IN RE: GREENSPRING MANOR DEVELOPMENT PLAN AND ZONING HEARING (2310 West Joppa Road)	*	BEFORE THE
	*	COUNTY BOARD OF APPEALS
	*	OF
8th Election District 3rd Council District	*	BALTIMORE COUNTY
	*	Case No. 08-0922 and Case No. 2021-0250-SPH
Greenspring Joppa Falls, LLC Owner and Developer	*	

* * * * * * * * * * *

NOTICE OF APPEAL

Pursuant to § 32-4-281 of the Baltimore County Code ("BCC"), Greenspring Joppa Falls, LLC ("Appellant"), by undersigned counsel, feeling aggrieved by the decision of the Office of Administrative Hearings with respect to the Development Plan and Petition for Special Variance in the above-captioned matter, hereby files this Notice of Appeal.

Appellant is appealing the Development Plan Opinion and Order, dated July 31, 2023, as well as the portions of the Order that pertain to the denial of the Petition for Special Variance related to traffic, and the Petition for Special Variance to remove a specimen tree, as well as the "Amended Combined Development Plan and Zoning Opinion & Order After Motion for Reconsideration Hearing" dated April 17, 2024. The Orders are attached hereto and respectively incorporated herein as Exhibits A and B.

In compliance with Rule 3.A of the Board's Rules of Practice and Procedure, Appellant provides its contact information as follows:

Greenspring Joppa Falls, LLC
1 South St #2800, Baltimore, MD 21202
(410) 347-7150
rpowell@atapco.com

RECEIVED
APR 18 2024
OFFICE OF
ADMINISTRATIVE HEARINGS

Appellant files concurrently with this Notice of Appeal a check to cover the costs of the appeal. Additionally, as required by Section 32-4-281(b) of the Baltimore County Code, a copy of this Notice of Appeal will be concurrently filed with the Baltimore County Department of Permits, Approvals and Inspections.

Respectfully submitted,

Adam M. Rosenblatt
Christopher D. Mudd
Venable LLP
210 W. Pennsylvania Ave., Suite 500
Towson, Maryland 21204
(410) 494-6206
Attorneys for Developer/Appellant

CERTIFICATE OF SERVICE

I hereby certify on this 18th day of April, 2024 that a copy of the foregoing pleading was emailed to: Michael R. McCann, P.A., 118 W. Pennsylvania Avenue, Towson, Maryland 21204 (michael@mmccannlaw.net), Peter Zimmerman (pzimmerman@baltimorecountymd.gov); Michael Wyatt (mwyatt@wyattgunning.com); and Doug Sachse (dsachse@dtslawoffices.com).

RE: **AMENDED COMBINED DEVELOPMENT PLAN AND ZONING OPINION & ORDER AFTER MOTION FOR RECONSIDERATION HEARING**
Project: GREENSPRING MANOR
Address: 2310 W. Joppa Road
PAI Case Nos: HOH 08-0922 & 2021-0250-SPH

Dear Counsel:

Enclosed please find a copy of the decision rendered in the above-captioned matter.

In the event any party finds the decision rendered is unfavorable, any party may file an appeal to the Baltimore County Board of Appeals within thirty (30) days of the date of this Order. For further information on filing an appeal, please contact the Baltimore County Office of Administrative Hearings at 410-887-3868.

Sincerely,

Maureen E. Murphy

IN RE: **DEVELOPMENT PLAN HEARING & PETITION FOR SPECIAL HEARING** 8th Election District 2nd Council District **(2310 W. Joppa Road)** **GREENSPRING MANOR** **GREENSPRING JOPPA FALLS, LLC** *Owner/Applicant*	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS FOR BALTIMORE COUNTY **CASE NOS. 08-0922 and 2021-0250-ASA**

* * * * * * * * * *

ADMINISTRATIVE LAW JUDGE'S
AMENDED COMBINED DEVELOPMENT PLAN AND ZONING OPINION & ORDER
AFTER MOTION FOR RECONSIDERATION HEARING

Pursuant to the Order on Motion for Reconsideration dated September 25, 2023, a Motion for Reconsideration hearing was held on February 26, 2024 (the "Motion for Reconsideration Hearing") which was limited to two (2) issues: (1) to accept into evidence a revised Development Plan to eliminate the previously proposed Emergency Access Gate; and (2) to consider testimony and/or documents from a Department of Public Works and Transportation ("DPWT") representative in regard to the sewer path from this Property.

The Order on Motion for Reconsideration was issued pursuant to Code of Baltimore County Regulations ("COBAR"), Title 2, Chapter 1, Part 1, Rule 4K which permits discretion to convene a hearing to receive evidence as follows:

> K. Motion for Reconsideration.
>
> A party may file a motion for reconsideration of an order issued by the Zoning Commissioner. Such a motion must be made in writing, within 30 days of the date of the original order. The motion must state, with specificity, the grounds and reasons for the request. The filing of a motion for reconsideration shall stay all further proceedings in the matter, including the time limits/deadlines for the filing of an appeal. The Zoning Commissioner shall rule on the motion within 30 days from the date which the motion is accepted

> for filing. A ruling by the Zoning Commissioner on the motion for reconsideration shall be considered the final decision in accordance with Section 26-209 or 26-132 of the Baltimore County Code. At his discretion, the Zoning Commissioner may convene a hearing to receive testimony and/or argument on the motion. Each party shall be limited to that which is the subject matter of the motion.

(*See also*, *Brandywine Senior Living at Potomac LLC v Paul*, 237 Md. App. 195, 216-17 (2018) (acceptance of an amended zoning plan during course of a hearing with sufficient notice to opposing parties with a fair opportunity for comment and cross-examination, was permitted). The Motion for Reconsideration Hearing provided Counsel of Record, as well as Mr. Wyatt and Mr. Sachse, with opportunity to cross examine the DPWT witness. Prior to the Motion for Reconsideration Hearing, both Counsel for the Developer and Mr. Wyatt each separately met with the DPWT witness.

After considering the evidence provided during the Motion for Reconsideration Hearing, the Opinion and Order on the development project known as "Greenspring Manor" dated July 31, 2023 shall be amended as follows:

1. Revised Greenlined Development Plan to Eliminate Proposed Emergency Access Gate.

As set forth in the Order on Motion for Reconsideration, the Developer was permitted to offer a revised Greenlined Development Plan (as a separately numbered Exhibit) to eliminate the proposed Emergency Access Gate (also referred to in the Opinion and Order as the "Mays Chapel Gate"). At the Motion for Reconsideration Hearing, Developer offered the revised Greenlined Development Plan (hereinafter the "Bluelined Development Plan") which was accepted into evidence as Developer's Exhibit 1C. As a result, the portion of the Opinion and Order (pp. 107-112) which previously denied the Greenlined Development Plan based on the testimony of the representative of Development Plans Review ("DPR") at the hearing on September 1, 2022 (Day

1), that the proposed Emergency Access Gate violated DPR Policy Manual, Section XIII.B, will be amended such that the Bluelined Development Plan (which no longer has the Emergency Access Gate) will be approved.

2. Sewer Capacity.

The Order on Motion for Reconsideration also permitted the testimony and/or documents from a DPWT representative in regard to the sewer path from this Property.

A. The County Attorney's letter dated February 23, 2024.

On behalf of DPWT, the County Attorney, James Benjamin, submitted a letter dated February 23, 2024 which provided new facts about the sewer path from the Property and sought to clarify inaccuracies reflected in the record (the "County Attorney Letter"). Mr. Benjamin was present during the entire Motion for Reconsideration hearing. The County Attorney Letter was accepted as County Ex. 14.

First, in response to any contention that the County Attorney Letter was admitted into evidence without testimony from, or cross examination of, the County Attorney, it should be noted that County-authored government documents, letters and/or emails (whether obtained from County agencies, by Public Information Act request, or from the County website) are regularly accepted into evidence at administrative hearings, without having a witness testify as to the contents of those documents, because they have an indicia of trustworthiness. Here, the County Attorney Letter, was emailed to OAH and to the attorneys of record in the Case, on February 23, 2024. It was also shown on the screen at the Motion for Reconsideration Hearing.

Second, the County Attorney Letter corrected factual information previously provided by the County and the Parties which information was relied upon in issuing the Opinion and Order. As detailed in the Opinion and Order, the Developer was the first party to raise the issue of sewer

capacity when it provided an email from DPWT dated September 4, 2020 responding to a request from Developer's engineers. In that email, DPWT responded that adequate sewer capacity did not exist in the down stream sewer system for [62 sic] new single family detached homes. (Dev. Ex. 55). [1] Another email from DPWT dated March 3, 2021 repeating much of same information which was then transferred to the official Concept Plan Conference ("CPC") comment prepared jointly by DPR and DPWT:

> Six of the segments noted above were to be addressed by the Johns Hopkins at Greenspring Station development prior to issuance of their use and occupancy permit. PAI did not enforce this requirement and the project was completed without the necessary sewer system improvements being completed. The Greenspring Manor development may not connect to public sewer until the agreement with Johns Hopkins at Green Spring Station is enforced and all sewer improvements are completed, including the additional improvements to segments 43794-43793 and 43793-43792 noted in the above table.

(Prot. Ex. 12). That same information was then carried over into subsequent DPWT emails, memos and correspondence until it was transcribed into the official DPR/DPWT Development Plan Conference ("DPC") comment dated August 10, 2021. The DPR/DPWT DPC comment added that Johns Hopkins was to complete 6 of the sewer segment improvements by August of 2023. These facts were relied upon in the Opinion and Order in finding that there was no evidence presented as to whether, or when, Johns Hopkins would be completing the segments at issue. (Opinion, pp. 129-130).

The County Attorney Letter, now makes clear that that information contained in the CPC and DPC comments was not correct. (County Ex. 14). The County Attorney Letter explained that the County entered into a Memorandum of Understanding ("MOU") with Johns Hopkins dated

[1] Developer's Post Reconsideration Hearing Memorandum p. 5 inadvertently identifies September 4, 2020 DWPT email as Protestants Ex. 55.

September 27, 2017 which expressly defined the roles and responsibilities of the parties in regard to the completion of 6 of the 8 sewer segments. The MOU clearly states that Johns Hopkins was not responsible for the construction of any sewer segments, much less by August of 2023. (County Ex. 14). The MOU expressly provides that the Use and Occupancy Permit would be issued to Johns Hopkins for the construction of Pavilion III at Greenspring Station, *regardless of whether the 6 sewer segments were improved.* (MOU, ¶ 4C). In fact, Johns Hopkins role was only to "coordinate with the County" to obtain federal and state permits and to "use good faith efforts" to obtain access easements. (MOU, ¶ 2B, 2C, 2D). The County was to substantially complete the construction by January 1, 2020. When that date came and went, the MOU expired by its own terms. (MOU, ¶2E). It should be noted that the 2017 MOU was agreed to by the prior County Administration and it expired at a time when the COVID pandemic hit.

Of particular relevance for this sewer path, the MOU expired before the first inaccuracies were written in the DPWT's response to Developer's September 4, 2020 email. (Dev. Ex. 55). The County Attorney Letter confirms that the DPC comment (from which the DPR representative read on Day 1 of the hearing) stating that the "other developer" (i.e., Johns Hopkins) was "obligated" to complete the improvements by August of 2023, was not factually correct. (County Ex. 12A). Indeed, the County Attorney Letter verified that Johns Hopkins' sewer design drawings, grading plan and sediment and erosion control plan had already been approved. As to confirmation that the 6 sewer segments will be improved in the future, the County Attorney Letter emphasized that the County and Johns Hopkins are currently working together to finalize a new MOU to complete the 6 segments within this sewer path.

I find that the County Attorney Letter constitutes new evidence which, by itself, answers the questions that the DPR representative was not able provide at the hearing, and corrects the

inadvertent inaccuracies and/or discrepancies contained in the CPC and DPC comments, in the memoranda, and multiple emails which documents were relied upon as a basis for the denial of the Greenlined Development Plan on the issue of sewer capacity. Equally as important, the County Attorney Letter provides the assurance that was previously missing - that there are ongoing coordinated efforts by the County and Johns Hopkins to finalize a new MOU which will result in the future completion of the 6 sewer segments.

B. Testimony of David Bayer, PE – DPWT, Sewer Design Section.

David Bayer, PE, Project Manager in the Sewer Design section of DPWT, was subpoenaed by the Developer to testify at the Motion for Reconsideration Hearing. Mr. Bayer, who is a professional engineer with a Master's degree in Environmental Pollution Control, testified that he has been a County employee for 30 years, 22 of which have been with the Sewer Design Section. Mr. Bayer explained that he is familiar with the Consent Decree, which required both the RKK Long Term Capacity Report dated November, 2012 ("RKK-LTC 2012 Report") and the Sewershed, Repair, Replacement and Rehabilitation Plan dated December, 2012 (the "SRRR 2012 Plan"). (Prot. Ex. 68, 67). Mr. Bayer explained that the Consent Decree did not require the County to repair the sewer system to any particular level of storm. Map 6.1 of the SRRR 2012 Plan recommended corrective actions for 5 storm types, in order to eliminate Sanitary Sewer Overflows ("SSOs") and reduced Inflow and Infiltration ("I&I"). Importantly, Mr. Bayer testified that the sewer path from the Property (from Joppa Rd. to Baltimore City line) does not exhibit either SSOs or I&I.

At the suggestion of Maryland Department of Environment ("MDE"), the County selected the 10 hr./6 yr. storm event as it most closely resembled storms in the County. Both EPA and MDE approved the corrective actions listed in the SRRR 2012 Plan. Mr. Bayer testified that the

County also hired RJN to review the improvements made between 2010-2019 within the Jones Falls Sewer Shed which findings were set forth in the RJN Performance Assessment Report dated May 27, 2021 (the "2021 RJN Performance Assessment Report"). Specifically, Map 2 of the 2021 RJN Performance Assessment Report shows corrective actions and structural repairs which were completed including lining, frame seals, frame covers, and flow inserts, for which RJN determined to be effective. Mr. Bayer emphasized that the only work remaining to be completed are 4 or 5 sewer segments and 2 manholes, *none* of which are within the sewer path from the Property.

In 2022, the County hired Hazen and Sawyer to perform a comprehensive evaluation or needs analysis, to provide long-term planning on sewer system improvements with the end goal that funding could be appropriately allocated. (Prot. Ex. 85, 86). Also in 2022, after video revealed corrosion on the inside of the sewer pipe under Lake Roland, DPWT proactively hired Ramboll to provide designs to re-line the Lake Roland sewer pipe. (Prot. Ex. 87). He acknowledged that the scope of the Ramboll work was then expanded beyond the Lake Roland pipe to include lining other sewer segments and interceptors so that the environmental areas (floodplains and wetlands) would only be impacted once. He made clear that the Lake Roland Sewer Rehabilitation project is not an indication of lack of sewer capacity in the Jones Falls Sewershed, but would increase capacity when the re-lining is complete. In any event, construction on the Lake Roland Sewer Rehabilitation project has not yet commenced.

Mr. Bayer was able to provide a historical perspective adding that when the Consent Decree was filed in 2005, there were 44 structures showing SSOs throughout the County sewer system. Since that time, 34 SSOs have been eliminated and that, of the 10 remaining, 4 are Baltimore City issues. Of the remaining 6 SSOs, only 1 of those is within the Jones Falls Sewer Shed but it is not located within the sewer path from the Property.

Mr. Bayer explained that, for every development project, DPWT analyzes each sewer path to determine whether there is adequate capacity. With regard to compliance with the DPWT Design Manual, it is not applied when evaluating sewer capacity for a development project which connects into an existing system; it is used to design a new sewer system. (Prot. Ex. 70). In regard to Mr. Bayer's email that zero homes could connect to the sewer system, he explained that his response (which he believed to be accurate at the time he wrote it) was based on an assumption that Johns Hopkins would not be improving 6 of the 8 sewer segments. Without these needed improvements, Mr. Bayer had concerns that there would be a high possibility of SSOs occurring. (Prot. Ex. 90). If all 8 segments are improved, Mr. Bayer agreed that the sewer path from the Property can handle the existing sewage and sewage from 61 proposed homes. He highlighted that it was this concern for SSOs which caused DPWT to designate the area where the Property is located as an 'Area of Special Concern' on the Basic Services Map. That designation may be removed upon completion of the segments.

Also of relevance, Mr. Bayer clarified that while Map 3 of the 2021 RJN Performance Assessment Report contained model-predicted SSOs and flow restrictions, his comment that zero units could be built was not based on any model predictions. (Prot. Ex. 78). It was again based entirely on the assumption that the 8 segments would not be improved. Mr. Bayer stressed that when model-predicted SSOs are presented in a consultant report, DPWT field verifies these areas first by installing flow monitors. He explained that flow monitors provide an accurate assessment of how the sewer segments are responding during wet weather, and provide more information than flow sensors. After DPWT collects and analyzes the data from the flow monitors, an I&I analysis will be performed to determine whether it is an area showing extraneous flow. Other tools can also be used by DPWT include 'sanitary sewer evaluation surveys' ("SSES") which involve

evaluating sewer pipes at night to see if any particular segments are, or will, leak. Additionally, DPWT also conducts 'smoke testing' to determine whether there are any illegal sewer connections. After the data is collected and analyzed, he explained that it will provide DPWT with the necessary information to decide whether to repair/replace a sewer segment.

In regard to the sewer path from this Property, five (5) flow monitors were installed as listed in Mr. Bayer's March 8, 2023 email. (Dev. Ex. 47-B). After installing those flow monitors, Mr. Bayer noted certain sewer segments showed blockages or restrictions from grease which required cleaning and maintenance. As is routinely done, he requested the Bureau of Utilities to clean out and inspect certain segments along the sewer path. When RJN submitted its model-predictions which included the sewer path, DPWT had little confidence in the results because the areas shown in red on Map 3, were 'overpredictions' which indicate inaccuracies. (Prot. Ex. 78). Because of the overpredictions in the RJN simulations, DPWT did not require any improvements downstream of 8 sewer segments.

Mr. Bayer verified that, as required by the SRRR 2012 Plan, the list of structural repairs downstream of the Property listed in his email dated May 30, 2023, were all either completed, or eliminated as unnecessary. (Dev. Ex. 45-A, 45-B). Consequently, he added that there are no other improvements that need to be completed in this sewer path. Mr. Bayer made clear that after the 8 segments are improved, the sewer path from this Property will operate safely and without detriment to the public health or the environment.

Mr. Bayer commented that a manhole cover had come off near or around Lake Roland and that, as a result, he had the top resecured and locked. From his review of that manhole opening, it appears that there was a storm on January 13, 2024 which caused sewage to back-up from the Baltimore City Jones Falls Pumping Station into the County lines. But he highlighted that he had

already installed flow sensors from Lake Roland down to the Jones Falls pumping station to monitor that area. Essentially, the Jones Falls Pumping Station cannot handle the amount of sewage that needs to be pumped. He added that the Jones Falls Pumping Station is in need of equipment to be installed and he understood the City would install the equipment in June of 2024. After the City improvements are completed, Mr. Bayer will continue to monitor the area to determine whether the pumping station improvements resolve any back-up into the County lines.

Unlike most development plan cases, DPWT's designation of the Property here as an *Area of Concern* on the Basic Services Map, along with the issue of outstanding work needed on the 8 sewer segments, presented a unique set of facts which necessitated DPWT's direct testimony. In the majority of development plan cases, the testimony of a representative from DPR is more than sufficient to address outstanding issues on behalf of both DPR and DPWT. It should be noted however, in many cases, notwithstanding the testimony of a DPR representative at a development plan hearing, Mr. Bayer's written confirmation on sewer capacity for a project is not only sought after, but routinely admitted in evidence. [2] Because of that often-used practice, it appeared that his written confirmation here was missing.

Yet, through his testimony, Mr. Bayer was able to provide DPWT's perspective – a perspective that neither expert witness can provide. In particular, not having had the benefit of Mr. Bayer's insight prior to issuance of the Opinion and Order, led to the conclusion that based on model-predictions by outside consultants, SSOs within the sewer path were imminent, and that repairs/replacement were warranted before additional homes could be added to the system.

---

[2] In *Torch Hill*, Case Nos. 08-0919 and 2021-0274-SPHA, notwithstanding the testimony of DPR representative at the HOH, Mr. Bayer provided an email confirming there was adequate sewer capacity for the 32 proposed homes. (Dev. Ex. 19). In Developer's Post Hearing Memorandum, Counsel in *Torch Hill* (which is same Counsel here), emphasized that the developer was not to rely on the testimony of the DPR representative but instead pointed to Mr. Bayer's confirmation as proof of sewer capacity. (See Post Hearing Memorandum, pp. 18, 19, and 21).

Without being provided DPWT's view about County-requested consultant reports (RJN, Hazen, Ramboll), it left each party's expert to opine as to how each report should be interpreted and what the reports should mean for County repairs/replacements to the sewer system. It is now clear that model-predictions allow DWPT to study a specific area and along with data collected using other tools, are actually used as part of DPWT's larger analysis. Importantly, the decision by DWPT to use flow monitors to continuously monitor and gather data from the sewer path is not only disciplined, but practicable, in that using those tools helps to pinpoint real-time issues, rather than relying on modeled-predictions which may or may not capture the true picture. Similarly, having Mr. Bayer verify that the Hazen Report is a long-term planning tool which, like Ramboll report, provides DPWT with a comprehensive needs analysis, allows DPWT to proactively prioritize future repairs/replacements.

Having Mr. Bayer explain that flow monitors, installed from the Lake Roland area to the Baltimore City Jones Falls Pumping Station, are being used to monitor the recent manhole opening near Lake Roland which was caused by a backup from lack of equipment in Baltimore City's pumping station, was invaluable. Using this data-driven, methodical approach, rather than immediately making repairs/replacements to County segments, DPWT can analyze whether the Pumping Station improvements by the City solve the problem. DPWT's collection and analysis of data from the flow monitors, is the most efficient approach for the County. Mr. Bayer's testimony also verified that while the Lake Roland sewer pipe shows signs of corrosion, the corrosion will not impede the sewage flow from this Property. As he explained, the Ramboll report was the product of DPWT proactively planning for the relining of both the Lake Roland sewer pipe, and simultaneously also re-lining other sewer segments to prevent impacting environmentally sensitive areas more than once. This approach protects the environmental areas.

It is now clear from Mr. Bayer's testimony that the list of repairs submitted by Developer in Dev. Ex. 45-A, 45-B were not 'minor' repairs as the Opinion and Order reads, but rather the required repairs under the SRRR 2012 Plan. Of relevance here, those required repairs were either completed, or eliminated as unnecessary. Other than the 8 segments addressed by the County Attorney Letter which will be repaired and/or replaced, Mr. Bayer confirmed no other improvements or repairs need to be completed in the sewer path from this Property.

In regard to the finding in the Opinion and Order that the sewer path did not comply with DPR Design Manual, Mr. Bayer explained it only applies to the design of new sewer systems; it does not apply to the connection of a development project to an existing sewer system. Having that information, I find that the Design Manual is not applicable to this Case.

As stated in the Opinion and Order, compliance with the Consent Decree as it pertains to the entire County sewer system is not an issue to be resolved in this Case. Rather, it is only whether the sewer path from the Property can handle both the existing and anticipated sewage flow from the proposed homes. Having Mr. Bayer explain the concerns that he raised in his emails, were based on an assumption that the 8 sewer segments would not be repaired/replaced, is critical. Given that the 8 sewer segments will now be repaired/replaced by the County and/or in conjunction with Johns Hopkins, Mr. Bayer was confident that, once those 8 segments are completed, the sewer path from the Property will be able to handle all existing and future sewage. Accordingly, I find that the basis for denial of the Greenlined Development Plan with regard to sewer capacity, as previously articulated in the Opinion and Order, has now been resolved in favor of approval. I find that the Bluelined Development Plan meets all rules and regulations for a safe and efficient sewer system. However, the Amended Order will be conditioned upon the completion of the 8

segments listed in the DPR/DPWT comment dated August 10, 2021 (County Ex. 12A), prior to issuance of any Use and Occupancy Permits.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **17th** day of **April, 2024,** that the Bluelined Development Plan for the Project known as **"GREENSPRING MANOR"** (Dev. Ex. 1C), be, and it is hereby, **APPROVED**.

The relief granted herein shall be subject to the following:

1. The Bluelined Development Plan (Dev. Ex. 1C), a copy of which is attached hereto, is incorporated herein.

2. Prior to the issuance of Use and Occupancy Permits, all improvements/repairs and/or replacements of the eight (8) sewer segments identified in the DPR/DPWT dated August 10, 2021 (County Ex. 12A) shall be completed.

Any appeal of this Order shall be taken in accordance with Baltimore County Code, § 32-4-281.

Maureen E. Murphy

IN RE: DEVELOPMENT PLAN HEARING, PETITION FOR SPECIAL VARIANCE, etc. 2310 W. Joppa Road *Greenspring Manor* 9th Election District 3rd Councilmanic District	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS Case nos. 08-0922 2021-0250-SPH

* * * * * * * * * * * *

PROTESTANTS' SUPPLEMENTAL POST-HEARING MEMORANDUM

Protestants, Valleys Planning Council, Inc., Falls Road Community Association, Inc., Heatherfield Community Association, Seminary Ridge Owners Association, Boxwood Homeowners Association, The Meadows of Greenspring HOA, and Tally Ho Community Association, submit this post-hearing memorandum in support of their opposition to the development plan and requested zoning relief.

I. INTRODUCTION

In her original decision, the ALJ thoroughly discussed the evidence in this case and made a number of findings regarding the capacity of the sewer system, ultimately concluding that the "overwhelming evidence" shows that, for this particular sewage path, the system does not "safely, adequately and efficiently function" and the sewage path "cannot handle the existing sewage which flows along that path much less the additional sewage which will come from adding 61 homes...." (Op., p. 129).

The specific findings upon which the ALJ's conclusions were based bear repeating and are set forth below *in seriatim*, the more important of these are highlighted in red.

1. The reports of consultants hired by the County reflect that "overcapacity defects and model-predicted SSOs are within the sewage path from this Property" (Op., p. 113).

2. The chronology of comments and emails from County representatives is enlightening, culminating in the March 2021 email between Mr. Bayer, Ms. Eicholtz and Mr. Peluso, who were "unequivocal" that there are "capacity deficient areas within the sewer path from the Property." (Op., pp. 113-17) (Prots' Exs. 12, 13, 14, 89, 90; Dev's Ex. 55; County Ex. 12A).

3. "[T]he only work actually performed as recommended by the SRRR 2012 Plan within the sewage path from the Property were 2 minor repairs." (Op., p. 117).

4. RJN's Map 3 supports that "for the County-chosen storm events (i.e., the 2 yr/6 hr and 10 yr/6 hr) there are model-predicted SSOs along the sewage path of the Property." (Op., p. 117).

5. The model-predicted SSOs "are not only within the Johns Hopkins' sewer segments, but are also downstream of the [segments], and again within the Project's sewer path flow." (Op., p. 118).

6. There was no evidence that DPWT changed its position or were satisfied that the deficiencies would be corrected and, consequently, the presumption in favor or plan compliance is not found. (Op., p. 120).

7. Protestants presented additional evidence that was instructive and "confirmed the inadequate sewer capacity." (Op., p. 120).

    a. Protestants' Ex. 69 (chart) revealed that "most of the sewer segments from the Property exceed the peak flow of 90-95%," which is the standard in the DPWT Design Manual and the industry standard per Mr. Grachek. (Op., p. 121).

        i. The pipe segments at MH 44216-MH 44212 exceed 90-95% and were recommended by RKK to be upsized to 18 inches. (p. 121).

        ii. The pipe segments at MH 20759 – MH 20755 are also overcapacity and were recommended of 10 inch relief sewers. (p. 121).

        iii. It is undisputed that the upsizing of pipes or installation of relief sewers has not been completed. (p. 122).

    b. RJN's Map 3 shows that "SSOs have been model-predicted within the Property's sewage path." (Op., p. 121).

8. "Based on this evidence, the sewage for this Project violates the DPWT Design Manual and should be denied on that basis." (Op., p. 121).

9. The sewage path from the Project "does not comply with DPWT Design Manual, p. 6-2," which requires sewer system to "safely collect[] and transport[] wastewater without harm to human health or environment." (Op., p. 122).

10. Mr. Lessner agreed that all of the action items in Section 6.14 of the SRRR Plan to address model-predicted SSOs have not been completed. (Op., pp. 122-24).

    a. I/I reduction was only completed in meter basins BC02, BC04, BC09, which is in the Timonium area and not in the sewer path from the Property.

    b. Developer's argument that SSO volumes are trending "downward overtime" does not address the existing and future problems along the sewer path from the Property.

        i. RJN's Map 2 reflects that only 2 minor repairs have been completed in the sewage path for this Property.

    c. There is no basis for Mr. Leffner's opinion that structural deficiencies in Corrective Action 3 only refer to those listed in the SRRR Plan and not in the Ramboll or Hazen Reports.

11. The results of the Ramboll Report "showed a worsening of condition of the sewer system...." (Op., p. 125).

    a. Ramboll Report cannot be discounted as only a "planning document" and only used for capital budget purposes. It does not matter whether Ramboll was prepared under the Consent Decree. It was created at the County's request and it informs the County about sewer capacity. (Op., pp. 124-25).

    b. Ramboll's examinations and inspections are examples of field verification that Mr. Lessner stated was not performed. (Op., p. 125).

12. Hazen Report confirmed that sewer pipes are over 100% capacity. (Op., p. 125).

    a. Hazen Report cannot be discounted as only a "planning document." The County may also use it for capital budget purposes, but the County hired Hazen to perform a comprehensive evaluation of the RKK models and to update those models. (Op., p. 126).

13. "[B]oth the Ramboll Report and the Hazen Report provided compelling evidence that the pipes in the sewage path from the Property are at overcapacity and that SSOs are predicted to result during the County-selected 10 yr/6 hr storm event." (Op., p. 126).

14. Protestants' evidence in regard to overcapacity defects and model-predicted SSOs within the sewage path was not sufficiently rebutted by the Developer. (Op., p. 126).

    a. If there was a change in DPWT's position or clarification to explain the evidence presented by Protestants, then testimony and evidence from DPWT was necessary.

    b. DPWT engineers needed to provide testimony to support the Developer's assertion that the model upon which Map 3 was based is "unverified in the field." (Op., p. 127).

    c. If there was a change in DPWT's position, then Mr. Bayer would have included the same in his emails of March 8 and May 30, 2023. (Op., p. 127).

15. The sewage to be generated by this Project does not comply with sections 32-4-410(b), 32-4-102, and 32-4-103(a) or the DPR Policy Manual. (Op., pp. 128-129).

16. The overwhelming evidence shows that, for this particular sewer path, the sewage system will not be safely, adequately and efficiently function. (Op., p. 129).

17. No evidence was presented as to whether Johns Hopkins will complete the work on the six sewer segments. This issue goes to the Developer's burden of proof and I am not willing to condition approval on the possibility that Johns Hopkins may or may not complete that work. (Op., p. 130).

Protestants submit that the testimony of David Bayer spoke to very few of these findings and was clearly insufficient to warrant any new or different findings or conclusions by the ALJ.

ARGUMENT

As noted, the ALJ found that there are *model-predicted* SSOs along the sewer path from the Property, not just in the eight segments immediately below the site, but also downstream of those segments. (Op., pp. 113, 117, 118). The ALJ pointed to, among other things, (1) the chart comparing DPW and RKK capacities, (2) RJN's Map 3, (3) the specific corrective actions recommended by RKK for the 10/6 storm that have not been performed by the County, (4) the Ramboll Report, and (5) the Hazen Report. (Prots' Ex. 69, 78, 87, 107, 108). The ALJ characterized this evidence as "compelling" and "overwhelming" and concluded that, for this sewage path, the system violates the Design Manual, County Code provisions, and the DPR Policy Manual. (Op., pp. 121, 122, 126, 128-29).[1]

Early on in this case, the Developer took the position that the County is *not* obligated to undertake corrective actions to address the *model-predicted* capacity problems identified by its consultants (RKK, RJN, Ramboll and Hazen). However, over the course of these proceedings, and most recently through the loaded questioning of Mr. Bayer, it is clear that the Developer's position on this issue has been toned down and now morphed into several alternative or lesser theories, namely: (1) the model-predicted incapacities need not be addressed because structural repairs have been performed downstream, (2) there is a "new model" from Hazen that does not show problems in the sewer system, (3) when a model-predicted capacity problem is identified, the County need not undertake corrective action unless it is able to first "verify" there is a problem through flow meters or flow monitoring, and (4) the model-predicted incapacities identified by the

[1] It need not be elucidated any further here, but there is no legitimate question that the Consent Decree requires the County to take corrective actions to address the model-predicted capacity problems identified by its consultants. The plain language of the Consent Decrees provides this and all experts (Mr. Grachek, Mr. Summers and Mr. Leffner) agreed that it does. (T10, pp. 40-42; T11, pp. 75-78; T13, pp. 139-40, 145). Mr. Bayer, likewise, agreed. (T14, p. 101).

County's consultants should not be relied upon because County has concerns about "over-predicting" in the model.

Mr. Bayer's testimony on these points was superficial, at times self-serving, and refuted by the operative documents and other substantial evidence introduced in this case. In the end, if we look at what Mr. Bayer actually said, his testimony does not come close to altering or changing any of the ALJ's findings and conclusions.

A. The "Structural Repairs" That The County Has Performed Were Minimal And Do Not Alter Or Change Any Of The ALJ's Findings And Conclusions

Mr. Bayer testified that there are only four or five segments and two manholes recommended by RKK in Map 6-1 that have not yet been performed by the County. He pointed out that the area of the unfinished work is located near the Towson Run interceptor, not downstream of this property. (T14, pp. 29-35).

This testimony does not add much to the Developer's previous introduction of Exhibits 45A and B, which showed the (minimal) work performed by the County downstream of the site, but the testimony is irrelevant in any event.[2] The structural repairs undertaken by the County do not increase the capacity of the system and have no connection to model-predicted capacity. (*See* T13, pp. 204, 206) (testimony of Mr. Leffner that the repairs would not cure or correct the model-predicted SSOs and hydraulic restrictions determined by RJN and reflected in Map 3).[3]

---

[2] Mr. Bayer confirmed that Exhibits 45A and B reflect all of the work performed downstream of the site by the County. (T14, p. 76-78).

[3] Mr. Bayer was asked about the SSOs that have been eliminated since the Consent Decree was entered. Instead of responding to this question, Mr. Bayer stated that there were 44 *structural* SSO's at the time the Consent Decree was entered, 34 of which have been eliminated and only one of the remaining ten is in the Jones Falls sewershed. (T, pp. 39-40). On cross, Mr. Bayer acknowledged that the SSOs that were eliminated were not SSOs at all, but rather "structural" SSOs. Structural SSOs are physical structures constructed by the County for the purpose of allowing discharge from the sewer system. (Prots' Ex. 65, pp. 7-8) (definitions of "sanitary sewer overflow" and "sanitary sewer overflow structure"). Mr. Bayer acknowledged that there have been SSOs in the system, including one in

More fundamentally, the model-predicted capacity improvements proposed by RKK and RJN were based on an assumption that rehabilitation, including the rehabilitation called for in Map 6-1 and Map 2, was *already* performed. (Prots' Ex. 68 (LTC report), § 3.1 (assumptions in modeling approach for determining corrective actions); (Prots' Ex. 78 (RJN report), pp. iv, 14) (hydraulic model updated based post-rehabilitation conditions).

In short, the structural repairs that the County has performed mean very little. They do not alter or even speak to the ALJ's conclusion, based on "overwhelming" and "compelling" evidence, that there are *model-predicted* capacity problems in the sewer path from this property (both in the eight segments *and* downstream), that those problems have not been fixed, and the system does not comply with County law.

B. The Alleged New, But "Unfinished," Model Cannot Be Relied Upon And Does Not Alter Or Change Any Of The ALJ's Findings And Conclusions

Remarkably, Mr. Bayer revealed at the hearing that, although Hazen has not finished developing its updated model yet, he recently asked Hazen to run a simulation with that model to see if capacity was improved if the eight segments below the site were repaired.[4] The simulation showed that "once the eight segments were improved there weren't any issues." (T14, pp. 42-44). Putting aside evidentiary objections,[5] there are obvious problems with this testimony from Mr. Bayer.

January of this year in the area of Lake Roland. (T14, pp. 114-15). Photographs of the SSO were introduced as Protestants' Ex. 110.

[4] The questioning of Mr. Bayer and his answers assumed the eight segments were "repaired." (T14, p. 44). The evidence supported that the segments required replacement/upsizing, not repairs.

[5] This is new evidence that should not be admitted. Mr. Bayer requested the simulation in November 2023, long after the hearing in this case closed. (T14, pp. 69, 70-71). Moreover, Mr. Bayer's email exchange with Hazen and the simulation itself were not produced by the County in response to counsel's December 14, 2023 Public Information Act request. A copy of the request is attached at **Exhibit 1**. Mr. Bayer did not know why these documents were not produced. (T14, p. 74-75). Had the County produced them as it should have, then counsel would have had the opportunity to cross-examine Mr. Bayer on this important point. Instead, the County and the Developer have insulated

Mr. Bayer stated, without elucidation, that the model was not completed, is still being worked on, and is not finished yet. (T14, pp. 42, 68, 69, 70). We have no idea what that means in terms of its accuracy or reliability. Mr. Bayer did not testify that the model was accurate or reliable or otherwise provide any information that would allow us to conclude it was accurate and reliable. In the absence of such evidence, an "unfinished" model is inherently unreliable and should not be considered. Moreover, Mr. Bayer did not run the simulation himself and was unqualified to speak to its result.

Further, Mr. Bayer acknowledged, on cross-examination, that his request of Hazen was "limited to" the eight segments. (T14, p. 71). However, he did *not* affirmatively state that, if the eight segments were replaced, then all the capacity problems in the sewer path downstream from the segments would be fixed and disappear.[6] There is no evidence – none – to support this conclusion. To the contrary, as the ALJ has pointed out, the "overwhelming" and "compelling" evidence is that there are *model-predicted* capacity problems in the sewer path from this property (both in the eight segments *and* downstream). This evidence includes, of course, the reports of *all* of the consultants hired by the County - RKK, RJN, Hazen and Ramboll. Thus, even if we consider this testimony from Mr. Bayer, it means very little.

Mr. Bayer from cross-examination, both because the documents were not produced and because Mr. Bayer was not the person who performed the simulation. As Mr. Bayer pointed out, it is not his role at DPWT to perform modeling. (T14, p. 72).

[6] Specifically, Mr. Bayer's testimony was:

> MR. ROSENBLATT: ... [W]ere you able to run the new model considering the eight segments [] were repaired?
> MR. BAYER: Yes.
> MR. ROSENBLATT: And did the system show any downstream problems from the project when these eight segments were repaired.
> MR. BAYER: No, once the eight segments were improved *there weren't any issues*.

(T14, pp. 43-44) (emphasis added).

C. Mr. Bayer's "Verification" Theory (*i.e.*, "Let's wait and see what happens") Is Contrary To The Consent Decree And Industry Standards; In Any Event, RJN Has Already Verified The Capacity Problems

Mr. Bayer acknowledged that RJN's Map 3 shows capacity issues downstream from the eight segments across from the site. (T14, pp. 46, 106). However, Mr. Bayer indicated that "[w]hen a model like this shows potential problems," you "don't immediately go and make those changes in the [] field." (T, p. 46). The County "like[s] to evaluate and try [to] confirm, validate what is predicted by those models." (T14, p. 105).

In response to questioning from the ALJ about one of the relief sewers recommended by RKK (20767-20766), Mr. Bayer explained that the County's "game plan" is to monitor flow meters to "watch to see if there's any kind of issues"; "we're looking for areas that are segments of pipe that are very leaky." (T14, pp. 124-25).[7] The ALJ then asked Mr. Bayer whether he feels comfortable if the eight segments are repaired and this property is hooked up to the sewer system.

> MR. BAYER: I'm not seeing anything on my flow monitoring that's concerning right now, but that doesn't mean I won't see something in the future.
>
> ALJ: Okay. So, right, obviously that in the future there could always be something. But I just was curious as to, you know, at least as you see it today, sitting here today, is there any issue that you see?
>
> MR. BAYER: Like I said, I'm not seeing anything in that flow path there that we ran a couple minutes ago.

(T14, p. 125).

The ALJ then asked Mr. Bayer about the SSO that occurred near Lake Roland. His testimony on this issue bears repeating in full:

---

[7] A point of correction regarding 20767-20766. As reflected in Protestants' chart (Ex. 69) and maps 7.1 and 7.2 in the LTC Report, DPW recommended that a 15" relief sewer be installed at 20767-20766 for *only* the 10/24 and 20/24 storms, *not* the 10/6 or lesser storms. (For the 10/6 storm, RKK recommend relief sewers for 19 other sewer segments, but not 20767-20766).

ALJ: .... [I]s there any concern that you have having seen those photos [of the SSO] with this project?

MR. BAYER: Not with the project, but yeah, I was very concerned, so I immediately directed some staff to go out there and put that lid back on because that's a safety issue. I didn't want someone to get hurt. So, he went out there immediately after I got that e-mail and put the lid back on and locked it. It's a particular type of lid, so it needs to be locked.

ALJ: Understood. So, but for this particular project, does the fact that you saw those lids off in that Lake Roland, in that area, does that have any concern that the, you know, the sewage, again, from this project, would not be able to flow safely?

MR. BAYER: There was a concern, so I have sensors all the way down to the Jones Falls pumping station in Baltimore City.

ALJ: That's down here, right?

MR. BAYER: Yes, it goes way down, miles or so down into the City, along the Jones Falls interceptor in the City and all the way up into, into this area, so –

ALJ: So, you added, did you say you added sensors because of this?

MR. BAYER: No, no, no. I'm just saying I've has sensors in there for about a year.

ALJ: Oh.

MR. BAYER: All the way down to the City's Jones Falls pumping station. So, and this is a preliminary review of that January 13th storm, I think, showed that the wastewater was backing up all the way from the City back up into the County. Every one of my sensors or meters down below. So, again, that's just a preliminary review of what it appears might have happened.

ALJ: Okay.

MR. BAYER: So, to answer your question, I'm concerned, yeah.

ALJ: Well, you, you were concerned and so what you do is, what do you do then as a result of that concern?

MR. BAYER: Well, like I said, preliminary review is I, I looked at the information I was getting from all those meters, all the way down to the City's Jones Falls pumping station.

ALJ: And you just keep going, gathering the information and then, so then at what, is there a breaking point at one point where do you say, you know, there, something has to be done or, or you just, how long does it take?

MR. BAYER: Well, as I said, it's just a preliminary analysis so far. What, what is occurring is Baltimore City has some issues at their Jones Falls pumping station and they need to install some equipment and I think that that's part of the problem is the station wasn't able to pump as much as it possibly could, resulting in a backup into the County. But again, this is just a preliminary review.

ALJ: Yeah.

MR. BAYER: But that appears as, as what's happening is the City's Jones Falls pumping station is struggling to keep up.

ALJ: Okay, okay.

MR. BAYER: And then to, to ask you what we, what happens moving forward is hopefully the City is going to complete their improvements sometime in June, is what I've heard. And we'll continue to monitor and see if they're effective in their improvements.

MR. BAYER: And then to, to ask you what we, what happens moving forward is hopefully the City is going to complete their improvements sometime in June, is what I've heard. And we'll continue to monitor and see if they're effective in their improvements

ALJ: Okay, all right. But from your experience, you believe that these flow sensors, the flow monitors, I keep calling them sort of the same thing. Obviously, you're, you know, but using those is giving you a better picture of what is going on and you just want to continue to look at that and gather that data?

MR. BAYER: Oh, yes. It gives us great information on how it, how, how the sewer system responds to wet weather, which is what we're really trying to figure out.

(T14, pp. 126-27).[8]

[8] Mr. Bayer's attempt to place blame on the City's pumping station is irrelevant. The pumping station may be physically located in the City but it is the pumping station that receives sewage from the County. If the pumping station has "issues" and sewage backs up, that is not an excuse or reason for allowing additional development in the County. As explained by Mr. Summers, who is familiar with the City's issues, the County and City systems are "interconnected" and "one big system." (T11, p. 7). In fact, while Mr. Bayer places blame on the City, Mr. Summers explained that a critical impediment to the City addressing its sewer problems is actually the *County's* failure to provide adequate information regarding the sewage flows it is sending down the Jones Falls (in terms of timing, peak volume, and duration). (T11, pp. 100, 103).

In any event, the pumping station as nothing to do with the County's model-predicted capacity problems because, as also explained by Mr. Summers, RJN's modeling is based on a "free discharge assumption," meaning an assumption that there's no restriction downstream that would cause a backup in the County. (T11, p. 104).

The superficiality and naivete of Mr. Bayer's "game plan" for dealing with incapacities in the sewer system, if that's what it is, would be comical if it were not so concerning.

1. Modeling, not monitoring alone, is the approach called for in the Consent Decree and by industry standards

The Consent Decree requires modeling, indeed it is industry standard to perform modeling, precisely because you cannot depend on monitoring to catch a problem before it happens. Short-term, or even daily, monitoring, by definition, is not likely to catch a storm that occurs on average only once in 10 years. One could monitor every day for several years and never see a 10-year storm. And even if one does, it is too late, the overflows are already occurring and the sewer system has to play catch up while the sewage continues to spill into the groundwater and other waterways of the sewershed. This is how the County got sued in the first place by the EPA and the MDE.

Indeed, the fundamental purpose of flow monitoring is not simply to catch overflows when or after they happen but rather to inform and supply data for modeling purposes. This is demonstrated explicitly by the Consent Decree itself, which provides:

> **9. Rainfall and Flow Monitoring.**
>
> A. General Requirements. Baltimore County shall collect rainfall and flow monitoring data as set forth below and utilize that data to perform evaluations of (i) inflow/infiltration ("I/I") into the Collection System, (ii) the Collection System's capacity to collect and convey peak flows experienced by or predicted for the Collection System without causing dry-weather and wet-weather SSOs....
>
> * * *
>
> ii. Flow Monitoring. Flow data shall be collected using a system of permanent and temporary flow monitors....
>
> (a) Baltimore County shall collect flow data at such locations in the Collection System as are necessary to allow the characterization of flow from each Sewershed service area, the characterization of every known SSO, the development of the Model as required by Paragraph 14,

and evaluation of the effectiveness of measures implemented by Baltimore County pursuant to this Consent Decree to reduce I/I and to increase system capacity.

* * *

iii. ...Baltimore County's flow and rainfall monitoring network shall be designed, installed, operated and maintained to provide data representative of actual rainfall and flow conditions and of sufficient quality for use in the development, calibration, and verification of the Model as required by Paragraph 14....

ii. Long-Term Capacity/Peak Flow Management Evaluation.

* * *

Baltimore County shall use flow data and rainfall data collected pursuant to this Paragraph and the Model required by Paragraph 14 both to accurately represent wastewater flow attributable to each service area and to estimate the impact of peak flows experienced by the Collection System on the capacity of the Modeled Components to manage peak flows. Peak flows shall be determined using flow monitoring conducted pursuant to this Paragraph....

14. Collection and Transmission System Model

....The integrated Model(s) shall allow Baltimore County to assess the capacity of its Collection System, as provided herein, and to identify the measures necessary to address capacity limitations as required by Paragraph 9.

* * *

B. Model Elements.

ii. The Model shall also be:....

(b) Calibrated using spatially and temporally representative rainfall data and flow data, either existing or obtained under this Consent Decree pursuant to Paragraph 9; and

(c) Verified using spatially and temporally representative rainfall data and flow data; that data shall be independent of the data used to calibrate the Model.

(Prots' Ex. 65, pp. 22, 24, 28, 54, 55).

In sum, a fundamental purpose of flow monitoring is to inform and supply data for the County's model. Monitoring, alone, can only tell you what has happened, not what will happen.

Modeling is the only way, consistent with the Consent Decree and industry standards, to determine whether or not there will be overflows when new sewage flow is added to the system. The modeling performed by RKK, and the more recent updated and recalibrated modeling by RJN, is the model that the County has and it tells us unequivocally that the system will overflow in multiple locations for the 10/6 storm and even for lesser storms. Indeed, at least one overflow has already happened, without the added flow from the proposed development. Mr. Bayer's flow monitoring did not prevent that from happening. His hopefulness about the ability of flow sensors to detect SSOs, based on the "preliminary review" he is apparently conducting, is simply not enough.

2. *The model-predicted capacity issues found by RKK and RJN have already been verified by flow monitoring data.*

It is important to recognize that the flow monitoring that Mr. Bayer described is the same type of data that RKK and RJN have already used in performing their evaluations and determining model-predicted capacity. RJN, for example, performed flow monitoring, both pre-rehabilitation and post-rehabilitation, at 43 locations throughout the sewershed between 2018 and 2020. (T14, pp. 108-09; Prots' Ex. 78, § 1.1 at p. 2 and Table 1-1). That flow monitoring data formed the basis of Map 3. (Prots' Ex. 78, pp. iv, 14) ("Pre- and post-rehabilitation flow monitoring data was used to update the hydraulic model based on the monitored flow conditions. The model was then used to simulate pre- and post-rehabilitation hydraulic conditions.... Map 3 depicts the model predicted SSO and flow restriction locations in Jones Falls for all five (5) design storm simulations under the post-rehabilitation condition").

In other words, the models used by RKK and RJN have *already* been *verified* by flow monitoring data. There is nothing wrong per se with Mr. Bayer acquiring *new* flow monitoring data, but unless that data shows that the model-predicted capacity problems identified by RKK and RJN have magically disappeared, it is irrelevant. Mr. Bayer did not contend that the new and

ongoing flow monitoring data showed anything different; in fact, he apparently remains "very concerned." If the data revealed something different than what RJN found just a few years ago, then surely Mr. Bayer would have said so or brought that data to the hearing. (T14, pp. 106-07, 110-11).

D. Table 5-3.1 And The Alleged "Over-Predictions" In The Model

Mr. Bayer described Table 5-3.1 in the SRRR Plan as a "self-assessment" by RKK of its model simulations. (T14, p. 48). He pointed to that part of the chart pertaining to meter basin BC-22 and stated that the County was "quite concerned" about "over predicting" at that meter basin. Noting that RJN "used the same model that RKK did," he stated that he has "low confidence" in the accuracy of RJN Map 3 because of the term "significant" in right hand column of the Table. (T, p. 50).

Mr. Bayer's explanation of Table 5-3.1 was conspicuously brief and superficial. He did not explain what any of the columns mean. He didn't explain what the terms "Model predicts SSOs beginning with the 2-year storm" means, how that supports his conclusion that there was overpredicting, or what overpredicting even means in context. He did not address the "**under**predicting" that is also reflected in the table for BC-22 and what effect that had on his level of "confidence." He also did not refer to or discuss the other meter basins that receive sewage from the subject property. Perhaps most importantly, Mr. Bayer did not explain how any of this relates to RJN's Map 3, other than the fact that RJN "used the same model that RKK did." As discussed, we know that RJN updated, recalibrated, and verified the model, but Mr. Bayer did not mention that. Mr. Bayer's attempt to white-wash RJN's modeling cannot reasonably be relied upon.

Moreover, this is a remarkable position for a licensed engineer to take. The model adopted by RKK was validated and calibrated as the Consent Decree requires. When RJN undertook its

performance assessment, it updated, recalibrated and verified that model based on new, post-rehabilitation flow monitoring data at 43 locations throughout the sewershed. (Prots' Ex. , p. iv). This process included targeting five (5) of the model-predicted SSO locations to verify model predictions. (*Id.*, p. 2). RJN established guidelines for calibrating the model for pre- and post-rehabilitation conditions and applied those guidelines to compare *modelled* peak flow with *observed* peak flow. (*Id.*, pp. 9-10). In Figures 3-1 and 3-2, RJN graphically showed the modeled versus the observed metered flow and concluded:

> For wet weather calibration, the R-values were adjusted iteratively until the model was calibrated (model-predicted and observed conditions match within established parameters) and *adequately predicted* peak flow, volume, and the hydrograph shape and timing.... *[T]he model reasonably simulates the recorded (observed) flow data. The modeled and observed data are generally within established margins of error and established tolerances.*

(*Id.*, pp. 10-11) (emphasis added).[9]

Modeling is an accepted and fundamental, if not rudimentary, part of sanitary sewer engineering. All models, by their nature, have tolerances, but that does not mean they can be ignored or discounted, particularly when modeling and corrective actions based on that modeling are required by a consent decree. Mr. Bayer, consistent with the Consent Decree and industry standards, cannot simply ignore the model the County's own consultant has created, updated, calibrated and verified.

---

[9] The SRRR Plan states that the model is "capable of predicting" peak flows and flow capacity. (Prots' Ex. 6, pp. 5-2, 5-4; *see also* Appendix I (Model Development and Calibration Report at p. iv ("The hydraulic model of the Jones Falls Sewershed has been built in accordance with the CD and the Model Approach Report. The network was built from field verified GIS information and the flow inputs are based on the 26 County and 6 Boundary flow meters. For the wet-weather calibration, it is concluded that the model responds in a realistic fashion. Based on these facts and the provided supporting material, the Jones Falls hydraulic model is judged to be properly calibrated").

Mr. Bayer's testimony regarding Map 3 is clearly insufficient to refute, alter or change the ALJ's findings and conclusions regarding the map, specifically her findings that:

- Map 3 supports that "for the County-chosen storm events (i.e., the 2 yr/6 hr and 10 yr/6 hr) there are model-predicted SSOs along the sewage path of the Property." (Op., pp. 117, 121).

- The model-predicted SSOs "are not only within the Johns Hopkins' sewer segments, but are also downstream of the [segments], and again within the Project's sewer path flow." (Op., p. 118).

E. Mr. Bayer's Explanation Regarding His March 22, 2021 Email Is Much Ado About Nothing And Does Not Alter Or Change Any Of The ALJ's Findings And Conclusions

During the hearing, Mr. Bayer explained that when he wrote his March 22, 2021 email ("Zero is the 'breaking point' of number of houses that could be built without causing an SSO") he assumed that the eight segments across from the site were not improved, *i.e.,* if the segments were not improved, then no houses could be built without causing an SSO. (T14, p. 45). Mr. Bayer was then asked "if those eight segments are repaired, then what is the breaking point for number of units that can connect" and he responded "once the capacity has been improved, they could connect all the units." (T14, p. 46). Mr. Bayer added that the eight segments needed to be improved because there is a "high possibility of overflow"; the County was concerned that if units were added, there was a "high probability of an SSO." (T14, pp. 45, 68).

We should be careful about not reading anything more into Mr. Bayer's brief and cursory testimony on this point, as the Developer will surely do. Mr. Bayer did *not* say that if, the eight sewer segments were replaced, then any and all capacity problems downstream from those segments would be fixed and disappear. There is no evidence – none – to support this conclusion. To the contrary, as the ALJ has pointed out, the "overwhelming" and "compelling" evidence is that there are *model-predicted* capacity problems in the sewer path from this property (both in the

eight segments *and* downstream). This evidence includes, of course, the reports of *all* of the consultants hired by the County - RKK, RJN, Hazen and Ramboll.

If Mr. Bayer intended that refute this evidence and really meant to say that everything will be fixed, then he would have done so. Instead, Mr. Bayer, while acknowledging the downstream capacity issues reflected in the RKK and RJN reports (T14, pp. 27, 81-82), advanced the several novel theories discussed in detail above (*supra* parts A-D).

Mr. Bayer's testimony regarding his March 22, 2021 email was not sufficient to refute, alter or change the ALJ's findings and conclusions regarding that email. Those findings bear repeating once again:

- The chronology of comments and emails from County representatives is enlightening, culminating in the March 2021 email between Mr. Bayer, Ms. Eicholtz and Mr. Peluso, who were "unequivocal" that there are "capacity deficient areas within the sewer path from the Property." (Op., pp. 113-17) (Prots' Exs. 12, 13, 14, 89, 90; Dev's Ex. 55; County Ex. 12A).

- There was no evidence that DPWT changed its position or were satisfied that the deficiencies would be corrected and, consequently, the presumption in favor or plan compliance is not found. (Op., p. 120).

F. Mr. Bayer's Misunderstanding Of (And Unfamiliarity With) The Ramboll Report

Mr. Bayer testified that the County hired Ramboll because there was some corrosion observed in a video taken of the interceptor under Lake Road. He suggested that the Ramboll work was not pursued because of any concern about capacity, but rather because of the corrosion in the interceptor. He explained that the corrosion "concerned us and we felt we should be proactive and try to initiate a rehabilitation project to take care of that corrosion." (T14, pp. 37, 38, 83). Mr. Bayer added that "the initial inferences for the project was we saw some corrosion and then it was decided that, well, rather than impact those resources with floodplain, wetlands, and

environmentally sensitive areas, that we would expand the scope and then just line everything in that area at the same time." (*Id.*, p. 95).

Mr. Bayer's understanding of the Ramboll report is completely contradicted by the report itself. The report makes clear that Ramboll was not hired to simply address corrosion in the main interceptor. Rather, it was hired, first, to undertake a review of all of the data from the County's previous sewer system evaluation (*i.e.,* the RKK reporting). (Prots' Ex. 87, §§ 2.2, 2.3). The Report reflects that Ramboll reviewed that data and then determined (i) that 35 of the 43 segments in and around Lake Roland had active infiltration and/or structural defects, and (ii) all 44 manholes in the system needed rehabilitation and 31 of them had infiltration. In its Report, Ramboll proposed the rehabilitation of all of these sewer segments and manholes. (*Id.*).

When confronted with the Report on cross-examination, Mr. Bayer admitted that the Report is directed to and covers not just the pipe under Lake Roland but all of the interconnectors and segments in and around Lake Roland. (T14, pp. 83-84). He agreed that the primary focus of the project was to minimize inflow and infiltration to reduce the likelihood of SSOs, not simply address corrosion of the main interceptor. (T14, p. 84). When asked whether he was suggesting that the pipes other than the one under Lake Roland do not actually need the repairs called for, he admitted that he hadn't looked at the video of those segments, so he couldn't say if they are in need of structural repairs or not. (T14, pp. 85-86). Eventually, he disclosed that this is not even his project, so he doesn't know. (*Id.*, p. 86).

Clearly, Mr. Bayer's testimony regarding the Ramboll Report was not sufficient to refute, alter or change the ALJ's findings and conclusions regarding that Report, in particular, the ALJ's conclusions that:

- The Report reflects that "overcapacity defects and model-predicted SSOs are within the sewage path from this Property" (Op., p. 113);

- The Report "showed a worsening of condition of the sewer system...." (Op., p. 125);

- The Report cannot be discounted as only a "planning document" and only used for capital budget purposes. It does not matter whether Ramboll was prepared under the Consent Decree. It was created at the County's request and it informs the County about sewer capacity. (Op., pp. 124-25);

- Ramboll's examinations and inspections are examples of field verification that Mr. Lessner stated was not performed. (Op., p. 125).

- "[B]oth the Ramboll Report and the Hazen Report provided compelling evidence that the pipes in the sewage path from the Property are at overcapacity and that SSOs are predicted to result during the County-selected 10 yr/6 hr storm event." (Op., p. 126).

G. The "Smoking Gun"

In their opening memorandum, Protestants made the rather simple point that if, as the County acknowledges, the eight sewer segments below the site have inadequate capacity and those segments have capacities between 94% and 101% (at least according to the County's capacity calculations), then it stands to reason that any other segments that have 94% or greater capacity are likewise insufficient and should be replaced. As the ALJ observed, there are numerous such segments along the sewer path from this property, best reflected in Protestants' Ex. 69. (Op., p. 121).

There was no testimony or evidence at the reconvened hearing that refuted this simple point. In fact, Mr. Bayer acknowledged that capacities of 94% or greater could be reason for concern:

> MR. MCCANN: [I]s it a safe assumption on my part, Mr. Bayer, that if I were to look at RKK's work product and RJN's work product for capacity numbers, if I were to see capacity numbers that were either 94.32 or greater for any sewer segments, that those are probably sewer segments that should cause us [] some concern....?

> MR. BAYER: If you're talking about a simulation, prediction that the model was run and it showed something like this it could be a cause of concern, yes.

(T14, p. 100). (*See* T14, pp. 45, 68) (eight segments have "high possibility of overflow" and "high probability of an SSO").

H. Other Issues

1. Mr. Bayer's background and authority to speak for the County

Mr. Bayer is employed as a "project engineer" in the County's Sewer Design Section. He reviews and designs capital improvement projects for that section. (T, pp. 18-19, 61). He is not chief of that section and does not hold any other title with DPW. (T, p. 61-62). As such, there is a serious and legitimate question regarding Mr. Bayer's authority to speak on behalf of the County. He was not subpoenaed as a corporate designee, nor was qualified as such during his testimony.

2. Areas of Special Concern

Mr. Bayer described an "Area of Special Concern" as an area "where we had those sanitary sewer overflow *structures*." (T, p. 56) (emphasis added). He explained that the subject property is within an area of special concern, but does not have any SSO structures. It was added because "information that one of the staff members had had gathered that we were very concerned about the possibility of overflow." (T. p. 56). Ms. Bayer clearly does not understand what an area of concern is.

3. The relevance of grease

During questioning of Mr. Bayer, the ALJ showed him RKK's chart of sewer defects (Protestants' Ex. 77) and asked about pipe segment 44212-44211 on page 15 of the exhibit, which reflects 67 total defects in that segment, 66 of which were attributed to "grease." Mr. Bayer

explained that sometimes people put grease into the sewer system and that is serious concern of the County. (T14, pp. 119-21).

Importantly, sewer segment 44212-44211 was one of the sewer segments that RKKK identified as overcapacity (151% for the 10/6 storm) and recommended for upsizing to an 18" replacement sewer. (Prots' Ex. 69, p. 1) (RKK v. DPW capacity chart). If the ALJ was supposing that the cause of the overcapacity may be grease, that cannot be the case. Protestants' Exhibit 77 is a listing of physical defects that existed in the pipe segments at the time RKK performed its physical inspection of the system many years ago. The overcapacity reflected in segment 44212-44211 is a model-predicted overcapacity and is not based on obstructions such as grease. More importantly, RJN's more recent *post*-rehabilitation modeling found this same segment (44212-44211) to still be 148% overcapacity. (Prots' Ex. 81) (RJN pre-rehab v. RJN post-rehab v. RKK capacity comparison chart).

CONCLUSION

In sum, after all the fanfare and anticipation, the evidence introduced at the reconvened hearing was unenlightening and did not move the needle at all. Most importantly, as described above, nothing Mr. Bayer said had any meaningful impact on the thorough and well-reasoning findings and conclusions made by the ALJ in her original opinion. Having been given the opportunity, the Developer could have called other witnesses from the County (in particular, individuals with the legal authority to speak on behalf of DPW, such as Lisa Eicholtz or Jeff Peluso or even the Director herself). Earlier in its case, the Developer also could have called someone from RKK, RJN, Ramboll, or Hazen or hired its own sewer expert. There is a reason the Developer chose not to do any of this and that reason is pretty obvious. Protestants respectfully request that the Development Plan be denied.

Subject: PIA request
Attachments: 20231214120212262.pdf

Ms. Walker: See the below public information act request and the attached exhibit to this request. Thank you.

1. All correspondence and other documents sent to or received from Venable, LLP (including Adam Rosenblatt, Chris Mudd or David Karceski), its consultants or any representative of the developer of the proposed Greenspring Manor development relating in any way to (1) that development, (2) the capacity of the sewer system to handle sewage from the development, and/or (3) the capacity of the sewer system otherwise.
2. All documents reflecting, referring or relating to (1) the status of the replacement of the eight sewer segments listed below, and/or (2) Johns Hopkins' position regarding its undertaking or obligation to undertake the replacements.

   43794-43793
   43793-43792
   43792-43791
   43791-43790
   43790-43789
   43789-43788
   43788-43787
   43787-43786

3. All documents reflecting, referring or relating to the current capacity of any other sewer segments downstream of the proposed Greenspring Manor development.
4. All documents reflecting, referring or relating to other repairs, replacement or maintenance of sewer segments downstream of the proposed Greenspring Manor development (other than those identified in the documents attached at **Exhibit A**).
5. All reports, studies, and other work-product of **Hazen & Sawyer** (Hazen) provided to the County regarding sewer in the Jones Falls sewershed (other than the newsletters that are available on the County's website)
6. All correspondence and other documents sent to or received from Hazen regarding sewer in the Jones Falls sewershed (other than the newsletters that are available on the County's website)
7. All reports, studies, and other work product of **Ramboll Americas Engineering Solutions, Inc.** (Ramboll) provided to the County regarding sewer in the Jones Falls sewershed (other than the Data Evaluation Report dated June 2022)
8. All correspondence and other documents sent to or received from Ramboll regarding sewer in the Jones Falls sewershed (other than the Data Evaluation Report dated June 2022)
9. All reports, studies and other work-product of **RJN Group, Inc.** (RJN) provided to the County regarding sewer in the Jones Falls sewershed (other than the Performance Assessment dated May 27, 2021)
10. All correspondence and other documents sent to or received from RJN regarding sewer in the Jones Falls sewershed (other than the Performance Assessment dated May 27, 2021)

11. All correspondence and other documents sent to or received from MDE and/or EPA relating to the Consent Decree entered in United Stated v. Baltimore County entered in 2005 in Case 1:05-cv-02028-AMD since January 1, 2023.

Subject: RE: Sewer Asset Confirmations

Good afternoon D'Andrea.
I reviewed the Excel Spreadsheet (EX44) that Mr. Conner had provided you on 5/23/2023 (attached).

Results from my review:

Corrective Action Status

MH 43820: Manhole Lining was not needed so that work was eliminated. An Inflow insert was installed 9/29/2014
MH 43819: Manhole Lining was not needed, so that work was eliminated.
MH 53270: A Watertight Frame and Cover was installed 3/12/2017.
MH 44213: A rain pan was installed 6/3/2019.
MH 44212: A rain pan was installed 6/3/2019.
MH 6883: A brick collar was installed around the Manhole and the outside of the Manhole was parged (sealed).

Segment 6875-6874: Lining completed 12/19/2019.

Segment 43794-43793: Segment Lining was approved 12/6/2019
MH 43794: Manhole Lining and Frame and Cover Replacement deleted per RFI 15
MH 43793: Manhole Lining deleted per RFI 14.

Hope this helps.

David

PEOPLE'S COUNSEL FOR BALTIMORE COUNTY'S
MEMORANDUM IN OPPOSITION TO MOTION FOR RECONSIDERATION

People's Counsel's County Charter master plan defense embraces the public interest in adequate sewerage capacity under the incorporated Water Supply and Sewerage Master Plan required by and consistent with the Maryland Environment Article.

I. Baseline: The Administrative Law Judge's Opinion Sewerage Section

A. "Areas of Concern"

The ALJ opinion recognizes DPWT identifies the surrounding Jones Falls Sewershed (JFS) as an "area of concern" (Pages112-13). This is an understatement.

B. The Johns Hopkins University Sewer Segments

The ALJ opinion transitions to the subject of the JHU sewer segments (113-20). This is the sewerage subject the County discussed in the CPC and DPC memoranda and in the initial staff testimony. There were eventually admitted in evidence a series of relevant e-mails by and among the Sewer Design Section staff. The opinion reviews them in detail.

In 2017, the County and JHU signed a Memorandum of Understanding (MOU) relating to development of JHU medical pavilions. This contemplated a sewer project to improve the proximate sewer segments. This involved many steps to implement.[1]

[1] On February 23, 2024, County Attorney James Benjamin sent in an MOU status letter. He described shared responsibilities and said JHU had submitted several plans. Many steps nevertheless remain incomplete. He believes the parties are working in good faith to move forward.

At this juncture, the 8-inch pipes immediately downstream have inadequate capacity. Sister Kathleen McAnany testified about the County's effort to acquire property rights to widen the sewer easement area. This has not been done. (114-15).

David Bayer's March 3, 2021 memo confirms the inadequate capacity. He writes the Greenspring Manor project cannot be approved until **"… all sewer improvements are completed"** (115).[2] Emphasis supplied. He also responds to Valleys Planning Council that the County issued permits to JHU despite their failure to fulfill obligations (116).[3]

On March 22, 2021, in an exchange with Jeff Peluso, Bayer explained no new dwelling units could be built without causing (or aggravating) SSOs (sewerage system overflows) (117). The exchange concluded,

> **"Zero is the "breaking point' of number of units which could be built without causing an SSO."**

The ALJ summarizes,

> "The internal e-mails, by and among County civil engineers in the Sewer Design Section (Bayer, Eichholtz and Peluso) who are charged with special knowledge of the County sewer system were unequivocal that *as of March 2021*, there were 'capacity deficient areas' within the sewer path of the Property. Conclusively, they determined that zero units could be built at the Property without causing SSOs."

Notably, this reflects SSO concerns and problems downstream from the GSM site beyond and south of the proximate 8 (JHU 6) sewer segments.

Meanwhile, seven years into the MOU, he presents no foreseeable timetable for completion. It should be kept in mind that Benjamin is not an expert and did not take the witness stand.

[2] Bayer's Memo implies JHU must complete the improvements. Benjamin's letter appears mainly to be geared to counter any suggestion JHU is blameworthy. For the purpose of the present case, it does not matter who is responsible for the 7-year and ongoing failure to complete the project. The capacity remains inadequate, with no end in sight. Meanwhile, the irregular timing of the letter effectively denied the opportunity to prepare. There was also denied the right of reasonable cross-examination. See, e.g. Hyson v. Montgomery County Council 242 Md. 55, 67-68 (1966).

[3] Again, it does not matter if JHU has been at fault, the fault lies with the County, or the fault is shared. The bottom line is that capacity is still inadequate and any purported progress speculative.

RJN's 2021 model in Map 3 supports Bayer's concerns (118). The RJN model extends to JHU segments, and to those downstream as well. Ibid. The ALJ wrote (118),

> "Consistent with Mr. Bayer's opinion that SSOs would result from the construction of any homes for this project, these model-predicted SSOs within the Johns Hopkins sewer segments (Prot. Exh. 88) but are also downstream of the Johns Hopkins sewer system and within the project's sewer path."

DPWT's Lisa Eichholtz's August 2, 2021 memo reiterated the inadequate capacity and that contemplated improvements were incomplete (118-19). The DPWT's August 10, 2021 DPC memo is consistent with these findings (119).

The ALJ opinion states there is no evidence JHU would complete the sewer work or that it had begun (120).[4] ALJ Murphy wrote,

> "As of Day 13 of this Hearing Officer's Hearing (May 31, 2023), there was no evidence provided by the developer that Johns Hopkins had begun or would be completing the sewer work on these sewer segments through which the sewer from the property would flow."

The disclosure of the DPWT emails and internal memos came only in response to Protestants' attorney Michael McCann's PIA requests. Ibid.

The ALJ ruled the collective evidence negates the "Elm Street" [People's Counsel v. Elm Street Development 172 Md. App. 690 (2007)] presumption (120),

> **"There was no evidence presented by the Developer that DPWT had changed its position,** or that DPWT engineers were satisfied that the deficiencies would ultimately be corrected. **But-for the County documents produced through PIA requests, we would not know the extent of the DWPT concerns about the sewer for this Project. Consequently, the presumption of the development plan compliance in *Elm Street, supra*, is not found here, as there was substantial evidence by DPWT to the contrary**. Accordingly, I place significant weight on DPWT's Sewer Design team engineers' opposition, and that evidence alone is enough to deny the Greenlined Development Plan due to lack of sewer capacity."

[4] This is still the situation. It does not matter if the County shares responsibility, who is at fault, and to what degree. Benjamin writes JHU prepared some plans; and the County approved them. Despite his view of the "good faith" of JHU and the County, there are (to repeat) many more things to implement. The County and JHU are trying to negotiate a new MOU. This shows they are not far from square one. There is no reasonably foreseeable completion date. Even were it evidence, Benjamin's letter does not obscure the 2017-24 failure and lack of discernible significant progress.

DPWT referred on November 10, 2021 to the County's 2015 Jones Falls Interceptor Chart (JFIC) as a basis to identify inadequate capacity in these sewer segments (120-21).

C. The JFS Big Picture

The JHU sewer segments constitute a localized, small corner of the much bigger JFS picture. We recapitulated in our post-hearing memorandum, Pages 25-32:

1. The County and the developer, i.e. the Collective Development Team (CDT), did not address the overall watershed problems in their affirmative cases.

2. The JFS has been subject to the EPA/MDE federal court consent decree for nearly two decades, with no end in sight.

3. The County has churned through four consultants --- RKK, RJN, Ramboll, and Hazen --- with report after report and model after model, and yet barely any progress toward fulfillment. The Hazen 2021 publication virtually puts the County back at the drawing board in its assessments, mapping of multiple SSOs, and projections.

4. The storm events projected in the models, albeit based on the Consent Decree, were at most 10-year events, assuming the County would satisfy the decree about now. The same goes for the 2025 population projections.

5. The communication from MDE in the record is the April 14, 2023 letter imposing stipulated civil penalties for 151 SSOs detected in 2018. There is no County response in the record. It is reasonable to infer MDE is working its way year by year.

6. It is prohibited to swim, fish, and virtually touch Lake Roland because of periodically high e coli concentrations caused by the sewage overflows.

This brings us to the ALJ opinion's discussion of the big picture. The opinion spotlights Protestant's expert Randall Grachek (121, et seq.). Analyzing the JFIC and the 2012 RKK/LTC report -- modeling up to 10-year storms – most sewer segments exceed 90-95% peak flow. This violates the DPWT Design Manual.[5] ALJ Murphy added (121),

> "Comparing the data from the 2015 County Jones Falls Interceptor Chart, with the information in the RKK-LTC 2012 Report, Mr. Grachek created the Comparison

[5] The Comparison Chart haa downstream sewer segments. There was no probative testimony from David Bayer to contradict this data. His scripted answers were conclusory, as discussed below.

> RKK/DPWT Capacities Chart (Prot. Ex. 69). The Comparison RKK/DPWT Capacities Chart from the Property exceed the peak flow of 90-95%. The DPWT Design Manual for Sanitary Sewers prohibits sewage flows above 90-95% revealed that, for the County-selected storm events (2 yr/6 hr and 10 yr/6 hr storms) most of the sewer segments flows above 90-95% of full depth are considered unstable and may result in a sudden loss of carrying capacity with surcharging. (Prot. Ex. 70, p. 6-27). Mr. Grachek testified that 90% peak flow is also the industry standard. The DPWT Design Manual further prohibits SSOs from occurring at any time. Yet, SSOs have been model-predicted within the Property's sewage path as shown by Map 3 of the 2021 RJN Performance Assessment. (Prot. Ex. 70, p. 6-22). Based on this evidence, the sewage for this Project violates the DPWT Design Manual and should be denied on that basis."

RKK recommended increasing pipe sizes and installing relief sewers. But it has not been done, so the sewage path does not comply (121-22). The RKK/SRRR Corrective Action Plan is not satisfied. (Again, the RKK recommendations go beyond the JHU segments).

The ALJ opinion then lists the SRRR Plan recommendations which have not been completed (123). This includes infiltration/inflow (I/I) issues:

> "With regard to I/I reduction, Mr. Lessner agreed that Corrective Action 1 has not been completed. The 2021 RJN Performance Assessment Report informs that I/I reduction was only completed in Metered basins BC02, BC04, BC09 which is in the Timonium area and not in the sewage path from the Property. (Prot. Ex. 78).

The 2021 RJN analysis confirms the incompleteness in the GSM area.

The opinion then turns to the SRRR Plan's description of structural deficiencies and the subsequent concerns expressed by Ramboll and Hazen (123-24),

> "With regard to Corrective Action 3 --- correcting structural deficiencies, I find there is no basis for Mr. Lessner's opinion that those structural deficiencies only refer to those listed in the SRRR 2012 Plan and not in the Ramboll or the Hazen Reports."

In 2022, Ramboll still recommended design, repair, and rehabilitation of interceptors, manholes and junction chambers in the Lake Roland Park area, and minimization of I/I. Despite CDT expert Nicholas Leffner's contention, the Ramboll conclusions are not unrelated to the Consent Decree or as a "planning document" (124-25).

Ramboll referred to the 2021 RJN CCTV examination of sewer pipes and discussed the importance of pipe examination to confirm their suitability for rehabilitation

technologies. They observed that there had not been performed the field verification of the RJN Performance Assessment (125).

The 2022 Ramboll report shows a worsening of conditions: 24 sewer segments with active I/I at pipe joints, 14 with structural defects; and 11 of the remaining 19 segments with structural defects (125). The report added all 44 manholes will need rehabilitation. 31 show infiltration, and they may require full replacement. ALJ Murphy concluded (125),

> "I find that these efforts by Ramboll are examples of 'field verification' of the information from the 2021 RJN Performance Assessment that Mr. Lessner stated was not performed. (Dev. Memo, p. 43). As with the 2021 RJN Performance Assessment, I agree that, unfortunately, the results of the Ramboll Report showed a worsening of condition of the sewer system …."

The ALJ opinion then underlines the February 6, 2023 Hazen report. This assesses that sewer pipes are still over 100% capacity (125-26). It cannot be discounted as a "planning document."[6] ALJ Murphy explained (125-26),

> "Similarly, the Hazen Report dated February 6, 2023 also confirmed that sewer pipes are still over 100% capacity. (Prot. Exs. 107, 108). Similar to the Ramboll Report, whether prepared under the Consent Decree or not, the Hazen Report cannot be discounted as only a "planning document." While the County may *also* use it for capital budget planning, the County hired Hazen to perform a comprehensive evaluation of the accuracy of the data from the RKK models and to update those models. Pursuant to the Protestants' PIA request, the Hazen scope of services, which are on-going, were provided. (Prot. Exs. 106 A, B, C)."

The Hazen Report involves modeling of sewer pipes from the GSM property to the county/city line for up to 10-year/6-hour storms (126). This corroborates previous findings of over 100% capacity. This necessarily includes, but is not limited, to the sewer segments immediately below the GSM property. over capacity.

Accordingly, the ALJ opinion concludes the Ramboll and Hazen reports provide compelling evidence that the pipes in the sewage path from the property are over capacity

[6] David Bayer, again in conclusory fashion, described the Hazen Report as involving "medium-term" or "long-term" strategy. It may refer to such strategy, but also identifies the persistent SSO problems in the JFS, including a map extending downstream from the GSM property.

and that SSOs are likely to result.[7] This includes, but extends way beyond the JHU pipes upon which the County DPC comments narrowly focus.

There is next the perceptive observation that neither Bayer, Eichholtz, nor any other DPWT expert appeared to support the CDT's rebuttal case (126),

> "The evidence provided by the Protestants in regard to overcapacity defects and model predicted SSOs within the sewage path here was not sufficiently rebutted by the Developer. To this point, neither Dave Bayer, nor Lisa Eicholtz, nor any representative from DPWT with knowledge of the sewer system, testified to support Developer's position in rebuttal. If there was a change in DPWT's position, or clarification to explain the evidence presented by the Protestants, then testimony and further evidence from the DPWT was necessary."

The CDT presented only Nicholas Leffner for rebuttal (126-27).[8]

The ALJ opinion also rejected Leffner's recollections of communications with Bayer as not the best evidence to meet the burden of proof. The best evidence would be direct testimony from DPWT witnesses. The opinion proceeds to review more recent emails from David Bayer: March 8 and May 30, 2023 (127). The bottom line is there was no change in the DPWT position. (127).

> "Similarly, in his email dated May 30, 2023, Dave Bayer could have provided any change in DPWT's position wherein, at the request of the Developer, he listed the corrective action status for rehabilitation/repairs that had either been completed, or were determined not to be needed; yet, he did not. (Dev. Exs. 45A, 45B). The silence is deafening."

But the CDT deliberately chose not to call County staff, and indeed resisted in broad terms our office's request that ALJ Murphy to bring in County SWM staff. [9]

---

[7] The April, 2023 MDE imposition of civil penalties for multiple SSOs shows the deficiencies, even if for 2018. There is no indication from MDE of any material improvement thereafter.

[8] This observation also reflects that neither the County nor the CDT addressed the overall JFS sewerage issues in their main cases. It was not until Protestants presented Randall Grachek and Robert Summers, and did the PIA work, that the subject came to the light of day.

[9] When we asked by email that a DEPS expert be brought in to discuss storm water management, the CDT attorney objected vigorously and stressed it was their choice not to call any such county witnesses. And they didn't call any DPWT witnesses until they lost the case.

We cannot emphasize enough that the CDT's reconsideration motion effectively to call David Bayer is the epitome of a "sour grapes" effort to reopen the case and take a bite at the apple which they didn't want to touch in their main case or even in rebuttal. It is an injustice, untimely, and unacceptable.

At the Reconsideration Hearing, ALJ Murphy expressed interest in "contributions" from County' Sewer Design expert staff. But that interest should have translated to action in the main case. Once the case ended, the proper time to call County experts had passed.

The ALJ opinion then rejected Leffner's opinion that the 2019-21 quarterly reports did not document SSOs as irrelevant. There followed the note that Bayer's March 22, 2021 email showed that any manhole corrections (2014/2017/2019) did not solve the problems. Nor was there any evidence from RJN in 2021 that the repairs were completed.

Capping the narrative of persistent major JFS deficiencies, the ALJ opinion identifies violations of County Code Sec. 32-4-410(b), requiring safe sewage which does not contaminate waters; Sec. 32-4-102 (b)(1)(2), safe sewage; Sec. 32-4-103(a), adequate sewage; and DPR Policy Manual 18, safe and sanitary sewage treatment and disposal (128).

The ALJ opinion then logically rejects Leffner's claim that the GSM generation of additional sewage would be inconsequential (129).[10]

Finally, the ALJ opinion turns to the JHU/County sewer segment status (129),

> "On the other hand, if Johns Hopkins is not exempt and is still required to complete the repair/rehabilitation, there was no evidence presented as to whether or when John Hopkins will complete the work. The undersigned even posed questions of DPR during the HOH but no information was known. **Ultimately, this issue goes to the Developer's burden of proof in its case-in-chief that adequate sewer capacity exists in the sewage path for this Project, including the repair/rehabilitation by Johns Hopkins. Given the lack of any direction on this important issue, contrary to the suggestion by DPR DPC comment, I am not willing to condition approval here on the possibility that Johns Hopkins may, or may not, complete that work. (County Ex. 12A).** 4" Emphasis supplied.

[10] We calculated the annual sewage generation for 61 dwelling units in this D.R. Zone would amount to 14,026,950 gallons, more than 14 million gallons. Post-Hearing Memorandum 26.

The ALJ opinion thus puts a lid on the case in rejecting the apparent CDT request to give approval, subject to some sort of condition.

Conditions may perhaps be imposed where they are fairly routine and will be adjusted or satisfied in a timely way. For example, ALJ zoning decisions often impose conditions for landscaping. DOP architectural review, and garage residential use. That is not the case here with the problematic JHU/County sewer segments.[11]

We will proceed to show there has been no material change in the situation. This is admitted explicitly in David Bayer's testimony. To reiterate, nor is there any relevance to attorney James Benjamin's effort to mitigate any arguable JHU blame for the shared seven-year JHU/County failure to meet the MOU and come anywhere close to completion.

II. The Reconsideration Hearing; David Bayer's Testimony

This brings us to a more direct evaluation of David Bayer's testimony. There is nothing there to warrant reconsideration. There are also significant procedural objections.

A. Reconsideration Beyond the Pale; Fundamental Unfairness

Under the guise of reconsideration, the developer effectively inaugurated and opened a new or second case. The word "reconsideration" is a misnomer here.

The debacle began when the County failed to present any DPWT Sewer Design Section or other witnesses with potentially relevant information. They failed, for example, to produce the Program Manager tasked with Consent Decree compliance.

Then the CDT tactically decided to save its sewerage expert for rebuttal. They not only withheld their hired expert, Nicholas Leffner, but also decided not to call any County expert staff. Indeed, they insisted it was their prerogative to call or not to call any County staff when we asked ALJ Murphy to bring in County SWM staff to illuminate that subject.[12]

---

[11] Anyway, to reiterate, resolution of the JHU segments is a far cry from resolving the multiple sewerage deficiencies which span the JFS down to the county/city line.

[12] Our Post-Hearing Memorandum analyzed the "Empty Chair" scenario and the adverse inference from their failure to testify. Brooks v. Daley 242 Md. 185, 194-95 (1966); Murphy v. McCloud 650 A.2d 202 (D.C. 1994). (29-30).

The County and CDT utterly failed to meet the burden of production of evidence on sewerage capacity. ALJ Murphy's opinion recognized they failed to meet the substantial evidence test of People's Counsel v. Elm Street Development 172 Md App. 690 (2007).[13]

It was Michael McCann, Protestants' counsel, who did yeoman's work to assist the ALJ. He presented Randall Grachek and Robert Summers with in-depth testimony. There were reviewed copious documents, including the reports of all the consultants. McCann forced the County disclosure of Sewer Design Section staff e-mail, which were revealing.

ALJ Murphy recognized all this in the main opinion.

The CDT still did not call County staff. Rather, they tried to rescue the case on rebuttal with Nicholas Leffner. ALJ Murphy correctly rejected his inadequate testimony.

A trial has a beginning and an end. This one ended after the deliberate choices of the County and developer not to call or present County Sewer Design Section staff. Bayer's untimely appearance now has nothing to do with reconsideration. It is the CDT's play to open a new flank to overcome their evidentiary failures and tactical miscalculations.[14]

As if this were not enough of an anomaly, ALJ Murphy denied Protestants' counsel's request to recall experts to respond to Bayer's testimony. ALJ Murphy disregarded that if Bayer had testified in a timely way for the County in the main case, Protestants' experts would have had the opportunity to respond. The opportunity to cross-examine does not substitute for the right to present testimony in response.

The unfairness crossed another line when Michael McCann submitted the Draft of the County's Triennial Sewerage and Water Supply Plan, required by Maryland law. In a dialogue after developer's counsel's objection, ALJ Murphy viewed this as reopening the case and asserted the reconsideration hearing was not so intended. ALJ Murphy did not recognize that, by accepting what she called a helpful County "contribution," this reopened the case to allow entirely new evidence from a witness who did not appear for the county

[13] We discuss in depth the Elm Street "conundrum" and legal implications in Section III.D below.

[14] As we also show in Section III.C below, there is nothing anyway in Bayer's testimony to cause any change in the ALJ's opinion. Our threshold point here is that the "reconsideration" move is flawed conceptually and procedurally at the outset.

and was not called. Whether or not "shocking," as McCann responded, it illustrated and magnified the reality that the case had been reopened in disguise. The ALJ had done the very thing supposedly rejected, for the benefit of the developer, and then restricted the Protestants. So, a two-tiered system of justice compounded the errors.

The misuse of reconsideration and added suppression of evidence were fundamentally unfair and amounted to a compound denial of procedural due process of law. Maryland Aggregates v. State 337 Md. 658, 686-88 (1994); Mayor and Council of Rockville v Woodmont Country Club 348 Md. 572, 590-92 (1998).

B. Overview

David Bayer agreed to meet with developer's counsel. They orchestrated and scripted a series of leading questions. There is the appearance that Bayer here became a development team adjunct by so jointly preparing the questions and answers. [15]

The legal problem with Bayer's direct serial responses --- particularly when downplaying SSO problems in the downstream path --- is they were conclusory, without supporting documentation or explanation. They did not come close to matching the breadth and depth of Randall Grachek and Robert Summers.

The Court of Appeals long ago emphasized in Worthington Construction Corp. v. Moore 266 Md. 19, 29 (1972),

> "An expert's judgment has no probative force unless there is a sufficient basis upon which to support his conclusions. Stickell v. City of Baltimore, 252 Md. 464, 474, 250 A.2d 541 (1969); State Health Dept. v. Walker, 238 Md. 512, 520, 209 A.2d 555 (1965); State, Use of Stickley v. Critzer, 230 Md. 286, 290, 186 A.2d 586 (1962). Here the very groundwork for his opinion is inadequately supported."

Likewise, Zilichickhis v Montgomery County 223 Md. App. 158, 185 (2015) reiterated,

> "Generally, an expert's opinion has no probative force unless there is a legally sufficient factual basis upon which to support the conclusions. *See Carter v. Shoppers Food Warehouse MD Corp.*, 126 Md.App. 147, 155–59 & n. 9, 727 A.2d 958 (1999)."

[15] Bayer admitted to being uneasy and hesitant to speak with Michael Wyatt, an area citizen who also appeared as an attorney. He did not display such uneasiness in testifying for developer.

In sum, the serial scripted narrative on direct laid inadequate groundwork for the conclusory downplay of downstream path SSO problems.

Nevertheless, Bayer stuck to his opinion that the GMS development could not be approved until the JHU/County project is complete. Nor did he have any evidence that the end is in sight for such completion.

Where unscripted, he provided some fair and interesting answers on cross-examination. We discuss these below.

C. The Scope of the Sewerage Capacity and SSO Problems

1. The Developer's Ostensible Objectives

The developer's counsel's objectives appear to be the following:

> (1) To persuade that capacity and SSO concerns are limited to the proximate 8 JHU/County sewer segments and any problems further downstream are either nonexistent or have been resolved;
>
> (2) To persuade that the 8 JHU/County sewer segments are on course to resolution in the near or reasonably foreseeable future; and
>
> (3) To obtain approval on the sewerage issue subject to a flexible, effectively unreviewable condition that development may proceed as soon as DPWT says the JHU/County sewer segment work is complete.

Based on this record, even with Bayer's testimony, these objectives lack adequate foundation, and are beyond the pale.

2. The Downstream Problems

Let us begin with the downstream issue. To the extent Bayer denied or downplayed capacity and SSO problems further downstream, his conclusory assertions do not stand up against Randall Grachek's analysis, the documented consultants' reports, and the unacceptable persistence of the downstream Lake Roland Dead Zone (LRDZ).[16]

[16] We reviewed the LRDZ and the excessive e coli contamination in our Post-Hearing Memorandum (28). Bayer did not address the LRDZ and the evident sewerage impact from the area south and downstream of the GSM property.

Furthermore, there is not in the record a single county Quarterly or Annual Report which claims elimination of capacity and SSO problems in the JFS area from the GMS property down to polluted Lake Roland. Nor is there a single document from MDE or EPA which indicates that the Consent Decree is satisfied with respect to SSOs in this area.

Even in direct examination, Bayer could not dispute the combined RKK/RJN data showing many 100% over capacity locations. Rather, he suggested models might overpredict. But this speculation does not help his position. As Grachek said, and consultant reports reflect, modeling -- while subject to a degree of error --- is central to capacity and design evaluation. He also admitted the Design Manual's circa 90% maximum flow depth for new sewer construction, albeit downplaying it as "guidance." Prot. Exh. 70. In contrast, the ALJ opinion cites the Design Manual as authoritative.

Michael McCann's cross-examination exposed more downstream problems. Upon review of rehabilitations slated by the RJN 2021 Report, Bayer admitted only two repairs were done in the GSM sewer path and that none were done closer to Lake Roland. Prot. Exh. 78, Map 2. Bayer was not aware of any other repairs downstream. Turning to the RJN Long Term Capacity Report, he admitted the recommended upsizing of pipes for 2 year/24 hour and 10 year/6 hour storms were not done or complete. Prot. Exh. 68, Map 5.1. He admitted more intense storms would warrant increased upsizing.

There was also a discussion of RJN's description of the installation of flow meters to check the effectiveness of any repairs. Ibid. Figure 1.2, Map 3. This included the distinction between structural SSOs, built to discharge, and the generic SSOs targeted by the Consent Decree. The main thing here is that Bayer admitted the presence of SSOs in the JFS downstream from GSM. Bayer tried to downplay them, but had to admit them.

Upon review of the Ramboll 2022 Report, Bayer acknowledged corrosion concerns and rehabilitation issues pertaining to the sewer segments under, in, and/or around Lake Roland. Prot. E.87, Figures 1,1.1. There ensued a discussion of the necessity to minimize inflow/infiltration by lining and/or structural repairs. Sec.2.2. These would help capacity, increase flow, and extend service life. But the design is not finished for this high dollar project. Bayer added this is not his project.

McCann produced photographs of relevant JFS manhole locations where SSOs occurred in January, 2024. Bayer tried to downplay them, but had to admit they happened.

Remarkably, McCann elicited from Bayer that the County has a Program Manager tasked with Consent Decree compliance.[17] This Manager never appeared to describe the County's JFS compliance status or, for example, communications with MDE and EPA.[18] This is another "Empty Chair" which generates yet another negative SSO inference.

This reflects starkly on the County/Developer failure to meet their burden of evidentiary production, here connected directly to the Consent Decree. This aggravates the evidentiary void as to resolution of primary SSO concerns. Bayer acknowledged he is not part of the compliance staff and had no information on their work.

The developer would make the case all about Bayer, fabricate that he gave favorable probative evidence, preempt thirteen hearing days, divert attention from the ALJ's finding of their failed proof, and cast aside the ALJ-credited Grachek and Summers evidence. Indeed, Bayer did not touch, much less dispute, their compelling evidence. As Bayer eventually admitted to Michael Wyatt, **nothing had changed.**

In view of all the evidence, it contradicts and subverts the ALJ's main opinion for developer to suggest the sewerage capacity and SSO problems are confined and isolated to the JHU/County sewer segments. On this record, as a matter of law, they are far more extensive. After close to two decades, there is still no end in sight for County compliance with the Consent Decree and its primary goal to eliminate SSOs. It is beyond the pale to engage in "pathway" tunnel vision and disregard the wide scope of enduring incapacity.

Ultimately, there is no evidence of any material change in the evidence to justify departure from the ALJ opinion's thorough finding, including the negation of "the Elm Street presumption." It would be arbitrary and capricious to display a change of mind.

[17] This should be a reminder that Bayer is just one of several project engineers with delineated assignments. He is not omniscient with respect to Consent Decree and JFS issues.

[18] The record shows only the unrebutted April 14, 2023 MDE letter to the County imposing a Stipulated Penalty Assessment for 151 SSOs in 2018. These are just SSOs which were detected.

3.The Proximate JHU/County Sewer Segments

The main thing and bottom line again is there has been no material or substantial change in the JHU/County sewer segment status which could conceivably justify deviation from the ALJ opinion's well-reasoned determination of inadequate sewer capacity.

Even in his mostly scripted direct examination, Bayer maintained the GSM development could not be approved until completion of the JHU/County sewerage project. Developer's counsel tried to deflect this opinion by asking if Bayer had referred to permit issuance rather than development plan approval. This petty tangential question goes against the ALJ's well-reasoned denial based on inadequate sewer capacity.

Early in Michael McCann's cross-examination, Bayer maintained as still "accurate" his March 3, 2021 email (Prot. Exh. 13) to DPR's DeSai. This email concluded that the Greenspring Manor project cannot be approved until **"… all sewer improvements are completed."** McCann followed up with the inquiry as to whether the March 22, 2021 (Prot. Exh. 90) **"zero 'breaking point'**" position is still accurate. Bayer replied it is accurate.

These two replies are sufficient in themselves to preclude reconsideration.

Remarkably, Michael Wyatt's cross-examination bookended these replies. Wyatt asked Bayer if anything had changed since the time of his earlier analysis. Bayer replied there was no change, Game over. Q.E.D.

Developer's counsel had tried to generate what may be called favorable smoke when he asked Bayer about a new model Hazen was working on, yet incomplete. Bayer asked Hazen to run simulations on the JHU/County project. Bayer did not produce the data, adding to the speculative nature of his inquiry. More important, Bayer made the inquiry to to evaluate if the proposed JHU/County project pipe widths are adequate. This is a reminder and wakeup call that there is uncertainty as to the effectiveness of these model-predicted projects. Even if the project is ever completed in this century, it may turn out to be inadequate to eliminate the downstream SSOs.

As for James Benjamin's tangential letter, he is an attorney, not a sewerage expert. He wrote mainly to deflect or mitigate JHU's share of the 7-year abject failure to meet the

sewerage project requirements for the JHU medical pavilions. He spins the "good faith" of the parties. But actions speak louder than words. There is still no end in sight.

4. The Problematic Effort to Revive the Request for Conditional Approval

The persistently inadequate sewer capacity should foreclose consideration of a condition. Such an open-ended condition would enable developer to pressure DPWT to label the project complete and give approval without further public notice and hearing.

We repeat the core of the ALJ opinion on this subject,

> "Ultimately, this issue goes to the Developer's burden of proof in its case-in-chief that adequate sewer capacity exists in the sewage path for this Project, including the repair/rehabilitation by Johns Hopkins. **Given the lack of any direction on this important issue,** contrary to the suggestion by DPR DPC comment, I am not willing to condition approval here on the possibility that Johns Hopkins may, or may not, complete that work. (County Ex. 12A). 4" Emphasis supplied.

There has been no material change or meaningful progress since that July 31, 2023 Opinion. Benjamin's cosmetic letter conveys sadly that, seven years after the initial MOU (since expired), JHU and the County are just now trying to negotiate a new MOU. This is no new "direction." As for Bayer, he is not involved with the JHU/County interactions and could give no "direction" or speculate on conceivable completion. It is delusive and delusional to suggest there will be completion any time on the discernible horizon.

There is absolutely no justification to give the developer what likely would become the legendary camel's nose under the tent. That is what they want. Then, behind the public curtain, they will try to get the whole camel in as they try to penetrate the DPWT tent.

D. <u>Elm Street</u> Conundrum: Burden of Proof; Presumptions; Substantial Evidence; Failure to Meet Burden of Production; Reconsideration Disqualified

From every perspective, the County and developer did not meet their burden of production of evidence on the sewerage issue. We submit the ALJ opinion, while negating the <u>Elm Street</u> presumption, also recognized the developer's failure of proof,

> **"<u>There was no evidence presented by the Developer that DPWT had changed its position</u>,** or that DPWT engineers were satisfied that the deficiencies would ultimately be corrected. **But for the County documents produced through PIA requests, we would not know the extent of the DWPT concerns about the sewer for this Project.**

> **Consequently, the presumption of the development plan compliance in *Elm Street, supra*, is not found here, as there was substantial evidence by DPWT to the contrary**. Accordingly, I place significant weight on DPWT's Sewer Design team engineers' opposition, and that evidence alone is enough to deny the Greenlined Development Plan due to lack of sewer capacity.

ALJ Murphy here implies Elm Street holds the County and developer enjoy a favorable presumption at the outset even without producing evidence. We believe this misreads Elm Street. But let us first review the law relating to presumptions and burden of proof,

Judge Charles Moylan in Cooper v. Singleton 217 Md. App. 626, 627-28 (2014) made the point that "presumption" and its first cousin, burden of proof, are among the slipperiest terms in the legal canon. Among others, he quoted Charles McCormick in 2 McCormick on Evidence (7th Ed. 2013), 217 Md. App. at 228:

> "Dean Charles McCormick, another of the early Olympians, added to the diagnosis:
>
> > One ventures the assertion that 'presumption' is the slipperiest member of the family of legal terms, except its first cousin, 'burden of proof.'[3]"

The slippery problem here begins with County Code Secs. 32-4-227(e) and 32-4-228(a). These refer to county comments and conditions and hearing officer review of unresolved comments. This brings into play the ritually cited case of People's Counsel v. Elm Street Development 172 Md. App. 690, 701-05 (2007).

ALJ opinions view Elm Street as saying County acceptance automatically creates a favorable presumption. But Elm Street did not say that. Rather, the Court viewed the case from the traditional judicial review standard of substantial evidence, 172 Md. App. at 704,

> "While the circuit court did remand the case for lack of "substantial evidence" as to the property's compliance with the requirements of §§ 1A03.5(A) and (C), "substantial evidence" in this context does not necessarily require, as appellants claim, an articulation of the underlying "facts and reasons." Substantial evidence is merely "such relevant evidence as a reasonable mind might accept as adequate to support a conclusion." *Warwick Supply & Equip. Co., Inc.*, 330 Md. at 494, 624 A.2d 1238. The revised red-lined development plan and the recommendations submitted by the Directors of the Office of Planning and DEPRM were such relevant evidence, and the hearing officer properly accepted that evidence as sufficient to meet the requirements of §§ 1A03.5(A) and (C)."

There, the Planning and DEPRM Directors made specific recommendations that the red-lined plan met the purposes of the R.C. 4 (Watershed Protection) Zone. We argued these

fell short of the evidentiary standard. The Court disagreed and sustained the approval.

Even where there is a judicially recognized presumption, as for special exceptions, petitioner must produce evidence. In Turner v. Hammond 270 Md. 41, 55 (1970), after discussing the presumption, the Court nevertheless underlined applicant's burden of proof,

> "While the applicant has the burden of adducing testimony which will show that his use meets the prescribed standards and requirements, he does not have the burden of showing affirmatively that his proposed use accords with the general welfare. If he shows to the satisfaction of the Board that the proposed use would be conducted without real detriment to the neighborhood and would not actually adversely affect the public interest, he has met his burden."

The burden of "adducing testimony" is effectively the classic burden of production. Turner has been cited in Schultz v. Pritts 291 Md. 1, 11 (1981) and People's Counsel v. Loyola College 406 Md. 54, 83 (2008). In other words, to gain the presumption and its benefit, a petitioner must first produce substantial evidence. Let us now return to the present case.

It was and should have been in plain view to DPWT staff and anyone paying minimal attention that the sewerage impact on the JFS would be a major issue. Credit to Michael McCann for presenting the issue with illuminating evidence. The CDT had recognized the issue. They hired Nicholas Leffner, but they held him back until rebuttal.[19]

So, County staff focused on the JHU sewage issue and identified difficulties. But they did not address the overall impact on the JFS. They did not make even a recommendation. Combined with the CDT's tactical decision to hold back Nicholas Leffner, this left a JFS evidentiary void.[20] On this record, there was no JFS overview evidence or any issue raised until Protestants called Randall Grachek. Meanwhile, to the extent DPWT CPC/DPC commented on the JHU sewerage project, they were negative.

[19] The present case comes after Krongard (Torch Hill). Although to the north, across Seminary Avenue, and different in material respects, sewerage impact was well known as a major issue. The developer's and primary protestants' attorneys were the same as here. The issue was no secret.

[20] An aggravating factor, to repeat, is the CDT also chose not to call Bayer or Eichholtz at all.

This is a far cry from Elm Street, where the DOP and DEPRM Directors did make specific written favorable recommendations on the relevant issues. Here, neither the County nor the developer satisfied the substantial evidence test on this major issue.

When a party with the burden of proof fails to produce substantial evidence necessary to meet the burden of production, the case is effectively terminated. There is nothing to rescue by reconsideration or any other mode. The CDT's desperate effort here to call County staff after their empty case ended without proof is the fruit of their manipulative but errant tactics. They have reaped what they sowed.

Developer's failure to satisfy the burden of production leaves absolutely nothing to reconsider without reopening the case. As we observed, there came a time at the hearing when ALJ Murphy told an understandably shocked Michael McCann that she did not want to reopen the case by admitting a County public triennial water supply and sewerage plan document. Yet the ALJ did not realize that by entertaining developer's motion and Bayer's testimony, this was a palpable and unacceptable reopening of magnitude.

The developer's case thus defaulted on the critical overall sewerage issue.

Based on the totality of circumstances, it would be arbitrary, capricious, unjust, and far beyond the pale to grant developer's Motion for Reconsideration in any way, shape, form, or degree.

IN RE: GREENSPRING MANOR DEVELOPMENT PLAN AND ZONING HEARING (2310 West Joppa Road)	*	BEFORE THE
	*	COUNTY BOARD OF APPEALS
	*	OF
8th Election District 3rd Council District	*	BALTIMORE COUNTY
	*	Case No. 08-0922 and Case No. 2021-0250-SPH
Greenspring Joppa Falls, LLC Owner and Developer	*	

* * * * * * * * * * *

DEVELOPER'S POST RECONSIDERATION HEARING MEMORANDUM

Greenspring Joppa Falls, LLC, legal owner and developer ("Developer"), by undersigned counsel, hereby submits this Memorandum and states as follows:

INTRODUCTION

On September 25, 2023, the Office of Administrative Hearings granted Developer's Motion for Reconsideration and permitted: (1) the Developer to offer a revised version of the Development Plan that eliminates the Emergency Access Gate; and (2) an additional hearing to consider testimony and/or documents from a DPWT representative regarding the sewer path from the subject property. On February 26, 2024, the Office of Administrative Hearings held a public hearing to address these two issues. First, as permitted by the Order granting the Motion for Reconsideration, Developer submitted a blue-lined Development Plan that removed reference to a proposed emergency access gate in the rear of the Property. *See* Developer's Exhibit 1C. The ALJ then addressed a letter from the County Attorney, James Benjamin, providing an update on the status of a Memorandum of Understanding between Baltimore County and John Hopkins related to sewer improvements that were referenced throughout this case. *See* Baltimore County Exhibit 14. Mr. Benjamin, who was in attendance, explained that the purpose of the letter was to provide clarifications to the record in this case as counsel of record.

The remainder of the hearing consisted of testimony from Dave Bayer, a Project Engineer for the Sewer Design Section of the Department of Public Works and Transportation (DPWT) with over thirty (30) years of work for Baltimore County related to sewer design.[1] Mr. Bayer provided an independent review of many of the documents and issues referenced throughout this case and explained Baltimore County's position with respect to sewer capacity in the Jones Falls sewershed and its relationship to the sewer path for this project. All parties were given an opportunity to cross examine Mr. Bayer. Notably, People's Counsel asked no questions.

This Memorandum provides a summary of Mr. Bayer's testimony and then explains how his testimony, coupled with the letter from Mr. Benjamin, provides compelling evidence for the ALJ to reconsider the July 31, 2023 Order denying the Development Plan in this case and to now determine that the Development Plan should be approved with conditions.

SUMMARY OF TESTIMONY OF DAVE BAYER

I. CLARIFICATIONS REGARDING THE CONSENT DECREE.

Mr. Bayer testified that he has a master's degree in engineering and has dealt with issues related to Baltimore County's sewer system on a daily basis for over 30 years. T. 24-25. With respect to the Consent Decree, he was involved "from day one" when the county began negotiating with the Department of Justice, EPA, and MDE. T. 28. While the Consent Decree required the preparation of a Long-Term Capacity Report ("LTC Report") and a Sewershed Repair, Replacement, and Rehabilitation Plan ("SRRR Plan"), Mr. Bayer confirmed the Consent Decree does not require Baltimore County to fix the sewer system to any specific level of storm, and the Consent Decree is specifically and intentionally devoid of such a requirement. T. 29.

a. THE SRRR PLAN.

Similarly, while the LTC Report evaluated certain modeled outcomes under various storm scenarios, the SRRR Plan did not require Baltimore County to make all of the improvements to address all of the storms modeled in the LTC Report. T. 33. On suggestion

[1] A transcript of Mr. Bayer's testimony from the February 26 hearing is attached hereto and referenced herein as "T."

from MDE, the County chose to evaluate their system under the 10-year, 6-hour storm because it most closely matches the rainfall pattern in the area. T. 34. With respect to the path of sewage from the Property, the SRRR Plan contained a map identifying areas exhibiting high inflow and infiltration (I&I) and existing SSO's. T. 36. Mr. Bayer confirmed that neither SSO's nor I&I exist downstream from the Property. *Id.* Both MDE and EPA confirmed in writing that the SRRR Plan meets the requirements of the Consent Decree. T. 39.

II. CLARIFICATIONS REGARDING VARIOUS CONSULTANT REPORTS.

a. THE RJN REPORT.

Mr. Bayer explained that the Consent Decree requires Baltimore County to prepare performance assessments for each sewershed, and that Baltimore County hired RJN to prepare a progress report for the Jones Falls sewershed (the "RJN Report"). T. 40. The RJN Report included two maps that detail the progress that has been made throughout the Jones Falls – Map 1 (the corrective actions recommendations map from the SRRR Plan), and Map 2 (entitled "Rehabilitation Completed"). T. 40-41. Mr. Bayer confirmed that he reviewed the status of the improvements identified throughout the Jones Falls sewershed and the only outstanding repairs are "four or five segments and two manholes." T. 41. These outstanding repairs are entirely comprised within: (1) a relief sewer project in Towson, where the county is using a relief sewer as a bypass to minimize environmental impact to a floodplain and wetlands area, and (2) a structured SSO on Marnat Avenue that requires Baltimore City assistance to resolve. T. 42-43. Neither of these outstanding repairs are within the sewerage path downstream from the Property. T. 42-43. RJN's performance evaluation concluded that the county's rehabilitation work has been effective. T. 43.

b. THE HAZEN REPORT.

Mr. Bayer explained that Baltimore County hired Hazen in 2022 to perform a comprehensive evaluation or needs analysis that focuses on medium to long term improvements to the overall sewer system within the Jones Falls sewershed. T. 44. Importantly, Mr. Bayer

testified that, in undertaking its evaluation, Hazen will be offering strategies that may help with future allocation of funding to specific projects, but Hazen's scope and duty in this instance is not to identify any immediate improvements within the Jones Falls sewershed that would be required to be completed before any new connections are made to sewer system. T. 44. Hazen's comprehensive evaluation and planning exercise is ongoing, and a final report has not been issued to date. *Id.*

c. THE RAMBOLL REPORT.

Baltimore County hired Ramboll as a consultant to design certain rehabilitation work in the Lake Roland area of the Jones Falls sewershed. T. 45. Mr. Bayer confirmed that Baltimore County did not hire Ramboll as a result of concerns about capacity in the Jones Falls sewershed; the purpose and scope for Ramboll's evaluation stemmed from certain structural anomalies/deficiencies in limited portions of the existing sewer infrastructure, namely the relining of a portion of the sewer pipe nearby Lake Roland. T. 45. While the relining project would address a specific pipe in Lake Roland and result in improved capacity within the system, Ramboll's scope and the report they prepared were completely unrelated to the overall capacity of the Jones Falls sewershed. T. 46. Mr. Bayer flatly stated that adding 60 homes to the Jones Falls sewershed would have no impact on the Lake Roland project evaluated by Ramboll. T. 46.

III. SUMMARY OF IMPROVEMENTS TO THE JONES FALLS SEWERSHED.

Mr. Bayer testified that, following execution of the Consent Decree, Baltimore County has spent more than $25 million in construction costs to make improvements in the Jones Falls sewershed. T. 47. At the time of the Consent Decree, there were 44 SSO's in the County, and 34 have now been eliminated. Four of the remaining 10 require Baltimore City improvements, and only 1 is located in the Jones Falls sewershed – Marnat Avenue – which is not within the sewerage path downstream from the Property. T. 47-48.

IV. DPWT EVALUATION OF GREENSPRING MANOR THROUGH MODELING.

Mr. Bayer confirmed that the Sewer Design section of DPWT evaluates all subdivisions proposed in Baltimore County. T. 48. In this case, the Developer's consultant emailed Lisa Eicholtz, Mr. Bayer's colleague, and asked whether Baltimore County's sewer system could handle the Greenspring Manor project. T. 48-49; Protestant Ex. 55. Ms. Eicholtz copied Mr. Bayer on her response and identified eight (8) sewer segments that needed to be upsized before homes from the Greenspring Manor project could connect to the public sewer system (6 of the segments are attributed to the Johns Hopkins project and 2 are the responsibility of the Developer). T. 48-49.

Baltimore County uses a model to conduct this analysis, and Mr. Bayer confirmed the results for this project are contained in Protestant's Ex. 64. T. 49. Importantly, and contrary to the testimony of Mr. Gracheck, Mr. Bayer testified that the model does account for wet weather through the "infiltration" column, which includes "extraneous flow, which would be inflow and infiltration." T. 50. The model includes Baltimore County's "best guess at what we thought the weather impacts would be." T. 50.

Baltimore County is also working on a new model, which is not yet complete. Nevertheless, Mr. Bayer ran the Greenspring Manor project through the new model to ensure that the 8 segments identified by Ms. Eicholtz were the only segments that needed improvement prior to connection of the Greenspring Manor project to the sewer system. T. 50-53. Mr. Bayer confirmed that "once the eight segments [are] improved, there [will not be] any issues." T. 53.

V. CLARIFICATION RE: THE PELUSO EMAILS.

Mr. Bayer explained that before he retired, Jeff Peluso was the Chief of the Bureau of Engineering and Construction for DPWT. T. 53. In March 2021, Mr. Peluso emailed Mr. Bayer and asked him questions about Greenspring Manor. T. 54; Prot. Ex. 90. Specifically, Mr. Peluso asked what the breaking point for Greenspring Manor was in terms of number of units that could connect to the County sewer system without creating an issue. *Id*. Mr. Bayer responded by email

stating that "zero" is the breaking point of number of units that could be built without causing an SSO. *Id.*

At the Reconsideration Hearing, Mr. Bayer clarified that his response assumed the 8 sewer segments identified by Ms. Eicholtz (6 Hopkins, 2 Developer) were not improved prior to connecting the Greenspring Manor project to the system. T. 55. He confirmed that if the 8 segments are improved, all of the units can safely connect to the County sewer system. T. 55.

Additionally, Mr. Bayer reviewed Map 3 of the RJN Report, entitled model predicted SSO and flow restriction locations. He confirmed that the Map does show additional modeled issues downstream from the 8 segments identified by Ms. Eicholtz. T. 56. However, when Mr. Bayer wrote his email to Mr. Peluso saying "zero is the breaking point" for homes that could connect to the system without causing an SSO, his email did not have anything to do with the modeled results shown on Map 3 of the RJN Report. T. 56; Prot. Ex. 78, Map 3.

VI. HOW THE COUNTY USES AND INTERPRETS MODELED RESULTS.

Mr. Bayer explained that when the County reviews a model such as the results shown in Map 3 of the RJN Report, they do not immediately make changes to address any issues shown by the model. T. 56. Instead, the County tries to verify the existence of actual issues in the field prior to allocating funding for a rehabilitation or repair project. T. 57. The County uses a variety of tools such as flow monitoring (Dev. Ex. 47B shows five flow monitors downstream of Greenspring Manor), simulations, and sanitary sewer evaluation surveys ("SSES"), which include video and smoke testing to identify issues and try to find and eliminate any illegal connections. T. 58.

Baltimore County also requires each of its consultants to prepare model calibration summary tables that are included in the SRRR Plans for the various sewersheds. T. 59. For the Jones Falls sewershed, Table 5-3.1 of the SRRR Plan contains the model calibration summary table. T. 59. Mr. Bayer explained that the table shows a "self-assessment" that evaluates whether

the models used are over or underpredicting SSO's in each meter basin. T. 59. Table 5-3.1 sheds light on Map 3 of the RJN Report because RJN used "the same model that RK&K did." T. 60.

For example, Mr. Bayer reviewed the results for meter basin BC22, which is immediately downstream from Greenspring Manor and shows numerous "red" segments in Map 3 of the RJN Report. T. 60-61. Mr. Bayer explained that the County was "quite concerned" with the over predicting in that area demonstrated on the model calibration summary table, which he labeled as "significant." T. 60. Accordingly, the County had "low confidence" in the accuracy of the predictions that were being provided for meter basin BC22, where the bulk of the "red" is shown downstream from the project on Map 3 of the RJN Report. T. 61.

VII. DPWT'S POSITION WITH RESPECT TO APPROVAL OF GREENSPRING MANOR.

Mr. Bayer walked through the various correspondence from DPWT regarding Greenspring Manor and confirmed that the only issues ever identified with respect to sewer capacity were the 8 segments mentioned by Lisa Echoltz. Specifically, Ms. Eicholtz authored a memo on August 2, 2021 identifying the 8 segments as needing repair prior to use and occupancy permit for the Greenspring Manor homes. T. 62. On August 10, 2021, the Development Plan Conference Comments for Greenspring Manor again referenced the 8 segments as needing improvement prior to use and occupancy permits being issued for this project. T. 62. This correspondence came after the RJN Report and "Map 3" that showed additional modeled ("red") issues on the path of sewage downstream from Greenspring Manor. T. 62. Mr. Bayer confirmed that DPWT never opposed the approval of the Greenspring Manor Development Plan on the basis of sewer capacity and limited its comments to requiring repair/replacement of the 8 segments prior to use and occupancy for the homes proposed by Greenspring Manor (i.e., after Development Plan approval). T. 63.

VIII. PIPE DESIGN, PERCENTAGES, AND THE DESIGN MANUAL.

Mr. Bayer testified that when pipes are shown to be flowing at 100% or higher, it does not necessarily mean they are unsafe. T. 64. Other factors, such as the cover elevation at ground surface must be considered. T. 64.

Additionally, Mr. Bayer shed light on the DPWT Design Manual, which requires new pipes to be constructed to operate at percentages varying from 70-90% depending on what type of pipe is being constructed. T. 64. Mr. Bayer explained that the Design Manual percentages pertain to design of new sewers: "Someone is constructing a new sewer, they are supposed to follow these guidelines." T. 66. This is not the requirement for existing pipes, only for "new sewer construction." T. 66.

IX. IMPROVEMENTS DOWNSTREAM FROM GREENSPRING MANOR.

Mr. Bayer testified that the SRRR Plan required certain improvements downstream from the Greenspring Manor Property. T. 67. As part of DPWT's review of the Greenspring Manor Development Plan proposal, Mr. Bayer was asked to list and to provide an update on the status of the SRRR Plan required repairs. T. 67. Upon performing that review, he verified that there were no outstanding SRRR Plan required improvements remaining downstream from Greenspring Manor. T. 67. All of the repairs identified in the SRRR Plan were already addressed prior to his review of the Development Plan proposal. *Id*.

X. EXPLANATION OF AREAS OF SPECIAL CONCERN.

Mr. Bayer explained that "Areas of Special Concern" depicted on Baltimore County's Sewerage Basic Services Map are generally locations where the County had seen SSOs occur. T. 65. With respect to the Area of Special Concern within which Greenspring Manor is situated on the 2023 Basic Services Map, Mr. Bayer confirmed that DPWT has not observed any actual

SSOs, but DPWT was concerned about the possibility of an overflow so they created the Area of Special Concern. T. 68. However, Mr. Bayer clarified that if the 8 segments are improved, "that concern would go away." T. 68. Mr. Bayer concluded that if the 8 segments are improved, DPWT believes the sewer system within the Jones Falls sewershed can function safely and without detrimental impact to the public health or environment. T. 68-69.

IMPACT ON ALJ ORDER

Mr. Bayer's testimony, coupled with the letter from Mr. Benjamin, provides compelling reasons for the ALJ to reconsider and reverse the portion of the Development Plan Order denying the Plan for "Lack of Sewer Capacity." The ALJ's analysis with respect to sewer capacity began on page 112 of the Development Plan Opinion and Order. The impact of the evidence presented at the Reconsideration hearing on each of the ALJ's findings is addressed individually below.

I. STATUS OF THE 8 SEGMENTS.

Much of the discussion and concern regarding the sewer path for this project revolved around the "8 segments" that indisputably need to be improved. The Order reflects that there was too much uncertainty regarding these segments, and the ALJ was "not willing to condition approval here on the possibility that Johns Hopkins may, or may not, complete that work." Order at p. 130.

Two of the 8 segments are the direct responsibility of the Developer and are actually shown in the bottom left corner of the Development Plan. Dev. Ex. 1C. Accordingly, as part of its overall improvements and construction for the project, Developer will be spending significant resources to design and to construct the improvement/enlargement of the 2 segments detailed on the Development Plan.

With respect to the remaining 6 segments, Mr. Benjamin's letter clarifies that Baltimore County and Johns Hopkins actually share the responsibility for making the improvements and have a "shared commitment" to improving the 6 sewer segments. BC Ex. 14, p. 2. Mr. Benjamin stated that Johns Hopkins will "continue to coordinate its efforts in good faith so that the County will be able to bid the Sewer Project for construction." *Id.* The letter makes clear that the project will be bid through the County's procurement process as a county infrastructure project and the County will actually be the applicant for the permits. BC Ex. 14, p. 2. The effort to improve these 6 segments is already underway.

These clarifications provide additional justification for approval of the Development Plan with a condition that Use and Occupancy permits be withheld until the repair/replacement of the 8 sewer segments are completed. Indeed, Mr. Bayer testified that DPWT never opposed the approval of the Greenspring Manor Development Plan. Instead, DPWT actually recommended approval of the Development Plan, subject to its comments requiring improvement of the 8 segments prior to use and occupancy for the homes proposed by Greenspring Manor. T. 63. This testimony, coupled with the letter from Mr. Benjamin, provides certainty that the Development Plan can be approved with appropriate conditions.

II. AREA OF SPECIAL CONCERN.

a. ORIGINAL ORDER.

The Order identified the "Area of Special Concern" surrounding the Property as a primary initial concern for the ALJ when evaluating the sewer path of this project. Order, pp. 113-114. This case was actually distinguished from the Torch Hill project on that basis. *Id.* Without the testimony of Mr. Bayer, the ALJ did not have independent, unbiased testimony on this issue at the time the original Order was written.

b. IMPACT OF BAYER TESTIMONY.

Mr. Bayer clarified that the reason the County put the Property in an Area of Special Concern was its fear that SSOs may occur unless the 8 segments identified by Ms. Eicholtz were repaired. If the required work on the 8 segments were to be completed, "that concern would go away." T. 68. Additionally, according to Mr. Bayer, once the 8 segments are improved, the county's sewer system will function safely and without detrimental impact to the public health or environment. T. 68-69.

Mr. Bayer provided independent, unbiased testimony explaining the justification for the Area of Special Concern, which will be alleviated when the 8 segments are improved. Approval of the Development Plan with a condition withholding the issuance of Use and Occupancy permits until the required work on the 8 segments is completed will ensure the Area of Special Concern "does its job" in requiring improvements prior to authorizing additional hookups to the system.

III. FINDINGS RE: DPWT EMAILS.

a. ORIGINAL ORDER.

In the original Order, the ALJ reviewed the chronology of correspondence both internal to DPWT and externally to representatives of the Developer and of the Protestants. Order, pp. 115-120. As DPWT did not initially testify to explain their internal emails, the ALJ was strongly influenced by Mr. Bayer's email stating that "no units could be built at the Property without causing an SSO." Order, p. 117. The ALJ repeatedly referenced this statement as evidence of "Mr. Bayer's opinion that SSOs would result from the construction of any homes from this Project." Order p. 118. Indeed, the Order states "I place great amount of weight on expertise and knowledge of DPWT engineers…that if any homes were added to the sewer system, SSOs will occur." *Id*. It also states that "DPWT and the Sewer Design team engineers have maintained their steadfast opposition to adding 61 homes to the sewer system due to inadequate capacity and

concern for SSOs." Order, p. 120. The email from Mr. Bayer was termed "enough to deny the Greenlined Development Plan due to lack of sewer capacity." *Id.*

b. IMPACT OF BAYER TESTIMONY.

This was arguably the most important part of Mr. Bayer's testimony. Mr. Bayer clarified that his email to Jeff Peluso (stating that no units can connect without causing an SSO) assumed the 8 sewer segments identified by Ms. Eicholtz would not be improved prior to connecting the Greenspring Manor project to the system. T. 55. He confirmed that once the required work on the 8 segments is completed, all of the units can safely connect to the County sewer system. T. 55.

Mr. Bayer's testimony also confirmed that DPWT was never opposed to the approval of the Development Plan. Rather, DPWT just wanted to ensure the required work on the 8 segments would be completed prior to Use and Occupancy permits being issued for the project. T. 63. He walked through the various correspondence from DPWT (including the Lisa Echoltz August 2, 2021 memo and DPWT Development Plan Conference comments dated August 10, 2021), and confirmed that DPWT never opposed the approval of the Greenspring Manor Development Plan on the basis of sewer capacity. T. 63. In fact, DPWT expressly recommended approval of the Development Plan, subject to the described protective conditions regarding the 8 segments. Additionally, Mr. Bayer testified that the modeled issues downstream from the Property shown in Map 3 of the RJN Report had nothing to do with his email to Mr. Peluso. T. 56; Prot. Ex. 78, Map 3.

Mr. Bayer's testimony confirmed that DPWT does not (and never did) oppose approval of the Development Plan (which was consistent with the testimony of Geno Cauley from DPR at the outset of the case), and does not believe that approval of this plan will lead to SSOs. The DPWT team just wanted to make sure that the required work on the 8 segments will be completed prior to Use and Occupancy permits being issued for the homes proposed for this

project. This is exactly what the Developer seeks in this case through the imposition of a condition in an order from the ALJ approving the Development Plan. The testimony provides compelling reasons for the ALJ to reconsider the decision to deny the Plan on the basis of sewer capacity and, instead, to approve the Development Plan subject to one or more protective conditions.

IV. FINDINGS RE: CONSULTANT REPORTS.

a. ORIGINAL ORDER.

In the original order, the ALJ found "that both the Ramboll Report and the Hazen Report provide compelling evidence that the pipes in the sewage path from the Property are at over-capacity and that SSOs are predicted to result during the County-selected 10yr/6hr storm event." Order, p. 126. Without testimony from DPWT, the ALJ did not have the benefit of an unbiased, neutral opinion as to the purpose of the consultant reports.

b. BAYER TESTIMONY.

Mr. Bayer's testimony confirms that neither report supports the conclusion that there is insufficient capacity in the system or that SSOs will result if the homes proposed on the Development Plan are constructed. According to Mr. Bayer, the Ramboll report does not relate to capacity of the system at all, and the construction of 60 additional homes would have no impact on the Lake Roland project (T. 45-46). Contrary to the findings in the original Order, the yet-to-be issued Hazen Report will be a long-range planning document that will not identify actions that require immediate repair before any connections are made to the Jones Falls sewershed. (T. 44). This testimony alleviates one of the major concerns expressed by the ALJ in the initial Order, as the consultant reports do not prove that there is insufficient capacity within the system overall, let alone insufficient capacity to handle the homes proposed by this project.

V. FINDINGS RE: MODEL PREDICTED SSOs.

a. ORIGINAL ORDER.

In the original Order, the ALJ found that testimony regarding "model predicted SSOs within the sewage path here was not sufficiently rebutted by the Developer." Order, p. 126. In particular, Map 3 of the RJN Report raised concerns at it showed a lot of "red" areas indicating potential issues under the model.

b. IMPACT OF BAYER TESTIMONY.

Mr. Bayer explained that the model calibration tables contained in Table 5-3.1 of the SRRR Plan demonstrate that the model predicted SSOs shown in Map 3 of the RJN Report showed "significant" overpredicting. Based on this information, DPWT had "low confidence" in the accuracy of the predictions. T. 60. This was particularly true in meter basin BC22, which is immediately downstream from the Property. T. 60-61.

According to Mr. Bayer, the County does not ignore model predicted SSOs, but they try to verify actual issues in the field before allocating funding for a rehabilitation or repair projects that may be indicated by models. T. 57. The County uses a variety of tools such as flow monitoring (Dev. Ex. 47B shows five flow monitors downstream of Greenspring Manor), simulations, and sanitary sewer evaluation surveys ("SSES"), which include video and smoke testing to identify issues and try to find and eliminate any illegal connections. T. 58.

The model predicted SSOs do play a role in guiding where the County should focus its observations in the field, but they do not prove that the Development Plan in this case violates any law or regulation pertaining to sewer capacity. The testimony provides justification for reconsidering the findings in the original Order related to sewer capacity.

VI. PROVISIONS OF THE DPWT DESIGN MANUAL AND BCC.

a. ORIGINAL ORDER.

In the original Order, the ALJ was concerned with the percentages of flow downstream from the Property, which exceed 90-95% under various storm events. Order, p. 121. The DPWT

Design Manual was quoted, with the ALJ concluding that flows above 90-95% are unstable. Order, pp. 121-22. The ALJ found that the Plan violates the section of the Manual providing that: "As part of any land subdivision or development of land, provision shall be made for the safe and sanitary treatment and disposal of sewage without detrimental effects to the public health or environment." Order p. 128, quoting DPR Policy Manual, p. 18. Additionally, the ALJ found that the sewage generated by this project would not satisfy BCC §§ 32-4-410(b), 32-4-102(b), and 32-4-103(a)(8), which require "sewage facilities to function safely." *Id.* at p. 128.

b. IMPACT OF BAYER TESTIMONY.

With respect to the percentages issue, Mr. Bayer testified that when pipes are shown to be flowing at 100% or higher, it does not necessarily mean they are unsafe. T. 64. Other factors, such as the cover elevation at ground surface, must be considered. T. 64.

Additionally, Mr. Bayer shed light on the DPWT Design Manual, which requires new pipes to be constructed to operate at percentages varying from 70-90% depending on what type of pipe is being constructed. T. 64. Mr. Bayer explained that the Design Manual percentages pertain to design of new sewers: "Someone is constructing a new sewer, they are supposed to follow these guidelines." T. 66. This is not the requirement for existing pipes, only for "new sewer construction." T. 66.

Finally, with regard to the sewer system "functioning safely" Mr. Bayer confirmed that if the required work on the 8 segments is completed, all of the units from Greenspring Manor can safely connect to the County sewer system. T. 55. The county's sewer system can function safely and without detrimental impact to the public health or environment. T. 68-69.

This testimony provides a compelling justification for the ALJ to reconsider the findings regarding the BCC and Design Manual. Mr. Bayer's testimony confirms that the project will comply with the applicable code and manual provisions if it is approved with a condition that the

required work on the 8 segments be completed prior to Use and Occupancy permits being issued for homes proposed on the Development Plan.

VII. IMPROVEMENTS DOWNSTREAM FROM THE PROPERTY.

a. ORIGINAL ORDER.

The ALJ was not convinced that repairs downstream from the project had been made. The Order cites to Map 2 of the RJN report and states that it only showed "2 minor improvements" to the system. Order, p. 117. Additionally, the ALJ felt that Dave Bayer could have alluded to additional downstream repairs in either his March 8, 2023 or May 30, 2023 email to Mr. Leffner, but held that the "silence is deafening." Order, p. 127.

b. IMPACT OF BAYER TESTIMONY.

Mr. Bayer broke the silence on this issue. He testified that since the Consent Decree was signed, Baltimore County has spent more than $25 million in construction costs to make improvements in the Jones Falls sewershed. T. 47. At the time of the Consent Decree, there were 44 SSO's in the County and 34 have been eliminated. Four of the remaining 10 require Baltimore City improvements, and only 1 is located in the Jones Falls sewershed – Marnat Avenue – which is not within the sewer path downstream from the Property. T. 47-48. With respect to the sewer path for this project, Mr. Bayer testified that all of the downstream repairs identified in the SRRR Plan have been addressed. T. 67.

Much of the analysis in the original Order expressed frustration with the fact that the ALJ was left to guess how to interpret correspondence from DPWT. Mr. Bayer's testimony answered important questions about the County's overall effort to make improvements in the Jones Falls sewershed and the status of the improvements downstream from the project, which have all been addressed. This testimony filled the void left by the prior silence, and presents compelling justification for the ALJ to reconsider the initial decision and to approve the Development Plan, subject to one or more protective conditions.

REQUEST FOR RECONSIDERATION

The evidence presented at the reconsideration hearing was sufficient to warrant reconsideration of the Order denying the Development Plan. Initially, a Blue-Lined plan was submitted that removes reference to an emergency access gate. This resolves the ALJ's concern that the plan violates the DPR Policy Manual. The testimony of Dave Bayer, coupled with the letter from James Benjamin, provided clarity on all of the issues in the original Order related to sewer capacity. The record in this case now contains substantial evidence supporting approval of the Development Plan with a condition that the work required for the 8 segments must be completed prior to the issuance of Use and Occupancy permits for the homes proposed on the Development Plan.

Protestants counsel and People's Counsel seem fixated on the Motion for Reconsideration, arguing that it never should have been granted and it was somehow "unfair" to hold this proceeding to hear testimony from DPWT. We assume this will continue in their post hearing Memoranda. The Appellate Courts have determined that it is soundly within an administrative law judge's authority to permit an applicant to present new evidence and even to amend an administrative application on the last day of a hearing, provided the Protestants are given "a fair opportunity for comment and cross-examination." Brandywine Senior Living at Potomac LLC v. Paul, 237 Md. App. 195, 216-17 (2018).

All parties were given an opportunity to cross examine Mr. Bayer. Notably, People's Counsel did not ask a single question. All parties could have contacted and met with Mr. Bayer prior to the hearing, but Mr. Bayer confirmed that only Developer's Counsel asked to meet with him and his attorney. T. 25. Mr. Bayer's testimony is incredibly probative and assists the ALJ in understanding the truth about the path of sewage from this project. Any argument about fairness is misplaced.

CONCLUSION

For the reasons stated herein, Developer respectfully requests that the ALJ approve the Development Plan with a condition that the work required for the 8 segments must be completed prior to the issuance of Use and Occupancy permits for the homes proposed on the Development Plan.

Respectfully submitted,

Adam M. Rosenblatt

IN RE: APPROVAL OF FINAL DEVELOPMENT PLAN & PETITION FOR SPECIAL HEARING IN THE MATTER OF: GREENSPRING MANOR LLC 2310 W. JOPPA ROAD	*	BEFORE THE OFFICE OF ADMINSTRATIVE HEARINGS FOR BALTIMORE COUNTY
8th Election & 2nd Councilmanic Districts	*	Case Nos: 08-0922 and 2021-250-SPH

* * * * * * * * * * * * *

PROTESTANT MICHAEL T. WYATT'S
POST-HEARING MEMORANDUM IN OPPOSITION
TO DEVELOPMENT PLAN

Protestant, Michael T. Wyatt, hereby submits this post-hearing memorandum in opposition to the development plan and requested zoning relief sought by Developer in the context of its Motion for Reconsideration.[1]

During thirteen (13) days of evidentiary hearings in this matter, Administrative Law Judge ("ALJ") Maureen Murphy heard abundant evidence about the lack of adequate sewer capacity along the path from the location of the proposed development. A specific issue of concern is the property adjacent to the proposed development. The property known as "Pavilion III", a medical office complex owned by Johns Hopkins, was constructed somewhere between 2017 and 2020. As part of the development of Pavilion III, Johns Hopkins and Baltimore County were required to perform certain obligations and incur financial expense for the improvement of 6 of 8 sewer segments identified in Protestants' Exhibit 13. ("JH-BC Sewer Work"). The JH-BC Sewer Work sewer work was never done.

The JH-BC Sewer Work was addressed during the underlying evidentiary hearing in this matter. And although the details of relative responsibility between Johns Hopkins and Baltimore County were not clearly enunciated, these details were not crucial to ALJ Murphy's decision in this case. From the

[1] Recognizing other opposition parties, through counsel, capably address the myriad of issues presented by the proposed development, the undersigned adopts those positions and only addresses in this Memorandum the issue relating to what is referenced herein as the "JH-BC Sewer Work".

evidentiary record, the objective status of the JH-BC Sewer Work was initially referenced by David Bayer, PE who stated the following:

> "Hopkins engineer just stopped working on the project. They never got the permits that are needed, and they never acquired the off-site right-of-way that is needed. PAI issued the occupancy for the building without requiring that Hopkins fulfill their obligations in accordance with the agreement."
> Mr. Bayer made that statement in a March 2021 email to his colleagues at DPWT.

(*See* Prot. Ex. 89). As correctly noted by ALJ Murphy in her decision, there was no evidence or information as to when, if at all, the JH-BC Sewer Work was to be completed:

> "[T]here was no evidence presented as to whether or when Johns Hopkins will complete the work…this issue goes to the Developer's burden of proof in its case in chief that adequate sewer capacity exists in the sewage path for this project, including the repair/rehabilitation by Johns Hopkins."

(Opinion/Order at pp. 129 – 130).

The purpose of this memorandum is to highlight that nothing has changed regarding the JH-BC Sewer Work, despite recent intercessions by Developer and the Baltimore County Office of Law.

In granting Developer's Motion for Reconsideration, ALJ Murphy ordered that a hearing be conducted to "consider testimony and/or documents from DPWT representatives in regard to the sewer path from this Property". The hearing was convened on Monday, February 26, 2024. Contrary to the limited scope afforded Developer in the context of reconsideration, Baltimore County Attorney James R. Benjamin, Jr. interjected his thoughts into this matter in the form of a letter, written one day prior to the hearing, and many months after the issuance of an Order/Opinion. Mr. Benjamin is not a DPWT representative and the authority for his involvement is at best unknown.[2] Over objection, Mr. Benjamin's February 23, 2024, letter and its attachment were received into the record as Balt. Co. Ex. 14. The situation created by Mr. Benjamin's

[2] Baltimore County Code § 3-2-1002 enumerates the duties and responsibilities of the County Attorney, who has general charge of the legal business of the County. The County Attorney shall "perform all of the legal work for each officer and unit of the county government". The County Attorney shall also "institute, defend, or discontinue a suit, action, or legal proceeding in a local, state, or federal court, or before a local, state, or federal administrative agency". *Id.* Authority for the County Attorney to gratuitously present evidence in a combined development/zoning hearing is nowhere to be found in the enabling legislation, and his role in this case is opaque.

unseemly appearance in this matter is even more problematic since he was not called as a witness, and his non-sworn letter and attachment were not subject to any scrutiny, including cross examination by Protestants.[3]

Putting aside for the moment these considerable concerns, a close examination of Mr. Benjamin's letter serves to reinforce ALJ Murphy's decision in this case, notwithstanding Mr. Benjamin stated intention of "correct[ing] certain factual inaccuracies reflected in the record concerning [the] development".

Through his letter, Mr. Benjamin purports to place new evidence into the record in this case in the form of a Memorandum of Understanding ("MOU") by and between Johns Hopkins and Baltimore County. Mr. Benjamin concedes "the September 27, 2017, MOU has expired" and, indeed, a reading of it confirms its non-enforceability.

Nevertheless, Mr. Benjamin goes on, for several pages, explaining what has and has not happened in the context of the construction of Pavilion III. In doing so, he confirms: (1) the JH-BC Sewer Work was a necessary consideration for the construction of Pavillion III (regardless of whether or not the JH-BC Sewer Work completion was a condition precedent to the issuance of any permits for Pavillion III); (2) the Johns Hopkins sewer work was never completed; and (3) currently there is no enforceable agreement requiring that the JH-BC Sewer Work actually get completed. [4]

Without support, Mr. Benjamin sunnily offers that:

> "Johns Hopkins and the County continue to coordinate its [sic] efforts in good faith so that the County will be able to bid the Sewer Project for construction… Johns Hopkins and the County are working together on finalizing a new MOU confirming and memorializing the items that are to be completed".

Again, instead of clarity there is vague reference and conjecture about purported negotiations of a possible agreement to be entered into at some future, ill-defined time frame. It bears emphasis that Johns

[3] The undersigned was not provided a copy of Mr. Benjamin's letter until after February 23, 2024 hearing was concluded. To say the entirety of the matters set forth in Mr. Benjamin's letter were unfairly insulated from any critical review would be an understatement.

[4] It should be added that the addition of 62 residential units proposed in the Greenspring Manor development in this case was clearly not a consideration when MOU was executed in 2017 and Johns Hopkins constructed Pavilion III.

Hopkins is not involved in this matter yet Mr. Benjamin purports to represent obligations Johns Hopkins may or may not have at some point in the future, under some yet-to-be-finalized MOU.

Critically, Mr. Benjamin confirms one of the major items which remains incomplete - some 7 years after the now-expired MOU was executed. And it is this: securing temporary construction and access easements necessary for the JH-BC Sewer Work. These yet-to-be-negotiated-for property rights would need to be acquired from off-site, third-party property owners such as the Benedictine Sisters of Baltimore, Inc. ALJ Murphy will recall the testimony of Sister Kathleen McNany who mentioned being approached several years ago about easement rights and the general reluctance of Benedictine Sisters of Baltimore, Inc. to grant such easement rights due, in part, to the severe disruption it would cause the religious monastery.

Mr. Benjamin also glosses over that the expired MOU provides that Johns Hopkins "may elect to not proceed" with the project should "the total bid costs" exceed a project threshold, or "Cap Amount" as contrasted with the requirement that Johns Hopkins provide "Security" in the form of a letter of credit. (Balt. Co. Ex. 14, MOU at pp. 2-3). These critical pieces, too, are nowhere near completion.

In sum, the purported obligations contained in the expired MOU are largely illusory. This is amply demonstrated by the failure to move the JH-BC Sewer Work forward after many years and the absence of any enforceable agreement to compel its completion. This situation cannot reasonably be expected to improve notwithstanding Mr. Benjamin's optimism. Mr. Benjamin's letter, instead of clarifying the issues relating to the JH-BC Sewer Work, serves to amplify uncertainty whether it will ever be completed.

Respectfully,

/s/ Michael T. Wyatt

Re: Greenspring Manor - PAI Case Nos: HOH 08-0922 & 2021-0250-SPH

Dear ALJ Murphy:

I am writing in regard to the above-referenced matter. It is my understanding that a hearing will be conducted on February 26, 2024 to consider testimony and/or documents from Department of Public Works and Transportation (DPWT) representatives in regard to the sewer path from a proposed 61 home subdivision development at 2310 West Joppa Road known as Greenspring Manor. In reviewing this matter, I thought it was important for the County to correct certain factual inaccuracies reflected in the record concerning this development.

The construction of a building and related facilities known as Pavilion III has been completed on land owned by Johns Hopkins. As part of the development plan for Pavilion III, the County and Johns Hopkins agreed to a Memorandum of Understanding (MOU) dated September 27, 2017 (see attached) that defined roles and responsibilities in the completion of certain offsite improvements to the County's sewer system ("Sewer Project"). The September 27, 2017 MOU has expired.

Given that an MOU governing the completion of the Sewer Project is atypical of the County's standard development review process, and that this MOU was executed prior to the current Administration taking office, I felt that it was necessary to note the existence of this document in order to provide the appropriate context for consideration of this case.

The record in this matter currently fails to include any information about the terms of the MOU. Moreover, the record incorrectly indicates that Johns Hopkins was obligated to independently "address" certain improvements for the Greenspring Manor development before the development may connect to the public sewer.

Under the MOU and as part of its role in jointly addressing the project with the County, Johns Hopkins was to hire an engineer to develop grading plans, as well as sediment and erosion control plans. These plans and mylars have been reviewed, and have been signed and approved.

The Sewer Project was to be bid by the County through its procurement process and be done as a County infrastructure project. The permits to be obtained for the Sewer Project would all be in the name of Baltimore County, not Johns Hopkins. Johns Hopkins was to coordinate with the County on the effort to obtain the State Highway Permit required to allow the County to perform the Sewer Project as well as all other required permits, such as those from the Army Corps of Engineers, Maryland Department of the Environment, the Baltimore County Soil Conservation District or any other entity, which permits are also needed in order to allow the County to perform the Sewer Project. Subject to the County's completion of the Sewer Project, Johns Hopkins was also to make a financial contribution to offset the County's costs with respect to it. In addition, Johns Hopkins was to use good faith efforts to obtain the temporary construction and access easements for the benefit of the County needed to allow the Sewer Project to move forward. The County's role under the MOU, was to coordinate with Johns Hopkins, to bid the Sewer Project through its procurement process, advance funds for the cost of and construct the project without undue delay once all permits and easements are acquired.

Importantly, to correct the record, please note that any inference that completion of the Sewer Project was a pre-requisite to issuance of the Use and Occupancy Permit for Pavilion III is inconsistent with the express terms of the MOU. Section 4(c) of the MOU reads as follows:

> *"Upon Pavilion III meeting all County requirements to obtain a Use and Occupancy Permit, and notwithstanding the completion status of the Project, which the parties agree, is not relevant in determining whether Pavilion III should obtain a Use and Occupancy Permit, the County will issue a Use and Occupancy Permit for Pavilion III."*

Johns Hopkins and the County have a shared commitment to completing the Sewer Project. Please be advised that, as contemplated in the original MOU, the grading plans as well as sediment and erosion control plans have been done by Johns Hopkins. Those plans have been reviewed, and the mylars for those plans have been signed and approved.

Johns Hopkins and the County continue to coordinate its efforts in good faith so that the County will be able to bid the Sewer Project for construction. As part of that effort, Johns Hopkins and the County are working together on finalizing a new MOU confirming and memorializing the items that are to be completed. [1]

---

[1] What remains to be done now is the securing of the remaining permits and financial contribution, as well as securing the necessary temporary construction and access easements. Once these aforementioned items are completed, the Sewer Project can move forward.

It is my hope that this information is helpful in clarifying the parties' roles in relation to the sewer project and in correcting the record. Thank you.

Very truly yours,

James R. Benjamin, Jr.
County Attorney

MEMORANDUM OF UNDERSTANDING

THIS MEMORANDUM OF UNDERSTANDING (referred to hereinafter as the "**Memorandum**") is made this 27 day of SEPTEMBER, 2017 by and between **JOHNS HOPKINS HEALTH CARE AND SURGERY CENTER DEVELOPMENT, LLC** ("**JHHCSCD**") and **BALTIMORE COUNTY, MD**, a body corporate and politic ("**County**").

Recitals

WHEREAS, JHHCSCD is the fee owner of 5.5769 acres of land as more particularly described on Exhibit A attached hereto (the "**Land**"); and

WHEREAS, JHHCSCD intends to commence the construction of a building and related facilities to be known as Pavilion III, as depicted on the Development Plan attached hereto as Exhibit B, on the Land (hereinafter "**Pavilion III**"); and

WHEREAS, as part of the County's approval of the Development Plan for Pavilion III, the County is requiring certain offsite modifications to the County's sewer system as described on Exhibit C attached hereto and incorporated herein (the "**Project**"); and

WHEREAS, the County has requested and JHHCSCD has agreed to participate in the Project as described herein below.

NOW, THEREFORE, it is STIPULATED AND AGREED to by and between the parties as follows:

1. *Recitals.* The above recitals form an integral part of this Memorandum and are incorporated herein as if set forth again in their entirety.

2. *JHHCSCD Responsibilities for the Sewer Project.* JHHCSCD agrees to the following:

   a. *Sewer Design.* JHHCSCD has engaged an engineer to design the Project (the "**Design**"). Prior to the date hereof, JHHCSCD has delivered a preliminary Design to the County for the County's review and approval. Within 21 days of JHHCSCD's receipt of the County's comments on the preliminary Design, JHHCSCD will cause the engineer to deliver a final Design to the County. The Design will be provided to the County by JHHCSCD on an "as-is" "where-is" basis, without any representations or warranties by JHHCSCD; provided that, the engineer who prepared and affixed his seal to the Design: (a)

shall be responsible for errors in the Design caused by his negligence, and (b) to the extent questions arise regarding the Design, will make himself available to the County to discuss and make appropriate modifications (with any related cost to be part of the cost of the Project that will be shared pursuant to Section 2(e) below). JHHCSCD will have no liability to the County with respect to the Design and the County's use thereof. JHHCSCD will pay all costs of the engineer incurred in connection with the Design.

b. *State Highway Administration Permit.* JHHCSCD will coordinate with the County on the effort to obtain the State Highway Permit (the "**SHA Permit**") required to allow the County to perform the Project. JHHCSCD will pay all costs and expenses of the Maryland State Highway Administration in issuing the SHA Permit.

c. *Other Permits.* JHHCSCD will coordinate with the County to obtain all other required permits, such as from The Army Corps of Engineers, Maryland Department of the Environment, the Baltimore County Soil Conservation District or any other entity, which permits are needed in order to allow the County to perform the Project.

d. *Temporary Construction Easements.* JHHCSCD will use good faith efforts to obtain the temporary construction and access easements needed to allow the County to construct the Project; provided, however, that the County shall approve and initially pay for any and all costs associated with obtaining such easements. Costs incurred by the County under this paragraph 2(d) are part of the cost of the Project that will be shared pursuant to Section 2(e) below. Any temporary construction easements must be executed and provided to the County prior to its acceptance of the bids for the work.

e. *Payment.* Subject to the County substantially completing the Project by no later than January 1, 2020, and upon JHHCSCD's receipt of an invoice sent by the County no later than thirty days after substantial completion of the Project, JHHCSCD will pay the County the lesser of: (i) 50% of the actual construction costs incurred by the County to complete the Project plus the County Administration/Inspection Costs (as defined below) (as supported by reasonable details provided to JHHCSCD); or (ii) an amount equal to 55% of the Project costs as reflected in the accepted bids for the work plus the County Administration/Inspection Costs; minus in the case of either clause (i) or (ii) the amounts paid by JHHCSCD pursuant to Sections 2(b)-(c) above (the "**Reimbursement Ceiling**"). The term "County

Administration/Inspection Costs" means costs for inspection and administration work performed for the County (which are estimated to be 8% of the cost of the work). If the total bid costs for the Project are in excess of $900,000 ("**Cap Amount**"), either the County or JHHCSCD may request a meeting within fifteen (15) days after receipt of the bids to discuss alternatives that might reduce the excess costs. Both parties will work in good faith to reduce the costs to the Cap Amount but, if unable to agree, JHHCSCD may elect to not proceed. JHHCSCD will pay the County any undisputed amounts within 45 days of its receipt of the County's invoice.

f. *Security.* JHHCSCD shall provide the County with a letter of credit ("**Security**") to secure JHHCSCD's payment obligations as set out in Section 2(e) above within thirty (30) days after the County's acceptance of bids for the Project. The amount of the Security shall be equal to the best estimate of the Reimbursement Ceiling as mutually agreed by JHHCSCD and the County, each acting in its reasonable discretion, at the time the Security is posted. The Security will be released upon the earlier of: (i) January 1, 2020 to the extent the Project is not substantially completed by that date; or (ii) on the date JHHCSCD satisfies its payment obligations as set out in Section 2(e) above.

3. *County Responsibilities for the Sewer Project.* Once all permits and easements are acquired, the County agrees to advance funds for the cost of and construct the Project without undue delay.

4. *Grading Permit; Demolition Permit; Building Permit; Use and Occupancy Permit.*

a. The parties acknowledge that the County has previously issued a grading and demolition permit for the existing tennis barns located on the Land.

b. The County shall issue a Building Permit for Pavilion III upon satisfaction by JHHCSCD of the County's normal requirements for the issuance of building permits which shall not include any requirements related to offsite improvements needed for the Project.

c. Upon Pavilion III meeting all County requirements to obtain a Use and Occupancy Permit, and notwithstanding the completion status of the Project which, the parties agree, is not relevant in determining whether

Pavilion III should obtain a Use and Occupancy Permit, the County will issue a Use and Occupancy Permit for Pavilion III.

5. *Governing Law.* This Memorandum shall be construed, interpreted and enforced according to the laws of the State of Maryland, without regard to principles of conflict of law. Should any provision of this Memorandum require judicial interpretation, it is agreed that the court interpreting or construing the same shall not apply a presumption that the terms of any such provision shall be more strictly construed against one party or the other by reason of the rule of construction that a document is to be construed most strictly against the party who itself or through its agent who prepared the same, it being agreed that the agents of all parties hereto have participated in the preparation of this Memorandum.

6. *Full Agreement and Understanding.* This Memorandum contains the full and complete agreement of the parties hereto and no oral agreements, past, present or future shall be effective or binding on or against the parties unless the same shall be reduced to writing and executed in the same manner as this Memorandum.

7. *Authority.* Each of the parties warrants that it has the authority to enter into this Memorandum and to bind itself hereby and have carefully read and understand this Memorandum and are cognizant of the terms and conditions hereof and the obligations associated herewith.

8. *Warranties and Representations.* The parties hereto each warrant and represent that they have the power and requisite legal authority to bind themselves, their organization if acting in a representative capacity and their respective successors and assigns to the agreements herein contained, and if a corporation, limited liability company, partnership or similar entity, each further warrants and represents that it is duly organized and is in existence in accordance with Maryland law and that it has taken all necessary action required to be taken by its charter, by-laws, or other organizational documents to authorize the execution of this Memorandum.

9. *Notices.* Any notices required or permitted to be given by either party to the other shall be addressed to the parties as follows:

On behalf of the County:

Steven A. Walsh, P.E.
Department of Public Works
Director
111 West Chesapeake Avenue
Room 307
Towson, MD 21204
410-887-3300

Copy to:

Michael Field, Esquire
County Attorney
Baltimore County Office of Law
400 Washington Avenue
Towson, Maryland 21204

On behalf of the JHHCSCD:
David K. Gildea, Esquire
600 Washington Avenue
Suite 200
Towson, MD 21204

Any notice that is required to be given pursuant to this Memorandum shall be in writing, and shall be deemed given upon actual receipt and shall be sent to all other parties by certified or registered mail, prepaid, or by federal express or other commercial overnight courier service to the last known address of the receiving party.

10. *Amendments.* This Memorandum may be amended only by a subsequent written instrument and signed by the parties hereto or their respective successors and/or assigns.

11. *Binding.* This Memorandum shall inure to the benefit of and be binding upon JHHCSCD and the County and their respective heirs, personal representatives, successors and assigns.

12. *Counterparts.* This Memorandum may be executed in counterparts, each of which shall be deemed an original for all purposes, all of which shall together constitute one and the same Memorandum; each counterpart may be signed and transmitted initially by tele-facsimile or PDF and the facsimile or PDF shall be considered as containing original signatures, provided that said counterpart is provided subsequently to each other party in its original form.

Sanitary Sewer Construction Notes

1. The cost of connecting to existing sewer and/or manholes, including the construction of a new channel or modification of an existing channel, is considered incidental and will be included in the unit price bid for sanitary sewer work.
2. The cost for construction under and/or over any existing utilities and utility service house connections including Gas, Electric, Cable, Storm Drains, water, and Sewer shall be included in the unit price bid for Sanitary Sewer pipe.
3. Trees and shrubs are to be preserved from damage to the maximum extent possible. Contractor to remove the stumps and roots of any tree or shrub that needs removal, but trees and shrubs within the limit of disturbance also will be removed. All costs for removal of trees, shrubs, stumps, etc. will be included in the lump sum price bid for "Clearing and Grubbing".
4. The existing utilities and other existing features shown are from the best available records and the accuracy and completeness of this information is not guaranteed. The information should be verified by the contractor to his satisfaction prior to the start of work. The contractor shall take all necessary precautions to protect existing utilities and shall maintain uninterrupted supply. Any damage incurred shall be repaired immediately at the contractors expense.
5. Underground utilities (electric, water, etc.) may, or may not, exist on private property. The location of these services are unknown. The contractor shall take all necessary precautions to avoid damaging these services. Any damage incurred shall be repaired immediately at the contractors expense.
6. All construction shall be accomplished in accordance with Baltimore County Standard Specifications and Details for Construction (February 2000, as amended).
7. The contractor shall notify Miss Utility at (800) 257-7777 at least 72 hours prior to starting excavation.
8. Location of house connections are shown for information only. Final location will be determined in the field by the inspector.
9. Sewer alignment to be regraded to original contours and stabilized.
10. The contractor shall maintain traffic at all times.
11. The contractor shall use extreme caution during excavation and/or installation of all work shown on these plans. All utilities shall be fully protected from damage or interruption.
12. Where two (2) feet of clearance cannot be obtained between pipes and structures, sand backfill shall be placed as directed by the engineer in the field.
13. Unless otherwise noted, the bid line for excavation shall be subgrade under proposed roads, established grade under turf areas, and existing grade along existing pavement.
14. Full trench compaction is required for a minimum distance of 20 feet on each side of all crossings, within all existing road rights-of-way, and where shown on the plans.
15. All connections to DIP must be made with DIP (class 52).
16. When connecting to any existing manhole, the manhole must be core drilled and an "A-lock" connector, or approved equal must be used to provide a watertight connection.
17. All property markers shown on the drawings and disturbed by the contractor must be reset in the original location by the contractor after construction is complete. All cost for resetting property markers to be included in other items bid.
18. All construction within Jones Falls Expressway right of way shall be in accordance with State Highway Administration Permit Number _____.

Sewer Bypass Pumping Notes:

1. The Contractor shall notify the Bureau of Utilities of the proposed bypass method and schedule. Contact Mr. Rodney Turner at 410-887-7440.
2. Sewage flow in the existing sewer is to be maintained at all times during construction. At no time will it be permitted for sewage to be discharged onto the ground, into any storm drains, or into any streams. All costs to maintain flow are to be included in the unit prices bid.
3. The Contractor shall be responsible for any flooding or damage that may result from the work.
4. Temporary bulkheads shall be installed as necessary. The temporary bulkheads shall be designed to resist sewage flows, and fit into the manholes as required to accommodate the work.
5. The Contractor shall notify Mr. Rodney Turner of the Bureau of Utilities at 410-887-7440 at least 48 hours in advance of the intended start of the work and coordinate all work with Mr. Turner. The Contractor shall determine to the satisfaction of the County that this operation will not result in surcharging the sewer or cause flooding backups or backflow into basements.
6. The Contractor shall furnish and install temporary pumps, suction and discharge piping, pipes, flow level controls and appurtenances to divert the flow of sewage around the pipe section to be constructed. The bypass pumping system shall be of sufficient capacity to transport peak flows in the sanitary sewer segment as are constructed. The Contractor shall be responsible for furnishing the necessary labor and supervision to set-up and operate the bypass pumping system. Stationary equipment (pumps, compressors, electric generator, etc.) engines shall be properly silenced with exhaust silencers and insulated enclosures. The bypass pumping system shall be furnished and installed to prevent spills from the pumps and piping. Any spillage that occurs shall be immediately reported.
7. Should any liquid or solid matter from the sewer collection system be spilled, discharged, leaked or otherwise discharged to the environment as a result of the Contractors flow control operations, the Contractor shall be responsible for all clean up and disinfection of the affected area and all costs associated with the cleanup. The Contractor shall also be responsible for notifying the County and performing all cleanup operations at no additional cost to the County. All sewer spills shall be reported within 24 hours to the Bureau of Engineering & Construction, Construction Inspection Division.
8. When flow in a sanitary sewer is plugged, blocked, or bypassed, sufficient precautions must be taken by the Contractor to protect the sanitary sewers and adjacent property owners from overflow damage that might result from the sanitary sewer surcharging.
9. The design flow for the bypass system should be based upon the maximum capacity of the sewers to be constructed using a safety factor of two (2).
10. All bypass system components, installation and operation shall conform to the Specifications and Guidelines of the manufacturer.
11. All bypass operations shall be monitored 24/7 and never left unattended. The Contractor shall provide an emergency contact name and telephone number to the Inspector.

Dear Counsel:

Enclosed please find a copy of the decision rendered in the above-captioned matter.

In the event any party finds the decision rendered is unfavorable, any party may file an appeal to the Baltimore County Board of Appeals within thirty (30) days of the date of this Order. For further information on filing an appeal, please contact the Baltimore County Office of Administrative Hearings at 410-887-3868.

Sincerely,

Maureen E. Murphy

IN RE: **DEVELOPMENT PLAN HEARING & PETITION FOR SPECIAL HEARING**	*	BEFORE THE OFFICE OF
8th Election District 2nd Council District	*	ADMINISTRATIVE HEARINGS
(2310 W. Joppa Road)	*	FOR
	*	BALTIMORE COUNTY
GREENSPRING MANOR	*	
GREENSPRING JOPPA FALLS, LLC *Owner/Applicant*	*	**CASE NOS. 08-0922 and 2021-0250-ASA**

* * * * * * *

ORDER ON MOTION FOR RECONSIDERATION

This matter comes before the Office of Administrative Hearings ("OAH") as a Motion for Reconsideration filed by Christopher Mudd, Esquire, Adam Rosenblatt Esquire and Venable, LLP on behalf of Greenspring Joppa Falls, LLC, Owner/Applicant, and Atapco Properties, Inc., Developer, and Protestants' Response to Motion for Reconsideration filed by Michael McCann, Esquire on behalf of Valley's Planning Council, Inc., Falls Road Community Association, Inc., Heatherfield Community Association, Seminary Ridge Owners Association, Boxwood Homeowners Association, The Meadows of Greenspring HOA, and Tally Ho Community Association, and People's Counsel's Response to on the Motion for Reconsideration filed by Peter M. Zimmerman.

Owner/Developer cited *Frederick Classical Charter Sch. Frederick Cty. Bd. of Educ.*, 454 Md. 330, 406 (2017), in support of their belief that 'precedent' exists, and/or that one must be followed by OAH, in hearing evidentiary issues in a case, such that OAH is required to provide notice to a party of the type of evidence is sufficient to meet the burden of proof, is inapposite. The *Frederick Classical School* case concerned the State Board of Education's interpretation of a statute. The Supreme Court of Maryland reversed the State Board of Education's statutory

interpretation holding that it was not only contrary to its previous interpretation, but was also contrary to the "statutory purpose and legislative history of the statute." (*Id.* at 342-343). Thus, the *Frederick Classical School* case has nothing to do with the above captioned case. Indeed, it would be improper for OAH to have such a precedent as the production of evidence is particular to each case.

In reviewing other cases decided by OAH on the issue of convening a supplementary hearing to take additional testimony after Motions for Reconsideration were filed namely, *In Re: PUD, 101 York Rd.*, Case No. 09-0843 and *In Re: Development Plan Hearing, 2609-2615 Caves Rd.*, Case No. HOH-03-0499, in both cases ALJ John Beverungen held supplementary hearings and took additional testimony on specific issues raised in the Motions for Reconsideration. In allowing additional hearing and evidence to be submitted, ALJ Beverungen found that it was "a reasonable request, and is one that will allow for this matter to be resolved in a sensible and economical fashion, without the need for multiple appeals and a procedural morass." After careful consideration of the Motion and Responses in this case, I agree that, in the interests of judicial economy, and pursuant to the OAH's discretion as authorized in Rule 4K, this approach makes practical sense here and the Motion for Reconsideration will be granted.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **25th** day of **September, 2023,** that the Motion for Reconsideration filed by the Owner/Developer, be, and it is hereby **GRANTED**; and

IT IS FURTHER ORDERED, that a hearing will be conducted to consider testimony and/or documents from DPWT representative(s) in regard to the sewer path from this Property; and

IT IS FURTHER ORDERED, the Owner/Developer is permitted, at the hearing, to offer a revised version of the Development Plan (to be marked as a separately numbered exhibit) that would eliminate the Emergency Access Gate, but no additional testimony or evidence will be provided in regard to that issue.

PROTESTANTS' RESPONSE TO MOTION FOR RECONSIDERATION

Protestants, Valleys Planning Council, Inc., Falls Road Community Association, Inc., Heatherfield Community Association, Seminary Ridge Owners Association, Boxwood Homeowners Association, The Meadows of Greenspring HOA, and Tally Ho Community Association, submit this response to the Motion for Reconsideration filed by Greenspring Joppa Falls, LLC (the "Developer").

ARGUMENT

A. The ALJ Did Not Misunderstand The Evidence

The Developer contends that the ALJ misunderstood the evidence before her, specifically (i) "the intent of internal emails from DPWT staff," (ii) the "purpose of third party consultant reports obtained by DPWT," and (iii) "conflicting statements from competing expert witnesses regarding the state of the sewer system serving the Property." (Mot., p. 1). There is no merit to this assertion.

1. The email from Dave Bayer and Mr. Cauley's "recommendation"

The Developer points to an email from Dave Bayer of DPWT (Prots' Ex. 90) in which he states, among other things, that sanitary sewer overflows would occur if Johns Hopkins did not replace the sewer segments below the site and that "zero" is the number of units that could be developed at the site without causing an SSO. (Mot., p. 2). The Developer argues that the ALJ's reliance on this email is contradicted by the testimony of DPW's Eugene Cauley, in which he testified that DPWT recommended approval of the development plan. (*Id.* (*citing* T. 9/1/22, p. 235).

It was certainly within the ALJ's prerogative and discretion to discredit the "recommendation" of Mr. Cauley in light of all of the other evidence introduced on the issue of sewer capacity. That evidence, which consisted of several witnesses and dozens of exhibits, need not be repeated here but is described in great detail in Protestants' post-hearing memorandum (pp. 2-28) and the ALJ's decision itself (pp. 30, 31, 44-45, 47-58). The recommendation of agency staff is not sacrosanct and, in the case of Mr. Cauley, was simply not sufficient to even raise a presumption in favor of plan approval.[1] Indeed, although Mr. Cauley stated, in conclusory fashion, when asked by the Developer's counsel, that DPWT recommended approval, it was clear that he knew very little about the sewer capacity.[2] With respect to the eight sewer segments, he did not know what development project required replacement of the segments or where the segments are even located, and had only become aware of the issue when he read the memoranda about it. (*Id.*, pp. 212-13, 265-66). When asked whether he could say that replacement of the eight segment would resolve the problems in the sewershed, he could not answer. (*Id.*, pp. 283-84).

---

[1] The ALJ agreed, concluding that "the presumption of development plan compliance … is not found here…." (Op., p. 120).

[2] Counsel for the Developer did not ask any questions of Mr. Cauley regarding sewer capacity.

2. The Ramboll and Hazen reports

The Developer contends that the ALJ "disregarded" testimony that the Ramboll and Hazen reports were "long term planning documents." (Mot., p. 3). The "testimony" referenced by the Developer is apparently that of Mr. Leffner, who described the Ramboll Report as "just an example of the County being proactive…doing what they do, which is own, maintain, operate, repair the sewer system." (T13, p. 133). "I think the Ramb[oll] report was, essentially, a study and improvement that the County planning to do for relining the main under Lake Roland. It's not necessarily any kind of capacity improvement." (T13, pp. 134-35). With respect to the Hazen study, Mr. Leffner described the study as "kind of like a further horizon study that the, the County is embarking up" and "kind of an example of the County, [] doing more with regard to the analysis and development of standard County practices beyond what just the Consent Decree requirement would be…. [I]t's more so a planning document, right? Continuing to identify analysis, capacity studies, long term planning to help influence the County's future capital spending in the County." (T13, pp. 134, 135).

The ALJ did *not* disregard this testimony by Mr. Leffner. Indeed, the ALJ made specific reference to it in her summary of the evidence (*see* Op., pp. 68-69) (Mr. Leffner "described the Hazen and Ramboll reports as the County's future long term planning for the capital budget" and "testified that neither Hazen nor Ramboll reports were cause of any concern") and then explicitly rejected his testimony. *Id.*, p. 124 ("I am not convinced by Mr. Lessner's opinion that [the Ramboll report] was only a 'planning document' and only used for 'capital budget' purposes"); *id.*, pp. 125-26 (the Hazen Report cannot be discounted as only a 'planning document'").

In any event, Mr. Leffner's view of the reports is hardly credible. The express "primary purpose" of the improvements identified in the Ramboll report is to "minimize the inflow and

infiltration into the interceptors to reduce the likelihood of sanitary sewer overflows." (Prots' Ex. 87, p. 1).[3] There is no mention or indication anywhere in the report that it is simply a "long term planning document." As for Hazen, there is language in the Hazen newsletter (Prots' Ex. 85) suggesting that the County would *use* the results of the Hazen study for budgeting and planning purposes, but the newsletters as well as Hazen's Scope of Services (Prots' Ex. 86) make clear that the study was not simply a "planning document" but rather a "comprehensive evaluation" for the purpose of determining the near-term and long-term capacity of the system and the preparation of a "capacity assessment report." (Prots' Ex. 86, pp. 1-19). The ALJ agreed. (*See* Op., p. 126) ("While the County may *also* use it for capital budget planning, the County hired Hazen to perform a comprehensive evaluation of the accuracy of the data from the RKK models and to update those models"). The suggestion that the Hazen and Ramboll reports are merely "planning" documents and therefore insignificant somehow is fictional.[4]

3. The repairs made by the County

The Developer states that the ALJ "was not convinced despite the introduction of an email from Dave Bayer, that repairs had been made to the County's sewer system downstream from the property." (Mot., p. 3).

First, a close review of the repairs performed by the County (reflected in Dev.'s Ex. 44 and 45B)[5] reveals that, aside from the lining of one sewer segment, the work consisted of simply repairs

---

[3] When asked whether he was aware of the purpose the Ramboll report, Mr. Leffner could not recall. (T. 5/31/23, p. 149). When asked whether he had an understanding of the scope of the work called for the report, he said he had "[a] general idea" and was "generally familiar." (*Id.*). And when shown the report itself, he agreed that the repairs involved "a lot of pipe." (*Id.*, p. 150).

[4] To be fair, it is unclear what exactly Mr. Leffner meant when he described the reports as "planning" documents. Was he suggesting that the County was not required to undertake the repairs or that the County was "planning" on performing the repairs?

[5] Some of the work identified in these exhibits was not performed because the County believed it was not necessary.

to four manholes. Indeed, Mr. Leffner agreed that these repairs were "minor" in nature and would not cure or correct, for example, the model-predicted SSOs and hydraulic restrictions determined by RJN and reflected in Map 3. (T. 5/31/23, pp. 204, 206).

Second, as the ALJ perceptively pointed out, the repairs were performed in 2014, 2017 and 2019 and, thus, Mr. Bayer would have known about them when he wrote his email on March 22, 2021, *i.e.*, he would not have written that email if he believed that the repairs corrected the deficiencies. (Prots' Ex. 90).

B. The ALJ Had More Than Sufficient Basis To Not Simply Accept The Conclusory Recommendation of Mr. Cauley

The Developer contends that the ALJ erroneously refused to accept the testimony of Mr. Cauley and found that additional testimony from DPWT representative was necessary. The Developer posits that "[a] DPR representative testifies on behalf of DPWT and relays whether there are any open issues or the department recommends approval of the development plan.... The purpose of consolidating DPWT's position on development plans into one single witness is to prevent HOHs from taking multiple employees away from their jobs to attend and testify. Until very recently, DPR confirmation was deemed to be the 'best evidence' – or at least sufficient evidence in an administrative forum, to explain DPTW's issues and position regarding the development plan." (Mot., p. 3).

The Developer's view of the hearing process is skewed and naive. The ALJ is not required to accept the testimony of an agency representative simply because he or she is a County employee and irrespective of what he or she actually says. Moreover, while there is nothing wrong *per se* with having one witness testify on behalf of two agencies, that does not immunize the witness from challenge on issues he or she clearly knows nothing about. Once it becomes clear that the witness's testimony may be inadequate – as was painfully obvious here in the case of Mr. Cauley - the

impetus is on the Developer, not the ALJ, to call other witnesses, either from the County or its own.[6] Following Mr. Cauley's testimony, the Developer had more than eight (8) months to figure this out before the hearing concluded on May 21, 2023.

C. There Is No Basis Whatsoever To Reconvene The Hearing

Remarkably, the Developer next argues that, because the ALJ departed from the "typical" practice of allowing one witness to testimony for two agencies, she should reconvene the hearing to consider testimony from "a DPWT representative." (Mot., p. 4) ("Accordingly, Developer requests that the ALJ...."). This testimony, says the Developer, "will clarify" "the state of the sewer system and the purpose of the third party consultant reports...." (*Id.*). Permitting an additional hearing on an "outstanding issue" would be "efficient" and "fair." (*Id.*, p. 5). Not permitting an additional hearing "would unfairly prejudice a developer that was following the direction of a reviewing agency, because the alternative is to require a developer to proceed all the way through full development plan review and approval process again...." (*Id.*). This would not be the first time, according to the Developer, that the ALJ's office convened a hearing to take additional testimony. (*Id.*) (*citing* PUD Case No. 09-0843 and 2627 Caves Road).

This argument, frankly, is laughable. The Developer had more than ample opportunity over the eight months of hearings during this case to call any and all County witnesses it wanted. Mr. Cauley's testimony was on the first day of the hearing, so the Developer had a full eight months to assess whether additional testimony or evidence on sewer capacity was necessary. Moreover, it was obvious throughout the hearing that sewer capacity was a major part of Protestants' case. Their sewer expert, Mr. Grachek, testified initially on February 10, 2023; Mr. Summers testified on March 27, 2023, and both of them testified again on April 11, 2023. Before the hearing

[6] Counsel for the Developer did not ask a single question of Mr. Cauley regarding sewer capacity. (T. 9/1/22, pp. 223-236)

reconvened for the last day on May 31, 2023, the Developer had plenty time to assess their testimony and call any and all witnesses they chose. They called only Mr. Leffner on May 31, 2023. Moreover, all of the exhibits pertaining to the sewer issue, including Mr. Bayer's emails, were introduced long before the last day of the hearing. The Developer had plenty of time to assess those documents, review them with County representatives or their own consultants, and present additional evidence. There will be no prejudice, at least none not of its own doing, if the Developer's request to reconvene the hearing is denied.

As the ALJ aptly put it:

> [N]either Dave Bayer, nor Lisa Eicholtz, nor any representative from DPWT with knowledge of the sewer system, testified to support Developer's position in rebuttal. If there was a change in DPWT's position or clarification to explain the evidence presented by the Protestants, then testimony and further evidence from [] DPWT was necessary.... The silence is deafening. (Op., pp. 126, 127).

Finally, regarding the two cases cited by Developer, they involved, as the Developer notes, "outstanding issues" that were not addressed during the course of the hearing. For example, in *2627 Caves Road*, the ALJ allowed additional testimony after the close of the hearing because the Planning Office had not submitted its findings on the RC5 Performance Standards to the ALJ prior to the hearing, as the Code requires.[7] There are no "outstanding" issues here, only failures of proof.

D. The Developer Does Not Dispute The ALJ's Conclusions Regarding Traffic

Importantly, the Developer does not mention in its motion any of the ALJ's findings and conclusions regarding traffic. The Developer does not address the thirteen (13) fallacies in the traffic impact study that the ALJ found "undermine the expert testimony by Mr. Driban." (Op., p.

[7] Contrary to the Developer's characterization, the issue on which additional testimony was permitted did not involve the Planning Office's "interpretation and application" of the Performance Standards in the general sense. (*See* ALJ Op., 20-21).

95).[8] And the Developer does not address the ALJ's conclusion that the development, even with the proposed road improvements, would result in a "worsening of conditions" at Falls/Joppa and Falls/Greenspring Valley roads. (*Id.*, p. 105).

Thus, even if the Developer's arguments regarding sewer are accurate and warrant a reconvened hearing, which they clearly do not, the motion for reconsideration still should be denied. ALJ denied the development plan for both sewer and traffic reasons, independent of each other.

E. The Emergency Access Gate

The Developer asks the ALJ to allow it to submit a revised development without the emergency access gate at the rear of the site. (Mot., p. 6). This request should be denied, of course, because the Developer has not demonstrated any basis for either (1) reconvening the hearing on the issue of sewer capacity or (2) reversing the ALJ's findings and conclusions regarding traffic.

CONCLUSION

The ALJ's Opinion in this case was thorough, well-reasoned, and supported by an extraordinary amount of evidence on both the sewer capacity and traffic issues. The sundry arguments advanced by the Developer in its motion for reconsideration are half-hearted and do not move the dial. After 13 days of hearing, dozens of witnesses, and nearly 200 exhibits, there are no outstanding issues and no basis whatsoever for the ALJ to reconvene the hearing to give the Developer a second bite at the apple. Protestants respectfully request that the motion for reconsideration be denied.

[8] Mr. Driban's testimony, she found, amounted to a "because I think so" opinion. (*Id.*, p. 96).

PEOPLE'S COUNSEL FOR BALTIMORE COUNTY'S
ANSWER TO DEVELOPER'S MOTION FOR RECONSIDERATION

1. **Standard for Review; Fraud, Mistake, and Irregularity:** Zoning Commissioner/Hearing Officer (ALJ) Rule 4K, BCZR Appendix G, makes available a Motion for Reconsideration. But it does not state the standard for review. In this absence, it is appropriate to apply the common law rule, which requires fraud, surprise, mistake, or inadvertence. See, e.g. Redding v. Board of County Commissioners 263 Md. 94, 111-12 (1971). This rule is construed strictly, and does not encompass a change of mind. The Court of Appeals revisited the equivalent "mistake" standard under Maryland Rule 2-535. Claibourne v. Willis 347 Md. 684, 692-93 (1997),

> "It is well settled that "mistake," as used in Rule 2–535(b), is limited to a jurisdictional error, such as where the Court lacks the power to enter the judgment. *Tandra S. v. Tyrone W.,* 336 Md. 303, 317, 648 A.2d 439, 445 (1994); *see Hamilos v. Hamilos,* 297 Md. 99, 107, 465 A.2d 445, 450 (1983). "The typical kind of mistake occurs when a judgment has been entered in the absence of valid service of process; hence, the court never obtains personal jurisdiction over a party." *Tandra S.,* 336 Md. at 317, 648 A.2d at 445; *see also Hughes v. Beltway Homes, Inc.,* 276 Md. 382, 386–87, 347 A.2d 837, 840–41 (1975) (providing numerous examples of mistakes, non-jurisdictional in nature, which would not permit a court to exercise its revisory power)."

The Collective Development Team's (CDT's) Motion does not allege anything close to the level of jurisdictional mistake, fraud of any kind, or irregularity. End of story.[1]

[1] Nor does the CDT Motion challenge the adverse determinations about traffic and denial of the special variance. So even if there were any merit to the motion, it would not affect the outcome.

2. **Discretion to Evaluate Evidence.** There is more. The ALJ has discretion to evaluate and weigh credibility and persuasiveness of witnesses. Pollard's Towing v. Berman's Body Parts & Mechanical 127 Md. App. 277, 289-95 (2001). As recognized by ALJ Maureen Murphy, there must be a sufficient basis for any expert opinion. Rochkind v. Stevenson 454 Md. 277, 286-95 (2017); Zilichiklis v. Montgomery County 223 Md. App. 158, 184-86, cert. denied 444 Md. 641 (2015); Even if admitted, there is discretion to evaluate such evidence. MEMC Electronic Materials v. BP Solar System 196 Md. App. 318 355-58 (2010); Bryant v. State 396 Md. 196, 203 (2006); Organic Farmacy Mgt. v. Four Greenfields 2021 WL 3173262; Telos Corp. v. Hamit 2018 WL 190374.[2]

3. Alleged "Misunderstandings" of DPWT Staff Emails, Consultant Reports, and Competing Statements of Expert Witnesses Regarding JFS Sewer System Capacity. (Motion Paragraphs 3-9). None of these allegations involve jurisdictional mistake. Anyway, ALJ Murphy exercised appropriate discretion to analyze and evaluate all the evidence, including the bases for expert opinions.

The 2005 Consent Decree was to be resolved by 2025. But the consultant reports and summer 2021 Hazen memo showed the County was still just about back to square one on the SSOs. The Bayer email amounted to the same thing. MDE got on record in 2023 with its imposition of civil penalties for 2018 SSOs. The Lake Roland *e coli* levels are as excessive as ever. There is no end in sight.[3]

4. Alleged Conclusiveness or Value of Eugene Cawley's Testimony. (Motion Paragraph 5). Eugene Cawley appeared as a county staff liaison for Development Plans Review and circuitously the Department of Public Works and Transportation (DPWT). He said the DPWT was satisfied generally, but did not mention or touch the sewerage issue, much less the Jones Falls Sewershed (JFS).

---

[2] Maryland Rule 1-104 precludes the citation of unreported opinions as precedent in the courts, but not before administrative agencies. Anyway, the unreported opinions reflect that the law in this area is so settled that it is unnecessary for republication.

[3] We addressed the sewer capacity debacle at Pages 25-31 of our Post-Hearing Memorandum.

5. "That's the Way You Do It?" (Motion Paragraphs 8-9). The CDT complains they usually can take advantage of such superficial testimony of county staff who at times are messengers with no expertise or even specific knowledge of relevant issues. They say this is supposed to save valuable time of multiple county employees! Ignorance is bliss.

If so, that may work where there is no opposition or no significant controversy, but that does not work where there is a real controversy. Here, it was obvious JFS sewer capacity would be a major issue. It is up to the parties to choose whether or not to call relevant county staff. They must then take the consequences.

6. Elm Street Revisited. Developer's lawyers often cite People's Counsel v. Elm Street Development 172 Md. App. 690 (2007) to deify the so-called "presumption" generated merely by county staff support. But even where the support might have some basis, Judge Peter Krauser's opinion explains that the presumption no longer controls when there occur relevant cross-examination and/or opposing evidence. In this context, it is noteworthy that Judge Charles Moylan cited Dean McCormick's "… assertion that 'presumption' is the slipperiest member of the family of legal terms, except its first cousin, 'burden of proof.'" Cooper v. Singleton 217 Md. App. 626, 627-28 (2014).

7. Elm Street Further Distinguished. In Elm Street, the Office of Planning and DEPRM (Environmental Protection) did at least submit written recommendations that the development plan was acceptable as having a solely owned R.C. 4 Zone conservancy area and in compliance with the R.C. 4 Zone performance standards. 172 Md. App. at 698-700. We challenged the reasoning as falling short or insufficient, but at least they addressed the specific R.C. 4 Zone criteria. In the present case, neither Cawley nor any other county witness even mentioned, much less addressed, the Consent Decree or overall JFS capacity problem.

8. CDT Tactics. The CDT chose not to call the relevant staff in their main case. They also chose not to present an expert witness on the subject. By the end of the CDT case, the JFS may as well have been on some other planet or moon.[4] There was nothing in the record to locate it on the map. There was a failure to meet the burden of proof.

[4] See Kurt Vonnegut, The Sirens of Titan (1959) for Titan and other possibilities.

9. Protestants Came "Ready to Play". Gary Williams, the legendary Maryland basketball coach, would stress that the team has to be ready to play. Protestants were more than ready. They opened up on stormwater management, with Daniel O'Leary. They then produced convincing testimony and documentation of the sewer capacity problems, per Randall Gracheck and Robert Summers. The CDT sponsored Nicholas Leffner for rebuttal. He said he communicated with county DPWT staff. When People's Counsel asked whether he suggested that they testify, he said it was not his place. Leffner may be right about that. It was up to CDT counsel to bring in county staff, and they chose not to. The relevant county staff (David Bayer, Lisa Eichholtz) were never called. As ALJ Murphy aptly perceived, the silence is deafening.[5]

10. CDT Resistance to the Calling of Any More County Witnesses. Ironically, on February 2, 2023, after Protestants' produced Daniel O'Leary to address stormwater management, People's Counsel sent an email to suggest (among other things) that ALJ Murphy call county staff to bring in their perspective:

> "1) Now that stormwater management has been placed in controversy, it is appropriate to have the presence of county staff to explain their position, and reasoning. Just as there was your appropriate request to bring in Kris Nebre to provide some clues as to the DPWT position on traffic, it would be equally or perhaps more necessary that there be a similar request for the presence of Kitty Uhdin and Ella Kaplan of DEPS SWM staff to explain their point of view on stormwater management."

After a back and forth, CDT counsel Mr. Rosenblatt voiced his emphatic objection:

> ""The most 'frustrating" part of the email from Mr. Zimmerman was the suggestion that the hearing should be delayed/extended for further county testimony. It would be unprecedented to 'require' that at this stage of the process While Mr. McCann and I have certain disagreements about how a Hearing Officer's Hearing should proceed, it appears we are in agreement that it is the developer's choice whether to call further county witnesses and I am confirming we do not intend to do so."

The e-mail chain is attached.

---

[5] We called it "The Empty Chair" (1959), comparing to S1 E1 of the iconic Untouchables TV series. Post-Hearing Memorandum Page 29.

That is where things were left. Metaphorically, CDT counsel insisted the staff ship had effectively completed its voyage, and there were no more ports to visit. Now they want to extend the itinerary.[6]

CDT counsel doubled down by producing Nicholas Leffner but not DPWT staff, even though, as noted, Leffner had apparently communicated with staff. So that ship sailed. The time for boarding or reboarding is long gone. It's too late now.[7]

11. Convening an Additional Hearing? (Motion Paragraphs 10-12). This case may be the most protracted land use hearing in history in hearing days and/or months duration. It went for 13 hearing days from September 1, 2022 to May 31, 2023. It was our office's effort which led to bringing in Kris Nebre. We continued to suggest, impartially, that additional county staff be called to contribute more information. The CDT continued to take the negative course.

Now they want to prolong the process into late 2023 and likely 2024 (given the right of other parties to bring in witnesses and file another memorandum).[8] Anyway, there is nothing any county staff could say at this juncture to downplay the documented sewer capacity deficiencies.[9]

12. Departure from Prior Decisions? (Motion Paragraph 10). The CDT argues,

> "Indeed, the requirement to hear testimony from a DPWT representative on the issue of sewer capacity is departure from all prior ALJ decisions, and when an administrative agency 'changes a position clearly established in its own prior precedent it 'must supply a reasoned analysis indicating the prior policies and standards are being deliberately changed, not casually ignored."

There are multiple problems with this argument.

---

[6] People's Counsel's impartial goal was to achieve a more complete record. However, when staff were not called, we did not register an objection or say staff were required to appear as a matter of law. Their absence just became part of the failure of proof of adequate sewer capacity.

[7] Carole King, It's Too Late Now (1971). (At least in the song, they really tried to make it).

[8] It may be acceptable to have six more weeks of winter after Groundhog Day, but not six more months of this trial.

[9] As we observed, DPWT euphemistically described the JFS as an "area of concern."

First of all, ALJ Maureen Murphy's decision does not articulate a requirement that DPWT primary staff testify in all cases, or even this case. Rather, the decision evaluates all of the evidence relative to sewer capacity, including documents generated by DPWT staff. Their failure to appear, for whatever reason, including CDT's positions, is just one of many aspects of the case. After all, ALJ Murphy did not require their testimony. When the issue came to center stage, it was up to CDT to bring them in if they chose to do so.

Secondly, there is no such thing as precedent or policy when it comes to such evidentiary issues. The production of witnesses is particular to each case.[10]

Thirdly, the closest case turns out to be CPC Falls Road ("Bluestem"), No. 20-006 (2020). It is familiar to ALJ Murphy and all counsel.[11] The developer made a motion to produce additional evidence at the County Board of Appeals (CBA) relating to sewer capacity in the JFS. There were apparently affidavits from county staff. The CBA denied the motion. Pages 30-31. Bluestem was the first case to address JFS sewer capacity. If there were any surprise then, it is no longer the case. Everyone knows about it.

13. Emergency Gate Redux. (Motion Paragraph 13). This has always been a sideshow. The CDT was trying to get credit with Meadows of Greenspring (MOG) and mitigate their overall disapproval by promoting the emergency gate. They succeeded to the extent that this became the main focus of MOG.

Now that it has been correctly determined that the emergency gate could not legally be justified, the CDT is willing to back off or downplay the issue.

---

[10] The CDT cites Frederick Classical Charter School v. Frederick County Board of Education 454 Md. 330 (2017). But that case does not apply. There the Court found that the State Board of Education had arbitrarily, without explanation, departed from its previous statutory declaration and interpretation of a transportation funding formula for charter schools articulated previously and confirmed in Baltimore City Bd. of School Comm'rs v. City Neighbors charter School 400 Md. 324, 3288 (2007). The Court still afforded the Board an opportunity on remand to hold proceedings to adopt a different interpretation. Montgomery County v. Anastasi 77 Md. App. 126 (1988) is likewise inapplicable. There, the County Merit System Protection Board departed, without adequate reasoning, from its prior adjudicatory decision that certain casual consultations by the police chief relating to police promotion procedures must were prejudicial and improper.

[11] ALJ Murphy discussed Bluestem in the Krongard case. PAI 08-919.

14. It's All in the Game. The deficient JFS capacity is just one of the many reasons this development proposal is excessive and deserves to be denied.[12] If ALJ Murphy had gotten to the master plan conflict and stormwater management issues, these would have been additional grounds for denial and/or referral to the Planning Board and County Council. But the given reasons are enough.

We have recognized the fairness and patience of ALJ Murphy in conducting this case. There are no procedural due process objections. The diligence, effort, and work rate are above and beyond the ordinary.

The End

Judge Kehoe introduced his recent opinion in Grier v. Heidenberg 255 Md. App. 526, cet. denied 482 Md. 149 (2022) with this quotation from Oliver Wendell Holmes, Jr.,

> "The language of judicial decision is mainly the language of logic." 10 Harv. L. Rev. 457, 465 (1897).

Holmes also wrote, positing the "bad man" point of view,

> The prophecies of what the courts will do in fact, and nothing more pretentious, are what I mean by the law. 10 Harv. L.Rev. at 460-61.

Based on the language of logic and law, the prophecy of what will be done in fact is that the CDT's Motion for Reconsideration will be denied.

This brings to mind the Doors' 1966 classic, The End.

[12] Given the apparent deficiency, CDT should have filed a special variance petition on this issue.

Subject: RE: Greenspring Manor Case: 2021-0250-SPH; PAI 08-0922; Scheduling Redux
Date: Monday, February 6, 2023 9:23:23 AM

CAUTION: This message from AMRosenblatt@venable.com originated from a non Baltimore County Government or non BCPL email system. Hover over any links before clicking and use caution opening attachments.

The most "frustrating" part of the email from Mr. Zimmerman was the suggestion that the hearing should be delayed/extended for further county testimony. It would be unprecedented to "require" that at this stage of the process. While Mr. McCann and I have certain disagreements about how a Hearing Officer's Hearing should proceed, it appears we are in agreement that it is the developer's choice whether to call further county witnesses and I am confirming we do not intend to do so. We truly believe, absent any unanticipated curveballs in the remainder of Mr. McCann's case, that February 10 and one additional day will be sufficient to conclude this case. We anticipate 2-3 rebuttal witnesses, but obviously that can go up or down depending on the subject matter of Mr. McCann's remaining witnesses.

With that in mind, the attorneys have been emailing unavailable dates in March and have responses from Mr. Wyatt, Sachse, and the developer's team regarding March availability. We would respectfully request that Mr. McCann and Mr. Zimmerman inform Kristen if any of the following dates do not work for them, and then we can schedule another hopefully final date for this case.

The available dates for Mr. McCann and Zimmerman to review are:

- March 2, 20, 27-29

Hopefully some of these work for them and are available for scheduling with Judge Murphy.

Caution: External Email

Judge: My thoughts on Mr. Zimmerman's email and Mr. Rosenblatt's response are set forth below.

1. I agree that an additional hearing day should be scheduled in the event it is necessary. As I said, I anticipate calling two more witnesses. This may change, it may not, but it is entirely my prerogative, subject only of course to your view of the relevance of any additional testimony/evidence. Mr. Rosenblatt and Mr. Mudd don't get to decide how many witnesses I call or whether I can change my mind on the issue. Assuming there are only two witnesses, given how things have progressed so far, I think it is fair to say that none of us know how long those witnesses might take. Moreover, counsel for Developer still have given us any indication of how many witnesses they will call on rebuttal or how long they think rebuttal will take. Scheduling a second day in case it's needed makes sense. (Please recall that I initially suggested a second day, Feb 10, in case it was necessary, which turned out to be true).

2. I don't disagree that it is Mr. Rosenblatt's prerogative whether to call any County representative to testify in his rebuttal. Mr. Zimmerman was not suggesting otherwise.

3. I agree with Mr. Zimmerman that, in considering whether to schedule a second day, some consideration should be given to at least the possibility of sur-rebuttal. I understand that you cannot make that call now – we haven't heard the developer's rebuttal case yet – but right now we're just considering simply holding a second day in case it is needed.

Finally, Mr. Rosenblatt sternly concludes, "Eleven hearing days over many months is beyond sufficient for this case, which involves 60 (not 6000) homes." I have never understood objections by this developer's counsel regarding the length of this hearing, as if the hearing process is some sort of charade with an outcome already determined. No one wants to waste time or money in a hearing, but the length of any hearing is ultimately determined by the issues generated by developer's plans, and your handling of the evidence and the application of law. There is no time limit here, certainly not one based on Mr. Rosenblatt's level of patience or frustration.

Thanks for your consideration.

Michael

Dear Judge Murphy- my 2 cents on the email sting here is that Mr. Zimmerman was simply being cautious and requesting that another day be set aside "just in case." If anything, it appeared to me to be an attempt to insure that everything is completed as soon as possible. Thanks for listening.
Doug Sachse

Judge Murphy,

We completely disagree with Mr. Zimmerman's email. Mr McCann has confirmed he has two more witnesses that will definitely conclude on February 10. We will be prepared to begin our rebuttal case on February 10 and will conclude our case within one more hearing day. There is no reason to call any additional county witnesses, nor is there any reason to entertain any of Mr. Zimmerman's thoughts with regard to stormwater management, which is well beyond his statutory authority to participate in cases that involve the county's zoning maps and the Master Plan. The passing references to stormwater management within the Master Plan hardly give Mr. Zimmerman any "authority" to be scrutinizing a highly technical element of a Development Plan, particularly where there are numerous other attorneys involved who do have the right and ability to do so and who, in fact, did so through the presentation of expert testimony.

Ultimately, it is the developer's burden in this case, and we will determine if and how we wish to address stormwater management in our rebuttal case. Mr. Zimmerman should not – and indeed cannot –involve himself in the strategy and decision making regarding the developer's rebuttal case.

As happens in every single development plan hearing, the county witnesses appear on the very first day of the hearing, testify, and recommend the development plan for approval (assuming they have determined to do so, as they have in this case). The well-known Elm Street case – in which People's Counsel participated and lost – makes clear that, upon recommendation of the County agencies, the plan is deemed to be compliant with the Code and regulations, unless the protestants can rebut that presumption. Here, the Department of Environmental Protection and Sustainability has already confirmed their recommendation for approval of the development plan, and they likewise confirmed that the concept stormwater management plan has been approved (Mr. Zimmerman may or may not be aware that development stormwater management plan approval is not required for a traditional development plan case – only for PUDs). That testimony and recommendation established a presumption that the Development Plan complied with all laws applicable to DEPS' review of the plan, including stormwater management laws. Of course, we heard from Mr. O'Leary during the last hearing, in an effort to rebut that presumption – as is permissible under Elm Street. Now, the developer may or may not choose to rebut the testimony of Mr. O'Leary, in whatever way we deem fitting. That is the developer's decision, not Mr. Zimmerman's. And, ultimately, you will have to determine who is correct on the issues pertaining to stormwater management. Mr. O'Leary has testified against dozens of developments and to our knowledge no county reviewers have ever been recalled following his testimony.

Mr. Zimmerman's email demonstrates a clear and continued delay tactic, and an attempt to

continue to exceed the limited statutory authority afforded to the Office of People's Counsel. We have been exceedingly patient in this matter, throughout the numerous hearing days during which the four attorneys opposing this development plan have put on their cases, but Mr. Zimmerman's email has pushed us beyond the point of frustration. He rested his case months ago, yet continues to randomly email additional exhibits that he attempts to introduce without the support of any witness testimony. He continues to re-ask witnesses the same questions asked by Mr. McCann in a less effective manner. This has all been allowed, but he is now going too far.

This is the first Hearing Officer's Hearing that developer's counsel has been involved in where we can recall People's Counsel ever having attended at this level, and he clearly lacks an understanding of the process and legal standard under the Elm Street case. His suggestion that surrebuttal may be necessary or appropriate in this case demonstrates his lack of understanding of the administrative process in these hearings, and his "threats" about the potential for arguments of procedural error if surrebuttal is not permitted, borders on abusive behavior. Your Honor has made perfectly clear that the case will conclude with developer's rebuttal case, which is entirely consistent with developer's counsel's experience in these cases for our collective 20+ years of handling these cases. Surrebuttal is not part of this process, because if it were permitted to occur, these cases would never conclude within any reasonable amount of time.

Eleven hearing days over many months is beyond sufficient for this case, which involves 60 (not 6000) homes. Please do not entertain Mr. Zimmerman's delay tactics and continue to allow him to waste all of our time in this case. He fails to recognize that county employees have jobs and day to day responsibilities and do not serve at his whim to testify multiple times in a single hearing. Please do not allow him to continue to extend this case in perpetuity. He has taken enough of our time already.

Caution: External Email

Thursday, February 2, 2023, Groundhog Day

Dear Judge Murphy,

This is my scheduling contribution and primer for today. (I am sending this separately to save paper and forest resources rather than extend the lengthy current e-mail chain).

In view of the scheduling debate at the conclusion of the January 30 hearing day, and for reasons stated below, Kristen should be asked to schedule **two additional days in March**:

1) Now that stormwater management has been placed in controversy, it is appropriate to have the presence of county staff to explain their review, position, and reasoning. Just as there was your appropriate request to bring in Kris Nebre to provide some clues as to the DPWT position on traffic, it would be equally or perhaps more necessary that there be a similar request for the presence of Kritty Uhdin and Ella Kaplan of DEPS SWM staff to explain their point of view on stormwater management. Otherwise, the record will be incomplete. We will be left with Daniel O'Leary and maybe a "rebuttal" witness. The county staff presence should be requested for February 10 if reasonably possible. P.S. Please note that the 3-page Development Plan Conference August 11. 2021 comments conclude with the statement: "The project **does not** meet the Baltimore County Code development plan requirements at this time." I do not recall any detailed or specific testimony from any county staff on this subject, including the issues raised by Mr. Daniel O'Leary. Nor do I recall any expert presented by the developer on the stormwater management issue. Please somebody correct me if I am wrong. The testimony of Mr. Uhdin and Ms. Kaplan may be supportive of either the developer or the protestants in various ways, may be probative or not. Whatever it may be, it is appropriate and fair to have it. It also appears from documents Mr. O'Leary received the morning of his testimony that there were communications after the August 11, 2021 DPC comment. Mr. Uhdin and Ms. Kaplan should be able to illuminate this subject. They should provide any review documents subsequent to August 11, 2021. (Any testimony by a developer's witness on county review and any alleged "approval" would be hearsay and would not anyway qualify as "rebuttal"). Please note also that the Master Plan does cover stormwater management.

2) It is uncertain what the scope and length of the rebuttal case will be.

3) There may be evidentiary issues regarding the scope of rebuttal evidence, as there are well-known limitations, See M.L.E. Trial Sec. 31. Among other things, a party cannot use rebuttal to present part of its case in chief. M.L.E. Trial Sec. 32.

4) It should not be overlooked that there is a right to surrebuttal. M.L.E. Trial Sec. 33: "Where new matter is introduced by the plaintiff in rebuttal, it is an error to refuse to permit the defendant to introduce evidence in surrebuttal."

5) Given that administrative hearings are intended to be more flexible than court hearings, there is some degree of discretion in admitting rebuttal and surrebuttal evidence. In any event, if Protestants wish to present surrebuttal, that is a potential right.

6) There is also the potential that one of the parties may have a "hard stop" on one of the days. This may further stress the situation. (No hard stop for me, by the way).

7) This case will potentially affect this neighborhood for decades and perhaps the rest of the 21st century. A second additional day will help cover all the bases. This will also avoid another contentious debate if it turns out that the second additional day is needed. It will also reduce or eliminate the potential stress and temptation to cut witnesses or evidence short or off on the first additional day. In the felicitous event that the case concludes after February 10 and just one additional day, then that second additional day may be available to everyone for constructive work on other matters. Often, there are relatively late postponements of hearings without irreparable damage to the collective hearing schedule from an open day.

I hope this contribution is helpful. As for the March dates, Adam Rosenblatt tells us today that between his office, Michael Wyatt, and Doug Sachse (pending me and Michael McCann) the only available dates are March 2, 20, 27, 28, and 29. I may have a CBA hearing scheduled March 2, but will make whatever arrangements are necessary to prioritize this GM case for March 2 and therefore am available here for March 2. The rest of the dates are also good. So all remaining dates are good (as well as just about every other date in March, by the way, in case anyone else is willing to make adjustments). Looks like the trial is approaching Vivaldi territory (Four Seasons – 1723), but I've always gone the extra mile to cooperate on scheduling.

Thank you so much for your consideration of this thought process. As the Beatles spotlighted in We Can Work It Out (1965): "Life Is very short, and there's no time for fussing and fighting, my friend. I have always thought that it's a crime. So I will ask you once again. Try to see it my way."

Respectfully, Peter Max Zimmerman, People's Counsel, 410 887-2188

IN RE: GREENSPRING MANOR DEVELOPMENT PLAN AND ZONING HEARING (2310 West Joppa Road)	*	BEFORE THE
	*	COUNTY BOARD OF APPEALS
	*	OF
8th Election District 3rd Council District	*	BALTIMORE COUNTY
	*	Case No. 08-0922 and Case No. 2021-0250-SPH
Greenspring Joppa Falls, LLC Owner and Developer	*	

* * * * * * * * * * *

MOTION FOR RECONSIDERATION

Pursuant to Rule 4K of the Rules of Practice and Procedure before the Zoning Commissioner/Hearing Officer of Baltimore County, Owner/Developer Greenspring Joppa Falls, LLC, by undersigned counsel, hereby submits this Motion for Reconsideration, and, in support thereof, states as follows:

1. On July 31, 2023, a Combined Development Plan and Zoning Opinion and Order (the "Order") was issued denying the green lined Development Plan marked and accepted into evidence as Developer's Exhibit 1B (the "Plan"). The denial was based in part on certain "sewer incapacity and deficiencies" outlined in the Order. *See* Order, p. 130.

2. As explained below, Developer is asking the ALJ to exercise the authority contained in Rule 4K to reconsider the decision made in the Order and to convene a hearing and hear additional testimony from a Department of Public Works and Transportation (DPWT) representative.

3. Developer contends the ALJ's findings on sewer capacity were based on misunderstandings with respect to the intent of internal emails from DPWT staff, the purpose of third party consultant reports obtained by DPWT, and conflicting statements from competing expert witnesses regarding the current state of the sewer system serving the Property.

4. For example, the ALJ interpreted an internal email from DPWT employee Dave Bayer that was written over two years before the decision was issued in this case to mean that "no units could be built at the Property without causing an SSO." Order, p. 117, citing Prot. Ex. 90. Mr. Bayer's email is repeatedly cited as an indication of the current state of the system, which the ALJ found to be incapable of handling even the existing sewage in the system: "It was clear to me that the sewage path from this Property cannot handle the existing sewage which flows along the path, much less the additional sewage which will come from adding 61 homes to the sewer system." Order, p. 129. Indeed, the ALJ held "I place great amount of weight on expertise and knowledge of DPWT engineers and shown in the DPWT CPC comment and Dave Bayer's internal email to DPWT colleagues, that if any homes were added to the sewer system, SSOs will occur. Order, p. 118. The ALJ also found that "DPWT and the Sewer Design team engineers have maintained their steadfast opposition to adding 61 homes to the sewer system due to inadequate capacity and concern for SSOs." P. 120.

5. These findings all contradict the testimony from Eugene Cauley, who represented Development Plans Review (DPR) and DPWT on the first day of the HOH and testified that DPWT is recommending approval of the Development Plan:

> Q. …the only issue preventing your recommendation of approval of this plan is this gate issue to Mays Chapel Road?
>
> **A. Yes.**
>
> Q. Other than the gate, DPR is satisfied that this plan meets all other requirements and can be approved?
>
> **A. Yes.**
>
> Q. Okay. DPWT is recommending plan approval and deferring the gate issue to the Judge?
>
> **A. Correct.**

T. 9/1/22 at p. 235.

6. Additionally, the ALJ disregarded testimony that the "Ramboll" and "Hazen" reports were long term planning documents and found that the reports "provide compelling evidence that the pipes in the sewage path from the Property are at over-capacity and that SSOs are predicted to result during the County-selected 10 yr/6 hr storm event." Order, p. 126. She was not convinced, despite introduction of an email from Dave Bayer, that repairs had been made to the County's sewer system downstream from the property. *See* Dev. Ex. 45A-B.

7. The ALJ directly stated that expert testimony was not the "best evidence" of the purpose of these reports and state of the system and that testimony from a DPWT representative was required in this case. Order, pp. 126-27.

8. As the ALJ is well aware, testimony from a DPWT sewer representative is not something that typically occurs in the context of an HOH. A DPR representative testifies on behalf of DPWT and relays whether there are any open issues or the department recommends approval of the development plan. That is precisely what occurred here, when Mr. Cauley introduced himself as follows before confirming that DPWT is recommending approval of the development plan:

> Q. Go ahead and let us know who you're reviewing for.
>
> **A. Yes. Hello, good afternoon. My name is Mr. Eugene Cauley, I review for DPR, and also DPW.**

T. 9/1/22, p. 195; *see* pp. 235-36 for confirmation that DPWT recommended plan approval.

9. The purpose of consolidating DPWT's position on development plans into one single witness is to prevent HOHs from taking multiple employees away from their jobs to attend and testify. Until very recently, DPR confirmation was deemed to be the "best evidence" – or at least sufficient evidence in an administrative forum, to explain DPWT's issues and position regarding development plans. Obviously, from the ALJs decision in this case, she did not feel it was sufficient to convey DPWTs position with respect to sewer capacity.

10. Accordingly, Developer respectfully requests that the ALJ convene an additional hearing to consider testimony from a DPWT representative, which will clarify, among other issues, the state of the sewer system and purpose of the third party consultant reports retained by DPWT to evaluate the state of their sewer system. Indeed, the requirement to hear testimony from a DPWT representative on the issue of sewer capacity is a departure from all prior ALJ decisions, and when an administrative agency "changes a position clearly established in its own prior precedent it 'must supply a reasoned analysis indicating the prior policies and standards are being deliberately changed, not casually ignored." *Frederick Classical Charter Sch. v. Frederick Cty. Bd. of Educ.*, 454 Md. 330, 406 (2017) (citing *Anastasi*, 77 Md. App. at 137) (emphasis added). Hearing from DPWT would give the ALJ the information needed to supply a reasoned analysis on the issue of sewer capacity.

11. This would not be the first time the ALJ's office has convened a hearing to take additional testimony to clarify the County's interpretation and application of a law/regulation. In at least two cases, PUD Case No. 09-0843 (the "PUD Case") and 2627 Caves Road (the "Prior HOH"), just as in this case, Protestants' counsel raised a novel issue that points out a potential shortcoming in a County agency's interpretation and application of a law/regulation. In the PUD Case, the issue pertained to a County reviewing agency's interpretation and application of stormwater management related-requirements prior to PUD development plan approval. In the Prior HOH, the issue pertained to a County reviewing agency's interpretation and application of BCZR provisions governing the RC 5 Performance Standards prior to development plan approval. In both cases, just as this case, the issue at hand did not require any change to the development plan that was the subject of review and approval. There, as here, the issue could be resolved through additional testimony and analysis by a County agency after timely filing of a Motion for Reconsideration. And there, as here, the requisite reviewing County agency simply did not require the submission of additional information prior to recommending approval of the

development plan at the HOH, because that agency's review of the additional information would have otherwise occurred at a later stage of review of the development proposal. *See Monkton Pres. Ass'n v. Gaylord Brooks Realty Corp*., 107 Md. App. 573, 585 (1996) (holding that Developer's obligation to comply with the applicable regulations does not end with approval of its development plan; the process "is indeed an 'ongoing process,' and the hearing officer's affirmation of the plan is just the first step").

12. As the ALJ properly determined in the PUD Case and the Prior HOH, this type of issue can be resolved most efficiently and fairly by permitting an additional hearing to take testimony on an outstanding issue. As the ALJ undoubtedly recognized when scheduling the additional hearing date in the PUD Case and Prior HOH, not permitting the additional hearing would unfairly prejudice a developer that was following the direction of a reviewing County agency, because the alternative is to require a developer to proceed all the way through the full development plan review and approval process again, even though the development plan itself is not required to change in order to resolve the issue at hand. Accordingly, Developer asks the ALJ to exercise similar discretion in this case, to hear from a DPWT witness, so that a more detailed and accurate state of the County's sewer system can be established in the record of this case.

13. The ALJ also found that the emergency access gate proposed in the rear of the Property violated BCZR Section 260.4.A.1 and the DPR Policy Manual, which prohibited approval of the Development Plan under BCC § 32-4-229. As was explained during the hearing, Developer proposed the gate as an accommodation to the residents of the Meadows/Boxwood communities, who expressed concerns over a "cut-through" road being established by virtue of the development proposal. Notwithstanding Developer's gesture to the Meadows/Boxwood community, DPR indicated in its comments and testimony that it could not fully support approval of the Development Plan, because it viewed installation of the gate as being violative of the requirements of the DPR Manual. Developer disagreed with DPR's interpretation of the

Manual, but Developer explained in its Memorandum that, if the ALJ determined the gate should not be installed for whatever reason, the ALJ could condition the order on *not* installing a gate. Given the discussion and rationale offered by the ALJ in the Order regarding the gate, and in order to obtain the full recommendation in favor of Development Plan approval from DPR (including DPWT), Developer is hereby asking the ALJ to permit Developer to offer a revised version of the Development Plan that would *eliminate the gate*, thereby establishing the connectivity contemplated under § 260 of the BCZR and unequivocal compliance with the DPR Manual.

CONCLUSION

For the reasons stated herein, Developer respectfully requests that the ALJ grant Developer's Motion for Reconsideration and reconvene a hearing to consider testimony from a DPWT representative and to accept a revised version of the Development Plan that eliminates the proposed emergency access gate.

Respectfully submitted,

RE: Development Plan and Zoning
Project: GREENSPRING MANOR
Address: 2122 W. Joppa Road
PAI Case Nos: HOH 08-0922 & 2021-0250-SPH

Dear Counsel:

Enclosed please find a copy of the decision rendered in the above-captioned matter.

In the event any party finds the decision rendered is unfavorable, any party may file an appeal to the Baltimore County Board of Appeals within thirty (30) days of the date of this Order. For further information on filing an appeal, please contact the Baltimore County Office of Administrative Hearings at 410-887-3868.

Sincerely,

Maureen E. Murphy

IN RE: **DEVELOPMENT PLAN HEARING & PETITION FOR SPECIAL HEARING**	*	BEFORE THE OFFICE OF
8th Election District	*	ADMINISTRATIVE HEARINGS
2nd Council District		
(2310 W. Joppa Road)	*	FOR
	*	BALTIMORE COUNTY
GREENSPRING MANOR		
	*	
GREENSPRING JOPPA FALLS, LLC		**CASE NOS. 08-0922 and**
Owner/Applicant	*	**2021-0250-ASA**

* * * * * * *

CORRECTED ADMINISTRATIVE LAW JUDGE'S
COMBINED DEVELOPMENT PLAN AND ZONING OPINION & ORDER

This matter comes before the Office of Administrative Hearings ("OAH") for a public hearing on a development proposal submitted in accordance with Article 32, Title 4, of the Baltimore County Code ("BCC"). Greenspring Joppa Falls, LLC Owner/Applicant (herein known as "Owner") and Atapco Properties, Inc., Developer (herein known as "Developer") submitted for approval a 1-sheet redlined development plan ("Redlined Development Plan") and a 1-sheet greenlined development plan ("Greenlined Development Plan") prepared and sealed by Kimley-Horn known as "Greenspring Manor." (Dev. Exs. 1 and 1B). The Developer proposes to build 61 single-family homes (the "Project") on 39.4± acres of land split-zoned Density Residential - DR 1 and DR 2, located at 2310 W. Joppa Rd. (the "Property"). There is one existing house which is to remain.

The Developer has also filed a Petition for Special Variance from the Baltimore County Zoning Regulations ("BCZR"), §4A02.4.G to allow the development of the Property within the Falls Road and Joppa Road and Falls Road and Greenspring Valley Road failing traffic sheds. The development and zoning cases were filed as a combined hearing as permitted by BCC, §32-4-230.

The Concept Plan Conference ("CPC") was held on March 9, 2021. A Community Input Meeting ("CIM") was held on April 27, 2021. A Development Plan Conference ("DPC") was held on August 11, 2021.

The Property was posted with the Notice of Hearing Officer's Hearing ("HOH") and Zoning Notice in compliance with the regulations. A public virtual WebEx hearing, in lieu of an in-person public hearing, was held on the following dates: September 1, 2022; September 20, 2022; September 21, 2022; October 27, 2022; October 28, 2022; November 1, 2022; December 5, 2022; December 7, 2022, January 30, 2023, February 10, 2023, March 27, 2023, April 11, 2023 and May 31, 2023 (Days 1-13).

Russell Powell, representative of the Developer, attended the HOH in support of the Plan. Also in attendance was Matthew Bishop of Kimley-Horn, the firm that prepared both the Redlined Development Plan and Greenlined Development Plan. Christopher Mudd, Esquire and Adam Rosenblatt, Esquire of Venable, LLP, represented the Developer. Michael McCann, Esquire represented Valleys Planning Council; Seminary Ridge Homeowner's Association; Boxwood Homeowner's Association; Heatherfield Homeowner's Association; and Falls Road Community Association. Peter Max Zimmerman, People's Counsel for Baltimore County also participated. In addition, Michael Wyatt, Esquire and Douglas Sachse, Esquire, neighboring property owners participated in the hearings. There were many property owners and interested citizens who attended some or all of the hearings.

COUNTY AGENCY WITNESSES

Numerous representatives from Baltimore County agencies who reviewed the Plan also attended the hearing, including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Jerry Chen, the Project Manager, Jim Hermann on behalf of both Development

Plans Review ("DPR") and Department of Recreation and Parks ("R&P"); LaChelle Imwiko from Real Estate Compliance ("REC"); Eugene Cauley from Development Plans Review ("DPR"); and Shawn Crawford, Office of Zoning Review ("OZR"). Also appearing on behalf of the County were Jeff Livingston from the Department of Environmental Protection and Sustainability ("DEPS"), and Brett M. Williams from the Department of Planning ("DOP").

Shawn Crawford verified both the OZR DPC comments dated November 3, 2021 and the OZR Final (HOH) comments dated April 4, 2022. (County Exs. 1A, 1B). The list of changes/additions requested by OZR set forth in the DPC Comments were made on the Redlined Development Plan and as a result, OZR recommended approval. LaChelle Imwiko testified for REC and listed the DPC comments which included labeling the 100-year Floodplain Easements, and Drainage and Utility Easements. (County Ex. 2A, 2B). At the hearing, the final change requested by Ms. Imwiko, pertaining to the total acreage for the 10 Drainage and Utility easements, was made in green which then resulted in the Greenlined Development Plan. With that final correction, REC recommended approval of the Greenlined Development Plan. (Dev. Ex. 1B).

Jeff Livingston testified on behalf of 3 sections within DEPS: (1) Ground Water Management ("GWM"); (2) Stormwater Management ("SWM"); and (3) Environmental Impact Review ("EIR"). GWM provided a comment dated August 26, 2022 that GWM had no outstanding issues or comments. (County Ex. 4). On behalf of SWM, the Concept SWM Plan was approved on June 23, 2021 as confirmed by a SWM comment dated November 10, 2021. (County Ex. 5). Mr. Livingston confirmed that the SWM devices will consist of 2 submerged gravel wetlands.

EIR provided HOH comments dated August 26, 2022 indicating that EIR reviewed the Redlined Development Plan dated November 10, 2021. (County Ex. 3). A Forest Buffer Variance was approved by the Director of DEPS on September 24, 2021 and an Alternatives Analysis was approved on

September 21, 2021. [1] The EIR HOH comments added 2 more minor changes that will need to be corrected prior to Final Development Plan approval. Finally, Mr. Livingston verified that the Director of DEPS approved the Developer's request for a Forest Conservation Variance to remove one (1) Specimen tree as set forth in the Director's letter dated September 21, 2021. (County Ex. 6).

In preparation for the HOH, Brett Williams provided a Memorandum on behalf of the DOP dated August 24, 2022 with an attached HOH Report dated November 18, 2021. (County Ex. 7). In response to DOP's DPC comments, the Developer provided a point-by-point response dated July 29, 2021. (County Ex. 9). DOP also reviewed and approved a School Impact Analysis ("SIA") with a filing date of July 9, 2021. (County Ex. 8). Mr. Williams explained that the projected enrollment for Riderwood Elementary School, Ridgely Middle School and Dulaney High School were under the State Rated Capacity ("SRC") and is 96.43%, 102.80% and 97.28% respectfully. Mr. Williams also stated that DOP reviewed the Redlined Pattern Book dated August 30, 2021 and found that it met all of the requirements of the Residential Performance Standards in BCZR, §260.

In the HOH Report, DOP addressed the Petition for Special Variance to develop within the 'F' level traffic shed of Falls Rd. and Joppa Rd., and Falls Rd. and Greenspring Valley Rd. Although BCZR, §4A02.4.G, requires DOP to provide a report to the Zoning Commissioner prior to consideration of the Special Variance in their HOH Report, DOP deferred the Petition to the Department of Public Works and Transportation (DPWT) for final recommendation and decision.

Jim Hermann, the Baltimore County Landscape Architect, testified that he approved the Schematic Landscape Plan on October 13, 2021 and, as a result, DPR recommended approval of the Redlined Development Plan from a landscaping perspective. (County Ex. 10). He added that a Final Landscape Plan would be filed in Phase II of the development process. In regard to Open Space

[1] The Protestants separately appealed these decisions to the Board of Appeals which approved of the same.

requirements, Mr. Hermann stated that for the 61 total proposed units, the required amount of Open Space ("OS") under BCC, §32-6-108 is 60,000 sf (1,000 sf per unit). (County Ex. 11). The Developer will provide 148,300 sf of OS at the Property as shown on the OS Proposed Conditions Plan which will be owned and maintained by a private Homeowner's Association ("HOA"). There are no Master Plan Greenways affected by this Project. As a result, on behalf of R&P, Mr. Hermann recommended approval of the Redlined Development Plan.

Eugene Cauley testified on behalf of both DPR and the Department of Public Works & Transportation ("DPWT") in regard to roadways, sidewalks, storm drains, water and sanitary sewer systems. DPR's general and site-specific comments were provided in the DPC comments dated August 10, 2021 (the "DPR DPC Comments"). (County Ex. 12A). He explained that a floodplain study need not be approved for filing in Phase I, and was permitted to be moved to Phase II of the development process. (County Ex. 12D).

Mr. Cauley testified that DPR could *not* recommend approval of the Redlined Development Plan with an 'emergency only access gate' because the number of homes adjacent to the Property exceeds 100, and therefore it is a violation of DPR Policy Manual, Access Guidelines, XIII.B. (Prot. Ex. 9). In regard to sewer capacity, he acknowledged the DPR DPC Comments dated August 10, 2021 indicated that eight (8) sewer segments do not have adequate capacity to accommodate 61 homes. (County Ex. 12A). Mr. Cauley confirmed that these 8-inch pipes were to be replaced and/or upgraded by Johns Hopkins when it built the 3 medical buildings at Greenspring Station as part of that prior development project. However, Mr. Cauley could not provide information as to when, or whether, JHH would be doing that work. He was clear that, as of HOH Day 1, the Johns Hopkins sewer segments had not been replaced/upgraded. The DPR DPC Comments also indicated that Johns Hopkins is obligated to complete that work by 2023. Mr. Cauley added that the Developer of this Project (Atapco), was required to

complete work on two (2) other sewer segments (MH 43793, 43794) for another development project but did not have specific information. (County Ex. 12A).

When asked about the Petition for Special Variance and failing intersections along Falls Rd., Mr. Cauley stated that a traffic impact study (TIS) was approved by State Highway Administration (SHA). In Case No.: 2021-250-ASA, DPR provided zoning advisory comments ("ZAC") dated October 18, 2021 wherein it was reiterated that no development is permitted in a traffic shed or along local roads with an 'F' level of service ("LOS") and that the Special Variance request needed to be coordinated/discussed with DPWT Traffic Design section. (County Ex. 12C). Mr. Cauley testified that he spoke with a County traffic engineer, Kristopher Nebre, PE, who works in the Traffic Planning and Traffic Engineering Section of DPWT. Mr. Cauley testified that Kris Nebre told him that DPWT had no further comment. From his conversations with Kris Nebre, Mr. Cauley understood that Falls/Joppa Rd. and Falls/Greenspring Valley Rd. were rated by the County as 'F' intersections. Mr. Cauley was also told by Kris Nebre that roadway improvements would be made to the intersection of Falls/Joppa but not to Falls/Greenspring Valley. When Mr. Cauley was shown the DPWT ZAC comment dated September 20, 2021 from Terry Curtis, PE - Engineer III with DPWT, Mr. Cauley acknowledged that, at that time, DPWT recommended denial of the Petition for Special Variance. (County Ex. 12B). Mr. Cauley then repeated the information provided to him by Kris Nebre that the traffic generated by the Project would have no net impact on the failing intersections. (County Ex. 12D). He testified that the levels of service for those intersections after the improvements are completed would still be rated as 'F'. (County Ex. 12 D).

Because of Mr. Cauley's testimony about traffic issues, at the request of the undersigned, Kristoffer Nebre, PE, Engineer IV, Division Chief of Traffic Engineering, Department of Public Works and Transportation (DPWT) was requested to testify. Kris Nebre testified that he reviewed the Redlined

Development Plan and the TIS prepared by the Developer's traffic engineer.

While he does not make the boundary line determination for traffic sheds, Kris Nebre did verify with the County GIS department that this Property is located within a failing traffic shed which includes both the Falls/Greenspring Valley intersection and the Falls/Joppa intersection. The relevant traffic shed does not include the Falls Rd. and Seminary Ave. (MD Rt. 131) intersection. He clarified that both Falls Rd. (MD Rt. 25) and Greenspring Valley Rd. (MD Rt. 130) are owned and maintained by the State of Maryland (SHA), while Joppa Rd. is owned and maintained by the County. As a result, the State, not the County, has jurisdiction to undertake work to physically improve those State-owned roadways, and/or to make changes to the signal timing. Alternatively, the State could approve plans by a developer to improve the roadways.

In order to rate intersections for the purpose of the Basic Services Map ("BSM"), Kris Nebre explained that the County uses the 'loaded cycle methodology' ("LCM") as found in the Highway Capacity Manual (1965). Under the LCM, the Traffic Engineering/Planning section employs a team of people to perform traffic counts at intersections for a 1-2 hours to evaluate each approach to an intersection. A traffic cycle becomes 'loaded' if on a green light, the last vehicle in line on a green light does not make it through the intersection. Stated in percentages, failing movements generate the assigned rating; an 'F' rated intersection has a load factor of 86-100%. For intersections rated 'D', 'E' and 'F', Kris Nebre explained that DPWT conducts annual traffic counts to reevaluate the ratings each year. For intersections rated 'A', 'B' and 'C', the counts are conducted every 3 years. He explained that because it is a snapshot in time, the LCM cannot be used to forecast future traffic generated by a proposed development.

Kris Nebre did confirm that both Falls/Greenspring Valley and Falls/Joppa are both rated by DPWT with a level of service of 'F.' He was not able to state which approach(es) for each of these

intersections was causing the 'F' rating, or how long either intersection had been rated an 'F'. He agreed that there were 12 intersections in the County with 'F' LOS, and that 3 of those 12 were located along the Falls Road corridor. (PC Ex. 9).

Kris Nebre also verified that SHA did not approve the Developer's proposed improvements to the Falls/Greenspring Valley intersection but did approve the proposed improvements to Falls Rd/Joppa Rd. intersection. Those improvements which will consist of one (1) additional left turn lane on both the eastbound and westbound approaches. He stated that these improvements will allow multiple movements simultaneously thus providing more time during green lights along the Falls Rd. corridor. After the improvements at Falls/Joppa Rd. are completed, SHA will change the signal timing. Kris Nebre stated that both the physical improvements at the Falls Rd./Joppa Rd. intersection, and the timing at the Falls Rd. intersections will improve traffic flow for Falls/Greenspring Valley intersection.

Kris Nebre explained that the standard for a Special Variance requires DPWT to analyze whether the proposed improvements to the roadway were such that the additional traffic generated by the development, will not make the intersections any worse. The roadway improvements must have the capacity to accommodate all new traffic generated from the development such that it would be as if no additional traffic was added to the intersection resulting in a net impact to the intersection. Having reviewed the TIS, and supplemental information provided to DWPT by the Developer's traffic engineer, it was Kris Nebre's opinion that the proposed development would result in a net zero impact along Falls Rd. (County Ex. 13).

Kris Nebre explained that when a development is being proposed, DPWT does not generate a TIS, nor does it conduct traffic counts. In analyzing a TIS to determine the impact of the development on a traffic shed, DPWT reviews the Critical Lane Volume ("CLV") and Highway Capacity Manual ("HCM") methodologies because, unlike the LCM, each method can project the number of trips to be

generated by a proposed development. He acknowledged that the intersections may still be rated as 'F'. In regard to whether Greenspring Manor development should have a permanent connection through Mays Chapel community, Kris Nebre deferred to DPR.

On cross examination, Kris Nebre acknowledged a series of emails obtained by the Protestants' counsel (the "DPWT Traffic Emails"). (Prot. Ex 15, 16, 17, 18 and 19). Kris Nebre explained that the DPWT Traffic Emails were created at a time when Greg Carski was the Bureau Chief of Transportation Planning and Transportation Engineering and Michael Filsinger was the Division Chief of Traffic Engineering. Kris Nebre now occupies the job of Division Chief. At the time of the DPWT Traffic Emails, both Mike Filsinger and Kris Nebre worked under Greg Carski. Greg Carski still works for the County. Kris Nebre also acknowledged DPWT DPC comments were prepared during review of the development plan dated August 12, 2021 ("DPWT DPC Comments"). (PC Ex. 6). Kris Nebre recalled that the DPWT DPC Comments were compiled by him and the DPWT team and he agreed that its contents were correct. (PC Ex. 6). He also acknowledged having seen the DPWT ZAC Comments authored by Terry Curtis, PE wherein DPWT recommended denial of the Petition for Special Variance. (County Ex. 12B).

DEVELOPER'S CASE

1) Erin Kuhn, SHA Associate District Engineer Traffic.

The Developer's first witness was Erin Kuhn, Associate District Engineer Traffic at SHA. She is assigned to District 4 which includes Baltimore County. District 4 reviews TIS and development plans but is not involved with the Special Variance. In this case, SHA reviewed the revised TIS dated December 9, 2020 and the Point-by-Point Response to State and DPWT comments. It was approved by SHA on January 21, 2021. (Dev. Ex. 15). The TIS included the proposed roadway improvements to Falls/Joppa Rd. (Dev. Ex. 16). By letter dated August 4,

2021, SHA did not object to the Development Plan for the Project, and by subsequent letter dated September 13, 2021, SHA had no objection to the Petition for Special Variance. (Dev. Exs. 17, 18).

Ms. Kuhn testified that as indicated in the March 7, 2022 Maryland Department of Transportation ("MDOT") letter, SHA did not approve the proposed improvements to Falls/Greenspring Valley Rd. intersection. (Dev. Ex. 20). At that intersection, the Developer was proposing one (1) additional left turn lane from Greenspring Valley Rd. turning north onto Falls Rd. SHA denied those improvements and found that they would create a safety issue when traffic in those left turn lanes merge together to head north on Falls Rd. (Dev. Exs. 19, 20, 21). After SHA denied the proposed improvements, Lenhart Traffic Engineers resubmitted the same improvements for Falls/Greenspring Valley Rd. which were denied by SHA for a second time.

Ms. Kuhn added that all three (3) traffic signals along Falls Rd. operate through a coordinated signal system. After the Falls/Joppa Rd. improvements are completed, SHA will retime all 3 signalized intersections. Ms. Kuhn repeated that under both the CLV and HCM methodologies, the TIS showed that neither the LOS for Falls/Joppa, nor the Falls/Greenspring Valley intersections, operate at LOS 'F'. However, as far SHA is concerned, when the proposed roadway improvements at Falls/Joppa Rd. are completed, the LOS for Falls/Joppa would change from LOS 'E' to 'D.'

2) Russell Powell, Senior Vice President, Atapco Properties.

Russell Powell was the Developer's second witness. As the Senior Vice President for the Developer, Mr. Powell is responsible for all new acquisitions. Atapco has a 100-year history in Baltimore. He described the Project as low impact with proximity to Greenspring Station and Johns Hopkins medical facilities. He highlighted that the proposed homes were being pushed

behind the existing house to preserve one-half the Property in OS. Atapco found the Property desirable for a by-right development, on cleared farm land, with its connection to utilities. The existing home will be sold to a new buyer. Atapco will contract with NVR Homes as the builder. He was also certain that community outreach with adjacent communities had been conducted. He stated that Atapco requested to meet with Valleys Planning Counsel ("VPC") but VPC denied the request.

Mr. Powell informed that since the Concept Plan, the following changes to the Development Plan have taken place:

1) adding a berm and landscaping to enhance the vegetative buffer;
2) clustering the homes away from W. Joppa Rd.;
3) changing the Mays Chapel gate to emergency-access-only;
4) the addition of speed bumps on Tally Ho Rd.;
5) roadway improvements at Falls/Joppa; and
6) upgrade sections of the sewer system.

Mr. Powell confirmed that the Developer here has elected to proceed with construction drawings for both roadway improvements and sewer system repair/replacement prior to approval of the Greenlined Development Plan. During cross examination, Mr. Powell stated that, prior to the purchase of the Property, the Developer learned that Johns Hopkins had not repaired the sewer system as part of its development approval in Greenspring Station. He also stated that the community outreach was with Seminary Ridge HOA, Boxwood Community and Meadows Community. He confirmed that the proposed homes would have 2-3 car garages and 3-4 bedrooms. The homes would range between 3,000 sf – 4,500 sf without basements. Market studies indicated that buyers want 3-car garages. He further acknowledged on cross that the proposed density was non-negotiable. The price point will range from 800,000.00-1,000,000.00.

3) Matthew Bishop, Landscape Architect, Kimley Horn.

Matthew Bishop was admitted as an expert in landscape architecture, land planning, in

development regulations and zoning process. In describing the location of the Property, Mr. Bishop stated it is located northwest of I-695, northeast of W. Joppa Rd., and east of Falls Rd. Immediately surrounding the Property are homes to the north and east, SHA property to the south, and to the west, Greenspring Station with mixed-use offices and medical facilities. The Property is split-zoned nearly in its center with Density Residential - DR1 to the south and DR2 to the north. The permitted density for 39.4 +/- acre Property is 61 homes which would be divided as 16 homes (16.8 acres +/-) in DR 1 and 45 homes in DR 2 (22.6 acres +/-). Mr. Bishop testified that the homes meet all bulk regulations and no variances were being requested.

Mr. Bishop conducted an analysis of the lots in the surrounding area and prepared a document showing lot size ranges from 6,500 sf-12,500 sf. (Dev. Ex. 4). This document was submitted to DOP in response to DOP's CPC comment. Street view photographs were provided. (Dev. Ex. 5A-5Y). A rendered Development Plan was provided to show Project. (Dev. Ex. 6). The Property has minimal topographical changes and therefore no retaining wall will be constructed thus minimizing the grading here. The first home will be located 550 ft away from W. Joppa Rd. The proposed access driveway will have dedicated in and out drive aisles.

After speaking with the Meadows and Boxwood Communities, the Developer is proposing the Mays Chapel Gate now be approved to be an emergency-access-only gate where Mays Chapel Rd. connects to the Property. The Mays Chapel Gate would prevent traffic between W. Joppa and Seminary Avenue. At the location of the Mays Chapel Gate, would be a 3-4 ft tall berm with large shade trees to buffer the Project from the Meadows and Boxwood communities. A Schematic Landscape Plan has been filed and approved by the County. There will be 1,000 new plantings including shrubs, shade trees, flowering trees and Evergreens.

The Project will provide more than double the amount of required OS with grass areas, a

pavilion, or gazabo and garden areas. The required amount of OS is 60,000 sf, while 148,000 sf of OS is being provided. A walking trail will proceed through Lots 2 – 9. The cost of the OS is $308,000.000. Public sidewalks will be on both sides of the interior roads. The homeowner's association will own the OS. There currently are no SWM devices on the Property; 3 submerged gravel wetlands are being proposed to treat both 100-year water quantity and quality. There are SWM facilities located in the residential communities to the north of the Property and at Greenspring Station.

The existing floodplain which is currently located in the front of the Property in farm fields, will be contained within the Forest Buffer and Forest Conservation easement areas. The proposed driveway will be built on fill at a higher elevation. The environmental areas will be protected in perpetuity through easements. There will be no negative impact to adjacent properties.

Mr. Bishop used the Pattern Book to describe the proposed home styles which will have variable widths of 40 ft; 50 ft; and 55 ft. (Dev. Exs. 7A, 7B, 7C). There will be a mix of front-end loaded and side-loaded garages. Most 2-car front-loaded garages will have first floor living.

Mr. Bishop testified that the Project meets the Master Plan which is intended only as a guide. He opined that the Project is consistent with the T3 suburban transect zone in that it will have single family dwellings which are oriented to the streets in a grid pattern embellished with landscaping. T3 applies to lowest density zones DR1 and DR 2, and permits a wide variety of density, design and setbacks.

In regard to rehabilitation of the sewer segments, Mr. Bishop stated that the Developer has agreed to upgrade the 8 inch sewer pipes to 12 inch sewer pipes located across Joppa Rd. Plans for the rehabilitation have been prepared and filed with the County.

As to the Residential Performance Standards in BCZR, §260, Mr. Bishop opined that the

Project met each section. Specifically, he testified that the Project meets BCZR, §260.2 – *Site Planning* in that 27 specimen trees ("STs") are being retained and only 1 ST is being removed, there is little forest clearing, and additional quality vegetation will be planted. Under BCZR, §260.3 – *Open Space*, the existing grading is being maintained, the homes are located 550 ft away from W. Joppa Rd., there are a mix of lot sizes without any panhandle lots. There will be plantings along the front of the Property which will link to the network of natural landscape open areas. All sidewalks will connect to Mays Chapel Rd. and a pedestrian path will be provided along W. Joppa Rd. All homes are oriented to open areas and to the gazebo park. The trail system will proceed through the open areas to adjoining communities. Under BCZR, §260.4 – *Streets and Parking*, there will be a street connection with Mays Chapel Gate being emergency-access-only to meet community concerns. In addition to garage parking, street parking is also provided. Under BCZR, §260.5 – *Landscape Design*, the entrance will be an inviting OS, with sidewalks leading to the OS. The gazebo, walking trail and garden are located in a pocket park. There is a berm on the northern end, and fencing on side and rear of the Property; tree canopy along the streets; a monument sign will be provided. Under BCZR, §260.6 – *Buildings*, under Subsection A, the Project provides a variety of housing types with variable widths and both front and side garage entries. All porches face the street and the front yard setbacks provide a uniform street edge. Decks and porches are available to buyers. The proposed gazebo provides the same architectural theme. The finish materials are provided in the Pattern Book, with similar materials and design on building facades, and compatible materials for siding using stone and brick. (Dev. Ex. 7). Under BCZR, §260.6.B, the front and side loaded garages are not the dominant theme. In conclusion, Mr. Bishop opined that the Project meets all Residential Performances Standards and the Development Plan meets all applicable development regulations.

On cross examination, Mr. Bishop acknowledged that the Developer was maximizing the number of density units on the DR2 and thereby condensing them onto the northern portion of the Property. He agreed that the smallest lot size was 7,507 sf (less than 1/5 acre) and the largest was 21,571 sf (less than ½ acre). He stated that 15 of the 61 homes have 3 car garages. He acknowledged that of the 61 lots, 24 of the lots are less than 10,000 sf and none will be near 30,000 sf. In regard to setbacks, the 3 typical lot layouts as shown on the Greenlined Development Plan provide the minimum required front, side and rear setbacks; there is no breakdown for the number of proposed lots which may have larger setbacks. He also acknowledged that the Floodplain Study had not been 'approved for filing' by the County as of the time of the hearing. The proposed driveway, connection to the sewer, and roadway widening of W. Joppa Rd. for acceleration/deceleration lanes, will all impact the floodplain. Bishop opined that there was no requirement under BCC, §32-4-414(c) to obtain a waiver to develop in the floodplain. Mr. Bishop recognized that his request to DPWT on June 28, 2021, for DPWT's confirmation that existing 'overtopping of water' on W. Joppa Rd. will not be made worse by the Project. (Prot. Ex. 23). DPWT did not respond to the request. In regard to SWM devices, Mr. Bishop explained that it is typical not to be able to treat all the water draining onto and off a property.

Mr. Bishop also explained that the Developer has agreed to repair/replace eight (8) sewer segments located on the SHA property across from this Property on W. Joppa Rd., and SHA has granted an easement to do the work. Mr. Bishop added that, in light of Johns Hopkins' failure to repair certain sewer segments for the medical and surgical buildings in Greenspring Station, he has not analyzed whether there is sufficient sewer capacity. He stated that he is relying on the County's expertise as to sewer capacity and the County was only requiring the rehabilitation of 8 sewer segments on SHA property.

4) John Canoles, Eco Science Professionals.

John Canoles of Eco Science Professionals was admitted as an expert environmental consultant with special knowledge of State and County requirements for Specimen Trees ("STs") and Forest Conservation Variances. (Dev. Ex. 10). Mr. Canoles prepared the Application for Forest Conservation Variance (the "Forest Conservation Application"). (Dev. Ex. 12).

With regard to the Forest Conservation Variance, Mr. Canoles explained that the Developer is requesting approval to remove one (1) specimen tree – ST12 - as identified in the photo. (Dev. Ex. 11). The Forest Conservation Application reveals the location of the tree is on W. Joppa Rd. and needs to be removed due to widening of W. Joppa Rd. with the acceleration/deceleration lanes for the Project. The Forest Conservation Application indicates that the ST12 is a 43-inch, Norway Spruce in fair condition which has already been impacted by tree trimming for overhead BGE lines. The Director of DEPS approved the removal of ST12 finding that all requirements in BCC, §33-6-116(d) and §33-6-116(e) have been met. (County Ex. 6; Dev. Ex. 13). Mr. Canoles opined at the HOH that the removal of ST12 meets all requirements in BCC.

5) Nick Driban, PE, PTOE, Associate Vice President, Lenhart Traffic Consulting, Inc.

Mr. Driban is a senior traffic engineer with nearly 16 years of experience in the field of traffic engineering. He is a licensed professional engineer in the State of Maryland with a Professional Traffic Operations Engineer ("PTOE") certification. He has worked for Lenhart Traffic Consulting ("Lenhart") for the past 5 yrs. Although he has been accepted as an expert witness in other counties in Maryland, this was the first case in which Mr. Driban has testified as an expert witness in Baltimore County. In this case, he was accepted as a professional traffic operations engineer with special knowledge of the BCZR and development regulations. (Dev. Ex. 24).

Mr. Driban prepared the TIS dated September 14, 2020 and, due to comments he received from both SHA and DPWT - Traffic Engineering Section, he revised it on December 7, 2020. (Dev. Ex. 25). In the TIS, Mr. Driban analyzed the roadway improvements at intersections of Falls/Joppa and Falls/Greenspring Valley, as well as the Mays Chapel Gate as emergency-access-only. Mr. Driban explained that since the State of Maryland owns and maintains the intersections of Falls/Joppa and Falls/Greenspring Valley as well as both Falls Rd. (MD 25) and Greenspring Valley Rd. (MD 130), SHA has the authority to approve any proposed roadway improvements. While Joppa Rd. is a local County Road, he stated that SHA also has jurisdiction within 50 ft of the Falls/Joppa intersection. However, it was his understanding that DPWT is still responsible for oversight and review of traffic requirements under the BCZR.

Mr. Driban explained that the TIS is divided into: (1) existing conditions which includes roadway network, existing lane configurations and existing traffic counts; (2) background developments which includes all developments which have been approved prior to the TIS; and (3) a growth rate of 1.5% which accounts a projection for the effect of regional growth on the roadways. The total conditions include the existing conditions, the background developments plus the traffic generated by the Project.

Mr. Driban testified that in analyzing the traffic to be generated by the Project, he used the Institute for Traffic Engineers ("ITE") Trip Generation Manual, 10th Edition. Mr. Driban explained that the ITE compiles studies conducted throughout the country for types of land uses and provides the number of morning peak hours and afternoon peak hours for vehicles which would enter and exit a site. For this case, Mr. Driban used Land Use Code 210 for Single-Family Detached Homes, and the ITE indicated that for the 61 proposed homes, 46 (11 in, 35 out) morning peak hours trips would be generated, and 61 afternoon peak trips (38 in, 23 out) would be

generated. (Dev. Ex. 25, p. 13).

He then explained that the total number of trips generated must be assigned directionally to a roadway network. Toward that end, he compiled a trip assignment chart contained within the TIS. (Dev. Ex. 25, p. 14). Mr. Driban projected that:

> (1) 60% of trips to and from the Project will turn onto Falls Rd. heading south or coming from I-695 and I-83;
> (2) 20% will head east on Joppa Rd;
> (3) 5% will cross over to Meadowood Regional Park;
> (4) 10 % will head north on Falls Rd. past St. Paul's Schools; and
> (5) 5% will turn left onto Greenspring Valley Drive.

Mr. Driban stated that his trip assignment projections are based on the theory that most travelers are going to regional destinations rather than to rural destinations.

The TIS also analyzed the LOS for each intersection using the CLV and HCM methodologies. CLV analyzes how much traffic passes through an intersection, while HCM looks at the average delay per vehicle at a given intersection. Mr. Driban described both the CLV and HCM as modern methodologies for analyzing traffic. Baltimore County was the only jurisdiction that applies LCM to rate intersections. He added that, conversely, LCM cannot be used to predict traffic to be generated by a development because LCM only reflects a specific moment in time, not the future.

Under the CLV analysis, Mr. Driban stated that in the morning peak hours, without the proposed improvements to Falls/Joppa, the CLV impact would be 13 vehicles added, and the LOS would remain an 'E'. With the proposed improvements, in the morning peak hours, he stated that Falls/Joppa would improve its LOS from 'E' to a 'D'. He also testified that, under CLV, Falls/Greenspring Valley would become LOS 'D'. (Dev. Ex. 25, p. 16). Similarly, under HCM, he concluded that the impact of the Project was negligible with Falls/Greenspring Valley remaining at LOS 'D' and Falls/Joppa improving from 'E' to a 'D'. (Dev. Ex. 25, p. 17).

Mr. Driban testified that the failing movements for the Falls/Joppa intersection is northbound in the morning peak hours, and for the Falls/Greenspring Valley intersection is the northbound in the afternoon peak hours. The roadway improvements proposed by the Developer are not to add lanes to the northbound direction on Falls Rd. Rather, Mr. Driban explained that the concrete median strip on W. Joppa Rd. at the intersection, will be removed to make way for an additional left turn lane for traffic heading south on Falls Rd. The lanes heading toward Meadowood Park will be repainted such that there will be 2 dedicated left turn lanes; 1 straight-thru lane toward Meadowood Park; and a dedicated/merge right turn lane heading north on Falls Rd. will remain. Heading eastbound from Meadowood Park toward the Property, the Developer is also repainting those lines to create a left-turn-only lane in order to provide 2 left-turn lanes heading north on Falls Rd., and 1 combined thru-lane/right turn only lane. An aerial photograph with the proposed improvements was provided. (Dev. Ex. 16). Prior to obtaining approval here, the Developer made the decision to proceed with SHA approval of the design plans for the roadway improvements.

Mr. Driban further testified that, only after the roadways improvements to Falls/Joppa are completed, will SHA retime the lights at each of the 3 intersections along Falls Rd. Mr. Driban prepared a document entitled 'MD 25 (Falls Road) Corridor Travel Times' (the "Corridor Analysis") using SHA's Synchro files factoring in Falls/Joppa roadways improvements and SHA retiming of the lights at the 3 intersections, to conclude that for every vehicle traveling northbound along Falls Rd., 45 seconds would be saved, and southbound 8 seconds would be saved. (Dev. Ex. 26). Without specifically stating the amount of time saved at each intersection, he then testified that some of the 45 seconds northbound would be saved at Falls/Seminary and that "it stands to reason that" some of the 45 seconds would also be saved at Falls/Greenspring Valley Rd. He then

concluded that, after the development is constructed, the proposed improvements and retiming of lights will have a positive impact on traffic along the Falls Rd. corridor.

In his opinion, Mr. Driban believes that the Project creates a small impact on traffic and that, with the proposed roadway improvements and retiming of the lights, any impact will be mitigated. With this opinion, Mr. Driban contends that the Special Variance standards have been satisfied. He asserts that the roadway improvements to Falls/Joppa will not only accommodate the traffic from the Project but will substantially improve the average delay along the entire Falls Rd. corridor. In terms of reserve capacity certificates, as specified in the Special Variance Standard, Mr. Driban did not find any. He concluded that the Developer has met all the County rules and regulations.

In regard to the neighborhood concern about cut-thru traffic particularly on Tally Ho Rd., Mr. Driban testified that Lenhart performed an Origin Destination Study. This study was conducted prior to installation of speed humps on Tally Ho Rd. in Fall of 2021. The result was that for the morning peak hours, an average of 3-10 vehicles drove on Tally Ho Rd.; 1.5 vehicles during mid-day and 5 vehicles in evening peak hours. It was Mr. Driban's understanding that the County does not have any threshold for when the amount of cut-thru vehicles amount to a traffic problem. He then concluded that there is not a substantial amount of cut-thru traffic on Tally Ho Rd.

Mr. Driban also opined that, the Mays Chapel Gate needs to be an emergency-only-access gate between the Project and The Meadows/Boxwood communities. Under his reading of the DPR Policy Manual, given that the proposed number of units is 61, there is no requirement for a second, permanent access. In his view, the DPR Policy does not mandate 2 separate access points. He reads the purpose of the DPR policy for more than 1 access point as needed to provide circulation

of vehicles and emergency access. Under that analysis, he reasoned that The Meadow has 99 units and 2 access points onto Mays Chapel Rd., and the 16 homes in Boxwood also have access to Mays Chapel Rd. He believes that an emergency-access-only gate gives full access to emergency vehicles headed to W. Joppa Rd. However, he then reasoned that if the DPR Policy did apply, the "unusual circumstances" exception in the DPR Policy should apply. According to him, those unusual circumstances are that Mays Chapel Rd. does not have any lights and is a local road which was not designed for a lot of traffic. (Dev. Ex. 28). Allowing full access through the Project would connect Seminary to Joppa Rd. and would attract 600-1,000 vehicles during both peak and non-peak hours, negatively impacting The Meadows and Boxwood communities.

In response to the DPWT email dated September 20, 2021 by Terry Curtis, PE, (County Ex. 12B; PC Ex. 6), Mr. Driban referred an email dated January 15, 2021 from Mike Filsinger, PE, who, at the time, was Chief, Division of Traffic Engineering, to Counsel for Developer stating:

> While the proposed development is located within a failing traffic shed, the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development. Any questions, let us know.

(the "Filsinger Jan. 15, 2021 Email"). (Dev. Ex. 30). Mr. Driban stated that he believed the Filsinger Jan. 15, 2021 Email provided DPWT's approval that the Special Variance standard has been met. He testified that he assumed the Terry Curtis must have mistaken the TIS for the Sensitivity Analysis which was requested by Greg Carski and Mike Filsinger during a meeting Mr. Driban had with them in June, 2021. Mr. Driban testified that he submitted the Sensitivity Analysis on July 8, 2021 but it was never reviewed by Traffic Engineering prior to the transfer of both Greg Carski and Mr. Filsinger out of the Traffic Engineering department of DPWT. (Prot. Ex. 39). Mr. Driban then testified that, he did not want to "take for granted" that approval, and

continued to work with Kris Nebre, who had by that point become Acting Director of Traffic Engineering. Mr. Driban stated that, at Kris Nebre's request, he continued to provide Kris Nebre with more analysis to address his concerns.

On cross examination, Mr. Driban acknowledged that this is the first case in Baltimore County in which he has been accepted as an expert, and, consequently, this case is the first time he has had to analyze the Special Variance standard. He agreed that a TIS is only one aspect considered under the Special Variance standard. In his discussions with the representatives in Traffic Engineering and Design, Mr. Driban was not expressly told that the 'district standard' as referenced in BCZR, §4A02.4.G was the CLV, HCM or a Corridor Analysis. Mr. Driban added that under the LCM used by the County, there is no model and therefore LCM cannot be utilized to project future conditions. On the other hand, he stated that both CLV and HCM have software which can calculate future projections.

Mr. Driban confirmed on cross that for Falls/Joppa Rd. intersection, the County traffic counts for **February 19, 2020**, showed the following existing morning and afternoon peak volumes, amount of vehicles:

Direction	Morning Peak (7:00-9:00 am)	Afternoon Peak (4:00-6:00 pm)
Northbound	1782 vehicles	1700 vehicles
Westbound	585 vehicles	726 vehicles
Southbound	1925 vehicles	1174 vehicles
Eastbound	259 vehicles	340 vehicles

(Dev. Ex. 25, p. 26).

Notwithstanding Mr. Driban's opinion that the Project would generate 46 peak morning trips and 61 peak afternoon trips, he acknowledged that the Greenlined Development Plan at Note

11 indicates that the average number of daily trips ("ADT") from the Project is 600 ADT. (Dev. Ex. 1B). He further conceded that he did not review the 200 studies which are the basis for the ITE trips and therefore, did not know whether any of the studies included 2-3 car garages. He then stated that he "would have to believe" the studies would include garages. In his view, the fact that 200 studies were conducted for Land Use 210 was a sufficient basis for his opinion, as the ITE trip generation numbers for other Land Uses were based on fewer studies. The ITE Manual is not a government publication but he referenced the most recent one. Mr. Driban did not know the age range of the studies contained therein but believes they go back 30-40 years, conducted between 1970-2010. The ITE trip generation numbers for this Project also do not factor in the number of drivers living in a home, nor the number of vehicles per home. Even with the proposed garages, he recognized that the Project also includes on-street parking. He summarized that the "best we can do is to use the trip generations."

He further acknowledged that the Trip Assignment percentages are estimates based on "local and regional patterns." (Dev. Ex. 25, p. 14). He agreed that his estimated percentages contain a margin of error. (*Id*.).

Mr. Driban agreed that the application of the ITE trip generation numbers for this Project does not account for additional trips in and out of the Property by residents, visitors, deliveries or vehicles providing a service, or to and from adjoining neighborhoods, or in and out of Greenspring Station. It also does not factor in trips in and out of Meadowood Regional Park for regular use or during athletic events, nor trips to and from the local private schools including St. Paul's Schools located at Falls/Seminary Ave. The Greenspring Station access drives were not studied. The ITE trip generation numbers do not account for off-peak hour trips as the peak trips account for the worst traffic times. While emphasizing that Falls Rd./Seminary Ave. is not part of the traffic shed

for this Project, the Corridor Analysis included Falls Rd. and Seminary Ave. He also recognized that his Corridor Analysis is a projection where Synchro data of average overall travel speed was inputted and the focus is on how long it could possibly take a vehicle to drive through the 3 intersections along Falls Rd. The Corridor Analysis is not a speed study and he did not conduct one. He conceded that the Falls Rd. corridor has the most concentrated group of 'F' intersections in the County.

In regard his HCM Signalized Intersection Capacity Analysis for Falls/Joppa Rd. intersection, he admitted on cross examination that after the roadway improvements at Falls/Joppa are complete, the delay for three (3) movements (both turning and straight) will be longer than currently exist for the *morning* peak hours, namely: (1) eastbound left lane ("EBL"); (2) westbound right lane ("WBR"); and (3) southbound thru lane ("SBT"):

Falls/Joppa Intersection	EBL	WBR	SBT
AM Existing Delay (sec)	79.0	62.6	29.8
AM After Improvements Delay (sec)	92.1	67.3	33.5

In the morning peak hours for the Falls/Joppa Rd. intersection, there will be additional delays after the improvements are completed such that 2 of 3 existing eastbound movements will remain failing: EBL will drop from an 'E' to an 'F', and EBT will remain an "E'. For westbound traffic, all 3 movements will remain failing: WBL will remain at an 'F', WBR will remain an 'E', and WBT will become an 'E'. For northbound traffic, LOS for NBL will become an 'E'. For southbound traffic, LOS for SBL will become an 'E'.

Likewise, after the improvements to Falls/Joppa intersection are completed, the *afternoon* delay increases for WBR and NBL:

Falls/Joppa Intersection	WBR	NBL
PM Existing Delay (sec)	59.9	23.2
PM After Improvements Delay (sec)	63.8	45.8

With regard to LOS in the afternoon peak hours after improvements are completed, two (2) eastbound turning movements will still be failing: EBL will remain at an 'F', and EBT becomes an 'E'. For westbound traffic, all 3 turning movements will still be failing: WBL becomes an 'E', WBT becomes an 'E', and WBR becomes an 'E'. For southbound traffic, SBL becomes an 'E'. (Dev. Ex. 25; Prot. Exs. 36, 37).

For Falls/Greenspring Valley intersection which will not have an roadway improvements, the TIS confirms that for existing conditions, there are 5 failing turning movements: EBL –'E'; EBT- 'E'; WBL – 'E'; WBT – 'E'; and SBL- 'E'. Similarly, in the afternoon peak hours, there are 3 failing movements: WBL – 'E'; WBT – 'E' and SBL – 'E'.

Mr. Driban was also cross examined on the TIS 'Results of Level-of-Service Analyses – CLV' chart ("LOS-CLV Chart") which he prepared for Falls/Joppa and Falls/Greenspring Valley intersections. He explained that the intersection letter grades for existing, background and total conditions on that chart were obtained from SHA. (Dev. Ex. 25, p. 16). He agreed that the CLV numbers for background and total conditions were projections. He conceded that the LOS-CLV Chart confirms that after the proposed roadway improvements to Falls/Joppa intersection are completed, the LOS for the Falls/Greenspring Valley intersection for both morning and afternoon peak hours decreases from a 'B' LOS to a 'D' LOS under SHA ratings. While the LOS-CLV Chart shows that, after the roadway improvements are completed, for the Falls/Greenspring Valley intersection, 3 trips will be added to the morning peak hours and 2 trips will be added in the afternoon peak hours. Likewise, under the CLV analysis, for the Falls/Joppa intersection, 13 trips

will be added to in the morning peak hours, and 16 trips will be added in the afternoon. Mr. Driban opined that these additional trips for Falls/Joppa Rd. are negligible because the overall 'mitigation' for Falls/Joppa intersection is 931% (-121/13) in the morning, and 819% (-131/16) in the afternoon. However, he agrees that, even after the improvements to Falls/Joppa intersection are completed, there is no mitigation by the Developer at Falls/Greenspring Valley Rd. intersection.

Similarly, Mr. Driban agreed that under the TIS 'Results of Level-of-Service Analyses – HCM' chart ("LOS-HCM Chart") which he also prepared for Falls/Joppa and Falls/Greenspring Valley intersections, after the roadway improvements to Falls/Joppa intersection are completed, the LOS for Falls/Greenspring Valley, for both morning and afternoon peak hours, drops from a 'C' LOS to a 'D' LOS. (Dev. Ex. 25, p. 17). Moreover, he further acknowledged that the existing LOS for Falls/Joppa intersection as shown on the LOS-HCM Chart, was actually the average from the HCM Signalized Intersection Capacity Analysis. (Prot. Ex. 36, 37). Again, that average was calculated, in part, based on LOS designations for merge lanes for which there is never a delay because merging vehicles do not wait at lighted intersections. Mr. Driban countered that the LOS under the HCM analysis is for the whole intersection and not for individual turning movements. As with his LOS-CLV analysis, to the extent that his LOS-HCM Chart shows an increase in the average delay per vehicle at those intersections (i.e. 1.1 sec in morning; 1 sec in afternoon), in his view, these delays were negligible.

During cross examination, Mr. Driban acknowledged that neither the CLV nor HCM accounted for the multiple entrances into Greenspring Station from Falls Rd. and Joppa Rd. He added that again, the net effect of the access points was negligible as there were at most 100 vehicles using those access points as compared to 1,000 vehicles typically driving on Falls Rd. While looking at the aerial photograph of Greenspring Station, Mr. Driban did not know the

number of parking spaces in Greenspring Station.

With regard to the proposed emergency-access-only gate, on cross examination Mr. Driban testified that he was requested by Greg Carski and Mike Filsinger to conduct a Sensitivity Analysis. He testified that the results of the Sensitivity Analysis showed that if the gate remained permanently open, substantial traffic would be incentivized to use Mays Chapel Rd. as a cut-thru between Seminary and Falls Rd. such that several hundred vehicles in both morning and afternoon would use that connection. Mr. Driban also testified that he believes the September 20, 2021 DPWT ZAC comment written by Terry Curtis, and the nearly identical DPWT DPC comment dated August 12, 2021, mistakenly refer to the Sensitivity Analysis for the Mays Chapel Gate as a Supplemental TIS. (PC Ex. 6).

PROTESTANTS CASE

1) Blandy Becker - 1205 Clearfield Circle.

Since 2020, Ms. Becker has been the President of Seminary Ridge Homeowner's Association ("Seminary Ridge HOA"). Seminary Ridge HOA includes 167 homes next to the Property. Ms. Becker has lived in her home since 2015. At the HOH, she testified individually and on behalf of Seminary Ridge HOA. She described the concerns of Seminary Ridge HOA about the Project adding more traffic to the Falls Rd. corridor; the lack of sewer capacity; and the small lot sizes of the proposed homes. Ms. Becker testified that traffic for St. Paul's Schools backs up on Seminary Ave. to Tally Ho Rd. Maryvale School, adjacent to St. Paul's Schools, also contributes to area traffic. Mays Chapel heading south backs up to turn left onto Seminary Ave., which has 1 lane in each direction.

Ms. Becker, who has been a realtor since 2013, stated that most lots in Seminary Ridge and Heatherfield communities have an average lot size of 0.56 acres, and the homes in The Meadows

and Boxwood communities are 0.426 acre lots. She lives on the smallest lot in Seminary Ridge which is 0.33 acre. In her view, the proposed detached homes on 0.1 acre lots are not compatible with the neighboring communities. She testified that in order to construct 3,000 sf - 3,500 sf homes with garages, the homes have to be built taller. Some proposed homes have 2 and 3 car garages which will add more traffic. She agreed that most homes in Seminary Ridge do not have any garages. Ms. Becker acknowledged that the homes in Heatherfield are mostly brick/stone ranchers, some have basements and some do not. Trelawny Court has 6 homes on large lots. The Boxwood community consists of attached homes.

Seminary Ridge HOA is also concerned that the sewer shed is failing and is opposed to connecting more homes to it. She added that Johns Hopkins never repaired/replaced the sewer segments which was required as a condition of approval for the medical buildings in Greenspring Station. It is her understanding that the sewage from Johns Hopkins buildings, and the sewage from Seminary Ridge neighborhood, flows through the same pipes. Ms. Becker added that, since the inception of this Project, the Developer has never reduced the proposed number of homes. Seminary Ridge HOA is concerned that the proposed road improvements at Falls/Joppa will be less safe because it would be more difficult to make a left turn out of Greenspring Station; adding another lane of traffic will only aggravate the problem. She stated that, presently, making a left turn from Exxon Station/Snowball stand onto Joppa Rd. is very difficult.

While Seminary HOA is opposed to the Project, if it is approved, Seminary Ridge HOA wants the Mays Chapel Gate to remain permanently open so as to provide another means of access for traffic other than Tally Ho Rd. Over the years, the cut-thru traffic and speeding on Tally Ho Rd. warranted the removal of the stop signs and the installation of speed bumps. The traffic generated by St. Paul's Schools adds to the cut-thru on Tally Ho Rd. She highlighted that Tally

Ho Rd. has 77 homes and several bus stops, in addition to the number of walkers, bicyclists and dog walkers who use the road for exercise.

2) Sister Kathleen McNany, Emmanuel Monastery, 2229 W. Joppa Rd.

The property located at 2229 W. Joppa Rd. is located across from the intersection of Tally Ho Rd. and W. Joppa Rd. (Prot. Ex. 44). It is owned and occupied by Benedictine Sisters of Baltimore, Inc. and is known as Emmanuel Monastery. According to SDAT records, it measures 2.96 acres +/- and houses 10 sisters of faith. St. Kathleen McNany has lived in the Monastery since 1986 and she has been its Head since 2020.

The collective concerns of the Sisters about this Project are traffic, safety, and impact on sewer. In regard to traffic, Sr. McNany testified that, 2 months ago, an automobile collision occurred on W. Joppa Rd. There are several dangerous points including the left turn merge lane from I-83 onto W. Joppa Rd.; the left turn into and out of the Exxon/snowball stand; and the left and right turns in and out of the Monastery driveway when traffic backs up along W. Joppa Rd. Adding another left turn lane at Falls/Joppa is just another lane to cross adding to the safety issues. On weekends, Sr. McNany mentioned that, in addition to daily services, programs and activities at the Monastery chapel, there are 3 other churches on W. Joppa Rd. (Trinity Assembly of God, Valley Presbyterian, and a Korean Church) each of which hold similar services and programs which add to traffic. Additionally, driving from the Johns Hopkins medical buildings at Greenspring Station, making a left onto existing W. Joppa Rd. is already difficult due to all the traffic. Moreover, between Memorial Day through Labor Day, Roland Run Swim Club, which is located next to the Monastery on W. Joppa Rd., brings more people and traffic. There are no sidewalks on W. Joppa Rd. When asked about the proposed improvements to the intersection of Falls/Joppa, Sr. McNany testified that when Meadowood Park was opened 10 years ago, a left turn

lane was added to that intersection and it did not alleviate traffic problems; vehicle collisions still occurred.

In regard to impact on the sewer system, Sr. McNany described that the sewer lines for this Project and for Johns Hopkins medical buildings run through an easement on the Monastery property. In 2017, she was approached by the County to widen the existing easement by 15 ft which was needed to enlarge the sewer pipe from 8 inches to 12 inches. She understood that this was related to the sewer improvements for the Johns Hopkins buildings at Greenspring Station. Sr. McNany expressed that she was concerned about this additional easement in that it would negatively impact the walking garden in the rear yard which has mature pine trees and fencing, both of which are needed for a sound barrier and privacy from Falls Rd. After that interaction with the County, there have not been any other communication about the sewer improvements.

3) Michel Brassert, Film maker, Cinematographer

Mr. Brassert, a film maker and cinematographer is involved in both tv and films and was called as a witness to authenticate photos he took using a drone. Mr. Brassert has a commercial drone license. Mr. Brassert testified in regard to each of the photos he took of Greenspring Station and the surrounding roadways. (Prot. Exs. 40 A-H; 41A-J; 42A-Y) (Prot. Exs. 43A-D).

4) Peter George, 8214 White Manor Dr.

Mr. George has lived in his home since 1997. He grew up on Thornton Ridge and as a child, frequently visited Greenspring Station. Mr. George testified that the proposed improvements to Falls/Joppa intersection will not improve traffic. The 3 intersections are congested in all directions. Specifically, traffic backs up down W. Joppa Rd. to the Ruxton-Riderwood bridge. Driving on W. Joppa Rd. between 4:00-6:00 pm, traffic backs up past Thornton Rd., and up to and including where Bellona Ave. intersects with Joppa Rd. He emphasized that

the number of trips made by patrons to Greenspring Station to eat, shop, work and attend medical appointments should be considered in this case. Traffic backs up at Falls/Joppa from many directions. In his view, adding 61 homes with 3 vehicles per home, will be 183 vehicle trips, all entering and exiting onto congested Joppa Rd.

Mr. George testified that he has witnessed at least 10 collisions at Falls/Joppa and 12 collisions at Falls/Seminary Ave. Mr. George was living in this neighborhood prior to the opening of Meadowood Park. With sports events and park rentals for events and parties, the amount of people and traffic has increased in the Falls Rd. corridor, particularly in the summer months.

On HOH Day 9, Mr. George was recalled to identify photographs which he took after the HOH on December 7, 2022. The photographs depicted sewer lines next to Tally Ho Rd. being pumped by the County to unclog the lines. (Prot. Exs. 47 A-C). Mr. George described that, whenever there is a heavy rain, the sewer system backs up and the area floods.

Mr. George testified that, on the day he took the photographs, he observed sewer manhole 43819 ("MH") near Tally Ho Rd. open and being flushed with water from the nearby fire hydrant. He mentioned that, in the Summer of 2022, he had observed the same flushing of the sewer lines due to a clog. Mr. George also provided a map from My Neighborhood GIA which showed not only MH 43819 but also MH43795 and MH43794A. Mr. George testified that either MH 43795 or MH 43794A was being unclogged that day.

5) Lynn Manthy, 8300 Tally Ho Rd.

Ms. Manthy has lived in her home, a 0.7 acre lot in the Heatherfield community for 13 years. She is a commercial banker. She described Heatherfield as having between 42-45 rancher style homes constructed in the 1950s on larger lots with a lot of green area. She is opposed to the Project finding that the area is already stressed with both traffic and sewer insufficiency. The

sewer system was never upgraded with the construction of the Johns Hopkins medical buildings. In her rear yard, there is a 6-7 ft wide stream located 45 ft from her home which overflows during rain events and fills her crawl space with water. (Prot. Exs. 30A, 30B).

In regard to traffic, Ms. Manthy stated that her husband was rear-ended at intersection of Falls/Joppa. She relayed that traffic backs up from Falls/Joppa past Tally Ho Rd. and that Tally Ho is used as a cut-thru for drivers wanting to avoid Falls Rd. traffic. She testified that many people and vehicles travel to Greenspring Station which has expanded. She highlighted that the group of townhouse style office buildings which abut the Property also have medical offices, dentists and orthodontists which generate traffic on W. Joppa Rd. Ms. Manthy indicated that she makes between 2-10 trips to and from her home each day including to and from Greenspring Station. She has personally observed northbound traffic approaching Falls/Seminary backing up through Falls/Greenspring Valley Rd. intersection.

6) Elias Pope, 308 Southwind Rd., Ruxton.

Mr. Pope does not reside in the communities immediately surrounding the Property. However, since 2010, he has worked in Greenspring Station. Having attended St. Paul's School, he has travelled W. Joppa Rd. many times. He also travels from his home to either work and to drop off/pick up his daughter from Maryvale School. Mr. Pope emphasized that both Falls/Joppa and Falls/Greenspring Valley Rd. are main thoroughfares for vehicles by-passing I-695. He stressed that a high volume of traffic outside of peak hours of 7:00-9:00 am and 4:00-6:00 pm. With the addition of Johns Hopkins outpatient services at Greenspring Station, the off-peak high volume of traffic is constant throughout the day. As someone who works in Greenspring Station, he testified that the parking lots at Greenspring Station are full during the work week.

In addition, there is heavy traffic on Falls Rd. for St. Paul's Schools and Maryvale,

particularly between 7:00-9:00 am. The Exxon station on Falls Rd. which is accessed by service road behind it is a frequently used gas station for larger trucks and contractor service vehicles. The restaurants in Greenspring Station also bring traffic. In his view, the surrounding roadways were not designed to handle the volume of traffic in and around Greenspring Station.

7) Richard Compton, 25 Seminary Farm Rd. Mr. Compton has lived in the Meadows at Greenspring community ("The Meadows") for 53 years. He is the President of the Board of Directors of Meadows at Greenspring Homeowners' Association ("Meadows HOA") and was provided with the authority to speak on behalf of the Meadows HOA. Mr. Compton described the residents at The Meadows as having the average age of 75 years. There are no sidewalks or trails in the community. The residents walk in the street and have social gatherings there. Mr. Compton identified the photographs taken in August of 2021 of the neighborhood. (Prot. Exs. 32A-C).

Mr. Compton described The Meadows as consisting of 21 single family homes, and 78 cluster homes in groups of 2, 3 and 4, for a total of 99 homes. The 5 primary concerns of the Meadows HOA are: (1) overdevelopment of the Property by proposing the maximum number of homes (61); (2) the County's previous approval of Johns Hopkins medical buildings in Greenspring Station with the existing sewer and traffic deficiencies; (3) existing traffic congestion and 3 failing intersections along Falls Rd.; (4) the existing sewer deficiency made worse by the addition of 61 homes; and (5) the Mays Chapel Gate must be an emergency-use-only or it will negatively impact the Meadows by becoming a cut-thru for traffic.

While The Meadows is against the proposed development, if it is permitted to proceed, they want the Mays Chapel Gate to remain closed for emergency-access-only. If the gate is permitted to remain open, the Meadows HOA is concerned about security, safety, outdoor socializing, exercise, character of neighborhood, and diminishing the value of those homes. The

Meadows will no longer be a retirement community. The neighborhood as it currently exists does not have crime because there is only 1 access point into Seminary Rd. The residents enjoy social gatherings and exercise in the streets. Some residents use canes or walkers.

8) Karen McGraw, 65 Seminary Farm Rd. Ms. McGraw resides in one of the cluster homes in The Meadows. She expressed the same concerns that Mr. Compton raised. She testified that the existing traffic on Seminary Ave. backs up to Thornton Rd., which makes a left out of the Meadows onto Seminary difficult. She is opposed to adding more homes along with a permanent pass-thru their neighborhood. She submitted a Petition signed by all of the property owners in The Meadows. (Prot. Ex. 33).

9) James Gary, 6 Trelawny Ct. Mr. Gary indicated that he and his family moved into his home in Seminary Ridge community in 2000. While he is now retired, he previously worked as an industrial engineer. His concern is the lack of capacity in the sewer infrastructure which currently overflows when it rains. Mr. Gary is opposed to adding development to that infrastructure which was not corrected with the developments at Greenspring Station. Mr. Gary is also concerned with the Falls Rd. and Joppa Rd. intersection in that, even with all the mitigating factors identified by Kris Nebre, that intersection will still be failing. Mr. Gary also noted that the Developer's HCM Signalized Intersection Capacity Analysis Chart included 3 dedicated merge lanes at Falls/Joppa which do not go through the lighted part of the intersection, namely: northbound, westbound and southbound. (Prot. Exs. 36 and 37). Because those merge lanes were included in the average calculation, it raised the LOS ratings for those lanes to an 'A' rating for northbound right turn land and southbound right turn lane (westbound remains at 'E'). This inclusion, he reasoned, inflated the LOS.

Mr. Gary also testified about the existing safety problems at Falls/Joppa intersection based

on the fact that he has personally observed traffic accidents at that location. The speed limit southbound on Falls Rd. is 40 mph but is typically exceeded. Traffic and excess speeds prevent pedestrians from crossing from Meadowood Park to Greenspring Station and to the snowball stand next to the Exxon. He testified that the access road into the snowball stand and the Exxon is already dangerous. With the proposed removal of the concrete median on W. Joppa Rd., the conditions will be more dangerous. In support of the safety issue, Mr. Gary testified that the Developer failed to consider that the vehicles driving into and out of Greenspring Station at the Exxon access road, will have to cross 3 lanes of traffic when making a left onto W. Joppa Rd. He believes traffic will back up at the light at the Falls/Joppa intersection making the access into and out of Tally Ho Rd. more difficult. He reasoned that the proposed roadway improvements will not help the flow of traffic east and westbound on W. Joppa Rd.

10) Dan Radebaugh, Esq. 8212 Tally Ho Rd.

Mr. Radebaugh, a title attorney, and his family purchased 8212 Tally Ho Rd. in September of 2020. After renovating it, they began living there in February of 2022. He did not know about the proposed development. He has 4 children and has concerns about increased traffic. In Summer of 2022, his college-aged son was involved in an accident at Falls/Joppa intersection. Another son drives to Gilman School. Mr. Radebaugh drives his daughter to St. Paul's School and his 4 year old daughter to Hunt's Preschool. With the existing traffic in the morning, it takes a long time to drive anywhere. He described the traffic as backing up from St. Paul's Schools to Falls/Greenspring Valley Rd. He reiterated the testimony that, in the morning, Tally Ho Rd. has become a cut-thru to Seminary Ave. While the speed limit is 25 mph on Tally Ho Rd., there are always speeding vehicles through the neighborhood. He believes that if the Mays Chapel Gate remains closed, this will increase traffic on Tally Ho. Rd. He added that there are no sidewalks

on Tally Ho Rd., street parking is permitted and there are 3 bus stops. Each bus stop services approximately 5 children per bus stop. Additionally, children also bike in the street.

11) Renee Hamidi, Valleys Planning Council

Renee Hamidi, Executive Director of Valleys Planning Council ("VPC"), which currently has 450 members, and whose geographic boundaries include 130 square miles between Pretty Boy Reservoir in north, I-695 in south, I-83 to east, and Rt. 30 to west. Specifically, VPC territory includes Greenspring Station and Meadowood Park. Ms. Hamidi testified that, while the Property is not within the geographic boundaries of VPC, VPC considers the Falls/Joppa intersection to be the 'gateway to the Valley.' Ms. Hamidi testified that she was given authority to speak on behalf of the VPC which is opposed to the Project due to the traffic and sewer issues. By and through its website, VPC collected signatures of property owners adjacent to and outside the immediate area of the Property who were purportedly opposed to the Project (the "VPC Petition"). Upon close examination of the Petition at the HOH, Ms. Hamidi was requested to redact all duplicate signatures and all signatures from people outside the immediate area and to resubmit the VPC Petition. (Prot. Ex. 26). Additionally, Ms. Hamidi analyzed the lot sizes in the existing neighborhoods in terms of range, average, and median. (Prot. Ex. 28). She calculated that the greater percentage of existing 752 lots are larger (17, 870 sf) than the proposed lots at Greenspring Manor (11,400 sf; median 11, 300 sf).

12) Susan Shellhoss, 8207 Tally Ho Rd.

Susan Shellhoss has lived on Tally Ho Rd. for the last 4 years. For 15 years prior to that, she lived across from St. Paul's Schools at 1407 W. Joppa Rd. as shown in photographs. (Prot. Ex. 29). She indicated that she is intimately familiar with the area, having moved 5 times within the 21093 zip code. In her experience the intersections along Falls Rd. have all been failing for over

30 years. There have been frequent collisions at Falls/Seminary Ave. intersection. Traffic backs up from St. Paul's Schools down Seminary Ave. where it is one (1) lane in both directions. Traffic regularly backs up from Falls/Seminary through the Falls/Greenspring Valley Rd., particularly turning into St. Paul's Schools in morning and afternoon. Heading north between Falls/Greenspring Valley and Falls/Seminary Ave. intersections, there is only 1 lane which contributes to the back-ups. Traffic increases at different times of the day, not just in morning and afternoon. In her view, the Developer here has not provided a traffic solution to the failing intersections along the Falls Rd. corridor, and the proposed improvements at Falls/Joppa Rd. are merely a 'band aid' to the traffic problems. She is concerned that adding another development combined with the 5 private schools in the area, only makes traffic problem worse. In listening to the Developer's witnesses, she calculates that the proposed 61 homes, with only 2 car garages, adds at least 122 vehicles to the existing traffic. She noted that during the summer months, foot traffic increases along W. Joppa Rd. due to Roland Run Swim Club and the snowball stand at Falls/Joppa.

13) Carol Berman, 2 Old Boxwood Rd.

Carol Berman has lived at 2 Old Boxwood Rd. with her husband for 15 years. She is the Secretary of Boxwood Homeowner's Association ("Boxwood HOA") and has been authorized to speak on its behalf. Boxwood is comprised of 27 homes, the owners of which are mostly retired. Boxwood HOA is opposed to the Project because it will add vehicles to existing traffic. She explained that traffic currently backs up from I-83 to Seminary Ave., and gets worse when there are sports events at St. Pauls's Schools. If the Project is approved, the Boxwood HOA is opposed to the Mays Chapel Gate remaining open as indicated by the Petition signed by owners in Boxwood. (Prot. Ex. 34). Boxwood and Meadow communities have no sidewalks with narrow

streets which are used by the residents for exercise and social events.

14) Dean Merritt, Esq., Heatherfield Community Association, Inc.

Dean Merritt has lived with his family at 3 Horseshoe Circle for 8 years. Mr. Merritt is President of Heatherfield Association, Inc. which is a community association with 47 homes ("Heatherfield"). Mr. Merritt described most of the homes in Heatherfield adjoining the Property are 1 acre in size. Heatherfield Association is opposed to the Project due to the increase in traffic and lack of sewer capacity. Mr. Merritt testified that he drives in and out of his property 15 times a day. Heading in both directions on W. Joppa Rd., heading towards the Royal Farms store at Thornton Rd. eastbound on W. Joppa Rd., the typical vehicle back-up occurs between 3:00 pm - 5:00 pm each day. The backup on W. Joppa Rd. gets worse when there is a backup on I-695 and I-83 as vehicles find alternate routes. Mr. Merritt can see traffic driving on W. Joppa Rd. from his house. (Prot. Ex. 46).

Meadowood Park gets very busy with sports and other events, and there are no crosswalks from Meadowood across Falls Rd. The SHA property at the corner of W. Joppa Rd., across from the Property here has become a parking lot for BGE trucks and is now being used as a police motorcycle training facility. Because he works from home, he observes cut-thru traffic on Tally Ho Rd. throughout the day, describing Tally Ho as a 'drag-racing-strip.' It was only in April of 2021 that Heatherfield Association learned about the Project from Seminary Ridge HOA; the Developer had not reached out to Heatherfield. The density of the Project has not changed; no alternative proposals have been offered. After attending the CIM, the Developer then began to provide copies of the Development Plan and offered landscaping to buffer the view of the Project from the homes in Heatherfield. In August of 2022, Developer finally offered to meet with Heatherfield Association but by that point, Heatherfield had retained legal counsel. If the Project

is approved over Heatherfield's objection, Heatherfield wants the Mays Chapel Gate to remain permanently open. If the gate is permitted to be emergency-access-only, the traffic from the Project will use Tally Ho Rd. as a cut-thru.

In regard to the lack of sewer capacity, Mr. Merritt's home has a crawl space due to the high water table. In 2018, there was sewage backup into the crawl space. The County came to unclog the lines along W. Joppa Rd. Mr. Merritt explained that the sewage from the Project will flow in the same pipes as the sewage for Heatherfield.

15) Michael Wyatt, Esq., 4 Trelawny Ct.

Michael Wyatt, Esquire has lived in his home with his family at 4 Trelawny Court for 20 years. His property is less than 1 acre. He is a life-long resident of the neighborhood, having grown up on Clearfield Circle in Seminary Ridge prior to moving to Heatherfield. During his youth, Greenspring Station consisted of a golf driving range and Windy Valley ice cream store. Mr. Wyatt, who participated fully as an attorney during the hearings cross examining witnesses and testifying, stated that part of his law practice involves doing zoning work. His concerns are threefold: (1) existing and increase in traffic; (2) lack of sewer capacity for more homes; and (3) density of the Project.

Mr. Wyatt articulated that Falls/Joppa intersection is a unique location in that there "is a lot going on" in terms of the roadway network and many turns/approaches, sub-intersections into and out of Greenspring Station, the Exxon and snowball stand, as well as its proximity to I-83/I-695, and Meadowood Park. Specifically, he stated that vehicles coming off I-83 northbound onto Falls Rd. drive 55 mph in a 40-mph zone, and come to a halt when turning right onto W. Joppa Rd. The same speeding traffic occurs southbound on Falls Rd. Just as the right turn from I-83 onto W. Joppa Rd. is a sharp 130 degree turn, the turning angles into and out of Meadowood Park

onto Falls Rd. are irregular. (Wyatt Ex. A). He reasoned that, as a result, Falls/Joppa Rd. intersection is less safe than other intersections.

Mr. Wyatt provided a photograph of the existing median strip on W. Joppa Rd. which has been in that location a long time and is an added safety measure. (Wyatt Ex. I). That median strip also has 2 signs both warning drivers not to turn left into the Exxon access road during certain times of day. He noted that the proposed roadway improvements to east/west W. Joppa Rd. will only create longer wait times for vehicles entering and exiting the sub-intersections. The proposed additional left turn lane will be a safety hazard in an already complicated roadway network.

Meadowood Park was opened 15 years ago and holds many sporting tournaments and events which cause overflow parking onto the shoulders of Falls Rd. As reiterated by other Protestants, there are no sidewalks on either side of W. Joppa Rd. He testified that there was a fatal accident 10 years ago at the stone gate going into the Property. Having driven on that section of W. Joppa Rd. his whole life, he described the site line as 'bad' because a driver can not anticipate oncoming traffic until the vehicles have cleared.

Similarly, having driven through the Falls/Greenspring Valley intersection, he has witnessed an increase in commuter traffic at that intersection. In mornings and afternoons, traffic backs-up from Falls/Seminary through Falls Greenspring Valley for parents driving into and out of St. Paul's Schools. Traffic congestion is not only in the morning and afternoons but throughout the day. Afternoon school and sporting events both at area schools and Meadowood Park increase traffic in and around the Falls Rd. area. Using street view photos, he testified that making left turns out of Tally Ho onto W. Joppa Rd is very difficult in the morning. (Wyatt Ex. F-H). He described traffic typically being backed up on Joppa Rd. both east and westbound and particularly at the intersection with Thornton Rd. where the Royal Farms is located. Traffic also back up at Joppa

Rd/Old Court Rd. He indicated that W. Joppa Rd. is a commuter road to Towson. As a resident of the neighborhood, he is opposed to additional traffic generated by the Project using Tally Ho as a cut-thru because it is a safety concern for bikers and runners.

Mr. Wyatt believes that the Special Variance should be denied because Kris Nebre from DPWT conceded that the proposed roadway improvements would not change the LOS under LCM for any of the Falls Rd. intersections. Mr. Wyatt read the original emails from DPWT wherein DPWT denied the requested Variance. In reviewing the Developer's TIS, Mr. Wyatt testified that the opinions are based on theoretical trip calculations rather than analyzing the actual traffic. The TIS ignores the multiple trips in and out of all adjoining developments through all intersections that take place daily. The theoretical calculations contain a margin of error. The addition of lanes at the intersection of Falls/Joppa will make the traffic worse, not better. Greenspring Station and its tenants which include a couple banks, medical offices, pediatric medical offices, restaurants, a gas station, shopping and Post Office, generate these trips. Having lived in the neighborhood for years, he is in and out of his driveway 7-10 times a day. He has observed that the residents of his neighborhood with children are doing the same thing. Service and delivery trucks have also increased throughout the neighborhood. Mr. Wyatt also provided street view photographs of traffic on Falls Rd. (Wyatt Ex. A); and from southbound Mays Chapel, down Seminary Ave. (Wyatt Ex. B).

In regard to sewer capacity, Mr. Wyatt expressed that existing problems with the sewer lines have not been fixed, and more developments have only added to the problems. Finally, Mr. Wyatt finds that the proposed density of 61 homes on 10,000-12,000 sf lots is not consistent with the T3 transect of low density housing with deep setbacks. The proposed homes on the highest part of the Property will have a negative visual impact and, in his view, will resemble "a stadium

of townhomes." The Greenspring Development Plan only provides a typical lot layout and shows the minimum required setbacks. He pointed out the front portion of the Property is a low-lying area prone to flooding which he believes, drove the Developer's decision to push the homes toward the back of the Property. Mr. Wyatt added that he learned during the CIM that Developer was also seeking environmental variances. He also took photographs from his home showing his view toward the Property. The only concession offered by the Developer was landscaping, not a reduction in density. (Wyatt Ex. C-E).

16) Doug Sachse, Esq., 9 Sedgefield Ct.

Doug Sachse, an attorney, has lived with his family at 9 Sedgefield Ct. in the Seminary Ridge community since 1984. As with Mr. Wyatt, Mr. Sachse fully participated in the HOH, cross examining witnesses and testifying. Mr. Sachse reiterated much of the concerns raised including that all 3 intersections on Falls Rd. are dangerous. Mr. Sachse added that safety from additional traffic generated by the Project is a huge concern due to number of children who live in neighborhoods adjacent to the Property. Several bus stops are on Tally Ho. Rd. There are no sidewalks in his neighborhood so children ride bikes, skateboards and play in the streets. There are no crosswalks from Meadowood Park to W. Joppa Rd. Even with stop signs and speed humps, vehicles use Tally Ho as a cut-thru and this will only worsen with traffic generated by the Project. The proposed roadways improvements will not make the roads any safer.

17) Beth Winter, 10934 Mays Chapel Rd.

Beth Winter lives at 10934 Mays Chapel Rd. and is opposed to the Mays Chapel gate being permanently open. She added that Mays Chapel Rd. is narrow and cannot accommodate two-way traffic. It is used by residents to exercise and socialize; there are no sidewalks.

18) Edward Consroe, 71 Seminary Farm Rd.

Edward Consroe, who lives at 71 Seminary Farm Rd. is opposed to a permanent vehicular connection on Mays Chapel Rd. While there may only be 5 homes fronting on Mays Chapel Rd., he stated that the Meadows has 99 homes with over 200 residents, plus family, friends and visitors.

19) Susan Tinanoff, 10934 Mays Chapel Rd.

Susan Tinanoff has lived at 10934 Mays Chapel Rd. for 24 years. Her home is the first house fronting on Mays Chapel after turning from Seminary and prior to Seminary Farm Rd. Ms. Tinanoff is opposed to the Project. If it is approved, she is opposed to the Mays Chapel Gate remaining open. There are many dog walkers in the neighborhood. There are no walking trails for the residents to use. Mr. Tinanoff testified that if gate remains permanently open, all of the homes in neighborhood will be adversely affected.

20) Lauren Greenberg, 51 Seminary Farm Rd.

Lauren Greenberg lives at 51 Seminary Farm Rd. and is also opposed to the Project. Similar to other Protestants, Ms. Greenberg is concerned about traffic and safety. She mentioned that there are 4 stop signs in the Meadows and Boxwood communities. Adding a cut-thru between Seminary and W. Joppa Rd. will increase the opportunity for collisions. She believes the character of the neighborhood will change and property values will decrease.

21) Daniel O'Leary, PE, SWM Expert.

Daniel O'Leary, PE was accepted as an expert in stormwater management ("SWM") with specialty knowledge in Maryland Stormwater Design Manual and Baltimore County storm water management controls. Mr. O'Leary has not designed SWM devices for a development in the County. For the last 8 years, he has been working at ESB Associates in Baltimore as a civil and water resource engineer. Prior to working at ESB, he was the Sediment and Stormwater Management Chief at Maryland Department of Environment ("MDE").

Mr. O'Leary reviewed the Developer's storm water management report dated May, 2021 (Prot. Ex. 51, 53) and a recent filing dated November 10, 2021. (Prot. Ex. 56). He explained that in determining the design of storm water management devices to control water quantity, the purpose is to compare the rate of discharge both pre- and post-development. To do so, a land use is chosen. Mr. O'Leary opined that the Developer used an incorrect land use category for non-forested land. The Developer used land use for 'agriculture' and should have used 'meadow in good hydrologic condition.' (Prot. Ex. 50). The 'meadow' land use category yields a conservative curve of 63 and will show water traveling over a wider area and at a slower pace. Mr. O'Leary calculated a rate of discharge of 0.39/hr for a curve of 63 in the 'meadow' category. He further calculated that the rate of discharge measured in cubic feet per seconds in a 'meadow' land use for the 10-yr storm as 56.78 cfs, and for the 100-yr storm at 167.69 cfs. Mr. O'Leary opined that the design of the storm water management devices should be based on more conservative numbers.

Under his analysis, the proposed storm water management devices here which consist of 3 submerged gravel wetlands and a retention ponds, is not enough for the Project. In his view, the proposed devices are insufficient to control the quantity of water from Property post-development. The Developer needs to either design larger ponds (30%-50% larger) or add another pond. Mr. O'Leary acknowledged that DPR does not consistently require the 'meadow' land use category to be applied. He further acknowledged that the County approved the proposed Concept Storm Water Management Plan and that the County will continue to review that plan.

22) Beth Miller, Architect, Green Towson Alliance.

Beth Miller, a licensed architect, was not offered as an expert witness. She is on the Executive Committee for Green Towson Alliance ("GTA") which is an all-volunteer advocacy group that monitors development projects in Baltimore County. Part of her duties on the GTA

Executive Committee include keeping track of development projects. GTA has been recognized by the DOP as a formal organization who regularly receives notice of development projects within its geographic boundaries. GTA is also a member of Towson Community Alliance ("TCA") which is an umbrella organization. She regularly attends DRC meetings, Planning Board meetings and Design Review Panel meetings. To track development projects in the County, Ms. Miller used My Neighborhood maps, SDAT, and the Baltimore County website.

In preparation for this case, Ms. Miller prepared a spreadsheet of development projects within the Jones Falls Watershed which are being proposed, which have been approved and are being constructed, and existing development already constructed. (Prot. Ex. 31). On January 24, 2023, she took photographs of some of the projects. (Prot. Exs. 31A-H). The purpose of the spreadsheet was GTA's concern about the capacity of the sewer shed. The results of her investigation indicated that since 2012, 2.5 million sf of development has been, or will be, constructed in the Jones Falls Watershed. She explained that the County sewer sheds follows the streams.

On cross examination, Ms. Miller conceded that while the spreadsheet lists the number of beds, that number does not necessarily correspond to the number of plumbing fixtures or the number of bathrooms. She also conceded that some of the projects are redevelopment projects such as Lutherville Station which would already have had sewer and water connections. When asked about specific details of the data on her spreadsheet, she sometimes recalled, and sometimes did not recall, where the information came from. In some cases, she admitted that she was not sure if some of the projects listed were constructed in 2012 or thereafter.

In regard to a project adjacent to the Property, the spreadsheet provides that the John Hopkins University Greenspring Station, Pavilion III, 10751 Falls Rd. is 110,000 sf and was

constructed in 2019-2021 based upon SDAT records.

23) Lawrence Bruder,74 Seminary Farm Rd.

Lawrence Bruder testified that he has lived in his home since April of 2022. He described his backyard as a low area where water drains to and forms a pool. In reviewing the Development Plan, he testified that his property will abut two (2) of the proposed homes. He is concerned that more water will drain from those homes onto his property and form a canal. He is concerned that all the wildlife which currently lives on the Property will move into his neighborhood. Mr. Bruder echoed the concerns about having the Mays Chapel Gate permanently open which will become a bypass and cut-thru road which will destroy the use and enjoyment of the residents of The Meadows. He explained that there are many walkers, children riding bikes, parents pushing strollers and elderly people who regularly walk on the streets in The Meadows; there are no sidewalks or speed bumps.

At a minimum, Mr. Bruder has observed at least 3 collisions at the intersection of Falls/Joppa. He is not convinced that the proposed roadway improvements to Falls/Joppa will alleviate any traffic congestion. He added that speed of vehicles on Falls Rd. becomes an even bigger problem when traffic is congested. The addition of the Johns Hopkins medical offices at Greenspring Station has increased the traffic. It is concerning to Mr. Bruder that the County did not ensure that Johns Hopkins repaired/replaced the sewer system prior to constructing the medical buildings.

24) Brooke Yearley, 66 Seminary Farm Rd.

Brooke Yearley, a preschool teacher, has concerns about the wildlife on the existing Property. She also had water flooding into her rear yard which causes her to use a dehumidifier in her basement. She echoed Mr. Bruder's concern that Johns Hopkins was required to make

improvements to the sewer system and never did. Ms. Yearley testified that traffic backs up along Seminary Ave. towards St. Pauls Schools during drop off and pick up times, which causes vehicles to make illegal U-turns in the middle of Seminary Ave. Vehicles do use Tally Ho Rd. as a cut-thru. She repeated that Meadows is a closed-loop community with young children on bikes and elderly people using walkers to walk in the streets. Ms. Yearley mentioned that, 2 years ago there was a fatal motor cycle collision at Falls/Greenspring Valley Rd. She added that the proposed improvements to Falls/Joppa will not improve traffic flow and will only cause additional volume.

25) Michael Singer, 10937 Mays Chapel Rd.

Michael Singer has lived in his home with his wife and 3 children since November of 2013. His home is located 2 houses down from Seminary Ave. on Mays Chapel. Mr. Singer is concerned about his children's safety if the Mays Chapel Gate remains permanently open. He explained that when driving his son to St. Paul's School in the morning he must leave before 7:30 am. Otherwise, the short drive will take 30-40 minutes. He believes that adding more traffic will negatively impact his property value. He is concerned about the safety of his other children who take the school bus from his neighborhood to Riderwood Elementary.

26) Michael Volley, 8 Trelawney Ct.

Michael Volley has lived in his home with his wife and 5 children for 18 years. Mr. Volley described a backup in the County sewer system on Trelawney Ct. which caused a backup into his basement on the evening of November 11, 2022. He took photographs of the manhole covers. (Prot. Ex. 48A, 48B). Mr. Volley explained that there was a blockage between the manholes (MH 45744 and MH 45722) as shown in the photographs. The County unclogged the sewer pipes by flushing the pipes with water from the fire hydrant. Mr. Volley hired a plumber to repair the issues inside his home. He noted that there was $60,000.00 worth of damage and expense to his home,

and that he and his family were not able to use the basement for 2 ½ months. Mr. Volley described the raw sewage which leaked into his basement, was vacuumed up, and filled 25 large bags.

27. Randall Grachek, PE, expert waste water engineering/sewer systems.

Mr. Grachek is an environmental engineer employed by NewFields, Inc. Although he is not licensed as a professional engineer in the State of Maryland, Mr. Grachek was previously accepted as an expert before the BOA in Case No.: CBA-20-006, *In the Matter of CPC Falls Road, LLC (CPC Falls Road Project/Bluestem)* ("*Bluestem*"), and before OAH in Case Nos. 08-0919 and 2021-0274-SPHA *Torch Hill Project* ("Torch Hill"), 1400 W. Seminary Avenue. As such, in this Case, he was likewise admitted as a professional engineer, in waste water engineering, and in the evaluation of a sewer system and its capacity. (Prot. Ex. 58).

Mr. Grachek testified that he is familiar with the Baltimore County sewer system and specifically the sewer infrastructure from the Property to the Baltimore County/Baltimore City line. The County sewer system is a gravity flow system (no pumping of sewage) with lateral lines flowing into main trunk lines. All waste water from the Jones Falls sewer shed (shown in green on My Neighborhood Map) and from the Property (outlined in blue), is conveyed to City. (Prot. Ex. 59). He explained that the sewer shed follows the 3 major streams namely: Jones Falls, Towson Run and Roland Run each of which flow into Lake Roland. Each of those streams has a separate sewer shed which sends all waste water through interceptors to the main sewer (trunk) line under Lake Roland and then into the City. (Prot. Ex. 60). The My Neighborhood Map for the Jones Falls sewer shed at issue here was provided. (Prot. Ex. 61). The sewage path from the Property (highlighted in yellow) is shown by blue line which runs under Lake Roland and into the City. (Prot. Ex. 62). The specific manholes through which the sewage flows is shown by yellow highlighted line by manhole numbers (MH) beginning with MH 43819, into 43794, 43793, 43792, 43791, 43790, etc. until it proceeds through the sewer segments into MH 6888 under the

Lake Roland. (Prot. Ex. 63).

Through a Public Information Act ("PIA") request, Protestant's counsel obtained a County prepared chart analyzing the sewage flow for Greenspring *Station* dated 2013 - updated as of October 8, 2015 with Johns Hopkins credits - (the "2015 County Jones Falls Interceptor Chart"). (Prot. Ex. 64). Protestant's counsel also produced the PIA request and emails from the Director of DPWT, verifying that when DPWT was reviewing the sewer capacity for this Project, they used the data from the same 2015 County Jones Falls Interceptor Chart. (Prot. Ex. 64A). The manholes at issue here through which the sewage from the Property flows (MH 43794 – 43786) are highlighted in yellow (Prot. Ex. 64) correspond to the same manholes shown on the My Neighborhood Map. (Prot. Ex. 63). Using the 2015 County Jones Falls Interceptor Chart, Mr. Grachek explained that the sewer lines between those manholes were listed by the County as each being 8 inches in diameter, and were between 94% to 100% full capacity. (Prot. Ex. 64).

Mr. Grachek referred to a Complaint filed on July 26, 2005 by the Environmental Protection Agency ("EPA") against Baltimore County in the United States District Court of the District of Maryland, Northern Division, Case No.: 1:05-cv-02028-AMD, regarding the discharge of tens of millions of gallons of untreated wastewater containing raw sewage into navigable waters and waters of the State beginning in 1997. (Prot. Ex. 66). Those waters included Towson Run, Lake Roland and the Jones Falls. The lawsuit resulted in a Consent Decree ("CD") dated September 21, 2005 in which the County was provided a legal framework and direction to eliminate sanitary sewer overflows ("SSOs"), the term used to describe when a sewer pipe reaches overcapacity causing sewage to flow into waterways. (Prot. Ex. 65). Mr. Grachek testified that when SSOs occur, often the manhole cover is pushed open. He explained that the concept of Inflow and Infiltration ('I&I') results from water from a storm event leaking into the sewer system pipes via cracks or defects.

Mr. Grachek explained that, under the CD, the County was charged with conducting a full evaluation of the system, inspecting the condition of the pipes, and modeling it with different weather events to determine whether the pipes were at overcapacity. Toward that end, the County hired consulting engineering firm Rummel, Klepper & Kahl, LLP ("RKK") to perform the study. RKK evaluated, inspected, and modeled the system using software to input data showing where the pipes were at capacity during both dry and wet weather events. He further explained that wet weather flows occur during and after rainfall event. Conversely, a dry weather flow results from users. RKK prepared a Long Term Capacity Report dated November, 2012 ("RKK-LTC 2012 Report"). (Prot. Ex. 68).

Mr. Grachek emphasized that the RKK-LTC 2012 Report recommended that the County take corrective action, depending on the storm event. Specifically, RKK studied 5 different storm events: (1) 2-Year, 6-hour storm; (2) 2-year, 24-hour storm; (3) 10-year, 6-hour storm; (4) 10-year, 24-hour storm; and (5) 20-year, 24-hour storm. RKK's recommended corrective action was set forth in the Sewershed Repair, Replacement and Rehabilitation Plan dated December, 2012 (the "SRRR 2012 Plan"). (Prot. Ex. 67). The RKK-LTC 2012 Report is appendix L to the SRRR 2012 Plan. In reviewing the SRRR 2012 Plan, Mr. Grachek stated that he agreed with the RKK modeling used. For the 2 yr, 24 hr storm, RKK recommended rehabilitation to 16 service areas including upsizing pipes and sealing manholes. For the 10 yr, 6 hr storm event, RKK recommended all of the corrective items for the 2 yr, 6 hr storm event which would result in installing 2,000 linear feet of relief sewer. He explained that a relief sewer pipe is a storage unit which may include an underground vault or additional parallel piping designed to temporarily manage water during these storm events.

Mr. Grachek's firm prepared an additional chart combining the data from the RKK-LTC 2012 Report with the 2015 County Jones Falls Interceptor Chart in order to compare in the information about sewer capacity (the "Comparison RKK/DPWT Capacities Chart"). (Prot. Ex. 69). Mr. Grachek stated

that numbers shown in green where sewer capacity is less than 100% on the Comparison RKK/DPWT Capacities Chart, indicates that the County analyzed those sewer pipes during dry weather which is not the industry standard. He confirmed that DPWT's numbers in green were taken from the 2015 County Jones Falls Interceptor Chart which included Johns Hopkins existing use credits as shown in yellow highlighted section. (Prot. Ex. 64). The Comparison RKK/DPWT Capacities Chart also confirms that for the 8 inch sewer pipes connecting MH 43792 through 43786 (highlighted in yellow on Prot. Ex. 64), which were determined by DPWT/County to be at 100% capacity and over capacity, were the sewer segments that Johns Hopkins was to replace/repair as part of the 3 medical buildings constructed at Greenspring Station. (Prot. Ex. 69). In addition, the blue highlighted numbers indicate that nearly all of the sewer pipes are at least 100% or overcapacity. (*Id*.). Moreover, Mr. Grachek testified that the red highlighted numbers show existing 10 inch pipes (MH 44216-44212) were to be upsized to 18 inches, or that relief sewers (ranging from 10 inches - 30 inches) were to be added because each of those pipes exceeded 100% capacity. (*Id*.).

Future pipe capacity charts were prepared by DPWT using data from the RKK-LTC 2012 Report (Prot. Ex. 68). Mr. Grachek opined that a sewer system should only be designed/repaired to manage sewage flow during wet weather, not dry weather. Toward that end, he reviewed the Baltimore County Design Manual which directs that the system should be designed to accommodate 90% capacity for trunk/interceptors; 80% for lateral pipes; and 70% for connector pipes; and that "flows above 90-95% of full depth are considered unstable and may result in a sudden loss of carrying capacity with surcharging at manholes." (Prot. Ex. 70, p. 6-27). He explained that pipes at greater than 90% capacity prevents water from flowing and can causes manhole covers to push open. A photograph of the manhole located northwest of Lake Roland showing the manhole lid was pushed open in 2019 and repaired in 2020. (Prot. Ex 71). He stated that the industry standard is 90% peak flow of sewage during dry and

wet weather.

Mr. Grachek added that the trunk or interceptor pipe underneath Lake Roland is a 42-inch, reinforced concrete pipe, and was installed in the 1940s-1950s. As part of his testimony in the *Bluestem* case from 2019, he used an aerial map to identify the pipe capacity to the Lake Roland interceptor during each of the 5 storm events. (Prot. Ex.73). This aerial showed that certain sewer pipes are over 100% capacity for each of the 5 storm events. (*Id*.). From his review of the SRRR 2012 Plan, Mr. Grachek opined that there were 541 defects found in the sewer system, and the most defective pipe, MH 6888-6887, and contained 536 of the 541 total defects. (Prot. Ex. 77).

Mr. Grachek further explained that SSOs pose health risks when raw sewage with I&I is leaked into streams. On this issue, Mr. Grachek reviewed E coli sampling results from studies performed by the County. (Prot. Ex. 75). Based on COMAR 26.08.02.03-3, he explained that the standard geometric means is 126. (Prot. Ex. 74). The Lake Roland sampling results from April, 2016 - August, 2022 as posted on the County website showed varying levels of E coli. (Prot. Ex. 75). Mr. Grachek stated that during his site visit to Lake Roland on January 20, 2023, he took 3 photographs of 'Stream Sense' signs erected by the County to alert people to the presence of E coli in water. (Prot. Ex. 76). He opined that the recurrence of SSOs increases the risk of high E coli levels.

In regard to the performance assessment required under the Consent Order, the County hired RJN Group who prepared a Performance Assessment Report dated May 27, 2021 (the "2021 RJN-Performance Assessment"). (Prot. Ex. 78). Mr. Grachek explained that while work was performed in 4 meter basins (BC02, BC03, BC04, BC09), as shown on Map 2, the meter basin for the flow of sewage within the sewer pipes from the Property to the Jones Falls interceptor, begins in BC05. He opined that, other than minor work on manholes, no work has been performed in meter basin BC05 and in particular, no upsizing of 10 inch pipes to 18 inches has been completed. He also found it significant that MDE has

not approved the proposed corrective action. Toward that end, Protestant's counsel confirmed with MDE via email in February and March of 2023, that MDE has not reviewed the SRRR 2012 Plan, and confirmed that the latest communication between MDE and the County occurred in April of 2021. (Prot. Exs. 79A, 80, 80A). MDE acknowledged in the email that while the County provided a response dated June of 2022, MDE has not responded. (Prot. Ex. 80).

In the 2021 RJN Performance Assessment Report, Mr. Grachek highlighted that for the lesser 2 year, 6 hr storm event, the model predicted SSOs showed a problem with the flow path from the Property to the Jones Falls interceptor in terms of both capacity and manholes. (Prot. Ex. 78, Map 3). In short, he explained that the 2021 RJN Performance Assessment Report presents a more dire situation than the RKK-LTC 2012 Report which showed overcapacity in the sewer pipes for sewage flowing from the Property to the Jones Falls interceptor, and then from Jones Falls interceptor to Lake Roland. Mr. Grachek's firm prepared a summary chart entitled 'Comparison of Sewer Pipe Capacities for greater than 90% GS Manor from the Property to the City line for both RJN existing and RJN post-rehab data (the "RJN Pre-Rehab and Post-Rehab Chart"). (Prot. Ex. 81). The manholes reflected on that RJN Pre-Rehab and Post-Rehab Chart are also shown in yellow highlighted line from My Neighborhood Map (Prot. Ex. 63). He emphasized that, for the 10 yr, 6-hr storm event, the 2021 RJN-PAR, the percentage of over-capacity exceeds 100% for the relevant sewer segments and more specifically, of the 40 pipes to be rehabbed, 36 indicate increased capacity usage post rehab (>90%); 4 pipes showed decreased capacity deficits. (Prot. Ex. 81). The Jones Falls Wet weather analysis which is contained in the 2012 RJN-PAR shows that for the 10 yr/6 hr storm event, the post- rehab for one of the sewer segments that Johns Hopkins was to fix (43793) is calculated as .52 peak capacity divided by a full pipe of .37.

Mr. Grachek also testified that it was incorrect for RKK and RJN to use population projections based on year 2008. (Prot. Ex. 83). Rather, he asserts that the population projections for the years 2013-

2030 should have been used. (Prot. Ex. 84). The population projections for 2013-2030 were obtained pursuant to a PIA request. (Prot. Ex. 84A). Additionally, he indicated that projected developments should also be considered as those have an effect on the sewer system. (Prot. Ex. 31).

Mr. Grachek then explained that in 2013-2014, the County hired Hazen and Sawyer ("Hazen") to perform a comprehensive evaluation of the accuracy of the data from the RKK models. A copy of the Hazen's newsletter was provided. (Prot. Ex. 85). Hazen's scope of services was provided pursuant to a PIA request. (Prot. Ex. 86). Hazen issued a progress report dated February 6, 2023. (Prot. Ex. 107). Hazen also issued a Model Pipe Capacity Report (the "Hazen Report") evaluating each pipe in the system as modeled during the 5 storm events. (Prot. Ex. 108). Mr. Grachek concluded that the sewer pipes from the Property to the County/City line as modeled during the 5 storm events shows >100% capacity. (Id.). Specifically, during the 10 year/6 hr storm event, the existing capacity for the sewer segment immediately below the Property through which sewage from the Project would flow, beginning with MH 43794 – MH43793, is greater than 100% (other than MH 43787-MH 43786 which is at 80% capacity). (Prot. Ex. 108, p. 9). Mr. Grachek stated that all 8 inch pipes are above 100% capacity and therefore deficient. He confirmed that the data on the Hazen Report nearly matches the information on the Comparison RKK/DPWT Capacities Chart (Prot. Ex. 69). He clarified that the reason the data is not an exact match is due to Hazen's adjustment of the model. Likewise, the Hazen Report shows that for MH 20753 – MH 20761 during the 10 yr/6 hr storm event, which are located immediately before the Lake Roland interceptor, the existing capacity of the sewer segments is >100% and in one segment is > 500% capacity. (Prot. Ex. 108, p. 3).

Mr. Grachek next explained that the County subsequently hired Ramboll Americas Engineering Solutions, Inc. ("Ramboll") for the development of design documents for the repair and rehabilitation of the interceptors, manholes, and junction chambers located within Lake Roland Park. Ramboll

prepared a Data Evaluation Report dated June, 2022 (the "Ramboll Report"). (Prot. Ex. 87). He stated that the Ramboll Report informs that the area of study included 19,550 linear feet of pipe (43 segments) ranging in size from 24 inches to 42 inches in diameter and their associated 43 manholes. The Ramboll Report reads that the County requested a detailed review/evaluation of available existing system data to:

- Confirm the condition of the pipelines and manholes associated with this project based on available system inspection data.
- Verify the rehabilitation recommendation (pipelines and manholes) included as part of this project.
- Identify data gaps requiring additional/follow up field evaluation efforts.
- Develop a preliminary list of permitting needs/requirements for the project.

(Prot. Ex. 87, p. 2). The scope of Ramboll's work included the inspection of 24 sewer segments by closed-circuit television, the videos for which saw I&I. Included in the Ramboll Report is an aerial map with sewer segments being rehabbed in red, and the manholes to be rehabbed in green circles. Mr. Grachek opined that in order to do this work, temporary lines would need to be installed. He further opined that these 70-year old pipes have structural integrity problems. In his review of the 2021 RJN Performance Assessment Report, the Hazen Report, and the Ramboll Report, the County has not certified that the work has been completed, and the County has not taken all corrective action as required under the CD.

28. Robert Summers, Ph.D.

Robert Summers, Ph. D., was admitted as an expert in environmental engineering, water quality standards, and regulatory enforcement as the regulations relate to sewer systems. (Prot. Ex. 98). Mr.

Summers testified that the dominant bacteria source from the E coli sampling in Lake Roland was from humans. He based his opinion on the fact that the spikes of bacteria were from rainfall events which leads to the conclusion that the sewer system is leaking into Lake Roland. Mr. Summers testified that he is familiar with the bacteria monitoring program of the Jones Falls which began in 2014. Mr. Summers testified about his review of a document entitled 'Total Maximum Daily Loads of Fecal Bacteria for the Non-Tidal Jones Falls Basin in Baltimore City and Baltimore County, Maryland' (the "TMDL") from September of 2006 which was an analysis of the fecal source and recommendation for limiting the bacteria in the Jones Falls basin. (Prot. Ex. 96). In Table 2.4.1, only 16% of the homes in the Jones Falls have septic systems. (Prot. Ex. 96, p. 20). The map in Figure 2.4.1 shows 84% sewer service for Jones Falls. (Prot. Ex. 96, p. 21).

In Table 2.4.4, bacteria contamination from human sources for the entire year (not only spring/summer months) shows contamination in the sub-sewer sheds as follows: JON0082 between 44%-56%; UQQ0005 between 40%-67%; and JON0184 between 44%-46%. (Prot. Ex. 96, p. 29). During Spring/Summer, the distribution of bacteria source loads in Jones Falls watershed are higher than the annual data. (Prot. Ex. 96, p. 30). Mr. Summers attributes the higher seasonal data to the increase in rain fall events between May – September. When taking seasonal water samples from Lake Roland, the County does not examine the source of the contamination. He explained that 'high flow' is defined as a rain event with run-off when river levels are higher. Based on that data that 84% homes use sewer system and the sources of contamination are human bacteria, Mr. Summers concluded that sewage is leaking from the sewer system into the streams and into Lake Roland.

The TMDL conclusion was to eliminate SSOs in County sewer system. Mr. Summers referenced the Clean Water Act which provides standards to achieve the elimination of SSOs. He found that the TMDL was consistent with the requirement in the Consent Decree to evaluate the sewer

system by modeling under dry and wet weather conditions to identify the existing problems. He added that modeling is the EPA standard for predicting future capacity and to eliminate SSOs. Toward that end, Mr. Summers testified that through the SRRR 2012 Plan, the County has identified existing problems in the sewer system and the future model-predicted capacity problems. (Prot. Ex. 67).

Similarly, the 2021 RJN Performance Assessment provides updated modeling and monitoring projections and in particular, for the 10 yr/6 hr storm event, showed model-predicted SSOs in BC0022 which is downstream from the Property. Importantly, the 2021 RJN Performance Assessment shows worsening of conditions in BC0022 than the original model in the SRRR Report. As a result of the model-predicted SSOs in BC0022, recommended upgrading the size of the sewer pipes. He also testified that all of the modeled deficits for the 2 yr/6 hr storm event apply to the 10 yr/6 hr storm event. He agreed that the County had only upgraded the 4 meter basins BC02, BC03, BC04 and BC09 which are not applicable to the Property here. Likewise, the Hazen Report shows increased levels of I/I during high rainfall (i.e. during wet weather).

Mr. Summers also discussed the MDE Design Guidelines from 2016 which provides standards for designing wastewater facilities. (Prot. Ex. 100). As such, according to the MDE Guidelines, a sewer system should be designed to accommodate peak flows during wet weather, or the highest flow in the sewer pipes to account for I/I. The State recommended standards from 2014 were also provided. (Prot. Ex.101).

Mr. Summers went on to describe that the capacity for the sewage from the Jones Falls travels through the Metered basin into the City and finally into the Back River Waste Water Treatment Plant. Mr. Summers testified that under a separate Consent Decree which the City entered into with EPA, the County still has not provided the City with information on flows in order that the City can address its problems. Toward that end, he offered a copy of the Phase II Plan for the City's Modified Consent

decree (Prot. Ex. 97). However, that exhibit was not admitted because the work required by the City under its Consent Decree with EPA, whether provided by the County to date or not, is not relevant to the issues regarding the sewage flow from this Property.

On cross examination, Mr. Summers added that the Consent Decree also has quarterly and annual reporting requirements wherein the County reports to MDE showing the rehabilitation of the sewer system. He also acknowledged on cross that the Consent Decree was dated 2005, the TMDL was dated 2006, and he was not certain if there have been updates since 2006. He indicated that the County does not perform its own TMDL monitoring. MDE relies on data collected and reports same to EPA under the Clean Water Act. Additionally, if there was new data since the TMDL in 2006, it could change the number of homes on sewer and septic systems. During the 16 years since 2006, there could be more homes on septic systems than connected to the sewer system.

PEOPLE'S COUNSEL CASE

1) Eric Rockel, Greater Community Timonium Council

Eric Rockel, 1610 Riderwood Drive, is President of Greater Community Timonium Council ("GCTC"), an umbrella organization of 40 community associations. The GCTC was originally formed in the 1970s and then reformed in 1989. Some of the local community associations involved here are part of GCTC such as Seminary Ridge Community Association, Heatherfield, Meadows and Boxwood communities. The Property is included within the GCTC boundaries which are: Schwann Rd. to north; I-695 to south; Dulaney Valley Rd. to east; and Falls Rd. to west. Mr. Rockel was previously employed by the County in Land Acquisition Department for 26 years when he retired from County in 2007. While working in Land Acquisition Department (now known as 'Real Estate Compliance'), he was a supervisor of County right-of-ways.

GCTC is opposed to the Project because it is too dense as noted by DOP in its CPC comments dated March 1, 2021. (Prot. Ex, 4; PC Ex. 3). Sixty-One homes are still being proposed. The proposed lot sizes are not compatible with the adjoining developments where existing lots measure in the 30 sf lot range. On Seminary Farm Rd. there are 5 homes which measure 23,300-26,600 sf, and on Old Boxwood there are 4 lots over 10,000 sf. The lots for the Project range from 8,800 sf (smallest) to 17,640 sf (largest) with average being 12,500 sf.

GCTC also opposes the Mays Chapel Gate as emergency-access-only gate because it is in violation of DPR Policy Manual which requires a second means of access for more than 100 homes (Meadows and Boxwood communities = 111 homes). GCTC contends that if the Project is approved, it is more practical to leave the Mays Chapel Gate open as a thru-street between Seminary Ave. and Joppa Rd. for not only the additional vehicles generated by the Project but also for emergency service vehicles

2) Ying Wei Lum, MD, 8308 Tally Ho Rd.

Ying Wei Lum, MD lives at 8308 Tally Ho Rd. with his wife and children. Dr. Lim is a vascular surgeon at Johns Hopkins Hospital. He testified that the proposed roadway improvements to Falls/Joppa Rd. with the additional left turn lane and removal of the existing concrete median strip will be more dangerous for vehicles turning from the access road behind the Exxon/snowball stand, and for those turning left onto Joppa Rd. out of Greenspring Station at Station Dr. Not only will left turning vehicles have to cross an additional lane of traffic but they will also need to navigate into the traffic from I-83 turning right onto Joppa Rd. Additionally, Tally Ho Rd. is a cut-thru street where extra traffic is obvious on weekends and outside of the peak hours. Dr. Lim testified that there are 4 bus stops on Tally Ho. picking up/dropping off 10-12 children per bus stop. Tally Ho is used by residents for biking, walking and neighborhood events.

COMMUNITY TESTIMONY

1) Michael Tanczyn, Esquire, 9 Old Boxwood Lane.

Michael Tanczyn is a retired zoning attorney who has lived in the Boxwood community since January of 2009. He provided a series of street view photographs. (Tanczyn Exs. 4A, 4B). Mr. Tanczyn is concerned about the traffic on Seminary Ave. and indicated that there are site distance issues turning into The Meadows. He witnessed a collision on Seminary Ave. He prepared a hand drawn diagram of the developments along Seminary Ave. (Tanczyn Ex. 5). He confirmed that his research of area record plats showed: (1) homes in the Boxwood community from a 1985 Plat; (2) homes on Seminary Ridge on a Plat from 1967; and (3) the Seminary Fields I development constructed in 1987 and Seminary Fields II in 1988. Mr. Tanczyn testified that the speed limits for the surrounding roads are: Seminary Ave. – 40 mph; Tally Ho – 25 mph; Joppa Rd. 30 mph; and Falls Rd. – 40 mph. In short, Mr. Tanczyn is not opposed to the Project but is opposed to the Mays Chapel Gate remaining permanently open. He noted that the Project is proposing 3-car garages which will generate a lot of traffic up Mays Chapel Rd. and vehicles will be backed up to exit onto Seminary Ave.

2) Fred Hallahan, 76 Seminary Farm Rd.

Fred Hallahan's home at 76 Seminary Farm Rd. is on the corner of Mays Chapel Rd. next to the Property. While he signed the Petition opposing the Project, Mr. Hallahan requested to speak on his own behalf. He stated that he is not opposed to the 61 homes but is opposed to the Mays Chapel Gate remaining open because Mays Chapel Rd. will become a primary thruway. He recommended that, in lieu of a gate, that a permanent 14 ft berm be created in that location to permanently close off May Chapel Rd. to traffic. The berm would be directly behind his home. Mr. Hallahan presented his idea to the Board of Directors of Meadows but they did not agree.

3) Susan Weiss, 8302 Tally Ho Rd.

Ms. Weiss has lived in her home which abuts the Property since 1978. She has seen the extent of development in the area including at Greenspring Station. She recalls when the Greenspring Inn and Windy Valley Ice Cream were at Greenspring Station. She emphasized that Joppa Rd. is dangerous for walkers as there are no sidewalks. Her husband is a cardiologist and worked at the Greenspring Station Johns Hopkins medical buildings and she acknowledged that the presence of Johns Hopkins medical buildings in Greenspring Station has contributed to the increased traffic. She believes Johns Hopkins Pavilions I and II were constructed in the 1980s and Pavilion III was constructed more recently. She regularly walks at Meadowood Park which requires driving to the western side of Falls Rd. because it is too dangerous to cross Falls Rd.

REBUTTAL

1. Nick Driban.

In rebuttal, Mr. Driban was recalled by the Developer and went over the same points covered in his direct testimony. Mr. Driban testified in rebuttal that the 'district standard' for the Special Variance requires evidence that after roadway improvements are completed, the relevant intersections will be no worse than currently exist. After the roadway improvements to Falls/Joppa intersection are completed, he reiterated that the Developer would be mitigating more than it would be impacting. He did not agree that adding a left turn lane at Falls/Joppa would create a safety issue and that was because the lines would only be shifted 1-2 feet. He repeated that the trip generation numbers used in TIS are based on 200 studies as set forth in the ITE Manual, and are based on the number of proposed units, not the number of vehicles generated by the each unit. As in direct, he opined again that leaving the Mays Chapel Gate permanently open will induce a "substantial amount of traffic" and Mays Chapel, a local road, will become a cut-thru. He opined

that Falls Rd. as an arterial street should be handling most of the traffic. In regard to accident data for the last 3 years, the SHA crash data for the 3 intersections along the Falls Rd. corridor was 0.54%. He added that if crash data was greater than or equal to 1.0, than it would warrant further action by SHA before considering improvements. The SHA data is derived from both State and County police. SHA had no record of a fatal crash at Falls/Joppa. Therefore, in his view, Mr. Driban opined that there is no safety issue. He added that he reviewed a federal data base for crash modification factors which indicates that adding a left turn lane will reduce the number of accidents by 20%.

Mr. Driban also testified that Lehnart set up 9 cameras along Falls Rd. corridor as follows: 2 – Falls/Joppa; 1 Falls/Greenspring Valley; 2 – Falls/Seminary; and 4 – W. Joppa Rd. near Property access. These cameras were set up during the period of Wednesday, January 18, 2023 - Saturday, January 21, 2023 (3.5 days total) and recorded the data by video. (Dev. Exs. 38, 39). He testified that after 9:00 am, queuing is non-existent, with minimal delay at the intersections which equates to a LOS of 'A' and 'B' under the HCM during off-peak hours. He also submitted photographs taken showing traffic builds around 3:00 pm when schools let out and at 5:00 pm with traffic from I-695 and I-83. He agreed that traffic peaks during lunch hour from 12:00-1:00 pm. He concluded that the amount of traffic shown in the videos and photographs is typical for an arterial road.

Mr. Driban did admit on cross examination that he did not watch the videos for all 9 cameras for all 3 days; he only watched the videos in real time at key locations. He did not keep a log when he watched the videos. While he saw some queuing at Station Drive next to the Property at the orthodontist/dentist office buildings, he did not see queuing on the videos at Station Drive towards Tally Ho Rd., or at Tally Ho Rd. Mr. Driban testified that over the last 3 years, he

had met with Greg Carski, Mr. Filsinger, and Kris Nebre at various times regarding the Special Variance standard. Mr. Driban described that he spent more than 2 years attempting to interpret the Special Variance standard and researching its legislative history. He believes that the only decision interpreting the Special Variance standard is the decision in *Torch Hill*, Case Nos.: 08-0919 and 2021-0274-SPHA. (Dev. Ex. 37).

Mr. Driban further agreed in cross examination that the week the videos were taken was a 4-day work week due to Martin Luther King. Jr. Holiday on January 16, 2023. He was not certain whether the DPWT also used cameras to conduct traffic counts to rate intersections under the LCM. Mr. Driban also explained that the furthest camera was placed east of Tally Ho Rd. but not as far as Thornton and Bellona at the Royal Farms store. There were no cameras placed along Tally Ho Rd.

2. Matthew Bishop.

Mathew Bishop, landscape architect, was also recalled as a rebuttal expert witness. In response to the Protestants' testimony, Mr. Bishop opined that the proposed homes meet the 3 goals of the Master Plan 2020 ("MP 2020"). (Dev. Ex. 35, p. 1). He further opined that the Project meets the T3 – Land Use Transect, and highlighted that T zones are only a guide providing conceptual and general standards and should not be read literally. He added that the transect zones replaced the conventional separate land uses in that the zones overlap and provide for a variety of housing types. Mr. Bishop testified that the Project exceeds the County design manuals which support the requirements in the BCC and BCZR. In response to Protestant's testimony that the lot sizes are compacted together in a certain area of Property, Mr. Bishop indicated that this is due to a planning practice of clustering homes on a property to preserve environmental areas. Mr. Bishop testified that the proposed clustering here is protecting the natural resources. Mr. Bishop added

that the proposed 30 ft building to building setbacks are also seen on the homes on Trelawny Ct. and Scottsdale Ct.

In regard to Mr. Hallahan's proposed 14 ft landscape berm, a 4 ft landscape berm is proposed by the Developer and there is a 10 ft Drainage and Utility Easement designated for that area to carry water away from the Property. He also pointed out that the proposed environmental and SWM areas labeled on the Development Plan. (Dev. Ex. 1B). On cross examination, Mr. Bishop agreed the adjacent neighborhoods have a variety of housing types with variable lot sizes. He also agreed that only Lot 29 is greater than 29,000 sf, and that there were a 'significant' number of larger lots in the adjacent neighborhoods.

3. Nicholas Leffner, PE, Kimley, Horn

Nicholas J. Leffner, PE was accepted as an expert professional engineer with special knowledge in development and development related policies, sewer design, sewer capacity analysis and storm water management design. (Dev. Ex. 41). Mr. Leffner has been a professional engineer in Maryland since 2013, and has been accepted as an expert witness in zoning and development cases in Baltimore County. Mr. Leffner testified that he has been involved with 12-24 sewer design projects in Baltimore County some of which included residential projects. In the past 3 years, he has worked on 1 case in the Jones Falls Sewershed which involved the redevelopment of a commercial property at 6400 Falls Rd. Civil engineering includes sanitary sewer design and engineering. Mr. Leffner agreed that modeling, using computer software to analyze sewer capacity, is accepted in the industry.

Mr. Leffner first addressed the issue of SWM and the testimony of Protestants' expert in SWM, Daniel O'Leary, PE. Mr. Leffner testified that Baltimore County does not require the designation of existing conditions for farm fields as "meadow". (Prot. Ex. 50). It was Mr.

Leffner's understanding that Mr. O'Leary's emphasis on the red highlighted box is misplaced because the County, in its control of floodplains and SWM studies, determines downstream flooding. Mr. Leffner emphasized that the County approved the Concept SWM Plan here which process he described as a conservative review that ensures the minimal County requirements are met. In response to Mr. O'Leary's opinion, Mr. Leffner testified that Phase II of the SWM process will identify the type and location of SWM devices. Given the Phase II process, he added that changing the existing conditions to 'meadow' at this stage would not change the type of device or current location on the Concept SWM Plan.

Contrary to the testimony of Mr. Grachek/Mr. Summers, Mr. Leffner testified that MDE approved the SRRR 2012 Plan by letter to the County dated September 6, 2013, and EPA approved the same by letter dated December 9, 2013. (Dev. Ex. 43). Mr. Leffner prepared an exhibit showing the sewage flow (in pink) from the Property to the County/City line. In regard to the specific manholes and sewer segments through which the sewage from the Property will flow, the Developer obtained an updated status of the sewer line from David Bayer, PE by emails dated May 30, 2023 and an accompanying spreadsheet. (Dev. Exs. 45A and B). The emails and spreadsheet confirm what manholes and sewer segments were repaired, what repairs were determined not to be needed, and/or what repairs have been approved. The email address 8 manholes and 2 sewer segments. The most recent repair date was 2019. By way of example, on September 29, 2014, the County installed an inflow insert at MH 43820. [2]

Mr. Leffner testified that repairs to the sewer system were also made in BC02, BC03, BC04

[2] Developer offered an Internal Memo (Dev. Ex. 46) which was on DWPT letterhead dated May 1, 2023 which Counsel for Developer and Counsel for Protestants agree was prepared for the benefit of the County Council to address questions/concerns about the capacity and repairs to sewer system under the Consent Decree. Because the Memo had no author, and there was no County employee offered to testify and be cross examined as to its contents, and given that it appears to address many issues raised in this case, it was not admitted into evidence as it was found to be unduly prejudicial to the Protestants and People's Counsel.

and BC09 meter basins or sub-sewer sheds because they were exhibiting a high degree of I&I into the sewer system and were contributing to the SSOs. (Prot. Ex. 78). Those meter basins are depicted in yellow-shaded area on Map 6-1 of the 2012 SRRR Plan. (Prot. Ex. 67). Mr. Leffner testified that the repairs to those meter basins made an impact on the whole sewer system; I&I has been kept out of the system thereby creating more reserve capacity. He added that the proposed 61 homes would produce 19,000 gallons of sewage per day.

In regard to the 2021 RJN Performance Assessment Report, Mr. Lessner stated that it was his understanding that the red areas on Map 3 are only model predicted and do not include current information verified in the field by the County. (Prot. Ex. 78, Map 3). He indicated that the information on Mr. Grachek's RJN Pre-Rehab and Post-Rehab Chart (Prot. Ex. 81) is also not field verified by the County. Mr. Lessner testified that DPWT installed flow meters in 5 manhole locations (MH 44220, MH 44217, MH 44215, MH 53270, MH 44209) to monitor if SSOs occur. It was his understanding that, the data from those flow meters did not show any active SSOs. (Dev. Ex. 47A). The model-predicted SSOs in the 2021 RJN Performance Assessment are in the same areas where the flow sensors are located. Mr. Lessner also opined that a sewer pipe which is at 100% capacity is not defective but just flowing at full capacity; none of the pipes are under pressure. He added that the Sewer Design Manual actually requires smaller sewer laterals and mains, not larger ones because oversized pipes have a slower velocity. He added that there is no restriction in the Sewer Design Manual that limits the operation of a pipe which is at overcapacity.

In regard to questioning about whether the 2021 RJN Performance Assessment identified problems in the sewer system, his response was "I don't think so." In support of this opinion he mentioned that as listed in the CD, "fats, oils and grease" ("FOG") cause blockages in the sewer system. (Prot. Ex. 65, p. 35). The CD further mentions other causes of blockages in the sewer

system including, illegal storm drain discharges (p. 42) and pumping stations repairs and replacements (p. 43). The 2021 RJN Performance Assessment primarily analyzed large storm events which do not frequently occur in the County.

Mr. Leffner reviewed the Quarterly and Annual Reports for the Jones Falls sewer shed required to be prepared by the County under the CD (p. 67) (the "Quarterly/Annual Reports"). He testified that the Quarterly/Annual Reports contain all of the required updates as well as the construction projects during the last 3 years. (Dev. Exs. 47-54). He emphasized that, even with model-predicted SSOs, there were no actual SSOs in Jones Falls Sewershed in the Quarterly/Annual Reports. He acknowledged that there is a structural SSO at the Marnat Rd. location which does not affect the sewage flow from this Property (the "Marnat Rd. SSO"). The Marnat Rd. SSO is the reason that the CD has not been terminated. In light of the amount of work performed by the County on the sewer system, he opined that the absence of SSOs shows that the purposes of the CD have been met. In his opinion, the proposed 61 homes will produce minimum sewage flow as compared to the flow in the existing sewer system.

Mr. Lessner acknowledged the email response of Lisa Eicholtz, PE of DPWT's dated September 4, 2020 to the Developer that the 8 inch sewer segments (MH 43794 – MH 43786) do not have adequate capacity to accommodate the 61 homes proposed in the Project. (Dev. Ex. 55). Mr. Lessner testified that the Developer here has provided the design for upsizing 2 sewer segments (MH 43794 - MH 43792).

In regard to Mr. Grachek's conclusion that the model-predicted analysis was based on dry weather in the 2015 County Jones Falls Interceptor Chart, Mr. Lessner testified that it was his understanding that the column "Infil. MGD" and "Inflow MGD" concerned flows beyond the sewer system. (Prot. Ex. 64). As for the Lake Roland Ecoli sampling results, Mr. Leffner opined

that there is a lot of variability in the sampling with no particular source found. The locations where the sampling occurred was shown in an aerial photograph. (Dev. Ex. 56). He highlighted that Lake Roland is not the only location where the County conducts sampling and *Stream Sense* signs are located in other parts of the County. (Dev. Exs. 57, 63). Mr. Lessner disagreed with Mr. Gracheck's and Mr. Summer's conclusion that SSOs were the source of the E coli readings and mentioned that those readings could also come from agricultural use and septic systems. He reasoned that since there have not been any SSOs since 2019, humans cannot be the source of the E Coli. He pointed out that there are 60,000 septic systems. (Dev. Exs. 58, 59). He obtained a color-coded map from the County of the septic systems located within the Lake Roland watershed wherein 635 homes are on septic. (Dev. Ex. 60). The County does not monitor septic systems. He provided an aerial map from My Neighborhood showing the extent of agricultural uses (green) (including horse farms) within the confines of the Jones Falls watershed (red) which could contribute to the E Coli levels. (Dev. Ex. 61). The County has not issued any advisory warnings as of May 26, 2023. (Dev. Ex. 62). Accordingly, it was Mr. Lessner's opinion that the E Coli readings in Lake Roland were from varied sources including wildlife, agricultural uses and septic systems. While he reviewed the TMDL Report, in his view, that because there have not been SSOs in last 3 years, humans cannot be the E Coli source.

In regard to the Hazen and Ramboll reports, Mr. Lessner testified that neither report was required under the CD but were prepared for the County to be proactive in its ownership, maintenance, operation and repair of the sewer system. (Prot. Exs. 85, 86, 87). He described the Hazen and Ramboll reports as the County's future long term planning for the capital budget. Mr. Lessner testified that neither Hazen nor Ramboll reports were cause for any concern. Mr. Lessner sees the relining of the main under Lake Roland as a planned improvement but not necessarily a

capacity issue, and the Project would not have any effect on that relining.

On cross examination, Mr. Lessner agreed that the CD requires the County to conduct the LTC evaluation and the SRRR 2012 Plan to identify long term deficiencies and corrective actions necessary to correct those deficiencies in the sewer system. (Prot. Ex. 67). Toward that end, he acknowledged that the County hired RKK to perform that evaluation and prepare the RKK-LTC 2012 Report. (Prot. Ex. 68). In regard to whether the RKK recommendations were necessary to repair the deficiencies, Mr. Lessner found that there were a lot of assumptions which were not verified including population projections that went into the recommendations. Therefore he reasoned that the recommended improvements may not be required and alternative repairs were available. As far as he knew, the County never determined that the RKK recommended actions were not necessary.

Mr. Leffner agreed that the 'majority' of the corrective actions identified in the SRRR 2012 Plan (Paragraph 6.14) has been done but otherwise, those actions have not been fully implemented by the County including the reduction and rehabilitation of I&I. (Prot. Ex. 67). As of May 31, 2023, Mr. Leffner agreed that there are areas of the County which are still exhibiting I&I. The Hazen Newsletter shows areas at least surrounding the Property in red where there is I&I. (Prot. Ex. 85). He conceded that 2021 RJN Performance Assessment found areas of model-predicted SSOs, through which sewage from the Property will flow, and specifically, as shown on Map 3. (Prot. Ex. 78). He also agreed that Ramboll Report identified 19,550 linear feet or 43 sewer segments (several miles) and 43 junction boxes in and around Lake Roland that could be repaired to control I&I but, did not agree that I&I is the reason for the model-predicted overflows. (Prot. Ex. 81). He further acknowledged that the Ramboll Report indicates that 24 of the 43 segments had active infiltration at sewer joints, and 14 of which had some structural defects; of the remaining

19 segments, 11 had structural defects. Given the Hazen Newsletter, the Ramboll Report and 2021 RJN Performance Assessment Map 3, Mr. Lessner agreed that corrective action 1 in the SRRR 2012 Plan (Paragraph 6.14) is not completed and that, while there was the 'balance of the area within the JF Sewershed' which was still outstanding, he did not know how many still needed to be repaired. He clarified that one of the areas which is outstanding is within the limits of proposed sewer improvements for the Project.

Mr. Leffner also conceded that the work in the Hazen Report has not been completed. He was not sure whether the County had performed any capacity improvements listed in Paragraph 6.14.2 the SRRR 2012 Plan. (Prot. Ex. 67). Specifically, as shown in red on Map 6.1 of the RKK-LTC 2012 Report for the 10 yr/6 hr storm, Mr. Leffner agreed that RKK recommended that sewer segments be repaired by sealing manholes and/or installing relief sewers, and that Map 6.1 includes all of the recommended repairs and replacements. (Prot. Ex. 68). In particular, RKK recommended upsizing the sewer segment pipe at MH 44219 (Meter Basin BC 22). (Prot. Ex. 68, ¶ 5.1). He was not sure whether MH 44219 had the manhole sealed but acknowledges that the upsizing of the pipe to 18 inches was not completed. However, he qualified his opinion stating that he does not believe the improvements recommended by RKK were an exhaustive list of improvements and that there could be alternative repairs/replacements for the 10 yr/6 hr storm event. He believes these were recommendations at the time RKK issued the report.

As to SRRR 2012 Plan, he agreed that Paragraph 6.14.3 correctly identified structural deficiencies, given that those structural deficiencies which were also identified in the Ramboll Report from June, 2022. Mr. Leffner stated that it 'could be' that 'structural deficiencies' listed in the SRRR 2012 Plan are inclusive of only the deficiencies identified therein, and not in the Hazen and Ramboll Reports.

As to Paragraph 6.14.5, as to confirming model simulations and revise if necessary, he agreed that RJN mostly updated the RKK model and recalibrated a portion of the model. The CD includes on-going analysis for a finite amount of work. While Hazen is conducting a comprehensive evaluation of the JF Sewershed for future 'planning' as opposed to required improvements. He believes that Hazen Report is beyond the study period of what is required by the CD.

In regard to rehabilitation work completed as shown on Map 2 of the 2021 RJN Performance Assessment, Mr. Lessner conceded that Map 2 shows that there was little work completed within Meter Basin 22 where the sewage would flow from the Property (i.e. green square/yellow circle – sewer lining); no relief sewers or upsizing of pipes has been completed. (Prot. Ex. 78). After the 2021 RJN Performance Assessment was issued, he testified that "presumably" more improvements have been completed within the sewage path from the Property and he referenced those improvements as the ones identified by Dave Bayer in the DPWT Email dated May 30, 2023. (Dev. Exs. 45A, 45B). Some of the improvements listed in DPWT May 30, 2023 Email were from the 2021 RJN Performance Assessment.

The 2021 RJN Performance Assessment discusses work performed in Meter Basins 02, 03, 04 and 09 which is not the area where the sewage from the Property will flow. Sewage from the project will flow through the JF interceptor, whereas sewage from Meter Basins 02, 03, 04 and 09 where rehabilitation was performed will flow through Roland Run interceptor. While he described Map 3 of the 2021 RJN Performance Assessment as a 'snapshot in time', he qualified his direct testimony by stating that he agrees that Map 3 shows future information. He stated that the RJN modeling has not been verified by flow sensor monitoring. Yet, Mr. Lessner did not have the data from flow sensor monitoring. He acknowledged that there is a difference between SSOs and

hydraulic restrictions on Map 3. In his view, Map 3 of the 2021 RJN Performance Assessment did not show a worsening of conditions from the RKK-LTC 2012 Report, even if pipes are over 100% capacity. He recognized that the 2021 RJN Performance Assessment used the same 2008 population projections as the RKK-LTC 2012 Report. (Prot. Ex. 83).

Mr. Leffner agreed that the Comparison Chart RJN Pre-Rehab and Post-Rehab Chart showed an increase in hydraulic restrictions (red). (Prot. Ex. 81). He also agreed that on the 2015 County Sewer Capacity Chart, DPWT determined that there is not adequate capacity because the 8 segments were at 94%-100% capacity. (Prot. Ex. 64). He agreed that numerous segments below the 8 segments for 10 yr/6 hr storm event are shown to be over-capacity. On the 2015 Jones Falls Interceptor Chart, based on his conversations with County representatives, Mr. Lessner understood that the modeling was based on wet weather as shown by columns labeled: 'Infil MSG' and 'Inflow MSG'. Yet, he indicated that infiltration can also occur in dry weather. (Prot. Ex. 64). There is an Appendix 5A to the RKK-LTC 2012 Report which lists capacity during dry weather. (Prot. Ex. 68). He agreed that the CD requires evaluation of capacity, modeling and corrective action is based on wet weather flow.

With regard to the DPWT May 30, 2023 email, his office inquired as to what repairs had been completed. (Dev. Ex. 45A, 45B). Mr. Leffner agreed that sewage from the Property does not flow through MH 43820. (Prot. Ex. 63). The repairs listed on DPWT May 30, 2023 email are minor and that none of those listed repairs increase capacity of the segments or capacity of the manhole. In his view, sealing manholes and lining pipes will increase capacity. (Dev. Ex. 45A, 45B). He admitted that the repairs listed in the DWPT May 30, 2023 email are not the repairs that were recommended in the 2012 RJN Performance Assessment, or in the Ramboll Report.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

Pursuant to BCC § 32-4-229, the "Hearing Officer *shall* grant approval of a development plan that complies with these development regulations and applicable policies, rules and regulations." (Emphasis Added). In *People's Counsel v. Elm Street Development, Inc.,* 172 Md. App. 690 (2007), the Court of Special Appeals held that if the county agencies recommend approval of a development plan, it is "then up to [protestants] to provide evidence rebutting the Director's recommendations." *Id.* at 703.

The Property is the last remaining undeveloped parcels in this area. Residential neighborhoods and the large commercial complex known as Greenspring Station have grown up around, and encircle it. Across from the Property is Meadowood Park, a public park, which attracts volumes of people year-round. The Property's location on W. Joppa Rd. - a local County road - and its proximity to the failing Falls/Joppa Rd. intersection, with numerous sub-intersections, make it a challenging place for 61 homes.

As shown by the County agency comments in review of the Development Plan and in their review of the Petition for Special Variance, as well as the emails and other documents produced in response to PIA requests, DPR and DPWT found that the Project did not comply with the development regulations and applicable policies due to the traffic, proposed emergency-access-only gate, and inadequate sewer capacity. After 13 days of hearings over many months, the Protestants and People's Counsel provided compelling evidence to counter the evidence produced by the Developer's in its case-in-chief, which evidence was then not sufficiently rebutted. Substantial evidence is merely "such relevant evidence as a reasonable mind might accept as adequate to support a conclusion." *Elm Street*, 917 A.2d 166, 174 (2007), (quoting *Md. State Police v. Warwick Supply & Equip. Co., Inc*., 330 Md. 474, 494, 624 A.2d 1238 (1993). Accordingly,

the Greenlined Development Plan must be denied under BCC, §32-4-229(b)(1). *Elm Street*, *supra*, 172 Md. App. at 696, for the reasons set forth herein.

A. <u>Traffic</u>.

The Property lies on the north side of W. Joppa Rd. The aerial photographs produced by the Protestants set the scene more accurately than words can describe showing the extensive surrounding development and intricate roadway network involved here. (Prot. Exs. 38, 40-44). It is undisputed that the Property lies within the a failing traffic shed which includes the intersections of both Falls Rd. and Joppa Rd., and Falls Rd. and Greenspring Valley Rd. DPWT determines the boundaries of the traffic sheds. For decades, both intersections have maintained an 'F' rating on the County Basic Services Map. The County owns and maintains W. Joppa Rd. The State of Maryland owns and maintains Falls Rd. (MD 25) and Greenspring Valley Rd. (MD 130) as well as the intersections of Falls/W. Joppa Rd. and Falls/Greenspring Valley Rd.

1. <u>Transportation Basic Services Map Standard</u>.

Before addressing the evidence which was presented on the Petition for Special Variance BCZR, §4A02.4.G, an issue arose during the HOH as to whether the standards employed by the County to rate intersections for the purposes of the Basic Services Map and the standards which a petitioner needs to meet for a Petition for Special Variance, were the same. Protestants and People's Counsel assert in their Post-Hearing Memorandums that the 'loaded cycle methodology' ("LCM") as set forth in the Highway Capacity Manual (1965) is the only standard which must be applied for both the Basic Services Map and a Special Variance; the Developer contends that the LCM cannot be used to meet the burden of proof in a Special Variance case. Consistent with the holding in *Torch Hill* and in review of the plain language in the Transportation Basic Services subsection and the Special Variance subsection, in my reading of the relevant provisions, the LCM

can only be used for Basic Services Map purposes.

In order to determine whether public facilities are adequate to meet the demands of a proposed development, the County applies the LCM to assign letter grades A-F to intersections within a mapped area (A being the best and F being the worst). When an intersection has received an 'E' or 'F' rating under the LCM, there is an automatic prohibition on the issuance of a building permit within that failing traffic shed, thereby regulating development.

Using the LCM, the Traffic Engineering/Planning section of DPWT performs traffic counts at intersections during a two-hour period to evaluate each approach during both morning and afternoon peak hours. Peak hours are 7:00-9:00 am and 4:00-6:00 pm. A traffic cycle becomes 'loaded' if on a green light, the last vehicle in line at the light does not get through the intersection. It is undisputed that an intersection which has just one (1) failing movement will be assigned an "F" rating. Stated in percentages, an 'F' rated intersection has a load factor of 86-100%. (See County Website, DPWT). For intersections rated D, E and F, DPWT conducts annual traffic counts and reevaluates the intersections each year. For intersections rated A, B and C, the counts are conducted every 3 years.

Because it compiles traffic counts from a specific day, the LCM is limited in its application. The singular purpose of the LCM is set forth in the express language of the general purpose and intent of Basic Services Map as found in BCZR, §4A02.1:

> §4A02.1. - Purpose and intent.
>
> The County Council finds that important public facilities in certain predominantly urban areas of the county are inadequate to serve all of the development that would be permitted under the regulations of the zones or commercial districts within which those areas lie. **Basic Services Maps are hereby established to regulate nonindustrial development** in those under-served areas to a degree commensurate with the availability of these facilities. Basic

> Services Maps are not permanent and will be reviewed annually with reports to the County Council.

In BCZR, §4A02.3, the Basic Services Map for water, sewer and transportation was adopted by the County Council. There is language in BCZR, §4A02.3 about the Transportation Basic Services Map. BCZR, §4A02.3.E.3.b informs that the Transportation Map shall be amended after DPWT certifies that the needed facility has been constructed and is performing where there has been actual construction to correct a deficiency in a failing intersection, by either the County through the capital improvements program, or through private funds of a developer. BCZR, §4A02.3.F makes clear that it was the intended goal to correct water, sewer or transportation deficiencies listed on the Basic Services Map in accordance with the Master Plan and the capital improvements program. BCZR, §4A02.3.G provides that no building permit or subdivision approval can be granted unless the Director of the DOP has issued a reserve capacity use certificate for the proposed development.

In BCZR, §4A02.4 are the mapping standards for water, sewer and transportation. The standards for each of the public facilities – water, sewer and transportation – are individually established for the purposes of designations on the Basic Services Map: (1) water supply standards are found in Subsection B; (2) the sewer standards are found in Subsection C; and (3) the transportation standards are set forth in Subsection D.

As title alone '*BCZR, §4A02.4 - Basic services mapping standards'* makes expressly clear, the LCM is a Basic Services Mapping Standard which forms the basis for the delineation of areas on the Transportation Basic Services Map as well as to evaluate development applications and restrict the issuance of building permits for failed intersections:

§ 4A02.4. - **Basic services mapping standards**.

A. Generally. The *standards contained herein* are intended to *form the basis for the delineation of areas on the Basic Services Maps* as well as for the evaluation of development applications in accordance with the requirements of this article.

B. Water supply standards.
* * * *

C. Sewerage standards.
* * * *

D. Transportation. [3]

1. Intent. The **transportation standards and maps are intended to regulate nonindustrial development** where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article. Such development is not intended to be restricted unless there is a substantial probability that an arterial and arterial collector intersection situated **within the mapped area will, on the date the map becomes effective, be rated at level-of-service E or F under standards established by the Highway Capacity Manual, 1965,** published by the Highway Research Board of the Division of Engineering and Industrial Research, National Academy of Sciences National Research Council.

The Transportation Basic Services Map explains that the standards from the 1965 HCM will control how to rate intersections within a mapped area and to the review of development applications to make sure that a building permit is not automatically issued. It is significant in Subsection D.1 that the phrase 'be rated at level-of-service E or F' precedes the phrase 'under standards'.

[3] The word 'standards' is missing from sub-title in 'D. Transportation.' Given that the word 'standards' appears after both 'water supply' and 'sewer' in those subsections, and the section title is 'Basic services mapping standards', and the phrase 'transportation standards' appears in the 'Intent' paragraph, this appears to be an inadvertent error in drafting.

In this case, the LCM served its purpose in that an 'F' LOS rating was assigned by DPWT under the Highway Capacity Manual, 1965 to both Falls/Joppa Rd. and to Falls/Greenspring Valley Rd. intersections which resulted in both intersections being part of a failing traffic shed. By doing so, it prevented the issuance of a building permit, which in turn, forced the Developer here to file the Petition for the Special Variance under BCZR, §4A02.4.G.

From the unambiguous language above, the Basic Service Mapping standards and the Special Variance standards are not one and the same. As cited by People's Counsel in his Post-Hearing Memorandum, citing Judge Brynja [sic Brianna] Booth in *Mayor and City Council of Baltimore v. Thornton Mellon*, 478 Md. 396, 429 (2022) statutory construction must make sense as:

> "Finally, we check our interpretation against the consequences of alternative readings of the text…..Doing so ensures that we adopt an interpretation that avoids a construction that is 'illogical, unreasonable, or inconsistent with common sense.'…. Indeed, 'it has been called a golden rule of statutory interpretation that, when one several possible interpretations produces an unreasonable result, that is reason for rejecting that interpretation in favor of another which would produce a reasonable result.'' Internal citations omitted.

(PC Memo, p. 13). The only logical, reasonable and consistent-with-common-sense reading is that the Special Variance standard is something other than the LCM.

2. Special Variance Standard.

From reading the above sections, the logical, reasonable and consistent interpretation is that the Special Variance standard is separate from the letter grade assigned under the Basic Services Map. While the building permit is withheld, BCZR, §4A02.4.G provides that an exception or waiver (i.e. a Special Variance) can be sought if the evidence meets the requirements in BCZR, §4A02.4.G.1:

> G. Petitions for special variance from provisions of this subsection.
>
> > 1. The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's purpose, pursuant to a finding:
> >
> > > a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and
> > >
> > > b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

Because the burden of proof includes proving what impact a proposed development (not yet built) would have on the failing traffic shed, the LCM, with its limited application, cannot be applied. Therefore, the letter grade assigned under the LCM for inclusion on Basic Services Map does not need to change to a better letter grade. Indeed, if an intersection rating on the Basic Services Map is to be changed, DPWT is the County agency charged with that task and the County Council would need to approve the change. But that is not to say that if demand and impact are shown using the CLV or HCM methods, that changes in letter grades are not important.

To determine logical, reasonable and consistent-with-common-sense reading of BCZR, §4A02.4.G.1, a Special Variance can only be granted if under Subsection G.1, it does 'not violate that provision's purpose.' As set forth above, the purpose or intent of the Transportation *Standards* found in Subsection D.1 is a determination that:

> …the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article.

From the Transportation Standards, the only logical, reasonable and consistent interpretation is as follows:

> (1) the phrase "…it has been determined that the capacity of arterial and arterial collector intersections is *less than*..." refers to the determination by DPWT to assign a letter grade for the intersection using LCM;
>
> (2) the phrase "…the capacity [of the intersection] necessary to accommodate traffic…" refers to the district standard; and
>
> (3) the phrase "…traffic both from established uses and from uses likely to be built…" refers to "the demand or impact of the development proposed…" which is in Subsection G.1.a. above.

Read together, a Special Variance requires a finding, after a hearing, that the demand or impact of the development proposed will be less than that assumed by the capacity which is necessary to accommodate traffic. As a result, it is clear that assigning a letter grade to an intersection using LCM does not answer the question of what the *capacity* of the existing intersection is, or what the impact of the development will be on that capacity.

3. OAH Cases on Special Variances.

The Special Variance provision BCZR, §4A02.4.G.1 has been also been interpreted in previous OAH cases. Thus, Mr. Driban was not correct when he testified that the only case which has interpreted the Special Variance provision was *Torch Hill*. In this case, People's Counsel provided copies of previous OAH Opinion and Orders from 8 cases involving the issue of Special Variance. (PC Ex. 38). These cases were helpful in terms of not only the type of evidence which can be provided in a Special Variance case, but the factors considered by OAH in making findings:

> (1) what is the capacity of the intersection?
>
> (2) what is traffic generated by existing uses?
>
> (3) what is the traffic from the uses likely to be built (i.e. the development project)

> (4) what is the capacity of the intersection that is needed to accommodate both existing and future uses?

To answer those questions, OAH has previously looked to a series of factors including, without limitation, whether: (1) the project is for less than 10 homes; (2) the trip generation number for the homes; (3) the distance of the property from the 'F' intersection; and (4) the direction of the traffic to and from the intersection.

In 2000 case, Deputy Zoning Commissioner ("DZC") Timothy Kotroco in Case No.: 00-557-SA, granted a Special Variance for 7 homes. DZC Kotroco was persuaded by a traffic study conducted by DPWT (f/k/a 'County Bureau of Traffic & Transportation') which study analyzed what percentage of vehicles would exit from an adjacent apartment complex to determine whether those vehicles would utilize the failing intersection. The developer's traffic engineer was C. Richard Moore, a retired head traffic engineer with Baltimore County for 31 years. Mr. Moore testified that the driving habits of the apartment complex residents would be representative of the future property owners of the proposed 7 homes. Because of his experience with the County, he was able to testify that the same traffic shed containing the 'F' intersection at issue had existed for 30 years. Mr. Moore opined that traffic shed did not apply to the property because the traffic patterns had changed due to the construction of additional streets and roads.

In a 2008 case, Case No.: 08-264-A, DZC Thomas H. Bostwick noted that Petitions for Special Variance were "rarely considered" by OAH (f/k/a Office of Zoning Commissioner) and that it was "a case of first impression" for him. The development there was for five (5) homes. As DZC Bostwick repeated Subsection G.1.a, and wrote it contained a two-prong test:

> ***First***, the [ALJ] must determine that the demand or impact of the proposed development will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal. ***Second***, the [ALJ] must find

> that the granting of a petition would not adversely affect a person whose application was filed prior to Petitioner's application.

In his application of the two-prong test in that case, DZC Bostwick was provided a copy of the failing traffic shed, the boundaries of which included the property at issue. Importantly, DZC Bostwick made clear that, given the property's location within the failing traffic shed, there were two (2) ways that a building permit could be issued:

> As the subject property is located within the shed, building permits cannot be issued nor development approval given until the intersection is improved and no longer failing ***or*** special variance relief is granted.

(Emphasis Added). DZC Bostwick's reading supports the interpretation that the 'standard' for a Special Variance is different than the Basic Services Map standards for assigning letter graded to intersections to prevent building permits from being issued.

In that 2008 case, DZC Bostwick addressed the term "district standard" and wrote that it was:

> …..neither a defined term nor is it described anywhere in Article 4A. In fact, testimony offered at the hearing is that the Baltimore County Bureau of Engineering has not defined the term and it is not a phrase used in the parlance of traffic engineers.

In pursuit of the meaning of "district standard," DZC Bostwick looked to a 2005 case written by DZC John V. Murphy (Case No.: 05-336-SA) where a Special Variance was granted to build three (3) homes. In the 2005 case, the "district standard" was interpreted to be the impact normally associated with a development of the type and size:

> …whether the anticipated impacts on traffic as they relate to such issues as volume, congestion, movement and timing of the proposed development **would be less than the impact normally associated with a development of that type and size**. He concluded that if the impacts were less, then relief could be granted pursuant to a petition for special variance. **Specific factors such as the anticipated**

> **volume of traffic to be generated, the route (including access and exit) of traffic to and from the proposed development, anticipated road improvements in the area, the nature and timing of the traffic generated by the proposed development, existing potential development patterns in the area, the nature of the land use proposed for development and existing development in the area *are all factors that need [to] be considered in determining whether special variance relief should be granted.***

(Emphasis Added). While the factors in the 2005 case are directed towards the existing traffic and traffic to be generated, I must *respectfully* disagree with DZC Murphy's interpretation of "district standard" as that term more likely refers to the *capacity* of an intersection as discussed below.

Nevertheless, in the 2005 case, the evidence provided to DZC Murphy in support of the Variance in Case No.: 05-336-SA was primarily from the testimony of two (2) County officials who both appeared and testified namely, Walter Smith, project manager for PAI, and Steven Weber, Chief of Traffic Engineering Division of DPWT. Steven Weber testified that the road at issue, Putty Hill Avenue, was the subject of ongoing County capital improvement program to widen that road at its intersection with Harford Rd. He also testified in regard to a County study which showed the actual number of vehicles (3,100) which used the failing intersection. He then compared actual counts to the 2.55 trips to be generated by the proposed 3 homes. After doing so, Mr. Weber opined that the daily fluctuations of traffic using the failing intersection were greater than the added trips from the proposed 3 homes. Additionally, Mr. Weber - who was subject to cross examination by residents of adjacent properties - testified that Special Variances were *generally granted in failing traffic sheds when the number of lots is less than 10*.

In another 2008 case, Case No.: 08-264-A, DZC Bostwick granted a Special Variance for 5 homes, and found that 'the impact of the proposed development will be less than anticipated,' by weighing the fact that the subject property was located 'a significant distance to the southwest of the failing intersection of Middle River and Pulaski Highway and was not easily accessible

thereto.' He also found that the residents of the proposed development would not even use the failing intersection during either morning or evening peak hours. In determining whether the anticipated impact of the development will be less than that assumed by the 'district standard,' he determined the intersection capacity by considering the existing traffic patterns; anticipated road improvements; the contemplated volume direction; and the anticipated timing of traffic to and from the proposed development.

In a later case, Zoning Commissioner ("ZC") William J. Wiseman, III, in Case No.: 08-436-SA, adopted the same 2-prong test and analyzed the same impact factors set forth in Case Nos.: 05-336-SA and 08-264-A. ZC. In that case, when building permit was sought, the County informed property owners that the permit would not be issued because the property was in a failing traffic shed. ZC Wiseman summarized the Special Variance relief as one for "the issuance of building permits for fifteen (15) single-family dwelling units where it has been determined that the capacity of the public facilities necessary to accommodate same (transportation) is less than necessary." The Petition language there speaks to the "capacity [of the intersection] necessary to accommodate…" In regard to the impact a proposed development would have, ZC Wiseman repeated DZC Bostwick's analysis that:

> Obviously, the manner in which a proposed development will impact specific directions/movements in the intersection is a significant consideration in determining the merits of a special variance request.

The type of persuasive evidence provided to DZC Wiseman included a copy of the County's data collection sheet and traffic analysis for the applicable intersection. That exhibit depicted the traffic counts for the intersection and analyzed the LOS for the respective movements through that intersection. In ZC Wiseman's case, he granted the Special Variance for 15 homes based on the

fact that the proposed improvements to the failing intersection were included within the State of Maryland's capital budget, that it was anticipated that SHA would complete the improvements, and that the building moratorium would be lifted by Summer of 2009. He also emphasized that there were numerous alternative routes to the subject property, each of which avoided the failing intersection.

Subsequently, ZC Wiseman in Case No.: 2009-0080-XSA granted a Special Variance to allow a proposed addition to an office building located within the failing traffic shed of Loch Raven Blvd./Joppa Rd. In that case, Stephen Weber, then Chief of Traffic Engineering Division of DPWT, provided a written comment addressing the Special Variance noting specific facts considered by him in support thereof:

> Based on the relatively small size of the addition, the distance of this site from the critical intersection, and recognizing that the eastern border of the moratorium area only lies 200 feet to the east at the Beltway, we would find that the additional traffic impacts from this site on the critical intersection would be nearly imperceptible and therefore we would have no objection to the granting of a Special Variance for this proposal.

In another 2009 case (Case No.: 2009-275-SA), the same failing traffic shed of Loch Raven Blvd./Joppa Rd. was at issue. The Petitioner there sought to construct an office building. DZC Bostwick applied the same impact factors applied by DZC Murphy in Case No.: 05-336-SA. In that case, DZC Bostwick was provided with County's data collection sheet and traffic analysis for the intersection of Loch Raven Blvd. and East Joppa Rd. from 2 separate years. Those traffic counts analyzed the capacity for specific movements through the intersection. DZC Bostwick noted the ZAC comment from Stephen Weber, Chief of County Division of Traffic Engineering to Dennis Kennedy with County's Bureau of Development Plans Review supporting the Special Variance Petition. He factored in that the property there was located some distance to the east of

the failing intersection and the only direction of travel that is failing was westbound in the morning peak hours away from the property. He concluded that the location of the property was largely unaffected by the failing intersection.

Summarily, the evidence presented here did not address the important factors identified in the prior OAH cases.

4. Fallacies of TIS.

Applying the analysis from Case Nos.: 00-557-SA, 05-336-SA, 08-264-A, 08-349-SA, 08-436-SA, 09-0080-XSA, 09-0275-SA to the facts here, I find the TIS was flawed in several ways. First, the demand or impact of the development was based on the ITE Manual. While the ITE Manual can be useful in some cases to determine demand and impact of a proposed development, in this particular case, given the existing residential, commercial and County park land development surrounding this remaining undeveloped parcel, as well as the State and County roads and location within a failing traffic shed, reliance solely on the ITE Manual underestimates the real trip generation numbers.

On this issue, ALJ Lawrence Stahl in Case No.: 2012-0060-SA denied a Petition for Special Variance for a proposed health/fitness facility at Greenspring Station where a racquet club existed. In that case ALJ Stahl recognized the traffic engineer did not only rely on the trip generation numbers from the ITE Manual for a comparable land use category but also referred to a related traffic study for another building in the area (the Osler building study). In that case, the traffic engineer candidly conceded that he did not want to only use the ITE numbers due to their 'regional inaccuracy':

> …..the IT[E] materials not accurate, as he noted that in this situation in the Baltimore/Washington region it was the custom to use other numbers rather than the ITE figures; and offered that the ITE manual itself suggests *the use of local data where appropriate*.

(Emphasis Added). In denying the Special Variance, ALJ Stahl articulated that use of the ITE Manual is akin to "running the numbers" and was not impressed with either the ITE trip generation numbers, or with the additional traffic study:

> Further, no additional traffic count studies were carried out on the Petitioner's behalf to produce "real" numbers or at least to focus, supplement or extend traffic count studies already available.
>
> Instead, Petitioner's traffic expert created a structural definition on paper of what he opined to be the accurate description of the Petitioner's present facility. The resulting description was then fit into the ITE land use categories to which the ITE formulae and resulting numbers were applied. The ITE manual (and software programs utilized) are admittedly consisting of compilations and averages useful to a degree, especially in the absence of actual numbers. Unfortunately, even the ITE acknowledges that it is sometimes inapplicable and may not reflect actual use in a particular situation. Petitioner's own traffic expert applied this caution in rationalizing his use of the "Osler building study" instead of the ITE numbers relative to the proposed medical office building facility.

Unlike the proposed Greenspring Station development before ALJ Stahl, the demand or impact of the development here is based solely on the ITE trip generation numbers for single family detached homes (Land Use 210) and nothing more. (Prot. Ex. 35; Dev. Ex. 25). Borrowing Judge Stahl's analysis, it was incumbent upon Developer's traffic engineers to do more than just "running the numbers" by finding a use and plugging the trip generation numbers into the TIS. It is inconceivable given the Property location as depicted in the photographs taken by Mr. Brassert, that the 61 homes would only generate 46 am peak trips and 61 pm peak trips and it defies common sense. (Prot. Exs. 40, 41, 42, 43).

Second, the Greenlined Development Plan proposes 60 new homes with 47 – 2-car garages, and 13 – 3-car garages which is a minimum of 135 vehicles, not to mention that the existing home

could also have, at a minimum 3 vehicles, for a total of at least 138 new vehicles. This total does not include visitors, deliveries, or service vehicles which add to the traffic in and out of the Property. That fact alone contradicts the ITE numbers. Third, the ITE numbers are inconsistent with the Greenlined Development Plan at Note 11 confirms that the average daily trips (ADT) is 600. (Dev. Ex. 1B). Mr. Driban did not provide any explanation as to that inconsistency.

Fourth, the Property's location next to Greenspring Station, private schools, Meadowood Park, US Post Office, religious institutions, and Roland Run Swim Club, to name just a few local destinations screams for a TIS which factors in those obvious daily non-peak trips. Greenspring Station, an immense commercial area with medical offices, restaurants, a bank, and retail stores, was not factored in to the number of trips generated. Mr. Driban did not opine that any of the single family housing developments in the ITE were next to a commercial area such as Greenspring Station or near a public park.

Fifth, while the ITE trip generation numbers underestimate the trips to be generated, I note that in support of his Sensitivity Analysis, Mr. Driban testified that "600" vehicles would use Mays Chapel in the morning peak hours, and "1,000s" of vehicles would use Mays Chapel in evening peak hours if the emergency-access-only gate was not approved. The trip numbers increased when advocating for an emergency-only-access gate, but were minimized when addressing trips generated from the development or how the proposed roadway improvements would account for the purported trips generated.

Sixth, I agree with People's Counsel's characterization that the ITE trip generation numbers are based on obsolete studies from 21 states other than Maryland, and included Ontario, Canada and those studies were dated from the 1980s, 1990s, 2000s and 2010s. There was no evidence as to how many studies were from Maryland, or whether any studies were from Baltimore

County and if so, the year of any Baltimore County studies. While Mr. Driban continued to repeat that 200 studies formed the basis for the ITE trips, he conceded that he did not review any of those studies, and none were produced in evidence. (Prot. Ex. 35). As a result, it is unclear whether any of those studies were for single family homes with garages as proposed here. Even still, the ITE informs that for at least 30 of the study sites from the 22 states and Ontario, data on the number of residents and number of household vehicles was *actually available*. However, no such data was discussed by him and no data was produced in evidence. (Prot. Ex. 35).

Seventh, as pointed out by Protestants, the County traffic counts from February 19, 2020 for Falls/Joppa Rd. intersection showed that in the morning peak hours, 1,782 vehicles were northbound, 1,925 were southbound, 259 were westbound, and 585 were eastbound. In the evening peak hours, 1,700 vehicles were northbound, 1,174 were southbound, 340 were westbound, and 726 were eastbound. (Dev. Ex. 25). The volume of existing traffic is an important factor considered in the prior OAH Special Variance cases, and these volumes are not insignificant. What ALJ Stahl saw in the Greenspring case was also present here in that no traffic counts were conducted to produce "real" numbers for existing traffic, or even to focus, supplement or extend the County's February of 2020 traffic counts:

> …. no additional traffic count studies were carried out on the Petitioner's behalf to produce "real" numbers or at least to focus, supplement or extend traffic count studies already available.

Here, I find that these 2020 County numbers show a heavy volume of traffic and should, at the least, have been a red-flag to conduct an accurate, updated traffic count.

Eighth, Mr. Driban's Trip Assignment contained in the TIS where he stated that 60% of traffic from the Project would head southbound toward I-83/I-695, 20% would go eastbound on W. Joppa Rd., 10% would drive north past Falls/Seminary Ave., 5% would head west toward

Meadowood Park, and the remaining 5% would turn left onto Greenspring Valley Rd., was not persuasive. (Dev. Ex. 25). He explained this Trip Assignment was on based on "applying local and regional patterns" where, without explanation, he opined that most traffic from the Project would head toward "urban regional destinations," rather than a local road. These assignments are not only estimates, but are self-serving in that they seemingly only exist to justify the proposed additional left turn lane on Falls/Joppa Rd intersection heading towards I-83/I-695. Yet on the issue of trip assignment, the County's actual traffic counts from February 19, 2020 support the opposite conclusion. The County traffic counts show that for the left-turn lane heading southbound on Falls Rd. toward I-83/I-695, there were only 230 vehicles in the morning peak hours, and 292 in the evening peak hours, contrasted with 1,782 vehicles headed north in the morning, and 1,700 vehicles headed north in the evening. I find it more probable that vehicles from the Project would follow the existing traffic patterns, and head north which is the failing movement. Given that there was no basis to support his "urban regional destination" theory of trips assignment from the Project, his opinion on this issue is unsubstantiated.

Ninth, comparing the County traffic counts of February 19, 2020 (ITS, p. 26 of 79) with the TIS Existing Peak Hour Volumes of Traffic (TIS, p. 8 of 79 – Exhibit 3), Lenhart transposed the County traffic counts for both northbound right turn from W. Joppa Rd. and southbound left turn onto W. Joppa Rd. This mistake made it appear that there were less vehicles heading northbound after turning right onto Falls Rd. from W. Joppa Rd. in both the morning and evening peak hours, as well as less vehicles in the southbound left turn lane onto W. Joppa Rd. from Falls Rd. driving toward, to, or past the Property in the evening peak hours. Specifically, Lenhart transposed the County numbers from the Property turning right at Falls/Joppa Rd. heading northbound: the County's northbound counts were 249 (339), not 230 (292). As a result, there

were actually19 more vehicles in the morning, and 47 more vehicles in the afternoon, turning right from W. Joppa northbound onto Falls Rd. This is not inconsequential given Mr. Driban's testimony that northbound is the failing movement at Falls/Joppa is in the morning peak hours, as well as at Falls/Greenspring Valley in the afternoon peak hours heading toward Seminary Ave.

The other Lenhart error was for the southbound left turn from Falls Rd. onto W. Joppa Rd. driving toward the Property's access in the evening peak hours. The County's southbound counts making the left turn onto W. Joppa Rd. were 318 (255), not 371 (237). While the morning counts turning left decreased, Lenhart's error for the afternoon counts resulted in 18 more vehicles headed in the direction of the Property access point. Both of these errors directly impact the existing traffic numbers and undermine the credibility of the TIS and the traffic engineering opinions expressed at the hearing.

Tenth, in regard the HCM Signalized Intersection Capacity Analysis for Falls/Joppa Rd. intersection, Mr. Driban admitted on cross examination that after the roadway improvements at Falls/Joppa are complete, the delay for three (3) movements (both turning and straight) will be longer than currently exist for the morning peak hours, namely: (1) eastbound left lane ("EBL"); (2) westbound right lane ("WBR"); and (3) southbound thru lane ("SBT"):

Falls/Joppa Intersection	EBL	WBR	SBT
AM Existing Delay (sec)	79.0	62.6	29.8
AM After Improvements Delay (sec)	92.1	67.3	33.5

Additionally, after the improvements are completed, 2 of 3 existing eastbound movements will remain failing: EBL will drop from an 'E' to an 'F', and EBT will remain an "E'. For westbound traffic, all 3 movements will remain failing: WBL will remain at an 'F', WBR will remain an 'E',

and WBT will become an 'E'. For northbound traffic, LOS for NBL will become an 'E'. For southbound traffic, LOS for SBL will become an 'E'.

While it need not be proven that the LOS under the **LCM** changes to a better letter grade due to the nature of that methodology being singularly focused on rating intersections for the Basic Services Map, the same is not true for the LOS under the CLV and the HCM. As indicated, both the CLV and HCM are methods used to measure the impact of the proposed development and/or the impact of proposed roadway improvements. The previous OAH Special Variance cases emphasized that turning movements at the intersection at issue is a significant factor used to analyze the impact of the traffic generated by a development and the efficacy of the roadway improvements. Here, the CLV and HCM were the chosen methodologies and, as shown in the TIS, the LOS will be worse for the morning peak hours at the very intersection where the improvements are proposed. That fact does not help the Developer's case.

Likewise, after the improvements to Falls/Joppa intersection, the afternoon delay for two (2) turning movements (*i.e.* westbound right lane ("WBR") and northbound left (NBL")) will also be longer than currently exists as follows:

Falls/Joppa Intersection	WBR	NBL
PM Existing Delay (sec)	59.9	23.2
PM After Improvements Delay (sec)	63.8	45.8

With regard to LOS in the afternoon peak hours after improvements are completed, two (2) eastbound turning movements will still be failing: EBL will remain at an 'F', and EBT becomes an 'E'. For westbound traffic, all 3 turning movements will still be failing: WBL becomes an 'E', WBT becomes an 'E', and WBR becomes an 'E'. For southbound traffic, SBL becomes an 'E'. (Dev. Ex. 25; Prot. Exs. 36, 37). As with the morning peak hours, the LOS for these turning

movements at Falls/Joppa intersection will be worse after the improvements are completed.

Also, it is not lost that, according to the TIS, Falls/Greenspring Valley intersection (which will not have an roadway improvements) currently has 5 failing movements in the morning peak hours: EBL –'E'; EBT- 'E'; WBL – 'E'; WBT – 'E'; and SBL- 'E'. Similarly, in the afternoon peak hours, there are 3 failing movements: WBL – 'E'; WBT – 'E' and SBL – 'E'. Given that the roadway improvements to Falls/Joppa Rd intersection have not been shown to improve that intersection, there is even less reason to believe that Falls/Greenspring Valley Rd. will improve.

The distance of a failing intersection and the route (access to and from a property) were additional factors considered in the previous OAH Special Variance cases. As applied here, the Falls/Joppa Rd. intersection is the closet intersection to the Property and there was no dispute that it will be heavily used by vehicles going to and leaving the Property. Consequently, its capacity to function, after the proposed improvements, and with the additional traffic from the Project, is worse than the existing capacity.

Eleventh, the HCM Signalized Intersection Capacity Analysis in the TIS incorrectly included the westbound-right turn, southbound-right turn and northbound-right turn lanes in assigning individual letter grades. This resulted in the inflation of the average LOS for the Falls/Joppa Rd. intersection after the improvements are completed. (Prot. Ex. 36, 37). Each of those turns were merge lanes for which vehicles do not go through the light and as such, those vehicles would never be delayed. As a result, when Lenhart averaged all of the letter grades for all of the turning movements, the average letter grade was artificially inflated.

Twelfth, Mr. Driban's testimony was that the proposed roadway improvements are "substantial". As the above facts have already shown that Falls/Joppa Rd. intersection is worse *after the improvements*, I find the Falls/Joppa Rd. roadway improvements are minimal at best.

Thus, it was not surprising that Developer had already proceeded with having design plans for the improvements at Falls/Joppa approved by SHA because the roadways improvements are nothing more than removing a median strip and repainting lines. Worse yet, there are no physical roadway improvements proposed along the northbound direction of Falls Rd. at either Falls/Joppa or Falls/Greenspring Valley intersections to improve the failing movement.

I also find proposed removal of the concrete median combined with the creation of an additional lane of traffic creates an additional safety problem given the substantial number of vehicles that need to navigate in many directions and with several access roads at the Falls/Joppa Rd. intersection. While SHA approved of the improvements, because SHA does not consider Falls Rd. corridor intersections to be failing, there is no harm in repainting the lines and adding an extra lane at Falls/Joppa Rd. Those improvements are at no-cost to the State which has no plans to make physical roadway improvements. The County will never be making improvements to Falls Rd. or Greenspring Valley Rd. since they are State-owned.

As for the Corridor Analysis, it does not validate the proposed roadway improvements to Falls/Joppa Rd. (Dev. Ex. 26). It amounts to projections created using traffic software program to show an overall decrease in delay on Falls Rd. It is not persuasive because it does not breakdown the time purportedly saved at each failing intersection.

Thirteenth, the LOS-CLV Chart confirms that after the proposed roadway improvements to Falls/Joppa intersection are completed, the LOS for the Falls/Greenspring Valley intersection for both morning and afternoon peak hours worsens from a 'B' LOS to a 'D' LOS using SHA ratings. While the LOS-CLV Chart shows that, after the roadway improvements are completed, for the Falls/Greenspring Valley intersection, 3 trips will be added to the morning peak hours and 2 trips will be added in the afternoon peak hours. Likewise, under the CLV analysis, for the

Falls/Joppa intersection, 13 trips will be added to in the morning peak hours, and 16 trips will be added in the afternoon. I do not see these trips as 'negligible' particularly in light of the fact that even after the improvements to Falls/Joppa intersection are completed, there is no mitigation by the Developer at Falls/Greenspring Valley Rd. intersection.

These 13 fallacies with the TIS as expressed above undermine the expert opinions expressed by Mr. Driban. In *Rockland v Stevenson*, 471 Md. 1 (2020), Maryland adopted the *Daubert* standard in regard to expert testimony. By adopting *Daubert*, the Court held that an expert opinion "must provide a sound reasoning process for inducing its conclusion from the factual data and must have an adequate theory or rational explanation of how the factual data led to the expert's conclusion". (*Id*. at 32). "Maryland law makes clear that an expert cannot assert an admissible opinion without an adequate factual basis or reliable methodology." *Giant Food, Inc. v. Booker*, 152 Md. App. 166, 188 (2003). "Our cases hold that an expert's opinion is of no greater probative value than the soundness of his reasons given therefor will warrant. Otherwise stated, we have said that 'an expert's judgment has no probative force unless there is a sufficient basis upon which to support his conclusions." (Id). (quoting *Beatty v. Trailmaster Prods., Inc*., 330 Md.726, 741 (1993). The Court of Appeals has explained:

> The premises of fact must disclose that the expert is sufficiently familiar with the subject matter under investigation to evaluate his opinion about the realm of conjecture and speculation, for no matter how highly qualified the expert may be in his field, his opinion has no probative force unless a sufficient factual basis to support a rational conclusion is shown. The opinion of any expert, therefore, must be based on facts, proved or assumed, sufficient to form a basis for an opinion, and cannot be invoked to supply the substantial facts necessary to support such conclusion. The facts upon which an expert bases his opinion must permit reasonably accurate conclusions as distinguished from mere conjecture or guess.

(Id. at 189) (quoting *Beatty*, 330 Md. at 741. Along these lines, an expert's opinion may not

amount to a 'because I think so' opinion. (*Id*. at 188). For these reasons, the TIS was not compelling evidence to meet the burden of proof necessary for the Special Variance.

5. DPWT – Opposition to Special Variance.

At the HOH, in fairness to Mr. Cauley who works in DPR and not in Traffic Engineering of DPWT, he could only testify as to what he had been told and was not able to testify in any specific detail about the merits of traffic concerns in this case. In the interest of transparency and to seek information, the undersigned had to request the testimony of a DPWT representative, Kris Nebre. Kris Nebre's testimony largely repeated his email to Mr. Driban dated August 16, 2022 that there would be "net zero impact along the corridor." (County Ex. 13). However, in reviewing the chronology of events learned from the documents produced pursuant to the Protestants' PIA request, I find that DPWT's official position, which was well-reasoned and thorough, had already been provided prior to the August 22, 2022 email.

On October 8, 2020, Developer's traffic engineer, Mike Lenhart, submitted to DPWT officials, the TIS dated September 14, 2020. (Prot. Ex. 16). At time of the DPWT emails, Kris Nebre's title was Traffic Engineer III and he was supervised by both Greg Carski, the Bureau Chief for the Bureau of Transportation, and Michael Filsinger, PE, Chief of Division of Traffic Engineering. In addition to Kris Nebre, Terry Curtis, PE, also had the title of Traffic Engineer III. Upon receipt of the TIS, on October 8, 2020, Greg Carski sent an email to Mike Filsinger, Kris Nebre, Vishnu Desai (DPR) and Rahee Famili questioning why a TIS would have been submitted for an 'F' rated traffic shed:

> Why would they do a traffic study for a development in a F level traffic shed? Isn't this development dead on arrival?

(Prot. Ex. 16). By email dated October 13, 2022, Mike Lehart requested a response from the DPWT

officials. (Prot. Ex. 15). In reply, Greg Carski wrote:

> Good Morning Mike – we took a quick peak at the study. As noted, the site falls within a LOS F traffic shed, thus prohibiting development. As you are aware, the LOS F determination based on actual peak hour field observations of the intersection. Theoretical calculations do not override our observations and ratings.
> * * * *

(Prot. Ex. 15). After the October 13, 2020 email, it appears that, based on an email dated October 22, 2020, DWPT officials had a discussion(s) with Developer's representatives in regard to Developer's proposed roadway improvements. (Prot. Ex. 17). On October 23, 2020, Greg Carski circulated those roadway improvements to the Mike Filsinger and Kris Nebre to which Mr. Filsinger replied:

> Let's discuss on Monday – this is interesting that they want to developer in a deficient shed.

(Prot. Ex. 17). On October 27, 2020, Mike Filsinger sent an internal email to Kris Nebre questioning whether the proposed roadway improvements at Falls/Joppa Rd. would help or hurt the Falls/Greenspring Valley Rd. intersection when he wrote:

> Kris – looking at this – the intersection just to the north is failing badly with a 92% load in the NB direction in the PM hours. If the improvements were made to the intersection to the south as the report shows, would it help or hurt the intersection to the north? From a common sense perspective, I can't see that it would help, therefore it would improve the overall failing shed. Your thoughts?

(Prot. Ex. 19). Between October 29 - October 20, 2020, the DPWT officials continued to review the proposed roadway improvements. (Prot. Ex. 18).

By email dated November 13, 2020 (of which both Mr. Filsinger and Kris Nebre were copied), the official response of DPWT was to oppose the development. (Prot. Ex. 18). In that email, Greg Carski wrote that ***improvements would need to be done to all 3 failing intersections***

to handle the additional traffic from the development, and that it was not sufficient to propose improvements to only one intersection for the approval requested:

> Good Afternoon Adam –
>
> In regards to the traffic analysis for the 2310 W Joppa Rd site, we offer the following comments:
>
> The proposed site is currently within a failing traffic shed as identified on the 2020 Basic Service Map. Furthermore, it actually lies within overlapping failing traffic sheds from three failing intersections, Falls Rd & Joppa Rd, Falls Rd & Greenspring Valley Rd and Falls and Seminary Ave. With new traffic being introduced into the three failing intersections, improvements would also need to be done to handle additional traffic at all three intersections. Since we are required to count all three intersections at the same time per the county council bill, the three intersections along the Falls Rd Corridor from Joppa to Seminary must be analyzed together. Because of this council bill which combines the corridor into one study, the increased traffic along the corridor needs to be accounted for and improvements would also be needed at the three intersections. Because of the special conditions that are in place to study this corridor and the fact that we have overlapping traffic sheds, it is not sufficient to propose improvements to only one intersection for the approval of this site.
>
> Given the above, we have noted that the report calls for proposed changes to the signal/striping/geometrics at the Joppa/Falls Rd intersection. The change is to remove the split phasing and go to a more conventional phasing. In addition, lane assignments were changed along Joppa and Falls to allow for double left turns on both legs. Since the proposal is to remove the split phasing, we believe that the dashed lines providing guidance to the drivers making that movement are extremely close to one another and we would have concerns making that movement. Unfortunately, the geometry of the intersection in our opinion would not be conducive to allowing this movement without the split phasing. Additionally, it does not appear that the proposed changes would bring the intersection of Falls Rd/Joppa Rd out of the failed rating given the fact that the level of service following the improvements with site traffic is worse than the existing level of service. Clearly the changes would not ameliorate the currently failing intersection.
>
> Based upon the above information, this report does not justify approval of the additional development within the failing traffic

shed.

Please contact us if you have any questions. Thank you.

Greg
Gregory W. Carski, Bureau Chief
Bureau of Transportation
410-887-3554

(Prot. Ex. 18). As of that date, DPWT's objection was that the improvements were only proposed to Falls/Joppa Rd., along with the removal of split-phasing signal timing in place of conventional phasing. The roadway improvements proposed today are the same ones proposed in 2020 and proposed adding a left turn lane to the eastbound and westbound of Joppa Rd. The DPWT email expressed concern with the removal of split-phasing signal timing. Significantly, DPWT wrote that the 'level of service following the improvements with site traffic *is worse than* the existing level of service.' (Id.). As a result, the position of DPWT was that the TIS did not 'justify approval of the additional development within the failing traffic shed.' (*Id*.).

Dissatisfied with DPWT's position, an internal email dated November 24, 2020 between Mike Filsinger, Greg Carski and Kris Nebre notes that, the Developer was then asking whether '…with the improvements will the intersection operate better than existing.' (Prot. Ex. 19). That email ends with the Developer's deadline for DPWT to respond by 'early next week.' (*Id*.).

By December of 2020, the TIS reads that it was modified slightly to retain the existing split signal-phasing but the same left turn lanes were proposed for the east-west directions. (Dev. Ex. 25, p. 4). In Memorandum dated December 9, 2020 which is attached to the TIS, Lenhart responded to comments posed by SHA from December 1, 2020 and from DPWT dated December 3, 2020. (Dev. Ex. 25). In that Memorandum, Mike Lenhart wrote that the 100 ft long concrete median on W. Joppa Rd. which was proposed for removal, did not serve any significant purpose,

and its removal would assist with snow plowing. With regard to the intersection of Falls/Greenspring Valley Rd., one comment (Comment #3) from MDOT SHA Office of Traffic and Safety noted that the LOS at that intersection was 'F" in the AM and "D" in the PM and that eastbound Greenspring Valley Rd. was not a free right turn as the lane became a mandatory right turn after the signal.

Developer produced an email dated January 15, 2021 from Mike Filsinger to Counsel for Developer stating that the proposed roadway improvements would mitigate the increased traffic generated by the Project:

> Adam,
> Hope this is what you are looking for:
> While the proposed development is located within a failing traffic shed, the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development. Any questions, let us know.
>
> Mike Filsinger, PE
> Chief Division of Traffic Engineering

(Dev. Ex. 30).

Importantly, at the HOH there was no testimony by Mike Filsinger, Greg Carski or DPWT to explain what facts had changed to reverse course if that was what it was. In my view, in order for the Developer to meet its burden of proof under *Elm Street*, *supra*, there needed to be evidence as to what relevant facts had changed after the DPWT's November 13, 2020 email. The proposed roadway improvements to Falls/Joppa Rd. were the same, and there were no improvements being made to Falls/Greenspring Valley Rd. Although Mr. Driban testified that he believed that Mike Filsinger's January 15, 2021 email was the official approval of DPWT for the Special Variance Petition, Mr. Driban's thoughts about Mr. Filsinger's email do not rise to the level of testimony of County witnesses, particularly in light of the *subsequent DPWT emails* after January 15, 2021 which made clear that the

opposite was true.

Moreover, given the failing traffic shed which has existed for decades where the Property is located, comparing this January 15, 2021 Filsinger email with Mr. Filsinger's comment to Kris Nebre on October 27, 2020 indicating his concern that "from a common-sense perspective," Mike Filsinger did not see the proposed improvements to Falls/Joppa Rd. as improving the failing Falls/Greenspring Valley intersection. Mr. Filsinger's comment on October 27, 2020 was consistent with the DPWT November 13, 2020 official position in opposition to the Project, which is evidence that DPWT was not convinced that the proposed roadway improvements at Falls/Joppa Rd. would have any meaningful impact on Falls Rd/Greenspring Valley Rd. intersection. Even more, I find that the Filsinger email of January 15, 2021 could not actually be DPWT's official position because otherwise it would have been found in the Development File, and/or in the Special Variance file; however, it was not. This cannot actually be DPWT's official position, because it did not provide notice to anyone, or even other County agencies reviewing the Development Plan, other than the Developer.

The chronology continues in that, after the Mike Filsinger January 15, 2021 email, DPWT then issued both a DPC comment dated August 12, 2021, and a separate ZAC comment dated September 20, 2021, which expressed failings of the TIS and opposition to the Project. The DPWT DPC comment entitled *Baltimore County Department of Public Works & Transportation, Development Review – Agenda and Approval* was acknowledged by Kris Nebre at the HOH as one that he worked on with DPWT representatives, and which contains his initials 'KN' in the 'Traffic' section. (PC. Ex. 6). The 'Miscellaneous Comments' section makes clear that DPWT wanted to be sure that PAI considered its opposition particularly because it was being submitted *after the DPC* on August 11, 2021:

MISCELLANEOUS COMMENTS	These comments are coming in after the DPC. We are asking PAI to take these into consideration.

(PC Ex. 6). This Miscellaneous Comment shows the *ongoing concern* that DPWT and Kris Nebre still had for the traffic problems in this traffic shed even after the Mike Filsinger January 15, 2021 email.

In the DWPT DPC comments, DPWT expressed concern about worsening of traffic problems at Falls/Greenspring Valley Rd. As noted therein, DPWT saw a bias in the TIS, that there was a relationship between the existing traffic on Falls Rd., the additional traffic to be generated by the Project, and the worsening of traffic at Falls Rd. and Greenspring Valley Rd. due to the proposed emergency-access-only gate:

> Comments:
>
> Traffic
>
> We have received and reviewed the Greenspring Station Development – Supplemental Traffic Impact Study. We offer the following comments:
>
> A TIS needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the required connection to Mays Chapel Rd. This connection is required by DPWT due to amount of homes (over 100) in The Meadows of Greenspring community. It should be a traffic impact not a "sensitivity analysis".
>
> The report does not note that the proposed development is in LOS F Traffic Shed. It also falls to mention the 3 LOS F rated intersections along Falls Rd.
>
> **The analysis clearly shows a reduction of critical lane volumes at the subject intersections along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa**. The benefits of the connection to Falls Rd is glossed over.
>
> Furthermore, the conclusion stated on the cover letter says that the Mays Chapel connection is not recommended. It then is stated that

> Falls Rd. is designed to handle significant volumes more than Mays Chapel which is obviously true. However, this development is currently in an 'F' traffic shed, which by definition is at capacity and cannot handle anymore volume. **The initial report which did not have the Mays Chapel bypass accounted for, already showed an increase of CLV at Falls and Greenspring Valley at full build out conditions**. The supplemental report does not address Falls and Seminary with the scenario of no bypass with full build out. In accordance to the ordinances tied with the basic service map, this development should have some improvement to result in 0 net critical volume trips added to the affected 'F' intersections along Falls Rd.

(PC. Ex. 6). Using the CLV analysis, Falls/Greenspring Valley Rd. would be worse after the Project was built. The Traffic Engineers within DPWT present a neutral, objective view of the actual conditions and their real concerns with adding traffic to this failing traffic shed. This is particularly true given that as with all development plan files, DPWT issued this DPC comment in the normal course of reviewing the Development Plan here. I find that, if DPWT's official position on the development plan was already expressed in Mr. Filsinger's January 15, 2021 email to the Developer, there is no need to issue this DPC comment. This DPWT DPC comment was contained within the Development Plan file.

Additionally, after the DPC comment was issued and provided to PAI, DPWT issued a ZAC comment dated September 20, 2021 which was filed in the companion Special Variance file, Case No.: 2021-0250-ASA. (County Ex. 12B). Terry Curtis, PE of DPWT wrote the ZAC comment and copied Kris Nebre. While the DPWT ZAC Comment is nearly verbatim of the DPWT DPC Comment, it added a new sentence at the beginning which was not found in the DPWT DPR comment, definitively expressing that DPWT's position was to deny the Petition for Special Variance:

> * * * *
> **The Department of Public Works and Transportation (DPWT) Bureau of Traffic Engineering and Transportation Planning**

feels this request must be denied based on the following reasons. We have received and reviewed the Greenspring Station Development – Supplemental Traffic Impact Study. We offer the following comments:

1) A Traffic Impact Study needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the **required** connection to Mays Chapel Road. This connection is **required** by DPWT by regulation due to amount of homes (over 100) in The Meadows of Greenspring community. It should be a traffic impact study not a "sensitivity analysis".

2) The report does not note that the proposed development is in LOS F Traffic Shed. It also fails to mentioned [sic] the 3 LOS F rated intersections along Falls Road.

3) **The analysis clearly shows a reduction of critical lane volumes at the subject intersection along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa.** The benefits of the connection to Falls Rd is glossed over.

4) Furthermore, the conclusion stated on the cover letter says that the Mays Chapel connection is not recommended. It then is stated that Falls Road is designed to handle significant volumes more than Mays Chapel which is obviously true. However, this development is currently in an 'F' traffic shed, which by definition is at capacity and cannot handle anymore volume. **The initial report which did not have the Mays Chapel bypass accounted for, already showed an increase of CLV at Falls & Greenspring Valley at full build out conditions.** The supplemental report does not address Falls & Seminary with the scenario of no bypass with full build out. In accordance to the ordinances tied with the basic service map, this development should have some improvements to result in net critical volume trips added to the affected 'F' intersections along Falls Rd.

If you have any questions please feel free to contact me anytime.

Terry Curtis, Jr.
Engineer III
Department of Public Works and Transportation

(County Ex. 12B). As occurs with all zoning files, this DPWT ZAC comment was issued in the normal course of reviewing the Petition for Special Variance here. There is no ambiguity in DPWT's position. It is obvious to me that there was clear coordination by DPWT, Kris Nebre and Terry Curtis to be consistent in reviewing the Development Plan and Special Variance Petition. Accordingly, the official position of DPWT was, once again, to deny the Special Variance.

The DPWT DPC and DPWT ZAC comments were also the basis for the original postponement of the Case in November of 2021. The email written by Kris Nebre to Mr. Driban dated August 16, 2022 came after the Case was already postponed. Unlike the *Torch Hill* case where 8 vehicles were projected to be generated from that development and the proposed lengthening of the left turn lane prior to Falls/Seminary Avenue accounted for those 8 vehicles, the additional left turn lanes proposed east-west for Falls/Joppa Rd. does not result in a net zero impact within the traffic shed. It results in worsening of conditions at both Falls/Joppa Rd. and Falls/Greenspring Valley Rd.

5. Developer's Proposed Falls/Joppa Rd. Roadway Improvements - Falls/Greenspring Valley Rd. Intersection.

Both DPWT 2021 comments are consistent with Mike Filsinger's original email to Kris Nebre dated October 27, 2020 wherein Mike Filsinger did not see the proposed improvements to Falls/Joppa Rd. as improving the failing Falls/GreensprFing Valley intersection. And there is no doubt that the Developer's traffic engineer recognized DPWT's continuing concern about Falls Rd./Greenspring Valley Rd. because Mr. Driban then prepared and filed with SHA a document entitled "Supplemental Analysis for 2310 Joppa Road Traffic Impact Study" dated January 19,

2022, which for the first time proposed roadway improvements to Falls Rd./Greenspring Valley Rd. intersection. (Dev. Ex. 20). Those roadway improvements, as shown on an aerial photograph, included adding a left turn lane for vehicles headed north toward Falls/Seminary Ave. (Dev. Ex. 19).

Unfortunately for the Developer, by letter dated March 7, 2022, SHA rejected the proposed Falls Rd/Greenspring Valley Rd. improvements and instead, asked the Developer to make improvements to Falls/Seminary Ave. which SHA described as a 'critical intersection', or to the beltway (I-695):

> 1. The new lane will only hold 2 cars. The lane will get blocked, and people will not want to use the lane because it drops immediately. It does not seem a significant amount of capacity will be added.
>
> 2. The lane drop looks too small for the double left turn incoming volumes at MD 25 @ MD 130. A high volume of vehicles would have to merge into the lane drop.
>
> 3. Please consider looking at the intersection of MD 25 @ MD 131 (Seminary), which is a critical intersection, or the beltway for mitigation efforts.
>
> 4. The left turning path should be able to accommodate for the biggest trucks (WB40/WB50) regardless of the current truck restrictions. The turning path crosses the island even in the cut median, which is highlighted by the green line.
>
> 5. The island toward the north is planned to be reduced. However, the island at the south might also need to be reduced because the turning path crosses the shoulder and almost touches the median.

(Dev. Ex. 20). The SHA response here informs of at least 2 existing problems with the north and south medians at Falls/Greenspring Valley Rd.

After SHA rejected the proposed Falls/Greenspring Valley Rd. improvements, Mr. Driban testified, and Ms. Kuhn of SHA confirmed, that Mr. Driban resubmitted the same improvements for Falls Rd/Greenspring Valley Rd. a second time. Unfortunately for the Developer, SHA again

rejected those improvements. (Dev. Ex. 21).

With the second rejection by SHA, and knowing the County's concern for the negative impact on Falls Rd. Greenspring Valley Rd., the "Corridor Analysis" chart purports to make up for the lack of physical improvements to Falls/Greenspring Valley Rd., or to anywhere else along the Falls Rd. corridor, by contending that there will be an overall time savings after SHA retimes each of the signalized intersections. I am not persuaded by the Corridor Analysis as it does not show the alleged savings in delay times at each intersection.

Because of the negative impact to Falls/Greenspring Valley Rd. within this traffic shed, I find that the TIS does not show mitigation of the increased traffic generated by the proposed development.

B. <u>Emergency-Access-Only Mays Chapel Gate Connecting Mays Chapel Rd</u>.

Seeking to gain the support of the Meadows and Boxwood communities, the Developer's proposal is that the Mays Chapel Gate be an emergency-access-only gate, rather than a thru-street. Indeed, the Greenlined Development Plan expressly describes that the May Chapel Gate is being proposed as an emergency-access-only gate. Accordingly, the issue is whether, as proposed, the Mays Chapel Gate, as emergency-access-only, meets all development policies, rules, and regulations. BCC, §32-4-229(b)(1); not whether the undersigned should change the Developer's Greenlined Development Plan proposal to a thru-street.

Throughout the HOH, the Mays Chapel Gate became a tense issue which pitted the residents of The Meadows and Boxwood communities against the adjoining neighborhoods of Seminary Ridge and Heatherfield. As shown by their Petitions, the Meadows (99 homes) and Boxwood communities (27 homes) were entirely opposed to the Project (other than the one resident who was out-of-the-country when the Petition was circulated). (Prot. Exs. 33, 34).

Additionally, the Meadows and Boxwood communities only wanted the Mays Chapel Gate to be emergency-access-only *if* the Project was approved. Their collective testimony described their neighborhood as an enclave with internal, walkable streets used daily by residents for exercising and socializing which would be permanently changed if Mays Chapel Gate was permitted as a thru street. Both The Meadows and Boxwood communities access Seminary Rd. via Mays Chapel Road. There are currently 4 homes which front on Mays Chapel Rd. Conversely, while the Seminary Ridge and Heatherfield communities were equally opposed to the Project, if approved, they advocated for a permanent thru-street to redirect the cut-thru traffic away from Tally Ho Rd.

DPR Policy Manual, XIII.B reads as follows:

> B. ACCESS GUIDELINES 1. Maximum Number of Units with One Means of Access
>
> a. Limits of Units
>
> - 100 units with no future street extension proposed
>
> - 150 units when a future street extension is proposed and is feasible
>
> - >150 ↑ 2"d means of access must be constructed
>
> b. Exception These limits may be increased when restricted by a limited or controlled access highway or other physical barrier or limitation as advised by the Department of Public Works
>
> c. Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances.

(Prot. Ex 9). DPR in its DPC comment dated August 10, 2021 stated that the proposed emergency-access-only gate was not permitted as follows:

> Since the number of (off-site) units are over 100, Mays Chapel needs to be a full access road and not an emergency access road.

(County Ex. 12A, p. 8). At the HOH, DPR representative Eugene Cauley, PE, further explained

that DPR could not recommend approval of the Greenlined Development Plan because the total units in the Meadows and Boxwood communities, combined with the 61 units in this Project, totals 126 units. Therefore, under DPR's interpretation, a full access road is required by DPR Policy Manual, XIII.B.

DPR, as the County agency whose Manual and policy is at issue here, has the authority to interpret and administer DPR Policy Manual, XIII.B. The Court of Appeals in *Marzullo v. Kahl*, 366 Md. 158, 783 A.2d 169, 177 (2001), quoting *In Board of Physician Quality Assurance v. Banks*, 354 Md. 59, 729 A.2d 376 (1999), held that an administrative agency's interpretation and application of the statute which the agency administers should ordinarily be given considerable weight by reviewing courts. *Lussier .v Md. Racing Commission*, 343 Md. 681, 696-697, 684 A.2d 804, 811-812 (1996), and cases there cited; *McCullough v. Wittner*, 314 Md. 602, 612, 552 A.2d 881, 886 (1989) ('The interpretation of a statute by those officials charged with administering the statute is . . . entitled to weight'). Furthermore, the expertise of the agency in its own field should be respected. *Fogle v. H &G Restaurant*, 37 Md. 441, 455, 654 A.2d 449, 456 (1995); *Christ [ex rel. Christ] v. Department of Natural Resources*, 335 Md. 427, 445, 64 A.2d 34, 42 (1994) (legislative delegations of authority to administrative agencies will often include the authority to make 'significant discretionary policy determinations'); *Bd. of Ed. For Dorchester Co. v. Hubbard*, 305 Md. 774, 792, 506 A2.d 625, 634 (1986) (application of the State Board of Education's expertise would clearly be desirable before a court attempts to resolve the legal issues).

Accordingly, based on DPR's opposition , I find the Greenlined Development Plan must be denied because the proposed emergency-access-only gate violates DPR Policy Manual, XIII under BCC, §32-4-229. Moreover, given that the Developer's proposal for Mays Chapel is emergency-access-only and not a full access road, that proposal can only be approved or denied;

the undersigned will not rectify this policy non-compliance by changing the Mays Chapel Gate to a full access road, in order to approve the Greenlined Development Plan.

I also note that in its original review of the Development Plan and Petition for Special Variance, DPWT agreed with DPR's interpretation of the DPR Policy Manual. The facts reveal that two days after the DPR comment above, DPWT took a definitive position that the Mays Chapel Gate must be permanently open. (PC Ex. 6). That DPWT DPC comment dated August 12, 2021 was initialed by Kris Nebre 'KN', and confirms that DPWT was also requiring the Mays Chapel remain open as a thru street:

> A TIS needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the required connection to Mays Chapel Rd. This connection is required by DPWT due to amount of homes (over 100) in The Meadows of Greenspring community. It should be a traffic impact study not a "sensitivity analysis".

* * * *

(County Ex. 12A; PC Ex. 6). In that DPWT DPC comment, the impact of the Mays Chapel Gate on traffic was described by DPWT. DPWT noted that, prior to changing the Mays Chapel Gate to emergency-access-only, the Developer's TIS showed an *improvement* in traffic conditions (reduction in critical lane volumes) along Falls Rd. However, with the Mays Chapel Gate as emergency-access-only, the traffic at Falls and Greenspring Valley Rd. intersection <u>increased</u>:

> The analysis clearly shows a reduction of critical lane volumes at the subject intersections along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa. The benefits of the connection to Falls Rd is glossed over.
>
> * * * *
>
> The initial report which did not have the Mays Chapel bypass

> accounted for, already showed an **increase of CLV at Falls & Greenspring Valley at full build out conditions**.

(*Emphasis Added*). (*Id*.). A little over 1 month later, Terry Curtis, PE of DPWT issued the nearly identical ZAC comment on September 20, 2021 which was contained in Case No.: 2021-0250-SPH in its review of the Special Variance case here. (County Ex. 12B; PC Ex. 6).

In its Post-Hearing Memorandum, Developer states that the DPWT DPC comments were not presented to PAI. Yet, there was no evidence of that; the DPWT DPR comment expressly state that the comments are for PAI's review. Nevertheless, the nearly identical comment was in the Petition for Special Variance file. On this issue, it is unclear why, after the DPWT DPC comment and the DPWT ZAC comment, that the DPWT HOH Report dated August 26, 2022, deferred the Mays Chapel Gate issue to the undersigned, rather than just reasserting its prior position. (County Ex. 12D). When asked at the HOH about the Mays Chapel Gate and its impact on DPWT's recommendation of the Greenlined Development Plan, Kris Nebre testified that DPWT would not take a position, and that this issue was for DPR. Accordingly, based on the DPWT DPC comment and the DPWT ZAC comment that the Mays Chapel Gate does not comply with DPR Manual Policy XIII, is another reason that the Greenlined Development Plan under BCC, §32-4-229 must be denied.

The Developer asserts that the proposed emergency-access-only gate qualifies under the exception in the DPR Policy Manual XIII.B.c. because there are 'unusual circumstances' warranting such a gate with this Project:

> c. Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances.

With this issue, the Developer in its Post-Hearing Memorandum, uses the failing intersections

within the traffic shed to suggest approval of the emergency-access-only gate is warranted. I do not find that there are any 'unusual circumstances' presented in this Case. To the contrary, it is merely the Property's location within failing traffic shed. This is a typical development proposal where the maximum number of homes is being proposed within the allowable density located within a congested area. An exception is not warranted here.

In addition to the non-compliance with the DPR Policy Manual, XIII, I also find that the Mays Chapel Gate as emergency-access-only does not comply with BCZR, §260.4.A.1 – *Residential Performance Standards* which requires:

> A. A development proposal shall:
>
> > 1. Provide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation.

(PC. Ex. 13). As proposed, the emergency-access-only gate does not provide for the street connection between the Property and the Meadows/Boxwood communities. The effect of the emergency-access-only gate is to have abutting residential communities which do not have a street connection between them; only emergency vehicles would be permitted to drive between those neighborhoods. As a result, because the Greenlined Development also violates BCZR, §260.4.A.1, it cannot be approved under BCC, §32-4-229.

C. <u>Lack of Sewer Capacity</u>.

Greenlined Development Plan at Note 3 reads that the Property is located in an 'Area of Concern' on the 2020 Basic Services Map Sewer Deficient and Areas of Concern. (Dev. Ex. 1B, DPR, Note 3). On the 2021, 2022 and 2023 Basic Services Maps, the Property is still located in 'Area of Concern'. (Prot. Exs. 92, 93, 95). Unlike the sewer capacity here, the sewer capacity in

Torch Hill was not located within an 'Area of Concern' on the Basic Services Map. In the Growth Management Act, and Basic Services Map, BCZR, §4A02.4.C.2, states that sewage capacity must be capable of serving already established uses, and new uses likely to be established.

In the *Torch Hill* Case, there was clear evidence from DPWT that there was adequate capacity in the sewer segments stemming from the Property. The County support was derived from the following evidence: (1) an email from Dave Bayer, PE dated September 2, 2021 (Torch Hill, Dev. Ex. 19); (2) DPR/DPWT – DPC comment dated November 1, 2021; and (3) the testimony of DPR representative at the *Torch Hill* HOH. To be clear, the sewage path for *Torch Hill* development is not the same path here. The sewage path here flows through Metered basins BC05, BC22, BC18, BC31, and TSJF01. (Prot. Exs. 62, 63; 78). (Dev. Ex. 44).

In this case, I am faced with a Property which has continued to be designated by DPWT as an 'Area of Concern' on the 2023 Basic Services Map and prior Maps, coupled with reports of consultants hired by the County, that overcapacity defects and model-predicted SSOs are within this sewage path from this Property. While I do not disagree with the Developer's position that the testimony of Protestants' expert witnesses, at times, focused on what, their view, the County's obligations were under the Consent Decree, and the County's obligation (or not) to provide information to Baltimore City, or the City's obligations to the County under the City's separate Consent Decree, this is not an enforcement case against the County or the City. I am charged with determining whether the sewerage from this Property, created by the proposed Project, along with the existing sewage, will flow through an adequate, safe and efficient sewer system which is in compliance with all County regulations and policies. In that regard, this Order and Opinion will only focus on the issue at hand.

In examining the adequacy of the sewer capacity for this Project, a review of the

chronology is enlightening. It begins by way of email dated August 26, 2020 from Developer's engineers asking DPWT whether there was "adequate capacity in the downstream sewer system for [62 sic] new single family detached homes." (Dev. Ex. 55). DPWT's email response dated September 4, 2020 from Lisa Eicholtz, PE, Chief of Sewer Design Section to Matthew Bishop, Developer's landscape architect, was that the 8 sewer segments of 8 inch pipes immediately downstream from the Property (MH 43794 - MH 43786), do not have adequate capacity for the proposed 62 homes. (Dev. Ex. 55). DPWT's email sheds light on the lack of capacity:

> Matt,
>
> We've reviewed your request and determined the following 8" sewer segments do not have adequate capacity to accommodate the proposed 62 home subdivision at 2310 West Joppa Road:

Upstream MH	Downstream MH	Length	Diameter	Status
43794	43793	137.96	8"	
43793	43792	192.31	8"	
43792	43791	87.36	8"	Part of Hopkins project
43791	43790	60.00	8"	Part of Hopkins project
43790	43789	316.80	8"	Part of Hopkins project
43789	43788	232.57	8"	Part of Hopkins project
43788	43787	159.01	8"	Part of Hopkins project
43787	43786	76.00	8"	Part of Hopkins project

> As noted in the table shown above, six of the segments are included in the Hopkins project which has not been constructed. As we discussed on the phone, my understanding is that there is an outstanding right-of-way issue that is holding up the project. Vishnu Desai from Development Plans Review may be able to offer more information on the status of that sewer replacement project.
>
> Dave Bayer of Sewer Design had a copy of the drawing showing the work that was to be completed by Hopkins. The drawing is attached for your reference.

(Dev. Ex. 55). The sewer segments for which Johns Hopkins was to repair/replace are shown on My Neighborhood map. (Prot. Ex. 88). The above DPWT email regarding easement issues is consistent with the testimony of Sr. Kathleen McNany, 2229 W. Joppa Rd. Sr. McNany testified

that in 2017, she was approached by a representative from the County in regard to widening the existing sewer easement on the Monastery property by 15 ft, in order to enlarge the sewer pipes from 8 inches to 12 inches. She testified that she understood this request was part of the Johns Hopkins buildings to be constructed at Greenspring Station. After that contact in 2017, Sr. McNany stated the Monastery was not again contacted.

As part of their PIA request, Protestants obtained an internal memo dated March 3, 2021, from Dave Bayer, PE who was then the Acting Chief of Sewer Design Section, to Vishnu Desai, Supervisor in DPR which reads the same as the above Lisa Eicholtz email to the Developer:

> 18. The following existing 8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor:
>
> | Upstream MH | Downstream MH | Length | Diameter | Status |
> |---|---|---|---|---|
> | 43794 | 43793 | 137.96 | 8" | |
> | 43793 | 43792 | 192.31 | 8" | |
> | 43792 | 43791 | 87.36 | 8" | Part of Hopkins project |
> | 43791 | 43790 | 60.00 | 8" | Part of Hopkins project |
> | 43790 | 43789 | 316.80 | 8" | Part of Hopkins project |
> | 43789 | 43788 | 232.57 | 8" | Part of Hopkins project |
> | 43788 | 43787 | 159.01 | 8" | Part of Hopkins project |
> | 43787 | 43786 | 76.00 | 8" | Part of Hopkins project |
>
> Six of the segments noted above were to be addressed by the Johns Hopkins at Greenspring Station development prior to issuance of their use and occupancy permit. PAI did not enforce this requirement and the project was completed without the necessary sewer system improvements being completed. **The Greenspring Manor development may not connect to public sewer until the agreement with Johns Hopkins at Green Spring Station is enforced and all sewer improvements are completed, including the additional improvements to segments 43794-43793 and 43793-43792 noted in the above table**.
>
> 19. Developer is responsible for acquisition of off-site easements for downstream sewer improvements.

(Prot. Ex. 13). The contents of that internal County Memo were then inserted into DPWT CPC comment dated March 8, 2021. (Prot. Ex. 12)

There were additional emails obtained by the Protestants through a PIA request. On March 15, 2021, after the CPC occurred on March 9, 2021, the then-Executive Director of VPC sent an email to the Acting Chief of Bureau of Engineering and Construction in DPWT, Jeffrey Peluso, PE, inquiring about information that was discussed by DPWT during the CPC (*i.e.* that Johns Hopkins work on the sewer segments was required as part of the approval of the surgical center at Johns Hopkins Medical at Greenspring Station). (Prot. Ex. 89). By that point, the VPC email confirms that the surgical building was constructed and occupancy permits had been issued. Indeed, the GTA spreadsheet indicates that, based on SDAT records, John Hopkins Pavilion III (110,000 sf) was constructed between 2019-2021. (Prot. Ex. 31).

In order to answer the VPC email, the same day, Jeff Peluso, PE sent an email to Dave Bayer, PE with a copy to Lisa Eicholtz, PE, inquiring as to the status of the Johns Hopkins sewer work. David Bayer, PE timely responded the same day stating the following:

> Hopkins' engineer just stopped working on the project.
> They never got the permits that are needed, and they never acquired the offsite right of way that is needed.
> PAI issued the occupancy for the building without requiring that Hopkins fulfill their obligations in accordance with the agreement.

(*Id*.). Given that the CPC had occurred on March 9, 2021, and the CIM was scheduled for April 27, 2021, Jeff Peluso, PE followed up with another email dated March 22, 2021 to Dave Bayer, PE and Lisa Eicholtz, PE asking the following questions:

> 1. Was Hopkins to prepare all plans and specifications along with permits for [the] their project? If so, were we (Engineering) sending it up to contracts? Who is responsible for securing the R/W?
>
> 2. Does this feed the Jones Falls Sewershed (Lafferty)?
>
> 3. If Hopkins didn't do the improvements, what are the ramifications of their new connection?
>
> 4. If Greenspring Manor were to continue through development, is there

> another way to provide capacity? Is there a "breaking point" for Greenspring Manor (no. of units)?

(Prot. Ex. 90). Dave Bayer, PE responded the same day that **no units could be built at the Property without causing an SSO**:

> 1. Yes, as outlined in the MOU Section 2, Hopkins was to prepare the drawings, and get all of the permits and off-site right-of-way. Yes, we agreed to manage the Contract from Request to Advertise through construction after we received all of the BLD Ready Documents and the easements were acquired by Hopkins.
>
> 2. Yes.
>
> 3. Sanitary sewer overflows.
>
> 4. Storage (and DPW has been opposed to that option) would be one option, finding another location that avoids the capacity deficient areas would be another option, however, we believe that option would be unfeasible.
> Zero is the "breaking point" of number of units that could be built without causing an SSO.

(Prot. Ex. 90). This internal email by and among the County civil engineers in the Sewer Design Section (Bayer, Eicholtz and Peluso) who are charged with, and have special knowledge of the County sewer system, were unequivocal that, *as of March of 2021*, there were "capacity deficient areas" within the sewer path from the Property. Conclusively, they determined that <u>zero units</u> could be built at the Property without causing SSOs. Additionally, the County engineers did not agree with alternative capacity options.

Only two months later, on May 27, 2021, the 2021 RJN Performance Assessment was issued and sent to Dave Bayer, PE. (Prot. Ex. 78 – See Cover Letter). By way of Map 2 attached therein, it confirmed that the only work actually performed as recommended by the SRRR 2012 Plan within the sewage path from the Property were 2 minor repairs:

- "Inflow Insert & Replace Frame and Cover" (yellow circle inside green square); and

- "Inflow Insert & Grout Bench and Riser" (yellow circle inside pink square).

(Prot. Ex. 78). Additionally, Map 3 of the 2021 RJN Performance Assessment supports Dave Bayer's PE's concern for SSOs in that for the County-chosen storm events (i.e. the 2 yr/6 hr and 10 yr/6 hr), there are model-predicted SSOs along the sewage path of the Property. (*Id*.). Consistent with Mr. Bayer's opinion that SSOs would result from the construction of any homes for this Project, these model-predicted SSOs are not only within the Johns Hopkins' sewer segments (Prot. Ex. 88), but are also downstream of the Johns Hopkins' segments, and again within the Project's sewer flow path. (Prot. Ex. 78, Map 3). I place great amount of weight on expertise and knowledge of DPWT engineers and shown in the DPWT CPC comment and Dave Bayer's internal email to DPWT colleagues, that if any homes were added to the sewer system, SSOs will occur. (Prot. Ex. 89, 90). Weighed against the DPWT engineers' collective judgment, Mr. Lessner's testimony in rebuttal that these model-predicted SSOs should not be outcome-determinative here because they have not been field-verified, and because no SSOs have been reported within the last 3 years on the Quarterly/Annual Reports, is not convincing.

As part of their PIA request, Protestants also obtained an internal memo dated August 2, 2021 from Lisa Eicholtz, PE, Chief of Sewer Design Section to Vishnu Desai, Supervisor in DPR again reiterating that the sewer segments lacked capacity for the proposed homes:

> The following eight 8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor.

Upstream MH	Downstream MH	Length	Diameter	Status
43794	43793	137.96	8"	*
43793	43792	192.31	8"	*
43792	43791	87.36	8"	Part of Hopkins project
43791	43790	60.00	8"	Part of Hopkins project
43790	43789	316.80	8"	Part of Hopkins project
43789	43788	232.57	8"	Part of Hopkins project
43788	43787	159.01	8"	Part of Hopkins project
43787	43786	76.00	8"	Part of Hopkins project

* required sanitary sewer upsizing from 8" to 12" by this developer is shown on the development plan.

Six of the segments noted above were to be addressed by the Johns Hopkins at Greenspring Station development. To date, these improvements have not been completed.

Issuance of Use and Occupancy permits for the residential units at Greenspring Manor development should be subject to completion of the system improvements noted above, including those Johns Hopkins at Greenspring Station is obligated to complete.

(Prot. Ex. 14). All of this evidence shows DPWT has maintained the same position on the lack of sewer capacity.

By August 10, 2021, during its review of the Development Plan here, DPR/DPWT issued a DPC comment which was also consistent with both the CPC comment and with the DPWT emails above:

20. The following eight -8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor. Six of the segments noted are to be addressed by another developer. To date, these improvements have not been completed. This developer is required to complete the other two segments noted with a *. Issuance of Use and Occupancy permits for the residential units from the Greenspring Manor development should be subject to completion of the system improvements noted above, including those by the other developer. Currently the other developer is obligated to complete this by August 2023.

Upstream MH	Downstream MH	Length	Diameter	
43794	43793	137.96	8"	*
43793	43792	192.31	8"	*
43792	43791	87.36	8"	
43791	43790	60.00	8"	
43790	43789	316.80	8"	
43789	43788	232.57	8"	
43788	43787	159.01	8"	
43787	43786	76.00	8"	

(County Ex. 12A).

When asked at the HOH on September 1, 2022 (Day 1) about the 8 deficient sewer

segments in DPR/DPWT DPC comment, Eugene Cauley, PE (who works in DPR and not DPWT) stated that he did not know whether, or when, Johns Hopkins would be completing that work; he added that he would have to look into the issue. As of Day 13 of the HOH (May 31, 2023), there was no evidence provided by the Developer that Johns Hopkins had begun, or would be completing its sewer work on those sewer segments through which the sewage from this Property will flow. Mr. Cauley's testimony was also that this Developer was completing the work on segments 43794-43792 but for *another* development project. When asked about the details of that other development project, he stated he would have to look into it. There was no evidence presented by the Developer as to any *other* development project for this Developer.

Contrary to the Developer's Post Closing Memorandum that DPWT (through DPR) recommended approval of the Greenlined Development Plan, as the above chronology reflects, DPWT and the Sewer Design team engineers have maintained their steadfast opposition to adding 61 homes to the sewer system due to inadequate capacity and concern for SSOs. There was no evidence presented by the Developer that DPWT had changed its position, or that DPWT engineers were satisfied that the deficiencies would ultimately be corrected. But-for the County documents produced through PIA requests, we would not know the extent of the DWPT concerns about the sewer for this Project. Consequently, the presumption of the development plan compliance in *Elm Street*, *supra*, is not found here, as there was substantial evidence by DPWT to the contrary. Accordingly, I place significant weight on DPWT's Sewer Design team engineers' opposition, and that evidence alone is enough to deny the Greenlined Development Plan due to lack of sewer capacity.

Additional evidence provided by the Protestants as part of their PIA request was instructive and again confirmed the inadequate sewer capacity. Specifically, Protestants asked

DWPT for its sewer capacity analysis for this Project. By confirmation email dated November 10, 2021, DPWT verified that the 2015 County Jones Falls Interceptor Chart was the chart used by DPWT to analyze capacity for this Project, and that there was no other analysis conducted, or information used. (Prot. Exs. 64, 64A). Although the information on the 2015 County Jones Falls Interceptor Chart was dated 2015, it nevertheless formed the basis for the DPWT's position that there was not adequate capacity within above sewer segments to support the proposed 61 homes. (Prot. Ex. 64).

Comparing the data from the 2015 County Jones Falls Interceptor Chart, with the information in the RKK-LTC 2012 Report, Mr. Grachek created the Comparison RKK/DPWT Capacities Chart (Prot. Ex. 69). The Comparison RKK/DPWT Capacities Chart revealed that, for the County-selected storm events (2 yr/6 hr and 10 yr/6 hr storms) most of the sewer segments from the Property exceed the peak flow of 90-95%. The DPWT Design Manual for Sanitary Sewers prohibits sewage flows above 90-95%:

> Flows above 90-95% of full depth are considered unstable and may result in a sudden loss of carrying capacity with surcharging.

(Prot. Ex. 70, p. 6-27). Mr. Grachek testified that 90% peak flow is also the industry standard. The DPWT Design Manual further prohibits SSOs from occurring at any time. Yet, SSOs have been model-predicted within the Property's sewage path as shown by Map 3 of the 2021 RJN Performance Assessment. (Prot. Ex. 70, p. 6-22). Based on this evidence, the sewage for this Project violates the DPWT Design Manual and should be denied on that basis.

In particular, the RKK recommendation for those pipe segments on the Comparison RKK/DPWT Capacities Chart which were shown to exceed 90-95% flow between MH 44216-MH 44212, was to upsize the pipes to 18 inches. Similarly, the recommendation for MH 20759 - MH 20755 which were also over capacity, was to install 10 inch relief sewers. (Prot. Ex. 69). It

is undisputed that no upsizing of pipes or installation of relief sewers within the sewage path of the Property has been completed. While Developer argues in its Post Hearing Memorandum that any recommendations from the RKK-LTC 2012 Report need not have been completed, Mr. Lessner's opined that flows above 90% were not "cause for concern" and that upsizing of deficient sewer pipes is worse than a smaller pipe. The DPWT Design Manual states that the County's Bureau of Engineering and Design has the authority to determine the size of the sewer pipes. In this regard, I find that the sewage path from the Project does not comply with DPWT Design Manual, p. 6-2 which "provides a sanitary sewer system that safely collects and transports wastewater without harm to human health or environment…."

The Developer agrees in its Post-Hearing Memorandum that the SRRR 2012 Plan is the "operative document[s] for Baltimore County's efforts to address the sewer system issues." (Dev. Memo, p. 35). The Developer further acknowledged that the Consent Decree described the SRRR 2012 Plan as: "…the document that controls and 'describes the deficiencies identified through the Collection System Inspection and provides for the performance of any repair, replacement, rehabilitation or other corrective action necessary to address those deficiencies." (Dev. Memo, p. 36). The Developer also agreed in its Post-Hearing Memorandum regarding the Corrective Action Recommendation Plan in SRRR 2012 Plan, Paragraph 6.14 (and Map 6.1) that "only these specified improvements within the SRRR 2012 Plan (i.e. to address I/I, capacity improvements and correcting structural deficiencies), were required. (Dev. Memo, p. 38).

With those facts not in dispute, during the cross examination of Mr. Lessner, he agreed that some of those action items dictated by the SRRR 2012 Plan, Section 6.14 - Corrective Action Recommendation Plan to address model-predicted SSOs in the Jones Falls Sewershed for the County selected 10 hr/6 yr storm event, have <u>not</u> been completed as follows:

1. Complete comprehensive I/I reduction rehabilitation of public manholes and sewers within SSA's exhibiting excessive I/I or other areas that contribute to model predicted SSOs determined by model simulations using the 10-Year/6-hour SCS Type II storm event.

2. Complete select capacity improvements based on a model simulation of the 10-Year/6-Hour SCS Type II storm event.

3. Correct identified structural deficiencies through rehabilitation or replacement.

4. Complete post-construction flow monitoring and analysis to confirm the I/I reduction effectiveness.

5. Confirm model simulations or revised the collection system model, if necessary.

6. Determine if additional improvements are needed based on the updated collection system model.

With regard to I/I reduction, Mr. Lessner agreed that Corrective Action 1 has not been completed. The 2021 RJN Performance Assessment Report informs that I/I reduction was only completed in Metered basins BC02, BC04, BC09 which is in the Timonium area and not in the sewage path from the Property. (Prot. Ex. 78). In its Post-Hearing Memorandum, while conceding that "…the total number of improvements completed at the time were less than the total required under the SRRR Plan…", Developer highlights that the Timonium area improvements reduced I/I and reduced predicted SSOs in the Timonium area. However, the Timonium area work does not remedy the inadequate sewer capacity within the sewage path from this Property. The Developer's other argument that SSO volumes are trending "downward overtime" does not address the existing and future problems along the sewer path from this Property. (Dev. Memo, p. 41). Indeed, Map 2 of the 2021 RJN Performance Assessment Report confirms that only 2 minor repairs involving "Inflow Inserts" as above have been completed in the sewage path for this Property (BC05).

With regard to Corrective Action 3 – correcting structural deficiencies, I find there is no

basis for Mr. Lessner's opinion that those structural deficiencies only refer to those listed in the SRRR 2012 Plan and not in the Ramboll or the Hazen Reports. Neither the Ramboll Report nor the Hazen Report were produced in evidence in *Torch Hill*. In terms of the Ramboll Report which was issued June of 2022, I am not convinced by Mr. Lessner's opinion that it was only "a planning document" and only used for "capital budget" purposes. (Prot. Ex. 87). It matters not whether the Ramboll Report was prepared under the Consent Decree. It was created at the County's request and it informs the County about sewer capacity. The Ramboll Report provides the express purpose for which the County retained Ramboll:

> The County engaged Ramboll Americas Engineering Solutions, Inc. (Ramboll) for the development of design documents for the repair and rehabilitation of the interceptors, manholes, and junction chambers located within Lake Roland Park. The primary focus of this project is to minimize the inflow and infiltration (I/I) into the interceptors to reduce the likelihood of sanitary sewer overflows.
>
> * * * *
>
> 1.2 PURPOSE
>
> As part of the preliminary engineering efforts for the project, the County requested a detailed review/evaluation of available existing system data in order to identify/accomplish the following:
>
> ▪ Confirm the condition of the pipelines and manholes associated with this project based on available system inspection data.
>
> ▪ Verify the rehabilitation recommendation (pipelines and manholes) included as part of this project.
>
> ▪ Preliminarily identify access and bypass requirements.
>
> ▪ Identify data gaps requiring additional/follow-up field evaluation efforts.
>
> ▪ Develop a preliminary list of permitting needs/requirements for the project.

(Prot. Ex. 87, pp. 1-2). Upon completion of the analysis, the Ramboll Report indicates that after

County approval, it will proceed with design activities to rehabilitate the sewer segments and manholes. With the clear directives outlining the scope of Ramboll's work including analyzing the sewer pipes and manholes, as well as the future corrective actions to be taken by Ramboll upon County approval, the Ramboll Report cannot be discounted as just a "planning document."

Importantly, the Ramboll Report referred to, and used the data from the 2021 RJN Performance Assessment. (*Id*. p. 3). Ramboll examined the sewer pipes using closed circuit television cameras (CCTV), performed sonar inspections, and physically inspected manholes to confirm that sewer pipes were suitable for trenchless rehabilitation technologies. I find that these efforts by Ramboll are examples of 'field verification' of the information from the 2021 RJN Performance Assessment that Mr. Lessner stated was not performed. (Dev. Memo, p. 43). As with the 2021 RJN Performance Assessment, I agree that, unfortunately, the results of the Ramboll Report showed a worsening of condition of the sewer system wherein it reads:

> The review of the CCTV inspections showed 24 segments with active infiltration at pipe joints, 14 of which included some level of structural defects. Of the remaining 19 segment inspections available, 11 segments had structural defects alone and 8 segments either showed no structural defects or infiltration.

Upon completion of manhole inspections, Ramboll determined that:

> …all 44 manholes within the system will need rehabilitation. Of the 43 manholes, 31 assets show evidence of infiltration. There are 2 manholes that are noted as 24" in their inspection reports. Field verification will be required to confirm that they are 24". Should this confirm manhole size, it will require full replacement to facilitate CIPP lining of the adjoining pipe segment.

Similarly, the Hazen Report dated February 6, 2023 also confirmed that sewer pipes are still over 100% capacity. (Prot. Exs. 107, 108). Similar to the Ramboll Report, whether prepared under the Consent Decree or not, the Hazen Report cannot be discounted as only a "planning

document." While the County may *also* use it for capital budget planning, the County hired Hazen to perform a comprehensive evaluation of the accuracy of the data from the RKK models and to update those models. Pursuant to the Protestants' PIA request, the Hazen scope of services, which are on-going, were provided. (Prot. Exs. 106 A, B, C).

Hazen issued a progress report dated February 6, 2023. (Prot. Ex. 107). Hazen's Model Pipe Capacity Report evaluated each pipe in the system as modeled during the 5 storm events which showed that the sewer pipes from the Property to the County/City line will be over 100% capacity. (Prot. Ex. 108). Specifically, during the County-selected 10 yr/6 hr storm event, the existing capacity for the sewer segment immediately below the Property through which sewage from the Project would flow, *beginning* with MH 43794 – MH43793 and continuing through the sewer segments, is greater than 100% (except for MH 43787-MH 43786 which is at 80% capacity). (Prot. Ex. 108, p. 9). Accordingly, I find that both the Ramboll Report and the Hazen Report provide compelling evidence that the pipes in the sewage path from the Property are at over-capacity and that SSOs are predicted to result during the County-selected 10 yr/6 hr storm event.

The evidence provided by the Protestants in regard to overcapacity defects and model predicted SSOs within the sewage path here was not sufficiently rebutted by the Developer. To this point, neither Dave Bayer, nor Lisa Eicholtz, nor any representative from DPWT with knowledge of the sewer system, testified to support Developer's position in rebuttal. If there was a change in DPWT's position, or clarification to explain the evidence presented by the Protestants, then testimony and further evidence from the DPWT was necessary. Given the importance of the sewer capacity issue in this case, Mr. Lessner's understanding of his interactions with DPWT representatives, his investigation of Map 3 of the 2021 RJN Performance Assessment with DPWT, and specifically his conversations with Dave Bayer, PE, is not the best evidence to meet the burden

of proof, particularly given the DPWT comments and emails as above have expressed the opposite view. With the facts presented in this case, the best evidence is to have the DPWT witnesses testify, particularly if, as the Developer writes in its Post Hearing Memorandum, the "County regards the model upon which Map 3 was based as being 'unverified' in the field." (Dev. Memo, p. 46). The DPWT Sewer Design Team engineers needed to provide that testimony.

I also find that, if Mr. Lessner's understanding of his interactions with DPWT is correct as described in the Developer's Post-Hearing Memorandum, and there was a change in DPWT's position, Dave Bayer would have included the same in his email dated March 8, 2023 wherein, at the request of the Developer, he lists the flow sensors downstream from the Property; yet, he did not. (Dev. Exs. 47A, 47B). Similarly, in his email dated May 30, 2023, Dave Bayer could have provided any change in DPWT's position wherein, at the request of the Developer, he listed the corrective action status for rehabilitation/repairs that had either been completed, or were determined not to be needed; yet, he did not. (Dev. Exs. 45A, 45B). The silence is deafening.

As to Mr. Lessner's point that the 2019, 2020 and 2021 Quarterly/Annual Reports (Dev. Exs. 48-53) did not document SSOs, this fact certainly did not alleviate Dave Bayer's real concern for SSOs as shown in his internal email to his DPWT colleagues dated March 22, 2021, and, without question, Dave Bayer has access to those Quarterly/Annual Reports. (Prot. Exs. 89, 90). What's more, each of the defects in the manholes which were listed in David Bayer's May 30, 2023 email as being corrected, were performed in 2014, 2017 or 2019, and therefore, when he wrote the March 22, 2021 email, he would have known about those repairs. (Dev. Exs. 45A, 45B). Thus, given the years of those repairs, Mr. Lessner's testimony that "presumably" repairs/rehabilitation were completed after the 2021 RJN Performance Assessment, was not accurate. (Id.).

In addition to the violation of DPWT Design Manual as above, based on the collective evidence presented, I also find that the sewage to be generated by this Project does not comply with BCC, §32-4-410 (b) which requires sewage facilities to function safely:

> (b) *Sewage.* Proposed public or private sewage facilities shall be designed and located to function safely and without danger of contaminating groundwater, surface water, or public or private water supplies.

Additionally, in not providing safe or adequate sewerage, I further find that the sewage generated by this Project also does not comply with BCC, §32-4-102:

> (b) *Intent of laws.*
>
> (1) This title is intended to protect and promote public health, safety, and welfare and to ensure that public facilities, services, and amenities are provided.
>
> (2) This title is intended to ensure that proposed development projects are safe, adequate, convenient and, where applicable, provide for the following:
>
> * * * *
>
> (iv) …..sewerage,…..

Moreover, I find that the sewage from the Project does not comply with BCC, §32-4-103(a):

> (a) *In general.* This title is adopted for the following purposes:
>
> (8) To provide adequate and efficient…..sewerage, …..and other public requirements and facilities;

Finally, I find that, as supported by the evidence, the Greenlined Development Plan also violates the DPR Policy Manual which provides that: "As part of any land subdivision or development of land, provision shall be made for the safe and sanitary treatment and disposal of sewage without detrimental effects to the public health or environment." (DPR Policy Manual, p. 18).

Each of these regulations and policies requires sewage facilities to safely, adequately and efficiently function. Here, the overwhelming evidence shows that, for this particular sewage path, it will not. As a result, I cannot accept the argument that just adding the sewage from 61 new homes to the sewer system is "inconsequential when compared to the amount of sewage which flows through the system." It was clear to me that the sewage path from this Property cannot handle the existing sewage which flows along that path, much less the additional sewage which will come from adding 61 homes to the sewer system.

With regard to the Johns Hopkins' sewer segments, as mentioned by People's Counsel in his Post Hearing Memorandum, under BCZR, §4A02.4.E.1.h, health care and surgery centers are exempt from the Basic Service Map. (PC Memo at p. 19). According to People's Counsel, the exemption was enacted after Johns Hopkins' Petition for Special Variance was denied in *Foxleigh Enterprises*, CBA 2012-0060-SA. (PC. Ex. 11). If that exemption applies, it may explain why Johns Hopkins was permitted by PAI to construct the 3 medical pavilions without first repairing/rehabilitating the sewer segments. If that is accurate, the exemption was not mentioned in any of the DPWT internal emails, or in the DPC comments. Again, the DPR DPC comment dated August 10, 2021 states that the Johns Hopkins is obligated to complete sewer segments repair/rehabilitation by August of 2023. (County Ex. 12A). The Dave Bayer emails confirm that Johns Hopkins stopped working on the sewer. (Prot. Ex. 89, 90).

Accordingly, if Johns Hopkins is entitled to an exemption from the Basic Services Map standards, it would stand to reason that DPR and/or DPWT would have known about it. For this case however, that exemption would means that the Johns Hopkins will never be repairing/rehabilitating those sewer segments. On the other hand, if Johns Hopkins is not exempt and is still required to complete the repair/rehabilitation, there was no evidence presented as to

whether or when John Hopkins will complete the work. The undersigned even posed questions of DPR during the HOH but no information was known. Ultimately, this issue goes to the Developer's burden of proof in its case-in-chief that adequate sewer capacity exists in the sewage path for this Project, including the repair/rehabilitation by Johns Hopkins. Given the lack of any direction on this important issue, contrary to the suggestion by DPR DPC comment, I am not willing to condition approval here on the possibility that Johns Hopkins may, or may not, complete that work. (County Ex. 12A). [4]

For all the reasons specified regarding sewer incapacity and deficiencies, the Greenlined Development Plan must be denied under BCC, §32-4-229.

D. <u>Remaining Issues</u>.

Given the denial of the Greenlined Development Plan on the basis of traffic, emergency-access-only gate and inadequate sewer capacity, there is no need to address the issues of alleged Master Plan conflict, alleged E Coli contamination, stormwater management, Forest Buffer Variance for a Specimen Tree, or floodplain issues.

<u>CONCLUSION</u>

[4] As the Board of Appeals held *In the Matter of Bluestem*, CBA-20-006, in response to the Developer's argument in Bluestem that the Development Plan should be approved with a condition that no building permit be issued until the sewer-shed deficiencies are remedied, the Board of Appeals wrote:

> Certainly, the ALJ is neither compelled to approve the Plan in the face of evidence that it fails to comply with development laws, regulations, policies, or rules, nor is the ALJ compelled to impose conditions in lieu of denying approval. To the contrary, the Code mandates the ALJ's decision in only one set of circumstances: where the ALJ finds the development plan complies with development laws, regulations, policies and/or rules. BCC §32-4-229(b)(1). The ALJ did not find that the Plan so complied, ergo, the ALJ had the discretion to deny approval. Similarly, the Code confines the ALJ's discretion when imposing conditions, requiring that the conditions be tethered to certain evidence and in furtherance of certain goals. BCC §32-4-229(d). On the other hand, the APFO [Adequate Public Facilities Ordinance] neither identifies circumstances requiring approval of a development plan, nor does it mandate approval with conditions.

I am cognizant that the owners of this Property are permitted by right to develop the Property with residential uses. Unfortunately, the Property's location within failing traffic sheds, and within an 'Area of Concern' in the public sewer system, made worse by the existing development of surrounding commercial, residential, educational and public uses, define the limits for this last, undeveloped Property. The existing residential communities are justifiably concerned about the additional traffic, inadequate sewer system, and the proposed emergency-access-only gate, all of which negatively impact the surrounding properties. While there may be a common notion that I approve a lesser number of homes on the Property, the Developer did not provide any testimony or evidence concerning a potential project based on a lesser number of units. Accordingly, I am tasked with the job of approving or denying the Greenlined Development Plan as submitted – for 60 new homes and 1 existing home, with an emergency-only-access gate. For the reasons set forth herein, I must deny the Greenlined Development Plan.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **31st** day of **July, 2023,** that the Greenlined Development Plan for the Project known as **"GREENSPRING MANOR"** (Dev. Ex. 1B), be and it is hereby **DENIED.**

IT IS FURTHER ORDERED that the Petition for Special Variance from the Baltimore BCZR, §4A02.4.G to allow the development of the subject property within the Falls Road and Joppa Road and Falls Road and Greenspring Valley Road traffic sheds, be, and it is hereby **DENIED**.

Any appeal of this Order shall be taken in accordance with Baltimore County Code, § 32-4-281.

MAUREEN E. MURPHY
Administrative Law Judge
for Baltimore County

IN RE: GREENSPRING MANOR DEVELOPMENT PLAN AND ZONING HEARING (2310 West Joppa Road)	*	BEFORE THE
	*	OFFICE OF
	*	ADMINISTRATIVE HEARINGS
8th Election District 3rd Council District	*	FOR BALTIMORE COUNTY
	*	Case No. 08-0922 and Case No. 2021-0250-SPH
Greenspring Joppa Falls, LLC Owner and Developer	*	

* * * * * * * * * * *

DEVELOPER'S POST-HEARING MEMORANDUM

Greenspring Joppa Falls, LLC, legal owner and developer ("Developer"), by undersigned counsel, hereby submits this Post-Hearing Memorandum in support of the Greenspring Manor Development Plan (the "Development Plan" or the "Plan"), petition for special variance related to traffic, and petition for special variance to remove a specimen tree, and states as follows:

INTRODUCTION

This matter set a record for the most hearing dates (13) ever held before the Office of Administrative Hearing ("OAH") in a Hearing Officer's Hearing (HOH). The project, known as Greenspring Manor, proposes a residential community featuring 61 single-family homes (one existing home and 60 proposed homes) on an approximately 40± acre property located on the north side of Joppa Road, east of Falls Road, in the Lutherville area of Baltimore County ("the Property"). *See* Developer's Exhibit 1B ("Dev. Ex."). Many of the issues raised in the case, particularly related to traffic and sewer, are substantially similar to those recently addressed in the Torch Hill case, where the ALJ issued an opinion directly addressing the arguments again raised by the Protestants and approving the development plan. *See* Dev. Ex. 37.

In this case, the Property is split-zoned DR 1 (Density Residential – one dwelling unit per acre) and DR 2 (Density Residential – two dwelling units per acre), is located entirely within the Urban-Rural Demarcation Line, and is the last cleared farm field in the surrounding area, which is otherwise improved with residential and/or commercial development. *See* Dev. Ex. 3A-B. As part of the approval process, Developer will provide over a million dollars of offsite public road and sewer improvements if this project is constructed. *See* Dev. Ex. 1B (lower left corner for sewer improvements) and Ex. 16 (traffic improvements).

This unfortunately is going to be a long Memorandum. The project drew interest from several neighboring communities (groups that live on or adjacent to Tally Ho Road to the east of the Property, the Meadows and Boxwood communities to the north of the Property, the Valleys Planning Council (even though their Executive Director testified that the Property is not located within the group's expansive boundary, *see* Dev. Ex. 34), and the Office of People's Counsel, who, in unusual fashion, attended and actively participated in the Hearing Officer's Hearing for the project.[1] As this is a combined hearing, this Memorandum will first address the issues related to approval of the Development Plan and then will address the special variance to remove a specimen tree and the special traffic variance. With respect to the Development Plan, the issues that will each be addressed are: (1) Master Plan compliance; (2) stormwater management; (3) the proposed emergency access "gate" at the rear of the Property; (4) compliance with BCZR § 260; and (5) Sewage Capacity. The Memorandum will then address the specimen tree and traffic special variance requests, for which the ALJ heard from several expert witnesses (all presented by the Developer).

[1] People's Counsel often participates in zoning cases before the Board of Appeals, but this is undersigned counsel's first time seeing People's Counsel participate in an HOH before the ALJ.

PROCEDURAL HISTORY

Even the path to the Hearing Officer's Hearing ("HOH") in this case was an eventful one. On August 11, 2021, a Development Plan Conference ("DPC") was held between Developer's consultants and various Baltimore County agencies. At the DPC, various Baltimore County agencies responsible for the review of the Development Plan submitted written comments regarding the compliance of the Development Plan with the various Baltimore County regulations governing land development in the County. Comments were received from Development Plans Review ("DPR"), Real Estate Compliance ("REC"), Zoning Review, the Department of Planning ("DOP"), the Department of Environmental Protection and Sustainability ("DEPS"), State Highway Administration ("SHA"), and the Department of Recreation and Parks ("Rec and Parks"). Developer then worked to address these comments prior to the Hearing Officer's Hearing ("HOH"), through preparation of a redlined Development Plan and greenlined Development Plan.[2] The HOH was originally set November 18, 2021, but as explained below, it was postponed for many months.

The process and procedure for a DPC is outlined in § 32-4-226(c) of the Baltimore County Code ("BCC"). Pursuant to § 32-4-226(c)(3), if any county agency does not attend the DPC, "the agency is presumed to have no comment on the plan." In this case, however, the Traffic section of the Department of Public Works and Transportation ("DPWT") did not attend the DPC but generated comments dated August 12, 2021, which state at the outset "these comments are coming in after the DPC. We are asking PAI to take these into consideration." *See*

[2] As Developer's witness Matt Bishop explained, a "redlined" version of the Development Plan (Dev. Ex. 1) was prepared to address agency comments made during the DPC. Additional green text was then added to the plan in order to respond to correct a typo in the Dedication Table located in the upper left corner of the plan (Exhibit 1B). In this Memorandum, the term "Development Plan" or "Plan" shall refer to the "greenlined" version of the Development Plan (Developer's Exhibit 1B) unless otherwise specified.

People's Counsel Ex. 6. The DPWT comments were not presented to the Developer, its consultants, nor were they presented to PAI, until the days leading up to the scheduled HOH. They were only discovered when the DPR representative, Mr. Cauley, was making his final rounds to confirm that each section of DPWT supported approval of the Development Plan. Following a lengthy postponement, the Developer was able to work with the DPWT traffic reviewer to obtain confirmation that the proposed project will not have any negative impact on the surrounding road network. *See* Dev. Ex. 14. The Developer also worked with SHA to confirm the proposed offsite road improvements (depicted in Dev. Ex. 16) would have a substantial benefit to the overall Falls Road corridor between Joppa Road and Seminary Avenue. *See* Dev. Ex. 20-22.

After the HOH (which was combined with the special variance petitions) was rescheduled, an unprecedented thirteen days of hearings were held before ALJ Murphy. In its case in chief, Developer offered testimony from Russell Powell, representative of the Developer, and a series of experts including, Matthew Bishop, a Registered Landscape Architect and professional land planner, Erin Kuhn, Assistant District Engineer for Traffic at MDOT/SHA, Nick Driban, Professional Traffic Operations Engineer, and John Canoles, an ecologist and professional environmental consultant. On rebuttal, Developer again presented testimony from Matthew Bishop and Nick Driban, and also from Nick Leffner, a civil engineer with expertise in Baltimore County's regulations governing stormwater management and sewer capacity.

Numerous individuals testified about the project primarily on the basis of traffic, Dan O'Leary, a professional engineer, testified regarding stormwater management, and two expert witnesses, Randall Gracheck and Robert Summers, testified regarding sewer capacity. Citizen testimony was split over the proposed "emergency access gate" in the rear of the Property, as the

Tally Ho residents favored a full access road connection between Seminary Avenue and Joppa Road and the Meadows and Boxwood residents favored an emergency access only connection.[3]

As outlined in this Memorandum, Developer, through County agency representatives and Developer's expert witnesses, presented strong and substantial evidence demonstrating that: (1) the Development Plan complies with all applicable County laws, regulations, and policies and should be approved by the ALJ; (2) the Department of Environmental Protection and Sustainability ("DEPS") was correct in approving the removal of the single specimen tree along Joppa Road and this recommendation should be followed by the ALJ; and (3) the burdens of proof for the special variance to permit this development in failing traffic sheds has been met. Protestants provided a significant amount of testimony, but they did not present evidence that would compel the ALJ to deny the Plan or the special variance petitions. Instead, their concerns are addressed in a list of voluntary proposed conditions contained in the conclusion to this Memorandum. Based on the entire record in this case, the Development Plan and related relief should be approved.

BACKGROUND

The Greenspring Manor project proposes 60 new homes on just under 40 acres of land located on the NE side of Joppa Road east of Greenspring Station and Falls Road. It is a project very important to Atapco, and one that has drawn the interest of various neighboring communities.

As Russell Powell confirmed, Atapco performed more voluntary public outreach in this case than any other case they have worked on in Baltimore County. Numerous voluntary meetings were held with the closest neighbors, including representatives from the Meadows and

[3] It will be truly interesting to see how Protestants' counsel addresses this issue, as half of his clients are on each side of this issue.

Boxwood communities and various groups within the boundaries of Tally Ho Road. *See* Dev. Ex. 31-32. Various changes to the Plan (such as moving the homes farther from Joppa Road, installing a landscaping berm to the rear of the Property, and proposing an emergency only access gate between the Property and Mays Chapel Road) were implemented to address the concerns of the neighbors that would be most affected by the project. The Plan respects all zoning requirements, does not require any variances to bulk and area regulations, and proposes the density that is permitted by right on the Property.

While open space is often a concern in BC, this project provides more than double the amount of required open space and preserves over 40% of the property as open and green. Dev. Ex. 1B, 6. While school capacity is often a concern, none of the schools are overcrowded so no relief from the Adequate Public Facilities regulations for schools is needed.

Thousands of trees will be planted where there is now a fallow farm field. *See* Dev. Ex. 6. There is no forest clearing, and the only specimen tree being removed is a nonnative tree located adjacent to Joppa Road that will be removed as part of the road widening. The existing Lankford home, which is located in the forest buffer near a stream, will be converted from well/septic to public utilities.[4]

The Falls Road corridor has created traffic issues for Baltimore County for many years and this project is a mechanism for providing hundreds of thousands of dollars of relief that SHA confirmed will significantly improve travel time through the entire corridor from Joppa Road to Seminary Avenue. *See* Dev. Ex. 20-22. This project is also a mechanism for upgrading specific portions of the county sewer line that have been identified as needing improvement. *See* Dev. Ex.

[4] The ALJ can take judicial notice that Developer obtained final, unappealable approval of a forest buffer variance and alternatives analysis for this project in February 2023 after VPC dismissed its appeal with prejudice in Circuit Court Case No. C-03-CV-23-00020.

1B. At the conclusion of this Memorandum, Developer proposes conditions of approval that address and require the offsite road and sewer improvements that will be provided if the project is approved.

Communities almost always prefer status quo, but the overall evidence confirmed that the benefits of this project far outweigh any impact that Greenspring Manor, if approved with the conditions suggested herein, would have on the surrounding area.

OVERVIEW OF THE DEVELOPMENT PROCESS

Baltimore County Code ("BCC") §§ 32-4-201, *et seq*. governs review and approval of a development plan. These Code provisions define what a development plan is, when a plan is required, what information must be on the plan, how the plan is prepared and submitted, who reviews that plan, and how the plan is ultimately approved.

With respect to the last two these functions – review and approval – the Code is likewise very specific. Upon submission, the Code requires that the development plan be reviewed by agency representatives for compliance with the regulations within that agency's area of expertise. BCC § 32-4-226(b). These agency representatives report their findings in the form of written "comments" at the DPC, which are then submitted to the Hearing Officer. BCC § 32-4-226(d). If an agency "does not attend the conference, the agency is presumed to have no comment on the plan." BCC § 32-4-226(c)(3). If the Hearing Officer receives no comments at all, "the Development Plan shall be considered to be in compliance with the county regulations." BCC § 32-4-226(e)(2).

The Code contains no provision that actually requires County agency representatives to appear at the HOH. Therefore, by application of these Code provisions, even if every agency failed to show up at the DPC, submitted no comment, and did not appear at the HOH, the

Hearing Officer would be obligated to consider the development plan to be "in compliance with the county regulations." BCC § 32-4-226(e)(2). *See also People's Counsel for Baltimore County v. Elm Street*, 172 Md. App. 690, 703 (2007).

On the other hand, if, based on the comments submitted by the agency representatives, "unresolved comments" are identified, the Code requires the Hearing Officer to take testimony and to receive evidence on those issues. BCC § 32-4-228(a). If, after taking testimony and receiving evidence on those "unresolved comments," the Hearing Officer finds that the plan "complies with the development regulations [Section 32, Title 4] and applicable policies, rules and regulations adopted in accordance with Article 3, Title 7 of the Code," the Hearing Officer is required to approve the development plan. BCC § 32-4-229(b)(1). *See also Elm Street*, 172 Md. App. at 696.

Additionally, Developer's obligation to comply with the applicable regulations does not end with approval of its development plan; the process "is indeed an 'ongoing process,' and the hearing officer's affirmation of the plan is just the first step." *Monkton Pres. Ass'n v. Gaylord Brooks Realty Corp*., 107 Md. App. 573, 585 (1996).

THE GREENSPRING MANOR DEVELOPMENT PLAN

Given that all County agencies recommended approval of the Development Plan, Developer produced strong and substantial evidence in support of the Plan, and Developer effectively rebutted the arguments raised by Protestants, the ALJ should approve the Development Plan.

I. THE COUNTY AGENCIES IDENTIFIED NO "UNRESOLVED COMMENTS OR CONDITIONS" ON THE DEVELOPMENT PLAN.

Representatives of the various Baltimore County agencies who reviewed the Development Plan attended the HOH, including the following individuals: Jerry Chen, Project

Manager (Department of Permits, Approvals and Inspections ("PAI")); Jim Hermann, Baltimore County Landscape Architect (PAI, also reviewing for the Department of Recreation and Parks); Eugene Cauley (PAI/Bureau of Development Plans Review, also reviewing for the Department of Public Works and Transportation ("DPWT")); LaChelle Imwiko (PAI/Real Estate Compliance); Shaun Crawford, (PAI/Office of Zoning Review); Jeff Livingston (DEPS); and Brett Williams (Department of Planning ("Planning")). All agency witness indicated that the Development Plan satisfied all applicable policies, rules, and regulations and each reviewer recommended approval of the Plan:

Office of Zoning Review: Shaun Crawford confirmed that all prior comments made by his Office had been addressed, and there were no outstanding issues with the Development Plan.

Development Plans Review/Department of Recreation and Parks: Jim Hermann testified that the Schematic Landscape Plan had been reviewed and approved. Mr. Hermann further confirmed that the project was far exceeding the open space requirements by providing onsite (providing over 140,000 SF when only 60,000 SF is required) in compliance with BCC § 32-6-108 and the Local Open Space Manual and that he had no outstanding issues related to open spaceOn behalf of both agencies, Mr. Hermann recommended approval of the Plan.

Development Plans Review: Geno Cauley testified that he had reviewed the Development Plan and Developer had addressed all of his comments from the DPC. The traffic study had been approved by SHA and the County had no further comments. *See* Transcript ("T."), 9/1/22, p. 197.[5] With respect to the floodplain study for the project, Mr. Cauley confirmed a study must be accepted for filing prior to the recordation of a plat or issuance of building permits for the project. T. 9/1/22, p. 196. This is consistent with BCC § 32-4-414(d)(3), which specifically states that a floodplain study must be prepared "before the issuance

[5] Protestants and People's Counsel presented comments from Terry Curtis that came a year or more prior to the HOH in this case. Mr. Driban explained the history of his dealings with DPWT and DPR, which resulted in full approval of the traffic study and confirmation that the project will not have any negative impact on the surrounding road network. *See* T. 10/27/22, pp. 230-235; *see also* Dev. Ex. 29-30.

of a permit or the recording of a subdivision plat." Additionally, the Director of DPWT confirmed that no waiver would be required to install a public access road off of Joppa Road to reach the proposed homes in Greenspring Manor. *See* Prot. Ex. 8.

With respect to the "emergency only" gate at the rear of the Property, Mr. Cauley initially stated that the DPR Manual requires it to be a full, open access point unless the ALJ determines that it falls into an exception in the applicable Manual section. *See* Prot. Ex. 9. Mr. Cauley made clear that if the gate issue is resolved, he recommended approval of the Plan as it complies with all applicable DPR and DPWT requirements. T. 9/1/22, p. 235. DPWT recommended approving the Development Plan and deferring the gate issue to the ALJ. *Id*. Additionally, on cross examination from Mr. McCann, Mr. Cauley admitted that he has heard no actual concerns from the Fire Department or DPWT related to the proposed emergency access gate. *Id.* at p. 256. Additionally, he could not state that a sufficient number of units exist for the DPR Manual Policy to apply, and confirmed that if residents from the Meadows or Boxwood community expressed safety concerns due to the potential for increased vehicles using Mays Chapel Road, that could constitute an "unusual circumstance" within the exception to the DPR Policy Manual. *See* Prot. Ex. 9.

Real Estate Compliance: LaChelle Imwiko, representing Real Estate Compliance, initially testified that there was one typo in the Dedication Table on the Red Lined Development Plan with respect to the total drainage and utility easement square footage. Developer addressed the square footage type with a green line (Dev. Ex. 1B), which, in turn, provided Ms. Imwiko with what she needed to recommend approval of the Development Plan.

Environmental Protection and Sustainability: Jeff Livingston appeared and provided testimony on behalf of three divisions with DEPS: Groundwater Management, Stormwater Management, and Environmental Impact Review (EIR). All three agencies recommended approval of the Plan. Additionally, EIR recommended approval of the request for special variance to remove a specimen tree along Joppa Road (Dev. Ex. 13) and Stormwater

Management had approved the concept stormwater management plan, which is all that is required for Development Plan approval.

Department of Planning: Brett Williams provided testimony on behalf of the Department of Planning ("DOP"), which included presentation of the approved school impact analysis (County Ex. 8) and Department's Final HOH Report (County Ex. 7). As explained by Mr. Williams, the Final Report included: (1) confirmation that the project satisfies the requirements of BCC § 32-4-103(f)(3) with regard to school capacity; (2) a statement that the Department has "no objection" to the request for special variance to permit development in the failing traffic shed; (3) a finding as to compliance with BCZR § 260 and Master Plan 2020; and (4) a recommendation of plan approval. ***Id.*** Over the year between the Department's Concept Plan Comments and Final Report to the ALJ, Developer worked with the Department and submitted a point by point analysis that addressed the Department's initial issues. *See* County Ex. 9. Additionally, Mr. Williams testified that the DOP did review the traffic study and has no objection to the ALJ approving the petition for special variance. T. 9/1/22, p. 77. Indeed, Mr. Williams determined the proposed offsite improvements "positively improved, would improve the traffic, the traffic level in this area." *Id*. at p. 100.

As demonstrated above, representatives of each of the County agencies responsible for reviewing and commenting on the Development Plan appeared and, after confirming compliance with all applicable rules and regulations, recommended approval of the Development Plan introduced as Developer's Exhibit ("Dev. Ex.") 1B. These recommendations from the County agencies, absent evidence to the contrary, provide a sufficient basis on which to grant approval of the Development Plan. BCC § 32-4-227(e). *See also Elm Street Development*, 172 Md. App. at 703.

II. DEVELOPER PRESENTED STRONG AND SUBSTANTIAL EVIDENCE TO SUPPORT APPROVAL OF THE DEVELOPMENT PLAN.

Rather than relying on the *Elm Street* presumption, Developer provided independent testimony, through a series of witnesses, confirming that the Development Plan does, in fact, comply "with the development regulations [Section 32, Title 4] and applicable policies, rules and regulations adopted in accordance with Article 3, Title 7 of the Code" and is entitled to approval. *See* BCC § 32-4-229(b)(1).

In its case in chief, Developer presented testimony from Matt Bishop, a professional land planner and landscape architect, with 20 years of experience in preparing and presenting development, zoning, and related plans in Baltimore County. As Mr. Bishop explained, he prepared the Development Plan and the Pattern Book (Dev. Ex. 7) for this project.

He first oriented the ALJ to the Property using an aerial image (Dev. Ex. 3), explained its location on the northside of Joppa Road east of Falls Road within the Urban-Rural Demarcation Line, within which properties are served by public water and sewer, and generally described the neighborhood and surrounding properties. Next, using photographs introduced as Dev. Ex. 5, Mr. Bishop described the current condition of the Property, which is largely a cleared farm field with an existing dwelling located on the southeast side of the Property and accessed off of Joppa Road. As Mr. Bishop explained, the property gently slopes up from front to back and has environmental resources along the border with the Tally Ho communities. There is no forest clearing required given that the Property is already cleared and farmed, and only a single specimen tree is impacted along the Joppa Road frontage.

As a planner, Mr. Bishop looked to the overall area to develop a site plan that fits in context to the surrounding properties. He studied the size of lots in the area and determined there is a wide range from sub-10,000 square foot lots to lots over 30,000 square feet. *See* Dev. Ex. 4. He explained that the Greenspring Manor layout reflects the split-zoned Property (16 homes in DR1, 45 in DR2) and that all lots are large enough to provide decks without the need for

variances. T. 9/21/22, p. 528. He aimed to provide landscaping throughout the project and to maintain a sizeable buffer along the east of the Property closest to the Tally Ho neighborhoods. He also explained that a decorate landscaping berm was added to the rear of the Property at the request of neighbors from the adjacent Meadows community. Additionally, while only 60,000 square feet of open space is required, this project is providing 148,300 square feet. *Id*. The open space program will include walking trails, pavilions, and garden areas for area residents. *Id*. at 530. All of the open space is accessed by public sidewalk and an asphalt walking trail that traverses and connects the open space areas. *Id*. at 531. The approximate cost of the open space improvements is $309,000. *Id*. at 549.

With respect to architecture, Mr. Bishop explained the homes will be a mix of 40, 50, and 54-foot wide single family dwellings that are projected to sell for $800,000 to $1 million. *Id*. at 542. There will be a variety of home types with varying but complementary architecture. *Id*. at 542-543; *see also* Pattern Book, Dev. Ex. 7.

Mr. Bishop provided a high level overview of the proposed stormwater management for the project and its relationship to the floodplain that crosses the front of the Property along Joppa Road. *Id*. at 535-537. He explained that the grading associated with the proposed entrance road will actually improve the situation for the neighboring property to the west along Joppa Road as the floodplain will be reduced west of the access road. *Id*. at 537-539. Additionally, there would be "zero" impact to the Tally Ho neighborhood in terms of stormwater and runoff from the Property. *Id*. at 540.

As a planner, Mr. Bishop explained his analysis of the Transect designation (T3 suburban area) contained in Baltimore County's Master Plan 2020 (MP 2020) and of the project's compliance with § 260 of the Baltimore County Zoning Regulations (BCZR). He testified that the project is "exactly the definition of" T3 development, in that the DR1 and DR2 densities are the lowest density for properties located inside the URDL and the Property is adjacent to higher density homes (Boxwood townhomes immediately adjacent) and commercial development

(Greenspring Station). *Id*. at 555-557. He also analyzed the surrounding properties in the T3 Transect and determined the project is substantially similar to many nearby development. *See* Dev. Ex. 9. Contrary to People's Counsel's apparent assertions, there are more heavily developed neighborhoods in the T3 Transect and even townhomes. *Id.;* T. 9/21/22, pp. 558-62.

Mr. Bishop explained that DPWT identified several sections of the public sewer system that must be upgraded in order to accommodate the homes from this project. Specifically, a segment of the existing line located south of the property across the street from West Joppa Road is currently 8-inches in size and the pipe must be replaced with 12-ince pipe. T. 9/21/22, p. 563. This improvement is shown directly on the Development Plan in the lower left corner. *Id*.; Dev. Ex. 1B. Plans for the sewer improvement have been prepared, submitted, and approved by Baltimore County. *Id*. at p. 564. Mr. Bishop then walked through each and every requirement of BCZR § 260, explaining how the project complies with the regulations. *Id*. at 567-583. He testified that the project complies with § 260 as well as all applicable development regulations, policies, rules and regulations. *Id*. at 583. Protestants did not present any expert testimony regarding the Master Plan, § 260, floodplain, or traffic.

Developer also presented testimony from Erin Kuhn, the highest ranking traffic official at MDOT/SHA's office that governs Baltimore County, and Nick Driban, a professional traffic engineer that studied and prepared the traffic impact study for the project. For the sake of brevity, the bulk of their testimony is summarized in the section of this Memorandum discussing the Petition for Special Variance and is not repeated in this section. However, it must be noted that Protestants did not call any expert witnesses to counter the testimony these experts presented with respect to traffic.

To summarize, the county agencies all testified that the project meets their applicable regulations and should be approved. Developer then presented substantial evidence further supporting approval of the Development Plan. At the conclusion of the Developer's case in chief, the ALJ had substantial evidence supporting approval of the Plan. Protestants proceeded

to make a number of arguments that are individually addressed below. As the following demonstrates, none of their arguments provide a basis for the ALJ to deny the Plan.

III. THE DEVELOPMENT PLAN COMPLIES WITH THE MASTER PLAN.

People's Counsel's involvement in this case was apparently due to their feeling that the project conflicts with Baltimore County's Master Plan 2020 ("MP 2020"). As demonstrated at the hearing, and restated below, this project fully complies with MP 2020.

As an initial matter, the Department of Planning is the agency that reviews projects for compliance with MP 2020, and they confirmed the following in their Hearing Officer's Hearing Final Report:

> The Development Plan is in conformance with the Baltimore County Zoning Regulations, the Comprehensive Manual of Development Policies, as well as the Master Plan 2020. The Department of Planning has reviewed the submitted redline Development Plan and associated materials for the above development for Greenspring Manor and recommends approval.

County Ex. 7.

Indeed, when asked point blank by the ALJ, Mr. Williams confirmed he sees no conflict with the Master Plan or any local plans:

> Q. … Do you see any conflict with the master plan or any of the local community plans?
>
> A. No, I do not.

T. 9/1/22, p. 80.

Additionally, Matt Bishop, who was accepted as an expert land planner and landscape architect, provided substantial testimony confirming the Plan conforms to MP 2020. Mr. Bishop testified at length regarding Baltimore County's "Proposed Land Use Map", which provides the "Transect Designation" for all properties throughout the County. Mr. Bishop pointed to language in the Master Plan confirming that the Map is "conceptual and general and is intended to reflect land use patterns and support the land use objectives rather than identify land use of individual

properties or parcels." MP 2020, p. 27 (People's Counsel Ex. 8). In this case, the Property is located in the T3 Sub-Urban transect, which Mr. Bishop explained is characterized as follows:

> Sub-Urban Zone consists of low density residential areas, adjacent to higher zones that some mixed use. Home occupations and outbuildings are allowed. Planting is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

MP 2020, P. 30 (Developer's Exhibit 8).

Mr. Bishop testified that the project meets this definition as the density is developed under the Property's DR1 and DR2 density (the two lowest density residential zones for land inside the URDL) and is adjacent to a mix of uses including other single family detached homes, townhomes, and commercial uses in Greenspring Station. According to Mr. Bishop, the image in MP 2020 accompanying the T3 transect shows a project substantially similar to the proposed development, while the T2 and T4 transects respectively depict homes much more spread out on larger lots, and attached housing at a much greater density. *Id.* In Mr. Bishop's opinion, the project fully complies with the T3 Transect contained in MP 2020. His analysis of the surrounding T3 Transect revealed higher density homes, and even townhomes, in the same Transect in which the project is proposed. *See* Dev. Ex. 9.

Additionally, Mr. Bishop testified MP 2020 emphasizes that the Baltimore County Zoning Regulations (BCZR) regulate the "uses, intensities, areas and setbacks" on property within the County. MP 2020 p. 179, Dev. Ex. 35. MP 2020 specifically contrasts the purpose of the Proposed Land Use Map by stating that the map "provides general recommendations for future land use within the context of the goals of the Master Plan and aids in rezoning considerations required by the various aforementioned zoning processes." *Id*. Here, the development proposes the density (intensity) that is permitted by right on the Property and does not require any variances to the bulk or area requirements within the Property's zoning classifications. This is further evidence of consistency with the language in MP 2020.

After hearing complaints regarding the size of the lots proposed in Greenspring Manor, Mr. Bishop performed a lot size comparison and demonstrated that the lots are laid out in a substantially similar matter to the surrounding neighborhoods. *See* Dev. Exs. 4, 36. In fact, the Tally Ho neighborhood, where the bulk of the testimony concerning setbacks and lot sizes came from, has many areas with similar or smaller setbacks between the existing homes than are proposed in this community. *See* Dev. Ex. 36.[6] While there is no requirement to be "the same" as your neighbor, Mr. Bishop's testimony and Exhibits demonstrated that Greenspring Manor fits well with the surrounding area, in compliance the T3 Transect designation.

Beyond the Transect designation of the Property, Mr. Bishop presented testimony that the project meets a number of the overall goals of MP 2020, including:

- Direct the future growth within the Urban-Rural Demarcation Line (URDL)
- Develop compact, mixed-use, transit-oriented, and walkable neighborhoods
- Provide a mixture of housing types for an emerging diversity of residents
- Provide adequate open space and recreational opportunities and increase connections to nature by linking open spaces and parks
- Tree planting and buffer conservation
- Reduce pollutant loadings of runoff with enhanced stormwater management
- Protect health of the natural environment and maintain a valuable biodiversity

MP 2020, p. i, Dev. Ex. 35. These are further evidence that the project complies with MP 2020.

Mr. Zimmerman's correspondence and Exhibits lead us to believe he will be arguing that the Woodley Park and Davis Farms cases help to establish that this project conflicts with MP 2020. Each case is easily distinguishable from the case at hand.

In Woodley Park, the ALJ and Board of Appeals denied the development plan because the developer failed to prove the standard necessary to obtain approval for panhandle lots. *See* People's Counsel Ex. 17. The Board of Appeals specifically held that the denial was <u>not</u> based on any conflict with MP 2020, holding "the Board does not agree that the ALJ found a conflict

[6] Additionally, Blandy Becker, to her credit, admitted on cross examination that the size of the lots does not really change any impact that the project may or may not have on the surrounding neighborhoods.

with the Master Plan nor does it agree with the ALJ's opinion as to his requirement to make compatibility findings in all development cases." *Id.* at Board of Appeals Order, p. 20. The Board also specified that the ALJ's comment on MP 2020 "is mere dicta regarding his opinion on the nature of this development and it is ambiguous to the Board as to whether he is definitively finding a conflict with the Master Plan." *Id*.

The Woodley Park case also had a number of significant factual differences from this case, including but not limited to:

- The plan called for the removal of 9 specimen trees;
- The plan proposed panhandle driveways and duplexes;
- The DOP recommended against approval until the hearing, and their change in position was not reflected in any documents prior to the hearing;
- Planning was critical of the proposed duplexes on small lots and could not say whether the proposal was consistent with surrounding neighborhood;
- Access to the property was provided via Woodley Avenue, a small residential street, as opposed to Joppa Road.

People's Counsel Ex. 17.

These substantial differences further demonstrate that the Woodley Park case has no persuasive value to the ALJ with respect to whether the Greenspring Manor project complies with MP 2020.

In Davis Farms, the case was referred to the Baltimore County Planning Board to determine whether the Board believed the plan conflicted with MP 2020. *See* People's Counsel Ex. 18. The Department of Planning recommended a finding that the plan complies with MP 2020, and after hearing argument from all counsel, the Planning Board voted that the project did <u>not conflict</u> with MP 2020. *Id*. However, in Davis Farms, former Councilman Quirk proposed a Resolution overruling the Planning Board and determining that the plan conflicts with MP 2020. *Id*. The Council's action did not come following a quasi-judicial hearing and has no precedential value to the ALJ in this case, where all administrative bodies found no evidence of a Master Plan

conflict. Additionally, like Woodley Park, the project had a number of significant factual differences from this case, including but not limited to:

- The plan called for removal of 22 specimen trees;
- A zoning petition was required for a "density anomaly" to accommodate the project;
- Access was provided through a unique narrow, dead end road with existing traffic issues (and no public improvements proposed);
- Testimony confirmed the project would create a 40% increase in traffic on road;
- Public sewer was provided via 19 grinder pumps and no offsite sewer improvements were proposed to the public system;
- The project was located next to Patapsco State Park;
- The project was found to violate portions of BCZR § 260;
- The proposal was for rear facing lots;
- The developer did not testify or confirm any public outreach prior to the hearing.

People's Counsel Ex. 18.

Again, these factual differences, combined with the fact that no administrative body found a Master Plan conflict following a quasi-judicial hearing, confirm that Woodley Park provides no persuasive support for Mr. Zimmerman's Master Plan argument.

In sum, Mr. Bishop's testimony, and the analysis contained herein, demonstrate that the project complies with MP 2020 and should not be referred to the Planning Board nor denied on the basis of MP 2020.

IV. STORMWATER MANAGEMENT.

As an initial matter, the plan on trial before the ALJ is the Development Plan, not the Final Stormwater Management Plan for this project. The final Stormwater Management Plan will not be reviewed and approved until the permitting stage of the development process. All that is required for approval at this stage is a development plan that shows "[s]tormwater management areas supported by preliminary hydrology computations, and proposed and existing storm drainage systems and verification of suitable outfall." BCC § 32-4-224(a)(10). As the ALJ is well aware, the development process "is indeed an 'ongoing process,' and the hearing officer's affirmation of the plan is just the first step." *Monkton Pres. Ass'n*, 107 Md. App. at 585.

During its case in chief, Developer presented testimony from Matt Bishop explaining that DEPS had approved the Concept Stormwater Management Plan for the project, which contains all of the information that is required to comply with BCC § 32-4-224(a)(10). Mr. Bishop also provided a high level overview of the location and type of stormwater management facilities proposed as part of the project. His testimony added additional detail from the initial DEPS testimony, which confirmed DEPS is the agency is responsible for reviewing Development Plans for compliance with the applicable stormwater management regulations and issued a comment initially dated November 1, 2021, and re-initialed August 26, 2022, confirming that the Plan meets the requirements and should be approved.

Protestants presented testimony from Dan O'Leary in an attempt to undercut the conceptual stormwater management design depicted on the Development Plan and Concept Stormwater Management Plan approved by DEPS. Mr. O'Leary argued that the MDE manual requires developers to treat the "before" condition of agricultural land as "meadow in good hydraulic condition" pursuant to Section 2.4, entitled Overbank Flood Protection Volume Requirements. Prot. Ex. 50. Based on his reading of the Manual, Mr. O'Leary testified that the project does not meet its concept stormwater management requirements.

In rebuttal, Developer presented testimony from Nick Leffner, who was accepted as an expert civil engineer with expertise in stormwater management (among other areas). Mr. Leffner explained that Mr. O'Leary overlooked the statement in the first paragraph of Section 2.4 limiting the application of the overbank flood protection requirements, including the requirement to treat predevelopment agricultural areas as meadows in good hydrologic condition:

> Overbank flood protection for the ten-year storm **shall only be required** if local approval authorities have no control of floodplain development, no control over infrastructure and conveyance system capacity design, or determine that downstream flooding will occur as a result of the proposed development.

Prot. Ex. 50 (emphasis added).

As the introductory paragraph states, the overbank flood protection to which Mr. O'Leary was testifying only pertains to certain jurisdictions. Mr. Leffner confirmed that Baltimore County does in fact control development in the floodplain, infrastructure and conveyance system capacity design, and has not determined that downstream flooding will occur as a result of the proposed development. As a result, the section cited by Mr. O'Leary does not apply in this case.

Furthermore, Mr. Leffner presented a blue lined exhibit confirming that even if Mr. O'Leary was correctly reading the MDE Manual, which he was not, no changes to the Development Plan would be required to calculate and treat the stormwater from this project. *See* Dev. Ex. 42. Based on the County's recommendation of approval, explanation of the information necessary for approval by Mr. Bishop, and confirmation from Mr. Leffner that (1) Mr. O'Leary is incorrect; and (2) even if he was correct no changes to the Development Plan would be necessary, Protestants have not presented any basis for the ALJ to deny the Development Plan on the basis of stormwater management.

V. THE GATE ISSUE.

At the outset, it must be stated that whether the ALJ determines that a gate should or should not be installed in the rear of the Property has no impact on whether the Development Plan should be approved. At DPWT's request, a note was placed on the Plan making clear that the ALJ will determine whether or not to permit the installation of the proposed gate: "to be approved by Administrative Law Judge." *See* Dev. Ex. 1B. Regardless of the ALJ's determination, the plan will meet all requirements and should be approved. Ultimately, the note will either be stricken, or will state "approved by Administrative Law Judge." However, despite the fact that it does not impact project approval, Developer respectfully requests that the ALJ authorize an emergency access gate to be installed because it will have a positive impact on the neighboring residents most affected by this issue.

The purpose of the proposed gate is to provide emergency access to Greenspring Manor in case the access road off of Joppa Road is somehow blocked, but to prevent the creation of a

"cut through" between Joppa Road and Seminary Avenue that could negatively impact the residents of the Meadows and Boxwood communities as well as future residents of Greenspring Manor. The policy potentially impacting the installation of the gate is contained on page 22 of the DPR Policy Manual and is entitled "Access Guidelines." *See* Prot. Ex. 9. The Access Guidelines Policy reads as follows:

B. ACCESS GUIDELINES

1. Maximum Number of Units with One Means of Access

a. Limits of Units

- 100 units with no future street extension proposed
- 150 units when a future street extension is proposed and is feasible
- >15 2nd means of access must be constructed

b. Exception.

These limits may be increased when restricted by a limited or controlled access highway or other physical barrier or limitation as advised by the Department of Public Works.

c. **Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances**.

(emphasis added).

For several reasons, Developer respectfully submits that the Policy does not mandate a second, full-use access connection to Mays Chapel Road.

A. The Policy does not apply because the project does not exceed 100 units with one means of access.

As several witnesses including Mr. Driban and Mr. Cauley (on cross examination by Mr. McCann) confirmed, the project only proposes 61 units with a connection to Joppa Road and a second emergency access point to Mays Chapel Road. The Meadows at Greenspring project contains 99 units and has two separate access points onto Mays Chapel Road. The Boxwood community has approximately 27 units with a single access point onto Mays Chapel Road.

These three separate neighborhoods are clearly identified on Dev. Ex. 27, which confirms there are no neighborhoods exceeding 100 units with only one means of access. Accordingly, the Policy does not apply to this situation or project. The only expert testimony on this issue came from Mr. Driban, who confirmed his belief that the Policy does not mandate two separate access points for Greenspring Manor given the number of units in each neighborhood. T. 10/27/22, pp. 222-223. Indeed, the Policy does not state that multiple access points *to an arterial road* or other specific class of road are required. Each of the projects will have two means of access (or more) if the gate is installed as requested.

B. A full-use access does not promote proper planning principles and does not further the intent of this Policy.

Mr. Driban explained that from a traffic planning perspective, it does not make sense to incentivize traffic to use Mays Chapel Road in lieu of larger surrounding roads such as Thornton Road and Falls Road. *Id.* at 226-227. Higher class roads are designed to handle higher volumes of traffic, and promote more mobility. *Id.* In contrast, Mays Chapel Road is designed to serve residential traffic and does not even have a sidewalk. If gated as proposed by Developer, Mr. Driban confirmed the purpose of the Policy will be fulfilled. *Id*. at 223. In fact, he testified the County's Master Plan and traffic calming literature speak to limiting cut through traffic. *Id*. at 227-228. He also reviewed regulations from neighboring jurisdictions, such as Anne Arundel County, and the Federal Highway Administration, to explain how cut through traffic in residential streets is discouraged. *Id*. at 228-229.

Mr. Nebre made clear that the Mays Chapel connection does not have to be fully open in order for the proposed improvements on Joppa Road to mitigate the impacts of this development. PT. 9/20/22, p. 324. When directly asked by the ALJ whether the Development plan should be approved based on the improvements to the Joppa/Falls intersection even if the gate remains closed or for emergency access only, Mr. Nebre testified that from a traffic perspective it should

be approved. *Id*. at 324-325. Additionally, numerous Meadows and Boxwood residents testified that they use the street for exercise and other community events and strongly oppose opening the road to cut through traffic, which could cause safety issues for residents.

Additionally, the emergency access gate would fulfill the purpose of the Policy by permitting a second access to all three neighborhoods if somehow their primary access point was blocked (fallen trees, floods, etc.) during an emergency. T. 10/27/22, pp. 223-224. While the numerous Meadows and Boxwood residents all testified that there has never been an issue with emergency access with their existing access configuration, the access gate would provide an additional means of access to all three communities in the event of an unanticipated emergency.

On examination by Mr. McCann, Brett Williams, from the Department of Planning, confirmed that the Planning Department supported the installation of an emergency access gate, and that the community was in favor of the gate. T. 9/1/22, pp. 113-114 ("we believe that the connectivity should be done, the connectivity should be there, but only to provide for emergency access due to the negative response from the community.")

C. If the ALJ determines the Policy applies, the resulting cut through is "unusual."

The Policy permits emergency access points to be approved in "unusual" circumstances. As Dev. Ex. 28 demonstrates, Mays Chapel Road would essentially be a straight shot between Seminary Avenue and Falls Road, both of which have "failing" intersections along Falls Road. As several Protestant witnesses testified, it is unusual to have a road with two failing traffic sheds in close proximity to each other. The direct nature of the cut through is also unusual when compared, for example, to the distance between Seminary and Joppa along Tally Ho (6,100 linear feet with 8 speed humps and 7 turns). *Id*. Installation of the emergency access gate alleviates any issues that could be created if a direct cut through is established between two major roads that abut failing intersections with Falls Road. Indeed, Mr. Cauley, on behalf of DPR, testified that "too much traffic going through might be an unusual situation." T. 9/1/22, p. 234. For these reasons, the ALJ should either find that the Policy does not apply, or that the

request meets the exception in the Policy and should be approved to promote good traffic circulation in an unusual circumstance.

VI. THE DEVELOPMENT COMPLIES WITH BCZR § 260.

Mr. Bishop testified in detail about each and every requirement in BCZR § 260. Additionally, the Department of Planning issued a statement confirming they had reviewed the plan and pattern book for compliance with § 260 and recommend approval. This section is included in the memo because Mr. Zimmerman asked Mr. Bishop an issue related to the road connection to Mays Chapel Road. Section 260.4.A.1 contains the following requirement:

> Provide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation.

In this case, the plan does provide an additional street connection to Mays Chapel Road, but proposes to gate the access for the reasons stated above. As explained in detail herein, and as Mr. Driban specifically testified, installation of the gate will facilitate good traffic circulation because it will promote the use of higher class roads in lieu of a residential street that is not equipped to handle the potential volume of cut through traffic that would result if the gate is not installed. T. 10/27/22, pp. 229-230. As the Plan does propose an additional street connection, and gates the access point to promote good traffic circulation, the Plan (with the gate) complies with § 260 and should be approved. Indeed, the Department of Planning supported providing the connection for emergency access and confirmed the addition of sidewalks would provide proper circulation and connectivity between the project and the adjacent neighborhoods. T. 9/1/22, pp. 113-114.

For these reasons, the record demonstrates that the project fully complies with BCZR § 260 and should be approved with the emergency access gate in place.

VII. SEWER CAPACITY.

A. The Protestants did not Present any Evidence that Warrants Denial of the Development Plan for any Issues related to the County Sewer System.

DPWT – the agency responsible for the study, operation, management, maintenance, and comprehensive planning of the County's sewerage system – not only recommended approval of the Development Plan (through DPR), but also specifically determined that the sewer system has adequate capacity to handle the 61 new units proposed on the Development Plan, subject to the completion of a handful of offsite improvements to the sewage system. *See* Dev. Ex. 55. Of course, under *Elm Street*, the recommendation by DPR/DPWT in favor of approving the Development Plan establishes a presumption that the Plan complies in all respects with applicable laws, policies, rules, and regulations applicable to those agencies, unless the Protestants can adequately demonstrate some sort of non-compliance. Further, the Appellate Court of Maryland in *Md. Securities Com'r v. U.S. Securities Corp.* held that "in the absence of evidence to the contrary, administrative officers ... [are] presumed to have properly performed their duties and to have acted regularly and in a lawful manner." 122 Md. App. 574, 58 (1988). Accordingly, without any evidence to the contrary – and there is none in the record – DPWT shall be presumed by the ALJ to be operating, managing, maintaining, and comprehensively planning the County sewage system properly and effectively, and the Development Plan was deemed compliant with applicable laws, etc., at the outset of the hearing.

Over the course of their numerous days of presenting their case, the Protestants spent a significant amount of time attempting to demonstrate that the County's sewer system downstream of the Property has certain problems that should compel the ALJ to withhold approval of the Development Plan. In doing so, the Protestants dwelled on the past, attempted to rewrite some of the history surrounding the County sewer system, relied heavily upon theoretical

studies and corresponding conjecture, and attempted to invent allegedly acute "problems" within the system that require immediate rehabilitation, which simply do not exist. They simply failed to: (i) generally present any evidence to demonstrate that DPWT is somehow acting inappropriately or in some other way that is detrimental to the operation of the sewage system; and (ii) rebut the presumption in favor of Development Plan approval following DPR/DPWT's recommendation of approval with any compelling evidence to demonstrate how the Plan somehow fails to comply with applicable laws, policies, rules, or regulations.

For its part, the Developer presented strong rebuttal testimony through expert professional engineer Nicholas Leffner and accompanying exhibits that: (i) support DPWT's recommendation of Development Plan Approval; (ii) confirm the County's compliance with the Consent Decree; (iii) confirm the adequacy of the overall sewerage system and the capacity to handle the modest additional sewage that would be generated by the new homes; and (iv) reinforces the specific improvements required to the sewer system in order to repair the only known acute issues that must be addressed prior to connection of the proposed new homes to the system. Accordingly, for all of the reasons explained in detail below, the ALJ should approve the Development Plan, subject to an appropriate condition that the limited improvements identified by DPWT be completed prior to the issuance of any use & occupancy permits for the homes within the proposed development.

B. A summary of the Protestants' case.

Through the testimony of Randall Grachek, Robert Summers, and a handful of neighbors, Protestant attempted to demonstrate that the public sewer system, into which the project would flow, is not adequate to handle the anticipated flows from the project and that the Plan should, therefore, be denied. Initially, the Protestants offered a handful of neighbors who testified about

problems with the sewer lines serving their homes (situated in the neighborhoods to the east of the Property). However, the neighbors really did not know the source of the problems (i.e., whether within the public system in their street or the private line between the street and their homes), and in all instances Baltimore County immediately came out to resolve the respective problem affecting their home. This testimony simply provided no compelling evidence of any widespread "capacity issues" – or any other chronic issue whatsoever – within the sewer system.

Next the Protestants offered Mr. Grachek, and at the foundation of his testimony lies the investigation and work that he undertook *nearly five years ago*, in conjunction with the *CPC Falls Road Project/Bluestem ("Bluestem")*[7] matter that dealt with a property several miles away on Falls Road, near the Baltimore City line. As part of that case – as well as this one – he identified the 2005 Consent Decree entered into between Baltimore County, the Maryland Department of the Environment ("MDE") and the United States Environmental Protection Agency ("EPA") as having dictated the evaluation and repair of the sewer system within the Jones Falls Sewershed ("JFS") (that includes the Property and areas downstream) and throughout the County. *See* Prot. Ex. 65. He also correctly identified a number of other reports generated in response to the Consent Decree, including a 2012 Sewershed Repair, Replacement and Restoration Plan ("SRRR Plan") and a 2012 Long-Term Capacity Report ("LTC Report"). *See* Prot. Ex. 67 & 68. However, his erroneous conclusions drawn from his review of these documents, his misplaced reliance upon several other documents, the numerous assumptions he has made without documentary evidence and/or a thorough understanding of certain evidence provided to him by Protestants' counsel, and his failure to have reviewed certain relevant

[7] *See CPC Falls Road Project/Bluestem*, PAI Case No. 09-0861.

portions of the County's files, collectively, have significantly clouded his testimony and correspondingly minimized its reliability and effectiveness.[8]

It became perfectly clear shortly into Mr. Grachek's testimony that his opinion was going to track the opinions that he previously provided in the *Bluestem* case, as well as in the *Torch Hill* case,[9] wherein he opined that the County's sewer system was deficient and lacked adequate capacity to serve the proposed development in those cases. He has had nearly five years to hone his narrative, which involves his formulation of numerous erroneous assumptions and the mistaken heavy reliance upon unverified and inapplicable computer modeling. In short, Mr. Grachek erroneously contends that the Consent Decree, SRRR Plan, and LTC Report *require* the County to undertake improvements to its sewer system that were recommended under computer modeling performed to mimic *massive* storm events (i.e., hurricane level storms) that are *not* representative of the types of rainfall events in this region; in fact, these three documents did *not* require improvements to be performed in accordance with the models that Mr. Grachek favored.

His testimony did evolve somewhat in this case, where he pointed to certain data assembled by a third party – whom he eventually identified as Mr. Tom McCord – in an attempt to assert that, even under the 10-year storm scenarios (which are the ones that informed the improvements required to be performed under the SRRR Plan approved by MDE and EPA) there are capacity issues elsewhere in the sewer system. He also pointed to a map appended to the

[8] Protestants' Counsel stated several times about how he had personally filed PIA requests with DPWT, and, at one point, noted that he had been provided with over 8,000 documents in response. Remarkably, Mr. Grachek admitted on cross examination that he had only reviewed somewhere between 50 and 106 of those documents in preparation for his testimony. *See* T. 4/11/23 P. 138. Despite not having even close to the full complement of materials from DPWT's files, he nevertheless attempted to upend the presumption in favor of Development Plan through passive criticism of: (i) DPWT's response to the Consent Decree and (ii) DPWT's evaluation of the available capacity in the sewer system to accommodate the project. The consequences of Mr. Grachek's limited review of materials also shone through in the *significant* amount of assumptions he made throughout his testimony and his failure to understand the sources for a number of the exhibits upon which he relied. *See, e.g.,* T. 2/10/23 p. 241-46, 259-60, 266-67; T. 4/11/23 p. 154.

[9] *See Torch Hill*, PAI Case No., 09-0919.

2021 RJN Performance Assessment Report and contends it demonstrates that, even after the improvements made to the sewer system in response to the SRRR Plan, there are modeled capacity issues along the stretch of the sewer system just downstream of the Property. As explained below, these attempts to demonstrate some sort of capacity problem simply did not do so.

Mr. Grachek then produced a smattering of exhibits regarding E. coli levels in Lake Roland and apparent "warnings" about the water quality there. What he failed, to produce, however, was any documentary or demonstrative evidence that the proves the E. coli levels measured in Lake Roland are: (i) from human waste; or (ii) caused by any sanitary sewer overflow ("SSO") or any other defect in the sewer system. Instead, he simply *assumed* that there must be some overflow or defect that is causing an actual leak of sewage into the County water system and that it must be causing the infrequent elevated E. coli levels measured in Lake Roland. Mr. Grachek admitted on cross examination that he had not reviewed any of the quarterly or annual reports filed by the County in conformance with the Consent Decree (see Dev. Ex. 47-54), which provide explanations of all of the progress in the County's implementation of SRRR plans throughout all sewersheds, as well as explanations of the presence of SSOs (or lack of presence of them) in sewersheds during the respective reporting periods. *See* T. 2/10/23, p. 202-03. Interestingly, these reports were apparently *not* among the 50 to 106 documents Protestants' counsel and Mr. McCord provided to Mr. Grachek – they almost assuredly would have been among the materials included in the PIA response, and, regardless, are available on the County website. Had he reviewed these reports, he would have seen that there has been *great progress* of the County in the last three years in implementing the SRRR Plan within the JFS and that there were no reports of any major issues within the JFS,

including no reports of SSOs that could be discharging into waterbodies that drain into Lake Roland during the reporting period.[10]

The final point that Mr. Grachek attempted to make was that DPWT's ongoing efforts to proactively maintain its sewer system – through implementation of a comprehensive future planning study performed by Hazen, and a proposal by Ramboll to reline certain aging sewer lines within the JFS – was some sort of indictment on current capacity or efficacy of the system. He also opined that both Hazen's and Ramboll's work are required under and in response to the Consent Decree, when there is zero evidence to support that allegation. Although the Protestants certainly want the ALJ to believe that the County's proactive retention of Hazen and Ramboll is some sort of "admission" of problems that somehow demonstrate a failure to comply with the Consent Decree, even Mr. Grachek admitted on cross examination that at least the Ramboll scope of work constituted "preventive maintenance" on the sewer system. *See* T. 2/10/23 p. 262.

Following Mr. Grachek, the Protestants offered Mr. Summers, who was a longtime employee at MDE, holding several positions while there, including a limited run as Secretary. Mr. Summers largely echoed the opinions of Mr. Grachek. While he offered some exhibits purporting to shed some light on wastewater disposal system designs and E. coli sources within the JFS, the presentation of his testimony seemed to be Protestants' attempts to have two separate experts offer virtually the same opinion, built upon the same flawed evidence, and rooted in the same unfounded assumptions.

In summary, the Protestants want the ALJ to believe there are major capacity issues in the County's sewer system, that the issues can only be solved through significant repair and replacement work (some of which they may not even be able to identify or to articulate the scope

[10] Even the Marnat Road structured SSO that remains active within the JFS, but well west of – and not along any waterbody that drains into – Lake Roland has not experienced an SSO since 2020.

of), and that the Development Plan cannot be approved until all of the work they feel must be complete is complete. What the Protestants ask of the ALJ is, effectively, to impose a judicial moratorium on development within the JFS. They feel that the ALJ should not approve this Development Plan – and undoubtedly any development – within the JFS, until certain unidentified and unplanned improvements are made to the sewer system that presumably will cause certain speculative and unverified models to reflect acceptable future modeled conditions within the JFS. They also feel that the ALJ cannot approve the Development Plan until the County's ongoing forward thinking long-term evaluation by Hazen and the preventative maintenance proposed by Ramboll are complete, both of which could take *years* and in the case of Hazen even decades. These are simply untenable positions taken by Protestants, which are completely unsupported by the evidence in the record and applicable law, and the ALJ should reject them and approve the Development Plan.

C. A 1,000 foot view of the Developer's rebuttal.

The Developer presented the testimony of expert professional engineer, Mr. Leffner, who has 15 years of experience designing sewer systems and evaluating sewer system capacity. *See* T. 5/31/23 p. 7. He has worked on hundreds projects in which he has performed sewer design/capacity evaluation services. *Id.* at 8. He reviewed hundreds of pages of documents in preparation for his testimony and, unlike any of the Protestants' witnesses had *directly engaged with representatives of DPW&T in order to understand the intricate details of the Consent Decree, the other reports generated in response to the Consent Decree, the sewer system improvements performed by the County, and the resulting impacts those improvements have had on the performance of the system*. He provided a fresh and enlightening description of the state of the sewer system within the JFS, while informedly refuting and flatly rejecting the Protestants' testimony and evidence.

His approach was rather simple. He effectively marched through the inner workings of the Consent Decree, to describe how it has been applied and followed by Baltimore County in regards to the JFS from its inception in 2005 through to today. *See* T. 5/31/23 p. 47-136. While his testimony and the contents of the salient documents are described in greater detail below, as a baseline, Mr. Leffner demonstrated that: (i) under the Consent Decree, Baltimore County agreed to develop and to implement measures with *the express goal of eliminating SSOs from its sewer collection system* (*see* Prot. Ex. 65, p. 8; T. 5/31/23 p. 48-49); (ii) in order to evaluate the baseline conditions, the County agreed to inspect the sewer system, to identify defects within the system, to monitor inflow/infiltration into the system, and to investigate the capacity of the sewer system (*see* T. 5/31/23 p. 51-52); (iii) the integral document that described the system evaluation and then provided the measures required to achieve the Consent Decree's goal of eliminating SSOs was the SRRR Plan (*see id.*, p.52-77; Prot. Ex. 67); (iv) the RJN Performance Assessment demonstrates how the improvements implemented under the SRRR Plan have been successful in reducing SSOs (*see* T. 5/31/23 p. 77-87; Prot. Ex. 78); (v) the quarterly and annual reports produced by Baltimore County in accordance with the Consent Decree demonstrate the progressive improvement of conditions, and the reduction of unstructured SSOs, within the JFS (*see* T. 5/31/23 p. 100-07; Dev. Ex. 48-54); (vi) there is no causal evidence supporting the notion that occasional E. coli level spikes in Lake Roland are related to SSOs, but plenty of evidence to the contrary (*see* T. 5/31/23 p. 116-27; Dev. Ex. 56-63); and (vii) the County is doing an excellent job in being forward thinking in its approach to monitoring and planning ongoing maintenance of the sewer system within the JFS (*see* T 5/31/23 p. 131-35).[11]

[11] All of the various documents in evidence refer to constructed SSOs and non-constructed SSOs. Constructed SSOs are manholes or other structures that were specifically designed/constructed to provide an overflow outlet for sanitary sewerage, as a means of providing relief to the system. Over the course of years, the County had installed a handful of constructed SSOs within the system, as a relief to the system,

Mr. Leffner effectively shut the door on the fantastical narrative spun by the Protestants during their presentation, and his testimony should compel the ALJ to agree that, with regard to the sewer issues raised by the Protestants, the Development Plan should be approved, subject to a limited condition pertaining to incomplete work required to the sewer system.

D. The Consent Decree and SRRR Plan clearly and adequately identify the sewer system work that was necessary to reduce SSOs and to improve system capacity, while the LTC Report merely informed the determination of the work required under the SRRR Plan.

Notwithstanding the Protestants' attempts to obfuscate the clear terms of the Consent Decree, a review of the document makes clear that it is the SRRR Plan – not the LTC Report – that dictates improvements that must be made within the JFS. The LTC does serve an important purpose in informing the decisions made under the SRRR Plan, but it simply does not do anything more than that.

As noted, the chief goal of the Consent Decree is to ensure the elimination of SSOs within the County's sewer system. *See* Prot. Ex. 65, p. 8. The Consent Decree also makes it perfectly clear that the primary tools to be utilized in determining the improvements necessary to achieve that goal are the SRRR Plans. Specifically, the Consent Decree provides:

> Following completion of the Collection System Inspection required by Paragraph 8, and considering the rainfall and flow monitoring data collected pursuant to Paragraphs 7.D. and 9, Baltimore County shall prepare a Sewershed Repair, Replacement and Rehabilitation Plan ("SRRR Plan") for each Sewershed that describes the deficiencies identified through the Collection System Inspection and provides for the performance of any repair, replacement, rehabilitation or other corrective action necessary to address those deficiencies.

---

and the Consent Decree – as well as all plans and reports generated in response to it – seeks to eliminate these constructed SSOs. *See* Prot. Ex. 65, p. 9-11. The non-constructed SSOs are those overflows that happen spontaneously within the system, typically due to some blockage in the system or some other issue that may unexpectedly cause an overflow to occur within a standard manhole structure. Given that they had been "unexpected" or "unplanned," the measures implemented in accordance with the Consent Decree are, at least in part, meant to eliminate these non-constructed SSOs.

Prot. Ex. 65, p. 31. Upon inspection, the ALJ will undoubtedly find that, outside of the Consent Decree, the SRRR Plans are, literally, the operative documents for Baltimore County's efforts to address the sewer system issues. They summarize and take into consideration all of the other evaluations required under the Consent Decree – including the LTC Report – and they then provide solutions to address the particular issues within each sewershed. *See, e.g.*, Prot. Ex. 67. And, in accordance with the Consent Decree, they are required to be reviewed and approved by MDE and EPA. *Id.* at pp. 34, 75-76.

Within the JFS, Baltimore County retained the engineering firm Rummel, Klepper & Kahl, LLP ("RKK") to prepare the required SRRR Plan, which was submitted to and approved by MDE and EPA. *See* Prot. Ex. 67; Dev. Ex. 43; T. 5/31/23 p. 53-55. In developing the SRRR Plan, Mr. Leffner described how the Consent Decree required RKK and the County, among performing other analyses and evaluations, to prepare a LTC Report for the purpose of evaluating the potential operation of the sewer system under various design storm event criteria. *See* Prot. Ex. 65, p. 32-33; T. 5/31/23 p. 50-52. RKK expressly utilized the LTC Report for that purpose when preparing the SRRR Plan for the JFS, and RKK appended the LTC Report to the SRRR Plan, as Appendix L. *See* Prot. Ex. 67, p. ES-1, 1-1, 5-1, 6-1, 6-12, 6-13. However, RKK explained in the SRRR Plan how it did *not* adopt or require all of the improvements recommended for all of the design storms studied under the LTC Report; rather it targeted certain improvements to reduce inflow and infiltration ("I/I") into the system – particularly in areas where I/I was exceedingly high – which would facilitate the required elimination of SSOs under anticipated wet weather conditions comparable to those experienced in Baltimore County. *See id.*, p. 6-12, 6-13, 6-16, 6-17.

Despite the Protestants' claims to the contrary, as Mr. Leffner noted, the LTC Report itself did not require any improvements whatsoever; rather, it was meant to inform RKK and the County for purposes of providing the final sewer system improvements required under the SRRR Plan. *See* T. 5/31/23 p. 50-52. Under the Consent Decree, the LTC Report was expressly

intended to be used "*to evaluate* whether the construction projects required by Paragraph 7.D. of the Consent Decree and the projects *Baltimore County proposes to complete pursuant to Paragraph 10* will ensure adequate long-term transmission capacity in the Collection System." Prot. Ex. 65, p. 27. The Consent Decree further provided that the SRRR Plan – which is expressly described in *Paragraph 10* of the Consent Decree – was the document that controls and "describes the deficiencies identified through the Collection System Inspection and provides for the performance of any repair, replacement, rehabilitation or other corrective action necessary to address those deficiencies." *Id.*, p. 31.

Indeed, the Consent Decree specifically describes how an LTC Report – one of which, as noted, was appended to the JFS SRRR Plan – was meant as a source to inform the ultimate identification of the corrective actions required under the SRRR Plans: "Within each SRRR Plan, Baltimore County shall:…vi. Propose a plan and schedule for implementing rehabilitation and other corrective action determined necessary to correct deficiencies in the relevant Sewershed identified during the inspections required by Paragraph 8, *taking into consideration the Long Term Capacity/Peak Flow Management analysis performed for the relevant Sewershed pursuant to Paragraph 9*." Prot. Ex. 65, p. 32 (emphasis added); *see also* T. 5/31/23 p. 50-52.

For the JFS evaluations conducted by RKK, the LTC Report provided the results of model simulations of the JFS using five design storm events. Based on that modeling, corrective actions were suggested and categorized by design storm event – i.e., different levels of corrective actions were determined based upon each hypothetical design storm event. *See* Prot. Ex. 68, Maps 4.1, 5.1, 6.1, 7.1, and 8.1. However, the LTC Report for the JFS did *not recommend or require* the County to adopt a particular design storm event criterion; it just provided a roadmap for potential corrective action, should the County choose to pursue design in accordance with particular storm event criteria. In fact, the Consent Decree made it perfectly clear that, even though the County was required to model for various storms, it was not required to implement improvements that would be responsive to all of them. It specifically permitted the County to

utilize "an alternative rainfall distribution that is more representative of Actual Baltimore County rainfall patterns." *Id.* p. 22; *see also* T. 5/31/23 p. 52-53.

Indeed, that is exactly what RKK and the County did when adopting the SRRR Plan for the JFS. Section 6.7 of RKK's SRRR Plan plainly explains that, while the LTC Report evaluates numerous types of storms, "as stipulated in Paragraph 9.C.ii(b) of the CD, the County may utilize an alternative rainfall distribution." Prot. Ex. 67, p. 6-12. The SRRR Plan furth explains that "[t]he County has reviewed various rainfall distribution methodologies and believes the recommendations outlined in the Maryland Hydrology Panel's Application of Hydrologic Methods in Maryland report are more representative of actual storm events experienced in Baltimore County and will result in more accurate predictions of the synthetic design events compared to the SCS Type II storm events [analyzed in the LTC Report]." *Id.* Ultimately, the SRRR Plan concludes that "[b]ased on a review of the Panel's analysis, the County recognizes that deficiencies exist in the synthetic design storm procedure and concurs that the 2- and 10-year/6-hour design storms are more representative of actual County rainfall patterns." *Id.*, p. 6-13; *see also* T. 5/31/23 p.

Prior to applying these anticipated rainfall patterns in their modeling for the SRRR Plan, RKK first evaluated the effectiveness of remedial corrective action previously taken by the County to eliminate structured SSOs and to perform other pre-determined sewer system improvements, as required under the Consent Decree. *See id.*, p. 2-1 to 2-5; *see also* Prot. Ex. 65, p. 9-16. RKK also performed a flow monitoring analysis "[t]o characterize flows within the sewage collection system and correlate rainfall to inflow and infiltration (I/I)." Prot. Ex. 67, p. 3-1; *see also* Protestants' Exhibit 65, p. 22-26. Additionally, RKK performed a thorough inspection of the sewer system, including manhole inspections, closed circuit television inspections, smoke testing, and dyed-water testing, in order to evaluate and to rank/rate the

physical condition of the infrastructure. *See* Prot. Ex. 67, p. 4-1 to 4-12; *see also* Prot. Ex. 65, p. 17-22.

Ultimately, the SRRR Plan outlined a plan for implementing the *necessary* repair, replacement, rehabilitation, and other corrective actions to address identified deficiencies, in order to achieve the stated goal of eliminating SSOs. *See* Prot. Ex. 67, p. 6-1 to 6-17; T., 52-77. In evaluating the *necessary* corrective actions, Baltimore County, under the watchful eye of EPA and MDE, utilized the approved "alternative rainfall distribution" for its modeling. *See* Prot. Ex. 67, p. 6-12 to 6-13; T. 5/31/23 p. 52-53. This modeling resulted in the scope of work described in Section 6 – Corrective Action Recommendation Plan – of the SRRR Plan. *See* Prot. Ex. 67, Table 6-5.3 (summary of the recommended sewer and manhole corrective action by flow meter basin); Table 6-6.1 (summary of the recommended capacity improvements by meter basin); and Map 6-1 (graphic depiction of capacity and structural condition improvements recommended by the SRRR Plan); T. 5/31/23 p. 52-77. It was ***only these specified improvements*** within the SRRR Plan that were required, which improvements were expressly targeted to (i) comprehensively reduce I/I; (ii) selectively perform capacity improvements; and (iii) correct certain identified structural deficiencies. *See id.*, p. ES-1 to ES-2; T. 5/31/23, p. 52-77. As Mr. Leffner noted, while the LTC Report was among the ***plethora of information*** RKK utilized in formulating the Corrective Action Recommendation Plan, there simply is ***no obligation*** for Baltimore County to separately perform any scope of work hypothesized in the LTC Report that was not otherwise contained within the Corrective Action Recommendation Plan section of the SRRR Plan. *See* T. 5/31/23 p. 50-77, 139-46.

E. The work performed in accordance with the Consent Decree and SRRR Plan to date has, in fact, reduced SSOs and increased system capacity.

In addition to specifying the ways in which the County was to evaluate its sewerage system and to implement improvements to it through the SRRR Plans, the Consent Decree required the County (i) to undertake assessments of the performance of the work required under the SRRR Plans; and (ii) to produce quarterly and annual reports on various aspects of the sewer system's performance. *See* Prot. Ex. 65, p. 34-35, 67-74. The County has prepared and produced these reports/assessments over the course of many years. *See* Prot. Ex. 78; Dev. Ex. 48-54. Collectively, they demonstrate the success of the improvements performed in the JFS, including a significant reduction in SSOs, in accordance with the goals of the Consent Decree. Furthermore, despite their attempts, the Protestants' simply have *not* demonstrated some sort of widespread sewer system capacity issue within the JFS.

i. The 2021 RJN Performance Assessment revealed positive results stemming from a significant amount of work performed under the SRRR Plan.

Paragraph 10.E of the Consent Decree required the County "to conduct a Performance Assessment of the work performed in each Sewershed as required under Paragraphs 7, 10, and 13 to determine the effectiveness of the evaluation and corrective action work performed." Prot. Ex. 65, p. 34-35. Each report was required, at a minimum, to: "(a) evaluate the number and causes of SSOs that occur on an annual basis in each Sewershed; (b) quantify the reduction of I/I in each Sewershed; (c) evaluate the effectiveness of repair, replacement, and rehabilitation projects in addressing structural and/or capacity issues; and (d) evaluate the effectiveness of preventative and proactive maintenance practices in reducing root, grease, and other blockages." *Id.*, p. 35.

In 2021, RJN Group, Inc. prepared a Performance Assessment Report for the JFS, which evaluated the County's efforts performed within the JFS performed over the period of time

between 2010 and 2019. The report identified all of the improvements performed under the SRRR Plan as of the date of the Report, which were depicted on Map 2, appended to the Report. *See* Prot. Ex. 78. While the total number of improvements completed at the time were less than the total required under the SRRR Plan, a significant portion of the required improvements had been completed, including hundreds of improvements required within the Timonium area that were expressly targeted to comprehensively reduce I/I within the system. RJN evaluated all of the improvements made up to that point, and it ultimately concluded that: (i) "the completed rehabilitation projects in [sewer meter] basins BC02, BC04, and BC09 (i.e. Timonium) were effective in reducing groundwater infiltration and exceeded the predicted base infiltration reductions in the 2013 SRRR Plan"; (ii) "I/I reduction rehabilitation and relief sewer construction in Jones Falls reduced predicted overflow volumes between 89 and 100 percent in total, for those basins where comprehensive I/I reduction rehabilitation was performed, or relief sewers were constructed"; (iii) "[n]on-constructed [sewage] overflows trended downward during the overall 2010 – 2019 evaluation period…[and] [t]here were *no discharges attributed to high flows during the assessed post-rehabilitation period*"; and (iv) "[o]verall the results of the performance assessment indicate that the rehabilitation performed, and relief sewers constructed or planned, were effective." Prot. Ex. 78, p. iv.

In regard to the chief goal of the Consent Decree to reduce and eliminate SSOs, it is important to review Section 2.3 of the RJN Report, which addresses "Non-Constructed Overflows." *See id.*, p. 6. As that section explains, "[n]on-constructed overflows are SSOs that occur from a County manhole or gravity sewer that is not an intentionally constructed non-pump station overflow structure" and they "can be caused by blockages, defective pipes, or high flows." *Id.*, p. 6. This section, and particularly Figure 2-1, demonstrate that SSO volumes have

progressively trended downward over time, and that outlier years with larger volumes are attributable to force main breaks (in 2016) and excessive rainfall (in 2018). Additionally, all of the constructed SSOs within the JFS have been eliminated, except for one – located on Marnat Road – that is located in the far western part of the JFS and is not situated within the path of the sewerage that would flow from Greenspring Manor. *See* Prot. Ex. 78, p. 5-6.

Again, at the very end of the Report, RJN reiterated that "the results of the performance assessment indicate that the rehabilitation performed and relief sewers constructed were effective." *Id.*, p. 19. And it explained how "[t]here out of the four constructed overflows have been eliminated. The volume of non-constructed SSOs have begun to decrease in the post rehabilitation monitoring period and the model predicted SSO volumes are projected to decrease 90 to 100 percent." *Id.* This objectively paints a very good picture for the health of the JFS as of 2019.[12]

ii. The quarterly and annual reports produced for the time periods since 2019 likewise reveal positive results.

Section VI of the Consent Decree imposes certain Reporting Requirements upon the County, in the form of quarterly and annual reporting for the County's entire sewerage system, not necessarily broken down by sewershed. *See* Prot. Ex. 65, p. 67-74. The quarterly reports are required to contain summarizations of: (i) discharges, flow meter installations, and mitigation measures from structured SSOs; (ii) construction activity performed during the quarter; (iii) progress on sewer system inspections; (iv) progress in implementing the SRRR Plans; (v)

[12] Mr. Grachek insisted that the RJN report only addresses the performance of work in four meter basins, and not the overall JFS. *See* T. 2/10/23 p. 98. The plain language of the report confirms that it assessed the performance within these basins, but it also looked at the elimination of constructed SSOs, the performance of pump stations, the County's FOG program, basement backups throughout the JFS, and SSOs throughout the sewershed. Map 2 appended to the report also confirms the work performed throughout the JFS, which informed RJN's assessment. *See* Prot. Ex. 78. Mr. Leffner flatly disagreed with Grachek and pointed out all of the various aspects of the RJN report that addressed things other than the four meter basins. *See* T. 5/31/23, p. 80-81, 172-74.

progress in implementing the County's Fats Oils and Grease ("FOG") Program; (vi) progress in completing certain supplemental environmental projects required under the Consent Decree; and (vii) issues that may prevent compliance with the Consent Decree. *See id.*, p. 67-70. The annual reports are required to contain summarizations of: (i) progress in implementing the plan to eliminate structured SSOs, including post-elimination monitoring; (ii) annual rainfall evaluations and ongoing flow monitoring; (iii) completion of I/I evaluations; (iv) progress in implementing the County's FOG Program; (v) any discovered illegal stormwater discharges into the sewerage system; (vi) performance of pump stations; (vii) completion of required modeling; (viii) performance of required sewer system inspections; (ix) completion of required gravity sewer line cleaning; (x) completing inventory of the sewer system; (xi) any deviations from the Emergency Response Plan; and (xii) any building backups discovered. *See id.*, p. 70-74.

During the rebuttal case, the Developer produced the annual reports from 2019, 2020, and 2021, as well as the quarterly reports from 2019, 2020, 2021, and three quarters of 2022. *See* Dev. Ex. 48-54; *see also* T. 5/31/23 p. 99-107. A thorough review of these documents in sequential order tells a remarkable story about the JFS, including highlights like: (i) reports of completion of the SRRR Plan in 2019, subject to time extensions for a limited number of assets (*see* Dev. Ex. 48); (ii) reports of subsequent competition of many of the remaining incomplete assets, subject to time extension for only 10 remaining assets (*see* Dev. Ex. 50, 52); (iii) explanations that, the incomplete assets "have no effect on performance of the collection system" (Dev. Ex. 52); (iv) Countywide reductions in discharges from structured SSOs from 2019 through 2022, including *zero* such discharges in one quarter of 2022 (*see* Dev. Ex. 54); (v) *no discharges from the Marnat Road structures SSO within the JFS since 2020* (*see* Dev. Ex. 52, 54); and (vi) no other mentions of any other Consent Decree compliance problems whatsoever

within the JFS, including no mention of any chronic or rampant SSOs (*see generally* Dev. Ex. 44-52).

Indeed Mr. Leffner specifically noted the import of these reports in that they: (i) described the County's progress in complying with the Consent Decree; (ii) provide updates on work recently completed and remaining work, the latter of which has decreased over time; (iii) explain that there have been a significant reduction in SSOs over time, including zero reported constructed SSOs since 2020 in the JFS; and (iv) no other reports of noncompliance with the Consent Decree, including no reports of non-constructed SSOs. *See* T. 5/31/23 p. 105-07.

In short, by all accounts of the official reports required to be produced under the Consent Decree, the sewer system within the JFS appears to be performing very well. And the Protestants did not produce any evidence to the contrary. Amazingly, the Protestants *had not even reviewed the quarterly or annual reports in any meaningful way.*

iii. The Protestants produced <u>zero</u> evidence demonstrating actual acute problems within the JFS that require immediate attention or would otherwise compel denial of the Development Plan.

The Protestants' case is built *entirely* on theories, suppositions, unsubstantiated data, and corresponding circumstantial evidence. They point to and rely upon a handful of charts and maps, which have been prepared using computer models, at least some of which are unverified, for the premise that, because the models show *the potential for* issues within the sewerage system, then there must be actual issues. And, based on this theoretical potential that is supported only by the circumstantial materials that the Protestants produced, the Protestants are demanding that the ALJ deny the Development Plan. In other words, they effectively demand a moratorium on all development within the JFS. Their demands, their position, and their substantial reliance upon modeling is flawed for at least three reasons: (1) some of the modeling has not been field verified by the County or any third party; (2) there is otherwise zero evidence

that demonstrates any *actual* SSOs, capacity problems, or other noteworthy issues with the system that would compel denial of the Development Plan; and (3) the quarterly and annual reporting required under the Consent Decree demonstrates that, in fact, the County's efforts have progressively improved the sewer system throughout Baltimore County, including the JFS.

The Protestants rely heavily upon two sources to make their point: (i) the LTC Report; and (ii) Map 3 appended to the RJN Performance Assessment. Neither of these documents are reliable sources upon which the ALJ can rely to reach the Protestants' desired outcome of Development Plan denial. First of all, as explained in great detail above, the LTC Report is *not* a document that controls or compels any sort of action by Baltimore County whatsoever. This document was expressly required under the Consent Decree to inform the preparation of the SRRR Plan, which governs the improvements required to the JFS sewer system. The maps to which the Protestants hopelessly point in the LTC Report, which are based upon design storms that have been rejected as being representative of rainfall patterns in Baltimore County, simply do not impose any specific improvements within the JFS. The ALJ has already made this finding in the *Torch Hill* case (PAI No. 09-0919), and it need not be revisited nor altered here.

Map 3 appended to the RJN Performance Assessment, which purports to demonstrate certain "model predicted overflows" and "model predicted hydraulic restriction" in certain segments of the sewerage system downstream of the Property, is just as unreliable as the LTC Report. *See* Prot. Ex. 78. According to Protestants, this Map, which is supposed to depict modeled conditions *after* the County has completed some (but not all) improvements required under the SRRR Plan, somehow demonstrates *actual* problems with the sewer system that they feel should be addressed. The problem for the Protestants is that the Map does *not* show any *actual* problems with the JFS sewer system; rather it is based upon modeled outcomes from a

renovated system where less than 100% of the work required to be performed under the SRRR Plan has actually been completed.[13] At best, it evidences anticipated and unverified conditions from a snapshot in time when *a portion* of the work required to be completed under the Consent Decree had been completed. Mr. Leffner specifically noted how he investigated Map 3 with DPWT and learned that they had not verified any of the problems that had been modeled, once they increased their monitoring in these areas. *See* T. 5/31/23 p. 87-90; Dev. Ex. 47A, 47B. Accordingly, it simply cannot be fairly relied upon by the ALJ, as Protestants hope it can, as some sort of dagger to the heart of the Greenspring Manor project, particularly when its predictions have demonstrably not been verified, and when the Protestants have failed to present even a shred of other evidence to demonstrate any *actual* chronic or acute problems within the JFS sewer system.

During their respective testimony, Messrs. Grachek and Summers both indicated that they have had little – if any – direct communications with County representatives to discuss anything related to the Protestants' alleged sewer issues, including the import or reliability of this map. Mr. Grachek flatly admitted that he had made no attempt to inquire with the County as to whether there have been any *actual* SSOs in the JFS within the past three years. *See* T. 2/10/23 p. 246. On the other hand, Mr. Leffner engaged directly with Mr. Dave Bayer from Baltimore County, among others, several times during his evaluation of all of the issues raised by the Protestants. T. 5/31/23 p. 59, 64-65, 89. He asked Mr. Bayer specifically about the import of Map 3, and he learned several interesting things: (i) upon receiving the RJN report and Map 3,

[13] Among the improvements required under the SRRR Plan that have not been completed and were not part of the assessment that was performed when generating Map 3 are the offsite improvements that the Developer has admitted from the beginning of this development review and approval process are required to be completed prior to connection of a single home to the sewer system. *See* Dev. Ex. 1B. These improvements will be included in a condition of approval the Developer proposes in this Memorandum.

Baltimore County immediately increased its field monitoring efforts in the "red areas" highlighted by the Protestants along the Greenspring Manor sewer run through the installation of four new flow meters in the area (*see* T. 5/31/23 p. 88-92; Developer's Exhibit 47A, 47B); (ii) this flow monitoring, which would provide immediate alerts to DPWT representatives when detecting any issues, has not generated results that mimic the predicted conditions – neither SSOs, nor hydraulic restrictions – from Map 3 (*see* T. 5/31/23 p. 88-92); and (iii) therefore, the County regards the model upon which Map 3 was based as being "unverified" in the field (*see* T. 5/31/23 p. 88-92). Being an unverified model, it cannot be deemed reliable, and it most definitely should not inform any decisions to be made in this case.

It should also be pointed out that, if Map 3 were so damning to the condition of the JFS, as Protestants claim it is, then it most definitely would have been prominently featured in the RJN Performance Assessment. One would think that, if RJN felt that Map 3 unquestionably demonstrated such a disastrous outcome for the JFS, it would have provided a lengthy explanation of the Map and it would have surmised in its report that perhaps the improvements completed to date have not been as effective as the County would have hoped. After all, under the Consent Decree, the very purpose for the report was to "determine the effectiveness of the evaluation and corrective action work performed"; so if RJN deemed the work to be ineffective for the JFS, it should have stated so. *See* Prot. Ex. 65, p. 35. But, RJN did not do that. Instead, they mentioned Map 3 twice: once in the table of contents, and a second time, buried within the document, simply explaining that it "depict[ed] the model predicted SSO and flow restriction locations in Jones Falls for all five (5) design storm simulations under the post-rehabilitation condition." Prot. Ex. 78, p. 14. That is hardly some red flag raised about the condition of the JFS. Far from it; recall that RJN's ultimate conclusion was that "Overall, the results of the

performance assessment indicate that the rehabilitation performed, and relief sewers constructed were effective." Id., p. 19.[14]

Mr. Leffner agreed that the RJN report and Map 3 do not support the Protestants' theories. Specifically, he described it as a "snapshot in time on the performance of the improvements and the ongoing…programs that are being just continuously rolled out within the County….[I]t's a model update mainly related to the SSO closures and Cockeysville improvements that were made to show the effectiveness of the SRRR improvements as they're being implemented within the County." T. 5/31/23 p. 85-86. Regarding the modeled SSOs and hydraulic restrictions shown on the Map, he explained that "[t]hey're model predicted based on whatever information was available to the modeler at the time. And don't necessarily include, I would say like current day information, nor has it been verified in the field." *Id.* p. 87.

Beyond their hopeless reliance upon the LTC Report and Map 3, as well as the testimony of lay witnesses who have experienced a sewer back-up in their homes (that were immediately addressed by the County) and another lay witness who observed nondescript maintenance work by certain contractors in a manhole in Joppa Road, the Protestants did not present a single shred of evidence identifying an *actual* chronic or acute problem with the sewer system. There was not a single photo presented; not a single video; not even a single account of anyone who has

[14] The Protestants have suggested that MDE and the EPA have "never approved" the Performance Assessment. First, of all, their approval is not required under the Consent Decree. While MDE and EPA have to approve many items, the Performance Assessments are not among them; rather, the only requirement is for MDE and EPA to have 90 days to provide comments. *See* Prot. Ex. 78, p. 35. The only evidence in the record on this issue demonstrates that MDE received the Performance Assessment in June 2021, but never provided any comments to RJN or the County. *See* Prot. Ex. 80. By contrast, MDE did choose to provide comments on other Performance Assessments for other sewersheds. *See* Prot. Ex. 79. It cannot be fairly claimed under the evidence in the record that the RJN Assessment Report for the JFS has somehow "not been accepted" or "not been approved" by MDE and EPA, when approval is not required, and the only evidence in the record demonstrates delivery of the document to MDE and no comment issued by MDE.

observed a *drop* of sewage discharging from the sewer system within the JFS. They, instead, relied upon unverified models, ecoli testing results (addressed below), and contracts for future maintenance services (addressed below), packaged together with tortured analyses of the Consent Decree and the plans and reports required by it, in their attempt to have the ALJ impose a judicial moratorium on all development within the JFS – starting, of course, with the homes proposed at Greenspring Manor.

There just simply is *zero* evidence in the record that should compel the ALJ to deny the Development Plan on the basis of some alleged – and entirely theoretical – chronic sewerage overflows or capacity issues.

iv. Protestants' evidence does <u>not</u> demonstrate capacity issues within the JFS.

The Protestants once again rely upon information extrapolated from theoretical and unverified models to claim that the sewer system has some sort of capacity issue.[15] These assertions should be rejected. First, DPWT, which has been managing the County's response to and implementation of the Consent Decree for nearly twenty years, has confirmed that there is adequate capacity in the system to handle the connection of the project to the system, subject to the completion of a handful of offsite improvements to be made to the system. *See* Dev. Ex. 55. Additionally, DPWT (through DPR) separately recommended approval of the Development Plan at the outset of the hearing. These two actions are due presumptive effect, in accordance with *Elm Street, Md. Securities Com'r,* and *Marzullo v. Kahl*, 366 Md. 158, 172-73 (2001). Thus, it is

[15] As a baseline for their overall position, if Protestants had their way, Baltimore County would require improvements to the system in accordance with the most intense storm design contained in the LTC Report. They seem to want the County to design their system to withstand rain conditions that would result from an incredibly intense hurricane. Mr. Leffner refuted an approach to sewer design that is based upon oversizing of the sewer systems. *See, e.g.*, T. 5/31/23 p. 93.

up to the Protestants to present evidence that effectively rebuts this presumption, which, as explained below, they have not done.

The Protestants offered testimony from Mr. Grachek in an attempt to prove the sewer system lacked capacity. He pointed to one exhibit (Prot. Ex. 69), which was apparently prepared by a lay person and provided to him and which he had not independently verified, but rather assumed to be correct; and he even seemed confused about the source of some of the information.[16] *See* T. 2/10/23 T. p. 72-73, 229-33. It turns out that the only sewer sections where capacities, as computed by DPWT, exceeded 100% were those sections that DPWT is requiring to be improved as a condition of its recommendation of approval of the Development Plan in this case. *See* Dev. Ex. 45A, 45B. And the other columns in the exhibit were from the LTC Report, which *modeled* a number of storms that were deemed inapplicable, and otherwise showed anticipated capacities *without any improvements to the system whatsoever*, which is of course an unfair and inappropriate comparison. *See* 2/10/23 T. p. 233-36. At the conclusion of cross examination, Mr. Grachek flatly admitted that his "*entire opinion of capacity issues [was] based on the assumptions that were made in these models" and in the data provided by the County. Id.* p. 236-37. Further, *he was not aware of any field measurement or data captured in the field that supported his position that the pipes in the system are actually over 100% capacity*. *See* T. 4/11/23 p. 154.

Mr. Grachek submitted a second exhibit (Prot. Ex. 81[17]), which provided *modeled* capacities based upon the unverified model that RJN performed when undertaking its performance assessment. Once again, he did not prepare this exhibit, but he assumed it was correct. *See* 2/10/23 T. p. 254-56. He also admitted that (i) the was not familiar with RJN's

[16] The source documents for Prot. Ex. 69 were apparently Prot. Ex. 64 and 72.
[17] The source document for Prot. Ex. 81 was Prot. Ex. 82.

model and had no idea what assumptions or information informed the model; and (ii) the post-rehabilitation portion of the model was based on a limited number of improvements within the JFS. That is, the model was performed at a time prior to the completion of at least some of the improvements required under the SRRR Plan. *Id*. at 256-57.

Finally, he pointed to an undated chart (Prot. Ex. 108), purportedly prepared by Hazen, which was apparently obtained by Protestants' counsel as part of a PIA request. Mr. Grachek could provide absolutely no explanation for when this chart was prepared, how it was prepared, or what it was really intended to show. *See* T. 4/11/23 p. 147-53. He fully admitted that his evaluation and testimony regarding Prot. Ex. 108 was formulated based upon a host of presumptions. This Exhibit is entirely unreliable.

Mr. Leffner easily picked-up on the common theme woven throughout the Protestants' evidence in support of their assertions about an alleged lack of capacity within the sewer system. He clearly recognized that the Protestants' assertions were built upon a heap of assumptions, including the unverified model performed by RJN and the misunderstanding that Baltimore County's own capacity analysis was based upon dry weather flows.[18] *See, e.g.*, T. 5/31/23, pp. 86-88, 110-12. He ultimately concluded that the County's approach to improving capacity within the system – significant reduction in I/I – had demonstrably worked, as demonstrated by the RJN Performance Assessment, the Quarterly and Annual Reports submitted under the Consent Decree, the County's confirmation of capacity for this project, and his interactions with

[18] The Protestants assumed that the County's own sewer capacity model (Prot. Ex. 64) applies dry weather flows, because there are "0.00" values contained in the "INFLOW" column, and also based upon their own extrapolation of the County's analysis compared to wet weather analyses performed by other consultants. Essentially, because certain wet weather analyses are larger than the County's analysis, the Protestants effectively *assumed* that the County's analysis must be a dry weather analysis. However, they never bothered to inquire with DPWT about it. *See e.g.*, T. 2/10/23 p. 214. Mr. Leffner, on the other hand, did, and he learned that the County applies one wet weather factor – for both infiltration and inflow – in the single column marked "INFIL." on the County's model analysis (Prot. Ex. 64). T. 5/31/23 p. 111-12. Thus, the Protestants' assumptions in this regard are erroneous.

DPWT generally regarding capacity, installation of new level sensors, and any corresponding issues with the sewer system. *See, e.g.,* T. 5/31/23 59, 76, 86-90, 99-112; Prot. Ex. 78; Dev. Ex. 47A, 47B, 48-55.

Mr. Leffner further opined that, even when assuming RJN's capacity model was accurate, the capacity numbers in excess of 100% may not be problematic for a couple of reasons. First, the performance assessment did not take into consideration a number of improvements required under the SRRR Plan, including the handful off offsite improvements required by DPWT to be completed prior to this project's connection to the sewer system; so the numbers would almost certainly change if the model is re-run with those improvements made. Additionally, operational capacity in excess of 100% does *not* automatically mean the system "is going to overflow" or cause other capacity-related issues with the system; there are host of factors that must be considered, including the depth of the sewer lines and manholes. *Id.* at 88-94.[19] He ultimately opined that, for all of these reasons, he opined that the Protestants' evidence did not present any capacity issues. *Id.* at 94. He also remarked that, from his perspective, the capacity modeling performed by the County's consultants "may be overly conservative," given the discrepancy in *actual* rainfalls in the area and the fact that there have *not* been any *actual* overflows or capacity problems demonstrated in the field. *Id.* at 108-9. The ALJ should likewise find that, given the battle of expert opinions and testimony, the Protestants have not effectively rebutted the

[19] While the Protestants insist that design manuals' "requirement" that sewer pipes be *designed* to a capacity less than 100% demonstrates an automatic "overcapacity issue" for a pipe that operates at more than 100% capacity, Mr. Leffner refuted that position, noting that systems themselves should not be deemed to be overcapacity, if one or more particular segment is showing a capacity in excess of 100%, particularly if there are no resulting SSOs. *See* T. 5/31/23 p. 92-94. He also noted that it is not good engineering practice to "oversize" a sewer pipe for the sake of avoiding a 100%+ capacity measurement, "because then the velocities may be really low and that can result in damage to the sewer lines or maintenance concerns." *Id.* at 93.

presumption in favor of DPWT's determination of sufficient sewer capacity in the system. *See Elm Street, Md. Securities Com'r,* and *Marzullo*.

F. The record evidence demonstrates that any elevated E. coli readings in Lake Roland are likely *not* caused by SSOs or leaks from the sewerage system.

Protestants presented a smattering of samples of E. coli level readings taken in Lake Roland, in an effort to argue that the elevated E. coli levels *must* be from SSOs. *See* Prot. Ex. 75. Mr. Grachek, in presenting the data, really had no idea how or why the County implemented its testing program. *See* T. 2/10/23 p. 241-46. He ultimately provided his assessment for why there were random spikes of E. coli levels in the Lake, which ultimately amounted to pure guesswork. His testimony, combined with Mr. Summers' equally speculative testimony[20], represented Protestants' attempt to put icing on a cake made out of hypotheses, assumptions, and conjecture. In a nutshell, the Protestants' witnesses insisted that, because various models – including at least one that was unverified – suggest that SSOs *could* be happening during particular large storm events, the occasional elevated E. coli readings must mean that the SSOs definitely are happening. *See, e.g.*, T. 2/10/23 p. 90. But the witnesses never presented a single ounce of proof that human effluent was making its way into any waterbody within the JFS; nor did any other witness.

On cross-examination, however, both of Protestants' witnesses admitted that there could be other sources of E. coli that cause or contribute to E. coli spikes in Lake Roland. For example, animal feces could cause E. coli to enter into water bodies, including livestock. T. 2/10/23 p. 246; T. 4/11/23 p. 136, 155. Additionally, septic systems could also pollute

[20] Mr. Summers' entire opinion – which was that human effluent was the most pervasive cause of E. coli within the JFS receiving waters – was based upon information contained in a TMDL report *issued in 2006*, which he admitted to have been issued right at the start of the County's efforts to address issues within the JFS under the Consent Decree. He further admitted that the TMDL report, which was not at all related to the Consent Decree, is not reliable in demonstrating E. coli readings *today*, given that there has been significant work performed within the JFS that would most definitely influence the 2006 analysis. *See* T. 3/7/23 p. 67, 115, 148-49.

waterways with E. coli and other pollutants that could negatively impact the water quality within Lake Roland. T. 2/10/23 p. 247; T. 4/11/23 p. 136, 155. As Mr. Summers freely admitted during cross examination, he – and the entire team supporting the Protestants – have not produced any evidence that would directly tie any E. coli spikes contained on Prot. Ex. 75 with an SSO. *See* T. 3/7/23 p. 136.

Mr. Leffner concurred with the Protestants' opinions about alternative causes of elevated E. coli readings in Lake Roland, and he prepared a few exhibits to demonstrate how the alternative sources are likely the primary causes. First, he presented a map showing the five water testing locations within Lake Roland, including at least one testing area that sits right below a dog park area, where dogs relieve themselves and are permitted to swim in the Lake Roland waters. *See* Dev. Ex. 56; T. 5/31/23, p. 113-15. Next, he presented a second map showing how large the Jones Falls Watershed is, including tens of thousands of acres of land and tens of thousands of homes situated outside of the Urban Rural Demarcation Line, which utilize septic systems. *See* Dev. Ex. 58, 59; T. 5/31/23 p. 117-21. He then presented a third map demonstrating that there are over 600 septic systems sitting right above and surrounding Lake Roland on all sides, situated between I-695 to the north, Charles Street to the east, the City line to the south, and I-83 to the west. *See* Dev. Ex. 60; T. 5/31/23 p. 121-24. He explained that he obtained the latter map from Baltimore County's Groundwater Management Division within DEPS, and he confirmed that the County does not monitor or inspect the quality or functionality of septic systems in Baltimore County. T. 5/31/23, pp. 121-24. Finally, he presented a map that showed the voluminous acres of agriculturally used land within the Jones Falls Watershed, including farmland that includes various branches of waterbodies that feed into Lake Roland. *See* Dev. Ex. 61; T. 5/31/23 pp. 124-28.

For Mr. Leffner, given the complete lack of proof of any active SSOs within the JFS, and recognizing the abundance of evidence identifying numerous other potential sources of E. coli within the JFS waterbodies, he was confident in opining that the elevated E. coli levels were not being caused by any SSOs. Specifically, he stated that "there's multiple sources that [the E. coli spikes] could come from" but that "there was nowhere near as much of an understanding [by Messrs. Grachek and Summers] of the amount of potential agricultural, septic, wildlife, urban land use within the watershed" as Mr. Leffner has. T. 5/31/23 p. 117. But with his understanding of the parameters of the area, and based on the evidence in the record, Mr. Leffner ultimately concluded that "the sources are varied as reported in…even some of the exhibits that we didn't review today, as far as the TMDL exhibits…where there's differentiation between wildlife, urban areas, agricultural uses." *Id.* p. 126. He went on: "there is a huge number of properties within the overall watershed that are on private well and septic, which…[are] not necessarily regulated or managed [by the County]." *Id.* p. 127. Finally, given the significant progress demonstrated in eliminating actual SSOs in the JFS, Mr. Leffner "[did not] know how you could say that…the source of the bacteria is just from sanitary sewer overflows" and given the record evidence to the contrary, it made sense that the *other* sources were the primary contributors to the E. coli spikes. *Id.*

There certainly is enough evidence in the record to support Mr. Leffner's opinion on this issue. At the very least, the record evidence must cast significant doubt for the ALJ that E. coli readings are definitively caused by SSOs, as the Protestants have baldly asserted. Accordingly, the ALJ should not draw any definitive conclusions that the occasional elevated E. coli readings have anything at all to do with the condition of the sewage system in the JFS. Similarly, the Stream Sense signs – which Mr. Leffner demonstrated to exist at numerous locations throughout

the County – do not present any compelling evidence that there is some sort of serious or acute water quality condition at Lake Roland. *See* Dev. Ex. 63; T. 5/31/23 p. 129-30. The signs are just a common practice used by Baltimore County to make citizens who may come into contact with public recreational waterbodies aware of the *potential* for health hazards, from time-to-time, for whatever reason. Indeed, as of the date of the hearing, the County had not identified Lake Roland – nor any waterbody in the County – as being subject to any closures, water contact alerts, nor water quality advisories. *See* Dev. Ex. 62.

Accordingly, the ALJ should reject any attempt by the Protestants to suggest that SSOs exist and are somehow causing elevated E. coli readings in Lake Roland. There just simply is not evidence in the record to support Protestants' theory.

G. The ongoing Hazen and Ramboll studies are not part of the Consent Decree and are identifying separate scopes of work for the County in implementing its routine maintenance program and long-term system planning.

During their fishing expedition in the County's records, the Protestants stumbled upon information regarding two separate consultants that Baltimore County has hired as part of its renewed and proactive efforts to maintain the sewer system within Jones Falls and to plan for the future. Specifically, they found evidence of: (i) a forthcoming report that will be prepared by Hazen and Sawyer to plan for future improvements to the sewer system over a 5-, 20-, and 50-year horizons; and (ii) an evaluation report by Ramboll to perform certain relining work on certain sewer lines nearby Lake Roland. The Protestants tried desperately to insist that Hazen and Ramboll were performing work in accordance with the Consent Decree, in an effort to assert that their respective reports are evidence that the County has failed to comply with the Consent Decree; however, as Mr. Leffner opined, and a review of the Hazen and Ramboll documents themselves will reveal, the evaluations being performed by these companies are completely

unrelated to the Consent Decree and are, instead, evidence of good maintenance and planning practices being implemented by Baltimore County.

The purpose for Hazen's work can be found right on the first page of the proposal document submitted by Protestants. Specifically, Hazen's "comprehensive evaluation," for which it was retained in 2020 to "complete an evaluation addressing the capacity, operations and maintenance (O&M), and structural needs of the sewer system and develop a comprehensive plan and strategies to address system deficiencies at year 2025, 20-year, and 50-year planning horizons and two additional planning horizons determined by the County." Prot. Ex. 86, p. 1. And a more thorough review of the document reveals that this is a forward-looking proposal from a company who has been tasked with reviewing the system comprehensively, including all improvements made to date, considering anticipated growth, and recommending improvements to the system that can be made over the next half century. It is a planning document. It is not tied to the Consent Decree whatsoever; it does not even mention the Consent Decree, though it does identify the SRRR Plan and LTC Report as items that Hazen would review, which is to be expected given the recent role of those two documents in informing the improvements made to the system over the last decade.

There is nothing remarkable, or telling, or scandalous about Hazen's work. Mr. Leffner described it as "a further horizon study that the…County is embarking on that's going to involve…future long-term planning for sewer system upgrades, considering costs and strategy, operation and maintenance kind of protocol or systems they can implement." T. 5/31/23 p. 134. Even Mr. Grachek agreed it was not something that he could confirm to be required as part of the Consent Decree. *See* T. 2/10/23 p. 260-61. In short, the forthcoming Hazen Report can be fairly

characterized as good planning practices by Baltimore County; this is the exact type of ongoing maintenance and planning that citizens should expect from their government.

The Ramboll report similarly demonstrates the County's ongoing efforts to maintain the sewer system within the JFS. There can be no doubt that the sewer assets set for relining and similar work described in the Ramboll report were among the assets thoroughly reviewed and evaluated by RKK in 2012. At that time, RKK evaluated and graded all of the assets within the sewershed – including those being re-evaluated by Ramboll – and made the determinations they made with regard to what improvements were and were not necessary to comply with the goal and requirements of the Consent Decree. And MDE and the EPA agreed with them, when approving the SRRR Plan. *See* Prot. Ex. 67; Dev. Ex. 43.

It should be no surprise then, that when taking a close look at the Ramboll report, Ramboll *agreed* that the assets that are the subject of the report do not have any major problems. Over the course of 13 pages, Ramboll breaks down its scope into 9 different "sites," and evaluates various aspects of each site, including the condition of the assets within each site. For every single site, Ramboll reports that review of inspection data confirms "***no major defects***." Protestants' Exhibit 87, p. 8-11, 14-15, 17, 19-20. The report calls for relining of all of the pipes, epoxy lining many of the manholes, and replacing the frame and cover of a handful of manholes. *This is hardly an indictment on the functionality of the system or any sort of evidence that the County has failed to comply with the Consent Decree. There is zero indication anywhere in the Ramboll report that there are any sewerage leaks or SSOs being experienced within or along any of the assets that are the subject of the report.* Plain and simple, this is a protective measure being undertaken by Baltimore County in order to continue to eliminate I/I into the sewer system. Again, this is a service that citizens should expect their government to perform.

In reviewing these reports and reflecting on the days of testimony and loads of evidence that the Protestants put into evidence, it is almost as if they are rooting for the sewer system to fail. And it is certainly clear that they completely distrust Baltimore County and DPWT. They want these two latest reports to viewed as some sort of proof that the millions of dollars the County has already spent and DPWT has deployed in improving the sewer system over the last decade has not done a single thing to improve conditions within the JFS. It seems the Protestants would suggest that any proactive measure by the County and DPWT going forward must be construed to mean that the overall sewer system is failing. And they most definitely feel that the ALJ should not be approving a single new toilet to flush into the system until the system is repaired to the satisfaction of the Protestants – whatever (and whenever) that may be. That simply is not practicable, nor is it the legal standard.

Protestants' counsel tried desperately to get Mr. Leffner to admit that the Hazen and Ramboll reports were somehow tied to the Consent Decree and/or that they provided evidence of some terrible sewer defect that should compel denial of the Development Plan. He did not bite. *See* T. 5/31/23 p. 148-53; 156-58. When Protestants' counsel attempted to tie the reports to the obligations under the Consent Decree and SRRR Plan, Mr. Leffner stated: "I don't think that statement [requiring the repair of structural deficiencies] is made to be an all-encompassing forever more recommendation. I think it's specific to correcting the identified structural deficiencies in [the SRRR] report, through rehabilitation and replacement…I do think the…Consent Decree does include ongoing analysis, but for a finite amount of work." *Id.* p. 158. There should be little doubt that the Hazen and Ramble reports – which were both commissioned nearly two decades removed from the adoption of the Consent Decree and after

the date by which all work under the Consent Decree was to be completed[21] – are completely separate from, and not a requirement of, the Consent Decree. Neither Hazen nor Ramboll even mention the Consent Decree in their proposals to the County.

H. The Development Plan should be approved, subject to a limited condition.

Section 32-4-229(b)(1) of the BCC requires the ALJ to approve a development plan that complies with County laws, policies, rules, and regulations. With regard to the sewer issues, there is nothing within the various documents, theories, and assumptions presented by the Protestants that demonstrates a single way in which the Development Plan fails to comply with a County law, policy rule, or regulation. The evidence does demonstrate – and the Developer fronted this issue for the ALJ – that there are a handful of improvements downstream of the Property that were required to be completed under the SRRR Plan and have not yet been completed. Some of these are already shown on the Development Plan itself, and the Developer is aware that it should not be able to connect any of the new homes to the sewer system until the improvements required by DPWT are completed.

Indeed, at the outset of the hearing DPR/DPWT recommended approval of the Development Plan, and DPWT has separately confirmed that there is sufficient capacity in the sewer system to accommodate the development. This provides the ALJ with presumptive evidence that the Development Plan should be approved, unless the Protestants can adequately rebut the presumption. *See Elm Street*, *Md. Securities Com'r*, and *Marzullo*. The have failed to do so. Accordingly, the Developer proposes that the ALJ should approve the Development Plan, subject to the condition provided in the Conclusion Section.

[21] It should also be noted that Baltimore County reported in several Quarterly and Annual Reports to MDE that the County's SRRR Plan implementation in the JFS was "completed," subject to a very limited number of remaining improvements.

VIII. THE DEVELOPMENT PLAN SHOULD BE APPROVED.

For the reasons stated herein, there is substantial evidence on which the ALJ should approve the Development Plan. Conditions are proposed as part of the conclusion of this Memorandum to ensure that the project provides the necessary traffic and sewer improvements to ensure the project is safely and effectively constructed.

SPECIMEN TREE SPECIAL VARIANCE

Developer presented testimony from John Canoles, a natural resource consultant with over 30 years of experience in the industry. *See* Dev. Ex. 10. Mr. Canoles explained that a petition for special variance was filed to remove a single specimen tree, a Norway spruce located along Joppa Road in the front of the Property. A photograph of the tree in question was marked and accepted into evidence as Dev. Ex. 11. Mr. Canoles noted that the tree is in "fair" condition as it has been "limbed" or trimmed around existing power lines, as is clearly evident from the photograph. *Id.* This is one of the few issues that was not contested by the neighbors or Protestants.

As Mr. Canoles explained, he performed a survey and found 25 specimen trees on the Property. Dev. Ex. 12. One of the trees was damaged during a storm, but the remaining specimen trees are all being preserved with the exception of the single tree along Joppa Road. *Id.* Following review of a request for special variance to remove the tree, the Director of DEPS issued a letter dated September 21, 2021 approving the petition. *See* Dev. Ex. 13. According to BCC § 33-6-116(g)(2)(i), this approval "shall be considered a recommendation to the [ALJ], who may either grant or deny the special variance requested."

As the ALJ is well aware, an applicant for special variance must meet one of three criteria listed in BCC § 33-6-116(d) and all three criteria listed in § 33-6-113(e).

Mr. Canoles provided testimony demonstrating that strict compliance with Article 33, Title 6 (requiring retention of the specimen tree) would cause unwarranted hardship (as defined by § 33-6-116(d)), in that the plight of the Petitioner is due to circumstances unique to the site and are not reflective of general conditions in the neighborhood. BCC § 33-6-116(d)(2). DEPS agreed, finding that the close proximity of the tree to West Joppa Road, and requirement to widen the road, demonstrate a unique circumstance not a general condition in the neighborhood. *See* Dev. Ex. 13. Additionally, Mr. Canoles argued, and DEPS agreed, that consistent with BCC § 33-6-116(d)(3), the removal of this single tree will not alter the essential character of the largely developed surrounding neighborhood. In fact, DEPS stated that "the tree would likely be removed by Baltimore County at some point due to its declining condition or eventual widening of Joppa Road as a necessary capital improvement project. *Id.* The request therefore meets two of the requirements in § 33-6-116(d) when only one is required to be met.

Next, Mr. Canoles testified in support of the additional findings required by BCC § 33-6-116(e). As he explained, the request will not adversely affect water quality as 5.9 acres of affectation are proposed for this project within the floodplain and forest buffer. Dev. Ex. 13, p. 2. The request also does not arise from a condition or circumstance on the Property for which Developer is responsible, as DEPS agreed the tree has existed adjacent to Joppa Road for many years prior to this development proposal and would likely be removed at some point "regardless of the proposed development." *Id.* Finally, the request is consistent with the spirit and intent of Article 33, Title 6 as the project does not propose any impact to forests and will retain all of the other specimen trees on site. *Id*.

In a complicated case, finding in favor of this request for special variance is a relatively easy task. Protestants must have recognized this as they focused their efforts on other issues and did not put on any testimony to contest the removal of this single tree. Developer respectfully submits that the criteria has been met and this special variance should be granted.

SPECIAL VARIANCE TRAFFIC PETITION

The balance of testimony regarding the Special Variance request in this case was strikingly lopsided. In addition to the County's DPWT representative, Kris Nebre, the Developer presented expert testimony from Erin Kuhn the highest ranking traffic employee for the District 4 office of MDOT SHA, which includes Baltimore and Harford County, and Nick Driban, a senior traffic engineer with 15 years of experience working for both SHA and as a professional engineer for Lenhart Traffic Consulting. In contrast, the Protestants did not present any expert testimony related to traffic and relied solely on lay testimony from area residents confirming what we already knew: there is a lot of existing traffic in this area.

I. BACKGROUND RE: FALLS ROAD CORRIDOR.

Kris Nebre confirmed that the Property is located in the failing traffic shed that includes the intersections of Falls Road with Joppa Road and Greenspring Valley Road, but not in the failing traffic shed that includes the intersection of Falls Road and Seminary Avenue. T. 9/20/22, p. 301. Under the County's Loaded Cycle Methodology (LCM), the "failing" movements in question are the northbound movement at the Joppa/Falls intersection during the morning peak hour, and the northbound movement at the Falls/Greenspring Valley intersection during the afternoon peak hour. T. 10/27/22, p. 201.

It is undisputed that Falls Rd. (MD Rt. 25), Greenspring Valley Road (MD Rt. 130) and Seminary Ave. (MD Rt. 131) are owned and maintained by the State of Maryland. T. 9/20/22, p. 301. Additionally, the signals at the intersections of Falls Road/Joppa Road and Falls Road/Greenspring Valley Road are owned and maintained by the State of Maryland. Mr. Nebre confirmed that the county has no jurisdiction over the "maintenance and operations" of the State roads and intersections. *Id.* at p. 303.

Testimony from Erin Kuhn confirmed that using the Critical Lane Volume (CLV) and Highway Capacity Manual (HCM) methodologies - both of which are used by SHA- the intersections are not failing. T. 09/20/22, p. 402. Specifically, Falls/Greenspring Valley is not close to failing and will not be failing in the future, under either of the methodologies utilized by the state. The Falls/Joppa intersection is a level E, which is "close to" but not failing. *Id.* Ms. Kuhn stated that with the improvements proposed by Developer, it will only improve. *Id.*

Given that the State does not rate the intersections as failing, the State has not, and likely will not, pay to make improvements to the intersections. Although the County has rated the intersections with an 'F' level of service under its Loaded Cycle Methodology (LCM) for many years, the County has not, and likely will not, incur the cost to improve State roads and intersections. As a practical matter, any improvements made to these intersections would have to be paid for with private funds by a developer like the applicant in this petition.

II. LEGAL FRAMEWORK FOR SPECIAL VARIANCES.

On its face, the Growth Management law confirms that the purpose for the Basic Services Maps (for water, sewer, and transportation) is "to regulate nonindustrial development in [certain predominantly urban areas of the county that are inadequate to serve all of the development that would be permitted] to a degree commensurate with the availability of these facilities." BCZR § 4A02.1. Importantly, the BCZR further confirms that these provisions are not intended to establish a permanent moratorium on development, nor to prohibit development within the identified "deficient" areas in all instances. Specifically, the BCZR provides: (i) "Basic Services Maps are not permanent and will be reviewed annually with reports to the County Council." BCZR § 4A02.1; and (ii) "Basic Services Maps are not intended to permanently establish either areas of service deficiencies or areas of service availability and adequacy. Such maps will be

reviewed annually, as it is the intent of the County Council that existing service deficiencies will be corrected in accordance with the Master Plan and capital improvements program." BCZR § 4A02.3.F.

The Growth Management law provides a mechanism – the special variance – whereby, upon a proper showing, the final subdivision of land (i.e., recordation of plats) and the issuance of building permits for properties within deficient, F-rated areas (depicted on the approved Basic Services Maps) may be approved or issued despite the existing deficiency. The required finding for a special variance is that the *actual* impact of the proposed subdivision/construction would be "less than that *assumed* by the district standard that would otherwise restrict or prohibit" the subdivision/construction. BCZR § 4A02.4.G (emphasis added).

Section 4A02.4.G of the BCZR requires that the Special Variance Petition not violate the provision's purpose. That purpose is set forth in BCZR, §4A02.4.D.1 as follows:

> D. Transportation.
>
> 1. Intent. The transportation standards and maps are intended to regulate nonindustrial development where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article.

As the ALJ recently found in the Torch Hill decision (Developer's Exhibit 37), the LCM standard is not the standard to apply in a Special Variance case under BCZR §4A02.4. LCM is the standard applied by the County to rate an intersection, but is not the standard to apply when a Petition is requested for what is essentially a waiver or exception (i.e. Special Variance) from the prohibition on issuing a building permit.

The purpose for determining the 'level of service' is to assign a letter grade (i.e. a 'rating') to an intersection, and the purpose of rating an intersection, is to control the issuance of building

permits at the outset. The 'F' letter rating is a 'red flag' on the file. The Special Variance, on the other hand, focuses on what impact the particular development will have on the intersection rated as failing, so that it can be determined whether or not the building permit restriction can be lifted for a project. If the impact from the development is net zero (due to a proposed improvement to the roadway and/or a TIA which calculates the impact as zero), then a waiver of the building permit moratorium can be granted. Mr. Nebre specifically stated that a developer does not need to improve the intersection's letter grade from F to D or better, it could remain an F but accommodate the traffic from the project so that the intersection "won't be any worse." T. 9/20/22, p. 307. This is consistent with the purpose of the Transportation Basic Services Map, which is whether capacity will exist at the intersection to accommodate both existing traffic and that generated by Greenspring Manor. It is also consistent with the required finding in BCZR § 4A02.4.G.1.a that the demand or impact from traffic generated by Greenspring Manor will be less than that presumed by the district standard.

Protestants repeatedly pressed for an interpretation that the LCM is the correct standard for the ALJ to evaluate a petition for special variance. But the LCM cannot be used to predict or forecast the impact of future projects or intersection improvements. As Nebre explained, LCM "controls development on our basic service map" but CLV would be used for traffic analysis for the TIS report. T. 9/20/22, p. 355. In fact, you have to use the CLV and HCM methodologies to project impacts caused by a development, or proposed improvements to an intersection, because the LCM methodology is "not something that can be forecasted. It's something that's based off of observations." *Id.* at 356.

It is actually **impossible** to evaluate a petition for special variance using LCM. You would have to build a project, allow people to live in the homes, construct an intersection

improvement, and then re-test the intersection by observing the new traffic pattern in the field. It would turn any special variance petition into an "after the fact" request because you cannot test a proposed improvement under LCM without first constructing it and then observing traffic in the field. The only methodologies that are predictive and can therefore be used to evaluate a petition for special variance, are CLV and HCM, which are both utilized by SHA and widely accepted in the industry.

Another element to a petition for Special Variance is contained in BCZR §4A02.4.G.2, which states that the DOP will provide the ALJ with a report prior to consideration of the Special Variance. In this case, unlike prior cases, DOP did provide an HOH Report indicating they have "no objection" to the approval of the special variance, but ultimately, they still deferred the issue to DPWT due to their expertise with traffic issues. *See* County Ex. 7. At the beginning of the hearing, DPR, who typically represents DPWT, was not able to answer all of the questions about traffic or the Special Variance Petition. As in Torch Hill, the ALJ therefore requested testimony from Kris Nebre in DPWT, notwithstanding the presumption that BCC § 32-4-226(c) and (d) presume that no comment from a County agency means the agency is not opposed to a development plan. Mr. Nebre did his best to provide answers to questions in regard to the applicable traffic shed, the 'F' rated intersections, the County's use of the LCM, and whether the proposed improvements will provide a zero net impact on the intersection.

Lastly, the ALJ is asked to find the Petition for Special Variance will not adversely affect a person whose application was filed prior to the Petitioner's application in accordance with § 4A02.3.G.2.b. This should not come into play in this case, as there was no evidence that any

applications for reserve capacity use certificates are on file with Baltimore County and the Developer is not seeking a reserve capacity use certificate here.

III. THE PROPOSED IMPROVEMENTS TO FALLS/JOPPA.

This is not a case where the Developer is simply asking the ALJ to determine that the surrounding road network is acceptable and can handle the traffic that will be created by the proposed project. Developer is proposing to spend hundreds of thousands of dollars to add a lane to both the eastbound and westbound approaches to the Falls/Joppa Road intersection. *See* Dev. Ex. 16; T. 10/27/22, pp. 202-203. As explained below, widening and adding additional lanes will provide a "substantial improvement to capacity." *Id.* at p. 203.

IV. SUBSTANTIAL EXPERT TESTIMONY CONFIRMED THE PROPOSED IMPROVEMENTS AT THE FALLS/JOPPA INTERSECTION WILL IMPROVE THE ENTIRE FALLS ROAD CORRIDOR FROM JOPPA THROUGH SEMINARY.

a. Testimony of Erin Kuhn.

One item that sets this case apart from other recent requests for special variance is that Erin Kuhn, the highest ranking traffic employee over the MDOT, SHA's 4th District (which covers Baltimore and Harford County), testified to SHA's findings with respect to the proposed improvements to the intersection of Joppa/Falls Road. Ms. Kuhn has held her title for 15 years, and reviews traffic studies that accompany development plans in Baltimore County. T. 09/20/22, p. 390.

Ms. Kuhn confirmed that in January 2021, SHA approved the traffic study for the Greenspring Manor project. *Id*. see also Dev. Ex. 15. The proposed improvements to the Joppa/Falls Road intersection "were shown in the traffic impact study, which we approved." T. 09/20/22, p. 392. By letter to Baltimore County dated August 4, 2021, Ms. Kuhn confirmed that

SHA indicated no opposition to the approval of the Development Plan. *See* Dev. Ex. 17. SHA also had no objection to the petition for special variance. *See* Dev. Ex. 18.

With respect to the proposed improvements at Falls/Joppa Road, Ms. Kuhn stated that SHA supported those improvements. T. 09/20/22, p. 396. The improvements, Ms. Kuhn explained, will improve the entire Falls Road corridor from Joppa Road to Seminary Avenue:

> We had asked originally when we first got the traffic impact study that all three signals at Seminary, Greenspring Valley and Falls be analyzed since they do all operate in a coordinated signal system together, and so as far as the improvements to be made at Falls and Joppa, those studies showed with those improvements that that would improve the corridor operations, it would reduce the delay, specifically reduce travel time through the corridor with the improvements that are being made at the Joppa Road intersection.

Id.

She again stated that MDOT/SHA agrees that the improvements will have a positive impact on travel times along the corridor. *Id*. at 397. The improvements to the corridor are significant, so much so that SHA did not support or require additional proposed physical improvements to Falls/Greenspring Valley Road, which Developer had offered to make in an effort to further reduce traffic along the Falls Road corridor. *Id*. at 397-98.

When asked to describe why the improvements to Falls/Joppa would benefit the entire corridor, Ms. Kuhn explained as follows:

> Yes. The improvements on Joppa Road, adding the additional lanes on Joppa Road. When you add an additional lane through an intersection, it helps get more traffic through the intersection more quickly by getting more traffic through Joppa Road sides of the intersection more quickly, and that would mean that they would need less time in the signal, so we could give more green time to Falls Road, similar to what Chris [Kris] has said so Falls Road is our main concern at the state, that's our main corridor that we want to maintain traffic flow, so if we can give more green time to Falls Road, that is actually going to improve the corridor, because these three signals are timed together, and, you know, one intersection can actually hold up another intersection. So more time to Falls Road

> gets more traffic through along Falls Road, and as shown in the study, will reduce the travel time through the corridor, and these numbers were pulled directly from the study which analyzed the corridor and looked at travel times though the corridor both with and without the improvements.

Id. at 400-401.

Finally, Ms. Kuhn confirmed that the traffic signals at Falls/Joppa, Falls/Greenspring Valley, and Falls/Seminary all work in a coordinated signal system, and that once the physical improvements are made to Falls/Joppa, the signals will be retimed to maximize the benefit of the physical improvements. *Id*. at 403-404. Her conclusion is that the travel times along Falls Road will be reduced from the existing levels, and the existing levels adding in Greenspring Manor, once the physical improvements are made to the Joppa/Falls intersection. *Id*. at 405.

b. Testimony of Kris Nebre.

Much of Mr. Nebre's testimony was previously discussed in this Memorandum and will not be repeated herein. However, on behalf of DPWT, Mr. Nebre provided written confirmation that "the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection." Dev. Ex. 29. He also verified that his former supervisor, Mike Filsinger, found in January 2021 that "the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development." Dev. Ex. 30.

c. Testimony of Nick Driban.

Mr. Driban walked through his traffic study and explained his evaluation of the level of service at the Falls/Joppa intersection where the road improvements are proposed. Under the CLV methodology, the intersection functions at a level of service E during the morning peak hour and would improve to a D if the proposed improvements are constructed. T. 10/27/22, pp.

196-197. The improvements would actually mitigate 931% of the trips that would be added from the Greenspring Manor project. *Id*. at 197. For the evening peak hour, the intersection functions at a level of service D, and would remain D, but at an improved level of efficiency. *Id*. at 197-98. Specifically, the improvements would mitigate 879% of the evening peak hour trips added from Greenspring Manor. Mr. Driban testified that the intersection would be "substantially better" with the proposed improvements. *Id*. at 198.

Mr. Driban presented similar and even more striking findings under the HCM methodology, where Falls/Joppa currently functions as a D in the morning peak hour and Falls/Greenspring Valley functions at a C. *Id*; *see also* Dev. Ex. 15, p. 17. The proposed improvements will mitigate 1364% of the trips added by Greenspring Manor at Falls/Greenspring Valley and 780% of the trips added at Falls/Joppa. *Id*. at 199. Notably, under the modern methodologies, CLV and HCM, Mr. Driban confirmed that neither of the intersections show as "failing" once the proposed improvements to Joppa/Falls are constructed. *Id*. at 201-202.[22]

Mr. Driban performed a corridor analysis to review the impact that this project and the proposed improvements would have on the Falls Road corridor from Joppa Road to Seminary Avenue. He used Synchro files obtained directly from SHA and added in the additional lanes that will be constructed by the Developer at the Falls/Joppa intersection. *Id*. at 207-208. In the morning peak hour, northbound traffic (where the failing movement exists at Falls/Joppa under the County's LCM), will see a 45 second savings, on average, for every car traveling along the Falls Road corridor during the morning peak hour:

[22] Mr. Zimmerman attempted to question the use of the ITE Manual to project the trips that would result from this project. Expert testimony confirmed the ITE Manual is the accepted methodology used to project trips in the field of traffic engineering. Additionally, this was not a "close call" as the proposed improvements mitigate hundreds of percentage points over what is proposed by this project.

> So, that's a forty-five second savings for, on average, for every vehicle passing through this corridor. Every single vehicle. That's the average delay per vehicle. Which is a twenty-four percent improvement in the overall corridor travel time.

Id. at p. 209.

Similarly, for southbound traffic during the morning peak hour, the improvements show a 14% increase in efficiency, or savings of eight seconds, for every vehicle passing through the intersections. *Id*.

During the evening peak hour, (where the failing movement exists at Falls/Greenspring Valley under the County's LCM), there will be a 31 second (10%) improvement for cars traveling northbound on the corridor and a 5% increase in efficiency for cars traveling southbound. *Id*. Mr. Driban summarized his results as follows: "So, the bottom line is, you know, we're talking about very substantial improvements for all traffic passing through this corridor as a result of the improvements being proposed." *Id.* Through re-timing of the signals, more time will be allocated to the movements north/south on Falls Road and travelers will notice a significant benefit if this project and the proposed improvements are permitted to proceed. *Id.* at 210. He concluded that "the demand or impact of the development being proposed is less than that assumed by the district standard." *Id*. at 213.

Mr. Driban also explained how far along the proposed improvements are in the approval process. *Id*. at 205-206. The improvements have been reviewed and approved by SHA, who owns the intersection, as part of the traffic study, and the Developer has spent its resources to ensure it will be ready to construct the improvements when the project is approved:

> The developer would typically move forward after those are completed and sort of all the entitlements are in hand. In this case, you know, the, the, the developer has elected to move forward, you know, at their own risk, to, to really be ready to make improvements.

> I mean, this is a major improvement and, and they want to be ready to make it, you know, as soon as, as soon as they can.

Id. at p. 206.

V. The petition for special variance should be granted.

The balance of expert testimony supporting approval of the project and proposed road improvements far outweighed any lay testimony summarizing the current state of traffic in and around the Falls Road corridor. Uncontradicted expert testimony established that the Developer is proposing to "mitigate far more" than the traffic that would be added to the "failing" traffic shed. T. 10/27/22, p. 212. County, State, and Developer experts all testified that the demand or impact of the development being proposed is less than that assumed by the district standard. Accordingly, the petition for Special Variance should be granted.

CONCLUSION AND PROPOSED CONDITIONS

Developer has produced strong and substantial evidence in support of its Development Plan, the specimen tree variance, and the traffic special variance. For these and all of the reasons stated herein, Developer respectfully requests that the Administrative Law Judge approve all three requests with Development Plan approval being subject to the following conditions:

CONDITIONS OF DEVELOPMENT PLAN APPROVAL

1. As of the date of this Opinion, it is known that the following sewer segments, including the two starred segments that are the financial responsibility of the developer, and the six additional segments that are tied to another project, are not yet repaired in accordance with the requirements of the 2012 SRRR Plan, and DPWT is requiring this work to be completed by the Developer and a third-party developer. This work must be completed to the satisfaction of DPWT prior to the issuance of any use and occupancy permits for the homes proposed in Greenspring Manor:

Upstream MH	Downstream MH	Length	Diameter	
43794	43793	137.96	8"	★
43793	43792	192.31	8"	★
43792	43791	87.36	8"	
43791	43790	60.00	8"	
43790	43789	316.80	8"	
43789	43788	232.57	8"	
43788	43787	159.01	8"	
43787	43786	76.00	8"	

2. The proposed offsite traffic improvements depicted on Dev. Ex. 16 must be constructed prior to the issuance of any use and occupancy permits for the homes proposed in Greenspring Manor.

3. Revise the note on the Development Plan to state that the emergency access gate is "approved by the Administrative Law Judge."

Respectfully submitted,

PEOPLE'S COUNSEL FOR BALTIMORE COUNTY'S
POST-HEARING MEMORANDUM

I. All Along the Watchtower

Bob Dylan, Jimi Hendrix (Cover), All Along the Watchtower (1967)

"Long road sometime shortest way to end of journey."
Charlie Chan at the Racetrack (1936)

Let us introduce the analytic kaleidoscope to this land use marathon:

People's Counsel's Participation: The Baltimore County Charter assigns People's Counsel to defend the comprehensive zoning maps and master plan. This encompasses development cases where such issues arise. The focus here is on an array of master plan conflicts, compatibility, special variance, environmental, and residential performance standards, all involving the master plan and zoning.

Master Plan Conflict: The development conflicts with and exceeds Master Plan 2020 (MP 2020) T-3 Suburban Transect Zone low density/deep setback criteria. The conflict is more extreme than in Davis Farms (DF). As in DF, these density/setback criteria focus on the particular site, not others near or far. Anyway, other subdivisions cited by developer predate MP 2020; those with high density are nonconforming.

Compatibility: The compatibility requirement applies to all residential subdivisions. County Code Sec. 32-4-402. The development fails the compatibility criteria regarding arrangement, orientation, massing, scale, and details of proposed buildings. It also fails the compatibility criterion requiring street connection.

Traffic and Transportation: Special Variance; Public Safety: The legislation focuses on the existing road network. The key assumptions or criteria are distance from the "F" intersection, and direction of traffic to or away. The legislation does not contemplate

unilateral orchestration of road network changes to gain a special variance.

Anyway, ITE trip generation projections are inadequate and obsolete for many reasons, the trip generation and Synchro modeling also suffer from inevitable margins of error in risk assessment. Citizen testimony and photos indicate higher trip generation levels.

Separately, the citizen testimony and photos show severe area congestion and hazards.

The Jones Falls Sewershed (JFS) Debacle; Consent Decree; Inadequate Capacity; Public Health; Basic Services Maps; MP 2020 Redux: In the wake of the 2005 EPA/MDE consent decree, there are unresolved JFS sewer incapacity and resulting water contamination. This implicates the Basic Services Maps, MP 2020, Maryland and County master sewer plan law, and public safety, health, and welfare generally.

Stormwater Management (SWM); MP 2020 Trifecta: The SWM plan is inadequate due to overstatement of existing runoff and understatement of projected runoff, skewing requirements both ways. This raises more MP 2020 conflict issues.

Residential Performance Standards (RPS) --- The Mays Chapel Road (MCR) Issue: The "emergency gate" scenario is a distraction. Anyway, it conflicts with the RPS street connection standard. There is no legislative basis to deviate. The Bureau of Development Plans Review "100-unit or less" policy is unauthorized and anyway inapplicable. It is also wrong to favor any particular community over others.

Expert and Citizen Evidence: Expert evidence and opinions must have a sound factual and legal basis. The Collective Development Team's (CDT's) expert evidence is biased, inadequate, and misguided. The citizen evidence on density and traffic is compelling.

"**Reaching Out" or "Gaslighting":** The CDT's "reaching out" for emergency gate and landscaping is tactical. Its function is to project a favorable image. There was no reach on density. There was no consideration given to multiple legal conflicts and adverse impacts.

The Forest Buffer Variance (FBV) and Alternatives Analysis (AA): The County Board of Appeals (CBA) sustained the County Department of Environment (DEPS) approval of the FBV and AA. Greenspring Joppa Falls, LLC, Case Nos. CBA 22-027, 22-028, 22-029 (2022). The CBA observed, however, Page 2, footnote 1:

> "This decision clears the way for the development process to continue. However, the Board made one point quite clear during it deliberations and reiterates that point now: there is nothing in this decision that should or can be construed as endorsement of, or opposition to, the ultimate development. This is left for another day."

The decision is apparently final. Our office did not participate in that case.

"Eternal Vigilance Is the Price of Liberty" --- This quote, often attributed to Thomas Jefferson but more likely by Wendell Phillips in 1852, resonates here. The tendency of legal analysis is to compartmentalize issues. There is also a holistic perspective.[1]

II. People's Counsel's Master Plan and Zoning Public Interest Defense

Checks and Balances
Montesquieu, The Spirit of the Laws (1748); James Madison, Federalist Papers No, 51 (1788)

A. Evolution

In 1974, Baltimore County citizens approved Baltimore County Charter Sec. 524.1 to establish the office of People's Counsel to defend the comprehensive zoning maps in the public interest.[2] From 1980 onward, Maryland appellate courts have consistently confirmed the standing of People's Counsel to exercise such defense.[3]

---

[1] We appreciate the fairness and patience of Administrative Law Judge Maureen E. Murphy in this arguably record-setting five-season hearing process. September 1, 2022 – Jul-August, 2023.

[2] Let us revisit the key language in Baltimore County Charter Sec. 524.1:

"*Powers and Duties*: The people's counsel shall have the following powers and duties: A. He shall appear as a party before the zoning commissioner of Baltimore County, his deputy, the county board of appeals, the planning board, and the courts on behalf of the interests of the public in general, to defend any duly enacted master plan and/or comprehensive zoning maps as adopted by the county council, and in any matter or proceeding now pending or hereafter brought involving zoning reclassification and/or variance from or special exception under the Baltimore County Zoning Regulations, as now or hereafter in force and effect, in which he may deem the public interest to be involved …"

* * *

"He shall have in such appearance, all the rights of counsel for a party in interest, including but not limited to the right to present his case, to cross-examine, to object, to be heard, and to file and prosecute an appeal in his capacity … as an aggrieved party." (Emphasis supplied).

[3] People's Counsel v. A.V. Williams, 45 Md. App. 617 (1980); People's Counsel v. Webster 65 Md. App. 694, (1986); People's Counsel v. Maryland Marine Manufacturing Co. 316 Md. 491 (1989); Board of Child Care v. Harker 316 Md. 683 (1989); Security Management Co. v. Baltimore County 104 Md. App. 234, cert. denied 339 Md. 643, 516 U.S. 115 (1995); People's Counsel v. Beachwood I Limited Partnership 107 Md. App. 627, cert. denied 342 Md. 472 (1996); Sycamore Realty v. People's Counsel 344 Md. 57 (1996); Marzullo v. Kahl 366 Md. 158 (2001); People's Counsel v. Surina 400 Md. 662 (2007) People's Counsel v. Loyola College 406 Md. 54 (2008); Geddes v. People's Counsel unreported, 232 Md. App. 726, 2017 WL 1193781 , cert. denied 455 Md. 443 (2017); Baddock v. Baltimore County 239 Md. App. 467 (2018), cert. denied Sahbi Hookah v. Baltimore County 463 Md. 545 (2019); Staples v. Baltimore County unreported, 239 Md. App. 730, 2018 WL 6437681 (2018).

In 1978, the citizens amended the Charter to add master plan defense. HNS Development Corp. v. People's Counsel 425 Md. 436 (2012) is the landmark master plan conflict decision for development cases.

The County Board of Appeals (CBA) in Woodley Park PAI 04-728, CBA 20-024, (2020) granted our office's motion to intervene to defend Administrative Law Judge (ALJ) Paul Mayhew's findings, especially Master Plan conflict. The CBA affirmed. (M. Murphy, Chair). P.C. Exh. 17.[4] Our office intervened again in Davis Farms to defend ALJ Mayhew's conflict finding. PAI # 01-0606, CBA-21-018 (2021). We tried the CBA remand. The Council confirmed ALJ Mayhew's decision. County Council Resolution 137-21. P.C. Exh. 18. It was then incorporated in his final ALJ decision.

The present case revisits the Master Plan T-3 Transect Zone, RPS, and compatibility and adds the special variance about traffic. BCZR Sec. 4A02.4. P.C. Exh. 14. Following WP and DF, we deemed it right to defend the public interest to provide an even more timely assessment of the important issues.

B. Complementary and Integral Master Plan, Zoning and Subdivision Controls

There are three "integral" and "complementary" parts of land planning; master plan, zoning, and subdivision (development) regulations. Board of County Comm'rs v. Gaster 285 Md. 233, 245-50 (1979); Coffey v. Md. Nat'l Capital Park v. Planning Comm'n 293 Md. 24, 26-31 (1982); Surina, 400 Md. at 688-695. Many cases mix master plan, zoning, and subdivision elements, i.e. density (Gaster, Coffey), stormwater management, access roads (Surina), and historic preservation (HNS Development).

County Charter Sec. 523 links the zoning maps to the master plan and development.[5] The County Code integrates them to protect public health, safety, and

---

[4] The County Council then downzoned the property, superseding the petition for judicial review. 2020 CZMP Issue 2-012, W of Main Street and E of Diploma Drive. Bill 80-20.

[5] Sec. 523 states, in its entirety, "Sec. 523. - The master plan and the zoning maps.

> (a) *Definition and implementation of the master plan.* The master plan shall be a composite of mapped and written proposals setting forth comprehensive objectives, policies and standards to serve as a guide for the development of the county. Upon receipt of the master plan from the department of planning, the county council shall accept or modify and then adopt it by resolution.

welfare: zoning Sec. 32-3-101, zoning; development plan purposes and policies; Secs. 32-4-102, 32-4-103. Development plans must comply with all other county laws, including zoning. Secs. 32-4-104(b), 32-4-114(a). Surina.[6] They must conform to the master plan. Secs. 32-4-103; 32-4-231; 32-4-232.

C. Crown Development and Its Progeny

People's Counsel v. Crown Development Corp. 328 Md. 303, 317 (1992) confirmed the office's broad charge for zoning and related matters in development cases:

> In any event, the circuit court did not err in permitting intervention. **People's Counsel has been given a broad charge to protect the public interest in zoning and related matters. *See* Baltimore County Charter § 524.1.** Density regulation is an important part of the zoning process. *West Mont. Ass'n v. MNCP & P Com'n,* 309 Md. 183, 194, 522 A.2d 1328 (1987). Although participation in the development plan process may often be outside the intended ambit of People's Counsel's authority, where protection against a violation of a density regulation is involved, People's Counsel has a legitimate interest." (Emphasis supplied).

Density regulation is one aspect of the zoning process. People's Counsel successfully defended comprehensive rezoning amid the development process. Sycamore Realty v. People's Counsel 344 M. 57 (1996). This is a landmark case on zoning estoppel.

Oella Mill, 02-412-SPH, I-498 (2002) involved high-redevelopment of the historic mill. There were zoning issues on parking, recreational open space, residential transition area controls, flooding, and density. The same law firm (Venable) challenged our participation. Hearing Officer Lawrence Schmidt held our office had standing. Pages 6-7,

> "As a preliminary matter, Counsel for the Owner/Developer [Venable] objected to the participation of the Office of People's Counsel in the Hearing Officer's Hearing component of this case. …. Essentially, the Developer argues that People's Counsel's

---

> (b) *Definition and implementation of the zoning maps.* The zoning maps shall show the boundaries of the proposed districts, divisions and zones into which the county is to be divided consistent with the master plan. Upon receipt of the zoning map from the department of planning, the county council shall accept or modify and then adopt it by legislative act."

[6] Judge Glenn Harrell wrote in Surina, "Zoning regulations and subdivision/development controls, along with … the master plan …, serve additional common objectives in terms of the effective, efficient, and consistent use of land within similarly-situated districts." Continuing, he admonished, "To the contrary, all proposed subdivision developments must comply with the applicable zoning ordinances in effect at the time the subdivision is proposed." 400 Md. at 691-93. In this context, he quoted Baltimore County Code Secs. 32-4-104(b) and 32-4-114(a).

authority is limited by Section 524.1 of the Baltimore County Code to participation in matters relating to defense of the master plan/duly enacted zoning reclassifications, variances or special exception petitions. The Developer argues that this authority does not include the development plan review process· codified in Title 26 of the Baltimore County Code. In response**,** People's Counsel argues that its standing has been broadly construed and cited a number of appellate decisions**,** including People's Counsel v. Crown Development Corp., 328 Md. 303 (1992), and Sugarloaf v. Department of the Environment, 344 Md. 271 (1996).

A review of the Baltimore County Charter (Section 524.1) as well as the cases cited above is persuasive to a finding that People's Counsel is a proper party. The appellate courts of this state have confirmed that People's Counsel may participate in all matters related to the defense of duly enacted Master Plan and/or Comprehensive Zoning Maps as adopted by the County Council. The appellate courts have given wide latitude and broad discretion to People's Counsel's duties in this respect. This includes participation in development plan hearings. Therefore, I find that People's Counsel is a proper party to this case. Moreover, it is to be noted that the concerned citizens of Oella (Protestants) raised and participated in the identical arguments offered by People's Counsel so that those issues were properly raised and considered in any event."

Judge McAuliffe added in Crown Development that where another party on the same side has standing, it is unnecessary to inquire into People's Counsel's standing,

"Finally, respondent argues that the People's Counsel for Baltimore County should not have been permitted to intervene at the circuit court level. Respondent does not, however, suggest how the presence of People's Counsel has prejudiced it. Alison Tucker was a proper party before the circuit court, and had standing to appeal to the Court of Special Appeals and to petition this Court for certiorari. Accordingly, the presence of People's Counsel was not required to obtain appellate review at any level in this case. *See Sugarloaf v. Waste Disposal,* 323 Md. 641, 650 n. 6, 594 A.2d 1115 (1991), and *Board v. Haberlin,* 320 Md. 399, 404, 578 A.2d 215 (1990) ("[w]here there exists a party having standing to bring an action ... we shall not ordinarily inquire as to whether another party on the same side also has standing.").

* * *

There also arose MP 2020 conflicts concerning JFS sewerage capacity. These implicated the integral Master Sewer and Water Plan as well. Concurrently, there arose MP 2020 conflict issues involving the SWM plan.

D. Historical Perspective and Primer

Since 1974, the office has participated successfully in 88 appellate cases. The CBA recognized our office's broad charge in Riffin. 14-094-SPH (2014). The Court of Special Appeals (CSA) affirmed. Geddes v. People's Counsel 2017 WL 1193781, cert. denied 455 Md. 443 (2017). Judge Salmon's CSA opinion included this footnote 2,

> "The People's Counsel for Baltimore County is an independent organization, separate from Baltimore County, with **the "specific public interest function" of defending the comprehensive zoning maps and master plan in a variety of cases**, **including special hearings**. *See generally* Baltimore County Charter, § 524.1(a)(3)A."[7]

We successfully defended the hookah lounge midnight curfew zoning law in Baddock/Sahbi Hookah 16-089-SPH (2017), Maureen E. Murphy, Chair; aff'd Baddock v. Baltimore County 239 Md. App. 467 (2018), cert. denied 463 Md. 545 (2019);

Occasionally, petitioners exaggerate the Crown Development "often outside the intended ambit" language" as if it were a blanket exclusion. Since no two cases are exactly alike, they fabricate distinctions. Anyway, there are master plan and zoning issues here. Our office is directing its attention to these priority issues.

Moreover, it is basic that standing does not depend on the outcome on the merits. It is the threshold for participation. Sugarloaf Citizens v. MDE 344 Md. 271 (1996).

III. What's It All About, Alfie?

"Is it just for the moment we live?
What's it all about when you sort it out, Alfie?
Are we meant to take more than we give,
Or are we meant to be kind?
Cilla Black, Dionne Warwick cover, Alfie (1966)

The CDT fabricated a narrative to secure a favorable ruling to reach their $61,000,000 revenue goal.[8] It's all about the money. But their plan conflicts with MP 2020 density and other standards referred to in the introduction. They overburden the most congested and hazardous Baltimore County road network. They maximize the generation of sewage to the severely inadequate JFS and generate excessive stormwater runoff. They ignore RPS. They override not only multiple laws, but also the legitimate interests of area citizens and the public.

---

[7] The CBA may review unreported appellate decisions, especially where they involve review of this CBA's own record. Moreover, Maryland Rule 1-104, which generally precludes their citation in court cases, does not apply to administrative proceedings. See Rule 1-101.

[8] This is a projection which looks increasingly doubtful as interest rates rise, inflation goes long-term, and the real estate market slips into recession.

IV. Master Plan Conflict

A. "In The Thick of Things"

Master Plan 2020 (MP 2020) is mandatory. HNS Development, *supra.* The T-3 Sub-Urban Zone Transect overlay is likewise thus mandatory. It is discussed, delineated, and applied on a Smart-Coded Land Use Map. P.C. Exh. 8, also attached here as Exh. A.

The key T-3 standards are "low density" and "deep setbacks." The word "low" frames the four corners of the proposed development and site plan parameters. The Lot Table and relevant statistics in in People's Counsel Exhibits 24 and 31. The proposed 61 dwelling lots on 39 acres computes to overall density of 1.56 lots per acre. The 60 new dwelling lots 2-61 are squeezed into 14.4 acres. The concentrated dwelling density is thus 4.2 lots per acre. Average lot size for 2-61 is .24 acre. The mode (most common 1,000sf segment) has 13 lots at .18-.21 acre (8,000-9000sf). There are 24 lots under .23 acres (10,000sf). This is not low density. To suggest otherwise is beyond the pale.

The site plan shows "typical" lot layouts with minimal setbacks. The Lot Table does not include the exact setbacks for each lot, so there is no other documentary evidence. The building models in the pattern book are large and multi-story. Dev. Ex. 1B, 7. These are not deep setbacks from any reasoned perspective.[9] The minimal setbacks also contribute to the high density. Moreover, while no zoning variances are yet proposed, eventual homeowners may request them for accessory uses and buildings. These would magnify effective density and tighten setbacks even more.

B. The T-3 Transect Zone

MP 2020 frames six Transect Zones, their function and purpose, and places them on a Smart Coded Transect Map. P.C. Exh. 8, also attached here.

To set the stage, with admirable scholarship, MP 2020 states, Page 27,

> "A 'transect' of nature, first conceived by Alexander Von Humboldt at the close of the 18th century, is a geographical cross-section of a region intended to reveal a sequence of environments. Originally, it was used to analyze natural ecologies, showing varying characteristics through different zones such as shores, wetlands, plains and

[9] Consider, for example, that the 30-feet building to building setback is comparable to a bunt down the first base line rather than a double off the scoreboard in Camden Yards.

uplands. It helps study the many elements that contribute to habitats where certain plants and animals thrive in symbiotic relationships to the minerals and microclimate."

"This same system can be used to demonstrate different human habitats. Some individuals prefer living on farms while others prefer living in cities. Before the automobile, American development patterns were walkable, and transects within towns and city neighborhoods reflected a variety of development patterns and uses. These degrees of urbanism are represented in a rural-to-urban transect [that] has been developed which provides six "Transect Zones" (T-zones) for application on the proposed land use map. "

MP 2020 then describes Transects as "zoning categories" with "a range of habitats from the most rural to the most urban. They integrate "environmental and zoning methodologies." The Transects are arrayed on Pages 27-29, including T-3:

"**T-3 ((Sub-Urban Zone)** includes **low-density residential areas**, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and **setbacks are relatively deep**. Blocks may be large and the roads irregular to accommodate natural conditions." Emphasis supplied in the text.

The T-3 Transect conflict centers on density. We provided statistics for average lot size, median, mode, and thereby density. P.C. Exh. 24, 31. The 60 new lots are concentrated on 14.4 acres, 4.2 lots per acre; average lot size is .24 acres; median is .3325 acre, and mode (most common) is .18-21 acre. There are 24 lots under the .23 acre (10,000sf) described by Matthew Bishop on Dev. Exh. 4.

The typical Lot Layouts and Pattern Book show minimal setbacks: 25' front yard, 30' rear yard (22.5', decks), and 30' building to building, 15' side yard. P.C. Exh. 26.[10] Building models are 40'- 54' wide, wider than the 15' side yard setbacks combined. The models look to be in the 3500sf range and over 2 stories tall.

Webster's Third New International Dictionary (there being no BCZR Sec. 101.1 definition states, in pertinent part, on Pages 1340-41:

" 4 **low** … *adj* ... **3 :** deficient, inferior, or unusually small in quantity, intensity, value or degree: as **a :** less than normal **:** not intense **:** MODERATE … **b** (1) **:** not loud **:** SOFT … (2) **:** depressed in musical pitch **:** FLAT … **f :** designed for slow or usu. the slowest speed; *specif.* giving the lowest ratio of propeller – shaft to engine shaft speed and the highest amplification of torque (gear) **… 4 :** very low **:** marking a nadir **:** LOWEST …"

[10] This is the prevailing pattern. Mr. Bishop said there are larger setbacks in some lots, but there was no table or any statistics. The entire site plan pictures minimal setbacks.

"6 **low** … *adj* … **1 :** in or to a low position **:** not on high **:** near the ground …."

These confirm the proposed subdivision is not low-density. There follow other hyphenated definitions of "**low**" which correlate to the main definitions.

As for setbacks, the 30' side to side building face setbacks are far from "relatively deep." The same goes for the rest of the setbacks.

Webster's Third New International Dictionary, Page 589, defines,

> "**deep** …*adj* ... **1 :** extending far or comparatively far from some level, edge, surface, or area : as **a :** extending downward to a considerable degree … **b :** extending well inward … **c :** extending well back from a surface … **d :** extending far laterally from something expressed or implied that is regarded as central …."

It is implausible to stretch this language to conclude the setbacks are deep. They are shallow. Consider them metaphorically as snorkeling rather than SCUBA diving. The CDT's apparent suggestion this plan has low density and deep setbacks is an an oxymoron, a classic juxtaposition of the incongruous.

C. Davis Farms

ALJ Mayhew judged the setbacks in Davis Farms (DF) to conflict, even on larger lots with greater setbacks. P.C. Exh. 18. The site plan here likewise "squeezes" maximum zoning density on the buildable portion of an environmentally constrained property, here even more restricted by floodplains, wetlands, and forests. The density here is much higher by any measure. Moreover, ALJ Mayhew did not extend his Davis Farms T-3 Transect inquiry to the lot sizes and configurations of adjacent areas.

ALJ Mayhew's incisive Davis Farms analysis is at Page 18, P.C. Exh. 18,

> "Master Plan
>
> As noted by the Planning Office in their Final HOH Report, this tract consists of TR 2 Rural Residential and TR 3 Sub-Urban transects. The GIS database indicates that the tract is primarily in the TR 3 transect. The TR 2 Rural Residential transect is described as consisting of "large lot single-family detached housing," with setbacks "generally 50 plus feet. Lots are deep to accommodate a larger backyard. Density varies between 2 to 5 acres per dwelling." And the TR 3 transect describes "low density residential areas, adjacent to higher zones that contain mixed use. Landscaping is naturalistic and setbacks are relatively deep."
>
> "In my view the development plan in this case does not comply with the Master Plan vision for these transects. As the "Lot Area Table" on the Plan shows, the 19 proposed lots range from .27 acres to .63 acres, with the majority of lots falling in the .30

> to .45 range. And the "Typical Lot Layout on the Plan for the lots in the DR 1 and DR 2 zones show front setbacks of as little as 25', and side building-to-building distances of as little as 30'. This is how 19 four to five bedroom homes are squeezed onto the buildable portion of this tract."

The County Council sustained ALJ Mayhew's decision. Resolution 137-21. P.C. Exh. 18. The Council Resolution confirms ALJ Mayhew's T-3 Transect interpretation and application.[11] This focuses on the site itself. Agency interpretations are entitled to deference, especially when adjudicated publicly and then confirmed or reinforced.[12]

A picture is worth a thousand words. The comparative statistics are telling:

	Davis Farms	**Greenspring Manor**
Effective Lot Density (Concentrated Area)*	2.4 Lots/Acre	4.2 Lots/Acre
Effective Lot Density (Entire Site)	.9 Lots/Acre	1.56 Lots/Acre
Average Lot Size (Concentrated Area)*	.42 Acre	.24 Acre (Lots 2-61)
Median Lot Size	.475 Acre	.33 Acre (Lots 2-61)
Mode (Most Common Lot Size, 1000Sfs)	.30-.46 Acre	.18-.21 Acre

*The concentrated lot area for Davis Farms is 8 Acres of the 21. For Greenspring Manor, it is 14.4 Acres of the 39, not counting Lot 1.

Neither Lot Table lists setbacks. Nevertheless, a scan of the DF lot diagrams shows larger DF lots with larger setbacks, especially rear yard setbacks. Yet ALJ Mayhew still found a setback pattern there does not meet the "deep" standard.[13]

ALJ Mayhew concluded, Page 19, "… the owners of the property have the right to develop the tract to some reasonable degree …..," then adding "Certainly the owner of this parcel has the right to build some number of homes." But his role was to approve or deny the plan as submitted. The same may be said here.[14]

---

[11] The County Charter defines a Council Resolution as administrative. Sec. 1009 (c).

[12] See, e.g. Skidmore v. Swift & Co. 323 U.S. 134, 140 (1944); Comptroller v. John Louis Co. 285 Md. 527, 544 (1979); MDE v. Co. Comm'rs of Carroll County 465 Md. 169, 206 (2019).

[13] Take any metaphor: a first-down rush vs. a 35-yard post pattern to the corner of the end zone; a 12-yard penalty kick in soccer vs. a goalie punt over 50 yards; the forest edge vs. the forest center; the entry to the cave vs. distant interior; snorkeling vs. scuba diving.

[14] As in Bob Seger's Still the Same (1978), the law here is still the same, with facts much worse.

D. Diversionary Comparisons.

CDT fashioned colorful exhibits (4, 9) to argue for a comparison of neighborhood and regional land uses. But the T-3 Transect language does not go outside the borderline. The T-3 criteria are "low" density, not "lower than some other area lots," and "deep" setbacks, not "deeper than others." This is elementary literacy.

Anyway, Matt Bishop's Dev. Exh. 4 distorts Greenspring Manor density, colored purple at 10,000-30,000sf. This misrepresents the Lot Table's 7,000-21,000sf for Lots 2-61, with 24 lots under 10,000sf. The immediately adjoining dwelling lots in HFD, SR, and MOG are much larger single-family dwelling lots around 1-acre. The purported general ranges for other area subdivisions are vague, with no Lot Tables.

Existing area subdivisions date from the 20th century: HFD, 1953; SR, 1967, MOG, 1982; Huntspring, 1990. Michael Tanczyn's exhibits showed other subdivisions similarly dated. So the attached-dwelling lots in some areas are nonconforming to the MP 2020 Transect. Mr. Bishop compounds the diversion with distant nonconforming dense areas in Mays Chapel, Five Farms, Thornleigh, and Pikesville. Dev. Exh. 9.

In sum, CDT presents some dense subdivisions in T-3 Sub-Urban Zone areas to argue for T-3 compliance here. Even if other subdivisions were relevant, these are in nonconforming subdivisions.[15] It is normal for the legislature to adopt zones which span nonconforming uses rather than draw a checkerboard to mark each such existing use. The T-3 Transect areas with older subdivisions comprising attached dwellings and/or small lots does not excuse or exempt new developments. Anyway, the adjoining Heatherfield (HFD), Seminary Ridge (SR), and Meadows of Greenspring (MOG border area) have much larger lots and setbacks and mostly smaller houses. The CDT's repeated focus on attached lots in MOG and more distant subdivisions is diversionary and irrelevant.

---

[15] Nor does it matter that the busy and dense Greenspring Station and JHMI pavilions are nearby. The pyramids of Egypt could be next door, and it would not change the analysis. Indeed, the commercial and institutional uses just aggravate the traffic difficulties.

Meanwhile, CDT Exhibit 4 blanks out and disregards the one nearby subdivision which is current. That is the Krongard (Torch Hill) subdivision, shrouded in white, like a ghost. We address Torch Hill below.

Judge Brianna Booth recapitulated the applicable statutory construction canon in Mayor and City Council of Baltimore v. Thornton Mellon 478 Md. 396, 429 (2022):

> "Finally, we check our interpretation against the consequences of alternative readings of the text. …. Doing so ensures that we adopt an interpretation that avoids a construction that is 'illogical, unreasonable, or inconsistent with common sense.'... Indeed, 'it has been called a golden rule of statutory interpretation that, when one several possible interpretations produces an unreasonable result, that is reason for rejecting that interpretation in favor of another which would produce a reasonable result.'" Internal citations omitted.

In sum, CDT's purported statutory construction is nonsensical. The MP 2020 "Smart Code" Transect Zone Land Use Map, Page 28, arrays Transects regionally. To sprinkle transects, property by property, to isolate existing subdivisions, would form an irregular crazy-quilt, a virtual Jackson Pollock drip/splash abstract expressionist painting.

E. Department of Planning Memoranda

The Department of Planning (DOP) found a Master Plan conflict in their March 9, 2021 CPC memo, but flipped to support in the September 11, 2021 DPC memo. The DOP's reversal of position lacks any rational basis. [16]

The DOP's errant rationale for eventual support of the project echoes DF. There, despite CPC concerns, the DOP flipped to favor the project. The DOP called the T-3 Transect advisory and "coincident" with the zoning classification. This conflated zoning compliance with master plan compliance, eviscerating and subverting the independent master plan mandate. The DOP reverts to its flawed concept here.

Our office's November 9, 2021 letter to the County Council in DF included this critique of the DOP position,

[16] The DOP CPC memo states, "As designed, the proposed development does not achieve the vision of the Master Plan 2020 nor the Comprehensive Manual of Development Policies. The Master Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses." Their DPC reversal argued the plan was revised "…to meet bulk regulations … and comply with the CMDP and BCZR without the need for relief." But such zoning compliance is irrelevant and insufficient to satisfy the higher T-3 Transect criteria.

> "The DOP Report asserts that MP 2020 is advisory and does not apply to individual properties or subdivisions. P. 1. This directly contradicts the Code and HNS Development. While the Master Plan may not "identify land use of individual properties or parcels," the Transects still provide criteria which must are mandatory and must be applied.
>
> "The DOP Report labels Transects as "coincident" with zoning, as if they add nothing to zoning controls. P. 3. This false conflation, equivalency, and subsuming of MP 2020 Transects into zoning map classifications renders the master plan ineffectual, nugatory, and superfluous. This is contrary to the Code, Surina, and HNS Development. The DOP Report also disregards ALJ Mayhew's analysis.
>
> "The DOP's approach makes it impossible ever to assess any master plan conflict. So they sidestepped the issue during the process, and now come back to rationalize their disinterest."

Ironically, in HNS Development, the DOP had appreciated the independent master plan mandate. They DOP's regression in DF also disregarded ALJ Mayhew's Woodley Park analysis.[17] Unfortunately, the DOP is still locked in to an ineffectual approach.

F. Krongard (Torch Hill) Distinguished

ALJ Maureen Murphy approved Torch Hill on October 13, 2022. PAI 08-0919, 2021-274-SPHA.[18] Our office did not challenge Krongard (Torch Hill). With 32 lots on 42 acres (about .4 -.5 acres per lot) at 1400 West Seminary Road, it looked arguably in the ballpark for T-3 low density and compatibility. The density is less than in DF (.76 Lots/Acre vs. .9 Lots/Acre). Area citizens did not raise a master plan conflict issue. So, Torch Hill did not pose the extreme master plan conflict ripe for resolution here...

Moreover, the Torch Hill developers found it economically feasible to market 32 lots on 42 acres. This suggests it is marketable here to situate and sell a proportionate number of 30 lots on 39 acres. So there is no economic excuse either.

---

[17] Their regressive approach echoed was already evident in Woodley Park.

[18] Protestants appealed.to the CBA. It has just been tried on July 11 and 13, 2023. We shall assume for the purpose of this memo that the CBA will affirm.

G. The Play Within the Play

Prince Hamlet encounters his father's ghost early in Shakespeare's iconic drama. Hamlet (1602), Act I, Scene V. The ghost confides a stirring and terrible history. So, the plot unfolds, with twists and turns, the play within the play, consciences caught, a fateful trip to England, and then the road to denouement. As Hamlet put it, "The play's the thing where I'll catch the conscience of the king." Act II, Scene II.

In our concurrent November 9, 2021 letter to ALJ Mayhew in the present case, we previewed master plan conflict, RPS, and special variance problems.[19] P.C. Exh. 15 (ID). There is a play to be performed within the play before the ultimate curtain falls at dusk. In view of the seriousness of the master plan conflict issue, the matter must be referred to the Planning Board and then to the County Council.

V. Compatibility

"Square peg in a round hole"

ALJ Mayhew spotlighted the hybrid zoning/development compatibility issue in Woodley Park. County Code Sec. 32-4-402. P.C. Exh. 17; Pages 17-21.[20] ALJ Mayhew decided this compatibility provision covers development plans in all zones. He distinguished the narrower group of zones involving DOP recommendations. His

---

[19] There were no written responses to or disagreement with our letter.

[20] County Code Sec. 32-4-402 begins, with these subsections applicable to the scope,

§ 32-4-402. - COMPATIBILITY.

(a) *"Neighborhood" defined.* In this section, "neighborhood" means the existing buildings and land uses adjacent to and extending from the proposed development to:
(1) A definable boundary such as a primary collector street or arterial street;
(2) An area with a significant change in character or land use; or
(3) A major natural feature.
(b) *Exception.* This section does not apply to a research park.
(c) *Recommendations by Director of Planning.* The Director of Planning shall make compatibility recommendations to the Hearing Officer for:
(1) A cluster subdivision;
(2) A development in the RCC, R-O, OR-1, OR-2, O-3, SE, OT zones, the CR districts, or, except as provided for a development described in § 32-4-402.1, a Planned Unit Development; or
(3) Alternative site design dwellings as provided in the comprehensive manual of development policies.

extensive reasoning deserve attention. Pages 18-19.[21] ALJ Mayhew's analysis addresses the relationship between statutory subsections and other relevant statutory sections. This accords with statutory construction principles. See Buarque de Macedo v. Automobile Ins. Co. 480 Md. 200, 215-30 (2022).

The CBA (M. Murphy, Chair) affirmed denial of the development plan based on RPS conflicts, but disagreed in *dicta* as to compatibility. Pages 17-20. The CBA said it needed to be consistent with its 11301 Pulaski Highway decision CBA 19-002 (2019). The CBA did not criticize ALJ Mayhew's reasoning. There was no judicial review.

Here, the plan does not satisfy the relevant criteria. The DOP said in their CPC memorandum, P.C. Exh.3:

> "The Department of Planning considers this site to be overdeveloped. Many of the lot sizes are not compatible to the surrounding neighborhoods."

---

[21] "While it is true that this subsection enumerates the types of development projects where the DOP Director shall make compatibility recommendations to the Hearing Officer, it does not state that these development scenarios are the only types of development where the concept of compatibility should be considered. In enacting this Code provision the County Council may have reasoned that certain types of development are more technical or unique and that the DOP should therefore be required to assist the Hearing Officer with recommendations. Further, subsection (b) expressly states the only type of development to which the section does not apply are research parks. So the County Council knows how to exempt a type of development from compatibility review when it wants to. Moreover, the Comprehensive Manual of Design Policies ("CMDP"), contains a "Residential Compatibility" Section that states that the BCZR and CMDP "require the Director of Planning to make compatibility recommendations for all development proposals other than certain single family housing in DR 5.5 zones." This "Compatibility" section lists five "compatibility objectives," including "Site Development Context," whose objective is to ensure that "[t]he arrangement and orientation of the proposed buildings and site improvements are patterned in a similar manner to those in the neighborhood." See, CMDP p. 66. Finally, and conclusively, BCC § 32-4-104, titled "Scope of Title," states that "[t]his title shall apply to the process preview for approval of *all* development." (Emphasis added).

"In sum, I believe that DOP is charged with making compatibility assessments on virtually all development projects, and I further believe that the Hearing Officer can and should consider compatibility in deciding whether a development plan should be approved."

As we saw, their DPC memo flipped to support, but without cognizable reasoning. GTCC President Eric Rockel aptly highlighted the DOP's irrational reversal of position during his concise and excellent testimony.

The plan conflicts with Code Secs. 32-4-402(d)(1), (d)(3), and (d)(8):

> (d) *Compatibility objectives.* Subject to subsection (c) of this section, development of property shall be designed to achieve the following compatibility objectives in accordance with the guidelines in the comprehensive manual of development policies:
>
> (1) The arrangement and orientation of the proposed buildings and site improvements are patterned in a similar manner to those in the neighborhood.
>
> * * *
>
> (3) The proposed streets are connected with the existing neighborhood road network wherever possible …."
>
> * * *
>
> (8) The scale, proportions, massing, and detailing of the proposed buildings are in proportion to those existing in the neighborhood."

The clustered lots conflict with the prevailing neighborhood pattern of larger lots and setbacks in HFD, SR, and immediate MOG border. The six building schemes in the Pattern Book are all larger in scale, more massive, and higher than those in the area. The detailing and styles are also quite different. They fail (d)(1) and (d)(8). The proposed Mays Chapel Road gate plainly conflicts with (d)(3), tracking the RPS.

To be sure, compatibility does not require an identical pattern. But the current plan is beyond the pale of the character of area subdivisions.[22] It is also useful to consider the relationship of compatibility to the master plan conflict. The concentrated density and minimum setbacks significantly contribute to the incompatible plan.

[22] Metaphorically, Camden Yards (1992) brought back compatibility with historic ballparks. Such multipurpose enclosed stadiums as Three Rivers (Pittsburgh, 1970)) and Veterans Stadium (Philadelphia, 1971) had broken and degraded the beautiful tradition.

VI. Traffic and Transportation

A. The Special Variance

"It is difficult to make predictions, particularly about the future."
Attributed to Mark Twain, Nostradamus, Niels Bohr, and Yogi Berra

Zoning is an exercise of the police power.[23] In 1979, Baltimore County enacted a Growth Management Law (GML) "... to implement the objectives of the county-wide Master Plan …." relating to "necessary public facilities." Bill 178-79. As amended, it is codified in BCZR Sec. 4A00.1, et seq. The County Council found "important public facilities in certain predominantly urban areas of the county are inadequate." There were established Basic Service Maps (BSM) to regulate nonindustrial development. They are reviewed annually and not intended to be permanent. BCZR Secs. 4A02.1, 4A02.3.F.

Where a residential development is proposed in a designated traffic shed with an "F" intersection, then a "special variance' is prerequisite for any building permit. The law provides the standard: "That the demand or impact of the development proposed will be less than that assumed by the district standard." BCZR Sec. 4A02.4.G.1.

This area not only has three "F" intersections, but also congestion and hazards attributable to the land use array, roads configurations, difficult turns, and lengthy time-consuming backups. There are problems not only at rush hour, but also at other hours where the churches and schools generate much traffic.

* * *

The County Council classified this petition genre as a "special variance" rather than "special exception." Juliet sighed in Shakespeare's Romeo and Juliet (1595), "What's in a name?" But the names Montague and Capulet were important. The law strictly construes variances. This includes a need which must be substantial and urgent.[24] In contrast, there is a settled presumption in favor of special exceptions. So the very name, special variance, implies strict scrutiny.

---

[23] Village of Euclid v. Ambler Realty Co. 272 U.S. 365, 387-88 (1926). Zoning laws "... must find their justification in some aspect of the police power, asserted for the public welfare."

[24] Chesley v. Annapolis 176 Md. App. 413 (2007), cited in Otter, 2022-173-A (2022).

It is also noteworthy that the Council has excluded or made exceptions for specific areas and uses from the BSM. P.C. Exh. 37. But the Council has chosen consistently to maintain control of the Falls Road area with its three F" intersections.

To illustrate, Bill 25-22 excluded the Ellicott Mill National Historic District in the South Rolling/Frederick Road commuter shed. BCZR Sec. 4A02.3.A. This excluded the Ellicott Mill redevelopment. ALJ Mayhew approved the project, recognizing this exclusion. Ellicott Mill PAI 01-0616, 2021-291-SPHASA, Pages 1, 19-20 (2022).[25]

Previously, the Council excluded part of the Ebenezer Road/Pulaski Highway commuter shed, and so the 130001 Pulaski Highway development. Bills 15-17, 30-20, 32-21, 25-22. BCZR Sec. 4A03.2.C. See PAI Case 11-1041, CBA Case 19-002 (2019). The Council also excluded a portion of the Charles Street/Bellona Avenue/Kenilworth Drive commuter shed. Bills 32-21, 25-22. BCZR Sec. 4A03.2.B.

The Council made an exception for Health Care and Surgery Centers Bill 37-15; BCZR Sec. 4A02.4.E.1.h. This facilitated Johns Hopkins Pavilion 3 at Greenspring Station.[26] There are other exceptions, such as for developments in Commercial Revitalization Districts and the Downtown Towson District. BCZR Sec. 4A02.4.E.1.a-j.

None of the exclusions or exceptions apply in the present case.[27]

While these legislative choices do not automatically disqualify the present application, they raise the implication and arguable presumption that the County Council ordinarily does not intend to make available special variances for developments in commuter shed areas still under control. This is another basis for strict construction.

* * *

The CDT argues their additional Joppa Road lanes result in less waiting times than assumed, thereby avoiding the otherwise inevitable adverse impact on the "F" level. They

---

[25] The CBA sustained ALJ Mayhew's decision. CBA 21-291-SPHSA and 23-013 (2023).

[26] This came after their petition for special variance had been denied. Foxleigh Enterprises, P.C. Exh. 11. 2012-0060-SA; 03-C-13-013521.

[27] Recently enacted Bill 19-23 maintains the "F" ratings.

submitted the Lenhart/Driban consulting Traffic Impact Analysis (TIA), September 14, 2020; revised December 7, 2020. Dev. Exh. 25.

There is no court case interpreting "impact less than that assumed by the district standard." But there is a decisional prism here. Rizakos, Castlemoor Road, 2000-557-SA (2000), T. Kotroco, DZC; FDP,LLC, Wilson Ave., 05-336 (2005), J.V. Murphy, DZC; Stillerman, 852 Middle River Road, No. 08-264-A (2008), T. Bostwick, DZC; LaPenna, Forest Ave., 08-349-SA (2008), T. Bostwick, DZC; Sterling Reserve, LLC, Wampler Road, 08-436-SA (2008), Wiseman, ZC; T. Bostwick, DZC; Hitt, East Joppa Road, 2009-080-XSA (2009), W. Wiseman, ZC; Rave-On Enterprises, 1801 East Joppa Road, 2009-0275-SA (2009), T. Bostwick, DZC; Baynesville Properties, East Joppa Road, 2022-079-XSA (2022), P. Mayhew, ALJ. These decisions depict a consistent path:

(1) Is the likely trip generation minor, such as for a modest number of homes or self-storage?

(2) Is the property located at a substantial distance from the "F" intersection?

(3) Is the likely direction of traffic toward or away from this intersection?

The consistent theme is that the standard is satisfied where the project is minimal, the property is distant, and the predominant traffic flow is away from the "F" intersection.

The situation here is opposite. The project is major and very close to the Falls/Joppa intersection. The TIA shows 80% of trip generation to and from that direction. Page 14. To escape the law, the CDT orchestrates a change to the intersection for their benefit. Nicholas Driban projected a reduced rush hour waiting time at the "F" intersection and so no negative effect.[28] But the statute does not intend for the developer to stage manage road changes and give rose-colored predictions about the effects.

In sum, the "demand or impact of the development" and "that assumed by the district standard" relate to the existing road network. The rule of strict construction applies if there were any doubt. Anyway, the impacts are at best speculative.

[28] The actual impact cannot be measured until the project is built. So there is no realistic remedy for any worsening situation. An aggravating factor is that the TIA still projects a Joppa/Falls "F" level intersection, so there is no room for the several errors, both specific and general.

* * *

If we assume *arguendo* the CDT lane addition theory were acceptable as a matter of law, it collapses factually anyway.

The TIA places the Institute of Traffic Engineers (ITE) Manual average trip generation projections into a Synchro computer model. It projects 46 AM rush hour trips (35 out) and 61 PM trips (38 in). Dev. Exh. 25, 13-14. But in the real world, the projection is too low.

ITE Land Use Section 210, Single-Family Detached Housing, cites data on household residents and vehicles for 30 sites, averaging 3.6 residents and 1.5 vehicles per dwelling unit.[29] Prot. Exh. 35 The surveys were in 22 states and Ontario in the 1980s, 1990s, 2000s, and 2010s. These outdated surveys clearly relate to lower dwelling populations than from 3500sf homes with 2-3 garages. Online shopping and deliveries (Amazon, etc.) came later, so those added trips must be considered. The sites surveyed likely had several access points, lessening trip generation for each one. Logically, the GSM subdivision will far exceed ITE trip generation projections.[30]

Let us explore further with a simple equation to compute waiting times:

> W = TS, where W = waiting times; T = trip generation factors (garages/unit, delivery trips, access road coefficient); and S = Synchro model coefficient

GSM trip inputs exceed ITE studies inputs. So real T exceeds projected T. Even if we leave S alone for the moment, this means real W is much greater than projected W. So, the errant or obsolete inputs of the ITE --- 1.5 garages/unit, 1980s-2000s, multiple access roads --- necessarily produce an errant conclusion.

[29] There was no showing of the underlying studies.

[30] The CDT argues the ITE is a tool commonly used in the profession. While it may be useful for some purposes as a starting point, it is too dated and superficial to be used mechanically for the current day's new developments.

It likely would have helped to do trip counts for the Tally Ho/Joppa Road and Thornton/Joppa intersections. But the CDT deliberately failed to do so. Nor did DPWT staff or the SHA request or conduct any counts.[31]

This brings us to the Synchro/SimTraffic models. They are fraught with inevitable margins of error and unforeseen circumstances.[32] The fields of risk assessment and risk management address traffic.[33] The TIA did not consider or taken them into account.[34]

To conclude, the CDT's traffic projections are biased, misguided, incomplete, and not credible. They fail to meet the legal standard, however interpreted.

* * *

Let us turn to Baltimore County and SHA reviews. The DPWT issued DPC comments on August 12, 2021. P.C. Exh. 6. Terry Curtis submitted their similar special variance comments on September 20, 2021.

The TIA, revised December, 2020, was available to DPWT. Yet they do not discuss the TIA assumptions and methodology. The CDT eventually got the August 16, 2022 e-mail from Kristofer Nebre to "Nick." Dev. Exh. 14. While not an official DPWT comment, Nebre concurs there "… would not [be] a net negative impact on the

---

[31] In Rizakos, former County Bureau Division Chief C. Richard Moore conducted traffic counts on the adjacent subdivision to provide a reasonable traffic analysis.

[32] Added lanes may just attract added trips from all area motorists, regenerate congestion, and protract waiting times. As Ying Wei Lum also observed, the reduced Joppa Road signalization may cause drivers to speed up to beat the light.

[33] See X. Yu, Risk Assessment: method and case study for traffic projects, J. Mod. Transport (2017), 25(4):236-49, https://link.springer.com/article/10.1007/s40534-017-0140-zU.S.;

Department of Homeland Security, Risk Assessment, https://www.ready.gov/risk-assessment.

[34] While based on more definite historical data, 100-year floodplain models failed to foresee the 2018 extreme storm which flooded Ellicott City. Upslope development approvals contributed. Hurricane models are subject to changes in course. Economic, political, and public health models may be speculative and/or wide of the mark.

intersection." Nebre leaves it to the Zoning Commissioner (ALJ) to decide the special variance.[35] There was no copy to other DPWT officials. None of them commented.

Kris Nebre then testified at ALJ Murphy's request. He said nonchalantly that he did not prepare. Nor had he independently studied the TIA. He did not discuss traffic projection or modeling methodologies. He gave no reasons to support his agreement there would be no negative intersection impact. He did not address area congestion and safety problems. Despite prodding by CDT counsel, he refused to voice a departmental position to support the special variance.[36] Angelica Daniels, Bureau Chief, did not appear.

There followed SHA Assistant District Engineer Erin Kuhn to echo their approval. This is irrelevant. Their lesser method to assess intersection levels muted their concerns. They focused on reducing traffic signal time east-west to enhance north-south corridor flow. They did not address area congestion and safety issues at all. They did no independent modeling study. Ms. Kuhn admitted to margins of error in ITE and modeling projections. She admitted area traffic counts could provide helpful information.[37]

* * *

Last but not least, there is no accountability. If the project is approved, and traffic worsens, there is no remedy for overdevelopment and aggravated consequences.[38]

* * *

This brings us back to Krongard. ALJ Murphy accepted the developer's 8-vehicle extension of the Seminary Roade left-turn lane and projection of no negative impact on the Falls/Seminary intersection. Pages 6-9, 12-14, 40-44. But there were not presented the legal analysis, precedents, and argument presented here, including the focus of the law on the existing road network and likely traffic direction. Other than Krongard, this appears to be the only case with a proposal to satisfy the standard with a unilateral improvement.

---

[35] The record is silent as to the written or verbal communications between Driban and Nebre which led to this friendly e-mail.

[36] On the whole, he seemed disengaged.

[37] "Crystal ball, There's so many things I need to know, Crystal ball, There's so many things I've got to know, Crystal ball, Won't you tell me please before I go." Styx, Crystal Ball (1976).

Anyway, there are significant distinctions. Torch Hill has about half the lot density. There was no dispute to the projected peak hour trip generation of substantially less than 50. There is attenuated impact on the more distant and problematic Falls/Joppa intersection. The lane extension is modest compared to lane additions here. It does not pose significant safety hazards. There is not as much of a scale of massive area congestion and safety problems as here.

Torch Hill Protestants did not produce lay or expert testimony. Page 40. There was no challenge to the validity or reliability of ITE traffic projections and Synchro modeling. There was no discussion of margins of error or risk assessment.

* * *

The DOP never issued the required report on the special variance. BCZR Sec. 4A02.4.G.2. Webster's Third New International Dictionary defines a report, *inter* alia, as:

> "**2 a:** something that gives information: usu. detailed account or statement (a weather ---) (an intelligence --) (news --) (a stock market --) …." Page 1925.

Black's Law Dictionary (4th Ed. 2014) corroborates,

> "**report and recommendation:** A written statement of findings and a proposed course of action for consideration by another, esp. a superior.

DOP's Brett Williams deferred to DPWT. P.C. Exh. 3. But there is no statutory authority for the DOP to shift or transfer statutory responsibility. Cf. United States ex. Rel. Accardi v. Shaughnessy 347 U.S. 260, 266-68 (1954). Nor does Kris Nebre's informal e-mail qualify as a report. So there is no agency report anywhere.

If the special variance issue were fairly debatable, there could be a remand for a report. But the special variance fails here factually and as a matter of law. Therefore, a remand would be futile. O'Donnell v. Bassler 289 Md. 501, 509-10 (1991).

B. Public Safety and Welfare

The special variance issue is a subset of the overall traffic issue. The transportation problems relate not only to special variance review, but also to development plan review generally. County Code Secs. 32-4-102(b), 32-4-103(a), and 32-4-229.

---

[38] Mr. Wyatt accurately assessed the county and SHA performance as disappointing.

ALJ Mayhew addressed safety issues in Woodley Park and Davis Farms although no "F" intersections were involved. WP covered manifold traffic problems on Woodley and Dean Avenues. P.C. Exh. 17, Pages 12-15-22-23.[39] DF identified hazards on Maple Avenue and its Frederick Road intersection. P.C. Exh. 18, Pages 7-11, 16-18. ALJ Mayhew also addressed traffic safety issues in Ellicott Mill, Page 20.

Here, there has unfortunately been zero study of potential aggravation of existing safety hazards. Neither the CDT nor DPWT paid any attention. The added Joppa Road lanes are likely to worsen rather than neutralize or mitigate the existing problems.

Area citizens' testimony and photographs demonstrate congestion and safety difficulties. The right turns from Falls to Joppa call for "eyes in the back of your head." The left turns from the Exxon passage and Greenspring Station are accident central. The multiple curb cuts on Falls Road east side are a jungle. Tally Ho Road is already a commuter thruway. The backups on Joppa extend a mile and a half to Thornton Road.

The CDT's traffic presentation focuses almost exclusively on the special variance. They did a Tally Ho Road traffic study to try to downplay commuter traffic. Ironically, they chose not to do traffic counts for the Tally Ho and White Manor/Joppa intersections.

VII. The Jones Falls Sewershed

> ***"And worse I may be yet. The worst is not So long as we can say "This is the worst.'"***
> William Shakespeare, King Lear Act 4, Scene 1 (1605)

A. Sewage Generation

To verify the expected sewage generation, we consulted the County Sewer Design Manual.[40] There are stated these projections on Page 24:

> a) Contributing Population: Domestic wastewater quantities normally are to be computed on a contributing population basis except as noted in the subparagraphs below. The population to be used in design depends upon the zoning of the area that the sewer serves. If the area contains residential zoning, the design population is based on full occupancy of all housing to be served at the population density shown on the following table. If the area contains non-residential zoning, the design contributing population for

[39] The CBA affirmed ALJ Mayhew's denial of the plan, based mainly on RPS conflicts.

[40] https://resources.baltimorecountymd.gov/Documents/PublicWorks/standardsandspecs/sept2010/06sewer2010.pdf.

non-residential areas is based on the population per acre and dwelling units per acre densities in the following table: Zoning Classification Dwelling Units per Acre, **Population per Acre**: RC 2, RC 5: 0.667, 2.33; DR 1: 1.0, 3.5; **DR 2**: 2.0, **7.0**; DR 3.5: 3.5, 12.25; DR 5.5: 5.5, 19.25; DR 10.5: 10.5, 36.75 DR 16: 16.0, 56.0; R 0: 5.5, 19.25 BL -- 12.0 BM -- 10.0; BR -- 12.0; MR -- 10.0; ML -- 10.0; MLR -- 10.0; MH -- 16.0

b) Average Daily Flow: 1. Residential: The average daily per capita wastewater quantity for residential areas shall be 90 gallons per capita per day. **The average daily residential flow rate shall be determined by multiplying the applicable population densities by the average daily per capita wastewater quantity of 90 gpcd.**

Given D.R. 2 Zone population density at 7.0 per acre, 90 gpcd average daily flow, and 61 dwellings, this computes to 7 x 90 x 61 = 38,430 gpd.[41] If we then calculate the annual sewage generation, we get 38,430 x 365 = 14,026,950. In other words, at maximum D.R. 2 Zone density, there will annually be more than 14 million gallons added.

Each new development generates an incremental addition to the overall sewage situation. This insidiously escalates the adverse impacts of infiltration, inflows, and SSOs. Is it appropriate to continue on every occasion to maximize density in a perpetually failing sewer region? The answer is no. While it is not the fault of developers that the JFS situation is a debacle, the public health has to be a priority.[42]

B. The 2005 Consent Decree

In 2005, the EPA and MDE imposed a federal court Consent Decree for the Baltimore County sewer system, including the JFS. Prot. Exhs. 65-66. The main purposes are to gain adequate sewer capacity, eliminate sanitary sewer overflows (SSOs), and mitigate adverse public health and welfare impacts. Sec. V, Para. 8. The decree spotlights 6, 10, and 20-year storms at 6 and 24-hour intervals. It projects population to 2025. These reflect a then reasonable expectation that the County would satisfy the decree by 2025. Otherwise, the population and storm projections would have extended longer.

[41] Nicholas Leffner estimated the gpd at 19,000 based on the design manual. It appears his estimate was too low and about 50% the design criteria.

[42] In 2018, Ellicott City experienced yet another disastrous flood According to UMBC Professor of Geography Andrew Miller, it appears that the degree of upslope development was an aggravating and contributing factor. https://umbc.edu/stories/learning-from-ellicott-city/

The County must file quarterly and annual reports. Sec. VI. MDE reviews the reports and either approves or disapproves. The County acquiesced to a civil penalty of $750,000.00. Sec. IX, Para. 26-30 and agreed to a myriad of major stipulated penalties in the event of noncompliance. Sec. XI, Para. 38-45.

On April 14, 2023, MDE Water and Science Administration Director D. Lee Carey wrote DPWT Deputy Director Lauren Buckler to conclude their review, with EPA, of County SSO information just for calendar year 2018. Prot. Exh. 111. The letter attached a chart of 151 SSOs and applied penalties, along with waiver status: uncontested, waived, or denied. As a result MDE reduced its penalty from 320,875 to 136,687.50. Director Carey added EPA would in due course send a separate letter for penalties due to the United States. The Carey letter is attached to this memorandum.

The review and penalties are just for calendar year 2018. There is no evidence to infer any significant reduction in SSOs for subsequent years. This is reflected in the labyrinth of ongoing reports and publications, with Hazen the latest.

C. Four Consultants and Hazen Redux

It took seven years for the County to get the RKK reports (2012). Prot. Exh. 67-68. This signaled a winding road. There was the first Hazen review, RJN (2021), Ramboll (2022) and again Hazen.[43] There is expected a further report from Hazen later in 2023.

Protestants' counsel Michael McCann did yeoman work to present and evaluate the reports. RKK listed major tasks, still incomplete. RJN mapped 38 meter basins and an unmetered area. Prot. Exh. 78, 81-82. Figure 1-2, Page 4. They assessed improvements in four Roland Run basins.[44] There is no serious rehabilitation downstream from GSM or elsewhere. RJN Map 3 shows Code Red model-predicted SSOs downstream from GSM even for the mildest 2-year 6-hour storm The SSOs are thus not even close to elimination. Indeed, it appears the post-rehab conditions are worse than pre-rehab conditions.

[43] It is unclear why the County took seven years to get a report from RKK. It is even more concerning that the County so often and rapidly changed consultants. This does not bode well.

[44] These meter basins were previously slated for rehabilitation by RKK. Prot. Exh. 67, Map 5.1. RJN found reduced infiltration/inflow in BC 02, BC O4, and BC 09. but not BC 03. It is unknown whether these reductions will last, and if so, for how long.

Hazen's 2021 Summer Update includes "Strategies needed to further protect the environment from potential sanitary sewer overflows (SSOs) …" Prot. Exh. 85-86, Page 1. They will "map out what the sewer system needs to look like over a 50-year period, *** to cover all possible aspects of what the sewer system could become by the year 2070." Page 4. The "Target Completion Date" is "in Fall 2023." Hazen will use its monitoring program to improve the County's JFS hydraulic model and "… will allow for informed decisions to be made on capacity needs throughout the entire sewershed and at the neighborhood level." The Update includes a map which identifies multiple SSOS still active in the relevant JFS area.

To read the Hazen Update, it is as if the county's back to square one. The recent MDE civil penalty caps this evidentiary debacle.[45] After 18 years, there is no end in sight.

D. Lake Roland – The Dead Zone

Lake Roland is the main receiving water downstream in the JFS area. It is at the county-city boundary. From there, sewage flows south to the Back River Treatment Plant. Lake Roland suffers from severe e coli contamination. Prot. Exh. 74-76, 96-102. The e coli levels fluctuate, largely related to storm events.[46]

The county record and common sense reflect that human sources of sewage largely contribute to the lake's e coli pollution. Nicholas Leffner tried to deflect the problems to septic systems and agriculture. But it is inescapable that the GSM downstream area is severely impacted by increased development. Prot. Exh. 31.

It should be kept in mind that several streams flow into Lake Roland. There are a myriad of intense residential, institutional, and commercial uses in the watershed, including the Towson Town Center, Towson University, St. Joseph's Hospital, Greenspring Station, the Johns Hopkins Medical Institutions, and the like.

---

[45] MDE makes efforts to monitor their decrees. The recent resolution of the Howard County decree is illustrative.

[46] E coli numbers are measured in MPN, Most Probable Number. Based on IS EPA Recreational Water Quality Criteria (2012), Any number above 100 per ml (millileter) reflects significant pollution. https://www.epa.gov/sites/default/files/2015-10/documents/rwqc2012.pdf. County Health Department sampling results show Lake Roland frequently in hundreds and thousands. Prot. Exh. 45. These are extreme numbers.

E. The Empty Chair

There were notable absences. Based on e mails and Leffner's testimony, David Bayer and Lisa Eichholtz are the principal county DPWT staff responsible for GSM sanitary sewer issues. They may have had informal communications with Leffner.[47] Anyway, they did not testify.

This presents the "empty chair" situation.[48] The Courts have developed a relevant rule of evidence. Their absence of witnesses under circumstances where they would be expected to testify raises the inference that their evidence would be unfavorable to the party, here the County and CDT.

The Court of Appeals underlined this point in Brooks v. Daley 242 Md. 185, 194-95 (1966). The Court referred to the iconic treatises on evidence,

> Professor Wigmore states the rule in regard to permissible inferences to be drawn from a party's failure to testify as follows:
>
> > 'It would be generally agreed, to be sure, that the mere fact of the party's failure to testify is not of itself open to inference; it is his failure when he could be a useful and natural witness * * * that is significant.' (2 Wigmore on Evidence (3rd ed.), s 289, page 173).
>
> See also McCormick on Evidence, s 249, pages 533-534.

The D.C. Court cited Brooks in Murphy v. McCloud 650 A.2d 202 (D.C. 1994),

> "Various courts have provided different characterizations of the inference to be drawn when a civil litigant fails to take the stand under circumstances in which she might ordinarily be expected to do so. *See, e.g.,* ***Brooks, supra,*** **218 A.2d at 189** (alluding to "the rule in regard to *permissible* inferences"); *Duratron Corp. v. Republic Stuyvesant Corp.,* 95 N.J.Super. 527, 231 A.2d 854, 856 (App.Div.1967) (referring to "the rule *permitting* adverse inferences"); *but cf. People ex rel. Borelli v. Sain,* 16 Ill.2d 321, 157 N.E.2d 417, 420 (1959) ("relator's failure to testify in his own behalf in a civil proceeding of this type detracts greatly from his position"); *Dunckelman v. T. Baker Smith & Sons, Inc.,* 447 So.2d 26, 29 (La.App. 1st Cir.1984) (party's failure to testify "creates a presumption that his testimony would be damaging to his case"). This court has also spoken in terms of a "presumption." *Namerdy v. Generalcar,* 217 A.2d 109, 112 (D.C.1966).[27] The United States Court of Appeals, in a pre–1971 case binding

[47] In contrast, their responses to Protestants' counsel's PIA requests may have been fraught.

[48] This brings to mind the iconic episode of The Untouchables S1 E1 (1959) starring Robert Stack as Eliot Ness and Bruce Gordon as Frank Nitti, referring to the empty chair of Al Capone.

> on us, *see* *M.A.P. v. Ryan,* 285 A.2d 310 (D.C.1971), has done the same. *Tendler v. Jaffe,* 92 U.S.App.D.C. 2, 7, 203 F.2d 14, 19 (1953)."

The inescapable inference is that county staff would have had to admit the JFS sewerage capacity situation is still in dire straits.[49]

F. Randall Gracheck and Robert Summers

Randall Gracheck confirmed JFS sewer capacity is still inadequate. There recur a plethora of downstream sanitary sewer overflows (SSOs), with many manholes measured at more than full capacity. Prot. Exh. 64, 69-73, 77. Robert Summers corroborated his testimony and illuminated the history of the consent decree based on his outstanding experience. The County is nowhere near fulfilling the purposes of the Consent Decree.

G. The CDT Case

The CDT presented nothing in their main case. In light of the obvious sewerage capacity issues, the CDT case failed right there.

The CDT apparently thought they could disregard the issue or, if necessary, counter with rebuttal. Even though there is some flexibility to administrative hearings, the burden is still on the developer to prove its case. See Grasslands Plantation v. Frizz-King Enterprises 410 Md. 191, 204-17 (2009). A case cannot be won purely on rebuttal.

Anyway, Nicholas Leffner's rebuttal is unconvincing. He consistently tried to downplay sewerage problems and present a rose-colored picture of county compliance with the consent decree. He orchestrated his presentation to get the CDT a result.

The CDT's game plan with Leffner was to deflect and divert attention from the serious deficiencies which every consultant identified. He seems to think the county's submission of required quarterly and annual reports translates to high grades. He didn't MDE has to review these reports. He made no mention of MDE's recent assessment of SSOs and imposition of more civil penalties. His reduction of the current Hazen undertaking to cosmetic budget planning was the last nail in the coffin of his credibility.

---

[49] Shakespeare's King Lear, in dividing his kingdom, said to Cordelia, "Nothing will come of nothing. Speak again." King Lear (1606), Act 1, Scene 1. Cordelia could only muster polite but bare speech. Here, what comes of nothing to the CDT is a losing case.

He did have to admit there is not a single document from the county, MDE, or EPA Region 3 to show the county is on the path to resolving the consent decree.

H. Public Health and MP 2020

The County Code prioritizes protection of public health, safety, and welfare. Secs. 32-4-102(b), 32-4-103(a). Sec. 32-4-410 requires sewage facilities to function safely.

This extends Maryland law. Environment Article, Title 9, Subtitle 5, governs county water and sewerage plans. This includes Sec. 9-505, which states in pertinent part,

> "(a) In addition to the other requirements of this subtitle, each county plan shall:
>
> **"(4)** Provide: **(i)** For sewage treatment facilities that are adequate to prevent the discharge of any inadequately treated sewage or other liquid waste into any waters; or **(ii)** Otherwise for safe and sanitary treatment of sewage and other liquid waste;
>
> **(5)** Provide for facilities that are adequate to treat, recover, or dispose of solid waste in a manner that is consistent with the laws of this State that relate to air pollution, water pollution, and land use;

Each incremental addition of sewage intensifies SSOs and insidiously spreads e coli contamination.[50] The approval of the GSM maximum density development an multimillion gallon annual sewage generation would conflict with Maryland and County law and, as a corollary, present a master plan conflict.

Moreover, MP 2020 and the integrated Baltimore County Master Sewer and Water Plan prioritize protection of water quality.[51] So there are more master plan conflict problems which warrant referral to the Planning Board and County Council.

I. The Growth Management Law

The Growth Management Law (GML) controls nonindustrial development in deficient sewage areas. BCZR Sec. 4A02.4.C. BCZR Sec. 4A02.C.3 begins:

---

[50] Notice may be taken that the impact may not be as dramatic as that widely reported from destruction of the Kakhovka Dam in Kherson Oblast, Ukraine. But the downstream e coli contamination there illustrates the potentially devastating types of problems.

[51] MP 2020 encompasses sewerage and water quality in its Visions; Public Infrastructure section, pages 45-49; Sustainable Environment section, pages 145-56; the Water Resources Element, Executive Summary, Appendix A. P.C. Exh. 41.

> "The maximum level of nonindustrial development per sewerage area shall not be greater than that capable of being provided with available sewerage capacity based on the following factors: …"

The 2021 Basic Services Map (BSM) for sewerage identified the JFS as an "Area of Concern." Prot. Exh. 92. It was one of just five countywide areas of concern. The DPWT correspondence strangely listed no deficiencies, but added this warning:

> "Everyone should be aware that the removal of an area of special concern does not mean that an area has unlimited developmental potential."

The 2022 BSM inadvertently omitted the "area of concern" designations. This is to be corrected in 2023. Prot. Exh. 94, 95.

Neither the law nor DPWT define "area of special concern." It is a euphemism for deficiency. The inadequate JFS capacity, multiple SSOs, and resulting pollution translate to a major deficiency. This is another reason to limit development in the JFS. The CDT must file a petition for special variance because of the inadequate sewage capacity.[52]

VIII. Stormwater Management (SWM); MP 2020 Trifecta

"Like all detectives, must consider every possibility." Charlie Chan in Paris (1935)

Pursuant to the Maryland Stormwater Management Act of 2007, Baltimore County enacted a comprehensive SWM law. Bill 25-10; County Code Article 33, Title 4. New development must manage stormwater runoff so existing runoff does not increase. To evaluate existing site runoff and project anticipated runoff involves an array of criteria and calculations. There is a Stormwater Manual which addresses these matters.

The Department of Environmental Protection and Sustainability (DEPS) is the designated county agency. As with sewerage, there were no county staff on hand to assess SWM. Again, the empty chair. But when DEPS submitted its August 11, 2021 DPC comment, they concluded, Prot. Exh. 3,

> "This project **does not** meet Baltimore County Code Development Plan requirements at this time."

[52] There was mention of the Krongard (Torch Hill) approval. The present case has to be decided on the present record. Anyway, the Torch Hill property is in the Roland Run section of the JFS and thus distinguishable. The recent MDE imposition of major civil penalties is telling.

Once again, the CDT did not produce any witness to address SWM in their main case. Protestants presented Daniel O'Leary, a well-qualified expert. He showed the CDT overstated existing runoff by assuming "straight row" or "road crops" pre-development rather than the required "meadow in good hydrologic condition." This involves a faster flow and less runoff. He explained the "row crop" premise has a much higher percentage runoff curve; and did the math. O'Leary also observed the CDT projection of anticipated runoff appeared understated by failing to apply the proper criterion for one-quarter acre lots. These errors skewed the SWM analysis to rationalize less SWM.

There was yet another problem. The CDT began with four SWM ponds but ended up with just three ponds. O'Leary would have to do a full design to come up with precise numbers; but he estimated the ponds would have to be 38-50% larger. This would undoubtedly have an impact on the entire site plan.

The CDT tried to counter O'Leary with Leffner, multi-tasking He said pre-development meadow criteria apply only when overbank flood protection is required. He questioned whether such protection is required. But he did not even inquire with county staff as to their approach. Leffner also said he could redesign the SWM to address the meadow criteria, but such hypothetical plan had not been presented or reviewed.

Meanwhile, Leffner did not address the understatement of anticipated runoff. Nor did he address the change from four SWM ponds to three ponds.

When all is said and done, it adds up to inadequate SWM.

Notably, MP 2020 also covers SWM and expresses the purpose to have appropriate SWM. P.C. Exh. 39. So, this is another master plan conflict issue.

IX. Residential Performance Standards

A. The MCR Connection Issue Is Secondary and Should Not Distract

There is no need to reach the MCR connection issue because the major issues require denial of the GSM plan. Yet it is MOG's priority. Otherwise stated, MCR should not distract from or overshadow the larger conflicts. The sideshow should not turn into the main event. Anyway, the proposed connection also conflicts with the law.

B. Legislative Context and Language

In 2001, the County Council enacted RPS Bills 34-01 and 58-01. P.C. Exh. 35. Bill 34-01 set procedural and substantive standards for all residential developments. Sec. 260.1.A. As enacted, it required DOP findings. BCZR Sec. 260.1.C. If the DOP found a proposal did not comply, then it could not be approved. The findings were subject to due process and were appealable.

The Bill also stated in Sec. 260.1.B.4 that:

> "Deviation from the standards may be allowed only if clearly necessary to:
> 1. Comply with another standard;
> 2. Comply with environmental regulations: or
> 3. Achieve the best possible development design, considering other goals in the comprehensive manual of development policies."

This provision remains. It is the only provision which allows for any deviation.

The substantive provisions in the Bill include the Sec. 260.4.A.1 "Streets" requirement explicitly mandates:

> "a) A development proposal shall:
> Provide for at least one street connection to an adjoining neighborhood or adjoining property, not including the principal access of the subdivision, in order to facilitate good traffic circulation."

The Site Planning provisions require "smooth transitions" with complementary buildings and site improvements. Sec. 260.2.A.5, 6. The street connection and site planning standards mirror the Code sections on compatibility and development policy. Secs. 32-4-402(d)(3), Sec. 32-4-102(b)(2)(iii).[53] There are also the open space criteria and restriction on cul de sacs. BCZR Secs. 260.3; 260.4.B.

Bill 58-01 adjusted the scope to residential developments of four or more lots within the urban/rural demarcation line (URDL). It retained DOP findings, but repealed the DOP denial's finality. The substantive standards stayed essentially intact.

[53] The statutory development policy calls for "Improved linkage between developments to enhance circulation of motor vehicles, bicycles, and pedestrians …"

C. The MCR Connection Does Not Fit

Mays Chapel Road anyway is a normal suburban subdivision access road. It is wide enough for cars to pass each other. While all the residents use the access road, only a few dwellings front on the road, so few parked cars. The road's very name shows it was intended in due course to be a through road to the eventual adjoining development, coupling also with the nearby north MCR section.

MOG wants to preserve its enclave for walking, bicycling, parties, and the like. MOG asserts that the connection impact on them would be far greater than any converse impact on HFD and SR. But those communities have legitimate concerns. The law does not intend an arbitrary choice or fiat to favor one association over others.

The main thing is the proposed gate conflicts with the plain legislative language. There is, moreover, no basis to deviate. If this community gets a gate, then virtually every subdivision in the county should get it. But that is not the law.

D. County Policy Analyzed, Dissected, and Exposed

The CDT argues Baltimore County Policy accepts one means of access for subdivisions with up to 100 units. Bureau of Development Policy Manual, Section XIII.B.1. Pages 22-23 (2002). P.C. Exh. 36. They say an MCR street connection to the adjoining neighborhood is not required because they propose 61 units and MOG has 99 units. This argument is flawed conceptually and factually.

DPR Policy states, in pertinent part,

> B. ACCESS GUIDELINES
> 1. Maximum Number of Units with One Means of Access
> a. Limits of Units
> --- *100 units with no future street extension proposed*
>
> * * *
>
> c. Emergency access points in place of full-use access points generally will be discouraged, but may be approved in unusual circumstances."

To begin, this is a kind of traffic access policy and not a land use policy. It does not supersede the RPS connection requirement. It does add an emergency access policy which is not in the RPS.

Moreover, it the DPR policy allowing one access up to 100 units were applied, it would conflict with the RPS. There is no such allowance in the legislation. But Christ v. Department of Natural Resources 335 Md. 427, 439 (1994) explained,

> "In any particular area of legislative concern, whether there should be a broad delegation of regulatory authority to administrators, or a more specific delegation, is a choice for the General Assembly."

As Bd. of Liquor License Comm'rs v. Hollywood Prod. 344 Md. 2, 11(1996) put it,

> "A determination of the scope of the agency's powers, therefore, turns on the General Assembly's intent in empowering the agency and the statutory scheme under which the agency acts."

Here, there is zero delegation of authority to any agency to alter the RPS, much less relax the street connection test. The only agency with a statutory RPS role is the DOP, limited to findings, not policy. The DPR has no statutory function. Anyway, the DPR policy does not even refer to the RPS and has nothing to do with it.[54]

The RPS law provides for "deviation from the standards" only in three specified ways quoted above. Section 260.1.B.4. A blanket relaxation for subdivisions with 100 units or less does not qualify. There is no other applicable standard and no environmental or design criterion. Notably, there is no deviation for the age of community residents.

Anyway, the adjoining neighborhood includes not only 99 MOG units, but also 27 in Boxwood, adding to 126 units. Combined with 61 proposed, there are 187 units. So this area does not even qualify by the numbers. The policy also discourages emergency access points.[55] This is especially apt where it intensifies "F" intersection traffic.

E. Open Space Location and Visibility, and the Cul de Sac

The proposal fails to provide open space visibility at the entrance and adjoining street. BCZR Sec. 260.3.A.2. Most of the dwelling units are not "around open spaces or squares." BCZR Sec. 260.3.A.4. Nor is there any justification for the cul de sac based

[54] So the DPR comments do not even address the RPS issue. P.C. Exh. 5.

[55] An "emergency gate" could fail. Also, the Lutherville Volunteer Fire Company (LVFC) first responders may have difficulties getting it open. There is no evidence of any input from LVFC. Any ensuing delays could be fatal. Blue Oyster Cult, Burnin' For You (1981).

on constrained site conditions. BCZR Sec. 260.4.B. While these conflicts may not be as broad in scope as the other conflicts with the law, attention should be paid to them.

F. No DOP Findings

The DOP meanwhile failed to make required RPS findings. Their DPC comment rubber-stamped the Pattern Book and developer lobbying points.[56] They errantly deferred this RPS issue to DPWT. Anyway, DPWT wanted the connection.[57] There is no need for a remand because the connection is required as a matter of law.[58]

X. Expert and Citizen Evidence in Perspective

"To conceal oneself from law is like trying to hide in birdcage."
Charlie Chan's Greatest Case (1933)

A. Take It With Many Grain of Salt!

Many land use cases feature contrasting "expert" and citizen evidence and opinions. Such expert opinions are more subjective and judgmental than in hard science disciplines. A background in landscape architecture, traffic engineering, and/or working with zoning petitions does not translate to expertise on zoning law, especially statutory construction and application. There also must be taken into account their bias.

Every expert opinion must have a valid factual and legal predicate. In People's Counsel v. Beachwood 107 Md. App. 627, 649-50 (1995), cert. denied 342 Md. 472 (1996), the Court rejected "expert" planning opinions. Judge Charles Moylan wrote,

> "A part of that *Boyce v. Sembly* opinion … not yet discussed in this opinion, and quoted with approval by the *Dorsey* opinion, observed,
>
> > 'The Court of Appeals and this Court have stated than an opinion, even that of an expert, is not evidence strong or substantial enough to show some error in the comprehensive rezoning unless the reasons given by the witness as the

[56] Agency reasoning must not be conclusory or "half-baked." Greater Baden-Aquasco Citizens v. Md. Nat'l Cap. Parks & Pl. Comm'n 412 Md. 73, 109 (2009), citing Bucktail v. County Council of Talbot County 352 Md. 530, 553 (1999).

[57] The DPWT called out the "bias" against Mays Chapel Road connection and criticized the failure to mention the "F" traffic shed and three intersections. They also observed that absence of a bypass would cause increased traffic toward "F" intersections.

[58] A remand would be an exercise in futility. O'Donnell v. Bassler 289 Md. 501, 509-11 (1981).

> basis for his opinion, or other supporting facts relied on by him, are themselves substantial and strong enough to do so. …'" Internal citations omitted.

Here, CDT's Mr. Bishop and his Exhibit 4 were misleading as to the proposed lot sizes and density. It diverted attention to peripheral subdivisions, several nonconforming. His Exhibit 9 went further beyond the pale to distant subdivisions with nonconforming townhouses and high density. His presentation on RPS was promotional and superficial.

CDT traffic expert Mr. Driban misused the inapplicable and obsolete ITE traffic generation input. They avoided area trip generation counts. There was no attention to margins of error. They had no remedy for potential traffic deterioration. They downplayed traffic congestion and safety.

Then Mr. Leffner downplayed the SWM and JFS problems. He painted a fairy tale picture of compliance with the Consent Decree

B. Respect for Area Citizens

This brings us to area citizens. The Court of Appeals recognized their ability to depict the neighborhood and potential impacts in Eger v. Stone 253 Md. 533, 540-43 (1969). The Court held admissible the testimony of an area resident who investigated and researched the traffic situation. The Court reminded that hearsay evidence is admissible. See, e.g. Tauber v. County Board of Appeals 257 Md. 202, 213 (1970). The many citizens here presented high quality probative evidence as to density and traffic, to which we alluded. There was no genuine dispute with their observations.

XI. "Reaching Out" or "Gaslighting" --- The Alternative Universe

"Reach out, reach out for me"
Four Tops, Reach Out (I'll Be There) (1966)

The CDT promoted they "reached out" to the "community." Their "reach" was to agree with MOG on the MCR gate. 2021 Community Input Meeting (CIM). P.C. Exh. 7, Page 2. But it divided the community associations, alienating HFD and SR. There were also the Rosenblatt e-mails to SR's Blandy Becker, offering landscaping. Messrs. Merritt and Wyatt exposed the artificiality of this offer.[59]

[59] Landscaping is required anyway.

A serious effort to "reach out" would have been a substantial offer to reduce density. The CIM Minutes include these exchanges at Pages 6, 8:

> "Question: Why not build the highly needed downsize community on this site? Less actual density?" "Mr. Rosenblatt: This is the developer's proposal."
>
> * * *
>
> "Question: What would it take for the developer NOT to move forward with this project?" "Mr. Rosenblatt: This is the project that is being proposed."

Their so-called "reaching out" amounts to gaslight and spin.[60] It masks their lack of reverse gear.[61] This deserved and got a cool reaction.[62]

XII. "Eternal Vigilance Is the Price of Liberty

"*Truth, like football, receive many kicks before reaching goal.*"
Charlie Chan at the Olympics (1937), quoted in Y. Huang, Charlie Chan, xvi (2010)

The GSM development plan conflicts with MP 2020; compatibility; traffic and transportation law and basic services; JFS sewershed legal criteria, SWM standards; and RPS criteria. There should be the requisite master plan conflict referrals to assess and/or confirm multiple conflicts, especially involving the T-3 Transect.

"Story are now completely extracted like aching tooth."
Earl Derr Biggers, House Without A Key 274 (1925)

Re: *United States and State of Maryland v. Baltimore County*
Consent Decree Civil Action No. AMD 05-2028, AI# 31394
Stipulated Penalty Assessment for SSOs in CY 2018

Dear Ms. Buckler:

The Maryland Department of the Environment, Water and Science Administration, Compliance Program ("Department"), in consultation with the United States Environmental Protection Agency ("EPA") (collectively, the "Agencies"), has reviewed the additional information which the Baltimore County Department of Public Works and Transportation (the "County") provided to the Department and the EPA on November 18, 2022, regarding Sanitary Sewer Overflows from the County's collection system ("SSOs") occurring in calendar year 2018.

The County is liable for stipulated penalties to the United States and the State of Maryland for all SSOs, per Paragraph 39 of the Consent Decree, Civil Action No. AMD 05-2028 (Consent Decree). Following the review of twenty-four (24) hour and five (5) day SSO reports provided to the Agencies, and considering record corrections provided by the County during the review process, the Department has determined that the County is liable for stipulated penalties for 151 SSOs during calendar year 2018, and a total penalty of $641,750. Half of this amount, $320,875, is due to the State of Maryland.

The Agencies may, "in their own behalf and in their unreviewable exercise of discretion, reduce or waive stipulated penalties otherwise due," per Paragraph 45 of the Consent Decree. The Department, in consultation with EPA, has conducted a thorough review of all waiver requests, along with any additional data provided by the County to support these requests. While the Department declines to make *force majeure* determinations, it does agree to a waiver of certain SSO stipulated penalties at its discretion. The Department gives consideration to circumstances under the County's control and measures taken by the County to avoid or minimize delays. The Department has utilized metrics in certain categories of SSOs, such as the storm recurrence interval, in an effort to apply its discretion in a more consistent and replicable manner.

The Department, at its discretion, waives stipulated penalties for the 57 SSOs listed in Attachment I; $136,687.50 total waived penalties. These penalties would have otherwise been due to the State of Maryland. Please note that this waiver is for penalties due to the State of Maryland only. As such, the Department has determined that the County owes stipulated penalties for the remaining 94 SSOs.

Ms. Lauren Buckler, AI# 31394

Pursuant to Section XI of the Consent Decree, and as detailed in Attachment I, the County owes a total stipulated penalty of $184,187.50 to the State of Maryland, for SSOs occurring during calendar year 2018.

Please notify Mr. Arno Laud, Chief, Enforcement Division, Compliance Program at (410) 537-3510 or by email at arno.laud@maryland.gov within fourteen (14) days confirming your acceptance of this stipulated penalty assessment. Upon acceptance, an invoice payable to the Maryland Department of the Environment will be mailed to you under a separate cover.

Please note that this letter addresses the Department's request for payment of stipulated penalties only. The EPA will provide a separate letter regarding payment of penalties to the United States, and any waivers granted.

Sincerely,

D. Lee Currey, Director
Water and Science Administration

PROTESTANTS' POST-HEARING MEMORANDUM

Protestants, Valleys Planning Council, Inc., Falls Road Community Association, Inc., Heatherfield Community Association, Seminary Ridge Owners Association, Boxwood Homeowners Association, The Meadows of Greenspring HOA, and Tally Ho Community Association, submit this post-hearing memorandum in support of their opposition to the development plan and requested zoning relief.

I. INTRODUCTION

Protestants comprise seven homeowners and land preservation organizations representing hundreds, if not thousands, of people in the area surrounding the subject property. As was evident from the testimony of the numerous witnesses who testified during the course of the 13-day hearing, the community is strongly and fundamentally opposed to the proposed development. The reasons are numerous and, frankly, pretty obvious. The public sewer system that would receive sewage from the site is, in the words of former ALJ John Beverungen, "woefully inadequate" to handle any additional sewage. Within a stone's throw of the site are not one, but three, failing "F-rated" intersections, among only a small handful of such intersections in the entire County. The

public facilities that would serve the proposed development are simply not adequate. This is precisely the type of development that the County's Growth Management Act was intended to prevent. This memorandum will be limited to addressing these important sewer capacity and traffic congestion issues.[1] In addition, as will be addressed in the post-hearing memorandum of People's Counsel, there are also serious issues regarding, *inter alia*, stormwater management, floodplain impacts, and conflicts with the County's Master Plan.[2] For all these reasons, Protestants respectfully request that the ALJ deny the development plan and zoning relief requested by the Developer,

II. SEWER CAPACITY[3]

A. The Jones Falls Sewershed and the sewer interceptors that serve the subject property

The subject property (the "Property") is located within the Jones Falls sewershed. Maps of the sewershed, and the location of the Property in the sewershed, were introduced by Protestants as Exhibit 59. The three major interceptors or trunk lines in the sewershed are: (i) the Jones Falls trunk line which conveys sewage from the west (including Pikesville), (i) the Roland Run trunk line which conveys sewage from the north, and (iii) the Towson Run trunk line which conveys sewage from the east (including Towson proper). (Prots' Ex. 61).

The three trunk lines, and the sewage they convey, converge at a single manhole (manhole 6888) located at the northern end of Lake Roland. All of the sewage then travels southward under Lake Roland in a single trunk line, 42" in diameter, before heading into the Baltimore City sewer

---

[1] The Meadows of Greenspring has filed a separate memorandum on the issue of the "pass-through."

[2] Protestants incorporate herein the memorandum filed by People's Counsel.

[3] The transcript of the hearing in this matter will be referenced as "T1, p. __" for the first day, "T2, p. __" for the second day, etc. The days of the hearing were September 1, 2022, September 20, 2022, September 21, 2022, October 27, 2022, October 28, 2022, November 1, 2022, December 5, 2022, December 7, 2022, January 30, 2023, February 10, 2023, March 27, 2023, April 11, 2023, and May 31, 2023.

system. Ultimately, the sewage is treated at the City's Back River wastewater treatment plant. The County does not have its own wastewater treatment system. The majority of sewage in the entire sewershed travels in this fashion, to manhole 6888[4] and under Lake Roland.[5] (T10, pp. 15-25, 80-81).

The three trunk lines and other sewer lines in the sewershed are depicted in a map introduce at Exhibit 61 (a copy Map 1.1 of the LTC Report (discussed below)). The sewer system is gravity-fed, and therefore, the three main trunk lines follow the path of the three major stream systems in the Jones Falls watershed that drain to Lake Roland. They derive their names from those streams – the Jones Falls, Roland Run, and Towson Run. Protestants' Exhibit 60 is a map showing the three streams.

B. The Lawsuit against the County and the Consent Decree

1. The Lawsuit

In July 2005, the EPA and MDE filed a lawsuit in federal court against Baltimore County alleging that it was discharging tens of millions of gallons of wastewater containing raw sewage from its sewer system into various water resources, including Towson Run, Lake Roland and the Jones Falls. (Prots' Ex. 66, pp. 5, 6 at ¶¶ 26, 30). The EPA and MDE alleged that these discharges were caused by, *inter alia*, inadequate flow capacity in the County's sanitary sewers and excessive infiltration and inflow to the sewers. (*Id.*, p. 6 at ¶30). The EPA and MDE alleged that the

[4] Protestants' Ex 71 is a photograph of manhole 6888, which shows the manhole cover to be ajar which, according to Protestants' expert Randy Grachek, was likely caused by a sanitary sewer overflow. The next photographs in the exhibit are photographs of the same manhole after being sealed by the County. (*Id.*; T10., pp. 82-83). Mr. Grachek explained that sealing a manholes has to be done in conjunction with work performed to increase capacity "so that you don't just exacerbate the problem by forcing the problem upstream." (T10, p. 83).

[5] Protestants' Ex. 78 (RJN Performance Assessment (discussed below)), p. 2 ("The majority of flow from the Jones Falls sewershed flows through a 42-inch interceptor gravity main discharging into the City of Baltimore's sewer system, where the flow is metered by a jurisdictional boundary meter (TSJF01) operated and maintained by the City of Baltimore.").

discharges have caused or contributed to the presence of elevated levels of coliform bacteria in these waters and sought injunctive relief and civil penalties against the County amounting to millions of dollars. (*Id.*, pp. 6-8).

2. The Consent Decree

The MDE, EPA and the County subsequently entered into a Consent Decree, signed by the parties and the federal court judge. (Prots' Ex. 65). Pursuant to the Consent Decree, the County is required to develop and implement a series of measures (set forth in Paragraphs 7 through 18) with the goal of eliminating all sanitary sewer overflows (SSO's)[6] in the County's collection system. The most pertinent of these required measures are/were to (i) conduct a physical inspection of sewer lines, manholes, and force mains in the collection system (Paragraph 8 (the "Collection System Inspection")), (ii) perform an evaluation of inflow/infiltration (I/I)[7] in the system and the long-term capacity of the system to transmit peak flows (Paragraph 9 (the "Long Term Capacity/Peak Flow Management" evaluation), and (iii) prepare a plan that describes the deficiencies in the system and provides for the performance of any corrective actions necessary to address those deficiencies (Paragraph 10 (the "Sewershed Repair, Replacement and Rehabilitation Plan")). (*Id.*, pp. 17-35).

3. The Sewershed Repair, Replacement & Rehabilitation Plan ("SRRR Plan")

The Consent Decree identifies the elements that must be part of the County's SRRR Plan. Among these are that the Plan must identify the corrective actions taken or to be taken to address the deficiencies in the current physical condition of system (*i.e.*, those identified in the Collection

[6] An SSO occurs when a pipe is overcapacity and sewage flows out of the pipe and into the ground and groundwater.

[7] Infiltration and inflow (I/I) is when water enters into a pipe either from groundwater or from a rain event.

System Inspection)[8] and propose a plan for implementing the corrective actions. The corrective actions must "tak[e] into consideration the Long Term Capacity/Peak Flow Management analysis" (discussed below). (*Id.*, p. 32 at C.vi). Importantly, the SRRR Plan must also provide projections regarding the range of storm events for which the system will be able to convey peak flows without the occurrence of SSOs. These projections must be "consistent with the results of the long-term capacity/peak flow management evaluation" and "shall assume completion" of the corrective actions recommended by the Plan. (*Id.*, p. 33 at C.ix).

4. The Long-Term Capacity/Peak Flow Management ("LTC") Evaluation

The County's LTC evaluation must assess the "existing and long-term capacity of" the system, the ability of the system to transmit "current and predicted" peaks flows in the system, and "identify appropriate measures to address capacity issues." (*Id.*, pp. 27-28, at 9.C.ii.a). The County must determine whether the corrective actions proposed by the County in the SRRR Plan "*will ensure* adequate long-term transmission capacity in the Collection System." (*Id.*, p. 27 at para. 9C.ii) (emphasis added).

5. The modeling of capacity

The Consent Decree requires the County to implement and maintain a hydraulic model to determine the present and future capacity of the system and the impact of improvements made to the system. (*Id.*, Para. 14, at pp. 54-55). The model must also "identify the measures *necessary* to address capacity limitations as required by Paragraph 9 (the LTC evaluation)." (*Id.*, Para. 14, at p. 54) (emphasis added).

[8] The Consent Decree requires the County to undertake construction of certain projects that were already identified at the time the Consent Decree was entered. They are set forth in Appendix B. (*See id.*, p. 15 at sec. 7D and p. 42 at sec. 13B).

6. Storm events

The County is required to determine future predicted peak flows "for, at a minimum, 2, 10, and 20 year/24-hour storm events." (*Id.*, p. 28 at sec. 9Cii(b)). The County is not required to "design or construct" its sewer system to any specific recurring storm interval." (*Id.*, p. 31 at C.ii(g)).

7. Population projections

The LTC evaluation must be based on "reasonable population projections for the year 2025." (*Id.*, p. 28 at para. 9C.ii(b); *see also id.* at para. 9C.ii(a) (peak flows must account for "year 2025 predicted population and land uses").

8. *Performance assessment*

The Consent Decree requires the County to conduct a "performance assessment" of the work "as required under" paragraph 10 (*i.e.*, the SSSR Plan) and "to determine the effectiveness of the evaluation and corrective action work performed." (*Id.*, pp. 34-35 at Para. 10E). The performance assessment must be submitted to MDE and EPA for review and comment. (*Id.* 10E.iii). After completion of the Performance Assessment, the County must "modify its Collection System operation and maintenance program as appropriate to achieve the purpose of this Consent Decree." (i.e., to eliminate all SSO's). (*Id.* at 10E.iv).

9. Purpose and goal of Consent Decree

The "express purpose" of the Consent Decree is for Baltimore County to take all measures necessary to comply with the Clean Water Act and the regulations promulgated thereunder, and the Maryland water pollution control laws and the regulations promulgated under such laws, with the goal of eliminating Sanitary Sewer Overflows." (*Id.*, pp. 3-4). The requirements of the Consent Decree in Paragraphs 7 through 18 (which include the LTC Report and SRRR Plan) are

to be developed and implemented "with the goal of eliminating all SSO's from Baltimore County's Collection System." (*Id.*, p. 8 at para. 7A).

C. The County's Hiring of RKK to Evaluate Capacity and Recommend Corrective Actions

After entry of the Consent Decree, the County retained an engineering firm, Rummel, Klepper & Kahl ("RKK"), to undertake the required evaluation of the sewer system and to recommend corrective actions to meet its obligations under the Consent Decree.

1. RKK's SRRR Plan

In December 2012, RKK issued a SRRR Plan for the Jones Fall Sewershed. (Prots' Ex. 67). Notably, as will be discussed in detail below, the SRRR Plan identifies both (i) corrective actions needed to address current deficiencies *and* (ii) corrective actions needed to address future/model predicted deficiencies identified in the LTC Report. RKK calls the entire plan its "Corrective Action *Recommended* Plan."

2. RKK's LTC Report

The LTC Report is Appendix L to the SRRR Plan. Consistent with the Consent Decree, RKK prepared a calibrated hydraulic model to evaluate the County's system in order to "determine where improvements are needed to eliminate SSO's and prevent model-predicted SSOs from occurring." (*i.e.*, to eliminate both current SSOs and future predicted SSO's) (*Id.*, p. 2) (emphasis added).

The LTC Report identifies the specific corrective actions "*necessary* to eliminate capacity deficiencies and sanitary sewer overflows (SSOs) predicted by the hydraulic model simulations developed for the sewershed." (*Id.*) (emphasis added). These corrective actions recommended by RKK are described in the body of the LTC Report (*id.*, pp. 9-27) and depicted in five (5) maps attached to the Report, one for each storm event. (*Id.* at maps 4.1–8.1). The results of the LTC

Report, as they relate to the proposed development, are discussed in detail below. In short, RKK found significant model-predicted capacity problems in the sewer lines that would receive sewage from the subject property.

D. The Sewer Lines That Would Serve The Proposed Development And Their Extreme Overcapacities

The Developer proposes to connect to the public sewer lines that presently exist across Joppa Road from the site. The precise manhole where the connection would be, and the sewer segments that run from that manhole, are depicted in Protestants' Exs. 63 and 88A and B. Sewage from the site would then flow southward in the manner depicted in Protestants' Ex. 62 and 63, until it reaches the Jones Falls interceptor, then westward to manhole 6888 and to the Lake Roland trunk line. As described above, the vast majority of sewage in the Jones Falls Sewershed flows to the same location.

Importantly, the LTC Report finds numerous model-predicted SSOs and overcapacities in the manholes and sewer lines that would serve the proposed development, beginning with the lesser 2 yr/24 hour storm. The specific corrective actions recommended by RKK for these deficiencies are reflected in the maps attached to the LTC Report. (Ex. 68 (Maps 4.1 to 8.1). The sealing of manholes is reflected by a brown dot, the replacement/upsizing of a sewer line is shown by a pink line, and installation of a relief sewer is shown by a red line. For the sewer lines that would serve the proposed development, RKK recommended the following:

2/24	*	replacement of 1377 liner feet of 10" sewer with 18" sewer[9] (MH 44216 to MH 44212)
	*	SSO at manhole 44219

[9] Increasing the diameter of the pipe from 10 inches to 18 inches is a significant increase. The area of a pipe, i.e., a circle, is a function of the radius squared (r2). So, the area an 18-inch pipe (9x9=81) is more than three times that of a 10-inch pipe (5x5=25).

10/6	*	[the above corrective actions for 2/24 storm]
	*	sealing 4 additional manholes [6883, 44212, 44213, 53270][10]
10/24	*	[the above corrective actions for 10/6 storm]
	*	installation of 11,557 additional linear feet of relief sewer ranging in size from 10- to 30-inches
	*	sealing 24 additional manholes
20/24	*	installation of 630 additional linear feet of relief sewer ranging in size from 21-inches to 30-inches
	*	sealing of 7 additional manholes

E. RKK v. DPW Capacities

Protestants' Exhibit 69 is a chart that compares the specific capacity percentages from RKK with those from the County for all of the sewer segments from the site to the border of the sewer shed at the County-City line. The fourth column reflects (in green) the capacities of these segments pulled from the chart that DPW generated during its review of the proposed development. (Prots' Ex. 64). The next five columns reflect the capacities determined by RKK for each of the storm events. (*See* Prots' Ex. 72 (RKK's pipe capacity charts)). Even a cursory review of this chart reflects enormous differences between DPW's capacities and those of RKK. Highlighted in blue are all of the capacities that, according to RRK, exceed the 90% design capacity prescribed in the County's Sewer Design Manual. (Prots' Ex. 70). The capacities highlighted in red reflect those segments that RKK determined need to be upsized or require the installation of a relief sewer. The last column in this chart identifies the specific sewer segments that RKK recommended for upsizing or the installation of relief sewers. Whether highlighted in blue or red, this chart shows

[10] The volume of overflow from these manholes, if they are not sealed for the 10/6 storm, is well over a million gallons. *See id.*, p. 13 at Table 7.1 (MH 6883 (1,031,000 gallons), MH 44213 (12,100 gallons), MH 44219 (81,500 gallons), and MH 53270 (8,700 gallons)).

that the vast majority of sewer segments that would receive sewage from the proposed development exceed 90%, many of them are far in excess of that standard. (T10, pp. 65-74).

As will be discussed below, Protestants' expert Randy Grachek concluded that the reason for the stark contrast between DPW's capacities and those of RKK is that DPW's capacities, remarkably, are based on dry weather, not wet weather, flow.

F. The "Smoking Gun" - The County's Concession Regarding The Threshold For When Sewer Lines Must Be Replaced

The incapacities of the sewer segments across Joppa Road

It is undisputed that eight (8) sewer segments where the Developer proposes to connect across Joppa Road do not have sufficient capacity to receive sewage from the development. In its development plan comments, the Bureau of Development Plans Review identifies the manhole numbers of these eight segments, the length of the pipes (1259 feet), and indicates that six of the segments were supposed to be replaced in connection with improvements made by Johns Hopkins at Greenspring Station, just northwest of the site. DPR's comment and other memoranda from DPW reflect that the County mistakenly issued occupancy permits to Johns Hopkins without first requiring Hopkins to install the six new sewer segments and acquiring the right of way necessary to do so. (Prots' Ex. 13, 14, 89, 90). DPW's comments state that the proposed development cannot connect to public sewer unless all eight sewer segments were replaced. (*Id.*).

Jeff Peluso, Acting Chief of the Bureau of Engineering and Construction saw this to be "a big problem." (Prots' Ex. 89). In an email exchange, Mr. Peluso asked Dave Bayer of the Sewer Design section what the ramifications would be if the new segments are not installed and Mr. Bayer responded "sanitary sewer overflows." (Prots' Ex. 90). Mr. Peluso asked whether there was another way to provide capacity for the proposed development; Mr. Bayer responded that it

was not feasible to avoid the capacity deficient areas and that "Zero is the 'breaking point' of number of units that could be built without causing an SSO." (Prots' Ex. 90).[11]

1. *The capacity threshold conceded by the County*

The eight sewer segments that the County acknowledges have inadequate capacity are depicted in Protestants' Ex. 88. These segments have capacities between 94% and 101% (at least according to the County's capacity calculations). (Prots' Exs. 64, 69). The two segments that Johns Hopkins were not required to be replaced (43794-43793 and 43793-43792) have capacities of 94% and 95%, respectively (again, at least according to the County's calculations).

As will be discussed below, the importance of this unprecedented concession by the County cannot be overstated. If the least of these capacities, 94%, is insufficient, then it stands to reason that any and all other segments that have 94% or greater capacity are insufficient and must be replaced. This conclusion is consistent, of course, with the 90% standard in the County's Sewer Design Manual. (Prots' Ex. 70).

2. *The testimony of Kathy McCany from the Sisters of St. Benedictine*

Across the street from the site is the home and chapel of the Sisters of St. Benedictine. Sister Kathy McNany testified that she was approached by County representatives about obtaining the right of way across the Sisters' property for several of the sewer segments. She testified that this would entail losing a substantial area of pine trees behind the monastery which is in immediate view from the windows of their sanctuary. She stressed the importance of the natural landscape to their mission. She testified that she has not granted the County the right of way and has no intention of doing so, nor has the Developer approached her about the issue.

[11] Mr. Grachek agrees that "zero" is the breaking point. (T10, p. 128). This email exchange was produced to Protestants' counsel in response to a Public Information Act request.

G. The Silver Bullet - RJN's Performance Assessment

As noted above. paragraph 10D of the Consent Decree requires the County to conduct a performance assessment to "determine the effectiveness of the evaluation and corrective action work performed." (Prots' Ex. 65, p. 35 at para. 10D).

For this task, the County chose to hire a new consultant, RJNgroup ("RJN"). On May 27, 2021, RJN issued a Performance Assessment Report that focuses on "comprehensive rehabilitation" performed by the County in four water meter basins located in the northeast corner of the sewershed (specifically, meter basins BC02, BC03, BC04, BC09). (Prots' Ex. 78, pp. iii, 3). This rehabilitation consisted of lining pipes and manholes and installation of two relief sewers (one near Coppermine Terrance one near Towsontown Boulevard). These improvements, and the others made by the County in the sewershed, are reflected in Map 2 of the Performance Assessment. (Prots' Ex. 78, map 2).[12]

In evaluating the effectiveness of the improvements, RJN used an "updated" and "recalibrated" hydraulic model to simulate conditions before and after the improvements (pre- and post-rehabilitation). (*Id.*, pp. iv, 12).

> 4.0 Effectiveness of Repair, Replacement, and Rehabilitation Projects
>
> This section evaluates the effectiveness of corrective actions completed in the Jones Falls Sewershed to address capacity and structural issues outlined in the Jones Falls SRRR Plan. The evaluation was performed based on a review of County-provided post-construction inspection records, improvements implemented based on the 2013 SRRR Plan (Section 6.0), and model simulation results *using the updated hydraulic model recalibrated based on pre- and post-rehabilitation flow monitoring data.*

(*Id.*, p. 12) (emphasis added).

[12] The two relief sewers, shown in pink in Map 2, are relatively short and, notably, are not amongst the relief sewers recommended by RKK. The Coppermine Terrace relief sewer is depicted in RJN's future capacity map (Map 3) (discussed below), but the Towsontowne one is not.

Using this model, RJN, like RKK, performed an evaluation of future/predicted capacity of the system. (*Id.*, 12-14). The narrative portion of the report identifies the future/predicted overflows in the four meter basins (BC02, BC03, BC04, BC09), but Map 3 attached to the Performance Assessment shows *all* of the model-predicted overflows in the entire sewershed *post-rehabilitation*. (Prots' Ex. 78, map 3; *id.* p. 14 ("Map 3 depicts the model predicted SSO and flow restriction locations in Jones Falls for all five (5) storm simulations under the *post-rehabilitation* condition").

Map 3 is critically important to this case. Preliminarily, it is important to note that Map 3 is a compilation of *all* of the predicted overflows (in both pipes and manholes) for *all* of the storm events. [RKK, in contrast, prepared a separate map for each storm event]. The deficiencies shown in Map 3 are cumulative; for example, if the Map shows predicted overflows for the *least* of the storms (2 yr/6 hr) (depicted in red), then there will be overflows for *all* of the remaining storms as well (the 2/24, 10/6, 10/24 and 20/24 storms). In other words, the color of the overflow (red, orange, yellow, green, or blue) identifies the storm event during which overflows/restrictions *begin* to occur.

The Map (entitled "Model Predicted SSOs and Flow Restriction Locations") shows numerous SSOs and hydraulic restrictions concentrated along the sewage path for the proposed development, beginning right below the site and continuing without interruption all the way to Lake Roland and then to the City line. There are more SSOs and restrictions along this path than anywhere else in sewershed. Moreover, they are predicted for the lesser storm events – the 2 yr/6hr storm as shown with red dots and lines, and the 2 yr/24hr storm as shown with orange dots and lines.

Perhaps most importantly, the SSOs and hydraulic restrictions reflected in Map are based on "post-rehabilitation conditions," that is taking into consideration the rehabilitation work completed by the County. As the Report explains, "Pre- and post-rehabilitation flow monitoring data was used to update the model based on the monitored flow conditions. The model was then used to simulate pre- and post-rehabilitation conditions.... Map 3 predicts the model predicted SSOs and flow restriction locations in the Jones Falls for all five (5) design storm simulations under the post-rehabilitation conditions." (*Id.*, pp. iv, 14).[13]

RJN v. RKK Capacities

A comparison of RJN's Map 3 with RKK's maps reveals that, under the updated and recalibrated model, the capacity situation is far worse than even estimated by RKK. Many sewer lines and manholes reach capacity in lesser storms and many new sewer lines and manholes reach capacity that did not do so in RKK's model.

Protestants' Exhibit 81 is a chart showing these differences for the 10 yr/6 hr storm alone from below the site to the County-City line. The column in blue shows the capacities determined by RKK for the 10 yr/6 hr storm. The columns in green and yellow show RJN's determinations before and after the rehabilitation performed by the County, respectively. Notably, RKK's capacities (blue) and RJN's pre-rehab capacities (green) are roughly the same, supporting consistency in the model before updating and recalibrating.[14] The most significant column in the chart is the last column which shows, in red, the increases in capacity percentages (*i.e.,* increased incapacity) determined by RJN under *post*-rehabilitation conditions. Thus, the chart demonstrates

[13] The "pre" and "post" rehabilitation capacity percentages are set forth in the charts attached as Protestants' Exhibit 82.

[14] The Consent Decree requires the County to update and recalibrate the model.

that the capacity problem is worse than RKK determined and was not improved by the rehabilitation performed by the County.

H. The Ramboll Data Evaluation Report – Lake Roland

The County engaged Ramboll Americas Engineering Solutions, Inc. ("Ramboll") to design the repair and rehabilitation of the interceptors, manholes, and junction chambers located within Lake Roland Park. (Prots' Ex. 87). In June 2022, Ramboll issued a Data Evaluation Report finding that 24 sewer segments in and near Lake Roland had active infiltration, 14 of which had structural defects. Of the remaining 19 sewer segments, 11 segments had structural defects. (*Id.*, p. 4). Ramboll found that all 44 manholes in the system required rehabilitation and that 31 of them were showing evidence of infiltration. (p. 4).

Ramboll proposed the rehabilitation of 43 sewer segments comprising 19,55 linear feet of pipe ranging in size from 24 to 42 inches in diameter as well as the rehabilitation of 43 manholes and junction chambers. (*Id.*, p. 2). The report explains that bypass pipes will be required to be installed to handle sewage while the segments are relined. The installation of these bypass pipes will require nine (9) staging areas, each one 50 feet by 100 feet, in and around the Park and obtaining easements from 15 private property owners as well as Baltimore City and the Mass Transit Administration. (*Id.*, pp. 5, 6, 7). Further, because the work will be conducted in dense forest, wetlands, and steep slopes, the County will need to obtain federal wetlands and other state and county permits. (*Id.*, pp. 7, 21).

The focus and goal of project is to "minimize the inflow and infiltration (I/I) into the interceptors to reduce the likelihood of sanitary sewer overflows." (*Id.*, p. 1; *see also* p. 3 (the goal of the project is "to minimize the amount I/I into the system and prevent overflows"). The scope of the project is reflected in a map on page 1 of the Report.

(*Id.*, p. 1; *see also* Figures 2.1 – 2.10).

I. The Whitewashing? - The Ongoing Study by Hazen & Sawyer

In or about January 2020, the County hired yet another consultant, Hazen & Sawyer, to evaluate the capacity of its sewer system in the Jones Falls Sewershed.[15] Prots' Ex. 86 is the Scope of Services (SOS) for the work that Hazen is performing. The SOS explains that the County requested a "comprehensive evaluation of the Jones Falls Sewershed to assess the near-term and long-term needs of the sanitary sewer system." (*Id.*, p. 1). Hazen's work will include reviewing all available data from the County and performing an evaluation of the capacity and structural needs of the system, a calibration and verification of the hydraulic model, and development of future flow projections. (*Id.*, pp. 2-19). Hazen will use the calibrated and verified model to evaluate the sewer system's response to five storm events and prepare a "capacity assessment report." (*Id.*, p. 19). All of Hazen's work will be detailed in a "comprehensive sewershed evaluation report." The report will provide a "flexible roadmap enabling the County to develop, informed, asset-based, and prioritized Capital Improvement Plan (CIP budgets for near-term and long-term system improvements and strategies."[16]

Protestants' Exhibit 85 is a newsletter that is posted, inconspicuously, at the Sewer Design section of DPW's site on the County's website. The newsletter describes Hazen's ongoing study and indicates its final report will be issued in late 2023.[17]

---

[15] The evaluation is being undertaken only for this sewershed and no other.

[16] One wonders how the County can possibly, consistent with its *legal* obligations under the Consent Decree, embark upon a "flexible roadmap" for "asset-based" and "prioritized" budgets.

[17] The ALJ can draw her own conclusions about why the County would hire yet another consultant to perform essentially the same tasks as RKK, RJN, and Ramboll, particularly while the County is still under the auspices of the Consent Decree. Any suspicions about consultant-shopping might be confirmed by the Scope of Services or, perversely, by the fact that the Scope of Services does not even mention the Consent Decree or the County's

Notable in the newsletter is Figure 3 on page 2, which shows a substantial area of rain dependent inflow/infiltration RDII at and above the subject property. This area is depicted in red, reflecting it to be the worst area in the entire sewershed for RDII. (Ex. 85, p. 2).

J. Hazen's Modeled Pipe Capacity Evaluation from 2013

In response to a Public Information Act request, the County produced a capacity evaluation conducted by Hazen back in 2013. Protestants' Exhibit 108 is a chart entitled "Jones Falls - Modeled Pipe Capacity – Existing Conditions." (Ex. 108; *see also* Ex. 104). The chart shows the dry weather flow capacity as well as the wet weather flow capacities for each of the five storm events. The dry and wet weather capacities for the sewer segments below the subject property which would receive sewage from the proposed development are highlighted in yellow. The vast majority of segments have capacities for in excess of the 90% standard, even for the lesser storms. If we look only at the 10 yr/6 hr storm, the first 24 segments immediately below the site all exceed, with one exception, 90% by far. The vast majority are well above 100% and as high as 266%. (*Id.* at p. 9 (stamped Hazen – 00927)). (T12, pp. 103-119).

The scope of services for Hazen's capacity evaluation reflects that Hazen, as part of its services, validated the model used by RKK in its LTC report. (Prots' x. 104, p. 2; T12, pp. 101-02). As Mr. Grachek explained, the capacities found by Hazen are comparable to those found by RKK in the LTC report. (115-16, 118-19).

---

obligations under the decree. Undersigned counsel can confirm that, in his review of thousands of documents produced by MDE in response to PIA requests, there was no mention of Hazen, the work undertaken by Hazen, or any reporting of its results.

K. The Consent Decree Is Still In Effect and Has Not Terminated

The Consent Decree terminates when, among other things, the County certifies that it has completed all of its obligations under Section V of the Consent Decree and the parties file a Joint Motion to Terminate. Section V (entitled "Remedial Measures") includes all of the obligations discussed above pertaining to inspection, evaluation, corrective actions, and performance assessment. (*Id.*, p. 104 at sec. XXIV). It is undisputed that the County has *not* certified completion of its obligations under Section V for the Jones Falls Sewershed. Protestants' Exhibit 91 are certification letters issued by the County for *other* sewersheds. No such letter has been issued for the Jones Falls Sewershed. Indeed, an additional pre-condition to termination of the Consent Decree is that the County pay all civil penalties assessed against it under the Consent Decree. Protestants' Exhibit 111 is a letter from MDE assessing $641,750 in penalties against the County for SSOs. After waiving penalties for certain SSOs, MDE requested payment of a total stipulated penalty of $184,187. (Prots' Ex. 111).

L. The Basic Services Map

Each spring the County Council adopts the Basic Services Maps for transportation, water supply and sewer. The 2021 and 2022 sewer maps show the subject site to be an "area of concern." (Prots' Exs. 92-94).[18] The sewer map *proposed* by DPW for 2023 likewise showed the site to be in an area of concern. (Prots' Ex. 95). However, the County Council, in adopting the map, changed the area below the site to be a "deficient area" rather than an "area of concern."

[18] To be accurate, the 2022 map as adopted by the Council mistakenly did not show the site to be an area of concern. When this was pointed out, DPW acknowledge that through a "printing error" the map signed by the Council in 2022 did not include area of concern. (*See* Prots' Ex. 94).

M. The Testimony of Randy Grachek

Randy Grachek is an environmental engineer with NewFields, an environmental engineering and consulting firm in Atlanta. He works in the firm's water and wastewater practice group. He has a masters in civil engineering with an emphasis on water and wastewater. Over the course of his career, he has designed, implemented, and evaluated the capacity of public sewer systems, including those in Washington, DC and Baltimore City. He is currently working on a project evaluating all of the sewer treatment systems in the City. In Baltimore County, he evaluated the sewer system and served as an expert in the *Bluestem* case (discussed below), involving a mixed-use development on Falls Road, south of the subject site, and the *Torch Hill* case, a residential development just north of the site. Mr. Grachek was accepted by the ALJ as an expert in wastewater engineering and in the evaluation of sewer systems and their capacities. (T10, p. 9-14; Prots' Ex. 58).

1. Non-compliance with the Consent Decree

Mr. Grachek testified that the Consent Decree requires the County to (1) *evaluate* its sewer system for model-predicted future capacity issues, (2) *identify corrective actions necessary* to address those model-predicted future capacity issues, and (3) *actually perform* the corrective actions necessary to address the model-predicted future capacity issues. He stated that the County cannot comply with the Consent Decree without taking the corrective actions necessary to address the model-predicted capacity issues. (T10, pp. 40-42).

Mr. Grachek testified that, based on findings of RKK and RJN, there are "significant capacity issues" in the sewer system that would receive sewage from the subject property. Based on the 10 yr/6hr storm alone, the problems are "significant." (T10, pp. 269, 282). He believes that

the County has not undertaken all corrective actions necessary to address the model-predicted capacity problems as required by the Consent Decree. (T10., pp. 159-160, 269).[19]

2. The County Sewer Design Manual

The County's design manual requires that "trunk and interceptor sewers shall be designed to flow at depths not exceeding 90% of full depth; laterals and main sewers, 80%; and building connections, 70%." (Prots' Ex. 70). The manual notes that capacities above these percentages are "unstable and may result in sudden loss of carrying capacity with surcharging at manholes."[20] (*Id.*). Mr. Grachek explained that "carrying capacity" is the capacity of the sewer line to convey water. He described a loss of carry capacity as: "[W]hen you get above ninety percent, you start losing [] the ability for the water to flow because [] you end up with []massive pressure losses because you filled up the pipe and now the pipe is [] basically being pushed back, or the flow is being pushed back through the system. And so, the only, the only thing that could happen is that [] surcharges or it basically flows out of the manholes." (T10, p. 77). As he put it, "you should never have above ninety percent in the trunk lines, or eight[y] or seventy for the other lines...." (T10, p. 79). Mr. Grachek explained that these percentages are consistent with industry standards. (T10, p. 78)).

3. RJN Performance Assessment

Mr. Grachek explained that RJN's Performance Assessment address only a limited amount of work done in the four meter basins in the northeast of the sewershed and several manholes elsewhere in the sewershed. (T10, pp. 98, 100). Map 3, he explained, shows a considerable number of problems with capacity and a "much worse situation" in the sewage path from the proposed development than the RKK reporting. (T10, pp. 108, 112).

---

[19] Mr. Grachek stated that he did not see the actual model used by RKK and RJN "no more so than I need to [] watch the guy [fixing] his car" and does not dispute that the modelling was appropriate. (T10, pp. 274-75, 276-77).

[20] Surcharging is when sewage leaves system in a manner that is not intended, such as the popping off of the cap of a manhole. (T8, p. 66).

4. The County's Dry Weather Capacity Analysis

As noted, Exhibit 64 is the capacity analysis generated by the County for this proposed development. As Mr. Grachek explained, the County's analysis considers only dry weather, not wet weather conditions. He explained that "capacity needs to be determined by wet weather flow because it's wet weather flow that typically determines when you have over capacity in the system." He's never been involved in a project where dry weather flow is used to either design or determine capacity. (T10, p. 78). It is not consistent with industry standards to determine capacity based on dry weather flow. (T10, p. 70).

5. The County's Population and Employment Growth Projections

The Consent Decree required the County to use reasonable projections for the year 2025 for its evaluation of future capacity. (Prots' Ex. 65, p. 28 at Para. 9C.ii). In the SRRR Plan, RKK used 2025 projections of population and employment growth from 2008. (Ex. 67, p. 5-9; Prots' Ex. 78). In its Performance Assessment, RJN, used these same projections from 2008. (Prots' Ex. 78, p. iv). Mr. Grachek testified that it is important to rely upon reasonable projections of population and employment growth when modeling future capacity. He explained that it is not reasonable for RKK and RJN to have used projections from four years prior to their reports. (T10, pp. 131-32, 134).

6. The condition of the Lake Roland Park interceptor

Mr. Grachek described the Lake Roland Park trunk line is a 42-inch reinforced concrete pipe that was installed in the middle of the last century. He explained that RKK performed an assessment of all pipes in the system and found 541 defects in the interceptor under Lake Roland. (Prots' Ex. 77, p. 22). No pipe segment in the entire sewershed has anywhere close to that number of defects.

7. The water quality in Lake Roland

Under COMAR 26.08.02.03-3, the maximum level of e. coli permissible in Class I waters is 126. (Prots' Ex. 74). The County Health Department tests Lake Roland every two weeks and reports the results on the County's website. The results between April 2016 and June 2022 reflect levels higher than 126, sometimes significantly higher, on numerous occasions during that period.

Mr. Grachek explained that the fluctuation in the results occur because "water is continually flowing through the lake" and reflects storm events and SSOs that occur. (T10, p. 91), pp. 100, 140). The County posts signs at Lake Roland to warn citizens of the potentially dangerous e coli levels due to sanitary overflows. (Ex. 76).

N. The Testimony of Bob Summers

Robert M. Summers is a teacher at the Johns Hopkins School of Engineering and an environmental consultant with EcoLogix Group Inc. (Prots' Ex. 98). He also presently serves as interim Executive Director of BlueWater Baltimore, a non-profit dedicated to protection and restoration of waterways in the Baltimore region, including the Jones Falls. He has a bachelor's degree in Natural Sciences and a Ph.D in environmental engineering from Johns Hopkins.

Mr. Summers was employed by MDE for more than 32 years, working in a number of positions. In 2001, he became Director of the Water Administration. From 2007 to 2010, he served as Deputy Secretary of MDE and in 2010 was appointed by the Governor as Secretary of the Department. (T11, pp. 27-29). In these positions, he had a number of duties relating to regulatory enforcement and compliance, including overseeing and managing the water-related enforcement programs and the regulation of public sewer systems under the NSDS program. His regulatory and enforcement responsibilities extended to regulations themselves but also consent decrees and other judgments entered by the courts. (T11, pp. 30-33, 58-59). This entailed "determining the nature of [a] violation and ensuring that an enforcement action is taken

appropriately to address that." (T11, p. 33). He negotiated and signed consent decrees, including those pertaining to sanitary sewer overflows and clean-up. (T11, pp. 33-36).

Mr. Summers is familiar with the County's Consent Decree. He was at MDE when the Consent Decree was entered and attended meetings and briefings on the matter. (T11, pp. 36-37, 57). In connection with this case, he reviewed and is familiar with the work and the numerous reports of County and its consultants, including reports or RKK, RJN, Ramboll and Hazen & Sawyer. (T11, pp. 37-39, 54-56). Mr. Summers spoke with Mr. Grachek regarding sewer capacity issues in this case and visited the site with him. (T11, pp. 40-41). Mr. Summers is familiar with the area and the Jones Falls Sewershed at large; he lives and travels throughout the area. (T11, pp. 40-41, 53).

Mr. Summers' work at MDE included the areas of water quality, water quality monitoring and modeling, and water quality standards. He developed and worked on water quality monitoring programs and, as Director of Technical and Regulatory Services, was responsible for development of water quality and contamination level standards and put those standards into place through the regulatory process. As Director of the Water Administration, he administered programs to protect water quality and ensure those standard were met. (T11, pp. 41-43, 49-50).

Mr. Summers has testified on water quality and other regulatory and compliance issues before the Maryland General Assembly, the U.S. Congress, and the U.S. Senate. (T11, pp. 43-44). He was proffered and accepted by the ALJ as an expert in environmental engineering, water quality and water quality standards, and regulatory enforcement and compliance with environmental laws and regulations and consent decrees, including as they relate to sewer systems. (T11, pp. 43-45, 61)

1. Water quality and Lake Roland

Mr. Summers testified that the e.coli levels in Lake Roland are due to failures in the sewer system. He pointed to MDE's report to the EPA entitled "Total Maximum Daily Load of Fecal Bacteria for Non-Tidal Jones Falls Basin," which provides an analysis of fecal bacteria contamination in the Jones Falls basin. (Prots' Ex. 96). Mr. Summers explained that the TMDL report concludes that human sources are the dominant source of the bacterial contamination in Lake Roland. (T11, pp. 62-63). He explained, first, that Table 2.4.1 in the report supports that 16% of the households in the Jones Falls basin are on septic systems and 84% are on the public sewer system. (T11, pp. 67-68; *see also* Figure 2.4.1). He explained that Tables 2.4.4 and 2.4.5 reflect the sources of bacteria load in the Lake Roland basin (specifically station JON82, JON184, and UQQ005) and show that human sources are the largest, accounting for between 40 and 67% of the total load. (T11, pp. 69-70; Figure 2.4.4). Mr. Summers added that given 84% of households are on the public sewer system, it's fair to say human sewage is the major or dominant source of bacteria. (T11, pp. 69-73). He explained that this is supported by the conclusion section of the report entitled "Assurance of Implementation." The report states: "The most significant planned implementation measures in the Jones Falls watershed involve the separation of combined sewer systems in Baltimore City and the elimination of sanitary sewer overflows in Baltimore City and Baltimore County. Each of these jurisdictions is obligated under a judicial consent decree and judgment to adopt and implement a Long Term Control Plan ("LTCP") to eliminate sewer overflows." (*Id.*, p. 51).

Protestants' Exhibit 102 is the County's TMDL Implementation Plan, which is a plan that the County is required to submit to MDE. Mr. Summers explained that this Implementation Plan,

which was submitted in December 2014, has new data since the TMDL report, and that the data supports his opinions regarding the source of bacteria in Lake Roland. (T12, pp. 18-20).[21]

2. The Consent Decree

Mr. Summers explained that the Consent Decree requires the County to evaluate its sewer system for future model-predicted capacity issues and identify the measures necessary to address those future capacity issues (75-76),[22] but it also requires the County to actually implement those measures:

> MR. MCCANN: [D]oes the Consent Decree require Baltimore County to undertake the model predicted corrective actions identified in the SRR[R] plan, including the LTC report?
>
> MR. SUMMERS: SO, the Consent Decree requires the, as I said, the evaluation of the system, it requires the development of a plan and it also requires the identified measures in the plan [] resulting from both monitoring and modeling, that those be implemented in order to eliminate sanitary sewer overflows, which is the overall objective of the Consent Decree.

(77-78; *see also id.*, p. 76 (the County "*definitely needs to deal with future conditions* because the overall objective of the Consent Decree is to eliminate sanitary sewer overflows")).

[21] Mr. Summers stated that the TMDL report, which is from 2006, has not been updated, but that does not affect his opinion because of his familiarity with the area and the extent of growth and development in the area. (T11, pp. 68-69). He described the spikes in contamination level, which he attributed to rainfall events and runoff and sewer spills. (T11, pp. 63-64, 71). This variability is not unusual. (T11, pp. 72-73).

[22] Mr. Summers stated that identifying future model-predicted capacity problems is consistent with his experience and industry practice. (T11, p. 76) "[E]very sanitary sewer overflow Consent Decree that I'm familiar with and, and I have participated in national meetings on this issue, they all must deal with the wet weather flows and future conditions. And it is definitely an EPA standard way of dealing with this, this problem. And it's necessary to meet the requirements of the Clean Water Act. So, it would be standard practice").

3. The RJN Performance Assessment

Mr. Summers testified that the Performance Assessment supports that the County has not undertaken all of the corrective actions necessary to address model-predicted capacity problems. He pointed to the area downstream of the proposed development in Map 3 which shows "modeled overflows" for the 10/6 storm and even the 2yr/6hr storm. In his words, the RJN report "does not show successful implementation in the portion of the basin where the sewage from the proposed development needs to flow through the system.... [Based on the performance assessment, there are definitely modeled overflows in this area." (T11, pp. 80, 81-82).

Mr. Summers explained that RJN updated the model and if you compare the modeled results with the initial SRRR Plan, "the performance assessment that RJN did actually shows worse conditions in this section of the system than the original modeling work." (T11, pp. 83, 84).

4. The Hazen study

Mr. Summers described the Hazen study as a "very comprehensive assessment." (T11, p. 84). Although the study has not been issued, what struck him was the rainfall dependent I/I (RDII) reflected in the Hazen newsletter (Prots' Ex. 85). He described the map on page 2 of the newsletter as showing "a very prominent red area of high I&I in the vicinity [] of the proposed development." This concerns him because the overflows shown on Map 3 of the RJN report "are a risk for this area for sure." (T11, p. 85). He explained that in high RDII areas, "you see a surge in inflow and infiltration into the sewer system." (T11, p. 86).

5. The County-City Problem

As noted, Mr. Summer is familiar with the City's consent decree and its sewer system. He described the County and City systems as "interconnected" and "one big system." (97). He explained that the City, in order to address its sewer problems and comply with its consent decree, needs information from the County regarding the sewage flows it is sending down the Jones Falls

(in terms of timing, peak volume, and duration). The City has asked for that information but the County has told the City that it is in the process of figuring this out and can't provide the information. (100, 103). The City is proposing to reduce I/I and prevent overflows and the sewage from the County "is a critical part of what the City needs...." (T11, p. 103).

Mr. Summers explained that, despite this, RJN's modeling used a "free discharge assumption," meaning an assumption that there's no restriction downstream that would cause a backup in the County." (T11, p. 104).

O. The testimony Of Beth Miller

Ms. Miller is a licensed architect and co-chair of the Green Development Workgroup of the Green Towson Alliance. On behalf of GTA, she regularly monitors development and participates in the development review process. (T2, pp. 156-157).

Ms. Miller performed an investigation of all of the residential and commercial development that has been constructed, is under construction, or has been proposed in the Jones Falls sewershed since the issuance of RKK's LTC Report in 2012, which includes many of the projects that anyone visiting Towson has seen such as Towson University's expanded dormitory housing, other residential apartments, and various new retail and office units.[23] Based on the information she obtained, Ms. Miller prepared a chart reflecting, for each development, the name of the development, the number of residential units or in square footage in the case of commercial units, the source of the information, and the estimated sewage generated per day based on both the State and County design manuals. (Prots' Ex. 24).

[23] Ms. Miller explained that some of the developer that was under construction is now existing, e.g., portions of Towson Row, two student housing buildings and some retail. (T2, p. 165).

Ms. Miller sent the chart to the County's sewer design section and asked them to confirm the accuracy of the estimated sewage amounts, which they did. (T2, pp. 161-163) (Ex. 24 "County Comments"). The chart reflects that all of the newly constructed or approved development since 2012 – which includes nearly 6000 residential units or beds and nearly 1.5 million square feet of construction - will generate 959,205 gallons per day under the State's design manual and 1,171,772 gallons per day under the County's manual. (Ex. 24). Ms. Miller took photographs of a number of the newly construction buildings in and around Towson proper. (Prots' Ex. 31A-H).

P. The ALJ's Ruling In The Bluestem Case

On August 30, 2019, ALJ John Beverungen, after receiving post-hearing memoranda from the parties, entered an Opinion and Order denying the development plan in that on the basis that it is not "in compliance with the myriad state and county laws which require all residential projects to provide adequate and safe sewage disposal systems." (ALJ Op., pp. 26-27). The ALJ found that the sewer system serving the property "is woefully inadequate to handle existing demand, much less the additional inputs from recently approved development in the Towson area." (*Id.*, p. 25). He noted that the County's consultant, RK&K, evaluated the system and found the interceptors serving the property to be "severely over capacity." (*Id.*, p. 23). He noted the numerous defects (541 of them) in the Lake Roland interceptor discovered by RK&K, "more than any pipe segment in the Jones Falls watershed," and that "the County's own testing of levels of E coli in Lake Roland far exceed safe levels set forth in state regulations." (*Id.*). He pointed to the "extensive" and "sobering" testimony of Mr. Grachek concerning the interceptor serving the Property and the overcapacities in the system (ranging from 104% to 589%), which he described as "sobering testimony." (*Id.*, p. 22). The ALJ stated: "I am persuaded by Mr. Grachek's testimony and the findings of the County's own consultant [RK&K] that the sewer system serving the subject

property is woefully inadequate to handle existing demand, much less the additional inputs from recently approved development in the Towson area." (*Id.*, p. 25). He noted that RK&K's findings were submitted to the EPA pursuant to the Consent Decree and thus found them to be "especially trustworthy" and placed "a great deal of reliance upon them." (*Id.*, p. 24).

Q. The Board's ruling in the Bluestem case

On January 3, 2020, the Board of Appeals entered an Opinion and Order affirming the ALJ's decision on the sewer capacity issue. The Board rejected the developer's argument that the ALJ exceeded his statutory authority or jurisdiction. Specifically, the Board found that the ALJ properly concluded that there was a sewer deficiency and that the proposed development would contribute to the existing problem. (Bd. Op., p. 8). The Board rejected the developer's argument that only the County Council has authority to determine sewer deficiency through its adoption of the Basic Services Maps, agreeing with the ALJ that the Basic Services Maps do not control and are "not dispositive on the question of whether a development plan complies with the development regulations and applicable policies, rules and regulations." (*Id.*, p. 10). The Board added that the protestants introduced evidence regarding the condition of the sewer system and the ALJ properly weighed that evidence, which persuaded him that the system in the area cannot handle the expected additional demand. (*Id.*).

The Board concluded that the ALJ's opinion reflects "careful consideration of the evidence" and "fully aligns and harmonizes with the County's development policies, legislative intent, and scope of the development regulations." (*Id.*, pp. 16, 17). The ALJ's conclusions were "reasonable and rational" and based on "more than sufficient" evidence. (*Id.*, p. 17).

III. ARGUMENT

A. The Development Plan Should Be Denied Because The Uncontradicted Evidence Supports That There Is Woefully Insufficient Capacity In The Sewer Lines That Would Receive Sewage From This Development

1. The evidence was overwhelming and uncontroverted and comes from the County's own consultants

The evidence was uncontroverted at the hearing that the sewer lines that would receive sewage from the proposed development are severely overcapacity. The chart which is Protestants' Exhibit 69 demonstrates that, for all storm events, the vast majority of sewer segments from the site to Lake Roland were determined by RKK to be well over 100% capacity, far exceeding even the maximum flowrate capacity that the County requires for the design of new systems. Many are well over 200% and some are as high as 400-500%. (Prots' Exs. 69, 70). RK&K recommended that a number of these segments be upsized or relief sewers be installed, as reflected in the last column of Exhibit 69. It is undisputed that the County has not done so.

There is perhaps no more important piece of evidence in this case than the County's acknowledgement that the eight sewer segments across Joppa Road from the site *presently* lack sufficient capacity to handle the sewage from the proposed development and must be replaced. As Mr. Bayer put it, the breaking point for the number of homes that these sewer segment can handle is "zero." (Prots' Ex. 90, p. 1). According to the County's own capacity analysis, these segments are between 94% and 101% capacity. If we assume, as we must, that 94% is the threshold for when even the County believes pipe replacement must occur, then that same threshold at the barest minimum must be applied to other segments, keeping in mind that the County's capacity analysis is based on dry weather flow.[24]

[24] This threshold, if that is what it is, is consistent with the County's own design guidelines, which provide for a design capacity of 90% for trunk and interceptor sewers and 80% for laterals and main sewers. (Prots' Ex. 70).

RKK's findings are fully supported by the work of the County's next consultant, RJN, who updated and recalibrated the model used by RKK and found SSOs and hydraulic restrictions in numerous more sewer lines, for lesser storm events, and to a much greater degree. (Prots' Ex. 78, Map 3). Indeed, RJN's Map 3 shows the sewer path from the subject property to be littered with SSOs and hydraulic restrictions for the least of the storms (2 yr/6hr) more so than any other area in the entire sewershed. (*Id.*). The chart which is Protestants' Exhibit 81 shows the overcapacities for these sewer segments and demonstrates that the overcapacities actually worsened *after* the County performed rehabilitation in the sewershed. (Prots' Ex. 81).

RKK's and RJN's findings are also supported by the recent report from Ramboll, which proposes an enormous amount of rehabilitation in and around Lake Roland Park, including the main interceptors (Jones Falls, Roland Run, and Towson Run) that tie into the Lake Roland interceptor. The report notes the active infiltration that is *presently* ongoing in numerous sewer segments and the *current* physical defects in the segements and manholes. The stated purpose and goal of the Ramboll project is to "minimize the inflow and infiltration (I/I) into the interceptors to reduce the likelihood of sanitary sewer overflows." (Prots' Ex. 87, p. 1).

The problems identified by RK&K, RJN, and Ramboll are exacerbated by the outdated population projections used by RKK and RJN. The Consent Decree requires the County to determine predicted peak flows under future conditions and to base future conditions "on *reasonable* projections of population and employment for the year 2025." (Prots' Ex. 65, p. 28) (emphasis added). It is not disputed that RKK's findings are based on population projections that were made in April 2008 and that RJN used those same projections in its Performance Assessment. (Prots' Ex. 68 and 78, p. iv ("The model was [] used to simulate … hydraulic conditions, under projected 2025 population and employment conditions *as obtained from the hydraulic model used*

for the 2013 SRRR Plan")). Mr. Grachek explained the importance of considering population and employment growth when determining capacity and concluded that it was not reasonable to use 2008 numbers as the baseline for the projections.

Projections aside, anyone living or working in the Towson area is aware of the enormous amount of development that the County has continued to approve since RKK issued its findings in 2012 and continues to approve after RJN's findings in 2021. As Ms. Miller testified, hundreds of new residential housing units and other retail, office and residential units have been proposed or constructed in Towson since then. (Prots' Ex. 31). The sewage from these units will be directed *via* the Towson Run interceptor to the Lake Roland Park interceptor. The problem is only getting worse.

2. There is abundant authority upon which the ALJ can rely to deny this Development Plan

As the ALJ in *Bluestem* correctly concluded, there are "myriad state and county laws which require all residential projects to provide adequate and safe sewage disposal systems." (ALJ Op., pp. 26-27). These laws, individually and collectively, provide more than a sufficient basis for the denial of this Development Plan.

(1). The Zoning Regulations – Growth Management Act

Section 32-6-106 of the County Code states that a building permit may not be issued unless the applicant meets the requirements of section 4A02 of the Zoning Regulations, the Growth Management Act (the "Act"). Section 4A02.3.G of the Act prohibits the issuance of a building permit in any area that has deficient sewer, transportation or water facilities based on standards set forth in section 4A02.4 of the Act. The sewage standards are set forth in 4A02.4.C, which provides:

1. Intent. The sewerage standards and maps are intended to regulate nonindustrial development where it has been determined that the county's share of public sewerage capacity *is substantially less than the capacity necessary both to serve already established uses and to serve new uses likely to be established pursuant to this legislation.*
2. Determination of reserve capacity. The county's share of public sewerage capacity must be *capable of serving already established uses and new uses likely to be established under the provisions of this legislation.*
3. Maximum level of nonindustrial development. The maximum level of nonindustrial development per sewerage area *shall not be greater than that capable of being provided with available sewerage capacity* ....

(2). <u>The State Environment Article</u>

Section 9-512(b) of Environment Article of the Maryland Annotated Code prohibits local jurisdictions from issuing a building permit unless the sewage system (i) "is adequate to serve the proposed construction, taking into account all existing and approved developments in the service area" and (ii) "will not overload any present facility for conveying, pumping, storing, or treating water, sewage, or solid waste." (Emphasis added).

(3). <u>The County Code</u>

Section 32-4-102(b) of the County Code (Development Policies) states that the intent of the development regulations is to "protect and promote public health, safety, and welfare and to ensure that public facilities, services, and amenities are provided," to "ensure that proposed development projects are safe, adequate, convenient and, where applicable, provide for... sewerage," and to "prevent[] environmental degradation and promotion of environmental enhancement...." Section 32-4-103(a), similarly, states that the development regulations in Title 4 are adopted to "protect and provide for the public health safety, and general welfare of the county," to "minimize adverse environmental... impacts on the surrounding community," and to "provide adequate and efficient ...sewerage."

To these ends, section 32-4-401 *et seq.* sets forth "design standards and requirements... for the preparation and review of proposed development." Among these, section 32-4-410(b) states: "*Sewage*. Proposed public or private sewage facilities shall be designed and located to function safely and without danger of contaminating groundwater, surface water, or public or private water supplies." Finally, section 34-3-104(b) of the Water and Sewer Article provides that "[t]he owner of any property in the county is responsible for maintaining the property in such a manner that no overflow of sewage, wash water, or other liquids or solids shall be discharged onto any ground surface, streets, or roads or into any waters of the county...."

(4). DPW's Design Manual, Sanitary Sewer

The Sanitary Sewer section of the Design Manual adopted by the Department of Public Works sets forth minimum design criteria for the design of components of a sewer system. (Prots' Ex. 15). The objective of the design standards is to "provide a sanitary sewer system that safely collects and transports wastewater without harm to human health or environment...." (Design Manual, p. 6-2). To that end, the Manual states that "[c]onstructed overflows shall not be permitted at any time." (p. 6-22). The Manual requires sewer capacities to be "designed for the estimated ultimate tributary population" and that "[c]onsideration shall be given to the maximum anticipated capacity of institutions, industrial parks, etc...." (p. 6-22). The Manual identifies specific maximum peak flow capacities for trunk and interceptors (90%), laterals and mains (80%), and building connections (70%). (p. 6-27). The Manual states that "[f]lows above 90-95% of full depth are considered unstable and may result in sudden loss of carrying capacity with surcharging at manholes...." (*Id.*).

(5). PAI's Development Plans Review Policy Manual

The Development Plans Review Policy Manual adopted by Department of Permits, Approvals and Inspections states that "[a]s part of any land subdivision of development of land, provision shall be made for the safe and sanitary treatment and disposal of sewage without detrimental effects to the public health or environment." (Policy Manual, p. 18).[25] The Policy Manual prohibits the granting of a permit for construction of any building or structure "unless provision is made and approved by Baltimore County for disposing of sewage from such building or structure" (*Id.*, p. 19).

B. The County Must Address The Future Model-Predicted Capacity Problems Found By RKK and RJN

The Developer will no doubt argue, as it must, that the County is not required to abide by the recommendations of its consultants and undertake corrective actions to address model-predicted capacity problems because they are just "recommendations." The Consent Decree does not require the County to undertake those corrective actions and the SRRR Plan itself, the story goes, did not propose to do so. This argument demonstrates a fundamental, if not naïve, misunderstanding of the Consent Decree, the relationship between the SRRR Plan and LTC Report, the distinction between physical rehabilitation of the sewer system and addressing model-predicted future capacity, and the assumptions underlying the RKK's and RJN's modeling.

1. The Consent Decree, the SRRR Plan, and the LTC Report

The Consent Decree required the County to develop and implement a series of measures (set forth in Paragraphs 7 through 18) with the goal of eliminating all sanitary sewer overflows (SSO's) in the County's collection system. The most pertinent of these required measures are/were

---

[25] PAI's Development Plans Review Policy Manual is available at: http://resources.baltimorecountymd.gov/Documents/Permits/Development%20Plans%20Review/devplanmanual.pdf

to (i) conduct a physical inspection of sewer lines, manholes, and force mains in the collection system (Paragraph 8), (ii) perform an evaluation of the future model-predicted capacity of the system to transmit peak flows (Paragraph 9), and (iii) prepare a plan that describes the deficiencies in the system and provides for the performance of any corrective actions necessary to address those deficiencies (Paragraph 10). (Prots' Ex. 65, pp. 17-35).

With respect to future capacity, all experts (Mr. Grachek, Mr. Summers and Mr. Leffner) each confirmed that the Consent Decree requires the County to (1) *evaluate* its sewer system for model-predicted future capacity issues, (2) *identify corrective actions necessary* to address those model-predicted future capacity issues, and (3) *actually perform* the corrective actions necessary to address the model-predicted future capacity issues. Indeed, as Mr. Grachek confirmed, the County cannot comply with the Consent Decree without taking the corrective actions necessary to address the model-predicted capacity issues. (T10, pp. 40-42; T11, pp. 75-78; T13, pp. 139-40, 145).

This plain reading is borne out by the provisions in the SRRR Plan itself. The very first paragraph of the Executive Summary states, explicitly, that this three-pronged purpose was the objective of the Consent Decree:

> Executive Summary
>
> The objective of Paragraph 10 of the CD was to prepare a Sewershed Repair, Replacement, and Rehabilitation (SRRR) Plan that [1] describes the deficiencies identified through [a] Collection System Inspection **and** [b] the Long Term Capacity/Peak Flow Management Evaluation (LTC/PFME), and [2] recommends repair, replacement, rehabilitation, or other corrective actions **necessary to address those deficiencies**.

(Ex. 67 at ES-1) (emphasis added).

Similarly, the very first paragraph of the first substantive section of SRRR Plan states:

> 1.1 Background
>
> ....Paragraph 10 of the CD requires the County to prepare a Sewershed Repair, Replacement, and Rehabilitation (SRRR) Plan that [1] describes the deficiencies identified through [a] collection system inspections **and** [b] the Long Term Capacity/Peak Flow Management Evaluation (LTC/PFME), and [2] provides for the determination of any repair, replacement, rehabilitation, or other corrective actions **necessary to correct identified deficiencies**. This SRRR Plan is for the Jones Falls Sewershed.

(*Id.*, p. 1-1) (emphasis added).

The SRRR Plan also expresses this purpose in describing the "recommended corrective action plan" itself:

> Data analysis, evaluation, and decision-making criteria were utilized to identify collection system defects and deficiencies and prioritize the corrective actions. The recommended Corrective Action Plan consists of [1] various structural and hydraulic corrective actions that are needed to address the deficiencies that were identified during the sewershed collection system inspection work. **The plan also** [2] identifies specific rehabilitation and other corrective actions **needed to eliminate model predicted sanitary sewer overflows (SSOs) that were determined by** the simulations completed during the Long-Term Capacity/Peak Flow Management Evaluation (LTC/PFME).

(*Id.*, p. ES-1) (emphasis added).

> 6.0 Corrective Action Recommendation Plan (CD Ref. P.10.C.iii-vii)
>
> 6.1 Overview
> The Corrective Action Recommendation Plan discussed in this section consists of [1] various structural and hydraulic corrective action recommendations needed to address the deficiencies identified during the collection system investigations and modeling activities for the Jones Falls Sewershed. **The Plan also** [2] identifies specific rehabilitation and other corrective actions **needed to eliminate model predicted sanitary sewer overflows (SSOs) that were determined by** the Long-Term Capacity/Peak Flow Management Evaluation (LTC/PFME).

(*Id.*, p. 6-1) (emphasis added).

These provisions demonstrate and emphasize not only that the Consent Decree requires addressing both physical problems and future capacity problems, but also that the future capacity problems are set forth in the LTC report and that the LTC is supposed to identify the corrective actions "necessary" to address those problems. The use of the terms "necessary to address," "necessary to correct," and "needed to eliminate" are critical.

Further, the ALJ should not be troubled by the use of the word "recommended" when describing the correction plan proposed in the SRRR Plan (sections 6.1 and 6.14), as if that suggests some of the corrective actions are required and others are not. The term "recommended corrective action plan" is used to describe the *entirety* of the plan. The SRRR Plan does not differentiate amongst the corrective actions in that way.

The Developer will make much of the provision in the Consent Decree requiring the County, in its SRRR Plan, to "*tak[e] into consideration* the Long Term Capacity/Peak Flow Management analysis," suggesting that this means something less than undertake the LTC report's corrective (*Id.*, p. 32 at C.vi). Importantly, however, the SRRR Plan must also provide projections regarding the range of storm events for which the system will be able to convey peak flows without the occurrence of SSOs. These projections must be "*consistent with* the results of the long-term capacity/peak flow management evaluation" and "shall assume completion" of the corrective actions recommended by the Plan. (*Id.*, p. 33 at C.ix).

2. The Assumption in RKK's and RJN's modeling

Throughout the hearing, it was suggested that the County has performed a lot of comprehensive rehabilitation throughout the system and therefore the capacity problems no longer exist. The Developer misses the fundamental point that the model-predicted capacity improvements proposed by RKK and RJN were based on an assumption that the comprehensive

rehabilitation was *already* performed. The LTC report, itself, states that this assumption was built into its modeling because, as the report states, comprehensive rehabilitation was deemed to be the preferred method for reducing I/I in the system.

The LTC report states:

> 3.0 MODELING APPROACH FOR DETERMINING CORRECTIVE ACTIONS
>
> 3.1 Procedure and Assumptions
>
> In determining the corrective actions recommended to eliminate model-predicted SSOs, several alternatives have been considered. The preferred method to eliminate model-predicted SSOs is to reduce inflow and infiltration (I/I) in the collection system(s) impacting an SSO by completing a comprehensive rehabilitation program of the public sanitary sewers and manholes within the identified SSAs. Rehabilitation of the sewers and manholes were modeled by reducing the Manning's "n" value of the pipe roughness coefficient to 0.01, assuming sewer rehabilitation was completed using cured-in-place-pipe (CIPP). Rehabilitation would also reduce the BI and the rainfall-dependent inflow and infiltration (RDII). Following the Baltimore County SRRR Guidelines, it was assumed that rehabilitation would reduce the BI by 23 percent, the total RDII volume by 35 percent and the peak RDII flow by 37 percent. Because of the complexity of the sanitary sewer systems, reduction of 35 percent in total RDII volume and reduction of 37 percent of the peak RDII flow were not always achieved. In these cases, a reduction of 36 percent of the capture coefficient (R value) was then used....

The Performance Assessment likewise reflects that RJN, in updating the model used by RKK, assumed *post-rehabilitation* conditions. The report states:

> Pre- and post-rehabilitation flow monitoring data was used to update the hydraulic model based on the monitored flow conditions. The model was then used to simulate pre- and post-rehabilitation hydraulic conditions, respectively, under projected 2025 population and employment conditions as obtained from the hydraulic model used for the 2013 SRRR Plan.

(Prots' Ex. 78, p. iv).

The report notes that Map 3, in particular, assumes post-rehabilitation conditions.

> Map 3 depicts the model predicted SSO and flow restriction locations in Jones Falls for all five (5) design storm simulations under the post-rehabilitation condition.

(*Id.*, p. 14).

This assumption makes eminent sense, of course. It would be foolish to create a model to determine capacity problems and not have that model take into account any work that was already performed or contemplated. It is important to read RJN's Performance Assessment in this light and recognize that, even with respect to the rehabilitation that was performed, RJN's findings cannot possibly be read to mean that the capacity problems found by RKK were fixed or that its own capacity findings can be ignored.

3. The Performance Assessment - Targeted v. Comprehensive Rehabilitation

It is also important to consider the limited nature of the Performance Assessment, aside from Map 3. The Performance marks a clear distinction between (1) "targeted" rehabilitation performed throughout the sewershed to address "structural defects" and (2) "comprehensive" rehabilitation to address I/I. The Report explains:

> Targeted rehabilitation to correct structural defects was performed throughout the sewershed. Comprehensive rehabilitation to eliminate sources of I/I was implemented in meter basins BC02, BC03, BC04, and BC09.

(*Id.*, p. 3; *see also id.*, p. 1("Rehabilitation construction in the four meter basins (BC02, BC03, BC04, and BC09) targeted for comprehensive rehabilitation for I/I reduction was performed from 2015 through 2019").

The conclusions of the RJN Report bear this out and support that the Report's findings, in large part, are directed only the four water meter basins:

- The results of the base infiltration reduction assessment indicate that the completed rehabilitation projects *in basins BC02, BC04, and BC09* were

effective in reducing groundwater infiltration and exceeded the predicted base infiltration reductions in the 2013 SRRR Plan while basin BC03 showed an increase in base infiltration.

- Model simulations show that I/I reduction rehabilitation and relief sewer construction in Jones Falls reduced predicted overflow volumes between 89 and 100 percent in total, for those basins *where comprehensive I/I reduction rehabilitation was performed*, or relief sewers were constructed.

- Tables 4-1A and 4-1B present the model predicted occurrences of sewer overflow locations and flood volumes for all five design storm events in the meter basins *where comprehensive rehabilitation I/I reduction projects and/or relief sewers were constructed (BC02, BC03, BC04 and BC09)*.

(*Id.*, pp. iii, 14).[26]

C. The Testimony of Mr. Leffner

In rebuttal to the testimony of Mr. Grachek and Mr. Summers, the Developer recalled Mr. Leffner. Mr. Leffner's opinions regarding sewer capacity would be laughable if they were not so serious.

1. Mr. Leffner's qualifications

First, a word about Mr. Leffner's qualifications to render the opinions he did. Mr. Leffner is a civil engineer, registered since 2013. (T13, p. 24). He does not have a master's degree in wastewater or sanitary sewer engineering. He is not a waste water or sanitary sewer engineer. His resume (Dev's Ex. 41) does not reflect any experience in sewer design or capacity evaluation. He has not published any articles nor belongs to any professional associations in wastewater or sanitary sewer engineering. (T13, pp. 15-16). Mr. Leffner's experience with the design of sewer systems is typically connected to a proposed development as opposed to an evaluation of an

[26] Notably, even in these meter basins comprehensive rehabilitation was already performed (i.e., post-rehabilitation), there are still SSOs. This is represented in Table 4-1B of the RJN Report, which "shows the predicted number of overflows in each meter basin under the post-rehabilitation condition. According to the results, the rehabilitation projects have decreased the occurrence as well as volume of SSOs in the meter basins where rehabilitation work was completed. The model predicts no overflow for the 2-year 6-hour, three (3) SSOs for the 2-year 24-hour storms, four (4) SSOs for the 10-year 6-hour storm, eleven (11) SSOs for the 10-year 24-hour storm, and twelve (12) overflows for the 20-year 24-hour design storm." (*Id.*, p. 14).

jurisdiction's or area's sewer system. (T13, pp. 12-13). A few years ago he worked on a project where he was looking at upsizing requirements related to a pump station for a military facility in Kansas and one in Forte Meade, Maryland. (T13, pp. 13-14). He has served as expert in sewer design on only once occasion in a case in St. Mary's County approximately five years ago, which involved downstream capacity analysis and onsite sewer design. (T4, pp. 17-18).

2. The Repairs made by the County along the sewer path from this site

With some fanfare, Mr. Leffner testified regarding the repairs that, based on his communications with the County, the County had undertaken along the sewer path from the subject property. The location of these repairs are reflected in Developer's Exhibit 44 and the actual work performed is described in Exhibit 45B. (For example, some of the lining work was not done because the County believed it was not necessary). Aside from the lining of one sewer segment, the work consisted of repairs to four manholes. Mr. Leffner agreed that these repairs are "minor" in nature and would not cure or correct the model-predicted SSOs and hydraulic restrictions determined by RJN and reflected in Map 3. (T13, pp. 204, 206).

3. RJN 's Map 3

Mr. Leffner downplayed the significance of Map 3, characterizing it as "kind of say like a snapshot in time on the performance of the improvements and the ongoing [] County kind of programs that being just continuously rolled out within the County. So, [] it's kind of a snapshot in time and model update mainly related to the SSO closures and Cockeysville improvements that were made to show the effectiveness of the SRR improvements as they're being implemented within the County." (T13, pp. 85-86). When asked for his understanding of all of the red areas shown in the map, Mr. Leffner stated:

> I think they're, they're kind of just that. They're model predicted based on whatever information was available to the modeler at the time. And don't

> necessarily include, I would say like current day information, nor has it been verified in the field. So, a lot of it, it's model predicted.
>
> The model may have been calibrated, but it hasn't since been verified by the County because some of the other County kind of ongoing measures that aren't included necessarily in this would be flow monitoring within some of the sub sewer basins, as well as level censors.
> So, you know, at, at some locations where they may have a model predicted overflow, the County could install an actual level censor to identify if there is actually an overflow or, you know, a problem that is occurring that the model is predicting.

(T3, p. 87).

Mr. Leffner did not explain how the installation of level censors would reveal or dispute *future* capacity problems. In any event, on cross, Mr. Leffner acknowledged that, while input values are specific, the map itself is *not* a "snapshot" and "doesn't reflect a single second in time." (T13, p. 181).

4. SSO's v. I/I

The Developer will no doubt argue that there is no evidence of active SSOs in the sewer path from the proposed development. This demonstrates another fundamental misunderstanding of SSOs and their relationship to I/I. An "SSO" is defined in the Consent Decree as any "spill, release, or Discharge from the Collection System, including all Building Backups." Contrary to the Developer's suggestion, SSOs are not limited to outwardly manifestations of capacity problems such as a blown manhole, but can be type of release that happens in an I/I situation. The Ramboll report makes this point perfectly in setting forth the purpose of the work proposed: "the primary focus of the project is to minimize the inflow and infiltration (I/I) into the interceptors to reduce the likelihood of sanitary sewer overflows." (Prots' Ex. 87, p. 1; *see also id.*, p. 3 (the goal of the project is "to minimize the amount I/I into the system and prevent overflows").

5. The LTC Report

Mr. Leffner stated that the purpose of the LTC Report was a "kind of evaluation tool" as a "kind of model or an appropriate baseline for considering future growth." (T13, pp. 51-52). This assertion is laughable and not supported by the Consent Decree or any evidence in the record.

6. The Ramboll Report

When asked about the significance of the Ramboll report, Mr. Leffner stated that the report was not prepared in response to a Consent Decree requirement and will not address capacity. He described it as "just an example of the County being proactive...doing what they do, which is own, maintain, operate, repair the sewer system." (T13, p. 133). "I think the Ramb[oll] report was, essentially, a study and improvement that the County planning to do for relining the main under Lake Roland. It's not necessarily any kind of capacity improvement. It's the relining of the main." (T13, pp. 134-35).[27]

This statement is remarkable not only because Mr. Leffner clearly did not know or understand the scope of the repairs and rehabilitation project at Lake Roland.[28] It is also remarkable, or ironic, given his own description of how the very same types of repairs and rehabilitation in the Cockeysville area *would* improve capacity. He testified:

> MR. MUDD: Okay. Getting back to this yellow area, what, what, what impact would the repairs performed in that highlighted area have on the system and its capacity in general?
>
> MR. LEFFNER: It, essentially, the lining and rehabilitation efforts meet what the, I'd say, kind of global intent of that SRRR plan was, which is do improvements within the existing infrastructure to keep inflow and infiltration out of the system.

[27] Mr. Leffner did not know that the purpose of the Ramboll report is to "minimize the inflow and infiltration into the interceptors to reduce the likelihood of sanitary sewer overflows." (148-49).

[28] On cross, Mr. Leffner indicated that he was only "generally familiar" with the Ramboll report. (T13, p. 150).

> By keeping those inflow and infiltration sources out of the system, essentially, there's more reserve capacity or capacity for wastewater flow. So, it improves the capacity of the existing system by preventing non-wastewater sources from entering into it.

(T13, p. 76).[29]

7. The Hazen Study

When asked about the Hazen study, Mr. Leffner likewise stated that the study, like the Ramboll report, is not being done in response to the Consent Decree. He described the study as "kind of like a further horizon study that the, the County is embarking up" and like the Ramboll report "is kind of an example of the County, [] doing more with regard to the analysis and development of standard County practices beyond what just the Consent Decree requirement would be.... [I]t's more so a planning document, right? Continuing to identify analysis, capacity studies, long term planning to help influence the County's future capital spending in the County." (T13, pp. 134, 135). These assertions are troubling, but there is no support for them, either in the Hazen documentation or from the County.

8. Assumptions

Mr. Leffner does not know whether the Consent Decree requires that the SRRR Plan determined future capacity based on the assumption that rehabilitation and repair was already performed. (T13, pp. 170-71). He is uncertain whether the SRRR plan itself makes that assumption. (T13, pp. 171-72).

9. Implementation of the SRRR Plan

Mr. Leffner agreed that that Consent Decree is still in force and that the County is still subject to its terms and requirements. (T13, p. 213). He also agreed that the SRRR Plan has not

[29] Later, on cross, Mr. Leffner acknowledged that the lining of the interceptors would minimize I/I and reduce SSOs. (T13, p. 149).

been fully implemented. (T13, pp. 85, 145, 146, 152-53). With respect to the Recommended Corrective Action Plan described in Section 6.14 of the SRRR Plan, Mr. Leffner:

1. There are still significant areas in the County exhibiting excessive I/I (T13, p. 146) (Ex. 85). RJN has identified significant areas of model-predicted SSOs including the areas that would serve the proposed development. (T13, p. 148). Given the Hazen study, the Ramboll report, and the RJN Map 3, item 1 is not completed. (T13, p/ 152-53).
2. Mr. Leffner was unaware if the County performed any of the capacity improvements recommended in the LTC Report. (T13, p. 153-54). He conceded that the upsizing of the pipe for the 10/6 storm was not done. (T13, p. 155).
3. Mr. Leffner does not believe the structural deficiencies referenced include those identified in the Ramboll report or that may be identified in the Hazen study. All of the work referenced in 3 is in the SRRR plan itself, but acknowledged that the Consent Decree requires "ongoing analysis, but for a finite amount of work." (T. 13, p. 158).

5 Mr. Leffner admitted that confirming and revising the model is an "ongoing evaluation" and that Hazen is in the process of redoing the model. (T13, p. 160). He admitted that Hazen is performing a comprehensive evaluation of capacity. (161).

III. Traffic and the Special Variance

A. The Growth Management Act

1. Development "commensurate with availability of public facilities"

In the "purpose and intent" section of the Growth Management, the County Council finds that "important public facilities in certain predominantly urban areas of the county are inadequate to serve all of the development that would be permitted under the regulations of the zones or commercial districts within which those areas lie." 4A02.1. The Act establishes the Basic Services Maps in order to "regulate nonindustrial development in those under-served areas to a degree commensurate with the availability of these facilities." The Maps are not intended to be permanently establish deficient areas; rather, the intent is "that existing service deficiencies will

be corrected in accordance with the Master Plan and capital improvements program," *i.e.*, the problem will be fixed *by the County*. 4A02.3.F

2. Reserve Capacity Certificates

To that end, the Act prohibits the issuance of building permit in a mapped service area unless the Director of Planning has issued a "reserve capacity use certificate." 4A02.3.G.1. A reserve capacity use certificate may authorize development "*only to the extent that it ... will not utilize more than the reserve capacity of the ... transportation network* ... of the Basic Services Mapped area within which the property is located." 4A02.3.G.4.a. (emphasis added).

In other words, the Act contemplates the issuance of a certificate in circumstances where there is some reserve capacity in the area where the property is located. Transportation capacity is determined based on a formula set forth in 4A02.3.G.4.a.

3. The Transportation Standards

Section 4A02.4 sets forth standards that are "intended to form the basis for the delineation of areas on the Basic Services Maps as well as for the evaluation of development applications in accordance with the requirements of this article," *i.e.*, the standards apply to both the adoption of the maps and to the approval of development during the development review process. 4A02.4.A.

Subsection D of 4A02.4 sets forth the "transportation standards." It provides:

> Intent. The transportation standards and maps are intended to regulate nonindustrial development where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article. Such development is not intended to be restricted unless there is a substantial probability that an arterial and arterial collector intersection situated within the mapped area will, on the date the map becomes effective, be rated at level-of-service E or F under *standards established by the Highway Capacity Manual, 1965, published by the Highway Research Board of the Division of Engineering and Industrial Research, National Academy of Sciences National Research Council.*

(Emphasis added).

4. *Special Variances*

Subsection D identifies certain "exceptions" to the transportation standards, but a provision authorizing petitions for special "from provisions of this subsection."

> 1. The Zoning Commissioner may, after a public hearing, grant a petition for a special variance from a provision of this subsection, only to an extent that will not violate that provision's purpose, pursuant to a finding:
> a. That the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal; and
> b. That the granting of the petition will not adversely affect a person whose application was filed prior to the petitioner's application in accordance with Section 4A02.3.G.2.b.

A plain reading of these provisions of the Growth Management Act tells us the following: (1) the primary intent and purpose of the Act is for the County to fix deficient public facilities through the capital budget process; (2) to the extent there is any "capacity" in public facilities, the intent is for a reserve capacity certificate to be issued, (3) the Act sets forth a formula for determining such transportation capacity, (4) the Act also sets forth transportation standards that apply not only when adopting the basic services map but also to the review and approval of development during the development review process, (5) these transportation standards are set forth in the 1965 Highway Capacity Manual, and (6) the ALJ may grant a special variance only from a provision in 4A02.4, which is the "subsection" in which this authority appears.

B. The Developer Has Not Proven Entitlement To A Special Variance

1. The testimony of Mr. Driban

Mr. Driban testified that, in his opinion, the standard for a special variance is met because the intersection of Falls/Joppa will be "substantially" improved in terms of overall delay. (T4, pp. 213, 215). Putting aside the limitations and fallacies in this conclusion (addressed below), Mr. Driban's conclusion is not supported by the plain language of the Growth Management Act or the evidence in this case.

Preliminarily, it should be noted that while Mr. Driban has worked on "tens of projects" in Baltimore County, none of these projects involved the review or evaluation of Baltimore County regulations or standards. In particular, he has never been involved in a project or testified in a case involving a special variance request or the standards for such a request. (T4, pp. 111, 243-45). Mr. Driban nevertheless testified that in this case "the County was onboard with concurring with our, with our approach to, to meeting the special variance requirements." (T4, p. 231). He based this observation, apparently, on Mr. Nebre's email communication of August 16, 2022 (Dev's Ex. 29). A review of this email reveals nothing of the sort. The only reference to the special variance in the email was as follows:

> The development sits in a current LOS F traffic shed, and therefore, per Baltimore County Zoning Regulations Manual, 4A02.4.G.1, we defer the findings from Lenhart Traffic and SHA responses be subjected to review from the Zoning Commissioner to determine if this development would be eligible for a waiver based off the zoning regulations.

(Dev's Ex. 29, p. 1).[30]

[30] Mr. Driban remarkably described the email from Mr. Nebre as "kind of his, is his sign off on, you know, his review of, of the traffic impact study...where he is agreeing that the improvements are, at the Joppa intersection, are enough to accommodate the volume from the site and that the mitigation from the improvement results in net zero impact along the corridor. Actually, it, it results [] this is my, you know, annotation, actually results in improvement along the corridor." (T4, p. 234). Again, the email says no such thing.

Indeed, when asked whether he was ever told by anyone in the County that the CLV or the HCM methods he used are the district standard under the zoning regulations, he answered: "I don't believe that I was told that those specific items are the district standard." (T4, p. 52). In the end, Mr. Driban acknowledged that he cannot say that the level of service under the loaded cycle methodology will be improved from an F. (T, 4, p. 52).

2. The testimony of Mr. Nebre

It is fair to say that the testimony of Kris Nebre was less than crystalline in numerous respects, but he was clear on some things. He testified that the *only* method used by the County for determining levels of service is the loaded cycle methodology. (T2, pp. 354-55T5, p. 6-7, 18). When a development is proposed in a failing intersection, the standard that the County applies is the loaded cycle methodology. (T2, p. 355). The standard that he applied in reviewing the Developer's traffic impact study, however, was not the loaded cycle methodology but rather whether or not the proposed development would make the situation "any worse" or, as he also put it, result in a "net zero impact." (T2, pp. 325, 327, 338, 339). When asked where that standard comes from, he responded "partially engineering" but "there's not like a standard I could really point to for that one." (T2, p. 339).[31]

Importantly, Mr. Nebre agreed that "net zero impact" is not the special variance standard set forth in the Growth Management Act. He explained that he was not speaking to that standard, which is why he "deferred" to the ALJ on that issue. (T2, p. 338). However, when pressed at the hearing, he stated that the "district standard" referenced in the special variance standard was the loaded cycle methodology.

[31] Mr. Nebre did not explain or elucidate how or on what basis he assessed net zero impact, e.g., is it based on volume, delay, safety, etc. He was unsure about the number of lots in the proposed development, but thought it was "more or less than 100 units." (T2, pp. 376-77).

> MR. WYATT: ....What is the standard? What is your Bureau's practice with regard to the word standard that's used in the regulations?
>
> MR. NEBRE: The standard for the basic serves map would be the, the loaded cycle methodology
>
> * * *
> MR. WYATT: When the, when the variance regulation refers to the district standard that would otherwise restrict or prohibit development, isn't that referring to the LOS standard that we've spent some time talking about today?
>
> MR. NEBRE: That's the best that we could see it.

(T3, p. 20).[32]

Finally, and most importantly, Mr. Nebre acknowledged that like Mr. Driban he cannot say, to any reasonable degree of certainty, that the proposed development, with the road improvements, will improve the F level of service at the intersection of Falls/Joppa. (T4, pp. 355-56).

3. The District Standard Must Necessarily Be The County's Level Of Service Methodology

As Mr. Nebre and Mr. Driban acknowledged, the only standard in Baltimore County for determining failing intersections is the loaded cycle methodology. It defies logic that the "district standard" for obtaining a special *variance from this failing level of service* could be achieved by applying some *other* standard. It would be mixing apples and oranges to obtain a variance from one standard by applying another standard. Other methodologies such as CLV and the modern

[32] Mr. Nebre stated that others in his department have expressed the opinion that in order for this development to be approved, the F level of service needs to be improved, however, he added obliquely that there have been changes in the department since this development was proposed and reviewed. (T2, pp. 340-41). Protestants' Exhibits 15-19 are emails between Mr. Nebre, his superiors Greg Carski and Mike Filsinger, and the Developer. At the time of these emails, Mr. Carski and Mr. Filsinfer were bureau chief and division chief, respectively, and his mentors. (T2, pp. 345-48, 351, 358). These emails are some indication that Messrs. Carski and Filsinger believed that the level of service under the loaded cycle methodology must change for a development to be approved. (Prots' Exs. 15-19).

HCM may be useful when considering traffic impact studies, but they have no connection to the loaded cycle methodology. They are separate and distinct methodologies that, when applied, do not speak to or affect levels of service as the County determines them. Importantly, in the very few cases decided by the OAH or the Board of Appeals, the ALJ and the Board have not seen fit to adopt a new standard for special variances. *See In re: Petition for Variance, Foxleigh Enterprises*, Case no. 2012-00060-SA; *In re Petitions for Special Hearing & Variance, 6503 Baltimore Nat'l Pike,* Case no. 2021-0130-SPHA; *In re Petition for Special Variance, Elias Rizakos*, Case no. 00-557-SA; *In re Petitions for Special Exception, Special Variance*, 1807 E. Joppa Rd., Case no. 2009-0080-XSA.

In other words, the "district standard" is the loaded cycle methodology. Mr. Nebre conceded this, of course, but this conclusion is also supported by the Growth Management Act itself. The transportation "standards" are set forth in 4A02.4 and identified as the standards in the 1965 Highway Capacity Manual, which includes the loaded cycle methodology.[33] The Developer did not address these standards or otherwise seek a variance from them.

Further, the fact that the load cycle methodology is predictive in nature and determined by field observations, rather than by numbers that a traffic engineer inputs in his or her computer, does not mean that we should abandon the County's methodology and just accept other methodologies as the district standard. The loaded cycle methodology is *the* standard in Baltimore County. The fact that it may have been around for a long time, or even the fact that other jurisdictions do not use the methodology, is irrelevant. As developers often like to say, everyone has the prerogative to seek changes in the law if they believe existing the law is outdated or should be changed.

[33] The 1965 Highway Capacity Manual is not the "HCM" methodology used by Mr. Driban to determine intersection delay.

Nevertheless, there are certainly ways to prove entitlement to a special variance based on the loaded cycle methodology. The standard requires a demonstration that "the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal." One impact "assumed" by the loaded cycle methodology is that more than 50% of the vehicles from the proposed development site will travel to the failing intersection. A developer could obtain a special variance by proving that less than 50% of the traffic from the proposed development will travel to the intersection. In fact, this was the developer's theory in at least a few of the cases that have been decided in this area.

The purpose and intent of the Growth Management Act should not be forgotten in all of this. The Act contemplates that the County is supposed to fix deficient public facilities through the capital budget process. If there is any available "capacity" in a deficient public facility – as the Developer contends there is this case – then the remedy is to obtain a reserve capacity certificate to use that capacity. The Act sets forth a formula for determining such capacity. *See* 4A02.3.G.4.a. The Developer has not applied for a reserve capacity certificate nor sought to meet the capacity standard for obtaining such a certificate. It would make no sense to allow a developer to demonstrate capacity and obtain a variance through some other capacity standard, as this Developer seeks to do.

In sum, Mr. Driban's assertion that intersection delay will be reduced, even if true, is irrelevant and does not speak to standard in the Growth Management Act. The same goes for Mr. Nebre's "zero impact" opinion. The bottom line, as Mr. Nebre and Mr. Driban agreed, even with the proposed road improvement, the LOS at Falls/Joppa would not change from an F level of service under the district standard.

C. The Limitations and Fallacies in Developer's Traffic Impact Study

The Developer's expert, Nick Driban, prepared a traffic impact study that reviews the intersections at Falls/Joppa and Falls/Greenspring Valley Roads, taking into account the Developer's proposal to add a lane on the westbound and eastbound approaches to the light at Falls and Joppa Roads to be exclusively for left hand turns. (Dev.'s Ex. 16).[34] The traffic impact study reviews the levels of service at the two intersections under the CLV and HCM methodologies.[35] According to Mr. Driban, the level of service under the CLV method goes from E to D in the am peak hour and remains a D in the pm peak hour. (Ex. 25 at p. 15 of 79, Ex. 8a) (T6, pp. 267-68). Under the HCM method, according to Mr. Driban, the level of service in the am, with the proposed improvements, stays at D. In the pm, the level of service likewise stays a D. (p. 17 of 79, Ex, 8b) (T4, p. 269). Mr. Driban concludes that the proposed improvements at Falls/Joppa would "substantially" improve capacity and reduce the amount of delay at the intersection. (T4, pp. 204-05). Mr. Driban goes so far as to say that the intersection will be "orders of magnitude better in terms of overall delay, the average delay per vehicle, than it is today." (T4, p. 213).

As preliminary matter, before addressing the relevance of any of this, there are significant shortcomings and fallacies in Mr. Driban's analysis. First, as Mr. Driban acknowledged, his levels of service analysis address only the signalized intersections at Falls/Joppa and Falls/Greenspring Valley and do not account for the many ingresses to and egresses from retail businesses, offices, and food establishments along this corridor during all hours of the day, not just peak hours. (T5, p. 31). Protestants' Exhibit 38 is an aerial showing all of these accesses onto and off Falls Road and the enormous amount of parking available to employees and customers at these businesses.

---

[34] Not described by Mr. Driban, but reflected in the plans for the improvements, is that the Developer also proposes to eliminate the left hand turn option for one eastbound and one westbound approach. (Dev's Ex. 16).

[35] It was stated that the loaded cycle methodology is old. The CLV methodology is 35 years old. (T4, p. 265).

Several witnesses testified regarding their typical travel and the multiple stops they make along this corridor. Mr. Driban's levels of service and trip generation data do not account for vehicles that might only make one right hand turn onto Falls Road but make multiple stops along the corridor. (T5, pp. 33-35, 37-39).[36]

Second, as Mr. Driban acknowledged, his conclusions about delay are based on an "averaging" of delay in the various the turning movements at these intersections or as he also put it "overall" delay. Attached in the appendix to the traffic impact study are charts setting forth the important details of the results of Mr. Driban's delay analysis. Protestants' Exhibit 36 and 37 are copies of pages from this appendix, specifically the analysis details for the intersection at Falls/Joppa in the am and pm, respectively. These details reflect that the delays and levels of service actually worsen, in some cases significantly worsen, for turning movements in both the am and pm with the Developer's proposed road improvements. Below is a chart reflecting some of the increases in delay reflected in Exhibits 36 and 37:

Comparison of Existing to Post-Improvements Delay and LOS

	EBL	WBR	SBT
Delay (**am**)			
Existing	79	62.6	29.8
W/improvements	92.1	67.3	33.5

	WBR	NBL	NBR
Delay (**pm**)			
Existing	59.9	23.2	.2

[36] Mr. Driban did not highlight the fact that his numbers under the CLV method actually worsen slightly in both the am and pm peak hours at the intersection of Falls and Greenspring Valley. (T5, pp. 10-11).

W/improvements	63.8	45.8	.3
LOS			
Existing		C	
W/improvements		D	

(Prots' Exs. 36 and 37).[37]

Similarly, Mr. Driban's "corridor study," which he glowingly described as reflecting "*very substantial* improvements for *all* traffic passing through this corridor as a result of the improvements being proposed," is based on averaging and modeling. (T5, pp. 40-41; T4, p. 209). He could have done a speed study, which would tell us the actual lengths of time it takes to drive from one of end of the corridor to the other, but instead used a model. (T5, pp. 41-42). Further, he did not study or perform traffic counts on non-peak hours to determine the effect on the corridor of the many non-peak trips made to and from Greenspring station or St. Paul's School when school is getting out or for sporting events. (T5, p. 125).

Third, Mr. Driban's traffic impact study focuses only on the projected peak *hour* volumes of traffic that would be generated by this site because that's what typical impact studies do. Mr. Driban was unaware of the total volumes of traffic generated throughout the day by the proposed development. That volume, according to the development plan, is 600 average trips per day. In this regard, it is important to identify the sheer number of cars that presently travel through the failing F intersection at Falls/Joppa Roads. Based on the traffic counts provided by the County, in

[37] In Exhibit 8a and 8b of the traffic study, Mr. Driban quantifies "mitigation as a result of proposed improvements." This description is misleading and the numbers he uses are misleadingly high. The numbers are actually a percentage of the impact that is being mitigation (e.g., 121/13 = 931%). They are not a comparison of background and post-development conditions. (T5, pp. 9-10).

the morning peak *hour* alone, 1782 vehicles pass through the intersection in a northbound direction, 481 vehicles pass through in the westbound direction, and 1925 pass through in the southbound direction. In the pm peak hour, 1696 vehicles pass through the intersection in a northbound direction, 686 vehicles pass through in the westbound direction, and 1174 pass through in the southbound direction. (Dev's Ex. 28, p. 26 of 79 (Exhibit 3) (handwritten notes provided by County) (T4, p. 251). Protestants introduced numerous photographs showing the amount of traffic in this corridor along Falls Road and on Joppa Road. (*See* Prots' Exs. 29, 40, 41, 42, 43).

Fourth, perhaps most importantly, Mr. Driban's traffic impact study conspicuously fails to address the impacts of increased traffic and the proposed road improvements on traffic safety. Numerous witnesses spoke compellingly about the existing safety issues at the corner of Falls/Joppa and on the approach to that intersection. They testified regarding the difficult curve for northbound vehicles taking a right hand turn onto Joppa and the frequency of accidents at that turn. They testified regarding the impact that removal of the concrete median on westbound Joppa Road would have on the safety of drivers and pedestrians crossing at the intersection.

Finally, although it is common to accept traffic impact studies as gospel, particularly when there is no opposing traffic expert, it is important to recognize the margins of error inherent in any traffic study, including this one. The margins of error in Mr. Driban's study are obvious from the very nature of the many variables he considered. These variables are:

- "trip generation" – Trip generation is derived from the ITE manual, which is based on studies of residential developments between 1980 and 2010. (Prots' Ex. 35). The amount of trips generated by this site during the am and peak hours is thus a projection or estimate based on studies that themselves have margins of error. According to Mr. Driban, it is also based on "intuition." (T5, p. 191).

- "trip distribution" - Trip distribution is the identification of the relative percentage of vehicles entering versus those leaving during the am and pm peak hours. Here, Mr. Driban assigned 25/75 ratio to the percentage of vehicles

coming in/out during the am peak hour and 63/37 ratio to the percentage of vehicles coming in/out during the pm peak hour. (Dev's Ex. 28, p. 13 of 79 (Ex. 6)). Like trip generation, it is a projection or estimate. In fact, Mr. Driban acknowledged that trip distribution is also based on "intuition." (T4, p. 191).

- "trip assignment" – Trip assignment is the identification of the direction in which vehicles leaving the site will travel and the direction they will come when they return. Here, the traffic impact study states, in nice round numbers, that 80% of the traffic generated at this site will travel to and from the west and 20% from and to the east. (Dev's Ex. 28, p. 14 of 79 (Ex. 6)). This is obviously a projection and an estimate.

- "growth rate" – Mr. Driban applied a growth rate of 1.5% to the traffic counts provided by the County. He acknowledged that the growth rate is an "estimate." (T4, p. 253).

- "averaging" – Mr. Driban acknowledged that his conclusion

Mr. Driban repeatedly used the word "substantial" to describe the improvements in delay that he believes will result from the road improvements on Joppa. In actuality, the improvements he found (even if we assume them to be correct) are a matter of seconds. Given this thin thread that Mr. Driban has weaved, it must be considered that his findings and conclusions could change entirely if one or more of the estimated and projected variables described above are altered even slightly. In other words, Mr. Driban's opinions leave no room – none – for margins of error. This is particularly true because, in addition to the conjectural nature of the variables themselves, he "averaged" them and assessed their "overall" effect. As was demonstrated by the simple exercise of the looking at the individual turning movements in his delay analysis (Prots' Exs. 36 and 37), Mr. Driban's findings, on another day, could be entirely different. The basis for his opinions is razor thin and should not be justify the granting of the important special variance that the Developer seeks.

D. The Planning Office's "Deferral"

Section 4A.02.4G.2 of the Growth Management Act requires the Department of Planning to "give a report on the petition to the Zoning Commissioner prior to his consideration of the petition." It is undisputed that the report contemplated by this provision has not been provided to the ALJ.

The Planning Department's "deferral" and the reasons offered why the required report has not been provided are unacceptable. A fair inference from all of this, similar to the inference that can be drawn from DPW's "deferral" (discussed above) is that these two agencies do not feel comfortable recommending approval of the special variance. The development plan should not be approved for this additional alone.

CONCLUSION

For the reasons stated, Protestants respectfully requests that the Development Plan and the requested zoning relief be denied.

IN RE: DEVELOPMENT PLAN HEARING, PETITION FOR SPECIAL VARIANCE, etc. 2310 W. Joppa Road *Greenspring Manor* 9th Election District 3rd Councilmanic District	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS Case nos. 08-0922 2021-0250-SPH

* * * * * * * * * * * *

POST-HEARING MEMORANDUM OF THE MEADOWS OF GREENSPRING

Protestant, The Meadows of Greenspring ("The Meadows"), submits this post-hearing memorandum in support of their opposition to the development plan and requested zoning relief.

INTRODUCTION

The Meadows is an established small, tight-knit community of 99 homes located immediately north of the subject property. The Meadows is opposed to the proposed development for reasons that include over-development of the area, sewer capacity, and traffic conditions. Protestants' Exhibit 33 is a petition signed by 97 residents in the community expressing this opposition.

If the ALJ approves the development plan, then the Meadows requests that the ALJ deny the proposed emergency-only access and prohibit permanently any vehicular access or connection to Mays Chapel Road and The Meadows community. Alternatively, The Meadows requests that the ALJ condition her approval on (i) emergency-*only* access to Mays

Chapel Road and The Meadows community, and (ii) the permanent prohibition of any future opening of vehicular access or connection to Mays Chapel Road and The Meadows community. (*See* Prots' Ex. 34).

ARGUMENT[1]

A. The Testimony of Residents of The Meadows

Richard Compton, Karen McGraw, and a number of other residents from The Meadows spoke compellingly at the hearing regarding the many reasons why there should be no vehicular access from the proposed development to their community.

They explained that The Meadows is not a retirement community *per se*, but it has naturally evolved into a community comprised primarily of residents in their 60s, 70s, and 80s. They place a high value on the safety, security and tranquility that presently exists in their neighborhood. Every day, a significant number of homeowners use the circular street pattern in The Meadows as a walking trail, many with their dogs and sometimes grandchildren. The roads are narrow, with no sidewalks and no speed control bumps. They are not designed for high volumes of traffic. Indeed when a vehicle is parked on one side of the street, a driver must wait until any oncoming vehicle passes before proceeding. A pass-through will undoubtedly have a negative impact on the value, attractiveness, character and most importantly the safety of the community. Photographs depicting these aspects of the neighborhood were introduced as Protestants' Exhibits 32A and b.

Residents are also concerned that allowing an emergency-only access at this stage, as some sort of compromise, will simply open the door for some future effort, outside the hearing

[1] The Meadows incorporates herein the post-hearing memorandum filed by the remaining Protestants in this matter.

process, to convert the access to a full vehicular pass-through. At the hearing, there was no testimony or evidence – none - from anyone in the County (including representatives of the police or fire departments) expressing the need for an emergency connection.

B. The Recommendation of the Planning Office

Importantly, the Planning Office recommends *against* allowing a public vehicular pass-through to The Meadows. In their development plan comments (Prots' Ex. 6), staff note that the vision of Master Plan is to provide "a network of design that exemplifies walkability, a greater pedestrian experience, enhanced circulation, connectivity etc." Staff conclude that a pedestrian-only access via a sidewalk will provide the connectivity called for in the Master Plan. (*Id.*, p. 4).

C. The Studies by Mr. Driban – There is No Need for a Pass-Through

The Developer's expert, Nick Driban, performed an "original destination study" over the course of several days. The study involved having someone sit at either end of Tally Ho Road and document the number of vehicles that cut through from one end to the other. The study revealed that very few vehicles actually use Tally Ho as a by-pass route. During the am peak hour, Mr. Driban found only 3-10 vehicles, or about 5%-12% of the traffic, was by-pass traffic. During mid-day, only 3% of traffic went through neighborhood and during the pm peak hour, only 4-5 vehicles on average over the several days used Tally Ho as a cut-through, accounting for 5% of the traffic. (T4, p. 217)

Mr. Driban also performed a "sensitivity study" to determine the percentage of vehicles that might be incentivized to cut through Mays Chapel Road if a pass-through were installed. Mr. Driban concluded that a fairly substantial percentage of traffic would be incentivized to use the pas-through because it's a direct connection with no traffic lights and

would allow faster travel time than Tally Ho. (Dev's Ex. 39; T5, p. 54). Developer's Exhibit 28 is a map showing various roads in the area. Mr. Driban explained that the cut through, if installed, would create a very direct connection between Joppa and Seminary that would likely be used by hundreds of vehicles during the morning and evening peak hours and the rest of the day. (T4, p. 225). He estimated as many as 600 vehicles in the morning and 1000 in the evening. He stated that this is a high volume of commuter traffic that should not be on residential streets like those in The Meadows where people are walking dogs. (T4, p. 229).

D. The Development Plans Review Policy Manual

In its development plan comments, the Development Plans Review (DPR) section recommend in favor of a full access pass-through to Mays Chapel Road. DPR relies, apparently, upon the following provision in its Policy Manual:

> ACCESS GUIDELINES
>
> 1. Maximum Number of Units with One Means of Access.
>
> a. Limits of Units
>
> -100 units with no future street extension proposed
> - 150 units when a future street extension is proposed and is feasible
> >150 2nd means of access must be constructed

(DPR Policy Manual, pp. 22-23).

Under a plain reading of this provision, a second means of access is not required if either the proposed development *or* The Meadows has 100 or less units.

The Meadows community has 99 homes and the proposed development would have 61 homes so neither community meets the threshold requiring a second means of access.

The Policy Manual cannot reasonably be read to require a *totaling* of homes in all adjacent communities when determining whether the 100-unit threshold is met. This would lead to a never ending computation of units in nearby and distant neighborhoods to ensure that, at no point, is there only one access for any combination of residential units across neighborhoods (*i.e.*, that the number of units ÷ 101 =/> 1). This would lead to absurd results. The clear intent of the Policy Manual is to simply look at each community individually and ensure that if it has more than 100 units a second means of access if provided.

E. Section 260.4 in the Residential Performance Standards

Section 260.4 in Zoning Regulations requires a developer to "[p]rovide for at least one street connection to an adjoining neighborhood or an adjoining property, not including the principal access to the subdivision, in order to facilitate good traffic circulation." Here, the pass-through would clearly not facilitate, for all the reasons cited above, "good traffic circulation." Instead, it would create congestion and safety issues for The Meadows and not resolve any problems perceived by residents of Tally Ho. As noted, the Planning Office, which is charged with applying the residential performance standards, recommended against the pass-through.

CONCLUSION

For the reasons stated, The Meadows respectfully requests that, if the development plan is approved, the ALJ deny the proposed emergency-only access and prohibit permanently any vehicular access or connection to Mays Chapel Road and The Meadows community. Alternatively, The Meadows requests that the ALJ condition her approval on (i) emergency-*only* access to Mays Chapel Road and The Meadows community, and (ii) the permanent

prohibition of any future opening of vehicular access or connection to Mays Chapel Road and The Meadows community. (*See* Prots' Ex. 34).

SUBPOENA

TO: Erin S. Kuhn, P.E.
Assistant District Engineer – Traffic
MDOT State Highway Administration, District 4
320 W. Warren Road
Hunt Valley, MD 21030
410-229-2380

You are hereby summoned and commanded to appear at a **Virtual WebEx Hearing** before the Administrative Law Judge for Baltimore County on Tuesday, the 20th day of September, 2022 at 1:30pm and Wednesday, the 21st day of September, 2022 at 1:30pm, regarding the above captioned matter for the purposes of testifying at the request of Adam Rosenblatt, Esq.

Upon receipt of service of this subpoena you are required to contact the Office of Administrative Hearings at 410-887-3868 or administrativehearings@baltimorecountymd.gov to provide your email address so that a WebEx link/invitation can be emailed to you prior to the hearing so that you can testify as commanded. Please then accept the link/invitation promptly upon receipt.

Private Process Server:

Please process in accordance with Rule 4(c) of the Rules of Practice and Procedure before the Zoning Commissioner/Hearing Officer of Baltimore County.

Paul M Mayhew

PAUL M. MAYHEW
MANAGING ADMINISTRATIVE LAW JUDGE
FOR BALTIMORE COUNTY

Issued:

RECEIVED

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREES PLANTED WITHIN 10 FEET OF THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY OPERATIONS AND MAINTAIN THE CLEARANCES REQUIRED BY THE CODE.
3. A FISHER RUN ROAD FOR ACCESS TO BUILDINGS AND ADEQUATE WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.116.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.5.10.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

** NOTE: TOTAL AREAS SHOWN IN THIS TABLE ARE APPROXIMATE ONLY. REFER TO THE RECORD PLAT OR RIGHT OF WAY DRAWING FOR EXACT AREAS.

ENTRANCE FEATURE AND SIGN

NOT TO SCALE
SIGN FACE AREA: 24 SQUARE FEET

DELINQUENT ACCOUNTS CERTIFICATION:

I, _____ DIRECTOR OF LAND DEVELOPMENT CERTIFY UNDER OATH THAT THERE ARE NO DELINQUENT ACCOUNTS FOR ANY OTHER DEVELOPMENT WITH RESPECT TO ANY OF THE FOLLOWING: THE APPLICANT, A PERSON WITH FINANCIAL INTEREST IN THE PROPOSED DEVELOPMENT, OR A PERSON WHO SHALL PERFORM CONTRACTUAL SERVICES ON BEHALF OF THE PROPOSED DEVELOPMENT.

GROUNDWATER MANAGEMENT

PRIOR TO RECORD PLAT APPROVAL THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREES PLANTED IN THE VICINITY OF THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY OPERATIONS AND COMPLY WITH THE BALTIMORE COUNTY FIRE CODE.
3. A FISHER RUN ROAD FOR ACCESS TO BUILDINGS AND ADEQUATE WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.116.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.5.10.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 110.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS ON APPROXIMATELY 39.5 ACRES. THERE ARE VERY FEW STEEP SLOPES AND NO SOILS CLASSIFIED AS HIGHLY ERODIBLE ON THE SITE. THE SOILS ON THE SITE CONSIST OF HYDROLOGIC SOILS GROUPS (HSG) B, C, AND D. SEE APPENDIX A FOR THE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE IS WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE; HOWEVER, THE PROPOSED DEVELOPMENT EFFORTS WILL RESULT IN CHANGES TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS, PROPOSED ROADWAYS, AND WITHIN PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY 3 SUBMERGED GRAVEL WETLANDS. A SEPARATE FLOODPLAIN STUDY HAS BEEN PREPARED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 2 OF THE 3 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR PEAK RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

ADDITIONAL INFO

ANTICIPATED ACTIONS:
1. VARIANCES NONE
2. SPECIAL VARIANCE: TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP
3. VARIANCE: TO PAVING ON A 50' ROW IN LIEU OF 30' PAVING ON A 50' ROW
4. SPECIAL EXCEPTIONS: NONE
5. OTHER: NONE
6. CONSISTENCY WITH DESIGN MANUALS: YES

ENVIRONMENTAL IMPACT REVIEW

THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.

1. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION IN FOREST BUFFER & FOREST CONSERVATION EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.
2. PRIOR TO RECORD PLAT APPROVAL, THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.
3. A VARIANCE WAS GRANTED ON SEPTEMBER 24, 2021, BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY FROM THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO REDUCE THE 100-FOOT BUFFER WITHIN THE BUFFER EASEMENT SHOWN HEREON AS REFLECTIVE OF THE FACT THAT THIS VARIANCE WAS GRANTED. CONDITIONS WERE PLACED ON THIS VARIANCE TO REDUCE WATER QUALITY IMPACTS INCLUDING PLANTING 17 438 SQUARE FEET OF BUFFER AREA, AND INSTALLING PROTECTIVE SIGNS ALONG THE BOUNDARY OF THE FUNCTIONING FOREST BUFFER EASEMENT.
4. A VARIANCE WAS GRANTED ON SEPTEMBER 21, 2021 BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY IN ACCORDANCE WITH SECTION 33-3-112 OF THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO FACILITATE INFRASTRUCTURE AND UTILITY CONSTRUCTION. CONDITIONS WERE PLACED ON THIS APPROVAL TO REDUCE WATER QUALITY IMPACTS, INCLUDING REFORESTATION (INCLUDING NATIVE SEED MIX PLANTING IN EXCESS OF 2.07 ACRES) AND FOREST BUFFER MITIGATION.
5. A SPECIAL VARIANCE WAS GRANTED ON SEPTEMBER 21, 2021 TO BALTIMORE COUNTY'S FOREST CONSERVATION LAW TO ALLOW OFFSITE IMPACT TO ONE SPECIMEN TREE FOR THE WIDENING OF WEST JOPPA ROAD. CONDITIONS WERE PLACED ON THIS VARIANCE, INCLUDING PROTECTION OF THE REMAINING SPECIMEN TREES AND FOREST RECREATION.

UNDEVELOPED AREAS

DESCRIPTION	ACRES
STORMWATER MANAGEMENT	2.15 ±
HOA/COA AREAS	1.75 ±
OTHER	12.55 ±
TOTAL PROVIDED	16.45 ±

OPEN SPACE

1. OPEN SPACE REQUIRED - 50 UNITS (60 NEW + 1 EXISTING) X 1,000 S.F. = 60,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 169,900 S.F. OPEN SPACE NOTES: (169,346)
3. ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
4. WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.
5. ANY FILL PLACED IN OPEN SPACE AREAS WHICH WERE PREVIOUSLY 100-YEAR FLOODPLAIN SHALL BE DESIGNED AND CERTIFIED BY A REGISTERED ENGINEER TO PREVENT ANY INCREASE IN THE 100-YEAR WATER SURFACE ELEVATION RESULTING FROM NET SOILS.
6. OPEN SPACE SHALL BE OWNED AND MAINTAINED BY THE HOMEOWNERS ASSOCIATION.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE IS BEING SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND WATER SUPPLY AREA.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. RAMPS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS. PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS SHALL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. A CMI WAS HELD ON APRIL 27, 2021. ISSUES WERE RAISED REGARDING THE POTENTIAL EXTENSION OF MAYS CHAPEL ROAD THROUGH THE SUBJECT PROPERTY. THE PLAN PROPOSES TO EXTEND MAYS CHAPEL ROAD BUT TO GATE IT FOR EMERGENCY ACCESS ONLY, TO BE APPROVED BY THE ALJ.
8. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
9. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING REGULATIONS AND THE APPROPRIATE RELIEF WILL BE REQUESTED.
10. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES.

OPEN SPACE CONT.

11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO ELECTRIC, GAS, CABLE TELEVISION, TELEPHONE, TELEVISION, SEWER AND STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. PRIOR TO CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.
13. THE PROPOSED OPEN SPACE AMENITIES INCLUDING THE WALKING PATHS SHALL BE CONSTRUCTED WITHIN THE 50TH BUILDING PERMIT IS ISSUED BUT PRIOR TO THE 40TH.

PLANNING

1. THERE SERVED BY PUBLIC SEWER AND INSIDE URDL PER BALTIMORE COUNTY MY NEIGHBORHOOD WEBSITE.
2. THERE ARE NO HISTORIC PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA INCLUDED ON THE MARYLAND HISTORICAL TRUST INVENTORY (MHT), BALTIMORE COUNTY LANDMARKS LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.
4. THE STACKED FLAT UNITS ARE AREA OF 500 CONFIGURATIONS AND ARE FOUND IN §1801.2.C1(d) OF THE BCZR. CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
5. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
6. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 35' IN THE ZONES
7. NO ACCESS EASEMENTS ARE PROPOSED.
8. ACCESS EASEMENTS MAY NOT BE FENCED.
9. ACCESS EASEMENTS ARE PROPOSED ON THE FOLLOWING LOTS: 6, 7 AND 11,12.
10. THE PROPOSED DECK DIMENSION OF 10'FT. X 20'FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 23 FT.

ZONING

1. EXISTING ZONING ON 1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), THE BALTIMORE COUNTY LANDSCAPE MANUAL, AND THE BALTIMORE COUNTY ZONING REGULATIONS. THE DEVELOPMENT WITH ALL OF THE AFOREMENTIONED REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE. SECTIONS AND OR APPROPRIATE RELIEF WILL BE REQUESTED. ALL SIGNAGE WILL COMPLY WITH SECTION 450 OF THE BCZR.
4. THE DENSITY CALCULATION IS PURSUANT TO §1801.2.C1(d) OF THE BCZR. SECTION 1B-C1.1(d).
5. THE STACKED FLAT UNITS ARE AREA OF 500 CONFIGURATIONS AND ARE FOUND IN §1801.2.C1(d) OF THE BCZR
6. NO ACCESS EASEMENTS ARE PROPOSED ON THE PLAN HAS BEEN HELD INTACT SINCE 1971. THE DEVELOPERS ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
7. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
8. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 35' IN THE ZONES
9. NO ACCESS EASEMENTS ARE PROPOSED.
10. ACCESS EASEMENTS MAY NOT BE FENCED.
11. ACCESS EASEMENTS ARE PROPOSED ON THE FOLLOWING LOTS: 6, 7 AND 11,12.
12. THE PROPOSED DECK DIMENSION OF 10'FT. X 20'FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 23 FT.

VEHICLE AND BIKE PARKING

1. PARKING
REQUIRED PARKING
SINGLE FAMILY ATTACHED
61 UNITS @ 2 SPACE / DWELLING UNIT = 122 PARKING SPACES
TOTAL REQUIRED SPACES = 122 PARKING SPACES
PROVIDED PARKING SPACES 122 PARKING SPACES
GARAGE PARKING SPACES 122 PARKING SPACES
DRIVEWAY PARKING SPACES 244 PARKING SPACES
TOTAL 122 04 = 5
2. REQUIRED BICYCLE PARKING SPACES 5 SPACES
3. PROVIDED BICYCLE PARKING SPACES

OFFSITE SANITARY SEWER IMPROVEMENTS

1"=60'

STORMWATER MANAGEMENT

STORMWATER MANAGEMENT FEE IN LIEU FOR ±20,730 SF OF JOPPA RD. IMPROVEMENTS WHICH CANNOT BE TREATED ONSITE

SEDIMENT CONTROL

SEDIMENT CONTROL DEVICES WILL BE DESIGNED AND CONSTRUCTED IN ACCORDANCE WITH THE MARYLAND STANDARDS AND SPECIFICATIONS FOR SOIL EROSION AND SEDIMENT CONTROL.

PUBLIC UTILITIES

PUBLIC WATER AND SEWER SERVICE WILL BE PROVIDED BY BALTIMORE COUNTY.

FLOODPLAIN STATEMENT

THE 100-YEAR FLOODPLAIN WAS DELINEATED BY A FLOODPLAIN STUDY PREPARED BY GREENHORNE & O'MARA, INC. DATED JANUARY 2021 AND APPROVED BY BALTIMORE COUNTY ON MARCH 2021.

WETLANDS STATEMENT

WETLANDS WERE DELINEATED BY ECO-SCIENCE PROFESSIONALS, INC. IN JULY 2020.

TRAFFIC STATEMENT

THE PROPOSED DEVELOPMENT IS EXPECTED TO GENERATE 600 ADT WITH 44 AM PEAK HOUR TRIPS AND 58 PM PEAK HOUR TRIPS.

PARKING STATEMENT

PARKING REQUIRED: 2 SPACES PER DWELLING UNIT = 122 SPACES
PARKING PROVIDED: 244 SPACES

HISTORIC STATEMENT

THERE ARE NO HISTORIC STRUCTURES ON THE PROPERTY.

PUBLIC WORKS AGREEMENT

A PUBLIC WORKS AGREEMENT WILL BE REQUIRED FOR THE IMPROVEMENTS TO JOPPA ROAD.

FOREST CONSERVATION

FOREST CONSERVATION OBLIGATIONS WILL BE MET BY A COMBINATION OF ON-SITE AND OFF-SITE MITIGATION.

OWNER'S CERTIFICATE

I/WE HEREBY CERTIFY THAT I/WE ARE THE OWNER(S) OF THE PROPERTY SHOWN AND DESCRIBED

GREENSPRING MANOR

2310 W. JOPPA ROAD

DEDICATION TABLE

THE FOLLOWING RIGHTS OF WAY ARE TO BE CONVEYED TO BALTIMORE COUNTY BY THE DEVELOPER/OWNER OF THIS PROPERTY AS A CONDITION OF APPROVAL OF THESE PLANS.

TYPE OF CONVEYANCE	No.	TOTAL AREA**
ACCESS EASEMENT	2	0.10 AC
DRAINAGE AND UTILITY EASEMENT	6-10	0.66 AC-0.19 AC; 0.72 AC
FOREST CONSERVATION EASEMENT	5	3.32 AC- 1.71 AC
STORMWATER MANAGEMENT EASEMENT	1	2.19 AC- 0.72 AC
100 YEAR FLOODPLAIN AND DRAINAGE AND UTILITY EASEMENT	5	5.10 AC- 5.13 AC
FOREST BUFFER AND FOREST CONSERVATION EASEMENT	6	9.28 AC- 3.32 AC
HIGHWAY WIDENING	1	0.54 AC
FOREST BUFFER EASEMENT	6	1.19 AC

** NOTE: TOTAL AREAS SHOWN IN THIS TABLE ARE APPROXIMATE ONLY. REFER TO THE RECORD PLAT OR RIGHT OF WAY DRAWING FOR EXACT AREAS.

ENTRANCE FEATURE AND SIGN

NOT TO SCALE
SIGN FACE AREA: 24 SQUARE FEET

DELINQUENT ACCOUNTS CERTIFICATION:

I, _____ DIRECTOR OF LAND DEVELOPMENT CERTIFY UNDER OATH THAT THERE ARE NO DELINQUENT ACCOUNTS FOR ANY OTHER DEVELOPMENT WITH RESPECT TO ANY OF THE FOLLOWING: THE APPLICANT, A PERSON WITH FINANCIAL INTEREST IN THE PROPOSED DEVELOPMENT, OR A PERSON WHO SHALL PERFORM CONTRACTUAL SERVICES ON BEHALF OF THE PROPOSED DEVELOPMENT.

GROUNDWATER MANAGEMENT

PRIOR TO RECORD PLAT APPROVAL THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSED MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSED SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREES PLANTED WITHIN 10 FEET OF A FIRE HYDRANT OR PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY OPERATIONS AND MUST COMPLY WITH THE BALTIMORE COUNTY LANDSCAPE CODE.
3. A FIRE CRASHER RUN ROAD FOR ACCESS TO BUILDINGS AND ADDITIONAL WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.116.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKER SYSTEM MUST BE INSTALLED IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1: 18.5.10.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS ON APPROXIMATELY 39.5 ACRES. THERE ARE VERY FEW STEEP SLOPES AND NO SOILS CLASSIFIED AS HIGHLY ERODIBLE ON THE SITE. THE SOILS ON THE SITE CONSIST OF SOIL GROUPS (HSG) B, C, AND D. SEE APPENDIX A FOR THE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE IS WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE; HOWEVER, THE PROPOSED DEVELOPMENT EFFORTS WILL RESULT IN CHANGES TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS, PROPOSED ROADWAYS, AND WITHIN PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY 3 SUBMERGED GRAVEL WETLANDS. A SEPARATE FLOODPLAIN STUDY HAS BEEN PREPARED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 2 OF THE 3 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR PEAK RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

ENVIRONMENTAL IMPACT REVIEW

THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.

1. THE FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT SHOWN HEREON IS SUBJECT TO PROTECTIVE COVENANTS WHICH MAY BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICT DISTURBANCE AND USE OF THIS AREA.
2. PRIOR TO RECORD PLAT APPROVAL, THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSED MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSED SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.
3. A VARIANCE WAS GRANTED ON SEPTEMBER 24, 2021, BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY FROM THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO REDUCE THE WIDTH OF THE FOREST BUFFER WITHIN THE 100-YEAR FLOODPLAIN BY 2' (REFLECTIVE OF THE FACT THAT THIS VARIANCE WAS GRANTED. CONDITIONS WERE PLACED ON THIS VARIANCE TO REDUCE WATER QUALITY IMPACTS INCLUDING PLANTING 17 438 SQUARE FEET OF FOREST BUFFER, AND POSTING PROTECTIVE SIGNS ALONG THE BOUNDARY OF THE FUNCTIONING FOREST BUFFER EASEMENT.
4. A VARIANCE WAS GRANTED ON SEPTEMBER 21, 2021 TO THE BALTIMORE COUNTY'S FOREST CONSERVATION LAW FOR THE DISTURBANCE OF FOREST CONSERVATION EASEMENTS AND FOREST BUFFER EASEMENTS IN ACCORDANCE WITH SECTION 33-3-112 OF THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO FACILITATE INFRASTRUCTURE AND UTILITY CONNECTIONS. CONDITIONS WERE PLACED ON THIS APPROVAL TO REDUCE WATER QUALITY IMPACTS, INCLUDING VEGETATIVE ENHANCEMENT (USING NATIVE SEED MIX PLANTING IN EXCESS OF 2.07 ACRES) AND POSTING PROTECTIVE SIGNS.
5. A SPECIAL VARIANCE WAS GRANTED ON SEPTEMBER 21, 2021 TO BALTIMORE COUNTY'S FOREST CONSERVATION LAW TO ALLOW OFFSITE IMPACT TO ONE SPECIMEN TREE FOR THE WIDENING OF WEST JOPPA ROAD. CONDITIONS WERE PLACED ON THIS VARIANCE, INCLUDING PROTECTION OF THE REMAINING SPECIMEN TREES AND FOREST PROTECTION.

SCHOOL IMPACT ANALYSIS

LAST UPDATED JUNE 30, 2021

1) THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN §1801.2.C(1)(f) OF THE BCZR.
2) ENVELOPES OR TYPICAL DWELLINGS AS SHOWN DICTATE A SPECIFIC LOCATION AND ORIENTATION WHICH IS INTENDED TO ALLOW COMPLIANCE WITH BALTIMORE COUNTY ZONING REGULATIONS AND POLICIES. SHOULD THE LOCATION OR ORIENTATION CHANGE OR CREATE CONFLICTS WITH THE REGULATIONS OR POLICIES, THE LOCATION OR ORIENTATION MUST BE CHANGED TO ALLEVIATE THE CONFLICT.

UNDEVELOPED AREAS

DESCRIPTION	ACRES
STORMWATER MANAGEMENT	2.15 ±
HOA/COA AREAS	1.75 ±
OTHER	12.55 ±
TOTAL PROVIDED	16.45 ±

OPEN SPACE

1. OPEN SPACE REQUIRED - 50 UNITS @0.69 NEW + 1 EXISTING) X 1,000 S.F. = 40,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 169,900 S.F. (148,340)
3. OPEN SPACE NOTES:
ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
ALL PLAYGROUND EQUIPMENT SHALL BE INSTALLED ON RUBBER, SAND, OR FIBER MATERIALS MEETING ASTM F1292 OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.
ANY FILL PLACED IN OPEN SPACE AREAS WHICH WERE PREVIOUSLY 100-YEAR FLOODPLAIN SHALL BE DESIGNED AND CERTIFIED BY A REGISTERED ENGINEER TO ENSURE THAT THERE WILL BE NO RISE IN THE 100-YEAR WATER SURFACE.
10. OPEN SPACE WILL BE OWNED AND MAINTAINED BY THE GREENSPRING MANOR HOMEOWNERS ASSOCIATION.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE IS BEING SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND WATER SUPPLY AREA.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. RAMPS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS. PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS SHALL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. A CMI WAS HELD ON APRIL 27, 2021. ISSUES WERE RAISED REGARDING THE POTENTIAL EXTENSION OF MAYS CHAPEL ROAD THROUGH THE SUBJECT PROPERTY. THE PLAN PROPOSES TO EXTEND MAYS CHAPEL ROAD BUT TO GATE IT FOR EMERGENCY ACCESS ONLY, TO BE APPROVED BY THE ALJ.
8. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
9. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING REGULATIONS AND OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
10. IT IS ANTICIPATED THAT THIS PROJECT WILL BE CONSTRUCTED IN TWO PHASES.

OPEN SPACE CONT.

11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO ELECTRIC, TELEPHONE, CABLE TELEVISION, GAS AND ELECTRIC, TRAFFIC SIGNALS AND STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. ALL GRADING, CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.
13. THE PROPOSED OPEN SPACE AMENITIES INCLUDING THE WALKING PATHS SHALL BE CONSTRUCTED WITH THE 50TH BUILDING PERMIT IS ISSUED BUT PRIOR TO THE 40TH.

PLANNING

1. TIER I SERVED BY PUBLIC SEWER AND INSIDE URDL PER BALTIMORE COUNTY MY NEIGHBORHOOD WEBSITE.
2. THERE ARE NO HISTORIC PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA INCLUDED ON THE MARYLAND HISTORICAL TRUST INVENTORY (MHT), BALTIMORE COUNTY LANDMARKS LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.
4. THE STOCKPILE AREA IS LESS THAN AREA OF 500 CUBIC/SQUARE FEET CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
5. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
6. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 35' IN THE DR ZONES
7. NO SIGNS ARE PROPOSED AS PART OF THIS PLAN.
8. ACCESS EASEMENTS ARE NOT BEING REQUESTED.
9. ACCESS EASEMENTS ARE PROPOSED ON THE FOLLOWING LOTS: 6,7 AND 11,12.
10. TYPICAL OPEN DECK DIMENSION OF 10'FT. X 20'FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 23 FT.

ZONING

1. EXISTING ZONING ON 1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), THE BALTIMORE COUNTY ZONING REGULATIONS (BCZR), AND THE BALTIMORE COUNTY LANDSCAPE MANUAL. THE DEVELOPMENT WITH ALL OF THE AFOREMENTIONED REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE. SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED. ALL SIGNAGE WILL COMPLY WITH SECTION 450 OF THE BCZR.
4. THE DENSITY CALCULATION IS PURSUANT TO THE RANGE OF DENSITY TABLE FOUND IN §1801.2.C(1)(f) OF THE BCZR
5. THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN §1801.2.C(1)(f) OF THE BCZR
6. THE PROPOSED DWELLINGS ON THE PLAN HAS BEEN HELD INTACT SINCE 1971. THE DEVELOPERS ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
7. NO THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
8. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 35' IN THE DR ZONES
9. NO SIGNS AR

DEDICATION TABLE

THE FOLLOWING RIGHTS OF WAY ARE TO BE CONVEYED TO BALTIMORE COUNTY BY THE DEVELOPER/OWNER OF THIS PROPERTY AS A CONDITION OF APPROVAL OF THESE PLANS.

TYPE OF CONVEYANCE	NO.	TOTAL AREA**
ACCESS EASEMENT	2	0.10 AC
DRAINAGE AND UTILITY EASEMENT	4-10	0.66 AC-0.9 AC; 5.72 AC
FOREST CONSERVATION EASEMENT	5	3.32 AC- 1.17 AC
STORMWATER MANAGEMENT EASEMENT	3	2.19 AC- 0.72 AC
100 YEAR FLOODPLAIN AND DRAINAGE AND UTILITY EASEMENT	5	5.10 AC- 5.13 AC
FOREST BUFFER AND FOREST CONSERVATION EASEMENT	6	0.28 AC- 0.32 AC
HIGHWAY WIDENING	1	0.54 AC
FOREST BUFFER EASEMENT	6	1.19 AC

** NOTE: TOTAL AREAS SHOWN IN THIS TABLE ARE APPROXIMATE ONLY. REFER TO THE RECORD PLAT OR RIGHT OF WAY DRAWING FOR EXACT AREAS.

ENTRANCE FEATURE AND SIGN

NOT TO SCALE
SIGN FACE AREA: 24 SQUARE FEET

DELINQUENT ACCOUNTS CERTIFICATION:

I, _____ DIRECTOR OF LAND DEVELOPMENT CERTIFY UNDER OATH THAT THERE ARE NO DELINQUENT ACCOUNTS FOR ANY OTHER DEVELOPMENT WITH RESPECT TO ANY OF THE FOLLOWING: THE APPLICANT, A PERSON WITH FINANCIAL INTEREST IN THE PROPOSED DEVELOPMENT, OR A PERSON WHO SHALL PERFORM CONTRACTUAL SERVICES ON BEHALF OF THE PROPOSED DEVELOPMENT.

GROUNDWATER MANAGEMENT

PRIOR TO RECORD PLAT APPROVAL THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSED MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSED SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREES PLANTED WITHIN 10 FEET OF THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY OPERATIONS AND MAINTAIN THE CLEARANCES REQUIRED BY THE CODE.
3. A FISHER RUN ROAD FOR ACCESS TO BUILDINGS AND ADEQUATE WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.116.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.5.10.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17.
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREE PLANTINGS AROUND THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY APPARATUS ACCESS WHEN THEY MATURE, NFPA 1141 CODE SECTION 18.2.4.1
3. A CRUSHER RUN ROAD FOR ACCESS TO BUILDINGS AND REQUIRED WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS PRIOR TO COMMENCEMENT OF BUILDING CONSTRUCTION WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF, IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.18.4.3.1.3
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING. THE SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY (SPRINKLER HYDRO / SPRINKLER FINAL).
5. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1: 18.6.10.5 PRIVATE HYDRANT COLOR
6. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE.
7. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
8. ALL FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:18.6.10.5 PRIVATE HYDRANT COLOR
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1:10.11.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

DELINQUENT ACCOUNTS CERTIFICATION:

I, _____, DIRECTOR OF LAND DEVELOPMENT CERTIFY UNDER OATH THAT THERE ARE NO DELINQUENT ACCOUNTS FOR ANY OTHER DEVELOPMENT WITH RESPECT TO ANY OF THE FOLLOWING: THE APPLICANT, A PERSON WITH FINANCIAL INTEREST IN THE PROPOSED DEVELOPMENT, OR A PERSON WHO SHALL PERFORM CONTRACTUAL SERVICES ON BEHALF OF THE PROPOSED DEVELOPMENT.

FOREST BUFFER MITIGATION AREA

FOREST BUFFER MITIGATION AREA #1	0.76 ACRES
FOREST BUFFER MITIGATION AREA #2	0.42 ACRES
FOREST BUFFER MITIGATION AREA #3	0.38 ACRES
TOTAL FOREST BUFFER MITIGATION AREA	1.56 ACRES

ENVIRONMENTAL IMPACT REVIEW

1. THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT, OR STREAM BUFFER EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.
2. ANY FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT SHOWN HEREON IS SUBJECT TO PROTECTIVE COVENANTS WHICH MAY BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICT DISTURBANCE AND USE OF THESE AREAS.
3. ALL LOTS SHALL BE SERVED BY PUBLIC WATER AND SEWER. UPON CONNECTION TO PUBLIC WATER AND SEWER, UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

GROUNDWATER MANAGEMENT

1. PRIOR TO RECORD PLAT APPROVAL, THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER. UPON CONNECTION, THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

OPEN SPACE CONT.

11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO TELEPHONE, CABLE TELEVISION, GAS AND ELECTRICITY, WATER, SEWER AND STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. THE DESIGN, CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.

OPEN SPACE

1. OPEN SPACE REQUIRED - 60 UNITS (60 NEW + 1 EXISTING) X 1,000 S.F. = 60,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 169,090 S.F.
ON SITE - 114,700 S.F. + 48,000 SF
ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
3. TEMPORARY OPEN SPACE BOUNDARY MARKERS, TREE PROTECTION DEVICES AND FOUR FOOT HIGH SNOW FENCING OR APPROVED EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY CLEARING OR GRADING.
4. WITHIN THE AREAS SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.
5. ANY FILL PLACED IN OPEN SPACE AREAS WHICH WERE PREVIOUSLY 100-YEAR FLOODPLAIN SHALL BE DESIGNED AND CONSTRUCTED IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
10. DEMOLITION OF EXISTING BUILDINGS AND PAVEMENT IS ANTICIPATED AS PART OF THIS PROJECT.

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN A LEVEL OF SERVICE F AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE IS BEING SOUGHT IN CONJUNCTION WITH THIS DEVELOPMENT PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND WATER SUPPLY AREA.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY AREA.
5. RAMPS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING AREAS, PER STANDARD DETAILS R-30A AND R-30B.
6. SIDEWALKS SHALL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. A GM WAS HELD ON APRIL 27, 2021. ISSUES WERE RAISED REGARDING THE POTENTIAL EXTENSION OF MAYS CHAPEL ROAD THROUGH THE SUBJECT PROPERTY. THE PLAN PROPOSES TO EXTEND MAYS CHAPEL ROAD BUT TO GATE IT FOR EMERGENCY ACCESS ONLY. TO BE APPROVED BY THE ALJ.
8. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
9. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
10. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES.
11. TOTAL ACT GENERATED BY THE SITE= 600
12. THE SITE IS LOCATED WITHIN A W-1 AND S-1 (EXISTING SERVICE AREA) WATER AND SEWER SERVICE AREA.
13. THERE ARE WETLANDS PRESENT ON THE SITE.
14. THE PROPOSED ROADWAYS SHALL BE DESIGNED UTILIZING PARALLEL PARKING WITHIN THE TURNAROUND AREAS/CUL-DE-SAC.
15. ALL SIDEWALKS SHALL BE A MINIMUM OF 5-FEET WIDE AND SHALL BE INSTALLED IN CONFORMANCE WITH BALTIMORE COUNTY STANDARDS AND TO CURRENT AMERICANS WITH DISABILITIES ACT (ADA) GUIDELINES.
16. A PRESSURE REDUCING VALVE WILL BE REQUIRED IF THE STATIC PRESSURE EXCEEDS 80 PSI.
17. AREAS BETWEEN THE SIGHT LINE AND THE CURB LINE MUST BE CLEARED, GRADED, AND KEPT FREE OF ANY OBSTRUCTIONS.
18. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES. GRADING, EDC, AND SWM WILL BE INSTALLED FOR THE ENTIRE PROJECT IN PHASE I. THE PAVING, WATER, SEWER, AND STORM DRAIN WILL BE INSTALLED IN TWO PHASES AS SHOWN ON THE SITE PLAN.

PLANNING

1. TIER I SERVED BY PUBLIC SEWER AND INSIDE URDL. PER BALTIMORE COUNTY 10-YEAR WATER AND SEWER PLAN.
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROPOSED DEVELOPMENT AREA INCLUDED ON THE MARYLAND HISTORICAL TRUST INVENTORY (MHT), BALTIMORE COUNTY LANDMARKS LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY.
3. THE SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR NATIONAL HISTORIC DISTRICTS.
4. A MINIMUM PRIVATE YARD AREA OF 500 CONTIGUOUS SQUARE FEET WITH A MINIMUM 15-FOOT DIMENSION IS PROVIDED FOR EACH LOT.

ZONING

1. EXISTING ZONING DR-1 & DR-2
2. THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 804.2), AND THE COUNTY LANDSCAPE MANUAL (SECTION 409.6.A.1). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL OF THE APPLICABLE REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES ON THE PROPER RELIEF WILL BE REQUESTED.
3. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR APPROPRIATE RELIEF WILL BE REQUESTED.
4. DENSITY CALCULATION IS PURSUANT TO SECTION 1B02.3 OF THE BCZR.
5. THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN §1B01.2.C.1.(B) OF THE BCZR.
6. THIS PROPERTY AS SHOWN ON THE PLAN HAS BEEN HELD INTACT SINCE 1971. THE DEVELOPER'S ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN UTILIZED, RECORDED OR REPRESENTED AS DENSITY OR AREA TO SUPPORT ANY OFF-SITE DWELLINGS.
7. THERE ARE NO EXISTING BUILDINGS TO BE RAZED.
8. THE MAXIMUM LIVING HEIGHT WILL NOT EXCEED 80' IN THE DR ZONES.
9. THERE IS NO KNOWN HISTORIC STRUCTURE ON THE PROPERTY.
10. ACCESS EASEMENTS MAY NOT BE FENCED.
11. ACCESS EASEMENTS ARE PROPOSED ON THE FOLLOWING LOTS: 6,7 AND 11,12.
12. TYPICAL OPEN SPACE DIMENSIONS OF 10 FT. X 20 FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 22.5 FT.

SITE DEVELOPMENT PROPOSAL

DWELLING TYPE	PROPOSED UNITS	PARKING REQUIRED	PARKING PROVIDED	OPEN SPACE REQUIRED	OPEN SPACE PROVIDED	AVERAGE DAILY TRIPS	PHASE	DEVELOPMENT SCHEDULE

DR-2	±22.6 AC	45	45
			TOTAL 61

SETBACK TABLE

SETBACK TYPE - DR 1 & 2	SETBACK
FRONT BUILDING FACE TO:	
R/W OR PROPERTY LINE:	25'
SIDE BUILDING FACE TO:	
SIDE PROPERTY LINE:	30'
SIDE STREET R/W:	30'
PAVING OR PRIVATE ROAD:	30'
TRACT BOUNDARY:	25'
REAR BUILDING FACE TO:	
REAR PROPERTY LINE:	30'
PUBLIC STREET R/W -	30'

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS OR APPROXIMATELY ± 39.5 ACRES. THERE ARE VERY FEW STEEP SLOPES ON THE SITE AND THE SOILS ARE MOSTLY HSG B. THERE ARE NO HSG D SOILS ON SITE ARE IN HYDROLOGIC SOIL GROUPS HSG B, C, AND D. SEE APPENDIX A FOR THE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE IS WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE; HOWEVER, THE PROPOSED DEVELOPMENT EFFORTS WILL RESULT IN CHANGES TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS, PROPOSED ROADWAYS, AND WITHIN PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY 4 SUBMERGED GRAVEL WETLANDS. A SEPARATE FLOODPLAIN STUDY HAS BEEN PREPARED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 3 OF THE 4 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR PEAK RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN ANY LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

Re: Greenspring Manor at 2310 West Joppa Road
Forest Conservation Variance
Tracking # 02-21-3518

Dear Mr. Canoles:

The Department of Environmental Protection and Sustainability (EPS) received an initial request for a variance from Baltimore County's Forest Conservation Law on July 30, 2021 pursuant to our design meeting of July 28, 2021. Revised plans further refining the water and sewer house connection designs in response to our August 11, 2021 comments were received on August 18, 2021. The variance seeks approval to remove Specimen Tree # 12, a non-native Norway spruce in fair condition, for the widening of West Joppa Road associated with a proposed 61-lot residential subdivision. This 43-inch (diameter at breast height) specimen tree has been heavily trimmed on one side due to its proximity to overhead utility pole wires. The variance application proposes no mitigation for removal of this specimen tree given that it is non-native.

The Director of EPS may grant a special variance to the Forest Conservation law in accordance with criteria outlined in Section 33-6-116 of the Baltimore County Code. There are six (6) criteria listed in Subsection 33-6-116(d) and (e) that shall be used to evaluate the variance request. One (1) of the three criteria under Subsection 33-6-116(d) must be met, and all three (3) of the criteria under Subsection 33-6-116(e) must be met, in order to approve the variance.

The first criterion (Subsection 33-6-116 (d)(1) of the Code) requires that the petitioner show that the land in question cannot yield a reasonable return if the requirement from which the special variance is requested is imposed and will deprive the petitioner of all beneficial use of his property. The applicant is not seeking the variance based on deprivation of all beneficial uses. Furthermore, a long-standing homestead-type residence exists on this property. Therefore, this criterion has not been met.

The second criterion (Subsection 33-6-116 (d)(2) of the Code) requires that the petitioner show that his/her plight is due to unique circumstances and not the general conditions in the neighborhood. Rather than the general conditions in the neighborhood, the petitioner's plight is due to the close proximity of the specimen tree to West Joppa Road, which must be

widened to meet the increased traffic resulting from the proposed 61-lot residential subdivision. Therefore, we find that this criterion has been met.

The third criterion (Subsection 33-6-116 (d)(3) of the Code) requires that the petitioner show that the special variance requested will not alter the essential character of the neighborhood. Removing the single specimen tree would not alter the character of the neighborhood. Furthermore, the tree would likely be removed by Baltimore County at some point due to its declining condition or eventual widening of Joppa Road as a necessary capital improvement project. Therefore, we find that this criterion has been met.

The fourth criterion (Subsection 33-6-116 (e)(1) of the Code) requires that the granting of the special variance will not adversely affect water quality. Removing the tree would not directly impact any wetland or stream. The development project related to this specimen tree removal will meet current water quality management requirements through environmental site design and proposes approximately 5.9 acres of afforestation within the floodplain and forest buffer. Therefore, we find that granting of the special variance will not adversely affect water quality and that this criterion has been met.

The fifth criterion (Subsection 33-6-116 (e)(2) of the Code) requires that the special variance request does not arise from a condition or circumstance which is the result of actions taken by the petitioner. The petitioner has not taken any actions necessitating this variance prior to its request. The tree has existed adjacent to West Joppa Road for years prior to this development proposal, and would likely be removed at some point regardless of the proposed development for the reasons cited above. Therefore, this criterion has been met.

The sixth criterion (Subsection 33-6-116 (e)(3) of the Code) requires that the Director of EPS find that the special variance, as granted, would be consistent with the spirit and intent of Article 33 of the Baltimore County Code. Permitting the removal of one specimen tree for the widening of West Joppa Road associated with a proposed residential subdivision would be consistent with the spirit and intent the Forest Conservation Law given that the development does not propose to impact forest and will retain all but one of the 27 specimen trees onsite. Additionally, 3.5 acres of forest conservation afforestation and 2.4 acres of forest buffer mitigation will be provided in and adjacent to the Forest Buffer Easement to comply with both the Forest Buffer Law and Forest Conservation Law. Therefore, this criterion has been met.

Based on our review, this Department finds that the required criteria have been met. Therefore, the requested variance is hereby approved in accordance with Section 33-6-116 of the Baltimore County Code with the following conditions:

1. Prior to issuance of any Baltimore County permit, high visibility fence shall be installed along the limit of disturbance (LOD) wherever the LOD is within 50 feet of the critical root zone of any specimen tree to remain, any Forest Conservation Easement, or Forest Buffer Easement. Installation of this protective fence shall be detailed on both the sediment control plan and final Forest Conservation Plan.

2. The following note must appear on all subsequent plans for this project:

   "A special variance was granted on September 21, 2021 to Baltimore County's Forest Conservation Law to allow critical impact to one specimen tree for the widening of West Joppa Road. Conditions were placed on this variance, including protection of the remaining specimen trees and forest resources."

It is the intent of this Department to approve this variance subject to the above conditions. Any changes to site layout may require submittal of revised plans and a new variance request. Moreover, a special variance to Baltimore County's Forest Conservation Law will be required for removal of any specimen trees shown to remain on this plan.

Please have the appropriate representative sign the statement on the following page and return a signed copy of this entire letter to this Department within 21 calendar days. Failure to return a signed copy may render this approval null and void, or may result in delays in the processing of plans for this project.

If you have any questions regarding this correspondence, please contact Mr. Michael Kulis at (410) 887-3980.

Sincerely yours,

David V. Lykens
Director

BALTIMORE COUNTY, MARYLAND
INTER-OFFICE MEMORANDUM

TO: Paul Mayhew
Hearing officer, Administrative Law Judge

DATE: 11/8/2021

FROM: Stephen Lafferty
Director, Department of Planning

SUBJECT: HEARING OFFICER'S HEARING FINAL REPORT
Project Name: Greenspring Manor
PAI #VIII-0922

GENERAL INFORMATION:

Applicant Name: Atapco Properties, INC.
1 South Street, Suite 2800
Location: Baltimore, MD, 21202
Council District: Second
Growth Tier: I
Zoning: DR 1, DR 2
Acres: 39.4 gross acres ±

Surrounding Zoning and Land Use:

North:	DR 2	Residential
South:	DR 1	Residential
East:	DR 1, DR 2	Residential
West:	O3	Office

Project Proposal:

The project proposes 61 single-family homes to be built on 39.4 ±acres of land zoned DR 1 and DR 2. The site is mostly comprised of a field that is primarily being farmed and has environmental floodplains and wetlands. There is currently one existing house, which is to remain.

Project History:

The project exhibits no development history at this time.

Other Anticipated Actions and Additional Review Items:

MEETINGS

Concept Plan Conference:	3/9/2021	Community Input Meeting:	4/27/2021
Development Plan Conference:	8/11/2021	Administrative Law Judge's Hearing:	10/21/2021

EVALUATION AND RECOMMENDATION

School Impact:
This development is subject to Section 32-6-103 of the Baltimore County Code, Adequate Public Facilities. The Department of Planning has reviewed the School Impact Analysis submitted on August 30, 2021 and recommends approval.

SIA Approval Finding:

The Department of Planning finds that the subject Development Plan meets the requirements of BCC § 32-6-103 at the time of the filing date, July 9, 2021. The School Impact Analysis performed by the Department of Planning indicates that the projected enrollment for Riderwood Elementary School, Ridgely Middle School, and Dulaney High School is below 115% of the state rated capacity respectively. The projected number of students as a percentage of the state rated capacity is:

- Riderwood ES: 98.57%
- Ridgely MS: 103.55%
- Dulaney HS: 97.88%

The Department of Planning recommends approval of the School Impact Analysis as it meets the requirements of the Baltimore County Code § 32-6-103.

Special Variance Request:

The applicant has requested the County to permit its development in an F level traffic shed as delineated on the 2020 Basic Services Map. This includes the intersection of West Joppa Road and Falls Road/I-83. The development access is within this failing traffic shed. The Department has received the applicant's memorandum regarding the traffic study analysis conducted in September 2020, which proposes improvements to mitigate the traffic in order to obtain a variance from the Basic Serves requirement.

With regard to the Special Variance request, the Department of Planning has no objection, but will defer and rely upon the expert judgement of the Department of Public Works and Transportation for final recommendation and decision.

Residential Performance Standards:

The Baltimore County Zoning Regulations (BCZR) § 260 requires the Director of the Department of Planning to provide a finding to the Hearing Officer for all residential development of four lots or more in Baltimore County that is located within the Urban/Rural Demarcation Line. The Department of Planning has reviewed the pattern book submitted on August 30, 2021 and recommends approval.

FINAL RECOMMENDATION: Through a point-by-point response letter received on September 16, 2021, and attached to this report, the applicants have positively responded to the August 11, 2021 Development Plan Conference comments made by the Department of Planning. The Development Plan is in conformance with the Baltimore County Zoning Regulations, the Comprehensive Manual of Development Policies, as well as the Master Plan 2020. The Department of Planning has reviewed the submitted redline Development Plan and associated materials for the above development for Greenspring Manor and recommends approval.

Lenhart Traffic Consulting, Inc.

Transportation Planning & Traffic Engineering

Memorandum: *Date:* **October 21, 2020**

TO: Mr. Greg Carski FROM: Mike Lenhart

RE: 2310 W. Joppa Road Property

Greg,

We have prepared this memorandum as a supplemental analysis to our Traffic Impact Study dated September 28, 2020.

The referenced Traffic Impact Study included a recommendation to modify the traffic signal phasing and re-allocate the lane use on the east and west legs of the intersection of Falls Road at Joppa Road.

We have conducted an additional analysis including an expanded set of road improvements at this intersection. The road improvements are shown on the attached concept plan, and include widening the east and west legs of the intersection to provide an additional lane on each approach. These expanded improvements would mitigate 571% of the site impacts in the AM peak hour and 663% of the site impacts in the PM peak hour.

We understand that the site falls within a failing traffic shed as shown on the Basic Services Map. However, the applicant will be submitting an application for a Special Variance to allow this development to proceed based on our proposal for improvements that will substantially over-mitigate the traffic impacts. The code section related to this finding states that, "*The demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or the standard is not relevant to the development proposal.*" Based on the proposed improvements, the traffic conditions will be better with the approval of the project and the associated improvements, than what would be expected to occur if the project is not approved.

In reviewing the historical imagery in this area, it appears that no significant improvements have been provided in this area in at least 25 to 30 years, and there are currently no improvements programmed. The attached analyses show that the granting of the special variance would improve traffic conditions based on the CLV methodology over what would occur otherwise without the granting of the special variance.

If you have any questions regarding this matter, please do not hesitate to contact me at the number below.

Thanks,
Mike

Greenspring Manor

July 29, 2021

Point-by-Point Responses to Department of Planning Comments on the Submitted Concept Plan

1. *The Department of Planning considers this site to be overdeveloped.*
    a. Density permitted by underlying zoning – 61 units.
    b. Open Space Required – 61,000 sf Open Space Proposed 167,500 sf
    c. Undeveloped area – (Forest Buffer, Forest Conservation, SWM, Open Space) = ±717,000 sf or ±16.45 acres. Site is 39.9 acres. Total Undeveloped area = ±41.22% of overall site.
    d. No bulk area variances are being requested.
    e. Only Clearing ±52,000 of wooded area or ±3% of the property.

2. *Many of the lot sizes are not compatible to the surrounding neighborhoods.*
    a. Boxwood Lane Semi-Detached and Townhome lots = 5,500-12,500 sf.
    b. Tally Ho average is ±31,500 sf.
    c. Seminary Farm Road Single family detached lots = ±24,000 sf.
    d. Seminary Farm Single Family Attached Lots = ±6,500 sf
    e. Greenspring Station Commercial Development
    f. Our proposed average lot size is. ±11,500 sf.
    g. We have prepared an exhibit showing the diversity of density in the surrounding neighborhoods.

3. *The number of lots should be decreased to allow for larger lots and would help achieve a design that could accommodate future improvements and yard space without the need for relief.*
    a. 10'x20' decks can be accommodated on all lots without need for a variance.
    b. Pools can be installed in the rear yards without need for variances.

4. *As designed the proposed development does not achieve the vision of the Master Plan 2020 nor the CMDP.*
    a. See evidence of how the proposed project does achieve the vision of the Master Plan 2020 and CMDP below.

5. *The Mater Plan 2020 recommends low-density residential development adjacent to higher zones consisting of mixed-uses.*
    a. Our plan provides this. DR-1 and DR-2 are the lowest Density Residential Zones.
    b. Directly adjacent to our site is the Greenspring Station development which contains higher density commercial uses.
    c. Directly to our north is a denser development containing semi-detached and single family attached units.

6. *The site also would require extensive grading. The site should be redesigned to minimize cut and fill while using the natural features of the land pursuant to the CMDP as well as Section 260 of the BCZR.*
    a. We intentionally set the proposed road as close to existing grade as possible. In most areas the proposed road is within 2' of existing grade.
    b. The general landform is being maintained. This can be evidenced by the fact that we have no perimeter retaining walls tying into existing grades.

    c. Section 260 Compliance
        i. *Provide variety in housing type or design, while maintaining continuity in scale, rhythm, proportion and detail. We are doing this.*
            1. We are providing 40', 50' and 54' wide units. This provides a variety of housing type and design but they are not so different that they don't maintain continuity.
            2. We are also providing a variety of front load and side load garages.

        ii. *Orient the front of the dwelling toward the street and incorporate prominent entries such as porches or stoops in the front building façade.*
            1. All of the homes front a street.
            2. All of the homes provide a front porch or stoop

        iii. *Adhere to a consistent front building setback for all dwellings on the same street or square, so that the fronts of the dwelling define a uniform street edge.*
            1. The overwhelming majority of the homes hold the same front building setback for continuity. Only 2-3 of the proposed 60 homes are setback slightly farther.

    All of the rest of the Section 260 requirements are architecture related and will be addressed in the Pattern Book.

Additional DOP Comments on the Plan

1.
    a. Redesign the overall layout with uniform lot sizes that are more compatible with the surrounding development.
        i. The Surrounding neighborhoods vary in size, density and use ranging from larger single family detached homes in the Tally Ho neighborhood to the east to Semi-detached and townhomes in the Seminary Farm neighborhood to the north. Directly to the west is the Greenspring Station commercial development.
        ii. Given the diverse range of housing types, sizes and commercial uses in the community and directly adjacent to our site we feel that our proposed community with single-family detached homes is compatible.
        iii. We are meeting yard requirements in CMDP Page 33 and the BCZR.

b. and more compatible with the description of the Master Plan 2020 T-3 Transect Designation.
    i. Our design is fully compatible with the description of the T-3 Transect. "T-3 (Sub-Urban Zone) includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions"
    ii. Our proposed design is low density. We adhere to the lowest Density Residential requirements and require no bulk area variances.
    iii. Our project is located adjacent to a higher zone which contains mixed use.
    iv. Our landscape design is naturalistic incorporating naturalistic landscape buffering including a mix of deciduous, evergreen and flowering trees.
    v. Our proposed setbacks are relatively deep and either meet or exceed the setbacks required by the zoning regulations.
c. Design road alignments in relation to existing topography.
    i. We have taken great care to keep our grading design close to existing grade. In many cases we are within ±2' of existing grade.
    ii. Per Master Plan Page 29 in T-3 "roads may be irregular to accommodate natural conditions".
d. Minimize cutting and filling and avoid mass grading of large tracts of land where possible pursuant to CMDP, Residential Guideline, page 43.
    i. Our cutting and filling is kept to a minimum by following the existing land formations. This is further evidenced by the lack of proposed retaining walls. The one retaining wall that we are now proposing is only necessary to provide walkout basements for a few of the homes.
e. Coordinate building design, site layout, and grading so that grade transitions are gradual and respect the existing topography pursuant to the Baltimore County Zoning Regulation section 260.2.A.3
    i. We are doing this to a great extent. Most areas are close to existing grade.

2. Remove lot 7 or reallocate it withing the redesign of the site plan to avoid the awkward siting of this home.
    a. We have adjusted the plan to accommodate this request.

3. Show front building orientations for all proposed dwellings.
    a. This has been done.

4. Provide a landscape and lighting plan to the County Landscape Architect for review and approval. Proposed lighting should be designed at a pedestrian scale and not create light spillage onto adjacent properties.
    a. A Schematic Landscape Plan has submitted to the County Landscape Architect.
    b. Lighting and Photometric Plans are not prepared for residential Projects. Streetlight design and spacing are dictated by DPW and BGE.

5. Add a note to the plan stating that the maximum height for a dwelling in a DR 1/DR 2 zone is 50 feet.
    a. This has been done.

6. Confirm with the Office of Zoning Review whether additional on street parking for overflow will be required.
    a. Not required for single family detached communities.
    b. Parking Required = 61 homes x 2 = 122 spaces.
    c. Parking Provided =
        i. (15) 3-car garage = 3 in garage and 2 in driveway = 75 spaces
        ii. (46) 2-car garage = 2 in garage and 2 in driveway = 184 spaces
        iii. Parking on one side of the street = 50 spaces
        iv. Total Parking Provided = 309 spaces.

7. Confirm by note on the plan that a minimum private yard area of 500 contiguous square feet with a minimum 15-foot dimension is provided for each proposed lot to ensure adequate yard space pursuant to the Comprehensive Manual of Development Policies (CMDP) page 33.
    a. The note has been added. The smallest private yard that we will have will be ±2,000 sf.

8. The Department of Planning will require the proposed cul-de-sacs to be designed pursuant to Baltimore County Zoning Regulations section 260.4.B. Landscaped islands will be required unless an unforeseen hardship exists notwithstanding the proposed layout design.
    a. We have increased the size of the cul-de-sac so that it now has a 52' outside radius with a 24' radius center island.

9. Provide all architectural designs to the Department of Planning for review and approval. The architecture should be included in the required pattern book and show all proposed housing types. The proposed architecture should indicate proposed dimensions, materials and colors to be used.
    a. This has been provided in the pattern book as part of the Development Plan submittal.

10. All proposed signage should be included in the pattern book and comply with section 450 of the BCZR. Signage should include proposed sign type, dimensions, materials, and colors.
    a. Signage design has been provide in the pattern book.

11. Indicate in the required pattern book that Lots 2, 6, 8, 15, 36, 46, 47, 52, 53, and 61 are high visibility lots. It should be demonstrated in the required pattern book how these lots meet the higher quality of design pursuant to the Baltimore County Manual of Regulations Section 260.6. The pattern book should include square footage for the side facades with element count requirements.
    a. This has been done.

12. The plan states that the proposed 52,000 sf HOA space will be an active recreation field. Clearly indicate whether this will be an open multi-use field, sport field, tot lot, or other open space.

Clarify whether the proposed open space within the 100-year floodplain is acceptable per county open space standards.

a. We have adjusted the grading so that none of the open space is within the floodplain.
b. The open spaces have been designed in more detail which can be found in the Pattern Book.

13. Confirm with the Department of Environmental Protection and Sustainability that all wetland, floodplain and forest buffer setbacks are being met.
    a. We are currently working with DEPS to have all of the environmental items approved. DEPS will make sure that all of the environmental requirements are met.

14. Make a clear distinction on the plan between the labeled forest buffer and forest conservation easement areas.
    a. This has been accomplished with notes and hatching.

15. Indicate if there are any specimen trees on the site. These trees should be preserved to the fullest extent possible.
    a. There are a total of 27 specimen trees on the property. We are only proposing to remove 1 which is adjacent to Joppa Road and needs to be removed because of required road widening.

16. Any fencing around the storm water management ponds should be of high-quality materials as approved by the Baltimore County Landscape Architect.
    a. We have included fencing details in the pattern book.

17. It is a policy of the Department of Planning that the homeowner should be able to have an open projection (i.t. rear decks) of at least 10' without requiring individual zoning relief.
    a. We can accommodate 10' decks on all lots without the need for variance. On many lots we can accommodate 12' decks without the need for variances.

18. Changes in building location or orientation, or proposed driveway location, at the time of building permit may require a determination from the zoning office of a possible amendment to the Final Development Plan (FDP). IF, at the building permit stage, it is anticipated that dwelling footprints may be reversed, or that the location of garages may change from front to side loaded or vice versa, a detailed alternative typical lot layout plan should be included in the pattern book.
    a. Informational.

Master Plan 2020 and CMDP Compliance

a. CMDP Compliance

i. *Residential Standards*
   1. *Single Family Detached Setbacks*
      a. We meet or exceed all of these.
   2. *Open Space shall be provided in accordance with County Open Space Manual.*
      a. We are doing this. 61,000 sf required. 167,500 sf provided.
   3. *Private Yard Areas: 500 square feet is required in the side or rear yard.*
      a. We easily exceed this. Most lots will have >2,000 square feet.

ii. *Residential Guidelines*
   1. *Site Planning*
      a. *Guideline: The size, scale and pattern of development suits the underlying landforms.*
         i. Vary the project designs for valleys, ridges and plateaus.
            1. We have designed the project so that the main road follows the natural valley of the land and most of the grading closely follows existing grade.
         ii. *Terrace new slopes greater than 25%.*
            1. We do not have many areas >25% other than where we are proposing walkout basements. Other areas >25% are relatively small and do not need to be terraced.
         iii. *Minimize cutting and filling*
            1. Cutting and filling has been minimized by following the existing grades closely.
         iv. *Where possible, avoid mass grading of large tracts of land.*
            1. We are not drastically altering the natural landform. Evidence of this is the lack of perimeter retaining walls.

      b. *Guideline: The project design retains the existing vegetation to the fullest extent possible.*
         i. *Avoid cuts into wooded ridges.*
            1. We are not cutting into any wooded ridges.
         ii. *Evaluate the natural vegetation of the site to determine the placement of buildings.*

1. We are clearing almost no trees. Two small areas to allow for new SWM facilities.

iii. *Protect existing trees during construction by protecting the actual root system, not the tree line.*

1. We will do this where appropriate. This will be required by the Department of Environmental Protection on our Forest Conservation and Forest Buffer Protection Plans.

c. *Guideline: Project design is an element of the watershed management.*

i. *Utilize preserved environmentally sensitive areas and environmental control facilities as site amenities.*

1. We are preserving ±11 acres as Forest buffer and/or Forest Conservation. ±27.5% of overall site.

ii. *Protect and preserve stream valleys and greenways. We are not impacting the stream valley.*

1. We are installing an extensive SWM system which will provide better SWM treatment than the existing farming activities on the property.

d. *Guideline: The project design contributes to the experience of traveling through the area.*

i. *Design side elevations facing the street with architectural features instead of blank walls.*

1. Required by Section 260 and we will do this and it has been shown in the Pattern Book.

ii. *Keep the sightlines of "gateways" open to view.*

1. The 1st new house is 550' from West Joppa Road and the existing home is remaining. This will keep the feel along West Joppa Road similar to what it is today.

e. *Guideline: Entrances to projects respect the character of area roads and driveways.*

i. *Use existing driveways as entrances where feasible.*

1. DEPS is requesting that we remove the existing driveway to reduce continued impacts within the forest buffer. The new driveway for the existing house will come off of the proposed road next to lot 2.

ii. *Employ signage materials that blend with the landscape.*

1. We will provide a tasteful sign that utilizes local materials. See detail in pattern Book.

iii. *Design entrances to be compatible with the immediate vicinity.*

1. Our entrance will meet all of the local regulations/requirements.

2. *Open Space*

a. *Guideline: Resource Conservation areas are integrated into a projects open space network.*

i. *Protect access to and views of stream valleys with an open space network.*

1. We will do this by adding a trail system into the Forest Conservation/Forest Buffer areas.

ii. *Combine common open spaces with views of undevelopable steep slopes.*

1. Not applicable. No steep slopes being developed.

iii. *Incorporate wetlands and natural habitats into an open space network.*

1. We will do this with a proposed trail.

b. *Guideline: The type and desired accessibility of open spaces governs their location.*

i. *Shield access to natural open spaces by locating entry points away from general view.*

1. We will do this by limiting points of access to Trail System.

ii. *Locate site amenities near dwellings to invite use.*

1. We are doing this with location of Open Spaces which are all close to the public road.

c. *Guideline: Open spaces may be partly enclosed.*

i. *Define open space with hedges, fences and trees or buildings.*

1. We are showing that we are doing this with our schematic landscape plan.

ii. *Differentiate types of open spaces through walkways and landscaping.*

1. We are doing this using trails and landscaping.

3. *Circulation*

a. *Guideline: Traffic filters through a neighborhood by means of hierarchy of local routes and through roads of varying widths and designs.*
    i. *Integrate streets with series of looped, local roads.*
        1. We are doing this. We have a curvilinear road network with interconnected loop.
    ii. *Redirect nonlocal traffic with T intersection streets*
        1. We are doing this. All of our intersections are T's.
    iii. *Develop street systems that reflect street function and traffic carrying needs.*
        1. We are doing this. Our proposed roads are following DPW guidelines.

b. *Guideline: New roads are sensitive to the existing landscape.*
    i. *Use mountable curbs on roads to complement rural character of an area.*
        1. We are doing this.
    ii. *Design road alignments in relation to the existing topography.*
        1. We are doing this. As stated our proposed roads closely follow existing grades.

c. *Guideline: Street edges and open spaces are landscape to define pedestrian areas.*
    i. *Vary planting material and paving to accent circulation and recreation areas.*
        1. We are doing this. We have prepared a schematic landscape plan which shows a variation of planting materials.
    ii. Locate landscaped buffer between streets and sidewalks.
        1. We are doing this. We are providing street trees per the landscape manual.

d. Guideline: The mix of garages, alleys and parking complements housing and street types.
    i. Solve overflow and visitor parking requirements with parallel parking on both sides of the street.
        1. Parallel parking provided on one side of street not both sides because there is plenty of off-street parking.
    ii. Reduce street widths when garages and driveway parking is provided for each unit.

1. We are doing this. Design Manual calls for a 30' pavement width we are proposing 28'. This has been approved on every residential I have worked on Baltimore County. Reduces Stormwater runoff and acts as a traffic calming measure.

iii. Create a rear lot garage and alley system for narrow lots.
1. Not Appropriate for this project.

iv. Use rear parking pads for attached houses on major streets with heavy traffic.
1. Not Appropriate for this project.

e. Guideline: A Pedestrian footpath and street network is integrated into the project design.
i. Make sidewalks and paths places for jogging, biking, strolling and informal play.
1. The entire community will have sidewalks and will connect to new trail system.

ii. Integrate streets and pedestrian paths.
1. We are doing this.

iii. Design a system to link local schools to surrounding neighborhoods, shopping and community facilities.
1. We intend to do this with a connection to Greenspring Station.

iii. Residential Compatibility
1. Regulatory Requirements:
a. The CMPD, Zoning Regulations, and Development Regulations require they the Director of Planning make a compatibility recommendation to the Hearing Office for:
i. Development other than single-family detached, semi-detached, or duplex housing that occurs in DR 5.5 zones.
1. We are not required to meet compatibility because we are proposing single-family detached homes.

b. Site Development Context:
i. The arrangement and orientation of the proposed buildings and site improvement are patterned in a similar manner to those in the neighborhood.
1. We are doing this. All homes face a street.

c. Site Features:

i. Locally significant features of the site such as distinctive buildings or vistas are integrated into the site design.
    1. We are doing this. We are keeping the existing home and putting it on a 3-acre lot.

d. Open Space Planning:
    i. The open spaces of the proposed development reinforce the open space patterns of the neighborhood in form and siting and complement existing open space systems.
        1. There are limited open spaces in the adjacent communities. Tally Ho has a walking trail at the rear of many homes. We will be installing a trail similar to Tally Ho and we will be providing more active open spaces which adjacent communities lack.

e. Building and Parking Layouts:
    i. The building and parking lot layouts reinforce existing building and streetscape patterns and assure that the placement of the buildings and parking lots have no adverse impact on the neighborhood.
        1. Not applicable. Geared toward multi-family projects.

f. Road widths and sidewalks:
    i. The proposed streets are connected with the existing neighborhood road network wherever possible and the proposed sidewalks are located to support the functional patterns of the neighborhood.
        1. We are showing a potential vehicular connection to Mays Chapel Road with the following note: "Gated for Emergency Access Only. To Be Approved By Administrative Law Judge".

g. Site Landscaping, Streetscapes and Buffers:
    i. The proposed landscape design complements the neighborhoods landscape patterns and reinforces its functional qualities.
        1. We are doing this with an extensive street tree planting and perimeter screening.

h. Exterior Signs, Lighting and Accessory Structures.
    i. The exterior signs, site lighting and accessory structures support a uniform architectural theme and present a harmonious visual relationship with the surrounding neighborhood.

1. Lighting design is dictated by the County for street lighting.

i. Building Scale, Proportions, Massing and Detailing:
    i. The scale, proportions, massing and detailing of the proposed buildings are in proportion to those existing in the neighborhood.
        1. Our proposed homes will be of similar square footage as Tally Ho homes. There is a wide variety of home types and sizes in the area.

BALTIMORE COUNTY, MARYLAND

SUBJECT: Development Plan Review Comments
For DPC August 11, 2021

DATE: August 10, 2021

FROM: Vishnu Desai, Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 W. JOPPA ROAD

DISTRICT: 8C2

We reviewed the subject plans dated July 28, 2021 and have the following comments.

GENERAL COMMENTS:

All construction shall be accomplished in accordance with Baltimore County Standard Specifications and Details for Construction *(February, 2000, as amended)* and Baltimore City Standard Details.

Security shall be posted prior to the issuance of building permits unless the posting of said security is deferred. The security shall be posted prior to the recording of the plat.

A *Public Works Agreement* must be executed by the owner and Baltimore County for the required public ***(and/or private)*** improvements.

In accordance with *Baltimore County Code, Section 32-4-414*, dredging, filling or construction in any wetland is prohibited.

Any manmade embankment over 10-feet vertically shall be designed and/or approved by a soils engineer. The following note is to be placed on the sediment control plans and grading plans before approval will be given:

- *"All manmade embankments have been designed and/or certified for stability by a soils engineer".*

The Developer shall be responsible for damages to the County's facilities, such as water meters, manholes, curbs and gutters and inlets within his subdivision and for any damages caused by his construction equipment outside of his subdivision. Occupancy permits will be withheld until such damages have been corrected.

The contours on the plan reveal rather excessive grading. The Developer's engineer is cautioned not to exceed the maximum set by Baltimore County standards. Benching requirements shall be in accordance with *Section 41.02, Item 3* of the *1983 Maryland Standards and Specifications for Soil Erosion and Sediment Control.* Retaining walls that are proposed along road rights-of-way shall be located away from the right-of-way a distance that is at least equal to the height of the wall.

Offsite rights-of-way are necessary for roads, storm drains or other utilities. The Developer is hereby advised that the final plat and/or building permits will not be approved until the offsite right-of-way is acquired.

The Developer and his engineer shall be responsible for investigating the need for and obtaining the necessary permits for the facilities serving this site that may require a "*Corps of Engineer's Permit*," a "*Water Resources Permit*," a "*Water Quality Certification*," and any other federal or state permits.

The Developer shall not allow any cable television cables to be installed in this subdivision without the required County permits being obtained. Baltimore County will not assume any rights-of-way, easements, or maintenance of any public improvements, where such cables have been installed without a permit until the cables are satisfactorily located.

When an *Irrevocable Letter of Credit* is posted as security and the County's ability to draw on or otherwise call the *Letter of Credit* is negatively impacted for any reason (*bank default, receivership, etc.*), it shall be the sole responsibility of the Developer to obtain a replacement *Letter of Credit* under the same terms and conditions.

The Developer shall be responsible for having all proposed street names in any new development approved by the *Street Name and Address Section* of the *Department of Permits, Approvals and Inspections* prior to his engineer placing these names on the final record plat and/or construction drawings. All street name changes made after plat recordation must be approved by the *Street Name and Address Section* and the record plat and construction drawings revised accordingly. The method for changing street names after a plat has been recorded will vary by project, and guidance will be provided by the *Street Name and Address Section.*

Test pits within County roads require a utility cut permit obtained from the *Bureau of Highways and Equipment Maintenance.*

The coordinate system used on all County drawings must be based on the North American Datum of 1983 (NAD 83) with the readjustment date shown in parenthesis. A couple examples are: NAD 83(1991) and NAD 83(2007). The elevation system of all drawings must be based on the North American Vertical Datum of 1988 (NAVD 88).

All drainage and utility easements containing a sewer or storm drain shall be a minimum of twenty (20) feet wide.

HIGHWAY COMMENTS:

WEST JOPPA ROAD is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.

The Developer's responsibilities along the existing road frontage of the development shall be as follows:

a) *The submission of detailed construction drawings to extend a minimum distance of 200 feet beyond the limits of the subdivision or as may be required to establish line and grade.*

b) *The submission of full cross sections is deemed necessary for design and/or construction purposes. The sections are to be taken at 25-foot intervals and are to be shown on standard cross-section paper at 1"=5' horizontal to 1"=5' vertical scale.*

c) *The preparation of the right-of-way plat for, and the dedication of, any widening and slope easements at no cost to the County.*

d) *The preparation of the right-of-way plats for any offsite road right-of-way required to make the necessary improvements.*

e) *The grading of the widening and the existing road to the established grade. Where adjacent properties are adversely affected by the improvements, the Developer shall be financially responsible for the necessary repairs to these properties.*

f) *The relocation of any utilities or poles as required by the road improvements.*

g) *The construction of combination curb and gutter in its ultimate location and a maximum of 28.5 feet of paving adjacent thereto along the frontage of the property. The paving thickness shall conform with Baltimore County standards.*

All streets in this subdivision shall be improved with a 28-foot combination curb and gutter cross-section on a 50-foot right-of-way and shall be the Developer's full responsibility.

The paving thickness shall conform to Baltimore County standards and requirements.

It shall be the responsibility of the Developer's engineer to clarify all rights-of-way within the property and to initiate such action that may be necessary to abandon, widen or extend said

rights-of-way. The Developer shall be responsible for the submission of all necessary plats and for all costs of acquisition and/or abandonment of these rights-of-way.

Prior to the recording of this plat, a road closing hearing is required, and the road must be formally closed by the County Executive.

The Developer is responsible for the grading of the widening to the proposed cross section based on the grade of the existing road. Where adjacent properties are adversely affected by the improvements, the Developer shall be financially responsible for the necessary repairs to these properties.

Cul-de-sacs shall be improved with a/an 60-foot paving radius with combination curb and gutter on a/an 71-foot diameter right-of-way and shall be Developer's full responsibility. The Cul-de sacs shall conform to Baltimore County Standard R-E.

The contours on the plan reveal rather excessive grades. The Developer's engineer is cautioned not to exceed the maximum set by Baltimore County standards in the establishment of street grades.

The sharp curves must conform to Baltimore County standards for minimum length of curve, minimum radii and widening.

The Developer shall provide an in-fee right-of-way at no cost to Baltimore County to permit County maintenance forces to perform any necessary work in the SWM and/or storm drain reservation. This right-of-way shall be a minimum of 20 feet wide and shall have a grade less than 10% from the roadway to the reservation.

Guardrails are required along the public road and/or the storm drain reservation and shall be the Developer's responsibility. The guardrails shall be constructed in accordance with Baltimore County standards.

Monumental entrances shall consist of two 20-foot lanes divided by an 8-foot median with minimum 25-foot radii curb returns and shall be constructed in accordance with Baltimore County standards for concrete entrances.

Driveways shall be constructed in accordance with Baltimore County standards with depressed curb and 7-inch concrete aprons within the right-of-way.

The Developer shall grade to the ultimate cross section those areas where the driveways intersect West Joppa Road, so as to provide proper sight distance.

All driveway entrances shall conform to Standard Plates R-15, R-15A, or R-15B.

In accordance with *Baltimore County Code, Section 32-4-408*, streetlights are required along all road frontages of subdivisions. The Developer will be responsible for the full cost of installation of the cable, poles and fixtures. Along new roads, the County will assume the cost of the power

when the roads have been accepted for County maintenance. Along existing roads, the County will assume the cost of power after installation.

"**No Parking**" signs shall be posted prohibiting parallel parking on 24-foot-wide streets and within the turnaround area.

Ramps shall be provided for physically handicapped persons at all street intersections. The ramps shall have detectable warning areas and shall be constructed in accordance with Standard Details R-36A or R-36B.

Sidewalks are required on both sides of the streets within this subdivision and/or along the frontage of all existing streets including state roads. The walks shall be a minimum of 5-feet wide and shall be installed to conform to Baltimore County standards and to current Americans with Disabilities (ADA) guidelines.

Screening shall be placed so as to prevent headlights within the parking areas from interfering with the traffic on the adjacent road.

Security must be posted prior to the issuance of a building permit to insure completion of any private improvement. Upon satisfactory completion of the private improvements and certification by a Professional Engineer that said improvements have been constructed in accordance with County standards and specifications, the security will be refunded.

STORM DRAIN AND SEDIMENT CONTROL COMMENTS:

The Developer is responsible for the total actual cost of drainage facilities required to carry the storm water runoff through the property to be developed to a suitable outfall. The Developer's cost responsibilities include the acquiring of easements and right-of-way both onsite and offsite and the deeding in-fee of said right-of-way at no cost to the County. Preparation of all construction, right-of-way and easement drawings, engineering and surveys, and payment of all actual construction costs including the County overhead both within and outside the development are also the responsibilities of the Developer.

Onsite drainage facilities serving only areas within the site are considered private. Therefore, construction and maintenance shall be the Developer's responsibility. However, a drainage area map, scale 1"=200', including all facilities and drainage areas involved, shall be shown on a plan and submitted to Baltimore County for review.

The Developer must provide necessary drainage facilities (*temporary or permanent*) to prevent creating any nuisances or damages to adjacent properties, especially by the concentration of surface waters. Correction of any problem that may result due to improper grading or improper installation of drainage facilities will be the full responsibility of the Developer.

Development of this property through stripping, grading and stabilization could result in a sediment pollution problem, damaging private and public holdings downstream of the property. A grading permit is, therefore, necessary for all grading, including the stripping of topsoil.

In accordance with *Baltimore County Code 33-5,* a grading plan shall be approved and a *Performance Bond* posted prior to issuance of a grading permit. A sediment control plan is required. The number of square feet of land disturbed shall be indicated on the sediment control drawing.

The Developer shall be responsible to stabilize the sidewalk areas and supporting slopes on all road rights-of-way following completion of the initial grading of the boxed-out subgrade. The stabilization shall be accomplished within the nearest period of optimum seeding as established in the *Baltimore County Sediment Control Manual.* Minimum acceptable stabilization measures will be as specified in the *Baltimore County Sediment Control Manual* under "*Critical Area Stabilization (With Semi-Permanent Seedings).*" Failure by the Developer to accomplish the stabilization as aforementioned will result in the termination of all processing phases of this development.

Floodplain studies will be necessary to be reviewed and approved prior to the recording of any record plat or issuance of any grading or building permits.

The Developer must furnish the *Bureau of Development Plans Review* with a *floodplain study* prepared by and sealed by a Professional Engineer. The study will be done in accordance with the latest version of the "Recommendations for Watershed Studies, Flood Plain Studies and Waterway Crossing Studies".

The 100-year floodplain shall be dedicated to Baltimore County in-fee or as an easement, at no cost to the County.

The rear of buildings may not be constructed within 20 feet of the floodplain as established for a 100-year flood level with a 1-foot freeboard. *See Plate DF-1 and DF-2 in the Baltimore County Design Manual.*

In conformance with *Federal Flood Insurance* requirements, the first floor or basement floor must be at least 1-foot above the floodplain elevation in all construction.

In accordance with *Baltimore County Code, Section 32-4-414,* filling within a floodplain is prohibited.

The Developer is responsible for the cost of temporary structures and measures required in the event of sectional development.
Temporary construction easements of adequate width are necessary adjacent to all offsite right-of-way or easements where utility construction is planned. They should be indicated on the right-of-way plats and construction drawings.

The record plat/building permit shall be withheld until offsite right-of-way and utility construction as required has been cleared and the contract for the utilities has been awarded.

The Developer shall provide a minimum 10-foot drainage and utility easement along all bordering property lines which are not adjacent to road right-of-way or storm drain reservations.

Where a new bridge or culvert adjoins a development or drainage reservation adjacent to a development, the Developer on each side is responsible for one-half the total Developer's responsibility as established by the method described in the preceding paragraph.

Where an existing bridge and/or culvert required replacement, widening or reconstruction, such work will be accomplished within the framework of the *Capital Improvement Program*. When a Developer wishes to proceed with a development requiring rebuilding or relocation of an existing bridge and/or culvert and funds have not been provided in the current *Capital Budget*, he may contribute the funds necessary or must delay development of that portion of the subdivision that would be adversely affected by the existing structure.

WATER AND SANITARY SEWER COMMENTS:

A preliminary print of this property has been referred to the *Baltimore City Water Division* for review and comment in regards to adequacy of water pressure in this development. If Baltimore City has any comment, it will be forwarded.

The Developer is responsible for any public water main extension and/or public sanitary sewer required to serve this property. He is responsible for the preparation and the cost of construction drawings and right-of-way plats required. He is further responsible for conveying any required right-of-way to Baltimore County at no cost to the County.

The Developer is responsible for the entire cost of any relocation of the existing public water main and/or sanitary sewer, including the preparation and the cost of construction drawings and right-of-way plats required, all right-of-way acquisition and/or release costs and recordation charges.

The Developer is responsible for the cost of capping or plugging any existing house connections not used to serve the proposed site.

The Developer will be given credit for one system connection charge for each existing house that is now connected into the public services.

Permission to connect to (*or to connect additional sanitary fixtures to*) the existing public sanitary sewer may be obtained from the *Department of Permits, Approvals and Inspections*.

Water and sanitary sewer service connections shall be installed by a utility contractor prior to the road improvements and shall be included in the *Public Works Agreement*.

The total water and/or sanitary sewer system connection charge is determined, and payable, upon application for the plumbing permit, or prior to the execution of a utility or right-of-way agreement.

The determination of the water system connection charges will be predicated on the established relationship using a 5/8-inch water meter at a cost of $575.00 per living unit. The sewer system connection charge, likewise, is based on a 5/8-inch water meter at a cost of $875.00 per living unit. Note: The same rate applies for 1-inch meters for sprinkler service.

Water mains outside of public right-of-way serving a proposed site improvement are considered private and shall be the Developer's full responsibility for construction and maintenance.

Fire hydrant spacing and location are subject to review and approval by the *Fire Protection Section* of the *Fire Department*.

Public sanitary sewers serving the individual lots/properties within the subdivision shall be located within the public roads serving those lots/properties, where practicable.

TRAFFIC ENGINEERING COMMENTS:

Confirm and then add this note to the development plan:

- *"Bureau of Traffic Engineering and Transportation Planning" has confirmed that the subject site* ***is/is not*** *within a traffic deficient area.*

Sight lines are to be drawn from the centerline of the proposed access at a point ten feet behind the extension of the main road curb line to the centerline of the nearest approach lane on the main road.

All subsequent plans, including record plats, must note that the areas between the sight line and the curb line must be cleared, graded, and kept free of any obstructions.

LANDSCAPE COMMENTS:

Schematic Landscape Plan(s) must be approved prior to Development Plan approval.

An approved Final Landscape Plan, cost estimate and security are required prior to permit approval.

SITE-SPECIFIC COMMENTS:

1. West Joppa Road is an existing road, which shall ultimately be improved as a 50-foot street cross-section on a 70-foot right-of-way.
2. The proposed cul-de-sac shall conform to County Standard Detail, Plate R-E, which requires a 60-foot turning radius.
3. Since the number of (off-site) units are over 100, Mays Chapel Road needs to be a full access road and not an emergency access road.
4. Remove the road label "Public Road A", if the road name is Foxwood Road. Please be consistent with road names and make sure all roads are labeled.

5. **"No Parking"** signs shall be posted prohibiting parallel parking along Mays Chapel Road extension and the cul-de-sac.
6. All designs and drawings shall be prepared in accordance with the latest design manual.
7. Provide additional labeling of the proposed contours on the plan, contours along the internal road network.
8. Note # 10 under the DPR notes indicates the proposed Development is to be developed/ designed in two (2) phases; please delineate phasing on the Development Plan. Also, provide a note detailing specific improvements completed under each phase of work.
9. All existing public utilities within West Joppa Road and Mays Chapel Road shall be clearly labeled, type of utility and size. Provide label all the utility as existing or proposed, if it is an existing utility provide the County reference drawing number.
10. Show proposed streetlights spaced per Baltimore County standards. Also, lights need to be provided along West Joppa Road as part of the frontage improvements, if there are no existing street lights.
11. Engineer should consider relocating the existing private drive and connecting it to Foxwood Drive beyond the Floodplain limits.
12. The Transportation Planning unit recommends that a multi-use path be constructed along the frontage of the property instead of the proposed sidewalk, as stated in Baltimore County's Western Bicycle and Pedestrian Master Plan.
13. Show all proposed Fire Hydrants along the proposed roads within the development. Coordinate with *Fire Protection Section* in regards to possible fire hydrants along Mays Chapel Road extension. Fire hydrant spacing and locations are subject to review and approval by the *Fire Protection Section* of the *Fire Department.*
14. Developer shall provide a **fee simple strip frontage on public road** for all meter services connected to public water main.
15. Developer shall investigate and provide pressure-reducing valve (PRV) when static pressure exceeds 80-psi.
16. Engineer to show and label all existing sewer manhole numbers adjacent to the site on the Development Plan.
17. All site runoff must be conveyed to a suitable outfall without imposing adverse impacts to the receiving watercourse.
18. The existing storm drain system needs to be checked for adequacy and upgraded or provide stormwater management as needed.
19. In accordance with *Baltimore County Code, Section 32-4-414*, filling within a floodplain is prohibited.
20. The following eight -8" sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision at 2310 West Joppa Road, known as Greenspring Manor. Six of the segments noted are to be addressed by another developer. To date, these improvements have not been completed. This developer is required to complete the other two segments noted with a ☆. Issuance of Use and Occupancy permits for the residential units from the Greenspring Manor development should be subject to completion of the system improvements noted above, including those by the other developer. Currently the other developer is obligated to complete this by August 2023.

Upstream MH	Downstream MH	Length	Diameter	
43794	43793	137.96	8"	★
43793	43792	192.31	8"	★
43792	43791	87.36	8"	
43791	43790	60.00	8"	
43790	43789	316.80	8"	
43789	43788	232.57	8"	
43788	43787	159.01	8"	
43787	43786	76.00	8"	

21. Developer is responsible for acquisition of off-site easements for downstream sewer improvements they are required to complete.
22. Jones Falls is an inter-jurisdictional watershed. 100-year stormwater management is required.
23. The existing culvert crossing on Joppa Road, located at the southwest edge of the development, is Baltimore County Bridge No. B-0432. Reference is made to existing Drawings No. 1988-0930 through 0933_003. This feature should be labeled as Bridge No. B-0432 on all plan details. Any modifications to this structure should be in accordance Baltimore County's DPW&T Design Manual, Section 10-Structures. Please note, the freeboard requirement for bridge structures is prescribed in Section 7.IV.B.2.
24. Any proposed bridge structures (those with effective span lengths of 8' or greater) within the development that will be dedicated to the County for ownership and maintenance should meet the above referenced criteria.
25. Submit suitable storm drain outfall study for review and approval.
26. A revised Floodplain Study was submitted to DPR and is under review.
27. The developer has submitted to the County an updated traffic study, showing an increased scope of work that includes three 3 intersections along Falls Road from Seminary Avenue to Joppa Road. DPW&T has not completed their review of the updated Traffic Impact Study.
28. This site is in a traffic deficient area with an 'F' level of service. Therefore, no building or grading permits shall be issued unless allowed by the Administrative Law Judge at a Special Hearing. Approval of this development plan does not guarantee or warrant that a permit will be issued.

BALTIMORE COUNTY, MARYLAND

INTEROFFICE CORRESPONDENCE

TO: Peter Gutwald, Director
Department of Permits, Approvals

DATE: October 18, 2021

EFC for VKD

FROM: Vishnu Desai, Supervisor
Bureau of Development Plans Review

SUBJECT: Zoning Advisory Committee Meeting
For September 20, 2021
Item No. 2021-0250-SPH

The Bureau of Development Plans Review has reviewed the subject zoning items and we have the following comments

If Special Hearing relief is granted, a Landscape Plan is required per the requirements of the Landscape Manual.

If Special Hearing relief is granted, Open Space requirements shall be addressed.

No Development allowed within a traffic shed or along local roads with an "F" Level of Service. This request needs to be coordinated/discussed with Baltimore County DPW&T Traffic Design Section.

DATE: August 26, 2022

FROM: Vishnu Desai P.E., Supervisor
Bureau of Development Plans Review
Department of Permits, Approvals and Inspections

PROJECT NAME: GREENSPRING MANOR

P.A.I. NO.: 08-0922

LOCATION: 2310 W. JOPPA ROAD

DISTRICT: 8C2

RECEIVED
AUG 26 2022
OFFICE OF
ADMINISTRATIVE HEARINGS

We reviewed the subject plans (Red-Lined) dated August 24, 2021 and the following comments/issues to be discussed at the Public Hearing.

LANDSCAPE COMMENTS:

An approved Final Landscape Plan, cost estimate and security are required prior to permit approval – Phase 2.

SITE-SPECIFIC COMMENTS:

1. Floodplain Study - Review and acceptance has been moved to Phase 2. The Floodplain must be accepted for filing by the County prior to Record Plat Recordation & Bldg Permits being issued
2. Proposed Access Gate – There is a note on the plan that states "Gated for Emergency Access Only. To Be Approved By the Administrative Judge." DPWT is deferring this item to the ALJ
3. Traffic Impact Study – Has been approved by the SHA and the County has no further comment. The Traffic shed will be somewhat improved and there will be no net impact to the traffic shed from additional traffic from the proposed development with said improvements. The traffic shed will still be operating at a LOS of F.
4. Development in Traffic Shed operating at a LOS of F (Variance) – DPW&T Traffic is deferring this issue to the ALJ.

To: PAI Zoning Advisory Committee
Cc: Anthony Russell; Kristoffer Nebre; Peoples Counsel
Subject: ZAC Agenda Case #2021-0250-SPH - W. Joppa Rd#2310

Good morning,

During my review of the ZAC Agenda for the distribution meeting of September 13, 2021, I reviewed a Special Hearing for case number 2021-0250-SPH for 2310 West Joppa Road. This request is to allow the development of the subject property within the Falls Road and Joppa Road and Greenspring Valley Road traffic sheds.

The Department of Public Works and Transportation (DPWT) Bureau of Traffic Engineering and Transportation Planning feels this request must be denied based on the following reasons. We have received and reviewed the Greenspring Station Development - Supplemental Traffic Impact Study. We offer the following comments:

1) A Traffic Impact Study needs to present an unbiased view of traffic conditions pre/post development. This study was clearly written with the bias not to provide the **required** connection to Mays Chapel Road. This connection is **required** by DPWT by regulation due to amount of homes(over 100) in The Meadows of Green Spring community. It should be a traffic impact study not a "sensitivity analysis".
2) The report does not note that the proposed development is in LOS F Traffic Shed. It also fails to mentioned the 3 LOS F rated intersections along Falls Road.
3) The analysis clearly shows a reduction of critical lane volumes at the subject intersections along Falls, due to the bypass traffic generated from the extension of Mays Chapel acting as permanent connecting road from Seminary to Joppa, and with the increased capacity from the proposed improvements by the developer at Falls & Joppa. The benefits of the connection to Falls Rd is glossed over.
4) Furthermore, the conclusion stated on the cover letter says that the Mays Chapel connection is <u>not</u> recommended. It then is stated that Falls Road is designed to handle significant volumes more than Mays Chapel which is obviously true. However, this development is currently in an 'F' traffic shed, which by definition is at capacity and cannot handle anymore volume. The initial report which did not have the Mays Chapel bypass accounted for, already showed an increase of CLV at Falls & Greenspring Valley at full build out conditions. The supplemental report does not address Falls & Seminary with the scenario of no bypass with full build out. In accordance to the ordinances tied with the basic service map, this development should have some improvements to result in 0 net critical volume trips added to the affected 'F' intersections along Falls Rd.

If you have any questions please feel free to contact me anytime.

Inter-Office Correspondence

To: Jeffrey A. Livingston, Manager
Development Coordination, EPS

Date: August 26, 2022

From: Michael S. Kulis, NRS II MSK
Environmental Impact Review, EPS

Subject: Greenspring Manor
Hearing Officer's Hearing

Environmental Impact Review (EIR) staff of this Department have evaluated the red-lined Development Plan, dated November 10, 2021, for the subject project. The Development Plan generally addresses EIR's Phase I requirements. However, prior to final approval, the Development Plan must be revised to resolve the following:

1. Delete the narrow strip of Forest Conservation Easement Area shown between Lot # 17 and Lot # 18, so that the plan is in accordance with the approved preliminary Forest Conservation Plan.

2. Illustrate the 15' Woody Vegetation Free Zone setback from the outer limits of the Forest Buffer Easement, adjacent to the Stormwater Management/Water Quality Facilities.

Subject: RE: 2310 Joppa Road; MDOT SHA Tracking 20APBA022XX; 36373

Nick,

This proposed development sits in an "F" traffic shed per Baltimore County Basic Service Map for Transportation. The signalized intersections in question are Falls & Joppa and Falls & Greenspring Valley, which are both intersections that are owned and maintained by the State Highway Administration (SHA), along with the traffic signal too being owned and maintained by SHA. The development calls for improvements along Joppa, which have been reviewed and approved by SHA. The letter from Lennart states that the improvements along Joppa enough to accommodate the generated volumes from the proposed site, and that the mitigation from the improvements result in net zero impact along the corridor.

The scope of the intersections in the traffic impact study are SHA intersections. We agree that the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection. With these statements, we request a copy of the traffic impact study and supplemental analysis be stamped and signed by a Professional Engineer. We do not have additional comments to offer. The development sits in a current LOS F traffic shed, and therefore, per Baltimore County Zoning Regulations Manual, 4A02.4.G.1, we defer the findings from Lenhart Traffic and SHA responses be subjected to review from the Zoning Commissioner to determine if this development would be eligible for a waiver based off the zoning regulations.

DISTRICTS: 08 ED / 02 CD

PROPOSAL: 61 Single-family detached dwelling units

ZONING: DR-1 and DR-2

The following comments are offered as guide during the Development Plan phase:

1. Correction from Zoning: Please revise Zoning Note #4 to state that the density calculation is pursuant to §1B01.2.C.1(b) of the BCZR.
2. List in the Zoning Notes which lots are affected by an access easement. Add to the Zoning Notes that "Access Easements may not be fenced."
3. State in the Zoning notes and on typical lot layouts that "Typical open deck dimension of 10 ft. x 20 ft. shall provide the minimum rear deck setback of 22.5 ft." Show a dimension to decks on typical lot layouts.
4. Label and show the location of the bicycle parking on the plan print.
5. If any signs are proposed, the proposed location of all signs must be shown on the plan print and enough detail of proposed signs must be shown to determine location, size, area, underlying lot ownership and compliance with Section 450 of the BCZR.

A Final Development Plan (FDP) will be required. Final zoning approval is contingent firstly upon all plan comments being addressed on the Development Plan; secondly upon the final resolution of all comments; thirdly upon the outcome of any requested zoning hearings; and finally upon the inclusion of the FDP requirements and all notes and details specified above being included on the zoning FDP.

Re: **Request for Determination regarding Open Space**
Greenspring Manor
2310 W. Joppa Road
2nd Council District, 8th Election District

Dear Mr. Gutwald and Ms. Johnson:

This firm represents the owner of the above-referenced properly located in the Lutherville-Timonium area of Baltimore County (the "Property"). I am writing to request a determination that certain land that will be encumbered by a stormwater management easement and outfall will qualify as "open space" provided in connection with the Greenspring Manor project.

The Property is located on the north side of Joppa Road east of its intersection with Falls Road. It contains approximately 33.51 acres of land that is improved with a single family dwelling and large open farm field. Our client submitted a Development Plan proposing to construct 60 new single family homes on the Property and we are seeking a determination related to the open space that will be provided in connection with the project.

According to BCC Section 32-6-108(c)(1), the 60 proposed single-family units would generate the need for 60,000 square feet of open space. Developer is proposing to provide ± 148,300± square feet of "open space" spread throughout the proposed development. *See attached* Open Space Exhibit.

A portion of the proposed open space (7,630 square feet) is located within an area that will be designated as a stormwater management easement with a stormwater management outfall area. Despite the stormwater management easement, this area will be "useable" and will be

an integral part of the *Greenspring Manor* community as a whole. A pedestrian walkway will provide access to residents through the area encumbered by a stormwater management easement and will actually connect two other sections of open space that will be provided for this project. Amenities such as a gazebo, benches, and trash receptacles will also be provided within the open space area. The developer could technically meet its open space requirements *without* the addition of the area encumbered by a stormwater management easement, but the encumbered area is essential to providing a usable connection between two separated open space areas on the Property. It will greatly improve the function of the open space program provided for future residents.

At this time, I am seeking confirmation, pursuant to Section 32-6-108(d) of the Baltimore County Code ("BCC"), that the proposed area of on-site open space shown on the enclosed plan qualifies as "open space" even though this area will be encumbered by "an environmental, stormwater management, or utility easement." Please confirm that the entire 7,630 ± square feet (or ± 0.17 acres) of open space will qualify as "open space" under BCC Section 32-6-108.

If you need any additional information in order to make the requested determinations, please feel free to contact me.

Very truly yours

Adam M. Rosenblatt

Department of Permits
Approvals and Inspections
Attn: Jerry Chen

FROM: LaChelle Imwiko LWI
Real Estate Compliance

SUBJECT: Greenspring Manor
PAI #08-0922

A review of the development plan for the above referenced project results in the following comments. These comments are advisory in nature.

1. Offsite rights-of-way and easements must be acquired prior to record plat approval.

2. When necessary, access easements, approved by DEPS, should be shown for storm water management facilities, forest buffers, etc.

3. Please label, and provide deed references, for all existing Baltimore County easements and publicly owned areas on the plan.

4. Please label all proposed easements and publicly owned areas on the plan, and provide a Dedication Table that includes the type of conveyance, quantity of each, and total area to be conveyed.

5. Please delineate and label required dedications for highway purposes as "Highway Widening Area", not "Future", "Proposed" or "Ultimate" regardless of whether or not highway improvements will actually be required as part of the development. New roads within the development, if public, should be labeled as such and included in the Dedication Table as "Highway Right-of-Way."

6. Please label with deed references and provide dimensions for any private easements and/or rights-of-way that exist on the property.

C. Pete Gutwald, Director
Department of Permits
Approvals and Inspections

7. Site-specific comments:

   a. 100 Year Floodplain Easements and Drainage & Utility Easements are dedicated to the County separately even if they encumber the same area. Therefore, please label each 100 year Floodplain Easement in alphabetic order separate from all Drainage & Utility Easements, which should also be labeled in alphabetic order. Ex. 100 Year Floodplain Easement 'A' and Drainage and Utility Easement 'A' and Forest Buffer Easement 'A'. Please see the attached dedication plan for revisions.

   b. In the dedication table remove "and Drainage and Utility Easement" after 100 Year Floodplain. The dedication table should read "100 Year Floodplain Easement. Also, all 100 Year Floodplain areas should be labeled as "100 Year Floodplain Easement".

   c. Please revise the dedication table number and acreage to reflect ten Drainage and Utility Easements. Please see the attached dedication plan for revisions.

   d. Add the square footage or/and acreage to each area identified for County dedication on the plan. Ex. Stormwater Management Easement 'C', X.XXac.

DEDICATION TABLE

THE FOLLOWING RIGHTS OF WAY ARE TO BE CONVEYED TO BALTIMORE COUNTY BY THE DEVELOPER/OWNER OF THIS PROPERTY AS A CONDITION OF APPROVAL OF THESE PLANS.

TYPE OF CONVEYANCE	NO.	TOTAL AREA**
ACCESS EASEMENT	2	0.10 AC.
DRAINAGE AND UTILITY EASEMENT	~~10~~	~~0.66 AC.~~ update
FOREST CONSERVATION EASEMENT	5	3.32 AC.
STORMWATER MANAGEMENT EASEMENT	3	2.16 AC.
100 YEAR FLOODPLAIN AND DRAINAGE AND UTILITY EASEMENT AND FOREST BUFFER EASEMENT	5	5.10 AC.
FOREST BUFFER EASEMENT	6	9.28 AC.
HIGHWAY WIDENING	1	0.54 AC.

** NOTE: TOTAL AREAS SHOWN IN THIS TABLE ARE APPROXIMATE ONLY. REFER TO THE RECORD PLAT OR RIGHT OF WAY DRAWING FOR EXACT AREAS.

Real Estate Compliance

SUBJECT: Greenspring Manor, 2310 West Joppa Road
PAI #08-0922

A review of the red-lined development plan for the above referenced project results in the following comments:

1. Real Estate Compliance's recommendation for approval of the above mentioned development plan is contingent upon the following:

    - The sum of the acreage called out on the Dedication Plan for the ten Drainage and Utility Easements is not the total acreage shown in the Dedication Table. The difference between the sum of the acreage called out for the Drainage and Utility Easements and what is given in the Dedication Table is approximately 0.26 +/-. Please rectify the discrepancy.

Matt Bishop, PLA, LEED AP

Project Manager and Senior Landscape Architect

Matt has 20 years of landscape architecture, land planning, and project management experience and has dedicated 15 years of that experience to building, partnering, and developing Baltimore County, MD. As a project manager and landscape architect, he has a solid understanding of various types of developments and redevelopments, including retail, residential, office, hospitality, and mixed-use. He specializes in land development entitlements, plan approvals, and permitting process and has become a trusted advisor to developers in and the jurisdiction of Baltimore County. Matt prides himself on working closely and collaborating effectively with clients and stakeholders, guiding them through county regulations to move their projects from plans to the built environment. Supervising and managing projects with construction budgets from $50,000 to $60 million, Matt is a proven project leader and partner.

BALTIMORE COUNTY EXPERIENCE

Southwest Physicians Pavilion PUD, Baltimore County, Maryland - Located in Catonsville this project was for the development of a new medical office building. The project followed the Planned Unit Development Process. Responsibilities included preparation and oversight of the PUD Concept Plan, the PUD development plan, pattern book, and landscape plans. Also provided expert witness testimony at the Administrative Law Judge Hearing.

101 York PUD, Baltimore County, Maryland - Located in Towson this project was for the development of a new student housing building. The project followed the Planned Unit Development Process. Responsibilities included preparation and oversight of the PUD Concept Plan, presentation at two community input meetings, the PUD development plan, pattern book, landscape plans, construction drawings, and permit processing. Also provided expert witness testimony at the Administrative Law Judge Hearing.

10540 Philadelphia Road, Baltimore County, Maryland - Located in the Whitemarsh area of Baltimore County, this project included the development of a new Holiday Inn Express, pad site for a second hotel, and pad site for a future retail/restaurant. Consulting services included the preparation of a limited exemption development plan, SHA access permit, forest conservation plans, stormwater management plans, grading plans, erosion and sediment control plans, record plat, and landscape plans. Services also included public agreements, permitting, construction administration, and closeout services.

Rosedale Federal Headquarters, Perry Hall, Maryland - Located on Belair Road in Perry Hall, this project consisted of an approximately 10,000 square foot addition to the bank's corporate headquarters. Consulting services

included special hearing process, expert witness testimony, Board of Appeals testimony, Baltimore County DRC, limited exemption development plan, construction documents, construction administration, and close-out services.

Rosedale Federal Philadelphia Road Branch, Perry Hall, Maryland - Located at the corner of Philadelphia Road and Golden Ring Road in Perry Hall, this project consisted of the razing of an existing home and replacing it with a new branch bank. Consulting services included Maryland SHA access and utility permits, Baltimore County DRC process including a limited exemption development plan, grading permit, stormwater management permit, utility, right of way, and environmental agreements.

Firestone Auto Care Center, Baltimore County, Maryland - Located in Perry Hall on the east side of Belair Road, this commercial auto care facility included 5,000 sf of service and retail space with associated parking, signage, and landscape improvements. Served as project manager in the preparation of all Baltimore County required plans including a special exception plan, development plan, grading plan, site plan, ESC plan, utility plans, and landscape plans. Served as expert witness at the special exception hearing.

Starbucks, 6900 York Road Baltimore County, Maryland - Located on York Road south of downtown Towson this redevelopment project included the razing of an existing 2-story commercial building and replacing it with a new Starbucks building with drive-through. Served as project manager in the preparation of all Baltimore County required plans and approval processes including Development Review Committee (DRC), stormwater management variance, landscape plan, grading plan (<20,000 sf LOD), permitting, construction administration, and close-out services.

Foundry Station PUD, Baltimore County, Maryland – Located in Dundalk this project was for the redevelopment of the Seagram's Brewery site. The project followed the Planned Unit Development Process and included 189 new townhomes centered around two common open space areas and two historic landmarks. Responsibilities included preparation and oversight of the PUD Concept Plan, presentation at two community input meetings, the PUD development plan, pattern book, and landscape plans. Also provided expert witness testimony at the Administrative Law Judge Hearing.

Hillshire Overlook, Baltimore County, Maryland – Located in the Dundalk Community of Baltimore County, this project consisted of the infill of 18 new single-family detached dwellings on a previously undeveloped site. Consulting services included the preparation of a concept plan, presentation at the community input meeting, development plan, and pattern book.

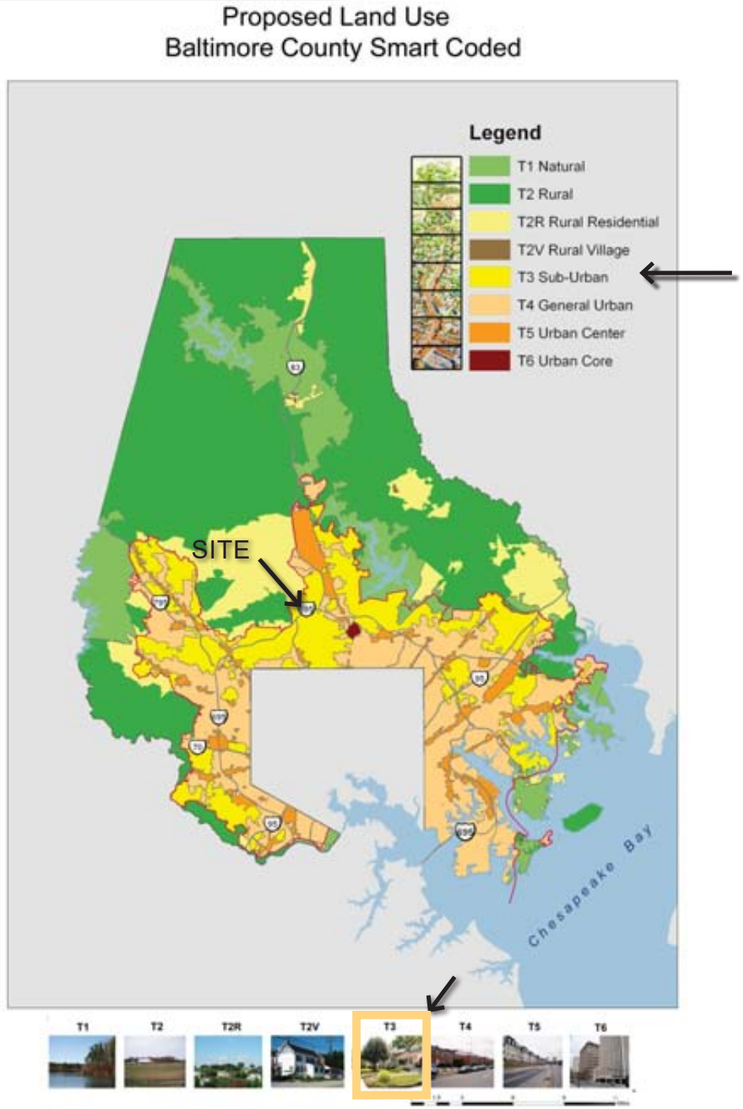
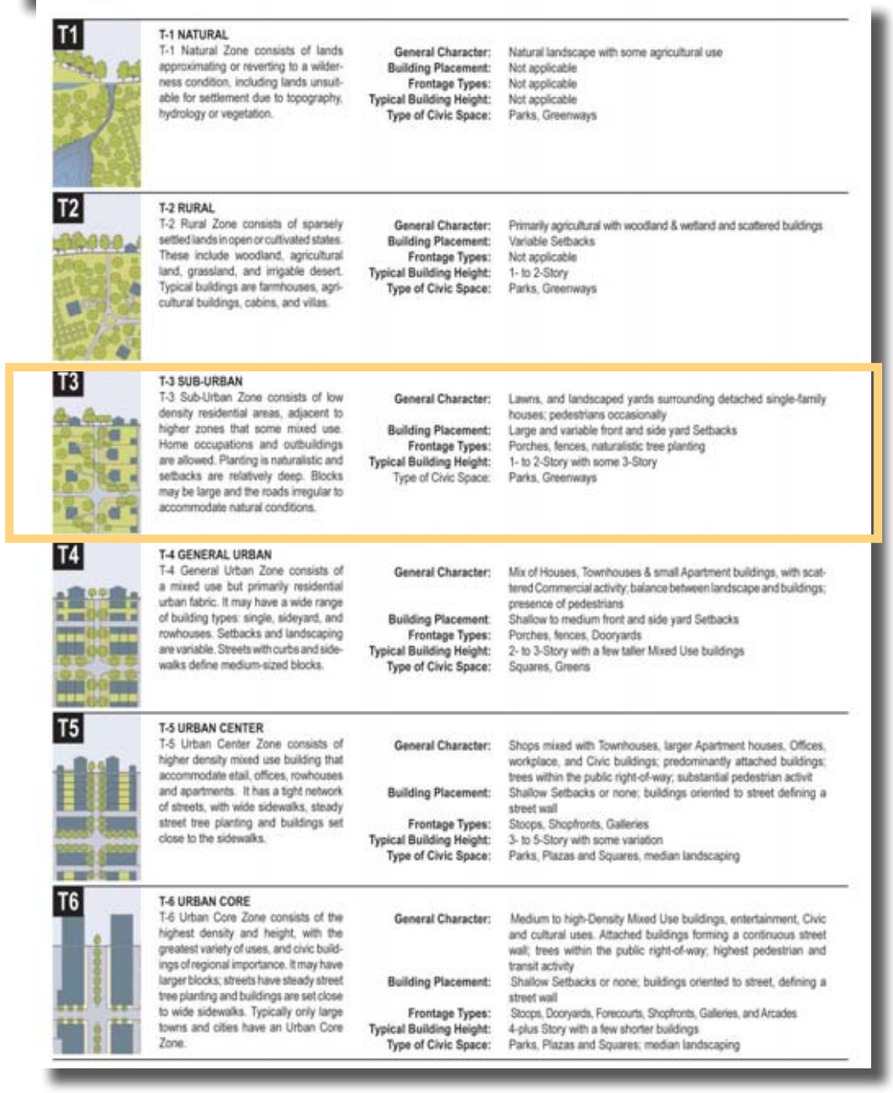
Map 5: Proposed Land Use



Transect Zone Descriptions



T1 NATURAL
T-1 Natural Zone consists of lands approximating or reverting to a wilderness condition, including lands unsuitable for settlement due to topography, hydrology or vegetation.

General Character:	Natural landscape with some agricultural use
Building Placement:	Not applicable
Frontage Types:	Not applicable
Typical Building Height:	Not applicable
Type of Civic Space:	Parks, Greenways

T2 RURAL
T-2 Rural Zone consists of sparsely settled lands in open or cultivated states. These include woodland, agricultural land, grassland, and irrigable desert. Typical buildings are farmhouses, agricultural buildings, cabins, and villas.

General Character:	Primarily agricultural with woodland & wetland and scattered buildings
Building Placement:	Variable Setbacks
Frontage Types:	Not applicable
Typical Building Height:	1- to 2-Story
Type of Civic Space:	Parks, Greenways

T3 SUB-URBAN
T-3 Sub-Urban Zone consists of low density residential areas, adjacent to higher zones that some mixed use. Home occupations and outbuildings are allowed. Planting is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

General Character:	Lawns, and landscaped yards surrounding detached single-family houses; pedestrians occasionally
Building Placement:	Large and variable front and side yard Setbacks
Frontage Types:	Porches, fences, naturalistic tree planting
Typical Building Height:	1- to 2-Story with some 3-Story
Type of Civic Space:	Parks, Greenways

T4 GENERAL URBAN
T-4 General Urban Zone consists of a mixed use but primarily residential urban fabric. It may have a wide range of building types: single, sideyard, and rowhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

General Character:	Mix of Houses, Townhouses & small Apartment buildings, with scattered Commercial activity; balance between landscape and buildings; presence of pedestrians
Building Placement:	Shallow to medium front and side yard Setbacks
Frontage Types:	Porches, fences, Dooryards
Typical Building Height:	2- to 3-Story with a few taller Mixed Use buildings
Type of Civic Space:	Squares, Greens

T5 URBAN CENTER
T-5 Urban Center Zone consists of higher density mixed use building that accommodate etail, offices, rowhouses and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

General Character:	Shops mixed with Townhouses, larger Apartment houses, Offices, workplace, and Civic buildings; predominantly attached buildings; trees within the public right-of-way; substantial pedestrian activit
Building Placement:	Shallow Setbacks or none; buildings oriented to street defining a street wall
Frontage Types:	Stoops, Shopfronts, Galleries
Typical Building Height:	3- to 5-Story with some variation
Type of Civic Space:	Parks, Plazas and Squares, median landscaping

T6 URBAN CORE
T-6 Urban Core Zone consists of the highest density and height, with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings are set close to wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

General Character:	Medium to high-Density Mixed Use buildings, entertainment, Civic and cultural uses. Attached buildings forming a continuous street wall; trees within the public right-of-way; highest pedestrian and transit activity
Building Placement:	Shallow Setbacks or none; buildings oriented to street, defining a street wall
Frontage Types:	Stoops, Dooryards, Forecourts, Shopfronts, Galleries, and Arcades
Typical Building Height:	4-plus Story with a few shorter buildings
Type of Civic Space:	Parks, Plazas and Squares; median landscaping

- **T-3 (Sub-Urban Zone)** includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

ENVIRONMENTAL

1. A TOPOGRAPHIC SURVEY WAS PREPARED BY MTTLS IN SEPTEMBER OF 2020. THIS INFORMATION WAS SUPPLEMENTED BY AVAILABLE BALTIMORE COUNTY GIS DATA.
2. BOUNDARY INFORMATION WAS GENERATED FROM A FIELD RUN SURVEY PREPARED BY MTPLS IN SEPTEMBER OF 2020.
3. THE EXISTING HOME IS SERVED BY A PRIVATE SEPTIC SYSTEM. THE SEPTIC SYSTEM WILL BE PROPERLY ABANDONED BY A LICENSED CONTRACTOR AT THE TIME THE HOME IS CONNECTED TO THE PUBLIC SEWER SYSTEM.
4. TO OUR KNOWLEDGE THERE ARE NO KNOWN UNDERGROUND STORAGE TANKS ON THIS SITE. A LETTER OF REQUEST WAS SENT TO THE MARYLAND DEPARTMENT OF THE ENVIRONMENT ON 5/4/2021 TO CHECK THEIR RECORDS. WE RECEIVED A RESPONSE BACK ON 6/11/2021 THAT NO RECORDS WERE FOUND.
5. NO KNOWN HAZARDOUS MATERIALS AS DEFINED BY SECTION 1-101 OF THE ENVIRONMENTAL ARTICLE OF THE ANNOTATED CODE OF MARYLAND EXIST ON SITE. A LETTER OF REQUEST WAS SENT TO THE MARYLAND DEPARTMENT OF THE ENVIRONMENT ON 5/4/2021 TO CHECK THEIR RECORDS. WE RECEIVED A RESPONSE BACK ON 6/11/2021 THAT NO RECORDS WERE FOUND.
6. THERE ARE NO KNOWN DESIGNATED AREAS OF CRITICAL STATE CONCERN IDENTIFIED AS SUCH UNDER THE PROCEDURES OF SECTION 5-511 OF THE NATURAL RESOURCES ARTICLE OF THE ANNOTATED CODE OF MARYLAND ON THIS SITE.
7. SOILS WERE OBTAINED FROM THE NRCS SOIL DATA MART WEBSITE.
8. THIS SITE IS NOT LOCATED WITHIN THE CHESAPEAKE BAY CRITICAL AREA.
9. A PORTION OF THE SITE IS LOCATED WITHIN A BALTIMORE COUNTY DEFINED 100 YEAR FLOODPLAIN. THE PROJECT IS NOT LOCATED WITHIN A FEMA FLOODPLAIN.
10. A DFIRST STAND DELINEATION AND PRELIMINARY FOREST CONSERVATION PLAN HAVE BEEN SUBMITTED TO THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.
11. TO THE BEST OF OUR KNOWLEDGE THERE ARE NO KNOWN SIGNIFICANT REGULATED PLANT OR WILDLIFE COMMUNITIES OR RARE, THREATENED OR ENDANGERED SPECIES ON THIS SITE. A LETTER OF REQUEST WAS SENT TO THE MARYLAND DEPARTMENT OF NATURAL RESOURCES WILDLIFE SERVICE AND MARYLAND DEPARTMENT OF NATURAL RESOURCES WILDLIFE HERITAGE DIVISION ON 5/24/2021 TO CHECK THEIR RECORDS. A RESPONSE IS PENDING.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17
2. ALL TREES AND OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREE PLANTINGS AROUND THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY APPARATUS ACCESS WHEN THEY MATURE. NFPA FIRE CODE SECTION 18.2.4.4.1
3. A CRUSHER RUN ROAD FOR ACCESS TO BUILDINGS AND REQUIRED WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AND CAPABLE OF HANDLING EMERGENCY APPARATUS WEIGHING 70,000 LBS. WHEN CONSTRUCTION OF ANY BUILDING IS UNDER ROOF. IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.16.4.3.1.3.
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE PROPOSED SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO SPRINKLER EMAIL)
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 5.18.5.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1.10.11.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS. THE PROPOSED DEVELOPMENT WILL CONSIST OF 61 SINGLE-FAMILY DETACHED HOMES. CLASSIFIED AS HIGHLY ERODIBLE SOILS. THE SOILS ON SITE ARE IN HYDROLOGIC SOIL GROUPS (HSG) B, C, AND D. SEE APPENDIX A FOR THE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE IS WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING CONDITIONS. THE PROPOSED DEVELOPMENT WILL INCREASE THE IMPERVIOUS AREA DRAINING TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS. PROPOSED ROADWAYS, FLAT, AND PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY ✓ SUBMERGED GRAVEL WETLANDS. A SEPARATE FLOODPLAIN STUDY HAS BEEN PREPARED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 2 OF THE 3 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

ADDITIONAL INFO

ANTICIPATED ACTIONS:
1. VARIANCES: NONE
2. SPECIAL VARIANCE: TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.
3. WAIVERS: 28' PAVING ON A 50' ROW IN LIEU OF 30' PAVING ON 50' ROW
4. SPECIAL EXCEPTIONS: NONE
5. OTHER: NONE
6. CONSISTENCY WITH DESIGN MANUALS: YES

DEVELOPMENT PLANS REVIEW

1. THIS PROJECT IS LOCATED WITHIN THE URBAN RURAL DEMARCATION LINE.
2. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP TRANSPORTATION ZONE. A SPECIAL VARIANCE IS BEING SOUGHT IN CONJUNCTION WITH THIS PLAN.
3. THE SITE IS LOCATED WITHIN AN AREA OF CONCERN AS SHOWN ON THE 2020 BASIC SERVICES MAP SEWER DEFICIENT AREAS AND AREA OF CONCERN.
4. THE SITE IS NOT LOCATED IN A DEFICIENT AREA FOR PUBLIC WATER AS SHOWN ON THE 2020 BASIC SERVICES MAP WATER SUPPLY DEFICIENT.
5. RAMPS SHALL BE PROVIDED FOR PHYSICALLY HANDICAPPED PERSONS AT ALL STREET INTERSECTIONS WITH DETECTABLE WARNING DEVICES PER STANDARD DETAILS R-36A AND R-36B.
6. SIDEWALKS SHALL BE PROVIDED ALONG ALL PUBLIC ROADS AND WILL MEET ALL STATE HIGHWAY ADMINISTRATION STANDARDS FOR CONSTRUCTION.
7. A CIM WAS HELD ON APRIL 27, 2021. ISSUES WERE RAISED REGARDING THE POTENTIAL EXTENSION OF MAYS CHAPEL ROAD THROUGH THE SUBJECT PROPERTY. THE PLAN PROPOSES TO EXTEND MAYS CHAPEL ROAD BUT TO GATE IT FOR EMERGENCY ACCESS ONLY. TO BE APPROVED BY ADMINISTRATIVE LAW JUDGE.
8. STREET LIGHTS SHALL BE INSTALLED ALONG ALL PUBLIC ROADS.
9. ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTIONS 450 OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
10. IT IS ANTICIPATED THAT THIS PROJECT WILL BE DEVELOPED IN TWO PHASES.
11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO, TELEPHONE, CABLE TELEVISION, GAS, ELECTRIC, WATER AND SEWER LINES, STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. THE DESIGN, CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.
13. THE MAINTENANCE OF ALL AMENITIES SHOWN ON THE WALKING PATHS SHALL BE CONSTRUCTED AFTER THE 30TH BUILDING PERMIT IS ISSUED BUT PRIOR TO THE 60TH.
14. 4' TALL BERM ALONG REAR PROPERTY LINE BEHIND LOTS 19-27
15. 6' TALL BERM ALONG REAR PROPERTY LINE BEHIND LOTS 3-6
16. SWM SHEET FLOW TO BUFFER LOTS 13-20 (#16,150 SF IMPERVIOUS AREA)

OPEN SPACE CONT.

11. NO UTILITIES, WHETHER PUBLIC OR PRIVATE, INCLUDING BUT NOT LIMITED TO, TELEPHONE, CABLE TELEVISION, GAS, ELECTRIC, WATER AND SEWER LINES, STORM DRAINS SHALL BE PLACED OR CONSTRUCTED ON OR WITHIN AREAS LABELED AS OPEN SPACE WITHOUT PRIOR WRITTEN CONSENT FROM BALTIMORE COUNTY DEPARTMENT OF RECREATION AND PARKS.
12. THE DESIGN, CONSTRUCTION AND INSTALLATION OF ALL AMENITIES SHOWN ON THE DEVELOPMENT PLAN SHALL BE THE RESPONSIBILITY OF THE DEVELOPER.
13. THE MAINTENANCE OF ALL AMENITIES SHOWN ON THE WALKING PATHS SHALL BE CONSTRUCTED AFTER THE 30TH BUILDING PERMIT IS ISSUED BUT PRIOR TO THE 60TH.

UNDEVELOPED AREAS OPEN SPACE

DESCRIPTION	ACRES
STORMWATER MANAGEMENT	2.15 ±
HOA/COA AREAS	1.75 ±
OTHER	12.55 ±
TOTAL PROVIDED	16.45 ±

1. OPEN SPACE REQUIRED - 40 UNITS (0.5 AC NEW + 1 EXISTING X 1,000 S.F. = 80,000 S.F. OPEN SPACE.
2. OPEN SPACE PROVIDED - 688,946± S.F.
OPEN SPACE NOTES:
ALL LOCAL OPEN SPACE SHALL BE IN COMPLIANCE WITH THE LOCAL OPEN SPACE MANUAL, LATEST EDITION.
TEMPORARY OPEN SPACE BOUNDARY, TREE PROTECTION DEVICES AND FOUR FOOT HIGH SNOW FENCING OR EQUIVALENT SHALL BE INSTALLED PRIOR TO ANY GRADING OR CONSTRUCTION.
WITHIN THE AREA SHOWN AS OPEN SPACE, DISTURBANCE BEYOND THAT WHICH IS SHOWN ON THE DEVELOPMENT PLAN SHALL NOT BE ALLOWED WITHOUT PRIOR APPROVAL FROM THE DEPARTMENT OF RECREATION AND PARKS.
ALL OPEN SPACE LOTS SHALL BE CONVEYED TO THE HOA. ALL OPEN SPACE LOTS SHALL BE DESIGNED AND CROSS-GRADED IN A GEOTECHNICAL ENGINEER TO ENCOURAGE DRAINAGE THAT MIGHT ARISE FROM WET SOILS.
HOA/COA OPEN SPACE SHALL BE OWNED AND MAINTAINED BY A HOMEOWNERS ASSOCIATION.

PLANNING

1. TIER 1 SERVED BY PUBLIC SEWER AND INSIDE URDL. PER BALTIMORE COUNTY MY MESHGOOD MEMO 5.1
2. THERE ARE NO KNOWN BUILDINGS, PROPERTIES, OR SITES WITHIN THE PROJECT BOUNDARY LISTED ON THE NATIONAL REGISTER OF HISTORIC PLACES, THE MARYLAND INVENTORY OF HISTORIC PROPERTIES, BALTIMORE COUNTY LANDMARKS LIST, THE NATIONAL REGISTER OF HISTORIC PLACES, OR THE MARYLAND ARCHEOLOGICAL SURVEY.
3. THE PROJECT SITE IS NOT LOCATED IN ANY BALTIMORE COUNTY OR MARYLAND CRITICAL AREA.
4. THE GROSS AREA OF THE 100 CONTIGUOUS SQUARE FEET WITH A MINIMUM 15-FOOT DIMENSION IS PROVIDED FOR EACH LOT.

ZONING

1. EXISTING ZONING DR-1 & DR-2
THIS DEVELOPMENT IS SUBJECT TO THE COMPREHENSIVE MANUAL OF DEVELOPMENT POLICIES (SECTION 504.2), AND THE COUNTY LANDSCAPE MANUAL (SECTION 409.6.A.1). THIS DEVELOPMENT WILL COMPLY AND BE CONSISTENT WITH ALL APPLICABLE REGULATIONS, STANDARDS, GUIDELINES, AND POLICIES OR THE APPROPRIATE RELIEF WILL BE REQUESTED.
2. ~~ALL SIGNS WILL CONFORM TO BALTIMORE COUNTY ZONING CODE, SECTION 450 OR APPROPRIATE RELIEF WILL BE REQUESTED~~ ALL SIGNAGE WILL COMPLY WITH SECTION 450 OF THE BCZR.
3. THE DENSITY CALCULATION IS PURSUANT TO ~~1989~~ OF THE BCZR. PARCEL A AS SHOWN ON THE PLAN WAS FOUND IN SUBS.L.2.C(1)B) OF THE BCZR. A MINIMUM PARCEL SIZE OF 10 ACRES IS REQUIRED. THE DEVELOPERS ENGINEER HAS CONFIRMED THAT NO PART OF THE GROSS AREA OF THIS PROPERTY AS SHOWN ON THE PLAN HAS EVER BEEN USED AS PART OF THE CALCULATION OF AREA TO SUPPORT ANY DEVELOPMENT ON ANY OTHER SITE.
4. NO TRADE-IN AREAS EXISTING BUILDINGS TO REMAIN.
5. MAXIMUM BUILDING HEIGHT WILL NOT EXCEED 50' IN THE DR ZONES.
6. THERE IS NO ZONING CASE HISTORY FOR THE PROPERTY.
7. ACCESS EASEMENTS MAY NOT BE FENCED.
8. THE PROPOSED DEVELOPMENT WILL HAVE THE FOLLOWING LOTS: 6-7 AND 11-12.
9. TYPICAL OPEN DECK DIMENSIONS OF 10 FT. X 20 FT. SHALL PROVIDE THE MINIMUM REAR DECK SETBACK OF 22.5 FT.

DEVELOPMENT PROPOSAL

DWELLING TYPE	PROPOSED UNITS	PARKING REQUIRED	PARKING PROVIDED	OPEN SPACE REQUIRED	OPEN SPACE PROPOSED	AVERAGE DAILY TRIPS	PHASE	DEVELOPMENT SCHEDULE

HIGHWOOD ELEMENTARY SCHOOL	~~462~~ 420	405	9	0	414	~~(48)~~ (6)	~~94.8%~~ 98.6%
WOODLY MIDDLE SCHOOL	1,070	1,100	4	4	1,108	38	103.6%
SUGARLY HIGH SCHOOL	1,984	1,930	5	8	1,943	(41)	97.9%

SITE DEVELOPMENT PLAN REVIEW COMMENTS

1) THE SETBACK REQUIREMENTS ARE PURSUANT TO THE LARGE TRACT TABLE FOUND IN 5.02.1.C.(1)(B) OF THE BCZR.
2) ENVELOPES OR TYPICAL DWELLINGS AS SHOWN DICTATE A SPECIFIC LOCATION AND ORIENTATION WHICH IS INTENDED TO ALLOW COMPLIANCE WITH BALTIMORE COUNTY ZONING REGULATIONS AND POLICIES. SHOULD THE LOCATION OR ORIENTATION 1"=20' CHANGE OR CREATE CONFLICTS WITH THE REGULATIONS OR POLICIES, THE LOCATION OR ORIENTATION MUST BE CHANGED TO ALLEVIATE THE CONFLICT

ENVIRONMENTAL IMPACT REVIEW

THERE SHALL BE NO CLEARING, GRADING, CONSTRUCTION OR DISTURBANCE OF VEGETATION IN THE FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND FOREST BUFFER & FOREST CONSERVATION EASEMENT EXCEPT AS PERMITTED BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY.

2. ANY FOREST BUFFER EASEMENT, FOREST CONSERVATION EASEMENT AND HONEYSUCKLE & INVASIVE SPECIES REMOVAL AREA SHALL BE PROTECTED BY SUPER SILT FENCE. THE SUPER SILT FENCE SHALL BE FOUND IN THE LAND RECORDS OF BALTIMORE COUNTY AND WHICH RESTRICTS DISTURBANCE AND USE OF THE AREA.

3. PRIOR TO RECORD PLAT APPROVAL, THE EXISTING DWELLING MUST BE CONNECTED TO PUBLIC WATER AND SEWER SYSTEM. THE EXISTING WELL MUST BE BACK-FILLED BY A LICENSES MASTER WELL DRILLER WHO MUST SUBMIT A WELL ABANDONMENT REPORT TO GROUNDWATER MANAGEMENT. THE EXISTING SEPTIC SYSTEM MUST BE PUMPED AND BACK-FILLED OR REMOVED BY A LICENSES SEWAGE DISPOSAL CONTRACTOR. ABANDONMENT REPORTS MUST BE SUBMITTED PRIOR TO RECORD PLAT APPROVAL.

4. A VARIANCE WAS GRANTED SEPTEMBER 24, 2021, BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY FROM THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO ALLOW DISTURBANCE WITHIN THE FOREST BUFFER EASEMENT SHOWN HEREON IS REFLECTIVE OF THE EXACT RELIEF THE VARIANCE WAS GRANTED. CONDITIONS WERE PLACED ON THIS VARIANCE TO REDUCE WATER QUALITY IMPACTS INCLUDING PLANTING 2.5 ACRES OF FOREST ON THIS BUFFER AS COMPENSATORY PROTECTIVE SIGNS ALONG THE BOUNDARY OF THE FUNCTIONING FOREST BUFFER EASEMENT.

5. A VARIANCE WAS GRANTED ON SEPTEMBER 24, 2021 BY THE BALTIMORE COUNTY DEPARTMENT OF ENVIRONMENTAL PROTECTION AND SUSTAINABILITY TO ACCOMPLISH USE WITH SECTION 33-3-112 OF THE LAW FOR THE PROTECTION OF WATER QUALITY, STREAMS, WETLANDS AND FLOODPLAINS TO ALLOW INFRASTRUCTURE AND UTILITY CONNECTIONS. CONDITIONS WERE PLACED ON THIS APPROVAL TO REDUCE WATER QUALITY IMPACTS, INCLUDING PLANTING 0.07 ACRES OF FOREST BUFFER EASEMENT AND MITIGATION OF 3.07 ACRES OF FALLOW FOREST BUFFER EASEMENT.

6. A SPECIAL VARIANCE WAS GRANTED ON SEPTEMBER 21, 2021 TO BALTIMORE COUNTY'S FOREST CONSERVATION LAW TO ALLOW DISTURBANCE WITHIN THE FOREST CONSERVATION EASEMENT SHOWN HEREON IS REFLECTIVE OF THE EXACT RELIEF THE VARIANCE WAS GRANTED. CONDITIONS WERE PLACED ON THE VARIANCE, INCLUDING PROTECTION OF THE ADJACENT STREAM THAT HAS DIRECT IMPACTS.

FIRE MARSHAL

1. PROPOSED BUILDINGS SHALL BE DESIGNED AND CONSTRUCTED SO AS TO MEET THE APPLICABLE PROVISIONS OF THE BALTIMORE COUNTY FIRE PREVENTION CODE NO. 3-17
2. LANDSCAPING OR OTHER OBSTRUCTIONS PLACED AROUND STRUCTURES SHALL NOT IMPAIR OR IMPEDE ACCESSIBILITY FOR FIRE DEPARTMENT OPERATIONS. ANY TREE PLANTINGS AROUND THE PERIMETER OF THE BUILDING SHALL BE OF A TYPE THAT WILL NOT INTERFERE WITH EMERGENCY APPARATUS ACCESS WHEN THEY MATURE. NFPA FIRE CODE SECTION 18.2.4.1
3. A CRUSHER RUN ROAD FOR ACCESS TO BUILDINGS AND REQUIRED WATER SUPPLIES SHALL BE AVAILABLE FOR THE USE BY EMERGENCY FIRE APPARATUS AT THE START OF BUILDING CONSTRUCTION AND MAINTAINED DURING THE ENTIRE CONSTRUCTION PERIOD. ROADWAYS IN ACCORDANCE WITH THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO.3-17, SECTION 1.16.4.3.3.5
4. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A RESIDENTIAL SPRINKLER SYSTEM FOR EACH INDIVIDUAL DWELLING.
5. THE SPRINKLER SYSTEM MUST BE INSPECTED BY THE BALTIMORE COUNTY FIRE MARSHAL'S OFFICE PRIOR TO TAKING OCCUPANCY. (SPRINKLER HYDRO / SPRINKLER FINAL).
6. THE PRIVATE FIRE HYDRANTS SHALL BE PAINTED "OSHA RED" TO DISTINGUISH THEM FROM THE PUBLIC (ORANGE) FIRE HYDRANTS IN ACCORDANCE WITH BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17 SECTION 1.16.4.3.3.5 PRIVATE HYDRANT COLOR.
7. A SEPARATE BUILDING PERMIT IS REQUIRED FOR THE INSTALLATION OF A PRIVATE UNDERGROUND FIRE LINE AND SHALL BE REVIEWED BY THE PLANS REVIEW SECTION OF BALTIMORE COUNTY. A PLUMBING PERMIT SHALL NOT BE USED TO INSTALL AN UNDERGROUND FIRE LINE
8. ALL FIRE HYDRANTS SPACING SHALL BE IN ACCORDANCE WITH THE BALTIMORE COUNTY STANDARD DESIGN MANUAL.
9. THE BALTIMORE COUNTY FIRE PREVENTION CODE, COUNTY BILL NO. 3-17, SECTION 1.16.3.1.5, REQUIRES THAT THE ADDRESS NUMBERS FOR RESIDENTIAL PROPERTIES SHALL BE A MINIMUM OF 3 INCHES IN SIZE.

SUITABLE OUTFALL STATEMENT

IN THE EXISTING CONDITION, THE SITE CONTAINS A SINGLE-FAMILY HOME AND AGRICULTURAL FIELDS ON APPROXIMATELY 39.5 ACRES. THERE ARE VERY FEW STEEP SLOPES AND NO SOILS CLASSIFIED AS HIGHLY ERODIBLE SOILS. THE SOILS ON SITE ARE IN HYDROLOGIC SOIL GROUPS "B" AND "C" AND ARE MAINLY "B" TYPE SOIL MAP. THE SITE GENERALLY DRAINS FROM THE NORTHWEST TO THE SOUTHEAST. THE SITE LIES WITHIN THE JONES FALLS WATERSHED. THE ENTIRE SITE EVENTUALLY DRAINS TO AN EXISTING CULVERT UNDER JOPPA ROAD WHICH HAS BEEN ANALYZED AS THE PROJECT STUDY POINT.

THE PROPOSED DEVELOPMENT WILL GENERALLY MAINTAIN THE DRAINAGE PATTERNS OF THE EXISTING SITE; HOWEVER, THE PROPOSED DEVELOPMENT EFFORTS WILL RESULT IN CHANGES TO SURFACE RUNOFF CONDITIONS WITHIN RESIDENTIAL AREAS, PROPOSED ROADWAYS, AND WITHIN PROPOSED STORM DRAIN SYSTEMS. THE PROPOSED SITE RUNOFF WILL BE MANAGED THROUGH THE IMPLEMENTATION OF ENVIRONMENTAL SITE DESIGN PRACTICES, SPECIFICALLY ☐ 3 SUBMERGED GRAVEL WETLANDS. THE PROPOSED SITE RUNOFF WILL BE MANAGED AND IS UNDER COUNTY REVIEW. QUANTITY CONTROL FOR INCREASED RUNOFF WILL BE MANAGED WITHIN 2 OF THE 3 PROPOSED SUBMERGED GRAVEL WETLAND AREAS, INCLUDING ON-SITE DETENTION FOR 100-YEAR 6HOUR RUNOFF RATES.

COMBINED HEARING REQUEST

WE ARE REQUESTING A COMBINED DEVELOPMENT PLAN AND SPECIAL VARIANCE HEARING. THE SPECIAL HEARING PETITION IS TO PERMIT BUILDING PERMITS IN AN 'F' LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP.

ADDITIONAL INFO

WITH RESTRICTIONS:
1. VARIANCES: NONE
2. SPECIAL HEARING: TO PERMIT BUILDING PERMITS IN AN F LEVEL TRAFFIC SHED AS DELINEATED ON THE 2020 BASIC SERVICES MAP
3. WAIVERS: 28 PAVING ON A 50' ROW IN LIEU OF 30' PAVING ON A 50' ROW
4. SPECIAL EXCEPTIONS: NONE
5. OTHER: NONE
6. CONSISTENCY WITH DESIGN MANUALS: YES

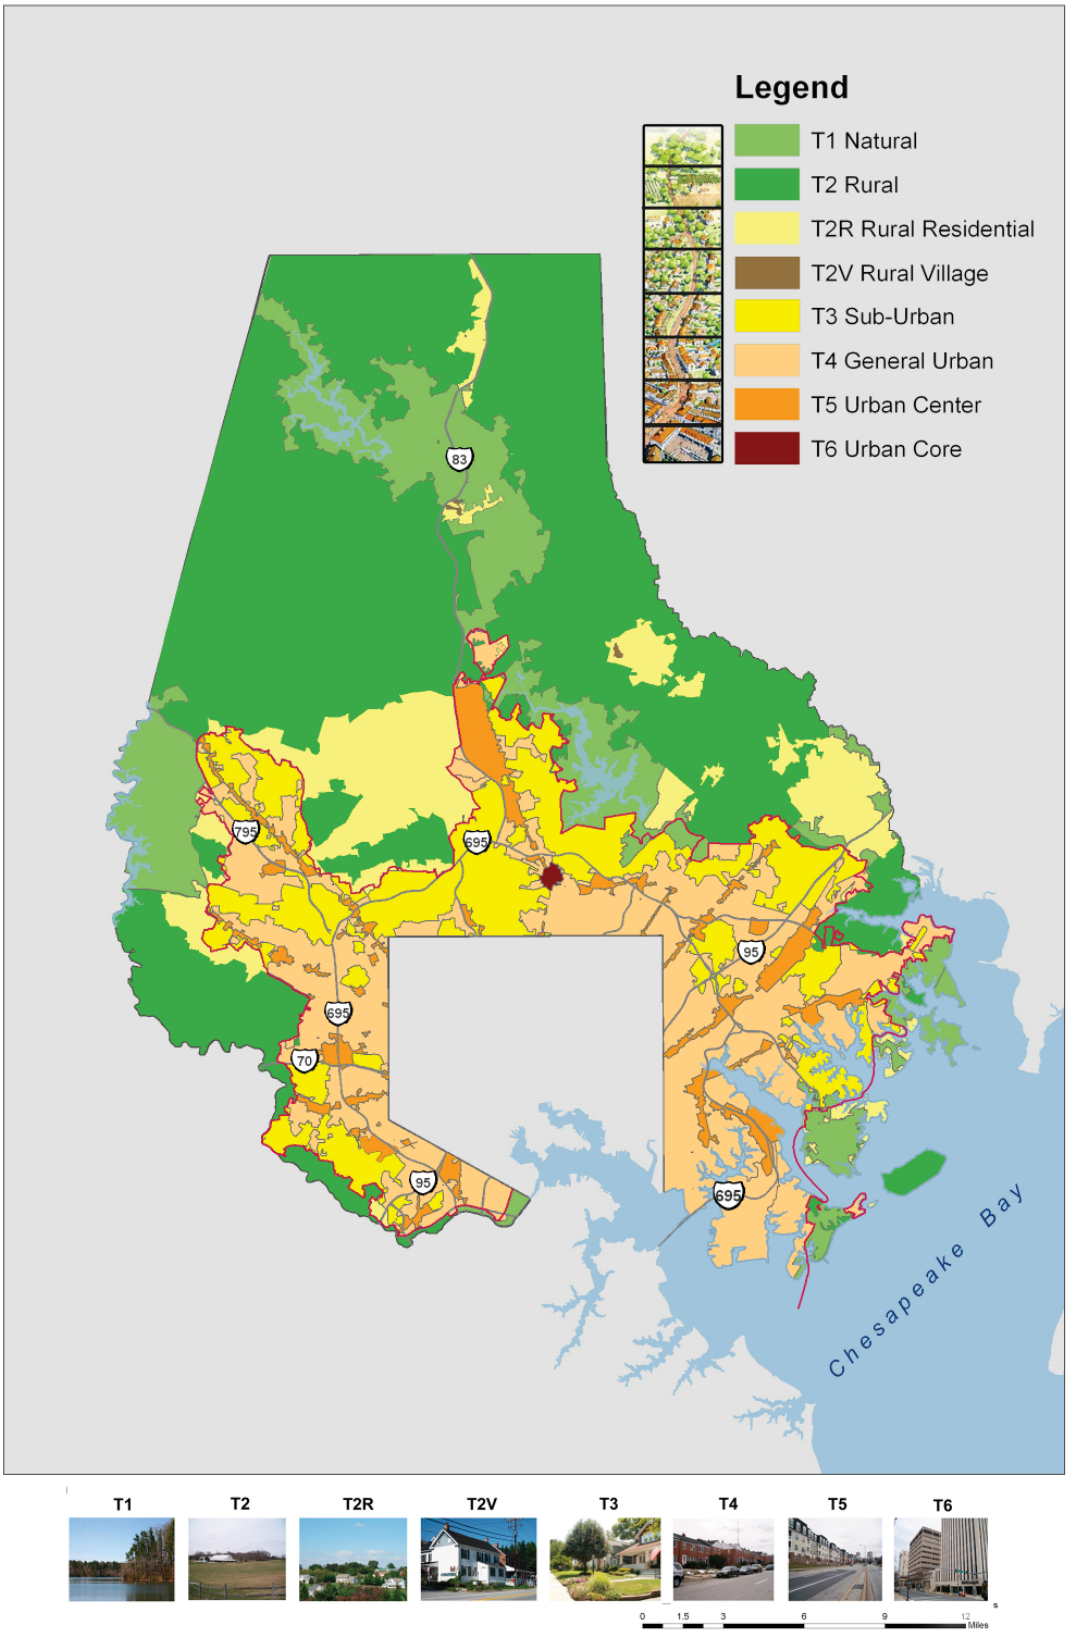
Map 5: Proposed Land Use

Proposed Land Use
Baltimore County Smart Coded



commercial establishments, open spaces and their relationship to roadways.

- **T-3 (Sub-Urban Zone)** includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

- **T-4 (General Urban Zone)** is characterized by mixed-use, but is primarily residential urban fabric. It may have a wide range of building types including single-family detached and attached houses, and townhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

- **T-5 (Urban Center Zone)** includes higher density mixed-use buildings that accommodate retail, offices, townhouses, and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

- **T-6 (Urban Core Zone)** has the highest density and height with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings set close to the wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

- **T-M (Manufacturing Zone)** includes certain industries and manufacturing processes that should not be combined with other uses. By their function, they require that their operations not be closely integrated with other uses (except those with similar characteristics).

- **T-I (Institutional Zone)** many institutional uses should be incorporated into the T-4 and T-5 transects, such as community centers, branch government offices, libraries, etc. However, certain institutions like medical complexes, educational campuses, and others that benefit from having all their functions in one location may need room to grow. That may make inclusion into a Community Enhancement Area impractical. Such facilities should be close enough to be walkable, and be mutually supportive.

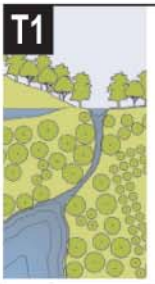
The transect system replaces the conventional separate land use zoning system. The T-zones provide the basis for real neighborhood structure, which relies upon compact, walkable streets, mixed-use, transportation options, and housing diversity. The T-zones vary by the ratio and level of intensity of their natural, built, and social components. Uses may overlap between one T-zone and another. The ability of transects to clarify the compatibility among uses makes them particularly useful in planning the built environment.

They may be coordinated to all scales of planning, from the region through the community scale, down to the individual lot and building. However, any new zoning would be applied at the community scale, and it is important to note that each community will have to establish (calibrate) its own unique development criteria. Furthermore, T-zones should be balanced within a neighborhood structure based on pedestrian sheds (walksheds), so that residents of lower density neighborhoods may still walk to different habitats, such as a main street, or civic space.

Transect-based planning is used throughout the County to provide a solid foundation for all other planning. As Baltimore County moves towards compact, mixed-use, higher-density walkable communities, the successful implementation of transect-based planning will play a key role in further developing the T-4 and T-5 zones.

The Transect Zones and the following graphics for the Transect Zone descriptions and civic spaces were originated and developed by Duany Plater-Zyberk & Co.

Transect Zone Descriptions



T-1 NATURAL

T-1 Natural Zone consists of lands approximating or reverting to a wilderness condition, including lands unsuitable for settlement due to topography, hydrology or vegetation.

General Character:	Natural landscape with some agricultural use
Building Placement:	Not applicable
Frontage Types:	Not applicable
Typical Building Height:	Not applicable
Type of Civic Space:	Parks, Greenways

T-2 RURAL

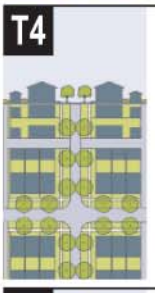
T-2 Rural Zone consists of sparsely settled lands in open or cultivated states. These include woodland, agricultural land, grassland, and irrigable desert. Typical buildings are farmhouses, agricultural buildings, cabins, and villas.

General Character:	Primarily agricultural with woodland & wetland and scattered buildings
Building Placement:	Variable Setbacks
Frontage Types:	Not applicable
Typical Building Height:	1- to 2-Story
Type of Civic Space:	Parks, Greenways

T-3 SUB-URBAN

T-3 Sub-Urban Zone consists of low density residential areas, adjacent to higher zones that some mixed use. Home occupations and outbuildings are allowed. Planting is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

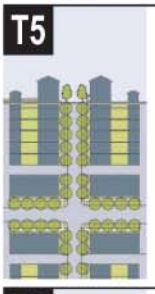
General Character:	Lawns, and landscaped yards surrounding detached single-family houses; pedestrians occasionally
Building Placement:	Large and variable front and side yard Setbacks
Frontage Types:	Porches, fences, naturalistic tree planting
Typical Building Height:	1- to 2-Story with some 3-Story
Type of Civic Space:	Parks, Greenways



T-4 GENERAL URBAN

T-4 General Urban Zone consists of a mixed use but primarily residential urban fabric. It may have a wide range of building types: single, sideyard, and rowhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

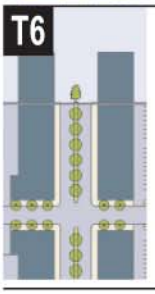
General Character:	Mix of Houses, Townhouses & small Apartment buildings, with scattered Commercial activity; balance between landscape and buildings; presence of pedestrians
Building Placement:	Shallow to medium front and side yard Setbacks
Frontage Types:	Porches, fences, Dooryards
Typical Building Height:	2- to 3-Story with a few taller Mixed Use buildings
Type of Civic Space:	Squares, Greens



T-5 URBAN CENTER

T-5 Urban Center Zone consists of higher density mixed use building that accommodate etail, offices, rowhouses and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

General Character:	Shops mixed with Townhouses, larger Apartment houses, Offices, workplace, and Civic buildings; predominantly attached buildings; trees within the public right-of-way; substantial pedestrian activit
Building Placement:	Shallow Setbacks or none; buildings oriented to street defining a street wall
Frontage Types:	Stoops, Shopfronts, Galleries
Typical Building Height:	3- to 5-Story with some variation
Type of Civic Space:	Parks, Plazas and Squares, median landscaping



T-6 URBAN CORE

T-6 Urban Core Zone consists of the highest density and height, with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings are set close to wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

General Character:	Medium to high-Density Mixed Use buildings, entertainment, Civic and cultural uses. Attached buildings forming a continuous street wall; trees within the public right-of-way; highest pedestrian and transit activity
Building Placement:	Shallow Setbacks or none; buildings oriented to street, defining a street wall
Frontage Types:	Stoops, Dooryards, Forecourts, Shopfronts, Galleries, and Arcades
Typical Building Height:	4-plus Story with a few shorter buildings
Type of Civic Space:	Parks, Plazas and Squares; median landscaping

John P. Canoles

Mr. Canoles, co-founder of Eco-Science Professionals, Inc., is a wildlife ecologist with 30 years experience in habitat assessments and inventories. As a principal in the firm, he has managed or participated in over 7,000 projects since 1992. Mr. Canoles is certified by the U.S. Army Corps of Engineers to perform wetland delineations and has worked on wetland delineation projects throughout Maryland, Virginia, West Virginia, Pennsylvania and eastern Ohio. In addition to providing wetland delineations, he has assisted in project planning to ensure efficient compliance with natural resource regulations and prepared/processed wetland/stream permit applications for projects requiring resource impacts. John has also provided wetland mitigation, stream restoration and mitigation certification services for a variety of clients.

Mr. Canoles is recognized by the Maryland Department of Natural Resources as a Qualified Professional to provide Forest Conservation Act services and has managed and participated in projects requiring floral and faunal surveys; Rare, Threatened, and Endangered Species searches; stream assessments; and, habitat evaluations on projects throughout the Mid-Atlantic region, including Chesapeake Bay Critical Area Forest Interior Breeding Bird Surveys and Critical Areas Findings Plans. Mr. Canoles is also licensed by MD DNR as a wildlife cooperator for the control and maintenance of nuisance wildlife.

In addition to pre-development consulting services, Mr. Canoles has assisted clients with non-compliance issues, developed restoration plans, assisted landowners with habitat design and installation projects, provided training to professional organizations and landowner groups, and has provided sworn expert testimony in Baltimore, Howard and Calvert Counties.

EDUCATION and CERTIFICATION

B.S. in Natural Science with Environmental Conservation Concentration, Towson State University 1990.

MD Department of Natural Resources - Licensed Wildlife Cooperator, 2012

United States Corps of Engineers - Provisional Wetland Delineator Certification, August, 1993. Certification # WDCP93MD0610044B2

Forest Conservation Act Information and Training Workshop. MD Department of Natural Resources, November 1992. Qualified Professional, January 1993.

MD Qualified Observer for Forest Interior Breeding Bird Surveys, October 1991.

USFWS Habitat Evaluation Procedures (HEP), Certified, U.S. Fish and Wildlife Service, July 1990.

ADDITIONAL TRAINING

Hydric Soils and Use of Field Indicators of Hydric Soils in the United States. Sponsored by U.S. Army Corps of Engineers, March 2005.

U.S. Army Corps of Engineers 2nd Maryland Consultants Workshop, March 2004.

Gunpowder Watershed Conference. Sponsored by Gunpowder Valley Conservancy, Baltimore County Department of Environmental Protection and Resource Management, and Baltimore Metropolitan Council. March 1999.

ASTM Standards on Environmental Site Assessments for Commercial Real Estate (E 1527-97 and E1528-96). American Society for Testing and Materials Course, Baltimore MD. March 1998.

Hydrogeomorphic Wetland Classification and Assessment Techniques. U. S. Army Corps of Engineers, February 1997.

Soil Stabilization: Soil Bio-Engineering. Cooperative course by Rutgers University and the U.S. Natural Resource Conservation Service, October 1996.

Steep Slope Analysis Training Seminar. Baltimore County Department of Environmental Protection and Resource Management, July 1995.

Native Plants in the Landscape, Millersville University, August 1991.

Anne Arundel County Critical Area Overview and Development Requirements, Anne Arundel County Community College, May 1991.

Stream Restoration Workshop, Ecosystem Recovery Institute & Brightwater Consulting, October 1990.

SELECTED PROJECT EXPERIENCE

Josiah Henson Special Park

Managed and provided field survey project services for the development of a historic park in Montgomery County, Maryland. Standard services included wetland certification, Natural Resource Inventory, Forest Stand Delineation and Forest Conservation Plan services. Project specific services included a detailed vegetative assessment of the property in coordination with the goals for historic preservation of the grounds.

Long Branch Wayne Local Park

Developed a Preliminary Forest Conservation Plan using previously approved existing site condition information for the referenced park project in Montgomery County, MD. Tasks included confirmation of existing site resource information, assessment of tree impacts and development of tree protection and reforestation requirements and design.

Edgely Grove Trail

Provided wetland delineation services and permit application and coordination for a pedestrian trail for the Harford County Department of Recreation and Parks. Services included field delineation of the nontidal wetland limits and Waters of the US on the project site and preparation of a findings report. These findings were integrated into a permit application to allow for wetland, buffer and stream impacts.

Ladew Nature Trail

Provided project management and field services for the development of an interpretive nature trail at the Ladew Topiary Gardens in Harford County, Maryland. The scope of work included field wetland delineation, preparation of a findings report, design of the trail layout, and boardwalk design and construction oversight. Also included in the project was development of interpretive educational stations, an interpretive trail guide and interpretive signage development.

Parklawn Cemetery

Provided project management and field services for the preliminary natural resource assessment of a 108-acre existing cemetery in Montgomery County, Maryland. Services included determination of existing site constraints as they related to natural resources including wetlands, streams, buffers, forest conservation and specimen trees. Upon development of site constraints/conflicts map, provided consultation with project engineer for future cemetery expansion and resources restoration projects.

PRESENTATIONS and PUBLICATIONS

Zoning DR-1 and DR 2

Water: public **Sewer:** public

Part C. Special Variance Type

Indicate the specific section(s) of the Code from which you are requesting a variance :

Title 6 Section 33-6-111 (b) 5 (i) - Retention Priorities, Specimen Trees

D. Project Description

Briefly describe the proposed project or activity.

The applicant is seeking to perform a residential subdivision of the subject property and as part of that effort the County is requiring road widening and sidewalks along the frontage of West Joppa Road. These required improvement will require the removal of an existing specimen tree.

Part E. Existing Resources.

Briefly describe the existing forest resources present onsite, and the condition/quality of these resources.

The subject property is currently maintained as a single family residence. The home and a large lawn are situated in the southeastern corner of the site. The balance of the property is maintained as an active crop field with a small area of forest being present along the eastern edge of the site.

The homestead includes a home and yard area with notable landscaping. Scattered pine groves are present behind the home and Yews are present around the lawn. The driveway

was lined with blue spruce but these trees area all now dead.

At the time of our field review, soybeans had been previously harvested from the crop fields. Some foxtail, thistle and other agriculture weeds were noted within the fields but generally they were open. Hedgerows are present along the eastern and western edges of the field. A portion of the hedgerow along the eastern edge of the field expands into the property to be considered forest. Along the western edge of the site the hedgerow follows along the property line and buffers the site from the adjacent commercial development. The hedgerow, in places does meet the minimum size requirement to be considered forest, but much of the area is made up of invasive species of trees, shrubs and vines. Tree-of-heaven is common along the property boundary along with Oriental bittersweet, Japanese honeysuckle, multiflora rose and bush honeysuckle. Some Russian olive has also begun to colonize the area. These areas are so overgrown by invasive vines that canopy coverage is low in many sections of the hedgerow. Native species present along the field edge include black cherry, black locust and tulip poplar.

The eastern edge of the property varies from having narrow hedgerow that follows close to the property boundary and extends offsite to a small forest patch that expands onto the property. The forest and hedgerow along this portion of the site contains a more native community that the western portion of the suite including slippery elm, sycamore, tulip poplar, red maple, black cherry and white oak. Numerous green ash trees, now dead, are also within this community. The shrub layer of the hedgerow and the forest area heavily impacted by invasive shrubs and vines. Multiflora rose, bush honeysuckle, privet, Japanese honeysuckle and Oriental bittersweet are very common.

The northern property boundary abuts another residential community. In this area the crop field abuts offsite lawn areas that contain scattered landscaping and gardens. In some instances it appears that the adjacent property owners have extended their lawn uses onto the subject property. The southern property boundary abuts the West Joppa Road right of way. Scattered evergreen screen plantings are present along this portion of the site.

A large 100 year floodplain is present on the site. The floodplain includes areas of natural overbank flows and a large backwater flood area that is caused by ponding behind the culvert under West Joppa Road. The floodplain extends across much of the road frontage and around the existing home.

A total of 25 specimen trees were originally identified on the plan. Since that time storm damage has impacted at least one of the trees. The location, size, species and conditions of the specimen trees have been approved as part of the Forest Stand Delineation.

The specimen tree to be impacted by the project is ST 12, a Norway spruce that is located along the shoulder of West Joppa Road. This 43 inch tree is in fair condition and has been impacted by trimming to maintain overhead lines that pass through the canopy.

Part F. Indication of Unwarranted Hardship in Accordance with Section 14-415 (d) of the Code.

Briefly describe how the land in question cannot yield a reasonable return if the requirements from which the special variance is requested is imposed and will deprive the petition of all beneficial use of his property.

The applicant is not seeking the variance based on deprivation of all beneficial uses.

Briefly describe how the plight of the petitioner is due to unique circumstances and not the general conditions in the neighborhood.

The plight of the petitions is due to the fact that the specimen tree to be impacted by the project is within close proximity to the road and will be impacted by required road widening. The location of the tree, the proposed road widening are unrelated to the general conditions of the neighborhood which would best be described as a medium density residential community.

Briefly describe how the special variance will not alter the essential character of the neighborhood.

The essential character of the surrounding neighborhood varies from medium density residential to the east and north to commercial and office to the south and west. The proposed road widening that will require the tree's removal will be in keeping with the standard road requirements for a County road. The proposed residential development that is proposed is in keeping with the adjacent residential properties as it will be developed in accordance with the County zoning and subdivision requirements. Notably, the current property use, as residential and agricultural is not in keeping with the current character of the neighborhood.

Part G. Other Special Variance Criteria Listed in Section 14-415 (e) of the Code

Briefly describe how the proposed project or activity will not adversely affect water quality both during construction and over the long term.

The proposed residential development does not require any wetland or stream impacts. There are no Forest Buffer impacts required for lot development. The project will convert a primarily agricultural property to a residential community that will include stormwater management facilities that will provide more functional water quality protection that the current property use. Further, the project proposes to provide 5.8 acres of reforestation within and adjacent to the floodplain/forest buffer to improve buffer function and water quality benefit.

During construction sediment and erosion controls will implemented to protect water quality. The proposed development plan will incorporate stormwater management facilities to treat run-off generated from impervious surfaces to provide long term protection of water quality.

Briefly describe how the variance does not arise from a conditions or circumstance which is the result of actions taken by the petitioner.

The petitioner took great care to preserve all of the 25 specimen trees spread throughout this property and will not impact any of the existing trees for new home construction or new roads to serve the proposed development. The only tree that will be impacted is the one located close to Joppa Road, where Baltimore County is requiring widening and sidewalk. The County's requirement to widen Joppa Road would be placed on any development of this property and is not specific to the actions being taken or proposed by the petitioner. The tree exists in this location and impacts cannot be avoided.

Briefly describe how the special variance, as granted, would be consistent with the spirit and intent of the Forest Conservation Regulations.

The Forest Conservation Regulations have been designed to balance reasonable development with goals of the forest resource protection. Granting of the special variance would be consistent with the spirit and intent of the Forest Conservation Regulations because the project does not propose to impact any forest and will retain all but one specimen tree on the property. The proposed project also includes 3.4 acres of forest conservation afforestation and 2.4 acres of forest buffer afforestation that will substantially increase forest cover on the site.

The proposed specimen tree impact is unavoidable due to the tree's location within proximity of the existing road and the requirement to widening the road for safety. Further, the specimen tree to be impacted is not native and is currently being trimmed as the result of overhead line maintenance.

In consideration of the unique attributes of the project site and the factors associate this variance request, granting of the variance is consistent with the goals of the regulations.

Part H. Supplemental Information.

Indicate any supplemental information included with the application.

___ Forest Stand Delineation
___ Forest Conservation Worksheet
_X_ Forest Conservation Plan - Preliminary
___ Forest Retention Investigation Report
_X_ Other (explain)

Forest Stand Delineation has been previously approved.

Part I. Additional Information.

Use this space to explain answers to any of the questions on this form in greater detail, or to provide any other information about the site or project pertinent to this variance request. Attach additional sheets if necessary.

Part J. Signatures

All persons have legal or equitable interest in the property must sign below. Unsigned applications will be returned to the applicant is incomplete.

I/We do solemnly declare and affirm under the penalties of perjury that the contents of this application are true and correct to the best of my/our knowledge, and that the application contains names and addresses of all persons having legal or equitable interest in the property.

JOHN A. OLSZEWSKI, JR.
County Executive

DAVID V. LYKENS, *Director*
Department of Environmental Protection and Sustainability

September 21, 2021

Mr. John P. Canoles
Eco-Science Professionals, Inc.
P.O. Box 5006
Glen Arm, MD 21057

Re: Greenspring Manor at 2310 West Joppa Road
Forest Conservation Variance
Tracking # 02-21-3518

Dear Mr. Canoles:

The Department of Environmental Protection and Sustainability (EPS) received an initial request for a variance from Baltimore County's Forest Conservation Law on July 30, 2021 pursuant to our design meeting of July 28, 2021. Revised plans further refining the water and sewer house connection designs in response to our August 11, 2021 comments were received on August 18, 2021. The variance seeks approval to remove Specimen Tree # 12, a non-native Norway spruce in fair condition, for the widening of West Joppa Road associated with a proposed 61-lot residential subdivision. This 43-inch (diameter at breast height) specimen tree has been heavily trimmed on one side due to its proximity to overhead utility pole wires. The variance application proposes no mitigation for removal of this specimen tree given that it is non-native.

The Director of EPS may grant a special variance to the Forest Conservation law in accordance with criteria outlined in Section 33-6-116 of the Baltimore County Code. There are six (6) criteria listed in Subsection 33-6-116(d) and (e) that shall be used to evaluate the variance request. One (1) of the three criteria under Subsection 33-6-116(d) must be met, and all three (3) of the criteria under Subsection 33-6-116(e) must be met, in order to approve the variance.

The first criterion (Subsection 33-6-116 (d)(1) of the Code) requires that the petitioner show that the land in question cannot yield a reasonable return if the requirement from which the special variance is requested is imposed and will deprive the petitioner of all beneficial use of his property. The applicant is not seeking the variance based on deprivation of all beneficial uses. Furthermore, a long-standing homestead-type residence exists on this property. Therefore, this criterion has not been met.

The second criterion (Subsection 33-6-116 (d)(2) of the Code) requires that the petitioner show that his/her plight is due to unique circumstances and not the general conditions in the neighborhood. Rather than the general conditions in the neighborhood, the petitioner's plight is due to the close proximity of the specimen tree to West Joppa Road, which must be

widened to meet the increased traffic resulting from the proposed 61-lot residential subdivision. Therefore, we find that this criterion has been met.

The third criterion (Subsection 33-6-116 (d)(3) of the Code) requires that the petitioner show that the special variance requested will not alter the essential character of the neighborhood. Removing the single specimen tree would not alter the character of the neighborhood. Furthermore, the tree would likely be removed by Baltimore County at some point due to its declining condition or eventual widening of Joppa Road as a necessary capital improvement project. Therefore, we find that this criterion has been met.

The fourth criterion (Subsection 33-6-116 (e)(1) of the Code) requires that the granting of the special variance will not adversely affect water quality. Removing the tree would not directly impact any wetland or stream. The development project related to this specimen tree removal will meet current water quality management requirements through environmental site design and proposes approximately 5.9 acres of afforestation within the floodplain and forest buffer. Therefore, we find that granting of the special variance will not adversely affect water quality and that this criterion has been met.

The fifth criterion (Subsection 33-6-116 (e)(2) of the Code) requires that the special variance request does not arise from a condition or circumstance which is the result of actions taken by the petitioner. The petitioner has not taken any actions necessitating this variance prior to its request. The tree has existed adjacent to West Joppa Road for years prior to this development proposal, and would likely be removed at some point regardless of the proposed development for the reasons cited above. Therefore, this criterion has been met.

The sixth criterion (Subsection 33-6-116 (e)(3) of the Code) requires that the Director of EPS find that the special variance, as granted, would be consistent with the spirit and intent of Article 33 of the Baltimore County Code. Permitting the removal of one specimen tree for the widening of West Joppa Road associated with a proposed residential subdivision would be consistent with the spirit and intent the Forest Conservation Law given that the development does not propose to impact forest and will retain all but one of the 27 specimen trees onsite. Additionally, 3.5 acres of forest conservation afforestation and 2.4 acres of forest buffer mitigation will be provided in and adjacent to the Forest Buffer Easement to comply with both the Forest Buffer Law and Forest Conservation Law. Therefore, this criterion has been met.

Based on our review, this Department finds that the required criteria have been met. Therefore, the requested variance is hereby approved in accordance with Section 33-6-116 of the Baltimore County Code with the following conditions:

1. Prior to issuance of any Baltimore County permit, high visibility fence shall be installed along the limit of disturbance (LOD) wherever the LOD is within 50 feet of the critical root zone of any specimen tree to remain, any Forest Conservation Easement, or Forest Buffer Easement. Installation of this protective fence shall be detailed on both the sediment control plan and final Forest Conservation Plan.

2. The following note must appear on all subsequent plans for this project:

   "A special variance was granted on September 21, 2021 to Baltimore County's Forest Conservation Law to allow critical impact to one specimen tree for the widening of West Joppa Road. Conditions were placed on this variance, including protection of the remaining specimen trees and forest resources."

It is the intent of this Department to approve this variance subject to the above conditions. Any changes to site layout may require submittal of revised plans and a new variance request. Moreover, a special variance to Baltimore County's Forest Conservation Law will be required for removal of any specimen trees shown to remain on this plan.

Please have the appropriate representative sign the statement on the following page and return a signed copy of this entire letter to this Department within 21 calendar days. Failure to return a signed copy may render this approval null and void, or may result in delays in the processing of plans for this project.

If you have any questions regarding this correspondence, please contact Mr. Michael Kulis at (410) 887-3980.

Sincerely yours,

David V. Lykens
Director

Subject: RE: 2310 Joppa Road; MDOT SHA Tracking 20APBA022XX; 36373

Nick,

This proposed development sits in an "F" traffic shed per Baltimore County Basic Service Map for Transportation. The signalized intersections in question are Falls & Joppa and Falls & Greenspring Valley, which are both intersections that are owned and maintained by the State Highway Administration (SHA), along with the traffic signal too being owned and maintained by SHA. The development calls for improvements along Joppa, which have been reviewed and approved by SHA. The letter from Lennart states that the improvements along Joppa enough to accommodate the generated volumes from the proposed site, and that the mitigation from the improvements result in net zero impact along the corridor.

The scope of the intersections in the traffic impact study are SHA intersections. We agree that the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection. With these statements, we request a copy of the traffic impact study and supplemental analysis be stamped and signed by a Professional Engineer. We do not have additional comments to offer. The development sits in a current LOS F traffic shed, and therefore, per Baltimore County Zoning Regulations Manual, 4A02.4.G.1, we defer the findings from Lenhart Traffic and SHA responses be subjected to review from the Zoning Commissioner to determine if this development would be eligible for a waiver based off the zoning regulations.

Point-by-Point Response Dated December 9, 2020
Baltimore County

The Revised TIA is approved, and no additional analysis is needed. An access permit will be required for all construction in the MDOT SHA right-of-way. Please see the attachment for the MDOT SHA recommended improvements and further guidance on plan submission requirements. Should another submission be made during the period when MDOT SHA employees are being required to telework, this submission must be made through the MDOT SHA Salesforce electronic submission portal located at the following link, https://mdotsha.force.com/accesspermit/login?ec=302&inst=1B&startURL=%2Faccesspermit. Please reference the MDOT SHA tracking number on any future submissions.

Please keep in mind that you can view the reviewer and project status via MDOT SHA's Access Management Division web page at http://www.roads.maryland.gov/pages/amd.aspx. If you have any questions, or require additional information, please contact Mr. Steve Autry via email at sautry@mdot.maryland.gov.

Sincerely,

Wendy Wolcott

2310 Joppa Road Development
MDOT SHA Tracking No: 20APBA022XX
Revised Traffic Impact Analysis (TIA) Revised December 7, 2020
Point-by-Point Response Dated December 9, 2020
Baltimore County

- The proposed 2310 Joppa Road development will be located on the north side of Joppa Road and consists of 62 detached single-family homes. The development will be accessed from a full-movement driveway along Joppa Road.

- The study analyzed the following intersections under existing, background, and future conditions:
  - MD 25 and Falls Road/Joppa Road
  - MD 25 and MD 130/Station Drive
  - MD 25 and MD 131
  - W. Joppa Road and Site Access

Based on the information provided in the Revised Traffic Impact Analysis (TIA), revised December 7, 2020 and Point-by-Point Response, dated December 9, 2020, MDOT SHA provides the following comments:

- Due to proposed changes to the MD 25 (Falls Road)/MD 25A/Joppa Road intersection and the close proximity to the I-695 and I-83 ramps, MDOT SHA contacted the Federal Highway Administration (FHWA) regarding the need for Interstate Access Point Approval (IAPA). The FHWA have confirmed that an IAPA is not required.
- Based on the auto turn template provided, EB Falls Rd. left turn path for lane 1 was not shown in the proposed condition. It appears that it will conflict with concrete median on north leg of the intersection. This will need to be addressed during the design phase.

An access permit would be required for all construction within MDOT SHA right-of-way. All MDOT SHA Policies, Standards, and Specifications must be followed when preparing the access permit plans for review, including, but not limited to the following documents:

- MDOT SHA Access Manual
- MDOT SHA Business Standards and Specifications
- MDOT SHA Accessibility Policy and Guidelines for Pedestrian Facilities
- MDOT SHA Bicycle Policy and Design Guidelines

The Access Management Plan Review Checklist must also be utilized in drafting the MDOT SHA improvement plans. Please include a copy of the completed checklist with each submittal. All of these documents along with additional guidance can be found on our web site at www.roads.maryland.gov under Business Center.

Towson, MD 21204

Dear Mr. Moxley:

Thank you for the opportunity to review the Development Plan for Greenspring Manor located on 2310 Joppa Rd. in Baltimore County. The Maryland Department of Transportation State Highway Administration (MDOT SHA) has reviewed the plan for the project listed below and is pleased to respond:

Greenspring Manor
PAI Number 08-0922
County Tracking Number MAJ-2021-00001
2310 Joppa Rd.
Baltimore County

The MDOT SHA has no objection to the Development Plan approval. We are currently reviewing plans for an Access Permit which is required for the proposed off site road improvements located at Falls Rd (MD 25) & Joppa Rd.. **All submission for this proposed off site road improvement must be made through the MDOT SHA Salesforce electronic submission portal link located at https://mdotsha.force.com/accesspermit/login?ec=302&inst=4v&startURL=%2Faccesspermit .** Please reference the SHA tracking number 20APBA022XX on future submissions. If you have any questions, or require additional information, please contact Mr. Steven Autry at 410-229-2335, by using our toll-free number in Maryland only at 1-800-735-2258 (x2335) or via email at sautry@mdot.maryland.gov.

Sincerely,

Teresa Eller, for

Dear Mr. Driban:

Thank you for the opportunity to review the Supplemental Analysis for 2310 Joppa Road Traffic Impact Study, dated January 18, 2022, prepared by Lenhart Traffic Consulting, Inc. for the proposed 2310 Joppa Road development in Baltimore County. The Maryland Department of Transportation State Highway Administration (MDOT SHA) has completed our review. The Supplemental Analysis is approved, and no additional analysis is needed.

2310 Joppa Road Development
MDOT SHA Tracking No: 20APBA022XX
Supplemental Analysis for 2310 Joppa Road Traffic Impact Study
Dated January 18, 2022
Baltimore County

MDOT SHA is not recommending the proposed improvements at the intersection of MD 25 and MD 130 based upon the comments and concerns expressed in the attachment. We continue to support the proposed improvements at the intersection of I-83, MD 25, and Joppa Road. This improvement will not only improve operations at this intersection but will reduce travel times along the corridor.

An access permit will be required for all construction in the MDOT SHA right-of-way. To initiate the plan review cycle toward the issuance of the access permit the design engineer must make an electronic submittal using the MDOT Salesforce link at https://mdotsha.force.com/accesspermit/login?ec=302&inst=4v&startURL=%2Faccesspermit. The plan submittal should include hydraulic computations, plans and all supporting documentation. Please utilize the MDOT SHA tracking number when making this submission.

All MDOT SHA Policies, Standards and Specifications must be followed when preparing the above plan submittal including but not limited to the following documents:

MDOT SHA Access Manual
MDOT SHA Business Standards and Specifications
MDOT SHA Bicycle Policy and Design Guidelines
MDOT SHA Accessibility Policy and Guidelines for Pedestrian Facilities

The Access Management Plan Review Checklist must be utilized in drafting the MDOT SHA Improvement Plans. Please include a copy of the completed checklist when making this submittal. All of these documents along with additional guidance can be found on our web site at www.roads.maryland.gov under Business Center.

If you have any questions or require additional information, please contact Ms. Teresa Eller via email at teller@mdot.maryland.gov .

2310 Joppa Road Development
MDOT SHA Tracking No: 20APBA022XX
Supplemental Analysis for 2310 Joppa Road Traffic Impact Study
Dated January 18, 2022
Baltimore County

- The proposed 2310 Joppa Road development will be located on the north side of Joppa Road and consists of 62 detached single-family homes. The development will be accessed from a full-movement driveway along Joppa Road.

- The study analyzed the following intersections under existing, background, and future conditions:
  - MD 25 and Falls Road/Joppa Road
  - MD 25 and MD 130/Station Drive
  - MD 25 and MD 131
  - W. Joppa Road and Site Access

Based on the information provided in the Supplemental Analysis for 2310 Joppa Road Traffic Impact Study, dated January 18, 2022, MDOT SHA provides the following comments:

1. The new lane will only hold 2 cars. The lane will get blocked, and people will not want to use the lane because it drops immediately. It does not seem a significant amount of capacity will be added.
2. The lane drop looks too small for the double left turn incoming volumes at MD 25 @ MD 130. A high volume of vehicles would have to merge into the lane drop.
3. Please consider looking at the intersection of MD 25 @ MD 131 (Seminary), which is a critical intersection, or the beltway for mitigation efforts.
4. The left turning path should be able to accommodate for the biggest trucks (WB40/WB50) regardless of the current truck restrictions. The turning path crosses the island even in the cut median, which is highlighted by the green line.
5. The island toward the north is planned to be reduced. However, the island at the south might also need to be reduced because the turning path crosses the shoulder and almost touches the median.

Mr. Mike Lenhart
Lenhart Traffic Consulting, Inc.
645 Baltimore Annapolis Boulevard, Suite 214
Severna Park MD 21146

Dear Mr. Lenhart:

Thank you for the opportunity to review the Traffic Impact Study (TIS), prepared by Lenhart Traffic Consulting, Inc. for the proposed development at 2310 Joppa Road in Baltimore County. The Maryland Department of Transportation State Highway Administration (MDOT SHA) has completed our review of the point-by-point letter for the project listed below, and our comments are also below.

2310 Joppa Road
MDOT SHA Tracking No: 20APBA022XX
Point-by-Point Response Letter Dated April 19, 2022

The proposed 2310 Joppa Road development is to be located on the north side of Joppa Road. The property is currently undeveloped and is proposed to be developed with 62 single-family detached units. The development will be accessed from a full movement driveway along Joppa Road.

As previously stated, MDOT SHA does not approve the proposed improvement at MD 25 and MD 130.

As you know, SimTraffic was used to analyze the queuing and travel time for the MD 25 corridor between Joppa Road and MD 131. Exhibit 8c of the December 9, 2020 submittal shows 95th percentile queuing results. The queue lengths along MD 25 decrease at each intersection from the background to total (with the proposed improvements) conditions.

During the morning peak hour under background conditions, the northbound travel time along MD 25 is 186.3 seconds and the southbound travel time is 216.7 seconds. With the proposed improvements at the intersection of MD 25 and Joppa Road, the travel time decreases to 141.0 seconds in the northbound direction and 208.1 seconds in the southbound direction. During the evening peak hour under background conditions, the northbound travel time along MD 25 is 291.9 seconds and the southbound travel time is 142.9 seconds. With the proposed improvements at the intersection of MD 25 and Joppa Road, the travel time decreases to 260.1 seconds in the northbound direction and 143.7 seconds in the southbound direction.

The analysis contained in the report show that the intersections do not operate with failing levels-of-service. Furthermore, the improvements to MD 25 at Joppa Road will improve the operation of the entire MD 25 corridor from Joppa Road to MD 131.

We excerpted the comments above from your December 9, 2020 submittal in support of our decision to not approve the proposed improvement at MD 25 and MD 130. We continue to support the proposed improvements at the intersection of I-83, MD 25, and Joppa Road.

An access permit will be required for all construction in the MDOT SHA right-of-way. To initiate the plan review cycle toward the issuance of the access permit the design engineer must make an electronic submittal using the MDOT Salesforce link at https://mdotsha.force.com/accesspermit/login?ec=302&inst=4v&startURL=%2Faccesspermit. The plan submittal should include hydraulic computations, plans and all supporting documentation. Please utilize the MDOT SHA tracking number when making this submission. Keep in mind that you can view the reviewer and project status via SHA Access Management Division web page at http://www.roads.maryland.gov/pages/amd.aspx.

All MDOT SHA Policies, Standards and Specifications must be followed when preparing the above plan submittal including but not limited to the following documents:

MDOT SHA Access Manual
MDOT SHA Business Standards and Specifications
MDOT SHA Bicycle Policy and Design Guidelines
MDOT SHA Accessibility Policy and Guidelines for Pedestrian Facilities

The Access Management Plan Review Checklist must be utilized in drafting the MDOT SHA Improvement Plans. Please include a copy of the completed checklist when making this submittal. All of these documents along with additional guidance can be found on our web site at www.roads.maryland.gov under Business Center.

Please note, if this project has not obtained an MDOT SHA access permit and begun construction of the required improvements within five years of this approval, extension of the permit may be subject to the submission of an updated traffic impact analysis in order for MDOT SHA to determine whether the proposed improvements remain valid or if additional improvements will be required of the development. If you have any questions or require additional information, please contact Ms. Teresa Eller via email at teller@mdot.maryland.gov .

Sincerely,

Wendy Wolcott

DEVELOPER'S EXHIBIT
22

June 10, 2022

Mr. Nick Driban
Lenhart Traffic Consulting, Inc.
645 Baltimore Annapolis Boulevard, Suite 214
Severna Park MD 21146

Dear Mr. Driban.

Thank you for your email regarding the proposed development at 2310 Joppa Road in Baltimore County. This letter provides additional follow-up to our May 9, 2022, letter and our recent meeting regarding the project listed below.

2310 Joppa Road
MDOT SHA Tracking No: 20APBA022XX

In your email, you requested confirmation of the proposed MD 25 corridor retiming, including the intersection of MD 25 and MD 130, to maximize the benefit of the physical improvements proposed to the intersection of MD 25 and Joppa Road. It is standard procedure for the Maryland Department of Transportation State Highway Administration (MDOT SHA) to retime traffic signals when geometric improvements are made. In this case, since the signal at MD 25 and Joppa Road functions in a coordinated system with the signals along MD 25 at MD 130 and at MD 131, the entire system will be retimed to reduce delay at the intersections and maximize throughput along MD 25. The signal timing will be reviewed and updated when the geometric improvements are complete.

As you noted, the proposed improvements to the intersection of MD 25 and Joppa Road, which include an additional lane on each of the side-street approaches, will reduce the amount of green time required for the side streets and allow additional green time to be allocated to the prevailing mainline (north- and southbound) traffic along MD 25 at Joppa Road. The signal timing will also need to be adjusted at the adjacent intersections with MD 130 and MD 131 in order to maintain coordination and accommodate the enhanced platooning of mainline traffic along MD 25 as a result of the Joppa Road intersection improvement.

For the reasons previously stated, MDOT SHA does not approve the geometric improvement that was proposed at MD 25 and MD 130. The analyses contained in the report show that the intersections do not operate with failing levels-of-service. Additionally, the improvements to MD 25 at Joppa Road will improve the operation of the entire MD 25 corridor from Joppa Road to MD 131.

An access permit will be required for all construction in the MDOT SHA right-of-way. To initiate the plan review cycle toward the issuance of the access permit the design engineer must make an electronic submittal using the MDOT Salesforce link at https://mdotsha.force.com/accesspermit/login?ec=302&inst=4v&startURL=%2Faccesspermit. The plan submittal should include hydraulic computations, plans and all supporting documentation. Please utilize the MDOT SHA tracking number when making this submission. Keep in mind that you can view the reviewer and project status via SHA Access Management Division web page at http://www.roads.maryland.gov/pages/amd.aspx.

All MDOT SHA Policies, Standards and Specifications must be followed when preparing the above plan submittal including, but not limited to, the following documents:

MDOT SHA Access Manual
MDOT SHA Business Standards and Specifications
MDOT SHA Bicycle Policy and Design Guidelines
MDOT SHA Accessibility Policy and Guidelines for Pedestrian Facilities

The Access Management Plan Review Checklist must be utilized in drafting the MDOT SHA Improvement Plans. Please include a copy of the completed checklist when making this submittal. All of these documents along with additional guidance can be found on our web site at www.roads.maryland.gov under Business Center.

Please note, if this project has not obtained an MDOT SHA access permit and begun construction of the required improvements within five years of this approval, extension of the permit may be subject to the submission of an updated traffic impact analysis in order for MDOT SHA to determine whether the proposed improvements remain valid or if additional improvements will be required of the development. If you have any questions or require additional information, please contact Ms. Teresa Eller via email at teller@mdot.maryland.gov .

C. Nick Driban, P.E., PTOE
Senior Traffic Engineer

Mr. Driban has 15 years of experience in traffic engineering for various transportation planning, traffic modeling and simulation, traffic operations and safety analysis, traffic impact study, and data collection projects. Mr. Driban has performed these services for clients around the country and throughout Maryland, including Baltimore County and the Maryland State Highway Administration. In addition, Mr. Driban has provided expert witness testimony on traffic and transportation issues before the Montgomery County Zoning Hearing Examiner, City of Annapolis Board of Appeals, Maryland Tax Court, as well as the Taneytown Board of Zoning Appeals, and has presented testimony on these issues before the Prince George's County Planning Board, Charles County Planning Commission, and St. Mary's County Planning Commission, among others. His relevant experience includes:

SHA Access Management Division - Traffic Engineer

As an employee of the Maryland State Highway Administration's (SHA) Access Management Division, Mr. Driban was responsible for reviewing Traffic Impact Studies (TIS) and development plans throughout the State to determine compliance with the Maryland State Highway *Access Manual*. In this role Mr. Driban coordinated closely with local agency staff. Mr. Driban's primary responsibility was to review all Traffic Impact Studies to confirm that appropriate assumptions were used and provide guidance on required mitigation. Mr. Driban served as the primary point of contact in coordinating TIS reviews throughout SHA, and was responsible for providing comments to and coordinating with developers' engineers. Mr. Driban was also responsible for reviewing plans for new developments to provide recommendations related to access management.

SHA Districts 3, 4, 5, and 7 Traffic Engineering Services - Project Engineer

Mr. Driban has worked on hundreds of tasks to provide traffic engineering services for SHA on an as-needed basis throughout the state of Maryland, including within Baltimore County. He has prepared traffic operations and safety studies, including numerous traffic impact studies for rural, small-town, and urban areas throughout Maryland. Mr. Driban's assignments have included traffic impact studies, crash analysis and safety studies, pedestrian and bicycle facility evaluations, traffic signal warrant studies, access management evaluations, and signal timing and phasing analyses.

Montgomery County DOT Traffic Engineering and Operations Consulting Services - Task Manager

Mr. Driban managed traffic engineering tasks as part of back-to-back on-call contracts, including analyzing and recommending alternatives to improve pedestrian, bicycle, transit and vehicular operations and safety throughout Montgomery County, MD. Mr. Driban was responsible for overseeing traffic volume data collection, highway capacity analyses using an array of traffic software packages, conducting and reviewing traffic impact studies, corridor studies, safety studies, alternatives development, and/or conceptual design on nearly 50 tasks.

Section 1 Introduction

1.1 Project Description

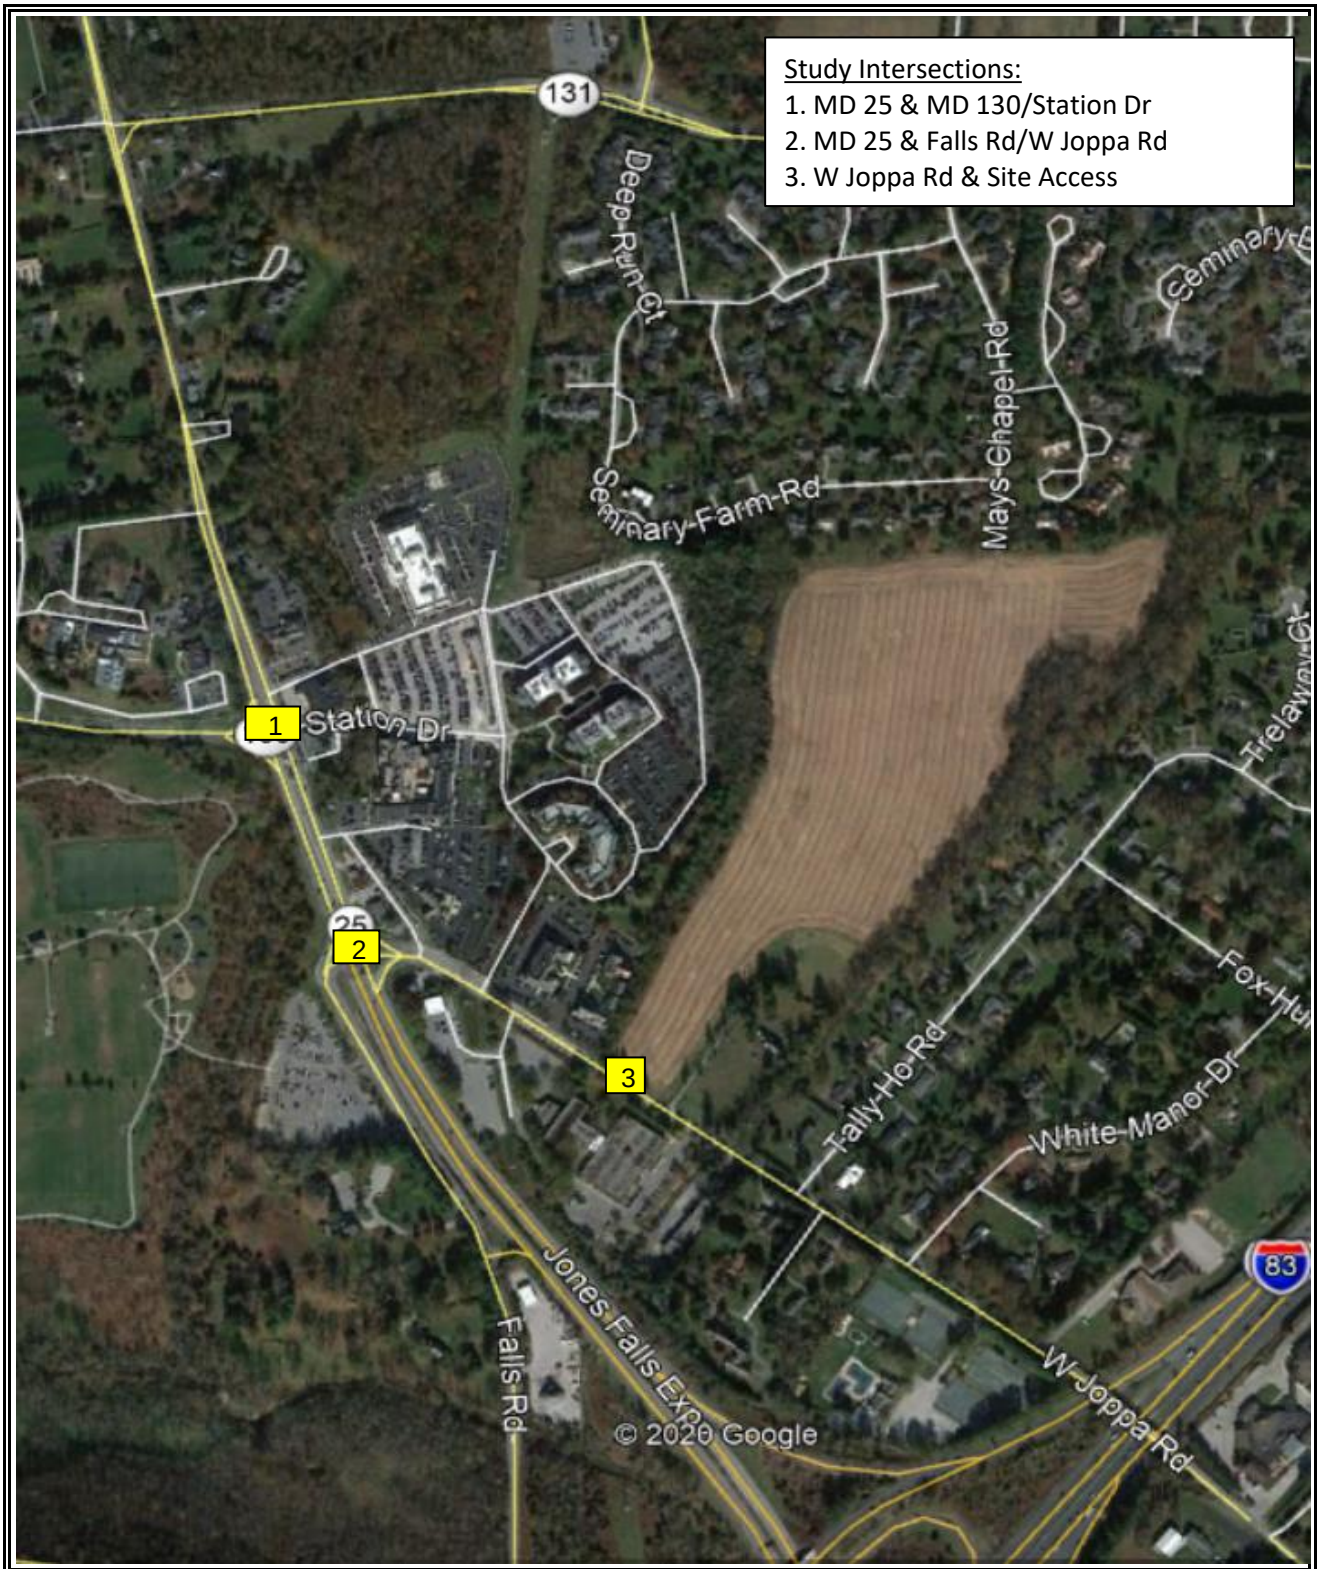
This Traffic Impact Analysis was prepared for the proposed 2310 Joppa Road development to be located on the north side of Joppa Road, as shown on **Exhibit 1**. The property is currently undeveloped and is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road.

This revised Traffic Impact Analysis (TIA) was prepared to propose additional improvements at the intersection of MD 25 & W. Joppa Road / Falls Road. The original Traffic Impact Analysis proposed a modification to the signal phasing along with changes to the existing lane use. This revised TIA proposed to retain the existing signal phasing, but widen the east leg (W. Joppa Road) and the west leg (Falls Road) to provide additional approach lanes on each leg.

1.2 Scope of Study

This traffic study was conducted in accordance with the requirements of Baltimore County. The Baltimore County 2020 Basic Services Transportation Map indicates the site is located within a Level-of-Service (LOS) "F" zone. The intersections of MD 25 & MD 130/Station Drive and MD 25 & Falls Road/Joppa Road are individually shown with a LOS "F".

A special variance can be granted pursuant to Article 4A02.3.G of the Baltimore County Zoning Regulations if the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal.



Traffic Impact Analysis	Site Location Map	**Exhibit 1**
LENHART TRAFFIC CONSULTING, INC. 645 BALTIMORE ANNAPOLIS BLVD, SUITE 214 SEVERNA PARK, MD 21146 www.lenharttraffic.com		

Section 2 Existing Conditions

2.1 Description of Roadway Network

The key roads in the study area are:

- MD 25 is a four lane (two in each direction) roadway with a posted speed limit of 40 MPH.
- Joppa Road is a two lane (one in each direction) roadway with a posted speed limit of 30 MPH.

2.2 Existing Lane Configurations

The Existing Lane Use & Traffic Control Devices are shown on **Exhibit 2**.

2.3 Existing Traffic Counts

Peak Hour Traffic counts are shown on **Exhibit 3**. The existing intersections were evaluated using the Critical Lane Volume (CLV) methodology and the results are shown on Exhibit 8.

Baltimore County staff provided a traffic count for the intersection of MD 25 & Falls Road/Joppa Road. This count has been utilized throughout the study and is dated February 19, 2020. A copy of the provided count is included in Appendix A.

Section 3 Background Conditions

3.1 Background Developments

The Baltimore County Land Management Development Mapping Tool was used to identify background developments in the project vicinity, however no approved developments were determined to be within the project vicinity.

3.2 Annual Growth / Background Traffic Volumes

An annual growth rate of 1.5% was applied for three years to the study intersections. **Exhibit 4** shows the resulting background traffic volumes with the growth applied at each study area intersection.

The background peak hour volumes were evaluated using the Critical Lane Volume (CLV) and Highway Capacity Software (HCS) methodology and the results are shown on Exhibit 8

1.5%	Growth Rate
3	Years of Growth
1.0457	Total Growth

Section 4 Total Conditions

4.1 Site Trip Generation

The site is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road. The trip generation for the site is detailed on **Exhibit 5**. Trip generation rates and totals are based on the ITE Trip Generation Manual, 10th Edition.

4.2 Site Trip Distribution & Trip Assignment

The proposed trip assignment for the site is shown on **Exhibit 6**.

4.3 Total Traffic Volumes

The total peak hour volumes are shown on **Exhibit 7**.

4.4 Projected Level of Service

The total traffic volumes shown on Exhibit 7 were evaluated using the methodology and the results are shown on **Exhibit 8a**. As shown, all intersections will operate with a LOS "B" or better with the exception of Intersection 2, which operates with a LOS "E". It should be noted that the proposed improvement (discussed below) will improve the CLV to an LOS "D". CLV worksheets have been included in Appendix B.

The results of the HCM analyses are shown on **Exhibit 8b**. As shown, all intersections will operate with a LOS "D" or better. The HCM worksheets have been included in Appendix B.

Exhibit 8c shows the SimTraffic queuing analysis results. All 95th percentile queues for movements impacted by the development have adequate storage, with the exception of the northbound left along MD 25 at the intersection with MD 130 during the evening peak hour. It should be noted that the proposed development increases the volume for this movement by only 0.14%. The HCS SimTraffic worksheets have been included in Appendix B.

The impact on Intersection 1 should be considered negligible and while the impact on Intersection 2 should also be considered negligible, a potential improvement has been identified that would mitigate the impact of the development and improve the

CLV from background to total conditions at Intersection 2. The improvement consists of widening the east and west legs to include an additional left turn lane at each approach. The road improvements are shown on the attached concept plan on **Exhibits 9a and 9b.**

Section 5 Conclusions / Recommendations

5.1 Results of Analysis

This Traffic Impact Analysis was prepared for the proposed 2310 Joppa Road development to be located on the north side of Joppa Road. The property is currently undeveloped and is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road.

Based on the analyses contained in this report:

- The Baltimore County 2020 Basic Services Transportation Map indicates the site is located within a Level-of-Service (LOS) "F" zone. The intersections of MD 25 & MD 130/Station Drive and MD 25 & Falls Road/Joppa Road are individually shown with a LOS "F".

- The results of the CLV analysis indicate that the study intersections actually operate at a LOS "E" or better.
    - The intersection of MD 25 & MD 130/Station Drive will operate with a LOS "B" during the morning and evening peak hour. The proposed development has an impact of 0.28% on this intersection.
    - The intersection of MD 25 & Falls Road/Joppa Road will operate with a LOS "E" during the morning peak hour and LOS "D" during the evening peak hour. The proposed development has an impact of only 1.13% on this intersection.
        - With the proposed improvement, the intersection of MD 25 & Falls Road/Joppa Road will operate with a LOS "D" during both the morning and evening peak hours.
    - The intersection of Joppa Road & Site Access will operate with a LOS "B".

- The results of the HCS analysis indicate that all intersections will operate with a LOS "D" or better during both the morning and evening peak hours with the proposed improvement. There is a negligible increase in the overall intersection delay at the study intersections from background to total conditions.

Using SHA's Critical Lane Volume methodology, this analysis indicates that the study intersections operate significantly better than the LOS "F" shown in the 2020 Basic Services Transportation Map with or without this development. Additionally, the proposed development has a negligible impact on the intersections along MD 25. However, in order to address the findings of the Basic Services Map, this TIA includes an expanded improvement as discussed in Section 4 above. The road improvements are shown on the attached concept plan on Exhibits 9a and 9b, and include widening the east and west legs of the intersection to provide an additional lane on each approach. These expanded improvements would mitigate 931% of the site impacts in the AM peak hour and 819% of the site impacts in the PM peak hour.

Appendix B to this report also contains Highway Capacity Manual (HCM) reports of the intersections including an evaluation of the proposed improvement. The HCM reports also indicate that the intersections are currently operating at acceptable levels of service ("D" or better). In addition, the HCM analyses of the proposed improvements also indicates a reduction of the overall intersection delays that are 1364% mitigation of the site impacts in the AM peak and 780% mitigation of the site impacts in the PM peak. This is commensurate with the improvements identified in the CLV analyses above.

The applicant will be submitting an application for a Special Variance through Baltimore County to allow this development to proceed based on our proposal for improvements that will substantially over-mitigate the traffic impacts. The code section related to this finding states that, "*The demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or the standard is not relevant to the development proposal*." Based on the proposed improvements, the traffic conditions will be better with the approval of the project and the associated improvements, than what would be expected to occur if the project is not approved.

It is also important to note that in reviewing the historical imagery in this area, it appears that no significant improvements have been provided in this area in at least 25 to 30 years, and there are currently no improvements programmed. The attached analyses show that the granting of the special variance would improve traffic conditions based on the CLV and HCM methodology over what would occur otherwise without the granting of the special variance.

Section 1 Introduction

1.1 Project Description

This Traffic Impact Analysis was prepared for the proposed 2310 Joppa Road development to be located on the north side of Joppa Road, as shown on **Exhibit 1**. The property is currently undeveloped and is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road.

This revised Traffic Impact Analysis (TIA) was prepared to propose additional improvements at the intersection of MD 25 & W. Joppa Road / Falls Road. The original Traffic Impact Analysis proposed a modification to the signal phasing along with changes to the existing lane use. This revised TIA proposed to retain the existing signal phasing, but widen the east leg (W. Joppa Road) and the west leg (Falls Road) to provide additional approach lanes on each leg.

1.2 Scope of Study

This traffic study was conducted in accordance with the requirements of Baltimore County. The Baltimore County 2020 Basic Services Transportation Map indicates the site is located within a Level-of-Service (LOS) "F" zone. The intersections of MD 25 & MD 130/Station Drive and MD 25 & Falls Road/Joppa Road are individually shown with a LOS "F".

A special variance can be granted pursuant to Article 4A02.3.G of the Baltimore County Zoning Regulations if the demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or that the standard is not relevant to the development proposal.

Section 2 Existing Conditions

2.1 Description of Roadway Network

The key roads in the study area are:

- MD 25 is a four lane (two in each direction) roadway with a posted speed limit of 40 MPH.
- Joppa Road is a two lane (one in each direction) roadway with a posted speed limit of 30 MPH.

2.2 Existing Lane Configurations

The Existing Lane Use & Traffic Control Devices are shown on **Exhibit 2**.

2.3 Existing Traffic Counts

Peak Hour Traffic counts are shown on **Exhibit 3**. The existing intersections were evaluated using the Critical Lane Volume (CLV) methodology and the results are shown on Exhibit 8.

Baltimore County staff provided a traffic count for the intersection of MD 25 & Falls Road/Joppa Road. This count has been utilized throughout the study and is dated February 19, 2020. A copy of the provided count is included in Appendix A.

Exhibit 3

Section 3 Background Conditions

3.1 Background Developments

The Baltimore County Land Management Development Mapping Tool was used to identify background developments in the project vicinity, however no approved developments were determined to be within the project vicinity.

3.2 Annual Growth / Background Traffic Volumes

An annual growth rate of 1.5% was applied for three years to the study intersections. **Exhibit 4** shows the resulting background traffic volumes with the growth applied at each study area intersection.

The background peak hour volumes were evaluated using the Critical Lane Volume (CLV) and Highway Capacity Software (HCS) methodology and the results are shown on Exhibit 8

1.5%	Growth Rate
3	Years of Growth
1.0457	Total Growth

Section 4 Total Conditions

4.1 Site Trip Generation

The site is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road. The trip generation for the site is detailed on **Exhibit 5**. Trip generation rates and totals are based on the ITE Trip Generation Manual, 10th Edition.

4.2 Site Trip Distribution & Trip Assignment

The proposed trip assignment for the site is shown on **Exhibit 6**.

4.3 Total Traffic Volumes

The total peak hour volumes are shown on **Exhibit 7**.

4.4 Projected Level of Service

The total traffic volumes shown on Exhibit 7 were evaluated using the methodology and the results are shown on **Exhibit 8a**. As shown, all intersections will operate with a LOS "B" or better with the exception of Intersection 2, which operates with a LOS "E". It should be noted that the proposed improvement (discussed below) will improve the CLV to an LOS "D". CLV worksheets have been included in Appendix B.

The results of the HCM analyses are shown on **Exhibit 8b**. As shown, all intersections will operate with a LOS "D" or better. The HCM worksheets have been included in Appendix B.

Exhibit 8c shows the SimTraffic queuing analysis results. All 95th percentile queues for movements impacted by the development have adequate storage, with the exception of the northbound left along MD 25 at the intersection with MD 130 during the evening peak hour. It should be noted that the proposed development increases the volume for this movement by only 0.14%. The HCS SimTraffic worksheets have been included in Appendix B.

The impact on Intersection 1 should be considered negligible and while the impact on Intersection 2 should also be considered negligible, a potential improvement has been identified that would mitigate the impact of the development and improve the

CLV from background to total conditions at Intersection 2. The improvement consists of widening the east and west legs to include an additional left turn lane at each approach. The road improvements are shown on the attached concept plan on **Exhibits 9a and 9b.**

Section 5 Conclusions / Recommendations

5.1 Results of Analysis

This Traffic Impact Analysis was prepared for the proposed 2310 Joppa Road development to be located on the north side of Joppa Road. The property is currently undeveloped and is proposed to be developed with 62 single-family detached units. The development will be accessed from a full-movement driveway along Joppa Road.

Based on the analyses contained in this report:

- The Baltimore County 2020 Basic Services Transportation Map indicates the site is located within a Level-of-Service (LOS) "F" zone. The intersections of MD 25 & MD 130/Station Drive and MD 25 & Falls Road/Joppa Road are individually shown with a LOS "F".

- The results of the CLV analysis indicate that the study intersections actually operate at a LOS "E" or better.
    - The intersection of MD 25 & MD 130/Station Drive will operate with a LOS "B" during the morning and evening peak hour. The proposed development has an impact of 0.28% on this intersection.
    - The intersection of MD 25 & Falls Road/Joppa Road will operate with a LOS "E" during the morning peak hour and LOS "D" during the evening peak hour. The proposed development has an impact of only 1.13% on this intersection.
        - With the proposed improvement, the intersection of MD 25 & Falls Road/Joppa Road will operate with a LOS "D" during both the morning and evening peak hours.
    - The intersection of Joppa Road & Site Access will operate with a LOS "B".

- The results of the HCS analysis indicate that all intersections will operate with a LOS "D" or better during both the morning and evening peak hours with the proposed improvement. There is a negligible increase in the overall intersection delay at the study intersections from background to total conditions.

Using SHA's Critical Lane Volume methodology, this analysis indicates that the study intersections operate significantly better than the LOS "F" shown in the 2020 Basic Services Transportation Map with or without this development. Additionally, the proposed development has a negligible impact on the intersections along MD 25. However, in order to address the findings of the Basic Services Map, this TIA includes an expanded improvement as discussed in Section 4 above. The road improvements are shown on the attached concept plan on Exhibits 9a and 9b, and include widening the east and west legs of the intersection to provide an additional lane on each approach. These expanded improvements would mitigate 931% of the site impacts in the AM peak hour and 819% of the site impacts in the PM peak hour.

Appendix B to this report also contains Highway Capacity Manual (HCM) reports of the intersections including an evaluation of the proposed improvement. The HCM reports also indicate that the intersections are currently operating at acceptable levels of service ("D" or better). In addition, the HCM analyses of the proposed improvements also indicates a reduction of the overall intersection delays that are 1364% mitigation of the site impacts in the AM peak and 780% mitigation of the site impacts in the PM peak. This is commensurate with the improvements identified in the CLV analyses above.

The applicant will be submitting an application for a Special Variance through Baltimore County to allow this development to proceed based on our proposal for improvements that will substantially over-mitigate the traffic impacts. The code section related to this finding states that, "*The demand or impact of the development proposed will be less than that assumed by the district standard that would otherwise restrict or prohibit the development, or the standard is not relevant to the development proposal*." Based on the proposed improvements, the traffic conditions will be better with the approval of the project and the associated improvements, than what would be expected to occur if the project is not approved.

It is also important to note that in reviewing the historical imagery in this area, it appears that no significant improvements have been provided in this area in at least 25 to 30 years, and there are currently no improvements programmed. The attached analyses show that the granting of the special variance would improve traffic conditions based on the CLV and HCM methodology over what would occur otherwise without the granting of the special variance.

SB Travel Time	216 Seconds	208 Seconds	4%
			Avg AM Corridor Improvement = 14%

Evening Peak Period	Background Conditions	Total Conditions (With Dev & Imp's)	Percent Improvement
NB Travel Time	291 Seconds	260 Seconds	10%
SB Travel Time	143 Seconds	143 Seconds	0%
			Avg PM Corridor Improvement = 5%

Notes: 1. Per the Maryland State Highway Administration, "The intersections of MD 25 at Joppa Road, MD 25 at MD 130, and MD 25 at MD 131 operate together in a system. All three intersections should be analyzed using the existing system timing. Existing Synchro Files can be obtained from OOTS."

2. Synchro files were obtained from OOTS and were utilized to evaluate the corridor as a whole, with and without the proposed improvements at the intersection of MD 25 & Joppa Road. The results, above, were submitted to SHA and reviewed as part of the approved Traffic Impact Study, dated December 7, 2020.

Subject: RE: 2310 Joppa Road; MDOT SHA Tracking 20APBA022XX; 36373

Nick,

This proposed development sits in an "F" traffic shed per Baltimore County Basic Service Map for Transportation. The signalized intersections in question are Falls & Joppa and Falls & Greenspring Valley, which are both intersections that are owned and maintained by the State Highway Administration (SHA), along with the traffic signal too being owned and maintained by SHA. The development calls for improvements along Joppa, which have been reviewed and approved by SHA. The letter from Lennart states that the improvements along Joppa enough to accommodate the generated volumes from the proposed site, and that the mitigation from the improvements result in net zero impact along the corridor.

The scope of the intersections in the traffic impact study are SHA intersections. We agree that the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection. With these statements, we request a copy of the traffic impact study and supplemental analysis be stamped and signed by a Professional Engineer. We do not have additional comments to offer. The development sits in a current LOS F traffic shed, and therefore, per Baltimore County Zoning Regulations Manual, 4A02.4.G.1, we defer the findings from Lenhart Traffic and SHA responses be subjected to review from the Zoning Commissioner to determine if this development would be eligible for a waiver based off the zoning regulations.

Caution: External Email

Adam,

Hope this is what you are looking for:

While the proposed development is located within a failing traffic shed, the proposed improvements associated with the traffic impact study will mitigate the increased traffic generated by the proposed development. Any questions, let us know.

Mike Filsinger, P.E., Chief
Division of Traffic Engineering

Hi everyone,

With our hearing now approaching we wanted to follow up with each of you to see if you would like to meet one more time (likely virtually) or have any additional questions or comments about the plan. If possible we would like to get on your calendars for some time next week so we can talk through any issues and make sure we are doing everything we can to address any concerns you may have.

If you are available and would like to meet please let us know and we will get something scheduled.

Thank you for continuing to work with us throughout this process.

Baltimore County, Maryland

MASTER PLAN 2020

Goals of Master Plan 2020

To promote policies and actions resulting in a safe, sustainable environment for future generations, the County Council in partnership with the citizens of Baltimore County, Maryland hereby adopt this Master Plan 2020.

Goal One: Continue the Success of Growth Management

- Direct the future growth within the Urban-Rural Demarcation Line (URDL)
- Protect and enhance Community Conservation Areas
- Promote redevelopment with an emphasis on ailing commercial or industrial properties
- Develop compact, mixed-use, transit-oriented, and walkable neighborhoods
- Advance economic well-being by promoting a high quality labor force
- Provide a mixture of housing types for an emerging diversity of residents
- Support quality public schools to enhance communities
- Prioritize infrastructure improvements via the Capital Improvement Program to endorse sustainable development
- Protect the character and economic vitality of the rural communities

Goal Two: Improve the Built Environment

- Provide adequate open space and recreational opportunities and increase connections to nature by linking open spaces and parks
- Invest in public grounds by tree planting, buffer conservation and habitat restoration
- Expand and deliver multi-modal transportation services
- Reduce pollutant loadings of runoff with enhanced stormwater management
- Meet desire for green communities by providing regulatory incentives
- Ensure integration between regulations and sustainability programs such as LEED

Goal Three: Strengthen Resource Conservation and Protection

- Protect health of the natural environment and maintain a valuable biodiversity
- Restore ecosystems and encourage fair, efficient use of natural resources
- Preserve cultural assets to establish a tangible sense of community
- Nurture farming activities and importance of the agricultural industry
- Conserve rural characteristics and scenic vistas

can be found within the *Towson Urban Area* section of the plan.

Owings Mills Growth Area – The last of the originally designated growth areas. See the *Owing Mills Growth Area* section for more information.

Middle River Redevelopment Area – The newest designated growth area. Details are provided in the *Middle River Redevelopment Area* section in the plan.

Employment Center – These areas generally consist of a variety of commercial uses predominantly employment-oriented, some with retail and housing. They may contain heavy industrial uses as well. These areas include CEAs, CRDs, and strip commercial areas. The preservation of family-supporting wage employment is the primary goal.

Proposed Land Use

The Proposed Land Use Map provides general recommendations for land use, based upon the policies provided in *Master Plan 2020*. The map is conceptual and general, and is intended to reflect land use patterns and support the land use objectives of *Master Plan 2020*, rather than identify land use of individual properties or parcels. The use of transects, and "T-zones", is designed to support compact mixed-use communities, while maintaining the stability of existing community conservation areas (Map 5). The proposed land use map will provide general direction for county land use decisions, and may be amended as needed.

Transect-Based Planning for the Built Environment

A "transect" of nature, first conceived by Alexander Von Humboldt at the close of the 18th century, is a geographical cross-section of a region intended to reveal a sequence of environments. Originally, it was used to analyze natural ecologies, showing varying characteristics through different zones such as shores, wetlands, plains and uplands. It helps study the many elements that contribute to habitats where certain plants and animals thrive in symbiotic relationships to the minerals and microclimate.

This same system can be used to demonstrate different human habitats. Some individuals prefer living on farms while others prefer living in cities. Before the automobile, American development patterns were walkable, and transects within towns and city neighborhoods reflected a variety of development patterns and uses. These degrees of urbanism are represented in a rural-to-urban transect has been developed which provides six "Transect Zones" (T-zones) for application on the proposed land use map.

The transect, as a framework, identifies a range of habitats from the most natural to the most urban (Map 5). Its continuum, when subdivided, lends itself to the creation of zoning categories. These categories include standards that encourage diversity. The standards overlap, reflecting the successional pattern of development and natural ecosystems. The transect thereby integrates environmental and zoning methodologies, enabling the design of compact, mixed-use, walkable communities that support the viability of natural ones.

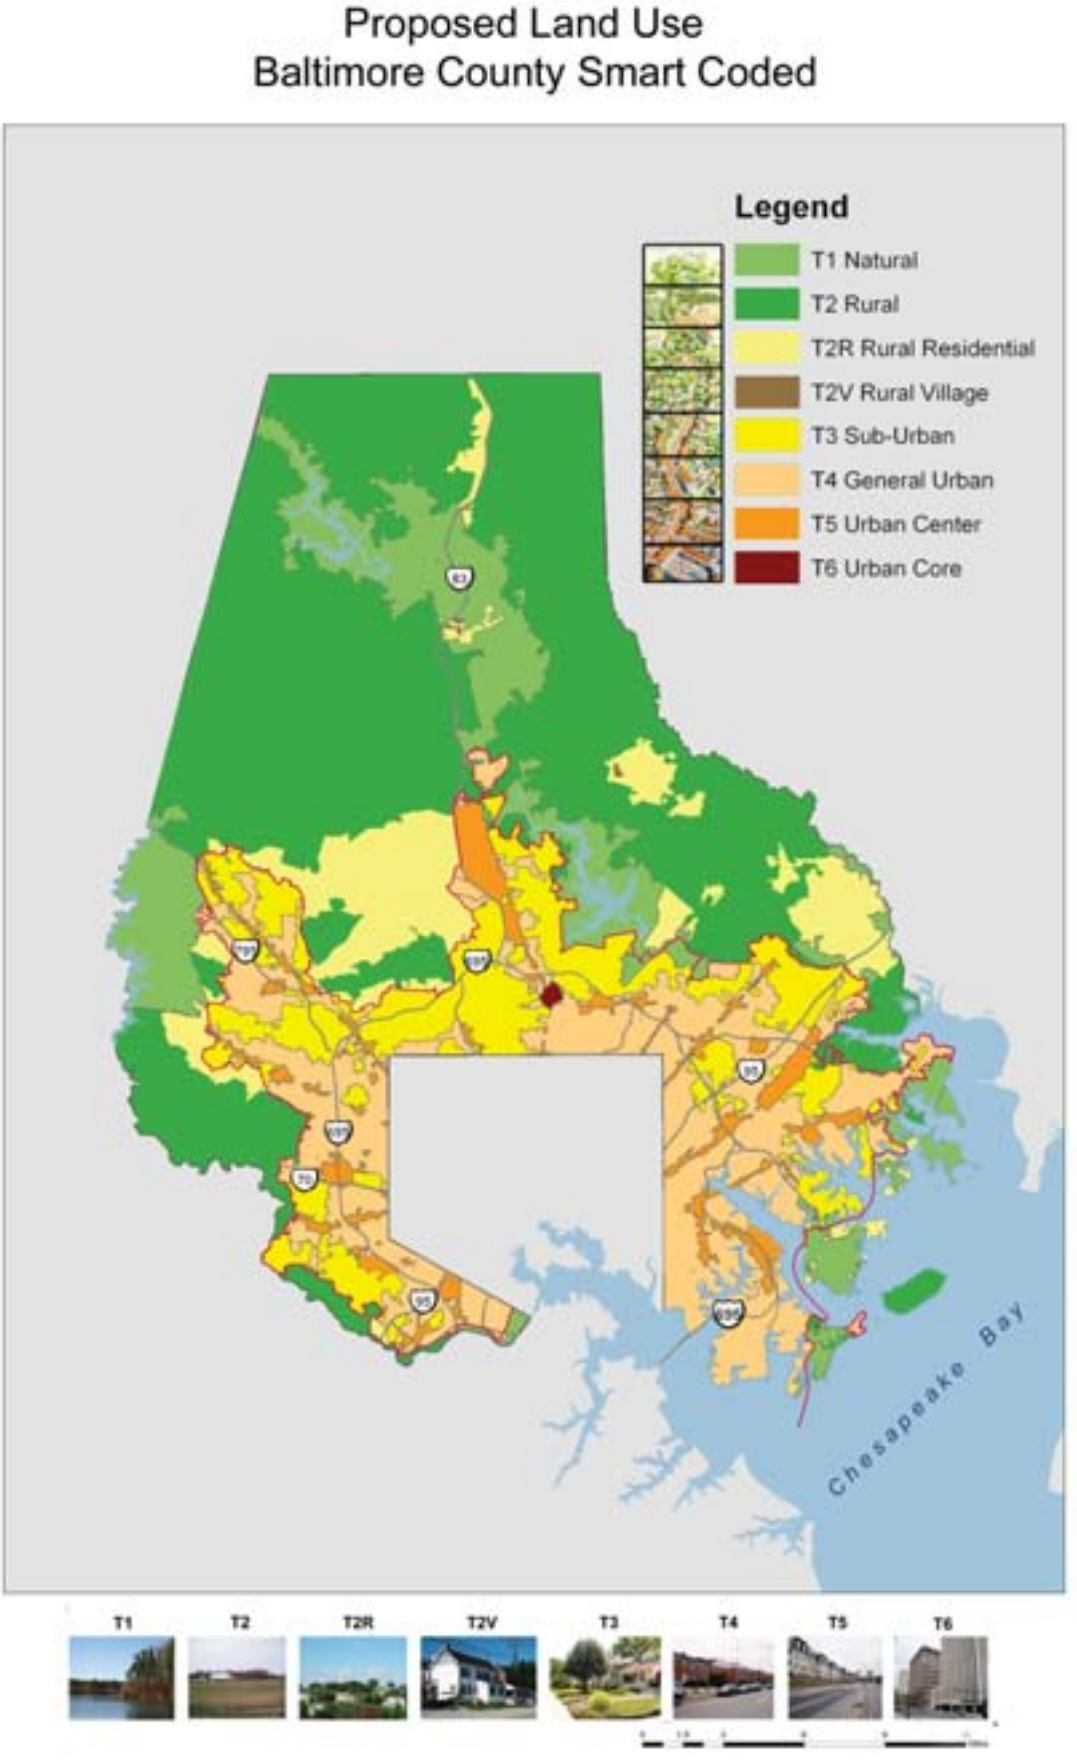
- **T-1 (Natural Zone)** contains lands approximating a natural condition, including lands unsuitable for settlement due to topography, hydrology, or vegetation.

- **T-2 (Rural Zone)** consists of sparsely settled lands in an open or cultivated state. These include woodlands, agricultural lands, and grasslands. Typical buildings may include farmhouses and agricultural buildings.

- **T-2 R (Rural Residential Zone)** consists of large lot single-family detached housing. Plantings are informal. All setbacks are generally 50+ feet. Lots are deep to accommodate a larger backyard. Density varies between 2 to 5 acres per dwelling.

- **T-2 V (Rural Village Zone)** takes into account the rural villages of Hereford and Jacksonville. This zone has a mix of smaller scale retail/office and some residential uses. T-2 V preserves the rural village character featuring an attractive and traditional pattern of houses,

Map 5: Proposed Land Use



commercial establishments, open spaces and their relationship to roadways.

- **T-3 (Sub-Urban Zone)** includes low-density residential areas, adjacent to higher zones that contain mixed use. Home occupations and outbuildings may be allowed. Landscaping is naturalistic and setbacks are relatively deep. Blocks may be large and the roads irregular to accommodate natural conditions.

- **T-4 (General Urban Zone)** is characterized by mixed-use, but is primarily residential urban fabric. It may have a wide range of building types including single-family detached and attached houses, and townhouses. Setbacks and landscaping are variable. Streets with curbs and sidewalks define medium-sized blocks.

- **T-5 (Urban Center Zone)** includes higher density mixed-use buildings that accommodate retail, offices, townhouses, and apartments. It has a tight network of streets, with wide sidewalks, steady street tree planting and buildings set close to the sidewalks.

- **T-6 (Urban Core Zone)** has the highest density and height with the greatest variety of uses, and civic buildings of regional importance. It may have larger blocks; streets have steady street tree planting and buildings set close to the wide sidewalks. Typically only large towns and cities have an Urban Core Zone.

- **T-M (Manufacturing Zone)** includes certain industries and manufacturing processes that should not be combined with other uses. By their function, they require that their operations not be closely integrated with other uses (except those with similar characteristics).

- **T-I (Institutional Zone)** many institutional uses should be incorporated into the T-4 and T-5 transects, such as community centers, branch government offices, libraries, etc. However, certain institutions like medical complexes, educational campuses, and others that benefit from having all their functions in one location may need room to grow. That may make inclusion into a Community Enhancement Area impractical. Such facilities should be close enough to be walkable, and be mutually supportive.

The transect system replaces the conventional separate land use zoning system. The T-zones provide the basis for real neighborhood structure, which relies upon compact, walkable streets, mixed-use, transportation options, and housing diversity. The T-zones vary by the ratio and level of intensity of their natural, built, and social components. Uses may overlap between one T-zone and another. The ability of transects to clarify the compatibility among uses makes them particularly useful in planning the built environment.

They may be coordinated to all scales of planning, from the region through the community scale, down to the individual lot and building. However, any new zoning would be applied at the community scale, and it is important to note that each community will have to establish (calibrate) its own unique development criteria. Furthermore, T-zones should be balanced within a neighborhood structure based on pedestrian sheds (walksheds), so that residents of lower density neighborhoods may still walk to different habitats, such as a main street, or civic space.

Transect-based planning is used throughout the County to provide a solid foundation for all other planning. As Baltimore County moves towards compact, mixed-use, higher-density walkable communities, the successful implementation of transect-based planning will play a key role in further developing the T-4 and T-5 zones.

The Transect Zones and the following graphics for the Transect Zone descriptions and civic spaces were originated and developed by Duany Plater-Zyberk & Co.

making process. This on-site work allows easy access to agencies, stakeholders, and information. Preparation for a Charrette begins months before the Charrette date.

Zoning and Development Regulations

The Baltimore County Zoning Regulations (BCZR) and Baltimore County Code (BCC) are the ordinances by which land use and development are implemented. The Comprehensive Manual of Development Policies (CMDP), Zoning Commissioners Policy Manual (ZCPM) clarify and support the BCZR and BCC. Development is also subject to the requirements of the Local Open Space Manual, Landscape Manual, Public Works Design Manual and Environmental Standards and Requirements Manual.

The use of any given parcel of ground within the County is generally determined by its zoning classification. Zoning classifications correspond to specific regulations within the BCZR that set uses, intensities, areas and setbacks. Through the Comprehensive Zoning Map Process, the Cycle Zoning Process and the Out of Cycle Zoning Process zoning classifications on individual properties are reassessed and either reclassified or left to stand. The Proposed Land Use Map provides general recommendations for future land use within the context of the goals of the Master Plan and aids in rezoning considerations required by the various aforementioned zoning processes.

Baltimore County's annual budget is established through two major funding sources, the General Operating Budget and the Capital Improvement Program (CIP). The costs of providing public services such as education and public safety are identified within the General Operating Budget, which is funded primarily through county property tax and income tax revenue. Expenditures for capital projects fall to the CIP. These funding requirements are generated by the construction and maintenance of the county's physical facilities and public infrastructure to include water and sewer lines, roads, storm drains, bridges, solid waste disposal, government buildings, park facilities and schools. Monies funding the CIP are primarily raised through county bond revenue.

The CIP is an essential program by which to achieve the goals of the Master Plan 2020. How CIP resources are committed impacts significantly on redevelopment strategies committed to sustainable mixed-use communities. The capacity of the infrastructure is critical to accommodating redevelopment. CIP funding is largely targeted within the URDL/PFA.

Advanced technology permits detailed observation of the environment of this region that increases comprehensive understanding of the impacts of human activity on our natural resources. Guidance on the federal level was provided by President Obama in May of 2009. "Executive Order 13508 Chesapeake Bay Protection and Restoration" commits the broad authorities of the Federal Government toward restoring the Bay. In 2009, the Environmental Protection Agency (EPA) established an accountability framework to ensure the restoration of the Bay as required by Executive Order 13508. This accountability framework compels jurisdictions to develop and implement appropriate Watershed Implementation Plans, attain two-year milestones of progress and provide timely and complete information to an effective accountability system for monitoring pollutant reductions. The EPA framework contains potential federal actions in the event that a jurisdiction fails to meet expectations. In response, the State of Maryland has now brought into law measures that oblige Baltimore County to assess how development is allowed to proceed. The Annotated Code of Maryland, Article 66B as amended, sets forth twelve visions for land use. The County specifically responds to these visions in this Master Plan and must be diligent in making them a reality. More so than any preceding

IN RE: **DEVELOPMENT PLAN HEARING & PETITIONS FOR SPECIAL HEARING & VARIANCE** 8th Election District 3rd Council District **(1400 W. Seminary Avenue)**	*	BEFORE THE OFFICE OF ADMINISTRATIVE HEARINGS FOR BALTIMORE COUNTY
TORCH HILL **aka 1400 W. Seminary Avenue** **Alvin B. Buzzy Krongard** *Owner/Applicant*	*	**CASE NOS. 08-0919 AND 2021-0274-SPHA**
1400 W. Seminary Avenue Developer	*	

* * * * * * *

ADMINISTRATIVE LAW JUDGE'S ("ALJ")
COMBINED DEVELOPMENT PLAN AND ZONING OPINION & ORDER

This matter comes before the Office of Administrative Hearings ("OAH") for a public hearing on a development proposal submitted in accordance with Article 32, Title 4, of the Baltimore County Code ("BCC"). Alvin B. Krongard, Owner/Applicant (herein known as "Developer") submitted for approval a 2-sheet redlined Development Plan (the "Redlined Development Plan") and a 2-sheet greenlined Development Plan (the "Greenlined Development Plan") prepared by Stacy A. McArthur of D.S. Thaler & Associates, Inc., known as the "Torch Hill Project" (the "Property"). The Developer proposes to develop ± 42.44 acres of land with 31 new single family detached dwellings, as well as retaining the existing dwelling which fronts on Seminary Avenue.

Along with the development plan, the Developer has filed a Petition for Special Variance from Baltimore County Zoning Regulations ("BCZR"), §4A02.4.G, to allow the Torch Hill Project within the Falls Rd. and Seminary Rd. traffic shed. Developer has also requested Variance relief

from the BCZR, §1B01.2.C.b, to permit a front yard setback of zero (0) ft. in lieu of the required 25 ft for the existing home.

In accordance with BCC, §32-4-201 *et seq.*, a Concept Plan Conference ("CPC") was held on August 11, 2020. A Community Input Meeting ("CIM") was held on September 17, 2020. A Development Plan Conference ("DPC") was held on November 3, 2021.

The development and zoning cases were considered as a combined hearing as permitted by BCC, §32-4-230. Details of the proposed development are more fully depicted on the Redlined Development Plan and the Greenlined Development Plan. (Dev. Exs. 1, 2). On June 7, 2022, in compliance with the regulations, the Property was posted with the Notice of Hearing Officer's Hearing ("HOH") development hearing, and Notice of Zoning hearing, and then reposted and certified on July 5, 2022. A public virtual WebEx hearing in lieu of an in-person public hearing was conducted on July 7, 2022, July 8, 2022 and August 22, 2022.

Testifying on behalf of the Developer was Stacy McArthur and John Motsco, PE, both of DS Thaler, the engineering firm which prepared the Redlined Development Plan and Greenlined Development Plan. Mickey Cornelius of the Traffic Group also testified. Christopher Mudd, Esquire, Patsy Malone, Esquire and Venable LLP represented the Developer. Michael McCann, Esquire represented the Protestant, Falls Rd. Improvement Association. Counsel for both Parties filed Memorandum in Lieu of Closing Argument on September 30, 2022.

AGENCY WITNESSES

Numerous representatives of the various Baltimore County agencies who reviewed the Plan and attended the hearing, including the following individuals from the Department of Permits, Approvals and Inspections ("PAI"): Jerry Chen, the Project Manager; James Hermann on behalf of Development Plans Review ("DPR") and Department of Recreation and Parks ("R&P");

LaChelle Imwiko from Real Estate Compliance ("REC"); and Shawn Crawford from the Office of Zoning Review ("OZR"). Also appearing on behalf of the County was Steve Ford from the Department of Environmental Protection and Sustainability ("DEPS"), and Marta Kulchytska and Jenifer Nugent from the Department of Planning ("DOP").

Shawn Crawford verified both the DPC comments dated November 3, 2021 and the Final (HOH) comments dated April 4, 2022 from OZR. (County Exs. 1A, 1B). Mr. Crawford testified that the OZR DPC comment about whether the 2 separate parcels comprising the Property would both be used was resolved by the removal of 1 parcel on the Redlined Development Plan. He also verified that misalignment of the zoning line and the lot line was rectified by the approval of a lot line adjustment from the Development Review Committee ("DRC"). Since all issues from OZR had been resolved, Mr. Crawford recommended approval of the Redlined Development Plan.

Mr. Hermann, the Baltimore County Landscape Architect, testified that he approved the Schematic Landscape Plan on April 25, 2022 and as a result, DPR could recommend approval of the Redlined Development Plan from a landscaping perspective. (County Ex. 2). He added that a Final Landscape Plan would be filed in Phase II of the development process. In regard to Open Space requirements, Mr. Hermann stated that for the 32 total proposed units, the required Open Space under BCC, §32-6-108 is 32,000 sf or 0.734 acres (1,000 sf per unit). (County Ex. 3). The Developer will provide 32,006 sf (0.735 acres) of Open Space onsite as shown on the Redlined Development Plan which will be owned and maintained by a private HOA. There are no Master Plan Greenways affected by this Project. As a result, on behalf of R&P, Mr. Hermann could recommend approval of the Redlined Development Plan.

Mr. Patel testified on behalf of DPR and the Department of Public Works & Transportation ("DPWT") in regard to roadways, sidewalks, storm drains, water and sanitary sewer systems.

DPR's general and site-specific comments were provided in the DPC comments dated November 1, 2021. (County Ex. 4A). Mr. Patel testified that adequate sewer capacity exists in the 8 inch sewers which serve this Property to accommodate the projected flow for 32 homes in the Torch Hill Project. With regard to the Developer's request for a sidewalk waiver along Seminary Ave., the Director of DPWT granted the waiver because there was no existing infrastructure to which any sidewalks could connect. (County Ex. 4B). However, the Director denied the sidewalk waiver along the new public roads within the development, finding that connectivity would be important for residents. (*Id.*). Given that the waiver of sidewalks had been addressed, DPR and DPWT recommended approval of the Redlined Development Plan. (*Id.*). When asked about the position of Traffic Planning and Traffic Engineering Section of DPWT regarding the impact of the Torch Hill Project on the 'F' intersection at Seminary Avenue and Falls Rd., Mr. Patel was not able to provide specific information. However, he did verify that Kristoffer Nebre handled the review for DPWT.

Ms. Imwiko testified for REC and stated that site specific comments which were raised as a result of the DPC, including labeling of easements and other changes, were made on the Redlined Development Plan. (County Ex. 6A). As a result, REC recommended approval of the Redlined Plan. (County Ex. 6B).

Steve Ford testified on behalf of 3 departments within DEPS: (1) Ground Water Management ("GWM"); (2) Stormwater Management ("SWM"); and (3) Environmental Impact Review ("EIR"). GWM provided a comment dated October 6, 2021 to clarify Note 15 on the Development Plan to state that the existing sewage holding tank which serves the existing home (tenant house), will be pumped and abandoned when the home is connected to the public sewer system. (County Ex. 7). On behalf of SWM, Andrew Fish, PE approved the Concept SWM Plan

on July 13, 2021 as confirmed by a SWM comment dated April 21, 2022. (County Ex. 8).

EIR provided DPC comments dated November 3, 2021 referencing the review of a Forest Buffer Variance, Forest Conservation Variances and an Alternatives Analysis as well as redesign of SWM Facility #1. (County Ex. 9A). Subsequently, EIR provided a HOH comment dated April 26, 2022, which requested a change to Note #17 and to clarify the ownership of the Forest Buffer Easement and Forest Conservation Easements. (County Ex. 9B). Mr. Ford acknowledged that those changes were made on the Greenlined Development Plan.

Finally, Mr. Ford verified that the Director of DEPS had approved the Developer's request to remove 16 of 90 specimen trees as set forth in the Director's letter dated April 15, 2022. (County Ex. 10). Mr. Ford testified that the Application for Special Variance met the required factors in BCC, §33-6-116(d) and (e) and that the Developer would be meeting its obligation to mitigate the 12 native trees in fair or better condition by planting 24,750 sf (0.57 acres) of forest onsite in the open meadow portion of the Forest Buffer Easement.

Testifying on behalf of DOP were Ms. Kulchytska and Ms. Nugent. DOP provided a HOH Report dated April 26, 2022 which provided DOP's detailed review of the Redlined Development Plan. (County Ex. 11A). In response to DOP's DPC comments (County Ex. 11F), the Developer provided a point-by-point response and made DOP's requested changes to the Development Plan. (County Ex. 11D). In particular, DOP reviewed and approved a School Impact Analysis ("SIA") with a filing date of September 14, 2021. (County Ex. 11B). Ms. Kulchytska explained that the projected enrollment for Riderwood Elementary School, Ridgely Middle School and Dulaney High School were under the State Rated Capacity ("SRC") at 96.89%, 102.80% and 97.28% respectfully. Ms. Kulchytska also stated that DOP reviewed the Redlined Pattern Book dated April 21, 2022 and found that it provided the architectural elevations of the models to be constructed

and that it met all of the requirements of the Residential Performance Standards in BCZR, §260.

Prior to the Director of DPWT granting in part, and denying in part, the Developer's request for a sidewalk waiver, the Director of DOP had provided a letter of support for both requests dated November 1, 2021. (County Ex. 11C). Ms. Kulchystka acknowledged that Seminary Avenue is a scenic route and that the Developer had provided DOP with a Scenic Route Report which demonstrated both the existing and proposed view shed from Seminary Avenue. She stated that DOP was satisfied with the Report. (Dev. Ex. 8).

Finally, the DOP HOH Report addressed the Special Variance Petition as required under BCZR, §4A02.4.G.2 and stated that DOP deferred the request to the DPWT as it was due to the F-rated intersection at Seminary Avenue and Falls Rd. and to the right-of-way widening as requested by DPWT. (County Ex, 11A, p. 2). Upon inquiry, Ms. Nugent explained that the DOP's policy is to defer such decisions to DPWT as the department with expertise in reviewing traffic impact studies and improvements to intersections. Ms. Nugent added that the DOP Director had reached out to DPWT in regard to Special Variance but was not successful in obtaining an answer.

At the request of the undersigned, on Day 3 of the HOH, Kristopher Nebre, PE, Engineer III of Bureau of Traffic Engineering and Traffic and his supervisor, Angelica Daniels, Bureau Chief of Traffic Engineering and Transportation Planning testified. As an Engineer III in Traffic Engineering and Traffic Planning Section of DPWT, Mr. Nebre's duties include handling traffic control inquiries from citizens, reviewing traffic signal construction plans and reviewing traffic impact studies.

By way of background, Ms. Daniels acknowledged that one of the responsibilities of Transportation Planning is to provide technical assistance to the DOP and to evaluate and recommend specific projects in anticipation of future transportation, land use and economic

development needs. (See Balto. County Website, Public Works, Traffic Engineering). Except for the eastbound private road coming out of St. Paul's Schools, Ms. Daniels explained that Falls Rd. and Seminary Avenue are State roads, and the signal at Falls/Seminary intersection is also owned by the State. (County Exs. 5A). As a result, the State, not the County, has jurisdiction to undertake work to physically improve those roadways and/or to make changes to the signal timing or, the State could approve plans by a developer to improve the roadways.

Mr. Nebre explained that the County uses the 'loaded cycle methodology' ("LCM") under the Highway Capacity Manual (1965). He stated that the County is the only jurisdiction in the United States which still uses that method to rate intersections. Under the LCM, the Traffic Engineering/Planning section employs a team of people to perform traffic counts at intersections during a two-hour period to evaluate each approach during both morning and afternoon peak hours. A traffic cycle becomes 'loaded' if on a green light, the last vehicle in line at the light does not get through the intersection. Stated in percentages, failing movements drive the assigned rating; an 'F' rated intersection has a load factor of 86-100%. (See County Website, DPWT). For intersections rated D, E and F, Mr. Nebre explained that DPWT conducts annual traffic counts to reevaluate the ratings each year. For intersections rated A, B and C, the counts are conducted every 3 years. Although he does not determine the boundaries for traffic sheds, he verified that the Property is only included in the traffic shed for Falls/Seminary intersection, and not the traffic sheds for Falls/Greenspring Valley or Falls/Joppa Rd., both of which are also failing intersections.

In regard to Falls/Seminary intersection, based on the actual traffic counts conducted by the County under the LCM, it was rated as an 'F' intersection. Mr. Nebre stated that it has been an 'F' intersection since he began working in the County in 2009. He clarified that the approaches causing the 'F' rating was westbound in the peak morning hours (86%), and eastbound in the

afternoon (90%) coming from St. Paul's Schools.

Mr. Nebre reviewed the Traffic Impact Analysis ("TIA") prepared by Mr. Cornelius. (Dev. Ex. 14). Mr. Nebre was able to explain his email dated December 22, 2021 wherein he requested more information from Mr. Cornelius as to how the level of service at the intersection would be improved from a loaded cycle standpoint and his comment about the proposed condition eastbound 'remov[ing] green time." (Dev. Ex. 17). In regard to the level of service, Mr. Nebre explained that he wanted to understand what the traffic impact from the Torch Hill Project would be on the intersection and that if the proposed improvement would make the intersection better, that would be positive. In regard to the eastbound traffic, Mr. Nebre recalled that the Developer was proposing signal changes for the eastbound traffic out of St. Paul's Schools but that, in his view, those proposed changes would reduce the amount of time the signal would remain green. He added that ultimately, any signal timing changes would need to be approved by the State Highway Administration ("SHA").

Mr. Nebre explained that the 'district standard' under BCZR, §4A02.4.G.1.a is to determine whether the traffic generated by a proposed development will have any negative impact on the intersection. If improvements to the roadway is proposed, the issue is whether the proposed improvement would accommodate the additional traffic generated by the development such that it would have a net zero impact on the intersection.

Mr. Nebre testified that, for the westbound approach, the Developer here has proposed to lengthen the left turn lane 190 ft. Mr. Nebre agreed that 190 ft. would accommodate 8 additional vehicles. He noted that SHA approved the proposed left turn lane extension on October 19, 2021. (County Ex. 5B). On behalf of DPWT, Mr. Nebre agreed that the proposed left turn lane extension will not make the Falls/Seminary intersection any worse such that the net impact from traffic

generated by Torch Hill development at the intersection would be zero. He also acknowledged receiving Mr. Cornelius' letter dated March 4, 2022 to which he responded by email dated April 28, 2022. (County Ex. 5A, 5C). He testified that, even with the proposed left turn lane extension, the Falls/Seminary intersection may still be rated a level of service of 'F' but that it will be reevaluated each year.

DEVELOPER'S CASE

Stacy McArthur was admitted as an expert in landscape architecture, in BCZR, and in BCC Titles 32 and 33 including specimen trees ("STs"). (Dev. Ex. 4). Ms. McArthur testified that, in the past 35 years, she has worked on at least 100 development projects. For this project, she began her work in May of 2020 and has been to the Property many times. She explained the development proposal in detail as shown on both the Redlined Development Plan and the Greenlined Development Plan. (Dev. Exs. 1, 2). She also created the Pattern Book. (Dev. Ex. 3).

Using an aerial geographic information system, ("GIS") photograph, she explained that the Property is inside the Urban Rural Demarcation Line ("URDL") and will connect to public water and sewer. (Dev. Ex. 5). The aerial photograph shows that the Property is irregularly-shaped, most unimproved parcel located on the corner of Seminary Ave. and Mays Chapel Rd. (*Id.*). Mature trees in an existing forest provide a natural screening along Seminary Ave. and will be protected in a Forest Conservation Easement. (Dev. Ex. 6). An existing residential structure which is proposed to remain, fronts on Seminary Ave., and is accessed by a driveway. The existing driveway is proposed to be removed, grass will be planted, and a new public road will be constructed on the western side of the home to provide access to the development.

Ms. McArthur described the Property as 42.44 acres. It is zoned Density Residential ("DR" 1) which allows for 42 units. However, a covenant was entered into with Meadows at Greenspring

community wherein it was agreed that the maximum number of units would be 32. The Redlined Development Plan shows the changes/additions/corrections requested by the County agencies during the review process. (Dev. Ex. 1). The Greenlined Development Plan includes the Redlined Development Plan in its entirety, and corrects, at the request of DEPS, that the Forest Buffer and Forest Conservation areas will be owned by a private homeowner's association and that Lot 22 extends into the Forest Buffer and Forest Conservation Easements. (Dev. Ex. 2). The only other addition to the Greenlined Development Plan was a note requested by DOP that the Pattern Book will be updated when a builder is selected. (Dev. Ex. 2).

A colored rendering of the Torch Hill Project was provided. She testified that it was consistent with the Greenlined Development Plan. (Dev. Ex. 7). It shows 16 acres of the Forest Buffer and Forest Conservation areas will be preserved by recorded easements. There will be mitigation plantings through reforestation onsite. The layout uses the existing stream crossing. Some lots will extend into the environmental areas. Two (2) SWM devices will be installed to control both water quality and water quantity. Parking for the homes will be provided via garages, driveways and on-street parking. On the western side, between the Property and Mays Chapel Rd. is a strip of land which will be protected by a Land Preservation Trust Easement. (Dev. Exs. 1, 2). Between Lots 4 and 5, there is a wetland area which will remain.

Ms. McArthur opined that the Torch Hill Project meets all of the Residential Performance standards in BCZR, §260 *et seq*. including: retaining existing quality vegetation; integrating the existing home into the development; coordinating building design and layout with existing topography; retaining the existing landscape buffer and adding trees, shrubs and vegetation; and providing for a smooth transition between neighborhoods. She further opined that the Torch Hill Project meets all development regulations in the BCC.

One setback Variance is being requested for the 2-story existing home on Seminary Avenue. She explained that the existing house was constructed between 1940-1950. If required to meet the front yard setback of 25 ft. applicable to the DR zone, the Petitioner would suffer a practical difficulty because the house would have to be demolished.

Ms. McArthur prepared an initial Forest Conservation Variance Application dated August of 2021 stating that 90 STs were on-site and requesting that eleven (11) of those STs be removed. (Dev. Ex. 9). After review by DEPS, the site layout was modified in order to retain additional forest and/or STs. Specifically, in order to retain the forested area north of Lot 22, STs would need to be removed. In addition, a retaining wall near Lot 1 was proposed to be constructed but will require the removal of STs. In order to use and incorporate the existing stream crossing into the design layout, STs would need to be removed in that location. On Lot 5, retention of the wetland area permitted the retention of a ST. As a result of the changes to the site layout, an Amended Forest Conservation Variance Application was filed in February, 2022 requesting that 16 STs of the 90 STs be removed. She indicated that, all attempts would be made not to damage the critical root zones ("CRZ") of 4 of those 16 STs.

Analyzing the factors required under BBC, §33-6-116(d) and (e), she testified that while BCC, §33-6-116(d)(1) is not applicable, the variance request satisfies both (d)(2) and (3) because the 90 STs are scattered throughout the Property which provides a unique circumstance not attributable to the general condition of the neighborhood, and the STs are not consolidated in any particular forest area. The removal of 16 STs will not alter the essential character of the existing neighborhood as the neighborhood is already built-out.

In regard to BCC, §33-6-116(e)(1), the Forest Buffer and Forest Conservation areas to remain will provide better water quality than the 16 scattered STs, 4 of which are in poor condition;

the request to remove the STs is due to limited developable areas and modification of original site layout, neither of which arose from a condition or circumstance caused by the Developer. Finally, within the spirit and intent of Article 33, only 12 of the 16 trees are in fair condition or better and 4.1 acres of reforestation and ST mitigation plantings will be provided on-site.

On cross examination, Ms. McArthur acknowledged that floodplains and wetlands exist in the middle of the Property. A floodplain study was accepted for filing by the County. An Alternatives Analysis was approved by DEPS in January, 2022 and covered all Forest Buffer, floodplain and wetland impacts.

Mickey Cornelius, PE was accepted as an expert in traffic engineering and in the BCZR. (Dev. Ex. 12). Using County records, Mr. Cornelius researched the traffic shed for this Property as depicted by County Basic Services Map and confirmed that it is within the failing traffic shed for Falls Rd/Seminary, but not within the traffic shed for Greenspring Valley/Falls Rd. or Joppa Rd./Falls Rd. (Dev. Ex. 13). He explained that the Property falls within that the County-determined traffic shed because 50% of the trips generated by the 32 homes will proceed through that failing intersection. He also acknowledged that Falls/Seminary intersection has been rated as an 'F' intersection on the Basic Services Map since at least 2000. There has been no initiative to improve it. (Dev. Ex. 33).

At the request of the County and SHA, while not customarily required for a 32-lot development generating 50 or less peak hour trips, but because the Property is located within a failing traffic shed, Mr. Cornelius prepared a TIA. (Dev. Ex. 14). The TIA was approved by SHA by letter dated October 19, 2021. (County Ex. 5B). In seeking DPWT's approval, Mr. Cornelius wrote to Mr. Nebre providing additional information as requested. (County Ex. 5C). Mr. Cornelius followed-up by email to Mr. Nebre on March 16, 2022, to which Mr. Nebre responded in an email

dated April 28, 2022. (County Ex. 5A).

As part of the TIA, the County insisted that 7 intersections be studied, not just Falls/Seminary. (Dev. Ex. 16). Mr. Cornelius explained that in rating intersections, the County uses the 'loaded cycle methodology' and is purportedly the only jurisdiction in the country to do so. He explained that this method requires observing and counting the number of vehicles which are able to proceed through an intersection on a green light. Unfortunately, he stated that this method is limited because it cannot predict future traffic conditions (i.e. from a proposed development). (Dev. Ex. 14, p. 7). Conversely, SHA applies the Critical Lane Volume ("CLV") and Highway Capacity Manual ("HCM") methodologies. Under both CLV and HCM analysis, the Falls/Seminary intersection is rated as a 'D' intersection during the peak morning hours, and 'C' during evening peak hours. (Dev. Ex. 14, pp. 14-15).

The trip generation rates from the Institute of Transportation Engineers ("ITE"), Trip Generation Manual (10th Edition), during projected peak hour trips for 32 single family detached homes, is 28 trips in the morning peak hour, and 34 trips in the evening peak hour. (Dev. Ex. 14, p. 9). Background traffic conditions were calculated to allow for 1.5% annual traffic growth along Falls Rd. He indicated that Seminary Ave. has not experienced a traffic growth over the past 10 years. (*Id.*). Mr. Cornelius testified that 40% of the projected trips from Torch Hill Project would travel east on Seminary Ave., with 60% traveling west. He stated that this results in less than one (1) vehicle per signal cycle being added to the Falls/Seminary intersection.

Mr. Cornelius opined that based on the TIA, the failing traffic movement was westbound on Seminary Ave approaching the intersection. The eastbound road at that intersection comes from St. Paul's Schools and is privately owned. To accommodate the additional vehicles from the Torch Hill Project headed westbound, the Developer proposes to extend the left turn lane 190 ft.

He explained that 190 ft. is the length needed to accommodate 8 additional vehicles. (Dev. Ex. 15). [1] Mr. Cornelius stated that there is sufficient right-of-way to meet the proposed improvement. He added that the queues will be reduced by 500 ft. (Dev. Ex. 14, p. 18).

In regard to the request for Special Variance, Mr. Cornelius explained that the 'district standard' set forth in BCZR, §4A02.4.G.1.a, is to show that there will be no impact from the development on the 'F' rated intersection. In his opinion, without the proposed left-turn lane extension, the 31 new homes would have only a negligible impact in that Torch Hill Project will only generate 1 vehicles every 5 minutes in the morning peak hours, and 1 vehicle every 8 minutes in evening peak hours. With the proposed left turn lane extension, there will be no impact on the intersection. As a result, in his opinion, the Special Variance should be granted.

John Motsco, PE was accepted as an expert professional engineer, in the BCZR and in the BCC. He explained that the Torch Hill Project would be served by connecting to the public gravity-fed sewer system at manhole 59915 which is located between proposed Lots 27 and 28. He testified that DPWT confirmed via email dated September 2, 2021 that capacity existed for the 32 proposed homes. (Dev. Ex. 19).

PROTESTANT'S CASE

The first witness to testify for the Protestants was Randall Grachek, PE an environmental engineer employed by NewFields, Inc. Although he is not licensed as a professional engineer in the State of Maryland, Mr. Grachek was previously accepted as an expert before the OAH in Case No.: CBA-20-006, *In the Matter of CPC Falls Road, LLC (CPC Falls Road Project/Bluestem)* ("*Bluestem*"). As such, in this case, he was likewise admitted as a professional engineer, in waste water engineering, in the evaluation of sewer systems and their capacity. (Prot. Ex. 2).

[1] The TIA states extension is 150 ft. until it was discovered by the engineers that the roadway could accommodate another 40 ft.

Mr. Grachek explained that Baltimore County has a gravity-fed sewer system with three (3) main trunks lines (Jones Fall; Roland-Run; Towson Run) which flow into the interceptor line under Lake Roland and then out to Baltimore City waste water treatment plants. While he has not visited the Property since the *Bluestem* case, upon his review of the sewer maps provided by the County, the sewage from the proposed project will end up in the Lake Roland interceptor. (Prot. Exs. 4, 5). The County data obtained by Protestant's counsel for the Roland Run interceptor was for 2019 and designates each service area by number, provides the acreage, as well as both the numbers for the upstream and downstream manholes and the coefficient for each pipe. (Prot. Ex. 6).

As in the *Bluestem* case, Mr. Grachek referred to a complaint filed on July 26, 2005 by the Environmental Protection Agency ("EPA") against Baltimore County in the United States District Court of the District of Maryland, Northern Division, Case No.: 1:05-cv-02028-AMD, regarding the discharge of tens of millions of gallons of untreated wastewater containing raw sewage into navigable waters and waters of the State beginning in 1997. (Prot. Ex. 8). Those waters included Towson Run, Lake Roland and the Jones Falls. The lawsuit resulted in a Consent Decree ("CD") dated September 21, 2005 in which the County was provided a legal framework and direction to eliminate sanitary sewer overflows ("SSOs"), the term used to describe when a sewer pipe reaches overcapacity causing sewage to flow into waterways. (Prot. Ex. 7). Mr. Grachek explained that, under the CD, the County was charged with conducting a full evaluation of the system, inspecting it to determine the condition of the pipes, and modeling it with different weather events to determine whether the pipes were at overcapacity. Toward that end, the County hired consulting engineering firm Rummel, Klepper & Kahl, LLP ("RKK") to perform the study. RKK evaluated, inspected, and modeled the system using software to input data showing where the pipes were at

capacity during both dry and wet weather events. (Prot. Ex. 9, 10). It showed 541 defects in a single trunk line (Sewer ID 6888-6887). (Prot. Ex. 18). Specifically, RKK studied 5 different storm events: (1) 2-Year, 6-hour storm; (2) 2-year, 24-hour storm; (3) 10-year, 6-hour storm; (4) 10-year, 24-hour storm; and (5) 20-year, 24-hour storm. (Prot. Ex. 10). RKK prepared a Long Term Capacity Report dated November, 2012 ("RKK-LTC 2012 Report").

Mr. Grachek clarified that he did not review the RKK modeling but assumed it was correct. He also did not personally investigate or perform his own evaluation of the sewer system but relied upon the results in the RKK-LTC 2012 Report. Mr. Grachek emphasized that the RKK-LTC 2012 Report recommended that the County take corrective action, depending on the storm event, which actions included installing *relief sewers* as shown by the red lines on the maps attached thereto. For the 10-year, 6-hour event, the 10-year, 24-hour event, and the 20-year, 24-hour event, he stated that the RKK-LTC 2012 Report specifically *required* that a relief sewer be installed between manholes ("MH") 6950 and 22009 of various lengths in linear feet, depending on the storm. (Prot. Ex. 10, p. 14). He explained that a relief sewer pipe is a storage unit which may include an underground vault or additional parallel piping designed to temporarily manage water during these storm events. The relief sewer recommended to be installed between MH 6950-22009 is in Essex Farm Park (the "Essex Farm Relief Sewer"). (Prot. Ex. 11).

He explained that the RKK-LTC 2012 Report also recommended upsizing a 10-inch pipe to an 18-inch pipe as shown by a pink line on the maps attached thereto. (Prot. Ex. 10, p. 14). Finally, the RKK-LTC 2012 Report at Table 6.1 recommended that, in conjunction with installation of the relief sewer, certain manholes be sealed as reflected by yellow circles on the maps. (Prot. Ex. 10, p. 14). He also showed a 2019 photograph of manhole 6888 with its lid ajar which in his view, is due to the surcharge pushing out the manhole cover. (Prot. Ex. 17).

Mr. Grachek researched on My Neighborhood GIS to determine whether the Essex Farm Relief Sewer proposed in the RKK-LTC 2012 Report had been installed and he discovered that it had not. He reviewed an email dated April 29, 2022 from the Chief, Sewer Design Section of DPWT, which also confirmed that the Essex Farm Relief Sewer had not been installed by the County. (Prot. Ex. 16). Mr. Grachek acknowledged that he only investigated whether the Essex Farm Relief Sewer had been installed; he did not know whether the County had performed any other improvements pursuant to the CD. He did not request nor did he review any Certificates of Completion for work performed by the County.

Additionally, he also reviewed a 2019 evaluation by the County of the sewer pipes and opined that the County failed to consider the degradation of each pipe in evaluating their capacity, as shown by the fact that the manning coefficient on the chart remained at .013 for each pipe. (Prot. Ex. 6). He explained that the manning coefficient relates to how rough or smooth the inside of each pipe is. With this data, he opined that the County did not evaluate the pipes for wet weather events. He further opined that this data shows that the Lake Roland interceptor pipe is not a good design, is at overcapacity, will always leak, and in his opinion, must be replaced. Mr. Grachek did not conduct any investigation or evaluation of the sewer system himself, nor did he do any modeling.

Mr. Grachek also reviewed the County's water sampling results from Lake Roland and noted that the sampling from May 23, 2022 indicated that E coli levels were greater than 2,420. (Prot. Ex. 20). He stated that the Code of Maryland Regulations ("COMAR") sets the geometric mean standard at 126. (Prot. Ex. 19). While acknowledging that E coli levels were only 43 on June 1, 2022, and 13.8 on June 15, 2022, he opined that the 2,420 result on May 23, 2012, could only have been the direct result of sewage leaking into Lake Roland from the interceptor. He

believed these levels prompted the County to erect 'Stream Sense' signs at Lake Roland in 2019 warning residents about SSOs. (Prot. Ex. 21).

For the Torch Hill Project, he stated that for the 32 proposed units, the sewage system could be designed using one of two methods: (1) 90 gal/per day per resident; or (2) 150 gal per bedroom per day. He calculated a normal flow from the Torch Hill Project would be 12,000-14,000 gal per day. He then opined if the sewage flow from the Torch Hill Project was the only additional flow into the existing sewer system, it would not have a negative impact. However, he added that if there were many developments over time, and no improvements were made, it would overburden the system which already has known defects. Accordingly, in his opinion, based on industry standards, he would not add flow to this system which is already discharging. He agreed that his opinion is based on the 2012 results in the RKK-LTC 2012 Report.

The next witness to testify was Beth Miller, a member of the executive committee for Green Towson Alliance, a group created in 2015 to monitor development in the County. Ms. Miller investigated development applications within the Jones Falls Sewershed since 2012. She created a chart listing developments which were proposed to be developed, were under construction and were existing. (Prot. Ex. 24). The chart was last updated on September 14, 2020. It lists the estimated sewage for each development based on square feet of the particular project.

DEVELOPER'S REBUTTAL CASE

Mickey Cornelius provided rebuttal testimony that the document provided by Protestant entitled *Methodology Used To Determine Geographic Limits of Traffic Areas Around Deficient Intersections* (Prot. Ex. 1) is from an unknown source and it does not provide the 'district standard' in BCZR, §4A02.4.G.1.a. Mr. Cornelius stated that the district standard in BCZR, §4A02.4.G.1.a is not the LCM but whether the development results in a net zero impact to the failing intersection.

Protestant's document is used to determine traffic sheds around failing intersection. The traffic shed here was verified on maps maintained by DPWT.

John Motsco, PE also testified in rebuttal to respond to Mr. Grachek's testimony concerning the capacity of the County sewer system in the Jones Falls Sewershed. Mr. Motsco stated that Mr. Grachek relied heavily on the RKK-LTC 2012 Report as the basis for his opinion that each one of sewer repairs recommended therein was required to be performed by the County. (Prot. Ex. 10). Mr. Motsco explained that the RKK-LTC 2012 Report contains a list of suggested repairs and was only Step 2 of the Consent Decree process. Mr. Motsco stated that those suggested repairs were only a non-binding, guide based on extreme weather events, and were not required to be performed under the CD for the Jones Falls Sewershed. (Prot. Ex. 7). He explained that the actual required repairs were approved by both EPA and Maryland Department of Environment ("MDE"), and are contained in the Sewershed Repair, Replacement and Rehabilitation ("SRRR") Plan dated December, 2012 (the "2012 SRRR Plan"). (Prot. Ex. 9). Additionally, a Performance Assessment Report dated May 26, 2021 was prepared by RJN Group, Inc. and details the 2012 SRRR Plan work performed by the County ("the 2021 Performance Assessment Report"). (Pet. Ex. 25).

Using Map 6-1 entitled *Sewer, Manhole and Hydraulic Corrective Action Recommendations* which was attached to the 2012 SRRR Plan, Mr. Motsco explained that Map 6-1 depicts the required sewer repairs for the Jones Falls Sewer Shed, and shows by way of a light blue line, the direction of sewage flow from Manhole 59915 to which the Torch Hill Project would connect, as it travels south through the sewer system. (Pet. Ex. 22). The yellow-shaded area on Map 6-1 contains sub-sewer sheds which were determined by the RKK-LTC 2012 Report to exhibit excessive inflow and infiltration ("I&I") as a result of storm water entering the sewer

system. Additionally, he stated that a valve at Texas Station was found to be leaking 100,000 gallons per day of raw sewage into the Jones Falls Watershed. The repairs for that sub-sewer shed area included relining sewer pipes and reconstructing/relining manholes. The sewage from Torch Hill Project will not go through the yellow sub-sewer sheds which is upstream from the Property. All of the required improvements within the yellow sub-sewer sheds comprising approximately 100,000 linear feet have been performed as confirmed by the Certificates of Substantial Completion. (Pet. Ex. 23). Mr. Motsco opined that those improvements, as well as the repair of the Texas Station valve, would increase sewer system capacity downstream during wet weather events, thereby reducing the potential for SSOs.

The area of Essex Farms Park on Map 6-1 is located at the junction of meter basins BC11, BC07 and BC06. Under the 2012 SRRR Plan, the extent of the required repair is only a lining for that sewer pipe (not a relief sewer) and that lining has not been installed. Within the Torch Hill sewage path (blue line on Map 6-1 of the 2012 SRRR Plan), the improvements proposed were only linings and reconstructions under SRRR Plan; no relief sewers or upsizing of pipe sizes were required to be performed in the sewage path. Based on the County Quarterly Reports and Performance Assessment Report, he stated 'almost all' sewer work within the Torch Hill sewage path (blue line) has been performed. (Dev. Ex. 22).

For the Torch Hill Project, Mr. Motsco testified that the maximum sewage peak flow would be 10,000-15,000 gallons per day. Taking into account the Texas Station valve repair alone, he opined that the sewer system has more than enough capacity to accommodate the sewage flow from this Project. The basis for his opinion was the County's confirmation via email from David Bayer of DPWT dated September 2, 2021, that the connection to Manhole 59915 has adequate capacity to service the 32 proposed homes. (Pet. Ex. 19).

Mr. Motsco also explained the Performance Assessment Report for the Jones Falls Sewershed prepared by RJN Group, Inc. dated May 26, 2021 was Step 4 of the CD process (the "2021 Performance Assessment Report"). (Dev. Ex. 25). The 2021 Performance Assessment Report monitored and analyzed the performance of the 2012 SRRR Plan required improvements to determine if they were successful. The conclusion reached was that the work was performed and that the overall system capacity has been improved.

In regard to the photograph of Manhole 6888 which Mr. Grachek opined needed repair. Using My Neighborhood Maps, Mr. Motsco located MH 6888, went into the field to take a photograph of it, along with a photograph showing that it was cast in February of 2020. (Dev. Ex. 24). Using his recent photographs, Mr. Motsco testified that the Protestant's photograph from 2019 did not reflect the current condition of the MH as it had obviously been repaired.

In regard to E coli readings in Lake Roland, he testified that E coli comes from many sources, including animals, and that a determination cannot be made that the results came from the sewer system. He determined there were 5 testing locations in Lake Roland which was consistent with the 5 testing results on Baltimore County website as produced by the Protestants. (Dev. Ex. 26). Upon further investigation, he stated that the County, through Environmental Health Services ("EHS"), regularly conducts water sampling at all of its recreational areas including bathing beaches and public swimming pools to warn public of health risks. (Dev. Ex. 27).

In Mr. Motsco's opinion, the source of contamination for E coli cannot be directly attributable to the sewer system. E coli comes from both human and animal sources. The sampling results do not distinguish between those sources because the purpose of the sampling is to warn people if <u>any</u> E Coli exists. He described Lake Roland as an area of high community use and has a dog park in the area where sampling occurs. In regard to the Stream Sense sign photos relied

upon by Mr. Grachek, Mr. Motsco did not observe any Stream Sense sign at Lake Roland when he was there the day before his rebuttal testimony. (Dev. Ex. 29). Mr. Grachek has not visited Lake Roland since 2019. Baltimore County provides notice to the public of water advisories and closings but no such advisory or closing was noted on the County website for Lake Roland. (Dev. Ex. 30).

Mr. Motsco testified that the Jones Falls Sewershed comprises 40 square miles, with 67,000 people living within its boundaries, but only 1/3 of that area was served by public sewer. (Dev. Ex. 28). That leaves 2/3 of the Jones Falls Sewershed area (45,000 people) who served by private septic systems as shown by the hatching on the map of the private septic systems outside of the URDL. (Dev. Ex. 28). With regard to the sewage issues, he opined that the Torch Hill Project complies with all rules, laws and regulations; he did not see any non-compliance warranting disapproval of the Greenlined Development Plan.

In cross examination, Mr. Motsco stated that he had not reviewed the County's sewer capacity analysis for individual developments. (Prot. Ex. 6). While he acknowledged that the County evaluates sewer capacity for each development based on dry weather conditions, this analyses is not inconsistent with the CD. (*Id.*). The CD directed the County to analyze the sewer system in both dry and wet weather, but did not require upgrading or improving the system based on a particular wet weather model (storm event). Mr. Motsco agreed that the goal of CD was to eliminate SSOs through the repair and maintenance of the existing sewer system. Under the 2012 SRRR Plan, there was no need to make improvements to provide for excess capacity because water should not have been leaking into the system in the first place. He reiterated that, under the CD, the County was given the freedom to use their judgment in deciding what repairs/replacements would be performed. In his view, the County has met all requirements of the CD for Jones Falls

Sewershed not just the 4 meter basins/sub-sewer sheds upstream from Essex Farm Park. He added that there is one (1) active SSO at Marnat Rd. located at City/County line caused by an undersized main. This defect must be corrected by the City. Regardless, the Torch Hill Project does not drain through Marnat Rd.

Mr. Motsco agreed that the Essex Farm relief sewer recommended in the RKK-LTC 2012 Report has not been installed because it was not required under the 2012 SRRR Plan to be installed. The maps attached to the 2021 Performance Assessment Report confirm that all necessary repairs and rehabilitation for the Jones Falls Sewer Shed. The Certificates of Substantial Completion were not provided for all Sewer Sheds in Jones Falls but only for 4 meter basins (BC02, BC03, BC04, BC09) which were available on County website. Yet, Mr. Motsco opined that because 100,000 ft of sewer relinings and rehabilitation within those 4 sub-sewersheds/meter basins has been completed, and the repair of the Texas Station valve where previously ¼ million gallons of sewage was passing through that valve had been corrected, those improvements alone would offset any increase in flow from Torch Hill Project. In his view, there would be capacity within the sewer system for this Project. He added that the active SSOs below the Property have "not been active as of late" which in his opinion, is an indication that the repairs upstream have worked. He emphasized that the County was given freedom to determine which areas of the system needed immediate repairs and which repairs should be repaired in the future. He confirmed that the County chose the 2-year and 10 year - 6-hour storm events as its storm models and designed the repairs with those 2 storm events in mind.

FINDINGS OF FACT AND CONCLUSIONS OF LAW

The BCC provides that the "Hearing Officer *shall* grant approval of a development plan that complies with these development regulations and applicable policies, rules and regulations."

BCC § 32-4-229 (emphasis added). In *People's Counsel v. Elm Street Development, Inc.*, 172 Md. App. 690 (2007), the Court of Special Appeals held that if the county agencies recommend approval of a development plan, it is "then up to [protestants] to provide evidence rebutting the Director's recommendations." *Id.* at 703. It should also be noted that in Baltimore County "the development process is indeed an ongoing process, and the hearing officer's affirmation of the plan is just the first step." *Monkton Preservation Association, et al. v. Gaylord Brooks Realty Corp.*, 107 Md. App. 573, 585 (1996). Indeed, the County agencies will continue to review the Developer's evolving plans and construction activities through every phase of the development process to insure compliance with all County laws and regulations.

I. Sewer Capacity.

A. The *Bluestem* Case.

A review of the *Bluestem* Development Plan Opinion and Order by ALJ Beverungen dated August 30, 2019 is necessary here given Mr. Grachek's testimony in both cases and given that the the capacity of the Jones Falls Sewer Shed was the definitive reason for the denial of that development plan by both the ALJ, and as affirmed by the Board of Appeals.

In the *Bluestem* Opinion, the ALJ recited that Mr. Grachek had reviewed "certain documents, primarily the many reports prepared by RKK" and, based on his review of "those documents," Mr. Grachek opined that "it was not acceptable to add any more sewage to the system since it is over capacity at the present time." (*Bluestem*, p. 12). In making his fact findings, the ALJ only references the "evaluation" and "study" conducted by RKK which is the RKK-LTC 2012 Report. Although available at the time of the *Bluestem* hearing, the ALJ does not specifically mention the SRRR 2012 Plan. Relying on the RKK-LTC 2012 Report, the ALJ emphasized that "the Lake Roland interceptor had 541 defects, more than any other pipe segment in the Jones Falls

watershed." (*Bluestem*, p. 23). ALJ Beverungen wrote that RKK "recommended Baltimore County install relief sewers for the Lake Roland & Jones Falls interceptors, which could help to address the overcapacity issues in this area." (*Bluestem*, p. 23).

Assuming the ALJ was provided with both the RKK-LTC 2012 Report, and the SRRR 2012 Plan, it is certain that he did not have the benefit of the 2021 Performance Assessment Report given that it had not yet been created when the Opinion was written. Importantly, the ALJ mentioned in *Bluestem*, that he was not provided with any evidence of repair, replacement or rehabilitation of the sewer system defects by the County:

> There is no evidence in the record to suggest Baltimore County had undertaken such measures, and Mr. Grachek opined 'the systemic problems identified does not warrant additional sewage being added to the systemic problem, even if it were just a little bit'.

(*Bluestem*, p. 23). The *Bluestem* opinion quotes Mr. Grachek's testimony wherein: "he [did] not believe the improvements recommended by RKK have been completed." (*Bluestem*, p. 12). Also informing the ALJ's decision in *Bluestem* was the lack of rebuttal evidence to counter Mr. Grachek's testimony:

> The Developer did not contradict any of the substantial evidence presented on this point by Protestants and it did not present testimony from an engineer or sanitarian to the effect that the existing sewer is sufficient to accommodate existing and proposed demand. Instead the Developer cites the fact the subject property is not identified as deficient on the County's basic services map. I believe such reliance is misplaced.

The *Bluestem* Opinion makes clear that no evidence was provided as to planned or completed repairs, replacements and rehabilitation in the Jones Falls Sewershed. (Prot. Ex. 9, p. 6-18). (Prot. Ex. 29, p. iii). Based on the 2012 SRRR Plan and 2021 Performance Assessment Report we know

that work required to be performed had been performed prior to the *Bluestem* Opinion.

B. 2005 Consent Decree.

At the center of debate between the Parties here is whether the RKK-LTC 2012 Report controls the repairs, replacement and/or rehabilitation of the sewer system, or whether the 2012 SRRR Plan dictates the plan of repair. Mr. Grachek conceded here that he did not know what improvements had been completed by the County since *Bluestem* in 2019; he had only researched whether the Essex Farm relief sewer had been installed at between manholes 6950 and 22009. Because of this, he concluded here, as in *Bluestem*, that the Torch Hill Project should not be approved because the sewer system is still at overcapacity. Conversely, Mr. Motsco opined that the repair, replacement and/or rehabilitation by the County, not only in the area upstream of Essex Farm (i.e. BC02, BC03, BC04 and BC09) but all of the required structural improvements have provided the necessary capacity downstream in the system. Putting aside the expert testimony for a moment and considering only the documents, a review of the CD, the RKK-LTC 2012 Report, 2012 SRRR Plan, and the 2021 Performance Assessment Report actually sheds light on the issue.

CD provides the framework for the County to follow in evaluating, inspecting, modeling and repairing/replacing/rehabilitating the deficiencies found in all 32 Sewersheds in the County. (Prot. Ex. 7). The express purpose of the CD was to "eliminate[e] Sanitary Sewer Overflows ("SSOs"). (Prot. Ex. 7, pp. 3-4; p. 8). SSOs are defined in the CD as "any spill, release, or discharge from the Collection System, including all Building Backups." (Prot. Ex. 7, pp.7-8). The effective date of the CD is the date entered by the Court, or September 21, 2005. (Prot. Ex. 7, p. 5). [2] Both the EPA and the MDE were parties to the CD and were given authority to review the

[2] The CD was signed by Honorable Andre M. Davis on September 20, 2005 which ordered that the Clerk enter the executed CD in the docket and to close the case subject to the Court's continuing jurisdiction to enforce the CD. (See Case No.: 08-0919 file). The copy provided by the Protestant as Protestant Ex. 7 is not signed by the Court.

County's performance by and through quarterly reporting and as otherwise directed therein. (Prot. Ex. 7, pp. 8, 11, 14, 15, 16, 22, 23, 60, 67).

The requirement for the County to prepare the 2012 SRRR Plan is set forth in Section 10.A of the CD. That Section states that upon the County's completion of the sewer system inspection, and after consideration of the monitoring data, the 2012 SRRR Plan would be prepared for the Jones Falls which would serve two (2) purposes:

> (1) describe the deficiencies identified through the sewer system inspection; and
>
> (2) provide for the performance of repair, replacement, rehabilitation or other corrective action necessary to address those deficiencies.

(CD, Section 10.A).

For all 32 Sewersheds, the County had until early 2020 to complete implementation of the SRRR Plans. (Id.). Pursuant to CD - Sections 10.B and 10.D, both the EPA and MDE were required to approve the 2012 SRRR Plan for the Jones Falls Sewershed. Toward that end, Section 10.B of the CD *expressly* states that each SRRR Plan "shall provide for future repair, replacement, and rehabilitation" of the sewer system for each Sewershed by no later than 4 years after EPA and MDE approve each SRRR Plan. That Section further provides that the County had the discretion to 'prioritize' the work to be performed in each Sewershed based on an evaluation of the rehabilitation activities that are expected to contribute most effectively to the prevention of SSOs.

Under the CD, each SRRR Plan was required to: "Identify all corrective actions taken (including the date completed), or to be taken, by Baltimore County (including but not limited to preventative maintenance, repair, replacement, or rehabilitation) to address the deficiencies identified during inspection of the relevant Sewershed." (CD, Section 10.C.iii). The CD further directs that, *while taking into consideration the RKK-LTC 2012 Report analysis performed for*

each Sewershed, the 2012 SRRR Plan for each Sewershed would propose a plan and schedule for implementing rehabilitation and other corrective action determined necessary to correct deficiencies identified during inspection. (CD, Section 10.C.vi).

The CD also permitted the County to determine the range of storm events applicable for each Sewershed. (CD, Section 10.C.viii, ix). Notwithstanding that the RKK-LTC 2012 Report which simulated five (5) different storms and made repair/replacement recommendations based on each storm event, under Section 9.C.ii(b) of the CD, the County chose the 2 yr. and 10 yr./6 hr. storms because they were *more representative* of actual storm events experienced in Baltimore County. (Prot. Ex. 9, p. 6-12, 6-13). This storm selection matters because both the selected repairs, replacements and/rehabilitations, and the performance testing of completed repairs, were based on those 2 model-predicted storm events, and not all 5 storm events in the RKK-LTC 2012 Report.

Moreover, CD Section 10.D unequivocally states that **each approved SRRR Plan shall be incorporated into, and become enforceable under, the CD**. Conversely, the CD, Section 9.C describes each Long-Term Capacity Report as prepared for each Sewershed as an *evaluation* (or study as described in *Bluestem*) comparable to another evaluation (i.e. the 'Inflow/Infiltration Evaluation'). Because the LTC Report is an evaluation/study needed to prepare the SRRR Plan, it was required to be completed prior to the date by which the SRRR Plan for each Sewershed was due, and the County was required to summarize and incorporate the results of each LTC evaluation into each SRRR Plan. (CD, Section 9.C). As background information and data, the RKK-LTC 2012 Report is one of the many appendices of the 2012 SRRR Plan (Appendix L). Conversely, the 2012 SRRR Plan is not an appendix to the RKK-LTC 2012 Report.

When describing each LTC Report as an *evaluation*, CD, Section 9.C.ii directs the County to use "the data and information collected and analyzed" [i.e. inspection (CD, Section 8) and

rainfall/flow monitoring (CD, Section 9] to evaluate whether the projects the County proposes to complete pursuant to CD, Section 10 (i.e. SRRR Plans) will "ensure adequate long-term transmission capacity in the Collection System."

As above, by its express language, the CD unambiguously differentiates between the RKK-LTC 2012 Report and the 2012 SRRR Plan, the former is the precursor evaluation/study containing data collected, and the latter is the actual plan of repair. Given that both documents were written by RKK, and are dated within 1 month of each other, it would make no sense that both provided the approved plan of repair for the Jones Falls Sewershed. It is significant for discussion here that the **2012 SRRR Plan is incorporated into and enforceable as part of the CD**, and was approved by the EPA and MDE as to not only the repairs proposed to be completed, but the time line in which the repairs must be completed. The RKK-LTC 2012 Report is only incorporated into the CD by virtue of it being one of the many appendices to the 2012 SRRR Plan.

C. 2012 SRRR Plan.

Turning next to the language in the 2012 SRRR Plan, it is consistent with the language in the CD, and describes the same 2 purposes for the 2012 SRRR Plan as follows:

> (1) describe the deficiencies in the sewer system (as identified in the RKK-LTC 2012 Report); and
>
> (2) recommend repair, replacements, rehabilitation or other corrective action necessary to address those deficiencies.

(Prot. Ex.9, p. ES-1). The 2012 SRRR Plan specifically acknowledged that model-predicted corrective actions suggested in the RKK-LTC 2012 Report were 'recommendations' and were 'defined' after 'sewer and manhole inspections, smoke and dyed-water testing, and night-time flow isolation investigations.' Some were superseded as follows:

> Some identified structural and condition related corrective actions to correct defects were superseded by the hydraulic

> corrective action recommendations, and these defects will be corrected when the hydraulic corrective actions are completed.

(Prot. Ex. 9, p. ES-1). Both the capacity improvements and the structural condition improvements are shown graphically on Map 6-1 attached to the 2012 SRRR Plan. (Prot. Ex. 9).

After the I&I analysis was conducted, the results were that BC02, BC03, BC04 and BC09 meter basins or sub-sewersheds were exhibiting a high degree of I&I into the sewer system and were contributing to the SSOs. (Prot. Ex.9, p. 6-3). Those meter basins are depicted in yellow-shaded area on Map 6-1 of the 2012 SRRR Plan. Additionally, meter basins BC05, BC07, BC14 and BC16 also revealed excessive I&I flowing into the sewer system. (*Id.*). Because of the high degree of I&I, those meter basins received priority, comprehensive repair and rehabilitation to eliminate the I&I as depicted on the legend on Map 6-1 of the 2012 SRRR Plan. (*Id.*).

Notably, the sewage from those repaired meter basins flows through the Essex Farm area (between BC07 and BC11) where the RKK-LTC 2012 Report recommended a relief sewer be installed (MH 6950-22009) to accommodate more sewage capacity. While it is undisputed that this relief sewer was not installed, the 2012 SRRR Plan (Section 6 – *Corrective Action Recommendation Plan*) does not list it as a required repair/replacement. In fact, Section 6 of the 2012 SRRR Plan explains that detailed corrective actions were *selected* by the County, and approved by EPA and MDE, after the manhole, sewer and capacity deficiencies were inspected.

By way of example, while the RKK-LTC 2012 Report recommended sealing five (5) manholes, the 2012 SRRR Plan more specifically detailed that manholes would be either cleaned; frame seals would be added; inflows would be inserted; manhole linings inserted; manholes would be replaced; frame and cover for manhole would be replaced; and/or the frame and cover of the manhole would be reset. (Prot. Ex. 9, p. 6-7). For sanitary sewer improvements, the 2012 SRRR

Plan directed that the specific improvements were: sewer linings would be inserted; insitu (in place) repairs made; point repairs made (excavate and replace); lateral connection repairs would be made; and/or a combination of these repairs if needed to repair a defect. The exact repairs for both manholes and sewers were also provided by meter basin number in Table 6-5.3 of the 2012 SRRR Plan. (Prot. Ex. 9, p. 6-9). Additionally, it was decided under the 2012 SRRR Plan that improvements for the four (4) pumping stations in the Jones Falls Sewershed would take place, as well as improvements to the force mains within those pumping stations. (Prot. Ex. 9, pp. 6-10, 6-11).

In regard to planned sewer capacity improvements for which a relief sewer is designed, the 2012 SRRR Plan details that capacity in the system would be *improved by virtue of the sewer linings, sealings, manhole linings, and manhole sealings*. (Prot. Ex. 9, p. 6-11, 6-12). The County determined, and the EPA and MDE both approved, that the most logical approach to addressing model-predicted SSOs was to complete the comprehensive I&I reduction *rehabilitation* of the manholes and sewers:

> 1. Complete comprehensive I&I reduction rehabilitation of public manholes and sewers within SSA's exhibiting excessive I&I or other areas that contribute to model predicted SSOs determined by model simulations using the 10-Year/6-hour SCS Type II storm event.
>
> 2. Complete select capacity improvements based on a model simulation of the 10-Year /6-hour SCS Type II storm event.

(Prot. Ex. 9, p. 6-16). Based on this language, it is clear that the County concluded that the specific improvements listed above for the sewers and manholes were the capacity improvements needed upstream from the Essex Farm sewer pipes to comprehensively reduce I&I. The planned capacity improvements were listed by meter basins and include BC02, BC03, BC04 and BC09. (Prot. Ex. 9, p. 6-16).

The 2012 SRRR Plan also confirmed that the timeline for completing the improvements for the Jones Falls Sewershed as contained in the 2012 SRRR Plan, was within 6 years of the EPA/MDE approval as follows:

> 6.15 *Corrective Action Implementation Schedule (CD Ref. P.10.Cvi)*
>
> The recommended improvements to the Jones Falls Sewershed's collection system which are contained in this SRRR Plan are estimated to be completed within six (6) years of the EPA and MDE's approval of this Plan per Paragraph 10.B of the CD.

(Prot. Ex. 9, p. 6-17). The EPA and MDE approved the 2012 SRRR Plan in 2013. (Prot. Ex. 29, p. iii). Those planned improvements, which were already completed as of December of 2012 (the date of the 2012 SRRR Plan), were depicted on Map 6-1. (Prot. Ex. 9, p. 6-18). Consequently, the deadline for completing the 2012 SRRR Plan improvements was 2019.

Lastly, the language in the 2012 SRRR Plan states that remedial work to eliminate SSOs at the 3 County non-pumping stations had been complete. The only active SSO is Marnat Rd. station because the remaining work has not been completed by Baltimore City; the defect in that sewer pipe is on property located in the City. (Prot. Ex. 9, pp. ES-2; 2-2).

D. 2021 Performance Assessment Report.

The 2021 Performance Assessment Report prepared by RJN Group, Inc. ("RJN") provides further evidence that the 2012 SRRR Plan, not the RKK-LTC 2012 Report, provides the detail of the approved work for the Jones Falls Sewershed. It points out that there were actually two (2) relief sewers constructed in the Jones Falls Sewershed, neither of which was for Essex Farms:

> Section 6 of the 2013 SRRR Plan provides detail of the work planned in the Jones Falls Sewershed. Targeted rehabilitation to correct structural defects was completed throughout the Sewershed. Comprehensive rehabilitation to eliminate sources of I&I was completed in SRRR meter basins BC02, BC03, BC04 and BC09.

> Rehabilitation construction in the four meter basins (BC02, BC03, BC04 and BC09) targeted for comprehensive rehabilitation for I&I reduction was performed from 2015 through 2019. Comprehensive rehabilitation construction for I&I reduction in basins BC02 and BC03 began in November 2015 and was completed in September 2018, in basin BC04 construction began in May 2016 and was completed in September of 2019. Two relief sewers were also constructed in Jones Falls to increase the capacity of the system, one near Coppermine Terrace and the other relief sewer was constructed within Towson Town Boulevard and will be put in serving in the future.

The 2021 Performance Assessment Report also informs that the relief sewer for Coppermine Terrace has been completed. (Prot. Ex. 29, p. 12). This 'planned' relief sewer was shown to be effective in eliminating capacity deficiencies and would prevent future SSOs. (Prot. Ex. 29, p. 12). This lens further support for the conclusion that Essex Farm Relief Sewer was not selected as an improvement under the 2012 SRRR Plan.

Moreover, the results of the 2021 Performance Assessment confirmed that the completed rehabilitation projects which occurred between 2015 through 2019, were effective in reducing groundwater infiltration. (Prot. Ex. 29, p. iii). RJN addressed the effectiveness of the repair, replacement and rehabilitation projects as follows:

> 4.0 *Effectiveness of Repair, Replacement and Rehabilitation Projects*
>
> This section evaluates the effectiveness of corrective actions completed in the Jones Falls Sewershed to address capacity and structural issues outlined in the Jones Falls SRRR Plan. The evaluation was performed based on a review of County-provided post-construction inspection records, improvements implemented based on the 2013 SRRR Plan (Section 6.0), and model simulation results using the updated hydraulic model recalibrated based on pre- and post-rehabilitation flow monitoring data.

RJN noted specifically that rehabilitation on public manholes, laterals and sewers within areas that

exhibited excessive I&I reduced model-predicted SSOs. RJN confirmed that the rehabilitation work for I&I removal in BC02, BC03, BC04 and BC09 was completed. (Prot. Ex. 29, pp. 12-13). Certificates of Completion were also provided for the comprehensive work in the area of BC02, BC03, BC04 and BC09 showing that all of that work has been completed upstream of the Essex Farm Park. (Dev. Ex. 23).

From the legend on Map 2 of the 2021 Performance Assessment entitled *Jones Falls Sewershed Repair, Replacement and Rehabilitation Plan, Rehabilitation Completed*, rehabilitation work on manholes and sewers was completed in the Essex Farm area including the following:

* manhole lining (red circle);
* lining and reset frame and cover (teal box, red circle); and
* lining and internal frame seal (orange box, red circle). [3]

It is important to note that the 2021 Performance Assessment Report does not only assess the completed work in BC02, BC03, BC04 and BC09 but also provides the results of pre- and post-rehabilitation flow monitoring which was reviewed by RJN to assess the effectiveness of all of the planned repair, replacement and rehabilitation work including both the pumping stations repairs and non-pumping stations repairs/closures. (Prot. Ex. 29, p. 2). This included an analysis of both dry and wet-weather modeling, and an evaluation of the frequency and causes of SSOs in the Jones Falls Sewershed between 2010-2020. The conclusion was that, after rehabilitation, I&I was reduced in BC02, BC04 and BC09. Any infiltration still shown in BC03 was determined to be caused by private septic systems within the MD Fairgrounds and appeared only with seasonal usage. (Prot. Ex. 29, p. 9). RJN concluded that a valve upstream of BC03 contributed to those results.

Wet weather flow capacity assessment was also conducted by simulating the County-

[3] The electronic copy of Map 2 is clearer than the hard copy contained in the Protestant's Exhibits.

selected 2-year and 10-year, 6-hour storm events. Comparing the pre-rehabilitation models for all 5 storm events in the RKK-LTC 2012 Report showing predicted SSOs, with the post-rehabilitation condition for the 2 and 10-year, 6-hour storm events, the conclusion in the 2021 Performance Assessment Report was that the rehabilitation work decreased both the occurrence and volume of SSOs as follows:

> During wet weather flow conditions in basins where comprehensive rehabilitation was completed, the Jones Falls pre-habilitation condition model predicts eight (8) SSOs for the 2-year, 6-hour, 21 SSOs for the 2-year, 24-hour storms, 23 SSOs for the 10-year, 6-hour storm, 34 SSOs for the 10-year, 24-hour storm, and 39 overflows for the 20-year, 24-hour design storm. (Table 4-1A).
>
> Table 4-1B shows the predicted number of overflows in each meter basin under the post-rehabilitation condition. According to the results, the rehabilitation projects have decreased the occurrence as well as the volume of SSOs in the meter basins where rehabilitation work was completed. The model predicts no overflow for the 2-year, 6-hour, three (3) SSOs for the 2-year, 24 hour storms, four (4) SSOs for the 10-year, 6-hour storm, eleven (11) SSOs for the 10-year, 24 hour storm, and twelve (12) overflows for the 20-year, 24 hour design storm.
>
> Table 4-2 shows the percentage of predicted overflow volume reduced in predicted SSO locations, for each meter basin under the five different storm conditions. For the post-rehabilitation condition, the predicted overflow is reduced between 70% and 100% when compared to the pre-rehabilitation condition.

(Prot. Ex. 29, p. 14). Of specific relevance here is that for the County selected 2 year, 6-hour storm event, the completed work has reduced the SSOs from 8 to zero. Under the 10-year, 6 hour model-predicted storm event, the completed work has reduced SSOs from 23 to 4.

Contrary to Protestant's argument that Map 3 of the 2021 Performance Assessment predicts SSOs along the sewage path from the Torch Hill Project (as drawn by Protestants in yellow) in fact, using the legend on Map 3, no SSOs are shown in red along the sewage path for the 2-year,

6-hour storm. Additionally, no SSOs are shown in yellow along the sewage path for the 10-year, 6-hour storm. [4] The fact that SSOs appear during the model-predicted 2-year, 24-hour storm (orange) (near BC07 into and underneath Lake Roland) or for the 10-year, 24-hour storm (green), is not relevant here because neither of those 2 storm events are the storm events which apply to the County. (See CD, Section 9.C.ii(b)). As a result, Map 3 does not support the Protestant's cause.

On Maps 2 and 3 of the 2021 Performance Assessment, the sewage path from the Torch Hill Project (shown by yellow line created by the Protestants) is consistent with the Developer's sewage flow path indicated by a blue line drawn by the Developer on the Map 6-1 of the 2012 SRRR Plan. (Dev. Ex. 22). [5] On neither of these sewage paths does the sewage from Torch Hill flow; it does not flow eastward and upstream between MHs 6950 and 22009 in the Essex Farm area. At best, the Torch Hill sewage will pass the convergence area of BC06, BC07 and BC11 and then head downstream. But again, the completed repair, replacement and rehabilitation of the upstream sub-sewersheds was approved by EPA and MDE to accommodate any capacity issue between MHs 6950 and 22009.

Mr. Motsco testified that, based on his review of County's Quarterly Reports and the 2021 Performance Assessment Report, 'almost all' of the 2012 SRRR Plan improvements have been completed in the blue sewage path line, including reconstructions and linings to further reduce I&I. (Dev. Ex. 22). However, acknowledged that all of the sewer linings downstream of the Torch

---

[4] The hard copy of Map 3 shows the yellow line drawn by the Protestant's for the Torch Hill Project sewage flow. The electronic copy of Map 3 does not have the yellow line/path but is much clearer and easier to read than the hard copy.

[5] The hard copy of Maps 2 and 3 show the yellow line drawn by the Protestant's for the Torch Hill Project sewage flow. The electronic copy of Maps 2 and 3 does not have the yellow line/path but is much clearer and easier to read than the hard copy.

Hill Project, as required under the 2012 SRRR Plan, and which are located in the direct path of sewage flow from the Torch Hill Project, have not been completed. Mr. Motsco confirmed that the remaining downstream improvements only include linings; there are no upgrades in the sizing of pipes, or relief sewers, required downstream of the Torch Hill Project.

Given that the completion date for the 2012 SRRR Plan improvements was 2019, it was not made clear during the hearing why all the improvements have not been completed. It is concerning to the undersigned that the downstream linings (whether for sewers or manhole or both) as required under the 2012 SRRR Plan - *in the direct sewage path for Torch Hill Project* - have not been installed. If linings have been planned, that means the sewers and/or manholes were determined to have defects, and those linings are necessary to correct those defects. While the Developer did not make clear how many downstream linings still need to be installed, or where those downstream linings need to be installed, the point is that the downstream linings need to be installed before any additional sewage from 32 homes in Torch Hill is added to the system. While it may be that 'almost all' of the required work for the Jones Falls Sewershed has been completed, and that DPWT confirmed that sewer capacity exists for the proposed 32 homes, I find that this particular unfinished work is necessary to correct any defects which still exist in the sewage path. (Dev. Ex. 19). Accordingly, prior to connecting the Project to the public sewer system, the completion of all work required under the 2012 SRRR Plan (whether linings for sewers, manholes or both) and which is within the sewage path from Torch Hill Project as shown by the blue line on Developer's Ex: 22, shall be completed as a condition of the Order.

E. E coli in Lake Roland.

Protestant contends that the County's E coli results for Lake Roland are the direct result of sewage leaking from Lake Roland interceptor. Mr. Grachek is not supportive of the Lake Roland

interceptor design and believes it must be replaced. The basis for his opinion is that on May 23, 2022, the County collected water samples from Lake Roland and tested for E coli as it does for other County recreational waterways. The E coli results for May 23, 2022 were in excess of 2420 geo metric means which was far in excess of the COMAR 26.08.02.03-3.A(1)(a) geo metric mean of 126. (Prot. Exs. 19, 20). Between April – June of 2022, the testing results for Lake Roland do show additional dates where the results were both above and below 126. For example, the results on dates immediately following May 23, 2022 shows the geo metric mean was only 13.8 on June 15, 2022, and was only 33.171 on June 1, 2022 – both far below the 126 threshold. If E coli levels are caused by the Lake Roland interceptor, than the geo metric mean would consistently be at higher levels; it would not spike to high and then low levels from week to week. For the results to vary from above the 126 geo metric mean to below, the logical conclusion is that result depends on the extent of the use of Lake Roland Park, which includes a dog park. There was no definitive evidence that the Lake Roland interceptor is leaking, particularly in light of the 2021 Performance Assessment Report which concluded that the approved repairs were effective. To contend that these E coli results are solely from human waste is mere speculation since no testing has made that determination.

There is further information directly countering this point. Mr. Grachek identified the Lake Roland interceptor by MH numbers: 6888 (upstream) and 6887 (downstream) which are both located in flow meter basin TSJF01. (Prot. Ex. 18). He emphasized here, as in *Bluestem*, that Appendix E of the 2012 SRRR Plan (entitled Table 4-3.4 – *Summary of Sewer Defects by Sewer Segment, Jones Falls SRRR – Collection System Investigation*) showed 541 defects for those MH numbers in meter basin TSJF01. (Prot. Ex. 18). This was further support for his position that the Lake Roland interceptor is leaking and must be replaced because it is at overcapacity. However,

the 2012 SRRR Plan explains that Appendix E (Prot. Ex. 18) was the result of manhole inspections using specialized pole mounted manhole camera. (Prot. Ex. 9, p. 4-2). Map 4-1 entitled *Sewer and Manhole Inspections Completed* shows that the Lake Roland interceptor was inspected and reviewed. Appendix E clarifies that in Manholes 6888-6887, 536 of the 541 defects were due to a defective pipe, surface or lining, but that none of the 541 were classified as 'major defects.' (Prot. Ex. 18, p. 22). If the interceptor was leaking, it would be a 'major defect.'

The 2012 SRRR Plan at Table 6-4.2 further reads that with flow meter basin TSJF01, 4 of the manholes were in poor condition and 1 manhole required immediate attention. (Prot. Ex. 9, pp. 6-5, 6-6). Likewise, the sewer segments in flow meter basin TSJF01 at Table 6-4.5 show that of the 28 sewer segments reviewed, 6 were in poor condition and 10 required immediate attention. (Prot. Ex. 9, pp. 6-5, 6-6). Importantly, the 2012 SRRR Plan listed both manhole improvements and sanitary sewer improvements in Appendix O of the 2012 SRRR Plan. (Prot. Ex. 9. p. 6-7). Appendix O was not provided in the Protestant's exhibits. Summarily, the specific sewer segments and manhole repairs for flow meter basin TSJF01 are also listed in Table 6-5.3 of the 2012 SRRR Plan and included:

* 15 in-situ (in place repair);
* 3,226 linear feet of sewer linings;
* 2 point repair;
* 14 lateral connection repair;
* replacing 1 manhole frame and cover;
* installing 4 frame manhole seals; and
* installing 5 manhole linings.

(Prot. Ex. 9, p. 6-9). What is more, according to the legend on Map 2 of the 2021 Performance Assessment Report the work in flow meter basin TSJF01 has been completed. While the Protestant contends that Lake Roland interceptor must be replaced, the legend on Map 2 of the 2021 Performance Assessment Report confirms that no rehabilitation work was recommended in BC31

which is the flow meter basin where Lake Roland and the Lake Roland interceptor is located. (Prot. Ex. 29).

For the reasons set forth herein, subject to the conditions set forth in the Order, I find the sewer system has the capacity to accommodate 32 homes from Torch Hill Project and as such it meets requirements, rules, regulations and County policies set forth in BCZR, §4A02.3.G; BCC, §32-4-102(b); DPW Design Manual Sanitary Sewer; and PAI, Development Plans Review Manual.

II. Special Variance – 'F' Rated Intersection Falls Rd. and Seminary Avenue.

The only witnesses to testify in regard to traffic and the "F' rated intersection of Falls Rd. and Seminary Ave. were Developer's traffic engineer, Mickey Cornelius; Angelica Daniels, Bureau Chief, Traffic Engineering and Transportation Planning of DPWT; and Kristopher Nebre, PE, Engineer III, Traffic Engineering and Transportation Planning of DPWT. The Protestant did not present any lay person testimony or expert testimony in regard to traffic issues. There were no citizens or property owners who testified about traffic.

As a starting point, it is undisputed that both Falls Rd. (MD Rt. 25) and Seminary Ave. (MD Rt. 131) are owned and maintained by the State of Maryland. Additionally, the signal at the intersection of Falls Rd/Seminary Ave. is also owned and maintained by the State of Maryland. Using the CLV and HCM methodologies - both of which are used by SHA - the Falls/Seminary intersection is rated as a 'D' intersection during the peak morning hours, and 'C' during evening peak hours. (Dev. Ex. 14, pp. 14-15). Given that the State does not rate the intersection as failing, the State has not, and likely will not, improved the intersection. Although the County has rated the intersection with an 'F' level of service for over 20 years, Ms. Daniels made clear that the County will not incur the cost to improve a State road. As a practical matter, any improvements

made to this intersection would have to be paid for with private funds by a developer.

BCZR, §4A02.4.G.2 requires the DOP to provide the ALJ with a report prior to consideration of the Special Variance. In this case, DOP did provide the HOH Report but deferred the issue to DPWT due to their expertise with traffic issues. (County Ex. 11A). At the beginning of the hearing, DPR, who typically represents DPWT, was not able to answer questions about traffic or the Special Variance Petition. In the interests of transparency, and to provide needed answers to questions on a central issue in the case, the undersigned requested the testimony from DPWT, notwithstanding the presumption that BCC, §32-4-226(c) and (d) presume that no comment from a County agency means the agency is not opposed to a development plan. Both Ms. Daniels and Mr. Nebre were able to provide answers to questions in regard to the applicable traffic shed, the 'F' rated intersection of Falls/Seminary, the County's use of the loaded cycle methodology, and whether the proposed left-turn lane extension will provide a zero net impact on the intersection. When Ms. Daniels confirmed that one of the duties of Traffic Planning and Traffic Engineering Section of DPWT is to provide technical assistance to the DOP, the deferral by DOP in its HOH Report to DPWT for the Special Variance issue made complete sense.

In regard to the Special Variance provision in BCZR, §4A02.4.G, it requires that the Special Variance Petition not violate the provision's purpose. That purpose is set forth in BCZR, §4A02.4.D.1 as follows:

D. Transportation.

> 1. Intent. The transportation standards and maps are intended to regulate nonindustrial development where it has been determined that the capacity of arterial and arterial collector intersections is less than the capacity necessary to accommodate traffic both from established uses and from uses likely to be built pursuant to this article.

I disagree with the Protestant's argument that the standard to apply in a Special Variance case under BCZR, §4A02.4.G is the LCM. This argument mixes the standard applied by the County to *rate* an intersection, from the standard to apply when a Petition is requested for what is essentially *a waiver or exception* (i.e. Special Variance) from the prohibition on issuing a building permit. The purpose for determining the 'level of service' is to assign a letter grade (i.e. a 'rating') to an intersection, and the purpose of rating an intersection, is to control the issuance of building permits at the outset. The 'F' letter rating is a 'red flag' on the file. The Special Variance, on the other hand, focuses on what impact the particular development will have on the intersection *rated* as *failing*, so that it can be determined whether or not the building permit restriction can be lifted for a project. If the impact from the development is net zero (due to a proposed improvement to the roadway and/or a TIA which calculates the impact as zero), then a waiver of the building permit moratorium can be granted.

And Mr. Nebre was clear in his testimony that in reviewing the TIA he was focused on the impact that the development would have on the intersection of Falls/Seminary to determine whether capacity would exist for the proposed and existing traffic in light of the improvement. He did not need to focus on the LCM rating as the *intersection had already been rated.* He added that if, the proposed improvements could also make the intersection function better, than that would be a good thing. Mr. Nebre is not a professional expert and is not accustomed to testifying in Court. I found his testimony to be objective and credible.

I also find that, based on the testimony of Mr. Nebre and Mr. Cornelius, after the proposed 190 ft. left turn lane extension (Dev. Ex. 15) is constructed, the capacity of the arterial and arterial collector intersections in this traffic shed will not be less than the capacity necessary to accommodate traffic from both established uses and from the Torch Hill Project. Said another

way, I find that, *after* the left turn lane extension is constructed, the demand or impact from the Torch Hill Project (i.e. the trips to be generated plus the existing trips) will result in a net zero impact to the intersection. The uncontroverted evidence was that the failing movement which generated the 'F' level of service rating is the westbound direction and specifically, vehicles queued to turn left on Falls Rd. Because the left-turn lane is too short to accommodate the amount of traffic, it restricts the movement of other traffic heading straight into St. Paul's Schools or right onto Falls Rd. The proposed 190 ft. left-turn lane extension is targeted to address the westbound direction and will accommodate the traffic generated from Torch Hill Project as determined by the TIA. Any delay from the private road eastbound from St. Paul's Schools will be handled by SHA with the signal light adjustment.

Contrary to Protestant's argument, until the County decides that it will no longer apply the LCM methodology, the LCM will still be used by the County to *rate* intersections; this case does not change that. To be sure, LCM is a conservative way to rate intersections and is limited to observations made by traffic counters during a 2-hour window; it does not predict future traffic conditions. Although conservative and limited, in hindsight, the LCM is not a bad thing for the County in regulating development; it stops the permit process until the roadway can be improved. When DPWT conducts annual traffic counts on Falls/Seminary, the level of service may remain at an 'F' rating. If it does, the surrounding community only stands to gain because any future development projects would be required to go through the same process as the Developer here.

But whether Falls/Seminary's *rating* improves or stays the same, the Special Variance does not require a finding that the County's level of service rating will be improved, only that the intersection will be able to accommodate the traffic generated by the Torch Hill Project. This is consistent with the purpose of the Transportation Basic Services Map (above) which is <u>whether</u>

capacity will exist at the intersection to accommodate both existing traffic and that generated by Torch Hill. It is also consistent with the required finding in BCZR, §4A02.4.G.1.a that the demand or impact from traffic generated by Torch Hill, will be less than that presumed by the district standard. In this case, I find that the proposed 190 ft. left-turn lane extension, along with the signal timing changes which SHA will perform, will not only increase capacity, but will reduce delays at the intersection.

Lastly, I also find the Petition for Special Variance will not adversely affect a person whose application was filed prior to the Petitioner's application in accordance with Section 4A02.3.G.2.b, as there was no evidence that any applications for reserve capacity use certificates are on file. The Developer here is not seeking a reserve capacity use certificate here. As a result, that provision is not applicable in this case.

III. Setback Variance.

The Petition for Variance from BCZR, §1B01.2.C.b seeks to allow a 0 ft front yard setback for an existing home which fronts on Seminary Ave. and was constructed in the 1940s-1950s. (Dev. Ex. 6, photos 15 and 16). When the DOP requested that the home remain, it was incorporated into the site layout. The existing home is part of the scenic route on Seminary Avenue as shown in the Scenic Route Study which was approved by DOP. (Dev. Ex. 8).

A variance request involves a two-step process, summarized as follows:

(1) It must be shown the property is unique in a manner which makes it unlike surrounding properties, and that uniqueness or peculiarity must necessitate variance relief; and
(2) If variance relief is denied, Petitioner will experience a practical difficulty or hardship.

Cromwell v. Ward, 102 Md. App. 691 (1995). I find that the Property is uniquely shaped and sized unlike other properties in the area. I also find that the Petitioner would suffer a

practical difficulty and unreasonable hardship if the existing 1940s-1950s home were required to be demolished because it cannot meet current front yard setbacks. I also find that the requested variance relief can be granted in strict harmony with the spirit and intent of the BCZR and without injury to the health, safety or general welfare, particularly in light of the request from DOP to retain the home as well as the lack of opposition from any adjacent property owner.

IV. Forest Conservation Variance.

On April 15, 2022, the Director of DEPS recommended approval of the Developer's request to remove sixteen (16) of the ninety (90) STs as set forth on the Plan to Accompany Forest Conservation Variance Application dated August, 2021 and then as revised in February, 2022. (Dev. Exs. 9, 10, 11). As originally filed, only eleven (11) STs were requested to be removed. In response to DEPS' request to conserve larger tracts of forest contiguous to the Forest Buffer, the number of STs increased to 16. However, it should be noted that, in removing these STs, 16 acres of the 32 acres (38%) will be permanently preserved by environmental easements. Of the 16 STs to be removed, four (4) are in poor or very poor condition. Of the twelve (12) remaining, mitigation will be provided on-site with tree planting. Pursuant to BCC, §33-6-116(g)(1) and (2), I will grant the Forest Conservation Variance to remove 16 STs as shown on the plan to accompany the Revised Application for Forest Conservation Variance dated February, 2022, and I adopt the reasons set forth in DEPS' Director approval of the Forest Conservation Variance dated April 15, 2022 (Dev. Ex. 11), with the condition that the Developer shall use all reasonable measures and protections during construction to save four (4) of the sixteen (16) STs and prevent impacts to their critical root zones (CRZs).

V. Residential Performance Standards, BCZR, §260.

The Developer submitted a Redlined Pattern Book which was reviewed and approved by the DOP on April 21, 2022. (Dev. Ex. 3). No modifications or waivers of standards have been requested as part of this Greenlined Development Plan. In considering the recommendation of DOP, and my review of the Redlined Pattern Book, I find that the Residential Performance Standards set forth in BCZR, §260 *et seq.* have been met.

VI. School Impact Analysis (SIA).

The Adequate Public Facilities Ordinance found in BCC, §32-6-103(e)(1)(2) states that development approval may not be granted in existing overcrowded school districts (defined as a district where enrollment exceeds 115% of the state-rated capacity ("SRC")), or if the development plan is projected to generate additional school population that would result in the school district becoming an overcrowded school district. An exception is set forth in BCC, §32-6-103(f)(3) which permits the development if any school in the district adjacent to the overcrowded school district has sufficient capacity to render the overcrowded school less than 115% of the state-rated capacity.

In this case, the School Impact Analysis ("SIA") as submitted by the Developer and approved by the DOP, confirms that that the projected full time equivalent enrollment ("FTE") for Riderwood Elementary School (98.09%), Ridgely Middle School (103.36%) and Dulaney High School (97.83%) are each school is below the 115% of the State Rated Capacity ("SRC"). As such, none of the schools are considered to be 'overcrowded.' As a result, I find that the Greenlined Development Plan meets Adequate Public Facilities Ordinance found in BCC, §32-6-103(e)(1)(2) and (f)(3).

VII. Open Space.

Under the Adequate Public Facilities Ordinance in BCC, §32-6-108 for the 32 proposed homes, the Open Space is 32,000 sf (1,000 sf per unit). The uncontroverted evidence is that the Developer is proposing to provide 32,006 sf or 0.735 acres of private, Open Space – all of which is onsite - as shown on the Greenlined Development Plan. (County Ex. 3). Accordingly, I find that this requirement has been satisfied.

Conclusion

For a development project to be approved under the Basic Services Map, both sewage and traffic generated by the proposed development must be accounted for in the existing system/infrastructure, or by improvements to that system/infrastructure. The impact that a proposed development will have on the segments of the sewer system and on the particular transportation infrastructure to which it will feed, will determine whether each of these public systems have the capacity, and can therefore accommodate, the additional sewage and traffic generated by the development. After considering the testimony and evidence presented, the exhibits offered at the hearing, and confirmation from the various County agencies that the Greenlined Development Plan satisfies those agencies' requirements, I find that the Developer has satisfied its burden of proof and, therefore, is entitled to approval of the Greenlined Development Plan, subject to the conditions in the Order. I further find that the Special Hearing relief to approve the Special Variance under BCZR, §4A02.4.G to allow the Torch Hill Project within the Falls Rd and Seminary traffic shed should also be granted for the reasons set forth herein. Additionally, I will grant Variance relief from §1B01.2.C.b for a front yard setback of 0 ft. in lieu of the required 25 ft. for the existing residential structure to avoid its demolition and to preserve the scenic view from Seminary Ave.

THEREFORE, IT IS ORDERED by this Administrative Law Judge/Hearing Officer for Baltimore County, this **13th** day of **October 2022,** that the Torch Hill Project as set forth on the attached Greenlined Development Plan (Dev. Ex. 2) which is incorporated herein and made a part hereof, be, and it is hereby, **APPROVED.**

IT IS FURTHER ORDERED that the Petition for Special Hearing under BCZR, §500.7 and pursuant to §4A02.4.G, to allow the construction of 31 single-family residences within the Falls Rd. and Seminary Rd. traffic shed, be, and it is hereby, **GRANTED**.

IT IS FURTHER ORDERED that Variance relief from BCZR, §1B01.2.C.b, to permit a front yard setback of zero (0) ft. in lieu of the required 25 ft. for an existing residential structure on the Property, be, and it is hereby, **GRANTED.**

IT IS FURTHER ORDERED, that the Forest Conservation Variance to remove the sixteen (16) specimen trees as listed on the Revised Plan to Accompany the Forest Conversation Variance (Dev. Ex. 10), which Revised Plan is attached hereto and incorporated herein and made a part hereof in its entirety, be, and it is hereby **GRANTED**, with the condition that the Developer shall use all reasonable measures and protections during construction to save four (4) of the sixteen (16) STs and prevent impacts to their critical root zones (CRZs).

The relief above is granted herein shall be subject to, and conditioned upon, the following:

1. Developer's Exhibit 22, Map 6-1 of the 2012 SRRR Plan, depicting the sewage flow from the Torch Hill Project which is attached hereto, shall be incorporated into and made a part of this Order. Prior to connecting to Torch Hill Project to the public sewer system, all repair, replacement and/or rehabilitation work required under the 2012 SRRR Plan (whether for sewers, manholes or both) and which is within the sewage path from Torch Hill Project as shown by the blue line on Developer's Ex: 22, shall be completed by the County, its authorized representative and/or the developer, as a condition of the Order. Upon completion, the County shall provide written confirmation of the same.

2. Developer's Exhibit 15 which is attached hereto, incorporated herein and made a part of this Order. Prior to building permits being issued, the Developer will construct the 190 ft. left turn lane extension on Seminary Avenue as depicted on Dev. Ex. 15 and/or as otherwise directed by SHA upon its review and approval of construction drawings for the turning lane extension.

Any appeal of this Order shall be taken in accordance with Baltimore County Code, §32-4-281.

RESUME

Nicholas J. Leffner, PE
Associate
Kimley-Horn and Associates, Inc.
215 Washington Ave, Suite 500
Towson, MD 21204

Civil Engineer

Education: Bachelor of Science, Civil Engineering
Virginia Polytechnic Institute and State University, Blacksburg, VA

Registration: Registered Professional Engineer in Maryland (#44113)

Professional Organizations: Urban Land Institute (ULI)

Professional Experience:

Civil Engineer, Bowman Consulting Group, Ltd. – 6 years

- Provided design, entitlement, and permitting consulting services to support a variety of land development engineering projects, including, residential, commercial, retail, industrial, institutional, and mixed-use projects.
- Prepared conceptual, final, and construction document level design plans, computations, and reports for a variety of civil engineering related disciplines; including, site planning/feasibility, site design grading and drainage, utilities, roadways, stormwater management, soil erosion and sediment control, and construction phase services.

Civil Engineer/Project Manager, Kimley-Horn and Associates, Inc. – 8 years (present)

- Serves as a civil engineering consultant and project manager of multi-disciplinary consulting team for a variety of land development projects
- Responsible for the design, entitlement, permitting, and construction phase services for a variety of land development projects; including, residential, commercial, retail, industrial, institutional, mixed-use, and energy (solar and battery storage) projects.

Project Experience:

Maryland – State owned lands, Federal owned lands, Alleghany County, Anne Arundel County, Baltimore City, Baltimore County, Calvert County, Caroline County, Cecil County, Charles County, Dorchester County, Frederick County, Harford County, Howard County, Montgomery County, Prince George's County, St. Mary's County, Queen Anne's County, Washington County, Worchester County

Other – Federal owned lands, Delaware, Kansas, New Jersey, New York, Oklahoma, Pennsylvania, South Carolina, Virginia, Washington D.C.

Re: Sewershed Repair, Replacement and Rehabilitation Plans

Dear Mr. Kiefer:

The Maryland Department of the Environment (MDE), Water Management Administration has reviewed the Sewershed Repair, Replacement, and Rehabilitation (SRRR) Plans submitted by Baltimore County for the Patapsco, Stemmers Run, Tributary 27, Gwynns Falls, Herring Run, Jones Falls, Dead Run, West Lowlevel and Tributary 48 paragraphs 8.C.i(c) and 10.B.and C of Consent Decree 1:05-cv-02028-AMD/JCD-06-0210. The Department acknowledges that the above noted SRRR Plans meet the requirements of the Consent Decree. This letter expresses MDE's comments only and not those of the Environmental Protection Agency (EPA), which may be provided by separate correspondence from the EPA.

The Department appreciates your attention to this matter. If you have any questions, please do not hesitate to contact Mr. David Lyons, Deputy Director, Compliance Program, at (410) 537-3510.

Sincerely,

Jay G. Sakai, Director
Water Management Administration

Re: Sewershed Repair, Replacement and Rehabilitation Plans

Dear Mr. Kiefer:

The United States Environmental Protection Agency (EPA) has reviewed the Sewershed Repair, Replacement and Rehabilitation (SRRR) Plans submitted by Baltimore County for the Patapsco, Stemmers Run, Tributary 27, Gwynns Falls, Herring Run, Jones Falls, Dead Run, West Low Level and Tributary 48 pursuant to Paragraphs 8.C.i.(c), 10.B, and 10.C of Consent Decree 1:05-cv-02028-AMD. The EPA acknowledges the above SRRR Plans meet the requirements of the Consent Decree.

Please be advised this letter expresses EPA's comments only and not those of the Maryland Department of the Environment (MDE).

Thank you for your cooperation in this matter. If you have any questions, please contact me at 215-814-2097.

Sincerely,

Andrew F. Seligman, Environmental Scientist
Water Protection Division

Subject: RE: Sewer Asset Confirmations

Good afternoon D'Andrea.
I reviewed the Excel Spreadsheet (EX44) that Mr. Conner had provided you on 5/23/2023 (attached).

Results from my review:

Corrective Action Status

MH 43820: Manhole Lining was not needed so that work was eliminated. An Inflow insert was installed 9/29/2014
MH 43819: Manhole Lining was not needed, so that work was eliminated.
MH 53270: A Watertight Frame and Cover was installed 3/12/2017.
MH 44213: A rain pan was installed 6/3/2019.
MH 44212: A rain pan was installed 6/3/2019.
MH 6883: A brick collar was installed around the Manhole and the outside of the Manhole was parged (sealed).

Segment 6875-6874: Lining completed 12/19/2019.

Segment 43794-43793: Segment Lining was approved 12/6/2019
MH 43794: Manhole Lining and Frame and Cover Replacement deleted per RFI 15
MH 43793: Manhole Lining deleted per RFI 14.

Hope this helps.

Department of Public Works

INTERNAL MEMO

RE: BASIC SERVICE MAPS – SEWER FACTS

DATE: May 1, 2023

Deficient vs. Area of Special Concern

- Areas of Special Concern have active Sewer System Overflow Structures (SSOs)
- There are no thresholds for AoSC. These are areas identified for the use of the County and developers to alert them that additional scrutiny will occur. Historically they are areas upstream of the constructed SSOs.
- Deficient Treatment Facility Areas follow the State guidelines requiring 20% reserve capacity at Treatment plants, not in piping, at the plant.
- Jones Falls - To eliminate the AoSCs, eliminate/close the SSO at Marnat Ave and add capacity in Brooklandville.

RKK vs. Hazen Reports

- RKK issued in 2012
  - SRRR Plan (Sewershed Repair, Replacement and Rehabilitation)
  - Recommended, EPA and MDE Approved – most logical approach to addressing SSOs was the complete comprehensive Inflow and Infiltration (I&I) reduction rehabilitation
- Hazen ongoing – final due end of 2023, quarterly reports on County DPWT website (3 year project)
  - Performance Assessment Report – purpose was 50 year planning after 2025
  - Maintenance recommendations
  - 26 flow monitors monitoring 24/7 in all weather conditions
  - Assessment of high rainfall dependent areas
  - Sewershed selected because of large unsewered area and diverse mix of residential, commercial, industrial

Storm Analysis

- Consent Decree allows choice of storm analysis, DOES NOT REQUIRE certain storms
- DPWT choose 2year/6hour and 10year/6 hour as most representative of storms the area gets
- Opposing testimony continues to mention 2,10,20year – 24hour storms, these are NOT REQUIRED by EPA/MDE, they are HURICANE LEVEL and this was upheld/acknowledged in ALJ Ruling 10/2022 for Torch Hill Development.
- This weekend – using Towson rain gage on Stevenson Lane – no storm level ratings were met
  - Friday 4/28/23 8a-midnight (16hr storm) 0.42" rain
    - To meet a 1 year/12 hour storm would have needed 2.4" of rain
  - Sunday 4/30/23 – 8a-12p (4hrs) 0.26" rain
    - To meet a 1 year/3hour storm event it would have needed to be 1.6" during the 4 hours.

Jones Falls Sewer Shed Projects

- Both Consent Decree and Non-Consent Decree projects = $44M+ initiated since 2013
- 2017 Blue Water Baltimore stated "The Jones Falls saw the greatest improvement with 7 out of 13 sites posting scores of 80% of higher…. Results likely not due to weather…. Baltimore County… implementing repairs to sewer system"
- Completed Projects

EXHIBIT
tabbies
46

    - Jones Falls Basic BC04 Sewer Rehab $1.6M complete 2017
    - Jones Falls Basin BC02-03 Sewer Rehab $2.5M complete 2016
    - Jones Falls Large Diameter Sewer Rehab $4.7M complete 2019
    - Jones Falls Basin BC09 Sewer Rehab $3.2M complete 2019
    - Jones Falls Sewer Structural Rehab Package 2 $5.3M complete 2019
    - Jones Falls Sewer Structural Rehab Package 1 $4.5M completed 2019
- Sewer Capacity vs. Inflow &Infiltration
    - EPA/MDE approved the approach of I&I (Inflow/Infiltration) Consent Decree Plan. This is reflected in the projects for rehab/relining of the sewer to reduce the inflow/infiltration into the system during all weather.

Individual Development Analysis

- Laundry Mat vs. Gas Station – sewer/water usage dependent, not square footage dependent
- Each development is assessed individually by DPWT Engineers for sewer/water use

Sewer System Overflow Structures (SSOs)

- There were 44 constructed SSOs structures at start of Consent Decree throughout the County
- Baltimore County has eliminated 34.
- Of the remaining 10, 4 require completion of City capacity improvement projects to eliminate. The other 6 are associated with active County construction projects.
- City Delayed - County SSO structures
    - 113 Marnat Road (Pikesville at City line)
    - 116 Nunnery Lane, 117 Briarwood Road, and 118 Overbrook road (Catonsville at City line)
- SSO's with Active County Projects
    - 41 Aiken Ave, 129 Queen Anne Drive (Parkville at City Line) – part of Herring Run project
    - 22 Alter Road, 23A Southern Cross Drive, 23B Southern Cross, 24 Patterson Ave (Lochern at City Line) – part of Powder Mill Relief Sewer project

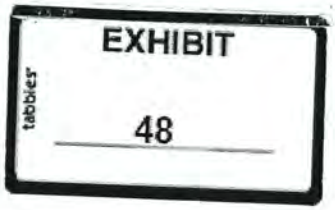
Quarterly Report

January 1, 2019
Through
March 31, 2019



Pursuant to Paragraph 19, of the Consent Decree between Baltimore County and the United States Environmental Protection Agency, Department of Justice and the Maryland Department of the Environment

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **January 1, 2019** through **March 31, 2019**.

The quarterly report discusses activities and progress of Baltimore County during the last quarter towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i(a). Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraphs 8 and 15 of the Consent Decree.

Paragraph 15.B.i.b inspections status is summarized in Attachment C; 0.3 miles were inspected\attempted to be inspected during the reporting period with 12 manholes and other appurtenances also inspected\attempted to be inspected. Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020.

Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plans

SRRR Plan Implementation/Progress:

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

(a) Consent Decree projects or requirements certified as complete during the reporting period:

None.

(b) Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

(c) Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Cockeysville SRRR Plan

On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.

Bird River SRRR Plan

On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.

Bengies SRRR Plan

On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

To expedite completion of the downstream hydraulic improvements, the County has split the design project into two projects: Powder Mill Interceptor Relief Sewer Phase I and Phase II. The County is preparing final design documents for the first project and is awaiting City permits for the second design project. The first design project is anticipated to be advertised in the first half of 2019.

Elimination of Non-Pump Station SSO Structures 41 and 129

The County is continuing negotiations and finalizing easement agreements with four property owners to accommodate construction of the East Branch Herring Run Relief Sewer (reference potential delay notification dated March 3, 2017).

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues coordinating with the City to complete the needed hydraulic improvements to the City's collection system. The County and City engineering staff did not have a coordination meeting during the reporting period; however, the DPW directors met to discuss ways to better collaborate. All County and City data requests were addressed during the period. The County intends to meet with the City to discuss potential options to expedite the City's hydraulic improvement project(s) and expand their study area for a more regional approach.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Thomas Kiefer, PE
Chief, Bureau of Engineering and Construction

Discharges from Overflow Structures

During the January 1, 2019 – March 31, 2019 Period

Pump Station Overflow Structures:

Name	Kings Point
Address	9701 Plowline Road
Date Of Discharge	2/24/2019
Duration Of Overflow	24 Minutes
Date Of Relevant Weather Conditions	2/24/2019
Description Of Relevant Weather Conditions	Dry
Gallons Discharged	6,000
Receiving Waters	Mardella Branch
Identified Cause	VFD Interruption
Details Of Corrective Action Taken Or Planned	Reset VFD

Non-Pump Station Overflow Structures – Metered:

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date Of Discharge	3/21/2019
Duration Of Overflow	3 Hrs. 58 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	10,709
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date Of Discharge	3/21/2019
Duration Of Overflow	9 Hrs. 43 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	69,322
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date Of Discharge	3/21/2019
Duration Of Overflow	9 Hrs. 19 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	68,236
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date Of Discharge	3/21/2019
Duration Of Overflow	12 Hrs. 19 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	339,095
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date Of Discharge	3/21/2019
Duration Of Overflow	2 Hrs. 23 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	17,087
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. SSO elimination time extension request approved on 4/16/2018.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date Of Discharge	3/21/2019
Duration Of Overflow	2 Hrs. 51 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	36,724
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Right of way acquisition required for sewer relief project. SSO elimination time extension request approved on 4/16/2018.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	3/21/2019
Duration Of Overflow	1 Hrs. 28 Min.
Date Of Relevant Weather Conditions	3/21-22/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	34,966
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	City hydraulic improvements needed to eliminate overflow. County is coordinating with the City to complete needed improvements.

3/21/2019	Overbrook Road & Medwick Garth		D
3/28/2019	8227 Fischer Road		B

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral; or
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole; or
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action; or
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E

Status of SRRR Plan Implementation

During the January 1, 2019 – March 31, 2019 Period

Attachment E: Status of SRRR Plan Implementation

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Bengies	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bird River	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bread & Cheese	9/29/2020	Yes
Cockeysville	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Dead Run	9/6/2017	Completed
Delmar	4/18/2022	Yes
Duck Creek	4/18/2022	Yes
Dundalk	4/18/2022	Yes
East Point	4/18/2022	Yes
Essex	4/18/2022	Yes
Gray Manor	4/18/2022	Yes
Gunpowder	4/18/2026	Yes
Gwynns Falls	9/6/2018	Completed
Herring Run	9/6/2018	Completed
Jones Falls	9/6/2019	Yes. On 11/17/2015 and 5/17/2018, the County submitted potential delay notifications for two sewer structural repair and rehabilitation projects.
Long Quarter	4/18/2024	Yes
Orems	9/29/2020	Yes. On 11/16/2018 the County submitted a potential delay notification for a force main replacement project.
Patapsco	9/6/2021	Yes. On 10/28/2018 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Redhouse Run	4/18/2024	Yes
Stemmers Run	9/6/2024	Yes
Texas	4/18/2022	Yes

Quarterly Report

April 1, 2019
Through
June 30, 2019

Pursuant to Paragraph 19, of the Consent Decree between Baltimore County and the United States Environmental Protection Agency, Department of Justice and the Maryland Department of the Environment

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **April 1, 2019** through **June 30, 2019.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i(a). Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A.**

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraph 15 of the Consent Decree.

Paragraph 15.B.i.b inspection status is summarized in **Attachment C.** Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020.

Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

(a) Consent Decree projects or requirements certified as complete during the reporting period:

Kings Point Pump Station Action Plan

On April 8, 2019 the County submitted a response to prevent further SSOs due to loss of power for the Kings Point Pump Station

West Low Level Sewershed

On June 6, 2019 the County submitted the Performance Assessment Report for West Low Level Run Sewershed.

Dead Run Sewershed

On June 6, 2019 the County submitted the Performance Assessment Report for Dead Run Sewershed.

(b) Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

(c) Problems that may prevent the County from meeting future Consent Decree compliance

deadlines:

Patapsco SRRR Plan

On April 22, 2019 the County submitted a potential delay notification for the Basin 33 Phase 2 Relief Sewer project.

Gray Manor SRRR Plan

On June 6, 2019 the County submitted a potential delay notification for the Gray Manor Relief Sewers project.

Beachwood Pump Station

On May 7, 2019 the County submitted a time extension request for the Beachwood Pump Station rehabilitation project.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

Contract 18180SX0 was awarded on 7/8/2019. This is the first phase of the relief sewer. The County is discussing the Right of Entry requirements with Baltimore City Department of Recreation and Parks.

Elimination of Non-Pump Station SSO Structures 41 and 129

Contract 14117SX0 will be advertised in early August 2019.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Thomas Kiefer, PE
Chief, Bureau of Engineering and Construction

Control Document No. 264

Attachment A

Discharges from Overflow Structures

During the April 1, 2019 – June 30, 2019 Period

Pump Station Overflow Structures:

Name	Randallstown
Address	5425 Old Court Road
Date Of Discharge	6/2/2019
Duration Of Overflow	20 Minutes
Date Of Relevant Weather Conditions	6/2/2019
Description Of Relevant Weather Conditions	Dry
Gallons Discharged	9,800
Receiving Waters	Bens Run
Identified Cause	Electrical Power failure
Details Of Corrective Action Taken Or Planned	Reset VFD

Non-Pump Station Overflow Structures – Metered:

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date Of Discharge	5/10/2019
Duration Of Overflow	7 Hrs. 15 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	25,285
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Phase I, Contract 18180SX0 was awarded 7/8/2019. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date Of Discharge	5/10/2019
Duration Of Overflow	7 Hrs. 17 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	19,744
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Phase I, Contract 18180SX0 was awarded 7/8/2019. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date Of Discharge	5/10/2019
Duration Of Overflow	7 Hrs. 35 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	74,933
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Phase I, Contract 18180SX0 was awarded 7/8/2019. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date Of Discharge	5/12/2019
Duration Of Overflow	1 Hrs. 25 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	53,522
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Phase I, Contract 18180SX0 was awarded 7/8/2019. County to submit a formal SSO elimination time extension request when a date has been identified.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	5/10-11/2019
Duration Of Overflow	8 Hrs. 2 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	12,392
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	City hydraulic improvements needed to eliminate overflow. County is coordinating with the City to complete needed improvements.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date Of Discharge	5/10/2019
Duration Of Overflow	1 Hrs. 13 Min.
Date Of Relevant Weather Conditions	5/10-13/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	998
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Contract 14117SX0 will be advertised in early August 2019. SSO elimination time extension request approved on 4/16/2018.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		5/10-13/2019
Rain (inches)		1.88
SSO Name	**SSO ID**	
Alter Road	22	-
Southern Cross Drive	23A	25,285
Southern Cross	23B	19,744
Patterson Avenue	24	128,455 (74,933 + 53,522
Aiken Avenue	41	-
Queen Anne Drive	129	998
Overbrook Road	118	12,392

Attachment B

Construction Projects Status

During the April 1, 2019 – June 30, 2019 Period

Attachment B: Construction/Rehabilitation Projects Progress – Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Consent Decree SSO Elimination Deadline	SSO Eliminated	Status
owder Mill Interceptor Relief Sewer Phase I (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	Contract 18180SX0 was awarded on 7/8/2019; EPA approved the County's SSO extension of time request on 4/16/2018
owder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	This project is waiting for Right of Entr from Baltimore City Department of Recreation and Parks; EPA approved County's SSO extension of time reque on 4/16/2018
Branch Herring Run Sewer (SSO 41 & 129)	-	Herring Run	TBD	No	Contract 14117SX0 will be advertised early August 2019; on 4/16/2018, EPA approved the County's SSO extension time request

:tachment B: Construction/Rehabilitation Projects Progress – Pump Station Rehabilitation, Repair and Replacement Consent Decree Paragraph No. 13

Project Name	Consent Decree Deadline	Anticipated Meeting CD Deadline	Comments
Harewood Park	3/20/2020	Yes	Construction

6/4/2019	11025 York Road		A
6/9/2019	204 5th Avenue	6/14/2019	

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral; or
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole; or
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action; or
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E

Status of SRRR Plan Implementation

During the April 1, 2019 – June 30, 2019 Period

Attachment E: Status of SRRR Plan Implementation

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Bengies	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bird River	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bread & Cheese	9/29/2020	Post Hoc: On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Cockeysville	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Dead Run	9/6/2017	Completed
Delmar	4/18/2022	Yes
Duck Creek	4/18/2022	Yes
Dundalk	4/18/2022	Yes
East Point	4/18/2022	Yes
Essex	4/18/2022	Yes
Gray Manor	4/18/2022	Yes. On 6/19/2019 the County submitted a potential delay notification for a relief sewer project.
Gunpowder	4/18/2026	Yes
Gwynns Falls	9/6/2018	Completed; On 04/08/2016 and 01/23/2018, the County submitted potential delay notifications for a relief sewer and a structural rehabilitation project.
Herring Run	9/6/2018	Completed; On 11/03/2015, 08/15/2017 and 03/08/2018, the County submitted potential delay notifications for two relief sewers and a structural rehabilitation project.
Jones Falls	9/6/2019	Yes. On 11/17/2015 and 5/17/2018, the County submitted potential delay notifications for two sewer structural repair and rehabilitation projects. Post Hoc: On 7/12/2019 the County submitted a time extension requests for the two delayed projects.
Long Quarter	4/18/2024	Yes
Orems	9/29/2020	Yes. On 11/16/2018 the County submitted a potential delay notification for a force main replacement project.
Patapsco	9/6/2021	Yes. On 4/22/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Redhouse Run	4/18/2024	Yes
Stemmers Run	9/6/2024	Yes

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Texas	4/18/2022	Post Hoc: On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.

Quarterly Report

July 1, 2019
Through
September 30, 2019

Pursuant to Paragraph 19, of the Consent Decree between Baltimore County and the United States Environmental Protection Agency, Department of Justice and the Maryland Department of the Environment

Table of Contents

i. Non-Pump Station and Pump Station SSO Structure Discharges 3
ii. Construction Project Status 3
iii. Collection System Inspection 3
iv. SRRR Plan Implementation/Progress 3
v. FOG Program 4
vi. SEP Status 4
vii. Compliance Issues 4
Attachment A - Discharges from Overflow Structures 6
Pump Station Overflow Structures 7
Non-Pump Station Overflow Structures – Metered 7
Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring 11
Attachment B - Construction Projects Status 12
Non-Pump Station SSO Structures 13
Pump Station Rehabilitation, Repair and Replacement 14
Attachment C - Collection System Inspection Status 15
Attachment D - CCTV in Response to an SSO 17
Attachment E - Status of SRRR Plan Implementation 19

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **July 1, 2019** through **September 30, 2019**.

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraph 15 of the Consent Decree.

Paragraph 15.B.i.b inspection status is summarized in **Attachment C**. Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020.

Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary

status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

   Jones Falls SRRR Plan

   On September 6, 2019, the County completed implementation of the Jones Falls SRRR Plan. There are 186 assets (i.e. sewers and manholes), which represent approximately 11-percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of the necessary construction/maintenance work. On 11/17/2015 and 5/17/2018, the County submitted potential delay notifications for two sewer structural repair and rehabilitation projects. On 7/12/2019 the County submitted time extension requests for the delayed projects.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

   None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Bread and Cheese SRRR Plan

On July 10, 2019 the County submitted a potential delay notification for the Bread and Cheese Sewershed Rehabilitation Project.

Texas SRRR Plan

On July 10, 2019 the County submitted a potential delay notification for the Cockeysville and Texas Sewershed Rehabilitation Project.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Elimination of Non-Pump Station SSO Structures 41 and 129

Sewer relief construction project awarded on 10/3/2019.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Control Document No. 272

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

None

Non-Pump Station Overflow Structures – Metered

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	7/4/2019
Duration of Overflow	42 Min.
Date of Relevant Weather Conditions	7/4/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	431
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	7/8/2019
Duration of Overflow	1 Hrs. 36 Min.
Date of Relevant Weather Conditions	7/8/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	12,288
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	7/8/2019
Duration of Overflow	2 Hrs. 49 Min.
Date of Relevant Weather Conditions	7/8/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	40,770
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	7/11/2019
Duration of Overflow	2 Hrs. 25 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,956
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	7/11/2019
Duration of Overflow	2 Hrs. 31 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,457
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	7/11/2019
Duration of Overflow	1 Hrs. 13 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	22,701
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Notice to proceed for Phase I contract was 9/3/2019. County to submit a formal SSO elimination time extension request when a date has been identified. Right of Way and Environmental Permits required for Phase II contract.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/11/2019
Duration of Overflow	2 Hrs. 47 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	69,357
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Sewer relief construction project awarded on 10/3/2019.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	7/11/2019
Duration of Overflow	3 Hrs. 11 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	57,850
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Sewer relief construction project awarded on 10/3/2019.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	8/22/2019
Duration of Overflow	31 Min.
Date of Relevant Weather Conditions	8/22/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	567
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	Sewer relief construction project awarded on 10/3/2019.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	7/11/2019
Duration of Overflow	2 Hrs. 1 Min.
Date of Relevant Weather Conditions	7/11/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	3,236
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	City hydraulic improvements needed to eliminate overflow. County is coordinating with the City to complete needed improvements.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		7/4/2019	7/8/2019	7/11/2019	8/22/2019
Rain (inches)		0.45	2.18	2.55	1.33
SSO Name	**SSO ID**	**Overflow Volume (gallons)**			
Southern Cross Drive	23A			1,956	
Southern Cross	23B	431	12,288	2,457	
Patterson Avenue	24		40,770	22,701	
Aiken Avenue	41			69,357	
Queen Anne Drive	129			57,850	567
Marnat Road	113			3,236	

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Consent Decree SSO Elimination Deadline	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – SXO 18180 (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	Contract notice to proceed was 9/3/2019. EPA approved the County's SSO extension of time request on 4/16/2018
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	This project requires Right of Entry and permit approval from Baltimore City Department of Recreation and Parks. EPA approved the County's SSO extension of time request on 4/16/2018
East Branch Herring Run Relief Sewer (SSO 41 & 129)	-	Herring Run	TBD	No	EPA approved the County's SSO extension of time request

Pump Station Rehabilitation, Repair and Replacement

Project Name	Consent Decree Deadline	Anticipated Meeting CD Deadline	Comments
Harewood Park	3/20/2020	Yes	Construction
Campus Hill	3/20/2020	Yes	Construction
Rettman's Lane	3/20/2020	Yes	Construction. Substantially complete 8/22/2019
Lodge Forest Manor	3/20/2020	Yes	Design. Potential delay notification submitted on 11/9/2017.
Stansbury Manor	3/20/2020	Yes	Design. Potential delay notification submitted on 11/9/2017.
Blenhurst	3/20/2020	Yes	Construction
Rosebank	3/20/2020	Yes	Construction
Beachwood Road	3/20/2020	Yes	Construction. Time Extension Request submitted 5/7/2019.
Oliver Beach	3/20/2020	Yes	Construction. Potential delay notification submitted on 9/17/2018.
Hyde Park	6/1/2021	Yes	Design
Bauernschmidt Manor	6/1/2021	Yes	Construction
Turkey Point	6/1/2022	Yes	Design
Millers Island	6/1/2022	Yes	Design
Corsica	6/1/2023	Yes	Design
Fort Howard	6/1/2023	Yes	Design
Pennwood Terrace	6/1/2023	Yes	Design

Attachment C - Collection System Inspection Status

Paragraph 15.B.i (b)
Completion scheduled for September 20, 2020
Currently On-Schedule

Miles Remaining Beginning of Quarter	Miles Inspected and/or Attempted this Quarter	Miles Attempted but not Completed to Date	Miles Remaining
7.0	0.2	2.1	6.8
Appurtenances to be Inspected Beginning of Quarter	Appurtenances Inspected and/or Attempted this Quarter	Appurtenances Attempted but not Completed to Date	Appurtenances Remaining
39	0	31	39

Note: All values are based on the current version of the County's GIS

Attachment D - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
7/4/2019	3909 Southern Cross Drive		D
7/8/2019	3909 Southern Cross Drive		D
7/8/2019	3902 Patterson Avenue		D
7/11/2019	Southern Cross Drive & Parsons Avenue		D
7/11/2019	3909 Southern Cross Drive		D
7/11/2019	3902 Patterson Avenue		D
7/11/2019	7829 Aiken Avenue & Taylor Avenue		D
7/11/2019	Queen Anne Drive & Hillcrest Avenue		D
7/11/2019	Marnat Road & Hatton Road		D
8/9/2019	1000 Lakeside Drive	8/13/2019	
8/22/2019	Queen Anne Drive & Hillcrest Avenue		D
9/3/2019	7929 Eastern Avenue	9/11/2019	

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E - Status of SRRR Plan Implementation

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Bengies	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bird River	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bread & Cheese	9/29/2020	On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Cockeysville	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Dead Run	9/6/2017	Completed
Delmar	4/18/2022	Yes
Duck Creek	4/18/2022	Yes
Dundalk	4/18/2022	Yes
East Point	4/18/2022	Yes
Essex	4/18/2022	Yes
Gray Manor	4/18/2022	Yes. On 6/19/2019 the County submitted a potential delay notification for a relief sewer project.
Gunpowder	4/18/2026	Yes
Gwynns Falls	9/6/2018	Completed; On 04/08/2016 and 01/23/2018, the County submitted potential delay notifications for a relief sewer and a structural rehabilitation project.
Herring Run	9/6/2018	Completed; On 11/03/2015, 08/15/2017 and 03/08/2018, the County submitted potential delay notifications for two relief sewers and a structural rehabilitation project.
Jones Falls	9/6/2019	Completed. On 11/17/2015 and 5/17/2018, the County submitted potential delay notifications for two sewer structural repair and rehabilitation projects. On 7/12/2019 the County submitted a time extension requests for the two delayed projects.
Long Quarter	4/18/2024	Yes
Orems	9/29/2020	Yes. On 11/16/2018 the County submitted a potential delay notification for a force main replacement project.
Patapsco	9/6/2021	Yes. On 10/28/2018 and 4/22/2019 the County submitted a potential delay notifications for sewer structural repair and rehabilitation projects.
Redhouse Run	4/18/2024	Yes
Stemmers Run	9/6/2024	Yes
Texas	4/18/2022	On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Tributary 26	2/11/2020	Completed
Tributary 27	9/6/2017	Completed
Tributary 43	2/11/2020	Completed
Tributary 48	9/6/2017	Completed
Tributary 78	2/11/2020	Completed
West Low Level	9/6/2017	Completed
Whitemarsh	4/18/2024	Yes

Quarterly Report

October 1, 2019 Through December 31, 2019

PURSUANT TO PARAGRAPH 19, OF THE CONSENT DECREE BETWEEN BALTIMORE COUNTY AND THE UNITED STATES ENVIRONMENTAL PROTECTION AGENCY, DEPARTMENT OF JUSTICE AND THE MARYLAND DEPARTMENT OF THE ENVIRONMENT

Table of Contents

i. Non-Pump Station and Pump Station SSO Structure Discharges 3
ii. Construction Project Status 3
iii. Collection System Inspection 3
iv. SRRR Plan Implementation/Progress 3
v. FOG Program 4
vi. SEP Status 4
vii. Compliance Issues 4
Attachment A - Discharges from Overflow Structures 6
Pump Station Overflow Structures 7
Non-Pump Station Overflow Structures – Metered 8
Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring 12
Attachment B - Construction Projects Status 13
Non-Pump Station SSO Structures 14
Pump Station Rehabilitation, Repair and Replacement 15
Attachment C - Collection System Inspection Status 16
Attachment D - CCTV in Response to an SSO 18
Attachment E - Status of SRRR Plan Implementation 20

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **October 1, 2019** through **December 31, 2019.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraph 15 of the Consent Decree.

Paragraph 15.B.i.b inspection status is summarized in **Attachment C**. Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020.

Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits

may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

   None.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

   None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

   <u>Blenhurst Pump Station Rehabilitation</u>

   On November 15, 2019, the County submitted a Potential Delay Notification for completing the improvements to the Blenhurst Pump Station.

   <u>Delmar SRRR Plan</u>

   On November 22, 2019 the County submitted a potential delay notification for the Glen Echo Relief Sewer Project.

   <u>Dundalk SRRR Plan</u>

   On November 22, 2019 the County submitted a potential delay notification for the Dundalk Sewer Rehabilitation Project.

East Point SRRR Plan

On November 26, 2019 the County submitted a potential delay notification for the East Point Force Main Replacement Project.

Essex SRRR Plan

On December 10, 2019 the County submitted a potential delay notification for the Essex Force Main Replacement Project.

Long Quarter SRRR Plan

On November 27, 2019 the County submitted a potential delay notification for the Long Quarter Force Main Replacement Project.

Orems SRRR Plan

On November 22, 2019 the County submitted a potential delay notification for the Orems Basin 03 Relief Sewer Project.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Elimination of Non-Pump Station SSO Structures 41 and 129

On 10/3/2019 the County awarded the construction project. The County will submit a second SSO elimination time extension when a date has been identified.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Control Document No. 292

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Pump Station Name	Oak Forest
Address	407 Seminole Avenue
Date Of Discharge	10/31/2019
Duration Of Overflow	44 Min.
Date Of Relevant Weather Conditions	10/31/2019
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	670
Receiving Waters	Tributary to Patapsco River
Identified Cause	VFD mistakenly set to 50 Hz. Pump was not able to run at full capacity.
Details Of Corrective Action Taken or Planned	VFD reset to 60 Hz.

Pump Station Name	Frederick Road
Address	1809 Frederick Road
Date Of Discharge	10/31/2019
Duration Of Overflow	40 Min.
Date Of Relevant Weather Conditions	10/31/2019
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	18,156
Receiving Waters	Tributary to Patapsco River
Identified Cause	Heavy rains inundated wastewater collection system that caused high flows to the pump station.
Details Of Corrective Action Taken or Planned	Heavy rains subsided.

Pump Station Name	Frederick Road
Address	1809 Frederick Road
Date Of Discharge	11/5/2019
Duration Of Overflow	11 Hrs 15 Min.
Date Of Relevant Weather Conditions	11/5/2019
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	125,856
Receiving Waters	Tributary to Patapsco River
Identified Cause	Check valve on Pump 3 stuck open due to due to debris. Force main drained back causing all pumps to lock out at the station.
Details Of Corrective Action Taken or Planned	Removed debris in the check valve.

Non-Pump Station Overflow Structures – Metered

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	10/27/2019
Duration of Overflow	3 Hrs. 20 Min.
Date of Relevant Weather Conditions	10/27/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,072
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	10/27/2019
Duration of Overflow	3 Hrs. 46 Min.
Date of Relevant Weather Conditions	10/27/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	4,290
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	10/27/2019
Duration of Overflow	42 Min.
Date of Relevant Weather Conditions	10/27/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	13,262
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	10/27/2019
Duration of Overflow	47 Min.
Date of Relevant Weather Conditions	10/27/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,842
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	City hydraulic improvements needed to eliminate overflow. County is coordinating with the City to complete needed improvements.

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date Of Discharge	10/31/2019 – 11/1/2019
Duration Of Overflow	3 Hrs. 16 Min.
Date Of Relevant Weather Conditions	10/31/2019 – 11/1/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	33,344
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	10/31/2019 – 11/1/2019
Duration of Overflow	4 Hrs. 51 Min.
Date of Relevant Weather Conditions	10/31/2019 – 11/1/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	42,951
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	10/31/2019 – 11/1/2019
Duration of Overflow	5 Hrs. 0 Min.
Date of Relevant Weather Conditions	10/31/2019 – 11/1/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	49,502
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	10/31/2019 – 11/1/2019
Duration of Overflow	4 Hrs. 45 Min.
Date of Relevant Weather Conditions	10/31/2019 – 11/1/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	200,675
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	10/31/2019
Duration of Overflow	1 Hrs. 39 Min.
Date of Relevant Weather Conditions	10/31/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	22,539
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 10/3/2019 the County awarded the construction project. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	10/31/2019
Duration of Overflow	2 Hrs. 9 Min.
Date of Relevant Weather Conditions	10/31/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	34,760
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 10/3/2019 the County awarded the construction project. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	10/31/2019
Duration of Overflow	2 Hrs. 40 Min.
Date of Relevant Weather Conditions	10/31/2019
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	27,037
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	10/31/2019 – 11/1/2019
Duration Of Overflow	2 Hrs. 36 Min.
Date Of Relevant Weather Conditions	10/31/2019 – 11/1/2019
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	120,256
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		10/27/2019	10/31/2019 – 11/1/2019
Rain (inches)		1.96	1.83
SSO Name	SSO ID		
Alter Road	22		33,344
Southern Cross Drive	23A	1,072	42,951
Southern Cross	23B	4,290	49,502
Patterson Avenue	24	13,262	200,675
Aiken Avenue	41		22,539
Queen Anne Drive	129		34,760
Overbrook Road & Medwick Garth	118		120,256
Marnat Road	113	1,842	27,037

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Consent Decree SSO Elimination Deadline	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – SXO 18180 (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	TBD	No	EPA approved the County's SSO extension of time request on 4/16/2018
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	This project requires Right of Entry and permit approval from Baltimore City Department of Recreation and Parks. EPA approved the County's SSO extension of time request on 4/16/2018
East Branch Herring Run Relief Sewer (SSO 41 & 129)	1/21/2020	Herring Run	TBD	No	EPA approved the County's SSO extension of time request on 4/16/2018

Pump Station Rehabilitation, Repair and Replacement

Project Name	Consent Decree Deadline	Anticipated Meeting CD Deadline	Comments
Harewood Park	3/20/2020	Yes	Construction
Campus Hill	3/20/2020	Yes	Construction
Lodge Forest Manor	3/20/2020	Yes	Design. Potential delay notification submitted on 11/9/2017.
Stansbury Manor	3/20/2020	Yes	Design. Potential delay notification submitted on 11/9/2017.
Blenhurst	3/20/2020	No	Construction. Potential delay notification submitted on 11/15/2019.
Rosebank	3/20/2020	Yes	Construction
Beachwood Road	3/20/2020	Yes	Construction. Time extension request submitted 5/7/2019.
Oliver Beach	3/20/2020	Yes	Construction. Potential delay notification submitted on 9/17/2018.
Hyde Park	6/1/2021	Yes	Design
Bauernschmidt Manor	6/1/2021	Yes	Construction
Turkey Point	6/1/2022	Yes	Design
Millers Island	6/1/2022	Yes	Design
Corsica	6/1/2023	Yes	Design
Fort Howard	6/1/2023	Yes	Design
Pennwood Terrace	6/1/2023	Yes	Design

Attachment C - Collection System Inspection Status

Paragraph 15.B.i (b)
Completion scheduled for September 20, 2020
Currently On-Schedule

Miles Remaining Beginning of Quarter	Miles Inspected and/or Attempted this Quarter	Miles Attempted but not Completed to Date	Miles Remaining
4.1	2.0	2.0	2.1
Appurtenances to be Inspected Beginning of Quarter	**Appurtenances Inspected and/or Attempted this Quarter**	**Appurtenances Attempted but not Completed to Date**	**Appurtenances Remaining**
136	97	40	19

Note: All values are based on the current version of the County's GIS

Attachment D - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
10/15/2019	4155 Glen Park Road	10/24/2019	
10/15/2019	6806 Bensel Avenue		A
10/27/2019	Southern Cross Drive & Parsons Avenue		D
10/27/2019	3909 Southern Cross Drive		D
10/27/2019	3902 Patterson Avenue		D
10/27/2019	Marnat Road & Hatton Road		D
10/29/2019	823 Scotts Hill Road	10/29/2019	
10/30/2019	104 Back River Neck Road		B
10/31/2019	Alter Street and Southern Cross Drive		D
10/31/2019	7829 Aiken Avenue & Taylor Avenue		D
10/31/2019	Marnat Road & Hatton Road		D
10/31/2019	Queen Anne Drive & Hillcrest Avenue		D
10/31/2019	Southern Cross Drive & Parsons Avenue		D
10/31/2019	3909 Southern Cross Drive		D
10/31/2019	3902 Patterson Avenue		D
10/31/2019	Overbrook Road and Medwick Garth		D
11/26/2019	4830 Butler Road	12/3/2019	
11/27/2019	8103 Beachwood Road	11/27/2019	
12/5/2019	8211 Fischer Road		B
12/7/2019	10620 Harford Road	12/9/2019	
12/18/2019	5415 Montbel Avenue	12/16/2019	
12/27/2019	5965 Schering Road	12/31/2019	

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E - Status of SRRR Plan Implementation

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Bengies	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bird River	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Bread & Cheese	9/29/2020	On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Cockeysville	9/29/2020	Yes. On 3/15/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Dead Run	9/6/2017	Completed
Delmar	4/18/2022	Yes. On 11/22/2019 the County submitted a potential delay notification for a relief sewer project.
Duck Creek	4/18/2022	Yes
Dundalk	4/18/2022	Yes. On 11/22/2019 the County submitted a potential delay notification for a sewer structural repair and rehabilitation project.
East Point	4/18/2022	Yes. On 11/22/2019 the County submitted a potential delay notification for a force main replacement project.
Essex	4/18/2022	Yes. On 12/10/2019 the County submitted a potential delay notification for a force main replacement project.
Gray Manor	4/18/2022	Yes. On 6/19/2019 the County submitted a potential delay notification for a relief sewer project.
Gunpowder	4/18/2026	Yes
Gwynns Falls	9/6/2018	Completed; On 04/08/2016 and 01/23/2018, the County submitted potential delay notifications for a relief sewer and a structural rehabilitation project.
Herring Run	9/6/2018	Completed; On 11/03/2015, 08/15/2017 and 03/08/2018, the County submitted potential delay notifications for two relief sewers and a structural rehabilitation project.
Jones Falls	9/6/2019	Completed. On 11/17/2015 and 5/17/2018, the County submitted potential delay notifications for two sewer structural repair and rehabilitation projects. On 7/12/2019 the County submitted a time extension requests for the two delayed projects.
Long Quarter	4/18/2024	Yes. On 11/26/2019 the County submitted a potential delay notification for a force main replacement project.
Orems	9/29/2020	Yes. On 11/16/2018 the County submitted a potential delay notification for a force main replacement project. On 11/22/2019 the County submitted a potential delay notification for a relief sewer project.
Patapsco	9/6/2021	Yes. On 10/28/2018 and 4/22/2019 the County submitted a potential delay notifications for sewer structural repair and rehabilitation projects.
Redhouse Run	4/18/2024	Yes
Stemmers Run	9/6/2024	Yes
Texas	4/18/2022	On 7/10/2019 the County submitted a potential delay notification for sewer structural repair and rehabilitation projects.
Tributary 26	2/11/2020	Completed

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Tributary 27	9/6/2017	Completed
Tributary 43	2/11/2020	Completed
Tributary 48	9/6/2017	Completed
Tributary 78	2/11/2020	Completed
West Low Level	9/6/2017	Completed
Whitemarsh	4/18/2024	Yes

Annual Report

January 1, 2019
Through
December 31, 2019

Pursuant to Paragraph 20, of the Consent Decree between Baltimore County and the United States Environmental Protection Agency, Department of Justice and the Maryland Department of the Environment

Table of Contents

i. Sanitary Sewer Overflow (SSO) Structure Elimination Progress 3
ii. Rainfall and Flow Monitoring Plan Compliance 6
iii. Evaluation of Rainfall and Flow Monitoring Data 6
iv. Fats, Oils and Grease (FOG) Program Updates 7
v. Illegal Stormwater Discharges 8
vi. Pumping Station Status 8

Attachment B – Flow Monitor Summary 15
Attachment C – List of Illegal Stormwater Discharges 19
Attachment D – List of Deficiencies found during the Inspection of Pumping Stations 21
Attachment E – Detail of Footage Inspected per 15.B.i.b 27
Attachment F – Building Backups 29
Attachments 1 and 2 - Flow Monitoring and Rain Gauge Location Maps ..... ftp download

Pursuant to Paragraph 20 of the Consent Decree entered between Baltimore County and the United States Environmental Protection Agency (EPA) and the Maryland Department of the Environment (MDE), this document constitutes the required Annual Report for the period **January 1, 2019** through **December 31, 2019**.

The annual report is a periodic review of Baltimore County activities related to the accomplishment of the Consent Decree general and specific requirements. The report is required to address:

i. Sanitary Sewer Overflow (SSO) structure elimination progress
ii. Rainfall and Flow Monitoring Plan compliance
iii. Evaluation of the rainfall and flow monitoring data
iv. Fats, Oils and Grease (FOG) Program updates
v. Illegal Storm Water discharges
vi. Pump Station Status
vii. Collection System Model Implementation Status
viii. Supplemental Collection System Inspection Progress
ix. Sewer Cleaning Progress
x. Collection System Inventory Progress
xi. Emergency Response Plan
xii. Building Backup Report
xiii. Annual Update to the SSO characterization report

i. Sanitary Sewer Overflow (SSO) Structure Elimination Progress

(a) Summarize progress in implementing approved schedules for the elimination of Non-Pump Station SSO structures

The listing of relief points is shown in Attachment A. Below is the status of the SSO elimination projects:

- 38 original SSOs (per CD Appendix A-2)
- 9 SSOs identified after CD effective date
- 3 SSOs reclassified as pump station SSOs
- 34 SSOs eliminated
- 10 SSOs scheduled for elimination

No SSO structures were eliminated during the reporting period.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

The original Consent Decree deadline for SSO elimination was March 22, 2017; however, on February 14, 2017, the County submitted a time extension request due to completing a required Phase II archaeological investigations for the Maryland Historical Trust and resulting delay in obtaining permit approval from the U.S. Army Corps of Engineers (ACOE). The requested SSO elimination date was undefined since the determination from the archaeological investigation may have required realignment and re-design of the new relief sewer. Subsequently, the County obtained ACOE's permit and, to expedite project completion, the County separated the project into two construction contract.

On September 3, 2019, the County issued the notice to proceed for the Phase I construction project, which is on-going. The Phase II construction project requires right-of-way acquisition

and environmental permits. After the right-of-way easements have been acquired, the environmental permits obtained and the Phase II construction project notice to proceed has been issued, the County will submit a second SSO elimination time extension with a definitive date to eliminate the SSO structures.

Elimination of Non-Pump Station SSO Structures 41 and 129

The original Consent Decree deadline for SSO elimination was March 20, 2018; however on October 4, 2017 the County submitted a time extension request due to private property easement acquisition. As stated in the time extension request, the requested SSO elimination date was undefined since the time to negotiate and acquire the easements was unknown. Subsequently, the right-of-entry agreements were finalized and the County completed design work. On October 3, 2019 the County awarded the construction project and will submit a second SSO elimination time extension after the contractor has submitted their construction baseline schedule.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City. A summary of the County's 2019 SSO elimination and/or flow monitoring activity is provided in Attachment A.

A summary of all County and EPA/MDE communication in 2019 related to SSO structures is shown below:

Date of Correspondence	From	To	Control ID	SSO ID	SSO Name	Subject
1/16/2019	County	EPA/ MDE	236	23A, 23B, 24, 41, 129	Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 12/21/2018
4/8/2019	County	EPA/ MDE	249	118, 22, 23A, 23B, 24, 41, 129	Overbrook Road, Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 3/21/2019
5/15/2019	County	EPA/ MDE	240	22, 23A, 23B, 24, 41, 129, 113, 116, 117, 118	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive, Marnat Road, Nunnery Lane, Briarwood Road, Overbrook Road	2019 Q1 Report
5/24/2019	County	EPA/ MDE	256	118, 23A, 23B, 24, 129	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 5/10-12/2019
8/5/2019	County	EPA/ MDE	270	113, 23A, 23B, 24, 41, 129	Marnat Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 7/11/2019
8/13/2019	County	EPA/ MDE	264	22, 23A, 23B, 24, 41, 129, 113, 116, 117, 118	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive, Marnat Road, Nunnery Lane, Briarwood Road, Overbrook Road	2019 Q2 Report
9/11/2019	County	EPA/ MDE	271	129	Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 8/22/2019
11/13/2019	County	EPA/ MDE	272	22, 23A, 23B, 24, 41, 129, 113, 116, 117, 118	Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive, Marnat Road,	2019 Q3 Report

Date of Correspondence	From	To	Control ID	SSO ID	SSO Name	Subject
					Nunnery Lane, Briarwood Road, Overbrook Road	
11/20/2019	County	EPA/ MDE	281	113, 23A, 23B, 24	Marnat Road Southern Cross Drive, Southern Cross, Patterson Avenue	Request to Waive Stipulated Penalties for Overflow Discharges on 10/27/2019
11/21/2019	County	EPA/ MDE	282	113, 118, 22, 23A, 23B, 24, 41, 129	Marnat Road, Overbrook Road, Alter Road, Southern Cross Drive, Southern Cross, Patterson Avenue, Aiken Avenue, Queen Anne Drive	Request to Waive Stipulated Penalties for Overflow Discharges on 10/31/2019

(b) Summarize post-monitoring data after the elimination of a Non-Pump Station SSO structure

Flow monitoring activities will continue in accordance with Paragraph 7.C.v of the Consent Decree. Once sufficient flow monitoring data has been collected, the County will complete the hydraulic evaluation in accordance with Paragraph 7.C.v of the Consent Decree.

(c) Progress in implementing plans developed in response to certain discharges from Pump Station SSO structure(s)

The following pump stations discharged to their overflow structures:

Pump Station	Sewershed	Date of Overflow	Corrective Action
Kings Point	Patapsco	2/24/2019	Force Majeure
Randallstown	Gwynns Falls	6/2/2019	Force Majeure
Oak Forest	Patapsco	10/31/2019	Reset VFD settings & change O&M plan
Frederick Road	Patapsco	10/31/2019	Design project to reduce I&I
Frederick Road	Patapsco	11/5/2019	Repair check valves

According to CD Paragraph 7.C.vi, the County is required to submit an action plan and schedule for certain discharges from Pump Station SSO Structures that are caused by an event other than complete loss of pumping capacity of the pump station.

On March 25, 2019, the County submitted to EPA/MDE a letter stating that the February 24, 2019 SSO at the Kings Point Pump Station was caused by high winds that caused intermittent power fluctuations on both independent power feeds. The power fluctuations resulted in a variable frequency drive (VFD) fault and pump shutdown. The independent feeds are the approved backup power plan for that pump station; therefore, the County considers this to be a force majeure event for which an action plan and schedule was not required.

On June 25, 2019, the County submitted to EPA/MDE a letter stating that the June 2, 2019 SSO that occurred at the Randallstown Pump Station was the result of power fluctuation of the station's electrical feed that caused an overvoltage fault of the VFDs of both pumps. The power fluctuation was not long enough to automatically transfer power to the on-site generator and the generator is the approved backup power; therefore, the County considers the power fluctuation to be a force majeure event for which an action plan and schedule was not required.

On December 18, 2019, the County submitted to EPA/MDE an action plan for the October 31, 2019 SSO at the Oak Forest Pump Station. As stated in the action plan, a post-SSO forensic investigation determined that the VFD for one of the pumps was mistakenly set to 50 Hertz, which

limited the pump's hydraulic capacity; therefore, the pump station was not operating at full capacity when wet weather flow was being conveyed to the station. The County revised the monthly preventive maintenance inspection to include confirming the VFD settings at all pump stations; therefore, the County developed and has implemented the action plan.

On January 10, 2020 the County submitted to EPA/MDE an action plan for the October 31, 2019 SSO at the Frederick Road Pump Station. As stated in the action plan, the County is in the design phase for a sewer rehabilitation improvement project to reduce wet weather flow to the pump station. The project is included in the EPA/MDE-approved Patapsco Sewershed Sewer Repair, Rehabilitation and Replacement Plan. On October 28, 2018 the County submitted to EPA/MDE a potential delay notification for the improvement project due to private property right of way acquisition obstacles. After completing the improvement project, the County will complete post-construction flow monitoring and an inflow/infiltration analysis to determine the project's effectiveness in reducing wet weather flow and to revise the existing hydraulic model.

On January 10, 2020 the County submitted to EPA/MDE an action plan for the November 5, 2019 SSO at the Frederick Road Pump Station. As stated in the action plan, a post-SSO forensic investigation determined that an air pocket located inside a valve precluded the valve from closing, which allowed the force main to drain back. To avoid a similar future incident, the County replaced the gaskets and bolts of all the check valves and revised the pump lockout timer from 15 seconds to 10 minutes; therefore, the County has implemented the action plan.

ii. Rainfall and Flow Monitoring Plan Compliance

(a) Summarize results of annual evaluation of numbers and placement of rain gauges and flow monitors

In accordance with Paragraph 9.B.i, the County continued to collect rainfall data as necessary to allow the characterization of flow from sewershed service areas, the characterization of known SSOs, the development or improvement of hydraulic models for the sewersheds, and evaluate the effectiveness of measures implemented to reduce I/I and to increase system capacity.

(b) Report any changes to the locations of gauges or flow monitors

A summary of the flow monitoring locations as of December 31, 2019 is provided in Attachment B. Maps of flow monitoring and rain gauge locations are provided in Attachments 1 and 2.

(c) Report on any deviations from the approved plan

None.

iii. Evaluation of Rainfall and Flow Monitoring Data

(a) Inflow/infiltration (I/I) evaluation progress (due 60 days prior to date of SRRR plan submittal)

This task is complete.

(b) Long-term capacity/peak flow management evaluation (due 60 days prior to date of SRRR plan submittal)

This task is complete.

iv. Fats, Oils and Grease (FOG) Program Updates

(a) Provide the results of the annual evaluation of the effectiveness of the modified FOG control program

In accordance with Paragraph 11.I of the Consent Decree, the County continues to use the food service facility inspection results and the performance indicators to evaluate the effectiveness of the modified FOG Program. The evaluation results are summarized in Paragraph (c) below.

(b) Provide an updated database and map of grease generating facilities

A map and database of grease generating facilities are provided in Attachment 3.

(c) Evaluate the effectiveness of the modified FOG program

The evaluation of the modified FOG program attempted to determine a correlation between the number of SSO discharges and the proximity and FOG discharge risk score of FOG-generating facilities. Below are the analysis results:

	0-10	11-15	16-20	21-24	>24
2013	0	0	2	1	2
2014	0	1	0	1	1
2015	1	1	1	2	0
2016	0	0	0	1	2
2017	0	0	0	0	1
2018	1	0	0	0	5
2019	2	0	1	0	2

The graph indicates that facilities with a FOG discharge risk score of >16 may have a higher incidence of localized grease-related sewer overflows. The County will further analyze the data to confirm this possible correlation.

v. Illegal Stormwater Discharges

During the reporting period, the County identified 23 illegal stormwater connections. A summary of the actions taken in response to each instance is provided in Appendix C.

vi. Pumping Station Status

(a) Report on the required annual evaluation of the backup power program

Baltimore County completed the evaluation of the effectiveness of its existing Pump Station backup power program, including the use of portable generators as backup power for multiple stations, in preventing SSOs relating to power outages.

During the reporting period, the fleet of six (6) portable generators that supplement on-site backup power at the County's stations was adequate to meet the emergency power needs. The percent of Pump Stations which are now equipped with on-site backup emergency power has been increased to ninety five percent (95%).

On March 24, 2019 a storm event at the Kings Point Pump Station resulted in a power loss from both independent electrical services. The power outage was caused by high winds, which damaged the two independent electrical feeds. The dual independent electrical feeds were installed at the station as an MDE-accepted back-up power source and; therefore, the portable generator used to mitigate the overflow is not included in the annual evaluation.

On June 2, 2019 electrical feed power fluctuations at the Randallstown Pump station caused an overvoltage fault of the VFDs of both pumps resulting in a SSO discharge of 9, 500 gallons. The power fluctuation was not long enough to automatically transfer power to the on-site generator. Since the power fluctuation is considered a force majeure event, this event was not considered as a deficiencies in the back –up power evaluation.

(b) Report on the development and implementation of any plans related to overflows due to power outages at pumping stations

None. The back-up power evaluation did not indicate any deficiencies in the portable generator fleet, therefore no remedial plan is required.

(c) Pump station inspection deficiencies list

A report on the deficiencies discovered during the inspections of our pumping stations is provided in Attachment D.

(d) Pump station deficiencies discovered during Engineering Evaluation/Condition Assessments

This task is complete.

(e) Summarize the progress in implementing a pump station information management system

This task is complete.

vii. Collection System Model Implementation Status

This task is complete.

viii. Supplemental Collection System Inspection Progress

For Paragraph 15.B.i.b inspections, the progress made during this reporting period is detailed in Attachment E. In summary, approximately 4.6 miles of sewer and 74 manholes and other appurtenances were inspected during the specified period. It is anticipated that required collection system inspections will be completed by the September 20, 2020 compliance deadline.

ix. Sewer Cleaning Progress

The County has completed the initial Consent Decree requirements and is executing the maintenance cleaning program as described in the MDE/EPA-approved Operation and Maintenance Plan.

x. Collection System Inventory Progress

This task is complete.

xi. Emergency Response Plan

On July 2, 2019 the County submitted to EPA/MDE the updated plan.

xii. Building Backup Report

Maps of Building Backups since the last submission are provided in Attachment 4.

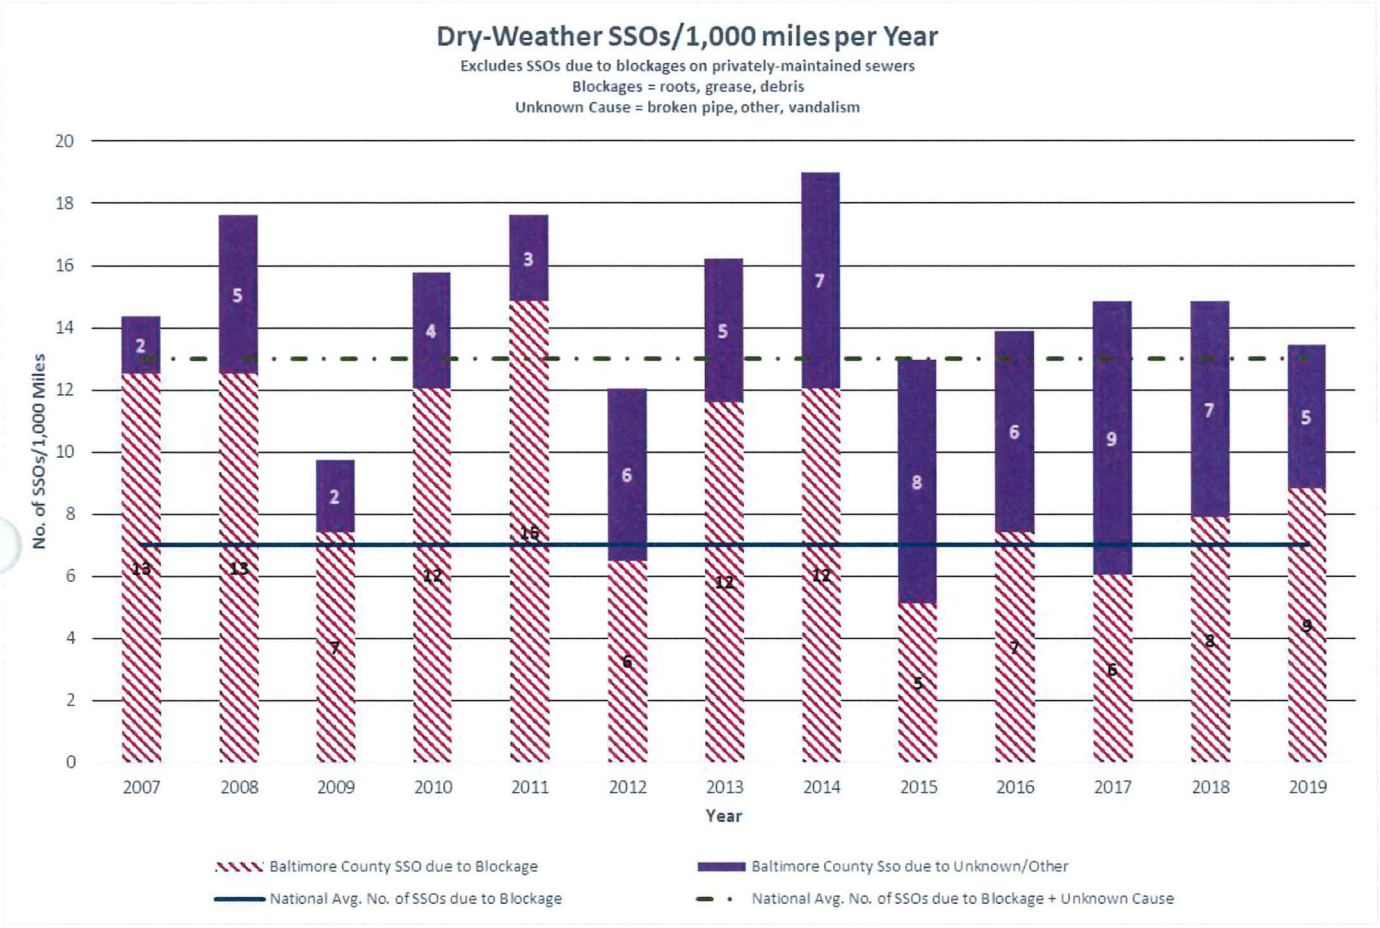
There were 80 reported building backups (including occurrences with zero gallon volumes) during the reporting period, as summarized in Attachment F. A summary of reported building backup history is provided below:

Year	Total Number of Reported Backups (ea)	Percent Increase/Decrease from Previous Year (%)
2006	113	---
2007	48	-57.5
2008	77	60.4
2009	44	-42.9
2010	90	104.5
2011	241	167.8
2012	139	-42.3
2013	217	56.1
2014	346	59.5
2015	143	-58.6
2016	136	-4.9
2017	71	-47.8
2018	345	386
2019	80	-76.8

xiii. Annual Update of SSO Characterization Report

In accordance with Paragraph 7.B.ii of the Consent Decree, the updated SSO characterization maps are provided in Attachment 5.

Based on the data available in EPA's report to Congress titled "Impacts and Control on CSOs and SSOs", dated August 2004, there are, on average, approximately 7 dry-weather SSOs due to pipeline blockages per 1,000 miles per year and an additional 6 dry-weather SSOs with unknown causes per 1,000 miles per year. Below is a summary per year of Baltimore County's dry-weather SSOs due to a pipeline blockage.



As shown in the above graph, since 2015, the number of SSOs per year due roots, grease and debris is approximately equal to the national average; however, in the same time period, the number of SSOs per year due to unknown/other causes, such as broken pipe, vandalism, etc. has significantly increased compared to the prior 7 year (2007-2014). Since 2015 the total number of SSOs per year has approximately doubled due to unknown/other causes.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Attachment D – List of Deficiencies found during the Inspection of Pumping Stations

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Duck Creek	Duck Creek	1/2/2019	Generator	Generator won't start	Replaced batteries	1/14/2019	3	
White Marsh (New)	White Marsh	1/4/2019	VFD 4	VFD fault	Replaced VFD	2/28/2019	2	
Windlass	Stemmers Run	1/15/2019	Pump 3	Malfunctioning hacker valve	Replaced cylinder seals	2/27/2019	2	
Stemmers Run (New)	Stemmers Run	1/21/2019	Pump 1	Broken impeller and wear ring	Installed new impeller and wear rings	1/23/2019	2	
Gray Manor	Gray Manor	2/1/2019	Auxiliary suction #3	Coupling came off of shaft	Installed new motor	9/5/2019	2	Delay in ordering, manufacturer lead time and drawing approval
Gray Manor	Gray Manor	2/1/2019	Aux suction valve Pump 1	Cylinder needs replacement			2	New cylinder arrived but damaged during shipping. Waiting on replacement cylinder
West Inverness	Gray Manor	2/6/2019	Pump 2	Malfunctioning pressure ring	Removed air and added oil to pressure ring	2/10/2019	2	
Baurenschmidt	Duck Creek	2/7/2019	Pump 2	RAD clutch burned up	Will pull generator to site when station has a power failure.	2/28/2019	2	
Stemmers Run (New)	Stemmers Run	2/14/2019	Pump 4	Broken impeller	Replaced impeller and wear rings	2/19/2019	2	
Texas	Texas	2/26/2019	Surge Relief Valve	Clogged valve	Unchoked valve and adjusted	3/12/2019	2	
Windlass	Stemmers Run	2/27/2019	Pump 2	Malfunctioning hacker valve	Replaced cylinder seals	3/3/2019	2	
Texas	Texas	3/1/2019	Pump 5	VFD ground fault	Repaired pump	5/9/2019	2	
Cape May	Duck Creek	3/7/2019	Generator	Bad bearings	Will operate on automatic when there is a power failure	4/23/2019	2	
Dundalk	Dundalk	3/7/2019	Spare Pump	Shaft locked up	Repaired pump	8/1/2019	3	
Randallstown	Gwynns Falls	3/8/2019	Pump 2	Seal failure	Installed repaired pump and put back online	6/28/2019	3	
Masseth Avenue	Delmar	3/11/2019	Influent grinder	Shorted motor	Replaced motor	9/5/2019	2	

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Forge Acres	Bird River	3/18/2019	Pump 1	Failed cone valve cylinder seal	Replaced seals	4/10/2019	2	
Temple Gate	Bread & Cheese	3/19/2019	Generator	Gas leak on piping feeding the generator	Repaired leak	3/20/2019	3	
Old Battle Grove	Gray Manor	4/6/2019	Pump 2	Pump won't stay running	Replaced VFD phase monitor	4/8/2019	3	
Forge Acres	Bird River	4/14/2019	Pump 3	Failed cone valve cylinder	Repaired cylinder	4/29/2019	2	
Corsica Road	Duck Creek	5/1/2019	Pump 2	Pump needs to be rebuilt	Repaired pump	8/1/2019	3	
Bear Creek	Gray Manor	5/3/2019	Generator	Primer leaking	Replaced fuel pump	5/9/2019	2	
Loveton Estates	Cockeysville	5/30/2019	Pump 2	Failed seal	Repaired pump	7/16/2019	3	
Red House Run	Red House Run	6/13/2019	Pump 1	Replace VFD	Replaced VFD	2/25/2020	2	Delay in ordering and manufacturer lead time
Orems Road	Orems	6/18/2019	Pump 2	Bad bearing	Repaired motor	8/12/2019	3	
Forge Acres	Bird River	6/28/2019	Cone Valve 1	Malfunctioning cone valve	Repaired valve and replaced cylinder seals	8/5/2019	3	
Stemmers Run (New)	Stemmers Run	7/1/2019	VFD 3	Replace VFD			2	VFD series is discontinued. Creating capital project
Red House Run	Red House Run	7/9/2019	VFD 3	Replace VFD	Replaced VFD	2/25/2020	2	Delay in ordering and manufacturer lead time
Beachwood Estates	Gray Manor	7/9/2019	Pump 2	Bad bearings	Repaired pump	9/11/2019	2	
Randallstown	Gwynns Falls	7/14/2019	Pump 2	Failed seal	Repaired pump	9/12/2019	3	
Ravens Complex	Gwynns Falls	8/11/2019	Pump 1	Not pumping to capacity	Repaired pump	9/18/2019	3	
Gray Manor	Gray Manor	8/28/2019	Emergency H/W tuning fork	Malfunctioning sensor and tuning fork	Replaced tuning fork	9/24/2019	2	

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Ravens Complex	Gwynns Falls	8/31/2019	Primary controller	Replace controller	Replaced controller	9/4/2019	3	
Long Quarter	Long Quarter	9/15/2019	VFD 1	Faulting VFD	Installed new DMO board	10/4/2019	2	
Beachwood Estates	Gray Manor	11/3/2019	Pump 1	Bad bearings	Replaced pump	2/3/2020	2	
Millers Island	Delmar	11/4/2019	Pump 2	Replace VFD	Replaced VFD	11/13/2019	3	
Greenhill Cove	Gray Manor	11/4/2019	Generator	Gas leak	Repaired leak	11/6/2019	2	
Dundalk	Dundalk	11/5/2019	Pump 1	Seal failure			2	Repair shop is waiting on replacement parts from manufacturer
Orems Road	Orems	11/8/2019	Cone valve 3	Malfunctioning valve	Repaired leak	11/14/2019	2	
Greenhill Cove	Greenhill Cove	11/12/2019	Pump 1	Bad bearings	Repaired pump	1/7/2020	2	
Helena Avenue	Helena Avenue	11/12/2019	Generator	Radiator leaking	Replaced radiator	12/11/2019	2	
Hawthorne 1	Hawthorne 1	11/18/2019	Generator	Leaking radiator	Replaced radiator	12/17/2019	2	
Cedar Beach	Cedar Beach	11/18/2019	Generator	Leaking radiator	Replaced radiator	1/2/2020	2	
Gunpowder	Gunpowder	11/27/2019	VFD 4	Malfunctioning cooling fan	Replaced fan control card	12/11/2019	2	
Long Quarter	Long Quarter	12/3/2019	Pump 3 suction gate	Missing sealing gasket			2	In process of ordering a replacement sluice gate.
Long Quarter	Long Quarter	12/3/2019	Pump 3	Malfunctioning pressure ring			2	This can't be repaired until suction gate is repaired.
Stemmers Run (New)	Stemmers Run (New)	12/11/2019	Cone valve 4	Malfunctioning valve	Replaced PLC	12/12/2019	2	

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Dundalk	Dundalk	12/13/2019	Pump 4	Failed seal			2	Pump was sent to repair shop
Long Quarter	Long Quarter	12/20/2019	Aux suction valve Pump 1	Malfunctioning positioner			2	Ordering new position indicator

The pump station deficiencies listed below were outstanding in the 2017 and 2018 Annual Reports. The repair status and/or reason for repair delay are provided below.

Station	Sewershed	Date	Equipment	Problem	Nature of Repair	Completed date	Priority	Reason for Delay if Open>6 Months
Old Stemmers Run	Stemmers Run	5/2/2017	Pump 1 VFD	Failed VFD	VFD section is blown up	2	2/28/19	VFD series is discontinued. Delay in ordering and installation replacement.
Old Stemmers Run	Stemmers Run	12/6/2017	Pump 2 VFD	Failed VFD	VFD output section is bad and soft start needs parts	2	2/28/19	VFD series is discontinued. Delay in ordering and installation replacement.
Gray Manor	Gray Manor	2/20/2018	Pump 3 VFD	Failed VFD	Replaced VFD	2	3/6/19	VFD series is discontinued. Delay in ordering and installation replacement.
Ravens Complex	Gwynns Falls	8/2/2018	Generator	Generator does not produce correct voltage under load	Replaced generator	3	1/23/19	
White Marsh (New)	White Marsh	9/19/2018	Pump 2	Sleeve spinning on shaft	Repaired shaft	2	5/9/19	The impellers had an 18-24-week lead time.
Kings Point	Gwynns Falls	9/22/2018	Pump 2	Pressure ring problem	Rebuilt pressure ring	2	6/4/19	Delay in finding the root cause of problem.
Stantonwood	Jones Falls	10/14/2018	Pump 2	Pump has seal failure	Repaired pump	2	2/8/19	Only explosion proof certified manufacturer could complete repair.
White Marsh (New)	White Marsh	12/7/2018	Pump 2	Multilin was removed and put into VFD 4	Replaced Multilin	2	4/16/19	Model is discontinued. Delay in ordering replacement.
Masseth Avenue	Delmar	12/29/2018	Pump 2	VFD is shorted	Replaced VFD	2	1/3/19	
Dundalk	Dundalk	12/29/2018	Pump 4	Will not rotate	Repaired pump	2	9/4/19	Delay in manufacturer lead time
Marlyn Avenue	Essex	12/29/2018	Pump 2	Will not rotate	Repaired pump	2	3/19/19

Attachment B - Construction Projects Status 12
Non-Pump Station SSO Structures 13
Pump Station Rehabilitation, Repair and Replacement 14
Attachment C - Collection System Inspection Status 15
Attachment D - CCTV in Response to an SSO 17
Attachment E - Status of SRRR Plan Implementation 19

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **January 1, 2020** through **March 31, 2020.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraph 15 of the Consent Decree.

Paragraph 15.B.i.b inspection status is summarized in **Attachment C**. Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020.

Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits

may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

   Beachwood Road Pump Station Rehabilitation

   Rehabilitation of the Beachwood Road Pump Station certified complete on February 5, 2020

   Rosebank Pump Station Rehabilitation

   Rehabilitation of the Rosebank Pump Station certified complete on March 13, 2020.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

   Oliver Beach Pump Station Rehabilitation

   On March 10, 2020, the County submitted a 60-day Time Extension Request for completing improvements to the Oliver Beach Pump Station due to re-bidding the construction contract.

   Blenhurst Pump Station Rehabilitation

   On January 27, 2020, the County submitted a 90-day Time Extension request for completing the improvements to the Blenhurst Pump Station due to relocating an underground electric service.

Lodge Forest Manor Pump Station Rehabilitation

On January 30, 2020 the County submitted a 5-year Time Extension request for completing improvements to the Lodge Forest Manor Pump Station. The time extension request assumed approximately 3 years to complete property acquisition negotiations with the Maryland Department of Natural Resources and 2 years to complete construction work.

Stansbury Manor Pump Station Rehabilitation

On January 30, 2020 the County submitted a 5-year Time Extension request for completing improvements to the Stansbury Manor Pump Station. The time extension request assumes approximately 3 years to complete property acquisition negotiations with the Maryland Aviation Administration and 2 years to complete construction work.

Harewood Park Pump Station Rehabilitation

On February 19, 2020 the County submitted a 90-day Time Extension Request for completing improvements to the Harewood Park Pump Station due to poor contractor performance.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

COVID-19 Pandemic

The COVID-19 Coronavirus pandemic has affected all local, state and federal activities. As a result of the pandemic, Baltimore County has indefinitely suspended advertising construction contracts and receiving contract bids. County employees and engineering consultants continue to remotely work on active projects and construction contractors continue their work to complete previously awarded sewer improvement contracts; however, the pandemic may delay response from private property owners regarding right-of way and/or right-of-entry negotiations. Additionally, the pandemic may result in unforeseen supply chain constrictions for active construction contracts.

Duck Creek SRRR Plan

On February 5, 2020 the County submitted a Potential Delay Notification for the Duck Creek Sewer Rehabilitation Project due to an expanding the design and construction project scope of work.

Elimination of Non-Pump Station SSO Structures 22, 23A, 23B, 24

On September 3, 2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Elimination of Non-Pump Station SSO Structures 41 and 129

On October 3, 2019 the County awarded the construction project. The County will submit a second SSO elimination time extension when a date has been identified.

Elimination of Non-Pump Station SSO Structures 113, 116, 117 and 118

The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Thomas Kiefer, PE
Chief, Bureau of Engineering and Construction

Control Document No. 292

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

None.

Non-Pump Station Overflow Structures – Metered

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date of Discharge	1/25/2020
Duration of Overflow	1 Hrs. 44 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,247
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	1/25/2020
Duration of Overflow	3 Hrs. 27 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	22,427
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	1/25/2020
Duration of Overflow	3 Hrs. 3 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	23,637
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	1/25/2020
Duration of Overflow	3 Hrs. 52 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	115,592
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	1/25/2020
Duration of Overflow	2 Hrs. 10 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	16,656
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 10/3/2019 the County awarded the construction project. The County will submit a second SSO elimination time extension when a date has been identified.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	1/25/2020
Duration of Overflow	4 Hrs. 18 Min.
Date of Relevant Weather Conditions	1/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	19,833
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		1/25/2020
Rain (inches)		1.55 - 1.84
SSO Name	**SSO ID**	
Alter Road	22	2,247
Southern Cross Drive	23A	22,427
Southern Cross	23B	23,637
Patterson Avenue	24	115,592
Aiken Avenue	41	
Queen Anne Drive	129	16,656
Overbrook Road & Medwick Garth	118	
Marnat Road	113	19,833

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Consent Decree SSO Elimination Deadline	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – SXO 18180 (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	TBD	No	Original CD elimination deadline was 3/22/2017. Extension request, with undefined SSO elimination date submitted on 2/14/2017. Second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	TBD	No	Original CD elimination deadline was 3/22/2017. Extension request, with undefined SSO elimination date submitted on 2/14/2017. Second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued.
East Branch Herring Run Relief Sewer (SSO 41 & 129)	10/3/2020	Herring Run	TBD	No	Original CD elimination deadline was 3/20/2018. Extension request with undefined SSO elimination date submitted on 10/4/2017. Second time extension request with defined SSO elimination date will be submitted after County receives construction baseline schedule.

Pump Station Rehabilitation, Repair and Replacement

Project Name	Consent Decree Deadline	Anticipated Meeting CD Deadline	Comments
Harewood Park	3/20/2020	No	Construction
Lodge Forest Manor	3/20/2020	No	Design. Time Extension Request submitted on 1/30/2020.
Stansbury Manor	3/20/2020	No	Design. Time Extension Request submitted on 1/30/2020.
Blenhurst	3/20/2020	No	Construction. Time Extension Request submitted on 1/27/2020.
Rosebank	3/20/2020	Yes	Substantially Complete on 3/13/2020.
Beachwood Road	3/20/2020	Yes	Substantially Complete on 2/6/2020.
Oliver Beach	3/20/2020	Yes	Construction
Hyde Park	6/1/2021	Yes	Design
Bauernschmidt Manor	6/1/2021	Yes	Construction
Turkey Point	6/30/2022	Yes	Design
Millers Island	6/30/2022	Yes	Design
Corsica	6/30/2023	Yes	Design
Fort Howard	6/30/2023	Yes	Design
Pennwood Terrace	6/30/2023	Yes	Design

Attachment C - Collection System Inspection Status

Paragraph 15.B.i (b)
Completion scheduled for September 20, 2020
Currently On-Schedule

Miles Remaining Beginning of Quarter	Miles Inspected and/or Attempted this Quarter	Miles Attempted but not Completed to Date	Miles Remaining
2.3	0.8	2.0	3.5
Appurtenances to be Inspected Beginning of Quarter	**Appurtenances Inspected and/or Attempted this Quarter**	**Appurtenances Attempted but not Completed to Date**	**Appurtenances Remaining**
19	46	0	4

Note: All values are based on the current version of the County's GIS

Attachment D - CCTV in Response to an SSO

Date of SSO	Location	CCTV Inspection Date	Exemption
1/8/2020	1907 Harrison Road	1/8/2020	
1/23/2020	3015 Delaware Avenue	1/28/2020	
1/25/2020	Alter Street and Southern Cross Drive		D
1/25/2020	Southern Cross Drive & Parsons Avenue		D
1/25/2020	3909 Southern Cross Drive		D
1/25/2020	3902 Patterson Avenue		D
1/25/2020	Queen Anne Drive & Hillcrest Avenue		D
1/25/2020	Marnat Road & Hatton Road		D
2/3/2020	3320 Eastern Blvd.		A
2/4/2020	9405 Perry Hall Blvd.	2/18/2020	
2/24/2020	8900 Citation Road		A
3/13/2020	1009 Old Eastern Avenue		A
3/27/2020	2416 Lampost Lane		B

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E - Status of SRRR Plan Implementation

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Bengies	9/29/2020	Yes. On 3/15/2019 the County submitted a Potential Delay Notification for sewer structural repair and rehabilitation projects.
Bird River	9/29/2020	Yes. On 3/15/2019 the County submitted a Potential Delay Notification for sewer structural repair and rehabilitation projects.
Bread & Cheese	9/29/2020	On 7/10/2019 the County submitted a Potential Delay Notification for sewer structural repair and rehabilitation projects.
Cockeysville	9/29/2020	Yes. On 3/15/2019 the County submitted a Potential Delay Notification for a sewer structural repair and rehabilitation projects.
Dead Run	9/6/2017	Completed
Delmar	4/18/2022	Yes. On 11/22/2019 the County submitted a Potential Delay Notification for a relief sewer project.
Duck Creek	4/18/2022	Yes. On 2/5/2020 the County submitted a Potential Delay Notification for a sewer rehabilitation project.
Dundalk	4/18/2022	Yes. On 11/22/2019 the County submitted a Potential Delay Notification for a sewer structural repair and rehabilitation project.
East Point	4/18/2022	Yes. On 11/22/2019 the County submitted a Potential Delay Notification for a force main replacement project.
Essex	4/18/2022	Yes. On 12/10/2019 the County submitted a Potential Delay Notification for a force main replacement project.
Gray Manor	4/18/2022	Yes. On 6/19/2019 the County submitted a Potential Delay Notification for a relief sewer project.
Gunpowder	4/18/2026	Yes
Gwynns Falls	9/6/2018	Completed; On 04/08/2016 and 01/23/2018, the County submitted Potential Delay Notifications for a relief sewer and a structural rehabilitation project.
Herring Run	9/6/2018	Completed; On 11/03/2015, 08/15/2017 and 03/08/2018, the County submitted Potential Delay Notifications for two relief sewers and a structural rehabilitation project.
Jones Falls	9/6/2019	Completed.
Long Quarter	4/18/2024	Yes. On 11/26/2019 the County submitted a Potential Delay Notification for a force main replacement project.
Orems	9/29/2020	Yes. On 11/16/2018 the County submitted a Potential Delay Notification for a force main replacement project. On 11/22/2019 the County submitted a Potential Delay Notification for a relief sewer project.
Patapsco	9/6/2021	Yes. On 10/28/2018 and 4/22/2019 the County submitted a Potential Delay Notifications for sewer structural repair and rehabilitation projects.
Redhouse Run	4/18/2024	Yes
Stemmers Run	9/6/2024	Yes
Texas	4/18/2022	On 7/10/2019 the County submitted a Potential Delay Notification for sewer structural repair and rehabilitation projects.
Tributary 26	2/11/2020	Completed
Tributary 27	9/6/2017	Completed

Sewershed	Consent Decree Deadline	On Schedule to Complete SRRR Plan Implementation
Tributary 43	2/11/2020	Completed
Tributary 48	9/6/2017	Completed

Attachment B - Construction Projects Status 13
Non-Pump Station SSO Structures 14
Pump Station Rehabilitation, Repair and Replacement 15
Attachment C - Collection System Inspection Status 16
Attachment D - CCTV in Response to an SSO 18
Attachment E - Status of SRRR Plan Implementation 20

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **April 1, 2020** through **June 30, 2020**.

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction Project Status
iii. Collection system inspection progress
iv. SRRR plan implementation progress
v. FOG program modification and development progress
vi. Supplemental Environmental Projects status, and
vii. Compliance with certification of completion and other issues of the Consent Decree

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13.F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

Continued implementation of the inspection of the collection system, pursuant to Paragraph 15 of the Consent Decree.

Paragraph 15.B.i.b inspection status is summarized in **Attachment C**. Baltimore County anticipates completing inspection of the gravity sewer lines identified in Paragraph 15.B.i.b by September 20, 2020. Approximately 1.9 miles of inspected gravity sewer lines require follow up investigative and/or assessment work.
Continued compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment D** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment E** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits

may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. SEP Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

On May 28, 2020, the County certified substantial completion for the Oliver Beach Pump Station rehabilitation project. Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.The original Consent Decree deadline for completing the Oliver Beach Pump Station rehabilitation project was May 19, 2020; however, the contractor's failed pump test on May 6, 2020 delayed testing and project completion certification until May 28, 2020.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

<u>Herring Run SRRR</u>

On May 4, 2020, the County submitted a Potential Delay Notification for the Performance Assessment Report for the Herring Run SRRR Plan due to the COVID pandemic.

On June 10, 2020, the County submitted a 120-day Time Extension Request for the Performance Assessment Report for the Herring Run SRRR Plan due to the consultant engineering's staff issues and COVID related inefficiencies. The requested deadline is October 6, 2020.

Gwynns Falls SRRR

On May 4, 2020, the County submitted a Potential Delay Notification for the Performance Assessment Report for the Gywnns Falls SRRR Plan due to impacts from the COVID pandemic.

On June 10, 2020, the County submitted a 120-day Time Extension Request for the Performance Assessment Report for the Gywnns Falls SRRR Plan due to the engineering consultant's staff issues and COVID related inefficiencies. The requested deadline was October 6, 2020.

Oliver Beach Pump Station Rehabilitation

The substantial completion date for the Oliver Beach Pump Station rehabilitation project was May 28, 2020. The County previously submitted a 60-day Time Extension Request on March 10, 2020 for completing improvements. A pump test was performed on April 30, 2020; however, the pump performance report submitted by the contractor was reviewed and was returned to the contractor indicating non-compliance on May 6, 2020. The pumps were fitted with larger impellers and a second pump test was conducted on May 19, 2020, which showed compliance with the Contract specifications. SCADA communications testing was then able to commence on May 20, 2020 and was completed on May 27, 2020. The County accepted Beneficial Occupancy of the station on May 28, 2020.

Blenhurst Pump Station Rehabilitation

On June 15, 2020, the County submitted a 90-day Time Extension Request for completing the improvements to the Blenhurst Pump Station due to poor contractor performance. The requested deadline was September 20, 2020.

Lodge Forest Manor Pump Station Rehabilitation

On May 13, 2020, the County submitted a follow-up letter to the January 30, 2020 Time Extension Request for the Lodge Forest Pump Station Project. The requested deadline was March 20, 2025.

Stansbury Manor Pump Station Rehabilitation

On May 13, 2020, the County submitted a follow-up letter to the January 30, 2020 Time Extension Request for the Stansbury Manor Pump Station Project. The requested deadline was March 20, 2025.

Harewood Park Pump Station Rehabilitation

On June 15, 2020, the County submitted a 60-day Time Extension Request for completing the improvements to the Harewood Park Pump Station due to poor contractor performance. The requested deadline was August 20, 2020.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

Bread and Cheese SRRR Plan

On May 28, 2020, the County submitted an 18-month Time Extension Request for the Bread and Cheese Sewer Rehabilitation Project due to rights-of-entry negotiations and acquisitions. The requested deadline was March 6, 2022.

On June 24, 2020, in response to EPAs e-mail dated June 1, 2020, the County submitted a follow-up letter to the May 28, 2020 Time Extension Request for the Bread and Cheese Sewer Rehabilitation Project.

Various Deadlines

On April 30, 2020, the County submitted a Potential Delay Notification due to COVID, which may result in suspending construction contract advertisements, delayed responses from private property owners regarding right-of-way/entry negotiations and unforeseen supply chain constrictions for active construction projects.

Duck Creek SRRR Plan

On May 15, 2020, the County submitted a follow-up letter for the February 5, 2020 Potential Delay Notification for the Duck Creek Sewer Rehabilitation Project due to an expanding design and construction project scope of work.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Thomas Kiefer, PE
Acting Director, Department of Public Works

Control Document No. 323

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

None.

Non-Pump Station Overflow Structures – Metered

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	4/13/2020
Duration of Overflow	1 Hrs. 17 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,582
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	4/13/2020
Duration of Overflow	1 Hrs. 19 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	3,045
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	4/13/2020
Duration of Overflow	1 Hrs. 13 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	20,359
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	4/13/2020
Duration of Overflow	5 Hrs. 35 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	59,526
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	4/13/2020
Duration of Overflow	2 Hrs. 2 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	25,221
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	4/13/2020
Duration of Overflow	1 Hrs. 3 Min.
Date of Relevant Weather Conditions	4/13/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,270
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	4/30/2020
Duration of Overflow	3 Hrs. 31 Min.
Date of Relevant Weather Conditions	4/30/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	36,418
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	6/22/2020
Duration of Overflow	1 Hrs. 4 Min.
Date of Relevant Weather Conditions	6/22/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,083
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	6/22/2020
Duration of Overflow	1 Hrs. 5 Min.
Date of Relevant Weather Conditions	6/22/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	920
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		4/13/2020	4/30/2020	6/22/2020

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined elimination date was submitted on 2/14/2017. A second Time Extension Request with a definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction. During the quarterly reporting period, approximately 2,500 linear feet of new relief pipe has been installed.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined SSO elimination date was submitted on 2/14/2017. A second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	10/3/2020	Herring Run	3/20/2018	8/3/2023 (requested)	No	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023. No pipe has been installed during the quarterly reporting period. The contractor is excavating shafts to tunnel under Perring Parkway.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a Time Extension Request with an undefined SSO elimination date. A second Time Extension Request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay

6/22/2020	Marnat Road & Hatton Road		D

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment E - Status of SRRR Plan Implementation

Gunpowder	4/18/2026			
Substantially completed SRRR Plan implementations [1]				
Dead Run	9/6/2017			On September 6, 2017, the County certified substantial completion for the implementation of the Dead Run Sewershed SRRR Plan with the exception of 1 asset for which work has now been completed.
Gwynns Falls	9/6/2018			On September 6, 2018, the County certified substantial completion for the implementation of the Gwynns Falls Sewershed SRRR Plan with

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
				the exception of 23 repairs for which a potential delay was submitted to EPA and MDE. On April 8, 2016 and the County submitted a potential delay notification for the Powder Mill Relief Sewer and Lower Powder Mill Sewer Rehabilitation project due to delays associated with environmental permit acquisition and on January 23, 2018 the County submitted a potential delay notification for the Gwynns Falls Structural Sewer Rehabilitation ESA project due to delays associated with acquiring right of entry agreements. To date, 6 repairs remain outstanding and will be completed concurrently with the Powder Mill Interceptor Phase1 project, which is currently in construction. On February 14, 2017, the County submitted a time extension request for the Powder Mill Interceptor Phase 1 project, which is associated with elimination of SSOs 22, 23A, 23B and 24.
Herring Run	9/6/2018			On September 6, 2018, the County certified substantial completion for the implementation of the Herring Run Sewershed SRRR Plan with the exception of 95 repairs for which a potential delay notification was submitted to EPA and MDE. On August 15, 2017 the County submitted a potential delay notification for the Herring Run Structural Rehabilitation Phase 2 project due to delays associated with right of way acquisition and on March 8, 2018 the County submitted a potential delay notification for the Herring Run Basins 17 & 33 project due to delays associated with acquiring right of entry agreements. As discussed at the July 23, 2020 EPA/MDE coordination meeting, the County will submit a time extension request for both projects.
Jones Falls	9/6/2019			On September 6, 2019, the County certified substantial completion for the implementation of the Jones Falls Sewershed SRRR Plan with the exception of 186 assets for which a time extension was either requested or approved by EPA and MDE.

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
				On July 12, 2019 the County submitted time extension requests for two projects that are located in the Jones Falls Sewershed due to delays associated with acquiring right of entry agreements (Jones Falls Large Diameter Sewer Rehabilitation project) and environmental permits (Jones Falls Structural Sewer Rehabilitation Package 2 project). The requested deadline for both projects was November 6, 2019; however, to date, neither EPA nor MDE have approved the time extension request. Both projects were substantially completed on November 4, 2019.
Tributary 26	2/11/2020			Substantially completed
Tributary 27	9/6/2017			Substantially completed
Tributary 43	2/11/2020			Substantially completed
Tributary 48	9/6/2017			Substantially completed
Tributary 78	2/11/2020			Substantially completed
West Low Level	9/6/2017			Substantially completed

[1] Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.

Attachment B - Construction Projects Status 18
Non-Pump Station SSO Structures 19
Pump Station Rehabilitation, Repair and Replacement 20
Attachment C - CCTV in Response to an SSO 21
Attachment D - Status of SRRR Plan Implementation 23

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **June 1, 2020** through **September 30, 2020.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraph 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Herring Run Performance Assessment

On June 10, 2020, the County submitted a 120-day Time Extension Request for the Herring Run Performance Assessment Report due to the engineering consultant's staff issues and COVID related inefficiencies. The requested deadline was October 6, 2020; however, the County successfully submitted the Performance Assessment Report for the Herring Run SRRR Plan on September 3, 2020 ahead of the deadline.

Gwynns Falls Performance Assessment

On June 10, 2020, the County submitted a 120-day Time Extension Request for the Gwynns Falls Performance Assessment Report due to the engineering consultant's staff issues and COVID related inefficiencies. The requested deadline was October 6, 2020. On October 6, 2020, the County successfully met that deadline and submitted the Performance Assessment Report for the Gwynns Falls SRRR Plan.

Bengies SRRR Plan

On September 29, 2020, the County completed implementation of the Bengies SRRR Plan except for one project for which a potential delay notification has been submitted. This project is detailed in the appendix and remains outstanding while the County is awaiting completion of right of entry (ROE) acquisition. On March 15, 2019, the County submitted to EPA and MDE a potential delay notification due to the time needed to acquire ROE agreements. The County continues coordinating with the property owners and will submit a time extension request when all ROE agreements have been acquired and the County has issued the construction contract NTP.

Bird River SRRR Plan

On September 29, 2020, the County completed implementation of the Bird River SRRR Plan. There are 3 assets (i.e. sewers and manholes), which represents approximately 60 percent of the total assets with repair recommendations that remain

outstanding and are awaiting completion of right of entry (ROE) acquisition. On March 15, 2019, the County submitted to EPA and MDE a potential delay notification due to the time needed to acquire ROE agreements. The County continues coordinating with the property owners and will submit a time extension request when all ROE agreements have been acquired and the County has issued the construction contract Notice to Proceed.

Bread and Cheese SRRR Plan

On September 29, 2020, the County completed implementation of the Bread and Cheese SRRR Plan except for one project for which a potential delay notification has been submitted. This project is detailed in the appendix and remains outstanding while the County is awaiting completion of right of entry (ROE) acquisition. On June 24, 2020, in response to EPA's e-mail dated June 1, 2020, the County submitted a follow-up letter to the May 28, 2020 Time Extension Request for the Bread and Cheese Sewer Rehabilitation Project. The County continues coordinating with the property owners and will submit a time extension request when all ROE agreements have been acquired and the County has issued the construction contract NTP.

Valve vault NS1039, which the Bread and Cheese SRRR Plan included a recommendation to rehabilitate, is located at the terminus of the Bread and Cheese force main. The County has not rehabilitated the vault and is confirming with the City of Baltimore to have the vault rehabilitated as part of a City sewer capital improvement project.

Cockeysville SRRR Plan

On September 29, 2020, the County completed implementation of the Cockeysville SRRR Plan except for one project for which a potential delay notification has been submitted. This project is detailed in the appendix and remains outstanding while the County is awaiting completion of right of entry (ROE) acquisition. On March 15, 2019, the County submitted to EPA and MDE a potential delay notification due to the time needed to acquire ROE agreements. The County continues coordinating with the property owners and will submit a time extension request when all ROE agreements have been acquired and the County has issued the construction contract NTP.

Orems SRRR Plan

On September 29, 2020, the County completed implementation of the Orem SRRR Plan, with the exception of construction of the Orems Basin 03 Relief Sewer Project. EPA/MDE was notified on November 22, 2019 of a Potential Delay for this project due to easement acquisition. The County is currently working with the Real Estate Compliance office to determine an accurate Time Extension for completion of this project.

The County has elected to replace the existing Stansbury Manor Force Main with a new force main to increase the reliability and sustainability of the County's wastewater pumping system. The County will therefore replace the existing air release valve with the installation of the new forcemain and the cleaning recommended force main in the Orems sewershed SRRR Plan becomes moot.

Harewood Park Pump Station Rehabilitation

On August 25, 2020, the County certified substantial completion for the Harewood Park Pump Station rehabilitation project. Substantial completion, as defined in Paragraph IV, Item CC of the Consent Decree means, the date, as certified by the Engineer in charge of a construction project, when the construction project or specified part thereof is sufficiently completed, in accordance with the contract documents, such that the project or specified part thereof can be used to accomplish the purposes for which it was intended.

The original Consent Decree deadline for completing the Harewood Park Pump Station rehabilitation project was March 20, 2020; however, on February 19, 2020, the County submitted to EPA and MDE a 90-day time of performance extension request due to poor contractor performance. The requested deadline was June 20, 2020. On June 15, 2020, the County submitted to EPA and MDE a second time of performance extension request due to poor contractor performance. The second requested deadline was August 20, 2020. Substantial completion was delayed 5 days due to a last minute mechanical issue with one of the new pumps during commissioning.

Completion Certification – Paragraph 15

On September 20, 2020, Baltimore County completed the closed circuit television (CCTV) inspection of the gravity sewer lines as required in Paragraph 15Bib of the Consent Decree. All manholes that are part of or immediately adjacent to the inspected gravity sewer line segments were also inspected. Some variance from the approved Inspection Plan of the actual CCTV inspection footage and number of manholes inspected was due to refinements and corrections to the initial 2004 data that was used to develop the Inspection Plan.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

Blenhurst Pump Station Rehabilitation

The original Consent Decree deadline for completing the Blenhurst Pump Station rehabilitation project was March 20, 2020; however, on January 27, 2020, the County submitted to EPA and MDE a 90-day time of performance extension request to relocate an existing and unmarked underground electrical service feed. The requested deadline was June 20, 2020. On June 15, 2020, the County submitted to EPA and MDE a second time of performance extension request due to poor contractor performance. The requested deadline was September 20, 2020. The contractor recently informed the County that a non-operable supply fan must be replaced before certifying substantial completion. On October 1, 2020, the County submitted a third time of performance extension request to replace the non-operable supply fan. The request deadline was November 20, 2020.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

None.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Thomas Kiefer, PE
Acting Director, Department of Public Works

Control Document No. 332

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Pump Station Name	Oak Forest
Address	407 Seminole Avenue
Date Of Discharge	8/12/2020
Duration Of Overflow	2 Hrs. 45 Min.
Date Of Relevant Weather Conditions	8/12/2020
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	34,800
Receiving Waters	Tributary to Patapsco River
Identified Cause	Heavy rains inundated wastewater collection system that caused high flows to the pump station.
Details Of Corrective Action Taken or Planned	Heavy rains subsided.

Pump Station Name	Frederick Road
Address	1809 Frederick Road
Date Of Discharge	8/12/2020
Duration Of Overflow	1 Hrs.
Date Of Relevant Weather Conditions	8/12/2020
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	25,800
Receiving Waters	Tributary to Patapsco River
Identified Cause	Heavy rains inundated wastewater collection system that caused high flows to the pump station.
Details Of Corrective Action Taken or Planned	Heavy rains subsided.

Pump Station Name	McTavish
Address	50 University Avenue
Date Of Discharge	8/12/2020
Duration Of Overflow	2 Hrs.
Date Of Relevant Weather Conditions	8/12/2020
Description Of Relevant Weather Conditions	Rain
Gallons Discharged	14,700
Receiving Waters	West Branch
Identified Cause	Heavy rains inundated wastewater collection system that caused high flows to the pump station.
Details Of Corrective Action Taken or Planned	Heavy rains subsided.

Non-Pump Station Overflow Structures – Metered

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/6/2020
Duration of Overflow	1 Hr. 17 Mins.
Date of Relevant Weather Conditions	7/6/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	19,251
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	7/6/2020
Duration of Overflow	1 Hr. 6 Mins.
Date of Relevant Weather Conditions	7/6/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	16,623
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/22/2020
Duration of Overflow	1 Hr. 35 Min.
Date of Relevant Weather Conditions	7/22/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	27,436
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	7/22/2020
Duration of Overflow	2 Hrs. 4 Mins.
Date of Relevant Weather Conditions	7/22/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	30,869
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	7/24/2020
Duration of Overflow	1 Hrs. 48 Min.
Date of Relevant Weather Conditions	7/24/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	31,588
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	7/24/2020
Duration of Overflow	2 Hrs. 19 Min.
Date of Relevant Weather Conditions	7/24/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	35,063
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date Of Discharge	8/4/2020
Duration Of Overflow	46 Min.
Date Of Relevant Weather Conditions	8/4/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,855
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	8/4/2020
Duration of Overflow	1 Hrs. 59 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	11,950
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	8/4/2020
Duration of Overflow	3 Hrs. 3 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	10,362
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	8/4/2020
Duration of Overflow	2 Hrs. 17 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	42,588
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	8/4/2020
Duration of Overflow	5 Hrs. 15 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	136,281
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	8/4/2020
Duration of Overflow	4 Hrs. 17 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	96,650
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	8/4/2020
Duration of Overflow	1 Hrs. 47 Min.
Date of Relevant Weather Conditions	8/4/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	5,420
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	8/4/2020
Duration Of Overflow	2 Hrs. 49 Min.
Date Of Relevant Weather Conditions	8/4/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	96,176
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	8/12/2020
Duration of Overflow	1 Hrs. 52 Min.
Date of Relevant Weather Conditions	8/12/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	252
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	8/12/2020
Duration of Overflow	1 Hrs. 43 Min.
Date of Relevant Weather Conditions	8/12/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	285
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	8/12/2020
Duration of Overflow	6 Mins.
Date of Relevant Weather Conditions	8/12/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	581
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	8/12/2020
Duration Of Overflow	2 Hrs. 1 Min.
Date Of Relevant Weather Conditions	8/12/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	15,380
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Overbrook Road
SSO ID	118
Address	Overbrook Road & Medwick Garth
Date Of Discharge	8/15/2020
Duration Of Overflow	49 Min.
Date Of Relevant Weather Conditions	8/15/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	15,880
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		7/6/2020	7/22/2020	7/24/2020	8/4/2020	8/12/2020	8/15/2020
Rain (inches)		3.96	0.93	1.87	2.46-2.78	1.97-2.65	1.01
SSO Name	**SSO ID**						
Alter Road	22				1,855

Marnat Road	113				5,420		

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined elimination date was submitted on 2/14/2017. A second Time Extension Request with a definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction. During the quarterly reporting period, approximately 2,500 linear feet of new relief pipe has been installed.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined SSO elimination date was submitted on 2/14/2017. A second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023 (requested)	No	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023. Approximately 190 linear feet of tunnel has been installed.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a Time Extension Request with an undefined SSO elimination date. A second Time Extension Request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Blenhurst	6/20/2020	Construction	10/1/2020	11/20/2020	Relocating unmarked electrical service feed, contractor performance and pump station mechanical issue.
Lodge Forest Manor	3/20/2020	Design (RoW)	1/30/2020	3/20/2025	DNR easement acquisition
Stansbury Manor	3/20/2020	Design (Permit)	1/30/2020	3/20/2025	MAA property acquisition
Baurenschmidt Manor	6/1/2021	Construction

9/9/2020	407 Chestnut Avenue	9/10/2020	
9/14/2020	709 Marone Way	9/14/2020	

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
Patapsco	9/6/2021	10/28/2018	Right of entry acquisition	
Delmar	4/18/2022	11/22/2019	Right of entry acquisition	
Duck Creek	4/18/2022	2/5/2020	Expanded project scope	
Dundalk	4/18/2022	11/22/2019	Right of entry acquisition	
East Point	4/18/2022	11/22/2019	Right of entry acquisition	
Essex	4/18/2022	12/10/2019	Right of entry acquisition/permits	
Gray Manor	4/18/2022	6/19/2019	Consultant performance	
Texas	4/18/2022	7/10/2019	Right of entry acquisition	
Longquarter	4/18/2024	11/26/2019	Right of entry acquisition	
Redhouse Run	4/18/2024			
Whitemarsh	4/18/2024			
Kemmers Run	9/6/2024			
Gunpowder	4/18/2026			
Substantially completed SRRR Plan implementations [1]				
Bird River	9/29/2020	3/15/2019	Right of entry acquisition	There are 3 assets (i.e. sewer and manholes, which represents approximately 60 percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed.
Bread & Cheese	9/29/2020	5/28/2020 (Time extension request)	Right of entry acquisition. (Requested date = 3/6/2022)	There are 127 asset (i.e. sewer and manholes, which represents approximately 100 percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed.

Sewershed	Original Consent Decree Deadline	Date of Potential Delay Notification	Reason for Delay	Comments
Bengies	9/29/2020	3/15/2019	Right of entry acquisition	There are 96 assets (i.e. sewer and manholes, which represents approximately 100 percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed.
Cockeysville	9/29/2020	3/15/2019	Right of entry acquisition	There are 12 assets (i.e. sewer and manholes, which represents approximately 57 percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed.
Dead Run	9/6/2017			Substantially completed
Gwynns Falls	9/6/2018			On September 6, 2018, the County certified substantial completion for the implementation of the Gwynns Falls Sewershed SRRR Plan with the exception of 23 repairs for which a potential delay was submitted to EPA and MDE. To date, 6 repairs remain outstanding and will be completed concurrent with the Powder Mill Interceptor Phase1 project, which is currently in construction.
Herring Run	9/6/2018			There are 93 assets (i.e. sewer and manholes, which represents approximately 6 percent of the total assets with repair recommendations, that remain outstanding and are awaiting completion of right of entry acquisition. The County will submit to EPA and MDE a time of performance extension request when all right of entry agreements have been acquired and the County has issued the construction contract notice to proceed.
Jones Falls	9/6/2019			There are 10 assets (i.e. sewer and manholes, which represents approximately 0.6 percent of the total assets with repair

Attachment D - Status of SRRR Plan Implementation 18

Pursuant to Paragraph 19 of the Consent Decree between Baltimore County (County) and The United States Environmental Protection Agency (EPA), the Department of Justice (DOJ), and the Maryland Department of the Environment (MDE), this document constitutes the required Quarterly Report for the period **October 1, 2020** through **December 31, 2020.**

The quarterly report discusses activities and progress of Baltimore County towards compliance with the requirements set forth in the Consent Decree including:

i. Non-Pump Station and Pump Station SSO Structure discharges
ii. Construction project status
iii. Collection system inspection
iv. SRRR plan implementation/progress
v. FOG program
vi. Supplemental Environmental Project status, and
vii. Compliance issues

i. Non-Pump Station and Pump Station SSO Structure Discharges

Discharges from Sanitary Sewer Overflow Structures took place at the locations and dates during the reporting period as detailed in **Attachment A**.

A summary of flow metering information for Non-Pump Station SSO Structures is included as **Attachment A1.**

ii. Construction Project Status

Attachment B presents the status of Paragraph 7 – Non-Pump Station SSO Structure Elimination projects and Paragraph 13F - Pump Station Rehabilitation Repair and Replacement projects that are in design and construction during the reporting quarter.

iii. Collection System Inspection

The County has completed all gravity sewer line inspections required under Paragraphs 8 and 15 of the Consent Decree. The County continues compliance with all gravity line CCTV inspections within the required 10 working days of the occurrence of an overflow for each SSO that occurred during this reporting period. **Attachment C** details the County's inspection response to each of the overflow that occurred during the reporting period.

iv. SRRR Plan Implementation/Progress

The SRRR Plans contain numerous projects in a variety of locations and stages of planning, design and construction. **Attachment D** includes a list of each sewershed and a summary status of Plan implementation. The implementation of the recommended improvement projects is proceeding; however, acquisition of required rights-of-way and regulatory permits may require a significant period of time thereby resulting in possible delay to complete the construction work.

The County's recommendations in some of the SRRR Plans for meter basins that exhibited excessive I/I and design-storm simulated model-predicted SSOs included the comprehensive rehabilitation of all pipe segments and manholes, increased hydraulic capacity and/or testing and repair of sewer house connections and laterals. Some of the recommended repairs were

revised based on design preparation and review of improvement projects. Additionally, some miscellaneous sewer/manhole/lateral repairs that were included in the SRRR Plans may be revised based on a review of the original and updated inspection data.

v. FOG Program

The County has completed implementation of the FOG Program Modification Plan.

vi. Supplemental Environmental Project Status

Completed.

vii. Compliance Issues

In accordance with Paragraph 19, Item B.vii, the following is a summary of Consent Decree compliance issues.

a. Consent Decree projects or requirements certified as complete during the reporting period:

Blenhurst Pump Station Rehabilitation

The original Consent Decree deadline for completing the Blenhurst Pump Station rehabilitation project was March 20, 2020; however, on January 27, 2020, the County submitted to EPA and MDE a 90-day time of performance extension request to relocate an existing and unmarked underground electrical service feed. The requested deadline was June 20, 2020. On June 15, 2020, the County submitted to EPA and MDE a second time of performance extension request due to poor contractor performance. The requested deadline was September 20, 2020. On October 1, 2020, the County submitted a third time of performance extension request to replace a non-operable supply fan. The request deadline was November 20, 2020.

The Blenhurst Pump Station was recorded as substantially complete on October 14, 2020.

Gwynns Falls Performance Assessment

On June 10, 2020, the County submitted a 120-day Time Extension Request for the Gwynns Falls Performance Assessment Report due to the engineering consultant's staffing issues and COVID related inefficiencies. The requested deadline was October 6, 2020. On October 6, 2020, the County submitted the Performance Assessment Report for the Gwynns Falls SRRR Plan.

Frederick Road Pump Station Action Plan

On October 6, 2020, the County submitted the Frederick Road Pump Station Action Plan as a result of the pump station SSO that occurred on August 12, 2020.

Oak Forest Pump Station Action Plan

On October 19, 2020, the County submitted the Oak Forest Pump Station Action Plan as a result of the pump station SSO that occurred on August 12, 2020. On December

15, 2020, the County submitted a follow-up letter to rescind the October 19, 2020 Action Plan due the existence of a previously submitted plan as a result of an SSO that occurred at the Oak Forest Pump Station on April 28-30, 2014 and referred to that July 23, 2014 Action Plan.

b. Consent Decree requirements due to be completed during the reporting period, but not completed:

None.

c. Problems that may prevent the County from meeting future Consent Decree compliance deadlines:

None.

I certify under penalty of law that this information was prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my directions and my inquiry of the person(s) who manage the system, or the person(s) directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate, and complete.

Control Document No. 344

Attachment A - Discharges from Overflow Structures

Pump Station Overflow Structures

Name	New Stemmers Run
SSO ID	42397
Address	830 Race Road
Date Of Discharge	11/30/2020
Duration Of Overflow	2 Hrs. 15 Min.
Date Of Relevant Weather Conditions	11/30/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,100,000
Receiving Waters	Northeast Creek
Identified Cause	MH #13378 cover and rings removed by lining contractor. Heavy rains caused Northeast Creek to rise causing creek bank to collapse letting the creek water enter manhole and station to overflow.
Details of Corrective Action Taken or Planned	Rain stopped. Station was pumping to capacity until overflow stopped.

Name	Old Stemmers Run
SSO ID	902157
Address	1100 Hengemihle Avenue
Date Of Discharge	11/30/2020
Duration Of Overflow	4 Hrs. 30 Min.
Date Of Relevant Weather Conditions	11/30/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,602,000
Receiving Waters	Northeast Creek
Identified Cause	MH #13378 cover and rings removed by lining contractor. Heavy rains caused Northeast Creek to rise causing creek bank to collapse letting the creek water enter manhole and station to overflow.
Details of Corrective Action Taken or Planned	Rain stopped. Station was pumping to capacity until overflow stopped.

Name	Orems
SSO ID	20909
Address	1356 Canberra Drive
Date Of Discharge	11/30/2020
Duration Of Overflow	1 Hrs. 15 Min.
Date Of Relevant Weather Conditions	11/30/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	636,000
Receiving Waters	Middle River
Identified Cause	Station was inundated with rain water from storm, suspected stream infiltration
Details of Corrective Action Taken or Planned	Station pumped down and overflow stopped

Non-Pump Station Overflow Structures – Metered

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	10/29/2020
Duration of Overflow	0 Hrs. 37 Mins.
Date of Relevant Weather Conditions	10/29/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	4,735
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	10/29/2020
Duration of Overflow	0 Hrs. 42 Mins.
Date of Relevant Weather Conditions	10/29/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	9,379
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	10/29/2020
Duration of Overflow	1 Hr. 4 Mins.
Date of Relevant Weather Conditions	10/29/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	12,301
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Marnat Road
SSO ID	113
Address	Marnat Road & Hatton Road
Date of Discharge	10/29/2020
Duration of Overflow	0 Hrs. 30 Mins.
Date of Relevant Weather Conditions	10/29/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	1,345
Receiving Waters	Jones Falls
Identified Cause	Insufficient wet weather hydraulic capacity
Details of Corrective Action Taken or Planned	The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.

Name	Aiken Avenue
SSO ID	41
Address	7829 Aiken Avenue & Taylor Avenue
Date of Discharge	11/30/2020
Duration of Overflow	0 Hr. 32 Mins.
Date of Relevant Weather Conditions	11/30/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	3,495
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Queen Anne Drive
SSO ID	129
Address	Queen Anne Drive & Hillcrest Avenue
Date of Discharge	11/30/2020
Duration of Overflow	2 Hr. 4 Mins.
Date of Relevant Weather Conditions	11/30/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	9,544
Receiving Waters	Herring Run
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023.

Name	Alter Road
SSO ID	22
Address	Alter Street & Southern Cross Drive
Date Of Discharge	12/24/2020-12/25/2020
Duration Of Overflow	4 Hrs. 47 Mins.
Date Of Relevant Weather Conditions	12/24/2020-12/25/2020
Description Of Relevant Weather Conditions	Rain
Net Gallons Discharged	2,614
Receiving Waters	Maidens Choice Creek
Identified Cause	Insufficient wet-weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross Drive
SSO ID	23A
Address	Southern Cross Drive & Parsons Avenue
Date of Discharge	12/24/2020-12/25/2020
Duration of Overflow	5 Hrs. 49 Mins.
Date of Relevant Weather Conditions	12/24/2020-12/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	42,133
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet-weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Southern Cross
SSO ID	23B
Address	3909 Southern Cross Drive
Date of Discharge	12/24/2020-12/25/2020
Duration of Overflow	5 Hrs. 46 Mins.
Date of Relevant Weather Conditions	12/24/2020-12/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	36,463
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Name	Patterson Avenue
SSO ID	24
Address	3902 Patterson Avenue
Date of Discharge	12/24/2020-12/25/2020
Duration of Overflow	7 Hrs. 22 Mins.
Date of Relevant Weather Conditions	12/24/2020-12/25/2020
Description of Relevant Weather Conditions	Rain
Net Gallons Discharged	168,674
Receiving Waters	Gwynns Falls
Identified Cause	Insufficient wet-weather hydraulic capacity.
Details of Corrective Action Taken or Planned	On 9/3/2019, the County issued the notice to proceed for the Phase I construction project. The County will submit a second SSO elimination time extension when a date has been identified. Right-of-way and environmental permits are required for Phase II construction.

Attachment A1: Summary of Non-Pumping Station Overflow Structure Monitoring

Date of Rain Event		10/29/2020	11/30/2020	12/24-25/2020
Rain (inches)		2.27-2.41	1.66	1.67
SSO Name	SSO ID			
Alter Road	22			2,614
Southern Cross Drive	23A	4,735		42,133
Southern Cross	23B	9,379		36,463
Patterson Avenue	24	12,301		168,674
Aiken Avenue	41		3,495	
Marnat Road	113	1,345		
Queen Anne Drive	129		9,544	

Attachment B - Construction Projects Status

Non-Pump Station SSO Structures

Project Name	Date of Construction Notice to Proceed	Sewershed Name	Original Consent Decree Elimination Date	Consent Decree SSO Elimination Date	SSO Eliminated	Status
Powder Mill Interceptor Relief Sewer Phase I – 18180 SXO (SSOs 22, 23A, 23B, 24)	9/3/2019	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined elimination date was submitted on 2/14/2017. A second Time Extension Request with a definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction. This project is 90% complete, achieving functional use on 1/26/2021.
Powder Mill Interceptor Relief Sewer Phase II (SSOs 22, 23A, 23B, 24)	-	Gwynns Falls	3/22/2017	TBD	No	A Time Extension Request with an undefined SSO elimination date was submitted on 2/14/2017. A second time extension request with definitive SSO elimination date will be submitted after right-of-way acquisition, environmental permits obtained and construction notice to proceed is issued for Phase II construction.
East Branch Herring Run Relief Sewer – 14117 SX0 (SSO 41 & 129)	2/5/2020	Herring Run	3/20/2018	8/3/2023 (requested)	No	On 4/27/2020 the County submitted a Time Extension Request to eliminate the overflow structure by 8/3/2023. This project is 27% complete.
Elimination of SSOs 116, 117, and 118	-	West Low Level	9/20/2016	TBD	No	On 6/22/2016, the County submitted a Time Extension Request with an undefined SSO elimination date. A second Time Extension Request with a definitive SSO elimination date will be submitted after the City shares with the County their proposed downstream corrective actions and construction schedule. The County continues to meet and coordinate with Baltimore City to complete the needed hydraulic improvements to the downstream collection system, which is maintained by the City.
Elimination of SSO 113	-	Jones Falls	9/20/2016	TBD	No	

Pump Station Rehabilitation, Repair and Replacement

Project Name	Original Consent Decree Deadline	Project Phase	Time Extension Request Submittal Date	Requested Deadline Date	Reason for Delay
Blenhurst	9/20/2020	Complete	10/1/2020	11/20/2020	Contractor performance and pump station mechanical issue.
Lodge Forest Manor	3/20/2020	Design (RoW)	1/30/2020	3/20/2025	DNR easement acquisition is complete. Permitting is ongoing.
Stansbury Manor	3/20/2020	Design (Permit)	1/30/2020	3/20/2025	MAA property acquisition agreement will be presented to the Baltimore County Board of Public Works on 2/21/2021.
Baurenschmidt Manor	6/1/2021	Construction			
Hyde Park	6/1/2021	Construction			
Millers Island	6/1/2022	Contractor Selection

12/24-25/2020	3909 Southern Cross Drive		D
12/24-25/2020	Southern Cross Drive & Parsons Avenue		D

Allowable Exemptions:

A. The cause of the SSO was a blockage in a County-owned lateral adjacent to the gravity line segment and the County cleans the County-owned lateral
B. The cause of the SSO was a blockage in the gravity line segment and visible directly from the manhole
C. The County has previously CCTV inspected the line segment(s) due to an earlier blockage and the County is in the process of developing or implementing corrective action
D. The location is an identified overflow structure and is being monitored pursuant to Paragraph 7.C and the County is involved in a process designed to eliminate the overflow structure

Attachment D - Status of SRRR Plan Implementation
