection 4A02.3.E. of the Baltimore County Zoning Regulations, the Planning Board has recommended revisions to the Basic Services Maps and submitted those recommendations to the County Council on February 21, 2017, and the County Council has held a public hearing thereon on April 3, 2017; now, therefore

SECTION 1. BE IT ENACTED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Basic Services Maps referred to in Subsections 4A02.3.A.1., 2. and 3. of the Baltimore County Zoning Regulations, and further identified as (1) 2016 Basic Services Sewerage Map, (2) 2016 Basic Services Water Supply Map; and (3) 2016 Basic Services Transportation Map, and any amendments and revisions previously made thereto are hereby repealed.

SECTION 2. AND BE IT FURTHER ENACTED, that the Basic Services Maps identified herein and accompanying this Act are hereby adopted and declared to be a part of this Act and incorporated by reference herein. The following maps are hereby adopted and identified as follows:

1. 2017 Basic Services Sewerage Map;

2. 2017 Basic Services Water Supply Map; and

3. 2017 Basic Services Transportation Map , WITH THE FOLLOWING AMENDMENTS:

(A) THE COMMUTER SHED AT THE INTERSECTION OF PULASKI HIGHWAY AND EBENEZER ROAD SHALL BE REDRAWN TO INCLUDE THE ADDITIONAL AREAS WEST OF PULASKI HIGHWAY, NORTH OF EBENEZER ROAD TO THE CURRENT

BOUNDARY, AND SOUTH OF EBENEZER ROAD TO HONEYGO RUN. THE COMMUTER SHED SHALL ALSO INCLUDE THE AREAS NORTH OF HONEYGO RUN AND EAST OF INTERSTATE 95, AND SOUTH OF COWENTON AVENUE AND EBENEZER ROAD TO THE CURRENT BOUNDARY AT THE RAILROAD TRACKS.

(B) BELAIR ROAD AND ROSSVILLE BOULEVARD – LEVEL OF SERVICE: F.

SECTION 3. AND BE IT FURTHER ENACTED, that upon the effective date of this Act, the Maps adopted hereby shall be signed by the Chairman of the County Council and shall be dated as of the effective date of this Act and thereafter delivered to the Department of Permits, Approvals and Inspections.

SECTION 4. AND BE IT FURTHER ENACTED, that Subsection 4A02.3.A.1., 2. and 3. of the Baltimore County Zoning Regulations, be and they are hereby repealed and reenacted, with amendments, to read as follows:

Section 4A02.3 - Basic Services Maps

4A02.3 - Adoption of Basic Services Maps

A. The following basic services maps, which shall be in the custody of the Zoning Commissioner for Baltimore County and posted on the county's internet website, are hereby adopted and made a part of this Article:

1. [2016] 2017 Basic Services Sewerage Map

2. [2016] 2017 Basic Services Water Supply Map

3. [2016] 2017 Basic Services Transportation Map

SECTION 5. AND BE IT FURTHER ENACTED, that this Act, having been passed by

the affirmative vote of five members of the County Council, shall take effect on May 15, 2017.

Chair, County Council

COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND
Legislative Session 2022, Legislative Day No. 8

Bill No. 25-22

All Councilmembers

By the County Council, April 4, 2022

A BILL
ENTITLED

AN ACT concerning

Basic Services Maps

FOR the purpose of repealing the Basic Services Sewerage Map, the Basic Services Water Supply Map and the Basic Services Transportation Map; and adopting a new Basic Services Sewerage Map, a new Basic Services Water Supply Map and a new Basic Services Transportation Map.

By repealing and reenacting, with amendments
Subsection 4A02.3.A.1.,2. and 3.
Baltimore County Zoning Regulations, as amended

BY repealing
2021 Basic Services Sewerage Map
2021 Basic Services Water Supply Map
2021 Basic Services Transportation Map, all as adopted by Bill No. 32-21

BY adopting the new
2022 Basic Services Sewerage Map
2022 Basic Services Water Supply Map
2022 Basic Services Transportation Map

EXPLANATION: CAPITALS INDICATE MATTER ADDED TO EXISTING LAW.
[Brackets] indicate matter stricken from existing law.
~~Strike out~~ indicates matter stricken from bill.
Underlining indicates amendments to bill.

WHEREAS, in accordance with Subsection 4A02.3.E. of the Baltimore County Zoning Regulations, the Planning Board has recommended revisions to the Basic Services Maps and submitted those recommendations to the County Council on March 5, 2021, and the County Council has held a public hearing thereon on April 26, 2022; now, therefore

SECTION 1. BE IT ENACTED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, MARYLAND, that the Basic Services Maps referred to in Subsections 4A02.3.A.1., 2. and 3. of the Baltimore County Zoning Regulations, and further identified as (1) 2021 Basic Services Sewerage Map, (2) 2021 Basic Services Water Supply Map; and (3) 2021 Basic Services Transportation Map, and any amendments and revisions previously made thereto are hereby repealed.

SECTION 2. AND BE IT FURTHER ENACTED, that the Basic Services Maps identified herein and accompanying this Act are hereby adopted and declared to be a part of this Act and incorporated by reference herein. The following maps are hereby adopted and identified as follows:

1. 2022 Basic Services Sewerage Map;

2. 2022 Basic Services Water Supply Map; and

3. 2022 Basic Services Transportation Map, WITH THE FOLLOWING AMENDMENTS:

A. THE COMMUTER SHED LOCATED AT THE INTERSECTION OF SOUTH ROLLING ROAD AND FREDERICK ROAD SHALL BE REDRAWN TO EXCLUDE THE AREA OF LAND ENCOMPASSED WITHIN THE ELLICOTT MILL NATIONAL REGISTER HISTORIC DISTRICT AS SHOWN ON THE MAP ATTACHED AS EXHIBIT "A".

B. THE COMMUTER SHED LOCATED AT THE INTERSECTION OF CHARLES STREET AND BELLONA AVENUE/KENILWORTH DRIVE SHALL BE REDRAWN TO EXCLUDE THE AREA OF LAND WITHIN THE BOUNDARY OF WEST JOPPA ROAD, GREENWOOD ROAD, AND CHESTNUT ROAD, AS SHOWN ON THE MAP ATTACHED AS EXHIBIT "B" AND MORE FULLY DESCRIBED HEREIN AS FOLLOWS:

LOT ONE AND LOT TWO AS SHOWN ON A PLAT ENTITLED, 'AMENDED SUBDIVISION PLAT OF BLAKEHURST LIFE CARE COMMUNITY' DATED MARCH 18, 1992 AND RECORDED AMONG THE LAND RECORDS OF BALTIMORE COUNTY IN PLAT BOOK SM NO. 64, FOLIO 34.

C. THE COMMUTER SHED LOCATED AT THE INTERSECTION OF EBENEZER ROAD AND PULASKI HIGHWAY SHALL BE REDRAWN TO EXCLUDE THE AREA OF LAND SHOWN ON THE MAP ATTACHED AS EXHIBIT "C" AND MORE FULLY DESCRIBED HEREIN AS FOLLOWS:

BEGINNING FOR THE SAME ON THE SOUTHEAST SIDE OF PULASKI HIGHWAY, 150 FEET WIDE, AT A POINT DESIGNATED WITH A MARYLAND STATE COORDINATE VALUE OF NORTH 628782.41 AND EAST 1478470.26 AS SHOWN ON A PLAT ENTITLED "FINAL PLAT, CECELIA SCHWABER, EXEMPT TRUST U/A" AND RECORDED AMONG THE LAND RECORDS OF BALTIMORE COUNTY IN PLAT BOOK S.M. 78, FOLIO 368; THENCE BINDING ON THE SOUTHEAST SIDE OF PULASKI HIGHWAY AND ON THE OUTLINE OF SAID PLAT **(1)** NORTH 45 DEGREES 02 MINUTES 33 SECONDS EAST 1068.61; THENCE LEAVING SAID HIGHWAY AND BINDING ON THE OUTLINES OF SAID PLAT THE FOLLOWING SIX COURSES AND DISTANCES: **(2)** SOUTH 69 DEGREES 53 MINUTES 59 SECONDS EAST 70.16 FEET;

THENCE (3) SOUTH 06 DEGREES 21 MINUTES 02 SECONDS EAST 1947.07 FEET; THENCE (4) SOUTH 82 DEGREES 05 MINUTES 22 SECONDS WEST 518.59 FEET; THENCE (5) NORTH 07 DEGREES 00 MINUTES 39 SECONDS WEST 344.59 FEET; THENCE (6) SOUTH 82 DEGREES 59 MINUTES 21 SECONDS WEST 365.35 FEET; AND THENCE (7) NORTH 06 DEGREES 56 MINUTES 32 SECONDS WEST 985.35 FEET TO THE PLACE OF BEGINNING.

CONTAINING 31.489 ACRES OF LAND, MORE OR LESS, WITH THE COURSES BASED ON THE MARYLAND COORDINATE SYSTEM (NAD 83/91).

BEING KNOWN AND DESIGNATED AS #11301 PULASKI HIGHWAY – PARCEL 27, 230 AS SHOWN ON A PLAT ENTITLED "FINAL PLAT, CECELIA SCHWABER, EXEMPT TRUST U/A" AND RECORDED AMONG THE LAND RECORDS OF BALTIMORE COUNTY IN PLAT BOOK S.M. 78, FOLIO 368.

ALSO BEING ALL OF THAT LAND DESCRIBED IN A DEED DATED JANUARY 4, 2010 AND RECORDED AMONG THE LAND RECORDS OF BALTIMORE COUNTY IN LIBER S.M. 29037, FOLIO 10 WAS CONVEYED BY REVOCABLE TRUST AGREEMENT OF CECELIA SCHWABER DTD. DECEMBER 9, 1985 AND CECELIA SCHWABER EXEMPT TRUST U/A DECEMBER 9, 1985 UNTO 11301 PULASKI HIGHWAY, LLC.

SECTION 3. AND BE IT FURTHER ENACTED, that upon the effective date of this Act, the Maps adopted hereby shall be signed by the Chairman of the County Council and shall be dated as of the effective date of this Act and thereafter delivered to the Department of Permits, Approvals and Inspections.

SECTION 4. AND BE IT FURTHER ENACTED, that Subsection 4A02.3.A.1., 2. and 3. of the Baltimore County Zoning Regulations, be and they are hereby repealed and reenacted, with amendments, to read as follows:

Section 4A02.3 - Basic Services Maps

4A02.3 - Adoption of Basic Services Maps

A. The following basic services maps, which shall be in the custody of the Zoning Commissioner for Baltimore County and posted on the county's internet website, are hereby adopted and made a part of this Article:

1. [2021] 2022 Basic Services Sewerage Map

2. [2021] 2022 Basic Services Water Supply Map

3. [2021] 2022 Basic Services Transportation Map

SECTION 5. AND BE IT FURTHER ENACTED, that this Act, having been passed by the affirmative vote of five members of the County Council, shall take effect on May 16, 2022.

IN RE: PETITION FOR SPECIAL VARIANCE NE/S Castlemoor Road at W/S Liberty Gardens Road 2nd Election District 2nd Councilmanic District (7118, 7200, 7202, 7204, 7206 7208, 7210 Castlemoor Road) Elias Rizakos & Dimitrios Vangelakos Petitioners	*	BEFORE THE DEPUTY ZONING COMMIS SIONER OF BALTIMORE COUNTY CASE NO. 00-557-SA

* * * * * * * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before this Deputy Zoning Commissioner as a Petition for Special Variance filed by the legal owners of the subject property, Elias Rizakos & Dimitrios Vangelakos, for property they own, located along Castlemoor Road, in the Lochearn area of Baltimore County. The subject property is zoned DR 5.5. The special variance request is from Sections 4A02.4.D and 4A02.4.F of the Baltimore County Zoning Regulations (B.C.Z.R.), to allow 7 residential building permits within a traffic moratorium area.

Appearing at the hearing on behalf of the special variance request were Elias Rizakos, on behalf of the property owners, Alec Ratych, an engineer with APR Associates, Inc., the engineering firm who prepared the site plan of the property, Dick Moore, traffic expert with Wells & Associates and C. William Clark, attorney at law, representing the Petitioners. Appearing in opposition to the Petitioners' request were George Hall, Sr., John Davidson, Judith Berger and Julius Lichter, attorney at law, representing a client who did not attend the hearing. There were no others in attendance.

Testimony and evidence demonstrated that the property, which is the subject of this special variance request, is a 7 lot residential subdivision located on the north side of Castlemoor Road, just west of its intersection with Liberty Gardens Road. The subject property was approved for

ORDER RECEIVED FOR FILING
Date 8/31/00
By

the development of 7 additional single-family, residential homes. The property is better known as "Castlemoor Estates" and was approved by way of a Hearing Officer's Hearing in December 1997. None of the homes have been constructed on the subject property and the 7 additional lots remain unimproved at this time.

After the approval of the development plan in 1997, the Petitioners continued to proceed through the development process. However, in August of 1998, the intersection of Liberty Road and Washington Avenue was downgraded to a "F" level intersection. The property, which is the subject of this special variance request, was depicted within the traffic shed area that feeds the intersection of Liberty Road and Washington Avenue.

Testimony and evidence offered by Mr. C. Richard Moore, the traffic expert testifying for the Petitioners, demonstrated that a traffic shed area is determined by those properties which generate 50% or more of their traffic towards the failing intersection in question. The Petitioners submitted into evidence an exhibit showing the intersection of Liberty Road and Washington Avenue and its surrounding traffic shed. Mr. Moore, who was employed by Baltimore County for 31 years as its head traffic engineer, testified that the traffic shed as it exists today for Liberty Road and Washington Avenue, covers the same area as it has for the past 3 decades. Mr. Moore's testimony was that the traffic shed area for this intersection has remained constant for the past 30 years and has not been altered, notwithstanding the changes in the road system over that time. Mr. Moore testified that it is necessary, at this time, given the changing traffic patterns and additional streets and roads that may have been constructed over the past few decades, to review the specific property in question to determine whether the subject property should remain within the traffic shed for Liberty Road and Washington Avenue. Mr. Moore performed a traffic study utilizing the driving habits of the residents of the Oakview Apartments as being representative of the future property owners for the subject property. The Oakview Apartments

ORDER RECEIVED FOR FILING
Date 8/31/00
By

were chosen due to the fact that they are located immediately adjacent to the property which is the subject of this variance request.

Mr. Moore submitted into evidence as Petitioners' Exhibit No. 3, the results of his traffic study. Those results clearly demonstrated that the traffic patterns of those residents residing within the Oakview Apartments fall substantially below the 50% requirement that would cause that particular property to be located within the Liberty Road/Washington Avenue traffic shed. Mr. Moore's study demonstrated that only 38.2% of the traffic from the Oakview Apartments actually utilizes the intersection in question. In addition, a study was conducted by the Baltimore County Bureau of Traffic & Transportation which also demonstrated that less than 50% of the vehicles exiting the Oakview Apartments actually utilize the intersection of Liberty Road and Washington Avenue.

Based on the testimony and evidence offered by the Petitioners' traffic expert, I find, pursuant to Section 4A02.4.F, that the district standard is not relevant to the proposed development of 7 additional lots located within the "Castlemoor Estates" property. Based on my finding, less than 50% of those residents will actually utilize the intersection in question. Furthermore, the variance requested herein will not violate the purpose of Section 4A02 of the Baltimore County Zoning Regulations and the granting of this variance will not adversely affect a person whose application was filed prior to this Petitioners' application. Therefore, the request for special hearing shall be granted.

As stated previously, several residents from the surrounding community appeared in opposition to the Petitioners' request. The testimony of those residents was that the traffic congestion in this area of the County is unbearable. Their testimony demonstrated that the addition of one more automobile traveling in this area of Baltimore County is not acceptable. In addition, Mr. Hall testified that many motorists in this area utilize Castlemoor Road as a shortcut

ORDER RECEIVED FOR FILING
Date 8/31/00
By R. Jameson

which causes a high volume of vehicles to pass by his house. He testified that Castlemoor Road is a narrow road which simply cannot accommodate these large number of commuters. Mr. Hall suggested that Castlemoor Road be made a one way street from Richwood Avenue to Timanus Lane. This would prohibit residents from utilizing Castlemoor Road as a shortcut.

While I can appreciate Mr. Hall's suggestion, I do not have the authority to alter traffic patterns as he suggested. He should pursue his suggestion with the Department of Public Works, Bureau of Traffic & Transportation. Perhaps they could consider his request and determine whether making Castlemoor Road a one way street is an acceptable solution.

As to the special variance request, I find for the reasons stated herein, that the variance should be granted.

THEREFORE, IT IS ORDERED this 31st day of August, 2000, by this Deputy Zoning Commissioner, that the Petitioners' request for special variance from Sections 4A02.4.D and 4A02.4.F of the Baltimore County Zoning Regulations, to allow 7 residential building permits within a traffic moratorium area, be and is hereby GRANTED, subject, however, to the following restriction which is a condition precedent to the relief granted herein:

1. The Petitioners may apply for their building permit and be granted same upon receipt of this Order; however, Petitioners are hereby made aware that proceeding at his time is at their own risk until such time as the 30 day appellate process from this Order has expired. If, for whatever reason, this Order is reversed, the Petitioners would be required to return, and be responsible for returning, said property to its original condition.

* OF BALTIMORE COUNTY

* CASE NO. 05-336-SA

* * * * * * * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before this Deputy Zoning Commissioner as a Petition for Special Variance filed by the legal owners of the subject property, FDP, LLC, by Dante Betro an authorized member. The variance request is for properties located at 8834, 8836 and 8838 Wilson Avenue in Baltimore County. The special variance is requested from Section 4A02.4.D of the Baltimore County Zoning Regulations (B.C.Z.R.), pursuant to Section 4A02.4.G of the B.C.Z.R., to permit construction on three lots in a transportation deficient area. The subject property and requested relief are more particularly described on Petitioners' Exhibit No. 1, the plat to accompany the Petition for Variance.

The property was posted with Notice of Hearing on January 21, 2005, for 15 days prior to the hearing, in order to notify all interested citizens of the requested zoning relief. In addition, a Notice of Zoning hearing was published in "The Jeffersonian" newspaper on January 25, 2005 to notify any interested persons of the scheduled hearing date.

Applicable Law

4A02.1 Purpose and intent. The County Council finds that important public facilities in certain predominantly urban areas of the county are inadequate to serve all of the development that would be permitted under the regulations of the zones or commercial districts within which those areas lie. Basic Services Maps are hereby established to regulate non-industrial development in those under-served areas to a degree commensurate with the availability of these facilities. Basic Services Maps are not permanent and will be reviewed annually with reports to the County Council.

b. Correction of deficiency. In the case of a deficiency which has been corrected by actual construction of adequate facilities, the maps may be amended, at any time, to reflect the correction, by resolution of the County Council after certification by the Department of Public Works, in the case of a water or sewer deficiency, or the Department of Traffic Engineering, in the case of a traffic deficiency, that the needed facility has been constructed and is performing so that the area no longer suffers a service deficiency. Where correction of the deficiency has been accomplished by means of private funding, the developer or developers paying the cost of correction shall have a preferred claim to any increase in the reserve capacity resulting from the correction irrespective of the requirements of Section 4A02.3.G.2.b. Absent a contrary agreement between the developers contributing to the cost of correction, the developers shall share in any increase in reserve capacity on a prorated basis in accordance with their percentage of contribution to the entire cost of correction.

F. Basic Services Maps are not intended to permanently establish either areas of service deficiencies or areas of service availability and adequacy. Such maps will be reviewed annually, as it is the intent of the County Council that existing service deficiencies will be corrected in accordance with the Master Plan and capital improvements program. The County Council also recognizes that continuing development in certain areas may create service deficiencies in areas that presently have adequate levels of service. In some cases, changes in underlying zoning classifications may have to be made to better correlate development potential.

Transportation. Intent. The transportation standards and maps are intended to regulate non-industrial development where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article. Such development is not intended to be restricted unless there is a substantial probability that an arterial and arterial collector intersection situated within the mapped area will, on the date the map becomes effective, be rated at level-of-service E or F under standards established by the Highway Capacity Manual, 1965, published by the Highway Research Board of the Division of Engineering and Industrial Research, National Academy of Sciences National Research Council.

E. General exceptions to basic services mapping standards.

1. The provisions of Section 4A02.4.A, B, C and D do not apply to any of the following:
a. Any development of three or fewer single-family detached dwellings, or establishment of their accessory uses, on a lot of record as of November 19, 1979 (see Section 101).

Petitions for special variance from provisions of this subsection.
1. The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's purpose, pursuant to a finding:
a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and

ORDER RECEIVED FOR FILING
Date 2/16/05
By

b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.
2. The Office of Planning shall give a report on the petition to the Zoning Commissioner prior to his consideration of the petition.
3. The Zoning Commissioner may grant or deny the petition, or grant it subject to any conditions or limitations consistent with the criteria set forth in Paragraph 1 above.
4. An appeal may be filed with the County Board of Appeals within 30 days of the decision of the Zoning Commissioner.

Zoning Advisory Committee Comments

The Zoning Advisory Committee (ZAC) comments are made part of the record of this case and contain the following highlights: None.

Interested Persons

Appearing at the hearing on behalf of the variance request were Dante and Flora Betro, Petitioners. Donald E. Hicks appeared on behalf of Hicks Engineering, the engineering firm that prepared the site plan of the property and Benjamin Bronstein, Esquire, represented the Petitioners. Walter Smith and Steven Weber, county employees, appeared at the hearing at the request of the Petitioner. Appearing at the hearing as protestants or citizens were Janet & Donald Keplinger, Albert & Rachel Diegel, Arthur & Margaret Dietsch, Jerome Beck, Fred Altman and Ruth Baisden. People's Counsel, Peter Max Zimmerman, entered the appearance of his office in this case.

Testimony and Evidence

Testimony proffered by the Petitioner indicated that the Petitioner bought six lots fronting on Wilson Avenue. These six were part of a ten lot subdivision which was recorded in the Land Records of Baltimore County on March 11, 1997. The County Council passed the transportation portion of the Basic Services Map in January 6, 1997 which designated the intersection of Harford Road and Putty Hill Avenue as a failing intersection. The transportation shed

ORDER RECEIVED FOR FILING
Date 2/16/05
By

surrounding this intersection included these ten lots. All agreed that the subdivision should not have been allowed to be recorded under the circumstances, but as Walter Smith, project manager for the Department of Permits & Development Management testified, it often takes 5 to 6 months for the final subdivision plat to be recorded. Apparently in that time the intersection was declared to have become failing (F level).

History aside, the Petitioner applied for and received a three lot exemption under Section 4A02.E.1.a and has or is building three homes on lots 4, 5, and 6. The question in this case is whether or not a special variance should be granted to allow homes on lots 1, 2, and 3. Apparently lots 7, 8, 9 and 10 are vacant and are not owned by the Petitioner.

Steven Weber, Chief of the Traffic Engineering Division of the Department of Public Works, testified that the County studies show the peak time for the Harford Road/Putty Hill intersection is 7:15 AM to 8:15 AM. and that the number of vehicles using the intersection at that hour is approximately 3,100. He next testified that during this hour, the trips generated by the proposed three lots were 2.55 trips. From this data, he concluded that the impact of these three additional homes on the intersection was imperceptible. In fact, he indicated that daily fluctuations of traffic using the intersection were greater than the added trips from the three homes. He also noted that generally special variances are granted in failing traffic sheds when the number of lots is less than 10.

A great deal of the time for cross-examination of Mr. Weber was taken by residents of Wilson Avenue who complained vehemently about traffic on Sunday mornings going to and from St. Ursula's Church via a curb cut in the cul-de-sac in which Wilson Avenue terminates. Apparently, this issue had been raised and debated for several years before the hearing on the subject case without adequate resolution as far as the residents along Wilson Avenue were

ORDER RECEIVED FOR FILING
Date 2/16/05
By

concerned. Given Mr. Weber's position in the County, he became the focus of much questioning about this continuing problem as seen from the residents' standpoint. Ms. Keplinger, one of the residents, supplemented her complaints about church traffic given at the hearing by a long and detailed recount of her efforts to stop the church traffic and her frustration at not being successful thus far.

Mr. Weber mentioned that Putty Hill Avenue was the subject of an ongoing County capital improvement program to widen Putty Hill at its intersection with Harford Road. However, neither Wilson Avenue or the part of Putty Hill not near the intersection were scheduled for improvement according to Mr. Weber. He indicated that at peak hours, traffic backs up from the intersection of Harford Road and Putty Hill east to Wilson Avenue. Finally, he mentioned that the Department interprets the transportation portion of the Basic Services Legislation to exempt three lots for each subdivided tract of land recorded before 1979.

Mr. Smith, from the Department of Permits and Development Management, testified that the ten lot subdivision was recorded in the Land Records for Baltimore County on March 11, 1997. He indicated that the County Council passed the transportation portion of the Basic Services Map in January 6, 1997 which designated the intersection of Harford Road and Putty Hill Avenue as a failing intersection. The transportation shed surrounding this intersection included these ten lots. He indicated the subdivision should not have been allowed to be recorded under the circumstances, but it often takes 5 or 6 months for the final subdivision plat to be recorded. Apparently in that time, the rating of the intersection at Putty Hill and Harford Road changed to level "failing F" and the plat reviewers failed to detect the problem. He also noted that there was no reserve capacity use certificate in the subdivision file.

ORDER RECEIVED FOR FILING
Date 2/16/05
By

The protestants who live along Wilson Avenue testified at length regarding the traffic generated by the Church on Sunday morning, the difficulty this traffic causes for elderly residents, and their opposition to even the small traffic that would be generated by the proposed three homes. Ruth Baisden, President of the Greater Parkville Community Council, described the efforts made by the community. She testified that they worked to delete a general widening of Putty Hill Avenue from the Master Plan, and to reduce the high number of traffic accidents on Harford Road. In general she noted that her organization does not support in-fill development, but rather seeks to preserve open space such as the subject lots. She also indicated that there was no hardship in this case other than economic return for the developer. Finally, she noted that this subdivision involved 10 lots of which the Petitioner bought 6 at a later time. She expressed concern that the remaining lots could also be granted a three lot exemption.

Finally, Mr. Bronstein pointed out that the County has to correct failing intersections. He stated that the impact on the failing intersection of these three lots would be insignificant, and that the problem of church generated traffic did not occur at the same time (Sunday morning) as the peak traffic in the failing intersection. He also noted that there is no reserve capacity use certificate for this subdivision. Finally, he argued that since the Planning Office did not comment on this request, this indicated Planning's approval.

The Planning Office submitted a comment after the hearing on the case which indicated that they did not oppose the Petitioner's request and the development of three lots would not negatively affect the district.

Findings of fact and conclusions of law

As I explained at the hearing, the issue of church traffic on Wilson Avenue is not before me. I do not have the power to order the church to stop using Wilson Avenue on Sunday

ORDER RECEIVED FOR FILING
Date 2/16/05
By

mornings. That said, I want to recognize the problem articulated so well by Ms. Keplinger's post hearing letter.

In addition, the issue of whether or not the Petitioner was entitled to a three lot exemption under the regulations is not before me. I will only note that the law allowing these exemption seems to require that the development involve 3 lots or less (this development involved 10 lots) and was recorded before 1979 (this subdivision was recorded in 1997). It appears that the County reviewers grant a blanket three lot exemption to all proposed developments in failing traffic sheds.

As Mr. Bronstein points out, this is a case for special variance and not a typical variance case under Section 307 of the B.C.Z.R. Consequently, the usual suspects of uniqueness, hardship, practical difficulty and impact are not factors to be considered. In order to grant a special variance, the special variance law requires:

1. that it will not violate that purpose of the legislation,
2. that the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or
3. that the standard is not relevant to the development proposal; and
4. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

Regarding criteria #4, from the testimony in this case, I have no evidence that granting the petition will adversely affect some other developer with a reserve capacity use certificate already in place. Apparently, this subdivision was not issued such a certificate. Whether there are any other developments pending in this traffic shed, I do not know, but have to trust that if such were the case the planning and traffic engineering groups would know and object. They have not.

Regarding criteria # 2 and #3, Mr. Weber testified that the impact of these three homes on the failing intersection of Putty Hill and Harford Road is "imperceptible". In fact, the additional

ORDER RECEIVED FOR FILING
Date: 2/16/05
By: Raj

traffic at peak hour is lower than the daily variations of traffic in that intersection at the peak time. Consequently, I find that criteria #2 and #3 are satisfied.

Finally, in regard to #1, again the impact of these three homes is so small that it becomes lost in the noise of data variations and so, I find that it does not violate that purpose of the legislation which is to limit development while facilities improvement are being designed and constructed. I note also the Planning Office comment that development of these three lots will not adversely affect the neighborhood. Consequently I will grant the special variance.

Pursuant to the advertisement, posting of the property, and public hearing on this petition held, and after considering the testimony and evidence offered by the Petitioners, I find that the Petitioners' special variance request should be granted.

THEREFORE, IT IS ORDERED, this 16 day of February, 2005, by this Deputy Zoning Commissioner, that the Petitioners' request for special variance requested from Section 4A02.4.D of the Baltimore County Zoning Regulations (B.C.Z.R.), pursuant to Section 4A02.4.G of the B.C.Z.R., to permit construction on three lots in a transportation deficient area, be and is hereby GRANTED.

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

John V. Murphy

By: Raj

IN RE: PETITION FOR SPECIAL VARIANCE SE side of Transverse Avenue, 75 feet +/- NE of c/l of Corktree Road 15th Election District 6th Councilmanic District **(852 Middle River Road)** Jacqueline E. Stillerman *Petitioner*	*	BEFORE THE DEPUTY ZONING COMMISSIONER FOR BALTIMORE COUNTY **Case No. 08-264-A**

* * * * * * * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before this Deputy Zoning Commissioner for consideration of a Petition for Special Variance filed by the legal owner of the subject property, Jacqueline E. Stillerman. Petitioner is requesting special variance relief from Section 4A02.4 of the Baltimore County Zoning Regulations (B.C.Z.R.) to permit the proposed non-industrial development where it has been determined that the capacity of the public facilities necessary to accommodate same (transportation) is less than necessary, and for such other and further relief that may be deemed necessary by the Zoning Commissioner for Baltimore County. The subject property and the requested relief are more fully described on the site plan which was marked and accepted into evidence as Petitioner's Exhibit 1.

Appearing at the requisite public hearing in support of the special variance request was Neil Stillerman, principal of Stillskyes Superior Builders. Mr. Stillerman is the proposed builder/developer of the site. The title of the subject property is in the name of his spouse, Jacqueline Stillerman. Also present at the hearing was Kenneth J. Wells with KJ Wells, Inc., the licensed property line surveyor who prepared the site plan. Petitioner was represented by Lawrence E. Schmidt, Esquire of Gildea & Schmidt, LLC. There were no Protestants or other interested citizens in attendance at the hearing.

RECEIVED FOR FILING
Date 4.25.08
By PZ

Testimony and evidence offered revealed that the subject property is an irregular-shaped unimproved parcel, consisting of approximately 1.27 acres and zoned D.R.5.5. The property has frontage on the unimproved roadbed of Transverse Avenue and abuts the Middle River Middle School campus, in eastern Baltimore County. The paved portion of Transverse Avenue ends immediately to the southwest side of the subject property. Mr. Stillerman proposes the development/subdivision of the property with five single-family detached homes. This is within the zoning density permitted.

In order to proceed with this proposed development, the developer has submitted a Concept Plan pursuant to the development review process contained in Article 32, Subtitle 2 of the Baltimore County Code ("BCC"). Concept Plan Comments were issued by the reviewing County agencies as a result of their respective reviews of the Concept Plan. One of the comments alerted Petitioner to the fact that the subject property is located within the shed of a failing intersection located at Middle River Road and Pulaski Highway (MD Route 40). This intersection has been assigned an "F" level of service pursuant to the current Basic Service Map for transportation. Thus, and as will be explained in more detail below, the instant Petition for Special Variance was filed.

The Concept Plan Comments also address the proposed access and road frontage issue as it relates to the development of the site. As is noted above, the property does not have frontage on any paved section of a public road as the paving for Transverse Avenue ends immediately adjacent to the southwest property line. It is also relevant that a proposed residential development has been approved across the bed of the unimproved section of Transverse Avenue from the subject property. This development will be a large subdivision of townhouses and is known as "Green Wood Manor."

RECEIVED FOR FILING
Date 4.25.08
By PZ

In order to provide access to the five dwellings proposed on the subject site, the Department of Public Works has taken the position that Mr. Stillerman will be required to improve a portion of Transverse Avenue. As explained at the hearing by Mr. Wells, one-half of the ultimate width of the road on the subject property's "side" of the road will be improved by Mr. Stillerman and Stillskyes Superior Builders. This will permit the subject property to have access to a paved public road. Moreover, as is more particularly shown on the site plan, two of the proposed single-family dwellings will have direct access via driveway to the improved public road and the remaining three units will share a common driveway from the road. Petitioner anticipates moving forward through the development review process to resolve any additional County agency comments or concerns, pending the outcome of the instant Petition for Special Variance.

The Petition for Special Variance is requested pursuant to Section 4A02.4.G of the B.C.Z.R. This section falls within the growth management regulations contained in Article 4A of the B.C.Z.R. Petitions for Special Variance under this section have rarely been considered by the Office of the Zoning Commissioner and this is indeed a case of first impression so far as the undersigned is concerned. Thus, a brief overview of the growth management regulations is appropriate.

Pursuant to Section 4A00.1 of the B.C.Z.R., the purpose and intent of Article 4A, entitled "Growth Management," is to generally "implement the objectives of the County-wide Master Plan and to adopt standards and guidelines relative to new development." Additionally, the growth management regulations seek to encourage development patterns that are consistent with the preservation of the quality of life in existing neighborhoods, to ensure the adequacy of public facilities and infrastructure, the preservation of the natural, agricultural and environmental resources and to promote appropriate new growth and development. The purpose and intent of the Basic Service Maps of the growth management regulations is set forth in Section 4A02.1 of the

PETITION RECEIVED FOR FILING
by 4.25.08
PJ

B.C.Z.R. Therein, it is provided that Basic Service Maps are to be annually prepared by the County to ensure that public facilities are in place to adequately serve proposed development. Additionally, Section 4A02.2 of the B.C.Z.R. states that in the event of any conflict between the growth management regulations and any other provision of the B.C.Z.R., the provisions of the growth management regulations control. Thus, the Petition for Special Variance requested in this case is governed by the requirements in Article 4A and, hence, the variance provisions of Section 307 of the B.C.Z.R. are not applicable.

Section 4A02.3 of the B.C.Z.R. sets out in detail the adoption process for the Basic Services Maps. There are actually three maps adopted; one related to the supply of public water, the second related to public sewage, and the third related to transportation. Petitioner seeks relief in this case only as to the third map (transportation map). Section 4A02.3 of the B.C.Z.R. sets forth in full detail the methodology to be employed during the annual adoption of the three Basic Services Maps by the Baltimore County Council. Additionally, Section 4A02.3.G of the B.C.Z.R. provides that no building permit or subdivision approval can be granted unless the Director of the Office of Planning has issued a reserve capacity use certificate for the proposed development. That section goes on to state that a property owner/developer shall make application for a reserve capacity use certificate in a method to be set forth by the Office of Planning. In this case, Mr. Wells testified at the hearing that because development proposed pursuant to the provisions of the special variance regulation (Section 4A02.4.G) have rarely been sought, he was advised by the Office of Planning that it has not produced for public use any such "application form." Moreover, he was informed that notwithstanding the provisions of Section 4A02 of the B.C.Z.R., the Office of Planning does not maintain a list of the pending applications.

Section 4A02.4 of the B.C.Z.R. sets out the Basic Services Mapping standards. The standards are individually established as they relate to water supply, sewage, and transportation.

PETITION RECEIVED FOR FILING
by 4.25.08
PJ

Moreover, Section 4A02.4.E of the B.C.Z.R. sets forth certain exceptions to the Basic Services Mapping standards. For example, Section 4A02.4.E.1.a of the B.C.Z.R. provides that minor subdivisions of three or fewer single-family detached dwellings are exempted from certain provisions of the Basic Services Mapping statute. Finally, Section 4A02.4.G of the B.C.Z.R. provides that a Special Variance can be granted from a provision of this subsection. In order for special variance relief to be granted, the Zoning Commissioner must hold a public hearing and must determine that the granting will not violate the particular provision's purpose, pursuant to making certain findings -- effectively a two-prong test. First, the Zoning Commissioner must determine that the demand or impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal. Second, the Zoning Commissioner must find that the granting of a petition would not adversely affect a person whose application was filed prior to Petitioner's application.

In this case, relief is requested because the intersection of Middle River Road and Pulaski Highway is a failing intersection. It has been graded as an "F" level of service intersection and the "shed" of this intersection is shown on Petitioner's Exhibit No. 4, which includes the subject property. As the subject property is located within that shed, building permits cannot be issued nor development approval given until the intersection is improved and no longer failing or special variance relief is granted.

Addressing this second requirement for a Petition for Special Variance first, the uncontradicted testimony and evidence offered in this case was that the application submitted by Petitioner would not adversely affect a person whose application was filed prior to Petitioner's application. As noted above, apparently due to the rare utilization of the relief afforded by this special variance process, there is no list maintained by the Office of Planning and thus there is no

ORDER RECEIVED FOR FILING
Date 4.25.08
By PM

"person whose application was filed prior to the petitioner's application." I therefore find that Petitioner has met this criteria in that its application is effectively first in line. I am cognizant of the fact there is other proposed development in the area, but that development is apparently not proceeding forward pursuant to the variance process set forth in growth management regulations as described herein. Thus, Petitioner has met its burden insofar as this test.

Turning next to the first prong identified, a finding must be made that the impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development; or that the district standard does not apply. Unfortunately, a review of the regulations at issue discloses that the "district standard" is neither a defined term nor is it described anywhere in Article 4A. In fact, testimony offered at the hearing is that the Baltimore County Bureau of Traffic Engineering has not defined the term and it is not a phrase used in the parlance of traffic engineers.

Although these special variance cases are rare, they are not altogether unfamiliar and the most recent case of this type came before the Office of the Zoning Commissioner as Case No. 05-336-SA, a copy of which was marked and accepted into evidence as Petitioner's Exhibit 5. That case was considered by former Deputy Zoning Commissioner John D. Murphy and relief was granted by the approval of a Special Variance on May 16, 2005. The Findings of Fact and Conclusions of Law rendered therein is instructive. Deputy Commissioner Murphy analyzed the issue of the impact of the proposed development on proposed conditions as he formulated the "district standard." He considered whether the anticipated impacts on traffic as they related to such issues as volume, congestion, movement and timing of the proposed development would be less than the impact normally associated with a development of that type and size. He concluded that if the impacts were less, then relief could be granted pursuant to a petition for special variance. Specific factors such as the anticipated volume of traffic to be generated, the route

ORDER RECEIVED FOR FILING
Date 4.25.08
By PM

(including access and exit) of traffic to and from the proposed development, anticipated road improvements in the area, the nature and timing of the traffic generated by the proposed development, existing potential development patterns in the area, the nature of the land use proposed for development and existing development in the area are all factors that need be considered in determining whether special variance relief should be granted.

In the instant case, a copy of the County's data collection sheet and traffic analysis for the intersection of Middle River Road and Pulaski Highway was marked and accepted into evidence as Petitioner's Exhibit 3. This exhibit depicts traffic counts for the intersection and analyzes the levels of service for respective movements through that intersection. For example, volumes and analysis are provided for straight (through) traffic patterns in each direction on both roads through the intersections, as well as left and right turning movements for each roadway. It is to be noted that an intersection is considered failing by Baltimore County if but one traffic movement reaches an unsatisfactory level. That is, an intersection might have adequate capacity for through traffic in all directions, but still be determined failing if a single turning movement capacity is inadequate. Obviously, the manner in which a proposed development will impact specific directions/movements in the intersection is a significant consideration in determining the merits of a special variance request.

In this case, there are several factors that support a finding that the impact of the proposed development will be less than anticipated and that the Petition for Special Variance should be granted. First, as shown on an aerial photograph that was marked and accepted into evidence as Petitioner's Exhibit 2, although the subject property is in the shed, it is located a significant distance to the southwest of the failing intersection of Middle River Road and Pulaski Highway and is not easily accessible thereto. As described above, the paved section of Transverse Avenue ends immediately to the southwest of the subject property. It will be extended to provide frontage

RECEIVED FOR FILING
Date 4.25.08
By

on the property; however, as a part of this development, that extension will not continue to the northeast and intersect with Middle River Road. Ultimately, that connection of Transverse Avenue and Middle River Road may be made not as part of this subject development, but rather due to the Green Wood Manor townhouse development. Thus, Transverse Avenue, even after the proposed improvements required as a part of this subdivision, will be a dead end street and will not provide direct access for the future residents of the subject property to Middle River Road.

Data was submitted from the Baltimore County Bureau of Traffic Engineering regarding traffic counts undertaken on June 6, 2007 and was marked and accepted into evidence as Petitioner's Exhibit 3. It was this investigation which lead to the designation of the Middle River Road and Pulaski Highway intersection as a failing intersection (Grade F) under the 2007 Basic Services Maps now in effect. That data shows that the highest volume of traffic, which contributed to the failing grade, resulted from the morning movement of through traffic westbound on Pulaski Highway. In fact, the data showed that 41,066 cars passed through that intersection westbound on Pulaski Highway during the morning peak hour.

The evidence indicates that if the residents of the proposed development were to travel westerly (toward the Baltimore beltway) in the AM hour, none would utilize the intersection. Rather, they would proceed southwesterly on Transverse Avenue to Honeycomb Road and ultimately intersect Pulaski Highway southwest of the failing intersection. Thus, due to these unusual circumstances, it is clear there will be no impact on the intersection during its peak volume. Similarly, traffic generated to and from this proposed development will not impact the intersection during the evening peak hour. Residents and visitors to the five homes proposed coming from the west (i.e. returning home from work) will not utilize the intersection. Thus, it is equally clear that existing traffic patterns, anticipated road improvements, the contemplated volume direction and timing of traffic to and/or from the proposed development are all factors that

RECEIVED FOR FILING
Date 4.25.08
By

weigh in favor of a finding that the anticipated impact of this development will be less than that assumed by the "district standard."

Secondly, the testimony offered by Stephen Weber, Chief of the Traffic Engineering Division of the Department of Public Works, to Deputy Commissioner Murphy and Deputy Commissioner Murphy's conclusions in Case No. 05-336-SA are also instructive. Therein, Mr. Weber opined and Deputy Commissioner Murphy agreed that the anticipated impact of a six lot subdivision would be negligible. Characterizing Mr. Weber's testimony, Deputy Commissioner Murphy wrote at page 4 that "[f]rom this data he concluded that the impact of these three additional homes on the intersection was imperceptible." In fact, he indicated the daily fluctuations of traffic using the intersection were greater from the added trips from the three homes. He also noted that "generally special variances are granted in failing traffic sheds when the number of lots is less than 10." These facts, opinions and conclusions are relevant to the instant case. The proposed subdivision is under ten units and the negligible amount of traffic to be generated to and from the subject site is insignificant when compared with the traffic volumes that utilize the subject intersection.

Based upon the foregoing, I find that the testimony and evidence that has been offered is sufficient to comply with the special variance standard set forth in Section 4A03.4.G of the B.C.Z.R. Thus, the Petition for Special Variance shall be granted and relief approved so that the proposed subdivision may be approved and building permits issued for this subdivision, notwithstanding its location within the shed of a failing intersection.

Pursuant to the advertisement, posting of the property and public hearing on these Petitions held, and for the reasons set forth above, the relief shall be granted.

THEREFORE, IT IS ORDERED, this 25th day of April, 2008 by this Deputy Zoning Commissioner, that pursuant to a finding that the demand or impact of the development

RECEIVED FOR FILING
Date 4.25.08
By PB

proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, and that the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application, Petitioner's request for Special Variance from Section 4A02.4 of the Baltimore County Zoning Regulations (B.C.Z.R.) is hereby GRANTED subject to the following.

1. Petitioner is advised that he may apply for any required building permits and be granted same upon receipt of this Order; however, Petitioner is hereby made aware that proceeding at this time is at his own risk until such time as the 30-day appellate process from this Order has expired. If, for whatever reason, this Order is reversed, Petitioner would be required to return, and be responsible for returning, said property to its original condition.

2. Petitioner shall improve Transverse Avenue in accordance with the requirements of the Department of Public Works. In particular, Petitioner agrees to improve one-half of the ultimate width of the road on Petitioner's "side" of the road.

3. The property must comply with the Forest Conservation Regulations (Sections 33-6-101 through 33-6-122 of the Baltimore County Code).

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

THOMAS H. BOSTWICK
Deputy Zoning Commissioner
for Baltimore County

IN RE: PETITION FOR SPECIAL VARIANCE S end of Forest Avenue, 1050 feet S of Edmondson Avenue 1st Election District 1st Councilmanic District **(110 Forest Avenue)** Leno Lapenna *Petitioner* Skirven Enterprises, Inc., Charles Skirven, President *Contract Purchaser*	* * * * * * * * *	BEFORE THE DEPUTY ZONING COMMISSIONER FOR BALTIMORE COUNTY **CASE NO. 08-349-SA**

* * * * * * * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before this Deputy Zoning Commissioner for consideration of a Petition for Special Variance filed by Leno Lapenna, the legal owner of the subject property, and Charles Skirven on behalf of Skirven Enterprises, Inc., the contract purchaser/developer. The special variance is requested from Section 4A02 of the Baltimore County Zoning Regulations (B.C.Z.R.) pursuant to Section 4A02.4.G of the B.C.Z.R. to permit subdivision approval and issuance of building permits for 23 dwelling units in the traffic shed of an "F" rated intersection on the Baltimore County Basic Services Map for Transportation. The subject property and requested relief are more particularly described on site plan that is contained within the case file.

Appearing at the requisite public hearing in support of the special variance request was Petitioner Charles Skirven, President of Skirven Enterprises, Inc., and his attorney, G. Scott Barhight, Esquire with Whiteford, Taylor & Preston, LLP. Also appearing in support of the requested relief was David S. Thaler with D.S. Thaler & Associates, Inc., the professional engineer who prepared the site plan, and Mickey Cornelius with The Traffic Group, Petitioner's traffic engineering and transportation planning consultant. There were several citizens who reside in the vicinity of the subject property that appeared in opposition to the requested relief, including the following: Paul Blair, Jr. of 112 Forest Avenue, Stephanie Dines of 31 Glenwood Avenue, Ann and Stephen Power of 122 Forest Avenue, and Stephen Lackey of 114 Forest Avenue.

ORDER RECEIVED FOR FILING
Date 5-13-08
By

Introduction

The subject property is a 6.46 acre parcel located directly to the west of Interstate 695 between Edmonson Avenue to the north and Frederick Road to the south in the Catonsville area of Baltimore County. Both Edmonson Avenue and Frederick Road have direct access to Interstate 695. The property is part of a Planned Unit Development ("PUD") known as the "Villas at Eden Terrace," which was approved by the Planning Board on October 18, 2007 and by the undersigned Deputy Zoning Commissioner acting as Hearing Officer on November 9, 2007.

At the time the Planning Board was considering the proposed development, it found that according to the 2007 Basic Services Map for Transportation, the subject property is within the traffic shed of the intersection of Frederick Avenue and Bloomsbury Avenue, which was shown as a failing intersection. It also noted that pursuant to Section 4A02.3.G of the B.C.Z.R., no permits may be issued and no subdivision plat may be approved for a proposed development within the traffic shed of a failing intersection. At that time, the Developer proposed that the Planning Board modify the requirements of Section 4A02.3.G of the B.C.Z.R. to permit final subdivision plat approval and the issuance of permits based on the unique characteristics and circumstances of this proposed development. Upon the recommendation of the County's Office of Planning and the Office of Law, the Planning Board found that it did not have the legal authority to modify this particular aspect of the zoning regulations. Petitioner now comes before this Commission seeking special variance relief from the Growth Management provision relating to Transportation, pursuant to Section 4A02.4.G of the B.C.Z.R.

ORDER RECEIVED FOR FILING
Date 5-13-08
By

Basic Services Maps

Pursuant to Sections 4A02.1 and 4A02.3 of the B.C.Z.R., the Baltimore County Council reviews and adopts the Basic Services Maps for Water, Sewer and Transportation on an annual basis (the "Basic Services Maps"). The Basic Services Maps incorporate a delineation of adequacy and availability of sewerage, water supply, and transportation services and facilities. The County Council annually prepares these maps in an effort to ensure that non-industrial development is regulated in a manner that is proportionate with the availability of the public facilities. The Basic Services Maps may be amended at any time to reflect the correction of a service deficiency. In fact, it is the intent of the County Council that existing deficiencies will be corrected in accordance with the Master Plan and the capital improvements program.

Section 4A02.4.D of the B.C.Z.R. provides that the Basic Services Map for Transportation is intended to regulate non-industrial development where it has been determined that the capacity of arterial and arterial collection intersections is less than the capacity necessary to accommodate traffic from established uses and uses which are likely to be established. It is intended that development shall be restricted if there is a substantial probability that an arterial and arterial collector intersection situated within the mapped area will, on the date the Basic Services Map for Transportation becomes effective, be rated at an "F" level of service under the standards established by the Highway Capacity Manual, 1965, published by the Highway Research Board of the Division of Engineering and Industrial Research, National Academy of Sciences National Research Council.

As shown on the 2007 Basic Services Maps – Transportation Map, Revised 01-23-07, which was marked and accepted into evidence as Petitioner's Exhibit 2, the failing intersection in the instant matter is located at Ingleside Avenue/Bloomsbury Avenue and Frederick Road. As

ORDER RECEIVED FOR FILING
Date 5-13-08
By

Ingleside Avenue crosses Frederick Road, it becomes Bloomsbury Avenue on the south side of the intersection. This intersection is located approximately 1,800 feet west of the intersection of Arbutus Avenue and Frederick Road, the intersection through which the residents of the Villas at Eden Terrace would travel when they exit the property from the south.

Special Variance

Section 4A02.4.G of the B.C.Z.R. permits the Zoning Commissioner to grant a petition for a special variance from any of the Growth Management provisions set forth in Section 4A02 of the B.C.Z.R. provided such variance will not violate the provision's purpose. In order to grant a petition for a special variance, the Zoning Commissioner must find:

a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and

b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2b.

B.C.Z.R. Section 4A02.4.G.1.

District Standards

As noted above, Section 4A02.4.G of the B.C.Z.R. provides that the Zoning Commissioner may grant a petition for special variance if the impact of the proposed development "will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal". In the instant matter, there are two district standards which, unless the Petition for Special Variance is granted, would restrict or prohibit the proposed development:

1. The location of the traffic shed of the F-Rated intersection (i.e. whether the proposed development should be located within the traffic shed of the F-Rated intersection); and

ORDER RECEIVED FOR FILING
Date 5-13-08
By

2. What factors lead to the intersection's F-Rating (i.e. what impact, if any, does the proposed development have on the intersection's F-Rating)?

The proposed development's anticipated impact in light of these district standards is analyzed below.

F-Rated Intersections

The Bureau of Traffic Engineering and Transportation Planning inspects hundreds of intersections controlled by traffic signals on an annual basis in order to determine how well traffic flows during the morning and evening rush hours. Intersections receive letter grades from "A" to "F" which indicate the level of service, or the degree of congestion. The level of service of an intersection is determined by analyzing each approach to the intersection individually. A computation is made of each approach to determine its "load factor" during both the morning and afternoon peak hours. The "load factor" is ascertained by recording the number of "loaded cycles" on each approach during the peak hours in both the morning and afternoon.

The cycle of a traffic signal is the period that encompasses one green indication of the signal. During each cycle of the traffic signal, an observer determines which vehicle is the last vehicle stopped in the queue at the time the signal turns green. If the last vehicle does not get through the intersection during that one green indication, the cycle is considered to be "loaded."

Each approach to the intersection is studied to determine the particular 60 minute period that has the highest percentage of cycles which are "loaded". In this case, the northbound approach to the intersection at Ingleside Avenue/Bloomsbury Avenue and Frederick Road between 4:00 P.M. and 5:00 P.M. generates the highest percentage of loaded cycles. This percentage, known as the "load factor," can range from 0 percent to 100 percent.

ORDER RECEIVED FOR FILING
Date 5-13-98
By

At the hearing, Mickey Cornelius with The Traffic Group, who was admitted as an expert in traffic engineering and transportation planning, and whose resume was marked and accepted into evidence as Petitioner's Exhibit 1, testified that the northbound approach to the intersection of Ingleside Avenue/Bloomsbury Avenue and Frederick Road has a load factor of 100 percent, which means that during 100 percent of the cycles between 4:00 P.M. and 5:00 P.M. not all of the vehicles stopped in line for the signal when it changes green get through the signal. No other approach through the intersection generates a failing percentage of loaded cycles at any time. Mr. Cornelius obtained this data from the Baltimore County Traffic Engineering Turning Movement County Data, which was marked and accepted into evidence as Petitioner's Exhibit 3.

Traffic Shed

As set forth in Section 4A02.4.G of the B.C.Z.R., in order for the Zoning Commissioner to grant a petition for a special variance, it must be found that the impact of the proposed development will be less than that assumed by the district standard which would otherwise restrict or prohibit the development. If the "district standard" is whether the proposed development is located within the traffic shed of the failing intersection, one must ask the question: "What constitutes the appropriate traffic shed of an F-Rated intersection?"

While there is a specific formula to determine when a given intersection is failing, there is no regulation which defines or creates the traffic shed of an F-Rated intersection. At the hearing, Mr. Cornelius testified that despite the lack of a legislative or regulatory definition for what constitutes a traffic shed, the accepted Baltimore County standard for mapping traffic sheds of failing intersections is based on the supposition that one-half of the traffic from the areas within the shed will proceed through the failing intersection. Mr. Cornelius indicated that he confirmed this standard with the County.

ORDER RECEIVED FOR FILING
Date 5-13-98
By

Petitioner maintains that the impact of the approved PUD is substantially "less than that assumed by the district standard." Evidence and testimony presented at the hearing revealed that the subject property is served by both Forest and Arbutus Avenues which lead to Edmonson Avenue and Frederick Road, respectively. As shown on the aerial photograph which was marked and accepted into evidence as Petitioner's Exhibit 4, both Edmonson and Frederick Avenues have direct access to Interstate 695, and as such, it is unreasonable to assume that one-half of the traffic generated by the PUD will proceed through the intersection, considering its close proximity to Interstate 695. In fact, given the unique location of the proposed development and its accessibility to Interstate 695, Petitioner believes the district standard is not even relevant to the proposed development.

Impact of PUD on F-Rated Intersection

In support of his testimony regarding the impact of the PUD on the traffic shed, Mr. Cornelius introduced a report on the trip generation study for the approved PUD plan, which was admitted as Petitioner's Exhibit 5 (the "Report"). The Report estimates the inbound and outbound trips generated by the approved PUD during the morning and evening peak hours. Mr. Cornelius used this information to analyze the impact of the approved PUD on the F-Rated intersection during the evening peak hour. In explaining this analysis, Mr. Cornelius stated that the 23 age targeted single-family attached units of the PUD will have significantly different trip generation characteristics than do non-age targeted developments. Typically, age targeted developments, similar to the approved PUD, generate considerably fewer trips during the peak hours than do similar non-age targeted developments. This is attributed to the fact that most of the residents of these communities have different daily schedules than the typical residents of a non-age targeted community.

ORDER RECEIVED FOR FILING
Date 5-13-98
By

Mr. Cornelius's Report estimates the inbound and outbound peak hour trips generated by the approved PUD. Mr. Cornelius used this information to analyze the impact of the approved PUD on the F-Rated intersection during the evening peak hour at the hearing. During the evening peak hour, it is estimated that the approved PUD generates seven total trips (four inbound and three outbound). Of the four inbound trips, the Report estimates that half are coming from the north and half are coming from the south. In regard to the two trips coming from the south, Mr. Cornelius testified that it is unnecessary for them to proceed through the F-Rated intersection in order to reach the development. There are three alternative routes which avoid the intersection entirely. Two of these alternatives, which assume the vehicles are proceeding from Interstate 95, are actually two minutes shorter than the route which proceeds through the F-Rated intersection. Mr. Cornelius added that even if both trips coming in from the south during the evening peak hours were to go through the F-Rated intersection, the impact is imperceptible.

On the other hand, a number of interested citizens testified in opposition to the requested relief. These included Mr. Power, Ms. Dines, and Mr. Lackey. All expressed concerns over the potential traffic impact of the new development on the F-Rated intersection. Collectively, they disagreed with the conclusions of Petitioner's traffic expert, Mr. Cornelius. Those living in the area believe that the addition of the Villas at Eden Terrace will significantly increase the overall traffic in the area, and in particular, will make the F-Rated intersection at Ingleside Avenue/Bloomsbury Avenue and Frederick Road even worse. In short, these neighbors did not feel Mr. Cornelius's conclusions concerning the traffic impact of the new development reflected their actual experiences with traffic congestion in the area.

Specifically, testimony indicated that age targeted seniors living at the Villas at Eden Terrace would contribute to the traffic problems, even at peak times; that the new development's

ORDER RECEIVED FOR FILING
Date 5-13-98
By

dual access to Interstate 695 from Frederick Road and Edmondson Avenue would create additional traffic and contribute to additional ingress and egress problems to and from the Baltimore Beltway; that because the new development is age targeted versus age restricted, it could still result in families residing in the planned dwellings and additional traffic during peak times; and that notwithstanding Mr. Cornelius's conclusions, residents of the community and the planned Villas at Eden Terrace would continue to use Bloomsbury Avenue as an access road from Interstate 95 to the south into the Catonsville community, thereby making the F-Rated intersection even worse. Finally, marked and accepted into evidence as Protestants' Exhibit 1 was a two-page Petition signed by a number of residents of Catonsville and particularly the Glenwood Avenue area, opposing any change in zoning and opposing the variance.

The Zoning Advisory Committee (ZAC) comments were received and are made part of the record of this case. The ZAC comments received from the Department of Environmental Protection and Resource Management dated February 21, 2008 indicate that the property must comply with the Forest Conservation Regulations. Comments received from the Bureau of Development Plans Review dated February 14, 2008 indicate that the property is proposed to be gated at both ends: Arbutus Avenue and Forest Avenue; as such, there will be no opportunity for cut-through. Given this, most of the new residents will choose to use Forest Avenue to get to Edmondson Avenue to get on the beltway and they will only go to Frederick Road via Arbutus Avenue during off-peak hours. Hence, they have no objection to granting the requested permission. Comments received from the Office of Planning dated March 19, 2008 indicate that agency does not oppose the request for special variance.

After considering the testimony and evidence from both the Petitioner and the Protestants, I find that the impact of the proposed development on the F-Rated intersection meets the threshold

ORDER RECEIVED FOR FILING
Date 5-13-08
By

set forth in Section 4A02.4.G of the B.C.Z.R., in regard to the F-Rated intersection district standard. Although I am mindful of the community's concerns of overall traffic in the area, I agree with Petitioner's traffic engineering and traffic planning expert, Mr. Cornelius, that the impact of the proposed development on the F-Rated intersection at Ingleside Avenue/Bloomsbury Avenue and Frederick Road will be minimal. Currently, of the potential eight cycles of traffic at the intersection (northbound, southbound, eastbound, and westbound each in the morning and evening peak times), only the northbound evening cycle from Bloomsbury Avenue is at 100% loaded, and therefore, F-Rated. Mr. Cornelius made a number of points concerning his analysis of current traffic movements and travel patterns in the area, calculating travel times from Interstate 695 to Frederick Road and Edmondson Avenue, and travel times from Interstate 195 to Bloomsbury Avenue and Edmondson Avenue, and reviewing other arterial roads and identifying properties where the majority of the trips originate. Taking into account his conclusions, I am persuaded that the impact of the new development to northbound Bloomsbury Avenue during the evening peak time will be imperceptible, and that granting the special variance will be consistent with purposes of Section 4A02 of the B.C.Z.R.

The second consideration which must be considered in reviewing a petition for special variance is whether the granting of the petition will adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b of the B.C.Z.R. This Section pertains to applications for reserve capacity use certificates. As Mr. Cornelius testified, there are no applications pending for any reserve capacity use certificates in this traffic shed.

ORDER RECEIVED FOR FILING
Date 5-13-08
By

Pursuant to the advertisement, posting of the property, and public hearing on this petition held, and after considering the testimony and evidence offered by the parties, I find that Petitioner's special variance request should be granted.

THEREFORE, IT IS ORDERED this 13th day of May, 2008 by this Deputy Zoning Commissioner, that Petitioner's request for special variance from Section 4A02 of the Baltimore County Zoning Regulations (B.C.Z.R.) pursuant to Section 4A02.4.G of the B.C.Z.R. to permit subdivision approval and issuance of building permits for 23 dwelling units in the traffic shed of an "F" rated intersection on the Baltimore County Basic Services Map for Transportation be and is hereby GRANTED, subject to the following:

1. Petitioners are advised that they may apply for any required building permits and be granted same upon receipt of this Order; however, Petitioners are hereby made aware that proceeding at this time is at their own risk until such time as the 30-day appellate process from this Order has expired. If, for whatever reason, this Order is reversed, Petitioners would be required to return, and be responsible for returning, said property to its original condition.

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

THOMAS H. BOSTWICK
Deputy Zoning Commissioner
for Baltimore County

IN RE: PETITION FOR SPECIAL VARIANCE E/S Wampler Road, 500' N c/line Wampler Road & Sterling Avenue **(Wampler Rd. & Kristy Michele Ct.)** 15th Election District 6th Council District Sterling Reserve, LLC, et al Petitioners	*	BEFORE THE ZONING COMMISSIONER FOR BALTIMORE COUNTY **Case No. 08-436-SA**

* * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before the Zoning Commissioner for consideration of a Petition for Special Variance filed by the owners of the subject property, Sterling Reserve, LLC, GM Holmes, LLC, Michael R. and Patricia R. Fromm, Dottie L. and Clifford D. Porter, and Peggy A. and James H. Carr, III (collectively Petitioners). Petitioners are requesting special variance relief from Section 4A02.4G of the Baltimore County Zoning Regulations (B.C.Z.R.) to permit subdivision (Sterling Reserve) approval, recordation and the issuance of building permits for fifteen (15) single-family dwelling units where it has been determined that the capacity of the public facilities necessary to accommodate same (transportation) is less than necessary. The subject property and the requested relief are more fully described on the site plan which was marked and accepted into evidence as Petitioners' Exhibit 2.

Appearing at the requisite public hearing in support of the special variance were Paul Amirault, managing member, Sterling Reserve, LLC, George Holmes, on behalf of the GM Holmes, LLC, Michael R. Fromm Sr. and Patricia R. Fromm, Dottie L. and Clifford D. Porter, and Peggy A. and James H. Carr, III. Petitioners were represented by G. Scott Barhight, Esquire and Jennifer R. Busse, Esquire of Whiteford, Taylor & Preston, LLP. Also attending in support of the request were Mickey Cornelius, Senior Vice President of the Traffic Group, Inc., who was offered and accepted as an expert in traffic engineering and planning; Kristy M. Bischoff, P.E., the professional engineer with Daft-McCune-Walker, Inc., land planners who prepared the site plan. The issues presented in this case generated significant public interest and a number of individuals connected with the Developer (Sterling Reserve, LLC), the homebuilder (GM Holmes, LLC) and the individual lot owners named above attended in support. It should also be noted that the Fromm's personal attorney, R. James Mitchell, Esquire, attended as well as real estate agents Jennifer and Nancy Ryan, Debra and Michael Fromm, Jr. There were no Protestants or other interested citizens in attendance.

An appreciation of the property's past history and use is relevant and is briefly outlined. The subject property and the 15 dwelling units under consideration were previously approved by this Zoning Commissioner sitting as the Hearing Officer on February 23, 2005 in Case No. XV-836 and 05-263-A. No appeal having been filed, the record plat for the Sterling Reserve Development was then recorded among the Land Records of Baltimore County on or about December 8, 2006. The irregularly shaped 7.79 acres of D.R.2 zoned land is located in eastern Baltimore County on the north side of Sterling Avenue and the east side of Wampler Road accessed by Bird River Road from the north and Bengies Road from the south. Building permits have been processed and issued by Baltimore County. Ownership of four of the fifteen lots was then transferred from Sterling Reserve, LLC to the homebuilder, George Holmes. Of those four lots, one is still owned by GM Holmes, LLC. Mr. Holmes constructed dwellings on two lots and sold those lots - one to the Carrs (Lot 10, known as 715 Kristy Michele Court) and the other to the Porters (Lot 12, known as 711 Kristy Michele Court). The Porters moved into their new home on December 27, 2007, the Carrs on February, 8, 2008. Subsequently, Holmes sold Lot 14, 707 Kristy Michele Court, to the Fromms. Early in 2008, Holmes began the permitting

ORDER RECEIVED FOR FILING
Date 8-1-08
By

ORDER RECEIVED FOR FILING
Date 8-1-08
By

process for construction of the home for Mr. and Mrs. Fromm. Baltimore County, however, informed Holmes that the permit would not be issued due to the fact that the subject lot was located in a failing traffic shed as a result of the failing intersection at Pulaski Highway (MD Rt. 40) and Middle River Road. In order to obtain relief for the Fromms as well as validating those permits already issued for the other lots, Petitioners filed a request for special variance relief. Section 4A02.4.G of the B.C.Z.R. falls within the growth management regulations contained in Article 4A of the regulations. Petitions for special variance under this Section have rarely been considered by this Commission. Thus, a brief overview of the growth management regulations is also deemed appropriate.

Pursuant to Section 4A00.1 of the B.C.Z.R., the purpose and intent of Article 4A, entitled "Growth Management," is to generally "implement the objectives of the County-wide Master Plan and to adopt standards and guidelines relative to new development." Additionally, the growth management regulations seek to encourage development patterns that are consistent with the preservation of the quality of life in existing neighborhoods, to ensure the adequacy of public facilities and infrastructure, the preservation of the natural, agricultural and environmental resources and to promote appropriate new growth and development. The purpose and intent of the Basic Service Maps of the growth management regulations is set forth in Section 4A02.1 of the B.C.Z.R. Therein, it is provided that Basic Service Maps are to be annually prepared by the County to ensure that public facilities are in place to adequately serve proposed development. Additionally, Section 4A02.2 of the B.C.Z.R. states that in the event of any conflict between the growth management regulations and any other provision of the B.C.Z.R., the provisions of the growth management regulations control. Thus, the Petition for Special Variance requested in

ORDER RECEIVED FOR FILING
Date 5-1-08
By

this case is governed by the requirements in Article 4A and, hence, the variance provisions of Section 307 of the B.C.Z.R. are not applicable.

Section 4A02.3 of the B.C.Z.R. sets out in detail the adoption process for the Basic Services Maps. There are actually three maps adopted; one related to the supply of public water, the second related to public sewage, and the third related to transportation. Petitioners seek relief in this case only as to the third map (transportation map). Section 4A02.3 of the B.C.Z.R. sets forth in full detail the methodology to be employed during the annual adoption of the three Basic Services Maps by the Baltimore County Council. Additionally, Section 4A02.3.G provides that no building permit or subdivision approval can be granted unless the Director of the Office of Planning has issued a reserve capacity use certificate for the proposed development. That section goes on to state that a property owner/developer shall make application for a reserve capacity use certificate in a method to be set forth by the Office of Planning. In this case, Mr. Barhight stated at the hearing that because development proposed pursuant to the provisions of the special variance regulation (Section 4A02.4.G) have rarely been sought, he was advised by the Office of Planning that it has not produced for public use any such "application form." Moreover, he was informed that notwithstanding the provisions of Section 4A02 of the B.C.Z.R., the Office of Planning does not maintain a list of the pending applications.

Section 4A02.4 of the B.C.Z.R. sets out the Basic Services Mapping standards. The standards are individually established as they relate to water supply, sewage, and transportation. Moreover, Section 4A02.4.E of the B.C.Z.R. sets forth certain exceptions to the Basic Services Mapping standards. For example, Section 4A02.4.E.1.a provides that minor subdivisions of three or fewer single-family detached dwellings are exempted from certain provisions of the Basic Services Mapping statute. Finally, Section 4A02.4.G provides that a Special Variance can

ORDER RECEIVED FOR FILING
Date 5-1-08
By

be granted from a provision of this subsection. In order for special variance relief to be granted, the Zoning Commissioner must hold a public hearing and must determine that the granting will not violate the particular provision's purpose, pursuant to making certain findings -- effectively a two-prong test. First, the Zoning Commissioner must determine that the demand or impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal. Second, the Zoning Commissioner must find that the granting of a petition would not adversely affect a person whose application was filed prior to Petitioner's application.

In this case, relief is requested because the intersection of Middle River Road and Pulaski Highway is a failing intersection. It has been graded as an "F" level of service intersection and the "shed" of this intersection is shown on Petitioners' Exhibit 3, which includes the subject property. As the subject property is located within that shed, building permits cannot be issued nor should development approval be given until the intersection is improved and no longer failing or special variance relief is granted.

Addressing this second requirement for a Petition for Special Variance first, the uncontradicted testimony and evidence offered in this case was that the application submitted by Petitioner would not adversely affect a person whose application was filed prior to Petitioner's application. As noted above, apparently due to the rare utilization of the relief afforded by this special variance process, there is no list maintained by the Office of Planning and thus there is no "person whose application was filed prior to the petitioner's application." I therefore find that Petitioners have met this criteria in that their application is effectively first in line.[1]

[1] As noted, the Sterling Reserve Development Plan was approved on February 23, 2005.

ORDER RECEIVED FOR FILING
Date 5-14-08
By

I am cognizant of the fact there is other proposed development in the area, but that development is apparently not proceeding forward pursuant to the variance process set forth in growth management regulations as described herein. Thus, Petitioner has met its burden insofar as this test.

Turning next to the first prong identified, a finding must be made that the impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development; or that the district standard does not apply. Unfortunately, a review of the regulations at issue discloses that the "district standard" is neither a defined term nor is it described anywhere in Article 4A. In fact, testimony offered at the hearing is that the Baltimore County Bureau of Traffic Engineering has not defined the term and it is not a phrase used in the parlance of traffic engineers.

Although these special variance cases are rare, they are not altogether unfamiliar. The most recent cases of this type came before the Office of the Zoning Commissioner as Case Nos. 08-264-A and 05-336-SA. Those cases considered by Deputy Zoning Commissioner Thomas H. Bostwick and John V. Murphy granted approvals of a Special Variance on April 25, 2008 and May 16, 2005. The Findings of Fact and Conclusions of Law rendered are instructive. Deputy Commissioner Murphy (also a civil engineer) analyzed the issue of the impact of the proposed development on proposed conditions as he formulated the "district standard." He considered whether the anticipated impacts on traffic as they related to such issues as volume, congestion, movement and timing of the proposed development would be less than the impact normally associated with a development of that type and size. He concluded that if the impacts were less, then relief could be granted pursuant to a petition for special variance. Specific factors such as the anticipated volume of traffic to be generated, the route (including access and exit) of traffic

ORDER RECEIVED FOR FILING
Date 5-14-08
By

to and from the proposed development, anticipated road improvements in the area, the nature and timing of the traffic generated by the proposed development, existing potential development patterns in the area, the nature of the land use proposed for development and existing development in the area are all factors that need be considered in determining whether special variance relief should be granted.

In the instant case, a copy of the County's data collection sheet and traffic analysis for the intersection of Middle River Road and Pulaski Highway was marked and accepted into evidence as Petitioners' Exhibit 4. This exhibit depicts traffic counts for the intersection and analyzes the levels of service for respective movements through that intersection. For example, volumes and analysis are provided for straight (through) traffic patterns in each direction on both roads through the intersections, as well as left and right turning movements for each roadway. It is to be noted that an intersection is considered failing by Baltimore County if but one traffic movement reaches an unsatisfactory level. That is, an intersection might have adequate capacity for through traffic in all directions, but still be determined failing if a single turning movement capacity is inadequate. Obviously, the manner in which a proposed development will impact specific directions/movements in the intersection is a significant consideration in determining the merits of a special variance request.

In this case, there are several factors that support a finding that the impact of the proposed development will be less than anticipated and that the Petition for Special Variance should be granted.

Mickey Cornelius described his familiarity with the proposed site and its immediate surrounding area, including numerous visits to the site and the completion by him of a Traffic Impact Study (*See* Petitioners' Exhibit 1). He explained that the County's Bureau of Traffic

ORDER RECEIVED FOR FILING
Date 5-15-98
By

Engineering and Transportation Planning inspects hundreds of intersections controlled by traffic signals on an annual basis in order to determine how well traffic flows during the morning and evening rush hours. Intersections receive letter grades from "A" to "F" which indicate the level-of-service, or the degree of congestion. The level-of-service of an intersection is determined by analyzing each approach to the intersection individually. A computation is made of each approach to determine its "load factor" during both the morning and afternoon peak hours. The "load factor" is ascertained by recording the number of "loaded cycles" on each approach during the peak hours in both the morning and afternoon.

The cycle of a traffic signal is the period that encompasses one green indication of the signal. During each cycle of the traffic signal, an observer determines which vehicle is the last vehicle stopped in the queue at the time the signal turns green. If the last vehicle does not get through the intersection during that one green indication, the cycle is considered to be "loaded".

Each approach to the intersection is studied to determine the particular 60-minute period that has the highest percentage of cycles which are "loaded". In this case, *the southbound approach to the intersection* at MD Rt. 40 and Middle River Road between 4:30 P.M. and 5:30 P.M. generates the highest percentage of loaded cycles. This percentage, known as the "load factor", can range from 0 percent to 100 percent.

Mr. Cornelius testified that only one leg of the subject intersection is failing. Specifically, Mr. Cornelius explained that the southbound traffic on Middle River Road as it approaches the intersection of MD Rt. 40 has a load factor of 91 percent, which means that during 91 percent of the cycles between 4:30 P.M. and 5:30 P.M. all of the vehicles stopped in line to cross over Rt. 40 when it changes green do not get through the signal. No other approach through the intersection generates a failing percentage of loaded cycles at any time. This

ORDER RECEIVED FOR FILING
Date 5-15-98
By

testimony was confirmed by the data obtained from Baltimore County's Traffic Engineering Division. (Petitioners' Exhibit 4)

Mr. Cornelius opined that the impact of the 15 dwellings in Sterling Reserve is substantially "less than that assumed by the district standard". Using Petitioners' Exhibits 1 and 3 and showing the location of the subject property and overlay of the relevant traffic shed, he demonstrated that the anticipated impact of inbound and outbound traffic of this development will be less than that assumed by the "district standard". He focused on the evening peak hour effects at this F-Rated intersection since that is the only time that the relevant leg of the intersection is classified as failing. During the evening peak hour, it is estimated that the 15 dwellings generate 15 total trips (10 inbound and 5 outbound). Since only the southbound leg of the intersection (cars on Middle River Road crossing over Rt. 40) is failing, the 6 trips exiting Sterling Reserve will not impact the subject failing intersection. In regard to the 10 trips entering Sterling Reserve, Mr. Cornelius testified that it is unnecessary for them to proceed through the F-Rated intersection in order to reach the property. There are numerous alternative routes which avoid the intersection entirely. Residents of Sterling Reserve are not likely to work in the very limited geographic areas which would place them in a position to decide whether to use the failing intersection on their way home from work. At most, only a few, if any, would work in the businesses which would even give them the reasonable opportunity to use this leg of the failing intersection. Mr. Cornelius added that given the small number of possible trips that could go through the failing leg of this intersection, during the peak evening hours, the potential impact would be imperceptible. In light of the evidence and testimony presented, I find that the impact of the proposed development on the F-Rated intersection meets the threshold set forth in

ORDER RECEIVED FOR FILING
Date 5-14-08
By

B.C.Z.R. Section 4A02.4.G. The potential impact is less than that assumed by the district standard.

B.C.Z.R. Section 4A02.4G.3 requires that the Office of Planning provide this Commission with Zoning Advisory Committee (ZAC) comments on the pending petition. The Office of Planning's comment, dated April 18, 2008, was accepted into evidence as Petitioners' Exhibit 6. This comment provides in pertinent part ... that since there are several alternative routes that are not located in the failing traffic shed and can be utilized by those traveling to and from the property, the Office of Planning does not object to the granting of the special variance.

The Office of Planning's comment notes that it is expected that the State Highway Administration (SHA) will complete improvements to the subject failing intersection (MD Rt. 40 and Middle River Road) such that the building moratorium may be lifted in early summer 2009. Mr. Cornelius supported this comment and provided data from the SHA showing that the proposed improvements are included in the State's capital budget and plans and construction is scheduled to begin in Fiscal Year 2008. The SHA Consolidated Transportation Program (CTP) 2008-2013 planned improvement data sheet was accepted as Petitioners' Exhibit 5.

I find that the evidence and testimony supports the fact that there are no other developments or lots in line for reserve capacity use certificates. I also note that while the testimony and evidence support the presumption that the planned improvements to the subject failing intersection will begin shortly and hopefully be completed prior to the end of 2009, forcing these Petitioners, given these circumstances, to wait what may be two (2) years for building permits is an unreasonable hardship.

The Sterling Reserve development is essentially half "built-out". The base paving has been laid but until either the moratorium is lifted or this special variance relief is granted, the

ORDER RECEIVED FOR FILING
Date 5-14-08
By

developer is prohibited from completing the road paving. Two families already live in the community and the Fromms are paying a mortgage on their lot without being able to build their home. I find these circumstances truly unfortunate. Thus, the Petition for Special Variance shall be granted and relief approved so that the previously approved subdivision may be issued building permits, not withstanding its location within the shed of a failing intersection.

Pursuant to the advertisement, posting of the property and public hearing on this petition held, and for the reasons set forth above, the relief shall be granted.

THEREFORE, IT IS ORDERED, by the Zoning Commissioner for Baltimore County, this 6th day of May 2008, that pursuant to a finding that the demand or impact of the development proposed will be less than assumed by the district standard would otherwise restrict or prohibit the development, and the granting of the petition will not adversely affect a person whose application was filed prior to the Petitioners application, the Petitioners request for a Special Variance from Section 4A02.4.G of the Baltimore County Zoning Regulations (B.C.Z.R.), to permit subdivision approval, recordation and the issuance of building permits for fifteen (15) single-family dwelling units where it has been determined that the capacity of the public facilities necessary to accommodate same (transportation) is less than necessary, be and is hereby GRANTED, subject to the following:

1. Petitioners may apply for their building permits and be granted same upon receipt of this Order; however, Petitioners are hereby made aware that proceeding at this time is at their own risk until the thirty (30) day appeal period from the date of this Order has expired. If an appeal is filed and this Order is reversed, the relief granted herein shall be rescinded.

ORDER RECEIVED FOR FILING
Date 5-9-08
By

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

WILLIAM J. WISEMAN, III
Zoning Commissioner

IN RE: **PETITIONS FOR SPECIAL EXCEPTION, VARIANCE and SPECIAL VARIANCE**	*	BEFORE THE
S/E Side of Joppa Road, 60' SW of c/line of Quentin Avenue	*	ZONING COMMISSIONER
(1807 East Joppa Road)	*	OF
9th Election District		
5th Council District	*	BALTIMORE COUNTY
Jennifer M. Hitt	*	**Case No. 2009-0080-XSA**
Petitioner		

* * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before the Zoning Commissioner for consideration of Petitions for Special Exception, Variance and Special Variance filed by Jennifer M. Hitt, the owner of the subject property, through her attorney, Edward J. Gilliss, Esquire. The Petitioner requests a special exception to allow the conversion of an existing Class A Office Building to a Class B Office Building in an R-O (Residential – Office) Zone, pursuant to Section 204.3.B.2.a of the Baltimore County Zoning Regulations (B.C.Z.R.). In addition, variance relief is requested from the B.C.Z.R. as follows: **(1)** from Section 409.4.A to permit a drive aisle with a width of 7.2 feet in lieu of the required 20 feet; **(2)** from Section 409.4.C to permit a travel lane with a width of 19 feet in lieu of the required 22 feet; **(3)** from Section 409.8.A.5 to permit a dead end parking bay without backup area; **(4)** from Section 204.4.C.4 to permit an 8 foot side yard setback for an addition in lieu of the required 10 feet; and lastly **(5)** for a special variance from Section 4A02.4.G to permit a proposed addition to 1807 East Joppa Road that is within the Loch Raven Boulevard/Joppa Road traffic shed. The subject property and requested relief are more particularly described on the redlined site plan submitted which was accepted into evidence and marked as Petitioner's Exhibit 1.

Appearing at the requisite public hearing in support of the request(s) on behalf of the property owner, Jennifer Hitt, were her husband, Matthew B. Hitt, who has for fifteen (15) years operated his accounting business at the subject location; Bernadette L. Moskunas with Site Rite

ORDER RECEIVED FOR FILING
Date 1-12-09
By

Surveying, Inc., the consultant who prepared the site plan for this property, and Edward J. Gilliss, Esquire, attorney for the Petitioner. There were no Protestants or other interested persons present. People's Counsel, Peter Max Zimmerman, entered the appearance of his office in this case and at the onset of the hearing, the Petitioner amended the Petition and site plan in response to comments submitted by Mr. Zimmerman and Stephen E. Weber, Chief of Traffic Engineering, who had reviewed the initial site plan. The amended plan provides signage and traffic circulation detail.

Testimony and evidence offered revealed that the subject property is a rectangular shaped parcel (50' wide x 160' deep) located on the southeast side of East Joppa Road between Quentin Avenue and Oakleigh Road, near the Baltimore Beltway (I-695) Overpass in Parkville. The property contains a gross area of 9,250 square feet or 0.212 acres, more or less, zoned R-O and is improved with a 1 ½-story frame bungalow and a paved accessory parking area in the rear portion of the lot. The Petitioner purchased the site in 2002 after leasing the property and improvements for some ten (10) years prior and now proposes a rear addition to accommodate the growing CPA (Certified Public Accountant) business. As shown on the site plan, the existing building is 32' wide x 31' deep and contains approximately 1,018 square feet of office space. The Petitioner proposes the construction of a two-story addition, 25' x 30' in dimension, to the rear of the structure to provide an additional 750 square feet of commercial space. Mr. Hitt stated the basement and second floor area would be dedicated to needed storage space. The addition's first floor will serve as a desperately needed conference room and provide organizational space. These improvements and uses are more particularly shown on building elevation drawings submitted into evidence as Petitioner's Exhibit 5.

Special Exception relief is necessary to reflect the proposed expansion of the current use from a Class A Office building to a Class B Office building. A Class B office building is defined in Section 101 of the B.C.Z.R. as "A principle building used for offices and which is not a Class A Building." A Class B Office Building is permitted in the R-O zone by special exception. In this regard, the building has been used by Matthew Hitt for the past 15 years and

ORDER RECEIVED FOR FILING
Date 1-12-09
By

has worked well without any complaint, zoning violation, or incident. The term "Office" is defined in the regulations as "A building or portion of a building used for conducting the affairs of a business, *profession*, service, industry, or government, including a medical office." Surely, this structure falls within that definition. For the Petitioner, the building is suitable and economically feasible for use at this site. The proposed 0.27 floor area ratio is appropriate and the seven (7) off-street parking spaces are adequate for the no more than five (5) office workers on premises at any one time. Mr. Hitt testified that the CPA's business primarily involves off-site visits to their client's place of business. It was further indicated that there will be no new employees, no new bathroom, no new vehicles, and, as stated above, storage will be dedicated to the basement and second floor areas with the remaining first floor for needed work space and conference room. Mr. Hitt stated that he anticipates staying at this location for at least the next thirteen (13) years and hopes to purchase 1805 East Joppa Road when the Odette's retire and close their insurance agency.

Based upon the testimony and evidence presented, I am persuaded that special exception relief should be granted. In my judgment, the proposal complies with the requirements of Section 502.1 of the B.C.Z.R. and will not cause detrimental impacts to the health, safety and general welfare of the locale.

Turning next to the variance requests, the Petitioner originally requested four (4) variances, three (3) relating to B.C.Z.R. Section 409 requirements for driveways (7.2 feet instead of 20 feet), travel lanes (19 feet instead of 22 feet), and dead-end parking (without back-up area) and one (1) from B.C.Z.R. Section 204.4.C.4 for a building side yard setback (8 feet instead of 10 feet). This Section states in pertinent part: "Minimum side yard setbacks: 10 feet, *except if the adjacent property is predominantly residentially zoned, residentially used or is adjacent to a residential street, in which case the setback shall be 20 feet*".[1] Although the adjacent properties are zoned R-O, they are used commercially and not residentially. Accordingly, the Office of

[1] In January 2005, the County Council rewrote the definitional section of the B.C.Z.R. to include the R-O zone as being within the "residential zone".

ORDER RECEIVED FOR FILING
Date 1-12-09
By

Zoning Review determined the applicable side yard setback in this case to be 10 feet. I agree. As illustrated on the site plan adjacent side-by-side properties are used commercially. Neighboring 1801 East Joppa Road is in the B.L.R. (Business Local Restricted) Zone. There is not a dissimilar use between the properties to lend support for a 20-foot side yard buffer. As to the appropriateness of this variance to permit a side yard setback of 8 feet, the 1-½ story bungalow is already built and located on the lot 7.2 feet (east side) from the property line. The setback has therefore already been established and has existed since 1951. This is corroborated by the Zoning Advisory Committee (ZAC) comment submitted by the Office of Planning. Within the comment the Director states:

> "This office supports the special exception request to expand the existing office. *The office addition is in line with and to the rear of the existing building.* The driveway servicing the building exists. The variances requested do not appear to place a burden on the existing adjacent residential uses or have negative impacts on the general vicinity."

Due to the architectural and structural characteristics possessed by this property, not shared by other properties in the area, the requested setback relief of 8 feet in lieu of the 10 feet is in order to comply with the spirit and intent of the regulations.

Addressing the Section 409 variances, Mr. Hitt stated that the driveway on the subject property provides for a total width of 10.5 feet (8.5 feet on the subject property plus a 2 foot encroachment of the driveway onto the adjacent property to the east). This driveway/configuration has existed on the site since 1951, well before the amended zoning regulations of 1955; however, current regulations require a minimum driveway width of 20 feet. As suggested by Steve Weber, who reviewed the plan at the request of Office of People's Counsel, Petitioner submitted Exhibit 3 - (Driveway Use Agreement), to address concerns of encroachment. This Agreement, dating back to 1984, provides for the right of the Petitioner, her heirs, and assigns, to use, for as long as it is used as a driveway, the piece of ground 2'-6" wide to

ORDER RECEIVED FOR FILING
Date 1-12-09
By

the east of the boundary line between 1809 and 1807 East Joppa Road and running 120' parallel with the western boundary of 1809 East Joppa Road. The Petitioner next requests approval to permit a travel lane with a width of 19 feet in lieu of the required 22 feet from 409.4.C. As also suggested by Stephen Weber, Petitioner submitted Exhibit 6 – (Joint Use Driveway Agreement) that states in pertinent part:

> "WHEREFORE, Odette and Hitt agree that the owners, tenants, employees and customers of the aforesaid properties and the business users of those properties shall be permitted to use each other's driveways, so that the driveway on the east edge of the properties (1805 E. Joppa Road) shall be used for ingress to the parking areas and the driveway on the far west of the properties (1807 E. Joppa Road) shall be used for egress from the parking areas. Odette and Hitt agree to instruct tenants and/or employees to use the driveways as aforesaid".

This agreement, to pair the driveways, is demonstrated on the revised site plan (Exhibit 1) and addresses to the extent possible the substandard entrance and driveway issues.

In addition, Mr. Hitt testified from his personal knowledge of the workings of the property that surprisingly, given Mr. Weber's comments, that there are no parking lot problems on site today. He believed this was because the Odette's property (1805 East Joppa Road) and Hitt's property (1807 East Joppa Road) sit side-by-side with driveways on either side of the adjoining properties with parking located behind the structures. Because both properties were formerly residences before being converted to commercial use, the driveways are narrower than if they had originally been constructed for commercial use. As noted above, Petitioner purchased 1807 East Joppa Road from Odette and intends to purchase 1805 East Joppa Road from Odette when they desire to sell. The Hitt's intend to merge the two (2) properties once they are under common ownership. *See* Petitioner's Exhibit 6. Mr. Gilliss opined that the use-in-common parking lot and access with the adjacent property qualified for relief to be granted for a

By

modified parking plan pursuant to B.C.Z.R. Section 409.12. To provide compliance with current regulations, he argues would be an undue hardship on the Petitioner for reasons given. I accept the fact that there is currently no room on the nonconforming property to rectify the drive aisle deficiencies. As such, I find the property unique. I also find that the Petitioner would suffer a practical difficulty if the regulations were strictly enforced.

In regard to parking, Ms. Moskunas supplemented Mr. Hitt's testimony by noting that ordinarily adding a new addition would require more parking. However, the subject addition will be used by the existing CPA business employees; therefore, the seven (7) spaces will provide more than adequate parking. People's Counsel correctly points out that B.C.Z.R. Section 204.4.C.6 and 9 requires Class B Office buildings to provide amenity open space in the interior portion of the parking lot in addition to buffer area requirements. Ms. Moskunas noted that a retaining wall runs along the parking area at the boundary between the subject property and 1809 East Joppa Road. *See* Photographic Exhibits 4B-9 through 4B-16. There is existing planting provided with existing mulch areas that runs perpendicular (east to west) across the parking area with 1805 East Joppa Road. Additionally, a 7-foot wood-on-wood board privacy fence runs across the entire rear property line separating the R-O from the D.R.5.5 residential uses to the rear. As evidenced on Petitioner's Exhibit 1 - General Note 13, the Petitioner shall submit for review and approval a landscape plan to Avery Harden, the County's Landscape Architect, at the time of building permit application. To require the Petitioner to provide additional amenity open space in the parking lot given these facts would be inconsistent with other commercial uses in the vicinity.

In addition, special variance relief is requested in order to proceed with the proposed development, the ZAC comments issued by reviewing agencies as a result of their respective

CLERK RECEIVED FOR FILING
Date 1-12-09
By

review of the site alerted Petitioner to the fact that the subject property is located within the shed of a failing intersection as well as an "Area of Special Concern" for sewer. The "F" level traffic shed identified is Loch Raven and Joppa Roads. This intersection has been assigned an "F" level of service pursuant to the current Basic Service Map for transportation. Thus, and as will be explained in more detail below, the instant Petition for Special Variance was filed.

Pursuant to Section 4A00.1 of the B.C.Z.R., the purpose and intent of Article 4A, entitled "Growth Management," is to generally "implement the objectives of the County-wide Master Plan and to adopt standards and guidelines relative to new development." Additionally, the growth management regulations seek to encourage development patterns that are consistent with the preservation of the quality of life in existing neighborhoods, to ensure the adequacy of public facilities and infrastructure, the preservation of the natural, agricultural and environmental resources and to promote appropriate new growth and development. The purpose and intent of the Basic Services Maps of the growth management regulations is set forth in Section 4A02.1 of the B.C.Z.R. Therein, it is provided that Basic Service Maps are to be annually prepared by the County to ensure that public facilities are in place to adequately serve proposed development. Additionally, Section 4A02.2 of the B.C.Z.R. states that in the event of any conflict between the growth management regulations and any other provision of the B.C.Z.R., the provisions of the growth management regulations control. Thus, the Petition for Special Variance requested in this case is governed by the requirements in Article 4A and, hence, the variance provisions of Section 307 of the B.C.Z.R. are not applicable.

Mr. Gilliss demonstrated that the only ingress and egress to the subject site is by way of the eastbound lanes of Joppa Road. He discussed several factors that mitigate against any anticipated impacts at the subject intersection. First, Joppa Road's eastbound and westbound

CASE RECEIVED FOR FILING
Date 1-12-09
By

traffic lanes are separated by a concrete median as depicted on the photographs submitted. *See* Petitioner's Exhibit 4B-1 through 4B-6. Traffic exiting 1807 East Joppa Road must therefore proceed east on Joppa Road away from the failing intersection. Secondly, there will be no increased traffic as a result of the proposed addition in as much as the employees will remain the same. This testimony is substantiated by Stephen Weber, who in his correspondence to the Office of People's Counsel dated October 19, 2008, states in pertinent part:

> "Based on the relatively small size of the addition, the distance of this site from the critical intersection, and recognizing that the eastern border of the moratorium area only lies 200 feet to the east at the Beltway, we would find that the additional traffic impacts from this site on the critical intersection would be nearly imperceptible and therefore we would have no objection to the granting of a Special Variance for this proposal".

Based upon the foregoing, I find that the testimony and evidence that has been offered is sufficient to comply with the special variance standard set forth in Section 4A03.4.G of the B.C.Z.R. Thus, the Petition for Special Variance shall be granted and relief approved so that the proposed improvement may be approved and building permits issued for this addition notwithstanding its location within the shed of a failing intersection. It is clear that there will be no impact on the "F" intersection.

After due consideration of all of the testimony and evidence presented, a review of the provisions contained within Petitioner's Deed (Exhibit 2) and Agreement(s) – (Exhibits 3 and 6), I am persuaded to grant the special exception and variance requests. The testimony and amended site plan presented by Ms. Moskunas and the fact that the CPA business has been operating for 15 years without incident is persuasive to a finding that the proposed use meets the special exception requirements set forth in Section 502.1 of the B.C.Z.R. as well as Section 307 and *Cromwell v. Ward* 102 Md. App. 691 (1995) and will not be detrimental to the health, safety or general welfare of the surrounding locale. I further find that the proposed use is consistent with and will complement the other businesses in the vicinity, and that sufficient parking exists to support the use.

CASE RECEIVED FOR FILING
Date 1-12-09
By

Pursuant to the advertisement, posting of the property and public hearing on these Petitions held, and for the reasons set forth above, the relief requested shall be granted.

THEREFORE, IT IS ORDERED by the Zoning Commissioner for Baltimore County this 12th day of January 2009 that the Petition for Special Exception, pursuant to Section 204.3.B.2.a of the Baltimore County Zoning Regulations (B.C.Z.R.), to permit a Class B office building in an R-O zone, be and is hereby GRANTED; and,

IT IS FURTHER ORDERED that the Petition for Variance, seeking relief from the B.C.Z.R. as follows: **(1)** from Section 409.4.A to permit a drive aisle with a width of 7.2 feet in lieu of the required 20 feet; **(2)** from Section 409.4.C to permit a travel lane with a width of 19 feet in lieu of the required 22 feet; **(3)** from Section 409.8.A.5 to permit a dead end parking bay without backup area, and **(4)** from Section 204.4.C.4 to permit an 8 foot side yard setback for an addition in lieu of the required 10 feet, in accordance with Petitioner's Exhibit 1, be and is hereby GRANTED; and

IT IS FURTHER ORDERED that the Petition for Special Variance seeking relief from Section 4A02.4.G of the B.C.Z.R. to permit the construction of a proposed addition to 1807 East Joppa Road within the Loch Raven Boulevard/Joppa Road traffic shed and a finding that such improvements will not adversely impact the traffic shed in which this property is located, in accordance with Petitioner's Exhibit 1, be and is hereby GRANTED, subject to the following restrictions:

1) The Petitioner may apply for her permit and be granted same upon receipt of this Order; however, Petitioner is hereby made aware that proceeding at this time is at her own risk until the 30-day appeal period from the date of this Order has expired. If an appeal is filed and this Order is reversed, the relief granted herein shall be rescinded.

2) The proposed addition shall be constructed substantially in accordance with the building elevation drawings accepted and marked as Petitioner's Exhibit 5.

ORDER RECEIVED FOR FILING
Date 1-12-09
By

3) Prior to the issuance of any permits, the Petitioner shall submit a landscape plan for review and approval by Avery Harden, the County's Landscape Architect.

4) When applying for any permits, the site plan and/or landscaping plan filed must reference this case and set forth and address the restrictions of this Order.

IN RE: PETITION FOR SPECIAL VARIANCE SE corner of Oakleigh Road and Joppa Road 9th Election District 5th Councilmanic District (1801 Joppa Road) **Rave-On Enterprises, LLC** *Petitioner*	*	BEFORE THE DEPUTY ZONING COMMISSIONER FOR BALTIMORE COUNTY **CASE NO. 2009-0275-SA**

* * * * * * * * * * * * * * * * *

FINDINGS OF FACT AND CONCLUSIONS OF LAW

This matter comes before this Deputy Zoning Commissioner for consideration of a Petition for Special Variance filed by F. Calvin Raver on behalf of the legal owner of the subject property, Rave-On Enterprises, LLC. Petitioner is requesting special variance relief from Section 4A02.4 of the Baltimore County Zoning Regulations (B.C.Z.R.) to permit the proposed non-industrial development where it has been determined that the capacity of the public facilities necessary to accommodate same is less than necessary, pursuant to Section 4A02.4.G; and for such other and further relief as may be deemed necessary by the Zoning Commissioner for Baltimore County. The subject property and requested relief are more fully depicted on the site plan that was marked and accepted into evidence as Petitioner's Exhibit 1.

Appearing at the requisite public hearing in support of the special variance request was Petitioner F. Calvin Raver with Rave-On Enterprises, LLC, and his attorneys Arnold Jablon, Esquire and Kedrick Whitmore, Esquire. Also appearing in support of the requested relief were Paul Lee and George Lambros with Century Engineering, Inc., the professional engineers who prepared the site plan. There were no Protestants or other interested citizens in attendance at the hearing.

Testimony and evidence was presented by Mr. Jablon by way of a proffer and revealed that the subject property is an irregular-shaped property consisting of approximately 1.23 acres

7.7.09

and zoned B.L.R. The property is located at the southeast corner of East Joppa Road and Oakleigh Road, just south of Interstate 695, in the Parkville area of Baltimore County. The property is improved with several existing structures, including a 2½-story building (to be removed) and a one-story block garage, in a state of disrepair (to be abandoned). At this juncture, Petitioner desires to construct an office building on the site to replace the existing building that is also in a state of disrepair. Mr. Jablon indicated that the office building is permitted as of right and all area requirements and building setbacks would be met and all parking calculations would comply with the applicable regulations. The only matter at issue is compliance with the growth management regulations contained in the Zoning Regulations. In particular, according to the Basic Services Map for transportation, the subject property is located within the shed of a failing intersection located at the intersection of Loch Raven Boulevard and East Joppa Road. This intersection has been assigned an "F" level of service, which constitutes a failing intersection. Thus, and as will be explained in more detail below, the instant Petition for Special Variance was filed.

The Petition for Special Variance is requested pursuant to Section 4A02.4.G of the B.C.Z.R. This section falls within the growth management regulations contained in Article 4A of the B.C.Z.R. Petitions for Special Variance under this section have rarely been considered by the Office of the Zoning Commissioner, thus a brief overview of the growth management regulations is appropriate.

Pursuant to Section 4A00.1 of the B.C.Z.R., the purpose and intent of Article 4A, entitled "Growth Management," is to generally "implement the objectives of the County-wide Master Plan and to adopt standards and guidelines relative to new development." Additionally, the growth management regulations seek to encourage development patterns that are consistent with the preservation of the quality of life in existing neighborhoods, to ensure the adequacy of public

7.7.09

facilities and infrastructure, the preservation of the natural, agricultural and environmental resources and to promote appropriate new growth and development. The purpose and intent of the Basic Service Maps of the growth management regulations is set forth in Section 4A02.1 of the B.C.Z.R. Therein, it is provided that Basic Service Maps are to be annually prepared by the County to ensure that public facilities are in place to adequately serve proposed development. Additionally, Section 4A02.2 of the B.C.Z.R. states that in the event of any conflict between the growth management regulations and any other provision of the B.C.Z.R., the provisions of the growth management regulations control. Thus, the Petition for Special Variance requested in this case is governed by the requirements in Article 4A and, hence, the variance provisions of Section 307 of the B.C.Z.R. are not applicable.

Section 4A02.3 of the B.C.Z.R. sets out in detail the adoption process for the Basic Services Maps. There are actually three maps adopted; one related to the supply of public water, the second related to public sewage, and the third related to transportation. Petitioner seeks relief in this case only as to the third map (transportation map). Section 4A02.3 of the B.C.Z.R. sets forth in full detail the methodology to be employed during the annual adoption of the three Basic Services Maps by the Baltimore County Council. Additionally, Section 4A02.3.G of the B.C.Z.R. provides that no building permit or subdivision approval can be granted unless the Director of the Office of Planning has issued a reserve capacity use certificate for the proposed development. That section goes on to state that a property owner/developer shall make application for a reserve capacity use certificate in a method to be set forth by the Office of Planning. In this case, Mr. Jablon indicated that the Office of Planning has not produced for public use any such "application form." Moreover, he indicated that notwithstanding the provisions of Section 4A02 of the B.C.Z.R., the Office of Planning does not maintain a list of the pending applications.

7.7.09

Section 4A02.4 of the B.C.Z.R. sets out the Basic Services Mapping standards. The standards are individually established as they relate to water supply, sewage, and transportation. In addition, Section 4A02.4.E of the B.C.Z.R. sets forth certain exceptions to the Basic Services Mapping standards. For example, Section 4A02.4.E.1.a of the B.C.Z.R. provides that minor subdivisions of three or fewer single-family detached dwellings are exempted from certain provisions of the Basic Services Mapping statute. Finally, Section 4A02.4.G of the B.C.Z.R. provides that a Special Variance can be granted from a provision of this subsection. In order for special variance relief to be granted, the Zoning Commissioner must hold a public hearing and must determine that the granting will not violate the particular provision's purpose, pursuant to making certain findings -- effectively a two-prong test. First, the Zoning Commissioner must determine that the demand or impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal. Second, the Zoning Commissioner must find that the granting of a petition would not adversely affect a person whose application was filed prior to Petitioner's application.

In this case, relief is requested because the intersection of Loch Raven Boulevard and East Joppa Road is a failing intersection. It has been graded as an "F" level of service intersection and the "shed" of this intersection includes the subject property, as shown on the Basic Services Map for transportation that was marked and accepted into evidence as Petitioner's Exhibit 7. As the subject property is located within that shed, building permits cannot be issued nor development approval given until the intersection is improved and no longer failing or special variance relief is granted.

Addressing this second requirement for a Petition for Special Variance first, the uncontradicted testimony and evidence offered in this case was that the application submitted by

7.7.09

Petitioner would not adversely affect a person whose application was filed prior to Petitioner's application. As noted above, perhaps due to the rare utilization of the relief afforded by this special variance process, there is no list maintained by the Office of Planning and thus there is no "person whose application was filed prior to the petitioner's application." I therefore find that Petitioner has met this criteria by default. Thus, Petitioner has met its burden insofar as this prong of the test.

Turning next to the first prong identified, a finding must be made that the impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development; or that the district standard does not apply. Unfortunately, a review of the regulations at issue discloses that the "district standard" is neither a defined term nor is it described anywhere in Article 4A. In fact, testimony offered at the hearing is that the Baltimore County Bureau of Traffic Engineering has not defined the term and it is not a phrase used in the parlance of traffic engineers.

Although these special variance cases are rare, they are not altogether unfamiliar and a recent case of this type came before the Office of the Zoning Commissioner as Case No. 08-264-SA, a copy of which was marked and accepted into evidence as Petitioner's Exhibit 2. That case involved a similar request for special variance and quoted from an earlier case (Case No. 05-336-SA) that was considered by former Deputy Zoning Commissioner John D. Murphy, wherein relief was granted on May 16, 2005. In that case, Deputy Commissioner Murphy analyzed the issue of the impact of the proposed development on proposed conditions as he formulated the "district standard." He considered whether the anticipated impacts on traffic as they related to such issues as volume, congestion, movement and timing of the proposed development would be less than the impact normally associated with a development of that type and size. He concluded that if the impacts were less, then relief could be granted pursuant to a petition for special

7.7.09

variance. Specific factors such as the anticipated volume of traffic to be generated, the route (including access and exit) of traffic to and from the proposed development, anticipated road improvements in the area, the nature and timing of the traffic generated by the proposed development, existing potential development patterns in the area, the nature of the land use proposed for development and existing development in the area are all factors that need be considered in determining whether special variance relief should be granted.

In the instant case, a copy of the County's data collection sheet and traffic analysis for the intersection of Loch Raven Boulevard and East Joppa Road from May 2, 2007 and May 28, 2008 were marked and accepted into evidence as Petitioner's Exhibits 5 and 6, respectively. These exhibits depict traffic counts for the intersection and analyze the levels of service for respective movements through that intersection. For example, volumes and analysis are provided for straight (through) traffic patterns in each direction on both roads through the intersections, as well as left and right turning movements for each roadway. It is to be noted that an intersection is considered failing by Baltimore County if but one traffic movement reaches an unsatisfactory level. That is, an intersection might have adequate capacity for through traffic in all directions, but still be determined failing if a single turning movement capacity is inadequate. Obviously, the manner in which a proposed development will impact specific directions/movements in the intersection is a significant consideration in determining the merits of a special variance request.

In this case, there are several factors that support a finding that the impact of the proposed development will be less than anticipated and that the Petition for Special Variance should be granted. First, as shown on the aerial photograph marked and accepted into evidence as Petitioner's Exhibit 3, although the subject property is in the deficient traffic shed, it is located some distance to the east of the failing intersection of Loch Raven Boulevard and East Joppa Road. In addition, the only direction of travel that is "failing" is heading west and in the

7.7.09

morning (AM) hours, away from the subject property. Hence the location of the subject property is largely unaffected by the failing intersection. On the other hand, traveling on Joppa Road from west to east toward the subject property is not at an "F" level of service and is also unaffected despite the overall "failure" status of the intersection. These conclusions were supported by the testimony of Petitioner's engineering experts, Paul Lee and George Lambros, as well as the email dated June 19, 2009 from Steve Weber, Chief of the County's Division of Traffic Engineering, to Dennis Kennedy with the County's Bureau of Development Plans Review in connection with that agency's Zoning Advisory Committee (ZAC) comments.

Thus, based on the above, it is clear there will be no impact from the development of the subject property on the failing intersection during its peak volume. It is equally clear that existing traffic patterns, anticipated road improvements, the contemplated volume direction and timing of traffic to and/or from the proposed development are all factors that weigh in favor of a finding that the anticipated impact of this development will be less than that assumed by the "district standard."

Based upon the foregoing, I find that the testimony and evidence that has been offered is sufficient to comply with the special variance standard set forth in Section 4A03.4.G of the B.C.Z.R. Thus, the Petition for Special Variance shall be granted and relief approved so that the proposed development may be approved and building permits issued for this project, notwithstanding its location within the shed of a failing intersection.

Pursuant to the advertisement, posting of the property and public hearing on this Petition held, and for the reasons set forth above, the relief shall be granted.

THEREFORE, IT IS ORDERED this 7th day of July, 2009 by this Deputy Zoning Commissioner, that Petitioner's Special Variance request from Section 4A02.4 of the Baltimore County Zoning Regulations (B.C.Z.R.) to permit the proposed non-industrail

7.7.09

development where it has been determined that the capacity of the public facilities necessary to accommodate same is less than necessary be and is hereby GRANTED. The relief granted herein shall be subject to the following:

1. Petitioner may apply for its building permit and be granted same upon receipt of this Order; however, Petitioner is hereby made aware that proceeding at this time is at its own risk until such time as the 30-day appellate process from this Order has expired. If, for whatever reason, this Order is reversed, Petitioner would be required to return, and be responsible for returning, said property to its original condition.
2. Development of the property must comply with the Regulations for the Protection of Water Quality, Streams, Wetlands and Floodplains (Sections 33-3-101 through 33-3-120 of the Baltimore County Code).
3. Petitioner shall complete the Forest Buffer Protection Plan and the recordation of the Forest Buffer Easement for this project.
4. The site shall be made to comply with all applicable parts of the Baltimore County Fire Prevention Code prior to occupancy or beginning of operation.
5. Prior to issuance of any building permits, Petitioner shall demonstrate compliance with the applicable Performance Standards for the B.L.R. Zone set forth in Section 229 of the B.C.Z.R.

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

THOMAS H. BOSTWICK
Deputy Zoning Commissioner
for Baltimore County

IN RE: PETITIONS FOR SPECIAL EXCEPTION AND SPECIAL VARIANCE (1526 E. Joppa Road) 9th Election District 5th Council District Baynesville Properties, LLC *Legal Owners* PS Atlantic Coast, LLC *Contract Purchaser* **Petitioners**	*	BEFORE THE
	*	OFFICE OF ADMINISTRATIVE
	*	HEARINGS OF
	*	BALTIMORE COUNTY
	*	**Case No: 2022-0079-XSA**
	*	

* * * * * * * *

OPINION AND ORDER

This matter comes before the Office of Administrative Hearings ("OAH") as Petitions for Special Exception and Special Variance filed for property located at 1526 E. Joppa Road, Towson, by Baynesville Properties, LLC, legal owner and PS Atlantic Coast, LLC, Contract Purchaser, ("Petitioners"). The Special Exception Petition requests approval under the Baltimore County Zoning Regulations ("BCZR"), § 450.4 to permit an Outdoor Advertising sign (as part of an existing Joint Identification sign) for off-premises sign for a proposed business use in the BR zone or in the alternative a Special Hearing pursuant to BCZR §§ 500.7 and 450.4 to permit off-premises signage on an existing Joint Identification sign in the BR zone. For purposes of clarity, there will only be one (1) off-premises sign for the proposed business, as illustrated by the site plan. Special Variance relief is also requested from BCZR, § 4A02.4.G. to allow development in an area restricted pursuant to BCZR 4A02.4.D.

Due to the COVID-19 a public WebEx hearing was conducted virtually in lieu of an in-person hearing. The Petition was properly advertised and posted. Ms. Shaun Walker appeared in support of the Petition and was represented by Adam Baker, Esquire of Rosenberg Martin Greenberg, LLP. Also in attendance were Brandon Rowe, PE, of Bohler Engineering and Carl Wilson, PE, of The Traffic Group. The site plan Mr. Rowe prepared and sealed was admitted as Petitioner's Exhibit 1, and the Traffic Report prepared by Mr. Wilson was admitted as Petitioner's Exhibit 8. They were accepted as experts in their fields and in the BCZR. There were no interested persons or protestants present. Accordingly Mr. Baker was permitted to proffer the following facts and evidence supporting the requested relief. Zoning Advisory Committee ("ZAC") comments were from the Department of Planning ("DOP") and Development Plans Review ("DPR") which agencies did not oppose the requested relief.

RECORD EVIDENCE

Mr. Baker explained that the subject property is located on the north side of East Joppa Road just west of Orchard Tree Lane. It is approximately 2.09 acres and is zoned BR. It is currently occupied by a construction storage yard that was approved in Case No. 08-190-SPH. Mr. Baker explained that the Public Storage corporation proposes to construct a five story, 173,000 sq. ft. self-storage facility. He identified Petitioner's Exhibit 2 as a letter from Peter Gutwald, the Director of Permits, Approvals, and Inspections ("PAI"), approving the development for a limited exemption under BCC § 32-4-106(b)(8). The architectural elevations were admitted as Petitioner's Exhibit 3 and show the typical Public Storage design. Mr. Baker also explained that Public Storage proposes to add its name and logo to the existing joint identification sign on E. Joppa Road. Finally, Mr. Baker submitted and explained in detail Petitioner's Exhibit 8, the Traffic Report. The Report explains that the only deficient aspect of the E. Joppa and Loch Raven intersection is the westbound "thru movement" on E. Joppa Road. The Report explains that this large volume of westbound traffic is likely caused by motorists using E. Joppa Road as an alternative to westbound I-695, which also experiences heavy traffic and backups in the morning rush hour. The salient conclusion of the Report is that the minimal traffic generated by this proposed self-storage business

will have little or no impact on the failing intersection because this location is *west* of that intersection. Finally, Mr. Baker submitted and explained Petitioner's Exhibit 10, which is the "height tent" plans prepared by Mr. Rowe, which demonstrate conformance with the BCZR.

SPECIAL EXCEPTION

Under Maryland law, a special exception use enjoys a presumption that it is in the interest of the general welfare, and therefore, valid. *Schultz v. Pritts*, 291 Md. 1 (1981). The *Schultz* standard was revisited in *Attar v. DMS Tollgate, LLC*, 451 Md. 272 (2017), where the court of appeals discussed the nature of the evidentiary presumption in special exception cases. The court again emphasized a special exception is properly denied only when there are facts and circumstances showing that the adverse impacts of the use at the particular location in question would be above and beyond those inherently associated with the special exception use.

Based on the evidence in this case, I find that the special exception request for identifying signage on an existing joint identification sign will have no greater impacts at this location than are inherent to such signs. I further find that the relief will not harm the public health, safety or welfare. To the contrary, the signage will assist motorists in finding this business and will thereby improve traffic safety. Accordingly, the Special Exception relief will be granted. In the alternative, I will also grant the Special Hearing relief for this signage for the same reasons.

SPECIAL VARIANCE

Under BCZR, § 4a02.4.G a "special variance" can be granted to provide relief from the Basic Services Map restrictions, but only as follows:

G. Petitions for special variance from provisions of this subsection.

1. The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's purpose, pursuant to a finding:

   a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and

   b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

2. The Department of Planning shall give a report on the petition to the Zoning Commissioner prior to his consideration of the petition.

3. The Zoning Commissioner may grant or deny the petition, or grant it subject to any conditions or limitations consistent with the criteria set forth in Paragraph 1 above.

It is not altogether clear what is meant by the term "district standard" in sub-section 1.a, above. However, in the instant case I find that the special variance is within the spirit and intent of the Basic Services regulations because the traffic generated by this proposed self-storage business will have no impact on the failing E. Joppa Road and Loch Raven Blvd. intersection. Accordingly, "the standard is not relevant to the development proposal," and thereby meets sub-section 1.a.

With regard to sub-section 1.b, there was no evidence adduced concerning any other pending applications, but because of this project's minimal traffic impacts, and the lack of any objection by any of the County agencies, I find that this requirement is also satisfied. Further, as to sub-section 2, the DOP notes in its ZAC comments that "the commercial use [proposed self-storage facility] is consistent with the context of the surrounding land uses and meets the spirit and intent of the regulations. The Department has no objections to approving the requested variance and special exception."

THEREFORE, IT IS ORDERED by the Administrative Law Judge for Baltimore County, this **24th** day of **May, 2022** that the Petition for Special Exception BCZR § § 450.4 to permit an Outdoor Advertising sign (as part of an existing Joint Identification sign) for off-premises sign for a proposed business use in the BR zone; and, in the alternative, Special Hearing relief pursuant to BCZR §§ 500.7 and 450.4 to permit off-premises signage on an existing Joint Identification sign in the BR zone are both **GRANTED**; and

IT IS FURTHER ORDERED that Special Variance relief under BCZR, § 4A02.4.G. to allow development in an area restricted pursuant to BCZR § 4A02.4.D is also **GRANTED**.

The relief granted herein shall be subject to the following:

1. Petitioners may apply for necessary permits and/or licenses upon receipt of this Order. However, Petitioners are hereby made aware that proceeding at this time is at their own risk until 30 days from the date hereof, during which time an appeal can be filed by any party. If for whatever reason this Order is reversed, Petitioners would be required to return the subject property to its original condition.

2. Prior to issuance of permits, Petitioners must submit for approval a landscape and lighting plan.

Any appeal of this decision must be made within thirty (30) days of the date of this Order.

PAUL M. MAYHEW
Managing Administrative Law Judge
for Baltimore County

PMM/dlm

Baltimore County, Maryland

MASTER PLAN 2020

PC Exh. 39

Baltimore County, Maryland

MASTER PLAN 2020

ADOPTED BY BALTIMORE COUNTY COUNCIL
November 15, 2010

Baltimore County Executive
James T. Smith, Jr.

Baltimore County Council
S.G. Samuel Moxley, District 1
Kevin Kamenetz, District 2
T. Bryan McIntire, District 3
Kenneth N. Oliver, District 4
Vincent J. Gardina, District 5
Joseph Bartenfelder, District 6
John Olszewski, Sr., District 7

Thomas J. Peddicord, Jr., Legislative Counsel/Secretary

Goals of Master Plan 2020

To promote policies and actions resulting in a safe, sustainable environment for future generations, the County Council in partnership with the citizens of Baltimore County, Maryland hereby adopt this Master Plan 2020.

Goal One: Continue the Success of Growth Management

- Direct the future growth within the Urban-Rural Demarcation Line (URDL)
- Protect and enhance Community Conservation Areas
- Promote redevelopment with an emphasis on ailing commercial or industrial properties
- Develop compact, mixed-use, transit-oriented, and walkable neighborhoods
- Advance economic well-being by promoting a high quality labor force
- Provide a mixture of housing types for an emerging diversity of residents
- Support quality public schools to enhance communities
- Prioritize infrastructure improvements via the Capital Improvement Program to endorse sustainable development
- Protect the character and economic vitality of the rural communities

Goal Two: Improve the Built Environment

- Provide adequate open space and recreational opportunities and increase connections to nature by linking open spaces and parks
- Invest in public grounds by tree planting, buffer conservation and habitat restoration
- Expand and deliver multi-modal transportation services
- Reduce pollutant loadings of runoff with enhanced stormwater management
- Meet desire for green communities by providing regulatory incentives
- Ensure integration between regulations and sustainability programs such as LEED

Goal Three: Strengthen Resource Conservation and Protection

- Protect health of the natural environment and maintain a valuable biodiversity
- Restore ecosystems and encourage fair, efficient use of natural resources
- Preserve cultural assets to establish a tangible sense of community
- Nurture farming activities and importance of the agricultural industry
- Conserve rural characteristics and scenic vistas

Futhermore, in conformance with Article 66B of the Annotated Code of Maryland, the following "Visions" to be implemented by Master Plan 2020 are hereby adopted.

(1) Quality of life and sustainability: a high quality of life is achieved through universal stewardship of the land, water, and air resulting in sustainable communities and protection of the environment;

(2) Public participation: citizens are active partners in the planning and implementation of community initiatives and are sensitive to their responsibilities in achieving community goals;

(3) Growth areas: growth is concentrated in existing population and business centers, growth areas adjacent to these centers, or strategically selected new centers;

(4) Community design: compact, mixed-use, walkable design consistent with existing community character and located near available or planned transit options is encouraged to ensure efficient use of land and transportation resources and preservation and enhancement of natural systems, open spaces, recreational areas, and historical, cultural, and archeological resources;

(5) Infrastructure: growth areas have the water resources and infrastructure to accommodate population and business expansion in an orderly, efficient, and environmentally sustainable manner;

(6) Transportation: a well-maintained, multimodal transportation system facilitates the safe, convenient, affordable, and efficient movement of people, goods, and services within and between population and business centers;

(7) Housing: a range of housing densities, types, and sizes provides residential options for citizens of all ages and incomes;

(8) Economic development: economic development and natural resource-based businesses that promote employment opportunities for all income levels within the capacity of the State's natural resources, public services, and public facilities are encouraged;

(9) Environmental protection: land and water resources, including the Chesapeake and coastal bays, are carefully managed to restore and maintain healthy air and water, natural systems, and living resources;

(10) Resource conservation: waterways, forests, agricultural areas, open space, natural systems, and scenic areas are conserved;

(11) Stewardship: government, business entities, and residents are responsible for the creation of sustainable communities by collaborating to balance efficient growth with resource protection; and

(12) Implementation: strategies, policies, programs, and funding for growth and development, resource conservation, infrastructure, and transportation are integrated across the local, regional, State, and interstate levels to achieve these visions.

SUSTAINABLE ENVIRONMENT

Environmental sustainability means using natural resources wisely to meet current needs without degrading the supply and quality of those resources for the future.

The goal of a sustainable environment supports Baltimore County's vision for community vibrancy and economic vitality. Environmental sustainability means using natural resources wisely to meet current needs without degrading the supply and quality of those resources for the future. Natural resources and air quality are essential to economic growth, environmental protection, energy conservation, and quality of life. Natural resources, especially forests and wetlands that comprise the green infrastructure, provide valuable ecosystem services including cleaning air and water. Sustainability also assures habitat protection for terrestrial and aquatic wildlife and genetic diversity.

Improvements to stream quality, in both water quality and habitat, will require a range of controls that best address specific types of pollution sources.

Policy: Continue to protect, enhance, and restore degraded waterways to meet water quality standards and permit requirements.

Actions:

(1) Continue to enforce development regulations for the protection of water quality, streams, wetlands, and floodplains.

(2) Continue to prepare and implement Small Watershed Action Plans (SWAPs) and participate in studies to identify needs and opportunities for stream restoration, wetland creation and restoration, and stormwater management.

(3) Continue to design and construct stream restoration projects using an adaptive natural channel design (NCD) approach.

(4) Incorporate stream protection policies in community plans.

(5) Continue to implement biological, chemical, and geomorphological stream monitoring programs in order to measure the long-term trends in stream quality.

(6) Identify opportunities for the creation of wetlands as mitigation for County capital projects and other land development impacts.

(7) Continue environmental education programs for schools, businesses, and homeowners for the reduction of water pollution and toxic and solid wastes.

(8) Continue to implement environmental inspection and maintenance programs such as storm drain inlet cleaning and maintenance of stormwater management facilities.

(9) Continue to identify and convert appropriate publicly owned stormwater management facilities to provide for increased water quality function.

(10) Continue to retrofit older communities to provide for stormwater treatment for improved water quality to the receiving waters.

(11) Continue to support watershed associations and citizens in stream clean-ups, stream and watershed surveys, and other restoration projects.

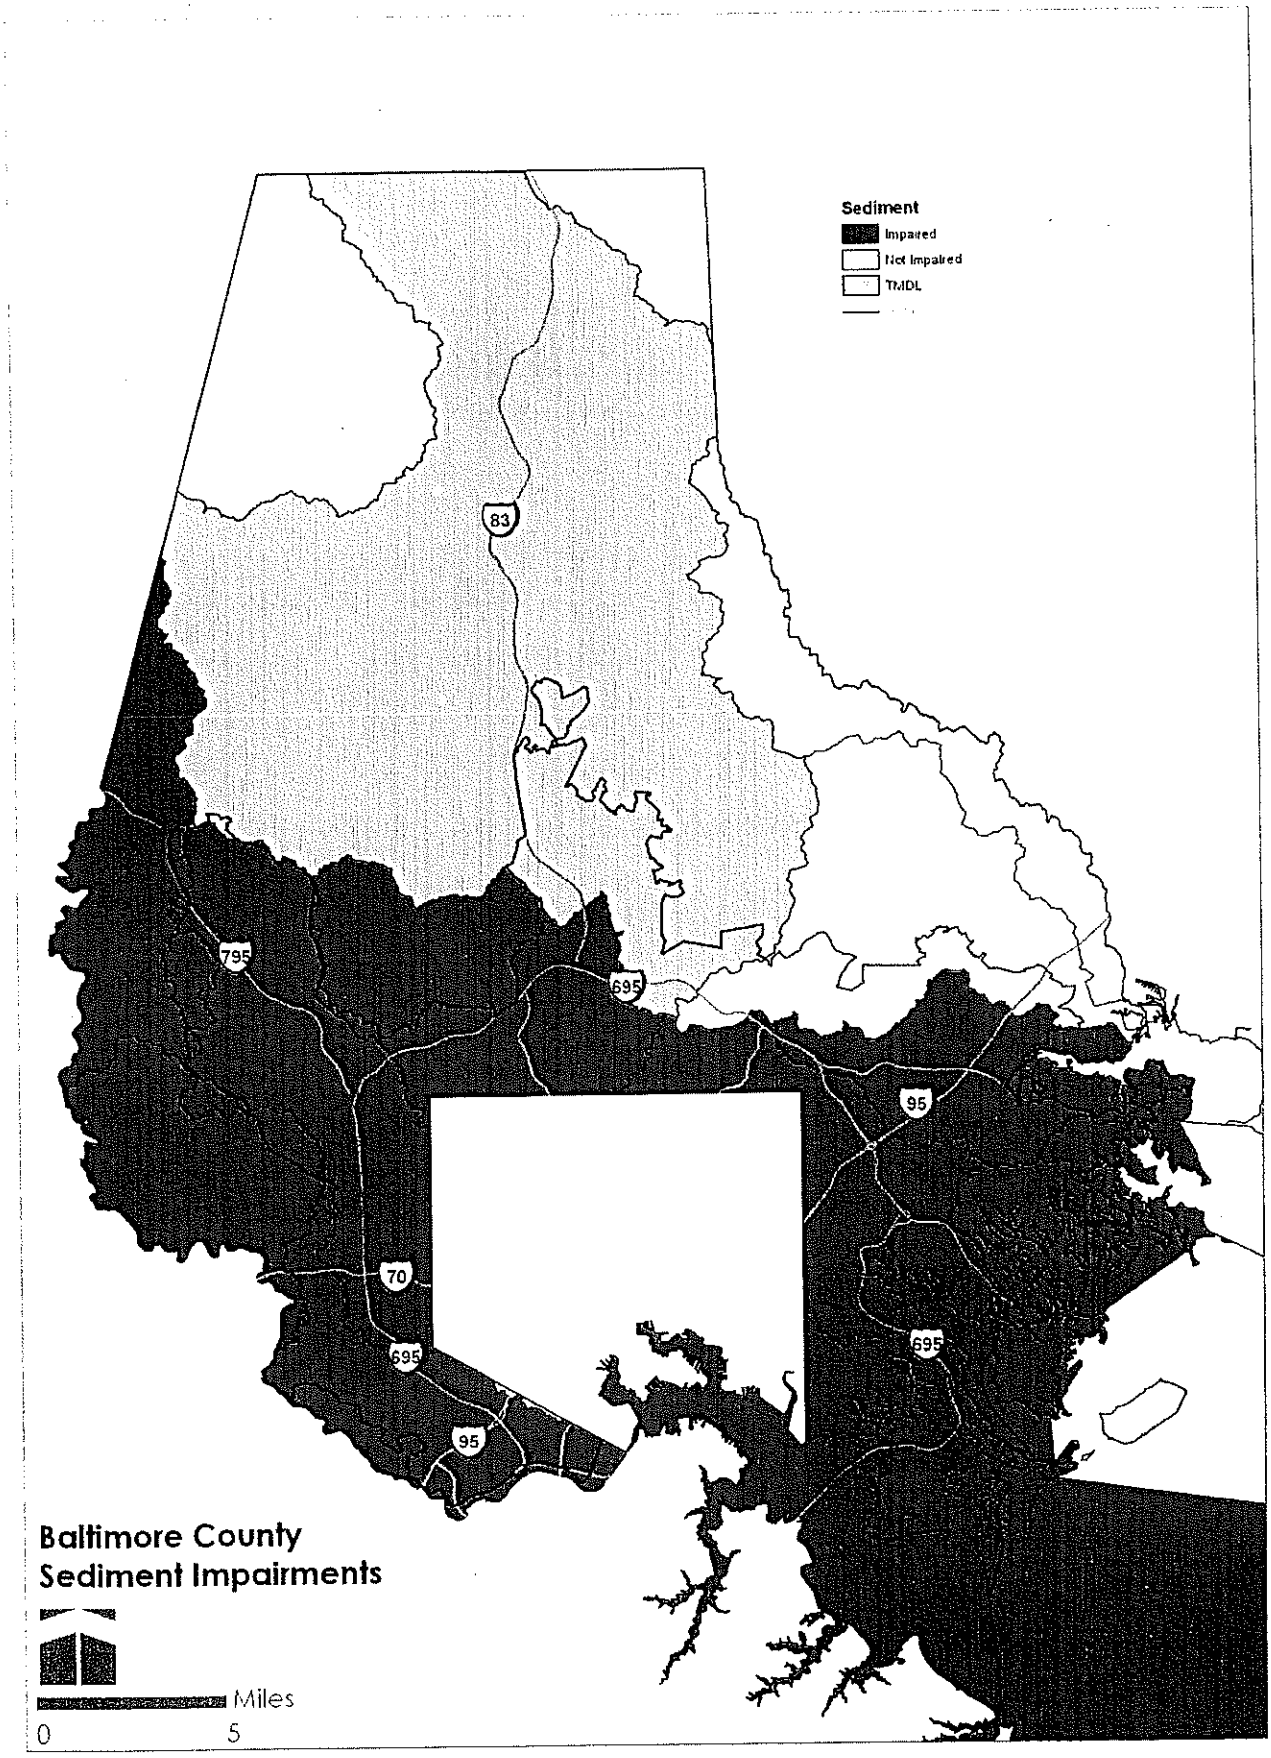
(12) Identify impediments to, and opportunities for tree plantings along streams on private properties, and work to plant more trees on private lands.

Stormwater Management and Sediment Control

The hydrologic cycle is a descriptive model for the movement of precipitation from the atmosphere to the earth's surface and then to receiving waters and back to the atmosphere. In natural areas, precipitation that reaches the ground infiltrates into the soil, replenishing groundwater aquifers and discharging to streams. In urban areas, precipitation that falls onto impervious surfaces runs off the surface much more rapidly. Unless properly controlled, stormwater runoff can result in stream channel erosion and the degradation of in-stream habitat and the aquatic biological community. Stormwater runoff also results in an increase of pollutants washed downstream. During the land development process, the soil at construction sites is the most vulnerable to erosion in streams and other surface waters. Soil erosion from construction activity may exceed 100 to 400 times that obtained from an adjacent undeveloped land or woodland in an equivalent period of time.

About 80% of Baltimore County was developed prior to the advent of stormwater management regulations, which damaged many waterways. In 1968, Baltimore County enacted Maryland's first local sediment control ordinance. Since the mid 1970's, Baltimore County has been a statewide leader in recognizing the impact of stormwater runoff generated as a result of land development. Stormwater management requirements have evolved over time. Initial

Map 40: Sediment Impairments



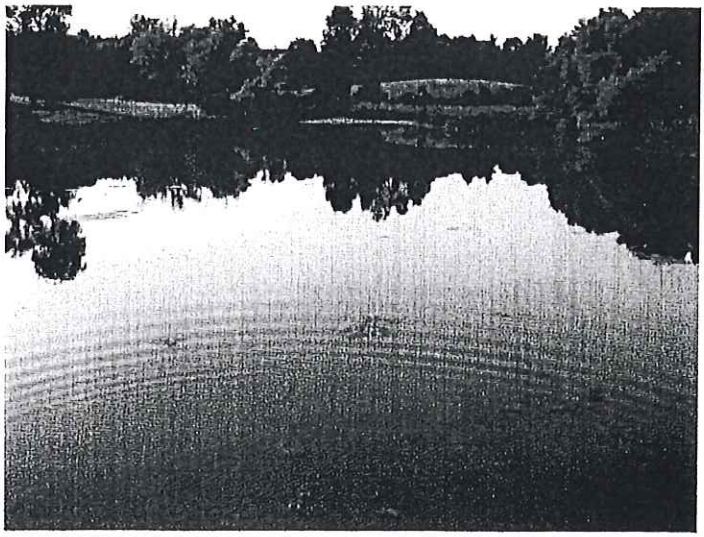
stormwater management focused on volume and peak discharge control to reduce physical impacts on streams. Beginning in the late 1980's through the early 1990's, water quality treatment was added as a means to address the increased pollutant loads associated with urban development. As stream science and understanding of stream dynamics evolved, it was recognized that further peak discharge control was necessary to protect stream channels from erosion during storm flow.

In the early 2000's, control of small storms was required, along with methods to disperse the flow from a development site instead of concentrating the flow. The Maryland Stormwater Act of 2007 further refined stormwater management by requiring Environmental Site Design (ESD) where practicable. ESD attempts to reduce stormwater runoff from a site by reducing impervious cover, retaining natural vegetation, and dispersing the runoff throughout the site to allow greater infiltration of precipitation. As Baltimore County's older urban and suburban areas are redeveloped, state-of-the-art stormwater practices will be constructed and water quality will improve.

Policy: Protect and improve water quality through the application of stormwater control measures for new development and redevelopment projects.

Actions:

(1) Continue to implement state-of-the-art stormwater management techniques, including ESD as feasible, for new and redevelopment projects.



(2) Provide flexibility for redevelopment to implement innovative solutions to stormwater management.

(3) Ensure the sustainability of stormwater practices including long-term function and maintenance.

Policy: Inspect and enforce compliance with the Baltimore County Code, permits, plans and State specifications as related to erosion and sediment control and grading.

Actions:

(1) Continue to inspect and enforce erosion and sediment control implementation on all active projects for compliance with approved plans.

(2) Continue to investigate complaints pertaining to erosion, sediment control, grading, and surface drainage problems associated with new construction.

(3) Continue to provide responsible personnel training and certification of individuals that oversee installation and maintenance of project controls.

(4) Continue to work in cooperation with the Baltimore County Soil Conservation District to require minimum standards for Soil Conservation and Water Quality Management Plans for conservation easements.

Best Management Practices (BMPs) for Agriculture

Best Management Practices (BMPs) that prevent soil erosion and protect water quality provide long-term benefits for maintaining the productive quality of farmland. Farmers are assisted in their efforts to apply BMPs by the Baltimore County Soil Conservation District, University of Maryland Extension (UME), the Maryland Department of Agriculture, the U.S. Department of Agriculture's Natural Resources Conservation Service, and the U.S. Farm Services Agency. Farmers and landowners participate in

§ 9-503. County plans
West's Annotated Code of Maryland
Environment

West's Annotated Code of Maryland
Environment
Title 9. Water, Ice, & Sanitary Facilities (Refs & Annos)
Subtitle 5. County Water and Sewerage Plans (Refs & Annos)

MD Code, Environment, § 9-503

§ 9-503. County plans

Currentness

In general
(a) Each county shall have a county plan or a plan with adjoining counties that:

(1) Is approved by the Department;

(2) Covers at least the 10-year period next following adoption by the county governing body; and

(3) Deals with:

(i) Water supply systems;

(ii) Sewerage systems;

(iii) Solid waste disposal systems;

(iv) Solid waste acceptance facilities; and

(v) The systematic collection and disposal of solid waste, including litter.

Periodic review of county plan
(b) Except as provided in § 9-515 of this subtitle, each county governing body shall review its county plan at least once every 3 years in accordance with a schedule set by the Department.

When revision or amendment to county plan is required
(c) Each county governing body shall adopt and submit to the Department a revision or amendment to its county plan if:

(1) The governing body considers a revision or amendment necessary; or

(2) The Department requires a revision or amendment.

Notice and public hearing before revision or amendment to county plan
(d)(1) Before a county governing body adopts any revision or amendment to its county plan or adopts a new county plan, the governing body shall:

(i) Conduct a public hearing on the county plan, revision, or amendment that may be conducted jointly with other public hearings or meetings; and

(ii) Give the principal elected official of each municipal corporation that is affected notice of the county plan, revision, or amendment at least 14 days before the hearing.

(2)(i) Notice of the time and place of the public hearing, together with a summary of the plan, revision, or amendment, shall be published in at least 1 newspaper of general circulation in the county once each week for 2 successive weeks, with the first publication of notice appearing at least 14 days before the hearing.

(ii) Notice of the public hearing may be a part of the general notice listing all other items to be considered during the public hearing or meeting.

MD Code, Environment, § 9-505

§ 9-505. Contents of plan; regional plans

Currentness

In general

(a) In addition to the other requirements of this subtitle, each county plan shall:

(1) Provide for the orderly expansion and extension of the following systems in a manner consistent with all county and local comprehensive plans prepared under Title 1, Subtitle 4, Title 3, or Title 21 of the Land Use Article and § 10-324 of the Local Government Article:

(i) Community water supply systems and multiuse water supply systems;

(ii) Community sewerage systems and multiuse sewerage systems; and

(iii) Solid waste disposal systems and solid waste acceptance facilities;

(2) Provide for the sizing and staging of facilities construction that is consistent with the county plan;

(3) Show compliance with items (1) and (2) of this subsection by using graphic and tabular information;

(4) Provide:

(i) For sewage treatment facilities that are adequate to prevent the discharge of any inadequately treated sewage or other liquid waste into any waters; or

(ii) Otherwise for safe and sanitary treatment of sewage and other liquid waste;

(5) Provide for facilities that are adequate to treat, recover, or dispose of solid waste in a manner that is consistent with the laws of this State that relate to air pollution, water pollution, and land use;

(6) Contain adequate information about:

(i) The existing sewage treatment capacity in each drainage basin or sewage treatment plant service area in the county;

(ii) The present level of use of sewage treatment plants in each drainage basin; and

(iii) Projections for use of sewage treatment plant capacity based on:
1. Outstanding building permits and subdivision plats if the county has subdivision authority; or

2. Zoning commitments if the county does not have subdivision authority;

(7) Taking into account all relevant planning, zoning, population, engineering, and economic information and all State, regional, municipal, and local plans, describe, with all practical precision, those parts of the county that reasonably may be expected to be served in the next 10 years by any:

(i) Community water supply system;

(ii) Multiuse water supply system;

(iii) Community sewerage system;

(iv) Multiuse sewerage system;

(v) Solid waste disposal system; and

(vi) Solid waste acceptance facility;

(8) Set procedures for identifying and acquiring, on a time schedule that conforms to the time requirement in item (7) of this subsection, any rights-of-way or easements that are necessary for any:

(i) Community water supply system;

(Ii) Multiuse water supply system;

(iii) Community sewerage system;

(iv) Solid waste disposal system; or

(v) Solid waste acceptance facility;

(9) Taking into account all relevant planning, zoning, population, engineering, and economic information and all State, regional, municipal, and local plans, describe, with all practical precision, any parts of the county in which it is not reasonably foreseeable to have service in the next 10 years by any:

(i) Community water supply system;

(ii) Multiuse water supply system;

(iii) Community sewerage system;

(iv) Multiuse sewerage system;

(v) Solid waste disposal system; and

(vi) Solld waste acceptance facility;

(10) Set a time schedule and a proposed method for financing the construction and operation of each planned:

(i) Community water supply system;

(ii) Multiuse water supply system;

(iii) Community sewerage system;

(iv) Solid waste disposal system; and

(v) Solid waste acceptance facility;

(11) Set forth the estimated cost of constructing and operating each planned:

(i) Community water supply system;

(ii) Multiuse water supply system;

(iii) Community sewerage system;

(iv) Solid waste disposal system; and

(v) Solid waste acceptance facility;

(12) Indicate:

(i) Any source of supply from the waters of this State;

(ii) The approximate amount of water to be withdrawn from the waters of this State; and

(iii) The quantity and quality of waste to be discharged into the waters of this State;

(13) Describe, in accordance with the provisions of this subtitle, each area in the county where:

(i) A community water supply system must be provided;

(ii) A multiuse water supply system may be installed and used;

(iii) An individual water supply system may be installed and used for an interim period until a planned community water supply system is available;

(iv) An individual water supply system may be installed and used indefinitely;

(v) A community sewerage system must be provided;

(vi) A multiuse sewerage system may be installed and used;

(vii) Except as provided in § 9-517 of this subtitle, an individual sewerage system may be installed and used for an interim period until a planned community sewerage system is available;

(viii) An individual sewerage system may be installed and used indefinitely;

(ix) A community solid waste disposal system must be provided; or

(x) A community solid waste acceptance facility must be provided for use by residents of the described area during an interim period until a planned community solid waste disposal system is available;

(14) Except as provided in § 9-515 of this subtitle, provide for amendment or revision of the county plan at least once every 2 years in accordance with a schedule adopted by the Department;

(15) Designate an appropriate agency of the county to be responsible for creating a workable plan:

(i) To keep the environment of the county free of solid waste, including litter; and

(ii) To prevent scenic pollution of both public and private property in the county;

(16) By July 1, 1987, treat each publicly owned community sewerage system as a separate entity for fiscal purposes within the local operating agency;

(17) Document compliance with and report on actions taken and plans to enforce §§ 12-605 and 12-606 of the Business Occupations and Professions Article;

(18) For a county with a population greater than 150,000 according to the latest Department of Planning projections, include a recycling plan by July 1, 2014 that:

(i) Provides for a reduction through recycling of at least 35% of the county's solid waste stream by weight or submits adequate justification, including economic and other specific factors, as to why the 35% reduction cannot be met;

(ii) Provides for recycling of the solid waste stream to the extent practical and economically feasible, but in no event may less than a 15% reduction be submitted; and

(iii) Requires full implementation of the recycling plan by December 31, 2015; and

(19) For a county with a population less than 150,000 according to the latest Department of Planning projections, include a recycling plan by July 1, 2014 that:

(i) Provides for a reduction through recycling of at least 20% of the county's solid waste stream or submits adequate justification, including economic and other specific factors, as to why the 20% reduction cannot be met;

(ii) Provides for recycling of the solid waste stream to the extent practical and economically feasible, but in no event may less than a 10% reduction be submitted; and

(iii) Requires full implementation of the recycling plan by December 31, 2015.

Use of prisoners
(b) A plan created under subsection (a)(15) of this section may include the use of prisoners from the State correctional system or from county jails or detention centers.

Rate of recycling
(c) The recycling reductions of 35% and 20% provided in subsection (a)(18) and (19) of this section are not intended to be the maximum percentage that a county can achieve. A county that can practically and economically achieve a higher rate of recycling is encouraged to submit a recycling plan for a higher percentage.

Revision of recycling plan due to population increase
(d) If a county with a population less than 150,000 increases to a population of above 150,000, the county shall have 2 years to revise the recycling plan to be consistent with the recycling goals under subsection (a)(18) of this section.

Regional recycling plan

(e)(1) The governing bodies of 2 or more counties may adopt a regional recycling plan to comply with subsection (a)(18) or (19) of this section.

(2) A regional recycling plan which otherwise satisfies the requirements of this subtitle for each of the participating counties shall constitute the county recycling plan for each county which participates in the plan.

Instructions and Guidance on Submissions to the Maryland Department of Planning

Water and Sewer Plans

Planning staff are responsible for reviewing both draft and adopted versions of county water and sewer plans and their amendments for consistency with county and municipal comprehensive plans, PFA eligibility, Growth Tier Map implications, and areas of other state interest. Planning completes and submits its review to the Maryland Department of the Environment (MDE) within 35 days of receipt. However, Planning is not responsible for the intake and processing of water and sewer plans and their amendments.

Counties must mail these plans for review, with a cover letter, to the office of the Director of the Water and Science Administration at:

D. Lee Currey, Director
Water and Science Administration
Maryland Department of the Environment
1800 Washington Boulevard
Baltimore, MD 21230-4718

For questions, please contact Robin Pellicano, Chief, Integrated Water Planning Program - Water Resources Planning Division in MDE's Water and Science administration, at robin.pellicano@maryland.gov.

MASTER PLAN AMENDMENTS AND REVIEW

The Maryland Department of the Environment (MDE) requires all counties and the City to maintain maps designating service areas for water supply and sewerage, whether public utilities or private well/septic systems. The service areas designated on these maps must be located within the Metropolitan District and are required to be consistent with the Comprehensive Land Use Master Plan adopted by the County.

WATER SUPPLY AND SEWERAGE MASTER PLAN AMENDMENTS

Amendments to the Water and Sewer Master Plan maps may be petitioned for change under an annual amendment cycle process governed by the Executive Order of April 11, 1990. Annually, Public Works submits a staff report to the Planning Board with updates and revisions to the plans. Recommendations from the Planning Board have been added to the Planning Board Report to the County Executive. The amendments are scheduled for vote by the Baltimore County Council on December 19.

The Planning Board will hold a public hearing on the petitions regarding Amendment Cycle 40 of the Baltimore County Water Supply and Sewerage Plan. Please not that Petition 22-05 633 Earls Road (LaFarge Quarry) has been withdrawn from Cycle 40.

WATER SUPPLY AND SEWERAGE MASTER PLAN TRIENNIAL REVIEW

Local jurisdictions throughout the State of Maryland are required by regulation to submit a comprehensive review of their water supply and sewerage plans once every three years. Baltimore County's most recent Triennial Review was approved on November 30 by MDE.

Legislative Session 2021, Legislative Day No. 12

Resolution No. 99-21

Mr. Julian E. Jones, Jr., Chairman
By Request of County Executive

By the County Council, July 6, 2021

A RESOLUTION adopting the report of the 2020 Triennial Review of Baltimore County Water Supply and Sewerage Plan.

WHEREAS, pursuant to Title 9, Subtitle 5 of the Environment Article of the Annotated Code of Maryland, Baltimore County has adopted a comprehensive 10-year Water Supply and Sewerage Plan; and

WHEREAS, the Plan was adopted on March 05, 2018 by Resolution 5-18; and

WHEREAS, the County is required by State law to review the Plan every three years and to submit a report of its review, together with amendments thereto or revisions thereof, to the State Department of the Environment; and

WHEREAS, the Planning Board did on October 1, 2020 hold an advertised public hearing on the 2020 Triennial Review; and

WHEREAS, the Planning Board did on October 15, 2020 vote to recommend that the 2020 Triennial Review be adopted; now therefore

BE IT RESOLVED BY THE COUNTY COUNCIL OF BALTIMORE COUNTY, that the 2020 Triennial Review of the Baltimore County Water Supply and Sewerage Plan, as amended, is hereby adopted; and

BE IT FURTHER RESOLVED, that this Resolution be submitted to the County Executive for his approval; and

BE IT FURTHER RESOLVED, that a copy of this Resolution together with the 2020 Triennial Review be submitted to the Maryland Department of Environment; and

BE IT FURTHER RESOLVED, that this Resolution shall take effect from the date of its passage by the County Council.

Baltimore, Maryland 21230-4718

Subject: Baltimore County Water Supply & Sewerage Master Plan
Triennial Review 2020

Dear Mr. Currey:

Baltimore County has completed its 2020 Triennial Review of the Water Supply and Sewerage Plan.

A preliminary draft of the Review was made available via e-mail to the Maryland Department of the Environment on September 22, 2020 with copies to the Maryland Department of Planning. The Baltimore County Planning Board held a hearing on October 21, 2020 and passed a resolution endorsing the Review on October 15, 2020. The report of the Review was adopted by the local governing body by County Council Resolution 99-21 signed by the County Executive on August 2, 2021.

I am forwarding one printed copy of the 2020 Triennial Review document, maps and appendices for review and approval. In lieu of additional paper copies the entire report, maps and appendices are available for viewing and download at:

https://www.baltimorecountymd.gov/departments/publicworks/masterplan.html

This Plan was prepared and processed following the requirements of COMAR 26.03.01, Regulation .02B. Sections covering engineering aspects of the plan have been prepared and reviewed for adequacy by Erin McKenna-Streyle, a P.E. licensed in the State of Maryland. If there are any questions, please feel free to contact Erin at (410) 887-8545.

Regards,

D'Andrea L. Walker, Acting Director
Bureau of Engineering & Construction
Department of Public Works and Transportation

November 30, 2021

The Honorable Julian E. Jones, Jr.
Council Chair
Baltimore County Council
Old Courthouse
400 Washington Ave.
Towson, MD 21204

Dear Council Chair Jones:

The Maryland Department of the Environment (MDE) has completed its review of the **Triennial 2020 W&S Plan Update (Plan)** of the Baltimore County Water Supply and Sewerage Plan. The Baltimore County Council adopted the Plan on August 2, 2021 by Resolution 99-21. The Update included text regarding septic connections for public and safety reasons outside of the Urban Rural Demarcation Line (URDL), table updates with new information, such as population forecasts and proposed water and sewer infrastructure projects and updated water and sewer category maps.

Maryland Department of Planning Findings

The Maryland Department of Planning (MDP) found the update to be consistent with the County's adopted 2020 Master Plan. MDP noted that although the plan incorporates the amendments from Fall/Spring cycle since 2017, the WSP does not seem to include the amendments in Cycle 38 and EM-01. Planning recommends that the county confirm that these amendments will be added to the new WSP and adjust it accordingly. In addition, MDP's comments included several recommended Growth Tier Map changes. The County is encouraged to work with MDP on any recommended updates.

MDE Findings and Action

In accordance with §9-507(a) of the Environment Article, Annotated Code of Maryland, the Department hereby **approves the Triennial 2020 W&S Plan Update.**

Recommendation: Based on MDE's Digital Flood Insurance Rate Maps, portions of the County are within Flood Zones and Inundation areas. Please see the following mapped areas on the Climate Ready Action Boundary Map: https://mdfloodmaps.net/CRAB/. The

County could consider climate resiliency in future updates to the W&S Plan, which could include but not limited to the following steps (https://toolkit.climate.gov/):

- Explore Hazards: Identify climate and non-climate stressors, threats, and hazards and how they could affect assets (people and infrastructure).
- Assess vulnerability and risks: Evaluate assets vulnerability and estimate the risk to each asset.
- Investigate options: Consider possible solutions for your highest risks, check how others have responded to similar issues, and reduce your list to feasible actions.
- Prioritize and plan: Evaluate costs, benefits, and capacity to accomplish each action integrating the highest value actions into a stepwise plan.
- Take action: Move forward with your plan and check to see if your actions are increasing your resilience with monitoring.

The County is encouraged to contact Dave Guignet, State NFIP Coordinator, of MDE's Stormwater, Dam Safety, and Flood Management Program, at (410) 537-3775 for additional information regarding the regulatory requirements for Floodplains and Storm Surges.

The County is also encouraged to contact Matthew C. Rowe, CC-P, Assistant Director of MDE's Water and Science Administration, at (410) 537-3578 for additional information regarding Climate Change and Resiliency.

This completes MDE's review, as required by §9-507 of the Environment Article, Annotated Code of Maryland. If you need further assistance on these matters, please contact Heater Barthel, Deputy Director, at (410) 537-3512, toll-free at (800) 633-6101, or by e-mail at heather.barthel@maryland.gov.

Sincerely,

Matthew C. Rowe

D. Lee Currey, Director
Water and Science Administration

CHAPTER I: GOALS AND ORGANIZATION

GOALS OF THE COUNTY CONSISTENT WITH COMPREHENSIVE PLANNING

MASTER PLAN 2020

To promote policies and actions resulting in a safe, sustainable environment for future generations, the County Council in partnership with the Citizens of Baltimore County, Maryland, adopted *Master Plan 2020* on November 15, 2010 (Resolution 94-10). The goals of the plan are as follows:

Goal One: Continue the Success of Growth Management

- Direct the future growth within the Urban-Rural Demarcation Line (URDL)
- Protect and enhance Community Conservation Areas
- Promote redevelopment with an emphasis on ailing commercial or industrial properties
- Develop compact, mixed-use, transit-oriented and walkable neighborhoods
- Advance economic wellbeing by promoting a high quality labor force
- Provide a mixture of housing types for an emerging diversity of residents
- Support quality public schools to enhance communities
- Prioritize infrastructure improvements via the Capital Improvement Program to endorse sustainable development
- Protect the character and economic vitality of the rural communities

Goal Two: Improve the Built Environment

- Provide adequate open space and recreational opportunities and increase connections to nature by linking open spaces and parks
- Invest in public grounds by tree planting, buffer conservation and habitat restoration
- Expand and deliver multi-modal transportation services
- Reduce pollutant loadings of runoff with enhanced stormwater management
- Meet desire for green communities by providing regulatory incentives
- Ensure integration between regulations and sustainability programs such as LEED

Goal Three: Strengthen Resource Conservation and Protection

- Protect health of the natural environment and maintain a valuable biodiversity
- Restore ecosystems and encourage fair, efficient use of natural resources
- Preserve cultural assets to establish a tangible sense of community
- Nurture farming activities and importance of the agricultural industry
- Conserve rural characteristics and scenic vistas

WATER AND SEWER PLAN

Sustainable development has been defined as that which "meets the needs of the present in a responsible manner without compromising the ability of current and future generations to meet their own needs" (United Nations General Assembly (1987)). To help ensure a sustainable community, Baltimore County will continue the following actions to protect the public water supplies and sewer systems:

- Work with Baltimore City and adjacent jurisdictions to protect and enhance the water supply reservoirs;
- Maintain and upgrade all capital facilities as required;
- Implement the water resource conservation practices established in the Baltimore county plumbing code;
- Where technically feasible, require property owners with developed properties that utilize septic systems that are located within areas designated as S-1, to connect to public sewer and abandon their septic systems.
- Where technically feasible and as determined by the Department of Environmental Protection and Sustainability (EPS), individual properties, communities, and subdivisions with failing, inadequate, and substandard private onsite water or septic systems or other public health concerns exist inside of the Metropolitan District and outside of the URDL in W-7 and/or S-7 (no planned service) designated areas, public water and/or sewer may be extended to existing lots of record if evaluated and required by DPW as the most economically feasible solution. Such extensions are permitted through the County's existing Water Supply and Sewerage Master Plan Amendment process.
- Actively participate in the Metropolitan District;
- Also actively participate in the Susquehanna River Basin Commission.

Master Plan 2020 was prepared in accordance with Article 66B of the Annotated Code of Maryland, Section 523 of the Baltimore County Charter, and pertinent sections in the Baltimore County Code. Development of the master plan involved all "stakeholders", such as citizens and community associations, county and state agencies, government officials, and businesspersons. Similarly, in preparing this Water and Sewer Plan, the appropriate comprehensive planning agencies were consulted: the Maryland Department of Planning, the Baltimore County Department of Planning, and the regional planning group, the Baltimore Metropolitan Council (BMC). This unified effort helped to ensure the Water and Sewer Plan is indeed consistent with, and in fact supportive of the County's goals of comprehensive planning.

The Water and Sewer Plan shall remain in effect concurrently with the Master Plan. Any revision to one plan that has substantive impact on the other will require commensurate modification of the other plan.

ADDITIONAL PLANS

Additional plans and studies are amendments to the *Master Plan 2020*, which further define land use and growth management strategies countywide, and for specific areas of the County. The County's Master Planning web page lists all adopted community and other plans:
https://www.baltimorecountymd.gov/departments/planning/masterplanning/adoptedcommunityplans/index.html

Furthermore, "The Baltimore County, Maryland Land Preservation, Parks and Recreation Plan," was adopted by the Baltimore County Council as a *Master Plan 2020* Amendment on June 5, 2017. The full document is posted at:
https://www.baltimorecountymd.gov/departments/planning/masterplanning/parkrecplan

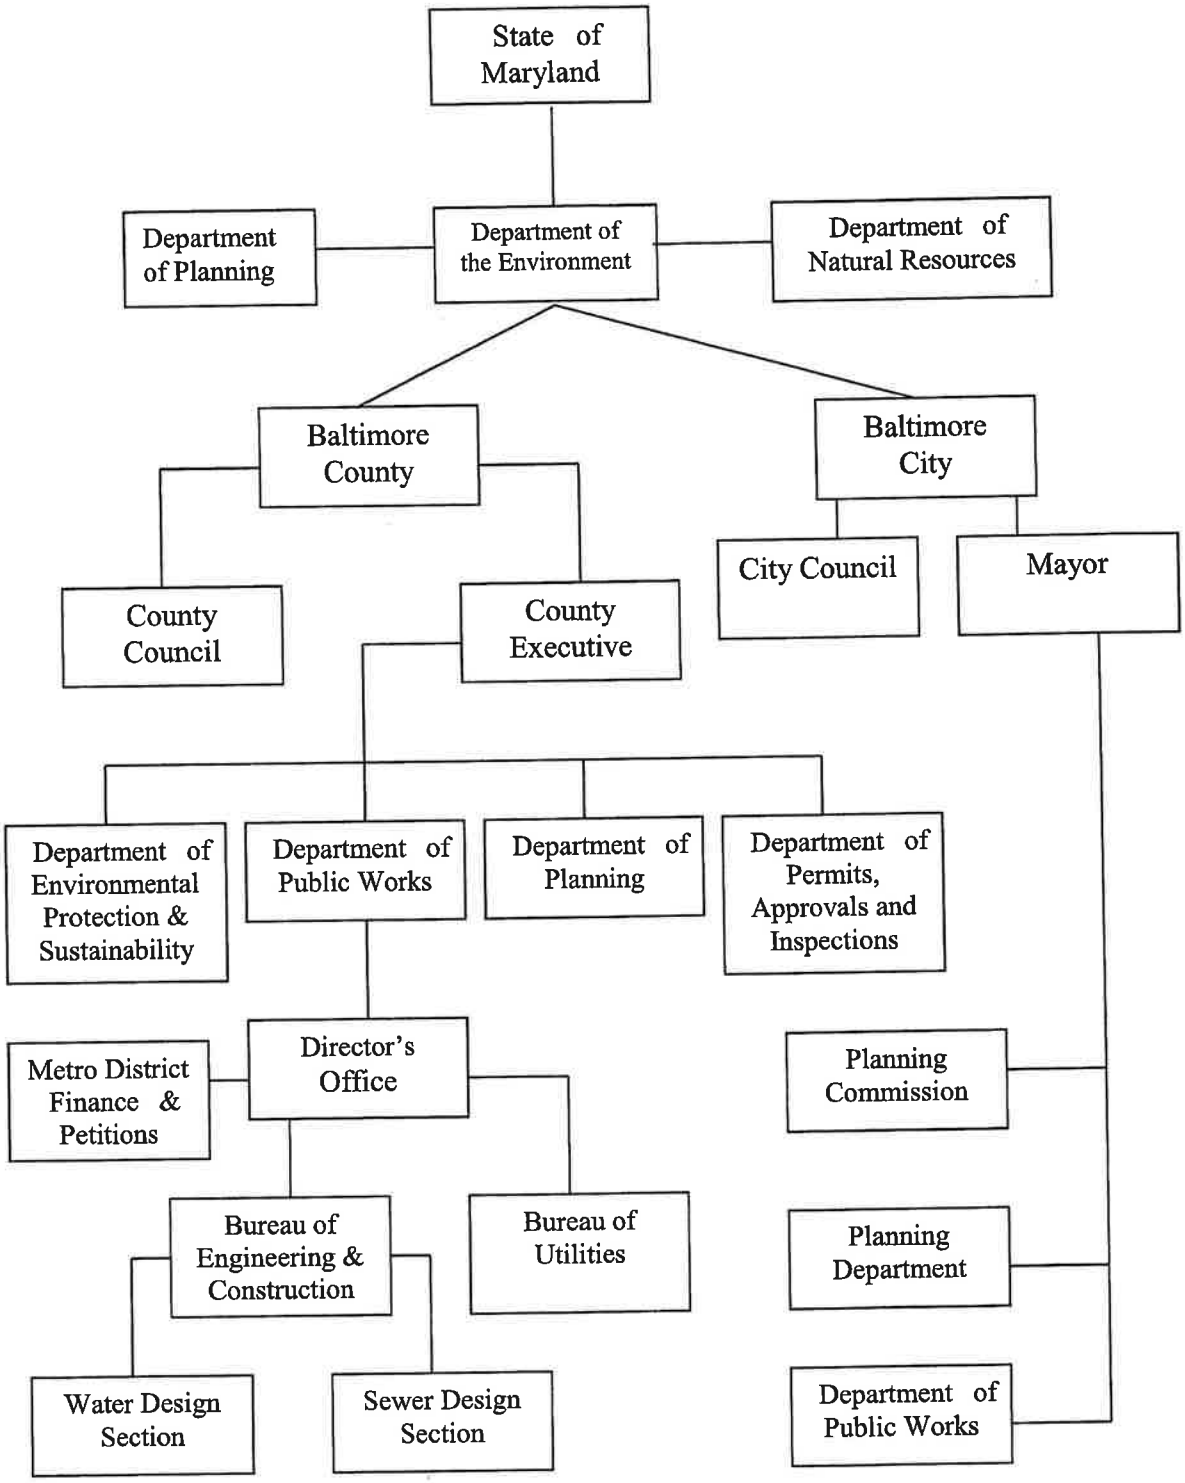
ARTICLE 66B, ANNOTATED CODE OF MARYLAND

In response to directives from the United States Environmental Protection Agency (EPA), the General Assembly of Maryland passed legislation amending Article 66B of the Annotated Code of Maryland. In 2012, the Maryland General Assembly repealed Article 66B and Article 28 and replaced them with the Land Use Article.

Specifically House Bill 1141 (HB 1141, 2006) required, among other items, a thorough examination of the safety and adequacy of all drinking water supplies and sewerage disposal systems for existing and future populations. The analysis contained in the master plan, called a Water Resources element (WRE), revealed that, with continued maintenance and protection, the public water supply and sewerage systems serving Baltimore County will be safe and adequate for the projected population until at least 2035. The WRE had a major influence on the policies and actions developed in *Master Plan 2020*, especially concerning protection of surface waters and the Chesapeake Bay. One of the primary goals is to direct virtually all new land development (or *redevelopment*) inside the Priority Funding Area (PFA), which is essentially the urban area closest to Baltimore City. Even with this anticipated population growth, there will be enough potable water in the public supply system, and adequate capacity in the public sewer system.

ORGANIZATIONAL CHART

State & Local Government as Related to Water & Sewer Management



CHAPTER IV - SEWERAGE PLAN

GENERAL BACKGROUND

Baltimore County constructs, operates and maintains all sewage collection and pumping facilities within the County. There are twenty-three (23) sewersheds which contain 2,060 miles of gravity sewer and 163 miles of pressure sewer. Baltimore County operates one hundred twenty (120) pumping stations and one (1) 90-thousand gallon per day treatment plant at Richlyn Manor, east of Belair Road, adjacent to the Gunpowder River.

County generated sewage is treated and disposed of at the City-owned and operated treatment plants, Back River and Patapsco. The City and County agree to pay for new capital projects and for the repair to, and enlargement of, additions or improvements to sewerage facilities. The total flow conveyed from the County to the treatment plants determines the County's portion of capital improvement and/or operation and maintenance cost.

Baltimore County receives flow from Anne Arundel and Howard Counties. By agreement, these counties pay their portion of operating and capital costs. Copies of the sewer agreements with Baltimore City, Anne Arundel County and Howard County are included in the Appendices.

On September 20, 2005, Baltimore County entered into a Consent Decree with the U.S. Department of Justice, the U.S. Environmental Protection Agency and the Maryland Department of the Environment. This document requires Baltimore County to completely evaluate its sewer system and make corrections in order to eliminate sanitary overflows in the collection system. This massive effort will involve field investigations, studies, reports, designs and construction projects. As of September 29, 2016 MDE and the EPA approved all Sewershed Repair, Replacement and Rehabilitation (SRRR) Plans. The County is in the process of implementing the corrective actions from these plans.

System Overview

The following is a description of each of the twenty-three (23) sewersheds with a discussion of their location, major system components, pumped flow, existing conditions and proposed projects:

BALTIMORE COUNTY MARYLAND

JONES FALLS

System Components Location

The Jones Falls Sewershed is located in central Baltimore County from the north boundary of Baltimore City to Green Spring Valley and from York Road on the east to Reisterstown on the west. The system serves approximately 7,100 acres and 64,217 people.

Major Sewers	Length (Miles)	Pipe Size
Jones Falls Interceptor	5.23	8" to 42"
Towson Run Interceptor	3.83	8" to 24"
Roland Run Interceptor	5.60	15" to 42"
Moores Branch	3.11	12" to 18"

Pumped Flow

There are four (4) pumping stations in the Jones Falls System, Stevenson at Anton, Templegate, Stanton Woods and Buchanan Road. The sewage from these stations flow to the Jones Falls Interceptor and then to the Mt. Washington Flume at the Baltimore City Line.

Existing Conditions

The Jones Falls SRRR Plan was accepted by the EPA on December 9, 2013 and certified by the County as substantially complete on September 6, 2018.

Proposed Projects

Below is the list of the proposed projects in Jones Falls.

Project	Description	Estimated Cost
Towson Run Relief Sewer	4,899 LF of 24"-27" relief sewer	$9,300,000
	Total	$9,300,000

MASTER PLAN 2020

PC Exh. 41

Goals of Master Plan 2020

To promote policies and actions resulting in a safe, sustainable environment for future generations, the County Council in partnership with the citizens of Baltimore County, Maryland hereby adopt this Master Plan 2020.

Goal One: Continue the Success of Growth Management

- Direct the future growth within the Urban-Rural Demarcation Line (URDL)
- Protect and enhance Community Conservation Areas
- Promote redevelopment with an emphasis on ailing commercial or industrial properties
- Develop compact, mixed-use, transit-oriented, and walkable neighborhoods
- Advance economic well-being by promoting a high quality labor force
- Provide a mixture of housing types for an emerging diversity of residents
- Support quality public schools to enhance communities
- Prioritize infrastructure improvements via the Capital Improvement Program to endorse sustainable development
- Protect the character and economic vitality of the rural communities

Goal Two: Improve the Built Environment

- Provide adequate open space and recreational opportunities and increase connections to nature by linking open spaces and parks
- Invest in public grounds by tree planting, buffer conservation and habitat restoration
- Expand and deliver multi-modal transportation services
- Reduce pollutant loadings of runoff with enhanced stormwater management
- Meet desire for green communities by providing regulatory incentives
- Ensure integration between regulations and sustainability programs such as LEED

Goal Three: Strengthen Resource Conservation and Protection

- Protect health of the natural environment and maintain a valuable biodiversity
- Restore ecosystems and encourage fair, efficient use of natural resources
- Preserve cultural assets to establish a tangible sense of community
- Nurture farming activities and importance of the agricultural industry
- Conserve rural characteristics and scenic vistas

Visions of Master Plan 2020

Futhermore, in conformance with Article 66B of the Annotated Code of Maryland, the following "Visions" to be implemented by Master Plan 2020 are hereby adopted.

(1) Quality of life and sustainability: a high quality of life is achieved through universal stewardship of the land, water, and air resulting in sustainable communities and protection of the environment;

(2) Public participation: citizens are active partners in the planning and implementation of community initiatives and are sensitive to their responsibilities in achieving community goals;

(3) Growth areas: growth is concentrated in existing population and business centers, growth areas adjacent to these centers, or strategically selected new centers;

(4) Community design: compact, mixed-use, walkable design consistent with existing community character and located near available or planned transit options is encouraged to ensure efficient use of land and transportation resources and preservation and enhancement of natural systems, open spaces, recreational areas, and historical, cultural, and archeological resources;

(5) Infrastructure: growth areas have the water resources and infrastructure to accommodate population and business expansion in an orderly, efficient, and environmentally sustainable manner;

(6) Transportation: a well-maintained, multimodal transportation system facilitates the safe, convenient, affordable, and efficient movement of people, goods, and services within and between population and business centers;

(7) Housing: a range of housing densities, types, and sizes provides residential options for citizens of all ages and incomes;

(8) Economic development: economic development and natural resource-based businesses that promote employment opportunities for all income levels within the capacity of the State's natural resources, public services, and public facilities are encouraged;

(9) Environmental protection: land and water resources, including the Chesapeake and coastal bays, are carefully managed to restore and maintain healthy air and water, natural systems, and living resources;

(10) Resource conservation: waterways, forests, agricultural areas, open space, natural systems, and scenic areas are conserved;

(11) Stewardship: government, business entities, and residents are responsible for the creation of sustainable communities by collaborating to balance efficient growth with resource protection; and

(12) Implementation: strategies, policies, programs, and funding for growth and development, resource conservation, infrastructure, and transportation are integrated across the local, regional, State, and interstate levels to achieve these visions.

improvements that reduce energy usage and promote healthier indoor air quality in residential and non-residential buildings.

(5) Require Energy Audits by certified personnel for all building rehabilitation projects receiving public funds.

(6) Provide training and certification opportunities to County personnel in LEED accreditation, Building Performance Institute certification, Energy Star Certification and other certificate programs that promote energy efficient and sustainable building practices.

(7) Encourage new construction for residential meet or exceed the design and construction standard of LEED silver certification, where feasible.

(8) Establish incentives for developers to build high performance buildings with LEED Gold certification and above.

(9) Upgrade building codes and provide incentives to allow, where feasible, new housing and major rebuilt ("gutted") houses to be built to LEED standards, or equivalent.

(10) Recommend that the County Council revise codes to incorporate the principles of LEED Neighborhood Design (LEED-ND) for residential developments.

LEED ~ Leadership in Energy and Environmental Design

A LEED-certified home is designed and constructed in accordance with the rigorous guidelines of the LEED for Homes green building certification program. LEED for Homes is a consensus-developed, third party-verified, voluntary rating system which promotes the design and construction of high-performance green homes.

Enterprise Green Communities

Green Communities is the first national green building program developed for affordable housing. It focuses on the use of environmentally sustainable materials, reduction of negative environmental impacts and increased energy efficiency. It emphasizes designs and materials that safeguard the health of residents and locations that provide easy access to services and public transportation.

Energy Star Certification

Homes that earn the ENERGY STAR certification must meet guidelines for energy efficiency set by the U.S. Environmental Protection Agency. ENERGY STAR qualified homes are at least 15 percent more energy efficient than homes built to the 2006 International Residential Code (IRC), and include additional energy-savings features that typically make them 20-30% more efficient than homes built to local residential construction codes.

Building Performance Institute (BPI)

BPI is a national standards development organization for residential energy efficiency and weatherization retrofit work. As an independent, not-for-profit organization, they bring together leading building science experts from across North America to develop their standards using a consensus-based methodology. Taking a holistic view, they ensure that all styles and ages of dwelling are included, and all climate zones are covered.

Earth Advantage

An Earth Advantage home is designed to improve energy efficiency by 15 percent over a conventionally built home. Every Earth Advantage home is designed to provide its residents with comfort and quality while maintaining high standards for energy efficiency, indoor air quality, environmental responsibility and resource efficiency. Earth Advantage, Inc. works with building professionals to help them understand and incorporate high performance green building practices and materials into their projects.

PUBLIC INFRASTRUCTURE

Public infrastructure consists of the facilities, equipment, and services needed for the functioning of a community. Infrastructure includes utilities for water and sewer, roads, bridges, storm drains, solid waste sites and public buildings. The Department of Public Works (DPW) is the county agency responsible for most of the County's infrastructure items. The Baltimore County School System and Department of Recreation and Parks manage the infrastructure for schools and parks respectively.

DPW plans, maintains, and constructs public infrastructure in the safest, most efficient, and cost effective manner possible. All facilities built in Baltimore County's urban area followed the county's pattern and timing of growth. The majority of these systems were put into service during the growth boom of the 1950s and 1960s. Because of the age

of the infrastructure systems, the needs shifted from constructing new facilities to maintaining and replacing the existing ones.

However, in the rural areas, the County will continue to provide only those levels of services necessary to address basic public health, safety and welfare. The guiding *Master Plan 2020* policies are to design and scale all infrastructure improvements appropriately for the limited amount of growth and maintenance of rural character, while still providing for public safety. The County does not provide increased levels of service where population density does not justify them.

Public infrastructure is important in determining the timing, location, and intensity of development; it serves as a valuable tool for master plan implementation. The basic infrastructure functions shape how Baltimore County integrates with other areas of the Baltimore Region. A well-designed county infrastructure system helps create a holistic system for the region and state. Each system working together in a hierarchy can minimize impacts to the environment. The county road network is an example of how local infrastructure feeds into, and complements the state road system, and the federal interstate road system.

Basic infrastructure provides the foundation for where redevelopment and reinvestment take place from the private and public sectors. Maintaining and enhancing the infrastructure in areas that strengthen Community Enhancement Areas, Community Conservation Areas and Employment Centers will help minimize the obstacles to building and creating sustainable communities in Baltimore County.

Policy: The infrastructure projects in the Capital Budget and Program should be used to maintain existing healthy communities, and leverage county resources to direct future mixed-use growth to the Community Enhancement Areas.

Actions:

(1) Maintain existing capital facilities. Maintaining and strengthening existing facilities protects the investments Baltimore County has made, and ensures that capital items will not be paid for twice.

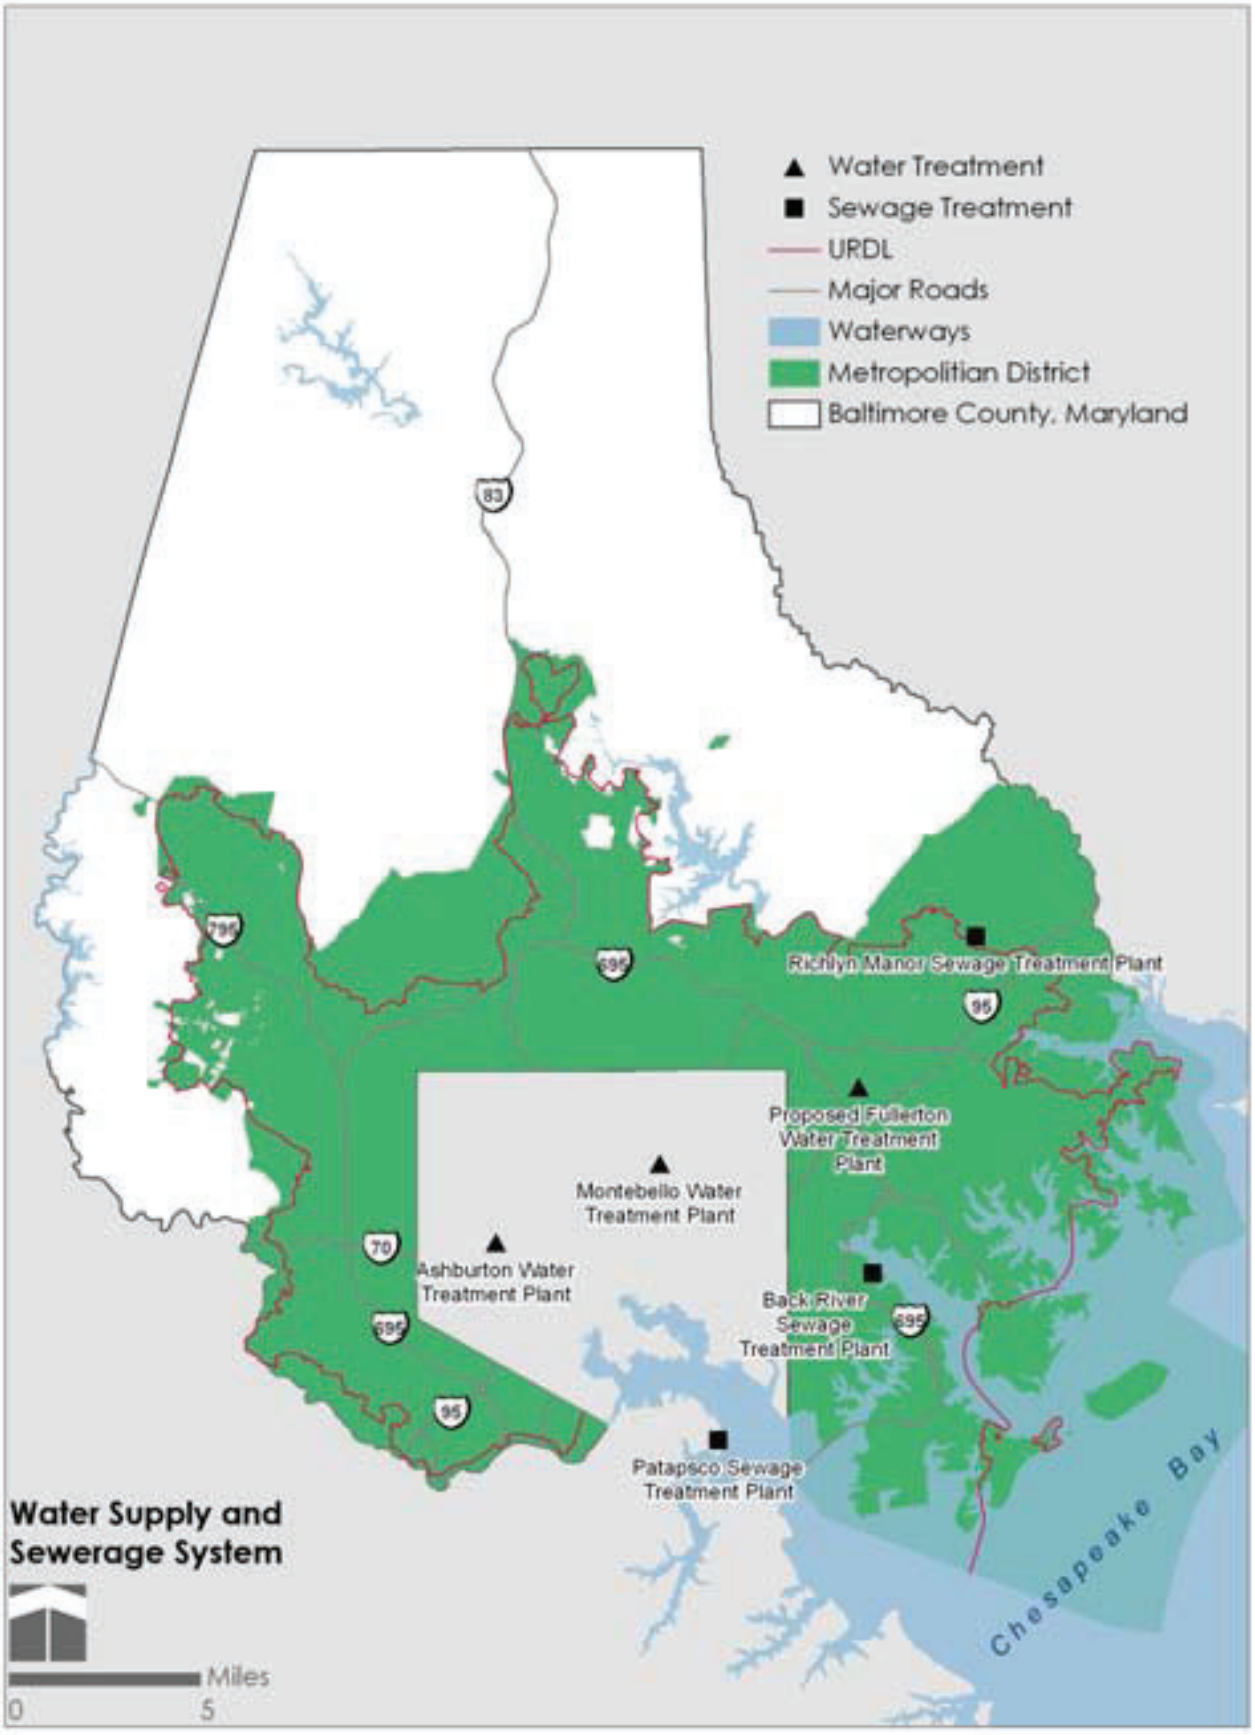
(2) Consider capital projects for Community Enhancement Areas and Employment Centers that are the locations suitable for proposed mixed-use redevelopment projects.

Water Supply System

The Baltimore County water supply system is part of the metropolitan water system serving Baltimore City (Map 10). There are three sources of water for the system: the Gunpowder River, which supplies the Prettyboy and Loch Raven reservoirs; the North Branch of the Patapsco River, which supplies the Liberty Reservoir; and the Susquehanna River. Water drawn from the three reservoirs is treated at the Montebello and Ashburton filtration plants, and then distributed to regional consumers. Susquehanna River water is used only on an emergency basis.

Baltimore County has another viable source of water supply, the prolific aquifer that exists within the geologic formation known as the Cockeysville Marble. This source of high quality water has been recognized as a natural resource worth protecting. In 1975, Baltimore County identified this aquifer as an area of critical state concern. Should the County ever be in a situation that would require it to find its own source of water, the Cockeysville formation will be its primary source. It is imperative that we protect this natural resource through a variety of techniques, including limiting the use of septic systems, modifying

Map 10: Water Supply and Sewerage System



land use regulations to prevent uses which may have adverse impact on the aquifer, and educating property owners who own land over the Cockeysville marble formation.

There are 13 distinct zones of water service. They are linked together by a series of pumping stations, transmission mains, storage reservoirs, and elevated tanks. Baltimore County now uses about 99 million gallons a day from the Baltimore system. About 30% of the consumption is used by commerce and industry. Residential consumption accounts for the remaining 70%. The system also supplies water for fire protection.

In the WRE, water supplies serving the County were compared to anticipated increases in the number of residents, and the corresponding water demand. Based on these population projections, reservoir capacities, and the additional source from the Susquehanna River, it is determined that there will be adequate water to serve Baltimore County's citizens living within the URDL until at least 2035. Additional information may be found in the WRE, adopted as part of *Master Plan 2020*.

Sewer System

Baltimore County constructs, operates and maintains all sewage collection and pumping facilities within the county (Map 10). There are 22 sewersheds that are divided into 80 sub-sewersheds. Baltimore County operates 104 pumping stations and one very small package treatment plant at Richlyn Manor. County-generated sewage is treated at two Baltimore City owned and operated wastewater treatment plants, at the Back River Treatment Plant near Essex and the Patapsco Treatment Plant at Wagners Point in South Baltimore.

Flow figures for existing and proposed populations projected out to 2035 fall within the limits of the existing NPDES permits for the wastewater treatment plants (WWTPs). These analyses show that the land use plan proposed in *Master Plan 2020* will be capable of achieving reductions in overall pollutant loadings to the Chesapeake Bay, as determined by State and Federal requirements. It is further demonstrated that there will be sufficient capacity in the WWTPs to accommodate additional flow from populations projected Countywide until at least 2035. More detailed information can be found in the WRE.

The Metropolitan District

The Metropolitan District of Baltimore County is both the geographic area within which public water and sewer services are provided, and the quasi-public corporation through which public utility services are financed and managed. It was established pursuant to the Metropolitan District Act (*Acts of the General Assembly of Maryland of 1924, Chapter 539, as Amended*), and operates according to the provisions of Article 20 of the *Baltimore County Code, 2003*. The County does not have a legal mechanism to finance public water and sewer utilities outside the district. The Metropolitan District is the agency that maintains and operates the water and sewer systems for the Baltimore Region. Baltimore City is the jurisdiction responsible for the operation of the Metropolitan District, enabled through cost-sharing agreements with the remaining Baltimore Region jurisdictions.

Adjacent property owners outside the boundary of the Metropolitan District who wish to receive public water and sewer service may petition to be included in the district. The Baltimore County Council may, upon recommendation by the County Executive, and subject to the approval of the mayor and city council of Baltimore, extend the Metropolitan District boundary to include the petitioner's locality.

Policy: Continue active participation in the Metropolitan District.

Action:

(1) To encourage a regional perspective, an investigation should be undertaken to determine whether an independent regional water/sewer management authority would better serve the Baltimore Region.

There are a few locations where the adopted urban rural demarcation line (URDL), the county's growth boundary, does not coincide with the Metropolitan

District boundary. The discrepancy between these boundaries leads to confusion.

Over the past 43 years (1967-2010) there has been little adjustment to the URDL. In fact, in balance, the URDL has contracted more than it has expanded, meaning that the urban area actually decreased in area, while the rural acreage increased. For any request to change the URDL, current standards provide for extensive review and public input, with significant burden placed on the applicant to prove there are public health concerns or similar issues as justification. This process has worked well in examining any proposed expansion or contraction of the urban area. As a general policy, in addition to those requirements specified in the zoning definitions, any subsequent change to zoning that involves changing an urban zoning classification to a rural zoning classification, or vice versa, should be immediately followed by a requisite review of the URDL.

Policy: The Metropolitan District Line should coincide with the URDL.

Actions:

(1) Consider the benefits of moving the Metropolitan District line to coincide with the URDL.

(2) Review the impacts of revisions to the URDL when zoning reclassification changes the designation of a property from rural to urban, or vice versa.

In future years, the County will need to increase its focus on maintenance and upgrading of the existing water and sewer infrastructure. Some system improvements are necessary to provide improved reliability of service.

Policy: Water and sewer infrastructure requires continuous maintenance and upgrading, as demand for service increases.

Actions:

(1) Continue upgrading the sewerage pump stations to increase capacity and improve reliability and energy efficiency.

(2) Effectively monitor the pump stations for malfunctions.

(3) Rehabilitate and replace sewer pipelines and manholes as needed.

(4) Use high technology analytical tools to determine the optimal expenditure of resources.

(5) Expand testing for sources of groundwater inflow and infiltration that reduce the sewerage system's capacity during wet weather conditions. Use test results to make repairs and thereby increase system efficiency and capacity.

(6) Increase the frequency of sewer main cleaning to clear away roots, sludge and grease in order to maintain a fully functional conveyance system, reduce sewerage back-ups, and to provide a means of detecting early signs of structural failures.

(7) Develop a major water purification and storage facility in Fullerton, which will complete the system of water treatment plants for the metropolitan system.

(8) Expand the water main cleaning and lining program to prevent or correct "water line constrictions" (obstructions that reduce water volume and water pressure) in older pipes. Newer pipes are constructed with special linings that prevent constrictions from forming.

(9) Continue to extend public utilities to all unserved communities within the URDL, giving highest priority to those areas that have failing wells or septic systems.

(10) Ensure that sewer extensions to correct failing septic areas outside the URDL only address existing problems and do not stimulate growth and development.

SUSTAINABLE ENVIRONMENT

Environmental sustainability means using natural resources wisely to meet current needs without degrading the supply and quality of those resources for the future.

The goal of a sustainable environment supports Baltimore County's vision for community vibrancy and economic vitality. Environmental sustainability means using natural resources wisely to meet current needs without degrading the supply and quality of those resources for the future. Natural resources and air quality are essential to economic growth, environmental protection, energy conservation, and quality of life. Natural resources, especially forests and wetlands that comprise the green infrastructure, provide valuable ecosystem services including cleaning air and water. Sustainability also assures habitat protection for terrestrial and aquatic wildlife and genetic diversity.

Baltimore County's environmental mission is to protect and perpetuate the natural resources of the County and to protect environmental health. Over the past 20 years, the County's Department of Environmental Protection and Resource Management (DEPRM) has established and implemented programs to protect critical natural resources, restore ecosystem functions, and educate citizens about good stewardship. While the County's environmental programs are nationally recognized, the pollution from sprawl development and unmanaged agricultural activities, as well as the continued loss of forests, requires significant changes to land use practices under new federal and State programs to restore the health of the Chesapeake Bay. *Master Plan 2020* builds upon past successes and recommends new policies to address emerging environmental challenges such as climate change.

Overall, both the biggest challenge and the most important reason for the County to serve as a catalyst for good resource management is the fact that 85% of the land area and resources in Baltimore County, depended upon and enjoyed by all, are privately owned. DEPRM uses an integrated watershed management framework to accomplish its mission, including land preservation, resource protection/ regulation, restoration, facility maintenance, monitoring, planning and research, and citizen education and participation.

Nature-Friendly Community

"Baltimore County, Maryland, has one of the most ambitious and successful land management and environmental protection programs in the country. An impressive combination of tools and strategies – land use regulations, land acquisition, and urban growth boundary, education, partnerships with private land trusts, and infill development initiatives – has been employed to preserve thousands of acres throughout the county and protect critical wildlife habitat….Baltimore County is in many ways a model for local governments everywhere when it comes to protecting nature and biodiversity." (Source: Duerksen and Snyder, 2005. Nature-Friendly Communities: Habitat Protection and Land Use Planning. p.152).

Climate Change

Citizens in Baltimore County and elsewhere are debating the implications of a changing climate as it relates to human activities. Of particular interest is whether human-produced greenhouse gases are causing long-term global warming. Baltimore County, as part of the global community, should reduce and mitigate negative impacts of human activities on the environment.

County government operations, private businesses, and the daily routines of citizens have great potential to increase atmospheric pollution through release of harmful gases and thermal pollution. One concern about a changing climate is the relative increase in sea level. While the rate and extent of sea level rise are under continuing study, it is estimated that the mean high tide in the coastal areas of the County may increase from three to five feet in the next century. Overall, the retention and planting of forests and trees is considered the single most effective measure for mitigating the negative impact of climate change.

Citizens can make adaptations to actions that might contribute to climate change, and mitigate impacts that are unavoidable or more difficult to prevent. This represents also good stewardship of limited energy and financial resources. Human activities that potentially affect the degree of climate change are mostly attributed to the production, use, and conservation of energy. Most of current energy in Maryland derives from coal and other fossil fuels that increase harmful atmospheric gases. Walking or riding a bike instead of driving, turning off lights and other electrical appliances when not in use, changing light bulbs from fluorescents to LED's, and similar actions are beneficial to the environmental health and natural resources. Energy conservation and other climate change adaptation and mitigation actions will lead to significant changes in current economic structure and community function. Over the long term, they will enhance sustainability.

Policy: Continue to adapt to, and mitigate impacts of climate change on the environment.

Actions:

(1) Implement the recommendations of the County's Sustainability Network for County operations, energy conservation, protection of natural resources, and communities in order to reduce emissions of greenhouse gases and energy consumption.

(2) Develop appropriate indicators for sustainability actions and commitments in order to summarize sustainability conditions and trends and to provide a basis for evaluation of progress.

Environmental Justice

The development of environmental justice in the United States dates to almost three decades ago when communities began to form organized protests against traditional planning efforts to site polluting factories and toxic waste dumps in less affluent and often minority neighborhoods. Local victories empowered local protesters to coalesce into a national movement. In 1994, President Clinton signed an Executive Order focusing the federal government effort on protecting or improving the quality of the environment and human health conditions for all communities.

The federal government definition of environmental justice is applicable to all levels of state and local government planning. Environmental justice calls for the fair treatment of all minority, indigenous, and low-income populations to ensure that no individual racial, ethnic, or socioeconomic group will bear an unequal burden due to the negative effects of pollution or other environmental hazards. Environmental justice also promotes equal access to public information and equal rights to participate in the development, implementation, and enforcement of environmental laws.

The Phase I Action Plan of the Baltimore Watershed Agreement between Baltimore County and Baltimore City specifically calls for consideration of environmental justice issues in the course of watershed management planning.

Policy: Incorporate environmental justice considerations when developing Small Watershed Action Plans to address water quality protection and restoration.

Actions:

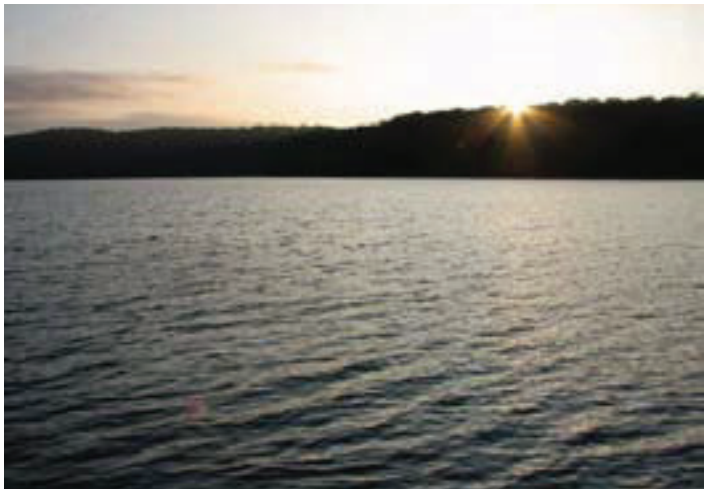
(1) Review environmental justice indicators developed nationwide and develop a set of indicators for the watershed management planning process.

(2) Include the environmental justice indicators in the Small Watershed Action Plans for prioritizing water quality improvement projects.

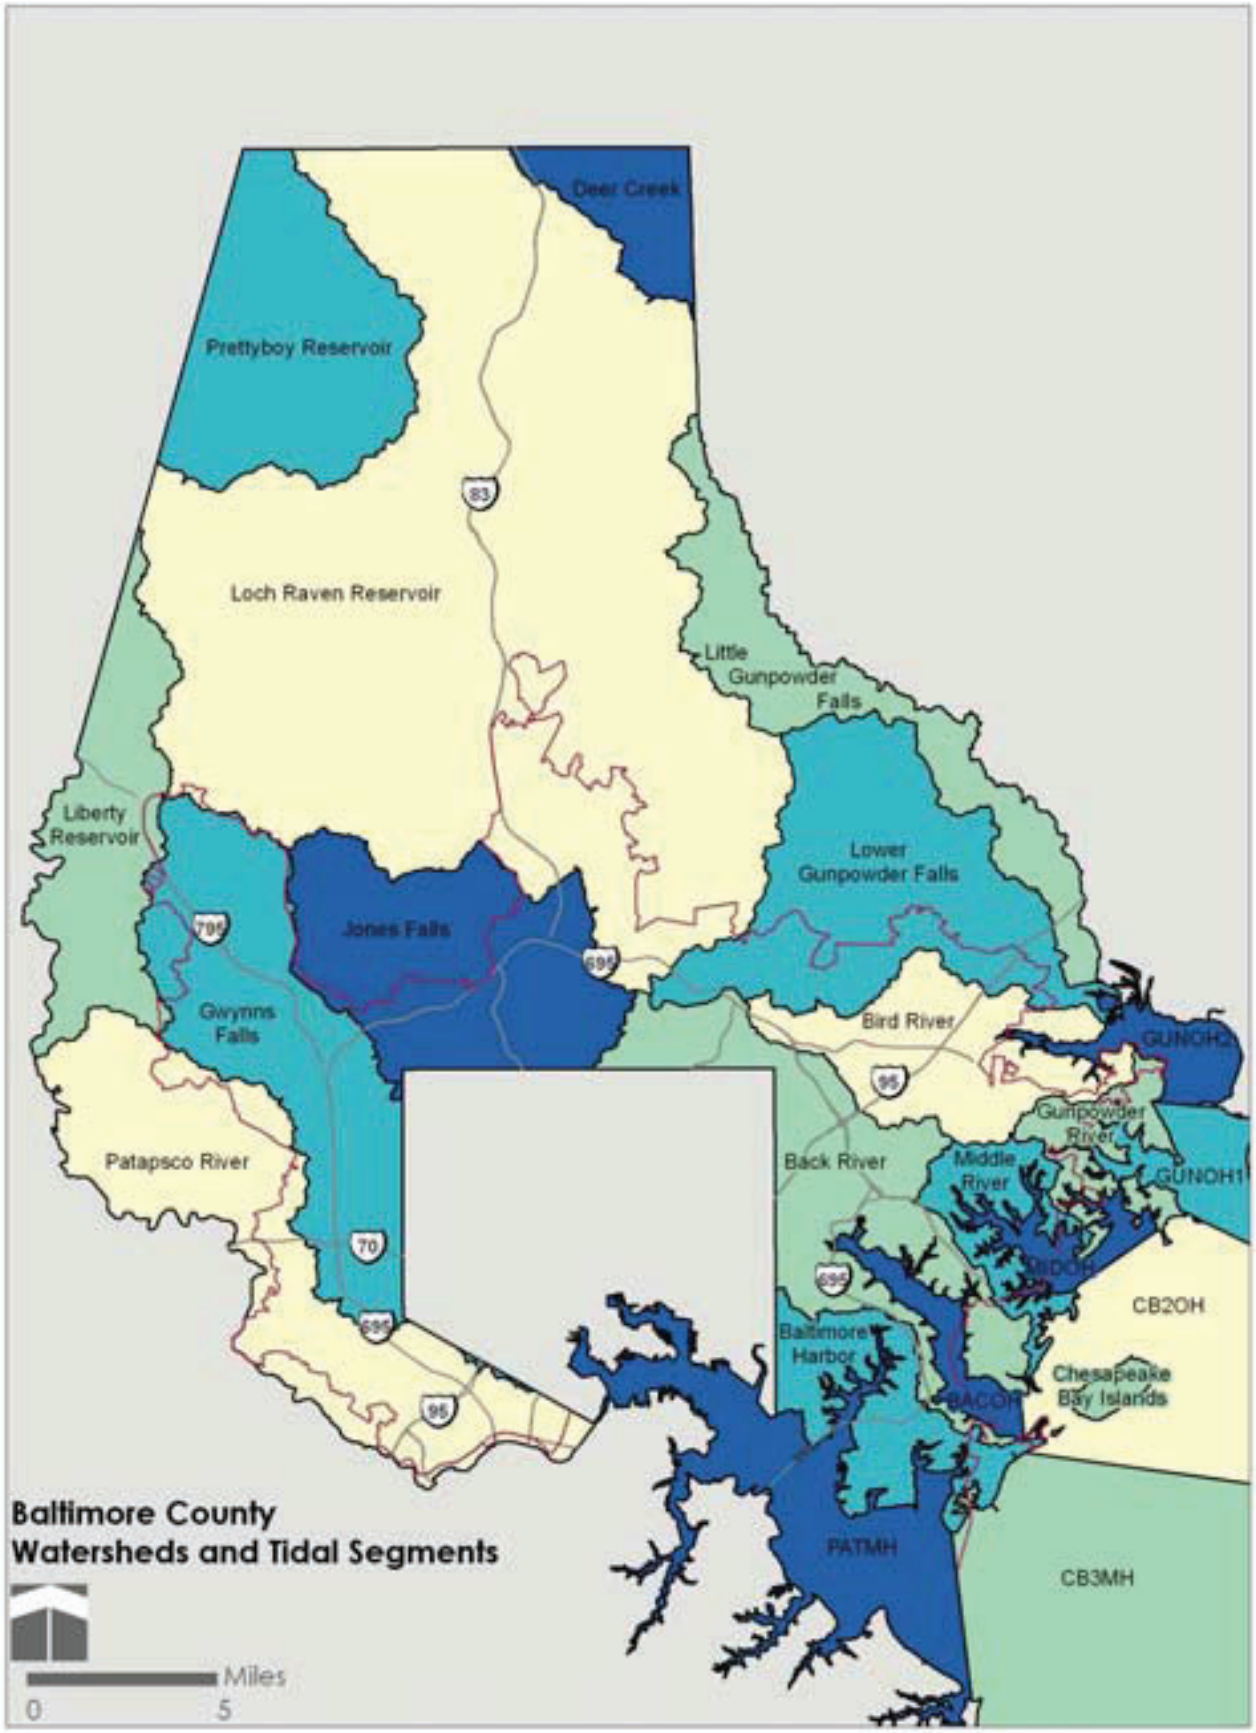
WATER RESOURCES

The water resources of Baltimore County include over 2,100 miles of streams, groundwater resources, three drinking water reservoirs, non-tidal and tidal wetlands, and tidal waters. All of these water resources are interconnected through the hydrologic cycle driven by precipitation in the form of rain and snow. These water resources are also interconnected with surrounding jurisdictions and through tidal exchange with the Chesapeake Bay.

Precipitation falling on the land drains to streams, either as surface flow or through groundwater flow. The land surface that drains to a particular stream is called a watershed or a basin. The Chesapeake Bay is a large basin with a total drainage area in excess of 64,000 square miles.



Map 36: Watersheds and Tidal Segments



Water Use Classification of County Waterways

In order to protect multiple water uses, the State of Maryland has designated four Use Classes and associated water quality standards. If the water is a source for a public drinking water supply, a "P" follows the Use Class.

The four Use Classes (and subcategories for Use II) are:
Use I
Water contact recreation and protection of non-tidal warm water aquatic life.
Use II
Support of estuarine and marine aquatic life and shell fish harvesting (not all subcategories apply to each tidal water segment); Shellfish harvesting; Seasonal migratory fish spawning and nursery (Chesapeake Bay only); Seasonal shallow-water submerged aquatic vegetation (Chesapeake Bay only); Open-water fish and shellfish (Chesapeake Bay only); Seasonal deep-water fish and shellfish (Chesapeake Bay only); Seasonal deep-channel refuge use (Chesapeake Bay only)
Use III
Non-tidal cold water – usually considered natural trout waters
Use IV
Recreational trout waters – waters that are stocked with trout

These waters support aquatic communities and provide for human uses such as agricultural irrigation and livestock watering, drinking water, industrial uses, fishing and boating, and receiving areas for treated wastewater. Having adequate clean water to support all of these uses is crucial to continued ecological and human health now and for the future, and for providing for the continued quality of life for citizens and the economic vitality of Baltimore County.

Waters in Baltimore County are of high quality in general. Some water resources are degraded by improper human activities. The waters that do not meet or exceed water quality standards are placed on an impaired waters list (Sec. 303(d) of the federal Clean Water Act) by the State of Maryland. These listings are based on 8-digit watersheds and tidal water segments, with each impairing substance listed separately. Regulations and policies require protection of high quality water resources and improvement of degraded water resources. High quality waters are protected through the permitting requirements associated with Tier II, defined as waters with a better than the average aquatic biological community. Tier II waters meet the anti-degradation requirements of the federal Clean Water Act. For each impairing

substance in any watershed or tidal segment, the State must determine how much of the substance must be reduced through modeling. This is referred to as a Total Maximum Daily Load (TMDL), or the maximum amount of a particular pollutant in a waterway that can be naturally assimilated while maintaining water quality standards

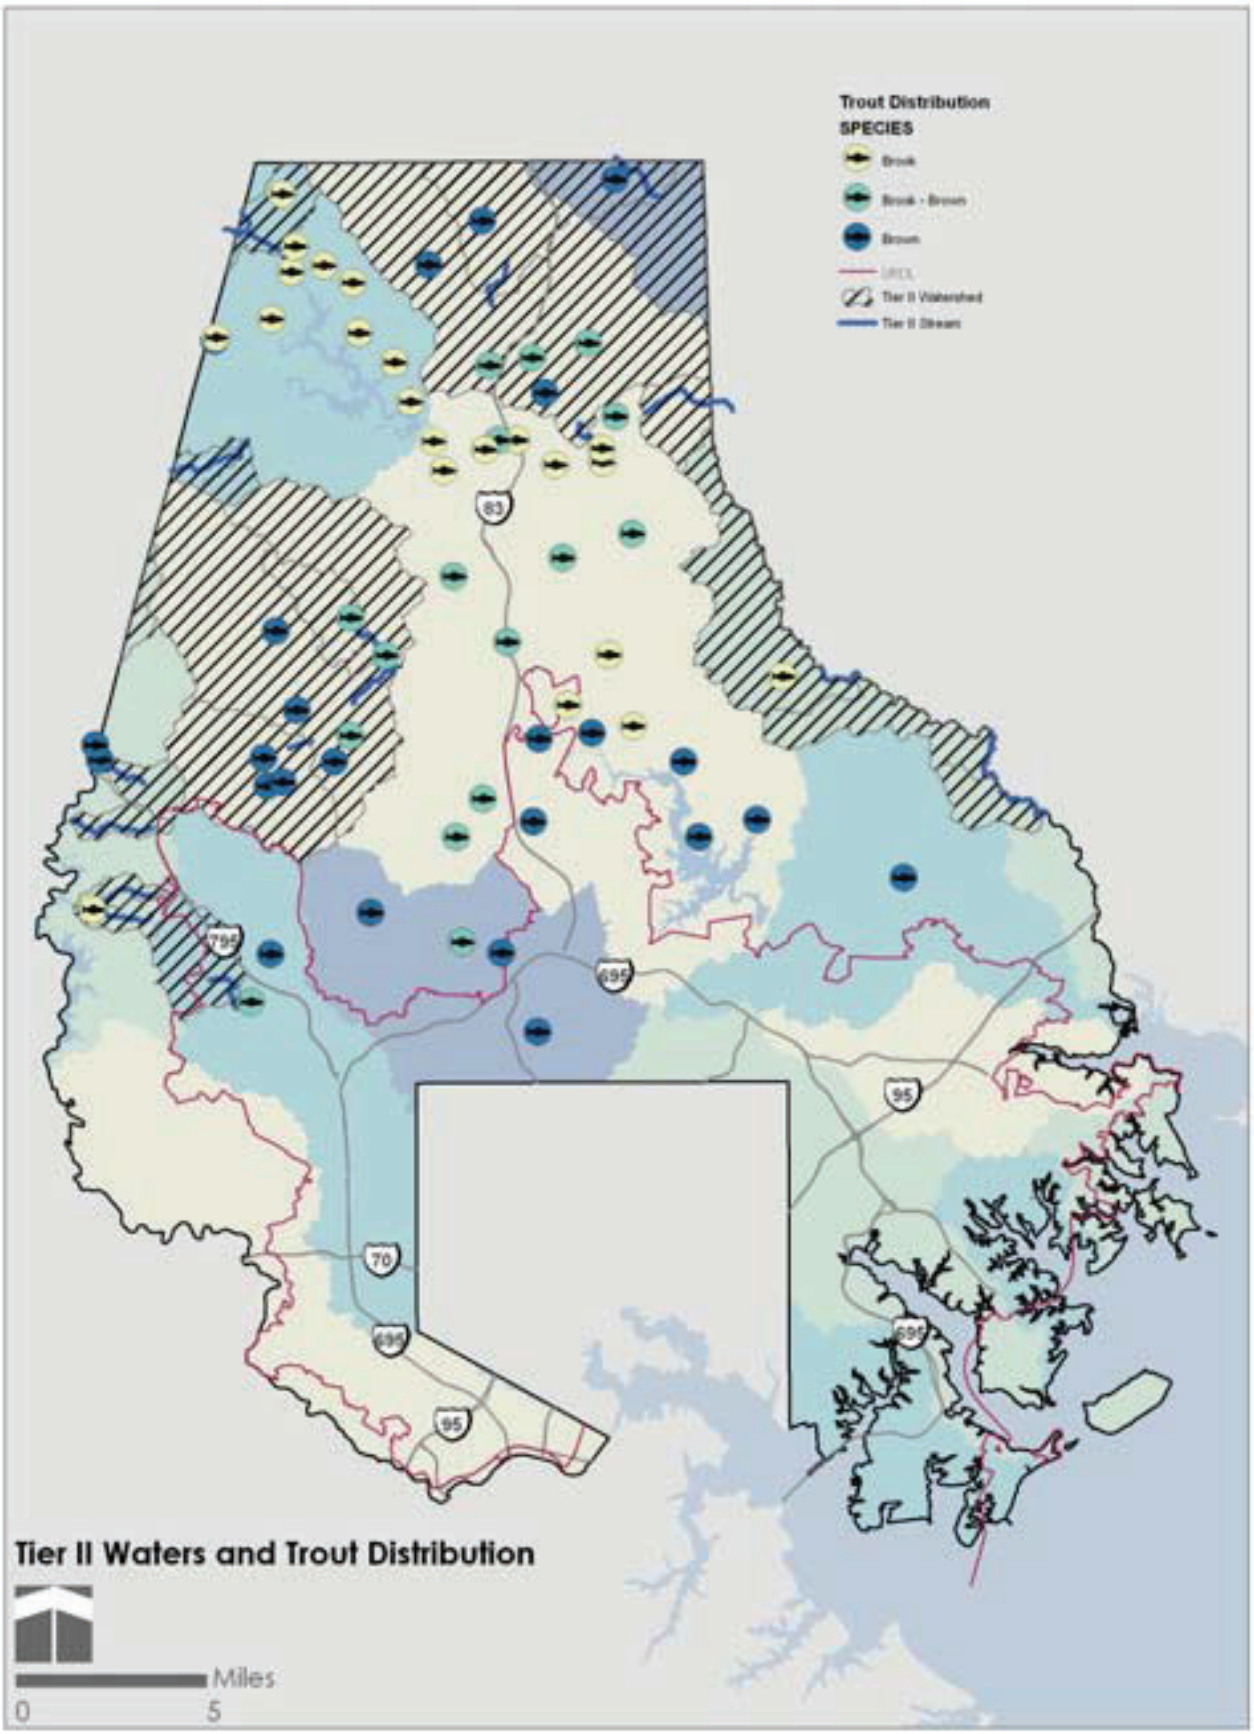
The principal regulatory requirement to address pollution impacts in urban areas is to implement the National Pollutant Discharge Elimination System - Municipal Separate Storm Sewer System (NPDES-MS4) permit. This permit requires the County to control the water quality that is discharged from its storm drain system, by implementing stormwater management, sediment control, education, monitoring, watershed management planning, and restoration programs. These programs are intended to control pollution from new development and restore

Tier II Waters and Trout

Tier II waters are identified and rated on the basis of aquatic community sampling by Maryland Department of Natural Resources. When both the fish and the bottom-dwelling invertebrate community have a rating of "good" the reach of stream represented by the sampling is identified as Tier II waters. Baltimore County has 33 miles of Tier II stream segments at 20 different sites, mainly in rural areas. The drainage area to these sites represents 23% of the County. These stream segments must be protected from degradation.

Trout are also indicative of higher quality water. Baltimore County's streams support a fairly good population of both brook and brown trout. Over 61 sites located on various streams have trout present. The trout are more wide spread than the Tier II waters, indicating that additional Baltimore County streams are still supporting aquatic natural resources.

Map 37: Tier II Waters and Trout Distribution



Total Maximum Daily Load (TMDL)

Baltimore County watersheds and tidal segments are impaired by a variety of substances, including nutrients, sediment, bacteria, trash, and various toxic substances, as well as biological impairments. The amount of each pollutant that needs to be reduced from each source in order to meet water quality standards is then determined. The model also indicates a cap for each pollutant based on the assimilative capacity of the water body. Any increase in a load from a new source must be offset to maintain the water quality standards. For each TMDL, the County is required to prepare an Implementation Plan with measurable implementation milestones and a projected timeline for meeting water quality standards.

The Chesapeake Bay is impaired by nitrogen, phosphorus, and sediment. The U.S. Environmental Protection Agency is developing TMDLs for nitrogen, phosphorus, and sediment to improve Bay water quality.

degradation caused by development that occurred prior to the current environmental protection requirements. Approximately 80% of the urban land was developed prior to environmental controls. Future permits will require preparing Implementation Plans for approved TMDLs and meeting water quality improvement and restoration milestones.

The Water Resources Element is an analysis of the adequacy of drinking water and wastewater treatment to support future population growth, and the ability to maintain and improve water quality within the County's receiving waters. The WRE analysis indicates that redevelopment will result in the greatest protection of high quality aquatic resources and reduction of pollution. The WRE is adopted as part of *Master Plan 2020.*

Watersheds

Baltimore County contains 14 major watersheds, which are identified on the basis of local stream systems and drinking water reservoirs. Seven of them are part of the Gunpowder River basin, six are in the Patapsco River basin, and one flows to the Susquehanna River basin. Watersheds are a useful framework for resource management. Individual resource elements including streams and forests are linked through ecosystem processes that operate to maintain the stability of the system.

Land use activities within watersheds affect the water quality of streams and downstream water bodies. Clearing forests increases stormwater runoff to streams, causing an increase in the amount of sediments, nutrients, and toxins and the erosion of stream channels. Changes in sediment and nutrient levels may degrade stream habitat quality. Land preservation programs that place environmentally sensitive land in permanent easements help protect watersheds and their interrelated systems.

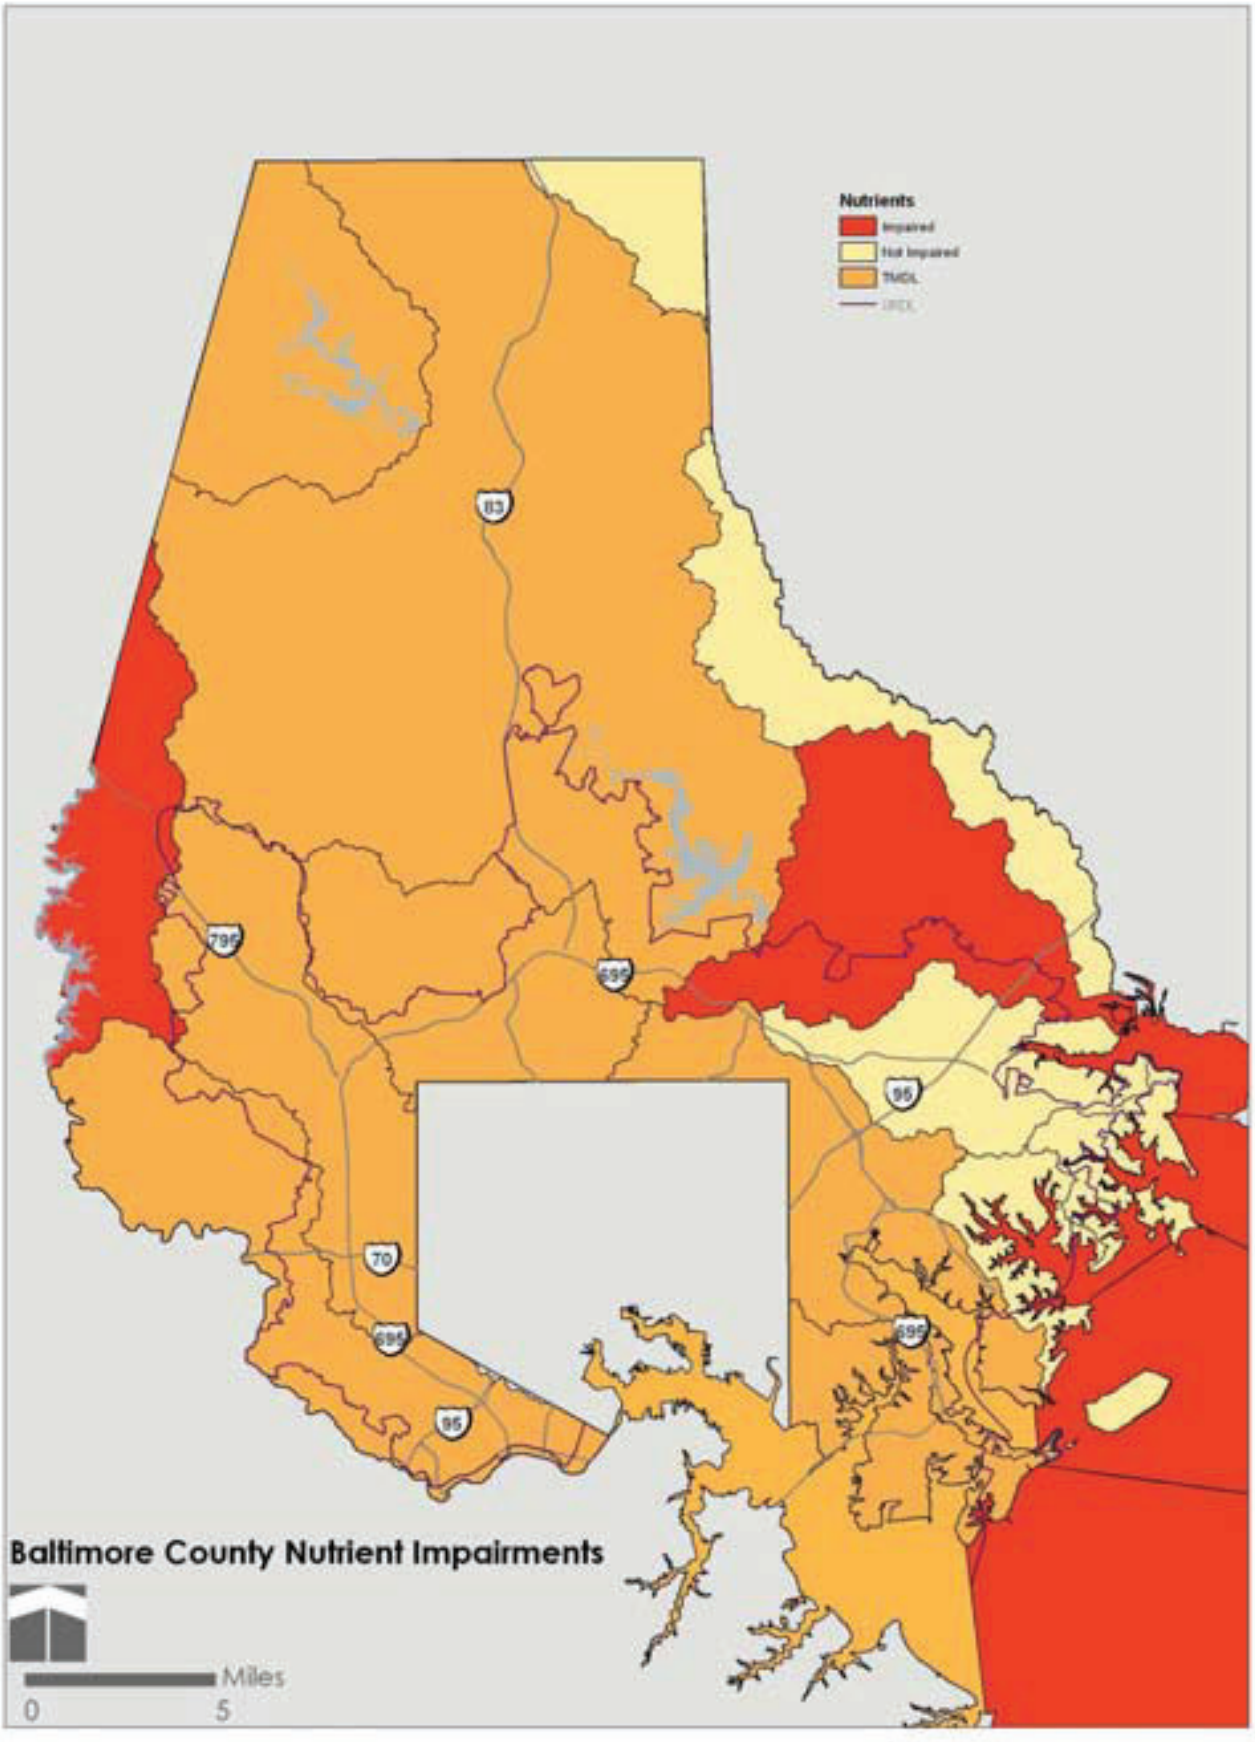
The County's watershed program consists of characterizing and prioritizing watersheds, preparing management plans, including Small Watershed Action Plans (SWAPs), and evaluating resource systems and functions at varying scales. Assessments of pollutant loads, stream stability, and forest community structure provide the framework for the implementation of capital projects, facility maintenance, education programs, and cooperative citizen actions.

Policy: Promote redevelopment and revitalization inside the URDL to reduce pollutant loads and protect natural resources.

Actions:

(1) Assure that the countywide redevelopment strategy accommodates population growth, provides maximum pollutant reduction, protects high quality waters, promotes economic vitality, and maintains a high quality of life for Baltimore County residents.

Map 38: Nutrient Impairments



(2) Include environmental policies and goals in community plans for the preservation and enhancement of functional open spaces such as greenways and wildlife habitat; the reduction of water, air, and toxic pollution and solid wastes; and the promotion of neighborhood environmental stewardship.
(3) Facilitate the redevelopment of underutilized industrial properties.

(4) Direct redevelopment efforts along the waterfront into historically disturbed, uncontrolled buffer areas in order to maximize water quality protection.

Policy: Assure protection of Tier II waters and those with known trout resources.

Actions:

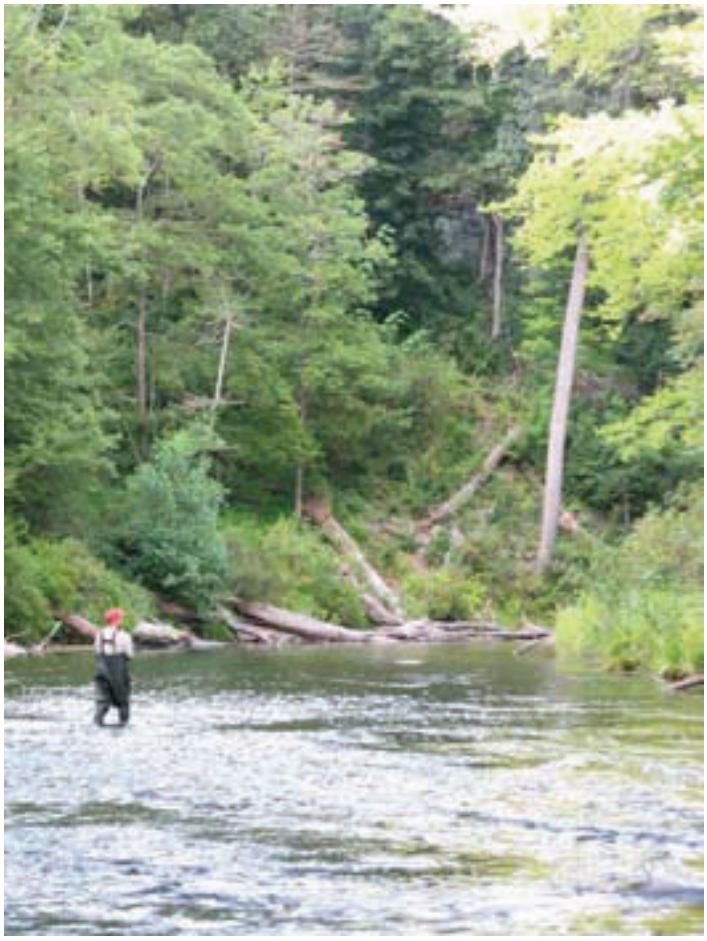
(1) Investigate the development of overlay zones for Tier II waters and those with known trout resources and evaluate the need for additional protection through development regulations.

(2) Examine the feasibility of an offset program to achieve a no net increase in pollutant loads from new development.

(3) Continue to protect water quality, streams, wetlands, floodplains, and forests from impacts of new development and redevelopment.

(4) Implement projects to restore wetlands, reestablish forests, plant stream and shoreline buffers, and stabilize stream channels in impacted watersheds.

(5) Continue to implement the 2006 Baltimore Watershed Agreement with the City of Baltimore for improved and coordinated efforts for public health, trash, stormwater management, community greening, and redevelopment.



Streams and Non-Tidal Wetlands

Baltimore County contains more than 2,100 miles of non-tidal streams and rivers, including some of the highest quality recreational fishery resources in the eastern United States and more than 1,000 miles of streams that drain to the three drinking water reservoirs. A stream system consists of a stream and its associated floodplain, wetlands, and springs. Wetland and riparian vegetation play an essential role in the natural functioning of a stream system, including maintaining base flow, regulating water temperature, controlling pollution, and providing habitat. Pollutants discharged from point and non-point sources degrade stream water quality. These sources include urban runoff (non-point sources, particularly from impervious surfaces), pollutants discharged directly to streams (point sources), and agricultural operations (non-point source). Urban non-point source types of pollution vary and include nutrients, sediments, metals, pesticides, oil and grease, salts, and other particulate and dissolved matter.

Point-source pollution, generated from wastewater treatment plants, industries, and other sources with a direct, piped discharge, is regulated by the State. Over the past several decades, channelization, encroachment of development on floodplains, draining and filling of wetlands, removal of riparian vegetation, and development or clearing of steep slopes and erodible soils has been detrimental to streams.

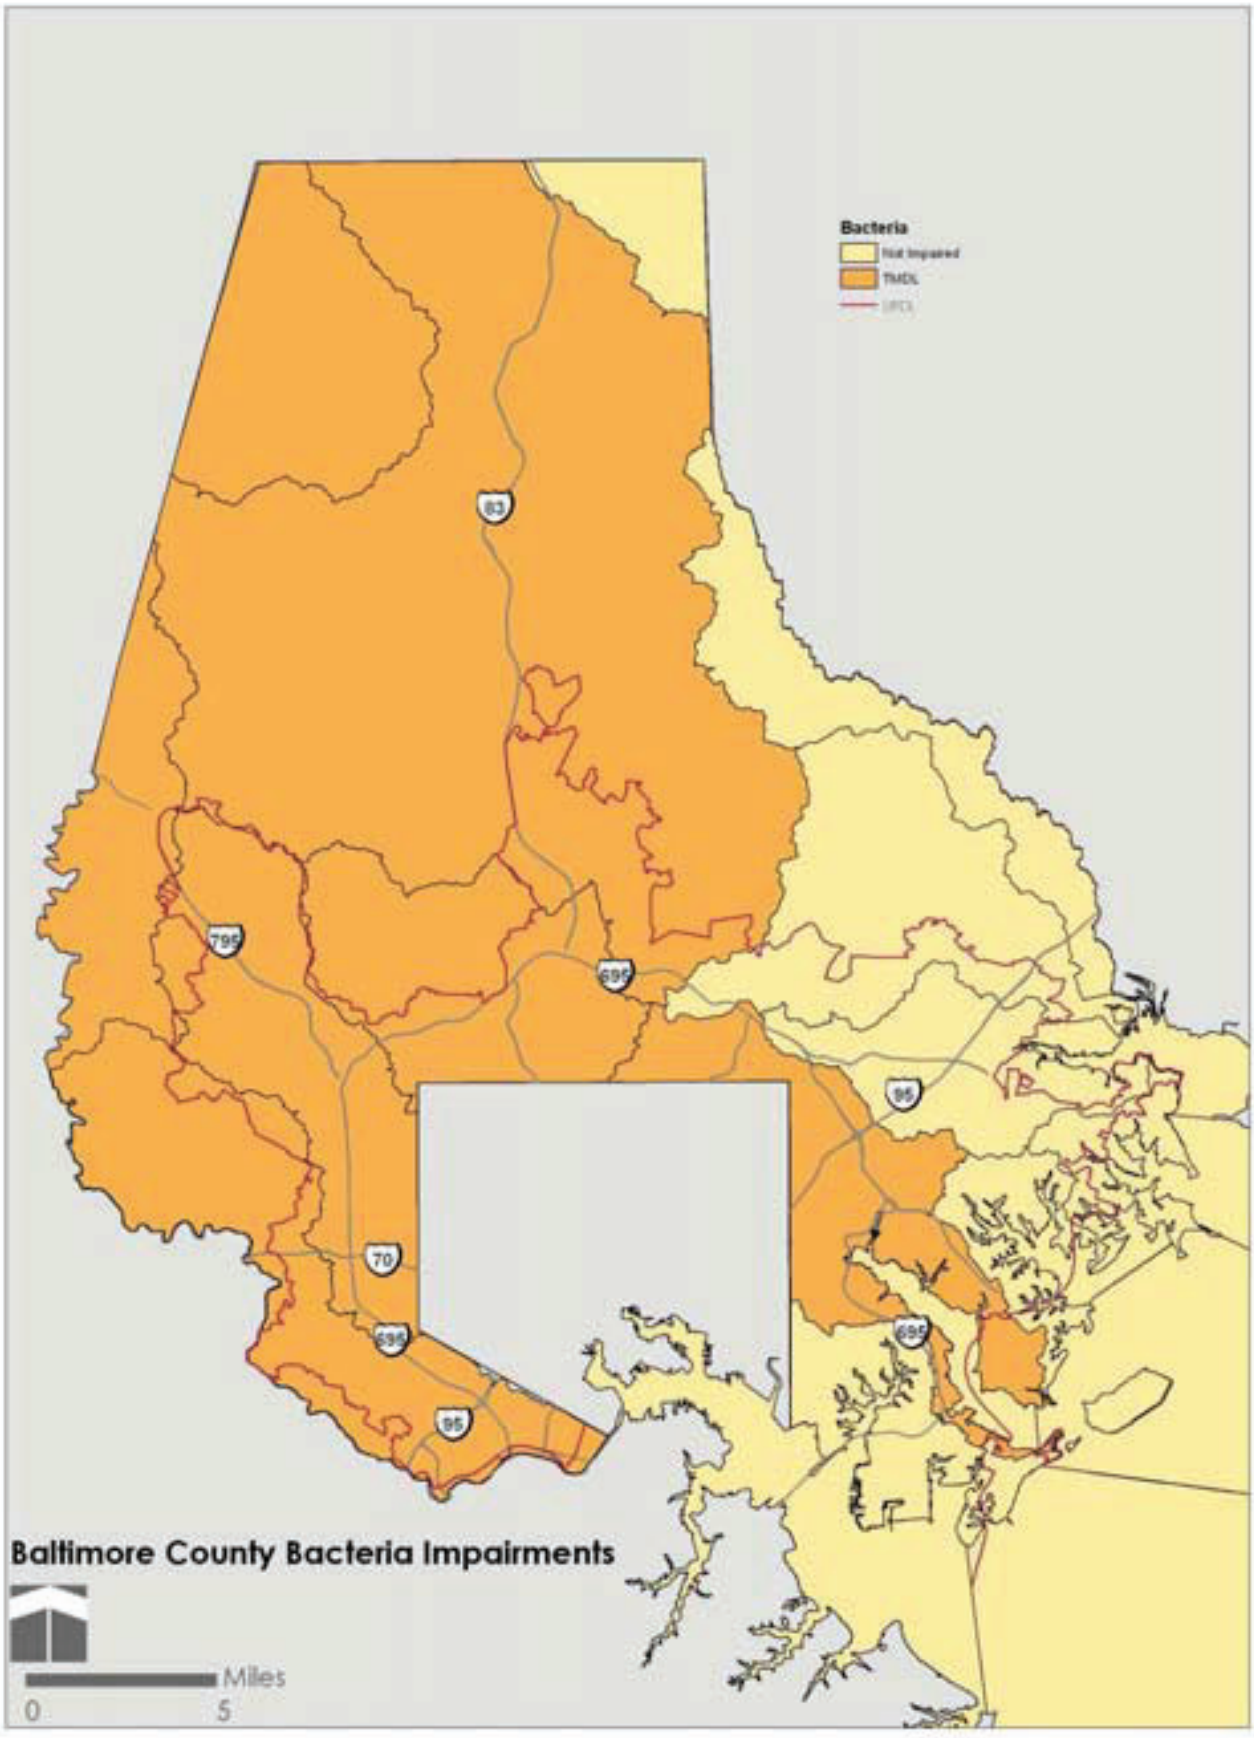
In 1987, DEPRM initiated a capital environmental restoration program to assess and identify water quality problems and implement design and construction of watershed restoration projects. The program is based on the County's 14 major watersheds, providing a comprehensive framework for protection and restoration of water resources. DEPRM has been recognized nationally for its stream restoration program and, with the completion of numerous projects, has made significant progress toward its objectives for watershed restoration. In the early 1990's Baltimore County developed regulations to protect water quality, streams, wetlands, floodplains, forests, and steep or highly erodible slopes from land development impacts. The County faces a challenge common to most areas experiencing urban growth: how to restore, protect, and enhance its waterways.

Stream Restoration

The U.S. EPA Mid-Atlantic Integrated Assessment program (MAIA) produced a document to share knowledge among state and local governments, regional offices, and non-governmental organizations. The document highlights DEPRM's stream restoration accomplishments. DEPRM's program incorporates project planning and design, communication and coordination with property owners, construction, and post-restoration follow-up. The program integrates state-of-the art techniques with an environmentally sensitive approach to stabilizing streams and reducing sediment loads, in turn enhancing stream morphology, ecological function, water quality, and aquatic habitat. Baltimore County responds to degraded urban streams with an adaptive natural channel design (NCD) approach that relies on the principles of fluvial geomorphology to evaluate stream flow, channel dimension, and bed and bank materials to optimize water and sediment movement and minimize erosive forces.

Physical changes to stream systems can be worse than pollutant runoff, point source discharges, or storm water management impacts. Since 1990, DEPRM has developed expertise in the restoration of destabilized stream channels. Reconstruction of channels applies the concepts of natural channel design (NCD) using natural materials (boulders and vegetation) in conjunction with the reshaping of the stream channels. When properly constructed, these restored streams are a cost-effective and attractive means to sustain physical stability, function, and habitat. Since the early 1990's, DEPRM has also maintained a physical, chemical, and biological stream monitoring program to determine ambient water quality and trends over time, assist in targeting restoration efforts, assess the effectiveness of restoration, and track progress in meeting TMDL pollutant load reduction requirements. The monitoring measures the abundance and diversity of aquatic life as indicators of stream quality and chemical constituents. Summary data from the biological monitoring indicate that there is fairly widespread impairment of aquatic organisms, even if only moderate, for most of the County's streams.

Map 39: Bacteria Impairments



Improvements to stream quality, in both water quality and habitat, will require a range of controls that best address specific types of pollution sources.

Policy: Continue to protect, enhance, and restore degraded waterways to meet water quality standards and permit requirements.

Actions:

(1) Continue to enforce development regulations for the protection of water quality, streams, wetlands, and floodplains.

(2) Continue to prepare and implement Small Watershed Action Plans (SWAPs) and participate in studies to identify needs and opportunities for stream restoration, wetland creation and restoration, and stormwater management.

(3) Continue to design and construct stream restoration projects using an adaptive natural channel design (NCD) approach.

(4) Incorporate stream protection policies in community plans.

(5) Continue to implement biological, chemical, and geomorphological stream monitoring programs in order to measure the long-term trends in stream quality.

(6) Identify opportunities for the creation of wetlands as mitigation for County capital projects and other land development impacts.

(7) Continue environmental education programs for schools, businesses, and homeowners for the reduction of water pollution and toxic and solid wastes.

(8) Continue to implement environmental inspection and maintenance programs such as storm drain inlet cleaning and maintenance of stormwater management facilities.

(9) Continue to identify and convert appropriate publicly owned stormwater management facilities to provide for increased water quality function.

(10) Continue to retrofit older communities to provide for stormwater treatment for improved water quality to the receiving waters.

(11) Continue to support watershed associations and citizens in stream clean-ups, stream and watershed surveys, and other restoration projects.

(12) Identify impediments to, and opportunities for tree plantings along streams on private properties, and work to plant more trees on private lands.

Stormwater Management and Sediment Control

The hydrologic cycle is a descriptive model for the movement of precipitation from the atmosphere to the earth's surface and then to receiving waters and back to the atmosphere. In natural areas, precipitation that reaches the ground infiltrates into the soil, replenishing groundwater aquifers and discharging to streams. In urban areas, precipitation that falls onto impervious surfaces runs off the surface much more rapidly. Unless properly controlled, stormwater runoff can result in stream channel erosion and the degradation of in-stream habitat and the aquatic biological community. Stormwater runoff also results in an increase of pollutants washed downstream. During the land development process, the soil at construction sites is the most vulnerable to erosion in streams and other surface waters. Soil erosion from construction activity may exceed 100 to 400 times that obtained from an adjacent undeveloped land or woodland in an equivalent period of time.

About 80% of Baltimore County was developed prior to the advent of stormwater management regulations, which damaged many waterways. In 1968, Baltimore County enacted Maryland's first local sediment control ordinance. Since the mid 1970's, Baltimore County has been a statewide leader in recognizing the impact of stormwater runoff generated as a result of land development. Stormwater management requirements have evolved over time. Initial

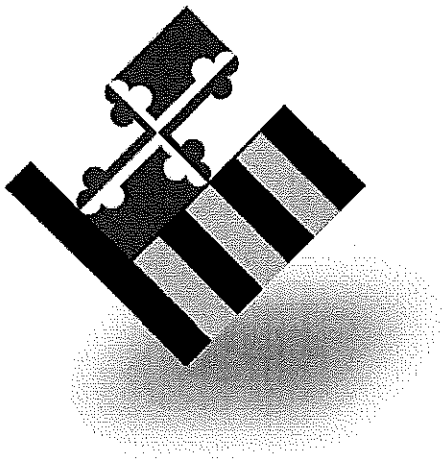
WATER RESOURCES ELEMENT



BALTIMORE COUNTY

MARYLAND

Draft presented to
Maryland Department of Planning
June 14, 2010

Executive Summary

Introduction

Developed in response to House Bill 1141, entitled *Land Use – Local Government Planning*, this Water Resources Element (WRE) will assist in protection and restoration of all water resources, including the Chesapeake Bay. The WRE is a thorough examination of all water resources in Baltimore County, Maryland. It includes public and private drinking water supplies, public and private wastewater disposal systems, and stormwater runoff from existing and proposed land uses. The intent of the analysis is to ensure safe and adequate supplies of drinking water, adequate facilities for wastewater disposal, protection of high quality natural resources, and a reduction *and cap* of pollutant loadings from point and non-point sources. Incorporated into the County's land use plan - *Master Plan 2020*, the WRE will inform policies and actions to be implemented over the next decade and beyond.

Growth

The population growth rate in Baltimore County is projected to slow, however, there still is an anticipated increase in the number of residents. Planning is crucial for any growth: it must be managed to protect natural resources, and assist in the restoration of degraded water bodies. Furthermore, responsible growth must be *sustainable*: the County must meet present and future needs, while preserving the environment and resources for future generations.

Drinking Water and Wastewater Disposal

Drinking water and wastewater disposal are either public or private systems. The public Baltimore Metropolitan Water Supply serves properties located "inside" the "Urban Rural Demarcation Line" (URDL), closest to Baltimore City. In a few growth-restricted areas, water and sewer is supplied due to public health issues related directly to preserving the quality of the Chesapeake Bay. The water system is supplied by 3 reservoirs located in Baltimore County, supplemented by the Susquehanna River. The public system providing wastewater treatment includes two large facilities and one smaller facility. Outside the URDL, there are private single homes, business well and septic systems, and multiple privately owned institutional, community and multi-use wastewater treatment facilities. For the most part in the rural areas, private water wells and on-site disposal systems are utilized. These public and private water supplies were examined to ensure they continue to be properly protected, and have an adequate supply to serve future populations. Pollutants discharged from all wastewater treatment facilities: public, private, community and individual systems, were analyzed to affirm they do not exceed permitted levels, accounting for the anticipated increase in the number of users.

Stormwater Runoff

The major contributor to pollution of our water bodies is how land is developed and used. Increased impervious surfaces from parking lots, driveways, houses and buildings, result in greater volumes of water runoff, eroding stream banks, and carrying nutrient-laden sediments and other contaminants. Agricultural uses, without benefit of *best management practices*, can cause similar effects, with additional contamination by inappropriate use of chemicals on crops. There is also considerable pollution from urban and suburban lawns. This Water Resources Element examines existing conditions of land uses, and determines current pollutant loadings. Based on projected population figures, and various proposed land use scenarios, future loadings are also calculated.

A Sustainable Plan

To meet the Total Maximum Daily Loads (TMDLs) required by state and federal regulations, the best future land use plan was selected from six (6) scenarios analyzed. As discussed in Chapter 5, it is demonstrated the future growth pattern allowing for the lowest pollutant loadings is a mix of high density mixed-use, revitalization of older neighborhoods with single-family homes and townhouses, including conversion of existing development to parks. Policies and actions to enable implementation of this land use pattern, preserving and protecting our high quality waters and resources in our rural areas, are proposed in this Water Resources Element. These policies and actions are further strengthened and enhanced throughout *Master Plan 2020*. The plan is based on a *sustainability framework* that will allow for appropriate development *and* redevelopment, while ensuring a brighter future for our citizens, and a cleaner, healthier natural environment. Baltimore County is strongly committed to improving the health of our local water bodies and the Chesapeake Bay.

Towson, Maryland 21204

August 27, 2010

Dear Mr. Keller: Pat

The Maryland Department of Planning has completed the coordinated review of the draft Water Resources Element for Baltimore County dated June 14, 2010. The draft element was sent to the Maryland Departments of Transportation, Environment, Natural Resources, Business and Economic Development, Housing and Community Development, and Agriculture. Comments received after the date of this letter will be forwarded to you upon receipt.

In addition to the requirements of HB 1141, our planning staff has reviewed the elements for consistency with the Planning Act of 1992, the Smart Growth Areas Act of 1997 and other State growth management principles and policies. Our review comments are attached for your consideration.

If you have any questions please feel free to contact me at (410) 767- 4500 or Steve Allan at (410) 767-4572 with any questions or concerns.

The Maryland Department of Planning looks forward to continued planning coordination with Baltimore County.

Sincerely,

Peter Conrad, AICP
Director, Local Government Assistance

MDP

Maryland Department of Planning
Review Comments
Baltimore County Water Resources Element
August 27, 2010

The WRE is very close to completion, but would meet the requirements of HB1141 with recommended comments. The most important comments to include are in **bold**. The WRE does not yet effectively address the following purposes of the law and/or State guidance, as follows:

- For each watershed, identify current WWTP discharge locations and loads (MDP M&G 26, p. 12).
- Does the WRE make findings that address estimated changes in both point and nonpoint nutrient loads (MDP M&G 26, pp. 39-40).

Overall WRE comments:

- The Master Plan indicates that the WRE is incorporated as part of the Master Plan (Master Plan 2020, p. 24). The WRE (and not just the WRE executive summary) should be adopted as part of the Master Plan.
- The County should be commended for:
  - including a WRE that examines multiple possible land use scenarios (p. 27) and a Master Plan that chooses the least impactful land use plan examined by the WRE with regard to both nutrient loading and impervious surface (Master Plan 2020, p. 24).
  - recognizing in its WRE that all new development impacts must be offset (pp. 17, 27) and including a policy to investigate the feasibility of an offset program (p. 55).
  - using the WRE as a preliminary assessment to determine whether local and Chesapeake Bay TMDL allocations can be met, in part through the proposed land use plan (pp. 27-28, 39).
- **The County should include a forecast on how future water and sewer demand would change given the WRE's recommendation of a land use plan that focuses on redevelopment within the URDL.** The water and sewer demand forecast (p. 5) appears to be based on the County's current land use plan. An alternative land use plan that focuses on redevelopment likely will increase demand for public water and sewer above current forecasts. If the County believes that the water and sewer demand forecast provided in the WRE adequately captures expected demand under the alternative land use scenario (i.e., redevelopment within the URDL), then the WRE should clarify that this is the case.
- The County should review its Land Preservation, Parks, and Recreation Plan and identify measures that will implement the Water Resources Element strategies. Referral of these relevant sections within the Land Preservation, Parks and Recreation Plan should be cited within the Water Resources Element.
- SB276, passed in the 2009 Maryland legislative session, sets a statewide land use goal of increasing the current percentage of growth in Priority Funding Areas (PFAs) and decreasing the current percentage of growth outside of PFAs. SB276 also requires local governments to develop

a percentage goal towards achieving the statewide goal. Although the new annual report requirements (including the local land use goal) under SB276 will not be filed until July 1, 2011, Baltimore County should consider (and discuss) whether its estimates of the percentage of growth to be served by public water and sewer will be sufficient to achieve the statewide land use goal. Statewide in Maryland, the current (as of 2006) percentage of growth in PFAs (not including "comment areas") is 68% http://www.mdp.state.md.us/msdc/PFA/Resid_Growth/by_County/PFA_cnty_index.htm.

- Please consider the following edits to add clarity:
  - There is a possible typo (p. 2) where the text refers to the county's population rate as decreasing to "3,900 people per year in the near future." To add clarity the text could use the 3,800 figure found in the chart for 2020 annual change in population.
  - The list of appendices (p. 6) is confusing because it does not refer to the appendices within the WRE. The WRE should clarify where these documents are located and/or assign them a letter not already used in the current appendix. For example, Appendix A is listed as the WRE Flowchart. However, Appendix A in the WRE is actually a technical memo on existing water quality conditions.

Comments on source water protection:

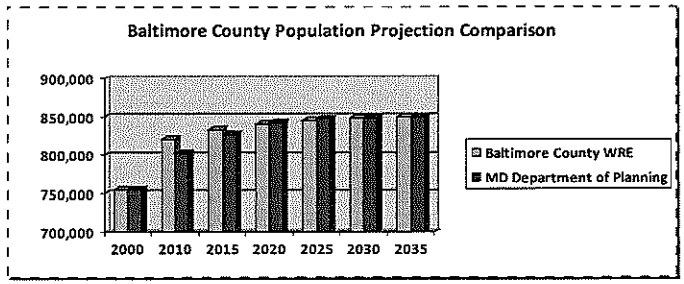
- The WRE could also include a few sentences regarding regional efforts to protect the Susquehanna River as a drinking water source since the County relies on the river in part for its drinking water needs.

Comments on identifying suitable receiving waters:

- **The WRE should provide a point source loading forecast for and indicate the discharge locations of the Patapsco WWTP, Back River WWTP and Richlyn Manor WWTP.**
- **The WRE should list the Maryland Tributary Strategy point source caps for the County's WWTPs.**
- **The WRE also should provide a combined point and nonpoint source loading forecast.**

Comments on population projections:

The population projections in the WRE are suitable for planning purposes. The long range (2020 through 2035) population projections presented in the WRE are consistent with county level population projections prepared by the Maryland Department of Planning (MDP) for Baltimore County (See Chart 1).



The short range (2010 and 2015) population projections presented in the Baltimore County Water Resources Element are slightly high relative to Maryland Department of Planning population projections. This difference is due to our incorporating the slowdown in population growth over the last several years as documented by the U. S. Bureau of the Census' population estimates through July 1, 2009.

The time period displaying the highest difference is 2010 where the WRE projection is 18,774 persons above the MDP projection. This difference shrinks in 2015 with the WRE population projection higher by 6,888 persons. Both short term projections presented in the WRE represent a less than three-percent difference compared to the MDP population projections for the same years.

Other Comments on methodology:

The population forecasts provided in the Draft of the Baltimore County WRE are generally found to be in-line with MDP's historical and projected total population estimates for Baltimore County, last updated in December 2008.

The methodologies used to determine the household population distribution from TAZ and Census Tracts to WQPA's, the modification of 2002 MDP Land Use data to 2005 Land Use data, low density residential modifications and the population change analyses are thoroughly explained and generally well executed, thanks in-part to the concise diagrams and thorough discussions found throughout the WRE Technical Memo B.

Date: June 14, 2010

Mr. Richard Josephson
Director of Planning Services
Maryland Department of Planning
301 West Preston Street, Suite 1101
Baltimore, MD 21201-2305

Dear Mr. Josephson:

Attached please find four (4) copies of the draft Water Resources Element (WRE) prepared by Baltimore County for your review. Thank you for offering to distribute to all appropriate Maryland State agencies for their review and comment. Staff looks forward to hearing from you soon with all comments on the WRE draft.

Staff convened a committee with representatives from the Departments of Environmental Protection and Resource Management and Public Works to develop the WRE. Furthermore, staff from all Baltimore County agencies are working on *Master Plan 2020*, which will propose policies and actions to implement strategies to further the goals of the WRE. It is anticipated that the adoption of *Master Plan 2020* by the Planning Board and the County Council will occur this autumn.

If you have any questions regarding this document please contact Bruce Seeley, Master Plan Coordinator, at (410) 887-3480. We look forward to hearing from you soon.

Sincerely,

Arnold F. 'Pat' Keller, III
Director

BALTIMORE COUNTY, MARYLAND
BUREAU OF TRAFFIC ENGINEERING AND TRANSPORTATION PLANNING
INTER-OFFICE CORRESPONDENCE

DATE: December 14, 2022

TO: D'Andrea Walker., Acting Director
Department of Public Works and Transportation

FROM: Angelica Daniel, Bureau Chief
Bureau of Transportation

SUBJECT: 2023 Basic Service Map – Transportation:

Our bureau has restudied all of the intersections currently on the Basic Services Map for 2022 as well as continued the update of all other signalized intersections, with the exception of the following intersection due to construction.

Honeygo Blvd & White Marsh Blvd (MD 43)	LOS = D

As of now the proposal is to retain its level of service from 2022.

CHANGES:
Based on these studies over the past year, we are recommending the following change to the Transportation Map for 2023:

Ebenezer Rd / Pulaski Hwy (US 40)	F to D

With the change above, there are eleven "F" level intersections and one "E" level intersection that are being proposed to control development on the 2023 Basic Service Transportation Map. These intersections are:

Baltimore Nat'l Pike (US 40)/ Rolling Rd N	LOS = F
Bellona Ave / Charles St (MD 139) / Kenilworth Dr	LOS = F
Bloomsbury Ave / Frederick Rd (MD 144) / Ingleside Ave	LOS = F
Burke Ave / Burke Ave W / York Rd (MD 45)	LOS = F
Falls Rd (MD 25) / Seminary Ave W (MD 131)	LOS = F
Falls Rd (MD 25) / Joppa Rd W	LOS = F
Falls Rd (MD 25) / Greenspring Valley Rd (MD 130)	LOS = F
Falls Rd (MD 25) & Shawan Rd & Tufton Ave *	LOS = F*
Frederick Rd (MD 144) / Rolling Rd S (MD 166)	LOS = F
Joppa Rd E & Loch Raven Blvd (MD 542)	LOS = F
Perring Pkwy (MD 41) / Putty Hill Ave	LOS = F
Joppa Rd E / Perring Pkwy (MD 41)	LOS = E

*The intersection of Falls Rd(MD25)/Shawan Rd and Tufton Rd is outside the URDL, therefore no commuter shed will be associated with this intersection.

At the intersection of Ebenezer & US-40, the northbound leg was widened to accommodate a fully assigned right turn lane. As a result, the level of service improved from an F to a D.

Enclosed is a list of the current D, E, and F intersections for your use. Should you have any questions in regard to the Basic Services Transportation Map for 2023, please contact me at ext.3554.

ELLICOTT CITY, MD – Howard County Executive Calvin Ball today announced that due to steps taken by the County's Department of Public Works' Bureau of Utilities to reduce the number of sanitary sewer overflows throughout the county, the Maryland Department of the Environment (MDE) has terminated its Sewer Consent Decree with the County. MDE established the decree with the County in March 2010 to decrease the number of sanitary sewer overflows caused by infiltration, grease and capacity.

"Sanitary sewer overflows don't just threaten our public health and property, but also threaten our environment, resulting in serious damage to and pollution of our streams, rivers and the Chesapeake Bay. I applaud our Bureau of Utilities team for meeting this challenge head on and executing solutions that ensure our sanity sewer systems operate effectively and efficiently."

Calvin Ball Howard County Executive

Since 2010, the Bureau of Utilities has implemented several capital projects to study and evaluate sewer service throughout the county and rehabilitate public sewer house connections. The Bureau has also standardized its method of reporting overflows and expanded its sewer system geographic information system mapping to include all water and sewer assets and locations. All new sewer main installations are also inspected to insure they meet current standards.

The Bureau of Utilities annually cleans out one-fifth of the County sewer mains and inspects one-twentieth of County sewer mains via closed circuit television video to identify any inflow and infiltration in the sewer system, and make repairs as needed. Staff also routinely inspect the County's extensive network of sanitary sewer main outfalls to assess conditions and make any necessary repairs.

As nearly 50 percent of all sewage overflows nationwide are caused by homeowners who improperly dispose of everyday fats, oils and grease (FOG), the Bureau of Utilities strives to educate residents, as well as business owners, on how to properly dispose of FOG. Since 2011, there have only been three overflows related to commercial businesses as sources of FOG.

Finally, the County is diligent in its oversight of maintenance and calibration of the sewer flow meters which measure the flow of collected sewage to both the Little Patuxent Water Reclamation Plant as well as the Patapsco Wastewater Treatment Plant.

"Since the enactment of the decree, because of the diligent maintenance efforts of our Bureau of Utilities, we successfully reduced our overflows by nearly 70 percent. Which puts us well below the State average."

Sewer Consent Decree Between HoCo, MD Terminated

The state has terminated its sewer consent decree with HoCo after the county implemented several capital projects to improve its system.

HALLAHAN COMMENTS TO ADMINSTRATIVE LAW JUDGE MURPHY–GREENSPRING MANOR CASE #2021-0250-SPH

All opinions expressed in this document are those solely expressed by my wife and me from our single family detached home at 76 Seminary Farm Road, at the corner intersection with Mays Chapel Road in The MEADOWS of Green Spring community (Noted as Lot 7 in the Greenspring Manor Development Plan).

Our overall opinion is that we are not opposed to the proposed 61 home Greenspring Manor community, but believe that the MAYS CHAPEL ROAD EXTERNTION SHOULD NOT BE APPROVED AND ANY ROAD PHYSICAL CONSTRUCTION SHOULD NOT BE ALLOWED, SINCE THE "GATED EMERGENCY ACCESS ONLY" WILL NOT BE SUSTAINABLE OVER TIME

If the current proposed Greenspring Manor Development Plan is approved with an extended Mays Chapel Road gated for "Emergency Access Only", our view is that our entire Meadows community will be negatively impacted by significant increases in Mays Chapel Road traffic when the "Emergency Access Only" condition is removed. Rationale supporting our view is as follows.

In the Day 4 public hearing on October 27,2022, Atty. Rosenblatt (Atty. for Developer Atapco) called upon Traffic Engineer Nick Driban of Lenhart Traffic Consulting. As part of his testimony, Mr Driban made the following two statements relevant to the proposed Mays Chapel Road Extension.

- If a proposed community is under 100 living units, Baltimore County requires only one access road. Greenspring Manor is 61 living units and therefore requires only one access road, as provided by its connection to Joppa Road.
- If the "Emergency Access Only" requirement is removed, Mays Chapel Road through the Meadows, as well as the primary road through Greenspring Manor, would "quickly become a major thruway" from Seminary Avenue to Joppa Road with an increase in traffic of over 400 cars per day.

The extended Mays Chapel Road "Emergency Access Only" designation may last for a year or two or possibly for a decade, but eventually will be removed due to increased pressure from one or all of the four following conditions as noted below.

- Tally Ho Road affiliated groups increase their pressure for a Seminary-Joppa pass-through road to reduce traffic on Tally Ho Road.
- An unfortunate emergency delay for an ambulance or fire truck due to a malfunction with the gate opening at the sign for "Emergency Access Only".
- Significant pressure from Baltimore County officials and commuter groups publically recognizing that a traffic increase on Mays Chapel Road through to Joppa Road is directly related to a traffic decrease at the increasingly high volume and failed Falls Road-Seminary Avenue intersection.
- The un-scientific, but publicly accepted, concept from the baseball movie Field of Dreams, "If you build it, they will come."

Considering all the above, we therefore suggest to ALJ Murphy that the current Manor Development Plan be revised to include the following THREE MINOR CHANGES to the Development Plan assuring that the current Mays Chapel Road extension will never occur and a pass-through road "major thruway" from Seminary Avenue to Joppa Road will never be created.

- Eliminate a 50 foot easement for extending Mays Chapel Road between Manor Lots 23 & 24
- Distribute the now surplus 50 feet of Manor lot lines among Manor Lots 21 through 27.
- Modify the currently proposed 14 foot high berm along rear property lines behind Manor Lots 19-27 to include a 14 foot high by 50 foot wide continuous berm along the revised rear property lines for Manor Lots 23 &24

As stated at the beginning of this document, all opinions expressed are those solely expressed by my wife and me. However, we sense that there are numerous current Meadows residents who concur with our opinions.

Respectfully, Fred & Jan Hallahan

Mike - I would like to respond to your request regarding Mr. Chen and others.
However, I have limited skills regarding doing things like this.
Would you please coach me through the process?
I am available on Thursday (6/10) after 11:00 a.m.
If that is not a good time for you, give me another.
Peggy

I favor this project over other possibilities like more Johns Hopkins Hospital North or another Peddy expansion, both of which will make the expected traffic impact from the future residents of Greenspring Manor pale to that of a fly vs cicadas which never go away.
> I would also point out for consideration something not mentioned by the Seminary Ridge residents who prefer no one but themselves should use the public roads of their community linking Seminary Road to Joppa Road for decades before Seminary Springs , Boxwood, the Meadows or the North side of Seminary west of Thornton were ever built out and inhabited.
> Anyone who lives in this area knows the sight distance on Seminary Ave.from the entrance to Seminary Springs to the Mays Chapel South entrance to the Meadows and Boxwood sucks and is very dangerous. In less than .1 of a mile between those entrances, Seminary Ave crests to a degree that westbound Seminary traffic towards Falls road from Seminary Ridge entrance come bombing over the hill between Seminary Springs sole entrance and Mays Chapel Road South, many times above the speed limit with less than 50 yards from that entrance. All communities South of Seminary Ave in this distance for westbound traffic usually have to stop to make a left into each community.. My own personal experience over the last. 12 years is that many drivers travelling fast when I was stopped would nearly crash into me while stopped. Some of the younger drivers going to a Falls Road private school per their window decals would give me the finger as they ran onto the northern grass because I was waiting to make a turn. Impeding their preferred path. I learned to habitually turn my left turn signal on at the Seminary Springs entrance; and check my rear view mirror to see if there were any cars cresting the first hill west of Seminary Ridge who could see my signal if observant which helped.
> I recognized many of the Seminary Ridge resident commenters and would ask them to consider the width of Seminary Ave at their entrance , the better sight distance both ways on Seminary at their entrance, and the winding path and speed bumps and

MPT Ex 1 P2

stop signs aplenty within their community public road network. Their sight distance on Joppa Road end is also very good.
> Finally, when Boxwood, Seminary Springs, and the northern Seminary Ave communities west of Seminary Ridge were developed, many had only 1 entrance/exit. I was involved for a Client in the proposed development on Seminary Ave proposed by Grace Fellowship, a megachurch. I also worked on it as part of the Coalition in opposition. I still regret that Seminary Ridge chose not to participate in opposing that megachurch development. Fortunately, the Church Elders chose to withdraw their proposal.
Respectfully, Michael P. Tanczyn, Esq.

EX 1 B 3

Dear Mr Chen, I have lived in Boxwood since January 2009. I practiced land use law as part of my practice in Towson since 1976. I reviewed this Proposed residential project and listened to the CIM . I also reviewed the communications you kindly attached to your meeting minutes. I favor this project over other possibilities like more Johns Hopkins Hospital North or another Peddy expansion, both of which will make the expected traffic impact from the future residents of Greenspring Manor pale to that of a fly vs cicadas which never go away.

I would also point out for consideration something not mentioned by the Seminary Ridge residents who prefer no one but themselves should use the public roads of their community linking Seminary Road to Joppa Road for decades before Seminary Springs , Boxwood, the Meadows or the North side of Seminary west of Thornton were ever built out and inhabited.

Anyone who lives in this area knows the sight distance on Seminary Ave.from the entrance to Seminary Springs to the Mays Chapel South entrance to the Meadows and Boxwood sucks and is very dangerous. In less than .1 of a mile between those entrances, Seminary Ave crests to a degree that westbound Seminary traffic towards Falls road from Seminary Ridge entrance come bombing over the hill between Seminary Springs sole entrance and Mays Chapel Road South, many times above the speed limit with less than 50 yards from that entrance. All communities South of Seminary Ave in this distance for westbound traffic usually have to stop to make a left into each community.. My own personal experience over the last. 12 years is that many drivers travelling fast when I was stopped would nearly crash into me while stopped. Some of the younger drivers going to a Falls Road private school per their window decals would give me the finger as they ran onto the northern grass because I was waiting to make a turn. Impeding their preferred path. I learned to habitually turn my left turn signal on at the Seminary Springs entrance; and check my rear view mirror to see if there were any cars cresting the first hill west of Seminary Ridge who could see my signal if observant which helped.

I recognized many of the Seminary Ridge resident commenters and would ask them to consider the width of Seminary Ave at their entrance , the better sight distance both ways on Seminary at their entrance, and the winding path and speed bumps and stop signs aplenty within their community public road network. Their sight distance on Joppa Road end is also very good.

Finally, when Boxwood, Seminary Springs, and the northern Seminary Ave communities west of Seminary Ridge were developed, many had only 1 entrance/exit. I was involved for a Client in the proposed development on Seminary Ave proposed by Grace Fellowship, a megachurch. I also worked on it as part of the Coalition in opposition. I still regret that Seminary Ridge chose not to participate in opposing that megachurch development. Fortunately, the Church Elders chose to withdraw their proposal. Respectfully,

Michael P. Tanczyn, Esq.

Councilman Patoka, Chief of Public Works, and Chief of Planning,
Dear Councilman and Division Chiefs
I forward my comments re Greenspring Manor proposed development.which I favor. Additionally, you may well remember that both Meadows 199 homes and Boxwood with 27 homes and 11 plus acres of open space only share 1 exit/entrance at present. I suggest the Countie's prior wisdom about bifurcating Mays Chapel North from Mays Chapel south at Seminary Ave was prudent and foresaw what has evolved as the Falls Road multiple failed intersections with 20 tomatoes in an 8 tomato can.. Any move to create a County desired cutthrough will devalue both of these communities as well as
Atapco's proposed development. Atapco has offered significant public improvement contributions to Joppa Road widening, and storm water management and their plan if improved as requested will enhance the neighboring residential communities with the possibility of shared. walking paths in common areas which I and my neighbor have striven to create for Boxwood in my 12 years here. I can tell you Seminary Springs residents utilize the Boxwood paths in good weather already. Thank you for considering my comments. Best, Mike Tanczyn

Adam, Sure, I have Dr appt at 8am out by 9am. I then am due at Ladew Topiary Butterfly House by 12:20pm. Tell me when works for your schedule as I will be busy at Butterfly House until 3:50 PM and gates close at 4PM. I sent you pix for prefiling for hearing. Before we speak, I am also working on another theory that the County Planning Office when Seminary Ridge Plat was approved in March 1970 as the only connector from Seminary on the North to Joppa road on the South expressed the County's future plan for getting to Joppa in the event of traffic backups in the future on Falls at Seminary and Joppa and Falls Rds. I am verifying every other near community on North side of JoppaRd and North and South sides of Seminary Ave located west of Thornton road did not have 2 similar access points to both Seminary and Joppa road. I will let you know what I find when we speak Monday. Best, Mike Tanczyn, Esq.

Forest Buffer Alternatives Analysis

Dear Mr. Canoles:

The Department of Environmental Protection and Sustainability (EPS) has reviewed an alternatives analysis, initially received on May 20, 2021, in accordance with Article 33, Title 3, Section 33-3-112(c) of the Law for the Protection of Water Quality, Streams, Wetlands and Floodplains. Section 33-3-112(c) states that roads and SWM and drainage devices are a few of the limited items and practices permitted in the Forest Buffer provided no other feasible alternative exists and that impacts to water quality have been minimized inasmuch as possible.

The initial analysis evaluated impacts to the required Forest Buffer Easement (FBE) for the construction of a public roadway and the creation of a stormwater quality and quantity management (SWM) facility that will serve a proposed 61-lot residential subdivision. However, this alternatives analysis was revised pursuant to our design meeting of July 28, 2021 with the development team for the widening of West Joppa Road to install a deceleration lane and to address new utility connections for the existing dwelling to remain. A second revised alternatives analysis plan further refining those water and sewer house connection designs was received by EIR on August 18, 2021 in response to our August 11, 2021 comments. A combination preliminary Forest Buffer Protection and Forest Conservation Plan (FBP/FCP) included with the analysis illustrates mitigation of the impacts at a 1:1 ratio with tree plantings that will fill in lawn and row crop areas and will delineate the Forest Buffer Easement between the resources and the proposed dwellings as well as West Joppa Road.

In all, five alternatives were evaluated for ingress/egress. Additionally, several designs were also considered for utility connections, SWM and access to the existing homestead. The preferred design of the interior "Public Road A" will result in 0.7 acres of direct impact to the100-year floodplain and FBE due to filling to elevate the roadway beyond the floodplain. An additional acre (1.0 Ac.) of secondary impact will occur, as the floodplain area upslope of the roadway connection will be excluded from being accessed by floodwaters. The other alternatives for access were rejected due to traffic safety, potential flooding, or neighborhood

concerns over excessive traffic in interior roadways. Required road widening along West Joppa Road will permanently impact 0.3 acres for the creation of a deceleration lane and the installation of a sidewalk within the existing County right-of-way. Lastly, the existing dwelling is being required to connect to metropolitan water and sewer service. Consequently, a new gravity-fall sewer connection to the County main in West Joppa Road is proposed within the limit of disturbance (LOD) associated with the removal of the existing driveway, since this dwelling will access West Joppa Road via "Public Road A". The proposed sewer line will cross the extensive floodplain and FBE at its narrowest width along the prior driveway alignment. A 0.07-acre maintenance area for the sewer would be sustained within the FBE. The FBE and floodplain to be impacted is currently maintained lawn or fallow row crop field. The applicant proposes planting over 2.07 acres within the remaining FBE as mitigation for the impacts, which would mitigate the impacts at a 1:1 ratio.

This Department has reviewed your analysis and has determined that the most feasible designs have been selected for the access road, utility connections, and SWM facility. Furthermore, we acknowledge that the mitigation described above will adequately minimize the proposed impacts to water quality, aquatic resources and the FBE. Therefore, the preferred designs of this infrastructure in the latest alternatives analysis are hereby approved in accordance with Section 33-3-112(c) of the Baltimore County Code with the following conditions:

1. The impacts to water quality and the Forest Buffer Easement shall be mitigated at a 1:1 ratio by planting 2.07 acres of Forest Buffer Easement onsite. Trees shall be native deciduous species a minimum 1-inch caliper, planted at a density of 200 stems per acre, and adequately sheltered. This mitigation can be included in the FBP/FCP for the 17,424 square feet of mitigation required as a condition of the companion forest buffer variance.

2. Any portions of the proposed Forest Buffer Easement temporarily disturbed by construction or driveway removal activities shall be stabilized at the end of each day in accordance with standard sediment control practices. Restoration seeding of disturbed areas shall be conducted with a diverse, native meadow seed mix, which **does not** contain Kentucky K-31 tall fescue.

3. The final FBP/FCP detailing the 2.07-acre FBE planting and including an itemized cost estimate must be approved by EIR prior to approval of any grading/sediment control plan for the project.

4. Impacts to the 100-year floodplain must have the necessary State and/or Federal authorizations in place prior to commencement of construction activities. Documentation of all State and Federal authorizations to impact waterways, wetlands and associated buffers shall be provided to EIR prior to County grading permit release.

5. Prior to grading permit approval, an Environment Agreement shall be signed, and a Forest Buffer Protection security based on 110% of the EIR-approved cost estimate shall be posted in accordance with the standard Forest Buffer Protection security policy. A separate Forest Conservation planting security will also be required at that time.

6. The following note must appear on all subsequent plans submitted for this project:

   - "An alternatives analysis was approved on September 21, 2021, by the Baltimore County Department of Environmental Protection and Sustainability in accordance with Section 33-3-112 of the Law for the Protection of Water Quality, Streams, Wetlands and Floodplains to facilitate infrastructure and utility connections. Conditions were placed on this approval to reduce water quality impacts, including vegetative stabilization using a native seed mix and planting in excess of 2.07 acres of fallow Forest Buffer Easement."

It is the intent of this Department to approve this alternatives analysis subject to the above conditions. Any changes to site layout may require submittal of revised plans and an amended alternatives analysis.

Please have the party responsible for meeting the conditions of this approval sign the statement on the following page and return a signed copy of this letter to this Department within 21 calendar days. Failure to return a signed copy may render this approval null and void, or may result in delays in the processing of plans for this project.

If you have any questions regarding this correspondence, please contact Michael S. Kulis or me at (410) 887-3980.

RECEIVED
AUG 18 2021
ENVIRONMENTAL IMPACT REVIEW

RE: Greenspring Manor
2310 West Joppa Road

Dear Mr. Kulis,

Thank you for your continued review of the referenced project. As noted in your August 11, 2021 comment letter we have been working with your department to address the County Code requirements relative to the Law for the Protection fo Water Quality, Streams, Wetlands and Floodplains and the Forest Conservation Act. Your most recent comment letter outlined four issues related to our July 30, 2021 submission that required additional attention/justification. These issues and how they have been addressed are provided below:

1. Can the proposed water house connection for Lot 1, the existing home, be relocated outside the buffer?

The attached plan shows a relocated water line alignment that avoids impacts to the forest buffer. The water line has also be located to minimize impacts to specimen tree.

2. Please relocate the proposed gravity sewer connection for Lot 1 so that it will be installed within the LOD of the driveway to be removed and quantify the impacts.

The sewer line alignment as been revised and the sewer connection will be installed within the LOD of the driveway to be removed. Though the installation of the sewer is a temporary impact as the LOD will be restored to grade and revegetated, we have identified the 2,760 sq.ft. area as a permanent impact because access to the sewer line will need to be maintained within the buffer. We have proposed that a 10 foot wide access easement will be provided for the sewer line maintenance within the buffer. The 0.06 acres of permanent impact will be addressed by the planting of 0.06 acres of buffer on the site. Mitigation credit for this obligation has been added to FCE/FBE 1.

3. Show and assess impacts to specimen trees outside the FB/FC save areas.

The critical root zones for specimen trees 4, 5, 6, and 7 have been added to the plans. These trees are located within proximity of proposed improvements. In light of the CRZ locations, the sewer and water line alignments have been revised to minimize CRZ impacts. The only tree with significant root zone impact will be ST 7, a 36" white pine, and the utility improvements will result in impacts to only 26% of the CRZ and therefore the tree can retained. The final FCP will include details and specifications for root zone protection including root pruning and protective fencing.

Disturbances associated with relocation of the driveway, as was required by DEPS to minimize permanent impervious surface within the buffer, will occur within the root zone of specimen trees 3, 4 and 5. This work, however will be limited to the existing driveway footprint and will not require excavation or fill. The existing driveway will be removed and restored, over-paved, or removed/re-paved, as needed, in this area. Protective fencing will be provided to protect the adjacent root zones. We do not anticipate that this work will adversely impact the adjacent trees given that the driveway currently existing within their root zones.

4. The preliminary FCP/FBPP may have to be further revised to mitigate for additional unavoidable impacts.

The PFCP has been updated to show the critical root zones and additional tree protection measures for the specimen trees to be retained outside of any easements. The PFCP has also been updated to correct the FC worksheet calculation and the planting areas have been revised accordingly.

The FBPP has been revised to include additional mitigation area necessary to address the sewer line crossing of the buffer. Final planting schedules, specifications and details will be provided on the Final Forest Conservation and Forest Buffer Protection Plan.

Thank you again for your time and efforts in this matter. Please do not hesitate to contact me if you have any further questions.

Sincerely yours,

John Canoles

Part B. Property Information

Property Address/Location: 2310 W Joppa Road, Brooklandville, MD 21022-0285

Tax Account Number(s) 0812000275

Subdivision/Property Name: NA

Tax Map 60 **Parcel No.** 449

Acreage/Lot Size 39 acres

Zoning DR-1 and DR 2

Water: public **Sewer:** public

Part C. Describe the purpose and need for the project (e.g., a stream crossing is needed to access the property).

The project will require impacts to the 100 year floodplain and forest buffer for access to the property and for a gravity sewer connection for the existing home.

Part D. Describe the existing site constraints. This section must be accompanied by a plan as described in the instructions accompanying this application.

The 100 year floodplain and the associated forest buffer extend across the entire Joppa Road frontage on the property. To gain adequate access to the site for the proposed community the applicant will be required to provide road widening and construct the road through the floodplain and the buffer. The construction of the driveway will result in 0.7 acres of direct impact to the floodplain and the buffer but will also result in the reduction of the floodplain due to the fill required to elevate the roadway above the floodplain such that the total buffer impact in this area has been defined to be 1.7 acres.

Areas upslope of the access road that will be outside the revised floodplain limits will be used for stormwater management and associated grading.

Grading is proposed within the floodplain/forest buffer to remain to increase the floodplain storage downslope of the access road. This grading is a temporary disturbance and will be stabilized and revegetated.

Road widening along the road frontage of Joppa Road will require impacts to 0.3 acres for the road improvements and installation of a required sidewalk. These impacts will

occur within the proposed road right of way.

Unavoidable impacts to the buffer are also required to install a gravity sewer connection for the existing home. The County is requiring that the house be converted from private to public sewer and the only gravity sewer connection available is located in Joppa Road and required access through the buffer. A 0.06 acre maintenance area will be maintained within the buffer.

Overall impact permanent impact to the buffer/floodplain complex will be 2.06 acres.

The floodplain and forest buffer to be impacted by the project are currently utilized for crop production.

Part E. Describe all of the alternatives which have been investigated which could achieve the purpose and need for the project. Identify the preferred alternative, and provide supporting documentation to indicate why the remaining alternatives were eliminated from consideration.

The Baltimore County Regulations for the Protection of Water Quality, Streams, Wetlands, and Floodplains 33-3-112 (c)(2) (I) indicates that roads, bridges, trails, storm drainage, stormwater management devices and practices, and utilities approved by the Department are authorized within the forest buffer provided that an alternatives analysis has clearly demonstrated that no other feasible alternative exists and that minimal disturbance will take place. The proposed development includes impacts to the forest buffer that qualify as approved uses within the buffer. These includes the access road and associated SWM facilities, the required widening of Joppa Road, and a sewer line connection for the existing home.

Access Road/SWM -

The proposed access road will require impacts to the floodplain and buffer. Since the floodplain extends across the entire Joppa Road frontage of the property there are no viable alternatives that could avoid these impacts. The project engineer and applicant have considered other site design alternatives in an effort to reduce impacts and have found that the proposed site design is the most practical and efficient way to address the access needs of the project and the goals of the regulations.

While the road construction itself only directly impacts 0.7 acres of the site, the fill required to elevate the road above the floodplain will impact and reduce the backwater floodplain that extends across the site. As such, all areas upslope of the driveway will be removed from the floodplain and considered as part of the impact calculation. Consideration of this secondary impact on the resources was taken in the alternative analysis for the project.

The following alternate site design elements were considered for the proposed access road.

Alternate 1 - Existing Driveway Alignment

The original site designs anticipated utilizing the driveway location of the existing home as the entrance road location. This location was preferred from an engineering standpoint because it allowed for a preferred lot layout within the interior of the site. This alternate was rejected once the extent of the floodplain was determined. Constructing the road in that location would have greater impact on the floodplain as it would create more area upslope (northwest) of the driveway that would be impacted by the required floodplain fill. The floodplain configuration and resulting buffers along the eastern edge of the site also impacted the preferred and anticipated lot layout, reducing the preferred functionality of having the access road in this location.

Alternate 2 - Access from May's Chapel Road

The project engineer considered the possibility of using May's Chapel Road as the primary access to the site to avoid impacts to the floodplain/buffer along Joppa Road. This alternative, however, would not reduce the impact on the floodplain/buffer because the property fronts on Joppa Road and the project will be required to provide an entrance to Joppa Road for emergency vehicle access. Due to the nature of the emergency access, this road would have to be elevated above the floodplain and would result in impacts to the buffer.

Mays Chapel Road is a narrow community road with limited road width. The use of this access point was not selected for the primary access to the site because the adjacent community has expressed opposition to this proposal. In an effort to appease community concerns about traffic that would flow through the existing community and for safety and emergency access, the use of Mays Chapel Road is limited to an emergency access connection between the proposed community and the adjacent neighborhood.

Alternate 3 - Shift Access Alignment to the Northwest

The project engineer investigated the possibility of shifting the access road alignment to the northwest, toward the property line, to reduce the floodplain impacts upslope of the access road. This alternate was rejected because it would require a curved entrance drive that would require much more paving than the proposed alignment. This alignment also does not allow for stormwater management to be installed outside the 100 year floodplain, unless that too was elevated above the floodplain on the southeast side of the road. Filling to create the SWM facilities on the downslope side of the driveway would result in comparable impacts to the floodplain and buffer, as compared to the proposed alignment, thus making the alternative undesirable.

Alternate 4 - Lowered elevation of roadway

By lowering the access road the extent of the floodplain could be maintained over the road, similar to condition of the existing driveway. This alternate could reduce the overall impact to the floodplain and buffer, however, would not provide safe access to the site during a flood event. If the driveway is not elevated above the floodplain it could be underwater and inaccessible during a flood and therefore this option was rejected.

Alternate 5 - Use of Flood By-pass Culverts in Access Road

The fill to elevate the roadway out of the floodplain causes the reduction of the floodplain upslope of the driveway. This indirect impact could be reduced if culverts were installed within the roadway fill to allow flood waters to move through the road fill and into its full extent upslope of the roadway. This alternate was rejected because the calculated floodplain extends offsite into the adjoining developed office park and this alternate would leave those offsite properties at risk for flooding. By addressing the flooding condition onsite, downslope of the roadway, this project can help eliminate this offsite flooding issue.

Joppa Road Widening -

There are no alternatives possible for the required road widening. This work is necessary to ensure traffic flow is safe and efficient for the proposed community and traffic users on Joppa Road. Because the floodplain/buffer extends across the entire frontage of the lot there is no way to make these improvements without impacting the buffers. The road improvements and sidewalk have been required by the County and therefore are not at the discretion of the applicant.

Sewer Connection -

The existing home is currently served by private water and sewer services. As part of the development plan, the home will be upgraded to public water and sewer. Unfortunately, due to the elevation of the home and the available sewer line connections, there are no gravity sewer connections available that will not result in impacts to the forest buffer. The applicant has been able to find a water line connection route that will tie into the proposed community to avoid buffer impacts for this use, but connecting the sewer into the future community lines would require a grinder pump service which is not the preferred method by the County. The use of the grinder pump has increased risk of failure that can cause secondary release issues. Given that the gravity sewer connection can be installed in a location well outside the standard stream buffers and avoids all direct stream/wetland issues, this alternative is the most practicable for the project. Further, to minimize impacts within the buffer, the sewer line will be run within the footprint of the existing driveway to be removed. This means that the overall disturbance within the buffer will be minimized to the extent required to remove the driveway.

A ten foot wide sewer access right of way is proposed over the sewer connection to allow for future maintenance. This area will not be planted or placed within a Forest Conservation Easement and may be mowed periodically to maintain access to the sewer line. No impervious surface or other formal uses will be permitted within this maintenance right of way and it will continue to be within the recorded Forest Buffer Easement.

Part F. Describe how the impacts associated with the proposed alternative will be minimized.

The proposed project has avoided all wetland and buffer impacts for the lot development of the project. The only impacts to the forest buffer are associated with a broad backwater floodplain that is currently utilized for crop production.

The proposed road alignment and design will minimize resource impacts by its location and configuration. The road impacts are situated toward the outer edge of the backwater floodplain and will help to reduce the flow of water potential on an adjacent property.

During construction the impacts associated with the proposed alternative will be minimized by using appropriate sediment and erosion control techniques

Further, to offset the proposed impacts the floodplain and forest buffer the project will provide afforestation of the buffer and floodplain to remain on the site at a 1:1 ratio. This conversion of the floodplain and buffer from active agriculture to forest and field will significantly improve water quality of the adjacent waters.

A Preliminary Forest Buffer Protection Plan is included with the application.

DEVELOPMENT PLAN CONFERENCE COMMENTS
EPS Project ID: M210057
Project: Greenspring Manor
Address/Location: 2310 West Joppa Road
Date & Time: August 11, 2021 @ 10:00 am
Assignee: Jeannette Applauso, P.E.

STORMWATER MANAGEMENT COMMENTS:

Note: Comments are advisory in nature and may or may not be applicable to this project. More specific comments will be provided with review of the Development Plan.

1. The Stormwater Management Act of 2007:

   A. The Developer is responsible to address the requirements of the Baltimore County Code, Section 33-4.

   B. Provisions for exemptions, waivers and variances for Stormwater Management (SWM) are described in this document. Exemptions, waivers and variances should be applied for and granted (or denied) by the Department before Development Plan approval is given.

   C. The Concept SWM plan must be approved by EPS before Development Plan approval.

   D. Conditions for recording plats and approving grading and building permits, as related to SWM, are also described in this document. The developer is advised to be aware of these conditions and include them in planning the project to avoid unnecessary delays.

2. General Engineering Requirements:

   A. Water quality storage volume (WQ_v), Recharge Storage Volume (Re_v) and Channel Protection Volume (Cp_v) are to be addressed using Environmental Site Design to the maximum extent practicable. If the development is in certain designated inter-jurisdictional watersheds or, if deemed necessary by Baltimore County, Extreme Flood Protection (Qf) or 100 year peak management may also be required.

   B. Please refer to the 2000 Maryland Stormwater Design Manual, Volumes I & II including the Stormwater Act of 2007 revisions, chapters on Environmental Site Design for general design criteria. Hydrology shall be in accordance with the June 1986 version of TR-55. After August 2010, project must use the latest NRCS Soil Classification at their website. Refer to Chapter 5, Environmental Site Design. Provide Environmental Site Design (ESD) to the maximum extent practicable using small-scale stormwater management practices, non-structural techniques and better site planning to mimic natural hydrologic runoff characteristics and minimize the impact of land development on water quality.

   C. The developer is responsible for addressing all applicable requirements of Federal, State and Local agencies, whether within or outside of Baltimore County, having jurisdiction over water quality, streams or wetlands.

   D. SWM Best Management Practices (BMP's) are also subject to review and approval by the Baltimore County Soil Conservation District (SCD).

E. SWM BMP's, which outfall to a Baltimore County right of way storm drain system or flood plain, will be reviewed concurrently by the Developers Plan Review (PAI) and EPS.

F. Site design must maintain, to the maximum extent possible, predevelopment drainage patterns and characteristics. Diversion of drainage is discouraged and EPS reserves the right to prohibit drainage diversions it finds detrimental.

3. Maintenance Requirements:

A. Private maintenance of SWM BMP's is acceptable. A Deed of Declaration and Easement must be executed by the developer guaranteeing maintenance of, and County access to SWM BMP's before the SWM permit security may be released. SWM BMP's in residential subdivisions are to be maintained privately by a Homeowners Association and shall be designed according to the requirements for public facilities.

4. Guidelines for Development Plan Approval:

A. Show type, size and location of all Best Management Practices (BMP's) on the Development Plan. Concept stormwater management plans must be approved.

B. Show that all outfalls from BMP facilities and bypass areas are "suitable" as defined by the Baltimore County Department of Public Works and the Department of Environmental Protection and Sustainability (EPS).

C. Show that the BMP facilities do not create a hazard. An example of a hazard would be an embankment dam located such that, in the event of a breach failure, down stream life or property is endangered.

D. List on the Development Plan any waiver or variance and give the date of approval by Baltimore County.

DEVELOPMENT PLAN CONFERENCE COMMENTS
EPS Project ID: M210057
Project: Greenspring Manor

5. Site - Specific Comments:

In addition to the above, each project will be given a brief review by EPS's Stormwater Management personnel, and a set of specific comments will be provided. The developer is responsible for addressing the following site-specific comments:

A. Water quality volume (WQ_v), Recharge storage volume (Re_v), Channel protection volume (Cp_v) are required using ESD to the MEP.
B. Overbank flood protection volume (Qp) and extreme flood volume (Qf) are also required for this project.
C. All site runoff must be conveyed to a suitable outfall without adversely affecting the receiving wetland, watercourse, waterbody, storm drain or adjacent property.
D. Provide BMP and ESD volume computations and drainage area maps indicating any by-pass areas at least four weeks prior to the Development Plan Conference. Include plans showing area(s) needed for BMP(s) as dictated by the MDE design manual. These areas should be separated to include pre-treatment, WQ_v and quantity management areas as required.
E. Building and grading permits will not be issued until BMP, ESD plans are approved.
F. This project is subject to the stormwater management requirements that Baltimore County adopted on July 2, 2001 and revised under the 2007 MDE SWM regulations for Environmental Site Design (ESD) features.
G. BMP and ESD sizing computations must be referenced to the 2000 and 2007 Maryland Stormwater Design Manual by page and section.
H. Chain link fence, meeting current County Standards, shall be used on all stormwater management facilities in residential developments that require fencing. Fence construction shall be in accordance with State Highway Administration Standard Details 690.01 and 690.02 and Maryland State Highway Administration Standard Specifications for Construction and Material Section 914.
I. Please note; on use III or IV waters, the maximum release time for Cp_v shall be 12 hours.
J. 3:1 interior slopes are required for all proposed structural stormwater management facilities.
K. Show proposed storm drains and swales to verify how proposed runoff gets to the BMP's, ESD's and SWM facilities. Swales needed as part of the SWM strategy need to be within a D&U Easement so as to be able to enforce that their operation will be maintained.
L. Show proposed BMP facility or pond contours and outfalls.
M. Show all BMP locations, easements, etc. needed to support the computations and regulations.
N. Diversion of drainage is discouraged. Diversions greater than 1 acre need to be submitted to and approved by Baltimore County Department of Public Works (DPW) prior to acceptance by EPS.
O. ESD practices must be shown in easements on plan with bearings and distances.
P. The concept stormwater plans were approved on June 23, 2021. We suggest to move the location of the swm facility as far as possible outside of the 100 year floodplain. Flood water back-up in the swm facility will increase maintenance and repair cost of the facility. Once the final swm plans are approved, the project will meet the Baltimore County Code Development Plan requirements.
Q. This project **does not** meet the Baltimore County Code Development Plan requirements at this time.

c:

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: C. Pete Gutwald
Director, Permits, Approvals and Inspections

DATE: 3/1/2021

FROM: Steve Lafferty
Director, Department of Planning

SUBJECT: CONCEPT PLAN CONFERENCE
Project Name: Greenspring Manor
PAI #VIII-0922

GENERAL INFORMATION:

Applicant Name: Atapco Properties, INC.
1 South Street, Suite 2800
Location: Baltimore, MD, 21202
Council District: Second
Growth Tier: I
Zoning: DR 1, DR 2
Acres: 39.4 gross acres ±

Surrounding Zoning and Land Use:

North:	DR 2	Residential
South:	DR 1	Residential
East:	DR 1, DR 2	Residential
West:	O3	Office

Project Proposal:

The project proposes 61 single-family homes to be built on 39.4 ±acres of land zoned DR 1 and DR 2. The site is mostly wooded and has environmental floodplains and wetlands. There is currently one existing house, which is to remain.

Project History:

The project exhibits no development history at this time.

Other Anticipated Actions and Additional Review Items:

☐ Variance	☒ Complete Streets*	☒ School Impact Analysis
☐ Special Exception	☐ Scenic Route	☐ PUD
☒ Special Hearing- F Level Intersection, Basic Services	☐ Compatibility	☐ Design Review Panel
☐ RTA Modification	☒ Section 260 Standards*	☐ Referral to Planning Board
☐ Waiver	☒ Pattern Book*	☐ Other –

* Information about the requirements for these items is located on the Baltimore County web page at www.baltimorecountymd.gov/devrev

MEETINGS

Post Submission Community Input Meeting:		Pre-Concept Plan Conference:	
Concept Plan Conference:	3/9/2021	Community Input Meeting:	
Development Plan Conference:		Administrative Law Judge's Hearing:	

ANALYSIS

Master Plan:
The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area. (CCA). Baltimore County's CCAs encompass the County's more densely populated, established communities. Nearly 75% of the County's residents live in CCAs, where there are a wide range of housing choices, small-town scale commercial centers and employment centers.
The CCA land management area designation is intended to protect and invest in these older communities, and revitalize their commercial hubs.

The "Proposed Land Use, Baltimore County Smart Coded" designation is T3 Sub-Urban. The T-3 transect is characterized by low-density residential areas, adjacent to higher zones that contain mixed-use. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

School Impact:
This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. A school impact analysis is required with development plan submittal. Information is available at the following web site:

www.baltimorecountymd.gov/Agencies/planning/devrevandlanduse/adequatepublicschoolfacilities.html

The proposal is within the boundaries of the following schools:

Riderwood Elementary School
Ridgley Middle School
Dulaney High School

EVALUATION AND RECOMMENDATION

The receipt of additional information from the Community Input Meeting or other sources may generate further comments at the Development Plan Conference.

Special Variance Request:

The applicant has requested the county to permit its development in an F level traffic shed as delineated on the 2020 Basic Services Map. This includes the intersection of West Joppa Road and Falls Road/I-83. The development access is within this failing traffic shed. The Department has received the applicant's memorandum regarding the traffic study analysis conducted in September 2020 which proposes improvements to mitigate the traffic in order to obtain a variance from the Basic Serves requirement.

The Department of Planning considers this site to be overdeveloped. Many of the lot sizes are not compatible to the surrounding neighborhoods. The number of lots should be decreased to allow for larger lots and would help achieve a design that could accommodate future improvements and yard space without the need for relief. As designed, the proposed development does not achieve the vision of the Master Plan 2020 nor the Comprehensive Manual of Development Policies. The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses. The site also would require extensive grading. The site should be redesigned to minimize cut and fill while using the natural features of the land pursuant to the Comprehensive Manual of Development Policies as well as Section 260 of the BCZR.

Residential Performance Standards:

The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to provide a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The applicant is to provide to the Department of Planning a pattern book for review. The development must be consistent with the spirit and intent of the entirety of §260 of the BCZR.

Additional Comments on the Plan:

1. Redesign the overall layout with uniform lot sizes that are more compatible with the surrounding developments and more compatible with the description of the Master Plan 2020 T3 Transect designation. Design road alignments in relation to existing topography. Minimize cutting and filling and avoid mass grading of large tracts of land where possible pursuant to the CMDP, Residential Guidelines, page 43. Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography pursuant to the Baltimore County Zoning Regulations section 260.2.A.3.
2. Remove lot 7 or reallocate it within the redesign of the site plan to avoid the awkward siting of this home.
3. Show front building orientations for all proposed dwellings.
4. Provide a landscape and lighting plan to the County Landscape Architect for review and approval. Proposed lighting should be designed at a pedestrian scale and not create light spillage onto adjacent properties.
5. Add a note to the plan stating that the maximum height for a dwelling in a DR 1/DR 2 zone is 50 feet.
6. Confirm with the Office of Zoning Review whether additional on street parking for overflow will be required.
7. Confirm by note on the plan that a minimum private yard area of 500 contiguous square feet with

a minimum 15-foot dimension is provided for each proposed lot to ensure adequate yard space pursuant to the Comprehensive Manual of Development Policies (CMDP) page 33.

8. The Department of Planning will require the proposed cul-de-sacs to be designed pursuant to Baltimore County Zoning Regulation section 260.4.B. Landscaped islands will be required unless an unforeseen hardship exists notwithstanding the proposed layout design.
9. Provide all architectural designs to the Department of Planning for review and approval. The architecture should be included in the required pattern book and show all proposed housing types. The proposed architecture should indicate proposed dimensions, materials, and colors to be used.
10. All proposed signage should be included in the pattern book and comply with section 450 of the Baltimore County Zoning Regulations. Signage should include proposed sign type, dimensions, materials, and colors.
11. Indicate in the required pattern book that Lots 2, 6, 8,15,36,46,47,52,53 and 61 are high visibility lots. It should be demonstrated in the required pattern book how these lots meet the higher quality of design pursuant to the Baltimore County Manual of Regulations Section 260.6. The pattern book should include square footage for the side facades with element count requirements.
12. The plan states that the proposed 52,000 sf HOA space will be an active recreation field. Cleary indicate whether this will be an open multi-use field, sports field, tot lot, or other open space. Clarify whether the proposed open space within the 100-year floodplain is acceptable per county open space standards.
13. Confirm with the Department of Environmental Protection and Sustainability that all wetland, floodplain and forest buffer setbacks are being met.
14. Make a clear distinction on the plan between the labeled forest buffer and forest conservation easement areas.
15. Indicate if there are any specimen trees on the site. These trees should be preserved to the fullest extent possible.
16. Any fencing around the storm water management ponds should be of high quality materials as approved by the Baltimore County Landscape Architect.
17. It is a policy of the Department of Planning that the homeowner should be able to have an open projection (i.e. rear decks) of at least 10' without requiring individual zoning relief.
18. Changes in building location or orientation, or proposed driveway location, at the time of building permit may require a determination from the zoning office of a possible amendment to the Final Development Plan (FDP). If, at the building permit stage, it is anticipated that dwelling footprints may be reversed, or that the location of garages may change from front- to side-loaded, or vice versa, a detailed alternative typical lot layout plan should be included in the pattern book.

SLOPE PROTECTION NOTE:

1. THE DEVELOPMENT AS PROPOSED WILL INCLUDE PROTECTIVE MEASURES ADEQUATE TO PREVENT EROSION OR SLOUGHING OF ANY STEEP SLOPES AS DEFINED BY SECTION 32-4-101 OF THE BALTIMORE COUNTY CODE AND PROMOTE THE PRESERVATION OF THE NATURAL TOPOGRAPHIC FEATURES OF THE STEEP SLOPE. THIS WILL BE ACHIEVED BY PROVIDING EROSION AND SEDIMENT CONTROL MEASURES IN ACCORDANCE WITH THE REQUIREMENTS OF THE BALTIMORE COUNTY SOIL CONSERVATION DISTRICT AND THE CURRENT STATE OF MARYLAND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE WILL BE SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND AREAS OF CONCERN.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. TRAFFIC SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS. PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS WILL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
8. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
9. STEAM AND GENERATOR EMISSIONS TESTING WILL BE DEVELOPED IN TWO PHASES.
10. TOTAL ADT GENERATED BY THE SITE= 600

ENVIRONMENTAL AREAS

DESCRIPTION	SQUARE FOOTAGE
EXISTING FLOODPLAIN	391,500 ±
PROPOSED FLOODPLAIN	393,200 ±
EXISTING FOREST BUFFER	609,480 ±
PROPOSED FOREST BUFFER	303,200 ±
PROPOSED FOREST CONSERVATION	42,814 ±
PROPOSED FOREST BUFFER AND FOREST CONSERVATION	270,693 ±

PLANNING

1. THE1, SERVED BY PUBLIC SEWER AND INSIDE URDL, PER BALTIMORE COUNTY MY NEIGHBORHOOD WEBSITE.
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA THAT ARE LISTED ON THE NATIONAL REGISTER OF HISTORIC PLACES, THE MARYLAND INVENTORY OF HISTORIC PROPERTIES LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY.
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.

OPEN SPACE

1. OPEN SPACE REQUIRED - 60 UNITS (60 NEW + 1 EXISTING) X 1,000 S.F. = 60,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 61.000 S.F.

   OPEN SPACE NOTES
   1. LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
   2. TEMPORARY OPEN SPACE BOUNDARY MARKERS, TREE PROTECTION DEVICES AND FOUR FOOT HIGH SNOW FENCING OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
   3. WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.

ZONING

1. EXISTING ZONING DR-1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), AND THE COUNTY LANDSCAPE MANUAL (SECTION 409.6.A.1). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL OF THE AFOREMENTIONED REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED.

SHEET NUMBER
2 OF 2

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: C. Pete Gutwald
Director, Permits, Approvals and Inspections

DATE: 8/11/2021

FROM: Steve Lafferty
Director, Department of Planning

SUBJECT: DEVELOPMENT PLAN CONFERENCE
Project Name: Greenspring Manor
PAI #VIII-0922

GENERAL INFORMATION:

Applicant Name: Atapco Properties, INC.
1 South Street, Suite 2800
Baltimore, MD, 21202

Location:

Council District: Second

Growth Tier: I

Zoning: DR 1, DR 2

Acres: 39.4 gross acres ±

Surrounding Zoning and Land Use:

North:	DR 2	Residential
South:	DR 1	Residential
East:	DR 1, DR 2	Residential
West:	O3	Office

Project Proposal:

The project proposes 61 single-family homes to be built on 39.4 ±acres of land zoned DR 1 and DR 2. The site is mostly wooded and has environmental floodplains and wetlands. There is currently one existing house, which is to remain.

Project History:

The project exhibits no development history at this time.

MEETINGS

Concept Plan Conference:	3/9/2021	Community Input Meeting:	4/27/2021
Development Plan Conference:	8/11/2021	Administrative Law Judge's Hearing:	TBD

ANALYSIS

Master Plan:
The *Master Plan 2020* "Land Management Area Plan" designation for the subject site is Community Conservation Area. (CCA). Baltimore County's CCAs encompass the County's more densely populated, established communities. Nearly 75% of the County's residents live in CCAs, where there are a wide range of housing choices, small-town scale commercial centers and employment centers.
The CCA land management area designation is intended to protect and invest in these older communities, and revitalize their commercial hubs.

The "Proposed Land Use, Baltimore County Smart Coded" designation is T3 Sub-Urban. The T-3 transect is characterized by low-density residential areas, adjacent to higher zones that contain mixed-use. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

The Department of Planning considers this site proposal consistent with the spirit and intent of the vision of the Master Plan 2020, the Comprehensive Manual of Development Policies (CMDP) and the Baltimore County Zoning Regulations (BCZR). The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses. The proposal has been redesigned to meet bulk regulations and accommodate future improvements and yard space to comply with the CMDP and BCZR without the need for relief. The lot sizes are compatible to the surrounding neighborhoods and do not adversely impact the established community. The proposal minimizes extensive grading and cut and fill, to the fullest extent possible, while using the natural features of the land pursuant to the Comprehensive Manual of Development Policies as well as Section 260 of the BCZR.

School Impact:
This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. The Department of Planning has reviewed the School Impact Analysis submitted on July 9, 2021 an offers the following comments:

- On all forms, the PAI number ought to be entered.
- On all forms, the official filing date should be July 9, 2021.
- On Form 1, there are 22 committed seats in the Riderwood Elementary School district. https://resources.baltimorecountymd.gov/Documents/Planning/apfo/committedseats.pdf
- On Form 3, the projected number of pupils (high school) is seven (7) instead of eight (8). Pupil yields from approved development in the past four (4) years ought to be selected and calculated against the official filing date of the referenced development plan.
- The above inaccuracies affect final results on Form 4.

SIA Approval Finding:

The Department of Planning finds that the subject Development Plan meets the requirements of BCC § 32-6-103 at the time of the filing date, July 9, 2021. The School Impact Analysis performed by the Department of Planning indicates that the projected enrollment for Riderwood Elementary School, Ridgely Middle School, and Dulaney High School is below 115% of the state rated capacity respectively. The projected number of students as a percentage of the state rated capacity is:

- Riderwood ES: 98.57%
- Ridgely MS: 103.55%
- Dulaney HS: 97.88%

EVALUATION AND RECOMMENDATION

The Department of Planning has reviewed the Development Plan submitted on July 9, 2021 and offers the following Comments.

Special Variance Request:

The applicant has requested the County to permit its development in an F level traffic shed as delineated on the 2020 Basic Services Map. This includes the intersection of West Joppa Road and Falls Road/I-83. The development access is within this failing traffic shed. The Department has received the applicant's memorandum regarding the traffic study analysis conducted in September 2020, which proposes improvements to mitigate the traffic in order to obtain a variance from the Basic Serves requirement.

With regard to the Special Variance request, the Department of Planning will defer and rely upon the expert judgement of the Department of Public Works and the final decision of the Administrative Law Judge.

Residential Performance Standards:

The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to provide a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The Department of Planning has reviewed the pattern book submit on July 9, 2021 and recommends approval pending the following comments below are addressed.

Additional Comments:

1. Clearly delineate and label on the plan all HOA open space areas.
2. To the extent possible, on all housing types that propose a water table, this treatment should be continued on all dwelling facades for continuity and to create a balance.
3. Show on the plan and in the pattern book the locations of all proposed signage.
4. Illustrate on the plan and in the pattern book the locations of all proposed trails, paths, and site amenities, such as the gazebo. Also, provide details and locations of all proposed trash receptacles.
5. Indicate in the required pattern book that Lots 2, 9, 10, 17, 23, 24, 37, 38, 48, 49, 54, 55 and 61 are high visibility lots. It should be demonstrated in the required pattern book how these lots meet the higher quality of design pursuant to the Baltimore County Manual of Regulations Section 260.6. The pattern book should include square footage for the side facades with element count requirements.
6. It is the position of the Department of Planning to ensure that every development in Baltimore County is aligned with the vision and goals of the Master Plan 2020, Comprehensive Manual of Development Polices and all applicable Community Plans. The vision of the Master Plan 2020 is to provide a network design that exemplifies walkability, a greater pedestrian experience, enhanced circulation, connectivity etc. The proposed Public Road "A" is proposed to provide connectivity to the adjacent community via sidewalks and a paved road that is gated and accessible by emergency vehicles only.
7. It is a policy of the Department of Planning that the homeowner should be able to have an open projection (i.e. rear decks) of at least 10' without requiring individual zoning relief.
8. Changes in building location or orientation, or proposed driveway location, at the time of building permit may require a determination from the zoning office of a possible amendment to the Final Development Plan (FDP). If, at the building permit stage, it is anticipated that dwelling footprints may be reversed, or that the location of garages may change from front- to side-loaded, or vice versa, a detailed alternative typical lot layout plan should be included in the pattern book.

BALTIMORE COUNTY, MARYLAND

SUBJECT: Development Plan Review Comments
For Floodplain Analysis

DATE: April 26, 2021

EFC for V/C D

FROM: Vishnu Desai, Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 WEST JOPPA RD

DISTRICT: 8C2

We reviewed the subject Floodplain Analysis Report dated March 6, 2021 and have the following comments.

SITE-SPECIFIC COMMENTS:

1. Engineer shall re-evaluate the hydrology represented on the drainage area map, there are a total of four (4) sub-drainage areas that should be analyzed as part of the study. There is a drainage area between the W. Joppa Road and Jones Falls Expressway that may have not been considered.
2. Additionally the report seems to only discuss an upper and middle sub-drainage northeast of W. Joppa Road. There is a lower drainage area shown on the drainage area map, but not discussed in the narrative of the report. The acreage and runoff seems to have been considered in the analysis, not absolutely sure. Please clarify the hydrology so that the drainage area map and the report are consistent.
3. There are no Tc paths shown on the Drainage Area Map for the middle or lower sub-drainage areas northeast of W. Joppa Road. The 4th sub-drainage area is not shown and devoid of any hydrologic information.
4. The County suggest the Engineer to use TR-20 to determine the 100-year peak Q for each sub-drainage area and the additive peak Q. Provide the TR-20 files in the report.
5. Engineer to provide in the report the FEMA panel or information which indicates the estimated backwater elevation of 276.0 at the confluence on the Jones Falls, as discussed in Section 4.1

6. The full scale plans (2x3) provided in the submission shall be re-numbered, two (2) of the plans are labeled as Sheet 1. The plans shall be included in a sleeve in the back of the report.
7. On the plans provide additional labeling of the contours especially the contours along W. Joppa Road and the Jones Fall Expressway.
8. Did the Engineer contact Baltimore County DPW-Storm Drain Section to see if any flooding complaints have been documented in the County's database for that area or adjacent subdivisions. If so, indicate in the report the approximate number of complaints or reports location relative to proposed development
9. The Engineering shows the proposed entrance road to the site is located within the existing Riverine Floodplain, a waiver request to permit such an improvement shall be submitted to the County (Director of Public Works) for approval.
10. Coordinate with Baltimore County DEPS regarding the location of the proposed SWM facilities in the existing Riverine Floodplain. The Jones Fall watershed requires 100-year quantity management, the proposed location of the SWM facilities may be hydraulically impacted.
11. The Flood Study indicates that W. Joppa Road is being over-topped by a 100-storm event in both the existing and proposed conditions, County requests the Engineer to model proposed improvements to meet County freeboard requirements for W. Joppa Road (County Roads).
12. In the report, the Engineer shall discuss how the culverts were analyzed (HY-8 or with HEC-RAS) and there impacts to the floodplain. This comment is somewhat related to the request in Item #9 above.
13. In regards to Jones Fall Expressway there seems to be some ambiguity, the water surface profile on the plan entitled Floodplain Profile shows the Jones Falls being over-topped. The water surface profile and cross-section 2015 in the report does not show over-topping of the Jones Falls. Please reconcile this information so it is consistent and correct.
14. Cross section No. 2015 in the report is NOT shown as a cross section on the plan entitled Floodplain Profile. The report and the plans shall be consistent in terms of information presented. There seems to be a few cross sections that do not show up consistently on profile, charts and in the report. Some cross section are labeled/shown twice, but are different sections. Make sure the information is consistent and correct.
15. For all cross sections adjacent to or directly over the existing culverts in W. Joppa Road or Jones Falls Expressway, incorporate or project the culverts on to the cross sections so the water surface elevation is shown relative the culvert or the opening.
16. Engineer to include the complete HEC-RAS file(s) in the next report submission. Not just the output file.
17. In section 4.6 Results, there is a statement that the proposed condition show no increase in 100-year ultimate conditions water surface profile as a result of this proposed development, which is logical considering the Greenspring Manor project is the last developable site within the drainage area being analyzed. The proposed condition is the ultimate condition in this specific case.

18. The title on Table 3 on page 6 seems to be a bit misleading; 100-Year Pre- and Post-Development. Was a pre-development Floodplain analysis completed on the drainage area evaluating the site in its existing condition? If so, provide that analysis and data. Is the Engineer trying to indicate the pre and post development water surface elevations are the same, further explanation may be needed?
19. Please indicate in the study any downstream impacts to properties located southwest of W. Joppa Rd and the proposed Greenspring Manor development. Will increased flooding occur on these properties and to what magnitude? Additionally, while modeling improvements to eliminate over-topping of W. Joppa Road, the Engineer shall consider downstream impacts of those improvements. Side note, I think these properties are owned by the State of Maryland.

The Engineer has clearly shown proposed site improvements (road & utilities) are within the existing County riverine floodplain. By County Code, no construction is allowed within a riverine floodplain without a waiver request submitted to the Director of Public Works for approval. Therefore, this flood study shall not be re-submitted to County for review and acceptance until such waivers has been approved or issued.

If you have any questions regarding the above comments, please contact either Mr. Vishnu Desai or Mr. Eugene Cauley at 410-887-3751.

JOHN A. OLSZEWSKI, JR.
County Executive

D'ANDREA L. WALKER, *Acting Director*
Department of Public Works and Transportation

August 18, 2021

Matthew A. Bishop, PLA, LEED AP
Kimley-Horn
210 West Pennsylvania Avenue, Suite 100
Towson, Maryland 21204

Subject: Greenspring Manor waiver to Baltimore County Code 32-4-414
Property Tax Account 08-12-000275

Dear Mr. Bishop:

Pursuant to development of the above-referenced property, this office has found that the property is not located within a special flood hazard area as shown on the Federal Emergency Management Agency's Flood Insurance Rate Map No. 245F, Community Panel No. 240010-0245F, dated August 2, 2011. The property as shown on the map is located in Zone X unshaded zones. However, there is a riverine special flood hazard area as defined in the Development Plans Review Policy Manual as having a drainage area equal to or greater than 30 acres.

This project involves development in the form of a proposed public road and roadway widening, bridges or culverts, utilities, drainage facilities grading and construction in the 1% annual special flood hazard, 100-year, riverine flood plain. Under The Baltimore County Code Section 32-4-414 (c) it states:

> "(c) *Development in flood plain prohibited; exceptions.* The county may not permit development in a riverine flood plain except for:
>
> (1) The establishment of property subdivision lines; and
> (2) The installation of a pond, culvert, bridge, street, utility, or drainage facility that the county finds is not detrimental to flood plain management programs."

After consideration of the Code above, the Department finds that the proposed public road and roadway widening, bridges or culverts, utilities, drainage facilities grading and construction for this project in riverine flood plain areas is not detrimental to flood plain management programs, subject to the following conditions:

1. The 1% annual flood plain and freeboard limits are delineated by a flood plain study certified by a Professional Engineer registered in the State of Maryland as being correct and done in accordance with the Baltimore County Department of Public Works Policy adopted August 1, 1991.

2. The flood plain study indicates no detrimental offsite impacts resulting from the grading and construction project.

3. All other governmental permits and waivers must be filed and are the responsibility of the engineer if the site is to be developed.

In conclusion, the letter of request for Greenspring Manor submission dated June 1, 2021 states the development activities "will not have negative impacts to upstream or downstream properties and are not detrimental to flood plain management programs". Based on this criteria noted above, the development will not require a waiver under Baltimore County Code Section 32-4-107 Title 8 Subtitle 3.

If you have any questions, please feel free to contact Terry Curtis at (410) 887-3117.

Sincerely,

D'Andrea L. Walker

D'Andrea L. Walker

BALTIMORE COUNTY

DEPARTMENT OF PERMITS AND
DEVELOPMENT MANAGEMENT

BUREAU OF DEVELOPMENT PLANS REVIEW POLICY MANUAL

In accordance with Section 26-283 of the Baltimore County code, regulations in this manual are intended to repeal the following sections of the Department of Public Works Development Procedures and Policy Manual adopted by County Council Resolution No. 100-85 on November 18, 1985.

Division I	*Sections 4, 5, 6, 7, 8*
Division II	*All Sections*
Division III	*Section 14*
Division IV	*All Sections*

February 27, 2002

on the existing street is approximately 5000 or more vehicles a day, an acceleration lane and a deceleration lane shall be provided. The length of these lanes may be reduced depending upon available rights-of-way and field conditions.

5. Intersection Spacing - Where possible, the distance between public or private street intersections shall be at least 100 feet, measured edge of road to edge of road. However, sight distance or traffic operation considerations may take precedence. The Department of Public Works may increase this distance requirement for arterial and major collector roads or to provide adequate stacking distance at traffic signals.

6. Median Breaks - New median breaks generally will be discouraged. However, when a new median break is necessary, a left-turn lane should be provided. When an entrance exists opposite a proposed median break, left-turn lanes should be provided in both directions. Where a new entrance is located at an existing median break, a left-turn lane should be provided.

7. Sidewalks - Sidewalks shall normally be provided along closed-section roadways in areas inside the URDL. In all other situations, the need for sidewalks shall be determined by the Director of the Department of Public Works.

8. Left Turn Lanes on Arterials - Where practical, road widening for left-turn lanes shall be provided on arterial roads where left-turning traffic would significantly impede straight-through traffic.

9. Traffic Impact Studies - A traffic impact study may be required as determined by the Director of the Department of Public Works. Upon the findings of the study, improvements along the property frontage and/or offsite may be required. The scope of the study will be determined on a case-by-case basis.

10. Perpendicular Parking – Where perpendicular parking is located on one side of a county road, maximum average daily trips is 800. Where perpendicular parking is on both sides of a county road, the maximum average daily trips is 600.

11. Traffic Calming – The use of traffic calming/management may be required where the Department of Public Works determines that such improvements are required.

B. ACCESS GUIDELINES

1. Maximum Number of Units with One Means of Access

a. Limits of Units

- 100 units with no future street extension proposed

- 150 units when a future street extension is proposed and is feasible

- >150↑ 2nd means of access must be constructed

b. Exception

These limits may be increased when restricted by a limited or controlled access highway or other physical barrier or limitation as advised by the Department of Public Works

c. Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances.

2. Number of Street Access Points - Along major collectors and arterials, access points exclusive of residential driveways generally shall be kept to a minimum of one access point for each public road bounding the property. However, additional access points may be permitted by the Director of the Department of Public Works. Minor roads may have more entrances as needed for subdivision layout.

3. Number of Driveway Access Points- The number of residential and commercial driveway access points generally shall be kept to a minimum on major collectors and arterials. This can be done by having a use-in-common driveway for adjacent lots, by having corner lots access off the minor street, or by having a private driveway for a group of lots to reduce or eliminate individual driveway access on major streets. Providing residential driveways on to major collectors and arterials should be avoided whenever possible, by instead fronting said lots onto internal subdivision roadways.

4. Use-In-Common Entrances- On major collectors and arterials, use-in-common entrances shall be considered where one property on a main street is being subdivided into several smaller parcels with frontage on the same street. Also, use-in-common entrances shall be placed on the edge of a developing property for use with an adjacent property.

C. PAYMENT FOR TRAFFIC CONTROL DEVICES. .

1. Signals Operated and Maintained by Baltimore County

a. Where a traffic signal on a public street is justified on the basis of traffic from a private entrance, the developer shall

Type of Plan: **Concept Plan**

Project Name: **Greenspring Manor**

Project Location: **2310 W Joppa Road**

PAI Number: **08-0922**

FD-R Number: **1376805**

Comments: **61 Single Family Dwellings**

1. Comment # 1 shall read; the Baltimore County Fire Prevention Code No: 3-17.

2. Comment #2 shall read; 2015 NFPA 1 Fire Code Section 18.2.4.1

3. Comment # 3 shall read; A crusher driveway for access to buildings shall be available for the use by emergency fire apparatus and capable of handling emergency apparatus weighing 70,000 lbs. when construction of any building is under roof, in accordance with Baltimore County Fire Prevention Code, County Bill No.3-17; Section 1:16.4.3.1.3

4. A separate building permit is required for the installation of a residential sprinkler system for each individual dwelling

5. The sprinkler system must be inspected by the Baltimore County Fire Marshal's Office prior to taking occupancy. (Sprinkler Hydro / Sprinkler Final).

6. Provide location of all proposed fire hydrants.

7. The private fire hydrants shall be painted " OSHA Red" to distinguish them from the public (Orange) fire hydrants in accordance with Baltimore County Fire Prevention Code, County Bill No. 3-17 Section 1: 18;5.10.5 Private Hydrant Color.

8. A separate building permit is required for the installation of a private underground fire line and shall be reviewed by the Plans Review Section of Baltimore County. A plumbing permit shall not be used to install an underground fire line.

9. All fire hydrants spacing shall be in accordance with the Baltimore County Standard Design Manual.

10. Need to provide the addresses for proposed buildings.

11. Provide name of all proposed roads.

12. The Baltimore County Fire Prevention Code, County Bill No. 3-17, Section 1:10.11.1.5, requires that the address numbers for residential properties shall be minimum of 3 inches in size.

13. The Baltimore County Fire Marshal's Office has requested that the above comments be added to the general note section of the plan. Once the notes have been added please resubmit the plan for 2nd review.

BALTIMORE COUNTY, MARYLAND

SUBJECT: Development Plan Review Comments
For CPC March 9, 2021

DATE: March 8, 2020

FROM: Vishnu K. Desai, Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 WEST JOPPA RD

DISTRICT: 8C2

We reviewed the subject plans received dated February 15, 2021 and have the following comments.

LANDSCAPE COMMENTS:

1. A Schematic Landscape Plan must be approved prior to Development Plan approval.
2. An approved Final Landscape Plan, cost estimate and security are required prior to permit approval.

SITE-SPECIFIC COMMENTS:

1. A Public Works Agreement is required for this project.
2. Provide additional details to the vicinity map like road network, road names and property boundaries.
3. Add Metropolitan District designations for sewer and water.
4. Add the Delinquent Account certification to the plan.
5. Provide additional labeling of the existing contours throughout the plan.
6. Provide note on the plan indicating if there are or are not wetlands on site. In accordance with *Baltimore County Code, Section 32-4-414*, dredging, filling or construction in any wetland is prohibited.
7. If the proposed Development is to be developed or designed in two (2) phases, please delineate phasing on the Development Plan.
8. Show the proposed first floor elevations.

9. West Joppa Road is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.
10. All proposed streets in this subdivision shall be improved with a 28-foot curb and gutter cross-section on a 50-foot right-of-way and shall be the Developer's full responsibility. Please label both the width of the road section and right-of-way on the plan.
11. The proposed cul-de-sac shall meet County standards, see Plate R-D, which requires a 60-foot turning radius.
12. **"No Parking"** signs shall be posted prohibiting parallel parking within the turnaround areas/cul-de-sac.
13. All sidewalks shall be a minimum of 5-feet wide and shall be installed in conformance with Baltimore County standards and to current Americans with Disabilities act (ADA) guidelines.
14. Developer shall extend proposed Public Road 'A' to connect to Mays Chapel Rd to the north via a 28-foot curb & gutter road section within a 50-foot right-of-way. The 50-foot right-of-way to be provided will replace the Emergency Access Easement shown on the plan.
15. Minimum width for all Drainage & Utility easements shall be 20-feet.
16. Engineer to show all existing sewer manhole numbers adjacent to the site on the plan.
17. The Developer shall provide a minimum 10-foot drainage and utility easement along all bordering property lines which are not adjacent to road right-of-way or storm drain reservations or where private easements or environmental easements border the property line.
18. The following existing 8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor

Upstream MH	Downstream MH	Length	Diameter	Status
43794	43793	137.96	8"	
43793	43792	192.31	8"	
43792	43791	87.36	8"	Part of Hopkins project
43791	43790	60.00	8"	Part of Hopkins project
43790	43789	316.80	8"	Part of Hopkins project
43789	43788	232.57	8"	Part of Hopkins project
43788	43787	159.01	8"	Part of Hopkins project
43787	43786	76.00	8"	Part of Hopkins project

Six of the segments noted above were to be addressed by the Johns Hopkins at Green Spring Station development prior to issuance of their use and occupancy permit. PAI did not enforce this requirement and the project was completed without the necessary sewer system improvements being completed.

The Greenspring Manor development may not connect to public sewer until the agreement with Johns Hopkins at Green Spring Station is enforced and all sewer improvements are completed, including the additional improvements to segments 43794-73793 and 43793-73792 noted in the above table.

19. Developer is responsible for acquisition of off-site easements for downstream sewer improvements.
20. All existing or proposed public utilities within W. Joppa Road and Mays Chapel Road shall be clearly labeled, type of utility and size. Provide the reference drawing numbers if the utility is existing.
21. Water and sanitary sewer service connections shall be shown on the Development Plan.
22. All site runoff must be conveyed to a suitable outfall without imposing adverse impacts to the receiving watercourse.
23. The existing storm drain system needs to be checked for adequacy and upgraded or provide stormwater management as needed.
24. Submit existing storm drain outfall study for review and approval.
25. Provide 100-year floodplain study for review and approval.
26. In accordance with *Baltimore County Code, Section 32-4-414*, filling within a floodplain is prohibited.
27. Developer shall investigate for adequate fire flow at the site and extend minimum 8-water main in all proposed roads serving the site.
28. Show all proposed Fire Hydrants along the proposed roads within the development. Coordinate with *Fire Protection Section* in regards to possible fire hydrants along Mays Chapel Road extension. Fire hydrant spacing and locations are subject to review and approval by the *Fire Protection Section* of the *Fire Department*.
29. Developer shall provide a **fee simple strip frontage on public road** for all meter services connected to public water main.
30. Developer shall investigate and provide pressure-reducing valve (PRV) when the static pressure exceeds 80-psi.
31. Developer's engineer has submitted a traffic impact study to Traffic Engineering Section. While the proposed development is located within a failing traffic shed, the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development.
32. This site is in a traffic deficient area with an 'F' level of service. Therefore, no building or grading permits will be issued unless allowed by the Administrative Law Judge at a Special Hearing. A traffic impact analysis will be required along with expert witness testimony at the Hearing. Approval of this development plan does not guarantee or warrant that a permit will be issued.

33. Sight lines are to be drawn from the centerline of the proposed access at a point ten feet behind the extension of the main road curb line to the centerline of the nearest approach lane on the main road.
34. The Developer shall be responsible for having all proposed street names in any new development approved by the Street Name and Address Section of the Department of Permits, Approvals and Inspections.
35. The Transportation Planning unit recommends that a multi-use path be constructed along the frontage of the property instead of the proposed sidewalk, as stated in Baltimore County's Western Bicycle and Pedestrian Master Plan.
36. Show proposed streetlights spaced per Baltimore County standards.
37. Prior to Development Plan approval, Development Plans Review (DPR, 410-887-3751) shall be contacted to schedule a field visit

* * * * *

The Development Plan when submitted will not be approved until all of the above comments, at a minimum, are properly addressed.

Subject: RE: Traffic Impact Study for 2310 W. Joppa Road

Good Morning Mike – we took a quick peak at the study. As noted, the site falls within a LOS F traffic shed, thus prohibiting development. As you are aware, the LOS F determination is based on actual peak hour field observations of the intersection. Theoretical calculations do not override our observations and ratings.

It should also be noted, that due to the Covid epidemic, these intersections along Falls Rd were not observed this year nor will they be. Therefore the F rating and associated traffic sheds will carry over to the 2021 Basic Service Map.

I'm sure this is not the news you wanted to hear but that's where we are.

Greg

Hi Greg, Kris, and Vishnu,

I'm writing to follow up on the attached traffic study that we submitted last week for your review. My client has the property at 2310 W. Joppa Road under a due diligence assessment and their due diligence period ends the end of next week.

We would appreciate the opportunity to speak with you regarding this project given the findings of the study and the location of the project with respect to the Basic Services Map and the two failing intersections per the Map.

Would you have 30-60 minutes we could set up a call to discuss on the 19th, or 20th next week?

Thanks,
Mike

Subject: Traffic Impact Study for 2310 W. Joppa Road

Hi Greg, Kris, and Vishnu,

I've attached a TIA for review. Can you please reply to confirm receipt and distribute this for review and comment as needed. When do you think you might be able to provide feedback? We have also submitted to SHA for review.

Thanks,
Mike

Subject: RE: Traffic Impact Study for 2310 W. Joppa Road

Why would they do a traffic study for a development in a F level traffic shed? Isn't this development dead on arrival?

Hi Greg,

Here is the analysis we discussed today. We would greatly appreciate your thoughts on our proposed improvements. Feel free to call any time if you have questions.

Thank you very much.

Subject: RE: Analysis for Falls and Joppa

Good Afternoon Adam-

In regards to the traffic analysis for the 2310 W Joppa Rd site, we offer the following comments:

The proposed site is currently within a failing traffic shed as identified on the 2020 Basic Service Map. Furthermore, it actually lies within overlapping failing traffic sheds from three failing intersections, Falls Rd & Joppa Rd, Falls Rd & Greenspring Valley Rd and Falls and Seminary Ave. With new traffic being introduced into the three failing intersections, improvements would also need to be done to handle additional traffic at all three intersections. Since we are required to count all three intersections at the same time per the county council bill, the three intersections along the Falls Rd Corridor from Joppa to Seminary must be analyzed together. Because of this council bill which combines the corridor into one study, the increased traffic along the corridor needs to be accounted for and improvements would also be needed at the three intersections. Because of the special conditions that are in place to study this corridor and the fact that we have overlapping traffic sheds, it is not sufficient to propose improvements to only one intersection for the approval of this site.

Given the above, we have noted that the report calls for proposed changes to the signal/striping/geometrics at the Joppa/Falls Rd intersection. The change is to remove the split phasing and go to a more conventional phasing. In addition, lane assignments were changed along Joppa and Falls to allow for double left turns on both legs. Since the proposal is to remove the split phasing, we believe that the dashed lines providing guidance to the drivers making that movement are extremely close to one another and we would have concerns making that movement. Unfortunately, the geometry of the intersection in our opinion would not be conducive to allowing this movement without the split phasing. Additionally, it does not appear that the proposed changes would bring the intersection of Falls Rd/Joppa Rd out of the failed rating given the fact that the level of service following the improvements with site traffic is worse than the existing level of service. Clearly the changes would not ameliorate the currently failing intersection.

Based upon the above information, this report does not justify approval of the additional development within the failing traffic shed.

Please contact us if you have any questions. Thank you.

Greg

The lawyers are now asking that with the improvements will the intersection operate better than existing. Need to dive into this a bit more. We need it by early next week.

Kris – looking at this – the intersection just to the north is failing badly with a 92% load in the NB direction in the PM hours. If the improvements were made to the intersection to the south as the report shows, would it help or hurt the intersection to the north? From a common sense perspective, I can't see that it would help, therefore it would improve the overall failing shed. Your thoughts?

GREENSPRING MANOR

2310 W. JOPPA ROAD

TIMONIUM, MARYLAND

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE WILL BE SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND AREAS OF CONCERN.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. TRAFFIC SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS. PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS WILL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
8. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
9. STEAM AND GENERATOR EMISSIONS TESTING WILL BE DEVELOPED IN TWO PHASES.
10. TOTAL ADT GENERATED BY THE SITE= 600

ENVIRONMENTAL AREAS

DESCRIPTION	SQUARE FOOTAGE
EXISTING FLOODPLAIN	391,500 ±
PROPOSED FLOODPLAIN	393,200 ±
EXISTING FOREST BUFFER	609,480 ±
PROPOSED FOREST BUFFER	303,200 ±
PROPOSED FOREST CONSERVATION	42,814 ±
PROPOSED FOREST BUFFER AND FOREST CONSERVATION	270,693 ±

PLANNING

1. THE1, SERVED BY PUBLIC SEWER AND INSIDE URDL, PER BALTIMORE COUNTY MY NEIGHBORHOOD WEBSITE.
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA THAT ARE LISTED ON THE NATIONAL REGISTER OF HISTORIC PLACES, THE MARYLAND INVENTORY OF HISTORIC PROPERTIES LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY.
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.

OPEN SPACE

1. OPEN SPACE REQUIRED - 60 UNITS (60 NEW + 1 EXISTING) X 1,000 S.F. = 60,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 61.000 S.F.

   OPEN SPACE NOTES
   1. LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
   2. TEMPORARY OPEN SPACE BOUNDARY MARKERS, TREE PROTECTION DEVICES AND FOUR FOOT HIGH SNOW FENCING OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
   3. WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.

ZONING

1. EXISTING ZONING DR-1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), AND THE COUNTY LANDSCAPE MANUAL (SECTION 409.6.A.1). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL OF THE AFOREMENTIONED REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONSISTS OF SINGLE-FAMILY HOMES AND AGRICULTURAL FIELDS. THE SITE DRAINS TO THE NORTH AND EAST TO TWO UNNAMED TRIBUTARIES TO THE GUNPOWDER FALLS. THE PROPOSED SITE WILL BE DIVIDED INTO FIVE DRAINAGE AREAS (AREAS 1 - 5). AREAS 1 AND 2 WILL BE HYDROLOGICALLY THE SAME AS THE EXISTING CONDITIONS. AREAS 3 AND 4 WILL BE HYDROLOGICALLY THE SAME AS THE EXISTING CONDITIONS, EXCEPT THAT THE IMPERVIOUS AREA WILL BE REDUCED BY 20% AND THE TIME OF CONCENTRATION WILL BE INCREASED BY 20%. THE PROPOSED DEVELOPMENT WILL ESSENTIALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE. HOWEVER, THE PROPOSED DEVELOPMENT WILL RESULT IN AN INCREASE TO THE 2, 10, AND 100 YEAR STORM EVENTS. THE INCREASE WILL BE MINIMAL AND WILL NOT IMPACT THE PROPOSED ULTIMATE CONDITIONS. THE INCREASE WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY # 3 REFORESTATION, # 4 FOREST CONSERVATION, # 5 FOREST BUFFER, # 6 STREAM BUFFER, # 7 WETLAND BUFFER, FOR ADDITIONAL STORAGE IF NEEDED, A POND COUNTY REVIEW, QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE PROVIDED WITHIN 2 OF THE EXPLORED STORMWATER PONDS. OUTLINE AREAS, INCLUDING LOW-RATE DETENTION FOR 50Y RESULTS IN AN INCREASE TO THE 2, 10, AND 100 YEAR STORM EVENTS.

Lutherville-Timonium, MD
Floodplain Site Work Request

Dear Ms. Walker:

In accordance with Baltimore County Code (BCC) Article 32, Title 4, Section 414 we are requesting permission to construct a new public street, utilities, and drainage facilities within a riverine floodplain for the project known as Greenspring Manor. The proposed improvements will serve a residential neighborhood on the property.

The existing floodplain is generated by a small stream located along the easternmost edge of the property. A floodplain study meeting the requirements of the Baltimore County Department of Public Works (DPW) Design Manual has been submitted to Baltimore County Development Plans Review (DPR). The floodplain study models both the pre and post construction conditions and makes clear that there will be no negative impacts to either upstream or downstream properties or to floodplain management programs.

A copy of the current draft of the Development Plan for the Greenspring Manor project is attached for your reference with the proposed road and utilities in the floodplain shown.

Given that the proposed activity only consists of a new public street, utilities, and drainage facilities and that these activities will not have negative impacts to upstream or downstream properties and are not detrimental to floodplain management programs, we are respectfully requesting that your department approve this request and confirm that no waiver is required under Section 32-4-107 of the Baltimore County Code. These activities are expressly permitted under Section 32-4-414(c), provided they are not detrimental to floodplain management programs.

Thank you for your consideration of this request.

Sincerely,

MA Bishop

Matthew A. Bishop, PLA, LEED AP

Senior Project Manager

GREENSPRING MANOR

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 5-17
2. LAGS/CAPINGS OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREE PLANTINGS AROUND THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY APPARATUS ACCESS WHEN THEY MATURE. NFPA FIRE CODE SECTION 18.2.4.1
3. A CRUSHER RUN ROAD FOR ACCESS TO BUILDINGS AND REQUIRED WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1:18:4:3.1.3.
4. A BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.5.10.9 PRIVATE HYDRANTS.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10 11:1:6, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

VEHICLE AND BIKE PARKING

1. PARKING
REQUIRED PARKING

SUITABLE OUTFALL STATEMENT

XXXXXXXXX

PLANNING

1. THIS IS SERVED BY PUBLIC SEWER AND IN/SIDE URDL, PER BALTIMORE COUNTY MY HOUSING WEBSITE
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA INCLUDED ON THE MARYLAND HISTORICAL TRUST INVENTORY (MHT), BALTIMORE COUNTY LANDMARKS LIST, OR THE REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL INVENTORY.
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.
4. A MINIMUM PRIVATE YARD AREA OF 500 CONTIGUOUS SQUARE FEET WITH A MINIMUM 15 FOOT DIMENSION IS PROVIDED FOR EACH LOT

ZONING

1. EXISTING ZONING DR-1 & DR-2
2. THIS PROJECT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 2.D AND THE COUNTY LANDSCAPE MANUAL (SECTION 405.B.4.). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL OF THE APPENDIX/FOOD RISK-LATIONS, STANDARDS, GUIDELINES, AND POLICIES ON THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED.
4. DENSITY CALCULATION IS PURSUANT TO §1B02.2 OF THE BCZR.
5. THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN §1B01.2.C(1)(B) OF THE BCZR.
6. THIS PROPERTY AS SHOWN ON THE PLAN HAS BEEN HELD INTACT SINCE 1971. THE DEVELOPERS ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
7. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
8. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 50' IN THE DR ZONES.
9. THERE IS NO ZONING HISTORY FOR THE PROPERTY.

OPEN SPACE

1. OPEN SPACE REQUIRED - 65 UNITS (43 NEW + 1 EXISTING) X 1,000 S.F. = 65,500 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 81,482 S.F.
3. ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
4. TEMPORARY OPEN SPACE BOUNDARY MARKERS, TREE PROTECTION DEVICES AND FOUR POST HIGH SIGNS FENCING OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
5. THE USE OF OPEN SPACE FOR ANY PURPOSE OTHER THAN THOSE WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE WILL BE SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF W-1 PRIORITY AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND AREAS OF CONCERN.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. INVERTS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS, PER STANDARD DETAILS R-34A AND D-34B.
6. SIDEWALKS WILL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
8. THE SITE LIES WITHIN TOWSON COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
9. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES.
10. TOTAL ACT GENERATED BY THE SITE=-0.00
11. THE SITE IS LOCATED WITHIN A W-1 AND S-1 (EXISTING SERVICE AREA) WATER AND SEWER SERVICE AREA.
12. THERE ARE WETLANDS PRESENT ON THE SITE.
13. "NO PARKING" SIGNS SHALL BE POSTED PROHIBITING PARKING WITHIN THE TURNAROUND AREA/CUL-DE-SAC.
14. ALL SIDEWALKS SHALL BE A MINIMUM OF 5 FEET WIDE. ALL SIDEWALKS SHALL BE INSTALLED IN CONFORMANCE WITH BALTIMORE COUNTY STANDARDS AND TO CURRENT AMERICANS WITH DISABILITIES ACT (ADA) GUIDELINES.
15. A PRESSURE REDUCING VALVE WILL BE REQUIRED IF THE STATIC PRESSURE EXCEEDS 80-PSI.

ENVIRONMENTAL IMPACT REVIEW

1. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT. FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.
2. ANY FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT SHOWN HEREON IS SUBJECT TO PROTECTIVE COVENANTS WHICH MAY BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICT DISTURBANCE AND USE OF THIS AREA
3. THE EXISTING WELL ON THIS SITE SHALL BE ABANDONED AND BACK-FILLED IN ACCORDANCE TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSED MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

GROUNDWATER MANAGEMENT

1. PRIOR TO RECORD PLAT APPROVAL THE EXISTING WELL(S) MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

Re: Greenspring Manor
2310 West Joppa Road
Lutherville-Timonium, MD
Culvert Design Freeboard Request

Dear Ms. Walker:

We are writing regarding an existing condition on West Joppa Road adjacent to the above-referenced project. The Baltimore County Department of Public Works Design Manual Dated August 2, 2010, Page 7-36 Item IV. Stream Crossings, A. Culvert Design, 4 provides that no *"rise closer than 3.0 feet to the low point in the established grade of the road in the vicinity of the culvert"* be permitted. The existing conditions on West Joppa Road do not comply with this provision during a 100-year storm event, and our study of the proposed conditions when this project is constructed show the same result as the existing condition. As outlined below, we respectfully request that the existing water overtopping West Joppa Road in a 100-year storm event be permitted to remain after this project is approved and constructed.

Existing Conditions:

- The existing condition at West Joppa Road along the frontage of the subject property does not meet the 3.0 freeboard requirement of the DPW Design Manual.

- A small stream exists along the easternmost edge of the property. A floodplain study meeting the requirements of the Baltimore County Department of Public Works (DPW) Design Manual has been submitted to Baltimore County Development Plans Review (DPR) to establish the extent of the existing 100-year floodplain. The results of the study show that there is ±8" of water overtopping West Joppa Road in a 100-year storm event.

- The property is currently occupied by one single-family home and the remainder of the property is actively cultivated with corn, soybeans, or other crops. A narrow-vegetated buffer exists immediately adjacent to the stream and associated wetlands. This buffer will not be impacted by the proposed development and stormwater management and permanent environmental easements will be established for the first time on this property as a result of this project.

Proposed Conditions:

- New 60 Lot Single-Family Detached Residential Neighborhood with associated public road, sidewalks, utilities, open space, landscaping, and stormwater management. Stormwater management will include both ESD and 100-year management in the form of Submerged Gravel Wetlands.

- The 100-year floodplain study referenced previously also models the post construction conditions. The results of the study show that there is no impact to the existing 100-year floodplain elevation or the depth of water overtopping West Joppa Road. Additionally, the study shows that no negative impacts are anticipated to upstream and downstream properties because of the proposed development.

Potential Solutions to eliminate overtopping and meet the 3' Freeboard requirement.

- Raise West Joppa Road 3'-8".
  - Raising West Joppa Road by 3'-8" would create many negative effects on adjacent properties including but not limited to the following:
    - The State of Maryland owned property on the south side of West Joppa Road would need to be filled 3'-8". Doing so would create drainage issues on the property, require the removal of several mature trees, and require the relocation of a utility pole. Additionally, the entrance to the parking lot for this property would be impacted and would need to be rebuilt and raised by 3'-8". Doing this would have negative impacts on the existing parking lot.
    - Raising of the road would extend beyond the extent of the frontage of the subject property at 2310 West Joppa Road. This would require impacts to the existing stream, 100-year floodplain, and wetlands in the area by requiring additional fill and or a new retaining wall to support the raised road.
    - If the road was raised 3'-8" it would create a damming effect which would have negative impacts on adjacent upstream properties. This is not permitted, nor is it sound floodplain management. To remedy this a larger culvert would need to be installed under West Joppa Road. Installing a larger culvert would have a negative impact on downstream properties because it would increase the flow of water onto those properties in a 100-year storm event.

- Increase the size of the existing culvert under West Joppa Road without raising W. Joppa Road.
  - The existing culvert is already ±12' wide but it is only ±2.5' tall. The culvert cannot be made wider because it would become wider than the receiving concrete channel on the south side of W. Joppa Road. The culvert cannot be made deeper because the bottom of the culvert is already at the elevation of the receiving concrete channel which is very flat and it cannot be made taller because it is already just below the surface of the road.

A copy of the current draft of the Development Plan for the Greenspring Manor project is attached for your reference with the proposed road and utilities in the floodplain shown.

Given that (1) the overtopping of West Joppa Road is an existing condition, (2) that the proposed development will not have negative impacts to the depth of overtopping or to upstream or downstream properties, and that (3) reducing the depth of overtopping would have negative impacts to adjacent properties and environmentally sensitive areas, we are respectfully requesting that your department approve this request to allow the existing condition on West Joppa Road to remain.

Thank you for your consideration of this request.

Sincerely,

MA Bishop

I am opposed to the development plan filed with Baltimore County for 61 single family homes at 2310 W. Joppa Road. I am also opposed to the granting of a special variance from the "F" level of service at the intersection of Joppa Road and Falls Road.
I believe the plan and the special variance should be denied for many reasons, including traffic congestion, sewer capacity, and other issues that will make this development too impactful on and incompatible with the surrounding area.

Shannon Hoffman	pucca111977@yahoo.com	4109639528	6 Scottsdale Ct., Lutherville, MD 21093	I can only imagine the chaos that will result in upwards of 100 cars trying to make the left hand turn into the new community from Joppa Road on a daily basis. It is absurd that a community of this density could be allowed with a single route of egress. There has been clear and compelling evidence presented in the hearings, from many departments, that the development of this density will create undue burden to the community. The only benefit I can see if the lining the pockets of the developers. It will not serve the greater good in any way, and will only overwhelm an already-strained infrastructure.	2022-10-19T11:06:23-04:00
Lawrence Hooper	llhooperjr@gmail.com	4433863240	2312 Tufton Ridge Rd., Reisterstown MD 21136	There is no way this project should be allowed to go forward unless the sewer and traffic issues presented by it are fixed before ground is broken.	2022-10-18T11:42:27-04:00

Mark Robinson	roby2442@gmail.com	4103759083	10 Trelawny ct Lutherville md 21093	We are not anti-development by any means, but this will absolutely destroy this area. The traffic is already brutal at all times of the day. the roads were not built to handle more homes. The critical systems , power and water , cannot handle more houses. Most importantly, there is no was our main road can handle construction vehicles, its already a major safety hazard with Waze circumventing drivers through the streets. Thanks, Mark	2022-10-18T08:39:37-04:00

Susan Immelt	scimmelt@gmail.com	443-928-8330	1019 Greensprin Valley Road 21093	The intersections of Greenspring Valley Road, Falls Road and Joppa road are already over-taxed. Communters driving north and south on Falls Road race to beat the lights, because the traffic is so backed up. Cars lawfully entering these intersections on green lights are broadsided by impatient north-south drivers. I blame the county for allowing the development without concern to the overwhelming traffic. It is dangerous. The potential residence on Joppa Road would pay a high price for living there!	2022-09-28T21:33:54-04:00

CLAYTON SHELHOSS	clayton@secondchanceinc.org	4104094997	8207 Tally Ho Road, Lutherville MD 21093	I have been a resident homeowner for over 30 years at 10935 Falls Road (one house south of Falls and Seminary), 10941 Falls Road (corner of Falls and Seminary), 1407 West Joppa Road and currently 8207 Tally Ho Road. I have firsthand experience of the year over year "F" failings of the intersections of Falls and Seminary, Falls and Greenspring Valley Road; and Falls and Joppa Road. I oppose the development plan as well as the granting of a special variance for all of the reasons stated above. Both Seminary and Joppa Roads are used weekly as alternate routes for the congestion that occurs due to westbound 695 and southbound 83 traffic jams. I ask that the County rule appropriately. Sincerely, Clayton Shelhoss	2022-09-19T10:49:09-04:00
Kevin Cordell	kcordell@gmail.com	4433986693	2206 Fox Hunt Lane, Lutherville, MD 21093		2022-09-19T10:29:53-04:00
Gill Shelhoss	GShelhoss@Sageproducts.com	14107909022	8207 Tally Ho Rd, Lutherville, md 21093	Why on earth would a special variance from the "F" level of service at the intersection of Joppa Rd and Falls Rd ever be granted? This situation has similarities to the city school system passing children who can not read. The intersections are a safety hazard to the members of the existing communities. those intersections should be fixed before any consideration of intentionally putting more traffic into those roads. Safety should be paramount over revenue. The intersections need to be fixed before any development should be considered	2022-09-19T09:54:16-04:00

Brian Sheahan	bsheahan@comcast.net	410-821-5665	8406 Tally Ho Road, Lutherville, MD 21093	I am very concerned about the current traffic failures on Joppa and Seminary Roads becoming exacerbated by this proposed new development project. Also, Tally Ho Road will become an even more dangerous "cut through" street. This is especially troublesome because so many young children play in the stream next to Tally Ho Road and have to cross the street to access the bike trail on the other side of the road.	2022-09-15T05:28:16-04:00
Thomas and Mary K mu	mkm2145@yahoo.com	4105837040	8331 tally Ho rd		2022-09-15T03:40:26-04:00

Mark Mercer	markbmercer@gmail.com	4109130626	8322 Tally Ho Road, Lutherville, Maryland 21093	As a resident on Tally Ho Road, I expect that this project would result in a substantial increase in traffic in front of my home, as people seek to avoid the failed section of Falls Road along Greenspring Station. This would be detrimental to the peace and safety of my community. The proposed "improvements" of infrastructure are not sufficient to relieve the traffic congestion or meet the needs of water and sewer delivery. This project should be abandoned; failing that, scaled back dramatically, to minimize its impact.	2022-09-15T02:05:06-04:00

18	bfjmj1@gmail.com	4108256391	6 trelawny court	The current infrastructure can not handle the amount of traffic in the area. Failing intersections should be a large reason this development should not go forward. All mitigation plans will not make the intersection above a failing grade. Sewer and water runoff is a large problem as Joppa road is regularly flooded directly next to the undeveloped property already. More building and less permeable ground will only make this problem worse

25	bpeck@janney.com	410-967-6228	12207 Boxer Hill Road, Cockeysville, MD. 21030	Please observe the very heavy traffic patterns currently at the intersection of Falls Road and Joppa Road during the morning and afternoon rush hours. (Please imagine how much more congested these crazy traffic patterns will be, if an additional 61 new homes are built at this location.) You don't have to be too imaginative knowing how bad this additional traffic will be with 122 additional vehicles cruising this immediate location. If you've ever been in northern Va. (i.e., McLean, Great Falls, Alexandria, Arlington) during morning or afternoon rush hours, it's a complete cluster of grid lock and traffic. If this housing development is built, everyone will HATE living in a northern VA. environment!

101	markbmercer@gmail.com	4109130626	8322 Tally Ho Road, Lutherville, Maryland 21093	As a resident on Tally Ho Road, I expect that this project would result in a substantial increase in traffic in front of my home, as people seek to avoid the failed section of Falls Road along Greenspring Station. This would be detrimental to the peace and safety of my community. The proposed "improvements" of infrastructure are not sufficient to relieve the traffic congestion or meet the needs of water and sewer delivery. This project should be abandoned; failing that, scaled back dramatically, to minimize its impact.

120	paulareynolds.photo@gmail.com	4104580223	10538 Burnside Farm Rd, PO Box 28, Stevenson, MD 21153	I have lived and worked in the Green Spring Valley since 1975. In almost 50 years, I have watched the development of this area continue to grow and with it, the difficulty to traverse Falls, Greenspring Valley Road, andHillside Road, at certain times during the day. I think the development in this area is saturated, and another 61 residences creating more traffic and sewer issues is not something this valley needs.
121	paulhartman3000@gmail.com	410-622-8396	18 1/2 Cedar Avenue, Baltimore MD 21286	There should not be development that increases density within the traffic shed of failing "F" intersections.
122	pdbrannan1@yahoo.com	4432355914	1244 Tally Ho Road	
123	pkirk@emmanuelosb.org	4108215792	2229 W. Joppa Rd :Lutherville, MD 21093-4601	There are constant cars /travelers/along Joppa Rd and to put 61+ more cars especially knowing that many who live here have more than one car would be a Disaster!!!! Plus in the summer time, the Pool draws many children and parents to gather here. Very dangerous for children. THIS IS NOT A GOOD IDEA!!!

	B	C	D	E
124	pmcgee5@verizon.net	4105980721	5 Horseshoe Circle Lutherville-Timonium 21093	This development presents a direct danger to all the residents and visitors to Heatherfield. Heatherfield is unique as it does not have sidewalks, curbs nor street lights. The increased traffic resulting from this development will increase the danger for citizens who walk, drive and live in Heatherfield. This development will place our children, grandchildren and great grandchildren at increased risk!
125	pphillips@emmanuelosb.org	4108215792	2229 West Joppa Road, Lutherville, Maryland	
126	probertsmd@comcast.net	410-584-2667	4 Beechmere Lane	I am particularly concerned about the negative environmental impact of this development.
127	pucca111977@yahoo.com	4109639528	6 Scottsdale Ct., Lutherville, MD 21093	I can only imagine the chaos that will result in upwards of 100 cars trying to make the left hand turn into the new community from Joppa Road on a daily basis. It is absurd that a community of this density could be allowed with a single route of egress. There has been clear and compelling evidence presented in the hearings, from many departments, that the development of this density will create undue burden to the community. The only benefit I can see if the lining the pockets of the developers. It will not serve the greater good in any way, and will only overwhelm an already-strained infrastructure.
128	quinn13208@cs.com	4109160337	13208 Falls Road, Cockeysville, MD. 21030	Absolutely opposed. This will add greatly to the already congested traffic issues in this area. It will affect our wildlife, water and overall loss of rural habitat. No more construction in this area!!!!

155	tquinn123@cs.com	4438240606	13208 falls rd, cockeysville md 21030	I am absolutely opposed to the Joppa Rd housing development, as well as the variance at the Joppa/Falls Rd. Intersection. Enough with housing sprawl in our fragile area! We're already at a tipping point.
156	vlafinney@comcast.net	410-823-1789	8408 Tally Ho Road. Lutherville, MD. 21093	The Joppa Rd - Falls Rd - Seminary Avenue corridor has been a failed traffic area FOR YEARS. There has been no work to improve the situation. I do not believe a new development in this area, even with promise to put in new infrastructure will resolve the current traffic and over-capacity use of the road in this area.
157	w1nny@hotmail.com	4439351700	11700 Greenspring Avenue 21093	This intersection is already congested. Please do not approve such densely packed housing.
158	weisfes@yahoo.com	4438345959	10112 Falls Road	

	B	C	D	E
				First, we would like to identify ourselves. We have lived in Seminary Ridge since 1978 when we bought the property at 8302 Tally Ho Road directly from Michael Keelty. At that time, the house was merely a foundation. Over time we have built 2 additions, one in 1989, a music room/library that overlooks the western part of the property, and in 2008, with a view toward our retirement, a first-floor master bedroom suite. This much more extensive addition also looks out to the trees and to the Lankford's cornfield. Before we undertook that project, we got reassurance from Norris Lankford that his property would never be sold to developers. We also checked with our family lawyer at Venable who also confirmed that the property was protected by zoning. Of course that was then. Subsequently, we learned that in March 2021 Dorothea Lankford sold the house and acreage to Greenspring Joppa Falls LLC for $8 Million. Atapco has proposed building 61 homes on the approximately 39 acres. We both retired on July 1 and were very busy before and after. As a result we may have missed some emails. One of the important items we missed was brought up by Blandy Becker when she mentioned that no one responded to the question of whether we would have liked additional landscaping, trees, etc. as a visual barrier. We certainly would have liked to have that option. We've been watching with great interest some of the hearings regarding the proposed Greenspring Manor and while we haven't been able to see all of the witnesses, we are struck by a number of things. Paramount is the increase in population density to a community that is already overburdened by issues relating to traffic, sewer systems, and water. One witness, a Mr. Compton, from The Meadows, mentioned â€œequality of life.That is an important concern that can't be measured with traditional visual or numerical data. One other thing of importance has not to our knowledge been brought up. Our storm drain reservation and open space is also a nature preserve. We have families of deer, rabbits, foxes, rare birds and other fauna and flora that roam the woods in between our homes and the cornfield. Adding 61 homes in the cornfield will displace these denizens of the community who are already living in our backyards. [OUT:The whitetail deer are eating our plants and shrubs and are carrying the ticks that cause Lyme Disease]. Another witness, Sister Kathy McNamy, abbess of the monastery of Benedictine sisters, spoke about the already existing dangers on Joppa Road (with its many institutions, such as 3 churches, the shops and offices at Greenspring station and Joppa Green as well as the three pavilions of Johns Hopkins at Greenspring), including how youngsters from the Roland Run Club walk to the snowball stand on a road (Joppa) without sidewalks or shoulders. She also talked about issues with the sewer system that arose when Johns Hopkins Medicine began developing Hopkins at Greenspring. At that time, the monastery was concerned about the possibility that the trees behind the monastery would need to be removed, leaving them with no barrier between their property and I-83. Attorney McMann asked Sister Kathy about her concern that their property could have been condemned at that time and wondered if she was worried about that potential with this new development. Mr. Rosenblatt, the attorney for Atapco, could not provide reassurance. Sister Kathy, like so many of us, were hoping to get to the hearing that was cancelled. She also used the term â€œdone deal.â€ We hope that is not the case. The overwhelming majority of the residents of the various communities impacted by the proposed â€˜villageâ€™ have expressed their reasons for why it is a very bad idea and have signed petitions opposing the development. To summarize, it would appear that three major issues remain unsatisfactorily addressed: 1) severe traffic congestion, over and above the already-significant traffic overburden, with attendant risk to the numerous pedestrians, children, and bike riders who currently travel on Tally Ho Road; 2) continued inadequate sewer/storm drainage; 3) damage or destruction of the current visual barrier between Seminary Ridge and the proposed development plan.

Petition Opposing Development Plan and Special Variance for Greenspring Manor (2310 W. Joppa Road – Case nos. 08-0922 and 2021-0250-SPH)

We, the undersigned, are opposed to the development plan filed with Baltimore County for 61 single family homes at 2310 W. Joppa Road. We are also opposed to the granting of a special variance from the "F" level of service at the intersection of Joppa Road and Falls Road. We believe the plan and the special variance should be denied for many reasons, including traffic congestion, sewer capacity, and other issues that will make this development too impactful on and incompatible with the surrounding area.

Petition Opposing Pass-Thru to Mays Chapel Road and The Meadows Community (2310 W. Joppa Road – Case nos. 08-0922 and 2021-0250-SPH)

If the development plan is approved, we, the undersigned, are vigorously opposed to having a vehicular connection to Mays Chapel Road and The Meadows of Greenspring community. Among other reasons, we believe that a pass-thru would irrevocably diminish the security, safety, value and character of this neighborhood, home to mostly residents in their 60's, 70's and 80's, who have daily walked these roads for some 40 years.

The Meadows was neither designed for, nor is it now equipped to handle additional traffic, due to narrow roads in a state of some disrepair without sidewalks or walking trails. The Baltimore County Police have identified a single point of entry/exit as the best defense against criminal activity, and the Baltimore County Fire Department has had no problem in serving the needs of Meadows homeowners. We do not oppose a gate for emergency access only, as proposed by Atapco, but not a single community in close proximity, including the developer of Greenspring Manor, favors a pass-thru road. Any nominal benefit associated with vehicular "connectivity" would pale by comparison to the devastating effects to the quality of life for those living in the Meadows of Greenspring. And it is highly questionable if this would do anything to change the three failed intersections on Falls Road at Seminary Ave., Greenspring Ave. and Joppa Rd.

We, the undersigned, are opposed to the development plan filed with Baltimore County for 61 single family homes at 2310 W. Joppa Road. We are also opposed to the granting of a special variance from the "F" level of service at the intersection of Joppa Road and Falls Road. We believe the plan and the special variance should be denied for many reasons, including traffic congestion, sewer capacity, and other issues that will make this development too impactful on and incompatible with the surrounding area.

Petition Opposing Pass-Thru to Mays Chapel Road and The Meadows Community (2310 W. Joppa Road – Case nos. 08-0922 and 2021-0250-SPH)

If the development plan is approved, we, the undersigned, are vigorously opposed to having a vehicular connection to Mays Chapel Road and The Meadows of Greenspring community. Among other reasons, we believe that a pass-thru would irrevocably diminish the security, safety, value and character of this neighborhood, home to mostly residents in their 60's, 70's and 80's, who have daily walked these roads for some 40 years.

The Meadows was neither designed for, nor is it now equipped to handle additional traffic, due to narrow roads in a state of some disrepair without sidewalks or walking trails. The Baltimore County Police have identified a single point of entry/exit as the best defense against criminal activity, and the Baltimore County Fire Department has had no problem in serving the needs of Meadows homeowners. We do not oppose a gate for emergency access only, as proposed by Atapco, but not a single community in close proximity, including the developer of Greenspring Manor, favors a pass-thru road. Any nominal benefit associated with vehicular "connectivity" would pale by comparison to the devastating effects to the quality of life for those living in the Meadows of Greenspring. And it is highly questionable if this would do anything to change the three failed intersections on Falls Road at Seminary Ave., Greenspring Ave. and Joppa Rd.

We do not oppose a gate for emergency access only, as proposed by Atapco, but not a single community in close proximity, including the developer of Greenspring Manor, favors a pass-thru road. Any nominal benefit associated with vehicular "connectivity" would pale by comparison to the devastating effects to the quality of life for those living in the Meadows of Greenspring. And it is highly questionable if this would do anything to change the three failed intersections on Falls Road at Seminary Ave., Greenspring Ave. and Joppa Rd.

Petition Opposing Pass-Thru to Mays Chapel Road and The Meadows Community (2310 W. Joppa Road – Case nos. 08-0922 and 2021-0250-SPH)

If the development plan is approved, we, the undersigned, are vigorously opposed to having a vehicular connection to Mays Chapel Road and The Meadows of Greenspring community. Among other reasons, we believe that a pass-thru would irrevocably diminish the security, safety, value and character of this neighborhood, home to mostly residents in their 60's, 70's and 80's, who have daily walked these roads for some 40 years.

The Meadows was neither designed for, nor is it now equipped to handle additional traffic, due to narrow roads in a state of some disrepair without sidewalks or walking trails. The Baltimore County Police have identified a single point of entry/exit as the best defense against criminal activity, and the Baltimore County Fire Department has had no problem in serving the needs of Meadows homeowners. We do not oppose a gate for emergency access only, as proposed by Atapco, but not a single community in close proximity, including the developer of Greenspring Manor, favors a pass-thru road. Any nominal benefit associated with vehicular "connectivity" would pale by comparison to the devastating effects to the quality of life for those living in the Meadows of Greenspring. And it is highly questionable if this would do anything to change the three failed intersections on Falls Road at Seminary Ave., Greenspring Ave. and Joppa Rd.

Land Use: 210
Single-Family Detached Housing

Description

A single-family detached housing site includes any single-family detached home on an individual lot. A typical site surveyed is a suburban subdivision.

Specialized Land Use

Data have been submitted for several single-family detached housing developments with homes that are commonly referred to as patio homes. A patio home is a detached housing unit that is located on a small lot with little (or no) front or back yard. In some subdivisions, communal maintenance of outside grounds is provided for the patio homes. The three patio home sites total 299 dwelling units with overall weighted average trip generation rates of 5.35 vehicle trips per dwelling unit for weekday, 0.26 for the AM adjacent street peak hour, and 0.47 for the PM adjacent street peak hour. These patio home rates based on a small sample of sites are lower than those for single-family detached housing (Land Use 210), lower than those for single-family attached housing (Land Use 251), and higher than those for senior adult housing -- single-family (Land Use 251). Further analysis of this housing type will be conducted in a future edition of *Trip Generation Manual*.

Additional Data

The technical appendices provide supporting information on time-of-day distributions for this land use. The appendices can be accessed through either the ITETripGen web app or the trip generation resource page on the ITE website (https://www.ite.org/technical-resources/topics/trip-and-parking-generation/).

For 30 of the study sites, data on the number of residents and number of household vehicles are available. The overall averages for the 30 sites are 3.6 residents per dwelling unit and 1.5 vehicles per dwelling unit.

The sites were surveyed in the 1980s, the 1990s, the 2000s, and the 2010s in Arizona, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Maryland, Massachusetts, Minnesota, Montana, New Jersey, North Carolina, Ohio, Ontario (CAN), Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Vermont, Virginia, and West Virginia.
