MR. LEFFNER: I think the County has evaluated and either completed all of the work that was identified in those locations or, in some cases, it, I'd say, kind of overlaps with improvements that are required by either a development project and, specifically, our development project.

MR. MUDD: Okay. So, let's go, let's go, let's do this. I'm going to show you Exhibit 45-A. Do you recognize this?

MR. LEFFNER: I do.

MR. MUDD: Okay and what, what is the, is, is this part of, how does this influence, or how did it influence the testimony you just gave about your understanding of the work performed?

MR. LEFFNER: I'd say it summarizes a lot of the conversations that I've had with Dave Bayer related to the improvements at each of those locations shown on the map.

MR. MUDD: Okay and this is 45-A, which is an e-mail, correct?

MR. LEFFNER: Correct.

MR. MUDD: Okay and 45-A, let's, let's go to 45-B. What is, what is this document?

MR. LEFFNER: That's a tabular list of each of those asset numbers, which again, where the manholes are, pipe section length and the required corrective action.

MR. MUDD: Okay.

MR. LEFFNER: As well as whether the status is complete or not complete.

MR. MUDD: Okay and there's a reference in 45-A to the spreadsheet. Is that the spreadsheet that it's referencing?

MR. LEFFNER: Correct.

MR. MUDD: Okay. All right. Let's talk about each, let's go back to forty-four and talk about each of these then, relative to what you know has been completed or not completed. So, forty, 43820, do you know what, what the result is of that?

MR. LEFFNER: I, I believe that 4320, that the County, yeah, they went to the manhole and inspected it, and lining was deemed not required, but they instead did a flow insert improvement.

MR. MUDD: Okay and then 43819?

MR. LEFFNER: Likewise, with the inspection from the County staff, the lining wasn't necessarily required and so they removed that as an improvement.

MR. MUDD: Okay. Now, let's talk about 43794, 43793, both the manhole and the work in between. What, what is your understanding of this area?

MR. LEFFNER: Those three boxes, or kind of the two manholes and the pipe between the two, are actually associated with the required offsite improvements with this project.

MR. MUDD: Okay. So, and are those reflected on the development plan, that work?

MR. LEFFNER: I believe so, yes.

MR. MUDD: Okay and its work, is it work to be done by the, this developer and/or others?

MR. LEFFNER: Yes.

MR. MUDD: Okay. So, these three boxes then have, have not been completed, is that correct?

MR. LEFFNER: Correct, I don't believe they have.

MR. MUDD: Okay. Let's go down to 53270, 44213, 44212 and take a look at this e-mail. What is, what is, what did we learn for 53270?

MR. LEFFNER: That they went to the site and installed the watertight frame and cover, as was recommended.

MR. MUDD: And 43213?

MR. LEFFNER: Yeah, and frame and cover work was done by the insertion of a rain pan.

MR. MUDD: And 43212?

MR. LEFFNER: The same.

MR. MUDD: Okay. I'll go back to the map for a second and make our way down to 6883 and go back to 45-A. What, what is 6883? What did we learn there?

MR. LEFFNER: It's saying the frame and cover was improved by adding a brick collar around the manhole. And the manhole was (inaudible).

MR. MUDD: And then the last, go back to the last was this red 6875 to 6874. And what does the e-mail suggest for that?

MR. LEFFNER: That the lining was completed.

MR. MUDD: Okay, okay. I, I'll move 44, 45-A and 45-B into evidence.

ALJ: Any objection, Mr. McCann?

MR. MCCANN: No objection, Your Honor, thank you.

ALJ: All right. Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, actually I do object. When you, when it gets to specific e-mail from Mr. Bayer, this is at another level. Mr. Bayer needs to be here for the opportunity to cross examine him. This is not some general, well, maybe they, they did comply, they didn't comply, whatever. This is just like the Chris Nebre situation.

Mr. Bayer needs to be here to testify, in my opinion, for procedural due process. Especially since this is just being produced today, you know, without any prior opportunity for, for Mr. McCann or anybody to investigate what's going on. So, anyway, I think, I think this is objectionable and I would move to strike the narrative about what Mr. Bayer told Mr. Leffner.

ALJ: All right. Well, the County Exhibit 45-A and 45-B are both County documents. They are from, with County e-mail addresses. They're obviously e-mails from the County.

Other e-mails have been produced in a similar way. In fact, in the Protestant's case, there are numerous e-mails with regard to different, different issues and, and they all came into evidence --

MR. MCCANN: (inaudible).

ALJ: Yeah, we're not, we're not going to exclude, we're not going to exclude an e-mail from the DPW&T answering specific questions. I mean, this is, this could be provided by, you know, even a, a Public Information Act. But however, it was provided, it certainly is a County document. These are both County documents. Mr. McCann?

MR. MCCANN: Yeah, I'm sorry to interrupt, Your Honor. I didn't mean to cut you off.

ALJ: Yeah, yep.

MR. MCCANN: The only thing I wanted to add to that is, and I, the distinction between these e-mails and the ones that were introduced before and have been introduced throughout this case, is these are specific e-mails. And you'll see by their date, that are in specific response to queries by Mr. Leffner, or, or his team about these issues.

So, these aren't, I happened to submit a PIA requesting to get this. I didn't get the complete e-mail, frankly. But so, yes, they are public records, but they're public records generated for the purpose of assisting this Developer in presenting evidence.

So, I think there's a clear distinction and I think that the e-mails and, and the testimony really, are problematic for that reason.

ALJ: But you didn't object.

MR. MCCANN: Yeah, I know. I wasn't paying close enough attention and I apologize for that.

ALJ: Okay. I mean, but for the purposes of this, these, these two documents, 45-A and 45-B, I think they're, they're a fair, they are, they are similar to the other e-mails, numerous e-mails that were submitted in your case. And so, you know, this is --

MR. MCCANN: Well, I just --

ALJ: I understand County document. I, I'm not, these, these, this document in particular it is, this is just a review by Mr. Bayer of, of what either work was done or wasn't done and, and the reasoning and with a spreadsheet. So, I, I don't see these particular documents as being drafted or created to assist the Developer. I understand it's answering some questions. I mean, it's answering (inaudible) --

MR. MCCANN: I didn't (inaudible) it that way, I just meant --

ALJ: Yeah, I, I didn't see it as that for, for this particular one so I'm going to admit 45-A and 45-B.

MR. MCCANN: Thank you.

MR. MUDD: Thank you. And forty-four is admitted as

well?

ALJ: Sorry. Forty-four is on the screen, was there any objection for forty-four, Mr. McCann?

MR. MCCANN: In and of itself, no. It's just a map with some numbers on it, but no.

ALJ: Right, understood. And Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, which, and I know you've already ruled, but which is A, and which is B? I, I'm --

ALJ: This is forty-four. We already put (inaudible).

MR. ZIMMERMAN: Right, 45-A and 45-B, which one is A (inaudible)?

ALJ: Well, if you look at the document, 45-A is the, is the e-mail and 45-B is the Excel spreadsheet.

MR. ZIMMERMAN: Okay. So, 45-A, the date, just so, so the record is clear, the date of Mr. Bayer's e-mail looks to be May 30th?

ALJ: Yeah.

MR. ZIMMERMAN: This is, this is May, yesterday. This e-mail is yesterday to D'Andrea, Dave Bayer to D'Andrea Walker. How, how does this get to Mr. Leffner?

ALJ: Okay. Well, you can, you can ask those questions on cross examination. So, those documents are admitted. The only question is forty-four, (inaudible).

MR. ZIMMERMAN: I'm sorry, the (inaudible) --

ALJ: Forty-four was the map with the numbers for the manholes in this --

MR. ZIMMERMAN: Can I see the top of the exhibit?

MR. MUDD: Sure.

MR. ZIMMERMAN: Okay. So, it's D'Andrea Walker to Charles Conner, okay.

ALJ: So, Mr. Zimmerman, --

MR. ZIMMERMAN: All right.

ALJ: -- Mr. Zimmerman, this has already been admitted. Mr. Mudd, can you go back to forty-four? Mr. Zimmerman, the question is whether you object to this map, which is--

MR. ZIMMERMAN: Yeah, I object to the whole thing in context --

ALJ: Okay.

MR. ZIMMERMAN: -- because they're all interrelated.

ALJ: Okay. I just wanted to get your objection on the record.

MR. ZIMMERMAN: Yeah, thank you. I know, I know you're overruling it.

ALJ: I, you're right. So, it, we're going to admit forty-four, 45-A and B have already been admitted. Okay. Go ahead, Mr. Mudd.

MR. MUDD: Thank you. Mr. Leffner, do you rec, recognize what I've put up as Exhibit 46?

MR. LEFFNER: I do.

MR. MUDD: Okay and what's this document?

MR. LEFFNER: I believe it's a fact sheet that was prepared by Baltimore County when having discussions with the public related to the sewer mapping.

MR. MUDD: Okay. It speaks for itself, but I'll also submit this as a County document as well, Exhibit 46.

ALJ: Yeah, I, this one I, I've looked at. I reviewed this last night. I, this, this one, I, it doesn't show who drafted it. It, it does, this one specifically in my view does look like it's in response to, you know, kind of Developer's concerns. I, I mean, I, I've never, I've never seen this before in the sense that Mr. McCann issued a PIA request, and this is dated May the 1st.

This report to me does seem to be generated for the purposes of litigation. So, I have, I have issues with, with this one. And it doesn't even show who drafted it other than being on the County letterhead. So, where did this document come from?

MR. MUDD: You asking me or Mr. Leffner?

ALJ: Yeah, I, whoever, I, I, --

MR. MUDD: I mean, there, there were, there were numerous discussions, Judge Murphy, between people in the community, County Council members, developers and Baltimore County representatives, including D'Andrea Walker and members

of her staff.

And this was prepared and submitted by D'Andrea Walker to the County Council in direct response to concerns raised by the Council, which were generated from community concerns. And Mr., Mr. McCann is aware of this and can dispute how I described it if he wants to. But I, I think that's a pretty fair explanation.

ALJ: So, so, did, did Ms., did, did D'Andrea Walker draft this?

MR. MUDD: It was presented by her office to the County Council and to myself and to Mr. McCann.

ALJ: To, okay, I mean, so, so, for, to the County Council during what, a hearing that the County Council had?

MR. MUDD: Yes.

ALJ: Well, do you know what hearing that was?

MR. MUDD: Yes. There were discussions about the basic services maps.

ALJ: Do you know, again, what was the hearing date for that? For the County Council?

MR. MUDD: I think the date was May 1st. I'm not positive though.

MR. MCCANN: I'll just add, I disagree, Judge, may I, just add?

ALJ: Yeah, okay, Mr. McCann.

MR. MCCANN: Yeah, I, I don't disagree with anything

Mr. Mudd just said in terms of the context, except that this wasn't really introduced at the hearing. It was intro, introduced outside of the hearing by, as you indicate, some unknown person from DPW prepared it. I know it came from her office but, so it wasn't in the hearing to the extent that makes a difference, I'm not sure if it does.

But my problem with it is, if I may, is very much similar to yours, Your Honor. That it's just a document that has no author to it, no one is signing their name to it and attributing, you know, their, you know, their reputation, much less their signature, to what's said.

What, I have problems with ninety-nine percent of what's actually said. So, if it is going to be introduced, I, I wouldn't even know, if I were even allowed the opportunity, to even ask, you know, who it, ask questions about who to ask questions about it.

I think it's, it's, it's quintessential hearsay, not, no authorship and, so I think it's, it shouldn't come in for that reason. But Mr. Mudd has described the context accurately.

MR. ZIMMERMAN: Can, can I add something at some point, Judge Murphy?

ALJ: Well, let Mr. McCann finish. Mr. McCann?

MR. ZIMMERMAN: I thought he was finished, sorry.

MR. MCCANN: That's it. I, I just, I don't have any

opportunity to challenge this and I, for whatever it's worth, I challenge nearly all of it, so that's a problem.

MR. ZIMMERMAN: Yeah, yeah. So, can I say, I recognize that this is a de novo hearing. For what it's worth, I've never seen this document. I was not involved in any discussions that were described. So, I've never even had a chance to read it.

But what I would say, once again, is if somebody from Public Works Department wants to come in and testify, whoever may have been involved in this memo, you know, we could cross examine them. But it's another situation of putting in a document prepared by somebody else that's really, is being put in here because obviously Developer thinks it's important. And we don't get a chance to really dig into it.

So, it, it's just another and it's getting, it's like we're going, you know, up, up or down a staircase of it's more, more and more hearsay --

MR. MUDD: Judge Murphy, --

MR. ZIMMERMAN: -- so I, I object for lack of a witness.

ALJ: Okay, okay. All right. Mr. Mudd?

MR. MUDD: Can I briefly respond?

ALJ: Yep, go ahead.

MR. MUDD: Sure. So, so with regard to authorship, I, I'm not sure how much more authorship we can get than being

on the letterhead of the County Executive and the Director. And Mr. McCann agreed with me that this came from the Director's office. And I think that, that generally speaking, it should be allowed in the same way that any number of public documents that have made their way into this, this process have been allowed.

We had, we had pages upon pages of reports generated by third parties who were not here, available for cross examination that, that have made their way in because they were found in a County file.

And I would ask you to accept this if for nothing more than what it's worth, which I know you may say this doesn't help you, it does help you. But I think it should come in and it should be fodder for Mr. McCann to explain why he disagrees and for us to explain why we think this shows the County's response to specific concerns raised by many people.

ALJ: Okay. So, so, I, I see this document, forty-six, differently than forty-five, 45-A and 45-B. 45-A being an e-mail from DPW&T and, and in regard to specific actions that were taken in regard to the, the manholes and the sewer linings.

This document, again, doesn't have an author. And I, and I have to agree with Mr. Zimmerman and Mr. McCann in regard to not having a witness here to be able to ask questions about it. I mean, this would be, this document could take, you know,

a couple days, I mean, not really, but it could take a day, but a County employee really should be here to, to be able to be cross examined in regard to all the information that's put on here.

This document, again, does not have an author. It, it, it's dated May the 1st. Mr. McCann's documents that he, is someone talking? Is, is someone talking? I keep hearing someone talk. Mr. McCann's documents that he put in were in response to a Public Information Act request.

And, and so it took, and, and we know though that the, with the hearings, we've actually had, you know, an issue where we had to delay the hearings because of trying to get responses from the County for, for the, the documents that he had requested.

So, I'm not sure, I mean, again, this was produced to him, but this is not in response to a Public Information Act. I see the seal on the top of it. And typically, I, I, you know, allow, you know, public documents from County records. But, but this one really needs a witness.

And, and the, you know, at the beginning of development plan hearings, we all know, the, the agencies come in and testify and DPR always comes in and testifies for DPW&T. And in regard to the traffic, I said, you know, it's really not good enough. We have to have Mr. Nebre here. So, we did.

In the same, this is another issue. And, and so if

these, these facts and, that are outlined on this document are, you know, just allowed in, there's no opportunity for cross examination. I think this one is prejudicial to the Protestants and People's Counsel in that there's not a witness.

If there's a witness who, from DPW&T came in and said, this is the document, here's what the situation was, here's why we generated it and then could be cross examined, I think that that's fair. But this is not just a, a, you know, a public record that should come in.

So, I'm not going to, I'm not going to allow forty-six to come in.

MR. MUDD: Okay.

ALJ: And I do hear people talking. And I don't know why. I keep hearing someone talk, but I'm looking at everybody's microphone. I want to make sure everybody keeps their microphones muted. It's as if there's background noise. I'm not sure, maybe it's in someone's office or something.

But please make sure that there's nobody in, in your office that's, that's talking so our record is clear. We don't want a bunch of noise in the background. All right. So, forty-six is, is not in evidence.

MR. MUDD: Okay. Thank you, Judge Murphy. All right. Mr. Leffner, getting back to, I think I'm going to put forty-four back up. So, what other work generally was required within the Baltimore County, sorry, within the Jones Falls

sewer shed under the SRRR plan, meaning under map 6.1?

MR. LEFFNER: A lot of the same type of improvements that were highlighted that we just walked through along the sewer outflow run that we had. I'd say specifically a complete re, complete rehabilitation of, with lining up in the Cockeysville area, which is highlighted in yellow on this map.

MR. MUDD: Okay and what --

MR. LEFFNER: Lining --

MR. MUDD: Go ahead. I'm sorry, go ahead.

MR. LEFFNER: Yeah, the kind of purpose of all of the improvements that were required on this, whether it be lining of pipes, lining of manholes, frame and covers, was to reduce inflow and infiltration into the system. By reducing the inflow and infiltration, preventing, you know, essentially ground water or rain sources from entering into the system, increasing the capacity for wastewater generated flows.

MR. MUDD: Okay and do you know why there was a focus in the Cockeysville area?

MR. LEFFNER: There was very high amounts of infiltration and infiltrate, inflow and infiltration that were monitored.

MR. MUDD: Okay. Do you know how many linear feet of pipe were relined in that area?

MR. LEFFNER: I, I think it was over a hundred thousand linear feet. It was a lot of pipe.

MR. MUDD: Okay and can you give examples of other types of repairs that were, that were performed in that area and elsewhere around the sewer shed?

MR. LEFFNER: Yeah, I mean, I think, you know, specific to that area, there was the rehabilitation efforts with lining, manhole improvements, frame and cover repairs. I know with visual inspection, there was a, a valve that's essentially a bypass for the Texas Station forest main that was found to be partially open, which allowed, essentially was allowing water to come into the Jones Falls water shed that's typically, or sewer shed, that's typically diverted into a different sewer shed.

So, that valve was closed to, essentially, reduce, I think it was like a, you know, it was a lot of flow coming through that, that valve. I think at one time the County mentioned a quarter million gallons a day. That was reduced, so that valve was closed.

Similar lining and manhole rehabilitation was done throughout the entire sewer shed. And then specifically, at some of the constructed sanitary sewer overflows there were, I believe there were three within the Jones Falls watershed. One of them I think was completely removed up by Riderwood Ave.

Essentially, the, the constructed overflow was plugged and blocked, and they've had no sewer overflow since. There was a second over at Marnat Road, that I think was found

to not be able to be closed yet, just because of coordination and, essentially, improvements needed to happen on the City line and if the overflow was plugged before those improvements were made then basement backups within the County would likely occur. So, they kind of chose to not close that SSO until the, the coordination with the City has been complete.

And there was a third on Charles Street Ave that I believe was closed and that they're still monitoring just to make sure there's no overflows.

MR. MUDD: Okay. Getting back to this yellow area, what, what, what impact would the repairs performed in that highlighted area have on the system and its capacity in general?

MR. LEFFNER: It, essentially, the lining and rehabilitation efforts meet what the, I'd say, kind of global intent of that SRRR plan was, which is do improvements within the existing infrastructure to keep inflow and infiltration out of the system.

By keeping those inflow and infiltration sources out of the system, essentially, there's more reserve capacity or capacity for wastewater flow. So, it improves the capacity of the existing system by preventing non-wastewater sources from entering into it.

MR. MUDD: Okay and you mentioned the Texas Station valve repair reducing hundreds of thousands of, of gallons per

day of, of water into the system. How many gallons per day of sewerage would be added to the system by the sixty-one lots in this subdivision?

MR. LEFFNER: I believe it's around nineteen thousand gallons per day.

MR. MUDD: Okay. Are you familiar with the performance assessment completed by RJN for this sewer shed?

MR. LEFFNER: Yes.

MR. MUDD: Which was, let me pull it up, Protestant's Exhibit 78, I believe. Sorry. Can you see that?

MR. LEFFNER: Yes.

MR. MUDD: Okay and this is Protestant's seventy-eight. Do you, you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Okay. Have you reviewed it?

MR. LEFFNER: I have.

MR. MUDD: Do you know why it was prepared in the first place?

MR. LEFFNER: It was required in the Consent Decree.

MR. MUDD: Okay and let's look at the Consent Decree for a second. And direct you, I'm sorry, page thirty-five. This is what you're referring to?

MR. LEFFNER: Correct.

MR. MUDD: This is on page thirty-four. What, what specifically did the Consent Decree require with regard to

performance assessment?

MR. LEFFNER: Again, this, this was, I'd say across the County within the, applicable to the Consent Decree but they were, to once improvements from SRR plans had been implemented, the performance assessment was supposed to be done to, as is summarized in the Consent Decree, essentially, evaluate and report any SSOs within the sewer shed, quantify the reduction of I&I, evaluate whether the repairs and rehabilitation projects within the sewer sheds was effective and evaluate whether the preventative and proactive maintenance requirements for the (inaudible) and root system were effective, essentially, in preventing SSOs.

MR. MUDD: Okay and is there any requirement that this document be approved by MDE or EPA?

MR. LEFFNER: I don't believe so. I think it's supposed to be provided to them and they could be commented on. But it did not necessarily need to be approved.

MR. MUDD: Okay --

MR. ZIMMERMAN: Move, move to strike that answer. It's obvious that EPA and MDE are supposed to review all these things, I mean.

MR. MUDD: Could I draw your attention please to roman three on page thirty-five and read that into the record?

ALJ: I'm going to overrule the objection. Go ahead.

MR. MUDD: Mr. Leffner, can you read roman three into

the record?

MR. LEFFNER: Baltimore County shall submit the performance assessment report for each sewer shed summarizing the results of the performance assessment for that sewer shed to the EPA and MDE for review and comment within ninety days after completion of the performance assessment for that sewer shed.

MR. MUDD: Okay. Is there any requirement that, in there, that this be approved by EPA or MDE?

MR. LEFFNER: No.

MR. ZIMMERMAN: And I'm going to object again. I think there are other provisions in the hundred and fifteen pages.

ALJ: (inaudible) now you're making a speaking objection. You can cross examine him on those points and so overruled.

MR. MUDD: Do you recall Mr. Grachek's testimony, moving back to the RJN report, Mr. Grachek's testimony about what work within the sewer shed was analyzed by RJN? In other words, what work had been performed prior to this RJN report?

MR. LEFFNER: Yes.

MR. MUDD: And what did he say?

MR. LEFFNER: I believe he said that the only work was the, the, the rehabilitation project up in that Cockeysville area.

MR. MUDD: And do you agree with that?
MR. LEFFNER: No.
MR. MUDD: Why not?
MR. LEFFNER: The report specifically calls out other improvements that were included within the report. I think the, the two main ones was the, kind of, though it wasn't required by the Consent Decree, or identified in the SRR plan, there was relief sewer constructed both along Copper Mine Terrace and then also along Towsontowne.
MR. MUDD: Okay. I'm showing you Protestant's Exhibit 78, map two, do you see this?
MR. LEFFNER: I do.
MR. MUDD: And what's this map entitled?
MR. LEFFNER: The rehabilitation completed.
MR. MUDD: Okay and there's a legend on this map?
MR. LEFFNER: Correct.
MR. MUDD: And what does that legend show?
MR. LEFFNER: It shows all the different types of improvements that had been done within the sewer shed.
MR. MUDD: Okay and am I, can you, am I correct that BC-09, BC-04, BC-02, BC-03, that's where the Cockeysville yellow area is from 6-1?
MR. LEFFNER: Correct.
MR. MUDD: Okay and are there improvements shown outside of that area on this map?

MR. LEFFNER: Yes.

MR. MUDD: Okay. What was the, what was RJN's report with regard to SSOs and the status of SSOs within the sewer shed? I'm back to Protestant's seventy-eight.

MR. LEFFNER: I believe in the RJN report they went through and identified each of the constructed SSOs. Those were the three at Riderwood Ave, Marnat Road and Charles Street Ave. And provided, you know, essentially, where I found the summary that the, two of them had essentially been closed and then Marnat Road was kind of on hold because of the further downstream coordination that they needed with Baltimore City.

They reported on the constructed overflows and then they also kind of go through an analysis saying, you know, based on the modeling, there was no projected dry weather overflows. I think the two-year six-hour event had no projected overflows. And beyond that, they kind of report the, the number of expected overflows for kind of modeled larger events.

MR. MUDD: All right. Let's, let's move back real quick to Marnat Road. To the extent this isn't known already but is, is the Marnat Road constructed SSO along the sewer path for this project?

MR. LEFFNER: No.

MR. MUDD: Okay. Where is it?

MR. LEFFNER: It's over on the, kind of, I don't know

if you have the, one of the maps up. Yeah, it's over on the west side.

MR. MUDD: Okay and, and, and --

MR. LEFFNER: West of, west of 83, I would say. Kind of outside both the --

MR. MUDD: Okay.

MR. LEFFNER: -- sewer, the sewer path for this project and the, the Lake Roland drainage area.

MR. MUDD: Okay. Well, will the additional sewerage from this development have any impact on that constructed SSO?

MR. LEFFNER: No.

MR. MUDD: Okay. Let's talk about non-constructed SSOs a little bit. Can you, can you discuss a little bit about what the RJN report reported about these non-constructed SSOs?

MR. LEFFNER: Yeah, they, they summarize and kind of, on the graph there, they identify the number of SSOs and kind of the amount that was released within specific year storms identifying that most of them were related to some type of blockage, defective pipe, or high flows. That 2018 was kind of an outlier year because of the amount of rainfall. And that there was a, kind of a significant SSO, or at least a discharge related to a forced main break.

MR. MUDD: Okay and then what happened in 2019?

MR. LEFFNER: In 2019, they had, kind of, you can see the last sentence. It says that it was caused by two breaks in

a forced main, was the result of almost all of the, the discharges in 2019.

MR. MUDD: What, and where were you reading, were you reading from somewhere here?

MR. LEFFNER: After it says figure 2.1, the last sentence.

MR. MUDD: Okay. Okay. What was the, the RJN report with regard to, with regard to I&I and quantification of I&I?

MR. LEFFNER: I think the, the quantification reduction for both base flow and then rain driven I&I was mainly focused up in that Cockeysville area, where the rehabilitation project had been complete. And identified that the, the measures taken by the County kind of achieved with the SSR, the SRR plan had proposed. Which by doing the rehabilitation, the lining, that it was able to reduce both base flow and rain, rain driven I&I.

MR. MUDD: Okay and what was the RJN report on, essentially, the effectiveness of the work performed under the SRRR plan?

MR. LEFFNER: One, that I think in the area where the improvements had been completed, I think they said that the, the model predicted SSOs was reduced by like eighty-nine to a hundred percent within those areas. And that with continued improvements within the other areas, it would be reduced by the same.

MR. MUDD: Okay and what was the RJN's report with regard to routine maintenance?

MR. LEFFNER: There were a few pieces because they, it was kind of focused throughout the report one on the, the fat, oil and grease program, which a majority of the sewer overflows that were kind of summarized in that Section 2.1 we were talk, looking at earlier --

MR. MUDD: Um hm.

MR. LEFFNER: A lot of the sanitary sewer overflows were related to blockages. So, whether that be a defective pipe or a blockage within the system, so, the, kind of the FOG program is to keep and regulate fat, soils and grease from leak, getting into the sewer system, which is a major contributor to blockages within the system.

Likewise, roots. So, kind of inspection and maintenance programs that the County has implemented to improve and, essentially, prevent blockages, which could result in a, in an overflow.

MR. MUDD: Okay. Did you, I'm sorry, lastly, what's the, what was the overall conclusion of, of the report?

MR. LEFFNER: Essentially, that, I think, the measures that had been done by the County were working as intended. That the constructed sanitary sewer overflows had been eliminated to the best extent that the County could at the time.

Again, the main exception being Marnat Road requiring coordination with Baltimore City and then with the kind of modeling for both I&I into the system and projected sewer overflows that, essentially, the infiltration and inflow within lined areas was going down as intended. And, you know, essentially, the improvements were working that the County's been working on.

MR. MUDD: Okay. Did you review map three of the, the RJN report?

MR. LEFFNER: I did.

MR. MUDD: All right. I'm showing that to you now, Exhibit 78, map three. Did you hear the testimony of Mr. Grachek about this map?

MR. LEFFNER: I did.

MR. MUDD: Okay and did you perform any other evaluations related to the RJN report and/or this map following that testimony?

MR. LEFFNER: Not necessarily modifying their model at all, but just reviewing the results that they had.

MR. MUDD: Okay and, and did you, did you engage with the Department of Public Works regarding this as, as well?

MR. LEFFNER: I did.

MR. MUDD: Okay. What, what's your understanding of what this map is meant to depict?

MR. LEFFNER: I would kind of say like a snapshot in

time on the performance of the improvements and the ongoing main, the County kind of programs that are being just continuously rolled out within the County. But it kind of takes a snapshot of time. So, you know, a, a period where rainfall data has been gathered, inspections have been done, flow monitoring is ongoing, additional flow monitoring is being added.

So, it's, it's kind of a snapshot in time and a model update mainly related to the SSO closures and Cockeysville improvements that were made to show the effectiveness of the SRR improvements as they're being implemented within the County.

MR. MUDD: Okay and there are, just looking at the key here, there are, there are, sorry, something in my way here. There are certain storm codes here, correct?

MR. LEFFNER: Correct.

MR. MUDD: Okay and this says modeled predicted overflow for each of these?

MR. LEFFNER: Correct.

MR. MUDD: Is that right? And, and it shows, do you recall Mr. Grachek's testimony about the model predicted overflows along the sewer path for this project?

MR. LEFFNER: Yes.

MR. MUDD: What, what's your understanding about those model predicted overflows in these red areas?

MR. LEFFNER: I think they're, they're kind of just that. They're model predicted based on whatever information was available to the modeler at the time. And don't necessarily include, I would say like current day information, nor has it been verified in the field. So, a lot of it, it's model predicted.

The model may have been calibrated, but it hasn't since been verified by the County because some of the other County kind of ongoing measures that aren't included necessarily in this would be flow monitoring within some of the sub sewer basins, as well as level censors.

So, you know, at, at some locations where they may have a model predicted overflow, the County could install an actual level censor to identify if there is actually an overflow or, you know, a problem that is occurring that the model is predicting.

MR. MUDD: Okay. Did you review Protestant's Exhibit 81, which I'm going to show you in a second here. Do you recall this exhibit?

MR. LEFFNER: I do.

MR. MUDD: Okay and you recall the testimony about this exhibit?

MR. LEFFNER: I do.

MR. MUDD: Okay and is your understanding, what, what's your understanding about where this exhibit, where the

information on this exhibit came from?

MR. LEFFNER: Again, I, I haven't gone through, and kind of fact checked all of these. And it sounded like most of them had been by Mr. Grachek. So, going on that assumption, there were, essentially, just forming a tabular summary from the RJN post-rehab model and comparing it to the RJN pre-rehab model and RK&K re, rehab model.

MR. MUDD: Okay and again, what's your understanding about that modeling?

MR. LEFFNER: It's model predicted, so it's the models that were developed by, I would say, each of those two companies. And then, for the RJN report the two scenarios, both pre- and post-rehab.

MR. MUDD: And has, to your knowledge, has the model been field verified?

MR. LEFFNER: No.

MR. MUDD: Okay. Let me show you Exhibit 47-A. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Okay and what, what is this?

MR. LEFFNER: It's kind of the, the same exhibit or map figure from the RK&K SRR plan. It has the same highlighted outfall sewer route from the project area down to the County and City line. And instead of improvements labeled on that previous exhibit, this exhibit identifies manhole numbers with

the, essentially, level censors that had been installed by Baltimore County DPW.

MR. MUDD: Okay and I'm going to show you Exhibit 47-B. Do you recognize this?

MR. LEFFNER: I do.

MR. MUDD: Okay and what is this document?

MR. LEFFNER: It's a list of, from Dave Bayer with Baltimore County, confirming the manhole structure numbers that the, essentially, the, the flow meters that have been installed that capture the flow from our subdivision --

MR. ZIMMERMAN: Okay. I, I move to strike. Again, objecting to these e-mails that were, you know, part of the trial preparation and, for this case, and not the usual County, you know, comments that are filed in the ordinary course of business. If we get Mr. Bayer, Mr. Bayer in, that's one thing and --

ALJ: Understood. And I, I see these e-mails differently though, as that the document forty-six was excluded. Because this is an e-mail which just provides factual information. There is, there are a lot, I mean, hundreds of exhibits the Protestants have produced.

There are lots of e-mails that, that have the same type of information. So, to be fair to both parties, we're going to put the, this document in. This is forty-seven, so. I mean, in other words, it's, I'm going to overrule your

objection.

MR. MUDD: Thank you. What, what is your understanding of why the, the County would have installed these flow meters in this location? I'm sorry, these meters.

MR. LEFFNER: As, as part of that verification process, the, to monitor and measure whether there are issues occurring at those manhole locations, I'd also say it's kind of tied to some of the other Consent Decree requirements that just shows the County's, I'd say, action towards developing maintenance and operation, as well as emergency action preparedness.

MR. MUDD: Okay and are you aware of any, any active overflows in this area based on everything you reviewed?

MR. LEFFNER: No.

MR. MUDD: Okay. Did you, well, strike that. Is there anything that you learned in, in obtaining this information, putting this exhibit together, from Baltimore County that would, would cause you to change that understanding? In other words, is that part of, is that part of what forms your basis for your opinion, or your understanding?

MR. LEFFNER: Correct.

MR. MUDD: Okay. So, let, let's assume for a second that, that the pipe capacity numbers that RJN's model demonstrated are, are accurate. Does that mean that there will

be sewerage overflows within this system necessarily?

MR. LEFFNER: No.

MR. MUDD: And why not?

MR. LEFFNER: The sewer capacities have, you know, one hundred percent would be the pipe flowing full. In most cases, the pipes may be ten, twelve, twenty-four inches. So, that's, that's really only, you know, a foot to two feet in those instances of sewage flowing through a manhole or in a pipe and the pipe is not under pressure.

If it, if the pipe capacity, if it's exceeding it, so it's say a hundred and five percent, that just means that the amount of flow that's being conveyed through the pipe is above the pipe capacity and it's operating under a little, essentially, like pressure. To where sewage in the upstream manhole may back up above the top of the pipe.

But it would take a significant amount of capacity over the pipe capacity before you would actually have, essentially, sewage backing up in a manhole that would come above grade. In a lot of cases, these sewers are very deep below grade. So, seeing some of those, you know, slightly above a hundred percent or even kind of well above a hundred percent, they're likely still contained within the sewer.

MR. MUDD: Okay. So, what, by the way, what's your understanding of what the sewer design manual says about how a, a sewer system should be designed?

MR. LEFFNER: It identifies that new sewage systems and then new sewage systems that are serving existing areas should be designed kind of in accordance with standard capacities, depending on what type of sewer it is that you're designing.

So, there's, kind of a recommendation for smaller sewer laterals and mains to be designed at one percentage threshold. I think it's around seventy percent. Kind of a little bit larger diameter pipes at maybe interceptor lines designed at eighty. And then big transmission lines up at ninety.

MR. MUDD: Okay and then how does that design then translate to, to, you know, actively conveying sewer once installed?

MR. LEFFNER: Yeah, I think, there is a lot of variables that go into sewer design. Growth projections is one. Kind of, you know, you don't know what's going to happen however many years from now.

So, there's a lot of guidance as far as how to accommodate and plan for future growth, sewer projections for actual development that's occurring, using best information available as far as monitored or, you know, verified field, verified field information in the sizing, with the, kind of intent to maintain those thresholds.

But, you know, the, designing to your best guess what

the sewage is going to be some day, as well as the actual conditions within the sewer pipe. Those percentages are going to vary. They're never going to be dead on.

For instance, you, you don't want to oversize a sewer too much because then the velocities may be really low and that can result in damage to the sewer lines or maintenance concerns.

Similarly, you may have more flow going through the pipe that was, it was designed for. But there's nothing in the design manual that limits the County or project to exceed those percentage thresholds and actually operate the pipe at a slightly higher percent capacity.

And I'd say it's pretty common, right? There's a lot of restrictions when doing sewer design, you know, shallow slopes or roadway or utility crossings, stream beds, which are just a less than ideal slope might be feasible to avoid some other type of environmental impact.

To where it's pretty common to where, you know, there, there may be certain circumstances where the pipes are operated above those thresholds.

MR. MUDD: Okay and do the, do the manhole structures themselves, how, how, if at all, do they play into the overall design?

MR. LEFFNER: It, it's kind of a mix, right? So, there's things, there's kind of impacts from having changes and

directions through manholes. If pipes are being operated above the full flow capacity, you can kind of get that build up, I would say, in the upstream manholes to where the pipes were operating under a little pressure.

In some cases, there's, it may be under so much pressure that it would overtop the manhole. And within the analysis, you may elect to just bolt the manhole down and make it watertight so none of the sewage can come out. That can result in upstream issues as well. So, you know, there's kind of a, there's a lot of balancing when looking at the existing sewer systems and the improvements that are done to them.

MR. MUDD: Okay. Assuming, let's assume that capacity figures in Exhibit 81, the RJN modeling are accurate, do you have an opinion as to whether they identify an actual capacity problem within this sewer system?

MR. LEFFNER: I don't think the charts do, no.

MR. MUDD: Okay. Let's get back to the Consent Decree for a minute. Okay. So, I'm down at the bottom of page thirty-five. And again, I know this document speaks for itself, but I just, I want to, I want to kind of quickly go through this. So, paragraph eleven in this, in this Consent Decree, what is, what, what was required under the Consent Decree with regard to this fats, oils and grease program?

MR. LEFFNER: It was kind of, I would kind of summarize it as further development of the FOG program by

controlling, permitting and then kind of reporting issues due to fats, oils and grease causing damage or blockages to the system.

MR. MUDD: Okay and do you know, are you aware if that has happened?

MR. LEFFNER: I understand it has from talking to County staff.

MR. MUDD: Okay. Anything else that you've reviewed in addition to County staff?

MR. LEFFNER: I think the FOG is included as part of the update within the performance assessment.

MR. MUDD: Okay. Paragraph twelve, sorry, I'm getting there. What was required in the, under the Consent Decree as of paragraph twelve?

MR. LEFFNER: I think it was controlling, you know, that kind of statement is controlling stormwater discharges into the sewer system.

MR. MUDD: Okay and do you know whether that effort has been undertaken by the County?

MR. ZIMMERMAN: Objection. Again, that's hearsay.

ALJ: He can, he can tell us what his understanding is.

MR. ZIMMERMAN: I mean, unless we have a specific document that he can identify that shows (inaudible) --

ALJ: But, but Mr. Grachek testified to the same

thing, about whether he thought that the County undertook the, the steps or not. So, he, Mr. Leffner can testify. Overruled.

MR. MUDD: So, --

MR. LEFFNER: I, I do believe, I understand that they have been doing that in addition to kind of not calling out as many of the specific elicit discharges in the RJN report. Also required by the Consent Decree is quarterly and annual reporting related to the sewer shed. And I believe stormwater discharges are identified there.

MR. MUDD: Okay. How about paragraph thirteen, pump station inspection, rehabilitation, repair and replacement?

MR. LEFFNER: Yes, I think those, those are covered and I, I think a lot of the reports, I think the LTC, SRRR and RJN report all identify pump station repairs. The majority of the pump stations were already adequately sized and had capacity without any kind of projected overflows. So, each of those reports kind of identify the various improvements done to pump stations within the sewer shed.

MR. MUDD: Okay. Down to paragraph fourteen. Sorry, I'm getting there. Collection and transmission system model. What, what was required under the Consent Decree with regard to this, this paragraph?

MR. LEFFNER: A lot of that is the model being talked about between the three different reports.

MR. MUDD: Okay, all right. Paragraph fifteen. When

you say three different reports, which are you talking about?

MR. LEFFNER: The model being developed between the long-term capacity and then the SRRR and RJN reports.

MR. MUDD: Okay and then onto paragraph fifteen, the collection system operation and maintenance. What's your understanding of what's required under this, this section of the Consent Decree?

MR. LEFFNER: Developing a, I'd say further developing the operation and maintenance program at the County to identify, you know, kind of reporting standards for failures, blockages, repairs that were done, quantifying SSOs at the locations, if, if there was an SSO associated with the blockage or failure. So, it's, it's more so on the, the, somewhat pro-active, but also kind of reactive operation and maintenance program with the County.

MR. MUDD: Okay and are you aware if that has happened?

MR. LEFFNER: Yes, again, I think, I think most of that is best summarized in some of the quarterly and annual reports.

MR. MUDD: Okay and is there a reporting requirement in fact under this section relative to this quarterly and annual reports?

MR. LEFFNER: I believe so, yeah.

MR. MUDD: Okay. Let's go onto sixteen, paragraph

sixteen. This is information management program. What, what's required under this section?

MR. LEFFNER: It's the development of a, essentially, a GIS system that has for, and I'd say it really supports a lot of the O&M, but it can also be tied to the future improvements that are being done to, I'd say, information tracking and gathering. So, coming up with a, a better, the better developed GIS system than what the County had. And I think there were specific requirements in the Consent Decree on what the GIS program should be able to do.

MR. MUDD: And are you aware of whether this has been implemented?

MR. LEFFNER: I believe so, or it is currently being implemented.

MR. MUDD: Okay. Paragraph seventeen is emergency response plan. Can you describe what this is re, what re, what, what the Consent Decree requires here?

MR. LEFFNER: Yeah, it, like the first sentence says, is develop and implement an emergency response plan, which is kind of related to any discharges, reported breaks, failures or improvements needed within the, the sewer system.

MR. MUDD: And are you aware if the County has this system in place?

MR. LEFFNER: I believe so.

MR. MUDD: Okay. Do you know how it's operated at

all?

MR. LEFFNER: I don't know all of the ins and outs on the emergency response plan. But I do know from meetings with the County that they're, like going back to the level censor models that are located in some of the manholes, is, I believe they get, they get notifications.

So, whether it's on a cell phone or on a technician's computer, that if, they're essentially, able to use, it's called SCATA (phonetic) equipment, which is like telecommunications to monitor pump station locations, level censors within manholes and so that way they can kind of, I'd say, identify but then also predict when there might be an issue at a location and they can have staff respond to it and deal with it accordingly.

MR. MUDD: Okay and then paragraph eighteen. What is required under this paragraph?

MR. LEFFNER: That's kind of the, the recordkeeping and re, reporting for building backups --

MR. MUDD: Okay and, and where does the reporting have to go, do you know?

MR. LEFFNER: I think it has to be included in the quarterly and annual reports, but there's a lot of backup data also included in the, the RJN report and I believe the SRR report as well.

MR. MUDD: Okay. So, you mentioned reporting quite a

bit. Paragraph nineteen, this deals with the quarterly reports, is that, is that what you're referring to when you're talking about quarterly reports under the Consent Decree?

MR. LEFFNER: The requirement for them, yes.

MR. MUDD: Okay and then, paragraph twenty, you mentioned annual, annual reports. Is this the paragraph that you were referring to there?

MR. LEFFNER: Correct.

MR. MUDD: Okay and the, they, they definitely speak for themselves. But can you just briefly describe what an, and let me ask you this. Have you reviewed quarterly and annual reports for this sewer shed?

MR. LEFFNER: Yes.

MR. MUDD: Okay and based on that review and your review of this Consent Decree, just generally speaking, what, what's the purpose for those reports? What do they, what do they contain?

MR. LEFFNER: I'd say a synopsis or summary of each of the required kind of updates. So, depending on the sewer shed, any CIP, or construction projects that are either under design, under construction, they would report any SSOs within the sewer shed. If there's any delays associated with something that's reported in the, in the quarterly or annual report. So, it's very much a comprehensive progress update related to each of the sewer sheds.

MR. MUDD: Okay.

ALJ: So, Mr. Mudd, I was just going to, if you had a, a pause to --

MR. MUDD: Yep.

ALJ: -- (inaudible) break.

MR. MUDD: Sure.

ALJ: (inaudible) and so I, you know, was thinking, I mean, I don't know how much, you're going to be a while, I think. So, maybe after, after we come back, that you finish direct and then take a lunch break. Does that work or --

MR. MUDD: Yes, that works for me.

ALJ: Okay. So, you would be able --

MR. MUDD: I, I am through the bulk of my questions. I'm sure I probably have another twenty or twenty-five minutes or so when we get back.

ALJ: Well, that, that's fine. I wasn't trying to rush you, you know, I just was, just trying to give everyone a break. I think it's 12:11, so let's just take, let's just take, you know, maybe a, fifteen minutes, how's that sound? We'll come back at 12:30.

MR. MUDD: Okay.

ALJ: Okay, thank you. I'll pause the record.

MR. MUDD: Sounds good, thank you.

(PAUSE)

ALJ: All right. We're back on the record. We're

still in the Developer's direct. Mr. Mudd?

MR. MUDD: I'm here. I'm waiting for Mr. Leffner to pop back on the camera.

ALJ: Oh, sure.

MR. MUDD: There you are. Can you hear me, Mr. Leffner? All right. So, we, we, we finished off before talking about quarterly reports and annual reports required under the Consent Decree. Have you reviewed quarterly reports and annual reports for the Jones Falls sewer shed?

MR. LEFFNER: I have.

MR. MUDD: Okay. I'm going to share with you Petitioner's Exhibit, or Developer's Exhibit, oh, sorry, forty-eight. And I just want to ask you and, and, Judge, I might proffer this if you don't mind, just to save time.

But Exhibit 48, 49, 50, 51, 52, 53 and 54 are all a mix of quarterly reports and annual reports. And they're, they're County documents from the website. I do not intend to go through them in great detail and I would offer all of them as being County records and ask for them to be admitted.

ALJ: Mr. McCann, do you have any objection?

MR. MCCANN: No, I do not. The only qualification I would add is that with respect to a couple, a couple of them, they are not signed, which is, there's a signature line but they're not signed. And I think those are, one particular, forty-nine and fifty. I just did a quick check.

MR. MUDD: Okay.

MR. MCCANN: Which, whatever that means, it means. But so, I would have a problem with those coming in. And then the other thing is is I'm sure you understand this, Judge, but these aren't specific to the Jones Falls.

But they are, obviously, a public document, they obviously are on the County's website. So, I would have to object to forty-nine and fifty. But not the others, as long as they have signatures, and I think that they are, I just haven't been through all of them.

ALJ: Okay. So, Mr. Mudd, these were just printed off the website so, --

MR. MUDD: That's right.

ALJ: -- (inaudible) with the signatures?

MR. MUDD: It's what's available on the website. So, --

ALJ: Yeah.

MR. MUDD: -- if you go onto the website and follow the, where, where, the same location where the Consent Decree is, --

ALJ: Yeah.

MR. MUDD: -- quarterly reports exist there.

ALJ: Okay.

MR. MUDD: And they were printed directly from the website.

ALJ: Right, (inaudible) seal on it, okay. So, the, the, sorry, Mr. Zimmerman, I hear you.

MR. ZIMMERMAN: Yeah, I accept Mr. Mudd's representation they're on the website. So, I don't object. But can we get the dates? Can, can he just give us the dates.

MR. MUDD: Yeah, I, I'll do that, I'll march through. I just didn't, I didn't think it was efficient time to spend with this witness identifying each. So, Exhibit 48 is quarterly report, all, all four quarterly reports for calendar year 2019. Exhibit 49 is the annual report for calendar year 2019.

Exhibit 50 are all four quarterly reports for 2020. Exhibit 51 is the annual report for 2020. Exhibit 52 are all four quarterly reports for 2021. Exhibit 53 is the annual report for 2021. And Exhibit 54 are three quarterly reports for, the three that are available, for 2022. And I'd move all those.

ALJ: Okay. We'll accept them. I mean, I hear you with the signatures. This is what's available on the County website, even Mr. Zimmerman verified that. So, it is, these are and what the County put up there. Why the County put up their documents that weren't signed, I'm not sure.

But maybe it was just an oversight on the County's part. But I think we all know what, what these are and certainly any questions about, you know, their relevance get,

or, or in terms of the, the project here and how they relate to the project, you guys can all handle that on cross.

MR. MUDD: Thanks.

ALJ: So, we'll admit fif, forty-nine through fifty-four.

MR. MUDD: Forty-eight through fifty-four.

ALJ: Forty-eight, whoops, forty-eight to fifty-four, got it. Thank you.

MR. MUDD: Thank you. Sure. And Mr. Leffner, back to you. So, are these, these reports that we've just went through, you've reviewed each of these?

MR. LEFFNER: I have.

MR. MUDD: Okay. Is there anything, I know we're not going to go through them in detail, but is there anything that you would specifically like to point out to the ALJ with regard to these reports?

MR. LEFFNER: I think in a lot of the reports, there, there are specific references to the Jones Falls sewer shed, one. So, it's not just the County wide updated is sewer shed specific. That's why it was worth reading all of them.

There's also discussions on the County's progress in meeting all the requirements of the Consent Decree. So, each of those Consent Decree outlined items are included in the, the quarterly and annual reports.

There are some areas where things haven't been

completed. So, there's a lot of good, kind of updates, through the course of the quarterly report saying, you know, X number of improvements have been done out of Y number. And that number continues to go down throughout the course of the quarterly reports for the Jones Falls sewer shed.

There are some areas where improvements haven't been completed and in pretty much every instance, there's, you know, a schedule delay, coordination with the City or some kind of justification provided for why it's not done.

In it, you know, they report the majority of the work has all been done or, you know, they're continuing to make progress to complete all the work within the Jones Falls sewer shed or the SRR plan.

So, it's a great, I think, representation of, aside from the reports, which are a snapshot at the time, I think this shows over the course of the last three years all the progress that the County has made in completing all the requirements for the Consent Decree.

And I think the one thing that really stands out in it, is that there hasn't been a single, non-structural sanitary sewer overflow reported in the Jones Falls sewer shed. So, even if there's model predicted overflows in some of the analysis that had been done, the computer system, while the County is validating it, that, you know, there, there wasn't a single overflow reported for a non-structured SSO in the Jones

Falls sewer shed in the quarterly or annual reports.

MR. MUDD: Okay. Has there been a structural SSO reported in the, in the report, in the annual reports?

MR. LEFFNER: There are, yeah. There, there are structural SSOs, again, the main one being Marnat Road.

MR. MUDD: Okay and after reviewing all the material we've discussed today, the Consent Decree, the long-term capacity report, the SRRR plan, the RJN report and the quarterly and annual reports, do you have an opinion about the work that the County has performed to date in response to the Consent Decree?

MR. LEFFNER: There's a lot of it that's been done, one. And then I also think, you know, with the reporting of having no overflows, I think that the, you know, it's kind of showing the main purpose of the Consent Decree as, as being met.

The, within the Jones Falls sewer shed, if there hasn't been a single reported non-structural SSO and then with the understanding that the Consent Decree would remain open because of the one constructed SSO on Marnat Road until they can get coordinated with the County to close that one out. That, they're, they're meeting the, the overall purpose of the Consent Decree, which is to prevent sanitary sewer overflows within the sewer shed.

MR. MUDD: Okay. What about, what about the models

that have predicted SSOs in the future? What do you, what do you make of those? Let's start with the RJN model.

MR. LEFFNER: Yeah, I mean, there, the RJN model that has model predicted overflows, one, with regard to the rainfall monitoring and, and rainfall that's included as an inflow and infiltration into the model. The large storm events that they report.

If you look at, I believe it was the RJN report has actual measured rainfall data for a few of the years that was included in the report. I think the long-term capacity does as well. That the, the storms that are happening, that were measured within the County, are far below the amount associated with some of the larger storm events, specifically, the, the twenty year that was required by the Consent Decree.

So, I think, you know, the rainfall data, just what's being measured versus being modeled, there's, you know, I'd say discrepancies in the rainfalls actually, you know, what's being modeled is on the conservative end.

For some of the other reports regarding flow monitoring and actual manhole structures that come up with the amount of infiltration, that's still being verified by the County. And I think that's represented by the additional flow monitoring stations and level censors that they put in to, to structures.

And then I think, you know, specific to the RJN

report is the, the model predicted overflows within some of the sewer locations. Some of them being in the same area as the County's level censors, which would, you know, essentially, read or flag that there's been an overflow.

And then in turn, you know, reading the available reports that, that, that there hasn't been a single overflow within that period that, you know, the model predicted. It may be overly conservative, which is represented, I think, in the reports as well.

MR. MUDD: Okay. Do you have an opinion as to whether the addition of sixty-one units to this area would increase the risk for any SSOs in the future?

MR. LEFFNER: No. The, the amount of flow associated with the sixty-one homes is, is very minimal compared to the flows that are in the existing system.

MR. MUDD: Okay. Aside from reviewing these materials and all the exhibits and everything that have been submitted in this case, have you done anything else to verify the system capacity for the sixty-one units?

MR. LEFFNER: Let me, I think beyond submitting a capacity request letter to DPW at the beginning of the project was, I would say the main piece that we did outside of our office engaging others.

MR. MUDD: Okay. Let me show you Exhibit 55. Can you explain what this is?

MR. LEFFNER: Yeah. I'd say what's on the screen now is the County's response that our team received from the County after receiving the request to propose, at the time it was sixty-two new homes within the subdivision on the subject property.

MR. MUDD: Okay and I guess, and I'm sorry, the, the date, the date of this, this was August of 2020. So, when would this have been in the, in the snapshot of time here with this case? When would you have done this?

MR. LEFFNER: At the beginning.

MR. MUDD: Okay and have you learned any information since receiving this e-mail that you're aware of, that changes the County's conclusion in this e-mail? In other words, have you heard anything different from the County beyond this e-mail?

MR. LEFFNER: Not necess, like I would say, nothing different in the sense of capacity issues that need to be resolved limited to that list. We have, you know, taken the pro-active approach of designing the improvements associated with that and, essentially, having, having plans approved by the County for upsizing of the two sections of sewer line that need to be upsized to support the development.

MR. MUDD: Okay, great. Do you, do you recall Mr. Grachek's testimony about the County, County's static model used for evaluating sewer capacity?

MR. LEFFNER: I do.

MR. MUDD: Okay and do you agree with his assessment that County only runs a dry weather analysis?

MR. LEFFNER: I don't.

MR. MUDD: Okay. Let me show you Protestant's Exhibit 64. Can you see that?

MR. LEFFNER: yes.

MR. MUDD: Sorry, let me rotate it. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: And what, what is it?

MR. LEFFNER: It, I, the Protestant's exhibit I think that was presented, essentially, as the, the model output from the County for this project.

MR. MUDD: Okay and do you recall, do you recall Mr. Grachek's testimony about what flow, sorry, dry flow versus wet flow? Or dry weather versus wet weather analysis?

MR. LEFFNER: Yes.

MR. MUDD: And what, what is your understanding of what he was, his opinion was?

MR. LEFFNER: That this, this capacity analysis and projected flow only included, essentially, like domestic and non-domestic sewage, with no infiltration or inflow accounted for.

MR. MUDD: Okay and do you agree with that?

MR. LEFFNER: I don't.

MR. MUDD: And why not?

MR. LEFFNER: There's a column that's one, two, three, four, nine over from the left on the bottom that says infill with MGD below it.

MR. MUDD: Uh huh. Here?

MR. LEFFNER: Yeah, which then confirmation with the County, it's infiltration and inflow. And rather than separating those two kind of different types of inflow into the system it's all represented in a single column.

MR. MUDD: Okay.

MR. LEFFNER: So, that's (inaudible) discussions with Baltimore County, that column is meant to represent other flows beyond the domestic flows into the sewer system, which account for the infiltration and inflow from wet weather.

MR. MUDD: Okay. Let's move on to Protestant's Exhibit 75. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Okay and what, what, just what is this, what is this meant to show from your ex, your understanding?

MR. LEFFNER: The sampling locations along Lake Roland where they're doing ongoing water sampling for specifically E.coli and bacteria.

MR. MUDD: Okay and is there anything in this report that surprised you?

MR. LEFFNER: I don't remember the entire report. I think there was one, I think there was a lot of I recall being variability between the, the monitoring. And just like levels that were measured. And likewise, could you keep scrolling down?

MR. MUDD: Sure.

MR. LEFFNER: Yeah, just looking at the different data sources.

MR. MUDD: Okay. What, is, is there anything about E.coli in, in the water body at all? What's, what's your opinion about whether the, the E.coli, the fact that there are E.coli readings here at all?

MR. LEFFNER: Yeah, I, I think the variability is one. I think the screen that you have there is great. It shows just in the span of twenty days how drastic the measurements are. I think that what the, and I don't know that of all thirty sheets, but assuming (inaudible) just for longer duration, it doesn't identify the source of E.coli, just more so that it exists within the water sample.

MR. MUDD: Okay and how many, how many testing locations are depicted on this exhibit?

MR. LEFFNER: Five.

MR. MUDD: All right. I'm going to show you Protestant's Exhibit 56, I'm sorry, Developer's Exhibit 56. Do you recognize this?

MR. LEFFNER: I do.

MR. MUDD: And what is this?

MR. LEFFNER: Those are the sample locations that I think are from the County's website.

MR. MUDD: Okay and how many locations are shown here?

MR. LEFFNER: There's kind of four red dots, but there's five sample locations because location three and four are both within the dog park.

MR. MUDD: Okay and what is your understanding with regard to these locations and the Developer, the Protestant's Exhibit 75 that we were just looking at?

MR. LEFFNER: Each of these is where those water quality samples are being taken at.

MR. MUDD: Okay. All right. Is Lake Roland the only place in Baltimore County where this type of testing occurs?

MR. LEFFNER: No, no, they're taken throughout the County.

MR. MUDD: Okay. I'm going to show you, I'm going to move Exhibit 56.

ALJ: Mr. McCann?

MR. MCCANN: No, no objection.

ALJ: And what about fifty-five?

MR. MUDD: Oh, I'm sorry, I thought I moved that.

MR. MCCANN: Fifty-five was the water sampling

results or was that something different --

ALJ: Fifty-five was the other one, it was the e-mail, the two e-mails from (inaudible) with the sewer.

MR. MCCANN: Oh, no, no, no, I'm sorry. No problem with that as well.

ALJ: Okay, fifty-five and fifty-six. And Mr. Zimmerman, any objection?

MR. ZIMMERMAN: Yeah, no objection to the --

ALJ: Okay, thank you.

MR. MUDD: Thank you. All right. And I'll show you fifty-seven. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Okay and what is this meant to show?

MR. LEFFNER: It's the water sampling, I think it's from the County's website where water sampling locations are.

MR. MUDD: Okay. I'll scroll all the way down to the bottom, that map show up, do you see that?

MR. LEFFNER: Yeah.

MR. MUDD: What does this map show?

MR. LEFFNER: That's just one map that identifies even more water sampling locations on the coastal areas of Baltimore County within, primarily within recreational waterway areas.

MR. MUDD: Okay and what is your understanding of anything you've reviewed about, on the County website, about

why water testing occurs at these locations? And I'm sorry, these locations meaning the ones we see here and Lake Roland?

MR. LEFFNER: Yeah, I think the, Lake Roland, these locations and others in the County, the reason that the water quality samples are being taken is, is as they are potential recreational waterways, to identify any issues, bacterial or other, that additional notification or prevention of people coming in contact with the waterway should be implemented.

MR. MUDD: Okay. Did you hear Mr. Grachek's opinion about what was causing the E.coli readings in Lake Roland?

MR. LEFFNER: Yes.

MR. MUDD: What's your understanding of his opinion?

MR. LEFFNER: I think he said that the majority of the reason was because of sewer overflows and acknowledged that agriculture, I think he specifically referenced feeding, I don't know if it was some kind of cattle, or some type of feeding use of agricultural land could also be a main contributor. As well as septic systems potentially, but it was, it was maybe less likely that septic systems could contribute to the bacterial growth in the waterways.

MR. MUDD: Okay and did you hear Mr. Summers' opinion about septic systems?

MR. LEFFNER: I did.

MR. MUDD: What was his opinion from your, your recollection?

MR. LEFFNER: I think he, he too said that septic systems have issues. I think he was primarily focused on like nitrogen phosphorus loading in waterways with protection of the Bay. And that there's kind of a, a duality to whether septic is best treated in a centralized facility with public collection systems or locally with septic tanks.

MR. MUDD: Okay and what, what, do you agree with their opinions about the E.coli, the cause of E.coli in the Lake Roland watershed?

MR. LEFFNER: I, I agree that there's multiple sources that it could come from. But I also think that there was no where near as much of an understanding of the amount of potential agricultural, septic, wildlife, urban land use within the watershed.

It's pretty, it's a pretty unique, I'd say watershed, as it is sewer shed. In addition to the potential for sanitary sewer overflows. Having reviewed the quarterly reports saying there have not been any for, you know, since 2019, you know, I think they may not have looked at all of the other sources that could contribute to it.

MR. MUDD: Okay. I'm going to show you Exhibit 58. Do you know what this, this document shows?

MR. LEFFNER: I do. That's the, the overall Jones Falls watershed.

MR. MUDD: Okay, I'm sorry --

MR. LEFFNER: (inaudible) --

MR. MUDD: Okay. This, so this is the watershed and not just the sewer shed?

MR. LEFFNER: Correct.

MR. MUDD: Okay. I should move, I'll move fifty-seven and fifty-eight at this time.

ALJ: Mr. McCann, any objection?

MR. MCCANN: Fifty, fifty-seven being the location of other testing sites?

MR. MUDD: Yes, this is fifty-seven.

ALJ: (inaudible).

MR. MCCANN: Yeah, I, I'm not sure what the relevance of that is. So what if there's a lot of sites? That just means that there's a lot of recreational waters all over the, you know, all over this area. Without the test results, I guess is my point, Your Honor, just, there's been no testimony about what the test results are. So, what's the relevance of that?

ALJ: Yeah, un, understood. You can cross examine him on that. I'm, you know, for, for what it's worth, we'll, we'll put in, I, I, well, let me ask Mr. Zimmerman any objection?

MR. ZIMMERMAN: We'll let it go for what it's worth, but.

ALJ: Okay. Fifty-six and fifty-seven and I think

you just said fifty-eight, didn't you, Mr. Mudd?

MR. MUDD: I offered fifty-eight.

MR. MCCANN: No objection.

ALJ: And fifty-eight, yeah, fifty-six through fifty-eight. Thank you.

MR. MUDD: Thank you. I'm going to show you Exhibit 59. Do you recognize this document, Mr. Leffner?

MR. LEFFNER: I do.

MR. MUDD: Okay and then, while we're at it, I'll show you, whoops, I'll show you fifty, we'll stick with fifty-nine, sorry about that. So, so, how, how big, how large is the Jones Falls watershed?

MR. LEFFNER: Acreage, I don't, I don't recall off the top of my head.

MR. MUDD: Okay. Do you know how much of the area is served by public sewer versus, versus well and septic?

MR. LEFFNER: I don't know the exact acreage or percentage, but I'd say half, probably half to a third of the watershed is served by the sewer shed. However, portions of the sewer shed within the watershed are not served by public sewer.

MR. MUDD: Okay and do you know where, do you know how many, how many septic systems exist within the entire watershed, by any chance?

MR. LEFFNER: Thousands.

MR. MUDD: Okay.

MR. LEFFNER: I forget the exact number offhand, yeah, it's in the, it was in one of the reports.

MR. MUDD: Okay. If you don't know, that's fine.

MR. LEFFNER: I want to say it was like sixty thousand or something. It's, you know, tens of thousands.

MR. MUDD: Okay and does the, let's go back to fifty-eight. What's the, what's the difference here between the hatched area on fifty-eight and the, the other areas that are not hatched?

MR. LEFFNER: The hatched area represents areas within the watershed that are outside of the, the URDL, the urban --

MR. MUDD: Okay. Urban demarcation line?

MR. LEFFNER: Yeah, that, that would represent the area that's outside of the, the sewer shed that I referenced earlier.

MR. MUDD: Okay and are areas that are outside the URDL served by public water and sewer?

MR. LEFFNER: They're not.

MR. MUDD: Okay and are there, are those then served by well and septic?

MR. LEFFNER: Correct.

MR. MUDD: Okay and did you investigate whether there are also areas inside the URDL that are served by well and

septic or, or at least septic?

MR. LEFFNER: Yes.

MR. MUDD: All right. I'm going to show you Developer's Exhibit 60. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Okay and, and what is this?

MR. LEFFNER: That's a map that is, you know, it's zoomed in a little bit, but just around the Lake Roland area, so within the Jones Falls watershed and the Jones Falls sewer shed that represents the number of septic lots that are served by onsite septic systems in lieu of public sewer, within kind of just that area focused around Lake Roland.

MR. MUDD: Okay and where did you get this map?

MR. LEFFNER: From Baltimore County.

MR. MUDD: And who in particular?

MR. LEFFNER: Mr. Kopnick.

MR. MUDD: Okay and does this, does this show how many septic systems exist in this area?

MR. LEFFNER: Approximately, yeah.

MR. MUDD: And what's that number?

MR. LEFFNER: About six hundred and thirty-five homes or lots.

MR. MUDD: On, on this exhibit, what color dots mean what?

MR. LEFFNER: On this, the blue dots are public sewer

service, and the orange dots are septic lots.

MR. MUDD: Okay. Do you know why there are so many septic systems that remain in this area that can be served by public sewer?

MR. LEFFNER: There could be a lot of reasons.

MR. MUDD: Okay. Do, do you have any, if, if you don't know, that's fine. But what, what would be your, why would you think there are septic systems still here?

MR. MCCANN: Objection. Speculation, Your Honor.

ALJ: Overruled. Go ahead.

MR. LEFFNER: So, there's a variety of different issues. I think one is availability of public sewer when the lots were developed. So, you know, if they were old lots with old homes, which a lot of this area is, public sewer may not have been available. And, you know, the house may have always been on a septic system.

Likewise, if the cost to connect to the public sewer system, whether it be because of a main extension to support a home, which just a homeowner couldn't burden, or rates. I know a lot of times with development and coordinating with the public that, you know, being charged water and sewer rates by a jurisdiction as opposed to not to have a, a privately owned and operated, you know, well and septic system.

Likewise, topography, I think is another one where, you know, main extensions via the gravity main system, which

serves most of this sewer shed area just may not be feasible. The topography really falls down along the, the waterways. So, Lake Roland, Roland Run, the Jones, upper branch of the Jones Falls, even Towson Run.

So, just from a gravity flow perspective, a house may not be able to connect easily to where they would need some kind of pumping station or low-pressure force main to connect to the public sewer system.

MR. MUDD: So, in, with regard to that last point, are the, what, what is the elevation? Are the homes above or below the lake when you say that?

MR. LEFFNER: Well, the homes are above the lake, but I think along a lot of the roads, you know, being familiar with the area, a lot of these homes follow high spots or ridges along roads and the homes are set back, you know, obviously above the waterways and the stream. But the whole area drains down to Lake, Lake Roland.

MR. MUDD: Okay. Do you know whether the County monitors these septic systems?

MR. LEFFNER: I don't believe they do.

MR. MUDD: Okay. You described the topography. From a sewerage design standpoint, as a professional engineer, what, what do you think the preferred method of handling sewerage from an environmental and ecological perspective is?

MR. LEFFNER: I too can see the duality in the types

of practices. I think from an urbanization and densification standpoint, centralized sewers are, you know, usually a little more conducive to the more populated area, just because of the, the room available and the maintenance associated with that many septic systems that's burdened by an individual as opposed to having public sewer systems.

So, I'd say in this area specifically, you know, the, the, having a public sewer system that is centrally managed by, you know, an entity is probably better.

MR. MUDD: Okay. I'll move Exhibit 60 into evidence.

MR. MCCANN: No objection.

ALJ: Any objection, Mr. McCann?

MR. MCCANN: Nope.

ALJ: Nope. And Mr. Zimmerman? Mr. Zimmerman?

MR. ZIMMERMAN: No objection. Sorry, I was muted, sorry.

ALJ: Okay, thank you.

MR. MUDD: I'm going to show you Exhibit 61. Do you recognize this, this document?

MR. LEFFNER: I do.

MR. MUDD: What is this?

MR. LEFFNER: It's an aerial view with in red a copy of the Jones Falls watershed. In blue is, kind of starting at the bottom right corner, Lake Roland and then some of the waterways are highlighted in kind of a darker blue area, some

of the other areas are highlighted in a lighter blue. It's kind of difficult to see those heading off to the, kind of the eastern side of the, the watershed, which would include like Towson Run. In green are all the properties that are identified as agricultural land uses through Baltimore County My Neighborhood.

MR. MUDD: Okay and who prepared this?

MR. LEFFNER: I did.

MR. MUDD: Okay and if you know, do you know approximately how many acres of farmland exist within the watershed?

MR. LEFFNER: Not off the top of my head I don't.

MR. MUDD: Okay. So, why did you prepare this document?

MR. LEFFNER: Being familiar with the area and seeing the number, you know, A, hearing Mr. Grachek's testimony that agricultural land uses, especially if they're livestock or feeding, could contribute to bacteria, being familiar with the area, knowing that there are properties that are, either have or propose to have livestock on them, horse farming is very familiar in a lot of these agricultural areas. And just the amount of agricultural area within the watershed that could be contributing to the, the, the bacteria within the waterways.

MR. MUDD: Okay. I'll move this exhibit into evidence.

ALJ: Mr. McCann?

MR. MCCANN: No objection, thank you.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MUDD: So, with all this additional information that you've put together regarding the septic systems and the, the, the agricultural uses and then, you know, drawing on everything else you've read and the testimony you've heard, what, what is your overall opinion about the E.coli readings at Lake Roland?

MR. ZIMMERMAN: Objection. I don't, I don't see where he, his expertise extends to parsing or breaking down how much is contributed by each item.

ALJ: You can cross examine him on that, so overruled.

MR. LEFFNER: Can you repeat the question, Chris?

MR. MUDD: Sure. Just, based on everything that you've read, prepared, evaluated regarding potential E.coli sources, what is your, in this, in this sewer shed and watershed, what is your opinion about the E.coli readings in Lake Roland that were presented in Protestant's Exhibit 75?

MR. LEFFNER: The, I think the sources are varied and as reported in, I think, even some of the exhibits that we didn't review today, as far as the TMDL exhibits that were

entered in by the Protestants at that time, where there's differentiation between wildlife, urban areas, agricultural uses. All of those exist within this watershed.

Likely if there are human sources saying that they're from sanitary sewer overflows, seeing the, the large majority of the watershed flowing into Lake Roland is actually not even on the public sewer system, it's on a private septic system.

That there is a huge number of properties within the overall watershed that are on private well and septic, which also discussing with the County, they're, they're not necessarily regulated or managed. It's just kind of on the local homeowner to, to repair and maintain them. So, just the number of sources are great as far as where, what could be contributing to the bacteria within the, the waterway.

And then on top of that, you know, reading, knowing that the County has gone through measures of adding more monitoring stations within the watershed, closing constructed sanitary sewer overflows and that they've been monitoring the sewer shed for the last, at least three years, and they haven't reported a single non-structural sanitary sewer overflow within the watershed, you know, I, I don't know how you could say that, that the source of the bacteria is just from sanitary sewer overflows.

There hasn't been a, a, there hasn't been a reported sanitary sewer overflow within the watershed in the last three

years. And the number of sources are, you know, pretty vast through the rest of the watershed that contributes down to Lake Roland, that's outside of the, you know, this project area and even the, the URDL itself.

MR. MUDD: Okay. I'm going to show you Exhibit 62. Do you recognize this document?

MR. LEFFNER: I do.

MR. MUDD: Sorry it's in a weird format. What is this meant to show?

MR. LEFFNER: I think this is from the, likewise, the County website regarding recreational waterways and warnings for potential alerts or advisories for not coming in contact, you know, washing your hands and kind of staying safe if there's a potential for impacted waterways.

MR. MUDD: Okay and does report any, any advisories currently in effect?

MR. LEFFNER: No.

MR. MUDD: And the date of this, and there's a date here that it was prepared, correct?

MR. LEFFNER: Yep.

MR. MUDD: As of May 26th?

MR. LEFFNER: Yeah, a couple days ago.

MR. MUDD: Okay. I'll move this into evidence as well.

ALJ: Mr. McCann?

MR. MCCANN: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MUDD: Do you recall seeing the stream sense sign photographs presented by the Protestants, I think it was Protestant's Exhibit 76?

MR. LEFFNER: I do.

MR. MUDD: Okay. You're, you're familiar with those signs?

MR. LEFFNER: Yeah.

MR. MUDD: Okay. Do you know if this is the only location where these signs are located in, in Baltimore County?

MR. LEFFNER: It, it's, it's not. There's more beyond Lake Roland.

MR. MUDD: Okay. I'm going to show you Exhibit 63. Do you recognize this document?

MR. LEFFNER: I do.

MR. ZIMMERMAN: Yeah, I'm going to object. I don't, I don't see what other places have to do with, with what we're dealing with here.

ALJ: Okay. I'm going to just overrule it for now and we'll just see where it goes.

MR. MUDD: Where did you get, where did this come from?

MR. LEFFNER: That's also on the County's website.

MR. MUDD: Okay and what's it meant, I'm sorry, I forget whether you answered this, but what's it meant to show?

MR. LEFFNER: Locations of where the stream signs, stream sense signs kind of warning or limiting contact with recreational waters are posted in the County. And I would, you know, I do assume too it's not an all-encompassing list just because, you know, Lake Roland is not listed on there.

MR. MUDD: Okay. I'll move this in evidence as well.

MR. MCCANN: No objection.

ALJ: Mr. Zimmerman, you still object? Mr. Zimmerman, do you still object?

MR. ZIMMERMAN: I was muted again, sorry. Yeah, I, I see no value in this but I'm sure you'll give it what weight you think it's worth.

ALJ: I think the, the, what they identified was that Lake Roland was not listed. I think it's --

MR. ZIMMERMAN: Yeah, well, --

ALJ: -- it's not there.

MR. ZIMMERMAN: -- obviously it's a mistake. It, it's there, you know.

ALJ: Well, all right. Well, that could be your fodder for cross. Mr., Mr. McCann, any objection?

MR. MCCANN: No objection.

ALJ: Thank you.

MR. MUDD: Thank you, both. Did you review the reports from Hazen as well as the Ramble report, which Protestants submitted, which were Exhibits 85, 86 and 87?

MR. LEFFNER: I did.

MR. MUDD: And in light, did, did you investigate anything relative to those reports as well or did you just review them?

MR. LEFFNER: I reviewed them and also discussed them with Baltimore County staff.

MR. MUDD: Okay and in light of your investigations and evaluations, what's your opinion about what those reports show?

MR. ZIMMERMAN: Objection again. It's hearsay conversations with County staff. Let's get the County staff in here to explain what's going on if, if we, if we're going to get into this.

ALJ: Understand. So, but he's entitled to his opinion, so let's hear what his opinion is in regard to his review of the Hazen and Ramble report so overruled.

MR. MCCANN: Well, Your Honor, I think the question was beyond that. It was not just what he, what his opinion is with respect to the reports, it's what his opinion was based on apparent conversations he's had with County staff.

And it's one thing if, if the County staff put their comments in an e-mail like some of the e-mails we've seen, you

know, the e-mails that have the manhole numbers, etcetera. But here we have no idea what County staff actually said and under these circumstances I don't think he should be allowed to rely upon hearsay.

ALJ: So, he hasn't given us any information about what the County staff has said, only what his understanding of, of, of his discussion --

MR. MCCANN: No, --

ALJ: -- so, --

MR. MCCANN: -- no, the questions was, Mr. Mudd asked the question, did you, or Mr., rather, Mr. Leffner said that he had conversations with County folks. And then the next question is, what's your understanding of what these reports mean. I mean, obviously, that question is directed to hearsay and the information he obtained from County staff, you know, who we can't cross examination in this case, that's classic --

ALJ: Yes.

MR. MCCANN: -- it's a classic problem with hearsay.

MR. MUDD: I, I'll, I'll instruct the witness, I, I don't want him to say what he was told. I want him to understand or say, give what his opinion is based on everything he's done, which includes conversations.

MR. MCCANN: Well, that's, that is a false line. You can't draw that line in his head. How is he going to do that?

ALJ: Okay. Well, he, he's not going to tell us what

the County staff said because they're not here and I agree, you should be able to cross examine them on those issues. But he's entitled to his opinion, and you can cross examine him on his opinion and highlight all of that. So, we'll overrule it.

MR. ZIMMERMAN: Wow.

MR. MUDD: So, just give your opinion based on everything you've, you've done to date with regard to the review of those reports, as to what you think, or what your opinion gen, in general, is about those reports?

MR. LEFFNER: Yeah, I think in general, neither of those reports were prepared in response to a Consent Decree requirement. We went through the Consent Decree earlier that specifically outlined what the requirements were.

And I think, you know, the, the Ramble report regarding the lining of the sewer main that was not included on the SRR plan is just an example of the County being proactive. And I would just say, doing what they do, which is own, maintain, operate, repair the sewer system.

So, specific to the Ramble report, I think in reviewing it, it was clear that the County, you know, the County does further improvements beyond just what's included or required as part of the Consent Decree requirements.

For the Hazen report, kind of likewise. I think the Hazen, and there wasn't necessarily a complete report provided in the Protestant's Exhibits, but reviewing some of the scoping

documents and kind of excerpts that were pulled from it, understand that the, the Hazen report is even kind of like a further horizon study that the, the County is embarking on that's going to involve, you know, I would say analysis, future long-term planning for sewer system upgrades, considering costs and strategy, operation and maintenance kind of protocol or systems that they can implement.

So, I think the, the Hazen report too is kind of an example of the County, the County doing more with regard to the analysis and development of standard County practices beyond what just the Consent Decree requirement would be.

MR. ZIMMERMAN: Move to strike that opinion. It's entirely without foundation and totally beyond speculation. Those, those documents speak for themselves and there's no way to say that that has nothing to do with the Consent Decree, in my opinion.

ALJ: Understood. You can cross examine him, overruled. I'm not going to strike that testimony.

MR. MUDD: Did these reports give you any cause for concern, Mr. Leffner?

MR. LEFFNER: No.

MR. MUDD: Why not?

MR. LEFFNER: I think the Ramble report was, essentially, a study and improvement that the County is planning to do for relining the main under Lake Roland. It's

not necessarily any kind of capacity improvement. It's the relining of the main.

And, you know, our project is not going to have any significant impact on that. So, you know, this, the proposed development project, should, should it be approved and move forward is, again, like fractions of the amount of sewage that goes down through the Lake Roland collector. So, it would have no impact on that project.

And likewise, the Hazen study, it's more so a planning document, right? Continuing to identify analysis, capacity studies, long term planning to help influence the County's future capital spending in the County.

MR. MUDD: Okay. Judge, bear with me for one second. I just want to make sure, I think that may be all the questions that I have for this witness. Just want to verify. Okay, I think that's it. I think I have nothing further. Thank you very much, Mr. Leffner.

MR. LEFFNER: Thanks.

ALJ: Okay. So, we had sixty-three and sixty-four is not in evidence.

MR. MUDD: Oh, I'm sorry. I will, no, sixty-four was offered last time. That was a cross examination exhibit that we --

ALJ: Oh.

MR. MUDD: We had, we had already pre-marked things,

so that was, that was when, when Mr. Summers testified.

ALJ: Oh, that's right. He, that's right, he referenced him, and he testified about that, I remember that now, okay. So, we would start with Mr. McCann. Mr. McCann, do you want to take a lunch break first and then come back?

MR. MCCANN: That'd be great, yeah.

ALJ: Okay. We'll come back and what do you guys need, a half hour or, sound good?

MR. MCCANN: Can we do 2:00 (inaudible)?

ALJ: Sounds good, 2:00.

MR. MCCANN: Okay. Thank you, Judge.

ALJ: All right, thank you.

(PAUSE)

ALJ: We are back on the record after lunch and Mr. McCann was going to start his cross of Mr. Leffner.

MR. MCCANN: Thank you, Judge. Good morning, or rather good afternoon, Mr. Leffner. Can you hear me?

MR. LEFFNER: Yep, I can. How are you?

MR. MCCANN: Great, thank you. So, I'm going to jump around here a little bit, unfortunately. But, a couple, maybe preliminary things. In terms of stormwater management, am I correct, and I can show you our exhibit, that there has not been a new stormwater management concept plan submitted since the one I'm going to show you right now. This is Protestant's Exhibit 51. Do you see that?

MR. LEFFNER: I do.

MR. MCCANN: Yeah, this one is dated May 2021 and received on May 20th. Does this look to be the last report, concept stormwater management report that was submitted to the County?

MR. LEFFNER: I forget the date of the most recent report submitted to the County. I would need to look because we had, we had two or three resubmissions, one of, the latest which showing the reduction of one of the storm water facilities.

MR. MCCANN: Okay. But nothing recent, I take it, is that fair? In other words --

MR. LEFFNER: Yeah, no, nothing since this hearing has been going on.

MR. MCCANN: Yeah, okay. Your Honor, I would have, I have an e-mail here. This would, this is an e-mail exchange between myself and the stormwater management reviewer, Ella Kaplan, just confirming as of, actually, 11:24 a.m. this, today that they hadn't received anything new. The e-mail speaks for itself, but it, it sort of, it's only a couple pages. It tracks my request for the plans and what, so I would have, want to introduce that as Protestant's Exhibit 109.

ALJ: Mr. Mudd, any objection?

MR. MUDD: Other, other than being incredulous that how can it be possibly have an exhibit from today like I had

one from yesterday and no, no objection.

MR. ZIMMERMAN: Yeah, you can throw them all out if you'd like, Judge, I mean.

ALJ: I, I already let them in. See, but see what happens, Mr. Zimmerman? We have this, we have a, one that's even newer today. That's why, you know, so, okay. So, this is Exhibit 51? Is that, no, no. This is exhibit, what is --

MR. MCCANN: 109.

ALJ: -- this exhibit, Mr. McCann?

MR. MCCANN: 109.

ALJ: 109, okay. So, this was a May 31st, '23 e-mail from Ella Kaplan.

MR. MUDD: Michael, would you mind scrolling through the whole e --

MR. MCCANN: Sure, absolutely.

MR. MUDD: Thanks. I just want to see what you asked, actually. Okay.

MR. MCCANN: Okay?

MR. MUDD: Okay.

MR. MCCANN: Okay. Mr. Leffner, also, I want to ask you a question about Developer's Exhibit 55. This is the memo that you received from Ms. Eicholtz in September 2020. Do you recall this memo?

MR. LEFFNER: Yeah, the e-mail.

MR. MCCANN: Yep, yeah and at the second page in this

Exhibit 55, is, looks to be Mr. Bishop's e-mail to her asking for, or asking effect, essentially, whether there's adequate capacity for the new, for the proposed development, is that correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and this, this inquiry by Mr. Bishop in August 2020, is that, is that typical of the inquiry that you might do in connection with a proposed development plan that you were handling?

MR. LEFFNER: It is.

MR. MCCANN: Okay, all right. All right. So, let's back up. I did want to touch upon the Consent Decree a little bit, but not very much hopefully. And maybe just hit some highlights. Can, can we agree, Mr. Leffner, that the Consent Decree requires Baltimore County to conduct a long-term capacity evaluation to identify corrective actions necessary to ensure long term capacity? Is that a requirement in the Consent Decree, correct?

MR. LEFFNER: To do, yeah.

MR. MCCANN: Okay. When you say, and I'm being specific in my words because I'm quoting. I'm not going to go to the Consent Decree if you'd like, but the Consent Decree requires the County to conduct the evaluation and that evaluation is to identify corrective actions necessary to ensure long term capacity. That, that's what the Consent

Decree says, does it not?

MR. LEFFNER: Verbatim, I'm not sure, but in generality, yes.

MR. MCCANN: Okay.

MR. LEFFNER: If you're quoting it.

MR. MCCANN: Yeah, paragraph 9-C-ii for the Judge's benefit. Can we also agree that the Consent Decree then requires the County to prepare an SRR plan to identify the deficiencies in the system and then perform corrective actions necessary to address those deficiencies, is that also what the Consent Decree says?

MR. LEFFNER: I, yes, in generality, yeah.

MR. MCCANN: And then, so let me just show you, in fact, I will show you this. This is the, I'll scroll up to the top so you can see it. This is the SRR plan. Do you recognize it as such? One second. Do you recognize that as the SRR plan?

MR. LEFFNER: Yep.

MR. MCCANN: Okay. This is, for the record, is Exhibit 67. Our Exhibit 7, 67. So, I just want to go to some language in the executive summary on page ES-1. This language in particular. And I'll just read it to you.

The objective of paragraph ten of the CD was to prepare a sua, sewer shed repair, replacement and rehabilitation plan that describes the deficiencies identified

through Collection System Inspection and the Long-Term Capacity/Peak Flow Management Evaluation and recommends repair, replacement, rehabilitation or other corrective actions necessary to address those deficiencies. Did I read that correctly?

MR. LEFFNER: Yes.

MR. MCCANN: Okay. So, what happened here is the County, to comply with the Consent Decree, hired RK&K to identify corrective actions necessary to ensure long term capacity, correct? That's what RK&K did, right?

MR. LEFFNER: Correct.

MR. MCCANN: And that evaluation, as we've been talking about, is our Protestant's, for the record, our Exhibit 68. I can show it to you if you'd like. But, you need me to show it to you? Maybe I should.

MR. LEFFNER: Just which report are you referencing?

MR. MCCANN: Let me just show it to you. So, this is Protestant's Exhibit 68. Do you recognize this document as the long, what I'll call the long-term capacity report?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and would you agree with me that the corrective actions that are in this document are in the form of recommended corrective actions? That's the language of this report, correct?

MR. LEFFNER: I'm not sure if they use recommended

specifically but identify improvements for the different scenarios.

MR. MCCANN: You don't recall whether they're called recommended or not?

MR. LEFFNER: I don't know the specific word. I know that they have a recommended, like a recommendation section for each of the, each of the storm events (inaudible) --

MR. MCCANN: Well, let me scroll down and I'll ask it maybe a different way. Bear with me one second. I'm sorry. Let me get to the, almost there. Okay. So, beginning on this page, which is page nine, the long-term capacity report goes through model predicted corrective actions for each of the storm events, correct? Beginning with the two year six?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and is there, in the language of the long-term capacity report, is there any, and I can certainly go through it if you'd like, but is there any distinction between what RK&K recommends and something less? That is, that it doesn't recommend but just provides for informational purposes or as a guide or some sort of half recommendation? Would you agree with me that its recommendations are its recommendations?

MR. LEFFNER: I think the summaries are the summaries, if that's what you're asking.

MR. MCCANN: Okay. Well, let me ask it this way

then. Do you have any reason to believe that the corrective actions that RK&K identified in this long-term capacity report to ensure long term capacity, are not necessary to correct the deficiencies that were identified?

MR. MUDD: Objection as to the form of question.

ALJ: You didn't, you didn't like the question?

MR. MUDD: Well, I, I'm not sure, it's very open ended. He's talking about deficiencies, deficiencies that were identified. What's, what, what deficiencies?

ALJ: Mr. McCann, did you want to --

MR. MCCANN: Yeah, I could try to rephrase.

ALJ: Rephrase the question, please.

MR. MCCANN: Yeah. Would you agree with me that RK&K identified a deficiency, deficiencies in the system that were needed to be corrected, would you agree with that much?

MR. LEFFNER: Yes.

MR. MCCANN: And those deficiencies were, took the form of both, you know, current repairs and rehabilitation of the system, as well as deficiencies that were reflected as a result of modeling, that is future capacity problems? Both were, both are part of what was done, correct?

MR. LEFFNER: They looked at the long-term capacity with like both growth population increases and the different rainfall scenarios to identify this pot, I'd say potential corrective actions. And I, the, there could be other

corrective action alternatives too, but they're just the recommendations in the report.

MR. MCCANN: Okay. Well, any reason to believe that the recommendations of RK&K in the long-term capacity report are not necessary to address the, the deficiencies in long term capacity?

MR. MUDD: Objection. Same objection.

ALJ: Overruled.

MR. LEFFNER: I think there's a difference in what you're asking in that one, the recommendations for the different scenarios are specific to those scenarios and the data they used to prepare the long-term capacity study that wasn't verified.

So, growth population differences, there's a lot of assumptions that go into the long-term capacity model. So, they may not necessarily be required improvements to repair deficiencies. It's a long-term capacity study that's projected out years ahead of time.

MR. MCCANN: Well, that's fair, yeah. We'll actually get into that a bit. Let me ask it this way, then I'll move on. To your knowledge, did Baltimore County ever make a determination that one or more of the recommendations in the long-term capacity report were not necessary to ensure long term capacity? Did that deter, determination ever made by Baltimore County?

MR. LEFFNER: I don't --

MR. MUDD: Objection. Still an open-ended question.

ALJ: I think it's a fair question. I mean, did the County determine if any of the corrective actions were not necessary. I don't think that's, I think that's fair.

MR. MCCANN: Were you aware of any such determination?

MR. LEFFNER: I, I don't know that they said any of those recommendations were not required.

MR. MCCANN: Okay. Let's talk about the SRR plan itself. Is it your opinion, I, I, I (inaudible) is, that the SRRR plan has been fully implemented by Baltimore County? Is that your opinion?

MR. LEFFNER: It has not.

MR. MCCANN: Okay and let's, if we could, you didn't address this section of, I'm going to go to six, 6.14. Bear with me. Okay. So, this is Section 6.14 of SRR plan, which is again, Protestant's Exhibit 67. Do you recognize this provision?

MR. LEFFNER: I do.

MR. MCCANN: Okay. You didn't really speak to it, but is it your contention that this, this, in essence, is the County's corrective action recommendation plan in the SRR, SRRR plan? Is this it? Is this --

MR. LEFFNER: Yes.

MR. MCCANN: Okay and it sounds like you acknowledge that this plan, as set forth in 6.14, has not been fully implemented, correct?

MR. LEFFNER: The majority has been done, but not fully.

MR. MCCANN: Okay. Well, let's talk about each of these items. Number one, it says complete comprehensive I&I reduction rehabilitation within SSA's exhibit excessive I&I, or other areas that contribute to model predicted SSOs determined by model simulations using the ten-year, six-hour storm event. I paraphrased that a bit, but did I read that correctly?

MR. LEFFNER: Paraphrasing, yeah.

MR. MCCANN: Yeah, okay. As we sit here today, and this is since the SRR plan was issued back in 2013, we know that there are still significant areas in Baltimore County that are exhibiting excessive I&I, isn't that true?

MR. LEFFNER: There are areas in the County, yes.

MR. MCCANN: Okay. Well, let me show you and we'll get back to this plan in a moment, but this is Hazen's newsletter. Do you recognize it as such?

MR. LEFFNER: Yeah, I believe it's not marked, but I believe this was one of your exhibits.

MR. MCCANN: Yeah, this is Exhibit 85. So, and we went over this with Mr. Summers. This newsletter indicates, does it not, the areas of rain dependent I&I in the Jones Falls

sewer shed, correct?

MR. LEFFNER: Presumably. But I think the figure says that it has high R values.

MR. MCCANN: All right. But this is I&I and in Bal, in the Jones Falls according to Hazen, right?

MR. LEFFNER: The, the R values in the winter, whether there's high I&I associated with it or not.

MR. MCCANN: Right and the red, do, do you recognize the area of our site? The red is, the area of our site is in the area of significant red, which is the, the most significant R values, amongst the more significant R values in the entire sewer shed, correct?

MR. LEFFNER: I'd have to zoom in some, but the R's might be the white area right between the red.

MR. MCCANN: Okay. Assuming it is, there is, and I'll take your word for it, you may be right about that. But it's surrounding the site, certainly, or areas of excessive I&I, correct?

MR. LEFFNER: High R values.

MR. MCCANN: Well, amongst the, amongst the highest as far as this map is concerned, right?

MR. LEFFNER: For the R values, yes.

MR. MCCANN: Okay.

MR. LEFFNER: Whether that's relating to high I&I would be an assumption. There would have to be measurements

done to confirm that.

MR. MCCANN: Okay. Well, Hazen, as we know is still in the process of, of doing its work, right?

MR. LEFFNER: As I understand, yes.

MR. MCCANN: Yep. And then getting back to the language of SRR plan, it talks about complete rehab in areas that contribute to model predicted SSOs determined by model simulations. We know since this report back in 2013 that RJN and, has identified significant areas, including the areas that will be served by where, including the areas that will receive sewage from the subject property, of model predicted SSOs, correct?

MR. LEFFNER: They did.

MR. MCCANN: Okay. Specifically, map three that we've been looking at. This map right here, which is Protestant's Exhibit 78, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and we'll, we'll get to your snapshot opinion in a moment, but in addition, and sticking to item one of the SRR plan, we also know dealing with SSOs and excessive, excessive I&I, that the County's consultant Ramble, within the last year, has specifically identified numerous segments in and around Lake Roland that need to be repaired in order to address I&I and model predicted SSOs, correct?

MR. LEFFNER: I think that they, specific to Ramble,

they've identified sections of the pipe that could be repaired to control I&I. I don't know that they're, I&I is the reason for the model predicted overflows.

MR. MCCANN: Well, let's, well, I'm not sure what you just said, if it's the same thing or not. But the purpose of the rehabilitation that's proposed by Lake, in and around Lake Roland by Ramble is for the purpose of addressing I&I and model predicted SSOs. That's the express purpose of this report, is it not?

MR. LEFFNER: I don't remember if that's the specific purpose. They were relining the main.

MR. MCCANN: Yeah, well, let's look at the purpose. It says, this is on page, Section 1.1 of Protestant's Exhibit 87 of the Ramble report, it's page one. It says right here, does it not, primary focus of this project is to minimize the inflow and infiltration into the interceptors to reduce the likelihood of sanitary sewer overflows, correct?

MR. LEFFNER: Correct. That's what the lining of those mains would do.

MR. MCCANN: Okay. Well, there's a lot, you, you seem to suggest that the work that was, is being proposed by Ramble, number one, was, was somewhat minor. The, do, do, do you have an understanding of the scope of the work that's proposed by Ramble?

MR. LEFFNER: A general idea from reading the report,

yes.

MR. MCCANN: Well, here, here's a specific idea. On the very same page is, in figure one, is a project map that identifies all the sewer segments that are the subject of this report. Do you see that?

MR. LEFFNER: Yes.

MR. MCCANN: Next page discusses the extent of those repairs. Are you familiar with the details of everything that's being done? It sounds like you're not.

MR. LEFFNER: Generally familiar, yes.

MR. MCCANN: Yeah, are you, it says forty-three segments, nineteen thousand five hundred fifty linear feet of pipe. That's a lot of work, is it not?

MR. LEFFNER: That's a long run of pipe, yes.

MR. MCCANN: Several miles, right?

MR. LEFFNER: Yes.

MR. MCCANN: And then, bear with me one second. In addition to the forty-three segments, there's discussion here about repairs to manholes and junction chambers, forty-three of those. Do you see that?

MR. LEFFNER: Correct. Those would be along the runs of pipe.

MR. MCCANN: Right. And then, in terms of the existing condition, go to page four. This report says, the CCTV inspection showed twenty-four of those forty-three

segments to have active I&I, active infiltration, fourteen of which includes some level of structural defects. Do you see that?

MR. LEFFNER: I do.

MR. MCCANN: And then, of the remaining nineteen, eleven segments have structural defects. Do you see that?

MR. LEFFNER: Correct.

MR. MCCANN: Then in terms of the, the, the impact on Lake Roland, page six of this report, talks about the enormous, what I'll call enormous, you tell me if you disagree, staging that's going to be necessary to line or otherwise repair forty-three segments and forty-three junction boxes in and around Lake Roland. Do you see that, this right here?

MR. LEFFNER: Yes.

MR. MCCANN: So, to paraphrase, it says, tell me if I'm wrong, nine sites along, in and around Lake Roland, each staging area to be fifty by a hundred feet. Do you see that?

MR. MUDD: Objection, Judge. I, I know that, that there's some leeway given to walking someone through an exhibit. But I feel like here the questions are am I reading this correctly? And then we're asking to agree with paraphrasing of a document that speaks for itself. I, I think he should be asked substantive questions.

MR. MCCANN: Well, it sounds like he's not very familiar with it so, I, I'm going through it more than I

otherwise would. But --

ALJ: I'm going to overrule it. I mean, it is, it is cross, so --

MR. MCCANN: I'm not going to --

ALJ: -- and he did say in the beginning of the, of the, I think he said at the beginning of his testimony on direct that he was familiar with these reports, so.

MR. MCCANN: Okay. Just one last question about the scope. Do you recall how many private property owners the, the work will require easements from in order to do, to do this type of staging? Do you remember?

MR. LEFFNER: I don't remember the number cited in the report.

MR. MCCANN: Okay, all right. I'll move on. Back to number one. So, given, given the Hazen bulletin, given the RJN, RJN map three and given the Ramble report, can we agree that number one, item one, in 6.14 is not completed as we sit here today?

MR. LEFFNER: Yeah, I, you know, there's the, the balance of the area within the sewer shed. I'm not sure how many are outstanding. The one that I do know that is, we covered earlier in testimony that it's within the limits of the proposed development improvements. So, I --

MR. MCCANN: I'm talk, yeah, I'm talking, well, I mean, Hazen hasn't even done its work yet. So, we know based

on that fact alone, don't we, that there may be comprehensive rehabilitation to certain areas that either exhibit excessive I&I or contribute to model predicted SSO, SSOs. That, we know that may happen, right?

MR. MUDD: Objection. This is, this is an RK&K report.

MR. MCCANN: That's not the question.

ALJ: I think he then, then changed it to, it really, the question is, is number one complete and the answer was it's not complete. And then the question was, Hazen hasn't done its work yet, is that correct. And I think his answer before was, I think he acknowledged that it wasn't done. Is that right, Mr. Leffner?

MR. LEFFNER: Yeah, the Hazen report is not done.

MR. MCCANN: Okay. Yeah, I'll move on. Let's just quickly go through a couple more of these. Number two, complete select capacity improvements based on a model simulation of the ten year, six storm event. We know quite a bit, number one, what did the County mean by select? Any idea what that meant, what that term means?

MR. LEFFNER: As this is part of the SRR plan, I believe select means the locations that are identified in this plan.

MR. MCCANN: Right. Did, did the County perform any capacity improvements recommended by RK&K in its long term

capacity report? Do you know?

MR. LEFFNER: I don't know.

MR. MCCANN: Okay. Well, the, let me give you an example, I'll go with the RK&K real quick. Bear with me one second. I'll just, let's just start with the ten-year six-hour storm. Do you recall, do you recall that there's maps attached to the long-term capacity report?

MR. LEFFNER: Yes.

MR. MCCANN: Okay. So, I need to share this with you. This is Protestant's Exhibit 68. It's, it's a map attached to, at the end of the report. And this is, the first map is, amongst the first maps is a two-year twenty-four-hour storm. This map here, I'll just stop here for argument sake, ten-year six-hour event. Do you see that? Map 6.1?

MR. LEFFNER: I do.

MR. MCCANN: And these are, in red, are the sewer segments that RK&K recommended, that relief sewers be installed and/or that manholes be sealed, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and amongst those is this pink right here, I'm zooming in. There is a recommendation by RK&K in its long-term capacity report that manhole 44219 be sealed and that there be a relief sewer of some significant length installed right here, correct, where the pink is?

MR. LEFFNER: I forget if the pink is relief sewer or

just upsizing.

MR. MCCANN: That's a good question. Upsize, you're right, I'm sorry. Upsize to eighteen inches. So, RK&K recommended that this, or it looks like multiple segments, be upsized, correct?

MR. LEFFNER: As an alternative, yes, for that storm.

MR. MCCANN: Well, before I get to, to what you just said was this, was, was this work done, was manhole 44219 sealed, and was the relief sewer identified, at least on this 10/6 map, was that in, was that upsized?

MR. LEFFNER: I forget. Looking at this map, just the manhole numbers, whether they were sealed or not, because I believe that's the area that some of them were rehabilitated with that list that we shared earlier --

MR. MCCANN: (inaudible) --

MR. LEFFNER: -- County confirmed done. The upsizing of the pipe I don't believe was done.

MR. MCCANN: Okay and you think this was an alternative for the County to do or not do, this particular upsizing?

MR. LEFFNER: Yeah, I think that that's one of the, it's, I would say, the recommendation that they probably landed on to the point of upsizing a pipe versus building a relief sewer, like there could be an alternative to it related to the storm event. Same with anchoring some of the other manholes.

MR. MCCANN: I'm just asking why it's, why you call it an alternative.

MR. LEFFNER: This is for, it's a, the, the summary of recommendations within each of the storm events of the long-term capacity --

MR. MCCANN: Um hm.

MR. LEFFNER: -- report. As a long-term document, was, was their recommendations I, I would say at the time for consideration. But it, I do not believe it was meant to be an exhaustive list of potential improvements.

MR. MCCANN: Okay. Any other reason why you call it an alternative?

MR. LEFFNER: For that reason, I just said, where they said upsize of pipe versus being, having a relief sewer. I think they just identified it as being an upsize pipe.

MR. MCCANN: Okay. Number three, back to the SRR plan, correct identified structural deficiencies through, through rehabilitation or replacement. This one is easy. We, we know this has not been completed from, among other reasons, we have a report from Ramble that identifies quite a number of structural rehabilitation that is, that is to be performed, correct?

MR. LEFFNER: I think the Ramble report identifies section of pipe to be repaired. Those are not identified in this report --

MR. MCCANN: I'm not asking you that. I'm asking you, remember this SRR plan was in 2013, I'm asking as we sit here today, again, I should, maybe I should have prefaced my question. I'm asking whether or not number three has been completed, this portion of the, the plan, as we sit here today. And, and my question in that regard is simply we know it's not completed because Ramble has just proposed a whole, a whole, a whole bunch of work that's going to be done in and around Lake Roland, correct?

MR. MUDD: Objection.

ALJ: What's the objection?

MR. MUDD: I, I'm sorry, I'll withdraw the objection.

ALJ: Okay. Go ahead, sir.

MR. LEFFNER: Could you, could you repeat the question?

MR. MCCANN: Yeah, I'm just, again, I'm getting to whether or not the, three, as we can, sit here today, can we, can say that it's been done, that this part of the plan has been accomplished. And my question is, we know that it has not been accomplished because of the Ramble report, correct?

MR. LEFFNER: I would say that this section of the report identifies, correctly identifies structural deficiencies. But I interpret it as specific to this report. Not inclusive of any report that's ever done in the future. Which would include the Hazen or Ramble reports.

MR. MCCANN: Which, which would include the Hazen, you said, or not include?

MR. LEFFNER: It would not. I, I don't think that statement is made to be an all encompassing forever more recommendation. I think it's specific to correcting the identified structural deficiencies in this report, through rehabilitation and replacement.

MR. MCCANN: Well, I, okay. I, I think that's, let me ask you this. Isn't it really the, the purpose of the Consent Decree to identify problems, fix them and then reassess, do some more modeling and re, reassess? Is, is that, I know that's a simplified way of putting it, but isn't that, essentially, what the Consent Decree requires? An ongoing analysis, in other words?

MR. LEFFNER: I think the, the Consent Decree does include ongoing analysis, but for a finite amount of work.

MR. MCCANN: So, you're saying all the work that was required by number three is identified within the confines of this report?

MR. LEFFNER: It, it could be, yes.

MR. MCCANN: Could be, okay. What about number five, for instance? Confirm model simulations or revise the collection system model, if necessary. Do you see that?

MR. LEFFNER: Yes.

MR. MCCANN: We, we know, do we not, that RK&K

prepared a model but then also RJN recalibrated that model, correct?

MR. LEFFNER: RJN did the model.

MR. MCCANN: Recalibrated the model, did it not?

MR. LEFFNER: The majority of what the --

MR. MUDD: Objection. Asked and answered.

MR. MCCANN: Did it recalibrate the model? Did RJN recalibrate the model?

ALJ: Overruled, go ahead.

MR. LEFFNER: The majority of what RJN did to the RK&K model was update their model. Most of the model inputs will remain the exact same, which is summarized in the RJN report.

MR. MCCANN: How do you possibly know what portion of the model was re, was recalibrated versus updated or --

MR. MUDD: Ob, objection. Objection. He asks him for his opinion, he gives it, and now he's accusing the witness --

MR. MCCANN: No, I'm not. I'm asking him how he knows what he says.

ALJ: I think it's just a follow-up question. So, I, I don't think it is, so overruled.

MR. LEFFNER: There's a section in the RJN report that says that the model from RK&K used for the SRR was used in preparation of the RJN report. And that the updates to that

model were limited. I didn't perform the updates, so I'm not sure of the all-inclusive list. But it's, it's in the RJN report. I can't cite the exact section though.

MR. MCCANN: Okay. Well, I'll give you an opportunity to find it. And I won't belabor it now. But it's your testimony that RJN did not recalibrate the model?

MR. LEFFNER: Not the entire model, no.

MR. MCCANN: Okay. Some portion of it?

MR. LEFFNER: Yes.

MR. MCCANN: In any event, what this item five calls for is confirming the model in some respect, and then revising the collection system model if necessary. So, it's an ongoing evaluation, fair?

MR. LEFFNER: Yes.

MR. MCCANN: Okay and we also know, you didn't mention it, but we also know that in addition to RJN doing what it did with the model, we also know that Hazen, as we sit here today, is in the process of redoing the model as well, isn't that true?

MR. LEFFNER: The, yeah, they're in the process of completing a study, but the, you know, reviewing the documents regarding the scope of their effort. It's not just limited to the existing model. It's a much further planning horizon document for the County.

MR. MCCANN: Yeah, you, you called it a planning tool

and it may be that, but are you suggesting, and I'll find it for you certainly. Let me close the, are you suggesting that Hazen is not conducting a comprehensive evaluation of sewer capacity in the Jones Falls? Are you saying that?

MR. LEFFNER: No.

MR. MCCANN: It is, is it not?

MR. LEFFNER: It is.

MR. MCCANN: And it says as much in the newsletters, doesn't it? Does it not?

MR. LEFFNER: Again, quoting it, I'm not sure. But, yeah, that they're doing a comprehensive evaluation that also includes, I think it's in the documents too, that's for a much further out planning horizon as far as like projected population growth, time, as well as a planning document that I, I believe it was the newsletters or in their scope document that, again, your exhibits that you entered into the hearing. But it's used to be a tool to help the County inform future capital spending.

So, I'd say that's a planning document, not necessarily a list of, of must dos. It's to help inform long term capacity improvements within the County and to help influence maintenance, further studies that should be required, improvements, capital spending. So, it's, it's a study that I would, based on, I believe, their scope is helped, to help the County as a planning tool for overall sewer rehabilitation and

improvements in the sewer shed.

MR. MCCANN: Well, you, you, you can call it whatever you want, the County can call it whatever it wants. But my question is simply does whatever Hazen is doing included, including a, as, as the newsletter says, I'm referring right now to Exhibit 85, expanded model calibration verification with new flow monitoring data. It says that, does it not?

MR. LEFFNER: Yes.

MR. MCCANN: And I guess while we're on Hazen, on what basis do you contend, because you've made the contention, that the Hazen report, when it's finished, has nothing to do or, I forget the word they used, is unrelated to the Consent Decree? On what basis do you say that?

MR. LEFFNER: I think the, based on these memo fliers and the scope documents, essentially, everything that was entered I reviewed, it's beyond the study period of what's required by the Consent Decree. So, I, I, similar to some of the earlier testimony I gave regarding the Copper Mine and Towsontowne relief sewers that were built, those were things that the County did that were not necessarily a specific requirement contained within the Consent Decree.

I would say the same about this Hazen study. It, it's a study that the County is embarking on and having complete, but it's not, you know, I don't think it's a specific response or requirement to the Consent Decree.

MR. MCCANN: I'm asking you why do you say that? How, how come you --

MR. LEFFNER: I, I mean, one point is the planning horizon for the Hazen study is far beyond the planning and population growth horizon in the Consent Decree.

MR. MCCANN: Okay. Anything else, other than what you've already said?

MR. LEFFNER: Yeah, I mean, I think capital spending is another one that they reference in here to come up with an approach to sec, I believe they say secure funding and plan for capital spending in future years. I don't think that was a requirement of the Consent Decree.

MR. MCCANN: Okay. Anything else?

MR. LEFFNER: I'm sure there's others.

MR. MCCANN: Yeah, well, I don't disagree that some portion of the Hazen study may, may, may include things that aren't included in the Consent Decree. But would you also agree with me that there are things that, as far as we know, within the Hazen scope of proposal that is reflected in this newsletter, that are exactly what the Consent Decree calls for?

MR. LEFFNER: They, depending on, again, the scope of the Hazen study, they may identify repairs that were included in earlier recommendations of the SRR plan if they have not been complete yet or again, I would assume, Marnat Road is probably one of those items that the County has said with

completing their work required by the SSRR, there's something beyond their control for getting that item complete.

I would assume that's going to show up in the Hazen report because it, it's, it's an ongoing effort that the County is making, it's a repair that's required and it hasn't been completed at the time of the report being finished. But yeah, if, and I believe Hazen is supposed to be done by the end of this year, if Marnat Road is not resolved with Baltimore City, I would hope that it shows up in the Hazen report.

MR. MCCANN: Okay. Let's keep it simple. Put aside all the trappings in this newsletter. The Consent Decree calls for an assessment of model predicted future capacity, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And the Hazen study also proposes to undertake an evaluation of model predicted future capacity, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay. You don't think that MDE would like to know what the Hazen report says?

MR. MUDD: Objection.

MR. MCCANN: I'm asking you, do you think MDE would, would, would want to know what the Hazen study reveals?

ALJ: Okay, hold on. There's an objection. Mr. Mudd?

MR. MUDD: Relevance.

ALJ: I mean, you know, we had testimony about whether MDE approved or reviewed a lot of these reports, so I'll allow it, go ahead. Overruled.

MR. LEFFNER: I don't, I don't think I should assume what MDE wants to or not see. But based on Mr. Summers' testimony that MDE is understaffed and not able to respond to their own efforts in progressing things, you know, if this is a, a County led study that's being, you know, directed and procured by the County for their use, I would leave it up to MDE.

MR. MCCANN: Well, that's a, you think MDE wouldn't be interested because it's understaffed?

MR. LEFFNER: I'm not, I, I think tracking the progress, is Baltimore County interested in seeing the results? Absolutely.

MR. MCCANN: Yeah.

MR. LEFFNER: Is MDE, I'm not sure. I don't, I've never been employed by MDE, and I don't know how much of the granular studies that's being completed by each of the jurisdictions they, they need to keep tabs on.

MR. MCCANN: Well, in accounting firms, it's two sets of books, isn't it, Mr. Leffner?

MR. MUDD: Objection. Relevance. Objection.

MR. MCCANN: Just asking.

ALJ: So that one, so that one I didn't get, is a

question I didn't get. So, what accounting to, to --

MR. MCCANN: In accounting firms, isn't this, isn't this two sets of books?

ALJ: Yeah, well, I mean, I don't know. I, I think he's answered the question about MDE, he's not sure if MDE is interested.

MR. MCCANN: All right, okay.

ALJ: Yeah.

MR. MCCANN: Getting back to the, the modeling. We also know, do we not, that in addition to RJN's, whatever it did, in connection with the model and in connection whatever with, and whatever Hazen is doing in connection with the model, we also know that back in 2014, after RK&K's report, Hazen itself back then did an evaluation of the model, did it not?

MR. LEFFNER: (inaudible).

MR. MCCANN: Okay. Okay. I'm going to cut to the chase in the plan, back to 6.14 and then move on. The, again, we're on 6.41 of the corrective, corrective action recommendation plan. This paragraph below that says areas selected for I&I reduction in the sewer shed include meter basins, include meter basins BC-02, 03, 04 and 09. These meter basins and all structural recommendations are shown on six, map 6.1. Do you see that?

MR. LEFFNER: I do.

MR. MCCANN: So, I take it from your testimony that

this map 6.1, which you, which we, which you looked at with Mr. Mudd, well, maybe, maybe I'm wrong about that. But does that map identify all of the work that the County is supposed to do pursuant to the SRRR plan? Is that your testimony?

MR. LEFFNER: That map 6.1 includes all those improvements?

MR. MCCANN: I'm asking you whether 6.1, I'll rephrase. Whether map 6.1 identifies the universe of repairs that the County was supposed to do, that it is required to do, under its SRRR plan?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: And nothing else, correct?

MR. LEFFNER: I don't believe so.

MR. MCCANN: Okay. What about the paragraph immediately below. Well, it says the capacity improvements that address items one and two will be implemented as follows. Do you see that language?

MR. LEFFNER: Yeah.

MR. MCCANN: Okay. Is that, are those capacity improvements, are those in addition to or part of what map 6-1 shows us?

MR. LEFFNER: I think number one and two are included on map 6.1. Okay. I'm going to show you Developer's exhibit, the approval letter from MDE. I think what you said was the letter was an acceptance or, or approval of the SRR plan. Is

that your testimony?

MR. LEFFNER: Yeah.

MR. MCCANN: Okay. This is Developer's Exhibit 43. I was going to mark it separately but, do you see that?

MR. LEFFNER: Yes.

MR. MCCANN: So, this, this letter is date stamped September 2013, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And all it says, does it not, in the fifth line, the Department acknowledges that the above noted SRR plan meets the requirements of the Consent Decree, end quote? Did I read that correctly?

MR. LEFFNER: Correct.

MR. MCCANN: And doesn't that mean, even a fair reading of that, isn't all that means is that, is that the plan, as it was then submitted, complied with the Consent Decree requirements and nothing more?

MR. LEFFNER: I'm not sure what you're asking. It meets the requirements --

MR. MCCANN: Well, certainly, I think, I think we can agree on this. This letter does not purport to approve any of the work that the County has done or not done pursuant to the SRR plan, correct?

MR. LEFFNER: You mean approved to implement?

MR. MCCANN: No, just approved the work after the

work that's been done, past tense?

MR. LEFFNER: I, I think this letter is saying exactly what it does, and the Consent Decree requires, which is MDE reviewed the SRR plan, and it meets the requirements of the Consent Decree.

MR. MCCANN: Right. But it doesn't, again, it doesn't approve any of the work that's actually been done, correct?

MR. LEFFNER: The, the County is reporting on what work has been completed.

MR. MCCANN: And that's in the form, at least in part, in the performance assessment back, we talked, we spoke about, right?

MR. LEFFNER: And quarterly reports, annual reports, in addition to the performance assessment.

MR. MCCANN: And the performance assessment has not been reviewed or commented on by MDE as we sit here today, correct?

MR. MUDD: Objection.

ALJ: What's the objection?

MR. MUDD: That, that's not the testimony.

ALJ: Well, I think it was a different question. Was the performance assessment report reviewed by MDE, right? Wasn't that the question, Mr. McCann?

MR. MCCANN: Review, yeah, reviewed or commented on,

was it?

ALJ: Okay, okay. So, overruled. Go ahead, sir.

MR. LEFFNER: I'm not sure based on documents I've seen, they've at least received it.

MR. MCCANN: No knowledge, as you sit here today, or understanding as to whether it's been reviewed or commented on by MDE?

MR. LEFFNER: No. Again, I don't work there and, nor have I seen any documents that said they were reviewed or commented.

MR. MCCANN: Right. You didn't pick up the phone and call them and ask them whether it's been reviewed or commented on?

MR. MUDD: Objection.

MR. MCCANN: I was asking --

ALJ: He had answered it, I think he answered it, he has no information that it's been reviewed or commented on.

MR. MCCANN: All right. Okay. There was a suggestion, I think, during Mr. Mudd's questioning of either Mr. Grachek or Mr. Summers that the future capacity numbers reflected in RK&K and RJN's reports do not account for all the rehab work that has been performed by the County. Do you recall that testimony, or that question?

MR. LEFFNER: I believe so.

MR. MCCANN: Isn't it true that the Consent Decree

requires that the SRR plan determine future capacity based on an assumption that rehabilitation and repair were already completed? Doesn't the Consent Decree require that?

MR. LEFFNER: I'm not sure.

MR. MCCANN: Okay. Doesn't the SRR plan itself reflect that this assumption was applied in the modeling that RK&K did? Are you familiar with that?

MR. LEFFNER: What assumption do you mean? Improvements have been made already?

MR. MCCANN: The assumption, yeah, I think you, you said you're not sure if the Consent Decree requires capacity based on an assumption that the repairs and rehabilitation were already completed. I just asked you whether or not the SRR plan itself reflects that this, that that assumption was, in fact, applied in the modeling that RK&K did, do you know?

MR. LEFFNER: I, I'm not sure what you're asking yet.

MR. MCCANN: Do you understand the assumption I'm talking about?

MR. LEFFNER: No, I think that's the question. The assumption that work had been done prior to the preparation of the SSRR or --

MR. MCCANN: No, in the, in the modeling. In the modeling, in determining future capacity, is, isn't, does, does the Consent Decree require the, an assumption that the rehabilitation and repairs called for in RK&K's report and were

already completed, follow me?

MR. LEFFNER: No, I think the, just the dating on the completed, so I think the SRR plan proposes recommendations, and their modeling includes if the, like if those improvements were to be made.

MR. MCCANN: So, they, that, that there is an assumption that they were, they were, they were to be made, correct?

MR. LEFFNER: They are being recommended to be made, yes, not --

MR. MCCANN: No, that they were performed. You don't, you don't recall that in the Consent Decree?

MR. LEFFNER: The SRR plan was prepared proposing recommendations to be completed. It was not a study showing all of the repairs that had already been made to show the results.

MR. MCCANN: You're not, I don't think you understand my question. I'll move on. The Consent Decree says what it says. So, turning to, this is map two from the RJN report, do you see that?

MR. LEFFNER: Yes.

MR. MCCANN: And I don't think you, this is a, a map identifying all the rehabilitation completed, as it says down at the bottom, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay and just, and this is as of the date of RJN's report in 2021, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And you spoke quite a bit about all the rehab that was conducted up in meter basins near Cockeysville, Timonium. Would you agree with me that according to this map there has been little if any rehab along the path where sewerage would flow from the subject site to Lake Roland? Would you agree with that?

MR. LEFFNER: As far as, are there as many dots along the line? No, but of the, I'd say it's like a percentage of the improvements that were required, there has been work done along that alignment.

MR. MCCANN: Where has it been done?

MR. LEFFNER: Right where your hand just was. Kind of at the intersection of where the --

MR. MCCANN: I understand that. I'm not --

MR. MUDD: Objection. I'd like to ask the witness to finish his answer, please.

ALJ: Yeah, go ahead. You were saying where his hand was. So, the cursor I think was up by the property --

(EVERYONE SPEAKING AT ONCE)

ALJ: Hold on, hold on, Mr. Leffner. Hold on one second. Okay. Go ahead now, what'd you say?

MR. MCCANN: I'm directing him to where he's talking

about, that's all --

ALJ: Oh, got it, okay --

MR. MCCANN: I'm allowing him the opportunity to explain what rehab was done.

ALJ: Great, thank you.

MR. MCCANN: Go ahead.

MR. LEFFNER: Yes, the, the yellow dot with the green box around it, the yellow dot with the orange box around it. And then, subsequent to this report being done with the confirmation that was presented earlier, there had been more rehabilitation efforts completed along (inaudible) presumably since the date of this report.

MR. MCCANN: You said presumably?

MR. LEFFNER: Yep.

MR. MCCANN: Okay. Well, first of all, let's just identify what the, the rehab that was done. These are not relief sewers or upsizing, are they? Just identify for us what rehab, according to RJN, was done as of the date of its report in 2021?

MR. LEFFNER: Lining (inaudible).

MR. MCCANN: And you're saying all, the, the work that you've identified in other exhibits, as you said, that's all been done since RJN's test, assessment?

MR. LEFFNER: Some of those manhole locations are included on the list.

MR. MCCANN: Yeah.

MR. LEFFNER: Because it was inclusive of all the recommendations along the alignment from the project location to the boundary of the City/County line.

MR. MCCANN: But certainly, none of the improvements, the recommended corrective actions called for by RK&K in its long-term capacity report, none of those were, have been accomplished, I think you've already acknowledged that, correct?

MR. LEFFNER: I, I don't know that I said none of them have been done the long-term capacity because there's also recommendations that are made that have been done from the long-term capacity.

MR. MCCANN: I'm talking about those directed from future capacity, model predicted future capacity problems.

MR. LEFFNER: The constructed sewer overflows were identified as items to repair, which have been done.

MR. MCCANN: Yeah. Okay. Judge, would it be okay if we took a five-minute break, just a little breather and --

ALJ: Sure, absolutely. Go ahead, we'll take five minutes.

MR. MCCANN: Okay, great. Thank you.

ALJ: I'll pause the record.

MR. MCCANN: Okay.

(PAUSE)

ALJ: We're back on the record. Mr. McCann, you're still in cross.

MR. MCCANN: Okay. Thank you, Judge, for the break, appreciate it. Mr. Leffner, I'm going to show you the, the RJN performance assessment, which is Protestant's Exhibit 78. And ask you, I guess generally speaking, that this assessment is really only assessment of the effect of rehabilitation performed in four-meter basins, specifically, 02, 03, 04 and 09, correct?

MR. LEFFNER: No, not necessarily.

MR. MCCANN: Okay. What do you mean by that?

MR. LEFFNER: There's other information or modeling that was updated in the RJN report outside of those four-meter basins.

MR. MCCANN: Okay. Yeah, we'll, and I guess we can get to that, that you're referring to map three?

MR. LEFFNER: Not necessarily map three. The section regarding the modeling.

MR. MCCANN: Okay. Well, let me, let me just ask it this way. I, I've been through this, every single word of it and wherever I see a conclusion about the effect of the rehabilitation undertaken on those four water meter basins, it's always qualified by the language as in here. For those basins where comprehensive reduction rehabilitation was performed.

So, for instance, this is on page four. See this sentence, model simulation show that I/I reduction rehabilitation etcetera reduced predicted overflow volumes for those basins where comprehensive rehabilitation was performed. Did I read that correctly?

MR. LEFFNER: Correct.

MR. MCCANN: Okay. So, and, and it's repeated. Let me go to page, the other conclusions, page eight, bottom paragraph. A comparison of the BI determined from the pre-rehabilitation condition to the BI determined from the post-rehabilitation condition determines the percentage of BI reduction in the meter basins studied. Did I read that correctly?

MR. LEFFNER: Correct.

MR. MCCANN: Then ultimately the report projected twenty-three percent reduction of BI in meter basins where, where rehabilitation was performed, per the SRR guidelines, correct? That's probably --

MR. LEFFNER: Correct.

MR. MCCANN: -- that's probably not a good example. Next page dealing with the results, I'm sorry, page twelve. The results in table three were, indicate that rehabilitation work has reduced the extent of inflow into the sewer system within all basins where rehabilitation was completed.

So, and then finally, I'll just point you to one,

one, page fourteen, just sort of the heart of the matter. The tables that you spoke about present the model predicted occurrences of overflows and flood volumes for all the five storm event, storm events in the meter basins where re, comprehensive rehabilitation was performed.

So, I guess my question is, well, number one. Just as a practical matter, those four water meter basins, if we look at the map that's attached. None of the sewage, I don't have the map attached, bear with me a second. None of the flow from those four water meter basins is going to go along the same sewer path as sewage from the subject site, correct?

MR. LEFFNER: I believe it does down at Lake Roland.

MR. MCCANN: Once it hits Lake Roland, but before it gets to Lake Roland, sewage from the subject site will, will go through the Jones Falls portion of the interceptor, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And sewage, any improvements, or any sewage flowing from the four water meter basins where comprehensive rehab was performed, will head down, will not head through that interceptor but rather through the, the Roland Run interceptor, correct?

MR. LEFFNER: Yeah, I believe it was the Roland Run.

MR. MCCANN: So, in other words, that rehab isn't going to have any affect at all on the segments that are below the subject site, at least until you get to Lake Roland, fair?

MR. LEFFNER: I wouldn't say they have no impact because they do meet each other at Lake Roland.

MR. MCCANN: Aside from that, until that point, no effect, correct?

MR. LEFFNER: The improvements within the section that do conclude, they hit each other, could affect the run that goes up the Jones Falls.

MR. MCCANN: Oh, it could? How so?

MR. LEFFNER: It could reduce the flows.

MR. MCCANN: Um hm.

MR. LEFFNER: And same with, because I think the first section that you highlighted referring to the four sub meter basins, it also said, I think it kind of said or, or and the relief sewers that were built, because one of them was in Towson Run, one was in the Jones Falls Run. And I think it was Section 4.2 says that their model includes both the comprehensive I&I reductions and completed relief sewer projects.

MR. MCCANN: Well, --

MR. LEFFNER: So, there are, there are other improvements that were modeled in the RJ&N report.

MR. MCCANN: Well, you're not suggesting that the, the rehabilitation performed in those four, four water meter, meter basins is improving the situation in the Jones Falls interceptor, are you? Are you really saying that?

MR. LEFFNER: I could and there's also the Texas valve, which was closed, reducing the amount of runoff that's going down to the same interceptor.

MR. MCCANN: You mentioned that. But again, that's not the same interceptor, that's the Roland Run interceptor, correct?

MR. LEFFNER: It is, and then they meet each other at Lake Roland.

MR. MCCANN: Okay. Let's talk about map three. I think in your, in your words, map three is just a snapshot in time, is that how you put it?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: Okay. Well, it's a model, isn't it? Models aren't snapshots in time, are they?

MR. LEFFNER: The inputs that are used to develop the model are.

MR. MCCANN: Okay, but that's not what you said. You said that map three itself is a snapshot in time. It's not that at all, is it?

MR. LEFFNER: I'm not sure what you mean that it's not.

MR. MCCANN: Well, it's a model that shows us what can happen under, under various storm events.

MR. LEFFNER: Right.

MR. MCCANN: It's not a snapshot in time, is it?

MR. MUDD: Objection. Objection. It's the third time the question has been asked.

ALJ: Well, I think Mr. Leffner is trying to answer the question or what, needed more clarification. I mean, see, because he said, I'm not sure what you mean is by a snapshot. So, so, so the question is is it static, is, is it one, you know, present time or is, does this map actually show us, you know, what could happen, you know, in terms of the modeling. So, that's the question, Mr. Leffner.

MR. LEFFNER: The, the model is, I would say it's finite in the inputs used to develop the model are based on that point in time. There's no future information included in the model. They, they couldn't do that.

MR. MCCANN: So, it's not the, it's not the map itself that's a snapshot in time, it's the, it's the numbers that are used in the model are, by definition, finite?

MR. LEFFNER: The map doesn't reflect a single second in time --

MR. MCCANN: Okay. Well, that, there's a big difference, is there not? Is there a big difference between those two things, Mr. Leffner?

MR. LEFFNER: Does this map reflect a single second in time or does the model have a specific time of the inputs used?

MR. MCCANN: Yeah, there's a big difference between

those two, isn't there?

MR. LEFFNER: Correct. And, and I said, this reflects a snapshot of time in that all of the information that's used to put into the model ends, right? There's no future information included in the model, they wouldn't be able to do that. Likewise, if there were ongoing repairs that had been made or were in the process of being made that they weren't aware of or having been complete when they did this model, it would, I would assume it would not be included either --

MR. MCCANN: Okay. Well, that's not what you said, that's not what you said when Mr. Mudd asked you. So, what is it?

MR. LEFFNER: I, I think it, what I just said is what I said earlier.

MR. MCCANN: Well, all models, all models are a snapshot in time based on the, the numbers that are inputted at the time they're inputted, right?

MR. MUDD: Objection. Objection.

MR. MCCANN: Is that true?

ALJ: So, I think, I think I, you know, I get his, what his answer is.

MR. MCCANN: I'll move on.

ALJ: Yeah, yeah, I get the --

MR. MCCANN: Okay.

ALJ: -- gist of the thing. Sustained.

MR. LEFFNER: The, there are --

MR. MCCANN: Hold on.

ALJ: Hold on.

MR. MUDD: There's no question on the floor.

ALJ: Mr. Leffner, hold on one second. Okay, go ahead, Mr. McCann. Next question.

MR. MCCANN: Okay, thank you. Are you, maybe to put it differently, are you challenging the results of the modeling as reflected in this map, R, RJN map three? Are they inaccurate, is it inaccurate in some way?

MR. LEFFNER: I, I have not done an independent review of their entire model, so no. I'm taking the report for what it is.

MR. MCCANN: You also said something about the model has not been verified without any real explanation. What did you mean by that?

MR. LEFFNER: With flow monitoring.

MR. MCCANN: Okay. But you, you just said that you don't have any specific flow monitoring data, do you, that, as I think you've already indicated, that challenges or refutes anything shown in this map three, do you?

MR. LEFFNER: I'm not sure what you mean.

MR. MCCANN: Are you aware of any flow monitoring data, you mentioned it, but you didn't speak to any, anything

specific, that, that indicates that what is reflected in map three is not an acc, is not accurate?

MR. LEFFNER: I'll use the example of the level censor locations that we reviewed earlier. Is that some of those level censors are located in the areas of model predicted overflows. And the flow monitoring, the level censors have been installed, according to the County, but yet none of the annual or quarterly reports report any sewer overflows.

MR. MCCANN: Okay. Is that, is that, but does that information indicate to you that, that the information shown in map through, map three rather, is inaccurate?

MR. LEFFNER: I would say model predicted versus realized. So, I'm not saying that this map is wrong and that they're model predicted that location. Again, that was up to them preparing it. But what's being realized is that there's flow censors and there's no reported overflows and the model predictions aren't being realized.

MR. MCCANN: Okay. Well, this isn't just talking about model predicted SSOs. This is also talking about hydraulic restrictions, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And there's a difference, right?

MR. LEFFNER: There is.

MR. MCCANN: Yep. Okay, bear with me one sec. Sorry, Judge, I'm trying to. The, I think you've acknowledged

as much already, the RJN performance assessment has not been, as far as you know, reviewed or commented on yet, correct?

MR. MUDD: Objection.

ALJ: He already said he, he did not, it was not, I believe.

MR. MCCANN: Right, I'm just confirming that.

ALJ: Yep.

MR. MCCANN: And isn't it true that the Consent Decree contemplates that once a performance assessment is undertaken the County is supposed to modify its, its evaluations and its improvements as appropriate in order to achieve the purpose of the Consent Decree? Isn't that what the Consent Decree calls for?

MR. LEFFNER: I'm not sure of all the updates that's required to the SRR.

MR. MCCANN: You're not sure what the Consent Decree requires in terms of what happens after the performance assessment?

MR. LEFFNER: Correct. I'd have to read the Consent Decree.

MR. MCCANN: All right. Well, would you agree with me that RJN map three, in terms of model predicted SSOs and hydraulic restrictions, shows, shows the situation to be far worse than even RK&K showed in its capacity numbers, at least in terms of the area where sewage would flow from the subject

site? Would you agree with that?

MR. LEFFNER: No, I, I don't think, I don't think this shows it being far worse than the RK&K report. One specific example is the hydraulic restriction that you mentioned. That could be just as simple as a pipe is flowing more than a hundred percent full. Nothing is failing, the pipe is just flowing more than a hundred percent full so there's a hydraulic restriction.

Similarly, the pipe might not even be flowing entirely full but the characteristics of the pipe either being really flat or really long, that it may present a hydraulic restriction within the model, so it shows up red.

MR. MCCANN: Well, sitting here today, you don't know what the, what hydraulic restrictions there are as reflected in this map as opposed to what, what, what may be reflected in the RK&K mapping, correct?

MR. LEFFNER: Not every single one, but the RK&K capacity, I think the charts that you've shared numerous times, show that some of the pipes are over a hundred percent full. That would be considered a hydraulic restriction and it would show up red on this map.

MR. MCCANN: Okay, yeah. Let's just keep it simple to SSOs. Would you agree with me that, that this map three, in the RJN report from May of 2021 indicates a situation that is far worse than, than even RK&K showed in its reporting back in

2013?

MR. MUDD: Objection. Asked and answered.

ALJ: He was asking the question though about SSOs. So, it's a different question. So, overruled.

MR. LEFFNER: I wouldn't say it's drastically different than the RK&K report.

MR. MCCANN: Okay. All right. Let's go onto this chart, which you spoke a little bit about. And this is Protestant's Exhibit 81. I think, I think as you've indicated, you have no reason to doubt any of the capacity numbers reflected in this exhibit, is that fair?

MR. LEFFNER: I wouldn't say I doubt them. I, I would say I trust whoever put it together copied and pasted the flows correctly. So, I have not fact checked every single one of these numbers, but if they were testified previously as being correct, I'll take it for what it's worth.

MR. MCCANN: Okay and these numbers alone reflect, do they not, that after the rehabilitation that RJN spoke to in its performance assessment, the capacity numbers in most instances, this is the righthand column, are actually worse than they were before, before the rehab, correct?

MR. LEFFNER: Comparing those two columns is kind of all I can take for these, so yeah. Anything in red, I believe, is an increase and anything that was shown in the parenthesis was a reduction.

MR. MCCANN: Okay. Let me show you Protestant's Exhibit 69, which is a different chart. Do you recall seeing this chart, Mr. Leffner?

MR. LEFFNER: I do.

MR. MCCANN: Okay and this is a comparison that was prepared of DPW capacity numbers with those of RK&K, correct?

MR. LEFFNER: Correct.

MR. MCCANN: So, let's just focus on these eight segments that we've been talking about throughout the course of the hearing. According to DPW, and I can show you the backup documentation if you want, DPW has identified the capacity for these eight segments as ranging between ninety-four and a hundred and one, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Then are you, are those wet or dry weather flows, do you know?

MR. LEFFNER: In the DPW analysis?

MR. MCCANN: Yes.

MR. LEFFNER: I understand it to be wet weather.

MR. MCCANN: Okay. I guess we'll get to that. But these are the, these are the, the eight segments, and I don't think we need to go through the exhibits that say this. But these are the eight segments that the County has said, in fact, said long ago, lack adequate capacity, correct?

MR. LEFFNER: Correct.

MR. MCCANN: So, we can, we can dispute what the design manual says in terms of capacity or whether that's the governing standard or not. But let's, let's just assume that ninety-four percent, the least of these, is the standard that the County uses in determining adequacy of a sewer segment, okay? Can you assume that for me?

MR. LEFFNER: I can assume it. I don't know if it's a correct assumption.

MR. MCCANN: So, it may be less or more, what, what's wrong with that assumption?

MR. LEFFNER: It's a County assumption, I don't know what the County assumption is.

MR. MCCANN: Well, the County has said that ninety-four percent is inadequate capacity, correct?

MR. LEFFNER: They said the pipe run is, yes.

MR. MCCANN: Right. So, at a minimum, is it a fair, fair conclusion and not much of an assumption, that ninety-four percent at a minimum is the percentage that the County says is an inadequate, is a sewer segment with inadequate capacity? Can we agree on that much?

MR. LEFFNER: I, I don't think the County said ninety-four is the minimum. They just said that that pipe is of insufficient capacity.

MR. MCCANN: Okay. Well, assuming that to be the minimum, the County said it's, it's a problem. Would you agree

with me that there are, below those eight segments, there are numerous sewer segments, at least under the ten-year six-hour storm, whose capacity is well above ninety-four percent? Would you agree with that?

MR. MUDD: Objection. The wit, the witness has said that, that he has, that he cannot make that assumption and now he's being asked to assume it and to draw a conclusion on the basis of extrapolated data.

ALJ: I mean, the question was the, the segments below the eight that we were talking about (inaudible) --

MR. MUDD: Understood. But he, but, but, but Mr. McCann asked him to say that ninety-four was assumed to be, was assumed to be insufficient, or inadequate, and the witness said, I cannot make that assumption. And now he's asking him to make that assumption to draw a conclusion about inadequacy of other areas along the, the, the, the pipeline.

ALJ: Well, I don't think he tied it to the ninety-four percent. I think he just said are the, are the segments below the eight we were talking about for the ten-year six-hour storm, do they lack capacity is what I heard him say, right, Mr. McCann? I mean, is that what you said?

MR. MCCANN: Correct. But (inaudible) --

MR. MUDD: (inaudible) ninety-four percent.

MR. MCCANN: Are they above the ninety-four percent regardless of whether he's remarkably unable to make the

assumption that I asked him about.

ALJ: Okay. So, --

MR. MUDD: So, the document speaks for itself. They're above ninety-four.

MR. MCCANN: Well, you asked plenty of questions --

ALJ: Okay, but he gets to cross examine. So, overruled. Go ahead, Mr. Leffner.

MR. LEFFNER: Can you ask the question again?

MR. MCCANN: Well, let me ask you again and maybe I, maybe I misheard you or maybe you said, and I didn't hear, and I apologize for that. Why is it that you cannot, at a minimum, assume that what the County believes to be an insufficient capacity is ninety-four percent? Why can't you make that assumption?

MR. LEFFNER: Ninety-four being as far as an assumption I won't make on the County's behalf. It could be higher than that, it could be lower than that. I don't know the number that the County is assuming to say that it's insufficient.

MR. MCCANN: That's not the question I'm asking. I'm not asking you to make an assumption about ninety-four percent in and of itself. I'm asking you to make an assumption that at a minimum, at a minimum, ninety-four percent is the, is the point at which the County says a sewer segment is over capacity. That's a different question. Can you make that

assumption?

MR. LEFFNER: Again, in this instant, did they make that determination, yes.

MR. MCCANN: Okay.

MR. LEFFNER: Is that they're overarching, I can't say that.

MR. MCCANN: Okay. (inaudible) document speaks for itself. I'll just move on, Judge. I did want to talk to you about the County's sewer capacity chart. This is Protestant's Exhibit 64. I think, if I heard you correctly, I think you indicated that this capacity analysis is based on wet weather as opposed to dry weather by virtue of this column that says infill MDG, is that, is that your testimony?

MR. LEFFNER: Correct.

MR. MCCANN: And what do you base that on other than the fact that it says infill MDG?

MR. LEFFNER: A conversation with the County who manages and updates this model.

MR. MCCANN: What did he or she say?

MR. LEFFNER: They said that that column is a combined column of both infiltration and inflow represented in the single column as opposed to separating both of them. And that that column reflects the wet weather condition used in their model.

MR. MCCANN: Said both things, said both of those

things to you?

MR. LEFFNER: Correct. That there's two separate columns, but they only use one of them and that that column represents the wet weather included in their model.

MR. MCCANN: Okay. I guess, number one, which, which storm event does, is that column, it goes on to, just that page, what storm event is that for? The information in that, in that column?

MR. LEFFNER: I'm not sure.

MR. MCCANN: Didn't bother to ask that?

MR. LEFFNER: I didn't.

MR. MCCANN: Isn't it true that you can have in, infill, infiltration rather, in dry weather?

MR. LEFFNER: You can.

MR. MCCANN: And just, you know, as a practical matter, these capacity numbers in the percent full column, I'm sorry if I'm, those don't suggest to you this is dry weather?

ALJ: So, there's nothing on the screen if you wanted something on the screen.

MR. MCCANN: Oh, there isn't? I'm sorry, Judge, I'm sorry.

ALJ: No, no, yeah.

MR. MCCANN: I'm talking to myself. So, and I guess you didn't see this. This is the column infill MGD, that's the column that you were referring to, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay. Just in terms of the shared numbers in this exhibit, on this righthand column, I'm sorry, this column fourth from the left, which says percent full. Don't those numbers suggest to you that this is dry weather?

MR. LEFFNER: No.

MR. MCCANN: They don't, okay. Bear with me one sec. Okay. I'm going to show you an exhibit. I'm going to mark this, Your Honor, as Exhibit 110, I think. And let me first ask you, are you familiar with, amongst the other documents that RK&K prepared, in addition to the long-term capacity report, which is part of the SRR plan. That also part of the SRR plan is a report called hydraulic capacity assessment, do you remember that document?

MR. LEFFNER: I'm not sure that I do.

MR. MCCANN: Oh, okay. This is, I'll represent to you, this is an appendix to that document, which as its title indicates, dry weather pipe capacity analysis. And ask you whether or not, given this righthand column, I know this is a long document, righthand column entitled pipe percent full, doesn't this also suggest to you that the numbers in the document that we were just looking at, that is, Protestant's Exhibit 64, represents dry weather rather than wet weather flow?

MR. LEFFNER: I think this tale does. But I think

these, the numbers in this column, again, not having the chance to compare the two of them, are all, I mean, --

MR. MCCANN: Okay.

MR. LEFFNER: -- below thirty percent or thir, forty to fifty percent. Whereas the chart you just shared was higher.

MR. MCCANN: The chart I just shared was higher?

MR. LEFFNER: The, the pdf with the highlighted areas (inaudible) --

MR. MCCANN: No, I wasn't, --

MR. LEFFNER: -- the eight-inch pipe that was all one hundred and --

MR. MCCANN: Yeah, I wasn't talking about --

MR. LEFFNER: -- (inaudible).

MR. MCCANN: Yeah, can you see this document? I guess you can't, huh? When I was showing you this Exhibit 64, I wasn't referring to the, the numbers in highlight under percent full, I was referring to all the numbers.

MR. LEFFNER: Yeah, and, you know, --

MR. MCCANN: That, these numbers, hold on a second. These numbers don't suggest to you that this capacity analysis is based on dry weather?

MR. LEFFNER: No, it's based on the flow through that pipe.

MR. MCCANN: Wet weather flow, you're suggesting?

MR. LEFFNER: As I understand it.

MR. MCCANN: Okay, all right. Your Honor, I know he hasn't seen the document I just showed before, but I would, it is part of RK&K's reporting. So, I would ask that Exhibit 110 be introduced. It speaks for itself --

ALJ: Mr. Mudd, do you (inaudible)?

MR. MCCANN: I'll, I'll show it again.

MR. MUDD: I do not recognize it.

MR. MCCANN: Well, there are hundreds and thousands of documents RK&K prepared, but this is appendix 5-A to one of the appendices of this, of the SRRR plan.

ALJ: And the SRR plan is Protestant's, I can't remember the number, but do you have this document in that?

MR. MCCANN: No, no, not all the appendices were attached because it's so long. The only appendices that was, that's attached is actually the long-term capacity report and that's a separate exhibit. So, I mean, I don't, if there's some question that I'm not making, that I'm making this up, I can certainly provide you with a copy of the SR plan that has this attached to it, if that's --

ALJ: It wasn't me, I mean, the witness does not, did not recognize it and I wasn't sure if Mr., if Mr. Mudd recognized it as part of a, the long, the SSR, SRR plan then that --

MR. MCCANN: I don't think he does.

MR. MUDD: I, I don't. I do see that, in the, in the table of contents, that this appendix is listed as pipe capacity analysis county meters – future conditions. So, it, it, from that perspective it matches. I just don't know whether, you know, I, I can't identify it, the witness cannot either.

ALJ: Hm, okay. So, I mean, we don't have anyone who could identify the document and we don't have a full copy of it. (inaudible) a lot of times you can pull out, you'll have a full copy of a document exhibit, and then you'll pull out and remark it as a separate exhibit, part of what's already included, but we don't have --

MR. MCCANN: This is --

ALJ: -- I mean, this is on the, apparently the table of contents but it's not on the, it's not, this part is not part of an exhibit that's already been admitted.

MR. MCCANN: No, I'm not suggesting that it is. I'm, this is a --

ALJ: No, but how are we going to admit it if it's not, the witness couldn't recognize it, Mr., Mr. Mudd is objecting to it, I don't know how it comes in without (inaudible) --

MR. MCCANN: Yeah, it comes in for the same reason the SRR plan comes in, it comes in for the same reason the long-term capacity report comes in.

ALJ: Yeah, well, I mean, but those documents were not objected to because everybody has those. But just the problem is with this one is nobody knows, nobody's seen this one, I mean, so, you're the only one that's looked at it.

MR. MCCANN: I know, but I'm not sure what that has to do with its admissibility. I --

ALJ: Well, I mean, how could it not? You have to identify it, you have to, somebody has to identify that they know what it is.

MR. MCCANN: Yeah, no, I understand. I, I can share the table of contents --

ALJ: I mean, you know, can't just, can't just like hand documents in. It's like the, you know, we had one earlier that, the Hazen letter, the Hazen scope of services and we had to go back and get something to show that it was, just because it, it was from them. But this, who knows how, you know, again, I, I mean, unless Mr. Mudd agrees. I mean, I'm not sure I can put this in.

MR. MCCANN: Well, I'll introduce the entire SRR plan. All hundreds and hundreds of pages. I'll just replace the exhibit that I already have, and I'll put this in if that's what I'll have to do.

ALJ: So, is that, is that good with you, Mr. Mudd? You have to show Mr. Mudd it before. I guess we could just leave it open. That would work. And then if you wanted to

replace it and put all those in, replace, well, what exhibit number was it again? I just for, SRR plan was what number?

MR. MUDD: Sixty-eight.

ALJ: Sixty-eight. Okay. So, Protestant's sixty-eight will be replaced with the entire plan that has all the appendices to it. And then, you could keep this one as one ten, because we'll be able to match it. How's that sound?

MR. MCCANN: It sounds cumbersome, but that's okay.

ALJ: (inaudible) it's not my, it's not my exhibit. I'm just trying to help.

MR. MCCANN: I know, I know you are. I know you are. I just --

MR. ZIMMERMAN: Wasn't it sixty-seven? Am I missing something?

ALJ: Sixty-seven anyone? Anyone for sixty-seven?

MR. MCCANN: What was sixty-seven?

ALJ: The SSR.

MR. ZIMMERMAN: The RKK exhibit.

ALJ: This is SSR.

MR. ZIMMERMAN: Right, right. Isn't that the RKK we're talking about?

ALJ: No, he said SSRR plan.

MR. ZIMMERMAN: Well, that's what they did, the SSRR --

MR. MUDD: You're right, that's, I mean, it, the

long-term capacity, well, --

MR. ZIMMERMAN: I, I just want to double check which exhibit we're talking about, whether it's sixty-seven or sixty-eight.

MR. MUDD: You're exactly right, and I guess this is the perils of trying to do what we did. Mr. McCann said that this was an exhibit to the SRRR plan.

ALJ: Yeah.

MR. MUDD: It actually appears to be an exhibit to the long-term capacity analysis and not the SRRR plan.

ALJ: Okay.

MR. MCCANN: It doesn't make any difference, whatever. It's still part of a document, --

ALJ: Well, I just want to get the numbers right. I, I just want to make sure that you got your numbers right.

MR. MCCANN: Don't, I don't disbelieve Mr. Mudd. I don't disbelieve when he says that, that it's sixty-eight. For some reason, he disbelieves that this is an attachment to it, but that's fine. I'll introduce the entire long term capacity report, which apparently this is attached to, as Exhibit 68, replace it, --

ALJ: Okay.

MR. MCCANN: -- and then I'll keep this as Exhibit 110 as a separate exhibit.

ALJ: Okay, that works. Okay, we'll do that.

MR. MCCANN: Sounds great.

ALJ: Okay.

MR. MCCANN: Okay. I guess, Mr. Leffner, regardless of what you, what you say about the County's sewer capacity chart that we just looked at, you don't disagree that the Consent Decree requires an evaluation of capacity based on wet weather, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And the Consent Decree requires the, that the model used by the County be calibrated to address wet weather, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And the Consent Decree requires that any corrective actions be based on wet weather, correct?

MR. LEFFNER: It does not identify a wet weather storm, corrective measures has to be improved too.

MR. MCCANN: Well, I'm not asking about any specific storm, I'm just talking about wet weather, peak flow, as opposed to dry flow. The Consent Decree requires corrective actions based on that, correct?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: Okay, all right. Okay. Just making sure I've got everything, Judge. Bear with me. Also, Mr. Leffner, with regard to the performance assessment, the RJN model that was used, was based on what's called a free

discharge assumption, correct?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: Okay and that's, essentially, an assumption that the sewage is able to be conveyed and handled by the City when it leaves the County, is that basically what the assumption is?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: Okay. Also, in terms of, you, you mentioned population employment projections a couple times. Do you know, am I correct that RJN in its performance assessment, it used the same population employment conditions that were used back when RK&K did its modeling, isn't that true?

MR. LEFFNER: Yeah, I believe so.

MR. MCCANN: And I can certainly show you the documents, but it, isn't it the case that the population employment conditions that RK&K relied upon, or projections rather, that RK&K relied upon in its reporting in 2013, was based on, were from 2008, did you catch, did you follow that question?

MR. LEFFNER: I did not.

MR. MCCANN: My question was whether or not the population employment projections used by RK&K were based on, were from, rather, 2008? So, in other words, several years prior to its reporting. Do you recall that?

MR. LEFFNER: Yeah, I think they were, I forget the

year that they were provided but they were for the year 2025.

MR. MCCANN: Right, but the projections were made in 2008, does that sound right? Or, or from 2008?

MR. LEFFNER: Around that time.

MR. MCCANN: Okay. I'm going to show you Developer's Exhibit 44, which are the, do you see that, Mr. Leffner?

MR. LEFFNER: I do.

MR. MCCANN: Okay. So, as I understand it, the, actually 44-B is the, forty-five, 45-A rather, is the e-mail. Let me pull that up as well. Okay. So, apparently you, although it's not reflected in the e-mails, you asked Mr. Bayer to give you, to identify any, any improvements that were made along the path, sewage flow path on the subject site down to the City line, was that basically the, the nature of your inquiry with him?

MR. LEFFNER: Not any. It was to confirm whether these locations that were recommended has been complete.

MR. MCCANN: Okay and just dealing with the first two, can we agree 43820 and 43819, if we were to zoom in, (inaudible) show you in, show you in another exhibit, sewage from the subject site is, is not going to go to either of those manholes, correct?

MR. LEFFNER: I believe it goes in with the 43819.

MR. MCCANN: You believe it does?

MR. LEFFNER: Through, through them, yeah.

MR. MCCANN: Let me just get a better, maybe a better exhibit that shows that just to be clear. Okay. This is Exhibit 63, Your Honor. Do you see that, Mr. Leffner?

MR. LEFFNER: I do.

MR. MCCANN: Okay, okay. So, again, these are the, do you recognize this as sort of the sewer segments just below the subject site?

MR. LEFFNER: Correct.

MR. MCCANN: So, 43819 is where the sewer would connect if the development were approved, right?

MR. LEFFNER: Just upstream.

MR. MCCANN: Right, okay. So, 43820 is, is not in the sewage, on the sewage path as, as you can put it, right?

MR. LEFFNER: It's upstream.

MR. MCCANN: It's above it?

MR. LEFFNER: Correct.

MR. MCCANN: And then, in terms of these other repairs, the nature of those repairs are identified in 45-A, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Right here?

MR. LEFFNER: Correct.

MR. MCCANN: These are all, would you agree with me, these are all relatively minor --

MR. LEFFNER: Correct.

MR. MCCANN: -- repairs? None of which deal necessarily with or address capacity issues, do they?

MR. LEFFNER: They do.

MR. MCCANN: In what, in what way? Other --

MR. LEFFNER: Limiting, limiting inflow.

MR. MCCANN: In terms of the, the lining, you mean?

MR. LEFFNER: Correct.

MR. MCCANN: Inflow and infiltration?

MR. LEFFNER: Correct, reducing I&I.

MR. MCCANN: Okay. But in terms of increasing capacity, none of these repairs actually increase the function, the capacity of this, of the segment itself, either the segment itself or the manhole for which the segment is attached to, is that fair?

MR. LEFFNER: Not of the pipes, but if the, the manhole cover at 6883 was sealed, that would prevent overflows.

MR. MCCANN: Overflows, okay. But none of these repairs, the ones reflected in forty-four and described in 45-A address either the capacity SSOs, hydraulic restrictions indicated in map three of the RJN performance assessment or the Ramble report, would you agree with that?

MR. LEFFNER: Again, if the manhole was sealed, it would prevent sanitary sewer overflows and the section 6875 to 6874, if it was lined, in, in the report they discussed the lining can improve the roughness coefficient in the pipe and if

it were reduced by lining the pipe, it would increase capacity of that pipe.

MR. MCCANN: No, I understand that. You've said as much. My question is simply whether or not these repairs that are identified in this Exhibit 44, whether they, well, put in the simplest of terms, whether this constitutes all, all the repairs, either to, proposed to be undertaken by Ramble or, or the, let's start there. This is not, this obv, these repairs obviously are not the repairs that Ramble was proposing in its report, correct?

MR. LEFFNER: Correct.

MR. MCCANN: And would you agree with me that these repairs are not going to cure or correct all of the SSOs, and hydraulic restrictions reflected in map three of the RJN report, correct?

MR. LEFFNER: Individually, they won't repair all those, correct.

MR. MCCANN: Hey, Judge, can I have like five minutes to take a look through all my notes rather than sitting here and making everybody wait?

ALJ: Yeah, that's a good idea.

MR. MCCANN: See if I have anything else.

ALJ: Yep, I'll pause the record.

MR. MCCANN: Okay, thank you.

(PAUSE)

ALJ: We're back on the record, we just took a short break.

MR. MCCANN: Okay. Mr. Leffner, I want to go back real quick, just a couple housekeeping things. To the RJN performance assessment, I was asking you earlier about modeling and what, if anything, RJN did with respect to the model, at least by RK&K. I'm going to show you the report. So, this is, and I can go to the top if you want. But this is roman numeral little iv, at the top. It says pre- and post-rehabilitation flow monitoring data was used to update the hydraulic model based on monitored flow conditions. Do you see that?

MR. LEFFNER: I do.

MR. MCCANN: Okay. So, the model is updated using pre and post flow monitoring data, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Okay. Can you, you mentioned something else, somewhere else in this report, about some way in which the, the model was, was used by RJN. Can you point me to that? Because I didn't find it anywhere.

MR. LEFFNER: 4.2 on page thirteen.

MR. MCCANN: Thirteen, okay. Where, where am I looking?

MR. LEFFNER: Just that, that section down to the paragraph that begins with other.

MR. MCCANN: Why don't you just tell me what it says?

MR. MUDD: Judge Murphy, --

MR. MCCANN: Again, the question was, the question is what, what, what does this section tell us about what, if anything, RJN did with respect to the model used by RK&K in terms of updating, recalibrating, etcetera, if anything?

MR. LEFFNER: The, the post-rehab condition model is different than the pre-rehab condition model in the following aspects.

MR. MCCANN: Okay.

MR. LEFFNER: Post-rehab condition model reflects reduced infiltration rates, as identified by quantification, construction of the Copper Mine relief sewer, construction of the Towsontowne Boulevard relief sewer. Other than the differences noted above, the pre- and post-rehabilitation condition models for the Jones Falls sewer shed are identical to one another and both models reflect rehabilitation projects completed prior to beginning of the 2008 rehab flow monitoring.

MR. MCCANN: Well, that's what the model reflects. I'm talking, my question was, was directed to what, if anything, was done with respect to the model itself in terms of recalibration and updating, etcetera. And I think, as I just read to you, the model was updated, right?

MR. LEFFNER: Correct and --

MR. MUDD: Objection, Judge. And Judge, this has been asked and answered --

MR. MCCANN: It has not.

MR. MUDD: -- multiple times.

ALJ: So, I, I don't really, I didn't follow the question. I've been trying to follow the question. I wasn't sure what exactly you're getting to. I'm not really sure, I mean, so, but (inaudible) --

MR. MCCANN: (inaudible) the document speaks for itself. I don't mean to belabor it. The document speaks for itself. I, I'm not sure his answer was responsive, but that's fine. Then a couple other questions regarding the, Lake Roland itself.

You, I just want to confirm you, there was an exhibit you used that reflect, that showed all the other areas in, I guess, in the County where water quality testing is performed. Do you recall that? I think it's Exhibit 57, do you recall that?

MR. LEFFNER: I don't remember, it wasn't all of the locations but yes, other locations in the County that water quality testing was done.

MR. MCCANN: Well, what was it purporting to show? Was it purporting to show all of them or some of them in some particular area, do you know?

MR. LEFFNER: There, there are multiple other locations that water quality is being tested in Baltimore County, not just Lake Roland.

MR. MCCANN: And do you have, did you bring with you, did you, I, I take it you, it hasn't been introduced as an exhibit, but do you have the results of any of the water quality, water quality sampling from those locations, at least for E.coli?

MR. LEFFNER: I don't, but any testing would be available online (inaudible) --

MR. MCCANN: Why, is there, is there a reason why you didn't present that?

MR. LEFFNER: Because they're not in the sewer shed.

MR. MCCANN: Okay. So, bottom line, Exhibit 57 tells us that there are a lot of recreational waters in or near Baltimore where water sampling is performed by the, by the County. Did I summarize that accurately?

MR. LEFFNER: Correct.

MR. MCCANN: You made some assumptions about why it is that folks were not on public sewer in and around, I guess, the Lake Roland area. Well, let me ask you this way. In, in connection with the septic system, there's a, I'm sure the Judge is aware of this, there are septic reserve areas required for any septic system?

MR. LEFFNER: Correct, any new septic system.

MR. MCCANN: Correct, and what, what's the required size for a septic, a standard size for a septic reserve system in Baltimore County?

MR. LEFFNER: I don't know, I don't, I'm not sure the standard size, but they, they vary depending on the use.

MR. MCCANN: Okay and the purpose of a septic reserve area is what?

MR. LEFFNER: It, it's an area identified to be reserved for the use of a septic infiltration system.

MR. MCCANN: Did, like I'm sorry, say that again, Mr. Leffner, I missed that.

MR. LEFFNER: It's an area that's reserved on the property that has restrictions for the use of a septic infiltration system.

MR. MCCANN: What's, it's an area reserved in case there's some sort of failure, right --

MR. LEFFNER: Or req, or requirement to provide sewage to the property.

MR. MCCANN: Okay, all right. You were here for Mr. Summers' testimony, correct?

MR. LEFFNER: Correct.

MR. MCCANN: Did you read the, the TMD reports that we submitted in the course of his testimony?

MR. LEFFNER: Yes.

MR. MCCANN: And it's, and did you read them prior to testifying this morning?

MR. LEFFNER: Not immediately, a few days ago.

MR. MCCANN: So, you don't believe that the TMDL

reporting suggests, or indicates rather, that the predominant source of E.coli in this area of the sewer shed is from, is a human source? You don't recall seeing that in the TMD, TMDL reporting?

MR. LEFFNER: Some of the locations it did have human as the main, I would say higher percentage than other sources.

MR. MCCANN: Yeah, I'm, I'm wondering why we're talking, I know Mr. Grachek may, may have said something, why, why we're challenging, why is it that you're challenging that the predominant source of E.coli in this area in and around Lake Roland is human sourced? Just summarize that for me, if you would.

MR. LEFFNER: I didn't say that.

MR. MCCANN: You're not challenging that?

MR. LEFFNER: I'm not challenging the TMDL testing. I'm just saying that there's the, that previous testimony stated that it had to be sanitary sewer overflows resulting in that. We simply said that there's been no reported sanitary sewer overflows within the Jones Falls based on the quarterly and annual reports. However, there's significant amount of septic systems.

MR. MCCANN: Okay, all right. So, just to sort of wrap up, the, would you agree with me that as we sit here today, the Consent Decree is still in force? It has not been terminated, correct?

MR. LEFFNER: I agree.

MR. MCCANN: The County, as we sit here today, is still subject to the terms and requirements of the Consent Decree?

MR. LEFFNER: Yes.

MR. MCCANN: In fact, the County was just recently assessed monetary penalties for a hundred and fifty SSOs that had occurred in the past, correct?

MR. LEFFNER: I'm not aware of that.

MR. MCCANN: You're not familiar with that?

MR. LEFFNER: No.

MR. MCCANN: Let me show you a letter that I'll mark as Exhibit 111. It's stamped April 14th, 2023. Have you seen this document before?

MR. LEFFNER: No.

MR. MCCANN: It's to Lauren Buckler, Deputy Director, from Lee Currey, the Director. No?

MR. LEFFNER: I have not.

MR. MCCANN: Okay. Okay. Your Honor, I would move this, that in as Exhibit 111. It's obviously a public record and speaks for itself. And with that, I do not believe I have any further questions of Mr. Leffner.

ALJ: Any objection, Mr. Mudd?

MR. MUDD: No, I just, it's a public record, but I would like Mr. McCann to send us a copy, please.

MR. MCCANN: I shall.

ALJ: Understood. So, we'll accept one eleven. All right and no other questions, Mr. McCann?

MR. MCCANN: That's it.

ALJ: All right. Mr. Zimmerman?

MR. ZIMMERMAN: Good afternoon. So, while we're talking about compliance with Consent Decree or penalties, that last exhibit, what awareness, if any, do you have, Mr. Leffner, that Howard County was able to resolve its Consent Decree and is no longer subject to their sewage Consent Decree?

MR. MUDD: Objection.

ALJ: Mr. Mudd?

MR. MUDD: Howard County?

ALJ: Yeah, I know, I was thinking the same thing. Do we care, Mr., Mr. Zimmerman, --

MR. ZIMMERMAN: I think it highlights the problems with Baltimore County, if another County was --

MR. MUDD: Objection, objection.

MR. ZIMMERMAN: -- able to resolve, resolve its Consent Decree when the County (inaudible) --

ALJ: I don't know if that, I don't know if you can make, I don't know if you can make that leap.

MR. ZIMMERMAN: All right.

ALJ: You really can't. I mean, in this case, I know there was a document was, that had to do with Baltimore City's

Consent Decree, and I excluded it because, because really in the end, I mean, we're talking about Baltimore County. And, and so, whether or not there were, you know, they were able to get it done quickly or not, or we just have, you know, the County here has to wait for the City to do something and the City says you're waiting for the County to do something, yeah. It's all, so, yeah, we don't, we don't really need (inaudible).

MR. ZIMMERMAN: Okay.

ALJ: Okay.

MR. ZIMMERMAN: All right. So, let me ask you this, and for the record, you were not working as an engineer when the 2005 Consent Decree was entered, were you?

MR. LEFFNER: I was not. I was in school to become one.

MR. ZIMMERMAN: Right. You were at, at VPI. So, have you looked into any of the appendices of the Consent Decree?

MR. LEFFNER: I've just reviewed the Consent Decree that was presented here.

MR. ZIMMERMAN: Do you know whether it has any appendices?

MR. LEFFNER: I'm not sure.

MR. ZIMMERMAN: Okay. Do, did you ever review any of the history leading up to the Consent Decree?

MR. LEFFNER: Not specifically.

MR. ZIMMERMAN: Okay. Could you recite for us once again the, the three, was it the three or four? How, however many different storms the Consent Decree requests to be included in the, the various studies?

MR. LEFFNER: I believe the Consent Decree required the two-year twenty-four-hour storm event, the ten-year twenty-four-hour storm event and the twenty-year twenty-four-hour storm event.

MR. ZIMMERMAN: Okay, okay. And those were, therefore, included in the RK&K and sub, subsequent reporting as part of the modeling, is that correct?

MR. LEFFNER: Correct.

MR. ZIMMERMAN: Okay and did you testify or was it shown in any of the documents that the population projections were to 2025.

MR. LEFFNER: That's what's summarized in the reports, correct.

MR. ZIMMERMAN: Okay. So, based on that, can we reasonably say that the intent was that the County would totally resolve the Consent Decree by 2025 at the latest?

MR. LEFFNER: I can't say that for sure.

MR. ZIMMERMAN: Well, if it, if it was anticipated that it would take longer wouldn't they have required the analysis of storms of a longer duration?

MR. LEFFNER: I'm not sure what you mean.

MR. ZIMMERMAN: Well, are there such things as fifty-year storms, thirty-year storms, hundred-year storms, flood, you know?

MR. LEFFNER: There are larger storm events, but that, that's not indicative of the amount of rainfall that happens within that amount of time. It's instead a likelihood that that amount could happen in any given storm event.

MR. ZIMMERMAN: Well, isn't it clear that the Consent Decree anticipated a likelihood of a twenty odd year time frame to study and if the, if the Count was going to take longer than twenty odd years, then it would have been appropriate to have a thirty- or forty-year storm analyzed and a population projection longer?

MR. MUDD: Objection. I've been trying to listen to see where this is going and I'm not, I'm not, I mean, the document requires what it requires. I don't know why we're guessing what, what else it might have required or should have required.

ALJ: Yeah, I'm not sure either, Mr. Zimmerman.

MR. ZIMMERMAN: Well, what I'm suggesting, Mr. Leffner, is the failure of the County to resolve the Consent Decree yet is, is effectively inconsistent with the intent of the Decree, don't you agree with --

MR. MUDD: That sounds like memo material.

ALJ: What's that, what was that material?

MR. MUDD: Sounds like memo material. He's arguing and through a witness.

ALJ: I'm not sure, yeah, I'm not sure that, that he can even answer that.

MR. ZIMMERMAN: Okay.

ALJ: How could he answer what the intent of the, he doesn't work for the County, the intent of the County is. How do we, how do we know what the, you said, what did the Consent Decree anticipate and, and so, I mean, this would all be speculation and guess. You can certainly argue it, but I'm not sure how he's supposed to answer that.

MR. ZIMMERMAN: Well, he's been allowed to interpret a lot of things, which I think goes beyond really, you know, engineering and into legal interpretation, so, so I thought it was fair to ask those questions. But, all right.

ALJ: Yeah, I mean, I, I'm not sure, you know, this would all be, you know, kind of --

MR. ZIMMERMAN: Okay.

ALJ: -- philosophical and I don't know.

MR. ZIMMERMAN: Okay, all right. Let me, let me move on then. Let me ask you this. The, the reason for including any storms in the modeling would, correct me if I'm wrong, would be the sanitary sewer overflows tend to occur or occur with more intensity after rain events, is that correct?

MR. LEFFNER: They can, with the exception of, you

know, breaking, blockages, other, other events can actually result in sanitary sewer overflows too during dry conditions.

MR. ZIMMERMAN: But the only reason to bother putting storms into the modeling is they have something to do with the sanitary sewer overflows, isn't that true?

MR. LEFFNER: Yeah, it can contribute to the overflows.

MR. ZIMMERMAN: Yeah, okay. Okay. All right. All right. I'm going to, I want to ask you a few questions about Lake Roland. And before we get to any exhibits, let me ask you did you include in your exhibits the numbers of homes on public sewers that are in the Jones Falls sewer shed?

MR. LEFFNER: Not on the figure, no.

MR. ZIMMERMAN: Oh, well, what, what's the answer? How many are there?

MR. LEFFNER: I'm not sure the number.

MR. ZIMMERMAN: You didn't even try to find out?

MR. LEFFNER: I don't remember the number. I believe it's published somewhere, but.

MR. ZIMMERMAN: Okay.

MR. LEFFNER: I'm not going to guess.

MR. ZIMMERMAN: You didn't include it because you didn't think it was going to help your case, isn't that correct?

MR. MUDD: Objection.

ALJ: All right. Mr. Zimmerman, now you're arguing with him.

MR. ZIMMERMAN: No, well, I mean, I'm asking him why he didn't include it --

ALJ: (inaudible) --

MR. ZIMMERMAN: -- it's an obvious thing to include if you're going to --

ALJ: -- (inaudible) but that's their case and they can prepare their case the way they want to prepare it. But you made the point that he, you asked the number of homes and he said he doesn't know what the number is.

MR. ZIMMERMAN: Okay and generally speaking, is land use intensity higher where there's public sewer than when there's not public sewer?

MR. LEFFNER: Not necessarily. But I would say yes, there's a tipping point to where --

MR. ZIMMERMAN: Yeah.

MR. LEFFNER: -- septic systems only allow such a divert, dense development.

MR. ZIMMERMAN: And are there institutions on public sewer in the Jones Falls sewer shed?

MR. LEFFNER: By institutions you, are you referring to like hospital systems or schools?

MR. ZIMMERMAN: Is, is G, is GBMC in the sewer shed?

MR. LEFFNER: Yes, I believe so.

MR. ZIMMERMAN: How about St. Joseph's Hospital?

MR. LEFFNER: Not sure.

MR. ZIMMERMAN: We're talking about the Jones Falls sewer shed by the way. How about Towson University?

MR. LEFFNER: Yes.

MR. ZIMMERMAN: Okay. How about Greenspring Station?

MR. LEFFNER: Yes.

MR. ZIMMERMAN: That, that being commercial. How about the Johns Hopkins Pavilion at, at the Greenspring Station area?

MR. LEFFNER: Yes.

MR. ZIMMERMAN: Okay. You didn't include those in your exhibit, did you?

MR. LEFFNER: No.

MR. ZIMMERMAN: Okay.

MR. MUDD: Objection, objection. Which, which exhibit?

MR. ZIMMERMAN: The exhibit that showed the agricultural, should we, maybe we, if you want to share it here, it's one of the Developer's exhibits from today that showed some agricultural area, that showed some septic systems and, in the Jones Falls sewer shed. Maybe, all right, why don't we put it up? Maybe some, if somebody wouldn't mind sharing it. I can, I can try to look through my notes and find the number.

MR. MCCANN: Which exhibit, Pete?

MR. ZIMMERMAN: It's the exhibit, Mr. Leffner, do, do you remember your exhibit where you were showing the Jones Falls sewer shed and how many septic systems you thought there were and how much --

MR. MCCANN: Yeah, I can find --

MR. ZIMMERMAN: -- agriculture and so on? I mean, I don't want to have to take a few minutes to go through my notes. I'm sure Mr. Mudd or Mr. Leffner know --

MR. MUDD: I have it, I have it up.

MR. ZIMMERMAN: Okay. Can we see it? There we go. Okay. I'm not going to belabor the point, Mr. Leffner, but you made an effort to, to show septic systems and, and so on, but not any institutions or any homes on public sewer or commercial developments on public sewer, correct?

MR. LEFFNER: I mean, any of those that are located in this vicinity are shown, they're just not highlighted.

MR. ZIMMERMAN: Right. What's the square, and you didn't give numbers on it like how many there were and how much sewage they would generate, did you? You didn't, right?

MR. LEFFNER: No, those would be included in the studies.

MR. ZIMMERMAN: Yeah, and what's the, can you give us about how many square miles are included in the Jones Falls sewer shed?

MR. LEFFNER: I, earlier I said I forget the total acreage.

MR. ZIMMERMAN: Can't even, can't even come close in miles, in square miles?

MR. MUDD: Objection. You ask him to speculate, the witness said more than once he doesn't know.

ALJ: Yeah, he actually said that on direct. He does not remember that, that data.

MR. ZIMMERMAN: And are you, okay, are you an expert on septic systems? Is that part of your expertise?

MR. LEFFNER: I'm not, not an expert in the design of septic systems.

MR. ZIMMERMAN: Okay. Now, you wouldn't know whether they, they're designed to take care of the sewage, whether or not it's raining or not raining? Can you answer that?

MR. LEFFNER: I mean, I can, I can say that they're designed not to treat rainwater, so.

MR. ZIMMERMAN: Yeah.

MR. LEFFNER: Yeah, rainwater can contribute to backups, --

MR. ZIMMERMAN: Okay.

MR. LEFFNER: -- as well as --

MR. ZIMMERMAN: Okay. I want, I'd like to share an exhibit on Lake Roland, which I sent a few minutes ago to the other attorneys, which parallels, to some extent, Developer's

exhibit. Okay. Let's see if we've got it. Okay. Can everybody see my Lake Roland exhibit?

MR. LEFFNER: Yes.

MR. ZIMMERMAN: Okay and this is from the web, Baltimore County. I'm scrolling down. Do, do you see, Mr. Leffner, there's a link to current testing results?

MR. LEFFNER: Yeah, that says good.

MR. ZIMMERMAN: Yeah, current good, yes, current good. But as you pointed out in your direct testimony, I think, E.coli levels can fluctuate, right?

MR. LEFFNER: Correct.

MR. ZIMMERMAN: Okay and, and, and in the exhibit you produced, there was some fluctuation, wasn't there?

MR. LEFFNER: There was.

MR. ZIMMERMAN: Okay. So, let's take a look. Okay. Wait a minute, where's, oh here. Okay, so here's actually the same map that the Developer produced of the location, the sample locations, right?

MR. LEFFNER: Correct.

MR. ZIMMERMAN: Okay, okay. So, let's, let's look at the latest water sampling results.

MR. MUDD: I'm going to object to the ongoing testimony about this exhibit.

ALJ: Ongoing testimony?

MR. MUDD: Well, I'm sorry, ongoing questioning,

pardon me. Before, before we continue questioning, I have, I have an objection to asking questions about this exhibit.

ALJ: Okay. So, what's your objection?

MR. MUDD: I don't think a foundation has been laid for where this information has come from.

ALJ: Oh, he said the County website earlier.

MR. ZIMMERMAN: Well, it, it's actually, it, it is a County document. The County runs Lake Roland and I, do I have to scroll all the way back? But it's available on the web. There's the Baltimore County, Maryland logo. Anyone can look at it on the web.

ALJ: Well, is this on the County website?

MR. MUDD: It looks to me to be from (inaudible) --

MR. ZIMMERMAN: I don't know, I don't --

MR. MUDD: -- (inaudible).

MR. ZIMMERMAN: Yeah, I don't, I don't know if it's on the County website. I googled Lake Roland Park, and this is what came up and I don't think the water sampling is, parts of it are similar to what we saw from the Developer. And I don't remember where they got their information, frankly --

ALJ: From the County, from the County website. So, Mr. Mudd, the, the map looked like the same one that you had. Is this where you got your map?

MR. MUDD: No, I mean, I'm sorry. The map was obtained from the Lake Roland website, correct. And it's the

same map that was used in the Torch Hill case. And I have no objection to the water sample results that Mr. McCann submitted, which were clearly from the website. I do have concerns about potential third party testing of this. That, that's not a County government source.

MR. ZIMMERMAN: Well, I'll tell you what. Some of the data, this is more recent, this comes up to more recent than the Developer's exhibit. But we can put the exhibit, we can, it goes back far enough, and we can see whether the, the earlier sampling matches the Developer's sampling and then we can --

MR. MUDD: (inaudible) they were not our develop, they were not our exhibits, first, Mr. McCann. Well, excuse me, Mr. Zimmerman. They were Mr. McCann's exhibits. And it still doesn't answer the question about where this information is coming from.

ALJ: Right. So, so, if it's, it's a County document, if it's a County document from the County website, then that would make sense. We already have that, unless this is updated. But this looks like it's not from that, it looks like it's from some other Lake Roland Council or something.

MR. ZIMMERMAN: Well, okay.

ALJ: That's what it says at the top, right? At the top of the document, that's what it said.

MR. ZIMMERMAN: It's, yeah, we'll go back. It's the

Lake Roland Nature Council. It also has a Baltimore County, Maryland logo, Baltimore County runs the park, we know that. So, to, to say that it should be excluded, I think, goes too far.

ALJ: Well, Lake Roland Nature Council is a different entity that's not here and, and so we don't, we can't --

MR. ZIMMERMAN: All right.

ALJ: -- again, it goes back to like the other, the other attorneys here can't cross examine on what the information --

MR. ZIMMERMAN: Okay, all right. Let's, okay, all right. Well, --

ALJ: You can use Mr. McCann's. He has --

MR. ZIMMERMAN: All right. Let's, I guess, I would just offer it and it's been, obviously you've sustained the objection so. I would ask it be, I would ask it be i.d., just for i.d.

ALJ: Yeah, no, --

MR. ZIMMERMAN: So, let's go to Mr. McCann's exhibit then.

ALJ: So, what was, what was the number going to be for that, what --

MR. ZIMMERMAN: Forty-four. Sorry, forty-four.

ALJ: Forty-four, --

MR. ZIMMERMAN: And I did send it, I did send it a

little while ago --

ALJ: Okay. So, you said thirty, thirty --

MR. ZIMMERMAN: -- to everybody.

ALJ: -- thirty-four or forty-four?

MR. ZIMMERMAN: Forty-four, forty-four.

ALJ: Forty-four, got it, okay.

MR. ZIMMERMAN: Forty-four.

ALJ: It's not admitted then so, and just for the record.

MR. ZIMMERMAN: Right, i.d., i.d. So, I think I can stop sharing at the moment, so I'll do that. I think I know how to do that. If Mr. McCann wouldn't mind putting up his exhibit that was admitted. And, and, and let's see if we can, okay. So, --

MR. MCCANN: This is Exhibit 75 for the record.

MR. ZIMMERMAN: Exhibit 75. So, Mr. Leffner, do you, you can see how the, --

MR. MUDD: You're sharing e-mails.

ALJ: Yeah.

MR. ZIMMERMAN: I've lost, I've lost it.

ALJ: That's all right. Mr., yeah, Mr. McCann, be careful. We're reading your e-mails.

MR. MCCANN: Sorry, guys. Sorry.

ALJ: No, we just don't want to have, I'm sure you don't want to share your e-mails.

MR. MCCANN: No.

MR. MUDD: Mr. McCann, Mr. Rosenblatt sent you a thank you note e-mail, we can look at that one.

MR. MCCANN: I know he did. He always sends me things like that, nice little notes.

ALJ: Look at that, look at that.

MR. ZIMMERMAN: Okay. So, so you see how the sampling i.d. numbers, we'll start with the most recent on this exhibit, August 18th, 2022. It's E.coli MPN. Do you know what MPN stands for, Mr. Leffner?

MR. LEFFNER: I forget the acronym.

MR. ZIMMERMAN: Do you have any idea?

MR. LEFFNER: It, it's, I don't want to mess it up.

MR. ZIMMERMAN: Okay. Would, to maybe see if I can refresh your recollection, would it be most probable number?

MR. LEFFNER: I believe so, yes.

MR. ZIMMERMAN: Okay and then it would be the numbers, do you remember per how many milliliters?

MR. LEFFNER: Of the sampling? I don't.

MR. ZIMMERMAN: Yeah, per like, you don't know whether it's like standard per, per hundred milliliters?

MR. LEFFNER: It is standard, the exact number of milliliters I don't recall.

MR. ZIMMERMAN: Okay. Can Mr. McCann scroll down? Obviously the numbers, and do you know whether or not if the

number gets above a hundred, that that's major, major pollution issues?

MR. LEFFNER: There's a threshold both on the, the testing limits that they'll report and when that would be considered a concern.

MR. ZIMMERMAN: So, let's go, let's go, scroll down, keep scrolling. So, then you get July 20th, 2022, it's, it's all of a sudden up to nine hundred twenty-one, you see that?

MR. LEFFNER: I do.

MR. ZIMMERMAN: Okay. So, do you know whether or not that indicates a, a massive pollution problem?

MR. LEFFNER: Not necessarily a massive pollution problem. I think all four, five of those samples were taken at the same time and they're all relatively in the same area and you can see the variability between each of them.

MR. ZIMMERMAN: Yeah, okay. So, if we, if the literature says one hundred is the threshold then you're at nine twenty-one, you just, do we just blow that off? I mean, well, that's my question. I mean, do we just disregard it, excuse me for being more colloquial.

MR. LEFFNER: If, if that's what was measured, I don't think you blow it off, as you said.

MR. ZIMMERMAN: Okay. Let's go down further just so we see what's, by the way, it says other parameters. Do you know what that is? Do you know what that means?

MR. LEFFNER: It, it's, essentially, other measurements that were taken in the sample.

MR. ZIMMERMAN: And do, do you have any expertise to tell us whether that number would be a problem, the one ninety on the other, the others?

MR. LEFFNER: No.

MR. ZIMMERMAN: Okay. Let's keep scrolling down, see what we find. Let's see. Wow. May 23rd, 2022, greater than twenty-four twenty. What do you have to say about that?

MR. LEFFNER: That's a lot higher than the others.

MR. ZIMMERMAN: The fact that it, it fluctuates, the fact that these numbers fluctuate, you know, in some months it's under, well under a hundred, isn't it a reasonable inference that the variation has to do with storm events and sanitary sewer overflows related to the storm events?

MR. LEFFNER: I think there's a lot of factors that could contribute to it.

MR. ZIMMERMAN: Yeah, okay. Okay. Have you done any analysis of this or are you, is that part of your expertise, I mean?

MR. LEFFNER: I've done no analysis of it, no.

MR. ZIMMERMAN: Okay. Have you discussed, I know you presented some exhibits in your direct testimony. Have you, have, do you have any documents from the Department of Environment, which would support any suggestion by you that

there's not a pollution problem in Lake Roland or that sanitary sewer overflow has nothing to do with it? Do you have any documents from the Department of Environment on that?

MR. LEFFNER: The Maryland Department of the Environment?

MR. ZIMMERMAN: No, the County Department of Environment.

MR. LEFFNER: Stating what?

MR. ZIMMERMAN: Stating that there's no problem in Lake Roland as far as E.coli pollution goes and any way sanitary sewer overflow is, is irrelevant and has nothing to do with it? Do you have any documents from the County to suggest that?

MR. LEFFNER: I don't, there's nothing specific from the County that says --

MR. ZIMMERMAN: Okay.

MR. LEFFNER: -- (inaudible) that.

MR. ZIMMERMAN: And as far as the stream sense sign, that stream sense sign, correct me if I'm wrong, and I'm paraphrasing, basically says don't touch the water, right? Is, am I wrong? Am I misrepresenting it?

MR. LEFFNER: No, I think it says to avoid water contact.

MR. ZIMMERMAN: Yeah, and you wouldn't let your dog swim in Lake Roland, would you? If you have a dog.

MR. LEFFNER: I have a dog, but I'm not a member of the dog park when I go there, so.

MR. ZIMMERMAN: Okay. You've been to Lake Roland Park recently?

MR. LEFFNER: Yes.

MR. ZIMMERMAN: Have you? Yeah, okay.

MR. LEFFNER: Yeah, I frequent it.

MR. ZIMMERMAN: Okay, yeah. Okay. Okay. I think that's, thank you, Mr. McCann, I think that's enough on that subject. As far as the potential sewage generation if this development were approved, correct me if I'm wrong, I think you said, you estimated nineteen thousand gallons per day?

MR. LEFFNER: Correct.

MR. ZIMMERMAN: Is, did I get that right?

MR. LEFFNER: Correct.

MR. ZIMMERMAN: Okay. How did you come up with that number?

MR. LEFFNER: The Baltimore County sewer design manual.

MR. ZIMMERMAN: Okay. So, did you happen to multiply that by three hundred sixty-five days to see what the annual generation would be?

MR. LEFFNER: I did not.

MR. ZIMMERMAN: Does six thousand nine hundred and seventy, or nine hundred and thirty-five thousand sound in the

ballpark?

MR. LEFFNER: I can get a calculator if you want me to multiply it.

MR. ZIMMERMAN: All right. Well, I don't want to take too much time. We can all do the numbers. Do you agree that modeling is state of the art for evaluating these sewer systems? That, that it was reasonable for the Consent Decree and all the reporters reporting to do modeling?

MR. LEFFNER: Yeah, modeling is common practice.

MR. ZIMMERMAN: Okay and are you an expert on types of models and running models and finding errors in models and, and/or their, either choice of models or their implementation?

MR. LEFFNER: It depends on the models. I'm not familiar with all different types of models.

MR. ZIMMERMAN: Okay. Were you familiar with the models used by RKK or RJN?

MR. LEFFNER: Some of them, yes.

MR. ZIMMERMAN: Some of them no. Which, which ones were you familiar with and which ones not?

MR. LEFFNER: I forget all the models they used.

MR. ZIMMERMAN: Okay. Anyway, you didn't try to do a study of how they modeled and their choice of model to suggest that, that they made a mistake in their modeling choice or their implementation?

MR. LEFFNER: No.

MR. ZIMMERMAN: Okay and to the best of your knowledge, has the County, MDE or EPA stated anywhere that there was any error by any of these companies in their modeling?

MR. LEFFNER: I don't recall any.

MR. ZIMMERMAN: Okay. So, it looks like, correct me if I'm wrong, the County has had four consultants in more or less the last decade with Hazen around for a second go at it. Is that a fair description?

MR. LEFFNER: They retained multiple different companies to do studies, yes.

MR. ZIMMERMAN: Did you ever look into why the consultants kept changing?

MR. LEFFNER: No, but I think large studies that are solicited by a jurisdiction are, it's pretty common that they may change companies.

MR. ZIMMERMAN: Yeah, I mean, so you don't know why they didn't just stick with RKK or at least stick with RJN after they did theirs?

MR. LEFFNER: I don't.

MR. ZIMMERMAN: Based on what we've seen, what would be the most reasonable estimate as to how many more consulting studies we'll see in the next ten years?

MR. LEFFNER: That would be a total guess.

MR. ZIMMERMAN: Yeah. Now, as far as Hazen goes, is

there some documentation indicating that a further report, a larger, I guess a larger document, is expected this fall of 2023, is that, am I, is my understanding correct?

MR. LEFFNER: I believe, yeah, that there's a deliverable expected later in 2023.

MR. ZIMMERMAN: And, and is it reasonably foreseeable that it will address the Consent Decree in some way?

MR. LEFFNER: I'm not sure. I don't think it'll be specific to the Consent Decree requirements.

MR. ZIMMERMAN: Have you checked with the people at Hazen?

MR. LEFFNER: No.

MR. ZIMMERMAN: Okay and while you called it a planning document, it projects a study of fifty years out, correct?

MR. LEFFNER: I believe that's part of it, yeah.

MR. ZIMMERMAN: Okay. Isn't it just as reasonable an inference that the fifty year, well, let me withdraw that for a moment. Has, to the best of your knowledge, has anyone in the County or MDE or anybody criticized Hazen for their publication, or claimed it was erroneous or problematic --

MR. MUDD: Objection. Relevance.

ALJ: Yeah, so, Mr. Zimmerman, I'm not sure why, why you're asking that question.

MR. ZIMMERMAN: Well, I want to know if there's been

any criticism of, of Hazen's publication so far in, in writing. Or whether we can take the Hazen publication as being meaningful.

ALJ: Okay. Well, all right. Overruled to the extent Mr. Leffner, do you know that answer?

MR. LEFFNER: I have no idea.

MR. ZIMMERMAN: Okay. Isn't it just as reasonable to infer that the fifty-year horizon referred to by Hazen, means that the County is nowhere close to complying and resolving the Consent Decree and they've got, they've got so much more work to do? Isn't that a reasonable, as reasonable an interpretation, if not more reasonable than your suggestion that this is just kind of a make way planning document?

MR. LEFFNER: (inaudible).

MR. ZIMMERMAN: Okay. But you never made it an inquiry of Hazen as to the significance of their publication, did you?

MR. LEFFNER: (inaudible).

MR. ZIMMERMAN: Um hm. Okay. To the best of your knowledge, is there any document from the Environmental Protection Agency or the Maryland Department of Environment indicating that based on what the County has done so far, it's, there's a reasonable expectation that the Consent Decree will be totally resolved within the next several years?

MR. LEFFNER: (inaudible).

MR. ZIMMERMAN: Okay. Okay. You mentioned something about field inspections. Are you suggesting that relates to sanitary sewer overflows?

MR. MUDD: Objection. Form, form of the question.

MR. ZIMMERMAN: Well, I, I don't mind rephrasing it.

ALJ: If you could rephrase it, Mr. Zimmerman?

MR. ZIMMERMAN: Well, what was the relevance in your mind of mention of field inspections? What does that have to do with what we're talking about?

MR. MUDD: Same objection. I'm not sure what field inspections he's referring to. And I'm not sure (inaudible) --

ALJ: Yeah, I think he used the term field verification when he was testifying.

MR. ZIMMERMAN: Okay.

ALJ: So, I think it was field verification (inaudible) --

MR. ZIMMERMAN: All right, field --

ALJ: -- it hasn't been, it hasn't been, he said it hasn't been verified in the field, I think is what Mr. Leffner said. But so, --

MR. ZIMMERMAN: Okay.

ALJ: -- Mr. Leffner, what, what was the significance of, of the field verification?

MR. LEFFNER: I think it goes back to when I said the difference between model predictions and realized --

MR. ZIMMERMAN: Okay.

MR. LEFFNER: -- is actually occurring in the field.

MR. ZIMMERMAN: Okay. So, first of all, the emphasis in the Consent Decree and all the reports is using the modeling, isn't that correct?

MR. LEFFNER: Well, there's an emphasis on modeling, as well as verification.

MR. ZIMMERMAN: Okay, all right. Well, let me ask you this. Have you ever heard of the term ISR, kind of used in the military?

MR. LEFFNER: Not sure I have.

MR. ZIMMERMAN: It, it's like intelligence surveillance reconnaissance. So, if I can use that as a metaphor, does the County have some mechanism or system where the moment there's a significant storm, the County immediately knows whether it's a two year storm, any of those storms that, that are, that are in those reports, there's some immediate communication with somebody in the County that there's a storm of this magnitude that's within the Consent Decree and the studies, and they immediately send somebody out to every single manhole and they give a report on a sanitary sewer overflow? Is there any system like that?

MR. LEFFNER: I'm not sure.

MR. ZIMMERMAN: Okay. I mean, is, is there any document which records, that the County has produced, that

records every single storm of the type that's reviewed in the report and who went out immediately to all the manholes, if anyone did, and reported on the level, if any, of sanitary sewer overflows? Is there anything like that?

MR. LEFFNER: So, that was a bunch of questions. Yes, part of the Consent Decree and the studies that have been done include establishing or using rainfall data collection points. They're identified in one of the exhibits. I think they had specifically as part of the Consent Decree kind of surround the County and the study areas.

So, there, there is rainfall monitoring data. Specific to showing up at every single manhole (inaudible) during the specific storm event, I'm not sure what the emergency response action plan for the County fails. There are --

MR. ZIMMERMAN: (inaudible) go ahead. I'm sorry, I didn't mean to interrupt you, go ahead.

MR. LEFFNER: Yeah, like that would just be based on weather predictions and I think we all know how accurate or inaccurate those can be. So, it, it, the more likely response to a problem would be the, the level monitoring stations that are located at pump stations, that are located at (inaudible)--

MR. ZIMMERMAN: Okay and --

MR. LEFFNER: -- (inaudible) it's not just a censor to say that it's overflowing, come and check on it. Both at

pump stations and the level censors in the manholes, there's typically stages. So, once it gets above a specific stage, there's a likelihood that a problem could exist and then, you know, someone could report to the area to see whether A, it even happened or if it just hit that kind of first level censor. Or B, if it does, try to resolve the issue.

MR. ZIMMERMAN: But to make a long story short, there's no immediate, whether you call it emergency, there's no immediate response system that every time there's a storm, the County knows precisely the level of the storm and they, they have staff to go out to every manhole, and/or other facility and check what's going on?

MR. LEFFNER: Again, they're, the County's standard practices, I'm not sure of all the details.

MR. ZIMMERMAN: Yeah, and which department would, would even do that, do you know?

MR. LEFFNER: I don't know. I would assume.

MR. ZIMMERMAN: And isn't, isn't it the reason why modeling is so important, that, that it's really not practical to, to have a massive kind of field verification program?

MR. LEFFNER: Modeling is used for a lot of different purposes, but I would say modeling can help identify potential problem areas.

MR. ZIMMERMAN: Yeah.

MR. LEFFNER: (inaudible) get a heightened level of

response.

MR. ZIMMERMAN: So, how did the EPA know back in the period leading up to the 2005 Consent Decree that there were major problems in the Baltimore County and the Jones Falls sewer shed? How, how did they know that?

MR. LEFFNER: I'm not sure how they came to the conclusion.

MR. ZIMMERMAN: Um hm. Okay. Let me ask you something. Since you made some reference to staff of the Department of Public Works, would that be Mr. David Bayer and Lisa Eicholtz?

MR. LEFFNER: They're among their staff, yes.

MR. ZIMMERMAN: I mean, are those the ones you were referring to when you were able to testify that you had some discussions?

MR. LEFFNER: Yeah.

MR. ZIMMERMAN: Did you ever ask them or suggest to them that it would be a good idea that they come in and testify and explain what's going on from their point of view?

MR. LEFFNER: I don't think that's my place.

MR. ZIMMERMAN: Um hm, okay. Okay. Let me ask you a few questions about the stormwater management. You've explained why you disagree with Mr. O'Leary, correct?

MR. MUDD: I'm going to object to any questions by People's Counsel for stormwater management issues.

ALJ: I was just going to ask, can you tell me again, Mr. Zimmerman, why (inaudible) --

MR. ZIMMERMAN: Yeah, it's in one of my exhibits, sorry, it's in one of my exhibits. This issued was raised, you know, some, maybe months ago by Mr. Rosenblatt and I had to include in the exhibits the portions of master plan 2020 on stormwater management.

ALJ: Okay, that's right. I remember now.

MR. ZIMMERMAN: Yeah.

ALJ: He did, he did, and it was objected to before.

MR. ZIMMERMAN: Yeah.

ALJ: So, we did allow it, so (inaudible) for the reminder --

MR. ZIMMERMAN: Yeah, my memory is not totally shot, so.

ALJ: Okay, thank you.

MR. ZIMMERMAN: I, this won't be too long actually.

ALJ: Okay, all right.

MR. ZIMMERMAN: So, what I'd like to ask you, Mr. Leffner, is whether you made any inquiry of the County to get some document from them, or even an e-mail frankly, to support your point of view that the meadow is not the appropriate criteria. Do you have any document from the County on how they were looking at it and what's, what's the appropriate way to interpret the, the manual? I mean, a document?

MR. LEFFNER: No, I, I'd say the document would be implementing standard design practices with the submission of our concept plan, which was ultimately approved by County staff.

MR. ZIMMERMAN: Well, where, what document do you have in evidence here to indicate that the County has, in fact, approved your plan? Is there any document you can point to?

MR. LEFFNER: There was the concept stormwater management report. I believe that was one of the earlier exhibits.

MR. ZIMMERMAN: Can you tell us what exhibit it is?

MR. LEFFNER: I don't know the number.

MR. ZIMMERMAN: Can anyone, all right. Let, let me, let me share one more thing. I think I know how to do it. Okay. So, do you, back in March 9th, 2021, there were development plan review comments. This is People's Counsel six. Do you remember this? Actually, it has, it's confusing, it has March 8th, 2020, that might be an error. So, for the concept plan conference, March 9th, 2021, do you remember this document?

MR. LEFFNER: Yeah, I believe so.

MR. ZIMMERMAN: There was, there was some discussion of, I'm looking at number twenty-three, number twenty-four, twenty, you know, there was some discussion of storm drain and flooding issues, correct?

MR. LEFFNER: In those comments, yeah.

MR. ZIMMERMAN: Yeah. So, really, the only question I have, is there any subsequent comment from, from the County updating this that you're aware of, from DPR, Development Plans Review, or, or any other department discussing the stormwater management or Department of Environment?

MR. LEFFNER: I think it was the later approvals.

MR. ZIMMERMAN: Yeah. Is, is there any document that you have in evidence that you can refer us to?

MR. LEFFNER: I'm not sure.

MR. ZIMMERMAN: Okay.

MR. LEFFNER: The, the initial development plan process hearing cited, I wasn't able to attend all of them. So, I'm not sure what was entered in in earlier hearings.

MR. ZIMMERMAN: All right. Well, Judge Murphy, I see the witching hour is upon us, so to speak, and it, so I think I can, I can leave it there, Judge Murphy. Thank you for all your respectful rulings, even those that don't necessarily agree with me. Okay.

ALJ: All right.

MR. ZIMMERMAN: I'm going to stop.

ALJ: Thank you, Mr. Zimmerman. So, we, we don't have Mr. Wyatt. Mr. McCann, any idea where Mr. Wyatt is?

MR. SACHSE: I, I know.

ALJ: Oh, Mr. Sachse?

MR. SACHSE: Yeah, he texted and said he had a client emergency and to let you know once it was his turn, that he had to go, he couldn't stay.

ALJ: He could not stay. Okay, all right. So, yeah, I, we would have called him earlier, I mean, we could have let, taken him out of turn, but he's not here. Did, Mr. Sachse, did you have questions?

MR. SACHSE: No, I don't, no.

ALJ: Okay, all right. So, back to Mr. Mudd. Any re-direct?

MR. MUDD: Just a very, very few. Thank you very much. Mr. Leffner, we'll get you out of here quickly. I know it's been a long day. Which, which, which County Department approves stormwater management plans?

MR. LEFFNER: Stormwater management plan we submitted, DPR.

MR. MUDD: DPR or, or, --

MR. LEFFNER: The Public Works Department reviews it.

MR. MUDD: Okay, all right. Let's, let's talk a little bit about, I want to show you development plan exhibit, I'm sorry, Developer's Exhibit. Sorry, bear with me. There we go, sorry. This Exhibit 61, can you see that?

MR. LEFFNER: Yes.

MR. MUDD: All the dark blue lines, what are those meant to reflect again?

MR. LEFFNER: Water courses.
MR. MUDD: And what do those water courses run to?
MR. LEFFNER: Lake Roland.
MR. MUDD: And what would happen in a storm event along those water courses?
MR. LEFFNER: They'd all drain to Lake Roland.
MR. MUDD: Okay. I think that's all I have. Thank you.
ALJ: Okay. Thank you, Mr. Leffner.
MR. LEFFNER: Thank you.
ALJ: All right. So, I think that is it, right, Mr., Mr. Mudd? That is all your case for rebuttal, right?
MR. MUDD: Correct.
MR. ROSENBLATT: That's all.
ALJ: What was that, Mr. Rosenblatt?
MR. ROSENBLATT: That's me.
ALJ: You just wanted to say something? Oh, wait, I'm sorry. Did you, are you, you have a case? You have somebody to put on?
MR. ROSENBLATT: No, that's all. We're, we're done with rebuttal.
ALJ: Oh, you just wanted to shout that out?
MR. MUDD: Mercifully, we're finished.
ALJ: Mercifully, oh, my. I can't believe it. So, all right. So, then I'm going to say housekeeping, Mr. McCann,

you owe me a revised exhibit list and Protestant's 109, 110, I don't know if you sent them by e-mail yet, but just e-mail them and, you know, drop them off (inaudible) do it today.

MR. MCCANN: (inaudible) and 111.

ALJ: Oh, yeah, 111, that's right, 111.

MR. MCCANN: And then, and then a new LTC report that includes that appendix, appendices.

ALJ: Yeah, that includes the append, so yeah, three exhibits, so a new exhibit list with that. So, I mean, again, you don't have to do that today.

MR. MCCANN: Okay.

ALJ: So, of course, that leaves us with memos in lieu of closing argument. And so, let me ask, Mr. Sachse, were you going to write something?

MR. SACHSE: Is it okay to, yeah, I, I don't know. I, I, I hadn't really planned on it, but.

ALJ: Okay. Yeah, you can think about it. But, but we need to come up with a date, so.

MR. SACHSE: Right, right.

ALJ: You know, there's a lot of dates here, so everyone, I mean, obviously thirteen days. I don't know if you all had the, or if you even need to get the, you know, copy of the, of the recording from our office.

But, you know, I'm not sure if people need that in order to prepare their memo in lieu of closing or, or how you

guys are going to do it. But, you know, we just, we need these, some time here to get everyone to write their memos, file them and then just to make sure I have time to read them. So, because obviously I want to, to read them carefully.

So, I mean, we need to go, we need to at least go past June, right? I mean, you know, thirty days for this case with all these days. What, what's everybody looking like in terms of vacation and what, what, what is reasonable? Anybody thought about anything? I'll start with Mr. McCann.

MR. MCCANN: Yeah, I, I hadn't thought about it. But no, I, maybe, maybe into the, you know, a week into July, for instance, maybe Friday, July 7th, gives us an extra week than normal, which --

ALJ: Yeah, I was going to say the 14th of July, but we could even extend it. But, and I mean, I know it sounds a long time, it's really not with all these days of testimony.

MR. MCCANN: Part of the problem is, is I, I haven't gotten all the transcripts, I requested them, and I know that takes a lot of time.

ALJ: It doesn't really. They should just e-mail them to you. Did you already from our office? It takes, it takes two minutes.

MR. MCCANN: I didn't know you guys had the transcripts.

ALJ: Oh, yeah, we just, I mean, I get them as soon

as the hearing is done, just --

MR. MUDD: I, I think he means written transcripts.

ALJ: Oh.

MR. MCCANN: Yeah, I'm sorry, I get the, I get the written transcripts.

ALJ: So, you're saying you get the e-mail, and you have to send the e-mail or, excuse me, not the e-mail --

MR. MCCANN: Yeah, I send the video out to someone.

ALJ: Oh, oh, and you want to attach the transcript to it?

MR. MCCANN: Well, it takes, so not, not all of it, but I can certainly provide you with a copy of all of it. But, anyway, my point was that --

ALJ: If that's the way you want to do it, I don't, you know, so yeah, maybe it's going to take longer than that.

MR. MCCANN: Well, no, I actually have some already, I just don't have all of them.

ALJ: Okay.

MR. MCCANN: So, I don't want to, that's not, I shouldn't say that's a major reason for extending it. I'm happy to show you, I can give them to Chris and Adam if they want. But I think, the 14th would be great if that's what's being suggested, I think that would be better for me.

MR. ROSENBLATT: Yeah, that, that works.

ALJ: That works for you? How about Mr. Mudd, does

that work for you with vacations, whatever?

MR. MUDD: I'm along for the ride with Mr. Rosenblatt. So, yes.

ALJ: He's doing the work, got it. Right, yeah. And Mr. Zimmerman, (inaudible) --

MR. ZIMMERMAN: Yeah, that, that works fine. I do have some vacation, but the July 14th is fine, is fine.

ALJ: Okay. So, I'm going to put on, I'm going to tell, that was easy, it was just too easy. All right. Greenspring Manor memos due, so you know the rule, July 14th and you just submit them by 3:30, I think is what we always say, 3:30, you know, before that and just, you don't have to submit them before that, just, submit them before that. What's going to happen is people can read yours and reply, as you know.

So, we do it all, always do it simultaneous so that there's no like, you know, brief and then reply brief and all that stuff, because, so you're going to give an advantage to the other side if you file it e-mail, and it is --

MR. ZIMMERMAN: Paper copy, I'm sorry, paper copy as well?

ALJ: Paper copy, yeah, because we still have paper files, so it's not for me (inaudible).

MR. ZIMMERMAN: Right.

ALJ: It's for the file. Yeah, paper copies and e-mail, drop them off. So, if, Mr. Sachse, if you want to do

that, 3:30 July 14th. If Mr. Wyatt wants to do that, he's welcome to as well. He participated and I, I can't believe I want to say that's it. I feel like there must be something more that I'm missing. No?

MR. MCCANN: Nothing else from me.

ALJ: Okay.

MR. MCCANN: Other than thank you.

MR. SACHSE: (inaudible) raise something.

ALJ: You're happy to raise something? What more could you raise?

MR. SACHSE: I can't, but you know, just to make it more fun.

ALJ: More fun. We've had a great time, right, so.

MR. SACHSE: Again, I appreciate all of you.

ALJ: So, yeah, so, all right. So, and everyone here is, the same people are, just for the record, have been in attendance are the same people who have been here a lot of the time, not every single day, but a lot of the, the same people, the same names I recognize, so everybody has been in attendance. That's it, okay?

MR. MUDD: Judge Murphy, I think, I, I can ask Adam, I guess, but I'm sorry, did, what time did you say on the, on the 14th?

MR. ROSENBLATT: Three-thirty.

ALJ: I think we always, don't we always tell people,

I'm asking you all, I think it's always 3:30. I think at 3:30, just because, because that's when if you had to hand deliver it, that's when Debbie and Donna leave, I think, for the day.

MR. MUDD: Okay.

ALJ: They work like 7:30 to 3:30, I think that's their, their deal.

MR. MUDD: Gotcha.

MR. SACHSE: Just say 3:30.

MR. MUDD: Yeah.

ALJ: Right, yeah.

MR. MUDD: Okay.

ALJ: And, and I, I guess it wouldn't be the worse thing if you just, if, if you can't get it there hand delivered on Friday, you could always just, as long as you get it e-mailed by 3:30. And then if you wanted to deliver it, you know, when you got a chance, that, that would be fine because it's just for the file.

MR. MUDD: Okay.

MR. MCCANN: Okay.

ALJ: Okay, everyone.

MR. MCCANN: Thank you, Judge.

MR. ROSENBLATT: Thank you.

MR. MUDD: Thank you.

ALJ: That's it. Thank you all for, you know, really doing a great job. Everyone really did. A long, long, long

case, but, you know, we wanted to make sure everybody got to speak and, and all the documents got in. And of course, you all have outdone yourself again with the number, Mr. McCann exceeded his record for exhibits as usual. And so, you know, just going down into the Guinness Book of World Records for long hearings. So, --

MR. MCCANN: Thank you, Judge.

MR. MCCANN: -- appreciate everyone's, you know, patience and really get us all working together, so it really was a pleasure, as usual.

MR. MCCANN: Take care.

MR. SACHSE: Thank you, Your Honor.

MR. ROSENBLATT: Thank you, Judge.

ALJ: Thank you.

MR. SACHSE: Thank you again, everybody.

ALJ: Bye.

MR. ZIMMERMAN: Thank you.

ALJ: Okay.

(OFF THE RECORD0

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, May 31, 2023, was recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 254 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 20th day of June 2023.

Christine R. Leary

[ON RECORD]

ALJ: Good morning, everyone. You're attending day twelve, case number 08-0922 and 2021-250-SA. Property address 2310 West Joppa Road. This is the combined development plan and zoning case for the project known as Greenspring Manor. And can we have counsel for the record identify themselves, beginning with the Developer.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer.

MR. MCCANN: Good morning, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel.

ALJ: All right, looks like everyone is here. And Mr. Sachse, are you leaving us or are you staying? Usually you, you let us know. You're muted, go ahead.

MR. SACHSE: It's a, since it's Tuesday, no, I can stay.

ALJ: Okay, just making sure.

MR. SACHSE: Appreciate it though, appreciate you asking.

ALJ: Yeah, no, no problem, no problem. All right. So, my notes reflect that the last time we were together, it was day eleven and the Protestants, Mr. McCann, was not, had

not finished his case, he didn't rest because he had Public Information Act issues and he had wanted to make sure that he had all the documents that he had requested. And so, he was going to go back and do that.

There was a request by the Developers to request another hearing day, day thirteen. I did that. I don't know what's happened with that. So, I just, guess I'm back to you all. Let me know, Mr. McCann, where are we?

MR. MCCANN: Yeah, good morning again, Judge. Yeah, so we, based on the documents that I've gotten over the past several days, we are going to recall Mr. Summers and Mr. Grachek, but very, very briefly. I was thinking about with respect to Mr., Mr. Summers, just introducing a document, which, but I think I'll just call him for the couple minutes it will take to get the document in. So, yes, we, we, we will be doing that based strictly on the documents that I have received.

I've let Mr. Rosenblatt know about what's going on. The main problem I have, Your Honor, with that is that Mr. Grachek has a conference with multiple clients scheduled today and isn't available until about 1:00. So, I've asked Mr. Rosenblatt, I've made him aware of that and asked him whether or not he would mind putting any non-sewer rebuttal folks on after I put on Mr. Summers first thing. And I'm not sure we resolved that yet.

But the other thing I just wanted to real quick, Judge, if I could just tell you what has happened over the last couple days just for the record, to clarify what's going on. What happened with the PIA request. When we were here last it was Monday the 27th.

That afternoon is when I got the four rather, or three rather large folders, three or four large folders with all the documents in them from the County. I wasn't able to open that link because of the size. So, I e-mailed the County right away and it wasn't until Thursday of that week that I received the documents in a format that I could pull up individual files.

So, it ended up being seventy-seven hundred or so documents. So, I spent the next several days looking at all of those, finished that review this past Wednesday, I think, or Thursday and then passed some of the documents on, a number of the documents on to Mr. Summers and Mr. Grachek and my folks.

And then, over, over the weekend, including the weekend, they reviewed them, and we came to some agreement really, frankly, yesterday about what to do. Because Monday, Sunday night, Easter night, around 10:00 p.m., I received another folder of documents from the County, about eight hundred and twenty more documents.

So, that's just sort of what's been going on. I think I keep, kept Mr. Rosenblatt relatively informed about all

of that, but, as I said, the main problem today is that Mr. Grachek isn't available until 1:00. What I could do is put Mr. Summers on real quick. I do have number, six in total, exhibits that I sent to Mr. Rosenblatt and Mr. Mudd last time, which were sort of these e-mail clarifications that they had asked for and I said I would follow up on.

So, I sent those to them and I think, based on my response, response I got from Mr. Mudd, that they are okay with those six, six exhibits. So, I spent a little time getting those in and explaining to you what they are. But aside from that, we do have this issue of Mr. Grachek's unavailability.

ALJ: And, and so, Mr. Rosenblatt, do you need to hear from these witnesses to get these documents in or can you all look at them and say whether or not you would agree?

MR. ROSENBLATT: We, we likely can look at them. I think one was sent over this morning and Mr. Mudd can address that. I think that's the document that Mr. Summers would either testify to or not. Overall today, I, I'd say the proposal for us to, to put testimony on before everyone's rested is unusual.

But I, I really want to make use of this time. So, maybe if, if Mr. McCann can deal with whatever documents it is that Mr. Summers is here to address, we take care of that, and if every, if all the lawyers, all the parties, can agree that they have rested cases with respect to everything except what

Mr. McCann's going to talk about, sewer only this afternoon with Mr. Grachek, then I can use the morning to put on some rebuttal witnesses about other topics, other than sewer so we're not just wasting a couple hours.

ALJ: So, I guess, I guess my question was though do you actually need to hear from Mr. Summers or Mr. Grachek to get these documents in?

MR. ROSENBLATT: No, --

ALJ: In other words, could we just look at the documents and say, I mean, I'm not, I don't want to oppress you, but that's what my question was. So, we can avoid having more witnesses.

MR. ROSENBLATT: I, I have to ask Mr. Mudd. I guess we don't, we don't know what the documents are for Mr. Grachek --

ALJ: Oh, okay. I see.

MR. ROSENBLATT: We do know, just got an e-mail some time after 9:00 this morning with a document that Mr. Summers would address and, and I think probably the answer is no. I, I don't think we need testimony on top of that. If it, it's just a document that, Mr. Mudd, you want, you want to address whether you --

MR. MCCANN: For the one this morning, sure. So, the one that Mr. McCann sent us this morning, it looks like a, a, well, a, it's a record that was received from, from Baltimore

County's files. And it is a follow-up of the TMDL plan that Mr. McCann presented from, excuse me, 2006, I think. My only concern and, and might form into an objection, is that it, it indicates on its face that it's been submitted by MDE to the County but doesn't indicate that it's been approved by MDE. So, I would have, I'd be, I'd be, I think it'd be helpful to be able to ask some questions about that.

ALJ: Got it, okay. Yeah, that makes sense. I, I didn't want to suggest that you should just, you know, agree, but I also didn't want to make Mr. McCann go through these paces if we didn't, if we were just authenticating the document, yep. But you've made sense that you need to ask some questions.

MR. MUDD: That, that, that's fine and I don't think it's going to be too long, as --

MR. MCCANN: Yeah.

MR. MUDD: -- Mr. McCann said and, and then just to be clear, I think Mr. Rosenblatt indicated this, but we have, to the extent there are more documents coming for Mr. Grachek, we don't have those. And I'm not, I'm not saying that for any other reason than we, we can't, you know, we, I can't say right now whether or not we think Mr. Grachek needs to be called or not because we don't know what he would be called for. We don't have any documents related to that.

MR. MCCANN: Yeah, I, and on that issue, if I may,

Judge? I know I sent your office some new exhibits on, last week and I did that, frankly, out of an abundance of caution because I hadn't really even spoken to my experts about them. So, I'm going to withdraw a number of them and, at the end of the day, we're only going to introduce two, two new documents through Mr. Grachek, one of which I received Sunday night. So, I, I couldn't have provided to you. But I think on those two exhibits, I think a little of testimony from Mr. Grachek is required. But as I said, the, Adam and Chris, I really, really don't think it's going to take longer than a half hour just to get through the two documents. But I can, I can send, I can send those to, to them and so, I can do that.

ALJ: Yeah, you might as well just, can you do that now? I guess --

MR. MCCANN: Yeah, sure, I can do that now.

ALJ: -- to them? I, it, so it's fine with me. I just wanted to see just to make sure, again, I didn't want to have you, Mr. McCann, go through the paces of putting on an expert or a witness just to authenticate a document --

MR. MCCANN: Yeah, believe me, I didn't, I don't want to either.

ALJ: But, no, no, no, it's fine. I mean, if you all need to do that and then sounds like questions might need to be asked so, we can do that. We can accommodate. And so, but Mr. Rosenblatt then, went, sort of skirted to was, are you then

resting your case?

MR. MCCANN: Yes, yes, yeah, I'm resting, I'm resting and I, and I think I told Adam that. So, this would be it for us.

ALJ: Okay, agrees to rest, you agree to rest now and that you're just going to put Mr. Grachek on at 1:00?

MR. MCCANN: Well, Mr. Summers on real quick now.

ALJ: Yeah, yeah, I know.

MR. MCCANN: Yeah.

ALJ: Mr. Summers first. But I'm talking about Mr. Grachek though, you're resting, you know, except that you do have to put Mr. Grachek on at 1:00.

MR. MCCANN: Correct and just I'll, if I, if you want me to, I can explain these exhibits I'm withdrawing from your list, although they haven't been identified yet.

ALJ: Yeah, so, yes, I had, so that was my next thing. We had, last time, the last exhibit I had for you was 101 and that was in evidence, 100 and 101 were both in evidence. And then you've submitted since 102 through 107. And then, of course, we go back to 86 as well, because 86, we were, we were, we needed that, a document showing that it was part of the County's records, that was the Hazen scope of services.

MR. MCCANN: Yeah, and I have that as well.

ALJ: Okay.

MR. MCCANN: So, I'm withdrawing, just on that point, Your Honor, I'm withdrawing, 102 is the document that we've been speaking about, that Mr. Summers will speak to briefly. I'm withdrawing 103 that's on your list and 105, 106-A, 106-B and 106-C. And then, there was a new document that didn't make it to your list, which as I indicated, was received Sunday night, that'll be, I guess, 108, just to keep it clean.

ALJ: Yes.

MR. MCCANN: Okay.

ALJ: Whatever document that is, I don't know what document it is.

MR. MCCANN: Yeah, and those, the, the, that document and 104 I will send to Mr. Rosenblatt and Mr. Mudd now. I guess the other thing is, do you want me to go through these six e-mails? I can do it in just a (inaudible) --

ALJ: Yeah, actually, I was going to ask you to do that just so we have the record clear.

MR. MCCANN: Okay.

ALJ: Because there were, you know, objections to, I guess, them coming in. So, so, why don't you, yeah, go ahead. I have 64-A as the first one.

MR. ZIMMERMAN: May I say one thing, Judge Murphy?

ALJ: Yeah.

MR. ZIMMERMAN: First of all, to corroborate or, in reference to Mr. Rosenblatt's observation, last time I did say

that our office concluded its case. What I want to say about exhibits, there's been a lot of exhibit changes, exchanges, without us being involved. So, we, at the moment, we only have Exhibits 1 to 34 from the Developer, you know, in our computer. And we only have for the Protestants one to twenty-three, twenty-six, twenty-eight, thirty-five, forty-five, forty-six.

So, I would just ask that in due course, as convenient in the next few days if, if the other parties could, you know, send us online their exhibits so that we have a full exhibit situation. And, and we did provide you, I think, an update of our exhibits, including marked out which ones were withdrawn or not admitted and so on. And hopefully, everybody has all of our exhibits.

ALJ: We did that last time. There was only one of yours that wasn't admitted. It was that article from Howard County.

MR. ZIMMERMAN: Right.

ALJ: The last one. And there was just one issue with Mr. Rosenblatt.

MR. ZIMMERMAN: Right.

ALJ: I was looking at to make sure that the addendum was attached, was part of the master plan.

MR. ZIMMERMAN: Right.

ALJ: He sent an e-mail confirming that, right, Mr. Rosenblatt?

MR. ZIMMERMAN: Right, my point is, that I think, I think I, I think we sent all the exhibits to everybody. Everybody should have all of our exhibits. But we don't have most of everybody else's exhibits.

ALJ: Heard that, yep.

MR. ZIMMERMAN: So, I hope they could provide us with that. At least in the next few days.

ALJ: Mr. Rosenblatt, did, did I say that correctly? That you agreed that the addendum that Mr. Zimmerman attached was part of the master plan?

MR. ROSENBLATT: Yes, that's correct. And, and I just want to be clear. We only have submitted thirty-four exhibits. So, you have --

MR. ZIMMERMAN: Is that --

MR. ROSENBLATT: Yeah, you have all --

MR. ZIMMERMAN: Okay, then, okay, I'm sorry. I thought there were more, but --

MR. MUDD: There was, there was one more on rebuttal.

MR. ZIMMERMAN: Okay, all right then. If that's, then, then we have all of them. I've, for some reason, I thought there were more. But I definitely don't have the majority of Mr. McCann's exhibits.

MR. ROSENBLATT: Okay.

MR. ZIMMERMAN: Okay.

ALJ: All right, Mr. McCann, that sounds like another

job for you.

MR. MCCANN: Yep.

ALJ: At some point. But you're, you're still revising and moving this list, so let's go back to where we were.

MR. ZIMMERMAN: Okay.

MR. MCCANN: Okay.

ALJ: 64-A, I think you were on.

MR. MCCANN: Okay. Can I share, Your Honor?

ALJ: Yeah, oh, yeah, sure. Can you just, can you just use this? Oh, let's see.

MR. MCCANN: I think I got it.

ALJ: I don't even have to move it to you anymore. You can just --

MR. MCCANN: Yeah, okay. So, again, I sent these all to Mr. Rosenblatt and Mr. Mudd. The first one is 64-A. And this is, just by way of explanation, Your Honor, sixty-four was the chart that had the DPW sewer capacities on it. And this is the e-mail that confirms that the chart that we introduced as sixty-four is the sewer capacity for this development, for Greenspring Manor.

ALJ: Got it, okay.

MR. MCCANN: So, so that's sixty, 64-A.

ALJ: Yep.

MR. MCCANN: Okay and --

ALJ: And there's no objection, right, Mr. Mudd and Mr. Rosenblatt?

MR. MUDD: Correct.

ALJ: Okay. You'll jump in if there's an objection.

MR. MUDD: Yes.

MR. MCCANN: And then, the next one is 79-A. This is, there was, seventy-nine was a letter from MDE regarding the performance assessment for other sewer sheds, not for the Jones Falls, the approval, that is. And sixty, I'm sorry, 79-A is confirmation from MDE that the, that MDE has not provided any specific feedback nor approval for the Jones Falls performance assessment. And that's what this e-mail is, e-mail chain.

And then 80-A is, I think Mr. Mudd or Mr. Rosenblatt had asked for a complete e-mail chain on my correspondence regarding the Jones Falls performance assessment and its approval or not. So, this is, I said I would produce the complete e-mail chain and that's 80-A.

And then, 83-A is my PIA request from long ago asking for population data and, which I said I would produce. And then 83-B is DPW's response to that PIA request, with the population data attached.

And then lastly, on eighty-six, there was a question about whether the scope of service, services for Hazen had that, was the one, was the one that I had introduced, was the one that the County had accepted, or acted upon, I guess. And

then, this is e-mail confirmation, certification I think we called it, about the final scope of services and DPW confirmed that.

And then attached to the e-mail, just to keep it together, was the, the final one. I can't recall, but I think the one that I had introduced was a couple days before this January 29th date. So, this is the one that, as I said, DPW has certified is, was the final Hazen scope of service.

ALJ: Okay.

MR. MCCANN: And that's it.

ALJ: Okay, that was it.

MR. MCCANN: Yeah.

ALJ: Okay, all right. Hearing no objection, all of those are admitted.

MR. MCCANN: Okay.

ALJ: And then, we just go to the documents that you have that you need introduced today.

MR. MCCANN: Right.

ALJ: So, I guess we're going to call, at this point, unless there's something else, we'll call Mr. Summers back to the stand.

MR. MCCANN: Yes, please.

ALJ: Mr., I see Mr. Summers is here. Just want to turn your video on?

MR. SUMMERS: Not letting me, it's not letting me

turn it on. There it is.

ALJ: There it is. Yep, it worked. All right. So, we swore you in last time, but let me just, since it's been some time, if you could raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. SUMMERS: Yes, I do.

ALJ: Go ahead, Mr. McCann.

MR. MCCANN: Okay, thank you. Mr. Summers, I'm going to show you the document that's been marked as Protestant's Exhibit 102. Do you see this document?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. Tell us what it is and where it came from, if you would.

MR. SUMMERS: This was part of the PIA response from the County that you received recently.

MR. MCCANN: Okay and how would you characterize the document in whole? What exactly is it?

MR. SUMMERS: Well, this is a required implementation plan for the bacterial TMDL that I discussed in my testimony last time. And I had read through this implementation plan, and it follows along with the TMDL document that I testified on and basically I believe confirms what I said about the TMDL previously.

MR. MCCANN: Okay and just so we're, the record is clear, the, the, the TMDL report that you spoke about last time was Exhibit 96, I guess you may not know the exhibit number, but that was from 2006, is that correct?

MR. SUMMERS: Yeah, the 2006 TMDL plan talks about the bacteria, source load being dominated by human sources, that is restated in the implementation plan here. Based on the 2006 TMDL document, I calculated sixteen percent of the households in the watershed used septic systems and this report comes up with 15.8% of the population from septic systems.

MR. MCCANN: And when you say this report, you're referring to this new Exhibit 102?

MR. SUMMERS: The new exhibit, the, the 20, I believe it's dated 2014, correct? Yeah. Submitted to MDE 2014. So, that confirms that part of my testimony. It has some discussion of bacteria monitoring, which basically shows that while some of the data could be interpreted to indicate the improvements of the, additional work as necessary to meet the bacteria water quality standards with respect particularly to high flow concentrations, which I did discuss the high variability of bacteria data in the TMDL document from 2006. And there's really nothing in this report that would change my opinions on that.

MR. MCCANN: Okay. Rather than go through the document itself, could, if you could just identify for Judge

Murphy and counsel the, the page numbers in this report that, that, I think as you indicated, support your prior testimony?

MR. SUMMERS: Yeah, page 3-3 talks about the domination of bacterial sources by human sources. Page 5-6 talks about 15.8% of the population on septic systems. Page, pages 6-, or page 6-8 talks about bacteria data and what was observed there.

And the, page 6-8, I believe in the summary says based on results of current trend monitoring sampling indicates that while improvements have occurred, additional is necessary to meet the bacterial water quality standards, particularly with respect to high flow concentrations.

And that is not, that is consistent and does not indicate any statistically significant trends. It's just general statement and that, I believe, is consistent with what I said previously on the TMDL document.

That the data is just too highly variable to provide statistical trend of either improvement or degradation. Conditions are pretty much staying the same based on the very limited data that's reported, and all these reports acknowledge the limitation of the small number of samples and the high variability.

MR. MCCANN: Okay. Any other pages that just, at least for the record, that we should identify?

MR. SUMMERS: There are sections toward the end of

the report that talk about the different types of practices that need to be implemented to address bacteria. Page 8-2 says that sanitary sewer repairs are a major component and I think need to scroll down. I don't know the page number but Section 9.2.1 talks about reductions in human sources being most important.

MR. MCCANN: Okay. Right here? This is page fifty-nine of seventy-six, 9.2.1, that section?

MR. SUMMERS: Yeah, reductions to human sources. I'm sorry, I lost track of the page.

MR. MCCANN: That's okay. That's page 9-4 for the record. Okay. So, anything in this report, that is Exhibit 102, has anything changed the opinions you expressed when you testified before?

MR. SUMMERS: No, it, it, I believe, is consistent with my previous testimony.

MR. MCCANN: Okay and, and I think you mentioned it, but does this report, Exhibit 102, is this based on any new data than the report from 2006?

MR. SUMMERS: Yes, it does have additional data through, I believe, 2013.

MR. MCCANN: Okay.

MR. SUMMERS: So, it has some more current data in it. But it, as I've said, it doesn't change my opinions previously stated.

MR. MCCANN: Okay and then lastly, to your knowledge, was, was this report, it's indicated final on the first page, was it, was it actually approved by MDE to your knowledge?

MR. SUMMERS: Well, I did, based on receiving this report, dig more deeply into the web and I found a more current version of this report, the 2014 report I just mentioned, dated 2016, posted on the webpage at the County. And actually, I found it, a link to it on the MDE webpage, which then referred the reader to the County webpage.

So, while there's no definitive statement that was approved, it would appear that the 2016 version was approved. And I compared all the sections in that report to what I had just talked about in the 2014 report, and they are pretty consistent, except that the 2016 report includes data through 2015. So, it adds 2014 and 2015 data. But again, that, there's nothing in that data that would change any previous testimony I gave.

MR. MCCANN: Okay. So, just on that point, the, the, the 2016 report that you just referenced, is that consistent with your prior testimony in this case?

MR. SUMMERS: Yes.

MR. MCCANN: In fact, does it reenforce your testimony in the prior, previously?

MR. SUMMERS: It, it, it does in that 2014 and 2015 data show the same variability that the earlier data does. So,

it, it just confirms with a little bit more data the same points.

MR. MCCANN: Okay, all right. Thank you, Mr. Summers. Your Honor, I would move Exhibit 102 into evidence and I'm happy to move in the, the 2016 version that he just referenced. But I don't, I'm not sure it's necessary, but I'm happy to do that.

ALJ: Mr. Mudd, any objection to 102?

MR. MUDD: I, I do. I have the same objection just about the finality of this agreement, or of this document. I understand it came from a County file and it says what it says. But I would object on that basis.

ALJ: Okay. Well, we'll overrule, we're going to allow 102 into evidence. You can cross examine him on that point. So, any cross for him?

MR. ZIMMERMAN: Oh, can I ask a question? Or should I wait for Mr. Mudd?

ALJ: Sorry, Mr. Zimmerman, I did it again.

MR. ZIMMERMAN: Just one, just one or two.

ALJ: Sorr, sorry, Mr. Zimmerman. You're right. I'll, I'll go to you first. I, I keep forgetting that you're into this, this --

MR. ZIMMERMAN: Okay, thanks.

ALJ: My apologies, go right ahead.

MR. ZIMMERMAN: No, this will be brief. So, Mr.

Summers, as far as you know, there's no data after the 2016 review?

MR. SUMMERS: There is not a report that refers to more recent data. There is more recent data on the County webpage. But again, I've looked at that and it is highly variable limited sampling. So, all the previous statements I've made apply.

MR. ZIMMERMAN: Well, how much more recent is that data that you just mentioned?

MR. SUMMERS: Well, you can find data on the, the webpage of the County to a pretty current timeframe.

MR. ZIMMERMAN: So, if I understand, what are you saying that, as to whether, whatever data you've seen up till now does not change your conclusions?

MR. SUMMERS: Yeah, the data are, as I've said, very limited number of samples. They are highly variable, and they do not indicate statistically significant trends, either of improvement or further degradation.

MR. ZIMMERMAN: Okay and what should we make of the apparent fact that there's been no report since either 2014, or as adjusted, 2016, in the last seven years, no, no new reports or summaries?

MR. SUMMERS: Yeah, I think it's, it's basically a situation where all the agencies have a lot of different reports that have to be produced and their staffing and ability

to get all of those reports done requires them to prioritize other activities. So, I think the fact that bacteria is so highly variable and difficult to address, and does not appear to be changing significantly, they have put their priority in other things.

But that is simply based on my conjecture. I hadn't spoken to anyone about that, but I know from my time at the Department, we had to do that kind of triage, if you will, all the time in terms of which reports to focus on first.

MR. ZIMMERMAN: Well, let me just, one or two more. Given that we're eighteen years after the Consent Decree was signed, what would you sign as to whether this, to the extent there's been a lack of updating activity that, that this is an indication that the, the expectations of resolving the issues in the Consent Decree have not been met?

MR. SUMMERS: Well, I believe, and I testified previously on the performance evaluation reports, that the modeling and the monitoring both indicate that expectations have not been met. So, hence the, the Consent Decree is still open, and work is still being done and the e-mail that Mr. McCann showed just previously, that MDE has not approved the performance assessment for the Jones Falls, I believe, speak for themselves.

MR. ZIMMERMAN: Okay. Thank you, Mr. Summers. That's all I have, Judge. Thank you.

ALJ: And let me just ask real quick, Mr. Wyatt, did you have any questions?

MR. WYATT: I do not.

ALJ: Thank you. Mr. Sachse, I'm just going to make sure also, any questions? He's nodding no. Okay, no? All right, great. All right, Mr. Mudd.

MR. MUDD: Good morning, again, Mr. Summers. How you doing?

MR. SUMMERS: Doing well, thank you.

MR. MUDD: What is your, you mentioned that the Consent Decree is still open, and work is ongoing. What's your understanding of, of why the Consent Decree remains open?

MR. SUMMERS: Well, there are many reasons why it's open. But at this point, there is not an approved performance assessment. There are still overflows, that structured overflow at Marnat Road, is, has not been closed. There are many items that have not been addressed.

I testified last time about the City and their request for flow projections that the County was not able to provide at that time. So, there are a lot of unanswered issues, questions, with respect to requirements of the Consent Decree that the County is still working on.

MR. MUDD: Okay and where, what, when you, when you give that, all that testimony and reasons that you gave, is that, is that your personal opinion?

MR. SUMMERS: That is my opinion. It is not based on any conversation with the County or MDE with respect to this. But simply looking at the documentation, you can see that the work is still ongoing?

MR. MUDD: Okay and do you think it's a requirement of the Consent Decree to have a performance assessment approved by MDE?

MR. SUMMERS: Yes.

MR. MUDD: Okay. You, you cited to Section 9.2.1 of the, of the TMDL report, the 2014 TMDL report that you testified about. Do you recall that section?

MR. SUMMERS: Yes.

MR. MUDD: And that, that section deals with reductions to human sources of, of E.coli bacteria?

MR. SUMMERS: Yes.

MR. MUDD: And do you agree with me, and, the, the section also says that SSOs, sewerage overflows, are, are at least in part, contribute to that, do you agree with that?

MR. SUMMERS: Yes, sanitary sewer overflows definitely contribute.

MR. MUDD: Okay and so you, you would agree that if SSOs are eliminated or reduced, then that would likewise, or should likewise, reduce the amount of human bacteria in the receiving waters?

MR. SUMMERS: I believe the TMDL document prepared by

MDE, and the County TMDL implementation plan are counting on that as a major component of what's needed to reduce the bacteria load.

MR. MUDD: Okay and what do you think personally about that? Do you think that the, if you eliminate or significantly reduce SSOs, that that will improve the human bacteria load in the, in the water?

MR. SUMMERS: Yes, it should.

MR. MUDD: Okay, all right. I don't have any other questions. Thank you.

MR. SUMMERS: Thank you.

ALJ: Mr. Summers?

MR. SUMMERS: Yes?

ALJ: Thank you, appreciate it. All right. So, Mr. McCann, that's everything for Mr. Summers, correct?

MR. MCCANN: That is. Yes, thank you, Mr. Summers.

ALJ: Okay. Okay and so, you indicated we're just going to wait for Mr. Grachek at 1:00. But Mr. Rosenblatt, and you indicated that maybe you would have someone to put on in rebuttal?

MR. ROSENBLATT: Yeah, are we, are we all in agreement that all parties, I know there have been three main lawyers, but two additional lawyers involved in the case. Has everyone rested everything with the exception of Mr. McCann putting on Mr. Grachek this afternoon on sewer only?

ALJ: I tell you what. We'll, let's go one by one. Mr. Zimmerman, you indicated you're, you've rested your case.

MR. ZIMMERMAN: Yes, last time I actually said that, yes.

ALJ: Okay and Mr. Wyatt?

MR. WYATT: I have nothing to put on in terms of re, I've rested to the extent I have a case, putting it on not through anyone else involved in the case, no further evidence.

ALJ: Got it. Mr. Sachse?

MR. SACHSE: Ditto, nothing.

ALJ: Same, okay. All right. Mr. Rosenblatt, I think that's your answer.

MR. ROSENBLATT: Yeah, and I think we, for the sake of everyone's time, we'll, we'll put on a witness that has nothing to do with sewer. So, --

ALJ: All right.

MR. ROSENBLATT: -- if I could recall Nick Driban.

ALJ: All right. Mr. Driban, you have to turn your camera on. All right. Mr. Driban, it's been a while, so if you could raise your right hand, please? Do you swear and affirm under penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. DRIBAN: Yes, I do.

ALJ: Okay. Mr. Rosenblatt.

MR. ROSENBLATT: Okay. Just, sorry, Your Honor. I didn't know how long that was going to take so I am right now e-mailing the exhibits to Mr. Zimmerman and Mr. McCann. And Mr. Zimmerman, I included Ms. Wheatley because there's a link to the exhibits, so hopefully that helps, if needed.

Okay and just for the record, Mr. Driban was admitted as an expert traffic engineer, and he will be testifying in that same capacity. Is there anything needed to confirm he's still accepted as that expert?

ALJ: He's still an expert. He was admitted and so, he will still testify as the same.

MR. ROSENBLATT: Okay, all right. Good morning, Mr. Driban.

MR. DRIBAN: Good morning.

MR. ROSENBLATT: We've heard a lot of testimony in this case and we're going to go over some of the, the testimony about traffic and I'm going to ask you questions about various topics related to traffic, okay?

MR. DRIBAN: Okay.

MR. ROSENBLATT: So, let's start with the special variance standard and have, have you listened to all of the testimony in this case? All the eleven days of hearing until today?

MR. DRIBAN: Yes, I have.

MR. ROSENBLATT: And have you heard testimony about

the state of the Falls and Joppa Road intersection and Greenspring Valley and Falls Road intersections?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And testimony that even after the improvements that we're proposing that they may remain at a level F rating under the County's loaded cycle methodology?

MR. DRIBAN: I have heard that testimony, yes.

MR. ROSENBLATT: Okay. I want to talk about the, the statute at issue and the, the district standard language. So, I'm going to share my screen and --

ALJ: So, I just, just want to caution that we, we, I think we went through this on, in, in his direct. I mean, I, and we all have the benefit of listening to the WebEx. I just, again, will let you go forward here some, but I mean, it, I don't want to repeat the testimony that he had before or change the testimony that he had before. And we went through the special variance standard.

MR. ROSENBLATT: We, we did and, and maybe a few of these are reiterating that nothing has changed his opinion, but there's probably --

ALJ: Okay.

MR. ROSENBLATT: -- five topics and they're, they're quick. I'm, I'm getting in the flow of (inaudible) --

ALJ: (inaudible) understood that you would say, that you would ask that question. I, I should, I, I probably jumped

in too early, but I understand that you asked that question. Whether the testimony from some of the Protestants, whether that changed your view --

MR. ROSENBLATT: Right.

ALJ: -- I just caution you that, you know, he did testify and that, you know, I have access to his testimony and so, --

MR. ROSENBLATT: Okay.

ALJ: -- (inaudible) --

MR. ROSENBLATT: I appreciate it, we're not going to be --

ALJ: (inaudible) I just want to make sure he's not changing his testimony so --

MR. ZIMMERMAN: May I jump in? I was just going to object that this is not sounding like rebuttal. This is sounding like either a repeat or a supplement of the main case and not rebutting any specific testimony --

ALJ: Well, that's why, that's why I just asked him about that.

MR. ZIMMERMAN: Yeah.

ALJ: And he just said that a lot of the Protestants had testified in regard to whether or not they thought the improvements would do anything to the roadways and so, he's now saying, asking him whether or not that information would change and so, to that extent, and of course, with rebuttal testimony,

it's always a, you know, a tricky, a tricky decision to make because if, if it's not allowed in, it obviously is just something that, you know, I, I don't want there to be an issue with it later on.

But just having said that, I just want to make sure everyone understood that we all have access to the prior testimony, so, okay. With that said, we're going to let, we're going to let him testify. Is that Mr. McCann?

MR. MCCANN: It is, I'm sorry. Judge Murphy, I do, I do want to, I do want to, you know, impose an objection on this issue of the special variance standard in particular because the only, the only persons to my recollection, I, I've read a bit of the past transcript, not all of them, but the only persons who have spoken to that issue are Mr. Driban himself and the gentleman from DPWT, whose name escapes me right now. But, so we --

ALJ: Mr. Niebre.

MR. MCCANN: Niebre, that's right.

ALJ: Yep.

MR. MCCANN: So, Mr. Driban had the, certainly had the opportunity to respond to that testimony. My clients didn't speak to the standard itself. Nor, nor did they speak to whether or not the, after the proposed improvements, the level of service would remain at level F. In fact, Mr., again, Mr. Driban and Mr. Niebre are the only ones who have, have

spoken to that issue. So, I think if we're going to limit rebuttal to just the testimony of my clients, which I think is, is appropriate to some extent, that discussions about the special variance standard is not part of that. So, --

MR. ROSENBLATT: Judge, I'm happy to explain and this, this whole exercise has taken longer than the amount of questions I intend to ask about this topic.

ALJ: That's usually Mr. McCann's objection. He usually interposes that and says, you're stealing that from him. That was one, that's one of his lines. He's always good with that.

MR. ROSENBLATT: Yeah, so, it, there's been a lot of testimony that these intersections are still going to be failing and it should be denied because they're still going to be failing. That is, I intend to ask him questions related to testimony that was presented in this case.

ALJ: Yeah.

MR. ROSENBLATT: And --

ALJ: (inaudible) it's a difficult issue with rebuttal, to make a decision about whether or not it's, you know, it comes in or not. And so, I'm going to err on the side of obviously letting you ask those questions.

But again, I just caution that, you know, given Mr. McCann's objection and also Mr. Zimmerman's, I think even before they objected I said that I, I know what the testimony

is. And so, Mr. McCann is actually accurate that, you know, there were no expert witnesses on this issue. So, rehashing special variance standard isn't going to, you know, move the ball here, so, or counter what, that, that the Protestants said, but I'm still going to allow it.

MR. ZIMMERMAN: All right.

ALJ: Mr. Zimmerman, I know you're dying to say something.

MR. ZIMMERMAN: I just want to say briefly, we certainly acknowledge that Mr. Driban is a traffic expert. That does not mean that he can interpret the law.

ALJ: I understand.

MR. ZIMMERMAN: I just want, if that, if that's what we're getting at. That's all.

ALJ: Yeah, but that's what, that happens all the time in these cases, that the experts come in and they say this is what the law says. And that's, that's a, you know, that's from, you know, from, from the beginning of administrative practice, that's, that's what they, they do. It doesn't mean that I agree with it.

MR. ZIMMERMAN: All right.

ALJ: Or, or, or, you know, could be that he has a different (inaudible) --

MR. ZIMMERMAN: All right.

ALJ: So, go ahead. All right.

MR. ZIMMERMAN: We'll trust you to sort things out, Judge. Thank you.

ALJ: Thank you, Mr. Zimmerman. Okay, all right. Mr. Rosenblatt, go right ahead.

MR. ROSENBLATT: Okay and I do think that this is the only topic I intend to ask him about where this type of objection may make any sense but. All right, Mr. Driban. I have the Code section up on the screen. I'm going to turn your attention to Section G, the petitions for special variance from this section, ask you again, you've sat through all the testimony in this case, is that correct?

MR. DRIBAN: That's correct, yes.

MR. ROSENBLATT: Okay and have you heard testimony that even after the improvements are made that people suspect the intersections may still be, quote unquote, failing?

MR. DRIBAN: I have heard that testimony.

MR. ROSENBLATT: Have you and, and you've testified about this already, but do you have an opinion as to what the, what the review is, what the district standard is, as explained in the subsection that's shown on the screen now, Section G?

MR. DRIBAN: Yes, the, the district standard is that the, after the development traffic is in place, the, the development must mitigate so their impact is zero or less than zero. In other words, they must, they must leave the intersection better than they found it with their traffic

included.

MR. ROSENBLATT: What, what did you do to form that opinion?

MR. DRIBAN: We met with County Traffic Reviewer, Mr. Niebre, reviewed the regulations myself, and also reviewed the Torch Hill ruling on Seminary Avenue.

MR. ROSENBLATT: Okay. I, I have marked, there's been a number of cases marked and submitted as exhibits, Judge. I normally don't do this, but Exhibit 37, Mr. Driban, is this the, the Torch Hill opinion you referenced?

MR. MCCANN: Your Honor, may I have a continuing objection? I don't want to interrupt any more.

ALJ: Yes, you can. Overruled.

MR. MCCANN: Thank you.

MR. ROSENBLATT: Okay.

MR. DRIBAN: This is, this is the opinion I reviewed.

MR. ROSENBLATT: And if we scroll down to page forty of this opinion, there's analysis on special variance. Did you, did you review this section?

MR. DRIBAN: I did.

MR. ROSENBLATT: Okay and based on your meetings and review of documents yourself, the testimony that the intersection will still remain failing potentially after the improvements are made, can you explain how the different methodologies play into that still failing assumption?

MR. DRIBAN: Right, so as I, as I testified in my original testimony, there are a number of different methodologies that can be reviewed for traffic. The County's, the County's mapping, basic services mapping, is based on the loaded cycle methodology, which is based on a field review of actual cuing at the intersections.

And the only way to understand what's happening with that cuing are to, to, to review loaded cycle methodology, is based on a field review. So, there's no way to identify, you know, the extent of an improvement until that improvement is actually in place. And so, we use other methodologies to evaluate operations and the improvement caused by various changes to an intersection.

MR. ROSENBLATT: Okay. Let's, let's move on from special variance standard and talk about the proposed improvements that are being made in this case. I'm showing you Developer's Exhibit 16, which was previously admitted. If you recall, this is a two-page exhibit of a before and after view of the proposed improvements to Falls Road and Joppa Road. Do you remember this exhibit?

MR. DRIBAN: I do.

MR. ROSENBLATT: And we've heard testimony that the improvements that are proposed and adding lanes on Joppa Road, will potentially create more traffic at this intersection. And can you explain your position on that assertion?

MR. DRIBAN: Yeah, my position is based on the traffic analysis that we conducted, which was reviewed by the County and by the State. And showed that the improvements proposed at this intersection will have not only benefits to this intersection but to the entire corridor of Falls Road.

You know, mitigating well, well above the amount of traffic that we are, that we're adding along this corridor. Some, in some locations, actually in excess of, you know, close to a thousand percent mitigation.

MR. ROSENBLATT: Okay and there was testimony that, as you can see on the top left of both sheets of Exhibit 16, there's an access road or alley that runs behind the gas station sort of parallel to Falls Road, can you see that in the upper left?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And there was testimony that it will become more difficult for people to make a left turn out of that access road onto Joppa Road. And can you speak to your, your opinion as to whether that is the case?

MR. DRIBAN: Yes, if you, I think that the, the best way to see it is just kind of flipping back and forth between these two pages as you're doing. If you look at page one --

MR. ROSENBLATT: Sorry, (inaudible) that happen.

MR. DRIBAN: Yeah, if you look at page one where the existing double yellow center line is as it relates to that

driveway and then flip to page two.

MR. ROSENBLATT: Okay.

MR. DRIBAN: You can see that that line really isn't shifting by more than, more than a foot or two at the location where the driveway is. It's, you know, it's basically in the same spot and so, today a vehicle coming out of that driveway has to cross three lanes, there are going to be looking, assuming they're going to be turning left onto Joppa Road, they're going to be looking to their left, and they're going to be looking at three lanes of oncoming traffic.

If you flip to page two, there is, in our improvement, we are opening up a fourth lane, but that fourth lane starts to develop kind of beyond where that driveway is. So, the center line isn't shifting and the amount of traffic or the, the lanes of traffic that a vehicle turning left out of that driveway, out of that intersection onto Joppa have to cross, it's still three lanes of traffic. There's really no change as to how a vehicle exiting that intersection would, would see the intersection or the traffic coming towards it.

MR. ROSENBLATT: Okay.

MR. DRIBAN: So, I, I, in my opinion, there's no change to operations or safety as a result of this, this modification.

MR. ROSENBLATT: Okay. We've heard testimony from, or an argument from Mr. Zimmerman, testimony about the trip

projections that were used for this project. And can you just respond as to whether the ITE manual can appropriately project trips in this case?

MR. DRIBAN: Yes, --

MR. ZIMMERMAN: Objection.

MR. DRIBAN: -- as I testified previously --

MR. ZIMMERMAN: Objection. That's not rebuttal of any testimony. I mean, he's not here to be the lawyer, you know, a co, co-attorney to respond to my whatever, I don't, whatever argument or whatever, you know, I don't, I don't know what we're getting into, but this is not rebutting certain testimony.

ALJ: What, what I remember is that Mr. Zimmerman asked a question on cross, the response was given by Mr. Driban and, and that's where it ended, because there is no other witness that testified for either People's Counsel or for the Protestants here in regards to those projections. And so, Mr. Driban already answered the question as I recall. Mr. Rosenblatt?

MR. ROSENBLATT: Yeah, and that, that's fine. But there have been citizens that have complained that we are underestimating the amount of traffic from this project. So,--

ALJ: Okay.

MR. ROSENBLATT: -- I'm asking him to rebut their testimony.

ALJ: Okay. So, you, but you couched the question as what Mr. Zimmerman said. So, so your question really has to do with what the Protestants said?

MR. ROSENBLATT: Yeah, there's, there's been testimony in this case that, about whether we're properly accounting for the number of trips. And I can specifically ask him about at least one of the witnesses saying how many trips he takes to and from his home.

ALJ: Okay.

MR. ROSENBLATT: And how that impacts the analysis.

ALJ: Then that's fine. That, that testimony, that's fine. But that's what you had said when you phrased the question, you said Mr. Zimmerman said this. And this, so he questioned the (inaudible).

MR. ZIMMERMAN: And I still object, because there's no foundation for him to rebut what a particular witness said about how many trips that witnessed observed. Either the witness observed them, or they didn't. Okay? This, Mr. Driban can't say what a witness observed on a particular day.

ALJ: Understood. No, I understand that, but they're still entitled to rebuttal. So, we're going to allow it. Go ahead, Mr. Rosenblatt. Overruled.

MR. ROSENBLATT: This, just for the record, feels extremely disruptive for People's Counsel to be making objections about a topic that is arguably not even within the

role of People's Counsel and it's repeated lengthy speaking objections. And I don't know if the goal is to throw off the, the cadency here or what, but it is very disruptive this morning.

MR. ZIMMERMAN: No, it's definitely legitimate and this is part of our case to deal with the special variance and traffic, public safety issues that are part of the development review. And consistent with the master plan and the special variance issues.

ALJ: Okay. Well, I'm going to overrule his objection. So, go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Okay. Mr. Driban, again, can you speak to the validity of the trip projection that you entertained for this project?

MR. DRIBAN: Yeah, I, I mean, I think there's been an array of testimony, talking about the impact of traffic from this development. And the way we evaluate that is the industry standard. It's the ITE trip generation manual. It's based on, it's used nationally, locally, by the State. It is the standard manual that is used for this type of analysis.

And the trips in that manual are based on hundreds of studies done throughout the country for a specific type of use. And actually, in this case, for single family housing, there are over the rates that we utilize in our study are based on over two hundred studies in that manual for both the a.m. and

the p.m. peak hour where someone has gone out and counted the, the, the number of trips going into and out of a specific development, you know, based on the number of units in that development.

So, this is, this is, this is a, this is, the way this is, this is the way this is done and, and the data in this case is overwhelming in terms of the, the manual. You know, there are, there are some uses in the manual that only have a couple of studies that support them. And in those cases, you know, there might be something to needing to look at, you know, different data.

But when there are two hundred studies, you know, that is, that is, that is plenty, more than enough data, to evaluate the number of trips during the peak hours. And in this case, it's really not even a close call because as I, as I mentioned in my, you know, earlier today and also my previous testimony, our development, the improvements that are being made is a (inaudible) you know, close to a thousand percent mitigation of the trips that are being generated.

MR. ROSENBLATT: Let's, let's talk about the, if you recall, a, a resident, I believe, in the Tallyho neighborhood who said he takes approximately fifteen trips on some days with three kids in and out of his home. How does, how does that type of testimony impact the trip projections for this project?

MR. DRIBAN: Right, I mean, I certainly can't speak

to his specific trip patterns. You know, I, I didn't go out and observe, you know, how that gentleman conducts his daily business. But, you know, as I testified to a moment ago, the ITE trip generation manual is based on, you know, hundreds of, hundreds of studies that have been averaged to develop the, the average rate for someone, you know, for a, given the type of single family development based on the number of units.

And so, you know, while that gentleman may have more trips than the average, the average homeowner, you know, we can't infer from that that sixty homes here would each have, you know, fifteen trips a day or multiple trips during the peak hour.

We use the data that is in the ITE manual, just as, as the State uses it, the County uses it, the Federal, you know, Federal studies use it. And that is the best source of data available. And based on that, we get our trip generation for the analysis that we conducted.

MR. ROSENBLATT: Let's move on to the issue of the gate. So, sharing my screen, I'm reshowing you Developer's Exhibit 28. And I'm going to ask you, you've heard testimony, a fair amount of testimony from the Meadows and Boxwood community, as well as the Tallyho community, about the proposed emergency only access gate in the rear of this project?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And can you address the testimony

where you have people for and against and can, can you explain your position about the, the varying testimony and what, in your opinion, leads to the most efficient flow of traffic?

MR. DRIBAN: Yes, so as I testified to previously, the challenge with --

MR. ZIMMERMAN: Objection. I just got to, I just want to object again. This is definitely not rebuttal testimony. This is just kind of elaborating the main case, repeating the main case. I mean, you know, this is extending the hearing with --

MR. ROSENBLATT: It's just not true. There was a lot of testimony about this issue, and he's allowed to rebut people saying it's a good idea or a bad idea or rending their opinions. I, I know this is the first ever Hearing Officer's hearing you've ever attended, but this, this is common. We, we have to rebut what was said.

ALJ: Yeah, understood. Under Elm Street, especially, that's what Elm Street says. And so, again, as, as I repeated, it's a tough call in terms of rebuttal and whether to exclude it or not and so --

MR. ZIMMERMAN: All right.

ALJ: -- some of it might be repetitive of what it was before. And I just caution, again, you know, the Developer's counsel he knows that obviously we don't want to repeat all that testimony again. But again, the other side of

it is they're allowed to rebut what people have said in, in the, in the Protestant's case. So, overruled.

MR. ZIMMERMAN: All right.

ALJ: Go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Okay. The, the crux of the question is what do you believe will lead to the most efficient flow of traffic and why?

MR. DRIBAN: So, as I, I'll keep it brief, but as I previously testified, opening Mays Chapel Road would induce, based on our analysis, a substantial amount of traffic to use, to use that local, local street as a cut through. It's a very direct route, you can see on this map, it's a very direct route between Joppa Road and Seminary Road. Unlike Falls Road, which is arterial, Mays Chapel Road does not have traffic signals on it.

And so, it would, it would likely cause a high volume of traffic to cut through what is, essentially, a neighborhood street. And so, best planning practices from again, local, state and federal guidelines, all dictate that there should, the higher functional class, which is Falls Road arterial, is where the traffic should be prioritized and, and, you know, essentially, pushed to and you do not want for both, for safety purposes, as well as a number of other reasons, you don't want to put a high volume of traffic on a, on a street that's designed for, you know, driveways, children, people walking,

bicyclists.

And so, I think the evidence is very clear that, that May, that opening Mays Chapel to traffic by not having a gate is, is against all best practices, you know, on every level.

MR. ROSENBLATT: Okay. Let's move on to some accident data. Do you recall testimony about there being a number of accidents at the Falls and Joppa Road intersection?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Did you investigate any of the actual numbers related to accident data?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And what did you find?

MR. DRIBAN: Okay. So, we, we reviewed SHA's crash data, the Maryland State Highway Administration's crash data, for the three intersections along the Falls Road corridor. And we also looked at the volumes of the traffic study in order to determine the crash rate for those three intersections.

Generally, the crash rate is calculated as the volume, the, excuse me, the number of crashes per one million vehicles entering an intersection, and typically, if you have a crash rate greater than 1.0 crashes per million vehicles entering an intersection indicates that the intersection may need further evaluation or study for safety issues.

In this case, the crash rate for all three of the intersections, Joppa, Greenspring Valley and Seminary, along

Falls Road were all below the 1.0 threshold. Specifically, Joppa was 0.54 crashes per million vehicles entering, Greenspring Valley was 0.29 and Seminary was 0.31 crashes per million vehicles entering.

And so, based on the data provided by SHA, there's, there's not a safety issue, measurable safety issue, at these, at these intersections.

MR. ROSENBLATT: Okay. There was testimony that the improvements that we're proposing are potentially going to increase the number of crashes. And can you speak to that assertion?

MR. DRIBAN: Sure. So, when we look at safety and how potential changes are going to, to affect an intersection or a section of roadway, we look at something called crash modification factors. There's a database federally maintained that, that includes crash modification factors for different types of intersection improvements.

And for the addition of a left turn lane at an intersection, which is what we're doing on both of the approaches at the, at the Joppa intersection, the crash modification factor would indicate that crashes would be reduced along those approaches by as much as twenty percent.

MR. ROSENBLATT: Okay and there was testimony about fatal crashes, a recent fatal crash at the Joppa/Falls Road intersection. Have there been any fatal crashes in the, in the

last three years that you were able to find?

MR. DRIBAN: The three years of SHA data that we were able to review did not indicate any fatal crashes at the intersection.

MR. ROSENBLATT: Okay. There's a lot of testimony about just the, the level of traffic on these roads and, essentially, about it being difficult or even horrific, quote, all the time. And my question for you is did you collect any additional data after hearing the testimony in this case to address these allegations?

MR. DRIBAN: Yes, we did. We, we went out and we set data collection cameras. When we collect intersection data, or traffic data, we use video collection cameras that are designed to record traffic in relatively high definition and record over a period of several days. And so, we set a series of nine cameras along the corridor and recorded three and a half days' worth of data with those cameras each, each camera.

MR. ROSENBLATT: Okay and I'm going to show you what has been marked as Developer's Exhibit 38. Can you see a, the start of a video on my screen?

MR. DRIBAN: Yes, I can.

MR. ROSENBLATT: I believe this video is approximately one minute long. It's been sent to counsel. Can you explain, well, it's time stamped. When was this video taken?

MR. DRIBAN: So, this video is from 9:30 in the morning on Fri, on Friday, January 20th, 2023.

MR. ROSENBLATT: Okay and I'm just going to hit play. If you could explain what, what the video shows or, and before I do, I'm sorry. Can you orient everyone to where this, where this is?

MR. DRIBAN: Yes. So, we're looking southbound along Falls Road at the intersection of Joppa Road. So, if you sort of look past the intersection toward the, I guess the top of the video or so, where the sky is, that would be traffic coming off of 83 and, and the beltway interchange and entering the Falls Road, traveling northbound to enter the Falls Road at Joppa intersection.

MR. ROSENBLATT: Okay and I'm going to hit play and just, can you explain what, what the video shows?

MR. DRIBAN: Yes. So, this, this is a sixty second clip. Just to get, just to sort of orient everyone. I, I explained what direction we're looking and, again, this is just a, this is just a representative sample of kind of what these videos look like, so you can get a sense of, you know, the definition and, you know, and what we see when we look at the videos.

And basically, what we, what we were trying to do with, with this data collection after was to get a better sense of how traffic fluctuates throughout the day. We, we've heard

testimony, you know, from a number of individuals in the area that traffic is horrific throughout the day, every day.

And so, again, we captured data from midday Wednesday the 18th of January through, as long as the cameras lasted on Saturday, January 21st, which again, was about three and a half days of data. And, and we used that data to, to just get a better understanding.

Those, those dates were not, that's the only days we set cameras, those dates weren't sort of cherry picked in any way. They, we decided to do this data collection (inaudible), and this was the first day we could get out there prior to the hearing that was originally scheduled for the end of January, when I was expecting to do this rebuttal testimony. So, that's, that's what this shows.

MR. ROSENBLATT: Okay and did you prepare another video as well?

MR. DRIBAN: I did, yes.

MR. ROSENBLATT: Okay, bear with me. I want to show you what's been marked as Developer's Exhibit 39. And ask you to explain what this second video shows. So, just to orient everyone, what is the, the time and date of this video?

MR. DRIBAN: This is, this is the same location looking, again, southbound at the Joppa intersection. And this is starting at 7:00 in the morning, 7:02 in the morning on Jan, Friday, January 20th.

MR. ROSENBLATT: Okay and I note this video moves quickly. Can you explain what we're going to see just in, in terms of overall time?

MR. DRIBAN: Yes, so this video is sped up to a hundred- and twenty-time speed. And the purpose of this video is just to kind of give you a sense, give everyone a sense, of, you know, again, what we see when we look at these videos. We do have the ability to, you know, use video software to speed them up and, you know, watch things more quickly, more, you know, slowly.

But this one specifically is sped up really fast, obviously, much faster than we'd watch it, in order to, you know, again, just sort of provide an overview of how traffic fluctuates during a, during a peak, peak hour. Typically, the peak period is from 7:00 in the morning to 9:00 in the morning. And so, this is just a, a sampling again of this location and, and what we observed, you know, based on the videos we set out there. So, if you want to go ahead and click play.

MR. ROSENBLATT: I will, I will play it and just explain what, what we will see.

MR. DRIBAN: Sure. So, again, typically peak hours are between 7:00 and 9:00 a.m. And so, you can see that, you know, as we build from 7:00 in the morning, you know, particularly southbound, people heading to I-695 and I-83, which would be towards the right side of the screen, you do

see, you know, traffic, some cuing for the left turn, the southbound left turn lane and onto Joppa Road. You know, you see traffic coming northbound.

You can also see the, the eastbound approach coming up Falls Road by the park there that there's some traffic along that approach. And as this goes through, we're now at 8:15, so this is kind of in the heart of the peak hour.

You can see that there is cuing, you know, again, the southbound direction kind of coming back towards the edge of the screen as far as, as far as we can see. And so, so the video is kind of jumping around a little bit on my end.

But as we get to 9:00, there is still some traffic, but as we move past 9:00, you can really see that the traffic will start to die down here, so the volumes start to decrease and, you know, the cuing that you saw is really, is really non-existent once we sort of get past 9:30 or 10:00.

You know, certainly there are vehicles stopping. It's a signalized corridor. This is an arterial. We would expect there to be, you know, a volume of traffic here. And of course, when the light is red they do have to stop. So, there is some inherent delay in having any traffic signal.

But this sort of discussion that there's constant traffic and, you know, and, and that there's no, there's no time when this corridor is not congested, I think if you watch this video, and then we'll go through some additional data that

we prepared as well, you can see that here we are at 10:45 and, you know, there's a couple of vehicles cuing when the light turns red, when the signal turns red, but you're not seeing those heavy southbound left turn cues.

You're really seeing very little traffic cuing northbound. And so, you know, again, here by noon, you know, you can see the intersection is operating, essentially, at, at a relative, relatively free flow state. Certainly, would not be a failing level of service.

I would say just based on visual observation. This is maybe a level of service A or B, which are among the best possible levels of service. And so, that is, you know, again, just of, just of a five-hour clip kind of showing how traffic changes from the beginning of the peak hour through the midday.

MR. ROSENBLATT: Okay and I, I'll show you one more exhibit you prepared, which is Developer's Exhibit 40. And this is a series of slides. Can you explain what, what this exhibit is before I flip through it?

MR. DRIBAN: Yes. So, again, this is the, the same camera that we had placed, and this is starting, when we, when we first set the camera on Wednesday, January 18th, this is 1:00 in the afternoon. And this series of slides, which hopefully we'll go through pretty quickly, basically just shows a snapshot of traffic every hour on the hour over the three and a half days that we, that we had the cameras out there.

You know, certainly it's not showing everything, but I think that is a representative sample of kind of how traffic fluctuates. So, starting here, at 1:00, you can see that there's, there's very little traffic at the intersection. You know, certainly no long cues on the, on any of the, the northbound or southbound approach.

MR. ROSENBLATT: Okay.

MR. DRIBAN: And as we flip through, you know, 2:00 on a Wednesday, basically the same. By 3:00, you know, schools are starting to let out around this time. We're sort of building volumes, you know, are starting to build toward the peak hour volumes, so increasing.

Here's 4:00. By 5:00, you can see the traffic coming from I-695 and I-83. There's some cuing going northbound so certainly, you know, that, that movement is starting to get a heavier volume and, you know, that approach likely is operating at a lower level of service certainly than it was at 1:00 or 2:00.

Six o'clock, you know, you can see traffic, there's still some traffic out there and notably there is, there was a truck that broke down in the, in the auxiliary lane around, along northbound Falls Road and was there for some amount of time, which you know, may have had an effect with, on traffic in terms of, of impeding it or slowing it down more.

Here's 8:00. You can see there's not, other than

maybe one vehicle along westbound Joppa Road, there's really no, no traffic at the intersection, you know, other than the broken-down truck.

MR. ROSENBLATT: I'm going to flip through the night quickly, but can you just summarize what the night shows?

MR. DRIBAN: Yeah, so we, so we didn't, sorry, Adam.

MR. ROSENBLATT: Go ahead. No, I'm sorry.

MR. DRIBAN: So, we didn't, you know, certainly didn't want to include every single hour overnight, but you can see that overnight there's, you know, little to no traffic. And then, you know, by 6:00, 7:00, this is starting the Thursday, you know, peak hour.

By 8:00, you can see there is some volume at the intersection. Nine o'clock, again, southbound there's some traffic, the truck is still there. By 10:00, minimal, minimal traffic in the, in the photo. Same with 11:00. You know, 12:00, again, kind of similar.

The volumes do tend to spike a little bit during the lunchtime hours, as people run to, you know, maybe Greenspring Station or, you know, just out from their office to run errands, things like that. So, you do tend to see a, a small peak, not as high as the a.m. or p.m. peaks, but there is typically a smaller peak between 12:00 and 1:00.

Here we are at 2:00. Three o'clock you can see traffic starting to build. There's a school bus. You know,

this is, again, when schools are starting to let out and you might see traffic. Here's the beginning of the peak period, 4:00. You can see volumes are getting a little heavier.

By 5:00, again, that traffic coming off of 83 and the beltways, both directions of the beltway is, is relatively steady, pretty heavy. And again, this is, you know, 6:00, still within the peak period. Again, this is what you would expect of an arterial volume.

There is volume, you know, during the peak hours, during the peak periods and as we flip to 7:00 and 8:00 here in the evening, you can see those volumes start to die down. By 8:00, minimal traffic. Here's midnight, 4:00 a.m., you know, again, no cuing, no, no operational issues.

We're now approaching 7:00 a.m. on a Friday, so the beginning of a peak. The truck has finally been removed. You can see volumes at 8:00 or, you know, are starting to build. Again, this is within a peak hour. Nine o'clock there's still some traffic at the intersection.

Ten o'clock, again, we've, we've, we left that peak period and volumes are starting to die down. Here's 11:00. Twelve o'clock, no traffic northbound, a little bit southbound. Here's 1:00, again, that, a little bit of the, the lunchtime peak that you would typically see on an arterial. Two o'clock, some traffic.

By 3:00, again, this is that school peak that I've

discussed and, you know, start building towards the p.m. peak hour. Four o'clock. Five o'clock, there's some traffic. Six, and again, we get into the overnight hours, 7:00 almost nothing, 8:00.

By 10:00, midnight, 4:00 a.m., very little traffic. I mean, this is level of service is the best, there's no vehicles out there to speak of. Now, we're on to Saturday morning, you know, Saturday morning the peak tends to be a bit later. It's usually between 11:00, noon, 1:00 in most locations, as opposed to the 7:00 a.m. to 9:00 a.m. you'd see on weekdays.

So, this is 8:00 on Saturday, January 21st, very little traffic. Nine o'clock in the morning Saturday, nothing. Ten o'clock, you can start to see some volume, but certainly not substantial cuing. Eleven o'clock, again, there are some cars out there. Twelve o'clock, kind of similar. One o'clock.

But generally, you know, this video doesn't show any substantial cuing when we reviewed it on, on Saturday at all. So, here's a little bit at 3:00 in the afternoon. Four o'clock you can see some traffic coming off both directions of the beltway and 83. Here's 5:00, not much going on. Six, 7:00, 8:00, 10:00.

And so, again, just to summarize this, in the three and a half days of video that we captured, there certainly are sometimes when volumes are, you know, are substantial at the

intersection. This is, this is standard arterial volume. If you look at a graph of most arterials, they peak from around 7:00 to 9:00. They drop back down. There's a smaller peak from, call it, you know, noon to 1:00, drops back down and then starting from 3:00, 4:00, 5:00, 6:00, there's another peak, which is typically the highest peak.

And that, and so that's standard for arterial. And if you, and, but if you look at the remaining hours of the video, you know, at this location, there really is not any sort of traffic issue. You would be able to progress through this corridor with --

MR. MCCANN: Objection. Hold, hold on. Sorry to interrupt. Judge, I'm sorry to interrupt the witness. The, the testimony is veering off from what's in front of the witness, and thus, in front of everybody else, to other video that he apparently looked at and he's now, he's testifying as, you know, his, his own words, if you look at the, at this other video, you'll see x.

I, I don't, I really don't think that's appropriate to be characterizing video that isn't in evidence, that we don't have the opportunity to see and particularly the conclusory fashion in which he's testifying about that video, as well as the photographs we're looking at right now. I mean, the leaps and bounds here are remarkable. Particularly for, for photos we haven't seen, so. That's my objection on –

MR. ZIMMERMAN: And, and I'd like to supplement, just to understand, Judge, you're being very lenient on the, the testimony. And, but just, for the record, I, I just want to kind of reiterate that I think all of this testimony is either elaborating or things that could, should be in the main case. This is not truly rebuttal. And I'll, and I'll stop at that so as not to be disruptive.

ALJ: Sure. I didn't hear when Mr. McCann said that he was talking about other videos. All I heard was the three days of videos that were in front of us, or the slides that are in front of us. I didn't hear anything else. Was there something, was there something else, Mr. Rosenblatt, that he was referring to that we haven't seen?

MR. ROSENBLATT: No, not, not yet.

ALJ: Okay.

MR. ROSENBLATT: I, I must say though, in every traffic study, there's, it relies upon data that we don't see, you, you don't put on the entire video of traffic counts. Experts routinely summarize what they, data they collected and what they see in the field. So, --

MR. MCCANN: That's, that's data though. Now we're talking, and maybe I misheard him. I said, I thought he said if you look at other video, or the entire video, or something, then you'll see x. That's what I heard him say. If that's not what he's referring to, then, then okay.

ALJ: I, I --

MR. ROSENBLATT: Well, Judge, --

ALJ: Go ahead.

MR. ROSENBLATT: -- sorry, go ahead. I, I was just going to say, we, we don't plan to, to put into evidence nine cameras that each show three and a half days of video. We picked a few of the videos. I do intend now to ask him some questions about some other points without putting in entire videos and I do think that's appropriate and consistent with any traffic engineer testifying about data they've collected.

ALJ: Okay, understood. Yeah, I'll, I'll overrule it, go ahead.

MR. ROSENBLATT: Okay. So, he was in the middle of answering just what, what these images or video showed. Is there anything else, Mr. Driban, you were in the middle of a sentence when Mr. McCann objected.

MR. DRIBAN: No, I mean, I think that sums it up. The, the, the point is, you know, if you watch the, the images that we just flipped through, you know, and I did watch the video that supports these images and, you know, in order to create them and also in order to conduct my own observations.

You know, it, it shows as I described it, which is that there is traffic as one would expect on an arterial during the peak periods and really, outside of those peaks, there's, there's not what would be considered any sort of, you know,

operational issues or anything that would rise to the, you know, to the classification of being, being considered failing level of service or, you know, really everything outside of the peaks looks like a level of service A or B based on my observations.

MR. ROSENBLATT: Okay. I'm going to show you, because I think it's the best exhibit to get an aerial, it's actually a Protestant exhibit number twenty-five. And can you see my screen now?

MR. DRIBAN: I can, yes.

MR. ROSENBLATT: Okay and did you, did you collect additional data for other points other than the camera view that you just showed and took images of?

MR. DRIBAN: Yes, we had a total of nine cameras, both along the, the Maryland 25 corridor, Falls Road corridor, as well as several along Joppa Road closer to the site access and, you know, further back to the east along, along Joppa Road.

MR. ROSENBLATT: Okay. What, what did your data show you with respect to Falls and Greenspring Valley Road? Are there any major differences from the pattern that we just showed via video and image for Falls and Joppa Road?

MR. DRIBAN: No, the, the patterns, as, as I described them for Falls and Joppa were very similar for Falls and Greenspring. You do see some traffic during the peaks.

But during the off-peak periods, things are operating relatively free flow, minimal delay and the intersection operates quite well.

MR. ROSENBLATT: Okay and I just, I just want to ask you about a few specific statements that were raised in testimony by Protestants in this case. Okay?

MR. DRIBAN: Um hm.

MR. ROSENBLATT: So, in, in your data collection efforts, did you see any cuing on Joppa Road back past the proposed entrance to this project or back to Tallyho?

MR. ZIMMERMAN: I got to repeat the objection. This isn't rebutting any specific testimony. This is just giving his, his own observations as if it's his case, but --

MR. ROSENBLATT: I just said, somebody testified that that happens. Did you see in your data collection any of that happening. That is directly rebutting a specific statement of a Protestant, Mr. Zimmerman.

MR. ZIMMERMAN: No, it is not because that, that observation by a witness might be on a certain time and a certain day. And Mr. Driban is talking about some other time or some other day, it's, it's apples and oranges in my opinion.

ALJ: All right. Well, you can, you can cross examine him on that so overruled. Go ahead.

MR. ROSENBLATT: Judge, is there any way to curtail Mr. Zimmerman's interruptions?

MR. MCCANN: You can't, you can't, --

ALJ: No, no, there isn't.

MR. MCCANN: -- you can't do that, come on.

ALJ: So, so understood, Mr. Zimmerman is making the objections that he thinks is, he needs to make for his case and for the record. And so, no.

MR. ZIMMERMAN: It's just possible that I'm right and Mr. Rosenblatt is wrong. But I understand that the Judge is being very lenient here and I do appreciate that so I'm not criticizing any of the rulings. But I happen to think that I am correct.

MR. ROSENBLATT: Of course, you do.

ALJ: All right, understood. All right, all right. Everybody play nice in the sandbox. Okay, boys. Let's go. Mr., Mr. Rosenblatt, go ahead.

MR. ROSENBLATT: I had asked, based on the testimony, that traffic cues to the site access point or to the Tallyho, in all of your data collection efforts, did you see cuing back to our site or back to Tallyho?

MR. DRIBAN: No, the data that we collected along that approach over the three and a half days, did not show anything even close to either the site access point or to the Tallyho Road.

MR. ROSENBLATT: Okay. I'm going to, I'm going to zoom in a little bit and ask you about Station Drive. So, for

the record is clear, Station Drive is the road that runs perpendicular to Joppa Road, into the parking lot behind Greenspring Station. Can you see that on Protestant's Exhibit 25, to the left of the, of the indicator for Baltimore Orthodontic Group?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Okay. So, there was testimony that cues from Joppa Road extend back past Station Drive. Did you see any of that in your data collection efforts?

MR. DRIBAN: In the videos that we collected during the a.m. peak and off peak, there was not cuing that extended back to Station Drive. Vehicles, in my observation of the videos, were able to enter and exit that access point without issue.

MR. ROSENBLATT: Okay and I previously asked you about the proposed improvements and their potential impact on the alley that's located closer to Falls Road. But do you believe that the improvements we're proposing will impact in any way the movements in and out of Station Drive?

MR. DRIBAN: I don't believe they'll impact them negatively. They're, you know, as we discussed at the location closer to the intersection, there are, the approach coming up towards Joppa does widen to four lanes, but that's really just as you approach the intersection.

Prior to that, it's, you know, it's three lanes at

the, the other location we discussed today and that will remain three lanes. And then further back towards the driveway that we're discussing right now, you know, again, we're not proposing to change the land configuration.

And so, traffic should be able to operate similarly. If anything, the fact that there's now a fourth lane at the intersection will provide a little bit of additional space for vehicles to cue closer to the intersection. And so, if there are, you know, days where there, where there could be any spillback to that location that would be reduced by the fact that you have additional space for vehicles to cue closer to the intersection.

MR. ROSENBLATT: Okay and having heard all the testimony in this case throughout the Protestant's case, Mr. Zimmerman's case, etcetera, has your opinion as to the potential impact this project would have on traffic in the surrounding area changed?

MR. DRIBAN: It has not changed.

MR. ROSENBLATT: Okay. Thank you. No further questions.

ALJ: Mr. McCann, any cross?

MR. MCCANN: Yeah, I do. Your Honor, would it be okay to take a bathroom break and then maybe just a little bit long, maybe ten minutes, just to collect my --

ALJ: Ten minutes. Sure, absolutely. I'll pause the

record.

MR. MCCANN: Great, thank you.

(PAUSE)

MR. MCCANN: Is it a link you said?

MR. ROSENBLATT: No, it's in, maybe what I'll do is send you five separate e-mails.

MR. MCCANN: Okay.

MR. ROSENBLATT: Try it that way.

MR. MCCANN: Whatever works is great, thank you.

ALJ: Do you need those documents, Mr. McCann?

MR. MCCANN: No, I can go ahead, Judge. That's okay, I'll go ahead.

ALJ: I, I don't want to rush you, if you need to --

MR. MCCANN: No, I'll, if I can have a moment when they do arrive, I'll, I'll take a quick look at them.

ALJ: Sure. And I, I went back on the record. So, we're on the record.

MR. MCCANN: Okay. Should I go ahead?

ALJ: Yep, absolutely. Yeah, go right ahead.

MR. MCCANN: Okay. Good morning, Mr. Driban.

MR. DRIBAN: Good morning.

MR. MCCANN: You --

MR. ROSENBLATT: So sorry. It just sent. I just wanted to say that.

MR. MCCANN: Okay.

MR. ROSENBLATT: I apologize.

MR. MCCANN: Okay.

MR. ROSENBLATT: Okay.

MR. MCCANN: Mr. Driban, you referred to your, or maybe it was Mr. Rosenblatt, data collection efforts. The, the videos that were taken, is that the sum, sum and total of the, your data collection efforts? Beside from the traffic accident issue, but the, the data collection efforts that you undertook since your testimony the first time consisted of these videos over three days, is that, is that accurate?

MR. DRIBAN: That's correct, yes.

MR. MCCANN: And the videos were taken from nine different cameras you said?

MR. DRIBAN: That's correct.

MR. MCCANN: Where were, where, where were the cameras located, do you know?

MR. DRIBAN: Yes, there were, I believe, two cameras on opposite approaches at the Falls Road and Joppa intersection. We had placed a camera at Greenspring Valley and Falls. I believe there were two at, again, on opposite approaches of Falls Road and Seminary.

And then there was a series, there were a series of four cameras that were placed along Joppa Road, along the east side of, the east leg of Joppa Road, one closer to the Station Drive access and then a few kind of proceeding back towards the

proposed site access point and Tallyho Road and White Manor Drive.

MR. MCCANN: Okay and those three days were January 19th, 20th and 21st, is that right?

MR. DRIBAN: I believe we started the afternoon of the 18th. So, Wednesday the 18th, around 1:00, plus or minus, and then proceeding through Saturday the 21st. It was about three and a half days in total of, that the data was collected.

MR. MCCANN: Okay and then in terms of the, the proof or evidence of, of, of that data collection, we have these Exhibits 38, 39 and 40, correct? You've discussed --

MR. DRIBAN: At this point, yes.

MR. MCCANN: Okay. Did, did you watch the videos from all nine cameras for all three days?

MR. DRIBAN: I cert, I certainly did not watch every minute of every camera, you know, in real time. I did watch key locations, you know, again, at varying speeds of, of either, you know, peak hours I tried to watch mostly real time or maybe at two-to-four-time speed, which is still, you can still see what's happening within every cycle of the signal.

And then, you know, other locations, for instance, the locations along Joppa that were further away from the Falls Road intersection, I watched at a much sped up rate, you know, to understand how that flow, how traffic fluctuated over the three and a half days. So, at some capacity, in some speed, I

did, I did view, you know, all the data that was collected. But certainly, did not watch all of it in, in real time.

MR. MCCANN: Okay. Well, you said a couple things there. Did you or did you not, first of all, in real time, did you watch the, the three days of, or so, video from all nine cameras? Did you do that?

MR. DRIBAN: In real time speed? No, I did not.

MR. MCCANN: Did you at any speed watch the video from all nine cameras for the entirety of all three or so days?

MR. DRIBAN: There were probably overnight sections, I, I don't believe so. There were probably overnight sections of, of, you know, some or many of the videos that I didn't review, at any speed, particularly --

MR. MCCANN: Okay. Did you --

MR. DRIBAN: -- again the ones farther away from Falls Road along Joppa where there just wasn't as much, you know, volume of traffic.

MR. MCCANN: Did you, did you keep a log of those portions of the videos from the nine different cameras that you did or did not watch? Did you keep any such log?

MR. DRIBAN: I do not have a log of that.

MR. MCCANN: You mentioned Station Drive, and I wrote down exactly what you said. You didn't observe, at least during the times that you were looking, any cuing in the a.m. peak or non-peak hours. Is that correct?

MR. DRIBAN: I believe what I stated was that during the a.m. peak and off-peak hours, there, we did not observe cuing back to Station Drive from the Falls Road intersection, yes, that is correct.

MR. MCCANN: From the Falls Road intersection to Station Drive?

MR. DRIBAN: Yes.

MR. MCCANN: What about east of Station Drive? Did you observe any cuing, at least during the times that you watched the video, in the a.m. peak or non-peak hours?

MR. DRIBAN: Well, we, I did observe some vehicles cuing trying to turn into Station Drive. And in those circumstances, where a vehicle was traveling east along Joppa Road, trying to make a left turn into Station Drive, what I saw in the videos was that vehicles were able to, those that wanted to go through along Joppa Road, it's wide enough there that they were able to bypass vehicles turning, turning left into Station Drive.

MR. MCCANN: (inaudible).

MR. DRIBAN: There was some cuing approaching Station Drive in that direction.

MR. MCCANN: Okay. Yes or no questions. The, the, during the times that you watched the, the video, did you see any cuing at Station Drive, from its intersection, from Joppa Road's intersection with Falls in the p.m. peak hour, non-peak

hour? You didn't mention p.m. in your testimony.

MR. DRIBAN: Yeah, I believe during the p.m. we did observe --

MR. MCCANN: Yes or no? Yes or no, Mr. Driban? You can explain --

MR. ROSENBLATT: Objection. That, he can explain his answer.

MR. MCCANN: No, he can't. It's a yes or no question, he can explain on re-direct if he wants. But I'm asking yes or no questions.

MR. ROSENBLATT: That's absolutely not how it works.

ALJ: I mean, he can, he can explain. Mr. Driban, did, so, did you see any peak, any cuing from Station Drive to Falls and Joppa in the peak hours, yes or no?

MR. MCCANN: P.m., p.m. peak, Your Honor.

ALJ: P.m., p.m.

MR. MCCANN: Yeah.

MR. DRIBAN: I believe during the p.m. peak on occasion there was cuing back to Station Drive.

ALJ: Okay, so.

MR. MCCANN: All right, thank you, Judge. Are you challenging or disputing Baltimore County's F level of service at these intersections over the past many years?

MR. DRIBAN: I think it depends what methodology you look at. I believe, you know, that the study that we conducted

that was reviewed and approved by both the County and SHA shows that based on CLV and HCM methodologies, you know, during most of the peak hours under those two methodologies, these are, this intersection is not failing.

Certainly, I, I would not challenge, you know, the data that they collected using the loaded cycle methodology. I believe that they have capable staff and, you know, the data that they collected using that methodology shows what it shows.

MR. MCCANN: Okay. So, you are not challenge, just to be clear, yes or no, you're not challenging the County's level of service for these intersections, F level of service for these intersections over the past many of years, true?

MR. DRIBAN: Again, I would state that the, that the data that we have in the studies shows that under the CLV methodology --

MR. MCCANN: I'm not asking you about the CLV, I'm asking you about the County's methodologies --

MR. ROSENBLATT: Judge, Judge, he has to be able to answer the question. He can't get cut off mid-sentence.

MR. MCCANN: He's repeating his answer. I'm, I'm trying to --

MR. ROSENBLATT: Because you asked the same question.

MR. MCCANN: I'm speeding things along here.

ALJ: Okay. So, I didn't hear the little, loaded cycle methodology was what you had asked about. I thought you

just said are you disputing the level of service of F in those three intersection --

MR. MCCANN: (inaudible). The County doesn't do another level of service --

ALJ: No, I realize that. Yep, but I wasn't sure you were narrowing it to that, so he keeps coming back to the, so, are your, your question is under the loaded cycle methodology, correct?

MR. MCCANN: Yeah, I'll rephrase it. I think he --

ALJ: Okay.

MR. MCCANN: -- I don't disagree with Mr. Rosenblatt that he may have answered, but I'm just doing it for clarity purposes.

ALJ: Yeah, understood.

MR. MCCANN: Are you challenging the County's F level of service under its loaded cycle methodology at these intersections, all three of them, over the past many years?

MR. DRIBAN: The County's data shows that the intersections under that methodology operate at a failing level of service.

MR. MCCANN: Okay. In terms of the cuing thing with that, whether it's at Station Drive or at any of the other locations that you didn't speak about, did, you've heard, you've heard the testimony of my clients and other members of the community about cuing, correct?

MR. DRIBAN: I have heard that testimony, yes.

MR. MCCANN: So, you, you're not suggesting that these folks aren't telling the truth, are you?

MR. DRIBAN: I am cert, I am certainly not suggesting that. I'm suggesting that, I'm stating that the videos that we collected over three and a half days, which were, essentially, randomly selected days showed, showed that, that there was no cuing during the time period that we have videos --

MR. MCCANN: On the --

MR. DRIBAN: -- back to those, back to those locations.

MR. MCCANN: On the, on the, the portions of video that you watched, correct?

MR. DRIBAN: At the, at the locations in question, where there was specific testimony, I, I did watch, you know, those videos in, at some speed, greater than real time speed.

But at some speed, you know, for the entire three and a half days in order to understand whether there was cuing at any point that, that extended back to there. So, over the three and a half days, the videos at, at the site access point and at Tallyho Road do not show cuing extending back from Falls Road to those locations.

MR. MCCANN: Okay and be specific about, again, I won't, you, you just said, you just said for all of the videos, from, from all nine cameras over the entirety of the three plus

hours, you observed, you did observe, you did review all of those videos and you didn't observe cuing at which specific locations? Be specific if you would.

MR. DRIBAN: So, I didn't, so just, just to clarify my testimony, I didn't say all nine cameras that I observed. What I specifically said was the cameras along Joppa Road, we had one at, again, Station Drive, which we've already talked about.

But I believe the question here was pertaining to previous testimony from area residents about cuing back to Tallyho Road and to the site access point, extending from Falls Road to those locations, we did have a camera at each of those, at each of those intersections, looking westbound towards Falls Road and I did, at some speed, again, not real time speed, but at a speed that was sub, that was, where I was capable of, of seeing whether cues spilled back or not.

I did watch the entirety of the three and a half days of video that we collected at those two locations and cuing did not extend back to either Tallyho Road or the site access point from Falls Road in any of the three and a half days of video that we captured.

MR. MCCANN: Just on, just on Joppa at Station and at Tallyho, correct?

MR. DRIBAN: I didn't say Station. I said at the site access point, our site access point and Tallyho Road.

MR. MCCANN: Got it. Okay. In terms of, you, you characterized some accident data that you received apparently from State Highway Administration, is there any reason why that accident data wasn't introduced as an exhibit? Do you have that?

MR. ROSENBLATT: Objection.

MR. MCCANN: Do you have that data?

ALJ: What, what's the, what's the objection?

MR. ROSENBLATT: How, how we choose to present our case is our prerogative.

ALJ: Yeah, understood. But, I mean, but he can ask the question if he has access to the data, so --

MR. ROSENBLATT: Yeah, the second question I don't object to. Sorry, that wasn't clear.

ALJ: So, yeah, you can ask the question about whether or not he has that data in his hand, I mean, whether or not it becomes an exhibit is, is their choice so.

MR. MCCANN: Got it, got it. And I understand that. Do you have access to that data that we're talking about?

MR. DRIBAN: I do.

MR. MCCANN: Okay. Is there a reason why it wasn't introduced?

MR. ROSENBLATT: Objection.

MR. MCCANN: That, that's a legitimate question.

ALJ: Well, I think it's counsel's choice to decide

whether or not it was introduced or not. I mean, so, you can ask him questions about it. I mean, he has it.

MR. MCCANN: That's a common question, but I'll move on. Did you obtain any data from either the State Police or the County Police for accidents at any of these intersections?

MR. DRIBAN: I did not, but the, the data that SHA reports is based on, they collect that data from both State and County, local jurisdictions, which is what makes up the SHA data.

MR. MCCANN: You certain about that? That is that State Highway, for its accident data, collects all of the accident reports or other data from both the State Police and the County Police? Are you certain about that?

MR. DRIBAN: My understanding is that, is that SHA has, there's a crash reporting system, statewide crash reporting system and that data is funneled to, into SHA's crash data base, which has, the SHA has a specific division, the TDSD, the traffic development and support division --

MR. MCCANN: Um hm.

MR. DRIBAN: -- who is responsible for compiling that data from the statewide crash reporting system and, and, and providing crash reports as necessary.

MR. MCCANN: As necessary, you said?

MR. DRIBAN: As, yeah, I mean, as requested. They have, they have that data, you know, within, within a database

and they can, they can generate reports when they, when they need them, as necessary.

MR. MCCANN: Okay. You said, I guess in conclusion in some respect, that there is no quote, measurable safety issue at these intersections. What, what does that even mean? What is, what is a measurable safety issue?

MR. DRIBAN: Yeah, that, that maybe wasn't the best choice of language. What I intended to state was that SHA and generally accepted practices, is crash rate great, greater or equal to 1.0 crashes per million vehicles entering an intersection is considered a location that would, that would warrant further attention to, to safety issues and, you know, possibly additional study for safety, you know, safety related reasons. In this case, the crash rates at the intersections did not rise to that threshold, is what I was intending by that statement.

MR. MCCANN: Got it, appreciate that. So, you're not saying there's no safety issues at this, at these intersections, you're just saying that according to the data from, from the State, the, there, there, there has not been enough safety incidents that would warrant some further action by the State, correct?

MR. DRIBAN: That's correct.

MR. MCCANN: I mean, any safety issue is a safety issue, isn't it, for the, for the driver's who use these roads?

MR. DRIBAN: I, I think that, you know, any, anytime you have vehicles traveling, you're going to have, unfortunately, crashes. And the way those crashes are evaluated by the State and other agencies, there has to be some mechanism for prioritizing, you know, how safety dollars are, are spent and how studies are conducted.

And so, this sort of screening mechanism is, isn't greater than 1.0 crashes per million vehicles entering or not, and if it's not, then, you know, for the State, it typically doesn't rise to the level of further consideration for, for safety improvements.

MR. MCCANN: Yeah, yeah, I understand that's the kind of thing traffic engineers look at. But what I'm asking you is whether or not, regardless of whether the, the safety incidents rise to a level that require some further action by the State, I guess in terms of road improvements or otherwise, do you have any specific knowledge that would allow us to determine whether or not the safety issues are, around these three intersections, are any better here than they are say elsewhere in this area of Baltimore County?

MR. DRIBAN: I mean, other than the crash rate data that I testified to that, you know, the State wouldn't consider this a, a corridor that would need, you know, that would need to, it'd, it'd be worthy of additional study for safety issues. That's all I can say about it.

MR. MCCANN: Okay, all right. With respect to the, the special variance standard, you were talking about that and then, and then you mentioned somewhat in the same breath that you had a meeting with Mr. Nebre. Do you recall that testimony?

MR. DRIBAN: Yes.

MR. MCCANN: Is that a meeting that took place prior to his testimony and prior to the hearings in this case?

MR. DRIBAN: Yes, he and I had, he, he and I had a number of calls and virtual meetings over the course of the, you know, year and a half to two years, I guess now going almost on three years, that we've been working on this project, where, wherein we discussed various traffic issues, including, the, the need for a special variance and what that standard was.

MR. MCCANN: Yeah, no, I, I agree, there's a lot of evidence about that in terms of e-mails and testimony but you haven't met with Mr. Nebre on that issue, that is, the special variance standard issue since his testimony in this case at the beginning of this case?

MR. DRIBAN: That's correct. I have not.

MR. MCCANN: Because you were here for his testimony, were you not? You heard him testify, right?

MR. DRIBAN: I was, yes.

MR. MCCANN: Yeah, and you heard him say that the

district standard under, under the regulation that you just discussed with Mr. Rosenblatt, is the County's level of service. Did, did he not say that?

MR. ROSENBLATT: Objection.

MR. MCCANN: I'm just asking whether he --

ALJ: He can ask, he can ask, he can ask the question. Mr. Driban, what is, what is your recollection?

MR. DRIBAN: I believe if you go back, Mr. Nebre testified twice and, you know, he had cited different answers to that question in his, his two, two testimonies. I don't recall the specific wording. I haven't reviewed the transcript of his testimony. So, I'm, I'm not certain what he said.

MR. MCCANN: Okay. Did you ever meet with or speak with Mr. Nebre's supervisors or colleagues, specifically, Mr. Karski or Mr. Filsinger on that issue? That is, the special variance standard.

MR. DRIBAN: I do not recall specifically whether we discussed that issue. At some point, a year, maybe two years ago --

MR. MCCANN: Okay.

MR. DRIBAN: -- at this point, there was, we did meet with Mr. Karski, and I believe Mr. Filsinger may have been in attendance, although I'm not certain. A lot of the discussion, we, you know, again, we discussed a number of, of traffic issues and I'm not certain whether at that meeting, you know,

that was specifically discussed.

Although, I, I know that when I testified earlier, and I believe it's in evidence, there was an e-mail from Mr. Filsinger stating that the special variance requirements had been met from, again, from about two years ago.

MR. MCCANN: We, we have all that in evidence, including do we not, e-mails from those gentlemen suggesting that the district standard is the County's level of service methodology? Do, do you recall those e-mails?

MR. DRIBAN: I believe I recall what you're speaking about.

MR. MCCANN: Okay. I'm just going to check the exhibits real quick, if I may, Your Honor. And that may be all I have, bear with me one second. Okay. Thank you, Mr. Driban. No other questions, Your Honor.

ALJ: Mr. Zimmerman, any questions?

MR. ZIMMERMAN: Yes, yes, thank you, Judge. And first of all, I'd like to correct one observation by Mr. Rosenblatt, who said that this is the first case, development case, we've ever been in. That is not correct.

We've been in a number of development cases over the years, including some with Venable. But we do it on a priority basis as to which cases are most problematic. And we were in Woodley Park at the Board of Appeals, a development case. We were in Davis Farms at the Board and on remand, which we view

as prequels to this case in part.

And we review every special variance case. And we were involved in the Hopkins case. So, we, you know, this is not the only case, okay, that we've, development case and/or special variance case that we've ever been in in the history of Baltimore County. So, I would like to correct that statement. But presumably, Mr. Rosenblatt is just not aware of these other --

MR. ROSENBLATT: No, Mr. Zimmerman, I'll put this to rest if we could. Have you ever appeared at a Hearing Officer's hearing before, an Administrative Law Judge before? That's what I meant.

MR. ZIMMERMAN: Yes, many times, many times, yes.

MR. ROSENBLATT: Because you just mentioned the Board of Appeals in the other cases, so.

MR. ZIMMERMAN: Okay. We can, we're in a case with Patricia Malone down at the Charlestown development. We were in the Galloway Creek case, which eventually went to the Board of Appeals. And we were at the A, we tried that at the ALJ level. We were recently at the ALJ level on the Edgemere Trust case. I could go through --

ALJ: Yeah, --

MR. ZIMMERMAN: -- many other, many other cases. But we don't get into every single case. We prioritize. Okay? So, at some point, you know, I could prov, I'm not going to, I

don't think I need to do it, but I could provide a series of cases where we're participated.

Every special variance case that starts at the ALJ level, we enter our appearance. We litigated the Hopkins case back five or ten years ago and I think the, the decisions, some of the decisions are in, are in the record here.

So, there are plenty of cases, but we do it on a selective basis, where we see a significant problem relating to the master plan or zoning. So, that's, that's what we do. And I'll just take it that Mr. Rosenblatt was not aware of the history, that's all.

ALJ: All right. Well, you don't have to explain yourself, you're (inaudible) --

MR. ZIMMERMAN: (inaudible) for the benefit of all the parties, including the Developer, you know, we do this from time to time based on our perception of the law and the public interest. So, so this is not the only situation where we participate, okay?

ALJ: Nope, understood. So, just go right ahead.

MR. ZIMMERMAN: Okay, all right. Having said that,--

ALJ: Thank you.

MR. ZIMMERMAN: So, Mr. Driban, am I correct in having the impression that you've been listening to most, if not all, of the testimony in the, in this case over the last number of months?

MR. DRIBAN: Yes.

MR. ZIMMERMAN: Okay and, and were you linking in during the testimony by various citizens, such as Sister Kathleen McAnany (phonetic), Michael Brassert, Peter George, (inaudible) James Gary, Dan Radebaugh, (inaudible), Dr. Lum, do those names ring a bell?

MR. DRIBAN: Can't speak to every single name but I've been here for the entirety of everyday of testimony that's happened. So, --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- if that's the list, then yes, I've heard all --

MR. ZIMMERMAN: And just to take an example, were you ever in the car or, or on foot with Sister Kathleen Macanany at the times upon which she said she saw certain things and made certain observations? Were you with her?

MR. DRIBAN: I was not.

MR. ZIMMERMAN: Okay. So, you can't say whether the things that she saw were things that she made up or did not see?

MR. DRIBAN: I cannot say that, nor would I ever imply that anyone made anything up. All I can present is the data that I've collected.

MR. ZIMMERMAN: So, and that would be true for all the other citizen witnesses, that you were not personally with

them on the days and times, one or more times, based on which they said they saw certain things --

MR. DRIBAN: Correct.

MR. ZIMMERMAN: -- and observed certain things?

MR. DRIBAN: That's correct.

MR. ZIMMERMAN: So, would you say there, are you, are you implying, based on your testimony, that all those citizens' observations should be disregarded?

MR. DRIBAN: You can make whatever implication you would like. I've presented the data that we collected.

MR. ZIMMERMAN: Okay, okay. Just a few more questions. All right. You mentioned that you did look at the Torch Hill opinion, correct?

MR. DRIBAN: That is correct.

MR. ZIMMERMAN: Okay. Have you looked at any other Zoning Commissioner or Administrative Law Judge opinions relating to special variances pertinent to transportation over the years?

MR. DRIBAN: I don't know that I have.

MR. ZIMMERMAN: Okay. Have you looked at any County Council Bills relating to the growth management law on transportation and basic services maps?

MR. DRIBAN: At various points, I have, I have reviewed several County Council Bills.

MR. ZIMMERMAN: Can you identify which bills you

reviewed by number?

MR. DRIBAN: I can't specifically, but I have looked at some of them.

MR. ZIMMERMAN: Which ones, if any?

MR. DRIBAN: Again, I can't specifically identify them, but in the course of my research and, you know, again, about two years plus of trying to, you know, understand this, this special variance and get to the bottom of --

MR. ZIMMERMAN: Um hm.

MR. DRIBAN: -- this case and the traffic requirements, I did, at some point, review some of those counsel bills, you know, in some part trying to understand how the, how the, how the policy areas are developed and, you know, again, just, just trying to understand the history of, of all this so I, I can really, you know, understand how that was developed.

MR. ZIMMERMAN: How many council bills are there related to the basic services maps on transportation?

MR. DRIBAN: I'm not certain how many there are, but I do know they go back quite a ways, a number of years.

MR. ZIMMERMAN: As you're sitting here today, can you identify any particular bill or anything about any particular bill --

MR. ROSENBLATT: Objection. Asked and answered.

MR. ZIMMERMAN: -- (inaudible) number?

ALJ: I think his testimony was that he --

MR. ZIMMERMAN: All right.

ALJ: -- couldn't identify them by number.

MR. ZIMMERMAN: Um hm. Can you identify any particular section of any particular bill that you would want to highlight right now? And if so, give us the number of the bill.

MR. ROSENBLATT: Objection.

ALJ: So, he doesn't have the bill numbers.

MR. ZIMMERMAN: All right.

ALJ: But (inaudible), Mr. Driban, do you remember any particular bill or any section of the, of one of the bills, the transportation bills on the growth management act?

MR. DRIBAN: There's nothing specific that comes to mind. I know one of the more recent ones discussed pretty specifically the, the boundaries of one of the more recent, the more recent areas traffic sheds that, that was developed. Again, I couldn't speak to specifically which one it is. But I, I, it's just something that sticks out in my mind from having reviewed some of them.

MR. ZIMMERMAN: Yeah. Do you know whether there's anything in any of the counsel bills which particularly exempts the Greenspring Manor property from the basic services map's legislation?

MR. DRIBAN: I, I'm not aware.

MR. ZIMMERMAN: Okay. Just a couple more questions. (inaudible) what is your hourly rate?

MR. ROSENBLATT: Judge, it's not a jury trial. Object to relevance.

ALJ: I think this was asked, maybe it was you, Mr. Zimmerman. Do you recall on --

MR. ZIMMERMAN: I don't think I asked this question. I don't know if Mr. McCann did.

ALJ: Somebody asked the question. I'm almost positive they asked the question and what was the, the, I think it was Mr. Wyatt, in fact. Mr. Wyatt may have asked the questions and, and asked about the retainer and all that. But, you know, to the extent it wasn't asked, and my memory is, is not serving me right, so overruled. Go, go ahead, sir.

MR. DRIBAN: We, hourly rate in terms of billing or how much I get paid an hour?

MR. ZIMMERMAN: Well, the company's billing rate, yeah.

MR. DRIBAN: Yeah, I, I believe we bill an hour at $250 an hour.

MR. ZIMMERMAN: Okay. For everyone that works on the project?

MR. DRIBAN: Some of our technician level folks, that would be my rate, some of our technician level folks and lower-level engineers would be billed at a lower rate than that. But

that is the (inaudible) --

MR. ZIMMERMAN: Okay. Do you have any ballpark figure on the, the billing so far, the total billing?

MR. ROSENBLATT: Judge, objection. Continuing objection. What, what relevance does this have to, we've established he is a paid expert. What relevance do these continuing questions have to the case?

ALJ: It goes to, you know, supposedly the credibility of the witness and so, overruled. Go ahead.

MR. DRIBAN: I'm not certain what our total billing on this project is.

MR. ZIMMERMAN: Okay and that's all I have. Thank you, Judge. Thank you, Mr. Driban.

ALJ: Sure. Mr. Wyatt, any questions?

MR. WYATT: I do, I have a few, thank you, Your Honor.

ALJ: Sure.

MR. WYATT: Mr. Driban, good afternoon. So, I'm gathering from your testimony you all put cameras up in late January of this year, nine cameras for about three and a half days, that's what you said, right?

MR. DRIBAN: That's correct, yep.

MR. WYATT: All right and that was, that was a short work week, was it not?

MR. DRIBAN: The week in question was, I believe,

Martin Luther King holiday was that Monday. Typically, for data collection, you don't set cameras after the immed, the day immediately following a holiday. So, we did not set them on Tuesday, but we did put them out on Wednesday, which again, would be considered a, a standard data collection day.

MR. WYATT: But it was not a standard work week, is my, my point, correct?

MR. DRIBAN: It was a four-day week, that's correct.

MR. WYATT: Okay and you put these up at various locations, including, I think for Mr. McCann's questioning, you had at least two, maybe three locations along Joppa Road as it approaches Falls Road and I-83, is that accurate?

MR. DRIBAN: That's accurate.

MR. WYATT: All right and none of those videos were shown for purposes of this hearing today, correct?

MR. DRIBAN: That's correct.

MR. WYATT: All right. And you said, based on your observations, well, one other question. With all the, when Baltimore County does the loaded cycle methodology, they use cameras as well, correct?

MR. DRIBAN: I'm not certain whether they do or not.

MR. WYATT: In all of your research for this case, you don't know if Baltimore County uses cameras or whether they actually have people out there doing hand counts? You're not sure?

MR. DRIBAN: I'm not certain. I mean, the, the data typically is taken as, you know, we have a count on a spreadsheet or a pdf and that's the data that, that we would provide or that the County would provide. I'm not sure how they collect that data, whether it's manually or, or by a camera.

MR. WYATT: You've never come across that in any of the cases you've worked on in Baltimore County, to know whether or not Baltimore County uses cameras or actual personnel onsite doing the counts?

MR. ROSENBLATT: Objection. Asked and answered.

MR. WYATT: I don't think it was answered. I asked him for this case, counsel. Now I'm asking him for all cases.

ALJ: Overruled. Go ahead.

MR. DRIBAN: We look at the data that's provided. The method of collection is typically not something, I mean, whether it's us giving them the data or vice versa or for any State agent, you know, any agency within the State, that's not, it's not particularly relevant how it's collected. In this case, you know, we did go out and set cameras because we wanted to have that ability to go back and conduct the observations that were conducted.

But for typical traffic impact study or evaluation of level of service, what matters is that the data at the end, at the end of the day, the end product, the spreadsheet or the pdf

that shows the volume by fifteen-minute period throughout the day.

MR. WYATT: All right. Baltimore County can retrieve or obtain data through cameras, would you agree with that statement?

MR. DRIBAN: If, if they have cameras, they certainly could do that. I'm, again, I'm not aware whether they, whether they use that method or whether they field collect it.

MR. WYATT: And the use of cameras for the loaded cycle methodology, data collection is permissible, is it not, in your industry?

MR. DRIBAN: Sure, as long as you can see the, the rear of the cue on all approaches, you could do, you could do that with a camera.

MR. WYATT: All right and so, with the nine cameras over three and a half days, did your firm do any loaded cycle methodology collection of data?

MR. DRIBAN: We did not review the loaded cycle methodology.

MR. WYATT: Okay and yet I heard you testify that based on your observations, you were comfortable that what you were observing was a level of service of an A or a B for Falls Road at the intersection of Joppa and Falls, correct? You, didn't you say that? Multiple times you said that actually, didn't you?

MR. DRIBAN: I did say that. That's based on my, my expertise in the field and having looked at intersections and what the level of service criteria are based on. You know, that, that's not necessarily specific, I mean, we didn't calculate the loaded cycle methodology. But my observation, based on volumes and having observed the videos is that those intersections are operating at a very good level of service.

MR. WYATT: All right. But that was your opinion today, is that you, your --

MR. DRIBAN: Correct.

MR. WYATT: -- your thumbnail view of the world based on casually looking at these videos without taking or discerning any of the data from them is that you're comfortable that these level, the level of service was an A or a B?

MR. ROSENBLATT: Objection.

MR. WYATT: That was your opinion today, correct, sir?

ALJ: Overruled, go ahead.

MR. DRIBAN: What I testified to is that during the off peak periods, specifically at certain points when we are looking at the, the power point or pdf slides or portions of the video, that my observation of that time point in the, in the videos was that, at that point, it was operating at level of service A or B.

I did say that during the peak periods, traffic

volumes were heavier, you know, and I specifically said at one point northbound, the northbound approach coming off of the beltway and off of I-83 appeared to be operating at a, at a worse level of service.

So, when I referenced level of service A and B, that was specific to off-peak periods, where there appeared to be very little traffic. For instance, you know, overnight there's almost no volume out there and that is, I can say with near certainty that that is a level of service A.

When there's no traffic at the intersection, there's no delay, you know, that's a level of service A. So, other observations that I made during off peak periods were based on my expertise of the, of the level of service methodology and review of those videos.

MR. WYATT: Okay. So, now I'm understanding you to be walking back your opinions from earlier because now you're saying it's certain times that they're level A or B. Whereas I understood earlier, you were, you were saying during peak hours, they were A or B.

MR. DRIBAN: I don't believe I said that. I believe, I believe my testimony throughout this, this testimony has been that it was off peak periods and pointing to specific times within the video that I, it appeared to be level of service A or B based on my observations.

MR. WYATT: And the level of service we're talking

about for purposes of this hearing is the basic service map level of service?

MR. DRIBAN: When I'm speaking about level of service A or B in this context, what I'm talking about is more the highway capacity manual methodology, which is based on delay at the intersection, average delay per vehicle.

MR. WYATT: So, your, your perspective of level of service that you've expressed today is different than the basic service map?

MR. DRIBAN: I think if you, if you were to observe, what I specifically, what I'm testifying to is that based on the highway capacity manual methodology, which is based on average delay per vehicle, in, in the off peak periods that I pointed to, that I believe the intersection is operating at a level of service A or B.

It's clearly operating well within acceptable thresholds. I believe the loaded cycle methodology would correspond to that level of service but or, or a similar level of service. But again, we did not specifically review for the loaded cycle methodology based on our data.

MR. WYATT: All right and you testified in response to a question that Mr. McCann posed to you, you're not taking issue with Baltimore County's classification under its basic service map of, of level of service F for this intersection at Joppa, Falls and, and 83, correct?

MR. DRIBAN: I don't, we did not provide data to either corroborate or refute that classification.

MR. WYATT: I believe that's all I have, thank you.

ALJ: Mr. Sachse?

MR. SACHSE: Mr. Driban, how far along Jop, how far east on Joppa Road were your cameras placed?

MR. DRIBAN: There were, there were a series of cameras and I believe the furthest one to the east was just east of Tallyho Road.

MR. SACHSE: But nothing back as far as Thornton or Bellona?

MR. DRIBAN: No.

MR. SACHSE: So, no opinion as to traffic on the, at that in, those intersections as a result of the development?

MR. DRIBAN: I did not evaluate that as part of this data collection effort.

MR. SACHSE: I understand. Did you have any cameras along Seminary?

MR. DRIBAN: I believe we had two cameras in the vicinity of the Seminary and Falls Road intersection.

MR. SACHSE: Were they on Seminary? And if so, how far east on Seminary?

MR. DRIBAN: I'm not, I'm not certain exactly where they were on Seminary.

MR. SACHSE: No, that's fine, if you don't know, you

don't know. And no, no, no cameras along Tallyho, is that correct?

MR. DRIBAN: Nothing on Tallyho cameras wise.

MR. SACHSE: All right. That's all the questions I have, thanks.

ALJ: Mr. Rosenblatt, any follow-up?

MR. ROSENBLATT: I don't, thank you.

ALJ: Okay. Okay, all right. I think we're finished with Mr. Driban. It's 12:30, so I know you have more witnesses, correct? But we have Mr. Grachek coming at 1:00.

MR. ROSENBLATT: Yeah, we propose maybe take lunch until 1:00 and do Mr. Grachek and then I'll get, I'll get another witness ready for this afternoon.

ALJ: All right. That sounds good. That, is that right, Mr. McCann, with you?

MR. MCCANN: That sounds good, thank you. Do we have a sense of how far we'll go today and whether we'll finish and all that in terms of planning?

MR. ROSENBLATT: We are going to need one more day. We're going to need the day we previously asked for.

ALJ: And can I just ask on the record, did you all hear from the scheduler? Because I know I sent that e-mail, Mr. Mudd asked me at the last hearing. I sent the e-mail, it included all of you on it. Did you hear anything?

MR. ROSENBLATT: I have not heard anything.

ALJ: Okay. I wasn't sure about that. I'm going to send an e-mail now then to make sure to follow-up with them, with that request.

MR. ROSENBLATT: Okay.

ALJ: Now that you've let me know. Okay.

MR. ROSENBLATT: Thank you.

MR. MUDD: Thanks.

MR. MCCANN: Thank you.

ALJ: That's good. We'll come back at 1:00.

MR. MCCANN: Bye.

(PAUSE)

ALJ: Back on the record after lunch and Mr. McCann has another witness, Mr. Grachek.

MR. MCCANN: Correct.

ALJ: All right. Mr. Grachek, it's been a while, raise your right hand, please. Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. GRACHEK: I do.

ALJ: All right. All yours, Mr. McCann.

(MR. GRACHEK IS VERY DIFFICULT TO UNDERSTAND)

MR. MCCANN: Okay, thank you. Mr. Grachek, I'll cut to the chase here. I'm going to show you what has been pre-marked as Protestant's Exhibit 104. Start with this document. Do you see that first page there?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. I'm going to scroll down just so it says forty-five pages, but just so you, you see exactly what it is. Are you familiar with this document?

MR. GRACHEK: Yes, I am.

MR. MCCANN: Okay, great. Why don't you tell, tell the Judge what it is and where we got it from?

MR. GRACHEK: The first document is an e-mail with the scope of services from Hazen to validate the RK&K model, flow model, in the sewer shed.

MR. MCCANN: Okay. So, you said e-mail, you mean, a letter, is that what you meant?

MR. GRACHEK: Yeah, yeah.

MR. MCCANN: Okay.

MR. GRACHEK: A letter I mean, not e-mail, a letter, excuse me.

MR. MCCANN: Okay. So, the letter and then the second page in this Exhibit 104 is what?

MR. GRACHEK: That is the scope of services for Hazen to provide modeling services. And if you read into the, into the scope of services, it's to validate the RK&K model.

MR. MCCANN: Okay. In fact, there's a, on this second page under background, there's a reference, second sentence, to, it says long term capacity, peak flow management, evaluation report. Is that the, is that an RK&K document?

MR. GRACHEK: That's the RK&K report.

MR. MCCANN: Okay and then, scroll down, I think I stopped at page nine. There's a third document in here. What is this document on, beginning on page nine?

MR. GRACHEK: That's a summary of the evaluation that was performed under that scope of services.

MR. MCCANN: Okay. Once you, have, have you read this document?

MR. GRACHEK: Yes, I have.

MR. MCCANN: Okay. Why don't you explain to the Judge, if you would, what, what, what happened and what the document tells us, if anything?

MR. GRACHEK: Yeah, very simply, what, what Hazen and Sawyer did is they performed an evaluation of the accuracy and the validity of the RK&K model by taking the data generated from the model as far as the, the sewer, the sewer shed and all the capacity elements of the model. And they related them to a guidance document, I believe it was from 2002, I can't recall the exact name of the guidance document that talked about the relative bands of accuracy for each one.

And then they plotted their data. They made a few adjustments to the model, minor adjustments to the model. But then they plotted the data to that accuracy, and they came to a conclusion that with just some minor exceptions that was really kind of not, not major to the overall process, that the RK&K

model was validated by this work.

MR. MCCANN: Okay, all right. Okay. Your Honor, I would move Exhibit 104 into evidence.

MR. MUDD: No objection.

ALJ: Any objection? Okay, thank you.

MR. MCCANN: Okay. Moving on, Mr. Grachek, to what's been pre-marked as Protestant's Exhibit 108, which I have right here. And I know it's, it's fifteen pages. I know it's very small print but tell us what this document is.

MR. GRACHEK: That's the evaluation from the Hazen work, showing the calculation of capacity of each pipe in the system.

MR. MCCANN: Okay.

MR. GRACHEK: Using, using (inaudible) equation and different parameters. Then they did an assessment of what the peak capacity would be during dry weather flow.

MR. MCCANN: Okay.

MR. GRACHEK: And after that, they, they divided the, the full capacity into the, into the calculated capacity and determined the pipe percent capacity. So, when you look at those numbers, a number under one hundred percent would be the pipe is not flowing full --

MR. MCCANN: Yeah, hold on one second. Let me, I'm sorry to interrupt you. I just want to, this is a lot to look at first glance, and the Judge hasn't actually seen it yet.

So, just, there are columns here, obviously, and I'll try to blow them out without distorting the entirety of the document.

But just, if you would, just go across the chart and tell us what the columns are. There's actually headings at the top, which I think are self-explanatory. But just tell us what the big headings are, maybe.

MR. GRACHEK: Yeah, big headings are the pipe, the pipe attributes that says, that shows, it shows the meter basin, it shows the, the, the length of pipe. So, for example, the second line is 10918, 13049.

MR. MCCANN: Yeah.

MR. GRACHEK: It provides a pipe diameter and a manning's coefficient, which is the coefficient that you use for determining the flow along with pipe gradient.

MR. MCCANN: Okay.

MR. GRACHEK: And they calculated then a full flow capacity, a million gallons per day, which on that second line, we use that as an example, is 3.97 million per day.

MR. MCCANN: Right.

MR. GRACHEK: Then for dry weather flow, they did a calculation of what the surcharge (inaudible), what the overall capacity is (inaudible) that first one isn't a very good example because it's got zero.

MR. MCCANN: Yeah.

MR. GRACHEK: But if you go down to say BC-09, it

would be the, let's see, one, two, three, four, five, six, the fifth, fifth column down.

MR. MCCANN: Right here?

MR. GRACHEK: The fifth, fifth row down, I'm sorry.

MR. MCCANN: Yeah. Okay, right here, where it says .13?

MR. GRACHEK: Yeah, .13, .13.

MR. MCCANN: Okay.

MR. GRACHEK: You would see, you would see a, a number of 12.5%. And that is the .13 divided by the 1.8 or, excuse me, the 1.06.

MR. MCCANN: Right here, these two numbers, .13 and 1.06?

MR. GRACHEK: You got the, the dry weather flow divided by the full capacity, so that means that pipe at dry weather flow is at 12.5% full.

MR. MCCANN: Okay.

MR. GRACHEK: Okay and then moving up, they do that same assessment using that same denominator with five different storms. And what the, what the flow is to determine peak capacity or the (inaudible) percent pipe flow during, during those times. As you can see, the numbers start rising and there are some numbers that are above one hundred percent and those are pipes represented by the model as being fully full or beyond full (inaudible) surcharging.

MR. MCCANN: Okay.

MR. GRACHEK: (inaudible).

MR. MCCANN: Okay. So, let me back out here a little bit and get some, get some perspective and scroll down. This is, as I said, fifteen pages. I'm going to scroll down to, first to, there are some highlighting in this exhibit. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Is that our highlighting?

MR. GRACHEK: Yeah.

MR. MCCANN: Okay and you looked at these numbers in the highlighting?

MR. GRACHEK: Yes, I have.

MR. MCCANN: Okay. So, and without going through all of it, just take one at a time. Actually, before I do that, let me go back, if I could, to Protestant's Exhibit 69. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: I can blow that up if you need, it's probably small --

MR. GRACHEK: I, I can see it fine.

MR. MCCANN: Okay. So, tell, remind us what this, what this is again, this is Exhibit --

MR. GRACHEK: This was, this was, was a, a summary that's provided by one of our people.

MR. MCCANN: Um hm.

MR. GRACHEK: From the RK&K report.

MR. MCCANN: Right.

MR. GRACHEK: That determined the, the percentage full capacities similar to those columns that you're looking at. This was from the RK&K report and not the Hazen report.

MR. MCCANN: Right.

MR. GRACHEK: And, and this represents also the, the pipes that leave from Greenspring Manor all the way down to the end of, to the County, to the County line.

MR. MCCANN: Okay.

MR. GRACHEK: And as, and this, what it shows here is that, as you can see, that when you have storm events that are, any storm event, but particularly those in the last four columns, the model represents over one hundred percent capacity, sometimes up to over five hundred percent capacity in some of these lines.

MR. MCCANN: Okay. So, and what, what is the green, I take it it speaks for itself, but the green column?

MR. GRACHEK: Yeah, the, the green, the green is the, is the normal dry weather flow capacity.

MR. MCCANN: From where?

MR. GRACHEK: From, from the, (inaudible) pipeline coming from Greenspring Manor all the way down to the County line.

MR. MCCANN: No, I mean, the source. It says DPW--

MR. GRACHEK: That's, that was my understanding because that was from the RK&K report.

MR. MCCANN: RK&K or from DP, it says DPW this column and then these columns say RK&K.

MR. GRACHEK: Oh, I'm sorry, I'm sorry. Excuse me. That was the DPW, DPW (inaudible), the Department of Public Works' numbers, I apologize.

MR. MCCANN: Okay.

MR. GRACHEK: Yeah, those are Department of Public Works numbers that, for dry weather flow.

MR. MCCANN: Okay.

MR. GRACHEK: And then the remaining are the RK&K numbers from wet weather flow.

MR. MCCANN: Okay and I think you've said as much, but is 43794, this pipe right here, and 43793, is that immediately below the subject property, Greenspring Manor?

MR. GRACHEK: That's my recollection, yes. I don't have it out in front of me, but.

MR. MCCANN: Okay. Well, I can pull up a map if you need me to.

MR. GRACHEK: The, yeah, if you would, (inaudible) verify that.

MR. MCCANN: Okay, yeah. Let's do that, just to make sure before we move back to the exhibit. One second. Let, let

me find what number it is. I believe it's sixty-two. Bear with me one second. It's not sixty-two.

MR. GRACHEK: And I, and I believe, based on what I recall, that was right --

MR. MUDD: Objection, objection. I'm not sure there's a question on the floor right now.

ALJ: Okay, just hold on a second, Mr. Grachek. Mr. McCann is just trying to pull up that map. So, you can verify that (inaudible) number.

MR. GRACHEK: Thank you.

MR. MCCANN: Okay. Let me show you, this is Protestant's Exhibit 3, just to refresh your recollection. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and it's, it's already in evidence. It's eleven pages.

MR. GRACHEK: Yes.

MR. MCCANN: It goes all the way down to Lake Roland and to the City line, correct?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and just, we were, we were talking about the, the sewer segment immediately below the subject site. Can you tell us by looking at this Exhibit 2 refresh your recollection about what --

MR. GRACHEK: Yes, you can see 437593 --

MR. MCCANN: Yep.

MR. GRACHEK: -- just off the County line and then 43795. Yeah, so, so those are --

MR. MCCANN: Okay. You said the County, you said the County line. Did you mean to say that?

MR. GRACHEK: Excuse me, not the County line, the prop, near the property line, between the property and the sewer (inaudible).

MR. MCCANN: Okay, all right. So, getting back to Exhibit 69, if we can. And I want to ask you to focus in, if you would, on, when we go back to the new exhibit, focus in on this column, the third column, RK&K column, ten-year six-hour storm. So, focus in on that column, and you have, there's some blue and red here, correct?

MR. GRACHEK: Correct.

MR. MCCANN: Okay. So, just, starting, well, let's start with, before we get to the blue, just for 43794 to these first eight segments. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Are those colored in the new exhibit, amongst the coloring that we have in the new exhibit that's here?

MR. GRACHEK: (inaudible).

MR. MCCANN: Yeah, I'll, I'll scroll down.

MR. GRACHEK: Scroll down to where that is.

MR. MCCANN: So, this is page nine of fifteen.

MR. GRACHEK: Yes.

MR. MUDD: Judge Murphy? I, I want to, I, I want to object here. And I, I think I can do it at the time of introduction, but I think it's better now before questions are asked about this exhibit. I'm, I'm not, I'm not sure there's been really any foundation laid for what this exhibit shows.

I understand there was, for what is shown on the, on the columns themselves. But where it came from, what year it's from, how it was put together, I mean, I, I'm, I'm a little concerned about having testimony on it without having any of that information.

ALJ: Okay. So, yeah, what I understood Mr. Grachek said it was the evaluation from Hazen and Sawyer and it was in regard to the capacity for each pipe in the system. And so, that's what, that's how the, that's how it started, I, I believe. Mr. McCann, can you just lay some more foundation questions for this?

MR. MCCANN: Yeah, I think he's already said but I can ask him again. But, that this is the evaluation that, the evaluation itself that, that --

MR. MUDD: I'd rather have the witness explain it.

MR. MCCANN: Okay. Well, I think he already has, but I'll ask him. Mr. Grachek, what is this document and where did it come from?

MR. GRACHEK: This is the evaluation that Hazen did as the validation, as part of the evaluation and the validation of the RK&K model.

MR. MCCANN: Okay.

MR. GRACHEK: This was done by Hazen and particularly here, the reason we have data here is because RK&K did not model pipes less than ten inches, but Hazen did. And so, we have numbers here that didn't appear in the RK&K document.

MR. MCCANN: Well, you're talking about this first band here. I'm not asking about that yet, so I think you're ahead of us. But did this, where did the document come from, this document?

MR. GRACHEK: My understanding, it came from the Hazen doc, the Hazen evaluation as --

MR. MCCANN: No, whose, whose document is it? Where, if, and I, you, Judge, I think it's, I mean, it's obvious. This is a Bate stamped document. I can represent to you is, as, as counsel in this case that this is amongst the documents, that this is, in fact, this was received Sunday night from Baltimore County, Bate stamped by Baltimore County, and it has Hazen's letterhead on it. So, I think the document is self-authenticating as much as the prior exhibit is.

ALJ: Okay. So, that, that's what you were talking about when the, in, in the opening today. That, that, that this is the document that you received on, on Sunday night.

MR. MCCANN: This is amongst the eight hundred documents I received Sunday night. The first document was amongst the seventy-seven hundred that I received last week.

ALJ: Oh, okay, got it. So, so Mr. Mudd, does that clarify for you?

MR. MUDD: Well, I, and I, to be clear, I'm not suggesting that this came from somewhere other than the County. What I'm, what I'm, what I'm concerned about is how we know that this was performed on the basis of what occurred under Exhibit 104.

ALJ: Okay. Well, you can ask those questions when you get to cross of, of Mr. Grachek. So, --

MR. MUDD: Okay. Well, I'd, I'd like to object to this line of questioning in, in advance.

ALJ: Okay, all right. Understood. But overruled. Go ahead, Mr. McCann.

MR. MCCANN: Okay. I wanted to address quickly, and I won't go through all of them but the, the first band and the coloring that we have in this exhibit, which is on ninth page, Bate stamped 927. And I'll blow it up. So, identify the pipes that this, these groupings, this grouping refers to.

MR. GRACHEK: It, well, it refers to the notes 43787 down to 43793.

MR. MCCANN: Okay. Are those the same segments that are depicted in this exhibit, this first grouping in Exhibit

69?

MR. GRACHEK: They're, they're very close. They're very close. They're not exact, but they're very close.

MR. MCCANN: Okay. Well, where --

MR. GRACHEK: They're just, they're just in different orders. But they are close, and they represent (inaudible) pipes.

MR. MCCANN: Okay. So, the first on this Exhibit 69, the first pipe is 43794. On the exhibit, the new Exhibit 108, what is the first pipe listed?

MR. GRACHEK: It's 437, it's 4351, so everything is looking upstream rather than downstream in this exhibit. So,--

MR. MCCANN: What do you mean by that?

MR. GRACHEK: -- 43793 is the last one at the bottom on the right, under this second column and the other one, the, the first one, in the left column.

MR. MCCANN: So, it's, it's reversed in order than --

MR. GRACHEK: It, yes, (inaudible).

MR. MCCANN: Okay.

MR. GRACHEK: (inaudible).

MR. MCCANN: Somebody is not muted, I believe. And then the highlighting, what's the, tell me what the, tell us what the highlighting is.

MR. GRACHEK: The highlighting is the percent pipe full capacity. This is from the Hazen, from the Hazen work,

that was not (inaudible) RK&K because, like I said, they didn't do eight-inch pipes. And you can see, virtually all the pipes were above a hundred percent (inaudible) a lot of them considerably over a hundred percent.

MR. MCCANN: Okay, all right. Going back to Exhibit 69. If we start, go down to sort of what I'll call the next grouping of colored numbers here. Do you see what I'm talking about? So, beginning with 44225 segment, going down to 44210, that, those, that segment of, are those, is that, are those segments depicted in this Exhibit 108?

MR. GRACHEK: Yes, they are, they are.

MR. MCCANN: Okay and I'll scroll down to the second highlighted section on page nine of Exhibit 108. Is that, in this band of blue and the highlighting, is that, are those the segments?

MR. GRACHEK: Yes.

MR. MCCANN: Again, in reverse order?

MR. GRACHEK: Yes, 44, yeah, in reverse order is 44224 to 44210.

MR. MCCANN: Okay.

MR. GRACHEK: At the (inaudible).

MR. MCCANN: And just focusing in on the, the ten year six storm, so if we go over to this column, I'm sorry, ten year six, all the way to the right here, the highlighted number beginning with 266.10 down to 108, how do those numbers compare

to the, the RK&K numbers in Exhibit 69?

MR. GRACHEK: I actually looked at those numbers and did the reverse order and while they are not exact, they are very close. And, and that would reflect, you know, some of the things that Hazen probably did with the models. But they are all very close.

MR. MCCANN: Okay. Okay. Going, I'm still on sixty-nine. If I, we go down to the next page of this exhibit beginning with the first pipe that shows the ten year six in blue. So, 20761 to 20753, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: That pipe, is that, are those segments also reflected in Exhibit 108?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, let's go to page, Bate stamped page 921. This would be the, the third page of this exhibit and highlighted and banded section on this page on the left-hand column, again, of Exhibit 108 goes from 27, 20753 to 20761. Do you see that, or 60?

MR. GRACHEK: Yes, 20760, (inaudible) --

MR. MCCANN: Is that --

MR. GRACHEK: -- it's in reverse to what we looked at on the other, other exhibit.

MR. MCCANN: Okay and do the ten year six, without going through all the, all the details --

MR. GRACHEK: Yeah.

MR. MCCANN: -- does the ten year six in Hazen --

MR. GRACHEK: Yeah, --

MR. MCCANN: -- let me, let me just finish the question, Mr. Grachek. Does the ten --

MR. GRACHEK: Sorry.

MR. MCCANN: -- year six storm capacities in this Exhibit 108, how do they compare with the, the capacities for the same segments in Protestant's Exhibit 69?

MR. GRACHEK: They're all relatively (inaudible), very close. They're all very close to those numbers. Not exact, but they are very close.

MR. MCCANN: Okay, all right. And I don't think it's necessary to go through all the bands. I think there's five in total. But, at least for the record, are the, on this Exhibit 108, are the banded and highlighted segments, do those correspond to the, the capacity, over capacity segments in Protestant's Exhibit 69.

MR. GRACHEK: They, they do. They do, within a, within a (inaudible) but they do, yes.

MR. MCCANN: Okay. Any reason why in this Exhibit 108 that you're aware of that the pipe segments aren't, or at least the band, banded ones with the highlighting, are not in order? You understand, do you un, know why that may be?

MR. GRACHEK: I, I do not know, probably just the

preference of those making the table. They, they went, went upstream rather than downstream.

MR. MCCANN: What about the, did they do a, is, is, are these pipe segments chronological?

MR. GRACHEK: Yes.

MR. MCCANN: Or numer, numerically speaking?

MR. GRACHEK: Numerically speaking they are.

MR. MCCANN: Okay.

MR. GRACHEK: They're in numerical order.

MR. MCCANN: Okay, all right. And since I'm sure Mr. Mudd will ask you, was any other information provided by the County in connection with this, this document? Or was this document just produced?

MR. GRACHEK: I, I (inaudible) looked at this document (inaudible).

MR. MCCANN: Any reason to believe that Hazen did not prepare this pipe capacity chart, or the capacities indicated in it are not what Hazen produced?

MR. GRACHEK: No, there's no reason to believe that they did (inaudible), they did because it's consistent with what, what they were indicating in their validation work and, and the minor adjustments there were making to the model. But it didn't change the outputs and significantly. So, they, they couldn't have come up with the numbers this close by accident.

MR. MCCANN: Okay. And when you say close, do you

mean, mean to, to, to what the RK&K?

MR. GRACHEK: Yes, to the RK&K.

MR. MCCANN: Okay.

MR. GRACHEK: As close to the RK&K.

MR. MCCANN: Okay and, Your Honor, I would move Exhibit 108 into evidence.

ALJ: Mr. McCann? I mean, excuse me, Mr. Mudd?

MR. MUDD: I, I object for the same reasons, for lack of foundation. But I understand your ruling so far and I'll ask questions on cross.

ALJ: Sure, and it was a, a document obtained during the Public Information Act that was produced to Mr. McCann and has a Bate stamp on it and so it's authenticated in that way. And so, I'll accept 108. Mr. McCann, I don't have 107, did you --

MR. MCCANN: Yeah, I was just about to show you 107.

ALJ: Oh, okay.

MR. MCCANN: I don't intend to ask Mr. Grachek any questions about it because it says what it says. And it was produced to me, and I think it speaks for itself. It's a letter dated February 6th, 2023, and I think as you'll see, Your Honor, it's a progress report for Hazen to the County. It's Bate stamped 292. It's only a couple pages. And I think, now that I look at it, I don't think I sent it to Mr. Mudd and Mr. Rosenblatt like I did the others, but I'll do that now.

ALJ: They haven't seen it? Mr. Mudd, have you seen this?

MR. MUDD: I have not.

MR. MCCANN: Yeah, I did not send this one to them. So, I'll do that right now.

ALJ: All right. We're going to let them look at this before we say whether or not it comes in.

MR. MCCANN: Okay. All right. I'll send it to them now. Other than that, Your Honor, I don't have any other questions of Mr. Grachek.

ALJ: Mr. Zimmerman, do you have questions?

MR. ZIMMERMAN: I, I do. I do. May I start?

ALJ: Y?

MR. GRACHEK: Yes, please.

MR. ZIMMERMAN: Okay. So, Mr. Grachek, when did you learn about this 2023 Hazen document, Protestant's Exhibit 107

MR. GRACHEK: It was, it was identified to me --

MR. MUDD: Object, objection. Objection. We're asking questions about an exhibit that we haven't had a chance to look at, Your Honor. And I, I don't mind him asking questions, but I'd rather take a few minutes to look at it. And, and I don't need to do that now but --

MR. MCCANN: It's a different document. It's not the document --

MR. MUDD: Yeah, he said, he said Exhibit 107. That

was the question he just asked.

MR. ZIMMERMAN: Yeah, I mean, we can take a break, we can, we can do it in --

MR. MCCANN: Oh, I'm sorry.

MR. ZIMMERMAN: -- May or June or whatever. But I want to ask him about this document.

ALJ: Mr. Zimmerman, you're asking for, just to be clear, you're, about 107 and not about --

MR. ZIMMERMAN: Well, I, at the moment, I'm asking, at the moment, I'm asking for the one that was just identified, and I think, was it admitted? I think it was, right? 107, the Hazen February 6, 2023?

ALJ: Mr. Zimmerman, so what I just said was, 107 he just, Mr. McCann just showed on the screen he had not sent it over to Mr. Mudd, so he was doing that now.

MR. ZIMMERMAN: Oh, okay.

ALJ: Mr. Mudd was going to review it and then we were going to decide whether or not it comes in, just because he hadn't had a chance to look at it.

MR. ZIMMERMAN: Okay, okay. So, you want me to ask some other questions and then get back to it or what?

MR. MUDD: I have, I have a suggestion, Your Honor.

ALJ: Yes, sir? Yes, Mr. Mudd?

MR. MUDD: Maybe, maybe he can ask questions he wants to ask and then we can take a brief break before I would start

and I could, he can, he can ask a handful of questions about 107 if we don't --

MR. MCCANN: The letter is, the letter is a County document, Your Honor. It's no different than any others, so I don't --

MR. ZIMMERMAN: If there's going to be a break, let's take the break now, you know, --

ALJ: Oh, my.

MR. ZIMMERMAN: If there's going to be a break at some point, I don't want to have to break up my questions.

ALJ: Okay, understood. We were just --

MR. ZIMMERMAN: And I haven't seen the document either, by the way. Okay? I mean, you know.

ALJ: Okay, right? So, I don't think Mr. McCann had a chance to send it over to --

MR. MCCANN: I just sent it, I just sent it a couple --

ALJ: Okay. So, he just sent it to, to Mr., how about, let's do this. Mr. Zimmerman, do you have other questions about the other documents while we're all looking at 107?

MR. ZIMMERMAN: I have some other questions, I can go ahead and maybe come back. I'll, I'll try. I'll try.

ALJ: Okay, that would, that would be good. How about if we do that?

MR. ZIMMERMAN: But one thing I would like to, has Mr. Grachek looked at this Protestant's Exhibit --

ALJ: He has not, well, what I understand is Mr., Mr. McCann said he didn't need to ask Mr. Grachek any questions about 107. He was just admitting it, because it was a document, and so Mr. Grachek only talked about the other document, 108.

MR. ZIMMERMAN: All right. Okay. Well, we can come back after Mr. Mudd and I, I guess, have a chance to see what it is but. All right. So, Mr. Grachek, as I understand it, you were now provided with several documents to show that the County hired Hazen back around 2013/'14 to review what RKK had done, is that correct?

MR. GRACHEK: That's correct.

MR. ZIMMERMAN: Okay and you didn't have that, those documents when you originally testified? Those were recently--

MR. GRACHEK: No, --

MR. ZIMMERMAN: -- provided to you.

MR. GRACHEK: -- those were new documents provided to me recently.

MR. ZIMMERMAN: Okay. What explan, based on everything you've seen so far, can, can you explain how or why the County would promptly get Hazen to review RKK and, and I'll make it a comprehensive question, then get RJN into it, then get Ramble into it, then bring back Hazen. I mean, can you,

can you explain what is going on here?

MR. GRACHEK: It was --

MR. ZIMMERMAN: Based on the documents you've seen or, and your, your experience?

MR. GRACHEK: Well, it would require me to speculate based on my experience. But the, the idea of having a second look at a model that extensive is not uncommon.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: You know, --

MR. ZIMMERMAN: And what about a third look, a fourth look, a fifth look or, or what, are, are we seeing updating? Are we, is Hazen coming back in now almost starting over? I mean, what is going on?

MR. GRACHEK: Well, based, based on what I saw from Hazen, there really wasn't anything significant that they changed as far as the general conclusions from the RK&K. They, they still showed --

MR. ZIMMERMAN: All right.

MR. GRACHEK: -- problems.

MR. ZIMMERMAN: Yeah, I mean, that's based on what they did in 2014, correct?

MR. GRACHEK: Right.

MR. ZIMMERMAN: Well, let me ask you this. And I wonder if Mr. McCann could share Protestant's, I think it's eighty-five. Is that the Hazen newsletter?

MR. MCCANN: Yes, I can share that.

MR. ZIMMERMAN: And, and also if Mr. McCann kind of could, I don't know if you can do a double, but number eighty-six as well.

MR. MCCANN: Okay.

MR. MUDD: Your Honor, while, while we're waiting for this, I'm, I'm going to object to any questions about this exhibit as being beyond the scope of direct.

ALJ: This exhibit meaning what, which one?

MR. MUDD: Eighty-five. The exhibit that we're pulling up now --

ALJ: (inaudible).

MR. MUDD: Excuse me, excuse me. The exhibit that's being pulled up that has yet to be discussed today.

ALJ: Okay, understood.

MR. ZIMMERMAN: May I respond or, or will you just promptly overrule the objection?

ALJ: Will I promptly overrule the objection? It does have to do with the Hazen reports and so, I'm going to let him ask his questions. Go ahead.

MR. ZIMMERMAN: Okay.

ALJ: Overruled.

MR. ZIMMERMAN: So, Mr., and just by, by way of background, Mr. Grachek, you, you discussed this to some extent in your direct testimony, correct? I mean, previously.

MR. GRACHEK: I, I did some cursory reviews of the Hazen newsletters.

MR. ZIMMERMAN: Yeah.

MR. GRACHEK: So, --

MR. ZIMMERMAN: And then, and that's Protestant's eighty-five, the newsletter. And have, have, you've read the whole thing? It's only a few pages, right?

MR. GRACHEK: Yeah, yes, I, I, I've, I've read and if you, yeah, I've read it.

MR. ZIMMERMAN: Okay and separately, eighty-six was the scope of services? Can, can Mr. McCann put that up? Okay. That's back in, is that the Hazen scope of services from 2020?

MR. MCCANN: And actually, that's the accurate, yeah, that should be eighty-six.

MR. ZIMMERMAN: Was that, I have that down as a scope of services, am I wrong? Let's see.

MR. MCCANN: It is. No, this is, the scope of services for Hazen, is that what you're asking for?

MR. ZIMMERMAN: Yeah, yeah. I thought it went right with the newsletter but. I, I mean, it's what you sent me, Mr. McCann, as your list of exhibits. And you have eighty-six for Hazen.

MR. MCCANN: This is the wrong, this is the exhibit that was replaced so bear with me one second. That I certified with the corrected scope of service. Which is 86-A.

MR. ZIMMERMAN: Okay.

MR. MCCANN: I'm pulling it up. Or replaced, not 86-A, but rather a new eighty-six. There it is.

MR. ZIMMERMAN: Okay.

MR. MCCANN: This is the e-mail cover and attachment as I indicated earlier.

MR. ZIMMERMAN: All right. Do you recall this document as well, Mr. Grachek?

MR. GRACHEK: This one, this one, it looks like it's for pumping stations.

MR. ZIMMERMAN: Okay, all right. Well, let's go back to eighty-five. What, what I want to ask you, and based on your combination of testimony from today and, and previously, based on your review of the records and anything else you've reviewed, you know, what explanation is there for the County having four different consultants in the last decade and now coming back to Hazen for what looks like a very comprehensive review, like fifty years out? You know, what, what can you tell us as, as to what's, you know, what's going on with, with Hazen now and, and where everything stands?

MR. MUDD: Objection. Calls for speculation by somebody who is not making those decisions.

MR. ZIMMERMAN: No, I'm asking him not to speculate. I'm asking him to say whether he can explain based on what he's seen so far.

ALJ: All right. Well, Mr. Grachek, don't speculate. I think last time the question was asked, I think sort of the same question was asked, you did say I would be speculating. So, if you could not speculate, but if you know, we'd like to hear it. So, overruled.

MR. GRACHEK: I, I am not connected directly with the County in any way, so I do not know what their motivations are.

MR. ZIMMERMAN: What can you tell us as to the time period, based, based on the Hazen newsletter, assuming it's accurate, what can you tell us as to the timeframe for what they're expecting to study? Can we go back to Protestant's eighty-five?

MR. MUDD: Objection. That's information that's available right on the document.

ALJ: Okay. Well, he can ask the question. Overruled. Go ahead.

MR. ZIMMERMAN: And can Mr. McCann put it up there? Can, can we scroll down a bit? Yeah, so, what I want to ask you about with reference to the introduction in page one, and without asking you about every single sentence, based on what's stated there and including the 20, you know, in the, in the like fifth indented paragraph, the twenty year and fifty year planning horizons, system deficiencies at year 2025 and that twenty year and fifty year planning horizons, I mean, what, if anything, does that tell you as an expert about the status of

the situation in the Jones Falls sewer shed and what is going on here?

MR. MUDD: Objection. Calls for speculation.

ALJ: Yeah, I'm not sure he's going to be able to answer it, but I'll overrule --

MR. ZIMMERMAN: (inaudible) --

ALJ: Now, Mr. Grachek, Mr. Grachek, to the extent you can answer it without speculating, can you answer that, sir?

MR. GRACHEK: What, what I can say is and I, I just read these bullets right now again too, this is a public relations document. And it is designed to provide the public a positive, a positive viewpoint on how their, their taxpayer money is being spent for development.

And they're saying all the right things in this. This, this may, may or may not be totally accurate based on, based on, you know, reality. But what it is saying here is a lot of the right things that, that are looking at all of the facilities, they're looking at a long horizon, they're looking at a massive capital improvements program, they're looking at BMPs, best management practices for operation and maintenance.

And looking at the overall sewer vulnerabilities. In other words, they're doing troubleshooting in the system. They're saying all the right things in this newsletter. And whether they're actually performing those changes though is

something that I can't --

MR. ZIMMERMAN: All right.

MR. GRACHEK: -- I can't, I can't speculate or (inaudible) --

MR. ZIMMERMAN: Okay.

MR. GRACHEK: -- the reason they're saying it is because that's what needs to be said.

MR. ZIMMERMAN: All right. Now, this was from the summer of 2022, correct? At least that's --

MR. GRACHEK: I believe so.

MR. ZIMMERMAN: Or, I'm sorry, was it 2021?

MR. GRACHEK: It's third quarter 2022 it says up here in the corner.

MR. ZIMMERMAN: Okay. In any of the documents, to, to the extent Mr. McCann has provided you with documents from the County in response to the PIA request, can you tell us whether there's a, any County document which contradicts anything Hazen is saying here or indicates that anything they're saying here is, is wrong?

MR. GRACHEK: I have, I have not read any documentation that disputes the findings of both RK&K and Hazen with regards to the over capacity of the pipeline systems within Baltimore County.

MR. ZIMMERMAN: Okay. Is there any document that you're aware of, at least at this point, which indicates that

the County staff believes that the Hazen newsletter description is a bad plan, a bad, a bad project, unnecessary, inappropriate, incorrect, anything like that?

MR. GRACHEK: I'm not aware of that.

MR. ZIMMERMAN: Okay and, of course, we haven't looked at that February 6th, 2023, correspondence yet. And just for the record, may, may I assume that you have not personally had any conversations with any County Department of Public Works staff that deals with the sewer issues?

MR. GRACHEK: Not to my recollection. I, I don't believe I have, but I, I've been involved in projects in Baltimore and Baltimore County for many years. I don't recall. But I, I don't believe that I have, no.

MR. ZIMMERMAN: Is there a single document, that you've seen at least, that gives a, what you would call a justifiable or reasonable prediction as to what year, if any, in the future Baltimore County will ever totally satisfy the Consent Decree?

MR. GRACHEK: I haven't seen any technical documents that would, that would prove to me that they're on that path of achieving what they're supposed to be achieving in the Consent Decree.

MR. ZIMMERMAN: Okay. Thank you, Mr. Grachek. That's all I have.

ALJ: Mr. --

MR. ZIMMERMAN: Other than, other than getting back to Exhibit 107 at some point.

ALJ: Okay. So, let's, let's, well, let's ask Mr. Mudd. Have you had a chance to look at 107? I have not. Mr. Rosenblatt, I think, took a look at it and I, I, it seems like, it seems like it, it, it is, there's no objection that we would have to it.

ALJ: Okay, all right. So, Mr., Mr. Zimmerman then, do you want to, have any questions about 107?

MR. ZIMMERMAN: Well, I haven't seen --

ALJ: Mr. Grachek hasn't reviewed it.

MR. ZIMMERMAN: Oh, I haven't, I haven't seen it myself. Can I take a quick look at it? I mean, I think we're going to, I think we're printing it out at the moment.

ALJ: Well, Mr. McCann I think e-mailed it to you.

MR. MCCANN: No, I'm sorry, I --

MR. ZIMMERMAN: Do we have, I'm not sure we got it.

MR. MCCANN: I haven't e-mailed it to Mr. Gra, to, to Mr. Zimmerman yet but I can do that right now.

MR. ZIMMERMAN: If you don't mind, I'll take a quick look and maybe, you know, maybe I won't have any questions, but at least, but maybe I will.

MR. ROSENBLATT: Either way, didn't this witness say he has not seen this exhibit and we're not objecting to it being admitted. But he didn't answer any questions about it.

So, --

MR. ZIMMERMAN: I may want to ask him about it. It's in. I mean, you know, --

MR. ROSENBLATT: He hasn't seen it.

MR. ZIMMERMAN: So, he'll see it, he'll see it.

MR. ROSENBLATT: How, this is not his witness and it's beyond the scope of the direct testimony. He did not ask a single question about this. This was a separate issue, this exhibit coming into evidence.

ALJ: Yeah, Mr. Zimmerman, I'm just trying, I mean, I'm giving you all the latitude here, but I mean, he, Mr. McCann specifically said I'm not asking Mr. Grachek any questions about 107. It is what it is. It's a public record and then Mr. Mudd, it was, the question was, does it come into evidence. So, how is Mr. Grachek going to answer a question? You just want him to read it? I mean, --

MR. ZIMMERMAN: I don't, I don't know until I see it. It's, it is, I think it's, it's either been offered in evidence or maybe it's in evidence, I'm not sure but --

ALJ: It, well, it, it was offered in evidence, Mr. McCann offered it. He didn't ask Mr. Grachek any questions about it. Mr. Mudd said I need to review it.

MR. ZIMMERMAN: Right.

ALJ: Mr. Rosenblatt reviewed it. They now have no objections to it coming in --

MR. ZIMMERMAN: Okay, so it's in evidence.

ALJ: It's a Public, it's a Public Information Act doc, yes, document, so it's in evidence.

MR. ZIMMERMAN: Right --

ALJ: (inaudible) you're not objecting.

MR. ZIMMERMAN: No, I'm not objecting, it may be something I might want to ask him a question about. It is in evidence and --

ALJ: I think what, Mr. McCann sent it to you. Do you have it? Pull it up on your screen. Do you have any questions? We need to get through this and we're not going to come back like another day and ask Mr. Grachek to come back another day. I mean, he's, presumably, you know, (inaudible).

MR. ZIMMERMAN: Well, let me see, let me see if it's on our screen. Is it on the screen? I have to get to my, I have to shift over to the e-mail then. You can't print it out?

MR. MCCANN: I can pull it up.

MR. ZIMMERMAN: Yeah, I'm --

ALJ: Could, could you pull it up, Mr. McCann?

MR. MCCANN: Sure.

ALJ: He's putting it on the screen, Mr. Zimmerman. There you are.

MR. MCCANN: Yep.

MR. ZIMMERMAN: You know, we're going to have to scroll down a bit. All right and while we're doing this, Mr.

Grachek is seeing this as well as we are, right?

MR. GRACHEK: Yes.

MR. ZIMMERMAN: Okay. Okay. Okay. We'll try to do this briefly, very, very briefly. Okay and I'm just seeing this. It looks like an eight-page letter with some attachments, does it not, Mr. Grachek?

MR. ROSENBLATT: Objection.

MR. MUDD: Yeah, objection, Your Honor. I know that (inaudible) --

MR. ZIMMERMAN: I'm trying to do this quickly, okay.

ALJ: It's in evidence, Mr. Zimmerman. And Mr. Grachek hasn't reviewed it, or it's not, he doesn't have it in, he's just looking at it on the screen like we are. Why are you asking him that? What, what questions do you have?

MR. ZIMMERMAN: Okay.

ALJ: Or what real questions do you have?

MR. ZIMMERMAN: I'll ask you, I'll simply, Mr., Mr. Grachek, other than this February 6th, 2023 letter, which, of course, will speak for itself as to Hazen's re, reporting to the County, are you aware of any other document between Hazen and the County from, in between the Hazen update, Protestant's eight-five and, and now? Or is, or is, as far as you know, does this give us a sense of what's going on with Hazen, at least as far as you know?

MR. GRACHEK: As I said, I have not reviewed this

document. But I presume, since it is a progress report for the work they're doing, that this would give us the most, most recent update as to the work (inaudible).

MR. ZIMMERMAN: Okay and you're not aware of anything else in between? At least, --

ALJ: Don't, just don't, don't speculate or presume, Mr. Grachek. Just whatever you know, based on (inaudible).

MR. GRACHEK: No, I, I'm not aware of anything else.

MR. ZIMMERMAN: Between, between the 2022 update, or prog, memorandum and this, this correspondence.

MR. GRACHEK: Yes.

MR. ZIMMERMAN: Okay, all right. That's all I have, Madam Judge. Yeah, that's all.

ALJ: All right. Thank you, Mr. Zimmerman. Thank you, Mr. McCann, for putting it back on the screen.

MR. ZIMMERMAN: Thank, yeah, thank you very much.

ALJ: Serving as Mr. Zimmerman's law clerk. (inaudible) joke.

MR. ZIMMERMAN: That's all, that's all. I'm muting myself.

ALJ: Okay, all right. Mr. Wyatt, any questions?

MR. WYATT: No questions.

ALJ: Thank you. Mr. Sachse?

MR. SACHSE: No.

ALJ: All right. And so, back to Mr. Mudd.

MR. MUDD: Yes, thank you. So, just to be clear, Mr. Grachek, that last question asked by Mr. Zimmerman, your answer about what that document did or did not show. That was pure speculation, correct?

MR. GRACHEK: Based on what I read in the last three minutes, that's what it was based on. But if I reviewed the document, I'd give you a good answer. But it looks like, it says progress report. So, I presume I know what progress report is.

MR. MUDD: Okay. But you're not aware of anything that's been at issue since then?

MR. GRACHEK: No.

MR. MUDD: And you're not aware of anything that had been at issue prior to that?

MR. GRACHEK: Other than the newsletters --

MR. MUDD: Okay.

MR. GRACHEK: -- and the, that I reviewed.

MR. MUDD: Okay. So, did you, were you here when Mr. McCann was talking about the number of documents he's received in the past several, several, I guess in the past week from Baltimore County?

MR. GRACHEK: I think that was stated at the start of my testimony, --

MR. MUDD: Okay. So, does the number seventy-seven hundred sound right --

MR. GRACHEK: Yeah.

MR. MUDD: -- for last week?

MR. GRACHEK: Yeah.

MR. MUDD: And eight, and eight hundred on Sunday?

MR. GRACHEK: That, that's what I heard.

MR. MUDD: Okay and how many of those documents did you review?

MR. GRACHEK: I'm trying to remember, five or six, five, five, I believe.

MR. MUDD: Okay and those five were sent to you directly by Mr. McCann?

MR. GRACHEK: Yes.

MR. MUDD: And, and if you had to guess, you're, you're aware that, that the, Mr. McCann has done other, in fact, I won't ask you to guess. But you're aware that Mr. McCann has done other PIA requests, correct?

MR. GRACHEK: I'm, I'm not involved in that. I know about this PIA request, but I don't know about any other ones.

MR. MUDD: Okay. So, how many documents, you, you said you reviewed five or six from this latest request. How many documents did you review aside from those five or six in preparation for your testimony today, today, or your original testimony?

MR. GRACHEK: Well, my original testimony, I can't give you an exact number, but probably fifty to a hundred.

MR. MUDD: Okay and, and then another five to six today?

MR. GRACHEK: Yes.

MR. MUDD: Okay and the fifty to a hundred that you received, were, did you get all of those directly from Mr. McCann or from someone, well, I'll, I'll start there. From Mr. McCann?

MR. GRACHEK: Yes.

MR. MUDD: Okay and when Mr. Zimmerman asked you whether or not you had read any documents that, that dispute the findings of RK&K and Hazen, you, you said you have not, correct?

MR. GRACHEK: That is correct.

MR. MUDD: But that's based on all the documents that were, that were given to you by Mr. McCann, correct?

MR. GRACHEK: Yes.

MR. MUDD: So, that doesn't mean that there, that there would be other documents potentially in the thousands of other documents you haven't read that could do that, correct?

MR. GRACHEK: I can't speculate to that.

MR. MUDD: Okay. Let's talk about Exhibit 104. I want to pull this up. All right. Can you see that?

MR. GRACHEK: Yes.

MR. MUDD: Can you still see it? I just moved it to a different screen.

MR. GRACHEK: Yes.

MR. MUDD: Can you still see it?

MR. GRACHEK: Yes.

MR. MUDD: Okay, great. So, I know you kind of quickly went through this with Mr. McCann, I, I don't want to, I'd like to do it a little bit more slowly. Can you describe what this exhibit, what this attachment A is meant to be?

MR. GRACHEK: In my reading of this document, this is a scope of services for Hazen to perform on call collection system modeling services. In other words, perform a, a validation on the RK&K model.

MR. MUDD: Okay and, and I'm sorry. I'm going to skip, skip back up to the first page. Do you know whether, were, were, were all of these documents, I think you referred to three separate documents within this, this single PDF, do you know whether all of these were delivered to you together.

MR. GRACHEK: All, all the documents you're looking at right now were delivered together, forty-five pages.

MR. MUDD: Okay and do you know whether they were assembled together in, within the County's files?

MR. GRACHEK: No, I do not.

MR. MUDD: Okay. So, as far as you know, Mr. McCann assembled it, or at least that's, you received it directly from him, correct?

MR. MCCANN: Objection. They're Bate stamped,

they're Bate stamped. And before we get along this path too much, Your Honor, I, I really, I, I think, it's a question of relevance, but these, this, the assumptions that are underlying these questions are, I think, are just, they're, they're speculative, first of all. But to assume that I'm not giving things to Mr. Grachek or that I am giving things or that I'm mixing up documents, I think is inappropriate.

But I also think it's irrelevant. It doesn't matter whether I gave, he looked at all seventy-seven hundred documents or not. He, he looked at what I gave him. So, the questions should be directed towards those documents. It literally does not matter whether Mr. Grachek looked at all eighty-five hundred or so documents or not, it doesn't matter.

ALJ: Well, okay. But through your objection, it's a speaking objection and you're directing an answer, you're, you're suggesting an answer as well. And so, he can ask the question and, and he can ask the question. This is cross examination. So he can ask, you know, all about it. It does have a Bate stamp at the bottom of it. We can all see the Bate stamp at the bottom. So, overruled.

MR. MCCANN: Just so I'm clear, I understand, (inaudible) --

ALJ: We don't need to have like a whole argument about it. We don't need to have a whole discussion about it. What, what, you're, you're making a speaking objection. So,

that the witness then understands, you know, that, that you don't, you don't believe it's important to, which is fine, it could be your position. You can follow-up in, in re-direct. But Mr. Mudd is able to ask, you know, the question in cross. So, let him ask the question.

MR. MCCANN: Yeah, I just think it's irrelevant, that's all. And I, I understand you're overruling the objection --

ALJ: You, you, I know, and Mr., Mr. Grachek hears you so I, but I have an issue with this, the whole speaking objection about it. So, you know, --

MR. MCCANN: Why would I be instructing Mr. Grachek not to speak about the, the relevance of this? I wouldn't be instructing him to do that. But --

ALJ: (inaudible) a lot of speaking objection. All right. So, overruled. Go ahead, Mr. Mudd.

MR. MUDD: Okay, thank you. On, so, regarding the, regarding the task that they undertook, we have the general assumptions. I want to go to, I want to go to the, I'm sorry, trying to find it here. This task 3.2. And I, I'd like you to explain what, what's the difference between calibration and verification.

MR. GRACHEK: I can't see 3.2. I can only see 3, the start of 3.1. If you can scroll down.

MR. MUDD: Oh, sorry. I think I'm there on my, on my

page. You're not, you're not seeing 3.2?

MR. GRACHEK: I see 3.1 at the bottom, model simulations. I don't see two.

MR. MUDD: Let me, let me, let me stop and reshare. So, I'm sorry, let, let me, just so you weren't, you weren't, I want you to know where we are in this document, so.

MR. GRACHEK: Okay.

MR. MUDD: I'm at the very first document, which you already described as being their scope of, of, of service.

MR. GRACHEK: Right.

MR. MUDD: And now I'm on page five of the pdf (inaudible) page four of the document, section 3.2. Can you just describe what the difference between calibration and, and verification are?

MR. GRACHEK: Sure. When you calibrate a model, a model is a mathematical representation of nature. And when you, when you do that, you relate the mathematical representation to real life data, empirical data that you get out in, in the world.

So, for this example, you would model the flows using the mathematics associated and the equations and, you know, things associated with developing the mathematical model. Then what you do is you go out and take real world flow and then you would adjust the model for what the real-world flow is and that's called a calibration.

A verification is when you take a completed model and then you relate that to either a different model or more real-world flow and then try and simulate that same model and then verify that that first model was accurate.

MR. MUDD: Okay.

MR. GRACHEK: And so, --

MR. MUDD: Okay and I think you concluded, and I think I heard this right, but I think you, you said that Hazen came to the conclusion that the RK&K model was validated.

MR. GRACHEK: That's correct.

MR. MUDD: Or verified, is that, is that the same as verified?

MR. GRACHEK: They, they did some recalibration of the model, but they stated in their report later on that, that the model was verified.

MR. MUDD: They did. Can you point me out to where that, point me to where that is?

MR. GRACHEK: That would be the next document, I believe.

MR. MUDD: Okay. So, let's go talk about --

MR. GRACHEK: Yeah, we're in the scope of services now. This would have to be past all the, past all the tables and graphs and everything.

MR. MUDD: Okay. I think this is the second document you're referring to.

MR. GRACHEK: (inaudible).

MR. MUDD: So, I'm sorry, I'm sorry. I didn't mean to cut you off. Go ahead.

MR. GRACHEK: Yeah, in the conclusion, in the conclusion of the memorandum.

MR. MUDD: Uh huh.

MR. GRACHEK: So, it would be toward the bottom. They indicated that it was validated.

MR. MUDD: Okay.

MR. MCCANN: Page 201 of the Bate stamp.

MR. GRACHEK: You have to go through lots of graphs here.

MR. MUDD: What are these graphs? I guess we'll just stop and look at one of them. What do these (inaudible) show?

MR. GRACHEK: They use a methodology that determined that the, that the data should be, should be reasonably accurate within a certain plus or minus percentage rate. And so, you can see when it's 00, the plus and minus is nothing. But when you get out to higher numbers, the plus and minus band gets wider. And then you're plotting the data to see if it reasonably fits that band. That's what those graphs are.

MR. MUDD: Okay and is this, is this based on field observed data or is this based on modeling?

MR. GRACHEK: Yeah, this is based on, based on the, does the model, does the model, the field observed data match

the model.

MR. MUDD: Okay.

MR. GRACHEK: Within a certain (inaudible).

MR. MUDD: Is this the conclusion section you were referring to?

MR. GRACHEK: Yes.

MR. MUDD: Okay and where would, where would it say in, in here?

MR. GRACHEK: Can you make that larger?

MR. MUDD: Sure, I'm sorry.

MR. GRACHEK: Okay. I have to look and see where. In the third paragraph it says, from the boundary model, and, and flow meters were initially identified as being slightly biased with respect to wet weather, but upon evaluation of the totality of events, JR, JWR29 are considered adequately calibrated validated meter and is, is still overpredicting volumes.

MR. MUDD: Okay and that's the only, that's the only place that it says it?

MR. GRACHEK: The last, it talks about the system model and wet weather systems, sewer (inaudible) calibration (inaudible) are considered as well. The errors generally fall within or close to the tolerance ranges. And that's, that's the, that's the most important one is they basically said that the errors fall generally within the tolerance ranges.

MR. MUDD: Okay. So, so, in other words, what they would observe in the field relative to the RK&K model is validated.

MR. GRACHEK: Yes, it was close enough within their band of error that they determined, based on their, I believe, (inaudible).

MR. MUDD: Okay, all right. Is there, is there another document here that you referred to or were there only two that were here?

MR. GRACHEK: It was just the two, I believe. It was the, this documents and the, another exhibit with the tables.

MR. MUDD: Okay. All right, thank you. I'm going to now take a look at Exhibit 108 and where, where did you get this document from?

MR. GRACHEK: It was from, could you bring that one up, please?

MR. MUDD: Sure. You mean, blow it up, you mean?

MR. GRACHEK: Yeah, just, yeah. I just need to see it before I, I respond (inaudible) --

MR. MUDD: And for the record, I'm sorry, this is Exhibit 108.

MR. GRACHEK: Yeah, I received this from, from Mr. McCann.

MR. MUDD: Okay and do you agree with me that there are no dates on this document?

MR. GRACHEK: I do not see, no, I do not see any dates --

MR. MUDD: Okay. So, --

MR. GRACHEK: -- what I'm looking at now, at the bottom of the page (inaudible).

MR. MUDD: So, I think, I think you're breaking up a little bit. Am I the only one he's breaking up for?

ALJ: Someone, someone keeps unmuting their microphone, there are several people and I'm muting them as I see them. So, I don't know why people keep unmuting themselves. But if you could, there's people calling in and unmuting themselves and so, when I see you unmuted, I'm muting you.

Other than Mr. Grachek and Mr. Mudd and Mr. McCann, they're the only people that are supposed to be talking. So, anyway, that's what that static was. So, why don't you, Mr. Mudd, ask that, I think you asked about there's no dates on the documents is what I have --

MR. MUDD: Yep, yeah, I'll repeat the question. So, are you aware if there are any dates on this document?

MR. GRACHEK: I, I don't recall any dates on the document.

MR. MUDD: Okay. But it's your, it's your testimony that the data, or the information that, that Hazen produced on this document is, is based on the model that they ran under

Exhibit 104, is that right?

MR. GRACHEK: Yes.

MR. MUDD: And how, how do you know that?

MR. GRACHEK: Because the, the model evaluation that's shown here is, is very close to representing what RK&K did. So, the only way that they could have these numbers and this, this, this, you know, type of data, would be as if they were validating RK&K's model.

MR. MUDD: You don't think that they're, that that's, that that's a speculative response? You, you know that to be sure?

MR. GRACHEK: Well, that, that's my rationale for, for believing that this is a result of that evaluation. The other thing too is that, is that this would be the result of the validation and recalibration that they did.

MR. MUDD: Okay.

MR. GRACHEK: (inaudible) normal, normal output for that.

MR. MUDD: Okay. But you're not a hundred percent sure, correct?

MR. GRACHEK: I, I don't have this as connected to a report, that previous report.

MR. MUDD: Okay. Let me go back, bear with me here. Let me pull up Exhibit 69. Sorry, I didn't have this one open. It's taken a little minute, a minute to open here. Okay. All

right. Can you see Exhibit 69 here?

MR. GRACHEK: Yes.

MR. MUDD: And you recall what this exhibit is?

MR. GRACHEK: Yeah, this is a summary that was, that was developed by one, one of the people on our team, I believe Mr. McCord, of the RK&K and Department of Public Works numbers for dry flow and the RK&K numbers for wet weather flow based on their model.

MR. MUDD: Okay and, I'm sorry, are, are you still seeing Exhibit 69?

MR. GRACHEK: Yes.

MR. MUDD: Okay, great. You, you say that the, this green column, that this is based on dry weather flow. How do you, what, what's your, your rationale for that being dry weather?

MR. GRACHEK: Because all the numbers are, for the most part, are below one hundred.

MR. MUDD: Say, I'm sorry, say that one more time?

MR. GRACHEK: Because all the, all the numbers are below one hundred as opposed to, and the way you would normally do a, a summary like this is you would, you would show the dry weather capacity and then you would then represent that against the wet weather capacities.

MR. MUDD: Are you talking about in this report?

MR. GRACHEK: I'm talking about in this, in this

document, that --

MR. MUDD: Right.

MR. GRACHEK: -- that where it came from. This was provided to me as a summary.

MR. MUDD: Understood. But, but you, you really don't know where the source of that information came from, correct?

MR. GRACHEK: All I know is it is from the Department of Public Works.

MR. MUDD: Right, or, and that, that's what was relayed to you, that this came from the Department of Public Works?

MR. GRACHEK: That's correct.

MR. MUDD: And it was also relayed to you that this was based on dry weather flow from the Department of Public Works, correct?

MR. GRACHEK: It was not relayed to me, I, I came to that conclusion based on what I saw, saw in the data. And it's just my --

MR. MUDD: And, and explain again why, why you, how this data concludes, or helps you conclude that that's dry weather flow?

MR. ZIMMERMAN: Objection. It's asked and answered.

ALJ: Overruled. Go ahead, sir.

MR. GRACHEK: Because all the numbers are a hundred

or below one hundred and they're different than the wet weather flows. And so, the presumption is that these would be the dry weather flows. These would be the flows that, that you would have if you did not have a storm going on and the pipes were flowing freely.

MR. MUDD: So, so that you just said it was a presumption. So, you're presuming, based on modeled wet weather flows that are also on this chart, that the green must be dry weather flows?

MR. GRACHEK: No, I'm basing that on the numbers themselves, that they're all less than a hundred.

MR. MUDD: So, there's no --

MR. GRACHEK: (inaudible) I do not have the source document.

MR. MUDD: Okay and the, you're saying then there's absolutely no circumstance where dry weather flows could be over a hundred?

MR. GRACHEK: No, I'm not, I'm not saying that, I'm not saying that. But what I'm saying is that in most cases that is the case. The dry weather flows, if you have a sewer system that has wet weather or dry weather flows over a hundred, that would be very atypical situation.

MR. MUDD: Okay and that, so you're, so you're then, it's based on your experience elsewhere and, and your analysis of this data, but not relative to source information.

MR. GRACHEK: Yes, I have read the source document for the other data. That's in the RK&K report.

MR. MUDD: Okay.

MR. GRACHEK: But the green data, I have not read the source (inaudible).

MR. MUDD: Okay. You know, when you were comparing Exhibit 69 to Exhibit 108.

MR. GRACHEK: Yes.

MR. MUDD: Do you recall going through that exercise?

MR. GRACHEK: Yes.

MR. MUDD: You, you said that the Hazen information was, was not exact, not, and, and you used terms like very close and relatively close. The numbers in 108 to what they are in, in Exhibit 69. Do you recall doing that, saying that?

MR. GRACHEK: Yes.

MR. MUDD: And you said that that's probably related to what Hazen did with the model. Do you recall saying that?

MR. GRACHEK: Yes.

MR. MUDD: Okay. That's a presumption as well, correct?

MR. GRACHEK: Yes.

MR. MUDD: Okay. Are you aware if Hazen or Baltimore County are monitoring actual capacities within pipes, sewer pipes, in, anywhere within this sewer shed?

MR. GRACHEK: I, I have read scopes of work and

documentation, scope of work that we had previously where they were, they were tasked to, to gather actual data, yes.

MR. MUDD: Okay. Are you aware of any measurements, have you reviewed that data?

MR. GRACHEK: No, I have not.

MR. MUDD: Okay. Are you aware of any measurements in the field that demonstrate overcapacity in any of these pipes?

MR. GRACHEK: I have not been provided actual, actual data, no.

MR. MUDD: Okay. All right. And then, last question, you, you mentioned in your discussions with Mr., your questioning with Mr. Zimmerman, about the Hazen newsletters. First you said that you undertook a cursory review, and then you said you've read it. How, how thorough, how thoroughly have you reviewed that document?

MR. ZIMMERMAN: Objection. That mischaracterizes his previous answer in my opinion.

ALJ: Okay, overruled. Go ahead, sir.

MR. GRACHEK: The newsletters take, the newsletters take very little time to read. I read through them. I read hundreds and hundreds of documents all the time. So, I don't recall every aspect of it. But my, my recollection, and it was confirmed by what I was reading on the screen when Mr. Zimmerman was questioning that those are, those are public

relations documents, and they don't have much technical information in them.

MR. MUDD: Okay. I think that's all the questions I have, Mr. Grachek. Thank you.

ALJ: Mr. McCann, any re-direct?

MR. MCCANN: I do, yeah, I do, real quick. Mr. Grachek, you were asked about Exhibit 69, and I'll pull it up real quick. The, the chart. And in, in particular, the green column. And you said you don't recall the, the source document for that information. Do you recall that testimony?

MR. GRACHEK: Yes.

MR. MCCANN: All right. Let me, I want to pull up Protestant's Exhibit 64, which is, do you see that document?

MR. GRACHEK: Yes.

MR. MCCANN: Yeah, and you've seen this before, correct?

MR. GRACHEK: Now that I see it, yes. I recall seeing this document.

MR. MCCANN: Okay and this, this is the document as intro, as introduced and accepted. It's got some highlighting here for these pipe segments, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Does that, looking at this now, does that refresh your recollection as to where the, the numbers in green on Exhibit 69 came from?

MR. GRACHEK: Yep, yes, it does. It does.

MR. MCCANN: Okay and then does, does this document, again, Exhibit 64, does it also refresh your recollection as to the source of your assumption that the, these numbers are based on dry weather flow?

MR. GRACHEK: Yes.

MR. MCCANN: Is there anything --

MR. MUDD: Objection, Judge. I, I probably should have done it sooner. But this is, this is teetering between refreshing a recollection and leading questions here.

ALJ: Yeah, it, it does sound like it's leading. But he is also refreshing his recollection. So, why don't you ask more open-ended questions, Mr. McCann, as opposed to directing him through the refreshing of recollection?

MR. MCCANN: How, how, if at all, does Exhibit 66, Protestant's Exhibit 66, refresh your recollection as to whether or not the DPW numbers in Exhibit, in this exhibit, the chart, are based on dry weather flow?

MR. GRACHEK: (inaudible) --

MR. ZIMMERMAN: (inaudible) sixty-four, not sixty-six? Sorry.

MR. MCCANN: Sixty-four is the chart that we're looking at right now. Does this, does this chart refresh, and I'll repeat the question. Does the chart refresh your recollection as to whether or not the DPW numbers in the

exhibit that you were just looking at, which is this chart, which the exhibit number I can't see for some reason, are based on dry weather --

ALJ: Sixty-nine.

MR. MCCANN: Sixty-nine, thank you. Are based on, on dry or wet weather flow?

MR. MUDD: Objection. I think asking the question whether or not is, is no different than asking a leading question and this --

MR. MCCANN: Well, I --

ALJ: Okay, I, well, I think he was on the path to asking the open-ended question, but then, then there was someone else interjecting. So, I, I think he was there so, so if, if, Mr. McCann, you could just rephrase it as an, as an open-ended, more open-ended question.

MR. MCCANN: How does this document, Exhibit 64, refresh your recollection?

MR. GRACHEK: This, this document is one that we reviewed as a document that was baseline for the system. And so, even though I do not recall that there was anything on this document that, that indicated that it was dry weather flow, it indicates to me that it's dry weather flow simply because you wouldn't produce a document like this with wet weather flow.

This is a baseline document. And so, my presumption is that this is dry weather flow. And it makes sense when you

look at the actual numbers compared to the commensurate wet weather flow that this would be dry weather flow.

MR. MCCANN: Okay. Thank you, Mr. Grachek. No other questions.

ALJ: Thank you, sir. I think we're finished.

MR. GRACHEK: Thank you, Your Honor.

ALJ: All right, appreciate it. Okay. So, Mr. McCann, that was all your witnesses, correct, just to make sure?

MR. MCCANN: Correct.

ALJ: So, you owe me 108, the Exhibit 108. I have 107. So, just that one. And then a revised exhibit list.

MR. MCCANN: Correct.

ALJ: Because you added, you know, you had, you had submitted it to us as you indicated, then you withdrew a bunch of them, so you want to make sure to have the most updated list.

MR. MCCANN: Will do.

ALJ: Okay, all right. So, you'll hand deliver that and also e-mail it. Okay. You're finished. Then we're back to the rebuttal case. Mr. Rosenblatt?

MR. ROSENBLATT: Yes, we do have another witness we can call. So, that, that is resting of the Protestant's case?

ALJ: He already rested before.

MR. ROSENBLATT: Okay, okay.

MR. MCCANN: I'll say it (inaudible) --

ALJ: (inaudible).

MR. MCCANN: -- three times, but not four.

ALJ: For the fourth time, yeah, (inaudible) --

MR. ROSENBLATT: All right. He cut me off at three, I'm okay with that.

ALJ: Right, right. (inaudible).

MR. ROSENBLATT: All right. Matt, Matt Bishop is the next witness.

ALJ: Everyone okay, need a break, anyone? Everyone good? Okay. All right. Mr. Bishop, you were here a while ago, but since you haven't been here for a while, if you could raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. BISHOP: I do.

ALJ: All right. And Mr. Bishop has been sworn as an expert in this case. He's a landscape architect and he's, you know, obviously been admitted in other cases. So, he's still the same expert.

MR. ROSENBLATT: Okay, great. Mr. Bishop, good afternoon.

MR. BISHOP: Good afternoon.

MR. ROSENBLATT: Have you sat through all of the days of testimony in this case?

MR. BISHOP: Yes, I have.

MR. ROSENBLATT: Have you heard the testimony of Mr. Rockle, Mr. Merritt, among others, about the master plan and potential ways in which this project arguably conflicts with the master plan?

MR. BISHOP: Yes, I have.

MR. ROSENBLATT: Did you review the master plan with their testimony in mind?

MR. BISHOP: Yes, I did.

MR. ZIMMERMAN: Objection. I don't think this witness is qualified to give legal interpretations on the master plan. It takes, it takes attorneys to argue that.

ALJ: I don't think so. So, we'll allow him, go ahead, Mr. Rosenblatt. Overruled.

MR. ROSENBLATT: Did you review the master plan with the testimony we just discussed in mind?

MR. BISHOP: Yes.

MR. ROSENBLATT: And did you prepare an exhibit to that effect?

MR. BISHOP: Yes, I did.

MR. ROSENBLATT: I'm going to show you what's been marked as Developer's Exhibit 35 and ask you, I'll flip through and can you tell the Judge what, what did you find in the master plan with respect to your theories of compliance?

MR. BISHOP: Yes, sure.

MR. MCCANN: Is that a leading question? I want to make, make sure we, we --

ALJ: Well, point well taken, Mr. McCann.

MR. MCCANN: (inaudible). That's --

ALJ: Point well taken. All right. Mr. Rosenblatt, you're going to need to do some open-ended questions of your expert here.

MR. ROSENBLATT: Okay. What, what did you find in the master plan, and I'll point you to page two of Exhibit 35, that addresses the testimony we've heard in this case from the Protestant's?

MR. BISHOP: Well, what we're looking at here I found is the, the several goals that are outlined by the 2020 master plan. And I've highlighted a few of the goals that show how our project meets those requirements. And I'll just read them real quick.

So, goal one is continue the success of growth management and direct the future growth within urban rural demarcation line, which our project obviously does. Develop compact, mixed use, transit-oriented, walkable neighborhoods.

So, we have, we can talk about this a little bit more. We've created a compact community that has a mix of residential types and it's a walkable neighborhood. There are sidewalks throughout, there are walking paths within the open space, there are pedestrian connections to adjacent

neighborhoods.

And also, we meet the requirement to provide a mixture of housing types for emerging diversity of residents. And that kind of goes to the argument that I've heard from other folks about how our project and our housing type and our, our lots don't meet or mesh well with the surrounding neighborhoods. Goal two --

MR. ZIMMERMAN: I would just like to have a standing objection, that this is just rehash, not really rebuttal. Just a second bite at the apple.

MR. ROSENBLATT: Mr., Mr. Zimmerman has each, after each hearing, he has submitted, without any testimony, just submitted sections of the master plan into evidence and we're entitled in addition to the direct testimony that was given at the hearings to rebut his case, which are the documents he put in.

ALJ: Understood and under Elm Street, that's exactly what it says. I think Elm Street, Mr. Zimmerman, you were actually in that case. That was your case, Elm Street. So, it says they have to rebut, right? So, --

MR. ZIMMERMAN: Well, I don't think this is truly rebuttal but --

ALJ: I understand.

MR. ZIMMERMAN: -- I'll just leave it at that.

ALJ: Okay.

MR. ZIMMERMAN: I understand you've overruled the objection. Thank you.

ALJ: Well, I, and I, I did explain I think earlier, you know, it is difficult to determine rebuttal versus whatever and I just want to make sure that everybody is getting their, obviously gets to put in, in the evidence they want to put in. And so, and so, we'll let them. Go ahead, sir.

MR. ROSENBLATT: All right. Mr. Bishop, just for the record, you're reading the second page of, of, of Exhibit 35, it's page, roman numeral I, or small I or 1, from the master plan and you were beginning to discuss goal two before Mr. Zimmerman interjected.

MR. BISHOP: You're correct. It's page I of the 2020 master plan and the title of the page is Goals of Master Plan 2020.

Goal two, I just wanted to highlight for everybody that provide adequate open space and recreational opportunities, increase, and increase connections to nature by linking open spaces and parks. Just wanted to reiterate that we are providing more open space than was required by the zoning regulations.

We are providing a large amount of connectivity for pedestrians throughout the community, bringing them close to nature, bringing them back out into the, the built environment as well.

Reduce pollutant loading of runoff with enhanced stormwater management. So, as discussed before, we are providing stormwater management to meet all the, the current criteria in that regard.

And then, goal three, strengthen resource conservation and protection. We are protecting the health and natural environment and maintaining a valuable biodiversity. So, we are providing the extra open space. We are providing additional environmental buffers. We're providing additional plantings and buffers around the existing natural resources than are currently there today.

MR. ROSENBLATT: Okay and you've included, starting with page twenty-seven, some analysis of the proposed land use map. And can you explain your findings with respect to that section?

MR. BISHOP: Sure. There was discussion in previous hearing days of thoughts that we may not meet the transect, the T-3 transect (inaudible), so I highlighted some sections of the master plan that I feel do a great job identifying how we do, in fact, meet those criteria of the T-3 transect.

So, the, the first one that you have highlighted here in yellow, just want to point out that this paragraph here basically states that the transects are a guide. They are conceptual and general in nature. And there are some things I wanted to emphasize to kind of prove that point.

It says right in the master plan here, the proposed land use map provides general recommendations for land use, based upon the policies provided in the master plan 2020. The map is conceptual and general and is intended to reflect land use patterns and support the land use objectives of the master plan 2020 rather than identify land use of individual properties or parcels.

The use of transects in T zones is designed to support compact mixed-use communities. I think there is quite a few points in that paragraph that support the goals that I just read before, and our project complies with the compact mixed-use community and the fact that this is more of a conceptual concept in planning these transects than more code and law.

MR. ROSENBLATT: Okay and why are you focusing on the section on the right about stating that the standards overlap?

MR. BISHOP: Right. So, there was other testimony I heard from other days to explain again how we don't fit the T-3 and I think that other folks are taking the T-3 definition too literal and the master plan is, does a good job here defining how there is a range of habitats, which is a line straight out of this paragraph, and that the, the transects are intended to overlap each other.

So, you go from one transect that's maybe more rural into the more urban and they're not intended to be a breaking

point in between each one. If you read this paragraph on the second half, there should be a, a natural transition from one transect in the more rural side to the more urban. There should be overlap in between.

So, if I can just read this here. The categories include standards that encourage diversity, the standards overlap, reflecting successional pattern of development and natural ecosystems. The transect thereby integrates environmental and zoning methodologies enabling the design of compact, mixed use, walkable communities that support the viability of natural ones.

So, that's a quote right out of the master plan, talking about how there should be a diversity of housing types and there should be transitions between each of the transects. So, they're not cut and dry.

MR. ROSENBLATT: And you've included page twenty-eight. Is, is this the map referenced on the previous page?

MR. BISHOP: It is, yes, that's the, the land use map from the master plan.

MR. ROSENBLATT: And page twenty-nine, you've highlighted one more paragraph on this transect subject and what, what are you showing here?

MR. BISHOP: This is just reenforcing what I said about the, the master plan's goal of having compact development and the idea of having an overlap between the transects.

MR. ROSENBLATT: Okay.

MR. BISHOP: So, I can read just a quick quote here. The T-zones provide the basis for real neighborhood structure, which relies upon compact, walkable streets, mixed use, transportation options and housing diversity. So, again, it keeps going back to those themes of compact neighborhood, walkable streets, mixed uses, transportation options and diversity of housing types.

MR. ROSENBLATT: Okay.

MR. BISHOP: And then one last sentence in here, just to reiterate. The uses may overlap between one T zone and another.

MR. ROSENBLATT: Okay and did you review the master plan for any reference to the interplay between that plan and the Baltimore County zoning regulations?

MR. BISHOP: I did. And if you, I think we have an exhibit I gave you, page one seventy-nine of the master plan.

MR. ROSENBLATT: Okay. So, this is page six of Exhibit 35.

MR. BISHOP: Yes.

MR. ROSENBLATT: And what did, what did you find?

MR. BISHOP: So, the highlighted sections there discuss, and I'll, I'll kind of put my summaries together here. But the, point one is that the Baltimore Code and the Baltimore County zoning regulations are intended to regulate development.

And that's stated right in the first two sentences, or two lines of the first paragraph. Baltimore County zoning regulations and Baltimore County Code are ordinances by which land use and development are implemented.

And then, the second point, if you read further into that paragraph, it explains how all these other manuals that have been implemented in Baltimore County for years support that, the zoning regulations and the County Code. We're talking about the CMDP, the Zoning Commissioner's policy manual, the local open space manual, the landscape manual, Public Works design manual and environmental standards. All those support the Baltimore County Code and the zoning regulations. And I argue that we meet and exceed the requirements in all those (inaudible) design manuals.

MR. ROSENBLATT: Okay and, and what did you find with explanation of the master plan's role in conjunction with the Baltimore County zoning regulations?

MR. BISHOP: So, the, the last paragraph here talks about how the master plan is more of a support document to the ones I just previously mentioned. The design manuals, the County Code and the zoning regulations. So, there are specific sentences I'll read out of here saying zoning classifications correspond to specific regulations within the Baltimore County zoning regulations that set uses, intensities, areas and setbacks. Lots of items that people were arguing we don't meet

by the master plan.

And then finally, the proposed land use map provides general recommendations for future land use within the context of the goals of the master plan and aids in rezoning considerations required by the various aforementioned zoning processes.

So, again, I'm just pointing out that the, the transects within the master plan are intended to be general, supporting guidelines to the design manuals, the Baltimore County Code and the zoning regulations, which, which dictate density, setbacks and uses.

MR. ROSENBLATT: Okay and for testimony throughout the case regarding lot sizes and complaint from a number of people, particularly in the Tallyho neighborhood, that the homes are too close together in this case. Do you remember hearing testimony to that effect?

MR. BISHOP: Yes, I did.

MR. ROSENBLATT: And can you, first explain as a, as a planner, discuss why you clustered the homes the way you did.

MR. BISHOP: Sure. So, the term clustering is a type of planning practice that's been around for close to a hundred years. And the idea is to cluster your development into the most developable areas of a piece of property.

And what that allows you to do is reserve the rest of the area for open space, for protection of natural resources,

for stormwater management, for replantings, things of that nature. And that's exactly what we've done here. We found the most developable areas of the site and we preserved the rest of it for those natural resources.

MR. ROSENBLATT: Okay and did you evaluate, based on the testimony you heard, what some of the setbacks between houses were throughout the Tallyho neighborhood?

MR. BISHOP: Yes, I did, and I prepared a few exhibits to communicate that.

MR. ROSENBLATT: Okay and I'm going to show you what's been marked as Developer's Exhibit 36. And ask you, let's start with the first sheet. What does the first sheet of Exhibit 36 show?

MR. BISHOP: This is a, an enlargement, it's a snip out of the green line, red line and green line development plan. It shows the first section of the homes on our, our road. And what I've highlighted here in red in the middle is showing our typical building to building setback of thirty feet.

MR. ROSENBLATT: Okay and, now let's turn to the second page of Exhibit 36. Where, where is this and what are you showing?

MR. BISHOP: So, on the next several slides, I took the Baltimore County My Neighborhood JIS mapping software and found other areas in the adjacent neighborhoods where we have

similar building to building setbacks.

MR. ROSENBLATT: Okay and --

MR. BISHOP: What you're seeing here is Trelawny Court. There are, I highlighted one, but there are several homes on this cul-de-sac that have the thirty-foot building to building setback similar to what we're proposing.

MR. ROSENBLATT: And does this show Mr. Wyatt's home?

MR. BISHOP: Yes, Mr. Wyatt's home is number four Trelawny Court, shown on the plan. So, there --

MR. ROSENBLATT: And where --

MR. BISHOP: -- are several houses directly across the street from Mr. Wyatt's home that have the similar building to building setback that we're proposing in our project.

MR. ROSENBLATT: Okay. Page three of Exhibit 36, where is this?

MR. BISHOP: This is another cul-de-sac within the same community. And again, showing the similar housing pattern with the thirty-foot building to building setbacks. There are several hear but I highlighted two, one on either side of the street.

MR. ROSENBLATT: So, this, this shows the road Scottsdale Court. What road does that connect to if you follow it up to the north?

MR. BISHOP: I believe that connects into Tallyho.

MR. ROSENBLATT: Okay and I'm sorry if I cut you off,

what does, what does this page show? Page three of Exhibit 36?

MR. BISHOP: I was just saying it shows the, the fact that there are several homes and areas within the adjacent communities that have the same building to building setback that we're proposing.

MR. ROSENBLATT: Okay.

MR. BISHOP: Thirty feet.

MR. ROSENBLATT: Page four of Exhibit 36?

MR. BISHOP: It's showing the same thing. It's just another example, but this time on Tallyho Road, again, which is directly adjacent to our project to the east.

MR. ROSENBLATT: Okay and finally, the last page, page five of Exhibit 36.

MR. BISHOP: Again, another area within the community that shows the typical thirty-foot building to building setback.

MR. ROSENBLATT: Okay. So, in, in fairness, if we go back to sheet two, Mr. Wyatt's property, for example, some of the homes in Tallyho are farther than thirty feet apart, do you agree?

MR. BISHOP: I would definitely agree. And that goes back to some of the excerpts from the master plan I read about having diversity of housing types within communities. So, there are some larger lots, there are some smaller lots, there are different types of homes all within the same neighborhood

and community.

MR. ROSENBLATT: Just a couple more questions, Mr. Bishop. I'm going to turn your attention back to the development plan, Exhibit 1-B, and ask you, there was some testimony from the Meadows and, and/or Boxwood community about the landscape berm that is proposed in the rear of the property.

MR. BISHOP: Yes.

MR. ROSENBLATT: And bear with me, I'm sorry. I'm jumping around, I'm trying to zoom in. And can you, can you explain the grade, berm, drainage and utility easement, what, what all is happening with respect to landscaping and drainage and this being the rear of the property towards the proposed gate that we've heard discussion about it?

MR. BISHOP: Sure, I'd be happy to. So, the adjacent homes to the north, or what you're showing as seven through ten, they are kind of on a high point. So, the fronts of their home are, the water is draining, the runoff is draining toward the road. The rear of their properties is draining back toward the Greenspring Manor project.

In the back of our lots, proposed up against the tract boundary, against those homes, we are proposing a berm of about four feet tall, with the intent of screening noise and visibility between the new homes and the existing homes.

And I heard some concern from the adjacent neighbors

that there might be some trapping of water in that area. So, I wanted to discuss the fact that the water on our side of the berm is going to continue to drain away from those neighbors and more toward Joppa Road.

Any of the water at the rear of our adjacent properties will go to that Berm area, but we'll have it designed to move the water around the berm via swales. And there is a ten-foot Baltimore County drainage utility easement proposed along that property line in order to make sure we can convey that water safely around the berm.

MR. ROSENBLATT: Okay, thank you. And just one final topic. My notes really from months ago reflect that there was maybe some confusion over the labeling of reforestation or certain easement areas. So, I'm hoping you can direct me to an area and explain the labeling on Exhibit 1-B so that everyone is clear what, what each of the symbols mean or indicate with respect to reforestation, easements and other labels?

MR. BISHOP: Sure. So, the, each of those areas are labeled with a note calling out the different type of environmental easement they are. The orange triangles are what is called the reforestation areas. So, those are areas that will be put into a forest conservation easement and planted with new trees, where they don't currently exist.

The areas with the plus signs are forest conservation areas. We're going to put in an easement that are existing

forest, that we're going to maintain as forest and keep it an easement. The areas that have the forty-five-degree angle cross hatch are forest buffer. So, again, that's going to be areas put in environmental easement and they'll maintain their, their vegetation. So, that's, for the most part, the three or four different environmental easement areas.

And to summarize all that, all those areas that are shown in those environmental hatches, or those easement hatches, will either be preserved forest or expanding forest, which will create a better, more expanded buffer around the environmental resource, which is the stream back there, and will provide better screening from the existing homes to our proposed homes.

MR. ROSENBLATT: Okay and my only other question is I think you referred to the triangles as orange triangles. And if we look to the front of the plan, towards Joppa Road, there's a whole bunch of orange or red triangles. But in the rear of the property there are just black or gray triangles. Is there any significance to that difference?

MR. BISHOP: They're doing the same thing, the orange or red ones were just added as a red line as we went through the development plan process. It was a, something we worked out with Environmental Impact Review, to provide a forestation or a new tree planting adjacent to Joppa Road.

MR. ROSENBLATT: Okay.

MR. BISHOP: Whereas before, we were just going to have it maintained as an existing field.

MR. ROSENBLATT: And then I have one more note about there being circles towards the front of the property, that may have been referring to the circles around the existing home?

MR. BISHOP: Sure. I, I believe, I'd have to zoom in on them a little bit, but I believe those are the critical root zone for the specimen trees that we're going to maintain on the existing property.

MR. ROSENBLATT: Okay. So, for the record, Exhibit 1-B, there are hatched red line circles that are just above what is labeled existing home. And did you just describe what those circles show?

MR. BISHOP: I did. Those are the critical root zone for specimen trees that we intend to keep on the property. And that would be better communicated probably on the (inaudible) forest conservation plans for the project.

MR. ROSENBLATT: Okay. And then, I apologize for jumping around, but are there hexagons somewhere that I have not mentioned?

MR. BISHOP: Yes, that is the open, the local open space areas.

MR. ROSENBLATT: Okay and where, where would that be?

MR. BISHOP: Up, right here, if you scroll down just a little bit. There you go. That whole area there is a private

HOA open space area.

MR. ROSENBLATT: Okay and what, what can be expected in the area with hexagons as opposed to the planting areas you previously discussed?

MR. BISHOP: We're not going to plant those area. They're intended to be open areas, nat, you know, somewhat natural, used for open space, for recreation, and we're proposing a walking path through that area, to provide more extensive pedestrian connectivity throughout the project.

MR. ROSENBLATT: Okay. Just a couple more. Looks to be diamonds. If you haven't already explained what the diamonds refers to?

MR. BISHOP: Those are the easement areas for the proposed stormwater management facilities.

MR. ROSENBLATT: Okay and finally this heavier X'd or hatched, I don't know how you'd describe, maybe you can describe the line towards the southern boundary of the property that we're zoomed in on in Exhibit 1-B.

MR. BISHOP: So, the, the inner one is the hundred-year flood plain easement. And the outer one is the forest buffer easement off of that hundred-year flood plain.

MR. ROSENBLATT: Okay and did I miss any of the --

MR. BISHOP: I don't think so, I --

MR. ROSENBLATT: -- (inaudible).

MR. BISHOP: If it was really, people are concerned

about, if you go to the top left corner of the plan, all of those easement dedications are a little more clearly shown in that inset there with the hatches and, and the extensive labeling. And we work with the real estate compliance department in the County to make sure these are all shown correctly and quantified correctly.

MR. ROSENBLATT: So, the various, do the various hatchings in the conveyance description in the, in the upper left-hand corner of Exhibit 1-B, where there's much less going on, do those different symbols correspond to what is shown on the larger plan view below?

MR. BISHOP: They do, yeah.

MR. ROSENBLATT: Okay and there's no triangle symbols here on this real estate compliance area, the upper left and why, why is that?

MR. BISHOP: Those are, they're within another easement. They're just, that was just to clarify the difference before (inaudible) plant new trees versus where we're going to maintain existing forest.

MR. ROSENBLATT: Okay. All right. I don't think I have any more questions. Thank you, Mr. Bishop.

ALJ: Mr. McCann, any cross?

MR. MCCANN: I do, just a little bit, thank you. Good afternoon, Mr. Bishop.

MR. BISHOP: Good afternoon.

MR. MCCANN: I was looking at your, your resume, Exhibit 2, it's been a while since I looked at it. But I don't, didn't see any reference, and I can pull, certainly pull it up if you want, any reference in Exhibit 2 to any particular experience in the master plan, or testifying in any cases about the master plan. Is, is that a fair characterization of your resume?

MR. BISHOP: I have in the past. I don't think I put anything in there specifically in regards to that.

MR. MCCANN: So, you have, you have opined in cases in Baltimore County on the applicability, or compliance rather, with the Baltimore County master plan?

MR. BISHOP: I have, yes.

MR. MCCANN: How often have you done that? How many times?

MR. BISHOP: How many times have I testified directly? I, I can think of at least one.

MR. MCCANN: Okay.

MR. BISHOP: If I thought harder I could probably come up with more.

MR. MCCANN: The master plan is, is, is mandatory, is it not, that is, it must be complied with?

MR. BISHOP: Yes.

MR. MCCANN: I know the exhibits haven't been moved in yet, but I do need to receive them, Adam, Chris, including a

highlighted thirty-five with, you know, that was highlighted in yellow, please.

MR. ROSENBLATT: I'm sorry?

MR. MCCANN: I, I haven't received any exhibits.

MR. ROSENBLATT: They were, they were all sent to you.

MR. MCCANN: Not Mr. Bishop's exhibits.

MR. ROSENBLATT: So, the link this morning had thirty-six and I separately e-mailed thirty-five. I'm happy to pull it up, I'm sorry, but the, I did e-mail it during your examination with Mr. Grachek.

MR. MCCANN: Yeah, you're right, I'm sorry. Thirty-six was part of that. But that's the exhibit that, with the setback exhibit?

MR. ROSENBLATT: Yep, yes, thirty-six I sent this morning with the traffic documents. And thirty-five I sent before Mr. Grachek concluded.

MR. MCCANN: Got it, okay. Thank you. Well, highlighted thirty-five would be good, please. (inaudible) I don't want to belabor this, but the exhibit I got, thirty-five, the master plan excerpts, is not, did not have any of the highlighting. Maybe that was a copying thing. So, --

MR. ROSENBLATT: Yeah, I'll, I'll send you the exact document, but you want me to pull it up now to make this easier?

MR. MCCANN: Well, no, no, that's fine, that's fine.

MR. ROSENBLATT: Okay.

MR. MCCANN: But with respect to that, the setback exhibit, you, you, you took four snapshots of side yard setbacks in the adjoining neighborhood, correct, Mr. Bishop?

MR. BISHOP: Yes, correct.

MR. MCCANN: And you referred, you called them typical setbacks but you measur, you measured them using My Neighborhood. And your, your point there was that they are compatible with the setbacks in the proposed development, right? Is that your point?

MR. BISHOP: I don't know if compatible is the right word, but yes, they're the same or very similar setbacks.

MR. MCCANN: Same, right.

MR. BISHOP: As what we're proposing.

MR. MCCANN: Did you, other than those four snapshots, and those were from what neighborhood again? Remind me?

MR. BISHOP: The neighborhood to the east of Tallyho side of the property, the project on the east side.

MR. MCCANN: Other, other than those four snapshots of those buildings shown in those snapshots, did you prepare any other exhibits from anywhere else in that community or any of the other surrounding communities with respect to the, the side yard setbacks in, in those areas?

MR. BISHOP: No, just those four for this exercise.

MR. MCCANN: Okay. What about the other setbacks of front and rear, I'm sorry, yeah, the front and rear setbacks in both the adjoining neighborhood to the east and the other neighborhoods? Did you prepare any exhibits showing setbacks in those communities?

MR. BISHOP: No, not for this exercise.

MR. MCCANN: Okay and then I think you pointed out that Mr. Wyatt's house does not have a thirty foot side yard setback and I, I assume your point there was that that supports the master plan because it, it shows, I think as you put it, variable setbacks, which is what the master plan calls for, is that what you were trying to say?

MR. BISHOP: That and the master plan also talks about having a diversity of housing types.

MR. MCCANN: Yeah, housing types. That's a reference to --

MR. BISHOP: (inaudible).

MR. MCCANN: I'm sorry, go ahead.

MR. BISHOP: And having a transition from the different types of transects so that there's, so it's not just cut and dry. This is exactly how it's got to be. There should be some overlap in transition as you go from different communities and different transects from one to the other.

MR. MCCANN: But housing types isn't a reference to

the setbacks, is it?

MR. BISHOP: Probably not. But I think you can use it as a term that talks about the size of the house, is it two stories, is it three stories, is it a rancher? I mean, there could be some, some diversity in that regard as well.

MR. MCCANN: Okay. But in terms of variability, you would agree with me that in this particular, within this particular proposed development, there is little, if any, variability in terms of side yard, front yard or rear yard setbacks, would you agree with that?

MR. BISHOP: Not really. There is, if you look at the development plan, there is a range. We have some homes that are setback, we have homes that have large, deeper rear yards than, than others. I would agree that the side, the building-to-building setbacks are pretty typical (inaudible) project, yes.

MR. MCCANN: Okay. Well, the plan speaks for itself. And then, it's been a while, but you recall, do you not, the Planning Office's concept, concept plan comments in this case? Do you recall those comments?

MR. BISHOP: I do.

MR. MCCANN: Is it, it's true, is it not, that the Planning Office, in its concept plan comments, found that the proposed development does not achieve the vision of the master plan, nor the CMDP, isn't that true?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt, what's your objection?

MR. ROSENBLATT: So, this is rebuttal testimony, and that discussion took place with the Department of Planning before Mr. Bishop testified the first time. There have been no discussion going back not just to the development plan, but prior to that, the concept plan and the comments that came out of that. I just think it's well outside the scope of rebuttal testimony, which was limited to these few documents.

ALJ: No, no, I mean, he's, he's talking about what the, you know, the variability and the, the setbacks as well. And so, I think it's fair and so, if he knows the answer, he can answer it. So, overruled.

MR. BISHOP: Would you mind repeating the question, so I answer correctly for you?

MR. MCCANN: Sure. And I, isn't it true that the Planning Office found in its concept plan comments, that the proposed development does not achieve the vision of the master plan?

MR. BISHOP: So, I'd want to see the exact wording, but to that general --

MR. MCCANN: Well, sure. Yeah, I'll, I'm happy to show it to you. I'm happy to. So, this again, is Protestant's Exhibit 4. I'll go to the top so you can see it.

MR. BISHOP: Yeah, I recognize the document.

MR. MCCANN: Okay, great. And with respect to the master plan, the discussion is on page three. And I'll just highlight or circle it, the area we're talking about, the paragraph, that is. And it says, about midway through the paragraph, it says, as designed, the proposed development has not achieved the vision of the master plan 2020. Do you see that?

MR. BISHOP: I do, yes.

MR. MCCANN: And the Planning Office also says, does it not, that the number of lots should be decreased to allow for larger lots and achieve a design that would accommodate future improvements in yard space without the need for relief, correct?

MR. BISHOP: I do see that, yes.

MR. MCCANN: Okay, all right.

MR. BISHOP: Now, that, however, that was not carried over to the development plan --

MR. MCCANN: Oh, I, I'm not suggesting it was. And I don't have any other questions. Thank you, Mr. Bishop.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, thank you, Judge. Yes. So, Mr. Bishop, where did you go to law school?

ALJ: Mr. Zimmerman.

MR. BISHOP: You know I didn't go to law school.

ALJ: You know he didn't go to law school.

MR. ZIMMERMAN: Did you take any law courses in your landscape architecture bachelors at University of Connecticut or your Master of Plant Science there either did you?

MR. ROSENBLATT: Judge --

ALJ: Mr. Zimmerman, I, I, this, but these, this is, you know, --

MR. ZIMMERMAN: You know, actually I think it is relevant, but I'll move on, I'll move on.

ALJ: Mr. Zimmerman, Mr. Zimmerman. You know, it, it, but, there's a, you know, there's a line and, you know, he, you know Mr. Bishop, he comes in and testifies and he's a landscape architect, he didn't go to law school, so.

MR. ZIMMERMAN: All right, it's my, go ahead.

ALJ: Let's have a different question.

MR. ZIMMERMAN: I've said, I just want to put it on, on, I'm on record in many cases and this is not directed particularly at Mr. Bishop, okay? I'm on record in many cases that I don't think the surveyors, engineers, contractors, landscape architects, what have you, have the education to promote legal opinions.

ALJ: Yeah, understood --

MR. ZIMMERMAN: So, that's, so I'm on record, so it's not singled out but --

ALJ: But this --

MR. ZIMMERMAN: I, I gather you don't necessarily

agree, but --

ALJ: No, no, no, no, that's not, that's not necessarily the case, no, I --

MR. ZIMMERMAN: All right.

ALJ: -- ultimately the decision comes down to, if it's a legal one, it comes down to --

MR. ZIMMERMAN: Right.

ALJ: -- my making the decision, but, but you can always argue that in your brief.

MR. ZIMMERMAN: All right.

ALJ: You don't have to ask Mr. Bishop about law school classes.

MR. ZIMMERMAN: I'm moving on.

ALJ: Good.

MR. ZIMMERMAN: I'm moving on.

ALJ: That's great.

MR. ZIMMERMAN: So, Mr. Bishop, has the Maryland Court of Appeals, now Supreme Court, case of *H&S Development v. Baltimore County, v. People's Counsel*, I should say, come to your attention?

MR. ROSENBLATT: Objection.

ALJ: So, Mr. Zimmerman, remember I was in that case, so I know what it says. See, you're, you're asking questions that are supposed to help me.

MR. ZIMMERMAN: Right, well, --

ALJ: And so, I know H&S because I was in H&S, and I know what it says. I know what it says, so --

MR. ZIMMERMAN: It goes to his understanding and credibility --

ALJ: He's not, he's not a lawyer and he's not here to talk about cases. He didn't ask, he didn't talk about any case, I didn't hear him talk about it. And again, you can argue that in your brief and I already know what it says.

MR. ZIMMERMAN: Okay.

ALJ: You know?

MR. ZIMMERMAN: All right. And the same goes for Woodley Park and Davis Farms, does it not?

ALJ: Yeah, he didn't, I'm sure he didn't, wasn't involved in either, not that I remember. I, I think I, I may have written Woodley Park, if I recall.

MR. ZIMMERMAN: You were on, you were on the Board of Appeals, Judge.

ALJ: I think I may have written it. I may have written it.

MR. ZIMMERMAN: And, and Administrative Law Judge Mayhew was in the case, okay. All right. All right. We'll get to argue, okay, I'll, I'll just ask a few more questions then. Just a note, would, would it be correct that, other than Torch, the recent Torch Hill case, all of the residential developments in the area are twentieth century developments

which predate the master plan 2020?

MR. BISHOP: I believe we went over that before and I think you may be correct, as far as I know, yes.

MR. ZIMMERMAN: All right. I'll leave it there, Judge Murphy. Thank you.

ALJ: Thank you, Mr. Zimmerman. Mr. Wyatt, any questions?

MR. WYATT: Just a few, thank you, Your Honor.

ALJ: Sure.

MR. WYATT: Okay. Mr. Bishop, you were talking about Seminary Ridge. That's the same zoning, has the same zoning as the development you're proposing, correct?

MR. BISHOP: Our prop, our project is split by DR-1 and DR-2. I'd have to go back and look at the zoning map to see exactly what Seminary Ridge is. It's been a while since I've looked at the zoning map.

MR. WYATT: All right and you, in Developer's exhibit number thirty-six, you identified a couple properties which you claimed are thirty-foot building to building setbacks, correct?

MR. BISHOP: Correct.

MR. WYATT: All right. Did you do a survey of Seminary Ridge to glean from that the percentage of residences which are thirty-foot building to building setbacks?

MR. BISHOP: I did not.

MR. WYATT: All right. Would you agree with me that

not all residences in Seminary Ridge have a thirty-foot building to building setback?

MR. BISHOP: I would agree with you.

MR. WYATT: Would you, would you agree with me that there's plenty of properties in Seminary Ridge that enjoy much greater than thirty-foot building to building setback?

MR. BISHOP: There are other properties that have larger than thirty-foot building to building setbacks, yes.

MR. WYATT: All right and you didn't mention in your testimony today any of the properties in Heather Field, which is the neighborhood to the south of Seminary Ridge, none of those residences have a thirty-foot building to building setback, correct?

MR. BISHOP: I'd have to go back and look.

MR. WYATT: All right. So, unlike the development you're proposing, where nearly one hundred percent of all the dwellings are thirty-foot building to building setback, the neighborhoods you surveyed, and even the one you exemplified that had a sampling of thirty-foot building to building setbacks, none of them are a hundred percent like the proposed development? None of them, none of them are a hundred percent building to building setbacks of thirty feet, correct?

MR. BISHOP: That I can say yes to, correct.

MR. WYATT: And then, just looking at the properties across the street from where I live, I think you were

highlighting, it looked to me live number five and number seven Trelawny Court. And I just quickly went online. The lot sizes for those properties (inaudible) number seven are seventeen thousand square feet and then the lot size for Harris, which is 5 Trelawney Court, is twenty-three thousand square feet. Would you have any reason to dispute those calculations?

MR. BISHOP: I have no reason to. I didn't do my calculations on how large the lots are. I was looking at (inaudible) setbacks.

MR. WYATT: Understood, okay. But you, you would agree, and number nine, and I wasn't sure, it was flashed up so quickly, I wasn't sure if 9 Trelawney was included, but that's the (inaudible)'s residence. That's eighteen thousand square feet. It's either, it's two of those three that were used, but it's safe to say all of those lot sizes are substantially larger than what's being proposed in your development, correct?

MR. BISHOP: I wouldn't say all, and I wouldn't say substantial.

MR. WYATT: Okay. The only one I'm able to find that has, that's in excess of seventeen thousand square feet is lot twenty-nine. Are there more? Did I overlook something?

MR. BISHOP: I'd have to go back and look at the area table again to see. I don't have that memorized, but there is a range of lot sizes on the prop, on the proposed project.

MR. WYATT: Okay and if we go through, and we've done

this in prior testimony so no need to revisit all of it now, but if we look at some of the lot sizes and the lot area table on Developer's development plan, you don't think substantial is the, a correct word to use when an average, when a lot is eleven thousand square feet and we're talking about seventeen or eighteen thousand square feet? That's not a substantial difference?

MR. BISHOP: I'd say no. I work on projects that have much smaller lots, and I work on projects where I have four or five acres per lot. So, I think substantial is too broad a term.

MR. WYATT: Okay. Significant?

MR. BISHOP: No, I'm not going to say that either. I think --

MR. WYATT: You concede they're different, correct?

MR. BISHOP: I would agree that they're, there are some difference there, yes.

MR. WYATT: All right. All right and again, just for clarification, you didn't, you didn't go back and go through Seminary Ridge to find out how many residences are thirty-foot setback building to building, correct?

MR. BISHOP: Correct. My, my point was to show a range. That the communities all have a range.

MR. WYATT: Okay and you, the development you're proposing has a range of thirty feet to what number of feet

building to building? What is its range?

MR. BISHOP: I'd have to look. We have different lots that have different size lots, different front setbacks, different rear setbacks, different side yard setbacks. There is a range there.

MR. WYATT: It's plus or minus a few feet, isn't it? If it was shown at all, which it's not, it's only plus or minus a few feet when it comes to building to building setback, correct?

MR. BISHOP: There are some that are a bit more than that, but yeah, a few feet from side to side. But the rear yards are deeper in some and shallower in some, front yards are deeper and shallower in some. The lot areas are bigger in some.

MR. WYATT: All right. One of the, one of the concepts you mentioned when talking about the master plan and lot sizes was this concept of clustering, which I think you said had been part of planning for a hundred years, is that, do you remember saying that?

MR. BISHOP: Yes, true.

MR. WYATT: Can you tell us where in Seminary Ridge houses are clustered?

MR. BISHOP: I haven't looked, I haven't analyzed Seminary Ridge for clustering. I was talking about our project and how it's a good planning practice across the board. Maybe,

it would have been better maybe for your community to have been clustered and preserved more open space in environmental areas. I don't see many buffers around resources, I don't see stormwater management in your community. So, that was my point.

MR. WYATT: Did you do any, any survey as to the area of open space in Seminary Ridge?

MR. BISHOP: No. I haven't, I haven't --

MR. WYATT: Do you (inaudible) talking about it?

MR. BISHOP: I have analyzed it, but I haven't analyzed the per square footage. I've analyzed your neighborhood before. But not to that level of detail.

MR. WYATT: No further questions.

ALJ: Mr. Sachse?

MR. SACHSE: No, I don't have any.

ALJ: Okay, all right. Let's see. Back to Mr. Rosenblatt. Did you have any re-direct?

MR. ROSENBLATT: I do, just a couple. Mr. Bishop, you were asked about how many times you've testified about the master plan. Do you recall that?

MR. BISHOP: Yes.

MR. ROSENBLATT: How many master, how many development plans have you prepared and worked on in Baltimore County?

MR. BISHOP: More than I can keep track of, I'd say a

couple dozen.

MR. ROSENBLATT: Can you explain whenever you submit a development plan is there involvement with the master plan when it comes to the Department of Planning or any other County agency that reviews the plan?

MR. BISHOP: Yes, you're, you're correct. The Department of Planning looks at it in that regard. We have to put special notes on the plan discussing what transect we're in and there's some tables that talk about master plan compliance.

MR. ROSENBLATT: Okay and so, outside of testifying, have you personally performed any of that analysis in the other development plans you've worked on throughout your years of practice?

MR. BISHOP: Yes, on every one of them.

MR. ROSENBLATT: Okay and just finally, you were shown the concept plan comments from the Department of Planning. Did the Department of Planning issue a hearing officer's hearing final report in November of 2021 for this case?

MR. BISHOP: Yes.

MR. ROSENBLATT: And I'll turn your attention to the final recommendation, the final paragraph on page three. And what did the Department say with respect to the master plan in their final report to the Judge?

MR. BISHOP: You want me to read the whole

recommendation --

MR. ROSENBLATT: Sure.

MR. BISHOP: It might be easier.

MR. ROSENBLATT: Sorry, I'm, I'm moving it over. I just wanted to blow it up for you.

MR. BISHOP: Sure. Through a point-by-point response letter received on September 16, 2021, and attached to this report, the applicants have positively responded to the August 11, 2021, development plan conference comments made by the Department of Planning. The development plan is in conformance with the Baltimore County zoning regulations, the comprehensive manual of development policies, as well as the master plan 2020.

MR. ROSENBLATT: Okay. That, that's all. I have no further questions. Thank you.

ALJ: Thank you, Mr. Bishop. I think that is, that does it for you. All right. So, back to Mr. Rosenblatt. What else do you have planned?

MR. ROSENBLATT: We just, I believe we just have one more witness that's going to be a very long endeavor that we're not ready to proceed, but we'll be ready first thing when we do get that extra hearing and that should conclude the case.

ALJ: Okay. So, that will probably be, well, I guess Ms. Lewis is actually circulating dates, so I think you all were on the e-mail chain for that. And so, I think people were

already responding.

You know what I just realized, Mr. Zimmerman? I left your name off of it. Sorry about that. I was just flipping back to my e-mail, and it was not on purpose, you know it wasn't. So, what I'm going to do is, I'm actually going to forward to you, I'm going to hit forward on all these e-mails so you can, I don't know why that happened, but I was--

MR. ZIMMERMAN: Nice to know I wasn't excommunicated yet.

MR. ZIMMERMAN: I, no, you weren't excommunicated. Yeah, I really did for some reason I left your name off of it. I was doing that at lunch so, I will forward those to you. But I think she was trying to circulate a, a day or so. So, you think, Mr. Rosenblatt, it's the whole day? I mean, you said it's a long witness.

MR. ROSENBLATT: Yeah, I think it's, I think it's one day and that will ensure that with all the cross examination and everything that we finish.

ALJ: Okay.

MR. MCCANN: (inaudible) the witness, just so, Your Honor, I don't, I hate to end on a sour note, but I, I can't help but notice the irony of this. That it's 3:00, we got at least two hours to go, maybe finish today, I'm not sure. I don't understand why one witness is going to, are you saying it's going to take the whole day?

MR. ROSENBLATT: Yes, just like the last two hearings, you each had one witness that took the whole day, that's what's going to happen here. And we're not going to start, stop and have a month or however long where we can't communicate with our witness.

MR. MCCANN: I was just asking, I was just asking.

MR. ROSENBLATT: Okay.

MR. MCCANN: All right, thank you.

ALJ: So, yeah, we're just trying to give and take here, and we did have the issues with the, the Public Information Act documents. I'm glad we got all that squared away. And so, yeah, I mean, a lot of this stuff is, you know, we just try to, you know, give and take here for, with everyone. So, we'll find out what that next day is. And Mr. Rosenblatt, you're going to get us over the documents that you put in today and then a revised exhibit list as you always do?

MR. ROSENBLATT: Yes.

ALJ: I think that's it. Anyone else for anything?

MR. ZIMMERMAN: Will Mr. McCann have sur rebuttal? Is that conceivable?

ALJ: No, we're not, we're not, we're not addressing sur rebuttal. I, I just don't think it's necessary, Mr. Zimmerman.

MR. ZIMMERMAN: Okay. I was just, just asking.

ALJ: You're just creating more, more issues, Mr.

Zimmerman. So, I, all right, okay. I think we are finished for the day. I'm going to stop the recording.

MR. ROSENBLATT: Okay. Thank you all.

MR. MCCANN: Okay. Thank you, Judge. Thank you.

ALJ: Thank you.

MR. MCCANN: Bye-bye.

[OFF THE RECORD]

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, April 11, 2023, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 199 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 5th day of June 2023.

Christine R. Leary

Christine R. Leary

IN THE MATTER OF:

GREENSPRING MANOR
2310 W. Joppa Road

CASE NUMBERS: 08-0922 & 2021-0250-SPH

Hearing Date: March 27, 2023

Pursuant to Notice, the above-entitled hearing was held before the Office of Administrative Hearings for Baltimore County by remote access.

PRESIDING:

MAUREEN J. MURPHY, ADMINISTRATIVE LAW JUDGE

FOR THE PARTIES:

ADAM ROSENBLATT, ESQUIRE
CHRISTOPHER MUDD, ESQUIRE

MICHAEL MCCANN, ESQUIRE

PETER MAX ZIMMERMAN, PEOPLE'S COUNSEL
FOR BALTIMORE COUNTY

Discussion regarding Exhibits	175

[ON RECORD]

ALJ: Good morning, everyone. Calling case number 08-0922 and 2021-250-SA. Property address is 2310 West Joppa Road. And you're attending day eleven of the combined development plan and zoning case for the project known as Greenspring Manor. And let's have counsel introduce themselves for the record, beginning with the Developer.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer.

ALJ: Okay.

MR. MCCANN: Good morning, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Good morning. People's Counsel for Baltimore County, Peter Zimmerman.

ALJ: Okay, looks like everyone. And so, again, this is day eleven. So, just to recap, folks. It looks like the same names are here that have been here throughout the, we're still in the Protestant's case. So, Mr. McCann, who represents five homeowners' associations, he's presented, by my count, twenty-eight witnesses and he has another, at least one or two or so today.

And then we've also had citizens testify who were not represented by Mr. McCann. Those, there were three of those. And People's Counsel also had two witnesses testify, so it

looks like we're in Mr. McCann's case, am I correct, Mr. McCann?

MR. MCCANN: That is correct.

ALJ: All right and just housekeeping, you did submit to us two copies, Mr. McCann, of your Exhibits 96 and 97, they're pretty thick.

MR. MCCANN: Yeah.

ALJ: And just so you know, so ninety-six is the one, the MDE September 2006 report. And then ninety-seven would be the Baltimore City Modified Consent Decree, January 18th, 2023. Two copies, so I'm not sure what I'm supposed to do with two copies.

MR. MCCANN: I think I, maybe I submitted them last time thinking I was going to get to them and then maybe forgot I did that. So, I apologize.

ALJ: No, that's fine. But what should I do with them? Just --

MR. MCCANN: You can throw them out, recycle them, yeah.

ALJ: Okay. Just want to make sure (inaudible) have two, two number ninety-sixes and ninety-sevens.

MR. MCCANN: Yeah.

ALJ: Okay, all right. So, we'll do that. Are we ready? Is there anything else that we need to do?

MR. SACHSE: One thing.

ALJ: Ah, Mr. Sachse.

MR. SACHSE: Yeah, well, I'm doing what I've done before, I'm checking in so that I can check out for a couple hours. So, I have something I have to do but I want to have a spot, that's all.

ALJ: Oh, yeah. Well, you always have a spot so, you know, just tune back in when you get here and when we see you, we'll see you.

MR. SACHSE: I will, I --

ALJ: If you're not here, then I won't ask you if you have cross and if --

MR. SACHSE: Yeah, I won't, I won't have any if I'm not here. But that's a good thing, I guess.

ALJ: If you're not here, I won't, I won't ask you. All right, no problem. No problem. So, I'm going to put, I'm just going to mute your microphone for now. Everyone else looks like they're muted, yeah. Ms. Hamidi, I can't mute yours, but you don't look like you're unmuted there, so only, the only person then that we, we would need to speak is Mr. McCann, who then has another witness.

MR. MCCANN: Yeah, thank you, Judge. There are two preliminary things. I, I don't know if you'd prefer to take either of them up now. But just to, just to remind you, during the course of, I guess, the last day of the hearing, there were a number of, five or six issues that I told you and Mr. Mudd

and Mr. Rosenblatt that I would follow up on in terms of, for instance, e-mail confirmations from the County and things of that nature. I can do that now, I can do that later, whatever you'd prefer.

And then, secondly, I do have just one witness today, Your Honor. I don't see him yet, but I'll get to that in a moment. But I did want to give you an idea, I have, I think you've heard me say a couple times during the course of this hearing, that I've submitted PIA requests to the County and the, that, the PIA requests are still outstanding. And for that reason, and I certain, I have all my e-mail exchanges with the County. And they, I just haven't gotten the documents yet, although the PIA requests were submitted some time ago.

So, I would like to reserve the right to call, once I get the documents, to recall either this witness or even Mr. Grachek because, I don't think there will be any issues, I think I know the universe of documents that exist. But it, it has been a long road getting these documents from the County. They obviously have a lot going on as well.

But, so, and I can, I guess I can give you more detail on that issue. But I, I do need to do that, just out of an abundance of caution.

ALJ: Okay. So, remind me again, e-mail confirmations, remind me what, what is that about?

MR. MCCANN: There were, I, I think maybe it was Mr.

Mudd had asked questions about did, maybe in a couple instances, the, the authenticity of the documents. For, for example, the, the DPW capacity chart. We want, I want, he asked for confirmation that that, in fact, did come from the County in response to my PIA request and I, I, with respect to each of these, I said basically, I don't have a problem doing it.

So, I spent some time and actually did each of the things I said I was going to do. And I could, I could go through that real quickly, if you want. Or I could do it at the end of the day, whenever you prefer.

ALJ: So, I had, the only thing I had was the Exhibit 86, which was marked for i.d. only. So, so did you, did you talk to Mr. Rosenblatt or Mr. Mudd about it? And have you guys all agreed that what you've submitted are part of the PIA request?

MR. MCCANN: No, I, it, it was sort of a thing that took me a lot longer than it, than I thought it would. And I didn't get it done until really the last couple days. So, I mean, I can do that. Maybe over a break I can send them to Mr. Mudd and Mr. Rosenblatt. Maybe that's an easier way to do it.

ALJ: Yeah.

MR. MCCANN: Yeah.

ALJ: I think that probably is better to proceed than take up time --

MR. MCCANN: Okay.

ALJ: -- you know, during the hearing to do that, yeah. So, then maybe Mr. Mudd or Mr. Rosenblatt wouldn't have any issue if, if they got what they needed, or they were satisfied, right?

MR. MCCANN: Got it.

ALJ: That makes sense. Okay. So, then you have other, so these other PIA requests, were they, when, when were they requested? During --

MR. MCCANN: I submitted, I think as I had mentioned last time, over the course of the last couple years, I've submitted eight PIA requests. The last PIA requests are dated November 8th and February 20th and, as I gave, I gave some background last time I think Your Honor is, you know, I submitted a PIA request to MDE.

Really didn't have any problems in getting the documents. I spent a couple days down there in the City looking through their files and got everything that they have. With the County, it's just been a little more cumbersome. So, the requests that I'm talking about, November 8th and February 20th of this year, really were just to make sure that there was nothing else.

And I think now that you sat through two of these cases, Your Honor, at least recently, you sort of, you know, have an understanding of who the consultants are, who the

reports are coming from.

And so, my PIA requests were to, to make sure that I had gotten everything and at one point, the documents were supposed to be, or some of them anyway, were, were to be produced on March 17th. That got pushed back to March 23rd, which is this past Friday and they still, as we sit here today, I still don't have them.

But I have, I have, in a single document that I can give to you and give to counsel, all my e-mail exchanges with the County since November of last year on these issues. And that doesn't include texts with the County Attorney, for instance. But I did print out all my e-mails.

So, I just don't want to close our case after this witness and then get documents whenever I get them, and there be something else that both either Mr. Grachek or Mr. Summers, who's our next witness, did not have the opportunity to review. I don't think there's anything else that I would, in terms of reports from the County.

I think everything that's evidence is in evidence is the, is the state of affairs in terms of reports that the County's consultants have issued on the sewer capacity issue.

ALJ: Okay and this is all from DPW (inaudible)?

MR. MCCANN: Correct, correct.

ALJ: So, that's the only --

MR. MCCANN: I've had, I've had two or three Zoom

conferences with DPW staff, with Mr. Benjamin, the County attorney on the line last week. I think we had a, we had a, a County's consultant, outside vendor, who handles all the documents under the Consent Decree participate in the Zoom call. But the bottom line at the end of the day, although I thought I was going to get some of the documents before this hearing, I haven't gotten, gotten them yet.

ALJ: Okay and the hold up though is the DPW&T or was it the County Attorney's office?

MR. MCCANN: Yeah, I, I don't want to characterize what specifically hold up, the hold up is, but the County, the documents are coming from DPW&T.

ALJ: Okay, okay. And I, and I would imagine I'm going to hear from Mr. Rosenblatt and Mr. Mudd, that they're going to say we don't want to start with our rebuttal case until we know your case is over.

MR. MCCANN: Yeah, well, --

ALJ: Right.

MR. MCCANN: -- I will know that, listen, the most recent e-mail I got was on Friday saying we're not going to be able to produce the documents on, today, and I'll pull that up right now. I think it, what, what was said was, we, we should be able to get documents to you today, meaning Monday, and that was the e-mail I got on Friday.

ALJ: Kind of hard to look at them in the middle of

the hearing.

MR. MCCANN: Yeah, yeah, I just, and as, I, you know, I can tell you this. That during my Zoom calls with the, that, that took place, I was told, and I don't think it's any secret, that the reports from the, the consultants you've heard, heard about so far, are the, are the last reports. There are no other reports.

And that's what I'm most interested in. There's not another RK&K report coming, there's not another RJN report coming, there's not another Hazen, well, actually Hazen, we have newsletters, we don't have a report yet. So, that's sort of the state of affairs.

ALJ: Okay. Yeah, the Hazen was eighty-six. I think, or maybe that's a different document, scope of services, that was i.d. only. That's what I recall from the last hearing.

MR. MCCANN: I got, well, you asked for a certification as, that's one of the other issues. You asked for certification, or maybe it was Mr. Mudd, but that is the scope of services and I've gotten that, so.

ALJ: Okay, right. Probably easier too, and that, that's what I recall when doing these PIA requests just, you know, I, I would send the letter out and say give me all these documents. And then I would send it attached with a certification, whether it was the government records

certification, you know, that listed all the, the, all the factors in the hearsay exception, or it was a business record exception.

Of course, you're always dealing with governments typically, so you're probably just going to use that. And then I just attach, would attach it and say give me all these documents and sign this form. So, I don't know if that helps like in future cases, I don't know, maybe it would because it--

MR. MCCANN: Yeah, on this case, this case, case it wasn't that easy --

ALJ: No, --

MR. MCCANN: -- but I understand it's something --

ALJ: Yeah, yeah.

MR. MCCANN: -- yeah.

ALJ: It wasn't something that easy. Well, Mr. Rosenblatt, Mr. Mudd, now you've heard Mr. McCann, just so we get a, kind of a sense of where we're going, what, what's your take? What's your position?

MR. MUDD: I think, I think you nailed it, Judge Murphy. I mean, we're, there's no way we can start our case before they're finished. I mean, that would be, I think, extremely prejudicial to us. I also want to note, I mean, we're, we're, you mentioned at the beginning of this, we're on day eleven and day ten was February 10th. And I think Mr. McCann said that he made a subsequent request on February 20th

and that's what we're waiting on.

MR. MCCANN: No.

MR. MUDD: I mean, I just, I think we're, we're entering dangerous territory here where we're going to hold up hearings for people who are requesting information during the hearing. I mean, this has been going on for months and months and months. And I understand he's frustrated with what they've given him, but it sounds to me like the latest request is, essentially, are you sure you've given me everything you have?

And I, at some point, we have to trust that the government's given what they have in the prior request. The prior eight requests. So, I mean, I think we, I would object first of all to waiting it out. And I think, you know, whatever it is that he has as of today I think is what he should be, you know, essentially, when he closes his case it should be closed.

ALJ: Right. Well, I mean, what he said is that he initially requested it, something, through a PIA request November the 8th. I, I don't know that I have all eight PIA requests. I may have parts and pieces of them perhaps that are in evidence, you know, and so, you know, he got some documents, but I think it's, it's one of those things where one kind of triggers the other, it, it seems to me, is what I heard.

You know, so, you, you asked for one, you know, you sent in a PIA request November the 8th, are, did you get

everything you're supposed to get, or did you get some documents. Well, you know some are missing and then you get some more and it's a, it's like a trickle-down thing where you're getting piecemeal documents from the County as opposed to one big batch with a certification saying here's everything we got. I agree, that would be the easier way to do it.

But I think what I hear Mr. McCann's dealing with is that it's just, I'm getting a little bit here, a little bit there and then you know there's another document and you're like where's this document? Oh, here's, here's another one, you know? So, so, you know, I'm, you know, and, and so he's waiting for them, and I think efforts have been made, particularly if he's in Zoom calls with Mr. Benjamin trying to get them the documents.

So, let's do this, let's, let's, I, I mean, I want the, I want the Protestants to be able to put on their case and I don't want to, you know, prejudice their case and they feel these documents, they just want to make sure they have everything that they need.

And so, what we're going to do is we're going to proceed with the first witness today and, you know, he may or may not get something in the middle of the hearing that may satisfy him. So, let's see where it goes. But let's let, let's let the Protestants complete their case first before you have to put your rebuttal case on, is what we're going to do.

So, make sense, everybody?

MR. ZIMMERMAN: Yeah, can I just remind that I, I've got some exhibits to put in at some point.

ALJ: Correct, and your, your case came after, even though you had those two witnesses that came out of order because we were trying to help them with their calendars, so your case comes after, in, in my mind, after Mr. McCann's.

And so, what I was hoping, after all these days of doing this, is that all of you at some, at some point would have a chance to look at Mr. Zimmerman's exhibits, a lot of which, and I'm not saying every one, but most are public records and some of them are law, which we don't really need as exhibits, but in any event, he puts them in, which is fine. So, at some, you know, if you, if you had a chance to look at –

VOICE: (inaudible).

ALJ: Someone is --

MR. ROSENBLATT: Mr. Driban?

ALJ: And Mr. (inaudible), I just muted you, thank you. So, you have exhibits, yes, Mr. Zimmerman. So, I was hoping that, you know, the, Mr. Rosenblatt, Mr. Mudd, you've had a chance or at some point you will have a chance to look at Mr. Zimmerman's documents? Anybody?

MR. ROSENBLATT: I, I do have to say, I was under the impression that his case was over, that he rested his case. I was almost certain that that was the case. I know he's

continued to submit exhibits. We've not so far objected to that. But he called his witnesses and was done with his case, as I understood it.

ALJ: Not as I understood it. So, he called them out of order because they, they couldn't come in, they, I think we were trying to accommodate Dr. Long and Mr. Rockel. Mr. Rockel comes in often and testifies in these cases. So, technically, his case is after, I think I said this --

MR. ZIMMERMAN: Right.

ALJ: -- I'm pretty sure I said this in the beginning --

MR. ZIMMERMAN: Yeah, --

ALJ: -- hold on, Mr. Zimmerman. Said this in the beginning, Mr. Rosenblatt, I know you're, head in the hand. So, in the beginning of the case, that would be Developer, Protestants, Mr. Zimmerman, and then we would take everyone else who is an interested citizen who didn't get a chance to testify.

We took people out of order because of the, just like we took Mr. Tanczyn out of order, right? So, he was really a citizen, an interested citizen. So, and, but we've had this ongoing kind of, you know, just every time Mr. Zimmerman, I guess his exhibits, you know, he, he has been adding to them.

But, you know, then I think we, I mentioned if, you know, some, at some point we could just make sure we all agree

or if you don't agree say what it is, what your objections are. So, he hasn't closed his case. Although, he's made clear he has no other witnesses. Mr. --

MR. ZIMMERMAN: Yeah, that was, that was for convenience that Mr. Rockel and, and Dr., I can't remember his full name, I'm sorry to say --

ALJ: (inaudible).

MR. ZIMMERMAN: Yeah.

ALJ: Dr. Lum (phonetic).

MR. ZIMMERMAN: That, that was for convenience. And, and most of the exhibits have been there for a long time, were submitted a long time ago. There were a few, there were a few additions, yes. But yeah, and I think we, in January, Judge, you, you asked me to, to send a letter indicating which exhibits I understood were admitted already and which ones were still to come and which ones would be withdrawn.

And I submitted a letter, I think in January, I'd have, I'd have to double check. January 12th I submitted a letter. You asked for an update on exhibits actually after the December 7th hearing. I don't remember if Eric Rockel testified already at that point.

But, you know, so it's just, it's just the exhibits and, other than I think four, three of which I think I'm going to submit that, that I submitted last week, out of the forty-three exhibits, I think thirty-nine have been around for a very

long time, so.

ALJ: Okay. Understood. So, Mr. Rosenblatt, that, so, I mean, the process that I had in mind was, you know, the one we usually go through. And usually Mr. Zimmerman is not here, so we usually have you, you know, the Protestants and then rebuttal.

But so, I, you know, in doing these cases all these years, usually Mr. Zimmerman usually comes after the Protestants, sometimes before, but, so, anyway. His case is not technically over. But in any event, have you looked at his exhibits?

MR. ROSENBLATT: To be honest, I am behind in looking at his exhibits, so it's --

ALJ: All right.

MR. ROSENBLATT: -- it's something we can do at a break or later.

ALJ: We can. We have another, we have more time. So, just, just again, I think we talked about this before, if at some point everyone could, and Mr. McCann, look at Mr. Zimmerman's exhibits, make sure that you agree and you don't have any objection.

MR. ZIMMERMAN: And, and Judge, may I say that some of the exhibits, as you pointed out, involve, you know, cases or legal materials. And part of that is to give everyone advance notice of what I'm going to refer to in my memorandum.

So, it's, it's to give them a heads up, rather than, you know, waiting till my memorandum when they won't get a chance to see them. So, I --

ALJ: Okay.

MR. ZIMMERMAN: -- it's partly out of fairness and, and I think in the past at the Board of Appeals and the ALJ, generally speaking, various parties have submitted Code provisions, zoning regulations and so on and so forth, yeah.

ALJ: I know, I know. I (inaudible) yes, I know you submitted, well, and, and Mr. McCann also submits law too. I was just, that's fine. Which is what I was kind of saying is, there's probably no objection to the law, what the law says. So, so we'll do that and, and so what we'll do is we'll proceed with Mr. McCann's case. And then, you know, we'll see what the day holds for Mr. McCann and whether he gets any answer to his PIA request. He's going, at some point, look at his e-mail confirmations that he has, maybe give them to, and give them to you, Mr. Rosenblatt and Mr. Mudd, to see whether or not that satisfies the issue you had last time.

MR. MCCANN: Yeah, I, I just sent them to Chris and Adam.

ALJ: Okay. I'm sure they're not going to look at them right now, so because we're (inaudible) all right. Is everybody ready --

MR. MUDD: Judge, could I just be heard on one more

thing?

ALJ: Yes.

MR. MUDD: And I, I, I understand what you said and I, and I, and I understand that you want to give him every opportunity to proceed. I just would ask, would you consider instructing Mr. McCann to keep us all informed of his efforts with the County. Because part of us, our frustration, and maybe most of it, is the fact that we're here on day eleven.

We were all expecting that it was going to conclude today and then we would start and that we would likely finish at our next hearing date on April 11th. And had we known that this request had gone in on February 20th, then, and that perhaps another date, date might be needed, we could have worked on that on February 20th.

MR. MCCANN: Well, --

MR. MUDD: But we might be stuck today or maybe even April 11th looking for yet another date. And that is the frustrating part for us, is that we have not been able to see the end of the tunnel for this project and get it finished and we'd very, very much like to do that, please.

ALJ: Understood. Mr. McCann, do you think that's (inaudible).

MR. MCCANN: No problem. I have no problem with that at all. I, you know, to, to be fair, I just got the e-mail on Friday, it was late in the day. Maybe I should have called

Adam or Chris and let them know that this was, heads up, but I had a lot going on and just didn't do that. But I, I did just look at the e-mail that I got on Friday, and it said that the documents would be sent to me via FTP today.

So, you know, I'll check my e-mail, let everybody know once I get a chance to, to skim them whether, maybe we can move on to other witnesses other than sewer today and try to get, use as much of today as we can.

ALJ: Right, and it could be that it's all, you know, everything you've received is everything that there is.

MR. MCCANN: Correct.

ALJ: It could be (inaudible).

MR. MCCANN: I am, I am --

ALJ: So, we may be worrying for nothing, all of us. So, let's see, see what happens. But if you could, Mr. McCann, in response to Mr. Mudd's request, just keep them informed. I mean, I'm not sure you need to copy them on your e-mails. You have your own, you're doing your own, you know, --

MR. MUDD: I, I'm not asking for that. Just --

ALJ: Yeah, yeah, yeah, just --

MR. MUDD: -- information on, about the progress would be helpful, please.

ALJ: Correct, understood. All right. And so, again, in some, in some respect, I do think it's, it goes beyond his control when you're waiting for the County to

respond to certain things, so, all right. All right. So, I think we got the preliminary issues out of the way. We have the next witness, did you say, Mr. McCann, who is the witness?

MR. MCCANN: Mr. Summers, Bob Summers.

ALJ: Is he a panelist, let's see.

MR. MCCANN: He should, I thought I saw him --

ALJ: Oh, there he is, he's an attendee. Here, I'll move him over.

MR. MCCANN: Great, thank you.

ALJ: Okay, there he is. Mr. Summers, let's see. All right. Mr. Summers, I see you have, do you have a camera?

MR. SUMMERS: Yes, I do.

ALJ: I don't see you yet. You're listening only. Oh, no, that's not it. Wait, let me see. There you are, sorry. I had the wrong screen. Okay. Raise your right hand, please. Do you swear and affirm under the penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. SUMMERS: Yes.

ALJ: Okay. Mr. McCann?

MR. MCCANN: Okay, thank you, Judge. Good morning, Mr. Summers.

MR. SUMMERS: Good morning.

MR. MCCANN: Can you hear me?

MR. SUMMERS: Yes.

MR. MCCANN: Okay, great. What do you do for a living presently that is?

MR. SUMMERS: I'm an environmental consultant and I teach a course at Johns Hopkins, The School of Engineering and I'm also retired from the State of Maryland.

MR. MCCANN: Okay. Who, who are you presently doing consulting work for?

MR. SUMMERS: It's a small company called Ecologics.

MR. MCCANN: And what does that company do and what do you do for that company?

MR. SUMMERS: Well, I have many years of experience in environmental issues, environmental regulation and I advise our clients regarding how to address various environmental issues. A lot of my work involves Maryland regulation and Maryland law and helping our clients, who are both private sector and government, to make the best work they can with respect to environmental protection.

MR. MCCANN: Okay and we'll get back to that in a moment. Blue Water Baltimore, do you do any work for that organization?

MR. SUMMERS: Yes. I joined the board of Blue Water Baltimore in 2020 as a volunteer. And have continued to serve on the board. Because of my long environmental experience, when their executive director departed at the end of 2020, the board asked me to be interim executive director. So, I served

in that capacity for a good portion of 2021.

MR. MCCANN: Okay and what is Blue Water Baltimore? The Judge may have heard of it, but what is, what is that organization?

MR. SUMMERS: Blue Water Baltimore is an environmental non-profit organization dedicated to the protection and restoration of water ways in the Baltimore metropolitan region, which includes the Herring Run, Jones Falls and Gwynns Falls and the drainage to Baltimore Harbor.

MR. MCCANN: Okay. In your work with Blue Water Baltimore, did you have, or have you had the opportunity to be involved in any matters related to the City, Baltimore City's public sewer system?

MR. SUMMERS: Yeah, Blue Water Baltimore is a party to the modified Consent Decree in Baltimore City, which requires them to address their sewer system overflows. It's not unlike Baltimore County's sewer Consent Decree.

MR. MCCANN: Okay and what, what is your been, what has your involvement been in that Consent Decree, or that litigation?

MR. SUMMERS: Well, as a member of the board and what the board terms the litigation and advocacy committee, I, and because of my experience, I've been asked to sit on meetings with the Baltimore Harbor Water Keeper, Alice Folpita (phonetic), and our attorneys from Chesapeake Legal Alliance in

meetings with MDE and the EPA to track progress on the City's modified Consent Decree.

MR. MCCANN: Okay. Backing up a little bit, I maybe lost the timeline for the Judge a little bit. You mentioned that you're currently employed by Ecologics post-retirement. When did you retire?

MR. SUMMERS: I retired from State service in January of 2015.

MR. MCCANN: Okay and how long have you been employed with Ecologics?

MR. SUMMERS: I believe pretty much since I retired. I, I think I took some time off. But my work with Ecologics is part-time.

MR. MCCANN: Okay. Okay and, and you mentioned just before, back, back again to Blue Water Baltimore. You mentioned, I think you said you were on the litigation and, and advocacy committee? Is that, that the name of the committee?

MR. SUMMERS: Yes.

MR. MCCANN: And it's, it's job --

MR. SUMMERS: That, that is a committee of board members --

MR. MCCANN: Yeah.

MR. SUMMERS: -- who advise the organization on its actions with respect to any environmental enforcement litigation that they are involved in. The Blue Water Baltimore

has an extensive monitoring program for water quality throughout the area.

They received information from various citizens who are concerned about water quality issues, and they have a monitoring team that can investigate sources of pollution. So, we participate in reviewing what they're doing and provide advice to the organization.

MR. MCCANN: Okay and with respect to, you said environmental enforcement, one, one of the enforcement actions ongoing is the City's Consent Decree, correct?

MR. SUMMERS: Yeah, the, when the City, the City had a Consent Decree, I believe, issued in 2002 and that, progress on that was slow so EPA and MDE entered into a modified Consent Decree with the City.

And at that point in time, Blue Water Baltimore petitioned, I don't know the exact legal term, but they petitioned to become a party to that. And so, they have been meeting since then, when the modified Consent Decree was put in place, I believe 2018, they have been participating in regular meetings. I did not joint until 2020.

MR. MCCANN: Okay. All right. Getting to your State employment, were you previously employed at the Maryland Department of the Environment?

MR. SUMMERS: Yes.

MR. MCCANN: When were you employed? Over what

period of time?

MR. SUMMERS: Well, actually, I joined the State's service prior to the creation of the Department of the Environment in 1983.

MR. MCCANN: Uh huh.

MR. SUMMERS: At that time, I was in the Office of Environmental Programs, and I was hired to work on non-point source pollution control, non-point source being rainfall, runoff type pollution control and monitoring work. And I got involved in the Chesapeake Bay restoration effort. The Department of the Environment, what was actually created in 1987, and at that point I became an employee of the Department of the Environment.

MR. MCCANN: Okay. Well, let's, maybe, maybe it would make more sense to go backwards in time, beginning in 2015 when you retired from MDE, tell us in reverse chronological order, the positions that you held at MDE.

MR. SUMMERS: Okay. From late 2010, December 2010, until I retired in 2015, I was Secretary of the Environment over the entire program that was during Governor O'Malley's second term.

MR. MCCANN: Okay.

MR. SUMMERS: Prior to 2010, I served as Deputy Secretary of MDE under Secretary Sherry Wilson, who was O'Malley's first appointee in 2007.

MR. MCCANN: Okay.

MR. SUMMERS: Prior to that, in about 2001, 2007, when I became Deputy, I was Director of the Water Management Administration, which is the regulatory water related arm of the Department.

And prior to that, I have served as Director of what was called Technical and Regulatory Services, which is an administration that provided scientific technical engineering support to the regulatory programs in the Department, which are organized roughly around water, air and land pollution.

MR. MCCANN: Okay. On that point, that, that is water, land and air pollution, the organization of MDE, you just said that you were the Director of the Water Management Administration, correct?

MR. SUMMERS: Yes, that --

MR. MCCANN: And just, I'm sorry, go ahead.

MR. SUMMERS: I was just going to elaborate but, on what that is but you --

MR. MCCANN: Yeah, go ahead, go ahead.

MR. SUMMERS: Well, the Water Management Administration does all of the Clean Water Act programs, so National Pollution Discharge (inaudible) System, NPDS. It's responsible for the Safe Drinking Water Act implementation, oversees sediment and erosion control wetlands and water ways and has a compliance program, which oversees the enforcement of

environmental laws related to water.

MR. MCCANN: And where, where, just on that particular job that you held for those several years under the Water Management Administration, is, does that include sewer, public sewer systems?

MR. SUMMERS: Yes, public sewer systems are regulated under the NPDS program. I, I left out one program, the Water Quality Financing Administration actually provides financial support for upgrading and dealing with treatment of water supply and sewage.

MR. MCCANN: Okay and we'll, we'll get to your resume in, in a minute, which I think describes your duties generally. But I want to ask you some questions about, during the per, period of time when you were Deputy Director and Director of MDE, as well as Director of the Water Management Administration, over that span of time, what specific duties did you have relating to regulatory enforcement or compliance?

MR. SUMMERS: Well, it, it evolved over the course of that period of time beginning in 2001, when I became Director of the Water Management Administration, I was responsible for overseeing and managing the enforcement programs related to water specifically.

Once I became Deputy Secretary, of course, I was serving under the Secretary and she designated me to take the lead in assisting her in overseeing the scientific aspects

that, at that time were done by technical and regulatory services and the water aspects of the Department.

But I also assisted her with land restoration, land contamination issues and air issues. So, as Deputy Secretary, I had a broader range of responsibilities. And as Secretary, I was the responsible person under State law for overseeing all of those activities in the Department. I don't know how much detail you want, but.

MR. MCCANN: (inaudible) referring to what you just said, would that include overseeing all regulatory enforcement --

MR. MUDD: Objection, objection. Objection.

ALJ: Mr. Mudd?

MR. MUDD: I think he needs to ask him what he oversaw and not --

ALJ: Yeah, if you could, just, if you don't lead him through his qualifications, so we're still on voir dire, if you could. If you could, Mr. McCann, --

MR. SUMMERS: I'm sorry.

MR. MCCANN: Yeah, --

ALJ: Hold on. Mr. McCann, go ahead, if you could just ask the question.

MR. MCCANN: I, my, my, my, my question simply is with respect to your oversight responsibilities as director, did that include regulatory enforcement or compliance?

MR. MUDD: Objection.

ALJ: So, you're, you're giving him the answer, what did it --

MR. MCCANN: It's a yes or no, that's not a leading question, Your Honor. I'm not going to get into this argument again. So, I'll, I'll move, try to, I mean, that's not a leading question.

ALJ: If you could just say what, in your, you're overseeing, you know, when you oversaw, what did it include.

MR. MCCANN: Okay.

ALJ: So, Mr. Summers, can you answer that?

MR. SUMMERS: So, --

MR. MCCANN: Go ahead.

MR. SUMMERS: -- I, I oversaw, as Secretary, everything in the Department, from personnel, to budget, to legislative action, to regulation development, to enforcement, the whole range of activities in the Department. When I was Deputy Secretary, I oversaw those things specifically in the areas of scientific support, engineering support, which would include water quality standards development, and the water related regulation and enforcement activities.

And prior to that, as Water Director, I oversaw all of the water programs, specifically the staff in our compliance program, that was responsible for enforcement, in our wetlands and waterways program, which was responsible for permits and

regulations related to streams and wetlands, in our stormwater administration, responsible for municipal separate storm sewer system permits and regulations, a water supply program, (inaudible) water permits, which deal with both ground water and surface water discharges.

And the Environmental Finance Administration, which is responsible for review of engineering designs for the development of water and sewer systems across the state.

MR. MCCANN: Okay.

MR. SUMMERS: So, I was involved in a lot of different things over that time period.

MR. MCCANN: Focusing in on your enforcement, regulatory enforcement and compliance duties, in your positions as Secretary, Deputy Secretary, Director of Water Management and Director of Technical and Regulatory Services, did your duties, in that regard, include not only --

MR. MUDD: Objection.

MR. MCCANN: Did your duties include x, --

MR. MUDD: Objection.

MR. MCCANN: -- it's not a leading question. Is the sky blue? That is not a leading question, Your Honor.

ALJ: I'm going to, I'm going to overrule it, go ahead.

MR. MCCANN: Yeah. In, in those capacities, in those positions, did your regulatory and enforcement responsibilities

include not only the regulations themselves, but also Consent Decrees, or other judgments, Court judgments?

MR. SUMMERS: Yes. In developing regulations, of course, any of those could be challenged so they were issues associated with negotiating and coming up with workable regulatory actions. When we get into violations of regulation, it's a matter of determining the nature of that violation and ensuring that an enforcement action is taken appropriately to address that.

The Department of the Environment has administrative regulatory enforcement capability, or responsibility, and that can often lead to a Consent Order, which is an administrative Order --

MR. MCCANN: Um hm.

MR. SUMMERS: -- to address an enforcement issue in the event that we need to use our civil authority, which we also had. We would go to Consent Decrees, which would be done in conjunction with a Judge. And so, the Department, and in my role in leadership, was to oversee those actions. I was, of course, dependent on the expertise of employees and different sections, engineers and environmental specialists, biologists, all types of different scientific expertise.

But as the Director, was my responsibility to make sure they did their jobs properly and I was the final decision maker for the Department, and I did sign Consent Decrees and

Consent Orders and made sure that enforcement was done properly by the Department.

MR. MCCANN: Did you ever participate in the negotiation of Consent Decrees or similar Court Orders?

MR. SUMMERS: I, I, I did participate in some of these, but for the most part, negotiations were handled by the compliance program staff and the Assistant Attorneys General, who worked for the Department. But I was, particularly in the bigger cases, briefed on what was being done and what was being proposed.

And when I was Water Director, I was under Secretary Ken Filbrick (phonetic), who actually signed the Consent Decree for Baltimore County. And I participated in briefings and advised him on that. But, of course, relying very heavily on the Assistant Attorneys General and the technical staff in the Department. So, I participated in that.

I also participated in similar discussions with Secretary Filbick, Filbrick on the Washington Suburban Sanitary Commission, Consent Decree on sanitary sewer overflows. As Secretary, I signed Consent Decrees with the City of Hagerstown on sewage overflow issues, and with Sparrows Point on the cleanup, modified Consent Decree, on the cleanup of the Sparrows Point site.

But for the most part, I served in an advisory and oversight capacity as opposed to a direct negotiating role.

MR. MCCANN: Okay and I think you may have covered this, but you, when, number one, you indicated you've signed Consent Decrees on behalf of MDE, correct?

MR. SUMMERS: Yes.

MR. MCCANN: Okay and again, I think you've mentioned this already, but did your experience in regulatory enforcement and compliance include, in particular, any public sewer systems?

MR. MUDD: Objection.

ALJ: Overruled. Go ahead.

MR. SUMMERS: Well, the Hagerstown Consent Decree had to do with their sewage plan and overflows that were occurring there. I signed Consent Orders, which are administrative, with Centerville Sewage Treatment Plant that was having excessive discharges in excess of its permitted authority. Those are a couple of examples.

But a lot of the work in my days as Director of Water Management involved sewage systems because at that time, former Governor Ehrlich has proposed, and we negotiated through the legislature, the Bay Restoration Fund, which provided funding at the State level for upgrading waste water treatment plans across the State, to meet what was called enhanced nutrient removal.

And this was part of the State's Bay restoration effort, and I was involved in developing that legislation and

getting it through the legislature. And people don't often hear about the Bay Restoration Fund, but they remember the catch phrase, which was used at the time, the so-called flush tax.

And that was used to provide funding for upgrading wastewater plants. So, I worked closely with our engineers in developing that legislation and in overseeing the implementation of hundreds of millions of dollars of investment in sewage treatment plan upgrades.

MR. MCCANN: Okay. You mentioned the Washington Suburban, I'm not sure I caught the entirety of that. But did that involve sewer systems, or sewer capacity issues?

MR. SUMMERS: WSSC, Washington Suburban Sanitary Commission, operates the sewage collection system for Prince George's and Montgomery County. They also operate several wastewater treatment plants. But a lot of the sewage from that area flows into Washington, D.C.'s Blue Plains Wastewater Treatment Plant, which is regulated by EPA.

MR. MCCANN: Okay. Are you familiar with the Consent Decree between Baltimore County and MDE?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. I think you mentioned you were at MDE at the time that that was entered into?

MR. SUMMERS: Yes.

MR. MCCANN: Did you attend any meetings or briefings

on that Consent Decree while you were working at MDE?

MR. SUMMERS: I attended meetings and briefings with the Secretary and the Compliance Program. I did not attend any negotiating sessions --

MR. MCCANN: Okay.

MR. SUMMERS: -- on, on that Consent Decree.

MR. MCCANN: Okay. Have you reviewed and are you familiar with the work performed by the County and its consultants pursuant to the Consent Decree?

MR. SUMMERS: Yes, I have reviewed the reports.

MR. MCCANN: Okay and that was my next question, that you reviewed the reports and other work product of the County's consultants?

MR. SUMMERS: Yeah, and let me be clear. The, there is a huge volume of material that's been produced over the years. And I have not reviewed every report in detail. But I have looked at and reviewed specific reports, I would call them, you know, major milestone reports, like the SRRR plan, the sewer rehab, rehabilitation plan, and the performance assessment and other documents of that nature.

MR. MCCANN: Well, let me ask you specifically about what, what you've reviewed, some of the documents. Did, did you review, you mentioned the SRRR plan. Did you review the, and you just mentioned, I'm sorry, you just mentioned performance assessment. Is that the RJN performance

assessment?

MR. SUMMERS: Yeah, I, I, I reviewed the SRRR, the, and the RJN performance assessment.

MR. MCCANN: Okay and did, did you review the work product of Hazen and Sawyer in connection with --

MR. MUDD: Objection, Your Honor.

ALJ: Mr. Mudd, what's your objection?

MR. MUDD: I, so I --

(EVERYONE SPEAKING AT ONCE)

ALJ: Mr. Summers, hold on, hold on one second. So, because there's an objection. So, so, Mr. McCann asked a question, Mr. Mudd objected. When he objects, then I have to rule on it. So, Mr. Mudd, what was your objection?

MR. MUDD: I, I'm just objecting, he, he's identified the reports that he's, by name, that he looked at. And now we're asking him, and feeding him, specific names, I believe, in an attempt to refresh recollection. So, I'm objecting to leading questions.

ALJ: Okay, understood. Well, I'm going to overrule it. So, so, sir, did you review the Hazen and, Hazen or Hazen, and Sawyer report?

MR. SUMMERS: Well, the Hazen and Sawyer has produced a series of, basically, pamphlets summarizing their work. It's not really a report. But there's some very interesting information in there that I can, I can talk about at the

appropriate time. But when Mr. McCann asked me, I just gave some examples of reports I reviewed, not an exhaustive list. So, I've reviewed a lot of reports. So, forgive me for not remembering each one in order.

MR. MCCANN: Yeah, and I, I'm just, I just want to ask you about specific, specific reports that are in evidence and make sure that you reviewed them. Did you, the pamphlets that you just referred to, did you review those Hazen and Sawyer pamphlets?

MR. SUMMERS: Yes, I read through them. There's not a lot of information and the figures are difficult to read, but it is a very ambitious undertaking document by Hazen and Sawyer to look at the integrity and performance of the sewer system. Not only today, but into the foreseeable future.

MR. MCCANN: Yeah, well, we'll, we'll get to each of these specifically, but right now I just want to, before I offer you as an expert, I want to establish for the Judge what it is you did review. So, did you review the Ramble report that was introduced into evidence?

MR. SUMMERS: I, I reviewed the documents that were provided by Ramble, the information regarding the, the scope of their work and the report that summarized the work plan.

MR. MCCANN: I'm sorry, did I interrupt you?

MR. SUMMERS: No, go ahead.

MR. MCCANN: Did you review, well, you were here for

Mr. Grachek's testimony, correct?

MR. SUMMERS: That's correct.

MR. MCCANN: And did you, there were quite a number of exhibits that were introduced during his testimony, do you recall that?

MR. SUMMERS: Yes.

MR. MCCANN: Did you review many of those exhibits, without going through all of them?

MR. SUMMERS: Well, I think, you know, the, the big parts were, as I've already mentioned, the SRRR plan, the LPC document, the RJN report, and as we've already discussed, Hazen and Sawyer and Ramble.

MR. MCCANN: Have you, aside from sitting through Mr. Grachek's testimony, have you had the opportunity to speak and meet with Mr. Grachek about issues, sewer capacity issues relating to --

MR. SUMMERS: Yes. We met and toured the Jones Falls sewer shed together. He testified about his site visit. So, I, I participated in that site visit with him.

MR. MCCANN: Okay. Well, in addition to that site visit, just in terms of communications with Mr. Grachek, over--

MR. SUMMERS: Yeah, I've had a number of virtual meetings with him, not only on the Baltimore County case, but also he is an expert witness for Blue Water Baltimore on the Baltimore City modified Consent Decree work.

MR. MCCANN: Okay. Are you familiar with the area comprising the, the Jones Falls sewer shed?

MR. SUMMERS: Yes, I actually live in the sewer shed, in the, over near Towson University and I travel and recreate throughout the area.

MR. MCCANN: Okay and you, have you been to the site where this proposed development is to be?

MR. SUMMERS: Yes, just, can see it from the road, but I haven't actually been on the property.

MR. MCCANN: Did you visit the site and the area around the site during the, the site visit that you just described with Mr. Grachek?

MR. SUMMERS: Yes, among other times, I used to go to a physical therapist in an office immediately adjacent to that property when it was still being farmed.

MR. MCCANN: Okay. Describe your, your educational background, Mr. Summers.

MR. SUMMERS: I have a bachelor's degree in natural sciences from Johns Hopkins University and a Ph.D. in environmental engineering from Johns Hopkins. And as I've already talked about my work experience, basically, applying all that I learned in college.

MR. MCCANN: Okay. One area that I haven't asked you specifically about is water quality and water quality standards. What, and I think you touched upon it. What, what

is your, has been in your experience in that area?

MR. SUMMERS: Well, when I was hired to work for the State, it was to work on development of a water quality monitoring program for the Patuxent water shed, which is the water shed that runs in between Baltimore and Washington, D.C. It was the subject of legal action by the southern counties against the northern counties and the state over excessive sewer contamination.

I developed a monitoring program for the rivers and streams in conjunction with the U.S. Geological Survey. We operated that monitoring program for a number of years. When I was Director of the Technical and Regulatory Services, that group is responsible for water quality standards, development.

Under the Clean Water Act, the State is required to monitor water quality, identify areas where we're not meeting water quality standards and then develop what's called a total maximum daily load, which is a Clean Water Act document that demonstrates what needs to be done in order to reduce pollution to the extent required to develop water quality standards, to meet water quality standards.

MR. MCCANN: Okay.

MR. SUMMERS: The water quality standards for the State largely follow the Environmental Protection Agency guidelines and, as Director of Technical and Regulatory Services, I was responsible for making sure that as the EPA

modified its requirements and introducing increasing levels of, or more protective levels of contamination for standards, we would develop new standards for the State and put those into place through the regulatory process.

So, I worked on that. And then when I became Director of Water Management Administration, I was administering programs that were to protect water quality and make sure the State was meeting those standards. So, I continued to participate in water quality standards development there.

MR. MCCANN: Okay. Let me show you your resume, which has been pre-marked as Exhibit 98. Do you see that, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. Nine page document, what is this, is this your resume?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. Your Honor, I would intro, move to admit this exhibit into evidence, exhibit number ninety-eight.

MR. MUDD: No objection.

ALJ: Any objection to the resume?

MR. MCCANN: Okay.

ALJ: Any objection to the resume?

MR. ZIMMERMAN: No objection here.

ALJ: Mr. Rosenblatt, Mr. Mudd?

MR. MUDD: No, I'm sorry, no objection, Your Honor.

ALJ: Okay, thank you.

MR. MCCANN: Lastly, Mr. Summers, have you testified or been accepted as an expert on issues related to water quality standards, first of all?

MR. SUMMERS: Well, I, I have testified before the State legislature, the U.S. Congress, U.S. Senate on water quality regulatory issues. I have also been deposed in a number of different cases, but I have not had to testify in Court.

MR. MCCANN: Okay. You mentioned regulatory issues. How about just, have you been accepted or testified as an expert on, on issues related to regulatory enforcement or compliance, as opposed to water quality specifically?

MR. SUMMERS: Yes, so much of my testimony before the legislature, congress and senate, was with respect to regulatory aspects.

MR. MCCANN: Okay. Okay. Your Honor, I would move Mr. Summers in as an expert in, in three areas. Number one, environmental engineering, number two, water quality and water quality standards and number three, regulatory enforcement and compliance with environmental laws and regulations and, and Consent Decrees, including as they may relate to sewer systems. So, those three areas.

MR. MUDD: I'm sorry, Michael. Would you mind repeating those, please?

MR. MCCANN: All three?

MR. MUDD: Yes, please.

MR. MCCANN: Environmental engineering, water quality and water quality standards, number two, and number three, regulatory enforcement and compliance with environmental laws and regulations and Consent Decrees, including as they may relate to sewer systems.

ALJ: Any voir dire, Mr. Mudd?

MR. MUDD: Yes, please. All right. I got some notes. Good morning, sir. How are you doing today?

MR. SUMMERS: Doing well, thank you.

MR. MUDD: Good. So, you are currently, are you an employee of Johns Hopkins?

MR. SUMMERS: Yes.

MR. MUDD: Okay and are you here today on behalf of Johns Hopkins?

MR. SUMMERS: Not at all.

MR. MUDD: Okay. Have you had any communications with Johns Hopkins about this hearing?

MR. SUMMERS: No.

MR. MUDD: Have you used any Johns Hopkins resources for purposes of your preparation today?

MR. SUMMERS: No.

MR. MUDD: Okay and you, you've clearly been, had a lot of roles within MDE over the years, correct?

MR. SUMMERS: Yes.

MR. MUDD: And am I correct that you're not involved, or you're, you're not here on behalf of MDE today, correct?

MR. SUMMERS: No, I haven't worked there for, since 2015.

MR. MUDD: Okay. Have you had any communications with anyone from MDE in regards to this case?

MR. SUMMERS: No.

MR. ZIMMERMAN: I'm going to object. That has nothing to do with his qualifications. That --

MR. MUDD: Is this your witness, Mr. Zimmerman?

MR. ZIMMERMAN: No, I, but I can (inaudible). That has nothing to do, that question, that, if he wants to ask him that ultimately on cross, that's one thing. But this doesn't have to do with his qualifications.

ALJ: Overruled. Go ahead.

MR. MUDD: Have you had any communications with anyone from MDE for this case?

MR. SUMMERS: Not about this case.

MR. MUDD: Okay. I wrote down and it says on your resume that you have a bachelors in natural sciences. Can you describe what you studied in your undergrad relative to natural sciences?

MR. SUMMERS: Yeah, natural sciences, basically, is biology, chemistry, physics, environmental science, geology, geography, it's a wide range of disciplines that have to do with the natural world and the scientific understanding of the natural world. And it is a major, that it used to be at Hopkins, to provide just a broad understanding of all of those subjects that I just listed.

MR. MUDD: Okay and, and is it fair to say that your, your studies in that respect were likewise broad? In other words, you didn't specialize in any one of those areas necessarily?

MR. SUMMERS: That's, that's correct.

MR. MUDD: Okay and how about environmental engineering? What, what did you study at Hopkins for your Ph.D. in environmental engineering?

MR. SUMMERS: So, in environmental engineering, we bring together the environmental sciences with engineering principles to work to solve environmental problems. Specifically my work involved erosion and sediment issues, stream processes involving erosion and, and how land surface is modified by streams and erosion.

And I studied the engineering properties of sediments that were deposited into Chesapeake Bay looking at ways to do a better job of designing and sizing dredge material containment basins. So, we were looking at the characteristics of the

sediments, how they behaved under the conditions that were caused by hydrologic or clam shell dredging and how that influenced the amount of capacity for storage that was needed for dredge material containment.

MR. MUDD: How, how long, how many years did you study for your Ph.D.?

MR. SUMMERS: I studied, I think, most of four years, but I got my Ph.D. in my fifth year. Unfortunately missed a deadline and went to work as a post-doc at the State University of New York, at Stoneybrook, working on dredging issues. So, I think my bachelor's degree was '76 and my Ph.D. was '82.

MR. MUDD: Okay and your, I assume, did you do a dissertation at the conclusion of your Ph.D.?

MR. SUMMERS: Yes.

MR. MUDD: And that was relative to the dredge material issue?

MR. SUMMERS: Yes.

MR. MUDD: So, I didn't hear a single thing in any of that description on your environmental engineering that dealt with sewage, is that right? You didn't study sewerage in your Ph.D.?

MR. SUMMERS: No, I, I took course work in water quality chemistry, wastewater system design and actually during part of the time as a graduate student, I taught sections of the wastewater engineering course work there. So, while my

dissertation didn't involve sewage, my course work, my teaching and other activities definitely involved water and wastewater treatment.

MR. MUDD: Okay. Are you a professional engineer?

MR. SUMMERS: No.

MR. MUDD: Have you, have you ever designed a sewer system?

MR. SUMMERS: No, I, I have not designed sewer systems. My focus was on water quality conditions and water quality modeling.

MR. MUDD: Okay and can you describe a little bit about that? What do you mean by water quality conditions and water quality monitoring?

MR. SUMMERS: Well, the monitoring, I talked a little bit about monitoring river flow and the contaminants that flow in rivers. Sediment load is a big part of monitoring river flow. Monitoring the impacts of pollution solutions.

We designed monitoring programs to sample streams above and below, for example, sewer discharges to look at changes caused by what is discharged into the streams. So, the monitoring is more focused on the natural environment and how it is impacted by things like sewage plants and other industrial discharges.

The modeling, I mentioned, has to do with the fact that you cannot monitor everywhere all the time. And so, we

use models to interpolate between our monitoring data to give us a complete picture. And then models can also be used to project into the future and under different rainfall conditions.

So, you know, I'm very familiar with all the modeling techniques that are used in wastewater design, but I, I am not an expert and have not done that type of wastewater design. My focus has been on the water quality impacts and the regulatory requirements and meeting water quality standards.

MR. MUDD: And, and that, was that your focus when you were at MDE?

MR. SUMMERS: My, my focus at MDE is, as I've said before, was extremely broad, but I definitely worked on those aspects I just described. Mostly in the earlier part of my career at MDE beyond once I became Director, I was not directly involved in field monitoring activities like I described, or modeling. I was overseeing the scientific and technical staff who did that work.

MR. MUDD: Okay. So, that would have been from 2010 to 2015?

MR. SUMMERS: From 2010 to 2015, I was Secretary of the Environment, and I was overseeing everything at the Department. But because of the broad range of responsibilities, I depended upon staff and my directors in each of the administrations, in this case water, to make sure

things were being done properly. And I was obviously briefed and involved in decision making with them, but I was not directly hands on.

MR. MUDD: Okay and how about from 2007 to 2010 as Deputy Secretary? Were you hands on then?

MR. SUMMERS: I was as Deputy Secretary, a little bit more hands on because the Secretary asked me to focus on specific areas related to water and scientific and technical issues associated with water quality standards development.

At that time, we were working on the first total maximum daily load for the entire Chesapeake Bay watershed, and I was the lead on, for the Department, in developing that with our technical staff and also our counterparts in all of the other states in the Chesapeake Bay watershed from New York to Virginia. So, --

MR. MUDD: Okay.

MR. SUMMERS: -- that was during my Deputy Secretary time, I was doing that.

MR. MUDD: Okay and, and I'm sorry, just to be clear, that was again, more oversight than, than hands on work, correct?

MR. SUMMERS: Well, it, there was a lot of negotiation and meeting with the other states and the USEPA and developing (inaudible), so it definitely involved other staff, but you know, I was directly involved in those discussions.

MR. MUDD: Okay. How about from 2001 to 2007 as the Director of Water Management, were you doing any hands on modeling --

MR. SUMMERS: Then I was overseeing the program managers meeting regularly with them on whatever issue they were working on, from drinking water to wastewater and providing the benefit of my experience and, basically, gaining a direct understanding of what the issues were and being responsible for the final result. And, as I've already said, signing some Consent Orders and Consent Decrees.

MR. MUDD: Okay and, and then how about your time before then, were you performing any, any hands-on evaluation or modeling at that time, or testing?

MR. SUMMERS: In, before my becoming a director, I was in charge of monitoring programs, field work, I did work in field. I also worked on computer modeling, data analysis and also oversaw staff who were doing that work as well.

MR. MUDD: And what, what years would that have been?

MR. SUMMERS: So, pretty much from the time I joined the Department or the predecessor Office of Programs in 1983, until I would say until the end of my time as Director of Technical and Regulatory Services, which I think was 2001. After 2001, I became Director of Water Management Administration and was not as directly involved in monitoring modeling activities. My focus, as Director of Water, shifted

to regulations, regulations development and enforcement.

MR. MUDD: Okay. You said you were familiar with the Jones Falls sewer shed. Can you describe a little bit about the sewer shed, the boundaries? Let's start with the boundaries. Do you know what the boundaries are?

MR. SUMMERS: Yeah, it, it extends from pretty much, I think, my house is at the western edge of the sewer shed in Towson, right along the York Road corridor. It goes, you know, it's irregularly shaped, of course, but it goes up into the Greenspring area along Falls Road, up to the north, where the subject property is.

It extends over, excuse me, I, I said west, I meant east, I'm on the east side. And the west side goes over to, I guess, pretty close to the Reisterstown area. I, you know, and it, and it, of course, goes down to the City line. So, it pretty much follows the lower two-thirds, I guess, of the Jones Falls watershed.

MR. MUDD: Okay. So, you're familiar with the Jones Falls watershed as well?

MR. SUMMERS: Yes, that goes on up further. I know that, I've reviewed the total maximum daily load report for the Jones Falls again recently. And it goes up into Greenspring Valley, the watershed itself. So, I know that area is mostly served by septic systems and lower part of the basin is served by the sewer system.

MR. MUDD: Okay. You testified that you reviewed a number of the plans that Mr. Grachek, or that were introduced through Mr. Grachek, the SRRR plan was one of them. How many times did you review that?

MR. SUMMERS: Well, I have reviewed that report several times since meeting with Mr. Grachek and, you know, it, it is a very extensive report. But I think I'm pretty familiar with the aspects of it related to this situation we're discussing.

MR. MUDD: Okay. You also mentioned that you reviewed the LPC document. What is that document?

MR. SUMMERS: Yeah, the, there's a long, I forget what the, what the acronym stands for, but basically, it is a document that looks at the performance of the remediation measures that were recommended in the RRR plan.

MR. MUDD: Okay and did, am I right that you said LPC?

MR. SUMMERS: I believe LTC.

MR. MUDD: Okay, okay. And how about the RJN report and the Hazen report and the Ramble reports, how, how often, how many times have you reviewed those?

MR. SUMMERS: I, I've reviewed them several times as, as I reviewed them initially and learned more about the case, spoke with Mr. Grachek, went back and reviewed different pieces of them. So, I've read through them and highlighted different

sections in my looking at those reports.

MR. MUDD: Okay. I think you mentioned that the Ramble report was provided by Ramble. Have you ever had any communications with people from the Ramble company?

MR. SUMMERS: No, I'm, I'm sorry, no, when I said provided by Ramble, I just meant they, they developed the report. I --

MR. MUDD: Okay.

MR. SUMMERS: -- I got it through the County.

MR. MUDD: Okay and did you get it from, all these reports, did you get them, you say you got them from the County. But did you get them from, through somebody else?

MR. SUMMERS: Well, they, they, a lot of this information is online. But Mr. McCann has provided copies of, of reports. So, I, I don't recall exactly where I got each report the first time. But I have been assembling them as I have been reviewing this situation.

MR. MUDD: Okay and you mentioned when talking about the Hazen report and the Hazen newsletters that the figures are difficult to read. What do you mean by that?

MR. SUMMERS: Yeah, well, I'll give you a specific example. One that's of particular interest to me and I think to this case, is the one that shows the high rate of infiltration occurring in the sewer system in the area surrounding the proposed development and upstream of that

development.

And it's the winter high RD-2 areas within the Jones Falls sewer shed, figure three. And it's difficult to, to read because it's just in a brochure. When you blow it up, you can't really see the details. So, I was, I was referring to that. But pretty much any of the other figures in those brochures are difficult to read.

They look very good in the brochure, and I'm very interested in reviewing the results because I think the report will answer a lot of questions about how, about the integrity of the Jones Falls sewer shed and the ability of the system to handle future flows. And that, the RD-2 map I'm referring to is high rainfall dependent inflow and infiltration.

So, it's, it's basically showing an area of the sewer shed that is experiencing very high inflow and infiltration, which means wet weather flows are a problem in that area.

MR. MUDD: Okay and you, you said that there's a huge volume of material that's been produced, you'd agree with that? Mean, meaning reports?

MR. SUMMERS: When you, just saying the reports associated with Jones Falls, they're many, many pages. When I said that, I was referring to all of the Consent Decree documentation. A lot of it is online at Baltimore County, but not all of it, particularly the earlier years. So, that's what I was referring to.

MR. MUDD: Okay. Would you agree with me that there's hundreds of pages of materials when, starting from the Consent Decree forward to the Hazen reports, or the Hazen newsletters?

MR. SUMMERS: Yes, there are many pages.

MR. MUDD: Okay and have you looked at all, every single page of every single document and have you reviewed that?

MR. SUMMERS: Of the specific reports that I referenced, I have read every page. But of all of the Consent Decree documents, no.

MR. MUDD: Okay. So, you talked about the Consent Decree. You were at MDE at the time the Consent Decree was signed?

MR. SUMMERS: Yes.

MR. MUDD: And you said that you did not attend any of the negotiating sessions on that Consent Decree, correct?

MR. SUMMERS: That's correct.

MR. MUDD: And you just attended briefing sessions with the Secretary, correct?

MR. SUMMERS: That's correct. And, and the compliance staff who were directly involved in the negotiation and the Assistant Attorney General. So, at the Department, you know, the negotiating team would go. They would discuss whatever the issues were. They would identify things, they

would bring that back and discuss that with me and the Secretary and we would then determine the Department's position.

MR. MUDD: And, and you said when, now you said we would determine the Department's position, but when you were Secretary you said that you ultimately had the final say, is that right?

MR. SUMMERS: Right, but these Consent Decrees were not being negotiated while I was Secretary.

MR. MUDD: Understood. So, you did not have the final say on anything relative to the Consent Decree in this case?

MR. SUMMERS: Those, those were handled by Secretary Filbrick, but Secretary Filbrick definitely relied on my input on making the decisions.

MR. MUDD: Okay. Your input along with many other people, correct?

MR. SUMMERS: Correct, correct.

MR. MUDD: Okay and the Consent Decrees you did work on, one was in, with the City of Hagerstown. You said that did include sewerage, correct?

MR. SUMMERS: Yes.

MR. MUDD: Okay. How about the Sparrows Point Consent Decree? Did that involve --

MR. SUMMERS: That was not a sewerage issue, that was

a land contamination issue.

MR. MUDD: Okay.

MR. SUMMERS: I, I worked on a, a Consent Order with Centerville, which was sewage related.

MR. MUDD: Okay.

MR. SUMMERS: And also, with the City of Salisbury, which was sewage related. Those were Consent Orders --

MR. MUDD: Okay.

MR. SUMMERS: -- which are similar to Decrees.

MR. MUDD: And when you described your role as Secretary of the MDE, just in general, you said you oversaw a lot of things and that you ultimately had to rely on the experts to do their various jobs in the various arms of that Department, do you agree with that?

MR. SUMMERS: Definitely. The Department has over a thousand employees, very highly qualified, and any leader in a Department like that has to have good staff and be able to depend upon them.

MR. MUDD: Does that, and that even includes in working on Consent Decrees?

MR. SUMMERS: Definitely.

MR. MUDD: Okay, all right. Judge Murphy, I, I'm going to object to this witness being accepted as an expert. I think that, while he certainly has a lot of experience in government, I think that these are very broad issues that Mr.

McCann's offering him in, environmental engineering, water quality standards, regulatory enforcement and compliance with environmental laws and Consent Decrees, including that they may relate to sewer systems.

And this witness, the very last thing he said, is that he has relied on the experts in dealing with Consent Decrees. And I think that his, his testimony also demonstrates that he hasn't had any hands-on experience in performing an assessment or monitoring streams and things like that since before 2001. That's over twenty years ago.

So, I think that calling this witness as an expert on, on a Consent Decree that was, you know, is currently being implemented and enforced, is, is a far cry from, from whatever expertise he may have had, or whatever expertise he does have. But I don't think he qualifies as an expert to speak about water quality, quality and sewerage issues in this case.

MR. ZIMMERMAN: Judge, would you like, may I say something, Judge, briefly?

ALJ: Okay, Mr. Zimmerman.

MR. ZIMMERMAN: Yeah, I'm just going to be really brief. I think this is one of the best qualified experts in the conversation for being one of the best qualified experts that we've ever had in a land use case. So, I, I think it's a, an easy decision to allow him to testify and the rest of it has to do with the weight of what he says, and they'll have an

opportunity to cross examine. That's all I would like to say. Thank you.

ALJ: Okay, understood. So, I don't think the fact that the, Mr. Summers has not been qualified as an expert by a Court, you know, disqualifies him from being an expert. An expert is someone under the Maryland Rules who by education, experience, training can, can offer an opinion or assist me with issues in a case.

And, and so, his experience that's been outlined today, and also in his resume, which has been accepted as exhibit number ninety-eight, I believe qualifies him in the areas that Mr. McCann has offered him and, which is environmental engineering, water quality and water quality standards, and regulatory enforcement, enforcement laws, Consent Decrees as, as they relate to sewer systems is the three areas that he indicated.

So, there's certainly a first time for everyone to be qualified as an expert. And so, you know, the, so I think that he, he does qualify and certainly he can be cross examined on those areas that Mr. Mudd has highlighted. So, all right. Go ahead. He's accepted, Mr. McCann.

MR. MCCANN: Okay. Thank you, Judge. Mr. Summers, I think you've already indicated you were here for Mr. Grachek's testimony, correct?

MR. SUMMERS: Yes.

MR. MCCANN: And do you recall his testimony relating to the issue of Lake Roland and the E.coli levels in Lake Roland, do you recall that testimony?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. Do you have an opinion regarding the extent to which the E.coli levels in Lake Roland may be, or maybe not, due to failures in the public sewer system?

MR. SUMMERS: Well, the TMDL document developed by the Department of the Environment looked at bacteria levels in Lake Roland and the tributaries feeding it. And they did use some methodology called bacterial source tracking, which is able to identify the source of a particular bacteria.

And using that bacterial source tracking methodology, they were able to identify the rough percentages of the bacterial load coming from different sources, domestic animals, human sources and wildlife, being several key areas. And based on that, they concluded that the human source was the dominant source of bacterial load. Not the only source, but the dominant source.

Bacteria is notoriously difficult to measure. It's highly variable due to variations in stream flow, the relative contribution of rainfall runoff and sewage sources, runoff from places like the dog park at the lake.

But it, it is largely, or often, associated with high runoff events and to that end, in, in making assessments of, of

the safety of water contact, particularly in beaches, the Department of the Environment and Health Departments recommend avoiding water contact within forty-eight hours after a rainfall event.

So, you get these high spikes of bacteria during rainfall events from, due to all those sources I mentioned. In the Jones Falls, the TMDL says that those sources are dominated by sewage.

So, again, it, it's, it's difficult to nail it down but there is definitely a bacterial contamination issue in the Jones Falls and the Department of Environment, in the TMDL mediation plan, focuses on the, meeting the requirements of the sewer Consent Decree and eliminating overflows as a major component of the restoration effort.

MR. MCCANN: Okay. Were you finished or did I cut you off? I want --

MR. SUMMERS: I was just going to say, since I have been working with Blue Water Baltimore, I have become familiar with their bacterial monitoring program.

MR. MCCANN: Um hm.

MR. SUMMERS: Which started back in about 2014 and they have been monitoring bacteria in the Jones Falls since and up to the present day. And you can see this high variability in their data. Much of the time, the system meets bacterial standards but there are definite spikes in contamination and a

lot of that is, as I've said, has to do with rainfall events. But it's not all rainfall driven. There can be situations, in particular a sewer spill, that can cause spikes as well.

MR. MCCANN: Okay. Let me follow-up on a couple points you just made. First, I'm going to show you, you mentioned the TMDL a couple times now. Let me show you this document, which is Protestant's Exhibit 96. Do you see that?

MR. SUMMERS: Yes.

MR. MCCANN: It is a long document, as I think the Judge indicated. What is this document?

MR. SUMMERS: This, this is an analysis of the sources of fecal bacterial contamination in the Non-Tidal Jones Falls Basin. And it looks at the available monitoring data, the information on the various possible sources. I've mentioned the bacterial source tracking analysis that was done, and it sets a limit on bacterial load into the Jones Falls and establishes recommendations for how to achieve those lengths.

MR. MCCANN: Okay. Let me refer you to page nineteen.

MR. ZIMMERMAN: Excuse me, can we get a date for the report?

MR. MCCANN: It is two thousand and, September 2006. Bear with me one second. Page nineteen, as I scroll down. This section in particular, 2.4 entitled source assessment. Do you see that?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. So, my first question, does this report, this report, section in particular, does it provide us with any information regarding the number of households in the Jones Falls that are on public sewer rather than septic? Does it address that issue?

MR. SUMMERS: There, there is a discussion of that in the report. I don't know exactly what section it's in. But you see table 2.4.1.

MR. MCCANN: Yep.

MR. SUMMERS: Shows the septic systems and households per subwatershed. UQQ0005 is the upper part of the, above the lake, JON0184 discharges to the lake, and JON0082 is the outfall of the lake. SRU0005, I'd have to refer back to the map in the report, but I don't think that is actually part of the drainage area to the lake.

MR. MCCANN: First of all, what's a subwatershed station? What is that?

MR. SUMMERS: Those are monitoring sites on river that represent different subportions of the Jones Falls. And there's a map in the report --

MR. MCCANN: Yeah.

MR. SUMMERS: -- that shows where those are. There it is.

MR. MCCANN: Is this the map? This is on page

thirteen, figure 2., 2.1. Is this the map you were referring to?

MR. SUMMERS: Yes, and you see UQQ and JON0184 are at the upper end of the lake, where two of the tributaries come into the lake. JON is, 184, is the Jones Falls. And JON0082 is the outfall of the lake.

MR. MCCANN: Okay. So, the question, again, does, does this provide, does this report provide us any information about the number of households? I, I think we looked at some figures, let me get back down to the chart. Did, did you look at this data and figure out how many households --

MR. SUMMERS: Yeah, the --

MR. MUDD: Objection. Objection.

MR. SUMMERS: -- first column --

MR. MUDD: Objection. I'm sorry, I'm objecting, the question has been asked, but I just would ask that Mr. McCann, again, not lead the witness.

ALJ: Yeah, try, try not to, Mr. McCann, lead the witness. So the question, sir, is, you know, did you come to the conclusion as to the number of households that have septic systems?

MR. SUMMERS: Yes. Actually, I interpreted the results of this report that is shown here on this table. The first column of numbers is the total number of households per subwatershed. And the second column, is the number of

households that have septic systems.

And if you total those up, you can determine that about fourteen, or sixteen percent, of the households are on septic systems and eighty-four percent are on the sewer system. And there's a map on another page of this report that illustrates the sewer system and the septic systems.

MR. MCCANN: Okay. Is it this map here?

MR. SUMMERS: Yeah.

MR. MCCANN: This would be --

MR. SUMMERS: You can see --

MR. MCCANN: Yeah, go ahead. Page twenty-one, go ahead.

MR. SUMMERS: Yeah, the, the yellow shaded area is served by sewer and then each of those circles represents a septic system in other parts of the basin. And looking at just the area upstream of Lake Roland, eighty-four percent of the households are in that orange shaded area, which is obviously much more densely developed, and sixteen percent are in septic system areas.

MR. MCCANN: Okay. What, how do you account, if at all, for the fact that this report is dated 2006? What, yeah.

MR. SUMMERS: Well, it is, it is an old report. The Department of the Environment has not updated it because of, basically, capacity issues at the Department to deal with all of the new water quality impairments that are being discovered

across the state and developing TMDLs for those.

So, they have not gone back and redone this report. I think it, it's, its value in this case, just as giving a general picture, that the fact that the dominant number of households in the sewer shed, excuse me, in the watershed, are in the sewer system, as opposed to septic systems. Roughly, eighty-four percent of the sewage is coming through the sewage system, and sixteen percent is going, is being treated in the soil and going into the ground water.

MR. MCCANN: So, just, just to be clear, has, has MDE issued a TMD report subsequent to September 2006?

MR. SUMMERS: No, this is, this is the, the only, well, for the Jones Falls bacteria, this is the only report. They've issued many, many TMDL documents across the state.

MR. MCCANN: Okay.

MR. SUMMERS: But not, they haven't reissued this one.

MR. MCCANN: The, and, and again, does the age of the report effect your opinion in this regard?

MR. SUMMERS: Well, I, I think it would be much, it would be helpful to have current information on the distribution. I'm sure that the County or MDE could provide that. But having a lot of familiarity with this area, actually living in this area, and seeing the extent of growth and development in the sewer shed, Towson University has grown

tremendously, I would not expect the more current data to be a whole lot different than this in terms of percentages. That is, the bulk of the sewage is coming from homes on the sewer system, dominated by that, eighty-four percent.

MR. MCCANN: Okay. Next, what, if any, information, I think you've mentioned this already, but if you could tell us where in the report it is, what, if any, information is in this report regarding the potential source of bacteria?

MR. SUMMERS: I don't recall page numbers or anything, but there are tables in the report that show the results of the bacterial source tracking analysis and I think if you scroll down --

MR. MCCANN: Well, here's, here's a section --

MR. SUMMERS: -- there's a section that explains the bacterial source tracking process. And then, I think there are tables that, later that show the results. There it is. Scroll down a little more, 2.4.4. And you see the sources that they looked at, domestic animals, human, livestock, wildlife. So, human, it varies depending on flow, which basin you're in. But you see, if you look at the three sites I mentioned, which comprise the Jones Falls, excuse me, the Lake Roland drainage, JON82, human sewage ranges between fifty-six and forty-four percent, JON184, forty-six and forty-four percent and UQQ, between forty and sixty-seven percent. So, --

MR. MCCANN: Okay.

MR. SUMMERS: -- it's, I would characterize human sources being a dominant source. You can see domestic animals and livestock and wildlife are the other sources, the human sources are the largest. And would characterize as being the dominant source.

MR. MCCANN: Okay.

MR. SUMMERS: And given that the sewage systems serve eighty-four percent of the household, septic system fourteen percent, you know, I think it's fair to say that human sewage from the sewage system is, is a major source to this system. And MDE acknowledges that in the conclusion to the report, in the recommendation of using the Consent Decree work as a major part of the effort to meet standards. And that's in the conclusion section.

MR. MCCANN: I'll go to that in a second. I just had a couple other questions about this chart, 2.4.4 is the chart you're referring to, right? I mean, the table, rather?

MR. SUMMERS: Yeah.

MR. MCCANN: Okay and then there's a table right below that, table 2.4.5, which looks similar anyway. What, what's, what are these, what's the difference between these charts?

MR. SUMMERS: Well, I think this one is for the seasonal period. Basically, the water contact period made in September --

MR. MCCANN: Okay.

MR. SUMMERS: -- I think was the whole year. But it's the same, yeah, average annual. So, when the seasonal period just focuses in on when people would most likely be coming in contact with the water.

MR. MCCANN: Okay.

MR. SUMMERS: And you see the percentages vary a little bit. It looks like they're a little bit higher, the human contribution is a little bit higher during the seasonal period, May to September. And that's, it's probably due to more storm event activity in those time periods.

MR. MCCANN: The, did you review the, the water sampling, the County's water sampling results in Lake Roland that Mr. Grachek spoke about during this testimony?

MR. SUMMERS: Yes, I did look at those.

MR. MCCANN: Okay and I can certainly pull this up, tell me if you, if you, if you need me to, but how would you characterize those results?

MR. SUMMERS: Well, I think they were highly variables, I discussed before.

MR. MCCANN: Yeah.

MR. SUMMERS: With spikes in the data, which may or may not be associated with runoff events, but largely driven by rainfall runoff. You would see periodic spikes. And the rainfall would not only be carrying things from domestic

animals, wildlife, livestock, but also sewage spills and you, you see on this table of source tracking, they looked at both high flows and low flows and, to get, to get a picture of how much the rainfall affected.

So, you look at UQQ site and you see sixty-six percent human in low flow and forty-five percent at high flow. And then, coming down, high flow fifty-three percent at 184, forty-five percent at low flow and then 0082, sixty-six and fifty-two. And I think that clearly high flow events have an impact, but there is also definitely a sewage, or human signal, sewage being both septic and sewer systems (inaudible).

MR. MCCANN: And what are high flow and low flow, just for the record?

MR. SUMMERS: High, high flow would be when you've had a rain event and there is runoff that is causing the river levels to be higher. If you, if you look at the, the County's webpage that reports their data, they also look at flow conditions --

MR. MCCANN: Um hm.

MR. SUMMERS: -- in comparison to their sampling.

MR. MCCANN: Okay. So, the, the variability that you described in the County's sampling results, in, in your experience, is that, is that unusual?

MR. SUMMERS: No, bacteria monitoring results are highly variable, that's why the water quality standards are

based on geometric mean values and require multiple samples to get a handle on what bacteria levels are. And in the scientific community, they're known to be highly variable, difficult to track and predict, so it, it, this all gives you kind of a general picture of, of the sources and the issues and, and this is why bacteria is very difficult to control.

MR. MCCANN: Okay. You mentioned the conclusion. Let me get to that section of this report. What section were you referring to --

MR. SUMMERS: (inaudible) implementation --

MR. MCCANN: Yeah.

MR. SUMMERS: You see that second paragraph --

MR. MCCANN: Yeah.

MR. SUMMERS: -- the most significant planned implementation. And this is speaking of both the City and the County, because the whole watershed encompasses both. But the elimination of sanitary sewer overflows in Baltimore City and Baltimore County are the most, and combined sewer in Baltimore City, the most significant planned implementation. It talks about the Consent Decree and what's required.

MR. MCCANN: Well, without reading this entire paragraph, what is, what is, what do the words most significant planned implementation measures, what is that referring to? What is --

MR. SUMMERS: The, the, if you scroll back up, the

title of this section is assurance of implementation. The, one of the requirements the Clean Water Act is that the State has to provide reasonable assurance to the Environmental Protection Agency that water quality standards will be achieved by implementation of this TMDL.

MR. MCCANN: Okay.

MR. SUMMERS: And so, the Department is telling EPA in this section that the most significant planned implementation measures involve elimination of sanitary sewer overflows and leakage into the water, watershed.

MR. MCCANN: Okay. Your Honor, I would move this Exhibit 96 into evidence.

ALJ: Any objection?

MR. MUDD: No objection.

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Thank you. Before we move on, well, actually, let's go ahead and move on. You, you indicated, I, I think you already said, you, you, you reviewed the Consent Decree, which is Exhibit 65 in this case?

MR. SUMMERS: Yes.

MR. MCCANN: And I'll ask you the same questions I asked Mr. Grachek. In, in your opinion, and based on your experience, does, does the Consent Decree require the County --

MR. MUDD: Objection.

MR. MCCANN: -- to evaluate --

MR. MUDD: Objection.

ALJ: Well, he hasn't finished his question yet.

MR. MUDD: Well, I'm, I'm afraid he's going to give him the answer before he asks the question.

ALJ: Well, the Consent Decree is like, it, it's pretty thick. I mean, he has to narrow it down, I would think some, right? So, overruled. Go ahead, Mr. McCann.

MR. MCCANN: Mr. Summers, does the Consent Decree require or not the County to evaluate the system, the sewer system, for future model predicted capacity issues?

MR. SUMMERS: Yeah, the Consent Decree has a whole sequence of activities that have to occur, starting with the evaluation of the sewer system, monitoring and modeling of that sewer system under a range of flow conditions, both dry and wet weather.

They have to identify what the problems are, identify what measures are needed to address those problems and account for in, in modeling, basically, project how well the identified measures can perform in terms of dealing with the sanitary sewer overflow situation.

MR. MCCANN: And in your experience, is the projections, or the, or the future capacity, using a model, is that consistent with industry standards?

MR. SUMMERS: Definitely the Consent Decree requires

looking at future conditions. It includes provisions that require them to use 2025 population projections. They also, it also is required to look at a range of different size storm events. So, definitely needs to deal with future conditions because the overall objective of the Consent Decree is to eliminate sanitary sewer overflows.

MR. MCCANN: Okay and that, the, is that consistent with industry standards, in your experience? That is, looking at future projections of capacity?

MR. SUMMERS: Yeah, every, every sanitary sewer overflow Consent Decree that I'm familiar with and, and I have participated in national meetings on this issue, they all must deal with the wet weather flows and future conditions. And it is definitely an EPA standard way of dealing with this, this problem. And it's necessary to meet the requirements of the Clean Water Act. So, it would be standard practice.

MR. MCCANN: Okay. The SRR plan, which you mentioned a couple times, which is, and I'll show it to you, just so I'm referring to a document you haven't identified yet. Bear with me one second. Okay. This, so this is, Protestants already introduced Exhibit 67. Let me show it to you. Is this document, see it on the screen, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: Is this the document that you were referring to as the SRRR plan?

MR. SUMMERS: Yes.

MR. MCCANN: Okay and then Exhibit 68, which I, is on the screen now, do you see that?

MR. SUMMERS: Yeah, that was the LTC report that I referenced previously.

MR. MCCANN: Okay and do you know whether or not this Exhibit 68, the LTC report, is a part of Exhibit 67?

MR. SUMMERS: Yeah, I, I believe it's actually an appendix to --

MR. MCCANN: Okay.

MR. SUMMERS: -- the overall plan.

MR. MCCANN: Okay and you, I think you've indicated a couple times, have you reviewed this SRR plan?

MR. SUMMERS: Yes.

MR. MCCANN: And are familiar with it?

MR. SUMMERS: Yes.

MR. MCCANN: Does the SRR plan require Baltimore County to identify existing problems in the sewer system?

MR. MUDD: Objection. Same objection.

ALJ: Overruled. Go ahead.

MR. SUMMERS: The Consent Decree requires them to identify it. The SRRR plan is to implement that part of the Consent Decree to identify existing problems in the system and future model predicted capacity problems in the system.

MR. MCCANN: Okay and does the Consent Decree require

Baltimore County to undertake the model predicted corrective actions identified in the SRR plan, including the LTC report?

MR. MUDD: Objection. Judge Murphy, we're just, we're leading the witness again through what is and is not required.

ALJ: Yeah, understood. The, the problem is, these documents are super long. I mean, unless we, you know, he's going to read every page, it's, we need to have some focus for the questions. So, I'll overrule it.

MR. MCCANN: Go ahead, Mr. Summers.

MR. SUMMERS: So, the Consent Decree requires the, as I said, the evaluation of the system, it requires a development of a plan and it also requires the identified measures in the plan, both monitoring and modeling, resulting from both monitoring and modeling, that those be implemented in order to eliminate sanitary sewer overflows, which is the overall objective of the Consent Decree.

MR. MCCANN: Okay. You've mentioned as well the RJN performance assessment. Have you reviewed and are you familiar with that report?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. I'm going to show you what's been marked and introduced as Protestant's Exhibit 78. Do you see that, Mr. Summers?

MR. SUMMERS: Yep.

MR. MCCANN: In your, in your opinion, Mr. Summers, based on your experience, does this report --

MR. MUDD: Objection.

ALJ: Is, is this the, this is not the right document, this is the (inaudible) letter.

MR. MCCANN: This is the --

ALJ: Oh, there you go.

MR. MCCANN: Yeah, just a cover page is part of the exhibit, Your Honor.

ALJ: Okay. Objection, Mr. Mudd, to this?

MR. MUDD: He, he, he was going to, he, he said in your opinion. He, if he's going to ask him an opinion question, he should ask him what his opinion is.

ALJ: Yeah, understood. And I, and I do agree with that. If you're asking for his opinion, could you please, you know, say do you have an opinion.

MR. MCCANN: Yeah.

ALJ: Don't lead him through the opinion.

MR. MCCANN: What, okay, thank you. What, if any, opinion do you have, Mr. Summers, regarding whether or not this RJN performance assessment supports or does not support whether the County has undertaken all of the corrective actions to address model predicted capacity problems?

MR. SUMMERS: So, in my opinion, this report shows both monitored and modeled projections of the performance of

this system and the measures that they have taken. In looking at Baltimore County's selective design storm of ten-year, six-hour storm, it is apparent that this report clearly shows, and in the map three, at the end of the report, that there is a section of the sewer shed, BC-22, down stream from the proposed development that is showing modeled overflows.

And so, this report is showing that the RJN assessment, while it does talk about the successful implementation of I&I work in the eastern part of the basin, does not show successful implementation in the portion of the basin where the sewage from the proposed development needs to flow through the system.

And specifically, if you look at what is recommended in the RRR assessment, there is a section of sewer pipe in BC-22 that needs to be upgraded to accommodate these flows. And if you look at the performance assessment report, RJN report, it shows based on updated monitoring and modeling that there are still problems in that section that have not been addressed. So, if you, if you, I believe there's a map three in this report or, or attachment to this report that shows that.

MR. MCCANN: Show you this, this is also part of the same exhibit, let me back out and back in. Is this the, the map that you're referring to?

MR. SUMMERS: Yeah, and you can see right in the

center, the screen there, those red circles are model predicted overflow under the two-year six-hour storm, which is smaller than the County's, the County's selected storm of ten years six-hour storm.

And the, the recommended improvements to the sewer system are cumulative. Everything that's recommended for the two-year six-hour storm, must be done in order to address the ten-year six-hour storm, which is clearly explained in the SRRR report.

MR. MCCANN: Okay and I think you mentioned the red markings. Could you just direct us, I think, I think the Judge is probably already familiar with what --

MR. SUMMERS: If you look at the center of the screen there, BC-22, --

MR. MCCANN: Right here?

MR. SUMMERS: -- it's surrounded by red circles, those are the, the proposed development is up in the unsewered area, BC-05, and the sewage comes down through those pipes where the red circles are. And then it goes on down to the Jones Falls through BC-18 and BC-31. You see the red --

MR. MCCANN: Yeah.

MR. SUMMERS: -- line arrows, that's the sewage drainage there. And you see an orange circle there right above BC-18, which is a ten-year six-hour storm overflow as well. So, based on the performance assessment, there are definitely

modeled overflows in this area.

MR. MCCANN: You mentioned, in describing the RJN performance assessment, first, monitored and then secondly, modeled. What, desc, can you explain what you meant by that?

MR. SUMMERS: Well, there's a, a table in the report that lists the different restoration measures that are needed.

MR. MCCANN: Um hm.

MR. SUMMERS: And it shows in, in some areas where there were actual activities, there was monitoring done to verify and that would be up in the upper, I guess, northeast corner of the sewer shed, if you scroll up a little bit, that BC-03, 02, 09, 04 area, was the subject of a major I&I upgrade that the County did. And, and so, there were measurements associated with that. The performance assessment used models for other modeling parts, including the area I'm showing, BC-22.

MR. MCCANN: Okay, okay. Your Honor, would it be okay to take a quick bathroom break. I don't have that much more but I would like to do that under unpressured conditions, so to speak.

ALJ: Absolutely. Yeah, why --

MR. MCCANN: Five, five minutes would be great.

ALJ: What'd you say?

MR. MCCANN: Five minutes would be great.

ALJ: Yeah, sure. Why don't we just take, why don't

we just take ten minutes so everyone can just take a breather and we'll come back because it's 12:19, so we'll just take ten minutes, okay?

MR. MCCANN: Thank you.

ALJ: All right. I'll pause the record.

(PAUSE)

ALJ: We're back on the record after a break. Mr. McCann, you were still in the middle of your witness.

MR. MCCANN: Yeah, thank you. Mr. Summers, are you there?

MR. SUMMERS: Yes.

MR. MCCANN: Okay, great. Let me show you real quick map three again, then I'll move on. How would you, I think you've already testified that you reviewed the, the SRR plan by RK&K, correct?

MR. SUMMERS: Yes.

MR. MCCANN: How, how would you compare the, the modeled capacity issues identified in this map three of the RJN performance assessment with the, the modeled capacity issues in the RK&K reporting?

MR. SUMMERS: Yeah, RJN updated the monitoring information as part of their performance assessment and reran the model. And if you look at the updated model results compared to the modeled results in the initial report, SRRR plan, and the LTC appendix to that, you did not see as many of

these overflows as you see in the updated report in this section of the sewer system. So, the performance assessment that RJN did actually shows worse conditions in this section of the system than the original modeling work.

MR. MCCANN: Okay. I'm going to go on to the Hazen newsletter, which is Exhibit 85. Do you see that, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: Is this the pamphlet that you were referring to earlier?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. What, if any, opinion do you have regarding this Hazen work product relative to the Consent Decree?

MR. SUMMERS: It, it is a very comprehensive assessment, which if you scroll down a little bit further, it actually carries the analyst out, not just to 2025 as the Consent Decree required, but it goes beyond that, twenty year and fifty-year planning horizon. So, this is an extension of the assessment that we just talked about, the RJN.

Of course, we don't have details, we just have what's in these brochures. But the thing that struck me, which I've already pointed to, in this case if you scroll down a little bit, you see this figure three?

MR. MCCANN: Yeah.

MR. SUMMERS: Which shows highlighted in red the area

upstream and surrounding the portion of the sewer shed that the proposed development would discharge to. And it's labeled Winter High RDII areas. If you scroll down a little further and over, I think, to the left, it explains what that is. There it is.

And this is a rainfall monitoring data analyst to assess current high rainfall dependent inflow and infiltration. And this is a very prominent red area of high I&I in the vicinity of the, in the vicinity of the proposed development. It is also upstream of the area that we looked at just previously in the RJN report.

MR. MCCANN: Um hm.

MR. SUMMERS: Where it showed overflows in the, in the sewer lines downstream of, of that area. So, this is of interest and concern to me to see the full report from Hazen and Sawyer, to see what's going on here. But that high I&I based on monitoring information would suggest that those overflows that are shown in the, the previous RJN report are a risk for this area for sure.

MR. MCCANN: Okay. A couple things. You referred us to the bottom of this page. I just want to make sure we're at the right paragraph. Is it this paragraph here, completed a flow level, this right here?

MR. SUMMERS: Yeah, that's, that's all the information we have about the specifics of this analysis, but

based on that, you know, and the, and the red area in that figure, I'm particularly interested in more detail. On this, I have looked at the most recent version of this. It's posted online, which is the winter 2022.

MR. MCCANN: Um hm.

MR. SUMMERS: And the same information is there, I'm not sure which one we're looking at here.

MR. MCCANN: This one says fall updates.

MR. SUMMERS: Fall, so this is quarter three. Quarter four has the same information.

MR. MCCANN: So, just to backup, just to explain, I think I may have said RD2, it's RDII, is that right?

MR. SUMMERS: Yeah, and it stands for rainfall dependent inflow and infiltration, RDII.

MR. MCCANN: And what is that in, in sort of laymen's terms? What, what does that mean? What is RDII?

MR. SUMMERS: That means in situations where you have high rainfall occurring, you see a surge in inflow and infiltration into the sewer system. Meaning, the sewage becomes augmented by inflow infiltration of rainwater or stream water, depending on the particular situation. But this is a, a new analysis that Hazen has done that suggests there may be an issue in this area.

MR. MCCANN: Okay and this area, just to be clear, going up to figure three on this Exhibit 85, you referred to

the red areas just, I know the Judge knows by now, but just tell us where in this --

MR. SUMMERS: Yeah, that, that, that's kind of the northwest point of the drainage, of the sewer service area and there's a, a white space in the red area at the lower --

MR. MCCANN: Right here, right here?

MR. SUMMERS: Yeah, that is, I believe, where the proposed development is located.

MR. MCCANN: Okay, okay. I think, in connection with the Consent Decree, I think you mentioned that, well, first off, let me just, I guess, restart. Do you have, do you have an opinion regarding whether the Consent Decree requires the County to evaluate capacity based on wet weather or dry weather flow?

MR. SUMMERS: It, it requires both wet weather and dry weather evaluation. The overall objective of the Consent Decree is to eliminate sanitary sewer overflows, particularly in the areas with high I&I. Wet weather is going to be a driving factor for overflows.

And the Consent Decree has a series of things that need to be done and the performance assessment is at the end of that series, to make sure that it works. And based on the results of the performance assessment, there may or may not need to be additional work done.

MR. MCCANN: Is there, well, in, in your experience,

is it consistent with industry standards to determine capacity based on wet weather?

MR. SUMMERS: Absolutely.

MR. MCCANN: Okay. Let me show you, this is Exhibit 100. You see that document, Mr. Summers?

MR. SUMMERS: Yeah, MDE wastewater design guidelines.

MR. MCCANN: Okay and just tell us what this is and what it tells us.

MR. SUMMERS: Well, this, this, this document, basically, goes hand in hand with something called the recommended standards for wastewater facilities, or the ten state standards. I believe Mr. Grachek referred to this in his testimony. But this document from MDE provides some additional information to supplement the requirements that are described in the ten state standards. So, you can see that in these bullets here --

MR. MCCANN: Yeah.

MR. SUMMERS: -- in the addenda, and in the event of any conflict between the two, MDE is saying these guidelines pertain.

MR. MCCANN: How, how, if at all, do these guidelines, design guidelines, relate to this issue of wet weather versus dry weather?

MR. SUMMERS: Well, if you scroll down in the guidelines, you'll see there's a section that, keep going down,

page three, I think it is. Peaking factor.

MR. MCCANN: Yeah.

MR. SUMMERS: This is a method of making sure that you can have a, a reasonable estimate of the maximum peaking flow for any proposed design. And you, if you scroll down a little further, basically, the peaking factor you see, go back up a little.

MR. MCCANN: Sorry, yeah.

MR. SUMMERS: Peak flow and, and in order to properly design, you need to look at hourly, daily and monthly flows. But the peaking factor gives you an estimate of how high flows would go in the event of a rain event, and you can see anywhere, just take the first row up to quarter million gallons a day, four times the average flow for an hourly peaking factor three times daily and two times for monthly.

And these peaking flows, peak flows are used in providing hydrologic information and capacity needed in the pipes. So, (inaudible) --

MR. MCCANN: So, is this for the design of the pipes or for the assessment of them, what is this for?

MR. SUMMERS: This is, this is design and sizing of the pipes. So you need to take peaking factors into account.

MR. MCCANN: Okay and what just, at least for the record, what is peak flow and what is peaking factor, what --

MR. SUMMERS: Well, --

MR. MUDD: Objection.

MR. MCCANN: What is peak flow, what is peak flow?

ALJ: Hold on. Go ahead, Mr. Mudd.

MR. MUDD: You, you may say this is more for cross examination, but this expert has admitted he's not an expert in sewer design. And we're putting up a document related to wastewater sewer design. I don't necessarily object to the introduction of the document, but to have this witness go through and to prevent, excuse me, present testimony as though he's an expert in these issues, I think, we're heading down a dangerous path here.

MR. MCCANN: Yeah, well, I'm not asking him about, about the design of sewer systems. I'm, I'm, I'm, that's not what I'm asking him and that's obviously not where he's headed with this. Maybe I should ask, number one, I should ask him what is peak flow. I think that's something he's qualified to answer.

ALJ: Well, I think that's where the objection was raised. But I'll overrule it because I'm, I'm not sure where it's going so I'll, I'll let you describe that. Go ahead, Mr. Summers.

MR. SUMMERS: Just peak flow is the highest flow that you might expect in that pipe, and it's intended to account for I&I, as that paragraph implies.

MR. MCCANN: Is, put simply, is peak flow wet

conditions or dry conditions?

MR. SUMMERS: Wet. Peak flow is going --

MR. MUDD: (inaudible).

MR. SUMMERS: -- (inaudible) second sentence.

ALJ: Hold on. (inaudible) and then you objected.

MR. MUDD: (inaudible) I was too slow. I, I have a continuing objection to the line of questioning, which I think is clearly related to design and capacity of sewerage systems, with which this witness is not an expert.

ALJ: Yeah, and I, and I hear you. But the document, of course, is designed guidelines for wastewater facilities. So, I, I'm trying to go, you know, obviously, follow where we're going here as well. But go ahead, I'll overrule it. Go ahead, sir.

MR. SUMMERS: Just, if you read the second sentence, the above average, the maximum peak flows are highly impacted by inflow, infiltration and wet weather event.

MR. MCCANN: Okay. Well, I'll move on, but why are we looking at this, Mr., what relevance, if any, does this have to your opinions, this document, the design guidelines?

MR. SUMMERS: Well, the wet, the wet weather is a critical part of the requirement in the Consent Decree, to consider wet weather conditions and peak flows within the sewer system.

MR. MCCANN: Okay, all right. Your Honor, I would

move this exhibit, which is one hundred, into evidence.

ALJ: And I don't think Mr. Mudd had any objection, correct, Mr. Mudd?

MR. MUDD: Well, I, I mean, I actually, I guess I'm going to object for the record. I understand you may let it in because it's a government document. But I think that this is an attempt to get in a document through a witness that really has no expertise in this issue and it's something that perhaps should have been brought in through a different expert who is a sewer design expert.

ALJ: Okay. You had indicated previously that you didn't have any problem with the document, so that's why I mentioned that --

MR. MUDD: I, I know, I'm sorry, I understand.

ALJ: That's all right. Got it. So, yeah, but I'm going to, I'm going to allow it to come in. So, it's going to be exhibit number one hundred. So, --

MR. MUDD: Thank you.

MR. MCCANN: And then, Exhibit 101, do you see that, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: Tell us what this is and how, if at all, it relates to your opinions?

MR. SUMMERS: These are the ten states standards that Mr. Grachek referred to in his testimony and the only aspect of

this that I would point out is that it also requires looking at peak flow in order to deal with capacity, in order to properly assure that your sewer system can handle the, the wet weather flow capacity needs.

MR. MCCANN: Okay, all right. Your Honor, I would move Exhibit 101 into evidence.

ALJ: Mr. Mudd? You must be muted. Mr. Mudd is frozen.

MR. MUDD: Sorry, I, I was talking, I was (inaudible).

ALJ: You were frozen, your screen was frozen, you were frozen like this.

MR. MUDD: Can you hear me?

ALJ: I can hear you now.

MR. MUDD: Okay. I was making a really good argument too --

ALJ: Oh, well, we missed it.

MR. MUDD: No, I, I'm, I said I, I do object to this and I, I want to renew my objection to Exhibit 100. This is a hundred- and seventy-five-page document that the witness, we haven't even made it past the cover page. And the witness mentioned one aspect of this document and, and the same thing on Exhibit 100.

We were on, on one page of that and I'm, my concern is that it's an attempt to get these documents in with hundreds

of pages of information that Mr. McCann may later rely on in his memo for something he didn't even examine a witness on. And we're allowing them in just because they're government documents. And this one I'm not even sure the foundation has been laid from where it came from.

ALJ: Yeah, could, could we get some foundation, Mr. McCann, as to --

MR. MCCANN: Yeah, (inaudible) I'm sorry. Where does, --

ALJ: -- 101?

MR. MCCANN: -- where does this document come from, Exhibit 101, the recommended standards for wastewater facilities? What is its source?

MR. SUMMERS: Well, it is a document that is heavily referred to by states, including Maryland, in reviewing the design and approval of plans and specifications for wastewater collection and treatment facilities. And it is something that Mr. Grachek referenced in his testimony, and it's also attached to the Maryland Design Standards, which we just looked at.

MR. MCCANN: Yeah, so Exhibit 100 is the, the bullet here, the ten state standards, that reference in Exhibit 100, is that to this Exhibit 101?

MR. SUMMERS: Yes.

MR. MCCANN: And you said, is Exhibit 101 attached to 100, to the design manual?

MR. SUMMERS: No, it, it's referenced in 100.

MR. MCCANN: Okay. Yeah, in terms of, Your Honor, if I may, in terms of the, putting the entire document in, believe me, I had no interest in printing out three hundred pages from my printer and delivering you two copies of this stuff. The only reason I did it is because every time I tried to pull out excerpts I get complaints about not including an entire document, so. It, whether it's full or complete, the issue is, does it come in?

It doesn't matter whether I'll reference it in a memo or not, or whether, you know, the point is, is it admissible, is it an admissible document. And there clearly, this is a public record from MDE and, and, and is, is admissible.

MR. MUDD: May I be heard on that part about --

ALJ: Okay, Mr. Mudd --

MR. MUDD: Again, this, this expert is by admission not a design expert and he is saying these were documents that supposedly were referenced by another witness. And this witness himself I don't think has any familiarity with these documents enough to say whether these things, where they came from or whether they actually are the documents that, to which Mr. Grachek is referring.

And I think it's dangerous to allow something in that, that may very well be, I still don't know whether this document is a, quote unquote, government document just because

it's referenced, excuse me, Exhibit 101, just because it's referenced in Exhibit 100. So, I, I have very real concerns about the admission of these things through this witness.

MR. MCCANN: Yeah, well, --

ALJ: So, I, so, Mr. McCann, so exhibit number one hundred and, and one oh one, the witness has identified them as documents coming from MDE or used by MDE and he worked at MDE. So, whether or not he's a, you know, design guidelines expert or, or not, he's referenced them as government documents.

In fact, I mean, again, if it was a PIA request and there was a certification on top of the, on, on the document, which said that it was from MDE, would be sort of the same thing as having this witness come in and identify them, to me.

So, and there would be no one explaining what they are if you just submit them as a PIA request and submit them with a government certification, so it comes in to under an exception to the hearsay rule. I believe it comes in that way.

So, all the issues though that you're raising, Mr. Mudd, can be addressed on cross examination about, you know, his familiarity with it or whether, what it has to do with, you know, the, the issues here and all of that. So, I'll allow both of those documents and you can cross examine him. So, one hundred and one oh one, Mr. McCann are in evidence.

MR. MCCANN: Okay, thank you. Mr. Summers, are you familiar with the Baltimore City's sewer system?

MR. SUMMERS: Yes.

MR. MCCANN: Okay. You, have you described this morning, or today rather, your involvement in that system?

MR. SUMMERS: Yeah, I, I'm familiar with both having participated in briefings on both Consent Decrees and having worked on the upgrades of both the Back River and Patapsco work, I mean, having been involved in developing the Bay restoration fund requirements and grant agreements for upgrading those facilities. So, I am familiar with the City and the County sewer system, which really are one big system of pipes interconnected.

MR. MCCANN: Where does, where does the sewage in the Jones Falls sewer shed, at least as it exists in the County, where does it, where does it go?

MR. SUMMERS: It goes into the lower Jones Falls basin in the City, travels through pipes, down the Jones Falls and then, excuse me, across to the east, eventually to the Back River Wastewater Treatment Plant.

MR. MCCANN: Do you know how much of the, of the sewage in the Jones Falls sewer shed, as it sits in Baltimore County, goes to Back River, the Back River Treatment Facility?

MR. SUMMERS: Well, the Jones Falls sewer shed sewage from Baltimore County should all go to, through the City, to the Back River Sewage Treatment Plant. However, as we know from the Consent Decrees there are frequently spills and

overflows along that pathway. So, it doesn't all make it to Back River, but the design is for it to be transmitted to Back River a hundred percent of the County's Jones Falls sewage.

MR. MCCANN: Okay. Let me show you what's been marked as Protestant's Exhibit 97. Do you see that?

MR. SUMMERS: Yes.

MR. MCCANN: Okay and what is this document? Bear with me one second, I think I just, go ahead, I'm sorry.

MR. SUMMERS: Yeah, scroll down a little so you can see the title. Okay. This is the phase two plan, which is required under the City's modified Consent Decree. And this has been posted on the City's webpage and it's actually open for public question and comment at this point in time.

MR. MCCANN: Okay and the date of this report?

MR. SUMMERS: January 18, 2023.

MR. MCCANN: Okay and what, if any, significance does this report have to your opinions?

MR. SUMMERS: Well, there is a section, if you scroll down, I don't recall what page it's on, but there's a section about Balt, flows from Baltimore County. Keep going down.

MR. MCCANN: Okay. Is it in the executive summary?

MR. SUMMERS: I believe so. There it is, Baltimore County flow uncertainty.

MR. MCCANN: Okay.

MR. SUMMERS: So, in --

ALJ: What, what page is that?

MR. MCCANN: This is page ten of the report.

ALJ: Okay.

MR. SUMMERS: So, as you can read in the first sentence, --

MR. MUDD: Hold on. I'm going to object.

ALJ: Mr. Mudd, go ahead.

MR. MUDD: I, I'm going to object on the basis of, of relevance and applicability. I, I know that he mentioned that sewage is flowing into the City and this section pertains to Baltimore County, but I don't know that there's really any relevance to a, a document that is related, apparently, to a Consent Decree and a completely different jurisdiction over which Baltimore County has no influence or, you know, or involvement, per se. Other than sewerage flowing to it.

But I'm not sure how that really is relevant to your burden, to our burden of proof and to your review here of a development plan in Baltimore County.

ALJ: I, I was curious myself. I haven't heard it, I think he was about to get to that. So, he was referring to page ten, ES-4.1, Baltimore County flow uncertainty. And so, I'm just sort of waiting to hear what that was. So, let's listen to the witness. So, overruled for now at least.

MR. MCCANN: Go ahead, Mr. Summers.

MR. SUMMERS: Okay?

MR. MCCANN: Yeah.

MR. SUMMERS: So, in order for the City to address overflows in the lower Jones Falls properly, the City needs to know how much sewage Baltimore County is going to be sending to them. And the City here has, as they explain in this paragraph, has reached out to the County to get the information, timing, peak, volume and duration, of the flows the City will need to accommodate.

And the County has responded that they're in the process of figuring that out. And they can't provide the information to the City at, at the time that this report was published.

And that the, the section goes on to explain that in order for the City to address its Consent Decree requirements, it needs this information from the County and that if you scroll down even a little further, that the information is critical to ensure the City can meet its LOP, which is level of protection, mandates under their own modified Consent Decree.

So, I think the significance of this to the County is that at this point in time, neither the City nor we have a, a full report from the County on what flows they are sending down the Jones Falls, which is something that is required under their Consent Decree.

MR. MCCANN: Okay. The question I had, there's a map, bear with me one second (inaudible) on page nine. Do you

see this map, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: I want to show you just that title, title first. I don't want to zoom out too much. Do you see the title?

MR. SUMMERS: Yes.

MR. MCCANN: Okay and then we can go up to the map itself --

MR. MUDD: May I have a continuing objection to this questioning?

ALJ: Sure, and I haven't ruled on the objection, the complete objection yet. So, yes, you can.

MR. MUDD: Thank you.

MR. MCCANN: What, if any, information on this map is relevant to, to your opinions in this case?

MR. SUMMERS: Well, those, those green areas are in the Jones Falls sewer shed, which as I've already testified, is transmitting sewage from Baltimore County and the Jones Falls basin. And these are all areas where the City needs to take additional I&I reduction work.

And I would just point out that there is a continuous hydraulic connection up into the County and the area in red on the Hazen report that shows excessive I&I in the County. The County has also, in its modeling assessment, said that they assume a free discharge assumption.

They use a free discharge assumption in their modeling which means that there would be no restriction in sending sewage down into the City. But we know that the City has, is struggling with its own overflow and I&I problems. So, the whole point of this is that the City and County systems are inextricably related and what you do in one can affect the other.

MR. MCCANN: Let me, let me ask you about this map in particular though. It's entitled location of proposed phase two plan I&I reduction projects. First of all, what is, what is phase two? Do you know what that's in reference to?

MR. SUMMERS: That is phase two of the City's modified Consent Decree, which was a title of this document. And basically, this is, once a modified Consent Decree was entered, because of delays in implementing the first part of their Consent Decree, the State and the EPA added additional requirements called phase two to address I&I and overflows in the City.

MR. MCCANN: Okay. So, as it relates to Jones Falls, do you see that's in green right there?

MR. SUMMERS: Yeah.

MR. MCCANN: In the legend? Up here where there are these green shapes, is, are any of these in close, which, which, if any, of these are in close proximity to, to Lake Roland and the sewage from the subject site?

MR. SUMMERS: Well, you can see Lake Roland on the map just above the City line, right under the word works in public works in the title.

MR. MCCANN: Right here?

MR. SUMMERS: That's Lake Roland.

MR. MCCANN: Okay. So, what, if any, significance is this green sort of blob here?

MR. SUMMERS: Well, that shows that the City is still, is proposing to reduce I&I into the Jones Falls system in order to prevent overflows further down in the system. And whatever the County is sending down is a critical part of what the City needs to be able to deal with. And that's why the City has asked for the information from the County. And the County has not, by their own, or by the City report indication, there's a letter that the County has not completed that work.

MR. MCCANN: Okay. You mentioned, and I'll get back to this in a moment, Your Honor, real quick, you mentioned free discharge assumption. Bear with me one second. I wanted to pull up the RJN performance assessment, which is, which, again, is page seventy-eight, I'm sorry, Exhibit 78. So, page thirteen, do you see this section, Mr. Summers?

MR. SUMMERS: Yes.

MR. MCCANN: In the RJN? I want to focus on this paragraph, which I'll highlight and this on page, again, page thirteen, uses that same term that you just used. Read this,

read, read this to us and tell us what that means.

MR. SUMMERS: Okay. All simulation runs were completed using a free discharge assumption at the City/County boundary. This would be that there's no restriction downstream that would cause a backup into the County. And they say, this is consistent with the approach used in the 2013 plan. And that the City has not completed phase two projects necessary to establish alternative future predicted boundary conditions at the jurisdictional boundary.

So, basically, the County is saying that the problem lies in the City and the City, in their phase two report, has indicated that they need the information from the County in order to do their work. So, you've got two parts of the same system, basically, pointing at each other over this issue.

MR. MCCANN: Okay. When you say the County is blaming the City, I don't know if that, those were your words or not, but just to be fair, what, first of all, what, what does this mean, free discharge assumption? Explain that. That's not obvious, explain that.

MR. SUMMERS: It, it just means that the flow from the sewer line coming out of the City into the County is not going to be prevented from discharging into the City system.

MR. MCCANN: What, what, that's an assumption, is that an assumption being made here?

MR. SUMMERS: It's, it's a free discharge assumption

of the modeling work. It isn't necessarily the truth. In fact, in other places, the County has said that it has not able to close all its structured overflows due to back up from the City.

MR. MCCANN: Okay.

MR. SUMMERS: There's a, a section that talks about, I believe it's overflow 113, Marnat Road. It's not in the Jones Falls, excuse me, the Lake Roland drainage, but it's another part of the Jones Falls where the sewage is not able to flow freely from the County into the City.

MR. MCCANN: Okay. Okay, yeah, I think it speaks for itself. Your Honor, I think that's all the questions I have for Mr. Summers. I would move, excuse me, I would move Exhibit 97 into evidence and --

ALJ: Okay. So, based on the objection, I, I do not believe ninety-seven should be admitted. So, I hear the testimony and I understand the, everybody understands that the City and County sewage systems work together, that it's global.

And I also appreciate Mr. McCann's interest in being complete. I think that's really what the, the reasoning behind putting this document in. But this is a, this is a modified Consent Decree that has to do with the City. That, you know, the map that you're, that you're showing on the screen, that you showed before, Baltimore County's, you know, sewage system is off of this map.

This, this document has to do with, as the witness indicated, really has to do with the City's interest in meeting their Consent Decree and whether or not they're waiting for information from, from the County that may be of interest this document to, you know, politicians or sort of the global, you know, kind of, making sure that, you know, the sewer system is working.

But as it relates to this particular property, this document doesn't help me at all in describing anything that has to do with this, with this, other than giving general information about, you know, who's waiting for information from who. So, so, for, for that reason, I do agree with Mr. Mudd on this point that ninety-seven should not be admitted into evidence. I don't think it assists me, again, in any issues related to, to this case.

The only other issue I have are, the only other document that we had I don't think that was admitted was ninety-nine.

MR. MCCANN: Yeah, we'll withdraw ninety-nine and at least for the record, Your Honor, I understand your ruling. I'm not asking you to change your mind. But I, I would like to state for the record the relevance of this Exhibit 97.

ALJ: Yeah, and, and you did, I think, through the witness, right? And you asked him what (inaudible) --

MR. MCCANN: No, I don't think the witness --

ALJ: You said how, but your question was, how is this relevant to your opinions. And so, it was clear what, how it was relevant. I don't think the document is uninteresting. It's very interesting to the witness in his field of work. It's just in regard to the issue here about this property, in this sewer system, whether or not the County, the City is complaining about what the County is doing, it, that just gets beyond the level of where we are, right?

MR. MCCANN: Yeah, but that's, that's not the point, Your Honor, and my --

ALJ: All right.

MR. MCCANN: -- he, he is not an attorney, Mr. Summers, so he doesn't understand the legal relevance.

ALJ: Sure.

MR. MCCANN: But the, here, here's the point. And, and I agree with you completely and I think this was the basis of Mr. Mudd's objection. And that is, this is the City's Consent Decree, and it has nothing to do with Baltimore County's Consent Decree, nor this project, which is, again, that's the objection I get all the time when we try and bring other cases in other developments. The point has nothing to do with that.

The point, and I think this is highly, highly probative, are the explicit statements made in here by Baltimore City, not about, about the, what the County told

them. These are admissions that, that the County told the City regarding the state of the County's assessment of its own problems.

Has nothing, per se, to do with the, the, the, the City's Consent Decree itself. I know that you have no jurisdiction over that. And obviously, even if this, the sewage in this development goes to the City, that's not the point.

The point here is that the City is char, and that, that is why I asked Mr. Summers to read the whole thing because I think unless you read it, you don't understand that point. They're saying here that the County is in the process of modeling and working on a new LTC report, Your Honor.

And yes, it's important for other reasons. It's affecting the City's ability, the City is saying it can't comply with its own Consent Decree because of this uncertainty. In fact, this is the most prominent challenge for the City.

So, I think it's, it's relevant, not for the reasons Mr. Mudd objected, nor for the reasons you are not letting it in, but for the reasons that I'm probably not artfully articulating. But I think if you read this, I think this is an important piece of evidence as any in this case, frankly.

ALJ: So, I, I mean, I don't agree that's the most important piece of evidence. I think it's sort of a transient issue here. And again, I'll stand by my, my ruling on it. All

the other one hundred and one documents have come in here and it's not about just having admitted those.

This hearing, this hearing is not about whether or not, you know, the County is not, essentially, on trial here, really. I mean, it's, it's a transient issue whether or not they're meeting their obligations under Consent Decree, or they need to provide information to the City is, is not, you know, what this hearing is about. So, for those reasons, I'm just not, we're not going to admit ninety-seven into evidence. You are withdrawing ninety-nine?

MR. MCCANN: I am, yep.

ALJ: Okay, all right. So, anything else?

MR. MCCANN: I'll look at my notes real quick, but I think that's it. Just give me thirty seconds, if you could. Yeah, nothing else, Your Honor. Thank you, Mr. Summers.

ALJ: Okay. Are we ready for cross --

MR. ZIMMERMAN: Just, do, do I go next, Judge? I, I have some questions.

ALJ: (inaudible) Mr. Zimmerman, I'm sorry, I did skip over you.

MR. ZIMMERMAN: Yeah.

ALJ: Mr. Mudd is frozen, hold on one second, he's frozen.

MR. MUDD: I, I'm here.

ALJ: Mr. Rosenblatt, are you frozen? Mr. Rosenblatt

is frozen too.

MR. MUDD: Can you hear me?

ALJ: Okay, now you're back. Mr. Mudd is frozen though.

MR. MUDD: Can, can you hear me?

ALJ: All right, you're back.

MR. MUDD: Okay. I don't know, I was just sitting very still.

ALJ: I know, well, no, I think it's the, you know, again, paying the bill over there for some reason with the cable.

MR. MUDD: You know, I, I'm definitely going to have cross examination. But I, as we've done in the past, I'd like for all of the attorneys on the other side to ask whatever questions they have and, and then I would actually request a break so I could just streamline it and we could have lunch at that time.

ALJ: Understood. So, Mr. Zimmerman, I guess I did skip over you because I was thinking this wasn't your issue in my head. I, but how is this your issue, Mr. Zimmerman? Are you there?

MR. ZIMMERMAN: Yeah, when we got into this at the end of Mr. Grachek's testimony last time and, and I --

ALJ: Okay.

MR. ZIMMERMAN: -- pointed out --

ALJ: Thank you for reminding me of that, yeah.

MR. ZIMMERMAN: -- that, that there are master plan 2020 provisions on sewer. There's also --

ALJ: Okay, right.

MR. ZIMMERMAN: -- master water and sewer plans. So, it, it is a --

ALJ: Thank you for reminding me, okay. I, my, my issue with, I always think you're on a different issue but thank you for reminding me. So, you do have questions for Mr. Summers?

MR. ZIMMERMAN: I, I, I do. And, of course, Mr. McCann didn't, you know, has emphasized the issue, but now that it's been brought up, it is of interest under, under the plan and I would like mostly to ask some background questions. But I have some questions of Mr. Summers.

ALJ: Okay. Why don't we do that? Why don't we take your questions and then I'll go to Mr. Sachse and to Mr. Wyatt, although I don't see Mr. Wyatt. Maybe he's here. Okay. Go ahead, Mr. Zimmerman.

MR. ZIMMERMAN: Okay, okay. Good afternoon. So, just a little background. The, the, can you tell, for the record, whether, whether the Clean Water Act is a Federal Law or a State law or a County law?

MR. SUMMERS: The Clean Water Act is a Federal law and enforcement and certain provisions of the Clean Water Act

have been delegated to Maryland by the EPA.

MR. ZIMMERMAN: And then Maryland has its own set of derivative laws to implement the Clean Water Act, is that correct?

MR. SUMMERS: Correct, correct.

MR. ZIMMERMAN: Okay.

MR. SUMMERS: And Maryland has other laws, State laws, that provide additional water quality protections over and above the Clean Water Act.

MR. ZIMMERMAN: Right, and what can you tell us as to whether MDE's lead agency to implement the Clean Water Act in Maryland?

MR. SUMMERS: And MDE is the leading agency to implement it in Maryland.

MR. ZIMMERMAN: Okay and what can you tell us as to what --

MR. MUDD: Object, objection. I, I just, I'm sorry, I was late on the objection. But I just would ask Mr. Zimmerman not to lead the witness, please.

MR. ZIMMERMAN: Excuse me, but that's not a leading question. If I said, isn't it true, obviously, that you're the lead agency, then that would be leading. He could, he could have answered yes, no or I don't know.

ALJ: So, the other thing is is it's an odd situation because it's Mr. McCann's witness. And so, it's technically

cross.

MR. MUDD: Okay.

ALJ: Even though People's Counsel is --

MR. MUDD: I understand.

ALJ: -- this, you know, it's anomaly, because it, because it's sort of neutral in a sense. So, it, it, there's no form for this, but I call it cross. So, I'm letting him cross and so we'll overrule it. Go ahead.

MR. ZIMMERMAN: Well, all right. Thank you, Judge. What can you tell us as to whether the Clean Water Act derives from the Federal Water Pollution Control Act from 1972, amend, the amendments?

MR. SUMMERS: Yeah, the, it, it became called the Clean Water Act when, when the Federal Water Pollution Control Act was amended in '72. And it, it added a number of provisions that we talked about today, including MPDS and TMDL.

MR. ZIMMERMAN: What, what can you tell us about the establishment of the NPDES in 1972, what it stands for and what its purpose was?

MR. SUMMERS: The National Pollutant Discharge Elimination System is a system of permits and self-monitoring and monitoring by the State, that is required for all point source discharges to waters of the U.S. Point source being sewage plants, industries, essentially any pipes that discharge to waters of the U.S.

MR. ZIMMERMAN: Okay and what can you tell us as to whether the law originally established deadlines for the elimination of such discharges and how, if at all, those deadlines were modified?

MR. SUMMERS: Yeah, I believe it originally set a deadline eliminating pollutant discharges by 1984 and that was incredibly ambitious, unrealistic and it hasn't happened even yet.

MR. ZIMMERMAN: Okay. What can you tell us as to whether the law originally dealt with point source discharges but later involved non-point source discharges?

MR. SUMMERS: Yeah, initially the focus was on point source discharges and then additional law and/or regulation addressed non-point source discharges. But and a, an aspect of it was municipal separate storm sewer system permits, which were classified as point source discharges because their pipes, but those pipes are to handle stormwater, so they are very similar to non-point source discharges in the sense that they're driven by stormwater.

MR. ZIMMERMAN: So, what can you say as to whether that's kind of a background for these Consent Decrees?

MR. SUMMERS: Well, the NPDES violations were the discharge of untreated sewage into the streams of, in this case, the Jones Falls, that came from the sewer system of Baltimore County and a lot of that discharge, because of I&I,

inflow and infiltration, into the sewer system, a portion of that discharge is a mixture of sewage and stormwater that are polluted and discharged to the streams in violation of the Clean Water Act.

MR. ZIMMERMAN: Yeah, and can you give us some background on what you talked about in your direct testimony of TMDLs and how they came into the program and what their function was?

MR. SUMMERS: Yeah, the TMDLs, total maximum density load, is a water quality, requires water qualify based affluent limitation. It basically looks at water quality standards, the available monitoring data, evaluates water waste, where water quality standards are not being met, that is they are impaired.

And for every impaired water, TMDL is required by the Clean Water Act to address how the impairment will be corrected by the implementation of storm water controls, sewage and industrial discharge controls and permits. And how the State will be able to achieve water quality standards.

MR. ZIMMERMAN: What can you tell us whether TMDL are relevant to the Consent Decree, if at all?

MR. SUMMERS: The TMDL was not the basis of the Consent Decree. The Consent Decree was due to NPDES permit violations and the TMDL just explained how the Consent Decree and other measures will be used to help the State meet water quality standards.

MR. ZIMMERMAN: Okay, okay. So, I have to ask you, what, what, based on your experience having been Deputy at the time of the 2005 Consent Decree, briefly, can you give us any background as to what the thought process was enforcing a Consent Decree rather than just informally working with the County?

MR. SUMMERS: Well, this was the Consent Decrees for sewage overflows were a Federal initiative of the Clean Water Act. It was an enforcement priority of the EPA. And when EPA brought this suit, it was similar to many others that they brought around the country.

And under the delegation agreement with the states, each state had the option of either joining with EPA in the suit or siding with, in this case, the County. And the State made the determination that it was a justified suit under the Clean Water Act and joined with EPA.

MR. ZIMMERMAN: Okay. At, at the time, if you can tell us what, were there any, can you say whether any parts of the County system were particularly problematic or was it the whole system?

MR. SUMMERS: Yeah, I, I, I don’t have that information at hand. I haven’t looked recently. But the Consent Decree identified a number of overflow areas in it. And the assessment was required to identify other areas of problems, and then obviously, as we’ve discussed, to develop

plans for how to address those.

MR. ZIMMERMAN: Do you recall whether or not there are any expectations as to a timeline as to when the Consent Decree revisions should have completely have been satisfied?

MR. SUMMERS: Yeah, there, there are timelines specified in the Consent Decree and I think many of those have not been met and still have not been yet.

MR. ZIMMERMAN: Yeah, okay. So, following up on the questions about the Consent Decree, some of which questions were objected to, all, albeit overruled, I wonder if Mr. McCann could share the Consent Decree and we could take a look at it?

MR. MCCANN: Yes, I can. Bear with me one sec.

MR. ZIMMERMAN: Could we go to page eight? And when I say eight, I mean at the bottom of the page.

MR. MCCANN: Yeah.

MR. ZIMMERMAN: Okay. So, in terms of section five, remedial measures, and, and Mr. McCann may scroll it a bit if, if it helps, what, what can you tell us as to the extent to which elimination of sanitary sewer overflows was, a priority under the Consent Decree?

MR. SUMMERS: Well, I mean, if you read, --

MR. MUDD: Objection, objection. I mean, the document speaks for itself, and this witness previously testified about his experience really, or lack of involvement with the preparation of this document and negotiation of it to

begin with. I think it calls for speculation.

MR. ZIMMERMAN: This is a follow-up to Mr., yeah, --

ALJ: (inaudible) and the witness' testimony with Mr. McCann was that the whole objective was to eliminate SSOs, that's really the whole point of it anyway. You're not going to take us through step by step because we've done this before, right, Mr. Zimmerman? Right? Are you going to take us through the whole --

MR. ZIMMERMAN: Not, not through every section. I was going to talk about a few sections, yes.

ALJ: Okay. So, I mean, I know this witness' testimony several times was, the whole objective was the elimination of SSOs, is that right, Mr. Summers?

MR. SUMMERS: That's correct.

ALJ: Okay, all right. Go ahead, Mr. Zimmerman.

MR. ZIMMERMAN: Let, let me go to page twelve. Are, are we on page twelve? Can, can we go to the bottom? Yeah, okay. What can you tell us as to whether the County has yet certified that all sanitary sewer overflows are, have been eliminated?

MR. MUDD: Objection.

ALJ: No, that's overruled. Go ahead.

MR. SUMMERS: I have not seen that certification.

MR. ZIMMERMAN: Okay. Let's go to page fourteen. Okay. Can we go to the top of fourteen? Okay, so, and that's,

page fourteen on certification of elimination, that's what would be relevant to the decree that you're referring to?

MR. SUMMERS: Yeah, I, I --

MR. ZIMMERMAN: Okay.

MR. SUMMERS: -- have not, I have not --

MR. ZIMMERMAN: Yeah.

MR. SUMMERS: -- seen documents certified that, that doesn't mean they aren't there, I just haven't seen them.

MR. ZIMMERMAN: Okay. Yeah, okay. Let me go to page twenty-two. Let's go down a little further. Okay. What's your observation as to whether this section of the Consent Decree on rain flow and flow monitoring relates to a lot of your testimony about the reports on that 2006 study by the State? Does, does this relate to that or is that some of the other reports?

MR. SUMMERS: Well, the, the rainfall and flow monitoring in this Consent Decree has to do with evaluating, as it says right there, I&I and the capacity to collect and convey peak flows. So, this is focused, obviously, on a Consent Decree. It's not related to the TMDL, --

MR. ZIMMERMAN: Yeah, okay.

MR. SUMMERS: -- except that the TMDL refers back to the Consent Decree as a primary means of implementing or helping to meet water quality standards as required by the Clean Water Act.

MR. ZIMMERMAN: And what does that tell us as to whether it corroborates your observations on wet weather and dry flows?

MR. SUMMERS: Well, wet weather and dry weather flows are very important, are both important in addressing contamination from SSOs.

MR. ZIMMERMAN: And do you see that mentioned on the bottom of page twenty-two in that paragraph?

MR. SUMMERS: The effectiveness of measures implemented by Baltimore County pursuant to this Consent Decree to reduce I&I and increase system capacities.

MR. ZIMMERMAN: Do you see the language dry weather and wet weather SSOs?

MR. SUMMERS: Yes.

MR. ZIMMERMAN: Yeah, okay. Okay.

MR. SUMMERS: (inaudible) both are important.

MR. ZIMMERMAN: All right. Let's go to page thirty-one. Okay and what can you tell us, whether that's the context for these SRRR plans that, that Mr. McCann has been asking you about?

MR. SUMMERS: Yeah, this, this is the requirement to use that inspection and rain flow monitoring data to prepare the SRRR plan as described here in paragraph A, general requirements.

MR. ZIMMERMAN: Okay and we're not going to go

through every subsection. What about page thirty-four, Mr. McCann? Okay and then, what can you tell us as far as the background of why or, or function of performance assessments?

MR. SUMMERS: Well, the SRRR is just a plan. Once you put the provisions of that plan in place, you need to do a performance assessment to see if it is actually going to achieve what you intend with the plan. And so that's what the performance assessment is required for.

MR. ZIMMERMAN: And what can you tell us whether that connects up with some of your direct testimony on performance assessment?

MR. SUMMERS: Yeah, the performance assessment is a critical part of meeting the requirements of the Consent Decree and you need to demonstrate that it's actually working as planned.

MR. ZIMMERMAN: Page fifty-four, Mr. McCann. Okay. And while he's doing that, by the way, Mr. Summers, you and I have never met, have we, or talked?

MR. SUMMERS: Not that I recall.

MR. ZIMMERMAN: And you have no idea what I'm going to ask you, okay.

MR. SUMMERS: I do not.

MR. ZIMMERMAN: Okay, okay. Fifty-four begins the modeling section, does it not?

MR. SUMMERS: Section B, modeling.

MR. ZIMMERMAN: Yeah. One thing I'm, I would like to ask you about, there's been some reference to different storms, and I don't remember all the details, it was like six-year storms, ten-year storms, different hours, if I'm mistaken about those numbers, let me know.

But what I'm wondering is, given that we're now eighteen years into the situation, what's your thought process as to whether the modeling needs to be for twenty-year storms, thirty-year storms, fifty-year storms? Is, is the ten- and six-year kind of outdated in a way? Or not, not up to snuff?

MR. MUDD: Objection. I, I think this is beyond this witness' area of expertise and beyond the direct, the scope of direct.

ALJ: Right. I mean, so, so, and my understanding is from, from reading this is that the County got to pick the storm and so, the County picked ten-year six-hour storm and so, that's why it became relevant. And so, whether or not it's outdated, why do we need to know that, Mr. Zimmerman?

MR. ZIMMERMAN: Well, it may indicate that the problems are even greater than, than, than the assumptions that, that are being made by the reporting entities. It, it looks like there was an expectation that everything would be resolved within, I don't know, fifteen years or so.

So, that, and the 2025, for example, was mentioned as a population estimate, I think. It's pretty obvious none of

that is being met. So, there's some indication that, as much as there are unresolved problems under the Consent Decree, the problems are based on the modeling, are even greater than the modeling would suggest. That's, that's my point.

ALJ: Yeah, I --

MR. MUDD: That sounds like a pretty good argument for a memo.

ALJ: Yeah, right. Or, well, even that, it's more like a, it's a good discussion for, you know, perhaps somebody who's going to change, I mean, we're, we're, we're stuck with what the Consent Order says. And so, whether or not, you know, --

MR. ZIMMERMAN: All right.

ALJ: -- in hindsight we like it, or we don't, I mean, these are more kind of political, theoretical kind of questions as opposed to something that has to do with this particular case, because we're stuck with the ten year six, so, --

MR. ZIMMERMAN: All right.

ALJ: -- if you could just, I'll sustain the objection.

MR. ZIMMERMAN: Okay, all right. So, so just a few more, without going through everything. So, page sixty-five, let's go to sixty-five, page sixty-five. So, beginning, the reporting requirements, I think, can, can you tell us in your

experience, when you were Secretary of MDE, whether the reporting requirements were regularly, regularly done?

MR. MUDD: Objection.

MR. SUMMERS: Scroll down a little more.

MR. ZIMMERMAN: Yeah, let's scroll down and, and, and by the way, before I, before you (inaudible) that question, let's go to page sixty-seven.

ALJ: Okay, hold on. I think, Mr. Mudd, did you object or no?

MR. MUDD: I did, I did.

ALJ: Okay. I thought he was objecting but --

MR. ZIMMERMAN: Okay.

ALJ: -- but I wasn't sure what the question was yet.

MR. MUDD: I was objecting to the relevance of the question and the answer.

ALJ: I wasn't sure what the, what the question was, yeah, reporting, oh, when he was Secretary at MDE, was the, was reporting done, is that what it was, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, and let me back up and say on page sixty-seven we see quarterly reporting with, what does that have to do with your observation that there are many, many documents that were generated under the Decree?

MR. SUMMERS: Well, --

ALJ: Okay, well, that's a different question. So,--

MR. ZIMMERMAN: Okay, that's a different question,

yeah.

ALJ: Different question, we'll sustain the other objection. Okay, go ahead. Go ahead, sir.

MR. SUMMERS: There were lots and lots of reports. You see the quarterly reporting here and I can't tell you offhand whether every report was met. But in general, implementation of the provisions of the Consent Decree have been delayed.

MR. ZIMMERMAN: So, in any event, if this, this provision were satisfied, there would be quarterly reports for the last three, four years that would disclose a lot of information, is that correct?

MR. SUMMERS: Yes.

MR. ZIMMERMAN: Okay and then, let's go to page seventy. So, so, same thing for annual reporting, just to make a long story short? Require, there's a, what can you comment as far as the requirement for annual reporting?

MR. SUMMERS: Yeah, similarly to the quarterly, annual reports were submitted.

MR. ZIMMERMAN: Okay. I think I just have a couple more questions. Yeah. What do you know, if anything, about whether there's any, anything going on in terms of potential modification of the Consent Decree? Is there anything going on?

MR. SUMMERS: I, I don't know of anything.

MR. ZIMMERMAN: Okay. What can you tell us as to whether there's a rule of thumb as to the amount of annual additional sewage, a, a dwelling, a single family detached dwelling with a family would likely generate each year?

MR. MUDD: Objection. The gentleman is not, not, not an expert on sewer design. I think it's an in, in appropriate question to ask him.

MR. ZIMMERMAN: This is well within his regulatory experience, I would think.

ALJ: If he can, if he can answer. Overruled. Go ahead, sir.

MR. SUMMERS: Yeah, in, in fact, I think with more modern plumbing fixtures, the discharge from newer homes is less because there is water conservation measures that are required there, if that's what you're talking about individual homes.

MR. ZIMMERMAN: Okay. But what about the amount, any, any rule of thumb as to the amount of sewage each year?

MR. SUMMERS: Well, there, there are numbers in the standards, but I don't, there's detailed lists of different types of facilities and how much flow would be expected but I, I'm not --

MR. ZIMMERMAN: Okay.

MR. SUMMERS: -- familiar with the details.

MR. ZIMMERMAN: Okay, so. Okay. Okay. That's all I

have, Madam, Madam Judge.

ALJ: Mr. Wyatt, any questions?

MR. WYATT: Yes, I do, Your Honor.

ALJ: Okay.

MR. WYATT: Mr. Summers, I wanted to follow-up on a point or some of the discussion you had with Mr. McCann relating to the now disallowed Baltimore City Consent Decree report. I just want to ask you this. What is your understanding of Baltimore County's completion of a long-term capacity report as it relates to the Baltimore City Consent Decree?

MR. SUMMERS: Well, --

MR. WYATT: Is it complete or is it incomplete as of today's date? What is your understanding?

MR. SUMMERS: As far as I know, it's incomplete as of today's date. I've not seen it.

MR. WYATT: And so, is it incomplete in such a way that your understanding is Baltimore City cannot now complete its analysis of its own Consent Decree?

MR. SUMMERS: That's what they said.

MR. WYATT: And what importance, if any, does this have on the opinions that you're giving us today?

MR. SUMMERS: Well, I believe it's important because it demonstrates that the County has not sufficiently completed its performance assessment and projections of flow. Otherwise,

why wouldn't they provide that information to the City? And if they don't know what their flow is, it makes me concerned about their understanding of whether or not they've actually achieved the goal of the Consent Decree to eliminate SSOs.

MR. WYATT: But if I've understood anything today from your testimony is that, is that there's a complete inter-relationship between the Federal, then the State and then the County and municipality as far as it goes, as far as compliance with wastewater and water management systems, is that accurate?

MR. SUMMERS: Yes.

MR. WYATT: All right and how, based on what you're saying, if Baltimore County has not completed its analysis, that incompletion has a, I guess, a ripple effect or a collateral effect on, on the integrated systems of surrounding counties, is that accurate?

MR. SUMMERS: Well, in this case, the hydraulic connection is between the County and the City. So, wouldn't, it wouldn't impact any other jurisdiction. But it is important that we look at the entire sewer system in dealing with these SSO issues.

MR. WYATT: Thank you, Mr. Summers. I have no further questions.

ALJ: Mr. Sachse, do you have any questions? No questions. And you're muted, but you said no, I can tell. Okay, all right. Mr. Mudd, we're back to you.

MR. MUDD: Yes, I, I'd like to take a break, if we could, get some lunch and --

ALJ: Sure. Let's, why don't we come back at 2:30?

MR. MUDD: That's great. Thank you.

ALJ: All right, thank you.

MR. MCCANN: Thank you.

(PAUSE)

ALJ: Is everyone back? Waiting for Mr. McCann. Mr. McCann, are you there?

MR. MCCANN: Yeah, I am, sorry about that.

ALJ: Oh, yeah, no problem.

MR. MCCANN: Okay.

ALJ: Okay, we're back after lunch. I already went back on the record. Mr. Mudd, it's your cross?

MR. MUDD: Okay. Thank you, Judge. Is Mr. Summers there? Oh, there he is. Hello. How you doing?

MR. SUMMERS: Okay.

MR. MUDD: All right. So, before we get started, just want to make sure, have you talked to, did you talk to anybody about this case during the break?

MR. SUMMERS: No.

MR. MUDD: Okay. When did you get involved in this case?

MR. SUMMERS: I don't recall the first contact, but I had met with Mr. Tom McCord on some issues over the last couple

of years and he was asking me questions about this and introduced me to Michael, but I don't recall exactly when I actually got involved in the case. It's been fairly recently, last year or so.

MR. MUDD: Okay. So, maybe 2022 you, you'd say, at some point?

MR. SUMMERS: Yeah, I'd have to go back and look at e-mails and so forth to verify but, --

MR. MUDD: Okay.

MR. SUMMERS: -- yeah, most of, yeah, 2022 at some point.

MR. MUDD: Okay and, and it, it sounds like you were first in touch with Mr. Tom McCord, is that right?

MR. SUMMERS: Yes.

MR. MUDD: Okay and then you've spoken to Mr. McCord then about this case, correct?

MR. SUMMERS: Yes, I have.

MR. MUDD: Okay and you've spoken to Mr. McCann about it?

MR. SUMMERS: Yes.

MR. MUDD: And you've spoken to Mr. Grachek about it?

MR. SUMMERS: Yes.

MR. MUDD: How many times have you spoken to Mr. Grachek?

MR. SUMMERS: I don't know exactly how many. We've

had a number of virtual calls and we spoke about it during our, the day of our site visit.

MR. MUDD: Okay and who else, who else was there on the day of the site visit?

MR. SUMMERS: Mr. McCord and Michael McCann.

MR. MUDD: And who else has participated in the, in the virtual meetings that you've had in preparation for the hearing?

MR. SUMMERS: I think it's just the four of us.

MR. MUDD: Okay. Aside from those four, had you had any other conversations with anyone else in preparation for your testimony today?

MR. SUMMERS: No.

MR. MUDD: Okay. You mentioned, both when I examined you and then obviously when Mr. McCann was asking you questions, that you reviewed a, a whole bunch of documents relative to this case, correct?

MR. SUMMERS: Yes.

MR. MUDD: How did you obtain all of those documents?

MR. SUMMERS: Either Mr. McCann or Mr. McCord sent them to me.

MR. MUDD: Okay.

MR. SUMMERS: And I also did some of my own online research to see, you know, exactly what the County was publishing about this.

MR. MUDD: Okay and what, what research did you do?

MR. SUMMERS: I just searched the web for documents related to Baltimore County's work in the sewer area. I looked at the County webpages for DPW and DEPS.

MR. MUDD: Okay. Did you use Google search?

MR. SUMMERS: Yeah, I believe so.

MR. MUDD: Okay and what, what types of things were you searching for when you performed that search?

MR. SUMMERS: Things related to the Consent Decree and sewage infrastructure studies that the County had. The Consent Decree documents, which we've already mentioned, that are voluminous. Looked at, to see if there was anything about updates on MDE's webpage, those kinds of things.

MR. MUDD: Okay and, if you recall, did you find anything in your research that you did not already receive from Mr. McCann or Mr. McCord or Mr. Grachek?

MR. SUMMERS: No, I believe everything I found, ultimately, I also got from them.

MR. MUDD: Okay and sort of similar question but asked in a different way, are there, are there things that they provided to you that you were not able to find in your own research?

MR. SUMMERS: Well, I got things from them which I did not find in any other source. But I didn't make an effort to search them out after they sent them to me.

MR. MUDD: Got it. So, in other words, there are things that they provided to you, and you just relied upon what they provided to you?

MR. SUMMERS: That's correct.

MR. MUDD: Okay. Can you give some examples of what those, that information might be?

MR. SUMMERS: Well, the first copies of the RJN report and the, I think I, I actually found the Hazen Sawyer brochures, but they sent me the information on the Ramble report. And it, a number of other exhibits that I saw in the testimony, or the, the review with, with Randy Grachek that, that Michael had that shared with the Court.

I would have to go back and look at my files to see if there's anything in particular, but for the most part, I think it either came from Michael, Tom or the web, the Baltimore County web.

MR. MUDD: Okay. During, during my initial questioning, we talked about the various documents that you reviewed, the SRRR, sorry, the SRR report and the RJN report and the Hazen documents and the Ramble report. Do you remember the discussion of those?

MR. SUMMERS: Yes.

MR. MUDD: And I think you had indicated that you reviewed each of those numerous times and you felt pretty familiar with those, is that right?

MR. SUMMERS: Yes.

MR. MUDD: And I think that you volunteered that with regard to the Consent Decree, you were actually less familiar with the Consent Decree, is that correct?

MR. SUMMERS: I don't recall saying that. If I said something like that, I would need to be refreshed on the context, because I have reviewed the Consent Decree in a similar way as reviewing those other documents.

MR. MUDD: Okay and, and then I think in Mr. Zimmerman's questioning of you, you indicated that, that some of the reports required under that Consent Decree, like the quarterly reports and the annual reports, you have not reviewed all those, correct?

MR. SUMMERS: No, I have not gone through every quarterly and annual report. In fact, the County only has the more recent ones up on the webpage.

MR. MUDD: Okay.

MR. SUMMERS: (inaudible) gone back prior to that.

MR. MUDD: Okay and do you know which, which ones are on the webpage, the County's webpage?

MR. SUMMERS: I think it goes back to 2018 or '16, I'm not sure.

MR. MUDD: Okay and have you --

MR. SUMMERS: It doesn't go, it doesn't go all the way back. I could, I could look.

MR. MUDD: That's okay. I just (inaudible), I didn't know. And have you reviewed the ones that are on the webpage?

MR. SUMMERS: Not everyone. I've reviewed the more recent ones, but just, you know, read them to see if there was anything of particular relevance to what we're working on.

MR. MUDD: Okay. You, I think Mr. McCann asked you a number of questions about the TMDL report.

MR. SUMMERS: Yeah.

MR. MUDD: That, and that report is in 2006, correct?

MR. SUMMERS: That's correct.

MR. MUDD: Okay and you talked about how there was information in that report relative to E.coli testing, correct?

MR. SUMMERS: Yes.

MR. MUDD: And you also mentioned, I think during that testimony, that Blue Water Baltimore also has a bacteria monitoring program that I think, was it from 2013 to present day? Did I get that right?

MR. SUMMERS: I don't recall exactly. I think it was 2014 is what I said. But they have an online report, and you can click on a site, and it will give you a plot of their date.

MR. MUDD: Okay and I think you described, I wrote it down, that, that a lot of this has to do with rain fall events, but not all rain fall driven. There could be situations in particular, a sewer spill, that can cause spikes, I think is one of the things you testified about, do you recall that, --

MR. SUMMERS: Yeah.

MR. MUDD: Okay.

MR. SUMMERS: And I was speaking in general terms about bacteria spikes. I was not, I have not identified a particular incident where those two things are related in the Jones Falls.

MR. MUDD: Okay. Do you know whether Blue Water Baltimore monitors for human E.coli versus other types of E.coli, like the TMDL did?

MR. SUMMERS: No, Blue Water Baltimore has not done bacteria source tracking. E.coli is a general indicator of fecal bacteria. And so, it can be contributed by any warm-blooded animal.

MR. MUDD: Okay. I'm going to show you, bear with me. Do you see Protestant's Exhibit 96 on the board here?

MR. SUMMERS: Yes.

MR. MUDD: Okay --

MR. SUMMERS: Which, which table is that? Can I see the --

MR. MUDD: Sure, sure. It's table 2.4.4.

MR. SUMMERS: Averaging annual, okay.

MR. MUDD: Yep, and I'm going to ask you a couple of general questions first and then we'll talk about this table. So, the report, you indicated, and it says here, is dated September 19th, 2006, is that right?

MR. SUMMERS: Yes.

MR. MUDD: Do you know, and, and the report, do you agree with me, it includes a, a host of, of data, a lot of data relative to sewage flows and E.coli readings and all sorts of things, you, you agree with that?

MR. SUMMERS: Yes, it, it has a fair amount of information. I wouldn't say it's, you know, totally comprehensive, but it is pretty, there's a fair amount of information there, yes.

MR. MUDD: Okay. Do you know where, when the timing of when all of this data was collected that's reported in 2006?

MR. SUMMERS: I, I don't recall offhand the timing of that data, but I would imagine it was several years before the publication of the report.

MR. MUDD: Okay and then, do you recall the, when the Consent Decree between Baltimore County and MDE and the EPA was entered into?

MR. SUMMERS: I believe that was signed in 2005.

MR. MUDD: Okay. So, this TMDL report then was, was sort of at the beginning stages of the County's implementation of the Consent Decree, do you agree with me on that?

MR. SUMMERS: Yes.

MR. MUDD: Okay. Now, you indicated that the Consent Decree has not been updated since 2006, do you agree, I'm sorry, not the Consent Decree, the TMDL report, there's been no

update that you're aware of since 2006, correct?

MR. SUMMERS: That's correct.

MR. MUDD: Okay and I think that you indicated, you, you mentioned the phrase capacity issues as being the reason why that has not occurred, is that right?

MR. SUMMERS: Yeah, I'm referring to staffing capacity.

MR. MUDD: Okay and what, what do you mean by that?

MR. SUMMERS: So, the Department, it has been well publicized in the last election campaign, is seriously short staffed. They have a lot of vacancies. They haven't been able to fill them. The TMDL program, not unlike the enforcement program, which was really highlighted in the shortage of staff, is similarly short staffed. EPA is constantly adding new and updating standards.

Every two years, the Department is required to review all of the available monitoring data and identify impairments and prioritize and develop TMDLs for each of those impairments. So, what I was referring to, is it a fact that the unit at MDE that's responsible for TMDL development doesn't have enough staff to update all of the TMDLs on a very frequent basis.

And some of those, like this one, have basically just been left alone while the staff is focused on other higher priority issues for the Department.

MR. MUDD: And when you give that opinion, is that

based on, on your experience when you were with the MDE as late as 2015?

MR. SUMMERS: Yes.

MR. MUDD: So, so you don't know that to be the case for any years between 2016 to today?

MR. SUMMERS: Well, I do know that it was an issue up until the time I left and I have kept in touch with my colleagues at the Department. And I know some of the struggles they have been facing. And I have read reports and heard the testimony about shortages in the compliance program for staffing. And also, in the Safe Drinking Water Act programs.

So, I don't have specific details on the staffing in the TMDL unit but given my experience with the Department and my knowledge of what's been reported since then, I don't think the situation has improved.

MR. MUDD: Okay. Are you aware of, that, whether or not Baltimore County does its own TMDL monitoring?

MR. SUMMERS: I know that Baltimore County does its own water quality monitoring and that they submit data to the Department of the Environment for the bi-annual water quality monitoring review. So, they collect data, they report it to MDE, but I do not believe the County actually does it for TMDL purposes, but they certainly do monitor and report to MDE.

MR. MUDD: Do, do other governments do that as well, do you know? Jurisdictions?

MR. SUMMERS: Yeah, under the Clean Water Act, MDE is required to collect data from anyone who has data that meets their standards. And so, that would include most counties, Baltimore City and also Blue Water Baltimore, as one example of a citizen monitoring program that is accepted by MDE.

MR. MUDD: And, and does MDE rely upon that data, or do they conduct their own or, or both?

MR. SUMMERS: Both. Under the Clean Water Act, MDE is required to consider all data that meets basic EPA standards, which the above would.

MR. MUDD: Okay and would there ever be a situation where MDE would exclusively rely on government data or, or, as you indicated, Blue Water Baltimore data, as opposed to conducting their own research?

MR. SUMMERS: No, not usually. Usually, MDE has at least some of its own monitoring data and I would include in that category, Department of Natural Resources monitoring data, because MDE and DNR work closely together on that. So, between MDE and DNR, they have some data in most places, and they augment that with County, City and NGO data as appropriate.

MR. MUDD: Okay. I, I've had up here on the screen for a little while this table 2.4.1, do you remember this table (inaudible) --

MR. SUMMERS: I believe that was in the TMDL report.

MR. MUDD: Okay and I'm going to, I just want to ask

you a few questions about this. So, first of all, as, as with everything else in this report, the data that supports this table came from 2006, and as you indicated, potentially even several years before that?

MR. SUMMERS: Yeah, I don't know, I don't recall, it may be in the report, but I don't recall the exact date that this data is from.

MR. MUDD: Okay and just so I understand, there are five, I'm sorry, yeah, five rows in this report that identify subwatersheds of the Jones Falls watershed, correct?

MR. SUMMERS: Yes.

MR. MUDD: So, it, is it, is it your understanding that the total number of households in this households per subwatershed column, if you added up all of those numbers, that would equal the total number of households within the Jones Falls watershed, is that right?

MR. SUMMERS: Yes.

MR. MUDD: Okay and, and then again, this third column shows septic systems and the, these were added up, this would add, this would equate to the total number of septic systems within the, the watershed, correct?

MR. SUMMERS: That's, that's correct.

MR. MUDD: Okay and you gave numbers, I think you ran these numbers and said that eighty-four percent of the homes were on sewer and sixteen percent were on septic, correct?

MR. SUMMERS: Yeah, but I just used the stations upstream of the dam at Lake Roland. I didn't do the math for the whole watershed, but that could certainly be done.

MR. MUDD: So, which --

MR. SUMMERS: (inaudible) for septic systems and sewage above Lake Roland, including Lake Roland.

MR. MUDD: Okay and, and how did, were those entire subsewersheds that you used?

MR. SUMMERS: Yeah, if you scroll back up to the map above --

MR. MUDD: This map?

MR. SUMMERS: No, the, the one that shows the monitoring sites.

MR. MUDD: Okay.

MR. SUMMERS: Okay. You see JON0082, that's the mouth of the reservoir, the dam. There are two sites above that. And those three watersheds delineated there make up the drainage to Lake Roland. I just looked at those. I did not include JON0039 or SRU0005, but you could do the same math for that.

MR. MUDD: Okay and, and to be clear though, I guess, this line here that I'm tracing, that's the City/County line, correct?

MR. SUMMERS: That's correct.

MR. MUDD: Okay. So, then back to the chart, which

I'll go in a second, but basically, you took the totals for these three subwatersheds and, and let me, let me, is, is that right? I'll ask you that question first.

MR. SUMMERS: Yeah, that's correct. I just used those three.

MR. MUDD: Okay and then, I guess, there's a small portion of JON0039 that extends into Baltimore County, correct?

MR. SUMMERS: Yes.

MR. MUDD: But, but generally speaking, these three watersheds that you mentioned, JON0082, JON0184 and UQQ0005, that represents the entirety of the, the Jones Falls watershed within Baltimore County, is that correct?

MR. SUMMERS: Well, except for that piece of JON0039 you see sticking up there.

MR. MUDD: Right, okay. And what is this number? What's the 01589440?

MR. SUMMERS: That's a USGS gauging station where they measure stream flow.

MR. MUDD: Okay. That doesn't have anything to do with this chart that we were looking at a second ago, chart 2.41?

MR. SUMMERS: No, it's not, that station is not on the chart. They don't do bacteria there. But that station is relevant to any estimation of stream flow.

MR. MUDD: Okay. So, I'm hoping this, I'm going to,

I'm actually, I've already forgotten these numbers. I'm going to go back up and look again. So, we have 184, 005 and 082. And those are 005, 184 and 082. So, it's, it's --

MR. SUMMERS: Yeah.

MR. MUDD: -- it's the fourth row, the third row and the first row, correct?

MR. SUMMERS: Yeah, I just added those up and did the math.

MR. MUDD: Okay and it looks like really the second row there's no septic, so that's within the, that's probably within Baltimore City, right?

MR. SUMMERS: Yeah.

MR. MUDD: Okay and then, JON0039, the hundred and thirty-four there might be some in the County, some in the City, potentially?

MR. SUMMERS: Yeah.

MR. MUDD: Okay and I know, I think you answered this before, but, but oh, never mind, I'll, strike that. So, I think you testified during, during direct, that you said it would be helpful to have current information on the distribution rather than relying on information from 2006 at the latest, do you agree with that?

MR. SUMMERS: Sure, new data is always more interesting for this purpose.

MR. MUDD: Okay and so, you would agree with me that

if you were to rerun these numbers today, that it may not be eighty-four percent and sixteen percent, correct?

MR. SUMMERS: Right, and I think I said that in testimony. I, I would not expect it to, the percentages to change a whole lot, but, you know, just being generally familiar with growth and development in the watershed, it's pretty much been growing everywhere. So, I would not be surprised if the percentages, eighty-four and sixteen, are still pretty close. Obviously, the number of households would be different.

MR. MUDD: Right, and you, I, but the point is, you can't say for sure, correct? Because you, you just don't have --

MR. SUMMERS: I, I don't know, that's correct.

MR. MUDD: Okay and then, so you have no idea how many new homes may have been constructed in the seventeen years since this report came out, or sixteen plus years?

MR. SUMMERS: Well, I certainly have an idea, I live there. I've seen a lot of growth in terms of households and particularly apartments in the Towson area.

MR. MUDD: Okay. But you don't know how many would, new ones on septic, in particular. You haven't counted that?

MR. SUMMERS: No, I, I don't know, but it's something that I'm sure the County could provide.

MR. MUDD: Okay, all right. Let's go back to table

2.4.4. Okay, again, you recognize this table?

MR. SUMMERS: Yep.

MR. MUDD: And I think that you testified that, I think you used the word, let me see, I think you had, well, I guess the numbers speak for themselves. But your opinion was that this, that this report shows that the percentage of human E.coli I think you said was the dominant percentage, or the dominant number in this chart, is that correct?

MR. SUMMERS: Correct.

MR. MUDD: Okay.

MR. SUMMERS: Yes, that's true.

MR. MUDD: Okay and, and again, we agree that this chart and the information in it was, was obtained at, at, at the latest in 2006, but again, you think it probably was information from years before, correct?

MR. SUMMERS: Yes.

MR. MUDD: All right and we agree that the Consent Decree was established in 2005, correct?

MR. SUMMERS: That's correct.

MR. MUDD: And that was the very beginning of, at least the County and MDE and the EPA starting to recognize the problems within this sewer shed or, or really, within Baltimore County, and then requiring actions to be taken to eliminate SSOs, sewerage overflows, correct?

MR. SUMMERS: Yeah, I think the TMDL report was

something that came after that problem was recognized as an issue. EPA, I don't know which year EPA started their, their enforcement initiative on SSOs, but I know, for example, that the State took its own action on SSOs in Western Maryland before anything happened with Baltimore County. So, the SSO issue is something that predates all this nationally.

MR. MUDD: Got it. And, and, and we agree that the Consent Decree, the stated purpose of the Consent Decree, is to eliminate SSOs, correct?

MR. SUMMERS: Correct.

MR. MUDD: And you agree with me that the County has at least started efforts to eliminate SSOs, correct?

MR. SUMMERS: Yes.

MR. MUDD: And would you agree with me, based on anything that you've read, that they have, in fact, eliminated and reduced SSOs within this Jones Falls sewer shed?

MR. SUMMERS: I think that it, it's hard to say whether they've reduced it or not. I have not reviewed a comprehensive evaluation, but I believe there were quite a few SSOs as recently as 2018. They were documented in the, I believe, it was the RJN report. So, they certainly have not been eliminated. They may have been reduced. I hope they have been reduced but I don't have specific analysis showing that. The City has reported a reduction in their SSOs. And I believe parts of the RJN report have said that there has been some

reduction.

MR. MUDD: Okay. So, so we agree that the RJN report does, does report a reduction in SSOs?

MR. SUMMERS: Yeah, I think for the couple of years, I'd, I'd have to go back and look again.

MR. MUDD: Okay. So, let, let's assume for a second, that, sorry, excuse me for one second. Let's assume for a second that the, the County's efforts in, in, in performing the work under the Consent Decree has been very successful. Again, this is an assumption. But very successful in eliminating SSOs within the Jones Falls sewer shed. Wouldn't, would you agree with me that that would have a material impact on the reporting that would occur on this chart if it were rerun today?

MR. SUMMERS: Well, MDE, in its conclusions in this report, said that that Consent Decree implementation was its, I forget the word that they used, if you scroll down, but basically, was the primary method of attacking this bacterial contamination problem. So, if, as you say, hypothetically, the County has been very successful, I would hope to see improvement in this data, for sure.

MR. MUDD: Okay and in particular, you would hope to see improvement in the, the amount of human E.coli, correct?

MR. SUMMERS: Yes, that, that would make sense.

MR. MUDD: Okay. So, then you, you cannot look at this report today from 2006 and assume that this level of

E.coli exists in this sewer shed, correct?

MR. SUMMERS: Not today.

MR. MUDD: Okay. The, regarding septic systems in, in the Jones Falls sewer shed, do you know how many, I'm sorry, do you know, did you do any investigation of the, of the condition of the septic systems?

MR. SUMMERS: No, nothing with respect to this case. I know that the County Environmental Health Directors do inspections of septic systems, and I don't know what their findings are in this area. When I was at the Department, in general, the majority of septic systems were functioning as designed. That is, the bacteria was being captured and treated by the soil.

So, I don't have a number, but I would expect the, you know, failure rate of septic systems to be not that high in the upper part of this basin. Septic systems typically fail in lower lying land. In areas like flood plains and areas where water collects.

MR. MUDD: Okay and do you agree that, that when you have a failed septic system, or leaky septic system, that could leak affluent and, and have, and cause water quality issues if, if near by a water body?

MR. SUMMERS: Yes.

MR. MUDD: Okay and when you were in, at MDE, and you were in the O'Malley administration, that administration and

your Department were involved in a number of legislative efforts regarding septic systems in, throughout the State of Maryland, correct?

MR. SUMMERS: That's correct.

MR. MUDD: And were you, you were in the Department, were you the Director when, when the State of Maryland introduced the legislation that required, or instituted growth tiers throughout the State of Maryland?

MR. SUMMERS: Yeah, I was, that was 2012, and I was Secretary in the Environment then.

MR. MUDD: Okay and were you the Secretary of the Environment when the legislature introduced, or I should say the administration introduced legislation in the legislature to require more stringent designs for new septic systems throughout the State?

MR. SUMMERS: Well, that, that came about as part of the Bay Restoration funding (inaudible) in 2004, and that required everyone who generated wastewater, including septic system owners, to pay into the fund and then septic system owners could apply for grants to pay for what we call best available technology.

And that best available technology was certified by the Department and, over the years, quite a few different so-called BAT systems have been approved and have been implemented around the state, including in Baltimore County.

MR. MUDD: When you say BAT, you're saying B-A-T, correct?

MR. SUMMERS: Best available technology, right?

MR. MUDD: Right. So, would you agree with me that some in the development community and home builders were concerned about the BAT systems, the BAT systems, because they were more expensive?

MR. SUMMERS: Yes, absolutely.

MR. MUDD: Okay and would you also agree with me that, that generally speaking, the concern that your Department and the administration had at that time was the impact of sewer systems on water, water bodies and water sheds?

MR. SUMMERS: Septic system impacts specifically on nitrogen levels in the ground water, because septic systems, other than best available technology, do not remove nitrogen. So, a typical septic system, without BAT, is producing something like thirty to forty milligrams per liter of nitrogen. Compared to an advanced wastewater treatment plant, which if being properly operated, can get three milligrams per liter.

MR. MUDD: Okay and --

MR. SUMMERS: So, it's quite significant reduction. Best available technology can't do what a sewage treatment plant does, but it can cut the nitrogen load in half and we're seeing growth in the number of septic systems across the State

and growth in nitrogen pollution of groundwater as a result.

MR. MUDD: Would, would you agree with me that, in all things considered, if, if available, it would be better to discharge affluent into a sanitary sewer system rather than into a septic system?

MR. SUMMERS: Well, there's a lot of debate about that because of the fact that our sewage collection systems, in many cases, are quite old and need to be rehabilitated before we can add additional sewage to them, hence the Consent Decrees that we've been talking about. A well operated septic system can be a very effective way of treating sewage.

But when you get into an area of very high concentration of septic systems, it makes sense to collect, to connect those to the sewage system, provided the sewage system has adequate capacity and the sewage treatment plant is actually working at (inaudible) nutrient removal levels.

MR. MUDD: Okay. I want to show you a news article from 2012. This might be a little bit of a memory test for you, but, this is an article from The Baltimore Sun. And it, and it, I'll actually let you read through it, if you'd like, and maybe you, maybe you'll remember it.

MR. MCCANN: Can you blow that up, Chris?

MR. MUDD: I'm sorry? Blow it up?

MR. MCCANN: Yeah, it's really tiny.

MR. MUDD: Sure.

MR. MCCANN: Thank you. I guess it's tough to with.

MR. SUMMERS: Okay. That must be something else.

MR. MUDD: Yeah, well, the picture is, but the text--

MR. SUMMERS: Oh, okay, it is. There's Ron Bowen from Anne Arundel County. Okay.

MR. MUDD: All right. I didn't mean to do that, sorry. Let me undo that. Okay. I'm going to go down to the next page and I, I, I'll, I'll, what I've, what I've highlighted here that I'd like you to read that, see if that rings a bell to you.

MR. SUMMERS: Did you want me to read it out loud or --

MR. MUDD: No, no, no, just, just want, I just want, what I really want to do is make sure that, there's a reference to Robert Summers, the Maryland Secretary of the Environment with a quote. And I wanted to just see if that, if that is, in fact, you.

MR. SUMMERS: Yes.

MR. MUDD: Okay and do you generally recall this article, the, the, the information --

MR. SUMMERS: I generally recall all the controversy around this. I can't say that I recall this specific and it's also a few quotes out of context. But bottom line is, if we want better water quality, we're going to have to treat our waste to a higher level.

MR. MUDD: Okay. So, I, I, Judge Murphy, I'm going to offer this as Exhibit, and it's a little bit out of order now, but we had started with a number of other exhibits, but this is Exhibit 64.

ALJ: Any objection, Mr. McCann?

MR. MCCANN: I don't think so. I haven't read the whole thing. But if, if he's quoted in it, then I don't have a problem with it.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: The only thing I would say, let's see the whole article. Are, are we, is he offering the whole article or just a couple pages?

MR. MUDD: I am. I mean, it, it ends here. So, it's --

MR. ZIMMERMAN: I mean, I mean, is the art, do we have the beginning of the article as well?

MR. MUDD: Yes, that's where I started.

MR. ZIMMERMAN: Okay, okay. Yeah, I have no objection, yeah.

MR. MUDD: Okay.

ALJ: Okay. So, that's number --

MR. ZIMMERMAN: What's, what's the number, I'm sorry?

MR. MUDD: Sixty-four.

ALJ: Thank you.

MR. MUDD: Great, thank you. Okay. You, you

testified, Mr. McCann was asking you some questions about the County, County's water monitoring that, that, there, there was an exhibit regarding the County's water monitoring results that Mr. Grachek entered into evidence, which is Protestant's Exhibit 75. Do you recall that?

MR. SUMMERS: In general, yes.

MR. MUDD: Okay. I, I can pull it up for you. I'm not trying to trick you, I just, he, he asked whether you were familiar with it, and I guess I'm going to pull this up and show it to you, just to make sure that this is what you are familiar with. So, this was Protestant's Exhibit 75.

MR. SUMMERS: Okay.

MR. MUDD: Do you recall seeing these numbers?

MR. SUMMERS: Yes.

MR. MUDD: Okay and you testified that those numbers were highly variable with spikes, do you recall that?

MR. SUMMERS: Yes.

MR. MUDD: Okay and you also testified that that, that that comes from livestock and sewage spills, was your testimony.

MR. SUMMERS: Sewage spills, I think probably the complete statement was a combination of domestic animals, livestock, wildlife and sewage spills, those, those headings in the tables.

MR. MUDD: Okay. Do, do you agree with me that

Baltimore County does not, does not conduct E.coli sampling based on the source? In other words, unlike the TMDL report, the County does not break it down by human versus animal?

MR. SUMMERS: Yeah, I don't know whether the County has done any of their own bacterial source tracking. But I haven't seen it if they have.

MR. MUDD: Okay. So, when you say that it's based on a combination of livestock, domestic animals and sewage spills, you really don't have any information to back that up, correct?

MR. SUMMERS: I have the, the bacterial source tracking information that's been done in the Jones Falls and for another, a number of other TMDLs around the State. And those are always the sources that vary in percentage, but those are the big contributors, that's all I was saying.

MR. MUDD: Right, so when, so when you're referring to the bacteria tracking in the, that MDE has performed, you're talking about the tracing that they performed in 2006?

MR. SUMMERS: Yeah, the, that, that TMDL tracing, and I'm also aware of other bacterial source tracing that's been done in other areas around the State, which has identified those as the main areas that were sources of bacteria.

MR. MUDD: So, you're, you're relying on other information in other jurisdictions with completely different circumstances to, to justify your statement that this is coming from sewage overflows?

MR. ZIMMERMAN: Objection.

MR. SUMMERS: No, it --

MR. ZIMMERMAN: The question, the question assumes things not in evidence.

ALJ: Overruled. Go ahead, sir.

MR. SUMMERS: All, all I'm saying is, the particular testimony of mine that you were citing, I was just generally indicating the sources of that bacterial pollution. I was not attributing it to Baltimore County. The only in, information I have with respect to bacterial source tracking in the County, in the Jones Falls specifically, is that TMDL. All I'm saying is that is not unlike similar bacterial source tracking results all over the State.

MR. MUDD: Okay. The RJN report, you testified regarding the RJN report, and you, you indicated that it's apparent that the report clearly shows that there's a section of sewer shed downstream from the proposed development that's showing modeled overflows. Do you have any idea whether the models contained in the RJN report have been calibrated by Baltimore County?

MR. SUMMERS: They were calibrated by RJN at the time that report was developed and, I guess, published in, what was it, 2021, I think. I don't know whether the County has changed any of that, other than to say that the Hazen and Sawyer pamphlet indicate that they are in the process of

recalibrating.

MR. MUDD: Okay. Do you have any idea whether the County has verified the model in the RJN report?

MR. SUMMERS: I, I do not, and I don't believe MDE has reviewed and approved it either.

MR. MUDD: Okay. In, in looking at what is recommended in the SRR assessment, you noted that there was a section of sewer pipe in, in BC-22, that's meter, meter basin twenty-two, (inaudible) upgraded to accommodate the flows through that basin?

MR. SUMMERS: Yes.

MR. MUDD: And then you, you indicated and I, I, I think I quoted it that, that if you look at the performance assessment, it shows that based upon monitoring and modeling, that there are still problems in that section. You agree with me that this is all based on modeling, correct? And not monitoring?

MR. SUMMERS: Well, the --

MR. MCCANN: Objection. Hold on, objection. I'm sure Mr. Summers is capable of answering it but what is based on? You said this is all. I, I think the question is unclear.

MR. MUDD: The problems, the problems that he identified, I'll, I'll, I'll ask the question again. You, your, your testimony was that there were problems that were shown, that were based on monitoring and modeling. And my

question is, do you, do you wish to correct that? Do you believe the RJN report ref, relies on modeling, on modeling, just modeling or does it rely on modeling and monitoring?

MR. SUMMERS: I believe the RJN report says that it used updated monitoring information and updated the model with it. I don't know specifically where that monitoring data plugged in to the model. But the report says that they looked at monitoring information that had been collected and developed an updated version of the model.

MR. MUDD: Okay and do you know whether any County monitoring has shown actual sewerage capacity or overflow issues in that meter basin?

MR. SUMMERS: I have not seen any of that data if it exists.

MR. MUDD: Okay. Just want to switch, I'm almost getting there. I want to switch, switch to the Hazen newsletter, which is Protestant's Exhibit 85. Here we go. I'll share this. Can you see that?

MR. SUMMERS: Now I can, yes.

MR. MUDD: Okay and I can, I can zoom in a little bit. I know Mr. McCann did as well. By the way, this is one of the figures, I, I suppose in your, my original questioning of you that you said was difficult to see, is that right?

MR. SUMMERS: Yeah, if you zoom into that, I couldn't, I couldn't read the actual percentages --

MR. MUDD: Okay. So, so, --

MR. SUMMERS: -- in the legend.

MR. MUDD: So, are you, are you then assuming that red indicates a problem here?

MR. SUMMERS: I'm not assuming, that's what the report says if you, excuse me, the brochure says if you go over to the left and down a little bit, it tells you that the red areas are high I&I.

MR. MUDD: Okay, so that's in this area here?

MR. SUMMERS: The red areas respond more dramatically to rainfall. That's what I base that on.

MR. MUDD: Okay. Then, so what is your understanding then of specifically what the red areas show? Sorry, I --

MR. SUMMERS: Well, they, I mean, all I have is that paragraph that we just read to go on. But I believe that it is based on that areas with high rainfall dependent inflow and infiltration during the winter, which would be the worst time of year for inflow and infiltration because plants are not growing and absorbing and transpiring the moisture.

MR. MUDD: Okay. So, you're not testifying then that this demonstrates any capacity issue within the red areas that are highlighted on this report?

MR. SUMMERS: No, I'm not. However, they are looking at high rainfall dependent inflow and infiltration. We know that that is an issue that can cause and contribute to

overflows. We also know based on the RJN report, that the model shows the sections of sewer system downstream of that area, according to the model, would be susceptible to overflows.

So, I'm saying that this Hazen and Sawyer finding makes me additionally concerned about overflows in the lower, in the portion of the Jones Falls sewer system downstream of the proposed development.

MR. MUDD: Have you done any evaluation of any other reports that were prepared prior to this Hazen newsletter to know whether this area has previously been highlighted for rain dependent I&I concerns?

MR. SUMMERS: I have looked at the, the previously mentioned RRR report and the RJN report. I don't know of other reports that have looked at this. But if you go to the RRR report, there are a series of maps showing areas of concern in the watershed, or in the sewer shed, as you go to increasingly larger storm events.

And you see in those maps overflow and capacity issues showing up in the sewer shed from the proposed development down, all the way to the Lake Roland.

And that makes sense with respect to this RDII area map that we're looking at right now and it also, apparently the County has some concern about it because they seem to be retaining Ramble to look at these sewer lines from the Jones

Falls down underneath the, the Lake Roland. So, just, you know, based on, I would say sketchy available information, it gives me concern.

MR. MUDD: Okay. Do you know what data was used to determine this figure three map?

MR. SUMMERS: No. The County has not released anything other than these brochures. So, all I have is the information you see here.

MR. MUDD: Okay. So, so, for example, you don't know whether, do you know whether this is modeled, this figure?

MR. SUMMERS: I think if you read the description that we were just looking at, it, it mentions monitoring.

MR. MUDD: Okay. This, this description here you're referring to?

MR. SUMMERS: Yeah, completed a flow, level and rain flow monitoring data analysis to assess current high rainfall dependent inflow and infiltration.

MR. MUDD: Okay. Do you know what that means, what they would have used to do that?

MR. SUMMERS: Well, I presume the flow refers to the flow monitoring within the sewer system. The level has to do with the depth of the water in the pipes and the rainfall has to do, obviously, with rainfall events.

MR. MUDD: But that, again, --

MR. SUMMERS: Looking at, at high rainfall events and

seeing an increase in the flow and level in the pipes.

MR. MUDD: Okay. But you, you, again, you don't know whether those are observed flows, levels of rainfall or modeled?

MR. SUMMERS: All I know is what that sentence says and --

MR. MUDD: Got it.

MR. SUMMERS: -- it says flow, level and rainfall monitoring. I don't know exactly what it is that has not been made available.

MR. MUDD: Okay, great. Just a couple more. Protestant's Exhibits 100 and 101, which were the 2016 wastewater design guidelines and then the recommended standards, the ten-state document, do you recall those documents?

MR. SUMMERS: Yeah, I thought they were, or they weren't admitted but yes, I recall them.

MR. MUDD: Do you, do you know where you obtained those documents from?

MR. SUMMERS: Yeah, the MDE document came from the MDE webpage, and I think the link to the ten state standards was not accurate in the MDE webpage, so I searched for that and found it online.

MR. MUDD: Okay. How did you do that search?

MR. SUMMERS: Well, it is a very much cited document,

so I just put the title in and was able to get it.

MR. MUDD: Okay. Did you discuss those documents with Mr. Grachek?

MR. SUMMERS: We discussed the capacity design issues with Mr. Grachek and, and he testified about it. I was not thinking I, I would be superseding anything Mr. Grachek said. I was just focusing on that as an indication that in order to, to properly evaluate pipe capacities, you need both dry weather and wet weather flow.

MR. MUDD: Did you, do you know whether the documents that you obtained are the most recent version of, of the design guidelines that MDE (inaudible) --

MR. SUMMERS: (inaudible) the most recent version on the MDE webpage, I have not checked with MDE on that. But we can certainly do that.

MR. MUDD: Okay. You, you mentioned that when EPA, I'm moving now onto some questions that Mr. Zimmerman had asked you. When the EPA brought this lawsuit and, and ultimately entered into the Consent Decree with Baltimore County, again, you were, you were at the MDE at that point, but you were not the Director, or sorry, you were not the Secretary, correct?

MR. SUMMERS: Right.

MR. MUDD: But I, but I believe that you said that it was similar to many other actions that the EPA brought throughout the Country, is that right?

MR. SUMMERS: Yes, at the time we were all very focused on this because it was an EPA enforcement priority, and we were following what EPA and Department of Justice was doing in other states.

MR. MUDD: Do you know how many other Consent Decrees were going on around the country?

MR. SUMMERS: No, I, I don't know the total number. It is many, I've already mentioned, WSSC, I know Philadelphia, Chicago, Milwaukee, most large, older cities were the focus of these efforts by EPA.

MR. MUDD: How many Consent Decrees were entered into during your time at MDE? Not, not when you were in charge, but between 1983 and 2015, if you know, how many Consent Decrees did, did, did MDE enter into with Maryland jurisdictions?

MR. SUMMERS: Well, I, I don't know for sure the total numbers. But I can tell you the ones I recall, and that was Frostburg, Lavale, Cumberland area in Western Maryland. I already mentioned Hagerstown. WSSC, Baltimore City, Baltimore County, Salisbury and I mentioned Centerville. Now, some of these were handled using Consent Orders, the Department's administrative authority, others went civil, I'm not distinguishing between those. But these are all areas where we had combined sewer overflows or sanitary sewer overflows occurring and enforcement was taken. I don't think I mentioned Cambridge, Maryland and there are probably others, but quite a

few going on and, of course, we were well aware that Washington, DC, Richmond, Virginia, a number of places on the Susquehanna River, including Harrisburg and Wilkes-Barre, I know those by virtue of my work with the Chesapeake Bay program. So, it was a very widespread enforcement effort by EPA.

MR. MUDD: Okay and you agree the Consent Degree is a pretty normal process for enforcing these types of issues that arise in, in Maryland?

MR. SUMMERS: Consent Decrees in the more difficult cases, Consent Order typically would be the first avenue to pursue. But the Decree becomes necessary if there's any push back or if EPA gets involved, because they only do it through the Federal Courts.

MR. MUDD: Okay and when, when you were Secretary, did you ever have to get involved in any enforcement of a Consent Decree against a, a County? And I can be more specific if you don't understand what I mean by that.

MR. SUMMERS: Well, all of the Consent Decrees have stipulated penalties whereby if they do not meet certain aspects of a Consent Decree, enforcement action is taken, and a stipulated penalty is paid. If we needed to go back to the Court in, in this situation that occurred with Baltimore City, we wind up with a modified Consent Decree.

MR. MUDD: Okay and are you aware of any such

enforcement action for the Consent Decree that's in effect for this case?

MR. SUMMERS: For Baltimore County, I am not aware of any enforcement at this point.

MR. MUDD: Okay.

MR. SUMMERS: That's not to say they haven't had to pay stipulated penalties. I don't know specifically about that. But typically, if a deadline is missed, there can be a stipulated penalty unless the County was able to convince MDE there was something beyond their control.

MR. MUDD: Okay and lastly, Mr. Wyatt was asking you questions about your understanding of Baltimore County's providing, or maybe not having provided information, certain information to Baltimore City. Do you recall those questions?

MR. SUMMERS: Yes.

MR. MUDD: Okay and you said that you don't know if it, if it is complete or not because you have not seen it, correct? That is, that is the, the flow, the flow information.

MR. SUMMERS: No, I, I don't believe that's correct. Reading the Baltimore City phase two report, the City says that the County has not provided that information --

MR. MUDD: Understood, so, go ahead --

MR. SUMMERS: -- so, personally, I haven't seen the City's letter, which the County, excuse me, the County's letter, which the City cites in their report.

MR. MUDD: Okay, all right. I have, I have no further questions, Judge Murphy. Thank you very much, Mr. Summers.

MR. SUMMERS: Thank you.

ALJ: Mr. McCann, do you have any rebuttal?

MR. MCCANN: Very few, just a couple.

ALJ: (inaudible).

MR. MCCANN: Thank you. I'm sorry, I won't be long, I promise.

ALJ: Yeah.

MR. MCCANN: Mr. Summers, Mr. Mudd was asking you to assume that if the County was very successful in, in eliminating SSOs, then there would be expected improvement in some of the bacteria data for Lake Roland. Do you recall that testimony?

MR. SUMMERS: Yes.

MR. MCCANN: Have you seen anything, any evidence that would support that assumption? That is, that the County has been very successful in eliminating SSOs, at least as it relates to the Jones Falls interconnector as opposed to the Roland Run or Towson Run interconnector.

MR. SUMMERS: No, I, I have not seen any information that indicates they have been successful.

MR. MCCANN: Secondly, Mr. Mudd asked you about legislation regarding the growth tiers and General Assembly's

attempt to address septic systems. Does any of that effort change your opinions expressed today regarding the sources, or source rather, of bacteria in Lake Roland?

MR. SUMMERS: No, I don't see that that applies.

MR. MCCANN: And then lastly, regarding, you just testified about the number of Consent Decrees that may have been issued during your time, does, does the number of Consent Decrees in any way change your opinions that you've expressed today? In other words, does it --

MR. SUMMERS: No, I don't know why it would.

MR. MCCANN: All right. Does it lessen the importance of this Consent Decree in your opinion?

MR. SUMMERS: Not at all. I think the Consent Decrees, as I've testified, are the ones that are the most problematic situations and the big ones in Maryland are WSSC, Baltimore County and Baltimore City.

MR. MCCANN: Okay, all right. Thank you. Nothing else.

MR. ZIMMERMAN: I have just a few, Judge, if I may?

ALJ: No, Mr. Zimmerman, why? You already had your questions. No, we're not redoing it all over again. Based on what? It's Mr., it's Mr. McCann's witness. He does, he does re-direct. You already had questions you asked.

MR. ZIMMERMAN: I would follow-up a couple of Mr. Mudd's questions.

MR. MUDD: No.

ALJ: No, no, no, no. We're not, we're not going back and forth. We had, it was Mr. McCann's witness. You had your opportunities to ask him questions. And so, Mr. Summers is finished. All right. So, that's it for that witness. Mr. McCann, do you have another witness for today or is that all the witnesses?

MR. MCCANN: That's it for us, Your Honor, subject, of course, to the issue I mentioned at the beginning of the hearing. I will tell you that I did, have received an e-mail from DPW at 2:30-ish with a link, a TP link to the documents. So, that's good news. I'll review it as soon as possible and let everybody know where we are.

ALJ: Okay.

MR. MCCANN: Yeah.

ALJ: So, that may or may not answer the question, in other words, it could be that DPWT says you have everything we gave you, right? And --

MR. MCCANN: No, I think they're going to send me a bunch of stuff and I'm going to need to go through it and make sure that there's nothing new. That's the way it works.

ALJ: Oh, oh, okay.

MR. MCCANN: So, it's all right. It'll be a lot of documents but, I, I'll, I'll get through them quickly and let everybody know very soon.

ALJ: So, they gave you a link to the FTP website, which is, so you just go to the website, I mean, download it or see what documents (inaudible) --

MR. MCCANN: Download it, yeah. They don't take the time to pull out things that I've already been given. That would take too much time on their end, so.

ALJ: So, they just repeat it and --

MR. MCCANN: I, I'm assuming that, but that's based on past practice. I haven't looked at it yet, so.

ALJ: Okay and then, so that's that issue.

MR. MCCANN: Yep.

ALJ: The other one was the e-mail confirmations that Mr. Mudd was requesting from the last hearing. So, that had to do with like capacity chart and all. Did you guys have a chance, or, to look at all that or no?

MR. MCCANN: I've sent, I've sent it to Chris and Adam. I don't know if they have it.

MR. MUDD: I have not, sorry, I was preparing for the witness.

ALJ: That's right, you were preparing for the witness. So, yeah, so we still have to go through that. So, given that the Protestants don't have any other witnesses, he can't close his case because we still need to deal with the issue of the PIA request and making sure he has all the documents he needs to put in.

And then also, you all need to make sure you got those e-mails, I guess for the, his e-mails requesting the PIA documents and, and so you'll need to go through those as well before the next hearing, is that right? Does that make sense?

MR. MCCANN: Yeah, we can talk about it. If they have any questions, I'm happy to answer them. I think it's pretty straightforward, frankly, but.

ALJ: Okay and then you agree, Mr. McCann, you'll keep them informed of what it, of whatever it is you, you've learned?

MR. MCCANN: Yeah, I mean, I should, I have a hearing tomorrow, but I should know tonight or give it, have a good sense of things soon, yeah.

ALJ: Okay, all right. Anything else, Mr. Mudd, Mr. Rosenblatt?

MR. MUDD: I, I'd just say, I, I'd like to make a, a request just to Mr. McCann. We, we, you know, I think we would be prepared to go for the next hour, hour and a half, if we were able to do so today. So, I would just ask Mr. McCann to dig into that immediately. And spend the time today trying to figure out what he, whatever it is he's trying to figure out so we can know what we're preparing for in two weeks.

MR. MCCANN: Yeah, I, I can't promise you to get, I, I got a hearing tomorrow before the Board, it'll be all, you know, all day. So, I, I've got a lot of work to do tonight on

other stuff. I, I'll get to it as soon as I can. I've been waiting --

MR. MUDD: I guess what I'm saying is, the thing is, there's an hour and a half we're getting back right now, so I'm just asking you to do that.

ALJ: But you don't want us all to sit here (inaudible)?

MR. MUDD: No, no, no, not now, no. But I, but I'm asking him to spend some time this afternoon to look at it.

ALJ: Yeah, --

MR. MCCANN: Well, I can, I can't make any promises, I can't make that promise. I, I'm not sure, I would never make that request of you guys. I've already spent several hours getting these e-mails together when I really shouldn't have to do that in the first place, frankly. These are public records, Your Honor. I spent a lot of time just establishing because there's some, I guess, inherent disbelief that I actually got these documents from the County. So, I spent a lot of time already. I can't promise you I will get to the documents tonight. I'll do my very best.

MR. ROSENBLATT: It, it's just, it's impossible to proceed this way. We're, we're just totally in limbo if there's no structure to this. It's, it's been months and months of Protestant's case, we're just hearing about this request today. I'm sorry, it's a bit of venting, but it's

incredibly frustrating and there's just no structure to this whatsoever.

MR. MCCANN: Imagine my frustration on my end. Imagine my seventy-five e-mails in, over the past four months. So, it's, it's frustrating on my end too. So, yeah.

ALJ: Yeah. I, I agree. It's been frustrating trying to get the documents that he's been requesting to get too. So, I mean, I don't think there's been no structure to it. In fact, I think there's, there's been structure to this case in terms of trying to make sure we're, we're following, you know, the procedure in, you know, in the courtroom, trying to make sure everyone's heard, trying to make sure everyone's case is, is, you know, presented and make sure it's fair.

So, yeah, I mean, I understand the, the, everyone's got frustrations. There have been times when, you know, certain people needed to leave early, certain times other people needed to leave early and we do try and accommodate, we try to accommodate witnesses even.

The ones that came out of order, for example, you know, Dr. Lum had to get back to work, other, other witnesses had to get back to work and so we, we try and be accommodating to everyone so that everyone can come in and participate and testify.

So, you know, I just want to make sure that Protestant's have enough time to present their, their case and

they need to make sure they have all the documents. So, --

MR. MCCANN: I'm okay with proceeding with other witnesses today if they're non-sewer related, I don't see why we can't do that if we're trying to save time.

MR. ROSENBLATT: We're not going to put on any, any rebuttal case until he rests.

MR. MCCANN: Okay. Well, you can't, you want your cake and eat it too. You want all the documents, but you want to finish (inaudible) --

MR. ROSENBLATT: It's not, it's not wanting it and eating it too.

MR. MCCANN: That's exactly what it is. But it's okay. I'll be quiet, I can --

ALJ: All right, all right.

MR. MUDD: Judge Murphy --

(EVERYONE TALKING AT ONCE)

MR. ROSENBLATT: (inaudible) Your Honor, there is something I would propose to do today. I have had an opportunity to go through all of People's Counsel's exhibits and his letter. And there's only two documents that I'd like to discuss. And, and that's out of what, forty-three exhibits. There's only two and it should only take a few minutes to go through.

MR. ZIMMERMAN: Well, can we go through the ones that, to, I've, I've got, I think I can share them, and I would

like to, you know, on the record get them quickly admitted. And then we can discuss the, the couple that Mr. Rosenblatt is objecting to.

MR. ROSENBLATT: I, I don't even know if you need to. I have no objection to any of them except forty-one and forty-three. And you've e-mailed them to all parties, including the Court.

MR. ZIMMERMAN: Okay.

MR. ROSENBLATT: And I can explain why and maybe clarify --

ALJ: Well, some, some of them were withdrawn, so.

MR. ZIMMERMAN: Right. Can I say what, can I indicate the numbers other than forty-one, forty-three, can I indicate what numbers I would like to admit?

MR. ROSENBLATT: You can, and I can, if it helps, everything you said in your letter is fine. You, you were very clear about which ones you want in, which ones for i.d., which ones are withdrawn.

MR. ZIMMERMAN: I, I want to just briefly just give the numbers of the ones, there's one additional one I think I'm going to withdraw. But can I, can I just list, can I do (inaudible).

ALJ: Well, (inaudible) so Mr. Zimmerman is clear what exhibits he needs, has, which ones he's putting in and which ones he hasn't, because he's given me lots of lists, so.

MR. ZIMMERMAN: Right. First of all, and, and I'm assuming, and when we checked with your office, Judge, she said you have the actual records of what's been admitted. What I have as already admitted is one, three, six through nine, thirteen to fourteen, sixteen, eighteen, twenty-one, twenty-three, twenty-four, twenty-six, twenty-eight, thirty, thirty-one. That's what I have. Hope I didn't go too --

ALJ: Twenty-four, yep, twenty-six, twenty-eight, thirty, thirty-one, that's what I have.

MR. ZIMMERMAN: Okay, good. So, what we're admitting today, which is like virtually all public record, but, well, almost all, so the, number four is the Zoning Office concept plan conference comments. Number five, development plans review conference and development plan comments.

Number eleven is the Foxleigh case, which is on transportation. Number seventeen is Woodley Park, which is a previous decision the, I think you're familiar with from the Board of Appeals. Twenty is selected County and Charter Code provisions.

Twenty-three is a, a supplement to the Hunts, maybe that's been admitted, I'm not sure, Huntspring and Seminary Ridge plats. Twenty-five is just a close up of the development plan, zoning and setback sections. Twenty-seven, just a close up of the site plan notes, you know, part of the Exhibit 1-B of the Developer, I believe.

Twenty-nine, the Davis Farms site plan. And, of course, the opinion was already admitted. The Davis, thirty-two, the Davis Farms record lot table and statistics. Thirty-five, County Council Bills on residential performance standards.

Thirty-six, a little bit more complete excerpt of the development review policy on access points, part of which has already been introduced. Number thirty-seven is County Council Bills on basic services maps, which are list, the numbers are listed.

Thirty-eight is various Zoning Commission, or Administrative Law Judge's decisions on special variances relating to transportation, traffic, which we'll review in our memorandum. Thirty-nine is the master plan on stormwater management, master plan 2020 excerpts.

Forty, we're going to withdraw. We just, we just think it's unnecessary but that's Maryland law and master sewer plans. So, we'll, we'll withdraw forty. Forty-one includes some master plan 2020 excerpts on sewerage that Mr. Rosenblatt may be objecting to. I'm not sure.

Forty-two is just an updated letter from the Department of Public Works indicating what they're proposing for the F level intersections, which is, seems consistent with what we already have. Forty-three is a, some online articles, information, relating to Howard County having resolved its

Consent Decree issues and I, I thought that would be relevant to show that MD staff is working and, and there is some ability of some counties to resolve their Consent Decrees.

And so, I think forty, forty and, forty-one and, I'm sorry, forty-one and forty-three, Mr. Rosenblatt either is objecting to or wants to discuss.

ALJ: Mr. Rosenblatt, right?

MR. ROSENBLATT: Yes, everything you said aligns with the letter you, you gave us last week. So, I, again, everything is fine. I think there's one or two exhibits that I might offline just ask you to resend me because I just couldn't find them. But they're, they're (inaudible) public record, so I'm not objecting to them, I might need them again.

MR. ZIMMERMAN: Can I share, I, I thought we had sent them all but --

MR. ROSENBLATT: I, I think you did. I don't want to take any more time right now. I have no objection to any of it and if I just, if I can't find it, I'll e-mail you. Forty-one --

MR. ZIMMERMAN: I, I appreciate that, Mr. Rosenblatt, yeah.

MR. ROSENBLATT: Forty-one, I just want to share this. It's a master plan excerpt, no problem with this. I'm going to go fast because the first twenty pages are master plan, Baltimore County master plan. And that's all fine. But

then, it's not all master plan. When you get to page twenty-one of the pdf, it switches over to something that's not master plan. It switches to, and I'm just, I'm looking, watching the Court flip so I just want to make sure (inaudible) --

MR. ZIMMERMAN: Can, can I say something? That is, that is an appendix of the master plan. That, that is actually, it's referred to in the master plan. It is, it's on a CD. It is an appendix, whether it's A or B, I don't remember now. It, it is actually an appendix of the master plan.

MR. ROSENBLATT: There's, there's two sheets there, water source element, draft presented to Maryland Department of Planning dated June 14th, 2010. Then, I think, are you saying this is also, these are appendixes to the master plan?

MR. ZIMMERMAN: Everything, the whole water resources element, which begins with the correspondence and then includes the substance, and I think we had, probably had excerpts here. It's a very long, might be a hundred pages. I don't think we included all of them. But --

MR. ROSENBLATT: There's just, there's just a handful but what, the, the last page is an unsigned letter --

MR. ZIMMERMAN: What I'm saying is, we can, everyone can doublecheck me on this. I gave the executive summary. This, this is an appendix to master plan 2020. This is all part of, part of the appendix and I think there's some text in the master plan which refers to it, which I can go back. I

don't have it, those paragraphs so right in front of me now, but this is part of the master plan is what (inaudible) --

MR. ROSENBLATT: I just, if, if that is the case, I'll withdraw my objection. I have never seen that, so I need to go verify that.

MR. ZIMMERMAN: Okay and --

ALJ: Was it just that, that you just verify that? I mean, Mr. Zimmerman is a, you know, officer of the Court and, and if he says it's part of the master plan, it's part of the master plan. If he says it's an appendix, then it is. And if it's an appendix, then it's part of the master plan. So, it would be admitted but --

MR. ZIMMERMAN: Right, --

ALJ: But let's, let's --

MR. ZIMMERMAN: My staff, my staff, we'll send it to him. We can --

ALJ: Let's, hold on.

MR. ZIMMERMAN: I'm sorry.

ALJ: Mr. Rosenblatt can pull it up at another time. He can pull it up and he can look at it. He, he could easily look at it. Just pull up the 2020 master plan on the County website and see if it's part of it. And if it is then, you know, then it is, --

MR. ZIMMERMAN: Okay.

ALJ: -- so, --

MR. ZIMMERMAN: If, if it's not, I'll withdraw it, but I'm pretty sure it is, yeah.

ALJ: Okay, that's fine.

MR. ROSENBLATT: All right.

ALJ: And then forty-three.

MR. ROSENBLATT: Yeah, forty-three, so for, forty-three is a one, four pages, I guess, but this is an article with quotes from Howard County.

ALJ: Right.

MR. ROSENBLATT: We would object on the basis of relevance. That what's happening in Howard County, it, it sounds like a prejudicial argument is being made when there's been, there, it has no basis to this case what's going on in Howard County, what the extent of their obligations in their Consent Decree were versus Baltimore County's.

And I think it would be much more prejudicial for Mr. Zimmerman, or anyone else, to be able to argue that just because Howard, something has happened in Howard County, that it's showing deficiencies in Baltimore County. I don't, I don't think that should be allowed into evidence in this case.

ALJ: I don't think Mr. Zimmerman is going to be surprised by that objection. Mr. Zimmerman?

MR. ZIMMERMAN: Well, I think it, it shows that the MDE is working, and they do have some staff and that there is some possibility of resolving these Consent Decrees. And, of

course, Baltimore County has not. So, in, in the whole picture, and, and there was cross examination by Mr. Mudd about, with Mr. Summers about all these Consent Decrees and hey, this is the status on Howard County. So, now, and I think we can take judicial notice.

Now, if these articles are wrong, these are recent, these, these are quite recent, I think, I don't have, I think it was February of 2023. You know, if these articles are wrong, I'm sure that, I couldn't find anything on the MDE website on it, I tried to check that. So, I haven't had time to, you know, call down to MDE. But it, it seems likely that this is correct, so.

ALJ: Yeah, and so, my position on these newspaper articles, other than the one that was, Mr. Summers admitted and, and agreed and reviewed that he was quoted in there for cross examination purposes, you know, do not get admitted. This is, I mean, not only is it, it just, it, it just, I mean, it has multiple, you know, hearsay statements and it has to do with another jurisdiction. It's just like the, the Baltimore City document that really just doesn't have to do with this particular case.

MR. ZIMMERMAN: All right.

ALJ: And so, you know, we don't need it, it's not relevant and it's not, it's not important for the, for the issues here in terms of the, so. So, we're not going to admit

--

MR. ZIMMERMAN: All right.

ALJ: -- forty-three. But forty-one, Mr. Rosenblatt's going to go check on that one.

MR. ZIMMERMAN: All right. Well, overall, I would just thank you for all your learned rulings on the evidence. And I, I accept, I accept your ruling.

ALJ: I, I thank you. And thank you for, for your, for your kind words there. But so, for Mr. Zimmerman, it, because I know that your assistant is also on here, Rebecca. And if you could then please go through and just make another exhibit list, just a final one --

MR. ZIMMERMAN: Yeah.

ALJ: -- if you could, and then you can say, you know, next to it, you already did this on one other one, an earlier version, where you highlighted in yellow what you wanted to withdraw. If you could go through and do it like Mr. McCann does where he, he just writes in red, in capital letters, withdrawn on your exhibit list --

MR. ZIMMERMAN: Right.

ALJ: -- next to it, strike through it, and then write withdrawn and I know I'm saying because Rebecca is listening. And so, and that would be great. And Mr. Rosenblatt will let us know about the other, the other one. Other than that, Mr. Zimmerman, your, is this your case? Is

this --

MR. ZIMMERMAN: Yes, it is. And forty-three is excluded kind of. It's, wasn't withdrawn but it was --

ALJ: It's not, not admitted.

MR. ZIMMERMAN: Not admitted.

ALJ: Not, not admitted, so --

MR. ZIMMERMAN: We'll put a red through on that one and you'll, the record will be clear anyway.

ALJ: Thank you. And yeah, we just want to make sure we have a current list of everyone's exhibits to make sure we know what's in evidence. Yeah, so, okay. But Mr. Zimmerman, just so one more time, so your case is, your case is --

MR. ZIMMERMAN: Yes, that is --

ALJ: -- hold on --

MR. ZIMMERMAN: That is correct. That is correct.

ALJ: Your case is finished.

MR. ZIMMERMAN: Yes, it's finished.

ALJ: Okay. Just want to make sure, I just want to make sure that that's the case, so we, okay. So, now it's 4:00. So, we're going to come back another, I think we have April the 11th is the next day, the hearings, okay? Twelve, day twelve.

MR. MUDD: Judge Murphy?

ALJ: Yes, Mr. Mudd?

MR. MUDD: At, at, at the risk of scraping at an old

wound, I, I just wanted to say two more things about the, the, our frustration. First of all, I'm sorry that we're, that Adam and I are visibly frustrated. But I wanted to explain the source.

I'm not, I'm not at all suggesting or trying to deprive Mr. McCann of putting his case on. He certainly deserves the ability to do that. Our frustration is that we, we tend to resolve these issues on days that, that, leading up to that date.

We think that we're going to be, turning it over to us. And I think this is the second or third time we've come to a hearing with that expectation and now we're not able to do it. And so, we find ourselves on the date of the hearing, like I'm going to do now, suggesting that we get another date because sitting here today, we don't know what the next day holds.

And every day that goes by without an ability for us to get a date for our client means that we're into May and then maybe beyond May. So, that's really what's driving our frustration. But I think that in light of what we're hearing today, we'd ask you to ask Kristen for another date so that we don't wait until the 11th to figure it out.

ALJ: Understood. All right. I can certainly do that. I can send her an e-mail, copy everyone like I did before. Mr. McCann is going to let all, everyone know, not me,

but he's going to let everyone else know, you know, within the next week or so maybe, whether the documents are what he needs. And then he may say I'm completely finished, and he can open on April the 11th and say I, I close my case.

MR. MUDD: Great.

ALJ: And then, and then we're done and then you can just begin. So, it may just be that we don't need another day. And you'll finish your rebuttal in one day?

MR. ROSENBLATT: That is definitely the goal.

ALJ: The goal, is that the goal? Okay.

MR. MUDD: Yeah, I mean, I, I, sitting here today, I think we expected to at least put a couple of witnesses on, and we can't. And, and I think one of our witnesses, at the very least, is going to be quite a lengthy witness, particularly on, on cross. So, that's another reason that I think we need yet another day.

ALJ: Okay.

MR. MUDD: Because we also don't want to start a witness and then be, have them be sequestered for the entire time between the first and second day, we cannot do that.

ALJ: You mean, between the, if you have two days (inaudible) --

MR. MUDD: Between the twelfth and thirteenth day.

ALJ: Yeah, oh, twelfth and thirteenth day, okay. Understood. All right. So, that means I'll send an e-mail to

Kristen and copy everyone.

MR. MUDD: Thank you. I'm sorry. Sorry, (inaudible) --

ALJ: No, not at all. Everyone, everyone has their own frustrations and it's all understandable, trying to make it fair. So, all right.

MR. MUDD: Understood. Thank you.

MR. MCCANN: Thank you, Judge.

ALJ: Thank you, everyone. All right. We're going off the record.

VOICE: Thanks.

MR. MCCANN: Take care.

VOICE: Bye.

[OFF THE RECORD]

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, March 27, 2023, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 188 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 28th day of May 2023.

Christine R. Leary

IN THE MATTER OF:

GREENSPRING MANOR
2310 W. Joppa Road

CASE NUMBERS: 08-0922 & 2021-0250-SPH

Hearing Date: February 10, 2023

Pursuant to Notice, the above-entitled hearing was held before the Office of Administrative Hearings for Baltimore County by remote access.

PRESIDING:

MAUREEN J. MURPHY, ADMINISTRATIVE LAW JUDGE

FOR THE PARTIES:

ADAM ROSENBLATT, ESQUIRE
CHRISTOPHER MUDD, ESQUIRE

MICHAEL MCCANN, ESQUIRE

PETER MAX ZIMMERMAN, PEOPLE'S COUNSEL
FOR BALTIMORE COUNTY

TABLE OF CONTENTS

Description	**Page**
Direct exam of Randall Grachek by Mr. McCann	10
Cross exam of Mr. Grachek by Mr. Zimmerman	179
Cross exam of Mr. Grachek by Mr. Mudd	193
Re-direct exam of Mr. Grachek by Mr. McCann	268

(ON RECORD)

ALJ: Good morning, everyone. You're attending day ten for case numbers 08-0922 and 2021-250-SPH. Property address 2310 West Joppa Road. This is the combined development plan and zoning case for the project known as Greenspring Manor. And for the record, we'll have the counsel introduce themselves starting with the Developer.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer/Petitioner.

ALJ: All right.

MR. MCCANN: Good morning, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel.

ALJ: Okay, all right. So, we're in Mr. McCann's case today. We have some people joining us here, I see. I'm just muting people's microphones that don't need to be unmuted. Mr. McCann, I had two exhibit questions for you before you call your next witness.

MR. MCCANN: Sure.

ALJ: So, yeah, so after the last hearing on January 30th, I know you submitted a revised exhibit list, I appreciate that. But then you submitted the documents for fifty-two, fifty-four and fifty-five that were withdrawn. I'm just trying

to make sure that we have the documents so I'm not sure what I'm supposed to do with these.

MR. MCCANN: Are you asking me whether you, you, you have them, if I've sent them to you, is that what you're asking?

ALJ: You have, you did send them, so I have them, I have them right here.

MR. MCCANN: Yeah.

ALJ: You've marked them as withdrawn and on the last, in the last hearing, I remembered that they were withdrawn. But then you sent them to us, so I'm not sure.

MR. MCCANN: Yeah, yeah.

ALJ: Yeah.

MR. MCCANN: I don't know why I did that. So, I should not have sent them, but they are as my exhibit list says in, I think in red, they're withdrawn, so.

ALJ: Okay. So, do I put them in the trash?

MR. MCCANN: You can put them in the trash.

ALJ: Okay. Well, you see, you're watching me put them in the trash --

MR. MCCANN: I am.

ALJ: -- just so we can all, we're all together on the same page. Okay. So, second question was, then you submitted, so we have fifty-six and fifty-seven, then I have the list and I had these pages that were not like labeled or

stapled to anything. So, they're kind of just loose. And they say Kimley Horn on them so it definitely refers to fifty-six and fifty-seven. But I'm not sure which one is which. And, and they're not, it's not labeled, so.

MR. MCCANN: Yeah, so, I'll resend those to you --

ALJ: Well, you don't have to, you can just tell me, and I'll write it on here.

MR. MCCANN: Yeah, I can tell you right now. I think what I mistakenly did is I, I don't send them to Donna and Deb stapled, because I think they need to copy them or, so I should have just stapled them, but I did not. I just found out that I did not need to do that. So, I can tell you where each --

ALJ: Yeah.

MR. MCCANN: -- each starts. So, fifty-seven, let me just, fifty-six, fifty-six, and I can pull it up if you want, is, you want me to pull it up, Your Honor?

ALJ: Yeah, you might as well. I mean, just so I, this all, this all looks like one document, but.

MR. MCCANN: Yeah, it, so the first one is this, this is the first page and it's five pages.

ALJ: Oh, okay. So, three, four, five. And then, --

MR. MCCANN: Fifty-seven begins with this schematic.

ALJ: Got it. All right. I'm just going to mark them on here so you don't need to resend, no, no need to resend more copies of things.

MR. MCCANN: Okay, great.

ALJ: So, fifty-six and Protestant fifty-seven. Okay, that's what I needed to know. All right. So, Mr. McCann, we're still in your case and I understand you have two witnesses today.

MR. MCCANN: I do, yep.

ALJ: All right. Sounds good. So, who's –

MR. SACHSE: Hey, Judge. This is Doug Sachse. I just want to know if I could interrupt a second. I did this before, I'm going to be checking out for about two hours, so I just didn't want you to worry about finding me or calling on me.

ALJ: Thank you for letting us know and so, that does help actually, because when I call on you for cross, I know --

MR. SACHSE: Right.

ALJ: -- if I don't see you, I know you're not there.

MR. SACHSE: Gotcha, thank you.

ALJ: When you pop back in, then I'll, then I'll let you know, ask you if you --

MR. SACHSE: Appreciate it, take care.

ALJ: Yeah, okay, thank you.

MR. MCCANN: So, we would call Mr. Grachek, Randall Grachek first. I think I see him.

ALJ: Okay. Mr. Grachek, you can unmute your microphone. Can you hear me?

MR. GRACHEK: Yes, I can.

[MR. GRACHEK'S CONNECTION WAS NOT CLEAR]

ALJ: All right. I know you signed in twice, but this connection looks fine so I, you're in as an attendee as well, but we'll just leave you on here. All right. So, if you could raise your right hand, please? You swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. GRACHEK: I do.

ALJ: All right. And so, Mr. McCann, I know Mr. Grachek has been sworn in as an expert in other cases, at least two in front of the Office of Administrative Hearings that I know of. So, I know you have his resume here. What are you offering him as an expert in, just trying to move --

MR. MCCANN: I will offer him in the same areas he was offered in in both the Torch Hill case and the Blue Stone case, case, which is, which are, number one, wastewater engineering, generally speaking, and two, the evaluation of sewer systems and their capacities.

ALJ: Sewer system and capacity. Mr. Rosenblatt, did you need voir dire?

MR. MUDD: I'm actually going to be handling this witness, Judge Murphy.

ALJ: Oh, sorry.

MR. MUDD: And no, I don't, I don't necessarily

object to his expertise in those areas. Obviously, he was accepted in those areas before. I do have some questions, but I can just save them for cross examination that would go to, you know, experience and things like that.

ALJ: Correct, yep, that sounds good.

MR. ZIMMERMAN: Can I, can I ask some questions?

ALJ: Do you have, do you need voir dire of Mr. Grachek as an expert?

MR. ZIMMERMAN: Well, I'm not, I haven't been familiar with him, so I just would like to ask a few background questions, unless he has a c.v. that's being --

ALJ: He, he does. Mr. McCann, I didn't mean to short circuit you here, but he has been admitted before. Mr. McCann has an ex, fifty-eight is his resume.

MR. ZIMMERMAN: Okay, all right. I don't think I've seen it, once I, maybe once I see it, I won't have to ask any questions. But it --

ALJ: Do you want, do you want it on the screen, is that what you're asking for?

MR. ZIMMERMAN: Yeah, yeah, could we see it on the screen? Could everyone see it on the screen?

ALJ: Mr. McCann has control, so.

MR. MCCANN: And I can, I can send it to Mr. Zimmerman as we speak.

MR. ZIMMERMAN: All right. To save time, maybe it

would be nice for everyone in the audience to see his, you know, just run through, run through the pages quickly so all the citizens can see his experience as well.

ALJ: Right, well, it's on the screen and so we're just asking if you had voir dire based on what you're looking at here.

MR. ZIMMERMAN: Yeah, that, that, I, as long as, I mean, this is, I didn't see this before, so it's fine. So, to save time, I won't ask any questions. I would, by the way, ask Mr. McCann to send us an updated list of exhibits. We don't, we don't have an updated list of all his exhibits.

MR. MCCANN: Will do.

MR. ZIMMERMAN: Okay. That, that, that, so to save time, yeah, now that we have the, his c.v., I assume that's admitted?

ALJ: I was going to ask you if you had any objection.

MR. ZIMMERMAN: Yeah, no, no problems, no problems.

ALJ: And Mr. Mudd, any objection?

MR. MUDD: To the c.v.?

ALJ: Yes.

MR. MUDD: No.

ALJ: Okay. Fifty-eight is admitted. All right, Mr. McCann.

MR. MCCANN: Okay, great. Thank you, Judge. Good

morning, Mr. Grachek.

MR. GRACHEK: Good morning.

MR. MCCANN: Let me maybe ask you a couple background questions. Are you familiar with the sewer system in, in Baltimore County?

MR. GRACHEK: Yes.

MR. MCCANN: How so? How is it that you're familiar?

MR. GRACHEK: I reviewed a plethora of documents and I visited the site.

MR. MCCANN: Okay. When you say the site, you mean the site of this development, proposed development?

MR. GRACHEK: I visited the site of the development and the sewer system leading down to the County line from the development.

MR. MCCANN: Okay. What kind of, what kind of system would you call Baltimore County's system?

MR. GRACHEK: It's a, your normal, a normal gravity flow sewer system with individual laterals coming from, from the, the users to collection lines to then finally trunk lines. Very typical of a, of a municipal sanitary sewer system.

MR. MCCANN: Okay and you said lateral lines and trunk lines. Real quick, just explain what those are.

MR. GRACHEK: You have connector lines that connect to the houses or the businesses or whoever uses the system. You have laterals that collect from those areas and they feed

into what is called trunk lines, which are the main lines that end up going out, in this case, to the City, so that they can be conveyed to the treatment plans in the City.

MR. MCCANN: Okay. Mr. Grachek, you're, could you try to adjust your volume a little bit? At least to my end, and I know we've had this problem before, --

MR. GRACHEK: Yeah, I, I, I've got mine turned up all the way and, and I'm having a little trouble hearing you too, so. I'm not sure how --

MR. MCCANN: Yeah, I have mine, maybe we should turn it up all the way. Could you turn yours down a little bit, maybe just speak louder instead? I don't know if that's going to work or not.

MR. GRACHEK: Okay, all right.

MR. MCCANN: Well, Judge, can you hear him fine?

ALJ: I can. It, it has a little bit of a tinging sound, but I can hear him.

MR. MCCANN: Okay, maybe it's my ears. Okay. In terms of your experience with evaluating other sanitary sewer systems, is there anything unique or special about Baltimore County's system?

MR. GRACHEK: The only, the only thing that's unique about the system is most systems end up leading to a treatment plant that's run by the municipality. In this case, all the wastewater in the sewer shed we're talking about ends up being

conveyed to the City, so that it mixes with their system. Other than that, it's a normal gravity, gravity flow system.

MR. MCCANN: Okay. So, across jurisdictional lines, is that what you're saying?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Are you, also by way of background, are you presently working on any sewer system issues in Baltimore City?

MR. GRACHEK: Yes, I am, I am assisting the Chesapeake (inaudible) in evaluation of the Back River and Patapsco plants and their repairs and, and all the work that has to be done to get those plants up to, you know, up to operational efficiency.

MR. MCCANN: Okay. You mentioned the Back River plant. Is that, is that the plant that receives all of the sewage from the Jones Falls sewer shed?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and were, and we'll get to this in a moment, but this property and where most of us are sitting right now, is within the Jones Falls sewer shed, is that right?

MR. MUDD: Objection. Judge, I know that he's trying to move things along, but he cannot testify.

ALJ: Yeah. So, I do, I was actually going to jump in and say that. I know you, you tend to do it --

MR. MCCANN: Okay.

ALJ: It, it's just, if you could ask open end, and because he's an expert, ask open ended questions. Thanks.

MR. MCCANN: I will do that. I will do that. What sewer shed are, is the subject property located in?

MR. GRACHEK: The property is in the Jones Falls sewer shed and it's along the, the Jones Falls line on the west side of the, of the sewer shed.

MR. MCCANN: Okay. So, you said you visited the site. In addition to visiting the site, what else have you done to prepare for your testimony in this case since you've been first retained to do so?

MR. GRACHEK: I reviewed many documents, documents including the, the original RK&K report and (inaudible) model. I reviewed newsletters from (inaudible). I've reviewed an RJN report, performance evaluation, a (inaudible) report on the issues with the trunk line under Lake Roland and newsletters from (inaudible).

MR. MCCANN: Okay. So, have you reviewed a lot of documents from Baltimore County, is that fair to say?

MR. GRACHEK: Yes.

MR. MCCANN: And have you also reviewed documents from various consultants hired by Baltimore County?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and have you reviewed documents that are new or different than those that existed at the time

of the Blue Stem and Torch Hill decisions that we referred to earlier?

MR. GRACHEK: Yeah, the, the, the new documents I've looked at, the (inaudible) report is a new document, the (inaudible) documents are, are new also.

MR. MCCANN: Okay and are these new and different documents significant, in your opinion or are they, are they significant to the opinions you'll express today?

MR. GRACHEK: I --

MR. MUDD: Objection, objection.

ALJ: Mr. Mudd?

MR. MUDD: I mean, again, he's putting words into the mouth of his witness here, Your Honor.

ALJ: Yeah. So, just, yeah, Mr. McCann, just try not to do that. You can ask him to describe the reports and how he feels about them. But you heard the issues. So, if you could rephrase.

MR. MCCANN: The que, yeah, the question is simply are they significant to his opinions. Is that, is that a leading question, Your Honor?

ALJ: No, that's fine. I think that's a fine question.

MR. MCCANN: Yeah. Yes or no, Mr. Grachek, and we'll move on.

MR. GRACHEK: Yes, they are significant.

MR. MCCANN: Okay. I think you mentioned, is the system in Baltimore County is it what's called gravity fed?

MR. GRACHEK: Yes.

MR. MCCANN: And I think we all know what that probably means, but what does it mean? Explain that if you would.

MR. GRACHEK: A, could you repeat that again, Michael?

MR. MCCANN: What, yeah, what is gravity fed mean? A gravity system?

MR. GRACHEK: Okay. A gravity system is where there's, there's no pumping of the sewage that the, that the, you know, typically in a, a waste, a wastewater system, you'll have, the sewer lines will follow the normal topography to a collection to be collected and the, basically the wastewater will flow downhill.

There are occasions when you have pump stations that will try to pump over certain features, you know, that might be in the way. But, but in general, we're talking about a gravity flow system through the Jones Falls sewer shed.

MR. MCCANN: Okay. Let me show you Protestant's Exhibit 59, which consists of two pages. Can you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: And what, what is this map?

MR. GRACHEK: This is a map of sewer sheds.

MR. MCCANN: Okay and is the Jones Falls sewer shed depicted in this map?

MR. GRACHEK: The Jones Falls sewer shed is the green one in the middle and the property that where the subject is, the, the polygon in the middle of, or the upper area of the, of the green area.

MR. MCCANN: Okay and I'll show you the next map in this same Exhibit 59. What is this map?

MR. GRACHEK: This is the, this is the blow up of the, of the same map showing the, showing the proximity of the site to Lake Roland and the streams to Lake Roland.

MR. MCCANN: Okay. I should ask you, what, what is a sewer shed? I think we've all heard the term water shed, but what is a sewer shed?

MR. GRACHEK: A sewer shed is a distinct area where, where, it's a capture zone with, for wastewater within an area where gravity flow from an extended area to a specific point.

MR. MCCANN: Okay. I'm going to show you the next exhibit. And if you don't mind, Your Honor, well, I guess I'll just move in fifty-nine, the two maps consisting of fifty-nine at this point, before I move on.

ALJ: Yeah, so we don't forget to move them in. So, any objection, Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Okay. Let me show you Protestant's Exhibit 60. Tell us what this map is, Mr. Grachek.

MR. GRACHEK: This shows, this shows in more detail all the streams that lead to Lake Roland. This gives you a general idea, although it's not a topographical map, it gives you a general idea of where the main sewer lines would be placed because, obviously, the, the, the streams are the low points of, of the area.

MR. MCCANN: Okay and is the subject property outlined on this map?

MR. GRACHEK: Yes, the subject property is in the, in the upper, upper middle portion.

MR. MCCANN: Okay.

MR. GRACHEK: Of the polygon.

MR. MCCANN: And what are, what are the, the major streams in the sewer shed or stream systems?

MR. GRACHEK: The Jones, Jones Falls, there's Towson, Towson Run and Roland Run. The Jones Falls is the west, the Towson Run is to the east and the, and the, the Roland Run is to the north.

MR. MCCANN: Okay. So, those three streams, I wanted to have you identify where they are in this map. This, this

sort of pronounced blue line to the right, right, or east side of the subject property, what stream is that?

MR. GRACHEK: That's Roland Run.

MR. MCCANN: Okay and then to the east, or to the right side of that, this pronounced blue line, what stream is that?

MR. GRACHEK: That is Towson Run.

MR. MCCANN: Okay and then to the left or the west, or below rather the subject site, what stream system is this?

MR. GRACHEK: That's Jones Falls.

MR. MCCANN: Okay and do all three of those streams flow to the same point?

MR. GRACHEK: Yes, they all flow, they all flow to Lake Roland.

MR. MCCANN: Okay and is Lake Roland depicted on this map right here?

MR. GRACHEK: Yeah, Lake Roland is the blue, where your cursor is, the blue area where the cursor is right now.

MR. MCCANN: Okay. Your Honor, I would move Exhibit 60 into evidence.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Thank you, Judge. Okay. Let me show you Exhibit 61, and I'll scroll down, it's eleven pages. I'll have you see all them first, then I'll ask you to identify what this eleven page document is.

MR. GRACHEK: This document shows the pathway of sewage that would, would come from the new development, all the way to the County line.

MR. MCCANN: Okay. When you say the County --

ALJ: Sixty-three you said or sixty --

MR. MCCANN: This is sixty-one.

ALJ: Sixty-one I have as the RK&K Jones Falls study area.

MR. MCCANN: It is, I'm sorry, it is, it is sixty--

ALJ: It is sixty-three, right? Yeah, you just went ahead, okay. Well, we'll, well, this is sixty-three for the record.

MR. MCCANN: Yeah, thank you. Okay and these numbers on, on the map, on the eleven pages, what do those numbers represent?

MR. GRACHEK: Manholes.

MR. MCCANN: Okay and when you say this shows the sewer path, is, just to be clear, is, is, are you referring to the, the highlighted lines on here?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. The other green lines are what,

and numbers, what are they?

MR. GRACHEK: Those are other, other sewer lines for other (inaudible) sewer shed.

MR. MCCANN: Okay. Let me go back to, bear with me one second. Do you see that map?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. This is Protestant's Exhibit 61, Your Honor. And I'll get back to sixty-three in a moment. What is this map?

MR. GRACHEK: This is a map of all the sewers in the Jones Falls sewer shed. The small, or the lighter green lines are the smaller pipes that emanate from the different users.

MR. MCCANN: Um hm.

MR. GRACHEK: And as, as the pipes get more bold, that indicates they're, they're moving to bigger pipes, to (inaudible), you know, to (inaudible) trunk lines. So, the, the larger (inaudible) that everything feeds into.

MR. MCCANN: And I know it's diff, difficult with, with all these lines to direct, for the record anyway, where they are. But tell us where the, the main trunk lines are for the sys, are for the sewer system in the Jones Falls and what they're called.

MR. GRACHEK: Yeah, the, the, the main laterals are on the west side, it would be the Jones Falls interceptor, which is where your cursor is (inaudible) --

MR. MCCANN: Right here?

MR. GRACHEK: Right there.

MR. MCCANN: Okay.

MR. GRACHEK: And then, the Roland Run interceptor is to the north --

MR. MCCANN: Right here?

MR. GRACHEK: That area. And then, the Towson Run interceptor is to the east. It all feeds into a, a structure that then sends all the wastewater to Lake Roland, the Lake Roland interceptor that is under Lake Roland, which is --

MR. MCCANN: Okay. So, this point, this point that I have my cursor on right now, which is difficult to describe for the record, but it's where those three lines meet that you just described sort of in the, in the --

MR. GRACHEK: Um hm. Yes, there's a, there's a, you know, often times you'll, you know, you'll have, you'll have these pipes meet at manholes. This is actually a little bigger than a manhole. It's like a juncture box where major, major laterals meet to, to a main interceptor.

MR. MCCANN: Okay and at that point where my cursor is, that is where the three trunk lines that you just described, what, where is that in relationship to Lake Roland itself?

MR. GRACHEK: That's on the north side of Lake Roland.

MR. MCCANN: Okay.

MR. GRACHEK: And the, the sewage flows by gravity underneath Lake Roland, the pipe was installed underneath Lake Roland under the bottom of the, of the lake. And then flows out to what you see is TSJF01, which is the, the meter box that enters Baltimore City.

MR. MCCANN: Okay. This, I'm sorry, I'm blowing it up here. So, when you say, well, a couple things. Number one, from the point I just asked you to describe, there's a green line that is below that, that's sort of going straight up and down. What is that line?

MR. GRACHEK: That's the Roland, or that's the Lake Roland interceptor. That's the main trunk line that goes out of the Jones Falls sewer shed.

MR. MCCANN: Is that under water?

MR. GRACHEK: Yes, that's, it's under water, un, under Lake Roland. But then the remainder, as it turns to the left, it's no longer under water, it's underground but there's no water, under water.

MR. MCCANN: Okay. So, in this point you've identified as TSJF01, what does that blue dot indicate again?

MR. GRACHEK: That's the, the meter, meter box to meter the flow into the City.

MR. MCCANN: Okay. So, the, the three trunk lines that you identified, Jones Falls, the Roland Run and the Towson

Run, does, does all the sewage from those trunk lines go to Lake Roland and then to TSJF01?

MR. GRACHEK: Based on, based on the mapping that we have here, it looks like the large majority does. It's possible that there might be some ancillary lines, meter boxes, you see meter boxes on, to the, to the west, that may have some that enter other areas to the, to that, but I don't have the information for that. But it's safe to say the vast majority of the wastewater that flows from the center, from the sewer comes in from TSJF01.

MR. MCCANN: Okay and then does, in terms of, does, does all of the sewage from the Jones Falls go to the City?

MR. GRACHEK: Yes, it goes to the Back River plant at the City, through the City and to the Back River plant.

MR. MCCANN: Okay, all right. Your Honor, I would move this exhibit in, which is sixty-one.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

MR. MCCANN: I want to show you what has been pre-marked as Exhibit 62. And I'll blow it up a bit.

MR. MUDD: I'm sorry, that last exhibit was sixty--

MR. MCCANN: One.

MR. MUDD: One?

MR. MCCANN: One.

ALJ: Sixty-one. The last one was sixty-one.

MR. MUDD: I thought we said sixty-one was RK&K, am I wrong about that?

ALJ: Sixty-one, at the bottom of it, has RK&K Engineers on it, with the Jones Falls, I mean, there's like a little border at the bottom.

MR. MUDD: Oh, I got it. I see. I misunderstood. Okay, so that was sixty-one, okay. Sorry, go ahead.

ALJ: But same thing is true for sixty-two, it's another one.

MR. MUDD: I, I (inaudible).

ALJ: Okay.

MR. MCCANN: Tell us what sixty-two is, Mr. Grachek? Mr. Grachek?

MR. GRACHEK: Yes?

MR. MCCANN: Tell us what Exhibit 62 is.

MR. GRACHEK: This is, this is the same map as the previous, but this shows highlighted the pathway of sewage from the proposed development to the County/City line.

MR. MCCANN: Okay and, and where and how is the, the subject property depicted on this exhibit?

MR. GRACHEK: It's the high, it's the one that's highlighted in blue.

MR. MCCANN: No, the subject property, that is.

MR. GRACHEK: Yeah, the subject property is the, the yellow polygon.

MR. MCCANN: Right here?

MR. GRACHEK: Right there.

MR. MCCANN: Okay and then the, what is the blue highlighting?

MR. GRACHEK: The blue line is the pathway of sewage from, from that proposed development to the County line.

MR. MCCANN: Okay. So, which, which of those three interceptors does the sewage flow from the subject --

MR. GRACHEK: It's on the Jones Falls interceptor line.

MR. MCCANN: Okay, all right. I'm going to go back to, I would move this exhibit into evidence, which is Exhibit 62.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: And no, no objection here.

ALJ: Thanks.

MR. MCCANN: Okay. So, I'm going to go back to sixty-three, which I haven't moved in yet. But do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: So, does the highlighted portion in this

exhibit track the same highlighting that we just reviewed with respect to Exhibit 62?

MR. GRACHEK: Yes.

MR. MCCANN: Okay, all right. I would move Exhibit 63 into evidence.

ALJ: Mr. Mudd?

MR. MUDD: No objection. But I, I, and Michael, you can proffer this, are, are these, these exhibits, where did they come from?

MR. MCCANN: This, this is My Neighborhood and, as well as the prior two are, the prior exhibits are from My Neighborhood as well.

MR. MUDD: The RK&K exhibits are from My Neighborhood?

MR. MCCANN: Oh, I'm sorry. No, no, this one is from My Neighborhood and the R, the prior two exhibits, the, the sewer maps, both the highlighted and unhighlighted one, are from the R, RK&K reports.

MR. MUDD: Got it, okay. No objection to sixty-three.

MR. MCCANN: Yeah.

MR. MUDD: Thank you, Michael.

ALJ: Mr., Mr. Zimmerman?

MR. ZIMMERMAN: No objection. I assume RKK is Rummel, Klepper and Kahl?

MR. MCCANN: That's correct.

MR. ZIMMERMAN: All right.

MR. MCCANN: Okay, I'll move on. Exhibit 64, do you see that document, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. What is this document?

MR. GRACHEK: It basically is a, is an analysis of, of flow through service areas for the, for the (inaudible) Jones Falls interceptor, with the Johns Hopkins existing use credits.

MR. MCCANN: Okay. Is this, is this, who, whose document is this? Who created this document?

MR. GRACHEK: My understanding is that the County did.

MR. MCCANN: Okay and let's just go through it. Maybe I'll use a little bit of highlighting to sort of, you mentioned, I guess, number one at the top it says Jones Hop, Johns Hopkins existing use credits. How is it you say that this is the, an analysis for the subject property?

MR. MUDD: Your Honor, I'm going to object to, I guess, (inaudible) line of questions and just ask you to make a ruling at this point. I'm not sure that sufficient foundation has been laid through this witness as to where this document came from. He, he indicated that it's his understanding that it came from the County, but I, I'm not sure that that's the

case.

ALJ: So, could you just ask some more questions on foundation with that --

MR. MCCANN: Well, it imparted, it, it gets, it's not complicated. But the, this is a document that I received in response to a Public, Public Information Act request, specifically directed to the County's capacity analysis for this development.

So, as most attorneys do in a lot of cases, I obtained this document and gave it to my client, so he didn't contact the County and find it. But this I can, I can introduce to you the e-mail exchange the constituted the PIA request and the County's response.

But I don't, there's no dispute at all in my mind that this is what, what the County told me it is and it's very similar, as you know, Your Honor, to the very same type of chart that was introduced in Torch Hill, that was likewise provided by the County based on my request.

ALJ: Right, I, I remember that. I remember this chart and I think you actually had the e-mail where you even said that it was a Public Information Act request. So, Mr. Mudd, do you not recall this document from Torch Hill (inaudible) --

MR. MUDD: I, I don't think, I, I recall a similar one, but Torch Hill ran a different, a different (inaudible).

ALJ: Right.

MR. MUDD: I guess what I'd like, I'd like for the record to comp, be complete here, Your Honor, and I'd like, if he doesn't mind, and he can continue the examination, but I'd like to have the backup e-mails would be helpful, I think.

MR. MCCANN: Absolutely. I can absolutely have those --

ALJ: And last time, Mr. McCann, I think it was, I want to say it was in a different exhibit and you actually had it. So, I'm not sure if it's here but if you don't, you can just provide it.

MR. MCCANN: Yeah, I don't have it as an exhibit, but I have it relatively handy, so it wouldn't take me long to find it.

MR. MUDD: And then, just one other question, if I may, and I guess this is really a question of Mr. McCann, but I just want to make sure that this exhibit is unaltered from what he received from the County in its entirety.

MR. MCCANN: It is, other than the fact that I have some highlighting for the, as we'll explain, for the (inaudible).

MR. MUDD: Okay.

MR. MCCANN: Yeah, that's it.

MR. MUDD: Okay.

ALJ: So, what we, what we can do is just attach,

when you send the e-mail over, we can make it 64-A, so that it's, it's stapled to it.

MR. MCCANN: Yep.

MR. MUDD: Great. Thank, thank you both. Thank you.

ALJ: Okay.

MR. MCCANN: Yep. Okay and I will do that when we get a break, Your Honor. Okay. May I go ahead, Judge?

ALJ: Absolutely, go ahead.

MR. MCCANN: Okay. So, I wanted to, as I said, sort of go through some of the sections of this on the first heading here on the lefthand side, it says area parameters. If we scroll down, it, then it says pipe schedule. This is on the second page of this Exhibit 64. And then, sort of the next subheading is system analysis.

And this is what, for present purposes, what I wanted to focus on, Mr. Grachek. So, if you could just describe, go across from left to right and describe what these columns are and what they mean on this fourth, this fourth page of this exhibit.

MR. GRACHEK: Okay. Basically, the, the sewer surface area is, is something that's defined in the system for, you know, for, for area. It tells you then what manhole to what manhole (inaudible). So, for example, at the top, it goes from manhole 52028 to manhole 52027.

MR. MCCANN: Okay.

MR. GRACHEK: It gives the pipe length, it gives the capacity of the pipe in million gallons per day, it gives the velocity of the pipe in feet per second, it gives the diameter of the pipe in inches and it gives the flow rate through in million gallons per day and, and then it gives the velocity in million gallons a day. That, those are actual flow numbers.

And it gives the depth of the pipe and then it gives a full percent, 2013 full percent, as of 2013, this is the typical percentage full. So, for example, it would be, it would be the rate in the 2013 divided by the full pipe rate. So, in, in, in the first case, in the top row, it would be .48 divided by 1.3, which would give you 37.4%.

MR. MCCANN: Have you, I'm sorry, give me those numbers again, that --

MR. GRACHEK: So, in the first row, it would be, it would be the, the, the rate, .48.

MR. MCCANN: Okay.

MR. GRACHEK: Divided by the capacity under full pipe, which is 1.3.

MR. MCCANN: Okay.

MR. GRACHEK: It gives you the 37.4%.

MR. MCCANN: Okay, okay. And then what about, so is percent full, is that --

MR. GRACHEK: Yeah, that's, that percent full (inaudible) is the reserve capacity is the capacity in MGD

minus the rate, so you have .81 in reserve.

MR. MCCANN: Okay.

MR. GRACHEK: And then it gives an evaluation of required relief and then the, and then an assessment of what year that relief is going to be required.

MR. MCCANN: Okay.

MR. GRACHEK: That's a County issue.

MR. MCCANN: Okay. Okay and the highlighted manholes that I, that are on this exhibit, I'll remove the highlighting that I just did, but the highlighted manhole numbers, are, are those, what are those, what sewer segments are those, that is?

MR. GRACHEK: Yeah, those are, those are segments directly south of the proposed development and those are sections that show that the, that the, the percent full, the capacity is anywhere from the mid ninety percent to over a hundred percent.

MR. MCCANN: Okay.

MR. GRACHEK: And as, as a result, those are pipes that (inaudible) so that that doesn't, that, that no longer occurs.

MR. MCCANN: Okay and I know you weren't here for some of the testimony, earlier testimony, but let me show you what's already been marked and introduced as Protestant's Exhibit 13. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Is, the sewer segments identified in this memo, which is Exhibit 13, are those eight sewer segments, are those the ones highlighted on --

MR. GRACHEK: Yes, those reflect the ones highlighted.

MR. MCCANN: Okay.

ALJ: And just for the record, the same chart is in the County exhibits, I want to say County 12-A, so just so you know, because that was part of a DPC comment from DPR, so.

MR. MCCANN: Okay, all right. And then, I want to go back to sixty-three, just to make it, I guess, this is what we've already introduced as Exhibit 3, Mr. Grachek. In terms of the location of those manholes that we just looked at in Exhibit 13 already introduced, does this first page of Exhibit 63, does it have the manholes, those same manhole numbers?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Okay, thank you. Your Honor, I would move Protestant's Exhibits 64 in and --

ALJ: Mr. Mudd?

MR. MUDD: No objection, with the understanding that 64-A will follow.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Okay. I'm going to show you

Protestant's Exhibit 65. Can you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: And what is this exhibit?

MR. GRACHEK: That is the Consent Decree regarding the Jones Falls sewer shed.

MR. MCCANN: Is, have you reviewed this Consent Decree? It's a hundred and fifteen pages. Have you reviewed--

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Tell us generally speaking, it's a large document, but generally speaking, what it is and what it requires of Baltimore County, if anything?

MR. GRACHEK: This is an agreement that was, that was crafted between Baltimore County and the United States for the work to be done to eliminate SSOs from, from Baltimore County. And the, the intent of this Consent Decree was the elimination of sanitary sewer overflows via the construction of remedies to the sewer system that resolve maintenance age and over capacity issues in the, in the sewer shed.

MR. MCCANN: Okay. Sanitary sewer overflows, SSOs, I don't think we've mentioned those yet. Just describe for the record what, what is an SSO?

MR. GRACHEK: A sanitary sewer overflow is an overflow of wastewater from the sewer system that occurs when the amount of wastewater going in through the pipe is in excess of the capacity of the pipe. When that happens, the, the, the,

the pipe basically backs up, or the water in the pipe backs up, and depending on the elevation profile, (inaudible) wastewater (inaudible) escape through manholes, it can knock manhole covers off and escape into the environment.

In many other cases, it can actually backup wastewater into people's basements if the elevation of their basements or their, or their homes is below the, the line (inaudible) back up.

And so, that is sewer overflow. Overflows are caused by structural capacity. In other words, putting too much, too much, many users on one line where you have over capacity. But the more prevalent and, and the more typical overflows are those that involve rain derived infiltration inflow.

When you have a storm event, you have a lot of water leaking through a system, particularly old systems, and when that happens you have a structural over, over capacity that is, has nothing to do with what's being produced in wastewater but is the wastewater being produced plus all the water from the storm is infiltrating into the (inaudible).

MR. MCCANN: Okay. Inflow and infiltration are I&I. What is that?

MR. GRACHEK: I&I is the, is the water that during a storm event or even, even outside a storm event, that leaks into the sewer system and adds volume or flow to the sewer system. It can be from a storm event, through large structural

defects in the system. It can be from flooding, in, into the system. It can be from cracks in the system that are, that are, basically, you know, basically under the groundwater table, where you have leakage of groundwater into the system.

MR. MCCANN: Okay. Before we, I ask you a couple more questions about Exhibit 65, let me pull up Ex, Exhibit 66. Tell us what this document is.

MR. GRACHEK: That is the Complaint by the, the Federal government and the State of Maryland against Baltimore County with regard to SSOs.

MR. MCCANN: Okay. Is this the Complaint that led to the Consent Decree?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Real quick, on, on this exhibit. I want to direct your attention to page five, paragraph twenty-six of the Complaint and blow it up a little bit. Didn't do that very well. But this, does this paragraph set forth the State and the Federal government's allegation against the County --

MR. MUDD: Objection.

ALJ: Yeah, so you're testifying. Just ask him what it is.

MR. MCCANN: Okay. What is this paragraph?

MR. GRACHEK: This is the general complaint that Baltimore County discharged and continues to discharge

untreated wastewater containing raw sewage from the collection system through point sources, i.e., sources from individual points of waterways of the United, of the United States or the State and of the United States from these various areas.

MR. MCCANN: And amongst the, the various areas that are described in this paragraph, is Towson Run, Lake Roland and the Jones Falls included?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Paragraph thirty, what is this paragraph?

MR. GRACHEK: That's a synopsis that between July 1997 and the time of the Complaint, that Baltimore County discharged several million gallons of untreated wastewater from the collection system without permitted authority.

MR. MCCANN: Okay and then, paragraphs thirty-one and thirty-two mention, well, what are, what are paragraphs thirty-one and thirty-two? What are those allegations?

MR. GRACHEK: Thirty-one and thirty-two speak to the general affects of sanitary sewer overflows, which is the, the contribution of bacteria, viruses, organisms and other, other things that are, that are basically pollutants to, to natural water sources.

Talks about diseases, it talks about, you know, different, different levels of bacteria. It also talks about elevated levels of coliform bacteria in these waters.

Coliforms are an indicator constituent that is analyzed in wastewater to represent the, the likelihood that pathogenic organisms are being put in the wastewater (inaudible).

MR. MCCANN: Okay. Can you say that in simple English, that latter --

MR. MUDD: I, I'm going to, I'm going to object, Your Honor.

ALJ: Go ahead.

MR. MUDD: I mean, I, I, I, I think he's drawing conclusions from something that, frankly, contains a, a bunch of allegations and as though, as though it's fact. And I think that's what Mr. McCann is asking him to do.

MR. MCCANN: No, I'm asking, I'm sorry, go ahead, Judge.

MR. MUDD: Well, the document says what it says, I guess, is another way of --

ALJ: They say what they say. I mean, I think it's within his realm, of his credentials in terms of his expertise to discuss it. We, we certainly can read it. I think that was just kind of what it says is what the question was.

MR. ZIMMERMAN: May I say there was a Consent Decree, so I think we can infer that, that this is legitimate.

MR. MUDD: Is Mr. Zimmerman going to be allowed to make arguments on my objections --

ALJ: Right. Mr. Zimmerman, yeah, you just, this is

not your objection and Mr. Mudd made the objection here. So, I mean, Mr. McCann, we can read what it says and --

MR. MCCANN: Yeah, well, it's a, it's a process. But were these allegations, Mr. Grachek?

MR. GRACHEK: I'm sorry, could you repeat that, Michael?

MR. MCCANN: These are, these are allegations?

MR. GRACHEK: Yeah, these, these are allegations and they speak to the general effects of san, sanitary sewer overflows when they do occur.

MR. MCCANN: Okay and I guess, I hadn't asked you yet, but I was going to. Are these allegations, not as they relate to Baltimore County, but in general regarding untreated wastewater, are they consistent with your experience?

MR. GRACHEK: Yes, completely.

MR. MCCANN: All right. I would move Exhibit 66 into evidence, Your Honor.

ALJ: It should be sixty-five and sixty-six?

MR. MCCANN: Not yet, I'm going back to sixty-five.

ALJ: Okay. Sixty-six, any objection, Mr. Mudd?

MR. MUDD: No, no objection.

ALJ: Mr. --

MR. ZIMMERMAN: Yeah, clearly no objection.

ALJ: Okay.

MR. MCCANN: Okay. Going back to the Consent Decree,

sixty-five. Again, without going through or having you read various provisions, let me just ask you a couple of questions about the Consent Decree. Does the Consent Decree require the County to evaluate its sewer system for existing --

MR. MUDD: Objection.

ALJ: He hasn't finished the --

MR. MUDD: What does, what does the Consent Decree require? He's testifying. He's asking specific --

MR. MCCANN: Well, that, I'll let you, I'll let you rule, Your Honor, but I don't think that's a, a leading question at all. Does it require X, that's a yes or no question, it's not leading at all.

ALJ: Yeah, I would, yeah, I don't think that particular question is leading, so overruled. Go ahead.

MR. MCCANN: Does the Consent Decree require the County to evaluate its sewer systems for existing SSOs and capacity issues?

MR. GRACHEK: Yes.

MR. MCCANN: Does the Consent Decree require the County to evaluate its sewer system for future capacity problems?

MR. GRACHEK: Yes.

MR. MCCANN: What does the phrase, without directing you to the Consent Decree, but what is the phrase model predicted capacity mean to you? What does that mean?

MR. GRACHEK: Sewer systems can be modeled. There's, there are various modeling, modeling methodologies and softwares that can be used to, to predict what flow, what flow would be going through a system in the future. And that can be, that can be put into computer models that will, that will be able to simulate the effect on the sewer system for various (inaudible).

MR. MCCANN: Okay. Does the Consent Decree also require the County to evaluate future or model predicted capacities based on wet weather flows?

MR. GRACHEK: Yes.

MR. MCCANN: And, and, and what are wet weather flows? What are, explain what that means.

MR. GRACHEK: (inaudible).

MR. MCCANN: In, in the, I'm sorry, Mr. Grachek, just let me finish the question. What are wet weather flows in the context of model predicted capacity?

MR. GRACHEK: Yeah, in the, in the context of, wet weather flows are flows that occur during rainfall events, at, and at, after rainfall events. They're, they're an indication of leakage into the, into the system as opposed to dry weather flows, which are just the normal flows that come from the users.

MR. MCCANN: Okay. Does the Consent Decree require the County to identify corrective actions that are necessary to

correct the model predicted future capacity issues?

MR. GRACHEK: Yes.

MR. MCCANN: And, and does the Consent Decree require the County to actually perform the corrective actions that are necessary to address the model predicted capacity issues?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. In your opinion, can the County comply with the Consent Order without taking the corrective actions necessary to address model predicted capacity issues?

MR. GRACHEK: No, they, they cannot, they cannot comply with the Consent Decree's requirement to, to deal with the, the overall issues at the system without, without implementing the, the actions in the model.

MR. MCCANN: Okay. Can, does the Consent Decree require the County to determine future capacity based on projections of population?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and does the Consent Decree require the County to review future model predicted capacity based on certain storm events?

MR. GRACHEK: Yes.

MR. MUDD: (inaudible) I know we visited this before. I, I'm going to continue to object on, on the testimony being fed to the witness here. I mean, --

ALJ: I'm going to overrule it. I don't think these

questions are, you know, they're not asking about his opinion yet. They're just, he's just asking what the Consent Decree, what's his understanding of the Consent Decree says and we can all read it and we've seen it before so, overruled.

MR. MUDD: Well, I, I, and I understand your ruling, but I guess I would say he, he's not asking him what his opinion is, he's asking him if he agrees with what Mr. McCann's characterization is.

MR. MCCANN: It's, well, how am I supposed to ask a question, any question, without him agreeing to my characterization of a question?

ALJ: I just don't think this is, these, these questions are more innocuous, I mean, just go to the, you know, to the --

MR. MUDD: Okay.

ALJ: -- what's in the Consent Decree, so overrule.

MR. MUDD: Thank you, understood. May I have a continuing objection?

ALJ: Yes, thank you. You can have a continuing objection now.

MR. MUDD: Thank you.

MR. MCCANN: This is, this is the last one, but I'll repeat the question again, Mr. Grachek, just for your benefit. Does the, does the, does the Consent Decree require the County to review future capacity based on certain storm events?

MR. GRACHEK: Yes.

MR. MCCANN: And, and explain to us again, I know you mentioned it, but what are, what are storm events and what does the Consent Decree require in that regard?

MR. GRACHEK: Storm events are, are judged based on an intensity of storm and a duration of a storm. And they are, they are based on the statistical average of how often a storm would occur over a long period of time.

So, for example, if you have a, a two year, six hour event, that would be an event that's statistically, over a long, long period of time, would happen every two years or six hours. It's not saying that you couldn't have one three years in a row and then not have one for ten years, but statistically that's what it's saying.

So, so, for example, a two year, a two year, six hour event is a more common storm. A ten year, twenty-four hour storm would be something that would be uncommon, although it could happen more than, you know, it could happen two days in a row but then not happen for forty years.

MR. MCCANN: Okay. Did the County undertake the evaluation required by the Consent Decree?

MR. GRACHEK: According to the RK&K report they did the analysis according to the Consent Decree. They modeled the site, they modeled the system based on the storm events required and, and the like. So, yes, they did.

MR. MCCANN: So, you said, mentioned RK&K. Is, who is RK&K?

MR. GRACHEK: RK&K was the consultant that the City, or the County hired, excuse me, in, I believe, the late, like prior to 2010, which culminated in their, in, in the report that was submitted. Then the plan in, I believe, 2013.

MR. MCCANN: Okay. In terms of future capacity, model predicted capacity, how did, well, strike that. Have you reviewed RK&K's work product, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: How did RK&K, in terms of future model predicted capacity, go about determining what that was?

MR. GRACHEK: Well, in, in the model, they presumed certain capacitor, or certain population growth from the time they were working on the model through 2025. And they, they calibrated their model appropriate, or you know, accordingly, I should say, for that.

MR. MCCANN: Okay. So, they, did they use a model, you said?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and, and I think you mentioned this before but is, is modeling, is that a standard practice in, in your industry?

MR. GRACHEK: Yes.

MR. MCCANN: Do you agree generally with, you know,

sort of the method or approach taken by RK in terms of its modeling?

MR. GRACHEK: Yes, I do.

MR. MCCANN: Okay. All right. Your Honor, I would move sixty-five into evidence before we move on.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thanks.

MR. MCCANN: I'm going to pull up another grouping of exhibits, Your Honor, to make it go a little quicker. Okay. Okay, this is, what's been pre-marked as Exhibit 67. It's a ninety-nine-page document. What is this document, Mr. Grachek?

MR. GRACHEK: This is the sewer shed repair, replacement and rehabilitation plan for the overall Jones Falls sewer shed.

MR. MCCANN: Okay.

MR. GRACHEK: From December 2012. This is the plan that was recommended to the County for, for remedying the issues in the sewer shed.

MR. MCCANN: Okay and then I'll show you, come back to sixty-seven, but let me show you, I'm sorry. Bear with me. This would be Exhibit 68. What is Exhibit 68, Mr. Grachek?

MR. GRACHEK: This is the evaluation report back from

November of 2012.

MR. MCCANN: Okay. Are these reports, that is sixty-seven and sixty-eight, were they prepared by RK&K?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Now, this Exhibit 68, is this a part, physically a part of sixty-seven that, the SRR plan?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Did you review both the SRR plan and this long term capacity report, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. First, with respect to the SRR plan, I'll ask you sort of similar questions as I did with the con, with respect to the Consent Decree. Does this R, SRR plan, does this identify existing problems in the County sewer system?

MR. GRACHEK: Yeah, it identifies, it identifies problems in the sewer system --

MR. MCCANN: Okay.

MR. GRACHEK: -- for various storm events.

MR. MCCANN: Okay. Does this SRR plan identify future model predicted capacity issues in the system based on wet weather flows?

MR. GRACHEK: Yes, yes.

MR. MCCANN: Does the --

MR. MUDD: I'm sorry. Judge Murphy, may I just have

a continuing objection on the same line of questioning?

ALJ: Same, yeah, same as before with the Consent Decree, you have a continuing objection.

MR. MUDD: Thank you.

ALJ: Thanks.

MR. MCCANN: And does the SRRR plan lastly identify the corrective actions necessary to address those model predicted future capacity issues?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. I want to turn to first the long term capacity report, which is Exhibit 68. And I'm going to direct your attention to the executive summary, which is on page, roman numeral four. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. I want to focus in on these couple paragraphs in the summary, I guess, the third, fourth and fifth paragraphs and I'll blow it up if you need me to a little bit more. Highlight the beginning just to direct you. What are these paragraphs in this executive summary? Just tell me generally speaking what they are.

MR. GRACHEK: These, these paragraphs provide in the opinion of the, you know, the writers of the report, what are the actions that are required to be taken, depending on the intensity and duration of the storm.

MR. MCCANN: Okay. So, for instance, for the two

year, twenty-four hour design storm, tell us what the, the recommended corrective actions were by RK&K?

MR. GRACHEK: For a two year, twenty-four storm, they, they recommend rehabilitation of sixteen service areas that exhibit excessive I&I.

MR. MCCANN: Okay.

MR. GRACHEK: They also recommend adding capacity for a certain amount of the sewer system by, by upsizing pipes and for five manholes to be sealed. And they gave a, a an approx, approximate (inaudible) cost --

MR. MCCANN: Okay.

MR. GRACHEK: -- for, in 2012 dollars, for achieving that, so that the system now is operating in a manner that, that can handle a two-year, twenty-four-hour storm event.

MR. MCCANN: Okay and for the ten year, six, just sort of summarize like what the recommended corrective actions were by RK&K.

MR. GRACHEK: Yeah, they, they, they recommended, as you see, this will cascade to more remedies that need to be done, but for the ten year, six hour event, in addition to the, what, what was stated above for the two year, twenty-four hour storm, they also recommend that another over two thousand linear feet of relief sewer be constructed, six manholes sealed and an additional, at an additional cost of $10.7 million.

MR. MCCANN: Okay. You said in addition to, is that

the language here you're referring to?

MR. GRACHEK: Yeah, in addition to. So, so this, this is, this is not, it's not all inclusive. You, you, for the two year, twenty-four hour storm you had a certain amount of work, additional work to get you to the ten year, six hour storm event it is, in the next paragraph, and so on, as you move down the process.

MR. MCCANN: Okay. Thank you for that. I just wanted to ask you for the two year, twenty-four hour storm it says, it mentions increasing the diameter of the pipe you mentioned. And then for, I just highlighted that in yellow. And for the ten year, six, it says, a relief sewer be constructed. Just and, and just in technical terms, I'm not asking you in any particular context, what are, what is the difference between, what do those terms mean, increasing diameter and relief sewer?

MR. GRACHEK: You can increase capacity in its segment of a sewer system by increasing the diameter of a pipe that, that is carrying the, the, the wastewater.

MR. MCCANN: Um hm.

MR. GRACHEK: And, you know, for example, a, a four-inch pipe conveys four times as much water as a two inch pipe and so on. So, you'll have not only additional ability to convey wastewater, but you also have storage, additional storage in the event.

Sometimes you're in a situation where you need additional storage on top of what normally conveys the water. And in that light, what happens on occasion is relief sewers will be installed, they'll be parallel to the conveyance sewers.

And they basically collect SSO, what would normally be an SSO, but they'll collect it in the relief sewer or it can be drained later when the storm is over and you have other flow. There are other options too, to build the storage tanks or underground storage facilities to manage the SSOs also.

MR. MCCANN: Okay. Bear with me one second. Okay. Does the, does the long-term capacity report contain maps for each of these storms, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Share again. So, for these storms that are mentioned here, I want to show you in the same report, this is page thirty-six of forty. Is a map, I'll blow it out then blow it in. Do you see that map?

MR. GRACHEK: Yes.

MR. MCCANN: And I'll direct you to the legend. What is, what is this map, this first map I'm showing you?

MR. GRACHEK: Well, this map, if you can go to the legend, the map, this map shows you that for the two year, six hour event, the legend would be on the other side.

MR. MCCANN: Do you see it, I think it's on the

bottom right, you see it here?

MR. GRACHEK: Yeah, that, that's the header for the two year six hour event. Go to the legend on the other side.

MR. MCCANN: Oh, okay. Gotcha.

MR. GRACHEK: Yeah, that, that would show you relief sewers to be added, pipes to be upsized and, and then the possibility of engineered SSOs. You can see engineered SSOs and SSOs designed to overflow to a specific area. And you can see on this one that they're recommending that in one of these years SSOs be closed, number one thirteen. You can see that (inaudible).

MR. MCCANN: Okay.

MR. GRACHEK: And, and so, --

MR. MCCANN: So, you said, engineered SSOs. And what, what's, looking again at the legend on the bottom lefthand corner, it says manhole to be sealed.

MR. GRACHEK: Right.

MR. MCCANN: What --

MR. GRACHEK: Manholes to be sealed are typically, and in this case, and in this case, these are manholes that have overflowed over time. If you've ever seen an SSO, once you get enough pressure in a manhole, the elevation of the water in the system gets above a certain manholes it can, it can pop the manhole out of the, you know, out of its hole and the water will flow, will flow out.

One strategy is to, is to manage the SSOs with, you know, with additional capacity but at the same time seal manholes. In other words, bolt them down so they can't sur, they can't surcharge, they can't leak. Now, doing that makes, makes the SSO problem exacerbated in other areas. But if you, if you couple that with a --

MR. MCCANN: Okay.

MR. GRACHEK: -- another remedy then you're all right.

MR. MCCANN: Okay. I'm just, just sticking with the legend, keep it simple for now, I just want to ask you what these mean. It says manhole to be sealed and SSA to be rehabilitated. Are those, are those, those, are those things that have already been done or are those things that RK is recommending based on the --

MR. GRACHEK: These are things RK&K are recommending.

MR. MCCANN: Okay and then this SSO manhole, is that an existing condition or, where in this legend where it says with the yellow dot. Is that an existing condition or is that a recommended action of some sort?

MR. GRACHEK: When I read this map, I interpreted that as the existing SSO manhole.

MR. MCCANN: Okay, all right. So, let's look at the map itself. This is, for what storm again is this?

MR. GRACHEK: This is the two-year, six hour event.

MR. MCCANN: Okay. So, for, for the two year, six hour, are there any and maybe first focusing in on the sewer lines that would be served by the subject, from the subject property, are there any either existing SSOs or recommended corrective actions?

MR. GRACHEK: There are two, it looks like there are two structural SSOs, that, that are to be closed. But I don't see any of the red, or the yellow, which would be SSOs and manholes.

MR. MCCANN: Well, I'm just directing you to the sewer path to the subject site.

MR. GRACHEK: Yeah, in our pathway, no.

MR. MCCANN: Okay and just --

MR. GRACHEK: In our pathway, no.

MR. MCCANN: Okay and I don't want to belabor this, I think the Judge recognizes this. But where, where, where on this map is the subject property again?

MR. GRACHEK: The property is up in the, in the west, on the west side of BC-05, north west side of BC-05.

MR. MCCANN: Right here?

MR. GRACHEK: Yep.

MR. MCCANN: Okay, all right. Let's go to the next map in the same Exhibit 68, which is, I'll direct you to the legend on the right. And what, what map is this?

MR. GRACHEK: Yeah, this is as you ramp up to a two

year, not six hour but twenty-four hour event.

MR. MCCANN: Okay.

MR. GRACHEK: And as you can see, there's a, there's a few changes that come into play. You have, you have in certain areas, you'll have manholes that are overflowing, you can see that. Now, in our, on our line in particularly though, what you see is an upsizing of a sewer pipe (inaudible) BC-22.

MR. MCCANN: Okay. They're just, give me a second. Is this where you're talking about right here?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and that is, that is a pink line. What does the pink line represent according to the legend on the bottom left?

MR. GRACHEK: Yeah, the, the pink line is, is the need for a, a relief, well, the red line is a relief sewer but the, the pink line would be pipes to be upsized.

MR. MCCANN: Okay. To it says eighteen inches. Okay and then, and is that particular upsized pipe, is that in the, the flow path of sewage from the subject property?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and then just to zoom in a little bit more. This yellow dot sort of above that, it says 44219, do you see that?

MR. GRACHEK: That is a predicted manhole overflow.

MR. MCCANN: Okay.

MR. GRACHEK: Based on that storm event.

MR. MCCANN: Okay, all right. Aside from those two things, anything else in the, the path of sewage from the subject property?

MR. GRACHEK: No.

MR. MCCANN: Okay. What about this yellow area up in the upper righthand corner of the Jones Falls? I can go to the legend, but what is that yellow area?

MR. GRACHEK: This is a, this is an area that the County chose to rehab for --

MR. MCCANN: I'm just asking about the map for now. What is this map telling us?

MR. GRACHEK: Oh, that just this area, it says that, an area to be rehabbed.

MR. MCCANN: So, RK&K was recommending rehabilitation to that area?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. How does that area and the sewage from that area, how does it relate, if at all, to the Jones Falls interceptor?

MR. GRACHEK: The only way that it would relate would be if you had excess flows going from the Rolling Run interceptor that would cause a backup into the Towson Run interceptor. In these storm events, it looks like we don't have an issue for the storm event.

MR. MCCANN: Let me ask it this way. So, again, this, this green line here that comes out of the yellow area, what, what interceptor is that?

MR. GRACHEK: Roland Run.

MR. MCCANN: Okay. Does any of the sewage, based on this map, and based on your understanding, does any of the, the sewage from this yellow area up in the righthand corner, does any of that flow in the Jones Falls intersection, interceptor?

MR. GRACHEK: No.

MR. MCCANN: Okay, bear with me one sec. Just one more thing about this report and then we'll move on. I'm, I'm sorry. I wanted to go back to the next map. And this, again, is in the long term capacity report, which is Exhibit 68. And this would be page thirty-eight of that exhibit. This map, according to the legend on the right, what is, what is this map, what storm event is this map?

MR. GRACHEK: It's the same as the other maps except this is for a ten year, six hour event.

MR. MCCANN: Okay.

MR. GRACHEK: In other words, a storm that was just statistically happening every ten years for a six-hour duration.

MR. MCCANN: Okay and then with respect, as it relates to this development, and the sewage path from this development, were there any additional recommended corrective

actions by RK&K?

MR. GRACHEK: It's the same, generally the same upgrade, but you can see that there are a few orange circles that show, that show some overflows. I think that was the, the, if you go back to the legend.

MR. MCCANN: Yeah.

MR. GRACHEK: That would show manholes to be sealed.

MR. MCCANN: Okay. You're talking about the brown circles?

MR. GRACHEK: Yeah, the brown circles.

MR. MCCANN: Okay.

MR. GRACHEK: That are underneath of the rehabbed area.

MR. MCCANN: Okay and then lastly, one more map. This is the next page, page thirty-nine of Exhibit 68. What is, what is this map? What storm event is this map?

MR. GRACHEK: This is for the ten year, twenty-four hour event. In other words, the same as the last except instead of the duration being six hours, it's a twenty-four hour event.

MR. MCCANN: Okay and does this map show any additional, either sanitary sewer overflows, relief sewers or upsizing --

MR. GRACHEK: Yeah, (inaudible) --

MR. MCCANN: Yeah, go ahead, I'm sorry.

MR. GRACHEK: This shows a dramatic change in the Towson Run interceptor system as the line that goes, and, and a dramatic change in the, what happens at Lake Roland --

MR. MCCANN: Tow, you said Towson Run, did you mean to say Towson Run?

MR. GRACHEK: I, I'm sorry, not Towson Run, Jones Falls, excuse me. For the Jones Falls. It's a dramatic change in the Jones Falls area and for Lake Roland and south of Lake Roland.

MR. MCCANN: So, this is --

MR. GRACHEK: In other words, this is, this is kind of the breaking point to where you start having some really serious over capacity issues throughout the entire system. Not that the other ones weren't serious, but this is particularly serious.

MR. MCCANN: Okay, all right. Let me go back to the report itself. So, this is page sixteen of the exhibit. It's page ten of the report, again, Exhibit 68. And this, this section is entitled model predicted corrective action summary, two year, twenty-four hour design storm event, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Just want to focus in on just one paragraph here. And, and I'll read it to you real quick and then you tell me what you think it means.

Except for the overflow at manhole 4429, the model

predicted overflows in BC02, BC03, BC07 and BC11 listed in Table 5.1 could be eliminated by simulating the rehabilitation of the wastewater collection system within four flow meter basins identified as existing, as exhibiting, I'm sorry, excessive I&I. The meter basins identified as exhibiting excessive I/I that have been simulated with rehabilitation are BC02, 03, 04 and 09. And then there's the last sentence about the cost.

Tell, tell me. Put that in plain English for us, if you would.

MR. GRACHEK: What they're, what they are, essentially, saying is they can, they can eliminate within certain meter basins, they can, they can eliminate SSOs within that area but it, it does not address the other areas. It simply is a reflection of what would happen in that area.

MR. MCCANN: Okay and those areas, BC02, 03, 04, 09, just getting back to this map on, in the same exhibit, is, that's the yellow areas in these maps?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and how does this paragraph, what, what, what does it say with respect to how those meter basins could be improved? What, what type of work?

MR. GRACHEK: It could be, it could be replacing pipes, it could be relief sewers, it could be other storage. More likely replacing, rehabbing old pipelines.

MR. MCCANN: Well, it says rehab, and I'm asking, that's what I'm, that's what I'm, I guess what I'm focusing in on, that says by simulating the rehabilitation. What does that word mean to you in the context of this report?

MR. GRACHEK: Typically, re, rehabilitation has to do with, with lining pipes that are leaking.

MR. MCCANN: Okay. This, this language at the beginning, except for the overflow at manhole 4429, what manhole is that? Is that reflected in, I'll go back to the appropriate map, which is the two twenty-four. Is, what manhole is 44219?

MR. GRACHEK: I, I, I do not recall which manhole that is.

MR. MCCANN: Okay. Is 44219 reflected on this map?

MR. GRACHEK: I can see it now, yes. It's, it's the one in the middle of BC-22, the yellow dot.

MR. MCCANN: Okay, all right. And let me just go to the next page of the same, very same report. I'll highlight this next paragraph and I'll just read it to you again.

To eliminate the model predicted overflow at MH 44219, it is recommended to increase the sewer size of five sewer segments in meter basin BC22 from ten inches to eight inches in diameter, totaling one thousand three hundred seventy-seven linear feet. Tell us what that means in plain English, if you could.

MR. GRACHEK: All right. It just means that you can eliminate, eliminate that problem with the, that manhole and with surcharging in that area if you upsize those pipes from ten inches to eighteen inches.

MR. MCCANN: Okay and the upsize pipes that that paragraph is referring to, is that reflected in this map, which --

MR. GRACHEK: Yeah, it's the, it's the line, it's the, I guess we'd call it purple line at BC-22.

MR. MCCANN: Right here?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Okay. Okay. With respect to that pipe that's the pink, what I think is a pink line actually on these maps, on the RK&K long term capacity report, was that, was that pipe, has the County upsized that pipe, to your knowledge?

MR. GRACHEK: Not to my knowledge.

MR. MCCANN: Okay and I want to turn back to Exhibit 64. This is Exhibit 64. Would this chart tell us whether or not that pipe had been upsized from a ten inch to an eighteen inch?

MR. GRACHEK: You'd have to go, go to the volume. You have the pipe schedule and then down to the volume, system analysis.

MR. MCCANN: Does this chart reflect the size of the

pipes?

MR. GRACHEK: I'd have to look --

MR. MCCANN: I'm just scrolling --

MR. GRACHEK: (inaudible).

MR. MCCANN: I, yeah, tell me if I'm going too fast.

MR. GRACHEK: Yeah, yeah, it's going pretty quick.

MR. MCCANN: Okay. Well, I'll move on.

MR. GRACHEK: I cannot see it on this, on this line by line.

ALJ: So, if you could just go past the yellow boxes, I'd like the (inaudible) 44219.

MR. GRACHEK: Yeah.

ALJ: It's right below it, the yellow box.

MR. GRACHEK: Yeah.

ALJ: If you could, right there. Stop right there.

MR. GRACHEK: Yeah.

ALJ: And see where it is, 44219?

MR. GRACHEK: Right.

ALJ: See, see where it is, Mr., Mr. McCann?

MR. MCCANN: Yes, right --

ALJ: 44219, is that what you're asking for?

MR. MCCANN: Yes, yeah.

MR. GRACHEK: Yeah.

ALJ: Okay. Is that what you're looking for?

MR. GRACHEK: Yeah, now I can see it.

ALJ: So, what was the question again about that? What was the answer to it? Does it tell you to, that the pipe was upgraded from ten inch to eighteen, does --

MR. GRACHEK: Yeah, --

MR. MCCANN: Referring, referring to this column that says d-i-a period, i-n period. Does, is that, what is that column?

MR. GRACHEK: That's the diameter pipe and if you go down and look at the pipe in those areas, it still says ten inches.

MR. MCCANN: Okay, okay.

MR. GRACHEK: I'm sorry (inaudible).

MR. MCCANN: I was scrolling too fast, I couldn't recall where it was, but thank you. Thank you, Judge. Okay. So, before I forget, I would move both the SRR plan, which is Exhibit 67, as well as the long term capacity report, which is separately marked as Exhibit 68 into evidence.

ALJ: Any objection --

MR. MUDD: No objection.

ALJ: Okay, thank you. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Okay. All right. Next exhibit, which is Exhibit 69, you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. It's entitled comparison of sewer capacities, sewer pipe capacities, Greenspring Manor site to City line, RKK versus DPW. Tell, tell us what that means and what this document is.

MR. GRACHEK: This is comparison of pipes from the, some from the RK&K report, some were not able to be determined because RK&K limited their, their evaluation pipes to twelve in, or ten inches or less.

And so, it, it gives the wet weather capacity of the pipe or the, the evaluation of wet weather capacity for a two year, six hour event, two year, twenty-four hour event, a ten year, six hour event, and then a ten year, twenty-four hour event, and then a twenty year, twenty-four hour event.

MR. MCCANN: Okay.

MR. GRACHEK: And basically, shows the, the percent of capacity utilized in every one of these storm events for the pipeline from the development property down to the, you know, the Lake Roland area of the County line. And as you, as you can see from this, even, even in the two year, six hour event, as you move down through the system, you start getting at capacities that are considerably over a hundred percent. And then it just, it gets worse as you have more intense storms.

MR. MCCANN: Okay, all right. Let me back up because there's a lot of information on here. Just left to right, tell us what the columns are.

MR. GRACHEK: Okay. It's the upstream manhole, downstream manhole, the pipe diameter in that segment between--

MR. MCCANN: Well, tell us as you, as you say that, just tell us what column it is, like column number one.

MR. GRACHEK: Okay. Column A is the upstream manhole.

MR. MCCANN: Yeah.

MR. GRACHEK: Column B is the downstream manhole. The pipe diameter is the diameter of the pipe, and that's the inner diameter of the pipe at the segment that, of question. And this is a, and then the next line is a system analysis of, of where we're at as far as percentage capacity. And as I said, this was done by DPW because RK&K didn't do pipes that small. And you can see that every one of them is from ninety-four to over a hundred percent capacity.

MR. MCCANN: Well, let me stop you there, let me stop you there. It says DPW system analysis for Greenspring Manor, this, this, so the green column, that what I'm talking about now, where, where are those, where are those numbers derived from?

MR. GRACHEK: They're, they are numbers that are, that are, were provided by the County.

MR. MCCANN: Okay. So, the previous exhibit we just looked at --

MR. GRACHEK: Yes.

MR. MCCANN: -- one second. Exhibit 64, this, this, this exhibit.

MR. GRACHEK: Right. (inaudible) pipe schedule and the sewer capacity. And you can see the, if you move to the right, the 94.3, all, all these are highlighted to a hundred, over a hundred in the percent full range --

MR. MCCANN: This column, okay.

MR. GRACHEK: Yeah, that's reflected on that other diagram.

MR. MCCANN: Okay. So, that's what that column is and what other Columns E, F, G, H, I, what are those, where, where are they from? Where are they from, the data?

MR. GRACHEK: Yeah, the, the green column is a dry weather assessment. The, the other columns are an evaluation of the, of the system under wet weather conditions that was predicated from the RK&K report.

MR. MCCANN: Okay.

MR. GRACHEK: And as you see the, you know, it's, it's, you know, (inaudible) as you move to higher system numbers that, you know, or higher storm numbers, you're going to end up with, with, you know, over capacities.

MR. MCCANN: Okay. So, the, for these columns, the RK&K columns is what I'll call them, --

MR. GRACHEK: Right.

MR. MCCANN: -- what does it mean when it says RK&K

did not determine, County says inadequate capacity? What does that, what does that mean?

MR. GRACHEK: Well, the County did their own evaluation because RK&K didn't do an evaluation on eight-inch pipes.

MR. MCCANN: Okay and when you say the County did an evaluation, what are you referring to?

MR. GRACHEK: That evaluation that, that, that resulted in the, what they provided us.

MR. MCCANN: Okay.

MR. GRACHEK: In that previous exhibit.

MR. MCCANN: Okay, --

ALJ: Is that Protestant's sixty-four?

MR. MCCANN: This one, Mr. Grachek?

MR. GRACHEK: Yes.

ALJ: Okay.

MR. MCCANN: Do these, the yellow highlighted areas on this Exhibit 64, do they correspond to, I lost it. Do they correspond to these pipes here, these first eight pipes, Mr. Grachek?

MR. GRACHEK: Yes, yes. I'm sorry.

MR. MCCANN: Okay.

MR. GRACHEK: I thought you were talking to the Judge, I apologize.

MR. MCCANN: Yeah, I'm going to, I got to move closer

to the speaker. Okay and then why, why the blue highlighting for the, in the RK&K columns?

MR. GRACHEK: Well, I mean, the, all those numbers show pipe capacities that are over a hundred percent and so they're highlighted in blue. As you see the, the, you see a little bit of, as I just explained, that the RK&K report did an analysis.

The City, or the County, excuse me, did an alternative analysis. Their numbers are all close. But they, but they didn't do it for wet weather flow. And so it shows (inaudible) the red numbers are the ones the pipes are supposed to be upsized.

MR. MCCANN: Okay.

MR. GRACHEK: And then anything in blue is what, is over a hundred percent capacity.

MR. MCCANN: Okay, a couple things. You said over a hundred. Here's a ninety-two that's in blue, here's a ninety-seven that's in blue.

MR. GRACHEK: I'm sorry, I will (inaudible). The sewer manual and general practice dictates that a, a main trunk line should never be over ninety percent full. And so, it's a, excuse me, it's not over a hundred percent, it's the ones over ninety percent.

MR. MCCANN: Okay. So, that's the blue. And what's the red highlight?

MR. GRACHEK: The red are just highlighted because those are the ones that are scheduled to be upsized but they're, they still, the RK&K report is evaluating them as if they were ten still. But they're shown to be upsized. So, they're over capacity. We don't have (inaudible) to determine whether that (inaudible) capacity issue.

MR. MCCANN: Okay. So, the red, is this red, are these red segments, where it says upsize, is that the, the, the upsize pipe that we just looked at in the, in the map?

MR. GRACHEK: Yep, that's the, the purple segment.

MR. MCCANN: Pink, pink or purple, whatever color that may be?

MR. GRACHEK: Yeah, whatever you want to call the color.

MR. MCCANN: Okay. Then you mentioned, I think in comparing the green DPW numbers to the RKK numbers, you, you said that the RK&K is wet weather and the County is dry weather, is that correct?

MR. GRACHEK: That's correct.

MR. MCCANN: Okay. Bear with me one second. In, in your opinion and, and based on your experience, Mr. Grachek, it is, is it appropriate or consistent with industry standards to determine capacity based on dry weather flow?

MR. GRACHEK: No.

MR. MCCANN: Why not?

MR. GRACHEK: Capacity needs to be determined by wet weather flow because it's wet weather flow that typically determines when you have over capacity in the system. And so, it has to be run based on wet weather flow. If you design all your treatment systems to be at either ninety percent capacity or, or in, in other lines, possibly eighty percent capacity, but if you designed everything to be ninety percent capacity, as the system ages, you would have SSOs happen everywhere.

MR. MCCANN: Okay. Have you ever been involved, ever, in the design or evaluation of a sewer system where dry weather flow is used to either design or determine capacity?

MR. GRACHEK: No.

MR. MCCANN: Okay. These RK&K numbers, I'm going to show you another exhibit, Exhibit 72, which is a hundred and fourteen page document. What are, what are these pages?

MR. GRACHEK: This shows for upstream and downstream manhole segments throughout the sewer shed. It gives the pipe diam, it gives the, the manhole numbers for the, defining the segment, pipe diameter, the capacity, the manhole depth, the simulated peak depth and the, the capacity, what percent capacity is used, the remaining capacity and the surcharge depth. That basically tells you the depth of surcharge.

MR. MCCANN: Okay.

MR. GRACHEK: And what you're seeing here is, is I would focus on capacity use, that a large number of pipes are

way over capacity.

MR. MCCANN: Yeah, so these, these charts, there's a hundred and fourteen pages, are these from the long term capacity report?

MR. GRACHEK: Yes.

MR. MCCANN: Okay, all right. Your Honor, I would move Exhibit 69 into evidence, which is the chart, the Excel chart that we just looked at.

ALJ: And just for the record, to be clear, sixty-nine, Mr. Grachek, you created that document, right?

MR. GRACHEK: No, I did not create that document.

ALJ: Well, where did it, where did it, I mean, you, we went through where some of the numbers came from, then where, where did the whole thing come from?

MR. MCCANN: What, go ahead, Mr. Grachek.

MR. GRACHEK: The document was created by one of the, one of the people that we work with in the, on the case, basically, but it was not by me personally.

ALJ: Okay, all right. So, but, but you used it in determining, you know, the information you just gave us?

MR. GRACHEK: Yes, ma'am. I used it to, I used it to determine, to, to basically pull a lot of data together, to the relevant data that we needed to do the evaluation for this, for this line.

ALJ: Okay. But you didn't actually input the

numbers, somebody else gave you the chart and you told them what you wanted, is that, is that how it worked?

MR. GRACHEK: That's correct.

ALJ: Okay, all right. So, any objection to sixty-nine? Is that the only exhibit you're putting in now, Mr. McCann?

MR. MCCANN: Sixty-nine and seventy-two, which were the tables, the hundred and some pages tables.

ALJ: Yeah. Any objection, Mr. Mudd?

MR. MUDD: I objection to sixty-nine for really, for the reasons you just explored, Your Honor. I'm not sure that we know, I mean, I know Mr. McCann explained where some of the numbers came from, but no one, this witness certainly did not input them and we're not sure the accuracy of them either.

ALJ: Well, he, he testified that he, he requested the numbers be inputted and, I guess, presented to him this way and that he used it in his evaluation. So, he went through some of them. And you can always go through them on cross if you, if you want to where the rest of the numbers came from.

So, I mean, he's allowed to put in, you know, charts and summaries, you know, in terms of the basis for his, I guess, ultimate opinion. So, sixty-nine will be admitted. And seventy-two, any objection? That's the, from the long term capacity report --

MR. MUDD: Yeah, no objection to seventy-two.

ALJ: And Mr. Zimmerman?

MR. ZIMMERMAN: (inaudible) I say I have no objection. Of course, experts are allowed to rely on staff and other sources, just as some of the Developer's experts had staff and other people working. So, no objection.

ALJ: Okay.

MR. MCCANN: Okay, let's move on. I guess one more question before we do that. This, just so we're clear, the exhibit that we were just talking about, Mr. Grachek, sixty-nine. Did the numbers from this exhibit come from anywhere other than the County capacity charts, sixty-four, and secondly, the RK&K future pipe capacities? Is that where, did they come from anywhere else or are those the only two?

MR. GRACHEK: My understanding is that those are the only two (inaudible).

MR. MCCANN: Okay.

MR. MUDD: I, I know I declared a second ago I had no objection to seventy-two. I, I'm trying to understand where seventy-two comes from.

ALJ: The long-term capacity report. I think it was an appendix or an exhibit to that.

MR. MUDD: It's, so it's from the long term capacity report?

MR. MCCANN: Yes.

MR. MUDD: Okay. Okay, no objection.

ALJ: Okay.

MR. MCCANN: Okay, moving on to, one second. Let me show you Exhibit 70, Mr. Grachek. Do you see that document?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. It is, again, a long document, seventy-three pages. I want to direct you to page, at the bottom, 6-27. To the section, well, what, first of all, I should ask you what is this document? I'll go up to the top. What is it?

MR. GRACHEK: This is the County's design manual for wastewater collection and pumping systems.

MR. MCCANN: Okay. Page 6-27, have you reviewed this manual and this section in particular, C, hydraulic --

MR. GRACHEK: Yes.

MR. MCCANN: Okay, let me just have, refer you to this language. And I'll, why don't you take a moment and read it if you're, are you familiar with it, first of all?

MR. GRACHEK: I'm familiar with it.

MR. MCCANN: Okay. Rather than me read it, why don't you just take a moment to refresh your memory of it and just tell us what, what it, what it says.

MR. GRACHEK: Yeah, I've read this in detail several times. This tells, it, it basically says that flows in a sewer pipe above ninety to ninety-five percent are unstable because they can cause sudden loss of carrying capacity and surcharging

events.

And that's because once you get above ninety, ninety, ninety-five percent, you start getting the, the, the amount (inaudible) or pressure loss throughout the pipe (inaudible) off the charts and (inaudible).

And so, as a result of that, and because of the need to (inaudible), these sewer pipes are, are, they convey materials that, that have constituents that, that are, that can (inaudible) for example, hydrogen sulfide is a common, a common material in, in wastewater, a common chemical in wastewater. Hydrogen sulfide degrades to sulfuric acid, it degrades pipes which causes pipes to eventually corrode and, and causes I&I.

So, the guidelines are, for trunk and interceptor sewers, they are designed to never flow at depths exceeding ninety percent. For laterals and sewer mains, eighty percent. And for the actual connections to buildings never more than seventy percent. And, and that's for all, all flow scenarios.

MR. MCCANN: Okay. Just a couple questions about some of the language here. First of all, it refers to sudden loss of carrying capacity. What is carrying capacity and what is surcharging?

MR. GRACHEK: Carrying capacity is the capacity of the, of the system to be able to carry the volume of water or convey the volume of water. And what happens is you'll have, you'll have a stable flow of water as, you know, all the way

from, from very little flow all the way up to anywhere depending on the size of the pipe, anywhere from seventy to ninety percent.

But when you get above ninety percent, you start losing, you start losing the ability for the water to flow because the, you end up with, with massive pressure losses because you filled up the pipe and now the pipe is, the pipe is, is basically being pushed back, or the flow is being pushed back through the system. And so, the only, the only thing that could happen is that (inaudible) surcharges or it basically flows out of the manholes.

MR. MCCANN: Okay. So, and then the language you just referred to, ninety percent for trunk and interceptor sewers, I think we've, we've already described what those are versus laterals and mains. The, the, the sewer lines that would receive sewage from the subject site, are they trunk lines, interceptors, laterals, main sewers, what are they?

MR. GRACHEK: It's a definition to be given depending on size and all that, but in, in this case, what would be considered a trunk line would be the main lines that accept, that accept water from the areas, basically, the Jones, the Jones Falls, the Rolling Run or the Towson Run.

Interceptors would be considered trunk lines. Certainly, the Lake Roland and downstream would be considered trunk line. Interceptors are pipe that come from, for example,

a subdivision or a business area that, that feed into the trunk lines.

MR. MCCANN: Okay.

MR. GRACHEK: And then, the, the building connections are the pipes that come directly from the buildings to the laterals.

MR. MCCANN: Okay. Next sentence says regardless of flow and depth, the minimum sizes to be used are six inch for building connections and eight inch for all other sewers.

MR. GRACHEK: What that means is, according to the County's, the County's manual, that, that they, they will not allow a, a four inch or, you know, a, or a two inch pipe for sewage.

MR. MCCANN: Okay. The ninety percent, is that consistent with your experience in the industry?

MR. GRACHEK: Yeah, that, that's consistent with industry. It's also consistent with (inaudible) standards.

MR. MCCANN: Okay and is the, is this ninety percent, based on your reading of this manual, is that dry weather or peak flow?

MR. GRACHEK: That is, that is to be considered for the most, it's more or less for peak flow, it's for peak flow dry weather but it's also for flow from various storm events. In other words, the pipe, no matter what the scenario, be it peak flow, average flow or peak flow and average flow augmented

by, by infiltration inflow from a storm event, you should never have above ninety percent in the trunk lines, or eight or seventy for the other lines appropriately.

MR. MCCANN: For wet weather conditions?

MR. GRACHEK: Yeah, for, for wet weather too.

MR. MCCANN: Okay and is that threshold, is that, in addition to being consistent with your experience in the industry, is that also consistent with sanitary, is it or is it not consistent with sanitary engineering principles?

MR. GRACHEK: Absolutely.

MR. MCCANN: Okay. Okay. I would move this Exhibit 70 into evidence.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No, no objection.

ALJ: Thank you.

MR. MCCANN: I'm going to grab a couple more exhibits here, Your Honor, and move on. Mr. Grachek, what, what do you know, based on your review of things, about the size of the interceptor that runs under Lake Roland? What do you know, and what do you know about the interceptor in terms of its condition?

MR. GRACHEK: I know that it, it's a forty-two inch pipe, reinforced concrete pipe. It was installed, I believe,

in the forties or fifties, but I can't, I, I, I don't quite recall then. And it was installed underneath Lake Roland. It's right down the middle of Lake Roland. And so, it's got soil over the top of it, the bottom of Lake Roland and then water over the top of it. It's basically built at the low point of the sewer shed.

MR. MCCANN: Okay. I'm pulling up some exhibits, bear with me one second. Okay. Let me show you, this would be Exhibit 71. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: What is that?

MR. GRACHEK: That is the, one of the manholes along the northwest side of Lake Roland, in the Lake Roland interceptor. And, as you can see, the, this picture was taken a number of years ago. I, I believe it was 2009, or '19 it was taken.

MR. MCCANN: Okay.

MR. GRACHEK: And, and it shows the, the, it shows the cover dislodged from the manhole indicating the likelihood that there was a sanitary sewer overflow that popped the lid off.

MR. MCCANN: Okay and do you recall, know what manhole number this is offhand?

MR. GRACHEK: (inaudible) 6888 but I'm not sure about that.

MR. MCCANN: Okay. If I showed you a map, would you be able to identify where, where it's located?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Bear with me one second. I'll just pull up this map which we've looked at already. This is Exhibit 62. Sorry, I should have had this handy. So, this is, again, the colored version of this map. But tell me where that manhole approximately is located?

MR. GRACHEK: If you, if you zoom in, zoom in the Lake Roland area.

MR. MCCANN: Yeah.

MR. GRACHEK: It's, it's at the juncture, junction of the, of the Jones Falls, the Towson Run and Roland Run interceptors.

MR. MCCANN: Okay. So, approximately to the left of where it's --

MR. GRACHEK: Approximately right where, where your cursor is.

MR. MCCANN: Okay.

MR. GRACHEK: Right there, right there.

MR. MCCANN: Right here, okay. And you said it was taken a couple years ago. What, what about the photograph, going back to it, strikes you as significant, if anything?

MR. GRACHEK: Well, the significant, the significant thing is other than its condition, it looks like it has been

maintained at that time. The, the manhole cover has popped off, which means that unless somebody decided to come up and pop the manhole cover off, that it most likely is a result of an SSO. So, you had, you had sewage backing up to an elevation throughout the system that was high enough to pop the manhole cover off a manhole that sits several feet above the water line of Lake Roland.

MR. MCCANN: Yeah, how high is this off the ground, do you know, approximately, do you recall?

MR. GRACHEK: Three feet, three to four feet.

MR. MCCANN: Okay. You, were you, did you take the picture or were you present when it was taken?

MR. GRACHEK: I was present when the picture was taken. I, I'm, I'm recalling maybe three to four feet.

MR. MCCANN: Okay, all right. And the next photographs in this exhibit also part, this is also, has a sticker from a prior case on it. But, have you looked at these photographs?

MR. GRACHEK: Yes, I have. This is, these are photos that were taken later on. But it looks like from the, if you go down to the, to the one where it shows the date.

MR. MCCANN: Yeah.

MR. GRACHEK: The next one down. That in 2020, in February of 2020, the County went out and put, this is what is called a sealed manhole.

MR. MCCANN: Okay.

MR. GRACHEK: So, it's bolted down so now it can't, it can't pop off.

MR. MCCANN: Okay and is this the same manhole that we just looked at in, in the photograph that you were present for?

MR. GRACHEK: I was not present for this one, but it does look like the same manhole, based on the background.

MR. MCCANN: Okay and what, what, if any, significance is there to, to the, this, the fact that the County sealed it? What, what do you make of that?

MR. GRACHEK: They, normally, you will seal a manhole so it doesn't, it doesn't surcharge anymore. But it has to be done with complimentary work done in the, normally, to complimentary work done to increase capacity so that, so that you don't just exacerbate the problem by forcing the problem upstream. And, you know, I, I, I can see that this is a sealed manhole. But I don't have anything to base whether they've done anything else to compensate for that.

MR. MCCANN: Okay, okay. I would move Exhibit 71 into evidence.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No, no objection. You said A and B?

ALJ: They were just stapled as seventy-one.

MR. MCCANN: Yeah, they're just, they're just seventy-one collectively. Seventy-two, which is on the screen now, tell us what this document is, Mr. Grachek.

MR. GRACHEK: Okay. This is the, this is a document that New Fields, our company prepared, one of my people prepared. And basically just documents for all these segments of the, the Jones Falls interceptor meeting up to Lake Roland.

And so, this is, this is on the line of, of the subject property. That from the RK&K report, these are the percent capacities of the system for every storm event. And this is taken from the data from the RK&K report. And we, we produced this one.

MR. MCCANN: Okay and --

MR. GRACHEK: And, and I looked at that, I, I compared it to the tables and verified that the data is accurate.

MR. MCCANN: Okay. So, this is, was this an exhibit introduced in the Blue Stone case that we referred to?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and this line that's referenced, is that the Jones Falls?

MR. GRACHEK: Yes.

MR. MCCANN: Where on this exhibit would be the, for, for instance, the manhole, 6888, that we just looked at in the

photographs, which were Exhibit 71?

MR. GRACHEK: It would be in the area of the, of the green dot that is directly, directly north of Lake Roland.

MR. MCCANN: So, where it turns, right here?

MR. GRACHEK: That one.

MR. MCCANN: Okay, all right. And does this, I think, I think you said this is the Jones Falls interceptor, correct?

MR. GRACHEK: Yes.

MR. MCCANN: And would sewage from the subject property go through this interceptor to, to get to Lake Roland?

MR. GRACHEK: Yes.

MR. MCCANN: Okay, all right. I would move this into evidence. This is Exhibit, again it's Exhibit --

ALJ: Seventy-three, actually.

MR. MCCANN: -- 73, yep.

ALJ: Yeah. Any objection, Mr. Mudd?

MR. MUDD: I, no, no objection, I think I can handle it on cross examination.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thanks.

MR. ZIMMERMAN: And this is seventy-three, yeah.

ALJ: Yes.

MR. ZIMMERMAN: Okay.

MR. MCCANN: Okay. Next exhibit would be seventy-seven. Do you see that, Mr. Grachek? Mr. Grachek, do you see this exhibit?

MR. GRACHEK: Yes, I see, I see that.

MR. MCCANN: Okay. I know it's very small. It's twenty-two pages and I'll blow it up a little bit. Tell us what this is and where it came from.

MR. GRACHEK: This is from the SRRR, this is an evaluation of defects at, in sewer segments for, throughout the, throughout the sewer shed.

MR. MCCANN: Okay. I'm going to refer you to the manhole that we were just discussing. It's not coming up. There it is, okay. So, this is on page, the last page of this exhibit, where it says sewer i.d. 6888 to 6887, upstream MH 6888, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and just, what does this information tell us?

MR. GRACHEK: It tells us there is a large number of sewer defects. And if you move over to the table, or to, move over on the other side of the table, it defines what those sewer defects are. It was, it was mostly defective by (inaudible) lining of the pipe. In other words, in other words, the pipe needs to be relined.

MR. MCCANN: Okay. You're referring to this column

here where it says defective pipe?

MR. GRACHEK: Yeah, yeah.

MR. MCCANN: Okay.

MR. GRACHEK: Basically, it shows that many defects in a fairly short segment of pipe.

MR. MCCANN: Okay and this, this, we talked about the manhole 6888. What, 6888 to 6887, what is, is that the segment --

MR. GRACHEK: That's the segment.

MR. MCCANN: Okay and how many total, total defects are there in that segment according to this report?

MR. GRACHEK: Yeah, it says five hundred and forty-one total defects.

MR. MCCANN: Okay and then, okay. I would move this exhibit into evidence. Again, this is Exhibit 77.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Okay. Mr. Grachek, can SSOs pose a health risk?

MR. GRACHEK: Yes.

MR. MCCANN: Explain what you mean, how it can, how that can happen?

MR. GRACHEK: They, when, when SSOs occur, it's

basically pouring, pouring raw wastewater or diluted wastewater with I&I over the ground. It can contaminate soil, it can contaminate receiving streams with pathogens and the like. And it can cause situations where, where receiving streams and areas are not usable because of dangers of pathogenic contamination.

MR. MCCANN: Okay. Bear with me one second. I'm going to show you what's been marked as Protestant's Exhibit 75. Do you see that document?

MR. GRACHEK: Yes.

MR. MCCANN: What is Exhibit 75? It's thirty pages, for the record.

MR. GRACHEK: This, this document is sampling results for e. coli plate counts and for results from the e. coli analysis showing the geometric mean of the samples in the area. And I believe the standard, standard for the area is a hundred and twenty-six and, for the geometric mean of chloroform, or e. coli counts.

MR. MCCANN: Okay. So, I guess maybe for the record, just describe how this exhibit is organized or --

MR. GRACHEK: Yeah, it, it shows for various sampling events what the, what the numbers are. There, there are certain cases where the geometric mean of the chloroform, or the e. coli exceeded the one twenty-six. You can see in July and other --

MR. MCCANN: Okay.

MR. GRACHEK: -- a couple cases where it was considerably higher.

MR. MCCANN: Yeah, and I know the Judge has seen a similar exhibit before. But just how is it broken down, what, tell me what all these columns mean and what the date means and what your understanding of all that is.

MR. GRACHEK: Yeah, the, the date is the date it was sampled.

MR. MCCANN: Right.

MR. GRACHEK: And the, and the results are, these are the, these are the results using (inaudible) plate count numbers for e. coli. And the one through five are the different samples that were taken. And you can see the results are twelve, six, nineteen, nineteen, eighteen.

MR. MCCANN: Okay.

MR. GRACHEK: The 13.615 is a geometric mean, you know, which is a, a different way of averaging the, that doesn't, that doesn't favor a, it, it's a way of averaging numbers that doesn't favor an outlier. And so, it provides a better indication of what you, you would expect to see. (inaudible) temperature, specific (inaudible), pH, it looks like those are parameters they are sampling for. Gives the wind and just, just other data.

MR. MCCANN: Okay and their most recent date is

August 18th, it goes a ways back. But some of these numbers, you mentioned the, the, the, this threshold of a hundred twenty-six. Some of these numbers are, the geometric mean is below that, is that fair?

MR. GRACHEK: Yes.

MR. MCCANN: And in some cases, do the, is the geometric mean greater than a hundred twenty-six?

MR. GRACHEK: Right. And as you can see, and some are, some are higher. I, my understanding is, these are, what you do normally when you, when you test the, are receiving (inaudible) like this, is that you sample after storm events.

And so, these were samplings that were done after various storm events. And it looks like on May 23rd, for example, there was a significant release of SSOs, because that's reflected by the, that the, the plate count numbers are, are even above the, what is capable of even being.

MR. MCCANN: Yeah, what do you make, what do you make of the carrot, two thousand four hundred twenty, what is your understanding of what that means?

MR. GRACHEK: Yeah, May 23rd is, May 23rd, 2022 is representative of a very large SSO release and probably, you know, a sampling in an area that just had a major, surface water that just had a major release.

MR. MCCANN: Okay. But the carrot in particular, what is the greater than carrot, what is, what is your

understanding of what that means?

MR. GRACHEK: Say that again, I'm sorry?

MR. MCCANN: The carrot, when it says, there's a carrot, c-a --

MR. GRACHEK: Oh, that just means that, that the result was higher than the analytical method can, can measure. These are done by, by doing plate counts, (inaudible) plate counts where you, you basically count the number of qualities that you generate by, by inoculating and incubating something. It looks like in that case, the numbers were so high that it's beyond the, the analytical limit.

MR. MCCANN: Okay.

MR. GRACHEK: So, so, --

MR. MCCANN: Is there --

MR. GRACHEK: In other words, it was really high.

MR. MCCANN: Yeah. Would you agree with me that the geometric mean varies considerably over time? Would you agree with that?

MR. GRACHEK: Yes, absolutely. I mean, water is continually flowing through the lake. And so, you know, it's, it, it is reflective of specific storm events and SSO events that occur based on the magnitude of the storm events.

MR. MCCANN: Okay, all right. Let me show you this exhibit, which is Exhibit, well, let me move the prior exhibit into evidence, Exhibit 75.

ALJ: Mr. Mudd?

MR. MUDD: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Exhibit 74, an eight-page document that has a COMAR section in it. Have you reviewed this section?

MR. GRACHEK: Yes.

MR. MCCANN: And, what, what, essentially, does it say, tell us?

MR. GRACHEK: This is where I reference the number of a hundred and twenty-six as the allowable geometric mean.

MR. MCCANN: Okay.

MR. GRACHEK: And the statistical threshold value is a, you know, it's just like a, a, a standard (inaudible) but the one twenty-six is the relevant number.

MR. MCCANN: Okay and is that one twenty-six geometric mean is that standard consistent with your experience with similar standards in other areas of the country?

MR. GRACHEK: I've seen it, I've seen it considerably lower. This is actually one of the higher levels that I've seen.

MR. MCCANN: Okay.

MR. GRACHEK: Which means that, that the, it's not regulated as stringently as some other places I've seen.

MR. MCCANN: Okay, all right. Let me show you --

ALJ: Any objection to seventy-four, which is COMAR, Mr. Mudd?

MR. MUDD: Nope, no objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Okay. Exhibit 76 consists of three photographs. Let me show you 76-C first. What is this photograph, Mr. Grachek?

MR. GRACHEK: This is a stream sense warning. And it basically says that, that the, the use of Lake Roland is impeded by bacterial risks. And that it's a warning to the public in the use of Lake Roland.

MR. MCCANN: Okay.

MR. GRACHEK: (inaudible) no swim --

MR. MCCANN: Okay --

MR. GRACHEK: -- warning, no drinking (inaudible) of the water.

MR. MCCANN: Where, where was this photograph taken and when?

MR. GRACHEK: This photograph was taken on the 20th of January, I believe.

MR. MCCANN: Of this year?

MR. GRACHEK: And it was taken, it was taken near the

dock.

MR. MCCANN: In where?

MR. GRACHEK: At Lake Roland.

MR. MCCANN: Okay.

ALJ: What was the year it, what was the year?

MR. GRACHEK: I, I --

ALJ: What was the year that you said?

MR. GRACHEK: Oh, this was taken, this was taken two and a half weeks ago.

ALJ: Okay, twenty, 2023.

MR. GRACHEK: Yes (inaudible) --

ALJ: So, the first picture, is it also for the second and third picture?

MR. GRACHEK: Yes.

MR. MCCANN: The same date, okay. So, this is --

ALJ: They're all, all three were taken on January the 20th, 2023?

MR. GRACHEK: Yes.

ALJ: Okay.

MR. MCCANN: Okay. So, the second photograph I'll show you is this one. Is that, is that also, yeah, I think you've indicated it was taken on the same date, is that also taken at Lake Roland?

MR. GRACHEK: Yes.

MR. MCCANN: Were all these photographs taken during

your, your site visit you described earlier?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and this is, this is obviously a different sign, is that right?

MR. GRACHEK: Repeat that, Michael, please.

MR. MCCANN: Is this, is this a different sign?

MR. GRACHEK: No, it's the same sign.

MR. MCCANN: No, then the one we just looked at.

MR. GRACHEK: Oh, the one we just looked at, yes. Yes, it is. It's posted at a different location.

MR. MCCANN: Okay and then lastly, this last photograph, I think you're better able to see the language, but anything in there that you'd like to point out other than what you've already said?

MR. GRACHEK: It states clearly that this is recurring SSOs and because of that there are risks associated with use of the water and they basically advise you to avoid, minimize contact with the waters, don't drink it, no hand to mouth contact if you touch it and minimize contact with open wounds. So, basically, stay out of the water.

MR. MCCANN: Okay. Your Honor, I would move Exhibit 76 into evidence, the three photographs.

ALJ: Mr. Mudd?

MR. MUDD: I guess my only question is did he take these photos? I'm not sure that that was --

MR. GRACHEK: I did not take these photos.

MR. MUDD: And was he present when they were taken?

MR. GRACHEK: I was present when they were taken, yes.

MR. MUDD: Okay. No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thanks.

MR. MUDD: And, and Michael, I didn't intend to ask him questions, I hope you know that (inaudible).

MR. MCCANN: That's fine, that's fine.

MR. MUDD: I could have handled it on cross, but I didn't want it to come in if it was a problem. Thanks for shaking your head, Mr. Zimmerman. Let the record reflect that too.

MR. MCCANN: Okay. I want to pull up a couple more exhibits.

ALJ: Everyone doing okay? Anyone need a break? Everyone looks okay, all right.

MR. GRACHEK: I'm okay.

MR. MCCANN: Okay, all right. Next exhibit is Exhibit 78. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Actually, (inaudible) page as well. It's twenty-five pages. What is this document?

MR. GRACHEK: This is a document prepared by a, another consultant, the RJN Group. And this is a performance assessment of the work that has been performed since the SRRR on the sewer shed.

MR. MCCANN: Okay. Is this performance assessment, is this something that's required by the Consent Decree?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. I'm going to pull that up real quick. Which is Exhibit 65. Bear with me one sec. Okay. This is on, again, Exhibit 65 at the bottom of page thirty-four, it crosses over to page thirty-five. Is this the section of the Consent Decree that addresses the performance assessment?

MR. GRACHEK: Yes.

MR. MCCANN: Okay.

MR. GRACHEK: Yes.

MR. MCCANN: I just want to, I guess, read this to you. It says, Baltimore County shall conduct a performance assessment of the work performed in each sewer shed as required under paragraph seven, ten and thirteen to determine the effectiveness of the evaluation and corrective action work performed. Did I read that correctly?

MR. GRACHEK: Yes.

MR. MCCANN: And I think that, that's consistent, I think you said it's a, you said the same thing, essentially,

right? It's work that's been performed.

MR. GRACHEK: Yes.

MR. MCCANN: Okay.

MR. GRACHEK: Of the actual work performed.

MR. MCCANN: Yeah, all right. So, getting back to the report, which is seventy-eight, what, what is, for lack of a better term, what's the scope of the report? What does it address?

MR. GRACHEK: This report does not address a performance assessment of the overall corrective actions in the sewer shed, but rather it reflects the, the actions taken in four-meter basins on the northwest or, excuse me, the northeast side of the sewer shed.

MR. MCCANN: Okay. Let me show you, also part of the same exhibit, it's map one in that. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Does this map, which again, is part of this, the RJN report labeled map one, does this map show the area where the area where the, or the, reflect the scope of the report? The area where the work was performed?

MR. GRACHEK: Yes, it's for the four meter basins that are in yellow.

MR. MCCANN: I'm sorry, where? In yellow, you said?

MR. GRACHEK: The four meter basins that are in yellow.

MR. MCCANN: Okay. Okay. I think I asked you something like this earlier, but do the, do the four water meter basins in yellow that's reflected in this map, do they flow to the Jones Falls interceptor?

MR. GRACHEK: No.

MR. MCCANN: Okay. Let me show you, can someone remind me how to move this, I need to get to an exhibit that's under here.

ALJ: The, is it the drop down bar?

MR. MCCANN: Yeah, it's in the way.

ALJ: Yeah, if you hit, you have to hold down control, shift, Q at the same time and it'll, it'll go up. And then if you need it back, just hit escape.

MR. MCCANN: Got it, excellent.

ALJ: Did it work? Okay.

MR. MCCANN: Thank you, Judge.

ALJ: Um hm.

MR. ROSENBLATT: Learned something new today.

MR. MCCANN: Yeah, I did. I always have a problem with that. All right. So, here's, in the same exhibit, same RJN report, which is Exhibit 78, I want to show you map two. And I'll point, direct you to the legend in this map. It says map two on the bottom right, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: And then, the title of the report is

Jones Falls sewer shed repair, replacement and rehabilitation plan, rehabilitation completed. What, what is your understanding of what this map is?

MR. GRACHEK: This map shows the, the limited amount of work that's been done with, primarily in those four meter basins in the northwest. And then the repair on several manholes throughout the basin.

MR. MCCANN: Okay and focusing in on the Jones Falls interceptor and the sewage as it would flow from the subject site, well, first, I guess, let me have you tell us where the, the site is, the subject site, I think --

MR. GRACHEK: Yeah, the site, the site is in the BC-05 area.

MR. MCCANN: Okay.

MR. GRACHEK: Up to the, in the northwest, or the north portion of the, of the area.

MR. MCCANN: Okay.

MR. GRACHEK: Above the interstate sign --

MR. MCCANN: Is it this area, this area right here?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and we've already described the flow from the site. Does, does, in this area, the flow from the site, that is, the, you know, as the flow leaves the site and goes to the Jones interceptor, in, in this map too, is there any work reflected at all in that path?

MR. GRACHEK: This map shows that no work has been, or very little, there's a couple, you know, manhole, manhole things but for a preponderance of the, of the Jones Falls, no work has been done in the, in the (inaudible).

MR. MCCANN: Okay. Well, and if I could highlight, I would do the flow path. But let me just zoom in close to the site. There are some markings right here and I wanted to ask you about those. Do you see those two squares?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Do you know offhand, I can go to the key, do you know offhand what those squares represent?

MR. GRACHEK: I'd have to look at the legend, but they look like they are adjustments to manholes.

MR. MCCANN: Yeah, let me go to the legend --

MR. GRACHEK: Some lining for manholes, lining and internal frame seals, --

MR. MCCANN: Well, hold on one sec, hold on one second because there's a lot of --

MR. GRACHEK: Okay.

MR. MCCANN: -- a lot of similar markings. I just want to make sure, they appear to be, so green square and a pink square.

ALJ: Where, where are you exactly? You can highlight that with your cursor.

MR. MCCANN: I shall. So, right here, Your Honor.

ALJ: Okay.

MR. MCCANN: Yeah, right below the site.

ALJ: Um hm.

MR. MCCANN: I think as he already described them, just blowing it up so we can see what those markings are. There's so many. So, a green square and a pink square, I'll just go down to the legend and ask you what, are these --

MR. GRACHEK: And that's a repair to a manhole, are insert and replace cover, insert grout bench and riser. Those are minor repairs to a manhole.

MR. MCCANN: Okay. So, do you recall your testimony earlier about the SSO 44219 and, and the recommended upsizing? You remember that testimony?

MR. GRACHEK: Are you talking, are you talking about the, ten inch line to be upgraded to the eighteen inch line?

MR. MCCANN: Correct.

MR. GRACHEK: Yes, I recall that.

MR. MCCANN: Okay and, and is that work, that is the upsizing of the pipe, is that reflected on this map too?

MR. GRACHEK: No, it is not.

MR. MCCANN: Okay. Okay. Okay, let's go back to the plan itself, which is Exhibit 70. I'm going to refer you to page seventeen, I'm sorry, fourteen. Blow that up. And I'll highlight this paragraph. Can you see where I am right now?

MR. GRACHEK: Yes.

MR. MCCANN: Okay, just wanted to make sure you could still see my screen. So, this paragraph on page twenty of the exhibit, page fourteen of the report, I'll blow it up. I'll just read it to you.

It says, Table 4-1B shows the predicted number of overflow, overflows in each meter basin under the post-rehabilitation condition. According to the results, the rehabilitation projects have decreased the occurrence as well as volume of SSOs in the meter basins where rehabilitation work was performed. The model predicts no overflow for the two year, six, three SSOs for the two year, twenty-four, four SSOs for the ten year, six storm, eleven, etcetera. Do you see that paragraph?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. What, a couple questions. Well, first of all, what do you make of that paragraph in the context of this report?

MR. GRACHEK: My, My, the first, the first item is that it's limited to just those meter basins where rehabilitation work was completed. Second is that --

MR. MCCANN: Well, hold on, hold on, hold on. When you say that, is, it says here, where rehabilitation work was completed, is that what you mean?

MR. GRACHEK: Yes, that's what I'm talking about.

MR. MCCANN: Okay, go ahead.

MR. GRACHEK: And it also tells me that even though they eliminated modeled overflows for the two year, six hour events, that the repairs failed to manage overflows for the other storm events. So, I, my assessment would be that the, or if they did, it did not, did not succeed.

MR. MCCANN: Okay. To your, to your knowledge, Mr. Grachek, was RJN's performance assessment ever approved by MDE, or did they ever comment on it even?

MR. GRACHEK: No.

MR. MCCANN: Okay. Your Honor, on that issue, this is, I would just, this is Exhibit 80. This is an e-mail that I sent to MDE regarding the performance assessment and the response I got. This isn't something that Mr. Grachek did, so and I can certainly blow it up so you can, and counsel can take a look at it. But, essentially, it asks whether the performance assessment has been approved.

MR. GRACHEK: And it basically says the Department has provided no formal response.

MR. MCCANN: You, okay, you're referring to the response?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. All right. Your Honor, I would move Exhibit 78 into evidence, which is the performance assessment itself, the map --

ALJ: Any objection, Mr. Mudd?

MR. MUDD: No objection to seventy-eight.

MR. ZIMMERMAN: No objection also, Judge.

ALJ: Thank you.

MR. MCCANN: The maps were part of it. And then I would move eighty into evidence, which is the e-mail that I received from MDE.

ALJ: So, Mr. Mudd?

MR. MUDD: I do object to this, because MDE is not here, number one. Number two, the e-mail chain refers to a February 1st, 2022 e-mail communications that were not included on, among this document. So, we have no idea what the full extent of the conversation was or was not.

ALJ: Yeah, --

MR. MCCANN: I'm happy, I'm happy to include that as well, if that's --

MR. MUDD: But I, I object fir, primarily on the basis of hearsay, without the ability to cross examine Mr. Herpel.

ALJ: Yeah, Mr. or Ms. Herpel, Jess Herpel.

MR. MUDD: Sorry.

ALJ: We don't, we don't know which one it is, but, oh, Jessica Herpel is what it says at the top, Maryland. Yeah, I mean, it's a State, it's an e-mail presumably from the State as opposed to, I mean, if this was the County, we would say, you know, that it could come in.

It, the problem is, it's, it's with the State. Although we let SHA, we let SHA documents in. And we did have someone from SHA here. And so, you know, given that it appears to be someone from the MDE that signed it, I mean, I, you know, Mr., Mr. McCann requested it, he's an officer of the Court, he's indicated that this was the response it appears to be.

I mean, there's a signature block and this is what it indicates. And so, I mean, I realize it's hearsay but in this situation, it's, you know, it is an administrative hearing and so because we allow SHA documents to come in, they come in as a matter of course, they come in in zoning cases all the time without the presence of, of MDE or not, SHA documents is what I was talking about, SHA people coming in, this is MDE actually. So, we'll allow it. It's, it's Exhibit 80, 78 and 80.

MR. MUDD: I, I would ask Your Honor if you would require that he, as he offered to do, to produce the remainder of the e-mail chain.

ALJ: Okay.

MR. MCCANN: Yeah, it's not a chain, it's just a separate e-mail that had other stuff in it, so I have no problem with, obviously with providing that.

MR. MUDD: And --

ALJ: And you'll make that 80-A?

MR. MCCANN: Sure.

ALJ: Okay.

MR. MUDD: So, I, I suppose there are at least two e-mails, one from you, you know, back and forth on February 1st, is that right?

MR. MCCANN: It's an e-mail from me and a response from her.

MR. MUDD: Okay.

MR. MCCANN: Yep.

MR. MUDD: Great. As long as we can see that, thank you.

MR. MCCANN: Actually, I have one more thing to discuss about the RJN. During the course of its work, Mr. Grachek, did, did, based on your review of the report, did RJN update the model that was used by RK&K to predict future capacity issues?

MR. GRACHEK: Yes, they did.

MR. MCCANN: And is, without looking at the report, is explicit reference to that fact in the report?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, let me show you map three to the report. We looked at two, here's map three. You see that?

MR. GRACHEK: Yes.

MR. MCCANN: And this map, I'll blow it up, is labeled map three, but it's entitled model predicted SSO and flow restriction locations. What does this map tell us, Mr. Grachek?

MR. GRACHEK: It, it shows that in the, in the flow path that, that we're, the subject flow path from the development to the Lake Roland Interceptor, is that there's, there's a considerable number of problems with capacity, with manholes under their model projections along that line.

MR. MCCANN: Okay and explain this map to us, how it's, how it's prepared based on the legend.

MR. GRACHEK: Basically, for the, for the area that we're looking at it shows model predicted SSOs for, in many manholes, for the lowest storm is two-year, six hour --

MR. MCCANN: Well, hold on, before you get to that, before you get to that. I'm just asking how is the map maybe in contrast to the five RK&K maps, this is a single map, explain --

MR. GRACHEK: This is a, this is a single map that shows all the different, all the different areas on one map and it's a little, it's a little cumbersome because you, you end up having, for example, anywhere where you have a, a red dot, then it has to be implicit on this map that for any higher storm that you would have the same type of situation.

MR. MCCANN: All right. So, let's just, let's just focus on that for a second. So, I'm looking at the legend. You're referring to, refer to a red dot. It says model predicted overflow under two year, six hour storm, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: And then below it for a storm code, it says model predicted hydraulic restriction under two year, six hour storm. Is, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Are those the two, just those two storms in particular, are they the lesser, for lack of a better term, of all the storms?

MR. GRACHEK: Yeah, that's the most, that's the most moderate storm scenario.

MR. MCCANN: And then, are the storms listed here increasing in intensity?

MR. GRACHEK: Yes. Well, increasing in intensity and duration.

MR. MCCANN: Okay. So, and I think you were headed there, is, is the map cumulative? Is that a best, a good way to describe it?

MR. GRACHEK: The way the, the way the map looks right now is basically, in my view, it underestimates the impact because it basically, you have to make the assumption that if you, if you have overflows for the most moderate storm event, that it's going to be far worse under, under the other storm events.

MR. MCCANN: So, yeah, but and I think you're saying the same thing, --

MR. GRACHEK: Yeah.

MR. MCCANN: Is, I mean, you say, you call it an assumption. Is, is, does this, so let's give an example. Okay? I'll give a specific example. For, concentrating on the sewage flow from, from the subject site, I'll zoom in on that area and I think I'll have you identify it, is this this area right here where my cursor is?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, these red dots and the red lines are what, what are they?

MR. GRACHEK: They represent, the red dots represent overflows at manholes under a two-year, six-hour event.

MR. MCCANN: Okay.

MR. GRACHEK: The red lines represent restrictions on a two year, six hour event.

MR. MCCANN: Okay. So, here's the, here's my question. If, if, as in this case, a, a red dot or a red line is shown for the two year, six hour storm, does that mean that those same models --

MR. MUDD: Objection, objection.

ALJ: So, you're, you sound like you're going to ask him, I mean, it is sort of an opinion question. So, if you could not lead him through the question. You need to ask more of an open ended question, you know, what do the red dots mean or (inaudible) --

MR. MCCANN: All right. Based, based on this map, will there be, based on the map and your review of it, will there be sanitary sewer overflows and hydraulic restrictions for all of the more intense storms, then the two years --

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Does this map show --

MR. MUDD: I'm going to object, I move to strike that question. I mean, he, he did the same thing, question and answer.

MR. MCCANN: That's --

ALJ: And I, but I think before that he's already indicated be, that because there are red dots, what I understood, in the, in the two hours, the two year, six hour storm event, that, that by, you know, therefore, you could extrapolate and say that for the more intense storms, you know, that it would be worse, is what he said. So, he sort of just repeated the same testimony already. So, but, Mr. McCann, if you could not lead him through just, you know, ask an open ended --

MR. MCCANN: Okay, yeah. I think, I think you're right. I think he's, he's made the point. I think the map speaks for itself. So, I'll, I'll just move on. And so, getting back to your point about what the map shows for this particular sewer path and, and maybe at this point what I'll do, bear with me one second. You said escape, Your Honor?

There we go. How about that? Bear with me one second. Okay. I want to, I pulled up Exhibit 62, which is the map that's already been introduced. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. I think this just highlights it better. So, comparing, taking this into consideration, what can you tell us about the results of this map to, for the sewer path from the subject site?

MR. GRACHEK: In my opinion, based on --

MR. MUDD: Objection, objection. That's not map two.

ALJ: That's not --

MR. MCCANN: I'm sorry, map three. Map three, I'm sorry.

ALJ: Yeah, it is map three.

MR. MCCANN: Yep.

ALJ: Okay.

MR. MCCANN: Go ahead, Mr. Grachek.

MR. GRACHEK: In my opinion, based on, based solely on the evaluations from these two maps, the RJN report reflects a much worse situation in the, the Jones Falls or that, the, the run from the development to, to Lake Roland than the RK&K report.

MR. MCCANN: Okay. Control alt H? Control shift Q? What is it, Judge?

ALJ: Yeah, control, control shift Q, it should be.

MR. MCCANN: Thanks.

ALJ: Did that work?

MR. MCCANN: Yep, it did. So, I, if I haven't already, I would move seventy-eight into evidence, which is the RJN performance assessment and the maps. I think I have.

ALJ: You did that already. I have it checked.

MR. MCCANN: Got it. Then next exhibit will be, this is Exhibit 81. Do you see that, Mr. Grachek?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. It's entitled comparison of sewer pipe capacities greater than ninety percent GS Manor site to City line, RGN pre-rehab versus RJN post-rehab. Did I read that correctly?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Tell us what this document is.

MR. GRACHEK: Okay. This gives a synopsis, if you look at the various columns, you have the upstream and downstream manholes for all the segments from the development to, through the Lake Roland side.

MR. MCCANN: Okay.

MR. GRACHEK: It gives the pipe, it gives the pipe diameters, it gives, according to the RJN post-rehabilitation from there performance assessment. It gives a full pipe capacity remaining in these pipes. It gives a peak flow and then it gives a calculated percent of capacity --

MR. MCCANN: Okay, let me stop you there, okay? Because again, we're not identifying the columns. But that's okay, I followed you. The, the, you just described the first six columns, is that correct?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and the, the last column is this column, calculated percentage of capacity, is that what you were just referring to?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and --

MR. GRACHEK: That's the, that's the, the peak flow divided by the full pipe.

MR. MCCANN: So, in other words, to do that, yeah, tell me how, what math you did to reach the one twenty.

MR. GRACHEK: It'd be point, .83 divided by .69, times a hundred, which would give you the percent of, so, so the first segment is flowing at a hundred and twenty percent capacity.

MR. MCCANN: Okay. So, these, these are, in dark and bold in column six?

MR. GRACHEK: Yes.

MR. MCCANN: Okay.

MR. GRACHEK: And according to the RJN post run, every, almost every pipe is running at well above a hundred percent --

MR. MCCANN: Okay and when you say in that, and this is the yellow, are you, when it says post-rehab, what does that mean?

MR. GRACHEK: That means after the, the work that is subject to the performance evaluation is completed.

MR. MCCANN: And what work was that, just remind us.

MR. GRACHEK: That was the work in the four sewer, or the four meter basins, plus the manhole work that was done (inaudible) in the previous exhibit.

MR. MCCANN: Okay, all right. So, if you could continue across. And beginning with, I guess, column G, where, where it turns green.

MR. GRACHEK: Yeah, --

MR. MCCANN: (inaudible) columns.

MR. GRACHEK: -- G, G through I is what RJN assessed prior to the rehab.

MR. MCCANN: Okay.

MR. GRACHEK: And that was compared, that was compared to what, in columns J and K, what RK&K had assessed. And you can see that within rounding (inaudible), those numbers are essentially the same. But what it shows here, and, and for, for reasons that I would have to know the model, is that based on the evaluation that's been done that the, the rehabilitation, according to this model, has in many of the segments made things worse.

MR. MCCANN: Okay. Now, when you say, when you say worse, well, let me backup before we get to --

MR. GRACHEK: We're, we're more over capacity than we were before and that could be for a lot of reasons. That, but it's showing, showing right here that, for example, from 44225, or 44224, prior to the time they did their rehab and calculating a hundred and seven percent capacity. Now they're at a hundred and twenty.

MR. MCCANN: Okay. So, you're, these two numbers here --

MR. GRACHEK: Yes.

MR. MCCANN: -- I've highlighted, okay.

MR. GRACHEK: And that cascades down. There are a few that are the other way. There are a few that are similar. But many, many of them are, are exacerbated.

MR. MCCANN: Okay. When you're talking about that, just which column are you talking about now, the difference.

MR. GRACHEK: Yeah, I'm, I'm talking about the comparison of all the numbers in Column I compared to the corresponding numbers in Column F.

MR. MCCANN: Okay. But where are the numbers, where's the comparison? What column is the comparison in?

MR. GRACHEK: No, that would be, that would be, obviously, Column K.

MR. MCCANN: Okay. Yeah, I can't ask leading

questions, as you've learned --

MR. GRACHEK: I'm sorry. I'm (inaudible).

MR. MCCANN: I'm trying to, --

MR. GRACHEK: I'm sorry.

MR. MCCANN: That's Column K?

MR. GRACHEK: Yeah, and as you can see they are close in segments. The situation is worse now than it was before.

MR. MCCANN: And when you say worse again, one more time?

MR. GRACHEK: And I define worse by meaning that your, your over capacity issue is of greater magnitude than it was prior.

MR. MCCANN: Okay and then this blue column, Column J, it says RK&K. Where are these numbers from?

MR. GRACHEK: Those are from the RK&K report.

MR. MCCANN: Okay. Okay and then lastly, it says in the title, it says greater than ninety percent up here. What, what does that mean?

MR. GRACHEK: That means that the, that means that every, that means the, basically, the capacity is greater, that the over capacity is greater than the ninety percent required by the, by the manual and by standards.

MR. MCCANN: So, does this, does this map, does this particular exhibit, does it include only the, the pipe capacities that are over ninety percent?

MR. GRACHEK: I, I'm sorry, I can't understand you, Michael?

MR. MCCANN: Does this, does this exhibit, Exhibit 81, include the pipe capacities, only those that are over ninety percent?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, there are, if we were to compare this chart to one of our earlier charts, we would see what, if any, --

MR. GRACHEK: Yeah, yeah, you'd see some that are, are good but you see the, the number of pipe segments in the length is fairly extensive.

MR. MCCANN: Okay, okay. You, and I think you touched upon this, but you said the rehab, rehabilitation in the four-meter basins in yellow, I think you said that they, that sewer from there didn't run to the Jones Falls interceptor.

MR. GRACHEK: Right.

MR. MCCANN: Are you able, are you able to say to a reasonable degree of certainty why then are the numbers, are the numbers decreasing? I mean, increasing, the capacity increasing? Do you follow me?

MR. GRACHEK: My, my professional opinion would be based not on an anal, a direct analysis is that --

MR. MUDD: I'm going to, I'm going to object before

he answers.

ALJ: Based on what?

MR. MUDD: I think he testified that he hadn't seen the model and he, and he could not ascertain why these numbers change without looking at the model. And now he's being asked to give his own opinion on a model that he doesn't even understand.

ALJ: Well, yeah, you can cross examine on, him on that.

MR. MUDD: Okay.

ALJ: Okay. Overruled. Go ahead, sir.

MR. GRACHEK: I, I, I would, my, my opinion would be is that the, that the model did put parameters (inaudible) since the RK&K model. And that, and, and also there's, and based on the fact that the sewer is ten years older than it is, than it was back then. So, a lot of things have happened.

MR. MCCANN: Okay.

MR. GRACHEK: But it's not, it's not because of any, and it may also be because of differences in, in, in parameters as opposed to the RK&K report. But it's curious to me that the RK&K and the, the pre-rehab numbers are fairly close. So, it's, it really, it's something that's kind of a mystery to me.

MR. MCCANN: You're comparing Column I and J?

MR. GRACHEK: Column I and J.

MR. MCCANN: Okay, okay. One more thing, does this

particular exhibit, I think you've already testified that RK&K didn't look at sewer lines smaller than ten inches, but does this, but does this particular exhibit include the pipes that are just across the street from the site, what I'll call the Johns Hopkins segments. Does it include those?

MR. GRACHEK: I believe, I believe so, yes.

MR. MCCANN: Well, let me, let me just show you another exhibit that will refresh your recollection.

MR. GRACHEK: Yeah, there's been a lot of numbers thrown around, I'd like to be able to take a look at it.

MR. MCCANN: Yeah. Okay. So, this is, this is Exhibit 63, if you recall. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and I'll direct you to the sewer--

MR. GRACHEK: Yeah, so it's 437 (inaudible), 43819 to, you know, to 44225.

MR. MCCANN: Yeah.

MR. GRACHEK: This (inaudible) back to the other exhibit.

MR. MCCANN: I will. Back to Exhibit 81, do you see those --

MR. GRACHEK: Yes, yes.

MR. MCCANN: -- those segments in here?

MR. GRACHEK: Yes.

MR. MCCANN: You do?

MR. GRACHEK: No, I'm, I'm sorry. Go back, 43819 to --

MR. MCCANN: Well, let me do this, hold on. Hold on, hold on. Let me just so we're clear about, and I don't want to belabor this, but we'll go back, just to be safe, go back to Exhibit 13, already in evidence, which is a Hopkins, I mean, I'm sorry, the memo from Mr. Bayer with these segments.

MR. GRACHEK: Yeah. Oh, no, I, I apologize. The answer is no. No, the, it starts at 44, at the 44 level. So, no, they are not included.

MR. MCCANN: Okay.

MR. GRACHEK: I'm sorry.

MR. MCCANN: That's okay, that's fine. I'm looking as we speak. So, let me show you --

MR. GRACHEK: Yes, this starts at the 44225, so, --

MR. MCCANN: Yeah.

MR. GRACHEK: -- they would not be included.

MR. MCCANN: Okay. Let me show you the next exhibit, which is eighty-two. This is a, to the Judge's chagrin, this is a two hundred ninety-eight page document. Do you see this?

MR. GRACHEK: Yes.

MR. MCCANN: Do you recognize this document?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. What is it?

MR. GRACHEK: It basically gives the, for, for the

different nodes, pipe diameters, pipe gradient, it gives a, an assessment for a ten-year, six hour storm of full pipe capacity compared to what the peak flow in the area --

MR. MCCANN: Right.

MR. GRACHEK: -- and it provides a surcharge state.

MR. MCCANN: Right.

MR. GRACHEK: (inaudible) used in some methodology for determining surcharge.

MR. MCCANN: Okay and is this part of the RJN report?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, and I'll scroll up just so, for instance, at the top page, it says two year, six hour storm post, and then if we go to the later, we have, for example, the two year, six hour storm pre. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Are those, are those references to the pre and post rehab condition?

MR. GRACHEK: This would be, yes. The pre-rehab condition on this one, yes.

MR. MCCANN: So, if, if we were to take a look at these, and this is, I'm going to go back to Exhibit 81, if we were to look at the RJN post-rehab capacities for the segments right across the street from the site, we could look at this chart and find that, right?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and let me just make, give an example. So, I'm going to, what storm event am I looking for?

MR. GRACHEK: It's a two year --

MR. MCCANN: No, am I looking for, what, what storm event did you use for this exhibit, Exhibit 81?

MR. GRACHEK: This would be the ten year, six hour.

MR. MCCANN: Okay. Let me just go to the ten year, six. I know it's a lot. In fact, let me do this, what I could do is quicker, if you don't mind, is type in 43793. Okay. I think I'm at the right page. Do you see this page? It's seventy-seven of the exhibit.

MR. GRACHEK: Yes.

MR. MCCANN: It says wet weather capacity analysis, ten year, six hour storm post, do you see that?

MR. GRACHEK: Right, yes.

MR. MCCANN: And here are 43793, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Is that one of the, excuse me, one of the segments that's in the, I lost it already.

MR. GRACHEK: Go back to the --

MR. MCCANN: Yep. Is that, is 43793 to 43792, do you see that?

MR. GRACHEK: Yes, that is, that is the site that you're pointing at now.

MR. MCCANN: Okay. So, if we go back to this Exhibit

82 on page seventy-seven, I just highlighted, is that the same segment?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and how would we look, using this chart, how would we figure out the percentage for that particular segment according to RJN post-rehab?

MR. GRACHEK: Well, the, the peak flow --

MR. MCCANN: Right.

MR. GRACHEK: -- that's .52, so it would be the full pipe capacity, it would be the peak flow divided by the full pipe, pipe capacity. So, .52 divided by the .37.

MR. MCCANN: Okay. We could do the math for all of these, correct?

MR. GRACHEK: Correct.

MR. MCCANN: Okay, all right. Sorry about that. Then I would move, oh, one more question about, getting back to eighty-one. Similar to the prior chart, was this, were the numbers inputted by someone else on your behalf?

MR. GRACHEK: Yes.

MR. MCCANN: And did, did the numbers come from RJN and RK&K data?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. All right. Your Honor, I would move Exhibit 81 into evidence, as well as 82, which were the tables.

ALJ: Any objection, Mr. Mudd?

MR. MUDD: None to eighty-two and on eighty-one, I just would like the record to reflect who prepared it.

ALJ: So, Mr. Grachek, who prepared the document for you?

MR. GRACHEK: It was prepared by, my understanding, it was prepared by Tom Cord.

ALJ: I'm sorry, who?

MR. GRACHEK: Tom Cord.

ALJ: Who, who is that?

MR. GRACHEK: He's, he's one of the people involved as, as far as the case goes. He doesn't work for my company.

ALJ: Okay. The last name was Court, C-O-U-R-T?

MR. GRACHEK: C-O-O-R-D, I believe.

ALJ: O-O-R-D.

MR. GRACHEK: Or C-O-R-D.

ALJ: C-O-R-D, so, but he prepared this under your supervision, you asked him to put these numbers in?

MR. GRACHEK: It was provided to me after it was prepared.

ALJ: Okay.

MR. GRACHEK: And I, I verified numbers from reports from it.

ALJ: Okay. All right, Mr. Mudd, --

MR. MUDD: I think I objected to Exhibit 69 for the

same reason I object to this, which is it was not prepared by this expert and I understand that you may rule against that, but that's my objection.

ALJ: Understood. So, we're going to overrule the objection. Mr. Zimmerman, you don't have any objection?

MR. ZIMMERMAN: No objection, right. No objection.

ALJ: It's an administrative hearing and also, he prepared, or he, he reviewed it after it was prepared with, with numbers he sort of asked to be put in here and then re, you know, verified the numbers once they were put into the chart. So, I mean, he doesn't have to prepare it himself as long as he's reviewed it and it's accurate as far as he's concerned, so. All right. So, that is eighty-one and eighty-two, right, Mr. McCann?

MR. MCCANN: That's correct.

ALJ: Okay.

MR. MCCANN: All right. Your Honor, can we take a short break, you know, just say five or ten minutes?

ALJ: Sure and do you, you have some more though for him, right?

MR. MCCANN: Yeah, not a whole lot more. I think I'm three-quarters done, maybe more.

ALJ: Right, understood. Okay. So, yeah, let's take, why don't we just take ten minutes and then come back and we will, we'll just finish with him, all right? And I'll pause

the record.

MR. MCCANN: Okay, thank you.

(PAUSE)

ALJ: Okay. Mr. McCann, after a break I think you had some more questions for your witness.

MR. MCCANN: Yes, thank you. Mr. Grachek, I'm going to show you what's been pre-marked as Exhibit 90, which is an e-mail exchange between Jeff Peluso and Dave Bayer. Have you seen this e-mail before?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. The e-mail from Jeff Peluso, which is dated March 22nd, 2021, I just want to ask you about items number three and items number four. I'm just going to read to you what item number three is. If Hopkins didn't do the improvements, what are the ramifications of their connection?

And then number four. If Greenspring Manor were to continue through development, is there another way to provide capacity? Is there a breaking point for Greenspring Manor, paren, number of units? Did I read that correctly?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and then, in Mr. Bayer's response, number three, in response to the question if Hopkins didn't do the improvements, what are the ramifications of their new connection? Mr., what was Mr. Bayer's response?

MR. GRACHEK: You're going to have SSOs.

MR. MCCANN: Okay and then in response to Mr. Peluso's question, if Greenspring Manor were to continue through development, is there another way to provide capacity? Is there a breaking point for Greenspring Manor number of units? What was Mr. Bayer's response?

MR. GRACHEK: He said zero.

MR. MCCANN: Well, just read it just for the record.

MR. GRACHEK: Okay. Storage, and DPW has been opposed to that option, would be one option, finding another location that avoids the capacity deficient areas would be another option, however, we believe that option would be unfeasible. Zero is the break point of number of units that could be built without causing an SSO.

MR. MCCANN: Okay and do, do you agree with that latter assessment? That is that in terms of the number of units that could be built at this site, that zero is the breaking point?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and remind us, Mr. Grachek, what, what were the County's capacity numbers for the, the sewer segments that we're talking about in this e-mail, the range?

MR. GRACHEK: The range was from ninety-four to over a hundred.

MR. MCCANN: And was that wet weather or dry weather

capacities?

MR. GRACHEK: Dry weather.

MR. MCCANN: And if you can recall, what were the, how did those numbers, dry weather numbers, compare, how do they compare with the capacities found by RK&K and RJN for those same segments?

MR. GRACHEK: I'm, I'm not sure what you're asking (inaudible) please rephrase that.

MR. MCCANN: Yeah, I'm, I think you just indicated that County's capacity numbers dry weather were between ninety and a hundred percent, right?

MR. GRACHEK: Right.

MR. MCCANN: I'm asking you how those numbers, the County's numbers, compare with the numbers found by RK&K and RJN for those same segments.

MR. GRACHEK: Okay. They are, from my recollection, that they are actually favorable. That they're probably worse with the RK&K and, and RJN numbers.

MR. MCCANN: Okay and using the RK&K and RJN numbers, are there other sewer segments below, that is below the site, and beyond the Hopkins segments, that are higher than the range ninety to a hundred percent?

MR. GRACHEK: Yes.

MR. MCCANN: Are there numerous such segments --

MR. MUDD: Objection.

ALJ: Well, you're interjecting the word numerous to his, to, to the question. So, make sure you don't lead him through it. Can you just rephrase, please?

MR. GRACHEK: The, the, the previous exhibits show that there are --

ALJ: Wait a minute, one second. Mr. McCann, can you rephrase the question, please? Because you said are there numerous segments.

MR. MCCANN: Is that, is that a leading question?

ALJ: Well, it just, yeah, because you asked him if, how many sewer segments were below the site were greater than, I think you had said greater than ninety.

MR. MCCANN: Okay, all right.

ALJ: And then, --

MR. MCCANN: That's fine. I, they are what they are. I think numerous is sort of an objective thing. But --

ALJ: You could ask him how many, I mean, --

MR. MCCANN: Yeah. It's okay. I'll move on, Your Honor, but thank you. All right. So, I would move, before I forget, Exhibit 90 into evidence, the e-mail exchange.

ALJ: So, is this part of an information act request also?

MR. MCCANN: Yeah, it's Bate stamped 9, County 935, as you can see.

ALJ: And so, do you have, I guess, Mr. Mudd, do you

need the cover letter that asks for it or – -

MR. MUDD: I know (inaudible) inconsistent. I'm okay on the County piece. I know how Mr. McCann has been getting that information, so.

ALJ: Okay.

MR. MUDD: I have no objection --

ALJ: Yeah.

MR. MUDD: -- to this e-mail.

ALJ: Okay, good. (inaudible) same thing. Mr. Zimmerman, no objection?

MR. ZIMMERMAN: No objection.

ALJ: All right. Ninety is in.

MR. MCCANN: Okay. Mr. Grachek, does the, does the Consent Decree require the County in determining model predicted future capacity to rely upon growth projections?

MR. GRACHEK: Yes.

MR. MCCANN: And is that, in your experience, is that standard, for lack of a better word?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Let me direct you to, back to the Consent Decree, which is Exhibit 65. This is page twenty-eight of the Consent Decree, thirty-two of the exhibit. And just give you some context, this is in the section entitled long term capacity. Do you see that evaluation?

MR. GRACHEK: Yes.

MR. MCCANN: Subsection B under that. Do you see that section?

MR. GRACHEK: Yes.

MR. MCCANN: I'm just going to highlight, read one section of that section and it says quote, future conditions shall be based on reasonable population projections for the year 2025, corr, end quote, do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Do you agree, I guess maybe more specifically, that when predicting model predicted future capacity it's, it's important to rely upon reasonable population projections?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Do you recall offhand, I can certainly show you in the SRRR plan, what baseline conditions are, I'm sorry, what, what the County, or RK&K rather, assumed would be the population projections? Do you remember from the SRRR plan?

MR. GRACHEK: My recollection was that they used the baseline conditions that existed in 2008.

MR. MCCANN: Okay. Let me just show you, so this is Exhibit 67, the SRR plan, page 5-9. I'll just read this to you. Population and employment will increase from baseline conditions, year 2008, to the future conditions, year 2025. Is that what you were referring to?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and so, this was back in two thou, what was the date of the SRR plan, do you recall?

MR. GRACHEK: The, the, the date for, say it again, Michael?

MR. MCCANN: The SRR plan, roughly, when was it, when was that?

MR. GRACHEK: The SRR plan was in 2012, or late 2012 or early 2013.

MR. MCCANN: Okay and did, did RJN rely upon the, the same projections, baseline conditions being 2008?

MR. GRACHEK: That is my understanding.

MR. MCCANN: Okay. Let me show you the RJN report, which is Protestant's Exhibit 78. This is page, roman numeral little i, little v, the executive summary. And highlight this sentence.

Quote, the model was then used to simulate pre and post-rehabilitation hydraulic conditions, respectively, under projected 2025 population and employment conditions as obtained from the hydraulic model used for the 2013 SRRR plan, end quote. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: And is that what you were referring to?

MR. GRACHEK: Yes.

MR. MCCANN: All right. Exhibit 83, do you see this

document?

MR. GRACHEK: Yes.

MR. MCCANN: What is it?

MR. GRACHEK: It just shows the population projections for the Jones Falls area based on, you know, based on different years.

MR. MCCANN: And what is the date of the projections, does it say?

MR. GRACHEK: It, for the date of the projections are, are April of 2008 and it shows projections backtracking to 2005, 10, 15, 20, 25 and 30.

MR. MCCANN: Okay. To, to your understanding, are these the, the projections that were used by RK&K and RJN?

MR. GRACHEK: Yes, that's my understanding.

MR. MCCANN: Okay. Do you believe it was reasonable for RK&K and RJN to use projections from 2008 in their modeling and updated modeling?

MR. GRACHEK: No, I think you should use projections from the time that you are preparing your analysis over a, my opinion would be over a twenty year period.

MR. MCCANN: Okay.

MR. GRACHEK: And so, if I, if I were doing it, I would run it from 2013 to 2033.

MR. MCCANN: Okay. I know you don't, you don't live in this area, do you?

MR. GRACHEK: No.

MR. MCCANN: But are you, or have you become rather, familiar with the growth that has occurred, for example, in Towson Proper since RK&K's reporting?

MR. GRACHEK: I, I have heard that and read that the population growth of that area has, has been relatively (inaudible) over the last several years but --

MR. MUDD: Objection, objection.

MR. GRACHEK: (inaudible) --

MR. MUDD: Objection.

ALJ: Sorry, you're objecting though while he was already answering the question so that's why he was, what's your objection, Mr. Mudd?

MR. MUDD: Hearsay. I, he was answering the question and said it was based on what he heard, that's not --

ALJ: I know, I heard him say that, what he heard and also, oh, I see why you objected then. And, but he also said, also what he read. So, Mr. Grachek, what is it that you read that tells you that, about the growth population in the Towson Proper?

MR. GRACHEK: In, in a previous case, I took a look at population projections, just Google population projections in the area, just so that I would know what we were talking about, and I can't recall the actual source of it. But I got an idea of the type of projections. And from what I gleaned,

the population growth in that area is probably a little bit above average.

ALJ: Okay, you --

MR. GRACHEK: But I can't, I can't recall the exact document.

ALJ: Okay. Mr., Mr. McCann can, I mean, excuse me, Mr. Mudd, you can cross examine him on that.

MR. MCCANN: Yeah, I mean, he's a, he's an expert, he can rely on hearsay. I hope we all remember that.

ALJ: That's correct, yep.

MR. MCCANN: Yeah, so, but let me show you, and I know you've looked at a lot of documents today, Mr. Grachek. Let me show you, this has been pre, previously marked in this case as Protestant's Exhibit 31. Do you recall looking at this document?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and just, we all know what it is, but just identify what it is and what, what it means to you.

MR. GRACHEK: This is just basically a report showing the, all the different projected, projected developments in the area. And it's a fairly extensive list, about the impacts and the, the number of units and the, you know, projections of square feet and, and, you know, the, giving an indication of growth.

MR. MCCANN: Does it also show the existing

developments?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and remind us, where does all the sewer from Towson Proper go?

MR. GRACHEK: I, I did not hear that, Michael.

MR. MCCANN: Where does all the sewer, sewage from Towson Proper go?

MR. GRACHEK: Well, from the downtown city of Towson it goes on the Towson Run interceptor.

MR. MCCANN: To Lake Roland?

MR. GRACHEK: Um hm.

ALJ: So, try not to testify, Mr. McCann, because you just gave him the answer, you said, to Lake Roland. So, I mean, you know, I think we all knew where it was going but just, you know, --

MR. MCCANN: Does it, does it, --

ALJ: -- where does it go from Towson Run interceptor then.

MR. MCCANN: Does it go, does it go to Lake Roland?

MR. GRACHEK: Yes.

MR. MCCANN: Other than RK&K and then RJN, has the County hired another consultant to evaluate its sewer, sewer capacity?

MR. GRACHEK: My understanding is they've hired another firm, (inaudible) Sawyer.

MR. MCCANN: Okay. Bear with me one second.

ALJ: Were you moving eighty-three and eighty-four into evidence, the population projections?

MR. MCCANN: Yep, I was just going to do that.

ALJ: Okay.

MR. MCCANN: Thank you.

ALJ: Okay, you are. So, Mr. Mudd, any objection to eighty-three and eighty-four?

MR. MUDD: Yes.

ALJ: Okay.

MR. MUDD: I object to eighty-three. I don't think there's been any foundation laid for where that came from.

ALJ: Yeah, I, I do agree with that, where, where did this come from?

MR. MCCANN: That was, actually the same exhibit introduced in Torch Hill. And it was proffered in that case, and I'll proffer it again through, I can do so through an e-mail. That this was produced to me in response to the, a, a query about the population and employment objections used, used by RK&K.

ALJ: So, it's part of your information request?

MR. MCCANN: Correct. My eight PIA requests, to be clear.

ALJ: Your eight PIA requests?

MR. MCCANN: Yeah.

ALJ: Okay, all right. So, Mr. Mudd, do you need the, you know, the document that shows that he requested it through an information act request?

MR. MUDD: I, I honestly don't recall this from Torch Hill.

ALJ: I've seen it.

MR. MUDD: Yeah? Okay.

ALJ: I've seen it, I recall it.

MR. MUDD: I see it, I see it there now. Okay. Yeah, and it was part of that, all right, I, I, I, I, that's fine with me then. I don't object to that and I do need to look at the other one though, bear with me. I'm sorry.

ALJ: The other one being what, eighty-four?

MR. MUDD: Eighty-four. Did we, did he even discuss eighty-four?

MR. MCCANN: No, and I think, it, it's really the same proffer. It's two separate, the same document, frankly, was produced in response to two separate PIA requests. For a, you know, so I guess, to be fair to Mr. Mudd, I'll, I'll, I don't have a problem with sending the PIA requests to establish this both, for both those exhibits, Your Honor.

ALJ: It, they're the same exact document.

MR. MUDD: I, well, I, they're, they are the same, but there's, the point being that I asked again for any updated projections that were used in connection with further reporting

and that was what was sent to me once again.

ALJ: Okay. So, we probably do need those e-mails, just, just to show why there's two of them of the same thing, you know?

MR. MCCANN: Yeah, I have no problem with that.

ALJ: It's no, it's not clear that one is in answer to (inaudible) --

MR. MCCANN: I thought there was, when I submitted them, I thought there was a separate, something different about them, but they're not.

ALJ: No.

MR. MCCANN: When I say separate, I mean, something in the, the, the title, but there's not.

ALJ: And so, Mr. Mudd, with the e-mail request for those two, are you satisfied?

MR. MUDD: Yes, except I'm not, you know, I'm a little concerned about what, I, I don't know if there's really been any testimony about the difference between them here. And what, what significance it has.

ALJ: There's been no, there's been no, I don't think he even talked about eighty-four. Mr. McCann, do you want to ask some foundation questions about it?

MR. MCCANN: Well, he doesn't have any knowledge of the PIA requests. I mean, he knows --

ALJ: Okay.

MR. MCCANN: -- (inaudible) I don't think it's going to be helpful to me to ask him about my PIA requests --

ALJ: Okay, I see.

MR. MUDD: If it's not going to come in through a witness, I object to eighty-four. I understand eighty-three and do not object to that. But I do object to eighty-four.

MR. MCCANN: Okay. I'll, then I, then I can ask him did I provide this to you, and did I tell you it came from the County. I can tell, I can ask --

ALJ: Well, I mean, so, as I understand it, eighty-three was the original request for Torch Hill and then eighty-four is the updated that he asked for under the PIA. So, I mean, if it's, that's all you need is the e-mails showing that was, or the document that it was attached to this, right? That shows it wasn't the update, right?

MR. MCCANN: Yeah, there was, yeah, there is no document (inaudible), this is literally what the County used. So, yes, I have, again, I have no problem submitting those e-mails.

ALJ: So, I'm just saying to Mr. Mudd, right --

MR. MUDD: I'm sorry, I, I guess I don't, when he says update, there was a separate request for this case? Is that what we're understanding?

MR. MCCANN: There was, there was a subsequent request that produced the second copy of the same chart, which

is a separate exhibit.

ALJ: Eighty-four.

MR. MCCANN: Correct.

MR. MUDD: And I'm sorry I'm being, I hope I'm not being difficult, Judge, I don't mean to be.

ALJ: No.

MR. MUDD: But what I, what I'm trying to avoid is the introduction of some evidence in the form of questions asked by Mr. McCann to the County and a response to that, without any other context of why the question was asked or anything like that.

So, if those e-mails I'm going to get are, are, that, that we're going to get at some point later, might, might cause me to ask different questions of this witness, or the appropriate witness that they should be targeted towards. I just don't want, I don't want to agree to have e-mails come in that might add some, something new that I don't have an ability to cross examine.

MR. MCCANN: It's not that complicated. I asked for the, I asked for the projections used and they were provided. So, --

ALJ: Yeah, and, and so, would, and the witness testified that, that, is it, you know, is it reasonable to use projections and his opinion was, you should have used projections from 2013 to 2030, 2030, excuse me. As opposed to

these ones from 2008.

So, so, I mean, he had already asked the witness about it and these come in as, you know, the information that, obviously, someone provided under, by the Coun, someone, someone in the County provided through the PIA request. So, I mean, I don't, I don't think it's, yeah, I don't think it's that complicated, is it?

MR. MUDD: Well, I, I guess I'm trying to figure out what the second request, I don't even know what needed to be updated. That's what I don't understand --

ALJ: Well, because, because in Torch Hill, he asked for the projections, as I understand it. That's eighty-three. And then for this case, he said, are there any updates, right, Mr. McCann? No, did I get that right? You're shaking your head.

MR. MCCANN: Yeah, that's, yes.

ALJ: Okay. So, in this case, he asked for the projections and it just turns out that they're the same.

MR. MUDD: Got it. So, it was the same exact request, it wasn't projections for a different purpose, you were asking for the projections used for their underlying --

MR. MCCANN: (inaudible) I don't, I don't think the purpose is, my purpose in asking for them isn't relevant. But the question was the same, yes, that's the answer. The, the question of the County, the specific request, was the same for

both.

MR. MUDD: Okay. I, I guess I'm still going to, I understand you're going to overrule, but I still have the same objection that I, that I'd like to understand what the content of the second request was.

ALJ: Okay. Well, he's --

MR. MCCANN: It was a PIA request, it was a PIA request.

ALJ: It was a PIA request for the update to make sure it's the same.

MR. MCCANN: (inaudible) by the way, just so that you're aware and I know you've heard me complain about this before, that is, that is how I have to get documents from the County now and --

ALJ: Yeah, understood.

MR. MCCANN: And it's been a fight. It has been an absolute fight to get things.

ALJ: Okay.

MR. MCCANN: Eight requests, so, --

ALJ: Well, what we're going to do is we'll mark 83-A is going to be the, the PIA request for that one, for eighty-three. And then eighty-three, 84-A is going to be that PIA request, which would be the update for this case, okay?

MR. ROSENBLATT: I just, really quick, I just want you to know, Mr. McCann, that is the same for us as well. I, I

(inaudible) --

MR. MCCANN: Oh, I don't believe that for a second. I don't believe that for a second.

MR. ROSENBLATT: I'm filing PIA requests for the first time (inaudible) --

MR. MCCANN: I know you are, I know you are. But it's, it's different.

MR. ROSENBLATT: We're having the same issues. It is not one sided.

MR. MCCANN: Okay.

ALJ: Okay. So, eighty-three and eighty-four and then so where were we, Mr. McCann? We got sidetracked there.

MR. MCCANN: Yep. I just asked him about another consultant, I think he mentioned Hazen & Sawyer. And my follow-up to that is, is have you, Mr. Grachek, have you reviewed documents relating to work that has been performed by Hazen?

MR. GRACHEK: I reviewed their newsletters.

MR. MCCANN: Okay and to your understanding, is that, is that work complete, completed?

MR. GRACHEK: No.

MR. MCCANN: Have they issued a formal report yet?

MR. GRACHEK: Not to my knowledge.

MR. MCCANN: Okay. Let me just show you what eighty, Exhibit 85. Excuse me. Do you see this exhibit?

MR. GRACHEK: Yes.

MR. MCCANN: And, and what is this, Mr. Grachek?

MR. GRACHEK: This is the newsletter that they send out quarterly showing their progress on the work.

MR. MCCANN: Okay. It certainly speaks for itself. But tell us, you know, what it is, based on your review of this newsletter, that Hazen is doing.

MR. GRACHEK: Yeah, in, in general, the general assessment is that Hazen & Sawyer are in the process of redoing all of the modeling and all of the work associated with the Consent Decree to modernize the, the entire operation. And they're doing modeling, they're looking at all the different, all the different segments. And basically a 2023 version of what RK&K was doing with probably more, obviously, better technology ten years later.

MR. MCCANN: Okay. So, just directing your attention to a couple things. And I don't, in this introduction, talking about the Jones Falls sewer shed comprehensive evaluation. It says, quote, the following are currently being evaluated with future projects vetted for long term capacity. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and then there's some bullet points here. I think you said something about modeling. But is it your understanding, based on your review of this newsletter,

that Hazen is, is looking at, once again, model --

MR. MUDD: Objection.

ALJ: Yeah, you're testifying so, what, what is your understanding, having read this document, Mr. Grachek?

MR. MCCANN: Regarding, regarding the issue of future capacity.

MR. GRACHEK: How the, my, my understanding is Hazen is doing a comprehensive evaluation of capacity throughout the sewer shed.

MR. MCCANN: Okay. Is there, is it, is it your understanding, what, if any, understanding do you have about what Hazen is doing regarding population growth?

MR. GRACHEK: I, I don't have that information.

MR. MCCANN: Okay. Let me just direct you to page three, to the section entitled population estimates. Just take a moment and read that, if you would.

MR. GRACHEK: Okay. Develop future population estimates, both residential and employment, which will contribute to future flows within the sewer shed. All sewer assets must be capable of conveying future flows to protect residents, businesses and environment from overflows and backups. I, I did read this. I, I was, I thought your question had to do with specific population projections. But they are, they are obviously incorporating population projections based on those --

MR. MCCANN: Okay. Okay. This one sentence that you just read in particular, all sewer assets must be capable of conveying future flows to protect residents, businesses and the environment from overflows and backups. Did I read that correctly?

MR. GRACHEK: Yes.

MR. MCCANN: Do you agree with that, number one?

MR. GRACHEK: Absolutely.

MR. MCCANN: And do you agree, and in your opinion, is that consistent with what the Consent Decree requires?

MR. GRACHEK: Yes.

MR. MCCANN: And, and, and by the way, is there any mention in this newsletter of the Consent Decree?

MR. GRACHEK: I do not recall.

MR. MCCANN: Okay. All right. Your Honor, I would move Exhibit 85 into evidence.

ALJ: Mr. Mudd?

MR. MUDD: I think I'm, I, I'm going to object on the basis of hearsay on this, and I understand what your ruling may be.

ALJ: Yeah, I mean, the expert can rely upon hearsay and he's reviewed the document and uses it for his analysis and opinions in this case. So, overruled. All right. So, Mr. Zimmerman, no objection?

MR. ZIMMERMAN: No, no objection.

ALJ: All right. So, we'll admit eighty-five.

MR. MCCANN: Thank you. Okay. Let me show you what's been marked as Protestant's Exhibit 87. Titled data evaluation report on-call sanitary sewer rehabilitation design services – task fourteen, Lake Roland sewer rehabilitation. Do you see that?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Have you, have you reviewed this document, Mr. Grachek?

MR. GRACHEK: Yes, I have.

MR. MCCANN: Okay. Tell us, tell us what it is, if you would. And I'll ask you some specific questions about it.

MR. GRACHEK: This is a, a, this is an analysis of the Lake Roland interceptor and, and areas around Lake Roland interceptor. It includes the lining of forty-three segments, forty-four manhole repairs in nine different locations around Lake Roland.

MR. MCCANN: Okay. I'll stop you there and maybe ask you about a couple sections in this report. The introduction section on page four of the exhibit. Just want to, this one sentence in the second paragraph, actually the second sentence in that paragraphs says quote, the primary focus of this project is to minimize the inflow and infiltration into the interceptors to reduce the likelihood of sanitary sewer overflows, end quote. Did I read that correctly?

MR. GRACHEK: Yes.

MR. MCCANN: Is, is that primary focus, as, as, as it's put, is that, in your opinion, consistent with the purpose of the Consent Decree?

MR. GRACHEK: Yes.

MR. MCCANN: Okay and then what is this figure one on the same page, what is this map?

MR. GRACHEK: This shows the project map of the manholes surrounding Lake Roland. It's, it's similar to maps we've seen before with the Jones Falls, the Roland Run and Towson Run interceptors meeting at the junction box on the north side of Lake Roland. And then the pipe going under Lake Roland and then the subsequent pipelines to the boundary of the County.

MR. MCCANN: Okay. So, just, it's entitled project map, but what are the, what are the red lines and the circles? What are they --

MR. GRACHEK: In this report, the red lines are those, are the, are the lines subject to rehabilitation and rehab.

MR. MCCANN: Okay and what about the circles in this report?

MR. GRACHEK: I, I'm sorry, I didn't --

MR. MCCANN: What is, what are the circles in the context of the --

MR. GRACHEK: Oh, those are the man, those are the manholes and the junction boxes that are to be rehabbed.

MR. MCCANN: Okay, all right. Next page, which is page two of the report. I think there's a reference, yeah. It says, in total, the project consists of approximately nineteen thousand five hundred fifty linear feet of pipe, forty-three segments. Is that, is that a substantial amount of pipe? I mean, what's your opinion on the scope of that?

MR. GRACHEK: That's, that's, that's an extremely substantial amount of pipe. It's a, it's a considerable lining project because to line a pipe like that, you have to take the pipe, the pipelines out of service, which means you have to acquire real estate and have bypass lines to operate during the time that that, that that work is being done. And, which you would with any other segment, but for a situation like this, particularly for the portion that's running under Lake Roland, it's, it's a large, large project.

MR. MCCANN: Okay. You said you, you said out of line, I think, what'd, what'd you mean by that? The existing lines, explain that, how that's done.

MR. GRACHEK: Slip lining is a common technology used to take old pipes and you basically apply a, a liner to the inside pipe that adheres to the pipe. It, it's a, it's a, a good way to get a longer use life from an old pipe, one that's not completely structurally defunct. The, the problem with

slip lining though is that you do, it, it, it can't be three-quarters of an inch to an inch thick lining, which means that you reduce your effective diameter of the pipe by doing that.

MR. MCCANN: Yeah, I'm not, thank you for that, my question as a little different. What, what happens when this work is being done, based on your experience, to the, to the existing segments? You said something about they had to take, be taken offline, is that right?

MR. GRACHEK: Yeah, they, they have to --

MR. MUDD: Objection.

MR. GRACHEK: -- (inaudible) segments have to be taken offline so they have to be bypassed --

ALJ: Hold on, there's a, hold on. Mr. Mudd had an objection. Mr. Mudd?

MR. MUDD: Mr. McCann asked a proper question and then slipped in a little answer before he turned it over to the witness.

ALJ: Yeah, so, --

MR. MCCANN: I was repeating what he said.

ALJ: Yeah, I know. But I, I thought you were repeating what, what he said. I mean, that, that's what I took it as, so (inaudible) --

MR. MCCANN: I'll rephrase, I'll rephrase (inaudible).

ALJ: -- so can you rephrase, yeah, rephrase the

question and then we'll have the, the answer again.

MR. MCCANN: In your experience, based on your experience, for work to be done like this, the relining that's called for, what, what happens to the existing segments while all that work is ongoing?

MR. GRACHEK: The, the existing segments have to be systematically bypassed. So, you rehab a segment, you have to have a bypass pipe to run while you're rehabbing that pipe. And then when you're done rehabbing that pipe, you put it back online and then bypass the next segment.

And that requires putting pipes of, temporary pipes of similar capacity and moving them constantly down, you know, downstream until you've, until you've fixed the system, relined, or you've completely relined the system. And it's, it's daunting. And it's a lot of work.

MR. MCCANN: Okay. You mentioned, based on your review of this report and based on your experience, what type of, you know, what area is going to be needed to undertake all this work, if you follow what I'm saying.

MR. GRACHEK: It's, you're, you're going to need a right of way most likely of at least twenty-five feet to put the temporary line in to do your work throughout the process. That's been my experience. It could be more, it could be less.

It's going to be particularly daunting, the lining system underneath the lake, simply because of the, the issues

where you're going to have to bypass, you can't really put a bypass pipe in the lake, so you're going to have to bypass around the lake and try to figure out how you, how you get flow temporarily down while you're lining it.

Aside from the significant health and safety issues, then you're going to have to take precautions for, for lining pipe that's underneath the lake.

MR. MCCANN: Okay and does, without getting into all the details, does the report set forth all of that about right of ways and so forth?

MR. GRACHEK: Yes.

MR. MCCANN: Okay.

MR. GRACHEK: Yes.

MR. MCCANN: And does, do you recall if the report, well, strike that, I'll move on. I wanted to show you page, the bottom of page three. This particular, this is in a section entitled pipeline data review and recommendations. It says, since the goal of the Lake Roland sewer rehabilitation project is to minimize the amount of I/I in the system and prevent overflows, all lines have been identified for rehabilitation, even if structural damage was not identified.

And then it says this. And this is what my question was about. The, the review of the CCTV inspections showed twenty-four segments with active infiltration at pipe joints, fourteen of which also included some level of structural

defects. Of the remaining nineteen segment inspections available, eleven segments had structural defects alone and eight segments either showed no structural defects or infiltration.

Explain what that means in terms of what, I guess, number one, what's active infiltration and what defects are we speaking about here.

MR. GRACHEK: I, I can't, I mean, there's a lot of ways to interpret these things, but I, I, active infiltration had to do with, it looks like, they actually saw infiltration happening at the time they did the inspection.

You know infiltration can be from storm water events, but eventually, it ends up being ground water, or water that's (inaudible) the soil, weakening the system. So, they had twenty-four segments where they saw active infiltration where they did their camera inspections.

And when you say structural defects, that's a structural, that's structural integrity problems that just come with a pipe that's seventy years old and, and you have degradation of these pipes. They don't last forever. And so, they can actually, you know, degrade and become thin enough to where they collapse on their own weight. You end up getting holes and prob, and other problems.

And based on this report, what they've done is to be, in full candor, looks like they've thrown up their hands and

said we're going to line the whole system no matter what.

MR. MCCANN: Okay. Twenty-four segments, how many segments are there in total, that are a part of this project?

MR. GRACHEK: I think it was forty-three segments.

MR. MCCANN: Okay and then going down to 2.4, manhole and junction chamber data review and recommendations. This sentence says, upon completion, completing the review, it was determined that all forty-four manholes within the system will need rehabilitation. Of the forty-three manholes, thirty-one assets show evidence of infiltration.

MR. GRACHEK: Yes.

MR. MCCANN: Infil, what is infiltration refer to? The same thing?

MR. GRACHEK: Well, that's most likely groundwater leaking through the joints in (inaudible) the manhole.

MR. MCCANN: Okay and then, there's also reference in this report to junc, the junction chambers. What's, what do you recall about the report that's called for as far as those are concerned?

MR. GRACHEK: I, I think when they're referring to junction chambers, I think they're talking about where you have major lines connecting pipe, where the three interceptors collect to one, that's a junction box.

MR. MCCANN: Okay.

MR. GRACHEK: It's, it's a more elaborate manhole.

MR. MCCANN: Okay. Will this project involve requiring, acquiring easements from private property owners?

MR. GRACHEK: Most likely, although I, I haven't done an assessment of the real estate area. They usually, they usually do.

MR. MCCANN: Will it involve environmental permitting?

MR. GRACHEK: Yes.

MR. MCCANN: For wetlands included?

MR. GRACHEK: It will be wetlands, it'll be, they'll, they'll, they'll have to look at stream setbacks and all those variances you get, you know, when you're doing work along a stream.

MR. MCCANN: Okay. I want to show you, at the end here, so, this is Appendix A, project asset map and I think we saw the same thing in the other one. But are the, are there any, any of the segments identified in this map, are they amongst the segments that would receive sewage from the subject property?

MR. GRACHEK: Yeah, all the way from 2763 to the County line.

MR. MCCANN: Okay. 2763 being over here?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Okay. I'm almost there. I would move that exhibit into evidence, Your Honor, which --

ALJ: Mr. Mudd, eighty-seven?

MR. MUDD: I, I have a hearsay objection on that as well, but I, maybe, I'm not sure if this, this foundation was laid, but where, where it actually came from.

ALJ: Where the document came from?

MR. MUDD: Yeah.

ALJ: Mr. McCann, is this a, a PIA request?

MR. MCCANN: No, this is not a PIA request. This was posted on, on a website of the Ruxton Riderwood Association. They received it from the County.

ALJ: I mean, it has the County name on it.

MR. MCCANN: Yep.

ALJ: (inaudible) but the expert can use hearsay in forming his opinions about things.

MR. MUDD: I guess it goes beyond that now that we know where it came from, is whether or not this has even been adopted, official, whether the County is going to implement this, whether they need to, who, who, who commissioned it.

ALJ: So, yeah, so then, just ask that on cross examination --

MR. MUDD: Okay.

ALJ: -- of the witness. Okay, Mr. Zimmerman, any objection?

MR. ZIMMERMAN: No.

ALJ: Okay.

MR. ZIMMERMAN: No, no objection.

MR. MCCANN: Okay. Bear with me one second. Can you see this exhibit, Mr. Grachek? Am I still sharing?

ALJ: Nothing is on the screen.

MR. MCCANN: Oh, nothing is on the screen? Okay. I'm going to show you the Consent Decree once again. This is Exhibit 65, page 103 of the Consent Decree. It's entitled termination. Paragraph eighty-one, I'll just read it to you real quick. The Consent Decree shall terminate when all of the following events have occurred. Subsection A, Baltimore County certifies that it has completed obligations under section five and section eight. Do you see that?

MR. GRACHEK: Yes, yes.

MR. MCCANN: To your knowledge, Mr. Grachek, has Baltimore County certified, or submitted the certification that, at least that's called for in this section of the Consent Decree?

MR. GRACHEK: No.

MR. MCCANN: Okay. I'll stop sharing. Okay. Just some, some wrap up questions, Mr. Grachek. In your opinion, based on your experience, has Baltimore County undertaken all of the correct, corrective actions necessary to address the model predicted capacity problems in the sewer system that would receive sewage from the subject property?

MR. GRACHEK: No, they have not.

MR. MCCANN: In your opinion, based on your experience, can the County comply with the Consent Order, without undertaking the corrective actions necessary to address model predicted capacity problems in this portion of the sewage system that would be served by the subject property?

MR. GRACHEK: No, they cannot.

MR. MCCANN: In your opinion, does the RJN assessment support that the County has not undertaken all corrective actions necessary to address model predicted capacity problems?

MR. GRACHEK: Yes, it does.

MR. MCCANN: In your opinion, does the Hazen study support that the County has not undertaken all corrective actions necessary to address model predicted capacity problems?

MR. GRACHEK: Yes, it does.

MR. MCCANN: And finally, in your opinion, does the Ramble report support that the County has not undertaken all corrective actions necessary to address model predicted capacity problems?

MR. GRACHEK: Yes, it does.

MR. MCCANN: That is all the questions I have of Mr. Grachek.

ALJ: For the record, so, Mr. McCann, I don’t have seventy-nine in evidence or eighty-six and I don’t know if eighty-eight and eighty-nine is, are, are documents that he was --

MR. MCCANN: Yeah, seventy-nine, you said seventy-nine and what other number?

ALJ: Seventy-nine, I have eighty-six, eighty-eight and eighty-nine.

MR. MCCANN: Yep. Let's take them one at a time. Seventy-nine is just a document that I obtained from MDE that is a matter of public record in response to a PIA request of MDE. It's not something that Mr. Grachek has any independent knowledge about. So, I was going to sort of address these all when we wrapped up. But I can, I can certainly introduce them now. I guess that would probably make more sense, Your Honor.

ALJ: Okay. So, the first one, seventy-nine, is MDE letter. And you say this is from a PIA request?

MR. MCCANN: It is. And I'll just put it on my screen. This is an MDE letter, obviously, pertaining to sewer shed performance assessments for other sewer sheds, other than the Jones Falls.

ALJ: And so, why, why do we need this if it's not for the Jones Falls?

MR. MCCANN: Well, Mr. Grachek testified that there is, that the County, I'm sorry, that MDE has not approved or commented on the, on the performance assessment submitted by RJN. And I recognize I already have an e-mail to this effect in there, but this is just an example of what MDE does with respect to performance assessments and what it hasn't done in

this case. Does that make sense?

ALJ: I mean, it's like we don't have this in our case, so, this is what it looks like?

MR. MCCANN: Yep, exactly.

ALJ: That's a little odd.

MR. MCCANN: Well, --

ALJ: I mean, I mean, he testified, he, he already testified that, that there was no, there, that, that MDE --

MR. MCCANN: Yeah.

ALJ: -- I mean, he testified about it without having this document, right? I mean, --

MR. MCCANN: Yeah. I'll withdraw it, that's fine, Your Honor. I withdraw it, I understand.

ALJ: It's like, it's like, you know, this is, we don't have this is an absent something, you know, --

MR. MCCANN: Yeah, yes, I understand.

ALJ: (inaudible) say you're going to withdraw that one?

MR. MCCANN: I will.

ALJ: Okay and then we've this Hazen, this Hazen scope.

MR. MCCANN: Correct. And this is, this is, again, not something that Mr. Grachek has independent knowledge of, because I got it from the County. But this, it speaks for itself. This is the scope of services that the County, that

Hazen submitted in connection with its work. So, it, it, you know, as it, as scopes of services do, it describes the, what Hazen is doing.

ALJ: From a PIA request.

MR. MCCANN: Correct.

ALJ: And you've got that PIA request?

MR. MCCANN: In fact, in fact, no, I, to be honest, this was not produced in response to a PIA request. This was given to me and twenty-three other community organizations that met with the County Executive and his Deputy back in, right before COVID, when we first heard about Hazen. It was, we had meetings about this.

So, this was provided directly to me and others from the, from, and it was the topic of discussion at those meetings. So, it's a public record. I don't think there's any dispute about that. It has a project number on it and everything. So, I don't, I don't think I got this in response to a PIA. I should have, but I didn't.

ALJ: Right, and you, you probably asked for it, --

MR. MCCANN: I've asked for everything (inaudible) got the newsletters. Didn't get this --

ALJ: From the PIA request you got the newsletters? I thought that came from a --

MR. MCCANN: It did, it did. But I got them, they're available on the website, as everyone can see, but that's all I

got.

ALJ: Okay.

MR. MCCANN: So, this I think it just comes in as a public record and it's, it's, I think it's relevant as to the scope of the work that's being proposed and relevant to Mr. Grachek's testimony.

ALJ: So, Mr. Mudd, any objection to this?

MR. MUDD: I do object. I think this is hearsay and I think it is hearsay that, by admission, Mr. McCann, McCann, and the fact that we didn't talk to Mr. Grachek about it wasn't, wasn't anything he relied on. He wasn't being asked to rely on hearsay. This is something that is a multi-page document that we're asked to just come in and refer to for, you know, whatever purpose Mr. McCann may want, without my ability to cross examine anyone on it.

ALJ: I mean, if it was a PIA request and, and he attached it, I mean, you know, we could, I just think it comes in if, if that's the case and that's what he, he indicated, right? No, you got this from the County Executive's office.

MR. MCCANN: Um hm.

ALJ: But, I mean, I would ask that we could mark it for identification, Mr. McCann, and then get something, show it to Public Works, from Public Works, and ask for just a certification. I mean, things come in if you have a certification on the, on the front of it, that just says that

this is a government record. And this, yes, this is, you know, whatever, how many pages and this is from our --

MR. MCCANN: Yeah, fine. Listen, I, I'm not, I'll do whatever Your Honor tells me to do. The problem I have is we introduce documents day in and day out in these hearings --

ALJ: Um hm.

MR. MCCANN: -- from the County, without question. And hearsay, put aside the hearsay nature, that doesn't matter. We're, hearsay is allowed in all the time and particularly on these types of documents. So, I don't understand why, when it, and I'm not trying to be cynical, but why when it comes from me, there's some question about --

ALJ: No, not at all. It's not from you. My only thing was that when you have it marked as Hazen scope of services and it's got Haden's, Hazen's name on the bottom of it, so it does have Baltimore County Department of Public Works at the top of it, with a project number.

But, it, it doesn't, it's not clear whether the Department of Public Works (inaudible) this document or whether Hazen created it. And so, if you just showed it to Department of Public Works, couldn't you get, get a certification that says --

MR. MCCANN: Your Honor, I will, I will never, ever get that answer. I, I'll subpoena them, if we want to have them come back another day and do that. But they will not --

ALJ: It's not a certification?

MR. MCCANN: -- they will not, I'm telling you, they will not. And I base that on three years of dealing with PIA requests and trying to get documents, documents that I found and MDE documents that the County clearly should have produced.

But I'll say right here and off the bat, page one says Hazen is pleased to submit this scope of services, number one. Number two, listen I think that the presumption should be that this comes in based on the face of it.

If Mr., Mr. Mudd and Mr. Rosenblatt find reason to, to contest it, then they can, you know, they can call the witness or make a phone call and say, is this for real? That can be done in thirty seconds. So, I think the presumption should be based on the long history of your office that it comes in. It's a public record.

ALJ: So, so, I mean, a public record, but see, again, this was created by Hazen though, right? It's a private company.

MR. MCCANN: No, well, it's, it doesn't matter who it's created by, it is a public record because it's in its, it's the County's record. It doesn't matter what the letterhead says, it doesn't matter who --

ALJ: Sure, but, and that's why it was, and that's why it's not clear. So, (inaudible) saying if it was me, I would say okay, do you have just a, can you just walk over to

DPW, show them it and say can you certify this, that this is, can you do that? I mean, I guess it's just because of this particular document.

In other words, like, some of these, you're, you're right. Some of these have like Department of Public Works, you know, and you know that it's their letter or it comes from them, you know, if it's comments or something. But this one was created by Hazen, a private company, for them and so --

MR. MCCANN: So, what am I certifying? What am I certifying, that it's in their records?

ALJ: Yeah, well, yeah, I mean, now, now I, maybe it's just me. But yeah, so there's a whole, like a certification. You could just, this is a government document, it's just a certification --

MR. MCCANN: Okay, all right. I'll go do it, Your Honor, because you're asking. I will do that. I'll try to do that anyway.

ALJ: You, but do you think you'll be successful?

MR. MCCANN: No. I, I will, I'll say something like, Judge asked, Judge Murphy asked me to do and I think that may, that may get me there, but --

ALJ: Yeah.

MR. MCCANN: -- I have no confidence at all that, that --

ALJ: If you stood there in front of them and said

here's my, and you prepared it, you prepared the certification to the front of it and said here, look at this. Is this in your documents?

MR. MCCANN: No way in, no way in heck, excuse my language. So, not that I'm persona non gratis over there, I just, I have a good relationship with all those folks. They just don't, they don't give information. You could get all this stuff on the City's website. It takes some time. Everything going on in the City, you can see everything. It's, it's overkill with the City. But I, I will try because you asked, Your Honor. And I'll let you know if I can't. I'll let everybody know.

ALJ: Go ahead, Mr. Mudd, what?

MR. MUDD: Yeah, I just want to give an example of why I'm concerned about just letting something like this in. And, and it's really that this, you've pinpointed the fact that this is from Hazen and if Hazen is presenting a proposal to Baltimore County in 2020, what we don't know is whether this proposal was accepted in this form. So, I would be concerned about Mr. McCann pointing to this potentially, I'm not saying it's going to happen, but potentially allowing this in. He points to it and, and he says Hazen was, was ret, was, was retained to perform all this work, when we don't know whether that's the case, whether they were or not. We don't know what portion of this they've been obtained, retained to do, if any.

That's my concern.

ALJ: Yeah, --

MR. MUDD: So, even a certification of whether this is from the County's records without any other background or, or, or, or substance --

MR. MCCANN: Yeah, I understand --

(ALL TALKING AT ONE TIME)

ALJ: Hold on, Mr. McCann.

MR. MCCANN: Okay.

ALJ: So, so, so, Mr. Mudd, so yeah, so, no, I get, I mean, but, but, you know, does it come in? I mean, he can make arguments about it and maybe you'll make different arguments about it. Or maybe, you know, but, but, but does it come into evidence? If it's a government record, it comes into evidence as an exception to a hearsay and it comes in.

I, my only thing was just to have it verified that, even if it's a Hazen document, it's in, it may not, yeah, it may say all the things that you say it says or it may say what Mr. McCann says it says, or maybe it was never used. But, you know, but the fact that it would come in just as a government document, right, for the, under the hearsay rules, like business record, government record, --

MR. MUDD: I understand, I understand what you're saying. And so, maybe, maybe the arguments I just made are save for, for, you know, briefing, or what have you. But I, I

do agree with you that I think it would be best to understand how this came from the government and I, I understand what Mr. McCann is saying. If we could get it certified, I would ask that we do that.

MR. MCCANN: The certification I'll ask for, Your Honor, just address that situation is I'll ask the, that it be confirmed that this is a public record, business record, you know, --

ALJ: It's a government record.

MR. MCCANN: -- number one, and number two, --

ALJ: Yeah, --

MR. MCCANN: -- number two, number two, is, that this was the scope of services upon which Hazen was hired. If I'll get an answer to one, I'll get an answer hopefully to two.

ALJ: Yeah, that --

MR. MCCANN: So, so, --

ALJ: -- would be even better if you could get that. I was just trying to get it that it was in their files, that they have this, this, as a government document. That, you know, it's part of their files.

MR. MCCANN: But I don't have a problem with doing that.

ALJ: Yeah. Okay. So, we'll just, we'll hold that one. So, that's eighty-six. And we'll just mark it for i.d. only.

MR. MCCANN: Yep.

ALJ: What else did I say? I said eighty, eighty-eight (inaudible) My Neighborhood sewer maps?

MR. MCCANN: Yeah, this is, these are just, these are just blowups of the segments across the street. So, I, I would like to keep those. I'll show them to, I'll show them real quick but they're just blowups and I think there's no reason to withdraw them. They're the same My Neighborhood maps that, they're just closer. So, this is, this is eighty, eighty-eight. There's two of them, one a little bit closer. That's all they are.

ALJ: Yeah, I thought we already looked at these, both of these.

MR. MCCANN: We looked at larger ones. This is just a --

ALJ: Larger.

MR. MCCANN: -- focused, you can see these, in other words, that's all.

ALJ: Yeah, that's all right. And then, and so, yeah, okay. So, yeah, Mr. Mudd, any, any issue with these?

MR. MUDD: No, Your Honor.

ALJ: My Neighborhood? All right, so these are in. So, eighty-eight. And then, eighty-nine --

MR. MCCANN: Eighty-nine --

ALJ: -- so this is a different e-mail.

MR. MCCANN: It is.

ALJ: So, the other e-mail came in.

MR. MCCANN: Yeah, I'm not sure --

ALJ: (inaudible) use this later or, so I didn't, you know, --

MR. MCCANN: No, this was just another e-mail amongst the, those that were produced to me and it deals with the Johns Hopkins sewer segments and I think, in short, it explains sort of what happened, which, so it's not something Mr., again, Mr. Grachek would be privy to. But it's a, it's an exchange between County officials, including the head of DPW and the head of PAI. And it's a public record.

ALJ: Right. So, Mr. McCann, any, Mr. McCann, Mr. Mudd, any, any objection?

MR. MUDD: No, no objection.

ALJ: Okay. Yep. So, Mr. Zimmerman, no objection?

MR. ZIMMERMAN: No, no objection.

ALJ: Okay. So, that comes in, so eighty-nine is in. So, just that one, eighty-six for i.d. only. And that, I just wanted to make sure you weren't missing anything else. Is there any other one?

MR. MCCANN: You said eighty-six is i.d. only? Oh, the scope of services, right, okay.

ALJ: Yeah, the Hazen scope of services.

MR. MCCANN: No, I mean, I have, there's ninety-one

that we haven't discussed, which is another similar type of document from MDE, similar to, this is the one we just looked at, seventy-nine, about the performance assessments. Ninety-one is, are letters from the County constituting certificates of completion with respect to other sewer sheds.

ALJ: Okay. So, it's the same thing, it's like we have, this is what we don't have.

MR. MCCANN: Right. But this is, yeah, this is, you know, not just a, an approval of an RJN performance assessment with, with, for which we have another exhibit, the e-mail that supports it. This is, this is an example of a County certification from the County itself about other sewer sheds, in this, in this case, Deep Run and tributary sewer sheds right there labeled. So, there is no such document for the Jones Falls.

ALJ: Yeah, so it's the same, I think it's the same argument as the other one, as seventy-nine. I mean, it's like we didn't have this in our case, but, but Mr. Grachek testified about that. He said there was no certification. He's re, you know, what he's reviewed. So, that, that's enough evidence as it is, that there's no certification. This, this gets confusing having something from another, you know, another project. And it's not needed. I mean, I mean, it's interesting --

MR. MCCANN: Okay.

ALJ: -- but (inaudible) --

MR. MCCANN: I got it. I'll withdraw ninety-one then, that's fine.

ALJ: Ninety-one, okay. So, that was it, right? I, I know you have another witness. I wasn't trying to, you know, didn't know if these --

MR. MCCANN: Yeah, no, the, I mean, I have, I've got, I want to put the basic services maps in, but that can be done either before or after the next witness or at some future time.

ALJ: So, now, we're on it now, so ninety-two is basic services map.

MR. MCCANN: Yep.

ALJ: Twenty-one, basic services map, twenty-two, basic services map.

MR. MCCANN: And ninety-four, I'll bring it up. Ninety-four, that, that is last year's basic services map. For some reason, and I, I don't think this should be a surprise to anybody, but for some reason, it did not, this is 93-A, Your Honor. Did not show the subject property as a deficient area, even though the other maps that are in, that I, so the, you'll see there, there is no deficient area for the subject site.

And so I, in, so I have an e-mail, I asked about that and there's an e-mail from the County explaining that it was a printing error, which is Exhibit 94. And it has (inaudible), it still, if you go to the County's website, the 2022 map

doesn't show the subject property as a sewer deficient area, but, so this is an explanation of why that map does not show that. I think it's important.

ALJ: Yeah, well, so, okay. Mr. Mudd, any objection to these, basic services map or to the County e-mail?

MR. MUDD: They're all public records. I, I, I don't, I generally don't like just the document dump, but I understand you're going to let them in.

ALJ: Yeah, well, I mean, it, you know, these are documents that they obtained and they're clearly County documents, administrative hearing, --

MR. MUDD: I understand.

ALJ: -- so they'll come in. Ninety-five is the draft with the memo, basic services map, for twenty-three?

MR. MCCANN: Correct.

ALJ: So, what, why do we need, is --

MR. MCCANN: Well, --

ALJ: It's not adopted yet.

MR. MCCANN: -- DPW has proposed a, now, despite last year's passing of a map that didn't show it, but DPW is, is proposing a map that does show it.

ALJ: But it hasn't been adopted yet.

MR. MCCANN: No, but it's a, it's a, it's in a concession, it's an admission, it's, it's significant that of all agencies, DPW was, is, is proposing that map. So, the

purpose isn't that it's official or not yet, it's, it's that DPW has represented that it is a deficient area. DPW --

ALJ: Well, it's a, it's a document that they created.

MR. MCCANN: Right.

ALJ: It's still a government document, even though it's not adopted yet. Okay. So, Mr. McCann, Mr. McCann, I keep saying that. Mr. Mudd, any objection to ninety-five?

MR. MUDD: I, I mean, I have the same concerns you do, but I understand that you're going to let it in.

ALJ: Yeah, well, I mean, we, we know that it's not adopted, so.

MR. MUDD: Yeah.

ALJ: It is what it is, they created it.

MR. ZIMMERMAN: Is it ninety-five or ninety-four, where are we?

ALJ: Ninety-five.

MR. ZIMMERMAN: Can, can I see ninety-five?

MR. MCCANN: Yes.

MR. ZIMMERMAN: Okay. That is the, what it, it is the proposed --

MR. MCCANN: Yes.

MR. ZIMMERMAN: -- proposed, potential or proposed 2023 map?

MR. MCCANN: Yes.

MR. ZIMMERMAN: Okay. No, I have no objection. I just hadn't seen it, that's all.

ALJ: Okay. All right. Anything else, Mr. McCann?

MR. MCCANN: No.

ALJ: So, any of the rest of the documents are for the other witness?

MR. MCCANN: Correct.

ALJ: Okay, okay. So, we're going to need to do cross. It is 2:11, does anyone want a lunch break? I, I think we should probably take, you know, a half hour.

MR. MUDD: Yes, please.

ALJ: Even though time is short, does, does a half hour work or does, do you all need forty-five minutes?

MR. MUDD: A half hour is fine for me.

ALJ: Mr. McCann?

MR. MCCANN: That's fine, yes. Thank you.

MR. ZIMMERMAN: It's fine. Let me just, let me just mention in advance that I do have several questions for the witness.

ALJ: Yeah, yeah, I would assume that and you can see how we're all going. We're not going to get through, probably the other witness today, I would imagine. But, you know, you can just tell. So, (inaudible) everyone else. Let's just come back at 2:45, all right? So, let's just take a lunch break and regroup.

MR. MCCANN: Okay, thank you.

ALJ: Thank you.

MR. ZIMMERMAN: Thank you, guys, thank you.

(PAUSE)

ALJ: All right. Back after lunch. Mr. McCann, just to make sure, you didn't have any other questions of your witness, you said, right?

MR. MCCANN: I do not, thank you.

ALJ: All right. Mr. Zimmerman, cross?

MR. ZIMMERMAN: Thank you. I'll try to be compact.

MR. MUDD: Ms. Murphy, if I may, just before Mr. Zimmerman goes, I, I'm not necessarily objecting here, but I would like Mr. Zimmerman to state for the record why, why People's Counsel has the authority to ask questions relative to sewer issues which are not related to the master plan or to, to the zoning regulations.

MR. ZIMMERMAN: Well, fir, first of all, I'm a party to the case on various issues already. And as a party, I think I'm entitled to ask questions.

But, meanwhile, I've gone through the master plan 2020 and I'm prepared to take ten or fifteen minutes to go through master plan 2020 and des, describe and read a series of provisions in master plan 2020 on water quality and sewer issues, along with the appendix to the master plan, the water resources element. I can take ten or fifteen minutes and do

that now or I can connect it up with a letter to save time. And, you know, the Judge could reserve on that.

ALJ: It was my, it was my understanding that, that, you know, this was part of his scope. That, you know, he, he's here for the master plan conflict and, and sewer was part of that, so Mr. Mudd --

MR. MUDD: Okay.

ALJ: Yeah, so --

MR. ZIMMERMAN: And, I will, I will just to comp, for sake of completeness, I will supply various parts of the master plan which I think are relevant, and guess what? There is a master water and sewer plan, part of the purpose of which is to protect water quality. Okay, all right. I'm going to try to be compact, nevertheless, and try to be fair in my questioning. All right, Mr. Grachek. First of all, can you tell us whether you and I have ever met or interacted or talked?

MR. GRACHEK: No, I don't think so.

MR. ZIMMERMAN: Okay, okay. So, let me first ask you, to the extent that there's been evidence presented by Mr. McCann in this case of any area citizens right next to the subject property who have suffered sewer backups, what can you tell us as to whether that would be relevant to your overall evaluation of the situation?

MR. MUDD: Objection. I think that's beyond the scope of direct. There were no discussions about anything

nearby the site with backups.

ALJ: Well, I don't, I don't think it is. I mean, he, he talked about in his area of expertise that part of the problem with SSOs are that they cause backups. In fact, he gave, you know, a, he described one of them and said that if you, the basement is below the, the sewer line, then backup is going to go into the basement. So, it's a hypothetical of this expert so he can answer that. So, overruled. Go ahead, Mr. Grachek.

MR. GRACHEK: Okay. Well, I guess I would ask you to be a little more specific. Are you asking me about generally how backups cause overflows or --

MR. ZIMMERMAN: No, I'm simply asking, assuming that I'm correct, that there has been evidence presented by at least one of Mr. McCann's witnesses of, who lives, I believe in Heatherfield, right next door to this property, of suffering a sewer back, severe sewer backup. You know, what does that fact reflect as to whether it's consistent or not consistent with the concerns that you've described of the overall situation.

MR. GRACHEK: Okay. Well, I (inaudible) thank you, I appreciate that (inaudible). My evaluation, what I've done on the system, is to evaluate the entire system. I really cannot talk about any specific sewer backup that may have occurred.

I know they, they do happen and they happen for the reasons that we've talked about, from an engineering and a

science standpoint. The, the backup, a backup could be (inaudible) in the pipe. It could be caused by a systemic problem that, you know, that could cause a backup all the way up, you know, from, from a place miles down the road.

And so, any specific backup may have been, may have been identified, you identify what the problem is, then you, you try to fix the problem per se.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: And so, so, any specific backup, you know, I'd have to look at each individual situation.

MR. ZIMMERMAN: All right, fair enough. Could I see your ex, your c.v. for a moment? Could Mr. McCann put that up on the screen? Protestant's fifty-eight. Because I don't have, I don't have a copy actually.

MR. MCCANN: See that?

MR. ZIMMERMAN: Okay. Could, could you, could Mr. McCann scroll down slowly, just slowly. Okay. Keep on going, please. You can go a little faster, that's fine. Okay. Okay. You can go a little faster and we'll get through this. I just wanted to, okay. All right, all right. I think that's enough. Thanks. All right. So, Mr. Grachek, you've had experience both in Maryland and nationally, correct?

MR. GRACHEK: Yes.

MR. ZIMMERMAN: Okay and what can you tell us as to whether you've interacted with state agencies and the EPA from

time to time?

MR. GRACHEK: I've had a lot of interaction with EPA on numerous projects from water, wastewater, all the way to hazardous waste work, (inaudible) work and the like. So, I've, I've dealt with federal agencies and I, I also, if you scan my c.v., I spent five years working with the Army Corps of Engineers. I worked as a partner supporting the EPA on projects prior to the time I went back into private consulting, back in 1993. And so, I have a lot of experience with regulators.

MR. ZIMMERMAN: Okay. All right and if Mr. McCann could, could put up the Complaint for a moment. I don't remember if that's sixty-five or, lets see. The Complaint that led to the Consent Decree. Could we see the first page? All right. So, so the United States of America and the State of Maryland are the Plaintiffs, are they not?

MR. GRACHEK: Yes.

MR. ZIMMERMAN: So, who would be the lead agencies for those two parties that would be involved, do you know?

MR. GRACHEK: Well, in environmental issues involving Consent Decrees and Permit, my experience has been the United States of America is, is represented by the agency associated with environmental, which would be EPA.

MR. ZIMMERMAN: Okay and that's actually, not to be leading, but to save time, that's actually reflected in the

first paragraph of the Complaint, correct?

MR. GRACHEK: Right.

MR. ZIMMERMAN: And then, and to, to get through this, and then you have Maryland Department of Environment, also known as MDE, right?

MR. GRACHEK: That's correct.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: Although, although I have worked on environmental projects that Department of Interior, other agencies, Department of Interior, represent United States of America, but --

MR. ZIMMERMAN: Okay.

MR. GRACHEK: -- but it's usually EPA.

MR. ZIMMERMAN: Okay. Based on your experience evaluating this case, what can you tell us as to whether the EPA region, relevant region and, and/or the Maryland Department of Environment, have been involved in kind of monitoring the progress under the Consent Decree.

MR. GRACHEK: I haven't, I haven't been involved with, as, as much with the actual monitoring by the agencies of the Consent Decree. My focus has been primarily on the technical aspects of it. My understanding though with any Consent Decree is that there's a lot of detailed interaction between both technical and (inaudible) team associated with compliance with, with these Consent Decrees.

And that goes all the way from when I sat on one side with EPA, with helping them technically, to the other side, where I was helping DOD (inaudible) on the other side of these Consent Decrees, so.

MR. ZIMMERMAN: Okay. Before, before I get to the next question about those agencies, there's, there was reference on one of the pages that Mr. McCann put on the screen in the Complaint to the NPDES, do, do you remember that?

MR. GRACHEK: Yes.

MR. ZIMMERMAN: Can you tell everybody, or tell the Judge, what is the NPDES?

MR. GRACHEK: The NPDES, National Pollution Discharge Elimination System and it is a program for regulating (inaudible) sources of wastewater to receiving streams. The NPDES program is typically delegated to the states for them to administer. I have one instance where I, I'm a professional engineer in Puerto Rico and EPA provides that in Puerto Rico, so.

MR. ZIMMERMAN: Okay. So, so, can you tell us whether one of the dimensions of the Consent Decree is that the County has not been in compliance with the NPDES or any permits issued under the NPDES?

MR. GRACHEK: Well, my, my understanding is and, and I haven't seen an NPDES permit for Baltimore County because Baltimore County feeds into the, into the system for Baltimore

City, which then goes to Patapsco and Back River plants.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: And so, they would be regulated, they would be permitted under NPDES for their discharge. The NPDES regulates, regulates wastewater at its discharge point.

MR. ZIMMERMAN: Okay, okay. But in any, so what would you say as to whether MDE would be the lead agency for reviewing or assessing the situation under the Consent Decree?

MR. GRACHEK: I, I would say that the, there are options associated with that. The Attorney General of Maryland could decide that it looks like for this Consent Decree that, that MDE has been assigned that role.

MR. ZIMMERMAN: Okay. What can you tell us, if anything, as to whether you've seen any official documents from MDE or the Attorney General of Maryland assessing the performance of Baltimore County from time to time under the Consent Decree?

MR. GRACHEK: I have not (inaudible) that.

MR. ZIMMERMAN: Okay, okay. Okay. I wanted to ask you about the, just a couple of questions about the stream, well, the storm types. The storm types and to save time which referred, referred in the Complaint and then in the various, RK&K reports, namely the two year, ten year, twenty year. Can you tell the Judge, or everybody, what's, what's the basis is or was for choosing those types of storms to study?

MR. GRACHEK: I, I would not know the basis. That was something negotiated in the Consent Decree that they chose those, those various storm events. All I can tell you is that those are the, those are within the range of normal parameters that I've seen in Consent Decrees for SSO projects that I've looked at in the northeast and Atlanta and other places where I've looked at SSOs.

MR. ZIMMERMAN: Okay. So, that may be a Federal or State policies or practice?

MR. GRACHEK: It, it may be a policy. It, it may also be a, it may be a situation where you look at specific weather in a certain area and make a determination based on that.

MR. ZIMMERMAN: Let me ask you this. Based on what you've seen of the RKA and the other studies with reference to the, those specific storms, spanning from two year to ten to twenty with various hours, what can you tell us about an educational observation about the situation if they were a thirty year storm, a forty year storm or more?

MR. GRACHEK: Probably that the, the storms (inaudible) remember, a storm, a storm event is rated by its, its propensity to happen, you know, that's what a twenty year storm is. But it's also by its duration. So, so a ten year, twenty-four hour storm might actually accumulate as much water as a twenty year, six hour storm.

You know, so, but if you are looking at storms that have, you know, that have much more, much higher, you know, numbers as far as like a forty year or fifty year storm, you're probably talking about volumes that are double what the highest value is. I, I grew up, part of the time I grew up was in South Dakota, and we had a five hundred year storm in Rapid City, South Dakota and it caused a massive flood in the city. And that was a, that was eleven inches in twenty-seven minutes.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: So, it does happen.

MR. ZIMMERMAN: Okay. All right. Based on your overall review, what can you tell us, if anything, as to whether or not the Baltimore County Public Works Department or other agencies has issued any official document or assessments, agreeing or disagreeing, or addressing in any way, various of the issues that you identified in your direct testimony?

MR. GRACHEK: Well, I mean, Baltimore, Baltimore County is responding to the Consent Decree with the production of the engineering and management documents that they're producing. I have not reviewed any documents where there's any type of direct review (inaudible) any of the items in the Consent Decree. I'm sure they do exist, but that's kind of out of my scope.

MR. ZIMMERMAN: Yeah. If you can answer this question, what can you tell us as to why it has taken so long,

or is taking so long to get recommendations for improvements and do significant improvements, assuming that the Ramdel, is it Ramdel or Ram --

MR. GRACHEK: Rommel.

MR. ZIMMERMAN: Sorry, assuming that, you know, some of the things they're describing end up being necessary, you know, why has it taken so long? Do, do you have any idea?

MR. GRACHEK: I, I cannot testify directly as to the exact reasons why, but I suspect that a lot of the reasons why it has taken so long have to do with a lot of the reasons it takes long everywhere.

MR. ZIMMERMAN: Um hm.

MR. GRACHEK: First of all, it takes a considerable amount of time, you're talking about tens of thousands of feet of sewer pipe that has to be evaluated. And it then, and then it has to be modeled.

And that practice of gathering that data, doing a model and then getting that model calibrated, get approved, get assessed can take three to four years to do, even if you're (inaudible) large municipality like the Baltimore Metro area. It can take a really long time. Longer in larger areas. That, that's one reason why.

That, that's if all things go well. And then the other reason has to do with what is the obvious, with money. These sewer improvements cost a lot of money and there has to

be bond issues or (inaudible) or things to, to raise money to do these things.

Then the last item is that, and you can see that with the system that we have here, fixing sewer pipes is incredibly disruptive. Sewers are under (inaudible), they're along stream beds, they're under roads, they're in the right of way, they're, they're all over the place and to, to do sewer repairs or replacement or even new, even slip lining of sewers or fixing, it's incredibly disruptive.

And, and you know, so with all those things combined, and, and then also, the other thing to is that you're dealing with a dynamic environment. Where it isn't like the, the amount of flow you have this year could be the same you have five years from now.

So, all those things combined result in a, a system where if a municipality has been neglected for a long period of time, you're probably talking realistically, you know, fifteen to twenty-five years, if you do everything you can to fix it.

MR. ZIMMERMAN: And let me ask you, if the, what you described from the Ram, is it Rambaugh? I want, am I getting the pronunciation right?

MR. GRACHEK: I, I think so.

MR. ZIMMERMAN: Rambaugh report. If, if the things you were describing and discussing there, turn out to be, you know, what's both recommended and approved, what, what would

you reasonably foresee as the timeframe for accomplishing all that work?

MR. GRACHEK: Just as, just as a pull it out of the air, based on experience, you're probably talking ten years.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: Depending on how you, what you decide to do. I mean, one of the things that will have to be decided in that, in that system is whether to go ahead and line the, the pipes or whether doing the, you know, concrete sewer pipes don't last forever, like nothing lasts forever.

And the other option would be, is to drain the, drain the lake, as lakes get drained periodically for sediment, and you build a, a new sewer line next to the, while it's operating, and then refill the lake.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: That, that could be an option to.

MR. ZIMMERMAN: All right. Well, if you can answer this next question. Based on your experience, when there are such serious, I guess, sewage problems and, such as in the Consent Decree, and let me, let me preface that. Have you been involved in other situations with Consent Decrees around the country similar to this?

MR. GRACHEK: Oh, yeah, yeah.

MR. ZIMMERMAN: So, based on your experience, when there's still a lot of work to do, what has been the general

approach, if you can tell us, as to, you know, what should be done with proposed new developments in those areas?

MR. GRACHEK: Well, I can tell you from experience, it, it, it's not for me to say, to judge what you, what, what they ought to do or what, what, what they have. But what I have seen done, in the city of Atlanta, I sat on a, a steering committee, where we built our, our giant sewage tunnels.

Many miles of sixteen foot diameter sewage tunnels to control SSOs and CSOs and we had a moratorium on development in, in the city until we got that project done. And often times, a moratorium on development is what pushes action past the political realm. That's just (inaudible).

MR. ZIMMERMAN: Yeah, do you know whether that, would, would, would it be done legislatively or by order of the executive branch?

MR. GRACHEK: I, I think it was done, my, my assessment is that when the city of Atlanta got the right mayor and she took charge and decided to make infrastructure a priority and, you know, without the political, political aspect taking care of it, then they were able to make it happen.

MR. ZIMMERMAN: Okay, all right. Just a couple more questions. I, I take it it's, it's not part of the scope of your testimony to review where the whole situation fits or doesn't fit under the County's zoning growth management law? That, that's not part of your scope?

MR. GRACHEK: No, no, it's not.

MR. ZIMMERMAN: I didn't think so.

MR. GRACHEK: I'm not a zoning expert.

MR. ZIMMERMAN: All right. I got to ask you this. There was, and this is kind of the last general subject area of my questioning. There's been mention in the direct testimony of the Torch Hill case, right?

MR. GRACHEK: Yes.

MR. ZIMMERMAN: Okay and you were a witness in that case, were you not?

MR. GRACHEK: Yes, I was.

MR. ZIMMERMAN: Okay and have you read Judge Murphy's decision in that case?

MR. GRACHEK: Yes, I did.

MR. ZIMMERMAN: Okay. If we assume, graciously, that Judge Murphy's decision with reference to the sewer issue is correct and did sustain on appeal, then what can you tell us as to whether the situation here is materially different, whether in terms of the scope of the project, the location of the project, or anything else you think relevant, if you can answer, that, that would lead to a different conclusion than the approval in Torch Hill?

MR. GRACHEK: It is, I think that's out of the scope of my expertise, frankly.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: I, I'm, I'm an expert on the, the merits of (inaudible) cases.

MR. ZIMMERMAN: Okay.

MR. GRACHEK: And I stand by my testimony in the other case --

MR. ZIMMERMAN: Okay.

MR. GRACHEK: -- regardless of the decision. So, that's not my place to --

MR. ZIMMERMAN: Okay, all right, --

MR. GRACHEK: -- (inaudible) --

MR. ZIMMERMAN: -- that'll be up to Mr. McCann or anyone else looking at the case. Okay, all right. I appreciate your very fair and, you know, honest testimony. And Judge Murphy, that's all I have.

ALJ: Okay. Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Thank you. Mr. Sachse?

MR. SACHSE: No questions.

ALJ: Mr. Mudd?

MR. MUDD: Yes, I have some questions. Thank you. Good afternoon, Mr. Grachek. How you doing?

MR. GRACHEK: Hello, I'm doing well. Yourself?

MR. MUDD: Can you hear, I'm doing well, thank you. Can you hear me okay?

MR. GRACHEK: Yes.

MR. MUDD: Okay, good. How, how long have you been involved in this case?

MR. GRACHEK: In this particular case, I have been involved for oh, probably less than a year. But I've been involved in all the sewer cases since 2019.

MR. MUDD: Okay.

MR. GRACHEK: Actually, late 2018.

MR. MUDD: So, you, you think it was about a year ago that you were first contacted about this one?

MR. GRACHEK: I, I think so. I, I, I can't recall. We, I have an ongoing relationship, you know, with, with the people that, on these projects, so, I can't recall. I can find out, but.

MR. MUDD: No, that's okay. That, that's fine. And who, who first contacted you?

MR. GRACHEK: Michael McCann contacted me.

MR. MUDD: Okay and have you engaged with others in addition to Mr. McCann?

MR. GRACHEK: I, I have conversations with some of the other people that are involved in the case. Tom McCord, mainly.

MR. MUDD: Tom McCord?

MR. GRACHEK: Yeah.

MR. MUDD: Okay and anyone else?

MR. GRACHEK: Not particularly (inaudible) but not

particularly, no.

MR. MUDD: Nobody else that you can recall?

MR. GRACHEK: Not that I can recall, no.

MR. MUDD: Okay and, and if, have you engaged with Mr. McCord over the course of the, of the year as well?

MR. GRACHEK: Yes.

MR. MUDD: Okay and all of the various documents and things that you've reviewed in this case, they've come directly either from Mr. McCord or from Mr. McCann?

MR. GRACHEK: Everything I have received, I have received through Mr. McCann.

MR. MUDD: Okay and, and, well, we'll talk about it in general, but do you know if there are things that, that are not from the County, documents not from the County, do you know where he was getting them from?

MR. GRACHEK: I, I, you need to be specific as to what --

MR. MUDD: I'm sorry, we'll wait till we get to them, to, to the extent it matters.

MR. GRACHEK: (inaudible).

MR. MUDD: How many, how many projects have you worked on in the State of Maryland before?

MR. GRACHEK: I would say as far as environmental projects, probably three major ones and then several SSOs, CSO type projects.

MR. MUDD: Okay and I'm going to ask you a few questions about projects in general but, but when I ask you that, is it safe for me to assume that when I ask you about a project, that, that your expertise, and really everything you do, relates to sewerage and sewer design?

MR. GRACHEK: No, not everything, no. I, I, I have multiple, multiple things I do in my profession as a civil and environmental engineer.

MR. MUDD: Okay. So, in Maryland then, relative to sewer design, how many projects have you worked on?

MR. GRACHEK: If you're looking at individual cases, four.

MR. MUDD: Okay and how many in Baltimore County?

MR. GRACHEK: Three.

MR. MUDD: And then the other one I think you mentioned was in Baltimore City?

MR. GRACHEK: Yep, yes.

MR. MUDD: Okay and you're not a licensed engineer in Maryland, correct?

MR. GRACHEK: No.

MR. MUDD: Have you ever sealed an engineer, or plan in Maryland? I guess you can't, correct?

MR. GRACHEK: No, I am not, I'm not a licensed engineer in Maryland.

MR. MUDD: Okay. In, in any of your, any of your

projects in other jurisdictions, do you ever perform the design work where you would be sealing plans?

MR. GRACHEK: Yes, yes. And if I, I, for example, if, I'm building a treatment plant right now in Puerto Rico and I'm the engineer of record.

MR. MUDD: Okay.

MR. GRACHEK: And I, I, I'm, I'm a P.E. in five states and in Puerto Rico. And, and just as an aside, I could get a, I could get a license in Maryland. We have, we have a multi-disciplinary company where we have lots of engineers with lots of P.E.s in different places. So, we don't feel like every engineer has to be licensed in every state.

MR. MUDD: Sure.

MR. GRACHEK: But it would be a matter of filing paperwork to get all, to get my reciprocity license in Maryland.

MR. MUDD: Okay and the, let's talk for a second about the project in Puerto Rico. Is that sort of a ground up development, meaning, a brand new treatment plant?

MR. GRACHEK: Yes.

MR. MUDD: Okay and so you do some work where you're, where you're being tasked to design things that are, that are brand new? They never thought about doing it before and they say we need a treatment plan, we're going to hire you to do it?

MR. GRACHEK: That's correct.

MR. MUDD: And then, and then, I guess another facet of your work is like in this case, where you're being asked to analyze deficiencies in a system?

MR. GRACHEK: Correct.

MR. MUDD: Okay and what, what's the breakdown in your, in your business of those two things?

MR. GRACHEK: Probably, I spend probably about twenty percent of my time doing evaluations and support for cases like this. And the rest of it is doing design, implementation and environment (inaudible) on other, other, other activities and, and, and not, not on (inaudible) cases.

MR. MUDD: Okay. How did you first get involved with the contingent in Maryland relative to sewer design and, and evaluating sewer deficiencies?

MR. GRACHEK: I was ref, it's, it's a, it's a pretty tight community of, of experts that are available nationwide for this type of work. And I was referred to an organization called Blue Water Baltimore, and I worked with the lawyer there, who is now with the Chesapeake Alliance. And I believe, I'm not for sure, but I believe Michael got a referral from the person there for, for me.

MR. MUDD: Okay and Blue Water Baltimore, is that for your Baltimore City project?

MR. GRACHEK: Yeah, Blue Water Baltimore is now Chesapeake Legal Alliance that I work with.

MR. MUDD: Okay. So, you don't, you don't have like any friends or anything in this community that you're doing this work for?

MR. GRACHEK: No, I haven't --

MR. MUDD: Okay.

MR. GRACHEK: I --

MR. MUDD: Okay.

MR. GRACHEK: -- was just saying, I, I don't, I don't have any relatives or, or family or old friends in, in Baltimore or in Baltimore County.

MR. MUDD: Okay. How much, how much of the, and I, I think you may have answered this a little bit but how often are you, are you performing a role in other jurisdictions like you are in this case, where you're trying to demonstrate deficiencies in a system?

MR. GRACHEK: It ebbs and flows in different years. There's some years where I do more of this. Like, for example, I've done a lot of work with NGOs involved in, in CCA work, cold combustion work. I've done a number of cases that involve water and sewer SSOs, CFOs, for different things. I would venture to guess in any one year, I'm probably at, you know, anywhere from ten to twenty percent doing this kind of work.

MR. MUDD: Okay and does that include expert testimony in hearings like this where you might be advocating in a particular way relative to, to a sewer design?

MR. GRACHEK: Correct, yes.

MR. MUDD: Okay. So, how many hours of testimony do you think you give a year on, on cases like this?

MR. GRACHEK: Oh, gosh, probably, actual testimony, you mean, like we're doing today. I would venture to guess probably twice a year I'll be on the stand.

MR. MUDD: Okay and I think you mentioned, what types of organizations do you typically do this work for?

MR. GRACHEK: I, I, my, my work I do for, for organizations are, a lot of them are for private environmental attorneys. But I also work, I've worked for organizations like Chesapeake or Blue Water Baltimore. I've worked for the, the River Keepers in several states. I've worked for the (inaudible) on several cases involving wastewater.

MR. MUDD: What's that stand for?

MR. GRACHEK: Southern Environmental (inaudible) Commissioner, I can't remember exactly. But they're, they're an organization that does environmental advocacy in the south.

MR. MUDD: Okay. So, that, and I was going to use that term myself. So, so, is, is your work exclusively with environmental activists on this type of work?

MR. GRACHEK: On, on the, on work, on work involving NGOs and SSOs, yes. I, to answer your question directly, I usually work on the Plaintiff's side of these things. I, I typically do not work for the municipalities.

MR. MUDD: And, and what is MGO, by the way, when you --

MR. GRACHEK: Non-government organization.

MR. MUDD: Okay. So, so, like Blue Water Baltimore is, that (inaudible) --

MR. GRACHEK: (inaudible) -- Sierra Club, those types of things.

MR. MUDD: Got it, okay. And, and how many different jurisdictions have you testified in over the years in, in that type of capacity, on behalf of an environmental advocate?

MR. GRACHEK: I would have to go back and count, but probably, as far as jurisdictions go, probably at least five or six different jurisdictions where I've actually testified. A lot of the work that I do never goes to trial. So, --

MR. MUDD: I'm sorry, could you repeat that, I'm sorry?

MR. GRACHEK: A, a lot of the work that I do never goes to trial or (inaudible) --

MR. MUDD: Oh.

MR. GRACHEK: -- we end up settling --

MR. MUDD: Got it.

MR. GRACHEK: -- (inaudible) the majority of the projects I work on for these organizations never go to trial.

MR. MUDD: Okay and, and are you involved ever in formulating Consent Decrees, for example?

MR. GRACHEK: Not Consent Decrees. I'm involved in providing technical input that leads lawyers to do the Consent Decree, but I am never asked and I studiously avoid being asked to opine on and develop Consent Decree language because it causes conflict of interest in my business.

MR. MUDD: What do you mean by that?

MR. GRACHEK: I can find myself, if I, if I'm working on a Consent Decree for an NGO, I might find myself out of work on a big client that we have, a big industrial client. So, I don't do that. I, I am careful not to work against clients that I, other clients that I have, industrial clients. So, I, I, I stay out of legal, I try to stay as an engineer and not as an attorney.

MR. MUDD: Okay, okay. Let's see. When, when you began your testimony and Mr. McCann asked you what you had, had reviewed, you said you viewed a plethora of documents. Can you give, and I know you went through some, but can you just describe for me off the top of your head all the various documents that you reviewed for your testimony today?

MR. GRACHEK: Yeah, the, the main documents are the RK&K report, the RJN report, the Rambaugh (phonetic) report, the Hazen newsletters and then a number of ancillary documents that are currently exhibits so.

MR. MUDD: Gotcha. And have you reviewed any of the, the annual or quarterly reports that are required under the

Consent Decree for Baltimore County?

MR. GRACHEK: No.

MR. MUDD: Okay. You testified that you visited the site, and I know that you did when you testified in the Torch Hill case, you had visited, I think, in 2019. You have visited since then, is that right?

MR. GRACHEK: Yeah, I visited January of this year.

MR. MUDD: Okay and who did you take that visit with?

MR. GRACHEK: With Michael McCann and Tom McCord.

MR. MUDD: Okay and is that the only other visit that you've taken?

MR. GRACHEK: Yes.

MR. MUDD: So, you've been to the site twice?

MR. GRACHEK: I've been to the, the, I've been to Lake Roland a few times, but I've only been to the Greenspring Manor site once.

MR. MUDD: Oh, I'm sorry, right. And so, you've been a couple times to, to Lake Roland. So, --

MR. GRACHEK: Yeah.

MR. MUDD: -- in talking about your Lake Roland, actually, let me stop, let me talk about Greenspring Manor. What, what did you, what, what did you on your site visit at Greenspring Manor?

MR. GRACHEK: It was a rainy day and we were preparing for lots of other work, and so it was a drive by. I

got to see the, the property. I got to see the, the, some of the sewers coming from the property and how it affected (inaudible), you know, where the sewer would be running through some of the developed areas on the opposite side of the development. And, and so, that's what I saw. I saw a big open field where the development is slated for.

MR. MUDD: Okay. When you say you saw the sewers, does that mean you saw manholes or what did --

MR. GRACHEK: I saw manholes.

MR. MUDD: Okay.

MR. GRACHEK: Yeah.

MR. MUDD: And did you, did you get out of your car at all?

MR. GRACHEK: Yes.

MR. MUDD: Okay and did you walk the sewer line at all or how --

MR. GRACHEK: No, I, I did not walk the whole sewer line. It was raining that day.

MR. MUDD: Okay. So, where, what did you do when you got out of the car?

MR. GRACHEK: I just got out of the car to take a look at some markings on a, on a manhole.

MR. MUDD: Okay.

MR. GRACHEK: Near the site. We got out, we also went to Lake Roland, and we got out of the car, take a look at

the signs and, and some of the areas in Lake Roland.

MR. MUDD: Yeah, what, what, tell me a little bit more about your Lake Roland site visit.

MR. GRACHEK: We, we visited the site like we had visited before. We took a look at, at the, the conditions of the lake and what is, it look, you know, basically, you know, there are very few people out there because it was a rainy day and we drove, we drove out. We looked at the signs, we noticed all the, you know, all the signage for, you know, caution signage and, and all that. Just took a look at the general area and refresh, refreshed myself on the, that.

MR. MUDD: Okay. What, what else can you tell me about the park? What, what, can you describe the park for me, based on your understanding of it?

MR. GRACHEK: I'm sorry, could you repeat that?

MR. MUDD: Can you describe Lake Roland park area for me? Just, just based on your understanding of it.

MR. GRACHEK: Yeah, Lake Roland Park is a, it, it's an area that looks like it's good for like walks and it's got a boat dock and, and it's, it's wooded, and it looks like a fairly nice place to go have a picnic and walk around the site. I do recall on the, on the westside, I walked (inaudible) rail line at one time in that area and it's, it's where the sewer pipe is too.

MR. MUDD: Did you ever walk on any trails there?

MR. GRACHEK: When, when, back in, I think it was 2019, we walked on the trail on the westside to get to manhole 6888.

MR. MUDD: Okay and that, that was the manhole that you showed pictures of earlier?

MR. GRACHEK: Yes.

MR. MUDD: Okay. You described, can you tell me a little bit about, and I know I'm going backwards here, can you tell me a little bit about the work you're doing in Baltimore City?

MR. GRACHEK: To the extent I can, I am supporting Chesapeake Alliance in the evaluation of the ongoing work under, between, you know, with the City of Baltimore and working with MDE on the upgrades to the Patapsco and the Back River plant. I'm also taking a look at the, at some of the documentation associated with a lot of work they've done on the SSOs over the last ten, fifteen years.

MR. MUDD: And you're doing that work for Blue Water Baltimore?

MR. GRACHEK: I'm doing it for Chesapeake Legal Alliance.

MR. MUDD: Okay and are they, I, I'm going to use this term, and I'm not, I don't mean anything by it other than trying to describe it this way, but are they sort of a watchdog in this process? Are they --

MR. GRACHEK: They're, they're an advocacy group that advocates, advocates for the environment.

MR. MUDD: Okay and so they're --

MR. GRACHEK: (inaudible).

MR. MUDD: I'm sorry, go ahead.

MR. GRACHEK: Like many others.

MR. MUDD: Yeah, sure. And are, are you helping them form input they might be giving into the process?

MR. GRACHEK: Yes.

MR. MUDD: Okay. So, again, that's not an example of where you're working on anything legally. You're, correct?

MR. GRACHEK: Correct. I, like I said before, I studiously avoid making legal opinions.

MR. MUDD: Okay. Have you ever, whenever you've been contacted by any of these groups, have you ever declined to do work on a project?

MR. GRACHEK: Absolutely.

MR. MUDD: Okay. What would, what would be an example of that?

MR. GRACHEK: It would be where we run a conflict of interest checking and determine the people that, or the project they want me to work on is in conflict with one of our existing clients. Or it ends up being a situation where it's something that, that I, I don't, I, I will not provide them, you know, the, they want an opinion that I'm not willing to provide.

We have several cases where we have people (inaudible) contact us and would like us to generate opinions that aren't, aren't technically sound and we won't, we won't do anything that isn't, that, to our best judgment, technically correct.

MR. MUDD: Okay.

MR. GRACHEK: Just, just, just to justify a case.

MR. MUDD: Okay. You described this, this Jones Falls sewer shed system as a gravity system?

MR. GRACHEK: Yes.

MR. MUDD: You know if there are any pump stations within the sewer shed?

MR. GRACHEK: No, I don't. I, I don't. I haven't seen any maps that have shown pump stations in the area. I, I would have to believe though that there are because of the topography in the area. But no, I haven't done any evaluation of any of the pump stations --

MR. MUDD: Do you recall any of the extensive discussion of the pump stations in the Consent Decree?

MR. GRACHEK: No.

MR. MUDD: Or in the SRRR report?

MR. GRACHEK: No.

MR. MUDD: Okay. You, you, you testified about the, the general size and we looked at a map of the, of the Jones Falls sewer shed. You, you would agree with me that there is a

water shed associated with the sewer shed?

MR. GRACHEK: There always is.

MR. MUDD: Okay and the sewer shed overlaps with water shed, would you agree with me on that?

MR. GRACHEK: Yes.

MR. MUDD: And the water shed, the water shed, in this case, is larger than the sewer shed, would you also agree with me on that?

MR. GRACHEK: I haven't seen a map of, of the water shed. And I, I would venture to guess that probably the water shed is regulated under a, a much larger area of land than the individual sewer sheds because the sewer sheds are dictated by where the sewers are. The water shed is dictated by all the land that (inaudible) have sewers too, so.

MR. MUDD: Okay.

MR. GRACHEK: So, this may be a subset of a larger water shed.

MR. MUDD: Okay and I just want to show you, bear with me here. Show you Petitioner's Exhibit, I'm sorry, Protestant's Exhibit 60. Can you see that?

MR. GRACHEK: (inaudible) I can see it now, yes.

MR. MUDD: Okay and, and do you remember going over this map with Mr. McCann?

MR. GRACHEK: Yes.

MR. MUDD: And you, you test, you were referring to

these various streams, correct?

MR. GRACHEK: Yes.

MR. MUDD: And would you agree with me, and if you know, do these streams reach beyond the limits of this, this map that we're looking at?

MR. GRACHEK: I haven't evaluated that, but most likely, yes.

MR. MUDD: Okay and do you know, looking at this map, where the extent of the sewer shed ends.

MR. GRACHEK: Well, the sewer shed ends at the County line.

MR. MUDD: How, how about to the north?

MR. GRACHEK: To the north, there are several other sewer sheds in the area.

MR. MUDD: Okay.

MR. GRACHEK: I haven't evaluated those sewer sheds.

MR. MUDD: All right and I, and I, and I don't mean it to be a trick. Let me, bear with me here. I'm going to, I'm going to switch, I'm going to stop, and I'm going to switch to a different exhibit. Sorry. How many windows. Do you recall this exhibit?

MR. GRACHEK: Yes.

MR. MUDD: Okay and this, this, as far as you know, shows the Jones Falls sewer shed?

MR. GRACHEK: Yes.

MR. MUDD: Okay and can you direct me, well, actually, I'll just, I'll just offer it, but the, this, this area right here, where my, where my mouse is, that's about where the property is, correct?

MR. GRACHEK: It's close, yes.

MR. MUDD: Okay and if, if you can recall looking at the last map, you would agree with me that the streams that's, that run through this sewer shed, extend beyond the sewer shed boundaries, right?

MR. GRACHEK: Yes.

MR. MUDD: Okay. So, things that might be in the streams, not only would be coming from, within the sewer shed, but from outside the sewer shed?

MR. GRACHEK: I guess, depends what you mean by things.

MR. MUDD: Well, any, any water that's in that stream would come from beyond the sewer shed and make it's way through the --

MR. GRACHEK: Yeah.

MR. MUDD: -- sewer shed into Lake Roland, right?

MR. GRACHEK: Yes, yes. The water that would come into Lake Roland, probably emanates from areas beyond the sewer shed.

MR. MUDD: Got it, okay. Okay. You also, I'm sorry, I'm going to put that exhibit back up. You testified about,

Mr. McCann was asking you questions about where all this sewerage was coming from and then where it was going to. And you were referring to this, I guess into meter at TSJF01 at the bottom, the blue dot that I'm referring to now?

MR. GRACHEK: Yes.

MR. MUDD: And I think you said that some, but not all, of the sewerage that makes its way under Lake Roland makes its way through that meter, is that right?

MR. GRACHEK: I, no, I clarified, all the water that makes its way under Lake Roland goes through that meter. What I was saying was that if you look to the, to the west, there are several other meter boxes on the boundary where small amounts of, of sewage likely, and I haven't evaluated this, but likely enter Baltimore City from those areas. They don't necessarily go to the, to the Towson or the, excuse me, the Jones Falls interceptor.

MR. MUDD: You're, you're referring to JFWR15 here where my mouse is?

MR. GRACHEK: Yes.

MR. MUDD: And JF0320S?

MR. GRACHEK: Yes.

ALJ: Could, could you zoom in, because --

MR. MUDD: Sure.

ALJ: -- it's really small and I can't see the numbers at all.

MR. GRACHEK: Yeah, and that's the only conclusion I can reach because there wouldn't be meter, meter stations there if there wasn't flow being metered out of the area. But I haven't looked at what, what that actually looks like. But it looks, it looks to me, on this map, that some of the water in the sewer shed doesn't necessarily go through the Lake Roland interceptor based on that.

MR. MUDD: Got it. But you don't know and, and you used the term small amount, but you really don't know the amount that's going through those areas, right?

MR. GRACHEK: If you look at, if you look at the connection of that southwest corner to the, to the Jones Falls interceptor, you see two very distinct points where sewer goes into that interceptor so, it would almost certainly be a small subset of that entire area.

And probably an area that feeds into sewer lines so that, so that you don't have to have pump stations pumping it over the hill to that other area. But that, that's speculation on my part based on what I'm looking at here.

MR. MUDD: Okay, understood. Thank you. Sorry, I'm just kind of, Mr. McCann covered a lot of ground, so bear with me. There may be times where I'm catching my, seeing where I am in my notes here. Okay. So, I'm going to pull up Exhibit, sorry, 64. You recognize this exhibit, you recall --

MR. GRACHEK: Yes.

MR. MUDD: And, sorry, I'm going to move this. Can you still see it?

MR. GRACHEK: Yes.

MR. MUDD: All right, good. I'm sorry. I'm dealing with two screens here, I just want to make sure I'm showing the right thing. Okay. So, you said that it was your understanding that the County created this document, is that right?

MR. GRACHEK: Yes.

MR. MUDD: But did you have any engagement with the County on this at all?

MR. GRACHEK: No, I did not.

MR. MUDD: And you didn't make, did you make any inquiries of the County about this document?

MR. GRACHEK: No, I, I have made no inquiries or had any contact with County personnel.

MR. MUDD: Okay and, you know, when, when, when all, all the data and information here, within these columns, how is it that you were able to determine, you know, what, what was, what was actually contained from a number's perspective based on these, these columns? Let me, let me rephrase that. Strike that. How, how do you know what each column shows, if you did not interact with the County on this document?

MR. GRACHEK: Because it's, it's a fairly typical way that the data is represented and the, the more relevant thing

on this document is if you page down, page down to the, to where they do the analysis is, the, the point of this, all the way down at the bottom is where you, stop right there, is when you're talking about the system analysis.

And that was the point of this document, where you see the full pipe capacity in, these are the areas that the County is required, you know, rehab of the sewer system, you know, already because the existing sewer pipes are at 94.32 to over a hundred percent capacity already. (inaudible) three different aspects (inaudible) data, but the system analysis is what is germane to this, to this exhibit.

MR. MUDD: Okay and what, what do you make of, how, how would the County have determined the, the flow, do you know?

MR. GRACHEK: I, I don't know how they did it particularly, but it's usually through flow metering.

MR. MUDD: Okay. Did you review any separate flow metering data?

MR. GRACHEK: No.

MR. MUDD: Do you have any idea how the County utilized the flow metering?

MR. GRACHEK: No.

MR. MUDD: Or implemented the flow metering?

MR. GRACHEK: No, I, I reviewed the data, presuming that the County data is accurate.

MR. MUDD: Okay and what do you make of the relief, required relief column? What does that mean to you?

MR. GRACHEK: That, that means, what that means is that the, do you need relief sewers or storage from what I see there and you don't need a relief sewer, you just need to upgrade their, they've been asked to upgrade those pipes from, you know, from eight inch pipes, I believe eight inch to eighteen inches.

MR. MUDD: Okay. Do, do you know for certain that that's what, that's what that section means or --

MR. GRACHEK: No, no, but it, it didn't seem relevant to the analysis because it, the County made an analysis that there's no actual relief sewers required. Relief sewers are basically sewers that store sewage. And what we're looking at is a, is an overall choke in the line for this capacity (inaudible).

MR. MUDD: Okay. I'm going to move on to the Consent Decree. So, you, you testified, I think Mr. McCann first mentioned the term SSO and then he asked you to define it. And I, I took notes on it and I think your, your definition loosely was that it's an overflow of wastewater from the sewer system that occurs with the amount of wastewater going through the pipe in excess of the capacity of that pipe. Is that a fair assessment for what you think an SSO is?

MR. GRACHEK: Yes.

MR. MUDD: Okay. Did you review how the Consent Decree defines what an SSO is?

MR. GRACHEK: No, I did not compare to what the SSO says. Or, excuse me, what the Consent Decree says.

MR. MUDD: Okay. I'm going to direct your attention to, bear with me, the definition section, I'm sorry. I'll show you that we're in the definition section. We're in section four, scrolling down to Z. Can you read what the definition of SSO is under this document?

MR. GRACHEK: Sanitary sewer overflow, or SSO, shall mean any spill, release or discharge from the collection system, including all building backups.

MR. MUDD: Okay. So, it's not necessarily, from this document's perspective, an SSO is not characterized as being related to capacity, do you agree with me on that?

MR. GRACHEK: This, this definition, when I said capacity, is an add on to what it is. This is, this is a definition as to what and my definition added a why.

MR. MUDD: I'm sorry?

MR. GRACHEK: My definition added a why to the what. In other words, I explained why you have an SSO backup in my, my response.

MR. MUDD: So, so you're saying --

MR. GRACHEK: It, it doesn't cover that here.

MR. MUDD: -- despite the definition here, you're

saying the only way that you can have an SSO in your opinion is if there's a capacity issue?

MR. GRACHEK: Yes.

MR. MUDD: You don't read this, this agreement, or this document as any spill or any release, even if it's a crack in the system, that's not, that's, that's, that may not be related to capacity? You don't think that's what's contemplated here?

MR. GRACHEK: No, because a sanitary sewer, a sanitary sewer water does not leak out through cracks.

MR. MUDD: Okay.

MR. GRACHEK: You, the pressure on the inside of the pipe is so much lower than the pressure on the outside that water only leaks in. So, no, you could have a, if you have a crack in the pipe, it's not going to, it has to do with capacity. You have pipes that are flowing at appropriate capacity, you're not going to have anything, anything substantial leaking out of them. They're not pressure pipes.

MR. MUDD: Okay and so, just to be clear. In, in your, in your opinion, when you read this document, anytime there's a reference to an SSO under the Consent Decree and, and, and then under agreements that have been adopted pursuant to the Consent Decree, it's your opinion that those all relate to capacity?

MR. GRACHEK: Yes.

MR. MUDD: Okay. Move on to sixty-six for now. Oops, I don't have sixty-six, that was the Complaint. I, I, I, actually, I hope this question makes sense because I know it's been a while and you've been asked a lot. But Mr. McCann asked you, he asked you to review the Complaint and to read a few, a few sections from it. And then he asked you if what was described in the Complaint is consistent with your experience and you answered yes. What did you mean when you were answering that question?

MR. GRACHEK: The Complaint, in general terms, I don't have the Complaint in front of me, but in general terms the Complaint is associated with release of sanitary sewage through overflows. And that Complaint is consistent with a lot of the municipalities that I've worked with. Is that the Complaint is that they have during storm events particularly they have overflow of sanitary sewage. That's what, that's what I meant.

MR. MUDD: Okay, thank you. Going to share now sixty-seven, which is the SRRR Plan. You agree with me that the SRRR Plan includes the long term capacity analysis as an appendix to this document, right?

MR. GRACHEK: Yes.

MR. MUDD: And you agree that the long term capacity report ran models based upon certain design storms, right?

MR. GRACHEK: Yes.

MR. MUDD: And that was required to run those models and to do that analysis was required under the Consent Decree, right?

MR. GRACHEK: Yes.

MR. MUDD: And you testified in a prior case that you thought that the County was obligated under the Consent Decree to complete improvements in line with those larger design storms, correct?

MR. GRACHEK: Yes.

MR. MUDD: But you also understand that that argument was rejected and that the Consent Decree permits the County to design the sewer consistent with an alternative rainfall distribution?

MR. GRACHEK: That may be the case, but that doesn't change my engineering opinion.

MR. MUDD: Okay.

MR. GRACHEK: And, and the reason I say that is because the Consent Decree specifically says that the intent of the Consent Decree or the, the demand of the Consent Decree, is to eliminate SSOs. And if you only, if you only, you know, upgrade your system to a certain storm event that is very, very likely, you're going to have SSOs for every other storm event, which is not consistent with this Consent Decree. That's my rationale.

MR. MUDD: Okay, I understand. So, you, you, you,

but you agree with me, generally, that, that the County's approach in the SRRR Plan was to use the alternative rainfall distribution?

MR. GRACHEK: I, I believe so, I believe that's what they did. They, the used alternative rainfall evaluations in some sense, and they also limited their work to certain, certain (inaudible).

MR. MUDD: Okay and you agree with me that MDE and EPA have approved the SRRR Plan, correct?

MR. GRACHEK: I, I know of, I am aware of some correspondence to that effect, but I'm not sure that they approved the entire SRR, SRRR Plan --

MR. MUDD: Do, so you don't know whether they approved it or not? I'm sorry, I didn't mean to cut you off.

MR. GRACHEK: -- they approved (inaudible), in my opinion, they approved the elements that they're going to do, but it is not a, it is not a blanket statement that no, the other things have to be done because we approved this plan.

MR. MUDD: Okay. So, ultimately, it's your opinion that the County should still be making improvements consistent with the large, consistent with the larger design storms, is that right?

MR. GRACHEK: Yes.

MR. MUDD: Okay. All right, let me move on to the, now, now I'm on long term capacity and peak flow report, which

is Protestant's Exhibit 68. I'm going to go to page thirty-six. This is something that Mr. McCann explored with you. You, you testified, Mr. McCann was talking to you about the, the key. I should say the, the, yeah, I guess the key here in the bottom lefthand corner.

MR. GRACHEK: Yeah, the, the legend.

MR. MUDD: Yeah, and you said that the brown manhole to be sealed would be a manhole that has overflowed at a certain time. Do you recall that testimony?

MR. GRACHEK: Yes.

MR. MUDD: Where do you get that information from?

MR. GRACHEK: It's a supposition that you only seal manholes because you either had overflows or other things you're doing that you suspect you're going to have overflows. That would be the only reason to seal a manhole.

MR. MUDD: But would you agree with me that there's nothing necessarily in these reports that demonstrates that every manhole that says to be sealed has had a, an overflow?

MR. GRACHEK: I agree with that.

MR. MUDD: Okay. So, so that, so you can't be for certain that, strike that. And, I guess, further on, on this particular issue, this map, and I may remind you, this map is based upon a, a model, correct?

MR. GRACHEK: Yes.

MR. MUDD: So, this particular map is based upon the

two year, six hour event model, correct?

MR. GRACHEK: Correct.

MR. MUDD: And so, that's, that's, in order to perform a model, certain assumptions and information are placed into a computer, right?

MR. GRACHEK: Yes.

MR. MUDD: And then the computer generates something that, that, I guess, results that would dictate the work that's, that's recommended on this plan, correct?

MR. GRACHEK: What the model does is it generates areas where there are concerns. And then the engineers are supposed to make judgments as to how they remedy those concerns.

MR. MUDD: Okay. So, --

MR. GRACHEK: So, it doesn't, it doesn't tell you that you got to put a pipe here or a storage basin here. It basically says, you're going to have SSOs here or there.

MR. MUDD: Gotcha.

MR. GRACHEK: And then, and then you make judgments as to how, how you're going to remedy that. Then you model those, those assumptions to see if you, if you satisfy the requirements.

MR. MUDD: Okay. So, then in, and in, taking that a step further, when you're using a model for this purpose, it's, it's actually not based upon reality, right? It's based upon

assumptions that are being made.

MR. GRACHEK: It's based partially on assumptions, but it's also based on a lot of data that you collect for existing flows. And so, a really good model will have a lot of really, really good historic flow data to be able to, to model along with not just flow data, but also the condition of the system.

MR. MUDD: Okay.

MR. GRACHEK: And the, and the, the better models have a lot more flow data. They have a lot better analysis of the system. Poor models don't.

MR. MUDD: Is it your opinion that this, so we're looking at yellow dots now, SSO manholes, is it your opinion that, that wherever one of those yellow dots appears is a location where there has, in fact, been an SSO?

MR. GRACHEK: No, that's a place where they have modeled an SSO in a manhole.

MR. MUDD: Okay.

MR. GRACHEK: And it may very well be that you have SSOs there but that's, this is, this is based on the model output.

MR. MUDD: Okay. I'm going to go to page sixteen, this way. I think it was actually real page sixteen, bear with me. Nope, I think it was that sixteen. So, I think you were referring to, on this page, manhole 44219, is that right?

MR. GRACHEK: I'd have to see it on the (inaudible).

MR. MUDD: Yeah, I know. Sorry, you've been bombarded with a lot of questions. So, let me go back to, whoops, sorry. Let me go back to, to thirty-six. Should then sorry, I'll go to thirty-seven. Can you see that now?

MR. GRACHEK: Yes.

MR. MUDD: Manhole 44219?

MR. GRACHEK: Yes.

MR. MUDD: Okay and then, going back to that page, I think this was the language that you and Mr. McCann were talking about. That, I think you testified that, under, under the predictive, under the model analysis, that this manhole requires an upsizing from ten inches to eighteen inches. Do you remember that testimony and that information?

MR. GRACHEK: Not the manhole, the sewer line.

MR. MUDD: I'm sorry, the, yeah, the sewer line.

MR. GRACHEK: Yes.

MR. MUDD: And it was a segment that was shown on thirty-seven, on map thirty-seven, page thirty-seven?

MR. GRACHEK: Right.

MR. MUDD: Okay. But you would agree with me that all these recommended changes again are based on the, the larger storms that are modeled, correct?

MR. GRACHEK: Depending on (inaudible) I believe that was, well, you'd have to look back at (inaudible) --

MR. MUDD: Yeah, I'll go back, I'll go back.

MR. GRACHEK: I think it might have been based on the, the ten year, six hour and ten year, twenty-four.

MR. MUDD: So, we're on map thirty-seven, this is the two year, twenty-four hour.

MR. GRACHEK: Right.

MR. MUDD: And that's showing water, showing sewer line improvements, correct?

MR. GRACHEK: If you go down to the, go down to the legend.

MR. MUDD: Um hm.

MR. GRACHEK: There, right there, and move to the right a little bit, no, the other way, I'm sorry. Go the other way.

MR. MUDD: Yep, pipes upsized to eighteen inches.

MR. GRACHEK: Right.

MR. MUDD: Okay.

MR. GRACHEK: (inaudible) go to the right, to the, to the label or the, the, the title.

MR. MUDD: Yep.

MR. GRACHEK: And that's for the two year, twenty-four hour event. So, in other words, that's the one that's one upgrade in the models they use. So, the first was a two year, six hour event, this is a twenty-four hour event and it shows, it shows that you need upgrade of the sewer pipe.

MR. MUDD: Right, again, but that's on that larger modeled storm, right?

MR. GRACHEK: Right, that, that --

MR. MCCANN: Objection, objection, hold on, hold on.

MR. GRACHEK: -- the same intensity storm --

MR. MCCANN: Objection. Hold on, Mr. Grachek.

ALJ: Hold on. Yeah, Mr. McCann?

MR. MCCANN: I'm sorry to interrupt. I, I think there's some confusion. Mr. Mudd keeps saying the larger storm and I don't know what, I don't know what that is in reference to. So, I would ask for, you know, the objection is, is that the, the question, I guess, lacks foundation or is confusing. And I think, frankly, I think Mr. Mudd is putting words in his mouth.

ALJ: Well, Mr. Mudd, could you just explain and just rephrase the question?

MR. MUDD: Sure. That's based, the, the, this recommendation, Mr. Grachek, is based upon the two-year, twenty-four-hour event that is modeled by RK&K, correct?

MR. GRACHEK: Right.

MR. MUDD: Okay and then --

MR. GRACHEK: That would be, let me, let me explain just, just for context --

MR. MUDD: I think you've, I think you've answered my question.

MR. GRACHEK: Okay.

MR. MCCANN: Let, let him, let him say, let him answer.

ALJ: Yeah, he's just going to come back on re-direct, so go ahead, Mr. Grachek.

MR. GRACHEK: No, I was just going to say that a two hour storm is a two hour storm. It's just that there, there's more flow because you're looking at a twenty-four hour duration. You know, these storms are rated by intensity and duration. So, it's the same intensity for them, just a longer duration.

MR. MUDD: Okay and, and again, you, you refer, referring to the next map on page thirty-eight on the key on the right, this is a ten year, six hour event, correct?

MR. GRACHEK: Correct.

MR. MUDD: And that's a modeled situation, correct?

MR. GRACHEK: Correct.

MR. MUDD: Okay and then on thirty-nine, where this shows more improvements as well, this is based upon the ten year, twenty-four hour event, correct?

MR. GRACHEK: Correct.

MR. MUDD: Okay. But you would also agree with me that these were not required under the SRRR Plan, correct?

MR. MCCANN: Objection. What's these?

ALJ: I was, I was going to say the same thing.

MR. MUDD: All right. That the improvements that are depicted on the ten year, twenty-four hour event on page thirty-nine and the ten year, six hour event on page thirty-eight and the two year, twenty-four hour event on page thirty-seven were not required under the SRRR Plan to be performed.

MR. MCCANN: Objection --

MR. GRACHEK: My, my take is that they were not selected --

ALJ: I mean, it's overruled. Go ahead.

MR. GRACHEK: No, my, my assessment is that it wasn't, they weren't required because the Consent Decree requires elimination of SSOs. They weren't selected.

MR. MUDD: Okay. Thank you. Excuse me. Oh, I need to stop sharing for a second, switch applications. I'm going to move to Exhibit 69, which is a chart, bear with me again, sorry. I'm shuffling around here. Okay. Do you remember this exhibit?

MR. GRACHEK: (inaudible), now, now I do, yes.

MR. MUDD: Okay and so, I'm sorry, I'll give you time to identify it. Do you remember this one?

MR. GRACHEK: Yes, I do, yes, I do.

MR. MUDD: Okay. This, this, is this an example of an exhibit that Mr. McCord prepared and gave to you?

MR. GRACHEK: Yes.

MR. MUDD: Okay. Did, did you verify any of the data

contained on it?

MR. GRACHEK: I didn't verify every number, but I verified enough numbers to give me confidence that it was inputted accurately.

MR. MUDD: Okay and am I correct, is, is, is the green number here based upon actual flow meter data?

MR. GRACHEK: I would, I would assume so, but that was an assessment that was done by DPW, and I don't have all the, as I stated before, I don't have all the methodology behind how they do their assessments. But I presume it had to be based on that --

MR. MUDD: So, this case, this came from the chart that we talked about earlier?

MR. GRACHEK: Yes, yes.

MR. MUDD: Okay.

MR. ZIMMERMAN: Excuse me, excuse me. Can we get an exhibit number on this?

MR. MUDD: On this?

ALJ: What was the --

MR. MUDD: This is Exhibit 69.

MR. ZIMMERMAN: Okay.

ALJ: What was the chart though, the earlier chart --

MR. MUDD: Oh, the chart was I think exhibit --

MR. MCCANN: Sixty-four.

MR. MUDD: Thank you, Michael. Yes.

MR. GRACHEK: Yes.

MR. MUDD: Sixty-four.

ALJ: Okay.

MR. MUDD: And I think you testified, Mr. Grachek, so you, you testified just now you don't really know exactly how this is monitored, correct? Meters (inaudible)?

MR. GRACHEK: That's correct.

MR. MUDD: And I think you said that before. But you did testify that you were relying on this as being dry weather numbers, correct?

MR. GRACHEK: Yes.

MR. MUDD: So, if you don't know how they've metered it or where the numbers came from, how can you testify that you're certain this is from dry weather analysis?

MR. GRACHEK: It is my understanding, based on, based on correspondence that this is dry weather analysis.

MR. MUDD: Correspondence with whom?

MR. GRACHEK: It was correspondence that I read that I can't recall at the time (inaudible) go back and find it.

MR. MUDD: Okay. I mean, is it some, is it someone on your, on your team or is it someone from the County?

MR. GRACHEK: My understanding is from the County but I have, I don't recall exactly. But it, it is consistent because, it's consistent because dry weather flow, you look at the numbers and it's totally different than wet weather flow.

MR. MUDD: Well, that would be the case in any scenario, right?

MR. GRACHEK: It should be, yes.

MR. MUDD: Yeah. But, but, but you're, you're assuming that modeled wet weather flows, because they're so far out above this, that, I'm sorry, the, the columns to the right are wet weather flows, correct?

MR. GRACHEK: Right.

MR. MUDD: And, and you don't know whether the green column is wet weather or dry weather, for sure, sitting here right now, correct?

MR. MCCANN: Objection. That's not, he didn't say he wasn't sure.

ALJ: Overruled --

MR. MCCANN: He said he didn't know where he got it from --

ALJ: All right, overruled. Go ahead, sir.

MR. MCCANN: I'm not sure what the question --

MR. MUDD: Do you want me to repeat the question, Mr. Grachek?

MR. GRACHEK: Yes, please. I, I, I, I'm, (inaudible).

MR. MUDD: That's okay, sure. So, you, you, you can't say for certain that the green column is based upon wet or dry weather flows, correct?

MR. GRACHEK: For certain, no.

MR. MUDD: Okay and you, you're assuming that they're dry weather flows because they are so different than the wet weather flows to the, to the right, correct?

MR. GRACHEK: That's one assumption, yes.

MR. MUDD: Okay. And you'd also agree with me that the flows that are predict, you agree with me that the green flows are, are actual metered flows, and that's what you've been informed, right?

MR. GRACHEK: That is my understanding.

MR. MUDD: But all the flows to the right are modeled flows, correct?

MR. GRACHEK: Yes.

MR. MUDD: And they are modeled flows where there is an assumption that no improvements have been made to the system, correct?

MR. GRACHEK: Well, it's an assumption using the, whatever meter data you have as the baseline.

MR. MUDD: Right. But I guess what I'm asking is when these numbers to the right in each of these columns, the two year, six hour in column E, and the two year, twenty-four hour in column F and the two, and the ten year, six hour in column G, and so on, all of those numbers were run on the basis of the existing conditions of the existing system, correct?

MR. GRACHEK: Yes.

MR. MUDD: So, there's, there, it is assumed, when looking at these, that no improvements have been made to the system whatsoever?

MR. GRACHEK: At, at the time those analysis were run back, back in 2012, yes.

MR. MUDD: Okay and you agree with me that since that time improvements have been made to the system, correct?

MR. GRACHEK: I'm not aware of improvements along this line that have been made.

MR. MUDD: But you are aware of improvements elsewhere within the system that have been made, correct?

MR. GRACHEK: Yes, in the, in those three, or those four basins in the northeast portion, because I don't have a performance evaluation for any other improvements in the, in the area.

MR. MUDD: Okay.

MR. GRACHEK: And, and --

MR. MUDD: You don't know, for example, whether any improvements that were required under the SRRR Plan say, let's say, south of Lake Roland, were made? You don't know if those were made, correct?

MR. GRACHEK: No.

MR. MUDD: Okay. But you would agree with me, let's assume for a second that improvements were made, either along this line or along, you know, in the area south of Lake Roland,

okay? Let's make that assumption.

MR. GRACHEK: Yes.

MR. MUDD: You would agree with me that these numbers would change, correct? The numbers in columns E, F, G, H and I would change?

MR. MCCANN: Objection.

MR. GRACHEK: Whenever you make significant improvements in model --

ALJ: Mr., Mr. Grachek, your counsel objected. Mr. McCann?

MR. MCCANN: Yeah, I, I think that's highly speculative. That improvements made would change those numbers and again, south of Lake Roland. I don't know why we're talking about south of Lake Roland. But would change those numbers. That is, that is about as hypothetical question as you can get. Depends on what they are and where they are --

ALJ: Yeah, well, --

MR. MUDD: He's an expert.

ALJ: Yeah, it's a hypothetical one and he can answer the hypothetical question. Okay. Go ahead, sir. Overruled.

MR. MCCANN: (inaudible) not hypothetical was my point.

MR. GRACHEK: No, I guess I'd like to make a point with that question though is that the documented work that was done in those four meter basins in the northeast showed that

three of them improved the situation and two of them made it worse, or excuse me, one of them made it worse.

So, it is conceivable that you could actually, I mean, the, the honest truth is that, that when you, when you fix a certain area and you let the flow come freely, it can cause overflows in other areas that haven't been fixed yet. More so than if they were, than if it hadn't been fixed because you're not stopping the water in that area. You're clearing that out, you're causing more water to get to the, to the other areas.

MR. MUDD: Okay. But those would still demonstrate changes, right? Changes from what we're seeing here in the numbers? Even if they increase?

MR. GRACHEK: This is a model, so there could be changes, there could be actual changes, and if someone else ran the model, there could be some variations.

MR. MUDD: Okay.

MR. GRACHEK: But, but I think looking at this data, the general trend is that under even the most reasonable, low end storm levels, you do have overflows, significant overflows.

MR. MUDD: Okay. Is it fair to say, when you're talking about capacity on this document, that you're basing your entire opinion of capacity issues based on the assumptions that were made in these models, is that right?

MR. GRACHEK: In the models and in the data provided

by the County.

MR. MUDD: Okay. I'm going to move on from this. Go back to Adobe. Okay. I'm showing you Protestant's Exhibit 71, I think it was shown 71-A, but it's, do you recognize this document, this picture?

MR. GRACHEK: Yes.

MR. MUDD: Okay and you, you agree with me that this photograph was taken in, around 2019, I think you said?

MR. GRACHEK: Yes.

MR. MUDD: Okay and you testified this, that, that this picture shows the cover dislodged from the manhole indicating that there was an SSO that popped the lid off, that was your testimony, do you recall that?

MR. GRACHEK: I said, I said that was the most likely reason that that, that lid was popped off.

MR. MUDD: Okay. But it's also possible, you would agree, that it could have been kids doing it, causing some mischief in the woods, right?

MR. GRACHEK: Yeah, yeah, I, some, some kid could have gotten a hankering to take the, you know, a hundred and fifty pound manhole cover off and leave it dislodged like that.

MR. MUDD: Okay and also an employee from Baltimore County could have done an inspection and not placed it back in, in, in place, correct?

MR. GRACHEK: I find it highly unlikely that they

would do an inspection like that and not put the manhole cover back on.

MR. MUDD: Okay. But you don't have any hard proof that an SSO occurred at this particular location, personally?

MR. GRACHEK: I mean, the way it is, that it is, it is generally dislodged with a small opening on one side, just enough for water to gush out of it, would indicate to me that the, the high likely hood is that this was an SSO.

MR. MUDD: Okay. I'm now moving on to Protestant's Exhibit 73. Do you recognize this document?

MR. GRACHEK: Yes.

MR. MUDD: Okay and I think you testified that the information, so, first of all, you prepared this document for the Blue Stone case, correct?

MR. GRACHEK: That's correct.

MR. MUDD: And you testified that, I think, that you base, the, that the numbers on this document were based upon the RK&K report?

MR. GRACHEK: That is correct.

MR. MUDD: Where in the report did these numbers come from?

MR. GRACHEK: I, it's been a while since I've looked at this, but I believe it's in one of the appendices.

MR. MUDD: So, this would, would it be from the long-term capacity analysis?

MR. GRACHEK: Most likely, yes.

MR. MUDD: Okay and again, those numbers are based on modeled impacts, correct?

MR. GRACHEK: That's correct.

MR. MUDD: Okay. Move on to Protestant's Exhibit 77. And I think you used this document, I'm going to do what Mr. McCann does here and search. I think you highlighted, yeah, this was it. You highlighted this particular line, which was a run of the sewer between manholes 6888, sorry, 6888 and 6887, correct?

MR. GRACHEK: Yes.

MR. MUDD: Do you remember the testimony here?

MR. GRACHEK: Yes.

MR. MUDD: And where, where was this, where is this particular location?

MR. GRACHEK: That's the line under Lake Roland.

MR. MUDD: Okay and, and you were making, were making note of the fact that there are five hundred and forty-one total defects in the sewer system here, correct?

MR. GRACHEK: That's what it says.

MR. MUDD: Do you know whether this document defines what a defect is?

MR. GRACHEK: If you move to the, move to the right, it shows that, I mean, there's a definition of all types of things. Basically, the camera analysis took a look and found

that the, there are pipe surface and lining defects. In other words, there's cracks in the lining through the camera. That's what that, that's what that means.

MR. MUDD: Okay and --

MR. GRACHEK: There's cracks on the inside of the pipes.

MR. MUDD: And do you, sorry, say, say that, never mind. Okay. I, I think I understand what you're saying. So, so you think that, that, that the defective pipe surface lining, that that means that there's five hundred thirty-six cracks, that's your opinion?

MR. GRACHEK: Well, cracks or, or defect, defective pipe surfaces. In other words, pipes that have been, have eroded over time. There's a separate category for fractures and cracks. But those are major fractures and cracks, like a big hole in the thing. We're talking about, we're talking about degrading of the pipeline. That pipeline is seventy something years old, at least.

MR. MUDD: Okay.

MR. GRACHEK: And so, it's going, it's going to be defective, it's going to be eroded over time.

MR. MUDD: Okay. I'll move on to Protestant's exhibit number seventy-five. These are the e. coli readings from Baltimore County?

MR. GRACHEK: Yes.

MR. MUDD: Do you know where this, these numbers here, one, two, three, four, five, those are five different sampling sites, is that right?

MR. GRACHEK: Yes.

MR. MUDD: Do you know where they're located?

MR. GRACHEK: No, I don't, I don't, I've never seen the samp, the actual sample cases.

MR. MUDD: Okay. But you, you just know they're at Lake Roland based on this document?

MR. GRACHEK: Well, yeah, that's the document provided to us by the County.

MR. MUDD: Okay and, and, and I can't recall which one, but Mr. McCann had scrolled through these and found an example of a higher reading or a reading at a location that was higher, a higher geometric mean than, let's say, another particular day. And you said, you said that, that that, that that sample came following a storm event, with a significant release of SSOs, I think was your testimony. Do you recall that?

MR. GRACHEK: Right. Yes, I recall that.

MR. MUDD: How, how, how do you know that from this document?

MR. GRACHEK: Because, because when you do the, the typical process (inaudible) verified with people doing the sampling, but typically, when you do, you sample a lake or a

river or a water course, you only do it during and after storm events. You don't do it during dry weather. So, in, in my view, every one of these represented a time where there was a rainfall event. Some probably more than others.

And I would imagine that the, then that the one that's shown the really high detection was most likely during a, a very large rainfall event during and after. And (inaudible) you have one that's a geometric mean of twenty-four twenty, then you have another one with a geometric mean, there's a twenty-three hundred. Then there's one that has all the data is off the charts basically.

MR. MUDD: Okay.

MR. GRACHEK: It's, it's above the, the analytical limit.

MR. MUDD: But that's based on your assumption. You, you did not verify that any of these days, any of them, there was rain before this happened?

MR. GRACHEK: No. You only take, you only take these type of datas during rainfall events. It would be, it would be, except for maybe one control sample, it would not be useful to take during non-rainfall events, because you're not, you're looking, you're looking at the effects of, during rainfall events and there's SSOs.

MR. MUDD: Okay. So, you're, when you're saying you would do that, what do you mean by that? Who, who would do

that?

MR. GRACHEK: Well, I mean, that's the standard practice for doing this work.

MR. MUDD: So, that, is that a standard practice for when you're evaluating impacts from SSOs?

MR. GRACHEK: Yes.

MR. MUDD: Okay. What, what about --

MR. GRACHEK: SSOs to receiving streams, yes.

MR. MUDD: What, what if, what if you just have a program in a jurisdiction like Baltimore County where you're just monitoring recreational waters for the health and safety of the community? Do, do you know whether those readings would only come after rain events?

MR. GRACHEK: Most likely, yes.

MR. MUDD: Okay. So, you think that --

MR. GRACHEK: I don't know that for sure.

MR. MUDD: Okay.

MR. GRACHEK: But it involves, it involves control samples, but you're, the only, the only source, the, the only significant source of any type of bacterial contamination is sanitary sewer overflows.

MR. MUDD: Okay.

MR. GRACHEK: You're going to, always going to have a (inaudible) bacteria in the water because animals live in the water. But, but seeing this above the baseline, that's why

your baseline is one twenty-six.

MR. MUDD: Okay.

MR. GRACHEK: And (inaudible) the water is cleaner than one twenty-six as far as bacteria goes.

MR. MUDD: All right. Do, do you, did you look closely enough at, at this document, at the various, the various columns that exist for each reading?

MR. GRACHEK: It looks like they're not taking, they're not collecting data for a lot of these parameters. They're, they're basically focusing in on the e. coli. They, they don't really need to have for, at least for this application, it doesn't appear to be, (inaudible) salt water area and the, the DO readings and the specific (inaudible) would only be relevant if you're concerned about, you know, DO in the ground water or, or in the surface water, kind of how it effects any type of aquatic life. But this, this isn't, this analysis isn't done for, for eco-risk, it's done for risks to swimmers.

MR. MUDD: Okay and how about this column about rain? This says rain, twenty-four hours, no, for May 3rd. And then the one before it, May 17th, has rain, twenty-four hours, yes. What do you make of that.

MR. GRACHEK: Well, like I said before, there are certain times when they take baseline data.

MR. MUDD: Okay. So, your, your assumption is that

May 3rd would be a baseline day?

MR. GRACHEK: I would assume so, or, or what it meant was that they couldn't get out during the rain event in twenty-four hours, but they sampled the next day.

MR. MUDD: Okay.

MR. GRACHEK: Because, because just of logistics of getting out and sampling. That, that happens sometimes too.

MR. MUDD: And, and you're also assuming that Baltimore County's monitoring program is only be performed to monitor for SSOs? That's your own, that's your assumption?

MR. GRACHEK: I didn't make that assumption. I just said that this is an indication of SSOs.

MR. MUDD: I thought you said that, that if the County had monitoring elsewhere, it would only be for SSOs. That's, that's not what you're saying? I'm, did I misunderstand?

MR. GRACHEK: I, I, I don't really understand your question.

MR. MUDD: If, if, if Baltimore County has monitoring for all recreational waters in the County, is it your opinion that they're only doing that to monitor for SSOs?

MR. GRACHEK: From an e. coli standpoint, likely, yes.

MR. MUDD: Okay and it's also your opinion that the only source of a hiring, a higher geometric mean in any of

these readings here would be from an SSO?

MR. GRACHEK: That is my opinion, yes.

MR. MUDD: Okay.

MR. GRACHEK: And some, some people may disagree with that, but that is my opinion and I'd be interested to see somebody give me another source.

MR. MUDD: Okay and have you, have you evaluated or sought to, any information from Baltimore County to confirm whether there have been any SSOs within this sewer shed during, let's say, the past three years?

MR. GRACHEK: I, I haven't looked at the SSO data beyond what you're showing me.

MR. MUDD: Okay.

MR. GRACHEK: And might I add, there are other sources, but I don't know if there are any cattle feed lots anywhere near where we're talking about.

MR. MUDD: And I'm sorry, any what?

MR. GRACHEK: I don't think there are any cattle feed lots anywhere close to where we're talking about. And if you did that, you'd be analyzing for e. coli and probably nitrogen also, so --

MR. MUDD: I think you broke up a little. Did you say cattle feeding lots?

MR. GRACHEK: Yeah, I mean, if you had a big feed lot for cattle, that could contribute e. coli too.

MR. MUDD: Okay.

MR. GRACHEK: But I don't think we have anything like that. That's an example of, one of the examples, of something that can contribute e. coli.

MR. MUDD: How about a failing septic system, could that contribute to e. coli?

MR. GRACHEK: Likely not, because that's not a surface water source, that's a ground water source.

MR. MUDD: And if the septic system is located close to the water source, is it, is it possible it could leech into the water?

MR. GRACHEK: It's possible, but at those concentrations unlikely that it would affect the concentration at the surface water body. You might find e. coli in ground water high concentrations, but because of the gradual input to that, probably not.

MR. MUDD: Okay and would that --

MR. GRACHEK: My opinion.

MR. MUDD: -- would it, would it change your opinion if there were numerous that were close to the water, numerous septic systems?

MR. GRACHEK: Not really, no.

MR. MUDD: Okay. You, you mentioned also when you were talking about these readings, that, that water is continually flowing through the lake.

MR. GRACHEK: Yes.

MR. MUDD: And you agree that there are a number of large water bodies that are discharging into this lake, right?

MR. GRACHEK: Yes, there are several streams that discharge into the lake.

MR. MUDD: Okay and if there's a storm event, that you would have, you would expect large flushes of water to come from these tributaries down into the lake, correct?

MR. GRACHEK: Correct.

MR. MUDD: Okay and you also agree with me that the lake is damned, did you see the damn?

MR. GRACHEK: Yes.

MR. MUDD: Okay. So, so the dam would actually stop the flow, or at least slow it, from its velocity coming out of a stream once it makes its way into a lake, do you agree with that?

MR. GRACHEK: My observation of the dam is that the dam usually keeps, keeps the, the lake at a certain elevation and when you have excessive flow, it overflows, because it's a, it's a complete spill (inaudible) dam and it overflows (inaudible) big storm event it'll flow faster. When you have a drought event, you may have (inaudible) so it might be a little lower. But on average, it's overflowing and that, that dam basically regulates the elevation and, and the like.

MR. MUDD: Okay. I'm going to show you Protestant's

Exhibit 76-B, which is the stream sense sign.

MR. GRACHEK: Yes.

MR. MUDD: And you testified that this sign notifies people and I, I quoted it, that there have been SSOs in this area. Is that, do you agree with that testimony?

MR. GRACHEK: Yes.

MR. MUDD: Can you read the sign for me?

MR. GRACHEK: I can. It is my opinion, and basically, it doesn't specifically say that, if you want me to read the whole thing, I will. But it doesn't specifically say that there are, you know, there are recurring things. But it does say, it does say (inaudible) potential for having sanitary sewer overflows during and following heavy rainfall.

MR. MUDD: Okay and how about the next paragraph?

MR. GRACHEK: Stormwater runoff from trees, parking lots, fields and lawns, as well as occasional leaks or overflows from the sanitary sewer system, may carry pollutants that negatively affect stream water quality, causing a potential health risk.

MR. MUDD: Okay. Do, do you, do you recall or do you know whether these signs exist in other locations in the County?

MR. GRACHEK: I haven't seen them in other locations in the County.

MR. MUDD: Okay. But you agree that this sign

recognizes that there are other contaminants that they're warning people about? Do you agree with me on that?

MR. GRACHEK: Yes. And but, stormwater from streets, parking lots, fields and lawns, as well as occasional leaks (inaudible) lawns don't, don't contain large quantities of e. coli.

MR. MUDD: Okay --

MR. GRACHEK: (inaudible) comes from sewage.

MR. MUDD: But they would contain some, you're saying, at least, right?

MR. GRACHEK: It's possible they could, but, by the time they got to the stream, it probably wouldn't be really measurable. The problem you have from, from streets and parking lots and that, is, is basically debris and if it's asphalt parking lots, you might have some PAHs. Fields and lawns, if you have fields and lawns that have been treated with pesticides or herbicides, you might have something like that coming into the system.

MR. MUDD: Okay.

MR. GRACHEK: But, but not e. coli.

MR. MUDD: Okay. Let's move on to Protestant's Exhibit 78. This is the RJN report and you discussed this report in the maps, correct?

MR. GRACHEK: Yes.

MR. MUDD: And I think you testified, you testified

that it was your opinion that this report showed that the work they did did not succeed. Do you recall that?

MR. GRACHEK: The, the work did not what, I'm sorry?

MR. MUDD: The work that the County performed did not succeed. Was that your opinion?

MR. GRACHEK: I, I'm still having a hard time understanding --

MR. MUDD: All right. Strike that, strike that. I'll move on.

MR. GRACHEK: Yeah.

MR. MUDD: Okay. You testified quite a bit on the RJN maps that they, that they produced when generating this report. Do you remember those maps?

MR. GRACHEK: Yes, I did.

MR. MUDD: And I think you testified that, that in your opinion, the work that was performed in meter basins two and three and four and nine, made, made conditions worse based on RJN's modeling, is that right? Worse, I'm sorry, worse within the Jones Falls interceptor.

MR. GRACHEK: What, what I said was that according to their assessment that three of the, three of the four made the situation better in those meter basins and that a fourth one made, meter basin, or the situation in the meter basin worse. That's, that's their words.

MR. MUDD: Okay.

MR. GRACHEK: And my assessment is that there's potential if you just fix the pipes upstream and don't fix the pipes downstream, you're adding more flow, more free flow. And so, it could have a deleterious affect on the part of the system that is, that is not fixed. Because you're sending all the flow right away.

MR. MUDD: Okay and again, the RJ, the RJN report was based on modeling, correct?

MR. GRACHEK: The, the RJ, the RJN assessment was based on pre-modeling and then modeling after the fact, yes.

MR. MUDD: Okay and do you know whether it was their own independent modeling or whether it was modeling, the same modeling that RK&K used?

MR. GRACHEK: My, my understanding is that RJN did their own, their own baseline modeling and their own final modeling.

MR. MUDD: Do you know what, what inputs they used?

MR. GRACHEK: I don't have their inputs, no.

MR. MUDD: You know what assumptions or underlying conditions that they've placed into their model?

MR. GRACHEK: I, the, the assessment report didn't provide that, but what I do have is a, is documentation that the, within rounding error, that a lot of the, many of the, or most of the, the assessments they did was fairly consistent with the RK&K analysis. I did not, I did not review their

model inputs.

MR. MUDD: Okay. What do you base that last statement on when you said you have information --

MR. GRACHEK: Oh, one of our, one of our exhibits showed them being, I can't remember which one it was, but one of our exhibits showed them side by side.

MR. MUDD: I think, I think we're going to get to that in a minute. Do know whether Baltimore County or anyone else certified RJN's model?

MR. GRACHEK: No.

MR. MUDD: Do you know if the modeling has been verified by flow monitoring to determine if its accurate?

MR. GRACHEK: The, the modeling was verified based on flow monitoring, for sure based on the, the basins that they did work on, because they did before and after. As far as the assessment of the remainder of the system, I don't have that direct information. But I, what I will say is that based on their modeling of the storms, it looks like in, looks like these different input data because the, the assessment was things, things were a lot more (inaudible) than what was in the RK&K report based on the storm events.

MR. MUDD: Do you agree with me that there's nothing in the Consent Decree or the SRRR Plan that requires the County to make any improvements that are depicted in the RJN report?

MR. GRACHEK: No, the Consent Decree predates the RJN

report, so it doesn't mention it.

MR. MUDD: Okay.

MR. GRACHEK: And the RJN report is a performance assessment, it's not a plan.

MR. MUDD: Okay. Oh, I know where I need to go, sorry. I'm getting there, guys. I know it's been a while. Sorry, I need to get, that's the wrong one. I'm going to show you Exhibit 81, I think is the, there we go. Are you seeing Exhibit, Protestant's eighty-one?

MR. GRACHEK: I do not see it yet. Okay.

MR. MUDD: Okay.

MR. GRACHEK: Yes.

MR. MUDD: Was this the document you were referring to a second ago when you said that things were fairly consistent?

MR. GRACHEK: Yes, RJN versus the, versus the other data.

MR. MUDD: Okay.

MR. GRACHEK: Yes.

MR. MUDD: And that, that's under the, well, why do you say that? I guess what, what causes you to say that?

MR. GRACHEK: If you look at columns I and J, the numbers are all very close. Column, column I is the RJN calculated baseline capacity for that, for that event. And the column J is the baseline capacities for the same event from

RK&K.

MR. MUDD: Uh huh.

MR. GRACHEK: And as you can see, within rounding error, they're all very close.

MR. MUDD: And that, but that's on the pre-rehab, correct?

MR. GRACHEK: That's on the pre-rehab, yes.

MR. MUDD: Okay and on that basis, do you think that post-rehab should be considered reliable?

MR. GRACHEK: I, I have no reason to believe it's not.

MR. MUDD: Okay. Where, where did the numbers from the RJN columns here come from, do you know?

MR. GRACHEK: The come from the, from the actual report appendixes and this is another one of those, one of the exhibits that was put together by our colleague.

MR. MUDD: Okay and you testified that the RJN report shows that the Jones Falls sewer line is more over capacity than it was before in this post-rehab, is that, is that your testimony?

MR. GRACHEK: That's what it shows.

MR. MUDD: Okay. But you also said that that could be for a lot of reasons, do you recall that testimony?

MR. GRACHEK: Yes.

MR. MUDD: And I think you said that you cannot

enter, ascertain exactly why without seeing or running the model, is that correct?

MR. GRACHEK: That would be correct.

MR. MUDD: Okay. So, and I think you also testified that the model did put parameters and, and changed, there were parameters that changed since the RK&K report and sewer is ten years older than it, ten years older than it was back then. So, a lot of things could happen. Do you remember that testimony as well?

MR. GRACHEK: Yes.

MR. MUDD: But, but, but it's fair to say that you really just don't know exactly what's behind these numbers, correct?

MR. GRACHEK: No, there's a lot of things that could change. The software is a lot better now than it was ten years ago too.

MR. MUDD: Okay and would you also agree with me that the RJN report does not take into consideration any work that may or may not have been done with the Jones Falls interceptor?

MR. GRACHEK: Well, the RJN report takes into account the work that was done on those three meter basins.

MR. MUDD: Right.

MR. GRACHEK: And, and, and the manholes that were approved, you know, the, you know, that were shown on that but it doesn't take into account anything else as being done.

MR. MUDD: Okay. So, to the extent that the SRRR Plan required work within the Jones Falls interceptor, or in other areas outside of those meter basins, this RJN report, and all the assumptions, do not take that into account, as far as you know, correct?

MR. GRACHEK: As far as I know.

MR. MUDD: Okay and when it reports the capacity issues that you've highlighted, again, these, these capacity issues in, in Section F, those numbers are based upon the assumption that no other work, other than the work in the four meter basins to the northeast, has been performed, right?

MR. GRACHEK: My, from reading the document, I presume that the, I presume (inaudible) say presume, but that, that when RJN did a performance assessment, they did an evaluation and the effects on the performance, that they were then required by the City to look at any, any new data in developing their model.

MR. MUDD: But you don't know if they've done that?

MR. GRACHEK: I, I don't know --

MR. MUDD: For sure?

MR. GRACHEK: -- if they've done that, but it sure looks like they did.

MR. MUDD: Why do you say that?

MR. GRACHEK: Because the numbers are so different.

MR. MUDD: Okay. Do you think that they took into

account any of the work that is required to be performed by Johns Hopkins, or by this applicant closer to Joppa Road that you talked about?

MR. GRACHEK: I wouldn't know.

MR. MUDD: Okay. I'm going to, I'm getting there, everybody. Move back to Adobe and I'm going to show you Exhibit 90, Protestant's Exhibit 90. Do you recognize this e-mail exchange? Sorry, it's coming up. Do you see that?

MR. GRACHEK: Yes.

MR. MUDD: Do you remember the discussion on this?

MR. GRACHEK: Yes.

MR. MUDD: You, you agree with me and you're aware that the County is requiring improvements to be made to the sewerage system by this applicant and by Johns Hopkins prior to connection of these new homes, is that, do you agree with that?

MR. GRACHEK: Yes.

MR. MUDD: And you agree with me that these e-mails refer to the completion of those improvements or the non-completion of those improvements, correct?

MR. GRACHEK: I, I can't, I can't say that for sure. All I can say is that based on this e-mail exchange asking questions, is that if we build (inaudible) it's going to cause overflows and if there's no, there's no breaking point for a number of units, but they do require the, the, the upgrading of those pipes near the development.

MR. MUDD: Right.

MR. GRACHEK: Now, does that, does that solve the whole problem? I, I can't say based on, I can't say from just this, but based on all the, all the other information, it, it might have a localized benefit, but not something that, throughout the sewer shed.

MR. MUDD: Okay and if you want me to, to let you review these a little bit more closely before you answer the next question you can. But do you agree with me that these e-mails make no reference to the RK&K report, nor to the RJN report, or any improvements recommended in those reports?

MR. GRACHEK: I, I don't see any to that effect.

MR. MUDD: Okay. Talk for a minute about population projections. I think, I think we talked about this before, but you, you agree with me, these population projections, it's your understanding that these were the ones that were used in the formulation of the RK&K report?

MR. GRACHEK: Yes.

MR. MUDD: Okay and I think you agreed with me earlier that MDE and the EPA reviewed and approved the RK&K report?

MR. GRACHEK: I, I've seen, like I said before, I've seen a document, approving a report doesn't necessarily approve the, I saw an app, an approval document, I believe, that had to do with the SRRR.

MR. MUDD: Okay.

MR. GRACHEK: But, but at the same time, at the same time, if I can respond to this, I can't be the judge on whether MDE or the EPA or anybody else approved a report, therefore, these population projections are good. All I can testify to is that you would need to continually upgrade your sewer system so that your sewer system is working twenty years out, in my opinion.

MR. MUDD: Okay. So, you can't be the judge on that. Do you also agree with me that you can't necessarily be the judge on whether these population trends are accurate or not?

MR. GRACHEK: Oh, no, I can't judge that either. All, all I can do is base that on the notion that they, they researched it, so.

MR. MUDD: Okay.

MR. GRACHEK: They may be higher, they may be lower.

MR. MUDD: Okay. You talked a little about the Hazen reports.

MR. GRACHEK: Yes.

MR. MUDD: Which were at Protestant's Exhibit 85. I'm not showing those to you, but I just have a couple questions about them. Do you know if Hazen's work is directly related to the Consent Decree?

MR. GRACHEK: I, I don't know that from a documentation, but I presume since they're redoing everything,

most likely it has to do with, with compliance with the Consent Decree.

MR. MUDD: Okay. So, do, do you know whether they're performing any official study that's required as part of the Consent Decree?

MR. GRACHEK: I haven't seen anything that, I haven't read anything that, that directly says that we are doing this as a result of section xxx of the Consent Decree. But what they're doing is consistent with what the Consent Decree requires. According to their, according to their newsletters, which are, you know, not, not really in depth.

MR. MUDD: Okay. I'm now going to go on to Exhibit 87, which we have now in front of you, this data and evaluation report. Do, do you know, strike that. Do you know what the purpose for this project is, that they've identified in here?

MR. GRACHEK: It hasn't been stated to me what their purpose is. That can be a lot of things. But to me, the purpose of this is, is, in my view, a rec, a recognition that this is a serious issue that needs a separate analysis and a separate plan because of the age and, and the SSO issues and also because of how this all relates to sewage flow going into Baltimore City.

MR. MUDD: Okay. Do you know if this is part of the RK&K report requirements, or the SRRR Plan requirements?

MR. GRACHEK: I can take a, it's not part of the RK&K

report. It, RK&K did identify problems in, you know, Lake Roland and, and that entire area that we looked at the, at the, at the interceptors, you know, moving up from Lake Roland. So, there is some, there is some consistency between the two. But I don't think this would be gapped by the RK&K, but I don't know that for sure.

MR. MUDD: Okay and would you agree with me that this would be an example of the County performing, at least in part, preventative maintenance on their sewer system?

MR. GRACHEK: Yes.

MR. MUDD: Okay and you, you think, you agree with me, that's a good thing, right?

MR. GRACHEK: Yes.

MR. MUDD: Okay. It's what municipalities and governments should be doing, they should be keeping their sewer system up to, up to, up to (inaudible).

MR. GRACHEK: Yes.

MR. MUDD: Got it, okay. You mentioned that, I think you said in passing, there was discussion about rights of way and things like that. And you said where it usually requires private land acquisition. But you don't know that for sure in this case, is that right?

MR. GRACHEK: Well, I mean, it's either land acquisition or easements or, you know, temporary easements so you can build, you can't, you can't bring heavy equipment out

and not have a, an easement to, to do that (inaudible) get on people's private property, so.

MR. MUDD: Okay --

MR. GRACHEK: That's, that's with any construction project.

MR. MUDD: Okay. I think the last question I have for you is, near the end of your testimony, you gave a lot of opinions, Mr. McCann gave a lot of opinions and you agreed with him, about the term model predicted capacity problems. What, what is --

MR. ZIMMERMAN: I, I object to the form of that question, that Mr. McCann gave a lot of opinions. I'd just object to that.

MR. ROSENBLATT: It's not his witness.

MR. ZIMMERMAN: So, I --

ALJ: Well, I mean, Mr. McCann can say that, but I just, I don't know why, how do you have the, why you're responding to it, but anyway, it's overruled. Go ahead.

MR. MUDD: Would you like me to repeat the question, Mr. Grachek?

MR. GRACHEK: Sure.

MR. MUDD: I said that Mr. McCann described to you, and you agreed, that, that there were model predicted capacity problems. Do you remember that term?

MR. GRACHEK: Yes.

MR. MUDD: What do you mean, or what does he mean or what do you both mean, by that term?

MR. GRACHEK: There are, we have, we have a, a system for water, for, for water treatment, sewage treatment and, and water sewage conveyance where we can't, we can't measure every single inch of the sewer system.

So, we have to rely on models to, not only to evaluate our current system but also to do predictive analysis to determine whether we need to upgrade now or upgrade to whatever lengths, otherwise we would be, we would be out in the dark simply just putting sewer pipes down and we might put down pipes that are too small and have to do it again. We might put down pipes that are too big and cost the taxpayers more money.

So, we, we use models and the models have gotten, like anything else technological, the models have gotten very good, so that we can now go in and predict what we're going to see based on usage and population growth and we can plan accordingly. But the model is critical. And it's not, it's not just a representation, it's critical to the decision process. If we didn't have that, the system would be completely inefficient and hard to deal with.

MR. MUDD: So, specifically, in this case, what are the model predicted capacity problems? Are those, are you referring to the models in, that were performed by RK&K and RJN?

MR. GRACHEK: You, normally, in a, in a really sound system, you would perform your modeling and you would, and you would make revisions based on that modeling and then model in your, your corrective actions. But then you would update your model at minimum every five years to add and push out your projections and keep up with it.

But what you can't do is you can't let the system, you know, degrade over a certain period of time then expect that, okay, we're going to do a model and we're going to fix anything all at once because there's not enough money in the world to do that. And so, the modeling is critical.

The modeling is not a, it's not a fad, it's not a, it's not something that is, you know, that's just a luxury to have. It's, it's absolutely critical to have a good sound system. And there are representations all around the country of municipalities, some smaller but, and even much bigger than Baltimore, that keep up with things in this vein and because they do that, they don't have to have these kinds of situations.

MR. MUDD: You, you, you've said before, you've had no interaction whatsoever with Baltimore County officials on this, correct? Personally?

MR. GRACHEK: No, --

MR. MUDD: Right.

MR. GRACHEK: -- no, I did an independent analysis

based on the documents that they produced.

MR. MUDD: So, do you, do you have no idea then whether they're performing any of their own modeling, like you suggest they should be?

MR. GRACHEK: Oh, I, I do. They're having Hazen Will, they're having Hazen do it.

MR. MUDD: Do, do you know whether they're having anyone else do it?

MR. GRACHEK: No, I don't.

MR. MUDD: You don't know whether they're doing anything internally?

MR. GRACHEK: No.

MR. MUDD: You don't know how any of their internal modeling works when someone asks whether there's capacity in the system for a new development?

MR. GRACHEK: I'm not aware of their, of internal modeling. And, you know, because they had RK&K do it and they had RJN do it. Now they've hire a really reputable firm, Hazen, to do it too. So, I, I, I'm not aware that they're actually updating their models internally.

MR. MUDD: So, so, do you think that then when a developer asks whether there's capacity in the system and they ask Public Works, that Public Works is going to RJN or RK&K or Hazen and asking them to, to tell them whether there's capacity in the system?

MR. ZIMMERMAN: I, I, I'm going to object to the question.

MR. MUDD: It's not your witness.

MR. ZIMMERMAN: That doesn't matter. Petitioner hasn't produced any information from the County of any modeling. There's no evidence of any County modeling.

ALJ: Okay. Overruled.

MR. GRACHEK: Most --

MR. MUDD: I have to repeat the question again, Mr. Grachek?

MR. GRACHEK: No, I'm, I can answer it. Most large municipalities rely on a combination of inhouse staff and consultants. And so, the answer to your question is yes. They, there's a significant question regarding a development, they would probably go back to their, their consultants and say run this.

MR. MUDD: But that's an assumption, you don't know if they're doing that or not.

MR. GRACHEK: I don't know if they're doing that or not, I don't.

MR. MUDD: Okay. So, what, so when you gave your opinions about model predicted capacity problems, are you referring directly to the models that we know about in this case, that is the --

MR. GRACHEK: Yes.

MR. MUDD: -- RK&K model and the RJN model?

MR. GRACHEK: Yes.

MR. MUDD: And those are the models that are based on the, the design storms that are required under the, the Consent Decree, correct?

MR. GRACHEK: That's correct.

MR. MUDD: Okay. I have no further questions. Thank you.

ALJ: Mr. McCann, re-direct?

MR. MCCANN: Yeah, I do. Thank you. We're almost there, Mr. Grachek. On that point, just once again, does the Consent Decree require Baltimore County to undertake models for the purpose of predicting future incapacity problems?

MR. GRACHEK: Yes.

MR. MCCANN: Did Baltimore County hire RJN, I'm sorry, RK&K to come up with a model?

MR. GRACHEK: Yes.

MR. MCCANN: Did Baltimore County hire RJN to come up with a model?

MR. GRACHEK: Yes.

MR. MCCANN: Did Baltimore County hire Hazen to come up with a model?

MR. GRACHEK: I hadn't seen the model, but it sounds like they have, yes, from what they're saying (inaudible).

MR. MCCANN: Okay and what we've seen of the results

of the modeling of RK&K and RJN, would you agree or disagree that the results of that modeling reflect an abundance of model --

MR. MUDD: Objection.

MR. MCCANN: -- a model predicted --

MR. MUDD: Objection. It's leading.

MR. MCCANN: No, it's not. It's an adjective. It's not misleading at all. Just like enormous, it's not, it's not, it's not a leading question. I'll still rephrase it, because I don't think it's leading at all. But I'll rephrase it.

ALJ: Okay.

MR. MCCANN: How would you, how would you characterize the model predicted capacity problems that the County's own consultants, RK&K and RJN, found? How would you characterize those?

MR. GRACHEK: I would say based on, based on information that I have from those models and based on other information that there are significant capacity issues using storm events that are realistic for the area.

And that if they do not fix these areas, that they're going to continue to have, or if they don't fix the areas and they continue to add a lot more development and a lot more users to the system, they're going to continue to have SSOs in violation of the Consent Decree.

MR. MCCANN: Is, in your, in your experience and in

your industry, are, is modeling a standard, everyday part of business?

MR. GRACHEK: It is, it is for any, any system that's, you know, of any, any substantial size.

MR. MCCANN: In your experience, specific experience, have, do, do municipalities spend billions of dollars on models, no, I'm sorry, spend billions of dollars on sewer systems based on modeling?

MR. MCCANN: Objection. It calls for speculation.

ALJ: It, it, does municipalities --

MR. MCCANN: In this experience --

ALJ: -- spend billions of dollars, do you really mean billions, billions of dollars?

MR. MCCANN: How would you characterize the amount of money that, in your experience, municipalities pay for some --

MR. GRACHEK: I --

ALJ: Hold on, Mr. Grachek, what, wait a minute. So, one more time, Mr. McCann.

MR. MCCANN: Yeah. How would you characterize the, strike that. In your experience, do municipalities regularly rely upon modeling before they spend any money --

MR. GRACHEK: Yes.

MR. MCCANN: -- on sewer systems?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Mr. Mudd asked you about Ramboll

report and whether that is preventive maintenance. I just want to remind you, because I think you, you said, you spoke to this point, this is, again, the Ramboll report. This is the introduction section. And I just want to read this section again to you.

The County engaged Ramboll Americas Engineering Solutions for the development of design documents for the repair and rehabilitation of the interceptors, manholes and junction chambers located within Lake Roland Park. The primary focus of this project is to minimize the inflow and infiltration into the interceptors to reduce the likelihood of sanitary sewer overflows. Did you, do you see that?

MR. GRACHEK: Yes, I --

MR. MCCANN: Okay. In your, in, in your opinion, in your opinion, based on your experience and your review of this document, is, is the, the County, is the purpose of this --

MR. MUDD: Objection.

MR. MCCANN: I didn't ask a question --

ALJ: Mr. Mudd, Mr. Mudd?

MR. MUDD: What is his opinion, that should be the question. Not is his opinion consistent with Mr. McCann's opinion.

ALJ: Yeah, it needs to be open ended --

MR. MCCANN: What is, what is your, what is your --

ALJ: (inaudible) --

MR. MCCANN: I got it, I got it. I got it. What is your opinion with respect to whether or not the purpose of this evaluation is to do preventive --

MR. MUDD: Objection, objection.

MR. MCCANN: Is the purpose of this report to do preventative --

MR. MUDD: Objection.

MR. MCCANN: That's not objectionable. It is not (inaudible) --

ALJ: Okay, everybody, all right, everybody.

MR. MCCANN: You need to go back to law school, first day.

MR. ZIMMERMAN: This is a lot of cross talk with a lot of interruptions. Let Mr. McCann finish his questions.

ALJ: Yeah, okay, I understand but he, he's, what he, Mr. McCann, you are, in a sense, testifying by putting in those adjectives. But why can't you just say, so is, is your, is your opinion still the same, that, that, what you testified to earlier, sir, or does it, is it preventative maintenance.

MR. MCCANN: No, Mr., those are Mr. Mudd's words, preventative maintenance. So, I'll ask him plainly. Given, given that sense, and given your --

ALJ: I mean, has his opinion changed, right?

MR. MCCANN: No, I'm asking, is this, is the purpose of this report preventative maintenance?

ALJ: Okay.

MR. MUDD: Yeah, so, so objection --

MR. MCCANN: That's not a leading question, not even close. Not even close.

ALJ: Hold on. Mr. Mudd, what'd you say?

MR. MUDD: Is it my turn?

ALJ: Yeah, what'd you say, Mr. Mudd?

MR. MUDD: Now I'm going to object on the basis of asked and answered. I asked him if it was for preventative maintenance and he said yes. And now Mr. McCann is trying to change his opinion.

MR. MCCANN: I am. What I'm trying to do --

ALJ: Well, it's, it's re, it's re-direct. But I, I know what the witness said, so, go ahead, sir.

MR. MCCANN: To be fair, to be fair, Mr. Mudd asked, used the word in part, preventative maintenance, that, I wrote it down. So, I'll re, I'll rephrase the question. Since your testimony with Mr. Mudd just a short time ago, do, do you have anything to add to your opinion regarding the purpose of this evaluation, of this work?

MR. GRACHEK: Okay. Can I go now?

MR. MCCANN: Yeah, go ahead.

MR. GRACHEK: In my opinion, this paragraph sum, summarizes precisely the reason that we do this kind of work and while, as I indicated before, the, the work in this report

is, in fact, maintenance and it can be construed as preventative maintenance. A lot of the work, since the system has been not maintained for a long time, is remedial.

MR. MCCANN: Okay, thank you.

MR. GRACHEK: And it needs, it needs to be, it should have been done twenty-five years ago --

MR. MCCANN: So, like, I'm sorry, go ahead.

MR. GRACHEK: No, that's it.

MR. MCCANN: Likewise, since we're talking about Lake Roland, the fact that this evaluation pertains to Lake Roland, does that change your opinion or amend your testimony in response to Mr. Mudd's questions about SSOs or the non-existence of SSOs contributing to Lake Roland? Does it change your testimony in that regard?

MR. GRACHEK: No, no.

MR. MCCANN: Okay.

MR. GRACHEK: It does not.

MR. MCCANN: Do you, do you actually need to see the model, the modeling, whatever that may look like, for RJ, RKK and RJN in order to express the opinions you've expressed today?

MR. GRACHEK: No, no more, no more so than I need to see, you know, watch the guy (inaudible) my car. These are reputable companies that are doing this modeling and they're doing it, there's people, there's people involved in the IT

world that are involved in this.

I could review the input parameters and I could review, you know, take a look at whether they're using, you know, a modern version of InfoWorks and, you know, which is modeling software, and all that. But at the end of the day, what, I have no reason to believe that anything that they're doing right now has some type of bias toward, toward one thing or the other. And trust me, I've seen it in other places where things have been biased in certain directions.

MR. MCCANN: Okay. You're assuming that the modeling is correct, is that fair?

MR. GRACHEK: Yes.

MR. MCCANN: Another thing struck me about your testimony on cross, you, you talked about modeling and then you mentioned that the engineers need to take the model and exercise some judgment.

MR. GRACHEK: Yes.

MR. MCCANN: Okay. Any reason, well, number one, as far as you know, are the, the folks that exercise that judgment on behalf of RK&K, were they engineers as far as you know?

MR. GRACHEK: I, I do not know, but I presume so since RK&K is an engineering company, that they, that they're involved in the process.

MR. MCCANN: And with respect to RJ&N, any reason to doubt that the folks that exercise that --

MR. GRACHEK: No.

MR. MCCANN: -- degree of judgment (inaudible).

MR. GRACHEK: Right.

MR. MCCANN: Is it fair to say that you're not only relying on the, the modeling, but also the exercise of engineering judgment by RK&K and RJN?

MR. MUDD: Objection, objection.

MR. MCCANN: Are you relying upon the exercise of engineering judgment by RK&K --

MR. MUDD: Objection.

ALJ: It's, it's --

MR. MCCANN: Can I finish the question?

ALJ: Oh, I'm sorry.

MR. MCCANN: Judge Murphy is not going to be prejudiced by the, by the scope of, by the questions. She's going to understand them.

ALJ: Yeah, I, I, I know the, I know the question, just, but, you know, so it should be, the question should be, was there something else you relied on, period. Like it's, that should be the question, instead of is there something else you rely upon and then give what the answer is. So, so, I'll, I'll sustain the objection. But, so, Mr. Grachek, was there something else you relied upon?

MR. GRACHEK: No. With regard to the modeling, I rely on the people that did the modeling and, and that's all I

really can do. If I were to call into question the modeling without knowing otherwise, (inaudible) it would be inaccurate.

MR. MCCANN: Mr. Mudd was asking you, and I'm just directing your testimony, was asking you about larger storm events. First of all, just as a fundamental matter, could you tell us in order of intensity, what the five storm events are that, that are relevant to this, you know, all of this?

MR. GRACHEK: I hope I can remember all of them.

MR. MCCANN: Go ahead.

ALJ: I know them, so, I don't, do you want him to repeat them or --

MR. GRACHEK: Yeah, there's obviously the two, there's the two year, six hour event, the two year, twenty-four hour event, the ten year six hour event, the ten year, twenty-four hour event and I believe there's a twenty year, six hour event, is that correct?

MR. MCCANN: If you say so, sir.

ALJ: So, you can't ask Mr. McCann questions. You, you have to answer the questions. So, but I know what the five storms are.

MR. MCCANN: Okay.

ALJ: (inaudible).

MR. MCCANN: You, excuse me, you, you mentioned, excuse me. You mentioned that, an opinion regarding whether the County should address larger events, whatever term that

meant. Do you recall that testimony?

MR. GRACHEK: Yes.

MR. MCCANN: So, let's just, number one, first and foremost, is it not true that the County, is, is it or is it not true that the County selected one of those storm events?

MR. GRACHEK: It, it appears that way from their SRR.

MR. MCCANN: And which storm event did they select?

MR. GRACHEK: I believe they picked the, the two year, I think it's a two year, six hour event.

MR. MCCANN: Okay. Let's look at, this is the SRRR Plan, Mr. --

MR. GRACHEK: I can't, I can't, I can't recall exactly which one it was.

MR. MCCANN: Okay. This is the SRR Plan, page six twelve and six thirteen. Mr. Mudd made some reference to the, to this, but let me just, I want to direct you to this paragraph here, beginning based on a review, and just read that for me, if you would. Or read it to yourself and --

MR. GRACHEK: Okay. Based on reviews, the County recognizes that deficiencies exist and they felt that the two and ten year, six hour storm design storms are more representative.

MR. MCCANN: Okay. So, does that refresh your recollection about what (inaudible) --

MR. GRACHEK: Yeah, yeah, it does, it does. I, I,

there have been a lot of numbers thrown by today and so, --

MR. MCCANN: Okay. That's okay, that's fine. So, just to be clear, amongst the five storm events you identified, well, of, of, well, strike it. Of those two storm events that are identified in this paragraph, which of those two is the, is the, the more intense?

MR. GRACHEK: The higher rainfall amount would be the ten year, six hour.

MR. MCCANN: Okay. So, and I know you testified about, gave your testimony about larger events. Just focus on the ten year, six hour. The opinions you've expressed all day today about, does that still apply with respect to the ten year, six hour storm? You follow me?

MR. GRACHEK: Yes.

MR. MCCANN: Okay. So, in other words, I'll, I'll ask you to assume, as a hypothetical, that the ten year, six hour storm is the appropriate storm, in the County, based on the County's selection --

MR. GRACHEK: (inaudible) County's selection, it's what they felt was the appropriate storm.

MR. MCCANN: Okay and assuming that, does that change any of the opinions you were, you expressed today regarding the County's addressing model predicted future capacity problems?

MR. GRACHEK: Basically, I'm trying, make sure I know how to phrase --

MR. MCCANN: Let me phrase, let me rephrase the question. Basically, --

MR. GRACHEK: Yeah.

MR. MCCANN: -- based on your testimony today, just based on the, the ten year, six storm, are there significant model predicted capacity problems according to (inaudible) --

MR. MUDD: Objection, objection --

MR. MCCANN: -- RK&K and RJN?

MR. MUDD: Objection. Your Honor, oh, my goodness.

ALJ: Wait, --

MR. MUDD: I just want to address one thing, because Mr. McCann's suggested that you're the one who would be prejudiced. That's not my concern. My concern is, as I think you understand, is that he gives the answer to the witness and then asks the witness to agree with him. So, that's why I object in the beginning of the asking of the question.

ALJ: Right. Yeah, --

MR. MCCANN: I'll rephrase it, I'll rephrase it.

ALJ: -- it just needs to be, just open, just --

MR. MCCANN: I got it, I got it. How would you --

ALJ: -- open ended. We've been doing this all day, but it has to be open ended.

MR. MCCANN: Yeah. How, how would you characterize the model predicted future capacity problems based on the ten year, six hour storm event? That's, if we assume that to be

the correct storm.

MR. GRACHEK: I, based on the ten year, six hour storm events, the model predicted capacity problems are considerably lower than they would be under the, obviously under the, the higher (inaudible). Now, remember, a, a, a two year, twenty-four storm and a ten year, six hour storm end up with about the same amount of rainfall.

So, you know, it's, and in my opinion, just overall my opinion, is that you should, you should model your, your sewer shed for the storm that happens during the duration of your analysis, which would be a twenty-year storm. You can't, you can't predict everything. You can't predict a five hundred year storm, but you should, you should use a twenty year storm in your analysis.

MR. MCCANN: I'm not asking you what storm they should use, I'm asking you to assume the ten year, six storm is appropriate. And I'm asking you to characterize, let me find the exhibit while I can, --

MR. GRACHEK: Yeah, I, I, I think a ten, a, a ten year, six hour storm is not sufficient.

MR. MCCANN: I'm not asking you which storm is sufficient, Mr. Grachek. And I'm sorry if I'm, if --

MR. GRACHEK: I'm getting confused now --

MR. MCCANN: Let me, let me finish, let me finish. I'm not asking you what storm is sufficient. I'm asking you to

assume the ten, six is okay. And let me ask you this first. Am I correct or not that this exhibit that we're looking at right now is based on ten, ten year, six hour storm?

MR. GRACHEK: Yes.

MR. MCCANN: Okay.

MR. GRACHEK: Yes.

MR. MCCANN: So, so, let's assume that's okay.

MR. GRACHEK: Okay.

MR. MCCANN: Regardless of how you feel about larger storms, how would you characterize the model predicted future capacity, that the County, that both RK&K and RJN have come up with?

MR. MUDD: Objection. This has been asked and answered. But the answer wasn't, never mind. Asked and answered.

ALJ: Okay. I don't think it was because I wrote it down a while ago and I still don't think he answered it. He went onto something else, saying he thought a different storm was better. So, I'll, I'll let him answer it. Go ahead. Overruled.

MR. GRACHEK: Based, based on the, the ten year, six hour storm event, assuming that was the accurate one, it shows significant problems in the system, under the RJN post, RJN pre and the RK&K report.

MR. MCCANN: Okay and with respect to Exhibit 64,

which is the, the County's capacity chart that we looked at, Mr. Mudd was questioning whether this was based on dry weather or wet weather, let's just assume, for argument's sake, that these capacity numbers between ninety-four and a hundred are, are based on wet weather flow. Assume that for me. Do you believe that those weather, wet weather capacity numbers are excessive --

MR. MUDD: Objection.

ALJ: Mr. Mudd, you're objecting?

MR. MUDD: Yeah. I think the question is how would he characterize those --

MR. MCCANN: How would you characterize those, those capacity numbers between ninety-four and a hundred, that range?

MR. GRACHEK: If you assume that this was under wet weather flow, they'd still be out, out of line with what you need.

MR. MCCANN: Yeah. By the way, do you recall a chart just like this in the Torch Hill case?

MR. GRACHEK: I don't recall that, Michael.

MR. MCCANN: Okay. All right. Bear with me one second. Mr. Mudd asked you a couple times about whether or not you've ever inquired, anyone in the County about any of this. And to be fair, have you ever tried to call anybody in the County?

MR. GRACHEK: Yeah, I, I have not called anyone in

the County.

MR. MCCANN: Are you certain about that, Mr. Grachek? Have you tried to? Let me ask, put it that way.

MR. GRACHEK: Have I tried to? Yes, I, I, one time did try to call someone in the County, but I haven't had conversations with people in the County.

MR. MCCANN: And who, who did you try to call?

MR. GRACHEK: I, I, I do not remember, it was a while back.

MR. MCCANN: Do you remember, did you try more than once?

MR. GRACHEK: I, I don't recall.

MR. MCCANN: Did you leave a message --

MR. GRACHEK: That would be something from back in, in previous cases.

MR. MUDD: Objection.

MR. MCCANN: Did you leave a message --

MR. MUDD: Objection.

ALJ: Well, he, he, I don't think he recalls at all. He doesn't recall --

MR. GRACHEK: No, I, I, I don't --

ALJ: He, he wouldn't, he won't be able to answer the question if he left a message because he --

MR. MCCANN: Okay. I gotcha, I gotcha.

MR. GRACHEK: I have a (inaudible) --

ALJ: Okay, that's enough. Mr. Grachek, that's enough.

MR. GRACHEK: I was going to say, I have a vague memory of --

ALJ: Mr. Grachek, Mr. Grachek --

MR. MUDD: Objection.

ALJ: -- wait for a question, please. Thank you.

MR. MCCANN: What do you have a vague memory of, Mr. Grachek?

MR. MUDD: Objection.

MR. GRACHEK: Of trying to contact, but I, but I don't, I, I don't recall --

MR. MUDD: Objection, objection.

ALJ: I, it, --

MR. MUDD: Your Honor, now they're (inaudible) your ruling here.

ALJ: Yeah, this is, you're just trying to get around it. So, let's just, you know, whether or not he tried to call someone, I don't think it, it's going anywhere anyway, but just, we can move on from this question.

MR. MCCANN: I don't know who's trying to get around what, Judge. I missed that, I'm sorry but.

ALJ: No, I, I just think we can move on from this question, whether he called someone or didn't and hung up or there was a message or not, it's just not, you know, I don't

think in the scheme of things it's --

MR. MCCANN: (inaudible) important, okay.

ALJ: It's not something earth shattering, so.

MR. MCCANN: Okay.

ALJ: Yeah.

MR. MCCANN: Okay. That's all I have, Mr. Grachek. Thank you, Mr. Grachek.

ALJ: All right, Mr. Grachek. I think it's been seven hours you --

MR. GRACHEK: Yes, yes (inaudible) --

ALJ: -- endured us all. So, yeah, that's a long one. So, yeah, you're finished. We don't have any other questions for you. It is 5:00. So, you don't have another witness, do you, today, Mr. McCann?

MR. MCCANN: No, I, not, I mean, --

ALJ: Right.

MR. MCCANN: -- it'll be a while, it would take a while, but.

ALJ: Right, yeah. I would think so. And I think seven hours is probably, seven and a half hours, is probably enough. So, we have the next day is March the 27th and so, we'll start with Mr. McCann's witness. How long do you think, do you have any estimate at all, (inaudible) should ask you this, but, I was, you were thinking that this was going to be done in two hours. But I had a feeling it wasn't.

MR. MCCANN: Yeah, this, this, this witness would not be as long as Mr. Grachek, that I can say.

ALJ: Okay, all right. Well, I mean, so, we'll do your witness first and then, but is that the only witness or you're not sure yet?

MR. MCCANN: Right now it is, yes.

ALJ: Right now, okay. So, whenever we finish, then next time we'll have to do, you know, the rebuttal case and so, so I would just be prepared to go if, you know, the witness is finished on March the 27th, okay?

MR. MCCANN: Sounds good.

ALJ: Not you, but the Developers obviously. All right, everyone. I think we're finished for today.

MR. MCCANN: Okay, thank you.

ALJ: All right.

MR. ROSENBLATT: Thank you, Judge.

MR. SACHSE: Have a good weekend.

MR. MUDD: Thank you.

MR. MCCANN: Bye.

VOICE: Thank you.

(OFF THE RECORD0

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, February 10, 2023, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 287 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 15th day of March 2023.

Christine R. Leary

IN THE MATTER OF:

GREENSPRING MANOR
2310 W. Joppa Road

CASE NUMBERS: 08-0922 & 2021-0250-SPH

Hearing Date: January 30, 2023

Pursuant to Notice, the above-entitled hearing was held before the Office of Administrative Hearings for Baltimore County by remote access.

PRESIDING:

MAUREEN J. MURPHY, ADMINISTRATIVE LAW JUDGE

FOR THE PARTIES:

ADAM ROSENBLATT, ESQUIRE
CHRISTOPHER MUDD, ESQUIRE

MICHAEL MCCANN, ESQUIRE

PETER MAX ZIMMERMAN, PEOPLE'S COUNSEL
FOR BALTIMORE COUNTY

(ON RECORD)

ALJ: Good morning, everyone. You're attending day nine for case number 08-0922 and 2021-250-SPH. Property address 2310 West Joppa Road. This is the combined development plan and zoning case for the project known as Greenspring Manor. Let's get counsel for the record, identify themselves beginning with the Developer.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer.

MR. MCCANN: And good morning, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: And Peter Max Zimmerman, People's Counsel for Baltimore County.

ALJ: All right. Looks like everyone is here. We left off last in December. And the, we're still in the Protestant's case, right? As I recall? And Mr. McCann, he's presented twenty witnesses so far. I know we had two from People's Counsel in the, in the middle there. And so, we're still hearing from the Protestant's, right, Mr. McCann? So, who do we have, what's, what's our, where are we going today?

MR. MCCANN: Today we have Dan O'Leary, stormwater management expert will go first. Then we'll have probably five or so short witnesses, maybe six, I think.

ALJ: Okay.

MR. MCCANN: So, we'll move pretty fast. I think we'll be, have no problem getting that all in today.

ALJ: Okay. Who do you want to call first?

MR. MCCANN: Dan O'Leary.

MR. SACHSE: Judge, can I interrupt for a second?

ALJ: Mr. Sachse, sure.

MR. SACHSE: Yeah, yeah. I, I just, I actually have to go, and I was going to turn off my video. I did want to check in to be in as a panelist then I will be, but I'll be gone for about two hours.

ALJ: Well, that's fine.

MR. SACHSE: Okay. I just wanted to --

ALJ: Check back in if you need to but I don't need, then I don't need to call on you for cross.

MR. SACHSE: Not, not till I get back in here and, and say hi again.

ALJ: Okay, got it. I'll keep an eye out for you.

MR. SACHSE: Thanks, I, I appreciate that.

ALJ: Yep, no problem. Okay. I just moved Mr. O'Leary over to the panelist.

MR. MUDD: Judge Murphy? It's Mr. Mudd.

ALJ: Oh, okay, yes.

MR. MUDD: I, I just wanted to know, I, is Mr. McCann resting today? I think that was our anticipation given that we have two, two days --

MR. MCCANN: No, no, we have one or two folks, probably two, that could not be here today so.

MR. MUDD: Judge Murphy, I think when we concluded at the last hearing there was one more witness that couldn't make it in December, which is why we scheduled these hearing dates.

MR. MCCANN: No, I never said that at all. I would never say that. That would be false. I just wouldn't say that because I know that not to be true, so I definitely didn't say that. And even, and even when we scheduled the two days it was, you know, I never said that we'd be done the first day, so.

MR. MUDD: Okay.

ALJ: Okay, well, I'm, yeah, I'm not sure how many more, I mean, he indicated there's probably five or six short witnesses, plus Mr. O'Leary. You know, I don't recall whether you said you were resting. I actually, I think I thought last time that the Protestants were finished but that was my error.

Because then Mr. McCann corrected me and said, no, no, no, people can't be here today. So, you all have probably had conversations that I'm not privy to. So, we'll see how it goes here. So, it doesn't sound like they're going to rest today but we'll see. So, anybody have any hard stops today? Okay, I don't either.

MR. MCCANN: Okay.

ALJ: All right. And so, we'll, we'll have Mr.

O'Leary first. Let's see. Hm. Oh, there he is. Mr. O'Leary, do you have a camera? I unmuted your microphone. Can you hear me?

MR. O'LEARY: Yes.

ALJ: All right. There you are. All right, great. Are we ready, Mr. McCann?

MR. MCCANN: We are, thank you.

ALJ: All right. Would you raise your right hand, please? Do you solemnly swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. O'LEARY: I do.

ALJ: All right. Go ahead, Mr. McCann.

MR. MCCANN: Okay, thank you. Mr. O'Leary, what do you do for a living?

MR. O'LEARY: I'm a civil/water resources engineer.

MR. MCCANN: Okay. Who do you work for?

MR. O'LEARY: ESD Associates in Baltimore.

MR. MCCANN: And what, what does that company do?

MR. O'LEARY: Civil/water resources and electrical engineering.

MR. MCCANN: Okay. For what types of clients do you guys serve?

MR. O'LEARY: Private clients, public clients. We do, some of our clients would be like Maryland Transit

Administration, State Highway Administration, homeowners' associations, it varies.

MR. MCCANN: Okay. So, it sounds like you do work for both developers and on occasion community organizations as well, is that fair?

MR. O'LEARY: Yes, yes.

MR. MCCANN: Okay and are you a principal in that entity?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and how long have you worked with ESD Associates?

MR. O'LEARY: I guess it's eight years.

MR. MCCANN: Okay and what'd you do before that?

MR. O'LEARY: Before that, I was with another firm, MMP Engineering, and I was there for twelve years.

MR. MCCANN: Doing what kind of --

MR. O'LEARY: (inaudible) how far you want me to go back.

MR. MCCANN: What's that, Dan?

MR. O'LEARY: How far do you want me to go back?

MR. MCCANN: Well, just describe briefly what you do, what you did at NMP.

MR. O'LEARY: Largely the same things I'm doing now. It was review of projects for permits, design of project for permits, expert services for clients.

MR. MCCANN: Okay. Did you, did you at one time work for the Maryland Department of the Environment?

MR. O'LEARY: Yes, I did.

MR. MCCANN: And what did you do for them, for that Department?

MR. O'LEARY: I was the sediment and stormwater planner (inaudible). So, I was in charge of reviewing all state and federal projects in Maryland that were required to obtain stormwater management and sediment control permits.

MR. MCCANN: Okay. Over the years, have you had occasion to do work in Baltimore County?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and, in fact, have you been accepted as an expert by the Office of Administrative Hearings on prior occasions?

MR. O'LEARY: I have.

MR. MCCANN: And also, by the Board of Appeals?

MR. O'LEARY: Yes, that's correct.

MR. MCCANN: And what about the Circuit Court for Baltimore County? Have you been accepted as an expert by the Circuit Court as well?

MR. O'LEARY: Yes, I have.

MR. MCCANN: Okay. What, what's your educational background?

MR. O'LEARY: I have a Bachelor of Science in Civil

Engineering from the University of (inaudible) in 1984.

MR. MCCANN: Okay. Are you, are you a licensed engineer?

MR. O'LEARY: I am.

MR. MCCANN: Okay and are you familiar with the Maryland stormwater management design manual?

MR. O'LEARY: Yes.

MR. MCCANN: And what is that manual?

MR. O'LEARY: It's the basis for stormwater management design throughout Maryland. It's the minimum standards for design.

MR. MCCANN: Okay and it applies in Baltimore County?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and were you involved in any way in the drafting of that manual?

MR. O'LEARY: Yes.

MR. MCCANN: What, in what fashion?

MR. O'LEARY: I was on the committee that reviewed the manual and provided feedback to the Center for Watershed Protection, who was writing the manual at the time.

MR. MCCANN: Okay. Your Honor, I, I think you're familiar with Mr. O'Leary. But I, I would move him in as an expert in the stormwater management and the stormwater management requires under the, requirements, I'm sorry, under the design manual and county law.

ALJ: And I now recognize Mr. O'Leary as an expert who's been accepted, yeah, in cases that I've had. So, he was reminding me as he went through it, I can't tell you which case it was, but I know he was accepted as an expert. Was there any voir dire that you needed, Mr. Rosenblatt? I think you've maybe used him as an expert is what I want to say.

MR. ROSENBLATT: I have not but he has, he has appeared with Mr. McCann in cases I'm involved a number of times and been accepted in the areas he's proffered this morning.

ALJ: So, no objection?

MR. ROSENBLATT: No objection.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, no objection and no questions.

ALJ: Okay and so he'll be admitted as an expert in Mr. McCann's stormwater management and, in particular, the, the Maryland design manual, as well as the Baltimore County regulations that control stormwater management.

MR. MCCANN: Correct.

ALJ: Okay.

MR. MCCANN: Thank you, Judge. Mr. O'Leary, are you familiar with the development plan that is the subject of this case?

MR. O'LEARY: Yes.

MR. MCCANN: You've been to the site?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and did you review the, the stormwater management submittals made by the Developer to the County in connection with the development plan?

MR. O'LEARY: Some of the, at least the ones I was given, yes.

MR. MCCANN: Okay. Did that include the, the, the Developer's stormwater management report?

MR. O'LEARY: Yes, dated May 2021 and some, and a recent filing, I'm not sure what the date of the recent one was.

MR. MCCANN: Okay, okay. Let me show you an excerpt. Judge, if I could share? Looks like I can. This would be Protestant's Exhibit 51. Okay. You see that, Mr. O'Leary?

MR. O'LEARY: Yes.

MR. MCCANN: Is the, the first page, anyway of the, the May 2021 report that you mentioned just previously?

MR. O'LEARY: That, that's the one that I referred to, yes.

MR. MCCANN: Okay and I'll just scroll down. This is an excerpt, as it's only four pages. But I wanted to go down to the, the conclusion section of this excerpt. Well, first of all, what portion of the, the report is this? Do you know?

MR. O'LEARY: It's the stormwater management narrative.

MR. MCCANN: The narrative? Okay. So, okay. So, the conclusion on page four, and I'll just read a portion of it. In particular the last sentence. The project meets the requirements for both ESD to the MEP and water quantity, 100-year management, through the implementation of four submerged gravel wetlands. Do you see, do you see that?

MR. O'LEARY: I do see that.

MR. MCCANN: Okay. Water quantity, one-hundred-year management, just before I ask about that conclusion, what, what does water quantity refer to in your business?

MR. O'LEARY: It's the requirement to manage after development flow back to pre-development as established by MDE, pre-development land use conditions.

MR. MCCANN: Okay and what, more specifically, are the requirements for quality, I'm sorry, quantity control as they relate to this, this, the subject site?

MR. O'LEARY: So, there are two designed storms that MDE requires this management. The ten-year storm, which is approximately five inches of runoff, I'm sorry, five inches of rainfall. And in this case, the one-hundred-year storm, which is in the MDE manual about seven inches of rainfall. But when you use the latest NOA, that's National Oceanographic Atmospheric Administration, use their latest tables, it's more like eight and a half inches of rainfall.

MR. MCCANN: Okay and when you say in this case a

hundred-year storm event is required, what, what do you mean by that? Is that something (inaudible)?

MR. O'LEARY: In the state stormwater regulations, there's a reference to what they call inter-jurisdictional flood hazard waterways. And those are waterways that may have had waters in one county and discharged in another county or jurisdiction.

So, in this case, the Jones Falls is the watershed wherein the head water areas and it drains into Baltimore City. So, the Jones Falls is considered an inter-jurisdictional flood hazard waterway. And therefore, the hundred-year storm management requirement applies.

MR. MCCANN: So, in other words, does the one hundred year management requirement, one hundred year storm event management requirement, does that apply in all parts of Baltimore County?

MR. O'LEARY: No, not unless the County enacts, so enacted something specific. But in this case, it's a state level requirement because it's the Jones Falls.

MR. MCCANN: Okay. So, getting back to the conclusion that I just read to you, do you agree that, in terms of this, the Developer's stormwater management submittals that the project meets the requirements for water quantity?

MR. O'LEARY: I, I do not.

MR. MCCANN: Okay and why, why do you not agree with

that conclusion?

MR. O'LEARY: Because the analysis wasn't performed following the Maryland stormwater design manual minimum requirements.

MR. MCCANN: Okay. Can you be a little more specific before we move on to the, you know, some subsequent exhibits? Just generally speaking what, what do you mean by that? In what way does it not comply?

MR. O'LEARY: So, the, the manual is specific about what land uses are to be assumed for existing conditions. Especially in the case of agricultural (inaudible) crops. And from the information that I've reviewed, the engineer that designed this used agricultural (inaudible) crops as, as a pre-development land use condition, which is contrary to the requirements of the manual.

MR. MCCANN: Okay. Is there, in, in determining water quantity, or quantity control rather, is there, is, I think you suggested already, is there a comparison made between pre-existing conditions and post-development conditions?

MR. O'LEARY: Well, not pre-existing, but existing conditions in post-development, yes. And the, so the purpose of comparing the rate of discharge after development to the rate, rate of discharge before development and if there's an increase in flow, then you need to manage the post-development flow back to existing levels by using ponds or other means to

reduce the runoff.

MR. MCCANN: Okay and you mentioned these, an, an assumption by the Developer regarding the pre, or existing conditions, correct?

MR. O'LEARY: Well, they, they appear to use what they consider the existing conditions. But the manual is specific about what to use for existing conditions.

MR. MCCANN: Okay, got it. All right. Let me move, let me show you Protestant's Exhibit 50. And this is a two-page document, I'll scroll down. What is this document, Mr. O'Leary?

MR. O'LEARY: This is two pages from chapter two of the Maryland stormwater design manual.

MR. MCCANN: Okay.

MR. O'LEARY: The sections pertain to overbank flood protection, called QP, which is the, related to the ten-year storm. And then, the next page is QF, which is the one-hundred-year storm, extreme flood volumes.

MR. MCCANN: Okay. So, these two pages, both the, the QP and the QF, are, set forth requirements that are applicable to this project, is that correct?

MR. O'LEARY: All projects except those on the Eastern Shore in Maryland, yes.

MR. MCCANN: Okay. So, I'm going to, on the first page of this Exhibit 50, there's some red boxed material. Did

you box that, Mr. O'Leary?

MR. O'LEARY: Yes, I did.

MR. MCCANN: Okay. So, why don't, why don't you explain what this provision says and why it is that you boxed that for our attention.

MR. O'LEARY: Well, the provision says, the standard for characterizing pre-development hydrologic land use for non-forested vegetation areas, and then there's another box that I added, that specifically says including agriculture, shall be meadow in good hydrologic condition.

And the reason for that, and this dates back to when I worked at MDE, there were developers of farmland that would come in and say well, we're going to develop these (inaudible) crops into houses and reduce the amount of runoff because it's a, it's a bit of a bait and switch in the methodology. So, in the storm water design manual, MDE concluded this language to sort of close that loophole.

MR. MCCANN: Okay. These are pre-development conditions, correct?

MR. O'LEARY: Yes.

MR. MCCANN: Okay. Is meadow in good hydro, hydrologic conditions, is that sort of a term of art? Is that one of those conditions?

MR. O'LEARY: (inaudible) specifically referenced in the design manual, the TR-55 manual that is the, you know, it's

also referenced in the MDE design manual. But TR-55 is a, a U.S. Department of Agriculture publication that is the hydrology standard used in Maryland.

MR. MCCANN: Okay. At the beginning of this section it says, when addressing the overbank flood, flooding design criteria, the following represent the minimum basis for design. Do you see that?

MR. O'LEARY: I do.

MR. MCCANN: And what, what does that mean to you in terms of whether or not this pre-development condition is required or not?

MR. O'LEARY: I think it's pretty clear that if, if you have non-forested land use, you're supposed to use meadow for everything, whether it's impervious area, open space, lawns, anything like that. And the reason is to conservatively address quantity control problems that are prevalent in the state.

MR. MCCANN: Okay. So, let's go to the next page, which I think you indicated was the QR, I'm sorry, the QF, or the hundred-year storm event. You have also a red box on this page. Explain what this provision provides for and why you boxed this section.

MR. O'LEARY: So, when the one-hundred-year storm management is required, the bullets at the bottom of that page are the basis for determining the criteria. And the second

bullet, the one in the box, says the same hydrologic and hydrologic methods used for overbank flood control, which is the ten-year storm event, shall be used to analyze QF, which is the extreme flood criteria.

MR. MCCANN: Okay and what does that mean for us lay folks?

MR. O'LEARY: It means all non-forested land use and existing conditions is to be considered meadow in (inaudible) condition.

MR. MCCANN: Okay. For both storm events?

MR. O'LEARY: Yeah, for the ten and one hundred year.

MR. MCCANN: Okay, all right. Anything else you wanted to highlight in these pages before we move on, Dan?

MR. O'LEARY: If you go back up one page.

MR. MCCANN: Yep.

MR. O'LEARY: The first bullet talks about using the models TR-55 and TR-20. Those are the U.S. Department of Agriculture hydrology methodology booklets. And TR-55 is the input. The TR-20 is one output method for, is a computerized method of calculating discharges based on TR-55. So, we'll be really focused on TR-55 when we talk about pre-development land.

MR. MCCANN: Okay, all right. Let me move on to Protestant's Exhibit 53. This is sixteen pages and I'll scroll down so you can see it and then we'll talk about it. Is this

also an excerpt from the Developer's stormwater management report?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and the, the red boxing are yours?

MR. O'LEARY: Yes.

MR. MCCANN: Okay, all right. Let me start on page, page that's numbered anyway, as twenty-three, which is the ninth page of this exhibit, blow it up a little bit. Tell us what this is and why, again, why you've boxed out this material. And it looks like you've added material in red, is that, is that true?

MR. O'LEARY: Yes.

MR. MCCANN: Okay. Why don't you go ahead and explain that?

MR. O'LEARY: So, this is part of the calculations required to develop a pre-development discharge as required in the, in the MDE manual. And the way the TR-55 is assembled, the methodology is based on a runoff curve number, which is a numerical representation of runoff from a, from certain land uses and soil types. The second element is the time of concentration, and I'll get into that, I guess, in a minute. And the third element is the rainfall amount.

So, this page here is focused on the development of the runoff curve number. And the higher the runoff curve number, the higher the amount of runoff.

So, for instance, in this case you'll see a row called paved parking lots, roof, driveways. And the curve number column for that row is ninety-eight because it's a, one hundred would be the most amount of runoff that you could get from a storm, roughly one hundred percent. Whereas on a paved surface, you'd get almost a hundred percent runoff.

And then for like the row crops and the woods, you can see the numbers are much lower because for those land uses you get less runoff for a given storm event.

And in the MDE manual that I referenced a moment ago, it says that for all of the land uses except the woods that are shown at the bottom, designers are supposed to use meadow in good condition.

So, for, if you were to replace all the B soil entries with meadow, they would be assigned a runoff curve number of fifty-eight as shown in the smaller red box to the right.

MR. MCCANN: Okay.

MR. O'LEARY: And for C soils, they would get a seventy-one. And for D soils, a seventy-eight.

MR. MCCANN: Okay.

MR. O'LEARY: That would give you a much lower curve number than when you use row crops, which have higher runoff curve numbers, paved parking lots, which have much higher numbers and in some cases open space grass has higher curve

numbers.

So, what I did in the red box for comparison purposes, was I recalculated the curve number if we were only to change the row crops into meadow. And got a runoff curve number of sixty-three for existing conditions compared to the weighted runoff curve number of seventy-seven that was shown in the stormwater report. And what that does, the sixty-three compared to seventy-seven, sixty-three is going to give you a much lower existing conditions discharge.

MR. MCCANN: And that'll, could affect the delta between pre-existing, or existing and post-development --

MR. O'LEARY: That's correct.

MR. MCCANN: -- (inaudible)? Okay. So, the sixty-three you just mentioned is on the righthand column. These are your calculations in this box over here on the lower right?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and the curve numbers you just mentioned are in this sort of vertical box right here, correct?

MR. O'LEARY: Yes, and I used the same sub-area acreage numbers that the designer provided. I did not recalculate those areas.

MR. MCCANN: So, you assumed that the, the acreage of these sub-areas, all these different sub-areas, was accurate?

MR. O'LEARY: That's correct.

MR. MCCANN: Okay and why did you box just the row

crop? I mean, do you, the three sub-areas for row crops, do you --

MR. O'LEARY: Well, those, the reason I did that is that specifically called out from the design manual, although the design manual does say all non-porous and land use shall be meadow in good condition, this was just demonstrative to show that if you only change the row crops in this case to the meadow land use, you get a significantly lower curve number.

MR. MCCANN: Okay. Are these --

MR. O'LEARY: Notice that the row crops represent the predominance of the land use, that twenty, almost twenty-nine acres.

MR. MCCANN: These numbers right here?

MR. O'LEARY: Yes.

MR. MCCANN: Okay.

MR. O'LEARY: If you add those up, they're almost twenty-nine of the thirty-nine acres total. And then you have another six acres of woods. So, the open space and existing paved parking lots, roofs and driveways don't account for a significant portion of this site.

MR. MCCANN: Okay. But technically speaking, those open space and paved parking lot areas, which amount to I guess roughly three or four acres, those should also be considered meadows in, in good hydro, hydrologic condition?

MR. O'LEARY: That's correct.

MR. MCCANN: Okay and when you say that row crops are called out specifically in the manual, let me just go back to the manual, is that by virtue of the, the phrase including agriculture, is that what you mean by that?

MR. O'LEARY: Yes.

MR. MCCANN: Okay.

ALJ: Which exhibit is that, Mr. McCann?

MR. MCCANN: I'm sorry, this is Exhibit 50, page, page one of fifty.

ALJ: Okay.

MR. MCCANN: So, you, you read the phrase including agriculture to mean row crop, essentially, is that --

MR. O'LEARY: Yes, that's correct.

MR. MCCANN: Okay, okay. Back to fifty-three, and the calculation, just for the record, on the righthand side, it says meadow good, what are all these calculations on the righthand side in red?

MR. O'LEARY: So, the way that, the way that you determine a weighted runoff curve number is you multiply the sub-area and acres times the curve number and you get a product. You sum those products and then divide it by the total area in acres. So, the sum of those products is two thousand four hundred and eighty-seven divided by the 39.47 gives you a weighted runoff curve number of sixty-three for the pre-development conditions.

MR. MCCANN: Okay. Is, in your experience, is the, is the difference between the runoff number of sixty-three and, and seventy-seven, is that significant?

MR. O'LEARY: Yes.

MR. MCCANN: All right. Let's go to --

ALJ: So, can you just finish that thought? Why is it significant? Give me the, the conclusion, or unless you're getting there.

MR. MCCANN: Nope, that's a good question actually.

ALJ: Sixty-three versus seventy-seven, Mr. O'Leary, you said it was significant. Why?

MR. O'LEARY: Because with, with a lower curve number you get less runoff. So, when you, so a hundred, almost a hundred percent runoff comes from parking lots. Seventy, you know, if, if you have a runoff curve number of seventy-seven, you're going to get less runoff than you would with a parking lot. But then with the meadow at sixty-three, you get even less. And in my opinion it's significantly less.

MR. MCCANN: But maybe the, maybe the question is why is it significant in terms of your broader conclusion? How, or if it is and if it is, how?

MR. O'LEARY: Well, I guess we'll, we'll get to that. I, when --

MR. MCCANN: Okay.

MR. O'LEARY: -- we show the results of the

independent study that I did.

MR. MCCANN: Okay, all right. So, let's move to the prior page. So, this is numerical page twenty-two and its excerpt, and it's page eight of the exhibit. Tell us what this shows us, Mr. O'Leary.

MR. O'LEARY: So, as I stated, there are three elements to determining discharge from a property. One is runoff curve number. Second is the time of concentration. And that's defined as the time that it takes a drop of water to travel across the property in question from the most remote point to its study point.

So, in this case, and there are some limitations, and I can go into those if you want. But the different types of flow are shown in the left column. Sheet flow is at the very upper reaches of the sub-watershed. Once you hit the maximum sheet flow length allowed of one hundred feet, then the flow would change from sheet flow to a concentrated flow.

In this case, shallow concentrated was used for two different reaches at two different slopes. And then channel flow with an assumed velocity was the, the last one.

MR. MCCANN: Okay.

MR. O'LEARY: And I used sheet flow associated with dense grass to go with the meadow land use condition as opposed to sheet flow through row crops. So, I got a, a higher, or a longer time of concentration than the designer did. And what

that affects is it affects the shape of the hydro (inaudible). So, if you have a longer time of concentration, the runoff is spread out over a longer period of time, so the peak of that runoff is lower. And then my opinion for existing conditions on an approximately forty-acre sub-watershed that's meadow, you would get a higher time of concentration than .233 hours and I calculated .39 hours.

MR. MCCANN: Okay. You said a lot there. Getting back to this sub-area identifier on the left-hand side. These are, again, these are existing pre-development conditions, correct?

MR. O'LEARY: Yes.

MR. MCCANN: Okay. Did you, do you agree, disagree, did you assume that these flow lengths and slopes were accurate?

MR. O'LEARY: I assumed that the flow lengths and slopes were accurate, yes.

MR. MCCANN: Okay.

MR. O'LEARY: And, and I looked at them on the plan as well (inaudible).

MR. MCCANN: Okay. So, you assumed those are okay?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and then you said you used dense grass for the travel time. Why dense grass? We haven't talked about dense grass yet. What is that? What is that and why did

you use it?

MR. O'LEARY: Dense grass would go with the meadow land use that's required in the runoff for (inaudible).

MR. MCCANN: Okay. As opposed, and what was used by the Developer in, in this, in these calculations per travel time? What --

MR. O'LEARY: That was the row crops land use.

MR. MCCANN: Okay and then how, how did you get your number? I guess your math isn't shown here, but how did you get your .235?

MR. O'LEARY: There's a formula in TR-55.

MR. MCCANN: Okay.

MR. O'LEARY: And it's, it's based on different land uses. And you have the, the roughness of the land use factors into the time that it takes that drop of water to, to traverse a hundred feet of that land use at that (inaudible).

MR. MCCANN: Okay and the manning, this fourth column we have boxed, the .060 number under mannings, what, what is that number? What is --

MR. O'LEARY: That's a roughness coefficient that's assigned based on what the land use is. And that, the higher the manning's n value, the slower the flow would be through the land use. So, if you can imagine a, if it were sheet flow across pavement, it would move very quickly, the manning's n value would be very low. And their travel time in the right

column would be, would be low or short.

MR. MCCANN: Right.

MR. O'LEARY: As the roughness increases, the travel time increases. And what I'm saying in this graphic is that with dense grass the travel time could be much higher than .078 hours.

MR. MCCANN: Okay. Did you assume that the, the roughness or the manning's coefficient was what the Developer has here or did you, do you disagree with that?

MR. O'LEARY: No, I, I used the, the coefficient for dense grass.

MR. MCCANN: Okay. So, you did not use .060?

MR. O'LEARY: No, I did not.

MR. MCCANN: What did you, what was the number that you did use?

MR. O'LEARY: I'd have to look it up.

MR. MCCANN: Okay.

MR. O'LEARY: If you want me to, I can.

MR. MCCANN: If you can do so quickly.

MR. O'LEARY: I'll look in the TR-55 manual.

MR. MCCANN: And while you're doing that, Mr. O'Leary, so these calculations that you came up with, that you have in red here, are these calculations that you did by running your own TR-55 or did you hand do them or how did you come, go about --

MR. O'LEARY: I ran my own TR-55.

MR. MCCANN: Okay.

ALJ: What, what was that last answer?

MR. O'LEARY: I, I ran my own numbers.

ALJ: Ran my own numbers, okay, thanks.

MR. MCCANN: Using, using TR-55?

MR. O'LEARY: Yes.

MR. MCCANN: Which is an industry standard --

MR. O'LEARY: Right. U.S. Department of Agriculture publication.

ALJ: Yeah, Mr. McCann, just try not to testify since he is an expert. I know you're trying to move along and that's, it's not intentional. Just try not to, just ask him questions.

MR. MCCANN: Okay.

MR. O'LEARY: So, the, I'm sorry. Should I keep, keep going or do you need to ask me a question?

MR. MCCANN: The question was, what, what manning coefficient did you use for your TR-55.

MR. O'LEARY: Okay. In, in TR-55, 0.06, which is shown here, represents cultivated soils with residue cover less than twenty percent. So, basically, cultivated cropland. I used 0.24, which represents dense grass.

MR. MCCANN: And again, why, why did you use dense grass instead of the coefficient that you just described?

MR. O'LEARY: Because dense grass goes with the meadow land use that I discussed. The manual requires you to (inaudible).

MR. MCCANN: Okay. Anything else on this page of Exhibit53 before we move on, Mr. O'Leary?

MR. O'LEARY: No, no.

MR. MCCANN: Okay. All right. Let's go to the prior page, which is page twenty-one of the report itself, page seven of the exhibit, you see that?

MR. O'LEARY: Yes.

MR. MCCANN: And what is this?

MR. O'LEARY: This is a summary of the input into TR-55. So, using the same drainage area but assuming meadow, the numbers are in red. So, the designer, using row crops for the time of concentration, .2333 hours, using meadow, I got 0.39 hours.

For the runoff curve number, the designer got a runoff curve number of seventy-seven. Through independent calculation and using meadow, I got a runoff curve number of sixty-three. And again, that was only turning the row crops into meadow. It was not turning the open space or any of the off site land uses into row crop, I mean, sorry, into meadow.

MR. MCCANN: Okay. In terms of time of concentration, which we just spoke about, is the difference between .233 and .39, which you calculated, is that significant

in your opinion?

MR. O'LEARY: So, as I said, that governs the shape of the runoff hydrograph.

MR. MCCANN: Right.

MR. O'LEARY: And the hydrograph is a, is a plot of runoff over time, or runoff versus time. So, this would make the pre-development hydrograph spread out more. So, it's, it, I guess what I'm trying to say is if we only change the time of concentration and left the curve number the same, it would be less significant than both of those changes occurring.

MR. MCCANN: Okay, all right. Let's go to page seventeen of the report, page four of the exhibit. This is entitled, make sure it's the right one. Rainfall depth. I think you indicated that the third criteria is rainfall, is that correct?

MR. O'LEARY: That, that's correct.

MR. MCCANN: Okay. So, tell us --

MR. O'LEARY: -- (inaudible) concentration and rainfall.

MR. MCCANN: Okay. So, tell us what this page shows us.

MR. O'LEARY: In, in the black text.

MR. MCCANN: Yep.

MR. O'LEARY: In the top, or the middle table there, that says two-year, five-year, ten-year, twenty-five year,

etcetera, in that area.

MR. MCCANN: Uh huh.

MR. O'LEARY: Those are the rainfall depths associated with the storms that were input by the Developer. And as you can see underneath that it says storm data source, there's a row that says storm data source.

MR. MCCANN: Right here, yeah.

MR. O'LEARY: And it says user provided custom storm data. So, I'm not sure where the data came from because it was a user provided data. If you look in red down at the bottom, those rows, NOAA Atlas 14 is an acceptable data source. And those are the rainfalls that come from NOAA Atlas 14 in the horizontal row there.

MR. MCCANN: Okay.

MR. O'LEARY: And then there are TR-55 preset rain, rainfall amounts for Baltimore County in the stormwater design manual. And they are a little bit different than what the designer used as well. So, I'm not sure where their numbers came from.

MR. MCCANN: Um hm.

MR. O'LEARY: But in my opinion, they were close enough that I didn't change the numbers. And their numbers and my numbers are essentially the same.

MR. MCCANN: Okay. So, as you, you say here, acceptable in rainfall depth data that was used by the

Developers. Is, was it acceptable, in your opinion?

MR. O'LEARY: Yes. I'm not sure where it came from, but I think it was acceptable, within the acceptable range.

MR. MCCANN: Okay, all right. Let's go back down, I think this is where we want to head next. And this is page twenty. Or page nineteen. Page nineteen, so, page five of the exhibit. What is this, Mr. O'Leary? Including what is the red indicated here?

MR. O'LEARY: This is the summary output from TR-55 that shows your discharges. So, it takes the time of concentration, the runoff curve number and the rainfall amount and through equations in TR-55, it sort of cranks out these numbers for the rate of discharge.

MR. MCCANN: Just so we're clear, what is rate of discharge? What does that mean in --

MR. O'LEARY: That's the ten-year storm flow, the hundred-year storm flow that is regulated by MDE.

MR. MCCANN: But these are, it's in CFS. What, is that cubic feet per second? That's cubic feet per second, yes. So, the runoff is in inches, of course time of concentration is in hours and the TR-55, and, and the rainfall amount is in inches. So, TR-55 takes that information and through methodology divided by, developed by USDA, you come up with a cubic feet per second discharge, or rate of discharge for each of those storm events.

MR. MCCANN: Okay and what did you determine?

MR. O'LEARY: So, I, I put slash lines through the two year and one year because they are not relevant to MDE's requirement for quantity control. We, they're only focused on the ten year and one hundred year.

MR. MCCANN: Okay. So, what this says is using the Developer's input, the sub-areas for existing conditions, they came up with 132.07 cubic feet per second for the ten-year storm and 290.06 cubic feet per second for the one-hundred-year storm.

Boxed in red below were the results from my independent calculation using meadow land use instead of row crops and I had came up with 56.78 cfs for existing and 167.69 for, I'm sorry, 56.78 for the ten year and 167.69 for the one hundred year.

MR. MCCANN: Okay. This is, it's, it's entitled peak flow right above here, do you see that?

MR. O'LEARY: Yes.

MR. MCCANN: Now, is this, are the, the, the flow that you just identified, are those existing conditions, post-development conditions or is that a comparison?

MR. O'LEARY: These are existing conditions. This is a comparison between my independent calculations and the Developer's calculations for existing conditions.

MR. MCCANN: Okay, all right. Before we move to

post-development, is there anything else in these initial pages that we need to review, Mr. O'Leary? Did you pretty much cover everything?

MR. O'LEARY: I think that's all.

MR. MCCANN: Okay. So, let's go down, back down, sorry to move around so much. Page twenty-four of the report. This is page ten of Exhibit 53. And I think this, am I correct, subsequent pages you put together here, this is all post-development calculations?

MR. O'LEARY: That's post-development, yes.

MR. MCCANN: Okay, okay. Beginning with page twenty-four, anything you want to point out here before we move down to your conclusions?

MR. O'LEARY: Well, the, the rainfall amounts are the same as for existing. Of course, that doesn't change.

MR. MCCANN: Okay.

MR. O'LEARY: If you would scroll down a little bit to the runoff (inaudible) number? Next one. I think (inaudible), one more page.

MR. MCCANN: So, this is page, just, twenty-nine.

MR. O'LEARY: Keep scrolling down, I'm sorry.

MR. MCCANN: One more? I'm sorry, okay. Here?

MR. O'LEARY: Yeah, right in here. If you want to maybe zoom out a little so you can see.

MR. MCCANN: Yeah, yeah, I'm sorry. So, this is page

thirty of the report, sixteen of the exhibit.

MR. O'LEARY: Yes.

MR. MCCANN: Okay.

MR. O'LEARY: So, the way the designer calculated the post-development runoff (inaudible) number --

MR. MCCANN: Um hm.

MR. O'LEARY: -- is they separated paved surfaces and open space, which is one way to do it. And they gave them a, excuse me, gave them a runoff curve number, a weighted runoff curve number of eighty. However, in the TR-55 manual --

MR. MCCANN: Um hm.

MR. O'LEARY: -- there is a residential land use quarter acre lots that gives you a slightly higher runoff per number than the developing, the Developer used. So, I think the Developer's post-development runoff curve number might be a little less conservative.

MR. MCCANN: Okay.

MR. O'LEARY: So, I did not, I did not rerun all these numbers for post-development with this curve number, assuming, I mean, how conservative you make your post-development calculations as long as it's accurate is up to the designer. But I think if I were the designer on this, I would have used the more conservative curve numbers for (inaudible) condition.

MR. MCCANN: Okay. Before you move on, let's just

sort of blow it up so we can tell what you were just referring to. You have eighty boxed, curve number eighty boxed here, is that what you are referring to as the Developer's curve number?

MR. O'LEARY: Yeah, that's the Developer's post-development runoff curve number.

MR. MCCANN: Okay and then this table 2-2a, you, you, this is your sort of insert onto this page, is that accurate?

MR. O'LEARY: Yes, it is. And that, that table comes directly from the TR-55 manual.

MR. MCCANN: Okay and then you have underlined and boxed, curve numbers for residential districts down here, right?

MR. O'LEARY: For quarter acre lots. And you'll see those are both higher than the weighted curve number of eighty.

MR. MCCANN: Okay and why did you box eighty-three and eighty-seven, in particular?

MR. O'LEARY: Because those are the, if you scroll up, the Developer used C and D soils.

MR. MCCANN: Okay.

MR. O'LEARY: If you scroll up, you'll see in their calculations they used C and D soils for their post, post-development curve numbers.

MR. MCCANN: Okay.

MR. O'LEARY: So, it's just for comparison.

MR. MCCANN: Okay.

MR. O'LEARY: Again, I didn't rerun these numbers, I'm just pointing out that this is a little less conservative than I would have prepared.

MR. MCCANN: Okay and where should I head next? Up, back up?

MR. O'LEARY: Yes. Now, the time of concentration for post-development, they just put in the minimum, which is .1 hours, and that's acceptable to me.

MR. MCCANN: Okay and then.

MR. O'LEARY: That there is just a summary of their input and output --

MR. MCCANN: That's on page --

MR. O'LEARY: -- (inaudible) their number of eighty.

MR. MCCANN: Okay, yeah. Page twenty-seven of the report, anything you want to point out on this page?

MR. O'LEARY: If you stop here, these are their post-development discharges. I think if you go up one more page, the summary is a little less confusing.

MR. MCCANN: Okay. Page twenty-six of the report, this?

MR. O'LEARY: Yes, yes. So, this shows what the ten, ten year and one-hundred-year outlet discharges are. A hundred and seventy-six for the ten year and is that, your cursor is right on top of it, is that, I think it's my cursor, 370.10 by the proposed, this chart's rate. So, those are the rates that

need to be managed back to existing assuming meadow and good condition.

MR. MCCANN: Okay and did you do in this exhibit, did you do a comparison of your post-development to the Developer's post-development?

MR. O'LEARY: No, I did not. I, as I said, I just wanted to point out that these numbers arguably could be a little bit higher if you wanted to be more conservative in your calculation.

MR. MCCANN: Proposed development, that is?

MR. O'LEARY: That's correct.

MR. MCCANN: Okay.

MR. O'LEARY: So, these are negotiable, but I think the pre-development, because MDE's manual does not say post-development curve number shall be this and this. Post-development runoff curve numbers are what the designer chooses them to be as agreed to by the County. So, I can't really argue that the numbers are wrong. I can argue that my numbers would have been a little higher, maybe more conservative in this case.

MR. MCCANN: Okay.

MR. O'LEARY: For post-development --

MR. MCCANN: So, getting back to the existing, go ahead, I'm sorry.

MR. O'LEARY: I was going to say, the pre-development

is really not negotiable because it's stated in the MDE manual what you're supposed to do. But post-development is more subjective.

MR. MCCANN: Okay and given your testimony about pre-development, what, what conclusions can you draw from the differences between your TR-55 calculations and the Developer's?

MR. O'LEARY: That the, the ponds that are used in this design are not adequately sized and they're too small in their current configuration.

MR. MCCANN: Okay and explain, make that connection for us, if you would? What, how do you reach that conclusion based on the numbers that you found? It may be obvious to you, but it may not be obvious to everybody else.

MR. O'LEARY: So, the post, post-development flows are the flow into the pond. In these pre-development flows, are the rate of flow that's allowed out of the pond. And the pond itself has to be designed to store the difference. So, if the pre-development for the outflow of the pond is lower by sixty percent, as it is in the comparison you see on the screen now.

MR. MCCANN: Yeah.

MR. O'LEARY: Which means your pond is going to have to be much larger to store the difference. So, I don't think the ponds are adequately sized as currently designed.

MR. MCCANN: Okay and when you say the ponds, let's, let's take a moment and go back to the development plan. Bear with me one second. Okay. This is, I'll scroll out. This is Developer's Exhibit 1-B, the green line development plan. Have you seen this plan before, Mr. O'Leary?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and just remind us, if you would, again with reference to Developer's Exhibit 1-B, what stormwater management is proposed and where it is.

MR. O'LEARY: They're proposing, they're proposing three combination submerged gravel wetlands and detention pond.

MR. MCCANN: And tell us where they're located, or point me to where they are.

MR. O'LEARY: There's one on the north, just above the entrance drive at Joppa Road.

MR. MCCANN: Right here?

MR. O'LEARY: Yeah, that's actually one pond.

MR. MCCANN: Okay.

MR. O'LEARY: (inaudible) what appears to be two. And then there's one at lot, zoom in a little so I can see the lot numbers. At lot eight.

MR. MCCANN: Okay.

MR. O'LEARY: Just sought of lot, lot eight.

MR. MCCANN: Okay.

MR. O'LEARY: And then just south of lot eleven. So,

they have three --

MR. MCCANN: Right here?

MR. O'LEARY: -- three ponds. They're for the purpose of meeting water quality requirements and quantity requirements by any waiting discharge.

MR. MCCANN: Okay and your opinion again with respect to the submerged gravel wetland facilities that are shown on the development plan, what is your opinion with respect to those three?

MR. O'LEARY: Well, the, the, the May stormwater management report that I had to review actually included four ponds and the development plan only shows three. So, I'm assuming that the designer made a change at some point after posting the, the May stormwater report and plans with the County that allowed them to eliminate one of the ponds. I haven't had an opportunity to review a revised stormwater report because I was just forwarded excerpts of that this morning.

So, I can't really comment on whether the water quality design is adequate. The quantity design that they forwarded this morning appears like they've met the, they've met the requirements based on their existing condition assumptions of row crops. However, they would not be meeting the requirements of pre-development meadow land use.

MR. MCCANN: Okay. Well, you said a lot there.

First of all, the, the, the documents you received this morning was not a new stormwater management report, correct?

MR. O'LEARY: It, it was different than the May report, the May 2021 report that I reviewed.

MR. MCCANN: Was the May 2021 report that you received and reviewed, was that a full blown, for lack of a better term, a stormwater management report?

MR. O'LEARY: Yes, that was a complete report.

MR. MCCANN: Okay and to your knowledge, has, is, has there been any new, amended, revised, full blown or complete stormwater management report since May of 2021?

MR. O'LEARY: I haven't seen one, a complete report.

MR. MCCANN: You, you said you got documents this morning. Did you ask for a new, any new or amended report? You ask for that?

MR. O'LEARY: Yes, I contacted the County numerous times, and they got back to me at 4:00 p.m. on Friday, this past Friday, saying that there was a more recent submittal, and they would forward it to me. And then I received them actually at 8:00, 8:30 this morning. But it was only excerpts, it wasn't a full report.

MR. MCCANN: Okay. Well, regardless of, did, did it, did the new submittals that you received this morning, does that, did that change your opinion in any way, regardless of the, the four versus three facilities, do they change your

opinion in any way regarding the, the existing pre-development conditions that you spoke about?

MR. O'LEARY: No, because their existing condition for lot curve number in the data that I received this morning is the same and should be the same as it was back in, back in May of 2021 when the previous report was received by the County.

MR. MCCANN: So, again, I, I think I may have asked you, maybe give it another shot, the, the, the development plan that we're looking at right now and the three proposed submerged gravel wetlands, what is your opinion regarding those facilities as it relates to quantity control?

MR. O'LEARY: They're insufficient.

MR. MCCANN: And in what way and to what degree?

MR. O'LEARY: They'll, they'll need to be made larger or an additional pond may be required to manage the flows back to the pre-development meadow land use (inaudible).

MR. MCCANN: Okay. But the first part of that, to, in what way are they insufficient?

MR. O'LEARY: They don't provide enough storage volume because the discharge is, the outflow discharge is, that were provided to me this morning are very close to the designer's pre-development land use condition discharges that I think are calculated incorrectly.

MR. MCCANN: Okay and in terms of, when you say the

facilities have to be larger, can you give us a sense, a, a general sense of to, to what degree the facilities need to be larger?

MR. O'LEARY: Well, that's, that's hard to do without actually doing a, you know, full blown proposed conditions design.

MR. MCCANN: Um hm.

MR. O'LEARY: But the existing condition discharges that I got are about forty percent of the existing conditions discharges that the designer came up with. So, the ponds may have to be thirty to fifty percent larger, if I had to guess.

MR. MCCANN: Okay.

MR. O'LEARY: Again, I can't say that with engineering certainty because it's not a linear, it's not a linear guess.

MR. MCCANN: Right. But to, to a reasonable degree of certainty, given, in, in your profession, are the discrepancies between what's shown on this development plan exhibit, Developer's Exhibit 1-B, and the calculations that you did that we've talked about earlier in terms of pre-development conditions are, are those discrepancies significant?

MR. O'LEARY: From a stormwater management standpoint, I would say yes. The ponds shown on this development plan would have to be considerably larger or there would have to be additional measures to reduce runoff.

MR. MCCANN: Okay. Are you familiar with the, the flood plain onsite and the Developer's efforts in that regard?

MR. O'LEARY: I'm, I, again, this morning I was sent, or I guess that was Friday, I was given a copy of the flood plain report and I read that. So, I, I understand that Joppa Road currently floods for the one hundred year storm and that the designer is claiming that they don't make any change to that with this development.

MR. MCCANN: Okay. What's, what's overtopping?

MR. O'LEARY: It means on the one-hundred-year storm flow, not all the flow can fit in the culvert underneath Joppa Road. It will overtop and run across the road surface for the one-hundred-year storm.

MR. MCCANN: Okay and prior to receiving what you received on Friday, you, had you reviewed prior, previously, other documents relating to the flood plain and the Developer's request for a waiver and, and things of that sort?

MR. O'LEARY: I had just seen some maps and mark, I think they were called mark ups of the flood plain profile that indicated there was overtopping.

MR. MCCANN: Okay. Given, given the overtopping, what, if any, impact does that have on the, the opinions you expressed before about the discrepancies in the TR-55 calculations and the sizing of the facilities? Are those two related in any way in your opinion?

MR. O'LEARY: Well, the, the flood plain report is based on a little bit different hydrology. It's based on ultimate development of existing zoning, land use conditions. So, in theory, the, the two things aren't related. The stormwater management design and the flood plain analysis.

However, as a designer, I would be concerned about being conservative on the design to protect against future liability because you already know there's an overtopping problem at Joppa Road. And if you don't take conservative steps to design the stormwater management it could be argued in the future that you contributed to it.

MR. MCCANN: Okay. Bear with me one second. Okay. Your Honor, I would move Exhibits 51, 50 and 53 into evidence and that's, I have no other questions for Mr. O'Leary.

ALJ: Fifty, fifty-one, fifty-three and fifty-four, right?

MR. MCCANN: Fifty-four being, one second.

ALJ: Report of concept stormwater management. That was the first, no, actually, did you, no, you didn't do fifty-four.

MR. MCCANN: No, I, fifty-two and fifty-four and actually fifty-five, I'll withdraw those. So, again --

ALJ: Okay, withdrawing those.

MR. MCCANN: Yeah, fifty-two, fifty-four and fifty-five are withdrawn.

ALJ: Okay, fifty-four and fifty-five. Just do a new, you know, at some point.

MR. MCCANN: I will.

ALJ: And then, just red, you know, strike it out, as you did on the other one, twenty-seven you withdrew, you can just, you know, write withdrawn, so.

MR. MCCANN: Okay, will do.

ALJ: Okay. Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No, no objection.

ALJ: And Mr. Zimmerman, you're not going to have questions about this, right? Because this doesn't apply to the, right?

MR. ZIMMERMAN: Actually, there is, there are master plan provisions on stormwater management, so actually I do have a few questions and I'm in the case and --

ALJ: Okay, I stand corrected.

MR. ZIMMERMAN: The, page one fifty-six to, and one fifty-eight of the master plan, but in any event, I'm in the case. I do have a few questions.

ALJ: Okay.

MR. ZIMMERMAN: I don't expect it to be extended.

ALJ: All right. No, I, you, I stand corrected. I was not thinking stormwater management was your issue so --

MR. ZIMMERMAN: Well, I, I wouldn't say it's my highest priority, but I just would like to get a few points of clarification with Mr. O'Leary.

ALJ: Sure.

MR. ZIMMERMAN: If, if I may.

ALJ: Go ahead, yep.

MR. ZIMMERMAN: Okay, thank you. So, Mr. O'Leary, first of all, you and I have never spoken about this case have we?

MR. O'LEARY: No, we have not.

MR. ZIMMERMAN: You have no idea what I'm going to ask you, do you?

MR. O'LEARY: I do not.

MR. ZIMMERMAN: Okay. Do you happen to know whether the master plan 2020 does have some pages on stormwater management?

MR. O'LEARY: I'm not aware of that.

MR. ZIMMERMAN: Okay. So, you may want to check pages one fifty-six and one fifty-eight. All right. So, if I understood your testimony generally, your view is that the report of the Developer understates pre-development conditions based on the incorrect use of row crop versus meadow and overstates, where is it, overstates post-development, or understates based on the question of conservative eighty versus eighty-seven. Can you, can you just summarize what's

understated, what's overstated conceptually?

MR. O'LEARY: Sure, I, I, I'll back you up a little bit. I think that pre-development discharge is overstated and then --

MR. ZIMMERMAN: Yeah.

MR. O'LEARY: -- post-development is understated.

MR. ZIMMERMAN: Okay, all right. That's what I thought. Could we go, just go back for a moment to the page, I think it was page twenty-three, where you were showing the row crop versus meadow numbers in red line?

ALJ: You don't have those exhibits, Mr. Zimmerman?

MR. ZIMMERMAN: I don't have it. Mr. McCann, is it fifty-three, Protestant's fifty-three or fifty-two? Page twenty-three? That was the one where you had, had the calculations and then your --

MR. MCCANN: Yeah.

MR. ZIMMERMAN: -- comparison.

MR. MCCANN: Which page?

MR. ZIMMERMAN: Yeah, the, the one that showed the row crop versus meadow. It had the seventy-seven versus sixty-three. Yes. Okay.

ALJ: Explain one more time for the record. Which exhibit was this?

MR. MCCANN: This is Exhibit 53 that I just pulled up.

ALJ: Fifty-three, right. Thanks.

MR. ZIMMERMAN: All right. Is that in or, that's not withdrawn, is it?

ALJ: No, no, no. This is in, I just --

MR. ZIMMERMAN: Okay.

ALJ: -- needed to know the number, that's all.

MR. ZIMMERMAN: Okay. I guess what I, I just, I'm just curious if you, if you ran the row crop for the rest of them, the open space, the paved parking lot and so on, I mean, is that normally required or not? In other words, should, does the row crop have to be used for all these other elements?

MR. O'LEARY: So, all non-forested land uses on the property in question are assumed to be meadow in good condition.

MR. ZIMMERMAN: Okay.

MR. O'LEARY: If it's off-site drainage area, you use what are the existing conditions. I know that this site is primarily row crop so that I only, I, I didn't go back and measure all of these open spaces and paved parking lots, etcetera, to determine whether they were onsite or offsite. But I know there's no row crops off site. So, I just used, I just changed row crops to meadow for comparison purposes.

MR. ZIMMERMAN: Okay. You have no idea how much of the open space and parking lot is onsite or offsite?

MR. O'LEARY: That's correct.

MR. ZIMMERMAN: Do you have any reasonable estimate as to what the numbers would look like if you used row crop for, excuse me, if you used meadow for a, a, a reasonable estimate for, for part of that, those other elements of open space and parking lots?

MR. O'LEARY: Well, as I, as I stated earlier, the row crop represents about twenty-nine acres of the total of thirty-nine. And then, if you look at the woods land uses below that's about another six or seven, six acres. So, between row crop and woods, you're at close to thirty, I don't know, thirty-four acres or something like that.

MR. ZIMMERMAN: Okay.

MR. O'LEARY: So, the rest of it is relatively inconsequential because they're small amounts.

MR. ZIMMERMAN: All right. They wouldn't apply to woods anyway, right?

MR. O'LEARY: That's correct.

MR. ZIMMERMAN: Okay. So, you're, you, you're dealing with another five acres or so, which might affect your number to some extent.

MR. O'LEARY: That's correct. But I wouldn't expect it to be significant.

MR. ZIMMERMAN: But your number is actually conservative, is it not? In terms of, it's not going to get any better?

MR. O'LEARY: My number, the numbers I --
MR. ZIMMERMAN: Yeah.
MR. O'LEARY: -- used, in my opinion, are mandatory.
MR. ZIMMERMAN: Right.
MR. O'LEARY: Not, not --
MR. ZIMMERMAN: And then you indicated --
MR. O'LEARY: -- (inaudible) up to MDE.
MR. ZIMMERMAN: Okay and then you indicated your post-development discussion, that's quote unquote, negotiable, is that correct?
MR. O'LEARY: To some extent it is, correct. The County has to agree with it (inaudible) --
MR. ZIMMERMAN: Yeah. Where do you get the idea that it's negotiable?
MR. O'LEARY: It's not prescribed in the stormwater design manual like this is.
MR. ZIMMERMAN: Okay. But you did use, you did indicate what you thought were the best, the best numbers to use and they differed from the numbers used by the Developer's consultant.
MR. O'LEARY: I simply said that there's a more conservative way to do it.
MR. ZIMMERMAN: Okay.
MR. O'LEARY: That would have been my choice under the circumstances of the known existing flooding.

MR. ZIMMERMAN: Okay. When it comes to row crop versus meadow, is there any provision in the manual that allows a Developer to ask for a variance, an exception, a waiver, you know, any deviation to, to give them a, some relief from going along with the meadow?

MR. O'LEARY: There's, there's not in the manual.

MR. ZIMMERMAN: Okay. Now just a couple more questions. Did, do you often have interaction with County staff on stormwater management issues?

MR. O'LEARY: I, I wouldn't say often, I would say occasional.

MR. ZIMMERMAN: And who would be the main person that you deal with on stormwater management, either generally or in this particular case?

MR. O'LEARY: In this case, I reached out to (inaudible), and I actually spoke with Ella Kaplan and Ella is the one who e-mailed me this morning the updates.

MR. ZIMMERMAN: So, has it, did it happen in your interaction that there was any mention of this discrepancy between the row crop and the, the meadow elements in the, in the report?

MR. O'LEARY: I had a brief discussion with Ella on Friday, where I asked about the use of a, use of a meadow land use.

MR. ZIMMERMAN: And what was the outcome of that?

MR. O'LEARY: She said sometimes they require it, sometimes they don't.

MR. ZIMMERMAN: Well, what would be the basis for not requiring it? Did she explain?

MR. O'LEARY: No.

MR. ZIMMERMAN: As far as you know, is there any documentary basis in the manual for not requiring it?

MR. O'LEARY: No.

MR. ZIMMERMAN: Is, is there any, did it, has the County, to the best of your knowledge, has the County staff written anything one way or the other to address this subject?

MR. O'LEARY: To my knowledge, no.

MR. ZIMMERMAN: With reference to the usage of row crop vers, and not using meadow, as you've described, assuming that you're correct, if we assume that you're correct, what is the possible explanation for this kind of basic mistake?

MR. ROSENBLATT: Objection.

ALJ: Over, overruled. I mean, in, in his experience, if he, if he's seen this before, is there a possible explanation for the use of row crop?

MR. O'LEARY: Could be unfamiliarity with the manual requirements.

MR. ZIMMERMAN: So, so, and this is my last question. So, to the best of your knowledge there's, there's no conceivable counterargument or rationalization or explanation

for using row crop versus meadow.

MR. ROSENBLATT: Same objection.

ALJ: Overrule. You can handle it on cross.

MR. O'LEARY: I think it's pretty black and white in the manual.

MR. ZIMMERMAN: All right. Thank, Judge, thank you. That's all I had. I tried to keep it relatively short.

ALJ: Thank you. Mr. Wyatt, do you have any questions?

MR. WYATT: Good morning, Your Honor. No, I do not have any questions. Thank you.

ALJ: Okay, all right. And for the record, Mr. Sachse is not back yet. I don't see him. So, Mr. Rosenblatt?

MR. ROSENBLATT: Judge, can we please take a short break and then --

ALJ: Sure.

MR. ROSENBLATT: -- come back with questions?

ALJ: Sure. Five minutes, is that good, or ten? Ten?

MR. ROSENBLATT: (inaudible), thank you.

ALJ: You need what, twenty?

MR. ROSENBLATT: No, ten would be great, thank you.

ALJ: Ten, all right, ten minutes. I'm going to pause the record.

MR. ZIMMERMAN: Eleven thirty? Yeah.

(PAUSE)

ALJ: Okay. Mr. Rosenblatt, cross?

MR. ROSENBLATT: Thank you, Judge Murphy. Good morning, Mr. O'Leary. I think you may be muted, I didn't hear your answer. Yep.

MR. O'LEARY: Good morning, sir. Sorry about that.

MR. ROSENBLATT: All right, there we go. So, Mr. O'Leary, I, I was thinking the last time that these same parties appeared together, and did you testify in the Red Maple case for Mr. McCann's clients?

MR. O'LEARY: Yes.

MR. ROSENBLATT: Okay and that was Mr. Mudd and I, Mr. McCann, Judge Murphy and, and you were a witness for Mr. McCann in that case, right?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And, and like this case, in that case you pointed to the MDE manual, that there was some provision that mandated certain types of devices be used and disagreed with the design proposed by the developer, right?

MR. O'LEARY: That was a little more subjective, but yes.

MR. ROSENBLATT: Okay. But the, the result was not in, in alignment with your opinion in that case, right? The case was not designed for stormwater management failures?

MR. MCCANN: Objection. Relevance.

ALJ: Overruled. It's cross.

MR. O'LEARY: I'm not sure I understand your question.

MR. ROSENBLATT: Did your opinion in that case get accepted? In other words, was the development plan designed because of your opinion about the devices you used?

MR. O'LEARY: That had to do with the definition of maximum extent practicable. And I have a different opinion than the County on that matter. So, yes, I think you're correct.

MR. ROSENBLATT: So, the, the ultimate result was not in alignment with your opinion, right?

MR. O'LEARY: That's my understanding, yes.

MR. ROSENBLATT: Okay.

MR. MCCANN: Well, objection. It's on appeal. To be fair, Your Honor. This is why Mr. Rosenblatt always objects when I bring up any other case. I, I understand this is cross, but if we're going to ask him questions about another case, let's be fair about what we're asking. This, that case is on appeal. So, to say it's done with, and it's being developed as we speak, or to suggest that, I think is --

ALJ: Okay. But you'll, but you're going to have re-direct, so. Yeah, overruled.

MR. ROSENBLATT: Mr. O'Leary, you were pretty honest this morning. You reviewed a series of documents, you said,

that you reviewed what was presented to you, right?

MR. O'LEARY: That's correct.

MR. ROSENBLATT: And you just, I guess, Friday or this morning were given some more recent documents from the exhibits, the, the documents you made exhibits this morning, right?

MR. O'LEARY: The documents I received this morning were not exhibits.

MR. ROSENBLATT: You did not choose to make them exhibits in the case today?

MR. O'LEARY: I don't think time allowed.

MR. ROSENBLATT: Okay. The, the report that you did testify to is nearly two years ago, right? It's from May 2021?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And over the last two years is, was your first involvement in dealing with the County and its reviewers with the case, is that just in the last week or so asking for more documents?

MR. O'LEARY: No, I've been asking for more documents since November --

MR. ROSENBLATT: Okay.

MR. O'LEARY: -- when I was first asked to look into this.

MR. ROSENBLATT: And you're saying just Friday or, or this morning you were presented with those documents?

MR. O'LEARY: That's correct. And only part of them.

MR. ROSENBLATT: Only part of them, is that what you said?

MR. O'LEARY: Only part of the documents, yeah. I didn't get a complete report, I just got a couple pages of calculation.

MR. ROSENBLATT: Okay and because of that, your opinion today is based on the numbers presented in that 2021 report, right?

MR. O'LEARY: And a brief comparison of those numbers to the ones I was given this morning, yes.

MR. ROSENBLATT: Okay and have you, I, I couldn't tell whether you said, did you speak to the actual reviewer of the stormwater management plan in this case or just to Kritty Udhin, who is the supervisor of stormwater management?

MR. O'LEARY: I, I had reached out to Kritty, and he never responded. And then two weeks ago he told me he was going to have someone else respond to me, a woman by the name of Ella. I contacted her early last week when I found out about her response to me. And she responded to me on Friday afternoon.

MR. ROSENBLATT: Okay. Did you have any in depth discussions with the reviewer about the type of design here or did you just ask for documents?

MR. O'LEARY: I asked for documents, and I asked her

in general about the, about the use of meadow land use in existing condition.

MR. MCCANN: Okay and what, what was the response on that issue?

MR. O'LEARY: I, I already answered that today but I, she said sometimes we require it, sometimes we don't.

MR. ROSENBLATT: Okay and are you aware of any conversations between, or documents sent back and forth between the, the developer's engineer and the stormwater management reviewers, other than the documents you spoke about that you received this morning?

MR. O'LEARY: I saw some County comments but no other stormwater related documents, except the comments on stormwater.

MR. ROSENBLATT: Okay. With respect to the documents, you did testify to this morning, I'm going to share my screen so Protestant's Exhibit 53. There's a report cover page. Then it jumps to page fifteen, sixteen, seventeen, then nineteen, twenty, twenty-one, twenty-two, twenty-three, twenty-four, twenty-five, twenty-six, twenty-seven, twenty-eight, twenty-nine, thirty.

So, is there a reason that the first fourteen pages are not included and that there's another page or two missing? Were they just not helpful to your analysis or did you receive a complete copy to review?

MR. O'LEARY: I received a complete copy. I think we, there's a separate exhibit that had the narrative, which was the first few pages because Mr. McCann and myself went over that this morning in this hearing. And then we tried to focus the exhibit on what I was going to testify about, and that's why there are certain pages missing.

MR. ROSENBLATT: Okay. So, you, you did review the whole document, these are just the pages admitted, or just the pages you wanted to testify to?

MR. O'LEARY: Yeah, the document itself was, I don't know, maybe a hundred pages long. So, we pared it down to what I was going to talk about.

MR. ROSENBLATT: Okay. So, and you combined, so, Exhibit 51, excuse me, is the table of contents and then page one and page two, so then pages three through, three through fourteen were just things that weren't important for your testimony, so you just selected these pages as an exhibit?

MR. O'LEARY: Well, there was actually more we were going to talk about until I get the report this morning because the report that I reviewed had four ponds on it and the current development plan only showed three. So, that was something that we were going to talk about, but decided this morning when I received the new calculations, that there were only three ponds in the calculations and three on the development plan. So, that removed part of the expected testimony.

MR. ROSENBLATT: Okay, understood. And changes like that over time will, you're, you're familiar with the development process in Baltimore County, right?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And what's required at the development plan approval stage of the process, is not final stormwater management approval but concept storm, stormwater management approval, right?

MR. O'LEARY: That's correct.

MR. ROSENBLATT: And do you believe that the Developer has received that from Baltimore County in this case?

MR. O'LEARY: That's my understanding they have received concept approval.

MR. ROSENBLATT: Okay and that is all that is required by the Baltimore County Code for a development plan to be approved and the final design comes later in the process, right?

MR. MCCANN: Objection, objection. It's a compound question. Certainly, the first part is highly objectionable. It's a legal question, whether or not approval of a concept plan is all that's required under the regulations.

ALJ: Mr. Rosenblatt, could you just break it down. We'll just do the first part, do the development regulations require just the concept stormwater management plan first and then go to the second one. So, overruled.

MR. ROSENBLATT: Okay. Could you answer the, that Judge's question or do you need me to rephrase it, Mr. O'Leary?

MR. O'LEARY: Please, please rephrase.

MR. ROSENBLATT: Sure. So, through the development plan stage, the concept stormwater management approval is what is required by the Baltimore County Code, right?

MR. O'LEARY: That's correct.

MR. MCCANN: Objection.

ALJ: Overruled. Go ahead, sir, what did you say? What was your answer?

MR. O'LEARY: I understand that to be correct.

ALJ: Okay.

MR. ROSENBLATT: Okay and then after the development plan stage, the County reviewers continue to review a stormwater management plan until a final stormwater management plan is approved, right?

MR. O'LEARY: That's my understanding, yes.

MR. ROSENBLATT: And you, I mean, you, you have, have you proposed stormwater management for projects in Baltimore County?

MR. O'LEARY: I haven't worked on a design project in Baltimore County for a few years, but that's my understanding of the process.

MR. ROSENBLATT: Okay. Have you ever worked on a project that was a former existing farm and designed stormwater

management for a property like that?

MR. O'LEARY: I don't recall.

MR. ROSENBLATT: Okay and just back to the, the County development process, so, and you've been a reviewer for MDE, is that right?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And you, in your experience, let's just start with MDE review, there's more than one reviewer for MDE stormwater management, right?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And in, in your experience, you as a reviewer could have one opinion about a design and one of your colleagues, a different reviewer, could have another opinion, right?

MR. O'LEARY: To some extent, yes.

MR. ROSENBLATT: There's some subjectivity in review and approval of, of engineered stormwater management plans, right?

MR. O'LEARY: Some, yes.

MR. ROSENBLATT: And in, in the sake of Baltimore County, it's the same, right? There's multiple reviewers. One reviewer could be in favor of a certain design and one reviewer could not, right?

MR. O'LEARY: I suppose.

MR. ROSENBLATT: And ultimately, Baltimore County is

the entity that approves the stormwater management plan for a project like this, right?

MR. O'LEARY: Under the delegation from MDE, that's correct.

MR. ROSENBLATT: Right. So, what you think as an engineer for the people you're representing or what the Developer's engineer thinks is appropriate, that's well and good. But Baltimore County has the ultimate decision, they decide whether the plan is appropriate and should be approved, right?

MR. MCCANN: Objection, objection. That's a legal question and it's, you, you have the ultimate authority, Your Honor, the regs provide the, so objection.

ALJ: All right.

MR. MCCANN: It's a legal, it's a legal question and it's, it's, it's, lacks foundation. It's just not simply, it's not true.

MR. ZIMMERMAN: Yeah, I concur with the objection --

ALJ: Mr. Zimmerman, what? What?

MR. ZIMMERMAN: I was just concurring with the objection, that's all.

ALJ: Oh, okay, all right. Well, overruled.

MR. ROSENBLATT: You can answer.

MR. O'LEARY: So, the, the basis of the requirements is the manual, the minimum requirements statewide. And so,

yes, I think there's some latitude when it comes to, like we discussed proposed conditions that are not specifically prescribed in the manual. But anything that's contrary to what's prescribed in the manual would be incorrect.

MR. ROSENBLATT: Okay and for this case, I'm going to share an exhibit. So, this was Protestant's Exhibit 50 and the boxed, the boxed phrase on the first page of Protestant's Exhibit 50 where it says including agriculture. This is the sentence on which you base your theory that the pre-development condition must be meadow in good hydrologic condition, right?

MR. O'LEARY: Yes.

MR. ROSENBLATT: And this one sentence, this is, this is the only phrase that you, you have based that opinion on, right?

MR. O'LEARY: That and my experience working on the manual and my experience as a plan reviewer, yes.

MR. ROSENBLATT: But, in other words, this, this phrase on page 2.12, this is the, the area of the, of the MDE manual that you believes mandates that all pre-existing conditions should be meadow in good hydrologic condition. There's not another sentence or another section pointing that out, this is the section?

MR. O'LEARY: That's correct.

MR. ROSENBLATT: Okay. Court's indulgence. Okay. I don't have any further questions. Thank you.

ALJ: Mr. McCann, re-direct?

MR. MCCANN: I do. Mr. O'Leary, less there be any doubt about what you have and have not reviewed in this case, is it, is it true or not that I sent you a substantial amount of documents relating to stormwater management and the flood plain issue in August of 2022? Does that sound about right to you?

MR. O'LEARY: Yes, that's correct.

MR. MCCANN: And is it also fair that you and I have discussed my efforts over the past couple months to get all of the documents from the County, including the stormwater management section? We've had those --

MR. ROSENBLATT: Objection.

MR. MCCANN: -- we've had those conversations, have we not?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt, you have an objection?

MR. ROSENBLATT: Yes, it's, it's leading, it's his witness. And he's, he's leading, he's basically testifying to what he wants --

ALJ: Yeah, you have to just, it is re-direct, but you do have to, you have to just tone down the testifying and so if you could ask that in the form of a question, please? Sustained.

MR. MCCANN: Have you and I talked about my efforts

to obtain documents from the stormwater management section in Baltimore County?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and you yourself, it sounds like you've had your own communications with the County to try to get the documents?

MR. O'LEARY: Yes.

MR. MCCANN: Okay. Now, you, the, the documents you received this morning, I'm going to show them again, lest there be any doubt about what you have and have not seen. This would be Protestant's Exhibit 56. Is that, is that what you received this morning? A five-page report on Kimley Horn's letterhead?

MR. O'LEARY: That is correct.

MR. MCCANN: Okay. Dated November 2021, correct?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and then Protestant's Exhibit 57 is a fifty-page document that you also received this morning, correct?

MR. O'LEARY: Yes.

MR. MCCANN: Okay and I, I think you've testified but I'll ask you again. Did either of these documents have anything to do or change your opinion in any way regarding the Developer's calculations of pre-development conditions?

MR. O'LEARY: No.

MR. MCCANN: And I think you suggested that when you

received these, that these were partial in some, in some way. And I, I wanted to ask you about that. Did, when, when you received these documents, what was your, what was your request of the --

MR. O'LEARY: For a complete stormwater management report.

MR. MCCANN: Okay.

MR. O'LEARY: If there had been any report updates.

MR. MCCANN: All right. So, as far as you understood this is, in addition to everything else I've sent you, this is the universe of documents that the County has on stormwater management issue?

MR. O'LEARY: That's my understanding.

MR. MCCANN: When they were sent to you this morning, was, was it indicated in any way that the documents were not, were partial or incomplete?

MR. O'LEARY: It wasn't indicated, but there are, I mean, the original report was like, I don't know, ninety-six pages and this is only a handful of pages. So, it's not a complete report. I don't know if there are complete calculations because I don't have the full context of the report.

MR. MCCANN: Right. But why are you assuming that it's part of a larger report? I, I guess that's my question.

MR. O'LEARY: Well, these, these hydro flow output

pages, like we see right now, --

MR. MCCANN: Yep.

MR. O'LEARY: Are in the report that I reviewed. I assume these are different. And this one only shows three of the submerged gravel wetlands, when the one I reviewed showed four.

MR. MCCANN: Okay. So, these two documents, which we've marked as Protestant's Exhibit 56 and 57, that you received this morning, are, are different in that respect from what you reviewed earlier. That is, there are now three facilities rather than four?

MR. O'LEARY: Yes.

MR. MCCANN: And does that, again, does that change your opinion in any way that you've expressed this morning?

MR. O'LEARY: No, it just tells me the stormwater concept that was approved by the County was approved prematurely because of a, removal of a stormwater facility is a substantial departure from the concept which --

MR. MCCANN: Okay.

MR. O'LEARY: -- should maybe be withdrawn or it should be required to restart the process.

MR. MCCANN: Okay. Mr. Rosenblatt was asking you about subjectivity. Is there, in your opinion, is there any subjectivity to your testimony this morning?

MR. O'LEARY: Not to the part about what's written in

the design manual. It's very prescriptive.

MR. MCCANN: And then, with respect to the stormwater management report itself, this is the complete report, I don't want to make that as an exhibit. But it's ninety-six pages. Is there anything in here that you did not include in your excerpts that we marked as exhibits, that relate to your opinions or change your opinions in any way that you've expressed this morning?

MR. O'LEARY: So, I, I noted the discrepancy between this report and the redline development plan. And that this report talked about four stormwater management facilities. The redline development plan only had three. So, I didn't spend a lot of time going through every calculation in this report because I knew there were differences that weren't accounted for.

I did, however, spend time going through the model input to make sure it conformed to the MDE requirements and that's when I became aware that they weren't using the correct pre-development land use condition.

MR. MCCANN: Okay. Thank you, Mr. O'Leary. No other questions.

ALJ: Mr. McCann, are you admitting fifty-six and fifty-seven?

MR. MCCANN: Yes, I am. Yes, I, I, I want to --

ALJ: Fifty-six you identified as a five-page

document from Kimley Horn dated November 2021. Fifty-seven was a fifty-page document but I'm not sure what it was.

MR. MCCANN: I believe it's also dated 11/10/2021, Your Honor. It has that date on a number of the pages. And I'm not sure, I guess maybe I could ask Mr. O'Leary what we would call this Exhibit 57, if that helps.

ALJ: Yeah, I just don't know how to identify it. All I have is fifty-page document.

MR. MCCANN: Yeah. Mr. O'Leary, what would you call this Exhibit 57?

MR. O'LEARY: The hydrology model.

MR. MCCANN: Okay.

ALJ: Okay. Hydrology model report. Mr. Rosenblatt, any objections?

MR. ROSENBLATT: No, but could you please send them to me? I understand that admitting them came up on the fly, but if you could just e-mail them to me so I have them.

MR. MCCANN: I will.

ALJ: All right. Mr. Zimmerman, no objection?

MR. ZIMMERMAN: No, no objection, yeah.

ALJ: All right. They're admitted. All right. So, are we finished, we're finished with Mr. O'Leary?

MR. MCCANN: Yes.

ALJ: All right. Who do we have next?

MR. MCCANN: We have Beth Miller, Your Honor, who I

believe is ready and available. Hopefully she is.

ALJ: (inaudible) going slow here, let's see. If she's in, she's not a panelist. All right, let's see. I think she may be in the attendee's room, and I'll move her over.

MR. MCCANN: Yeah, there she is. I see her.

ALJ: Let me just get down here to the, ten attendees today. Let's see, Ms. Miller. Okay, make you a panelist. Okay. You can unmute yourself and put your screen on, please. Oh, there you are. Do you have a microphone on?

MS. MILLER: Yes, just turned it on.

ALJ: Okay. Would you raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. MILLER: Yes, I do.

MR. MCCANN: Okay. Thank you, Judge. Ms. Miller, can you hear me?

MS. MILLER: Yes.

MR. MCCANN: Okay. I think the Judge is familiar with you but tell, tell us what you do.

ALJ: Actually, I am, that's right, here's another person that's testified before. Is she going to be an expert? Sometimes she testifies as an expert and sometimes she testifies as a, you know, in her own capacity.

MR. MCCANN: Yeah, I don't think she's going to, I

don't think it qualifies as expert testimony. I think she's going to, I will ask a little bit about her background, but I don't think she --

ALJ: That's fine. Yeah, okay, (inaudible).

MR. MCCANN: Go ahead, Ms. Miller. What do you do?

MS. MILLER: Okay. So, I am a registered architect in the State of Maryland. I work for an all-volunteer organization called the Green Towson Alliance. And we advocate for, we're, we're an alliance of community members that advocate for protection of air and water quality, preserving open spaces, mitigating the causes of climate change and educating the public about environmental issues. And we advocate for the protection and effective application of Baltimore County's environmental regulations and adequate public facilities.

MR. MCCANN: Okay and what projects, well, before I ask you that, what, do you have any leadership position with GTA, Green Towson Alliance?

MS. MILLER: Yes, I'm on the executive committee.

MR. MCCANN: Okay and what projects have you worked on that we might be familiar with in, in this area, Towson and thereabouts?

MS. MILLER: Yeah, so one of my roles is, is to monitor development projects and I have been involved in Towson Station, Towson Row, Avalon Bay, the 706 Washington Avenue

dorms, I think they were named studios at one point. The Red Maple Place project, Villas at Woodbrook and most recently, 502 to 506 Baltimore Avenue, the, got a very strange name, WHRLLC Holdings, or something like that. That's the ones that I can remember.

MR. MCCANN: Okay. So, it sounds like you're familiar with the development review process in Baltimore County?

MS. MILLER: Yes.

MR. MCCANN: And more specifically, are, are you familiar with the ways in which someone in your position could, as you put it, keep track of ongoing proposed and approved projects in Baltimore County?

MS. MILLER: Yeah, we are, about two years ago, we started the process of getting listed as an association with the Development Review, the Development Review process, so we are supposed to be notified about all development in our geographic area that we consider part of our group. It's hit and miss. But I am also a delegate to the, in terms of hit and miss, I mean, in terms of us actually being notified, we've had, run into some problems with that.

But I'm also a member, I'm a delegate for the Towson's Community Alliance organization, which is a group of community associations, like an umbrella group, and they are also listed. So, sometimes if I don't get notified through

the, the Permits, Application and Inspection process for review, I will find out about it through TCA. Or just by listening to news articles and other, you know, media that's available that is talking about new projects.

MR. MCCANN: Okay and whether you receive notice from the County or not, if there is a miss, as you put it, you're familiar with the sources of information that the County has available to the public to determine information about projects and the status of projects as they go through the process, is that correct?

MS. MILLER: Yeah, yeah. There's a, there's a number of different search devices. There's a development review search on the Baltimore County website. There's a My Neighborhood site that connects us. Tax records. There's a, there's also a My Neighborhood device where it connects us permit information.

MR. MCCANN: Okay and do you know physically where to go if you were to go to the, the County's offices to investigate?

MS. MILLER: Yeah.

MR. MCCANN: Yeah.

MS. MILLER: Yeah, there's, there's a, one building on, I have to think about which street, Ches, there's two buildings on Chesapeake Avenue, one that has the majority of the plan review offices. And then there's a second one that

has the Department of Planning offices.

MR. MCCANN: Okay and you've testified, have you testified before, other than before Judge Murphy, have you testified in other cases before the Office of Administrative Hearings?

MS. MILLER: Yes, a couple other ones, yeah.

MR. MCCANN: Okay. Have you testified, or participated, in DRC meetings?

MS. MILLER: Yes.

MR. MCCANN: Planning Board meetings?

MR. MUDD: Objection.

ALJ: What's the objection?

MR. MUDD: This has been going on for a little bit, but he's, he's again, he's testifying here. He should ask her what she's done.

ALJ: Okay, correct. That's true, Mr., and he's trying to go through it fast. Mr. McCann, if you could just --

MR. MUDD: I understand.

ALJ: Yeah, if you could just, he doesn't, we don't have a resume here --

MR. MCCANN: I don't know how to ask her if she's attended a Planning Board meeting unless I ask her have you attended a Planning Board meeting.

MR. MUDD: I think you can ask her what she's, what, what she has done to pull the information together. I mean,

that's pretty simple, Michael.

MR. MCCANN: Well, I'm not asking her about, yet about what she's done in this case. I'm just asking whether she attends meetings.

ALJ: Okay and I don't find that particular statement to be leading, just, make sure you just ask questions if you could, so. Thanks.

MR. MCCANN: All right. Have you attended Design Review Panel meetings?

MR. MUDD: Objection.

ALJ: Overruled.

MS. MILLER: Yes, I have.

MR. MCCANN: Okay. Okay. Let me show you what has been pre-marked as Protestant's Exhibit 31. Do you see that, Ms. Miller?

MS. MILLER: Yes. I, I have it on a second computer screen here much larger, because I would have to wear my little glasses and squint into the screen. So, if you see me looking to my left, that is because I'm looking at it on a different screen.

MR. MCCANN: Okay. Yeah, it is small.

MS. MILLER: It's the same document.

MR. MCCANN: Okay. Just tell us, it's a single page, tell us in general what this is.

MS. MILLER: So, this is a spreadsheet that shows

development in the Jones Falls watershed since a 2012 engineering study that was done in connection with the sanitary sewer Consent Decree.

MR. MCCANN: Okay and did you prepare this chart?

MS. MILLER: I did.

MR. MCCANN: And just generally, why, why did you prepare it?

MS. MILLER: We were, our, our organization was concerned about capacity in the sewer shed, sanitary sewer capacity, and we wanted to understand how much development had occurred since this re, that report was done. So, we prepared a chart that shows developments that are already, have already been constructed, some that are under construction currently and some that are proposed and have either been approved or are in the development process.

MR. MCCANN: Okay. You just described three categories, and I think I'll just scroll down, because I think you started in these green high, well, just explain how the, rather than me --

MS. MILLER: Right.

MR. MCCANN: -- asking leading questions, ex, explain how it's broken down. Maybe by, maybe by colors, might be helpful.

MS. MILLER: Okay. So, there's a, the green color is, each of those, there are three of those. Each one is a

different category. So, the first one is proposed or forecast developments.

MR. MCCANN: Okay.

MS. MILLER: And then under that, there are a number of developments. There's a column that says the year and that indicates either when it began in the development process or sort of where it is currently in the development process, or the admin, when, when an opinion was given approving the project. And then the next green column is projects that are under construction currently.

MR. MCCANN: Um hm.

MS. MILLER: And then the final one is existing developments that have already been constructed and are, I, I can't testify that they're all, all occupied. But they're all, they all exist, they've all been constructed.

MR. MCCANN: Okay and in terms of the existing development portion that you just described, the dates, what are, what are the dates, the column for year, what do those, what do those dates signify?

MS. MILLER: Right. So, there's also a column for information source.

MR. MCCANN: Uh huh.

MS. MILLER: So, they, those dates relate to different categories. The MDAT structure-built date, that's the Maryland Department of Assessment and Taxation record --

MR. MCCANN: Okay.

MS. MILLER: -- that, that indicates when the structure was built. So, that date is on the date column. And then there's a few I could not get a tax record, either because it was a, a public university, like Towson University, they don't pay taxes. So, in those cases, I would search a website, either, you know, a, a designer or the institution itself.

MR. MCCANN: Um hm.

MS. MILLER: To find out what those dates were.

MR. MCCANN: Okay and then in terms of the square footage and the number of, there's a couple other columns we haven't mentioned yet. The type, where did you obtain that information from?

MS. MILLER: Yeah, the square footage often came from the Baltimore County Development website. I believe it's also included on the MDAT records --

MR. MCCANN: Okay.

MS. MILLER: -- in many cases. Generally, I think the source column applies to that information also, the square footage information also.

MR. MCCANN: As well as the number of units and the type?

MS. MILLER: No, the unit number, that would come from the development, Baltimore County Development website. Or the, the beds, units, those, those types of things, would come

from the development website or an, an article, a news article.

MR. MCCANN: Okay and then you have a notes column here at the end. Just anything particular about those, that column?

MS. MILLER: Yeah, that's just indicating what the abbreviation means, SFSD is single family semi-detached, for instance. That applies mainly to the type column. And then MDAT, explained that that's Maryland Department of Assessment and Taxation.

MR. MCCANN: Okay. Did you also conduct an investigation or, as to whether or not the, at least the ones that are under construction and that are existing, I know those two headings, that those, these developments have, in fact, proceeded?

MS. MILLER: I did, I did go to quite a few of these project sites, these development sites, and photograph them. Not all of them, but the ones that are in the, closer into Towson and one out at Greenspring Station. I, I went out and took photos of them.

MR. MCCANN: Okay. Yeah, those are the column that says photo key, does that refer to?

MS. MILLER: Right, right.

MR. MCCANN: Okay. Let me show you Protestant's --

MS. MILLER: I'm sorry, I just noticed the notes column you were talking about. I apologize. I was, I thought

you were talking about the notes at the bottom of the chart. You're talking about the notes on the far right when you asked me?

MR. MCCANN: Yes, thank you. I, I should have thought (inaudible) --

MS. MILLER: Yeah, in some cases where I couldn't use the MDAT site, I, I put in the, the link to the article that I looked at and just some other notes about, up in the proposed, whether, I noted that a few of these, one of these developments was a material amendment to a major subdivision. So, it wasn't a completely new structure, it was a, an addition.

MR. MCCANN: Okay.

MS. MILLER: Yeah, yeah.

MR. MCCANN: All right.

MS. MILLER: Just some, some additional information that, in that column.

MR. MCCANN: Okay and the notes section, these are the notes at the bottom that you were talking about, right here?

MS. MILLER: Yes, yeah.

MR. MCCANN: Okay and you totaled up square footage and the number of units as well at the bottom here in green?

MS. MILLER: Right, right, yeah. So, it's almost 2.5 million additional square feet in the sewer shed constructed since 2012.

MR. MCCANN: Okay and how did you know all of these proposed, under construction and existing developments are in the Jones Falls sewer shed?

MS. MILLER: The My Neighborhood mapping tool shows the, the limit, you can, there's, there's different layers in the, in the tool and you can click on the, the watershed tool so you can see it as a, as a map, delineation on the map. And then also when you look at it, when you input an individual property address, there is information that comes up and it will tell you what the water, what the watershed is. And generally, a watershed and a sewer shed are the same.

MR. MCCANN: Yeah.

MS. MILLER: They, because the sewer lines follow the, the, the streams.

MR. MCCANN: Right. And the, and you said and that's in My Neighborhood website?

MS. MILLER: Yes.

MR. MCCANN: So, you, did you actually look at the My Neighborhood website to look at a map of the Jones Falls sewer shed?

MS. MILLER: Yes, I did.

MR. MCCANN: To confirm that these --

MS. MILLER: Yes, so, each, each address I input into that mapping tool and was able to confirm that they were in the Jones Falls sewer shed, both by the notes that are provided

when you search a property and also in the, in the map itself.

MR. MCCANN: Right, okay. So, the --

MS. MILLER: The physical map.

MR. MCCANN: -- getting back to the photo key, some of these, there's letters in that column, some of these are in red and some are in black. Why the red?

MS. MILLER: I just used that as a kind of a visual tool. The red are used for proposed developments.

MR. MCCANN: Um hm.

MS. MILLER: And then, oh, well, I apologize. I meant to use more color coding and I did not. I meant to have the under construction coded in a different color and the existing in a, in a third color, but I didn't do that.

MR. MCCANN: Okay. Well, obviously, we, we don't have photos of the proposed or forecasted developments, correct?

MS. MILLER: No, we don't.

MR. MCCANN: Okay, all right. Let me show you Protestant's Exhibit 31 at the top here. Do you see that?

MS. MILLER: Yes.

MR. MCCANN: Okay. So, this is an eight-page document, and I'll just scroll through and there's letters on each of these photographs and a description. Do those letters correspond to the photo key that we just looked at?

MS. MILLER: Yes, they do.

MR. MCCANN: Okay. So, let's, so, for example, the first photograph in Exhibit 31 is labeled G. Is that, it says Towson Hotel under construction. Is that --

MS. MILLER: Right.

MR. MCCANN: What, excuse me, does that correspond to back at Exhibit 31 --

MS. MILLER: Yes.

MR. MCCANN: -- right here?

MS. MILLER: Right, that's correct.

MR. MCCANN: Okay and you took these photographs?

MS. MILLER: I did.

MR. MCCANN: Okay.

MS. MILLER: I took them all on one day. I could tell you the date if you want --

MR. MCCANN: Yeah, sure, if you could.

MS. MILLER: Bear with me just a moment. I took them all on January 24th.

MR. MCCANN: Of this year?

MS. MILLER: Of this year. Yes, 2023.

MR. MCCANN: Okay. I'm just looking through them to make sure that they don't capture any other buildings. This, for instance, page four of this exhibit, which is photograph O.

MS. MILLER: Um hm.

MR. MCCANN: Altus student housing and retail. Is there any portion of what's seen in this photograph, just so

we're clear, that is not actually that building? For instance, this one on the lefthand side?

MS. MILLER: Yes, the one on the left is not that building. And then I think you can see a portion of The York on the right.

MR. MCCANN: Right here?

MS. MILLER: No, further down.

MR. MCCANN: Right here?

MS. MILLER: Yeah, that, I think is a portion of The York, which is also on the chart.

MR. MCCANN: Okay, so --

MS. MILLER: And then yes, the, on the far right that is not part of the, that building, that just --

MR. MCCANN: Okay and likewise, photograph P, you were trying to get the bulk of the building, I, I take it, but this building on the right-hand side of the photograph looks to be partially, that's not the Whole Fields, Whole Foods and the retail building that you were identifying in the chart, correct?

MS. MILLER: So, in the foreground is --

MR. MCCANN: Yes.

MS. MILLER: -- yes, in the foreground is Whole Foods. And then going up north, to the right on York Road, that's The York. And then yes, beyond that is Towson Commons, which is not part of the, not part of the photo, that building.

MR. MCCANN: Okay.

MS. MILLER: And then this is 101 York, and the lower left is a Starbuck's and that's not, obviously, part of that development.

MR. MCCANN: This photo, Q?

MS. MILLER: Yes, in photo Q.

MR. MCCANN: Okay.

MS. MILLER: This --

MR. MCCANN: Photo T?

MS. MILLER: Photo T, this is Towson Square, and you can see part of another development, the, the big thing that says Towson on it in the background that's not part of that development.

MR. MCCANN: Okay. But all the other buildings, the lower rising buildings are the --

MS. MILLER: Yeah, the cinema and the restaurants on the right and, and, and at the end of that driveway, yeah.

MR. MCCANN: Okay, all right. And this, with respect to photograph AA, the Towson University Startup, is, is that, which building is the main building shown here?

MS. MILLER: It's that, it's that limestone building in the foreground, yeah.

MR. MCCANN: Okay, okay. Your Honor, I would move Exhibits 31 and 31-A.

ALJ: Okay. So, thirty-one, I have the, the newest

document that you submitted, which is one page. But I also have this very larger one that you originally submitted, which is ledger, printed as a ledger. It, it, it looks like it's the same one. And then I have a second one that says revised Exhibit 31. So, what do I do with those?

MR. MCCANN: Those were superseded by the, the, what we've looked at this morning.

ALJ: Okay. So, do I just throw them out?

MR. MCCANN: Yeah, yeah, you can throw them out.

ALJ: Literally, throw them out. Okay, I just wanted to make sure. Okay, so, (inaudible) --

MR. MCCANN: Yeah, and 31-A through H are new.

ALJ: Yes.

MR. MCCANN: I don't think I submitted those before and I, they're not labeled A through H, but I, they don't really correspond to the photo key, but they're A through H because there's some, however many of photos. So, maybe what I should do is resubmit it with an A, B, C, D through H.

ALJ: You did submit it that way.

MR. MCCANN: Oh, I did? Okay.

ALJ: You did, so my copy says 31-A through 31-H.

MR. MCCANN: Okay.

ALJ: Yeah, so we have those. Okay, Mr. Mudd, any objection?

MR. MUDD: Nothing I can't handle on cross, thank

you.

ALJ: Okay. Mr. Zimmerman, any objection?

MR. ZIMMERMAN: No objection.

ALJ: Thank you. They're admitted.

MR. MCCANN: And no other questions, thank you. Thank you, Ms. Miller.

ALJ: Mr. Zimmerman, any questions?

MR. ZIMMERMAN: No questions.

ALJ: Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse?

MR. SACHSE: No questions.

ALJ: All right. We're back to Mr. Mudd probably, right, Mr. Mudd? I'm going to guess?

MR. MUDD: Yes, I do have a couple.

ALJ: Okay.

MR. MUDD: Hello, Ms. Miller, how are you?

MS. MILLER: I'm good.

MR. MUDD: You, you gave some very similar testimony in another case recently, right?

MS. MILLER: That's correct.

MR. MUDD: Okay and your, your, your exhibit has changed a little bit since that case, am I correct about that as well?

MS. MILLER: Yes.

MR. MUDD: Okay and you, I think in the other case, you tried to compute sewer flows, essentially, with each of the developments, or at least some of the developments, correct?

MS. MILLER: That's correct.

MR. MUDD: Okay. But you, you've eliminated that this time?

MS. MILLER: That's correct.

MR. MUDD: Any, any particular reason?

MS. MILLER: The, well, we also had information provided by the County in the previous exhibit and I, it just wasn't complete, so I didn't feel comfortable submitting it.

MR. MUDD: Okay. Are you able to see what I'm sharing here?

MS. MILLER: Yeah, let me zoom it in a little bit. Yep.

MR. MUDD: This, this is the, the exhibit Mr. McCann just showed you?

MS. MILLER: Yeah.

MR. MUDD: Okay. I just have, I just want to run through a couple of the, the, or some of the information that you provided. So, generally speaking, when you're, when you've computed number of units and number of beds, did you do any evaluation as to how many plumbing fixtures are in any of these facilities?

MS. MILLER: No.

MR. MUDD: Okay and so you don't know, for example, with student housing if it shows four hundred and eighty-two beds, you don't know if that means that there's four hundred and eighty-two bathrooms or whether there's, there's a hundred and twelve bathrooms or any number, you, you don't know, correct?

MS. MILLER: I don't.

MR. MUDD: Okay.

MS. MILLER: Well, let me take that back. I know that there are bathroom fixtures in that building.

MR. MUDD: Okay, of course.

MS. MILLER: I don't know how many.

MR. MUDD: Understood. How about on this WRH Property Holding, LLC at 502 to 506 Baltimore Avenue, --

MS. MILLER: Um hm.

MR. MUDD: -- do you know if that is in the Baltimore County development review process, do you know where in that process that is?

MS. MILLER: They just had their hearing last week, I believe. Yeah, just last week.

MR. MUDD: Before, before the Administrative Law Judge?

MS. MILLER: Yes.

MR. MUDD: Did you participate in that?

MS. MILLER: I attended. I didn't, I didn't par, I

didn't speak, but I, I attended.

MR. MUDD: Okay and you have participated in some of these other cases, correct? You, you, the Studious Apartments, in fact, you were, you participated in that case?

MS. MILLER: Yeah.

MR. MUDD: And that was on behalf of Green Towson Alliance?

MS. MILLER: Yes.

MR. MUDD: And you opposed that project?

MS. MILLER: I would say we had concerns, we weren't, we weren't a Protestant in that case, no. But there were things that I wanted the Judge to consider, so I testified about it.

MR. MUDD: Okay and you testified in Torch Hill as well?

MS. MILLER: Yes.

MR. MUDD: In that, you gave similar, similar testimony to that, the testimony that you're giving today, right?

MS. MILLER: Yes, yes.

MR. MUDD: And Red Maple Place, you participated in that and opposed that project?

MS. MILLER: I was a witness for the Protestant.

MR. MUDD: Okay. But you, you, you were there and indicated your, your representation of Green Towson Alliance as

well, correct?

MS. MILLER: Yes, yes.

MR. MUDD: Okay and I think we talked about this in the last case, but you even, I think it was before Green Towson Alliance, but you participated in the Towson Row case, correct?

MS. MILLER: I did not, I, the Towson Row case, I attended DRP hearings for.

MR. MUDD: Okay.

MS. MILLER: And spoke at those, but I did not attend the Administrative Law Judge hearings.

MR. MUDD: And, and in fairness, that was, Green Towson Alliance didn't exist at that point, right?

MS. MILLER: At the time of the, I, I honestly don't know when that hearing was.

MR. MUDD: Okay. How about when the Green Towson Alliance was formed, when was that?

MS. MILLER: Two thousand fifteen, May of 2015.

MR. MUDD: Okay. Have, have you been involved in anything related to these Towson University projects?

MS. MILLER: No.

MR. MUDD: Okay. How about the Towson Flats?

MS. MILLER: No.

MR. MUDD: How about 101 York Road?

MS. MILLER: Nope. We attended one hearing for that that was like a stormwater management hearing. But we just

attended, we didn't, we didn't testify at that.

MR. MUDD: Okay. Up here at Lutherville Station, you, you indicate here that a transit-oriented development application has been submitted. Does that, that's as far along as you are aware of that project is?

MS. MILLER: Yeah, I believe it's being talked about as being submitted as a PUD, but I don't think that that has happened yet.

MR. MUDD: Okay and, and this, this number, two hundred and twenty-one thousand three hundred square feet, where did you get that information from?

MS. MILLER: That came from the application, I believe.

MR. MUDD: Okay and you note here that --

MS. MILLER: Yeah, it did come, yeah, that definitely came from the application.

MR. MUDD: -- from the TOD application?

MS. MILLER: Yeah.

MR. MUDD: And the same with the four hundred apartment units?

MS. MILLER: Yes.

MR. MUDD: Okay and you indicate on, on the note's column here that major portions of existing two hundred sixty-nine thousand square feet have been vacant.

MS. MILLER: Um hm.

MR. MUDD: The Caldor's was there in 1999 and Loehmann's and so forth. But there, there have been other uses there since. Circuit City was there for a time, you remember that?

MS. MILLER: Right.

MR. MUDD: Yeah?

MS. MILLER: Yeah, Old Navy is curr, currently opened. I don't know that any of the rest of them might be some offices being used there currently.

MR. MUDD: Okay. But the, the point is that that project is an example of redevelopment, correct?

MS. MILLER: Yes.

MR. MUDD: So, there, there's, there are things there and whether or not they may be currently active, in years past, there have been plumbing fixtures that have been hooked up there and water usage and so forth, correct?

MS. MILLER: Right, although I would say residential use is a more intense use in terms of sewage.

MR. MUDD: What, what do you base that opinion on?

MS. MILLER: I'm not a sewer expert, so I, I, I, I, I, I just think there's more fixtures.

MR. MUDD: But you don't know how many fixtures, you said before you don't know how many fixtures are in any of these facilities, right? Just that there are some?

MS. MILLER: I don't know a specific number, no.

MR. MUDD: Okay.

MS. MILLER: I, I could probably figure it out if I had the plans, I could easily figure it out. And on some of these projects, I have like studios and some of these other projects. I've seen the number of fixtures, but not in every project.

MR. MUDD: Okay. Do you know about whether fixtures were installed in the eighties or nineties, whether newer fixtures may be better with regard to waterflow?

MS. MILLER: Yes, they are.

MR. MUDD: Okay. How about this 502 to 506 Baltimore Avenue project? That's a redevelopment site as well, correct?

MS. MILLER: Yes, yeah, it is.

MR. MUDD: Okay and how about Towson Row, that's another redevelopment site, correct?

MS. MILLER: Yes, it is and it's a much greater density than the former use.

MR. MUDD: Okay. What do you mean by that?

MS. MILLER: I think the former uses were maybe one and two, three story buildings at the most, and these are twelve story buildings, I believe.

MR. MUDD: Okay. But again, you don't know how many fixtures were in the, in the prior development, right?

MS. MILLER: No, I don't, no.

MR. MUDD: Moving on to under construction, the

College of Health Professions TU camps, the two hundred and forty thousand --

MS. MILLER: Um hm.

MR. MUDD: -- that number came from the TU website?

MS. MILLER: Yeah, that may have also been on the permit. I'm not sure if it was only on the website or if it's also on the permit.

MR. MUDD: Okay. So, you're not, you're not exactly sure where that came from?

MS. MILLER: If you give me a, hold on just a minute. No, I'm not sure about that.

MR. MUDD: Okay. Moving down into the existing, Towson Mews. Do you know when Towson, what, what, what are these dates here? The 3/17/16, 4/29/16 and 2017? What do those dates reflect?

MS. MILLER: I believe the 2017 is the structure built date from the MDAT records. And the others are Baltimore County website, when you do a development search there are entries on different dates, so those are some of the other dates that were listed when it was --

MR. MUDD: So, you, I'm sorry --

MS. MILLER: -- under development.

MR. MUDD: Okay. So, you, but do you know what occurred on those dates? Are those approval dates or are those construction dates or what are those?

MS. MILLER: Those are probably submission, either a concept plan or a development plan submission dates.

MR. MUDD: Probably or, or you don't, --

MS. MILLER: Yes, probably. I can't tell you for certain.

MR. MUDD: Okay.

MS. MILLER: But the MDAT structure-built date is for certain.

MR. MUDD: Okay and there's thirty, thirty-four, what's that number refer to?

MS. MILLER: That is the number of, sorry, I'd have to scroll up. Number of units, that's the number of units.

MR. MUDD: Okay and this TH, what does that mean?

MS. MILLER: Townhome.

MR. MUDD: So, there's thirty-four townhomes here?

MS. MILLER: Yes.

MR. MUDD: And you think, or you're not sure, that all, all thirty-four of those were built in 2017?

MS. MILLER: I don't know if the MDAT records indicate for, for a development like that, if that's the entire development build out. But those, that project has been built out at this point.

MR. MUDD: Okay. But you just don't know when it happened?

MS. MILLER: It's definitely within the timeframe of

this chart, since 2012, it is, it has been constructed after 2012.

MR. MUDD: And how, how do you verify that?

MS. MILLER: Well, I believe I had a photograph of that project and I've seen it.

MR. MUDD: Okay. But based on --

MS. MILLER: (inaudible) --

MR. MUDD: -- based on a photograph you took in 2023, you're confident they were built after 2012?

MS. MILLER: No, I'm confident it was built after 2012 because it was not in development in 2016, as indicated by those earlier dates. And the MDAT records indicate that the structure was built in 2017.

MR. MUDD: Okay and you think there's, there's one structure here?

MS. MILLER: No, it's townhomes.

MR. MUDD: Okay.

MS. MILLER: So, it's, it's a collection of maybe four or five different groups of townhomes.

MR. MUDD: Okay. Let's move on to Barnes and Marshall Halls, Towson University, West Village.

MS. MILLER: Um hm.

MR. MUDD: Where, what's this seven hundred referred to?

MS. MILLER: That is the number of beds.

MR. MUDD: Okay and the three hundred twenty-seven thousand?

MS. MILLER: That's the square footage.

MR. MUDD: Okay and 2016?

MS. MILLER: That's the date it was completed and construct, the construction was completed, excuse me.

MR. MUDD: Okay and where did you verify that?

MS. MILLER: On the Ayres Saint Gross Architect's website.

MR. MUDD: Okay. So, all this information is based on information, based on information you saw on the project architect's website?

MS. MILLER: I can't, I, I, yes, yes, that is.

MR. MUDD: Okay. So, you didn't pull any permits or look at MDAT or anything here to verify that?

MS. MILLER: Towson University rec, doesn't have records on MDAT and I wasn't able to find a permit on it either, probably for the same reason.

MR. MUDD: Okay.

MS. MILLER: Because it's state property.

MR. MUDD: Okay, okay. Towson Flats, what do these, what do the 2014 and '17 dates?

MS. MILLER: Again, they were, you know, submission dates in 2014 and then the MDAT records indicate 2017, that there was a structure there.

MR. MUDD: Okay.
MS. MILLER: Structure built at that time.
MR. MUDD: And these are apartments?
MS. MILLER: Yes.
MR. MUDD: And a hundred and five total apartments?
MS. MILLER: Number of units, yes.
MR. MUDD: Okay and where, where did you get that information from?
MS. MILLER: That was from the development search.
MR. MUDD: Okay. Do you have any idea how many are, are one bedroom versus two bedroom versus three bedroom?
MS. MILLER: I don't.
MR. MUDD: Okay. How about, how about Brightview?
MS. MILLER: What's your question about Brightview?
MR. MUDD: I'm sorry, good, right. What is the ninety-two on the Brightview one?
MS. MILLER: I believe that's beds.
MR. MUDD: Okay.
MS. MILLER: Yeah, that's the number of beds.
MR. MUDD: Okay and 2012, what's that?
MS. MILLER: That's when the MDAT records show that that structure was constructed or built.
MR. MUDD: And MDAT records show the number of beds? I've never seen that before.
MS. MILLER: No, I bel, yeah, no, I think the beds

came from a development search.

MR. MUDD: Okay, but that's not indicated here, right?

MS. MILLER: Right.

MR. MUDD: Okay. Where, these two are new for me. Where, where is Spencer's Crossing located? I, I understand the address, but can you tell me geographically?

MS. MILLER: Hold on just a minute, please. What's that? Spencer Crossing. Are you asking about, okay, so that's M. That is just, whoops, sorry. I'm having trouble managing. It's east, I'm sorry, west of Interstate 83 and north of Timonium Avenue, I believe.

MR. MUDD: Okay and there's seven homes there?

MS. MILLER: Yes.

MR. MUDD: Okay and what, what do the 2012 through 2014 dates come from? What does that mean?

MS. MILLER: Again, that, I believe, the two thousand, it's, the development process began in 2012 and then the MDAT or, I wouldn't say began, it was occurring between 2012, 2014 and then the structure, structures were built from the MDAT records in 2014.

MR. MUDD: Okay and you have a note over here, five-bathroom homes. Did you review the floor plans for each of these homes?

MS. MILLER: No, I think that was in the development

search information.

MR. MUDD: So, in the development search, you, you saw that all seven homes each have five bathrooms?

MS. MILLER: I can't say for certain. It's been a while since I looked at that particular development.

MR. MUDD: Okay. How about Meadowvale, where's that?

MS. MILLER: That's a little bit further north, but also east of Interstate 83, just east of it.

MR. MUDD: Just east of 83?

MS. MILLER: I'm sorry, west of 83.

MR. MUDD: Okay and it's, and it's in like the Timonium area?

MS. MILLER: Yes.

MR. MUDD: Okay and there's forty-one units in there, forty-one homes?

MS. MILLER: Yes.

MR. MUDD: Okay.

MS. MILLER: Single family homes, yeah.

MR. MUDD: And where, where did you verify that information?

MS. MILLER: Again, I looked at the MDAT records and the Baltimore County development website for that, that information.

MR. MUDD: Okay and the 2012 to 2014, what, what does that refer to?

MS. MILLER: That could have, and I'm sorry, now I'm remembering. I think this applies also to Spencer Crossing. That those, those homes had different dates for the structures being built. So, it, they ranged between 2012 and 2014.

MR. MUDD: Okay. So, then --

MS. MILLER: It's multiple, multiple homes that were built in different, on different dates.

MR. MUDD: So, do you have any idea when those, when the development plans were actually approved for those projects?

MS. MILLER: Again, I haven't looked at this for a little while, so I don't, I didn't have a permit for each one of these, this was just looking at the MDAT structure build dates.

MR. MUDD: Okay and so it's possible that the approvals obtained, were obtained before 2012?

MS. MILLER: I doubt that because I searched, no, that, that is not, because my search was for anything built after, 2012 or later.

MR. MUDD: Right, built 2012 or later, so you --

MS. MILLER: No, it, I'm sorry, initiated in the design development process or later.

MR. MUDD: And how did you limit your results in that way?

MS. MILLER: Just by going through the, they're

listed in chronological order on the website.

MR. MUDD: Okay, so --

MS. MILLER: So, if it, if it was in development, in the development process before 2012, I didn't consider that as a project --

MR. MUDD: All right. Well, I'm going to skip down to the Quarry Lake at Greenspring. Do you have any idea when those approvals were obtained?

MS. MILLER: I don't, I think --

MR. MUDD: Does 2004 sound right?

MS. MILLER: I don't know. There's, there's quite a bit of different development in there, so there's a whole section of buildings on this Travertine Road that were built in 2012. So, yeah, they could have been approved sooner.

MR. MUDD: Okay.

MS. MILLER: That's, that is possible for those.

MR. MUDD: Okay. But you're positive that Spencer's Crossing and Meadowvale were not, were not approved any sooner than 2012?

MS. MILLER: Well, Mr. Mudd, you may have caught me in a, in a contradiction here. Yeah, I would have to look at that again.

MR. MUDD: Okay.

MS. MILLER: I can't, I can't say for certain.

MR. MUDD: Okay and the Altus student housing

building here, it says that it was approved on, in 2005, is that correct?

MS. MILLER: I'm sorry, I don't know where you are now.

MR. MUDD: I'm sorry, I'm, I'm under Towson Row.

MS. MILLER: Oh, that's a mistake. That should be 2015.

MR. MUDD: Okay. Do, are there any other mistakes on this report?

MS. MILLER: Well, I already told you that I meant to use different colors on these photo keys so, yes, there are other mistakes on this chart.

MR. MUDD: Okay.

MS. MILLER: I think you know that Altus student housing was not approved in 2005.

MR. MUDD: Okay. How about 101 York Road? Is that part of the Towson Row development?

MS. MILLER: No, it is not.

MR. MUDD: Okay, but it's listed under Towson Row, correct?

MS. MILLER: No, it is not. It's just the Towson Row was bolded. It's not, it's not meant to indicate that it's under Towson Row.

MR. MUDD: Okay. I'm, I'm sorry, I skipped over this too. Back here, just above Towson Row, you have SFSD and the

number sixty-two, but there's no other information on this row. Is, is that, is that something --

MS. MILLER: I'm sorry, let me get, I'm looking at the wrong, are you pointing to that now? Okay, thank you.

MR. MUDD: Sure.

MS. MILLER: That might be, I'm not sure what that is there for, that might be a mistake, sir.

MR. MUDD: Okay. Bear with me. Tell me a little bit about, so Tow, Towson Square, that was another redevelopment site, correct?

MS. MILLER: Yes.

MR. MUDD: Okay and Bare Hills Business Park, do you know what this, what this construction was?

MS. MILLER: It's a, it's, I believe it's sort of an office building.

MR. MUDD: Okay. You don't, do you know whether they have bathrooms in there?

MS. MILLER: I assume that there would be a bathroom in an office building.

MR. MUDD: Okay. Down here for all the Towson University, TU Union addition, Towson Armory, TU Startup, these are all things that you've, again, pulled from the Towson University website, correct?

MS. MILLER: Right.

MR. MUDD: And similarly, going down for Loyola

Blakefield, you pulled from the Catholic Review website, correct?

MS. MILLER: Right, correct.

MR. MUDD: So, not, not, not official records, these are just reports that someone --

MS. MILLER: Yeah, again, the Towson Blakefield is not listed on the MDAT records, so I wasn't able to get that. But I, I would assume that Loyola Blakefield wouldn't announce that a new building is open on their campus unless they were being truthful.

MR. MUDD: Okay.

MS. MILLER: I think that would be very odd for them to announce something that wasn't actually open.

MR. MUDD: Okay. How about the Baltimore Fishbowl website, is that an official website?

MS. MILLER: It's a new source.

MR. MUDD: Okay. So, you based that information on a new source, okay.

MS. MILLER: Yeah, I've seen, you know, I've been over there, I've seen that, that new restaurant, it's, it's there.

MR. MUDD: Okay, all right. I think that's all the questions I have. Thank you very much.

ALJ: Mr. McCann, re-direct?

MR. MCCANN: Yeah, just, just a couple quick follow-

up. I, I think you've recognized already, Ms. Miller, that you're not a sewer expert. But Mr. Mudd was asking you about fixtures and do you know, based on your experience, whether or not wastewater estimations are based on the number of fixtures or on something else, do you know?

MS. MILLER: I, I think it depends on the structure, the kind of use of the building. I think there's different formulas for each, for different categories, --

MR. MCCANN: Right.

MS. MILLER: -- yeah, it's --

MR. MCCANN: Do you know any of the categories that identify fixtures as the basis for estimating wastewater?

MS. MILLER: I do not know. I don't know the answer to that.

MR. MCCANN: Okay, fair enough. Fair enough. Mr. Mudd was asking you about approval dates. And I don't need to pull it back up, but under the existing portion of your chart are you confident, based on your investigation and your personal familiarity, that all of those developments were constructed, maybe not necessarily approved, but constructed after 2012?

MS. MILLER: Yes.

MR. MCCANN: Okay.

MS. MILLER: I am confident of that.

MR. MCCANN: And the title of your report was not

development approved since 2012, it's just developments since 2012, is that --

MS. MILLER: Right.

MR. MCCANN: Okay, all right.

MS. MILLER: Right.

MR. MCCANN: Thank you, Ms. Miller, appreciate it.

MS. MILLER: Okay.

ALJ: Ms. Miller, I have one question on this exhibit.

MS. MILLER: Um hm.

ALJ: Under existing, you have Johns Hopkins University Greenspring Station Pavilion III --

MS. MILLER: Um hm.

ALJ: -- address 10751 Falls Road. And it looks like, using my magnifying glass, a hundred and ten thousand square feet. And I know you were here in a prior hearing. Do you know if that development is the one we were talking about in terms of the sewer and, were you here for that at all?

MS. MILLER: I, I'm, I don't think I was, I don't think I heard that testimony.

ALJ: Okay. Do you know, have any information about this Johns Hopkins University Greenspring Station Pavilion III, you actually took a picture of it, one of them.

MS. MILLER: Yeah, yeah. I, I mean, the only purpose that this chart was for was to document the, the dates of when

buildings were constructed, so that's the information I have available.

ALJ: So, it was 2019 to '21?

MS. MILLER: That, I think the 2019, I think the structure build date is the 2021, and the 2019 was when there were development submissions on it.

ALJ: Okay. Any other information you have about that one?

MS. MILLER: Nope.

ALJ: Okay, all right. That's all I have. Those are admitted. So, that is our second witness for today, Mr. McCann. Is it a good time to take a lunch break?

MR. MCCANN: I was actually going to ask Your Honor if we could take one more really quick person.

ALJ: Sure.

MR. MCCANN: It'll be a very, very short, because he has a stop break, a stop at 1:15, a hard stop.

ALJ: Yeah, absolutely. Let's do that. And so, who is that person?

MR. MCCANN: And that is Peter George. Hopefully he is available. And I should, before I put him on, I should, I'm sure you do remember, Judge, that he testified earlier --

ALJ: That's what I was going to say.

MR. MCCANN: Yeah. I, I am calling him back, not to ask him about any of the things I asked him about before, but

he observed something since our last hearing date and has a couple photographs and will limit my questioning. I know it's somewhat unusual, but I'll limit my questioning, no one else, there is no other witness I could do this through. So, that's my purpose for calling him, although he's already testified.

ALJ: Yeah, I'm trying to remember. Was he the photographer?

MR. MCCANN: No, no, no. Peter George was just a neighbor who lives over on, he lives over on I think White Manor. He testified about his concerns about the project.

ALJ: Okay, right, right, right, okay.

MR. MCCANN: I'm not going to ask him about any of that, traffic or anything. He's just, he has some photographs to show --

ALJ: Okay.

MR. MCCANN: -- that (inaudible) --

ALJ: Okay. Well, I was looking for him in the panelists, so maybe he's in the attendee's room.

MR. MCCANN: Okay.

ALJ: Let's see. Eleven attendees. Yep, there he is.

MR. MCCANN: Yes.

ALJ: Okay. He's coming over. All right. Mr. George, unmuted you, can you hear me?

MR. GEORGE: Yes, Your Honor, I can hear you, thank

you.

ALJ: And you have a camera, right?

MR. GEORGE: I do not, I don't think so, I apologize.

ALJ: Oh, okay.

MR. GEORGE: Yeah, I went through this the first time with you.

ALJ: The first time, right. Well, raise your right hand, please. Do you swear and affirm under penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. GEORGE: I do.

ALJ: Okay.

MR. MCCANN: Thank you, Judge. Mr. George, are you able to see the screen?

MR. GEORGE: Yes.

MR. MCCANN: Okay, good. I'm going to --

ALJ: Did he say yes?

MR. GEORGE: I see, I see you, Your Honor and I see Michael and I see Mr. Rosenblatt and one other person and the names.

ALJ: Okay, that's all right, you can see the screen. Okay, good. Now you can see this, right?

MR. GEORGE: Yes.

ALJ: Okay.

MR. MCCANN: Okay. I'm going to show you three

photographs. These are Protestant's Exhibit 47-A, B and C. You said you saw that, you see that, Mr. George?

MR. GEORGE: Yes.

MR. MCCANN: Tell us, tell us what this is, well, first of all, did you take this, these photographs?

MR. GEORGE: Yes.

MR. MCCANN: Tell us what this first photograph is and where it is.

MR. GEORGE: I, I think it's at manhole cover, I hope I'm using the right, you know, definition, but manhole 43819, which is just, probably twenty yards due west of the stream, you know, that is just past Tallyho. Right, right at the base of Dorothea Langford's property, which is now the development property, so.

MR. MCCANN: Okay. So, from this perspective where is the subject property? On the right, the left?

MR. GEORGE: Yeah, on the right, on the right, on the right is Dorothea Langford's.

MR. MCCANN: Right, the existing stone house?

MR. GEORGE: Yes.

MR. MCCANN: Okay and when did you take this photograph, these, these photographs?

MR. GEORGE: I, I don't have the exact date, Mr. McCann, but I, you know, in the last two months, so.

MR. MCCANN: Okay. Was it since the last hearing

date?

MR. GEORGE: Yes, yes, definitely. Yes, yeah, what, what happened is I, driving out of my road and I saw the activity and I had stopped before to talk to them and this time they were very, you know, helpful, as they were the first time in explaining what they were doing.

MR. MCCANN: And who did you speak with?

MR. GEORGE: I spoke with two of the operators. I did, they didn't identify, really ask them, but obviously, it's either a contractor for the County or it's the County. But I'm oblivious to which, which, which of those two representations the, the employees were, were with.

MR. MCCANN: Okay and what did, what did they tell you?

MR. MUDD: Objection.

ALJ: Yeah, see, that one's a little tougher to, to find out what they told because, one, we don't know if they were County employees. Number two, and number two, we don't know whether they were just contractors and then, they're not here to be cross examined.

So, even though it's an administrative hearing, and the pictures can come in because he took them and he can testify about their authenticity, but, but having conversations about what a contractor said on the side of the road when, when there's, it's just prejudicial to the other side. Same would

be true for you, Mr. McCann. You know, if the other side --

MR. MCCANN: Yeah, well, --

MR. GEORGE: I think, I think, I think next --

ALJ: Mr. George, --

MR. MCCANN: Hold on, Mr. George. Hold on, hold on. I think, I think this witness can be able to say, if he hasn't said it already, that the contractors were, were, were there on behalf of Baltimore County, hopefully --

ALJ: He just said, I wasn't sure if they were, they were third parties or if they were County employees. But even if they were, either way, it's hard, I, I mean, we can't have testimony about what they said. That, I mean, that's just, it gets to the, really just the, the prejudice of it for the, the other side. And that wouldn't be fair to you either.

MR. MCCANN: No, I understand. We have testimony all the time about what people, about conversations developers have with the County. I mean, we have, I could --

ALJ: Yeah, right, right. I mean, but not, not in the same, it's not, it's not the same, I mean, quite honestly. I mean, you're talking about representatives of County agencies are here testifying all the time, did you speak with the reviewer and who was the reviewer.

That, you know, there's a different level. This is a contractor. I mean, you can put the pictures in though, I mean, or he can testify about what he saw. I mean, I'm not,

you know, can, can he look, can he just tell us what he saw or what's in the photograph?

MR. MCCANN: Yeah, I mean, that's fine. But I, what I'm, the point I'm making is a little different. I'm not going to argue with Your Honor. But I'm talking, I'm talking --

ALJ: (inaudible) to the other side, I mean, that's not (inaudible) --

MR. MCCANN: (inaudible) talking, but just so the record is clear, I'm talking about developer's consultant's conversations with County employees out of the hearing and telling, telling Your Honor and, and Judge Mayhew, about their conversations with County folks that aren't there to testify. So, that happens all the time.

ALJ: I know, but they're, but again, they're a representative of agencies and reviewing plans and things and they're people who come in and testify. We, this is just a different level, in my view. So, I have to sustain that objection.

MR. MCCANN: Okay, all right. I'll just ask, have him confirm what he observed in connection with the three photographs that I'll show him. Go ahead, Mr. George, what did you observe?

MR. GEORGE: Well, I observed, I asked them what they were doing, and they said that they --

MR. MUDD: Objection.

MR. MCCANN: Don't say --

MR. MUDD: Objection.

MR. MCCANN: Don't say what they said.

ALJ: Mr. George, you can't, you can't, I just ruled --

MR. GEORGE: Okay.

ALJ: -- you can't say what they say, because that's hearsay. Those people aren't here to testify so it becomes prejudicial to the other side. So, just, go ahead and just answer what you observed.

MR. GEORGE: All right. I observed a truck with a manhole cover open and they were filming the process, if you could show the other pictures, Mr. McCann --

MR. MCCANN: Sure.

MR. GEORGE: -- it would be helpful.

MR. MCCANN: So, this would be 47-B, the second photograph.

MR. GEORGE: And that's on Tallyho Road, right at the entrance of Tallyho and West Joppa.

MR. MCCANN: Um hm.

MR. GEORGE: And they were, I'm not allowed to say, am I allowed to say, Your Honor, what they said to me when I asked them --

ALJ: No, no, so that's, those are hearsay statements.

MR. GEORGE: Okay.

ALJ: So, just tell us what you observed.

MR. GEORGE: Okay. So, I observed this big truck with a big hose attached to the, to the fire hydrant, and they, and I observed that they were flushing the water through because it, because that's what they were doing.

MR. MCCANN: Okay. Well, let's, I think, let me show the third photograph as well. Is that a different view of 47-B? This is 47-C.

MR. GEORGE: Yeah, it's the same, yes, that's just looking north at the very entrance of Tallyho from Joppa --

MR. MCCANN: Okay.

MR. GEORGE: -- Joppa, West Joppa is on your left and the manhole covers are a hundred yards to the left and the ones that flow down into the city.

MR. MCCANN: Okay. Let's, let's go back to 47-A. This manhole cover that we see here, is, can you confirm for us that that was a sewer manhole as opposed to a, a water supply valve or something else?

MR. GEORGE: Yes, yes.

MR. MCCANN: Okay and how do you know that?

MR. GEORGE: I, I guess, I mean, I haven't smelled it, but they --

MR. MCCANN: Okay.

MR. GEORGE: -- showed me the computer on, the first

time I observed this last summer and, but I'm not allowed to say what they, these were County employees last summer and they were, you know, they were, they were sending numbers back to Towson on the, on the actual percentage of flow.

MR. MCCANN: That happened last summer?

MR. GEORGE: Yes, sir.

MR. MCCANN: You saw them doing that?

MR. GEORGE: Yes.

MR. MCCANN: In the same location?

MR. GEORGE: Yes, the same manhole cover. Yes, the same manhole cover, yes.

MR. MCCANN: Okay.

MR. GEORGE: (inaudible) number if you want, yeah, of the manhole cover, so.

MR. MCCANN: Before, before I move on to the other photos, anything else you recall observing with respect to this photograph, other than what you've already described? Or anything else you recall from last summer in the same location?

MR. GEORGE: No, just that it was the same manhole, it's 43819, I believe, and it's, it seems to be a preponderance of activity that, that is being awarded to this particular manhole, which is closest to the, to the stream bed that flows down from, that flows south of Dorothea Langford or APCO's property.

MR. MCCANN: Okay. Can you tell us what's going on

here? What, what it appeared in your layman's view of what this line is and what was being done? What did you observe?

MR. GEORGE: They were trying to unclog the sludge.

MR. MCCANN: Okay, okay. And the exhibit, the photographs in Exhibit 47-B and C, the same, same day, same incident, so to speak?

MR. GEORGE: Yes, same five minutes. Yes, yes.

MR. MCCANN: Okay and what, I think you already described, you said they were pumping water of some sort. How, how, if at all, do you, did you, do you believe what's depicted in Exhibits 47-B and C was connected with the, the manhole, your manhole observations in the prior photograph? Can you tell?

MR. GEORGE: Yeah, I, I, only through the, commonsense that when you open a fire hydrant in the middle of the day and you would, then the manhole, and you walk to the fire hydrant, and then you turned on a big pump and the hose filled up, that you're pumping through something to unclog what I've been, what I observed moments before in manhole cover 43819.

MR. MCCANN: Okay. So, all three photographs were taken on the same day, is that correct?

MR. GEORGE: Yes, within the same five minutes, yep.

MR. MCCANN: Okay. Let me show you one more --

MR. GEORGE: Michael, if I could, Mr. McCann, I

could, it might be ten minutes because it was the same truck, I think, that moved --

MR. MCCANN: Okay.

MR. GEORGE: -- (inaudible) yards, so.

MR. MCCANN: Okay. Let me share 47-D with you. Do you see that?

MR. GEORGE: Yes.

MR. MCCANN: Okay. Do you recognize the area depicted in this map?

MR. GEORGE: Yes.

MR. MCCANN: Okay and I'm going to zoom in a little bit. And given where you said the manhole in 47-A was located, which, can you tell us which, if any, of the manholes depicted in this exhibit was the manhole that you observed and took a photograph of that day?

MR. GEORGE: Yes, Mr. McCann, it's 43819, which is on the, on the triangular, you know, definition of those manholes. It's the one that's west and just, just west of, of Tallyho Road, so.

MR. MCCANN: Okay. Does, do you believe it's this one, 43819 rather than 43715?

MR. GEORGE: Yes, I know it is, yes.

MR. MCCANN: And how do you know that?

MR. GEORGE: Well, I observed it, I observed the truck at 43, let me, let me explain this very clearly.

MR. MCCANN: Okay.

MR. GEORGE: At 43819, was the first picture and that's where they were doing the, that's where the tube, the line was out of the truck. (inaudible) working on 43795 and 43794 (inaudible) and the sludge that I, I believe existed, was in 43795. Again, there's a triangle, obviously, you have two that flow into one headed towards Baltimore and they, they were working on, I do not know which one was clogged because I'm not an expert, but they were working on that triangle and that, that's what I know for a fact.

MR. MCCANN: Okay and that's based on your observations, I mean, did you, let me, let me, well, strike that. Let me ask you this. You're, you're speaking about these other manholes, but, but to be fair, you did not see anyone working on those manholes when you were there on those occasions, correct?

MR. MUDD: Objection.

MR. MCCANN: Did you or did you not.

ALJ: Yeah, so sustained, so just, hold on, hold on, just so the record is clear. Sustained. He just rephrased it so it's a question. So, did you see anyone working on 43795 or 43794-A?

MR. GEORGE: Yes, yes, I did.

ALJ: You did.

MR. GEORGE: Yes.

ALJ: Are they in the photos?

MR. GEORGE: No.

MR. MCCANN: Okay.

ALJ: Okay, --

MR. MCCANN: The photograph, that's where I, I, the photograph that we looked at, you believe, based on location, strike that. You, I think you --

MR. GEORGE: Yeah, I'm not allowed to say what they told me, but (inaudible) --

MR. MCCANN: Okay.

MR. GEORGE: -- where the fire hydrant was, above 43796 (inaudible) and the flow was down 43795 where the sludge (inaudible).

MR. MCCANN: Mr. George, you're breaking up, you have to say that one more time and then we'll wrap up here.

MR. GEORGE: Yeah, just the truck and the pump and the fire hydrant were on Tallyho above 43796 to the bottom right of the illustration.

MR. MCCANN: Okay.

MR. GEORGE: And they're pumping to try to remove the sludge from 43795 and 43794A and they were (inaudible) 43819.

MR. MCCANN: Okay, all right. No more questions of Mr. George. Thank you --

ALJ: Well, Mr. George, first of all, where is this map from that I'm looking at? Where'd you get this?

MR. GEORGE: I (inaudible) that's not my map, Your Honor.

MR. MCCANN: I provided (inaudible).

ALJ: Oh, okay.

MR. MCCANN: It, it's from, it's GIS portal for the County, Your Honor.

ALJ: Got it, okay.

MR. MCCANN: I (inaudible), I provided it to him.

ALJ: Understood. Okay. So, it's GI, My Neighborhood. And so, the, the photographs, just to be clear, Mr. George, the photographs that you took, the three photographs, fairly and accurately reflect what you observed on the day you took them?

MR. GEORGE: Yes, yes, Your Honor.

ALJ: Okay, all right. And so, all right, no more questions. So, you're offering these three exhibits. Any objection, either Mr. Rosenblatt or Mr. Mudd?

MR. MUDD: No objection to the photos.

ALJ: No objection to the photos or the map?

MR. MUDD: Well, the, the map was not prepared by the witness --

ALJ: Right, but it's a GIS map.

MR. MUDD: -- (inaudible) Mr. McCann saying it's a County document, then so be it but it really wasn't any foundation laid for that.

ALJ: So, so it is a County document. That's what he just said, it was a GIS from the County website.

MR. MCCANN: It is, GIS open portal data is where it's available to anyone.

MR. MUDD: Okay, that's fine.

ALJ: All right, no objection. Mr. Zimmerman, any objection to the documents?

MR. ZIMMERMAN: No objection.

ALJ: Okay and how about, Mr. Zimmerman, do you have questions?

MR. ZIMMERMAN: No questions.

ALJ: And Mr. Wyatt? Mr. Wyatt?

MR. WYATT: Yeah, my apologies. No questions, Your Honor.

ALJ: Okay, no problem. Mr. Sachse?

MR. SACHSE: No questions.

ALJ: And back to either Mr., is it Mr. Mudd or Mr. Rosenblatt? (inaudible) --

MR. MUDD: (inaudible) no questions, thank you.

ALJ: Okay, no questions. All right, okay. Thank you, sir. So, it's 1:00, we met your 1:15 deadline.

MR. GEORGE: Thank you very much, Your Honor. Thank you.

ALJ: Okay, appreciate it. All right. So, how about now, Mr. McCann? Is it a good time for a lunch break?

MR. MCCANN: I think so. Yeah, if it's okay.

ALJ: Let's do 1:45.

MR. MCCANN: Sounds good.

ALJ: And then you have three witnesses, so you have two more witnesses?

MR. MCCANN: I have one, two, three, yep, short ones.

ALJ: Oh, three, okay. All right.

MR. MCCANN: Okay.

ALJ: All right. I'll pause the record.

MR. MCCANN: Thank you.

(PAUSE)

ALJ: Back on the record after lunch and we have another witness in Mr. McCann's case.

MR. MCCANN: Yes, thank you, Judge. And just, just so you know, we have, I have four witnesses, not three. Sorry, it's a bit of a moving target on my end sometimes. But they're all, they will all be short.

ALJ: Okay.

MR. MCCANN: So, the first one is Larry Bruder, B-R-U-D-E-R.

ALJ: I think he was in the attendees' room, here we go. Okay, he's a panelist.

MR. BRUDER: Hello?

ALJ: Hi. All right. You unmuted your microphone and there you are --

MR. BRUDER: Can you see me?

ALJ: -- is your camera on? I can.

MR. BRUDER: Can you hear me?

ALJ: Yes.

MR. BRUDER: Great.

ALJ: All right. Raise your right hand, please. Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. BRUDER: I do.

ALJ: Thank you.

MR. MCCANN: Thank you, Judge. Good afternoon, Mr. Bruder. Can you hear me?

MR. BRUDER: I can hear you.

MR. MCCANN: Okay, great. Tell the Judge where it is that you live.

MR. BRUDER: I live at 74 Seminary Farm Road in the Meadows.

MR. MCCANN: Okay. I'm going to show you a, a map and ask you to help me locate where your house is. This is Protestant's Exhibit 24-B. I'm going to highlight in green the house right here. Do you see that?

MR. BRUDER: Yeah, that's me.

MR. MCCANN: Okay and how long have you lived there, Mr. Bruder?

MR. BRUDER: About, I've lived in the Meadows, I guess, almost, a little over two years now.

MR. MCCANN: Okay. Did you live elsewhere --

MR. BRUDER: I did, --

MR. MCCANN: -- before?

MR. BRUDER: -- I did. I lived, when I moved into the development, I lived at 6 Deep Run Road, and that one is on the other side of the development (inaudible) --

MR. MCCANN: Okay and what was the address again? What was that address again?

MR. BRUDER: Six Deep Run Road.

MR. MCCANN: Deep Run, okay. Okay and you said you lived at the current address for two years. Who do you live with?

MR. BRUDER: My wife, Ann. I lived at the current, I've lived at the current address since April of last year.

MR. MCCANN: Of 2022?

MR. BRUDER: (inaudible) the Meadows since November of 2019.

MR. MCCANN: Okay. I'm, I'm confused now. You, you lived, you've lived at the current address for, just since April of 2022?

MR. BRUDER: That's right.

MR. MCCANN: And before that, you lived in Deep End, --

MR. BRUDER: Deep Run Road.

MR. MCCANN: -- Deep Run, I'm sorry, --

MR. BRUDER: Deep Run Road.

MR. MCCANN: -- since 2019?

MR. BRUDER: That's right.

MR. MCCANN: Got it, okay. And are you familiar with the development plan that's proposed for this site?

MR. BRUDER: I am.

MR. MCCANN: You've seen it?

MR. BRUDER: I have.

MR. MCCANN: Okay. What, if any, concerns do you have, Mr. Bruder, that you would like to express to the Judge?

MR. BRUDER: Well, I have a number of concerns that really are on two different levels, I guess. The first has to do with the, the concerns about the groups of homes that are adjacent to the new development. My neighbors on my left and my right. And then the other set of, of concerns I have really have to do with the community as a whole. So, I, I, I'll start that way. And just jump right into this.

In regard to my particular property, and the other properties on the left and the right of me, they would be from 76 Seminary Farms Road to, I think, 66 Seminary Farms Road. My, my first concern is about drainage. And my property as, is set, the backyard is set in such a way that all the water drains to the back.

And when it really rains, we get an awful lot of water going down there. And the Meadows in general tends to be really very wet all over and so all that water in my property, and also in my neighbors' property, I'm sure, drains back towards the, where the new development is going to be.

And when I saw the development plan, one of my concerns was that there are, there are going to be two houses that are going to be directly behind my house and I'm concerned about the amount of, of drainage that will be coming off those homes, off their rooves, they're going to be directed to the back of their property.

And so, I'm worried what's going to happen along that whole stretch of our neighborhood, our direct neighborhood, the ones that are adjacent to the new development, I'm just worried that, and I think my neighbors are worried too, about the, the, the fact that we might have somewhat of a canal there unless there's some kind of drainage put in. And so, so that's one area that we're concerned about and wanted to express to all of you.

The other is that the, the property behind us now, has, used to be a cornfield and now it's turned into, really turned into a, a meadow, a wildlife area. And, you know, as you get any open space, all of us know this is that we've got a lot of, a lot of wildlife.

We've got a lot of deer. We've got a lot of fox.

We've got a lot of rabbits. We got hawks that are hunting. You know, I, my, my sense is is that these types of, this type of an issue was kind of a lesser thing when you're thinking about development, but I am concerned, and we are concerned that these, these animals are all the, once the, once the land is churned up, they're all going to be coming into our development.

And, and we'll be having lots of fox under our decks and the deer already have been running through the property at night when I walk the dog. We've, we've had some close calls with deer running through the property. So, I'm worried we're going to be seeing a lot more of that because those animals won't, will no longer be in the meadow area.

The other area that I wanted just to bring up is that the development, the development really is a closed loop. And I, I apologize if you've heard this before, I, I'm sure that, Judge, I hope I'm not repeating things. But I just, this is all affecting me personally and I, I wanted to make sure I shared my thoughts on this directly.

But, it's a closed loop, and what that does is it makes it really a special area and a unique area for people to socialize, they walk around, they exercise. We have a number of different types of people in the development that are walking around.

We have people with strollers, we have people with,

we actually have a, one woman, Eddy, she's over ninety and she was in her walker the other day walking around the neighborhood, because it's easy to walk around, it's not a lot of traffic and it makes for a, a really nice way to meet people and, and have a community. And so that's something that we have continued to do.

And my concern is that if, if the development goes in, which I'm against, and if the thought of a pass through happens, which I'm also against, that, that we will become a thoroughfare for traffic that's heading from Seminary Avenue to Johns Hopkins or to Joppa and try to get to that intersection of Joppa and, and Falls Road.

And so, it becomes, like for example, in the mornings when I go out, Seminary Avenue can be, if you head out at about 7:30 in the morning, you, sometimes you can't make the left turn on Seminary Avenue because it's backed up all the way to our development, with cars waiting to go and make the left turn at Falls Road to head for the, head for the beltway.

Other times, if you go a little later, the, the traffic subsides but then you've got the fifty mile an hour cars, cars that are just shooting over the hill at a very fast rate.

And my concern is what'll happen in the mornings in particular will be that a lot of those cars that are blocked up and they can't get all the way down to Falls Road, will just

decide to just bypass Falls Road completely and make a left turn onto the Meadows, shoot down Mays Chapel and go right through the new development, hang a right onto Joppa Road and then hang another quick right and they're right into Johns Hopkins medical facility, which is a significant amount of, or there's a significant amount of traffic going back and forth there in the mornings, and in the evenings. So, that's my big concern.

One thing that I have noticed that even with, with no pass through, right now we don't have that issue, there are cars that will make that left turn and they don't see the, the sign that says no outlet and they'll make a left turn and they'll come, they'll come down Mays Chapel pretty darn fast. And then they go all the way down to where it says dead end and then they stop in their tracks, and they have to turn around and go back.

So, it is a concern. I think it's a natural thing that people would do, and I think it would damage the community. I think it would disrupt the, the lifestyle that we have there. You know, my concern would, would include the, the idea that we don't have a, or we're walking, we're walking in the road because we don't have sidewalks.

And we don't have, at this point, we don't have any speed bumps. And we also, we have fire hydrants along that Mays Chapel straight away and it is a straight away. So, it

does get, the concern really is that people would get pretty good speeds along there.

So, I'm concerned that the County would have to put a lot of money into actually putting some revisions into the area to be able to make it safe. And it is a safe, right now at this point, it is safe to walk around there.

Also, because the closed loop, it, it's also safe in regard to the fact that we don't get an awful amount of traffic other than the folks that are coming into the development. We do get the Amazon trucks and the FedEx trucks, which can be a problem, but the, as far as, you know, kind of they're driving around.

But the, in general, I, we've been told and, and you'd have to check the numbers, I guess, we don't have a lot of crime. It's, it's a relatively safe area because I think the fact that it's a closed loop development makes it a little bit of a, acts as kind of a safety buffer and helps us in that regard. So, so that's a concern.

I, I think that the, the one thing, I have had a chance to look at the, the aerial photograph that, of the revision that's planned for the intersection of Seminary, I'm sorry, the intersection of Joppa and Falls Road. And, in fact, I was, I was through that development last Friday.

I go through, or that, that intersection. I'll go through that intersection twice a day on the way to work, on

the way back from work. And there was an accident that particular day. And I'm, I'm not really clear on how the, widening that, that, that intersection a little bit and allowing a left turn really, really helps the situation a whole lot.

I mean, it, in this case, I was kind of, I was heading down south on Falls Road towards the beltway and there was an accident at that intersection. And it was an accident where it looked, it appeared that a car, what I observed, was that a car had tried to make a left turn from Joppa onto Falls Road and a Falls Road car, coming down, straight down south had hit it.

And, and the thing about that intersection is that you have three intersections in a row. You've got, you've got Seminary and Falls, then you have Greenspring and Falls and then you have the Joppa Road and Falls. And what's happening is that, okay, you got the cars turning left from Joppa Road down to the beltway.

That's, that's, you know, that's fine. That doesn't really appear to be very backed up in regard to getting those cars around. But the issue, the real issue is that the cars coming down Falls Road are going very fast. And what they try to do when the, when the traffic is heavy, what they're trying to do is avoid having to stop at several lights.

So, they kind of get a break and they start going

very quickly through the Greenspring, the Greenspring/Falls Road light and then keep going as fast as they can to see if they can clear that other light. I think that that's, that's part of the problem there.

But as far as the development is concerned, Your Honor, it doesn't seem to me that it, that that intersection is, would be a, what, what I really observe when I, when I drive around the neighborhood in the morning and the evenings and things, is that there's a much worse back up on the, going left towards Towson.

And a lot of times, if I go down Thornton, for example, I go to the dentist that way sometime or, or to St. Joe's, and so, when I head down in that direction and look to make a left turn, you can't really make a left turn, it's a blocked box right at where the, Thornton crosses Joppa Road, where the Royal Farms is. And so, I see that as kind of a problem.

It doesn't seem to me that working on that one development is going to really, I'm sorry, working on that one intersection of the Joppa and Falls is really going to help out the, the issue that we have going in the other direction towards Towson.

I think Johns Hopkins has a big impact on that, and obviously, you guys have talked about that quite a bit I would think.

So, so, my concern is that the, that the traffic patterns that would be created if, in the event that this, this development goes in and that pass through goes through, would really, you know, not only, you know, kind of, I think, impact the, the, the value of living in that community and the value of living in that area, which I think is, is exceedingly high. And, and so, so, that's why I'm against it. It's a very stable area and I think that, from my point of view, it would be a mistake to go through.

And I, and I haven't even gotten into the questions about sewers or, you know, kind of, or the storm drains. And I would say that the only thing there is that the community, as I talk to people in my community, they're not scared, but people feel pretty threatened and, and, and worried because, you know, we're hearing about the sewer system and I, I was listening to the testimony a little earlier that maybe there's a back up and we've heard that Johns Hopkins was supposed to be able to put in a, was, was supposed to do some revisions to the sewer system. We really would, what would be worse, I guess, to the, having the traffic problem, would be is if we have a sewer backup.

So, anyway, that's, that's what I wanted to say. I hope, Judge, that, first of all, I appreciate you listening to me. I'm sure you've heard a lot of this before. But, as I say, you know, my wife and I are significantly impacted by this

and appreciate it. And hope that you would have the opportunity at some point, if you haven't already, to stop and see the Meadows and to take a look at the, at the, at the neighborhood before you make a judgment.

MR. MCCANN: Thank you. Mr. Bruder, the accident that you mentioned at Joppa and Falls, when was that?

MR. BRUDER: It was Friday of last week.

MR. MCCANN: This, this past Friday, just a couple days ago or a week, okay.

MR. BRUDER: No, last Friday.

MR. MCCANN: Okay. Okay and it sounds like you travel the roads regularly. You said in the evening and in the morning?

MR. BRUDER: I do. I, I, I work, I work at a medical device company near the, near the airport. And so, I go through that, those intersections in the morning and in the evening.

MR. MCCANN: Okay, great. Thank you, Mr. Bruder. No other questions.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No questions. Thank you, Judge.

ALJ: Sure. Mr. Wyatt?

MR. WYATT: Yeah, good afternoon, Mr. Bruder. A question about the accident that you saw, this is Friday morning about 8:30?

MR. BRUDER: That's, yeah, that's right.

MR. WYATT: Yeah, I think I saw the same accident. The intersection was closed for some period of time, was it not?

MR. BRUDER: It was, but when I went through, it was, it was still open, they were letting us through on the left side.

MR. WYATT: Right. And it, with, with what frequency would you say you've seen accidents at that intersection at the time you've lived at the Meadows?

MR. BRUDER: I would say, I, I, well, I haven't witnessed them everyone, so it's not something that I see a lot, I'm only going down at particular times. But I've seen, I, I'm, I've seen certainly three different accidents.

MR. WYATT: And, and --

MR. BRUDER: This one was the most recent, to my mem, and obviously the freshest.

MR. WYATT: Right, okay. Thank you, Mr. Bruder. I have no further questions.

MR. BRUDER: Okay, thank you.

ALJ: Mr. Sachse?

MR. SACHSE: Mr. Bruder, I just wanted to make sure you are against the development. You are protesting the development itself?

MR. BRUDER: I am against the development, sir. And,

and if in a disappointing situation where the development is approved, I am absolutely against the, the pass through, which I think would be just --

MR. SACHSE: I, I understood that. I just, I wanted to make sure that I knew if you were for or against the development.

MR. BRUDER: I am against the development.

MR. SACHSE: That's, that's what I wanted to know. Thank you very much.

MR. BRUDER: Thank you.

ALJ: Mr. Rosenblatt or Mr. Mudd?

MR. ROSENBLATT: Just a couple questions. Good afternoon, Mr. Bruder. This is Mr. --

MR. BRUDER: Hi, how are you?

MR. ROSENBLATT: Good. This is Mr. Rosenblatt. Just a couple questions for you. You just answered really my biggest question with Mr. Sachse. But the first thing you talked about was water flow. Have you taken a look at the development plan? Do you know if the grades are proposed to go away from your property or towards your property?

MR. BRUDER: I don't know. I know there's been talk about a berm in the back of the property that they would put up, which, to help, I guess, with screening of looking at these houses. But no, I don't know.

MR. ROSENBLATT: Okay.

MR. BRUDER: But I, it is a concern.

MR. ROSENBLATT: Would it alleviate your concern if the grades were proposed, basically, at their highest towards your property line and got progressively lower towards the center of this development?

MR. BRUDER: You know, Mr. Rosenblatt, I, I'm not, I'm not an expert on any of this, so I can't, I don't think I can comment on that.

MR. ROSENBLATT: Okay.

MR. BRUDER: I just know right now it's a worry of mine. What would be, what would be great is if there was a, is if there would be no, no canal going back through my property when this development is put in. And I'm assuming that there is a lot of thought being put into, to having that done correctly. And I would hope that would be the case.

MR. ROSENBLATT: Sure. Just one, one other question. You talked about how you go to St. Joe's and I, I just didn't quite understand the (inaudible) --

MR. BRUDER: Oh, yeah.

MR. ROSENBLATT: -- intersection you were talking about? So, --

MR. BRUDER: Yeah, I'm sorry. So, (inaudible) --

MR. ROSENBLATT: -- (inaudible) let me ask a specific question and then you'll, I'll give you --

MR. BRUDER: Okay.

MR. ROSENBLATT: -- all the time to answer it. So, when you are leaving your house to go to St. Joe's, you say you go down Thornton Road to Joppa?

MR. BRUDER: I will go Thornton Road to Joppa, make a left on Joppa.

MR. ROSENBLATT: Right.

MR. BRUDER: And then I go to that really bad intersection at Bellona and Joppa and then I make a left turn--

MR. ROSENBLATT: So, is that --

MR. BRUDER: -- that drops me out onto Charles Street, then I make a right turn.

MR. ROSENBLATT: Is that the left, the left turn you were talking about, was at Joppa and Bellona that is difficult?

MR. BRUDER: The left turn is, the first, the left turn I'm trying to make is from Thornton to Joppa, and that's backed up. So, because it gets backed up over that bridge. And, and then that intersection of Bellona and, and Joppa.

MR. ROSENBLATT: Okay.

MR. BRUDER: It's a very bad intersection and --

MR. ROSENBLATT: Okay. That, those are the two you were talking about, okay.

MR. BRUDER: Those are, yes, sir, that's the one I'm taking about.

MR. ROSENBLATT: Go it, no further questions. Thank you for your time.

ALJ: Any re-direct, Mr. McCann?

MR. MCCANN: No, but thank you.

ALJ: All right. Thank you, sir.

MR. BRUDER: Thank you very much. Appreciate the opportunity to talk about it.

ALJ: Thank you. And, Mr. McCann?

MR. MCCANN: Yeah, Brooke Yearly, Y-E-A-R-L-Y.

ALJ: Another attendee. So, just a second. Yep, there we go. All right. Ms. Yearly?

MS. YEARLEY: Yes, good afternoon.

ALJ: Hi. I'm looking for you. There you go.

MS. YEARLEY: (inaudible). I'm on an I-Phone, so I'm not sure if this is going to work, but.

ALJ: Sure. Do you have a camera or no?

MS. YEARLEY: I'm not seeing anything that will allow me to click on a camera.

ALJ: Okay.

MS. YEARLEY: I can share, let's see.

ALJ: Can you see the screen?

MS. YEARLEY: I can see the screen.

ALJ: Okay. Would you just raise your right hand, please? Do you swear and affirm under penalties of perjury, that the testimony you are about to give is true and correct to the best of your knowledge and belief?

MS. YEARLEY: Yes.

ALJ: Okay.

MR. MCCANN: Okay. Thank you, Judge. Yeah, we were trying to work out the video earlier, it wasn't working, so. Can you hear me, Ms. Yearley?

MS. YEARLEY: I can.

MR. MCCANN: Okay and where do you live?

MS. YEARLEY: I live at 66 Seminary Farm Road and --

MR. MCCANN: Okay.

MS. YEARLEY: -- I have lived here since 2012.

MR. MCCANN: Okay and you live, you are neighbors with Mr. Bruder?

MS. YEARLEY: Yes.

MR. MCCANN: How many houses down are you from Mr. Bruder?

MS. YEARLEY: I am three houses down from Mr. Bruder. I am the last house along the farm, before it reaches the forest area that is the backside of Johns Hopkins complex.

MR. MCCANN: Okay. Can you see the green highlighting that I just did?

MS. YEARLEY: Yes.

MR. MCCANN: Okay. That's, is that correct?

MS. YEARLEY: If the house to, or if the lot to the right is the vacant lot, yes.

MR. MCCANN: Did I highlight the right house right here?

MS. YEARLEY: The green one, it should be, yes.
MR. MCCANN: Okay, great.
MS. YEARLEY: Yep.
MR. MCCANN: And how long have you lived there?
MS. YEARLEY: I've lived here since 2012.
MR. MCCANN: Okay and who do you live with?
MS. YEARLEY: I live with my husband, Chuck Yearley.
MR. MCCANN: Okay and without repeating, I know you haven't attended all the days of the hearing, but without repeating too much of Mr. Bruder's testimony, what, if any, concerns do you have to express about this development?
MS. YEARLEY: Okay. I am opposed to the development for a number of reasons. I'm going to second the reason for the wildlife. The other day, we had thirty deer in our backyard. We've had hawks, foxes, etcetera. I'm not going to belabor the point. But they would certainly be impacted.
I also have water in the back of my yard. On a heavier rain, there are numerous springs in the back of our yard. We do have a basement. We need to run a dehumidifier when we have heavy rains so that it doesn't penetrate. I too am concerned about the flow of water, and I believe that the berm would create an unnatural setting for water disbursement.
MR. MCCANN: Okay.
MS. YEARLEY: I am also extremely concerned about the lack of improvements for the third building of Johns Hopkins,

their third pavilion. That it is public knowledge that they did not make those improvements when they had the opportunity, therefore, any development in this area would put further impact on sewer, water and utilities.

I am exceptionally concerned for the known three failed intersections of which I travel as a pre-school teacher frequently. And would like to describe what happens when St. Paul's School, both going and coming, 8:00 a.m. and 5:00 p.m., to pick up carpool.

Seminary Avenue backs up, cars who do not want to wait for the multiple turns in the traffic pattern will make a U-turn unsafely in the middle of Seminary Avenue, sometimes turning into the Meadows, and go the other way, presumably down Tallyho or Thornton.

I've also seen this happen on Joppa Road, both at Tallyho and I believe the name of that other road is Whitehurst, White something, White something.

MR. MCCANN: Um hm.

MS. YEARLEY: I, I too have been unable to get out of my development and make a left turn for this reason. I invite the Judge to please come and drive when you're able to drive these roads, to come into the Meadows and see that it is a close community to drive at 5:00 if your time allows, to drive at 8:00 if your time allows.

I think it doesn't do it justice to see statistics.

You have to witness it and I think we are terrified of the impact. We successfully were able, as a community, to dissuade the Grace Fellowship Church from being developed on Seminary, Seminary Avenue.

This development is quite large. This development is also not in keeping with the lot sizes of the individual single-family homes that are on the backside of the Meadows, also along Tallyho and the offshoots of Tallyho whereby our house is on a half an acre, some are three-quarters of an acre, and these would be exceptionally close. I am extremely opposed to, to that.

I believe that, just to repeat, there are young children. We have someone who comes to our neighborhood, who is recovering from a horrific car accident, an adult who walks on a three wheeled walker because his attendant knows that he's safe and is not in harms way for cars as he learns to rehabilitate his legs.

We do have older people, we have younger people. We have people who ride bikes. We have a two-year-old learning how to ride a scooter. We do not have sidewalks. I'm repeating, but just to re-emphasize, we do not have sidewalks. That's the appeal of a, a close-knit community where we feel safe.

My secondary concern is that I am very much opposed to the development and hope that that issue will stand alone.

With that being said, the pass through would create an enormous traffic nightmare, security issues, cut throughs that people would develop as they develop when 695 backs up and 83 backs up, they come out like ants out of a wet ant hill and they go through all the communities, Bellona Avenue, Joppa Road, Seminary.

I too have witnessed an accident that I believe was two years ago at that intersection of Greenspring and Falls where a motorcyclist was tragically killed because of that intersection.

So, I, I just, I invite you to come and, and see the impact, the irreversible impact, not to mention schools. I do not see any improvement in the, the two schematics for a slighter turn lane on Joppa Road. I see no improvement to the flow of traffic, the congestion and adding more volume seems unsafe.

MR. MCCANN: Yeah. You, were you referring just now to the proposed improvements at Joppa? Is that what you were referring to?

MS. YEARLEY: Yes, the, the map that I have been sent.

MR. MCCANN: The aerial photograph?

MS. YEARLEY: Yes, sir.

MR. MCCANN: Okay. You also mentioned, and I'll share again this map with you that I showed you earlier, where

cars turn around on Joppa. And I know the Judge is familiar with the roads by now. But the, you said it happens at, on Joppa at Tallyho. And then you said the other road, was, is it this road right here, White Manor, is that where it was?

MS. YEARLEY: White Manor, yes. White Manor and Tallyho, when people are backed up on Joppa Road and they will do a U-turn.

MR. MCCANN: Um hm.

MS. YEARLEY: And then have to come across traffic and turn to go to the opposite way, extremely dangerous. They do the same on Seminary Avenue when it backs up going towards Falls Road, a U-turn, exceptionally dangerous. Yes, sir.

MR. MCCANN: You mean, they're heading westbound towards, towards the light and apparently they see traffic and turn around?

MS. YEARLEY: Yes, and they do a U-turn, sometimes they are positioned to do a U-turn at the beginning of Mays Chapel, the entrance to the Meadows. But sometimes not. They'll just whip around.

MR. MCCANN: So, obviously, you're not seeing that sort of thing from your house, that's when you're in, you're in your own car, it sounds like, right?

MS. YEARLEY: Yes, yes.

MR. MCCANN: Okay.

MS. YEARLEY: We also have the new Torch Hill across

the street, which will also impact the traffic on Seminary Avenue or even more traffic.

MR. MCCANN: So, you, do you drive these roads regularly?

MS. YEARLEY: I do.

MR. MCCANN: Yeah. Where's the school that you work at?

MS. YEARLEY: It is called Woodbrook Early Education.

MR. MCCANN: Um hm.

MS. YEARLEY: And it is on Stevenson and Charles and sometimes that traffic area is so bad, that I will go down 83 and get off and come up on Charles. It, various ways to get to the school, so I have to plan my route carefully.

MR. MCCANN: So, you're heading westbound from your house?

MS. YEARLEY: Yes, sometimes, yes. Um hm.

MR. MCCANN: Okay, great. Unless there's anything else you want to add, thank you for your time.

MS. YEARLEY: All right, thank you.

ALJ: Mr. Zimmerman, any questions?

MR. ZIMMERMAN: No questions, Judge.

ALJ: Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse?

MR. SACHSE: I don't have any questions.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: Just one. I, I just want to make sure I wrote this down correctly. You, you had mentioned an accident that was fatal. Can you just tell me what intersection that was and how long ago that was?

MS. YEARLEY: I was at the bank, the M&T Bank, which is in the little strip shopping center, and I believe that it was a southbound on Falls and the light at Greenspring, that it involved multiple cars and a motorcyclist that was hit and, what do you call it, he was airborne because of the accident and died at the scene.

MR. ROSENBLATT: How long ago was that?

MS. YEARLEY: I believe it was two years ago, but my memory is not specific to the length of time that was.

MR. ROSENBLATT: Okay. Thank you. No further questions.

ALJ: Any re-direct, Mr. McCann?

MR. MCCANN: Just to be clear, when you say Greenspring, you mean Greenspring Valley?

MS. YEARLEY: Yes, Greenspring Valley, yes.

MR. MCCANN: Okay, great. Nothing else. Thank you.

MS. YEARLEY: Thank you, Judge.

ALJ: Thank you, ma'am. All right, Mr. McCann.

MR. MCCANN: Michael Singer.

ALJ: All right, Mr. Singer.

MR. SINGER: I'm here, I can hear you.

ALJ: There we go, okay. Let's see. There we go. Oh, there you are. All right. Raise your right hand, please. Do you swear and affirm under the penalties of perjury, the testimony you are about to give is true and correct to the best of your knowledge and belief?

MR. SINGER: Yes.

ALJ: Okay, great.

MR. MCCANN: Thank you, Judge. Mr. Singer, tell the Judge where you live.

MR. SINGER: 10937 Mays Chapel Road.

MR. MCCANN: Okay. Is that, is that also in the Meadows?

MR. SINGER: Yes, we're the second house on the left when you turn into the development.

MR. MCCANN: Okay. I'll pull up the map. Bear with me one second. Okay. You see that map, sir?

MR. SINGER: Yes.

MR. MCCANN: Okay. So, you're on Mays Chapel Road. I'm going to highlight in green in the Meadows. Is it this property right here?

MR. SINGER: Yes.

MR. MCCANN: Right here, is that right?

MR. SINGER: Correct.

MR. MCCANN: And you said that the second house from

Seminary?

MR. SINGER: Correct. You, you got the right house. It's green, it's triangular.

MR. MCCANN: Got it, got it. How long have you lived there?

MR. SINGER: Since November of 2013.

MR. MCCANN: And who do you live with?

MR. SINGER: My wife, Mary, my three kids, Owen, Gavin and Josephine, and my two dogs, Lulu and Coco.

MR. MCCANN: And how old are the kids?

MR. SINGER: Thirteen, eleven and seven.

MR. MCCANN: Okay and you're familiar with the development plan for this site behind you?

MR. SINGER: Yes.

MR. MCCANN: You've seen it?

MR. SINGER: Um hm.

MR. MCCANN: Okay. What if, what, if any, concerns do you have?

MR. SINGER: So, similar to what Larry and Brook were talking about, I'm very concerned about traffic. We moved to this neighborhood because of the low traffic, of the, it not being, I mean, we love our house and everything. But one of the big reasons we moved there was there wasn't a lot of traffic.

We planned on growing our, our family. We walk in

the neighborhood, we bike in the neighborhood, we play in the side yard regularly, we just love it here. And I'm concerned that with any, you know, increased traffic, and it being a cut through, it's going to make it more dangerous for, for my family.

I'm also concerned about everybody that walks in the neighborhood. There's a lot of elderly here, there's some younger families as well. And so, I, I, I'm very opposed to the cut through from the new proposed neighborhood.

MR. MCCANN: Okay and are you also opposed to the development itself? That is --

MR. SINGER: You know, I, I am just based on traffic, what everybody's mentioned about Seminary Avenue, Falls Road, the failing intersections going into Greenspring Station. We drive, one of our children is at St. Paul's everyday and pick, pick him up every day.

And if we don't leave before 7:30 in the morning, it's, it's about a thirty-to-forty-minute ordeal to go about three hundred yards and back. We, we frequently, if, if you leave after 7:30, you can't make a left. It's just backed up all the way down to Tally, Tallyho, so.

MR. MCCANN: Um hm.

MR. SINGER: For there to be more traffic in the area, would negatively impact us. We would, it, it would really have a material negative impact on us.

MR. MCCANN: Okay. Anything else, Mr. Singer, that you want to add?

MR. SINGER: That's it.

MR. MCCANN: Okay. Thank you, sir. No other questions.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, no questions.

ALJ: Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse? I'll unmute you again. Mr. Sachse?

MR. SACHSE: Oh, I'm sorry, I'm sorry. (inaudible).

ALJ: All right. You said no questions, right?

MR. SACHSE: No, no, no. I said I had one question.

ALJ: Oh, I'm sorry. Go right ahead.

MR. SACHSE: No, no problem. I, I probably (inaudible) mine. But just how, how often or how many school buses come into the, the closed loop neighborhood at the Meadows?

MR. SINGER: I don't, I don't know that. My kids, two of my kids take a bus to Riderwood. So, I know there's at least one. But I don't track how many come in and out. I'm sure you could find that.

MR. SACHSE: I just didn't know if you had elementary, middle and high school buses coming in and out on a

regular basis. I'm sure you would notice that.

MR. SINGER: Two of my children are in elementary school and ride the bus to Riderwood.

MR. SACHSE: So, you do have one bus maybe that comes in the morning and the afternoon?

MR. SINGER: I would say a minimum of one bus.

MR. SACHSE: But you don't know of any other?

MR. SINGER: I've seen other buses, but I don't know the count. I don't, I don't count them.

MR. SACHSE: Okay, okay. And your, your basic objection is to the increase flow of traffic, not on, possibly in your neighborhood, but all the way around, Seminary, Joppa, Falls, Thornton, Tallyho, etcetera, is that right?

MR. SINGER: Yes. I'm, I'm concerned for the safety of my children, concerned for the safety of my neighbors. There's no sidewalks in the neighborhood. Everybody walks on the street, and they walk frequently, we walk frequently. And then further out, you know, there's just a lot of traffic once you get out of the neighborhood as well. In, in all directions.

MR. SACHSE: I, I, I, I understood that. I was asking though whether you objected to the, the building or the development being built at all because the, not, not only Joppa, Seminary and Falls, but every neighborhood in the area would be affected by the increased traffic.

MR. ROSENBLATT: Objection.

MR. SINGER: That's not my primary reason, but I --

ALJ: Hold on one second. Mr. Rosenblatt objected. I think as to the complex nature of the question? And the testimony?

MR. ROSENBLATT: I, it's just really like over the top testifying but --

ALJ: Yeah.

MR. ROSENBLATT: -- it is what it is. It's --

ALJ: I, I know. So, Mr. Sachse, yeah, you are just kind of testifying as you, you, you formulate the question. We just, what it sounds like, you know, you're giving him a statement and you want him to agree. You could probably just shorten it and just make a, you know, raise a question, I mean, you know, ask him what is --

MR. SACHSE: Actually, Your Honor, I'm not (inaudible).

ALJ: (inaudible).

MR. SACHSE: I'm trying to make it very easy by making it a cross examination question that he could say yes or no to.

ALJ: Yeah.

MR. SACHSE: And he's already testified that there is so much traffic on Seminary, Joppa, etcetera, he's concerned about that neighborhood being built and increasing the traffic.

His main concern --

MR. ROSENBLATT: This is now all testimony --

ALJ: I know. This is the, you're testifying now, Mr. Sachse. So, so, let's just, let me do it this way. So, Mr. Bruder, so, I'm sorry, it wasn't Mr. Bruder. Mr. Singer, sorry, wrong name. Mr. Singer, so, are you, is, is it your concern that traffic will increase not only in the, in the Meadowood community, but also in the surrounding communities or no?

MR. SINGER: Yes.

ALJ: Okay, there you go.

MR. SACHSE: Thank you for that. That was about it, yes.

ALJ: That was it, are you sure? I don't want to cut you off.

MR. SACHSE: No, no, I, I, I agree. I mean, I was just trying to lay the foundation for it, that's all.

ALJ: Understood, okay. All right, let's see. Mr. Rosenblatt?

MR. ROSENBLATT: No questions. Thank you.

ALJ: Okay. Any re-direct, Mr. McCann?

MR. MCCANN: No, thank you, Judge. Thank you, Mr. Singer.

ALJ: Thank you, Mr. Singer.

MR. MCCANN: Okay. Lastly, Your Honor, Mike, Mike

Volley, V-O-L-L-E-Y.

ALJ: Okay, let's see. All right. He's a panelist. Where are you? Hm, there you are. Here, I'll unmute you. Can you hear me?

MR. VOLLEY: I can.

ALJ: All right. Do you have a camera?

MR. VOLLEY: Yes, it, it's trying to work and there it goes.

ALJ: Oh, there you are. All right. Raise your right hand, please. Do you swear and affirm under the penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. VOLLEY: Yes.

ALJ: Okay.

MR. MCCANN: Okay, thank you, Judge. Good afternoon, Mr. Volley.

MR. VOLLEY: Good afternoon.

MR. MCCANN: Tell the Judge where you live, please.

MR. VOLLEY: I live at 8 Trelawney Court in the Seminary Ridge development.

MR. MCCANN: Okay. I believe you live next door to Mr. Wyatt, is that right?

MR. VOLLEY: Two houses down.

MR. MCCANN: Two houses down. Good thing. Let me show you the map we've been sharing with everybody. One

second. Okay. Trelawney Court is right here, correct, do you see that?

MR. VOLLEY: Yep.

MR. MCCANN: Okay and are you right where my cursor is, right here, is that your property?

MR. VOLLEY: I'm to the left of that. I'm just next to the, the green highlighted.

MR. MCCANN: Okay. Yeah, I'm sorry, I thought you were there. So, I'm going to highlight you, if I can, in pink. That's your property there, correct?

MR. VOLLEY: Correct.

MR. MCCANN: Sort of a triangular shape at the end of the Court?

MR. VOLLEY: You got it.

MR. MCCANN: Okay. Great. How long have you lived there?

MR. VOLLEY: Eighteen years.

MR. MCCANN: Okay and who do you live with?

MR. VOLLEY: I live with my wife, I had five children, three are still living here, two are off at college, and we just got a dog recently.

MR. MCCANN: Okay. I'm going to show you a couple photographs to start off. These are Exhibits 48-A and, and B, beginning with 48-A, do you see that?

MR. VOLLEY: Yep.

MR. MCCANN: Did you take this photograph?
MR. VOLLEY: I did.
MR. MCCANN: When did you take it, Mr. Volley?
MR. VOLLEY: About a month ago.
MR. MCCANN: Okay and is this Trelawney Court that we're looking at?
MR. VOLLEY: Correct.
MR. MCCANN: And is your house on the left or the right?
MR. VOLLEY: It's on the left.
MR. MCCANN: Okay and then, before I ask you a little more about this, let me show you the next exhibit, which is 48-B. Is this also Trelawney Court?
MR. VOLLEY: Yes.
MR. MCCANN: And is this you, is one of the, is this your house here?
MR. VOLLEY: Correct.
MR. MCCANN: Okay. Why did, why did you take these photographs?
MR. VOLLEY: I took them because you asked me to take them.
MR. MCCANN: Okay. Well, let me ask you, well, did you more specifically, did you have, have any sewer issues before you took these photographs that prompted you, or prompted me to ask you to take the photographs?

MR. VOLLEY: Unfortunately, we did.

MR. MCCANN: Okay and explain what happened, if you would.

MR. VOLLEY: On November the 11th of this past year, Friday night, I just happened to walk down into my basement and noticed some water. I was able to figure out that it was coming from a toilet in our basement bathroom. I, you want the whole story?

MR. MCCANN: You're breaking up a bit, Mr. Volley.

MR. VOLLEY: Okay, can you hear me?

MR. MCCANN: No, it's broken up. But --

MR. VOLLEY: Can you hear me now?

MR. MCCANN: That's much better. Yeah, can you start over again?

MR. VOLLEY: Sure. On the evening of November 11th of the past year, I was in my basement and noticed water was on the, the floor.

MR. MCCANN: Um hm.

MR. VOLLEY: I was about to figure out that it was coming from the toilet, which is in our basement bathroom. I was able to take the toilet off and shoved towels into the little hole, or the big hole the toilet connects to the sewer line.

We are able to get a plumber out the next day, who came out and, you know, upon pulling the towels that were, were

stopping the sewage from coming up, sewage started, started coming in, the plumbers, you know, were able to ascertain after an hour or two, let's say, that the stoppage or --

MR. MUDD: Objection, objection.

ALJ: Mr. Mudd?

MR. MUDD: I think we're, we're, we're going with hearsay again here. I don't have a plumber to cross examine here.

ALJ: Yeah, well, that's true. What, what, Mr., I'm sorry, Mr. Volley, just limit your testimony to what your understanding of the issue was, as opposed to saying it as what the, the plumbers told you or something like that. Does that make sense?

MR. VOLLEY: Yes. I'll do my best.

ALJ: Okay. Do it that way, do it that way, yeah.

MR. VOLLEY: We, it's my understanding that the issue that was causing the backup and the sewage coming into our basement was a blockage on the County sewer line.

MR. MCCANN: Do, and do you know where that was?

MR. VOLLEY: Yes, it, it was between the two manhole covers of the two pictures that you showed me earlier.

MR. MCCANN: Okay. So, just for reference, those are manholes shown in 48-B, that's the one closest to your house, correct?

MR. VOLLEY: If that's the picture that's on there

now, yes.

MR. MCCANN: Okay. Can you see the picture?

MR. VOLLEY: Yes.

MR. MCCANN: Okay and then 48-A, that's the manhole that's farther away from your house?

MR. VOLLEY: Correct, yes.

MR. MCCANN: So, your understanding was what with respect to those two manholes?

MR. VOLLEY: That the blockage that was causing the sewer to come into our basement was between those two.

MR. MCCANN: Okay and, and was the issue resolved?

MR. VOLLEY: Yes, I mean, we called the, the County. They were quite responsive. They came out within an hour. They identified what needed to be done. They sent a very large vehicle to come out. They took the manhole cover off the one you're showing. They hooked a line up to the fire hydrant. They put a gigantic snake down that manhole cover.

MR. MCCANN: Um hm.

MR. VOLLEY: The snake did what the snake does. It released the blockage. The water from the other manhole cover receded and that caused the sewage from stopping to come into my basement.

MR. MCCANN: Okay and how long were the County folks there, do you recall?

MR. VOLLEY: They were pretty quick, you know. We

called, they came out within an hour. Those guys called the big truck. That truck came within an hour and, you know, they were gone within an hour. You know, once the, the big truck came and the, they started working, it was over within fifteen minutes, I'd say.

MR. MCCANN: Okay. Let me show you another exhibit, if I could. And this is, do you see that map?

MR. VOLLEY: Yes, I do.

MR. MCCANN: This would be, I believe it's 48-C, Your Honor. And do you recognize, and I'll blow it up a little bit, Mr. Volley. Do you recognize where it is on this map that your house is?

MR. VOLLEY: Yes.

MR. MCCANN: And am I, am I circling the correct property right here?

MR. VOLLEY: Yes.

MR. MCCANN: Okay and to the best, your, your familiarity, I take it you're familiar with these manholes because you see them a lot, correct?

MR. VOLLEY: I do.

MR. MCCANN: Are, are the manholes that we just saw photographs of, are, are, are they 45745 and 45744, these two?

MR. VOLLEY: Yes.

MR. MCCANN: Okay, all right. Okay, thank you. How about, what, what are your feelings about the development at

large, Mr. Volley, in general, putting aside this issue? Moving on.

MR. VOLLEY: I mean, I'm opposed to the development primarily for the, the concerns that the folks prior to me have expressed. Primarily the current infrastructure being overburdened as it is and with the new development, which has taxed the infrastructure even more from a traffic, sewage and, and other issues.

MR. MCCANN: Okay, great. Your Honor, I'd move Exhibits 48-A, B and C in, and I have no other --

ALJ: 48-C is this, where's this map come from again?

MR. MCCANN: Same, Baltimore County's GIS open data portal.

ALJ: Okay, all right. Any objection to 48-A through C?

MR. MUDD: No.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Okay. Those are in. Let's see. Mr. Zimmerman, any, I'm sorry, Mr. McCann, were you finished?

MR. MCCANN: Yes, I was, thank you.

ALJ: Okay, sorry. Mr. Zimmerman, any questions?

MR. ZIMMERMAN: Actually, one or two.

ALJ: Okay.

MR. ZIMMERMAN: I have to ask you, Mr. Volley, with

reference to this blockage incident and the sewer that you describe, what, if anything, do you think that has to do with whether or not this development plan should be approved?

MR. VOLLEY: Well, it's my understanding that additional stress on the sewer system would be bad. It would have led to more sewage, potential sewage blockages and/or more sewage coming up in my basement.

MR. ZIMMERMAN: Okay. If that's it then, thank you. That's, you've answered my question. Thank you very much.

MR. VOLLEY: You're welcome.

MR. ZIMMERMAN: That's all, yeah.

ALJ: Mr. Wyatt, any questions for your neighbor?

MR. WYATT: I do. I just have a few. Good afternoon, Mike. I want to, you talked about this sewer problem on our Court being resolved pretty quickly. But let me, let me ask a few questions. My observation was your situation wasn't resolved quickly. How much, how much work, or how much damage did this sewer backup cause in your home and in your basement?

MR. VOLLEY: Well, I can say, it, there was significant damage. The, literally the plumber just left about a half an hour ago to do the final repairs to the basement. It was less than it could have been because me and my wife had a shop vac and were, took about twenty-five large shop vacs of sewage and dumped it into our backyard as the plumbers were

working. But it, we've been without a basement since, you know, November 11th.

MR. WYATT: All right and so when you were talking about water coming up out of the toilet, we're really talking about effluent sewage, raw sewage materials, just so we're not confusing drinking water with what you experienced as a family?

MR. VOLLEY: No, it's the worst that you could ever imagine.

MR. WYATT: All right. And I, I, you, whether you may or may not have had insurance, are you able to quantify in terms of dollars the, the, the amount of damage that this sewer backup caused to your home and your loss? Are you able to quantify that?

MR. VOLLEY: Well, luckily we did have insurance for this sort of accident. It's a, it's a rider that needs to be added and by the grace of God for some reason I did it. And it's, I believe, it's in the neighborhood of $60,000. A portion of that also has to do with, you know, once they cleaned up the initial, you know, once we, the, the plumber or the County fixed the issue, the water receded, they came out and they ripped out all of the carpeting.

They also ripped out a bunch of the tile that was underneath of the carpeting and it turns out that that was asbestos tiling. So, we ended up having to take all of that out as well. So, over, over, you know, adding everything up, I

believe it was about $60,000.

MR. WYATT: All right and this, all, the extensive refurbishment or repairs took place over the course of weeks, if not months?

MR. VOLLEY: Well, today the plumber just left, so it's over two and a half months.

MR. WYATT: All right, thank you. I have no further questions, Your Honor.

ALJ: Mr. Sachse?

MR. SACHSE: I don't have any questions, thank you though.

ALJ: Okay. Back to Mr. Rosenblatt or Mr. Mudd, which one?

MR. MUDD: It would be me. Just a couple.

ALJ: Okay.

MR. MUDD: Good afternoon, Mr. Volley.

MR. VOLLEY: Hello.

MR. MUDD: The, do you know where the sewer connection is occurring for the subject property? Where, where it's connecting to the public sewer system?

MR. VOLLEY: Nope.

MR. MUDD: Okay. So, you don't know whether or not the sewage that would be generated from the subject property would actually come through your street?

MR. VOLLEY: Correct.

MR. MUDD: Okay and is there a, is there a stream or a flood plain behind your house?

MR. VOLLEY: Yes.

MR. MUDD: When you dumped your sewerage, did you dump it near that?

MR. VOLLEY: Nope.

MR. MUDD: Okay, all right. I have no further questions.

ALJ: Any re-direct, Mr. McCann?

MR. MCCANN: No, thank you, Mr. Volley.

MR. VOLLEY: Thank you.

ALJ: Okay. Thank you, Mr. Volley. All right. Mr. McCann?

MR. MCCANN: That's it, Your Honor.

ALJ: Oh, that was it, that was the total. Okay. Well, it's only 2:40.

MR. MCCANN: Yep.

ALJ: So, you don't have anyone else who can testify today?

MR. MCCANN: Well, I made an effort to make sure that we covered everybody, so I don't think we've missed anybody. We have two witnesses coming on the 10th.

ALJ: Okay. So, two, two more witnesses on the 10th of February.

MR. MCCANN: Yep.

ALJ: By the way, that's supposed to be like, that's supposed to be the last day but are we going to be able to finish?

MR. MUDD: No.

ALJ: Because we have rebuttal, I mean, the, yeah, rebuttal.

MR. MCCANN: Well, that's the first I've heard that we're not going to be able to finish but.

ALJ: I don't know, I was asking Mr. Mudd, Mr. Rosenblatt?

MR. MUDD: I think today's the first that we heard that Mr. McCann was going on to the next day and not going to use up an extra hour and twenty minutes that we had before 4:00.

MR. MCCANN: We agreed to two days, Your Honor. I mean, I said nothing to these gentlemen to the contrary, so, there shouldn't be any --

MR. MUDD: Your Honor, --

MR. MCCANN: -- there shouldn't be any complaints.

MR. MUDD: I'm not, and I'm not, the, the complaint that we have, Your Honor, and I'm sorry if this is going to sound frustrated but we've been at this for nine days. And I think the expectation of the other side is that they get to put on seven plus days of witnesses and testimony and stop in the middle of a day and then expect us to finish our entire

rebuttal on the rest of that day.

And we'll certainly do our best, but I don't think we can be expected to even know what's going to be testified to next time. And we need time to, to prepare a response. That, that's the frustrating part for us.

MR. MCCANN: Yeah, I won't, I won't speak to that. I'll let that stand.

ALJ: Well, in, in --

MR. MCCANN: It doesn't matter. It doesn't matter.

ALJ: So, so, and just to, and just, in response to that, you, the, the Developer gets a chance to rebuttal, and you get, you get to respond. And so, if, if there's not enough time on the next day, then there's going to be another day. There's going to be day eleven.

So, I mean, you know, I know that's not ideal but we're not going to cut it off either for the rebuttal testimony. So, I mean, that's the way, you know, I want these cases to, I want everyone to be able to testify and to put in whatever evidence you need to put in. And so, I was just trying to see if there's anyone else that we could call.

Mr. McCann, would you look at the attendees real quick? Most of the names I already recognize have already testified. Is there anyone, or in the panelists as well, is there anyone you don't represent that I could, I don't want to go through these names. If, if you recognize them all.

MR. MCCANN: To be honest with you our folks, I don't recognize, but they may be Developer folks. There's no one that I'm aware, looking at this list of participants that has expressed an interest to me to testify. Either I represent or I don't represent.

ALJ: Okay.

MR. MCCANN: So.

ALJ: Right, right. I just don't want to call on someone if it's one of your clients. So, obviously Mr. Bruder, Mrs. Bruder, they are together. We had Ms. McGraw already. We had, I don't think we had Mr. Coggins, right?

MR. MCCANN: I do not recognize that name, yeah.

ALJ: Okay.

MR. MCCANN: But yeah, there are other folks, Richard Compton I think you said, --

ALJ: Yeah, yes, he's testified already. And so, Ms. Tinanoff, I think, did as well. Is that, was she one of yours, Mr. McCann?

MR. MCCANN: I do not recall that. Dean Merritt has testified.

ALJ: Dean was obviously, yes. I saw him.

MR. MCCANN: Erick Rockel, of course.

ALJ: Yep, he testified. Ms. Townsley?

MR. MCCANN: I can't remember, Your Honor, to be honest with you.

ALJ: Okay. Okay. Well, you're not --

MR. MCCANN: It'd be easier, I think it'd be easier just for you to go down --

ALJ: Yeah, I was going to, try to just go (inaudible). So, here's what I'm going to do just because we have more time here. I'm just going to see if we can get someone in to testify. So, just going through the list here. You're in the attendee's room. All right. So, Mr. Coggins, can you hear me?

MR. COGGINS: Yes.

ALJ: Did you have any interest in testifying or were you just listening?

MR. COGGINS: No, I'm with the Developer. I'm just listening.

ALJ: Oh, you're with the Developer, that's right. Okay, thank you.

MR. COGGINS: Yep.

ALJ: All right and Ms., Ms., Ms. Bruder, I'm unmuting you. Your husband just testified. Did you need to testify as well? No answer, okay. All right. I have a phone number 410-302, can you hear me?

VOICE: Yep, I'm just listening.

ALJ: You're just listening, okay, thank you. 410, the phone number is 410-296, can you hear me and did you want to testify?

MS. GREENBERG: Yes, this is Lauren Greenberg, I, I did get a chance to testify --

ALJ: You did.

MS. GREENBERG: -- at, for a few minutes at another hearing.

ALJ: You did. I remember you. I just, I have a number and I don't have a name.

MS. GREENBERG: Yes.

ALJ: So, that's why I --

MS. GREENBERG: Right, of course.

ALJ: Just checking. Thank you, ma'am. Okay.

MS. GREENBERG: Thanks. There was one thing about traffic that I, I feel like I'm the only one that's really mentioned it. It's just the feeling trapped to get in and out of the, I think it's four different intersections with, right within our neighborhood.

ALJ: So, you did testify about that last time. I'm, I'm --

MS. GREENBERG: Yeah.

ALJ: Yeah, and we have, so I have the notes from last time. I, you don't need to do it, you don't have to say it --

MS. GREENBERG: Oh, great.

ALJ: Yeah.

MS. GREENBERG: That's terrific. Thank you so much.

ALJ: All right, thank you. All right. Mr. Weiss, can you hear me? James Weiss? Weiss? James Weiss? Nope, no answer. Okay, and Ms. Frankonovich is with the law office. Okay. So, that's the attendees' room. And let me just see one more person on here was, (inaudible) just see if there's anybody we can listen to.

MS. WEISS: Hi, can you hear me? I'm Susan Weiss. I'm James' wife.

ALJ: Yes, I was getting to you next.

MS. WEISS: Oh, okay.

ALJ: You're here on the list. Did you want to testify?

MS. WEISS: Well, you know, I had written a letter that I sent to people in my community, but I hadn't been asked to testify. I'd be happy to, you know, say a few things based on that --

ALJ: Are you, are you Mr. McCann's, are you with any of the community associations that Mr. McCann represents?

MS. WEISS: I, I, I'm Seminary Ridge. I live on Tallyho Road right adjacent to where this development is going to be built. I'm at 8302.

ALJ: Okay and so, you had something you wanted to testify about?

MS. WEISS: Well, much of what I wrote in the letter has been covered. One of the things that hadn't been covered

when I wrote the letter (inaudible) --

ALJ: Hold, hold on one sec. Yeah, can you hold on one second? So, I just want to say, if you could please, I don't see you on, do I see you on the screen? Where are you?

MS. WEISS: I'm, I'm here. I can start a video, I guess.

ALJ: Yeah, if you could?

MS. WEISS: Let's see, how do you, can you see me?

ALJ: There you are. All right. First thing I need, just raise your right hand. Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. WEISS: Yes, I do.

ALJ: And one more time, give me your address.

MS. WEISS: It's 8302 Tallyho Road.

ALJ: Tallyho Road. Okay, go right ahead.

MS. WEISS: So, we've lived here since 1978 actually in this house. We've put on several additions, but we've raised our children here and our grandchildren, in fact, some of them live around the corner, five of them, on White Manor Drive. My, my daughter and her husband live in the old manor house on Manor, so, so Mr. George is their neighbor, actually.

And it's a very close-knit community. There's a lot of rebuilding going on on Tallyho now. Several of our friends have added to their homes and, and there's been also some

migration, as well, naturally. But, you know, we're, we've been very happy here.

And we've gone through a whole lot of, you know, change in terms of building up the community, the Johns Hopkins Center. There was, you know, a long time ago, we had that wonderful little ice cream place that now is, I guess, developed into some, another food emporium.

But it, the traffic has, as everyone has said, has just mushroomed in the forty some odd years that we've lived here. And it's very concerning. Especially, you know, when you think that there are no sidewalks on Joppa Road. And our children, you know, used to walk from Roland Run, where they were, where we were members at one point, to, to get ice cream or to go over and into the area where there, there was a, the, these food emporia.

And I, it, it was dangerous enough then. And I can only imagine what it would be like to add sixty-one more families to this community, that's already, I think, overtaxed in terms of, of the sewage, of the traffic, of the animals, of all the things that people have mentioned.

And I've been not able to come to all these meetings, but I've attended some of them. My husband actually has as well, James. And so, as we see this, you know, and we listen to some of the, of the testimony that's heartbreaking.

I, when I listen to Sister, was it Kathy McNamee from

the, from the Monastery, the Benedictine Sisters, you know, I realized that Johns Hopkins, where my husband and I have both been employed for the last fifty years, more or less, we just both retired on July 1st, is part of the problem in that, you know, they, they've skirted some issues with, with the zoning and so forth.

I, I just don't know what to say. I remember when, when Mr. Langford was alive, he told my husband that as long as he was alive, that cornfield was never going to be changed. It was always going to remain that way.

ALJ: So, we can't, we can't have testimony of someone who's not here because it's hearsay.

MS. WEISS: Oh, I know, --

ALJ: So, they can't cross examine the gentleman (inaudible) --

MS. WEISS: (inaudible).

ALJ: I know you didn't mean it, go ahead.

MS. WEISS: Yeah, as a matter of fact, I, I know, well, so anyway. I, I did call my lawyer, who happens to be at Venable, and he checked into it, and he said yes, the zoning was and, again, I, I, I don't want to go outside the, the parameters of what you want me to say.

I just, I can't, I guess I can't say enough about the concerns that everybody has, that people in the Meadows, Seminary Ridge people, especially those of us who are going to

abut, and our house actually does abut the development.

And, and you know, White Manor, Brookland, the whole Brooklandville area here is begging for this not to happen. And I don't know how I can say that more forcefully. That this is just a, just an error in planning, in urban planning and I don't know how it happened. But I'm just hoping that you, as, as a, you know, Judge of the Court, Your Honor, will look at all of this testimony and, and, and take it into consideration. That, that's all I have to say.

ALJ: And when you say you work at Johns Hopkins, is that the one, the buildings in Greenspring Station or is that downtown?

MS. WEISS: So, I work both at the Peabody and at Homewood. I, I am a professor in Romance Languages, now called Modern Languages and Musicology at the Peabody. My husband is a cardiologist and worked both at the downtown East Baltimore hospital and also at Greenspring.

ALJ: Okay.

MS. WEISS: He also --

ALJ: Greenspring, Greenspring, he works actually in those buildings. There's three, three Hopkins buildings, is that right, in Greenspring Station?

MS. WEISS: He was in Pavilion One, yes.

ALJ: Okay.

MS. WEISS: The Cardiology Division is in Pavilion

One.

ALJ: Okay and do you know when they were built, those buildings?

MS. WEISS: Hold on, he's here. Jimmy, when were they built?

ALJ: Oh, no, no, no, ma'am, I'm sorry. Sorry. He would have to testify. So, you're on the stand (inaudible) --

MS. WEISS: (inaudible) I would say, I would say they were built in the eighties. That would be my guess.

ALJ: Just, you have been here forty-seven years, I was just curious, if you had the dates --

MS. WEISS: Yes, I don't have it at the tip of my fingers. I'm sorry.

ALJ: Okay, that's no problem.

MS. WEISS: (inaudible).

ALJ: All right, understood.

MS. WEISS: Yeah, now he's asking me what the question was. So, I --

ALJ: I actually unclicked him and he was in the attendees' room, I unclicked him, but he didn't answer.

MS. WEISS: He's in the house, he just didn't hear it.

ALJ: Well, just pretend you're, you're on the stand right now in the courtroom so.

MS. WEISS: (inaudible).

ALJ: You are sworn in. So, I'm going to ask Mr. McCann, do you have any questions?

MR. MCCANN: No, other than I wanted to ask Ms. Weiss what her street address was, is, I, I may have missed that.

MS. WEISS: 8302, 8302.

ALJ: 8302.

MS. WEISS: Yes.

ALJ: Tallyho.

MS. WEISS: Yeah, we're the last house before the Brooklandville, we were next to Mr. Petty when he lived there and now the (inaudible) live there.

MR. MCCANN: Yep, and you mentioned Roland Run. I, I think there has been some reference to the, to that club during the course of the hearing. But where, describe where that is in relationship to Tallyho and Joppa, for instance.

MS. WEISS: Right, it's at the end of Tallyho and the intersection of Joppa, if you make a left, go right next to the Monastery, the entrance is on the right. So, that would be on the south side of, of, I, I'm not very good with directions, but the south side of Joppa Road.

MR. MCCANN: Okay. If you take a left out of Tallyho and head east on --

MS. WEISS: And a right into Roland Run and, and we're not members there anymore. We're, we're at a different country club, but we were there for many years when our kids

were little. And were on swim teams and so forth.

MR. MCCANN: Okay. Well, thank you. Nothing else.

MS. WEISS: Sure.

ALJ: Mr. Zimmerman, any questions? Mr. Zimmerman?

MR. ZIMMERMAN: Can you hear me?

ALJ: Yeah, I just unmuted you, go ahead.

MR. ZIMMERMAN: Oh, sorry. Yeah, so, Ms. Weiss, when you were talking about the 1980's, you were talking about for the Pavilions One and Two, correct?

MS. WEISS: That's right.

MR. ZIMMERMAN: Pavilion Three much more recent?

MS. WEISS: Yes, I think Pavilion One was the first and, and that was there for a while before they built Pavilion Two. And then there was a, you know, the, there was a tennis barn, I think it was part of Brick Bodies and --

MR. ZIMMERMAN: Greenspring Racquet Club.

MS. WEISS: Thank you, Greenspring Racquet Club. And then they also had a little, you know, part of Brick Bodies owned there, and then that became another club, I think, that's on, in Timonium now. But those were torn down when Hopkins bought it to build the surgical pavilion.

MR. ZIMMERMAN: All right and like others, you would have no objection if the Judge took a ride around the neighborhood?

MS. WEISS: She's more than welcome and I will, you

know, show her my, my clogged stream in the back, which I'm always calling the County to tell them to --

MR. ZIMMERMAN: Okay.

MS. WEISS: -- fish out the garbage.

ALJ: So, Mr. Zimmerman, I think you know I can't, I can't make visits to properties (inaudible) --

MR. ZIMMERMAN: Well, if all the, if all the attorneys would agree, I think that's possible.

ALJ: Well, let me just say I'm familiar with the whole area, so I know all the streets.

MR. ZIMMERMAN: All right.

ALJ: And so, there's no (inaudible) --

MR. ZIMMERMAN: Okay. So, considering --

ALJ: I know that I'm not allowed to do that actually, so, it's not as if --

MR. ZIMMERMAN: Well, if, I think attorneys can stipulate to something. But anyway, --

ALJ: All right.

MR. ZIMMERMAN: -- let me move on. The, Ms. Weiss, have you listened to most of the days of testimony in this case or much, some of it or what?

MS. WEISS: Some, I would say some. I don't know how many days it's been going on but --

MR. ZIMMERMAN: Okay.

MS. WEISS: -- we were in and out of town, yes, but I

have heard, you know, I've mentioned the ones that I've, that I've heard and I, you know, really feel for the people at the Meadows.

I know those of us in Seminary Ridge, of course, even with the speed bumps would prefer to have another access so that we're not the ones who have to pick up the, the, the slack or the, you know, the increased amount of traffic. But I think at the end of the day what we're all, what we're all saying is that we really don't want this to happen.

MR. ZIMMERMAN: Yeah. So, let me, having con, thought, given this a whole lot of thought, what would your reaction be if the Developer downsized to twenty or thirty units? How, how would you feel about that?

MS. WEISS: I, I don't, I, I'm not really at liberty to, I, or I, I don't know what I --

MR. ZIMMERMAN: All right.

MS. WEISS: Yeah.

MR. ZIMMERMAN: Okay.

MS. WEISS: Yeah, I mean, you're talking about one acre lots instead of these, these cluster homes, is that what you're asking me?

MR. ZIMMERMAN: Yeah, something like that, yeah. I mean, I know it's hard in the abstract. I don't mean to ask you an unfair question.

MS. WEISS: No, I know. I mean, look, I, I, I feel

for everybody in this case, on both sides. But when you, when you realize that we're already congested, as we are here, even two homes are going to make for more activity and more difficulty.

MR. ZIMMERMAN: Okay.

MS. WEISS: I'm just really worried about the environment, the environment as well, you know. We've talked about the sewage, we've talked about the animals, all of that, is going to be compromised by any additional building that goes on here.

MR. ZIMMERMAN: Okay. Well, thank you very much for your, your testimony. Thank you.

MS. WEISS: I wish I could have been prepared but.

MR. ZIMMERMAN: All right.

ALJ: Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse? You're muted again. You're still muted.

MR. SACHSE: (inaudible) same time. Can you hear me now?

ALJ: Yes, sir. Yep.

MR. SACHSE: Thank you. Ms. Weiss, if, you've been there since 1978?

MS. WEISS: Yes.

MR. SACHSE: And you were a member of Roland Run for

a while?

MS. WEISS: Yes. We were at Valley Country Club, then at Roland Run and now we're at Greenspring. So, we've --

MR. SACHSE: Okay. If you walked down Tallyho to Joppa Road.

MS. WEISS: Um hm.

MR. SACHSE: And took a right?

MS. WEISS: Yes.

MR. SACHSE: I'm just wondering if you can remember, and I'll ask you, as you go down right and you're walking west, --

MS. WEISS: Yes.

MR. SACHSE: State roads is on the other side of the street, is that correct?

MS. WEISS: That's correct.

MR. SACHSE: And on the north side of the street would be the fields that are to be developed if this development is allowed to go through, correct?

MS. WEISS: That is correct, (inaudible) --

MR. SACHSE: There are no --

MS. WEISS: -- yes.

MR. SACHSE: Sorry. There are no, no sidewalks there, right?

MS. WEISS: No, and I've fallen a few times walking.

MR. SACHSE: I understand. After you go past those

cornfields, there is an off, little office area --

MS. WEISS: Joppa Green, it's called Joppa Green.

MR. SACHSE: Right, I was going to say Joppa Green.

MS. WEISS: Um hm.

MR. SACHSE: Was that there when you first moved in in '78?

MS. WEISS: No, no.

MR. SACHSE: Then the next would be the entrance into Greenspring Station, the office buildings and everything for Hopkins, is that correct?

MS. WEISS: Yes, but none of that was there when I moved in.

MR. SACHSE: So, none of that was there. And I think you were talking about you could walk to Windy Valley, which is where the ice cream, soft ice cream was?

MS. WEISS: Yes, yes. Windy Valley, yeah.

MR. SACHSE: And, and that was, essentially, a straight shot with no development whatsoever back in nineteen seventy --

MS. WEISS: There was, there was a golfing range. I think it was and, and a greenhouse, a greenhouse --

MR. SACHSE: I was going to ask you if the golf range was there at the time.

MS. WEISS: The golf range was there. Yes, it was. And, and Bowers Greenhouse, I believe it was called. It was a,

greenhouses, yeah, um hm.

MR. SACHSE: So, in that period of time, everything that has been developed on the north side, including Joppa Green, Hopkins, Greenspring Station, the Wachovia building that's there, none of that was there, is that correct?

MS. WEISS: None of that was there. The only thing that was there on Falls Road was what is now Joey Choo's Restaurant in the back. It was called the Greenspring Inn, it was a restaurant.

MR. SACHSE: Right, right.

MS. WEISS: Okay.

MR. SACHSE: The Bar Association used to have its --

MS. WEISS: Yes.

MR. SACHSE: -- annual, what do they have, what are they called, the, doesn't, doesn't matter, there before they moved it. Okay, that, that's, have, have you walked that distance recently? In other words, from Tallyho down to where Windy Valley used to be?

MS. WEISS: Yes, I have. I'm actually a member of the Johns Hopkins women's walking group. And so, we do, but we can't walk there so we walk at Meadowood now.

MR. SACHSE: Well, I was going to ask, how do you walk because there's no sidewalks and --

MS. WEISS: It's very difficult and very dangerous and I have hurt myself a few times jumping into the, there's a

little gulch in front of the, the property where the Langfords live. In fact, there was a beaver once staring right at me. It, it is, it's not, it's treacherous to walk there and the kids still do it, I see them, and I worry about it all the time.

MR. SACHSE: Do you ever, you said that the walk club you're in goes over to Meadowood?

MS. WEISS: We're at Meadowood now, yes.

MR. SACHSE: Do you ever try to walk --

MS. WEISS: Oh, no.

MR. SACHSE: -- across the road at that point?

MS. WEISS: No, no, no, absolutely, no, no.

MR. SACHSE: Why not?

MS. WEISS: I mean, I, look, I, I'm not very bold. When I was in China a few years ago, I took a cab to cross the street because I couldn't (inaudible), yeah.

MR. SACHSE: That's all the questions I have.

MS. WEISS: Okay.

MR. SACHSE: Thank you very much, I appreciate it.

MS. WEISS: Sure.

ALJ: Mr. Rosenblatt, Mr. Mudd?

MR. ROSENBLATT: No questions, thank you.

ALJ: Okay. Thank you, Ms. Weiss.

MS. WEISS: Thanks very much.

ALJ: I appreciate it. All right. And let me just

make sure there's no one else here that we can call on. Let me just see and I see if, Ms. Tinanoff, can you hear me?

MS. TINANOFF: Yes.

ALJ: Did you want to testify?

MS. TINANOFF: No, I already testified at the previous hearing.

ALJ: That's what I thought. I did, but I have a list of people so I'm just making sure. Thank you, ma'am.

MS. TINANOFF: Thank you, bye-bye.

ALJ: Okay. I don't see anyone else on the list who hasn't already testified. I've gone through the attendee's room. So, I guess we don't have any more witnesses. I got to 3:00, which is, you know, okay, but probably is best that we use all the time. So, February 10 --

MR. MUDD: Judge Murphy, I'm sorry.

ALJ: Yes?

MR. MUDD: May, may I just be heard for one more minute?

ALJ: Okay. Sure.

MR. MUDD: I, I just feel like I need to do this for the record. And I know that I've expressed my frustration already. And I suggested at the beginning of the hearing that Mr. McCann had said that he only had one more witness and I, I do stand corrected, because that's not what he said.

But just so you understand our frustration, I, I have

an e-mail with Mr. McCann after our December 5th hearing, where he indicates to us that he thinks a half day would be sufficient. And then later in December, when we were picking days, he says that his witnesses are available today and tomorrow.

And, you know, when we here that we're, that things are going to be a half day and we talk to our client about it and we're budgeting time, we would have pushed in December to try and get three days if we had known this is what was going to happen.

And here we are on January 30th, likely in need of another day after next time, and, and we know that when we go to Kristin that February is going to be booked up, so we're going to be into, into March already.

ALJ: Yeah, February is, February is already finished. Actually, today the final calendar was done. I mean, I know you have the 10th. I'm not sure if there are other days that could, you could fit in there, but yeah, I hear what you're saying.

MR. MUDD: This is what really drives us nuts. So, I'm, I'm, I apologize because I know I'm a little bit heated here, but I just wanted you to know I'm not making this stuff up. And we're trying to do this as ex, expeditiously as possible and it's just frustrating for us. Thank you.

ALJ: Yeah, yeah. So, Mr. McCann, you know, I know,

and you're, and I understand your position is probably going to be that, you know, you're hearing from people who are telling you --

MR. MCCANN: No, well, it's not just that.

ALJ: -- (inaudible) to testify.

MR. MCCANN: It's not just that, Your Honor. It's not just that. An e-mail in November about the status of this hearing is as speculative, I mean, I don't think anybody on this call, attorneys included, would have expected we're going this long. And I don't have, it's unfair to put this all on me.

We have a number of attorneys on here. We have had a lot of cross and a lot of direct by other attorneys by me, so I have very, I tell my people all the time, I have very little control over, of the timing of this. So, for me to say in November, you know, whatever it was I said, I think it's unfair to go back that far.

Number two, yeah, I was available today and tomorrow, that doesn't, I also said I was, we needed a, a second day and, and, and asked for the 10th as well. So, I just don't have any, I have a lot less control than Mr. Mudd suspects I do about all of this.

And, and contrary to the suggestion, there's no games being played here with witnesses. So, I'll leave it at that, but we're all, we're all trying to get this done so, I just

don't think it's fair to, you know, accuse me of, of delay, purposeful or otherwise. That's not where we are.

ALJ: Sure, and, and so, I mean, I do think --

MR. WYATT: Your Honor, if I may, Your Honor?

ALJ: Okay, Mr. Wyatt?

MR. WYATT: The suggestion that just because I'm on the opposition side that I might be also involved in gamesmanship with the scheduling and putting all this on McCann, I think, is not fair at all.

ALJ: Um hm, um hm.

MR. WYATT: I have every interest in concluding this most expeditiously. I'm taking days out of working for other clients and on other matters. So, you know, I just, there's this open-ended suggestion that we prefer to have as many days as possible. That couldn't be further from the truth. And I think that's --

MR. MCCANN: Yeah, and that's, (inaudible) here.

MR. WYATT: -- (inaudible).

ALJ: Hold on, Mr. McCann. Mr. Wyatt wasn't finished. Go ahead, Mr. Wyatt.

MR. WYATT: So, I'm just saying, I, I feel compelled to bring it to your attention that --

ALJ: Yes.

MR. WYATT: -- while I am in opposition of this development, I, I'm not playing games with a calendar or am I,

or is there some collusion among those in the opposition, to make, stretch this out as many days as possible, which I think is what Mr. Rosenblatt and Mr. Mudd are suggesting.

It's not the case at all. I'm, I'm on the e-mails. Some people just are not available, and we can't convene these hearing dates at the pleasure of the Developer and, and if we could stay till midnight on some of these days, I would be happy to do it. But that's just not feasible.

MR. MCCANN: And, and I should be more specific. My two witnesses, we'll be done, we're not going to be all day on the 10th. So, the suggestion that, I mean, the real benefit here is the Developer, I don't know when this started, Your Honor, but the Developer is going to get weeks to prepare their rebuttal, weeks apparently. So, that's, that's where we're headed in this, but, and that's a great advantage, a great advantage.

So, and we can't respond to it, of course. So, I, we will be done, and I'm not going to, Mr. Mudd will try to hold me to how long, I've got two witnesses on the 10th, and we will be done, I anticipate, we will be done before lunch, or soon thereafter, so. I'll start early if we want to try, if the interest is getting done on the 10th, let's start at 8:00 a.m. Let's start, let's start at 7:00 a.m.

ALJ: I don't, I don't mind, 7:00 a.m. is a little rough, I think we, you know, we certainly could do like a 9:00

a.m. But the, the only thing is, you have to post the property, you know, so that you tell people ahead of time. It has to be posted because I can't, unlike the Board of Appeals, I can't just change the timing because of the notice issue. Unless you all, but I think you already, it's actually already on the County website at 10:00.

So, I'm going to get myself in trouble with the people who schedule because it's there already. So, anybody looking ahead is going to think, oh, it's at 10:00. So, to change it now is probably too late. But maybe if there's another day you could make, so that's the way that has to work, yeah.

MR. ROSENBLATT: We, we will jointly try and get another February day. If that's impossible, we're going to get one more day as close to February 10th as possible. And we will hope that that is more than enough to be done.

MR. ZIMMERMAN: Judge, can I add one thing? Our office is certainly not interested in seeing the case go for twenty days or whatever, and we've been cooperative. But I think it, it's sort of inevitable when you have no pre-trial discovery and witnesses come in who nobody has seen or know, known exactly what they're going to say, that that tends to lengthen things on, on all sides. And when you have a controversial case like this.

And I don't think Mr. McCann has been unfair from

everything I've seen. And, you know, whatever is, I, I don't know that that much gets accomplished with rebuttal or sur rebuttal or whatever. But whatever it takes and, I think, Judge, I just want to say so far, under the circumstances, I appreciate the fair way that you've handled the case. That's all I have to say.

ALJ: Well, I appreciate that, Mr. Zimmerman. So, one of the things we could do right now, you have exhibits. Has, have the rest of you had a chance to look at People's Counsel's exhibit? I know it's not his turn and technically he would come after the Protestants, but, you know, the exhibits he had, the, the most recent version of exhibits, he did have two witnesses, by the way, Mr. Rockel --

MR. ZIMMERMAN: Yeah.

ALJ: -- and Dr. Blum or, so that could be something at least --

MR. ZIMMERMAN: Right.

ALJ: -- has anyone had a chance? I guess Mr. Rosenblatt, Mr. Mudd, to look at --

MR. ZIMMERMAN: Yeah.

ALJ: -- Mr. Zimmerman's exhibits. Anything you object to or am I pushing that?

MR. ROSENBLATT: I honestly have not looked.

MR. ZIMMERMAN: All right.

MR. ROSENBLATT: One was a lot of legislation --

MR. ZIMMERMAN: Well, may, may I suggest, first of all, I'm confirming I have no more witnesses, okay? That's number one.

ALJ: Okay.

MR. ZIMMERMAN: Number two, I did send the letter January 12th, in which I indicated what my understanding is, what additional exhibits remain. I believe they're actually all public records, but I, maybe that could be handled in an expedited way next time.

ALJ: Sure. Just give everybody a heads up to look at those and, and, you know, --

MR. ZIMMERMAN: And if anyone in, in the next either before February 10th or after, can indicate which ones they want to object to, then, then that would limit the ones we need to discuss, so.

ALJ: Right. So, I'm just, that would take up, you know, less time the next time when you all need it for, for rebuttal. So, did you want to say something, Mr. Rosenblatt?

MR. ROSENBLATT: Yeah, if the, if I look and there's an issue, maybe I can call you, Mr. Zimmerman, before the 10th and we can talk through or come to some agreement.

MR. ZIMMERMAN: Yeah.

MR. ROSENBLATT: Just so we don't take up everyone's time.

MR. ZIMMERMAN: Right. We always, we always are here

to pick up the phone, yeah.

ALJ: And, and he also withdrew a bunch of exhibits too, so (inaudible) –

MR. ZIMMERMAN: We withdrew a few, yes.

MR. ROSENBLATT: We have no objection to you withdrawing exhibits, Mr. Zimmerman.

MR. ZIMMERMAN: Yeah, one we asked to remain as i.d., but that's, that is what it is.

ALJ: Yeah, well, that's in the file actually anyway, but.

MR. ZIMMERMAN: Right.

ALJ: So, so anyway, but and so, having said all that, I don't, I don't think anybody is to blame. We're all trying to get through this. And I do agree, it's just, you don't know who's going to, sometimes you don't know who's going to testify and who's not.

We also have people who are not represented by Mr. McCann, like today was an example. Other days have been an example where we've had people come in and testify. And I am trying to make sure that everyone here, you know, giving respect to the attorneys, who are also, you know, Protestant's in the case, to have them participate in the hearing as well.

And so, it, you know, it's the nature of it and so, this isn't the first, as, as the three of you know, I'd say Mr. McCann, Mr. Mudd and Mr. Rosenblatt, not the first ten or

eleven day hearing I've had with the three of you.

For some reason, whenever I have the three of you, it always seems to be, as my recollection, ten days, ten days long. And then when you add Mr. Zimmerman, well, that's, you know, Mr. Zimmerman, it's usually a couple more days when you add Mr. Zimmerman in it.

So, you know, over the years, I think we've all had these ten-day hearings. So, anyway, I would just see how you, you know, whether you, if you have another day, you can ask Kristin. I would just do that today because, you know, they'll probably be gone if not.

And you know they fill in with other cases that come up. We have certain ones that have deadlines when they, these are not zoning type cases, but they come up and they, as soon as they, we get them in the office, they have to be heard within ten days. So, you know, sometimes they're, things are filled in. That's what the deal is, so. All right?

MR. ROSENBLATT: Thank you.

ALJ: Okay, all right.

MR. MCCANN: Thank you, Judge.

ALJ: Thank you.

MR. MUDD: Yep, thank you.

ALJ: Thank you everyone. All right, appreciate it. So, I'm going to stop the record. We're off the record.

(OFF THE RECORD)

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, January 30, 2023, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 204 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 30th day of June 2023.

Christine R. Leary

(ON RECORD)

ALJ: Good morning, everyone. You're attending day eight, case number 08-0922 and 2021-250-SPH. Property address 2310 West Joppa Road. And this is the combined development plan and zoning case for the project known as Greenspring Manor. Let's have counsel for the record, identify themselves beginning with the Developer.

MR. ROSENBLATT: Good morning, Judge. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer/Petitioner.

MR. MCCANN: And good morning, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel for Baltimore County.

ALJ: All right. And we are in the Protestant's case. Mr. McCann, we left off yesterday and I think you had maybe another witness?

MR. MCCANN: Two more, including Mr. Wyatt.

ALJ: Oh, that's right.

MR. MCCANN: Yeah.

ALJ: Okay, all right.

MR. MCCANN: The first one, the first one would be Mr. Merritt, M-E-R-R-I-T-T.

MR. MERRITT: Good morning.

ALJ: Good morning, Mr. Merritt. All right. You

look familiar for some reason.

MR. MERRITT: Yes, I'm an, I'm an attorney. Long time ago I clerked for Judge Murdoch, that's probably where we ran into each other.

ALJ: Oh, okay, all right. Yep, all right. I didn't know, all right. That's great. Raise your right hand, please. Do you swear and affirm under the penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. MERRITT: I do.

ALJ: All right. Mr. McCann?

MR. MCCANN: Thank you, Judge. Good morning, Mr. Merritt.

MR. MERRITT: Good morning.

MR. MCCANN: Where do you live, sir?

MR. MERRITT: 3 Horseshoe Circle in the Heather Field community, right off of White Manor and I back up to Joppa Road.

MR. MCCANN: Okay. I'm sorry, one second. Sorry about that.

MR. MERRITT: That's all right.

MR. MCCANN: Let me pull up the map, which again, is Protestant's Exhibit 24-B, can show everybody where you live. Do you see that, Mr. Merritt?

MR. MERRITT: Yep.

MR. MCCANN: Okay. I want to direct your attention to where I believe you live and that is you said in Heather Field, correct?

MR. MERRITT: Correct.

MR. MCCANN: So, it was this --

MR. MERRITT: Just left an area, whoop, yep, right there.

MR. MCCANN: Okay. So, you're and I'm, what I'm going to do is I'm going to highlight that property in the record purple. And as you said, you, you back up to Joppa, is that correct?

MR. MERRITT: Correct.

MR. MCCANN: Describe the orientation of your house, where the driveway is and, and things of that nature.

MR. MERRITT: Sure. The driveway is right off of the circle and comes down the right side of the property from the top, yep. And then the house, you can, you can, it's, the way you see it there is facing that dir, that north direction and to the south, my backyard is, backs up to Joppa Road and then across the street the Roland Run Swim Club.

MR. MCCANN: Okay, great. How long have you lived there?

MR. MERRITT: Eight years.

MR. MCCANN: And who do you live with?

MR. MERRITT: My wife and three boys.

MR. MCCANN: Okay.

MR. MERRITT: A high schooler, a middle schooler and an elementary schooler.

MR. MCCANN: And you said you're an attorney?

MR. MERRITT: I work for, I actually work for a technology company, but I am an attorney and I also have a broker's license, been involved in both residential and commercial real estate transactions.

MR. MCCANN: Okay. The Heather Field community, we've mentioned it a couple times, but could you describe for the Judge what, what homes that, you know, comprises what area?

MR. MERRITT: Yeah, forty-seven, eight homes there, up to the, all of White Manor, all of Fox Hunt and Tallyho up until that sort of, the (inaudible) property, the pink at the top, purple/pink --

MR. MCCANN: Okay. So, this is Fox Hunt Lane right here?

MR. MERRITT: Correct.

MR. MCCANN: And this is White Manor Drive?

MR. MERRITT: Correct.

MR. MCCANN: And your court is not labeled on this exhibit?

MR. MERRITT: No, it is not, that's Horseshoe Circle, it's called, but it's a court.

MR. MCCANN: Okay, great. Prior to your eight years

at this property, did you live or work in the area of Greenspring Station?

MR. MERRITT: Yep, pretty much my whole life. I lived in the, another part of the Lutherville-Timonium zip code prior to this, before, and in Towson, grew up in Cockeysville and Hunt Valley and only, only time was a few years in college that I was away from the area.

MR. MCCANN: Okay. Have you sat, Mr. Merritt, through all or any portion of the hearing?

MR. MERRITT: Yep, almost all of it. But I do have a job, but I've been able to listen to almost, almost all of it.

MR. MCCANN: Okay. You feel comfortable talking about the proposed development plan?

MR. MERRITT: Yes.

MR. MCCANN: You're familiar with it, obviously.

MR. MERRITT: Yes, very.

MR. MCCANN: Okay and are you here on behalf of the Heather Field Association?

MR. MERRITT: Yes, I am. I'm, I am the President of the Heather Field Association and we have met and agreed to allow me to speak on behalf of them as well. So, both on behalf of that and myself.

MR. MCCANN: Okay and the formal name of Heather Field Association is?

MR. MERRITT: Is the Heather Field Association,

Incorporated.

MR. MCCANN: And how many members?

MR. MERRITT: We are not a mandatory homeowners' association. I believe it's forty-seven.

MR. MCCANN: Okay. Forty-seven, forty-seven members, I think you said there were forty-seven homes in Heather Field as well, right?

MR. MERRITT: Yes, yes. Oh, the, I'm sorry, I don't have it handy, the, our treasurer would have the exact number who've, who have paid or are up on their dues and official members.

MR. MCCANN: Okay. I'm going to show you an exhibit which we've marked as --

MR. MERRITT: I would, I would estimate about half but it, it varies wildly from who pays their dues year to year.

MR. MCCANN: Okay. It's voluntary as you said, right?

MR. MERRITT: Right, and only $15, $20.

MR. MCCANN: Okay, all right. Let me show you what has been marked as Protestant's Exhibit 45. Do you see that?

MR. MERRITT: Yes.

MR. MCCANN: Okay. Tell, tell us what this is.

MR. MERRITT: This is a, a Board letter that was approved by the Heatherfield Association Board that's elected by the members at our annual meeting. We gathered and met on

November, if you scroll back, November 15th.

MR. MCCANN: Uh huh.

MR. MERRITT: And discussed the, the primary issues, being sewer, traffic, density and it is signed there by, just electronically, by the, and approved by all of the members of the Board.

MR. MCCANN: So, this is an official written statement of the Association's position?

MR. MERRITT: Yes.

MR. MCCANN: Is that fair? Okay. Okay, great. As, as you just indicated, there are concerns or issues mentioned in this letter. And no need to, to repeat things, but I did want to give you an opportunity to, to express what the Association's concerns are. So, if you could, could do that, please?

MR. MERRITT: Yep. We, well, we are the, the Association that abuts the proposed development the most. We have the most homes along the line directly next to it. Most of our homes are close to an acre. I live on over an acre, just over an acre myself.

There are many other properties in the area that are over an acre. And we feel the density of, around eleven thousand, eleven thousand four hundred some square feet for a, a home is not consistent with the, the County's plan or the neighborhood or, or the surrounding areas.

MR. MCCANN: Okay.

MR. MERRITT: Our other concern, our other concerns are around, I'll try to be quick because I don't want to repeat, but our other concerns are around traffic. We, we've all seen how bad it is at, at Joppa and Seminary and the failed intersections.

But I also wanted to bring up, and I did, I did submit a map to you in case you want to pull it up, the other direction. I have, as, as I mentioned, I have three children in three different schools. And my wife and I are constantly going in and out of the neighborhood. I would, I would estimate probably fifteen plus times a day we're, we're coming in and out, between pick up, drop off, school activities, sports, all of that and we go --

MR. MCCANN: Two of you, two of you collectively, Mr. Merritt, you mean?

MR. MERRITT: Collectively, yeah, my wife and I.

MR. MCCANN: Okay. Go ahead, I'm sorry.

MR. MERRITT: So, we go both directions. Of course, you get on the highway you go, you go towards the west, northwest there. But also, we, I don't think it's been discussed in, in what I've seen on these hearings, is towards the southeast.

The Joppa Road and Thornton and Bellona intersections are absolutely horrible. And have been backing up consistently

since post-COVID. They would, so, if you see there the Royal Farms, --

MR. MCCANN: Yeah, just for the record, just for the record, I'm showing what has been marked as Protestant's Exhibit 46. It's an aerial photograph. Did you obtain this aerial from Google, it looks like?

MR. MERRITT: Yes, it's a, it's a Google map, screenshot.

MR. MCCANN: Okay. Go ahead. I'm sorry.

MR. MERRITT: Sure, so I just wanted to direct you to the Royal Farms there.

MR. MCCANN: Right here, yeah.

MR. MERRITT: Yeah. So, the, it, it will back up from that intersection and the Bellona intersection just to the right there, it will back up all the way past Old Court, probably up towards W. Joppa Road, West Joppa Road. Those, it will consistently back up all the way to there, especially if there is any sort of backup on the highway. Everyone uses these roads to, to bypass 695 or 83 and get around.

So, it, it can take me, it, sometimes it takes, I have a son at the Loyola and a son at Calvert Hall and one at Riderwood. And just to get to any of those schools, it could be, Riderwood could be five minutes away, or it could be thirty minutes away. And same thing with Loyola and, you know, it's more like ten or fifteen and Calvert Hall fifteen, twenty. But

they can easily double due to the backups at these, those intersections.

MR. MCCANN: And when you say backup, you mean cars heading eastbound or south eastbound on Joppa?

MR. MERRITT: Yes.

MR. MCCANN: Okay.

MR. MERRITT: Yeah.

MR. MCCANN: Okay, go ahead.

MR. MERRITT: (inaudible) ways, particularly eastbound.

MR. MCCANN: And what time of day is this, Mr. Merritt?

MR. MERRITT: That backup is more so in the 3:00, 4:00, 5:00 rush hour. On the other direction, I often see it, I can look out my backyard and see it backup toward from the Falls intersection. That, that has been discussed quite a bit.

MR. MCCANN: Okay. Say that again, from your backyard, which is where, approximately?

MR. MERRITT: My backyard, my home is marked on here with a little blue home upper, up higher there.

MR. MCCANN: Oh, I'm sorry, I'm way off.

MR. MERRITT: Yep.

MR. MCCANN: Yeah, let me, I'll move down. Right here, right?

MR. MERRITT: There we go, yep.

MR. MCCANN: Okay.

MR. MERRITT: (inaudible) you've introduced in other exhibits.

MR. MCCANN: Yep.

MR. MERRITT: So, I can see, it'll often back up and, if anything happens at that intersection, it'll just, it'll start coming all the way back to my house. I can see them out my backyard.

MR. MCCANN: You mean the intersection of Falls and Joppa?

MR. MERRITT: Correct.

MR. MCCANN: Cars heading west, west or westbound?

MR. MERRITT: Yes, heading into it. Heading northwest bound.

MR. MCCANN: Okay.

MR. MERRITT: There's also been an increased number of events happening on the Meadowood property. There was a lacrosse tournament where cars were parked everywhere, all over the grass. There were people running around on the intersection trying to cross it with not, I don't think there's crosswalks, there's definitely no crosswalk sign. So, I, I think that's, that's become dangerous.

Also, the property that's been discussed, the state, someone called it the State Highway's property or whoever is controlling it now with the state, that has become activated

recently, not only as a parking lot for trucks and BGE and tree trimming, but it is now a motorcycle training facility, apparently. They're using the parking lot to do motorcycle trainings or testing.

MR. MCCANN: When do you see that and how often?

MR. MERRITT: You can see it right now if anybody wants to go, they're doing it literally right now.

MR. MCCANN: Okay.

MR. MERRITT: I don't know if it's been going on for the past few weeks.

MR. MCCANN: And that we, Meadowood is, is labeled here on this Exhibit 46 --

MR. MERRITT: Meadowood is labeled, and the parking lot is just to the right of that. Yeah, you're, you're basically right on it. They're using all of that parking, those parking lots there. They have cones set up and motorcycles riding around, police motorcycle training, I think.

MR. MCCANN: So, just, just south, southeast of the intersection, right here?

MR. MERRITT: Correct.

MR. MCCANN: Okay, okay.

MR. MERRITT: So, these, these roads were originally not designed to cut through. Tallyho is a straightaway. It has become a drag strip. We have no sidewalks. We have a lot of elderly and young families of all ages, as I've, as we've

noted in the letter here.

And they use it as a, as a drag strip because it was not intended ever to cut through and it, well, maybe it wasn't intended but then it did cut through. So, the neighborhood believes that if anything is built, any sort of road is built over here, it should pass through as, as the County's master plan has (inaudible) as well.

MR. MCCANN: Okay. Anything else that you wanted to add that's perhaps not covered in your official statement?

MR. MERRITT: (inaudible) there's, there's nothing else, I believe, it's, sewer and drainage are a major concern. I actually don't, I live in one of the, there's a number of homes that have no basement, just a crawl space. I'm told that's because of a high-water table or, or water, possible water issues. There were water issues before I built the home that, that were remedied as I was buying it. Because there is no, and there's no basement, I believe, for that reason.

MR. MCCANN: Is that the case, is that the case for other neighbors, other neighbors of yours?

MR. MERRITT: Some, not, I couldn't tell you which ones have crawl spaces or, or slabs or, or basements. I can tell you I do not, I have just a crawl space.

MR. MCCANN: Okay.

MR. MERRITT: And then there, there was concern amongst the community about, you know, general health of the

Jones Falls, Chesapeake Bay, Roland Run, that's, that's noted here as well. So, not just their own personal homes, but the, the sewage seems to be at a capacity, and it's not been updated to handle even the current situation so that we believe no homes should be built for that reason as well.

MR. MCCANN: Okay, great. Thank you, Mr. Merritt. I'm going to, before I let you, I'll let you answer questions from the other attorneys, I'm going to move into evidence Exhibits 45 and 46, Judge.

ALJ: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection, thank you.

ALJ: Mr. Zimmerman, any objection?

MR. ZIMMERMAN: No, no objection.

ALJ: All right. Mr. Zimmerman, do you have cross?

MR. ZIMMERMAN: I do, I do, I do. I guess the first thing is could Mr. McCann share Exhibit 45? And scroll to the second page?

MR. MCCANN: It's slow today.

MR. ZIMMERMAN: Well, while, while he's doing, okay. I was going to say, I can ask a question or two while that's being put up. Okay, here we go. So, yeah, let's go to the second page, or third, yeah, yeah that, right. Are these pages numbered?

MR. MERRITT: It's just two.

MR. MCCANN: Just two.

MR. ZIMMERMAN: Okay. So, the second page. All right. Before I ask a question about a specific sentence or two, what would you say as to whether you often work remotely so that you're, you're at home from time to time during the day?

MR. MERRITT: Yep, quite regularly.

MR. ZIMMERMAN: And, as you said, you're, you're in and out to different schools and doing other things during the day, is that, do I understand that, --

MR. MERRITT: Yeah, schools, appointments, coffee, meetings at Greenspring Station, yep, --

MR. ZIMMERMAN: Yeah, so what, what level of opportunity does that give you to observe the traffic on Tallyho Road?

MR. MERRITT: Every hour and minute of the day, either my wife or I are in and out so. Like I said, fifteen, that might even be a low estimate on some days.

MR. ZIMMERMAN: Okay. So, the first sentence on page two about, I'm paraphrasing, the traffic using Tallyho Road as a cut through, --

MR. MERRITT: Um hm.

MR. ZIMMERMAN: What, you know, what is that observation? What's the basis for your saying that, --

MR. MERRITT: We believe, we believe it should be made fair amongst the neighborhoods. There's, there's a number

of different ways to cut, to get through from Seminary to Joppa and they're used, utilized on various basis, basis. If there's traffic backups on any of them, some people use Thornton, some people use Tallyho and then Mays Chapel Road is clearly marked to, to go through and exists and is ready, is ready to be put through (inaudible) --

MR. ZIMMERMAN: And what's your ob, yeah, I'm sorry, did you finish your answer?

MR. MERRITT: (inaudible).

MR. ZIMMERMAN: So, what's your observation, observation, if any, about cut through traffic in or around rush hours for commuters, commuters?

MR. MERRITT: Oh, yeah, it can, it, it, it, it is a lot. It's a lot more than just the people who live in the neighborhood. I'm familiar with most peop, a lot of the people in both Seminary Ridge and Heatherfield and there are a lot of cars and trucks that come through that are not part of it. They will even use our, I don't see it as much directly from my, from my front of my house.

But every once in a while it gets so bad that they use White Manor because they're just getting lost or trying to cut through any way and to make a turn, it can take mult, numerous minutes or more to turn out of the neighborhood on, on any given day, without an unusual backup. But when an unusual backup occurs, traffic can back up Tallyho and up White Manor.

MR. ZIMMERMAN: So, what, what are you saying as to whether you have, you're pretty familiar with the vehicles that are owned by the people in Heatherfield and even Seminary Ridge?

MR. MERRITT: Yes, yes, I think so.

MR. ZIMMERMAN: Okay. Okay and what's your observation or concern, if any, as to whether it's likely that the proposed development will cause some increase in traffic on Tallyho Road among other things?

MR. MERRITT: Yeah, it absolutely would, especially if it was only allowed to come out one direction. They would immediately come out of their neighborhood and turn up into Tallyho --

MR. ZIMMERMAN: Okay.

MR. MERRITT: -- to, to get somewhere.

MR. ZIMMERMAN: Okay.

MR. MERRITT: And that would, it would definitely increase. And if, if it's fam, if they're marketing this to families, as I believe they are, they're going to be just like me, you know, two, three, two and a half kids and traveling to sports and things, ten, fifteen, twenty times a day.

MR. ZIMMERMAN: Okay and with you, with you, what is your real estate background and to what extent do you use it?

MR. MERRITT: I own my own boutique brokerage. We do commercial and residential. The commercial side does some

restaurants and, and things, and retail. The residential side, I have a few people who hold their license under mine and do residential real estate transactions. It is not my full-time job, but something I keep up with and the people under the real estate agents that are within the brokerage do do, do it regularly.

MR. ZIMMERMAN: Okay. Do you have a separate real estate office, or do you work that from your home?

MR. MERRITT: Since COVID, mostly home.

MR. ZIMMERMAN: Okay.

MR. MERRITT: We're required to have an office, but yeah.

MR. ZIMMERMAN: And did you take some courses or get some licenses for all that?

MR. MERRITT: Yes, part of my, I'm a licensed attorney in good standing with the Bar Association and a while back, a long time ago, about twelve, thirteen years ago, that allowed me to take the broker's license and I keep up with the continuing education as well.

MR. ZIMMERMAN: Okay and does that include some familiarity with traffic issues to be a broker?

MR. MERRITT: Yes, I would say you have to know the neighborhoods and, and the, the layouts of areas and people are usually interested in that sort of information. So, you have to have some working knowledge and the ability to research and,

and find more information about that.

MR. ZIMMERMAN: Okay, all right. So, turning to another point. You, you mentioned that the Heatherfield Association met on November 15th, 2022, is that correct?

MR. MERRITT: Correct.

MR. ZIMMERMAN: And was that a virtual meeting or how, how did that happen?

MR. MERRITT: That was actually, the, the Board met in person.

MR. ZIMMERMAN: Okay. But can you tell --

MR. MERRITT: Well, no --

MR. ZIMMERMAN: Go ahead, go ahead.

MR. MERRITT: No, go ahead.

MR. ZIMMERMAN: Can you tell me, however, whether you've been following this project since at least early 2021?

MR. MERRITT: Yeah, I don't know about early '21, but yeah, at some point in 2021 I was made aware of it.

MR. ZIMMERMAN: Yeah, Judge, I'd like to share one exhibit, namely the community input meeting. If I can, let's see. Let's see if I can, okay. I think I, part of it is on the screen. Let me see if I can scroll.

ALJ: It's not on the screen yet.

MR. ZIMMERMAN: Oh, it's not on the screen? Okay. I'm going to get some staff help here to make sure I've got it correctly done. Okay, got to click on WebEx, sorry. Okay.

Are we on the screen?

ALJ: Yes, it's small.

MR. ZIMMERMAN: Okay. This is, this is People's Counsel's seven. I'm, I'm just going to, okay, so here's the first page of the community input meeting minutes.

ALJ: It's really, really, it's really small (inaudible).

MR. ZIMMERMAN: Oh, okay. Let me see if I can, yeah. I mean, --

ALJ: That's good.

MR. MERRITT: That's good enough.

MR. ZIMMERMAN: We'll, yeah, we'll scroll when we want to look at something particular. So, so, we've got, just by way of background, we've got the eight pages of minutes, Jerry Chen managing, then let's, then we begin a bunch of e-mails and --

MR. MERRITT: (inaudible).

MR. ZIMMERMAN: -- and we can, we can spend five minutes and, and do a count, but let's assume I'm right that there are between fifty and sixty e-mails. So, I'm going to briefly scroll down to your e-mail. So, the first e-mail from Seminary Ridge. And starts out, I am extremely concerned about the density of the development and so on and so forth, I'm paraphrasing, right?

MR. MERRITT: Yes.

MR. ZIMMERMAN: That first one from Matthew Miller, Seminary Ridge --

MR. ROSENBLATT: Judge, objection. Are we just going to read the document into the record?

MR. ZIMMERMAN: No, this was background. I'm going to ask some questions.

ALJ: (inaudible) Mr. Merritt's e-mail, is that what you were looking for?

MR. ZIMMERMAN: Well, I know where it is and we're getting to it.

ALJ: Okay, all right. Go ahead and find that so we'll sustain the objection just because you're going to find it.

MR. ZIMMERMAN: So, here we go. I, by my count, it's the sixteenth e-mail, but you know, somebody will correct me if my count is wrong. So, this is dated, this is, I mean, Judge, everyone can read it. This is your e-mail April 26th, 2021, correct?

MR. MERRITT: Correct.

ALJ: Do you just, you just want to blow it up a little bit though so (inaudible) --

MR. ZIMMERMAN: Yeah, let, let's blow it up, let's blow it up.

ALJ: Just so we can read it.

MR. MERRITT: I recall it, yes.

MR. ZIMMERMAN: Yeah, so, by that time, you were already expressing some concerns, right?

MR. MERRITT: Correct, I mean, as soon as we heard about this.

MR. ZIMMERMAN: Yeah, and how, how did you learn about the project and what did you do to study or review it to come up with your concerns?

MR. MERRITT: We actually learned from it, from the Seminary Ridge Homeowners' Association. And then eventually, from, from the Developer.

MR. ZIMMERMAN: So, --

MR. MERRITT: We, we reached out to the County and (inaudible) believe the Developer then reached out to us.

MR. ZIMMERMAN: Okay. So, what can you tell us about the Developer's reaching out to you or you reaching out, any communications, meetings with the Developer?

MR. MERRITT: Initially, very little. I'm not sure they knew what Heatherfield was or that it existed. I think there was some confusion, as I, as I witnessed at the beginning of this, this, these hearings, the very first ones, when no one seemed to understand where Heatherfield was or that it existed. They just knew Seminary Ridge and, and the Meadows. Yet, we, we have the close, we are the closest ones.

MR. ZIMMERMAN: Right, and yet, correct me if I'm wrong, but did you say there was some sort of meeting or

communication between you or your people and, and any of the Developer's representatives?

MR. MERRITT: Eventually. Seminary Ridge brought us into a meeting, I believe. I, I, I don't remember very well. That was a while ago.

MR. ZIMMERMAN: Maybe one meeting?

MR. MERRITT: Yeah.

MR. ZIMMERMAN: Okay and what, what do you remember from that meeting?

MR. MERRITT: I remember seeing the map, the pic, the pictures.

MR. ZIMMERMAN: Okay.

MR. MERRITT: That's what I remember of, and seeing a lot of homes crammed into a very small area that (inaudible) --

MR. ZIMMERMAN: Do you remem, remember, I'm sorry, I didn't, did I interrupt you?

MR. MERRITT: I said very, very, a large number of homes crammed into a very small area that do not look like the homes around here.

MR. ZIMMERMAN: Yeah. So, do you remember if that meeting was before or after the community input meeting of April 27th, 2021?

MR. MERRITT: I don't. I'd be guessing if I, if I did. I don't recall.

MR. ZIMMERMAN: Okay. What I, one thing I'd like to

ask you about, we could spend time and scroll through, but if I'm, if I'm correct that many of the e-mails, if not all of them, begin with that same sentence, okay?

Paraphrasing, I'm extremely concerned about the density, I mean, we can spend a minute or two and just, you know, scroll through a whole bunch and, you know. So, how, how did it come to pass, how did it come to pass, if you know, that there's this, to some extent at least, a pattern of some similar concerns expressed in the e-mails?

MR. MERRITT: Either, yeah, I believe the community association circulated some information and, and, and suggested language to help people --

MR. ZIMMERMAN: Yeah.

MR. MERRITT: -- I, I believe, I'm not sure. That may have been Seminary Ridge that did that, I'm not sure.

MR. ZIMMERMAN: And do you recall whether or not all or almost all of the e-mails, well, let me, let me withdraw that for a moment. Do, do you remember ever seeing these, these various e-mails --

MR. MERRITT: Yes, yes, I remember --

MR. ZIMMERMAN: -- at some point?

MR. MERRITT: -- seeing these e-mails.

MR. ZIMMERMAN: And do you remember whether or not either every single e-mail or almost everyone comes from Heatherfield or Seminary Ridge.

MR. MERRITT: I think they come from both.
MR. ZIMMERMAN: Yeah --
MR. MERRITT: (inaudible).
MR. ZIMMERMAN: -- do you recall whether even one e-mail came from Meadows of Greenspring or Boxwood?
MR. MERRITT: Maybe one.
MR. ZIMMERMAN: Yeah.
MR. MERRITT: But I, I don't, I don't recall even, I don't remember it, so.
MR. ZIMMERMAN: Okay.
MR. MERRITT: No, I don't, I don't think there were, there were many, if any.
MR. ZIMMERMAN: And do you have any idea why that might be?
MR. ROSENBLATT: Objection.
MR. MERRITT: No.
MR. ZIMMERMAN: All right. Let me scroll up --
ALJ: Hold on, hold on, Mr. Zimmerman, hold on. Overruled.
MR. ZIMMERMAN: Okay.
ALJ: He did say no already. But he is --
MR. ZIMMERMAN: Right.
ALJ: -- the President of Heatherfield so --
MR. ZIMMERMAN: Yeah.
ALJ: -- I mean, --

MR. ZIMMERMAN: Yeah.

ALJ: -- to the extent he's the President of Heatherfield, he said he's familiar with the e-mails.

MR. ZIMMERMAN: Right.

ALJ: And he said that he recalled that he did not, there was maybe one e-mail from Meadows or Boxwood in there. So, I mean, and to his, you know, his position --

MR. ZIMMERMAN: All right.

ALJ: -- I mean, he has familiarity with e-mails, so overruled.

MR. ZIMMERMAN: Yeah, Judge, that is a learned ruling, thank you. Go ahead, Mr. Merritt.

ALJ: Oh, because I agreed with you.

MR. ZIMMERMAN: No, it's not --

ALJ: I'm kidding, Mr. Zimmerman.

MR. ZIMMERMAN: The, the depth and the articulation. So, Mr. Merritt, yeah, so, so before, before we get into a little more detail, what, what do you think explains the absence of opposing e-mails from Heather, from Meadows of Greenspring or Boxwood?

MR. ROSENBLATT: Objection.

ALJ: Yeah, overruled. Again, overruled. No, he's the, he's the President of Heatherfield. He's in a position that he, he may know, he may not know but (inaudible). So, overruled. Go ahead.

MR. MERRITT: Thank you, Judge. I believe that our neighborhood was, was not involved as I mentioned earlier. And that somehow the other neighborhoods were involved with the Developer and had been speaking to them and thought that, that their concerns were going to be addressed. And no, but no one ever reached out to us, so we felt like we, we needed to be heard.

MR. ZIMMERMAN: Okay. Let me show you something and see whether you might want to add some observations. So, I'm going into the minutes now. Okay. Let's look at page two of the minutes and I'm going to scroll up. I, I don't know if the entire page shows or there's pictures blocking part of it. On mine, there's some pictures blocking the --

MR. MERRITT: Just a bit, I can read it though.

MR. ZIMMERMAN: Okay. So, and part of mine is blocked, but there, there's, I'm paraphrasing, there's the --

ALJ: You have, you have to move the --

MR. ZIMMERMAN: Hm?

ALJ: You have to move the document over. If you move the document over --

MR. ZIMMERMAN: Oh.

ALJ: -- then kind of go up.

MR. MERRITT: You scroll bar on the bottom.

MR. ZIMMERMAN: Oh, on the bottom or --

MR. MERRITT: There you go, that works.

ALJ: There you go, now you've expanded it. Now go up with the arrow bar. If you go up to the top, you'll have the top of the page down.

MR. ZIMMERMAN: Well, my, my (inaudible).

ALJ: Right underneath of enable all features --

MR. ZIMMERMAN: Okay, here we go.

ALJ: (inaudible) that's it.

MR. ZIMMERMAN: Okay. So, so, we're talking about Mr., I'm referring to the section of the minutes where Mr. Rosenblatt is using a Power Point presentation, beginning at that paragraph.

And at that point, among other things, toward the middle of the paragraph, and I'm pointing to it, if connection of Mays Chapel Road will be emergency use only with bollards installed. Developer to have continued discussions with Department of Public Works to keep this access as emergency use only, unquote. So, does that indicate, what, what would you say to whether that indicates that the Developer had already reached out with Meadows of Greenspring and made a deal on --

MR. ROSENBLATT: Objection. That's, objection.

ALJ: Over, overruled. Go ahead, sir.

MR. ZIMMERMAN: -- made it, you know, made an arrangement, okay?

MR. MERRITT: Yes, --

MR. ZIMMERMAN: On, on the emergency gate?

MR. MERRITT: Yes, it is our belief that some arrangement was made with that neighborhood --

MR. ZIMMERMAN: Yeah. So, then you --

ALJ: So, wait a minute. Mr. Zimmerman, because you kind of testify again.

MR. ZIMMERMAN: All right.

ALJ: But Mr., but, but Mr. Merritt, why, why do you believe that? What information do you know as the President of Heatherfield that will lead you to that, other than reading it? Yeah, --

MR. MERRITT: Two factors. One, that we were not consulted or contacted and that they knew about this prior to us. And that there would be such a, such a suggestion of not connecting the road and making it just for emergencies. Why wouldn't it go through? The County's master plan says it should go through. Why, why in the world wouldn't it go through?

MR. ZIMMERMAN: Yeah, okay. All right. Let me ask you about a little different subject.

MR. MERRITT: Yeah. It also says lot sizes are consistent with surrounding communities and I believe that to be false.

MR. ZIMMERMAN: Yeah, okay. Thank you, thank you for, thank you for that. Okay. Anything else you want to say about Mr. Rosenblatt's Power, oh, let me, did you actually

attend the community input meeting or, or --

MR. MERRITT: I did. There may have even been a question from me on there somewhere or maybe they just read my letter. But I, I was on it, yes.

MR. ZIMMERMAN: Yeah, and was that virtual, that meeting?

MR. MERRITT: Yes, it was.

MR. ZIMMERMAN: Yes, it was. Okay. So, can, in, the entire time, so after that meeting, community input meeting, given all the e-mails and so on, including the references to concerns about density, did anyone from the development team ever reach out to you to offer to negotiate on the density and compromise on the density in any way?

MR. MERRITT: No.

MR. ZIMMERMAN: Okay. Let me show you, go ahead, Mr. Merritt, I didn't --

MR. MERRITT: No, no, nothing was offered, like no sort of negotiation or anything was offered.

MR. ZIMMERMAN: Okay. Let me go to page six, see if we can do this. Okay. I'm going to blow it up a little bit if I can.

MR. MERRITT: So, you're, you're testing my eyesight, Mr. Zimmerman.

MR. ZIMMERMAN: Yeah, I know, that's, we're going to try to do better. Let's see if I can, okay. Is this better?

Can you read it now?

MR. MERRITT: Um hm, yep.

MR. ZIMMERMAN: Okay. So, I'm putting the arrow, there's a question, quote, why not build the highly needed downsize on, downsize community on this site, question mark. Less actual density, exclamation mark. Do you happen to know who asked that question?

MR. MERRITT: No.

MR. ZIMMERMAN: No? Anyway, do you see Mr. Rosenblatt's answer? This is the development's proposal?

MR. MERRITT: (inaudible) I vaguely recall it may have been (inaudible).

MR. ZIMMERMAN: So, so anyway, you see the answer, quote, assuming the minutes are accurate, this is the Developer's proposal.

MR. MERRITT: Correct.

MR. ZIMMERMAN: Okay and that --

MR. MERRITT: There is, again, there is no alternative proposals, no, no, there was no ability to suggest something different. No, this was, this was it, take it or leave it. Or take it.

MR. ZIMMERMAN: Okay and there was never any, you know, different position in the year and a half after that or, you know, since April 27th --

MR. MERRITT: Correct. I've seen no other proposals,

--

MR. ZIMMERMAN: Yeah.

MR. MERRITT: -- thoughts, ideas, anything.

MR. ZIMMERMAN: So, what's your assessment of the quality of reaching out in reference to density?

MR. MERRITT: There's been none.

MR. ZIMMERMAN: Yeah, okay.

MR. MERRITT: It's been, yeah, as you can see, it's been a concern the entire time here. It's been a concern brought up immediately and no, no, no suggestions were made otherwise.

MR. ZIMMERMAN: Yeah, okay. All right. I don't think I need to share this anymore, Judge. So, I can --

ALJ: You just hit stop sharing.

MR. ZIMMERMAN: Yeah, right. Where is, where is, where is the stop sharing? I'm trying, I'm trying to find it.

ALJ: It should be right there on your screen.

MR. ZIMMERMAN: I'm getting some, I apologize for sometimes my technical --

ALJ: That's all right (inaudible) --

MR. ZIMMERMAN: -- well, wait a minute. Before we stop sharing, we have a, the former president of Heatherfield was Pat McGee. Can you see this, while we have it up?

MR. MERRITT: Yes, that was just an up, we were trying to update the, some things that were mentioned during

the hearing.

MR. ZIMMERMAN: And then, and then it says you said, quote, you may contact me as I am on the Board, Dean Merritt, Esquire, and you gave your e-mail address, right?

MR. MERRITT: Correct, because we had not been contacted very much so we wanted, I wanted to make sure that everyone had my contact, my information.

MR. ZIMMERMAN: And who asked the question, the, the last question, quote, what would it take for the Developer not to move forward with this project, unquote? Do, do you happen to know who asked that question?

MR. MERRITT: No, I don't.

MR. ZIMMERMAN: Anyway, then there's the repeat answer, this is the project that's being proposed, that's Mr. Rosenblatt.

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Yeah.

MR. ROSENBLATT: He's just reading and testifying.

ALJ: Yes, you're testifying --

MR. ZIMMERMAN: All right, all right. I, I can stop sharing, where's, let me, where's the stop --

ALJ: I sustain that objection, the last one.

MR. ZIMMERMAN: Okay, all right.

ALJ: So, just hit the stop share button.

MR. ZIMMERMAN: Oh, wait a minute, wait a minute,

wait a minute. I got it, I think I got it now.

ALJ: Yep, you did.

MR. ZIMMERMAN: Okay. It, it was, you know, rather small up at the. Okay, so, with, I, I can't help asking you this. With reference to the proposed emergency gate, do I understand that your association is, is in favor of a connection rather than an emergency gate. Is that --

MR. MERRITT: If any sort of road is built, yes. It should, it should be a full connection.

MR. ZIMMERMAN: Okay and what would your reaction be if it turns out that the proposed gate and the lack of connection conflicts with the residential performance standards and all of the Developer's arguments to try and get around that are without merit?

MR. ROSENBLATT: Objection.

ALJ: Yeah, sustained.

MR. ROSENBLATT: That is a ridiculous question.

ALJ: Mr. Zimmerman, --

MR. ZIMMERMAN: All right.

ALJ: -- I mean, you're asking him, --

MR. ZIMMERMAN: All right.

ALJ: -- first of all, I mean, he is an attorney. So, he may --

MR. ZIMMERMAN: All right.

ALJ: -- he may know about the residential, but you

can ask him whether he knows about the residential performance standards first --

MR. ZIMMERMAN: Okay.

ALJ: -- (inaudible) regulations. If he does, then, then maybe you can ask --

MR. ZIMMERMAN: Okay.

ALJ: -- the questions, but so you want to go (inaudible) --

MR. ZIMMERMAN: All right. All right. Thank you, thank you so much, Judge. Yeah, so, having listened to this hearing and being an attorney, to what extent, if any, have you familiarized yourself --

MR. MERRITT: I, I am familiar --

MR. ZIMMERMAN: -- with the residential performance standards?

MR. MERRITT: I, I am familiar, yes.

MR. ZIMMERMAN: And --

MR. MERRITT: I wouldn't say I am an expert, but I am familiar.

MR. ZIMMERMAN: But the street standard, the street connection standard?

MR. MERRITT: Yes.

MR. ZIMMERMAN: And would that be one of your, your concerns that the --

MR. MERRITT: Yes, yes, that's certainly one of our

concerns.

MR. ZIMMERMAN: (inaudible), yeah.

MR. MERRITT: It is one of our concerns, and, and, and we, we agree, yes.

MR. ZIMMERMAN: And that, and what would you say is to, if I suggested that would be a legal issue that the Judge will have to resolve --

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Yeah.

ALJ: Yeah, but Mr. Zimmerman, I mean, --

MR. ZIMMERMAN: All right. All right.

ALJ: -- I don't even (inaudible), I don't know what Mr. Merritt is supposed to tell you about that (inaudible).

MR. ZIMMERMAN: All right.

ALJ: I'll sustain that one, yep.

MR. ZIMMERMAN: All right. We'll, we'll, we'll deal with it in our post-hearing memo.

ALJ: Yeah, that's right, that's right.

MR. ZIMMERMAN: Yeah, okay. So, Mr. Merritt, yeah, unless you have anything else, I think I'm, I'm happy to have you here today and thank you for your testimony.

MR. MERRITT: Thank you.

ALJ: Okay. Thank you, Mr. Zimmerman. How about Mr. Wyatt, do you have any questions?

MR. WYATT: No, Your Honor, I do not have questions.

ALJ: Okay. Mr. Sachse?

MR. SACHSE: No, Your Honor. Dean, thank you. I have no questions, no.

MR. MERRITT: Okay.

ALJ: All right. Mr. Rosenblatt?

MR. ROSENBLATT: Yes. Good morning, Mr. Merritt.

MR. MERRITT: Good morning. How's your hip?

MR. ROSENBLATT: Hanging in there, thank you for asking. I'm going to show you, you've probably seen me do this with other witnesses, Developer's Exhibit 33. I'm going to zoom in on what I believe your property is down on the corner of Joppa Road. I've drawn an X and the initials DM. Can you just confirm I've correctly identified your property?

MR. MERRITT: Correct. The X is my property.

MR. ROSENBLATT: Okay. Thank you very much. You talked a little bit, mainly with Mr. Zimmerman, about your dealings with the Developer throughout the last couple years. I want to show you what has been marked as, sorry, Developer's Exhibit 31. It's a string of e-mails.

MR. MERRITT: Um hm.

MR. ROSENBLATT: And I'm going to scroll down to the bottom and just kind of go through some of this to talk about your recollection of dealings with myself and the development team.

MR. MERRITT: Yeah.

MR. ROSENBLATT: So, beginning on, on June 16th, 2021, e-mail from me, is this your e-mail address, dean@merrittinc.net?

MR. MERRITT: Yes.

MR. ROSENBLATT: Is it big enough that you can read it? I saw you kind of leaning forward.

MR. MERRITT: Yes.

MR. ROSENBLATT: Okay.

MR. MERRITT: That's correct.

MR. ROSENBLATT: And so, on June 16th, I e-mailed to your e-mail address, I am attaching the site plan and presentation we just discussed. Please keep in touch and let us know about landscaping or any other questions or comments. Thank you very much. You remember receiving this e-mail?

MR. MERRITT: Yeah, it was a long time ago, but I, yes.

MR. ROSENBLATT: Okay and then a couple weeks later, June 28th, e-mailed again, just checking to see if you have any comments or requested changes regarding landscaping or buffering for Tallyho. Please e-mail or call any time. Did you receive that e-mail?

MR. MERRITT: Yep.

MR. ROSENBLATT: Ms. Becker, who is the president of the neighboring association, she, she wrote back what, first on June 28th, 2021. She states that she went on vacation and sent

something to the neighbors, and this again is your e-mail address, Dean@merrittinc.net, right?

MR. MERRITT: Yes, yes.

MR. ROSENBLATT: Did you ever write back to any of the e-mails I sent you, if you recall?

MR. MERRITT: I'd have to check my e-mail records. If you want to give me a moment, I can do that.

MR. ROSENBLATT: You can. Here, let's, in the interest of time, let's, let's just keep going.

MR. MERRITT: But I believe we discussed it on the, on the call.

MR. ROSENBLATT: Right, okay. Aug, August 4th, 2021, another e-mail from me saying the Environmental Department asked us to eliminate the existing driveway. And I, I sent you a, a redline version of the plan that showed the new driveway layout. Do, do you recall receiving this from me?

MR. MERRITT: If I'm on it, I'm, I'm sure I did.

MR. ROSENBLATT: Okay and again, Ms. Becker wrote back on August 4th, 2021, do, do you recall if you ever wrote back to this e-mail?

MR. MERRITT: I don't recall.

MR. ROSENBLATT: And we continue on to November 4th, 2021, e-mail from me again to, including the dean@merrittinc.net e-mail address, with the hearing now approaching, I wanted to follow-up to see if you'd like to meet

one more time virtually, or have any questions or comments about the plan, we'd like to get on your calendars next week. And I offered to meet and again, do you, do you recall ever writing back to this e-mail from me?

MR. MERRITT: No, but I had previously written an e-mail in April that was shared, so, that, that you, you would have received as well.

MR. ROSENBLATT: Okay.

MR. MERRITT: That, that Mr. Zimmerman shared with our objections to the density.

MR. ROSENBLATT: Sure, you wrote that to the, to the County in regard to the community input meeting?

MR. MERRITT: Right. So, you had, you had our concerns on that.

MR. ROSENBLATT: Sure, but these, these offers that I e-mailed to you throughout 2021, Ms. Becker wrote back a couple times. You don't, you don't recall ever writing back as to the --

MR. MERRITT: Right, and they only offered regarding buffer, specifically buffer.

MR. ROSENBLATT: Your, your neighborhood, as you said, has a number of homes that do back to the development, right?

MR. MERRITT: That's correct.

MR. ROSENBLATT: Did you ever ask for any additional

landscaping or buffering for those homes?

MR. MERRITT: They, they may have, I, I don't know.

MR. ROSENBLATT: You're president, right, of the HOA?

MR. MERRITT: Correct. As I said, it's a, it's not a mandatory one. So, they would, they would be certainly able to do that on their own as well.

MR. ROSENBLATT: Okay and so you're, this is your e-mail address.

MR. MERRITT: Yes.

MR. ROSENBLATT: Do you know pmc, or pmcgee5@verizon.net is Pat McGee part of your Board as well?

MR. MERRITT: He's the past president before me.

MR. ROSENBLATT: Okay. So, these e-mails that went to your e-mail address and Pat McGee, that's two members of Heatherfield that received all these e-mails?

MR. MERRITT: Um hm.

MR. ROSENBLATT: Okay, all right. And in 2022, I just want to forward or, or show you what's been marked as Developer's Exhibit 32. And again, on August 5th of this year, e-mail from me talking about the hearing coming up on September 21st, stating it's been a long time since we talked, offering to meet. You never wrote back to this asking to meet again --

MR. MERRITT: At, at that point, we had, we had engaged counsel, so we had Mr. McCann, I believe reaching out to you.

MR. ROSENBLATT: Okay, got it. All right. You talked a few times about your concerns about sewer. And I think you stated that, something to do with the master plan and sewer. Can you explain your understanding of, of the sewer issues?

MR. MERRITT: My understanding primarily comes from watching these hearings and some of the, the studies. And also, being somewhat knowledgeable of the Hopkins development that took place. There were supposed to be sewer upgrades made for that, that were not fully completed.

The, the neighborhoods around here and, and the whole area have had sewage issues for, for many years. The infrastructure is very dated, in and around all of Baltimore. So, we, that's why we are concerned about it.

MR. ROSENBLATT: Now, you said you, your neighborhood has had sewer issues for many years. Have you ever had a backup into your house?

MR. MERRITT: I had one backup into my crawl space area..

MR. ROSENBLATT: When was that?

MR. MERRITT: Two thou, when did I move in, probably around, around 2018.

MR. ROSENBLATT: Okay. What was, what was the, how did you deal with that? Did you call Baltimore County, a plumber, what did you do?

MR. MERRITT: Yes, they, Baltimore County would come out and, and try to, I have a very long run in the back of my home. They would come out and, and try to pipe, pipe it, and then, if I needed to, a plumber would do it from in the house as well, which I had, I had done once.

MR. ROSENBLATT: Was it something that happened to every street on your, on your court or just your house?

MR. MERRITT: I don't know.

MR. ROSENBLATT: Okay. Any other knowledge of other backups (inaudible) --

MR. MERRITT: Mine feeds out the back to Joppa Road. So, I, whether it happened to my street, probably wouldn't, and I don't actually, I don't even know where my other, my neighbors feed out to.

MR. ROSENBLATT: Do you, do you know where the sewage from, from Heatherfield, from your neighborhood, goes in relation to --

MR. MERRITT: I know, I know where mine goes.

MR. ROSENBLATT: Okay. Do, do you know, let me just ask this question. Do you know where the sewage from your neighborhood goes, and if it's the same path that the sewage from the proposed development will travel through the County sewer system?

MR. MERRITT: Eventually it would, I believe it would.

MR. ROSENBLATT: Do you think it's the same right away or do you know or is this just (inaudible) --

MR. MERRITT: Well, define right away, I, you know, eventually they do, they do come together.

MR. ROSENBLATT: Okay. So, you, your understanding of the sewage system, you said you've, you've been listening to the hearings, right?

MR. MERRITT: Yes.

MR. ROSENBLATT: In this case, and you've read some of the documents. Are, have you talked to any expert on the subject? Either with Baltimore County or, or some kind of sewer expert?

MR. MERRITT: No, I, I've only read what, what's been made available here.

MR. ROSENBLATT: Okay. Well, let's talk a little bit about, about traffic. You said, I believe you said you leave your house, you and your wife, an average of fifteen times a day. And then you said ten --

MR. MERRITT: Yep.

MR. ROSENBLATT: -- to fifteen, maybe twenty times, is that right?

MR. MERRITT: That's right.

MR. ROSENBLATT: If you're leaving your house twenty times a day, how, what, what times of day is that? How, how would that even work?

MR. MERRITT: Sure, we'll, we'll go through today. I left this morning to take my son to Loyola, came back, went to the dentist, had dental work done already this morning. My wife left to take my son to Riderwood and returned.

She left, she works, she is a therapist in Towson and had two appointments today, so we're at five. We've got to go pick up all three of my sons. Two of them have, one of them has sports today, one of them is going to Copper Mine for a, I don't know what he's doing there, rock climbing or something.

I will probably go out and get some lunch today. She will probably go to the grocery store later. And, and tonight I have an event as well downtown. So, we're at, I think I'm at fourteen or fifteen right there just today.

MR. ROSENBLATT: And all that stuff, that's a typical day for you?

MR. MERRITT: That's a typical day.

MR. ROSENBLATT: Okay. When you go to, let's start with Riderwood, how do you drive from your house to Riderwood?

MR. MERRITT: I leave the neighborhood via White Manor, turning left onto Joppa.

MR. ROSENBLATT: Okay and from Joppa, travel --

MR. MERRITT: Then Joppa down to Thornton, left on Thornton and then left into the Riderwood neighborhood.

MR. ROSENBLATT: Is that the same if you're going, basically to, anywhere in Timonium? If you're going to Giant

or Shop Rite or any restaurants?

MR. MERRITT: No, sometimes we'll turn right or left, basically, we, we go out and check traffic before we leave, so, sometimes we'll go right, sometimes we'll go left.

MR. ROSENBLATT: What do you mean by that? On, on what road?

MR. MERRITT: On Joppa, whether we turn right or left on Joppa, or whether we turn right or left out of the, out of the neighborhood, you know, --

MR. ROSENBLATT: Okay.

MR. MERRITT: -- to head north or south and then head east or west.

MR. ROSENBLATT: Gotcha. And then would you take, I guess is Thornton Road the road you take over, if you're heading, what is that, east on Joppa, take Thornton up to (inaudible) --

MR. MERRITT: We might, or might go all the way to Bellona or we might go Falls if it's, if we know the traffic is not bad.

MR. ROSENBLATT: Okay.

MR. MERRITT: Thankfully our cars have GPSs and traffic so we're, we're constantly monitoring this.

MR. ROSENBLATT: Right. You talked a little bit about, I think it's police training going on across the street from you?

MR. MERRITT: Motorcycle, police motorcycle, I don't know, the training, testing, yep.

MR. ROSENBLATT: That, that was my question. How, how do you know what it is? Did, have you talked to anyone or?

MR. MERRITT: You can see giant trucks that say a number of different police associations, State police, Anne Arundel County police, they're all in police uniforms, they have police motorcycles with lights on them and there are about two thousand cones set up in the parking lot right now.

MR. ROSENBLATT: Okay (inaudible) --

MR. MERRITT: I can go get you a picture and have it, have it by the end of the hearing.

MR. ROSENBLATT: I don't need a picture. I was just wondering. It sounded more interesting than anything else. I was wondering how you knew it was training.

MR. MERRITT: It is. I didn't, I didn't go over and ask if I could, I could participate.

MR. ROSENBLATT: Okay. You mentioned the master plan several times and --

MR. MERRITT: Um hm.

MR. ROSENBLATT: -- you, in one respect you mentioned it when talking about the connection of Mays Chapel Road from Seminary to Joppa.

MR. MERRITT: Yes.

MR. ROSENBLATT: Have you reviewed the master plan,

the County's master plan 2020?

MR. MERRITT: Yes, it was shared with us by either the attorneys or, or maybe one of the area representatives, County Council representatives.

MR. ROSENBLATT: And, and, and you believe in the master plan it talks about connecting Mays Chapel Road from Seminary to Joppa?

MR. MERRITT: That the, the road was, was put there and designed to be connected if a road was ever built.

MR. ROSENBLATT: And that's again, that's part of, that's part of what you believe is in Baltimore County master plan 2020?

MR. MERRITT: I don't know the year, but yes.

MR. ROSENBLATT: Okay. Did you say there's drag racing that goes on in Tallyho?

MR. MERRITT: I said it's become like a drag strip.

MR. ROSENBLATT: Okay.

MR. MERRITT: Where people will step on their gas as hard as they can and, and people have fast cars and go straight up that road as fast as they can. And ignore the stop sign that's at the end.

MR. ROSENBLATT: So, where you live, which is not directly on Tallyho, right?

MR. MERRITT: Yes.

MR. ROSENBLATT: Do you still feel the impact of, of

traffic along Tallyho, whether it's cut through or just cars from your neighborhood along Tallyho?

MR. MERRITT: Yes, we, we walk that area a lot and we, we also drive it, we walk it and also, as I said, every once in a while they'll even come over to White Manor where I, where I can see them.

MR. ROSENBLATT: Okay. I want to talk to you a little bit more about, because you spent some time on this cut through situation, and but it's, correct me if I'm wrong, but I believe you, you said that one of your issues is you feel like it was decided that the gate would be part of this proposal for Mays Chapel Road and that it would be gated and your neighborhood would much prefer to see a full, open access, right?

MR. MERRITT: Um hm.

MR. ROSENBLATT: And that's something you, you have expressed as far back as the community input meeting that (inaudible) --

MR. MERRITT: Yes, and you, yes, and you assured us that this would be a decision for the Judge and that you would not be discussing it.

MR. ROSENBLATT: Okay and I guess my question for you, I'm, I'm showing you a copy of, of Developer's Exhibit 28. And asking you, you see how Mays Chapel Road, the, the path that would be from Seminary to Joppa Road is highlighted in

red, can you see that?

MR. MERRITT: Um hm.

MR. ROSENBLATT: And then the path, the existing path on Tallyho --

MR. MERRITT: Yes.

MR. ROSENBLATT: -- from Joppa up to Seminary is also highlighted in red? See that?

MR. MERRITT: Yes, I see that.

MR. ROSENBLATT: Okay and I guess my question for you is who do you think it would impact more if Mays Chapel Road is opened, full access from Seminary to Joppa? The people that live along Mays Chapel Road and in Seminary Ridge and Boxwood or the people on Tallyho?

MR. MERRITT: If it were opened, it would impact those four or so homes. If it were, if, if it were not opened, it would impact the fifty, sixty, seventy homes, I'd have to double check the count there, that are along Tallyho.

MR. ROSENBLATT: Well, you just said, you don't live on Tallyho, and you're still affected by the traffic along Tallyho, right?

MR. MERRITT: Yes, I, I, because I am, I walk there, and I use it all the time.

MR. ROSENBLATT: And you've heard the same thing, you've been listening to these hearings. You have heard that same exact statement that people walk in Seminary Ridge and

Boxwood, right?

MR. MERRITT: Correct.

MR. ROSENBLATT: And if this road is opened, it's going to have a pretty big impact on the people that live on, in Seminary Ridge and Boxwood, right?

MR. MERRITT: How many are right along the road there? That are directly impact, I would say they're impacted and there's direct impact or highly impacted and minorly impacted. I'm minorly impacted --

MR. ROSENBLATT: Are you minorly impacted? I'm sorry, I didn't mean to cut you off. Are you minorly impacted --

MR. MERRITT: Yeah.

MR. ROSENBLATT: -- is that --

MR. MERRITT: Yeah, I would, I'm, I'm less impacted than, less impacted than someone who lives directly on Tallyho.

MR. ROSENBLATT: Okay. So, is it your statement, you do not agree that there would be more of an impact to Seminary and, and Boxwood communities then to Tallyho if this gate is open and it's full access?

MR. ZIMMERMAN: Objection. I think Mr. Rosenblatt meant Meadows of Greenspring, just to clarify, just to help him out.

ALJ: Seminary Ridge would be above Heatherfield, Mr. Rosenblatt.

MR. ROSENBLATT: I, I'm, he's actually right. I, I'm talking about the two communities to the north of, of the project, so.

ALJ: Right, which is Meadow, Meadow, not Meadowood.

MR. ROSENBLATT: Meadows of Greenspring.

ALJ: Meadows of Greenspring and Boxwood.

MR. ROSENBLATT: Yep.

ALJ: Yep.

MR. ROSENBLATT: Thank you, Mr. Zimmerman. So, I'm going to ask the question again with the correct name. The Meadows neighborhood and the Boxwood neighborhoods along Mays Chapel Road, would you agree that they would face more of an impact than the homes throughout the Tallyho, Heatherfield, Seminary Ridge neighborhoods if this gate is open and the road is full access?

MR. MERRITT: They would both be impacted in different ways.

MR. ROSENBLATT: Okay.

MR. MERRITT: Positively, negatively, I don't know how you're, you didn't say.

MR. ROSENBLATT: Okay. You are, in part, a real estate broker, right?

MR. MERRITT: Correct.

MR. ROSENBLATT: Are you, is there a relation to the Merritt family, the Merritt properties?

MR. MERRITT: No, no.

MR. ROSENBLATT: Okay. How about, can you tell me in, in Heatherfield, is that a generally desirable area to live, neighborhood to live in Timonium?

MR. MERRITT: Yes, I think so.

MR. ROSENBLATT: Do houses sell pretty quickly if they go on the market in Heatherfield?

MR. MERRITT: As of, as of late, everywhere, everywhere does, even the worst neighborhoods.

MR. ROSENBLATT: Okay. Court's indulgence. Okay. I, I have no further questions. Thank you very much.

MR. MERRITT: Thanks, Adam.

ALJ: Mr. McCann, any re-direct?

MR. MCCANN: Just, just some quick follow-up, Your Honor.

ALJ: Um hm.

MR. MCCANN: Mr. Merritt, good morning again. With respect to the e-mails, I think they were Developer's Exhibits 31 and 32, do you recall that testimony?

MR. MERRITT: Yes.

MR. MCCANN: It sounds like you don't recall, sitting here today, whether or not you personal responded to Mr. Rosenblatt's e-mails, is that fair?

MR. MERRITT: That's correct.

MR. MCCANN: But was, Blandy Becker, was she, she was

on those e-mails as well, correct?

MR. MERRITT: Um hm, yes.

MR. MCCANN: Was she in any way serving as some sort of a spokesperson for that --

MR. MERRITT: Yes, we, we, we've worked together on this, so yes.

MR. MCCANN: And she responded to Mr. Rosenblatt, correct?

MR. MERRITT: Yes.

MR. MCCANN: And whether you did or did not personally respond to Mr. Rosenblatt's e-mails, is that any indication on your part of, of any unwillingness to at least listen to what the Developer had to say?

MR. MERRITT: Yeah, absolutely, we'd be happy to listen to anything that they had to say. It was pretty clearly stated that this was the plan and the only thing he asked was buffer, I think.

MR. MCCANN: Yeah, and you pointed that out that the e-mails were --

MR. MERRITT: I'm not a buffer expert or, so.

MR. MCCANN: Yeah. Well, yeah, you pointed out that the e-mails related to landscaping and buffer. Why, if you did not respond, why, why, well, why did you or why, why didn't you or anyone else respond to Mr. Rosenblatt's inquiries about what you wanted for proposed landscaping and buffer? Is there a

reason for that?

MR. MERRITT: Because our concern as with density and, and lot size, not with landscaping or buffer. And we had also eventually engaged attorneys and others to help us with this.

MR. MCCANN: Okay, great. With respect to this, this sewer problem that you had, the backup.

MR. MERRITT: Um hm.

MR. MCCANN: Do you recall, you said it was 2018 or so?

MR. MERRITT: Yeah, ballpark. It was before, we did some remodeling, I know it was before that, so, before 2020, I know that.

MR. MCCANN: When it was eventually resolved or temporarily or permanently, is that accurate?

MR. MERRITT: Um hm.

MR. MCCANN: Was the, was the, was the fix a, in your, in your bathroom in your house or was it a fix in the, the public sewer, do you know?

MR. MERRITT: No, I, I, they never were able to determine. They cleaned everything out and eventually things got flowing.

MR. MCCANN: Okay. When you say they, you mean the County?

MR. MERRITT: Both the County and the, and, and a

personally hired plumber.

MR. MCCANN: And do you know what exactly it was that the County cleaned out? Was that the public portion of the sewer?

MR. MERRITT: Yes, because they started from my furthest out, clean out, way at the end of my and, and went out from there because they --

MR. MCCANN: Where is that --

MR. MERRITT: -- they refused to work on anything in, on the other side.

MR. MCCANN: Okay and when you say the farthest clean out, what, what are you referring to?

MR. MERRITT: There's a cleanout that's almost to Joppa Road, out the back of my house. If you want to pull up the map and if you really, really zoom in I can point that out.

MR. MCCANN: Excuse my e-mails. Bear with me a second.

MR. MERRITT: And, and I think, and I also, I may be one of the more unique homes in the neighborhood that feeds directly out to Joppa Road.

MR. MCCANN: Okay. This again is Exhibit 24-B. I know it's not a very --

MR. MERRITT: Yeah.

MR. MCCANN: -- detailed map but it --

MR. MERRITT: And I know that too based, because I

have gas heat and a lot of the neighbors do not have gas, so natural gas service.

MR. MCCANN: Okay. What is it that you know, I'm sorry?

MR. MERRITT: I have natural gas service and I know many of the neighborhood, neighbors do not, they have oil.

MR. MCCANN: Okay and, and using this exhibit, you're highlighted here in pink.

MR. MERRITT: Yeah, so on the --

MR. MCCANN: Describe, yeah --

MR. MERRITT: -- if you can see the, the vague outline of my home, on the left, bottom left corner of the home is where it comes out of my house.

MR. MCCANN: Okay.

MR. MERRITT: And then heads south towards, yep, right there. And there's a clean out right, right there.

MR. MCCANN: In the corner of your property, the south --

MR. MERRITT: Yeah.

MR. MCCANN: -- west, southwest corner?

MR. MERRITT: Correct, correct.

MR. MCCANN: And that's where they did the work, the County?

MR. MERRITT: Correct, yes.

MR. MCCANN: Okay. Okay, that's it. Thank you, Mr.

Merritt, appreciate it.

MR. MERRITT: Sure, thank you.

ALJ: All right. Thank you, sir. Appreciate it. We'll mute you. All right. Mr. McCann, other witnesses?

MR. MCCANN: Just Mr. Wyatt.

ALJ: Oh, that's right. All right. Mr. Wyatt. Raise your right hand, please. Do you swear and affirm under penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. WYATT: I do.

ALJ: All right.

MR. MCCANN: Okay. Thank you, Judge. Good morning, Mr. Wyatt. I know you've mentioned a couple times where it is that you live, but just please remind us.

MR. WYATT: Yeah, good morning. My family lives at 4 Trelawney Court. We've, my wife and I moved there about twenty years ago.

MR. MCCANN: Okay. Any kids?

MR. WYATT: We, we raised two sons there. One is college age and still intermittently lives with us. But more or less they're, one is out, and one is on his way out.

MR. MCCANN: So, your children grew up in that, in that house at 4 Trelawney?

MR. WYATT: Yes, they did.

MR. MCCANN: Okay. Real quick I'll show you the map

again, Protestant's Exhibit 24-B, share. And we talked about Trelawney Court quite a bit. I think Mr. Gray is highlighted here in green. Where is it that you live on Trelawney?

MR. WYATT: So, we are just, we are just to the, just below the green Gary lot.

MR. MCCANN: Okay.

MR. WYATT: That triangular lot.

MR. MCCANN: Right here in red, I'm highlighting it in red?

MR. WYATT: Yes, that's where we live. That's 4 Trelawney.

MR. MCCANN: Okay.

MR. WYATT: And just of note, I don't think we are listed as an adjoining property owner on the development plan.

MR. MCCANN: Right.

MR. WYATT: Because between us and the, the Langford or development parcel is a triangular piece of open space that's owned by Seminary Ridge Homeowners' Association. But, but basically, if you're, and we'll get to some of the photographs later, it looks like one continuous piece of property. You walk out our backyard and you'll find yourself right in the cornfield.

MR. MCCANN: So, it sort of looks like you and Mr. Gray have a big backyard, I guess, bigger than it --

MR. WYATT: Right, perhaps a little bit bigger than

we actually own. We, our, our property is a little under an acre.

MR. MCCANN: Okay and that, I think we've talked about the size of the lots already, but that, your lot is same, maybe a little bit bigger than some of the other ones on Trelawney?

MR. WYATT: Correct. Across the street, they're probably a, maybe a, in the half acre range. But then you'll, you'll see on the, the west side of Trelawney --

MR. MCCANN: Um hm.

MR. WYATT: -- most of the lots are in the acre range. I think that's just the way the developer laid it out at the time, I'm not sure exactly why.

MR. MCCANN: Okay, great. Aside from being in that, in your home for twenty years, did you also grow up in the community, Mr. Wyatt?

MR. WYATT: I, I did. My family grew up, I, I lived, I've lived in 21093 pretty much my entire life, all but maybe college, law school and a few years when we lived out in Sparks. But I grew up on 12, at 1218 Clearfield Circle. My mother lived there until about 2015 and then she moved over to the Boxwood community, which is adjoining, we've heard of that in this hearing. And she still lives there.

So, but I'm, yes, I grew up. I was even in our neighborhood before the area where I now live was even

developed. So, we, we were original residents in Seminary Ridge growing up. I've been, been there my entire life.

MR. MCCANN: So, Clearfield Circle, just to, remind us where that is?

MR. WYATT: Clearfield Circle is more on the Seminary Avenue side of Seminary Ridge. So, if you, if you take, head in from Seminary Avenue on Tallyho.

MR. MCCANN: Right.

MR. WYATT: There's a, there's two of the first three intersections are Clearfield Circle.

MR. MCCANN: Okay. South of Seminary, right?

MR. WYATT: South of Seminary. Blandy Becker lives on Clearfield Circle to give you an example.

MR. MCCANN: Yeah, and I'm looking at the map now. Okay. How about your familiarity with the, the office and retail at Greenspring Station?

MR. WYATT: I would say uniquely familiar and very familiar, because I grew up in the area, I, I'm, Greenspring Station wasn't even developed when I was growing up. I, you know, my friends and I would, would be in the, on the Langford property collecting golf balls from the driving range that was there, the (inaudible) driving range. And then getting ice cream at Windy Valley.

None of the other developments had, had been in place at that time. So, yeah, definitely very familiar with, I've

watched it grow and I've watched the development over the years.

MR. MCCANN: Okay and you, we've all seen you, but you, you've sat through just about every minute of this hearing, correct?

MR. WYATT: I think I missed about a half hour total, but yes, I have.

MR. MCCANN: Okay and is it fair to say you're very familiar with what's being proposed by the Developer?

MR. WYATT: I would say that I am, yes.

MR. MCCANN: Okay and you also, just for the record, I know Judge Murphy knows this, but you also, part of your legal practice is, involves land use, development, zoning issues of some sort, correct?

MR. WYATT: I do a modest amount of that kind of work, but I do a substantial amount of work in real estate, either real estate transaction or real estate controversy is probably more than fifty percent of my practice.

MR. MCCANN: Okay and how long have you been practicing?

MR. WYATT: Thirty, I was admitted to the Bar in 1989, thirty-two, three years.

MR. MCCANN: Okay and where's your office? I think everybody may know that as well.

MR. WYATT: We're in, we're in Towson, in the

Campbell Building, at 100 West Pennsylvania Avenue.

MR. MCCANN: Okay. Tell us, Mr. Wyatt, if you would, what your concerns are about the proposed development.

MR. WYATT: Well, yes, I'll do so and I'll, I'm going to echo a lot of the concerns that have been expressed previously, but I'll try to amplify and maybe add to the discussion, if I, if I can.

But, you know, so my concerns are traffic, sewer and density. I'll start first with traffic. Because of where we're located in our neighborhood, we're usually going down Tallyho to Joppa Road, either going west into the intersection of Falls at Joppa and the Jones Falls Expressway or we're going to head to the east, the Tow, the Riderwood area or into Towson.

One of the things that struck me throughout this hearing thus far is that the Developer has really not addressed traffic safety issues. The sole focus appears to be on trip generation, theoretical trip generation, and congestion mitigation. And to me, these are completely separate issues. Let me break it down by intersection.

MR. MCCANN: Okay.

MR. WYATT: Falls and Joppa Road, there's a lot going on there. And I don't think very much of it has been discussed in this hearing so far. If you consider what that intersection actually is, it is Interstate 83, the Jones Falls Expressway,

coming to a, coming to a halt. So, the speed limit goes from fifty-five miles an hour to forty miles an hour when you approach the Greenspring Station area.

You also have Falls Road heading south, where people are anticipating being able to go fifty-five. They don't wait until they're on 83. They, they start accelerating right around Wine Merchant, which is a few hundred yards up the road before the intersection when you're heading south.

MR. MCCANN: Right.

MR. WYATT: So, to, to me, I think that's fairly significant about this, it's unique about this intersection. I can't, there's very few intersections where you have the end of an, of an interstate highway that, in, into, feeding into an F rated intersection.

The other thing I don't, it's certainly borne out by the photographs and the drawings, but this is a very irregularly shaped intersection. And by that, I mean, Falls Road literally is heading north before it turns at an extreme angle to intersect with Falls and 83.

Joppa Road does the same thing. It's heading north, it's heading north by northwest before it makes a severe turn so that it can be straight for less than a hundred yards so that it can be an intersection. But beyond that, it's not a, it's not a real type of plus sign intersection like was shown on all of the traffic engineering reports that we saw earlier

during Developer's case.

It's actually, and again, yeah, thank you. This is, I think (inaudible) exhibit but --

MR. MCCANN: This is Protestant's Exhibit 25. I just wanted to, I think we all talked about Falls Road a lot. But the Falls Road that you're speaking to now and the extreme turn is this, this portion of Falls Road here, right?

MR. WYATT: Correct.

MR. MCCANN: Yeah.

MR. WYATT: Yeah, so running basically north/south, it shows a little bit to, at, at an angle on this photograph. But Falls Road is actually running parallel with Interstate 83 or what we know is the Jones Falls Expressway. So, it's not Falls Road there. I mean, you have a multitude of different roads connecting and Falls Road is running parallel. It takes that sharp turn --

MR. MCCANN: Um hm.

MR. WYATT: -- so that it can intersect. Same thing with Joppa across to the right of the photograph. That's Joppa Road running alongside Greenspring Station and the, and the Greenspring Pavilions and offices and then it takes a, a sharp lefthand turn so that it can, there can be an intersection. So, I, I, again, I, I can't think of any, any intersections that are actually like this.

I believe, from having lived in the area and my own

observations, it makes this intersection way less safe than most other intersections. I, I think Jim Gary said he, he believes there's been accidents at that intersection on a daily or weekly basis. I would say weekly to monthly that intersection is either closed or partially closed because there's been a, some type of crash.

MR. MCCANN: This is Joppa and Falls, correct?

MR. WYATT: This is the Joppa, Joppa and Falls. And one, you know, one of the things and, and I think Ying Lom (phonetic) mentioned it yesterday, I didn't hear any mention of it during the Developer's case. What the Developer is proposing to do is very, it's, it's very diminimus as far as adding a lane to this intersection.

But it's also, they're taking away a median strip that exists. You can see it sort of on this photograph. There's a median strip between, it's, it's at the eastbound Joppa Road inter, westbound Joppa intersection as, as you approach its intersection with 83, there's, yeah, there's a good picture of it.

MR. MCCANN: This is, it's been marked as Wyatt Exhibit 2, it's been provided to your office, Your Honor. Is this, is this a photograph depicting that area you just described?

MR. WYATT: Yes, it is. And that's a median that's been there as long as I can remember and having been sitting in

that intersection probably hours of my life, I think it does provide a little bit of a buffer and some safety and space, space being preoperative here, from oncoming traffic and, and traffic that's taking, that's turning from the various turn movements that intersect, at that, at that particular part of the intersection. So, that's going to be removed.

There's been no mention about what happens to it. I guess we're going to, we're going to jam more lanes into the same amount of space, or maybe a little bit more space, but I'm not sure where those signs would go either.

They're pretty important signs because they, they alert that there's a separation and then they alert also you can't take a lefthand turn into the driveway into the gas station. So, that, that's one issue. If it was addressed, I, I didn't hear it addressed very adequately.

One other thing, and Ying Lom brought this up, and maybe one, one or two other witnesses have brought this up, but there, there are, there are, at this intersection, two, I would call them sub intersections. And these are the two entrances from Greenspring Station onto Joppa Road. One is at the snow, it's the snowball stand entrance --

MR. MCCANN: Um hm.

MR. WYATT: -- where there's a gas station. And then further to the east is the intersection into Greenspring Station. One of the, I guess, selling points that the traffic

study was promoting, is that by addition of a, by additional lanes for the east and westbound turning movements, that it would provide more green time for north/south traffic.

Well, it doesn't, you know, by my simple deduction, that, more green time north/south is going to create more red time east/west. What that's going to do is create stacking along those two, along the two sub-intersections that I'm talking about.

I think Ying, I think Ying Lom yesterday mentioned and I, I totally agree with what he's saying. When you're trying to pull out of that first sub-intersection, which is at the snowball stand, and you're trying to --

MR. MCCANN: Is that right here, Mr. Wyatt?

MR. WYATT: Yeah, correct, where you have your cursor.

MR. MCCANN: Okay.

MR. WYATT: If you're pulling out of there in any kind of traffic and trying to go left, it's nearly impossible to do so. And now we're going to be adding more traffic and more stacking and a longer light signal that's going to prevent, that will prevent people from making that lefthand turn.

I would tell you a lot of times, if I'm going to the gas station or to the bank or one of the area restaurants, instead of taking a left there, I end up taking a right and

looping all the way back around to Seminary to Tallyho to get, to get home, because you can't, you just can't make a left now. It's going to be worse at that intersection when you're stacking traffic because of a longer light signal to allow more green time north/south, well, it's more red time east/west. So, that's one thing.

And I think the same problem will, the problem gets replicated. Even to the east at the Greenspring Station entrance, --

MR. MCCANN: Just right here where my cursor is?

MR. WYATT: -- it's the same thing.

MR. MCCANN: Yeah.

MR. WYATT: And it's, it's magnified further up closer to the intersection because we'll have another lane there also that we have to compete with trying to take a lefthand turn. That's an extra lane of oncoming traffic that you're going to have to now account for in trying to make a lefthand turn. It's, I think it's going to create a more hazardous situation than it already is.

Meadowood Park. I heard Dean Merritt say it and I, I, all of us that live in the area know it, you know, it's been, been a recreational park since it was put up, put into the system probably fifteen years ago. But it, it creates a lot of unique challenges.

It's hosting recreational events and tournaments

throughout the year, and it usually involves overflow parking onto Falls Road, which creates a little bit more of a hazard if you're going north or south on Falls Road approaching or coming from that intersection.

MR. MCCANN: So, you're saying, where do cars park? You're saying cars park along Falls for overflow of the parking lot?

MR. WYATT: Yes, they, they'll park both on the, on the southbound shoulder and on the northbound shoulder right out from the entrances of Meadowood all the way until it, up into the intersection and I think there may be a no parking sign. You can't, you can't park past a certain point.

MR. MCCANN: On both sides of Falls, like here and here, where my cursor is?

MR. WYATT: I think it's a, even further to the north is where you're able to park.

MR. MCCANN: Okay.

MR. WYATT: On, on the shoulders on Falls Road. When, that parking lot fills up if there's a tournament. And then, you know, from, from that, you have to understand, there's no sidewalks at all in, in this area, anywhere in this area, until you get to, there's a small sidewalk in front of one of the, the offices further east on Joppa. But there's just no sidewalks. People are trying to cross this intersection. It's just very, it's a dangerous situation.

Further to the east, I don't know if it's going to be on this exhibit, but just sort of moving along out of that intersection, right, yeah, that's, right, right along near the Langford property, the Developer parcel on Joppa, there's a, there's a weird kink.

It's not really shown here but if you're heading east and you're following a car, you, you have to wait for that car to clear before you know if there's oncoming traffic. I, I don't know how it's been allowed to exist for so long, but it's a, it's a really strange, weird turn and a lot of it has to do with the topography in the area.

That, there's been, there was a fatal accident into the Langford stone gate, probably eight or ten years ago. A car, I believe, was traveling westbound and because of this kink or whatever situation the driver encountered, he slammed head, head long into the wall of the stone gate that is the entrance way into the Langford property.

I know there's a remembrance that's etched in the gate itself, that I think was put by the family, it was there the last time I looked, which is a, a month or two ago. I know it's still there. There's, a lot of times family members will come by and put flowers there. So, the sight lines are very bad --

MR. MCCANN: When you say kink, can you, when we're looking at eastbound Joppa here in this area which is

Protestant's Exhibit 25, that looks to be straight. Is that, is that outside this aerial or describe a little better, if you would.

MR. WYATT: It, it's outside of that area. It's going to be a little bit further to the east. I think people that travel Tallyho frequently like I do would understand that you can't anticipate oncoming traffic just because you can't see it until the vehicles in front of you clear.

MR. MCCANN: Okay.

MR. WYATT: That's just not going to be addressed. I'm surprised it hasn't been addressed already, but again, you know, I'm just trying to highlight some of the concerns that haven't already been discussed in this case. And that's, and that's one of them.

If you go into the Greenspring/Falls, that situation, you know, further north of, of the Joppa/Falls intersection, the situation is pretty bad. I don't know what improvements, if any, are going to be made here but it seems like it's going to just continue to get, to get worse.

I know over the last couple of, probably in the last ten years, we've noticed a great, a, a big increase in commuter traffic utilizing Greenspring Valley that probably they weren't using before. And that's probably as a result of, again, I'm speculating a little bit here, but 695 now eastbound from Reisterstown to Towson is, is pretty jammed up in the morning.

So, a lot of people have cleverly, you know, discovered that they can go through Greenspring Valley and they're now doing it. So, they'll, they'll come eastbound Greenspring, take a short jog down Falls Road and then a left on Joppa and that's, that's in the a.m.

And then in the p.m., you've heard others talk about where it backs up getting into St. Paul's School and that's basically backed up right through that intersection in, I think, I think that's a.m. and p.m., if I'm not mistaken.

Seminary, let's talk about Seminary and Falls Road intersection. Here, you know, it's very important, I don't know, we're, for some reason this development is not located in the traffic shed, I think somebody's mentioned earlier.

To me, it's still part of this integrated and synchronized corridor. It needs to be accounted for in this case, not in, just in Torch Hill, but as part of this case, I don't know how we're overlooking it but. There's, the traffic there is horrendous.

I mean, it, it backs up on to the St. Paul's School property, but then backs up eastbound all the way to Mays Chapel with regularity. I have a, there's one photograph I took that shows in the afternoon, which is not when people are dropping their children off at St. Paul's, but this was in the afternoon.

I had to be in that area, it was the afternoon, it

was day five of the hearing, so this is around 6:00. It's in my earlier packet, which we can get to early, later, but it's backed up to Mays Chapel on Seminary Avenue.

The other thing, you know, Tallyho, I, there's a lot of concern. You know, traff, traffic for me, in trying, trying to leave Tallyho and take a left on Joppa Road can be particularly difficult in the morning because there's a lot of eastbound traffic. Again, a lot of that is commuter traffic.

And I know a lot of our neighbors are very concerned about the cut through issue. We have a lot of families and small children that live along Tallyho. Many of us run, walk or bike, or skateboard on Tallyho all the time. And, you know, an increase in traffic there would just be unacceptable due to this development.

So, and I, I recognize sitting through this hearing, this, this whole issue of connectivity or a cut through, it is, in a way, it's created this false narrative in this case. It's, it's a, like al, to me it's almost like a, an illusory choice.

We don't really have to get to any of those issues if there is no development and that's sort of the, the, the approach that I, I would take. That the resolution of that issue doesn't need to happen. It's, it's very secondary, if, if it's even that.

I think even Blandy Becker said it's not a primary

concern of any of us. It's, it's a very remote concern in the event there is some kind of development. I just don't think that's been, been expressed in, in that sense. But I think it's important to say it.

On traffic. One of the other things that, to me, stood out in this hearing was Mr. Nebre, the Baltimore County traffic witness, clearly stated the district standard, which is how Baltimore County rates level of service, is based on the loaded cycle methodology. He was pretty unequivocal when questioned about that. That the district standard is loaded cycle methodology that Baltimore County uses for the basic service map.

So, based on that, even Develop, Developer's traffic engineer would concede there's going to be no change from the intersection, the three intersections, that are, that are rated F, they're failing intersections. Nothing is going to be changed, they'll still be failing.

I, there was some e-mails that were introduced earlier in the case from, I think it's Department of Public Works, or Highways, but it was interesting that the original responses from his department were probably the, the most accurate where they're telling the Developer that this, this is a non-starter development. That it's DOA. Why are, why would the Developer even move forward with it?

So, how do you go from, you know, I just have to

question. How do you go from there to now handing it to Judge Murphy to make a decision on this, with this tepid, you know, we're not really sure type of response? I, I have to agree with Gil Shellis (phonetic) who, who said that, that's really disappointing from a County agency employee.

And I know he's well intentioned and everything, but there needs to be more safeguarding here for the people that live in this area. And I just don't think it's being done in this case.

A lot of, and we know this and I'm, I'm sure the attorneys can argue it but, a lot of, a lot of the traffic issues here, they're based on theoretical trip calculations. But I think these, these theoretical trip calculations that we're hearing about are at, at odds with the reality of living in this area.

And take Mr., take Dean Merritt, for example. Dean Merritt is the Wyatt family ten years ago. We're in and out of our driveway with two boys, they went, they both went to Riderwood, then they went to Loyola. They were active in sports. Both of them became drivers. We were in and out of our driveway seven to ten times on an average day.

And, you know, now they're, they're out of our house and, you know, one of them is still there, but even now, we're still in and out of our, we're, we're in and out of our neighborhood five or six times, four to six times a day, not

one or two.

And we have three vehicles. When our one son is home and I didn't hear anybody talk about Amazon trucks or Federal Express deliveries, which everyone has noticed in the last couple of years, during COVID, have exponentially increased. So, those are more vehicles that don't seem to be accounted for anywhere here. And I think it needs to be considered.

Dean Merritt's experience, the Wyatt family's experience, it's shared by virtually every family in this neighborhood. And I think would be no different than families moving into the theoretical neighborhood we're talking about.

You're, I think Mr. Powell said these are going to be million-dollar homes for young families, young families with children that go to area schools and will no doubt be involved in a lot of extracurricular activities. In and out of their driveway, in and out of the development, multiple times a day.

I now see it on our own court, we've had some, some turnover in terms of, we're now one of the older families on the court, unlike when we moved in. And I see a lot of the younger families and they're, they're doing exactly what we were doing. There's two or three kids, they're, they're loading up the family rec, you know, R, SUV and heading out all the time.

And we, you know, we all go through, we all went through it and we're now witnessing the next generation doing

it. So, I just, almost have to, the theoretical trip calculations, they're nowhere near the reality that most of us in the area are familiar with.

Also, they don't account, one of the other points I want to make, those calculations don't account for trips out of a development, like our neighborhood, where you're making multiple stops and still traveling around the intersections of Falls and Joppa, Greenspring/Falls, Seminary and Falls, before returning to the development.

And those trips are multiple stop trips. You would go get gas, you might go to the bank, you might have a doctor's appointment, you might stop off at the restaurant, you might go shopping in Greenspring Station, you might have to go to the post office. There's a lot of things you can do before you're returning. All of that is going to require people going in and out of the parking lots, getting back on the roadways, going through those intersections. That's not picked up on a trip generation study that's, again, all, all theoretical.

So, these, these margins for errors, when we're, when we're talking about seconds, seconds here based on a theoretical traffic study, I, I don't, I don't think they're going to hold up to the practical reality that, that most of us have experienced in the area. That's, that's basically kind of it for, for traffic.

I have concerns about the sewer system. I'm not an

expert on sewer capacity or sewer flow or anything like that, but I do know that there's been other cases and, and studies, and now we're talking about adding several hundred more users onto a failing sewer line.

That doesn't seem like a great idea to me. I'm, I'm not qualified to speak to sanitation engineer issues, and I think I would leave that for others to do. Not qualified as, because we don't really see it. It, it's underground and it's not a problem until it's really a problem.

But we do know and, and I think there's evidence of this and there was evidence of this in another case recently that sewer, sewer capacity and sewer flow is an issue for development in this area. And I believe that is maybe the reason why there's been so little development in the area, other than the traffic issue.

Density. Developer wants to put houses on let's call it ten to twelve thousand square foot lots, basically. Sixty homes to be located on really the only developable part of this six, this forty-acre tract. Pretty tightly packed in there. I'm not a master plan expert but I do know in the T-3 transect that there should be low density housing. This doesn't strike me as low-density housing with relatively deep setbacks.

I think the Developer, and again, maybe these are the requirements of the development plan. But the setbacks are rare, are, are barely shown on the development plan. There's,

there's an illustration of, I think, it's three typical setbacks, but from even just a cursory review of the development plan, all of these homes are going to be more or less, right on, just off of the sidewalk. They're going to be right next to one another, I mean, with thirty, ten, ten yards of separation in most, in, in most cases.

And from where our property is, and where a lot of the neighbors, they're per, they, their vantage point, these homes are going to be located on the highest part of the development parcel, most visible to all of us that live in the, in the area.

We're going to, we're going to have a visual impact, not like most other developments and, you know, it's interesting, you know, we're even, we're discussing in the context of $1 million homes, whether or not a prospective purchaser would need a variance to build a deck. I mean, that's how, that's how small these lots are. And it's important not to lose sight of that.

That shouldn't even be a discussion in a townhome community let alone a $1 million comm, $1 million home community. So, I'm just concerned about the negative impact of the density where the other, other communities have far less density or, or were developed prior to the master plan.

I think from, and I, we'll get to the photographs that I took off of our back deck over the years, but I think, I

think we will be looking at, it, it's going to be like a stadium of townhomes basically.

Will be immediately viewable from our backyard because of the way this Developer has sought to configure this development onto a very small fif, about fifty or sixty percent of the property. It's like an amphitheater of, of McMansions. I know everybody uses that term these days, but they're very tiny lots.

So, there's not supposed to be any screening or a berm that I'm aware of on, on that part of the property. The, you know, it's going to be our property, my, and my neighbor's and then a sixty-home subdivision. So, you know, that, that's just a real concern for density. Environmental is, is --

MR. MCCANN: Mr. Wyatt, sorry to interrupt.

MR. WYATT: Yeah.

MR. MCCANN: I have these photographs and we mentioned the photographs. It may be a good time to show them now do you want to do that, or you want to wait?

MR. WYATT: Yeah, that, I think that's fine, sure.

MR. MCCANN: Okay. So, let me pull up, this is Wyatt Exhibit 1-A through H. One second. So, this is --

MR. WYATT: All right. So, this is, I guess this is A or, --

MR. MCCANN: This is A, yeah.

MR. WYATT: Okay. So, this is a photograph I took.

This is the afternoon of, I think, day five. It was a Friday afternoon. I had to be at, at two of the three intersections that afternoon running errands.

But that's looking north onto Falls Road where I'm turning from Falls Road heading across the intersection. So, that's southbound traffic on Falls Road at, at a little bit before 6:00 p.m. on a Friday afternoon. That, that's not even the direction of commuter traffic. That's what I intended to convey with that photograph.

MR. MCCANN: Okay. You're sitting in your car here travelling --

MR. WYATT: I'm, yes, I'm in my car.

MR. MCCANN: Okay. 1-B?

MR. WYATT: All right. So, this is, I believe it's a little bit earlier, because I, I'm, I'm heading southbound on Mays Chapel. I had to go where I just took the photograph and realized there's no way I, there's no way I'm going to be sitting in a line of traffic from Mays Chapel to Falls Road. That, that sign there is the intersection of Mays Chapel Road and, and Seminary Avenue. Traffic --

MR. MCCANN: So, you're, you're, you're actually north of Seminary right now, looking westward towards the intersection, well, towards --

MR. WYATT: Yeah.

MR. MCCANN: -- cars that are heading towards the

intersection of Falls and Seminary?

MR. WYATT: Yes, that's correct. I'm, I'm looking westbound, heading south where original Mays Chapel stops and then it picks up into the Meadows and Boxwood further to the east. But yes, I'm looking westbound. That is Seminary Avenue, traffic is backed up from Falls Road to Mays Chapel.

This is, this is in the afternoon. This is not when people are dropping off children at St. Paul's in the morning, this is the afternoon. And this is before we have Torch Hill subdivision or before we have this theoretical subdivision, adding traffic to the problem.

MR. MCCANN: 1-C?

MR. WYATT: All right. So, this is, this is just a random photograph I took from our back deck looking at our backyard. That shed is on our property. Beyond it is a tree line and then there's, there's the Langford, the Developer parcel in the background. That high, you can, you can see the high point in the development parcel. That's where the homes are to be built.

MR. MCCANN: Beyond the tree line?

MR. WYATT: Beyond the tree line. Yes, correct.

MR. MCCANN: And that tree line that we're seeing there, which, roughly how thick is that or how many trees are in the, width wise, would you estimate?

MR. WYATT: A single line of trees.

MR. MCCANN: Okay and is that --

MR. WYATT: We've had, we've had several of them fall over the last couple of years in windstorms. They're, they're pretty, they're pretty old trees.

MR. MCCANN: Yeah, and is that consistent with how that tree line runs along the border of what, what would be, I guess, the eastern border of the subject property --

MR. WYATT: That's about right. It's, it's, it's five to fifteen yards wide, depending on where it is.

MR. MCCANN: Okay.

MR. WYATT: It may be wider at one other point further to the south but right where that is, it's, it's not that wide.

MR. MCCANN: Okay, all right. 1-D?

MR. WYATT: Basically same, same picture.

MR. MCCANN: Okay. 1-E?

MR. WYATT: Same picture taken a few years earlier when Dad was a little more mobile playing with his kids in the backyard. But yeah, that's, that's showing it really in, in the wintertime. And again, that, that, that other shed is the Gary's property.

MR. MCCANN: To the right, yeah.

MR. WYATT: And the, behind it. And then if you, through the woods, you actually can see Mays Chapel. And I think that's probably Mr. Hallahan's home, I'm not sure.

MR. MCCANN: You mean the Meadows?

MR. WYATT: Yeah, yes, correct, it's Meadows. And I think that's where, where, approximately, where Mays Chapel Road dead ends.

MR. MCCANN: This photograph, which is the fifth page, photograph E, this was, was this taken during the fall or winter?

MR. WYATT: That, that looks like it's dead of winter.

MR. MCCANN: Okay and you're the old guy in the gray, I mean, in the white top?

MR. WYATT: I was thinking, thinking people would confuse me with Joe Flacco, but yes, correct.

MR. ZIMMERMAN: Excuse me, are these all Wyatt exhibits? All these numbers now?

MR. MCCANN: These are Wyatt 1-A through H. Okay. The sixth, or 1-F, what's this?

MR. WYATT: Okay. So, this is, I'm, I'm going to work one morning, probably late summer, early fall, and this is heading south on Tallyho. That's Fox Hunt, which connects to White Manor, off of which, where Mr. Merritt lives, Peter George lives down there to the left. But that's Tallyho. That, that's a stop sign at Fox Hunt, and I don't know, we're three or four cars deep there in the morning. Just at any, at a random time.

MR. MCCANN: Okay. So, this is facing towards Joppa Road, and you said there's a stop sign right here?

MR. WYATT: Correct.

MR. MCCANN: Okay.

MR. WYATT: And that, that van, that driveway right there to the right is Lynn Manthy's (phonetic) house.

MR. MCCANN: Okay. Was traffic beyond the, the stop sign, is it backed up all the way to Joppa here or?

MR. WYATT: No, it's not. No, I'm just saying, at that stop sign, we were three or four deep.

MR. MCCANN: Okay, all right. And you said, what time of year was this or, and what time of day, excuse me?

MR. WYATT: I'm going to guess 8:00 or 8:15.

MR. MCCANN: In the morning?

MR. WYATT: In the morning.

MR. MCCANN: Okay, all right. Next photograph?

MR. WYATT: This is Tallyho and the intersection of Joppa Road. It's, it's typical in the morning, two or three cars backed up, trying to take a lefthand turn and there's usually plenty of traffic east and westbound on Joppa Road, preventing us from doing so. Usually it's, it's a little bit of a wait.

MR. MCCANN: Yeah. This doesn't look like there's a whole bunch of cars on Joppa heading east or westbound, but is that, you've described that situation already.

MR. WYATT: Yeah, that, that's, that's what that shows.

MR. MCCANN: Okay, all right. And then the last photograph?

MR. WYATT: Same thing. I think I took, I think I took the photograph moments later, just showing --

MR. MCCANN: Okay.

MR. WYATT: -- we were there still.

MR. MCCANN: Okay.

MR. WYATT: And yeah, actually, one of the things, this reminds me because Dean Merritt mentioned something that's part of my reality every day. And it was when I, when I dropped our boys off at Loyola or took, was taking them to Riderwood. But it's, I would say generally Joppa is pretty free flowing right there in the mornings. There's traffic, but it's moving. But when you get up further to the east --

MR. MCCANN: Um hm.

MR. ZIMMERMAN: -- by Hunt's Church and then as you get down into the intersections near Thornton Road, where the farm store is, it, it's usually in the mornings, it's, you're, you're waiting several light cycles to clear through there. Then, depending on the time, and then in, in the p.m. rush hour, same thing if you're, if you're heading eastbound or westbound. It just gets very jammed up there. People again --

MR. MCCANN: Does it--

MR. WYATT: -- it's sort of, people have discovered it's a good commuter route in and out of Towson and in and out of some of the, some of the work and school environments that people need to get to.

MR. MCCANN: Where's our, where on Joppa eastward is there a, is the first light that you would come to if you were heading as you, as you just were, from Tallyho towards Towson, for instance?

MR. WYATT: Are you pulling up an exhibit?

MR. MCCANN: Yeah, I was going to ask you though and try to find an exhibit while I asked you. Do you, do you know where that, the first light you would hit as you head eastbound? Where is that?

MR. WYATT: It's going to be at Thornton Road.

MR. MCCANN: Okay.

MR. WYATT: Where the farm store is.

MR. MCCANN: So, there's no light at Joppa and Old Court?

MR. WYATT: Correct.

MR. MCCANN: Okay. Let me just pull it up real quick so I'm not confusing everybody. I think it was Mr., Mr. Merritt's Exhibit 6, the aerial, the large aerial. Okay. So, do you see that?

MR. WYATT: I do.

MR. MCCANN: Okay. So, east or southeast of the

beltway at Old Court Road, there's no light right here where my cursor is?

MR. WYATT: That's, that looks like that's Hunt's Church. So, there's no light there at Old Court and Joppa. And then a little bit further true east is where Joppa intersects with Thornton Avenue --

MR. MCCANN: Um hm.

MR. WYATT: -- or Thornton Road and, and there is a light there.

MR. MCCANN: Yeah. And there's, what's the situation like at Joppa and Old Court? Is there folks on Old Court heading eastbound as well?

MR. WYATT: Correct. It can sometimes back up past Old Court, past Hunt's Church toward our neighborhood in the mornings. But it's definitely pretty sketchy at that intersection if you're, especially if you're, find yourself on Old Court trying to make a left. It's probably not going to happen for you.

So, you're going to end up taking a right and maybe looping back around or, or you'll go through Ruxton, through Ellingham, but yeah, it's, it's not a great situation, especially if you're Old Court, if you're from Old Court direction. And then you get down into Thornton. By then it's, it's pretty jammed up and it, it continues to be jammed up through the next intersection heading to the east, which is at

Bellona.

MR. MCCANN: Okay.

MR. WYATT: And then after that, it actually then loosens up till you get into Towson.

MR. MCCANN: Yep, okay. Great.

MR. WYATT: It's a real choke point.

MR. MCCANN: Okay. Before I forget, I, I wanted to move in Wyatt Exhibit 1 and 2.

ALJ: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: Your Honor, I know Mr. Wyatt isn't finished yet. Would it be possible to take a five-minute break, bathroom break?

ALJ: Yes, it's almost ten of twelve, I should have done that before. Thank you, Mr. McCann. So, yeah, sure, five minutes.

MR. MCCANN: Great, thanks.

(PAUSE)

ALJ: All right. Back on the record.

MR. MCCANN: Okay. Mr. Wyatt, I interrupted you with photographs. Was there more that you wanted to add?

MR. ROSENBLATT: I'm sorry, I just, Mr. Zimmerman

doesn't appear to be back, I don't know if we --

MR. MCCANN: Okay.

MR. ROSENBLATT: -- want to wait one minute for him. I certainly don't, but I thought I'd point out that he's not back.

MR. MCCANN: That was very nice of you.

ALJ: Ms. Wheatley is here, she's logged in. Maybe she can see if he's, is he there?

MR. MCCANN: Maybe he's under his desk.

ALJ: He, I'm sorry, you said he's in the restroom?

MS. WHEATLEY: Yeah, he'll be right back. I'm going to go look for him.

ALJ: Okay. Okay, no prob, well, don't go look for him.

MR. ROSENBLATT: Sorry. The last thing I want to do is make it take longer, I just didn't want him to --

ALJ: No, not at all. I saw that he wasn't, but I thought maybe he was just kind of in the room there. So, let's just wait a second. All right. Well, there he is. Okay, all right. Mr. McCann, go right ahead.

MR. MCCANN: Okay. Mr. Wyatt, anything to add to what you already told us about?

MR. WYATT: Just a few thoughts. But before I go into those, the exhibits, are they all of the photo, you said one and two, but are they all of the photographs I submitted?

MR. MCCANN: I believe so, let me check.

MR. WYATT: Okay.

MR. MCCANN: Let me check real quick.

MR. WYATT: I think I submitted these as lettered exhibits, probably and confused everyone, but just as long as they're all getting into evidence because we've --

ALJ: They, they are, because there's one that's labeled as number one and that's the median strip between the Exxon and the right turn on Joppa. And then the other ones were labeled as 1-A through H.

MR. WYATT: Yeah, Exhibit 1 is actually supposed to be Exhibit I. I guess we didn't do a very good job of labeling it, but.

ALJ: Oh, I, okay. So, let's do that. Mr. McCann, let's, let's, let's, I'll just relabel them, so that should be 1-I.

MR. MCCANN: Yeah, sorry about that. I didn't --

ALJ: That's okay. So, we have one, one, you know, so it's 1-A through 1-I, is, are all your photos.

MR. MCCANN: Is that everything, Mr. Wyatt?

ALJ: Yeah.

MR. WYATT: As far as the exhibits. So, --

MR. MCCANN: Okay.

MR. WYATT: -- yeah, I mean, a couple, a couple other points that I don't think are, are repetitious from other

points made. Environmental. And I think this really goes to the overall parcel or tract, but one of the things the Developer sort of tried to claim, you know, that it was doing everyone a service by pushing back all of the homes to the rear, to the rear, rear of the property, you know, was creating this, this great buffer or, or some type of, you know, positive viewshed along Joppa Road.

I mean, I, it, if you look at, you know, my, look, looking at the development plan, you can't put any homes on the front of that property along Joppa Road. That's the reason why they're putting them to the rear.

It's not because they're trying to benefit the community in any, in any meaningful sense. It just happens to be you can't develop in, in that low lying area, which is very marshy and, and floods quite frequently. So, that, that's why it's getting pushed back. I just want to underscore that point.

The next, just sort of struck me about process and it, they're, they're worth, I think, noting. I, like a lot of my neighbors, when, when this development was being proposed in early 2021, we signed up for and attended a virtual community input meeting that Jerry Chen hosted.

And prior to the meeting, a lot of us sent, I think Mr. Zimmerman was scrolling through it earlier today, we sent comments and questions because it would help inform us about

this development. I, I was one of those e-mails. My e-mail is at page sixty-nine of the community input meeting minutes. And I asked a very specific question about what variance were, what variances were being sought by the Developer in this case.

Now, remember, this is in the spring of 2021, when the Developer clearly would have known what it was, what it needed, what variances or administrative approvals it needed to move forward with the development. And the quote, the response from the Developer on page four of the minutes, no variances are being requested. So, that, that was a, that was the starting point of dealing with this particular Developer.

We later learned, of course, this is not true. There, there are a myriad of discretionary approvals being sought by the Developer in this case. Some of which, I believe, were underway at the time of the community input meeting. I, I just note that, that community input meeting was attended by dozens of people, all had very serious, earnest questions of the Developer.

And to me, it's almost like the Developer was making a mockery of, of our questions. You saw Mr. Zimmerman scroll through some of the responses that the Developer gave. They were the, the same response to the same, to different questions.

Mr., Mr. Powell, in this hearing talking about, I think he said more community, I think, if I quoted him

correctly, he did, they did more community outreach here than any other project, any other project that he's been involved in. I don't know if that's forever or at TABCO.

But I, I, I'm sure Mr. Rosenblatt intends to get into this with me, but I did on one occasion speak with Mr. Rosenblatt, Mr. Powell about this, about this project at their invitation. And, you know, from my, I won't get into all of the details of the discussion, but I will simply say that I believe the outreach is designed to make it look like they're engaged in outreach without any meaningful willingness to engage on the issues and the concerns.

By that I mean, it, it was very clear, direct, direct questioning, you know, did the Developer have any interest in reducing the number of lots and the answer was, was a resounding no. And they were moving forward with this project and that's sort of how all that concluded.

So, I have to question now, you know, we're, you know, we're years down the road with all this outreach. Other than the two outlier people who have testified, I think it's Mr. Tanczyn and Mr. Hallahan, how is, how is, has there been outreach when every single neighbor and neighboring community opposes this development? You, you'd have to wonder what were they seeking to accomplish with this outreach.

I, you know, I can go into some of the evidence, but I'll, I'll just say like some of, some of the Developer's

evidence in this case, they just tend to marginalize or sidestep pretty important issues.

You know, let's talk about the development plan. It shows these lot layouts without really reference to, to setbacks. There's three typical lots that only show minimum side, front and rear yard setbacks. There's, there's no schematics at all that show, or at least I didn't see any in this hearing, that show what all these large homes on tiny lots are going to look like in the aggregate.

All we saw, all we saw during the, the presentation by Developer were these pleasing schematics of the various styles of homes that were going to be built. And they, they looked like they were sitting on about an acre or two acres of, of land.

But no one has shown us what this is really going to look like when you're on the street and you're looking at five or six homes within your purview. Again, that, that, that's important that we all know what this is going to look like when it's built.

You know, again, I mentioned the, you know, utilizing industry theoretical traffic counts that don't really account for what's going on. There's just margins of error and, you know, minimal growth rates. Again, I, I think they're going to be proven incorrect over time and these intersections will continue to get worse, not better, in the coming years.

So, you know, the suggestion that the minimal improvements being made, proposed by the Developers to the intersection presents some sort of great opportunity for us, it, it's not a great opportunity or else Baltimore County or State Highway would have done this years ago. They're, they're only doing it because they were requested by the Developer to approve this development.

So, again, I understand advocacy. I, I do this for a living. But to me, these things go a little bit beyond advocacy when, you know, we're, we're, there's missing parts to what the Developer is proposing and I'm concerned that if this is approved, there's going to be no accountability from this Developer in the future and by then, it'll be too late for any of us to do anything about it. So, that, that's sort of, you know, non-substantive, but just process related from my perspective.

MR. MCCANN: Okay. Thank you, Mr. Wyatt. Anything else before I let you go?

MR. WYATT: No, no, thank you.

ALJ: Mr. Zimmerman, do you have questions?

MR. ZIMMERMAN: I do, thank you. So, Mr. Wyatt, with reference to the community input meeting, you've heard Mr. Merritt's observations. What, if anything, would you say about whether you agree with his observations or have anything to add beyond what you've already said as well?

MR. WYATT: Well, again, a lot, a lot of us, I don't know if this is directly answering your question, but a, a lot of us submitted concerns. There were some of the, you know, identical concerns raised by many of my neighbors and, and from what we observed, we didn't get, we didn't get really direct responses or any meaningful engagement by the Developer. I think that's what Dean Merritt meant to say.

MR. ZIMMERMAN: Yeah. By the way, did the Planning Department ever interact with you all or make the slightest move to address any of your concerns?

MR. WYATT: No, it did not.

MR. ZIMMERMAN: No. All right. Now, you, you were here, were you not, this morning when Mr. Rosenblatt went through a bunch of e-mails relating to some, call it offer of potential landscaping, maybe buffer and, of course, Mr. Merritt answered those questions. Were you directly or indirectly familiar with these offers of landscaping?

MR. WYATT: I, I would say tangentially. I, there's probably, I'd have to go look. There's probably the similar language in an e-mail or two between Adam Rosenblatt and myself.

MR. ZIMMERMAN: Yeah. So, what's your assessment of whether those offers of landscaping should warrant you to give your total support to this development?

MR. WYATT: Well, I mean, my, my response would be,

it's sort of like being asked out on a date, I've already, I've already said no, because the, the conditions of the date are totally unacceptable, so why do you continue to e-mail me asking what car you need to pick me up in? I mean, it, to me it's, what's the point of further discussion? We're not interested in landscaping when the development is a non-starter due to these other very serious concerns.

MR. ZIMMERMAN: Yeah, does, are you familiar at all with John McEnroe, the tennis great?

MR. WYATT: I, I am, yeah.

MR. ZIMMERMAN: Does this, does this bring to mind what he always used to say when there was a problem like you cannot be serious? Yeah.

MR. ROSENBLATT: Objection, Judge. This is --

MR. ZIMMERMAN: All right.

ALJ: Sustained, Mr. Zimmerman.

MR. ZIMMERMAN: All right.

ALJ: But we get the point.

MR. ZIMMERMAN: Okay. So, in general, what's your, following up on your direct testimony, what are you saying, if at all, that in total, the reaching out is a promotional exercise to help them get to their $61 million that they think they're going to get from selling these houses?

MR. ROSENBLATT: Objection.

ALJ: Yeah, so, Mr. Zimmerman, come on. I mean,

you're, you're testifying again and Mr. Wyatt, he's, he's indicated, he's an attorney, I mean, you can just ask him a question he, he's --

MR. ZIMMERMAN: Well, I --

ALJ: -- capable of answering it, you know.

MR. ZIMMERMAN: -- that wasn't testifying. All right. Do you have anything --

ALJ: (inaudible) testifying, come on, Mr. Zimmerman, come on. Let's, let's --

MR. ZIMMERMAN: All right. Mr. Wyatt, --

ALJ: -- (inaudible), yeah.

MR. ZIMMERMAN: Okay. Thank you, Judge. I, I --

ALJ: Yep.

MR. ZIMMERMAN: -- will accept your instruction, okay. So, Mr. Wyatt, do you have anything to add to kind of summarize or recapitulate the gist of how you would characterize the, the reaching out efforts?

MR. ROSENBLATT: Objection. Asked and answered. It's not his witness. He's just asking the same question over and over that he already testified at length about.

ALJ: Okay. Mr. Wyatt, do you have anything add, further, to add in regard to the offer of landscaping or buffering that you haven't already mentioned?

MR. WYATT: Only sort of what has already been said by Dean Merritt. All those efforts were designed to appease a

concern relating to a development predicated upon what the Developer clearly understood would be non-opposition to the development. So, we weren't interested then, and we aren't interested now in, in talking about what, you know, to me is lipstick on a corpse. We're not interested.

MR. ZIMMERMAN: Okay, all right. Let me move on to another subject. Following up on your direct testimony about the concerns about the theoretical nature of the traffic projections, okay? So, I would like to share an exhibit, Judge. Okay. Okay. Let's see. Okay. This is actually Protestant's Exhibit 35. This is from the ITE manual.

ALJ: We don't see it, we don't see it.

MR. ZIMMERMAN: You can't see it? Wait a minute.

ALJ: Not yet.

MR. ZIMMERMAN: How about now?

ALJ: Yes.

MR. ZIMMERMAN: Okay, great. Great, great. Okay. So, I'm going to scroll down. You, you've seen this before, haven't you, Mr. Wyatt, the ITE manual land use section that Mr. McCann introduced?

MR. WYATT: I remember looking at it, yes.

MR. ZIMMERMAN: All right. I just, okay. So, so --

ALJ: Which, which number is this, Mr. Zimmerman?

MR. ZIMMERMAN: I believe it's Protestant's thirty-five. Mr. McCann will correct me if I'm wrong.

ALJ: Oh, Mr. McCann's exhibits?

MR. ZIMMERMAN: Yes.

ALJ: Oh, not yours.

MR. ZIMMERMAN: Yeah, that's not my exhibit, right this is --

ALJ: Okay.

MR. ZIMMERMAN: Yeah.

MR. MCCANN: It is thirty-five, yes.

MR. ZIMMERMAN: Yeah. So, well, first of all, do you remember whether or not Mr. Driban indicated the studies that were used by the ITE are not published, but rather were held internally by the, the ITE?

MR. ROSENBLATT: Objection. He's leading and testifying.

ALJ: Okay. Well, I mean, do you, you know, he actually asked him do you recall the testimony, so overruled. You, Mr. Wyatt, do you remember Mr. Driban saying that or not?

MR. WYATT: Not at this particular moment. I, he, he, I, it's likely he said something like that, I just don't remember it exactly.

MR. ZIMMERMAN: All right. Do you know whether there are any exhibits which show any of the studies that the ITE used to come up with their projections or estimates?

MR. WYATT: Not at this --

MR. ZIMMERMAN: Yeah.

MR. WYATT: -- it all, a little bit blends together--

MR. ZIMMERMAN: Yeah.

MR. WYATT: -- as far as the source of the data.

MR. ZIMMERMAN: Right. So, let's, let's assume for the sake of argument, at least at this point, that we don't have all the studies, or any of the studies, as exhibits or any details, okay? Assuming that I'm right about that, and that the studies have not been shown, how is it possible for anyone to compare the subdivision study with the proposed development here?

MR. ROSENBLATT: Objection. This is not an expert witness. He's proposing hypotheticals and speculation. Again, this is, this is an issue for Mr. Zimmerman to argue in his memo. We're getting nothing out of this for him to ask Mr. Wyatt.

ALJ: I mean, I have to agree. Sustained. I mean, Mr., Mr. Wyatt, I mean, he, he, he's an experienced attorney, he, he, but he's not a traffic expert. And you're, you're, again, you are, you're asking him hypothetical questions. He isn't being offered or qualified as a traffic expert. And, and he already said he doesn't know about the study so now you're, you're running over that and running right to where you want to be so.

MR. ZIMMERMAN: Well, may, may I just say something? This is not a question that requires an expert. It's a simple

question that anyone should be able to answer and is capable to answer in the absence of the studies, how can one make a comparison? That doesn't require any expertise.

ALJ: (inaudible) but it's an argument that you can make.

MR. ZIMMERMAN: All right.

ALJ: You can just make this argument, you can just use this document and make the argument, right? Why, why do you need him to agree with you?

MR. ZIMMERMAN: Well, all right.

ALJ: I mean, yeah, --

MR. ZIMMERMAN: Well, I mean, just about everybody in this case has been allowed to testify to various concerns and the issues and --

ALJ: And, and he, and Mr. Wyatt can, and he has. But, but to try to extract from him information that's in this document, you could just make the argument in your brief.

MR. ZIMMERMAN: Well, --

ALJ: Right?

MR. ZIMMERMAN: All right. Let me ask one more question and whether or not you'll feel this is the same type of question. Mr. Wyatt, you see the paragraphs, the three paragraphs under additional data? How would you say the, the averages of 1.5 vehicles per dwelling unit and the use of some studies from the 1980s, '90s and 2000s affect, one way or the

other, a comparison with the proposed development plan?

MR. ROSENBLATT: Objection.

ALJ: Just, you're asking him expert testimony, the issues on the IT manual.

MR. ZIMMERMAN: No, this is not really, my, in my view, it's not an expert question, it's simply how does 1.5 vehicles per dwelling unit compare with, to --

ALJ: You're, but you're not, now you're testifying, now you're testifying about what you want to say --

MR. ZIMMERMAN: Well, I was explaining, I'm explaining the reasoning for my question.

ALJ: I'll tell, I'll tell you what. If Mr. McCann feels that he needs to go into this area with Mr. Wyatt, he, he can on --

MR. ZIMMERMAN: All right.

ALJ: -- on, you know, re-direct in terms of traffic or something he missed, but --

MR. ZIMMERMAN: Yeah, I thought this, I thought this supplemented, this was really connected with his direct testimony, but I will, of course, respect your ruling and I will go to something else, okay?

ALJ: Okay.

MR. ZIMMERMAN: So, okay. So, I guess we can stop, stop sharing that. Okay. What I want to ask you is, in terms of the difficulties with the traffic safety, Mr. Wyatt, do you

recall Sister Kathleen McEnaney's testimony about the difficulties of making the turns from, you know, I-83 onto Joppa Road and, you know, having to have eyes in the back of your head and so on?

MR. ROSENBLATT: Objection. It's like he's never been to a hearing before. I, these are not legitimate questions.

ALJ: Yeah, I, Mr. Wyatt, were, were you here for Sister McAney's testimony?

MR. WYATT: I, I was. I do remember --

ALJ: You remember that testimony?

MR. WYATT: I do.

ALJ: Okay, all right. Overruled. Go ahead.

MR. ZIMMERMAN: Yeah, what, what, what would, what would you say as to whether you concur with that or have any additional observations one way or the other?

MR. WYATT: Well, I, I, I know it's clearly her reality and, and, and where they come out of their monastery is almost directly across from Tallyho. And, and I do know it's probably a little bit more dicey for them, coming in and out of that intersection than the, the much wider Tallyho.

MR. ZIMMERMAN: Yeah. But in terms of the observations about trying to make the turnout of I-83 north and then making that turn into Joppa Road before you get to, get to her property.

MR. WYATT: So, actually yes, now I, I remember exactly what she was talking about. Well, again, like I was saying. It's a very irregularly shaped intersection. So, this isn't a mere ninety-degree turn you're making. Basically you're, you're almost making a hundred and twenty or a hundred-and thirty-degree turn.

So, it really forces you, when you're merging from 83 onto eastbound Joppa, to not look, you're, your side view or rearview mirror are not going to pick up traffic that are take, that's taking a, that's heading eastbound before the merge.

And you really have to crank your head pretty far around to be at a, make sure you're clear or, or you just comp, completely wait it out. I've seen people have to open their doors to, to look behind them to make sure they're clear. That's what I think the sister meant by eyes in the back of, of her head.

MR. ZIMMERMAN: Okay, all right. Separately, what can you tell us as to whether the Greenspring Station parking lots and the Johns Hopkins parking lots are such that they're virtually full just about all day?

MR. ROSENBLATT: Objection. Leading, testifying.

ALJ: Yeah, you're testifying --

MR. ZIMMERMAN: Right.

ALJ: -- again. Just ask him a question. He's been here since the, before Greenspring was built.

MR. ZIMMERMAN: Yeah.

ALJ: I mean, he can answer.

MR. ROSENBLATT: The problem is, when he does this, the damage is done.

ALJ: I know, I know.

MR. ROSENBLATT: Then they just repeat, yeah --

ALJ: I, I know, I know. It's an administrative hearing so and Mr. Wyatt's an attorney, he's actually done these hearings and I've, I've had him as counsel so, so, Mr. Wyatt, do you have any observations about the Greenspring parking lot or the Hopkins parking lot?

MR. WYATT: I do. I, I live right around the corner so I'm, I'm there with pretty great frequency. Yeah, they're typically very full and at capacity. I noticed in the, you know, it's interesting. In the last couple of years, they've restriped the parking spaces and I've noticed they've gotten a little narrower and I think that's to accommodate more, more vehicles, but it's, it's pretty congested, it's pretty full there for most of the time.

MR. ZIMMERMAN: Okay and try to ask a not leading question. For the making left turns out of Greenspring Station, what, if anything, can you tell us about how that, how that goes?

MR. WYATT: Well, again, it's, it's one of these, you know, you, you're, you have to look. It's at, it's at a weird

angle because it comes in sort of, you know, where again, you're turning your head the, the other direction a hundred and ten degrees or, or something like that, to make sure you're clear.

Then you're, then you have to cut across three lanes of traffic at the first sub-intersection, which is the one from the snowball stand or this time of year Christmas tree sales, pavilion. It, it's, it's just extremely dangerous, you know, the experience that, you have to get it, the, the times you can do it are like the middle of a Saturday afternoon or Sunday when there's no traffic.

MR. ZIMMERMAN: Okay.

MR. WYATT: I mean, during the middle of the day it's just, you can't do it.

MR. ZIMMERMAN: And what about left turns into the Greenspring Station at that location?

MR. WYATT: I think there's a pro, restriction. The sign, there's a sign there and I think it's, I think it's during the afternoon that you're not supposed to be taking a left-hand turn into that first one. I don't know about --

MR. ZIMMERMAN: I'm not talking, I'm not talking about the Exxon one. But, are you talking about the Exxon one now?

MR. WYATT: Yeah, the Exxon one.

MR. ZIMMERMAN: Yeah.

MR. WYATT: I'm not sure too many people definitely coming off of 83 onto Joppa Road can see that sign. If they're trying to go left.

MR. ZIMMERMAN: Yeah.

MR. WYATT: It's, it's almost impossible to do that though, so very few people would be doing it. I think you can take a left into Greenspring Station at any time. I think the lefthand turn is unrestricted.

MR. ZIMMERMAN: Yeah, right. What observation, if any, would you add or make one way or another about how this all works when it's after dark?

MR. WYATT: Only that, I think there then becomes a, a diminishment in terms of visual, people's vision is impaired, --

MR. ZIMMERMAN: Okay.

MR. WYATT: -- things are less visible.

MR. ZIMMERMAN: Okay. All right. Just a, I'm sorry, I didn't mean to interrupt.

MR. WYATT: Yeah, I mean, I think that's really all I would be able to add. I, I, you know, because depending on the time of year, it could be dark when it's light other times of the year. I don't think it's impacting the, the traffic itself though. The, the numbers are pretty constant.

MR. ZIMMERMAN: Okay. Just a few more questions. Did, did you happen to mention the size of your lot and type of

house you have?

MR. WYATT: I did, I didn't mention the type of house, but we're, yeah, we're on a, it's just under one acre and it's a house, it's a col, you know, it's a center hall colonial type of house built in the mid or late 1970s. So, unlike today's homes, it's probably pretty broken up into a lot of small rooms where now people have them, you know, one bigger room, but.

MR. ZIMMERMAN: Okay. It's not a rancher?

MR. WYATT: No, it's not a rancher.

MR. ZIMMERMAN: Okay and what's your observation also as to the predominance of ranchers in Heatherfield?

MR. WYATT: I believe most of the homes there were originally ranchers or ranch style at one point. Now, that neighborhood has turned over a lot in the last ten or fifteen years. So, people are, like the Shellis', they're, you know, they're adding a second floor with dormers.

Like the Radebaugh's, they're, you know, basically, you know, building in the footprint and that's all they're doing. So, there's a, there's a lot of variety in that neighborhood now. But they, they were, they were ranchers originally.

MR. ZIMMERMAN: And what would you say as to whether there are in the variety still some ranchers?

MR. WYATT: It's, it's probably still predominantly

ranchers, but a lot of them have been modified to, to one degree or another.

MR. ZIMMERMAN: Okay and with reference to the models of the proposed dwellings that are shown in the pattern book, do you, have you seen those models?

MR. WYATT: I re, I remember them when they were shown on the screen during the hearing, yes.

MR. ZIMMERMAN: Okay and what would you say as to the extent to which, combined with the lots that they're proposed, to what extent are they similar to the pattern in Heatherfield and Seminary Ridge?

MR. WYATT: They're not similar at all. The, the homes that were shown on the schematics were, were very, were very narrow and tall to be able to be placed onto the smaller lots in the, in the proposed development.

MR. ZIMMERMAN: Okay. Thank you very much. Judge, that's, that's all my questions.

ALJ: Okay. Mr. Sachse, do you have questions of Mr. Wyatt?

MR. SACHSE: I do not.

ALJ: Okay. Mr. Rosenblatt?

MR. ROSENBLATT: Yes, thank you. Good afternoon, Mr. Wyatt.

MR. WYATT: Good afternoon.

MR. ROSENBLATT: Same question I've asked a number of

people. Developer's Exhibit 33, I tried to put an X and the initials MW on your property. Did I correctly identify your lot?

MR. WYATT: You're correct, as usual, yes.

MR. ROSENBLATT: Thank you. All right. Let's move to Developer's Exhibit 6, the rendered development plan, and I think as you said, that your lot is sort of behind or farther away from the subject property than a triangular piece of property owned by the Seminary Ridge Owners' Association, right?

MR. WYATT: That's correct.

MR. ROSENBLATT: So, on, so, on Developer's Exhibit 6, to, just to, so the record is clear, your lot is below the triangular piece of property owned by that association and also below what is marked as 6 Trelawney Court. Sorry, I'll zoom in, it's hard to see, 6 Trelawney Court owned by James and Mary Jo Gary, right?

MR. WYATT: Well, we're next-door neighbors to the Gary's on Trelawney. They have a smaller part of that triangular open space behind their property. It's, it's a little bit wider behind our property.

MR. ROSENBLATT: Okay. So, you're, just for the record, on this Develop, Developer's Exhibit 6, your property is, if you were to draw a line down from the six in 6 Trelawney Court, you'd, the adjacent property is yours, right?

MR. WYATT: Correct.

MR. ROSENBLATT: Okay, all right. To zoom out a little bit, so from your property there's the homeowners' association triangular piece, then there's a strip owned by Baltimore County and then there's the subject property, right?

MR. WYATT: Correct.

MR. ROSENBLATT: And on the subject property, as is shown in this exhibit, what's proposed is forest buffer, forest conservation area, which is highlighted in green, and then the closest part of the development to you is lots eighteen and nineteen, right? If you can see that? I'll zoom in.

MR. WYATT: I'm going to have to take your word for it. It's kind of small. Okay, yes, correct.

MR. ROSENBLATT: Okay and your exhibit, this is your 1-C, this shows sort of the view from, from your house, backyard, into the subject site, right?

MR. WYATT: Yes.

MR. ROSENBLATT: All right. So, your, your property, does it end where your shed is located or just behind that shed?

MR. WYATT: Yes, just behind it.

MR. ROSENBLATT: Gotcha. And then, do you and your neighbors, do you continue mowing that, the additional grassy area before you get to the trees?

MR. WYATT: Actually, our association pays a

contractor to do it.

MR. ROSENBLATT: Okay. So, they come in and mow during the months that require mowing?

MR. WYATT: Yeah, we have, in our neighborhood, we have probably a little over twenty acres of open space that our, our meager dues of $100 or $200 a year cover for maintenance. So, that's one of them.

MR. ROSENBLATT: Gotcha.

MR. WYATT: That's one of the areas. They're, they're interspersed throughout our neighborhood.

MR. ROSENBLATT: Okay and from, from this photo, I mean, this, this photo is really what your position is all about, right? You're, you're going to see homes where now there's this grassy area behind the trees, you're going to see these homes if they're built, right?

MR. WYATT: Well, I think it would be marginalizing my testimony to say that's what it's all about. That's not what it's all about at all. I mean, I think it's about the issues I talked about earlier this morning. But, you know, to your point, is that what I would see? That's what I see now and I, I did mention I would be seeing, basically, some type of amphitheater of, of large homes on small lots.

MR. ROSENBLATT: Isn't that the most important thing to you? You talked about the visual impact. You're one of the properties that basically abuts this. You're going to see

homes where now you don't, isn't that --

MR. MCCANN: Object, objection, asked and answered. He's already answered that question.

ALJ: That's all right, overruled. It's cross examination. I mean, Mr. Wyatt is an attorney, so go ahead.

MR. WYATT: No.

MR. ROSENBLATT: Okay and you, you did say we, we met, you met with me and members of, of the Developer in the months leading up to these hearings, right?

MR. WYATT: Yes.

MR. ROSENBLATT: And you were offered landscaping, but you said there's no reason to reach out about landscaping, you don't care about landscaping. The development is a non-starter. You don't want the development, right?

MR. WYATT: I, I don't think I responded one way or another with regard to landscaping.

MR. ROSENBLATT: Okay. You, you said today though you're not interested in landscaping when the development itself is a non-starter, right?

MR. WYATT: If, if the Developer wants to put in landscaping without a developer, maybe that is a discussion, I don't know. But, I didn't, you're, you're, you're mischaracterizing my testimony.

MR. ROSENBLATT: I, I thought I said it exactly. You said the development is a non-starter, right? You don't want

the development. Yes, I, I do not want the development, correct?

MR. ROSENBLATT: You want this property to remain undeveloped?

MR. WYATT: I oppose the present development that's being proposed.

MR. ROSENBLATT: Okay and no, no amount of landscaping behind your property to block views is going to change that, right?

MR. WYATT: You're asking me, you're asking me to speculate on, based on something that's not being proposed and, yeah, I don't, I don't, yeah, I can't answer your question.

MR. ROSENBLATT: Okay. So, you, you don't know and we're here today with a Judge who can impose conditions if she chooses to approve this plan, right?

MR. WYATT: Correct.

MR. ROSENBLATT: You know this from your practice that often times conditions are imposed as part of zoning cases and development cases, right?

MR. WYATT: Yes.

MR. ROSENBLATT: But you, you have not, to date, asked for additional landscaping, nor are you prepared today to say if the project is approved, you'd like to see more landscaping to protect this view?

MR. WYATT: Correct.

MR. ROSENBLATT: Okay, all right. Let's talk a little bit about traffic. You testified that, to many, many of the issues that we've heard about throughout these hearings. But then you, you sort of focused on traffic safety, right?

MR. WYATT: Well, I mentioned that as one thing that I thought had been overlooked during this case.

MR. ROSENBLATT: And you're, you're aware that Falls Road and Joppa Road intersection is owned and maintained by SHA?

MR. WYATT: Correct.

MR. ROSENBLATT: And that the improvements that are proposed to that intersection, have to be reviewed and approved by SHA in order to be constructed, right?

MR. WYATT: Correct.

MR. ROSENBLATT: Don't, SHA is going to be reviewing for safety and design, are they not?

MR. WYATT: I don't know, I don't know what their level of review is.

MR. ROSENBLATT: Okay. You've never had to do that as part of your real estate or development practice?

MR. WYATT: I don't think I've been involved at that level, no.

MR. ROSENBLATT: Okay. You were here for the testimony of the SHA witness?

MR. WYATT: I was.

MR. ROSENBLATT: And you heard her testify about improvements that would occur to the entire corridor from Falls and Joppa through to Seminary and Falls, right?

MR. WYATT: I heard --

MR. ZIMMERMAN: Object, objection, excuse me, objection. You know, Mr. Rosenblatt was --

MR. ROSENBLATT: It's not his witness. I don't see how he can object.

MR. ZIMMERMAN: I can object.

ALJ: Mr., Mr. Zimmerman, what were you going to say?

MR. ZIMMERMAN: Mr. Rosenblatt was constantly objecting anytime I asked a question with reference to someone else's testimony. So, I think what's, you know, good for the goose is good for the gander. If, if he gets to make those objections then he shouldn't be, you know, asking these questions about so and so's testimony, which may or may not be exact, so, that's my objection.

ALJ: So, what, what he asked, differently than what you asked. Is he asked Mr. Wyatt were you present during Ms. (inaudible)'s testimony and Mr. Wyatt said yes. And then, he asked another follow-up question. What you do is you, you insert your, your (inaudible) and then the person says were you here, do you remember that, and they say no, and then you proceed to ask a question. So, it's a little different. But, but let me --

MR. ZIMMERMAN: I think he was starting to, yeah, --

ALJ: -- let me say for the record that Mr. Wyatt was not only here, but he asked questions of Ms. Koon and cross examined her. So, so he was here, he does know what her testimony is. So, overruled. If you can answer the question, Mr. Wyatt, go ahead.

MR. WYATT: What was the question again?

MR. ROSENBLATT: Did you hear her, the SHA witness, testify that there would be improvements to the timing from the Falls and Joppa Road intersection, all the way through to Seminary and Falls Road?

MR. WYATT: Based, based, it was, I remember her saying that north/south traffic along Falls Road would have greater green time.

MR. ROSENBLATT: Okay. You don't remember her talking about the amount of time it would take to get from one of the intersections through the Falls Road corridor to the third intersection?

MR. WYATT: I, I think, yes, I remember her mentioning something about timing. It's, if this had been yesterday or day before, I might remember it a little bit better. We've been pretty broken up in this hearing so.

MR. ROSENBLATT: That is completely understandable. All right. So, we talked a little bit about that corridor and then your, your concern about safety also is, relates to Joppa

Road and near the entrance to both Tallyho and to this project, right?

MR. WYATT: Correct.

MR. ROSENBLATT: And I believe, was it you that testified about an accident that took place at the, at the entrance to this property?

MR. WYATT: I did.

MR. ROSENBLATT: Okay and you've seen the development plan in this case, right? It was presented to you before the hearing and obviously you've seen it throughout these hearings?

MR. WYATT: Correct. Yes, I've seen it.

MR. ROSENBLATT: And you know that part of the plan is to widen Joppa Road and create a new entrance into the project?

MR. WYATT: I, I'm aware of that.

MR. ROSENBLATT: And through, through your practice, having done some land use, are you aware if Baltimore County reviews proposed entrances, proposed accesses onto County roads?

MR. WYATT: I am aware.

MR. ROSENBLATT: And won't they be reviewing for safety and sight lines and all those requirements?

MR. WYATT: I mean no disrespect to Mr. Nebre and his Department, but having heard him in this case, I, I, I don't know.

MR. ROSENBLATT: Okay. So, it's not that you don't know whether they'll review, you don't trust the, the County reviewers, is that what you're saying?

MR. WYATT: No, I'm not saying that at all, no. And, and that's what I mean by I'm not, I, I don't know what level of review that Department gives certain elements of development plans. It's not clear to me now. I, before this, I thought it was clear. I thought they were there as a, as a gatekeeper, as it were. But I think we've all been very, we've learned maybe the hard way that that's not the case.

MR. ROSENBLATT: Okay and so, you are aware though that the property will be dedicating a right of way to widen Joppa Road along this property's frontage, right?

MR. WYATT: I understand that's part of the proposal, yes.

MR. ROSENBLATT: Okay. You talked about the methodology that Baltimore County uses the loaded cycle methodology, and you stressed that Mr. Nebre said that is the, that is the methodology that is used when developing the maps that show what intersections are failing, those basic services maps, right?

MR. MCCANN: Objection. That's not what he said. I guess he can speak for himself, but that's not what he said.

ALJ: Let him, I'll let him speak for himself. Again, he's an attorney, so overruled. Go ahead, sir.

MR. WYATT: Well, I mean, I, that's not exactly what I said. What I said was that Mr. Nebre was very clear in his testimony that the district standard, which I think, at least the attorneys and, and, and Judge Murphy would understand in the context of the variance ordinance, is the standard rated by Baltimore County using loaded cycle methodology.

MR. ROSENBLATT: Do you understand, either through testimony in this case or through your, your legal practice, how you conduct a test under the loaded cycle methodology?

MR. WYATT: I think, I think people used to actually go out and do hand counts. Now, I understand they use cameras.

MR. ROSENBLATT: Do you, do you know if it would be possible to calculate the proposed improvements to Falls and Joppa Road under the loaded cycle methodology before those improvements are constructed?

MR. WYATT: I don't know.

MR. ROSENBLATT: Okay. You talked about the trip calculations as being estimates and, and your experience seeing, first of all, living in this area and hearing Mr. Merritt's testimony about taking multiple trips throughout the day in and out of homes off Tallyho, right?

MR. WYATT: Well, Dean Merritt and also Gil Shellis. I think, I think everyone has mentioned, you know, how, how busy we are when you're raising kids in this area.

MR. ROSENBLATT: And are you familiar with the

concept of peak hour of peak travel hours in traffic studies?

MR. WYATT: Only, not in my practice or in my background, but I heard, I've heard it mentioned throughout this hearing, yes.

MR. ROSENBLATT: And your own experience, I mean, you said similar to Mr. Merritt's, there are trips that are taken throughout the day in and out of developments that occur all hours of the day when you have young children, right? They're not all during rush hour in the morning or rush hour in the afternoon.

MR. WYATT: I don't, well, unlike Mr., unlike Dean Merritt, I, I'm, I'm in the office every day, you know, just that's what I've elected to do. So, I don't, I don't go out of my home during the day during the week.

I, I would, no, I would say a lot of the trips we're talking about here with, with children and sports or other activities, you know, from my observation and my experience, they are concentrated during the peak hours. They're usually in the morning, they're in the morning and a lot of the stuff happens in the evenings as well, because most children are in school during the day.

MR. ROSENBLATT: You, you think it would even be possible to leave the home ten, fifteen, twenty times a day during two peak hour time periods in one day?

MR. WYATT: Sure, of course. Why wouldn't it be?

MR. ROSENBLATT: Okay. You talked about a, a sentence from the community input meeting minutes that said no variances are being sought in this case. Do you remember that testimony?

MR. WYATT: I do.

MR. ROSENBLATT: No zoning variances are being sought in this case, right?

MR. WYATT: I think the wording was no variances are being requested.

MR. ROSENBLATT: Okay and you, you've done enough of this work to know you can ask for variances from setbacks or rear yard requirements, things like that, right? When you're, when you're proposing development?

MR. WYATT: Yes, that, yes.

MR. ROSENBLATT: And, and there are none in this case, right? You're, you're aware the Developer is not asking for any, any variances to any bulk or area regulations?

MR. ZIMMERMAN: I object to the question because whoever buys these houses could, could still be asking for variances.

MR. ROSENBLATT: Judge, again, it's not his witness.

ALJ: I know, it's not your witness, Mr. Zimmerman. Go ahead. Overruled.

MR. WYATT: Well, look, I, you know, I, my, my question in my e-mail, so I don't really have to, anybody can

look at it, it's part of the public record. Was clearly designed to pick up any kinds of var, any kind of variance or administrative approval that happens outside of the development process.

We all know those take place and I was specifically inquiring about those. So, you know, not only were we told no variances were taking place, nobody even mentioned the traffic variance that's at issue in this case. That's a variance.

MR. ROSENBLATT: Mr. Wyatt, you --

MR. WYATT: We weren't talking about minor, side and rear and front setback, that's not what we're talking about at all.

MR. ROSENBLATT: So, those would not be important to you?

MR. WYATT: I, important or not important, they're not part of this case.

MR. ROSENBLATT: I'm not sure I understand, but I'll move on. Are you familiar with the, whether zoning requires an owner/developer to put a typical setback on development plans?

MR. WYATT: I'm not familiar with it, all of the technical requirements that go into a development plan. I've never drawn one up.

MR. ROSENBLATT: Okay. Have you, have you ever represented someone presenting a development plan?

MR. WYATT: Yes.

MR. ROSENBLATT: Okay and just don't recall whether it showed typical setbacks or whether that was a requirement?

MR. WYATT: I, I can't say for sure. I, I, it's my understanding they're normally shown but.

MR. ROSENBLATT: Okay.

MR. WYATT: (inaudible) different understanding and I'll just have to accept that for now.

MR. ROSENBLATT: You, you are aware that the development plan in this case shows the typical setbacks and I think you even testified about that this morning?

MR. WYATT: I think there were three, I think there were three lots shown as typical setbacks.

MR. ROSENBLATT: Okay and you, you testified about your belief about those setbacks and Baltimore County's master plan and then compared those setbacks to your, your own neighborhood where you live, right?

MR. WYATT: Yes.

MR. ROSENBLATT: Do you think your neighborhood is, is a good model for how properties should be designed? How lots should be laid out, how developments should be laid out in this area?

MR. WYATT: Well, I know, I know it was a good design at the time. There's been a lot of changes since that development. It was started, I think, in the late sixties and completed in the late seventies, so, you know, for example,

master, master plan didn't exist then. There's no stormwater management requirements back then. There's a lot of differences.

So, yeah, I love our neighborhood. I mean, I've lived there my whole life. But is that how you would lay it out now? Probably not. Most developers now would never do lots larger than required or, or dedicate the kind of open space we have in our neighborhood.

MR. ROSENBLATT: Do you know how much open space is being proposed as part of this project?

MR. WYATT: Not offhand, the calculation, no. I know a lot of the property is not usable and I, I, I sort of just use that gross acreage so I'm not sure specifically how much open space.

MR. ROSENBLATT: Okay. You talked about the, the actual homes, like the renderings of the homes that you saw in the, in the pattern book, remember that?

MR. WYATT: I did, yes.

MR. ROSENBLATT: And I think you were asked do those, are those reflective of the type of homes in your neighborhood and you said they're, they're not, right?

MR. WYATT: Correct.

MR. ROSENBLATT: You, you've, you've lived, worked in this area for a long time. Are you familiar with some of the other neighborhoods in, in the Timonium area?

MR. WYATT: I am.

MR. ROSENBLATT: Are you familiar with Seminary Overlook?

MR. WYATT: I am.

MR. ROSENBLATT: How about Jennifer Ridge?

MR. WYATT: Yes.

MR. ROSENBLATT: How about the Oaks and Mayfair?

MR. WYATT: Yes.

MR. ROSENBLATT: Are, are those homes, from what you can tell from the pattern book, are the homes proposed similar to the homes in those neighborhoods?

MR. WYATT: No, because the, the homes being proposed here are going to be in a subdivision with much smaller lots than any of those that you've just mentioned.

MR. ROSENBLATT: I'm not talking about the lots. I'm talking about the homes that you saw rendered in the pattern book. Are they similar to the homes in those neighborhoods?

MR. WYATT: Architecturally, I don't know that they're all that distinguishable, architecturally.

MR. ROSENBLATT: Okay. Court's indulgence. I may be done. I guess, just a couple more questions, sorry, about, about traffic. So, how, how long have you lived in this area? And I apologize, I know you answered that, but I have a lot of notes.

MR. WYATT: Well, I'm, I'm fifty-eight. I grew up in

Seminary Ridge. Other than undergraduate and law school and a few years when, when my wife and I didn't have children, I, I'm going to say I've lived forty-seven or eight years in the area.

MR. ROSENBLATT: And did you testify or, or mention on an earlier day that one of your parents also lives in Boxwood or, or the Meadows?

MR. WYATT: Yes, my mother lives on Old Boxwood, which is in Boxwood.

MR. ROSENBLATT: Okay and have, have, has your mother lived in the Timonium area for a long time as well?

MR. WYATT: Yes, she's lived in 21093 pretty much her entire life.

MR. ROSENBLATT: Okay and you, you've shown pictures and you testified really in detail about the traffic and, and other congestion issues in, in the area, right?

MR. WYATT: Yes.

MR. ROSENBLATT: Have you ever moved out or considered moving out of Timonium because of these issues?

MR. WYATT: I don't think so.

MR. ROSENBLATT: All right. I don't have anything further. Thank you.

ALJ: Mr. McCann, any re-direct?

MR. MCCANN: Yeah, I do, thank you. Mr. Wyatt, we're almost done here. Let me show you the Baltimore County Code, specifically, development regulations Mr. Rosenblatt was asking

you about, the typical lot depictions on the development plan. And just, are you familiar with the development regulations?

MR. WYATT: I am.

MR. MCCANN: Okay.

MR. WYATT: In a general sense, not, I don't have them memorized by rote, but.

MR. MCCANN: Okay. I'm going to show you, can you see that Section 32-4-224?

MR. WYATT: I can.

MR. MCCANN: Okay. Let me try to blow it up a little bit. Okay. I think I just lost where I was, give me a second. Okay. 32-4-224, it says, and I'll just read it in part, required development plan information, the development plan shall contain the following development information. Proposed lot or building lot with parking and loading areas. Do you see that?

MR. WYATT: I do.

MR. MCCANN: All right. Keep that in mind. And then I'll go a little farther down to additional requirements. Again, the heading is required development plan information, a little farther down in Subsection C. It says permissible alternative information. A development plan may show the location of a precise building envelope instead of the precise location of the building. Do you see that?

MR. WYATT: I do.

MR. MCCANN: Okay. Given that, and let me go back now if I could, to the Developer's green line development plan, which is 1-B, we have, I think this is what you were referring to, when you said typical lot layouts, correct?

MR. WYATT: That's correct.

MR. MCCANN: Okay and I think you pointed out in your, I believe your direct testimony, correct me if I'm wrong, that these typical lot layouts show the minimum setbacks for the rear, side and front yard setbacks, correct?

MR. WYATT: That's my recollection.

MR. MCCANN: Okay. Given the requirements of the Code we just looked at, given what's shown on this development plan, would you expect, as both an attorney and as a, as a reasonable per, layperson, expect these typical lot layouts to be the actual, or near actual situation with the houses as constructed?

MR. WYATT: It doesn't sound like they will be from the testimony so far and it's really difficult to discern from the development plan itself, you know, exactly where things will be situated on each particular lot.

MR. MCCANN: Yeah.

MR. WYATT: Like, well, we spent a lot of time on the, on the calculations that Mr. Bishop put in about adjoining properties and developments and the, and the calculations. But like a lot, this is all, to me, sort of slanted in favor of

making it look like it's something that it's not.

MR. MCCANN: Yeah.

MR. WYATT: So, --

MR. MCCANN: Well, this, if the --

MR. WYATT: -- I can't tell, that's the, my answer is I can't tell, it's, I don't know that anyone can tell unless you're part of the development team.

MR. MCCANN: Well, let's, let's give the development team the benefit of the doubt and assume typical means what, I think, we all believe it to mean. And that the sixty home, new homes on this development plan each are, each of them have one of these so-called typical lot layouts, let's assume that. Do you have con, the con, the concerns you've expressed about density, are they still the same?

MR. WYATT: Yeah, they are, they would be the same. Even, even if this ends up being typical, which it may, let's leave room for that, it, I still have, my current concern level about density does not change.

MR. MCCANN: Okay. Getting to this point about the community input meeting, I think, it was and your request or someone's question of the developer team about whether there would be any variances. Number one, and I, I think the Judge knows this, but perhaps for everybody else's benefit, the special variance that we're talking about, or the traffic situation, is that in the zoning regulations?

MR. WYATT: It is.

MR. MCCANN: Okay.

MR. WYATT: It's, it's considered a special variance.

MR. MCCANN: Okay and again, as a, as a, an attorney or as a reasonable layperson, in response to the question posed to the Developer's team, whether or not there are any variances, would you have expected that if, that if there was a special traffic variance being sought, would you have expected that to have been disclosed in response to that question as phrased?

MR. WYATT: Yes, it was, it was a catchall. I mean, anybody can go back and read it and, and it was, I didn't construct the question to be hyper-technical, but it was a, a catchall, not non-lawyer type of question, because we weren't allowed, remember, these community, ever, the community input meeting was conducted WebEx and may have been one of the, you know, one of the early ones conducted. But it's all very stilted, there's no interaction like you would have in a, in an auditorium at a public school. I mean, that was it.

MR. MCCANN: Okay.

MR. WYATT: You had the chance to ask written questions. There's these sort of canned responses and then every, and then, you know, they check the box. They're, then there's been a community input meeting. So, I would have expected Developer then to tell us all of the variances that

were being sought.

And there's no, there's numerous variances. I think some of them were pending either at, in, in the Office of Administrative Hearings or before the County Board of Appeals around that same time.

MR. MCCANN: Yeah, well, I don't want to belabor this anymore, but, and the, and the community input minutes will speak for themselves. But other than that question that you've identified that was asked, are there any variances being sought, was, was there any mention at all, either in response to a question or during the Developer's demonstration, that, presentation rather, that there was a special variance, or some traffic relief sought of some sort? Was there any even mention of that?

MR. WYATT: Not that I recall now. I'd have to go back and look at all of the minutes to be sure but I, I don't recall very much time being devoted to that as a response from Developer. There was a lot of concern raised by neighbors about traffic.

MR. MCCANN: Okay, all right. Moving on from that. Mr. Rosenblatt asked you about peak hours, peak traffic hours. Mr. Merritt, I'm not so sure he was characterizing his fifteen trips per day or thereabouts as being just during peak hours. But, I don't think he made that distinction.

But in your experience, are there a lot of trips made

by folks like you and your neighbors, in non-peak hours? For instance, either to Meadowood or to St. Paul's or to Greenspring Station? Is there, are there a lot of non-peak hour trips in your experience?

MR. WYATT: I would say so, yes.

MR. MCCANN: And for instance, based on your experience, are athletic events at St. Paul's, whether it's lacrosse, soccer, football, whatever it is that's occurring at those fields, are those necessarily during peak hours? That is, during --

MR. WYATT: They're not. Usually it's when schools let out, so we're talking mid-afternoon typically is when sporting events are scheduled.

MR. MCCANN: Okay.

MR. WYATT: And, and, and not just sporting events. All after-school or extra-curricular activities typically take place after school hours. So, if, if a, if a student is involved in a club, usually, usually those club activities take place after school hours, which, you know, generally, 3:00 to 4:00 range, depending on the school.

MR. MCCANN: Okay and then when, a more obvious question with respect to Greenspring Station and the various retail, medical and restaurant uses at Greenspring Station, are those, to your knowledge, based on your experience anyway, are those establishments open during, and busy during non-peak

hours as well as peak hours?

MR. WYATT: Yes, they are.

MR. MCCANN: I want to go to this rendering that Mr. Rosenblatt showed you. And again, I know the Judge knows this full well, perhaps everybody on the call does not. But this, this, this green area, this beautiful green area that we're looking at, which is just, as you've indicated, just behind your house, when it says forest buffer and it says forest conservation on this, is, is, from a technical sense anyway, does that mean that all of this green area will be, will be entirely forested?

MR. WYATT: No, not at all. In fact, I'm not seeing that any of it is from this schematic. It just means that it's going to be, you know, there's two sets of requirements. I don't want to get into the technical aspects of it, but it's, it's protected area, that's all that it means.

MR. MCCANN: And then, but to be fair, there are, and I'll zoom in so you can see it, reforestation area indicated. It says 1.01 acres. Do you see that?

MR. WYATT: I do.

MR. MCCANN: And then over here, it says, also says reforestation acres, .29 acres. Do you see that?

MR. WYATT: I do.

MR. MCCANN: Both of which, or have been reduced apparently. But let's assume, if you can picture in your

mind's eye, what that reforestation of .29 acres and 1.01 acres looks like, if you can do that, will, does, does that make a difference to, to any of the, any of your testimony this afternoon regarding the visual impacts and the other things that you're concerned about with respect to this development?

MR. WYATT: No, it, it wouldn't, it wouldn't allay any of my concerns in terms of visual impact and the density concerns.

MR. MCCANN: Do you anticipate looking behind your house when, if, if this development is approved, and seeing all this green, this beautiful green?

MR. WYATT: I, I don't. I, I'm not sure what I'll be seeing, but no, I'm not expecting, it's, it's going to show the way it's presented on this plan.

MR. MCCANN: Okay, that's it. That's all I have. Thank you, Mr. Wyatt, appreciate it.

ALJ: Thank you, Mr. Wyatt. All right. So, it's 1:00. Should we take a lunch break? Probably a good time.

MR. MCCANN: Yeah, that sounds good, that sounds good, Your Honor.

MR. ZIMMERMAN: I thought we're done, Judge.

MR. MCCANN: I, I, I'm done --

ALJ: Done with who, Mr. Zimmerman?

MR. ZIMMERMAN: With Mr. Wyatt.

ALJ: Yes, Mr. Wyatt is finished.

MR. MCCANN: And I don't have any more witnesses today, Your Honor.

ALJ: Okay, all right.

MR. MCCANN: So, --

ALJ: And we have Mr. Sachse, you don't have any more witnesses. And we're going to go through and make sure there's no one else here. There are other people who are here who may want to testify. As of now, we have six people in the attendee's room. There's two call in numbers. There may be some people who want to testify. And so, Mr. McCann, you probably want to just look through the panelists and also the attendees just to see who, maybe some of these are your people.

MR. MCCANN: Okay.

ALJ: And you, you know, when we get back from lunch, but I know Mr. Sachse had an exhibit and he, he wants to testify.

MR. MCCANN: Okay.

ALJ: And, and we'll, we'll go through the list here first and we'll, then we'll see where we are.

MR. MCCANN: Sounds good.

ALJ: All right. Forty-five minutes, at 1:45.

MR. MCCANN: Thank you.

ALJ: Thank you.

(PAUSE)

ALJ: Mr. Zimmerman, are you there? All right, there

you are. Okay. Back on the record after a lunch break. Mr. McCann concluded his case. Before I get to Mr. Sachse, Mr. McCann, I just want to make sure, for the record, I have all your exhibits except for two. And just making sure my list is right. Exhibit 27 was a chart of front setbacks?

MR. MCCANN: Withdrawn. And just to be clear, we haven't finished our case, we just finished our witnesses for today, Your Honor. We're looking at new dates in January.

ALJ: Oh, you're not finished your case?

MR. MCCANN: No, no, no, just, I had no other witnesses today because of --

ALJ: Oh, oh, oh, I misunderstood. I'm glad you said that. Okay. So, so you're actually, you, you have more, okay. You have more witnesses.

MR. MCCANN: Not a lot more, not a lot more, but we do.

ALJ: Sure.

MR. MCCANN: Before I forget, twenty-seven was withdrawn. I think I put on my most recent --

ALJ: Okay. Then, go ahead. Twenty-eight you're resubmitting. That was through Ms. Hamidi yesterday.

MR. MCCANN: I did, oh, that one, I'll get that one to you today.

ALJ: Yeah, that's fine. I mean, it's no rush. And then thirty-one was Beth Miller. So, maybe she's coming back

to testify?

MR. MCCANN: Yes.

ALJ: Oh, okay. Then, then I misunderstood what you said.

MR. MCCANN: Yeah.

ALJ: I thought you were finished your, your case. So, that means, all right, you have no more witnesses. Is that because no one else could come today, was that, was that the problem?

MR. MCCANN: Yeah, we, we were looking at the 13th or 14th or something like that and it didn't work for one or more of us. So, --

ALJ: Oh.

MR. MCCANN: Adam and I are providing Kristin with our unavailability in January.

ALJ: Okay. Yeah, she did ask us for those dates a little bit ago. So, she should have ours, so.

MR. ZIMMERMAN: Yeah, it'd be nice if somebody kept me in the loop on that as well, so.

ALJ: Well, you, I think you're always on all the e-mails. I saw you were --

MR. ZIMMERMAN: Oh, okay. Good.

ALJ: -- (inaudible). Yeah, you were on most e-mails that I saw from, from --

MR. ZIMMERMAN: No, I mean, as far as the January,

I'm not, I don't know what's going on for January, that's all.

ALJ: Okay, got it. All right and then for your, for your exhibits, Mr. Zimmerman, since we're on the topic, and, and we don't have to do it today since now that I understand we are coming back --

MR. ZIMMERMAN: Right.

ALJ: -- for Mr. McCann's case, but if, if Mr. Rosenblatt and Mr. McCann could go through, you know, his exhibits. I have multiple ones that are in evidence.

MR. ZIMMERMAN: Right.

ALJ: But then the rest of them appear to be, you know, either public records, I mean, --

MR. ZIMMERMAN: Right.

ALJ: -- you can object, hold on, Mr. Zimmerman. Hold on, Mr. Zimmerman. I was asking Mr. Rosenblatt and Mr. McCann, maybe Mr. McCann has no objection, but a lot of these are public records, so I wasn't sure, if you could at some point, look through those and let me know whether, you know, you have any objection to any of those.

MR. MCCANN: Yeah, we can do that.

MR. ZIMMERMAN: Yeah, there, there were a few that I, actually, are no longer necessary. But maybe I can just send, and I may have one more exhibit to add, but maybe I can send an e-mail out to everybody indicating which exhibits, you know, I, I would want to, to complete the group.

ALJ: Sure. And so, and so, if you go through your list and you take anything out, just redact it, just, you know, have a, you know, I know Rebecca is going to handle this for you probably. If she could just redline through what the number that you have --

MR. ZIMMERMAN: Yeah.

ALJ: -- and just leave the number on there, don't renumber, obviously, because they're already numbered. And then just redline and say—

MR. ZIMMERMAN: Redline, yeah.

ALJ: -- (inaudible) yeah.

MR. ZIMMERMAN: Okay, good idea, thank you, thank you.

ALJ: Okay. I just wanted to make sure that we, we weren't missing anything. And then, okay. So, having said that, that was just a little housekeeping. Mr. Sachse, you're here to testify. And so, we'll do that next. All right. Mr. Sachse, raise your right --

MR. SACHSE: Your Honor, could I just interject for a second? You, you said --

ALJ: Yeah.

MR. SACHSE: -- I, I had an exhibit. I think there may have been one submitted, but I don't really have one with all the other exhibits that have come in, so.

ALJ: Well, let me show them to you just to make

sure, because I want to make sure that they're in if you want them in. So, if you don't want them in --

MR. SACHSE: If you don't mind, if you don't mind, yeah. I, I --

ALJ: No, no, but let me swear you in first before you say anything.

MR. SACHSE: Okay.

ALJ: Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. SACHSE: I do.

ALJ: Okay, all right. And so, we'll just put them up there. Here, let me just show you. Here's the first one, you had submitted this. And we had initially labeled this as Heatherfield/Seminary Ridge exhibit, which is Mr. McCann's client, because on the e-mail, that was the subject matter and so it was just labeled that way.

MR. SACHSE: Right.

ALJ: I can relabel this as Doug Sachse exhibit. But did you want this in?

MR. SACHSE: No, I don't think it's necessary.

ALJ: Okay, all right. All right. Well, we'll withdraw that and the only other one was this photo of the, of the, you know, --

MR. SACHSE: The gate.

ALJ: The gate.

MR. SACHSE: The Mays Chapel gate. And I think that's been covered in prior testimony and exhibits.

ALJ: Okay.

MR. SACHSE: So, I, I don't think it's necessary.

ALJ: Okay, all right. Well, then I, I'll stop sharing those. All right. Well, and so, it is your turn to testify. So, Mr. Sachse, what did you want to tell us?

MR. SACHSE: Well, essentially, I think you've heard just about everything. I have been a resident in Seminary Ridge, excuse my cough, since 1984.

ALJ: And what was your address, I forgot?

MR. SACHSE: It's still the same, 9 Sedgefield Court.

ALJ: Sedge, Sedgefield.

MR. SACHSE: S-E-D-G-E-F-I-E-L-D.

ALJ: Okay, Sedgefield Court. That's in the Seminary Ridge area?

MR. SACHSE: Seminary Ridge, that's correct.

ALJ: Okay, all right.

MR. SACHSE: I have lived here since 1984, raised six kids, who thankfully have moved on, but come back quite a bit. Have four grandchildren that I have here quite often.

And I think I'm along the lines of Mr. Compton, maybe Mr. Hallahan, I, all of us in, including all the witnesses really that I've heard, feel that it's, the area has been

overdeveloped and there's very little, it just, something is going to break the camel's back, and this seems to be, it's got to stop.

I mean, there, we've gone through all of Hopkins and Greenspring Station and the like, and the traffic at the intersections, the three intersections involved, I'm not, not even going to go through them because you've heard so much about them. And how dangerous they are.

There are no sidewalks coming up Joppa Road towards Falls Road, or actually in either direction, east or west on Joppa. So, walking along Joppa has become more and more treacherous.

Again, I think that my biggest concern, and I'll talk for about one minute and then that'll be it, is on the, on safety. As I said, I have had six kids living in the house, put them on buses, know where the bus stops are along Tallyho Road.

I've seen the increase in traffic over the years on Tallyho Road. I see the kids accumulate at the various bus stops at Clearfield Circle, at the top of Lochmore, at Sedgefield and down all the way towards Joppa Road. And the number of kids, it, it varies from year to year, because kids grow up, etcetera.

But there are a lot of children in this neighborhood that take the bus, that congregate on the bus stops, and you

can see even with the, the bus stops with the buses coming to a stop and sometimes with the flashing lights on that people, especially cut throughs, who are just trying to get from one end, from Seminary to Joppa, or Joppa to Seminary, don't always pay a lot of attention. And I think it's, it's a tragedy waiting to happen.

One of my big concerns is, especially, even now, I like to walk a lot and I, of course, I have some problems with that right now, but that's another matter. But walking out onto Tallyho Road gets, the more, you can just see more and more traffic.

What I also notice though, there are more and more kids out riding bikes, on skateboards, on the different hover boards and the like, and you can't necessarily stay on the sidewalk to do a lot of that. Especially when there are other people walking.

The increase in traffic is, has been such, that you've been told that we have calming bumps, but first we had stop signs, then the calming bumps and it still is a problem and yet another development is being proposed, which, no matter what, will increase the traffic flow on Tallyho.

I think even the people in Boxwood and the Meadows understand that. They just don't want any more flow onto their street, which I understand. And as far as any possible pass through, they want to, essentially, eliminate any possible

traffic on there.

A lot of the reasoning was because of the gatherings and the older people that live there and property values. Along Tallyho Road, the same issues apply, except that you have a lot more children. And like I said, a lot more children that are going out into the roadway on bikes and different vehicles, coming out from bus stops and it's really very concerning.

One of my (volume goes very low) kids were growing up and now my grandchildren, I like to have them walk with me over to Meadowood. Meadowood wasn't there at the very beginning. But I like to take them over to the playground. And I can tell you, as you get down going south on Tallyho and get to Joppa, you would go west on Joppa towards Meadowood.

It's, it's a scary place. And I could probably be criticized for wanting to take my, the walk there, I'll accept that. The cutout that's proposed to widen Joppa for the new development, will simply make it that much more dangerous and that much worse and will give another area where cars may pull out as you're trying to walk down the road.

When you get to the intersection at Falls and Joppa, if I have three of them with me, I have to have a hand on each one of them. There are, there's left turn signals, there's a cutoff into Valley Road.

And I know you know all this already, so I apologize for being redundant but there's almost no, it's almost

virtually, almost virtually is not something I meant to say, it's virtually impossible to walk along Joppa Road and cross Falls Road from the north side because, not only is there not a walkway, there's like a gutter or cul, or, I can't remember the name is, that goes under.

So, you have to be very careful. You have to get out in the roadway, and you have to cross over the right turning lane to get to the little triangle of grass. Then try to make sure you wait for the lights appropriately coming each direction, because there's left hand turn going Falls Road north and left hand turn on Falls Road going south.

So, you have to worry about those. And then the traffic that comes through that's going straight on Falls Road one way or the other. Then when you survive to the other side, you have traffic that yields off of Falls Road to, is actually staying on Falls Road at the intersection of Falls and Joppa, where the intersection is actually coming to an end, meaning the, not the intersection, the expressway, 83 is coming to an end.

So, I, I, I, the only thing I wanted to add is that I think, and I think Mike Wyatt touched on this pretty well. But that, it really is the large safety issue adding any more development in the area. And truly, I haven't heard any proposals that touch on it to make the area, to even keep it as safe as it is now. But certainly, it'll be less safe and it's

very, very dangerous now. And that's all I really had to add.

ALJ: Okay. Well, thank you for that, Mr. Sachse. Let's, Mr. McCann, did you have any follow-up questions?

MR. MCCANN: I do not, thank you.

ALJ: Okay, all right. Mr. Zimmerman?

MR. ZIMMERMAN: Just one or two, yeah. So, let me play devil's advocate, Mr. Sachse. What if it's suggested that the Developer is entitled to do something with their property, what do you have to say about that?

MR. SACHSE: I have to live with whatever decision is made.

MR. ZIMMERMAN: Okay, all right. Thank you. That's all I have.

ALJ: Mr. Wyatt, did you have questions of Mr. Sachse?

MR. WYATT: I do not, Your Honor. Thank you.

ALJ: All right. Mr. Rosenblatt?

MR. ROSENBLATT: Just, Mr. Sachse, to make sure I understand where you live, Developer's Exhibit 33 is on the screen. At the top of Sedgefield Court, there's sort of a, I don't know what shape to call it, trapezoid property. I put an X and the initials DS, --

MR. SACHSE: That looks like it. To the extent I can see it, that looks like it.

MR. ROSENBLATT: Okay, thank you. I don't have any

further questions.

ALJ: Okay. Mr. Sachse, that looks like you, you don't have any more cross, so, thank you very much.

MR. SACHSE: I appreciate it.

ALJ: All right. Yep, I appreciate it as well. So, we'll just go through the people are here, Mr. McCann, did you have a chance just to look at the panelist list? I don't want to call on your people to the extent you have anybody here.

MR. MCCANN: Yes, before we started I did, and I didn't see anybody that I recognize as being within the community associations that I represent.

ALJ: Okay.

MR. MCCANN: Other, other than the folks who have already testified.

ALJ: Right, yeah, got it. Okay. So, let me just go down the list here, just, just to see if there's anyone here who we can take some testimony from. So, I'm, I'm unmuting Beth Winter. Ms. Winter, are you here to testify?

MS. WINTER: I, I was not, but I could.

ALJ: It, it's up to you. I'm just making sure everyone gets a chance to testify who wants to. So, if you don't want to, you don't have to. But if you want to, say something, then we're, we're happy to take your testimony.

MS. WINTER: Okay. I'll, I'll say something.

ALJ: All right. So, let me do this. Let me, let me

swear you in. Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. WINTER: Yes, I do.

ALJ: Okay and then give me your address.

MS. WINTER: 10934, excuse me, Mays Chapel Road.

ALJ: Mays Chapel, okay. And that's in, is that right next to the dev, property we're developing or is, is that across --

MS. WINTER: I am on the, the, the road that is being proposed to be the, where the traffic goes through.

ALJ: Okay, all right. Okay. Well, then, go right ahead.

MS. WINTER: And we've lived in this community actually for a long time. We just recently bought this house and moved into it in the hopes that this will not go through in terms of the, the road.

I do think there are, would be a lot of problems with people getting out of the community, not just exiting off of Mays Chapel onto Falls Road, or going on Mays Chapel through to Joppa. But the, the Seminary Farm and the other roads that enter onto Mays Chapel, I think, would get very backed up, especially at certain times, the rush hour times of the day. With people unable to turn either left or right. And certainly, that would affect us coming out of our driveway as

well.

I do also think the road is quite narrow. I know people along here often have multiple, you know, let's say they're having a party or, or some other gathering at their house and lots of people are parked on the street. I think when that occurs, there's not going to be room for two-way traffic, so I think the, the road would have to be widened.

You'd have to put in speed bumps. You'd also, there's no sidewalks and you have heard that people walk quite a bit, and they really do. It's a very active, walking neighborhood. So, there would be additional expenses that would be associated with, with making the, the road a through road, because it's just not set up to accommodate through traffic at this point.

And I guess those are, those are some of my key thoughts.

ALJ: Okay, great. So, let me just ask the attorneys, you probably sat here and listened, if they have questions of your testimony. Mr. McCann?

MR. MCCANN: Yeah, I just wanted to identify Ms. Winter's property location for the record. So, I could, if I could show the exhibit, Your Honor, and do that real quick and I was looking for it as she was speaking. Again, it's 24-B. Okay, great. Ms. Winter, can you, do you have video capabilities?

MS. WINTER: I do.

MR. MCCANN: Okay, great. How are you?

MS. WINTER: Oops, but, I'm trying to, --

MR. MCCANN: I'm finding the --

MS. WINTER: There I am.

MR. MCCANN: Okay. So, Mays Chapel Road, we, it's on this Exhibit 24-B. Where along the road do you live exactly?

MS. WINTER: It looks like you're pretty close to where it is. That should be it, I think. It's right behind the cluster homes. I mean, right, yeah. That should be it.

MR. MCCANN: All right. I'm going to highlight it in yellow, right here, is that right?

MS. WINTER: Yes, um hm.

MR. MCCANN: Okay. Other than that, I didn't have any questions. Thank you, Your Honor.

MS. WINTER: Okay.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No questions, thanks.

ALJ: All right. Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse?

MR. SACHSE: No questions.

ALJ: And then, Mr. Rosenblatt?

MR. ROSENBLATT: No questions, thank you.

ALJ: And with that, Ms. Winter, you didn't get too

many questions. Surprising. All right, we appreciate your testimony.

MS. WINTER: Thank you.

ALJ: Thank you.

MS. WINTER: You're welcome. Bye-bye.

ALJ: Okay, all right. And let's see who's next up here. Bruce Oakley is with you, Mr. Rosenblatt, right? Isn't he?

MR. ROSENBLATT: Yeah, it's Oxley, sorry.

ALJ: Oh, I'm so sorry.

MR. ROSENBLATT: I froze for a second thinking of the name Oakley, and I couldn't think of it. Bruce Oxley is definitely with the TABCO. Thank you.

ALJ: With you, okay. And then we have, the next one is Mr. Consroe. Mr. Consroe, do you have any testimony today?

MR. CONSROE: I, I have an opinion, yeah, yeah. I do, yes.

ALJ: All right. Well, then, let's do this. Let's, let's, let's see, where are you? Do you have video camera?

MR. CONSROE: I do. Okay?

ALJ: All right, sir. Would you raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. CONSROE: Yes.

ALJ: And where do you live?

MR. CONSROE: 71 Seminary Farm Road.

ALJ: Seminary Farm Road. Okay, so that's right above the property we were talking about. Okay. I know where that is, all right. Go right ahead.

MR. CONSROE: Sure. As I said, I, I had not planned to, to say anything, but, but feel as though, and I'll restrict my comments to one area. But feel as though I, I need to. The one area that I want to comment on is this connection on Mays Chapel Road. And just to reiterate what was in the first sentence of the Petition that I did sign, I am opposed to a vehicular connection on Mays Chapel. I, I was before and I still am.

The reason for that and I, I certainly understand that the attorneys on the call have people to represent. But I'm a little disappointed that on many occasions, there has been reference to the fact that there are only four homes on Mays Chapel. There are actually five. But that doesn't represent the situation.

The Meadows of Greenspring have ninety-nine homes, approximately two hundred people that live here. If we add children and grandchildren, it's many more than that. There is a single way out for all of those ninety-nine homes. I won't speak for the Boxwood community, but it's true of them as well.

And that one way is Mays Chapel Road. So, any

vehicular connection to Mays Chapel would impact not just the five residents that live directly on Mays Chapel, but all of the residents and their guests and their children and grandchildren, whether that's in cars or pedestrian traffic.

And so, that is the reason that I supported the Petition against any vehicular connection, and I guess I would just ask, Judge, from what I understand from my own research, I, I hope it's accurate, is that you can provide conditions in your opinion.

I, I would hope that those conditions would include not a vehicular connection, but if you decided, if you decided for an emergency only access, that somehow you condition that to be true and hold the County to that condition going forward.

I think it is by far a significant safety issue, predominantly and secondarily, just a congestion quality of life issue. And that was my only comment.

ALJ: Okay, thank you. Mr. McCann?

MR. MCCANN: Yes, real quick. Good afternoon, sir.

MR. CONSROE: Good afternoon.

MR. MCCANN: You talked about the pass-through issue. Am I correct though that you also, well, for instance, you signed the Petition, which is our Exhibit 33, which opposes the development outright, as opposed to just opposed, being opposed to the pass through, is that correct?

MR. CONSROE: That, that's correct. I opposed the

development.

MR. MCCANN: Okay. So, your testimony this after, afternoon, I take it, is just couched in terms of if the Judge decides to approve this plan, you would ask her to impose the conditions you suggested, correct?

MR. CONSROE: Correct.

MR. MCCANN: Okay. Then real quick, I want to show you, as I have the other witnesses, the exhibit that shows the map, I'm sorry, the map, 24-B. As I understand it, you're the fourth, fourth house in from Mays Chapel Road, which is this one right here that I'll highlight in yellow?

MR. CONSROE: I am the, yes, that's, that's correct. That's mine.

MR. MCCANN: Okay, great. No other questions. Thank you, sir.

MR. CONSROE: Um hm.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No questions. Thanks, Judge.

ALJ: Mr. Wyatt?

MR. WYATT: No questions, thank you.

ALJ: Mr. Sachse?

MR. SACHSE: No, no questions.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: No questions, thanks.

ALJ: Thank you. All right. Well, thank you, Mr.

Consroe.

MR. CONSROE: Okay, thank you.

ALJ: All right and let's see. We did the rest of the gentlemen that are on here, the people that are listed are the Developer's witnesses, other people who have testified except for this last one. Ms. Tinanoff?

MS. TINANOFF: Yes.

ALJ: Did you have testimony today?

MS. TINANOFF: I have to unmute myself.

ALJ: You're unmuted. I can hear, I can hear you.

MS. TINANOFF: (inaudible) okay. I hadn't expected to testify, but I, I could add a little bit to what Beth and Ed said.

ALJ: Okay. Then let me do this. Do you have a video camera?

MS. TINANOFF: Yes.

ALJ: Do you --

MS. TINANOFF: Did that do it?

ALJ: No.

MS. TINANOFF: So, it's on --

ALJ: It's usually at the bottom of the screen. It'll say start video and just hit the start video button.

MS. TINANOFF: Yeah, I did, I did press start video, but.

ALJ: Okay.

MS. TINANOFF: I, oh, there it is.

ALJ: Oh, there you, it's working. That's, all right. So, if you don't mind, raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. TINANOFF: I do.

ALJ: All right. Where do you live?

MS. TINANOFF: I live at 10939 Mays Chapel Road.

ALJ: Mays Chapel.

MS. TINANOFF: It's the first house as you enter the Meadows from Seminary Avenue.

ALJ: Okay.

MS. TINANOFF: And it's across the street from Beth Winters and up a little bit.

ALJ: Got it, okay. Thank you. Go right ahead.

MS. TINANOFF: Well, I'd just like to echo everything that, that both Ed and Beth said. I, we've lived in the Meadows for twenty, twenty-four years now. We used to live on Seminary Farm Road, but we moved to this house about six years ago.

And we have, I'm also one of the, the walkers who walks daily, almost daily in the, in the Meadows. And it's been especially wonderful during the pandemic when we were able to walk and be out together, even though we couldn't get

together in people's houses.

And it, it's a wonderful place for walking. We don't have sidewalks but it's very easy to walk on the road. Most people do loops around the neighborhood and we, it's a, the only way we can, can walk because there are no sidewalks, there are no walking trails or anything else in, in the meadows.

And it would be a real problem, we are opposed to the development, in general. But if it were approved, we are very much opposed to having Mays Chapel opened up to vehicular traffic. It, there's enough traffic just with people in the community coming and going every day that even when we're walking we have to be careful that, you know, we're out of the way of the, the cars.

And a lot, many people have dogs also, that walk their dogs, and there's no other place to go. So, it would be a real problem to have additional traffic on the narrow roads with no sidewalks. And it, two-way traffic would be a problem.

Also, there's been some testimony that it would only affect those of us on Mays Chapel Road, and it would affect us more because we couldn't back out of our driveways if there was a lot of traffic.

But it, it, as Ed mentioned, everybody in the Meadows, whether they're in Seminary Farm or the cul-de-sacs, or on Mays Chapel, still have to make the left turn or the right turn if, if it were cut through to get out of the

Meadows.

And so, anyone who lives in the Meadows would still have to go on to Mays Chapel Road to get out of the community. So, it's not only affecting those of us who live on Mays Chapel Road.

Also, I was curious, there have been a lot of testimony from people on the Tallyho Road area about how much they have trouble with traffic on Tallyho and people cutting through between Joppa and Seminary Avenue. And they've had to put up speed bumps and stop signs and they're concerned about safety.

And so, I'm surprised that many of them want to have the same, us to have the same problems. To impose that on another neighborhood, knowing the difficulties they have, why would they want us to have the same difficulties?

And it wouldn't help them that much because people still have other alternatives. They can go to Thornton. They, and they can go to Falls Road. But to having another community having the same problems they have, I mean, that seems like a reason not to have the road cut through because of the problems they already have.

And we know that that's a problem for them and I, I feel sorry for them. But I don't think that cutting through Mays Chapel will help them much and it will certainly hurt us. So, I'm very much opposed to the possibility of the cut

through, and I would love to have some assurance that that won't happen, because it would be very difficult for the lifestyle of this community and the safety of this community.

ALJ: Okay. Thank you, ma'am. So, let me ask Mr. McCann. Do you want to go first? Do you have any questions.

MR. MCCANN: Sure, real quick again basically --

ALJ: Yeah.

MR. MCCANN: -- the same questions. Ma'am, can you just confirm for me where your address is? I'll blow up the map again, once again, and you're on Mays Chapel Road --

MS. TINANOFF: Yes.

MR. MCCANN: -- so I think this is your house right here where I highlighted, closest to Seminary you said, right there --

MS. TINANOFF: Yes, it's right across, our driveway is right across from Seminary Farm Road.

MR. MCCANN: Okay.

MS. TINANOFF: So, if we were backing out of our driveway, we'd have to look in three directions, behind us, to the right and to the left.

MR. MCCANN: Okay and did I highlight it correctly right here in yellow?

MS. TINANOFF: Yes, that's right.

MR. MCCANN: Okay and without going through all the, the details that some of the other witnesses have test, have

testified about, the, the traffic situation on, on Seminary and on Joppa, do you concur with some of the concerns that other people have expressed in this, during the course of this hearing?

MS. TINANOFF: Oh, yes, absolutely.

MR. MCCANN: Have you, have you been here for the hearing?

MS. TINANOFF: Yes, I've been here for most of them. I missed the first one or two, but I've been listening to most of them.

MR. MCCANN: Okay and you, like Mr. Consroe, you signed the Petition opposing this development for instance, correct?

MS. TINANOFF: Yes, yes, I did.

MR. MCCANN: Okay. Thank you, Judge. Nothing else.

ALJ: Thank you. Mr. Zimmerman?

MR. ZIMMERMAN: Just one or two. In your own words, why are you opposed to the development?

MS. TINANOFF: Well, for the reasons that, that many others have said and, and also the, the, the organizations. That the, the overdevelopment and the failed traffic intersections, I mean, they're bad now. Many times, I can't get out of our neighborhood to get on to Seminary Avenue, to make a left turn on Seminary Avenue to go to Falls Road because the traffic is so backed up, at, at rush hour times

particularly.

And so, the, the traffic is definitely a problem now and adding to that would be, make matters worse and, and the, there's been so much development already. And if Torch Hill is approved, that's right across Seminary Avenue from us. So, we already are going to have a new development north of us. And then, to have another sixty homes south of our development, you know, we're in the middle of these two. It would just, I just think it's, it's way too much.

MR. ZIMMERMAN: Okay. Thank you, Ms. Tinanoff. Judge, that's, that's all I have. Thank you.

ALJ: Thank you. Mr. Wyatt?

MR. WYATT: Nothing, Your Honor. Thank you.

ALJ: Mr. Sachse?

MR. SACHSE: I don't have anything, thank you.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: No questions.

ALJ: Thank you. All right. Well, thank you, Ms. Tinanoff.

MS. TINANOFF: Thank you.

ALJ: There are four people in the attendees' room, one is Ms. Becker, she testified already. One is Ms. Francovich, she's just, she's from (inaudible). Ms. Francovich, you're not here for, to testify are you?

VOICE: I don't have any questions at this time.

Thank you though. I really appreciate that.

ALJ: Oh, okay. You don't sound like Jennifer Francovich. Jennifer Francovich works in the Office of Law.

VOICES: (inaudible).

ALJ: Okay. I guess they have no questions. Okay and then the next one, person is, let's see. The next person, whoops. Phone number is 410-296. Can you hear me?

VOICE: Hello?

ALJ: 410-296? Hi, yes. Hello.

VOICE: I'm not sure --

ALJ: Can you hear me?

VOICE: Yes, are you talking to me?

ALJ: Yes, I just see your number is listed in the hearing. I didn't know if you wanted to testify, so I was just double checking.

VOICE: 410-296-2225?

ALJ: It just shows me the first six numbers.

VOICE: Oh, okay. I was, I've been listening in on my telephone. I don't have the access to the video and --

ALJ: That, that's fine. Did, did you want to testify?

VOICE: I, I'd like to add a few words to what my neighbors just said. I also live in the Meadows of Greenspring.

ALJ: Okay. Let me do this. Let me get your name

first. What's your name?

MS. GREENBERG: Lauren Greenberg.

ALJ: Okay and Ms. Greenberg, your address?

MS. GREENBERG: 51 Seminary Farm Road.

ALJ: Seminary Farm Road, okay. And would you do this, would you raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. GREENBERG: I do.

ALJ: All right. Go right ahead, Ms. Greenberg.

MS. GREENBERG: Thank you so much. Thanks for your patience, Judge Murphy.

ALJ: Yeah, that's right, Mr. Zimmerman, did you hear that? Patience. Thank you, Ms. Greenberg, for pointing that out to Mr. Zimmerman.

MS. GREENBERG: I'd like to add to, especially the last two neighbors that, who are concerned along with me, especially about, you know, if the, if Greenspring Manor is approved and if Mays Chapel were to become a through road.

That not, I'm, I'm more concerned, most concerned about traffic and hazards and safety for even a bigger group. And the way I see it is this. Everyone who lives in the Meadows has to get out, we're at a stop sign trying to turn to get onto a road. Then we have to stop and turn again to get

out.

But Old Boxwood has the same exact problem. They only have one way out. Someone a few hearings back had testified that there was another way out of Old Boxwood but no, they don't have any other access aside from Mays Chapel.

And then, the, even the Developer, I believe, it's my understanding that the Developer opposes Mays Chapel being a through road as well, because I think part of what their reasoning would be, I'm imagining, is that they're speaking for the people who would be buying these homes who aren't here yet to speak for themselves. They would also have to get on to Mays Chapel.

If it becomes a through road, you now have three neighborhoods, plus the five houses on Mays Chapel, well, they're part of our neighborhood. You have many more people than I think has been, you know, really added up and spoken for altogether.

There's three neighborhoods, not just one at a time, all trying to get on to Mays Chapel. Two of them, at least, I know right now, where Seminary Farm Road is, and where Old Boxwood comes out, it's not that, those, those road, intersections are close to each other.

And I'm also concerned about the general public. Whoever decides to use it as a through road, those people are trying to drive through, right? Well, they're seeing three

different, it's actually, Seminary Farm loops around. So, there's actually, it forms two intersections. So, there's actually four in total.

These people are driving through a, probably a short road and they're seeing four places of stop signs of people lined up trying to get out. These people are looking back and forth and waiting. They have to use their judgment, when can I pull out to get out into traffic?

They, there could be mistakes made, misjudgments. You pull out and it causes an accident. That affects the people on the through road as well. What if someone is the type of person that sees a line of cars waiting and wants to stop to let someone through? Do they do that one time? Do they do that four times? Does that cause, what kinds of problems does that cause?

Another thing is I, so, yeah, I think, I think even though all the other points that have been made are very important to us, the walking and the property value and the character of the neighborhood and I mean all that, and the setting, of course, it's extremely important.

But I think even more important is the hazards and the safety and the access for, for all of us and for the general public. And if, if speed bumps were to have to be put in, so I have chronic neck pain along with many other ailments, and I've been injured by speed bumps, going over them.

And one time I was doing, some years ago, I was doing some reading, and they've done research in England, that they actually cause neck pain and I think, I think I had read that in England or parts of England, they're not even allowed to put in speed bumps because they can give people neck pain. I thought that was interesting. I had never heard that spoken of here.

And then again, like someone just said, which I think was a really good point, is we don't even know if this would really make a difference for the general public, or make a difference for Tallyho. So, we, we would be hurt the most.

And then someone else had mentioned, I think one of the lawyers in a question had mentioned that balancing, who does this really affect the most would be the three neighborhoods along Mays, trying to access Mays Chapel. Our relative harm would be so much greater than any slight benefit to other surrounding neighborhoods or people cutting through.

I think that's my main points. And again, thank you so much. Thanks for the time.

ALJ: Yeah, absolutely. Thanks, Ms. Greenberg. So, so just a second. Let me make sure that Mr. McCann has no questions first, Mr. McCann?

MR. MCCANN: Yes, thank you, Ms. Greenberg, for your testimony. Let me show you the map real quick and just confirm your address as I understand it.

ALJ: She's on, she's in a, she's in a, she's a phone caller, so she doesn't see it.

MR. MCCANN: Oh, I'm sorry.

ALJ: Yeah.

MR. MCCANN: I missed that.

ALJ: Still, I don't know, (inaudible) --

MS. GREENBERG: (inaudible).

MR. MCCANN: Okay.

MS. GREENBERG: I back up to Quail Hollow and I look out onto Yearling.

MR. MCCANN: Okay. That's fine, Your Honor. No questions. Thank you.

ALJ: Oh, okay. All right. Mr. Zimmerman? Mr. Zimmerman?

MR. ZIMMERMAN: Oh, I'm on mute. Okay, can you hear me?

ALJ: I can.

MR. ZIMMERMAN: In the, I had, I was, I was muted, but. So, I was just going to say, consistent with the spirit of patience, I have no questions.

ALJ: Thank you, Mr. Zimmerman. He's amusing Ms. Greenberg at this point. Okay, thank you. Mr. Wyatt?

MR. WYATT: No questions.

ALJ: Mr. Sachse?

MR. SACHSE: No questions.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: No questions.

ALJ: All right. Well, thank you, ma'am.

MS. GREENBERG: Thank you so much.

ALJ: All right and then there's just one more, I'm going to mute her. One more that, person or someone signed in as U24745? Can you hear me? Anyone there? All right. I'm not sure what, who that is. It's obviously not a phone number, but they have been here the whole time. They were here yesterday. All right. So, we don't have anyone else today that I can ask questions of or ask to testify. So, so that's it for the day?

MR. MCCANN: For us, yes, Your Honor.

ALJ: All right. No one else that we can ask, that needs to be called, right, Mr. Rosenblatt? You're going to wait until Mr. McCann is finished?

MR. ROSENBLATT: Yeah, we have to wait until they're done --

ALJ: Right.

MR. ROSENBLATT: -- to determine rebuttal. I --

ALJ: Rebuttal, yeah.

MR. ROSENBLATT: -- wish we could be done today obviously.

ALJ: Yeah. All right, understood. Well, we try to, try to work with everyone's schedules to make sure, you know,

we get everyone in so I guess we'll go back to scheduling and then find out in January when you all can come back. Do we just need one day?

MR. MCCANN: Adam and I were talking about that. Yeah, I, I think so. Yeah, but if, if --

ALJ: Uh oh.

MR. MCCANN: -- things change, we'll, we'll let Kristin know that. But yeah, we were talking, I, I was suggesting, I don't know if Adam chimed in on that yet, but I was suggesting just one day.

ALJ: Okay. What do you think, Mr. Rosenblatt?

MR. ROSENBLATT: I --

ALJ: Put you on --

MR. ROSENBLATT: -- sorry, making, making me --

ALJ: I'm holding your feet to the fire here.

MR. ROSENBLATT: No, I mean, maybe we can talk offline. I thought, I just don't want to do this again. I don't want to have to get dates and get dates, I'm sure no one wants to have to do that. So, --

ALJ: Yeah.

MR. ROSENBLATT: -- maybe we can talk a little bit offline and see would just having a second date that's right near the first date make sure this doesn't happen again. And if so, I would say get two. If not, get one.

ALJ: Well, so, the problem with just kind of getting

it just to be, you know, safe is that it, the problem is that it takes away hearing dates from other people who are waiting.

That, that's the reasoning and so, they want to know, of course this is, you know how when you go to Court they always say well, how long is your case going to be and you always say twenty minutes in your District Court, you say, you know, two hours if you're in Circuit Court, you know. So, it's kind of the same idea. Then they give you a day, then the day's gone and so.

MR. ROSENBLATT: Then I would say we need two days because I, I just can't imagine with the way, with how many lawyers are involved, it --

ALJ: Yeah, that's the thing.

MR. ROSENBLATT: -- and there's more, at least half a day or more of continued Mr. McCann's case. We're definitely going to have rebuttal evidence.

ALJ: Yeah.

MR. ROSENBLATT: And we don't want to run out of time.

ALJ: Okay, all right. Well, should I send an e-mail then to Kristin just --

(RECORDING STOPS)

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings for Baltimore County, December 7, 2022, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 176 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 5th day of July 2023.

Christine R. Leary

IN THE MATTER OF:

GREENSPRING MANOR
2310 W. Joppa Road

CASE NUMBERS: 08-0922 & 2021-0250-SPH

Hearing Date: October 28, 2022

Pursuant to Notice, the above-entitled hearing was held before the Office of Administrative Hearings for Baltimore County by remote access.

PRESIDING:

MAUREEN J. MURPHY, ADMINISTRATIVE LAW JUDGE

FOR THE PARTIES:

ADAM ROSENBLATT, ESQUIRE
CHRISTOPHER MUDD, ESQUIRE

MICHAEL MCCANN, ESQUIRE

PETER MAX ZIMMERMAN, PEOPLE'S COUNSEL
FOR BALTIMORE COUNTY

(ON RECORD)

ALJ: Good morning, everyone. You're attending day five, case number 08-0922 and 2021-250-SPH. Property address 2310 West Joppa Road, combined development plan and zoning case for the project known as Greenspring Manor. For the record, Mr. Rosenblatt, we'll start with you. If you could just introduce yourself for the record?

MR. ROSENBLATT: Good morning, Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer/Petitioner.

ALJ: Mr. McCann?

MR. MCCANN: Good morning, yeah, good morning, everyone. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel for Baltimore County.

ALJ: All right. We're continuing here, day five. We were in the middle of cross examination of Mr. McCann. But preliminarily, just so we have the exhibits straight. Mr. McCann introduced yesterday exhibit number thirty-five, which was the land, land use ITE manual. Is there any objection, Mr. Rosenblatt to that?

MR. ROSENBLATT: No objection.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: All right and I did get Mr. Zimmerman's

corrected exhibit yesterday with the, in regard to the math issue. But we did not receive the e-mail for the Developer, e-mail is for exhibit number thirty. This was an e-mail from Mr. Filsinger dated January of 2021. So, I just wanted to --

MR. ROSENBLATT: Judge, I, sorry, Judge.

ALJ: Yep.

MR. ROSENBLATT: I think I still need to talk, excuse me, with Mr. McCann. I forwarded what I had, which is a pdf by my engineer, of the actual e-mail that was read into the record. But Mr. McCann had said that he wanted the chain that preceded that to be part of the exhibit. I, I just had asked if you could just forward that to me, I'll look at it right away and we'll, you know, we'll see.

MR. MCCANN: I have, I should have done that already. I will do that, that's okay.

MR. ROSENBLATT: No problem.

ALJ: That's fine.

MR. ROSENBLATT: So, it, it will be Exhibit 30, we just need to agree on what the extent of it is.

MR. MCCANN: And maybe we can talk about it during the break. I'll send it to Adam --

MR. ROSENBLATT: Sounds good.

MR. MCCANN: Yeah.

ALJ: Yeah, that's fine. I just wanted to make sure we were all onboard with what exhibits were sort of lingering

out there.

MR. MCCANN: Yep.

ALJ: Okay. So, we are back. Mr. Driban.

MR. MCCANN: Yes.

ALJ: He's here. You're still under oath, we swore you in yesterday and so, Mr. McCann was in the middle of his cross and we'll let you continue. And I'll give you the presenter token in case you need it.

MR. MCCANN: Okay, great. Okay. Good morning, again, Mr. Driban.

MR. DRIBAN: Good morning, Mr. McCann.

MR. MCCANN: Okay. So, where we left off, just to refresh your recollection, everybody's recollection was with the levels of service for, under the CLV and HCM methodologies as reflected in Developer's Exhibit 25. And just to recap that really quickly.

There were, for the a.m. peak hour, levels of service under the CLV methodology, the only improvement in level of service was for the a.m. peak hour, that is, it went from E to under existing conditions to D, under post-development conditions with the road improvements, correct?

MR. DRIBAN: That's the only change in the letter grade, yes.

MR. MCCANN: Okay and I know you're, would much rather talk about the mitigation rather than levels of service,

but we'll get there. And then, so in other words, for the evening peak hour under the CLV methodology, and Ill blow it up again, the level of service under existing conditions was D, under post-development conditions with the road improvements, the level of service remains a D, correct?

MR. DRIBAN: Yes.

MR. MCCANN: And then, under the HCM methodology, the level of service for both the a.m. and peak hour existing conditions was D, under post-development conditions with the road improvements, the level of service remains a D, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and the level of service also doesn't change under either methodology for Falls Road and Greenspring Valley, correct?

MR. DRIBAN: That is correct.

MR. MCCANN: And then, you don't have on here Falls Road and Seminary, which is the other failing intersection. But I assume the level of service under either the CLV or the HCM does not change for that intersection as well, is that correct?

MR. DRIBAN: That was not part of the scope of our study, so I can't speak to that.

MR. MCCANN: Okay. So, let's talk about, I know what you want to talk about, and that is the mitigation, which is this last column. And you kept on using the term, I, I jotted

it down, substantially improving. That is the road improvements are substantially improving the traffic conditions and you, you mentioned these percentages.

Hopefully this is large enough that everybody can see them. This is in the righthand column on page sixteen for the CLV methodology, where we talk about mitigation as a result of proposed improvements. Do you recall that testimony on direct, Mr. Driban?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. So, this, this nine hundred and thirty-one percent, which certainly sounds like a, a, you know, a staggering number, I just want to make clear what that is. But that is actually, is really a comparison of, I know I wasn't doing a good job of highlighting yesterday. Really a comparison of post-development conditions with post-development conditions with the road improvements, right? In other words, these two numbers, fifteen forty-nine and fourteen twenty-eight. That's the, that's what this nine hundred thirty-one percent is, correct?

MR. DRIBAN: The nine hundred thirty-one is, percent, is the comparison of the site's impact, which is the increase in CLV from background to total. So, fifteen thirty-six, to fifteen forty-nine. So, we add thirteen critical lane volumes, trips to the intersection versus one hundred twenty-one CLVs that are mitigated, that, which is the --

MR. MCCANN: Well, --

MR. DRIBAN: -- change from fifteen forty-nine to fourteen twenty-eight.

MR. MCCANN: Right, what I just highlighted --

MR. DRIBAN: Well, the --

MR. MCCANN: -- the fifteen forty-nine --

MR. DRIBAN: It also includes the fifteen thirty-six.

MR. MCCANN: Well, yeah, by definition, total inclusive background.

MR. DRIBAN: The, what is being measured, so that, if you look to the column to the right of the fifteen forty-nine, that number is thirteen --

MR. MCCANN: I know that. Mr. Driban, can you just answer my question. I know where we're headed --

MR. ROSENBLATT: No, no, no. He, these are not yes and no questions. He's answering it in his own words. He does not have to agree with --

MR. MCCANN: Well, I --

ALJ: Okay, understood. Let, let me get him, let me get him to answer the, go ahead, Mr. Driban. What were you going to say? Thirteen something?

MR. DRIBAN: Well, he's asking, the question as I understood it is, is, is this a direct, specifically a comparison of the number, the total number that he's highlighted, which is fifteen forty-nine and the fourteen

twenty-eight, and the answer is no. There's more to it than that. It's a comparison of the change from background. So, if you highlight fifteen thirty-six --

MR. MCCANN: I, I, okay, I'm sorry, go ahead.

MR. DRIBAN: -- if you highlight that number, the comparison, the nine hundred and thirty-one percent is the change from background to total, which is thirteen CLVs. And then, the change from total to total with improvements. So, you, so there's a number that, that is part of the comparison that you haven't, that you're not including.

MR. MCCANN: I, I, I skipped over that step and I shouldn't have highlighted those two numbers. What I, what I, what this is really is, is a comparison of these two numbers. That is, the CLV impact under total post-development conditions without the road improvements and total post-development conditions with the road improvements.

MR. DRIBAN: Yes.

MR. MCCANN: Okay. That, I skipped over, and I thank you for that. So, in other words, what, what you did here is, essentially, you took the hundred, this is a, a percentage of how much of the impact, of the impact you're mitigating, right? In other words, you divided a hundred twenty-one by thirteen and got nine thirty-one?

MR. DRIBAN: Correct.

MR. MCCANN: Okay. So, you're not, it's not a

comparison of existing, or even background, and post-development conditions, it's just a, the nine hundred thirty-one percent is just a, is, is a reflection of how much of the impact post-development you are mitigating with these road improvements.

MR. DRIBAN: Correct.

MR. MCCANN: Okay. So, you know, on that point, the numbers aren't as big, but your, your charts certainly seem to acknowledge that for the other intersections, the CLV impact is a positive number.

Meaning, regardless of the, the size of the number, the situation post-development is, even though there's no road improvements, for instance, at Greenspring Valley, this number three is a positive number. So, that actually the situation in technical, I'm sorry for doing that, the situation in technical terms at Greenspring Valley, is going to get worse, correct?

MR. DRIBAN: Part of the CLV methodology with, with the study, the impact is three from the development.

MR. MCCANN: Right, worse. The number is, okay, and the same with respect to the --

ALJ: Hold on, Mr., Mr. Driban, is it worse? Did you say yes?

MR. DRIBAN: Per the CLV methodology it is.

ALJ: Okay. Go ahead.

MR. DRIBAN: The, the CLV is one of the methodologies

that was evaluated.

ALJ: Right.

MR. MCCANN: And then, likewise, for the p.m. peak hour, the situation at Greenspring Valley is worse. In other words, it hasn't been mitigated, but rather, is worse, correct?

MR. DRIBAN: Per CLV, yes.

MR. MCCANN: Okay and going to HCM, which we'll get into in more detail about, the, we have these same percentages, but the, the post-condition situation at Greenspring Valley is technically worse, correct?

MR. DRIBAN: For HCM, yes.

MR. MCCANN: And then, for the p.m., it's not worse apparently, correct?

MR. DRIBAN: That's correct.

MR. MCCANN: Okay, all right. One thing I noticed about this, the HCM methodology, I mean, assuming, all this assumes that the CLV and the HCM are relevant to this entire discussion, but let's, we can speak hypothetically, I guess.

If we apply the HCM methodology, what I noticed about these levels of service D, is these are, this does not account for the individual turning movements, correct? This is a, an overall level of service for the intersection for all of its turning movements, correct?

MR. DRIBAN: Yes, that's how the, the intersection level of service is quantified as an overall level of service.

MR. MCCANN: Okay. So, if we were to go to the details for this chart, which you didn't discuss during direct examination, so this would be, for the HCM methodology, we go to page forty-nine of the report, which again, is Developer's Exhibit 25. This particular page reflects the details by turning movement for Maryland, I'm sorry, Falls Road and Joppa under a.m. peak hour existing conditions, correct?

MR. DRIBAN: Correct, yes.

MR. MCCANN: And then, if we go to page fifty-five of Exhibit 25, we can see the HCM methodology for Falls and Joppa a.m. peak hour total with proposed new improvements, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay, all right. So, I prepared a separate exhibit with those two pages. And this will be, Your Honor, this will be Exhibit 36. So, again, this, the first, it's two pages, this Exhibit 36 is the two pages I just referenced, pages forty-nine and fifty-five of Developer's twenty-five.

And what this reflects for all the movements, does it not, and I'll blow it up, Mr. Driban, it, it reflects levels of service, as you can see my pointer, I got a brand new big blue pointer for everybody's benefit. I was probably driving people crazy yesterday. But the, the level of service this is a.m. existing conditions. The level of service for each turning movement is identified across the board here, correct?

MR. DRIBAN: That is correct, yep.

MR. MCCANN: And then, the average of those individual turning movements, which, by the way, include F turning movements, correct?

MR. DRIBAN: It does, yep.

MR. MCCANN: Under the HCM methodology, right?

MR. DRIBAN: Yes.

MR. MCCANN: The average of those turning movements is D, that's the number down here on the bottom of the page, first page of this exhibit, where it says HCM 2000 level of service. That's where we get the D from in the document, in the pages we just looked at, correct?

MR. DRIBAN: Yes.

MR. MCCANN: And then, so the line I just asked you about, level of service, with the individual levels of service for the turning movements, below that is a, an approach LOS, what does that line indicate?

MR. DRIBAN: So, that's --

MR. MCCANN: Is that part, is that part of the averaging or not?

MR. DRIBAN: So, that's the average of the individual approaches at the, on that, the individual movements on that approach. So, if you think about it, if you think about the, the top line that you showed me, sorry, --

MR. MCCANN: Yeah.

MR. DRIBAN: -- first line you have highlights on, the blue circle that says level of service.

MR. MCCANN: Yeah.

MR. DRIBAN: Those are the individual movements. So, for westbound, you might have right turn through movement, left turn. Those average out into the approach level of service for that approach.

MR. MCCANN: Got it. Got it. So, for, in the case of, and I'll just circle it and maybe leave this as part of the exhibit, if I circle those two rows, the level of service for two of those turning movements is F and one's an E, but it averages out to an E, correct?

MR. DRIBAN: That's right.

MR. MCCANN: Okay, all right. And then likewise, on the p.m., I'm sorry, the a.m. total with proposed new improvements, that's page two of this Exhibit 36, we again have, and this is post-development with new improvements, we have levels of service, right? This line I'm circling, correct?

MR. DRIBAN: Correct, yep.

MR. MCCANN: And they're along this, this row here. So, post-development for, with the improved conditions for two of the turning movements, we have levels of service F, correct?

MR. DRIBAN: That is correct, yeah.

MR. MCCANN: In fact, we also have levels of service

E, you know, several of them, which under the HCM methodology would also be unacceptable, correct?

MR. DRIBAN: That is correct.

MR. MCCANN: Okay. But the average of all those, as you've pointed out on, or as this reflects, under HCM 2000 level of service is D, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay, all right. The other thing I wanted to look at was, there's another column, I'll go to the first page of this Exhibit 36. There is, there is a row, just above level of service which says delay.

MR. DRIBAN: Um hm.

MR. MCCANN: (inaudible) these numbers here, for instance, 79.0, which I'll circle in red, that is the delay in seconds at that turning movement, correct?

MR. DRIBAN: Average delay per vehicle in seconds at that turning movement, yes.

MR. MCCANN: Yeah, and this is under existing conditions, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and I'll just circle another one, which is 62.6 seconds delay per vehicle for a.m. existing conditions and that's the westbound right hand turn, right?

MR. DRIBAN: Correct.

MR. MCCANN: Okay. So, I just wanted to compare

those two numbers in particular with post-development conditions with the road improvements. And if we go down to those, that very same row, I already have it circled. Actually, let me go back up, I'm sorry. On the first page of this Exhibit 36 under A, existing conditions, I also wanted to circle for the record in red 29.8 in the delay row for the southbound through lane on Falls, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay. So, the, if we take those three numbers and look at what they are post-conditions with the proposed improvements, would you agree with me that the delay for those turning movements actually increases. So, in other words, under post-conditions with road improvements, the delay for this, for the eastbound lane goes from 79.0 seconds to 92.1 for each vehicle, correct?

MR. DRIBAN: For that movement, yes.

MR. MCCANN: Okay and then for the westbound right hand turn lane under A, existing conditions, the delay per vehicle goes from 62.6 to 67.3 seconds, correct?

MR. DRIBAN: That is correct.

MR. MCCANN: Okay and I'll circle that in red as well. And then, for the southbound through lane on Falls Road goes from, a.m. existing conditions, goes from 29.8 seconds per vehicle delay to 33.5 seconds delay per vehicle under post-conditions with road improvements, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. Okay and let's look, the same thing for the, for the p.m. and I won't go through, excuse that marking, I won't go through all of the same questions. But I did want to point out in terms of delay, blow it up a little bit. So, the first page in this exhibit, which would be thirty-seven, this would be p.m. existing conditions for Falls and Joppa, correct?

MR. DRIBAN: Correct.

MR. MCCANN: And the --

ALJ: Wait a minute, which, which page of Developer's twenty-five are you now on?

MR. MCCANN: Now I'm on page fifty-seven, I'm sorry, I should have --

ALJ: Fifty-seven, yep. And I just want to make sure we're, we got the right page numbers. All right. So, you're on page fifty-seven of Developer's twenty-five, but this is going to become thirty-seven of your exhibits, Protestant's exhibits.

MR. MCCANN: Yeah, in fact, it's, it's two pages, Your Honor, it's page fifty-seven and page sixty-three of Developer's twenty-five.

ALJ: Okay, yep. And you're going to print these with the colored highlighting, right, when you submit it?

MR. MCCANN: Yes.

ALJ: Okay. Yeah, that actually, yeah, if you could please. Thank you.

MR. MCCANN: And, yeah, and I can reprint this without this circle and x. I, now that I have a copy from the Developer it'll be, of the traffic study, I don't have, you know, I didn't have it before so.

ALJ: Yeah, well, that's fine. No, I just wanted to make sure you submitted it with the color copy, okay.

MR. MCCANN: Yeah. So, I just wanted to compare the delay under those two conditions, the existing versus post-development with road improvements and, just in a couple respects. And that is, let's see, westbound right hand turn lane, if I could draw in red the delay according to this chart is 59.9 seconds per vehicle under existing conditions. And under post-development with road improvement conditions that number is 63.8 seconds per vehicle, correct, Mr. Driban?

MR. DRIBAN: That's correct.

MR. MCCANN: And then, going back up to the first page under a.m. existing conditions, the delay per vehicle on the, bear with me one second. On the northbound lane of Falls is 23.2 seconds, correct?

MR. DRIBAN: Northbound left turns, yes.

MR. MCCANN: Oh, yes, thank you. And then, under post-development with road improvements, that number is 45.8 seconds per vehicle, correct?

MR. DRIBAN: That is correct.

MR. MCCANN: Okay and like the, the a.m. peak hour levels of service that we looked at, there are, there are individual turning movements, both under the existing conditions and the post-development conditions with road improvements that are either an F or an E, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and I'm circling those on the first page of this exhibit. On the second page of this exhibit, post-development and I'm also circling the Fs and Es, which are levels of service for those individual turning movements, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. I'm sure this is driving everybody crazy. All right. With that, Your Honor, I will move these to exhibits, thirty-six and thirty-seven, into evidence.

ALJ: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: Yeah, I, I just question, are, are the exhibits going to have these markings on them --

ALJ: Yes.

MR. MCCANN: (inaudible).

MR. ROSENBLATT: Okay and then (inaudible) no objection.

ALJ: All right. Mr. Zimmerman?

MR. ZIMMERMAN: No objection. Can I ask is thirty-six a.m. and thirty-seven p.m.? I, I just was trying to follow it.

MR. MCCANN: Yes.

MR. ZIMMERMAN: Okay. Yeah, yeah. I'm fine with these exhibits.

ALJ: Okay, thank you.

MR. MCCANN: Okay. You talked about the, the road improvements, and as I understand it, Mr. Driban, the, the design for those road improvements has not yet been approved by SHA as we sit here today, correct?

MR. DRIBAN: The --

MR. MCCANN: Final design.

MR. DRIBAN: -- the, the design, the final design plans have not been approved. The, the, what will be constructed there has been approved.

MR. MCCANN: What's the difference between what's--

MR. DRIBAN: So, there's two, there's two stages to the SHA process. The first step is they have to review and approve what you're proposing and confirm that they agree with that. We have agreement on what's going to be built. Then there's the, the details of getting final design that conforms to SHA standards in order to obtain an access permit.

So, it is in the final design process. They've already agreed that it can be constructed, it's just a matter

of, you know, getting plans that a contractor can, can construct and conform to SHA standards.

MR. MCCANN: So, you said you anticipate approval, correct, final approval?

MR. DRIBAN: On the second half of that, yes.

MR. MCCANN: Okay.

MR. DRIBAN: The final design piece.

MR. MCCANN: You also said that developers, in your experience, typically wait until the development approval process is completed, but this developer is, in your words, proceeding at its own risk, is that correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. So, you know, it's theoretically possible or not impossible that the design of these road improvements, which are reflected in, in Developer's Exhibit, bear with me one second. I forget what number it is, but one of the Developer's exhibits, could, could change to some extent.

MR. DRIBAN: No, SHA has already agreed with, with the configuration and the final design and the, and the detailed concept of what lanes will be there. What could change is whether, you know, a curb is here or six inches this way or the drainage structures, if any of those, those details that are part of SHA's standards and requirements of the, of the actual design of the, for, for contract construction,

that's what could change. The improvement itself is, is approved and that's what will be ultimately constructed there in terms of the lanes.

MR. MCCANN: Well, yeah, when you say improvements itself, do you mean just the, just the, not the physical, but the, the concept of having x number of lanes through, through, that's been proposed.

MR. DRIBAN: The addition, yes, the additional lanes that, that are, that have been proposed are approved by SHA.

MR. MCCANN: Well, I, I'm just not certain how you're able to say that it couldn't change. How do you know that for certain? That is, that the, either not, not, not the concept, well, I'll move on, that's fine. So, along those same lines, you talked about maybe some of the details maybe change. Let me just pull up that exhibit, the road improvements. Excuse me. And this is Developer's Exhibit 16. Do you see that, Mr. Driban?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and I know this is a concept plan but it, it certainly looks to me, just based on this and, and particularly in addition to what you just suggested, is that there are going to be, there's going to need to be some physical expansion of the road out there. In other words, you're not just taking the existing roadway and putting some striping on it, is that right?

MR. DRIBAN: Right, I believe there are some, some pavement widening and some curbs. You can see, for instance, in the, next to where it says West Joppa Road, yep, where your arrow is, you know, --

MR. MCCANN: Yeah.

MR. DRIBAN: -- there will be some, there will be some impacts to that channelized island, yes.

MR. MCCANN: Okay and then, are you also familiar with changes that are going to be made, or proposed anyway, at the entrance to the site, in terms of installing acceleration, deceleration lanes and widening Joppa Road at that location?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. Did you, did you conduct any analysis or investigation into the delay, we just talked about delay with the, in connection with the HCM methodology, that will occur while all of this work is being done?

MR. DRIBAN: No.

MR. MCCANN: Okay. Would you agree with me, given the current state of the, the intersection, and its, the nearby intersections, that the improvements that are proposed in this exhibit, that will be proposed in the final design and those that will be proposed at the entrance, will have a significant effect on traffic for however long that takes. I know you may not know how long that takes. But would you agree with that?

MR. DRIBAN: I don’t know how significant or

insignificant it might be. I mean, any construction, any improvement project has, has impacts during construction, that's, that's the nature of, of, of roadway improvements.

MR. MCCANN: But, but sitting here today you don't know how long that, that it'll take? All those improvements?

MR. DRIBAN: I haven't, we haven't looked into that. I, that's not my area of expertise. I mean, it's just not something we've looked into on this project.

MR. MCCANN: Okay, all right. Let's, let's move on to the, I think what you called corridor study, where you looked at the, the travel speeds through the intersections. Do you recall that testimony?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and I, as I understood it, you were able to perform that study because you obtained from SHA, and I forget the name of the program, simulations, Simfast, or what's the name of it again, Mr. Driban?

MR. DRIBAN: Yeah, the, the program that we use is called Synchro and there's a, a kind of secondary piece of it that does those simulations called Simtraffic (phonetic). They, they go together.

MR. MCCANN: Okay.

MR. DRIBAN: Synchro is S-Y-N-C-H-R-O, I don't know if that matters, but.

MR. MCCANN: Yep. And Simtraffic is one word, right?

MR. DRIBAN: You got it, yep.

MR. MCCANN: Okay. So, those are literally, for non-computer literate people like me, those are just programs that State Highway has and that you, you had access to that, where you just input data and, I guess, I assume, traffic volumes, etcetera, and what you can actually visualize and see are, is a video of how traffic is moving through these intersections. Is that part of, what can be accomplished with these programs?

MR. DRIBAN: I think that's a, a bit of simplification. I mean, the, the video is based on a detailed traffic simulation model that's, that's built into the program. And, and these programs are the industry standard for this type of analysis. There, there are certainly others, but Synchro and Simtraffic are the most commonly utilized.

MR. MCCANN: Okay. But the concept I just described, is that, that is, you can actually see cars at the intersection, moving through in real time?

MR. DRIBAN: It is an output from it, yes. That's, that's not, I mean, the video is, is not necessarily the primary goal of doing that analysis. But it is, it is one of the outputs.

MR. MCCANN: Well, you say it's not primary, but I, I mean, I think everybody on this, in this hearing would, would love to see those videos. Why, why haven't they been produced and why aren't they, why weren't they shown?

MR. DRIBAN: It, it --

MR. ROSENBLATT: Objection, objection. We can make our case. I don't think that's an appropriate question.

MR. MCCANN: All right.

ALJ: Okay. Well, so, I mean, just for the record --

MR. MCCANN: Let me ask it this way, I'll (inaudible).

ALJ: Hold on. Yeah, okay. Just rephrase the question, thank you.

MR. MCCANN: Is there, is there a reason why you did not, during your testimony, present a video simulation of the results of that analysis?

MR. DRIBAN: We, we conducted the Synchro and Simtraffic analysis at the request of SHA to look at the corridor operations. The outputs from the Simtraffic model are what SHA and the agencies are what, you know, really the data that is important.

It's, it's the actual, again, it's based on car following parameters, it's based on the volumes of traffic, the traffic control devices. It considers, you know, the whole gamut of, of, of traffic operations. And so, when we, when we submitted our, our study that was the information that was provided to them.

The videos, again, they're, you know, they're, they're sort of a secondary thing that, you know, the public

may, may want to look at. But it's not, the actual data is in the, is in the outputs and the information that we conveyed to SHA.

MR. MCCANN: Okay and you mentioned outputs, but I think you also just mentioned some inputs. Car following parameter, what is that?

MR. DRIBAN: So, I mean, the, the, when I talk about Simtraffic, so there's, let me kind of step back, right? So, Synchro is the, is the HCM piece of the modelings, of the software. So, the HCM is a set of equations. We've just gone into great detail on some of the outputs and the numbers from that.

And, you know, the inputs to the HCM and to the Synchro piece are lane configurations, traffic volumes, you know, traffic controls, whether there's a roundabout, a stop sign, a traffic signal, the timing of that signal, the area type, you know, whether it's a central business district or, or not.

You know, some of the, those are some of the out, the inputs that go in. The Simtraffic piece takes those inputs and it runs them through a, a, a research based model, traffic model, that has default, you know, car following parameters, it has, you know, spacing between typical vehicles traveling at a given speed, you know, it's, it's, it's based on research that's been conducted, you know, and used to develop this, this

car, this vehicular simulation model.

MR. MCCANN: Yeah. No, I appreciate that, that's, that's helpful. But what I gather from everything you just said is that these inputs, or strike that. There is, given the type of information you just described, there are margins of error in that program, correct?

MR. DRIBAN: It's a model. There are parameters that SHA prescribes for running the model wherein we, we run what's, what's called five runs. So, we don't just do one simulation and say, you know, this is, this is the result of the simulation.

We run the same simulation multiple times and, you know, to, and then average those, those runs to make sure that we have, you know, given that it's a model and to your point, that, that we've done our best to sort of minimize the, the margin of error of any, you know, one run.

MR. MCCANN: Yeah, yeah, I understand that. But at the end of the day, it's a model. It's, it's a projection, correct?

MR. DRIBAN: Sure, yep.

MR. MCCANN: For instance, you know, you said the inputs are land configuration, traffic volume. Well, first of all, traffic volume itself is a projection. You're, you're, I assume the traffic volume that's inputted into this program are the trip generation numbers from, that we looked at yesterday,

correct?

MR. DRIBAN: Yep.

MR. MCCANN: And that, and you, and you said timing, I assume by that you meant the timing of the lights, correct?

MR. DRIBAN: That's correct.

MR. MCCANN: Okay. Did you, you talked earlier about the timing of the lights perhaps changing if SHA, it's up to SHA. But what, what timing, the timing that was inputted into the program, was that the current, the way in which the lights are currently timed or is that some hypothetical timing that SHA may approve?

MR. DRIBAN: Yeah, so, for existing, we obtain the files from SHA, so it's their existing timing out there. And then, for the total with improvements, Synchro, again, this is the industry standard program that's utilized, Synchro has the ability to optimize timing based on changes in lane configurations or volumes or things that might occur.

And so, and that's what SHA typically uses to, to, to develop their new timings. And so, we, the timings were optimized under the, the total with improvements condition to reflect the fact that there are substantial changes being proposed to the lane configurations.

MR. MCCANN: Okay and I think you, you said something about the area, there's an input for area, where you could, I guess you could put in the type of locality, whether it's a

business district or a rural area, that type of thing?

MR. DRIBAN: That's one of the inputs, yep.

MR. MCCANN: Okay. But getting back to lane configuration, the, does, am I correct that, do you mean by that specifically here, in this case, the, the Falls Road corridor, the East and West Joppa corridor and the Greenspring Valley and Station Road, are those the, the, is that the lane configuration that was used?

MR. DRIBAN: The lane configuration refers to the specific number and type of lanes on each approach. So, Synchro uses a, a link and node, a link and node model --

MR. MCCANN: Yeah.

MR. MCCANN: The node would be the intersection, right? So, kind of the, the striped area and, you know, the center of it, and the links are incoming roads. So, you know, Falls Road, northbound and southbound, Joppa Road and then the other, the other side of Maryland 25. And the lane configuration, just using, you know, the, the eastbound, which is the bottom sort of page, page down on this.

MR. MCCANN: Yeah.

MR. DRIBAN: The lane configuration would be one left turn lane and one shared left through right turn lane. So, it's, it's accounting for the, the specific individual lanes on each approach.

MR. MCCANN: All right and when you say approach, I

know that's a technical term, that's a, that's a, a lighted intersection, correct?

MR. DRIBAN: Approach just means a leg, a leg of the intersection, coming into the intersection. So, most typical intersection has, is, is a four leg intersection, would have four approaches. In this case, there's a southbound Falls Road approach, northbound Falls Road approach, westbound Joppa Road approach and then the eastbound approach.

You know, you can have other configurations, but an approach just means a, a road approaching an intersection, coming, coming into an intersection.

MR. MCCANN: All right. So, I assume then that the, the program, I keep calling it a program, I don't know if that's the right word or not. But program doesn't account for any other public accesses, you know, along the corridor, correct?

MR. DRIBAN: I mean, they're not analyzed with level of service.

MR. MCCANN: Yeah, that's why they're not. They're not part of the program because there's, they're not part of the level of service analysis, right?

MR. DRIBAN: Right.

MR. MCCANN: Okay. So, for instance, let me show you this exhibit, which will be thirty-eight. This is an aerial photograph of the area and I have, I'll print this as it is.

But can you see at the bottom, do you recognize West Joppa Road here, and Falls Road, do you recognize what this is of?

MR. DRIBAN: Yes.

MR. MCCANN: So, I, I was counting the number of accesses onto Falls Road and Joppa along this corridor that are not at the intersections of Falls and Joppa or Falls and Greenspring or Falls and Seminary and you see there's one, I'll start at the bottom. Do you see there's one right here on Joppa as you approach the intersection?

MR. DRIBAN: Yes.

MR. MCCANN: You see that?

ALJ: Can, can you direct, oh, there's your cursor.

MR. MCCANN: Yeah, I've got my, my blue cursor.

ALJ: I see it. Okay, so (inaudible) wanted to mark it, but.

MR. MCCANN: Yeah.

ALJ: I see the cursor now.

MR. MCCANN: Yeah. That I don't know how to do, Judge. (inaudible) describing it maybe.

ALJ: Actually, you're right. I don't know how you can do it on this. You're right, you can't. I guess, unless you made this a pdf. This is actually your screen, isn't it?

MR. MCCANN: Yeah, let me, I actually have a pdf, so let me use that instead.

ALJ: It's fine, you can use what you were using. I,

I wasn't trying to make it difficult. I just didn't know if you wanted to, I could see your cursor after you did it. But I didn't know if you wanted to mark the photo.

MR. MCCANN: I'll just do a better job describing it. But so the, and then, if we get onto Falls Road, just north of the intersection with Joppa, there's an entrance right here where my cursor is and that's to a convenience store and gas station, correct, Mr. Driban?

MR. DRIBAN: I'm not seeing your screen share.

MR. MCCANN: Ah, okay. I guess that helps.

MR. ZIMMERMAN: Is this an exhibit?

MR. MCCANN: It is, yeah. This will be thirty-eight.

ALJ: It will be an exhibit.

MR. MCCANN: Yes. So, getting back to where I, what I was just describing, just north of the intersection with Joppa on the east side of Falls Road there is an entrance and actually an exit to a convenience store and gas station, correct, where my cursor is?

MR. DRIBAN: Correct.

MR. MCCANN: And then, past those two entrances, the entrance and the exit, just to the north, just to the north of that, there is an entrance on the east side of Falls Road that would take you, for instance, to a liquor store, his name is escaping me, as well as to Greenspring Station itself, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and if you go farther up, you get to the intersection with Greenspring Valley. There is, of course, Station Drive there. Just past Station Drive on the east side of Falls Road there is an access point to, to retail shops, correct, as well as the Greenspring Station?

MR. DRIBAN: Correct.

MR. MCCANN: And then, just past that there's an access point on the east side of Falls Road north of that to, to medical and other offices?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and then, I guess the rest of the exhibit, you know, speaks for itself. But, okay and I'll, I'll mark that as Exhibit 38 and move that into evidence.

ALJ: Mr. Rosenblatt, any objection?

MR. ROSENBLATT: No objection.

ALJ: Thank you. Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Thank you.

MR. MCCANN: So, you, in addition to the program you just spoke about and the fact that it doesn't actually account for these public accesses to, to those retail, etcetera, am I correct that the HCM methodology and the CLV methodologies that we spoke about, have spoken about, also do not account for these multiple access points mainly as I think you indicated they, because they, they, they're not in, part of the level of

service analysis, is that correct?

MR. DRIBAN: Yeah, they, they don't account for them, I mean, it's, it's, it has to do with not being part of the level of service analysis, but also, you know, the net effect of most driveways is, is, you know, is negligible. So, it's not, you know, the, the main thing, looking at these traffic models is the intersections.

MR. MCCANN: Yeah.

MR. DRIBAN: And that's, that's what those models CLV, HCM are designed to do.

MR. MCCANN: Yeah, but here, have you spent any time in this area, Mr. Driban?

MR. DRIBAN: I have, yes.

MR. MCCANN: Do you live in this area?

MR. DRIBAN: I don't live in this area.

MR. MCCANN: Where do you live?

MR. DRIBAN: I live in Baltimore City.

MR. MCCANN: Okay. Do you, when I ask whether you spend any time in this area, do you, do you have kids that go to school nearby, near this intersection?

MR. DRIBAN: I don't.

MR. MCCANN: Do you ever shop or visit any of the retail, medical or business offices at Greenspring Station?

MR. DRIBAN: I have on occasion.

MR. MCCANN: Yeah. So, these, these aren't, these

accesses that I just described, and there's others reflected in this exhibit, they're not, they're not negligible. Those are significant acc, those, those are access points with a significant amount of traffic, --

ALJ: Is that a question?

MR. MCCANN: -- isn't that true?

ALJ: Are you asking him --

MR. MCCANN: Question mark, question mark.

ALJ: Question mark. Mr. Driban, that was a question.

MR. DRIBAN: They are, I mean, so we, when I say I spent time here, there's, the time I spent in my personal life, but also as part of this analysis, we spent a lot of time, you know, the origin and destination study, collecting data, driving the corridor, you know, understanding the, the, the roadway network and there's certainly traffic in and out of those driveways, you know, especially at different, you know, different times of the day.

You see traffic coming in and out of the medical park, the gas station. But in terms of the net effect of that traffic on the roadways, you know, you've got thousands of vehicles on Falls Road and, you know, at most, you know, tens or maybe a hundred vehicles from, from any of those driveways. I would not call that substantial, but.

MR. MCCANN: Do you see all the parking lots in this

exhibit, Mr. Driban?

MR. DRIBAN: I do.

MR. MCCANN: Do you know how many, do you have any idea of how many either restaurants, retail shops, business offices or medical offices there are at Greenspring Valley on this right-hand side or east side of Falls Road alone? Do you know how many establishments there are roughly?

MR. DRIBAN: I don't have specific numbers of that.

MR. MCCANN: Do you know how many parking spaces there are at Greenspring Station for all of those establishments that I just described?

MR. DRIBAN: I'm not aware of that.

MR. MCCANN: So, for, so getting back to trip generation, when we looked at those trip generation numbers, which are the numbers that are used in your modeling, those are vehicles that are leaving the proposed, leaving or coming to the proposed development, correct?

MR. DRIBAN: The trip generation piece is specific to the development, yes.

MR. MCCANN: So, in other words, that, that trip generation, those trip generation numbers upon which, you know, you're modeling and even the Synchro and Simtraffic is, is based, does not account for a person who leaves their home at the proposed development in the morning and then spends time going in and out of, on one or more occasions, what, the

establishments at Greenspring Station are, at St. Paul's School, for instance, it doesn't account for all those new, well, I'll call them new trips, does it?

MR. DRIBAN: It does. It, I mean, it accounts for, it accounts for the, the movements that those vehicles make, you know, within that, within that peak hour. And, and the, and the other movements, I mean, the existing traffic from these developments is, is absolutely accounted for in the, in the, in the model by the existing counts that we take, you know, --

MR. MCCANN: (inaudible) I'm sorry, go ahead. I'm sorry.

MR. DRIBAN: It's okay.

MR. MCCANN: Yeah, so, I understand the traffic counts, those are actual counts, I'm talking about the trip generation numbers. You're telling me that if a person leaving one of the sixty homes in the proposed development were to leave, were to get gas at this gas station that we just described, so in and out of that entrance, go down and drop their child off at St. Paul's, in and out of that entrance, come back down south, go in and get some coffee at one of the retail establishments at Greenspring Station, you're telling me that the model, the trip generation numbers for those sixty homes, takes into consideration those four extra trips that I just described?

MR. DRIBAN: It doesn't account for the driveway trips, but it does account for the, the person leaving their home, making a, assuming in this case they're going to St. Paul's School, making a right onto Joppa, making a right onto Falls Road and going up to St. Paul's School.

If they do that and then come back for, you know, get, for coffee and come back southbound and make another trip through the area, then, within that one hour that we're looking at, then no, that would not be accounted for. But the, the initial movement of right turn onto Joppa, right turn onto Falls Road northbound through the intersections is accounted for.

MR. MCCANN: Yeah, well, you just mentioned peak hour, that's another thing. You know, the basis of your methodologies and the basis of the trip generation numbers are peak hours, correct?

MR. DRIBAN: That is the industry standard, yes.

MR. MCCANN: I, yeah, I understand the standard, but, so that wouldn't account for, I know it's projections anyway, but that wouldn't account for a mom or, mother or father, or a relative, attending a lacrosse game at St. Paul's at 3:00, right?

MR. DRIBAN: The idea behind capturing the peak hours is that you're getting the worst times on the road. And so, if you can, you know, review the impacts during those times and

mitigate those, then you've, you've captured it. And that's, again, that's the standard. No, it doesn't account for off peak, I mean, we don't specifically analyze off peak, off peak operations.

MR. MCCANN: Yeah, well, that's my point. You're, you're, and I understand you're looking at the worst hour. But you're not mitigating for traffic on, in any other hour of the day, even if it may be --

MR. DRIBAN: Well, the idea is that if the, if the improvements will mitigate the traffic during the worst hour, then they certainly mitigate the traffic during, during the better hours, so the off peak hours. That's, that's the point of looking at the, at the peak hours. That's why, that's why it's done that way.

MR. MCCANN: I understand, I understand. So, I'm sorry, I got distracted from the corridor study. But, as I understand it, what you used, or what was used for the simulations was average overall travel speed, right? That's a technical term?

MR. DRIBAN: That's one of the things we look at. I think the actual exhibit that was presented was the travel time, average travel time through the corridor.

MR. MCCANN: So, again, we're, we're, we're talking about averages, right?

MR. DRIBAN: Yeah, per, per vehicle average travel

time through the corridor.

MR. MCCANN: So, the, obviously by the, virtue of the fact it's an average, and by virtue of the fact it's a simulation, we're talking about, once again, projections, right? Right?

MR. DRIBAN: Modeled, yeah, modeled, modeled data.

MR. MCCANN: Yep, okay. And as, as I understand the averaging that's done for the corridor study, it's an averaging of vehicle speeds over the length of the highway for all vehicles acting as a group sort of, as, as opposed to individual vehicles, does that make sense?

MR. DRIBAN: Can you repeat the question?

MR. MCCANN: Yeah, let me, I'm not sure I can. So, maybe I'm, I should move on. So, when you use average speed for this simulation, well, strike that. Let me ask it this way. You didn't conduct a speed study, correct?

MR. DRIBAN: We did not.

MR. MCCANN: And what, what is a speed study?

MR. DRIBAN: A speed study would be driving from, you know, in this case, the corridor from one, one end of the corridor to the other end of the corridor and determining how long that takes over a number of, of runs, which would be a, a projection of the average, the average speed.

MR. MCCANN: So, in other words, and that's, that's a common thing in your industry, correct, speed studies?

MR. DRIBAN: It's, it's a tool that's used. I wouldn't say that it's, it's one of the more common ones. But certainly, there are, you know, there are, there are studies where it's conducted.

MR. MCCANN: So, it's just like a traffic count, that is, you have somebody sit in and observe and take measurements of travel speeds through the corridor, correct?

MR. DRIBAN: Sort of, yeah, I mean, it's, it's not just like a traffic count. A traffic count is conducted at a single intersection and someone is sitting there and, and just watching and counting the volumes. Those are conducted for every single traffic impact study in every, really every traffic study that's done.

A speed study involves somebody actually getting in their car and driving up and down the corridor. It's sort of a more interactive type of study. And it's, and it's not commonly conducted.

MR. MCCANN: Well, speed studies, my experience with speed studies is they're, they're often used when, in determining sight distance issues --

MR. DRIBAN: So, we're talking about two different kinds of speed studies. You're, you're right, Mr. McCann. So, so the speed study that you're talking about is, for sight distance, is going out and shooting radar and looking at, and looking at the, the speeds of the car, you know, like a police

officer would, looking at the speeds of the cars in that location --

MR. MCCANN: Yeah.

MR. DRIBAN: -- when, when we're talking about doing a corridor analysis and a speed study that would be conducted in conjunction with a corridor analysis, it is, is actually, is what's called a floating car speed study.

MR. MCCANN: Yeah.

MR. DRIBAN: So, you're, you're actually, you, you're driving up, because again, in this case, we're, the metric that we used was travel time, which is related to speeds, but really what you want to know is, you know, how long does it take to get through the corridor and what is the, sort of average speed, based on that. So, you know, it's a, it's a different type of speed study that we would use for this type of analysis, where you're actually in a car driving down the corridor in order to look at travel times.

MR. MCCANN: Okay. But you didn't do that here. You, you did, you took some industry average of some sort or?

MR. DRIBAN: We used the model.

MR. MCCANN: Okay.

MR. DRIBAN: We relied on the model.

MR. MCCANN: Bear with me one second. So, let's, let's talk about the special variance. I guess first, you would agree with me, would you not, that the issue of the

special variance under the zoning regulations is a distinct issue from whether the traffic impact study should or should not be improved, approved under the development regulations, would you agree with that?

MR. DRIBAN: I think they're, I think they're part and parcel. I mean, yeah, they're, they're governed by distinct regulations. But the traffic impact study is sort of a, is certainly a piece of the, the special variance requirements. I mean, it gets into the trip generation and some of the other, the other issues, under the special variance.

MR. MCCANN: I know you've combined the two, but I'm asking, my question is, well, let me ask it this way. Your conclusion, apparently, with respect to the special variance standards is that, based on the CLV and the HCM methodologies and on your corridor study, that the impact would be less than, than the district standard, correct? That's your test, that's your conclusion, essentially, is it not?

MR. DRIBAN: That was our, I mean, the CLV and HCM, if you're reading the conclusion from the traffic impact study, that was the conclusion at the time. There, there was a lot of work that happened beyond that, where we, you know, we coordinated with the County to make sure that we had met the special variance standard. And there were some other, you know, pieces of, of data that were included in that.

MR. MCCANN: Yeah, when you said --

MR. DRIBAN: Like, like the corridor, like the corridor analysis and coordination with SHA for, for signal timing.

MR. MCCANN: You just said you coordinated with the County to meet the district standard. We, you were here for Mr. Nebre's testimony yesterday, correct?

MR. DRIBAN: I was.

MR. MCCANN: And you heard Mr. Nebre testify, I take it, that the district standard under the special variance standard is not the C, the CLV or the HCM or the, the corridor study that you undertook, but rather is the level of service under the loaded cycle methodology. He said that, did he not?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: That's a mischaracterization of, he testified (breaks up) not his testimony.

MR. MCCANN: He exactly said those very words.

ALJ: Yeah, overruled. Go ahead, sir.

MR. DRIBAN: I, Mr. Nebre testified over the course of multiple days, as you're aware, and I, I believe, you know, his response to that question was answered in, in several ways over the course of that testimony. So, I'm not, I don't have his transcript in front of me, I couldn't tell you whether that's exactly what he said or not.

MR. MCCANN: Well, you were here, I'm just talking about yesterday. The question was asked of him by Mr. Wyatt, what was the district standard and Mr. Nebre answered, without equivocation, do you agree, that the district standard is the level of service under the loaded cycle methodology.

MR. DRIBAN: My rec, I don't have his transcript in front of me. My recollection is that he also spoke to trip generation and, and needing to mitigate the trips. But again, I don't have his transcript in front of me so I, I can't say for certain whether that's --

MR. MCCANN: Well, let's --

MR. DRIBAN: -- (inaudible).

MR. MCCANN: Let's just go with your recollection then. When Mr. Nebre was speaking about trip generation and mitigation, he was referring to the traffic impact study, was he not?

MR. DRIBAN: I, I'm not, I'm not certain.

MR. MCCANN: Okay. Well, would you agree with me that under the loaded cycle methodology, the level of service for this intersection at Falls and Joppa Road would still be an F after the development is built, if built, even with the proposed road improvements?

MR. DRIBAN: As I explained yesterday, there's, the loaded cycle methodology is based on direct observations. So, there's no way to know that until, until the improvements are

in place.

MR. MCCANN: Well, let me ask it this way. Is, well, let me, let me go onto something else right now and get back to that. But you, you mentioned coordination with the County and I think you even talked about some correspondence you had with the County. Did, in fact, let me do this. Let me show you Developer's Exhibit 29. Bear with me one second. Okay. Do you see that, Mr. Driban?

MR. DRIBAN: I do, yes.

MR. MCCANN: Okay. So, this, I think this was described, and correct me if I'm wrong, but this was described, this, Developer's twenty-nine, was described as the approval e-mail or letter from the County, correct?

MR. DRIBAN: Yes.

MR. MCCANN: And, and have you read this before?

MR. DRIBAN: I have.

MR. MCCANN: It's addressed to you obviously, you've read it, right?

MR. DRIBAN: I have.

MR. MCCANN: Okay and would you agree with me, we can certainly all read it, I'm sure the Judge will read it, that the, the approval that is actually granted in this letter, is the approval of the traffic impact study and not any approval of your argument regarding the special variance standard.

MR. DRIBAN: I think this e-mail very clearly gets

into details of the special variance standards. The mitigation from the, the last line from the first paragraph, the mitigation from the improvements results in a net zero impact along the corridor. That's part of the mitigation. That's part, excuse me, that's part of the special variance standard.

We agree that, and then from the second sentence of the second paragraph, we agree that the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection.

MR. MCCANN: Okay. So, I just highlighted, did I highlight the right sentence? Is that what you just read?

MR. DRIBAN: As well as the last sentence in the first paragraph, yes.

MR. MCCANN: Well, the last, let's be specific about that. The, the last sentence in the first paragraph doesn't render an opinion. It just describes the letter that, what you state in your letter, correct?

MR. DRIBAN: That's right. And then the second paragraph goes on to state that they agree --

MR. MCCANN: Okay. Well, this, you're not suggesting that that sentence, beginning with the letter from Lennart is actually a, a, a, an approval in and of itself, do you?

MR. DRIBAN: No, but --

MR. MCCANN: Yeah, I understand what you're saying. So, really, the, the only approval, or let's just call it an

agreement, by the County in this entire e-mail, which is one sentence that I just highlighted, correct? We agree that the proposed development along with the improvements to the intersection would not have a net negative impact on the intersection, correct?

MR. DRIBAN: That appears to be correct.

MR. MCCANN: Okay. In fact, Mr. Nebre goes on to say that we don't have any additional comments to offer. He mentions the special variance standard in the zoning regulations and explicitly says that, that we, meaning the County, defer, defer the findings to, to Judge Murphy, correct?

MR. DRIBAN: That is what he says, yes.

MR. MCCANN: Okay. Your point before, I wanted to get back to it, about the loaded cycle methodology being based on personal observations. You've said that a couple times. You, when we were discussing, for example, the Synchro program and the Simtraffic, it sounds, you know, as you described it, those are programs where you can input various parameters, correct? We talked about that before, right?

MR. DRIBAN: That's correct.

MR. MCCANN: And including traffic counts or trip generation counts, correct?

MR. DRIBAN: That's correct.

MR. MCCANN: Okay. Would you agree with me that it's entire, it's entirely possible for whether or not such a

program exists to your knowledge or not, for loaded cycle, cycle methodology to, to do the very same thing with the loaded cycle methodology? That is, that is, you could, I mean, --

MR. DRIBAN: I, I don't (inaudible) –

MR. MCCANN: (inaudible) --

MR. DRIBAN: The loaded cycle specifically is, is based on, is calculated based on field data. So, there's no, can't project a loaded cycle, future loaded cycle, finding. You can't, Synchro --

MR. MCCANN: Why --

MR. DRIBAN: -- and Simtraffic is also based on data, but the, the purpose of those tools and the reason the methodology has changed since the 1965 manual is to make it so that future, you know, these, these tools exist where you can take existing data and you can project future, future conditions.

MR. MCCANN: Well, you say that and I, I, and, why couldn't you take the number of vehicles, the timing of the light, put them in the intersection and given the timing of the light and the traffic counts and all the parameters that you can put in, that you described for other programs, and determine how many, what percentage of loaded cycles there are? That can be done, can it not?

MR. DRIBAN: I don't know that there's a tool for it and I know that the way that the, the County does it, it's all,

it's entirely based on actually having a person physically there and that that's the methodology that, you know, that the loaded cycle uses.

MR. MCCANN: No, I --

MR. DRIBAN: It's, it's based on watching actual cars in the field and whether those cars get through the intersection or not.

MR. MCCANN: I know that's how the County does it. And, but that's also how the County conducts traffic counts. That's also how speed studies are done and based on, you know, physical presence and personal observation. But I'm asking you, you know, you can model anything, it's possible, would you agree, to sort of have a model that would tell you what percentage of loaded cycles would occur under certain conditions?

MR. ROSENBLATT: Objection. This has been asked and answered.

ALJ: Overruled. Go ahead.

MR. DRIBAN: I'm, I'm not aware. I mean, the, the current methodologies in HCM and CLV, have, have software that's developed to, to do those, those calculations. I'm not aware, to do calculations under those methodologies. I'm not aware of a model for the loaded cycle, for the loaded cycle methodology --

MR. MCCANN: I understand, yeah. That wasn't my

question but I'll, I'll move on. During any of the communications you've had with anyone in the County, including Mr. Nebre, did anyone ever tell you that the critical lane volume, the HCM methodology or the corridor study you did is, or are, the district standard under the zoning regulation? Did anyone ever tell you that?

MR. DRIBAN: The CLV or the HCM specifically?

MR. MCCANN: Or, or the corridor study? Any of those things. Did anyone ever tell you explicitly that those are the district standard?

MR. DRIBAN: District standard per Section 4-A-02 of the zoning regulations?

MR. MCCANN: Yes, under the zoning regulations.

MR. DRIBAN: I, I don't believe that I was told that those specific items are the district standard.

MR. MCCANN: Okay.

MR. DRIBAN: But they certainly relate to it.

MR. MCCANN: Okay. We talked, actually, a number of times about projections and margins of error. Let me just ask you, we've already covered it. Okay. So, lastly, I know you talked also separately about the issue of the pass through or the cut through. Do you recall that testimony?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and, you know, assuming this, this development is approved, of course, that becomes an issue. But

I have a report that you prepared on that issue, and I wanted to show it to you. I think you prepared it. Bear with me one second. Okay. So, this is a report, it appears to be dated July 8, 2021. And I would mark this as, I think, Exhibit 40.

ALJ: Thirty-nine?

MR. MCCANN: Thirty-nine. Okay.

ALJ: Yep.

MR. MCCANN: And I'll scroll down, it's a hundred and twenty-seven pages. Do you recognize this, Mr. Driban?

MR. DRIBAN: I do, yes.

MR. MCCANN: Yeah, and I, as I understand it, this is what's called a sensitivity study?

MR. DRIBAN: A sensitivity study, sensitivity analysis, yes.

MR. MCCANN: Yeah. For the purpose of, for what purpose did you prepare this?

MR. DRIBAN: We prepared this based on a request at a meeting with Greg Karski and Mike Filsinger for more information about this, the Mays Chapel connection.

MR. MCCANN: Okay. Yeah, you referred to that meeting yesterday, right?

MR. DRIBAN: I did, yes.

MR. MCCANN: Okay and I don't need to go through the report in any detail, but could you just sort of summarize what the result, what the conclusion and the findings of the report

are?

MR. DRIBAN: Yes. So, we looked at the, the volumes of traffic at the intersection of, along the corridor, and particular attention to the, to the volumes of traffic along Seminary and Falls and Joppa that might be likely to use Mays Chapel as a cut through connection if it were to be connected between Joppa and Seminary.

MR. MCCANN: Right.

MR. DRIBAN: We ran a sensitivity analysis using our traffic models to look at what percentage of that traffic might be incentivized to cut through May Chapel based on, based on faster travel times than, than the Falls Road corridor, given that it's a fairly direct connection and just, you know, essentially, just east of Joppa Road, excuse me, of Falls Road with no signals on it, with no, with no traffic lights on it.

And we, we determined that a fairly substantial percentage of traffic would be incent, would be incentivized, I don't have the specific numbers, I'm trying to find them, but it was several hundred vehicles during the morning peak hours, several hundred vehicles during, during the evening peak hour that would be likely to use that connection, based on our analysis, if it, if it were opened.

MR. MCCANN: Okay. Okay, great. I would move that exhibit into evidence and that's all the questions I have.

ALJ: Any, any, any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

ALJ: Okay. So, that's an exhibit that's a hundred and twenty-seven pages, July the 8th, '21. So, that'll be thirty-nine, Protestant's thirty-nine.

MR. MCCANN: Right, and I have no other questions. Thank you, Mr. Driban.

MR. DRIBAN: Thank you, Mr. McCann.

ALJ: Okay --

MR. ROSENBLATT: Mr. McCann, if it's possible, could you e-mail me thirty-six and thirty-seven?

MR. MCCANN: Yes.

MR. ROSENBLATT: Because I may, I may need to use them while Mr. Zimmerman is asking questions. If you can, thank you.

MR. MCCANN: I'll do that now.

ALJ: Okay. Mr. Zimmerman, cross?

MR. ZIMMERMAN: Yeah, I'm ready. Okay. Good morning, Mr. Driban, and welcome to Baltimore County.

MR. DRIBAN: Good morning.

MR. ZIMMERMAN: Have you been working on this project for a couple of years now?

MR. DRIBAN: Yes.

MR. ZIMMERMAN: Okay and would that include meetings,

phone calls, e-mails, other interactions?

MR. DRIBAN: Sure, yes.

MR. ZIMMERMAN: Okay. To what extent were other members of the development team in the loop or participating with you in your interactions with County staff?

MR. DRIBAN: I mean, at various points, there were certainly meetings that occurred with Mr. Rosenblatt, with the civil engineer, excuse me, the land, the land planner, Matt Bishop, James Malako (phonetic) was another person from his team, other people from my office, Mike Lenhart has been involved at various times, Brian Biddle.

So, I would say that, you know, over the course of two years, there's been back and forth with both SHA and Baltimore County and certainly a number of people have been involved with that.

MR. ZIMMERMAN: Okay. So, you tried to keep everybody posted as to what was going on --

MR. DRIBAN: For the most part, sure, yeah.

MR. ZIMMERMAN: Yeah. And you were the main person working from your firm, but Mr. Lenhart was also involved?

MR. DRIBAN: That's correct.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: And also, Brian Biddle from our office. He's our design lead, so he's been involved with the direct improvements at Joppa and coordinating that piece of it, with

SHA.

MR. ZIMMERMAN: Okay, all right. I'd like to share an exhibit, Judge, if I may. Let's see. Okay, good. So, let's take a look at the growth management law that you were discussing with Mr. McCann a few minutes ago. Okay. Okay. Let's see. I'm, I'm looking for the part which discusses the 1965 manual. Here we go. So, page 4A:10 begins the transportation, the main transportation provision, does it not? Is this (inaudible), do we need to zoom up?

MR. DRIBAN: I, I can read it. I'm just trying to find that on my screen. So, yes, I, I have it.

MR. ZIMMERMAN: Okay. Can everybody else see it? All right.

ALJ: Yes.

MR. ZIMMERMAN: So, this is 4A:2.4, capital D. So, what I, I simply want to ask you, in this paragraph where they talk about the level of service, E or F standards, established by highway capacity manual 1965, is, is that what you've been referring to as the loaded cycle methodology? Is that where that comes from?

MR. DRIBAN: That is how the County has, has explained it to me and I've gone into the 1965 manual as well. And that is, the output of that, that, that manual, 1965 methodology, is the loaded cycle methodology that they use as, as it's, yeah.

MR. ZIMMERMAN: But not what you normally use?

MR. DRIBAN: It's not what anybody is using except Baltimore County.

MR. ZIMMERMAN: So, correct, I want to say this, ask this as politely as I can, but consistently in your testimony, you've basically criticized, virtually destroyed the value of the, the loaded cycle methodology, or how would you describe it?

MR. DRIBAN: I absolutely don't think that's fair. I've said it's, the methodology is not used anymore --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- because it's an outdated methodology. I think there are better, you know, the highway capacity manual comes from a lot of research. The Transportation Research Board publishes the highway capacity manual, and they are consistently doing research. A lot has changed in the --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- field of transportation over the course of the last sixty-seven years --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- since that manual was published. And so, I think the standard that, there are standards today that are commonly use that represent more modern standards. But the, the County standard is what the County standard is --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- and I don't think I've, all I've said is it's outdated, which is (inaudible) --

MR. ZIMMERMAN: Well, in, so summarizing, is it fair to say that you think the County standard is obsolete?

MR. DRIBAN: It's an outdated standard. The, I mean, this is, I couldn't tell you exactly which edition of the highway capacity manual this comes from. I think it might have been the second or third, but we're up to, I believe, the sixth or seventh --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- now, so there are fifty-seven years' worth of research on traffic methodologies that are, that are incorporated into more modern methodologies.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: It's, I mean, factually, it's an outdated methodology. It's not used anywhere else in the State of Maryland and, yeah.

MR. ZIMMERMAN: Did it cross your mind to suggest that the Petition for Special Variance include a request to declare the County's standard invalid, arbitrary, capricious and should not be applied, but rather --

ALJ: Mr. Rosenblatt, are you objecting?

MR. ROSENBLATT: Yes.

ALJ: Okay. I wasn't sure if you, if you did object. Go ahead.

MR. ZIMMERMAN: I hadn't finished my question actually but.

MR. ROSENBLATT: I apologize. I thought the question was finished. (inaudible).

ALJ: I, I apologize, Mr. Zimmerman.

MR. ZIMMERMAN: All right. Well, we can, we can leave it at that point. All right.

MR. DRIBAN: So, so the, --

ALJ: Hold on, wait a minute.

MR. ZIMMERMAN: No, the Judge, the Judge can rule. You see where I was going.

MR. DRIBAN: (inaudible).

MR. ROSENBLATT: My issue, Judge, is he's asking him --

ALJ: Okay, hold on.

MR. ROSENBLATT: -- (inaudible) Petition and I don't think that's an appropriate question for a, for our traffic engineer.

ALJ: Right, yeah. I was going to say, that, that's a legal question. I mean, --

MR. ZIMMERMAN: All right.

ALJ: -- (inaudible) that objection yesterday in terms of, you know, a legal conclusion and that really is a legal, I mean, that's, that's for the counsel to decide whether or not the Petition includes, you know, --

MR. ZIMMERMAN: Okay.

ALJ: -- (inaudible) I'm not sure I could even rule on that --

MR. ZIMMERMAN: All right. Okay. So, anyway, the Petition for Special, you, you have discussed some aspects of this Petition for Special Variance in your direct testimony, have you not?

MR. DRIBAN: Yes.

MR. ZIMMERMAN: Yeah, and you would agree that under the special variance, whatever you may think of the loaded cycle methodology standard, that's the standard you have to deal with, under this law.

MR. DRIBAN: The loaded cycle methodology sets, sets the, how the basic services map, levels of service, are calculated. And then, the special variance is a, is, is a separate component from that that's --

MR. ZIMMERMAN: Right.

MR. DRIBAN: -- documented in Section 4-A-0-2.

MR. ZIMMERMAN: So, what I have to ask you is, that given the loaded cycle methodology approach is the standard in this law, isn't it irrelevant to discuss all this information about CLV and HCM?

MR. DRIBAN: So, we've, I mean, when I say we had a lot of coordination and I think, you know, the, the coordination has been to, to try to understand from the

County's traffic engineers, who are responsible for, you know, helping to make a determination under, under this for the special variance, you know, how exactly it gets applied, given, you know, the, the some of the limitations of the loaded cycle methodology.

And so, you know, I, I worked long and hard to try and understand how that, how that applies. And my understanding from the County is basically that, you know, the loaded cycle methodology sets the basic services map level of service in areas of level of service F, as identified under that methodology. Development is not allowed.

There's talks, the, actually on your screen right now, under 2-A, it talks about the critical vehicle trip number. So, trip generation and, and it further goes in, if you, you know, if you go down through the, the section, it goes into, essentially, not allowing any additional trips from the development, or from a development, in level of service F areas, except under the conditions of the special variance, which, you know, which is what, what we're discussing here.

And there are conditions for that special variance that, if the demand or impact of the development proposed would be less than that assumed by the district standard. And so, district standard is, is documented here, then there's, then the special variance is, is possible.

MR. ZIMMERMAN: Okay. Well, I'm not asking you in

this question about your interactions with County staff. I'm simply asking you as a matter of law, given that the loaded cycle methodology is the 1965 standard that's been described, isn't it totally irrelevant as a matter of law, whatever County staff may say or not say, that the CLV and HCM are simply irrelevant?

MR. ROSENBLATT: Objection.

MR. DRIBAN: My understanding, my understanding is --

MR. ROSENBLATT: Objection.

ALJ: Hold on, Mr. Rosenblatt objected. Go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: He's asking the witness as a matter of law.

ALJ: Right. It's, again, it's a legal, it's a legal question again. Mr. Zimmerman, I mean, you can ask him about, you know, how he sees it, but yeah, never use (inaudible) issue for me.

MR. ZIMMERMAN: All right. I'll move on, but the only thing I would say is that over my objection, Mr. Driban was allowed to answer all sorts of legal questions from Mr. Rosenblatt. But I think, I think the point is made. I think the Judge, you get it and we'll argue it in our post-hearing brief. Okay. So, I'm going to move on.

Let's go to one other aspect. Let's take a look at the special variance standard, if I can find, wait a minute.

Yeah, I think it's at the end, isn't it?

MR. DRIBAN: It's G-1, I think you just passed it.

MR. ZIMMERMAN: I'm sorry, I'm going, I've gone, oh, okay.

MR. DRIBAN: There you go.

MR. ZIMMERMAN: Okay, here we go. Sorry. Thank you, Mr. Driban.

MR. DRIBAN: Yep.

MR. ZIMMERMAN: So, so I want to ask you, I'm sorry I don't have a pointer, but I think we can all see 40, 40, 4A-02.4.G.2. The Department of Planning shall give a report, I'm quoting it, the Department of Planning shall give a report on the petition to the Zoning Commissioner prior to his consideration of the Petition, unquote.

And, of course, we know the Zoning Commissioner is now the Administrative Law Judge, right? Right. So, where's the report from the Department of Planning, Mr. Driban?

MR. DRIBAN: I'm not certain.

MR. ZIMMERMAN: Okay and report, just so we, you and I have a good understanding, if I quote one of the definitions in Webster's Dictionary (inaudible) and there are a number of definitions that any, anyone can look at, number of sections. Something that gives information, usually detailed account or statement, weather report, intelligence report, news report, stock market report. I, you know, is there any such report

from the Department of Planning in the, in the record?

MR. ROSENBLATT: Objection, to, to --

ALJ: Yeah, (inaudible) --

MR. ROSENBLATT: -- (inaudible).

MR. ZIMMERMAN: All right.

ALJ: Well, he already answered it because he --

MR. ZIMMERMAN: Okay.

ALJ: -- said he wasn't sure about it.

MR. ZIMMERMAN: All right.

ALJ: So, --

MR. ZIMMERMAN: All right.

ALJ: Yeah.

MR. ZIMMERMAN: Okay, all right. I think that's all I need to do to share this exhibit. However, let's go to the Planning Department comments. And by the way, growth, the exhibit we were just looking at, Judge, was People's Counsel Exhibit 14. So, it might be good to admit it.

ALJ: Any, any objection to fourteen, which is the growth management act?

MR. ROSENBLATT: No objection.

ALJ: Thank you. Mr. McCann, assuming no objection?

MR. MCCANN: No objection, thank you.

ALJ: Thank you.

MR. ZIMMERMAN: Okay, all right. So, now we're, People's Counsel three, and although this may have been

discussed, I'm not sure this has been admitted. This is a combination of the con, concept plan conference comment from Planning Department and the, followed by the development plan conference comments.

So, I'm going to scroll down so that we have full, full information, so to speak. And I think this is page three we're going to go to. Here we go. So, the top of page three has a discussion of, a paragraph on the special variance request, does it not, Mr. Driban?

MR. DRIBAN: It appears to, I'm reading it now.

MR. ZIMMERMAN: Yeah, have you happened to have looked at this before, or is this, this something not within the scope of your work?

MR. DRIBAN: I believe I've seen it before, but it would have been a while ago. I'm just refamiliarizing myself.

MR. ZIMMERMAN: All right. So, clearly, this is not a report as contemplated by the law, is it?

MR. ROSENBLATT: Objection.

ALJ: Yeah, Mr., Mr. Zimmerman, --

MR. ZIMMERMAN: All right.

ALJ: That's not, again, that's not –

MR. ZIMMERMAN: All right.

ALJ: (inaudible) --

MR. ZIMMERMAN: All right.

ALJ: -- really for me to answer, so.

MR. ZIMMERMAN: Okay.

ALJ: I'll, I'll sustain the objection.

MR. ZIMMERMAN: All right. Well, let's look at the--

MR. ROSENBLATT: And Judge, just to preempt the next maybe ten minutes of this, I have no objection to the comments coming into evidence. They're not, this is not something this witness can assist the Court or anyone listening in any way. He, Mr. Zimmerman did this yesterday. He's just going to ask him to read the document. They say what they say. I don't object to them coming in, if we could move on.

MR. ZIMMERMAN: All right. Is Mr. Rosenblatt finished? Okay.

MR. ROSENBLATT: I'm sorry, Judge, I think you're muted.

MR. ZIMMERMAN: Okay.

ALJ: Sorry, I was muted. Mr. Zimmerman, and so, if it, we could, we could just admit these, I think --

MR. ZIMMERMAN: Yeah.

ALJ: -- I think --

MR. ZIMMERMAN: Well, it would just be a couple questions, you know, (inaudible) --

ALJ: Hold on, I'm still talking.

MR. ZIMMERMAN: All right.

ALJ: Mr. Zimmerman, I'm still talking. Okay. So, I think this is also, the Protestants have a, one of these

exhibits as well. They have the concept plan comments, that's Protestant's four. So, yeah, there's no reason to go through in detail and have him read this. You can put this in though, right?

MR. ZIMMERMAN: All right. Let's put that in and I have maybe one or two questions. It's not going to be ten minutes.

ALJ: Okay, all right. So, any objection, Mr. McCann? You have the same document --

MR. MCCANN: No, thank you.

MR. ZIMMERMAN: Okay. So, let me ask you this, Mr. Driban. Do you know whether the Planning Department was in the loop in all your discussions with the traffic staff, traff, County traffic engineering staff?

MR. DRIBAN: I'm not certain what correspondence Mr. Nebre had with them or didn't have.

MR. ZIMMERMAN: Okay. But you didn't directly deal with the Planning Department, did you?

MR. DRIBAN: I mean, we certainly had interactions with them throughout the course of the, of the, trying, you know, trying to work through everything, but ultimately, it was Mr. Nebre that I was coordinating with.

MR. ZIMMERMAN: Okay. Well, I guess the last question on this is that, and I hope it's not repetitive, is that, you know, are you aware of any other written

communication from the Planning Department, which even mentions the special variance issue?

MR. DRIBAN: I'm not certain.

MR. ZIMMERMAN: Okay. Okay. I can stop sharing for the moment. Okay. Well, all right. So, let me ask you about the Department of Public Works and Transportation correspondence. And I guess I will share again. So, let's see, trying to, trying to find the sharing. Okay, here we go. Okay. So, Mr. Driban, I'm showing you part of People's Counsel Exhibit 6 --

ALJ: There's nothing on the screen right now. It's just a black screen.

MR. ZIMMERMAN: Nothing on the screen?

ALJ: Yeah. We're using, we're looking at your desktop that's just --

MR. ZIMMERMAN: All right. We're getting some help on this. All right, here we go. Is it visible?

MR. DRIBAN: Yes.

ALJ: It is, thank you. Yep.

MR. ZIMMERMAN: Thanks. Okay. So, Mr. Driban, I think you, you've probably seen this before in the course of the hearing and, and maybe earlier in your work, correct? This is the August 12th, 2021, development review comment from the Department of Public Works.

MR. DRIBAN: Would you mind just scrolling through

the --

MR. ZIMMERMAN: Yeah (inaudible) scroll through the whole thing, yes.

MR. DRIBAN: Thank you.

MR. ZIMMERMAN: Two pages and the text is really on the second page. You want to take a quick look at it?

MR. DRIBAN: Yes, I'm familiar with this document.

MR. ZIMMERMAN: Okay and this, and this overlaps the, just so, we, we included in this exhibit, the, the later, September 20, 2021 e-mail from Terry Curtis, which you mentioned, did you not, in your direct testimony?

MR. DRIBAN: I don't know that I mentioned the Terry Curtis e-mail. I'm not certain whether I did or not. I was referring to the memo that you're, on pages one and two.

MR. ZIMMERMAN: Okay. You were referring to the August 12th, 2021.

MR. DRIBAN: That was, that was my intent to reference, (inaudible) --

MR. ZIMMERMAN: Right, that's fine. That, but they, you know, they show what they show. If there's an overlap, there's an overlap. Okay. So, this was a comment that, can you describe again your reaction to this comment?

MR. DRIBAN: Yeah, so I, I think if you read through the comment, it pretty clearly is in relation to the Mays Chapel connection analysis that we did. It talks about, talks

about, first of all, I think if you scroll up a little bit, it talks about the supplemental analysis or it sort of, can, can you scroll up a little bit, Mr. Zimmerman?

MR. ZIMMERMAN: Absolutely, yes.

MR. DRIBAN: And yeah, so right here in the first, the first section. Greenspring Station development supplemental traffic impact study, that was in reference to the Mays Chapel analysis that we did. I don't know, in fact, give me, if you would give me just one second to pull up my copy of that study.

Yeah, see, what we call that doc, what we called, if you'll remember in my testimony yesterday, the County asked us, Greg Karski and Mike Filsinger asked us to conduct a specific analysis of the Mays Chapel Road connection. And that was published in July, so just before these comments came out, and it was entitled Greenspring Station development – Mays Chapel Road connection analysis.

It was not intended to be a supplemental traffic impact study. It, nowhere in our document say it was a traffic impact study. And if you, if you read through these comments, they're very clearly related to that supplemental analysis that we did, which was intended to be a sensitivity, in fact, it says, it should be a traffic impact study, not a sensitivity analysis.

We had an actual traffic impact study. This was a

sensit, sensitivity analysis. So, the comments are being made, my read of it, and given the timing of things, is the comments are made on a supplemental analysis that we were requested to do by Greg Karski and Mike Filsinger to look at Mays Chapel. But they're being made as though that study was our traffic impact study for the project, which it, it was not.

MR. ZIMMERMAN: Okay. So, in your view, this, this comment, basically, targets the Mays Chapel Road connection issue.

MR. DRIBAN: I, I mean, not only is it targeting the Mays Chapel connection issue, but it's reviewing that study as though it were a traffic impact study, which is problematic for another, a number of reasons, you know, but, and, and I say problematic because that study does not, I mean, their sensitivity analysis does not meet the standards of a traffic impact study.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: It wasn't intended to be one. So, so, yes, I mean, it's, it's targeting that document, not the actual traffic impact study we did.

MR. ZIMMERMAN: Okay, okay. So, let me just scroll up for a moment so, I think you would agree that this document does have, at least the printed name of the acting director of the Department of Public Works, D'Andrea Walker, correct?

MR. DRIBAN: Sure.

MR. ZIMMERMAN: Okay. Is there any subsequent official document from the Public Works Department signed by D'Andrea Walker or with her name on the letterhead?

MR. DRIBAN: I'm not certain.

MR. ZIMMERMAN: Okay, okay. Okay. I'm going to stop sharing. Okay. I'm going to move on to the, no, actually. Yeah, let me move on briefly to the Kris Nebre e-mails, so I guess I do have to, well, I don't think I need to share. Do you agree that Kris Nebre, whether in his e-mail or in his testimony, was not purporting to represent an official position of the Department, but rather simply the work that he was asked to do and did?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Isn't that an accurate description of his position?

ALJ: Hold on, there's an objection. Mr. Rosenblatt?

MR. ROSENBLATT: How is he supposed to know? I mean, that's not a question for this witness. It was a question he, I guess, failed to get the answer he was looking for from Mr. Nebre.

ALJ: Okay, well, --

MR. ZIMMERMAN: No, actually, Mr. Nebre --

ALJ: Hold on. Over, overruled, to the extent that (inaudible) --

MR. ZIMMERMAN: All right.

ALJ: -- you have an answer. Do you know?

MR. DRIBAN: Sorry, can you repeat the question?

MR. ZIMMERMAN: Okay. Is it an accurate description of Mr. Nebre's position that he's a staff member who, of Public Works Department, who was asked to do some review and did it, but he was not purporting to speak as the director of the Department, communicating a, a formal position?

MR. ROSENBLATT: Objection.

ALJ: Overruled. Go ahead, sir. If you know.

MR. DRIBAN: I believe, I believe Mr. Nebre, to, to my knowledge, Mr. Nebre is the, either the acting or I think maybe at, at this point, the formal person in charge of the Traffic Division in Baltimore County. And that is the person that we typically coordinate these studies with and so, you know, the position that I received from him, I understood to be the, the Department's position.

MR. ZIMMERMAN: Okay, okay. So, so, you regard any personal e-mails from County staff as official departmental reports or positions.

MR. DRIBAN: I believe when someone is acting as the, as the director or head of their department, that, you know, and they grant approval and that would represent, and this is, I don't know, this is my opinion or legally binding but, you know, the, I believe that that would represent the approval of that department.

MR. ZIMMERMAN: Yeah. Did Mr. Nebre indicate that he is not the division head, that there is somebody else who is the division head?

MR. ROSENBLATT: Objection.

ALJ: Mr. Zimmerman, are you asking during Mr. Nebre's testimony?

MR. ZIMMERMAN: Yes, during Mr. Nebre's testimony, didn't he indicate that there's another person who is the division head?

ALJ: There's the bureau chief, I believe he indicated that he is now the division chief.

MR. ZIMMERMAN: All right. Well, the record is what it is. I don't think he did, but I may --

MR. DRIBAN: I can confirm with respect to traffic that he is the person, he is the highest position within the Traffic Division.

MR. ZIMMERMAN: Okay, okay. And other than his e-mail to you, is there any other document from him following that?

MR. DRIBAN: Not that I'm aware of.

MR. ZIMMERMAN: Okay, all right. Let me go to the timing of the traffic counts. Did you indicate that the Falls Road/Joppa traffic counts, which you used, were County counts done February 19th, 2020?

MR. DRIBAN: I believe that's correct, yes.

MR. ZIMMERMAN: Okay. Would you agree that the COVID crisis was emerging in February of 2020?

MR. DRIBAN: No.

MR. ZIMMERMAN: No?

MR. DRIBAN: I mean, emerging globally, but in terms of impact locally, I don't believe the traffic was impacted any, to any extent whatsoever at that time.

MR. ZIMMERMAN: Yeah. How do you know that?

MR. DRIBAN: We conduct traffic counts throughout the State of Maryland on a, you know, week to week, every single week basis and, you know, we're aware of the trends in traffic and, and how things change. And certainly, you know, post-March of 2020 things, things changed fairly dramatically for, for quite some time.

But I don't believe that the state of emergency in the state, I don't have a date, but I know it was sometime in March and I don't believe that there were any modifications to school schedules or anything else locally that would have affected a February count.

MR. ZIMMERMAN: Okay, all right. In any event, would it have made sense to update those traffic counts within the last two years, rather than simply assuming a growth rate?

MR. DRIBAN: Well, so, the growth rate isn't instead of updating the counts. The growth rate is a standard part of a traffic impact study to account for the fact that, you know,

a development may not be constructed right away. It typically takes a couple years.

We, in this case, applied three years of growth to account for just regional changes, regional, regional growth. I think the counts we have in this study are actually the best possible counts because they are before COVID was impacting things and, you know, as, as we all know now, I think there's a lot more work from home and if you look at traffic volumes, you know, in some places they've rebounded fully to pre-pandemic volumes and some places they haven't.

And but, but I think having data from the month before the pandemic is actually, probably the best quality data you could, you could have for this project.

MR. ZIMMERMAN: Okay. Well, in any event, let me share for a moment. Okay. So, let's go to People's Counsel nine. So, we're going to look at the, can, can you see this? We're going to scroll down.

MR. DRIBAN: Yes.

MR. ZIMMERMAN: So, 2021, I'm going to go to 2022, but we've got both of them. So, you see the, do you recognize the County's basic service map description?

MR. DRIBAN: I do, yes.

MR. ZIMMERMAN: Let me, so, there's no dispute, is there, that still as of 2022, that all three of the relevant intersections were considered F intersections by Baltimore

County.

MR. DRIBAN: You're saying there are three relevant intersections, I'm not sure I agree with that characterization.

MR. ZIMMERMAN: Well, Falls Road, I'm looking at page one, Falls Road and Semin, Seminary Avenue at the bottom of page one.

ALJ: Can you blow it up, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah.

ALJ: Just hit the expanded and then shift it over to the center to people can see it. You're going to the right now.

MR. DRIBAN: There are three intersections along Falls Road that are identified as level of service F.

MR. ZIMMERMAN: Right. Yeah, I just wanted to confirm that. And, and that's the current situation until the next evaluation in 20, for 2023, right?

MR. DRIBAN: Those three intersection being level of service F, yes.

MR. ZIMMERMAN: Okay and would you agree that this is the most concentrated group of F level intersections in the entire County?

MR. ROSENBLATT: Objection.

ALJ: What's your, what's your objection, Mr. Rosenblatt?

MR. ROSENBLATT: Relevance.

ALJ: Overruled. Go ahead.

MR. DRIBAN: I haven't done a detailed analysis of that, but I would, I would, I would guess that they are, I would presume they are.

MR. ZIMMERMAN: Okay. Well, well, it looks like three out of twelve. All right. I'll move on. So, okay. I'm going to stop sharing. Okay, all right. Thank you for that, Mr. Driban.

ALJ: Any objection, any objection to People's Counsel nine?

MR. ZIMMERMAN: Right, thank you, Judge.

MR. ROSENBLATT: No objection.

MR. MCCANN: No objection.

ALJ: Actually, that was already in.

MR. MCCANN: No objection, thank you.

MR. ZIMMERMAN: Oh, was it? Okay, thanks.

ALJ: (inaudible).

MR. ZIMMERMAN: So, let's talk, I want to talk a little bit about trip generation also, kind of following on the footsteps of Mr. McCann. Is it correct that the, well, let me ask you this. Who produces the ITE manual?

MR. DRIBAN: So, ITE is an industry association, Institute for Transportation Engineers. They're, they, they produce it.

MR. ZIMMERMAN: And what proportion of the engineers

would be like you, associated with companies that work for, you know, developers and constituents such as that?

MR. DRIBAN: I mean, ITE is broadly, (inaudible) industry. So, I've been a member of ITE since I was in college at Penn State, which was sixteen years ago. It, it extends down to college students who are interested in the transportation field. It's, you know, it, when --

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- I was at STV, and we were doing work primarily for State and Counties, public agencies, I was a member of ITE.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: It's open to the broad industry of people that, that do traffic analysis.

MR. ZIMMERMAN: Okay and is, is there some particular committee that produces the manuals or up, or updates them?

MR. DRIBAN: I'm not certain.

MR. ZIMMERMAN: Yeah. In any event, it's not a government organization, is it?

MR. DRIBAN: It's not, it's an industry association.

MR. ZIMMERMAN: Okay. The manual is not a government produced manual?

MR. DRIBAN: No, it's not.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: But it is, it is used and referenced by

--

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- government agencies.

MR. ZIMMERMAN: Right.

MR. DRIBAN: I mean, it's the standard manual.

MR. ZIMMERMAN: Is there anything in the manual itself which acknowledges that these are projections that may not work out exactly in, in real life and that there may be margins of error?

MR. DRIBAN: I'm not certain whether the manual says that or not.

MR. ZIMMERMAN: Is there anything in the literature, or in the industry, a rule of thumb, that people discuss what the likely margins of error would be?

MR. DRIBAN: Not that I'm aware of. I mean, the ITE trip generation manual is, is, is what's used for studies. It's the best thing we have. We have to have some way of projecting these numbers and, and that's the basis for the manual --

MR. ZIMMERMAN: All right.

MR. DRIBAN: -- existing in the first place.

MR. ZIMMERMAN: Okay. So, I want to follow-up on your answers to Mr. McCann, if I heard them correctly, when he asked you about the situation where you have proposed two to three garage homes primarily in the Greenspring Manor

development. And correct me if I'm wrong, did you say you thought some of the studies used in the ITE manual probably had two to three garage homes?

MR. DRIBAN: I would believe, based on the number of studies for this particular use, which is more than two hundred, it's about two hundred fifty studies, that, you know, this certainly isn't the only development in the world that's going to have, you know, two to three car garages. So, I would have to assume that some of those studies had, had that condition.

MR. ZIMMERMAN: Okay. Now, once again, how many studies were used for the, you know, detached home category? And I think Mr. McCann introduced his Exhibit 35 with the so called land use (inaudible) or, do you happen to know approximately how many studies?

MR. DRIBAN: It's roughly, I'm trying to get you an exact number right now. But it's, it's roughly two hundred fifty studies during the a.m. peak hour and approximately the same, maybe a little bit more during the p.m. peak hour.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: So, those are all different, different sites.

MR. ZIMMERMAN: And how, what were the years in which those studies were conducted?

MR. DRIBAN: I don't, I know Mr. McCann's exhibit had

that data. I don't have it in front of me and --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- I know it extends back some years and actually --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- studies are still being added, so probably covers the last thirty to forty years, up through, --

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- you know, today.

MR. ZIMMERMAN: So, so, is it plausible that as time goes by the, the older studies would be just as obsolete as you're, you're saying the County traffic standards are?

MR. DRIBAN: I think the idea is to have, so, the idea is to have the, you know, an aggregation of data that covers a range of conditions. And the ITE manual is continually updated.

So, these, the, the rates that we used were from the most recent edition available at the time and the, I mean, if you're comparing it to the 1965 standard, there are, there are, you know, again, four, five editions of that that have come out since 1965 that don't include that methodology. So, it's, it's not an apples to apples comparison between the two.

MR. ZIMMERMAN: Okay. But what are the year, in the current manual, what are the years of the studies that we're dealing with? What is the range?

MR. DRIBAN: I, I, I don't have that information in front of me. I know Mr. McCann's exhibit had it. I believe it's, I believe, if I'm recalling correctly from yesterday, that it was 1970 through 2010, but they're still adding data to that now so it would really be 1970 through 2022, I would say.

MR. ZIMMERMAN: So, somebody would have to dive in and do a real detailed statistical study to, to, to see the array of years. Obviously you have, it wasn't within the scope of your work to produce a list of all the studies. Is that in the appendix of the ITE, all the years?

MR. DRIBAN: Individual studies are not, you know, ITE maintains those.

MR. ZIMMERMAN: Okay and you don't know how many of the studies involve developments with two to three car garages, do you?

MR. ROSENBLATT: Objection. Asked and answered multiple times.

MR. ZIMMERMAN: No, it hasn't been actually.

ALJ: So, I mean, no, yeah, you didn't say how many studies, he said that, his testimony was that he assumes that there's, --

MR. ZIMMERMAN: Right.

ALJ: -- of the two hundred fifty studies, they, they probably had two or three car garages, but he didn't say how many. Sir, do you know how many?

MR. ZIMMERMAN: Right.

MR. DRIBAN: I don't know how many.

MR. ZIMMERMAN: Okay. So, in terms of projections, let me ask you this. If say, one-third of, even one-third of the developments' land uses in the study had two to three car garages, that would be less than the array in this proposed development, wouldn't it?

MR. DRIBAN: I don't, I'm not aware of how many studies within ITE had two to three car garages or didn't. I mean, it's possible, --

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- not knowing, it's possible that a hundred percent of those studies had two to three car garages.

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: So, I can't, I can't answer that question.

MR. ZIMMERMAN: But if ten percent had two to three car garages, then the trip generation would be way low for what we're going to see from this development, wouldn't --

MR. ROSENBLATT: Objection.

MR. DRIBAN: I don't, I don't --

MR. ROSENBLATT: Objection.

ALJ: Hold on, hold on, there was an objection. Mr. Rosenblatt?

MR. ROSENBLATT: I mean, there's, there's such a lack

of (inaudible) to this question and it calls for complete speculation. The witness has already said he doesn't know how many studies are there that have this level of garages. And there's been absolutely no testimony about number of garages versus (inaudible) or anything else. He's just making all kinds of assumptions. I think he's --

ALJ: It's cross examination and he, and he's allowed to ask hypotheticals, you're, you're allowed to, you know, assume facts and so he's an expert witness and so, sir, overruled. Go ahead.

MR. DRIBAN: Okay. So, let me, let me go into a little bit of a deep dive on this. So, ITE, when they're, when, you know, there's an independent variable we look at. We talked yesterday with Mr. McCann about units versus residents and why we use units as opposed to residents in this case.

ITE is constantly re-evaluating their data and publishing new manuals. In fact, I think the duration between their tenth edition and their eleventh edition was something on the order of magnitude of two to three years.

When there are confounding variables that are directly influential to the, to the independent variable being analyzed, those are included in ITE. So, for instance, with a gas station, when you look at like a Wawa or 7-11, convenience store with gas station, the independent variable that's used is the size, the square footage of the gas station. Is it four

thousand square feet, five thousand square feet.

The ITE includes a separate adjustment factor for the number of fuel, fueling positions, or fuel pumps at those, at those types of uses. So, where they've identified, based on their data and their statistical calculations that there is a significant factor that changes the trip generation, that is accounted for.

There is no such adjustment factor for the number or size of garages on a residential, single family residential use under ITE 210. So, --

MR. ZIMMERMAN: So, wouldn't you agree that there is a degree of speculation associated with the ITE numbers because there is no such specific evaluation relating to the number of garages.

MR. DRIBAN: No, I disagree with that. I think where, where there's a need to publish that, as I referenced the convenience store use with gas station, they, they do include those variables. They have not for this, so I, I don't think it's speculative whatsoever.

MR. ZIMMERMAN: Okay. Well, let me ask you this from a kind of crow's nest point of view. Given that the Developer projects, you know, selling these homes for a million dollars each and is it reasonable to infer that we're going to have two adults, plausibly, two adults working, potentially a teenager with a car, you know, three trips from many of these dwellings

coming out in the morning, in the rush hour?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: For many of these homes?

ALJ: What, what's, what's the objection, Mr. Rosenblatt?

MR. ROSENBLATT: Again, he's, he's calling for complete speculation.

ALJ: Okay. Again, it's a, it's a hypothetical and he wants to know whether or not there will be at least three trips in the morning. So, go ahead, sir, overruled.

MR. DRIBAN: I'm not a demographics expert, so I'm not sure, couldn't tell you exactly, you know, what type of family might move into that, that home, or, or specifics. What I can tell you is that the ITE trip generation manual is the standard used by local agencies, by SHA, nationally as well, and that it is the best predictor available for the number of trips.

MR. ZIMMERMAN: Okay. But clearly not perfect or not guaranteed to be exact, as a, as a projection, would you agree with that?

MR. ROSENBLATT: Judge, I, I (breaking up) ask the same question. Objection.

ALJ: All right. Sustained. He did answer, he did answer that.

MR. ZIMMERMAN: All right.

ALJ: And I think he's confident, he's comfortable with the ITE manual.

MR. ZIMMERMAN: Okay. Now, I have to ask, is there on street parking and driveways proposed for these homes, by the way?

MR. DRIBAN: There is, I mean, there are driveways, yes.

MR. ZIMMERMAN: Okay and on street, does there happen to be on street parking?

MR. DRIBAN: I would have to go back and look at the plans.

MR. ZIMMERMAN: Okay, okay. Now, your firm is quite capable, is it not, of conducting traffic counts?

MR. DRIBAN: Yes.

MR. ZIMMERMAN: Okay and are those difficult to do? Or could you explain briefly how, how a traffic count is done for an intersection? Like if you wanted to do one, for example, for Tallyho Road and Joppa Road, how would you do it?

MR. DRIBAN: Yeah, so, you'd, traffic count is exactly as it sounds. It's, it's looking at the number of, it's, it's technically a turning movement count. So, it's the number of vehicles that make each movement at an intersection.

So, you, you'd look at northbound Falls Road during the course we typically look at the peak period, which is from, it varies by jurisdiction, but in this area, we're typically

looking at three hours of data between 6:00 and 9:00, 9:00 a.m., 4:00 and 7:00 p.m.

So, trying to capture the, the heaviest volumes out there and, and you go out, and you would count in fifteen minute increments how many cars make each movement. So, how many go through, how many go right, how many go left, from each of the four approaches to the intersection. And then, you would, you would look at, for the overall intersection, what the highest hour, the highest hour is within that time frame.

MR. ZIMMERMAN: Okay and this is done by a human being or do you have a, a mechanical device that does this?

MR. DRIBAN: We typ, when we do it, we typically set video, video cameras that capture the video, and then someone brings it back into the office and, and counts it in the office. And this, there's a program that we use where you can speed up the, speed up the video or slow it down, you know, to, to make it easier to count. If it's a busy intersection or if it's a, you know, light intersection in terms of traffic volumes, you can speed it up a little bit.

MR. ZIMMERMAN: Okay and how many days of counts would you normally take to, to feel comfortable that you have accurate information?

MR. DRIBAN: Yeah, the, the standard for counts is one count, one day of counts. And, but the day that is counted is required to be while schools are in session, not immediately

following a holiday, national holiday, of any sort where, you know, where schools might have been closed and it's, it's a Tuesday, Wednesday or Thursday.

It can't be a Monday or Friday because there are different traffic patterns on Mondays and Fridays somewhat, and those, you know, those patterns can be low for then, you know, what you see on a Tuesday, Wednesday or Thursday. So, the idea is to get typ, a typical day of traffic and then, you know, look at the worse part of a, you know, the heaviest volume of that typical day. And that's --

MR. ZIMMERMAN: And --

MR. DRIBAN: -- sorry, those are SHA --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- SHA guidelines.

MR. ZIMMERMAN: And were counts involved in your so-called origin destination study for Tallyho Road?

MR. DRIBAN: So, the origin destination study is a little bit of a different study, different than the turning movement counts. What you do for an origin destination study is you actually post somebody at a point and then somebody else at the other point and you, you look at the matching vehicles coming through from one end to the other. And, and then determine how many, how many matches you have between the two points.

MR. ZIMMERMAN: Okay, all right. In any event, what

I have to ask you is wouldn't it have been either helpful or relevant to do traffic trip generation counts at the intersection of Tallyho and Joppa Roads to get some additional data that might help with the trip generation estimates?

MR. DRIBAN: So, no, I mean, the ITE trip generation manual is the, is the guiding document for, for trip generation. It's what's accepted by SHA. I will say that as part of our, as I mentioned yesterday, we had some traffic calming back and forth with, with the County, you know, related to Tallyho.

And at one point, I did count all of the units in Tallyho and run the trip generation numbers for that to see, to see whether we could determine, the, the purpose at the time, before we did this, the more detailed origin destination study was, you know, if you, if you run the ITE trip generation numbers for Tallyho based on how many units are there, and you then go out and count the intersections and, and the volumes in the count are much higher than the number of units would lead you to believe they should be, based on the ITE trip generation manual, you might infer that the difference is cut through traffic.

So, at one point I did run the ITE trip generation numbers for all of Tallyho. And I can tell you that the numbers were almost spot on to, to count data that the County had there at that, at the Tallyho community exit points.

MR. ZIMMERMAN: But, I mean, do you have any written traffic generation data for actual counts at Tallyho and Joppa in the record?

MR. DRIBAN: I don't believe there's any in the record, but there's certainly correspondence that, with Keith Lank from Baltimore County that if anyone is, that, that exists where we sort of discussed some of these items. And I can, and I can tell you that I, I mean, I'm telling you that I did con, I did conduct that analysis on my own, as part of the discussions with them.

MR. ZIMMERMAN: I mean, did you, you had these cameras out counting, counting the cars on a certain, on one day at Tallyho and Joppa, is that, or, is that what you're saying?

MR. DRIBAN: We used the count that the County provided to us for, for Tallyho.

MR. ZIMMERMAN: And when, when was that done? Okay. Okay.

MR. DRIBAN: Their data at the time was from 2015, it looks like.

MR. ZIMMERMAN: So, wouldn't you want to do a current count for Tallyho and Joppa?

MR. DRIBAN: So, we, we ultimately did when we did the origin destination study, as part of the origin destination study.

MR. ZIMMERMAN: A complete trip generation count?

MR. DRIBAN: You're sort of mixing terms. Trip generation is a, is the, is from the ITE trip generation manual and it's based on the number of units. And I conduct, I did run the numbers for all Tallyho to determine what ITE would say the number of trips from there is.

MR. ZIMMERMAN: Okay.

MR. DRIBAN: Separately, we went out and we, we conducted a count there as part of our origin destination study, which is a separate thing, and that was an actual, an actual count that we conducted.

MR. ZIMMERMAN: So, so what are the rush hour, what are the peak hour counts coming out of Tallyho? What, what's the exact number of trips coming out of Tallyho peak hour?

MR. DRIBAN: On the, I'm just looking at one day of data, we had, sorry. Let me go to the County's counts. Okay. So, one end of Tallyho, they had the a.m. peak volume as twenty-eight in one direction and sixty-one in the other direction.

MR. ZIMMERMAN: Sixty-one toward Joppa Road? Towards Falls Road, excuse me?

MR. DRIBAN: This is coming out of the Tallyho, coming out of Tallyho onto, onto --

MR. ZIMMERMAN: Right.

MR. DRIBAN: I'm not sure if this is the Joppa or the

Seminary end. Yeah, twenty-eight and sixty-one. And then, during the p.m., they had sixty-four and thirty-nine.

MR. ZIMMERMAN: On Joppa?

MR. DRIBAN: On Tallyho, coming out, coming out of Tallyho.

MR. ZIMMERMAN: To Joppa, to, to Joppa, not to Seminary?

MR. DRIBAN: I'm not, I'm doing this on the fly, so I'm actually not --

MR. ZIMMERMAN: All right.

MR. DRIBAN: -- a hundred percent certain which is which. But this, but it's --

MR. ZIMMERMAN: All right.

MR. DRIBAN: -- one or the other.

MR. ZIMMERMAN: What, what year was that?

MR. DRIBAN: That's dated 2015.

MR. ZIMMERMAN: All right. So, we don't have any current data?

MR. DRIBAN: We do have current data. I have data that we conducted --

MR. ZIMMERMAN: All right.

MR. DRIBAN: -- in September of 2021.

MR. ZIMMERMAN: All right and, and does that have also sixty-one and twenty-eight or whatever?

MR. DRIBAN: We had sixty-one and forty-four during

the a.m., sixty and sixty-five during the p.m.

MR. ZIMMERMAN: All right. All right. Anyway, so I'm going to move on from that. But, with reference to modeling, you would agree that, you know, models are used in, in many fields, are they not?

MR. DRIBAN: Sure.

MR. ZIMMERMAN: And generally speaking, the models may be either erroneous or may not reflect what actually ends up happening in the real world, whether it be economic models, hurricane models, political polling models because circumstances can't always be completely foreseen --

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Do you agree with that?

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: We're asking the traffic engineer in this case about hurricane and economic models.

ALJ: I think he was just, by way of example. I mean, I think, Mr. Zimmerman, it, you know, model is what it is, right? By definition, it's going to be --

MR. ZIMMERMAN: Okay.

ALJ: -- projection and inputting data.

MR. ZIMMERMAN: Okay.

ALJ: But I think he did cover that a couple times.

MR. ZIMMERMAN: All right. All right.

ALJ: So, sustained.

MR. ZIMMERMAN: All right. Well, one of the aspects, a specific aspect from, from kind of a, a citizen point of view, or a non-expert point of view, it's, it's sometimes thought that if an additional lane is added to a road, whether it be a beltway or some other, that people who would not have otherwise used that road will now go ahead and use it because there's an additional lane. In kind of an, if you build it, they will come.

Is it plausible that more people will actually come to this intersection, who previously did not, because they know there's this additional lane that's being proposed and is that taken into account in your projections?

MR. DRIBAN: We take in, we take that into account by adding the, the growth rate, the general growth rate that accounts for traffic that could come from regional sources, things that we're not specifically accounting for. So, there is, yeah, I mean, we accounted for an increase in traffic at the intersection above and beyond what's out there today.

MR. ZIMMERMAN: Yeah. But what about people who are already there but are making a decision not to use that intersection because they know how bad it is, but once you add your lane, well, okay, those same people will now use that intersection, so it just fills up as much or more than it ever was.

MR. DRIBAN: I, I don't have any specific knowledge

about that.

MR. ZIMMERMAN: Okay. Okay. Are you, I think I asked you this before, that you're not a specialist in risk assessment and risk management, correct?

MR. DRIBAN: I'm not.

MR. ZIMMERMAN: But are you aware that there is a field of study and of practice called risk assessment and risk management?

MR. DRIBAN: I'm not specifically aware, but I'll take your word for it.

MR. ZIMMERMAN: Okay. Well, what I have to ask you is this. Given that there is some level of uncertainty in any model or projection, if, if, if you agree with that, you, if you don't agree with that, you can tell us. Doesn't it make sense for there to be a margin of safety that, that you have to assume that the projection is going to be low to some extent? That that is a potential outcome?

MR. DRIBAN: Well, I think --

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: Yeah, the question merged like three things into one and is, again, asking for speculation.

ALJ: I mean, the question was whether, because they're using a model, it makes sense to factor in a margin of safety because the projection will be low. Let's break, can,

can we break it down, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah.

ALJ: Into parts? I mean, is, is --

MR. ZIMMERMAN: Yeah, yeah. Is it, is it plausible that there is a risk, some risk, that the models and trip generation assumptions will be low, to some degree? That that may happen?

MR. DRIBAN: Yeah, I think it's just as likely that the models could be low as it is that, that they could be high. And the, and in this case, the, the Coun, the, the State has very specific standards. So, traffic engineering, obviously, is something that's near and dear to most people. Everybody drives, so everybody has a sense of traffic.

So, these conversations come up very regularly where we're talking about, well, how do you know this? How did you get this information? And so, the State, and not just the State but, you know, Federal agencies, you know, local agencies, have developed guidelines for traffic impact studies that get at the root of this.

And they have very specific dates and times that you need to conduct your counts. They have very specific methodologies for conducting the trip generation. They have very specific methodologies for, you know, your, your volume projections.

And, and so, you know, the best we can do is to, is

to use those projections. It's possible that they could be low. It's also possible that they could be, they could be, could be high. But in this case, the, the mitigation, what we're really looking at is, have we, have we mitigated the impact.

And, and there is a margin of safety, to use your words, built into that because we haven't just slightly mitigated our impact, we've mitigated, mitigated it, you know, eight to ten times over. So, I think that's the margin of safety in, in, in my opinion.

MR. ZIMMERMAN: Okay. So, so what I have to ask you is that given these intersections already F rated by the County, if, if the modeling and all your assumptions do turn out to be too low, then there really is no margin of safety here, is there?

MR. DRIBAN: The margin of safety, you heard Kris Nebre testify early on that the, that the district standard is related to the trip generation. And the margin of safety is the fact that we've mitigated our trip generation ten times over, eight to ten times over. So, yes, I think there's a very, very high margin of safety built in to, to what we're proposing to do.

MR. ZIMMERMAN: Well, isn't it true that all Kris Nebre said in his e-mail was that they could say that there was no net negative impact that was there, he said in his e-mail?

That's all he said?

MR. DRIBAN: That is what he said in his, in his e-mail, yes.

MR. ZIMMERMAN: Yeah. So, if, if his observation is all we have, then if all these projections are too low, then the F intersection could end up much worse, couldn't it?

MR. DRIBAN: His obser, his observation isn't all we have because we went through the details of the study and provided specifics on how much --

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- how much we're mitigating, so --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- you know, he's, he's, he said I think what was necessary as the baseline for the special variance, but if you look at the, the factual data that exists --

MR. ZIMMERMAN: Um hm.

MR. DRIBAN: -- you know, we've clearly not just (inaudible), not just zero net negative impact, but a substantial positive impact overall.

MR. ZIMMERMAN: Okay, okay. Let me ask you this kind of academic question. When the County rates the intersection as F, are they looking at all four turning movements and if any particular movement is F, then it's an F intersection or, you know, how do they do that? Do you know?

MR. DRIBAN: Yes, they look at all of the approaches

and if any one of those approaches is, is an F, then the intersection is considered to be an F under the loaded cycle methodology.

MR. ZIMMERMAN: Okay. Actually, that's what I thought. So, what I don't understand, and please explain it, I'm sure, is that, why is it that in some of your exhibits or your study, you ended up doing some averages when Mr. McCann was asking you some questions. You had certain turning movements ended up as F or E or whatever. But then you did an average, what's the relevance of the average since if any turning movement is F, it's F.

MR. DRIBAN: Yeah, so, again, we're mixing methodologies. The level of service under, under the loaded cycle methodology is predicated on the specific movement, the specific approach. Whereas, the level of service under, excuse me, CLV and, and the highway capacity manual, is predicated on the entire, on the intersection as a whole. So, you know, that overall level of service that we report, is, is what's standard reporting in --

MR. ZIMMERMAN: All right.

MR. DRIBAN: -- in the studies. You know, there certainly are some failing movements, but, you know, for every movement you circled that gets worse, you know, from, from existing to total and, by the way, the, the real comparison should be background to total, because that is what, that is,

background is everything up into our site, without our site's impact.

So, really, you know, when SHA looks at it or any of the counties look at it, they're comparing the background condition to the total condition. And so, yeah, there are some movements that fail today. There are more movements that fail under the background condition when you look at the regional growth that we've added.

But ultimate, they, the improvements, there's still some movements that fail. But there are movements that get a lot better than, than they are today as well. And those movements tend to be the movements that are carrying the highest volumes of traffic.

So, you know, to answer your question specifically, at Joppa and Falls, the, the County's loaded cycle methodology has the northbound movement on Falls as the failing movement. And that movement, I believe, gets substantially better as a result of the, the improvements that are being proposed.

MR. ZIMMERMAN: All right. Okay. Meanwhile, it was not within the scope of your work to eval, evaluate any safety issues that would relate to the addition of lanes, was there?

MR. DRIBAN: The County asked us to look at the, the turning, the truck turning template and the vehicular turning templates, to make sure that, that those movements can occur without having overlap between them and there's no sort of new,

new challenges as a result, new safety challenges as a result of that.

MR. ZIMMERMAN: Did that include movements from all the other access points, or just the movements at the inter, the signalized intersections?

MR. DRIBAN: It was the movements at the signalized intersections.

MR. ZIMMERMAN: Okay. How far back do the, the new lanes, the additional lanes go?

MR. DRIBAN: Give me one second.

MR. ZIMMERMAN: Is there any exhibit that shows that? Exhibit 16 does not seem to show the entire length of the, the additional lanes. At least, at least near Greenspring Station.

MR. DRIBAN: I'm not, which, which exhibit, Exhibit 16?

MR. ZIMMERMAN: Sixteen. Let's see, I, I think I may have that. Let's see. Okay. So, this was actually a Developer's exhibit, right, sixteen?

MR. DRIBAN: Yep. Yeah, so page two actually does show the extent of, of the modifications.

MR. ZIMMERMAN: Oh, there's a second page?

MR. DRIBAN: Yep. So, this, this shows --

MR. ZIMMERMAN: I'm having, I'm having trouble getting to your second page.

MR. DRIBAN: You've got it, this is it. What you're

showing is page two.

MR. ZIMMERMAN: Okay. So, what I want to know, at the top of this exhibit, so to speak, there's still that additional lane, correct?

MR. DRIBAN: Can you clarify?

MR. ZIMMERMAN: Well, --

MR. DRIBAN: You're saying, --

MR. ZIMMERMAN: It looks like the, well, your additional lane goes back further on Joppa Road than is shown in this picture, is what I'm asking.

MR. DRIBAN: No, so, do you see where the pavement changes, the, excuse me, the, the, the coloring changes from, it's sort of a, I don't want to say lighter, yeah, right there. That's, that's the boundary of where the improvement would extend. That's where we've, where we would be able to tie back into the existing pavement markings.

MR. ZIMMERMAN: It looks you have, okay, at that point, there are three lanes?

MR. DRIBAN: Three westbound lanes.

MR. ZIMMERMAN: Three westbound lanes.

MR. DRIBAN: Yep.

MR. ZIMMERMAN: And how far back do you, you're saying that that, --

MR. DRIBAN: That is, that is --

MR. ZIMMERMAN: -- that the, the yellow is the extent

of a new lane? That that other, back of that, that's already there?

MR. DRIBAN: That's correct. That's, those existing westbound, those are, there's an existing three lanes today that remains three lanes up to the intersection. What we've done is widen sort of right at the intersection --

MR. ZIMMERMAN: Okay.

MR. DRIBAN: -- into, to get this additional left turn lane. You can see where the marking, where sort of coloring of the, on the image changes. That's the extent of our additional improvement.

MR. ZIMMERMAN: Okay. But for anyone coming out of the Exxon cut through, if we can call it that, and they want to make a left turn, they have one additional lane to try to cross, is that correct?

MR. DRIBAN: No, no. I mean, it's, that lane, the extra lane, you can see, I wish I, I could point to it, but a little bit, sort of up and to the right of where your cursor is.

MR. ZIMMERMAN: Yeah, it's --

MR. DRIBAN: Anyway, the, the point is, that lane, yeah, sort of right in there, that lane is starting to tie back in to --

MR. ZIMMERMAN: Yeah.

MR. DRIBAN: -- the existing conditions. So, really,

somebody coming out and wanting to make a left there is not, I mean, you're crossing sort of part of a lane. But functionally, if they're looking to the left to see what traffic is coming at them, they're still looking at the same three lanes of traffic and, you know, they're crossing is, is increased maybe by, I don't know, six to eight feet, just roughly, just roughing off the, off the drawing here. But it's not an entire, it's not a full additional lane that they would have to get across there.

MR. ZIMMERMAN: Okay. Have you tried to make a left turn out of that street?

MR. DRIBAN: Yes, I have.

MR. ZIMMERMAN: You have, all right. Okay. Thank you, Mr. Driban, that's all I have.

MR. DRIBAN: Thank you.

ALJ: Okay. How are we doing, everyone? I know we have, we have to ask some more people if they have questions. Does anyone need a break? Trying to see, Mr. Zimmerman, can you stop sharing so I can just put everybody on the screen.

MR. ZIMMERMAN: Sorry.

ALJ: That's good, no, you're good.

MR. ROSENBLATT: I could use --

ALJ: Everyone doing okay?

MR. ROSENBLATT: I could use a two-minute break, Judge.

ALJ: Yep.

MR. ROSENBLATT: Or, or we could, I, if (breaking up) anyone else is going to ask questions, that's fine too. (inaudible).

MR. DRIBAN: I could, I could use two minutes if possible.

ALJ: Yeah, absolutely. Let's do that. Take a five-minute break and then we'll come back, okay? I'll pause --

MR. ROSENBLATT: Thank you.

MR. DRIBAN: Thank you.

(PAUSE)

ALJ: -- record. Okay. Back on the record after a break. Mr. Wyatt, did you have questions?

MR. WYATT: Yes, Your Honor, I just have a few questions of this witness if I may.

ALJ: Sure. Absolutely, go ahead.

MR. WYATT: Mr. Driban, good afternoon.

MR. DRIBAN: Good afternoon.

MR. WYATT: I'm Michael Wyatt. You may have heard me say earlier that my family and I live on Trelawny Court, which is off of Tallyho. I take it you're familiar with that area?

MR. DRIBAN: Yes.

MR. WYATT: All right. Please don't take offense to the questions I have to ask you. But a lot of my neighbors may not understand your role in this proceeding. So, I want to ask

you a few questions about, just for clarity, you, you work for the Developer in this case, correct?

MR. DRIBAN: We are the traffic engineer for Tabco, yes.

MR. WYATT: Okay and you're being paid as, for that work?

MR. DRIBAN: Yes, we are.

MR. WYATT: Okay. Do you have an idea, or understanding how much your firm has been paid by the Developer through today's date?

MR. ROSENBLATT: Objection. I know in Circuit Court this stuff is allowed. We admit he's a paid consultant. I don't know if it matters how much money he's making.

ALJ: I understand, but they can ask it, it's cross examination. Overruled. Go ahead.

MR. DRIBAN: I'm not, I'm not certain. I don't handle the accounting.

MR. WYATT: Well, based on your familiarity with other projects in which you've been involved, can you give us a ballpark of about approximately how much some, something like this through today's date would cost a Developer for having your firm involved?

MR. ROSENBLATT: Objection.

MR. DRIBAN: I, I would have to look that up.

ALJ: Overruled.

MR. WYATT: Can you tell us, okay, so your answer is you, you don't know how much Lenhart Engineering, the firm by whom you're employed, has been paid?

MR. DRIBAN: I'm not certain on this project. I can tell you that for, you know, a typical traffic impact study, we, it cost around, between $7,500 and $12,500 for the traffic impact study. And then, additional studies, you know, would cost, would, would be additional. We've certainly done additional studies, but I'm not certain what the total cost would be at this point.

MR. WYATT: All right. Can you give us a sense of, does your firm do any work for community groups or Protestants of developments?

MR. DRIBAN: We do work for public agencies throughout the state, but we don't, we don't do Protestant work typically.

MR. WYATT: Okay. So, other than the agency work to which you alluded, and I'm not sure quite what that means, but we can come back to it, a hundred percent of the work of Lenhart Engineering is done on behalf of developers?

MR. DRIBAN: Other than the agency work, but there is agency work that we're doing.

MR. WYATT: I understand. Other than the agency work.

MR. DRIBAN: I mean, those are kind of the only two

things that, I mean, those are really the two types of work that exists in, in traffic. I mean, there's, there's public work and there's private work.

MR. WYATT: No, I understand. But one hundred percent of the private work --

MR. DRIBAN: So, yes, of the non, of the, of the non-public work, all of our private work is developer. I mean, we may have worked for some non-profits at different points, but, but.

MR. WYATT: Thank you. A hundred percent of the work is on behalf of developers that work, which is private?

MR. DRIBAN: A hundred percent of the non-public work, which is not a hundred percent of our work, is, is, is for developers.

MR. WYATT: Okay, thank you. And, and how many projects have you or your firm been involved in where there are three class F intersections in Baltimore County?

MR. DRIBAN: We've, I think to, to Mr. Zimmerman's point earlier, the Falls Road corridor is really the only location where there are three class F intersections in, in proximity. So, this is, we've certainly done work in the County, but this is the first, as I testified to earlier, my first time doing a special variance for, for this.

MR. WYATT: All right. Have you, have you ever heard of a case in, in your experience, where there are three failing

intersections involved in one development?

MR. DRIBAN: Yeah, I mean, I don't think it's that uncommon. There are certainly congested areas in other counties that, that have failing intersections. In Baltimore County, it's, it's certainly not a, not common place. But, you know, some of that has to do with the way the intersections are rated here.

MR. WYATT: Yeah, let's talk about the ratings for a second. You agree with me that the variance being sought by the Developer in this case is not something that's granted at the State of Maryland level, correct?

MR. DRIBAN: It's governed by the County's zoning regulation.

MR. WYATT: All right and this, in other words, this, this is not something the State Highway Administration or Maryland State government or Department of Transportation has any jurisdiction over?

MR. DRIBAN: They don't have jurisdiction over the special variance, but as I testified earlier, the State does control, you know, any modifications or changes that would occur to Falls Road have to be approved by the State.

MR. WYATT: I, I remember your testimony quite well, sir. I'm only asking you as it relates to the granting or denial of the special variance being sought in this case, the State of Maryland has nothing to do with it.

MR. DRIBAN: That's correct.

MR. WYATT: Okay and the State of Maryland, you would also agree with me, doesn't have any role whatsoever, in the level of service designations that are made as part of Baltimore County's basic service map.

MR. DRIBAN: That's correct.

MR. WYATT: Okay, all right. You testified earlier that it was your understanding in this project that the Developer was good to go, or basically, that approvals relating to the traffic issues had been provided by, I think it was Pilsinger and Karski in early 2021. Do you remember that testimony?

MR. DRIBAN: I do.

MR. WYATT: All right. And then, it turns out that additional work was requested by Baltimore County. I think you told us there was some personnel changes that may have brought that about and as a result of that, you did some additional work, corr, is that accurate?

MR. DRIBAN: That's accurate, yeah.

MR. WYATT: Okay and one of the things that you've done now in the, in, strike that. Some of the additional work you did was relating to my neighborhood and Tallyho Road. Didn't you testify to that?

MR. DRIBAN: I did, yeah.

MR. WYATT: All right and you also alluded to traffic

calming measures that you seem to suggest you were part of, I want to, I want to get clarification from you. Your firm had no involvement at all with Seminary Ridge's obtaining traffic calming measures through Baltimore County, correct?

MR. DRIBAN: I think I was very clear on my testimony that we, the timing of when we started to engage with the County, you know, the speed humps, we were in corr, we were in correspondence with, with Keith Lank, who manages the County's traffic calming, as well as Greg Karski and others.

And, you know, we did provide some information to them and, and it was, and it was immediately following that back and forth that they were installed. But I was very clear that, you know, I can't say whether we had any influence over that or not, other than the fact that we were in communication with them at, on a project that had been shelved, in my understanding, for at least five years, I think longer than that.

They had, there were design plans that were provided to me by the County showing those speed humps from, you know, I don't have an exact date. But it was more than five years ago and they hadn't, you know, they hadn't moved at all to that point and they were installed during the course of our correspondence. So, I never testified that we, that we influenced that or, or didn't. But the timing was around the time we were corresponding with the County.

MR. WYATT: I mean, would you agree with me it's completely coincidental, but from your testimony yesterday, you would, someone could be led to believe that Lenhart was involved on, on a nearly gratuitous basis in obtaining something that was sought by my neighborhood, my neighbors and I, for quite some time? I just want to make sure it's clear, you were not directly involved in any of that.

MR. DRIBAN: I think if you re-read my testimony from yesterday, I don't, I don't think I purported to be directly involved in that. I, again, we had conversations with them at the time and that's all, you know, that's all I testified to.

MR. DRIBAN: Sir, you brought it up. No one asked you about it, you gratuitously brought it up as part of your testimony that the timing was such that you may have had some influence over the implementation of traffic calming measures. I'm suggesting to you that that was your testimony and that was the impression you intended to create when you testified/

MR. ROSENBLATT: Judge, objection. Asked and answered, I think very clearly, what his testimony was. And to my recollection is consistent with his testimony. This is like the fourth time (breaking up) some sort of admission that I don't think exists.

ALJ: Okay. I, I recall his testimony yesterday and I, and I believe he said he wasn't sure whether they played a part in it, but then it was sort of a coincidence, as Mr.

Wyatt's alluded to. So, I'll sustain the objection. Go ahead, Mr. Wyatt.

MR. WYATT: All right. Thank you, Your Honor. Mr. Driban, as part of your work, do you read, read literature on traffic analysis, traff, traffic analysis, traffic study, try to keep up with publications?

MR. DRIBAN: Sure, yeah.

MR. WYATT: Both past and present?

MR. DRIBAN: I'm not sure what you mean by that.

MR. WYATT: Well, have you, let me ask you specifically, are you familiar with the work of Doctors Chang and Joseph of University of Maryland that are somewhat critical of critical lane, no pun intended, critical lane volume analysis?

MR. DRIBAN: I'm not familiar with the specific information that you're discussing.

MR. WYATT: I mean, have you ever come across in, in, as part of your work, criticism of other experts to the critical lane volume method because it, it lacks a basis of, or it's not empirical, it's not based on first, firsthand, hard data. But it's all more theoretical, or hypothetical, in a sense. Have you ever heard that (inaudible)?

MR. DRIBAN: I, I've not seen that. I, and it actually is based on hard data. I mean, the turning movement counts that are physically collected are what, are what make up

that CLV, the CLV numbers. So, I don't, I'm not familiar with the literature you're discussing. But I don't, I don't think it's fair to characterize it, as, as not being based on empirical data.

MR. WYATT: All right. Let me, let me ask you when you, sometime just prior to a hearing that was scheduled in this case, I think last August, that's August of 2021, were you asked to conduct additional work by Baltimore County, which resulted in the postponement of the hearing?

MR. DRIBAN: The request for the additional work was in June of, of 2021 and was completed in the very beginning of July of 2021.

MR. WYATT: All right. Do you remember this matter being scheduled for a hearing subsequent to that, I think it's August, I'd have to go back and look, but sometime in August of 2021, and then being postponed again as a result of additional requests from Baltimore County relating to traffic?

MR. DRIBAN: My recollection is that the original, the original hearing was from November of, what was supposed to be November of last year. I'm not certain on that date.

But, but yes, it was postponed and I think a part of the reason for that was, I mean, certainly, it was traffic and I think would have been the e-mail that we've discussed, or the comments that we discussed that Mr., can't remember at this point whether it was Mr. McCann or Mr. Zimmerman put up, I

think it was Mr. Zimmerman, where there was County, very critical remark from the County that where, in their, in their opinion, related to a traffic impact study. But actually were related to a sensitivity analysis that was requested by others at the County who subsequently left.

MR. WYATT: That timeframe could be accurate, I, I don't, it was sometime last, late summer, early fall. There was a hearing that was scheduled, it's been postponed until we resumed this in September of 2022. So, almost a, a year or ten- or eleven-month delay, would you agree with that?

MR. DRIBAN: I believe that's correct.

MR. WYATT: All right and during that time, I think you testified you've had interactions with State Highway Administration in terms of getting approval for the proposed improvement, roadway improvements, correct?

MR. DRIBAN: We certainly have had interactions with State Highway. The, the improvement at Joppa was, was approved well before that. I mean, there's a letter from January of 2021, stating their, their agreement with the traffic impact study, which would, which included that improvement. Subsequent to that, there were other discussions with SHA as a result of kind of ongoing work, but that improvement has been, has been approved by them for, you know, since January of 2021.

MR. WYATT: All right. Well, that's actually, actually, yeah, thank you for that clarification. So, what I'm

hearing from you is that basic, basically, the Developer went ahead and was trying to get SHA approval of the roadway improvements before even Baltimore County had given indication that a special variance would be given in this case, correct?

MR. DRIBAN: The, the project followed the typical course of a project. So, when we submit a traffic impact study, the traffic impact study does not just go to the County agency or to the State. It goes to both at the same time, almost across the board, that's, that's the way it works.

And sometimes, the County agency will approve the study before the State agency does, sometimes the State will, will approve it beforehand. But, but, you know, that traffic impact study that was submitted to both agencies included the improvement to Joppa, to the Joppa Road intersection and it was approved by SHA in January of 2021. It's, it's not, I mean, the process was the same as, same as any other development, you know, that we would work on.

MR. WYATT: I, I realize there's always some degree of push/pull in development work. But what I thought I heard you say yesterday and confirmed Mr. McCann's question earlier today, was that the Developer actually did, did this a little bit out of sequence, was proceeding at Developer's own risk in getting the SHA approvals in place before having the confidence of a, of a grant or denial of a special variance in this case.

MR. DRIBAN: Right, so there's two, there's two, when

we talk about SHA approvals, there's two pieces to it. The first is, approval of the study and any mitigation or improvements that are required as part of the study. That's what was approved in January of 2021 by SHA.

What the, where the Developer elected to move forward, kind of how, ahead of how they typically go is, although it's not, you know, it happens, but what, what, where they elected to move forward was to pay someone to do detail design of, of the plans, to work through SHA's process in order to obtain, before you can actually construct within SHA's right of way, you have to have step one done, approval of the study and concept plan and then you have to have step two, which is approval of detailed design plans that are fit to be bid by a contractor and, and actually constructed.

So, they elected to move forward with step two, the detailed design plans, and that's what's in process with SHA now so that if this, this project is, you know, ultimately, receives approval from Baltimore County to move forward, they are ready to build that improvement as soon as possible in order to, to help mitigate their traffic.

You know, other, I, I said it's uncommon, but other develop, other developments have done that. It's not, it's certainly not out of the question and, you know, yeah. So, when I said that they, that they kind of moved forward, they didn't do anything that was untoward or improper. They

actually were trying to move forward with something at their own risk for the benefit of, you know, the public.

MR. WYATT: Okay and then, when you talked earlier about Baltimore County requesting that you use its numbers, those were the LCM numbers that they were requesting you to use, correct?

MR. DRIBAN: Traffic, it was traffic counts. The turning movement counts (inaudible) intersection.

MR. WYATT: All right and that's from their, their own LCM data, is that your understanding?

MR. DRIBAN: When you say LCM data --

MR. WYATT: The, the data, the data that Baltimore County collects as part of its rating for the level of service of intersections.

MR. DRIBAN: I'm not certain whether that count was from that data or whether it was a separate count that they, that they conducted. Agencies do, from time to time, go out and conduct counts at various intersections and I don't know whether, I, I can look it up, but I'm not certain whether that was the --

MR. WYATT: Well, you used it as part of your analysis in your report. You're not sure, it, it's loaded cycle methodology counts, you would agree there, right?

MR. DRIBAN: It was a count, it was a count that the County, so loaded cycle methodology is a methodology for

analyzing an intersection and the, and the degree of adequacy at that intersection. A turning movement count is separate, is separate from that. So, what we were given was a turning movement count.

MR. WYATT: All right and is it your understanding what you were given in turning moving counts was based on observation or based on some other methodology?

MR. DRIBAN: It was a count that they conducted, so it would have been based on somebody out there looking at traffic volumes and counting the actual number of vehicles, as I explained the process earlier.

MR. WYATT: There, there was, I think Mr. McCann had a, had an aerial in Exhibit 38, Your Honor, if I could impose and just ask you to pull up, I think it's Protestant's Exhibit 38. It's an aerial photograph.

ALJ: Mr. McCann had that on his screen. He just high, he pulled up Google Map and put it on. Mr. McCann, would you --

MR. WYATT: Oh, he did? Okay.

MR. MCCANN: I, I actually took a screenshot of it and sent it to Adam, so I can pull it up if you want me to.

ALJ: If you could. And, and let me, yes, let me do this. Let me just give, hold on one second. Let me give Mr. McCann the presenter token and then he'll put it up on the screen for you.

MR. MCCANN: Actually, I say that and I'm having this issue with my computer again. I can't --

MR. ROSENBLATT: Judge, if you send it to me, Mr. McCann did e-mail it to me, and I can pull it up.

ALJ: Okay. Let me, let me move over to Mr. Rosenblatt then. Okay, Mr. Rosenblatt, you now have the presenter token. I didn't have it, Mr. Wyatt, I don't have the exhibit so I --

MR. WYATT: I understand.

ALJ: Yeah, so, could you zoom in maybe some? Yeah. Thank you. It's small on your screen. There, it's better. Okay. There you go.

MR. WYATT: All right. So, I just, Mr. Driban, in looking at this and then based on your familiarity with, with being out in that area, there's substantial parking lot coverage and, and buildings that are not even on this, would you agree with that?

MR. DRIBAN: There are parking lots, sure.

MR. WYATT: Okay. Yeah, like for example, Meadow Wood Recreational Park has a pretty big parking lot. That's not included in this aerial, right?

MR. DRIBAN: I'm not familiar with specifically what, whether it is or is not in this aerial.

MR. WYATT: Well, do you know where it is?

MR. DRIBAN: Yes.

MR. WYATT: Okay. It's west of Falls Road.

MR. DRIBAN: Yeah, --

MR. WYATT: Right at the intersection of Joppa, the one we're talking about in this case?

MR. DRIBAN: Yes.

MR. WYATT: Meadow Wood Park?

MR. DRIBAN: Yep.

MR. WYATT: Okay. You see they have a parking lot there that's not depicted on this aerial photograph?

MR. DRIBAN: Yes.

MR. WYATT: All right. There's also some office buildings and a new Johns Hopkins testing facility and physician's building to the, to the top of the photograph and, and further up to the left, to the, I guess the, the north part of, across from Greenspring Valley Road, heading north, that's not shown on this. Do you remember those areas when you were out there?

MR. DRIBAN: That appears to be the case.

MR. WYATT: Yeah, but you, your, you testified earlier that a lot of the side streets that come out onto Joppa and Falls Road are, are not accounted for or they're accounted for not directly, but you said more or less indirectly as part of your work, right?

MR. DRIBAN: I don't recall specifically saying those words but they're not, they're not in the CLV or the HCM

outputs.

MR. WYATT: Did you do any studies or have there been any studies of, of this area, not, not at peak p.m. rush hour, but during peak, let's say school pickup and drop off hours, 2:00 to 3:00 to 4:00?

MR. DRIBAN: I have been out there during those times, but we didn't study that because that's not what is required under traffic impact study guidelines.

MR. WYATT: Right, I understand it's not required. But do, do you remember, you, you understand St. Paul's School is further up the road on Falls Road, right?

MR. DRIBAN: Um hm.

MR. WYATT: All right and have you ever been at, at St. Paul's School when it's exiting or when, when school is letting out or when there's an athletic event up at St. Paul's School, Falls and, at Falls and Seminary?

MR. DRIBAN: I have.

MR. WYATT: Okay and did you notice any congestion or extra traffic on the road at that time that would be unusual for that time of day?

MR. DRIBAN: There are short peaks that occur when, when any school, whether it's St. Paul's School or any other school is letting out. You know, you can have a rush of traffic for, you know, five, ten, fifteen, maybe twenty minutes that's, that's a higher volume than, you know, when there's,

when there's not school letting out. And I think that St. Paul's School is, is similar.

MR. WYATT: And then you also have athletic events taking place at Meadow Wood Park throughout the day that I don't think anybody's talked about in this case. Are you familiar with that use?

MR. DRIBAN: I know there's a park there, I'm not familiar with the specific events that may occur or not.

MR. WYATT: Do you know what kind of park it is?

MR. DRIBAN: It looks like soccer, athletic fields.

MR. WYATT: All right and if I told you it was a large recreational park for Baltimore County and used both by public and private schools, would you, would you have any reason to dispute that?

MR. DRIBAN: I, I believe that.

MR. WYATT: And then one other thing, I think you said in response to Mr. McCann's testimony, that you couldn't say for sure what the level of service would be for any of these intersections after the roadway improvements, is that accurate? Am I, did I hear it correctly?

MR. DRIBAN: Well, we can say from the highway capacity manual and CLV methodologies, but the loaded cycle methodology doesn't offer a predictive way to determine that.

MR. WYATT: All right. So, today, based on the way the County makes designations under level of service, there's

no way to know that it's going to be anything other than where it is now, if, based on the roadway improvements, correct?

MR. DRIBAN: Based on the loaded cycle methodology, there's, there's not a way to look at that.

MR. WYATT: All right. And I think that's all I have. Thank you, Mr. Nebre.

MR. DRIBAN: Mr. Driban, yep. You're welcome.

ALJ: He's Driban, he's not Mr. Nebre. He's Mr. Driban.

MR. WYATT: Driban, excuse me.

ALJ: That's okay.

MR. DRIBAN: Yep.

ALJ: No problem. All right. Mr. Sachse, do you have any questions at all?

MR. SACHSE: Yeah, a couple if it's okay.

ALJ: Absolutely, go ahead.

MR. SACHSE: We probably should bring that, the exhibit back, I don't, I don't think I really need to. I just have a question and that is are, Mr. Driban, are you aware that as you travel north on Falls Road, you go through the intersection at Joppa and then you go to the light at Greenspring Valley, and there's some office buildings on the righthand side, Maryland Pediatric, I believe. And then the roadway goes into one lane. Are you aware of that?

MR. DRIBAN: Yes.

MR. SACHSE: And I know you've said you've, you're aware of St. Paul's. Have you ever noticed, or been there in the morning when the traffic actually backs up to where it goes from one lane at Seminary to two lanes on Falls Road? In other words, people traveling north on Falls Road will be backed up because of the traffic at St. Paul's and the reduction of lanes from two to one, backed up all the way to Maryland Pediatric and beyond, from Seminary.

MR. DRIBAN: I'm not, I've not personally seen that, but I, I'll take your word for it.

MR. SACHSE: Oh, you'd have to, because I've been in it. On Seminary, as you approach the light at Falls Road in the morning, going from Seminary to Falls Road, have you ever personally been there and seen the traffic back up that can go as far back as Tallyho?

MR. DRIBAN: I can't speak specifically as to whether it goes as far back as Tallyho, but I have seen, I have seen traffic on that approach.

MR. SACHSE: Okay. I, I, I can assure you it does, because I can speak to that. But the, the inter, is any work being done at the intersection of Falls and Seminary to help rectify the long, long, long delays that are caused by these backups?

MR. DRIBAN: We're not part of that, that failing traffic shed, so, you know, we're not proposing anything

specific at that intersection other than signal timing changes, which would facilitate movement of traffic throughout the entire corridor in conjunction with the improvement we're doing at Joppa.

MR. SACHSE: When you say you're not part of the traffic shed, you mean, Greenspring Manor development would not be part, considered part of that traffic --

MR. DRIBAN: If you look at the County's GIS maps --

MR. SACHSE: -- shed?

MR. DRIBAN: -- (inaudible) --

MR. SACHSE: (inaudible).

MR. DRIBAN: I'm sorry, you broke up right in the middle of that, can you repeat?

MR. SACHSE: I'm not sure.

MR. DRIBAN: I think, I mean, the, what I was saying is that the County's GIS map shows that the Greenspring Manor development is not in the Seminary at Falls traffic shed, for, for basic services map.

MR. SACHSE: Okay and, and I, I apologize, because basic services maps and the manuals and stuff, I'm not really that familiar with. I do live in Seminary Ridge. Now, do you know, I think you may have testified to it, but do you know how many houses are on Tallyho Road between Seminary and Joppa Roads? So, both in the Seminary Ridge and Heather Field developments.

MR. DRIBAN: I don't have that number handy, but at some point we did count those houses and --

MR. SACHSE: If I told you it was seventy-seven, would that sound about correct?

MR. DRIBAN: Sounds, sounds right.

MR. SACHSE: Pretty close, right? And from your knowledge, the speed humps and the prior stop signs that were at every intersection were because of the significant number of cars that were passing from Joppa to Seminary and at pretty high speeds. Did you understand that to be a fact?

MR. DRIBAN: I understood that that was a community concern and that, you know, traffic calming devices were installed based on community concerns. I don't know specifically why, what the County's, you know, whether it was speed related or something else. But, but I, I mean, that would be a reason to install those types of, of (inaudible).

MR. SACHSE: Makes sense. Do you know how many houses are on Mays Chapel to where the gate from Seminary, where the gate is right now?

MR. DRIBAN: In, in the neighborhood, you mean?

MR. SACHSE: Right, just from, you, you know where the gate is?

MR. DRIBAN: Yes. I, I'm asking if you're talking about just on Mays Chapel Road specifically or within the, or within the development?

MR. SACHSE: Oh, no. Just on Mays Chapel Road.

MR. DRIBAN: Just on Mays Chapel Road, I don't know the specific number. It looks like ten-ish, plus or minus, that are on Mays Chapel. I think there are ninety-nine total in the neighborhood west of Mays Chapel and something like twenty-seven, that might not be the exact number, east of Mays Chapel.

MR. SACHSE: Right, but this, this is what I'm getting at and, and maybe it's pretty obvious, but this question has to do with the cut through from Joppa to Seminary, which will be blocked by a gate, correct?

MR. DRIBAN: That's --

MR. SACHSE: That's the proposal.

MR. DRIBAN: That's the proposal.

MR. SACHSE: Right, and the number of houses on Mays Chapel from the gate to Seminary that would be affected by pass through traffic, if I told you it was four, would you, would you find that to be pretty close or correct?

MR. DRIBAN: If you told me there were four houses along Mays Chapel Road, I --

MR. SACHSE: (inaudible) and I don't mean to interrupt you, but I, I don't, from, from the gate to Seminary on Mays Chapel.

MR. DRIBAN: Yeah, if, if you're telling me there are four houses along Mays Chapel, I think I count five, but

regardless, it's not just those houses that would be impacted. It's, it's every --

MR. SACHSE: That's not my question. But my, my, my question (inaudible) --

MR. ROSENBLATT: Wait, wait, wait. Mr. Sachse, he's answering your question. He has to have a chance to finish (breaking up).

ALJ: One second, yeah. One more thought. He said, I think he said --

MR. SACHSE: I'm sorry.

ALJ: -- (inaudible) those houses impacted so what other houses, Mr. Driban?

MR. DRIBAN: Yeah, you were, you were talking about the im, you asked how many houses would be impacted. I agree that there are, I think, I count five, but again, four or five along May Chapel. But the impact is not just to the people that live right along Mays Chapel.

It would be to, you know, any, anybody in that neighborhood who might be out walking their dog or riding their bike or, you know, using that street. The people that use, you know, that should be using that street and that are using that street are not just the four houses that live along there.

MR. SACHSE: Do you know the section that I'm talking about, the short section between Seminary and the gate, in relationship to the rest of the Mays Chapel houses? And where

the sidewalks are and where the walking would be and where the pedestrians would be in the Mays Chapel development?

MR. DRIBAN: I don't believe there are sidewalks in that, along that section of Mays Chapel Road.

MR. SACHSE: Yeah, yeah, there are none along the section where, from the gate to Seminary. I mean, I think we agree on that.

MR. DRIBAN: Yeah, so I'm not sure what you're, so what's your question?

MR. SACHSE: Well, you talk about the effect being on more than just the four houses that go from the gate to seminary, that there could be people walking or riding their bike or the like. But the entire bulk of the neighborhood is to the west of the Mays Chapel gate.

MR. DRIBAN: Okay. I mean, --

MR. SACHSE: So, what, what I'm looking at, truly, is the impact for traffic on the pass through would be, essentially, to those four houses and I'm, I understand you're saying there are other people that may be taking walk out there, although there are no sidewalks, that's not part of major, part of a development, but it could affect those people too. I think that's what you're saying. It's not just the four houses.

MR. DRIBAN: Yeah, I'm saying if, if the gate is closed, then there are, you know, ninety-nine houses west of

Mays Chapel and twenty-seven east of it. The twenty-seven might not be the exact number. But whatever the number, whatever the number is, you know, those people have the ability to walk around, I mean, their neighborhood is in a loop, so they have the ability to walk around that loop, or bike, or kids are out playing, you know, they can be out there.

If you open that road up, it becomes a major thoroughfare and, you know, and it's, so it's impacting the community's usability of that, of that road.

MR. SACHSE: Well, you, you did say something, and I, I, I may not have picked this up correctly. But you said that there would be, several hundred vehicles would be incentivized to use that pass through --

MR. DRIBAN: (inaudible) --

MR. SACHSE: -- did I say that correctly?

MR. DRIBAN: That's, yeah, that's what our analysis showed.

MR. SACHSE: Well, what was the analysis based upon?

MR. DRIBAN: So, the analysis was based upon, I mean, some of the things that you just raised. Seminary today, you know, there are, I, if you want exact volumes, I can try to pull them up. But there --

MR. SACHSE: No, I, I, I understand the volumes are tremendous.

MR. DRIBAN: Yeah, there, there are hundreds of

vehicles today that go westbound on Seminary, so towards St. Paul's School, and make a left onto Falls Road, right? And when they turn left onto Falls Road, there's a signal at Seminary, there's a signal at Greenspring Valley and there's a signal at the Joppa intersection.

MR. SACHSE: Right.

MR. DRIBAN: If you open up a connection that has no signals, and so, now somebody can make, can travel westbound on Seminary, they can turn left into Mays Chapel Road, it's a very direct connection through a neighborhood, no signals.

MR. SACHSE: Um hm.

MR. DRIBAN: They can turn right out onto Joppa Road and then make a left at, at Falls Road, there is a travel time savings of not having to stop at the lights there. Because the connection is, is, essentially, equally direct to the connection along Falls Road, but doesn't have any traffic control devices. So, we looked at, --

MR. SACHSE: So, --

MR. DRIBAN: -- we looked at the total volume of traffic today that does the, the first movement I said, which is westbound Seminary to southbound Falls. And then we looked at the corresponding movement, which is northbound Falls to eastbound Seminary. So, a northbound right turn at that intersection.

And we ran that through the travel time model,

Simtraffic model, and looked at where there would be a travel time savings, you know, how, what percentage, what percentage of those existing movements would be able to make it through Joppa, from Joppa, through the Mays Chapel cut through, up to Seminary in a faster time with, then, then staying on Falls Road.

And the result was, something on the order of magnitude of two hundred fifty vehicles during the morning and something like three hundred vehicles during the evening.

MR. SACHSE: Does that take into account that those vehicles would have then making the turn on Tallyho, so would that reduce the traffic on Tallyho that would go to Mays Chapel? Or you don't know, it's not part of the analysis?

MR. DRIBAN: I, I'm not certain on that. I mean, I, what I can tell you is that Tallyho, when we conducted the analysis, it's a much longer route, and there are speed humps, a number of speed humps, as you're aware, within the neighborhood and, and the volume of cut through traffic, or the traffic that is incentivized to do that is reduced by those speed humps and by those longer --

MR. SACHSE: I'm sorry, (inaudible) --

MR. DRIBAN: -- and by, the volume of traffic that's incentivized to cut through Tallyho, you know, so when we're talking about traffic and the route, the route choice, it's, it's all about incentives, it's all about what's the fastest

way I can get from point A to point B, or the safest way or, you know, some combination of the two.

But Tallyho has, has a number of speed humps and the route is much longer than, you know, than the cut through route that would be created along Mays Chapel. So, frankly, again, you know, the data shows that there's not an existing cut through problem in Tallyho. There is some traffic that does it, but it doesn't rise nearly to the level, you know, that jurisdictions consider, consider it to be an issue.

And Mays Chapel, being a much more direct route and closer to Falls Road, you know, the, the analysis that we did shows that that would be a much more utilized route and, and would actually be problematic in terms of, you know, cut through traffic volumes.

ALJ: I think Mr. Sachse's computer may be having problems. I think he was cutting out. Mr. Sachse? I could still hear everything. Could everyone else hear? I think we could all hear, yeah. It was fine, your testimony was fine, it was just that I think his computer cut out. Or his internet, or something.

Let's see. See if he comes back here. Let's just give it a minute. Looks like we lost him. He probably will come back, I would imagine, if he logs back in. Is everyone else doing okay though in terms of, I guess, just, we just took a, a break. I don't know if it makes sense, Mr. Rosenblatt,

before I get to your re-direct, because I want to make sure Mr. Sachse is finished. Does it make sense for everyone just to take a break for lunch and then we can come back?

MR. ROSENBLATT: We can, yes. I'm going to be very quick with re-direct barring some big change in the rest of Mr. Sachse's questioning. Yeah, I think it makes, makes sense, yeah, because I can't really ask the questions until he's done.

ALJ: Until he's finished, yeah.

MR. ROSENBLATT: And then, while, for good use of time, there's, there's one witness we have, it's really a citizen witness that I have promised to call and, as part of the case now (breaks up) after Mr. Driban is done, just for planning purposes for everyone.

ALJ: Okay.

MR. ROSENBLATT: And I don't think that'll take long.

ALJ: Okay. So, what we're going to do is, then let's just take, let's just take a lunch break now in case, you know, and then I think maybe Mr. Sachse will come back in hopefully. Maybe if someone's on here, they can tell him that we're just taking a lunch break waiting for him. How long, so, half hour, does that work? The same as yesterday, everyone?

MR. MCCANN: Yeah, so is --

MR. ROSENBLATT: Absolutely.

MR. MCCANN: I'm sorry, didn't mean to interrupt.

ALJ: Go ahead. Go ahead, Mr. McCann.

MR. MCCANN: It sounds like, so, when you, Adam's got one more witness. So, I, I've got folks lined up, obviously. So, I'll be ready for that. The only thing I did want to mention before we come back on is I have a hard break today.

ALJ: Okay.

MR. MCCANN: I've got something at 5:30. I'd rather, I don't want to wait till 5:00 to leave, I really should get out of here by 4:30.

ALJ: Okay.

MR. MCCANN: So, I just wanted to mention that. But a half, half hour is okay.

ALJ: (inaudible).

MR. MCCANN: What's that?

ALJ: I didn't ask, sorry, I didn't ask. I should have asked, but, didn't ask whether, who, if anybody had a hard stop today, so. Yeah, that's no problem, 4:30.

MR. MCCANN: Okay and, but a half hour is okay.

ALJ: Okay. Let's take the lunch break now, half hour. I'll pause the record. Let's see, it's 1:10, so let's just say 1:45 again. Okay.

MR. MCCANN: Great, thank you.

ALJ: Thank you.

MR. MCCANN: Bye-bye.

(PAUSE)

ALJ: We're back on the record after a break. And we

were, Mr. Sachse, you were in the middle of your cross examination and your internet cut out. So, I, I know you were in the middle of a question.

MR. SACHSE: (inaudible)?

ALJ: I can. You have a little delay, there's some delay with your internet, but. So, I can hear you. I mean, are you next to a router?

MR. SACHSE: It must be holiday --

ALJ: Holiday?

MR. SACHSE: (inaudible) well, that's the internet I'm on.

ALJ: I, I think so. I think your internet, yeah. Did you have more questions? I know you were in the middle of a question.

MR. SACHSE: I will, I will try just, and if I lose it, then fine, go on without me.

ALJ: Okay, no problem. All right.

MR. SACHSE: I don't want to hold things up because it took so long to come back, so if, if --

ALJ: Did it? Okay, yeah, I saw you were in the attendees room and I moved you over to the panelist. So, I saw you there, okay.

MR. SACHSE: Yeah, I appreciate it.

ALJ: You go right ahead. Let's, let's keep our fingers crossed.

MR. SACHSE: Mr. Driban, where are you?

ALJ: If you just hit the grid panel, you'll see everybody. I don't know if you see that grid panel button. You can just hit that and then you'll see, you should see everybody's picture.

MR. DRIBAN: Yeah, I think if I speak, I move to the middle.

MR. SACHSE: Yeah, that's what I thought. I had you, and then --

ALJ: There's different layouts you can look at, a grid view --

MR. SACHSE: Right.

ALJ: Yeah. And if you hit the one view, you'll have one big picture or you'll have (inaudible) --

MR. SACHSE: Yeah, no, I, I, I see it, I gotcha.

ALJ: Okay. Okay.

MR. DRIBAN: Yep, I'm here.

ALJ: Go right ahead.

MR. SACHSE: (inaudible). I, I did want to tell you I saw your dog walk by, I think, and very well behaved.

MR. DRIBAN: Okay.

MR. SACHSE: Wasn't there a dog?

MR. DRIBAN: Oh, earlier, yeah, yeah, --

MR. SACHSE: Yeah, yeah. Sorry, I just figured I'd, okay. I won't waste any more of your time. I, what I was

trying to get at is in making an analysis of incentivizing to turn onto Mays Chapel, if it's opened up, if, let's say the calming bumps were put along Mays Chapel. That would make that pretty similar to Tallyho, is that correct?

MR. DRIBAN: Well, I think the difference is the, the length of the two routes. I mean, (inaudible) --

MR. SACHSE: (inaudible) it's not, I, I, again, I, I happen to be right there. I know Seminary to Joppa is, is almost exactly one mile and --

MR. ROSENBLATT: Mr. Sachse, he was answering your question and you cut him off. I'd appreciate if you'd let him finish answering your question.

ALJ: Yeah, I don't think he did that intentionally. But yeah, so, just try to wait for each other to finish --

MR. SACHSE: Yeah, okay, I apologize.

ALJ: I don't think it's on purpose. I understand it's not on purpose. So, so, I think Mr. Driban had said the difference of the length of these two roads, Mays Chapel being shorter, and, and Tallyho being like long and winding was the difference, I guess.

MR. DRIBAN: Right.

ALJ: In his, in his view, yeah.

MR. DRIBAN: Yeah, the difference between the two is, you know, the, between Joppa and Seminary on Mays Chapel is something on the order of ninety-two to thirty-five hundred

feet. That might not be exact but just a quick measurement. And between Joppa and Seminary on Tallyho is almost sixty-two hundred feet. So, it's, you know, not quite twice as long but it's substantially, substantially longer.

MR. SACHSE: I, the, the traffic that would, let's say, Mays Chapel was opened up, would the, and, and the calming bumps were also, calming whatever you call them, were put in there, would the analysis remain the same? And if so, would the vehicles that you project going down Mays Chapel are ones that would have gone down Tallyho but are now going down Mays Chapel or do you not know?

MR. DRIBAN: I, the, so bumps anywhere will have a calming effect to some extent. However, you know, in terms of whether it would make Mays Chapel and Tallyho the same, I don't believe it would because Mays Chapel is much more direct route than Tallyho is.

As far as the second part of your question, you know, whether some of the small volume of traffic that today cuts through Tallyho would potentially cut through Mays Chapel instead, I, I think it's likely, given that if Mays Chapel were to be open, that, you know, it's a shorter route, I think, you know, that that likely would be the case.

MR. SACHSE: Okay and if the gate is up, I, I know you explained the different ways that it might be opened by emergency personnel, but --

MR. DRIBAN: Yes, --

MR. SACHSE: If you were going to say something, go ahead. I didn't --

MR. DRIBAN: Sorry, I was just going to say there, there are, there are a number of different ways that it can be opened by emergency personnel. I gave, I think, a couple of examples, but that's (inaudible) --

MR. SACHSE: Right.

MR. DRIBAN: -- not a comprehensive list.

MR. SACHSE: Right. But, let's say, for example, as you, as you were exiting Greenspring Manor, if it were, if it were built, now you're up, right there at the gate is very close to Seminary. But you don't have a choice, you can't go that way. So, you have to go down to Joppa. But you talked about what if a tree fell. What if a tree fell down by lot one and you were in Greenspring Manor and wanted to get our or wanted to get in, you, you couldn't, could you?

MR. DRIBAN: You would need to have the, the emergency gate opened, one way or another.

MR. SACHSE: So, everybody in the neighborhood would have to have the ability to do that and, and at that point, to keep it open so you could go in and out?

MR. DRIBAN: Well, no, I mean, it's no different than what's up north on, on Mays Chapel Road as it connects to Seminary today. I mean, if, if a tree were to fall across that

entrance, you know, there, there would need to be some way, some way in and out of there. Somebody would have to come and cut the tree down. In this case, there's a gate, and you would have to call, you know, 911 and have somebody come and open the gate in order to, to get out.

MR. SACHSE: To let anybody get in or out of either neighborhood.

MR. DRIBAN: Well, the tree presumably would --

MR. SACHSE: (breaking up) I'm talking about if there's, if, if a tree fell, say, on Mays Chapel up by Seminary, then everybody in Mays Chapel would have to get through the cut through to be able to get down to Joppa. So, they could circuitously try to get (breaks up)?

MR. DRIBAN: If a tree, yeah, I mean, with or without a gate --

MR. SACHSE: Make sense to you?

MR. DRIBAN: With or without a gate, if a tree fell across the top of Mays Chapel at Seminary either way traffic would have to get down and out onto Joppa (inaudible) --

MR. SACHSE: Right and if it (inaudible) --

MR. DRIBAN: Right, that doesn't change --

MR. SACHSE: The, the reason I'm hesitating is --

ALJ: Hold on, Mr. Driban. Go ahead, (inaudible).

MR. SACHSE: I think the internet (inaudible) --

ALJ: Hold on, Mr. Driban. Go ahead. I think

there's just a delay in his internet, so that's why it's --

MR. DRIBAN: Yeah, I was trying to --

ALJ: Go ahead, Mr. Driban.

MR. DRIBAN: I was trying to delay my response. So, so, yeah, I mean, that the, it's no different with or without the gate whether, you know, if a tree falls across Mays Chapel, then they have to find, to go up to the southern end. Assume, you know, with the development in place. With that connection in place.

MR. DRIBAN: With the, with the gate there, I think we're agreeing, so --

MR. DRIBAN: Yeah, --

MR. SACHSE: -- with the, with the gate there, there's going to be a problem if a tree falls either up at the Seminary end or down at the Joppa Road end?

MR. DRIBAN: No, I don't think it's a problem --

MR. SACHSE: Well, you, you, let me say, if you were living in the neighborhood and you needed to get out and a tree fell and you couldn't because your access was cut off, would, would that seem like a little bit of a problem?

MR. DRIBAN: That's the case today though. I mean, there's no connection south of Mays Chapel today. So, if a tree fell across Mays Chapel at, at the Seminary Road intersection, all those people would have that same issue, whether this development is in place or not.

MR. SACHSE: Those people would. The people in the new development would be completely locked in if the development was built and the gate was kept, right?

MR. DRIBAN: I'm not, I'm not following, I apologize.

MR. SACHSE: No, that's okay. I'm, I'm not always easy to follow. But what I'm saying is, you buy a million dollar house on, in this lot, in Greenspring Manor. And there's a gate giving you, cutting off your access to Seminary, which is really right there next to you, fine.

So, you have to go down to Joppa. Now, a tree falls down by lot one near Joppa. You're in the new development and you need to get out, you have to have some sort of an arrangement by which you can go up and open the gate.

MR. DRIBAN: You would likely have to, the gate would have to be opened one way or another, and that's likely via, you know, a 911 intervention, which is the same thing, if the, let's say there was no development to the north whatsoever.

That that, that Mays Chapel, the piece that's there today didn't exist and there was no development. If they built this property, and this is the case for the, for the portion of Mays Chapel that does exist, if they, if they built this property with nothing there, if a tree fell down, those, those people would be, those people would need to either have the tree chopped up or they would have to have somebody, you know, if the connection is there, they'd have to have somebody come

and unlock the gate. But it's not, I mean, if a tree falls across the road, it's going to inconvenience people, sure.

MR. SACHSE: I know, and I understand that. And I think we're going to go round and round, so I'll, I'll, I'll try to have the last word and then go on. But if there was a, since there is a, a cut through there, there's the road there, it's an easy access, but we're gating it. So, that cuts off that access between Seminary and Joppa, which would cause inconvenience to anybody and everyone living in either neighborhood if the road was blocked on either end. Because there's a gate.

ALJ: Is that a question or is that (inaudible) –

MR. SACHSE: (inaudible) --

ALJ: Well, I know since you're an attorney, you know that it's not time to testify.

MR. SACHSE: I know.

ALJ: I was just, so, but is that a question to Mr. Driban?

MR. SACHSE: I could, I could do like Mr. Zimmerman said question mark after that.

ALJ: Question mark, question mark at the end, but --

MR. SACHSE: Question mark at the end.

ALJ: Question mark, Mr. Driban. Anything additional that you hadn't already said?

MR. DRIBAN: I think I've, I think I've covered it.

MR. SACHSE: Yeah, and, and I appreciate it. I, I appreciate your time.

ALJ: Yep, absolutely, yeah. Absolutely. Any other questions, Mr. Sachse?

MR. SACHSE: I, I, yeah, I did have a question about the, the turns coming out of Tallyho and coming out of, on Seminary and on Joppa. The numbers that you gave, I didn't really understand, but you indicated that I think in, if I can read my own writing, September of 2021, there, it was sixty-one, forty-four, sixty-six, sixty-five, I think that's a.m. and p.m. But you weren't sure whether they were on Tallyho or on Seminary, which, which are attributable to either.

MR. DRIBAN: Well, so no, so the first, the first set of numbers I gave were from data that Baltimore County provided. And so, it was either they, they were volumes along Tallyho Road, either at, like approaching Seminary, pulling up to Seminary from Tallyho Road, or pulling up to Joppa from Tallyho Road.

I don't, just, in the, in the moment, trying to go through them, I don't know, I, I'm not sure whether it was Seminary, those were approaching Seminary or approaching Joppa. But they are the volumes specifically coming into or leaving the neighborhood along Tallyho Road.

MR. SACHSE: May I ask you a question? And I'm being serious. You did give 2015 numbers that were from the County,

correct?

MR. DRIBAN: Those were 2015 volumes from the County, yes.

MR. SACHSE: Weren't there 2021 numbers that either you, your company, somebody else had come up with?

MR. DRIBAN: We collected, we did an origin destination study, and part of the origin destination study involved us determining the number of vehicles, again, for those same two approaches. So, leaving the neighborhood or coming into the neighborhood along Tallyho Road along Seminary, and then the same thing, coming into and leaving the neighborhood along Tallyho Road along Joppa Road.

MR. SACHSE: And they, that was some time in 2021?

MR. DRIBAN: Yes, we conducted those counts over a couple days in 2021.

MR. SACHSE: And that's where I think I had the numbers sixty-one, forty-four, sixty-six, sixty-five.

MR. DRIBAN: That matches what I have, yes.

MR. SACHSE: Okay and do you know the sixty-one, sixty-four, was that at Seminary or you don't, you don't know?

MR. DRIBAN: That is at, that's at Seminary.

MR. SACHSE: And so, the sixty-six, sixty-five were at Tallyho?

MR. DRIBAN: No, those are the p.m. volumes at, at Seminary.

MR. SACHSE: Okay. So, when, when, and I'm not going to belabor it, I'm just, it's more for my curiosity because I didn't understand. So, it's at Seminary that there are, there's, a.m. is how many vehicles turning at, off of Tallyho, or into Tallyho, at Seminary and Tallyho?

MR. DRIBAN: Yeah, so, leaving Sem, leaving Tallyho onto Seminary, there's a total of sixty-one vehicles during the highest volume, in the highest hour in the morning.

MR. SACHSE: Right.

MR. DRIBAN: There are forty-four vehicles that make the, the opposite movement of that, which is coming into Tallyho Road from Seminary in the morning.

MR. SACHSE: Okay, okay. So, I, I think I understand now. So, those, those are basically in and out numbers.

MR. DRIBAN: It's in and out of Tally, yeah, exactly. So, those are the morning, and then the evening is sixty leaving Tallyho and sixty-five coming into Tallyho --

MR. SACHSE: You --

MR. DRIBAN: -- from --

MR. SACHSE: No, I understand, and you helped me on that. When, I mean, do, do you know the distance between Tallyho and, or Tallyho intersects Seminary and where Mays Chapel intersects Seminary?

MR. DRIBAN: I can measure it quickly. Looks like it's approximately twenty-four hundred feet.

MR. SACHSE: Was that anything that was taken into the calculations as to the incentivizing of vehicles to turn in, into Mays Chapel?

MR. DRIBAN: Yes. Yeah, I mean, we looked at the, the distance of, of Mays Chapel, you know, from, from a common point. So, we, we started at a common point on the south side and a common point on the, the north side and, and we looked at the travel time to, to and from that common point, either using Falls Road or using Mays Chapel Road, if Mays Chapel Road were to be connected.

MR. SACHSE: Okay. I, I, I think that's all the questions I have, and I appreciate your time.

MR. DRIBAN: Yeah, thank you.

ALJ: Thank you, Mr. Sachse. All right. Mr. Rosenblatt, any re-direct?

MR. ROSENBLATT: Yes, a few questions. Could I have permission to share, please? Okay, Mr. Driban.

MR. DRIBAN: Yes.

MR. ROSENBLATT: Mr. McCann asked you some questions this morning about sixteen and seventeen of your traffic report and the numbers that I've highlighted with respect to the intersection of Falls Road and what we've been calling Greenspring Valley Road, or what you have as Station Drive on, on these two sheets. You see the highlighted numbers?

MR. DRIBAN: Yes, yes.

MR. ROSENBLATT: And I believe you were asked whether the, whether the total (breaks up) in other words, whether if this project is built with the proposed improvements under these methodologies you're showing (breaks up) to the intersection of Greenspring Valley and Falls Road. Do you remember those questions?

MR. DRIBAN: I do.

MR. ROSENBLATT: So, my question is, do these two pages, this, these charts, do these account for any retiming of signals that will take place as part of the physical improvements that are made to Joppa Road?

MR. DRIBAN: They don't.

MR. ROSENBLATT: Okay. Do these (breaks up) anticipated to be once signals (breaks up).

MR. DRIBAN: No.

MR. MCCANN: Objection, objection.

MR. DRIBAN: No.

MR. MCCANN: I'm sorry to interrupt.

ALJ: So, go ahead, Mr. McCann. What's your objection?

MR. MCCANN: Well, the first question was whether they account for any retiming of signals that will take place. And I think the assumption is, and the second question that, the last question that just followed was along those same lines, I don't recall the exact wording of it.

But the, the assumption, it's, it's, it's based on assumption that retiming will, in fact, take place. This is State Highway. We, there's been no testimony that State High will, in fact, State Highway will, will, in fact, retime these lights to whatever it is that the Developer thinks it should be retimed to. There's been no evidence of that whatsoever.

So, it's, it's a, there's no foundation for that question. It's a hypothetical. He can ask, he can ask a hypothetical question, if the light is, is retimed. But I don't, I'm not, that's a fair question. But to suggest that the, can I finish?

MR. ROSENBLATT: I apologize, I thought you were done. Isn't that exactly what (inaudible) testified on, on the first or second hearing date? That signals will be retimed?

MR. MCCANN: I don't recall her saying that with, with any certainty, no. I don't.

ALJ: (inaudible) I recall her talking about it, but why don't you rephrase the question, Mr. Rosenblatt, that if, if, if the signals are retimed.

MR. ROSENBLATT: I'm sorry?

ALJ: Did you hear what I said?

MR. ROSENBLATT: No, I think it actually cut out for one second. I'm sorry, if you --

ALJ: So, I said I do recall Ms. Kuhns (phonetic) saying that, talking about the signals being retimed. I'm not

sure if it was more certain or less certain. But they would do it, if they were going to do it after the improvement was done. Would you just rephrase your question in terms of, you know, if, if it's going to get retimed?

MR. ROSENBLATT: Okay. Mr. Driban, if, if the signals are retimed, will, do these charts represent (inaudible) delay would be to that, that intersection under CLV and HCM?

MR. DRIBAN: These charts do not reflect what retiming would have, how retiming would affect it.

MR. ROSENBLATT: Did, did you study how much signal retiming, in terms of seconds, how much time retiming would be necessary to turn the CLV impacts (inaudible) and the HCM delay impact of (inaudible) at that intersection that you show on pages sixteen and seventeen of your study. Did you study how much signal retiming would be necessary to accommodate those delays (inaudible)?

MR. DRIBAN: Yes, we --

MR. MCCANN: Are we talking about Station Drive, I'm sorry, Station Drive?

MR. ROSENBLATT: Yes.

MR. DRIBAN: Yes, we, we did, we did conduct that analysis. It was reviewed by the State and County and the finding was that we would need to shift one second, so out of the entire cycle length, you know, which is several minutes

long, we would need to shift one second in order to mitigate this impact.

And SHA routinely times their, retimes their traffic signals as part of improvement projects, especially within coordinated signal systems and, you know, coordination that I had with them, understand that they will do that, you know, as part of this project, as is typical.

MR. ROSENBLATT: Okay and just to turn your attention to a prior exhibit, Developer's Exhibit 22, did you engage in meetings and/or correspondence back and forth with, with SHA (inaudible) signal timing?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And showing you this Developer's twenty-two, letter dated June 10th, 2022, I highlighted a portion of the first full paragraph and ask you to explain what SHA told you in writing about whether retiming would (inaudible).

MR. DRIBAN: Yeah, so, they, what, what the highlighted portion says is it is standard procedure for the Maryland Department of Transportation, State Highway Administration, to retime traffic signals when geometric improvements are made.

In this case, since the signal and Maryland 25 and Joppa Road functions in a coordinated system with the signals along Maryland 25 at Maryland 130 and at Maryland 131, the

entire system will be retimed to reduce the wait at the intersections and maximize throughput along Maryland 25. Signal time will be reviewed and updated when the geometric improvements are complete.

MR. ROSENBLATT: Okay and I think that (inaudible) with what either the Judge or Mr. McCann just said in terms of (inaudible) timing would take place.

MR. MCCANN: What was the question again, I'm sorry, Adam? What was the question?

MR. ROSENBLATT: No, I didn't ask, I didn't, there's no pending question. Now, just one or two more questions. Mr. McCann asked you, actually I think several people now have asked you, about whether your CLV and HCM analysis takes into account these sort of side streets in and out of (inaudible) office buildings, etcetera. Do you remember those questions?

MR. DRIBAN: Yes.

MR. ROSENBLATT: My question is, when you had existing (inaudible) information that (inaudible) analysis, what, what effect does, does these existing access points have on the gate that you have for existing traffic?

MR. DRIBAN: The volume of traffic that's coming in and out of these existing access points is captured as part of our existing turning movement counts. So, that, you know, the volumes of vehicles from any of these parking lots or buildings is part of the study we conducted.

MR. ROSENBLATT: And finally, Mr., Mr. McCann, we can talk about supplementing this, but I, I marked, just because I don't (inaudible) have to stay on the stand any longer, or, or to have to call you back, Mr. Driban. When you are reading an e-mail from Mr. Filsinger, I believe it was yesterday in your testimony, I, I've marked as Developer's Exhibit 30, can you take a look at this e-mail and verify that this is, in fact, what you were reading?

MR. DRIBAN: It is, yes.

MR. ROSENBLATT: Okay and again, Mr. McCann, we, we can talk offline about whether other e-mails (inaudible) exhibit or what, but just for the sake of time and I don't, don't have any further questions and to get Mr. Driban on his way, I'd ask that this be admitted as Developer's Exhibit 30.

ALJ: Any objection, Mr. McCann, to this document on the screen, this thirty, the Developer's thirty?

MR. MCCANN: No objection. But I would like to ask just a couple more questions of the witness, Your Honor. In light of what's just been brought up, possibly, but both about this exhibit and about the, the two, the prior (inaudible).

ALJ: So, we go down that road, --

MR. MCCANN: I know.

MR. ROSENBLATT: I am strongly against that. I mean, I, I, with the burden of proof (inaudible) should be given the last word here. He had hours and hours and I've asked two

minutes of re-direct. I, I don't think it's appropriate to give people more chances to ask questions now.

MR. MCCANN: Well, --

ALJ: That, that's sort of a, the issue here. I mean, it, it, you know, I mean, yeah, I mean, it's, it, you know, we did have hours of, of testimony and, and then to allow you to do it, then Mr. Zimmerman goes, then every, everyone else goes as well and, you know, I think you, your, you went through an extensive, you know, cross examination of him, Mr. McCann.

This would be really out of the ordinary to ping pong back and forth here, you know, especially since the questions that were just asked in re-direct were in response to the questions that you asked. So, I mean, it's not new topics.

MR. MCCANN: No, I understand that. But let me just, if I could just --

ALJ: Yes.

MR. MCCANN: -- and I understand the ruling, but just, just two points. I'm not, you know, I, you've been very fair throughout this hearing, Your Honor. I'm always troubled by objections based on the amount of time things will take. You know, because we have a lot of, we happen to have a lot of parties in this case, we happen to have a lot of attorneys, time should never be the basis of an objection, number one. And, and I'm not saying that's what you're saying.

But number two, I just think, I know, in, in, in Court there may not be further cross, but here, we're here to educate you and if it's helpful to you and I think it will be, particularly if it only takes a minute, then I think that's, that's the standard by which this type of objection should be allowed, I mean, ruled upon. But with that, I understand your ruling. I just think it would be helpful.

MR. ZIMMERMAN: Judge, may I say something quickly? I don't anticipate asking any more questions anyway, but there is something called re-cross, okay? After there's re-direct, there's normally re-cross. I thought that was normal, but, that's all I want to say.

ALJ: I know, in your world, I remember that there is. Yeah, re-cross. You know what, I mean, given that, as Mr. Zimmerman indicated, he won't have any other questions and I really hesitate to go down this road.

My balancing of this is really the appellate decisions that have come down that really have kind of indicated that administrative hearings should just be open to allowing as much evidence as possible. And really, like I say, that just is out of general terms. And so, what I'm going to do is let Mr. McCann ask his questions. Go ahead, Mr. McCann.

MR. MCCANN: (inaudible) --

MR. ROSENBLATT: I have to, I have to object to, for the record.

ALJ: I know, I know.

MR. ROSENBLATT: Just, I, we're the party with the burden, we should be given the last word.

ALJ: I know, I know.

MR. ROSENBLATT: I do not think this is fair at all.

ALJ: I know, understand. And you're going to have, you're going to have the last word as soon as he's finished. So, hold on. Let Mr. McCann, go ahead, Mr. McCann.

MR. MCCANN: Thank you, Judge Murphy. Just on this one point about your study, Mr. Driban, being based on actual traffic counts as, I'm, I'm sorry. I think what Mr. Rosenblatt was asking you about is the various access points along the corridor and whether or not your studies accounted for traffic coming out and going into those access points. And I think your response to that was that you used traffic counts as, as the, as the basis of your evaluation. Did I hear that right?

MR. DRIBAN: I believe what I stated was that the traffic counts that we have would include any and all volume from parking lots and buildings that have been referenced in various cross examinations.

MR. MCCANN: Right, it would include the volume, but it wouldn't, it wouldn't be, those, those traffic counts aren't, and they're not in your report, unfortunately, those, the actual traffic counts. The traffic counts aren't specific enough to identify how many cars are going in and out of each

of those access points, how many?

MR. DRIBAN: The total, the total volume from all those access points is included in our study and the study was conducted in accordance with all, all relevant standards.

MR. MCCANN: Right, just the total volume, not individual volumes per access point, correct?

MR. DRIBAN: Individual access points are not studied as --

MR. MCCANN: Okay.

MR. DRIBAN: -- part of, as part of (inaudible) traffic impact study.

MR. MCCANN: And I just want to be careful about when you, when you, how you use, how you're using those counts. You're using those counts in order to project future volume, correct? That's how, that's how you were using those counts? I'm sorry, you're not, let me rephrase that question. You're using those counts really only to identify the distribution of the traffic as opposed to the volume of traffic at, at, at, of the various turning movements, is that fair?

MR. DRIBAN: No, turning movement counts are the basis of the whole study. Existing conditions is a review of, of, of the, of the turning movement counts at each intersection. I mean, that's, that's standard for any traffic study you're going to see. You have to start with existing count data and, and go from there.

MR. MCCANN: I know you start with that, it's a question of how you use it and for what purpose when you're projecting and that's what I'm trying to get at. Okay. I may or may not be able to, to ask the question appropriately, so. And the e-mail speaks for itself so, that's it. Thank you, Mr. Driban. Thank you, Judge, I appreciate it. I'm not sure how helpful that was at all after that but thank you for that.

ALJ: Mr. Rosenblatt, anything further?

MR. ROSENBLATT: No further questions, thank you.

ALJ: Okay, all right. All right, thank you. And Mr. Zimmerman, you don't have any other questions, right?

MR. ZIMMERMAN: I promised no further questions.

ALJ: You promised. And I'm just going to check real quick with Mr. Wyatt. That didn't generate further questions for you, did it?

MR. WYATT: None, Your Honor. But thank you for asking.

ALJ: Thank you. Mr. Sachse, no further questions, right, of that, based on that (inaudible)?

MR. SACHSE: Right.

ALJ: Okay, thank you. All right. So, I think we're finished with Mr. Driban. All right. So, who do we have next, Mr. Rosenblatt?

MR. ROSENBLATT: The only other person we have is, I, I promised to call him in our case is Mike Tanczyn. I see, he

just popped up as a participant, so.

ALJ: Oh, there he is. Mr. Tanczyn, nice to see you. It's been a long time.

MR. TANCZYN: Yes, Your Honor. Good, good afternoon.

ALJ: Good afternoon. All right. Mr. Tanczyn is an attorney and he used to come in and try cases and is probably smarter having retired, perhaps. And still, still doing zoning cases. Mr. Tanczyn, all right, you got your hand raised there. Do you swear and affirm under the penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. TANCZYN: I do.

ALJ: All right. Go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Good afternoon, Mr. Tanczyn.

MR. TANCZYN: Good afternoon.

MR. ROSENBLATT: Throughout your career, did you ever have a case where four lawyers were beating up on you at once?

MR. TANCZYN: I'm looking forward to it.

MR. ROSENBLATT: Can you, can you tell the Judge, basically, why you're here to testify, where do you live and what, what are the topics you intend to convey to the Court? And I, I, you've given me some exhibits that I'll share at your request. But just, if you could, explain to the Judge what, why you're here and where you live.

MR. TANCZYN: Certainly. I live at 9 Old Boxwood

Lane in Boxwood. We have lived here since January of 2009 and as the Judge has mentioned, I am a lawyer and have been a lawyer in Baltimore County now in my forty-sixth year. And I represented, on quadrennial maps, many clients and I participated in administrative land use law, both for communities who were concerned about a project, as well as businesses and the development side.

What I'd, what I'd like to do today and, and I've been watching the last two days so, I mean, I try to do some things to economize time. And by that I mean, my participation so far in this project has been as follows. When, when the first notices came out, I looked, look at what was submitted before the CIM, which, which I listened to remotely.

I checked out Tabco on ways that are available on the internet and listened to the CIM, my wife and I together, and she's here today making sure I don't misspeak, across the table from me. You can't see her. And so, what, we put our names in so, so we got the comments from the CIM.

We then wrote a letter, and I would ask Mr. Rosenblatt, if he could please put up, so what I'm going to try to do is economize by giving you everything I did up to this point in communications with Baltimore County. People can ask me questions about them, I don't want to read them into the record. I'm trying to save some time.

And then, the bulk of what I hope to do today is to

say what I've done since then to answer some questions that I had about what is proposed, what is objected to and I'll go through that fairly quickly and I have a total of eight exhibits and I'll talk as fast as I can.

So, what, what is on the screen now is after the CIM comments were received, we were invited to send our positions back, if you will, as of that time. And what you're looking at is the letter of, dated June, or actually it's e-mailed June 2nd of 2021 back to Jerry Chen at the County, who was sort of like the person guiding the CIM. So, I, I can represent to you that I wrote it, I sent it and I would ask that it be admitted. For the --

ALJ: Is there an objection --

MR. WYATT: Your Honor, if I may, could this witness be asked questions --

ALJ: Yes.

MR. WYATT: -- rather than this monologue and him trying to introduce exhibits? I think this is highly irregular, the way this is being handled. I don't, I think unless he's being asked questions, we're being deprived of the ability to object to the questions.

ALJ: Okay, understood. Mr. Rosenblatt, do you have questions for Mr. Tanczyn?

MR. ROSENBLATT: Well, he's really, he, he is a citizen testifying. I, I, I'm trying to do it in our case, but

these are his exhibits, one through (inaudible) Mr. Wyatt or anyone else would be (inaudible) say what they want about the case. That's what he's doing. He's, he's not doing it as like my expert witness, he's doing it as a person who lives here, so.

ALJ: Except it's in your case right now and it, it, if he was putting this on, you know, in the Protestants' case, then, then I would say yes. But because he's your witness in your case, and Mr. Wyatt has asked, you know, for questions, so if you could direct just questions to him so he can respond.

MR. ROSENBLATT: I mean, I'll, I'll try. To be honest, Your Honor, I, I did not anticipate having to do that because citizens are regularly given an opportunity to explain their positions on matters, so. I know he's done a lot of work. I'll ask general questions for his exhibits, but he's definitely more up to speed on what he intends to show from each one than I am. So, I'll do the best I can.

You, Mr. Tanczyn, you started to explain what your Exhibit 1 was in terms of a letter back to Mr. Chen following the CIM. Are there any specific points in this letter that you, you'd like to reference?

MR. TANCZYN: No. What I, what I would request is that we withdraw the exhibit. It'll take longer, but I will, if, if I could proceed --

MR. WYATT: Objection. Your Honor, he's not

answering the question. He is handling exhibits on behalf of the Developer. This is unreal.

ALJ: He, he's, he, I'm sorry, he's handling exhibits on behalf of the Developer? These are Mr. Tanczyn's exhibits and --

MR. ROSENBLATT: Correct.

MR. WYATT: I understand. But he, he is referencing them and now withdrawing them. I mean, these need to be offered through the proposing party, not through a witness --

ALJ: (inaudible).

MR. ROSENBLATT: I find it pretty outrageous that Mr. Wyatt is doing this, when there will clearly be people from his neighborhood and if he regularly attended these hearings, he would see that citizens are just (inaudible) their opinions are about a case.

I'm trying to do this out of courtesy for a citizen that's been involved since the CIM to now and (inaudible) not know what he's going to testify. These are his exhibits, these are not Developer exhibits.

If you'd like to inconvenience him, Mr. Wyatt, and tell him to come back at the end of the case to do this all over again, we can do that. But I thought it would be nice for a citizen that lives in the near, in the immediate adjacent neighborhood to accommodate him and let him testify to the work he's done on this project.

MR. WYATT: I think counsel should direct comments through Your Honor, not directly to me during this hearing.

ALJ: All right. So, let's, here's what we're going to do. Mr. Tanczyn, you've got on the screen exhibit number one. This is your exhibit, is that right?

MR. TANCZYN: Yes, yes, Your Honor.

ALJ: Okay and you drafted this exhibit, you typed it, is it an e-mail that you typed?

MR. TANCZYN: Yes.

ALJ: Okay, just --

MR. TANCZYN: But that's the letter that's e-mailed.

ALJ: It's, it's a letter that you wrote to Mr. Chen, Mr. Jerry Chen, who's the project manager for this project?

MR. TANCZYN: Correct.

ALJ: Okay and so, without reading the whole document, what, what in here is, is your point? What, what were you trying to convey to Mr. Chen?

MR. TANCZYN: Well, on the first page, Your Honor, and I, the, the, the following exhibits will explicate what is mentioned in this letter. So, on the first page, if you go to the third paragraph, my concern has to do with sight distance at Seminary Avenue where Mays Chapel South goes south.

ALJ: Okay and what about the sight distance at Seminary? Are, are you talking about when you come out of Mays Chapel, you, the sight distance either way on Seminary, what,

what --

MR. TANCZYN: Yes, yeah, that's exactly it, Your Honor. And --

ALJ: Okay.

MR. TANCZYN: -- it, it, I've measured it, I have taken pictures that, they're part of the exhibits, that show what I'm telling you. And, and, and the reason, the reason for telling you this about that sight distance issue, is it doesn't exist at all at, I'm sorry? Yeah, my wife's trying, trying to calm me down.

ALJ: All right.

MR. TANCZYN: At, at Tallyho, or at Joppa, at the end of Tallyho.

ALJ: So, there's a sight distance problem when you're coming out of Tallyho or out of Mays Chapel and you're trying to turn on Seminary, there's a site distance problem?

MR. TANCZYN: Not at Tallyho, up at Mays Chapel South.

ALJ: Up at Mays Chapel, okay. And so, so what, what does that have to do with this? And I don't mean to say it that way.

MR. TANCZYN: It goes, it goes to the question of whether there should be a gate as proposed by the Petitioner, which I favor.

ALJ: Okay. So, does that mean that you believe

there should be a gate closed at all times or that it should be open?

MR. TANCZYN: A gate that can be opened in emergencies and I, I have reasons for that.

ALJ: Okay. What are, what are your reasons?

MR. TANCZYN: Okay. My, my principal reason is my personal safety. When I'm stopped for traffic to make a turn into the community from Seminary. And the pictures that are a further exhibit, Your Honor, just so we can address it, it may, it may be easier to understand if, if the pictures, I'll tell you the reason and then the pictures will demonstrate my concerns and the conditions in front of Tallyho Road from Seminary as well.

ALJ: Sure. Now, which, the photos are in, it looks like they're in number four. Mr. Rosenblatt, could you scroll to four, please?

MR. TANCZYN: Yeah, it's four, 4-A, Your Honor.

ALJ: Okay.

MR. TANCZYN: Because there's a four, there's a 4-B that does something else.

ALJ: Sure, and, and we just need to, if you could, thank you, Mr. Rosenblatt. If you could some up so we could see the photos. Now, you, now, I know this, this property because this was the Torch Hill property. So, what are you trying to show with number one, photo one?

MR. TANCZYN: Okay and what I'm going to ask Mr. Rosenblatt to do is to go to the next picture. Because the next picture is a blowup of the first page. So, it's easier to see. I only did this because my wife's pictures were from her I-Phone. And so, number one just shows the I-Phone pictures. We made them bigger, but I didn't want anybody to question whether they looked the same from the smaller picture.

ALJ: Understood, okay. So, we got picture number two that's the expanded view. So, what, I know that I'm looking at, you know, facing, this is on Seminary --

MR. TANCZYN: Torch Hill.

ALJ: -- coming out.

MR. TANCZYN: Right. So, --

ALJ: Okay.

MR. TANCZYN: -- so, between the other side of the road and where I am, I'm, I'm at the stop sign to leave Boxwood. And, and what, what I want to show you in this picture is that there are no shoulders on the north side of Seminary in this region from that lane that you're looking at to the west going down almost to Mays Chapel North, which is a distance from here of point two-tenths of a mile.

ALJ: Okay, understood. Did you want to go to the next picture?

MR. TANCZYN: These pictures were all taken on 8/19/2022 in my presence by my wife. They fairly and

accurately represent the areas shown with no changes made to the pictures.

ALJ: Okay. I appreciate that foundation. That's, that's exactly what I was going to ask you next. Okay. So, this is picture number two.

MR. TANCZYN: Mr., okay, picture number two, good. Well, what I'm going to ask us to do is to, these again are the small pictures. If, if Mr. Rosenblatt could go to 4-A-3. Okay, good. That's, that's fine.

Now, you can still see the gatehouse, Your Honor, on the left side of the picture and what I'm going to ask you to note is there's also, in add, on the far side, on the north side of Seminary, there is not only no shoulder in that area, but the grassy area is hilly.

Now, we'll have a series of pictures that will demonstrate that from both directions. And so, I'm going to ask, before we go to the next picture, that you imagine a car like mine with me driving it, that is waiting to turn into Boxwood, and there's traffic coming in the example that we will get to after we look through this, these pictures, which will come back up the other, the other way from Thornton Road and will show you what's on both sides of the street in between.

But I ask you to remember this picture, or we could go back to it, because at the end of this, when I show you that, I'm going to tell you about something that happened to

me.

ALJ: Okay. What's the next picture?

MR. TANCZYN: Can you, can you raise, there you go. Keep going, keep going, Adam. Okay. Now, if, if we could, if we could stop, let's see where we are. Okay. Adam, can you move that to the left side please, just a bit, so that the writing, I can't see the writing. Okay.

So, Your Honor, where we are here is, we are now, well, actually, let me see. Okay. So, where we are now is, my wife and I are in the car, we are heading westbound on Falls, on Sem, or, or pardon me, on Seminary Avenue towards Falls. And this area shows you, because up ahead on the left is the entrance to the near communities, which we will talk about later, and they are not relevant to my testimony.

But you, as you look beyond the telephone poles towards the west, you, you can see from just past the red light at Thornton to the next indentation, which would be the entrance to Tallyho.

Beyond that, and we have another picture closer coming up. Beyond that, you can see in the distance the rise, as you go west of Seminary Ridge, you go up the hill and you can see clearly from the traffic light, traffic in both directions, if you're coming out of Tallyho. There's also many lanes.

Tallyho has, at its entrance, or just before its

entrance from the east, its own turn lane with an arrow saying it's a turn lane to get into Tally, Tallyho. You can, you can see that there's a small shoulder on the right.

There's, for all intents and purposes, the lane closest on the, on the south side of Seminary at that point, coming towards my car, there is something that will become, it's like a decel lane, but it's for traffic that's going to turn and go, go south on Thornton, down towards Joppa. That's what I want to show you in this picture, if we could go to the next one, please?

Now, this, this is actually taken when we, before, before, or after, pardon me. Before the previous picture, when we were at the red light at Thornton and Seminary. To show you that on the south side, where you see the, looks like an SUV or type car like that, getting ready to turn, that there's no, there's no curbs on that side of the street.

And on the, for, next to the car dead ahead on the other side of the light, you can see a small area, which is less than a shoulder in width. It's more like a walking path, even though there's a sidewalk next door in width. And so, that's the point that I wanted to make with that picture. Just to show what you can see and how far.

ALJ: All right, yep. And I'm familiar with Seminary, you know, the road. But, all right, let's go to the next picture, four.

MR. TANCZYN: All right, okay. This one shows entrances to different communities, first one is from Thornton on each side, which are facing, and you can see better on the right side of the picture how narrow the area is between the curb and the stripe.

Beyond that, it's a little, we're a little closer to the Tallyho Road entrance into Seminary Ridge on the left. But you're also closer to the hill and up towards the crest, right beyond, and we're going to have further pictures that walk us along, or drive us along.

But you can, you can see the, the, the cars in the distance, which had almost reached the crest right where the next development is on the right.

And on the left, across, almost directly across the street from the top of the hill at Hillside at Seminary is the entrance to a property which is, golly. A, it's, I think it's 1031 West Seminary. And, and that, that property, or the, that, that property is, lies down that small lane in between Seminary Springs and Seminary Ridge. And ends up backing up to our pen space in, in Boxwood, which I will get to when we go further, for another issue. So, that would be that picture.

Now, Your Honor, picture five and, and these say see enlarged photo, so I'm going to ask, okay. That's a better one. So, this is picture five, thank you, right there.

Which shows Seminary Avenue west of the entrance to

Hillside at Seminary entrance, which would be to the right and showing the accel, accelerating right land, no shoulder on the left side of the road from here all the way to the entrance of Seminary Springs. Because the only thing we're going to see next, well, we'll see that.

Now, the other thing that I wanted to point out because this is key to the sight distance issue, is you can notice that, that the road is, is elevating as we go west. There's a gradual rise in elevation.

Now, what I would like to bring to your attention is in the far distance, and, and it'll be shown closer in the next picture, but at the end of this, I'm ahead of myself. Can we just go to the next picture, please, Mr. Rosenblatt?

MR. ROSENBLATT: Yes.

MR. TANCZYN: Number six probably. Okay. We're, great. So, on the immediate left, ahead of us, is the entrance to Seminary Springs, which is directly across Seminary from the Hunt Spring development. As, as you can see, there is the, the lane on the left side to help traffic when it comes out of Seminary, out of Safeway to build up speed before it goes forward. Ditto with the Hunt Spring on, on either side of their entrance.

Now, what I'd, what I'd like to focus on, if there's a, is it possible, Adam, to, that's beautiful. So, if we focus beyond the Hunt Spring entrance on the right, and you focus on

that shoulder at a distance, which I guess could be an accelerating, an accel lane to head west from Hunt Spring and pick up some speed.

But the point I want to make is, if we look straight along that paved path, and you'll see where it looks like the trees are sticking out onto that shoulder, at that point, that's the common line where Hunt Spring, going to the north, where Hunt Spring development ends and what we're calling, what I called Cronguard on this, but it's Torch Hill.

That's where they have an access road or lane that travels on the perimeter of their property to go inward and ultimately that property, as I understand it, goes all the way up and meets on Mays Chapel North, where the main house is of the property currently.

And the reason for mentioning that is, I, I want to highlight what looks like that mass of green has no shoulder and it doesn't, it doesn't encroach on existing westbound Seminary Avenue lane.

It's going to be important going forward because that green mass of, of vegetation goes a short distance and then hooks up, or it stops quite close to picture number two, where I asked you to remember that I was, imagine my car awaiting to turn into Boxwood. And we can proceed to the next picture.

MR. ROSENBLATT: Okay. I think that's going to be your Exhibit 4-B.

MR. TANCZYN: Yes, it is. And I would, same, these were taken on 10/20 of this year, by my wife, in my presence in my car. They, this is a blowup so, so you can see it better. Not that one, Adam. We can, that's the next exhibit. That's 4-B.

So, if you could hold those pictures right now, because what I'd like to do, if we could go back to number two. And, and then I would like to tell you my story of what happened to me. The blowup of two, Adam, please. Yeah, okay.

So, this happened in 2013. I know that because I had retired from Medifast as their legal counsel and I thought I was going to retire but turned out I started practicing law again. Or kept practicing.

So, my car is parked or, or stopped to turn into Mays Chapel South on, on a particular morning of, I believe it to be April 13th of 2013. If it turns out it was the 14th or the 12th, I can't say for sure because I've taken an oath. What I can tell you is everything else that I'm about to tell you, I will never forget.

So, while I'm sitting there, and you have to imagine because it's not shown, that this, my car is parked or, or, pardon me. It's awaiting the ability to turn into Boxwood. There's traffic coming from Falls Road up Seminary, preventing me from doing that in a line.

There's no way to squeak through or squeeze through

and that, that, what happened was, because the sight distance is so poor that cars one-tenth of a mile, so there's two-tenths of a mile between the, I've measured this, between the Seminary Springs entrance and the Mays Chapel South entrance that we're looking at.

And the, the, the high point of the elevation of Seminary before it goes back down and it lies about a tenth to the east of what you're looking at, tenth of a mile. Now, that's the crest.

There's a sign right there in the, beyond, on, on this side of the crest, that shows a yellow sign that shows that Mays Chapel South goes left and then there's two-tenths, or not two-tenths, but it's two-tenths away, so they show the spread, that they're not connected to where Mays Chapel North will be.

Now, I mention that for this reason. And I, I've driven this every day that I've been at Boxwood that I wasn't on a trip somewhere else. In my experience, when I'm coming past the Seminary Springs entrance into Seminary, I'm still going uphill.

And so, the only part of that sign that you can see is the part above the pole that it's hanging on. It sits up high. And that means that that's what shows, to me, as I come up on the crest, heading, heading to the west. That's all I can see.

And so, once you get past that point, you're going downhill towards the Mays Chapel South entrance. So, while I'm sitting there on the day stated, a car, and I'm focused on the traffic ahead of me, but I'm keeping my eye in the rearview mirror.

And all of a sudden, while I looked in the rearview mirror, this SUV came very, it came so fast towards the back of my car over the hill, right past those bushes that I told you are a little further down, they're just out a, that were coming the other way, and the driver was driving very, very fast.

It was springtime, I had my windows down. It turns out this driver had her windows down. The driver of the vehicle first tried to slam on her brakes. She then estimated that she couldn't stop in time, and she pulled off onto the grassy hilly area coming at a great rate of speed.

When I saw that in my rearview mirror, here's how I felt. I felt like people who are fearful to the degree that the hair goes up on your neck, you get a metallic taste in your mouth. And as fast as she was coming, I feared for my life. So, she pulled very fast onto the grassy area.

Now, it's, it's a little level at the edge of the road, then it goes up to a hill. She was coming so fast and, and she, her next option was to try to pull around, and that's what she did.

She was going so fast that when she tried to go over

that fast and hit the hilly part, she just missed the back of my car and was over on the grass and pulling as hard as she could on her steering wheel to get back and she pulled so hard that both driver side wheels were up in the air, because of her efforts to get back to the road and return.

As she, and this happened faster than a sentence that I have said to you. It was that fast. As she went by me, because the pressure on the car that she, or the SUV that she was driving, when she pulled to come back on the road, she was, she was putting all her weight, all her classmates from the school that she attends at the end of Seminary, and I know that because of the uniforms they were wearing and the stickers on the, on the car.

So, her, it turned out, her head was actually out of the window on the driver's side as she leaned like a skier to put her weight against what was happening with the wheels off the ground. And once, I surmised this. Here's what happened next instead of a surmise.

The next thing that she did before they headed on down to the light at Falls Road, is she stuck the middle finger up at me and yelled at me. I never heard what she said because she was going so fast. That, I consider, a sight distance issue.

ALJ: Okay. So, and if you could just then, how does this tie into, again, the, the Greenspring Manor property

that's on Joppa? How, how does this --

MR. TANCZYN: Okay.

ALJ: -- relate to that?

MR. TANCZYN: Okay. I relate, I relate it this way, Your Honor.

ALJ: Um hm.

MR. TANCZYN: If, if you're, in your decision in this case, first, you'd have to agree to approve it. The next decision would be will the gate be there or not. Now, I don't know how much traffic is going to come. Seminary Ridge thinks this will help them out. Based on what I heard from the, the Petitioner's traffic person, it, it doesn't sound like that.

But any traffic that has a choice without the gate, we'll call it a cut through, I listened to all the testimony yesterday, I'm not going to, you know, whatever Mr. Driban said about reasons to have the gate, local road, all that, those makes sense to me. But so, so that's how I would relate it. Any traffic which thought it could cut through.

Now, now as far as Seminary Ridge is concerned, they're east of us. There's another concern that I have if it were to be a cut through. And that is, if you consider the amount of traffic that the, that all of the residents knows comes to Seminary from Sem, Mays Chapel North, that traffic could make a left and then a right into Mays Chapel South. If, if you follow me.

Now, I will tell you, as long as we're doing this in the same, in the same breath, that what, what I've heard other questioners talk about who are residents of Seminary Ridge, about traffic backups to the distances that they said, they do happen. They're, they're going to continue to happen.

I, I have a later exhibit and, and we can, (inaudible) get done with this part of it, I can have that put up and we can talk about it. But what, what this, what this caused me to do was to do what I call an area study, a study area. And the boundaries of that if, if, I'm thinking, I'm trying to think out loud in light of what, what we're doing.

Let me do it this way. Let me say my personal observations, when those backups occur which have been mentioned by Doug Sachse and by I, I believe, the attorney Mr. Wyatt, to the traffic witness. Seminary ends at Falls. At Falls, and I want to talk back from that exact point, I want to talk back to where we are at Mays Chapel South entrance. I want to talk to that to you and tell you this.

So, if we, if we were standing together at Falls at Seminary and you wanted to look from there to the east. What you have at that point are three traffic lanes. You have two headed westbound. The one to the center line as a, a left, a left turn lane. And the one to the right is, in essence, an additional lane from which you can either go directly into St. Paul's School proper south entrance. Or if you're going north

on Falls, you can make the right turn.

Now, that obtains with no shoulder on either side coming back east on Seminary to the Deep Run bridge. The Deep Run runs under Seminary, just before you get to, right where the power, the overhead power lines are. And it's, it's very narrow, only those two lanes, from Falls Road all the way up closer beyond that, to the Korean church, where the County made them put in shoulders in front of their property for turning traffic from the Mays Chapel North who, which is going --

ALJ: And I'm familiar, I'm familiar with that direction and that, I, I just handled the Torch Hill case so I, I, do know that, that road and what it looks like.

MR. TANCZYN: Okay.

ALJ: So, if you're going eastbound and then what is, and so again, if you could relate it to this case.

MR. TANCZYN: Yes, I can.

ALJ: Yeah, okay.

MR. TANCZYN: So, what I'm, what I'm talking about is part of traffic safety is the ability for the police department to set up radar points if they're not following somebody and measuring their distance from their car.

And so, there is virtually no radar points that the, say, that the County police use that are on or adjacent to Seminary Avenue because it's unsafe. The only point, since I've lived there in 2009 to the present, where the County

police set up radar points to Mays Chapel North, they park in the Korean church parking lot and they catch the traffic usually coming westbound.

The, the next, and, and if we, and if we follow the traffic safety backwards towards Thornton, they sometimes, but not always, on that downhill, on the Seminary Ridge side, will set up traffic. What's the point? How does it affect anything?

Everybody who travels that road regularly knows what I just told you. What do they do? They drive faster. And so, the speeds that they come up from Falls to Seminary, forty miles an hour doesn't cut it, what they're doing.

And so, they come up fast and they affect not only Mays Chapel South but on the other, on the other side of the crest, there's one private citizen between Seminary Springs and the Mays Chapel South entrance that 1046 or 1049 Seminary Avenue.

It's a doctor and he, his property shows where cars have run into things because he's downhill from the road and came on his property and smashed up things.

So, how I relate that to this issue is, to answer your question, is that I will represent to you and will have an exhibit and I'll explain my work in detail, but the bottom line, the cliff notes of my conclusion, is in the study area that I told you, the only developments which connect from

Seminary to Joppa are Seminary Ridge and Heatherfield.

And I, I'll, I'll talk in a bit on it when we get to Exhibit 5 about my research that drew that conclusion. And, and, and my testimony about that will also be applicable to the properties on the north side of Seminary, which also, of course, do not have direct access to Joppa. But we have an exhibit that will show that they are one way in and out communities as well.

So, the issue of one way in and out, such as the ones down on Mays Chapel South, which includes the Meadows at Greenspring and Boxwood and any, and any individual owners, is that the County, I'll give you the cliff notes on the study.

My study will show in exhibit, which we haven't seen yet, which is number five, that and, and what I, essentially, did was used the Land Records, so on and so forth, and the information gleaned as is follows. When each subdivision plat was approved, who signed off for it as to Planning and/or Traffic, and the plat number on which that is found.

And I'm going to represent to you in a cliff note, that the, most, most of the remaining developments, are after Seminary Ridge and Heatherfield were approved. Heatherfield appears, we're going to put in the exhibit in a minute, but that, that covers the traffic safety. And, and I'm prepared to go to 4-B because that covers something different in the same area.

ALJ: So, but I mean, I guess, just trying to get down to the, the point here. Are you, is it that you're saying that you would only want the gate to be opened or would you want the gate to be closed, is that, is that your, is that what you're trying to get, get at?

MR. TANCZYN: I, I favor the gate being closed.

ALJ: Being closed, okay. Being closed and you, and you live in that, you live in that community you said.

MR. TANCZYN: I, I'm at 9 Boxwood and we are the northern property adjacent.

ALJ: Right. Okay, and so that it would be, it would be closed so that you would still be accessing from your community onto Seminary, right?

MR. TANCZYN: That's, that's correct. Getting out isn't the problem.

ALJ: Okay, yeah. It's just pulling in, pulling in, as you said is the problem.

MR. TANCZYN: It's a sight distance problem for anybody who turns there.

ALJ: But, but with this development, how, whether or not it's approved, how, how is that going to change your turning in to, to Mays Chapel South?

MR. TANCZYN: It won't. It won't change my way of turning in at all. I'm just telling, I'm illus, I'm using my example, and I used one example. That's the only one that I

feared for my life.

ALJ: Sure, no, I, I appreciate that and that, it was a, you know, I, I can feel for your, you know, your position at the time. It's just that with, with regard to this issue and this development, since you're, you're favoring that it be closed, your, your access in and out of, of your community is not going to change, right? I mean, it wouldn't --

MR. TANCZYN: It would not.

ALJ: -- (inaudible) go in and out.

MR. TANCZYN: It would not, Your Honor.

ALJ: Yeah.

MR. TANCZYN: That, that, so the remedy, which the County has not seen important enough to do, is to do something about what our issue is regardless of what happens to this development.

ALJ: Oh, yeah, but I mean, I'm, I mean, I can only focus on this development, right? Because if you had issues that you think the County should address, of course, you'd have to address that with the County, as you know.

MR. TANCZYN: I understand and I understand --

ALJ: Yeah.

MR. TANCZYN: -- that they haven't done much with the failed intersections.

ALJ: Oh, right. And we've, we've learned that, you know, that they're, because they're owned by the state, the

County isn't, isn't going to spend money --

MR. TANCZYN: Yes, Your Honor.

ALJ: -- on, on the, on the state, you know, state roads and intersections and, and you know, so, that, that's something that, you know, has come out of, of these proceedings. But okay. So, so but, the rest of your exhibits, are they all in regard to what you think the County should be doing to make it safe --

MR. TANCZYN: No, no, no, they're not, Your Honor.

ALJ: Okay.

MR. TANCZYN: And four, we haven't done 4-B --

ALJ: Okay.

MR. TANCZYN: And I'll represent to you --

ALJ: Uh huh.

MR. TANCZYN: -- it's something new and different. It is the road, it is the approach from Mays Chapel South from Seminary going to the gate.

ALJ: Oh, okay, great. Mr. Rosenblatt, do you mind putting 4-B up?

MR. TANCZYN: There's a series of pictures, just like before.

ALJ: Yes, and --

MR. TANCZYN: My wife took them, my wife took them on the 20th in my presence --

ALJ: Yes. Right, and, and these fairly and

accurately reflect what you saw on that day, on (inaudible) --

MR. TANCZYN: Yes, Your Honor. We have not, we have not changed it one iota and we have the small pictures.

ALJ: I understand, okay.

MR. TANCZYN: So, picture, I think this is the first one, 4-B. And where we are is we're standing close to, but just in from Seminary on the right side of Mays Chapel South. What you can see in that picture is the downhill drop of the road.

You can also see the twenty-five mile an hour speed limit, which is the same as the speed limit in Seminary Ridge. All of the developments up and down Seminary, because I drove my car through every one of them, so they all go to twenty-five miles an hour.

You can see, of course, throughout, I'm going to represent to you, there's no sidewalks on either side of Seminary, Mays Chapel South, nor in the communities of Seminary Ridge or Boxwood, or the Meadows at Boxwood, pardon me.

ALJ: Okay. So, just, just to be clear, your, your wife was not sworn in so, we just have to make sure you're the one testifying since you're the one --

MR. TANCZYN: Yes, Your Honor.

ALJ: Yep, thank you.

MR. TANCZYN: I'm sorry.

ALJ: All right.

MR. TANCZYN: So, what, what you're looking at is Mays Chapel South heading down, and it, you can see that it makes a little, it's not a straight line. It wiggles to the left and that approach would take you down to the Boxwood entrance.

Now, what, what it, it, what appears small in this picture, is this the enlarged one, Adam? I, I guess that's the one. Okay. Yeah, they were all enlarged. Okay. So, before, past the twenty-five mile per hour speed limit, you'll see on the right a road sign that, if you were up close and you were reading it, it would say Seminary Farm Road.

That is the first exit to the right into the Meadows at Greenspring. And, and then you can, you can see the character of the community going down. Is this the second picture? Okay, thank you. So, in this picture, we go to the other side of the street to, across from where we were.

You can see the same twenty-five mile per hour speed limit and this shows you how the road runs, looking towards what's on the side of the Meadows. And you can go to the next picture. But it's the same thing. You have, you have that angled macadam, no curbs, no gutters, or drains.

So, I guess, we're at picture three, Adam? There's, yeah, okay. So, this picture three, we're standing at the first resident's driveway across, it's individual residence, not part of either development. And we're looking to the west,

down Seminary Farm Road. Just so you can see the character of, of what they have, that there are no sidewalks, etcetera.

Adam, if you could show the next picture, please? Okay. Now, we are standing at the second residence, private residence, looking down Mays Chapel South to the gate, or where the, where the fence is now for what we have called this farmer's field.

You will see on the right side, one of those individual homes on, on your right, past that big bush and tree. There's another individual house beyond that, or next door to that. And that house is across from the entrance into Boxwood, which is called Arbor Way.

To the next, there's one more house on that side, actually two more, which are part of the Meadows. One of them faces on to Mays Chapel South. And then the other side of that one, is the other end of Seminary Farm Road if you imagine the letter V or a horseshoe between the entrance and this entrance. It, it goes in at the top and goes back out there.

And there's one more house on the right side before you get to the farmer's field, which is the Meadows. Now, that house, were the gate not to be placed, would have a big problem because the part of its improvements, which face Mays Chapel South right at the farmer's field, right before the farmer's field, is a triple car garage and a paved with drive, like a driveway coming out of the garage, where they have, literally

right now, they just back out because the farmer's field doesn't cut through. They're going to have to rethink their world if it cuts through because they can't pick the garage up and go some other way.

ALJ: Understood, but they're, but you're not representing them, right?

MR. TANCZYN: I'm just pointing out things and they may care about it or not. I'm sure you're going to hear from them.

ALJ: Okay, all right.

MR. TANCZYN: And my, I'm telling you what my picture, goes down the farmer's field and --

ALJ: Yes, understood.

MR. TANCZYN: Okay. Next one, please, Adam?

MR. ZIMMERMAN: Excuse me. Could we identify these exhibits somehow? And are these Tanczyn exhibits?

ALJ: Yes, he has, he's, he's identified them as he's gone along, the picture numbers. And these are his own exhibits.

MR. ZIMMERMAN: Okay, okay.

ALJ: Community member exhibits and they're also in their own like binder that, that were given (inaudible) --

MR. ZIMMERMAN: Okay. So, we're calling them community member exhibits?

ALJ: They are community member exhibits.

MR. ZIMMERMAN: Okay, I just (inaudible) --

ALJ: Mr. Zimmerman, did you get an e-mail of these exhibits?

MR. ZIMMERMAN: You know, I'm, I'm watching the hearing so, I, you know, so I'm not reading, I can't do, read e-mails and watch at the same time, so.

ALJ: I understand, I understand. But you probably would have gotten these, I would think, (inaudible) --

MR. ZIMMERMAN: We probably did but, you know, I'm just following along. I just, so they're community member exhibits?

ALJ: Correct.

MR. ZIMMERMAN: Okay. That's all, sorry, I didn't, I couldn't --

ALJ: Mr. Rosenblatt, did you give those to Mr. McCann and Mr. Zimmerman?

MR. ROSENBLATT: I did, yes. By e-mail.

MR. MCCANN: I've got them.

MR. ZIMMERMAN: We probably got the e-mail but I'm busy watching, that all, sorry.

ALJ: Understood, thank you. Okay, all right. There's no other picture, I don't think, Mr. Tanczyn, just this one is the last one I think we had, right?

MR. ROSENBLATT: I think that's, that's right.

ALJ: That's it.

MR. ROSENBLATT: Yes.

ALJ: Okay.

MR. ROSENBLATT: Mr. Tanczyn, maybe, maybe I can direct you. Based on, I did not even realize how much work you had put into this, but you obviously have. And maybe if I could just direct you to a few questions (inaudible) work and all the photographs you've taken, is that okay?

MR. TANCZYN: Yes, sir.

MR. ROSENBLATT: Okay. So, I saw you, your Exhibit 7, which I think is already in evidence as one of the Developer's exhibits, is the illustrative plan. And can you, you, using Exhibit 7, can you point out to the Judge where on this exhibit Boxwood is located?

MR. TANCZYN: Okay. Your Honor, Boxwood is located immediately, as you look at it, where, where the words Mays Chapel Road are shown, Boxwood is to the right of that. Its property runs to the common line with this development.

And Boxwood is reached, as you can see, right where the road is, that's where Arbor Way cuts through the vegetation and it meets Old Boxwood Lane. Old Boxwood Lane is what used to be called a dog bone cul-de-sac. There's a, there's a cul-de-sac, it, at the top and the bottom. And there are twenty-seven homes within Boxwood. I'm speaking, as I told you, just for myself.

MR. ROSENBLATT: So, Mr. Tanczyn, you live in one of

the twenty-seven homes in the Boxwood community where the words Mays Chapel Road (inaudible)?

MR. TANCZYN: Yes, I live at 9 Old Boxwood Lane, since two thousand, since 2009 with my wife.

MR. ROSENBLATT: Okay and, and you're aware on this exhibit where the emergency only access gate would be? In other words, at the rear of the Greenspring Manor property before you get to the words Mays Chapel Road on your Exhibit 7?

MR. TANCZYN: Yes.

MR. ROSENBLATT: My question is, let's, let's get directly to your point. If there is no emergency only access gate there, and this project is approved with no gate, what is your fear will happen as someone who lives in Boxwood, in terms of traffic and safety and anything else you want the Judge to know?

MR. TANCZYN: If, if the gate is present?

MR. ROSENBLATT: If there's no (inaudible) and this is a full access --

MR. TANCZYN: If there's no gate --

MR. ROSENBLATT: -- (inaudible) yes.

MR. TANCZYN: Okay.

MR. ROSENBLATT: If there was no gate, what is your concern? Please, please tell everyone listening.

MR. TANCZYN: Well, I can tell you what I, what I do and what I observe neighbors either from Boxwood, either from

the individual homes or from Seminary Ridge do is because we have no sidewalks, etcetera, I'm not going to beat a dead horse, it's used for recreational purposes.

There are groups of people who walk together every day. I'm a runner. It's eight-tenths from Arbor Way all the way around Seminary Farm, back to Arbor Way, so I try to get multiples of eight-tenths when I run there.

I'm concerned for, I'm, I'm concerned about traffic coming into the community, which presents, as this does, when the development of every other community on Exhibit 5, that we haven't gotten to yet, which is bounded by Thornton, Seminary, Joppa, Falls Road, the County, after it approved Seminary Ridge and Heatherfield and said they shall have access via this public road network. None of these other developments, including ours, were ever designed to have cut throughs.

MR. ROSENBLATT: Talk, talk about specific impacts. What, what do you fear will happen if there's no gate as a resident of Boxwood?

MR. TANCZYN: I'm, I'm concerned about safety. I'm concerned about more traffic as a percentage. There, there are likely to be more accidents because we have so little way in and out, if there were more accidents, we don't have, in my experience, any accidents that close off our exit to Seminary in the time I've lived here.

We have had trees come down. They have been cut up

so emergency equipment can come in there. I, I, I would say it this way. I see no reason for the County not to be followed in its wisdom by the Planning Department approving no cut throughs in our case or in any of the other cases, where all these other subdivisions were made.

And, and I will point out to you when we get to Exhibit 5 and to our Exhibit 6, which is an aerial Google map, I will point out to you answers to some of my questions about why Mays Chapel Road was not continued on the other side of Seminary Ridge before the time Seminary Ridge, or at the time Seminary Ridge was developed in the year that it was developed.

MR. ROSENBLATT: I'm not going to cut you off Mr. Tanczyn, but I know you could talk for hours about the other exhibits, but I think the most important thing and use of everyone's time is, as --

MR. TANCZYN: Okay.

MR. ROSENBLATT: -- you've just done, you've expressed what some of your concerns are. So, I'm just going to ask you a couple more questions without getting into the complexity of the other, the other exhibits, if I can.

MR. TANCZYN: Yes, sir.

MR. ROSENBLATT: So, you've explained some of your concerns, if the, if Judge Murphy approves, assume she approves the project. If she approves an emergency only access gate at the rear of this property, before the words Mays Chapel Road on

your Exhibit 7, does that (inaudible) your concerns that you just mentioned?

MR. TANCZYN: A hundred percent.

MR. ROSENBLATT: Okay and did you, before, before coming to this case, do, write an e-mail to, I believe, County Councilman Patoka and various County officials expressing your position about this project in general?

MR. TANCZYN: Yes, and, and we were invited to do that.

MR. ROSENBLATT: Okay. I'm going to, I'm going to show you what's been marked as your Exhibit 2 and just ask you, is this an e-mail that you wrote that succinctly outlines your position about the project, the traffic, the, the emergency access issues?

MR. TANCZYN: I don't see it yet. I still see the previous exhibit.

MR. ROSENBLATT: Well, it might be on, does everyone else see the e-mail?

ALJ: No, not yet. It's still the exhibit number seven.

MR. ROSENBLATT: Oh.

ALJ: Yeah.

MR. ROSENBLATT: Still?

MR. TANCZYN: I'm sorry, it isn't.

ALJ: Still, yep.

MR. ROSENBLATT: Is this changing?

ALJ: Nope.

MR. ROSENBLATT: What? Come on, I'm trying to speed it up. How about now?

ALJ: Let's see.

MR. ROSENBLATT: Is that working?

ALJ: Kind of delayed. It just says it's starting to share, but it's not coming through yet. Yeah, it's just, must be stuck.

MR. ROSENBLATT: All right, I'm going to stop --

MR. MCCANN: I can pull it up. You want me to pull it up, Adam? What is it?

MR. ROSENBLATT: I'm sorry, I have not had this yet.

ALJ: He's trying now, he's trying again. Nope, it's stuck. Don't know why it's stuck.

MR. MCCANN: What number is it?

MR. ROSENBLATT: Two, Tanczyn two or community two.

ALJ: Let me give you the presenter, Mr. McCann. It's coming over.

MR. MCCANN: Okay. Is that it?

MR. ROSENBLATT: Yes. So, I was asking Mr. Tanczyn, is this an e-mail you wrote to, looks like the County Council, Public Works, Planning, etcetera, expressing your opinion about, about this project?

MR. TANCZYN: On November 8th, 2021.

MR. ROSENBLATT: Okay and --

MR. TANCZYN: Pardon me, June 2nd, 2021.

MR. ROSENBLATT: Right, okay. And if we were to scroll down the exhibit, two pages, I believe it may repeat itself. I believe the text may be the same on page two as, as page one. But --

MR. TANCZYN: I did that, I, I did that only because on that third page I didn't have a date, the date is shown on the e-mail, on the previous two pages.

MR. ROSENBLATT: And Mr. Tanczyn, I understand you're here on your own behalf, you're not representing anyone, but does this e-mail that you wrote to the various agencies, does this, does this express your opinion about the Greenspring Manor project and (inaudible) here?

MR. TANCZYN: Yes.

MR. ROSENBLATT: Okay. Just a couple more background questions, Mr. Tanczyn. You, you used to practice land use law?

MR. TANCZYN: I did.

MR. ROSENBLATT: Did you represent both developers and community groups in your practice?

MR. TANCZYN: I did. I started out with the community groups, some of them thirty year clients, and, and then I did both, because you can make more money that way.

MR. ROSENBLATT: Okay and do you have any relation

with Tabco or Greenspring Manor project? Do you benefit financially or any other way from the project?

MR. TANCZYN: I do not. I haven't asked for anything and I don't expect anything.

MR. ROSENBLATT: Okay. That e-mail that was just shown, were you asked by anyone to write that?

MR. TANCZYN: To, to send it?

MR. ROSENBLATT: To send that e-mail to Councilman Patoka or anyone else?

MR. TANCZYN: No.

MR. ROSENBLATT: Okay, all right. I know some of your other exhibits you hinted illustrate the, the lack of connection between Seminary and Joppa Roads through other developments. If, if we were to boil down what (inaudible), is it simply that the only cut through, if you will, between Falls Road and Thornton Road is through Tallyho and none of the other neighborhoods have a cut through?

MR. TANCZYN: They do not.

MR. ROSENBLATT: Okay and is that the purpose of all, all the work you did in, in analyzing different projects and, and putting together what I think are your exhibits five or six?

MR. TANCZYN: Well, we haven't talked about five yet and its importance, if I could represent what it does and if you could put it up, I don't have to talk through it. The

dates are on, when all the developments were, first plat was approved, who approved it for Planning.

I will point out, in some cases there will be a name for approval of the plat from another County agency. But in those cases, they were approved for both departments, such as Public Works and Planning. Sometimes Planning signs for Public Works as well.

And the significance, I would point out, is and I've, and I've already talked about when the Seminary Ridge and Heatherfields were approved, and that shows the plat number and the date and the book number. Is that most of the other developments are, are later.

Three of them in particular were done in close proximity and time. Those being Seminary Springs, Boxwood and before that, the Meadows at Greenspring. All is shown with the plat number, date of approval and, and, and they will say, in the most part, for those three for sure, Norman Gerber was doing it.

And Norman Gerber was there earlier and approved, as well, he'll sign at Seminary and there's another couple, wait a minute. I got to see the one on the bottom. Oh, of course he did those three and I'm looking for the condominium called Thornton Wood to see who did that one. Anyhow, the point, my point is this.

The significance of Norman Gerber approving all of

those and I knew him and held him in high esteem in his position, worked with him on some projects for clients of mine after he had retired from the County. A top notch guy. No one will disagree.

But you have continuity. You have somebody who is approving a number of them with a common idea of what should be there. And the only other exhibit that, that if, if anybody wanted to double check me instead of looking at individual plats, our Exhibit 6 I'll just represent, is a study area and I told the boundaries to the Judge earlier.

If you look at that, for the properties up, on the north side that, that enter, that, that abut Seminary, West Seminary, on, on their entrance, you will see every one of them that I have noted as a plat, they are in and out one way entrances and exits. And so, they are affected by traffic on Seminary.

Now, one other point, if I can make it, I've listened to Mr. Sachse when he was talking about the backups and what does everybody do. There was some talk yesterday and I want to address or, or throw my two cents in if allowed, based on my time here, experience here.

Is there going to be what traffic going through Seminary Ridge? That's a question. I can tell you what I have done and what I've seen many other people do when those horrible backups, there's a lot of stuff at St. Paul's with

activities, as stated, which causes a backup.

And so, if my wife and I had a dinner reservation in Baltimore City, we were going to go down the Jones Falls, we come out and say oh, heck because it's backed up almost to the Mays Chapel South from, South entrance from Falls Road, what do we do?

One time I went through Seminary Ridge. Never again. Forty miles an hour and you go to Thornton Road. You go down Thornton Road at thirty miles. You go west on Joppa and before you get to Heatherfields, you, you make a turn on Old Court Road. That's what I always did since I had a law office in Towson when I was going to Court in the City.

And Old Court Road takes you below all of this and dumps you onto the Jones Falls Road. I, I respectfully suggest, that you can get, that you can get from the Mays Chapel South entrance quicker doing what I just said than going through Seminary Ridge. I ran through Seminary Ridge because there was so little traffic, when I was doing my ten mile runs. That's all I have to say.

ALJ: All right, thank you. Thank you, Mr. Tanczyn. And so, for the record, Mr. McCann, you didn't have any objection to these exhibits?

MR. MCCANN: No, Your Honor. I would only ask that they be marked as Tanczyn exhibits. I don't want --

MR. TANCZYN: They're MPT with a number.

ALJ: Hold on, hold on. Mr. McCann, you did not want them marked as community member?

MR. MCCANN: Correct.

ALJ: I think we should change that as well. It, it, you know, just because it is confusing because you're representing those community associations.

MR. MCCANN: Correct.

ALJ: So, we'll, we'll mark these as Michael Tanczyn Exhibits, and I'll just change it on the, on the exhibit list. So, there were eight of those. Mr. Zimmerman, you don't have any objection, do you?

MR. ZIMMERMAN: No. I will note, I haven't seen them before today, but I have no objection.

ALJ: And, but they were sent to you, I think Mr. Rosenblatt said by e-mail.

MR. ZIMMERMAN: Well, half an hour, an hour ago, I don't know.

ALJ: Right, understood. Yeah, I know. I just, but you, you'll, you'll have them --

MR. ZIMMERMAN: Right, yeah, yeah, yeah. No objection. No objection.

ALJ: Okay, all right. Thank you. And then, Mr. McCann, did you have any cross?

MR. MCCANN: I do not. No, thank you.

ALJ: Okay. Mr. Zimmerman, any cross?

MR. ZIMMERMAN: I do, actually, yes, yes.

ALJ: Okay.

MR. ZIMMERMAN: First of all, Mr. Tanczyn, could, could somebody share your Exhibit 5? And by the way, I have to say, great to see you.

MR. TANCZYN: Always good to see you.

MR. ZIMMERMAN: Regards to Patty and we'll have to talk sometime on the phone, yeah.

MR. TANCZYN: I would, you, you would have the exhibit. It has the --

MR. ZIMMERMAN: Right.

MR. TANCZYN: -- information on it that I testified to.

MR. ZIMMERMAN: Right.

MR. TANCZYN: If there's no objection, that could be an exhibit. Looks like it is.

MR. ZIMMERMAN: Exhibit 5, right? You're Tanczyn Exhibit 5, yeah. And before we say that, by the way, in 2009, following up on your commentary representing community associations, you were representing the Dulaney Valley Improvement Association, were you not?

MR. TANCZYN: Thirty years.

MR. ZIMMERMAN: And we went to the Court of Special Appeals in the Seminary --

MR. TANCZYN: No, that's Seminary Galleria.

MR. ZIMMERMAN: Seminary Galleria versus Dulaney Valley Improvement Association (inaudible) --

ALJ: Hold on one second, hold on one second. Mr. McCann, your e-mails are on the screen.

MR. MCCANN: Oh, I'm sorry.

MR. ZIMMERMAN: Okay.

ALJ: I don't want a bunch of people to read your e-mails.

MR. MCCANN: I appreciate that.

ALJ: Yep. You, you had the exhibit up there for a second. You, did you need number five?

MR. MCCANN: Yeah, I'll go back to it.

ALJ: I'm sorry, you seem to be the clerk at the moment doing (inaudible) --

MR. MCCANN: That's okay, no problem. Let me --

ALJ: Mr. Zimmerman needed that. Mr. Zimmerman, can we get to the exhibit instead of talking about Seminary Galleria? I know that was a big case of yours and you bring it up often and you were successful. You remind me of that often. But I'll let you (inaudible) because it is 3:37. Mr. McCann --

MR. ZIMMERMAN: Okay, well, okay. So, I just want to say, Mr. Tanczyn, of course, Norman Gerber was Planning Director, was he not?

MR. TANCZYN: Yes, yes.

MR. ZIMMERMAN: And do, do these names, does that

reflect the fact that he was the Planning Director when these subdivisions were approved in the 1980's and even earlier?

MR. TANCZYN: If his name is on it, he signed for Planning as Director.

MR. ZIMMERMAN: Okay and we had a few dates yesterday with Mr. Bishop's cross examination. But I see we have a few more that we didn't get to. So, Boxwood was 1986, the plat? I'm looking at it, I'm just, yeah. Was that, was that a 1986 plat for Boxwood?

MR. TANCZYN: Eighty-five.

MR. ZIMMERMAN: Eighty-five, okay.

MR. TANCZYN: Yeah, they built it out in '85 and '86.

MR. ZIMMERMAN: All right and Seminary Springs, 1985?

MR. TANCZYN: June, July 23rd, '85.

MR. ZIMMERMAN: Seminary Ridge, 1967?

MR. TANCZYN: That's the first one I got.

MR. ZIMMERMAN: Okay. There were several sections on that one?

MR. TANCZYN: There were sections, correct.

MR. ZIMMERMAN: Okay and then I see, is there a Thornton Ridge subdivision?

MR. TANCZYN: Yeah, well, it's a condominium.

MR. ZIMMERMAN: All right.

MR. TANCZYN: And there's a plat, there's a plat there for that. So, in that case, because it's approved as a

condominium, all of the individual units, they're unit one, unit two, --

MR. ZIMMERMAN: Okay.

MR. TANCZYN: -- unit three, like that.

MR. ZIMMERMAN: That's 1964?

MR. TANCZYN: I'm sorry, if somebody could, oh, wait, I can look at it. Seventy-four.

MR. ZIMMERMAN: Seventy-four and then there's --

MR. TANCZYN: (inaudible) it's in, it's in, it's plat three, '74 in the condominiums.

MR. ZIMMERMAN: Okay. There's one on the right, kind of toward the, a little bit towards the bottom. It seems to say 4/21/64. Am I missing something? Oh, I see the '74 now. There's also a '64, isn't there, above that?

MR. TANCZYN: Okay. Now, the one, the one above the line on Landrake Road, which is the common entrance for those different sections, has, the, the house right there at the corner, has the community sign called Village Green. And, and that includes, and that one troubled me, and then I finally figured it out. It's actually approved as a Thornleigh --

MR. ZIMMERMAN: Okay.

MR. TANCZYN: -- extension or something.

MR. ZIMMERMAN: All right.

MR. TANCZYN: On, and it's in plat book 29, 131 --

MR. ZIMMERMAN: Okay.

MR. TANCZYN: -- of Thornleigh and, okay. And then the one below is another Thornleigh --

MR. ZIMMERMAN: Um hm.

MR. TANCZYN: -- for the land going to the south towards --

MR. ZIMMERMAN: Right.

MR. TANCZYN: -- Joppa.

MR. ZIMMERMAN: Okay and these go all the ways to Thornton Road, correct?

MR. TANCZYN: Yeah, yeah.

MR. ZIMMERMAN: And what's the distance, if, if, maybe you said it, Mays Chapel Road to Thornton Road, is that about what, how, how long is that?

MR. TANCZYN: Peter, I haven't measured the exact distance.

MR. ZIMMERMAN: All right, all right.

MR. TANCZYN: I heard, I heard Mr., the traffic expert, Mr. (inaudible), measure it for Doug Sachse. He actually measured the, the entrance distance from --

MR. ZIMMERMAN: Okay.

MR. TANCZYN: -- Mays Chapel South as a thousand feet. And so, I'd say another six hundred feet, more or less. I can measure it but anybody can measure it.

MR. ZIMMERMAN: All right. So, maybe if, a third of a mile or, I mean, I don't want to hold you to it.

MR. TANCZYN: I, I, I would rather not guess.

MR. ZIMMERMAN: All right. Anyway, the north side of Seminary from Hunt Spring 1990, we, we saw yesterday anyway. But the others are all 1980's vintage, correct?

MR. TANCZYN: Well, the '88 one down on the corner is the Fields of Seminary II. And the Fields of Seminary original is on the other side of the street. So, one of them, plat was approved on the south side --

MR. ZIMMERMAN: Yeah.

MR. TANCZYN: -- for that development, in '87, and a year later, about, Fields of Seminary II was approved.

MR. ZIMMERMAN: Okay. So, the only recent development would be Torch Hill, is that correct?

MR. TANCZYN: Yes.

MR. ZIMMERMAN: Okay and did you oppose Torch Hill?

MR. TANCZYN: I, I did not participate because I understood, I'm not going to waste your time. For reasons that we don't have to go into --

MR. ZIMMERMAN: Okay, all right.

MR. TANCZYN: -- this was pre-approved because a reservation granted by agreement with others years ago.

MR. ZIMMERMAN: All right, fine.

MR. TANCZYN: That he had to wait a period of time before he could develop it.

MR. ZIMMERMAN: Okay, okay. All right. Let me, let

me share one of my exhibits, so thank you for that, Mr. Tan, Michael, can I call you, so --

MR. TANCZYN: Call me whatever you want, call me for dinner.

MR. ZIMMERMAN: So, yeah, let me share an exhibit, if I can find my (inaudible). Okay. I'm trying to find my twenty-one, there we go. Okay. I'm going to try to reduce this one actually. All right. So, so this is an ADC map, actually, is there anything you want to say with reference to the, the road system? Anything you want to add?

MR. TANCZYN: Well, the, the road, the road system as established, as I read it, as I understand it, having tried to understand what the traffic guys say when all the cases we ever had, seems --

MR. ZIMMERMAN: I'm going to, I'm going to zoom up.

MR. TANCZYN: Okay. The concept, the concept in summary is this. When they decided not to have these one way, one way, one way in, one way out communities that we talked about, what would be the effect of that in traffic? It sort of channels it onto Seminary, either way, on to Joppa either way and it, it sort of prevents other cut throughs to, for a reason.

MR. ZIMMERMAN: Okay. Is there, where Boxwood, the main access for Boxwood is which street?

MR. TANCZYN: It's called Arbor Way.

MR. ZIMMERMAN: Okay.

MR. TANCZYN: And it's, it's right across --

MR. ZIMMERMAN: I'm putting my arrow on it. Can, can you see that? Can you --

MR. TANCZYN: Yeah, I do see it.

MR. ZIMMERMAN: Okay. So, does Arbor Way go through to Mays Chapel Road?

MR. TANCZYN: It does not.

MR. ZIMMERMAN: Okay.

MR. TANCZYN: We are, we are an enclosed community. Arbor Way ends at the dog bone --

MR. ZIMMERMAN: Okay.

MR. TANCZYN: -- cul-de-sac, which is called Old Boxwood Lane.

MR. ZIMMERMAN: So, I'm pointing an arrow to a, a short road that goes up to Seminary Avenue.

MR. TANCZYN: Right.

MR. ZIMMERMAN: Is that, is that the way you get in?

MR. TANCZYN: No.

MR. ZIMMERMAN: How do you get in?

MR. TANCZYN: What, what, what that is Peter, is an access for, it's either 1041 or 1031 West Seminary, which is a large, over two-acre, mansion, property with swimming pool and everything else, that abuts our rear common area at Boxwood.

MR. ZIMMERMAN: I just, I don't want to belabor this.

But I mean, how do you get into your development? Is there another road that we're missing?

MR. TANCZYN: No, there's no other way in.

MR. ZIMMERMAN: All right, all right. So, I want to just briefly, the speed limits that you mentioned, Seminary Avenue is --

MR. TANCZYN: Forty, forty miles an hour for the study area.

MR. ZIMMERMAN: All right. Tallyho, what's the speed limit?

MR. TANCZYN: Twenty-five.

MR. ZIMMERMAN: What about Joppa Road?

MR. TANCZYN: Joppa is, I believe, a little higher, maybe thirty.

MR. ZIMMERMAN: Okay and Falls Road varies?

MR. TANCZYN: Yeah, well, the speed limit is only applicable when there's a traffic jam, but it's, it's, I think it's, in that, in that area for the three intersections, I believe it to be forty miles an hour.

MR. ZIMMERMAN: Okay.

MR. TANCZYN: Actually, when you, when you come off the Jones Falls it says the speed limit is going to be forty. And then it stays that way all the way up beyond this project area, past the St. Paul's entrance on the north side.

MR. ZIMMERMAN: Okay.

MR. TANCZYN: It just goes and goes.

MR. ZIMMERMAN: If I understood the gist of your testimony about Seminary Avenue and the first part of your testimony is there are quite a few traffic hazards based on topography, the narrowness of the road, the number of the curb cuts and excessive speed. Am I, is that, am I correct in having that impression?

MR. TANCZYN: It's a good summar, it's a good summary of what I said.

MR. ZIMMERMAN: Okay. So, what I have to ask you is wouldn't it be better if this development were reduced to about thirty lots, the same more or less proportionately as Torch Hill? So, that would be, people are eventually going to get out to Seminary one way or another.

MR. TANCZYN: I, I wouldn't favor that. Can, may I explain why?

MR. ZIMMERMAN: Of course.

MR. TANCZYN: And here's, and this goes back, what I'm referring to is the previous battle involving these neighborhoods, which was across Seminary and west of Mays Chapel North, past the Korean church. And it was for Grace Fellowship Church.

They wanted to put a mega church between, or on, on the north side of Seminary and adjacent to Deep Run on the east and the Korean church and to Falls, not quite, I think they did

go to, almost to Falls Road on the, on the western boundary. And that was a, a huge fight. Traffic was an issue.

It turned out that the developers, or the church elders, withdrew, withdrew it. But that was, that, I can't imagine what the traffic would be with a mega church there. Which doesn't just, doesn't just, it's active all week.

MR. ZIMMERMAN: Are you finished?

ALJ: Mr. Tanczyn, the question though was --

MR. ZIMMERMAN: That's fine.

ALJ: -- do you agree that it should be a thirty-lot subdivision as opposed to sixty? And then you were talking about the church, but how do you --

MR. TANCZYN: I'm sorry.

ALJ: -- (inaudible) back to the question.

MR. TANCZYN: I'm sorry.

ALJ: Yep, no problem. Go ahead.

MR. TANCZYN: So, to address it directly, I don't think that anybody, I, I see this project as what I call infill. It's not going to be a farm anymore, it's going to be something else. Now, in one of my letters, which I think is in evidence, I, I talked about the elephant next door, which is, I would call it generically, Johns Hopkins --

MR. MCCANN: Yeah, I would, I would object to these questions, this testimony. I'm sorry to interrupt, Mr. Tanczyn. Sorry to do this, but --

MR. TANCZYN: I was (inaudible) answer to his previous question --

ALJ: Hold on, hold on. Mr. Tanczyn, Mr. Tanczyn, yeah, hold on, please. Mr. McCann, go ahead.

MR. TANCZYN: I'm sorry.

MR. MCCANN: I was slow to push the unmute button, I apologize. When Pete asked the question, what, would you be okay with the thirty-lot subdivision, or something to that effect. I think that, that question is objectionable. It's irrelevant. We're here for a sixty lot subdivision. It doesn't matter and I think it's entirely irrelevant so I'll object.

MR. ZIMMERMAN: I'll withdraw the question.

MR. MCCANN: Thank you.

MR. ZIMMERMAN: I'll withdraw the question. Okay, that's all, that, that's all I have, Judge. Thank you.

ALJ: Okay, thank you, Mr. Zimmerman. Mr. Wyatt, did you have any questions for Mr. Tanczyn? Looking for Mr. Wyatt.

MR. MCCANN: Actually, Mr. Wyatt texted me. I think he had to leave at 3:30, Judge.

ALJ: Oh, okay. All right.

MR. MCCANN: Yeah, he didn't want to interrupt.

ALJ: Oh, okay. I didn't know that. All right. Well, how about Mr. Sachse. Did you have any questions for Mr. Tanczyn? You're muted.

MR. SACHSE: I'm, I'm muted.

ALJ: Oh, there you go. Now you're unmuted, go ahead.

MR. SACHSE: Okay. Michael, the --

MR. TANCZYN: I can't hear him.

MR. SACHSE: You can't hear me?

MR. TANCZYN: I'm sorry, I can't.

ALJ: Yeah, speak, just make sure you speak up, Mr. Sachse.

MR. SACHSE: Now, that, that should be unmute. I'm, can you hear me?

ALJ: You are, you're unmuted. I can hear you. Mr. Tanczyn, can you hear him?

MR. TANCZYN: What he just said I heard.

ALJ: Okay. Mr. Sachse, just speak up. Did you have questions or no?

MR. SACHSE: I, I was, I was just going to ask the one question is, if you call it a question, is the traffic is, you talked about Seminary Avenue and sight lines and speed and, I forget what else, but one of the real issues is the density of traffic on Seminary Avenue, is that fair to say?

MR. TANCZYN: I, I've already testified to that point and I agree with you.

MR. SACHSE: Okay. I love being in agreement, thank you. I don't, I don't have any other questions.

ALJ: Okay and Mr. Zimmerman had talked about his exhibit number twenty-one, which is an ADC map. Is there any objection to that, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

ALJ: Okay. Mr. McCann?

MR. MCCANN: No objection. All right. So, thank you, Mr. Tanczyn. And we have your exhibits.

MR. TANCZYN: Thank you.

ALJ: Okay. We appreciate it. It's now ten of four. Mr. McCann, I wasn't sure what, what your plan was. I know you had witnesses lined up, oh, actually, I'm sorry. I should actually do this first, back up. Mr. Rosenblatt, did you have any other witnesses?

MR. ROSENBLATT: No, thank you. Although in hindsight, maybe I would rest our case (inaudible) calling Mr. Tanczyn, but however you want to consider it, we, at this point, that's all the evidence we intend to present in our direct.

ALJ: All right. That's the Developer's case. That's what I, I knew you were going to go there. I at least assumed that from what you said before. And now I'm turning to Mr. McCann. Mr. McCann, it's now ten of four, what is your plan or preference here? I, I didn't think you anticipated probably that we would be this hour starting with your witnesses.

MR. MCCANN: No, I, I did have folks lined up. I guess the question now, I told some of them they could testify yesterday (inaudible) and then told others they were going to testify today. So, as long as, I mean, I could, we could use the time if we have a half hour left, I could probably see if one or more folks is available. These are community folks.

ALJ: Yeah, sure, no, that's fine. I just didn't know if you, you could still have them available today so --

MR. MCCANN: Yeah, I, I see at least one or two there. So, is Blandy Becker available?

ALJ: All right. Ms. Blecker, I do see you. Can you turn your camera on or do you have one?

MS. BECKER: I think I do, am I on yet? Hi.

ALJ: Hi, there you are. All right. And could you raise your right hand, please? Do you swear and affirm under penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MS. BECKER: I do.

ALJ: All right. Mr. McCann?

MR. MCCANN: Okay, thank you. Good afternoon, Ms. Becker.

MS. BECKER: Hello.

MR. MCCANN: Thanks for your patience. So, switching gears here. Tell the Judge, if you would, where it is that you live?

MS. BECKER: 1205 Clearfield Circle, which is right off of Tallyho Road.

MR. MCCANN: Okay. Judge, can I share? Just wanted to show her a map that would reflect where she is. Great, thank you. Okay. Do you see that, Ms. Becker?

MS. BECKER: Um hm.

MR. MCCANN: Okay. I, maybe to speed things along here, if you don't mind, I'm going to sort of point out where it is that I believe that you live and if you could just confirm that. So, you live, first of all, in what, what community do you live? What's the name of the community?

MS. BECKER: Seminary Ridge.

MR. MCCANN: Seminary Ridge, okay. And that community accesses off of Seminary Avenue?

MS. BECKER: Yes.

MR. MCCANN: Okay and you are, if I'm correct, you are roughly right, right --

MS. BECKER: Exactly.

MR. MCCANN: Okay.

MS. BECKER: Yep.

MR. MCCANN: Can you see that, Judge? In fact, I'll go ahead and highlight it in yellow. Okay, great. And how long have you lived there, Ms. Becker?

MS. BECKER: Since 2015.

MR. MCCANN: Okay and who do you live with?

MS. BECKER: My husband, three kids and my dog.

MR. MCCANN: Okay. What do you do for a living, by the way?

MS. BECKER: I'm a real estate agent.

MR. MCCANN: Okay. And are you, do you hold any position with your community association?

MS. BECKER: Yeah, I'm the president of the HOA.

MR. MCCANN: Okay and what's the name of the HOA, for the record?

MS. BECKER: Seminary Ridge Homeowners Association.

MR. MCCANN: Okay and are you testifying this afternoon both on behalf of the association and individ, and in your individual capacity?

MS. BECKER: Yes.

MR. MCCANN: Okay. So, have you had the pleasure of sitting through these proceedings? Some or all of them?

MS. BECKER: Yes, for the most part. I had to step out between 11:00 and 11:45 today, but otherwise I've been listening.

MR. ROSENBLATT: (inaudible) is there any documentation or (inaudible) that shows that that is the case.

ALJ: So, let me just ask then, we, there's no rule eight here.

MR. MCCANN: No.

MR. ROSENBLATT: But, --

ALJ: So, I mean, there's no --

MS. BECKER: We took a vote as a board --

ALJ: Hold on, hold on, no, no, no.

MS. BECKER: I'm sorry.

ALJ: One second.

MS. BECKER: I'm sorry.

ALJ: So, Mr. Rosenblatt, there's no rule eight so, so, so.

MR. ROSENBLATT: (inaudible) move on.

ALJ: Well, I mean, isn't that typical for these proceedings? I mean, I would, that's what I understood that, that, I mean, yeah, I mean, --

MR. MCCANN: Yeah, I typically don't get the rule eight papers for, for these proceedings.

ALJ: Well, there's, yeah, there's no rule eight in, for the HOA, for the Office of Administrative Hearings, just for the Board.

MR. MCCANN: Yeah.

ALJ: I had to get used to that myself.

MR. MCCANN: Yeah. But I'll ask her some questions about that and, obviously, Mr. Rosenblatt can cross her on that issue.

ALJ: Okay. Go ahead, all right.

MR. MCCANN: So, Ms. Becker, you were just about to explain that, how it is that you're testifying on behalf of the

association. Could you explain that a little more?

MS. BECKER: We did have a meeting, an HOA meeting, and we did take a vote that we could testify and, and what we kind of were for and against in terms of this development.

MR. MCCANN: Okay.

MS. BECKER: Should say against.

MR. MCCANN: Okay and was that meeting at the association, at the board or both?

MS. BECKER: So, if I look back to since this development has come to our attention, we have been very open with our neighborhood.

MR. MCCANN: Yeah.

MS. BECKER: So, we talked to our whole entire neighborhood, in Zoom meetings a couple times.

MR. MCCANN: Uh huh.

MS. BECKER: We actually had Patak (phonetic) come in with us a couple times, and then individually as a board, we decided that yes, I can represent the Board and the neighborhood and get information and, and what we stand for. If, if I'm answering that correctly.

MR. MCCANN: And how many folks roughly live in the association, in the, in the neighborhood rather?

MS. BECKER: There's a hundred and sixty-seven houses, I don't know how many live in each one.

MR. MCCANN: Okay and I was just asking you

previously if you had the pleasure of sitting through the proceedings and I think you indicated that you had. So, are you, are you familiar then with what's being proposed?

MS. BECKER: Yes.

MR. MCCANN: And you've heard some of the testimony, or it sounds like most of the testimony during the course of the hearing?

MS. BECKER: Yes.

ALJ: Hold on one second. I'm going to mute, Mr. Tanczyn, I'm going to mute your microphone because you're still speaking. Sorry, go ahead, Mr. McCann. Say that again.

MR. MCCANN: Okay. I believe the question was whether or not she's heard some or all of the testimony and evidence during the course of this case.

MS. BECKER: Yes.

MR. MCCANN: Okay and, and on your own behalf and on behalf of the association, please tell the Judge what, if any, concerns you have about the proposed development.

MS. BECKER: As the association, our main concerns of the development is when we hear about the Falls Road traffic and that failing traffic shed and adding more into it. When we've learned about the sewer capacity issues with the County and adding more houses in. And we really, everybody in here, I will say, is anti the density, the, the size of the lots and the number of homes that are being built in there.

MR. MCCANN: Okay. Can you either, maybe it would be appropriate to ask about your own personal opinion about the traffic. You mentioned traffic. What, what, could you provide us with a little more detail about how you feel about that issue? That aspect of the development?

MS. BECKER: When, when speaking of traffic, this would be specifically up at Falls Road, I guess, in that failing traffic shed. I'll leave Tallyho for another issue, but up at Falls Road, I mean, just as a neighbor, it's a nightmare up there.

I was up there twice today, watching from my phone, but coming out last week around 4:00, two weeks ago about 4:00 in the afternoon, I was leaving Greenspring Station between the Mackenzie building and the gas station exit. I don't know what that little, there's like three entrances there.

I was leaving and turning left onto Joppa to go back to Tallyho. It took close to five minutes to make that lefthand turn and I did it with a Hail Mary. I won't', you know, the hairs were standing up on the back of my neck as well.

But it's hard because cars are flying off of 83 and whipping around that corner to come onto Joppa Road because they're going fast anyhow. Sadly, we all know when we get off of a highway, we, you kind of go faster because you've been driving fast. So, they are whipping right there.

And it's, it's next to impossible to go left. I almost think like you'd have to say everybody has to go right, which puts more traffic up on Falls Road because I think someone is going to get hurt, in my opinion, turning left.

MR. MCCANN: Okay. I, I wanted you, if you could, I'm going to show you a, an aerial photograph. This would be Protestant's Exhibit 38. It may not be the best exhibit to use, but I'll blow it up so it's more, can you describe where it is that you were just talking about. I think everybody somewhat knows, but what, what --

MS. BECKER: Okay. So, go, you see where the gas station is? Your cursor is kind of near it.

MR. MCCANN: Right here?

MS. BECKER: Yes, the road that takes you to Joppa.

MR. MCCANN: Yep.

MS. BECKER: If you keep kind of coming, am I looking at it right? Yeah, yeah, right there.

MR. MCCANN: Uh huh.

MS. BECKER: So, I wasn't there. If you go farther east on Joppa, which I don't know if your picture goes to it, but that's a dangerous turn there. I just don't ever do it there. It's a cluster. But if you go farther east on Joppa, there's a, the next entrance, it's kind of across from O'Connor and (inaudible).

MR. MCCANN: Uh huh.

MS. BECKER: Yeah, right there.
MR. MCCANN: So, this is Exhibit 25 now, I switched.
MS. BECKER: Yes, right. Yes, so, --
MR. MCCANN: Right here?
MS. BECKER: That, yes. I was leaving there and --
MR. MCCANN: Wait, before you proceed, hold on one second, Ms. Becker. Hold on, slow down. Let me just describe or have you describe where it is that you're talking about. So, this is a, if you were headed eastbound on Joppa and you were to make a turn, make a left into Greenspring Station, is that where you're talking about right here?
MS. BECKER: Well, I was actually exiting Greenspring Station and --
MR. MCCANN: Oh, I'm sorry.
MS. BECKER: -- trying to make a left onto Joppa Road.
MR. MCCANN: Okay, got it.
MS. BECKER: And that backs up right there from people trying to get out. So, once you get up there, you kind of have that pressure that you better get going. And there's a way so that you can take a left and somebody can take a right, if that makes sense. So, you're not bottle necking the right people. But going left, going east onto Joppa from there, which a lot of people do, is pretty scary.
MR. MCCANN: Okay and, and the traffic that you were

concerned about is traffic on Joppa heading east or westbound, which traffic are we talking about?

MS. BECKER: Heading eastbound.

MR. MCCANN: Eastbound, okay.

MS. BECKER: But if you, Michael, if you look at, so see where the Jones Falls Expressway is?

MR. MCCANN: Uh huh.

MS. BECKER: And if cars are, what happens is cars are flying off of that and they're going onto that exit ramp--

MR. MCCANN: Right.

MS. BECKER: -- that takes you onto Joppa Road, they whip around.

MR. MCCANN: Right.

MS. BECKER: So, they're whipping so fast and see how close it is from there to the --

MR. MCCANN: Yep, okay.

MS. BECKER: That's, that's who, that's who you're kind of dodging. You're playing Frogger.

MR. MCCANN: Okay. So, that was one example you said a couple weeks ago?

MS. BECKER: Yeah, in that, yeah, that happens, I, I bet you if you talk to some employees in there or anybody shopping that that's pretty frequent.

MR. MCCANN: Okay and then you said you were at Greenspring Station twice today you said?

MS. BECKER: No, I was at Greenspring Station at 9:00 a.m. this morning and then I was actually down on Falls Road at Falls and Lake, so I kind of went up to that intersection at two different times.

MR. MCCANN: As somebody that lives close by, obviously, is that, you mentioned two trips on this corridor in a, in a single day. Is that something that's common for you?

MS. BECKER: Um hm.

MR. MCCANN: What kind of trips do you typically make in this corridor?

MS. BECKER: They were both just errands that I was running.

MR. MCCANN: Okay.

MS. BECKER: But my kids are now getting a little bit older. But I, I would go multiple times a day over to that Meadow Wood Park.

MR. MCCANN: Um hm.

MS. BECKER: Especially at rush hour traffic. And then, I, my daughter is, went to Maryvale, which is, nobody has considered that with the St. Paul's traffic, I think that was probably just a forgotten thing. But Maryvale is right up next to St. Paul's. So, I would go out onto Seminary, which Mr. Tanczyn was saying how bad Seminary gets. And hit that traffic up there to pick her up a lot.

MR. MCCANN: Okay. So, Maryvale, you're right. I

don't think we mentioned it during the course of this hearing. Is Maryvale on Greenspring Valley Road?

MS. BECKER: You would, you can't enter, enter Maryvale from Greenspring Valley, you have to enter it from Falls. It's their only way in and out. So, because their driveway is actually crumbling, so they could never open that back access again.

MR. MCCANN: Okay.

MS. BECKER: So, you do get the traffic at Falls and Seminary because of Maryvale and St. Paul's traffic. I think that, yeah, they're, it's, it's not fun there.

MR. MCCANN: Okay and Maryvale, go ahead, I'm sorry.

MS. BECKER: We've had days where you turn left onto Seminary from Tallyho and the traffic to get up to Falls backs sometimes all the way up to Tallyho. So, my other daughter went to NDP, I was glad to go right on Seminary to get the hell away from that, excuse my language.

MR. MCCANN: Yeah. Well, let me get back to Exhibit 24, if you don't mind, which shows that. So, Tallyho and we've talked a lot about Tallyho but the, this is right here where I'm circling, that's where Tallyho meets Seminary Avenue?

MS. BECKER: Um hm.

MR. MCCANN: And then, so you're saying traffic at Falls and Seminary backs all the way up to Tallyho?

MS. BECKER: Not every day, I will say that. But it,

it has, especially in the beginning of the school year, it's always more of a nightmare. But I would say most days, you're stopping about, the traffic is backing up to about Mays Chapel, before Mays Chapel. The, the Mays Chapel Road that's in question, not the one that takes you up to BCC.

MR. MCCANN: Okay and that's the area that you just described where the Mays Chapel Road in question meets Seminary, that's right here?

MS. BECKER: Yep. There's, there's usually traffic starting there in the morning to get to St. Paul's and Maryvale.

MR. MCCANN: Okay and describe, I think we may have some photographs on this, but describe this section of road where that traffic that you just described is and from, so in other words, from over here, where Falls and Seminary is, to where Mays Chapel meets Seminary. What, what's that road like? Is it four lane, two lane?

MS. BECKER: Two lane.

MR. MCCANN: Is it, so one way each way?

MS. BECKER: Um hm, yes.

MR. MCCANN: Is there any shoulder to speak of on either side that you could pass somebody on?

MS. BECKER: I can't remember. I don't think, I would never do that. I, no, there's, actually I know there's not a shoulder because I watch the St. Paul's cross country

team run on it and I want to call the school to be like please stop letting those kids run down there because it's, it's so congested right there. But I haven't done that.

MR. MCCANN: Okay, all right. Any other examples of traffic? You've talked about Seminary Ave and its intersection with Falls. You've talked about Green Station, Greenspring Station a little bit. Any other concerns as far as traffic is concerned?

MS. BECKER: In terms of the failing traffic shed?

MR. MCCANN: Yeah.

MS. BECKER: No, not --

MR. MCCANN: Okay.

MS. BECKER: -- in terms of the failing traffic shed, no.

MR. MCCANN: Okay.

MS. BECKER: But I --

MR. MCCANN: You mentioned another concern being the size of the lots. What did you mean by that?

MS. BECKER: Well, when I look at it and, again, I know, to me it looks like most of those lots that, if I was going to take a buyer to buy one, they're probably getting like .18 size lot with a thirty-five hundred square foot house on it. When I look at the lots in Seminary Ridge and Heatherfield, Heatherfield is usually about an acre. The houses around that area in Seminary Ridge, which are on

Trelawny, are about an acre. Even the houses in Boxwood, maybe it's not Boxwood, it's the Meadows (inaudible).

MR. MCCANN: Yeah.

MS. BECKER: They're a half-acre. And even the ones at Boxwood, because they're kind of the bigger ones that fan out, they're about a half-acre. In my world, you don't compare attached homes to detached homes, but I'm learning that you guys do. So, when I, like these are detached homes on .1 acre lot being compared to attached homes is, you know, that's just my layman's side of it. But it, it seems very, very congested. It looks like a lot of building on not a lot of land, but.

MR. MCCANN: Okay and I think you mentioned, did you mention sewer or did I imagine that?

MS. BECKER: Well, that's the three concerns that as a neighborhood we have decided that we, why we are against this neighborhood.

MR. MCCANN: Yeah.

MS. BECKER: There are major concerns in why we don't want it. It's not that we, we do see something, they're eventually, but you know, when we hear the traffic up there, that, that impacts our lives every day. And then when you hear about the failing sewer shed, yeah, that concerns every single neighbor because stuff's got to flow out of your house.

MR. MCCANN: Yeah.

MS. BECKER: And if it's failing right now, if

someone could explain to us, you know, how does it get fixed? You know, like is that going to impact, is that just a burden we all have to take on to, I guess, give somebody a profit.

MR. MCCANN: Yeah. The, as a member of the board of your association, have you, or does anyone else on the board, have you guys been approached at all by a representative of the Developer about --

MS. BECKER: Yeah, um hm.

MR. MCCANN: Okay.

MS. BECKER: And we, we, we did have meetings with them in the beginning, where they pretty much told us that we, they didn't care about our concerns because our concerns were more, because we were kind of blown away, issues with, you know, the opening and closing of the road, which I know you're not focusing on.

MR. MCCANN: Um hm.

MS. BECKER: And the number of homes. And we were told that that stuff is not going to change, it's already set in stone. And that's when we all kind of showed up in force at the community input meeting because it didn't feel fair that we had no say on the number of homes and anything like that. And it, it, granted, we didn't know how the process worked so, yes.

MR. MCCANN: Yeah. And that's, that's before your association retained me, is that correct? That was a while ago?

MS. BECKER: Yeah, it was a while ago. That's pretty much why we did retain you.

MR. MCCANN: And then, so, was there, you said a meeting or meetings with Developer's representatives?

MS. BECKER: Can't, you know what? I, I can't remember. I think it was one or two Zooms. I, I could be wrong on that.

MR. MCCANN: Okay and those were both before the community input meeting you said? That there were two?

MS. BECKER: Yes, I believe so.

MR. MCCANN: Okay and --

MS. BECKER: I believe so.

MR. MCCANN: -- during that, those one or two meetings by Zoom, you said that the community, including yourself, expressed your concerns about the development?

MS. BECKER: Um hm.

MR. MCCANN: Did, in response to, to your expressing, expressing your concerns, did the Developer's representatives propose any, any adjustments to the plan that you were shown?

MS. BECKER: They did offer landscaping --

MR. MCCANN: Yeah.

MS. BECKER: -- to the back so, you know, for the people who it was going to butt up to. I don't think they ever called, contacted any house or notified them individually, you know what I mean? They didn't receive anything from the County

or anybody. But I think they did offer some landscaping.

MR. MCCANN: Okay. Anything else that you want to add about your concerns, Ms. Becker? Does that cover everything?

MS. BECKER: Yeah, as the, as the neighbor, I mean, I think so far. Hopefully that's it. Kind of --

MR. MCCANN: Maybe I should ask this. Other than the volume of traffic, which I think you described pretty well. And I think you gave one example of a safety concern you had. Is, is safety a concern for you along this corridor of Falls Road and along these failing intersections as well?

MS. BECKER: Yeah, a hundred percent, a hundred percent.

MR. MCCANN: And describe --

MS. BECKER: I, I, I, I think the traffic up at Falls Road and I know the traffic engineer had studied and all that, but it, and I, I don't want to, and I know that stuff is all the science, or the facts, but it's, it's dangerous up there. There, there, you know, it is.

MR. MCCANN: Do you think the, and you, have you seen the aerial photograph of the proposed road improvements?

MS. BECKER: They're not, I don't think they'll do anything.

MR. MCCANN: Okay.

MS. BECKER: That, that's my opinion. I, it, and it

actually seems to me it'll almost be harder to go left onto Joppa from there. That I, I almost feel like they're going to, someone will have an accident, they'll say everybody has to go right to Falls Road, which will just put more traffic up at Falls Road.

MR. MCCANN: Okay.

MS. BECKER: And, and if I can speak to what Mr. Tanczyn, whatever his name, sorry, I apologize, Tanczyn. When he was --

MR. MCCANN: Yeah, one second. Before, Ms. Becker, before you go on.

MS. BECKER: Okay.

MR. MCCANN: I think, I was just going to ask you about that. It's my understanding that your, your community, if this development is approved, you, you've already stated your opposition to it. But if it's approved your, your community is not in favor of just a, everybody's been calling it gated, I don't think it's a, but is not in favor of that, of a gated access but rather you would prefer an open access between the development and the Meadows community, is that correct?

MR. ROSENBLATT: Objection.

MS. BECKER: Yes.

MR. ROSENBLATT: I've tried to be lenient, but this is really leading.

MR. MCCANN: It's --

ALJ: So, it is, it is leading (inaudible) --

MR. MCCANN: Okay. I'll, I'll rephrase.

ALJ: Okay. If you could just rephrase that question (inaudible) --

MR. MCCANN: Yeah, I'll rephrase it, that's fine. Tell us what your, what, what, if any, position your community has regarding the pass through and I'll leave it, leave you (inaudible).

MS. BECKER: Okay. So, for the pass through for us, that was probably one of the main things that did upset us to start the process of researching the neighborhood in more in depth. So, when we heard that Mays Chapel Road was not going to be opened by the Developer and that decision was done, we were, you know, obviously upset.

So, we really started digging more into the neighborhood. And that's when we learned of concerns that became even greater, such as the density, the sewer line. And then, really once, it kind of highlighted Falls Road and what a nightmare it is.

I know the traffic engineer had said that, you know, I guess it was the same time, we started working with the County at the end of 2019. We had an annual board meeting and a few elderly I will say neighbors expressed concerns about the speed on Tallyho and how we can stop that. At that point,

scared backing out of their driveway.

And then, other people had brought up concern on West Seminary and Tallyho, where you talk about where the gentleman from Boxwood, Old Boxwood, had talked about the blind sights. We have a major one coming eastbound on West Seminary, there's a hill.

When you're coming from Mays Chapel, where we're talking, towards Tallyho, he had a photo of it. You're seeing a hill. We have had, I kid you not, probably seven or eight near head on collisions because people are flying eastbound on Seminary, someone makes a right.

We don't have a deceleration lane to turn right onto Tallyho Road. And so, they're flying. They go into a middle lane where another car is coming westbound and takes a right onto Tallyho. I don't know if I've made any, but basically, the cars go like this and you watch them go like that.

We have, actually, we're very active in our neighborhood. So, we had worked with Keith Lank on Tallyho with the speed humps. He told us he cannot help us with Seminary because it's a state highway. We filled out the forms on the State Highway website. I did not do it, someone in our neighborhood did it, and it was kind of left that, well, we have no proof that that's a dangerous area.

Our proof is we see it and I've got a house right there that's a rancher at Seminary and Tallyho, that watches

it. He's got two kids right there. If you go I not why we have the speed humps, we did have stop signs that were put in, I believe, in the late eighties. And the County had recommended the speed humps instead of the stop signs. And we have all the research on that.

We did a very thorough testing of all our neighbors on what they wanted. We did surveys. We surveyed mainly Tallyho because they were the only people that had the vote. But we also surveyed the entire neighborhood, just because we wanted to be neighborly.

And at the very end of that, when we all decided that they were going to get approved, the people on Briarfield started fighting for an island and we kind of got in another battle. Why do we want an island right here? And they were saying, they were terrified of their kids cut, you know, with, with that, with that intersection. And I will say, this is all traffic coming from Falls Road, that is flying down Seminary.

And you may just get some neighbors turning into Tallyho, with cars flying around it. So, we now have an island there. We have a blind child that lives on Briarfield, we have a blind sign there, we put there. We think, I think Heatherfield has a blind child where they are off of Tallyho.

And then we have a severely disabled child that's right on Tallyho that can't walk on the sidewalk because his wheelchair is too big, because we actually put in wheelchair

ramps for him and for other people. But the mother was like, the wheelchair is too big, it has to be on the road. I think with the, you know, you get a little bump in that.

So, so, when I was listening to him speak about that, I thought, God, his problem would be solved if he could go out to Joppa Road and go right or left and not have to make a lefthand turn onto Seminary Avenue. The connection would actually solve his problem. Because Seminary is a mess in the morning. I, you know, that's, that's just the way I feel.

We do, I know that I was surprised to hear Keith Lank had, I think the traffic engineer had said Keith Lank ordered the, the study. Because I had asked him, do you know who's doing the study? We saw the guy. He was sleeping half the time. But Keith was, said he didn't. So, anyhow, it is what it is. It doesn't matter.

But when, I walk twice a day with my husband and the dog, I see a lot of the neighbors. I'm not impacted by Tallyho. You can see where I live. But cars fly on Tallyho. The speed bumps have a hundred percent slowed them down. We have a spot where we'd like another speed hump because the cars will fly in between.

They are not our neighbors. I'm not saying people shouldn't be able to cut through but they, you know, it, you know, it would, it would, it would, it would lessen up some of the traffic that we're seeing at Falls Road there, I think.

MR. MCCANN: Okay. Thank you, Ms. Becker. I don't have any other questions. I have, well, Mr. Rosenblatt may have some so (inaudible).

ALJ: So, just, just so I understood that last thing you just said. The community's position, community association's position on the pass through is that it should be opened?

MS. BECKER: A hundred percent. And, and we, the more we've researched, we see the, the master plan and we saw County notes where County people were saying yes, it should be open due to the master, the master plan says it. And all of a sudden we're seeing that they agree it should be closed. We're kind of like what, why, we don't know why we were never approached for any of this.

We do have a lot of houses between, I think, Heatherfield and I think you'll meet with the Heatherfield president. We work well together. For some reason, it's just, we're, we just, we're just over here on the side. A hundred percent, we do want the connection.

I think it would actually help both neighborhoods. I did a map search and I just clicked the Boxwood house to the, to the original house on Joppa and it's five minutes right now to get from that original house on Joppa in question to, I think it was number five Boxwood.

I just threw it into my Google Maps. It's five to

six minutes. If you do Tallyho, it's five minutes. If, or Falls Road it's five minutes. Tallyho it's five minutes and Thornton it's six minutes. I guess if you have a gate that opens with a siren blowing, what if the gate blow, breaks or whatever.

Some, I guess a firetruck is just going to go five min, I, I don't know. To, to me it doesn't make any sense. The connection should be there for those neighbors as well.

ALJ: Okay.

MS. BECKER: Even, that's just what I think.

ALJ: (inaudible) --

MS. BECKER: But I will say in all, we would prefer the sewer line fixed, the Falls Road fixed and the density does not make sense to us at all.

ALJ: Understood, okay. Yep. And that's the position of the community, those three things specifically. And I know you made some of the references were yours personally. But the community's, that's their --

MS. BECKER: Yep.

ALJ: Okay.

MS. BECKER: And the community, if it is approved, wants the road to be open. The, the connection to happen.

ALJ: Okay, understood. All right. Mr. Rosenblatt, cross?

MR. ROSENBLATT: Are there any questions from, I

guess, Mr. Zimmerman or, or --

MR. ZIMMERMAN: Yes, can I go before --

MR. ROSENBLATT: (inaudible) --

MR. ZIMMERMAN: I'm sorry.

ALJ: You're right, I apologize, Mr. Zimmerman, I'm sorry. Mr. Zimmerman first.

MR. ZIMMERMAN: Okay.

ALJ: Thank you.

MR. ZIMMERMAN: Yeah, I did have a few. So, let me, let me once again put the ADC map up on, it might help. If I can find it. All right, coming right up.

ALJ: It's on the screen.

MR. ZIMMERMAN: Right.

ALJ: And just, just so everyone knows, it's 4:23. Mr. McCann did need to leave at 4:30. Just try to highlight that that's the time.

MR. MCCANN: Thank you, Judge. Thank you.

MR. ZIMMERMAN: Well, all right.

ALJ: And we're back on Tuesday anyway.

MR. ZIMMERMAN: Yeah, I don't know if I can finish in seven minutes. But maybe, you know. So, --

MR. MCCANN: Ms. Becker may, well, I --

MR. ZIMMERMAN: Yeah, I don't know, maybe I should start on Tuesday.

MR. ROSENBLATT: I have (inaudible) too, it's no way

it's five minutes.

ALJ: Okay. I mean, Mr. McCann, is your client coming back?

MR. MCCANN: I'll let her answer that if she can.

MS. BECKER: Oh, Tuesday, yeah, I'm coming back.

ALJ: Okay.

MR. ZIMMERMAN: So, Tuesday, yeah, that would be, I think, less stress on everybody. So, --

ALJ: I don't want it to be rushed so that you all feel that you can't ask the questions that you need to ask, you know? And then we have Mr. Sachse and, of course, Mr. Wyatt is also not here. So, Ms. Becker, if you could come back on Tuesday? You're sworn in and so, you don't want to speak with anyone about your testimony between now and Tuesday.

MS. BECKER: Okay.

ALJ: When we come back at 10:00 and you should, everybody should have their own links, as we know. Of course, this is day five, so you all know what the drill is by now, that everyone has their own links to come back on Tuesday. That probably makes sense. Anything else?

MR. ZIMMERMAN: May I say, I think I at least have a couple of citizen witnesses. I don't know what Mr. McCann has, but there might be a third, but at this moment, I know of at least two citizens who indicated they'd like to testify, either through me or on their own.

ALJ: Yeah, absolutely. Yeah, and I did hear that as well and so, when Mr. McCann gets finished with his case, you know, then we can turn to those citizens and anybody else who's here who wants to testify. And that's the time for Mr. Sachse and Mr. Wyatt also to testify as well.

MR. MCCANN: Judge, could we, I know I e-mailed you guys about this. Would it be possible, there's, we're obviously not going to finish on Tuesday. Is it possible we could start working on dates, Adam and I, on, obviously not today, but on Monday, could we start that process?

ALJ: Yeah, I think that is a good idea. We were, now you had asked before --

MR. MCCANN: Yeah.

ALJ: -- because scheduling really wanted to, really see if --

MR. MCCANN: Yeah.

ALJ: -- you know, they had to because, again, if it did finish then, then the date gets wasted, somebody else (inaudible).

MR. MCCANN: Yeah, I know, I understand. Listen, I understand completely. It's not your --

ALJ: No, but you're right. You're right, let's do that. Let, yeah, if you guys don't mind working on dates. And I can even let them know. I'll, in fact, I'll send them an e-mail today to let them know that you're going to be contacting

them that you need other dates. And what do you think timing wise? Do you think two more days after Tuesday or one day after Tuesday? (inaudible) --

MR. MCCANN: I think, I think given how we've gone so far, I think two more days would be, would be best and hopefully close together.

ALJ: Two more days in addition to Tuesday?

MR. MCCANN: In addition to Tuesday, yeah.

ALJ: So, three total? Right. How do you, Mr. Rosenblatt, are you in agreement?

MR. ROSENBLATT: (inaudible) so it's really up to them how much they're going to do.

ALJ: Right, but then you also have rebuttal if you choose to.

MR. ROSENBLATT: Sure. So, yeah, it sounds crazy but maybe that's (inaudible).

ALJ: Okay. (inaudible) finish November's calendar, so you're looking at December.

MR. MCCANN: Okay.

ALJ: Did you know that? I don't know, well, they might be able to find dates. They may not have, you know, closed everything off, but I know that they had finished the November calendar because they were asking us December dates, but.

MR. MCCANN: Okay.

MR. ZIMMERMAN: Yeah, I'm out December 1st, 2nd, 3rd but any, anything after that, other than 15th to 19th, you know, is open.

MR. MCCANN: Thank you, Judge.

ALJ: Okay. All right, everyone. I think we're finished for today. And we'll be back on Tuesday.

MR. MCCANN: Have a nice weekend.

ALJ: Thank you, you too. Thank you.

(OFF THE RECORD

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings of Baltimore County, October 28, 2022, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 251 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 31st day of March 2023.

Christine R. Leary

(ON RECORD)

ALJ: Good morning, everyone. You're attending for case number 08-0922-2021-250-SPH. Property address 2310 West Joppa Road. And this is the combined development plan, zoning case for Greenspring Manor. For the record, I'll have counsel introduce themselves beginning with Mr. Rosenblatt.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer/Petitioner.

MR. MCCANN: Good morning, Judge. Michael McCann on behalf of the Protestants.

ALJ: Good morning.

MR. MCCANN: Good morning.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel for Baltimore County, Towson.

ALJ: All right. Anything before we get started? No one can think of anything? All right. So, folks, if you're attending for the first time, it looks like we have the same people here in the attendees room who have been here all along, so you know the rules.

Just keep your microphones muted. We can't have everyone talking or unmuting your microphone because it is being recorded. It is a hearing and not a meeting. Just keep that in mind if you can and we are going to start then, Mr. Nebre is joining us again.

So, let me find him. I know you're here, I saw you. There you are. Thank you, Mr. Nebre, for coming by again. Let me do this. Let me swear you in again. Do you swear and affirm under penalties of perjury the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. NEBRE: I do.

ALJ: All right and what we're going to do is we're going to start with Mr. Wyatt. You did not get a chance to ask questions. Mr. Nebre had to leave the last time and so, I am going to let you start.

MR. WYATT: Thank you. Good morning, Your Honor.

ALJ: Good morning.

MR. WYATT: Mr. Nebre, good morning.

MR. NEBRE: Good morning.

MR. WYATT: I'm Michael Wyatt. My family lives on 4 Trelawny Court in pretty close proximity to the proposed development. Do you know where Trelawny Court is?

MR. NEBRE: No, I don't, not off the top of my head.

MR. WYATT: All right. It's off of Tallyho, do you know where it is?

MR. NEBRE: Tallyho is, I believe, off Seminary.

MR. WYATT: Okay. Yeah, you previously testified in this probably about a month ago and you had to leave early so I appreciate your coming back because I had some questions and

some other people may also have additional questions, based on your earlier testimony and perhaps what you say today in response to my questioning. Since you last testified, have you discussed this matter with any of the parties or their attorneys?

MR. NEBRE: No, I have not.

MR. WYATT: Okay. Baltimore County has a website for your Bureau, correct?

MR. NEBRE: Yes.

MR. WYATT: And it talks about the responsibility of the Baltimore County Bureau of Traffic Engineering and Transportation Planning, that's your Bureau, right?

MR. NEBRE: That's our, that's the Bureau, yes.

MR. WYATT: All right and, and for purposes of this hearing, you're authorized to speak on behalf of the Bureau?

MR. NEBRE: I believe I'm, for this hearing, I was under the impression I was just going off the, what I was, what I reviewed, the traffic impact study.

MR. WYATT: All right. But you're, but you're here, not here, virtually you're here, authorized to speak in this matter on behalf of the Bureau?

MR. ROSENBLATT: Objection. Asked and answered.

ALJ: Overruled. Go ahead, Mr. Nebre.

MR. NEBRE: Yeah, that's what I was brought under the impression that I was just, I was here to be questioned

regarding the traffic impact study.

MR. WYATT: Okay, thank you. One of the things that your Bureau is responsible for doing is the rating of intersections in Baltimore County, correct?

MR. NEBRE: That's the, one of the responsibilities of the Bureau, yes.

MR. WYATT: All right and this is done with a, a, let's call it, a level of service rating or an LOS?

MR. NEBRE: LOS rating, yes.

MR. WYATT: All right. And that's, that's done as part of the basic services map?

MR. NEBRE: Yes.

MR. WYATT: Okay and that, is that basic services map published, published on what, with what frequency? On an annual basis, basically?

MR. NEBRE: Annual basis.

MR. WYATT: All right and Baltimore, and Baltimore County, you're in fact, Department of Public Works and your Bureau, you would agree with me that you're singularly responsible for developing and maintaining the LOS ratings for Baltimore County intersections, regardless --

MR. NEBRE: That is, yes, --

MR. WYATT: -- regardless of by whom owned. Meaning, whether it's a State or County road, it's your Bureau that's issuing the LOS ratings, is that correct?

MR. NEBRE: For the basic service map, yes.

MR. WYATT: Okay and Baltimore County uses what's called a loaded cycle methodology in making its LOS determinations for the basic services map?

MR. NEBRE: That's for the basic services map, yes.

MR. WYATT: Okay. But there are other methodologies, you would agree, for rating traffic congestion other than loaded cycle methodology?

MR. NEBRE: There are other methodologies, yes.

MR. WYATT: All right and --

MR. NEBRE: But the one pertaining to the basic services map is the loaded cycle analysis.

MR. WYATT: Yeah, they're, it, well, that's what I was getting at. There's, there's no other methodologies authorized by, for Baltimore County in making LOS determinations as part of the basic services map.

MR. NEBRE: As part of the basic services map, yes.

MR. WYATT: All right and the, I'm going to call it the LCM, loaded cycle methodology, is for the LOS rated intersections, they're, they're done on a near annual basis?

MR. NEBRE: Okay. The, the ones that are on the basic service maps are done on a, yeah, on an annual basis because that's the one we're updating every year. There's other, yeah, if that's all you need to get answered. But yeah, there are other, other intersections in the County because we

have to, you know, we're trying to evaluate all intersections, but the other ones are less frequent because they're not on the map.

MR. WYATT: Okay. What about with rated F intersections? With what frequency are those looked at by your Bureau?

MR. NEBRE: Because those are on the map currently, anything currently on the map would be rated annually.

MR. WYATT: Okay, all right. Let me ask you this. Who determines whether a particular property is within a particular traffic shed?

MR. NEBRE: You're talking about the boundaries of the shed?

MR. WYATT: Well, that's, would be one way. I mean, I'm trying to understand, what's the standard by which Baltimore County determines whether prop, a particular property is located within or outside of a particular traffic shed?

MR. NEBRE: Okay, yeah, so the sheds have been defined. And I think I've been, I've answered this question in a previous trial. I have not, I have not had the experience on how the, the sheds have been determined. I don't really have experience on that part, on the methodology on how those sheds are determined, so I'm not the best to answer that question on how the sheds have been determined.

From our research, there are, have been memos

explaining it, however, I've, my, me, myself have not determined a shed on how the, how far a shed goes out from an intersection.

MR. WYATT: Fair enough. I'm putting you on the spot. You don't know offhand as we, as we are here today how the proposed development is within two traffic sheds of Joppa and Falls Road and Greenspring and Falls Road. You don't know how that determination is made?

MR. NEBRE: Not how, the shape of the boundary, but we, we see where the boundaries are and the, that boundary is on the map.

MR. WYATT: All right. But you would agree, and you probably know this to be true, the proposed development property is located within the two traffic sheds I just mentioned?

MR. NEBRE: The, I've answered this in another question, in another thing where the, the property is located in a shed and the shed has separate, because I think there was a question regarding if they overlap. And my, we, I inquired with our Mapping Department and they have, per their record, is two, are two, the sheds are separate sheds.

MR. WYATT: Is Greenspring Manor, the proposed development, the, the property where it is located, is it within the traffic shed of Falls and Joppa?

MR. NEBRE: Yes, it, that's the Falls and Joppa shed.

MR. WYATT: Okay. Is, is the same property located in Falls and Greenspring traffic shed?

MR. NEBRE: It, it is, it's not in that traffic shed, it's a separate shed.

MR. WYATT: Okay. Is there, is this printed, is it published somewhere? How, how could we know whether a particular property is located within a particular traffic shed?

MR. NEBRE: That would be on the basic service map. It's faint, the, the boundary, there is like a boundary, maybe that's what, something we could suggest in the future to make it like more bold. But there's a, there's a line within the traffic shed, if I'm looking at the map right now.

MR. WYATT: All right. So, you, you, you think right now that Greenspring Manor is not located within the traffic shed of Falls and Greenspring Avenue?

MR. NEBRE: Oh, that, that, I was, I was thinking about the other intersection, sorry. Those two are actually in the same shed, yes.

MR. WYATT: Okay.

MR. NEBRE: I was, sorry, I was, I misunderstood. I thought you, the, the question was Seminary. So, --

MR. WYATT: Sorry if I wasn't clear.

MR. NEBRE: Yeah, so it was Greenspring Manor, yeah, the one directly to the north of Joppa, that intersection is in

the same shed as the one in, as Falls.

MR. WYATT: Okay, very well. And there's another proposed development, Torch Hill, or also known as the Croneguard (phonetic) property. Are you familiar with that case?

MR. NEBRE: I am, I've sat in for Torch Hill.

MR. WYATT: Okay and, and that, that matter has already been through a hearing, and you testified as part of that hearing?

MR. NEBRE: I was part of that hearing.

MR. WYATT: And do you recall, as part of that hearing, that that proposed development is, is located within an F rated traffic shed along Falls Road at Seminary Avenue?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt, what's your objection?

MR. ROSENBLATT: Objection to any relevance of the other project. We're not here to talk about Torch Hill.

ALJ: I understand, but the traffic impact study included all three intersections and I'll let Mr. Wyatt ask the question. Overruled.

MR. WYATT: Thank you, Your Honor. Mr. Nebre, do you, you remember the question?

MR. NEBRE: What is that question?

MR. WYATT: So, I, there's another proposed development, Torch Hill, it's already been through a hearing,

you testified at that hearing, correct?

MR. NEBRE: Yes, I did.

MR. WYATT: All right and one of the issues in that case is that it is in close proximity, or within the traffic shed of another F rated intersection at Seminary Avenue and Falls Road, correct?

MR. NEBRE: It is a, it was close to the Seminary and Falls, yes.

MR. WYATT: Okay and that particular F rated intersection, Falls and Seminary, you would agree is within a few hundred yards of Falls and Greenspring Avenue intersection?

MR. NEBRE: It is, it is within the same corridor, yeah. I mean, I don't have the distance off the top of my head, but it's close enough where, yeah, that, that we, it, it's close.

MR. WYATT: And then, from that intersection, which is Greenspring, Greenspring Valley Road, I, I've been referring to it as Greenspring Avenue, I get confused myself, and, and Falls, is, is visually within distance of Falls and Joppa Road intersection?

MR. NEBRE: Greenspring to Falls, from Greenspring Valley to Falls is pretty, yeah, it's, you could see both signals probably from each other.

MR. WYATT: All right. Let me ask you this. How many, about approximately how many variance requests for

building permits within an F rated traffic shed are processed through Baltimore County on an annual basis?

MR. NEBRE: It varies. I mean, this is probably the heaviest I've seen. It, it's not too often.

MR. WYATT: When you say this is probably the heaviest, what, what is the this in your sentence?

MR. NEBRE: This year, this year where we've seen variances request to try to develop in, in F traffic sheds.

MR. WYATT: And do you know how many approximately you've seen in this particular year?

MR. NEBRE: Including those two, this is probably four or five.

MR. WYATT: All right and, and to your knowledge of those, how many have gone to a hearing and were approved?

MR. NEBRE: I don't know. I don't know what has been approved.

MR. WYATT: Your Bureau reviews these though, correct?

MR. NEBRE: The traffic impact studies, yes. And, and any developments submittals.

MR. WYATT: All right and, and just so I'm clear, your Bureau is reviewing these because it's been requested to do so by the Department of Planning?

MR. NEBRE: It's part of the development process.

MR. WYATT: Did, did your Bureau prepare a written

report in this case for the hearing?

MR. NEBRE: No.

MR. WYATT: Did it do so in the Torch Hill case?

MR. NEBRE: Not a written report.

MR. WYATT: Do you know if Department of Planning provided a written report with regard to the variance request in this case?

MR. NEBRE: Not that I know.

MR. WYATT: Do you recall if it did so in the Torch Hill case?

MR. NEBRE: Not that I know.

MR. WYATT: Do you know how it came to be that the Department of Planning requested your Bureau report to the ALJ in this case?

MR. NEBRE: I don't know the specifics, but I, I would just guess because it's, because I, I deferred to the Judge.

MR. WYATT: Well, I'm just, let me ask you, let me put it in simpler terms. Why are you the one that's here talking about traffic in this hearing? Do you know how that came to be?

MR. NEBRE: I was called.

MR. WYATT: Did, did your, did your Bureau undertake any independent traffic studies or analysis in connection with the Developer's variance request in this case?

MR. NEBRE: No, we did not make any independent studies to, to analyze it. We, you know, we do our, we do our traffic counts to make the, the F, to determine the traffic sheds. But however, just to, to supplement their studies, no. They, they were the ones that provided studies.

MR. WYATT: All right. So, you, you review the Developer's traffic study or studies, plural, in this case?

MR. NEBRE: Yes.

MR. WYATT: All right and did not undertake any independent studies on behalf of the Bureau or Baltimore County?

MR. NEBRE: No, we did not.

MR. WYATT: All right and Lenhart (phonetic), I think is the traffic engineer that the Developer hired in this case?

MR. NEBRE: For, for, for Greenspring Manor.

MR. WYATT: For Greenspring Manor, correct. It, it's true that during the review of the Developer's traffic studies that were submitted to your Bureau over the course of time from when this project was first, was first in concept to where we are now, that there were several in your Bureau who expressed concern about a proposed development because of its proximity to F rated intersections, is that accurate?

MR. NEBRE: Yes, because it is in an F rated intersection and we're developing and there's going to be a net generating traffic into the shed. So, that's where the concern

comes first.

MR. WYATT: Okay and let me ask you this, and I think had another witness confirm all this, but I just want to check. In, in terms of the classifications for intersections, they, they come by way of a letter designation, correct?

MR. NEBRE: The, the, the level of services is graded with a letter designation.

MR. WYATT: So, there's, there's A, B, C, D and F?

MR. NEBRE: Yes.

MR. WYATT: All right and, and there's, and that's for the level of service designations under the basic services map, correct?

MR. NEBRE: Yes.

MR. WYATT: All right and these are important from a traffic perspective because there's a, there's a moratorium on building permits for structures located within an LOS designated F traffic intersection, correct?

MR. NEBRE: Yes.

MR. WYATT: All right and Baltimore County actually has some information on its website. Have you ever reviewed it for your Bureau? Are you familiar with your own, your own website?

MR. NEBRE: I've, I've skimmed through it, yeah, that's why, that's where it actually conveys the moratorium is on there, there's information on the website saying that level

service of F has a moratorium.

MR. WYATT: It actually says, I'll, I mean, I'll quote it and you can tell me if you, if it sounds accurate, but areas around a level of service F intersection would have a moratorium on building permits for non-industrial development with some very limited exceptions. Does that sound like language from the website of your Bureau?

MR. NEBRE: More or less.

MR. WYATT: All right. In fact, would you agree with me that there are not many other provisions in the Baltimore County Code or Baltimore County zoning regulations where building permits for non-resid, for non-industrial development are tied to traffic in such a meaningful or important way?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt, what's your objection?

MR. ROSENBLATT: Form of the question. He's asking words like meaningful and many.

ALJ: Understood. Overruled. Go ahead, Mr. Nebre.

MR. NEBRE: Yeah, that, that's why, I mean, it's my familiarity with the, how development is tied into traffic. We have a moratorium in place, but however, you know, they are proposing improvements, but that's what I had trouble finding, therefore, on how much improvement needed to be done and that's why it was our Bureau suggested it be up for arbitration or review.

MR. WYATT: Okay. I'm just, based on your, your work within the Bureau, can you think of any other connections that could be drawn to building more, to traffic and the issuance of building permits? Are you familiar with any other instances where the two are connected?

MR. NEBRE: I mean, we got the basic service map and there are zoning, and we got a zoning manual. There probably is some provision also in, in the development manual. But there's, there's language there too regarding traffic impact studies.

MR. WYATT: All right and, and just confirm if you would, there's, there's no other grading systems, other than the letter grades or designations we just spoke about, in Baltimore County for traffic intersections, correct?

MR. NEBRE: For, for our, for our rating for the basic services map, yeah.

MR. WYATT: What about otherwise?

MR. NEBRE: When we review the traffic impact study, we, we, we look at the, the critical lane volumes, the effect of the critical lane volumes.

MR. WYATT: And where, where does it say in the Baltimore County, is that a designation that's published? Is that somewhere we could look that up?

MR. NEBRE: No, unfortunately not. It's more so something in practice. It is something that is practiced by

the State and we at least hold ground with State standards on that, because that is something that, that is frequently, jointly reviewed, therefore, we would at least point to a State standard. In practice, like you said, not written.

MR. WYATT: All right. What is your Bureau's interpretation of the, are you familiar with the variance regulation that's applicable in this case?

MR. NEBRE: Dealt with a few variances, but there, for different purposes too, so for this case, I guess it was for the, for the traffic.

MR. WYATT: Yeah, for the traffic variance that's sought by the developer in this case, are you familiar with the, the language in the, in the regulation by which such a variance request is reviewed?

MR. NEBRE: No, I'm not.

MR. WYATT: Have you ever heard the term district standard?

MR. NEBRE: In, in past, in past trials it was brought up.

MR. WYATT: Do you know what that, to what that refers?

MR. NEBRE: I, I, only in practice. We would just say what, how we practice it.

MR. WYATT: And, and how do you, what is the term dist, what, what does district mean? What is the practice of

the Bureau with regard to the district?

MR. NEBRE: Yeah, the jurisdiction itself.

MR. WYATT: All right. What, what is the standard? What is your Bureau's practice with regard to the word standard that's used in that regulation?

MR. NEBRE: The standard for the basic service map would be the, the loaded cycle methodology.

MR. WYATT: The, the LOS designation about which we've spoke previously, correct?

MR. NEBRE: Yeah, that's the, that's the one we can, we find like grounding on.

MR. WYATT: All right. Is this interpretation or how you apply the regulation, is it written down anywhere in your Bureau? Is it some, something we could look up?

MR. NEBRE: The 1965 manual of, of, of the highway capacity manual, it was the methodology used and it was written in the zoning manual.

MR. WYATT: Okay. When the, when the variance regulation refers to the district standard that would otherwise restrict or prohibit the development, isn't that referring to the LOS standard that we've spent some time talking about today?

MR. NEBRE: That's the best that we could see it.

MR. WYATT: All right and get, you know, just given that there's no other grading systems related to traffic

intersections done by Baltimore County, at least, doesn't the various, variance regulation require that whatever the demand or impact is created be proposed by the proposed development, be something less than its present designation, i.e., the district standard?

MR. NEBRE: And that's where, that's why I brought it up to arbitration because you could see the mitigation that impacts with one methodology but not, it's pretty, it cannot be done with the loaded cycle methodology because it's, the loaded cycle methodology is not really predictive, it is something that is observed.

MR. WYATT: How many times, do you recall, that you've visited these, these intersections in connection with the proposed developments of Torch Hill and Greenspring Manor?

MR. NEBRE: Visited, like drive by it because, I live in Owings Mills, so it's, it's every now and then I would cut through Greenspring Valley. So, I am, I am familiar with the intersections. However, in terms of observing it for a prolonged amount of time, I have not seen in my, with my own eyes for a while.

MR. WYATT: And the Developer's traffic engineer in this case, Lenhart, they used a different methodology in their reporting, would you agree with that?

MR. NEBRE: They were using critical lane volume.

MR. WYATT: They were not using LCM or what you use

for the LOS designations, correct?

MR. NEBRE: Observed loaded cycles, they were not using that but yeah, they were using other, other methods.

MR. WYATT: Do you know from the reports that were submitted by the Developer's traffic experts how many times they visited any of these intersections?

MR. NEBRE: No, I don't know the, the frequency of their visit. I know they visited for, for their, for their, for their own data collection.

MR. WYATT: All right. Do you know if, you would agree with me that there are margins of error that are contained in the Developer's traffic reports?

MR. NEBRE: I don't know how to answer that one. I mean, traffic is, you know, it varies, I mean, no one could say it's consistent. Therefore, you know, what you've observed is what you've observed.

MR. WYATT: So, there would, there would need to be some sort of margin of error built into the report because it's not based on actual observations or, or the LCM methodology?

MR. NEBRE: It could be.

MR. WYATT: All right and, and there's also, are you familiar with the term growth rate assumptions that are used in, in traffic engineering reports, generally?

MR. NEBRE: Yes, yes, we, we, we have, there's growth rate assumptions.

MR. WYATT: All right and there, there would be, would there not, some type of margin of error associated with a growth rate assumption?

MR. NEBRE: I mean, yeah, it's, there would be something that actually happened but, we, we always just go with the, or we use a reasonable assumption.

MR. WYATT: All right. Let me ask you this. Do you, are you aware of any cross reference in the Greenspring Manor traffic study submitted by this Developer between its development and any traffic report submitted in Torch Hill?

MR. NEBRE: No, not, not off the top of my head.

MR. WYATT: All right. Are, are you, are you aware of any cross reference in the Greenspring Manor traffic studies that have been submitted by the Developer to the adjoining F rated intersection at Falls and Seminary?

MR. NEBRE: Not that I recall.

MR. WYATT: I remember one thing that you said when you testified earlier, that sometimes an intersection can be improved from a, from a class F to class D or C intersection. Do you remember talking about that?

MR. NEBRE: There, there, I don't, was it, I just mentioned it earlier, that the improvements could be done, but I don't know to what extent I made that statement, but.

MR. WYATT: I think you used the example of an, of an apartment building being turned into a florist. That's almost

it's self-explanatory it's going to generate less traffic and, therefore, it could improve the intersection from an F to an acceptable letter grade where there wouldn't be a building moratorium. Do you remember that?

MR. NEBRE: Something of the sort. Yeah, or, I didn't say improvement to the intersection, maybe the performance of the intersection would be less, there'd be, there's no net impact to the intersection.

MR. WYATT: But here, I'm talking about the possibility of actually improving the classification under LOS from a, from an F rated intersection to something where there wouldn't be a building moratorium. That's possible, you would agree?

MR. NEBRE: It's hard to make that determination. That's why I put it up for arbitration. What I was testifying to was yes, there will be, one, there will be impacts. But two, there will be improvements to the corridor, which is proposed by the Developer and there will not be net impacts to the, to the intersection. Whether it will stay an F or D, I cannot make that determination because of the current methodology.

MR. WYATT: Well, what I'm saying to you because you brought it up in your initial testimony is there, there could be, or there are examples, where the, where the change of the use or the proposed development, would actually change the

letter grading under LOS.

MR. NEBRE: I would not say change the letter grade, but not make an impact. I mean, yeah. I don't know someone could make an impact that much by, you know, just changing a land use.

MR. WYATT: All right and --

MR. NEBRE: But it could, but I'm not saying, not making, I would not make that strong of a statement where the change of a land use would change the LOS.

MR. WYATT: Well, along with certain improvements made to a, to an intersection such as curbs and gutter and, you know, signaling, you, it, it could, based on your review, correct?

MR. NEBRE: Yes, it could.

MR. WYATT: All right. Is, let me ask you this. Is there any, is there any mechanism in Baltimore County for to call back a variance if the assumptions that are made in granting it are proven incorrect?

MR. NEBRE: That, no, I don't know that one.

MR. WYATT: Let me ask you one other question. Would, would the approval of two variance requests located within the same combination of three F rated intersections be, and I'm going to use the words very limited, as that term is used in the Baltimore County website, based on your experience?

MR. NEBRE: That, that would be very limited. I

mean, like I said, if we don't see too many F, attempts at development at F intersections.

MR. WYATT: Thank you, Mr. Nebre. I don't have any further questions.

ALJ: Okay. Let's see if we can go to, I just want to make sure there was no one else. Mr. Wyatt, did you know of anyone else who, who needed to ask questions? Just by virtue of you being here. You had mentioned when you started talking that someone else might have questions.

MR. WYATT: Well, I was, I was thinking other people that have, have been asking questions may have questions based on my questions.

ALJ: Okay, understood. Hold on. Mr. Rosenblatt, we're going to go next to you because you did not ask questions the last time and I know you also had questions when Mr. Nebre had to leave, so I'll turn it over to you.

MR. ROSENBLATT: Thank you, Judge. I may have no questions, just, Court's indulgence for one, one second. We appreciate Mr. Nebre's time. I'm not going to ask any questions. Thank you. I think you're muted, Judge.

ALJ: Sorry, thank you. I'm going to ask Mr., I'm looking for Mr. Sachse. I want to make sure Mr. Sachse didn't have anything. Where are you? I saw you earlier. Hm. Hm. Okay. I don't see Mr. Sachse. Just, he was here a minute ago. I do want to just make sure he didn't have any, because he also

is an attorney who lives nearby. Okay.

What we're going to do is limited, I'm going to ask Mr. McCann, do you have any questions based on Mr. Wyatt's questions? Please don't repeat questions that you asked in the previous hearing, we're going to try to be conscious of Mr. Nebre's time here and we don't want to spend another, you know, hours here repeating the same questions. But based on Mr. Wyatt's questions, did you have any questions, Mr. McCann?

MR. MCCANN: I do not, thank you.

ALJ: Okay, all right. Mr. Zimmerman, same thing to you.

MR. ZIMMERMAN: Yeah, same answer. No further questions at this time. Thank you.

ALJ: Okay, understood. All right. Thank you. I, Mr. Nebre, I, I think we're finished.

MR. NEBRE: Okay. Thank you so much.

ALJ: I appreciate your coming back. Thank you.

MR. NEBRE: All right.

ALJ: All right. Okay. When we last left off before bringing Mr. Nebre back in, we were in the middle of Mr. Bishop's cross examination by, and we were going to have Mr. Zimmerman, is what I remember. Am I right, Mr. Zimmerman?

MR. ZIMMERMAN: That's correct.

ALJ: Okay. So, you're ready to go?

MR. ZIMMERMAN: I'm ready.

ALJ: Okay, all right. Let me see if I can find Mr. Bishop here.

MR. BISHOP: I'm here, does that pop up when I talk?

ALJ: Oh, there you are. There you are, right there. All right. Let me re-swear you. It's been a little while. Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. BISHOP: I do.

ALJ: All right, thank you. All right, Mr. Zimmerman?

[MR. ZIMMERMAN TALKS OVER THE WITNESS AND ALJ THROUGHOUT THIS WHOLE CROSS EXAMINATION – VERY DIFFICULT TO TRANSCRIBE ACCURATELY]

MR. ZIMMERMAN: Right. Thank you very much. Before we get into, I, I think Doug Sachse is on his way to Virginia in a car, and that may explain why he might be in and out. I could be wrong.

ALJ: Okay, understood.

MR. SACHSE: I, I just got a new connection, so whether I'll stay or not, I don't know. But I'm back.

MR. ZIMMERMAN: Okay. So, I --

ALJ: I just want to make sure, we just let Mr. Nebre go. I sure hope you didn't have any questions.

MR. SACHSE: I, I think Michael did a great job, I do

not.

MR. ZIMMERMAN: Okay.

ALJ: Okay, understood. And Mr. McCann you're talking about?

MR. SACHSE: Wyatt.

ALJ: Oh, Mr. Wyatt, I'm sorry. Yeah, you're both Michaels, understood. Okay, thank you, Mr. Sachse. All right. I'm going to put you back on mute. All right. Mr. Zimmerman?

MR. ZIMMERMAN: All right, thank you. Thank everyone who is attending. Thank you, Judge. And I noticed Mike Tanczyn's name there, so shout out to him. So, Mr. Bishop, good to see you this morning.

MR. BISHOP: Good morning.

MR. ZIMMERMAN: Just, as a matter of fact, did you happen to grow up in Balt, in the Baltimore region?

MR. BISHOP: No, I grew up in Connecticut.

MR. ZIMMERMAN: Okay and how long have you been in this region?

MR. BISHOP: Since 2006.

MR. ZIMMERMAN: Okay and your training is in the field of landscape architecture, is it not?

MR. BISHOP: Yes, but that's a broad profession. Most of my work is planning based.

MR. ZIMMERMAN: All right. So, you're not a registered engineer, are you?

MR. BISHOP: I'm not.

MR. ZIMMERMAN: You're not an environmental scientist.

MR. ROSENBLATT: Objection, Judge. There was an opportunity to voir dire Mr. Bishop on his qualifications and no questions were asked and we, I believe, even proffered and all agreed to his areas of expertise.

ALJ: Understood. Yeah, it's fine. It's just background information. Overruled. Go ahead.

MR. ZIMMERMAN: Okay. You're not an environmental scientist, are you?

MR. BISHOP: I'm not.

MR. ZIMMERMAN: Okay. You're not a traffic engineer, for the record?

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay. But as a manager, however, you do work with specialists, do you not?

MR. BISHOP: I do.

MR. ZIMMERMAN: So, as part of your managerial role, you have some familiarity in a general way as to what's being proposed in these various fields, is that correct?

MR. BISHOP: Yes, that's correct.

MR. ZIMMERMAN: Okay and for the record, do you happen to have a Masters or other degree in Management or Business Administration?

MR. BISHOP: No, I have a Masters degree in Landscape Architecture and Land Planning.

MR. ZIMMERMAN: Okay. Okay and the pattern book lists the various specialists on your team, does it not?

MR. BISHOP: It does.

MR. ZIMMERMAN: Okay and that also includes a landscape architecture company, does it not, a separate company?

MR. BISHOP: That's correct, yes.

MR. ZIMMERMAN: How, I'm just curious. How is it that you have a separate landscape architecture company working on the project when you yourself are a landscape architect?

MR. BISHOP: A lot of our clients have relationships with different consultants. So, our client prefers to work with that landscape architect for design of the landscaping, the amenities (inaudible).

MR. ZIMMERMAN: Okay. So, your main role here is as a manager, is that a fair inference?

MR. BISHOP: No, my main role is the land planner for the project and management of the civil side of things.

MR. ZIMMERMAN: Okay and do you have people on your team at Kimley-Horn?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay. How many people work with you on the project?

MR. BISHOP: On this project?

MR. ZIMMERMAN: This project, yeah.

MR. BISHOP: Several.

MR. ZIMMERMAN: And what are, what are their roles, if I may ask?

MR. ROSENBLATT: Objection, Judge. This is getting far afield from just background. This is the fourth, third or fourth attorney to ask questions of Mr. Bishop. He, he testified for hours last time and we haven't asked one question about the plan.

ALJ: Mr. Zimmerman, are you getting there?

MR. ZIMMERMAN: Yeah, we're getting there. But, you know, it's good to know that the, the framework of who works on the plan, who prepares it.

ALJ: Well, well, why don't you do that, why don't you ask if you have issues about the plan, ask specifics about who --

MR. ZIMMERMAN: All right, --

ALJ: -- I mean, I understand but it's Mr., can we move on (inaudible) --

MR. ZIMMERMAN: Right.

ALJ: -- and Mr. Bishop has been here many times.

MR. ZIMMERMAN: All right. I've got a few more background questions and we'll get to the plan. Okay. Just for the record, Mr. Bishop, you generally work for developers

rather than the opposite, you know, constituents who are opposed to projects, is that correct?

MR. BISHOP: That's correct.

MR. ZIMMERMAN: Okay and you do not have a legal education, do you?

MR. BISHOP: No, I do not.

MR. ZIMMERMAN: Okay. Did you take any law courses at the University of Connecticut?

MR. BISHOP: So, yes, we, we had some fundamentals of practice and as part of my licensure testing, there were sections in there as well that had a little bit of, you know, practice, so contract writing, LLCs, corporations, that type of thing.

MR. ZIMMERMAN: Okay, okay. You're not presenting yourself, are you, as an expert in constitutional law, statutory construction, common law, that sort of thing?

MR. BISHOP: No.

ALJ: He was already accepted as an expert in the fields that they proffered originally, yes, so, he's not an expert in constitutional law, I feel confident about that.

MR. ZIMMERMAN: Or statutory construction.

ALJ: Or statutory construction, I think that's (inaudible).

MR. ZIMMERMAN: All right. I think it's my job, yeah.

MR. ZIMMERMAN: We're moving, right, absolutely, yes, absolutely. So, let's move on to the master plan 2020. Do you happen to know which institution in Baltimore County approves the master plan?

MR. BISHOP: Approves the master plan?

MR. ZIMMERMAN: Right.

MR. BISHOP: I believe it's the Planning Commission and County Council.

MR. ZIMMERMAN: Okay. Do you happen to know whether any County Charter provisions apply to the master plan?

MR. BISHOP: I don't.

MR. ZIMMERMAN: Okay. Do you know how often the master plan is supposed to be approved, a new master plan?

MR. BISHOP: So, every ten years there's an overhaul and I think there are intermediate revisions and amendments annually.

MR. ZIMMERMAN: Okay. So, they, do you know, happen to know when the 2020 master plan was approved?

MR. BISHOP: I don't know, it was probably around 2010, usually ten years before the, the date on the document.

MR. ZIMMERMAN: Okay. Okay. Let's share, Judge, let me share briefly if I can. Oh, here we go. Go to Adobe. Okay. Okay. Just, just to confirm, Mr. Bishop, the, we're not playing Jeopardy, but, here it is, Resolution 94-10, 2010, did you happen ever to have reviewed this resolution?

MR. BISHOP: No, sir.

MR. ZIMMERMAN: Okay. Anyway, 2010, we agree. So, I'm going to stop sharing for a moment, Judge. I'll come back to the sharing in a few minutes but can, can we eliminate the sharing for a moment?

ALJ: You have to stop sharing, just hit the stop sharing.

MR. ZIMMERMAN: Stop sharing. Where is this --

ALJ: Yep.

MR. ZIMMERMAN: Yeah, my, where's my stop sharing. Sorry, let me --

ALJ: It's right down the bottom of the screen. If you just, you should just see a stop share.

MR. ZIMMERMAN: Stop share. Oh, okay. It's actually on top of mine. Okay, thank you, Judge. All right. So, Mr. Bishop, would you agree with me that the existing subdivisions which predate the 2010 adoption of the master plan, would not necessarily have to comply with the provisions of the 2020 master plan and would, would not have been required?

MR. BISHOP: I would agree that document wasn't in place when they were going through the process, so how could they?

MR. ZIMMERMAN: Right, I, so there may well be many subdivisions which do not conform, existing subdivisions prior to 2010 which do not conform to the 2020 master plan and the

transect scheme, do you agree with that?

MR. BISHOP: I guess that could be the case.

MR. ZIMMERMAN: Yeah, okay. Do you happen to know what Baltimore County, now, well, let me, let me move back a little. You, you did quote some parts of the master plan 2020, did you not, in your direct testimony?

MR. BISHOP: I believe so.

MR. ZIMMERMAN: Yeah, so, do you happen to know what Baltimore County Code provisions pertain to the master plan in development cases?

MR. BISHOP: No.

MR. ZIMMERMAN: All right. Do you happen to know whether the master plan is advisory or mandatory in development cases?

MR. BISHOP: So, I think it's a, a bit of a tricky subject. If the document says one thing, but I think the, the reality is that the document is a binding document.

MR. ZIMMERMAN: Okay. Okay. You're not, I know you're not presenting yourself as a legal expert, but has, has any of the case law, such as the (inaudible) Development case, been brought to your attention, the Court of Appeals case --

MR. BISHOP: No.

MR. ZIMMERMAN: -- by your team?

MR. BISHOP: No, sir.

MR. ZIMMERMAN: Okay. Okay and do you know what the

process is if Judge Murphy should find the, there's a serious issue of master plan conflict? Do you know how that works?

MR. BISHOP: Limitedly, yes. I believe it gets sent over to the Planning Commission for a determination of whether or not it's a master plan issue.

MR. ZIMMERMAN: All right and then the County Council, do you happen to know?

MR. BISHOP: I believe, yes, if there's still an issue with the Planning Commission, then the County Council gets involved.

MR. ZIMMERMAN: Okay. Do you happen to know whether the, the transects that you discussed in your direct testimony, do you happen to know whether the transects are, in fact, types of zones?

MR. BISHOP: I would, I think that's a tricky question as well. Are you, I mean, are we talking about zoning regulations, zones? Are you talking about, the term zone can mean many things.

MR. ZIMMERMAN: Right. Let me share again, Judge, so.

ALJ: You, you still have it.

MR. ZIMMERMAN: Oh, I still have it, sharing?

ALJ: You just --

MR. ZIMMERMAN: Here we go, thanks, yeah. Thank you, got it. Let's see. Okay and by the way, the County Council

Resolution was People's Counsel Exhibit 28. Now, we're going to our Exhibit 8. I know that was also a Developer's exhibit.

ALJ: Let me ask, is any, does anyone have an objection to twenty-eight? Mr. Rosenblatt, it's the Resolution 94-10.

MR. ROSENBLATT: No objection.

ALJ: Anything, Mr. McCann?

MR. MCCANN: No objection, thank you.

ALJ: Okay, thank you.

MR. ZIMMERMAN: Okay. So, let's see. So, I'm going to page twenty-seven, which, part of which, Mr. Bishop, you, you quoted in your direct testimony. Do you recall that?

MR. BISHOP: Yes, I do.

MR. ZIMMERMAN: Okay. So, let's look at the righthand side of the page, at the end of the first paragraph there, could, could you possibly read the last sentence?

MR. BISHOP: Starting with these degrees of urbanism?

MR. ZIMMERMAN: Yes, yes.

MR. BISHOP: These degrees of urbanism are represented in a rural to urban transect has been developed which provides six transect zones, t-zones, for application on the proposed land use map.

MR. ZIMMERMAN: Okay and to speed it up, the second sentence in the next paragraph, could you read that? Its continuum?

MR. BISHOP: Its continuum when subdivided lends itself to the creation of zoning categories.

MR. ZIMMERMAN: So, I want to just, I just want to ask you, the fact that these are types of zoning categories, do you have any comment on the significant of that one way or the other?

MR. BISHOP: I don't believe I do.

MR. ZIMMERMAN: Okay. Okay. Now, I'm going to move over to some of your comments in the community input meeting relating to the plan. And this is People's Counsel's seven. I don't know if anyone else put this in as an exhibit. So, you were at the meeting, obviously, right?

MR. BISHOP: I was.

MR. ZIMMERMAN: April 27th, 2021. So, your comments are shown in the third paragraph on page one, are they not?

ALJ: You want to blow it up a little?

MR. ZIMMERMAN: Let me, let me see if I can zoom up, okay?

ALJ: Yes. Yeah, if you don't mind, just hit the plus.

MR. ZIMMERMAN: Yeah, absolutely.

ALJ: Thank you. Keep going.

MR. ZIMMERMAN: Let me see. Now I've got to move the thing and something is blocking my arrows here. Let me see, okay, here we go. Let's see if we can zoom, zoom, Judge, is

this (inaudible)?

ALJ: That's better. I'm not sure, it is, I'm not sure he can read it, but.

MR. ZIMMERMAN: Yeah, Mr. Bishop, can you see it?

MR. BISHOP: I can see it but --

MR. ZIMMERMAN: I can, wait, let me see if I can zoom better. Now, I'm, is that better?

MR. BISHOP: I can see that, yes.

MR. ZIMMERMAN: Okay. So, in the third paragraph, you give your introduction and a description of the site, correct?

MR. BISHOP: Correct.

MR. ZIMMERMAN: And is that, is that description still accurate, in your opinion?

MR. BISHOP: Generally, that was a community input meeting after a concept plan but, you know, the plan has been further developed since then.

MR. ZIMMERMAN: Right. Well, as far as the 39.4 acres in size of the site, the zoning of, the split zoning, the sixty-one single family homes on quarter acre lots, the topography at least, the background, the background information, all of that is still correct, is it not?

MR. BISHOP: Generally, yes.

MR. ZIMMERMAN: Okay and the quarter acre lots, that, as a, as a general matter, that's still basically correct, is

it not, more or less?

MR. BISHOP: Well, I think that's a generalization and an average.

MR. ZIMMERMAN: Yeah.

MR. BISHOP: But yes.

MR. ZIMMERMAN: And just to, to be clear, the, there are sixty new buildings, lots proposed, but the existing dwelling is being retained, is it not?

MR. BISHOP: That's correct, yes.

MR. ZIMMERMAN: That's on a much larger lot, about four acres, am I correct?

MR. BISHOP: Yes, you are correct.

MR. ZIMMERMAN: So, the quarter acre lots obviously does not refer to lot one.

MR. BISHOP: Correct.

MR. ZIMMERMAN: Yeah. Can you tell us anything about that existing house? Is it historic, is it a mansion or, you know, what's, what's really good about that house or distinct, distinctive?

MR. BISHOP: It's an existing house, it's in decent condition. It's been there for quite a while, but it's not historic. It's not a mansion. It's a decent size house.

MR. ZIMMERMAN: Okay. Okay. I'd like to, there were quite a few comments on the CIM, were there not? And ques, a lot of e-mails from the citizens, do you recall that?

MR. BISHOP: I do recall that.

MR. ZIMMERMAN: I mean, the CIM goes on for, I don't know, sixty, seventy, eighty pages, something like that, is, do you remember that?

MR. BISHOP: I think your document says forty-three.

MR. ZIMMERMAN: Oh, is it forty, well, these are two to a page, two to a page, so. So, maybe eighty-six, but whatever it shows. So, do you, do you know whether or not you or anybody on the collective development team, provided further written responses to all the e-mails and questions in addition to the, the answers given by either Mr. Rosenblatt or you?

MR. BISHOP: You mean, responses directly to all the people that were in the community input meeting?

MR. ZIMMERMAN: Right, or filed, you know, filed with the County a series of written responses to the different e-mails.

MR. BISHOP: I think there were some direct communications with community groups and there were other things that we addressed with revisions to the concept plan and our development plan filing.

MR. ZIMMERMAN: All right. So, some verbal meetings, I mean, some meetings in person or by Zoom?

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay. Okay. Okay. All right. So, I'm going to stop sharing for a moment and then, then resume

sharing. So, with reference to your eventual site plan, the green line, Developer's Exhibit 1-B, you sealed the plan, did you not, personally?

MR. BISHOP: I did.

MR. ZIMMERMAN: And, and were there various members of the team who worked on that plan?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Yeah, okay. All right. Let's go to the next sharing, if I can. All right, here we go. Developer's Exhibit 4. Now, you introduced that, did you not--

MR. BISHOP: Yes, I did.

MR. ZIMMERMAN: -- in your direct testimony?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay. Did you personally prepare that, or did the team do it or, you know, how, who was involved in preparing that?

MR. BISHOP: I personally prepared this.

MR. ZIMMERMAN: Okay and what documents did you use as background or, you know, basis, to, to come up with your color-coded descriptions?

MR. BISHOP: I used available Baltimore County JIS data.

MR. ZIMMERMAN: Did you review the subdivision plans for each of the area subdivisions that are shown on this exhibit?

MR. BISHOP: No, but the GIS is very similar to those plats, it's very accurate.

MR. ZIMMERMAN: Do you happen to know the names of the adjacent subdivisions?

MR. BISHOP: I know generally they're referred to as Boxwood and Seminary, I don't know if --

MR. ZIMMERMAN: Seminary Ridge.

MR. BISHOP: Seminary Ridge. I'm not sure exactly what they're called on the plats themselves.

MR. ZIMMERMAN: All right. Meadow, you've heard of Meadows of Greenspring?

MR. BISHOP: Meadows, yes.

MR. ZIMMERMAN: Okay. How about Hunt Spring, have you heard of that one?

MR. BISHOP: That sounds familiar.

MR. ZIMMERMAN: Okay. Heather Field?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Do you know which ones are where on this exhibit?

MR. BISHOP: Generally. I know that Boxwood is due north and east and so is Seminary Ridge.

MR. ZIMMERMAN: Okay.

MR. BISHOP: The other ones I'm not sure.

MR. ZIMMERMAN: Okay. Do you happen to know the dates of each of these adjacent areas, the subdivisions, plats

that were approved?

MR. BISHOP: Not off the top of my head, no.

MR. ZIMMERMAN: If I suggest to you that they were, with the exception of, I don't know if we called it a color, with the exception of white, north of Seminary, well, which Mr. Wyatt mentioned, Torch Hill. They're all twentieth century subdivisions, would that, would you be aware of that?

MR. BISHOP: I'm not sure, I'd have to look at the documents.

MR. ZIMMERMAN: All right. Let's, let's move for a moment to, let's see, so, here's Meadows of Greenspring and you see that that's --

ALJ: Hold on. Mr. Zimmerman, what exhibit number are you on? Is this --

MR. ZIMMERMAN: I'm sorry, People's Counsel's sixteen.

ALJ: Sixteen, okay, thank you.

MR. ZIMMERMAN: Sorry, thank you. And I'll try to, I'll try to zoom up on this one too. Let's see. I'm having trouble, trying to zoom up so we can see the date better and, and my, my computer is getting a little bit blocked here. Wait a minute. Ah, now, now I'm sorry, that's, all right. Can, can you happen to read to the righthand corner at the bottom, December 1st, 1982? Can you read that?

MR. BISHOP: I can't see that. I'll take your word

for it, but I can't --

MR. ZIMMERMAN: Excuse me?

MR. BISHOP: -- I can't see that.

MR. ZIMMERMAN: You can't see it?

ALJ: Mr. Zimmerman, just zoom in on the, on the --

MR. ZIMMERMAN: I'm try, I'm really trying. The problem is, if I start zooming in, it takes me to the top of the exhibit, wait a minute, here we go. Let's see.

MR. BISHOP: I generally see it. It says 1983, one of the signatures says 1983.

MR. ZIMMERMAN: Right and Norman Gerber was the Director of Planning. Did, did you happen to know Norman Gerber?

MR. BISHOP: No, I was five in 1983, Mr. Zimmerman.

MR. ZIMMERMAN: All right, yeah. Okay. So, anyway, so that, obviously that's a twentieth century subdivision, right?

MR. BISHOP: Yes.

MR. ZIMMERMAN: And that would not, would not have to conform to the T-3 transect, do you agree with that?

MR. BISHOP: I believe that back then, the T-3s were not adopted in the master plan yet.

MR. ZIMMERMAN: Yeah, okay. Let's keep going. Let's see. Heatherfield, 1953, can you see that?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay and Heatherfield is, you know, right adjacent to, to your project, property, and it goes up from Joppa Road, does it not? Joppa and Tallyho?

MR. BISHOP: I'm not sure where Heatherfield starts.

MR. ZIMMERMAN: Okay. Well, you see Joppa Road on the left of this plan? Let's, let's, let's zoom down a bit if we can. Okay. You can see it, right? Joppa?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay and then it, the borderline on what's actually, I guess, the westside, but the top of the exhibit is, would be your property, your Greenspring Manor property, right?

MR. BISHOP: Generally, yes.

MR. ZIMMERMAN: Okay and by the way, this is pretty much at least half acre lots, is it not, single family detached?

MR. BISHOP: These are single family detached. I don't know what the lot areas are.

MR. ZIMMERMAN: Okay. You've driven through the area, haven't you?

MR. BISHOP: Several times, yes.

MR. ZIMMERMAN: Tallyho Road, yeah, okay. All right. Let's see if we can, have anything more here. Seminary Ridge, it's, trying to go up on, wait a minute. All of a sudden my pluses has gone, hold on one second. Rebecca? I've got to get

my chief of staff here to --

ALJ: You can just right click on the mouse. If you right click it, you should be able to zoom.

MR. ZIMMERMAN: It's not, I'm getting blocked by something. So, I've got, --

ALJ: You can hit control, shift, Q, and then that'll raise the drop-down bar up.

MR. ZIMMERMAN: All right. Now, we got it, okay. Sorry.

ALJ: Nope, that's fine.

MR. ZIMMERMAN: So, Seminary Ridge, do I have to go, can you see the 1967 or do we have to zoom up some more?

MR. BISHOP: No, I, I can see it, 1967.

MR. ZIMMERMAN: Okay and this part of Seminary Ridge looks like it has pretty substantial single family dwellings, lots, more in the, more in the range of half an acre.

MR. BISHOP: Okay, I can't see that.

MR. ZIMMERMAN: You can't see that. All right. You haven't, you haven't, you haven't put together a lot table for Seminary Ridge, Heatherfield or any of these other subdivisions similar to the lot table that you've got for Greenspring Manor?

MR. BISHOP: No, but I do know, while you're asking me that question, that I've measured them, I don't have a table. And I know that several of the lots in the adjacent communities are smaller than ours. (inaudible) --

MR. ZIMMERMAN: All right, Meadows of Greenspring, I, I get, Meadows of Greenspring has some attached dwellings, no doubt, right? We, we know that.

MR. BISHOP: So, so does, and so does Boxwood.

MR. ZIMMERMAN: Okay, okay. But you haven't put together lot tables for every single one of those subdivisions for us to look at?

MR. BISHOP: No.

MR. ZIMMERMAN: Have you?

MR. BISHOP: No.

MR. ZIMMERMAN: Okay, all right. Let's see if we've got anymore here. Okay. This looks like Hunt Spring, does it not?

MR. BISHOP: Yes, it's an interesting design, yes.

MR. ZIMMERMAN: Yeah, I, yeah. And it is interesting, yeah. So, this looks like 1990. Do I have to zoom up? Can you, can you see that?

MR. BISHOP: Can't quite see it. I think I can see ninety something.

MR. ZIMMERMAN: Can we see it now, 1990?

MR. BISHOP: Nineteen ninety, yes.

MR. ZIMMERMAN: Okay. Okay. I'm going to stop sharing for a moment. Actually, okay. So, the point is, all, all of those, if not all of those, most of the adjacent subdivisions, are they not, that are on your color coded

exhibit?

MR. BISHOP: I think they are --

MR. ZIMMERMAN: Are there any others, are there any other subdivisions that you remember? I'm not trying to trick you.

MR. BISHOP: Not off the top of my head --

MR. ZIMMERMAN: Let's put it back up.

MR. BISHOP: It's been a few years since I put that exhibit together, so I don't know the names of all the communities we analyzed.

MR. ZIMMERMAN: Trying to share now, let's see. Okay, here we go. Okay, okay. So, we know Heatherfield is in the tan, right?

MR. BISHOP: Right.

MR. ZIMMERMAN: Next, right next to the, your property, is that, we agree on that?

MR. BISHOP: Yeah, it's just south on this plan, yes.

MR. ZIMMERMAN: Yeah, east as, east as the crow flies.

MR. BISHOP: Correct.

MR. ZIMMERMAN: All right and then you've got, of course, your, your property is in purple. And then you've got, is that Seminary Ridge in purple, that's next to Heatherfield?

MR. BISHOP: Yes, to the right.

MR. ZIMMERMAN: Okay and in tan on the, we just

looked at Hunt Spring, that's to the north of Seminary on the tan, I kind of have a little, a little marker that I'm --

MR. BISHOP: yes.

MR. ZIMMERMAN: -- I don't know if it, if it, you can see that I'm moving around.

MR. BISHOP: I see that.

MR. ZIMMERMAN: North, north of Seminary in the purple, I don't know the name of that subdivision. Do you happen to know the name of that one?

MR. BISHOP: I don't.

MR. ZIMMERMAN: Okay. Meadows of Greenspring is in the red. That's a mix of attached houses, I'd say major, majority of attached houses. And then you've got in the blue the single family detached, right?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay. Okay and, by the way, it's, I don't know if we call it color white or, but you, you do have the Torch Hill that Mr. Wyatt referred to earlier this morning. That's in white, or blank and --

MR. BISHOP: Well, yeah, we didn't analyze that because it wasn't an approved development at the time.

MR. ZIMMERMAN: Right, and I'm not criticizing you at all for that, but it has been approved, has it not, subject to any appeals anybody may take? Is that, is (inaudible) --

MR. BISHOP: (inaudible) --

MR. ZIMMERMAN: -- Judge Murphy just approved it, right? We know that.

MR. BISHOP: I did see that, yes.

MR. ZIMMERMAN: Yeah. And, by the way, we're not in that case, for the record. So, I'm sure the Judge knows it but not everybody attending knows that, so.

MR. BISHOP: Should we mention the yellow areas in this analysis as well?

MR. ZIMMERMAN: Okay. Sure, you got some yellow areas. You got some mixed use. Greenspring Station, you've got the office building that most of us know about and maybe a lot of us have gone to.

MR. BISHOP: Um hm, (inaudible) --

MR. ZIMMERMAN: That's on the north side of Joppa, closer to Falls Road, I've got my arrow on that.

MR. BISHOP: Right.

MR. ZIMMERMAN: And one of my favorite cafes is there, Stone Mill Café, right? Have you been to Stone Mill Café?

MR. BISHOP: I have, actually. (inaudible) --

MR. ZIMMERMAN: All right.

ALJ: So, Mr., Mr. Zimmerman, we just, I appreciate that, --

MR. ZIMMERMAN: All right.

ALJ: -- I know, I'm sure you --

MR. ZIMMERMAN: Well, he asked me, he asked me to get into the commercial, so, I (inaudible) --

ALJ: Yeah, we know it's Greenspring Station, yep.

MR. ZIMMERMAN: Okay.

ALJ: Okay.

MR. ZIMMERMAN: And then you've got kind of a State Highway Administration property on the southside of Joppa Road?

MR. BISHOP: Correct.

MR. ZIMMERMAN: I'm not clear what's happening with that, is, do we know?

MR. BISHOP: I don't know.

MR. ZIMMERMAN: Okay and, actually, there's a religious, what's that all about?

MR. BISHOP: There's a church there and there's a tennis club across the street --

MR. ZIMMERMAN: (inaudible) --

MR. BISHOP: -- (inaudible) to show there's a mix of uses in the area and densities.

MR. ZIMMERMAN: Yeah. The tennis, the Rolling Tennis Club, that's near the bridge, right? That's, that's --

MR. BISHOP: Correct.

MR. ZIMMERMAN: Right, okay. All right. Well, let's, let's see if we can really look at Greenspring Manor. Now, you've got that in the purple. You've got that at ten thousand to thirty thousand square feet, with an average of

thirteen thousand five hundred square feet, is that correct?

MR. BISHOP: That's what it says, yes.

MR. ZIMMERMAN: Yeah. So, how did you come up with, is it, is that supposed to apply to Greenspring Manor specifically or is that, or did you take all the purple and, you know, somehow average out all of the purple at once or, or can we just look at Greenspring Manor and say that, hey, that, that's, that really is supposed to be accurate?

MR. BISHOP: It's a general average for the areas in purple --

MR. ZIMMERMAN: Okay. So, it's not, yeah, sorry. I didn't mean to interrupt you.

MR. BISHOP: (inaudible) the idea was just to show the general idea that we have our use, our proposed use, in that range of ten thousand to thirty thousand square foot. And that's similar to the other areas in purple.

MR. ZIMMERMAN: Okay.

MR. BISHOP: We have some higher density red, lower density in orange and commercial and mixed use in yellow --

MR. ZIMMERMAN: Okay. So, I'm not, so, I'm sorry. Again, I thought you were finished. You're finished now, right?

MR. BISHOP: Yeah, I'm just saying, it's not intended to be an exact representation. It is an average, it's a general planning document, to show you the mix of uses and

densities in the area.

MR. ZIMMERMAN: Okay. So, just to be clear, you're not saying that Greenspring Manor has a range from ten thousand to thirty thousand square feet. You're not telling us that?

MR. BISHOP: Greenspring Manor, as we know, has some smaller lots, some larger lots. The general average is in the, you know, eleven, twelve, thirteen thousand square foot range.

MR. ZIMMERMAN: Okay.

MR. BISHOP: Which is --

MR. ZIMMERMAN: So, yeah, anything else you want to say on, on that end, on that question?

MR. BISHOP: Well, it's just very different from the blue area characteristics and very different from the tan, --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- very different from the red, --

MR. ZIMMERMAN: Let me ask, yeah. Somebody reading your exhibit might assume that Greenspring Manor is in the ten thousand to thirty thousand square foot range, is that correct? I mean, am I wrong in assuming that that's what you may have meant, even though that's not what you meant?

MR. BISHOP: Well, I think I just said what I meant. Is that it's an average and it's a generalization to show you roughly what our density is in relation to the other densities in the area.

MR. ZIMMERMAN: Okay, all right. Let's look at the

lot table. In full disclosure, this is, I want to make sure I show the whole exhibit because I did the little colored, my own little bit of commentary or some numbers at the bottom, which are red, blue and green. And we'll get to that in a minute or two, but this is the lot table, is it not, the main, the black and white, the lots one to sixty-one?

MR. BISHOP: That's correct, yes.

MR. ZIMMERMAN: I, I, Judge, I zoomed this in, so we didn't have to mess around with, you know, zooming. This is on your Developer's Exhibit 1-B, correct?

MR. BISHOP: That's correct.

MR. ZIMMERMAN: All right. Let's see if I can make it a little, okay, is this legible? It shows the whole --

ALJ: It's really small to read, if you want him to read it.

MR. ZIMMERMAN: All right. Let's zoom, let's zoom back up, sorry. Okay. So, now, lot one is kind of all by itself, right? I mean, it's different, that's the existing house?

MR. BISHOP: It is.

MR. ZIMMERMAN: And I have to ask you, I, you've, you've got a hundred thirty thousand ninety-nine square feet for 3.9 acres, 3.9 acres, essentially four acres, right? For, for lot one, the existing house?

MR. BISHOP: Close to it, yes.

MR. ZIMMERMAN: Yeah, I mean, we know that an acre is forty-three thousand five hundred sixty square feet, right?

MR. BISHOP: Yes.

MR. ZIMMERMAN: So, I mean, in fairness to you, if, if, if your four, if your four-acre number is correct, then the one thirty thousand number is not correct, right? I mean, one of those numbers is not correct.

MR. BISHOP: It could be. We can fix that.

MR. ZIMMERMAN: Do you know which one is correct?

MR. BISHOP: I'd have to pull up our CAD file and figure out which one is correct.

MR. ZIMMERMAN: Because, I mean, four acres would be at least a hundred, probably about a hundred and seventy-four thousand square feet or close to it.

MR. BISHOP: It's a typo, it should be 2.98 acres instead of 3.98.

MR. ZIMMERMAN: Ah, okay, good. To, how did, how did that happen?

MR. BISHOP: I don't know, sir. It's a, --

MR. ZIMMERMAN: All right.

MR. BISHOP: -- somebody typed in the wrong --

MR. ZIMMERMAN: So, all right, we'll, okay, I mean, it seems like I'm the only one who noticed that, sorry. So, it's 2.9 acres, but anyway, whether it's 2.9 or 3.9, it's quite different from all the other, the newer building lots, which

you pointed out when, when you were talking about quarter acre lots, you were talking about lots two to sixty-one, on the average?

MR. BISHOP: I would, I guess so, I mean, I don't know if we --

MR. ZIMMERMAN: All right, well, --

MR. BISHOP: -- you know, in my testimony, what I was saying at the community input meeting, yes. It was --

MR. ZIMMERMAN: And guess what? I'm not challenging that, okay? I, I wasn't asking about that to challenge you.

MR. BISHOP: Now, there are larger lots and smaller lots within the community. There's a range.

MR. ZIMMERMAN: Right. Absolutely. So, to be fair and balance, so to speak, which doesn't mean we're interested in Fox News, in answer to Michael McCann's questioning, he asked you about the smallest and the largest lots. And if I, my memory is correct, somehow or other, lot nine was identified as the smallest at seventy-five hundred seven square feet, or .17 acres. And I would suggest that that is correct. Do you agree with that? I mean, you can (inaudible) --

MR. BISHOP: (inaudible) table that looks correct (inaudible).

MR. ZIMMERMAN: Okay and at the, yeah, at the time, I think the statement was made that lot nineteen was the largest lot of .43 acres, at, at the time. Is, is that consistent with

your recollection?

MR. BISHOP: I don't recall. I mean, I can see on here that lot thirty is larger than that.

MR. ZIMMERMAN: Right. I wanted to get to that. Lot thirty is actually the largest lot, okay. Now, we'll get through this kind of quickly, but you, you, I think you acknowledge that there are lots that are lower than the ten thousand square feet implied on your Exhibit 4.

MR. BISHOP: There are, yes.

MR. ZIMMERMAN: Okay and do you happen to know how many? I've counted them up, okay? And you can correct me or your team can take a quick look at this. But I would suggest there are twenty-four of the sixty, between lots two and sixty-one. Those sixty lots, twenty-four of them are below ten thousand square feet.

MR. BISHOP: Okay.

MR. ZIMMERMAN: Okay. Well, if, you know, you can check me later. If anyone wants to screenshot this and, you know, it, it only takes a minute or two to count them up. Anyway, so twenty-four of them are ten thousand, below ten thousand square feet. And the largest, as you just pointed out, is lot thirty, which comes in at twenty-one thousand five hundred seventy-one square feet.

So, the, the ten thousand to thirty thousand square feet maybe from some perspective you felt it was helpful. And

maybe it is, I don't know. But it really doesn't represent this, Greenspring Manor, does it?

MR. BISHOP: I still think that it does if you, I mean, I guess I could have broken it down into more categories. But it was supposed to be a general indication that we meet the T-3 where we're adjacent to higher density, mixed use and other, you know, similar size properties. So, I still think it serves that function --

MR. ZIMMERMAN: Well, I get what you're trying to do, but the actual numbers for this are seven thousand to twenty-one thousand, you know, with the, the fractional twenty-one thousand five hundred seventy-one. Not counting lot one, which I would assume you would agree is a different category.

I mean, we're talking seven thousand to twenty-one thousand, not ten thousand to thirty thousand, the actual numbers, do you, whatever, you know, whatever your Developer's four was supposed to represent.

MR. BISHOP: Well, I would argue that the smallest lot you said was, I think, nine and that the largest is one, at 2.98 acres, which you said had a typo. So, I think there's that range --

MR. ZIMMERMAN: Okay. Well, you can rely on, it's kind of an outlier, isn't it? I mean, that doesn't really make much sense to use that as a representative lot, does it?

MR. BISHOP: I think it's part of the community. We

(inaudible) keeping it --

MR. ZIMMERMAN: All right, okay. All right. The Judge will figure that one out.

MR. BISHOP: (inaudible) I would disagree with that.

MR. ZIMMERMAN: All right, that's fine. Okay. Well, let's, I kind of dived a little bit more into the numbers and I don't know if you've studied this to this degree. But I added up lots two to thirty with a, with actually a pencil and paper, a pen and paper and we got six, I got 6.965 acres and then 7.416 acres for lots thirty-one to sixty-one. Did you ever do that addition, any --

MR. BISHOP: No.

MR. ZIMMERMAN: -- anyone on your team?

MR. BISHOP: No.

MR. ZIMMERMAN: Okay. Does that look about right to you?

MR. BISHOP: I'd have to do the math.

MR. ZIMMERMAN: Okay. Well, let's assume I'm right and, of course, anyone on your team or anyone out there can screenshot this and --

ALJ: Can, can you, can you zoom in, can you zoom in, Mr. Zimmerman?

MR. ZIMMERMAN: Excuse me?

ALJ: Can you zoom in, please, --

MR. ZIMMERMAN: Yeah, absolutely.

ALJ: And then, so, so, is this an exhibit of yours?

MR. ZIMMERMAN: Yeah, this is my exhibit, sorry, thirty-one. Sorry.

ALJ: Oh, thirty-one.

MR. ZIMMERMAN: Thirty-one.

ALJ: Oh, okay.

MR. ZIMMERMAN: Okay. Can every, is it legible now?

ALJ: I don't have this as thirty-one. I have something else as thirty-one. It was delivered yesterday and--

MR. ZIMMERMAN: Oh, you're right, you're right. You're right, this is not, this is twenty-four. My mistake.

ALJ: Okay.

MR. ZIMMERMAN: My mistake. My mistake.

ALJ: I see it. No, I see it.

MR. ZIMMERMAN: Twenty-four. Yeah, thirty-one we're going to get to in a minute. Sorry.

ALJ: Okay and so, and you said, and you said that lots two through thirty-one, or what was, what was the number?

MR. ZIMMERMAN: It's right there in red, is that visible?

ALJ: Yes. Okay, two through thirty, 6.965 acres and then the other one you said, thirty, oh, here it is. Thirty-one to sixty-one, seven --

MR. ZIMMERMAN: 7.416 and --

ALJ: -- point four one six.

MR. ZIMMERMAN: -- like I say, everyone can screenshot it, it takes about two minutes or three minutes to add them all up and I'm, you know, if I made a mistake, you know, somebody can figure it out.

ALJ: So, Mr. Bishop, Mr. Bishop, did you have a chance to do the calculations or, I guess, that's a question to you Mr. Zimmerman is asking.

MR. ZIMMERMAN: Well, --

MR. BISHOP: I did not, but I'm curious why he didn't include lot one. It seems like (inaudible) --

ALJ: Well, --

MR. ZIMMERMAN: Yeah, we can debate that. Of course, if we include lot one, we'll, we'll, we'll come up with a little different number, I acknowledge that. And, you know, the relevance of lot one, you know, we can argue about. And we'll, we'll get to that in a second. But if we just take two to sixty-one, because every, obviously you had a certain perspective on your Exhibit 4. And now, I have, given a little different point of view, right? So, --

MR. ROSENBLATT: Judge, before questions are asked about this, I, I certainly, I have no objection to the lot table. But I think we need some foundation as to how these, how this exhibit was prepared. I, Mr. Zimmerman, did you, these are your numbers and did you --

MR. ZIMMERMAN: Yeah, I just said that. I basically

did some third grade math, okay? I added up, I added up, --

MR. ROSENBLATT: And you, you created a pdf --

MR. ZIMMERMAN: I added up the numbers --

ALJ: You're both talking, you're both talking over each other. So, Mr. Zimmerman said that he calculated these calculations, Mr. Bishop said he hasn't done the calculations. And then questioned why lot one wasn't included. So, that, that was sort of, this is his, Mr. Zimmerman's summary of what his --

MR. ZIMMERMAN: Yeah.

ALJ: -- yeah.

MR. ROSENBLATT: And Mr. --

MR. ZIMMERMAN: (inaudible).

ALJ: Okay, hold on --

MR. ZIMMERMAN: Go ahead, I'm sorry. I thought, I didn't mean to interrupt anybody.

ALJ: Yeah, hold on, Mr. Zimmerman. Go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Mr. Zimmerman created this color coded pdf, like edited pdf, with these notes on top of the lot chart? You did that yourself?

MR. ZIMMERMAN: I said, I, I did the, the math, basically, third grade elementary school math, or maybe fifth grade, I don't know. Yes, those are my calculations.

MR. ROSENBLATT: And how did they get onto this

exhibit, I guess, is my question?

MR. ZIMMERMAN: I, because I created, I made it a demonstrative exhibit with the lot table, instead of putting them on separate pieces of paper for convenience, I placed them at the bottom of the lot table. I could have put them on a separate page. I, I've made quite clear that this is not part of the original exhibit. These are some number that, that I have calculated.

MR. ROSENBLATT: And you personally did that? You typed in your numbers into this exhibit?

MR. ZIMMERMAN: Yes, I did. Yes, we did, our office did, yes.

ALJ: Any objection to twenty-four, Mr. Rosenblatt?

MR. ROSENBLATT: I, just the questions I had, but I understand he's, he's laid some foundation, so.

ALJ: All right. It was demonstrative. Mr. McCann, did you have any objection to twenty-four?

MR. MCCANN: No, thank you.

ALJ: All right, thank you. Go ahead, Mr. Zimmerman.

MR. ZIMMERMAN: Right, okay. So, this is just some basic arithmetic to give a little different perspective. If my numbers are right and every, as I say, everyone can screenshot it, everyone can add up the lots, it takes two or three minutes to do.

I, I ended up with, for the area where lots two to

sixty-one are, not counting lot one for a moment, not counting the flood plains and the wetlands and the open space and so on. We get basically 14.38 or 14.4 acres. At least if my numbers are correct, right, Mr. Bishop?

MR. BISHOP: Yes, assuming your numbers are correct.

MR. ZIMMERMAN: And if my numbers are correct, we end up with an average of 2.4 acres per lot, right, just the math? Just the math, just the math. And that happens to be consistent with what you said at the community input meeting, which was quarter acre. It's just, you know, one-tenth of an acre difference. So, I'm not challenging your number, really.

MR. BISHOP: I'm --

MR. ZIMMERMAN: Just, just illustrating a little more --

ALJ: Mr., Mr. Zimmerman, but Mr. Zimmerman, remember, you need to ask a question.

MR. ZIMMERMAN: Okay. Isn't this consistent --

ALJ: Hold on, hold on. Mr. Zimmerman, hold on. I just want to make the record clear. You just need to ask questions, as you know.

MR. ZIMMERMAN: Right.

ALJ: And not testify. So, are you asking --

MR. ZIMMERMAN: All right.

ALJ: -- him a question, are you asking him whether that, those numbers are right, the 14.38 and the average is 2.4

acres per lot. Are you asking --

MR. ZIMMERMAN: Yes, if those numbers are right, we come down to 2.4 acres per lot for that area --

ALJ: Okay. Mr. Bishop, what was your answer to that?

MR. BISHOP: I'm, I'm kind of confused about the math. What are we doing, 14.38 divided by sixty?

MR. ZIMMERMAN: Right. Oh, it should be point, I'm sorry. You know, it should be .24, my mistake, .24 acres per lot. Now I made a mistake.

MR. BISHOP: That makes more sense.

MR. ZIMMERMAN: Yeah. I'm sorry, my apologies. That, that exhibit needs to be corrected, Judge. It should be (inaudible) --

MR. BISHOP: (inaudible), you moved the decimal point, I (inaudible).

MR. ZIMMERMAN: Yeah, move the decimal point, my apologies.

ALJ: Okay, --

MR. ZIMMERMAN: (inaudible) acres per lot and that, Mr. Bishop, that would be consistent with your quarter acre description.

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay and Judge, we'll, if it's all right, we'll correct that exhibit --

ALJ: Yeah, you're going to need to resubmit that.

MR. ZIMMERMAN: Yeah, we'll resubmit. We'll, we'll resubmit that as corrected. Sorry about that.

ALJ: And you want to submit it in color, okay?

MR. ZIMMERMAN: In color, absolutely, in color.

ALJ: All right, okay.

MR. ZIMMERMAN: I thought we did, I don't --

ALJ: I, no, you did and I just want to make sure when you resubmit it it's in color --

MR. ZIMMERMAN: Yeah, we'll, we'll resubmit it later today. We'll, we'll resubmit it.

ALJ: Okay, that's fine.

MR. ZIMMERMAN: Yeah.

ALJ: We just, we have --

MR. ZIMMERMAN: Okay.

ALJ: -- a black and white copier so --

MR. ZIMMERMAN: We all, we all can make mistakes and I'm not criticizing the, you know, the mistake on lot one, okay. So, then we get the average lot size for at least this area of Greenspring Manor, not counting lot one, would be ten thousand four hundred fifty-four square feet. Does that, and that makes, that's about .24 acres. You can check, does that sound right, Mr., Mr. Bishop?

MR. BISHOP: (inaudible).

MR. ZIMMERMAN: Okay.

MR. ROSENBLATT: At this point, Judge, Mr. Zimmerman is basically just testifying to this exhibit. We, we can agree it says what it says.

MR. ZIMMERMAN: I'm asking Mr. Bishop whether it looks correct. I mean, you can do the multiplication in ten seconds on a smart phone.

ALJ: Sir, understood. Mr. Bishop, do you, does this look correct to you?

MR. BISHOP: I, I just did the math on my calculator and ten thousand four hundred fifty-four square feet is .239 acres.

MR. ZIMMERMAN: Okay. Thank you so much. Okay. Now, to be perfectly fair, if we added in lot one, and you can do the math later, I think we would prob, and I haven't, I haven't done it myself, but I, just doing it in my head, I think we would come close to your thirteen thousand five hundred square feet average.

If we, if we added in the three acres or maybe, I'm not sure, thirteen thousand, I don't know what we'd come up with exactly. But obviously we'd come up with a, a larger, a larger number, maybe twelve thousand to thirteen thousand. You can, you can let me know if you'd like.

ALJ: All right, are you asking a question?

MR. ZIMMERMAN: Is that corr, you know, if you add in the lot one, you're going to get a somewhat larger average,

maybe closer to your thirteen thousand five hundred, if not up to that.

MR. BISHOP: Correct. It would be larger.

MR. ZIMMERMAN: Yeah, okay. And, all right, when I first did this exhibit, I had one seven and four three as your low and high. That's obvious, that has to be corrected also. It's, we saw it's .495. But anyway, the effective lot density I have at the bottom.

If my numbers are correct, sixty lots, two to sixty-one on fourteen and four acres, you get 4.2 lots per acre, at least for that particular point of view, that area. Those numbers are obviously correct, are they not, Mr. Bishop?

MR. BISHOP: I, they may be, but I --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- take issue with your approach that, I mean, how do you not include the entire tract in that overall density?

MR. ZIMMERMAN: Okay. Well, if we take sixty-one, we'll, you know what? We'll get to that in a moment. But if we take sixty-one lots on thirty-nine acres, we're going to get pretty close to 1.6 lots per acre. Does that sound right?

MR. BISHOP: You would get something close to the mix of DR-1 and DR-2, which is (inaudible) zoning.

MR. ZIMMERMAN: Okay and question of course is the master plan. Okay. Now, this is People's Counsel thirty-one

and yes, these are my statistics. I put them together and some of it is a repeat. The top is my average lot size calculation for lots two to sixty-one. I have an asterisk at the top, this does not include lot one. You know, we can, we can do another exhibit where we include lot one and see how much the average goes.

Now, the median I corrected on this one. It's, it's not, it's not .43 as previously assumed, it's .495. So, do you, do you agree that right in the middle is .3325 acres? And you can check me on, do you agree with that?

MR. BISHOP: In the middle of (inaudible) --

MR. ZIMMERMAN: Halfway between .17 and .495 is .3325. You take the --

ALJ: Mr. Zimmerman, first, can you zoom in?

MR. ZIMMERMAN: Yeah.

ALJ: And then second, can you just ask one question at a time so that --

MR. ZIMMERMAN: All right.

ALJ: -- he can respond so the record is clear that he's responding --

MR. ZIMMERMAN: Right.

ALJ: -- to whatever question you're asking.

MR. ZIMMERMAN: Okay.

ALJ: Instead of testifying. Remember, ask him a question.

MR. ZIMMERMAN: All right.

ALJ: Please.

MR. ZIMMERMAN: Mr. Bishop, take a look at my statistics under the median lot size calculations and then, you know, tell me what you think as to whether they're accurate, not accurate, you know, assuming that I'm right that the median, do, do you agree the median, generally speaking, is the midpoint in statistical approach?

MR. BISHOP: Correct. I would agree, agree with that. I still don't think I agree with your, your approach to how you handle the land area but your calculations here, I mean, I can do the math and I'm sure that they're correct.

MR. ZIMMERMAN: Okay, okay. Yeah, we can ar, people can argue about the relevance, right, of it. But we do end up with, it, to be expected, since the, the median is a larger number than the average, so you would expect that more of the lots would be below the median than above the median, correct?

MR. BISHOP: (inaudible) statistics, you want to get into statistics about average versus median.

MR. ZIMMERMAN: Okay. Well, all right. Well, it is what it is. But fif, fifty-three, you can check me on this, let me know later if you want to if, if this, this is incorrect. But I've got fifty-three of the sixty new lots are below the median. Does that sound logical to you, based on your understanding of the lots?

MR. BISHOP: Probably somewhere (inaudible) but again, me answering that without you including lot one and --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- some other areas in the analysis, I think would be disingenuous for me to give you an answer on that.

MR. ZIMMERMAN: Okay. Well, for the median at least, if we add in lot one, we end up eight above that median. I guess the median would slightly, the med, obviously, the median would be hugely different. The median would be way different if, if we started with three acres instead of .495. And we can ar, we can all argue about the relevance of that. Yes, so I --

MR. BISHOP: And then, and then (inaudible) --

MR. ZIMMERMAN: (inaudible) comments further? You want to comment --

ALJ: Mr. Zimmerman. Mr. Zimmerman, you have to ask questions.

MR. ZIMMERMAN: All right. Okay. So, you, you --

ALJ: Hold on, Mr. Zimmerman. You keep making statements, I need you to ask questions so that he can answer them.

MR. ZIMMERMAN: All right.

ALJ: Please? Okay.

MR. ZIMMERMAN: Sorry. Mr. Bishop, would you like to make any further comment on what we've seen with the median,

those numbers?

MR. BISHOP: No, no.

MR. ZIMMERMAN: Okay. Now, the mode, do you know the mode, do you know that the mode is a statistical term meaning the value appearing most often?

MR. BISHOP: I'd prefer not to get into statistics and the difference between an average mien and mode.

MR. ZIMMERMAN: All right. Well, anyway, do the segments of, the thousand square foot segments that I've listed under mode, do those look accurate to you?

MR. ROSENBLATT: Judge, objection. At this point, this is an incredibly poor use of time. If Mr. Zimmerman is proffering that he created, these are his numbers, he created this, then we can have this as an exhibit and he can argue to relevance.

MR. ZIMMERMAN: Okay.

MR. ROSENBLATT: Mr. Bishop has never seen this before and he's just asking him does this document say what it says. It's, it is what it is. If we're going to let this in, we don't need to ask him questions about it. He has nothing to offer on this.

ALJ: Mr., Mr. Zimmerman, did you want to just offer this as an exhibit and --

MR. ZIMMERMAN: I, I would and I was almost finished, to be honest. But yeah, I would like this, I would like this

to be a demonstrative exhibit --

ALJ: Yes.

MR. ZIMMERMAN: -- and if, you know, if anyone can find that there's any inaccuracy on the math, you know, I'm open to that --

ALJ: Okay, hold on --

MR. ZIMMERMAN: -- and it does say, I'm sorry, Judge.

ALJ: -- Mr. Zimmerman, hold on, Mr. Zimmerman. Mr. Rosenblatt, I assume you have no objection to thirty-one?

MR. ROSENBLATT: No, just --

ALJ: And Mr. McCann?

MR. MCCANN: No objection.

ALJ: Okay. So, Mr. Zimmerman, it's, if you want to ask questions of Mr. Bishop in terms of, you know, what you're doing, in other words, if we were in a courtroom and you were standing at a chalkboard and you wanted to write this out and make a demonstrative, you know, just make it --

MR. ZIMMERMAN: All right.

ALJ: -- you know, a point to it and ask him questions, you can ask him questions about that. I'm not saying you can't.

MR. ZIMMERMAN: Okay.

ALJ: I just need a question, I just need a question --

MR. ZIMMERMAN: I get it. I get it. And I'm almost,

I get it, Judge, sorry.

ALJ: I just, but, you know, and, and, but, and then on the other hand, if, if you don't really need him to, ask questions of him, you could argue this in your, you know, at the end.

MR. ZIMMERMAN: Right.

ALJ: Yeah, --

MR. ZIMMERMAN: Well, I'm just about done, just about done.

ALJ: Okay, that's fine. I'm not trying to rush you.

MR. ZIMMERMAN: All right.

ALJ: You can also ask him questions about it, because you have a right to cross examine him.

MR. ZIMMERMAN: Yeah.

ALJ: Yep.

MR. ZIMMERMAN: So, well, I'll just ask a couple. Does, based on what you know of your plan, does it surprise you that the largest number of lots by thousand square foot segments is in the eight thousand to nine thousand square foot range at thirteen of the lots, the numbers of which are identified on this exhibit? Does, does that sound, you know, like based on all the work you've done, that, that would be correct?

MR. BISHOP: I'd have to do my own math. I'm not going to tell you that (inaudible) --

MR. ZIMMERMAN: Okay, all right. And just to, since you asked about adding lot one, we did do that for, on this exhibit at the very bottom to get you the lots per acre for the entire site, sixty-one lots on thirty-nine acres, 1.56 lots per acre. Let me know, you know, does that math look right or do you want to check it at some point?

MR. BISHOP: No, I think, I can check it but that sounds better.

MR. ZIMMERMAN: Okay.

MR. BISHOP: That sounds closer to what I would expect (inaudible) --

MR. ZIMMERMAN: Okay. Yeah, for the, for the whole site. Yeah, obviously you disagree with my point of view on the, you know, the 14.4 acres for the lots two to sixty-one, I get that. Okay. I think that does it for this exhibit. Okay, give me one moment and we'll go to the next one. Okay. All right. That brings us to, let me, let me stop sharing for a moment. That brings us to, to the, well, actually go back to, back to Exhibit 4. Let's go back to Torch Hill. Do you happen to know the lots, lot and, and area, property size situation on Torch Hill?

MR. BISHOP: I don't, that's not one of my projects.

MR. ZIMMERMAN: Not one of your projects. Okay. All right. I'm going to show you, this is People's Counsel Exhibit 23. And we could have put in Judge Murphy's opinion, I

suppose. But I'm going to show you, this is Planning Department concept plan conference comment.

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Okay.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: The concept plan, not even the development plan, the concept plan conference comment from a different case has no relevance and should not be admitted in this case. We're not here to talk about this project.

ALJ: It's hard to see. Are you, is this for Torch Hill?

MR. ZIMMERMAN: It's, yes. I'm only showing it for the, to get this, the property size and the lots and the number of lots and the property size. That's the only thing I'm interested in.

ALJ: Well, he, again, he just said that he's not familiar with the lot sizes because he didn't work on Torch Hill. So, how --

MR. ZIMMERMAN: Okay.

ALJ: -- I mean, I don't know how --

MR. ZIMMERMAN: All right.

ALJ: -- again, this could be something you could argue and it's a County record. But how is, I mean, just to get him to acknowledge what's written here, it doesn't really--

MR. ZIMMERMAN: All right.

ALJ: Yeah.

MR. ZIMMERMAN: All right. I'm going to stop sharing for a moment. Actually, let me, let me go back to four. Now, so, Mr. Bishop, you included in your color coded exhibit at least four, maybe more, twentieth century subdivisions, correct?

MR. BISHOP: I think based on what you showed me before that would be correct.

MR. ZIMMERMAN: Yeah, and yet you omitted the most current subdivision. Why did you omit Torch Hill?

MR. BISHOP: I think I told you that before, that Torch Hill wasn't even a project when we put this together, or hadn't been before the County, so why would I include that? How would I know if it was approved or not? I mean, or how would I know if it was going to be approved in the form it was presented originally? So, it, it didn't make sense to put that in the analysis.

MR. ZIMMERMAN: It, it was already just about to go to hearing and actually hearing completed prior to today and, I mean, by September 20th, it was about to go to hearing, I don't have the dates. It was, and it was proposed, it was a pending project, which might be approved. Isn't that something you would want to examine as much more relevant than ancient history subdivisions?

MR. BISHOP: No. In my opinion, no.

MR. ZIMMERMAN: Okay. So, --

MR. BISHOP: (inaudible) --

MR. ZIMMERMAN: -- you don't think Torch Hill has any relevance to this case?

MR. BISHOP: It may now that it's been approved, but at the time, I said that wasn't, you know, information that was available at the time we did this analysis.

MR. ZIMMERMAN: All right. Well, --

MR. BISHOP: (inaudible).

MR. ZIMMERMAN: -- let's assume that you're right, that you, you didn't need to bother with it when, when did you do this? Two years ago? This, this exhibit? When, when was this prepared?

MR. BISHOP: This exhibit was done as part of our initial development plan submittal.

MR. ZIMMERMAN: Well, how many years ago was that?

MR. BISHOP: Two thousand twenty-one.

MR. ZIMMERMAN: Okay. Well, wouldn't it make sense to update it now that Torch Hill has been approved?

MR. ROSENBLATT: Objection. This witness has been on the witness stand since before the project was approved. I haven't been able to talk to him for a month because Mr. Zimmerman wasn't ready to ask him questions at the last hearing. And now we're questioning him on something that took place in the interim.

ALJ: Well, I mean, my understanding is this exhibit was prepared in 2021.

MR. ZIMMERMAN: Okay.

ALJ: His testimony is he didn't include Torch Hill, but the question is whether or not, do you think that that is relevant or should be included or should be updated. So, overruled. Go ahead, Mr. Bishop.

MR. BISHOP: I don't see why we couldn't update this exhibit to include the Torch Hill case.

MR. ZIMMERMAN: Okay and are you aware, by now, that it's thirty-two lots on forty-two acres?

MR. BISHOP: I'll take your word for it.

MR. ZIMMERMAN: All right. And I assume Mr. Rosenblatt is not going to disagree with that, but all right.

ALJ: All right, Mr. Zimmerman. Just try to keep the comments out of it.

MR. ZIMMERMAN: All right. All right.

ALJ: Thank you.

MR. ZIMMERMAN: Okay. Now, we're ready to go to Developer's Exhibit 9. If I can find it. Okay. What, you, you prepared this smart coded exhibit, which runs several pages, did you not?

MR. BISHOP: I did, yes.

MR. ZIMMERMAN: Okay and you personally prepared this, I assume?

MR. BISHOP: I did.

MR. ZIMMERMAN: Okay and when did you prepare this one?

MR. BISHOP: Same time frame as Exhibit 4.

MR. ZIMMERMAN: Okay. Sometime in 2021?

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay, all right. So, you've got five, is it five? How many, let me just, I've got to move down a little bit. I thought you had five different items for this. Let's see. Am I correct? Can you tell me how many other T-3 areas that you were looking at?

MR. BISHOP: That we analyzed? I'd, I would have to look through the document you have here.

MR. ZIMMERMAN: All right. Well, let's, and these were, you prepared this, did you not, to show some other T-3 transect areas and, and --

MR. BISHOP: Correct.

MR. ZIMMERMAN: -- you had some photographs, correct?

MR. BISHOP: Correct.

MR. ZIMMERMAN: So, we got one on, and I'm going to go through this one at a time. You got one on Mayfair Field Drive, I, you know, I'm just, the arrow, obviously, there are other streets in the area, but --

MR. BISHOP: Right.

MR. ZIMMERMAN: -- your arrow points to Mayfair Field

Drive, does it not?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay, all right. We're going to go back and forth, so. Let's go to People's Counsel thirty. So, the first one I, let's look at a, a sample lot on Mayfair Field Drive. And is this legible or do I have to zoom up on this?

MR. BISHOP: I can see it.

ALJ: It has, yeah, you can see it, but if you want him to read it, you're going to have to zoom in.

MR. ZIMMERMAN: Is that better?

ALJ: Better.

MR. ZIMMERMAN: Okay. I just happened to take a sample lot, what did I, okay, 11705 (inaudible), all right. That's, that's the, that's how we got this, do you see that here's 11705, just a sample.

MR. BISHOP: Sure.

MR. ZIMMERMAN: Okay. So, now, you know from your expertise, that if you, you get the SDAT, which I'm, you see the SDAT, and you're very familiar with that kind of data, are you not?

MR. BISHOP: I am, yes.

MR. ZIMMERMAN: Okay. So, each one of the SDATs refers to the subdivision plat, correct?

MR. BISHOP: Correct.

MR. ZIMMERMAN: You see the plat reference? Do you

see the plat reference, 0064?

MR. BISHOP: I do.

MR. ZIMMERMAN: 0103? Do, I'm sorry, I'm making sure it's a question. Do you see that?

MR. BISHOP: I do.

MR. ZIMMERMAN: Okay.

ALJ: Mr. Zimmerman, what's, what exhibit number are you on?

MR. ZIMMERMAN: Thirty, People's Counsel. Do I have the right number? Yes, thirty. I'm pausing so that the Judge can have thirty at her fingertips.

ALJ: Okay, (inaudible).

MR. ZIMMERMAN: Are we ready?

ALJ: I am, I'm on thirty now, right. The exhibit that I have, the hard copy is not in color, just so you're aware.

MR. ZIMMERMAN: Oh.

ALJ: That what's on the screen is in color but what's here is not in color.

MR. ZIMMERMAN: All right. Well, I don't know how--

ALJ: Go ahead.

MR. ZIMMERMAN: -- we certainly meant to have it in color, but.

ALJ: Sure.

MR. ZIMMERMAN: Okay. So, this is a, turns out that

this is a subdivision circa 1992.

MR. ROSENBLATT: Again, not a question.

MR. ZIMMERMAN: Is this, is this a 1992 subdivision Mayfair second amendment of Mayfair 1992?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay. So, again, pre, this predates the 2020 master plan, does it not?

MR. BISHOP: It does.

MR. ZIMMERMAN: Okay. Now, I, okay, let's, now, the next one, without going back to your exhibit, do you recognize that number two is Valleywood? You've got, and we can go back and get the, the street, but you've got the Valleywood subdivision as your second item, 1979?

MR. BISHOP: Yes, I see that.

MR. ZIMMERMAN: Okay and then, I mean, is that, rather than spending a few minutes, you know, going back and showing you the street and so on, do, do you recognize that you used the area where the Valleywood subdivision is?

MR. BISHOP: I, I didn't look at them based on subdivision name. I'd have to see the map and tell you.

MR. ZIMMERMAN: Okay, we can do that. If I can, see, a second. All right. So, is this Thornton Road and --

ALJ: You're going to need to zoom in and if you can say which page you're on.

MR. ZIMMERMAN: I think we're talking the third page

of the exhibit that shows the area of Thornton Road, near Thornton Road.

MR. BISHOP: Is that, you're asking me if that's the subdivision plan we were just looking at? I'm not sure (inaudible) but --

MR. ZIMMERMAN: Yeah, let's, well, let's go, try to zoom in on it.

MR. BISHOP: I'm not sure how, if it's really that relevant, I think I trust that you'd hold up the right subdivision plats based on my exhibits, but.

MR. ZIMMERMAN: Well, let's, --

MR. BISHOP: Valleywood seems to be a different shape on the corner there then what you showed me before on Thornton.

MR. ZIMMERMAN: Well, where's this, okay. All right. Well, all right. Do you recognize that, and whether it's the (inaudible) at least we've got the one on Five Farms Lane. Do you recognize that one of your exhibits is in the Five Farms subdivision area, Valleywood?

MR. BISHOP: You'd have to go back and show me that piece of my exhibit. I believe it is, but I'd have to see it again.

MR. ZIMMERMAN: Let's go back up. Okay, here we go. Five Farms Lane area?

MR. BISHOP: Yes. That one looks correct. That one matches.

MR. ZIMMERMAN: Valleywood? Okay, that's 1979, isn't it? I mean, should I go, do we have to go back to the subdivision plat or --

MR. BISHOP: No, I saw the subdivision plat.

MR. ZIMMERMAN: Yeah.

MR. BISHOP: It said '79, yes.

MR. ZIMMERMAN: And that's been there a long, long time, anyone, right, off Timonium Road --

MR. BISHOP: Nineteen seventy-nine, correct.

MR. ZIMMERMAN: I mean, that, you know, do you, do you know that that's, that that subdivision has been there a very long time?

ALJ: Well, he, he said 1979.

MR. ZIMMERMAN: All right, all right.

ALJ: But wait, he saw your Valleywood plat, your Valleywood plat said --

MR. ZIMMERMAN: Okay.

ALJ: -- 1979, and then he acknowledged that that was near the Five Farms --

MR. ZIMMERMAN: Okay.

ALJ: -- you know, (inaudible).

MR. ZIMMERMAN: All right. Then we've got, sorry, thanks, Judge.

ALJ: Yep.

MR. ZIMMERMAN: The, the, the next one is near

Thornton Road, on a, on a little, kind of a local street near Thornton Road. This would be north of Joppa Road, would it not, Mr. Bishop?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay, yeah. Not, not far from where the Royal Farms is and the bridge and all that, right?

MR. BISHOP: (inaudible)

MR. ZIMMERMAN: You have to cross the bridge and --

MR. BISHOP: (inaudible).

MR. ZIMMERMAN: -- yeah. Okay. So, so, let's see if we can go to the next one. Chelsea Bridge Way near Thornton Road, okay? Does that look like your third --

MR. BISHOP: That's right.

MR. ZIMMERMAN: Okay. So, we got, got a sample, do you see the SDAT on the particular lot on Chelsea Bridge Way?

MR. BISHOP: I do.

MR. ZIMMERMAN: Okay. Then we end up with 1984. Our good friend David Thaler did this one. I can zoom in, you see, you see the date, right?

MR. BISHOP: I can read 1984, the signature date, yes.

MR. ZIMMERMAN: And just so we get a little better shot of this, okay. There's, you know, there we see that well known area. Okay. Okay and, I mean, I could spend a few more minutes going through the last two but, let's see. Well, we

might as well let everybody who's watching see what this is all about. All right. This may be your fifth one in Pikesville. Where's your arrow on this one? There we go. Stone, this is the Stevenson Crossing area, do you recognize that?

MR. BISHOP: I do, yes.

MR. ZIMMERMAN: Yeah. So, I think this may have been actually your last one. So, does this look like the area --

MR. BISHOP: It does, yes.

MR. ZIMMERMAN: It does, yeah. Another David Thaler job way back from 1979. Do I need to zoom up on this one?

MR. BISHOP: No, I can see it, 1979.

MR. ZIMMERMAN: Okay, 1979. There's only one other one left. Would, and this is Valley Green from 1956. Do you recognize this as, you know, not far from the Valley Country Club, Jeffers Lane, Yarborough. Do we have to go back to your exhibit?

MR. BISHOP: No.

MR. ZIMMERMAN: No? Okay.

MR. BISHOP: No.

MR. ZIMMERMAN: So, the, just a, you know, whether or not you agree, let me ask it in a question form. It so happens that each one of the areas that you chose for Exhibit 9 is a twentieth century subdivision, you know, going back, some of them going back as far as like six, I don't know, like seventy, fifty, sixty, seventy years.

MR. BISHOP: So, you're arguing that we shouldn't include any previous precedent for housing and development in Baltimore County?

MR. ZIMMERMAN: Well, (inaudible) the Judge is instructing me to ask questions, --

MR. BISHOP: (inaudible) --

MR. ZIMMERMAN: -- I'm simply asking you to confirm, I'm not arguing the case at the moment, we'll, be time for that. I'm just asking you to confirm the areas that you did choose are twentieth century subdivisions, some of them going back, you know, fifty years or more.

MR. BISHOP: Yes, you showed the dates on the plats of the areas that we used.

MR. ZIMMERMAN: And you did not choose Torch Hill as an update, for example, did you?

MR. BISHOP: And I explained because it didn't exist at the time of our analysis, correct.

MR. ZIMMERMAN: But, but it was well into the process, was it not? It was --

MR. ROSENBLATT: Objection. Asked and answered.

ALJ: Yeah, the, that one was --

MR. ZIMMERMAN: All right.

ALJ: -- asked and answered, Mr. Zimmerman --

MR. ZIMMERMAN: All right.

ALJ: -- so I did, I did, I got, I got your point on

it, thank you.

MR. ZIMMERMAN: Okay --

ALJ: (inaudible) --

MR. ZIMMERMAN: -- and for the record, you did not choose Woodleigh Park, did you?

MR. BISHOP: I'm not familiar with Woodleigh Park.

MR. ZIMMERMAN: Okay. You did not choose Davis Farms did you?

MR. BISHOP: I did not use Davis Farms.

MR. ZIMMERMAN: Okay, okay. That's all on this exhibit.

ALJ: Any objection to People's Counsel Exhibit 30, Mr. Rosenblatt?

MR. ROSENBLATT: It's hard to see because we jumped around a bit, but assuming it's all plats and SDAT sheets I have no objection.

MR. ZIMMERMAN: Okay.

ALJ: Well, do you have a copy of it? Have you seen it? Mr. Rosenblatt? Did you --

MR. ROSENBLATT: Yeah, I, I was, I was e-mailed a, a link to a series of exhibits this morning. So, I, I did glance at it and I'll, I'll pull it up, but I, I don't have an objection. I didn't see anything that's not a record plat or an SDAT sheet.

ALJ: And Mr. McCann, any objection?

MR. MCCANN: No objection, thank you.

ALJ: Thank you.

MR. ZIMMERMAN: Okay. That's all for that exhibit, Mr. Bishop. So, just to kind of maybe follow-up on your last answer, I, I assume, or let me know, have you read Judge Paul Mayhew's decision in the Davis Farms case?

ALJ: Now, why, why does he need to talk about that right now? Has he read it? I mean, he's not, again, he's not an attorney.

MR. ZIMMERMAN: All right, okay. Well, the --

ALJ: Is there --

MR. ZIMMERMAN: -- the reason I asked the question is because he brought up all these other areas for comparison.

ALJ: Okay.

MR. ZIMMERMAN: So, that's all --

ALJ: But you went through all those.

MR. ZIMMERMAN: All right, all right. Well, I was asking what he didn't look at, okay? So, all right, I --

ALJ: Correct. You did and he said he did not use them.

MR. ZIMMERMAN: I'll move, I'll move on.

ALJ: Okay.

MR. ZIMMERMAN: So, that's all for that subject matter. But now we're going to move into the setbacks, okay. So, --

ALJ: Is everyone doing okay? Does anyone need a break? I, just let me know because, you know, I'll just, I'll go on and on and I won't stop, so if anyone needs to break, just let me know. No, I see no hands, okay. Keep going.

MR. ZIMMERMAN: Okay. So, now we're going to, we're going to do a little sharing again. And we're moving on, if I can, okay. Let me locate, all right. You recognize, this is a close-up, Mr. Bishop. Do you recognize this as a close-up of the unit layouts --

MR. BISHOP: I do.

MR. ZIMMERMAN: -- on the Developer's Exhibit 1-B?

MR. BISHOP: I do, yes.

MR. ZIMMERMAN: Okay. Is this fairly readable or do we need to, do we need to upgrade this, Judge, to make it more legible?

ALJ: You, you, it would be better if you zoomed in, just, if you could click it a couple times. Yep, all right. Go ahead.

MR. ZIMMERMAN: Okay. Now, Mr. --

ALJ: Now, this is, for the record, People's Counsel twenty-six.

MR. ZIMMERMAN: Yeah, thank you, thank you for that. Mr. Bishop, you remember that Mr. McCann asked you about this?

MR. BISHOP: I do.

MR. ZIMMERMAN: The setbacks. And correct me if I'm

wrong but did you say that this is not meant to be definitive, the setbacks here, which are shown to be actually the minimum?

MR. BISHOP: Right, these are represent, representative of typical layouts for the zoning office.

MR. ZIMMERMAN: Okay. So, the question then is, well, did you particularly prepare these layouts or was that part of your team under your supervision?

MR. BISHOP: I prepared these.

MR. ZIMMERMAN: Okay. So, why did you choose the minimum rather than some other number or, yeah, why did you choose those numbers?

MR. BISHOP: This is something we do on every project. They're typical lot layouts and it's used by the zoning office when they get building permits in to check to make sure that the building permits meet the minimum setback requirements. So, that's what they asked us to do, was to show the minimum setback requirements.

MR. ZIMMERMAN: Okay, all right. Is there anything in writing, or is that just a verbal custom that, that they ask you to do that?

MR. BISHOP: That's just something they've always asked me in my sixteen years of doing this in Baltimore County.

MR. ZIMMERMAN: Okay, okay. Now, can, is there anything on the site plan that allows us to know exactly what the setbacks are on every single lot?

MR. BISHOP: We add labels, setback labels, on a lot of the lots, but there's no requirement to label every single lot.

MR. ZIMMERMAN: Well, the question is, have, whe, whether or not there's a, quote unquote, requirement, and we could go back to Developer's 1-B, but does, does each of the lots have a number for the setbacks?

MR. BISHOP: Each of the lots meets the setback requirements. I'm not, I can't tell you if, without looking at the plan, every single front, side and rear yard is labeled.

MR. ZIMMERMAN: Does, is there a single lot, is there any lot on Developer's, do you have Developer's 1-B at your fingertips, or you know, --

MR. BISHOP: I do.

MR. ZIMMERMAN: Okay. Do any of the lots show the specific setbacks?

MR. BISHOP: They do. There's a dashed line that shows the front, side and rear setback lines that we're not crossing over.

MR. ZIMMERMAN: All right. Well, what are the set, what is the setbacks on lot two?

MR. BISHOP: What are the setbacks on lot two? Twenty-five foot front yard, thirty foot rear yard, thirty foot building to building.

MR. ZIMMERMAN: Okay. Fifteen foot side yard, in

other words, yes? Is, is it, when you have thirty foot building to building, does that mean fifteen feet side yard?

MR. BISHOP: I don't, I don't want to get technical, but it's a total of thirty. It doesn't necessarily mean to be fifteen, but basically, yes.

MR. ZIMMERMAN: I mean, building to building is one lot to another lot, is that correct, I mean, --

MR. BISHOP: Correct. But you could move that center lot line around and have twenty on one side and ten on the other.

MR. ZIMMERMAN: Okay. Well, ten you'd need a variance, wouldn't you?

MR. BISHOP: Not if it's thirty foot building to building.

MR. ZIMMERMAN: There's no side yard setback requirement then, is that what you're telling us?

MR. BISHOP: I'm pretty sure in this, in this zone that it, it is a building to building setback requirement and not --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- interior side yard --

MR. ZIMMERMAN: Okay. So, thirty feet would be the minimum?

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay. So, my, to my, to the best of

my recollection, correct me if I'm wrong, when you answered Mr. McCann's questions on setbacks and I'm going to stop sharing for a moment. You said there are plenty of lots, quote unquote, plenty with larger setbacks, did you not?

MR. BISHOP: I don't recall if that was my exact testimony.

MR. ZIMMERMAN: Well, --

MR. BISHOP: There are several lots that are, have larger setbacks.

MR. ZIMMERMAN: All right. Can you please identify which lots have larger setbacks, which setbacks they are and how much larger?

MR. BISHOP: You want me to go through all sixty-one lots?

MR. ZIMMERMAN: Yeah, I mean, I mean, yes. I mean, or do, you know, do you know of the sixty, of the sixty, obviously, lot one has larger, we know that. But do, do you have any idea how many --

MR. BISHOP: I haven't done that analysis. I could spend time and do that analysis. But right now, --

MR. ZIMMERMAN: Yeah.

MR. BISHOP: -- I'd have to sit here and spend time identifying for you which ones. But I know, just looking here, that several of these have much larger rear yard setbacks than the minimum thirty feet.

MR. ZIMMERMAN: And what does several mean? Is it two of them, five of them, I mean, what are we talking, and which setbacks? I mean, how do we get a better understanding of precisely what the setbacks are on every single lot?

MR. BISHOP: You look at the development plan and you look at the front, side and rear yard setback lines and you can see that we're within them.

MR. ZIMMERMAN: Would a, is there even a scale on your development plan that will allow me to use a ruler --

MR. BISHOP: Yes, it is a scale drawing.

MR. ZIMMERMAN: And what is the scale? And where is it, and where is it stated?

MR. BISHOP: Right underneath the drawing, it says site plan and there is a scale written there --

MR. ZIMMERMAN: Well, what is the scale for the, for the rather small looking, you know, the lots are, are not very big on the plan, the, the way they're drawn.

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: What is, okay, what is the scale exactly? One inch to how many feet?

ALJ: All right, that's the question. All right. It's overruled. Go ahead.

MR. BISHOP: One inch equals sixty feet.

MR. ZIMMERMAN: One inch is sixty feet. So, what is the largest, putting aside lot one, what is your, can you give

us an estimate, a number, or do you feel comfortable giving us a number of how many lots have larger than thirty feet building to building setbacks?

MR. BISHOP: I, --

MR. ZIMMERMAN: And how much larger, and how much larger?

MR. BISHOP: I don't feel comfortable doing that analysis unless I had the, was given the time to go through each one and measure that for you.

MR. ZIMMERMAN: I guess the question is, why didn't you do that since it's --

MR. BISHOP: (inaudible) something that's required. It's not required for us to show what's more than the minimum. We only have to prove that we meet the minimum requirement.

MR. ZIMMERMAN: Well, would it have been reasonable to have done that in light of the transect criterion of deep setbacks?

MR. ROSENBLATT: Objection.

ALJ: Well, it's a fair question because it's in light of the transects, so go ahead. Overrule.

MR. BISHOP: The front setback is shown graphically on every plan or on every lot on this plan. And the deep setback is related to the front setback and that's very easy to determine.

MR. ZIMMERMAN: All right. Would, would you be

willing, before this hearing ends or, to provide us with an illustration or a listing of the precise setbacks, front, rear and building to building for every single lot so that we can see it?

MR. ROSENBLATT: Objection.

ALJ: Yeah, I'm not, Mr. Zimmerman, see, I mean, he's not your, he's not your --

MR. ZIMMERMAN: All right.

ALJ: -- witness. I mean, you're, you're giving instruction to someone who's not your witness to, to --

MR. ZIMMERMAN: All right.

ALJ: -- calculate. But I think, but I think that, you know, but you've, your, I mean, your point is taken.

MR. ZIMMERMAN: All right.

ALJ: So, I'll sustain that objection.

MR. ZIMMERMAN: Okay. With reference back to your, come back for a moment to my, this is my Exhibit 26 and, again, it's a rep, an excerpt from your plan, is there any footnote or explanation to say that, that when we use the word typical, the word typical, that you're not really meaning typical, okay? It's, could be anything? I mean, is, is there any explanation that we're not to really take this seriously, as a typical, as typical layouts?

ALJ: Still, I mean, I, Mr. Zimmerman, his --

MR. ZIMMERMAN: All right.

ALJ: -- testimony was that these were for the zoning office, that they want to see these layouts and they probably told them to say typical layout. I mean, I'm not, I, you know, but you already made your point --

MR. ZIMMERMAN: All right.

ALJ: -- that, you know, that we don't really know where the individual setbacks are on each lot, so.

MR. ZIMMERMAN: All right.

ALJ: I mean, I think we're kind of parsing this here to the point of, you know what, you get --

MR. ZIMMERMAN: All right.

ALJ: -- it's the, we, the zoning office is making them do this, I guess.

MR. ZIMMERMAN: All right. Well, --

ALJ: So, --

MR. ZIMMERMAN: -- I got one more question on it. Did they, did anyone instruct you to use the word typical or was that your choice of words?

MR. BISHOP: As I mentioned before, I've been doing development plans like this for sixteen years. I've used that terminology that whole time for dozens of residential developments.

MR. ZIMMERMAN: But would you agree that it, if that's true, then the use of the word typical is not an accurate choice of words?

MR. BISHOP: It is the, it's a term that the zoning office makes us use. You could confirm that with them if you'd like.

MR. ZIMMERMAN: All right. Well, I'm not, I'm not challenging your, that they may like that. Okay. All right. You worked on the pattern book, did you not?

ALJ: Let me do this first. Any objection to twenty-six, People's Counsel twenty-six --

MR. ZIMMERMAN: Yeah.

ALJ: -- Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

ALJ: Thank you. Mr. McCann --

MR. ZIMMERMAN: All right. I'm going to, I'm going to stop sharing.

ALJ: -- hold on. Mr. McCann?

MR. MCCANN: No objection, thank you.

ALJ: Thank you.

MR. ZIMMERMAN: Okay. Is there anything in the pattern book that shows the setbacks?

MR. BISHOP: I'd have to look at the pattern book again, but I believe it has those typical lot layouts as well.

MR. ZIMMERMAN: But not anything more than that?

MR. BISHOP: No.

MR. ZIMMERMAN: Okay, all right. Now, it's time to go for the secondary, I'll call it secondary, well, I won't

characterize it, let's take a look at the residential performance standards. And let's find People's Counsel Exhibit 13. Now, I think, correct me if I'm wrong, but did you testify that the Planning Department made findings that approved your residential performance standards compliance?

MR. BISHOP: I'd have to look at their comments again, but yes, I believe at the end of their development plan comments it has a paragraph to that effect.

MR. ZIMMERMAN: Okay. So, now, during your testimony, you did produce, or you narrated verbally, an item-by-item description of how your plan complies with the, I'll call them RPS, is that, is that correct?

MR. BISHOP: That is correct.

MR. ZIMMERMAN: All right.

MR. BISHOP: We also gave a detailed, point by point, to the Planning Department during the review process.

MR. ZIMMERMAN: Right.

MR. BISHOP: And showing how we meet all of --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- two sixty.

MR. ZIMMERMAN: Is there anything in writing, which you provided the Planning Department or, or anywhere comparable to the narrative you gave? In other words, did, did you produce something in writing in the file or so far that goes through every single RPS and stated how you thought you met

them?

MR. BISHOP: That's what I just stated, yes. During our, between the concept plan and development plan, we submitted a point by point on how we met all of the residential performance standards requirements.

MR. ZIMMERMAN: And where is that written? Did you, have you produced that written description for, in your direct testimony?

MR. BISHOP: I did not.

MR. ZIMMERMAN: Okay.

ALJ: And so, for the record, Mr. Zimmerman, that is Baltimore County Exhibit 9. So, that was a County exhibit.

MR. ZIMMERMAN: Are we talking about the Planning Department comments?

ALJ: Correct, yeah.

MR. ZIMMERMAN: Okay.

ALJ: Planning Department comments (inaudible) --

MR. ZIMMERMAN: Thank you so much, Judge. And actually, we have a --

ALJ: Yeah, just, the point by point is nine, specific.

MR. ZIMMERMAN: Yeah.

ALJ: Okay?

MR. ZIMMERMAN: The point, can, I don't have that at my fingertips. Could, could you possibly share that exhibit

with us, is, is that possible?

ALJ: Do, do you want to share that right now?

MR. ZIMMERMAN: Yes, but I'm, I, I --

ALJ: Okay.

MR. ZIMMERMAN: -- I can't do it. I don't know how to do it. I don't have it, I mean.

ALJ: Okay. Hold on a second.

MR. ZIMMERMAN: Are we talking about the Planning Department development plan conference comment or something else?

ALJ: Hold on, I was muted. It, you, you wanted the point by point, right?

MR. ZIMMERMAN: Well, that, but I actually, I, I did want, and which I don't have for sharing, the Planning Department comments.

ALJ: This is exhibit number, County exhibit number nine, which is the point by point he just mentioned. For, in response to the development plan comments --

MR. ZIMMERMAN: Okay. Let's take a, let's take a, yeah, I didn't have this available. So, let, let's see, Mr. Bishop, did this document include an RPS itemization?

MR. BISHOP: Yes.

MR. ZIMMERMAN: Okay and can you tell us where it is?

MR. BISHOP: It's an eleven page document, I believe if you --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- scroll through, there it is. Section two sixty compliance.

MR. ZIMMERMAN: Okay, okay. All right. Thank you for that. And, Judge, I don't have it convenient at my fingertips, but could we, could you, could you share with us the Planning Department comments?

ALJ: Did you want the --

MR. ZIMMERMAN: Both the concept plan and development plan conference comments? I have them in my Exhibit 3, but, unfortunately, didn't upload them for sharing. I --

ALJ: So, do you want the concept plan comments first?

MR. ZIMMERMAN: Yes, and then the development plan conference.

ALJ: Okay. Hold on just a second.

MR. ZIMMERMAN: Thank you for that. That's the only exhibit that I don't have uploaded.

MR. ROSENBLATT: Judge, was the, the Planning Department final report also an exhibit? I'm sorry --

ALJ: Yep, you're good. I'm muted. Yes, it was. I was just trying to find the, actually, yeah, so for whatever reason, it was the hearing officer's hearing report and the development, the hearing officer's hearing report is the one actually. So, let me pull that one up, okay?

MR. ZIMMERMAN: Okay.

ALJ: Okay. Here you go. So, Mr. Zimmerman, this is County exhibit, for the record, number seven. And so, this was the memo that Mr. Williams --

MR. ZIMMERMAN: Okay.

ALJ: -- (inaudible) he submitted, but then attached to it is the actual hearing officer's --

MR. ZIMMERMAN: Right, okay.

ALJ: -- hearing report dated --

MR. ZIMMERMAN: Yep.

ALJ: -- November the 8th of 2021.

MR. ZIMMERMAN: Okay. In fairness, for whatever reason, I hadn't seen the first page, but that's fine. But yeah, the November 8th, 20, yeah, that, that's kind of a cover sheet, is it not, Mr. Bishop, of the August 24th --

MR. BISHOP: Yes.

MR. ZIMMERMAN: -- and by the way, the, your, your own report, or itemization, that was shown by the Judge a few minutes ago, I think it was County Exhibit 9, so that, that, that wasn't the County file, was it not, or was it?

ALJ: It, it was in the file, yes.

MR. ZIMMERMAN: (inaudible) okay, all right.

ALJ: And that's why I made it an exhibit, because it was in response to --

MR. ZIMMERMAN: Okay, okay.

ALJ: -- it was in response to comments, and it's also listed in here, I believe.

MR. ZIMMERMAN: All right, that's fine. All right. Let's look at the November 8th, thank you, Judge, for --

ALJ: Sure.

MR. ZIMMERMAN: -- going to the page which, which is titled, where there's a paragraph titled residential performance standards, which is, is it page three or two, what, whatever page it is. So, --

ALJ: It's on the screen.

MR. ZIMMERMAN: Yeah, it's on the screen. And there are two sentences, are there not, Mr. Bishop? First indicating there's a requirement, the first indicates simply, and I'm paraphrasing, there's a requirement that there be compliance with residential performance standards, correct?

MR. BISHOP: Correct.

MR. ZIMMERMAN: Okay. The only finding, unless there's something else, well, let me know if there's anything else you're aware of, but the, I would ask you, the, the only finding is one sentence. The quote, and I'm quoting, the Department of Planning has reviewed the pattern book submitted on August 30, 2021 and recommends approval, unquote. Okay. Is there anything else, is there any other finding, the Department of Planning has actually made to elaborate or itemize, their findings?

MR. BISHOP: You want to scroll to the next paragraph, please?

MR. ZIMMERMAN: Sure.

MR. BISHOP: Can we read this one?

MR. ZIMMERMAN: Read whatever you'd like. Okay.

MR. BISHOP: And I think this is their finding, these two paragraphs, in their report.

MR. ZIMMERMAN: So, in, is there any explicit, is there anything else besides that --

MR. BISHOP: Not that I'm aware of.

MR. ZIMMERMAN: -- sentence, which, which indicates that they, to paraphrase, they received your point by point letter.

MR. BISHOP: I mean, that's what it says right there. Through a --

MR. ZIMMERMAN: Yeah.

MR. BISHOP: -- point by point response letter received on September 16th, 2021.

MR. ZIMMERMAN: Okay. I mean, there's no specific written description by the Planning Department of why they think each of your points is correct?

MR. BISHOP: Not that I'm aware of.

MR. ZIMMERMAN: They just agreed with you and that's the end of it, okay. Okay. All right. Now, let's, Judge, I think that, that's the only, those are all the questions I have

on this particular document. Let me ask you just about a few of the specific residential performance standards, Mr. Bishop. And let's go to the RPS. And I'm, I'm not going to go through every single one.

Okay. So, let's, let's go to the somewhat controversial issue of the Mays Chapel Road connection, or not, or not having connection. So, 260.4.A.1, correct me if I'm wrong, but was your explanation for compliance that basic, and I'm paraphrasing, that basically, you were satisfying at least one or two of the community associations?

MR. BISHOP: Excuse me, you mean --

MR. ZIMMERMAN: The reason for not having a street connection to the adjoining neighborhood --

MR. BISHOP: No, we do have a connection --

MR. ZIMMERMAN: -- (inaudible) was your explanation, well, do you think street, well, all right. I'm sorry. I didn't mean to interrupt you. But --

MR. BISHOP: (inaudible) --

ALJ: Ask him, ask him a question --

MR. ZIMMERMAN: Wasn't your, correct me if I'm wrong, wasn't your explanation for not having a, a traffic, a road connection that cars can go on, vehicles can go on, that you were satisfying one or two of the adjacent community associations? Was that your reasoning?

MR. BISHOP: No, I think that's partially what I

said. We are providing a connection but we are making it emergency only.

MR. ZIMMERMAN: Okay. Is it your interpretation that that RPS standard is satisfied by an emergency connection?

MR. BISHOP: Yes.

MR. ZIMMERMAN: And what is, what, what language is there to support that conclusion?

MR. BISHOP: My professional opinion is that we are providing a vehicular connection and a pedestrian connection to the adjacent communities. But because of traffic issues, because of community interest and other reasons, we think that having it be emergency access only is the best solution.

MR. ZIMMERMAN: Um hm, okay. And by the way, I have to ask you this. How is the fire department supposed to get through when there's a fire? What, what's the method?

MR. BISHOP: We haven't determined that exactly, but I've done that in the past with them where we have a movable (inaudible) or we have a (inaudible) box for emergency responders or squelch alarms. There are ways to have those opened by emergency responders.

MR. ZIMMERMAN: So, what's the plan here?

MR. BISHOP: I just mentioned, we don't have that fine detail yet. (inaudible) we haven't gotten to the point where we're pulling permits and doing construction yet.

MR. ZIMMERMAN: Have you communicated with the Luth,

is it Lutherville Volunteer Fire Department the closest fire department?

MR. BISHOP: I don't know. I'd have to look. I have not communicated with them specifically about this. I have on other projects.

MR. ZIMMERMAN: Well, are the firemen supposed to get out of their trucks and do something to get this gate open?

MR. BISHOP: Not necessarily. We can work with them on that. There's ways to do it where you do have to physically get out. There's other ways where you just blow your horn and the thing will open. Or you have a key card or --

MR. ZIMMERMAN: And how are the fire people supposed to know what they're supposed to do, all of them?

MR. BISHOP: This is not uncommon. This happens in several other communities where they'll be informed and they'll know what to do. This happens often in multi-family communities, apartment building communities.

MR. ZIMMERMAN: And the firemen never make a mistake, okay. All right.

MR. ROSENBLATT: Is that a question?

MR. ZIMMERMAN: All right. Let me ask you this --

ALJ: No comments. Mr. Zimmerman, try to keep the comments out of (inaudible) --

MR. ZIMMERMAN: All right, sorry. With reference to the diff, the, the points of view of the different communities,

I have to ask you, how did you decide to choose between the communities that don't want the normal, you know, the, the normal motor vehicle connection and the ones that didn't? You know, how, how did you make that choice?

MR. BISHOP: I'm not going to be the one to testify on that. We will have others who, who can talk traffic more than I can.

MR. ZIMMERMAN: Okay, all right.

MR. BISHOP: Yeah.

MR. ZIMMERMAN: All right. And did the Planning Department make a specific finding as to the reasonableness of having an emergency connection?

MR. BISHOP: Not that I'm aware of.

MR. ZIMMERMAN: Other than saying they reviewed your pattern book?

MR. BISHOP: Not that I'm aware of.

MR. ZIMMERMAN: Yeah. By the way, there's nothing in your pattern book, is there, that discusses the RPS, correct me if I'm wrong, please.

MR. BISHOP: I don't recall. I'd have to go through the pattern book and see it.

MR. ZIMMERMAN: All right.

MR. BISHOP: (inaudible) is in there but I don't --

MR. ZIMMERMAN: Okay.

MR. BISHOP: -- I don't recall.

MR. ZIMMERMAN: But in fairness, they said they reviewed your point by point response, or didn't they, okay. All right. While maybe not the biggest issue in the case, take a look at 260.3.A.1 and 2. The open space. Is there, does it require the open space be creating focal points along streets and in view of the development entrance? I mean, I'm, is that what it, basically it says?

MR. BISHOP: It says creating focal points along streets, which we do. I testified that we do.

MR. ZIMMERMAN: But isn't your open space, you know, around, is it eighty yards? I forget the number you gave. It's, it's at some, they're at some distance from Joppa Road, aren't they?

MR. BISHOP: Integrate open space areas into the proposed development by creating focal points along streets, which we have several different open space areas. And I would argue that they all have great focal points --

MR. ZIMMERMAN: But in view of the development and, I'm sorry. In view of the, number two, in view of the development entrance or adjoining public street?

MR. BISHOP: Yes, you can see --

MR. ZIMMERMAN: Doesn't that mean Joppa Road, or am I wrong? Does it, does it mean Joppa Road?

ALJ: Let, let him answer the questions.

MR. ZIMMERMAN: I'm sorry.

ALJ: When he's trying to answer, you're cutting him off, you're talking --

MR. ZIMMERMAN: All right.

ALJ: -- so, so, the question was, does it meet A.2, is that the question?

MR. ZIMMERMAN: Yes.

ALJ: Okay. Does it meet A.2, Mr. Bishop?

MR. BISHOP: Yes, we have open spaces adjacent to Joppa Road. And as I testified before, we intentionally set our new buildings back five hundred fifty feet away from Joppa Road so we could maintain the existing feel of Joppa Road and--

MR. ZIMMERMAN: All right.

MR. BISHOP: -- for maintaining the existing home so that, that it meets that criteria.

MR. ZIMMERMAN: Okay, all right. Let's move on to one more item, which I'm actually, 260.4.B. How does it meet the cul-de-sac requirement, the cul-de-sac that you have, when the property is easily developable without a cul-de-sac?

MR. BISHOP: Well, --

MR. ROSENBLATT: Objection to the form of that question.

ALJ: Overruled. Go ahead.

MR. BISHOP: I mean, if you read further into Section B here, cul-de-sacs are deemed appropriate if you have sensitive environmental features, serious natural grade. We

have an adjacent forest buffer, hundred-year flood plain. So, it seems to me that it's appropriate to have a cul-de-sac.

MR. ZIMMERMAN: Okay, all right. That's all on the residential performance standards.

ALJ: And that was People's Counsel thirteen --

MR. ZIMMERMAN: Thirteen.

ALJ: -- I'm assuming no object --

MR. ZIMMERMAN: Yes, thank you --

ALJ: -- no objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

MR. ZIMMERMAN: Thank you, Judge.

ALJ: And Mr. McCann?

MR. ZIMMERMAN: Thank you, Judge.

MR. MCCANN: No, no objection.

ALJ: Thank you.

MR. ZIMMERMAN: Okay, all right. I, I want to ask, I'm moving to a different subject now. So, as a manager, not as a traffic engineer, but as a manager familiar generally with what's being proposed, well, let me ask you, you're generally aware of what's being proposed with traffic improvements, are you not?

MR. BISHOP: I am, yes.

MR. ZIMMERMAN: You're generally aware of Lenhart's concepts and their proposal --

MR. BISHOP: Yes.

MR. ZIMMERMAN: -- are you not? Yeah. So, are you familiar with the, I guess, either management or administration concept of risk assessment and risk management?

MR. BISHOP: No.

MR. ZIMMERMAN: No, okay. Well, whether or not you're familiar with that, as a manager, do you recognize that whenever there are projections, predictions, in any, virtually any field, there are risks that the assessments could be wrong, that the projections could be wrong for a variety of reasons?

MR. ROSENBLATT: Objection.

ALJ: Yeah, I, sustained.

MR. ZIMMERMAN: All right.

ALJ: That's just, first of all, it's general. Second of all, I mean, he's the manager sort of of the plan in that he manages the team to prepare the plan.

MR. ZIMMERMAN: All right.

ALJ: And I hear you're trying to get into traffic issues, which he's not a traffic engineer. They do have a traffic engineer, you know, generally asking him about predict, predictions and projections, yeah. I mean, what's --

MR. ZIMMERMAN: All right.

ALJ: -- it's you're trying to ask him?

MR. ZIMMERMAN: All right. I'm going to limit my, I'm going to shorten my questioning on this subject then. Kind of following up on a question from Mr. Wyatt earlier this

morning, what accountability any, what accountability, if any, is there, Mr. Bishop? And I'm going to stop sharing.

What, what accountability is there and who, if anyone, is accountable if, putting aside all the other issues, this development gets approved, goes in and the F intersections get much worse, or just worse, you know, where's the accountability?

MR. ROSENBLATT: Objection.

ALJ: Mr., Mr. Zimmerman, I don't know how he could ever answer that. I mean, you could ask that question of, perhaps of a politician, you know. I just, that, that's sustained.

MR. ZIMMERMAN: All right.

ALJ: (inaudible) more specific question you want to ask.

MR. ZIMMERMAN: All right. The more specific question, which, you know, you know, is the Developer willing to put up any kind of guarantee, whether financial or otherwise, that if this development were approved, the, the F intersection would improve?

MR. ROSENBLATT: Objection.

ALJ: So, so he's not a traffic engineer. He --

MR. ZIMMERMAN: It's not, it's not a traffic engineering question. It's, it's a management, it's a, it's an accountability question, you know.

ALJ: Yeah, again, just, sustained. It's just not an appropriate question to ask him. He's a landscape architect and, and so, it's just not appropriate. You might want to ask that question of, of the traffic engineer.

MR. ZIMMERMAN: All right. All right, we'll see.

ALJ: I mean, there's someone else for that.

MR. ZIMMERMAN: All right. We're getting toward the end. I have to ask you, you, correct me if I'm wrong, but did you discuss in your direct testimony about how the, you or the development team reached out to various community associations?

MR. BISHOP: That was not my testimony, no.

MR. ZIMMERMAN: Okay. Well, Judge, I don't know if a lot of people are ready for lunch, but that's, and, and I could go on, but I'm not. So, that's, that's all my questions. I want to thank Mr. Bishop for his patience.

ALJ: Okay.

MR. ZIMMERMAN: And, and thank you, Judge, for all your rulings.

ALJ: Yeah, and so, I just want to make sure you know for the record what I have in evidence for People's Counsel's Exhibits 6, 9, 13, 24, 26, 28, 30 and 31. Just so you have a list, okay? So far, unless I missed one.

MR. ZIMMERMAN: Yeah, I, I, yeah, I don't, I don't know. It, it sounds find and we'll get to the others.

ALJ: Okay. Understood. Let me ask then, Mr. Wyatt,

are you going to have questions?

MR. WYATT: I may have a few, Your Honor.

ALJ: Yeah.

MR. WYATT: I mean, I'm happy to wait until, if we're inclined to take a break. I don't know what your preference is.

ALJ: It, I don't, I don't really have a preference, but I just wanted to make sure we kind of included everyone. We need to go back to Mr. Rosenblatt as well. And so, is everyone, does everyone need a break? I think at this point, maybe they do.

MR. ROSENBLATT: Judge, I would not object to a few minutes break, but I would really like to finish this witness if we could before we take any, if and before we take any kind of lunch break.

ALJ: Okay, understood. All right. And let's just take ten minutes. I want to pause the record so everybody can just stretch their legs and then we'll come right back, ten minutes, with Mr. Wyatt.

MR. MCCANN: Okay, thank you.

ALJ: Thank you.

(PAUSE)

ALJ: All right, everyone. Back on the record after a break and we're still in the cross examination of Mr. Bishop. Mr. Wyatt, you may have had questions, you said.

MR. WYATT: Correct, yes. Thank you, Your Honor.

ALJ: Um hm.

MR. WYATT: Good afternoon, Mr. Bishop. I'm Michael Wyatt. I think you probably heard me speak before in this hearing. But my family and I live on Trelawny Court. You know where that is?

MR. BISHOP: I do.

MR. WYATT: Okay. Just have a couple of questions for you. You and Mr. Zimmerman had considerable back and forth on whether lot one should be included in calculations or not included. I just need you to confirm for us, lot one is, is not developable, correct?

MR. BISHOP: Lot one, I'm not sure if I understand in, in what context you mean.

MR. WYATT: Well, in the sense that you wish to have it included, Mr. Zimmerman doesn't wish to have it included. But the, but the bottom line is, that's an exist, that's an existing home and it's not part of the new development.

MR. BISHOP: It is. I mean, the overall tract, the house sits on one lot of records. So, we are subdividing that lot and just keeping the existing home on it (inaudible) new lot, if that makes sense.

MR. WYATT: Fair enough. Even if you were to have razed that house, there's issues that would restrict development on that land. You agree with that?

MR. BISHOP: Some of the land.

MR. WYATT: Okay. But, but the point here is, there's nothing new taking place with that structure or its surrounding curtilage or acreage.

MR. BISHOP: Correct.

MR. WYATT: So, I want to ask you a question or two about the development plan. Your Honor, if I may impose upon you to pull up Developer's Exhibit 1-B?

ALJ: All right, just give me a minute.

MR. WYATT: That's what, that's what I remember is the development plan as revised. I don't have all the exhibits. I, I'm not counsel of record.

ALJ: That's fine.

MR. WYATT: I'm at a little bit of a disadvantage.

ALJ: Sure, let me, just give me one minute and I'm going to pull that up. And this is Exhibit 1-B, which is the green line plan.

MR. WYATT: Thank you, Your Honor.

ALJ: Yep.

MR. WYATT: Mr. Bishop, and I'm going to ask you, throughout the development plan, in the front and in the back of all of the building envelopes on each lot, there's a dotted line. Can you see that? It's probably not blown up enough to see it, at least on my screen, but I know it, I know it exists. You must know it exists, you prepared this.

MR. BISHOP: Right, those dash lines, is what you mean?

MR. WYATT: Yeah, they're, those are, those dash lines that appear to, in the front and, and in the rear of each lot --

MR. BISHOP: Correct.

MR. WYATT: -- the inside of which there appears to be the building, or the building envelope is shown, right?

MR. BISHOP: That's correct.

MR. WYATT: Can you, could you please confirm for us are those the building, or is that line the building setback line for front and back --

MR. BISHOP: Correct.

MR. WYATT: -- for each lot?

MR. BISHOP: Yes, that's correct.

MR. WYATT: Okay, all right. Thank you, Your Honor. That, that's all I had on that. I just wanted that confirmation. So, Mr. Bishop, not today but last time you testified, there were some schematic drawings that you showed to everyone to be representative of the kind of homes that would be constructed on the, on the, on these lots. Do you remember that?

MR. BISHOP: I do, yes.

MR. WYATT: I think some of them actually had names as I remember. I wrote a couple of them down, one was called

a, a Tyler, is that a name that rings familiar with you?

MR. BISHOP: It does. I mean, those are in the pattern book.

MR. WYATT: Correct.

MR. BISHOP: (inaudible).

MR. WYATT: What is, when one looks at, at the Tyler or any of the other schematic drawings of the homes that are going to be constructed or would be constructed on the development if it's approved, it does not show any neighboring homes or adjoining, adjacent homes, does it?

MR. BISHOP: No, they show the individual options.

MR. WYATT: Okay, all right.

MR. BISHOP: Yes.

MR. WYATT: In other words, you're looking at one particular model, but you're not seeing it in the context of the development, correct?

MR. BISHOP: Correct, they're just elevations of the building.

MR. WYATT: Are there any drawings somewhere that would show us what a street view would look like of this proposed development if it ever gets constructed?

MR. BISHOP: No, I don't think we put any (inaudible) together showing that vantage point.

MR. WYATT: Then you were, Mr. Russell Powell testified last month that one, I don't know if it was day one

or two of the hearing, but you know who he is, right? He works for Tabco?

MR. BISHOP: I do.

MR. WYATT: And you probably work in close connection with him in this project?

MR. BISHOP: I do, yes.

MR. WYATT: All right. Now, I, I, I just remember, and you probably do too, Mr. Powell talking about all of the community outreach that's been done in connection with this proposed project. Do you remember that testimony?

MR. BISHOP: I do.

MR. WYATT: And, in fact, you've been part of some of that outreach, have you not?

MR. BISHOP: Actually, no, I can't really say that I have. That's been something that the Developer and others have taken care of. I did participate in the community input meeting.

MR. WYATT: Did you participate in any meetings, or Zoom meetings or phone calls for any of the neighborhoods adjoining the proposed development?

MR. BISHOP: It's been a few years, but I don't believe that I did.

MR. WYATT: Well, what is, what, what is your under, what is your understanding of that outreach? I mean, is it something that you've considered as part of your management of

this project?

MR. BISHOP: It's something that the Developer took upon themselves to have the relationships with the comm, adjacent communities. I know that they did have those. I was on many coordination calls with the rest of our design team and Developer, and when those happened, when they were going to happen, I provided exhibits and background information for them to share with the communities. But I was not in those meetings. Sometimes you don't want to have too many people involved in a meeting. Sometimes it gets a little out of control, so, that, that was my involvement --

MR. WYATT: Sorry. But you are, you are familiar because you need to be familiar as the manager of this proposed development, that these kinds of meetings were taking place. In fact, you were here, like all of us, when Mr. Powell talked about it, right?

MR. BISHOP: I, I'm fully aware of them and, as I mentioned, I provided background information for them to use at those meetings. And I was --

MR. WYATT: And --

MR. BISHOP: -- Yeah.

MR. WYATT: -- let me just, you know, as a follow-up, are you familiar with any adjoining neighborhood being in support of the proposed development that you're managing?

MR. BISHOP: I don't have the answer for that, no.

MR. WYATT: Would you agree with me when I, if I told you that every single adjoining neighborhood to the proposed development is in opposition to the development project you're managing?

MR. BISHOP: That's not what I understood. I think if certain things happened, I thought that some of the communities would be supportive.

MR. WYATT: Well, tell us which ones so we can anticipate that they might step forward as part of your case.

MR. BISHOP: Well, it had to do with the connection of the road. Not sure which community groups it would be.

MR. WYATT: You don't, as the manager of this project, you're not familiar with which neighborhoods would, are supporting it?

MR. BISHOP: At this point, I think support has changed both ways during the course of this project. And at this point in time, I don't know who's in support or not.

MR. WYATT: All right. So, you're, you're, you're giving us the impression that there may be neighborhoods out there, whose identities of which you are not presently aware, who will step forward and support this project?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: Multiple reasons. One is relevance. As, as an attorney, Mr. Wyatt knows that case law states that

these development plans are not popularity contests. That's an exact case law quote. And second of all, this witness has said he has not been at any of these meetings and I don't know why he's the one being questioned about stuff he didn't participate in and doesn't know.

ALJ: Yeah, understood. Well, he, he, he did say he does not know who's, who is supporting the Developer's position at this point, but the question is still fair. So, overruled, go ahead, Mr. Wyatt.

MR. WYATT: Mr. Bishop, do you need me to repeat the question?

MR. BISHOP: Would you, please?

MR. WYATT: All right. So, your, your, based on your testimony today, you presently are unaware of the identity or identities of any of the adjoining communities that might step forward as part of this case in support of the proposed development that you're, that you're in charge of managing?

MR. BISHOP: That is correct.

MR. WYATT: Do you, today, do you know of any, the identities of any communities that are in support of the proposed development that you're in charge of managing?

MR. BISHOP: I am not aware --

MR. ROSENBLATT: Objection.

ALJ: Okay. Overruled. You've already answered, he's not aware of any.

MR. WYATT: Thank you. I, thank you, Mr. Bishop. I, I have no further questions.

ALJ: All right. Thank you, Mr. Wyatt. Mr. Sachse, did you have any questions? You're muted. You can unmute yourself.

MR. SACHSE: Yes, if I'm able, I'd like to ask a few questions.

ALJ: Absolutely, go ahead. And then, just tell us where you live. I know you're an attorney but, what, what's your house?

MR. SACHSE: I live on Sedgefield Court, 9 Sedgefield Court, which is within the Seminary Ridge community.

ALJ: Okay, sure. Go right ahead.

MR. SACHSE: Mr. Bishop, and I'm, I'm sorry if I'm not so familiar with development and development plans. But from what I understand, and I think Mr. Wyatt just cleared this up for me, lot one is the existing large house that, that fronts on Joppa Road, is that right?

MR. BISHOP: That's correct.

MR. SACHSE: And the other sixty lots are the ones that will be placed five hundred and fifty feet, I think, is, is how far back you said from Joppa Road.

MR. BISHOP: That's correct.

MR. SACHSE: Towards, towards Seminary. They will be put in, those sixty lots will be put in that area, is that

correct?

MR. BISHOP: That's correct.

MR. SACHSE: And those sixty lots, and, and I'm sure it's been provided, but I don't know, they'll be on how many acres?

MR. BISHOP: That, I don't have that number for you. We do our developments based on the overall tract --

MR. SACHSE: And I understand that --

MR. BISHOP: -- yeah.

MR. SACHSE: -- but in listening, I, it seems to me that if I were coming to, I know you're not selling these lots, but if I was coming in to buy one, I'm going to be buying on a quarter acre lot?

MR. BISHOP: Roughly.

MR. SACHSE: I can't buy, I can't buy lot one, right? That's not --

MR. BISHOP: Well, lot one, I, I'd have to ask the Developer. I think lot one will be for sale.

MR. SACHSE: Lot one may be for sale, but if I'm coming in to buy one of the properties that is being developed --

MR. BISHOP: Correct.

MR. SACHSE: -- it's going to be a quarter acre lot, give or take a little bit?

MR. BISHOP: Yes, some of them are close to half an

acre, some of them are, are a quarter acre.

MR. SACHSE: But they average out, I mean, I, just listening to it, it, it's pretty, it's a little bit under a quarter of an acre that they'll average out to.

MR. BISHOP: Generally.

MR. SACHSE: And those lots are all up, I guess that would be the, I don't want to get my directions wrong, but the northern sector, section of the development up towards Seminary Avenue?

MR. BISHOP: Correct.

MR. SACHSE: And yet, there's a gate being placed so that there's no pass through out to Seminary Avenue, is that correct?

MR. BISHOP: That's our proposal, yes.

MR. SACHSE: Right. And so, all traffic from the new development, will have to go down and enter to Joppa Road?

MR. BISHOP: Correct.

MR. SACHSE: I mean, they could, if they, if, if the people bought in there and wanted to go out to Seminary Avenue, which would be very close to them, they'd actually have to drive all the way down to Joppa Road, either turn right and go over to a failing intersection, Falls Road, and then go right up to Seminary, or go left and come, probably, nobody knows, but up Tallyho Road, which has, I believe, seventy-seven of the homes in Heatherfield and Seminary Ridge on it? I may have

made that too long. If you want to leave, you, you, I'll let you answer. Go ahead.

MR. BISHOP: Well, just, I take issue with the failing intersection, because we are proposing improvements to the Falls and Joppa corridor.

MR. SACHSE: And, and, --

MR. BISHOP: You come out and you go right towards Falls and Joppa or you would go left on Joppa Road and wherever you're going from there, I don't know.

MR. SACHSE: Well, what I was saying is, if you wanted to get to Seminary Avenue and you are, you bought in this new development, instead of going straight out to Seminary, that's being blocked off by a gate, correct?

MR. BISHOP: Correct.

MR. SACHSE: And most of the houses are actually closer to Seminary from where they are than they are to Joppa, because there's, they're being set back five hundred and fifty feet for the first house.

MR. BISHOP: Okay.

MR. SACHSE: Does that, that sounds correct, doesn't it?

MR. BISHOP: The location does.

MR. SACHSE: Okay. So, I buy a house in the new development and I want to go to Seminary, my only choice is to go all the way down to Joppa, pass by the existing large lot

one that has a big house on it, hit Joppa and then either go right to Falls and I understand, right now it's a failing intersection and I, I'm not trying to get on you on that, because I know you're not a traffic expert.

But you can either go right to Falls, take a right on Falls and go up to, through Greenspring Valley, up to Seminary, which are all not very good intersections. And then, take the right on Seminary. That would be one option.

Or your second option is to go out to Joppa from your new home, go down to Joppa and take a left. And if you need to get to Seminary, the first road you run into is Tallyho Road, are you aware of that?

MR. BISHOP: Correct.

MR. SACHSE: The next road would be White Manor, but that kind of winds you around. You could go through White Manor, or you could go over the bridge and go out to Thornton, right? Which is a, another mile away. So, a lot of the traffic would be directed --

ALJ: What was the answer to, what was the answer to that last question where you said he's going over to Thornton and over the bridge, Mr. Bishop, what did you say?

MR. BISHOP: That's correct.

ALJ: Okay.

MR. BISHOP: Those are all options for connecting to Seminary.

MR. SACHSE: Seminary.

ALJ: I just wanted to make sure he responded for the record. Okay. Go ahead, Mr. Sachse.

MR. SACHSE: Yeah, I'm, I'm sorry. So, going right and taking Falls or going left and taking Tallyho would be the two quickest ways to get directly out to Seminary from where the development is being located?

MR. ROSENBLATT: Objection.

ALJ: Mr. Rosenblatt?

MR. ROSENBLATT: There's been no establishment that those are the quickest ways.

ALJ: Well, that's what the question was, and Mr. Bishop said it was. All right.

MR. ROSENBLATT: I didn't think, I didn't think he, he could or he --

ALJ: He just said, he just said yes, it was. I mean, yeah, that would be the, the quickest way to go if you're trying to go to Seminary, you make a right on Joppa and up Falls and then, otherwise you'd go left and go up to Tallyho to Seminary.

MR. SACHSE: All right.

MR. BISHOP: Can I clear up for a minute?

ALJ: He did --

MR. BISHOP: I think I was saying yes to there's three different options to connect from Joppa up to Seminary,

not indicating which one was the fastest. Let me make that clear.

ALJ: Okay. So, there are three routes, but you didn't say it was the fastest.

MR. BISHOP: Correct.

ALJ: Okay, all right. Did you have another question, Mr. Sachse?

MR. SACHSE: Then let me rephrase the question. If you're coming out of the new development and making a left on Joppa Road, the first road that connect to Seminary is Tallyho.

MR. BISHOP: Correct.

MR. SACHSE: Second one is White Manor but that doesn't, doesn't go directly to Seminary, correct?

MR. BISHOP: Correct.

MR. SACHSE: And then you can go out, you can go over the bridge over the beltway and go out to Thornton and that does connect to Seminary. But that's another mile or so away.

MR. BISHOP: That's correct.

MR. SACHSE: So, whether, whether it's the quickest, the easiest, whatever, the first way for you to get from Joppa to Seminary, if you're taking a left out of the neighborhood, is to travel along Tallyho Road.

MR. BISHOP: Yes.

MR. SACHSE: Okay and those would be the only choices as long as there's not a pass through through Mays Chapel for

anyone in the new development to take?

MR. BISHOP: Generally, yes.

MR. SACHSE: Okay. Thank you. That's, that's all the questions I have.

ALJ: Thank you, Mr. Sachse. All right. Coming back to you, Mr. Rosenblatt. Any re-direct?

MR. ROSENBLATT: Yes, please, Your Honor. Could I have permission to share? Okay. Mr. Bishop, it's nice to talk to you. It's been a month.

MR. BISHOP: Good afternoon.

MR. ROSENBLATT: I'm going to show you Developer's Exhibit 9, scroll down to page, let's start with page three of Developer's Exhibit 9, where you identified townhomes within the T-3 transect. Do you, do you see that page of the exhibit?

MR. BISHOP: I do, yes.

MR. ROSENBLATT: And you were asked by Mr. Zimmerman, you were asked a series of questions and shown some old subdivision plats showing that the properties in your Exhibit 9 were developed before master plan 2020 was in place. Do you recall that?

MR. BISHOP: I do, yes.

MR. ROSENBLATT: Okay and, to your knowledge, was the transect system, did it exist before master plan 2020 or did it come into, basically, come into existence during master plan 2020?

MR. BISHOP: My understanding is it came into existence in master plan 2020.

MR. ROSENBLATT: Okay. So, these, these existing subdivisions did, did Baltimore County, in establishing master plan 2020 and the transect map, did Baltimore County place these transects on the existing subdivisions for the first time as part of master plan 2020?

MR. BISHOP: Yes.

MR. ROSENBLATT: And if the County agencies that are responsible for developing master plan 2020 thought that these townhomes you found, or some of the other smaller lots that you found, were a conflict with transect three, T-3, could they have placed other transects on these properties when developing master plan 2020?

MR. MCCANN: Objection.

MR. ZIMMERMAN: Object, objection.

ALJ: There's two objections. Go ahead. Mr. McCann, what's your objection?

MR. MCCANN: It's just speculation, Your Honor.

ALJ: Yeah, right. Yeah, I agree, it is. And Mr. Zimmerman, same?

MR. ZIMMERMAN: Yeah, it calls for a legal conclusion and, yeah, speculative, yeah.

ALJ: Right, whether, what, what the County would do or not do, again, that's a point you could argue, but not a

question for Mr. Bishop to decide what the Department of Planning would have done or what the County agencies, in fact, would have done. So, sustained.

MR. ROSENBLATT: Okay. I'll, I'll rephrase the question. Did Baltimore County place the tre, the T-3 transect on the properties you've identified here showing townhomes and some smaller lots, as part of master plan 2020?

MR. ZIMMERMAN: Objection. Asked and answered.

ALJ: He, he did answer, he actually did answer that. He did say, you asked that question and he said T-3 was placed on the existing subdivisions for the first time in master plan 2020.

MR. ROSENBLATT: Okay.

MR. ZIMMERMAN: Yeah.

ALJ: He said that. Yep, okay.

MR. ZIMMERMAN: Yeah, right.

ALJ: Sustained. Understood, Mr. Zimmerman.

MR. ROSENBLATT: Mr. Bishop, you've, you've testified at length about the development plan. Does, do all of the lots in the plan comply with any applicable book and area regulations in the County Code and, and any other regulations?

MR. ZIMMERMAN: Objection. This is rep, repetition, I mean, he says (inaudible) --

MR. ROSENBLATT: You asked the same question forty-five times in a row, I'm not allowed to rehabilitate?

ALJ: Okay. Mr., so, Mr. Zimmerman's questions really went to his issue of whether or not there's a master plan conflict. That's, I think, what he was getting to with all of that. So, but you did ask him that. In fact, he did say, in fact, he said that the development complies with all the regulations and, and recommended that it should be approved, right? I mean, that, you asked him that question, I think it was the last one. So, sustained. He did ask that, he answered that, excuse me.

MR. ROSENBLATT: I'm going to re-show you Developer's Exhibit 4. Mr. Bishop, you were asked some questions about the Torch Hill project that is identified at, in white, and sort of the upper righthand corner of Developer's Exhibit 4?

MR. BISHOP: That's correct, yes.

MR. ROSENBLATT: So, assume, for the purpose of this questioning, assume the lots in Torch Hill are the biggest lots shown on, on this exhibit. In other words, they're in the brown and the tan area, that shows the, the highest square footage of any of the lots in the surrounding area, okay?

MR. BISHOP: Okay.

MR. ROSENBLATT: Does that change your opinion as to analyzing the master plan compliance for Greenspring Manor?

MR. BISHOP: None whatsoever.

MR. ROSENBLATT: Okay. Do you know if there's a restrictive covenant agreement limiting density on the Torch

Hill property?

MR. ZIMMERMAN: Objection.

ALJ: What's your objection, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, I mean, whether there's a restrictive covenant or not is irrelevant. The, the thirty, the density, you know, for Torch Hill is what it is, it's thirty-two lots on forty-two acres, you know.

ALJ: I'm not sure either what the relevance would be, Mr., Mr. Rosenblatt, whether he knows there's a restrictive covenant or not.

MR. ROSENBLATT: I would like to know how Mr. Zimmerman, in his statutory role as People's Counsel, gets to make these certain objections. It, it is beyond me how he has this obligation under the charter to represent the general public and is getting to make these objections. How --

ALJ: Oh, well, he's, his, you know, his issue is is there a master plan conflict. And so, he, that's, that's why he was asking questions about Torch Hill so, I mean, he's, he's, he can ask questions and, and ask, you know, raise objections to some of the questions in, in his role as, you know, in, in terms of what his job is. So, yeah, no, he's, he's able to ask those questions. So, so, yeah, restrictive covenant, though, why is that relevant to this?

MR. ROSENBLATT: I'll move on.

ALJ: Okay, okay, thanks.

MR. ROSENBLATT: We have to go back to the last hearing, Mr. Bishop, but do you remember being asked questions by Mr. McCann about the, the concept plan? You were shown the concept plan?

MR. BISHOP: Yes.

MR. ROSENBLATT: Okay. Can, can you explain the difference between the level of detail that was shown on the concept plan in this case and what studies, in particular with respect to the, to the buffer that was shown on the concept plan and how that relates to the information that's now shown on the development plan.

MR. BISHOP: I think --

MR. MCCANN: Objection. Your Honor, this is beyond the scope of, of Mr. Wyatt's cross and Mr. Zimmerman's cross. I don't want to belabor --

ALJ: This is, this is re-direct of all of it. Remember, you were here last time. You crossed Mr. Bishop and then Mr. Zimmerman didn't have time to put his, to do his cross. And so, this is a continuation and so this is re-direct of your cross. He just --

MR. MCCANN: Oh, I thought this was Adam's second re-direct. He's, he's already re-directed, I thought he already re-directed Mr. Bishop in response to my questions.

MR. ROSENBLATT: No, I didn't.

ALJ: What's that?

MR. ROSENBLATT: I did not.

MR. MCCANN: Okay, I apologize.

ALJ: I didn't think so.

MR. MCCANN: I apologized.

ALJ: Are you, I mean, if you're correct, Mr. McCann, then I'm not remembering. I checked my notes just to make sure. It was, you ended and, and Mr. Zimmerman couldn't do his.

MR. MCCANN: Got it.

ALJ: Yeah, okay, good.

MR. MCCANN: I'm sorry, I'm sorry.

ALJ: So, so, just for the record, there's been no re-direct yet, it's today. So, the question was, Mr. Rosenblatt, it was a question that Mr. McCann had asked about the concept plan comments and about how it is different from the development plan. Is that what you, is that what you asked? Repeat your question, Mr., Mr. Rosenblatt.

MR. ROSENBLATT: Yes. You, you were shown the concept plan and asked questions in particular about the buffer shown on the concept plan. So, my question is can you explain what work was done between concept plan and development plan and how the information contained on the development plan relates back to, or if it does?

MR. BISHOP: Sure. So, the concept plan is just that. It's a concept. It has a much lower threshold or

requirement for detail. And, in fact, the checklist says, you know, it's recommended that you have the wetland delineated and the forest buffer established but not required.

So, we did our first assessment of all the buffers and our layout and our grading and all those other things that are required. And then, as we move past concept plan, we add a whole nother level of detail based on the use of the checklist items from the County and we establish a more defined set of plans, which would include a more defined buffer, more defined flood plain, more defined grading, more defined horizontal layout of the plan.

MR. ROSENBLATT: Okay and just one more question and, again, I'm, I got to go back a month or however many weeks ago, but I just wanted to clarify a, a point that you testified and were asked questions about regarding the boundary of the flood plain before and after the project is constructed and my, my one question is, I'm zooming in on the entrance road on Developer's Exhibit 1-B.

And above, plan up, above the entrance road is a stormwater management facility and HOA private open space area. My question is, if the project is constructed, will that stormwater management area C and private HOA space, will that be located in the boundaries of the flood plain?

MR. BISHOP: It will not.

MR. ROSENBLATT: Okay. Thank you, Mr. Bishop. I

don't think I have any further questions.

MR. BISHOP: Thank you.

ALJ: Okay. It looks like we're finished with Mr. Bishop. And Mr. Rosenblatt, I would imagine you have other witnesses?

MR. ROSENBLATT: Yes, we do. Would, would love to keep moving. We have, we, we have one long witness and there's a third witness that's probably in between, but towards the shorter side.

ALJ: Okay.

MR. ROSENBLATT: So, --

ALJ: So, I, we just took a ten-minute break. I think it'd probably be a good idea just to take a lunch break for everyone. Does anyone want to do that or just want to keep going. No?

MR. MCCANN: I, I would prefer a lunch break if most --

ALJ: Yeah.

MR. MCCANN: -- most people are agreeable to that.

ALJ: I, I would think so.

MR. ZIMMERMAN: Madam Chair, I wonder, just to take ten seconds, if we could admit a couple of the other exhibits that I shared earlier, just to, as housekeeping.

ALJ: So, I went through those, the ones that you had put in --

MR. ZIMMERMAN: There were a few others, actually.

ALJ: Okay, all right. Well, let's, all right. So, let me, let's, let's do that then before we just take a lunch break. Which ones, Mr. Zimmerman?

MR. ZIMMERMAN: Number seven were the CIM minutes.

ALJ: Okay. Any objection to the community input meeting minutes?

MR. ROSENBLATT: No objection.

ALJ: Any objection?

MR. MCCANN: No, no objection.

MR. ZIMMERMAN: Number eight was the master plan excerpts, which I think are similar to one of the Developer's exhibits actually.

MR. ROSENBLATT: No objection.

MR. MCCANN: No objection.

ALJ: Thank you.

MR. ZIMMERMAN: I did, I don't know if I shared it was number eighteen is the rec, the record of Davis Farms.

MR. ROSENBLATT: I object to that being an exhibit in this case. He can, he can argue, but it should not be an exhibit in this case.

ALJ: It, you know, the, the, this is, I mean, something that's, I guess, is tradition. I, I never like having law as exhibits, but I've gotten used to it over the years that everybody likes to put in their exhibits, and

traditionally, we allow it. I mean, if, just so that it can be clear, it's been marked. I don't have any problem putting in Administrative Judge's decision in evidence for, for eighteen. Mr. McCann, you don't have any objection, do you?

MR. MCCANN: No, I do not, thank you.

ALJ: Okay.

MR. ZIMMERMAN: I mean, I could have waited till the post-hearing memo but it's giving everybody, you know, notice, so anyway. I think number sixteen I, I referred to the, some of those neighborhood sub, subdivisions, number sixteen.

ALJ: You did, you did talk about those. Any objection to sixteen? These are the plats that referenced the exhibit that's, exhibit number nine, that Mr. Bishop had created, the, the T-3 transect. Any objection to sixteen?

MR. ROSENBLATT: No, I thought that was already in.

ALJ: Okay.

MR. ZIMMERMAN: And while it was objected to maybe, I did show number twenty-three was the planning comments to Torch Hill.

MR. ROSENBLATT: Again, objection.

ALJ: Yeah, so, they're public record. So, you know, from that perspective, I don't think they, they can come in. Certainly if, you know, you can argue that it, it's not relevant, you know, in the sense of that, it doesn't apply to this, to this development, but it's still a public record. So,

it can come in because it's a public record. I mean, it's a County record. So, twenty-three comes in.

MR. ZIMMERMAN: It's just to show the number of lots and, and the size of the property, basically.

ALJ: All right. Well, again, no editorializing. You can make argument --

MR. ZIMMERMAN: Okay.

ALJ: All right. What else?

MR. ZIMMERMAN: I think that's, I think that covers it. Thank you.

ALJ: Okay, all right. So, any preference on time? Half hour, twenty minutes? Half hour? I know whenever I say that you always say forty-five minutes, but.

MR. ROSENBLATT: Twenty to thirty is fine with me.

MR. MCCANN: Yeah, a half hour is good, if that's okay.

ALJ: Half hour. All right. We'll do thirty minutes, we'll come back at 1:45.

MR. MCCANN: Okay, thank you.

ALJ: Thanks.

(PAUSE)

ALJ: We are back on the record after a lunch break. And the Developer had another witness. Mr. Rosenblatt?

MR. ROSENBLATT: Yes. Next will be John Canoles and actually, Mr. Mudd will be asking the questions.

ALJ: All right. Mr. Canoles, you were here a minute ago.

MR. MUDD: Can you hear me, Mr. Canoles?

ALJ: His camera --

MR. CANOLES: I can, can you see me?

ALJ: No, just turn your camera on. Hit the --

MR. CANOLES: I gotcha.

ALJ: There you are. Okay. Raise your right hand, please. Do you swear and affirm under penalties of perjury, that the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. CANOLES: I do.

ALJ: All right and Mr. Canoles has been admitted as an expert many times, many cases. Mr. Mudd, what are you going to offer him, and what areas of expertise?

MR. MUDD: I'm going to offer him as an expert in environmental consultant with particular knowledge and experience with County and State environmental regulations related to the specimen trees and specimen tree variances.

ALJ: County and State regulations with regard to specimen trees?

MR. MUDD: Yes, (inaudible).

ALJ: Oh, and special variance, wait a minute, sorry. Specimen trees and special variances. Okay. So, any objection, Mr. McCann, to having, accepting Mr. Canoles as an

expert?

MR. MCCANN: No, no, Your Honor.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No, Your Honor. That's probably not my issue, specimen trees anyway, so.

ALJ: Oh, that's right. So, you probably won't have questions.

MR. ZIMMERMAN: Probably not.

ALJ: Right, I would think not. All right. Okay. He will be admitted as an expert environmental consultant with specialty knowledge in the County and State regulations in regard to specimen trees and special variances. Did I say that correctly, Mr. Mudd?

MR. MUDD: You did. Thank you very much.

ALJ: Okay, thank you. And he has a, a resume probably, right?

MR. MUDD: He does. May, may I share? It's Exhibit 10.

ALJ: Okay. I was just going to grab that, yep. Let me just see. Here you are.

MR. MUDD: Thank you. Do you see that, Mr. Canoles?

MR. CANOLES: Yes, I can, thank you.

MR. MUDD: Okay. Is that a copy, a copy of your c.v.?

MR. CANOLES: It is.

MR. MUDD: Okay. I know that, that you've been accepted as an expert, but just for purposes of the record, would you mind just giving a brief explanation to everyone who's listening about your experience in the areas that I, that I proffered you as an expert in?

MR. CANOLES: Sure. I am a principal at Eco Science Professionals. I, were, our mailing address is P.O. Box 5006, Glen Arm, Maryland. I'm an environmental consultant. We've been in business for thirty years. I've had additional experience before that. In relation to the specimen tree issues, I'm a Maryland qualified forest conservation, Maryland Department of Natural Resources qualified professional to provide Forest Conservation Act services.

MR. MUDD: Okay and you've worked on specimen tree variances in the past?

MR. CANOLES: Yes, many.

MR. MUDD: How many would you say, if you had to guess?

MR. CANOLES: Hundreds, probably, at least.

MR. MUDD: Okay and can you describe what you were asked to, to do in this case?

MR. CANOLES: Yeah, we, we performed the original assessment of all the natural resources on the property, wetland delineation, forest land delineation and including the specimen tree flagging and, and prepare the, the finding

reports to support those, the forest land delineation, etcetera.

MR. MUDD: Okay and does this proposed development propose any impacts to any specimen trees?

MR. CANOLES: There is impacts proposed to one specimen tree, yes.

MR. MUDD: Okay. I'm going to share with you, again, what's been marked as, and previously admitted, as Exhibit 1-B. Do you recognize this document?

MR. CANOLES: Yes, sir.

MR. MUDD: This is the development plan for the property, is that correct?

MR. CANOLES: Yep.

MR. MUDD: Okay. Can you just orient me and the Judge and you can, you can tell me where to move to to just show where the single specimen tree is that will be impacted.

MR. CANOLES: Well, it's not on the screen now. Bottom left corner, you keep going up now, down in the far left corner you see a red TPR, excuse me, --

MR. MUDD: Okay. Here?

MR. CANOLES: Yeah, --

MR. MUDD: I'll, I'll zoom in. And just for, for benefit, I mean, I know that we're looking at video here but can you just describe in your words where this tree is located?

MR. CANOLES: Oh, yeah, sure. On the, from the, on

the site prospective it's adjacent to Joppa Road in, I guess, the southwestern corner of the site, in the, in the portion of the property that's in front of the existing home.

MR. MUDD: So, bear, so you said southwestern, but bear, bear in mind the orientation of this plan.

MR. CANOLES: Oh.

MR. MUDD: It's all right.

MR. CANOLES: That's all right. Is it, this plan is, is, it's not southwest?

MR. MUDD: Well, I think, I'll show you the north arrow, let me back out.

MR. CANOLES: If Falls Road is running north, then it's southwest, but --

MR. MUDD: Right, so, so do you know what road is here on the lefthand side of this plan?

MR. CANOLES: Yeah, that's Joppa Road.

MR. MUDD: Okay and the --

MR. CANOLES: All right.

MR. MUDD: Yep, Joppa, Joppa runs and meets Falls. Do you know where that, where that occurs?

MR. CANOLES: Yes, --

MR. MUDD: (inaudible) --

MR. CANOLES: -- and that would be up at the top of this site, yep.

MR. MUDD: Okay. Sorry, it's not meant to be a

difficult question but I (inaudible).

MR. CANOLES: It's kind of in the southern corner.

MR. MUDD: Got it.

MR. CANOLES: Based on that north arrow.

MR. MUDD: Okay. So, the north --

MR. CANOLES: It's in the, it's in the, it's in the right of way of, of Joppa Road.

MR. MUDD: Okay, all right. And I'm going to zoom back in. So, we'll just, just pinpoint it again on this, on this plan.

MR. CANOLES: Yep. Sorry about that.

MR. MUDD: That's okay. Keep going down. And you said it's marked with TBR, is that right?

MR. CANOLES: Yes, on that plan, yes.

MR. MUDD: Sorry, it's going a little slowly. There we go. Do you see it in the screen now?

MR. CANOLES: Yep.

MR. MUDD: Okay and what, why, why is that being proposed for removal?

MR. CANOLES: Well, that, and you can see a little closer, it says ST 12, just to the left where the TBR is, as, is written in that is, indicates that it is specimen tree twelve on the FSD. And that tree is a Norway spruce and it's being removed to accommodate the road widening of Joppa Road.

MR. MUDD: Okay and will, what are these lines that

are next to, to the tree?

MR. CANOLES: Well, the grading lines, is that what you're referring to?

MR. MUDD: Yes, and the, the, the dark dashed lines here as well.

MR. CANOLES: Well, there's property line and a road right of way. The, the road right of way extends into what would be considered the subject property. And that includes where the tree is located.

MR. MUDD: Okay. So, so, are you saying that after, if the right of way is dedicated, this tree would be in that right of way?

MR. CANOLES: Correct.

MR. MUDD: Okay, all right. I'm going to show you what's marked as Petitioner's Exhibit 11. Do you recognize that?

MR. CANOLES: Yes, that is the specimen tree in question. And you can see how the, on the righthand side of the photo, you can kind of discern some powerlines. And you can see how the tree has been trimmed by BG&E to accommodate those powerlines.

MR. MUDD: Okay, all right. So, let's, I'm going to, I'm going to stop sharing again for a second. Let's talk a little bit more about the site. You said this is one specimen to be removed. How many specimen trees exist on the site in

total?

MR. CANOLES: Well, currently, there's only twenty-six. When we did the original FSD for the site, there were twenty-seven. But between when we did our field work and when Mike Kolus, the, the reviewer for Environmental Protection, went out to the site to review it, one of the trees had been taken out by a storm. So, there is, are now currently twenty-six specimen trees.

MR. MUDD: Okay and is there any forest clearing proposed with this development?

MR. CANOLES: There's no forest clearing proposed, and no other specimen tree removal proposed.

MR. MUDD: Okay and are you familiar with Baltimore County Code, Section 36-116 pertaining to special variances?

MR. CANOLES: Yes, I am.

MR. MUDD: How have you become familiar with that?

MR. CANOLES: Through preparing specimen tree variances and forest conservation variances for other purposes.

MR. MUDD: Okay and did you analyze that section for purposes of completing a special variance application here?

MR. CANOLES: Yes, sir.

MR. MUDD: Okay and I'd like to, I'm going to share again. Show you what's been marked as ex, I'll, I'll move Exhibits 10 and 11 into evidence as well.

ALJ: Any objection, Mr. McCann?

MR. MCCANN: No objection, thank you.

ALJ: All right. Mr. Zimmerman, I'm sure you have no objection, right, because this is not your area?

MR. ZIMMERMAN: No objection probably to any of these exhibits.

ALJ: Okay, all right.

MR. MUDD: Okay and I'm going to show you what's now been marked as Exhibit 12. Do you recognize this document, Mr. Canoles?

MR. CANOLES: Yes, that's the, the forest conservation variance application that was submitted for the project.

MR. MUDD: And who did you submit it to?

MR. CANOLES: To Baltimore County, Department of Environmental Protection.

MR. MUDD: Okay. I'm going to stop sharing again. I'll move that into, into evidence as well, Exhibit 12.

ALJ: Mr. McCann?

MR. MCCANN: No objection.

MR. MUDD: Thank you. Okay. So, in that application, did, did you, did, did you analyze the special variance requests in accordance with Section 33-116?

MR. CANOLES: Yes.

MR. MUDD: Okay. So, let's go through that standard here now in your testimony as well. There, you agree that, are

there, well, let's talk first about Section 33-116-D. There are three prongs in that section, do you agree with me on that?

MR. CANOLES: Yes, there are three standards that are offered to be met, yes.

MR. MUDD: Okay and, and must the Developer, must the Applicant, satisfy all three in that section?

MR. CANOLES: No. In this section, you're only required to meet one of those.

MR. MUDD: Okay. So, let's go through each of the three anyway. So, Section D-1, must demonstrate that the land in question cannot yield a reasonable return if the requirement from which this special variance is requested is imposed and will deprive the Applicant of all beneficial use of the Applicant's property. Does this request to remove this single specimen tree satisfy that standard?

MR. CANOLES: Well, we, we didn't, we didn't make the application on the basis of that standard, because the deprivation of all beneficial uses is a very high standard. And we didn't feel that we could meet that.

Although, because the, the tree is within the road right of way and because any road improvements that would be required to accommodate any new development on the site would require that the tree be removed, it's possible that you could argue that it does meet that standard. But that wasn't part of our application.

MR. MUDD: Okay. How about Subsection D-2, you must demonstrate that the plight of the Applicant is due to unique circumstances and not the general conditions in the neighborhood? Do we meet that standard?

MR. CANOLES: We do. We argued in the variance application and the County agreed that the, the, the general conditions of the, of the neighborhood had no bearing or, or no input into, as to why this specimen tree was being removed. It's simply, they agreed that because the specimen tree is within the road right of way, that was the factor that was unique to this project and unrelated to the, the surrounding property.

MR. MUDD: Okay. Subsection D-3, would demonstrate that the special variance request will not alter the essential character of the neighborhood. Did we meet that standard?

MR. CANOLES: Yes, we argued again that we met that standard and the County agreed. In fact, you know, our position was the, the current situation on the subject property is not in keeping with the surrounding properties because they are primarily developed for residential uses. So, allowing them to remove the one specimen tree is not going to adversely or significantly impact the condition of the surrounding neighborhood.

MR. MUDD: Okay. Next section that we, that we must satisfy is 33-6-116, I think it's D-3. You know that section?

MR. CANOLES: Yes.

MR. MUDD: Okay and there are three prongs in his section as well, correct?

MR. CANOLES: Yes, there are.

MR. MUDD: And are we obligated to satisfy all three in this section?

MR. CANOLES: We are.

MR. MUDD: Okay and, so let's go through those. I'm sorry, I think it's 33, let, let me get the section right, 33-6-116-E, sorry, not three. So, let's talk about E-1. That the, the granting of the special variance will not adversely affect water quality. How does this request satisfy that standard?

MR. CANOLES: Well, in this case, there's a couple factors that we considered. Typically, while some trees and specimen trees do provide some water quality benefit, the removal of this specific tree has a, a limited function, partly because a lot of its critical root zone is impacted by the existing road, paving for Joppa Road. In which case, it reduces its, any function that it, its root zone would have relative to providing water quality benefit.

Secondly, the location of the tree, it's not within a wetland or it's, or, and it's not adjacent to a stream or on a stream bank where it's providing stability to the stream bank, so its removal won't affect negatively those resources.

Thirdly, we also considered the fact that as part of the overall development of the property, we will be providing five acres of reforestation on land that is currently, or has historically been in agricultural use. And converting from an agricultural use to a forest situation will certainly improve water quality.

So, in considering all those things, we felt that we met this standard.

MR. MUDD: Okay. How about Section E-2, that the special variance request does not arise from a condition or circumstance which is the result of actions taken by the Applicant. Did we satisfy that standard?

MR. CANOLES: We do. This standard really is created to ensure that someone that illegally removes a specimen tree prior to getting, or applying for a variance, can't be issued a variance through, in that process because the tree is still in place and we haven't done anything to cause its removal. We meet that standard.

I would note that because the tree is within the right of way of the road, and within the BG&E powerline, you know, BG&E could come out there today and remove that tree with, without any authority needed from the County.

MR. MUDD: Okay and then lastly, E-3, that the special variances granted would be consistent with the spirit and intent of this title. How do we satisfy that standard?

MR. CANOLES: Well, the proposed project, the goal of the Forest Conservation Act is not to stop development, but to guide it, to be sensitive to forest resources primarily, because the proposed development will be allowed to retain all the existing forest on the site, we feel that the project as, in general, meets the most important part of the Forest Conservation Act.

Removing this single tree from within the road right of way where it, it is already impacted by the road, impacted by the powerlines, it's certainly not, or it certainly is consistent with the, the goals of the Forest Conservation Act.

MR. MUDD: Okay and I think you mentioned that the County agreed throughout this process. I'm going to share one more time what's been marked as Developer's Exhibit 13. Do you recognize this document?

MR. CANOLES: Yes, that's the variance approval letter.

MR. MUDD: Okay and this is, I guess, four pages, including a signature by Mr. Powell, is that right?

MR. CANOLES: Yes, yes.

MR. MUDD: Okay and so, what, what, I guess in the shortest terms, what is this letter convey, what does it say?

MR. CANOLES: Well, the letter basically goes through what we just went through in the process and, and presents the justification from the County standpoint as to how all these

standards have been met and approves the removal of the specimen tree, the variance request.

MR. MUDD: Okay. With that, Judge Murphy, I have no further questions of this witness.

ALJ: All right. Any objection to thirteen, Mr. McCann?

MR. MCCANN: No objection.

ALJ: This is also County exhibit number six, just for the record. So, we have coordinating exhibit numbers. Mr. McCann, any questions?

MR. MCCANN: I do, I do have, not a whole lot, but some questions. Could I share, Your Honor, before I move on? Good afternoon, Mr. Canoles, how are you?

MR. CANOLES: Fine, fine, good afternoon.

MR. MCCANN: Thank you. Thank you, Judge. Okay. So, you've identified the location of the tree. Can you see my copy of Developer's Exhibit 1-B of the green line development plan, sir?

MR. CANOLES: Yes, I can.

MR. MCCANN: Okay and you've indicated that the tree needs to be removed because, to accommodate an ex, I guess, a decel, deceleration lane, correct?

MR. CANOLES: Well, the, the proposed grading for the road improvements will impact more than thirty percent of its critical root zone, so the County consider, considers it to be,

to have to be removed, yes.

MR. MCCANN: No, I understand that. But what are the proposed road improvements that we're talking about specifically, do you know?

MR. CANOLES: My understanding is that there are, that it is for either an accel, well, I guess a decel lane on that side of the road. And, and grading. I'm not exactly sure where the paving and the grading are, but, exactly, but it, it's within the critical root zone of the tree.

MR. MCCANN: Okay. Is that the extent of your knowledge as to what the road improvements are?

MR. CANOLES: Yes.

MR. MCCANN: Okay. So, in other words, based on the understanding that you just expressed, for cars traveling towards the intersection of Falls Road and, and Joppa, towards that traffic light, traveling in this direction, the County is requiring a deceleration lane, to widen the road to accommodate a deceleration lane for cars entering into the proposed development, is that your understanding?

MR. MUDD: Objection. I mean, I think he's asked and answered the extent of his understanding, what this is about.

ALJ: Understood. Over, overruled. Go ahead.

MR. CANOLES: My understanding is that there is road widening along the side of Joppa Road. The, whether it's, the amount of it and how much of it is needed for a deceleration

lane, I don't know specifically.

MR. MCCANN: But you don't think you need to know that in order to testify to the, to the standards you've talked about this afternoon? That is, the extent of the road improvements? Or any, any specificity as to them?

MR. CANOLES: Well, in this case, I just need to know what the proposed limits of disturbance are associated with the road improvements. I trust that the road improvements that the engineer puts on the plan are what is being required by the County. But I'm not involved in those negotiations or the design of the road improvements.

MR. MCCANN: Okay how do you know what the proposed limits of disturbance are? How did you learn that?

MR. CANOLES: There was a plan we had at some point that showed limits of disturbance and you can see on here, the, I believe, the expanded road right of way and, ultimate, paving widths are shown on there.

MR. MCCANN: Okay. Well, then I guess, you know, given your understanding, or the limits of your understanding, is it, is it fair to say that if a deceleration lane was not required by the County, then this tree could remain, is that a fair statement?

MR. CANOLES: If the limits of disturbance were less impactful on its root zone, it could be retained for, but I don't know all the specifics, specifics of why the road

widening is required as it is required.

MR. MCCANN: Well, you know it's a deceleration lane, you've indicated that, right? That's the purpose of it?

MR. CANOLES: That's my understanding, yeah.

MR. MCCANN: So, if we didn't have to --

MR. CANOLES: A turn lane --

MR. MCCANN: -- if we didn't have to do, kept the road the way it is and didn't have to do any improvements along that side of the road, is it a fair statement that the specimen tree would not need to be removed, need to be removed, that is?

MR. MUDD: Objection. Asked and answered.

ALJ: Overruled. Go ahead.

MR. CANOLES: If, can you, I'm sorry, can you ask me that again?

MR. MCCANN: Yeah, absolutely. The question simply is if the County did not require the road improvements that you've mentioned, specifically the installation of a deceleration lane, and the road would have remained the way it is, would you agree with me that there's, there's no requirement that that, that this specimen tree be removed?

MR. MUDD: Same objection.

ALJ: Overruled. Go ahead.

MR. CANOLES: Still overruled. If there was no proposed disturbance within the critical root zone, the tree could be retained. It actually may be retainable, the actual

trunk of the tree, even with the proposed site improvements. But, but it's potentially, could be removed tomorrow by BG&E.

MR. MCCANN: Well, yeah, you said that and let me ask you about that. I mean, BG&E is not a governmental entity, is it?

MR. CANOLES: I don't, I don't, no, I assume it's a private entity --

MR. MCCANN: (inaudible) BGE is subject to the forest conservation regs just like any developer is, is it not?

MR. CANOLES: They have agreements in place with different agencies as to what they can do for hazard tree removal. Some of that, my understanding is, is not regulated by the Forest Conservation Act, by the County or the State.

MR. MCCANN: But fair enough, you seem to suggest that BG, if it wanted to, just, it could go ahead and take that tree down today, if it wanted to. And I'm, I'm getting at that testimony. What, what basis do you say, I mean, for instance, do you have any knowledge about what this agreement is that BG&E has with the County in that regard?

MR. CANOLES: No, but we've had projects where BG&E has done road clearing and has removed trees from under, under and around their powerlines.

MR. MCCANN: No, I, I think we all have seen that. My question is, in this case, under these circumstances, are you aware of any reason why BG&E would need to take this tree

down if the road improvements that are proposed would, are not necessary --

MR. CANOLES: Well, BG&E --

MR. MCCANN: (inaudible) --

MR. CANOLES: -- BG&E's authority, or involvement with the tree is irrespective of the development project. It's, theirs is relative to the protection of their powerlines. So, I, the two things really aren't linked.

MR. MCCANN: Well, you linked them. You said that BG&E could take down the tree if it wanted, if it wanted to. And I'm just trying to get to the basis of that statement, that's all and then I'll move on. I just want to make sure --

MR. CANOLES: As I said, when they deem a tree to be a hazard to their powerlines, they have the authority, in my understanding, to remove a tree. This tree --

MR. MCCANN: I understand that. I understand that.

MR. CANOLES: Well, as you can see from the photo, they, they have maintained the tree already by trimming a lot of the branches off of it.

MR. MCCANN: I understand (inaudible) --

MR. CANOLES: If the tree, if the tree is deemed to become more of a hazard the trimming can't simply alleviate the hazard, then they could remove the tree.

MR. MCCANN: Okay. I understand all of that. My question simply is, as a matter of fact, sitting here today, do

you know of any circumstances under which or, or why BG&E would take down, take down this tree if the road improvements were not made and, and the road were to remain the way it is?

MR. MUDD: Objection. Asked and answered, I think twice now.

ALJ: So, so, yeah, I think you're, I mean, you're, there's a mix here of what the development, whether if the development goes through then the road widening goes through. But I think, I understood his testimony to say that separate from that, BG&E could take it down just because it interferes with the powerlines. Now, whether they can do that or not, but I don't think it's linked to the development, so (inaudible).

MR. MCCANN: Yeah, I think it is linked. He --

ALJ: Okay.

MR. MCCANN: My, my question is as a matter of fact. I, I understand BG&E has authority.

ALJ: Yeah.

MR. MCCANN: I think everybody on this call knows that BG&E takes down trees to protect powerlines.

ALJ: Yeah.

MR. MCCANN: I'm just asking as a, what facts does this gentleman have, maybe I should have asked it that way, does this gentleman have that would support that today, sitting here today, if the development proceeds forward, but the road isn't improved at all, it's kept the way it is, does he have

any facts to support that BG&E would need to take this tree down? Not trim it but take it down.

MR. MUDD: Objection.

ALJ: So, I mean, I still think there's a mix here of, of why BG, if there's no roadway improvements, isn't just the question what, what you asked before, which was does it have to be taken down at all? Whether or not BG&E is involved, right, Mr. McCann? I mean, do we, do we care --

MR. MCCANN: I'm asking him, I'm asking him, he's, he keeps on suggesting that the tree would come down anyway --

MR. CANOLES: No, that's not --

MR. MCCANN: -- and I'm asking him what facts he has to, or could come down anyway, what facts does he have sitting here today that it would come down anyway.

ALJ: If, if it interfered with the powerlines, is what I understood, right? I mean, --

MR. MCCANN: (inaudible).

ALJ: If, that's, that's the, for the BG --

MR. MCCANN: I understand. That's an if. I'm asking for facts, not for hypothetical circumstances in the future that might occur. I'm asking what he knows sitting here today about any facts or circumstances that would give BG&E the right to take down this tree if this road was not improved and it was kept the same.

MR. MUDD: Same objection.

ALJ: Okay, understood. Overruled. Go ahead, Mr. Canoles.

MR. CANOLES: Well, it's the same answer. If the tree in the future becomes what, a hazard to the lines per BG&E's definition of that, they, in my understanding, would have the right to remove the tree. Irrespective of whether the site is developed or not.

MR. MCCANN: All right. Well, you're not answering the question, but I understand. I understand, I'll move on.

MR. CANOLES: I'm sorry. I think I am but --

MR. MCCANN: That's okay. You keep on saying if. I'm not asking about hypotheticals, I'm asking what you know about, have you talked to BG&E for instance about this issue?

MR. CANOLES: No.

MR. MCCANN: Okay. I'll move on.

MR. CANOLES: I didn't, sorry.

MR. MCCANN: Are you, are you familiar at all with any, with the, the requirement in Baltimore County of when and under what circumstances an accel or decel lane is required --

MR. CANOLES: No.

MR. MCCANN: -- under County, no. Okay. Real quick, just a couple quick questions about the standard that Mr. Mudd asked you about. I don't have a lot of questions, but I have a copy of it here so everybody can see it and I'll, this is,

again, it's 33-6-116, and I'll just enlarge it a little bit. Do you see that well?

MR. CANOLES: Yes.

MR. MCCANN: Okay, great. So, first, Subsection D, the, D-2, which you spoke about. I think you said with respect to that section, I'll just read it real quick. It says, quote, that the plight of the applicant is due to unique circumstances and not the general conditions in the neighborhood, end quote.

With respect to that standard, I think you, what you said is that the, what, what I gathered from what you said, is that what is unique about these circumstances is that there is a tree in the right of way?

MR. CANOLES: Well, that is the unique circum --

MR. MCCANN: The tree, the tree is in the right of way.

MR. CANOLES: That's a unique circumstance. Most of the time, you don't have specimen trees that close to the road because their root zones have been previously impacted by the road development, salt problems, whatever the other issues that come with being adjacent to a road.

MR. MCCANN: Okay. But this tree doesn't have those problems, right? It's there, it's in good shape, right?

MR. CANOLES: It has survived, yes.

MR. MCCANN: Okay. So, my question again, is simply other than the fact that this specimen tree is physically

located in the right of way, are there any other unique circumstances that you, you would identify in response, or in connection with this provision under D-2 of 33-6-116? Other than that?

MR. CANOLES: That is the primary unique circumstance --

MR. MCCANN: Okay.

MR. CANOLES: -- and the fact that removal of the tree and, and the, the associated plate, is not related to the general conditions in the neighborhood.

MR. MCCANN: Yeah, well, that's a separate standard. I was just asking you about the first part of that. So, no other unique circumstances, other than what you've described already, correct?

MR. CANOLES: Well, it's a non-native tree and it's also been trimmed along the powerlines. So, those are also unique that impact its quality and its functional value.

MR. MCCANN: Okay. Well, you didn't say that before. You said its non-native nature and the fact that it's close to the powerlines?

MR. CANOLES: Yes, it's been trimmed, yes.

MR. MCCANN: So, those are, in your opinion, those are two additional circumstances that render this situation, or render the plight of the applicant unique, correct?

MR. CANOLES: Yes, yes.

MR. MCCANN: Okay, all right. And then Subsection E finally, each of these have to be met, correct? Because this is stated in the conjunctive?

MR. CANOLES: Correct.

MR. MCCANN: Okay and with respect to E-2, which says quote, that the special variance request does not arise from a condition or circumstance which is the result of actions taken by the applicant, end quote.

As I understand your testimony in response to Mr. Mudd's questions, the, the reason why this requirement in D-2 is met, is that this is not, this was not a situation where the tree was already taken down and then post that, this special variance request has been submitted, that's not the situation here, right?

MR. CANOLES: Yes, that's my understanding of that standard is, is to keep people from applying for a variance after the fact.

MR. MCCANN: Okay. So, no, other than that, no other basis for your opinion under E-2, that's the extent of it, correct?

MR. CANOLES: Correct.

MR. MCCANN: Okay. Bear with me, I think that's all I have. And maybe I missed it. I was looking for it in my notes, Mr. Canoles. I, I apologize. But could you state again what, under D-3, going back up to D-3. The provision that says

for an unwarranted hardship, the applicant must show that the special variance requested will not alter the essential character of the neighborhood. Explain to me, again, if you don't mind, why that element is met, has been met.

MR. CANOLES: Well, we argued, and the County agreed, that the removal of one tree along the side of the road was, was not something that would have, would alter the essential character of the neighborhood. We, we, in an attempt to justify that standard, we defined the essential neighborhood, or the charact, or the essential character of the neighborhood was more defined by the adjacent high density residential and commercial uses then would be a single tree along the road.

MR. MCCANN: So, the high, the essential character of the neighborhood is, is high density residential housing?

MR. CANOLES: Yes.

MR. MCCANN: Okay and when you say neighborhood, what do you, what are you including in that characterization?

MR. CANOLES: The adjacent properties.

MR. MCCANN: You mean, immediately adjacent or nearby or what do you mean by that?

MR. CANOLES: I mean, in my opinion, the, the prop, adjoining properties that contribute to the character of the neighborhood when I drive along Joppa Road.

MR. MCCANN: Yeah, but I'm asking what they are, that's my question.

MR. CANOLES: Well, as all the, the developments along Tallyho Road and then the commercial development at Windy Valley.

MR. MCCANN: Okay, okay. And the tree, for everyone's benefit, before I let you go, just explain what a specimen tree is, Mr. Canoles.

MR. CANOLES: What a, a specimen tree is?

MR. MCCANN: Generally, generally speaking, yes.

MR. CANOLES: In the, in the terms of this, it's, it's a tree that's greater than thirty inches in diameter at breast height.

MR. MCCANN: Okay.

MR. CANOLES: That's, that's how this tree was determined to be a specimen tree.

MR. MCCANN: (inaudible) know the diameter of this tree at breast height?

MR. CANOLES: It's a forty-three-inch Norway spruce.

MR. MCCANN: Okay.

MR. CANOLES: And Norway spruce --

MR. MCCANN: (inaudible) approximately?

MR. CANOLES: Excuse me?

MR. MCCANN: Do you know how old the tree is approximately?

MR. CANOLES: That's really hard to tell. Generally, there are some age growth rate factors that you can ascribe to

a tree. They're very general and typically are used more so in a forestry standpoint than in a, in an individual tree standpoint. But it could be a hundred and thirty years old, plus or minus.

MR. MCCANN: Okay, all right.

MR. CANOLES: It could be a lot less than that if, but it's hard to tell without doing an increment bore.

MR. MCCANN: Got it. Okay. Thank you, sir. No further questions, Judge. Thank you.

ALJ: Okay. Mr. Zimmerman, I'm skipping you, right? Did you say yes? You're, okay. You're talking but you're, you're not coming through for some reason. Yeah, no, I mean, your microphone is unmuted but I can't hear you. I don't know why. Are you there?

MR. ZIMMERMAN: Let me --

ALJ: There you are. Maybe it's your headset, maybe the headset isn't plugged in? Okay. We can sort of hear you. If, you, you don't have any questions though, right?

MR. CANOLES: I think he has a question.

ALJ: He, I don't think he has, I think he's saying no, but I just want to make sure. Are you saying yes or no?

MR. ZIMMERMAN: Oh, sorry. I had to unmute myself. No questions (inaudible) hear me.

ALJ: Thank you. Yes, we can hear you now. All right. Thank you. Mr. Wyatt, do you have any questions?

MR. WYATT: No questions, Your Honor.

ALJ: Thank you. Mr. Sachse, any questions?

MR. SACHSE: No, no questions, Your Honor. Thank you.

ALJ: Any, any questions in re-direct, Mr. Rosenblatt?

MR. MUDD: No, Your Honor.

ALJ: I'm sorry. Mr. Mudd?

MR. MUDD: It's okay.

ALJ: I looked at him and, you know.

MR. MUDD: Mr. Rosenblatt is getting a well-deserved rest (inaudible).

ALJ: Okay. Well, Mr. Mudd, you don't have any questions?

MR. MUDD: No, I do not. Thank you very much.

ALJ: Okay. I think we're finished with Mr. Canoles.

MR. CANOLES: Thank you very much, Your Honor.

ALJ: Thank you. All right, who's the next, who's, who's up next?

MR. ROSENBLATT: Next witness is Nick Driban. And Judge, I, I should have said this earlier. I hate to, to do this but I have a hard stop for parenting duties at 4:30 today. I just, I should have said it first thing. I can go all hours of the night the next two hearings, but today I'm very sorry. I just, I just forgot to say that, so I wanted to say that.

ALJ: That's fine, no problem. So, 4:30, well, it's 2:30, so we have two hours, you know, we should --

MR. ROSENBLATT: I'll get as far as I can.

ALJ: Okay, all right. So, we have Mr., is it Driban, right, Driban? Driban. Okay, I can't hear you, can you hear me? Nope. You, are you connected to the computer when it, for the sound audio?

MR. DRIBAN: Yes, can you hear me now?

ALJ: All right. Now, you're good.

MR. DRIBAN: All right.

ALJ: Okay, thank you. Raise your right hand, please? Do you swear and affirm under penalties of perjury, the testimony you're about to give is true and correct to the best of your knowledge and belief?

MR. DRIBAN: I do.

ALJ: Okay, all right. Mr. Rosenblatt?

MR. ROSENBLATT: Thank you, Judge. Permission to share, please?

ALJ: Yep.

MR. ROSENBLATT: And while that's happening, Mr., it is Driban, right?

MR. DRIBAN: Lieutenant Driban, yeah. No, it's, I pronounce it Driban, yes.

MR. ROSENBLATT: Driban, okay. I've been saying it wrong for a year. Sorry about that. I'm going to share a copy

of what's been marked as Developer's Exhibit 24, ask you, is this your resume?

MR. DRIBAN: It is.

MR. ROSENBLATT: Can you explain with who you're employed, what's your position, what you do for a living?

MR. DRIBAN: Yes, I am an Associate Vice President with Lenhart Traffic Consulting. Our office is at 645 Baltimore Annapolis Boulevard, Suite 214, in Severna Park, Maryland. We are a traffic engineering firm and I've been with Lenhart Traffic for about five years now, which is a portion of my total of fifteen, actually sixteen years now, of experience in total.

Prior to Lenhart Traffic, I spent about ten years with, excuse me, about eight years with STV Incorporated, where I was a traffic engineer, and then ultimately, at the time I left, was a traffic operations manager for that department, where I oversaw a staff of five.

And also had a two-year stint with the Maryland State Highway Administration in their Access Management Division, where I was responsible for viewing traffic impact studies for sites throughout the state, including district four, which is Baltimore County and Harford County, as well as other, other areas of the state.

MR. ROSENBLATT: Okay. You explained your work history, can you talk a little bit about your education?

MR. DRIBAN: Sure, yes. I have a bachelor's in science in Civil Engineering from Penn State University, yeah.

MR. ROSENBLATT: Are you a traffic operations engineer?

MR. DRIBAN: Yes, I'm both a professional engineer in the State of Maryland, as well as a professional traffic operations engineer, which is a certification through the Institution of Transportation Engineers, which is sort of a, the, the industry association for, for traffic and transportation engineers (inaudible) --

MR. ROSENBLATT: Okay. I'm sorry. Are you registered in Maryland?

MR. DRIBAN: Registered P.E. in Maryland, PTOE is a national certification.

MR. ROSENBLATT: Okay and have you testified before in other cases, other jurisdictions?

MR. DRIBAN: Yes, I have.

MR. ROSENBLATT: Been accepted as an expert?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Did you prepare certain reports and exhibits related to traffic for the Greenspring Manor project?

MR. DRIBAN: Yes.

MR. ROSENBLATT: In preparing those documents, did you review the Baltimore County development and zoning regulations?

MR. DRIBAN: Yes, I did.

MR. ROSENBLATT: And in addition to the regulations applicable to development plans, did you review the regulations applicable to requests for special variances from the traffic sheds in the basic services maps?

MR. DRIBAN: I did.

MR. ROSENBLATT: And are you familiar with the standard for approval of both development plans and Petitions for special variance?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Have you been to the property?

MR. DRIBAN: I have.

MR. ROSENBLATT: Drive, have you driven the roads in the surrounding area?

MR. DRIBAN: Yes, I have.

MR. ROSENBLATT: And as said, have you conducted studies related to this proposed development?

MR. DRIBAN: Yes.

MR. ROSENBLATT: At, at this time, I'd ask that Mr. Driban be admitted as a professional traffic operations engineer with particular knowledge of the requirements for zoning and development in Baltimore County.

ALJ: Mr. McCann, any voir dire?

MR. MCCANN: No, I think I can handle it on cross examination, anything, I would, I would assume, Your Honor,

that despite the fact that he hasn't testified in Baltimore County, that you will nevertheless accept him as an expert. So, with that, I'll, I'll save anything on, in that regard for, for cross.

ALJ: Okay. Mr. Zimmerman?

MR. ZIMMERMAN: I do have a few questions.

ALJ: Voir dire questions, Mr. Zimmerman?

MR. ZIMMERMAN: Yes.

ALJ: Okay.

MR. ZIMMERMAN: Yes. So, Mr. Driban, do you have any legal education?

MR. DRIBAN: No, I do not.

MR. ZIMMERMAN: Okay. Is, as part of your traffic engineering expertise inclusive of the field of risk assessment and risk management?

MR. DRIBAN: Not formally.

MR. ZIMMERMAN: Okay. Okay, that's all the questions I have. My, my observation or view is that Mr. Driban is surely a qualified traffic engineer. But I don't think he, I think the scope does not include any legal conclusions or interpretation as to the meaning of the growth management standards relating to transportation. That's, that's a legal conclusion for the Judge to make after argument, but not for traffic engineers to interpret. That's my view.

ALJ: Okay, understood. And so, he'll be admitted as

an expert professional traffic operations engineer, with specialty knowledge in the Baltimore County zoning regulations, Mr., Mr. Rosenblatt, is that what --

MR. ROSENBLATT: Zoning and development regulations.

ALJ: Zoning, Baltimore County zoning and development regulations. Okay, all right. And we'll, we'll admit his c.v. as --

MR. ROSENBLATT: Okay, thank you.

ALJ: -- which number is it? Let me see. Oh, it's twenty-four.

MR. ROSENBLATT: That is twenty-four.

ALJ: All right, thank you.

MR. ROSENBLATT: All right. So, Mr. Driban, you said you've been to the property. Are you familiar with the area surrounding the property?

MR. DRIBAN: Yes, I am.

MR. ROSENBLATT: And did you perform a traffic impact analysis for this project?

MR. DRIBAN: Yes, we did.

MR. ROSENBLATT: Did you perform an analysis of the proposed offsite improvements and whether they will impact traffic at the intersections along Falls Road, Joppa, Greenspring Valley?

MR. DRIBAN: Yes, we did.

MR. ROSENBLATT: And did you perform an analysis of

this potential emergency only access gate that is proposed at the Mays Chapel Road corner of the property?

MR. DRIBAN: Yes.

MR. ROSENBLATT: All right. Let's start with the traffic study. So, I'm going to show you what's been marked as Developer's Exhibit 5, a study dated December 7th, 2020. Is this the report you prepared?

MR. DRIBAN: Yes, it, it appears to be.

MR. DRIBAN: And were you here for the prior testimony in this case from Kris Nebre and Aaron Kuhn (phonetic) from SHA?

MR. DRIBAN: Yes, I was.

MR. ROSENBLATT: Is this the study submitted to those agencies, that the agencies reviewed and approved?

MR. DRIBAN: It is, yes.

MR. ROSENBLATT: Okay. Can you explain the interplay between Baltimore County and SHA in reviewing this study?

MR. DRIBAN: Yeah, so, obviously with the development being in Baltimore County, we are going through the Baltimore County development process, which means that their traffic department and other departments are responsible for, for review and oversight of, of traffic requirements within the Baltimore County zoning regulations and other guiding documents.

In this case, SHA is the owner of Maryland 25, which

is Falls Road, which is just west of the site. And so, they have oversight for actual review and approval of any potential improvements or mitigation that would be constructed to be along Falls Road, or any of the, the intersections along Falls Road.

Even Maryland 30, Maryland 130 and Maryland 131, which are Seminary and Greenspring Valley Road, which are both also state roads. And then additionally, we have Joppa Road, which is a County road, but within typically five hundred feet or, or more depending on the influence area of the intersection, SHA still has jurisdiction over, over that road as well. That, that section of that road.

MR. ROSENBLATT: Okay. Let's go over the report. First, there's, there's an initial date, excuse me, of September 14th and revised December 7th. Could you please explain what, what the difference is? Like what happened between the two that caused a revision?

MR. DRIBAN: Yeah, so we submitted our initial study in September of 2020. And as is typical with pretty much any study that goes into State Highway, they've got seven divisions with, internally, that review it. And so, we typically get comments from one or all of those divisions on the study.

Again, with Baltimore County as well, you know, it's typical to get comments, at least one round of comments or questions or just sort of clarifications on the study. So, we

received comments from both the County and State on our first draft of the study and it was revised with the, with the second date in red, which I believe is December 7th and resubmitted to both the County and the State.

MR. ROSENBLATT: What, what's the scope of the study that you performed?

MR. DRIBAN: The scope of the study included the site access point, as well as Maryland 25, which is Falls Road, at Joppa intersection and Maryland 25 at Greenspring Valley/Station Drive.

MR. ROSENBLATT: And if we look, look at page five of your traffic study, is this a location of the intersection study?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Okay. Let's, before we talk about the proposed project, let's talk a little bit about the existing conditions. Where did the traffic counts come from that you used as, as part of your analysis to this case?

MR. DRIBAN: The, the traffic counts were actually conducted primarily by SHA. So, initially, the first draft of the study was, was actually counts that we received from SHA directly.

And then, one of the comments we received as part of the first round of review was from the County saying that they had a more recent count and that they would like us to use a

more recent count at the intersection of Falls Road and Joppa, which they provided to us and was, and was used as part of the, the revised and final version of the traffic impact study.

MR. ROSENBLATT: And when you were first performing the analysis for this case, was it during COVID times?

MR. DRIBAN: Yeah, it was. And there was, you know, various counties in the state had different ways of handling, of handling that. And it sort of evolved over the time that, you know, COVID was, you know, was raging.

Initially, you know, many, that both the State and County had moratoriums entirely on conducting traffic counts when things were really shut down in March and April of 2020. But, you know, as, as time went on, those, those moratoriums kind of loosened up.

But in this case, we initiated the study during the early part of COVID in early 2020 and we were actually very lucky to have access to SHA and County counts that occurred just before COVID really shut things down.

MR. ROSENBLATT: Okay. Let's talk about background traffic so, explain what, what background traffic is and what was considered as part of this report.

MR. DRIBAN: Yeah, so when we look at a traffic impact study, we typically look at three conditions. There's existing conditions, which we just discussed, which is what's out there today. So, one configuration is traffic volumes, you

know, intersection, intersection traffic controls.

So, whether it's stop controlled, signalized, roundabout, etcetera. And when we move from there, we look at background conditions. Background conditions are anything that's approved prior to, to the study being conducted that, that would come online before the site, so those are approved developments, specific developments.

And, and then generally, we'll, we'll include a growth rate that kind of accounts for regional, regional growth and traffic along roadways or, you know, developments that may occur that were not, you know, that, that we're not aware of at the time that come online later.

So, in this case, there were no, we coordinated with the State and County, there were no approved background developments at the time of the study. But we did include a one and a half percent growth rate over the course of three years to account for just general regional growth that may occur and anything else that could come online.

MR. ROSENBLATT: Where does that 1.5% number come from?

MR. DRIBAN: The 1.5% comes from a look back at SHA's, they keep historical traffic volume data. And in this case, they had data along Maryland 25, Falls Road, in the vicinity of the site.

And so, we look at ten years of that data and

determine the average growth rate, which I believe in this case, was a little bit less than, than one and a half percent. We, we used one and a half percent based on correspondence with SHA and, you know, based on the historical growth rate.

MR. ROSENBLATT: All right. Let's talk about total conditions. And how did you calculate, first, the trips that are projected for this project?

MR. DRIBAN: Yeah, so, we have existing conditions, background conditions and then total, background is everything up to the point where the site gets constructed, gets constructed and total then is everything that was included back, in existing, plus everything in background and then the site traffic itself.

And the way these studies are conducted, that I probably should have said earlier, you know, there's a very rigorous methodology that, that SHA uses, you know, that's fairly standard if you go to different jurisdictions throughout the country or throughout the state.

You know, this, this methodology that I'm describing is, is fairly standard between them. And so, specific to the site traffic conditions, the first piece is conducting what's called a trip generation analysis. Trip generation is conduct, is conducted using the ITE, Institute for Transportation Engineers Trip Generation Manual.

That is a three-part document. Each part is, you

know, five hundred to a thousand pages. And, and basically, what's contained in there is, for any land use you could think of, whether it's a single family detached units like this or a hotel or a shopping center or a park. You know, really, anything that you could think of.

It's a compilation of studies that have been done throughout the country that looks at how many trips. So, a trip is a vehicle entering or exiting a site. So, it looks at how many trips on average occur for a given type of development based on the size of that development.

So, in the case of single family detached units, the, the, the unit count, or the, the independent variable is units and when you input the number of units to the ITE trip generation manual equations, you can get the number of trips in and out during the a.m. peak hour and the p.m. peak hour for a site of that nature.

And, and this is, this is the standard document that's used industry wide. I mean, it, it is, it's, it's used in Maryland, it's used in Florida, it's, it's the document, you know, it's, it is the way that trip generation is conducted.

MR. ROSENBLATT: Okay and can you explain your calculation of how many trips will be generated from this project?

MR. DRIBAN: Yes. So, in this case, again, the independent variable for the ITE trip generation manual is, is

units. We have sixty-two units and so you can see at the top of the exhibit that's on screen now, there are equations. The morning equation is a little simpler. It's 0.7 times the number of units, plus 9.74.

And so, and then there's a split in and out, you know, as you would sort of anticipate, or sort of intuitive, more, more traffic from a single family development leaves, leaves in the morning. So, seventy-five percent is leaving, twenty-five percent is coming in.

And so, when you plug in sixty-two units in that equation, you get eleven trips inbound and thirty-five trips outbound in the morning. And that is the total during what we call, and I should have probably explained this earlier, but the a.m. peak hour, we look at the, the a.m. peak hour and the p.m. peak hour. So, those are the highest volume of traffic for both the site and adjacent roadways, you know, throughout the day.

And the, the purpose of looking at that, again, this is part of the, the standard methodology that State Highway uses that, you know, that most agencies use. The purpose of looking at the highest hours to make sure you're capturing sort of the worse traffic that you have a conservative analysis that you're conducting.

So, when I say there are sixty-two units generating forty-six trips, eleven in and thirty-five out, that's during

the heaviest volume of traffic from that, from that site during the, during the morning.

And then, just kind of finishing through the exhibit, during the evening, the equation is a little bit more complicated. It's, there's an LN involved and natural (inaudible), etcetera. But we had thirty-eight trips inbound, twenty-three outbound and a total of sixty-one trips that would come, that would be to and from the, the development during the highest volume of traffic during the p.m. period.

MR. ROSENBLATT: And to turn back to total conditions for a minute. Did, did you analyze the projected level of service for the studied intersections under the, what we refer to, as the CLV and HCM methodologies?

MR. DRIBAN: Yes, we did. In this case, we, we did both methodologies. They're sort of, I guess, complimentary methodologies in a lot of ways. The CLV methodology is really, is the state standard and really what the County primarily uses. CLV stands for critical lane volume.

And the critical lane volume methodology is, is basically a way of evaluating how much traffic for different movements of the intersection needs to pass through the intersection at the same time and sort of conflicts with each other.

And so, out of that evaluation comes a letter grade. It's called level of service. It runs A, B, C, D, E or F.

Generally, for State Highway, level service E and F are considered to be unacceptable under the CLV methodology. So, we did do that methodology because that's the baseline.

In situations where there are coordinated signal systems, so where the traffic lights are timed to each other, such as along Falls Road, we sometimes would utilize the highway capacity manual, or HCM, methodology as well. And that methodology is again, letter grades as well, so A, B, C, D, E or F. E is considered, E and F are considered to be typically unacceptable by SHA.

And that methodology is a little bit more equations based and looks at the average delay per vehicle that would be incurred of an intersection based on the, the traffic control devices, the lane configurations and the volumes at that location.

MR. ROSENBLATT: And before you go into your, the results of your study under those methodologies, did you prepare a breakdown, you've explained how many trips are projected from this project. Did you prepare a breakdown of where the trips will go?

MR. DRIBAN: Yes. So, in order to, in order to, sort of apply the, the trip generations, we have a number of trips that I discussed that was on previous page or the, yeah, the previous page that you showed on Exhibit, excuse me, page thirteen of the report.

Those trips have to be actually assigned to the road network. And so, you know, we know the number that comes in and goes out of the site driveway. We need to know where those are coming from and going to. And in this case, based on the roadway network in the vicinity of the site, you know, the majority of, of these trips are going to be to and from the south, along Joppa Road. The, excuse me, to and from the south along Falls Road via Joppa Road.

Falls Road to the south provides, provides access to 695, both inner loop and outer loop, as well as northbound and southbound 83. And so, the vast majority of trips is, you know, projected to go, to go that way. There will be, you know, some trips that will head eastbound along Joppa Road.

You can see the percentages on the screen. We had, there are twenty percent that would go eastbound on Joppa Road, you know, that may be some trips that go into Towson or to the schools that are over in that direction. And then there's a small amount of traffic that would go, that would go west on, on Falls Road, west on Greenspring Valley Road, five percent to each of those.

And then ten percent northbound on Falls Road, passing out of study area, in that direction. And, and really, if you look at the regional origins, origins and destinations in this area, you know, it's primarily rural to the north and west of here. You know, you've got the busy Maryland 45

corridor to the east, Towson also to the east, which would be primarily accessed via, again, Falls Road to the south, as well as Baltimore City and, you know, many of the surrounding areas.

MR. ROSENBLATT: And I'll try and do a better job for this, but for the record, you're, we're referring to page fourteen of your traffic study for the trip assignment data?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Okay. Let's talk about the level of service under each methodology. So, I'll turn your attention first to page sixteen and ask you, what are the results for the studied intersection under the critical land volume methodology?

MR. DRIBAN: Yeah, so, under the critical lane methodology, again, we have the, the studied intersections, the three that I noted initially. And you can see that the intersection of Maryland 25 and, and 130, which is, which is Greenspring Valley, operates at what SHA would consider an acceptable level of service B. Under all three conditions that I noted, existing, background and total.

The intersection of Maryland 25 and Joppa Road, Falls Road and Joppa Road, operates at a level of service E under, under existing and background and total during the a.m. peak hour. And I should, I should clarify for those looking at the screen, the top half of this is the, is the morning peak hour. There's three columns, existing, background, total and then the

bottom half has the same three columns for the, for evening peak hour.

So, as I, as I was saying, the level of service is E during the morning peak hour under existing conditions today, background conditions and total conditions at Joppa Road and Falls Road. And then, for the site access, that would be projected to operate at level of service B. Obviously, that intersection doesn't exist under existing and background, but it would be a level of service B under the total conditions. For the p.m. peak hour, evening peak hour, again, Maryland 130 operates at level service B.

Falls and Joppa is shown to be a level service D, based on the critical lane volume methodology, so it is considered acceptable. And, and the site access point would be a level of service A as well.

MR. ROSENBLATT: Okay. You, you've spoken about existing, background and total. Can you please explain there's, there's also information on this chart for proposed improvements and different grades and numbers?

MR. DRIBAN: So, yes, when we identify a failing, an intersection that doesn't meet the state, the State's requirement or the County's requirement, in this case, Maryland 25 at Joppa Road is, is a level of service E during the a.m. peak hour.

That's an existing condition. You can see it's an E

under existing, it's an E under background without our site. And our site adds only thirteen trips, which in the scheme of, you know, the, the total volume there, the total critical lane volume, is a, is a negligible impact to begin with.

But we did improve, we did propose a substantial improvement to that intersection in order to mitigate our impact. And so, that's the line just below where it says number two, Maryland 25 and Falls Road/West Joppa Road. There's a line below that says proposed new improvements.

And with the proposed improvement, the intersection would operate at a level of service D during the a.m. peak hour and actually, so it's actually better than what's out there today. And then you can see in the column to the right, the percentage of mitigations or how much CLV impact we mitigated, again, our impact was thirteen. We mitigated a hundred and twenty-one CLVs, or nine hundred and thirty-one percent of our impact.

So, substantially improving the intersect, intersection to beyond even what's out there today. And that's with our, that's with our site traffic included in the, in the calculation.

During the evening peak hour, the intersection was already at a level of service D. With the improvement, you can see it goes from a D, fourteen thirty-eight, to a D, thirteen oh seven. So, it's the same letter grade, still level of

service D, but the, but the CLV, the critical lane volume, is improved by a hundred and thirty-one CLVs. Relative to our sixteen CLV impact, which is an eight hundred and nineteen percent mitigation of our, of our impact.

So, again, the intersection would be substantially better during the p.m. peak hours with our site and, and the improvements we're proposing than it is even under existing conditions today.

MR. ROSENBLATT: And did you perform an analysis of the results under the highway capacity manual?

MR. DRIBAN: We did, yes. So, the highway capacity manual results are somewhat similar. It's, it's not uncommon for CLV and HCM to be, you know, a letter grade different, just because they have, it's different equations, they consider slightly different factors. But --

MR. ROSENBLATT: Let me just quickly say, is this page seventeen of your report?

MR. DRIBAN: It is, yes.

MR. ROSENBLATT: Okay. Continue, sorry.

MR. DRIBAN: Yeah, so, the, the highway capacity results show that Falls at Greenspring Valley, intersection one, is a level of service C during the a.m. peak hour under existing, background and total. Falls and Joppa is a level of service D under existing and background.

And it just happens that the threshold for a level of

service D versus a level of service E is 55.0 seconds. So, under background, which is everything up to the point that we build our site, it's at a 54.8 second. We add 1.1 seconds to that, which pushes it across the threshold from a D to an E.

So, it's, it's a negligible impact that just happens to push it across that letter, that letter grade. But you can see that on a line below that with the proposed improvements at the Falls Road and Joppa Road intersection, we actually reduced the delay to 40.9 seconds, which is well below the existing 49.7 seconds under existing conditions at that intersection.

It's a fifteen second improvement in delay for every single vehicle that passes through there. This is the average delay per vehicle, which mitigates thirteen hundred and sixty-four, one thousand three hundred and sixty-four, percent of our impact at that intersection.

And again, leaves it better than we found it. Even with our site traffic, substantially better than we found it, even with our, our site traffic. And when I say when, when we found it, I mean, better than what's out there if you were to drive through it today.

Under the evening peak hour, again, the intersection, intersection one at Falls Road at, at Greenspring Valley operates at level of service C under existing, background and total. That is, you know, for both a.m. and p.m. at the intersection, it's within State Highway Administration's

adequacy thresholds. It's, it's better than, you know, than what's required based on this methodology.

And intersection two, Maryland 25, Falls Road at Joppa Road, is a B under existing, D under background, D under total. We add one second of delay to that. With the proposed improvement, we mitigate 7.8. We reduce the average delay for every vehicle that passes through that intersection by 7.8 seconds, which mitigates seven hundred and eighty percent of our impact.

And again, leaves the intersection better than it is if you would drive through it today, even inclusive of background development, you know, background growth that's happening and, as well as our site traffic.

Lastly, the site access points under both a.m. and p.m. peak hours are shown to operate at a level of service A, which is the best possible level of service.

MR. ROSENBLATT: Okay. Did, did you confirm with Baltimore County what the F failing movements are at, at Joppa/Falls and at Greenspring Valley/Falls under, under loaded cycle methodology?

MR. DRIBAN: We did, yes. So, so Baltimore County uses a, a slightly different, a very different methodology known as the loaded cycle methodology. It's out of the 1965 highway capacity manual and it relies on observations of the, of the intersections, field observations.

So, actually, sending someone out and looking at whether vehicles can pass through the intersection. If you go out and you look at a cue, can the last vehicle in that cue get through the intersection before, once, once the light turns green, can it get through the intersection before the light turns red again. If they do not, that would be considered a cycle failure.

And the loaded cycle methodology looks at the percentage of cycle failures by approach during, during the peak periods. And if it, if it exceeds a certain threshold for any approach, that would be considered a level of service F, failing intersection under the loaded cycle methodology.

So, in this case, Joppa and Falls, northbound on Falls during the a.m. peak hour is a level of service F. And at Greenspring Valley and Falls, northbound on Falls during the p.m. peak hour is a level of service F. Based on, and that's based on the County's, County's own data and sheets for the loaded cycle methodology review.

MR. ROSENBLATT: Now, I want to ask you about each of these methodologies, but under the critical lane volume and highway capacity manual methodologies, if this project is constructed and the proposed improvements to the intersection of Joppa Road and Falls Road are made, do the intersections show as failing under these methodologies?

MR. DRIBAN: Under the, the modern, current

methodologies, they would not show as failing based on the improvements that are being proposed.

MR. ROSENBLATT: How about under the methodology you just explained that Baltimore County uses for basic services maps, the loaded cycle methodology?

MR. DRIBAN: Yeah, so, the, the loaded cycle methodology, as I explained, requires field observations. It has to actually be conducted, you know, based on going out and looking at traffic as it stands. And so, it's, it really can't be reviewed until, until the improvements are in place, and someone goes out and does that, does that evaluation. There's, there's no way to project it.

MR. ROSENBLATT: We've heard a lot about the, quote unquote, improvements to Joppa and Falls. You have sort of an after picture on page twenty of your study. But I'm going to, I'm going to turn your attention to Developer's Exhibit 16. It's a two-sheet exhibit that has that same image, but it also has a before and after to contrast. And just ask you, again, we've heard a lot about this. Can you explain what exactly the proposal is to improve the intersection at Joppa and Falls?

MR. DRIBAN: Yes. So, you can see if you kind of flip back and forth between pages one and two of what you've got on the screen. What we're proposing to do is to add a lane to both the eastbound and westbound approaches. So, the Joppa Road is the, Joppa Road is the westbound approach. This, this

exhibit, north is facing to, to the left of the exhibit.

So, Falls Road runs north and south. The westbound Joppa, Joppa Road approach, we're proposing to add a lane, which would provide for two exclusive left turn lanes. And whereas today, there is a, a left and a shared through left.

The improvement would, would change that to separate the left turning traffic, which is a substantial volume, out from the through movement and provide additional capacity for, for that approach. On the eastbound, and we would maintain the existing right turn, channelized right turn, for the right turn lane on that approach.

In the, in the eastbound direction, it's a similar, similar type of improvement, where we're looking at adding an additional lane to that approach. The additional lane would, would modify the, the movements that are today a left and a shared lane that accommodates the left through and right to again separate out the left turn volumes from that and, and provide for a separate, shared through and right turn movement.

So, what that does, what those improvements do, is they, you know, first of all, widening to add a second lane, or an additional lane, is a, you know, it's a substantial improvement to capacity.

And the reason for that is when you have additional lanes on an approach, particularly a high volume approach like Joppa Road, where you've got, you know, a lot of left turning

traffic coming out of there, going, wanting to go southbound on Falls Road, when you have additional capacity for that traffic, you can shorten, so there's a fixed amount, I'm going to get kind of technical here.

There's a fixed amount of, of time available within a traffic signal cycle. And so, you know, when you have fewer lanes, you have to, on a side street, you have to devote more of that, this fixed amount of signal cycle to that side street approach.

As you widen those side street approaches and add lanes and add capacity, you're able to reduce the amount of time that it takes that traffic to get through the intersection and, therefore, that, that signal time, the fixed time within that signal, can be allocated to the main line, in this case, Falls Road.

And in doing so, you know, the mainline has, has a much higher volume and so, in doing so, you have a really substantial benefit to the progression of traffic through that intersection, as well as to, you know, the progression of traffic along the corridor by moving additional through traffic, more quickly through the intersection.

MR. ROSENBLATT: Where does this proposed improvement stand with SHA?

MR. DRIBAN: Yeah, so, SHA kind of has a, they have a two, what I would call like a two-stage process for approving,

for approving design plans. And so, the first stage is they have to do, they have to review a traffic study, traffic impact study, or other traffic study. And approve that, right?

And so, we have, this, this improvement was included in our traffic impact study, which was approved by SHA. So, we have step one entirely complete. And then, step two of the process, and you can't move on to step two until you've, until you've completed that first stage and having, having an improved traffic impact study.

But step two of the process is to get approved design plans, detailed design plans. And so, we have concurrence on the improvement. And we've actually been moving forward with SHA to, to work through their process to get, to get approval of the, of the final design plans for this intersection.

And that process, I sort of briefly explained with the traffic impact studies earlier, you know. With the traffic impact study we submitted, we had comments back, we addressed the comments, you know, we meet, meet with them if we need to, you know. There's coordination to figure out how to, how to meet all of SHA's requirements and confirm that what's being done is in line with, you know, what they, what they want to see and what's required by them.

And so, it's the same process with the design plan. We've had several rounds at this point for this intersection, where we're submitted design plans, they've reviewed them.

We've received a few comments and I believe the most recent, the most recent submittal that we have has either gone in or will be going in later this week or early next week.

And we anticipate, based on sort of typical trajectory of these, that that will be, that we'll get final approval to move forward and construct these improvements at such time as appropriate in the overall development process with this, with this incoming submittal.

So, we're actually, we're actually really far, you know, typically, the design, the detailed design and the sort of second half of that process to get SHA's approval doesn't happen until, until after you have your development approvals from the County and any variances and things like that, like what we're doing here.

The developer would typically move forward after those are completed and sort of all the entitlements are in hand. In this case, you know, the, the, the developer has elected to move forward, you know, at their own risk, to, to really be ready to make improvements. I mean, this is a major improvement and, and they want to be ready to make it, you know, as soon as, as soon as they can.

So, SHA has been engaged and I think we're, we're close to having their approval on this piece.

MR. ROSENBLATT: Okay. You talked about major improvements and we, we have talked a lot about this particular

intersection of Joppa and Falls. But did, did you perform a corridor analysis to analyze the impact that these improvements and the proposed development would have on the Falls Road corridor from this intersection up through Seminary Avenue?

MR. DRIBAN: Yes, we did. We did.

MR. ROSENBLATT: I'm going to show you what's been marked as Developer's Exhibit 26. Ask you, I mean, this, this is probably what people listening care about. What, what will this mean in terms of travel time through the Falls Road corridor if this improvement is made?

MR. DRIBAN: Yeah, so, one of the comments that we got when we submitted our initial study in September of 2020 to SHA, was that the Falls Road corridor, the three signals, Joppa Road, Greenspring Valley Road and Seminary Avenue, operate as part of what's called a coordinated signal system. So, the timing of those three intersections is connected.

And so, SHA requested, actually required, that we conduct a corridor analysis to review those three, those three intersections. And we did, so we conducted those, that analysis. This is the kind of output of that analysis, which is a corridor analysis of Falls Road, between Joppa, up to Seminary. So, obviously including Greenspring Valley.

In order to conduct that analysis, we actually obtained Synchro (phonetic) files from SHA, these are all, these are SHA's own analysis files. Synchro is the program we

use, Synchro Syntraffic (phonetic) traffic kind of go hand in hand. So, we got their Synco Syntraffic files.

And, and the only modification to those files was to account for the improvement at Joppa Road, as well as, you know, signal timing changes that would, that would, they would like to implement at the intersections of Greenspring Valley and, and Seminary, in conjunction with that improvement.

SHA routinely retimes signals, you know, when, when major improvements are made along a coordinated signal system. And so, in this case, the, the final result of this, just kind of walking through it, so the top half of the table is the morning peak hour, the a.m. peak hour, and we've got a comparison of the, of the travel times based on the model, of background conditions versus the total conditions.

So, background is everything up until we have the site, total is everything, including the site. And, and so the second column there is total conditions with dev, with developments, with the site traffic and the proposed improvements.

And so, we look at northbound travel time through those three intersections, southbound through those three intersections. You can see that northbound, under background conditions, so without the improvement, without the site, is a hundred and eighty-six seconds.

With the improvement and the site, it's a hundred and

forty-one seconds. So, that's a forty-five second savings for, on average, for every vehicle passing through this corridor. Every single vehicle. That's the average delay per vehicle. Which is a twenty-four percent improvement in the overall corridor travel time.

For southbound, background is two hundred sixteen seconds, total is two hundred eight seconds. That's a four percent improvement, again. That's eight seconds better for every vehicle that passes through, on average. And so, the average a.m. corridor improvement is fourteen percent.

For the evening peak hour, again, the setup is the same. For the northbound travel time, without the site, without the improvements, two hundred ninety-one seconds, under background. With the site, with the improvements, under total conditions, it's two hundred sixty seconds, which is a thirty-one second improvement for every single vehicle, on average, that passes through the corridor, or a ten percent improvement.

And then, the southbound is a hundred and thirty-three in both background and total. But, you know, the average improvement there is five percent.

So, the bottom line is, you know, we're talking about very substantial improvements for all traffic passing through this corridor as a result of the improvements being proposed.

MR. ROSENBLATT: Okay. Let's, let's break it down, sort of individually. What, what impacts would the development

improvements have on, on the Joppa/Falls Road intersection?

MR. DRIBAN: On the Joppa and Falls Road intersection, you know, we're enhancing the operations by adding, by adding lanes and making the side streets more efficient. I explained the allocation of time within the signal system. So, this would be a major, you know, a major positive impact in terms of moving traffic and, you know, the Falls, the operations overall at Falls Road and Joppa Road intersection.

MR. ROSENBLATT: Okay and how, how about, so, there, there's no physical improvement being proposed to the intersection at Falls and Greenspring Valley. What impact does the project and the proposed improvement at, at Joppa have on that intersection?

MR. DRIBAN: Yeah, so, again, as I, as I explained, the corridor, the corridor signals would get retimed routinely by SHA as a result of a major improvement. Because we'll be able to synchronize those signals and move traffic through more effectively on the entire corridor, that intersection would benefit as well, which is, you know, captured by the overall corridor improvement in this, in this exhibit.

And, and I guess just to kind of highlight, you know, that, that point, when we looked at the improvement on average at the Falls and Joppa intersection on, on one of the previous exhibits, my, my highway capacity manual exhibit, which also

uses delay per, average delay per vehicle, you know, the time savings I think in the a.m. was, I don't have it in front of me, but I believe, I believe it was on the order of, magnitude of fifteen seconds, if I'm remembering correctly.

You know, you can see that throughout the whole corridor, again, it's forty-five seconds during the a.m. peak, peak period. So, there's additional benefit that's occurring at intersections other than, than just where the, where the physical improvement is taking place. And you can see that, you know, through this exhibit and how much, and how much improvement there is to the overall corridor.

MR. ROSENBLATT: Okay. How about, I, I know it's not part of your initial study, but can you explain whether there's any positive impact to Falls and Seminary?

MR. DRIBAN: Yeah, I mean, similar answer to, to the, to the Greenspring Valley intersection. I mean, you look at the overall corridor, you know, improvement here and there's certainly improvements, you know, again, beyond just what was occurring at Joppa, so, you know, some of that is at Greenspring Valley. I think you would infer that some of it is also at, at Seminary.

And this, again, this analysis that we're looking at on the screen, does specifically include those two intersections and the entire Falls Road corridor, inclusive of those two. So, I think, you know, it stands to reason that

Seminary would also see some improvement. Certainly, the corridor sees a major improvement.

MR. ROSENBLATT: Okay and just to circle back to your report, your conclusions, do you have an opinion as to the state of the Joppa/Falls, Greenspring Valley/Falls, intersection if the project is constructed and the, the physical improvements are made?

MR. DRIBAN: Yeah, I mean, I think the analysis kind of speaks for itself. On the previous, previous pages we were looking at, you know, we, we mitigate far more than our impact, which is a small impact to begin with, we mitigate far more. And actually, the intersections, the intersections will be better after our site traffic, with our improvement, than they are today, if the project is approved.

MR. ROSENBLATT: All right. Let's, let's talk for a minute about the, the Petition for Special Variance. So, how, how does this evaluation relate to the, to the standard for special variances in 4-A-02.4.G.1?

MR. ZIMMERMAN: Objection.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, I don't, I don't think it's up to this witness to interpret the statute.

ALJ: Yeah, understood. I mean, ultimately, it's, it's my job, but we can certainly hear from an expert as to his opinion on, on what he believes it says. Overruled. Go ahead.

MR. DRIBAN: Yeah, I, it proves that the demand or impact of the development being proposed is less than that assumed by the district standard.

Improvements that we're recommending can not only accommodate traffic from this project, but again, they actually, you know, they're, it's better not only the, you know, the existing traffic that's out there, but it's, you know, we accounted for some regional growth and some background traffic.

And even with that accounted for, with our site, with our site traffic accounted for, the intersection will be substantially better. I mean, orders of magnitude better in terms of the, the overall delay, the average delay per vehicle than it is today. And it will also leave the, the rest of the intersections along the corridor in a better place than, than they're in today, based on the corridor analysis.

MR. ROSENBLATT: And can you explain the, the interplay of the SHA versus County ownership of the intersections and the lights and how these improvements would be made, absent this project?

MR. DRIBAN: Yeah, so, that's a good question. The, so as I was explaining before, you know, the County has oversight of, of, of the development process and review of, of the site. And SHA, ultimately, has responsibility and, and oversight of, of whether to allow, you know, improvements, or

to, or to do their own improvements in the corridor.

And so, it's actually, you know, it's kind of, this is, Falls Road kind of falls into a catch twenty-two to some extent. Where, you know, by SHA's methodologies, for the most part, you know, we saw that Greenspring Valley is a level of service B or C, depending on the methodology you look at.

You know, or the intersection of Joppa, or Joppa Road is only failing under one of the two methodologies. It's unlikely that SHA would ever improve this on their own, based on the fact that the modern methodologies, the methodologies that SHA uses, don't show failures.

And, and actually, that's evidenced by, if you go back and look at, you know, the, the history of this intersection and the signal plans that SHA maintains, the last time lanes were added, as far as I could tell from my research of SHA's date was 1985. So, we're, you know, thirty-seven years out from any, from any additional lanes to the Falls or Joppa intersection. Or really, any kind of major improvements with capacity of that magnitude being added.

So, you know, and, and I guess what I kind of glossed over there is Baltimore County, since it's an SHA roadway, would not be making their own improvements. So, really, I mean, the opportunity to, to make an improvement like this is, is through mitigation, is through the County, the County.

The County's basic services map identifies this as a

level of service F, based on the loaded signal methodology, and the loaded cycle methodology, and, you know, so, I think the idea, I can't speak to the intent of it, but certainly it's an opportunity to, you know, to provide, to provide mitigation and make (inaudible) benefits, not just the site, but again, benefits all of the, the residents that pass through that intersection today.

MR. ROSENBLATT: Will the, the granting of this Petition, did you find any reserve capacity certificate request that would be negatively impacted by approval of this special variance?

MR. DRIBAN: I did not.

MR. ROSENBLATT: Okay and, in your professional opinion, does this development, with the improvements that you've explained, meet the standard for obtaining a special variance in Baltimore County?

MR. DRIBAN: Yes, it does.

MR. ROSENBLATT: And, in your opinion, does the proposed development meet all rules and regulations related to traffic?

MR. DRIBAN: Yes, it does.

MR. ROSENBLATT: A few, few more issues to discuss. I heard some questions this morning on Tallyho, the neighboring road. And I just want to ask you, during, during the development process, did you learn that Tallyho, that

neighborhood, believes there, or believe they're facing a cut through problem of, of people between Seminary and Joppa Roads?

MR. DRIBAN: We did, yeah. Through some, some of the neighborhood coordination meetings that the Developer was undertaking, we definitely heard that that was, that that was an issue.

MR. ROSENBLATT: Did you perform a study to determine the extent, or if there is a, a cut through problem?

MR. DRIBAN: Yeah, so, when we were, were alerted about this potential concern from the community, we did coordinate with Baltimore County traffic staff. Keith Lank oversees their traffic (inaudible) program, or at least did at the time we were coordinating.

And so, we were in discussions with him about, you know, potential, about sort of the, trying to understand the magnitude of the cut through issue and whether the County had any plans. And he did inform us that one of the things they were looking at, the County was looking at at the time, was insulation of speed humps, removal of stop signs within the, within portions of the, the, the Tallyho neighborhood, to be replaced with speed humps.

And so, we, we had some discussions with them, just back and forth about, again, really just trying to understand the issue. And one of the things they asked us to do was to conduct an origin destination study, which is a, a pretty

detailed, I mean, it's, it's a very detailed study that really is not particularly common just because it's data intensive and effort intensive.

But basically involves, you know, sitting at either end of the, of the, of a neighborhood and documenting the, the volume of vehicles that actually cut through from one end to another. And so we did that study over the course of several days in the fall of 2021.

And the results of that study were that there's actually a very low volume of cut through in that neighborhood during the peak periods that we evaluated. You know, on average, during the a.m. peak period, we found somewhere between three, three vehicles and ten vehicles, depending on the day, which was about five percent of the traffic on one day, twelve percent on another.

During the mid-day, one and a half vehicles on average, over the course of one set of observations we did, and then one and a half again another day, another set of observations. So, that was three percent of the total traffic going through the neighborhood or within the neighborhood.

And then during the p.m. peak hour, again, five vehicles and four vehicles, you know, on average over the course of several days that we, that we collected this data, which accounted for about five percent of the traffic within the neighborhood.

So, those volumes, just for context, you know, they're, the, the County doesn't have a specific threshold or, or cut off for when cut through traffic is considered an issue. Like they don't say it's x number of cars that is, is considered problematic.

But there are some, you know, some neighboring jurisdictions, you know, states, counties, that, that do have fairly harden facts, guidelines, you know. For instance, PennDOT says that if the cut through traffic on a local residential street needs to be more than forty percent of the volume and a minimum of one hundred cut through trips. Again, we're talking about, you know, less than ten during every, every peak hour we analyzed except for one. Certainly nothing near a hundred.

VDot has guidance, says a hundred and fifty trips or more, forty percent of the total traffic. And then Prince George's County also has some guidance that says a majority of the traffic on the street must be cut through traffic in order for it to be considered for, problematic.

So, the bottom line is, we did a study at the County's request, you know. The, the data showed that there's really not a, there's really not a substantial volume of cut through. And, you know, but out of that coordination with the County, you know, I can't say for sure whether, whether, you know, we helped move this along or not.

But it was while we were in discussions with the County, with, with traffic division, that the speed humps were ultimately installed and that the stop signs, some of the stop signs were removed within the community.

So, as a project, they had, they had been planning and, you know, I, I can't, I don't know that we can take credit for, for it. But certainly, the, the timing was as we were speaking to them and yeah, so.

MR. ROSENBLATT: Were the numbers you mentioned, was that before or after the, the speed bumps were installed?

MR. DRIBAN: That was before the speed bumps were installed. And speed bumps, if you look at the literature, there's typically about a twenty percent reduction to, to cut through traffic at the time they're installed. So, the numbers that I quoted, you know, could potentially be even, even lower now.

MR. ROSENBLATT: Okay. I'm going to show you, and I'm going to talk about the Mays Chapel gate issue with you. Before I do, I don't believe I asked for your, the prior three exhibits to be admitted. So, twenty-four is your resume, twenty-five is your traffic study, whoops, sorry. And twenty-six is your corridor analysis that you explained. And Judge, I'd move these three into evidence.

ALJ: Mr. McCann, any objection?

MR. MCCANN: No objection, thank you.

ALJ: Mr. Zimmerman?

MR. ZIMMERMAN: No objection, Your Honor.

ALJ: Thank you.

MR. ROSENBLATT: Okay. Let's, let's talk about the, the proposed emergency access only gate at the rear of this property to Mays Chapel Road. Showing you what has been marked as actually Protestant's, Mr. McCann's Exhibit 9, a copy of the pages from the Bureau of Development Plans Review Policy Manual.

And I'll turn your attention to the bottom of the second page of this exhibit, page twenty-two of the manual, and the policy, I believe it begins on the bottom of twenty-two and runs into twenty-three. And can you just, can you explain the policy and then we'll talk about it?

MR. DRIBAN: Sure. So, the, the policy provides unit counts wherein a gate could, would be required. In this case, it limits the limits on the number of units are a hundred units, with no future street extension proposed --

MR. ROSENBLATT: I'm sorry, Mr. Driban, I think you said where a gate would be required. What, --

MR. DRIBAN: Excuse me. Yeah, apologies. Where, where --

MR. ROSENBLATT: Start over, start over just so it's (inaudible) --

MR. DRIBAN: Yeah, sorry. Where a secondary access

point would be required. In this case, the, you know, the access guidelines state the maximum number of, of units with one means of access. So, you know, above these numbers, the guidelines would, would say that in a typical situation, you would need to have a second means of access.

So, in this case, the limit on the number of units is a hundred units with no future street extension proposed, a hundred and fifty units when a future street extension is proposed and is feasible or, and greater than a hundred and fifty units, a second means of access must be constructed.

Now, there are exceptions to that. The first is, these limits may be increased when restricted by a limited or controlled access highway or other physical barrier or limitation as advised by the Department of Public Works. And also, emergency access points in place of full access points generally may be discouraged but may be approved in unusual circumstances.

MR. ROSENBLATT: Okay. Let's, let's talk about the policy and then we'll talk about the exceptions, so I am, I'm going to show you what's been marked as Developer's Exhibit 27 in a second. But I want to focus your attention on the, the guideline maximum number of units with one means of access, limit of units, one hundred units with no future street extension proposed and then the one fifty you just explained.

MR. DRIBAN: Um hm.

MR. ROSENBLATT: Can you explain what exhibit, Developer's Exhibit 27 is?

MR. DRIBAN: Yeah. So, so the guidelines talk about the number of units. They don't talk about that, with, with one means of access. They don't talk about, you know, that that, that that access must be to a certain classification of roadways.

So, they don't say that you must have two means of access to a, an arterial road or a collector road. These are different functional classes of roads, right? It just says means of access.

So, in this case, you know, we looked at the communities around, as well as the site and the Meadows at Greenspring, which is the red boxed area on this exhibit, has ninety-nine units, by my count. It's got two access points to Mays Chapel Road. Boxwood has twenty-seven units, it's got one access to Mays Chapel Road.

Greenspring Manor would propose to have sixty-one units, or is proposed to have sixty-one units, which would be, which, which would have one access point to Joppa Road. So, if you look at the requirements, none of those, none of those neighborhoods have more than a hundred units, you know, with, with, with a single access point.

MR. ROSENBLATT: In your opinion, does the policy mandate that there be two separate access points for

Greenspring Manor?

MR. DRIBAN: No, I don't believe it does.

MR. ROSENBLATT: Okay and can you speak to the purpose of this policy? You said you've seen similar policies. What, what's, what's the purpose of requiring more than one access point in certain circumstances?

MR. DRIBAN: Yeah, so, I mean, there can, there's, there's kind of a couple things, you know. One of them can be circulation, the need for site circulation, you know, to, to enhance getting in and out of different sites without undue delay.

The second I think it would probably be emergency access. You know, making sure that if, I don't know, a tree falls across the driveway and there's an emergency inside that, emergency responders, police, fire, EMTs, would have, would have access via an alternative means.

MR. ROSENBLATT: Okay and in, in your opinion, if the proposal is as suggested by the Developer, that being full access to Joppa Road, emergency only access via gate to existing Mays Chapel Road in the rear, does that fulfill the purpose of this policy?

MR. DRIBAN: Yes, I believe it does.

MR. ROSENBLATT: And explain it. So, for, for the Meadows and Boxwood, if, if their access to Seminary Avenue was blocked by a tree, could there still be emergency response to

those neighborhoods with the proposal this Developer has put together?

MR. DRIBAN: Yes, there are. So, with a gated access back there, there are a number of different, different systems. I mean, we've, we've worked on other, you know, similar projects in other areas where, you know, there, there are systems that can open a gate based on recognition of sirens.

There's systems that can open a gate based on recognition of, you know, the, the flashing lights of a, of a vehicle. I mean, there are, there are a number, a number of different ways that the gates can be, the gates can be allowed for, for emergency vehicles. And it's actually a fairly common condition, I would say.

MR. ROSENBLATT: And I guess vice versa. If a tree falls across Joppa Road access to Greenspring Manor, could emergency vehicles respond with this proposed gate?

MR. DRIBAN: Yes.

MR. ROSENBLATT: Let's go back to the policy for a second. You've talked about your opinion as to whether the policy itself applies. Assume for a minute, if the Judge were to determine that it does apply, I want to focus your attention on, on the exception under C, which states emergency access points in place of full use access points generally may be discouraged but may be approved in unusual circumstances.

And I want to talk about your opinion as to whether

this is an unusual circumstance. And to do that, I'm going to show you what has been marked as Developer's Exhibit 28. Can you explain what this exhibit shows?

MR. DRIBAN: Yeah, so, so, what this exhibit is showing is kind of the, the different routes between Joppa and Seminary, between Joppa and Seminary. So, you've got, you know, today Falls Road and Green, you can go northbound or, you know, I'm just thinking about that direction. Northbound on Falls Road, you can make a right on Seminary and, you know, you can get between them that way.

You can go through Tallyho, which is a windy road through little streets. It's, it's, it's got eight speed humps, you know, there are turns all along it, and it's a much longer route. Or I guess it's comparable to Falls Road. But if this Mays Chapel connection were to be created, it's a very direct route. And it's, and it's parallel to Falls Road, you know, roughly parallel and not that far off.

So, you know, we've talked about the fact that Falls Road is signalized, you know, Mays Chapel Road is not. It, it really, it really would create a very direct connection between Joppa and Seminary that, you know, analysis that we've conducted shows that likely to be used by hundreds of vehicles, hundreds, during the, the morning and evening peak hour. As well as, you know, as well as likely throughout the rest of the day.

MR. ROSENBLATT: What, what impact could that have on the Meadows, Boxwood and Greenspring Manor?

MR. DRIBAN: Yeah, so there's this, there's a concept I sort of mentioned it earlier, but there's a concept of functional classification. So, functional, functional classification is a hierarchy of roads. So, if full access controlled highways that are meant to provide the most mobility and the least amount of access.

Down from that, you've got arterials, which are high level of mobility, minimal access. Collectors are kind of a cross between mobility and access.

And then at the, the bottom, the lowest level of mobility, the highest degree of access, is local roads. And local roads are, you know, what you would think, Mays, Mays Chapel Road is a local road. It's your typical neighborhood streets with a lot of driveways, they're not meant to be high speed roads typically. They're not meant to carry a high volume of traffic. They're meant to get people into and out of their driveways to their, sort of final, ultimate destination.

And so, you know, the, the challenge with creating a, a, a, a direct connection via Mays Chapel Road, is that Falls Road is, is a, is an arterial. You know, it's designed to handle traffic. And Mays, Mays Chapel is a local road, it's really not. It's really meant to provide people access to their driveways.

And there's a lot, a lot of best practices, traffic engineering and transportation planning engineer, planning information out there that speaks to, you know, the hierarchy of these roads and how they should be used.

So, you know, specifically, the County, the County has a couple bits of guidance. The Department of Public Works' neighborhood traffic management program has a paragraph that reads the neighborhood traffic management program for residential streets, so this is kind of the County's cut through control program.

The neighborhood traffic management program for residential streets represents the commitment by Baltimore County to promote and maintain the safety and livability of the County's residential neighborhoods.

And it goes on from there. But it concludes with, increased traffic volumes and vehicular speeds have negatively impacted the livability of residential communities. So, you know, it's, it's, it's saying pretty directly, we don't, it's not a good idea to put traffic on local roads.

This is from County's master plan 2010. There's a sentence discussing managing traff, or a paragraph discussing, discussing managing traffic within communities that concludes with mitigation measures should be taken to insure that community streets remain safe and compatible with perspective, with the respective community.

And then lastly, for County guidance, from the County's design manual for roads and streets, they talk about the term traffic calming refers to measures intended to reduce the undesirable effects of traffic. Such effects are generally twofold. In, inappropriate, in parenthesis, generally too high speeds for a route or street, and inappropriate traffic, e.g., through traffic on a residential street.

So, the County's own master planning documents and traffic calming documents are discussing that, you know, allowing through traffic, cut through traffic, is, is, is not recommended.

And I'll, I'll wrap up quickly on this topic, but the, a couple neighboring jurisdictions have similar language. For instance, Anne Arundel County's functional classification, they describe local roads. Local roads are designed specifically to have high accessibility to abutting land uses and access to the higher classification facilities. They offer the lowest level of mobility. And service to through traffic is usually deliberately discouraged.

And finally, Federal Highway Administration, in their highway functional classification concepts, they say, urban local roads provide direct access to adjacent land, provide access to higher systems, carry no through traffic.

You know, in this case, again, based on volumes of traffic in, in the immediate vicinity along Falls Road, and

particularly traffic, I guess I should probably explain this just a little bit further.

So, so when we look at the potential cut through volumes, it's primarily traffic that today is going westbound on Seminary Road and making a left to go southbound on Falls Road that, that might now go westbound on Seminary Road, cut through Mays Chapel, come out on Joppa and cut through to make that movement or vice versa.

And that's where, you know, again, there's I think something like six hundred vehicles that do that in the morning, a thousand roughly in the evening. And you know, even if a small fraction of that volume cuts through, you're, you're putting a high volume of commuter traffic that, that shouldn't be on residential streets onto streets where people are walking dogs, where children might be playing. And it's just really for all intents and purposes, and all best practices, it's really an undesirable situation.

MR. ROSENBLATT: So, two, two questions and then I think we can move on. But one, Mr. Zimmerman showed Mr. Bishop a zoning regulation Section 260.4, that spoke to providing a second means of connection to neighborhoods for, quote, good traffic circulation. And can you explain, in your opinion, does the proposed emergency only access gate facilitate good traffic circulation under these circumstances?

MR. ZIMMERMAN: Objection to, to the interpretation.

ALJ: Okay. Well, overruled. Go ahead.

MR. DRIBAN: I, I think, you know, it certainly provides the ability to move more vehicles, but it's moving more vehicles in a place where they're not designed or meant to be. So, I, I don't, in my opinion, that's not, that's not good circulation.

MR. ROSENBLATT: Is the proposal for the emergency access only gate, does that promote better traffic circulation in your opinion?

MR. DRIBAN: I believe it does. We, we heard Mr. Gino (inaudible) testify very early on that one of the, one of the reasons for, for an exception, you know, for a gated access is, is safety. And I believe that the emergency access gate would, would promote safety for the existing neighborhood while still allowing, you know, a functional and effective access for emergency vehicles. So, yes.

MR. ROSENBLATT: And just, just one final area of testimony. We've, we've been shown a comment from fall of 2021 from Terry Curtis, the Department of Public Works and Transportation, that questions the analysis that you provided and, I wanted, I wanted you to sort of explain your personal experience dealing with Public Works throughout this process, from 2021 to now with Mr. Nebre and in, in your personal experience, what happened there?

MR. DRIBAN: Yeah, so, as I, as we've discussed, the,

you know, the original traffic impact studies were submitted in, in September, first sort of back and forth with the County, September of 2020. We had comments from them. We submitted an updated study that was approved in December of 2020, that was approved in January by State Highway Administration.

At the same time as the State Highway Administration approved our study, we actually got an e-mail from, from Mike Hilsinger at the County that stated that they concurred with, with our improvements. I'm trying to find, if you could just give me one second to find the language.

He said, while the proposed improvement is located within a failing traffic shed, the proposed improvements associated with the traffic impact study, will mitigate the increased traffic generated by the proposed development.

And so, you know, we understood at that point, in January of 2021, that we had approval from both the County and the State and that the County was, was onboard with concurring with our, with our approach to, to meeting the special variance requirements. That we had mitigated all of our traffic based on the improvements.

Subsequent to that, I mentioned there was some back and forth on Tallyho based on community questions and things that came up. There's also, you know, as we've discussed, the Mays Chapel Road connection has been a subject of discussion and debate, you know, within, within our (inaudible) as well as

within the County.

So, there was a meeting in June of ’21 with Greg (inaudible), who at the time was the head of the, the Department of Traffic, the Division of Traffic, and Mike Hilsinger. And they requested at that time, an analysis.

They wanted more information of what would happen, you know, what the potential impacts if the gate is open, does it work well, does it not, you know, can you give us traffic data to support, you know, to, either way. Whether it does or doesn’t.

And so, we, we prepared a detailed analysis that was submitted to them, that was, that was specific to that quest. It was an analysis of, if you open Mays Chapel Road, how much traffic is likely to cut through, you know, what are the impacts of that, is it, you know, is it recommended.

And we submitted that on July 8th of 2021. In, around that time, not maybe exactly then, but around that time, the, both, both Greg Karski (phonetic) and Mike Filsinger moved on and Kris Nebre came in as the, I think at the time, acting leader for the traffic division.

And so, there was a change over in, in staffing, in terms of people who had been in that meeting and sort of directly involved with this project. And so, we got that comment that you’re referencing where somebody said, this isn’t a traffic, but, I’m paraphrasing, but somebody said, this isn’t

a traffic study.

Traffic impact study needs to present, you know, an unbiased review of, of the study, intersections, you know, based on, based on the, the standard methodology (inaudible) and basically sort of, sort of lambasted the, the fact that we, quote unquote, hadn't done a proper traffic impact study.

That study that was, I believe the basis for that comment, was not the traffic impact study. Again, at this point, we thought we had an approved traffic impact study. It had been reviewed by the County, the State, we had e-mails from both stating that they concurred with it. And this was a supplemental analysis that we conducted at the request of folks from the County who ended up departing prior to reviewing it.

So, you know, there was definitely some, some confusion. And I think that's where the comment that you're referencing originated from.

MR. ROSENBLATT: Over the past year, have you been able to resolve that communication issue with Mr. Nebre?

MR. DRIBAN: Yes, we've had correspondence with Mr. Nebre over, over the course of the past year and he's asked for some clarification on different things. He's asked us to conduct additional analysis on different things.

You know, he, he wanted to, I think, kind of make his own, come to his own conclusion and not just take for granted, you know, the information that, that we had from Mike

Filsinger, you know, in January of 2021. So, yes, there's been a substantial amount of back and forth with him.

MR. ROSENBLATT: And, and I think this may have already been an exhibit, but I couldn't find the number, so I've made Developer's Exhibit 29 a August 16th, 2022 e-mail from Kris Nebre to yourself, among others, and ask you is this the, the latest communication you had with Mr. Nebre prior to this hearing?

MR. DRIBAN: Yes.

MR. ROSENBLATT: And can you just explain what, what Mr. Nebre, what his e-mail did for your analysis?

MR. DRIBAN: I, I should clarify, actually, my last statement. I, so in this e-mail, he requested that I send over a, a P.E. stamped copy of a couple documents, and I did send those back to him subsequent to this. So, that would have been my, my last official communication with him, but.

This, this e-mail that's kind of his, is his sign off on, you know, his review of, of the traffic impact study, as well as the, you know, the additional information that we provided, where he is agreeing that the improvements are, at the Joppa intersection, are enough to accommodate the volumes from the site and that the mitigation from the improvement results in net zero impact along the corridor. Actually, it, it results, I, this is my, you know, annotation, actually results in improvement along the corridor.

MR. ROSENBLATT: Okay. I believe, Your Honor, that I have not asked for Exhibits 27, which was the overview of number of units in the area, number twenty-eight, which was the aerial with the connections between Seminary and Joppa highlighted, and twenty-nine, which was Mr. Nebre's e-mail, e-mail to Mr. Driban. So, I would ask that these three exhibits be admitted.

ALJ: Any objection, Mr. McCann?

MR. MCCANN: No objection. But Adam, if you could send the, the new one, twenty-nine quickly.

ALJ: That's also twenty, exhibit number thirteen, by the way. Twenty-nine, Developer's, excuse me, Developer's twenty-nine is County exhibit number thirteen.

MR. MCCANN: Yeah, I'm not sure I have that County exhibit so.

ALJ: Yeah.

MR. MCCANN: Thank you. No objection.

MR. ROSENBLATT: It, Mr. McCann, I think it was all e-mailed to you before we started this afternoon, but if not, I'll do it right now (inaudible).

MR. MCCANN: Including twenty-nine? Including twenty-nine?

MR. ROSENBLATT: I think so, yes. That was the intent.

MR. MCCANN: Yep, I have it.

MR. ROSENBLATT: Okay, thank you.

MR. MCCANN: Thank you.

ALJ: And do we have the exhibit, the e-mail that the witness was just talking about? January of 2021, from Mr. Filsinger? I haven't seen that. (inaudible) --

MR. ROSENBLATT: That was part of one of their exhibits, there were a series of e-mails. But if not, I can, I can find it.

ALJ: Well, I, I haven't seen that one.

MR. MCCANN: Yeah, it's not introduced yet, but I --

ALJ: It's not, oh, were you introducing it, Mr. McCann?

MR. MCCANN: No, but I --

ALJ: Oh.

MR. MCCANN: -- I can, I think it should come in, it was referenced.

ALJ: Yeah, I didn't, I don't have it. So, the ones that Mr. McCann put in, fifteen through nineteen, --

MR. MCCANN: Yep.

ALJ: -- they were the, the traffic e-mails. That's not in there.

MR. MCCANN: Correct.

MR. ROSENBLATT: Okay. We, we will make that our Exhibit 30 and I will, I imagine, Mr. Driban, as much as he probably wants to, is not leaving the stand anytime soon. So,

I will make sure I do that before he's done. If that's okay?

ALJ: Okay.

MR. MCCANN: Yeah, and I have no objection to that. I would just ask that the entire chain be, e-mail chain, be introduced, not just that e-mail. And I have that, if you don't, so.

MR. ROSENBLATT: Okay. I, and what I will do, Mr. McCann, is I'll e-mail what I have to you and confirm that is what you think is the entire chain and we'll do it --

MR. MCCANN: Sounds good.

MR. ROSENBLATT: -- at the appropriate time. Okay.

MR. MCCANN: Sounds good, thank you.

ALJ: Then, Mr. Zimmerman, you don't have any objection to the Developer's exhibits? You're, you're muted again, you're, okay, try again. Nope, you just muted yourself.

MR. ZIMMERMAN: Okay, can you hear me? Sorry.

ALJ: I can, yeah.

MR. ZIMMERMAN: No objection. I'd like to be included in the distribution of exhibits, if that's –

MR. ROSENBLATT: Of course. You also were sent all these exhibits before we started this afternoon.

MR. ZIMMERMAN: Right. Thank you very much. Thank you.

ALJ: Okay. Then cross, Mr. McCann?

MR. MCCANN: Yeah, can I take a, a two minute break?

ALJ: Sure.

MR. MCCANN: Break and then come back?

ALJ: I'll pause the record.

(PAUSE)

ALJ: Back on the record after a break and Mr. McCann, cross?

MR. MCCANN: Okay, thank you. Good afternoon, Mr. Driban.

MR. DRIBAN: Good afternoon.

MR. MCCANN: I'd like to start first with just a couple questions about your resume and if I could share, Your Honor? Great, thank you very much. So, this is Developer's twenty-four. You recognize this as your resume?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and is it blown up enough for you to read it?

MR. DRIBAN: Yep.

MR. MCCANN: Okay. I guess first, a couple questions. You're resume mentions your work with SHA and with Montgomery County. I thought you had mentioned a couple of positions with firms, including your present firm, during the course of your testimony. Is this not an updated resume or am I missing something?

MR. DRIBAN: These are, this is my project resume. So, these are, these are projects that I've worked with, worked

on, been a part of, you know, at various firms that I've, that I've worked for. So, the SHA Access Management Division, that was, that was a job. I was there for about two years.

The districts three, four, five and seven was a project that I worked on at STV and we, we had an on call contract with different divisions within SHA, where we would do tasks, traffic related tasks, for those divisions, or those districts, excuse me. District four is Baltimore County. You know, safety studies, traffic signal (inaudible), traffic impact study reviews from time to time.

And then, the Montgomery County DOT is similar to that. Where we had an on call contract in my time at STV where we worked on --

MR. MCCANN: Okay, --

MR. DRIBAN: Yeah.

MR. MCCANN: -- it's just unusual, I didn't see the actual employer for when you were employed on here. But that, you're, you're sort of describing this as a project resume, is how you put it, correct?

MR. DRIBAN: Correct, yes.

MR. MCCANN: Yeah, --

MR. DRIBAN: I'm, I'm happy to provide, you know, specifics on employers if, if helpful.

MR. MCCANN: No, that's okay. Just STV, one more time, what's that --

MR. DRIBAN: Yeah, STV, Incorporated.

MR. MCCANN: Okay. Does that acronym stand for anything or is it just STV?

MR. DRIBAN: It's just STV.

MR. MCCANN: Okay and where are they, where's, where's that company based out of?

MR. DRIBAN: Headquarters is in New York, but I was in the Baltimore office, which is in Woodlawn.

MR. MCCANN: Okay and although not entirely described here, it sounds like, but where was most of your work for STV performed, what jurisdictions?

MR. DRIBAN: Yeah, so we, as I sort of briefly touched on with the, the, the SHA districts three, four, five and seven, --

MR. MCCANN: Yeah.

MR. DRIBAN: -- you know, the, the majority of the work for STV was in, was in Mar, was within Maryland. We did work for an array of different, different districts and different divisions within SHA.

So, district three is Prince George's and Montgomery County. We had an on call contract with them where we looked at anything and everything traffic related, you know, traffic safety, traffic operations. District four, again, Baltimore, Harford County, on call contract with them where we looked at traffic tasks, you know, same type of stuff.

MR. MCCANN: Yeah.

MR. DRIBAN: District five is south, is Southern Maryland, that's Anne Arundel, Charles, Calvert and St. Mary's. And district seven is Frederick and Carroll counties. So, we had, you know, it was the same, similar type of work for each of those agencies.

We also did work in Montgomery County. We did work in Baltimore City. I mean, we, we covered a lot of ground but it was all, you know, traffic, traffic focused and --

MR. MCCANN: Yeah.

MR. DRIBAN: -- you know, throughout the State of Maryland.

MR. MCCANN: What about Lenhart, your current firm's offices, where are they located?

MR. DRIBAN: Lenhart Traffic, our offices are located in Severna Park.

MR. MCCANN: Okay, all right. Well, I guess regardless of who you were working for at the time, just look, looking at the introductory paragraph to your resume, it looks like you have performed services within Baltimore County before.

MR. DRIBAN: Yes.

MR. MCCANN: Okay and what percentage of your work over the years that you've been licensed and the jobs that you've just described, would you say is in Baltimore County as

opposed to other jurisdictions?

MR. DRIBAN: It's hard to put a percentage on it. I mean, I, I can tell you that we had a direct on call contract with State Highway district four where we did projects directly for State Highway for public agency in Baltimore County.

We, and then, during my time at SHA, we, I was, the traffic impact study reviewer, there were three of us that covered the whole state and so, a chunk of that was with Baltimore County projects, coordinating with State Highway divisions and, and with County staff as well. I couldn't, I couldn't put a percentage to it, but certainly done, you know, with the course of my experience, tens of projects.

MR. MCCANN: Tens of projects?

MR. DRIBAN: Tens of projects.

MR. MCCANN: Yeah, and those, it sounds like those projects, since you were working in conjunction with, with SHA, involved application, review and application of SHA standards as opposed to the standards in Baltimore County, the development regulations and/or the zoning regulations, is that fair?

MR. DRIBAN: Yeah, it's, it's both. I mean, the, the SHA, you know, in a lot of things they are working hand in hand with, with counties. You know, I kind of mentioned in this case that SHA has jurisdiction over the roadways. But the County has jurisdiction over approval of the, of the

development.

And so, when we're reviewing traffic impact study, there's back and forth that occurs where you, you know, you sort of need to be knowledgeable in, you know, what the County standards are and whether, you know, the study you're reviewing complies with those as well as with SHA's standards.

MR. MCCANN: Okay. Well, let me, let me be more specific. Of all the projects, the tens of projects over the years that you've worked on that involved property within Baltimore County, how many of those projects involved the review, evaluation of the Baltimore County development regulations or the Baltimore County zoning regulations as opposed to any State Highway standards?

MR. DRIBAN: I mean, none directly. I wasn't a Baltimore County reviewer --

MR. MCCANN: Okay.

MR. DRIBAN: -- so when I was with SHA, we didn't, we didn't have any, you know, like I, I wasn't applying, I wasn't responsible for overseeing the County's standards, if you will.

MR. MCCANN: Got it, got it. So, this is your first project involving a proposed development in, in Baltimore County involving the application, review and application of the Baltimore County zoning regulations, correct?

MR. DRIBAN: We've done with, at Lenhart Traffic, we do, we've done, I've done studies within Baltimore County that,

you know, have been reviewed and approved as part of that. This is, this is my first time testifying in a special variance hearing.

MR. MCCANN: Okay. How about, other than testifying in a special variance hearing, have you ever worked on a project in Baltimore County, not in connection with State Highway standards, but rather, involving the application of the special variance provision in the Baltimore County zoning regulations.

MR. DRIBAN: Only in the capacity of reviewing SHA studies, not, not directly.

MR. MCCANN: Well, are you telling me that, in reviewing SHA studies, SHA considers the standards in the Baltimore County zoning regulations for special variances?

MR. DRIBAN: SHA typically, in most counties that have detailed traffic impact study guidelines, SHA does defer to the County guidelines. In this case, you know, Baltimore County doesn't have, they have the loaded cycle methodology for their intersections, but they don't have, you know, kind of detailed, you know, traffic impact study guidelines of, of their own.

So, at my time at SHA, when traffic impact studies would come in within Baltimore County, I had coordination with, you know, with County staff pertaining to traffic and to their zoning regulations through the lens of an SHA reviewer. So, I

was not overseeing the Baltimore County standards, but I had to be aware of what those standards were as part of my review.

MR. MCCANN: Okay. I'm not asking about traffic impact studies. I just want to make this clear. I'm asking about the special variance standard in the zoning regulations. Have you ever been involved in a project, where you were specifically asked that, as you have in this case, to review and evaluate that standard in the regulations?

MR. DRIBAN: No.

MR. MCCANN: Other than this case, have you ever been accepted as an expert before either the Administrative Law Judge of Baltimore County or the, or the Baltimore County Board of Appeals?

MR. DRIBAN: Within Baltimore County, no.

MR. MCCANN: And prior to being retained in connection with this project, had you even ever looked at the special variance standard in the section of the, the applicable section of the Baltimore County zoning regulations?

MR. DRIBAN: Yes, I was aware of the standard and had looked at it before.

MR. MCCANN: But not in connection with any project.

MR. DRIBAN: Not in connection with this specific project, but we do work in Baltimore County. And so, I, I've reviewed that. When I say we, Lenhart Traffic, does work in Baltimore County and so, I've reviewed that standard before.

MR. MCCANN: Okay, all right. I'll move on. Just a couple basic things before we get to your report, Mr. Driban. I think you've acknowledged much in your report, I can certainly show it to you, that all three of these intersections, all three that, the F rated intersections, Falls and Seminary, Falls and Greenspring Valley and Falls and Joppa, are inherently related and should be considered together when evaluating traffic impacts. Would you agree with that?

MR. DRIBAN: They operate as part of a coordinated signal system, so they are, they are connected.

MR. MCCANN: And should be evaluated together, correct?

MR. DRIBAN: There's, there's a degree of evaluation that is required for that, sure.

MR. MCCANN: And let's just, let's just get to your traffic impact study. I just have a number of questions about it. This is, I believe, Exhibit 25, the Developer's, Developer's fourteen apparently, yeah. I don't know why it's labeled twenty-five. But do you recognize this document --

ALJ: It's twenty, it is twenty-five. Maybe they renumbered the exhibits. Because I had an old sticker on something else that said fourteen. But this is twenty-five, just for the record.

MR. MCCANN: Okay. Thank you, Judge.

ALJ: Yep.

MR. MCCANN: Okay. Do you recognize this document as the traffic impact analysis you did, the final one, that is, revised as of December 7th, 2020?

MR. DRIBAN: Yes, I do.

MR. MCCANN: Okay. Just a couple specific questions about some of the, the underlying information that you relied upon. You mentioned the traffic counts that you used. Let me go to page six of this Exhibit 25. And I'll just highlight it. This paragraph which mentions the Baltimore County, I assume, yeah, Baltimore County traffic counts that were dated February 19, 2020. Are those, those the counts that you relied upon in connection with this report?

MR. DRIBAN: That is the count at that specific intersection that's referenced in that paragraph, yes.

MR. MCCANN: Okay, because in, it references Appendix A and I, maybe my copy, I did not see those, those traffic counts in Exhibit, Appendix A, so maybe you can provide them to us. I'll go down to Appendix A. I saw counts for what I, what I, look to be Greenspring Valley, so bear with me one second as I scroll down.

Appendix A. There's the basic services map. It's the growth projection. Then here's some traffic counts. This is on page twenty-seven of this Exhibit 25. These appear to be State Highway counts for Falls and Greenspring Valley Road, correct?

MR. DRIBAN: Yeah, you're, you're correct.

MR. MCCANN: Okay. I didn't see, I'll let you look as I scroll down, but I didn't see any for Falls and Joppa, though I've been wrong before.

MR. DRIBAN: No, I, I think you're right. I'm looking through it now and it looks like that count may have been omitted from Appendix A. What happened, as I explained initially, is we came in with, with counts in our original study that were provided by SHA, which I think is what remains in Appendix A.

And Baltimore County gave us sort of a hand marked up count that they had conducted with that date that they asked us to use. So, it looks like it was omitted from Appendix A, but that is the, the correct source of the count.

MR. MCCANN: No, I, I understand there's different dates, two different dates, of the traffic counts. I'm more concerned about getting the counts for Joppa Road and Falls Road. So, I would ask, Your Honor, you know, it's a bit unusual, that those be provided since they were supposed to be part of the report.

ALJ: (inaudible) Appendix A, you go, page twenty-six of seventy-nine, is a handwritten, I'm not sure if this is what he's referring to, if you could just scroll to twenty-six and see if that is the, those are the counts that the County asked him to use, twenty-six, is that it?

MR. DRIBAN: Yeah, I didn't see that one when you were flipping through. Yes, that is, that is it. It says our counts, 2/19/20. That is their, that was the handwritten marked up by Baltimore County staff.

MR. MCCANN: Okay.

MR. DRIBAN: And it's, yeah.

MR. MCCANN: And they include Joppa Road, obviously.

MR. DRIBAN: Specific to Joppa Road, yes. That was the one that they, they said they had a count for, that they asked us to use.

MR. MCCANN: So, this is all you got? This, this page right here, which is page twenty-six, and I saw this before, didn't know it was quite this. But page twenty-six of Exhibit 25, these are the traffic counts upon which your traffic study is based?

MR. DRIBAN: This is what Baltimore County asked us to use, correct. Yes, we had a count, the, I mean, as you were flipping through Appendix A, you can see the count, I believe it's the original count, that we had in there --

MR. MCCANN: That's Greenspring, that's Greenspring Valley, right? Right?

MR. DRIBAN: It was hard to tell as you were scrolling through --

MR. MCCANN: Yeah, I didn't mean to do that too quickly. I'll go back and, I guess it doesn't matter since we,

we know those are the counts, but. Just, and they say what they say, but, but I'll move on. You can look at --

MR. DRIBAN: (inaudible) --

MR. MCCANN: -- (inaudible).

MR. DRIBAN: -- just to clarify, by way of clarification. Yes, we, so it, those are Greenspring Valley, I have my own copy up there. Those are the Greenspring Valley counts that are in there. And then you would have seen a similar count in the original study for Joppa Road. What we exchanged that out for was this hand marked up copy from Baltimore County that they asked us to use.

MR. MCCANN: Okay, all right. Got it. And I was going to use, let me turn to page eight. So, these, these, this is Exhibit 3, page eight, of Developer's Exhibit 25. These are the peak hour volumes, I guess, based on the older counts, right?

MR. DRIBAN: Those should be based on the newer count, I believe.

MR. MCCANN: Okay. So, they, they were different than the handwritten notes that we just saw. But in any event, I, I wanted to get a sense from you, because you, you didn't really talk during your testimony about sheer volume of cars during peak hours.

So, and maybe, rather than this, I should use the hand counts. Let me go down to those. So, if we wanted to

look at, for folks that haven't looked at this type of document before, if we wanted, I take it the, the two thousand, February 2020 counts are in handwriting, not the other ones, right?

MR. DRIBAN: Correct, yes.

MR. MCCANN: Okay. If we wanted to take a look at all of those, during the peak hour, a.m. and p.m., the sheer number of cars that are, for instance, heading northbound on Falls Road during the a.m. peak hour, we would take, and I'm just going to turn this, we would take these numbers right here, 2016 is six hundred eighty-nine, I'm sorry, two hundred forty-eight, one thousand one hundred ninety-six in two thousand, and two hundred fifty-six, we would add those up and that would tell us the number of cars heading northbound, entering the failing intersection of Joppa Road in the a.m., is that the a.m.? That's p.m. peak hour, correct?

MR. DRIBAN: P.m., correct, yes. Yeah, and that's, that's on the northbound approach.

MR. MCCANN: Okay.

MR. DRIBAN: Now, just, just a small point of clarification. The two hundred fifty-two at the bottom there, they have a channelized right turn, so they don't, they don't, you know, they're at the intersection, but they're not, you know, part of the signalized movement. So, semantics, but just, just by way of clarification.

MR. MCCANN: They're not subject to the light, is

what you're saying? They're, --

MR. DRIBAN: Correct. There's a sweeping wide channelized right turn lane for that, for that movement.

MR. MCCANN: But during the p.m. peak hour, so in the evening rush hour, roughly, there's seventeen hundred cars in a single hour heading northbound on Falls Road towards that intersection, correct?

MR. DRIBAN: Sounds right, yes.

MR. MCCANN: Okay and then in the a.m., roughly seventeen hundred or eighteen hundred cars heading towards northbound, heading towards that intersection of Falls and Joppa during the a.m. peak hour, correct?

MR. DRIBAN: Based on quick math, yes. It, I, I agree.

MR. MCCANN: Okay. That's my quick math as well.

MR. DRIBAN: Yeah, I'm, I'm with you.

MR. MCCANN: Let me just back around to Joppa eastbound, we could do the same thing if we, if we spent the time looking, adding up these numbers and I'll, so eastbound, the total number of cars, and again, these are estimates. These are all estimates based on past traffic counts, correct?

MR. DRIBAN: It's not, it's not estimated, it's an actual --

MR. MCCANN: Actual --

MR. DRIBAN: -- turning movement count, so it's,

some, you know, we go out and collect data. In this case, the County went out and collected data and these are their actual volumes that, that were counted on that day.

MR. MCCANN: Got it. So, the total number of a.m. cars heading westbound on West Joppa Road towards the failing intersection, you would add up these numbers, and it looks to be roughly five to six hundred, correct?

MR. DRIBAN: Agreed, yeah.

MR. MCCANN: And in during the peak p.m. hour roughly seven hundred or so, correct?

MR. DRIBAN: Looks right, yes.

MR. MCCANN: Okay. Next, growth rate, back to page eight, I'm sorry, page nine. This is page nine of Exhibit 25 again, Developer's exhibit. You applied a growth rate of 1.5%. And I think you indicated during your examination by Mr. Rosenblatt, that that number you got from State Highway, right?

MR. DRIBAN: We developed that number based on data that State Highway maintains.

MR. MCCANN: Okay and that, I guess, by its nature, is a projection, it's an estimate, right?

MR. DRIBAN: It's a, it's an estimate, it's a look back at historical data to see what the growth pattern has been, yes.

MR. MCCANN: Yeah, and is that, that specific percentage, or that num, rather the statistics that you looked

at, were they locations specific? I mean, were they specific to Baltimore County or, or some portion of Baltimore County or were they state wide statistics, do you know?

MR. DRIBAN: Yeah, they're, they're specific. SHA maintains maps going back ten years of data, volume data, you know, in various locations. But I think within the County, this one is Falls Road, south of MD 130. So, it's right, you know, it's within the corridor, just, you know, north of the Joppa Road intersection.

MR. MCCANN: Okay and how old were those statistics, projections, do you know?

MR. DRIBAN: Well, so, they collect a count every year at certain locations throughout the state. So, we looked at data for 2009, '10, '11, '12, '13 through 2019. So, it was ten years' worth of data, historical counts that the State had collected.

MR. MCCANN: Okay and you didn't attach that data to the report, did you?

MR. DRIBAN: Page twenty-five.

MR. MCCANN: Okay, all right. You spoke about trip generation. So, I'm going to turn to page thirteen of this exhibit, Developer's Exhibit 25. And I think you explained where this is derived from and I'm sure the Judge is very familiar with where these numbers come from.

But I wanted to ask you about the, the trip

generation manual itself. I've, I've looked at it before, and certainly looked at it in this case, and those, those, these numbers that we get from the ITE trip generation manual, are based on studies that are performed by the ITE, correct?

MR. DRIBAN: Yes, that's correct.

MR. MCCANN: And not necessarily studies in Maryland, it may be studies from all over the country, correct?

MR. DRIBAN: That's right, yep.

MR. MCCANN: In fact, let me show you, bear with me one second. This would be our next exhibit, Judge. It's not been marked yet. I'll have the witness identify it and mark it as our next exhibit, share this with you.

ALJ: And that would be thirty-five, right?

MR. MCCANN: Thirty-five, correct. And it's a nineteen-page document. I'll scroll down through it slowly but tell me if you recognize what it is, Mr. Driban.

MR. DRIBAN: Yes, it appears to be pages excerpted from the ITE trip generation manual.

MR. MCCANN: Okay. So, this is what specifically for a single family detached housing, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and you used, as I understand it, first of all, let me ask you about, there's an introductory section here and it talks about the basis for this, for these trip generation numbers. In this case, it looks like studies

were conducted in a number of states, including Maryland, back in the eighties, nineties, two thousands and two thousands and ten, correct, two thousand and tens?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and as I read this, and I won't scroll through the whole thing, but there are two ways, two ways actually, to look at trip generation for single family detached housing. You can do so based on the number of dwelling units, as in, as in this second page, is that correct?

MR. DRIBAN: That is correct, that is correct, yes.

MR. MCCANN: And if I scroll down, these are all dwelling units. Later on, there are portions of this provision of ITE that determined trip generation, not based on dwelling units, but rather the, the number of residents, correct? For instance, this is page eleven of this exhibit. It says residents there. Is that, that's an alternative way of looking at, at getting trip generation numbers, right?

MR. DRIBAN: It appears so. I've never seen any, anybody do it that way, but yes, that's what you're showing.

MR. MCCANN: All right. But you used units, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and specifically, I think where you got your numbers from, that we just saw in Exhibit 25, you got your numbers from, I guess I wanted to ask you that. This is page three. It says, dwelling units, weekday, peak hour of

adjacent street traffic, is that the one you used, for your trip generation numbers in your study?

MR. DRIBAN: That looks to be correct, yes.

MR. MCCANN: Okay and that's a.m., and here's the average rate, it says .7, right?

MR. DRIBAN: Correct.

MR. MCCANN: And I'll ask you about that in a moment. And then for p.m. peak hour, adjacent street traffic, this is page four of this exhibit, the average rate is .94, correct?

MR. DRIBAN: That, that is correct, yep.

MR. MCCANN: Okay. So, getting back to your study, whoop, excuse me. It's simply really just once you have the manual, it's just a matter of doing the math, take the number of units and multiply it by .7. At least for the a.m. trips, that's how it's generated, correct?

MR. DRIBAN: So, there's, there's a rate and an equation --

MR. MCCANN: Yeah.

MR. DRIBAN: -- just to be, yeah. And so, there's, the ITE provides guidance on whether to use the rate or the equation. And they often produce similar but slightly different results.

When there are more than twenty studies for a specific type of site, which single family detached has over two hundred. Actually, close to three hundred studies that

support the, the equation, they consider the equation to be the, the proper use.

So, it's not, you know, in this case, it's .7 times the number of units, plus 9.74. So, it's not, it's not just the rate that you were highlighting, it's actually an equation.

MR. MCCANN: Yeah, I, I mischaracterized it. I appreciate that. And the same thing, there's a, there's a calculation for the p.m. trips right here, correct?

MR. DRIBAN: Correct, yes.

MR. MCCANN: Okay. So, you didn't, it sounds like you didn't do trip generation evaluation based on the number of residents as opposed to dwelling units. It sounds like you've never done that before.

MR. DRIBAN: Not only have I not done it, but I've never seen it. And typically the guidance, and, and that's speaking as a former reviewer of traffic impact studies for the State.

Typically, the guidance for, you know, what, whether to use a, given an independent variable from ITE is to look at which one has the, the most studies. You know, in this case, the single family, using units, has order of magnitude, two hundred twenty-six studies that support the a.m. peak hour, trip generation rate, two hundred forty-eight for the p.m.

Whereas, the residents based rate equation has twenty-one studies for the a.m. and twenty-one for the p.m.

So, the, the quality of data, the quality of the information using units is substantially better and it's what is, it's what's used industry wide for single family.

MR. MCCANN: Yeah. Where did you get that information from? I don't see that in the, in the introduction to this provision --

MR. DRIBAN: Yeah, they have a, ITE has a web based, web based app that provides some additional information and, you know, beyond just the sheets that you see there.

MR. MCCANN: Yep.

MR. DRIBAN: And so, so the web based, the web based document lists the number of studies and just some additional kind of statistic type stuff.

MR. MCCANN: All right. But the question I had, struck me about using dwelling units, because if you look at these numbers, I think anybody looking at them would think they're, they're rather low. I mean, for a.m. peak hour, what you're suggesting, or what you're telling us that the ITE manual projects for sixty-two units in the a.m. peak hours is only, is only forty-six trips, correct?

MR. DRIBAN: That's correct. And, and, you know, what I should point out about that, as I did in my testimony, is that this is looking at the single highest hour. So, in sixty-two households, you may have, you know, you likely have more than sixty-two trips that occur over the course of, let's

say, 6:00 a.m. to 9:00 a.m., or 6:00 a.m. to 10:00 a.m., as people are leaving and coming back, and people go to work or school. But based on hundreds of studies conducted throughout the country where they actually sat, you know, at the entrance to a community and looked at how many go in and out during the highest hour based on --

MR. MCCANN: (inaudible).

MR. DRIBAN: -- (inaudible) forty-six would be, would be occurring during the a.m. peak hour.

MR. MCCANN: Correct, forty-six would be what?

MR. DRIBAN: Forty-six trips would occur during the a.m. peak hour. So, eleven in and thirty-five (inaudible) --

MR. MCCANN: It says, it says peak here, I think everybody understood that. It, does that strike you as low though? During peak hour for a development of sixty-two homes, only forty-six trips are being made? That doesn't sound low to you, just based on personal experience?

MR. DRIBAN: I just explained, I just explained what I think that's, that's accounting for.

MR. MCCANN: You (inaudible) --

MR. DRIBAN: (inaudible) these are numbers based on studies.

MR. MCCANN: I understand. But these studies, and I'll get to this eventually, but you just mentioned two hundred plus studies. You would agree with me that there's a margin of

error, not only in these numbers that we're, you're using right now, but there's a margin of error in, in each and every one of, or collectively, of the studies that are, that we're talking about, correct?

MR. DRIBAN: I'm not sure what you mean by margin of error.

MR. MCCANN: Well, tell me what --

MR. DRIBAN: In, in this context.

MR. MCCANN: Yeah, well, we'll get to that in a little bit. In any event, --

MR. DRIBAN: I mean, I, I would say that, I would say that --

MR. MCCANN: No, no, wait for a question. Wait for a question, Mr. Driban. In terms of, these are peak hours, as you pointed out. Am I correct though that, what, what you didn't mention, the, the average daily trip generation, daily that is, for this proposed development, is six hundred cars per day, correct?

MR. DRIBAN: We didn't look at, I don't have that number in front of me, I'm not certain.

MR. MCCANN: Well, let me, let me show you Developer's Exhibit 1-B, and just direct you to note eleven. I'll blow it up. It says, total ADT generated by the site, six hundred. Do you see that?

MR. DRIBAN: I do.

MR. MCCANN: Any reason to think that's not correct?

MR. DRIBAN: I mean, I, I haven't independently verified it, but I trust that it, the engineer who put it on the plan said they did, so. I, I'm sure it's, I mean, I'm sure that they did their due diligence on it.

MR. MCCANN: Did you personally, I take it not, but did you, I'll ask anyway, did you personally review any of the studies upon which this trip generation, this specific provision of the trip generation manual is based, are based?

MR. DRIBAN: You mean, like the individual studies that go in to, to creating the rates?

MR. MCCANN: Yes, yes. I've never, I've never reviewed the individual studies. I have reviewed the underlying information that, you know, that, that forms the basis of the ITE trip generation manual as a whole and some of the, you know, --

MR. MCCANN: I'm just asking about the studies.

MR. DRIBAN: (inaudible).

MR. MCCANN: (inaudible) Mr. Powell's testimony, for instance?

MR. DRIBAN: Sorry?

MR. MCCANN: Were you here for Mr. Powell's testimony?

MR. DRIBAN: Yes, I was.

MR. MCCANN: Did you hear Mr. Powell testify that

these homes could have two to three car garages? Did you hear that testimony?

MR. DRIBAN: I did hear that testimony.

MR. MCCANN: Did, I, I take it you don't know, but did any of the studies upon which this trip generation manual provision is based, take into consideration such things as the number of garages? Do you know if that's the case, yes or no?

MR. DRIBAN: I'm not certain, but I'm sure that within two hundred plus studies conducted across the country, that certainly some of those sites would have had that configuration.

MR. MCCANN: I, how can you say, you haven't reviewed any?

MR. DRIBAN: The, the, the --

MR. MCCANN: (inaudible) --

MR. DRIBAN: -- the amount of data for this land use in particular is, is far above and beyond any other land use in the ITE trip generation manual. There have been more studies done on single family housing units than any, than anything else. Probably because that's, you know, one of the more common types of development. At least, at least that I'm aware of. But the, I mean, the data is more robust for this use than probably, probably anything in the, in the manual.

MR. MCCANN: Okay. The, the next page, which is fourteen, of Exhibit 25, Developer's Exhibit 25, is the trip

assignment or distribution for the proposed development, correct?

MR. DRIBAN: Correct.

MR. MCCANN: Okay and just a little more detail on this. Essentially, what this distribution tells us is of the cars leaving the site, which is right here where I x'd, where I've x'd, the, you've estimated that the distribution of those, the travel of those cars, is in, in the percentages that I've circled, correct?

MR. DRIBAN: Correct, yes.

MR. MCCANN: So, in other words, twenty percent heading eastbound on West Joppa, sixty percent heading southbound on, on Falls Road, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay and, and these, these, these are estimate, right? These are --

MR. DRIBAN: Yes, yes.

MR. MCCANN: -- these percentages are based on estimates. I know they're based on, I'm sure they're based on the ITE manual, but they're estimates, correct?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. Are they based on the ITE manual or are they derived from somewhere else?

MR. DRIBAN: They're based on the trip generation and then applying regional, local and regional patterns to

determine where origins and destinations would be.

MR. MCCANN: Okay. But because they're estimates, there's, there's some margin of error for this, right? This is not, by any means, these percentages, particularly, you know, nice, even percentages like sixty percent and twenty percent, there's a margin of error in these numbers, right?

MR. DRIBAN: Yes.

MR. MCCANN: Okay. All right, let's talk about the, the level of service results, we're getting there. So, this is page sixteen of Exhibit 25. I'll blow it up a little bit. First, let's talk, maybe this is, this is the critical lane volume results, correct?

MR. DRIBAN: Correct.

MR. MCCANN: All right. On page sixteen, that is. The critical lane volume, I think you've already described what it is, but it's been around for quite a while too, has it not? I've read somewhere thirty years or so, does that sound about right?

MR. DRIBAN: That sounds about right, yeah.

MR. MCCANN: Yeah.

MR. DRIBAN: I mean, I don't know exactly, but it's been around.

MR. MCCANN: Okay and, and I take it, just on a very practical level, you have, as you're sitting at your desktop in your office, there is some computer HCM, I'm sorry, CLV

software that you use, where you input some of the, the data and these numbers are, are outputted. Is that fair? That's an oversimplification, but is that basically, is that basically how it works?

MR. DRIBAN: The CLV is more, that would, that would apply to the highway capacity manual. But for the CLV, it's more SHA and different counties publish the CLV procedures and it's, it's more of a calculation and (inaudible) use Excel to do it, but they're, you know, there's, it's more of a calculation based on the volumes and the, and the formula that's put forth by the agencies.

MR. MCCANN: Yeah. But, putting aside the existing morning and peak hour counts, the, certainly the background and the total counts, those are, those are estimates, those are projections, correct?

MR. DRIBAN: They're projections that are conducted based on the guidelines for traffic impact study that are, you know, published by SHA and are standard in commonplace throughout, throughout the country, throughout the practice. So, yes, they, they are, but, you know, there's a methodology behind them.

MR. MCCANN: I'm not questioning whether there's a methodology. I'm just asking whether they're projections. And because they're projections, would you agree with me that there's some margin of error in whatever, whatever computations

are, whatever that method, that methodology calls for, the CLV methodology, that is, is that fair?

MR. DRIBAN: There's not, I mean, the CLV calculations are what the CLV calculations are. They're, if there's any, you know, anything that, certainly a projection, projection is just that. It's a projection. So, the, the way that --

MR. MCCANN: I'm just asking --

MR. DRIBAN: -- what's, what's, if I could just finish. What's projected is the volumes that go into the CLV, that we've looked at, that we've looked at in the previous exhibits. The CLV itself is a formula that is hard and fast and that's not, that piece of it is not a projection, the actual CLV number is not.

MR. MCCANN: Well, it's, it's an output based on the input of estimates or projections, right?

MR. DRIBAN: It's an output based on, yes. But the CLV itself isn't, semantics, yes.

MR. MCCANN: Okay. Well, I'll move on. I just, so, it, to cut to the chase, in terms of the results in the critical lane volume analysis for Falls and Joppa, we're, we're going under existing conditions without the improvements, I'm sorry. Yeah, from existing to total, that is, with the proposed development, we're going from, I'm sorry about that. We're going from an E to an E. So, no change without the

proposed improvements, correct?

MR. DRIBAN: There's no change in the level of service. The C, the actual CLV number used to determine the letter grade does change as you can see --

MR. MCCANN: I understand that. I'm just asking about the letter grade.

MR. DRIBAN: The letter grade is still an E, correct, yes.

MR. MCCANN: With, with improvements, the, there apparently is a change. And according to CLV manual, it's from an E to a D, right? That's reflected here, right?

MR. DRIBAN: Right, yes.

MR. MCCANN: The fourteen twenty-eight, right? Is that correct?

MR. DRIBAN: Yeah, that's correct.

MR. MCCANN: Okay and then, evening peak hour, comparing the existing critical lane volume, level of service to the total or the post-development level of service, the level of service itself does not change, correct? It stays at a D, right?

MR. DRIBAN: The letter, the letter level of service is the same, yes.

MR. MCCANN: Okay and then, and I'll get to the percentages in a moment. But under the highway capacity manual, the, the numbers are reflected in page seventeen of

Exhibit 25, correct?

MR. DRIBAN: Correct, yes.

MR. MCCANN: Okay and for Falls and Joppa, it goes from, actually it goes from a D under existing conditions, to an E without the improvements, correct?

MR. DRIBAN: That's right, yeah. The threshold between D and E is 55.0 seconds, so, it crosses, crosses the threshold.

MR. MCCANN: Yeah, but with the improvements, that is this number here, the level of service D, with the improvements, comparing the existing level of service to the level of service that exists post-development, the level of service does not change, it goes from a D to a D, correct? So, no improvement, no improvement there in terms of level of service, right?

MR. DRIBAN: In terms of the level, so level of service is made, is derived from the, the amount of delay. So, when you're talking about level of service, you're really, you're not, you can't just talk about it as the letter grade --

MR. MCCANN: Well, I'm asking the questions, Mr. Driban, and I'm sorry to interrupt, but my question --

MR. DRIBAN: I'm answering your question --

MR. MCCANN: -- is about the level of service, I know you want to say what you want to say --

MR. ROSENBLATT: Well, he, he does get to answer the

questions and, and I know this is always a tough balance. But, I mean, he gets to answer in his own words.

MR. MCCANN: But he's not, he's not being responsive --

ALJ: All right. Well, I think he, he, he believes he's being responsive. One second. It's 4:28, Mr. Rosenblatt. You have to leave at 4:30.

MR. ROSENBLATT: I'm so sorry.

ALJ: No, no, understood. I just want to make sure. I was looking at the clock and I just want to make sure. I'm sure Mr. McCann has more questions --

MR. ROSENBLATT: Yeah.

ALJ: -- that he won't finish today. So, I just want to give him a heads up. You know, we have like two minutes. But so, so that he knows, he, he has to come back tomorrow anyway. Everyone has to come back tomorrow, nobody's, nobody's free. So, Mr. McCann, did you want to continue for two more minutes or would you --

MR. MCCANN: No, maybe I'll just finish this up at level of service results and Adam has to go --

ALJ: Okay, all right.

MR. MCCANN: -- so that's fine. I don't have a problem with that at all. So, real quick, highway capacity manual level of service, I think I just asked you, goes from a D to a, a D for the morning peak hour, evening peak hour also

goes from a D to a D. So, stays, the level of service stays the same, correct?

MR. DRIBAN: The letter grade, it stays the same.

MR. MCCANN: Okay and maybe, maybe I should stop there, Your Honor, before I move onto something else. If we're going to stop anyway, so.

ALJ: Yeah, that's what I was thinking, so that you could, you know, gather your thoughts then for tomorrow too. All right. So, everyone, we are back here tomorrow at 10:00. And we'll just continue again with the same witness. So, we'll, after Mr. McCann is done, we'll turn to Mr. Zimmerman, Mr. Zimmerman, Mr. Wyatt, everyone. We'll just make sure Mr. Sachse, you, you have questions, you can also ask them tomorrow. Does that make sense, 10:00?

MR. MCCANN: It does, yep.

ALJ: All right. All right. And I know Mr. Rosenblatt, you're running out the door.

MR. ROSENBLATT: I know, I'm so sorry. Thank you, everybody. I'll see you tomorrow.

ALJ: I've been, I've been, we've all been in those shoes many times. So, yep, and what I'm going to do is stop the recording. So, we are off the record.

CERTIFICATE OF TRANSCRIBER

I hereby certify that the hearing in the matter of Greenspring Manor, 2310 W. Joppa Road, case numbers 08-0922 and 2021-0250-SPH, heard before the Office of Administrative Hearings of Baltimore County, October 27, 2022, were recorded by means of audiotape.

I further certify that, to the best of my knowledge and belief, page numbers 1 through 271 constitute a complete and accurate transcript of the proceedings as transcribed by me.

I further certify that I am neither a relative to nor an employee of any attorney or party herein, and that I have no interest in the outcome of this case.

In witness thereof, I have affixed my signature this 22nd day of March 2023.

- - - - - - - - - - - - - -

JUDGE MURPHY: Good afternoon, everyone. You're attending day three of case number 08-0922 and 2021-0250-SPH, property address 2310 West Joppa Road. Again, this is a combined development plan special variance case for the project known as Greenspring Manor.

For the record, we have counsel for the developer and protestants and Mr. Zimmerman. I'll let you introduce yourselves.

MR. ROSENBLATT: Good afternoon, Your Honor. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the developer petitioner.

JUDGE MURPHY: All right. Mr. McCann?

MR. MCCANN: Thank you. Good afternoon, Judge. Michael McCann on behalf of the protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, people's counsel for Baltimore County, Towson, Maryland.

JUDGE MURPHY: All right. Thank you. So

when we left off yesterday, we had the developer's case started, and so we had another witness for the developer I understand, is that right?

MR. ROSENBLATT: Yes, Judge, we're ready. Just so everyone is aware, we hope to get through three witnesses today. They are all ready to go.

JUDGE MURPHY: That's ambitious. All right. So who do we have first?

MR. ROSENBLATT: The first witness is Russell Powell.

JUDGE MURPHY: Okay. There you are. Raise your right hand, please.

Whereupon,

RUSSELL POWELL

A witness of lawful age, after being duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

DIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Good afternoon, Mr. Powell.

A. Good afternoon.

Q. Could you please tell the Judge with who you work, and what position you have?

A. Sure. Atapco properties, and I am a senior vice president.

Q. How long have you had that job?

A. Fourteen years.

Q. Is that with Atapco the whole time?

A. Yes.

Q. Tell us a little bit about your career with them.

A. Sure. Yeah, I was with Atapco for 14 years. Prior to that, I spent 11 years vice president of Toll Brothers. Prior to that, I came from general brokerage.

Q. Okay. Just in a sentence or two, tell the judge what it is you do with Atapco.

A. Sure. My function primarily is to be in charge of all new acquisitions. That would include residential, retail, industrial/commercial, in office, as well as performing an executive function for all residential projects, both lot development and

vertical multi-family.

Q. Can you just talk a little bit about the company in general, Atapco?

A. Sure. So Atapco properties has a long history. It can trace its roots back into Baltimore for over 100 years. Atapco properties is a wholly owned subsidiary of Atapco. Atapco is an acronym, it stands for American Tradition and Production Company, excuse me.

That company was founded by the Blausteins. It was the foundation of what later became Amoco, and then beyond that, BP/Amoco. The real estate group was formed probably 25 years ago now in order to diversify the family's holdings, and we operate across all platforms as I mentioned. We do residential lot development, vertical multi-family development, as well as ownership management, retail, office and industrial. So --

Q. Do you have more than one project in the Baltimore area?

A. We do. Currently we are open for sales

at Longview. That is a 173-unit community on International Drive. It's about a nine iron away from the Wegman's up in Hunt Valley. We are the 90 percent partner of the Madison Park Redevelopment Project which recently broke ground. That's on North Avenue in Baltimore City.

We are also under development, or I should say entitlement, soon to be development of an 80-unit apartment building in Baltimore City. Obviously Greenspring, which we're here today talking about, and we also own the former Baltimore Sun headquarters downtown.

Q. Okay.

A. As well as offices downtown.

Q. So your company purchased the property we're all here talking about?

A. We did.

Q. So what, can you tell the Judge what is it that you liked about this particular property?

A. Yeah. So in full disclosure, I've chased this property through multiple life's, both my

previous employer and now with Atapco. It's a highly desirable location. Great walkability to retail, to office, great commuter access, so it's one of those projects that I think has been on a lot of folks' radar for a long time.

You know, we love the fact obviously the proximity to Greenspring Station, you know, obviously Johns Hopkins Medical. Like I said, you know, access to great schools, so it just really checked all the boxes.

Q. Are there many undeveloped, unencumbered properties in this area of Baltimore County?

A. Not that I'm aware of.

Q. Can you describe Atapco's approach for proposing development on this property?

A. Sure. One of the things that really appealed to us is kind of the low impact nature of the development. You know, we were able to preserve almost half the project. In open space, we were able to push all of the proposed new homes back from Joppa Road.

Actually I think behind the existing manor house to kind of preserve that viewshed.

The property afforded us the ability to kind of, you know, set up a community that we were able to create some buffer between us and the neighbors. You know, it was previously cleared, had access to utilities. It was zoned, so it was a buy right [phonetic] project, so, you know, that fit, again, a lot of our criteria is, you know, kind of like I said, low impact.

Q. What is being proposed with the existing Langford home?

A. So we're going to preserve the Manor House. It will be subdivided and remain on its own parcel. We'll be hooking it to public utilities when and if, and at some point we will sell that home to a new buyer. So it will remain a private residence.

Q. Do you have a builder selected for the project?

A. We do. NVR Homes is our builder. We are under agreement with them.

Q. Okay. Do you have any idea of what the selling price for the homes would be?

A. Yeah, they haven't posted their actual pricing yet, but I would suspect what we're hearing from those, between 800 and a million dollars.

Q. Let's talk a little bit about your role leading up to this hearing. Did you do any community outreach?

A. Yes, we have. In fact, I would say this project probably stands alone, and the most amount of community outreach for any project I've worked on in the county, we have made the rounds with various HOA's, Boxwoods, Tally Ho, et cetera, multiple times to try to update continually, listen to feedback, try to make changes to the plan where appropriate. So yes, quite a bit.

Q. Did you offer to meet with the Planning Council?

A. We did.

Q. And did a meeting take place?

A. It did not.

Q. Can you, you said you made some changes and did some things to satisfy community concerns. Can you give us some example of changes that were made from the concept plan to now?

A. Sure. I think one of the big ones early on is we added some landscaping and a berm at the rear of the property in order to enhance the buffer between some of the existing homes. We, I think I had mentioned we had actually pushed the homes towards the new access road and away from Joppa Road again to minimize any effects to the surrounding community.

That was made very clear to us very early that, you know, Mays Chapel should be an emergency access road only. I think we embraced that concept, so I think we proposed that as an emergency access only. I know that has been a hot topic of discussion, but, you know, we advocated, we heard obviously traffic concerns early on.

We advocated and provided traffic analysis to, for speed bumps in Tally Ho. You know, we proposed to start immediately and spend almost a

million dollars to improve the Falls Road traffic corridor. We are going to hopefully finish I think what the county and Johns Hopkins started in upgrading the sections of the sewer identified by Baltimore County as needing upgrades. So just some of the things we talked about.

Q. With respect to the traffic and sewer off site improvements, although your development plan has not been approved, have you proceeded with obtaining approval of the construction documents for those projects?

A. We have.

Q. For which one?

A. Both.

Q. Okay. And do you know the status of those, how far along you are in the process?

A. I do not. I'll have to defer to someone else on that one.

Q. Sure, sure. No problem. Okay. Thank you, Mr. Powell. I think that's all the questions I have on direct.

A. Great. Thank you.

JUDGE MURPHY: Mr. McCann?

MR. MCCANN: Yes, thank you. Just a couple.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good afternoon, Mr. Powell.

A. How are you, Mr. McCann?

Q. Good, thank you. When exactly did your company acquire the property?

A. I believe closing was March of 2021.

Q. Okay. As part of that acquisition process, well, did you, can you pinpoint for us, you mentioned for example the sewer capacity problems that this county has identified, that Hopkins was supposed to fix, correct? You know what I'm talking about, right?

A. Yes.

Q. Okay. When did you learn about that issue? Was that before or after your company's acquisition of the property in March of 2021?

A. That was during our due diligence

period, so prior to acquisition.

Q. Okay. But I take it you didn't learn about the necessity of making the road improvements that we've been talking about over the last couple of days until after the acquisition, correct?

A. I'm obviously aware of that intersection. Some of the issues, I'd say that's been an ongoing topic, so I'm not sure I can answer you clearly.

Q. You may have bought the property knowing that there would be some road improvements that would be necessary?

A. Yeah, we were aware that, you know, work needed to be done, sure.

Q. Because of the failing intersections?

A. I'm assuming.

Q. Okay. Do you live in the area, sir?

A. I do not. I'm in Anne Arundel County.

Q. You mentioned the amount of outreach that you did. Can you just specify that a little bit? I'm not asking for names, but what organizations did

you or someone else on behalf of your company meet with?

A. Yeah, no, that's fine. Representatives, and thank you for not asking me names, because I would probably get them wrong, but we have met with Seminary Ridge, Tally Ho, Boxwood, and the Meadows at various points over the last year plus.

Q. Okay.

A. And in some of those groups, it was multiple meetings. As they'd request and the plans were change, we would, you know, respond back and share with them, you know, the progress.

Q. Okay. And when you say meetings, is it fair to say that not all those were in person meetings, given the state of affairs?

A. Some were actually, but there were some that were virtual.

Q. And then in terms of the changes that you identified in response to Mr. Rosenblatt's questions, you identified, that is changes to the plan, you have identified five of them.

That is you did some landscaping, number one. Number two, you pushed the homes back away from Joppa in order to minimize the effect on adjoining communities. Number three, you proposed traffic speed humps on Tally Ho Road. Number four, you are proposing to incur a million dollars to improve the intersection at Falls Road, and then five, you intend to comply with your, with the request that you fix the sewer segments that we've talked about. Is that correct?

A. Correct.

Q. Okay. But at no point, I assume you would have identified it, at no point have you ever, at least since the filing of the concept plan, have you ever reduced the density of this proposed development, is that correct?

A. That's correct.

Q. And you mentioned just, one point of clarification. You mentioned that a meeting with the Valley Planning Council did not occur. Can you be a little more specific about that? Was a meeting

requested and it was denied? Or give me some detail on that, if you will.

A. Yeah, to my knowledge a meeting was requested and denied.

Q. In other words, you are telling us that Valley's Planning Council said no, we do not want to meet with you?

A. Correct.

Q. Do you know, can you tell us anymore about it than that? Or is that just --

A. I don't. I'd have to go back and look at, you know, some emails and phone logs, et cetera. I do not.

Q. Okay. Thank you, sir. Appreciate your time.

A. Thank you.

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: Thank you, yes.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. So just following up on the last

question or two, so the interaction with Valley's Planning Council was like we don't need to meet with you because we love the project? We don't need to meet with you because we're against it? Or [indiscernible]

A. I don't --

Q. -- information?

A. I don't think a reason was given. Not to my knowledge.

Q. Okay. All right. So the project is not a senior citizen project, is it?

A. It is not.

Q. Okay. So are you part of the marketing team, or you have marketing people under you?

A. I do, I'm involved.

Q. So could you give us an idea of the type of houses that are proposed?

A. Sure. They are all single family detached. There will be a range in sizes as far as widths in the homes. Some will accommodate two and/or three car side load garages, so I don't know if I'm

answering your question.

Q. Yeah, it's fine.

A. [indiscernible] go on that.

Q. Yeah, keep going, sure.

A. Yeah. And again, the idea is to offer some variety, and obviously, you know, a range in price points. So all going to be high end materials, obviously the fitting, you know, the proposed pricing.

Q. Are they mainly two, three or four bedroom? Can you give us an idea of the number of bedrooms?

A. I, I believe they are all at minimum two bedroom. They're between three and four bedroom typically. I'd have to go back and look at the plans, it's been awhile.

Q. And what about, can you give us a range for the square footage of the homes?

A. Off the top of my head I want to say probably 3,000 feet plus to 4,500. And again, I'm guessing on that.

Q. Does that include the basement?

A. Not typically unless it's finished.

Q. Okay. So there may be finished, there would be basements?

A. That is what we're proposing, yes, or the builder is proposing, yes.

Q. Okay. And the square footage that you mentioned doesn't include the garages, does it?

A. Typically not.

Q. Okay. And the idea of three car garages, you know, why is that currently, you know, a good idea?

A. I think it's what the market demands. The buyer profile here likes three car garages. They own multiple vehicles.

Q. Does that, for example, like teenagers have their cars to go to school or college, something like that?

A. I would suspect something, yes. I don't get that far into those weeds. I trust the builders to understand the marketplace, but I know I could use an extra bay at my house, but I have those teenagers.

Q. So, and, well since you mentioned that you want to, your builder or whoever indicates a sale price of $800,000 to $1,000,000 for each, on the average for the different lots, right?

A. Mm-hmm.

Q. How important is that to the project, to be able to sell at those numbers?

A. I'm not sure I follow your question.

Q. Well, I guess, I have to ask, you have economists in your group? In the company?

A. We have finance people. I wouldn't grant them the title of economists. We have a lot of people who like to theorize on the economy, but --

Q. I mean, is the project dependent on the current, or past interest rates? Or is there some interest rate that's critical for --

MR. ROSENBLATT: Objection, objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: Both relevance and I cannot possibly see how this is within the scope of people counsel's authority to be pursuing this line of

questioning.

JUDGE MURPHY: So Mr. Zimmerman, is the line of questioning going to your argument about master plan conflict?

MR. ZIMMERMAN: Well, indirectly, yeah. But you know what? I'll withdraw the question, I'll withdraw the question.

JUDGE MURPHY: Okay.

MR. ZIMMERMAN: Thank you, Mr. Powell. That's all I have, Judge. Thank you.

MR. POWELL: Thank you, Mr. Zimmerman.

JUDGE MURPHY: Mr. Wyatt?

MR. WYATT: Yes, Your Honor, I do have a question or two for this witness if I may.

JUDGE MURPHY: Sure, absolutely.

MR. WYATT: Thank you.

DIRECT EXAMINATION

BY MR. WYATT:

Q. Good afternoon, Mr. Powell. I just wish to follow up on an item or two. By way of introduction, I live on Traloni [phonetic] Court,

which is in Seminary Ridge. It backs up to the proposed development.

I think we may have met on a Zoom call a little over a year ago. Do you remember that?

A. I do, sir. Yes. Nice to see you again.

Q. And I guess that was part of your community outreach was to reach out to also individual residents like myself who might be impacted by this development. Would you agree with that?

A. Yes, sir.

Q. Safe to say during that meeting that the issue of the location of the houses and the number of lots was more or less not a topic that the developer was willing to negotiate or even discuss?

MR. ROSENBLATT: Objection.

MR. WYATT: Your Honor, he opened the door in all of the questions of this witness about this Herculean outreach supposedly with all these neighborhoods and individuals. I'm just, I want to explore that.

JUDGE MURPHY: Understood. Mr. Rosenblatt, we're going to overrule the objection. Go ahead.

MR. POWELL: Sorry. Could you restate that?

BY MR. WYATT:

Q. Okay. So during our, during at least our discussions and what I understand to be discussions with many of the other neighborhoods, is it safe to say that basically the number of lots, the density or the location of where the lots are to be is non-negotiable from the developer's standpoint?

A. No, I don't think that's a fair statement. I think we have looked into moving lots, changing lot sizes, and I think comments ran the gamut, so I would say that was the only two issues. I don't recall specifically what you and I might have discussed, it has been some time, but I think there was a range of issues and topics, but --

Q. All right. Well, let me ask it to you this way. Since that meeting, has the development plan changed in terms of the numerosity of lots or the location of the lots?

A. No.

Q. Okay.

A. I'd have to go back and look at our last meeting. I'll go ahead and say I don't think so. I don't recall when you and I spoke, which plan you're referring to, but --

Q. All right. And do you remember specifically telling me that the number of lots was non-negotiable?

A. I don't specifically remember that. It sounds like you do.

Q. Okay. Well, I'll be likely testifying later, and you can listen in on my testimony if you'd like.

A. Sure.

Q. So during, any changes that have been made to the number of lots or the location of lots since concept plan through the revised development plan have you would agree been made in connection with comments from Baltimore County, not from neighborhoods?

A. Sure, we've responded to comments from Baltimore. Absolutely.

Q. All right. And there may be an elimination of maybe one lot and a relocation of a lot or two or a few, but substantively, no material change has been made from the original concept plan to the development plan that's before Her Honor today.

A. I'll defer that to the future expert to get into the details with you.

Q. All right. And just to follow up on Mr. Zimmerman's questioning about the demographics or the economics of this project, these are going to be inhabited if this development is approved by families generally. We're not talking single people would buy a home like this that don't have a family, you would agree?

A. Look, we don't discriminate. Anybody that wants to buy these houses can. In all fairness, it's probably a question posed better for the builder. Sure. These demographics certainly represents folks that have families.

Q. But you have familiarity in the industry. You have been in the business for a few decades now. You would agree this isn't going to be something a single professional just starting out with no family is likely to buy. The target market here is a family, correct?

MR. ROSENBLATT: Objection. Asked and answered.

MR. POWELL: Yeah, I --

JUDGE MURPHY: Overruled. Go ahead.

MR. WYATT: I'm sorry, I didn't get your answer.

JUDGE MURPHY: Go ahead, sir.

MR. POWELL: Me?

JUDGE MURPHY: Yes.

MR. POWELL: Oh. Yes, I suspect at this price point it's probably difficult for a lot of first-time home buyers, typical single buyers. But again, I think you're asking market related questions that would probably be better answered by somebody who is a little closer to it on the building side.

BY MR. WYATT:

Q. All right. And then let me ask you this. At a price point of $800,000 to a million dollars, is that based on your experience, is that a starter home for a family? Or is that a move up type home for a family?

A. I think it really depends on where you live. The price points range wildly across the state. I think the answer you're looking for which I'll give you is it's probably more typical a move up buyer.

Q. Okay. Thank you. And some of these, as Mr. Zimmerman pointed out, some of these homes are going to have more than two cars, or are designed to accommodate families with more than two cars.

A. Yes, sir.

Q. Most likely children of driving age going to high school or college.

A. Again, I can't really speak to who is going to show up and buy these homes. I wish I could tell you definitely.

Q. You have experience. I mean, you

probably live in a neighborhood yourself. If you can just tell us your common experience, when you have three cars, it's usually not a mom and dad, no children, who would own the three cars. You've got kids driving, coming and going, high school, college, even a job, summer job or something like that.

A. Sure.

Q. All right. Thank you very much.

MR. WYATT: No further questions, Your Honor.

JUDGE MURPHY: Okay. Let me do this. Let me go down the list here. I just want to make sure, this might be long in the beginning doing this just to see who needs to ask a question, but I'm going to unmute. Mr. Sachs, do you have any questions?

MR. SACHS: No, I don't. Thank you.

JUDGE MURPHY: Thank you. All right. Mr. Racal? [phonetic] Any questions? Mr. Racal? Previously with Baltimore County land acquisition. Mr. Racal, are you there? No. All right. Well, we can't hear you if you're there, Mr. Racal. Sorry,

folks. All right. Just making sure here. Okay. The next person is Ying, hello? Hello? Ying We Lun? [phonetic] Hello? Hello?

MR. LUN: Sorry.

JUDGE MURPHY: Yes, hi. Sorry. You're in a hearing. Did you have any questions of the witness?

MR. LUN: No. I'm not a lawyer, I'm just listening in.

JUDGE MURPHY: Just listening. Okay. Well, I'm not going to come back to you, then, I'm just going to keep you muted now I know that you don't, you're just listening. Okay. All right. Folks, all right. The next person, Brandy Becker, [phonetic] do you have any questions of the witness?

MS. BECKER: No.

JUDGE MURPHY: Thank you. Elaine Tipton, [phonetic] do you have any questions of the witness?

MS. TIPTON: No.

JUDGE MURPHY: Thank you. Actually, and I don't even know, some of these might be your clients, too, Mr. McCann, but I know some, I know one name, but

I don’t know them all.

MR. MCCANN: I’m just going to help you out and tell you who is.

JUDGE MURPHY: Can you? That would be great actually. I’m on Jeffrey Budniss. [phonetic]

MR. MCCANN: He’s not my client.

JUDGE MURPHY: Okay. How about Juliette Eastwick? [phonetic]

MR. MCCANN: No, not that I’m aware of. People within the communities I represent, but I’m not not aware of her.

JUDGE MURPHY: Okay. How about Karen Dailey? [phonetic]

MR. MCCANN: No.

JUDGE MURPHY: Karen McGraw? [phonetic]

MR. MCCANN: No.

JUDGE MURPHY: And we know who Katie Beach [phonetic] is. Lara Peake Townsley? [phonetic]

MR. MCCANN: No.

JUDGE MURPHY: Okay. So I need to ask all these people. Patrick Coggins? [phonetic]

MR. MCCANN: No.

JUDGE MURPHY: And then Rebecca is with Mr. Zimmerman. Ms. Amedius [phonetic] with Valley Planning Council, and then we have, it's Richard Compton?

MR. MCCANN: Richard Compton, he's a client.

JUDGE MURPHY: Richard. He's a client of yours?

MR. MCCANN: Yes.

JUDGE MURPHY: Okay. I'll skip them. Let me just go back here.

MR. MCCANN: As is just for future reference, Judge, Brandy Becker. Just so you know, she was --

JUDGE MURPHY: I try to remember this.

MR. MCCANN: Yeah.

JUDGE MURPHY: Brandy Becker, but not Elaine Tipton?

MR. MCCANN: Not that I'm aware, no.

JUDGE MURPHY: Okay. Brandy Becker is yours. All right. I'm just going to unmute Mr.

Budniss. Can you hear me? He's away from his computer. Hello, Mr. Budniss? No. All right. Juliette Eastwick, do you have any questions of the witness?

MS. EASTWICK: I'm just listening.

JUDGE MURPHY: Thank you. I won't come back to you, then. All right. Just making sure, folks. Karen Dailey, any questions of the witness?

MS. DAILEY: No. Just listening, thank you.

JUDGE MURPHY: Okay. We'll get through this quicker, folks, I know it seems long here, but Karen McGraw, any questions of the witness? No? Ms. McGraw? No answer. Lara Peake Townsley, do you have any questions?

MS. TOWNSLEY: No, thank you.

JUDGE MURPHY: Thank you. All right. And we have Mr. Coggins, Patrick Coggins. Any questions?

MR. COGGINS: No questions, Your Honor.

JUDGE MURPHY: Thank you. And then Mr. Compton is with you. All right. So, I mean, we're probably going to move pretty, much quicker, because

now I know who's who, people didn't have questions. Okay. I think that was it for your witness. Mr. Rosenblatt?

MR. ROSENBLATT: I just had one follow up question, single question.

JUDGE MURPHY: Well, let's see. Redirect. All right. Missed you. Go ahead.

REDIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Are you still there, Mr. Powell?

A. Yes.

Q. Just one question. The meetings that you described with the various community groups, were those meetings that were required by Baltimore County as part of the development process?

A. No, not to my knowledge.

Q. Thank you.

MR. ROSENBLATT: Nothing further.

JUDGE MURPHY: All right. Thank you, sir.

MR. POWELL: Thank you, Your Honor.

JUDGE MURPHY: Sure. Next witness?

MR. ROSENBLATT: Next witness will be a longer witness. This is Matt Bishop.

JUDGE MURPHY: Okay.

MR. ROSENBLATT: Just giving everybody a heads up.

JUDGE MURPHY: Right, sure. And, but it looks like we really don't have many people who are, I'm thinking Mr. McCann is covering a lot of these people, so we don't need to go through everyone again. All right. Mr. Bishop, there you are. Raise your right hand, please.

Whereupon,

MATT BISHOP

A witness of lawful age, after being duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

JUDGE MURPHY: Mr. Bishop has been admitted as an expert many times before. What areas of expertise are you offering him in?

MR. ROSENBLATT: Yes. If I could have permission to share.

JUDGE MURPHY: Yes.

MR. ROSENBLATT: Share his resume. Thank you, Judge. So I'm sharing for everyone's knowledge what's been marked as Developer's Exhibit 2. Mr. Bishop is a professional landscape architect and land planner. As he said, Judge, he has years and years of experience in Baltimore County with planning and developments, development plans, zoning cases.

I'd offer him as an expert in the field of land planning with specific knowledge and expertise in the laws and regulations applicable to Baltimore County's development and zoning processes.

JUDGE MURPHY: Development and zoning processes. Processes? Is that what you said?

MR. ROSENBLATT: That's what I said. It sounded better when I thought it than maybe when we're repeating it, but --

JUDGE MURPHY: Is he an expert in the process I guess? There wasn't any issues about the process, but --

MR. ROSENBLATT: The zoning and development

regulations, and yes, he probably will testify to parts of the development process. I'm sure he'll be asked, if not by me.

JUDGE MURPHY: All right. Any objection, Mr. McCann?

MR. MCCANN: No objection. Thank you.

JUDGE MURPHY: He'll be admitted. I'm sorry, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah. So what I would like to say is I don't object to Mr. Bishop's expertise as a landscape architect. I'm preparing site plans. But if he goes into any statutory construction on the key issues in the case, I think that would be beyond his expertise.

JUDGE MURPHY: Okay. He, you know, he can testify, you can cross-examine him on that. All experts in this field give their opinions about what it says. Ultimately I get to decide in the regulations, and you'll always have your, you, and you give me that view. So, you know?

MR. ZIMMERMAN: Thank you very much.

JUDGE MURPHY: Okay. He'll be admitted as an expert land planner and the laws, and with specialty in the laws and regulations of the development, for developments and the zoning process, if I said that right.

MR. ROSENBLATT: The only thing I'll mention is he is a professional landscape architect as well.

JUDGE MURPHY: I did not say that, even though I knew that. Professional landscape architect. Okay. And we'll admit his CV has Developer's Exhibit 2.

(Developer Exhibit No. 2 was marked for identification and entered into evidence.)

DIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Good afternoon, Mr. Bishop.

A. Good afternoon.

Q. Did you, were you hired by Atapco to prepare various plans and exhibits for this case?

A. Yes. Myself and my firm were hired to prepare many exhibits in support of this case.

Q. All right. Did you prepare the development plan and exhibits we're going to show today?

A. Yes, I did.

Q. Okay. And have you been to this property before?

A. I've been to the property many times over the past two years, yes.

Q. And let's, before we talk about the specific plan, let's go through what I've marked as Developer's Exhibit A, there's actually a 2-page exhibit with aerial photographs. If you could, please orient everyone listening to the location of the property and some of the surrounding land uses.

A. Sure. I think everybody knows where we are based on all the testimony we've had so far, but we have about a 40-acre parcel located in the center of this image. The property is located northwest of I-695, and due north/northeast of West Joppa Road, and just east of Falls Road.

The surrounding area is predominantly

residential to the north and east. It's a mix of single-family detached homes and townhouses. Directly to our south is a Maryland State Highway Administration facility. It's in various stages of use and unuse at this point, and then directly to our west is the larger Greenspring Manor, sorry, Greenspring Station mixed use project that has offices, medical office, retail restaurants, banks.

Q. In reviewing the surrounding area, did you perform an analysis of the size of the lots, the residential lots, in the surrounding area?

A. Yes, we did.

Q. I'm going to show you what's been marked as Developer's exhibit 4. Can you please explain what this exhibit shows?

A. So this is an exhibit, as you mentioned, that analyzes the size and type of development in our immediate vicinity. We are the pinkish/purplish block in kind of the center of the plan. There is a legend, but to go into detail a little bit more, the areas in red, which we are either

directly adjacent to or very close to, are mainly semi-detached and townhouse developments, and they have average lot sizes by our analysis in the range of 6,500 square feet to 12,500 square feet.

There is in purple, which is the kind of area that we're in plus many other areas due southeast of us, their lots range from the 10,000 square foot to 30,000 square foot range. The blue areas have slightly larger lots, which are in the range of 20,000 to 25,000 square feet. The tan lots are the largest of them, and the range of 31,500 square to 50,000 square feet, and then finally we have in yellow all of the existing commercial and institutional zone areas or developed areas basically to our north, west and south of the plan.

Q. Was this analysis something submitted to the Department of Planning between their concept plan comments and the development plan? The development plan comments?

A. Yes, it was. We put this together to help answer some concerns or questions that the

Department of Planning had based on our concept plan.

Q. Let's take a look at the property itself, and some photos of the property and surrounding area. I'm going to show you what's been marked as Developer's Exhibit 5. It's a series of actually 25 photographs. So did you take these photographs?

A. Yes, I did.

Q. I'm going to scroll through each one, so we have a clear record, I'll say what number photograph we're on, and if you could describe for the Judge what's shown in the photographs. The first page of Developer's Exhibit 5.

A. I'll be relatively quick, since we have so many pictures, but this is a photograph from West Joppa Road facing the existing home on the property. You'll see that there's a large lawn area between the house and West Joppa Road and the existing entrance with the entry walls to the left in the photograph.

Q. What is proposed in this area, both in front of the home and where the existing driveway is

located?

A. That area will remain undeveloped, and it will become an environmental conservation area.

Q. And with respect to the existing driveway?

A. The existing driveway will be removed. The new driveway will come in, and we'll see from a plan later, will come in from the new proposed road, sort of at the rear of the existing home, and we will also I guess I'll go into for a second, we're going to take the house off of the existing private septic system and connect the house to the public sewer system in West Joppa Road using the bed of the existing driveway, which is to be removed.

Q. Photograph number 2?

A. All right. This is the existing driveway, which we just discussed, which serves the home, the existing home. This driveway will be removed and reverted back to natural state, and in the bed of it will be the new proposed sewer connection that we discussed.

Q. And you'll start to see on the left side of this photograph, can you describe what the existing state of the property is?

A. Right. So areas that aren't occupied by the house and the lawn that you see here are current active agricultural fields. I think this photo was taken, and it was a soy crop. I've seen it in years past where it was also a corn crop. The majority of the rest of the property was actively farmed.

Q. Okay. Photograph 3?

JUDGE MURPHY: Before you get to the next one, so these are not labeled, you know, 5A, B, C. So can we do 5A, 5B, 5C? Does that work? Otherwise, I'm going to do 5-1, and that won't, I'm just trying to be neat about this, because otherwise it just all says number 5.

MR. ROSENBLATT: It does. So that the record is most clear, yeah, they can each receive a letter if that's easier, Judge.

JUDGE MURPHY: Yeah. The first one is going to be 5A. Is that fine? 5A instead of 5?

MR. ROSENBLATT: Sure.

JUDGE MURPHY: Okay. And then you did 5B.

MR. ROSENBLATT: Yes, and we can revise it and send it to everyone with labels on them if that's preferred, or people can --

JUDGE MURPHY: Well, I'm just marking them on my exhibit, yeah. All right. So you were on 5C.

BY BY MR. ROSENBLATT:

Q. So yeah, I'll say the third page of the PDF, which we'll call 5C, Mr. Bishop. Can you explain what's shown there?

A. Right. This is similar to the last photograph, and it's starting to show more about the farming activity that I was mentioning, and you'll see in the background, the trees that you most seen in the background are right at the edge of the property. Most of those trees are on the adjacent property, but you also see as you go up in the back of the photograph here is the grade has a gentle rise toward the rear of the property.

Q. Okay. Photograph 4, which is 5D?

A. All right. This is turning around from where I was standing in the previous photograph, in the existing driveway looking back at the State Highway Administration building that's across the street.

Q. And the fifth page, 5E?

A. Basically the same position, but now looking west toward Falls Road along West Joppa Road.

Q. And what, if anything, is proposed along Joppa Road if this development proceeds?

A. We are proposing widening of Joppa Road to facilitate acceleration/deceleration lanes as requested by Baltimore County, and we also will have additional landscaping, streetscaping and forest conservation mitigation plantings to the right of the existing property.

Q. Sixth page, which is 5F?

A. This is further into the property, down the driveway. This is the rear of the existing home. The home will be staying, this driveway will be staying, but we'll have a different connection off of

the new road instead of Joppa, as I mentioned.

Q. And what is to the rear? In other words, behind the trees in the distance, which neighborhood?

A. That is the Tally Ho neighborhood. So those trees are a mix of being on our property and the rears of some of the homes in Tally Ho. Those will all stay.

Q. Page 7, which is 5G?

A. I believe this picture is back off of Mays Chapel Road at the rear of the property looking toward the west. So you'll see the farming activity, as I mentioned, and the treeline, the properties adjacent to Greenspring Station in the background.

Q. Okay. The eighth page of this document, which will be 5H?

A. Same location, just turned a little bit, and now looking directly toward the rear of the existing house and Joppa Road, basically showing the existing farming and the existing trees that are off to the left.

Q. And the ninth photograph, which is 5I?

A. It just finishes the panoramic here, so same location off of Mays Chapel looking east toward the edge of the property. Again, the trees in the background are basically close to the dividing line between our property and the rear of the Tally Ho community.

Q. Okay. All right. Number 10, 5J?

A. 5J is showing a representative home within the Tally Ho community, off of Tally Ho Road. Behind that house is our subject property.

Q. 11, 5K?

A. Similar photograph. I think I took a handful of these just to show what some of the homes in the adjacent communities look like. Again, our project is I believe behind the rear property of this home.

Q. And 12? So 5L?

A. Similar, it's just a little further up. It's down Tally Ho Road, but again, it's another similar home in the community.

Q. How many homes can you see in this photograph?

A. I see three. The white one, the brick one, and then I think there's one to the right, but it reflects, you know, very typical home in the area, the size, front load garage, the parking pad in the front, the home is set back relatively far from the street, plantings. Very typical.

Q. Can you describe --

A. [Indiscernible]

Q. -- sorry, a little bit about the distance between the homes?

A. Yeah. They are typical. I'm not sure exactly what the distance is, I didn't measure that on this exhibit, but they are, they meet the zoning requirements for the zone they're within. But they're relatively close together.

Q. 13, which is 5M?

A. Again, a little further up Tally Ho Road, showing existing homes. They are typical building to building setbacks, and their distance from

the street. Again, front load garages, two car garages, parking pads, relatively deep setbacks. When I say relatively deep, I think they meet the zoning requirements.

Q. 14, which is 5N?

A. Getting up closer to Seminary, similar houses and setbacks.

Q. Okay. 15, 5O?

A. 50 is up into the community, that's due north of our project, off of Mays Chapel. These are, I would call them townhouse units. They are connected multiple homes in one building. They are closer to the street. They have front load garages. I took all these pictures just to show that there is a mix of housing types in the area. There are single families with smaller lots, larger lots, attached homes, townhouses, a very wide mix of housing types in the area.

Q. The 16th image is P, 5P?

A. Again, this is another section of the community due north of our project, off of the Mays

Chapel Road, and again, they are, I would call them townhouses again per the zoning regulations. They are multiple homes in one building.

Q. Okay. And 5Q, which is 17?

A. Right. Same community, and again, just illustrating the variety of housing types. These are, you know, three or four homes in one building. They are close to the road. You can probably get one car in the driveway in front. They are frontload garages as well.

Q. 18, photograph, this would be 5R?

A. This was similar to one of the earlier photographs, but it's off of Mays Chapel Road. This is where the, as you'll see on our plan, Mays Chapel Road terminates at our property, and you'll see our property in the background with the farm fields.

Q. We've heard a lot about this gated or not gated issue. Is this the location on the property being discussed?

A. Yes, that's correct. That's the exact location.

Q. Page 19, which is 5S?

A. This is basically that same photograph but turned around, looking back north on Mays Chapel Road, merely illustrating the existing Mays Chapel Road in its existing condition.

Q. And at the sort of back end of this photograph, what road, what cross street would this road lead into?

A. That would be West Seminary Avenue.

Q. The 20th page is 5T?

A. This is another home that is just north of our property, and illustrating the wide variety of housing types in the neighborhood.

Q. Just to go back for one second, I know we're trying to get through these, but to go back to the 18th photograph showing the gate, this is 5R. If this project is approved, is this gate to remain?

A. We are proposing a gate to remain. Whether or no it is that exact gate is up for discussion, but yes, we are proposing a gate in that location.

Q. This gate, the condition it's in, would the developer propose something newer, nice, if permitted to gate this access?

A. Yes. I'm sure I can safely say that they would.

Q. And I apologize, Mr. Bishop. I'm on 20, which was T, I think you may have spoken about this.

A. I did.

Q. I'm trying to keep track of my letters. So far I think I've got them all. The 21st page is 5U?

A. That's the same community as the previous photograph, just a little bit further north. Again, it's a representation of townhouse type units there. I think there's four or five homes within that one building.

Q. Page 22, that's 5V?

A. This is a photograph of Greenspring Station, which is directly adjacent to us, to the west, and it is showing the mix of office space and

various commercial uses.

Q. So where would the subject property be in relation to the building shown in this photograph?

A. It's a few hundred feet behind us. This is the main access road, one of the main access roads into the Greenspring Station development.

Q. And 23, which is 5W?

A. Again, this is another one of the office buildings that's located within Greenspring Station directly to our west.

Q. 24, which is 5X?

A. This is also within Greenspring Station, and this is the newer Johns Hopkins medical facility that was built a few years ago.

Q. And finally, the 25th photograph, 5Y?

A. Again, this is another office building in Greenspring Station. This is the building that's directly adjacent to our property to the west, closest to Joppa Road.

Q. Thank you, Mr. Bishop. In connection with going through the development process and this

hearing, did you prepare a rendered development plan?

A. Yes, I did.

Q. I want to show you what's been marked as Developer's Exhibit 6, and I'll try and zoom in so you can see everything. Can you, before we get to the specifics of, you know, the road and specific units, can you explain what the overall concept was for designing a layout on this property?

A. Sure. So the property is somewhat unique in a few aspects. We definitely want to come off of West Joppa Road as the main access point. We also wanted to try and respect the natural topography of the land, so you'll see that the road comes in off of Joppa Road, and it comes in and then it swoops down a bit before it goes up and terminates close to Mays Chapel Road.

If you look at the existing grading of the property, it's of a natural valley of the property there, so we set that up so we could stay close to existing grade, and then because the property widens toward the rear, we have the upper loop and the

interior loop to take advantage of that area where it widened out.

We have also placed all the homes basically where the existing agricultural activity was going on and left as much of the natural surrounding environmental areas in their current state, and we also left the existing home in place and put it on its own roughly 3-acre parcel. As I mentioned before, we relocated the driveway so it comes in off of the new road, so you can see in red on this plan.

Q. On previous versions on a concept plan level, were homes proposed to be closer to Joppa Road?

A. Yes. We've had multiple iterations, and we did at one point have the homes closer to Joppa Road in what is now an open space area.

Q. Okay.

A. Currently, and we might get into this later, but the first proposed homes are about 550 feet away from the edge of Joppa Road, so there's quite a bit of physical and visual separation there from what you can see from West Joppa Road.

Q. And you spoke a little bit about grading. With respect to topography, are there any exterior retaining walls proposed for this project?

A. There are no perimeter retaining walls around this property, which would lead you to think that there's no, the grading is not terribly extensive, which is the case. We've been very intentional in minimizing the grading activities on the property.

The only retaining wall you'll find is in the interior, and that was really to facilitate some walk out conditions for variety for potential buyers.

Q. Okay. Let's talk a little bit about the proposed road network, and I can zoom in or out as needed, but can you describe how traffic is proposed to access and circulate around the property?

A. Sure. So as I mentioned briefly, our main access will be off of West Joppa Road, so we have a main entrance there, and we have a, I call it a monumental entrance. It'll be wider and have a bifurcation, meaning that there is an in on the right,

there's a landscaped median, and then there's an out lane on the left, and we will have new entrance signage in that area.

And then as you come in, a I mentioned, there's a bit of a straight section, and then it turns into a curved linear form where it ties into the existing Mays Chapel, and as we're proposing as emergency access only with a gate. And then because of the shape of the property, we do have the larger loop to plan north, that will loop from the main spine road and come back around and tie into the spine road again, and there's an interior, smaller loop that's again, on the proposed spine road and is centrally, or located around a central open space. And finally, we have a short cul-de-sac in the bottom right of the plan.

Q. I'm going to zoom in a little bit on the rear sort of right side of this exhibit under Mays Chapel Road, and ask you to explain the note that is on this plan with respect to the emergency access gate.

A. Yes. So we put this note on the plan after having discussions internally with Baltimore County, and the note reads gated for emergency access only, to be approved by the administrative law judge.

Q. And we have heard about this issue, and we'll hear more I'm sure from other witnesses, but can you explain why that gate, in basic terms why we're proposing that gate?

A. Right. So it's in reaction to the community's request. So the communities to our north did not want to have new through traffic introduced to their neighborhoods. The potential connection would be between West Seminary and down to Joppa Road, but using the existing Mays Chapel Road and connecting through. Understandably, those communities don't want any additional traffic in that area, so we thought a great solution would be to put an emergency access only in that location, and so that's what we're proposing at this point in time.

If there is any emergencies on Mays Chapel Road or proposed road and one of the entrances was not

accessible, emergency responders could open that gate and either access our community, Mays Chapel Road communities, West Seminary or Joppa Road.

Q. And Mr. Powell, while we're zoomed in on this part of the property, Mr. Powell mentioned adding some berming and landscaping at the request of the community. Could you please explain where that is shown on the plan?

A. Sure. I can't read the exact numbers, but the lots that are adjacent to the existing community to the north and east on this plan, thank you, lots 24 through 30 roughly, we have proposed a berm that's 3 to 4 feet tall, and then on top of that, a dense planting of a mix of large shade trees, evergreen screen trees and flowering trees and lower shrubs to help buffer the proposed homes from the existing homes.

Q. Is that something that was required by Baltimore County?

A. No. Screening is required, but this is above and beyond what would be required by the county

in their landscape manuals.

Q. Speaking of landscape manual, can you explain, please just the general concept for landscaping, what type of landscaping and the locations where it is anticipated to be placed if this project is constructed?

A. Sure. So starting with the main roads, all of the roads will have a very defined street scape planting, so all of the larger green dots you see, those will be major shade trees. Oak trees, maple trees, that type of tree.

At the entrance, we've also supplemented that, or enhanced that with proposed flowering trees. At any of the road intersections where we may have side buildings facing the public road. We have enhanced the landscaping there as well, so we have more shade trees, more evergreen trees and shrubs in those areas, and as I mentioned, adjacent to any existing homes, we've enhanced the landscaping, perimeter of the properties, and finally behind any of the lots that are adjacent to proposed open space, we

have provided enhanced landscaping there to help buffer the rears of the homes from the community open space areas.

Q. Has Baltimore County approved the schematic landscape plan for this project?

A. Yes, they have.

Q. Do you know about how many plantings are proposed for the landscaping associated with Greenspring Manor?

A. Yes. The proposed landscape plan has about 1,000 new plantings on the plan.

Q. How many are trees versus evergreen, shrubs, et cetera?

A. I do. We have about 250 major shade trees, about 130 flowering trees, 278 evergreen trees, and 400 shrubs.

Q. Thank you. Let’s talk a little bit about the zoning and the zoning regulations. What is this property zoned?

A. It is split zoned DR1 and DR2.

Q. If I zoom in on the center of this

plan, can you describe how the zoning line and the two different zones is identified on this plan?

A. Sure. You can see there's an angled line, dark black line that's going north to south. The area to the left is DR1, and area to the east or north is DR2.

Q. You just brought up a good point by saying north/east. What is the, you've mentioned north a couple of times. How is this plan oriented? Where is north with respect to this plan?

A. North would be towards the label that says Mays Chapel to your right. So we've oriented, we rotated the plan about 90 degrees so it fits properly on planning documents.

Q. Okay. And if I zoom out, can you just describe how that zone line runs through the property?

A. So it's about the middle of the property, and again, to the south would be DR1, and to the north would be DR2.

Q. Okay. And does this plan meet all bulk and area regulations under the zoning regulations?

A. It does. We're not requesting any bulk area variances.

Q. How about, are there cases where variances for, blanket variances for decks on all units are proposed, how do these, how would decks fit onto the proposed lots in this case?

A. These lots are large enough to provide decks without the need for variances. We've actually shown them on the plan, there's a dashed line behind each of the units.

Q. Was that information shared with the Department of Planning between concept plan and development plan?

A. Yes, it was, because I know they're concerned about that on this project and others.

Q. About how many acres is this property?

A. It's about 40 acres.

Q. And can you tell the judge the density permitted and proposed?

A. I can. So there's 61 dwelling units permitted, and we're proposing 61.

Q. How many are new?

A. 60 are new, one existing, and we have 16 homes in the DR1 zone, and 45 in the DR2 zone.

Q. Is there any transfer of density attempted transfer between the two zones to fit the units on the property?

A. We intentionally did not try to transfer any of the density between the two zones.

Q. Let’s talk about open space. Does this project provide the required amount of open space for the 60 new homes, 61 total homes?

A. Yes. We provide what’s required, and then quite a bit more.

Q. Do you know how much more?

A. I actually have that noted here. So required 60,000 square feet for the 60 new homes, and we’re providing 148,300 square feet, so more than double what’s required.

Q. Let’s explain the open space areas and programs. So I can start wherever you’d like. Start maybe towards the entrance and go from there?

A. Yeah, that'd be good.

Q. It's not letting me zoom in for some reason. There we go. Okay. So I am zooming in towards the access road, and how you start with there's an area marked open space that is above the access road, or I guess that's west in terms of actual direction.

A. Correct. So right, you'll come in off of Joppa Road, a new proposed access road, and there will be an open space on your left, and it's mostly a grassy area for active type open space uses, but we're also proposing a pavilion and some walking areas, and garden areas. You can see that in the red to the I guess plan of the open space. And then if you, sorry.

Q. No, I was just trying to zoom in so you could read the notes if that helps.

A. No, I think I covered it. And we have a connection plan south. There will be a trail that goes next to lot 2 and connects it to the larger open space behind lots 2 through 9. This area will bring you closer to the environmental areas, but stay out of

the environmentally sensitive areas. It'll be a larger open area for active recreation, and we're proposing a trail system in there to connect all of the open spaces together.

That open space will continue up and connect back into the main spine road between lots 9 and 10, and that location will have our community mailbox area, and again, some more seating areas and planting areas. Our final open space area is the park in the middle that units 49 through 54 are oriented around, and we're proposing more pathways, more planting and a gazebo type structure in that area.

And all these areas are connected by the public sidewalk system on both sides of the, all the streets, and also an asphalt walking trail in the open space areas.

Q. And will the open space areas all be owned by the HOA?

A. Yes, they'll all be privately owned by the HOA.

Q. Let me zoom out for a minute. Let's

talk about the school impact of this project. Are any of the applicable schools, elementary, middle, high schools, overcrowded under Baltimore County law?

A. No, none of them are.

Q. Does this project require any adjacent capacity from other school districts to be used?

A. No, it does not.

Q. And there's three blue stormwater management labels on this plan. I'd just ask you generally, well, first, is there any stormwater management on the property currently?

A. Currently there are no stormwater management facilities existing today.

Q. And can you just, can you briefly explain the, what the program is to be? In other words, how many facilities, where are they located, and which parts of the property they will serve?

A. Sure. We're proposing three stormwater management facilities, all three of them will be submerged gravel wetland type facilities. Two of them are kind of centrally located on the plan, above the

forest buffer areas, but behind the homes. Those will treat both 100-year management for quantity of stormwater, as well as treat them for the quality of the stormwater, so to remove nutrients and pollutants.

And then we also have a facility adjacent to Joppa Road and our proposed road that will also treat stormwater management.

Q. You mentioned though the submerged gravel wetlands. If you know, what does that generally just look like to a layperson driving by or walking by?

A. It'll look like a naturalized area. It'll have stone in the bottom of it to help cool and filter the water and store the water, but above that there will be planting media they call it, and we'll also have plant material and form of grasses and native plant material.

Q. So, and I guess in sort of older projects, there will sometimes be big type facilities. Is that the type of facilities that are proposed here?

A. No, they won't, you won't see standing

water for long periods of time. They're not terribly deep, they're relatively shallow.

Q. And we hear the term from time-to-time ESD to the MEP. Is that the standard that was proposed in this case?

A. It is. That is what we have to at least meet as a minimum to meet Baltimore County requirements and state of Maryland requirements for stormwater management.

Q. Okay. Let's talk a little bit about, we've heard about the floodplain on this property. So did you perform a, or did you create an exhibit to show the boundaries of the floodplain that includes the floodplain on this property?

A. Yes, I did.

Q. I might have to stop for a second. This is blocking my ability to get to the next exhibit. Bear with me. Okay. So I'm going to show you, though slightly out of order, this is going to be Developer's Exhibit 23, and ask you, is this the exhibit that you and your firm prepared?

A. Yes, it is.

Q. Can you just explain what's depicted with respect to the existing floodplain that includes this property?

A. Sure. This exhibit is intended to show how large the drainage area is that contributes to the floodplain that's on the property, so the yellow, the white or yellow dashed line is the drainage area upstream of our property.

It's about 133 acres, and the intent here is to show that the communities north of us in our drainage area have their own existing stormwater management facility which treats the 100-year storm, and so does the Greenspring Station project to our west, that is the other lighter blue color. So they have their own stormwater management facility as well to treat their water before it goes into the larger drainage system.

I also want to point out that we are proposing our three, three of our own stormwater management facilities as I mentioned, that also treat

the stormwater management before it goes, or the stormwater before it goes into the naturally occurring drainage area or drainage system.

Q. Now, when Baltimore County reviews floodplain studies, do they allow people to take advantage of the existing or proposed stormwater management facilities?

A. No, the requirements are incredibly conservative, and they do not allow you to consider those.

Q. So, okay. From this plan, let’s go back to the subject property, and can you talk about where is the floodplain currently located on the subject property?

A. It’s a little hard to see here zoomed out, but it’s mainly the darker green areas to the south of the plan. If you zoomed in, there’s a line that’s depicted as the 100-year floodplain boundary. The inner dashed line, right there you go, it’s a good label there, right. So the inner dashed line there, that is the 100-year floodplain, and it extends west

or planned north up towards Greenspring Station, or if you're going down toward, if you go across the open space, down across the reforestation area, and then continues north along the property line, leaves the property in some areas, comes back onto the property in other areas. All that area we're including in forest buffer and forest conservation easement.

Q. And what is currently there now?

A. Some of it is existing active farm field, and some of it is existing forested areas.

Q. Okay. And focusing on, we're back to exhibit 6 so the record is clear, and the left side or southwest side of the property, so the, as the property runs along Joppa Road, can you explain currently where the floodplain boundary is?

A. Right. So if you zoom in for me one more time, I'd appreciate it. So we'll take the, thank you. We'll take where the label is that you see there next to lot 2, the 100-year floodplain, extends across our proposed road up across the open space label, up onto the adjacent Greenspring Station property where

those X's are, the red X's, comes back around and then crosses Joppa Road and then comes back.

Q. So under existing conditions, is there any part of the frontage of our property along Joppa Road that is not in a floodplain?

A. No. In order to access our property, you would have to cross floodplain in one place or the other along Joppa Road.

Q. Zooming in on sort of the front, again, close to Joppa Road on this exhibit, and there is a red indicator that says 100-year floodplain post construction. Can you explain what that is, what that shows?

A. Sure. We are proposing the addition of this road, which we discussed before, and that road will be built on some fill, and it will be elevated out of the floodplain. So once you put that road in, it effectively cuts off the floodplain to the west.

Q. Why does it cut off the floodplain? Can you explain that?

A. The source of the floodplain is the

drainage area system that's on the east side of our property, which runs basically north to south. So when we add fill and elevate the road a little bit, it basically cuts off the floodplain that's like I mentioned, to the west of us, because it's higher elevation.

Q. So from the road towards Greenspring Station, what impact does the construction of this project have on the boundary of the floodplain?

A. So the floodplain boundary would be reduced and taken off of our adjacent, our neighbor's property in Greenspring Station, so they'll no longer have 100-year floodplain on their property, which would be an improvement, and will also not be where our stormwater management is shown, or where our open space is shown any longer. It'll all be confined to the area plan south of our proposed access road.

Q. And how is the new location or post-construction location of the floodplain depicted on this plan?

A. It is, well, a series of red X's on the

existing floodplain where it's going away, and then a heavy red dashed line with the red label that says 100-year floodplain post-construction, right where your cursor is. Just south of the proposed road.

Q. You spoke about the change that would happen for the Greenspring Station property to the northwest. If I zoom out, what impact is this projected to have on floodplain issues to the opposite side, toward Tally Ho?

A. Zero. We've done all of our analysis following the county's requirements in the DPW design manual, we've run all the calculations pre and post, and we have no impact on any of our adjacent neighbor's properties from a --

Q. What, sorry. What is physically there on the property now versus what will be there in the reforestation area and the lands around the road and existing home?

A. So currently it's a mix of existing farm fields, crops as I mentioned, and lawn areas. When we are done with construction, those areas will

be converted to reforestation area, which means they will be planted with new trees, most mainly trees.

Q. And with respect to the driveway, I think we spoke about it but didn't go into any detail. Can you explain the existing and proposed driveway to the existing home?

A. Sure. Just underneath the label that says reforestation area in white, that's the area of the existing driveway, that's going to be removed, and a new driveway constructed in the red hatch connecting to the rear of the home, out to the new proposed road. Basically taking that driveway out of the existing floodplain.

Q. Let's talk a little bit about architecture and the pattern book.

MR. ROSENBLATT: For all the attorneys, our pattern book is exhibit 7, but it's such a big document, it's very hard to scroll through, so it's split up into 7A, B and C.

BY MR. ROSENBLATT:

Q. And Mr. Bishop, I'm going to have you,

there were some questions about architecture and the size of homes, so I think let's try and focus on that. So I will turn your attention to, we'll start with page 18 of the pattern book. Sorry. And have you, can you just explain a little bit about the architecture proposed for this project, type of homes, materials, sizes, et cetera?

A. Sure. I can speak in generalities. I know it's been discussed a little bit in earlier testimony, but we are proposing several different types of homes. They will all be similar to each other, but different.

They have, we have a range of 50-foot, 40-foot, 50-foot and 54-foot-wide homes. The building materials would be of a higher quality, the architecture I think is very attractive. It was mentioned that they are potentially going to sell in the $800,000 to a million-dollar range, and we have a mix of front load garage units and side load garage units.

We have a wide variety of housing types, but

all still in the same kind of architectural vein, so they will be, compliment each other.

Q. So if anyone wants to look at specific sizes and floor plans, does the pattern book, if I flip through it, does it detail specifics about layouts and sizes of each of the proposed units?

A. Its very detailed. It meets all the requirements of Section 260 as it relates to architecture.

Q. And we'll talk about those in more detail. On page 25 is another sort of unit. Can you describe the architecture?

A. Sure. This is a front 2-car garage, front load unit. It's predominantly brick, lots of windows, and attached covered stoop, integral with the garage.

Q. And again, the actual dimensions, layouts, and I will go to the next image, which is on page 32 of the pattern book, and describe the third now type of unit.

A. Similar unit, a little wider. Again, a

2-car front load garage unit with a full-length covered porch to kind of downplay the dominance of the garage.

Q. And one more in this exhibit, page 42.

A. Similar sized unit, just a little different style, 2-car garage, front load with a porch, columns, different style siding. Again, lots of windows.

Q. And just a couple more. Going through the broken-up pattern book on 7C, page 53 of the pattern book, there is another unit. Can you explain?

A. This is another unit. I believe this one is designed for more of a single floor living. It does have two stories, but it's more of a single floor plan, 2-car garage, front loaded.

Q. And finally, page 61 of the pattern book. Sorry.

A. This is, again, one of the larger units that has a covered porch, it has different types of materials on the front, mainly a brick, and this is actually showing a 3-car garage, which has in this

option has two cars that kind of, a 2-car garage unit that's kind of in the side of the building and a 1-car garage that's facing the street, but it's set back from the street quite a bit.

Q. Thank you, Mr. Bishop. I'm going to go back to the development plan itself, and ask you, there's one green line and a number of red lines on this plan, and ask you to kind of go through and explain what the red lines show. I'll start in the upper left corner of the plan, and ask you to explain what they read, and in this instance, one green line change. Who requested that, and what changes are shown?

A. Okay. So everything to the upper left is the dedication table, and an inset that we prepared, and those are basically real estate compliance issues that show what areas we are dedicating to Baltimore County, whether it be an easement or a road, right of way, and majority of the red was us working with the real estate compliance group to label all of the dedications in a way that

they thought was the easiest to follow.

Q. We'll talk about this a little bit more with Section 260, but the entrance monument, is that shown on the plan? Can you explain what it is to look like?

A. Sure. That is the proposed entrance sign. It's only red line because the zoning office asked us to put it physically on the plan. We always had it in the pattern book, but they asked us to also include it on the plan. It's a masonry entrance sign, about 8 feet tall that says Greenspring Manor on it.

Q. And as we scroll towards kind of the left center plan view, there is some red there. Can you explain what, there's a number of red triangles and labels, and ask you to explain what the red line changes are in this area?

A. Sure. Some of the red lines are the county landscape architect asking us to put the details that we had in the pattern book onto the plan for the proposed open space improvements, so that would be like the planting areas and the pavilion.

You'll see that with notes about what specific products are going to install there.

And then we also have the new driveway location, which was a request from environmental impact review of Baltimore County, so you'll see that in the red hatch at the rear of the existing home. The red triangles you mentioned are new forest conservation areas. We had those in a different location early on, but we decided that that was the best location for them, so that's all reforestation planting now where the red triangles are.

Q. Okay.

A. You'll see that the new proposed alignment of the public sewer connection in the bed of the existing driveway. A lot of other things were again, coordination with real estate compliance on how exactly they wanted the dedications areas labeled. The county landscape architect asked us to add some fending to screen between the private properties and the adjacent open spaces, which we did.

We had some notes to add once our

alternatives analysis and forest conservation variances were approved, so you'll see those in red in some of the general notes.

Q. Can you explain the labeling change to the typical units on the bottom of the plan?

A. I think we just added more detail to confirm that we had enough room for our decks without the need for variances.

Q. And some notes added or changed. Can you explain this?

A. Yeah. I think they are mostly just responding to development plan comments, mostly generic basic comments on open space and association labels. Yeah, that kind of stuff.

Q. And if I scroll up the right side of the plan, I'm trying to make sure I don't --

A. Sure. We added asphalt trail detail per the request of the county landscape architect.

Q. Okay.

A. Trails can be in the open space we discussed earlier. We added a cost estimate for all

the open space areas, for all the improvements that will go into that, that's that table by your hand.

Q. And what is the estimate of the improvements that are proposed?

A. Approximately $309,000.

Q. And then some changes to the maybe road or cul-de-sac?

A. We did revise the cul-de-sac slightly. Development plans review asked us to make the cul-de-sac a little bit larger, which we did, and you can see that in red. We also added a phasing line, a construction phasing line per the request of development plans review, and that just kind of shows which homes we think we'll build first versus second.

Q. The gate issue, it's not in red, but the same note we saw on the rendered plan I notice is not in red. Can you just say how much, or we said it clearly, where did the language for this note come from?

A. It came from the Department of Public Works of Baltimore County, and from the highway design

section.

Q. Okay. There's a few stormwater management notes. Can you explain on each of the facilities on the road what those notes are?

A. Sure. So we, on the stormwater management facilities, we changed the shape of the ones in the middle of the plan, thank you, a little bit to make sure we had enough separation from the forest conservation areas to the embankments of the stormwater management facilities.

There was a comment from environmental impact review. We also made them slightly deeper to gain a little more volume in them.

Q. Okay. And then on the road?

A. Added a few notes on how to label HOA easements and showed the entrance signs. Again, we had all the entrance signs and the open space details in the pattern book, but the county landscape architect asked that we add them to the plan itself, so that's why they are red now.

Q. With the exception of the one green

line that took place at the outset of our first hearing officer's hearing date, is this the red line's plan that was circulated to the county agencies prior to their testimony in front of the judge?

A. Yes, it was.

Q. All right. Mr. Bishop, did you perform an analysis of the master plan, and specifically the property and its transect designation under the master plan?

A. Yes, we put together quite extensive, quite an extensive report showing how we met that, or complied with the master plan.

Q. Okay. Before we turn to your exhibit, Mr. Zimmerman actually I'm going to show you people's counsel 8, he attached a few pages from master plan 2020, and ask you before we talk about our specific transect, what does the master plan say about the proposed land use map that shows the transects? And I'm turning your attention to page 27 of the master plan that is part of people's counsel exhibit 8.

MR. ZIMMERMAN: I'm going to object at this

point, just to indicate that any interpretations of the law, I think that's beyond Mr. Bishop's expertise. He can indicate what the plan says, but we are starting to get into interpretation, and I just want to put it for the record that I would object to that, because that requires a legal education.

JUDGE MURPHY: Overruled. Go ahead, Mr. Bishop.

MR. BISHOP: If you don't mind, I'm just going to read the first paragraph that starts the whole transect.

BY MR. ROSENBLATT:

Q. Sure.

A. Actually it says the proposed land use map, which they're referring to, the transect land use map provides general recommendations for land use based upon the policies provided in master plan 2020. The map is conceptual and general and is intended to reflect land use patterns and support the land use objectives of master plan 2020 rather than identify land uses of individual properties or parcels. So I'd

argue that it's intended to give guidance on how to develop these areas, not to be very strict guidelines in that regard.

Q. Turning to Developer's exhibit 8, which is our excerpt of the master plan, you just spoke about the proposed land use map. Can you explain what, first in general terms what this map shows?

A. Sure. This map shows out of the master plan 2020 the different transects that have been designated. so it goes from T1, the most natural, to T6, which is the core, basically just in Towson, downtown Towson.

Q. What is the transect for the subject property?

A. We are at T3 suburban transect.

Q. Before we turn to further pages, is there an image at the bottom of the map for each of the transects?

A. Yes.

Q. And I'm sure this is hard to see, zoomed in on the computer, but if you can, can you

explain what is shown in the image for T3?

A. Sure. You'll see single family detached homes adjacent to public streets with sidewalks with landscaping in the front yards.

Q. Can you tell from this image how many homes are depicted in the image for T3?

A. I wish I could. Maybe 3. It's a little grainy.

Q. Can you describe the distance between the homes in this photograph?

A. It's close, and I would say that it meets probably the county zoning requirements.

Q. All right. I'm going to zoom out and turn your attention to page 29 of the master plan, which is a part of Developer's exhibit 8 and ask you I guess if you could read what the description of the T3 suburban zone is in master plan 2020?

A. Sure. The T3 suburban zone means low density residential areas adjacent to higher zones that contain mixed use. Home occupations and out buildings may be allowed, landscaping is naturalistic,

and setbacks are relatively deep [indiscernible] roads irregular to county natural conditions.

Q. And turning to the next page, so page 30 of the master plan. Is there, again, a description of the T3 suburban zone?

A. Yes.

Q. And is the paragraph on the left side of T3 the same as what you just read?

A. Yes, it is.

Q. And is there an image, left most side of T3, depicting a layout?

A. Yes, there's a plan view schematic showing the general layout of a T3 suburban area.

Q. Can you please describe that, what's depicted in that image?

A. Sure. You have a grided street or a street grid, and single-family detached homes with landscaping and orientation toward the street.

Q. And how does the image for T3 differ from the images shown for tier 2 and T4?

A. So T2 is obviously much more rural and

less dense. You can tell the houses are much more set back from the streets, the lots are much larger, and the landscaping is even more naturalistic, and I think they're even showing intent for farming, agriculture uses, whereas the T4 really introduces attached product. I mean, it's very obvious that there is townhouse units there, and they're much closer to the street, with some single family detached as well.

Q. Now, turning back to, I just want to make sure it's exactly the same. Okay. So the description on page 29 of the master plan that you read into the record, can you explain in your opinion if and how this project complies with the description of what a T3 suburban zone development should be?

A. Sure. I think we're on exactly the definition of it. We are in the lowest density residential zone in Baltimore County, which are the DR1 and DR2 zones, so that addresses the low-density residential areas. We are adjacent to higher zones.

As I mentioned, there are communities directly to our north and adjacent to us that have

townhouse configurations in them, which are denser use. We also have the Greenspring Station project which contains mixed use as I showed with the mix of medical office, standard office, commercial uses.

The landscaping, we have as we mentioned, extensive landscaping with nearly 1,000 or more proposed trees, and we're leaving all of the naturalistic areas basically intact along our property's perimeters.

Q. Okay.

A. The roads are irregular. We have curved linear roads, and we are, as I mentioned, we are accommodating the natural conditions. We tried to use the existing grade to our advantage. When we laid this out, we stay very close to the existing grades. We are maintaining almost all of the existing naturalized areas, the adjacent forested areas in the stream network, so I think we fit nicely into the T3 suburban zone.

Q. And you spoke of, do you know what percentage of the property will remain open,

undeveloped if this project is constructed?

A. Correct. I believe it's about 40 percent.

Q. And in terms of local open space for county requirements, can you explain again, just in relation to this how we meet or exceed the open space requirements?

A. Sure. As I mentioned earlier, we have 60,000 square feet of open space required, and we're providing over 148,000 square feet, so that is over twice what is required.

Q. In anticipation of this hearing, did you review some other developments that are also in the T3 transect in the near vicinity of this project?

A. Yes, I did.

Q. I show you what's been marked as Developer's exhibit 9, starting with the same proposed land use map is the first page of exhibit 9, but then there are four numbers with red circles around them. Can you explain what that shows?

A. Sure. This is the transect map as we

discussed earlier, but with an overlay. I identified four different areas that are in the T3 transect similar to the transect or the same transect that we're in, and the intent is to show the vast mix of housing types and community types within the T3 transect.

Q. I'll turn your attention to page 2 of exhibit 9. You describe, describe what you are showing in this page.

A. Sure. This is a community that is on the T3 transect, or within the T3 transect. The photograph that I show to the left is just a random house that I picked, but it shows a similar setback and lot size and configuration as our proposed community, and if you scroll down, I also show that within the same transect and similar community, you have townhomes very similar to our setup.

As we mentioned earlier, there are communities directly to our north that have townhouses, and some others that have single family detached similar to the picture I showed earlier.

Q. On page 3 of exhibit 9, can you again describe, I'll zoom out for a second and then zoom in when you're talking about each image.

A. Sure. Again, another T3 transect in the general area that our project is in, and again, showing large townhouse development type houses, and also mixed amongst single family as well, so it's a mix of uses.

Q. In the, I guess the upper right of page 3, how many stories are the townhomes that you depicted?

A. I believe it's a 3-story townhouse.

Q. And again, you may have already said this, but you have an arrow pointing to a neighborhood off of Thornton Road. Can you explain what is depicted there?

A. Correct. Those are 2-story townhouses.

Q. Are they in the same transect as the subject property?

A. Sorry, yes, they are also in the T3

transect.

Q. And page 4, I'll try and zoom out at the beginning. Can you explain where these properties are located, and then I'll zoom into each one so you can describe what's depicted?

A. Sure. These are relatively close to us. They're about, they're on the other side of I-695 directly east of our project. They're in the DR35 zone, and they're showing single family detached homes, relatively small front yards, relatively close building to building setbacks.

Q. Okay. And there's another image on the right side. Did your description cover both images?

A. It covers both. They're similar. Neither of these have garages, but they are similar. I'm sorry, the one in the upper right, you're right, is a semi-detached project. Sorry. So that's a 2-house, two families in one building versus true single family detached.

Q. Got it. I'm jumping around a little bit. This is page 4, upper right of Developer's

exhibit 9. Can you just explain one more time so the record is clear what is shown?

A. Sure, I'm sorry. There's a, that is a semi-detached product or house, so there's two families in one building, and the intent really with these exhibits is jut to show the wide variety of densities and design and setbacks located within the T3 transect throughout Baltimore County.

Q. And the final page, one more image, where is this located, and what does it depict?

A. It's south of 695, again to the east of our project, but in the general vicinity, and these are showing, again, townhouses in the T3 transect.

Q. So were all the images that you picked out in the T3 transect?

A. Yes, they are.

Q. In your opinion as a land planner and landscape architect, is this development consistent with the T3 suburban designation and master plan 2020?

A. Yes, it is.

Q. Now, did the Department of Planning

make a finding with regard to consistency with the master plan for this project?

A. Yes, they did.

Q. Okay. I am going to turn back to the development plan for one more topic. Okay. So we have heard a bit about off site improvements for this project, but I'm going to ask you, is the proposed sewer upgrade that will be constructed if this property proceeds shown on the development plan?

A. Yes. The lower left-hand corner of the plan shows what we intend to do.

Q. And where is this improvement located, and what is the improvement itself?

A. Located, the improvement is located just south of our property across the street from West Joppa Road. It is proposed improvement of an 8-inch sewer line to 12 inches, and I believe there are two sections that we are agreeing, or required and agreeing to improve in that area.

Q. And have plans for the construction of the sewer upgrade been prepared, submitted to

Baltimore County?

A. Yes, they have been prepared, submitted and approved by Baltimore County.

Q. And do you know the, I had asked Mr. Powell, do you know the status of the construction plans for the traffic improvements that we've heard so much about?

A. Yes. So we have submitted our SHA access permit plans, and have been through a couple rounds of review, and are very close to having those plans approved as well.

Q. And the, either DPR or DTWP comment mentioned segments of sewer in addition to the ones shown on Atapco's development plan that must be upgraded prior to connecting these homes into the sewer system. Are you aware of that issue?

A. I am, yes.

Q. And is this something where a condition, would you suggest any condition if this plan is approved to address that issue?

A. Yes. The condition should be, and I

believe it has been required by DPW&T as well is that this, our sections of sewer and the sections that you just mentioned are also in the development plan comments, should all be installed and approved before we can get a building permit, any building permits for our project.

Q. Turning back to, I think this may be the best image for you to go through each of these requirements, but we are going to talk about Section 260, and what I'd like to do, because the issue has been raised, is to go through each of these requirements and have you explain how the requirements are addressed on our plan.

So Section 260.2 has to do with site planning, and I'm just going to go through and ask you each one. So how does this project retain the existing quality of vegetation of the site to the fullest extent possible and protect the root systems of that vegetation during construction?

A. So as I've mentioned probably briefly before, we are protecting basically all the trees

along the eastern property line. As you can see on this exhibit in the dark green, there are 27 specimen trees on the property now. We are retaining all of them but one, and the one that we have to remove, we have to remove because of required widening of West Joppa Road, and that tree has already been heavily limbed up and marginalized by Baltimore Gas and Electric, and on the site other than specimen trees, we're having very little clearing of the existing forest on the property.

Q. How does the plan integrate locally significant features of the site, such as distinctive buildings, vistas, topographic features, specimen trees, tree stands, monuments, landmarks, ruins and gardens into the site design and retain the character of the features and their settings?

A. So as mentioned before, we're keeping the existing home on the property and putting it on a 3-acre parcel, so that will stay the same. I also mentioned that we're trying to retain the existing shape of the land from a topography standpoint, and I

also just mentioned that we're not, we're only removing one of 27 specimen trees on the property.

Q. Does the project coordinate building design, site layout and grading so that grade transitions are gradual and respect the existing topography?

A. I'm sorry, I probably answered this one. Well, I answered number 2. But yes, we are maintaining most of the existing grading out there. In fact, most of our grading is within two feet of existing grade. We don't have any permitter retaining walls that would artificially change the character of the grade.

Q. Okay. Is there a landscape buffer between the rear yards of dwellings existing in 2001 and the rear yards of abutting new dwellings proposed?

A. Yes. I think we covered this earlier on testimony. We are providing an enhanced landscape screen and buffer between the homes off of Mays Chapel Road to the north of the project, and we're maintaining all the, or most of the existing

vegetation along the east side, backing up to the Tally Ho neighborhood.

Q. Does the project provide for smooth transitions between neighborhoods by ranging and orienting the proposed buildings and site improvements to compliment those in the surrounding neighborhood?

A. Yes. We've pushed, as I mentioned before, the proposed homes, about 550 feet away from Joppa Road, and we also discussed the, not compatibility, but how we are similar in size and design of all the surrounding communities.

Q. Does the project provide transitions with respect to setbacks, street patterns and building to street relationships?

A. Yes. As I've mentioned, we have integrated curved linear streets which are similar to what's done in the other neighborhoods, and we are also integrated into a mix of different uses, as I've mentioned several times before, with higher density, commercial, townhomes, and a mix of different single family lot sizes in the area.

Q. Okay. Let's, are there any reverse frontage lots or pan handle lots proposed?

A. No, there are not.

Q. Section 260.3, titled open space, it says development proposal shall integrate open space areas into proposed development by first, does the project create focal points along streets?

A. Yes. We have three areas of the open space that are directly adjacent to the streets. As I mentioned, the first one as you come in is on your left, and it will be landscaped and have a structure there that will create a focal point. As you get to the center of the project, there's another access to the open space that's going to have our, excuse me, our planting areas, and mailboxes, and then we have a centrally located kind of pocket park, which will have a gazebo and more gardens and walking areas.

Q. Does the term open space in Section 260, is that the same as the open space regulations in the development regulations?

MR. ZIMMERMAN: Objection. I don't see how

he can give that kind of interpretation.

JUDGE MURPHY: I don't think it's an interpretation. Go ahead, Mr. Bishop. Overruled.

MR. BISHOP: My opinion is that there are very specific open space requirements that are set forth in the open space manual in Baltimore County which are different than the intent of the Section 260 open space areas.

BY MR. ROSENBLATT:

Q. All right. Let's go through the rest of them. Is one of the requirements locating landscaped open green spaces in view of the development entrance or adjoining public street?

A. Right. So the entire frontage of Joppa Road is going to be planted with combination of decorative plantings and a combination of reforestation areas. So the whole front is going to be a green space.

Q. The next requirement is planning a linked network of natural and landscaped open areas connected by pedestrian and bike trails. Can you

explain the trail issues, and I don't know if we've talked about the frontage of the property, so if you can focus on that as well.

A. Sure. We're proposing a wider, multi modal sidewalk along our frontage of Joppa Road, so what that is is just a paved sidewalk that's wider than typical, so you can have walkers and bikers on the same trail, so that's along the frontage of Joppa.

And then we have the asphalt trail which we discussed earlier which connects the two larger open space areas. We have all that connecting to a sidewalk system throughout the entire community, so we'll have sidewalks on both sides of all streets, and then we'll also have a pedestrian connection at the end of our proposed street, and its connection to Mays Chapel Road at the north of the property.

Q. And are dwelling units oriented around open areas or squares?

A. Yes. So we have the pocket park in the middle there, which you just focused on, and we also have the other buildings a little bit to the left have

access to that open space as well.

Q. Okay. Does the project incorporate significant features such as spans of trees into open areas?

A. Right. So as I mentioned, most of the property is currently farmed, but the areas that are not and are currently natural, we've utilized and brought our open spaces closer to and incorporated a trail system so that residents can take advantage of that, those naturalized areas.

Q. Does the design link the development's open areas to the surrounding neighborhood open areas, including public parks, walks and bike trails, and create both functional and visual continuity by matching the design of a bike trail in the proposed development to a bike trail located in an adjoining community?

A. I think we've covered this already, but we are proposing that multimodal bike trail along Joppa Road, so it can be integrated into the neighboring communities.

Q. Does it run along the entire frontage of the property?

A. It does, yes.

Q. All right.

A. And I'd answer in connection to Mays Chapel Road as well.

Q. Section 260.4, streets and parking. The proposal shall provide for at least one street connection to an adjoining neighborhood and adjoining property, not including principal access to the subdivision, nor to facilitate good traffic circulation. How is that met in this case?

A. So this one we are providing the street connection, however we discussed it's going to be emergency only because of the desires of the community to our north, so making that emergency access only with some kind of open or movable gate.

Q. Again, we have heard traffic testimony, and I'm sure we'll hear more, but how does that relate to good traffic circulation from a planning perspective?

A. Well, it's going to not disrupt the Meadows and the Boxwood neighborhoods, I think that's our main concern with keeping that emergency only, so those communities can maintain their current status quo. It also helps direct traffic to the arterial streets in the area, and not through these local streets.

Q. Are the streets proposed designed to slow traffic by offsetting alignments, reducing street width, reducing the length of blocks, and employing the use of traffic management devices such as roundabouts, jokers, to accomplish traffic calming?

A. Yes. We have narrower streets with parking on one side, and as I've mentioned a few times before, we have incorporated curb to linear features, which is also a traffic calming measure.

Q. You mentioned, I think you already covered this, but is on-street parking allowed?

A. Yes, we have on-street parking proposed on one side of all the streets.

Q. Are pedestrian and bike access to

commercial areas and community facilities on site within the development and to the surrounding neighborhood proposed?

A. Yes. We discussed this, so we have the path along Joppa Road, and the pedestrian connection at Mays Chapel Road.

Q. And finally the section, are street and parking accommodations provided which compliment the surrounding neighborhood?

A. Yes, that's the parking in your garages, in your driveways, and on the streets.

Q. And there is language about cu-de-sacs that may be used if it's demonstrated that a street connection is not feasible due to site conditions such as grade transitions or natural features, and alternate layouts not feasible.

If cul-de-sacs are used, developments should consist of a balance of street patterns, and if cul-de-sacs are used, design elements such as center landscaping and traffic circles shall be used. Is there a cul-de-sac proposed for this project?

A. Yes. We have one cul-de-sac.

Q. And can you describe the design of it, with respect to size, landscaping, et cetera?

A. Sure. It's a larger cul-de-sac that allows for essentially planted island, and it is warranted because of all the environmental features we talked about before with the floodplain, the forest buffer, and forest conservation areas.

Q. And finally, street widths and front yard setbacks may be reduced in accordance with traditional neighborhood design standards. Is that something proposed in this case?

A. I don't think that's really terrible applicable. I think that's a more specific housing design type than we are doing here, but the road has been reduced to minimize stormwater management impacts, and to create traffic calming.

Q. We talked a bit about landscaping, so hopefully we can move through these quickly, but Section 260.5 speaks about landscape design. It says a project shall, it says landscape public open spaces

to invite users, particularly emphasizing the intended entrance to the open space, so try and depict the entrances to the open space and ask you how they are landscaped.

A. Sure. So each of the landscapes, or open space areas as I mentioned, have landscape features. So we have the, if we can start at the one closest to Joppa, that would be best.

But you'll see from here, and from pages in the pattern book that we have incorporated a sidewalk system to bring you into the open space with a pavilion and seating areas and gardens and landscape areas. We've done that will all three of the open space entrances.

So that one there, the one in the center as I mentioned has the group mailbox area with again, seating areas and bike racks and gardens, and then the one shown in the middle here has a gazebo, again, more walking trails and more garden areas.

Q. Okay. In addition to plant material, are fences, walls or earth forms used or needed to

provide excessive and attractive screens and buffers where necessary?

A. Yes. We've talked about the berm that we've incorporated in the north end of the property adjacent to the existing homes, and the extensive landscaping, and enhanced landscaping we'll put there.

So we've also incorporated a series of fences between the sides and rears of the private properties and the community open space areas.

Q. To provide for or reinforce and maintain a continuous street tree canopy by preserving healthy street trees, or if they're not present, planting new trees. The canopy shall be comprised of trees of the same species or trees with design characteristics and growth habits that are similar to those of the existing street trees.

A. Sure. So we are, as you can see from this plan, extensively landscaping and providing a continuity of street scape and street scape plantings.

Q. And are there any existing street trees that can be used?

A. No, there are no, I mean, most of it is farmed and farm field, so all of these trees will be new.

Q. Has the design for site signage shown on this landscape plan, and in this case on the development plan --

A. Yes, in both places.

Q. 260.6 talks about buildings, and we've gone through the architecture. I'm not going to make you go through each of the images, but if you could just give a little tidbit about each of these.

Does the project provide a variety of housing type or design while maintaining continuity of scale in proportion to detail?

A. Yes. As I mentioned in passing before, we're providing 40, 50 and 54-foot wide units, so there's a variety there. It provides variety and type of design, but they are not terribly different, so there was a continuity in their design, and we're also providing a combination of front load and side load or side entry garages.

Q. Are the dwellings oriented toward the street? And do they incorporate prominent entries such as porches or stoops into the front building facade?

A. Yes. All of the homes face public street, and all of the homes will provide a front porch or stoop.

Q. Do the dwellings adhere to a consistent front building setback on the same street or square so that the fronts of the dwellings define a uniform street --

A. Yes. Most of the homes maintain the same or similar front yard setback. There's only a couple of the homes of the proposed 60 that are set back a little bit further from the road.

Q. Decks, balconies and porches designed as components of the building following dominant building lines, proportions and style and in a scale appropriate to the available space on the site. It says decks shall be screened to minimize visibility from a public street.

A. So as we've also mentioned, all the proposed homes have the availability for decks if the buyers so choose, and we've also taken care to screen the corner lots or any of the lots where that deck area could be visible from the public area. So you'll see in the landscape plan more evergreen trees, more shrubs, more flowering trees in those areas.

Q. Accessory structures designed at a scale appropriate to the dwelling and design, storage buildings and garages with the same architectural theme as the principal buildings on the site providing consistency and materials, colors, roof pitch and style.

A. Yes. As we mentioned in some of the earlier areas, we have a pavilion and a gazebo. Those details can be found in the pattern book, and they are in keeping with the architecture of the neighborhood.

Q. And the finished material of the exteriors of building is extended to grade, or if not possible, to within 12 inches of grade on all sides of the building, excluding foundation walls which they'll

use a finished quality material such as decorative concrete block, or concrete with a brick pattern, or stucco, and provide landscaping along the foundations.

A. Yes, that is provided, and it can be seen in the pattern book as well, in the architectural section.

Q. Similar materials and design elements on all building facades proposed, and building facades articulated using coordinated architectural features such as porches, windows, doors, chimneys, gables and dormers.

A. Yes. We went through all the architecture, and I think they all have very similar styles, compatible porches, stoops, garage doors. Compatible variety of siding, be it stone or brick, or siding.

Q. The last 260 requirement, garages may not become the dominant street feature, garage doors shall use items such as windows, decorative patterns and color to relieve the visual impact to the house from the street. Is that provided in this case?

A. Yes. Since I mentioned we've incorporated some side load garages, and we feel we meet all of the CMDP in Section 260 architectural requirements.

Q. Okay. In your opinion, are the requirements of Section 260 met?

A. Yes, they are.

Q. Did the Department of Planning make a finding with respect to compliance with Section 260?

A. Yes, they did, it's in their report.

Q. And in your opinion, does the development plan meet all applicable development regulations contained in the county code, as well as any applicable policies, rules and regulations regarding --

A. Yes, it does.

Q. Thank you, Mr. Bishop.

MR. ROSENBLATT: I have no further questions.

JUDGE MURPHY: Well, let's move into evidence the ones you spoke about. Can we do that?

MR. ROSENBLATT: Yes, please. So starting with exhibit 2, which was Mr. Bishop's resume, we used 2 through 9, and 23.

JUDGE MURPHY: 2 through 9, and 23. Okay. And any objection, Mr. McCann?

MR. MCCANN: No objection.

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

JUDGE MURPHY: Okay.

(Developer Exhibit Nos. 3 through 9 were marked for identification and entered into evidence.)

(Developer Exhibit No. 23 was marked for identification and entered into evidence.)

JUDGE MURPHY: Mr. Rosenblatt, just so I don't forget, I think in the last hearing you had, there was a green line added to the development plan for the red line development plan. Number one, I thought you made it 1B.

MR. ROSENBLATT: Yes.

JUDGE MURPHY: We never got that, I mean, so

I know you dropped off other exhibits, but that 1B wasn't provided.

MR. ROSENBLATT: Okay. I apologize for that.

JUDGE MURPHY: No, I just want to make sure we get it, just so, and then your exhibit list will have to be, you'll have to add, you know, 1A, 1B.

MR. ROSENBLATT: Yes.

JUDGE MURPHY: Just revise it, so you'll have to do it again. All right. So that is, those are those. Mr. McCann?

MR. MCCANN: Yes, Judge. Could we take a break, a bathroom break and just maybe a little longer than that so that I can, five, ten minutes would be great.

JUDGE MURPHY: Yeah, let's take ten minutes. How does that sound?

MR. MCCANN: Great. Thank you.

JUDGE MURPHY: All right. I'll pause the record.

(Whereupon there was a brief recess)

JUDGE MURPHY: We're back on the record. Mr. Zimmerman had a question about --

MR. ZIMMERMAN: Can I say something? I'll defer to everybody else, and it's of course advantageous to have cross-examination right after direct. On the other hand, cross-examination may take awhile, and sometimes people get impatient towards the end of the day or have a harder time paying attention, so, I mean, I'll defer to your ruling, but the cross-examination could take awhile.

JUDGE MURPHY: Okay. I think Mr. McCann was going first anyway, right?

MR. ZIMMERMAN: Okay.

JUDGE MURPHY: All right. Well, we'll see what Mr. McCann has to do. Thanks. All right. Go ahead, Mr. McCann.

MR. MCCANN: Okay. Thanks, Judge.

CROSS EXAMINATION

BY MR. MCCANN:

Q. Good afternoon, Mr. Bishop. I'm not sure where you are, but I think you're here, correct?

A. I'm here.

Q. Okay. Great. So I know it has been stated a couple of times already, but 60 homes are proposed on property with a density that allows no more than 60 homes, correct?

A. There are 61 homes that are permitted, 61 are proposed, one of them is existing.

Q. All right. Yeah, the 60, or lot number 1 rather is the existing house, correct?

A. Correct.

Q. Okay. And you said I think during the discussion about the T3 transect that you consider this development or this area that is part of that transcript to be low density, correct?

A. No, I stated that I thought that we met the intent of the T3 suburban zone.

Q. Okay. Well, you didn't say it was low density?

A. It's located in a lower, the lowest designed residential zones.

Q. Zones, D1 and D2, correct?

A. Correct.

Q. Let me just show you exhibit, Developer's exhibit 1B, which is the green line plan. I'll pull it out so you can see it. I wanted to ask you about the zoning line, which if I'm correct runs sort of straight through the middle of the houses, correct? That's the zoning line right there. Can you see my cursor?

A. Yes, that is the zoning line, yes.

Q. And I'll use left from right as Mr. Rosenblatt did, it's sometimes easier. But the left from a plan view, I counted up those houses, there's 15 houses, and that's in the DR1 zone, correct?

A. Correct.

Q. So sort of the right-hand plan view of the development, there are 45, in other words, three quarters of the homes are in DR2, correct?

A. Correct.

Q. And are you familiar with the, obviously you are. Are you familiar with what the density is, permitted density in the DR1 as opposed to

the DR2 zone?

A. Yes.

Q. DR1 is one unit per acre, correct?

A. Correct.

Q. And DR2 is two units per acre, correct?

A. Correct.

Q. So literally two times the amount of density is permitted in the DR2 zone than is permitted in the DR1 zone, correct?

A. Correct.

Q. Okay. And while we're sort of looking at the plan, you talked about the mailboxes, community mailboxes that will be installed, is that right?

A. Yes.

Q. In the open space areas, correct?

A. Correct.

Q. Isn't that something you typically see in a townhome community as opposed to single family home community?

A. No. Several years ago the U.S. postal service stopped allowing individual mailboxes for

single family developments, single family detached developments.

Q. For new development?

A. Correct.

Q. I did not know that. Okay. And in terms of lot sizes, again this is Developer's exhibit 1B, I took the liberty of coloring up my copy a little bit. On the right-hand side of the plan, there's a lot area chart, is there not?

A. Yes.

Q. Just let me zoom in on that a little bit. I'm getting there, bear with me. Can you see that?

A. Yes, I see that.

Q. Okay. It's obviously lot areas. So what I did with my yellow and red pen here is I looked at the smallest lot amongst the new 60 lots, and then the largest lot amongst those new 60 lots, and what I found was in red here, lot number 9 is .172 acres. Do you see that?

A. I see that.

Q. So less than a fifth of an acre. And then in terms of square footage, 7,507 square feet, correct?

A. Correct.

Q. Okay. And then what I, I mean, obviously I'll give you time to look through this chart, but that's what I'll represent to you, that that's the smallest lot that I saw on my review, and then the largest lot I saw, other than of course lot one, which is the existing house, the largest lot is .495 acres, less than a half of an acre, or 21,571 square feet. Does that sound about right to you?

A. That sounds right.

Q. Okay. Because that struck me when you were discussing your that is Developer's exhibit 4, this document here, this is your, this is the document that you submitted to the planning office, I think you've indicated, and you spoke about this, correct?

A. Correct.

Q. And this reflects, hopefully it's big enough for you see, this reflects various, the

communities around the subject property including Greenspring Station, the SHA properties, and the square footage of the lots on those, in those areas, correct?

A. Correct.

Q. And I think you said this was something that, again, you submitted to the planning office, and the planning office apparently had no questions about it, or signed off on it? Did they respond in any specific way to this?

A. It was a supplement to our point by point response to their concept plan comments.

Q. Okay. But did you, did they respond to this at all?

A. I don’t recall.

Q. Okay. What’s that?

A. I don’t recall any response from the department of planning.

Q. Okay. No questions about it or anything like that?

A. I don’t remember any.

Q. Okay. Because when I was looking at this a little more closely than I had in the past, I noticed that you have purple areas, which are the subject property, and then these two other communities to the right, and lower right. You've categorized those purple areas as between 10,000 and 30,000 square feet, a rather broad range, is it not?

A. It is.

Q. And then you averaged, and when I look, go back and look at the green line plan, I looked at the number of lots that were under that range, again, the range being 10,000 to 30,000, and what I noticed was, and this is my sort of yellow markings. What I noticed is of the 60 new lots, what did I find? 24 of the 60 are less than 10,000 square feet. That is less than the very range that you created in exhibit 4. Do you see that?

A. I see that.

Q. Okay. In fact, the range again in exhibit 4, Developer's exhibit 4 was 10 to 30,000, would you agree with me that the vast majority of

these lots, even those beyond the ones I've circled in yellow are nowhere near 30,000 square feet? Would you agree with that?

A. I would say that there is a mix and a range of lot sizes, and the intent of that exhibit was to show the range of lot sizes, and I'd still argue that all of the lots in our development are average in that range of 10 to 30,000 square feet if you add them all up and divide by 61.

Q. Yeah, but that's a range of lot sizes in the community at large. The range of lot sizes of this particular proposed development in comparison to the range of lot sizes in the adjoining developments, I take it that's something that you didn't do?

A. I would disagree. If you look at all the other areas, I mean, the townhouse areas have a wide range of lot sizes as well. They have larger ones on the end, and smaller ones on the inside, and they've got outliers that are larger, and outliers that are smaller, so I would think this is very similar.

Q. Well, that wasn't my question. My question was did you undertake the task of comparing the range of lot sizes within this proposed development and compare them, that range, to the range of lot sizes in other developments? Did you do that?

A. Yeah, I think that's been done with the exhibit and how we calculated the numbers.

Q. What exhibit? 4?

A. We just looked at the plan that you were just showing me.

Q. This exhibit number 4 doesn't tell us anything about what the range is in the proposed subdivision, does it?

A. No.

Q. All right. I'll move on. Back to the plan, a couple of other things on the plan itself, we'll move on. I noticed that, I'll blow it out and then come close again. Developer's exhibit 1B, at the bottom of the plan, there are typical layouts. Do you see that?

A. Yes.

Q. You're familiar with that obviously. I'll blow it up a little bit. So you have typical 54-foot wide, typical 50-foot wide, and typical 40-foot-wide layouts amongst the proposed new 60 homes, right?

A. Yes.

Q. Okay. And then if we look a little closer at not the width of the lot, but the setbacks, and I'll use my highlighter if it works, setbacks for each layout, beginning with the front yard, is 25 feet, right?

A. That's correct.

Q. Okay. And that is the county's minimum, minimum front yard setback, correct?

A. In this zone, correct.

Q. Okay. And then likewise, the minimum required setback under the county zoning regulations for the side yard is 30 feet, and in each of these layouts, the setback provided for is 30 feet, correct?

A. That's correct.

Q. And then for the rear yard, likewise the minimum county requirement for the rear yard

setback under the zoning regulations is 30 feet, and in each of these layouts you have the development plan proposes 30-foot rear yards, correct?

A. That is correct, but these are typical layouts, they are not indicative of all the layouts. This is something that the zoning office makes us do so they can check permits when they come in to make sure that all of our proposed lots meet the minimums. These are not indicative of all the lots out there.

Q. Okay. How many lots is it, are these layouts indicative of?

A. They are minimums basically. To make sure that we meet these requirements.

Q. That’s not my question.

A. [indiscernible] answer.

Q. Yeah, my question was how many, if these are supposed to be representative or indicative as you said, and was required by the planning office, how many, of the 60 new lots, how many of those lots are these three layouts indicative or representative of?

A. I've not done that analysis. There are several that are much larger setbacks than this.

Q. Okay. Well, we can, on a scale plan, we can do all of that if we wanted to spend the time, could we not?

A. We could.

Q. But you haven't done that?

A. Not specifically, no. I just know because I know the plan very intimately that there are plenty of lots that are, have larger rear-yard setbacks, and some that have wider front yard setbacks and some that have more than 30-foot building to building. There is a range.

Q. Okay. Well, I'll hold you to planning, and we'll talk next time perhaps. But the, another thing I wanted to know about the plan is we have a listing up here of adjacent property information, and that's typical, that's required for development plans under the Baltimore County code, is it not?

A. Yes.

Q. Okay. What I noticed was a lot of old

Boxwood Lane and Seminary Farm addresses. These are the folks that received, well, there is multiple reasons, do you agree with me, why the county requires that this be put on the plan?

A. Sure.

Q. Okay. Well, I guess my question was why amongst those adjacent property owner, that listing, why are none of these properties to the immediate, I'm going to say bottom of the plan view, none of these folks, how come none of these folks, folks that will live right next door to this development, proposed, all of these homes, you can see them all. How come none of these folks were listed on the adjacent property listing?

A. Well, the idea is that because I had enough room on the plan to list them on their individual lots, they are listed there. The ones that I couldn't list because of space constraints are listed in that chart that you just mentioned.

Q. Okay. Is that the reason?

A. Yes.

Q. Okay. Because this adjacent, again, this is a somewhat I'll call it formal requirement to identifying adjacent property information, or development plans, for example, and concept plans and community input minutes, were those sent to not only the folks that are identified at the top of the plan under that listing, but also to the folks who own homes at the bottom of this plan?

A. Correct.

Q. Okay. It was?

A. They were. They were notified as well, and they got a copy of the plan.

Q. Okay. All right. Thank you for that. I think you said, and I wrote down that 40 percent of the property will remain undeveloped. I wanted to talk about that for a minute, because, bear with me. I'm going to show you, this has already been marked and introduced as Protestant's exhibit 5. It's the concept plan, and I've got some coloring on it.

I'll just scroll down so you can see it. It's got the county stamp on it. It's entitled

concept plan. This is, again, Protestant's exhibit number 5. And what I did on this plan was, and it's somewhat rough, given scale, but I wanted to get your confirmation, and I'll zoom in once I sort of look at it.

In total, what I did was I outlined in green the extent or the outline, boundary rather, of the forest buffer. Do you see that?

A. I see that.

Q. Okay. And that green that I just outlined as we know because of the location of the stream to the bottom of the plan, so everything to the left and below that line was identified in this concept plan as forest buffer, correct?

A. Correct.

Q. Okay. And then in terms of floodplain, I outlined the floodplain in blue, it in some ways parallels the forest buffer boundary. Do you see that?

A. I see that.

Q. So everything in this case below that

line and, let me zoom in a little bit, it'll be helpful, because it is labeled floodplain. I'll use my cursor. The record won't reflect it, but all this area right here that I'm moving my cursor through on the left-hand side, plan view, that's all floodplain, correct? As we sit here today.

A. No. As it was shown on the concept plan.

Q. Okay. That's how it was shown on the concept plan. Well, let me just finish this, and then we'll get to where I think you're headed. The floodplain extends on the concept plan, on the other side, or on the right-hand side of the plan as well, does it not?

A. Yes, it does.

Q. Okay. And then in red what I've done on this exhibit 5 concept plan is I have outlined areas of wetlands on site, which are admittedly minimal in comparison to the floodplain forest buffer, correct?

A. I'm sorry? What were you showing with

the red line?

Q. The floodplain. I'm sorry, the wetland.

A. Yes. I'm not quite sure you have the green line correct with the forest buffer. It looks like you jumped from forest buffer to tree line and back, so it is --

Q. Well, I was careful about it, I did it a couple of times, messed up a couple times, but if you're talking about right here, the tree line is shown in this sort of humped line, right?

A. Right.

Q. The forest buffer was shown in the dashed line.

A. But as you get to SD26 right there, you go up there and it deviates, it comes down [indiscernible]

Q. You're right. I apologize. I'm going to correct this if I could and have you confirm that I did it right. I may not be able to. There we go. I think I know what you mean by that, thank you for

that. The forest buffer actually goes down this way, correct? Following the dotted line?

A. Correct.

Q. Okay. If you don't mind, I'll do it while everybody is watching here. I think this got erased when I erased that.

A. Right. You've got it now. Yep.

Q. Is that right?

A. That's correct.

Q. Okay. Great. So I'm going to --

MR. MCCANN: Judge, it's a bit unusual, but I'm going to mark this as a separate exhibit, and this would be exhibit 20.

JUDGE MURPHY: Okay. And does it, will you be able to print that with the --

MR. MCCANN: Yes, I will. I'll print and save it. I'll save it right now. Yes, and be able to send somebody, you and Adam and Mr. Zimmerman a copy of this exact exhibit.

JUDGE MURPHY: Okay. So that's exhibit 20. Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection to admissibility.

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

JUDGE MURPHY: Thank you. Okay. That's 20.

(Protestant Exhibit No. 20 was marked for identification and entered into evidence.)

MR. MCCANN: Okay.

BY MR. MCCANN:

Q. And at least as shown on this concept plan, Mr. Bishop, you would agree with me that the natural resources and the protective areas associated within those shown on this plan, if you look at the area covered, I mean, it's roughly I would say best guess almost half of the entire property, right?

A. It's a piece of the property. I'm not sure what the percentage is.

Q. Okay. All right. Well, let's look at, back to the Developer's exhibit 1B, and again, I've done some coloring on this. I'm going to keep handy the concept plan. Okay.

So again, what I've done, and I'm going to have you verify that again, in rough, this is rough, and I'm not asking for anything more than confirmation than it's a rough outline.

I've outlined the floodplain in blue, forest buffer in green, and again, the wetlands in red or orange. Do you see that?

A. I see that.

Q. Okay. So on the right-hand side, if I've done it correctly in terms of the forest buffer, the green and the floodplain in blue are roughly where the floodplain and the forest buffer exists, correct?

A. It looks relatively correct, yes.

Q. Okay. Same thing with the wetland area, the smaller areas of wetland?

A. Sure.

Q. Okay. And as we move to the left-hand plan views portion of the plan, this is where I had some questions, and some of which you've answered in your direct examination, but focusing on this area right here where, you know, sort of the area that runs

along, above and below the entrance road, which is up here.

In green, again, forest buffer, this is different than as shown on concept plan, and the floodplain in blue is different than shown in the concept plan, and as I am just going back to exhibit 20, we can see obviously it's different. It's, for lack of a better term, it's a chunk, significant chunks have been taken out.

But am I correct that the reason why that is is that this development plan, as you've noted, is post construction? This plan, that is Developer's exhibit 1B, which I've colored here, is representative of what the extent of the floodplain and the extent of the forest buffer will be after this development is constructed. Is that fair?

A. Well, I think it's over simplistic. I think, let me explain this. So the development plan shows both existing and proposed conditions. They will both be there, and you'll see that where we changed the floodplain has little red X's on it.

Q. Yeah. Can I stop you there, Mr. Bishop, if you don't mind? Can I stop you there real quick?

A. Sure.

Q. So yeah, I want to make sure that we understand, this is the area you're talking about here. I won't outline it in blue, because you have it X'd out. There's an X.

A. Correct.

Q. That would not, as you've described in your direct examination, that will no longer be the extent of the floodplain, because you've described, you are reconstructing the floodplain, right? Is that what you're referring to when you said, when you had these X's right here?

A. Yes.

Q. Okay. Okay. So I interrupted, and the same thing down here, by the way. On the bottom of the plan, with respect to what I believe was, this used to be the forest buffer line, and that is X'd out now, is it not?

A. Correct, yes.

Q. And it is sort of somewhat lower to down here. Okay. So go ahead, I interrupted you.

A. So the difference between the concept plan, flood plan and forest buffer and the development is because as you know, this is an integrative process. The concept plan is conceptual data, and the floodplain at that point in time was very conceptual, and as we went through the process, we prepared a floodplain study to meet Baltimore County requirements, and the result of that was the floodplain that you see on the development plan now.

It's not because it is post construction floodplain versus existing conditions floodplain.

Q. Okay. And when you say using the floodplain as an example. When you say it's shown on the, on this development plan, you're including areas that I did not color in blue that have been X'd out, like right here?

A. Correct.

Q. Maybe I should have highlighted that in

blue. And is that yours, is your answer the same with respect to the forest buffer?

A. Yes, because they related to each other.

Q. Okay. So, and that includes, and that includes your answer that you just indicated that I think to put it succinctly, what you're telling us is that based on the floodplain study, it was not as expansive as you had thought?

A. When we ran through the more formal analysis that the county requires, we ended up with what we show here.

Q. Okay. What about the forest buffer? Was your answer the same with respect to that, the forest buffer is considerably different?

A. The forest buffer will be different as well, but the forest buffer shown in this plan matches the plans that were approved by Baltimore County environmental impact review.

Q. Okay. So that, so I think I understand, with respect to the forest buffer boundary or extent,

that is post construction and reflects the granting of the alternatives analysis and forest buffer variance that we mentioned a bit in this case, correct?

A. That I believe would be correct, yes.

Q. Okay. And I think as Mr. Rosenblatt pointed at the beginning of yesterday, the Board of Appeals recently had a deliberation and approved both of those requests, that is the forest buffer variance and the alternative analysis, correct?

A. Yes, correct.

Q. Okay. But as we know, things can get appealed, right? So we're sitting here today. If my clients decide to appeal that decision, we won't know for awhile whether or not this development plan truly reflects the state of affairs. You're assuming in 1B that that forest buffer variance and alternative analysis will be upheld. Is that a fair statement?

A. What is shown in this plan is consistent with what we submitted to Baltimore County and what environmental impact review approved and thought was appropriate.

Q. What the agency approved?

A. What the agency approved. I can't speak for the appeals process.

Q. Got it. No, I understand. And then I have other colors on here. I have a lighter green, a lime green. That is the, correct me if I'm wrong, that is the 45, I'm sorry, 35-foot setback from the forest buffer, correct?

A. That is a principal structure setback from the forest buffer, which is 35 feet for residential, yes.

Q. Okay. And you're referring to a provision in the development regulations, the environmental regulations that is that requires a 35-foot setback from principal structures, correct?

A. Correct.

Q. Now, I mean, we can zoom in and I understand that the line is very rough here. Is that 35-foot setback met with respect to lot 2 right here?

A. Yes, it is.

Q. Pretty close though?

A. Close, but it meets the requirement.

Q. Okay.

A. In Baltimore County, BIR agreed and approved it.

Q. Okay. And then I have, that I'm really not going to get into, I have outlined the stormwater management facilities that you've already discussed three different locations, do you see that?

A. Yes.

Q. In purplish. And then I have outlined again very roughly in yellow the specimen trees on site, correct?

A. Correct, yes.

Q. Okay. I've got that one up there. Okay. So you talked about what is going to happen to this floodplain, and I want, it may be better to look at the actual plan rather than this one. So this is 1B again.

I want to sort of have you identify for us, getting back to the floodplain, before we get into this. You said, and I think you said it carefully a

couple times that you've submitted a floodplain study that meets the requirements of Baltimore County floodplains, right?

A. Correct.

Q. Has Baltimore County as we sit here today, have the approved, formally approved the floodplain study that you submitted?

A. So they, I'll be real technical. The county doesn't approve floodplain studies. They accept them for filing, and we have submitted a couple times to make sure that we are comfortable with our floodplain line, but I will point out that floodplain studies are not required to be accepted for filing during phase 1 process. The county code allows them to be approved prior to permit. So they do not need to be approved at this --

Q. I wasn't suggesting that they were. I'm not going to, I appreciate your explanation, but my question was simply as we sit here today, has the floodplain study been approved?

A. The floodplain study has not been

accepted for filing by Baltimore County yet.

Q. It hasn't even been accepted for filing?

A. You are misunderstanding. They don't approve a floodplain study. Their approval is equal to acceptance for filing.

Q. Okay. I thought you, I misunderstood you. I thought you just indicated that approval of a floodplain approval as opposed to accepted for filing does not occur until phase 2, is that correct?

A. The county allows us to submit a floodplain study to be accepted for filing, which is equivalent to approval during the phase 2 process. It's not required prior to development plan approval.

Q. You said it a little different before, but maybe I misheard.

A. It's a nuance between the term approved and accepted for filing. They are roughly the same thing.

Q. Okay. So if there is a distinction, what you're saying is that there is no actual approval

by Baltimore County of a floodplain study. It's either accepted for filing, or it's not, correct?

A. Yes.

Q. And what's involved as we sit here, it has not been accepted for filing, right?

A. Correct.

Q. And what, I'm not sure I agree with you, but what is your understanding of what it means from the county's perspective when something is accepted for filing? What kind of review does that involve? And what kind of approval --

A. If you really want to get into it, you have to talk with development plans review in Baltimore County and their legal team about why they call it accept for filing versus approval. I think it's a liability thing, but they're one in the same.

So we have to submit a floodplain study, it has to meet all of the arduous checklist items listed in the Department of Public Works design manual. Once we meet all those requirements and check all those boxes off, then the county will accept it for filing,

and they'll put it in the records and that will be a public document, and it will be the documented floodplain.

Q. Okay. So you believe that you've submitted a floodplain study that meets all the requirements that you just mentioned, and many others, but the county hasn't yet agreed with that position and actually formally accepted it for filing.

A. We did enough to be confident that the floodplain study is accurately shown on this plan.

Q. Tha's not what I, I'm just asking you whether the county, I think you've already said the county has not accepted it for filing.

A. I said that, yes.

Q. Okay. But in terms of going where I was headed, in terms of all that, I'd like to identify the development that's actually going to occur in the floodplain, or in the area of the floodplain. I guess to be fair, obviously we have an access road, right?

A. Correct.

Q. We have the stormwater management

facilities that are depicted above the access road, correct?

A. Correct.

Q. We have some, in an area of open space, designated open space, we have a pavilion, an asphalt path, gardens, benches, two benches, two bike racks and two tables, correct?

A. Correct.

Q. Do we have, obviously we have sewer, water and sewer extensions, which are shown here to be under the access road, correct?

A. Correct.

Q. And we also have a new proposed sewer connection in this area to the existing house, correct? Through the floodplain?

A. That's correct.

Q. All right. And also proposed water house connection to their existing house, correct?

A. No, they kept the water house connection out of the floodplain, I believe.

Q. Okay. All right. What about any of

the road widening? Would that occur within the floodplain?

A. I believe it's, yes.

Q. Okay. And as I, did I miss anything? Or did I capture most of it? That is the question was if development will occur within the floodplain.

A. I think you --

MR. ROSENBLATT: Objection, objection. That was not the question at the outset.

MR. MCCANN: It was.

MR. ROSENBLATT: It was not. He said it was in the area of the floodplain, and --

MR. MCCANN: I'm sorry.

MR. ROSENBLATT: -- there were all sorts of things about the [indiscernible]

MR. MCCANN: Correct. I'm sorry. You're correct. I'll rephrase that.

JUDGE MURPHY: If you can, sustain the objection. Just rephrase, please, Mr. McCann.

MR. MCCANN: Sure.

BY MR. MCCANN:

Q. Yeah, the question was just a follow up to say did I capture everything that will be constructed within the area of the floodplain?

A. I think you got most of it. I'm not sure that you got all of it.

Q. Okay. Well, the plan speaks for itself, right?

A. Everything shown on the plan, yes, is there.

Q. Okay. All right. And you described I think a little bit about how the road will be built. I mean, it'll be, there will be a ton of grading going on in this area of the floodplain, correct?

MR. ROSENBLATT: Objection.

MR. MCCANN: A lot of grading.

JUDGE MURPHY: What's the objection, Mr. Rosenblatt?

MR. ROSENBLATT: A ton of grading.

JUDGE MURPHY: Okay. I mean --

MR. MCCANN: I'll use a lot of grading.

JUDGE MURPHY: Hold on. All right. We'll

sustain the objection, just because Mr. McCann is going to rephrase it. You're going to use the word a lot instead of --

MR. MCCANN: I will use --

BY MR. MCCANN:

Q. Will there be a substantial amount of grading in the area of the floodplain, Mr. Bishop?

A. I will say that there will be grading in the area of the floodplain. I'm not going to quantify how much.

Q. Is that because you don't know? Or you disagree that it's substantial?

A. I mean, substantial is a very loose term. How are we going to justify that?

Q. Okay. All right. Fair enough. But there will also be a lot of fill, a substantial amount of fill? Would you agree with that?

A. I'll use the same answer. It'll be some fill in the area. I'm not going to quantify it either. I mean, are we talking, in relation to the entire project, to a much larger project, smaller

project. I mean, I think that the qualifiers --

Q. Okay. Well, you said that the road will be built on fill. You said that, I wrote it down when you said it, correct?

A. I'm not arguing that. Yes, there will be fill in the area.

Q. Okay. Is there a reason why, you know, in a lot of cases we see existing condition maps. How come there is not one associated with this development plan?

A. It's required as part of the concept plan. A lot of the times when we get the development plan, we consolidate it onto one sheet. It makes it easier for everybody to review it.

Q. It makes it easier?

A. I know, I know. But if you look at the reviewers and talk to them, they prefer to see everything on one sheet and not have to flip back and forth. Another reason why we use larger sheets and not match lines.

Q. Okay. All right. But on that front,

you know, as an example, you know, we have forest buffer areas, we have floodplain areas, we have forest conservation areas, we have open space areas. There is not a single key in the legend for any of those areas. If we go into the key, there's the key. Why is that not the case?

We are left to deal with arrows, which I think when the judge takes the time to look at the plan closely, she may already have --

A. You are questioning our drafting styles, and that's fine. Everything is properly labeled on the plan.

Q. Well, I'm questioning the accuracy of the labeling is what I'm questioning, if you want to know, but you would agree with me that there is no legend describing, well, it speaks for itself. I'll move on. A. Well, there's a floodplain shown there, and there's a forest buffer line type --

Q. Well, it says floodplain, and there's an arrow, there's some arrows.

A. No, no. In the legend you just pointed

to, there was a label that said forest buffer, and there was a label that said floodplain with the line type next to it. So, at the bottom. Floodplains, the long dash and two double dots and forest buffer.

Q. What I meant to say, and I do recall seeing that. I meant to say sort of the area as opposed to the boundary is what I meant to say. I mean, there are all sorts of, and I don't mean to belabor this point.

There's crosshatching, there's circles, there's octagons, and then we are left to sort of figure out, but it's okay, I'll move on.

A. Can you scroll to the right of the plan for me, please? Where the general notes are. I believe there's another key for hatches. I may be wrong. Maybe zoom out. I may be wrong, I thought there was.

Q. I don't see it, but --

A. They're all there. You're right, the plans are complicated. The checklist and everything that we have to do requires a lot of information on

these planning documents, so it can get cluttered, but everything is labeled.

Q. All right. We mentioned, I think we mentioned the road widening that's proposed on Joppa Road. That's I guess to be, on sort of the right-hand side of the road, this will be, the road will be wide in that area?

A. Correct.

Q. Okay. To what extent, I mean, are there measurements? Do we know how much, to what extent --

A. It will be widened basically one lane width to provide for a deceleration and acceleration lane. Q. All right. So the construction will take place in the floodplain along Joppa Road. It will be within the area of the floodplain, correct?

A. Correct.

Q. How long do you, do you have an estimate of how long it will take for the widening of that significant length of Joppa Road will take?

A. I don't.

Q. Bear with me one second. Okay. I'm getting there. I wanted to show you, I don't think this has been introduced as an exhibit yet. This is from your firm, June 1, 2021, a letter from you to Ms. Walker with DPW, with a plan attached. Do you recognize this?

A. I do, yes.

Q. And this was submitted to Ms. Walker as the head of DPW for a finding that, I'll put it as a finding of no waiver, that is you were not, you the developer, on behalf of the developer, were not required to obtain a waiver in order to develop in a floodplain. Is that fair?

A. Can I read this for a second?

Q. Yeah, absolutely. I'll blow it up some more.

A. I can read it. Okay. Can you scroll down a little bit, please?

Q. Sure.

A. And the exhibit?

Q. Yeah.

A. Yes. We did submit this, Ms. Walker.

Q. And my more specific question, just because there was a delay there in your answer was this was a request or a confirmation as it says here that no waiver is required under 324107, right?

A. Correct.

Q. Okay. And the basis of that request, that is your belief that no waiver is required, is the Section 32414(c), right? I can show it to you if you want.

A. Yeah, I know the section. I'd have to see it just to make sure that --

Q. Real quick, I don't want to take up too much time, but let me show it to you so you can confirm whether it's correct or not. All right. So this is 324107, Baltimore County code. This is the first section that you cite in your letter entitled waivers, right?

A. Okay.

MR. ZIMMERMAN: Excuse me. Do these have exhibit numbers?

MR. MCCANN: They do not. They do not.

BY MR. MCCANN:

Q. Then 324-414(c) is the section you cite in your letter. I just want to make sure that this is --

A. That's correct.

Q. Let me just make sure I ask the right question. This section that’s highlighted here is 32-4-414(c) is the section upon which you rely upon in your request that a waiver is not required for the development of this floodplain, correct?

A. I believe, I’d have to look at the letter, but yes, that is the section I understand is the one we referred to.

Q. Okay. Let me go back to the letter. The letter again, 32-4-414(c).

A. Yes.

Q. Okay. All right.

MR. MCCANN: Judge, before I forget, I would like to move in, 20 was the colored concept plan, the other thing I showed Mr. Bishop I think was the

colored plan, Developer's Exhibit 1B. I'd like to move that in, 21. And then this June 1st letter from Mr. Bishop to Ms. Walker would be 22. I think that's all.

JUDGE MURPHY: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: Is 22 already in, Mr. McCann? That's my only question. I don't object to it, I just, it might be in twice. I think --

MR. MCCANN: No, that's the approval letter from Ms. Walker back to Mr. Bishop. This is the request letter.

MR. ROSENBLATT: No objection.

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: No objection.

JUDGE MURPHY: Okay. Thank you. They're admitted.

(Protestant Exhibit No. 21 was marked for identification and entered into evidence.)

(Protestant Exhibit No. 22 was marked for identification and entered into evidence.)

MR. MCCANN: Okay. Great.

BY MR. MCCANN:

Q. And then I wanted to ask you about this. This would be I think the last exhibit, this is 23. This is the June 28th cover sheet and letter. I'll scroll down to the bottom, from you, Mr. Bishop, four pages in total, to Ms. Walker. I'll blow it up and I'll ask you if you recognize it.

A. Yeah, I'm familiar with it.

Q. Okay. As I read this, this is a request that, I think it says as much in the last sentence of the first paragraph, you are asking Ms. Walker of DPW that the existing water over topping situation on West Joppa Road be permitted to remain after the project is approved, correct?

A. That's correct.

Q. Just explain that issue real quick. What is over topping, and what is going on on West Joppa Road?

A. It's a complicated scenario, but the existing floodplain study that the county requires

through the DPW design manual, the result of that study is that the existing condition before any development occurs out here, there would be potentially water and a flood event that would over top, or run over top of West Joppa Road.

Q. Okay. And that, this is permission for that situation in a 100-year storm event to remain. In other words, you're not going to correct that as part of this project?

A. That was the request at the time, yes, to not correct the existing condition problem.

Q. Okay.

A. I know you don't want to hear this, but we've also in our analysis and everything determined that we have, we were not increasing the over topping during our construction. So we were not making the situation any worse than it already is.

Q. Okay. So this letter was written, and then subsequent to that, the floodplain study that you performed indicated that the situation would still remain, which you indicate here, but it would not be

increased to any extent. That's what your floodplain study would show?

A. Yes.

Q. Okay. All right. Got it. So I noticed on the second, third page of the exhibit, second page of the letter it says potential solutions to eliminate that over topping and to meet the 3 foot [indiscernible] requirement, there's a bunch of things here that seem pretty significant. Is the county requiring you to do any of these?

A. No.

Q. Okay. And I did not see, but I assume the county approved this request in your letter of June 28th?

A. We never received any formal response to this letter.

Q. Okay. Okay. All right.

MR. MCCANN: Your Honor, I would mark this as 23.

JUDGE MURPHY: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

JUDGE MURPHY: Mr. Zimmerman? Mr. Zimmerman, any objection?

MR. ZIMMERMAN: No objection.

JUDGE MURPHY: Thank you.

(Protestant Exhibit No. 23 was marked for identification and entered into evidence.)

MR. ZIMMERMAN: I got the muting wrong.

BY MR. MCCANN:

Q. Back to Exhibit 1B, Developer's Exhibit 1B, Mr. Bishop. On the left-hand side of the plan, it indicates stormwater management fee in lieu for 20,730 square feet, Joppa Road improvements which cannot be treated on site. Describe for me what that means and what the issue is there if you would.

A. So the situation is that the stormwater management treatment for quantity, which is what's related to 100-year floodplain issues cannot be located within the 100-year floodplain. The elevation of Joppa Road is about equal with the 100-year floodplain. Therefore, we cannot provide stormwater

management for the widening and improvements on West Joppa Road.

Q. Okay.

A. So this is a very typical scenario. Many projects where at the lowest point of the property, say for a driveway or road widening or something like that, that you cannot treat the last several thousand square feet, and therefore the county has a mechanism in place to pay a fee in lieu instead.

Q. Is it typical because it’s a fee being paid? Is that what you mean by that?

A. No, it’s typical to not be able to treat all of the water on your project.

Q. So was that fee in lieu request granted?

A. Not formally requested because that is a phase 2 final stormwater management thing, and all we need for development plan approval is concepts [indiscernible]

Q. Right. But sitting here today, again, we do not have approval for the fee in lieu that’s

indicated on the plan?

A. Correct, as a phase 2, Baltimore County phase 2 item.

Q. If it's phase 2, why is it on the plan? Strike that. Real quick on the sewer segments that you spoke about in response to Mr. Rosenblatt's questions, since the, at least the two segments that you are directly responsible for are on State Highway property, have you obtained their approval? I know you said the construction plans had been submitted and that sort of thing, but is there, has there been approval from State Highway in other words, in the form of an easement to do that?

A. Yes, there is an easement granted for the installation and construction of that storm drain, or sewer line.

Q. To Atapco? To you or your client? Or you're just saying the utility easement in that area?

A. No, it's not specifically to our client. It is an easement in place specifically for the installation of the sewer improvements.

Q. Right. Granted to Baltimore County and Baltimore County would allow you to do the work?

A. I would have to look at the document, but that could be the way it happens, yes.

Q. Okay. Beyond the two segments that your, the Developer is directly responsible for, and the six segments that Hopkins was responsible for, have you, or has anyone else on behalf of the Developer determined whether there is sufficient sewer capacity farther downstream of those segments?

A. I did not analyze that, it's not in my area of expertise.

Q. Okay. Has anyone else on behalf of the developer, other than you or anyone in your firm, determined whether there is sufficient sewer capacity downstream of those eight segments?

A. No, we're relying on the expertise of Baltimore County for that.

Q. Did Baltimore County determine whether or not there was any, there was sufficient sewer capacity downstream of the eight segments? Do you

know?

A. The only discussion I had was the specific eight sections that were included in their development plan comments.

Q. Okay. All right. So I think this is an obvious question, but I take it although you prepared these typical lot layouts, you don't have any information to provide regarding the demographics of the types of folks that might want to purchase these homes, or will purchase these homes?

A. No, that's not my area of expertise.

Q. Okay. How many of them are three car garages? Do we know that?

A. I do have some notes here, I could tell you. Bear with me a second.

Q. Sure.

A. 15.

Q. 15. Is it shown on the plan?

A. They are shown on the plan graphically, yes.

Q. Three car garages?

A. Yeah. I don't have a table quantifying them, but the plan dictates when they are 3 or 2-car garages.

Q. Okay. And lastly, you spoke about the master plan on direct examination, and just generally speaking, what's your understanding in Baltimore County is the master plan, is Baltimore County's master plan, is it mandatory? Or is it merely advisory in nature?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Are you asking him about H&S case? I'm not sure he knows about the H&S case. I'm not, you know, he's not a lawyer.

MR. MCCANN: That's ironic. We just allowed this gentleman to speak about all sorts of standards, despite the fact that he's not a lawyer.

MR. ZIMMERMAN: Can I say something? He testified that it was advisory basically when asked by Mr. Rosenblatt on the very first text that he looked at, he said it was advisory, it didn't mean much.

JUDGE MURPHY: Mr. McCann, were you going to

ask him what the H&S case says? Or were you --

MR. MCCANN: No, I'm just asking about his understanding, just as any experts ask about their understanding of their applicable, I mean, I'm not asking --

JUDGE MURPHY: Don't get into the case law then, all right? I'll overrule the objection.

MR. MCCANN: No, that's my last question of this gentleman.

JUDGE MURPHY: No, I understand. I just don't want you to get into the case law with him obviously, so if you can, sir, go ahead.

MR. MCCANN: You don't need to be a lawyer to understand the law.

JUDGE MURPHY: I mean, I just don't want, it's not fair to ask him, you know, if you asked about the case, what does the case say, and I don't expect him to be able to answer that. I mean, maybe he read it, but Mr. Bishop, go ahead. It's overruled, go ahead.

BY MR. MCCANN:

Q. I'll repeat the question. What is your understanding, Mr. Bishop, of whether or not generally speaking the Baltimore County master plan is mandatory or advisory in nature?

A. Well, my opinion and my knowledge is only what's written on the cover page of the master plan, which says that it is basically I'm paraphrasing, advisory in nature. It's written right on the first page of the master plan. If there's legal precedent beyond that, I'm not a lawyer, so I'd have to defer to somebody else.

Q. So I take it then you base your opinions in this case regarding the master plan on that assumption or that opinion?

A. No, I wouldn't say that that predicated any of my opinions on the master plan.

Q. Okay. All right.

MR. MCCANN: No further questions. Thank you, Mr. Bishop.

JUDGE MURPHY: And did I, Mr. McCann, I did move in 23, right?

MR. MCCANN: You may not have, but I would move it in.

JUDGE MURPHY: I don’t think there was any objection, right, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

JUDGE MURPHY: Yeah, yeah. Mr. Zimmerman didn’t either, right? Mr. Zimmerman?

MR. ZIMMERMAN: I didn’t object, no.

JUDGE MURPHY: That’s what I thought. We did. Okay. I just wanted to make sure that that’s in evidence. Okay. So it’s 5:00 folks. Mr. Zimmerman was saying he has a long cross-examination. How are you guys, what does it look like here? Does anyone have any, does anyone want to continue today? Or do you want to start tomorrow? Not tomorrow, it’s not tomorrow. Actually it’s the next time.

MR. ZIMMERMAN: I’ll defer to you, Judge, but it may take awhile.

JUDGE MURPHY: Right.

MR. ZIMMERMAN: I’m willing to go, because, you know, if everyone else wants to, I’ll do whatever

you'd like, but it might take awhile.

MR. ROSENBLATT: I'm so sorry, I didn't mean to interrupt. I would like to do it today if we can.

JUDGE MURPHY: Mr. Zimmerman, how long will yours take?

MR. ZIMMERMAN: I'm very poor at estimating, and a lot depends on the answers, so I really can't tell. I really can't tell.

JUDGE MURPHY: And Mr. Wyatt, did you also have questions?

MR. WYATT: I don't think I will have questions at this time, but again, it would depend on what Mr. Zimmerman asks of the witness, so I don't want to commit one way or another, but right now standing here if you asked me, I would say I have no questions.

JUDGE MURPHY: So in other words, I couldn't call you, okay.

MR. WYATT: Right. I have nothing to ask right now.

JUDGE MURPHY: I was going to ask you if you

had any questions to ask. All right. Mr. McCann, are you okay?

MR. MCCANN: Yeah, I'm okay with going forward.

JUDGE MURPHY: All right. Mr. Rosenblatt, are you okay?

MR. ROSENBLATT: Yes, thank you.

JUDGE MURPHY: All right. All right. Mr. Zimmerman, go ahead.

MR. BISHOP: Do I get a say?

MR. ROSENBLATT: Could we take a --

JUDGE MURPHY: Oh, hold on, hold on. I didn't ask the witness who has to answer the questions. Mr. Bishop, what? I'm sorry.

MR. BISHOP: I'm good as long as I can be done by 6:30. I have a hard stop at 6:30. Do you think we can achieve that?

JUDGE MURPHY: Yeah. I was actually hoping 5:30.

MR. BISHOP: Even better.

MR. ZIMMERMAN: I don't know about 5:30, but

could we take just a 5-minute break?

JUDGE MURPHY: Mr. Zimmerman, are you better coming back another day?

MR. ZIMMERMAN: Look, I can get through it, but --

JUDGE MURPHY: 5:30? How about 5:30, Mr. Zimmerman?

MR. ZIMMERMAN: I don’t know if it will end by 5:30, and that’s the problem. People get impatient at the end of the day.

JUDGE MURPHY: That’s right, so I want you to be able to ask your questions, and I don’t want you to [indiscernible]

MR. ZIMMERMAN: I do the best I can, but, you know --

JUDGE MURPHY: I know you do.

MR. ZIMMERMAN: But nobody else has been given a, you know, a hard limit. So --

JUDGE MURPHY: That’s true.

MR. ZIMMERMAN: And we went through hours of direct testimony.

JUDGE MURPHY: You're right. That is, we did, you're right, we did go through hours of direct testimony. I would, then I would suggest that we just, because Mr. Zimmerman has a ways to go, and I would like to end by 5:30, that we come back the next time and do the cross, and Mr. Bishop also has to leave at some point, 6:30, so let's do it that way.

Again, I wish we had started at 9:00 a.m. If we had started at 9:00 a.m., then we wouldn't have this problem.

MR. ZIMMERMAN: Thank you. I think that's better actually, I really do. We can pick it up, we can pick it up.

JUDGE MURPHY: Mr. Zimmerman does always get the short end of the stick, or maybe it's just years of hearing cases where he always seems to be at the end of the day, and sometimes the questions go on. I'm sure, Mr. Rosenblatt, that's not great for you, but your client is going to come back, I mean, excuse me, your witness is coming back anyway.

MR. ROSENBLATT: The only problem I have,

and I'm not saying let's not do this, but just for the record, he's my main person on this project, and I guess I can't talk to him for a month about the project, because he's on the witness stand.

JUDGE MURPHY: Yeah, I didn't set the dates in. I just found out yesterday.

MR. ROSENBLATT: No, I understand, and it is what it is, but that's, I just have to state that for the record. It's going to make it very hard to be ready for anything else if I can't talk to him for a month.

MR. ZIMMERMAN: May I say, you're not supposed to talk to him in between direct and cross.

MR. ROSENBLATT: That's exactly my point, Mr. Zimmerman.

MR. ZIMMERMAN: Yeah, but also a lot of these documents honestly, I've never even seen before. They were, as far as I can tell, and Mr. Rosenblatt will correct me if I'm wrong, a number of these exhibits were never put into the file. He'll correct me if I'm wrong. We see them for the first time

today.

MR. ROSENBLATT: That happens in every single case.

MR. ZIMMERMAN: Color coded stuff, the T3, you know, there were a whole bunch of exhibits. I didn't complain about it, okay? But as a matter of fact --

JUDGE MURPHY: Mr. Zimmerman, are you talking about Mr. McCann's exhibits, the color --

MR. ZIMMERMAN: No, I'm talking about Mr. Rosenblatt's exhibits. I didn't make a federal case out of it, but I would like to point out that many of these exhibits we saw for the first time today. As far as I know, they're not in the file. I don't know that the pattern book is even in the file. You can correct me.

MR. ROSENBLATT: The pattern book is in the file.

MR. ZIMMERMAN: The last time I looked, all right. But the color-coded stuff, the T3, all that stuff --

JUDGE MURPHY: I mean, that's exhibit number 4. You don't have a copy of all the --

MR. ZIMMERMAN: No, I never saw that before.

MR. ROSENBLATT: Everything was emailed to him before the hearing. [Indiscernible]

MR. ZIMMERMAN: Well, maybe today or yesterday, I don't know. Maybe today it was emailed, but, you know, we don't, I'm getting ready for the case, I'm not checking every email. But let Mr. Rosenblatt tell us exactly when he emailed that. Was it earlier today? Was it yesterday? Let him tell us.

JUDGE MURPHY: Mr. Rosenblatt, can you, do you know if all 23 exhibits were emailed to Mr. Zimmerman?

MR. ROSENBLATT: All 23 to both Mr. Zimmerman and Mr. McCann.

MR. ZIMMERMAN: When?

JUDGE MURPHY: Mr. McCann, you have them, right?

MR. ZIMMERMAN: When?

MR. MCCANN: I do.

MR. ROSENBLATT: Before the hearing started. If it was not a virtual hearing, you'd be seeing them live first time when I handed them out, so it's an advantage, if anything.

MR. ZIMMERMAN: So then it's fine for us to resume on the 27th and I'll have maybe a fair opportunity to look at some of that stuff, okay?

JUDGE MURPHY: All right. Mr. McCann, I don't have any exhibits for you.

MR. MCCANN: I sent them all to you, Your Honor.

JUDGE MURPHY: Well, we don't have any copies.

MR. MCCANN: Yes, I dropped them off.

JUDGE MURPHY: Have you?

MR. MCCANN: Yeah, I dropped, well, I dropped off all of them initially, then I dropped off the four or five or so that I introduced yesterday, I dropped those off this morning.

JUDGE MURPHY: Okay. But how about the

ones, numbers 1 through 15 or 14? Did you already --

MR. MCCANN: Those were --

JUDGE MURPHY: Were they in a binder?

MR. MCCANN: They weren't in a binder, but I dropped off the originals after the first, after the first hearing.

JUDGE MURPHY: Okay.

MR. MCCANN: I'll send them again if you want hard copies, or --

JUDGE MURPHY: No, let me just see if we can find them. For some reason, I don't know. Maybe they are with something else, but I just didn't have any exhibits at all. I was just working off the online version.

MR. MCCANN: No, I definitely did.

JUDGE MURPHY: Let me make sure. I don't want you to have to recopy stuff.

MR. MCCANN: I don't mind.

JUDGE MURPHY: Well, that can be expensive, so let me make sure we don't, we have it somewhere.

MR. MCCANN: Okay. All right.

JUDGE MURPHY: I'll look for them.

MR. MUDD: Judge Murphy?

JUDGE MURPHY: Yes, Mr. Mudd?

MR. MUDD: I've been quiet all day, but I'd just like to say one thing for the record, because there's a bunch of people here who don't participate in these hearings very often.

That actually apparently includes Mr. Zimmerman, because the insinuation by Mr. Zimmerman is that we're somehow holding back materials that he would otherwise be entitled to see, and the way that these hearings work is that some exhibits are things that are in the file in advance, and other exhibits are not, and there are things that through practice we have gotten used to the fact that we hand things off minutes, sometimes minutes before the hearing because we're not sure what we're going to introduce.

Mr. McCann does the same thing to us on rebuttal. We have no idea what his rebuttal case is going to be, so I just want that to be clear for the record that we've done nothing wrong and nothing

inconsistent with the way that the practice of this area has been for at least during the pandemic. Thank you.

MR. ZIMMERMAN: I wasn't insinuating anything. I was simply indicating it would be quite another point of why it's reasonable to delay as it actually gives us a chance to take a look at some of these documents, and by the way, we were requested by Mr. Rosenblatt with a PIA request September 2nd to provide him with just about everything which we're in the process of working that out.

So, you know, so I'm just, I'm not insinuating anyone did anything wrong at all, I'm just saying, you know, it's another good reason why it's not unreasonable to resume on the next hearing day, that's all.

JUDGE MURPHY: Okay. Understood. I didn't take it that either the developer's, the attorneys of course they always email and always deliver the document, so I didn't have any doubt that that happened at all. I'm sure that if Mr. Zimmerman

checks with Rebecca, I bet she has [indiscernible]

MR. ZIMMERMAN: No, I'm sure we got those emails, but we probably got them today or, you know, I asked Mr. Rosenblatt exactly the date and time when he sent them. You know, we're not here checking every single email from him the minute he sends it.

JUDGE MURPHY: Yeah.

MR. MUDD: I just wanted the record to be clear, and the people who are here to be aware of how these proceedings go. That's all I was trying to do.

JUDGE MURPHY: Absolutely, and sometimes when we're in the courtroom, too, you hand somebody a document and it's not been seen before and you want to --

SPEAKER: We live in the Wild West. We don't have [indiscernible] so it is what it is.

MR. ZIMMERMAN: Look, I didn't make a federal case out of it when it was happening. I was just pointing out it's not that, you know, anyway, it's, I said what I said.

JUDGE MURPHY: All right. So I think, is it

October the 27th? Does anyone have the date?

MR. ROSENBLATT: Yeah, the 27th and 28th.

JUDGE MURPHY: 27th and 28th already set in. Do you know if it's 10:00 a.m.?

MR. ROSENBLATT: I think it's 10:00. I mean, that would be great to start at 9:00 if we could, Judge.

JUDGE MURPHY: Well, again, it's probably going to be posted, so that has to change, and it has to be on the, you are reposting, right? The Developers are, so yeah, you're going to need to make, if you're going to change it to 9:00, then you have to put it there, and then it also has to be on the county website so everybody knows to come.

MR. ROSENBLATT: [indiscernible] on the property.

MR. MCCANN: We are in the process of changing or adding dates to the sign, just in an abundance of caution.

MR. ZIMMERMAN: Judge, one more --

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: Sorry.

JUDGE MURPHY: Right, but if you add, if we change it to 9:00 a.m., I'm fine with that, just let me know. But you have to make sure the sign matches, and that it's also on the county calendar that way so that people who don't have their [indiscernible] if Mr. Wyatt or whatever wanted to click in, he knows. He knows to click in. You know what I mean? Mr. Rosenblatt?

MR. ROSENBLATT: Yes. I'm just thinking, if I can get all that done, I'm going to try. If not, at least we have two full days instead of these half days.

JUDGE MURPHY: I agree with that. Right, I agree with that.

MR. ZIMMERMAN: Judge, one more thing.

JUDGE MURPHY: Okay, Mr. Zimmerman.

MR. ZIMMERMAN: On the sign posting, the north end, the sign is at the end of the dead-end road of Mays Chapel. Wouldn't it be reasonable to post a sign at Seminary and Mays Chapel? Otherwise, people

are not going to see it. I know a lot of people know about this case, but maybe not everybody. So right now that sign has been at the dead end.

MR. ROSENBLATT: He has absolutely no authority to ask us to put a sign anywhere. We have three signs on Joppa and two signs on the back of the property meeting the county code as has been certified by the sign poster. This is so far beyond his authority, it is unbelievable.

MR. ZIMMERMAN: It says [indiscernible]

JUDGE MURPHY: It is true. I mean, there are regulations for the sign posting and where they go. It has to be conspicuous, and it has to be near the property, so, you know, I'm sure you would love it to be that way, but, you know, and there's a newspaper article or posting, and then there's also on the county website. You know, everything.

MR. ZIMMERMAN: Well, it just doesn't make any sense, it's a dead-end road, but, you know, it's not conspicuous in my opinion, but I'll leave it at that.

JUDGE MURPHY: Okay. All right. All right. So I think we're finished, right, for today? Everyone? There's nothing else.

MR. ZIMMERMAN: Thank you so much.

JUDGE MURPHY: All right. Thank you. I'm going to turn off the record.

(Whereupon the hearing was adjourned.)

TRANSCRIBER'S CERTIFICATE

I, Dana Dezarn, hereby certify that I transcribed from audio file the proceedings to the best of my ability in the foregoing-entitled matter; and I further certify that the foregoing is a full, true and correct transcript of the audio files produced.

IN WITNESS THEREOF, I have subscribed my name on July 5, 2023.

Dana Dezarn

P R O C E E D I N G S

JUDGE MURPHY: Good afternoon, everyone. You're attending day two of case number 08-0922 and 2021-250-SPH, property address 2310 West Joppa Road. This is the combined development plan/special variance case for the project known as Greenspring Manor. Counsel for the record, starting with the Developer?

MR. ROSENBLATT: Good afternoon, Judge. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the Developer.

MR. MCCANN: Good afternoon, Judge. Michael McCann on behalf of the Protestants.

MR. ZIMMERMAN: Peter Max Zimmerman, People's Counsel for Baltimore County.

JUDGE MURPHY: All right. So again, day 2 here. Folks, if you were not here for day 1, you just want to make sure to keep your microphones muted. This is being recorded, and so I already actually hit the record button, so we can't have everyone just unmuting their microphones and speaking up, because there's a lot,

Page 297

there will be a lot of background noise on the record.

Just make sure that, you know, you just keep yourself muted, and then if it's your turn, I can unmute you, everyone in the attendee's room unmute themselves anyway. Having said that, all right. The last time we left off, we were going to have Mr. Nebre testify, and Mr. Nebre is here. Anything before we get started, by the way?

MR. ROSENBLATT: Judge, the only thing that has changed since the last hearing is the, as was mentioned at the first hearing, the Board of Appeals had considered an appeal of the forest buffer variance and alternatives analysis for this project, and a week ago on the 14th there was a public deliberation, and the Board indicated that it is approving both of those items. We don't have a written order yet, but the deliberation took place.

JUDGE MURPHY: So the alternatives analysis and the forest buffer variance?

MR. ROSENBLATT: Variance, yes.

JUDGE MURPHY: Okay. All right. I guess they didn't get into the interlocutory order stuff for another

Page 298

day.

MR. ROSENBLATT: Indeed.

JUDGE MURPHY: All right. Okay. In that case, so folks we have Mr. Nebre joining us at my request. He is from traffic engineering and planning. Mr. Nebre, can you raise your right hand?

Whereupon,

KRISTOFFER NEBRE

A witness of lawful age, after being duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

JUDGE MURPHY: Mr. Nebre, let me just start off, just get some general things out of the way here just to hopefully prevent everyone from asking the same questions. So I'm going to ask you a few questions, and then we're going to have the Developer's ask you, as you know, Mr. Mudd and Mr. Rosenblatt are representing the Developer, Mr. McCann is representing Protestants, and we also have Mr. Zimmerman, who is here for People's Counsel. So just to give you a heads up, you might have a few questions from them.

Page 299

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

Q. So Mr. Nebre, you are the Traffic Engineer III, is that right? With traffic engineering and traffic planning with the Department of Public Works and Transportation?

A. Yes, I am.

Q. All right. And as I recall, you are the only Engineer III in your section?

A. Yes.

Q. Okay. And so you have been with the County as I recall since 2009?

A. Yes, I have.

Q. All right. And can you just describe what your duties are?

A. Part of it is reviewing traffic impact studies, part of that, reviewing traffic signal plans and maintenance of traffic plans, things pertaining to traffic and taking care of constituent concerns.

Q. Okay. And you're familiar with the project at Greenspring Manor?

Page 300

A. Yes.

Q. All right. How did you become familiar with it? Did you review the development plan?

A. Yeah. There was a development plan that was for review, but also the traffic impact study.

Q. And you reviewed both of those?

A. Yes.

Q. Okay. And the, what does the traffic shed for Greenspring Manor include?

A. The traffic shed for Greenspring Manor is in an F shed, and the two key intersections within that shed are Greenspring Valley and Falls, and Falls and Joppa.

Q. Okay. And what did you review that tells you that?

A. That was part of the, in the basic service map. It's located, the location in the shed is in that particular shed.

Q. Okay. And, all right. So it's both of those. Does it also the Falls and Seminary Road intersections?

Page 301

A. That is a mitigation shed.

Q. Okay. So that's not for this property?

A. It was part of, it's not, yeah, it's outside the shed for this property.

Q. Okay. Were you the one who determined what the traffic sheds were?

A. The sheds were, I mean, it's been an F for awhile, so I did not, I was not part of how those boundaries were determined. However, we evaluate that particular shed every year, and that shed was an F through our observations, yearly observations.

Q. Okay. The traffic shed is an F?

A. Yes.

Q. Okay. So the first one we have is, let me do this. So I'm just pulling up Google Maps so we can orient ourselves here, and the property address is right sort of next to this where it says Baltimore Orthodontic Group right here. And so you indicated that the first, that it's within the shed. Here's Greenspring Valley Road. Do you see where my cursor is?

A. Yes, I do.

Page 302

Q. And then there's Falls Road is right north to south?

A. Yes.

Q. Okay. And then just orient ourselves again, there's West Joppa Road where my circle is, where my cursor is, right?

A. Yes.

Q. Got that? All right. So let's just start with the first one, Greenspring Valley Road and Falls Road. So as I understand it, those are both state roads?

A. Yes. The intersections, the traffic signal, oh, yeah. At Falls Road and Greenspring Valley Road, both of those roads are state.

Q. State. Because Falls Road is Maryland 25, Route 25, right?

A. That's a state road, yes.

Q. And then Greenspring Valley Road is Maryland 130?

A. As seen in the map, yes.

Q. Okay. So the county, would the county have any jurisdiction over those two roads given that they're state roads?

Page 303

A. Not on the maintenance and operations of the road.

Q. And how about over the traffic signal at Greenspring Valley and Falls?

A. Greenspring Valley and Falls, that is also owned and maintained by the State Highway Administration.

Q. Okay. And so what is the, how does the county rate that intersection? Greenspring Valley and Falls Road.

A. Greenspring Valley and Falls Road per hour, grading system is an F.

Q. And what does that mean? Can you explain that?

A. The congestion is, the, our grading system is based on what we call failed cycles. So a failed cycle is when the last car in que does not make it through the green time, and within a certain hour if there's a certain percentage on a particular leg that reaches a certain percentage, then, you know, it's graded accordingly to how many failed cycles we see in one hour.

Page 304

Q. And the county conducts those traffic counts?

A. Yes, we do.

Q. And you do that how often?

A. For D, E and F intersections in the county, we'll evaluate them on a yearly basis.

Q. And is it called the loaded cycle methodology?

A. I think you could call it that, yes.

Q. All right.

A. Loaded cycle analysis.

Q. Analysis. What does the, do you know what the state rating is for Falls and Greenspring Valley Road? How do they rate the intersection?

A. I won't speak for them.

Q. But you don't know what it is, though?

A. Oh, I mean, their rating analysis?

Q. Right. Do you know how they rate that intersection?

A. No, I don't know what their rating, I mean, I will let, I may let them speak regarding that.

Page 305

Q. Oh, okay. I don't know if they are speaking, but all right.

A. Okay.

Q. Okay. So let's see. So is it fair to say that when you sign the F rating, what, well, why don't you tell me? What does that mean when you sign the F rating, I mean, I know you said it had to do with the failed cycles, that the county is doing these traffic counts. What does it mean, though, when you're an F rating?

A. An F rating means that okay, like on the evaluation, the percentage is, I think it's like 86 percent to 100 percent failed cycles in an hour for a particular leg. Is that what you're asking for?

Q. Yeah. And do you, is development permitted to go through when it's an F intersection?

A. We have a, something, like a guideline listed in our website on the traffic engineering page that development is under moratorium in an F shed.

Q. Okay. Is there any exceptions to that?

A. I think we've made exceptions regarding on

Page 306

how much demand you are throwing, you are generating to the intersection.

Q. Well, I don't understand. What does that mean?

A. Okay. I mean, if I could just speak in examples, if a certain site was a Walmart and became a flower shop, we can't, you know, fault that for becoming something that generates less traffic.

Q. Okay. I see, okay. Is the county looking for improvements, though, to the roadway or to the intersection before even to the signal, before they'll give a permit in an F intersection?

A. Because, yeah, we would want to see some sort of improvement at an intersection, because there is new development coming in for this case in particular. It was not an existing site, therefore there is new traffic going to be generated towards the site, and how will that be accommodated when we are in an F shed where our regulations cannot take anymore traffic. So it has to be, sorry.

Q. Go right ahead, go ahead.

Page 307

A. Something has to be shown that capacity will be accommodated.

Q. Okay. And does that mean that the developer who is improving the road or proposing to improve the road, does that mean that the rating has to change from F to say D? Or to B? Is that what you're looking for? Is the county looking for that?

A. Or we could, it could still stay an F, but it could be like maybe a better F so to say, like that's why we're seeing if there's capacity that the traffic generated by the site will be accommodated, meaning it won't be any worse.

Q. And so I understood there's a phrase that I just read throughout the documents that's called the net impact from the development will be zero. Is that how you look at it?

A. Or net impact will be less than zero added capacity, so it's as if there was no traffic added to the intersection, not making it any worse.

Q. Not making it any worse, okay. All right. So then let's go to the other, you did Falls and

Page 308

Greenspring Valley Road. And so do you know, what are the improvements, if any, that are being proposed for Greenspring Valley Road and Falls Road, if any?

A. As, there is, as I know it, there is no physical improvements that are going to be done on Greenspring Valley Road. The improvements to the corridor will be as a result of the improvements that are done along the south intersection at Falls and Joppa.

Q. Okay. So we're not to that one yet. I'm trying to stick to one intersection here. So no physical improvements to Falls and Greenspring Valley intersection?

A. Nothing that is proposed.

Q. Do you know which direction or approach at Greenspring Valley and Falls Road causes it to have an F intersection?

A. Not off the top of my head, sorry.

Q. Okay. Do you know how long it's been rated an F intersection?

A. No, I don't, but if I, no, I don't want to say if I'm not for sure, but as long as I have been in

Page 309

the county, I could say that part.

Q. And that was at least since 2009?

A. Yes.

Q. Do you know if there will be any changes or improvements to the traffic signal at Falls and Greenspring Valley?

A. Not the physical signal itself, not like physical indications, but probably as a, like I said, as a result of the changes that are going to be done at the Joppa and Falls, like you said, you're not focused there, but --

Q. [indiscernible]

A. -- for coordination sake, I think they will do changes to the timing along Falls.

Q. Meaning who is going to do changes?

A. Either SHA or, yeah, probably SHA.

Q. Because you were saying that they're, the intersections, excuse me, the signals are actually owned by SHA, right?

A. Yes.

Q. Okay. State Highway Administration. All

Page 310

right. Let's go to Falls and Joppa Road. So Falls Road, you already told us that was a state road, because that's Maryland Route 25. Joppa Road though is a county road, right?

A. That's a county road, yes.

Q. And so, but as I understand it, just looking at this Google Map for lack of a better tool, just to give us reference, it looks like this intersection here, there's two different signals, right? At least, so one at Joppa and Falls, and then there's one at kind of Falls and Falls, which goes down here to the south. Do you see what I mean?

A. Yes, but when we refer to a signal, we refer to something to controlling the whole intersection, so they're not like two separate things or split ownership. It's controlled by one controller.

Q. Oh, it's one --

A. One program, yeah.

Q. Okay. One controller. So, but these signals at this intersection of Falls and Joppa are just for combining them together, these are also owned by the

Page 311

state? Or by the county?

A. They're all owned by the state. Just to reiterate, yeah, it's like the whole intersection, the signal is like controlled by one controller and connected as one, I don't want to say the word network, but yeah.

Q. Okay. And then so what rating does the county give to Falls and Joppa Road intersection? When I say that, I mean the entire intersection, because you just, you know, explained that to me.

A. Yes. Falls and Joppa is an F intersection also.

Q. Okay. And do you know what the, how the state rates it?

A. Not how the state rates it. Sorry.

Q. Okay. Let's see. So what approach, which approach or direction at this intersection is causing it to be an F rated intersection by the county?

A. Off the top of my head, I don't have the report in front of me, sorry.

Q. Where would you find that?

A. Traffic counts? Performed by our count

Page 312

crew. They would know which direction was the failing direction.

Q. So I thought, didn't you say you reviewed those when they did those counts every year?

A. Yes.

Q. Okay. Do they provide it to you, which direction or approach is the one that causes it be an F.

A. Yes, it's on their count sheet, but on the map it's just, we have just the grades, we don't put the direction on the map.

Q. Okay. Let's see. So are there any improvements being proposed, I think you mentioned this twice now. What are the improvements being proposed for Falls and Joppa intersection? For this intersection?

A. There's going to be a bit of widening on both Falls and Joppa to accommodate a through only lane, so that we can have a separate, we could see, I think you could see like the pavement arrows.

The through movements along what we call the east and westbound movement, or we colloquially say the cross streets are shared with a turning movement. There

Page 313

is going to be improvements that are going to be done on the cross street that will separate the through movements, and the left-turn movements will have their own, be on their own also.

Q. You're going to have to give that to me in a breakdown. So what are we talking about? Is it on Joppa? Or is it on Falls?

A. Both sides, both sides of the cross movement. Not the main line. So we'll have like an extra lane that will have a through only, and then on the --

Q. Which way does a through only go? Which direction am I going?

A. Like east and west.

Q. Okay. So if I'm on Joppa, West Joppa, and I'm going through that intersection --

A. Towards the other side of Falls, yeah, towards the park.

Q. Yeah, this is Meadowbrook Park over here.

A. Yeah. So there will be an extra lane that will go from there, that will --

Q. It's going straight across?

Page 314

A. Yes.

Q. You can go straight across now, can't you?

A. No, but I said a separate. You can see the pavement marking where your cursor is that, that is shared with the left-turn movement.

Q. Okay.

A. So it's a split arrow, so it's, so both, that lane accommodates both left and through movement. However, there is going to be an extra lane now that only accommodates a left turn movement, and now, I mean, sorry, let me slow down.

There will be a separate lane that will only serve through movement, and the other two lanes will be serving left turn movements.

Q. And how is that going to help?

A. So both sides right now, because it's this configuration, the signal operates where it serves the west leg first, and the east leg first, or vice versa, but one, it can only serve one leg at a time, the signal.

With the new lane configuration for the traffic signal, for their traffic impact analysis, they will be

Page 315

operating in a way where the left turn movements could be simultaneously, and the through movements could be served simultaneously. So that would improve the capacity throughout the intersection and serve more traffic.

Q. And since the improvements are on this west Joppa Road leg where my cursor is, which is kind of next to that Exxon right there on the corner, or actually it's a snowball stand, does that mean that that's the approach or direction where it's failing, causing it to be F?

A. Not necessarily. By doing that, we could devote more time to the main line, so that's why we improve capacity on the east and west legs, so that the main line, we could devote more time to the main line, because right now, like I said, it's like the signal is doing it one by one, east leg, west leg.

But when you can make simultaneous movements, now time could be allocated where the main line can get more of the time.

Q. Main line is the Falls Road north/south?

A. Yes.

Page 316

Q. Okay. Any other improvements that they're proposing?

A. Yes, there's going to be some widening also on the, if I did not make it clear, there's going to be widening on the park side leg.

Q. The park side, okay. Now my cursor is over here. So what are we doing over here?

A. They're putting anther through lane.

Q. Another through lane, so if I'm at the park, I'm going to go straight, I can go straight then to Joppa, west Joppa, as opposed to what, sharing a lane, making a left and going straight?

A. Yeah. There will be a lane dedicated, I believe so. But I just know there is some sort of widening there, and the new lane configuration allows it so that you could, both turning movements could be done simultaneously.

So there will be widening, like you can see how close those left turn movements are, you cannot serve those two left turns simultaneously, they'll be crashing into each other, so that's why there will be some sort of

Page 317

widening so that the left turns could be also accommodated to where the left turns could be served simultaneously.

Q. And for this case, for the proposed development here, how is that going to help this development? Or, you know, how is it going to I guess not make traffic any worse is what you had said before.

A. Yeah, there's going to be more, now there could be more green time allocated to, on Falls Road.

Q. Green time on Falls Road meaning the green light stays green longer?

A. Yes.

Q. Is that what that means? Okay. North/south, right?

A. Yes.

Q. Okay. All right. So any other improvements to this intersection?

A. Along with that, that's the physical improvements, and then there's going to be the timing improvements that go along with that.

Q. And you had indicated before the timing of

Page 318

the traffic signals all along this whole corridor, the Falls Road corridor, SHA is then going to retime the lights?

A. They are the ones that are, yeah, it's under their control.

Q. But they will be doing that, do you know?

A. I mean, either they take the timings that are going to be proposed by the developer, or, you know, they will be doing the timing changes per their observations.

Q. And how will this improvement on Falls and Joppa, then you had said, how will that affect or impact this, the Falls and Greenspring Valley F intersection?

A. With more time that's allocated towards Falls on the through movement on Joppa. That means we could get probably more, hopefully more throughput, or it would improve the flow for traffic incoming from Greenspring Valley.

Q. It helps, so if I'm coming down Greenspring Valley and I'm facing, I'm at that, this light right here, Falls, having the improvements to the

Page 319

Joppa and Falls intersection will improve the flow along Greenspring Valley Road?

A. Greenspring Valley, yeah, Greenspring Valley going towards Falls. So if there's more green time allocated at Falls than traffic coming from Greenspring Valley going towards Falls would see an improvement.

Q. Okay. All right. So then let me ask you this. So were there any other improvements? Let me just make sure. Here's the property over here. Was there anything else that the were proposing? Do you remember? Or that was it? I mean, it can be, I just was making sure.

A. Regarding the traffic for those two intersections, yes. If any other improvements could, I mean, I don't have the site plan in front of me. It's considered an improvement. I believe there was talk about acceleration and deceleration lane in front of their frontage, but that's just part of development.

Q. Okay. All right. On the development plan, you mean?

A. Yeah.

Page 320

Q. Okay. Let me do this. I'm almost finished. I should be almost finished. Not quite almost finished, but I'm actually moving along pretty fast, aren't I? I'm not going to keep you all day, because I know you want to get back to work. I'll let the, I'll do this. Okay.

So contained in our file for the special variance was this ZAC comment, which is dated September 20th, 2021. It's from Mr. Curtis. So he's with your department, right?

A. Department, yeah, but not my bureau.

Q. Oh. He's a traffic, he's an Engineer III, Department of Public Works and Transportation. What does he, where does he work?

A. He works in the engineering and construction, Bureau of Engineering and Construction.

Q. Okay. He actually copied you on this email. Do you remember it?

A. No, I don't, I'm sorry.

Q. You don't remember? I don't know why, you don't have enough, you have every development plan to

Page 321

review. So anyway, well, so it appears that what he says in the second paragraph, and I'm trying to make it big enough for you so you can read it.

It says the Department of Public Works and Transportation Planning feels the request for the special variance, which this is referring to this case number, has to be denied because of the following reasons. And so they list these reasons, and so it looks like under number three, and that's why I wanted to ask you about this, number three, it says that there, it looks like he reviewed the proposed improvements by the developer, and so it says something about the benefits of the connection to Falls Road or glossed over.

So I need to understand what, is this the position currently of the Department of Public Works and Transportation? Go ahead.

A. That comment may have pertained to a supplemental study by the traffic engineer, because it had something to do with the cut through, like the connection of the whole community going to Mays Chapel Road.

Page 322

Q. That was one of them, that was one of them. That's in number 4, that was going to be my next question, but how about this one? I mean, was this, do you know, I mean, again, you said you don't remember, but looking at it now and since you were copied on it at the top, I'm trying to, you know, is this the current position dated September 20, 2021, which is actually last year today, does this reflect the position of the Department of Public Works on this development plan?

A. I think, I was going to get to sort of this point. Had the connection been allowed to come through, it would furthermore benefit Falls Road because of redirected traffic. So I think that's what that is trying to say, yeah, there is benefits for a, for the connection without the gate from a flow, traffic flow standpoint.

Q. Explain to me, I mean, I know where the gate is. The gate is proposed within the community, and it's supposed to, I mean, the, it says it's being proposed as an emergency access gate only. Is that the position of the Department right now?

Page 323

A. That one, I was going to, I say I was going to refer to the development manual, so that one is for development manual, because it hits a certain threshold of homes, that was a requirement from the development manual, and our stance was that's outside of traffic engineering issue regarding the gate.

Q. Outside of traffic engineering?

A. It's part of the development manual that was a development, that was like a development manual criteria.

Q. And so traffic, your section doesn't look at the gate issue about whether the gate should be closed or permanently open?

A. That one, yeah, that's why it was deferred to you, Judge.

Q. I always like when you do that, yeah, and I'm happy to do that. I'm happy to make the decision, but I, you know, what I'm going to say is, I'm going to ask you, what do you think as a traffic engineer, an engineer, so are you saying that you don't deal with gates?

Page 324

A. Every now and then, but that one was a proposed gate, so --

Q. Does it need to stay open to change the traffic? Or are you, or is, does the Department of Public Works Traffic Engineering section, are they comfortable with the improvements being made and the gate remaining emergency only?

A. Per the traffic impact study, it can be shown that it does not need to have the gate open. However, but the requirement of the gate being there or fully open would not, does not affect the improvements on Falls Road based on the physical improvements I know are proposed.

Q. So if I say this again, if I say that the gate remains closed or for emergency access only, you are comfortable having reviewed the improvements to Joppa and Falls Road, and no improvements to Greenspring Valley and Falls physical improvement at the intersection, you're comfortable from your section that the development plan should be approved based on the improvements?

A. Based on the improvements, I could only

Page 325

say yeah, from the traffic, from the traffic that is on Falls Road will not get any worse, even with the gate down. However, regarding the approval of the gate, we find that being a development plan issue.

Q. Okay. Traffic on Falls Road would not get any worse, and that is the standard that you look at? That's the one you apply?

A. Yes.

Q. Any worse. Okay. Again, doesn't need to be better than an F. In fact, you indicated before as I understand it, if the improvements are all made, let's say they're all made to Joppa and Falls Road intersection, the intersection may be still an F, or it may change, right?

A. Yes.

Q. So isn't that --

A. But it won't be a, but it won't be any worse F.

Q. It won't be a worse F. Right. But it's not, I mean, it could change, it could be then a D or it could be a B, depending on the traffic counts, right?

Page 326

A. Yes, yeah.

Q. So the county then through your traffic counter people, they need to go back to the intersection every year, and they have to count the, I guess the sequence again like you explained first about, you know, how much green time there was?

A. Yeah, they'll count the intersection, and they'll note the congestion that takes place.

Q. Okay. All right. And I think I just have one more thing. Look at that how fast I am today. I got this one. So I saw this email that you had sent, and so do you recognize this one?

A. This one is pretty recent. I think this is just stating, basically giving our approval of the traffic impact study.

Q. Yeah, it sits in the traffic shed, and you just, it repeats in here as you see that, you know, the intersections and all are owned by SHA. It talks about the improvements that you already mentioned along Joppa, and they have been approved by SHA, but they've also been approved by the county, right? The improvements along

Page 327

Joppa, because Joppa is a county road.

A. Yes.

Q. Okay. So you've looked at the traffic impact study I suppose that states the improvements will accommodate the generated volumes from the proposed site, so that's what you were talking about, mitigation from the improvements result in net zero impact along the corridor, is that right?

A. Yes.

Q. All right. Okay. Go ahead.

A. Yeah, I was going to say I probably should have been clear that it would not be more than, because net zero implies it stays the same but it could be better. It could be at zero, but I just wanted to make it clear, it's not going to be worse.

Q. Not going to be worse.

A. Yeah.

Q. Okay. Okay. So what I'm going to do is I'm going to make this County exhibit number 13, that's the exhibit we're on, because we had day 1 already, so we're already up to 13. So that will be in evidence for

Page 328

you.

(County Exhibit No. 13 was marked for identification and entered into evidence.)

JUDGE MURPHY: And I am finished. So I'm going to turn it over to Mr. Rosenblatt.

MR. ROSENBLATT: Thank you, Judge. I don't think I have any questions at this time.

JUDGE MURPHY: Okay. All right, Mr. Rosenblatt. Mr. McCann?

MR. MCCANN: Yes. Thank you, Judge.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good afternoon, Mr. Nebre.

A. Hey, Mr. McCann.

Q. I wanted to ask you a little bit about your background, because I don't think we've, although we've been through this dance just a few short weeks ago, I didn't ask you any questions about your background. Well, number one, the Judge already asked you about your current position, you're an engineer III, correct?

A. Currently I'm a IV, but I just, but that's

Page 329

what it is right now.

Q. Are you a licensed engineer?

A. Yes, I am.

Q. Did you go to college for engineering, obviously?

A. Yes, I did.

Q. When did you graduate?

A. I graduated 2004.

Q. Okay. Where did you go to school?

A. University of Washington.

Q. Okay. And any post-graduate work after that?

A. No.

Q. [indiscernible] education, that is?

A. No, just a bachelors.

Q. Okay. And you began work with the county in 2009. Did you work anywhere else in any, in the engineering field between when you graduated and when you came to the county in 2009?

A. In California. I worked as a developer's engineer.

Page 330

Q. And what do you mean by that? What did you do?

A. I was doing land development design sites, particularly warehouses.

Q. Designing sites, you said?

A. Yes.

Q. Okay. So in that job, you weren't necessarily, and you were there for, strike that. You were there for the entire five years or so after graduation, before you came to the county?

A. I had maybe one year of tutoring, but other than that, yeah, from then onto the county.

Q. What do you mean by tutoring?

A. I got out of college, I worked at like an SAT math center.

Q. Okay. In the California job that we spoke about, were you during that period of time, were you reviewing traffic impact studies?

A. No, I was not.

Q. Okay. When you came to the county in 2009, did you start, were you reviewing traffic issues

Page 331

then? Or did you take on that at some later point?

A. Not like directly coming into the job. I, you know, I had people working above me who received the traffic impact studies, it was their responsibility, and I would just check certain aspects of the traffic impact study, but it was not a full blown study, you know, they asked me to just skim it and see how I understand it, and then later on I learned what the calculations mean. So it was more of like growing into it, but no, like coming into the job, I did not know about traffic impact studies.

Q. When you were first hired, you were hired in the Bureau of Traffic Engineering?

A. Yes, I was.

Q. And then at some point in time you began doing review of traffic impact studies and traffic engineering on a, on your own as opposed to under the supervision of others? Is that a fair statement?

A. Yes.

Q. And when was, when did that take place do you think?

Page 332

A. Probably more on my own, like in the last maybe three years, but we've had like a group of people always look over it.

Q. Okay. And in this case, would you agree with me, because I've seen all the documents, that there are hundreds if not thousands of documents related to traffic that were submitted by the Developer in this case? Is that a fair statement?

A. Was that regarding the particular project? Or you're talking --

Q. Yes, yes. I'm sorry, this particular project.

A. So there was the main traffic impact study from Lenhart? Is that what you're trying to say?

Q. Well, there were multiple traffic impact studies from the developer, were there not?

A. Okay. I believe there was one that came in, and we reviewed it and we asked for either supplemental studies or a revision of the traffic impact study.

Q. Okay. All right. I'm trying to somehow

Page 333

quantify what it is that the county received. But you've received multiple submittals either in the form of traffic impact studies or supplemental reports from the developer, correct?

A. Yes, yes.

Q. Okay. And have you reviewed all of that at some point in your --

A. Some point, yes.

Q. Okay. When was the last time you reviewed anything in connection with this case?

A. I can't recall too specifically.

Q. Okay. But you didn't review anything specifically in preparation for today's hearing?

A. For today's hearing, no.

Q. The Judge was asking you about the failing nature of the intersections at Falls and Greenspring and Falls and Joppa. Am I correct that in all of Baltimore County, there is only a handful of failing intersections?

A. Yeah. Yeah, it's not like a multitude, but a handful would be something like, I guess, yeah, I'm just looking at the map behind me. I mean, I'd say six

Page 334

or seven sheds, just like eyeballing it.

Q. Right. And there are three failing intersections at Greenspring Station amongst all of those, correct?

A. That corridor along Falls Road there's three failing intersections.

Q. Okay. I think you were a little bit unsure whether or not the traffic shed associated with Falls and Seminary was part of the traffic sheds for Falls and Greenspring and Falls and Joppa. Did I hear you correctly? That you're not sure about that?

A. No.

JUDGE MURPHY: Mr. McCann, I think he was clear about that, because I actually asked him. I said we're not talking about Falls and Seminary, just so we're clear, and he said it was separate.

MR. NEBRE: Yeah, I consulted with our GIS group, and they gave me an exhibit showing that the sheds were separate.

BY MR. MCCANN:

Q. Okay. Well, the sheds may be separate,

Page 335

but is it fair to say that all three of these intersections, Falls and Seminary, Falls and Greenspring Valley and Falls and Joppa are interconnected and need to be considered when reviewing any development in any one of the traffic sheds?

A. And, you know, I believe there was, it was considered.

Q. Yeah. In fact, the State Highway Administration, I can point you to some letters, but the State Highway Administration as well as the developer's engineer itself agreed that these intersections are interconnected and need to be considered together, correct?

A. Yes, performance as a whole.

Q. Yeah. Okay. A couple things about SHA. I think you indicated that the county has no control over the road itself to the extent there are state roads involved here, and then no control over the lights because those are owned and maintained by the State Highway Administration, correct?

A. The traffic signals are owned by SHA and

Page 336

yeah, most, the roads in question are owned by SHA.

Q. Okay. But in terms of the State Highway Administration's authority in this development plan case, as far as you know anyway, the only role that they have in connection with this development is to prove or disapprove an access permit number one, correct?

A. Because yeah, it's not on their road, the access on Joppa Road, I don't think they have as much, I don't think they could stop the development, if I understand their role on this.

Q. Yeah, I'm sorry, you're right. Joppa is not a state road, correct?

A. Yeah, Joppa is not a state road.

Q. So the reason the State Highway Administration's authority in this case really is derived from the fact that there are proposed improvements to roads that it owns, correct?

A. Yes, that is their interest in this.

Q. Okay. And then also I think you've acknowledged that the State Highway may, depending on how it plays out, may since it controls the traffic light,

Page 337

may have made some changes in the timing of the lights since it owns the lights, correct?

A. With the new configuration, I believe they would.

Q. Okay. But you would agree with me that the State Highway Administration has no authority to chime in on whether or not this special variance that's been requested should be granted under the county zoning regulations, would you agree?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: I'm objecting to asking this witness what legal authority SHA has.

JUDGE MURPHY: Yeah. Mr. McCann, you know, that's, you know, obviously for me to look at under the zoning regulations, and I don't think that's a fair question for the witness, Mr. Nebre.

MR. MCCANN: You mean the State Highway Administration's authority?

JUDGE MURPHY: Yes.

MR. MCCANN: Okay. All right. I'll move on.

Page 338

BY MR. MCCANN:

Q. I did want to ask you about the standard that you've described this afternoon, and you said I think you called it a standard, you said that what you want to see is that the proposed development won't make the situation, the traffic situation and these failing traffic sheds any worse, correct?

A. Yes.

Q. Number one, would you agree with me that that is not the standard that is set forth in the special variance standard in the zoning regulations? You're not speaking to that this afternoon, correct?

A. That is partially why I deferred to, made that statement to defer to the Judge on my response to Lenhart.

Q. Okay. So it's, and we'll get to that in a second. What you're referring to is the fact that on the special variance standard that is before the Judge, your office deferred any conclusions to the Judge in this case, correct?

A. Yeah, we deferred.

Page 339

Q. Okay.

A. Final statement there.

Q. Right. Now, this standard that you did mention doesn't have anything to do with the special variance standard, where do you get that from? In other words, where do you derive the standard as you've described it that proposed development cannot make the traffic situation any worse in these failing traffic sheds? Where does that come from?

A. That one, was that quoted on the, it was like, the impact is going to be less than standard?

Q. No, I'm asking you about your testimony earlier this afternoon about the fact that what you're looking at is whether or not the proposed development will make the traffic situation any worse in these traffic sheds. I'm asking where does that standard come from? That net zero or whatever you want to call it, where does that come from?

A. Partially engineering judgment, and also, yeah, there's not like a standard I could really point to for that one.

Page 340

Q. Okay. Would you agree with me that other folks in your department have expressed the opinion that in order for this development to be approved, that the county's level of service F has to be improved upon?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Hold on, Mr. Nebre. Mr. Rosenblatt?

MR. ROSENBLATT: Asking him what other people's opinions are.

JUDGE MURPHY: The question would be if he knows that, and so --

MR. MCCANN: These aren't any, yeah, just to be clear, I'll rephrase.

BY MR. MCCANN:

Q. Do you know whether or not anyone else in your department has expressed the opinion or just suggested that in order for this development to be approved, the level of service F, the county level of service F has to be changed from an F?

A. Not currently, no.

Q. Okay. What do you mean by not currently?

Page 341

A. There may have been expressed something from people that used to work, I used to work for, however, there has been changes in the department since this development has been proposed and reviewed, so if there was anything that was expressed then, I'm not akin to that.

Q. Okay. I'm asking you about in connection with this development. I'm not asking you about, strike that. Let me ask you about that since you brought it up. Other than this development, to your knowledge have representatives of your department expressed the opinion that in order for a development in a failing traffic shed to be approved, the county's level of service F had to be changed from an F?

JUDGE MURPHY: Well, we're just only talking about this development. I don't want him, you know, the witness is here on my request, and for him to have to respond to what happened in other developments, I mean, it's not fair to the witness. It's not a fair question to the witness.

I know, but you are suggesting that people have

Page 342

said things in other cases, and we're only here on this case, so I'll sustain the objection. I want only questions asked about this case.

MR. MCCANN: Can I be heard on that? Because this is an important point. I get this objection all the time, just because another development, the name of another development is raised, therefore automatically it's irrelevant.

The point here is that's the basis of the ruling, if there is a standard that the department has been applying in other cases, we get this question all the time as to the developer's witness who say every day, Your Honor, this is what the development, the people in the county tell me is the standard.

I'm asking this gentleman about the standard in his department, whether it's connected with another case or not, that doesn't matter. The point is it's the standard in his department, and it's highly relevant.

JUDGE MURPHY: I understand, and he has already expressed what the standard is to his knowledge, this is what the standard is, and so you're going to go down

Page 343

these roads where you're suggesting that X, Y and Z was said. It's not fair to the witness. The witness is here for this case, it's not [indiscernible]

MR. MCCANN: No.

JUDGE MURPHY: He's not a paid expert witness here. He's a county witness who is just giving his testimony based on this case.

MR. MCCANN: What difference --

JUDGE MURPHY: And you've asked him, and you've asked him what the standard is, he's given you what his answer is. The objection is sustained.

MR. MCCANN: All right. Well, if I could share? Bear with me one second.

BY MR. MCCANN:

Q. Before I, I want to get back to something else you said before, Mr. Nebre, and that is that there has been some change of some sort related to this issue of the standard. When did that occur, that change that you were speaking about?

A. Which change are you talking about?

Q. I think when I was asking you about the

Page 344

standard and whether other folks in your department had expressed a view on the standard, you said that at some point in time there were people that thought one way, but that that had changed during your tenure.

A. Oh, no, I did not say something about waiving opinions. I said there was a change in staff, and then, you know, if you were saying has there been anybody that had some sort of expression about a certain way a standard is viewed, I said I would not know about it because of the changing staff.

Q. Okay. Fair enough. Thank you for that. So let me show you an email. This is from Greg Karski [phonetic] to you, as well as some other folks in connection with this development, 2310 West Joppa Road, and it's two pages. I'll scroll down so you can have a moment to take a look at it, the initial email.

JUDGE MURPHY: If you could expand it a little bit so that he can actually --

MR. MCCANN: It's always bigger on this end.

BY MR. MCCANN:

Q. Okay. So that's the second page of the

Page 345

exhibit, the initial email to you from Mr. Lenhart. Do you see that?

A. Yes, I do.

Q. Here's a subsequent email from Mr. Lenhart to you and Vishnu and some others. Do you see that?

A. Yes, I do.

Q. Okay. Then here's an email dated October 3rd, 2020 from Mr. Karski. Do you see that?

A. Yes.

Q. Okay. Who is Mr. Karski?

A. Greg Karski was the bureau chief of transportation.

Q. Okay. Traffic engineering?

A. Yes.

Q. Okay. So the head of your bureau?

A. Yes.

Q. Okay. And is he no longer in that position?

A. He's no longer in this position.

Q. Okay. And where is he now? Do you know?

A. Not exactly. I'm sorry.

Page 346

Q. Is he within the county?

A. He's within the county somewhere.

Q. Okay. Okay. Do you recall this email by chance?

A. Not the details.

Q. Okay. But at the time he wrote this, and I'll move on, in October of 2020, Mr. Karski was the head of the Bureau of Traffic Engineering, correct?

A. Yes.

Q. Okay. All right. I'm going to show you another exhibit.

MR. ROSENBLATT: I'm just trying to keep track. Was there a number for that?

MR. MCCANN: I did not assign one yet. I will do that. Thank you for asking.

JUDGE MURPHY: Are you on 15?

MR. MCCANN: We are.

(Protestant Exhibit No. 15 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Let me just show you a couple more and ask

Page 347

the same question essentially. So this is a one page email exchange between Mr. Lenhart and Mr. Karski and yourself and Mr. Dasai, and same question I guess, at the time that Mr. Karski sent this email, number one, do you recall this email, Mr. Nebre?

A. I don't see anything on my screen right now, Mr. McCann.

Q. Okay. I'm looking at it, and no one else is. Let me know if that's too big. This is a one-page email. Go down to the first email on the page. Do you see that?

A. Yeah, I see the email.

Q. And then the response from Mr. Karski on Thursday, October 8, 2020, do you see that?

A. Yes.

Q. At the time Mr. Karski wrote this email, was he, again, this is October, 2020, so I assume the answer is the same, that he was head of the Bureau of Traffic Engineering?

A. Yes, he was.

Q. Okay.

Page 348

MR. MCCANN: So that would be 16.

(Protestant Exhibit No. 16 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Let me show you another one. This is also a single page email. The bottom page has an email from Mr. Rosenblatt, same month, October 2020 to Mr. Karski, and then a subsequent email to you from Mr. Filsinger a couple days later. Do you see that?

A. Yes.

Q. Okay. And am I correct, well, what is, it says here Mr. Filsinger was the Chief, Division of Traffic Engineering. Is that, the Division of Traffic Engineering, is that the same thing as the Bureau of Traffic Engineering?

A. It's within the Bureau of Traffic Engineering, Bureau of Transportation currently.

Q. Okay. So is this, so Division of Traffic Engineering is not the same as the Bureau of Traffic Engineering?

A. It works within. It's the same.

Page 349

Q. Okay. Was Mr. Filsinger, he was chief, it sounds like he didn't replace Mr. Karski, but this is another position that he held?

A. He worked under Mr. Karski. Greg Karski was the Bureau Chief, Mike Filsinger was the Division Chief.

Q. Got it, got it. Okay.

MR. MCCANN: So that would be exhibit 17.

(Protestant Exhibit No. 17 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. I'll show, excuse me. This is a five-page email, so let me just blow it up and scroll down. I'll go to the bottom first. Let me know if I'm going too fast. I'm on the fifth page right now. As you can see, the fourth page, it begins with an email from Mr. Rosenblatt to Mr. Karski. Do you see that?

A. Yeah, I see the email.

Q. Okay. And then page 3, subsequent email from Mr. Rosenblatt. Do you see that?

A. Yes.

Page 350

Q. Okay. Also an email back from Mr. Karski of about the same date. Do you see that?

A. Yes.

Q. Okay. And then we're on the second page, another email from Mr. Rosenblatt to Mr. Karski. Do you see that?

A. Yes, I see the email.

Q. Okay. And then a response from Mr. Karski with Mr. Filsinger cc'd. Do you see that?

A. Yes.

Q. Okay. And let me just get to this final email from Mr. Karski with you cc'd, along with some others. Do you recall this email?

A. I think so, but not fully. I just know he made a response to someone representing the developers.

Q. Okay. I want to direct your attention, if you want to read the whole thing, obviously feel free to, but I wanted to direct your attention to the, I guess the third full paragraph, and I'll highlight for you a particular sentence, two sentences. I'll just read it.

Additionally, it does not appear that the

Page 351

proposed changes would bring the intersection of Falls Road and Joppa Road out of failed rating, out of the failed rating given the fact that the lowest level of service following improvements with site traffic is worse than the existing level of service. Clearly the changes would not ameliorate the currently failing intersection. Did I read that correctly?

A. That's what it says.

Q. Okay. So, and at the time, Mr. Karski wrote this, as is indicated, he was still Bureau Chief, correct?

A. Yes.

MR. MCCANN: So this would be exhibit 18, Your Honor.

(Protestant Exhibit No. 18 was marked for identification and entered into evidence.)

MR. MCCANN: Then I just have one more. Bear with me one second. Thanks for your patience. This would be exhibit 19.

(Protestant Exhibit No. 19 was marked for identification and entered into evidence.)

Page 352

BY MR. MCCANN:

Q. This is, I'll blow it up, a two-page email exchange. We'll go down to the bottom again. Correspondence between Mr. Rosenblatt and Mr. Karski. Do you see that?

A. Yes.

Q. Okay. And then Mr. Filsinger, an email from him to you. I'll just read this. It says, on October 27, 2020, Chris looking at this, the intersection just to the north is failing badly with the 92 percent load in the northbound direction the p.m. hours. Do you recall this email?

A. I think I do.

Q. Okay. And is Mr. Filsinger referring to the intersection of Falls and Greenspring?

A. Falls and Greenspring.

Q. Yeah. And he says right here, from a common sense perspective, I can't see how, see that it would help, therefore it would, I can't see that it would help, therefore would improve the overall failing shed. Do you recall what he meant by that, and what your

Page 353

thoughts, if any, were on that?

A. I think he's saying there's, if anything, there's not really, because there's no physical improvements to the intersection, so I think from that perspective that it may seem, it could make that particular intersection worse.

Q. Okay. And then lastly on the same exhibit, this is 19 again, the first page of the exhibit has an email from Mr. Filsinger to yourself, which says, "the lawyers are now asking that with the improvements will the intersection operate better than existing? Need to dive into this a bit more, we need it by early next week." Do you recall this email?

A. Not really.

Q. Okay. Was there, at this period of time in November, 2020, in connection with, we'll keep it in connection with this development, was there internal discussion between yourself and your superiors about what standard it is that you would apply in connection with this development in this failed intersection?

A. I don't remember.

Page 354

Q. Has there ever been in connection with this development, not any others, but this one, any discussion between you and your superiors about what standard should be applied in this case for this development?

A. Not that I recall.

JUDGE MURPHY: Any objection to 15 through 19, Mr. Rosenblatt?

MR. ROSENBLATT: I think they are all county emails, so --

JUDGE MURPHY: All right. Mr. Zimmerman, I'm assuming you don't have any objection?

MR. ZIMMERMAN: You are correct.

JUDGE MURPHY: All right. Thank you. We'll accept those.

MR. MCCANN: Thank you.

BY MR. MCCANN:

Q. I may have asked you this the last time we got together, Mr. Nebre, but I just want to make sure that when determining levels of service, the only standard that the county applies is the loaded cycle

Page 355

methodology. That's how level of service is determined, correct?

A. For the basic service map, yes.

Q. What do you mean by that?

A. That's the one that controls development on our basic service map. The thing, we would, the level of service that will be for the traffic analysis for the TIS report would be, we would use other analysis, CLB reports, but the one that controls development is the loaded cycle analysis.

Q. Okay. So when you say basic services maps, do you mean that when a development is proposed in a failing intersection, the standard that the county applies is the loaded cycle methodology?

A. Yes.

Q. And lastly, we talked, you talked to the Judge about the improvements that are being proposed by the developer at Falls and Joppa. Even with those improvements, would you, or do you rather agree with me that the level of service under the county's methodology is not being reduced from an F?

Page 356

A. We cannot guarantee that. I think that's why, our methodology does not make, like it's not something that can be forecasted. It's something that's based off of observations.

Q. Right.

A. Yeah.

Q. So, but my question is can you sitting here today, can you say with some degree of certainty to a reasonable degree of engineering certainty that the improvements proposed by this developer at Falls and Joppa Road will remove this particular intersection from an F level of service?

A. I cannot make that statement with certainty, if that's what you're trying to ask for.

Q. Well, to a reasonable degree of certainty.

A. Yeah.

Q. Okay.

MR. MCCANN: Thank you, Mr. Nebre. No further questions.

MR. NEBRE: All right.

JUDGE MURPHY: Mr. Zimmerman?

Page 357

MR. ZIMMERMAN: Yes, thank you. Can you hear me?

JUDGE MURPHY: I can.

MR. ZIMMERMAN: Okay. Thank you.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. Mr. Nebre, first of all, just to be fair, you and I actually have never met or spoken about this case, have we?

A. I don't recognize who you are, Mr. Zimmerman. No, we have not spoken.

Q. I'll try to ask some fair, factual questions. The first one, I'm curious, is there such a thing as graduate education in traffic engineering? Or is it simply learning by experience?

A. There is post-graduate studies for traffic, focus on transportation.

Q. Okay. Is there such a thing as a graduate degree in traffic engineering?

A. I wouldn't know the names of the degrees.

Q. Okay. And following up on a few of Mr.

Page 358

McCann's questions, when you began work on traffic issues, was Mr., were Mr. Karski and Mr. Filsinger kind of your mentors?

A. Yes, they were.

Q. Okay. And is there currently a Bureau of Traffic Engineering or division, or have things kind of reorganized?

A. They are reorganized.

Q. So what's the current structure?

A. Okay. Bureau Chief is Angelica Daniel, and division chief is myself now.

Q. Okay. Okay.

MR. ZIMMERMAN: If I could share, Judge, a few exhibits. Okay. Here we go.

JUDGE MURPHY: I'll just give it to you.

MR. ZIMMERMAN: Right. So let's see if I know how to do this, or maybe I've lost it now.

JUDGE MURPHY: No, you have it. You were sharing your screen, but you're sharing the actual screen and not the document, so you are now sharing the Webex.

MR. ZIMMERMAN: Yeah. So, okay.

Page 359

JUDGE MURPHY: Just find the document.

MR. ZIMMERMAN: We are starting over again.

JUDGE MURPHY: Sure.

MR. ZIMMERMAN: We are trying. Wait a minute. I don't know, Judge, since you have my exhibits, would it be possible for you to, you might get it, we might get it on quicker.

JUDGE MURPHY: So I haven't opened any of yours.

MR. ZIMMERMAN: All right.

JUDGE MURPHY: But is there a particular one?

MR. ZIMMERMAN: Yeah. There were just two of them actually.

JUDGE MURPHY: Okay. Which ones are they?

MR. ZIMMERMAN: I believe 6 and 9. Here we go, here we go. I'm sorry.

JUDGE MURPHY: Did you find it?

MR. ZIMMERMAN: Yeah, yeah, yeah. Okay.

BY MR. ZIMMERMAN:

Q. Mr. Nebre, can you see this comment from the Department of Public Works and Transportation? I'm

Page 360

scrolling. With somewhat similar if not identical statements with the September email, excuse me, September 2021 email from Terry Curtis that the Judge showed you a little while ago.

JUDGE MURPHY: Could you just scroll up so that he can see the date? I mean, you kind of went through it pretty quick.

MR. ZIMMERMAN: Yeah. I'm trying to scroll up.

JUDGE MURPHY: Yeah, just use your --

MR. ZIMMERMAN: August 12, 2021. In the file there's this comment that we have seen before from, let's see, okay. From Baltimore County Department of Public Works and Transportation, development review on this Greenspring Manor. Let's see. I think there's an August 6 date. Wait a minute. Response, I guess the response was due August 6th, but your department got it in August 12th.

BY MR. ZIMMERMAN:

Q. Anyway, are you familiar with this comment from your department?

A. Which one in particular?

Page 361

Q. The whole thing, just the whole thing.

A. This looks like something, a similar thing that Mr. McCann showed.

Q. Yeah. The Judge showed you the email from Terry Curtis, which I will show you again in a moment, but did you work on anything relating to this comment? Or were these other people? Do you even know that this comment exists?

A. I think this was something we compiled as a group.

Q. Okay. So you worked on it?

A. Yeah.

Q. You remember working on it?

A. Definitely. I mean, it's here, we got it. We got the comments.

Q. Well, I'm asking you, do you remember specifically that you were one of the people who worked on this comment?

A. Yes.

Q. Okay. So you agreed with everything in this comment at the time, or did you not?

Page 362

A. I'll say at the time.

Q. Okay. All right. Is there, to the best of your knowledge, is there any other comment on our department stationery updating or later on this case?

A. I thought I provided everything I did to Mr. McCann. So --

Q. Well, that's not my question. Is there any other, can you identify any other document on your department's letterhead with the county executive's name, the acting director's name, you know, the official Baltimore County logo, seal? I mean, any other supplemental or updated document adding to or revising or repealing anything in this document?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Yeah, go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Multiple objections to that question, but the way it's phrased with the letterhead and official seal, an also he's asked and answered this to the best of his ability.

JUDGE MURPHY: Right. I mean, Mr. Zimmerman, it's not a fair question. It's not a fair question,

Page 363

because first of all, it's multiple pages here, and so he hasn't gone through each page. He remembers working on it as a team is what he indicated. Remember, he's not a paid expert witness, he's a county witness that came in at my request, and so to ask him whether there's some other document that has the county seal with the county executive, I mean, how is he, and he's already said to Mr. McCann in response that there's lot, there were lots of submittals, there were lots of documents. How he supposed to know that?

MR. ZIMMERMAN: Well --

JUDGE MURPHY: I mean, in fairness.

MR. ZIMMERMAN: Well, I'll just say, and then I'll move on. I was just trying to ask him as a county staff member if there was any update, any other document that, you know, is sent to the file really from the department. That's, I didn't think it was that complicated of a question.

JUDGE MURPHY: I mean, I think you're assuming that he has it all memorized, every document that gets sent, and so can you just [indiscernible]

Page 364

MR. ZIMMERMAN: All right. I'll move on, I'll move on.

JUDGE MURPHY: Let's get to the question. I sustain the objection.

BY MR. ZIMMERMAN:

Q. And what I wanted to, and now I'm moving onto the email which the Judge asked you about a little while ago. So I think, correct me if I'm wrong, Terry Curtis is kind of the messenger, but not a traffic engineer?

A. Yes, he works for the ZAC, the Zoning Advisory Committee. He is just a representative for that ZAC, but he does not work for traffic.

Q. All right. He also does a lot of work on floodplains, right?

A. That's what mainly is line of expertise.

Q. Okay. So what I wanted to ask you about, paragraph 2, it does refer to three LOS F-rated intersections along Falls Road, correct?

A. Yes.

Q. So does that corroborate that one way or

Page 365

another it's relevant to look at all three intersections?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Mr. Zimmerman, I mean, he was clear at the beginning that Seminary and Falls Road is in a different traffic shed. He was clear. I mean, no matter how many times you ask him, he is still going to say the same thing, which is Seminary and Falls is in one traffic shed, and Greenspring and Falls and Joppa and Falls are in the other traffic shed.

So does it corroborate, I mean, this was a document written by Terry Curtis, and when I asked him about it, he said I can sort of remember, but not, I think he actually said he couldn't remember it, so I'm going to sustain the objection. So [indiscernible]

MR. ZIMMERMAN: I wasn't asking him if --

JUDGE MURPHY: -- a fair question, please.

MR. ZIMMERMAN: I wasn't asking him for a different shed. I was just asking him whether this is indicative of some relevance of the intersection, that's all.

JUDGE MURPHY: Irrelevance of the intersection?

Page 366

MR. ZIMMERMAN: Yeah, the F, when you have three LOS F-rated intersections, the third one is obviously Seminary and Falls, and I was just trying to ask if it had some relevance. I wasn't trying to get him to deny or to change his testimony about --

JUDGE MURPHY: His testimony was that I think in the traffic impact study they did request that his, his department did request, did request from the developer's traffic person expert to actually analyze all of them, made him analyze all of them, even though it's not even in the shed.

MR. ZIMMERMAN: Okay. I'm moving on.

JUDGE MURPHY: Okay. Sustained. Thank you.

MR. ZIMMERMAN: I'm moving on, I'm moving on. Okay.

BY MR. ZIMMERMAN:

Q. Just by way of background, so Mr. Nebre, just so we're, this exhibit 9, and the other one was People's Counsel 6. Exhibit 9, I've got the county public records on basic services maps. You're familiar with this, aren't you?

Page 367

A. Yes, I am.

Q. Okay. So, and I'm looking at the inter office correspondence dated February 24, 2022.

JUDGE MURPHY: You're going to have to zoom in. You have it, it's really, really, really small. Yep, just hit the plus sign.

MR. ZIMMERMAN: Yeah, let me do that. Sorry.

JUDGE MURPHY: That's all right. You're getting there. I mean, look at you putting stuff on the screen, Mr. Zimmerman. We're making progress here.

MR. ZIMMERMAN: Thank you very much. So --

JUDGE MURPHY: Move over, move it over into the middle of the screen.

MR. ZIMMERMAN: Let's see.

JUDGE MURPHY: See the arrow at the bottom?

MR. ZIMMERMAN: Yeah, got it. Wait a minute.

JUDGE MURPHY: There you go. Hit the arrow. There you go. Zoom in some more. It's still small. All right. You've got to move it over.

MR. ZIMMERMAN: Is that too big?

JUDGE MURPHY: Well, no, but you have to move

Page 368

the document to the, there you go. You're getting it.

MR. ZIMMERMAN: One thing at a time here.

JUDGE MURPHY: Unless Rebecca is helping you.

MR. ZIMMERMAN: No, I'm doing this by myself.

JUDGE MURPHY: You're doing it yourself. All right.

BY MR. ZIMMERMAN:

Q. All right. Just by way of background, have you seen this document before, Mr. Nebre?

A. Yes.

Q. Okay. So just, we're scrolling down. Just to kind of, you know, complete or, the information about F-level intersections, there are actually 12, are there not, in the county?

A. I mean, whatever is [indiscernible]

Q. Yeah. I'm not saying there was anything, you know, intentionally wrong or whatever with your previous answer, I'm just trying to get this, you know, I don't expect you to remember it on top of your head.

A. I was trying to just eyeball it from the map.

Page 369

Q. We've got 12 in the county, and they're all listed in this People's Counsel 9, and there we see the, well, we've got Falls and Joppa, Falls and Greenspring Valley, and I think if we went up a little, we'd get back to Seminary. Where is it? There it is, yeah. So we've got, whether it's, you know, what impact it has is to be determined, but we have three of the 12 F-level intersections in this area, correct?

A. Yes. You've got, three of them are on the list.

Q. Okay. And I think maybe you were asked, but you don't happen to know how long they've been level F?

A. No, I don't.

Q. All right. And maybe this is supplementing the Judge's question, but you don't happen to know what's in the capital, county's capital budget at this time for any plans to, for the county to do something to improve these intersections?

A. Not that I know.

Q. Okay. Okay.

Page 370

MR. ZIMMERMAN: I think that's all I need to share for the time being, Judge.

JUDGE MURPHY: You can just hit stop.

MR. ZIMMERMAN: We can get out of the sharing. Oh, here we go.

JUDGE MURPHY: Just hit stop sharing.

MR. ZIMMERMAN: Got it. Okay. Thank you.

JUDGE MURPHY: Look at that.

MR. ZIMMERMAN: Okay. I'm going to try to get through this as --

JUDGE MURPHY: Hold on. So exhibit 6 and 9, you want to offer those?

MR. ZIMMERMAN: All right, yes, yes. I was going to offer them all together, but yes, 6 and 9, yes.

JUDGE MURPHY: Okay.

MR. ZIMMERMAN: Background public records, yes.

JUDGE MURPHY: Mr. Rosenblatt, any objection?

MR. ROSENBLATT: No. I think 6 is already in, and 9 is public record. No objection.

JUDGE MURPHY: Okay. And I'm sure Mr. McCann has no objection.

Page 371

MR. MCCANN: No objection. Thank you.

JUDGE MURPHY: Thank you.

(County Exhibit No. 6 was marked for identification and entered into evidence.)

(County Exhibit No. 9 was marked for identification and entered into evidence.)

BY MR. ZIMMERMAN:

Q. So Mr. Nebre, I do want to ask you, did you work on the Terry Curtis email? Since we know he's not a traffic engineer, who worked on that email, do you know?

MR. ROSENBLATT: Objection. Objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: That was asked and answered. Actually I almost objected the last time he asked who worked on that, because it was already asked and answered.

JUDGE MURPHY: Who worked on that? I have to be honest, I don't remember that question. I didn't ask it. When I showed it to him, he said I don't remember it, is what I remember him saying. So let me, I'll overrule it.

Page 372

Go ahead, Mr. Zimmerman.

BY MR. ZIMMERMAN:

Q. Do you know, do you happen to know who worked on that and gave the information to Terry Curtis to send to the Zoning Advisory Committee?

A. I mean, we send our portion, but his name is the one on, if it's sent by Terry Curtis, he may be the one that compiled it, but I can't say for sure.

Q. Okay. So we know he didn't do it, but somebody else in your office did it, but you don't remember?

A. There's a certain portion that was pertaining to traffic impact studies, or traffic engineering portion, and that was, we gave our comment to somebody, whether that was passed to Terry or did we send it directly to Terry, I don't know.

Q. Okay. And you don't remember at this moment that you were copied on the email?

A. No, I don't.

Q. Okay. But anyway, assuming you got the email, you didn't, you know, raise any objection to it?

Page 373

All right.

JUDGE MURPHY: Well, how is he, I mean, he's going to raise an objection to an email that Mr. Curtis sent? I mean, he is, this is the representative for the ZAC comments, when they do the ZAC committee, he is the one, you know?

MR. ZIMMERMAN: All right. I'm going to move on. I get it, I got it.

JUDGE MURPHY: Thank you.

BY MR. ZIMMERMAN:

Q. Now, I gather that from time to time you and/or your department, various people, have reviewed various submissions by the developer's traffic engineer, correct?

A. Yes.

Q. Okay. What I'd like to note is have you or your department produced a written report describing the traffic generation expected, describing each F level intersection, which direction it's F, what the deviation is from the required, you know, standard for waiting, you know, the cycles and so on. Is there any like report

Page 374

that's come from your office, other than kind of agreeing with some of the things, or all the things that the developer's traffic engineer is kind of telling you guys?

A. Not like a report, no.

Q. Okay. Can you, do you have or could you give us a chart showing with the three intersections in each direction which is F, which is not F, and what the deviations are, you know, you know, how much each situation exceeds what is required to get it down to D?

BY MR. ZIMMERMAN:

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Can you do that so that we would know for each intersection the situation?

JUDGE MURPHY: Mr. Rosenblatt, objection?

MR. ROSENBLATT: He's asking a live witness to generate a chart in the future.

JUDGE MURPHY: I understand. Yeah, Mr. Zimmerman, I mean, I guess you could have asked him that before he came today. I mean, he doesn't have any other document or, I mean, Mr. Nebre, do you know whether that information is available online by any chance? I'll just

Page 375

go there with that.

MR. NEBRE: I think when he's asking about deviation, that's, you know, again, that's like a study in itself. But, I mean, so, but we do have information about, you know, where the failing direction is for each intersection. That could be exhibited, but like I said, just like doing it on the fly right now --

JUDGE MURPHY: No, no, no, I wasn't asking you to. Understood. My question is could you, is it available to him.

MR. ZIMMERMAN: Yeah, I didn't mean on the fly.

JUDGE MURPHY: Well, I know. I know you were asking whether he could produce a document at some other point later on in the future. Sustain the objection.

I mean, you can, you know, at some point if you wanted to ask that, I mean, you could certainly, you know, send a request to him.

MR. ZIMMERMAN: All right. So, all right. I don't want to repeat.

BY MR. ZIMMERMAN:

Q. But at this point, at least today, you are

Page 376

not able to tell us in which of the four directions or for each intersection the F level is applicable?

A. Yeah, I can't tell at this point.

Q. Okay. So it could be, it could be one in each intersection, it could be all four?

A. Yes.

Q. All right. Okay. And do you have, is there a diagram that you have of the before and after traffic improvements to show these lanes that you were trying to describe?

A. Yes, it's in the traffic impact study.

Q. The traffic engineers? The developer's engineer study?

A. Yes, they show an exhibit on the new lane configuration.

Q. And what is your assumption, what familiarity do you have as to how many lots are proposed, the nature of the dwellings, and what is assumed as to the trip generation?

A. I can't say that off the top of my head. I just, I can only, you know, give like what I, just a

Page 377

rough feel. I mean, I think it's about, I thought it more or less 100 units, but, I mean, again, that is all stated in the traffic impact study already.

Q. Do you know how the trip generation numbers or assumptions were assumed or estimated?

A. They were based off the trip generation reports, which is a standard traffic engineer document based on certain land uses, what the projected numbers from a site will be generated.

Q. The Institute of Traffic Engineers Manual?

A. Yes, the ITE.

Q. Okay. Correct me if I'm wrong, but is that manual based on a kind of average of study of many different land uses?

A. Yeah. As they kind of state in their manual what sites they surveyed, how many sites they surveyed, and yeah, it's based off like statistical analysis there.

Q. Could it be 100 sites, or 200? Do you have any idea how many sites?

A. Oh, for certain land uses? Yeah,

Page 378

different land uses had a different amount of surveys. In some of them they caution you, just take it with a grain of salt, because they only surveyed a site or two.

Q. How many, do you know how many they would have studied for this type of use?

A. That one, since like a single home residential, that's a pretty common site, so I think there as a fair amount of sites that they can survey for that one. A lot of data points I'd say. So something that, with no caution, I don't think there would be a caution for that one.

Q. Is it plausible that, you know, some types of residential development would be at the high end, and others at the low end, that they're not all in the middle?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: Just is it plausible?

JUDGE MURPHY: So Mr. Zimmerman, I'll sustain the objection. Can you just rephrase the question?

BY MR. ZIMMERMAN:

Page 379

Q. Well, let me ask it this way, Mr. Nebre. In order to get a better or best estimate of the likely traffic generation from the proposed development, would it be appropriate or reasonable to have traffic counts done in the neighborhood at intersections on Joppa Road and/or Seminary that are relatively nearby and see what the actual counts are in that area?

A. It can be done that way. I've seen very few traffic impact studies where they've taken that approach, but we have the trip generation manual for a reason, so, you know, so it could be just taken like, you know, as a standard book. So yeah, I don't know what you're getting at there, but it can be done, but it wasn't, so we don't object to not having it done that way. I mean, all traffic impact studies that we've received have, typically go through the ITE manual unless there's an overwhelming reason not to do so, and with the land use such as detached homes, there's not an overwhelming reason not to use the trip generation manual.

Q. How hard would it be to do traffic counts

Page 380

on Tally Ho and Joppa, for example? What is, is it White Manor? You know, White Manor, do you know the intersections into Joppa Road, in the area?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: How hard would it be to do traffic counts?

JUDGE MURPHY: Mr. Zimmerman, I think maybe just, yeah, the question, I mean, my understanding is that Mr. Nebre's division, they just do traffic counts. I thought he said in his direct at the intersections for, if it's D, E and F, that's where they do traffic counts. They don't just go to every street near the development, right? Am I right, Mr. Nebre?

MR. NEBRE: Yes. For our, our typical traffic counts, we count all signalized intersections in the county, and it is either a one-year cycle or a three-year cycle, depending on the grades.

Judge, may I interrupt here? I'm sorry to say, I was not expecting to be here this long, and I have to pick up my son soon, so I don't, if there's like any

Page 381

pressing issues, I don't know like how long I'm going to be expected to stay here.

JUDGE MURPHY: Gosh, no problem. What time do you have to be there?

MR. NEBRE: I typically leave like two minutes ago.

JUDGE MURPHY: Two minutes ago? All right. Mr. Zimmerman --

MR. ZIMMERMAN: I've got two or three more questions, and then I'm done.

JUDGE MURPHY: Make them relevant to this case.

BY MR. ZIMMERMAN:

Q. At the risk of whatever, given that this is a special variance situation, do you think it's worth reconsidering whether actual traffic counts, you know, should be done to see whether the IT manual is accurate?

A. For me, no, I don't think so. I mean, we know that there's going to generate some sort of traffic. The question is how much traffic will be generated, so I don't think like a special case count needs to be done for this for traffic generation purposes.

Page 382

Q. Okay. And you don't happen to remember the number that the developer's engineer is assuming based on ITE?

A. No, I don't.

Q. Okay. Final question. Your department doesn't look at the residential performance standards on Mays Chapel or on traffic or anything like that. You don't look at the zoning reg section 260 standards?

A. No, not when I review the traffic impact studies, I don't.

Q. Okay. any further comment on whether a Mays Chapel connection would to some extent reduce the traffic going into the F level intersection at Joppa and Falls?

MR. ROSENBLATT: Objection, asked and answered.

JUDGE MURPHY: Yeah, he already answered that, and yeah, so any other comment, not necessary. All right.

MR. ZIMMERMAN: That's it. Judge, that is all I have. Thank you.

JUDGE MURPHY: Thank you, Mr. Zimmerman.

Page 383

MR. ROSENBLATT: Judge, I had two questions that I think will take one minute.

JUDGE MURPHY: Wait, I thought you had no questions.

MR. WYATT: Judge Murphy, if I may. I actually have a few questions of this witness. I may be more than a few minutes. I don't know how you would like to handle that.

JUDGE MURPHY: Okay. So I, okay, hold on one second. Mr. Rosenblatt, I thought you didn't have any questions.

MR. ROSENBLATT: I didn't have any questions based off your questions, but I just have a few that I think will clarify points, and as the movant in the zoning case, we are typically given a last word so to speak, so --

JUDGE MURPHY: With a county witness?

MR. ROSENBLATT: Yes.

JUDGE MURPHY: Would not a county witness, no, and Mr. Nebre needs to actually leave. He was my witness today, and so Mr. Wyatt, I mean, again, you were here as

Page 384

an interested neighbor, and so unfortunately, I mean, I don't want to keep Mr. Nebre any longer.

He has already been here for an hour and a half today. I'm not sure why we started by the way at 1:30, we could have started at 10:00. So I can't, I'm not going to keep Mr. Nebre. He has to go pick up his son, and so if you wanted to have him come back at some point when it gets to your case, if you wanted to recall him, that's fine, but I'm not going to make him stay here today. Mr. Nebre, are you there?

MR. NEBRE: Yes, I am.

JUDGE MURPHY: I know you are. All right. Thank you very much, and also Ms. Daniels, she is also free to go. So thank you both for coming.

MR. NEBRE: All right. Thank you.

JUDGE MURPHY: Appreciate it.

MR. WYATT: Your Honor, just so I'm clear, you're releasing the witness without the full ability of participating panelists?

JUDGE MURPHY: No, not at all. You can, so again, you know how this works, you know how this works.

Page 385

So what we're doing is this is, these are the county witnesses. The county witnesses were, you know, giving information about whether or not there's unresolved conditions or comments on a development plan.

You can certainly call him back as a witness at some point when the Protestants go forward. We haven't even gotten to the Developer's case, as you know. So next we're going to do the developer's case, then we're going to have probably Mr. McCann's case, then we're going to have Mr. Zimmerman's case, and certainly, you know, you can absolutely call him back.

If you want to do that, you can certainly do that, okay? So you have every opportunity to. I mean, he's available, he's a county witness. There's no problem with doing that or calling any of the other county witnesses. So yeah, but I don't want to keep Mr. Nebre when he has to go pick up his son and had no idea he would be here for an hour and a half.

MR. WYATT: I understand. I didn't know his schedule, and I simply wanted the opportunity that everyone else had today while he was here at the hearing

Page 386

to ask a few simple questions. I don't intend to disrupt the proceeding, I'm not going to be asking every single witness questions, but he was a very important witness.

JUDGE MURPHY: Sure.

MR. WYATT: Because he is a traffic witness, he's the county traffic witness, so I just want to be clear. I shouldn't be required to call him, I should have had the opportunity I believe today to ask questions subject to his scheduling. But so be it. I registered my objection or my issue with Your Honor.

JUDGE MURPHY: No problem. I had no idea he had to leave either. He just, did you hear him speak up and say that at 3:00 he said I was supposed to leave two minutes ago to pick up my son.

And so, and typically what happens in these cases is DPR comes in and testifies for the traffic department. That's really the way it customarily works in development plans. I felt like we really needed to in this case bring him in so we were all kind of better off for that. So, but there's no problem if again, in recalling him as a witness if you have questions you want

Page 387

to ask hm, and so we can certainly do that, okay? So, I mean, you'll have every opportunity. I just want to make sure that's clear for the record.

Okay. We are now, Mr. Rosenblatt --

MR. ROSENBLATT: So, Judge, there's one more government, Erin Kuhn from SHA is here. I was going to ask, could we just take a 2-minute break, and then she will be my first, she will be the last government witness, or first of mine, however you view it, and then we'll jump into our case.

JUDGE MURPHY: Sure, absolutely. So we'll do, like how long do you need? Like 10 minutes, or 5 minutes?

MR. ROSENBLATT: Five minutes is fine.

JUDGE MURPHY: All right. We'll take 5 minutes. I'll pause the record.

MR. ZIMMERMAN: Judge, can I say one thing? So you had mentioned opening statements or whatever. I'm willing to defer my, I was going to do a statement, but in order to get things moving, I'd be glad to defer that until, you know, until my case, so we get, so we keep on

Page 388

moving.

JUDGE MURPHY: Sure. And Mr. Rosenblatt, I guess you're going to defer, if you had an opening statement, I guess --

MR. ROSENBLATT: I'm sorry, I didn't mean to cut you off. I also wanted, want to give an opening statement. I was going to do it after, because it's a government witness and I'm trying to get her back to her day as soon as I can, but after that it would be sort of the official opening of our developer witnesses, and I'll do it at that time.

JUDGE MURPHY: Okay. Sounds good. All right. I'll pause, did you say 10 minutes? Is that what you said?

MR. ROSENBLATT: Five minutes is plenty.

JUDGE MURPHY: Five minutes. Okay. Thank you.

MR. ROSENBLATT: Thank you.

(Whereupon there was a brief recess)

JUDGE MURPHY: Back on the record after a break. And Mr. Rosenblatt, you wanted to call a witness from the State Highway Administration I think you said?

Page 389

MR. ROSENBLATT: Yes, that's correct. Her name is Erin Kuhn, K-U-H-N. I see her as a participant.

JUDGE MURPHY: Okay. Would you raise your right hand, please?

Whereupon,

ERIN KUHN

A witness of lawful age, after being duly sworn to tell the truth, the whole truth and nothing but the truth, testified as follows:

JUDGE MURPHY: All right, Mr. Rosenblatt. And again, just for the record, we're just going to come back and do opening so that we can have Ms. Kuhn testify first and move her out of here so she can get back to work.

DIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Thank you. Good afternoon, Ms. Kuhn.

A. Good afternoon.

Q. With who are you employed, and what is your position?

A. I work for the Maryland Department of Transportation, State Highway Administration. I am the

Page 390

Assistant District Engineer for Traffic at the District 4 office, which covers Baltimore and Harford County.

Q. Is that the highest position in traffic a the district level?

A. Yes.

Q. And how long have you had that job?

A. Fifteen years.

Q. And can you just in a couple sentences tell the Judge what your duties and responsibilities are?

A. Responsible for safety and operations along the state highways in Baltimore and Harford County.

Q. Okay. As part of your job, does your district review traffic studies and development plans and zoning petitions and comment on various proposals in Baltimore County?

A. We do, as far as the traffic impact studies and development plans. Not necessarily the zoning issues.

Q. Let's talk about this project, Greenspring Manor. Did your department review a traffic study and analysis back in December of 2020?

Page 391

A. Yes, we did.

Q. And I'm going to share just a series of exhibits with you starting with, and everyone I apologize for the numbering, but we had pre-numbered other exhibits, and the hearings get out of order. So I'm showing you Developer's exhibit 15, and this is a letter from MDOT/SHA, dated January 21, 2021 to Mike Lenhart of Lenhart Consulting about this project. Do you recall this letter, Ms. Kuhn?

A. Yes.

Q. And at this time in January of 2021, what was MDOT/SHA's position with respect to the traffic impact analysis for this project?

A. Let me just make sure I'm looking at the correct letter. Yes, this was our approval letter where we approved the traffic impact study.

Q. Okay.

A. And indicated that an access permit would be needed for the improvements that are, would be required on Falls Road at Joppa Road.

Q. Okay. And so did this study that was

Page 392

approved at this time, did it include the proposed improvements to the intersection of Joppa Road and Falls Road that we heard about? I'm showing you Developer's exhibit 16, the before/after.

A. Yes, it did. That appears to be the improvements that were shown in the traffic impact study, which we approved.

Q. And I'll show you what has been marked as Developer's Exhibit 17, and this is a letter from MDOT/SHA dated August 4, 2021 to Lloyd Moxley, the development manager for Baltimore County, and ask you at this time did SHA/MDOT take a position as to the request for development plan approval in this case? I'm going to zoom in, given the bad copy.

A. And our response was that we had no objection to the development plan approval, which we usually do not since we don't approve or deny development, but, you know, we were reviewing the roadway improvement plans.

Q. And I guess likewise I'll show you what's been marked as, I just closed out of it. Bear with me.

Page 393

MR. MCCANN: Adam, while you're doing that, sorry to interrupt, but listen, I have no problem if we just introduced these exhibits that Adam has already sent me, which are 17 through 22. I'm sorry, 15 through 22, they're all State Highway documents. I'm not so sure why we need this witness to testify, she's not the author of any of these in particular, but they are public records nonetheless, so --

JUDGE MURPHY: He may want her go go through them just to, I mean, as part of her testimony, so, but you don't object to 15 through 22, so they will be admitted. Mr. Zimmerman, any objection to those?

MR. ZIMMERMAN: I haven't seen them, but I have no objection.

JUDGE MURPHY: Okay.

MR. ROSENBLATT: They were emailed to you before the hearing, Mr. Zimmerman. Just, you have them in your inbox.

MR. ZIMMERMAN: I guess I haven't seen the email. All right. Anyway, I have no objection.

JUDGE MURPHY: All right.

Page 394

(Developer Exhibit Nos. 15-22 were marked for identification and entered into evidence.)

JUDGE MURPHY: Go ahead, Mr. Rosenblatt.

MR. ROSENBLATT: Okay. I'll move as quickly as I can, but we are going to go through these.

BY MR. ROSENBLATT:

Q. Ms. Kuhn, I'll just ask you a question or two about each one. So turning to Developer's Exhibit 18, this is a letter dated September 13, 2021 from SHA to Kristin Lewis [phonetic] in the County's permits department, and ask you at this time did SHA express an opinion as to the petition for special hearing for special variance that is sought in this case.

A. No, we did not.

Q. Did you have any, did the department express any objection to the approval of the special variance plan?

A. We did not. We normally would not since that's really a county issue.

Q. Okay. Now, following these comments from the last being September 2021, did there come a time

Page 395

where the developer's consultant proposed to make an additional physical improvement to the intersection of Greenspring Valley Road and Falls Road?

A. Yes.

Q. I'm going to show you what's been marked as Developer's Exhibit 19. If you can see it, I can zoom in if needed, but does the restriping/reconfiguration depicted in Developer's Exhibit 19, is this the proposal that was submitted by the Developer's consultant to MDOT/SHA for review?

A. Yes, that's correct.

Q. And I show you what's been marked as Developer's Exhibit 20. This is a letter from MDOT/SHA dated March 7, 2022 to the traffic consultant for the developer. Did MDOT/SHA recommend approval of the physical improvements that were proposed to Greenspring Valley and Falls Roads?

A. No, we did not.

Q. Did the Department express any objection to the improvements that are proposed at Joppa Road and Falls Road?

Page 396

A. No, we supported those improvements at Joppa and Falls, but not the proposed improvements at Fall and Greenspring Valley.

Q. I'm going to turn your attention to the top paragraph on the screen right now and ask you, can you explain what MDOT/SHA's position is as to the impact that the proposed improvement at Joppa and Falls will have on the corridor. In other words, from Joppa Road up to Seminary Avenue on Falls Road?

A. We had asked originally when we first got the traffic impact study that all three signals at Seminary, Greenspring Valley and Falls be analyzed since they do all operate in a coordinated signal system together, and so as far as the improvements to be made at Falls and Joppa, those studies showed with those improvements that that would improve the corridor operations, it would reduce the delay, specifically reduce travel time through the corridor with the improvements that are being made at the Joppa Road intersection.

Q. Okay. You testified that the studies show

Page 397

that. Does MDOT/SHA agree with the report as to the impact that this will have on travel times along the corridor?

A. Yes, we do.

Q. Did the developer following issuance of this letter try again to make a submittal arguing to make the physical improvements that were proposed to Greenspring Valley and Falls Road?

A. Yes.

Q. And I'll show you what's been marked as Developer's Exhibit 21. This is the letter dated May 9, 2022, again from MDOT/SHA to traffic consultant for the developer, and again, did MDOT/SHA, did they support the proposed improvement at the intersection of Greenspring Valley Road and Falls Road?

A. We did not support the proposed improvement at Greenspring Valley, and at Falls and Greenspring Valley, we do support the proposed improvement at Falls and Joppa. We did not feel that the proposed improvement at Falls and Greenspring Valley would be beneficial, and again, we noted that travel

Page 398

times would be reduced through the corridor with just the improvements at Joppa Road.

Q. I'm going to ask you to just explain in a little more detail, and I've zoomed in on the paragraph of this letter that starts with during the morning peak hour. Can you just explain to the Judge what MDOT/SHA's position is on the impact in terms of timing that the proposed improvements would have on the corridor? In other words, from, on Falls Road from Joppa Road up through Seminary Avenue?

A. Well, the proposed --

MR. MCCANN: I'm going to object. I'm sorry to interrupt. I'm going to object, Judge.

JUDGE MURPHY: Objection?

MR. MCCANN: You know, basically on foundation. Number one, Ms. Kuhn is not the author of any of these letters that we've been looking at. Again, I don't mind them coming in, but she's being asked to talk substantively about the content of them, and now being asked for the first time to state the official position of SHA on issues that apparently are reflected in these

Page 399

letters.

I don't think there's been any foundation for either her involvement in any of these letters or the review of any of the reports, nor any foundation for her authority to speak on behalf of SHA. So I don't want to prolong things, but I don't want to get too far in this.

JUDGE MURPHY: Okay. I'm going to overrule the objection. She has actually indicated that she recognizes the document, she's here to speak on behalf of MDOT and SHA, and --

MR. MCCANN: I know that [indiscernible]

JUDGE MURPHY: -- and I'd actually like to hear what she has to say. Thank you.

MR. MCCANN: It is highly unusual to have, and I'm not sure why we're in Mr. Rosenblatt's case for this, this is the first time I've ever had a representative from State Highway testify as part of agency part of the case. So, but I guess that's not an objection, but I didn't hear her say she's here to testify on behalf of [indiscernible] is that what she said?

JUDGE MURPHY: Yes, that's what I heard her

Page 400

say. She is here on behalf of them, and she's from the department, and I want to hear what she has to say, so overruled. Go ahead.

THE WITNESS: Okay. The question was?

BY MR. ROSENBLATT:

Q. Just to state it more briefly, Ms. Kuhn, I have zoomed in on the paragraph that starts with during the morning peak hour of Exhibit 21, and I'm asking you to explain MDOT/SHA's position as to what impact the improvements that are being made at Joppa and Falls will have on the timing, the travel time on the corridor along Falls from Joppa up through Seminary Avenue.

A. Yes. The improvements on Joppa Road, adding the additional lanes on Joppa Road. When you add an additional lane through an intersection, it helps get more traffic through the intersection more quickly by getting more traffic through Joppa Road sides of the intersection more quickly, and that would mean that they would need less time in the signal, so we could give more green time to Falls Road, similar to what Chris has Asid, so Falls Road is our main concern at the state, that's

Page 401

our main corridor that we want to maintain traffic flow, so if we can give more green time to Falls Road, that is actually going to improve the corridor, because these three signals are timed together, and, you know, one intersection can actually hold up another intersection. So more time to Falls Road gets more traffic through along Falls Road, and as shown in the study, will reduce the travel time through the corridor, and these numbers were pulled directly from the study which analyzed the corridor and looked at travel times though the corridor both with and without the improvements.

Q. And your department as you previously indicated, have you approved the study?

A. Yes, we have.

Q. Okay. And in the next paragraph, just to ask you a couple questions about this. The letter reads the analysis contained in the report show that the intersections do not operate with failing levels of service. What methodology is that speaking to, if you know?

A. The methodologies used in the report were

Page 402

critical lane volume and highway capacity manual, current highway capacity manual.

Q. So under those two methodologies, are the intersections along Falls Road going to operate at a failing level once the improvements at Joppa and Falls Road are made?

A. Which intersections? All of them?

Q. Yes.

A. The Greenspring Valley Road with the highway capacity manual method and CLV is not currently failing, and will not be in the future. I believe Joppa Road is shown as level of service, about an E, which is close enough to failing. Even though it's not an F, but it operates at an E, the, with the improvements made, it will improve. I'm not sure if that brings it to, up to the next level, but it does improve it. I'd have to check.

Q. Okay. And, I'm sorry, I didn't mean to cut you off. Did you have anything else to say about that statement?

A. I think that it, that improvements do

Page 403

bring it from an E to a D, and actually yes, according to the study, that is the case.

Q. All right. And one final exhibit, I'm going to show you what's been marked as Developer's Exhibit 22, this is a letter from MDOT/SHA dated June 10, 2022 to the developer's consultant. Did there come a time after the last exhibit we looked at when the consultant for the developer reached out to discuss the potential retiming of the traffic signals along the Falls Road corridor?

A. Yes.

Q. And did, does this letter confirm, or strike that. Can you explain to the extent you haven't already, what will take place once the physical improvements are made at Joppa and Falls with respect to retiming of the intersections on the Falls Road corridor?

A. Again, since the three signals do operate in a coordinated signal system, we don't just look at one at a time or retime one signal and not the others, we have to look at the whole corridor, and so if changes are made geometrically to an intersection, we are going to

Page 404

look at retiming it. In this case, we would look at retiming all three of these intersections, and that I believe is what this letter is saying, that once the improvements are made, then we will go out and retime the three intersections.

Q. Will that help to sort of maximize the benefit of the physical improvement made at one intersection?

A. Yes. And generally timing is developed and implemented, and signal technicians will actually go on site and make adjustments in the field after the improvement is made to make sure that it's functioning well.

Q. And I guess one final question. What is SHA's position with respect to the impact, positive or negative, that the proposed development and the proposed improvement to Joppa and Falls Road will have on the Falls Road corridor?

A. The proposed development will increase traffic, but the proposed improvement will improve operations and flow along the corridor.

Page 405

Q. And that last statement about improvement of, along the corridor, does that include even with the new trips proposed by this development?

A. Yes. It would be, the travel times will be reduced from existing and background with the new development and the improvements.

Q. Thank you.

MR. ROSENBLATT: I have no further questions.

JUDGE MURPHY: So ma'am, before I ask the attorneys, I just want to confirm what you said.

EXAMNATION BY THE COURT

BY JUDGE MURPHY:

Q. What I thought you said was the level of service for Joppa and Falls is currently, SHA rates that at an E? Is that right?

A. Yes.

Q. Currently. And then you were, your testimony was I thought you said that, first you said you were unsure whether it brings it to a level D, but then you changed that to a D, is that what you said, or not?

A. I did. I pulled up the traffic study and

Page 406

did confirm that the study shows that it will go from an E to a D with the improvements.

Q. And the methodology that the SHA uses, is that different from the day the county rates intersections?

A. Yes, it is.

Q. Okay. I know the county we talked about Nebre today that used the loaded cycle methodology and the county, so the state does not use that method?

A. We do not. That is an older highway capacity manual method I think from 1969, and we use the latest version of the highway capacity manual, as well as critical lane volume.

Q. Okay. And let me just ask one more question about Greenspring Valley and Falls Road. Your testimony was that the SHA did not recommend those improvements, and why was that?

A. The improvements we did not feel would be beneficial. It was recommending pretty much a 30-foot double left turn lane, a 30-foot long lane, while you can, calculations might show an improvement, I don't see

Page 407

that really being used and being beneficial, especially when that if you make a double left from Greenspring Valley Road to northbound Falls Road, there is actually two lanes on northbound Falls Road, but the one lane drops, it goes down to one lane.

So why would you want to use that lane knowing that you're going to, that you're going to lose the lane right after the intersection?

Q. So the lane, there's one that goes, they both go left, and then one goes left and straight into Greenspring Station, right?

A. So right now there's just a single left-turn lane from Greenspring Valley to Falls Road. The proposal would be for widening a little bit so that you would have two left turn lanes. Actually there are two receiving lanes on Falls Road, so we could do that, but again, the left turn, the proposal would have a left turn lane that could hold one, maybe two cars, and then you are turning into a lane on Falls Road that then drops a couple of hundred feet from the intersection.

Q. Oh, that's right. Yeah, I remember now,

Page 408

yeah, it's that left turn. When you're going north on Falls before you get to Seminary, you are right, it's kind of like a merge lane is what I --

A. It's a merge lane. There's two lanes when you're approaching, northbound approaching Greenspring Valley Road. You can go straight through the intersection, but then as soon as you get through, that right lane, you're going to see, you know, right lane ends signs.

Q. Right.

A. And you have to get out of that lane. So that would be where we'd be double left turning people into a lane that's going to end.

Q. Got it. Okay.

A. You know, most people who know that, aggressive drivers might use that lane, but others will not want to use that lane.

Q. Got it. Okay. Thank you.

JUDGE MURPHY: All right. Mr. McCann, questions?

MR. MCCANN: Yes, thank you.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good afternoon, Ms. Kuhn. How are you?

A. Good. How are you?

Q. Good, good. Thank you. I take it you were not issues a subpoena by Mr. Rosenblatt's office to appear today, is that correct?

A. That is not correct. I was issued a subpoena.

Q. Oh, you were?

A. Yes.

Q. Did you speak to Mr. Rosenblatt prior to your testimony today about your testimony?

A. Yes, I did.

Q. Okay. You mentioned that, and I certainly recognize your name, I've seen your name before on various SHA documents, but you said that you're an assistant district engineer, correct?

A. Yes.

Q. And then there is, the district engineer is Wendy Walcott, [phonetic] correct?

A. Yes, she was. She has retired.

Q. Okay. Has anybody replaced her?

A. Sutapa Sumanta [phonetic] is now the acting district engineer.

Q. Okay. So when you indicated, and maybe I just missed it, that you are here to testify on behalf of State Highway Administration, where does that authority come from? In other words, did you check with one of your superiors? Or the appropriate person to confirm that you could officially state the position of State Highway Administration this afternoon?

A. I did check, and I did confirm, and speak with our attorneys as well.

Q. And I don't want to get into your attorney conversations, but my question is not whether you spoke to them about testifying, my question is whether you spoke to them about the issue of you being authorized to speak on behalf of SHA.

A. They were fine with me being here to explain the previously approved letters that were written by my office.

Q. Yep. And, you know, on that point, I didn't see your name as the drafter of any of these documents, exhibits 15, 17, 18, 20, 21 or 22. Am I correct that you did not draft those letters?

A. No, I did write, I did approve all of them, and I personally drafted at least one of them.

Q. You approved all of them? In what way?

A. Yes.

Q. In what way?

A. Access management is under me, so all letters before they go to the district engineer for signature, they come through me and I have to review and approve them before they go to the district engineer.

Q. Okay. Got it. But it sounds like you, even though you didn't sign them, you reviewed and approved the letters, but did you review all of the submittals from the developer's engineer in response to which these letters were issued? Did you conduct that review?

A. I had my staff that reviewed the traffic impact study. I did end up having to personally review

the traffic impact study after there was quite a few questions that came up about what was happening with it.

Q. Okay. So you reviewed the traffic impact study?

A. Yes.

Q. Anything else?

A. No.

Q. Okay. And when you say the traffic impact study, as I understand it, there's a lot of documents in this case, but that's the traffic study that's dated December, 2020, correct?

A. The December, 2020, and then there was the supplement that was issued earlier this year.

Q. Okay. According to exhibit 20, it was dated January 18, 2022. Does that sound right?

A. That sounds about right.

Q. All right. I'll show you the letter. But anything else that you reviewed as opposed to maybe your staff other than the original impact, I'm sorry, traffic impact study and that supplemental study that's referenced in exhibit 20? Did you review anything else?

Page 413

A. Not me personally. My staff does get a lot of the site plans, things from the county to review, which we generally respond with, we either ask for a traffic impact study or indicate that there's no impact to state roads and we don't have comment, but we do get sent those to review.

Q. Okay.

MR. MCCANN: Judge, could I share real quick? Thank you. Okay.

BY MR. MCCANN:

Q. Ms. Kuhn, just a couple questions about the documents themselves. So this is, I'll scroll back so you can see it a little bit. This is Exhibit 18. Do you recall you testified about that document?

A. Yes.

Q. Okay. And in this letter you say, Ms. Walcott says rather than we have no objections to the approval of the special variance plan subjected to the condition that the developer was required to obtain an access permit, et cetera. Do you see that?

A. Yes.

Page 414

Q. Okay. So it sounds like based on your testimony thus far, number one, you did no review personally any special variance plan or special variance relief that was sought by the developer in this case?

A. I did not personally, no.

Q. Okay. And I think you've also candidly acknowledged with respect to zoning issues your office would not and did not in this case review this plan for compliance or, with those, with any zoning relief, correct?

A. That's correct. We do not review for that. That's why most of the time we have no objection to these zoning type issues, because we don't have authority in that manner.

Q. Correct. In fact, when you do comment on development plans, I think you were also candid about this. You said that you don't approve the plans or disapprove them. In that regard, your authority, State Highway's authority is strictly limited to whether or not to grant an access permit or not. Is that fair?

A. We comment on whether an access permit is needed, because any work within the state right of way needs an access permit, and we will comment on whether we would like to see a traffic impact study for review. Those are the things we comment on.

Page 415

Q. Okay. And then, so getting back to the question about zoning. In this case, you've talked about level of service, at least how State Highway looks at level of service. You did not look at level of service as the county reviews level of service. Is that a fair statement?

A. That's correct.

Q. And so you, strike that. Let me show you another exhibit. This is Exhibit 21. So this is, again, a letter drafted, or signed by Wendy Walcott anyway, and this is, it looks to be like different submittal from the developer than the two that you said you reviewed. It's a letter dated April 19, 2022, that's the subject of this letter, correct?

A. Yes.

Q. Okay. And so you did not review this point by point response from Mr. Lenhart that is the

Page 416

subject of this letter, which is exhibit 21. Is that fair?

A. Actually, I did.

Q. Oh, you did? Okay. But I think you've said, and maybe I heard you wrong, but there's this discussion in this paragraph about SimTraffic, and I'll just highlight it, blow it up a little bit so you can read it better, these two paragraphs here. There's a discussion here about SimTraffic. First of all, what's SimTraffic?

A. SimTraffic is a modeling software that functions along with Synchro and SimTraffic actually are two softwares that work together. Synchro determines signal timing and level of service, and SimTraffic actually takes that information and will model it, and you can see the cars actually moving and look at visual ques and issues with traffic.

Q. Yeah. So when I see SimTraffic, that word, I see the word simulation in there. Is that pretty much what it is? It's a --

A. Yes.

Page 417

Q. So you actually, if we were to look at it, if we had the opportunity to look at it, we could actually look at how the cars are moving, a model of how the cars are moving under certain conditions based on parameters that are inputted, correct?

A. That's correct.

Q. Okay. I think you said, correct me if I'm wrong, but this discussion about the queuing and travel time and these are, this is information that was pulled directly from Mr. Lenhart's study, correct?

A. Yes.

Q. So in other words, you personally did not go back and confirm whether any of these conclusions were or were not correct, but you reviewed them in Mr., it sounds like you reviewed them in Mr. Lenhart's report and approved them, correct?

A. That's correct.

Q. Okay. Then one more exhibit, exhibit 22. I'll blow it up. This is the last exhibit, and it pertains to some signal timing that State Highway Administration will undertake, correct?

Page 418

A. Correct.

Q. So once these improvements are made, if they are made, years from now State Highway Administration will look at the timing of these lights and will I guess since you own the lights, you'll be able to adjust the timing such, in such a way to, as you put it, increase green time as much as possible for the north and southbound lanes?

A. That's correct.

Q. Okay. But sitting here today, that timing hasn't been done? It can't be done, right?

A. It could be done on paper, but we're not going to do that unless we know an improvement is going to be made, and it would need to be then modified in the field when [indiscernible]

Q. Yeah. When you say, I'm sorry. When you say could be done on paper, you mean there's an analysis that you could do with the existing improvements assumed, I mean, with the proposed improvements assumed that would give you a basis to calculate what the timing should be?

A. Yes.

Page 419

Q. Okay. But that hasn't been done?

A. No.

Q. Okay. Stay with me one second.

MR. MCCANN: That's it. Thank you, Ms. Kuhn, I appreciate it.

JUDGE MURPHY: All right. Mr. Zimmerman, any questions?

MR. ZIMMERMAN: Yes, I do. Thank you.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. Ms. Kuhn, how long has there been a difference between the state's methodology on F level intersections and the county's?

A. For as long as I have been here, 29 years.

Q. Okay.

A. Or longer.

Q. So your department hasn't tried to force the county to change to your methodology, has it?

A. No.

Q. Okay. All right.

MR. ZIMMERMAN: Maybe Mr., I hesitate to say

Page 420

this, Mr. Rosenblatt could share the photo of the Falls Greenspring Valley intersection.

MR. MCCANN: I could do that, since I have the sharing --

MR. ZIMMERMAN: Mr. McCann.

MR. MCCANN: Is that an exhibit?

MR. ZIMMERMAN: It was shown, it was shown --

SPEAKER: I think it's 19.

MR. MCCANN: Thank you. Bear with me one second.

BY MR. ZIMMERMAN:

Q. Okay. So we are looking again at that exhibit. Is that the only improvement that the Lenhart Engineering suggested, adding a left turn lane from Greenspring Valley Road, left onto North Falls Road?

A. Yes.

Q. Okay. And if I understand your testimony correctly, your department rejected it because of safety concerns?

A. We rejected it, we did not feel that it would be beneficial for safety or operations.

Page 421

Q. I mean, whenever there is merging traffic, that is an increase of the potential for hazard, correct? Something like that.

A. Yes.

Q. Okay. Okay. And there were no other even hypothetical improvements that would, were proposed for that intersection or considered, is that correct?

A. Not that I recall.

Q. Okay. And anyway, it was mentioned there were two different proposals. Were they basically the same? Can you give us a recap of what difference, if any, there were on the proposals that your department rejected?

A. I don't think there were two different proposals. It was proposed, the same basic improvement was proposed to us twice.

Q. He was trying to convince you.

A. Yes. We rejected it, and they submitted more information, and we rejected it again.

Q. Okay. It shows your independence of thoughts, right? All right. Let me ask you this. If I

Page 422

read some stack of material correctly that's in the file, there was also a proposal to improve the Falls Road/Seminary intersection, was there not?

A. I don't think there was. I believe we suggested that that be looked at.

Q. You don't recall there's some correspondence rejecting any of that? A proposal to add a left turn lane from St. Paul School north?

A. I don't recall seeing that with this development.

Q. Okay. Let me ask you about the assumptions on trip generation. What have you assumed the trip generation would be from this development?

A. Trip generations would be from the IT trip generation manual.

Q. Well, do you know what the number is that's assumed?

A. I don't. And actually, we have multiple offices at State Highway that review traffic impact studies, so the trip generation, there's two other offices that would be looking more closely at that than

Page 423

mine. That is not an area of my expertise. Mine is more in the analysis of the actual [indiscernible] that are coming through the intersection, and the needs of an area.

Q. Okay. So there's somebody else in your department that would know what the assumed trip generation is, or somebody looked at it, is that correct?

A. Yes, yes.

Q. But you don't happen to know the number?

A. I do not.

Q. Okay. You were here when I was questioning Mr. Nebre, correct?

A. Yes, I was.

Q. So what do you think of my suggestion that, to get a more accurate assessment of trip generation, it would be reasonable to do actual traffic counts at intersections, you know, going from current existing subdivisions into Joppa Road and Seminary Avenue?

JUDGE MURPHY: Hold on.

MR. ROSENBLATT: Objection.

Page 424

JUDGE MURPHY: Yeah, Mr. Zimmerman. Mr. McCann, you're showing us your emails right now. Thank you. I just wanted to make sure you knew that we were seeing your emails.

MR. MCCANN: Sorry, sorry.

JUDGE MURPHY: I'm sure you don't want us to. Mr. Zimmerman, how could she possibly answer that question? Are you asking whther she, you're asking for her opinion about whether the county should conduct traffic counts on these off streets when Mr. Nebre said that the county only conducts the traffic counts at the intersections? Is that what you're asking her?

MR. ZIMMERMAN: I'm asking her as an expert whether to get a plausibly more accurate assessment of trip generation that it would be reasonable to do traffic counts at the various intersections existing into Joppa Road and Seminary Avenue. It doesn't matter what Mr. Nebre said, I'm asking her what her view is as to, you know, best or better ways than maybe the IT manual to look at a specific situation and get a more accurate, updated trip generation assessment, especially in an

Page 425

important case. That's all.

JUDGE MURPHY: So are you asking whether SHA should conduct those traffic counts?

MR. ZIMMERMAN: No, no, I'm not asking that. I'm asking whether for somebody to do traffic counts, whether the developer, the county, it doesn't matter who, whether specific traffic counts are, stand a good chance --

JUDGE MURPHY: Should be done.

MR. ZIMMERMAN: -- of giving a more accurate assessment than just reading off the ITE manual. That's all I'm asking.

JUDGE MURPHY: All right. So do you understand the question, ma'am?

MS. KUHN: Yes.

JUDGE MURPHY: Okay.

MR. ROSENBLATT: I have the same objection.

JUDGE MURPHY: Okay. Overruled. Go ahead.

MS. KUHN: Okay. Well, the trip generation manual, the way that it is developed is by getting traffic counts at various sites. So, for example, a

Page 426

subdivision that has 100 homes or 200 homes, it takes samples of traffic counts at many different subdivisions with varying numbers of units, and as Chris I think had said, there are likely a lot of samples that have been taken at subdivisions, so the numbers in IT are probably pretty good.

To get a really good sample, if, I believe this was 62 homes, and if there's some subdivisions with similar numbers of homes and similar sized homes in a similar area, that could be counted to verify that the trip generation numbers are good, that could be useful, but I believe there's already a lot of information in the ITE, and to find specific comparisons that match exactly for this development might be difficult.

Q. Okay. Well, in your answer you've mentioned similar size subdivisions, but if you had a subdivision of 100, for example, couldn't you do the counts and then proportionately, you know, use some algebra to, you know, get an equivalent number?

MR. ROSENBLATT: Same objection.

MS. KUHN: Yes, and that's how it's done.

Page 427

JUDGE MURPHY: Overruled, the objection. Thank you.

BY MR. ZIMMERMAN:

Q. Okay. And does the IT manual indicate any degree of error or range, a variation that it assumes that there could be from the averages?

MR. ROSENBLATT: Judge, I'm sorry, I don't want to keep objecting, so I'm going to make an overall continuing objection. This is People's Counsel for Baltimore County who is now taking everyone's time who is listening to question the ITE manual, and this is an issue that is far outside of his code and charter authority to patriciate in cases, and we do not feel this is an appropriate either use of time, or something that is within his legal authority to raise in this case.

JUDGE MURPHY: Okay, well --

MR. ZIMMERMAN: We're dealing with a special variance, which is a zoning issue.

JUDGE MURPHY: Mr. Zimmerman?

MR. ZIMMERMAN: Sorry.

JUDGE MURPHY: Yeah, thank you. So he is here

Page 428

for the special variance. The special variance does have to do with traffic. He is questioning whether the best tool to use is to refer to the trip generation manual to gather that number that's in there for these 62 homes, or it's whether it's better to do a traffic count, so his question was is there any error, Ms. Kuhn, in the ITE manual that you know if in terms of the traffic counts, so I'll overrule the objection. Go ahead, ma'am. And you'll have a continuing line of objection, Mr. Rosenblatt, so you don't have to keep objecting. Go ahead, ma'am.

MS. KUHN: Yes, generally there is an error that's given in the ITE for most of these, and I'm not familiar with what it is for this type of subdivision. I'm not an expert on the trip generation manual.

MR. ZIMMERMAN: Okay. Thank you. Judge, everyone will be pleased to know that that's all the, I want to thank the witness as well as Mr. Nebre for their participation, and that's all I have. Thank you.

JUDGE MURPHY: Thank you, Mr. Zimmerman. Mr. Wyatt, do you have questions?

Page 429

MR. WYATT: Actually I do, Your Honor. Thank you.

JUDGE MURPHY: Okay. You're fine. Absolutely. Go ahead.

DIRECT EXAMINATION

BY MR. WYATT:

Q. Good afternoon, Ms. Kuhn. I'm Michael Wyatt, and I'm an adjoining property owner. I live in Seminary Ridge, which backs up to this development, the proposed development, just to give you some orientation.

So my neighbors and I are sort of new to some of these traffic issues, so I want to ask some basic questions. These are sort of the same questions I would have asked Mr. Nebre had he been able to stay around.

When we talk about the level of service standards that are off of the basic service map for Baltimore County, that is a Baltimore County maintained map, is that correct?

A. That is correct.

Q. Okay. And the state, or State Highway Administration does not maintain its own map for basic

Page 430

service maps or --

A. We do not.

Q. -- anything of that nature. So when you were saying earlier that portions of intersections may be a D or an E according to State Highway standards, there's no map on which those standards are maintained that we would be able to review today, correct?

A. That's correct.

Q. Okay. You would agree with me, would you not, that when we're talking about three class F intersections which are in rapid succession, it's all within less than a mile distance, correct?

A. Yes.

Q. All right. I'm talking about Joppa Road, Falls Road, I-83, Greenspring Valley and Falls Road, and Seminary and Falls Road. All three of those are almost within clearly under a mile distance. When you've looked at maps, they are all in pretty close proximity to one another, you would agree?

A. Yes.

Q. All right. And as far as Baltimore County

Page 431

is maintaining the basic service maps, all three of those intersections are rated as a Class F, is that correct?

A. Yes.

Q. All right. And just so we understand this point completely clearly, there is no such thing as a gradiated F. In other words, the grade of the intersection if it's an A, it's an A. There is no A+ or A- or A.1, .2 or so forth and so on. In other words, the letter grade is the letter grade, is that accurate?

A. It's similar to a letter grade as you get in school.

Q. Right. Some schools gave pluses and minuses, but some schools gave flat letter grades, and in this case the flat letter grade maintained on Baltimore County's basic service map is one letter grade, correct?

A. There's numbers behind it, but there's one letter grade, yes.

Q. All right. In other words, once you are a class F, there's no type of degree of that class F, it's a class F as far as the basic service map is concerned?

A. Correct.

Page 432

Q. Okay. All right. And there's no double F or triple F or anything like that, your F is F. E is E, D is D, and so forth and so on?

A. Yes.

Q. Mr. Zimmerman asked you earlier about, well, let's back up. So you look at a lot of the developer's traffic engineering reports as part of the basis for the letters that were introduced into, as part of your direct examination, correct?

A. Yes.

Q. All right. And as part of looking at those studies that were done by the developer's engineer, and Mr. Zimmerman asked you, started to ask you this. There is built into those reports, would you agree with me, a certain margin of error, or there's a margin of variation, because these are all theoretical based studies. The traffic engineering company didn't go out and actually count cars, because they can't, because it's based on a future possibility of development, it's all hypothetical. Would you agree?

A. As far as the trip generation, it's

Page 433

hypothetical. There should be traffic counts of existing locations.

Q. All right.

A. Which again, vary day to day, too.

Q. Right. And what I'm driving at here, because this is theoretical or hypothetical, there needs to be built into that a margin of error or potential for variation. Would you agree with that?

A. I'm not sure that you're trying to say. Traffic volumes vary from day to day.

Q. Well, for all of the conclusions reached by the developer's traffic engineering company, you would agree that those conclusions have built in within them some type of margin of error upon which the conclusions are based. Yes or no?

A. The conclusions are based on the assumptions that they have made, which obviously are assumptions and may have some variation to what actually happens when something is built.

Q. Correct. Because there's no empirical study here that a lot of this is based on theory and

Page 434

projected counts that you can't have exact, that's really what I'm saying here. Would you agree?

A. Correct, yes.

Q. All right. Do you know offhand what that margin for error is contained in the developer's traffic engineering report?

A. No, I do not.

Q. Did you have an opportunity to review any of the Baltimore County emails that were introduced as part of Mr. Nebre's testimony?

A. This afternoon?

Q. Well, before this afternoon. Let's start there.

A. I mean, I was here this afternoon, and so I was able to see emails that were put on the screen. I can't say to other emails that I may or may not have seen.

Q. And prior to today, had you seen any of those Baltimore County communications relating to traffic engineering?

A. If I was cc'd on them, I did.

Page 435

Q. All right.

A. But I don't believe I was.

Q. Okay. All right. Would you agree with me that those emails are informative, if nothing else, as it relates to interactions between the developer and Baltimore County Bureau of Traffic Engineering?

MR. ROSENBLATT: Objection.

JUDGE MURPHY: Mr. Rosenblatt?

MR. ROSENBLATT: Asking whether something is informative about communications between two other people that aren't --

JUDGE MURPHY: Yeah, and she doesn't know what, and it's so broad, too. You're not asking about a specific email, which she may or may not have been cc'd on. It's not a fair question. So if you want to rephrase that question, I'll sustain the objection.

MR. WYATT: As an expert witness, Ms. Kuhn, did you, what, if any, reliance did you place on those emails as in forming your opinion today?

MR. ROSENBLATT: Same objection to those emails. I think it's too broad.

Page 436

JUDGE MURPHY: Do you know which email you're talking about?

MR. WYATT: They were part of, I didn't write down all the exhibit numbers, but these were the emails that Mr., that were referenced during Mr. Nebre's testimony that Ms. Kuhn stated she witnessed and was watching as it occurred. I don't have all of them, or, in my possession.

JUDGE MURPHY: Right. There's five of them, and, I mean, it's not fair to the witness though just to ask, kind of in general did she, you know, find them informative or what she thought about them, because I'm not sure she even had a chance to read it.

If, you know, Mr. McCann had put them on the screen, I mean, I don't know how you want to do this, but it's just not fair to the witness to ask that question. So to the extent she could have read them on the screen and digested them and then give an opinion about them, so I'll sustain the objection.

BY MR. WYATT:

Q. Ms. Kuhn, did you review the emails that

Page 437

were put up on the screen during Mr. Nebre's testimony?

A. I read some of them. I wasn't able to read through all of them.

Q. And as a result of reading those today, to the extent you may not have been copied on any of them prior to today, what effect or what weight do you give those emails as part of your testimony now?

A. They didn't have any impact on my testimony.

Q. I'm just following up on one point Mr. McCann made, and that is you don't know sitting here today what the differences in signal timing would be if this development is approved and these highway improvements are made, correct?

A. Correct. I know there is some proposed signal timing improvements in the study submitted to us, but we would not finalize that until improvements were actually made.

Q. Okay. Thank you.

MR. WYATT: I have no further questions.

JUDGE MURPHY: Okay. And we did have Mr.

Page 438

Sachs. [phonetic] Did I say your name right?

MR. SACHS: Yes.

JUDGE MURPHY: You're an attorney, and I, you are an attorney, right?

MR. SACHS: Yes.

JUDGE MURPHY: And I didn't know if you had questions separate from Mr. Wyatt.

MR. SACHS: I don't have any now.

JUDGE MURPHY: Okay. All right.

MR. SACHS: I appreciate it.

JUDGE MURPHY: I moved you over to the panelist room. You didn't have to turn your camera on, but that's why I moved you over, because I saw you were in the file, your name was in the file.

MR. SACHS: No, I appreciate.

JUDGE MURPHY: Okay. All right. Mr. Rosenblatt, did you have any follow up, redirect?

REDIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Just one or two, Ms. Kuhn, I'm trying to, I'll try and get you back to your day. But is there,

Page 439

does SHA employ a standard methodology when reviewing traffic studies?

A. Yes.

Q. Did the study in this case comply with the methodologies that are routinely used in your field of expertise?

A. The original study that was submitted was lacking some information, which we asked for more, which was provided, and then ultimately the traffic impact study was approved.

Q. And to be more specific with my question, is the ITE manual routinely accepted as the method of projecting trips for a proposed development?

A. Yes, it is.

Q. Okay. Thank you.

MR. ROSENBLATT: I have no further questions.

JUDGE MURPHY: Okay. Thank you, ma'am. I think we are through. I appreciate your testimony. You were here today for several hours, so I do appreciate your coming in.

MS. KUHN: Thank you.

Page 440

JUDGE MURPHY: All right. You can log off, unless you want to stay and listen.

MS. KUHN: No, thank you.

JUDGE MURPHY: Okay. Thank you. Thank you very much. All right. So it is 4:15. What do we have planned next? Do you guys want to do opening statements?

MR. ROSENBLATT: We certainly can. It probably does not make sense to start one of our witnesses, but I'd like to do at least the opening statements if we can, just to move, to get things as far along as we can in a reasonable hour.

JUDGE MURPHY: I would, too. Does anyone, Mr. Rosenblatt, do you know since your microphone is open, why we're starting at 1:30? Did you all have conflicts?

MR. ROSENBLATT: I think that one of the attorneys did when they were scheduled.

JUDGE MURPHY: Okay.

MR. MCCANN: Yeah. If I recall, I thought someone said that you had code enforcement in the morning.

JUDGE MURPHY: I was supposed to be code

Page 441

enforcement this morning, but I didn't have it, so I don't have it tomorrow either, but we can't start until 1:30, because that's when the notice is issued. Unfortunately, I mean, I don't really love the 1:30 start time, but just trying to get through this, right? And then we also have two more days, I just found out today, October something. October 28th maybe. Did you all know that?

MR. ROSENBLATT: Yes.

MR. MCCANN: Yes.

JUDGE MURPHY: Okay. Well then you're ahead of me. I haven't seen October's calendar, that's probably why. Okay.

MR. MCCANN: [indiscernible] tomorrow morning, Judge, is that right?

JUDGE MURPHY: Well, I mean, I, you know, remember when I was [indiscernible] I would change, you know, I would change a start time to 9:00 a.m. But the problem is there's the notice issue. I think there were recertifications done by the developer's sign poster, and it says 1:30, and so that's what the county's website

Page 442

says, 1:30, so I can't just, I'll get in trouble if I unilaterally change that.

I mean, the Board of Appeals we don't mind that, but here, they don't like that, which makes sense, because people know it's 1:30 tomorrow. Anyway, yeah, it would have been nice, 10:00 would have been a nice start time. Okay. Mr. Rosenblatt can do his. Mr. McCann, are you going to have an opening? You usually reserve.

MR. MCCANN: Yeah, I will not have an opening. Thank you.

JUDGE MURPHY: You will not. But Mr. Zimmerman does?

MR. ZIMMERMAN: Yeah, I will have an opening, yes. Sorry about that.

JUDGE MURPHY: No, I figured as much. So why don't we start with Mr. Rosenblatt so we can try to get something done?

MR. ROSENBLATT: Okay. Thank you, Judge, and thank you, everyone.

OPENING STATEMENT

MR. ROSENBLATT: I think I'll be brief, but I do

Page 443

want to talk a little bit about the project overall. We've had some sort of specialized testimony mostly related to traffic, but we haven't really talked about the project overall.

So Greenspring Manor proposes 60 new homes on about 40 acres of land that's located as we know now on the northeast side of Joppa Road just east of Greenspring Station and the intersection with Falls Road. It's a project that's very important to Atapco, the owner and developer, and obviously it has drawn the interest of a number of community groups that are represented here.

Atapco has done more public outreach in this case than any case that I have ever worked on in Baltimore County. We have held numerous meetings with the Tally Ho community, the Meadows, Boxwood communities, and various changes were made to the plan to try to address the concerns of the community.

It is a plan that is by right, in other words it respects all zoning requirements. There is no variances to any bulk or area requirements or regulations, and the density proposed is permitted by

Page 444

right.

While things like open space are often a concern on Baltimore County development projects, this project provides more than double the amount of required open space and preserves over 40 percent of this property as open. And while school capacity is often a problem that we hear about in development cases, none of the schools are technically overcrowded for this project, so no relief is needed from Baltimore County's adequate public facilities regulations for schools.

If the project is built, thousands of trees will be planted where there is now a farm field. There is no forest clearing needed for this project, and the only specimen tree being removed is one single tree that is right next to existing Joppa Road that has been significantly limbed by BGE and their maintenance for power lines.

No specimen trees will be removed to build the proposed homes in this case, and no forest will be cleared. The existing Langford home, which has been on this property for many years, it is located in a forest

Page 445

buffer, near a stream, and it is currently on well and septic, and if this project is permitted to proceed, that home will be converted to public utilities, which is an upgrade environmentally, and maybe most importantly we've heard a lot about the traffic portion of this case, but approximately a million dollars in public improvements are going to be made as part of infrastructure upgrades related to both traffic and sewer.

So this Falls Road corridor has created traffic issues for Baltimore County for many years, and this project if approved is a mechanism for providing hundreds of thousands of dollars of relief that SHA just confirmed for everybody will improve the travel time through the entire corridor from Joppa Road up through Seminary Avenue.

The project is also providing a mechanism for upgrading portions of the sewer line that have been identified by Baltimore County as needing improvement. I know that's a very important issue along this Falls Road corridor, and this project right on the development plan in the lower left corner, which we'll obviously get into

Page 446

in detail is showing the off-site sanitary sewer improvements that will be constructed as part of this project.

We are aware communities, change is scary, everyone always prefers status quo, and maybe the idea where there is now a farm field and not a lot going on on this property of change and building homes is scary to some, but we intend through the witnesses you'll hear tomorrow and in October to show that the benefits of this project far outweigh any impact that Greenspring Manor will have on the community, and that this project which is proposing 60 new really upscale homes with upgraded materials, and you'll hear from the developer that a builder has been selected and what the proposed cost in the market will be for these homes, but this will really be a new neighborhood that's an asset for Baltimore County and provide much needed in fill development rather than trying to sprawl to out west or north where development is less than in this kind of tight corridor in Baltimore County.

So that is all for now. I appreciate everyone's

Page 447

time and look forward to hearing directly from the witnesses to bear out much of what I just said.

JUDGE MURPHY: Thank you, Mr. Rosenblatt. Mr. Zimmerman?

MR. ZIMMERMAN: Thank you, Judge.

OPENING STATEMENT

MR. ZIMMERMAN: This is a very interesting case, and I appreciate you being here and the way things have moved along so far. As a public office, although I think you are quite familiar with our office, many people are not, and also as a public office, I think I should explain how it came to pass that this case came to our attention and we felt it necessary in the public interest to participate.

I will say at the beginning that unless some citizens who are not represented by Mr. McCann ask us to facilitate their testimony, we don't anticipate presenting any expert witnesses. Maybe other witnesses, it depends whether citizens get in touch with us who are not represented by Mr. McCann at the moment. We don't necessarily have that. So our case after the opening

Page 448

statement is mainly documentary, and we've submitted exhibits, and of course questioning some of the witnesses.

So here's kind of a roadmap to the situation. And in preparation for the opening statement, I re-read kind of a classic law review article by Oliver Wendall Holmes entitled the Path of the Law, and I would say in addition to the specific issues that we deal with in this case, there is also according to homes necessary to look at the overall purposes of the law.

So we've got previous cases, and we've got the overall purposes. In terms of the path of our coming to the case, it came to our attention around the middle or second half of 2021 when it was scheduled for November 18th. We did write a letter dated November 9th, it's one of our exhibits. I realize it's not evidence, but we put it there so everyone can see it, and we may refer to it in our post hearing brief.

The case was then scheduled for November 18th. There was no reply directly to our letter, but the developer for other reasons asked for postponement. I

Page 449

will say we did send an email asking to be included in any scheduling discussions, but then eight months passed, and the next thing we knew about the case was we got a very nice invitation from Deborah Wiley [phonetic] of your office to participate as a panelist, and if I may say, it was an invitation we could not refuse.

Another way of looking at our path to the case, and we did identify in our November 9, 2021 letter the various issues that we thought could be important, and those are the issues that we're dealing with.

There had come to our attention in terms of the path in two previous cases that I think you're quite familiar with, Judge, Woodley Park and Davis Farms, there were master plan conflict issues involving the same T3 transect zones that were residential performance standard issues, and also in Woodley Park a compatibility issue, and we, as you know, we intervened and at the Board of Appeals when we kind of found out about those cases, to defend Administrative Law Judge Mayhew's decisions, and defend the zoning and the master plan in the public interest.

Page 450

As you know, the Board of Appeals affirmed Judge Mayhew mainly on residential performance standards, and noted the procedure actually to go to the Planning Board for master plan conflict issues. He had found a master plan conflict, as you know. And by the way, that case went into Circuit Court, but the county council rezoned the property downward, so that was the end of that case where the development plan was denied, and I would say our defense was contributed to a successful outcome.

The Davis Farms case you probably know about. Once again, we intervened and the case was remanded. Judge Mayhew confirmed our participation at the planning board and county council level explicitly, and again, we were dealing with master plan conflict and resdential performance standards, but mainly master plan conflict of course at the planning board level, and the county council eventually agreed with Judge Mayhew that there was in fact a master plan conflict based on the T3 transect zone, which he discussed at page 18 of his opinion, and it is one very compact and incisive

Page 451

paragraph.

So these cases heighgetened our attention to the case that then emerged here, and it did occur to use that if we found out or our attention was drawn to such a case at the ALJ level, that it would be reasonable for us to communicate and to participate at the earlier stage, and not just have to find out about it at the, after the opinion.

Obviously as you know, master plan zoning and development are three parts of land use law, and the development plans are supposed to comply with the master plan and zoning, and we hope and assume that the majority of the time they do, so those are development plan cases we do not need to participate in. But from time to time, we have to participate.

So this case comes in the wake of Woodley Park and Davis Farms, and then since every so often Mr. Rosenblatt has objections, we have to for the record say that the county charter assigns us to defend the comprehensive zoning maps and master plan in the public interest, and we prioritize these cases, especially the

Page 452

development cases as to the magnitude of master plan conflict issues, the scale of the development, and whether there are some zoning issues.

Of course we participated in the HNS development case, which is I think the landmark master plan conflict case of the 21st Century that you're very familiar with, and as far as zoning issues in development cases, it goes back to the 1990s with cases like People's Counsel versus Crown Development, Sycamore Realty versus People's Counsel, Marsula versus Caul. [phonetic]

We briefed those extensively in Woodley Park and Davis Farm, and we'll probably have to brief it again, but I think, Judge, you are familiar with the scope of our participation in development cases when we're focus on master plan conflict and zoning issues, and that's what we're focused on in this case, which means there may be some issues that Mr. McCann brings up that we're not going to focus on, because we don't view them as core master plan and zoning issues, so we try to do the right thing.

This brings us to the present case, and I'm

Page 453

going to try to be brief. I think the core issue is going to be master plan conflict with the T3 intersect, and as I briefed in Davis Farms, we know it's low density and deep setbacks is at the core of the intersect, and we did go to the dictionary, and I'll just mention the word low in Websters is deficient, inferior or unusually small in quantity, intensity, value or degree. That's how the definition begins. We can look at the whole definition.

Deep means extending far or comparatively far from some level of service or area, so what I will just say is this plan is twice as dense as the plan Judge Mayhew found in conflict in Davis Farms where you've got actually 61 dwellings as we understand it, unless it has been changed to 60, at maximum density squeezed onto .3 acre small lots, 14 of the 39 acres if our math is correct, which fractionally is 4.4 lots per acre on the area where the houses are.

Davis Farms had 21 lots on about half of the 19 acres with lots that were almost twice the size, .27 to .63. So if we're dealing with the language, the logic, the math, everything points to the fact that we have a

Page 454

master plan conflict issue here, and I would also say that Judge Mayhew's analysis focused just on the subject property. It didn't deal with, you know, a comparison with things in the area.

But anything, I do think you'll see the prevailing pattern here in the other subdivisions is half acre or more detached dwellings, and yes, there are some attached lots as well as we've seen.

So, and in order to send the case to the planning board, I don't even think you have to agree with me that it definitely looks, walks, quacks or, you know, the old quacks like a duck metaphor. You don't have to agree 100 percent that it's definitely a master plan conflict. I think it just has to be a serious concern that it's a master plan conflict, and then it goes to the planning board and to the county council.

But in any event, my view so far, unless something comes up to make me change my mind, is everything points to the fact that this is a master plan conflict. So that was, that really was the core issue. I'm going to briefly go through the other issues.

Page 455

Residential performance standards, we'll have to see how that gets sorted out. It looks like there are some issues. The planning department so far, as in Davis Farms and Woodley Park, they really in my view didn't make the kind of findings that were intended, and still haven't, and I won't go through the details of, you know, what we heard last time.

But in those cases, Woodley Park, Davis Farms, I think my reading is correct. Judge Mayhew just viewed it that he would just kind of cut through the situation and decide whether or not there were conflicts, regardless of the kind of skeletal view of the planning department, that they'd reviewed the pattern book and they were okay with it. So he went ahead and looked at whether there are conflicts, and at this preliminary stage, I'll just say let's see how all the evidence comes in, and at the end, we'll, you know, we'll try to analyze whether the residential performance standards have been satisfied. But suffice it to say that I think the issues are there for you to look at.

There's an interesting mixed zoning development

Page 456

issue that came up in Woodley Park that is quite a conundrum, and that you are very familiar with I know, and that is a legal issue that has not been resolved in the courts, and there's a difference of opinion between Judge Mayhew and the Board of Appeals, and that is whether compatibility review applies to all zones, or just certain zones under Code Section 324402.

Judge Mayhew basically decided that it did apply to Woodley Park, but on the Board of Appeals which you are familiar with, the Board indicated that it did not apply, and that case, you know, as I said, went to court, but then was dismissed out because of the down zoning. So we don't have a court decision on that. As respectfully as I can, and I often tell my deputy when we don't always agree 100 percent that Supreme Court justices can disagree respectfully, but I really think Judge Mayhew had the better of the analysis, and that compatibility review does apply to all zones, not just the zones where the planning director is slated to make a recommendation, but we'll brief that. But I just wanted to alert everybody that I think that's a legitimate issue

Page 457

that is not yet resolved, and I know that on the Board of Appeals you dealt with that issue, so that's a conundrum.

As far as the special variance, I will say at this point it's a zoning issue, it's complicated. I think the facts are complicated. The law may be complicated. We don't really have any court cases, you know, articulating precisely how to deal with it, even though it's been a law for a long time. So let's just see how that gets sorted out, and I won't give, you know, a preview of, you know, does it have to be granted, denied, or whatever. We'll see how that gets sorted out.

We can't ignore that we're still in a, I think the same sewer system, and I'll be corrected if I'm wrong, that Judge Bevrongin [phonetic] dealt with in the CP Falls Road case or CPC Falls Road, and that became quite an issue, so does the master water and sewer plan come in here? Does the growth management on sewers come in here? You know, these are zoning and master plan issues, and I would like to see how that gets sorted out. Maybe there will be some witnesses to address that.

So those are the issues that we see. I wanted

Page 458

to, you know, I'd rather say it now so that people can't say later that I didn't let them know what I think the issues may be. So I'm, at this point I'm definitive on the master plan conflict, and let's see what happens with all the other issues, with all the facts, and all of the analysis that we can do at the end of the case, and thank you for moving the case along and I guess we'll see you tomorrow.

JUDGE MURPHY: And you had said something about if anyone was not represented by Mr. McCann.

MR. ZIMMERMAN: Right.

JUDGE MURPHY: They could contact your office, and so that actually would be helpful. So I don't know folks that can look at the, you know, attendees list, and I can look at, you know, tomorrow the participants panelist list again and, you know, obviously some of the people I know, some people are very, very good about putting listening only, which is just very helpful. What a great, you know, idea.

But if you or, you're not represented by Mr. McCann, and he has, he is representing several of those

Page 459

neighborhood associations or community associations, you can reach out, Mr. Zimmerman, to your office? Can they reach out?

MR. ZIMMERMAN: Yes, and I've already spoken with one or two who may be represented by Mr. McCann, but I said there are some, frankly I think we know there are some differences of opinion on the Mays Chapel Road connection issue of different associations, and I've indicated that, you know, it's up to them whether or not he may call them as witnesses, from Heather Field and from Seminary Ridge, or if they would like it, I'd be glad to try to facilitate their testimony. Or if there's anyone else out there, it is sometimes helpful if, you know, I can ask them who they are, what their views are, you know, where they live and so on, it may make it a little bit easier.

JUDGE MURPHY: It does to me, because if you know who they are, then that saves me from, I mean, I won't be able to tell. Sometimes people come in one day and they don't come the next, and then if they need to testify, I try to go through each person at the end when

Page 460

it's the Protestant's case. If there's someone, but if you would let me know if you see someone --

MR. ZIMMERMAN: Yeah, I will, and I'll let everybody listening in now, if they are still around, the phone number is 410-887-2188, you know, so we are always available, and the more often than not, I answer the phone. So --

JUDGE MURPHY: And he is people's counsel for Baltimore County, so in case anyone didn't know that. I think we said that a couple times today.

MR. ZIMMERMAN: Right. Thank you.

JUDGE MURPHY: All right. Mr. Wyatt, you turned your camera on. Does that mean you want to have an opening statement?

MR. WYATT: It does not mean that. Thank you for asking though, Your Honor.

JUDGE MURPHY: Okay. All right. And sorry we couldn't get you to Mr. Nebre today, so you certainly can try to come back to that at a later time if that works for you. All right.

So all right. I think that was it for today.

So Mr. Rosenblatt, you know, I guess we're starting at 1:30 tomorrow with your next witness?

MR. ROSENBLATT: Yes, we'll be ready.

JUDGE MURPHY: Okay. Yeah. Unfortunately, so Judge Mayhew is doing the code enforcement cases, so anyway, I'll come on at 1:30.

SPEAKER: Can I ask before we break?

JUDGE MURPHY: Yes.

SPEAKER: Mr. Rosenblatt, can you share with me how many witnesses you may have tomorrow? Just in case I need to have anybody available. I mean, do you anticipate getting done tomorrow?

MR. ROSENBLATT: Given how this is going, very unlikely that you have any time to put a witness on. I definitely have enough to fill tomorrow. I hope that I finish tomorrow. We'll have to see how it goes.

SPEAKER: Sounds good. Thank you.

JUDGE MURPHY: Okay. Thanks everyone.

(Whereupon the hearing was adjourned.)

TRANSCRIBER'S CERTIFICATE

I, Dana Dezarn, hereby certify that I transcribed from audio file the proceedings to the best of my ability in the foregoing-entitled matter; and I further certify that the foregoing is a full, true and correct transcript of the audio files produced.

IN WITNESS THEREOF, I have subscribed my name on July 5, 2023.

Dana Dezarn

P R O C E E D I N G S

- - - - - - - - - - - - -

THE JUDGE: Good morning, everyone. Calling case number 08-0922 and 2021-0250-SPH. Property address 2310 West Joppa Road. This is a combined development plan and zoning case for a project known as Greenspring Manor. We'll have counsel identify themselves for the record, beginning with the developer.

MR. ROSENBLATT: Good morning, Judge Murphy. Adam Rosenblatt and Chris Mudd of Venable, LLP on behalf of the developer.

THE JUDGE: All right. And with you, with your team is?

MR. ROSENBLATT: We have a number of people. I see Matthew Bishop and James Malico, our, with Kimley-Horn, the land consulting company. We have several representatives of the owner, I'm just looking at the participant list to see who is signed in. I do see Nick Drevin [phonetic] is part of the development team, Ross Powell, also part of the development team, and there may be a few others that I can't tell from the attendee list.

THE JUDGE: Okay. Understood. And you and Mr. Mudd are separated in the, you must be quarantined.

MR. ROSENBLATT: No, I just prefer the double monitor situation for the conference room, that's all.

MR. MUDD: He asked me not to sit with him today.

THE JUDGE: That's what I thought. That's what I thought. All right. So how about Mr. McCann?

MR. MCCANN: Good morning, Judge.

THE JUDGE: Good morning.

MR. MCCANN: Michael McCann on behalf of the Valley Planning Council, Seminary Ridge Owner's Association, Heather Field Community Association, the Falls Road Community Association, and the Boxwood Homeowner's Association.

THE JUDGE: Okay. Well, Valley Planning Council, Seminary Ridge Homeowner's Association, Heather Field Homeowner's Association, Falls Road Improvement Association?

MR. MCCANN: Community Association.

THE JUDGE: Community Association, Boxwood

Homeowner’s Association, right?

MR. MCCANN: That's correct.

THE JUDGE: I was looking for the file, I didn’t see a letter, an entry of appearance with who you represented, so okay, that clarifies things. And we have Mr. Zimmerman.

MR. ZIMMERMAN: Good morning, Judge. Peter Max Zimmerman, people’s counsel for Baltimore County, Towson, Maryland.

THE JUDGE: Good morning, Mr. Zimmerman. I’m surprised to see you in a development case.

MR. ZIMMERMAN: Well, we wrote a letter November 9th, and if you had a chance to read that, we decided that the right thing to do is to let everybody know what we think about the case and get more information.

THE JUDGE: Okay. All right. Let me see. I’ll put you back on mute, and I’m just going to unmute Mr. Wyatt. Mr. Wyatt, can you hear me?

MR. WYATT: I can, Your Honor. Good morning.

THE JUDGE: Good morning, Mr. Wyatt. You’re

Wyatt & Gunning, [phonetic] and we've had zoning cases before. Are you representing a party?

MR. WYATT: I am not representing a party, I am appearing pro se. I am a majority property owner to this development.

THE JUDGE: Okay. That's what I thought, I just wanted to make sure, so I'll put you back on mute. All right. Let's see, I think that was everyone that I saw for the attorneys. All right. Let's turn to you, Mr. Chen. Let's see. You're in the conference room there. You're muted. There you go. Can you hear me?

MR. CHEN: Can you hear me now?

THE JUDGE: Yes.

MR. CHEN: Okay. Good morning. Representing, yeah, in the conference room today is DPR, Mr. Cauley, Recs and Parks, Mr. James Herman.

THE JUDGE: Okay. All right. All right, folks. Well, before we get started, just some ground rules for people who haven't attended before. I do see some names in the attendees room that have attended other hearings, so they're professionals at this point.

There’s a lot of people in the attendees room.

So what we need everyone to do is just keep their microphones muted when you’re not speaking. So this is an actual hearing, just so everyone knows. It’s not a meeting, it’s not a community input meeting, it’s not a homeowner’s association meeting, it’s not a neighborhood association meeting, so that means you can’t just unmute your microphone and start talking.

There is a recording being made, it’s very important that the recording is clear. The recording is what is used on appeal. They need to be able to hear what’s being said, and if we have, you know, shuffling of paper and noises or people talking, then that’s a problem obviously. I try to keep my microphone muted when I’m not speaking, because I have a tendency to make noise as well, and so what I’ll do is I’ll unmute your microphones when it’s time for you all to speak.

Just so you know, here’s the process. The process is that the county goes first. The county agency representatives are here from the different departments, and they go first and they testify to tell me whether or

not there's any unresolved comment or condition that needs to be addressed, and whether or not they recommend approval or not of the plan.

So we'll hear from each county witness first, we'll put in exhibits, we'll put those up on the screen. One of the benefits to Webex is that you all participating get to see those exhibits on the screen as, you know, in real time as we go. You know, in the courtroom it's often difficult to sit in the back and not see anything. You could probably take a break and maybe glance at something, but this way you at least get to see the exhibits as we go through it.

And so after the county witnesses are finished testifying, we turn it over to the developer. The developer, through Mr. Rosenblatt and Mr. Mudd are going to put on their witnesses and their exhibits, they'll put those on the screen, and so the other side, the protestants, get a chance as well as Mr. Zimmerman, to cross-examine them on whatever evidence has been presented, and so we'll do that.

After the developer gets done their case, we

turn to the protestants, Mr. McCann with his clients, and then people's counsel as well. They have exhibits and they have testimony that they want to offer. After all of that, if there's someone who hasn't been, is not represented, I think you'll be representing a lot of people, so he's got several community associations, and so if he's doing that for those community associations, then, you know, you may not need to, but at some point I'll probably turn to go down the list and see if you all have anything to say.

And so we do have two other days scheduled, just so everyone is aware, I think it's the 20th and 21st starting at 1:30, and so you should have links for those dates. All right. Anything, Mr. Rosenblatt or Mr. Mudd or Mr. McCann before we get started?

MR. ROSENBLATT: Not from the developer, thank you.

THE JUDGE: Okay. All right. And so I was actually looking for, let's see. Mr. Chen, you don't have zoning in the conference room with you?

MR. CHEN: No, we don't. He should be online.

THE JUDGE: Oh, there he is, Mr. Crawford.

MR. ZIMMERMAN: Madam Chair, do we get opening statements?

THE JUDGE: Well, first, see, since you don't usually come, first we do the county witnesses, yeah, and then we go back and we'll do opening statements.

MR. ZIMMERMAN: All right. Sorry about that, thanks.

THE JUDGE: That's all right, Mr. Zimmerman, nice to see you. All right. Okay. Can I get the county witnesses to raise their right hands? Let's try to do everybody all at once. Everybody in the conference room, I've got Mr. Williams, I have Mr. Livingston, let's see. Ms. Anwico, [phonetic] I saw her earlier, she's here. And then everyone in the conference room, I again do not see anyone yet from zone, oh, I see, Mr. Crawford, that's right. Mr. Crawford, I didn't forget you.

All right. Everyone raise your right hand. Do you solemnly swear or affirm under penalties of perjury the testimony you're about to give is true and correct to the best of your knowledge and belief?

SPEAKERS: I do.

THE JUDGE: All right. Well, I was going to start with zoning, but zoning doesn't seem, oh, yes you are. There you are, Mr. Crawford. Why do I keep forgetting you? Mr. Crawford, there you are.

MR. CRAWFORD: Yes.

Whereupon,

SEAN CRAWFORD,

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

Q. All right. Mr. Crawford, why don't you identify yourself, you're testifying for, I'm actually going to put the documents on the screen. Go ahead.

A. Sean Crawford, I'm testifying on behalf of zoning review.

Q. Okay. And so your agency reviewed the development plan. Which plan did you review?

A. When submitted, I received a copy on

August 24th, which was the company that's hearing today.

Q. Okay. The plan is dated August 24th?

A. That's the day I received it. Give me just one moment.

Q. Sure.

A. It looks like this plan was dated November 10, 2021.

Q. 2021, that's the one you reviewed, okay. On the screen is the comment that you sent to our office dated August 24, 2022, and that's your signature and date at the bottom, is that correct?

A. Yes.

Q. All right. And so you're reviewing on behalf of zoning again, and so go ahead. Is there any, are there any comments left to be addressed?

A. No, beyond a final development plan will be required.

Q. Okay. And so I see that that's on your comment here, and so you also had a comment, or actually it was one for the development plan conference, the DPC date is August the 11th. Even though the subject says

concept plan, it's actually for the development plan conference. So have you seen this one? This one is by a different zoning planner. This was dated August 10, 2021.

A. Yes.

Q. Okay. So this was the initial, these were the initial comments, and the comments that were made were just by things that you needed to be added. And when, and I see the last paragraph here, it was copied into your newest comment, right?

A. Yes.

Q. Okay. And so going back to the August 10, 2021 comment, it says essentially that all of these issues, or at least you're saying that all of these issues have been addressed that are listed here, 1 through 5?

A. Yes.

Q. Okay. Because what it says in here is that the above, as you see at the bottom, the conclusion of the VFTP requirements of all notes and details specified above being included, meaning what? You see

the details where it says all notes and details specified above are included?

A. Right. That's an error on my part.

Q. Okay. So what notes, are they the ones that are listed in the first --

A. Yes. That was copied from the original. I didn't take that out, so that's an error. Once again, we're just requiring a final development plan.

Q. Okay. All right. We're going to make, exhibit number 1 is going to be the Office of Zoning Review development plan conference comment, and that is dated August 10th of 2021, that's 1A. 1B is going to be the other, which is the final, and it is dated August 24th, OZR final comment, August 24th, 2022.

(Developer Exhibit No. 1A was marked for identification and entered into evidence.)

(Developer Exhibit No. 1B was marked for identification and entered into evidence.)

BY JUDGE MURPHY:

Q. Let me just ask you, Mr. Crawford, so in this case, the developer is proposing, well, what's the

maximum permitted density for this? For this property, do you know?

A. Give me just a moment to check the plan. It looks like it's 61 proposed units. I don't know offhand what the total density counts are.

Q. Okay. All right. Do you know if all the homes that are being proposed are meeting all of the setbacks from the ER zone?

A. Yes.

Q. Okay. And so, it sounds like somebody is talking in the background there. Is that someone in your office, Mr. Crawford?

A. No, it is not.

Q. All right. Looking for somebody talking. I don't see anybody. Okay. All right. Mr. Crawford, and so it meets all the setbacks. That means that none of the homes that are being proposed will require variance relief, is that right?

A. No.

Q. Right. Okay. Thank you, sir.

JUDGE MURPHY: Mr. Mudd or Mr. Rosenblatt, I

don’t know which one of you is asking questions. Any --

MR. ROSENBLATT: It’ll largely be me, Your Honor.

THE JUDGE: Okay.

MR. ROSENBLATT: Mr. Rosenblatt. No questions of Mr. Crawford, thank you.

THE JUDGE: Okay. Mr. McCann?

MR. MCCANN: I do have a couple. Thank you, Judge.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good morning, Mr. Crawford. Can you hear me?

A. I can. Good morning.

Q. Good morning. I don’t think you and I have met before, so if you don’t mind, I’m just going to ask you a couple of questions that I simply don’t know the answers to about you and your history with the department. How long have you been with Zoning Review?

A. Full time, a little over a year.

Q. Okay. And your position in Zoning Review?

A. Planner.

Q. Planner? Okay. And when did you first become involved in any review of this particular development?

A. Early August of this year.

Q. August of 2022?

A. Yes.

Q. Okay. Yeah, because I noticed you weren't, I think Judge Murphy indicated as much, that you weren't involved in the review of the concept plan and the drafting of the concept plan [indiscernible]

A. Correct.

Q. Okay. And then lastly, you said that there are no setback variances required. Have you personally gone back and looked at the plan and determined whether or not any of, all of the setback requirements, the front, side and rear setbacks and any others are complied with? Have you done that?

A. No, that was based off of the original planner's initial comments on August 10, 2021.

Q. Okay. Okay. Thank you, Mr. Crawford.

A. You're welcome.

THE JUDGE: All right. Mr. Zimmerman, any questions?

MR. ZIMMERMAN: Just a few. Thank you, Judge.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. So Mr. Crawford, just to kind of clarify. The original staff person in your office who reviewed this was Rosalee Johnson, [phonetic] was it not?

A. Yes.

Q. And she's no longer with the office, is that correct?

A. Yes.

Q. So you're kind of pinch hitting?

A. Yes.

Q. So in your file, do you happen to have the March 5, 2021 concept plan conference comments from your office running several pages?

A. I do, dated March, yes, I do.

Q. Could you put them up, did you include them in your exhibit?

A. I don't know how I would share it.

MR. ZIMMERMAN: Judge, I happen to have it in my exhibits. Could we put it up on the screen and share it? If Mr. Crawford doesn't happen to have it?

THE JUDGE: Yeah. So I have the share button right now, and so I can find it. Do you want that on the screen?

MR. ZIMMERMAN: I'd like to make sure we've got a complete set of zoning exhibits.

THE JUDGE: Yeah, they're all contained within the file of course. All right.

MR. ZIMMERMAN: That's a pretty voluminous file, it's kind of hard to --

THE JUDGE: It's pretty big. It's two big green files. Hold on, I'm getting there. All right. Zoning, okay, hold on one second. Here it comes. All right. Can you see that, Mr. Zimmerman?

MR. ZIMMERMAN: Oh, great, great. Yeah.

BY MR. ZIMMERMAN:

Q. Well, first of all, Mr. Crawford, have you ever seen this piece of paper? I'm not trying to trick

you or criticize, because you just got in the case, but --

A. Prior to today, no.

Q. Okay.

MR. ZIMMERMAN: So could we scroll down a little bit, Judge?

BY MR. ZIMMERMAN:

Q. So Mr. McCann asked you a little bit about the density. So in fairness, your office pointed out that the, you've got a split zone situation of DR2 and DR2, right? Paragraph 1.

A. Correct, correct.

Q. Okay. Then paragraph 2, she does the arithmetic, so you've got 16.8 acres of DR1, which gives you 16 units maximum, and then you've got 22.6 acres of DR2 for 45. So that adds to a maximum of 61. And guess what, they're proposing 61 units. So by way of background, we're talking about they're at the maximum density, right?

A. Yes, correct.

Q. Okay. So they're within the maximum

density, and that's just background information on the situation. And then you've got a list of all the setback requirements, which as far as you know, they're meeting. Is that correct?

A. Yes.

Q. Okay. Okay.

MR. ZIMMERMAN: That's all I have. Thanks. And I just would like, Judge, if this could be included as, you know, part of the zoning exhibit somehow.

THE JUDGE: You want to make this --

MR. ZIMMERMAN: Or I've got it in my exhibits as well, maybe that'll take care of it.

THE JUDGE: That's fine. Yeah, you have it in your exhibits, and it is already numbered, so I'll let you put that in. How does that sound? All right. Thank you, Mr. Zimmerman. All right. All right, Mr. Crawford, I think that's it for you.

MR. CRAWFORD: All right. Thank you.

THE JUDGE: Thank you, and you're free to go. All right. Next up, Ms. Anwico. I'm trying to get the ones out up here who are not as controversial. All

right. Let's see, one minute. Let me do this. I'm just going to get rid of one.

MS. ANWICO: Good morning.

THE JUDGE: Good morning. One second. All right.

Whereupon,

LASHELLE ANWICO,

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

Q. All right, Ms. Anwico. You are here for who, and go ahead and tell us, and then you can tell us what you reviewed.

A. Good morning, everyone. Lashelle [phonetic] Anwico with Real Estate Compliance. We reviewed the plan, concept and development plan at this stage for the illustration and basically call out of proposed or easements that will be dedicated to Baltimore County and existing easements, easements that are

private, public easements that may run through the land in question.

I guess the original review was made, I reviewed the plan on November, the November 10, 2021 plan. I originally reviewed it in March. My only comment then was to add a dedication table, which they did, so the plan that I reviewed recently, my comments are dated August 25, 2022.

A review of the red line development plan for the above-referenced project results in the following comments. Real estate compliance's recommendation for approval of the above-mentioned development plan is contingent upon the following. The sum of the acreage called out on the dedication plan for the ten drainage and utility easements is not the total acreage shown in the dedication table.

The difference between the sum of the acreage called out for the drainage and utility easement and what is given in the dedication table is approximately .26 more or less acres. Just please rectify the discrepancy. The easements are labeled correctly. I just tried to go

back and recalculate a couple of times.

I'm sure a number is transposed somewhere. I would not hold up recommendation for, you know, for that, but if I could just see that that has been revised or rectified in some way, that will be enough for real estate compliance.

Q. Okay. All right. So that just needs to be changed on the plan. Let's do this just real quick before I have Mr. Rosenblatt ask, we can ask him whether that's been done.

So the initial review was August 11, 2021. We have, this would be your DPC comments, and you list them here. Six of them, and then seven was the site-specific comment, and then these are the ones that you just mentioned, how you had these comments, had these additions or corrections changed, right?

A. Well, no. Actually I did not. This is probably the first time they are seeing these comments.

Q. Okay.

A. Unfortunately, yes.

Q. They didn't see this from the development

plan conference?

A. Well, the development plan conference in August I asked them just to add a dedication table. They, that was done sometime between that development plan hearing and I guess, you know, through other agencies. Real Estate Compliance did not receive a copy of this red line plan with the dedication table added until August 24th. I had to request it from Jerry Chin. The developer did not send us a copy before, well, we did not receive a copy. We don't have record of receiving a copy with the dedication table added.

Q. Okay. You say August the 24th, 2022?

A. Yes, of 2022, yes.

Q. Oh, okay, because I had it, I can see that attached to your comment you had a chart, and I'll just flip it, but here's the chart. And this was your initials in terms of what you were requesting, right, be changed?

A. Yes.

Q. Okay.

A. Yes.

Q. And you --

A. So it was an update to change item, when we went back, we counted. It was nine easements showing, and now they changed it to ten, and now the acreage is not, does not match, but I did not see the red line plan with the change in the dedication table until August 24th.

Q. Okay. So --

A. 2022.

Q. 2022. Okay.

A. Yes.

Q. You then, you've since issued then your other comment, which showed on the screen the other one, which is the newer one, and this one just says that you need this added, this comment added?

A. Yes.

Q. Okay.

A. The easements may have been changed to 10, but I don't know if the areas had been.

Q. Okay. What we're going to do is I'm just going to mark before we move ahead here. I'll ask Mr.

Rosenblatt to respond. Real Estate DPC comments are August 11th, 2021, those were the ones I just put on the screen. Let me flip that again, flip, flip. All right. August 11th, and then the other one, 2B is going to be the final comment dated August 25th, 2022, final comment.

(County Exhibit No. 1A was marked for identification and entered into evidence.)

(County Exhibit No. 1B was marked for identification and entered into evidence.)

THE JUDGE: Okay. Mr. Rosenblatt, you might want to respond to the question here?

MR. ROSENBLATT: Yes, please.

DIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Good morning, Ms. Anwico. How are you?

A. I'm good. Good morning, Mr. Rosenblatt. How are you?

Q. Good.

MR. ROSENBLATT: Judge, could I have permission to share?

THE JUDGE: Yes. Give me one second.

Q. And while you're transferring that, Ms. Anwico, the final comment that you had, well, to back up for a second, the list of comments about the dedication table and adding certain things to the plan, are you confirming that all of that has been done? In other words, those comments have been satisfied?

A. Yes.

Q. And you have the one remaining comment which is basically a typo to the acreage to one of the easements being dedicated to Baltimore County?

A. Correct.

Q. So in pre-Covid times, we could walk, we'd be in the same room, we could walk up to the board with a magic marker and cross out the acreage and put the correct acreage on. Obviously we're not in the same room now, so I want to just share if I could, this is the red line plan that was circulated to the Judge, Mr. McCann and all the agencies, and I've zoomed in on the top left corner, and my question is we did not do this before today because of the red line policy.

But if this single acreage for a drainage and

utility easement is corrected, is that all your agency is requiring in order to recommend approval of the plan?

A. Yes.

Q. Okay.

MR. ROSENBLATT: Judge, I'm not sure exactly how you want to do this. I can make this exhibit 1B. We had declared an exhibit 1, that's a red line plan, again shared with Mr. McCann and your office, but this is a clerical error that we can easily correct either now or after the hearing, however you would prefer.

THE JUDGE: So your engineer usually corrects these, right?

MR. ROSENBLATT: Yes.

THE JUDGE: Okay. So they'll, they're going to do that in their case, but you're at least showing Ms. Anwico's purposes that it, that you've changed, you want to zoom in just a little bit.

MR. ROSENBLATT: Sure.

THE JUDGE: Yeah, just click again, click again, yeah. There we go. So you've changed it, is that right, Ms. Anwico?

MS. ANWICO: Yes, I believe so.

THE JUDGE: Okay.

MS. ANWICO: Let me just check my notes real quick.

MR. MCCANN: Judge, I don't have a problem with marking them as 1B. We don't need to do anything --

THE JUDGE: Great. Thank you, Mr. McCann.

MR. MCCANN: Yeah, and just --

THE JUDGE: Mr. Zimmerman, I'm assuming there's no objection from you either?

MS. ANWICO: Yes, the acreage is now, the green acreage --

MR. ZIMMERMAN: No objection. Maybe it would have been nice for Ms. Anwico to have it a month or two ago, but that's okay.

THE JUDGE: I'm sure she appreciates that.

MS. ANWICO: I do.

THE JUDGE: All right. Thank you, Mr. Zimmerman. All right. So Mr. Rosenblatt, you'll mark that as one of your exhibits, so 1B, we'll accept that.

MR. ROSENBLATT: And for my benefit, will 1B

be, it looks like there's multiple pages to this exhibit. Will it be all pages of the development plan?

SPEAKER: There's only one page to the plan, and that's the only change to the red line plan that I sent to you previously is that single green line. So I'll email, as soon as I stop sharing, I'll email this to you so you can have it.

MR. ROSENBLATT: Thank you.

THE JUDGE: All right. I think, let's see. Mr. Rosenblatt, anything else?

BY MR. ROSENBLATT:

Q. So based on that change, Ms. Anwico, your office recommended approval of the development plan?

A. Yes.

Q. Thank you.

MR. ROSENBLATT: I have no further questions.

MS. ANWICO: Thank you.

THE JUDGE: Mr. McCann, any questions?

MR. MCCANN: No questions. Thank you.

THE JUDGE: Mr. Zimmerman, any questions?

MR. ZIMMERMAN: No questions. Thank you.

THE JUDGE: Thank you, Ms. Anwico. You're finished.

MS. ANWICO: Thank you.

THE JUDGE: All right. And let's see. Next up, how about if we do Mr. Livingston.

Whereupon,

JEFF LIVINGSTON

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

A. Good morning, Your Honor. Jeff Livingston.

Q. Yes.

A. From the Baltimore County Department of Environmental Protection and Sustainability.

Q. Yes. All right. You're taking Mr. Ford's spot?

A. Mr. Ford retired.

Q. I know. I think maybe, you know, he was

tired of coming here.

A. After 53 years, yes.

Q. Right, right. Okay. Hold on one second, let me grab your, I'm just going to put yours on the screen. One second. Okay. Share, and there you go. All right. So I'm just putting yours up on the screen, but go ahead and explain who you review for, and then I've got your documents, we can go through them.

A. So environmental, I'm actually representing three sections within environmental. Those would be Environmental Impact Review, commonly referred to as EIR, Groundwater Management and Stormwater Management.

So this first page here, this is from Mr. Michael Coolis, [phonetic] he is in environmental impact review, and what they review for is they review for compliance with forest conservation regulations, and then the regulations for the protections of wetlands, streams, floodplains, commonly referred to as forest buffer regulations.

So this comment here from Mr. Coolis is in

regards to the red line development plan dated I believe November 10, 2021. He didn't really see those until fairly recently, but he did review it, and he had two comments. So the one comment was delete the narrow strip of forest conservation easement area shown between lots 17 and lot 18 so that this plan, the development plan, matches with the approved preliminary forest conservation plan.

That section can be wooded, it's just we don't want it in a forest conservation easement. They have met their obligation with that, including that in the forest easement. And then comment number two, illustrate the 15-foot woody vegetation free zone setback from the outer limits of the forest buffer easement adjacent to the stormwater management water quality facilities.

I believe that that, there is a note on there that says there is a 15-foot woody vegetation free zone. Typically there's just a leader line, and it gets put in that shows it's 15 feet. But I have discussed this with Mr. Coolis, he said once these have been done, he has no issues with the plan.

Q. Okay. So he would recommend approval if these two additions are made to the plan?

A. Correct, he can.

Q. Okay. All right. Well, what we're going to do is mark this as County exhibit number 3 is the EIR dated August 26, 2022.

(County Exhibit No. 3 was marked for identification and entered into evidence.)

BY JUDGE MURPHY:

Q. We'll come back to those in just a second with Mr. Rosenblatt, but let's go to this one, ground water management.

A. Yes. So this is the same comment that was provided by ground water management at the+ development plan conference, and that they have no outstanding issues.

Q. Okay.

A. The subdivision is going to be on public water and sewer.

Q. Public water and sewer, okay. All right. That's going to be County exhibit number 4.

(County Exhibit No. 4 was marked for identification and entered into evidence.)

BY JUDGE MURPHY:

Q. And then the last one, if I can just, yeah, this is --

A. So this is from our stormwater management section, and this provides stormwater concept plan approval, and this is in reference to the development plan dated November 10, 2021.

So what they're looking for is they're looking for the size, type and location of the stormwater management facilities. In other words, are the appropriate stormwater management facilities, are they in the right locations, and correct dimensions? Actively we're looking at a two-dimensional puzzle here, and this is Ms. Jiru Malotra, [phonetic] providing the approval for concept stormwater plan.

Q. And would you know how many stormwater management facilities they are proposing?

A. I believe there's three separate facilities on the property. I do have the plan up on my

second screen, much like Mr. Rosenblatt. The second screen really comes in handy.

Q. It does. And do you know what type they are? What type of stormwater management?

A. Submerged gravel wetlands, I believe.

Q. All right. And so, all right. So that is for stormwater management, and the only thing required in my understanding just doing these cases is the concept, right? Stormwater management plan?

A. Unless it's a planned unit development, correct, it is concept stormwater approval at development plan time, development plan hearing.

Q. All right. This is going to be County exhibit number 5.

(County Exhibit No. 5 was marked for identification and entered into evidence.)

BY JUDGE MURPHY:

Q. I do have, we'll come back to that question with Mr. Rosenblatt in just a second in regard to this first one with EIR. I also have the specimen tree approval that was dated September 21, 2021. Have

you seen this one?

A. I have, and I have discussed it with Mr. Coolis.

Q. And this was, go ahead. Do you remember what this is about?

A. This was for a single permission to take down a single specimen tree, and I believe it was relating to the access road in.

Q. Okay. And it was, it's recommended by the Director who is Mr. Lekins. [phonetic] Let me go down to the bottom. Is that Mr., Mr. Lekins is the director of the department?

A. It is.

Q. And he approved the removal of this one specimen tree for the widening of the roadway?

A. Correct.

Q. All right. And there will be at least, there should be on the plan, do you know if that's on there, that a special variance was granted in regard to the specimen tree? Is that on the plan?

A. It is.

Q. Okay.

A. It should be down at the bottom in red.

Q. Okay. All right. So this is County exhibit number 6.

(County Exhibit No. 6 was marked for identification and entered into evidence.)

BY JUDGE MURPHY:

Q. Specimen tree approval dated, it's really a recommendation, September 21st, 2021. Let me just ask you, I did note on the plan, the red line plan, that there was also, do you know about a forest buffer variance that was granted on 9/24/2021 having to do with 17,000 square feet or so of impact to a buffer?

A. Yes.

Q. Any idea what that is? Can you explain?

A. Well, some of it is for continued existing use for the yard and the house with the existing house. In other words, part of the floodplain would come up onto the property of the existing home, and part of the variance is for continued existing use. Part of the variance is also for the original driveway to the house,

goes through the buffer.

I believe on the concept plan, that driveway was scheduled to be saved, and we actually requested, EIR requested that it be moved so the house now accesses off of Foxwood Drive. There is still an impact to the buffer where the driveway was located, the existing driveway currently is located, because there will be a sewer line running through there, and that's actually one of the things that's actually allowed through the forest buffer easement.

Q. Okay. so that's what that one was for. Okay. And then there was also an alternatives analysis approved on 9/21/2021 for it looks like infrastructure and utility connections. Do you know about that one?

A. Yes. So roads, utilities, things like that are allowed through the buffer, to impact the buffer with what's called an alternatives analysis. You have to, the developer has to provide several different alternatives, and the Department can either accept that, one of them, or they can reject them all and ask for new alternatives.

Q. And here, the Department accepted it?

A. Eventually we did accept it, so there is the road coming in, there's the utility line for the sewer coming to the existing house, and there is a small impact for the location of the stormwater, and I don't believe any outfalls. It looks like it's just a little bit of a stormwater impact.

Q. For both of those, the forest buffer variance that was granted on 9/24, and the alternatives analysis, those were never in the development plan files. I was wondering, where did we find those?

A. You mean the actual plans that are used for that?

Q. Well, just the, isn't there usually a document, like a letter that says it was approved or not?

A. Correct, there are. Traditionally we've never actually sent those over, and discussing, I've discussed this before with Mr. Moxley [phonetic] in development management, as to how much, because the file consists of stacks and stacks of documents.

Q. Right.

A. So, and his response was to include the development plan comments in the summary.

Q. Got it. Okay. All right. I'm just wondering for my own curiosity, I was just wondering about those. I just saw those on the development plan. Okay.

JUDGE MURPHY: Mr. Rosenblatt, any questions?

MR. ROSENBLATT: Yes, just a few. Judge, could I have permission to share again? Thank you.

DIRECT EXAMINATION

BY MR. ROOSENBLATT:

Q. Good morning, Mr. Livingston. Can you hear me?

A. I can.

Q. Okay. Good. I'm going to show you a copy of the, what we have marked as exhibit 1B, it's the same plan that has the single green line to the red line. I'm just going to zoom in to discuss the two EIR comments, and ask you as to the first comment about eliminating a narrow strip of forest conservation easement between lots, I believe it said between lots 17 and 18, there is

a, do you see a red line through the .88 acres on the exhibit on the screen?

A. I do.

Q. Okay. Does that address the first comment? Removal of that forest conservation easement?

A. Well, actually it's that black line. You see where it says reforestation area with the 0.29 acres? And just to the right of the A in area, the last A, there's that vertical line.

Q. Yes.

A. Yes, this line.

Q. To the right of A, so the record is clear.

A. Correct. That's the boundary of the forest conservation easement. If you go further to the right I believe one of the original plans showed that that was going to be planted, and that's fine, that can be planted, but that's not, that's kind of above and beyond the preliminary forest conservation plan.

Q. Okay. And so removing the acreage for the forest conservation easement next to that, does that address your comment?

A. It does.

Q. Okay. And just the only other comment was to better I guess identify the 15-foot tree, shrub restriction area around stormwater management facilities. So I've scrolled more to the center of the plan, and there's a red hashed area to the left of the eastern most stormwater management facility with a note that says 15-foot tree/shrub restriction zone. Do you see that?

A. I do.

Q. And again, to the second stormwater management facility located more centrally in the project, the same red hash line with a 15-foot tree/shrub restriction zone highlighted?

A. Yes, I see that.

Q. And does that address the second EIR comment?

A. It does.

Q. Okay.

MR. ROSENBLATT: And Mr. McCann, Judge Murphy, this is the same plan that was submitted to both of you prior to the hearing. Again, the only change is what we

discussed earlier with real estate compliance.

Q. So Mr. Livingston, based on those changes on this plan, does your department recommend approval of the development plan?

A. We do recommend approval of the development plan.

Q. All right. Thank you.

MR. ROSENBLATT: I have no further questions.

THE JUDGE: Mr. McCann, any cross?

MR. MCCANN: I do. Can I share as well?

THE JUDGE: Yes. Let me find your name.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good morning, Jeff. How are you?

A. Good morning.

Q. Good morning.

MR. MCCANN: Thank you.

Q. Mr. Livingston, you said that stormwater management section reviewed the stormwater management plan for, as you put it, size, height and location of facility, correct?

A. Correct.

Q. Okay. Let me show you, and I'll have this marked as Protestant's exhibit 1.

(Protestant Exhibit No. 1 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Do you see that, Mr. Livingston?

A. I do see that.

Q. Okay. And this is --

A. Is it from the DPC? The Development Planning Conference?

Q. Yes. Am I correct that this page right here, as well as the subsequent two pages for the development plan conference comments of the stormwater management section?

A. Correct.

Q. Okay. And I think what we looked at earlier was marked as County exhibit number 5, this document, this is the final approval of the stormwater management, correct?

A. It's concept. Concept stormwater plan

approval. Final stormwater approval comes later.

Q Yeah, I was referring to final approval of it, of the plan, but yeah, thank you for that. And this was signed off on this, meaning the final approval of the concept stormwater management plan was signed off by Jiru Malotra, is that right?

A. Jiru Malotra, correct.

Q. Malotra, okay. Turning back to what I'll mark as Protestant's exhibit 1, this August 11, 2021 development planning conference comment, this was reviewed apparently by Jeanette Appaloso, [phonetic] correct?

A. Correct. Jeanette Appaloso.

Q. Appaloso, okay. And she is no longer with stormwater management, correct?

A. Correct.

Q. Okay. Well, let's, I wanted to refer you to a particular comment on page 3 of these development plan comments. I'll blow it up so you can actually see it. P refers, you see, to the approval of the concept stormwater management plan. Do you see that?

A. I do.

Q. And then the reviewer's suggestion was to move the location of stormwater management facility as far as possible outside the 100-year floodplain, and she continues on giving the reason why, and in section, do you see that?

A. I do.

Q. Okay. And then in section, or item Q, she indicates that the project does not meet the Baltimore County code development plan requirements at this time, correct?

A. Correct.

Q. Okay. Am I correct that development plan does not remove the storm, number one, remove the stormwater management facility outside the 100-year floodplain? It's still in the floodplain, correct?

A. I believe, yes.

Q. Okay. Let me just show you, this is a copy of what Mr. Rosenblatt sent me prior to today's hearing, and I think it's been marked in this case as Developer's exhibit 1, and to confirm that, I'll just go

over to the date and I'm sure he'll correct me if I'm wrong.

A. Yeah, the one up top here, yes.

Q. I think the date on this is August 25, 2022.

MR. MCCANN: Am I looking at the right plan, Adam?

MR. ROSENBLATT: Yes, and you should have, if it matters to you, the green line plan was emailed, so this would, this is what was marked as exhibit 1, and then 1B is the one with the single green line. Yep.

MR. MCCANN: Great. I just wanted to make sure we were looking at your exhibit.

Q. So, and again, I know it's a busy plan, so it's hard to see, Mr. Livingston, but I'll sort of highlight in yellow the floodplain, the border of the floodplain that is.

A. I see it.

Q. Yeah, you see it. For the record, and for the Judge's benefit, below the proposed road it says 100-year floodplain, correct?

A. Correct.

Q. Okay. And then the line indicating the boundary of that floodplain sort of hits south southeast, and it continues actually on the other side of the road, does it not?

A. It does.

Q. Okay. And to the left of that, or I guess to the, approximately to the west of that is a rather large stormwater management facility, correct?

A. Correct.

Q. And that facility, would you agree with me, is entirely within the floodplain?

A. I do agree.

Q. Okay. The, you made reference to the forest buffer variance, and also to the alternative analysis that were approved, and those approvals are reflected in, well, not reflected, we have exhibit 7, but just first on the forest buffer variance, it’s your understanding that that forest buffer variance was for the continued use or continued existence of the house, the existing house on site, its driveway and its yard,

correct?

A. Well, we'd have to actually read the actual letter, because I believe it was for several different items, so we would have to look at the forest buffer variance and the alternatives analysis.

Q. Okay.

A. If I can bring those up as well.

Q. Well, I have it. Let me grab it real quick, just so you can answer. Let me blow that up. This is a letter dated September 24, 2021. Do you see that?

A. I do.

Q. And is this, I'll scroll down, it's three pages signed by Mr. Lekins. Is this the approval letter for that forest buffer variance?

A. It should be, yes.

Q. Okay. This is my highlighting obviously, but I highlighted it in order to reflect what the forest buffer and floodplain impacts are, and as I think you indicated, it says here for the dwelling and its yard area, is that correct?

A. Correct.

Q. Okay. And then the total of 17,424 square feet of variance was granted, correct?

A. I believe so.

Q. Okay. Now, that forest buffer variance was appealed by me, was it not? On behalf of my clients?

A. My understanding is yes, it was. I believe you've already had the hearing, but I am not familiar with the outcome.

Q. Okay. I think Mr. Rosenblatt would agree that's still pending, we haven't had the decision on that yet. So as we sit here today, let's just assume that the Board of Appeals agrees with me and denies this forest buffer variance, would you need to, is it fair to say that you and other members of your department will need to re-review the development plan in light of that denial?

A. In some capacity, correct, yeah. I believe the mechanism would be that the developer if they tried to go forward, they would be basically sent back to the development review committee, and they would have to ask for B2, to amend a previously approved plan if they

had to change the plan.

Q. When you say previously approved plan, are you referring to the development plan?

A. To the development plan.

Q. Well, you're assuming it's going to get approved. I didn't make that assumption yet.

A. What was going to be approved?

Q. Yeah. As we're sitting here today --

A. Oh, yeah.

Q. -- without any development plan approval, the granting or the denial of the forest buffer variance which is on appeal may make a difference in your recommendation of approval. Is that fair?

A. All of that would depend on the timing. Judge Murphy has a timeline to issue an order in this case, and I'm not sure, I mean, that would all come down to a matter of timing.

Q. I get you. I understand.

A. This comes down to like part of the legal proceedings that I'm never involved in as well.

Q. Yeah, I understand. You're saying if this

development plan is approved, and then we find out that the forest buffer variance was denied, it would have to go the BRC for an amendment to the approved plan.

A. Correct, or to try to amend it, or if it's significant enough, it might get remanded back, well, kicked back to a DPC. That's another possibility.

Q. Okay. And then we, you also talked about the alternatives analysis, which I think you indicated was a request for approval from DES [phonetic] to have the new road, the entrance road, and utilities and stormwater management in the forest buffer and floodplain, correct?

A. Correct.

Q. Okay. And am I correct that that alternative analysis also extended to, I'll pull it up again, to the widening of, the proposed widening of Joppa Road?

A. I believe so. I'd have to read the letter.

Q. Okay. Let me pull that up for you. So you see that? I'll pull it up.

A. Yeah. However, this alternatives analysis was raised pursuant to our design meeting for the widening of West Joppa Road to install a deceleration. I'm reading one of the other older versions, yeah.

Q. Okay. So let me just show you this, because I may mark both of these --

A. Correct.

Q. -- as exhibits. This is a 3-page letter signed by Mr. Lekins, I'm sorry, 4-page letter, actually it has the plan attached. I think they did it just for the record, and I'll introduce as just the four pages of the letter itself. But do you recognize this as the letter for approving, DES approval, of the alternative analysis?

A. At a fairly high rate of speed, yes, I do recognize that.

Q. I'm sorry. Let me know if you want to look at it closely. Hold on. I really wanted to focus in on one thing, but let me know when you're satisfied it's the right letter.

A. Okay. If you can scroll down, please.

Q. Sure. Keep on going?

A. Yeah, if you can hold it right there.

Q. Okay.

A. I believe it is. I believe this is the correct letter.

Q. Okay. Just so you see it, page 3 is, you see Mr. Lekins, I'm sorry, Mr. Schaeffer's signature. Do you see that?

A. Yes, I can see that.

Q. Okay. Getting back to the areas that I highlighted of course, am I correct, now having read it, would you agree with me that the alternative analysis extended not just to the new entrance road in the stormwater management facility, but also the widening of Joppa Road?

A. I believe so, yes.

Q. Okay. All right. And am I correct also that the alternative analysis approval that's reflected in this letter, the September 21, 2021 letter from Mr. Schaeffer, is also the subject of an appeal by me on behalf of my clients?

A. Correct.

Q. And that appeal is likewise pending?

A. Correct, to the best of my knowledge.

Q. Okay. And sitting here today, would you agree with me depending on the timing, that the approval or disapproval of the alternatives analysis by the Board of Appeals may affect your recommendation in this case for development plan approval?

A. I would agree that it could, yes.

Q. Okay.

MR. MCCANN: That's all I have, Judge Murphy. I would just ask that those two letters be marked as Protestant's exhibits 1 and 2, number 1 being the forest buffer approval, and number 2 being the alternative analysis approval.

THE JUDGE: Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No. Just to be clear, one of the documents had a submittal attached to it, and you're just limiting the exhibit to the approval letter?

MR. MCCANN: Correct. I'll send you a copy when we get done.

MR. ROSENBLATT: Okay.

MR. MCCANN: And I'll remove the highlighting so it's not part of the exhibit.

MR. ROSENBLATT: Okay. No objection.

THE JUDGE: Okay. Thank you. Mr. Zimmerman, I'm assuming you don't have any objection?

MR. ZIMMERMAN: No objection. No objection. I have questions, but no objection.

(Protestant Exhibit No. 2 was marked for identification and entered into evidence.)

THE JUDGE: Mr. McCann, you're finished? Was that a yes? Okay. All right. Mr. Livingston, hang in there. Mr. Zimmerman, you're next.

MR. ZIMMERMAN: Thank you.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. Good to see you, Mr. Livingston.

A. Likewise, Mr. Zimmerman.

Q. By way of background for everybody listening, you know this case was scheduled actually to be heard last November of 2021, right?

A. Correct.

Q. And so that explains why some of the comments and activities were from September to November, 2021 from your office, correct?

A. Correct.

Q. The first thing I want to ask you is what's the date of that red line development plan that was on the screen, if you know? Or maybe Mr. Rosenblatt can tell us. He was asking you about it and you said hey, things are okay now, something like that.

A. The one that he had up?

Q. Right.

A. I believe it was the November 10th, 2021.

Q. Okay.

A. I believe that was the date.

MR. ROSENBLATT: For the record, the one I had was August 25, 2022. That's Mr. Rosenblatt.

MR. LIVINGSTON: That is exhibit 1B, yes.

BY MR. ZIMMERMAN:

Q. Okay. Exhibit 1, that's the November 10th, correct?

A. Exhibit 1 is, so I'm scrolling over. I think it's the same day. It actually is August 25, 2022. This was the plan submitted to Mr. McCann and the ALJ's office.

Q. All right. So Mr. Livingston, are there some differences between the November 10, 2021 plan and the August 25, 2022 plan?

A. I was, this went up as we were going along, there is the change was, did have the forest conservation line delineated. Remember when we were discussing that with Mr. Rosenblatt?

Q. I'm just asking you, you know, what the main differences that are --

A. I believe what I'm calling the second plan does have a line with the forest conservation line shown on the plan, and it has got the planting stricken between lots 17 and lot 18, they're not on there.

Q. Yeah.

A. And then there was a minor line in the bottom of the one stormwater management pond. But other than that, I did not see any other changes.

Q. Okay. Given that this case was postponed from last November, do you have any concern about not getting a revised plan until a week before the hearing? Is that a concern?

A. In this case, no, because it's not changing anything structurally for EPS.

Q. Okay. And do you know whether or not this August 25th revised plan was made available to the public, other than to Mr. McCann?

A. I don't know. That's probably more of a development management issue.

Q. Okay. As far as the forest buffer variance goes, it was approved September 24, 2021, and is on appeal. Can you say why your department didn't provide all that information for the file for Judge Murphy to have available?

MR. ROSENBLATT: Objection, Your Honor.

THE JUDGE: What's the objection?

MR. ROSENBLATT: I have, I have two objections. One, the forest buffer variance which I allowed Mr. McCann to put the letters in, to ask questions about it,

but as you know it is a separate legal process that is not before the ALJ, it is never before the ALJ. If it's appealed, it goes to the Board of Appeals separately from a development plan, so that is the first part of the objection.

The second part of the objection, and I didn't do this at the outset, because thought that Mr. Zimmerman would respect the statutory authority that allows him to participate in certain types of cases, but we now have people's counsel whose authority to attend and participate in hearings is limited by the Baltimore County charter and code, asking environmental questions that have absolutely nothing to do with the zoning regulations, petitions for variance, special exception, reclassification, and he is far exceeding his statutory authority in asking these witnesses questions that have nothing to do with his role as a Baltimore County employee, not an interested citizen.

THE JUDGE: Okay. Mr. Zimmerman, yeah, I did have the same, I did look up that again, so you and I have had that discussion before. Your authority is

limited to the zoning issue, which is the special variance.

MR. ZIMMERMAN: Well, and actually the master plan conflict, we participated in the landmark, many master plan cases, H&S Development versus People's Counsel is the landmark case on master plan conflict and master plan was added to our charter in 1978.

So yeah, our priority in this case as I'll explain in the opening statement is the master plan and residential performance. Zoning standards, special variance issues, yes, which in the zoning law, but I thought it might be helpful since you asked about, you know, the forest buffer variance and the alternatives analysis not being in the file, it seems to me they are inter-related, and they may relate to some extent to the master plan, I don't know, but I was actually just trying to be helpful, because it looks like, you know, this is all inter-related, and the idea that these things are separate doesn't make any sense to me, but I think the point, you've made the point that you don't have that material, so I'll try to, you know, I'll refocus back on

the master plan and zoning issues so we don't spend, you know, four or five days on this case.

THE JUDGE: I appreciate that. One of the reasons I brought it up was because the Board of Appeals in a recent case that I had, development plan case, ruled that the alternatives analysis or interlocutory orders based on a Chesapeake Bay case, Chesapeake Bay Foundation case dated January of 2022, that they are not interlocutory, and so that was one of the reasons they changed the alternatives analysis, so I was curious whether or not the Board in this case, again, getting into too much here, but whether or not these would really be part of the development plan based on that case.

But again, for your purposes, if you can tell me how your questions in regard to environmental issues are related to master plan conflict, I didn't see a master plan conflict.

MR. ZIMMERMAN: Well, the master plan conflict is mainly the T3 transect issue, which you had in the, you know, Whitley Park, [phonetic] so I don't know if, I can't say at this point whether the environmental issues

relate directly to the master plan.

THE JUDGE: All right.

MR. ZIMMERMAN: I was just trying to be a little bit helpful. By the way, there was a Court of Appeals case the last week on the interlocutory versus final, at least in Harford County of the, it may be the same case you're referring to.

THE JUDGE: It's the same case, it is.

MR. ZIMMERMAN: It just came out last week, that was the Court of Appeals on that, and they actually said that the, under the Harford County Code, the forest conservation decision was a final decision, so that's a new case. I'm just trying to be helpful there.

THE JUDGE: Okay. All right.

MR. ZIMMERMAN: I'll refocus on, you know, I'll stick to the master plan and the zoning, okay?

THE JUDGE: If you could, yes, if you could.

MR. ZIMMERMAN: So I do have a zoning question.

THE JUDGE: A zoning question for Mr. Livingston?

MR. ZIMMERMAN: For Mr. Livingston, yeah.

THE JUDGE: Okay, Mr. Livingston.

MR. ZIMMERMAN: Yeah.

BY MR. ZIMMERMAN:

Q. So Mr. Livingston, are you familiar with the growth management law?

A. You're talking about growth allocation in the critical area?

Q. No. I'm talking about growth management law and the zoning law relating to sewer sheds and adequate sewer. Are you familiar with that?

A. I am not.

Q. Okay. And what about, there is also a master water and sewer plan that the country has, correct?

A. Correct.

Q. That's part of the master plan. Are you familiar with that?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: It's a water sewer plant question.

MR. LIVINGSTON: But that's not environmental.

MR. ZIMMERMAN: Okay. So that's not your department. That's not within the department, that's another, that's like public works department or somebody [indiscernible]

THE JUDGE: [indiscernible] Mr. Zimmerman? Hold on one second. There was an objection. Overruled, since you already talked over top of the objection. All right. Just let me get a chance to rule on the objection first. The objection is overruled.

MR. ZIMMERMAN: Okay.

THE JUDGE: Mr. Livingston said it's not an environmental issue.

MR. ZIMMERMAN: Okay. That's fine. I just wanted, he gave a good answer, that's fine, but the question related to the county's master sewer and water plan, which is part of the master plan, all right. So, you know, we are going to have a lot of these, you know, nitpicking objections when I'm asking questions about the, you know, the master plan.

THE JUDGE: Understood. We're just trying to move it along, so that's fine, sir. Go right ahead, Mr.

Zimmerman.

MR. ZIMMERMAN: No, that's it. I just wanted to find out if his department, you know, gets involved with those adequate sewer growth management master water sewer plan issues, and apparently they don't.

THE JUDGE: Okay. All right.

MR. ZIMMERMAN: Okay. I'll accept that.

THE JUDGE: All right.

MR. ZIMMERMAN: That's all I have.

THE JUDGE: Thank you, Mr. Zimmerman. All right, Mr. Livingston, you are free.

MR. LIVINGSTON: Thank you.

THE JUDGE: Thank you.

MR. ZIMMERMAN: I neglected to introduce that August 11, 2021 stormwater management development plan, stormwater management comment, those three pages, so I would --

THE JUDGE: Which one was that?

MR. ZIMMERMAN: That was the three page stormwater management comment that I showed Mr. Livingston. It would be exhibit 3.

THE JUDGE: Oh, right.

MR. ZIMMERMAN: And I'll send that to you and Adam as well.

THE JUDGE: And that's Protestant's exhibit 3.

MR. ZIMMERMAN: Correct.

(Protestant Exhibit No. 3 was marked for identification and entered into evidence.)

THE JUDGE: Okay. All right.

MR. ZIMMERMAN: Thank you.

THE JUDGE: No problem. All right. Thank you, Mr. Livingston. Next up is going to be planning, Mr. Williams.

MR. WILLIAMS: Good morning, Judge. How are you?

THE JUDGE: Good morning. How are you? We are moving right along here.

MR. WILLIAMS: Yes, ma'am.

THE JUDGE: Let me do this. Let me find yours, give me one second here. All right.

Whereupon,

BRETT WILLIAMS

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

Q. Department of Planning, go right ahead.

A. Good morning, everyone. My name is Brett Williams [phonetic] with the Department of Planning. The development plan for site design pursuant to the Baltimore County zoning regulations master plan 2020 comprehensive manual of development policies and other applicable community plans associated with this development.

So we have submitted our HOH report dated 11/8/21. If you scroll down to the school impact section, under evaluation and recommendation, the Department of Planning finds that the, at the time of the filing date for July 9, 2021, the school impact analysis that was submitted has been approved by our department.

The subject schools are Bridlewood [phonetic] Elementary school, Ridgely Middle School and Dulaney High

school, all of which are under the threshold of 115 percent of state capacity respectively, and we recommend approval of this school impact analysis.

Q. Let me ask you that. Don't we need a new school impact analysis, or am I wrong about that? Here it is on the screen dated July 9th, 2021. I thought every November they re-did the numbers based on September 30th numbers.

A. Honestly, I'm not sure. I don't believe, to my knowledge we haven't gotten the new numbers yet.

Q. Oh, the Planning Department hasn't?

A. Yes, because I believe we get it from the Baltimore County public schools, and we haven't gotten them yet.

Q. Okay. No new numbers. All right. Okay.

A. But if you'd like, we could re-run another school impact analysis just as a precautionary measure.

Q. Well, you wouldn't be able to write it though if you don't have the numbers, right?

A. Yeah. To my knowledge, we don't have the numbers.

Q. Okay. All right. Well, if you don't have them, then we don't have them. I just wanted to ask that question while you were on that topic. Okay. So that's analysis. All right.

A. We are, our department is also aware that there is a special variance request for failing F level traffic shed as delineated on the 2020 basic services map. With regard to the special variance request, the Department of Planning has no objection, but will defer and rely upon the expert judgment of the Department of Public Works and Transportation for final recommendation and decision.

Q. So on that one, on that one, you reviewed for some reason the traffic impact study was sent to Department of Planning, right?

A. Yes, and we have reviewed that as well.

Q. It's attached to your report. In fact, it was the, here we go, it's the back of it. So this was attached to your right, to your HOH report?

A. Correct. We wanted to put on the record that we did in fact review it, but we are not the

technical experts behind the decision making for whether it should be approved or not. We rely upon the experts of DPW and Transportation.

Q. We had this in another case, and of course the statute for, the statute, the code, the Baltimore County zoning regulation section for special variance indicates that Department of Planning is charged with the report. Did you actually have any conversations with the Department of Public Works? Have you met with them? Is there anything that you could tell us about it?

A. We have not met with the DPW on this report, but we have reviewed the report, and our position is that we have no objection to approving, with the recommended improvements that we saw in the Lenhart, [phonetic] I think it was called the Lenhart traffic report. We have no objections to approving this variance, special variance request.

Q. Do you remember based on your review of the Lenhart traffic consulting traffic impact study, what are the improvements that they're proposing for the project?

A. So I'm, I am going to have to re-look, revisit it, but I believe they were extending, widening a couple of lanes along the intersection, and providing traffic, additional traffic signals and things like that.

Q. Okay. And you were the one who would have read the traffic impact study?

A. I did read it myself, yes.

Q. Okay. For the Department of Planning.

A. Yes.

Q. Okay. All right. And so that's that part of your HOH report. And then you had the residential standards.

A. Yes, ma'am. So the Baltimore County zoning regulation 260 requires the Director of the Department of Planning to make a finding based on residential development of four lots or more with the submittal of the August 30, 2021 pattern book that Department of Planning recommends approval of that pattern book, and our final recommendation through a point by point response letter received on September 16th, 2021, being attached to this report, the

applicants have positively responded to the August 11, 2021 DPC comments made by Department of Planning.

The Department is, the development plan is in conformance with the Baltimore County zoning regulations, the comprehensive manual development policies, as well as the master plan 2020. The Department of Planning has reviewed the submitted red line development plan, and associated materials for the above development for Greenspring Manor, and recommends approval.

Q. Okay. For the performance standards, the pattern book that you reviewed was submitted on August 30th, that's 2021?

A. Yes.

Q. So there's a newer version of that? Did you get the updated version of the pattern book? I think that's dated August 29, 2022.

A. Let me see what we, yes, we did receive it.

Q. Okay. And would you have reviewed that one as well?

A. Yes. Our comments still don't change as

far as recommendation. We did see that.

Q. Okay. That was my, go ahead. That was my next question, whether your position had changed based on your review of the latest pattern book. And so you indicate here that it is, the development plan has conformed with the master plan. Do you see any conflict with the master plan or any of the local community plans?

A. No, I do not.

Q. Okay. The, you mentioned the, we have the school impact analysis of course which we showed on the screen. The point-by-point responses to your planning comments, this is from the concept plan comments dated July 29th of 2021.

You had in your initial comments, one of the things Department of Planning said is that they considered this site to be overdeveloped, and so did you change your position on that?

A. Yes, we did.

Q. And why was that?

A. Well, with working with the developer through several meetings, we, it was determined that with

the proposal being 61 units and meeting the density that it was not over developed.

They were able to actually provide open space without the need for requests for relief. There are no regulation variances being requested for this property, and also the lot sizes were similar to the surrounding area. I think Seminary Farms Road, it was determined that the lots were about 24,000 square feet on average. Also the lots proposed for this development were an average of about 11,500 square feet, which is less than some of the surrounding single family attached lots in the area.

Like I said, they were able to also meet the density by right, so without any bulk regulations, so --

Q. And you're also, you had concern that you wanted homeowners to be able to put up decks, right? And so without the need for variances, and that was also a concern. Did they address that?

A. Yes. So they, in the same DP, there's a regulation to provide 500 consecutive square feet of very useful lot area. This was met on all of the lots without

need for relief, and also the proposed lots are able to meet, provide decks without a variance on all of the lots.

Q. Okay. All right. And then there were, I mean, there's a lot more here you went through, but you were satisfied when you got this document which is many pages that you, they had addressed all of your initial concerns from the concept plan conference.

A. Correct.

Q. Okay. And I'm just showing it for the record, it, the pages, they are not numbered, but they do go on analysis for the master plan 2020, the comprehensive manual development policies, also I just want to show it on the screen just to show that this is the document that you reviewed.

A. Yes.

Q. Yeah, okay. So that is another exhibit. All right. So we're going to say the Department of Planning hearing officer's report, which is the one we first showed on the screen dated November 8, 2021 is County 7.

(County Exhibit No. 7 was marked for identification and entered into evidence.)

THE JUDGE: The school impact analysis is County exhibit number 8, dated 7/29/2021.

(County Exhibit No. 8 was marked for identification and entered into evidence.)

THE JUDGE: The Department of Planning, the point-by-point response from the developer which typically I don’t put in because it’s not a county generated document, however the county did review this based on this point-by-point response did recommend approval based on this response, and that is going to be County exhibit number 9.

(County Exhibit No. 9 was marked for identification and entered into evidence.)

THE JUDGE: All right. Mr. Rosenblatt, any questions?

MR. ROSENBLATT: No questions. I think I missed what exhibit 6 was, Your Honor.

THE JUDGE: The specimen tree approval.

MR. ROSENBLATT: Okay. Thank you, and thank

you, Mr. Williams. I don't have any questions at this time.

THE JUDGE: Okay. Mr. McCann?

MR. MCCANN: Yeah, thank you.

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Good morning, Mr. Williams.

A. Good morning, Mr. McCann. How are you?

Q. Good, thank you. So let me show you, it sounds like you were very frank with the judge in explaining your reasons for why your office's position on this development changed, and you mentioned a number of things. Let me just, before I show you anything, let me just make sure I've captured the reasons.

And again, the question is are these the reasons why the Planning Office changed its position to now support those development? Number one, you said that the development meets the zoning density.

A. Correct.

Q. Number two, you said that the development provides open space?

A. Correct.

Q. Number three, you said that the developer is not seeking any variances from the county's bulk regulations.

A. That's correct.

Q. Okay. You said, number four, that the proposed lot sizes are similar to some of the other single-family residents in the area, correct?

A. Correct.

Q. And number five, the developer is not seeking any variances for any rear-yard decks that are [indiscernible] is that correct?

A. Correct.

Q. Did I miss anything?

A. I think you have it all.

Q. Okay. Let me show you what I'll mark as Protestant's exhibit number 3.

THE JUDGE: That should be Protestant's 4, I think. You already put --

MR. MCCANN: Oh, I'm sorry. I was thinking 4 and said 3, thank you.

THE JUDGE: Yes.

(Protestant Exhibit No. 4 was marked for identification and entered into evidence.)

MR. MCCANN: Okay. And I'll blow these up a little bit so you can see them. This is dated March 1, 2021.

BY MR. MCCANN:

Q. I'll scroll down slowly, Mr. Williams, so you can see it. Let me know if you want me to stop. The question I'm going to ask you at the end of this scrolling is whether or not you can confirm for me that these are the Department of Planning's concept planning comments of March, 2021.

A. These do in fact look like our comments.

Q. Okay. Great. And the four pages, that's your signature at the bottom?

A. Correct.

Q. And that's Ms. Nugent's [phonetic] signature at the bottom?

A. Correct.

Q. And at the top, page 1 of this exhibit 4,

Steve Lafferty, [phonetic] the Director of the Department of Planning, those are his initials?

A. Correct.

Q. So Mr. Lafferty as well as Ms. Nugent signed off on these concept plan comments back in March, 2021?

A. Correct.

Q. And let’s just direct your attention to, bear with me one second. Special variance request. Read the first two sentences and I’ll highlight them in the second paragraph under special variance request.

It says the Department of Planning considers this site to be over-developed. Many of the lot sizes are not compatible to surrounding neighborhoods. The number of lots should be decreased to allow for larger lots, and would help achieve a design that could accommodate future improvements in yard space without the need for relief. Did I read that correctly?

A. Correct.

Q. Those first two sentences. I want to also show you and have marked as Protestant’s exhibit 5, the

concept plan.

(Protestant Exhibit No. 5 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Let me show that to you. This is a two-page document. First, I'll show you the two pages. I'm sorry. Go up a little bit. So page 1 of this exhibit, and page 2, okay, and then I'll move over to the legend so you can see the dates. I'll blow it up a little bit. Bear with me a second. I can turn that if you'd like, but do you see that date of this concept plan, two pages? February 15, 2021?

A. Yes.

Q. Okay. And in fact there's a seal on this. It says received February 16, 2021 from Department of [indiscernible] and Inspections. Do you see that?

A. Yes.

Q. Okay. Below that, again, does this appear to be the two-page concept plan that was filed in February of 2021 in which is the subject of your March 1, 2021 concept plan comments?

A. Yes.

Q. Okay. Okay. First of all, we can, I know it's busy, but would you agree with me, number one, that this concept plan proposed the very same number of lots as the development plan, Developer's exhibit 1, correct?

A. Yes. 61 units, yes.

Q. Okay. And would you agree with me that the lot sizes have not appreciably changed? You can look at the lot areas on this table and compare it to the development.

A. I believe, to my knowledge, lot 7 was removed for open space.

Q. Yeah.

A. And the cul-de-sac was added for better circulation.

Q. Okay. But in terms of the lot areas, and we can all look at the two charts on the concept plan, the development plan ourselves, but would you agree with me based on your review of this plan back then and the current development plan that the lot areas were all 61 new lots, so roughly the same as they were, as they are

in the development plan. Would you agree?

A. Yes, they are similar.

Q. Okay. And the, with the exception of the things you just mentioned, the configuration of the lots themselves is the same. That is same central road network, same orientation of the houses, that sort of thing.

A. There's slight variations to the road networks, and we made sure that we reinforce the lot depths to provide better site design for each lot.

Q. Okay. So you said two things there. You said the road network had slightly changed. Let me show you Developer's exhibit 1A, we had it up before. This is the current development plan. Would you agree with me that the road network and the configuration of the houses is roughly the same?

A. It's similar, but I believe there has been minor changes to reduce the visual impact at Joppa Road.

Q. Okay. And what changes are those?

A. Some of, like I said, we, they got rid of I believe lot 7 to provide open space, the cul-de-sac,

circulation, and I believe the lot depths, the housing depths on some of the lots were increased.

Q. Okay. Let's just look at that real quick, and I'll show you. To be fair, I'll direct you to it. This is the concept plan, again. Protestant's exhibit 5. I'll blow it up a little bit so you can see it. Do you see that in this concept plan that there are proposed houses to the immediate I guess east of the stormwater management facility? Do you see that?

A. Correct, I see it.

Q. Okay. And then going back to Developer's exhibit 1, to be fair, I think this is what you were referring to. That area that I just described in the concept plan is now as you've described it, is not, all the houses have been moved a little further back.

A. Yes.

Q. Is that what you were referring to?

A. Yes, to reduce the visual impact, impacts on Joppa.

Q. So the removal, the moving of these houses, what 100 feet or 200 feet or so, in your mind

lessens the impact of the houses, is it the, let me rephrase that. Is it the visual impact from Joppa towards the houses that you're concerned about? Or is it the visual impact from the houses to Joppa Road that you're concerned about?

A. So from Joppa Road to the houses, we have what are called Section 260, we like to mitigate impacts of the houses, and one of the main thing that visual viewshed, and also with the high visibility lots, in 260 there is what is called high visibility lots, and we'd like to reduce impacts of the size of the houses, and also into the rear yards.

Q. Okay. So for the houses, going back to the concept plan again, exhibit 5, what has been achieved in the development plan I guess is what you're suggesting is that these I guess roughly two houses here, lots 61 and 60, they are no longer in your opinion high visibility lots?

A. So if you can go back to the other one.

Q. Sure.

A. 661, so those two were removed, but the

house on this plan is still a high visibility lot.

Q. 661 in the development plan is still a high visibility lot?

A. Correct.

Q. And that hasn't been removed obviously?

A. Correct.

Q. What about 60, lot 60?

A. Lot 60 is not a high visibility lot.

Q. Okay. What about lot 2 to the south across the street? Is that a high visibility lot?

A. Yes.

Q. What about lot 3? Is that a high visibility lot?

A. No. High visibility lots are only lots visible from the public right of way, where the side facades are exposed from the public right of way.

Q. Okay. The public right of way being?

A. On this case, the main, the public road, Foxwood Drive, the public road as well.

Q. Okay. So as we sit here today, the development plan as proposed still has high visibility

lots?

A. Yes.

Q. Okay. You mentioned the cul-de-sac, and I wanted to ask you what it is about the development plan that's changed. I apologize for switching back and forth, but I'm showing you now Protestant's exhibit 5, and I'll zoom in if you'd like.

What's different between this concept plan, Protestant's exhibit 5 [indiscernible] in terms of [indiscernible]

A. I'm sorry, I can't hear you. Something --

Q. That's not a cul-de-sac. So when you say cul-de-sac --

A. It's in the bottom right where the HO is, yeah.

Q. I'm sorry, I temporarily forgot what a cul-de-sac was apparently. Let me go to that area of the plan, thank you for that. Here is the concept plan, the cul-de-sac. What has changed between the two plans? Let me know which one you want to look at.

A. So now, in this first exhibit right here,

the, it was not meeting the county requirements, so, and the DPC or the red line plan meets county requirements, sidewalk is added, and it now has a landscape island to meet all of the requirements set forth in the regulations.

Q. Okay.

A. And that also provides better function and circulation for the site.

Q. So for this, for the lots on the cul-de-sac, which ones specifically have been changed, or should have been changed? Which ones? Which lot numbers? Looking at the concept plan first.

A. I'm sorry, I don't understand the question.

Q. Yeah. Maybe go to the development plan. Tell me what has changed, or repeat for me what has changed on the development plan with respect to the cul-de-sac, I think you said.

A. So lots 17 and 18 were shifted. Lot 19, lot 19 was HOH open space. HOA open space. Again, you can see they've added the sidewalks, there's better

turning radius for the cul-de-sac. The landscape island has been provided, which is a part of the regulations as well, and yeah, it provides better circulation and function for those houses that are serviced by the cul-de-sac.

Q. Okay. And all those things you just mentioned, those relate in your opinion to, well, strike that. Lastly, or not lastly, but another question in terms of the houses themselves. On this plan as well as the concept plan, there is a breakdown, is there not, of the typical unit layout? Do you see that on Developer's exhibit 1?

A. Yes, I do.

Q. So in other words, the developer is proposing certain units to be 54 feet wide and some 50 feet wide and some 40 feet wide, correct?

A. Correct.

Q. So pretty significant differences in square footage, correct?

A. Correct.

Q. And then in the concept plan, likewise,

I'll turn to that same table. In the concept plan, the developer likewise was proposing 54-foot, 50 foot and 40-foot-wide units, correct?

A. Correct.

Q. Do you know offhand how many of each of those size units there are on the concept plan, and how many of those, each of those --

A. I do not.

Q. Let me just finish the question, sir.

A. I'm sorry.

Q. It will help my train of thought as well. Do you, amongst the 61 new lots, do you know in the concept plan, do you know how many are 54 foot wide, 50 feet wide, or 40 feet wide?

A. Not offhand, no.

Q. And in terms of the development plan, do you know what the distribution is between the 54-foot wide, the 50-foot wide, and the 40-foot wide?

A. Not offhand, I do not.

Q. Okay. Okay. In terms of traffic, would you agree with me that under both plans, the traffic

generated by each plan will be the same?

A. Yes.

Q. Would you agree with me that the sewer generated by the 61 homes will be the same under both the concept plan and the development plan?

A. I would assume so, but I'm sure it's not [indiscernible] but I would assume so.

Q. Okay. All right. A couple other things. You mentioned that, in response to Judge Murphy's questions that you did not, the Planning Office, did not submit a report to her on the office's recommendations regarding this type of variance, correct?

THE JUDGE: Let me just say for the record, it was in the report. It's in the HOH report? I don't want there to be a misunderstanding. So they actually, special variance was mentioned as you saw in the HOH report.

MR. WILLIAMS: Yeah.

MR. ROSENBLATT: Judge, would you mind pulling that up? Because I don't think I have that.

SPEAKER: I certainly don't have the, yeah, I

don’t have the --

BY MR. MCCANN:

Q. Maybe I did mishear you, Mr. Williams. I thought you said that you weren’t a technical expert, and that the Planning Office didn’t --

A. I’m sorry, go ahead.

Q. And the, it’s okay. You’re a step ahead of me. I thought you said that you were not a technical expert in traffic, and you and your office did not submit the report required by the zoning regulations on the special variance issue.

THE JUDGE: Let me pull it up. So just to be clear, I mean, it’s, again, the special variance language is in the HOH report, so it’s right here. So there’s the report, it is just that they defer to the department.

MR. MCCANN: Okay.

THE JUDGE: I just don’t want there to be, you know, confusion about my question.

MR. MCCANN: I guess that’s an important distinction. So let me, what exhibit is that, Your Honor?

THE JUDGE: It is exhibit 7.

MR. MCCANN: 7, okay.

BY MR. MCCANN:

Q. So this HOH report of November 8, 2021 is a report, you call it a report, correct?

A. Correct.

Q. And it makes reference to and uses the word special variance, correct?

A. Correct.

Q. But you did not, aside from that, you nor anyone else in your office actually reported on or spoke to or explained what your position was on a special variance, correct?

A. So I can’t speak, I can speak for my review, so I reviewed the Lenhart traffic report, and it was determined, I determined that these improvements positively improved, would improve the traffic, the traffic level in this area, but pursuant, there’s no regulation stating that it is under our purview to do the review and make a final recommendation finding, but through our review it was determined that we have no objection to this, to the granting of the special

variance, and, but we ultimately defer to DPW and transportation.

Q. Okay. So when you use, in this paragraph we're looking at on page 3, when you say the Department of Planning has no objection, the basis of that, to the extent that that's a report, the basis of that are the things you just described thus far, correct?

A. Yes.

Q. And anything else that you haven't said?

A. No.

Q. Okay.

A. I think that's it.

Q. You're a planner, correct, Mr. Williams?

A. Correct.

Q. Did anyone other than yourself review the traffic report?

A. Yes. So all of the people who have signatures on the final HOH report, Jennifer Nugent and Steve Lafferty have reviewed it as well.

Q. You know that they did?

A. Yes.

Q. Okay. And why is it that you say based on your review of the report that, strike that. You mentioned, before I forget, you mentioned changes in lot depth between the concept plan and development plan. Did I hear you right?

A. Correct.

Q. When you say that, how many, again, we can all look at it ourselves and measure it, but how many lots do you think have been increased in depth in the development plan?

A. So --

Q. [indiscernible] to the concept plan.

A. So I can’t say exactly how many, but if you look at the differences between the concept plan and development plan, you will see the setbacks have been adjusted, especially around the road area and open space, and also the, with the adjustment of the lot depths, you can see that the rear yard areas for all the lots are now able to meet the regulations of the CMBP. [phonetic]

Q. Okay. They can adjust it. You would agree with me that any adjustments to the lot depth

between the concept plan and the development plan aren't very significant. If any have been made to any of the lots.

A. You said aren't?

Q. Yes, are not.

A. I would say so.

Q. Okay. You would say they are? Or are you agreeing with me that they're not significant?

A. I would say the lot depth changes, and the adjustments of the lots have been significant in changing the layout, and now they also meet the code requirements of the CMBP, so --

Q. Well, again, we can all look at the differences. When you say they have been changed a lot, are we talking a couple feet, right, at most if they have been changed?

A. I'm saying they've been adjusted enough to now meet the codes without bulk regulations, and also meet all of the requirements and regulations.

Q. Okay. I was unaware of any lot in the concept plan that did not meet the bulk regulations

either in terms of setbacks or anything of that nature. Are you saying that there were violations?

A. I do not believe there were violations, but some of the lots were not meeting the CMBP rear yard, the minimum rear yard square footage.

Q. Okay. And so it's the CMBP you're talking about, not the bulk regulations?

A. Correct.

Q. And what does the CMBP provide for in regard to rear lot areas?

A. If I'm not mistaken, the residential development must provide 500 consecutive square feet of usable rear yard area.

Q. That's kind of small. I mean, is there, are there any, are you telling me that there are lots, if we look at the concept plan, that there are lots that were under 500 feet? Is that what you're saying?

A. Some of, I, I'm not 100 percent sure, but some of the lots look pretty tight, just visually looking at them, the rear lot areas look like some maybe couldn't accommodate decks or provide the rear yard area, and

that's --

Q. Which lots were those?

A. The ones to the north. If you could bring up your screen again.

Q. Sure.

A. I could --

Q. You want to look at the concept plan first?

A. Sure.

Q. Okay. Let me know if you want me to blow it up at all.

A. Yeah, I still can't see your screen.

Q. Oh. Maybe share. Thank you. This is the concept plan, this is exhibit 5, Protestant's exhibit 5. Do you see that?

A. Yes.

Q. Okay. So tell me what lots you were talking about.

A. Okay. So if you, right where the entrance is, that lot, it's a little tight there.

Q. Are you talking about lot 35? I can blow

it up.

A. Yeah, because I can't--

Q. The entrance to this, to this road right here?

A. Yes.

Q. So which lot are you talking about? 36? 35?

A. Okay. Is that HOH area? I think I see HOH area for lot 35, and I'm not sure if that --

Q. Let me re-ask the question so we're all on the same page about what it is I'm looking for. I'm just asking you to identify if you can any of the lots in the concept plan that you think were insufficient in terms of rear yard.

A. So I'm not 100 percent sure just by looking at them if they are, but it was confirmed on, at, by the point-by-point response at the DPC, comments that each lot can now accommodate the rear yard areas, and you can see the adjustments that have been made from CPC to DPC.

Q. Okay. So the developer's representative

told you that those improvements were made?

A. Yes, they confirmed it by note.

Q. Okay. And again, we can all look at the plan ourselves, but it's your testimony again that the development plan provides to some significant degree more rear yard space?

A. Yes.

Q. Okay. All right. I'll move on from that. Getting back to the concept plan comments, the next sentence, I'll read to you, and I just have a couple more questions. The next sentence, this again is the concept plan comments of March, 2021. I'll read the next sentence where I left off.

It says, as designed, the proposed development does not achieve the vision of the master plan 2020, nor the comprehensive manual development policies, the master plan 2020 recommends low density residential development adjacent to higher zones consisting of mixed uses. This would also require extensive grading. The site should be redesigned to minimize cut and fill while using the natural features of the land pursuant to the CMBP, as

well as Section 26 of the BCZR. Did I read that correctly?

A. Correct.

Q. Well, first and foremost, what is your understanding, Mr. Williams, of the master plan? Is it in your opinion, is it mandatory, or is it advisory in nature?

A. I believe, I believe it is. I'm not 100 percent sure, but I believe it is not advisory. I believe it's binding.

Q. Okay. And the reason why back in March of 2021 you believe that the development plan was, does not achieve the vision of master plan 2020 was among other reasons that it was inconsistent with the T3 transect in that master plan, correct?

A. At the time, yes.

Q. Okay. And one of the things that the T3 transect talks about is, as you indicated here, low density, right?

A. Yes.

Q. And another thing that the T3 transect

talks about is setbacks, I'm sorry, one second. Setbacks that are relatively deep, correct?

A. Correct.

Q. Okay. And another thing that the T3 transect talks about is that the properties adjacent to biozones, meaning higher density zones, correct?

A. Correct.

Q. And adjacent to zones that contain mixed uses, correct?

A. Yes.

Q. All right. One second. I'll stop sharing. You mentioned as I just read, you mentioned that the site should be redesigned to minimize cut and fill. These are, again, in your concept plan comments of March, 2021. In what way specifically has the proposed development minimized cut and fill? If at all. If at all.

A. Well, just from visually looking at the two plans, they have reduced grading. It looks, just from the visual, visually looking at it, you can see that they demonstrated, they have reduced cut and fill. I'm

not sure --

Q. You're not sure to what extent?

A. Well, I can say just from visually looking at it, they have reduced the grading of the site, so it's not massive grading, and cutting and filling hasn't been drastically reduced, but it's been reduced.

Q. Okay. And so both of those comments, that is that the, there is no longer massive grading, and the cut and fill has been reduced, that's based on your sort of visual look of the development plan, correct?

A. Correct.

Q. You did not conduct any investigation beyond that to determine how much grading or how much cut and fill was involved in the development plan versus the concept plan.

A. You mean did I do an analysis to compare exactly?

Q. Yes.

A. No, I did not.

Q. Okay. A little beyond your expertise?

A. Yes.

Q. Okay. And when you say, you actually said that the development plan does not involve massive grading. What do you base, what could you possibly base that conclusion on? Particularly if you didn't do an investigation.

A. Well, a grading plan was, you can see the grading on the development plan, the difference between the gradings, between the development plan and the concept plan.

Q. Okay. Anything else that you looked at? I think you said no, right?

A. As far as?

Q. The amount of grading required for the development plan versus the concept plan.

A. I personally didn't do an analysis of comparing the amounts of grading and cut and fill between the concept and development plan. What I believe the engineers have done their own analysis as far as that.

Q. What engineers? The developers?

A. The developers, correct.

Q. Did you review that analysis before you

reached a conclusion you did in your develop plan comments? No?

A. No.

Q. Okay. I'm going to show you, I have, I have the Judge has already showed us the HOH report that was submitted. I actually have development plan comments, which I understand are different. Am I correct about that?

A. Correct. I believe there were still open comments that we had at DPC.

Q Let me just show this to you, and I'll mark those as the next exhibit, which I think is 6. I'll show those to you. Do you see this? This is dated August 11, 2021. It says subject development plan conference. Do you see that?

A. Mm-hmm.

Q. These are Mr. Lafferty's initials?

A. Yes.

Q. Okay. And then I'll scroll down slowly to final page, page 4, signed by you and Ms. Nugent, correct?

A. Correct.

Q. Okay. I have a question about one note, and that is note 6. I'll blow it up a little bit and let you take a look at it rather than me reading it to you.

A. Okay.

Q. So just real quick, I'll show you the plan. Again, Developer's exhibit 1 so everybody knows where we're talking about. This is in sort of the rear of site, and I'll blow it up. It says, if you see here, it says gated for emergency access only to be approved by Administrative Law Judge. Do you see that?

A. Correct.

Q. So in other words, the developer is not proposing that this be connected, that is that this development be connected to the community behind it, right?

A. Correct.

Q. And it sounds like based on your comment that we just looked at, that the Planning Department supports that, correct? As opposed to making it connected.

A. Correct. I believe there was a community meeting that transpired, and the community did not support the connection.

Q. Okay. And you believe the, I take it from your comment here that the lack of connection, that is gating it for emergency access only, is consistent with the master plan and the CMBP, as well as applicable community plans, correct?

A. Correct. We believe that the connectivity should be done, the connectivity should be there, but only to provide for emergency access due to the negative response from the community.

Q. Okay. And from a planning perspective, does that make sense as well?

A. Yes.

Q. Okay. And when you say connectivity, I gather from this comment that you believe that having the ability for pedestrians to walk between the communities achieves that connectivity, correct?

A. Correct. That's why we asked for a sidewalk.

Q. Okay. I know I keep on saying I'm done, but I am done, Mr. Williams.

A. Thank you, Mr. McCann.

Q. Thank you very much.

MR. MCCANN: Before I let you go, I'll ask the judge if we can mark the August 11, 2021 development plan conference comments as our next exhibit, which I think is 6.

THE JUDGE: It's 6, right. Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: No objection.

THE JUDGE: All right.

(Protestant Exhibit No. 6 was marked for identification and entered into evidence.)

THE JUDGE: Are you finished, Mr. McCann?

MR. MCCANN: I am. Thank you. Thank you, Mr. Williams.

THE JUDGE: Mr. Zimmerman, did you have any questions?

MR. ZIMMERMAN: I do. Thank you, Judge.

THE JUDGE: Okay.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. So Mr. Williams, just preliminarily, did I not call you last week to ask whether there were any additional detailed comments from your office subsequent to August 10, 2021?

A. I believe, yes, we did speak, yes.

Q. And there are no other detailed comments after the August 10th development plan conference comment, am I correct?

A. Correct.

Q. Okay. And nothing in whatever plan red line was submitted a few days ago, you know, changes anything as far as you're concerned?

A. No, it doesn't change our recommendation to the ALJ.

Q. Okay. And for the record, you have no idea what I'm going to ask you today, right?

A. Um --

Q. We didn't discuss what I was going to ask you?

A. No.

Q. I did send you a copy of the letter that I wrote November 9, 2021, didn't I?

A. Correct.

Q. Okay. Did you have a chance to read it?

A. I did.

Q. Okay, good. By way of background, how many years have you worked in the Planning Department?

A. It will be ten years January 28th.

Q. Okay. And what is, do you have a specialty within the department? Or what's your area of concentration?

A. I'm with development review, Department of Planning.

Q. Okay. And how long have you been in that section?

A. Since I started working with the county.

Q. Okay. And just by way of background, can you give the judge very briefly your educational background and other, any other education in the planning profession?

MR. ROSENBLATT: Objection, Judge.

THE JUDGE: Do we need to know, I mean, I'm sure he, you know, he has graduated and all that, and he's already testified now for an hour and a half. Do I need, do I honestly need to know where he graduated? I know you are always interested in this, Mr. Zimmerman.

MR. ZIMMERMAN: Well, yeah. I mean, it would have been over by now if Mr. Rosenblatt hadn't objected. I mean, just, you know, it is good to know the, you know, he may have majored in a certain type of planning. I mean, it's good to know.

THE JUDGE: He's testifying for the Department of Planning --

MR. ZIMMERMAN: All right. All right.

THE JUDGE: -- we don't need to know, sustained.

MR. ZIMMERMAN: All right. I get it. We'll move on.

BY MR. ZIMMERMAN:

Q. So as far as the Planning Department comments go, you've observed that of course Mr. Lafferty, the Director, ultimately signed them or initialed them,

and then you've got Jennifer Nugent, you've got, also there's an MK. That's, can I print out, why don't you print out? It's hard for me to print out.

A. It's my immediate supervisor, Marta Chekalchesky. [phonetic]

Q. Okay. So did you do the main work on these comments and then discuss them with everybody? Or was it like a collaboration?

A. So I'm the primary reviewer of the plan. I've reviewed it, made comments. It was then reviewed by my immediate supervisor, Marta Chekalchesky. She provided feedback and edits, and then it was, after clearance, it was sent up to Jennifer Nugent. She did her review. After she cleared it, it went to Steve Lafferty.

Q. Okay.

MR. ZIMMERMAN: Now, let me, maybe Mr. McCann will help me out. Can we get the March 1st, 2021 concept plan conference up? I mean, I've got it as an exhibit, but I think Mr. McCann already made an exhibit, didn't he?

MR. MCCANN: Yes, I can get it.

MR. ZIMMERMAN: Can we get the March 1st one up for a few more questions?

MR. MCCANN: Okay. There it is.

MR. ZIMMERMAN: Okay. And let's scroll, can you scroll down, Mr. McCann? All right. Wait a minute. Let's just get this. Page 1, I'm sorry, let's see. Page 2. Okay. Can we scroll down to the master plan? All right.

BY MR. ZIMMERMAN:

Q. So right there, Mr. Williams, you refer to the T3 suburban transect, and you described it, right?

A. Yes.

Q. And basically you do that in every concept plan conference you have a paragraph on the transect, correct?

A. Correct.

Q. And what's your understanding of the purpose of the transects in the master plan? Can you give a description of what the master plan says about transects?

A. It is a tool designed to help guide and establish development throughout the county.

Q. And is it advisory, or mandatory?

A. To my knowledge, it is mandatory.

Q. Okay.

A. It's basically used in conjunction with the zoning.

Q. Do you know whether it's a kind of zone in a way?

MR. ROSENBLATT: Objection.

THE JUDGE: What's the objection, Mr. Rosenblatt?

MR. ROSENBLATT: Whether it's a kind of zone?

THE JUDGE: Is it a type of zoning? Or consistent with zoning? Used with zoning, is it used with zoning. What was the question?

MR. WILLIAMS: It's used in conjunction with the zoning.

THE JUDGE: Okay.

MR. ZIMMERMAN: I don't know if Mr. McCann can, we'll get to this in a moment, about the transects and the zones and so on.

BY MR. ZIMMERMAN:

Q. Let's get to the next page, or is it the, on the exhibit. Page 3. So let's go to the, I don't know, third to last sentence in the third paragraph. "The master plan 2020 recommends low density residential development adjacent to higher zones consisting of mixed uses." Isn't that in part a reference to the T3 transect?

A. Yes.

Q. Okay. So is it fair to say that the T3 transect was a factor in your conclusion that the Department of Planning considers this site to be over developed?

A. Yes.

Q. Okay. All right. Okay. And, all right. What, if anything, did your later August 10th, 2021 comment say about the T3 transect and its relevance? Did it say anything?

A. So the master plan also promotes connectivity whenever possible, and we really wanted the connectivity of the communities, and we, I believe with every development we do push forward that, but with the

negative feedback of, well, the negative feedback we got from a community input meeting, we decided to accommodate the connectivity with the gate to provide the, recommend providing the connectivity with the gate, but --

Q. Okay. Well, actually that wasn't my question.

MR. ZIMMERMAN: But can we get the August 11, 2021 development plan conference comment up? I have it as an exhibit 2, but Mr. McCann I think has it handy.

MR. MCCANN: Do you see that?

MR. ZIMMERMAN: And by the way, was this exhibit 4 or 5 of Mr. McCann's, the March 1st one?

MR. MCCANN: The March 1st was exhibit 4.

MR. ZIMMERMAN: Okay.

MR. MCCANN: This is exhibit 6.

MR. ZIMMERMAN: All right. We were talking about 4, and now we're onto 6. All right. Let Mr. McCann go through it.

BY MR. ZIMMERMAN:

Q. And I want Mr. Williams to tell me where, if anywhere, you mentioned again the T3 transect, and

anything relating directly to it.

A. I believe it should be a master plan comment on these DPC I believe.

Q. Well, let's look for it.

A. There it is.

Q. Okay. Okay. That's just a repeat of your description that you had in the March one, correct?

A. Mm-hmm.

Q. That's an exact, exactly the same. All right. Let's go through the, your statement about consistency. All right. Well, all right, you repeated the recommendation, master plan 20 recommends low density residential development adjacent to higher zones consisting of mixed uses, and yet this had been a factor in your stating the site was over developed, so there's nothing different about the master plan from the time of the, from one to the other. I mean, it's still the T3 transect, it's still low density, and it was a factor in your reasoning --

A. So what I was unaware of during my initial review, the, so firstly, single family detached dwellings

are considered a low density use. Not saying I didn't know that before, but what I didn't know is the surrounding community is, has commercial uses as well as townhouse development as well, which is considered higher density uses compared to single family detached, which is being proposed here.

Q. All right. So in your opinion, or your office's opinion, I mean, single family detached dwellings are by definition are categorically always low density. Is that what you've just told us?

A. No.

Q. They're not always low density?

A. They're not. Compared to the townhouse uses and the commercial use, it is a low-density use, and most times it depends on the zoning whether a site is considered low density. In this case, the property is zoned DR1 and DR2.

Q. Okay. Do you have any written analysis that your office produced to explain why the situation here is low density?

A. We do not have any reports or analysis.

Q. Do you know how many acres are involved with the actual location of the houses?

A. I believe we went over it earlier with zoning, but I don’t recall offhand.

Q. Did you see, do you know whether or not you agree with the statement in my letter that when you subtract all the, you know, forest buffer areas and stormwater management, all the things that are listed in the dedication table and the open space, you end up with about 14 acres where the houses are located?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Do you agree with that?

THE JUDGE: Hold on. What’s the objection?

MR. ROSENBLATT: He’s asking if he agrees to a letter that’s not been presented, part of the case, it’s the form of the question that I’m objecting to.

THE JUDGE: Okay. So just, if you could just rephrase, please.

MR. ZIMMERMAN: I’ll rephrase it.

THE JUDGE: The question [indiscernible]

MR. ZIMMERMAN: Did you analyze --

THE JUDGE: Hold on, hold on, hold on. Mr. Williams indicated earlier that he did read the letter, that Mr. Zimmerman did provide it to him, so he supposedly is familiar with the letter. All right. Go ahead. Just rephrase it.

BY MR. ZIMMERMAN:

Q. Yeah. Whether based on my letter or not, would you agree with me that first of all, that the houses, proposed dwellings, lots, are clustered together on a part of the property?

A. Can you explain?

Q. Do they occupy a part of the property? They don’t, they’re not spread out over the entre property.

MR. ZIMMERMAN: Maybe Mr. McCann can, did he get the development plan up? I mean, I can get it up, too, but maybe Mr. McCann has it. Can we get the whole thing? We’re getting close here now.

BY MR. ZIMMERMAN:

Q. Okay. So there are a lot of areas of the property that are relating to environmental aspects,

stormwater management, open space and so on, correct?

A. Correct.

Q. Okay. So did you evaluate whether or not the houses are on a less than half of the site?

A. What I did during my review and evaluation, I made sure that it complied with zoning regulations and requirements, that no zoning relief was needed, and also we did not look at, of course I noticed, am aware of where the houses are located. We look at the development as a whole, and the regulations.

Q. Okay. All right. And before I get to the next question, which kind of is a segue from that one, the dwelling lots average about one quarter acre, don't they? You know, one third, maybe one fifth of an acre, one third? .3 or a little more than that, and the middle, one quarter acre. Is that, do you understand that to be the case?

A. Yes.

Q. Okay. And by the way, if I told you that, if you look, if you drive through Heather Field, if you drive through Hunt Spring, if you drive through other

adjacent communities, you're going to see lots with one half an acre to close to an acre. Do you recognize that? Many of the single family detached other lots are one half acre or more?

MR. ROSENBLATT: Objection, objection.

THE JUDGE: Mr. Rosenblatt?

MR. ROSENBLATT: Again, it's the form of the question. He asked a question, then he qualified it with another.

MR. ZIMMERMAN: All right. Let me rephrase the question.

THE JUDGE: Okay. All right. Sustained.

BY MR. ZIMMERMAN:

Q. What's your understanding of the average lot sizes in Heather Field?

A. So, hold on, give me a second. I really don't know. What I can tell you is in response to, point by point response at concept, it was, the developer's exhibited how, in relation to the surrounding neighborhood, the lot sizes were similar if not --

Q. Okay. Well, before I get to the segue

question then, I guess I'm going to do a little sharing. But before I do that, have you driven around Heather Field? Have you driven around these neighborhoods to see what the lots look like?

A. No, I have not.

Q. All right.

MR. ZIMMERMAN: Judge, may I share something?

THE JUDGE: Yes.

MR. ZIMMERMAN: Okay. Let's see if I can do this. Okay. I may need a bit of help here. Hold on. Hold on one moment while we get my chief of staff on the sharing.

THE JUDGE: Did you need a certain exhibit up?

MR. ZIMMERMAN: Yeah. I want to, where's my exhibit? Exhibit 16. I'd like to get that one up.

THE JUDGE: I'll tell you what.

MR. ZIMMERMAN: Judge, you can do that? Thanks.

THE JUDGE: I'll just do it, yeah. It's going to be faster, so we can, we still have two more county witnesses.

MR. ZIMMERMAN: Okay.

THE JUDGE: And I'm sure they're probably ready for lunch at this point.

MR. ZIMMERMAN: We're not taking a lunch break, are we?

THE JUDGE: Well --

MR. ZIMMERMAN: I'm ready to go through. I'm going through, you know?

THE JUDGE: Okay. [indiscernible]

MR. ZIMMERMAN: Mr., I'm sorry. Can I continue?

THE JUDGE: Yeah. Is this the one?

MR. ZIMMERMAN: Yeah. I think so. Wait a minute. Yeah. We've got to scroll down though, I'm sorry. I wish I could do the, okay. All right.

BY MR. ZIMMERMAN:

Q. So do you see this lot outlined in Seminary Ridge?

A. Yes.

Q. Division, just north of the property, not far from Mays Chapel Road? [phonetic]

A. Yes.

Q. All right. Okay. So let's continue to scroll. This is just a sample for you, Mr., by the way, does it look somewhat similar to some of the other lots? Okay. So let's look at the SDAT information. All right. 23,251 square feet, that's more than a half an acre, right?

A. Correct.

Q. Okay. Let's continue on, let's scroll on. All right. Here's the Seminary Ridge subdivision, right? Do you recognize that? Or I'm sorry, I made a mistake. Meadows of Greenspring, Meadows of Greenspring. Is this, right. So do you recognize that as having larger lots than on quarter acre lots?

A. Um --

Q. Meadows of Greenspring. I think there are a bunch of plats here if we scroll down.

A. Yeah. I really can't tell.

Q. I mean, did you ever look at this when, to check these allegations that the lots are the same sizes?

A. I haven't seen this document, no.

Q. Okay. All right.

MR. ZIMMERMAN: Let's scroll down, Madam Chair. These are just additional, to get through this, these are just additional plats for Meadows of Greenspring, and I'm sure everybody will have a chance at leisure to examine these in detail and test whether, test, you know, what we're talking about here. So let's continue down past Meadows of Greenspring. Keep going. Let's keep going, Judge. I'm sorry to have to ask you to do this.

Let's keep going. We're going to go to the next subdivision. Okay. All right. I think this is Heather Field if I'm not mistaken, and we have a sample. I think we've got a sample lot in there. Yeah, that's on Tally Ho Road, right next to this property, right?

BY MR. ZIMMERMAN:

Q. Do you see that, Mr. Williams?

A. The blue outline?

Q. Yeah, the blue outline on Tally Ho Road.

A. Yes, I see it.

Q. Yeah, and it's somewhat similar in size to many of the other, I mean, it's some variation, right?

A. Mm-hmm.

Q. Okay. Let's keep going.

MR. ZIMMERMAN: Judge, if you'll help me out. Let's keep going down. Again, the SDAT, 30, whoops. Let's go back to the SDAT. 30,000 square feet.

BY MR. ZIMMERMAN:

Q. Now, a quarter of an acre is about 10,000 or 11,000 square feet, right? Is my math right? 43,560 square feet an acre, one quarter of that --

A. Correct.

Q. Right. So instead of 10,000 or 11,000 square lots, maybe a little less, a little more in the proposal. Now here you've got a sample 30,000, right? Okay. Let's take a look at Heather Field. Let's continue to scroll down. All right. Heather Field. All right. Did you ever look at the subdivision plat of Heather Field to check the accuracy of the claim that the proposed lots here are similar to those in the neighborhood?

A. No, I haven't, but I have used the GIS, which is our mapping system, and looked around at lots. To the north of the property there are varying lot sizes,

similar to what is proposed in this development, and these lots, the lots proposed in the Greenspring development are varying lot sizes as well, and also look pretty similar and close to what is described in the area.

Q. Can you identify a single lot in Meadows at Greenspring and Heather Field that's a quarter acre?

A. Not offhand, I cannot.

Q. Okay. And isn't that something that you should have been doing? Shouldn't you have charted this out to check the lot sizes?

A. Well --

MR. ROSENBLATT: Objection.

THE JUDGE: So hold, on there's an objection. Mr. Rosenblatt?

MR. ROSENBLATT: Yes. Object. Couldn't he have done something?

MR. ZIMMERMAN: Yeah, a good question.

THE JUDGE: So I think Mr. Williams' testimony, to be fair to him, is that he had looked at the sizes to the north of the property. I'm not sure whether these

are. Mr. Zimmerman, are these north of the property?

MR. ZIMMERMAN: Well, Meadows of Greenspring is right north, we know that.

THE JUDGE: All right.

MR. ZIMMERMAN: We can go back. We can go back. I don't know what he was looking at.

THE JUDGE: Okay. Well, in fairness, I mean, he did say he did not review these specific documents, but he did use the my neighborhood GIS map.

MR. ZIMMERMAN: Okay.

THE JUDGE: So he did look at those, you know, the lot sizes [indiscernible]

MR. ZIMMERMAN: I'm not trying to, I'm not trying to, sorry. I'm not trying to trick him.

BY MR. ZIMMERMAN:

Q. Let's go back. Based on your GIS, can you, do you agree that Meadows of Greenspring is right to the north where Mays Chapel Road would connect?

A. Well, if you can go back to the site plan one that showed the existing property and the surrounding areas, and you look to the north, you will see varying

lot sizes.

Q. Well, isn't Meadows of Greenspring right to the north? Isn't that the immediate subdivision to the north?

A. Well, can you go to the site plan?

Q. Okay. All right. I don't know whether to ask the Judge or Mr. McCann to go back to the --

THE JUDGE: What are we looking for now?

MR. ZIMMERMAN: I think Mr. Williams wants to see the proposed site plan for this new subdivision.

MR. MCCANN: I can pull it up. I have it handy.

THE JUDGE: Let me just do this.

MR. ZIMMERMAN: And if we can save this one to come back to, I don't know if that's possible.

THE JUDGE: Okay. Is this the one?

MR. WILLIAMS: No. In the documents he was just showing, he passed like, when he showed the existing property in comparison to the surrounding neighborhoods, I believe the housing to the north had varying lot sizes as well. They weren't all consistent and exactly the

same.

BY MR. ZIMMERMAN:

Q. So going to the north, Joppa Road is actually to the south, right? When you look at these site plans, they go from right to left?

A. Yes.

Q. But north is actually Meadows of Greenspring? Okay. Well, let’s assume --

THE JUDGE: Mr. Zimmerman? Mr. Zimmerman, hold on a second. Mr. Williams just said this, he just was looking for this document, which is part of your exhibit 16, and he wanted to refer to this to answer your question.

MR. ZIMMERMAN: Okay.

THE JUDGE: So Mr. Williams, did you want to add something?

MR. WILLIAMS: Yes. So if you look at these, the housing to the north of the existing property, none of them are exactly the same or consistent with each other. They’re close in lot size, but they are all varying in size, and what the developers have proposed I

believe meets the spirit of the existing character of the neighborhood and serves as a transition for, from low density to high density of the surrounding neighborhood.

MR. ZIMMERMAN: Okay.

THE JUDGE: Anything else, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah.

THE JUDGE: Okay.

BY MR. ZIMMERMAN:

Q. And what about Heather Field? Did you look –-

A. Can you show me where, can you show me where that is on this map?

Q. Okay.

MR. ZIMMERMAN: Let’s scroll down. I think we have to keep, keep going.

THE JUDGE: Mr. Williams wanted to know where Heather Field was on [indiscernible]

MR. ZIMMERMAN: Heather Field being just to the east of this property, Tally Ho Road area, among others.

MR. WILLIAMS: Is it not on this map?

THE JUDGE: There is Tally Ho Road, I mean,

it's --

MR. ZIMMERMAN: You have to scroll down to the next subdivision.

MR. WILLIAMS: Okay. So it's not immediately adjacent to the proposed development.

MR. ZIMMERMAN: Well, actually it is adjacent to the east, isn't it? Let's keep, let's keep going down. Keep, we've got to keep going.

THE JUDGE: This one?

MR. ZIMMERMAN: Right, right.

BY MR. ZIMMERMAN:

Q. So did you look at this area to check whether the lot sizes are generally speaking half acre or more?

A. Look at what area? Which area?

Q. The area to the east. All right, I'm using my arrow. The area --

THE JUDGE: Wait. You can't highlight it because it's on my screen. So where do you want me to, where is it specifically?

MR. ZIMMERMAN: I'm looking for Tally Ho Road.

It's --

THE JUDGE: There's Tally Ho Road right here.

MR. ZIMMERMAN: Yeah, Tally Ho Road right there, and the rest of that area, just adjacent to this site to the east, they are mainly half acre lots or more.

MR. WILLIAMS: I believe, aren't those single family detached dwellings as well?

BY MR. ZIMMERMAN:

Q. Yes.

A. And --

Q. [indiscernible] half acre or more lots. Isn't that part of what your thinking was when you originally wrote the concept plan conference comment?

A. So looking at this, they are similar uses, and I believe, so that DR2 section to the north of Tally Ho, yes, right there. Are you saying all of those houses are the same exact acreage?

Q. Well, can't you tell from your experience that most of them are half acre or more?

MR. ROSENBLATT: Objection.

MR. WILLIAMS: I can't, I can't tell you just

by looking at a lot how --

THE JUDGE: Hold on.

MR. ZIMMERMAN: All right. I don't want to beat a dead horse, Judge.

THE JUDGE: There was an objection. Mr. Rosenblatt?

MR. ROSENBLATT: It sounds like he's withdrawing or --

MR. ZIMMERMAN: Yeah. I mean, look, these documents will be available for anyone to look at and critique and comment on, so I'll go onto another subject.

THE JUDGE: Okay.

MR. ZIMMERMAN: So we can get these off the screen, Judge, if that's not inconvenient.

THE JUDGE: Not at all.

MR. ZIMMERMAN: Okay.

BY MR. ZIMMERMAN:

Q. So I thought it was interesting, Mr. Williams, an I think Mr. McCann also asked you about this. As I understand it, am I, okay. Are we still there?

A. Yes.

Q. We had some electricity problems yesterday, so hopefully we won't have them today. Okay. So Mr. Williams, as I understand it, your observations about the office's policy that basically if, and I don't want to mislead or misstate what you said, but basically if they meet the density, if they don't need variances, if they meet the open space requirements, and add something if I'm missing something, that you are okay with the master plan. That's your office's approach, correct?

A. No. We use the master plan in conjunction with the zoning regulations. The zoning regulations are also mandatory as well. So --

Q. Okay. But I mean if it meets the zoning regulations, if it meets the, and the open space, and when I say the zoning regulations, I mean it meets the density, it meets the setbacks, it meets the area, the rest of it, meets the open space, then as far as you're concerned, as far as your office has been concerned in the past, the T3 transect is satisfied. That is your

office's policy as I understand it. Correct me if I'm wrong.

A. So my understanding is that with the master plan, following the T3 transect, this is, this, the zoning of the property is low density, single family detached and surrounded by some townhouse uses and commercial uses which are high density uses compared to the proposal of the site.

After reviewing all of the material, my final recommendation is that yes, this does in fact meet the intent, spirit and intent of the master plan 2020 and the T3 transect.

Q. So either you are agreeing or disagreeing with me that in general as long as they meet the zoning density, they meet the zoning setbacks are and heigh and so on and open space, then that's coincidental with the T3 transect. Are you agreeing or not agreeing?

MR. ROSENBLATT: Objection.

MR. WILLIAMS: I believe --

MR. ROSENBLATT: Objection.

THE JUDGE: Hold on, there's an objection.

MR. ROSENBLATT: Two or three times it's asked [indiscernible]

MR. ZIMMERMAN: Well, that's it, I'm asking a yes or no answer.

THE JUDGE: Mr. Zimmerman, can he, he did answer the question.

MR. ZIMMERMAN: All right.

THE JUDGE: He actually said the master plan was used in conjunction with the Baltimore County zoning regulations, so you've asked it three times. He did answer it, so yeah, let's move on.

MR. ZIMMERMAN: All right. Okay.

BY MR. ZIMMERMAN:

Q. All right. Mr. Williams, do you or your office, do you take a look at the administrative law judge decisions on master plan conflict in previous cases to get some guidance?

A. Yes. I've reviewed, I believe the latest one I reviewed was Davis Farms.

Q. Okay. And in Davis Farms, didn't your office basically indicate that as long as they meet the

zoning, there's no master plan conflict?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Well, that's their policy. I'm asking [indiscernible]

THE JUDGE: Hold on, hold on. Hold on, Mr. Zimmerman. Mr. Zimmerman, hold on.

MR. ZIMMERMAN: All right.

THE JUDGE: Mr. Rosenblatt, what's your objection?

MR. ROSENBLATT: He's asking about a different case that's not before the ALJ today.

THE JUDGE: Yeah.

MR. ROSENBLATT: What happened in other cases has no bearing on this.

MR. ZIMMERMAN: I'm speaking about the policy --

THE JUDGE: I think he's trying to get to whether or not there's a master plan conflict here, so I'll overrule it. Go ahead, Mr. Zimmerman.

MR. ZIMMERMAN: Okay. So once again, Judge, I'll ask your help in People's Counsel exhibit 18, which is the Davis Farms case. Okay. We're going to do a lot

of scrolling.

BY MR. ZIMMERMAN:

Q. But first of all, Mr. Williams, do you recognize the introductory page, the first age of Administrative Law Judge's Paul Mayhew's order on remand in the Davis Farms case?

A. Yes, I have seen this document, but it's been awhile.

Q. At some point did you read it?

A. Yes.

Q. I'm not, okay. All right.

MR. ZIMMERMAN: Let's scroll down to the Planning Department's position paper.

MR. ROSENBLATT: Objection. Again, objection to this entire line of questioning. What they wrote in another case, Mr. Zimmerman can argue at the end of the case that this, he thinks this is similar, but to ask this witness in this case about a different case that is not before the judge is definitely inappropriate.

THE JUDGE: Yeah. Mr. Zimmerman, I'm starting to, I mean, I'm trying to give you a little leeway here,

but this again, this is another case. This is for argument, and if you want to provide this, this is one of your exhibits, if you want to argue this at the end, I mean, having, having a planner go through this and then reiterate what it says --

MR. ZIMMERMAN: I just want to ask him about one or two sentences, and we'll be done.

MR. ROSENBLATT: Judge Murphy? Judge Murphy?

MR. ZIMMERMAN: It's about the policy.

THE JUDGE: Hold on.

MR. ZIMMERMAN: It's about the Department's policy, which I think is relevant here.

THE JUDGE: Okay. Well, you can ask him what the policy is, and he doesn't need to repeat what's in here. Just whatever you have, whatever is in here, you can certainly [indiscernible]

MR. ZIMMERMAN: Then I have to, then just let me make a proffer.

THE JUDGE: Mr. Mudd, you wanted to object?

MR. MUDD: I'm just observing here. I would ask Your Honor to instruct Mr. Zimmerman to allow people,

including yourself --

THE JUDGE: Yes.

MR. MUDD: -- finish your statements before he interjects. This is absurd to be listening to this and how rude he is being. I'm sorry.

THE JUDGE: I understand. Mr. Zimmerman, I don't think he's doing it on purpose honestly, I don't. I think he's listening in the headphones, so I don't, there's no offense taken. I have stopped him when it's an issue.

So Mr. Zimmerman, you can put this in and you can argue this. Do you want to --

MR. ZIMMERMAN: I can either ask, I just want to make a proffer of one or two sentences.

THE JUDGE: All right. Make the proffer.

MR. ZIMMERMAN: The proffer would be on page 3 of the Planning Department's, now I've lost it. Wait a minute. All right.

On page 3 of the August 23, 2021 letter from Steve Lafferty to the Planning Board, among other things, and I guess we'll have to quote this in the brief under

findings, the Planning Board said, “after reviewing the master plan 2020 proposed land use map, the urban rural demarcation line and zoning map at the time of the master plan 2020 adoption,” and this is the key part. “The transect designation for the development proposal site was mapped to run coincident with the zoning classification,” and then it goes on and on. And I guess we’ll all argue that case.

THE JUDGE: Yes. Let’s [indiscernible]

MR. ZIMMERMAN: It’s also in the exhibit that the county council reversed the Planning Department and Planning Board position, okay?

THE JUDGE: All right. But you’re asking Mr. Williams to go through all this, it’s really --

MR. ZIMMERMAN: Right. I’m ready to move on, and I apologize. Electronically sometimes I’m not realizing when other people have finished, so I apologize. I’m going to make a major effort to slow down. Okay.

THE JUDGE: Understood. So are you [indiscernible]

MR. ZIMMERMAN: I've got a few more questions.

THE JUDGE: Okay. Are they related to the master plan conflict or any of the, you know, again [indiscernible]

MR. ZIMMERMAN: No, they relate to the special variance and the residential performance standards.

THE JUDGE: Mr. Williams, are you doing okay?

MR. WILLIAMS: Yeah, I'm all right.

THE JUDGE: Hang in there. Okay. We still have two more witnesses, county witnesses. They're in a conference room. They're in the conference room.

MR. ZIMMERMAN: Okay. All right. Well, let's talk about residential performance standards in Section 260 of the zoning regulations.

MR. ROSENBLATT: Objection. This is outside the scope of people's counsel's statutory authority.

THE JUDGE: He can get involved in zoning cases, this is the zoning regulations. I'm [indiscernible] where he's going, but we're going to let him.

MR. ZIMMERMAN: And we did, we went into this

in Woodley Park, Davis Farms, I mean, it's zoning, okay?

THE JUDGE: All right. Go ahead.

MR. ZIMMERMAN: All right.

BY MR. ZIMMERMAN:

Q. Mr. Williams, in terms of the findings, does your, did your department do a point-by-point finding relating to each subsection of Section 260 of the zoning regulations performance standards?

A. Well, with 260, our department usually requires the applicant submit a book that includes illustrations and details of materials and proposals that, what has been proposed and how it meets what is outlined in Section 260.

Q. Okay. So, but my question is did you prepare, or your colleagues, a point-by-point subsection by subsection finding in each instance as to whether the proposed plan meets every single subsection of Section 260 of the zoning regulations?

THE JUDGE: So what he just said was that he has the developer do it.

Q. Is that it? Is that about it?

A. Yeah. So we don't do the point-by-point response. We have the developer assemble the required pattern book, and we review to ensure that it meets the requirements of Section 260.

Q. Okay. Is there a page in the pattern book where they go through each section, subsection one by one? Can you point us to a page where it says residential performance standards that meets 260.1 because of this, 260.2 because of that, and so on?

A. So there is a, I want to say glossary that outlines each section, tells you what's on what page, but we, I don't believe that they did a point by point.

Q. Okay. There's no specific page you can refer us. Do you have the pattern book in front of you?

A. Not open currently in front of me.

Q. Is the pattern book in the file, in the judge's file?

A. I believe the developer was going to submit the pattern book.

Q. I'm just, yeah. Anyway, all right, I don't want to prolong this too much. There's no specific

page at the moment that you can refer us to. Maybe the developer will later, all right.

Now, let me ask you however some other questions based on your overall review of the residential performance standards.

MR. ZIMMERMAN: And once again I'm going to ask for some sharing of people's counsel exhibit 13. Okay. Let's scroll down. Now, let's scroll down to subsection C, just for background. I'm sorry, on the very first page, 164 should be there. Yeah.

BY MR. ZIMMERMAN:

Q. Mr. Williams, you're familiar with Section 260, are you not?

A. Correct.

Q. Okay. And 260.1C talks about the findings that your department is supposed to have made, actually made by the Director of Planning, correct?

A. Correct. So our finding was made in the final HOH report.

Q. Okay. Which you've described, and we've asked about. All right. Let's scroll down to Section

262.A6 on the next page. All right. You can read that, right? Providing transitions with respect to setbacks, street patterns and building to street grade relationships. Okay.

So my question is, and this may be a controversial issue, but wasn't the set up in Meadows of Greenspring and the dead end, Mays Chapel Road, set up so there would be a connection to this development when this property would be developed?

A. To my knowledge, yes.

Q. And from an overall traffic point of view, whatever the difference of opinion may be among community associations, doesn't it make sense to connect up Mays Chapel Road?

MR. ROSENBLATT: Objection.

MR. ZIMMERMAN: Under this standard?

THE JUDGE: Hold on. Mr. Rosenblatt, objection?

MR. ROSENBLATT: He, first of all, this topic was asked and answered, and second of all, he's asking him from a traffic perspective only, which he, the

witness has already said we've done the best we can with traffic, but we are not the traffic reviewers for Baltimore County.

THE JUDGE: Yeah, I know.

MR. ZIMMERMAN: It's a zoning question, sorry.

THE JUDGE: [indiscernible] he talked about the gate, it's about the gate connection to Mays Chapel I believe. Right, Mr. Zimmerman?

MR. ZIMMERMAN: Yes, yes. It's been asked about.

THE JUDGE: Right.

MR. ZIMMERMAN: And I'm cross-examining him. I mean --

THE JUDGE: You asked him about it in the policy I think of the department, or Mr. McCann may have, that at least the, or I'm sorry, the position of the Department was that it should remain closed for emergency reasons only. Are you now asking him whether it should now be opened?

MR. ZIMMERMAN: Yes. I'm asking whether that gate, whether that closing is consistent with this

section of the residential performance standards.

THE JUDGE: All right.

MR. ZIMMERMAN: It's a different question.

THE JUDGE: All right. Overruled. Go ahead, Mr. Williams.

MR. WILLIAMS: It was my position that the Department of Planning supported the connectivity. We got the connectivity, and yes, I do believe, we do refer to the expertise of DPW and transportation, but with the community's response to the connectivity, I don't, it was decided that we would make it for emergency uses only.

MR. ZIMMERMAN: Well, what did the Public Works Department say about the Mays Chapel Road connection?

MR. ROSENBLATT: Objection.

THE JUDGE: So we have them testifying next, not them, but DPR is testifying next, so my question to Mr. Williams was had he met with them or talked to DPW, and he indicated no.

MR. ZIMMERMAN: Well, I don't want to interrupt anyone.

BY MR. ZIMMERMAN:

Q. So my next question is do you know what DPW's position is on the Mays Chapel Road connection?

A. I do not.

Q. Okay. All right.

MR. ZIMMERMAN: All right. Let's scroll down. Let's go to Section 260.3, open space. Would you take a moment, Mr. Williams, and read Section 260.3A, which I want to ask you about.

A. Mm-hmm.

Q. Okay. So do you know where the open space sections are on the proposed plan?

A. Yes.

Q. Okay. And are there three or four of them? Do you know? They are split up.

A. If you could bring up the plan, I don't want to speak. I know --

MR. ZIMMERMAN: Can we do that for a moment?

MR. WILLIAMS: I know there's a centralized open space where the road [indiscernible] and there are several HOA areas throughout the site.

BY MR. ZIMMERMAN:

Q. Do you know whether there's an open space right on Joppa Road? I don't want to trick you. We can get the plan up.

A. Yes, I believe so.

THE JUDGE: Do you need the plan, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, I think we need the plan. I'm sorry. Okay. Is it, I'm sorry, is anyone bringing, is Mr. McCann bringing it up? Or do you want me to? I can get the original plan. Judge, can you hear me? Can anyone hear me?

SPEAKERS: Yes, we can.

THE JUDGE: Hold on one second, hold on. I've got it. It's just that I closed it because I have a lot of things open. Okay. Here you go.

MR. ZIMMERMAN: And I don't know if we'll need to zoom in a little bit, but --

BY MR. ZIMMERMAN:

Q. Correct me if I'm wrong, and I may be missing something. The first open space area is some distance from Joppa Road. I mean, Mr. McCann talked about

the stormwater management facility which Mr. Livingston talked about, and then just east of that on the north side of the main access road in, I believe there is open space.

If you zoomed in a little bit, you could probably read the writing a little better. Do you see that, Mr. Williams?

A. Yes, sir.

Q. Okay. And what's that about?

A. That's HOA common area.

Q. Yeah.

A. I believe these are also considered open space as well.

Q. What? The reforestation area?

A. No, the stormwater management area.

Q. That's open space? That's local open space? Are you serious?

MR. ROSENBLATT: Judge? Objection.

THE JUDGE: Mr. Zimmerman, I know you're asking questions about residential performance standards, but we do have VPR, Mr. [indiscernible] usually address, he's

the Baltimore County landscape architect. He usually addresses open space issues, and so maybe your questions are better directed to him. I mean, are you asking --

MR. ZIMMERMAN: Excuse me, but this is a zoning issue, and the Planning Department does the findings on residential performance standards. So --

THE JUDGE: I know, but –

MR. ZIMMERMAN: He is the best, this is the best person for me to ask in my opinion.

THE JUDGE: Okay.

MR. ZIMMERMAN: We'll get through it pretty quickly if we could, but --

THE JUDGE: We will?

MR. ZIMMERMAN: Yes, we will. So I just want to make sure we can confirm, we've got the, right now the .55 acre area number 1, which is, I don't know -–

BY MR. ZIMMERMAN:

Q. How far is that from Joppa Road? Do you have any idea, Mr. Williams?

A. I do not.

Q. Okay. All right. To get through this

quickly, there's another open space area on the south side of the access road, if we move to the right, which is somewhat larger.

THE JUDGE: This one?

MR. ZIMMERMAN: We've got to keep going to the right, and maybe zoom out a bit and we can see it.

Well, anyway, there's one area that's in the triangle, you can see that, it's a relatively small open space area. That's area number, it doesn't have, area number 3, and area number 2 is below the main access road a little to the left, which is bigger. Wait a minute.

THE JUDGE: There, it's right there.

MR. ZIMMERMAN: There we go, 2.55 acres, area 2. Okay.

BY MR. ZIMMERMAN:

Q. Are there any, am I missing any? Is there another open space area, Mr. Williams, that, I'm missing?

A. I don't think so.

Q. All right. Well, if there is, we'll get it corrected. But with those three, let's go back to Section 260.3. How do these three open space sections

create focal points along streets? And does that mean Joppa Road? Does that include Joppa Road?

A. So there's a difference between the passive and local open space, there's different types of open spaces. So I believe Mr., that the Baltimore County landscape architect will have the final say on approving open space areas.

Q. All right. Well, let's go, number A2, locating, this is more specific. Locating landscaped, open green spaces in view of the development entrance or adjoining public street. Do you see that? Did I read that correctly?

A. Yes.

Q. Okay. Well, this, these open spaces do not do that, do they?

A. Well, there is a centralized open space that does, creates a focal point of centralized, and provides, and amenities are provided for the users of the development.

Q. And what about in view of the development entrance or adjoining public street? What about that?

A. Really those HOA areas, I'm not too sure about. Looking at it, at Joppa, there seems to be green space, so --

Q. Anyway, your department did not do a detailed analysis of the open space provision of the residential performance standards, right?

THE JUDGE: You already asked him that question.

MR. ZIMMERMAN: All right, okay.

THE JUDGE: And he said no.

MR. ZIMMERMAN: All right.

THE JUDGE: Any other questions?

MR. ZIMMERMAN: Yeah.

BY MR. ZIMMERMAN:

Q. Number 4, orienting dwelling units around open areas or squares, how does the largest open space area number 2 fit with that particular requirement?

A. I believe the centralized open space meets that requirement.

Q. I'm asking area number 2, it seems to be to the rear of a lot of units.

A. Is this the one we're talking about, the one that's on the screen now?

Q. Yes, 2.55 acres. How does that fit with Section 260.3A4 in your opinion?

A. It looks like they provided trails and a walking path.

Q. All right. Okay.

THE JUDGE: All right. Does that answer your question, Mr. Zimmerman?

MR. ZIMMERMAN: Yeah, let's move on. Section 260.4, the next page, top of the next page --

THE JUDGE: Are we going through each one of them?

MR. ZIMMERMAN: Well, we're close to being finished. We're not going, obvious I'm not going through every detail, but I think it's mainly one point here.

BY MR. ZIMMERMAN:

Q. A1, provide for at least one street connection to an adjoining neighborhood or an adjoining property, and then it goes on, in order to facilitate good traffic circulation. Mr. Williams, did I quote

that, paraphrasing it?

A. That's correct.

Q. Yeah.

A. So the connection was provided. It's only for emergency uses.

Q. Well, is that the intent of this section, that you gate things up with the adjoining neighborhood, and --

MR. ROSENBLATT: Objection as to the intent of the statute.

THE JUDGE: Yeah, that's sustained.

MR. ZIMMERMAN: All right. I guess we lawyers will argue about that one.

THE JUDGE: That's right, yeah.

MR. ZIMMERMAN: Okay. And, all right.

BY MR. ZIMMERMAN:

Q. Well, I have to ask you, let's go down to 260.5, and maybe this is a detail, but landscape design, and maybe this is Mr. Herman, it is zoning. Landscape public open spaces to invite users, okay. What's your thought on that one?

A. Yeah. So final decision, landscape decision are given and recommended and approved by the Baltimore County landscape.

Q. And have you consulted with the landscape architect on that subject?

A. Not besides reviewing his comments made at CPC and DPC. I have not spoken with him directly.

Q. Okay. All right. Moving onto another subject. With reference to transportation issues, with reference to sewer issues, isn't that part of the interdisciplinary planning function, to consider those and not simply to defer to other departments?

A. No, not in my opinion.

Q. I mean, isn't, doesn't the Planning Department, don't you have the ability to ask questions when you see what another department has to say, some kind of common sense planning questions about the assumptions different departments make?

A. We coordinate where necessary.

Q. Okay. And what is your understanding as to which department would be most involved with the sewer

system and pollution issues relating to the sewer system?

A. I believe that would be Department of Public Works and Transportation.

Q. Okay. Has it come to your attention that there is an Administrative Law Judge decision on the Jones Falls sewer shed and adequacy of sewer?

THE JUDGE: He just said that he thought that was handled by DPW and [indiscernible] you asked a follow up of whether or not he's reviewed a legal opinion on the sewer shed, right?

MR. ZIMMERMAN: All right. I was just curious whether they kind of take note of it, that's all. But I'm stopping on that.

THE JUDGE: Okay. All right. Almost finished. Just a couple of questions.

BY MR. ZIMMERMAN:

Q. Following up on Mr. McCann's questions on the setbacks and so on, what is your understanding as to the average setbacks that are provided? Are they just about what's, you know, within what is permitted? Or, you know --

A. They are meeting the --

Q. Can you give any quantification of the average front, rear and side setbacks?

A. If you look at the development plan, there is typical layout on the plans, and they all meet the requirements of the Baltimore County zoning regulations.

Q. But, I mean, what are they? Are the 25, 30 feet? I mean, are they 100 feet? Are they 1,000 feet? What are we really talking about?

A. Like 25-foot front averaging is what it says.

Q. And side and rear?

A. Thirty.

Q. Okay. So pretty close to the, you know, what the minimums are, correct?

A. Yes.

THE JUDGE: Well, it meets the regulations, so --

MR. ZIMMERMAN: It meets, but, I mean, they could be providing more. They could be providing double what the regulations are. I just wanted to get a sense.

BY MR. ZIMMERMAN:

Q. Do you have any sense from the pattern book or anything else as to the size of the proposed buildings, the houses? How many square feet? How high? Basements? How many cars are assumed for each dwelling?

A. So they are providing, I know the maximum height they cannot exceed 50 feet. They are providing garage units that support two cars as well as a driveway, and the housing, housing sizes vary from 54 foot wide, 50 feet wide and 40 wide, and they all meet the requirements.

Q. So what about square, I mean, are we talking about four bedroom, two bedroom? What are we talking about?

THE JUDGE: Well, I mean, doesn't that come later, Mr. Zimmerman, in terms of [indiscernible]

MR. ZIMMERMAN: No, he's a planner. I mean, shouldn't he know? Based on --

THE JUDGE: Let me ask this, [indiscernible]

MR. ZIMMERMAN: I would think that's a legitimate planning question.

THE JUDGE: Mr. Williams, in your review as a planner, do you need to know the square footage of the houses? Is that something you typically look at?

MR. WILLIAMS: Lot coverage as far as, it depends on development, but we do sometimes look at lot coverage.

THE JUDGE: Okay.

MR. WILLIAMS: It depends on the zoning and type of development, but sometimes we, lot widths and lot areas, minimum lot widths and areas, as well as lot coverage, we do reveal.

THE JUDGE: Okay.

MR. ZIMMERMAN: Well, I was hoping he would answer the question and just give a ballpark on what we're talking about, what type of houses we're talking about here. I mean, I thought that would be pretty, you know, kind of garden variety question.

THE JUDGE: So Mr. Williams, do you have any idea what the square footage of these different houses are? Is it listed?

MR. WILLIAMS: You keep moving the screen, I

can't, okay. There's the --

THE JUDGE: Here we go.

MR. WILLIAMS: There's the lot area, square footage of the houses.

THE JUDGE: So the square footage of the house is on here?

MR. WILLIAMS: I believe that's the square footage of the lots.

THE JUDGE: Yeah, of the lots, right. He wants to know the square footage of the house.

MR. WILLIAMS: They are located in the pattern, but if you --

THE JUDGE: So we don't have the pattern book up yet. All right. They're in the pattern book.

MR. WILLIAMS: Yes.

MS. JACKSON: All right, Mr. Zimmerman, they're in the pattern book.

MR. ZIMMERMAN: What are you assuming as to how many cars each family will have?

THE JUDGE: He answered that. There's two.

MR. WILLIAMS: Parking requirements, yeah, I

answered that, and parking requirements are zoning, are --

BY MR. ZIMMERMAN:

Q. I'm not asking you whether or not they meet the parking requirement, I'm just asking you what your assumption is. Will the families have two or three cars typically based on your experience?

MR. ROSENBLATT: Objection.

MR. WILLIAMS: I'm sorry, Judge, but he is, this is like consulting questions.

THE JUDGE: [indiscernible] Mr. Williams. Hold on, Mr. Williams. Yeah. You've already, he's already answered the question. There's cars, you know, here on the plan, you can see them. There's two, there's three. I mean, it shows what it is on the plan.

MR. ZIMMERMAN: All right. Well, we're bringing it out, then. I mean, we're bringing it up so it's clear on the record for people. A lot of people are attending the hearing, and they can't necessarily see every detail, so --

THE JUDGE: Okay.

MR. WILLIAMS: So with the square footage of

the houses, they are in the pattern book, you can see the first-floor elevation numbers on the units, you can see the parking garages where the two car garages, they are proposing front loaded and side loaded garages, as well as driveways.

MR. ZIMMERMAN: All right. I'll move on. I thought Mr. Williams could just give us a ballpark and, you know, without us having to study the pattern book or bring it out in more detail, but I'll move on. One or two more questions, and that's it.

BY MR. ZIMMERMAN:

Q. With reference to the community input meeting, did anyone from your department attend the community input meeting?

A. I can't speak for anyone else, but I did not attend. I read the minutes.

Q. You did read the minutes?

A. Yes.

Q. Did you read all the emails and input that came in from the different people?

A. So most of the emails went to the sector

planner. I reviewed a couple that came my way, but most of my review was done, most of my comments came from the community input meeting minutes.

Q. And does your department have any kind of response or position with respect to what various community members had to say by email or questioning at the CIM?

A. I incorporated to the best of my abilities the responses of the community, that's why the connectivity with the gate was not really pushed for.

Q. Okay. Thank you.

MR. ZIMMERMAN: That's all I have, Judge. Thank you.

THE JUDGE: Okay.

MR. ZIMMERMAN: Thank you for your patience.

THE JUDGE: All right. Thank you, Mr. Zimmerman.

MR. WILLIAMS: No problem.

THE JUDGE: Mr. Williams, you are finished.

MR. WILLIAMS: Thank you, Judge.

THE JUDGE: Does anyone need a break?

MR. ROSENBLATT: Yes.

THE JUDGE: Appreciate it, Mr. Williams.

MR. WILLIAMS: Have a good one.

THE JUDGE: You, too. Yes. Do we need a break? Do we need a 10-minute break? Or do we need a lunch break? It's 1:15. We have two witnesses that are in the conference room.

SPEAKER: Yeah, Judge, with the county witnesses still having not gone, I would suggest just a 10-minute break to try and get them on their day.

THE JUDGE: Yeah, I would, too. All right. Let's do 10 minutes and we'll come back. I'm going to pause the record. So it's 1:13 now, so let's just say 1:25. Great.

(Whereupon there was a brief recess.)

MR. ROSENBLATT: I really need it zoomed in if possible.

THE JUDGE: Yep.

MR. ROSENBLATT: Thank you. And while you're doing that, I'm going to ask Mr. Herman, and I can certainly pull it up.

Whereupon,

JAMES HERMAN

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

DIRECT EXAMINATION

BY MR. MCCANN:

Q. There is a provision in the county code dealing directly with open space, 326108, correct?

A. That is correct.

Q. Okay. I'm sure you're familiar with that section. And there's a more specifically, and let me know if you want me to pull it up, but there's a provision in there that talks about what are called environmentally constrained areas. Are you familiar with that term?

A. Yes.

Q. Okay.

MR. MCCANN: And, Judge, maybe I'd better share this rather than trying to shortcut Mr. Herman here. So if I could share that real quick, and then I'll get back

to this document. Thank you. Okay. I'll blow this up.

BY MR. MCCANN:

Q. Do you see that, Mr. Herman?

A. Yes.

Q. 326108A1 defines environmentally constrained areas. Are you familiar with that definition?

A. Yes.

Q. Yes?

A. Yes.

Q. Okay. Great. And there's a provision in 326108 that allows open space to include environmentally constrained areas. This is subsection 6, which I'm highlighting now. Do you see that?

A. Yes.

Q. Okay. Would you agree with me when that is done, there's another section that says, and this would be, sorry, scroll down, B, I'm sorry, D, under 326108, that there is a finding required by the Director of Rec and Parks and the Director of Permits, Approvals and Inspections whenever open space is provided for in an

environmentally constrained area, residential transition area, or an area encumbered by an easement, one of the easements. Am I correct about that?

A. That is correct.

Q. Okay. So I wanted to, does that provision apply here? In other words, we can get to the plan itself, but is there any, any of the open space that's being proposed, is any of it in an environmentally constrained area?

A. I believe it is just in a stormwater management area when it's all said and done.

Q. Okay. We'll get to the plan, but while we have the code here, it does speak to stormwater management here, the subsection D, and I'll blow it up a little bit. It says that the findings that I just spoke about are required when the open space areas are encumbered by a stormwater management easement, correct? So if you could answer that question first, and then we'll move on, Mr. Herman.

The question was simply whether or not the finding that I was referring to earlier from the Director

of Rec and Parks and PAI applied when the open space is in a, in the area of a stormwater management easement, correct?

A. Correct.

Q. Okay. And you're looking to see if that's the case here?

A. Yeah. It's on that exhibit.

Q. Okay.

MR. MCCANN: Judge, can we go back to that? Exhibit 11. Great. Thank you. Okay. I think this is going to be difficult for me, but, maybe I'll do it this way. I have a copy of the plan, the development plan, and I think open space is indicated on that, so maybe I can do that, Judge, if I can share again. Thank you. Okay. This is Developer's exhibit 1, a plan dated Augus 25, 2022.

BY MR. MCCANN:

Q. So before I get to this, it looks like you are ready to answer my question already, Mr. Herman, and that is whether or not any of the proposed open space is in the area of a stormwater management easement or any

other, one of the other areas that we just looked at in the code. Is that the case?

A. Yeah. I was looking into it, yes.

Q. And did you, what did you determine?

A. It's in the stormwater management easement.

Q. Okay. Could you tell us where that is? Which part of the plan?

A. Well, you had your cursor down there. It's below --

Q. Which facility?

A. It's the one that's, it's the facility behind lot 7, 8 and 9.

Q. Okay. I'll blow that up.

A. Okay. And then --

Q. Bear with me one second while I focus in on it. Okay. So it's the central stormwater management facility, correct?

A. Correct, correct.

Q. Okay. And could you describe maybe using this exhibit, Developer's 1, where it is that the open

space is provided for in the easement?

A. Yeah. And it follows, if you see on the left-hand side of lot 6, there is a utility easement that's coming down. That dashed line there that comes down --

Q. Yeah, right here.

A. No, no, the straight line that follows the easement that's between unit 6 and 7.

Q. Right here?

A. Correct. That actually goes down. On this exhibit, it actually shows it, it just carries that line down to basically the forest buffer line.

Q. Okay.

A. Straight down, and then it follows the forest buffer over to basically where the open space area line that's to the right of lot number 9, and it's basically that line extended to the forest buffer, and it's the area that's in that, that goes from basically from the forest buffer up to, there's a line below the stormwater management area there, you can see the grade.

Q. Okay. Go ahead, I'm sorry.

A. Go ahead. No, go ahead.

Q. You go ahead.

THE JUDGE: Why don't you use the highlighter and just highlight [indiscernible]

MR. MCCANN: I forgot about that. Thank you.

THE JUDGE: I know you know how to use markers.

BY MR. MCCANN:

Q. This is again, Developer's 1. This is the dotted line you're talking about, right?

A. Yeah. It continues down.

Q. And extends to the forest buffer, which is right here?

A. No, it continues straight down I believe. And what might also help is I'm sure the design team has probably a larger scale of this that they might be able to put on the screen.

Q. Yeah.

A. So that it's more accurate.

Q. It's just hard to see the one the judge has. So do you see where my highlighting ends?

A. I see it, but you need to back up.

Q. Oh, it's too long?

A. Yeah. You need to go back up to lot number 6, and there's a drainage and utility, or an access easement that's coming down between unit 6 and unit 7.

Q. Yeah. Right here?

A. And that dashed line that comes down and it's got stormwater management easement to the right of it. Stormwater management easement, it's a dark dash, and then on the exhibit, that line is extended on the same trajectory to the forest buffer.

Q. This line between lots 6 and 7?

A. Not between it, to the left side of it. See where it says access easement? That arrow? If you carry that line on the same trajectory down to the forest buffer.

Q. Okay. I thought I had done that. Maybe you can't see it.

A. No, you followed the contour line 304.

Q. Did I?

A. Yes.

Q. Okay. I'm sorry.

THE JUDGE: He looks like he's following the --

MR. MCCANN: I followed the contoured line, I saw a line and I just, yeah, I messed up. This is a bit cumbersome.

BY MR. MCCANN:

Q. So here's the line right here, right? Am I right?

A. Yes, that line, extended.

Q. That line extended. Got it. It's just not showing on the --

A. Yes. Yeah, it's not, that's why I was saying if we, you know, if the design team had a larger exhibit, I think it would be clear.

Q. Okay. And I guess the extent of the, for present purposes anyway, the extent to which the open space is in the easement doesn't matter so much as you do agree it sounds like that finding by the Directors of Rec and Parks and PI, PAI would be required for that, correct?

A. Correct.

Q. Okay. And that has not been done, right?

A. Oh, no, this letter has been signed both by Mr. Gutwall [phonetic] and Ms. Johnson.

Q. Is this the letter from Venable?

A. Yes.

Q. Okay. That's another exhibit I hadn't seen, so I apologize. I don't know why I don't have that. Okay. Well, other than the stormwater management easement areas, which apparently that letter indicates have been approved as being in the open space area, are there any other areas of open space, or any other environmentally constrained areas as defined in the code?

A. I don't believe there are, sir.

Q. Let me get rid of this. Let me ask you about another area. Bear with me one second. Another question, I'm sorry, back to the stormwater management facility, we were just looking at it. Would the, would there be, to your knowledge, would there be a stormwater management easement that extends to this area of where the swale is?

A. What swale are you referring to?

Q. Well, a swale, it says swale with [indiscernible] so maybe it's more than one.

A. Oh. Well, we took the lot number 9's down, and the line that's extended, and at that point in time, that's what was identified as being within the stormwater management easement. I'm not aware of those being any type of stormwater management facilities.

Q. Well, let's do this, since I don't have the plans in front of me. I'll let you go, Mr. Herman, and if I need you to bring you back for the next hearing, I hope you don't mind, I'll ask you to do so. But right now rather than me stumbling around, I think it would probably make sense just to let you go. Everything may be clarified by the exhibits once I see them.

A. Okay.

Q. Okay? But thank you.

THE JUDGE: All right.

MR. MCCANN: No other questions, Judge.

MR. ROSENBLATT: Judge, if I could just really quickly, I don't want to take away from the hearing, but if your staff could send us, is that exhibit 11, then if

it’s not clear from seeing it in an email, I can try and provide a clearer version of any of those documents. It may be scanned, the version you have, and I could maybe provide another one, but I need to see what it is.

THE JUDGE: Okay. I’ll do it right now. They don’t have it, I have it. So hold on one second. Okay. I sent the email, you should both get it. I hope it’s coming through.

SPEAKER: Thank you, Judge.

SPEAKER: Thank you, Judge.

THE JUDGE: Okay. It said it went through, so --

MR. MCCANN: As I said, I’ll just, I don’t have any other questions for Mr. Herman. I’ll [indiscernible] bringing him back, but if I do need to, I’ll just ask him to come back.

THE JUDGE: All right. Mr. Herman, sit tight.

THE WITNESS: Well, also what I was going to say is the intent behind this was to be able to connect the trail system through the stormwater management easement. So from that standpoint, that was the intent, and that was the intent to have that whole area done.

So, you know, if down the road the stormwater management was extended, the intent is to connect the trail so that it all consistently works and ties the whole thing together. Just as a general --

MR. MCCANN: Okay.

THE JUDGE: All right. Mr. Zimmerman, any questions?

MR. ZIMMERMAN: Yeah, thanks.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. So Mr. Herman, the [indiscernible] note that you sent, was that basically a reconfirmation of the position of the department last year, prior to the previously scheduled November hearing that got postponed?

A. I'm sorry?

Q. I mean, your August 25th, 2022 note that you just produced, was that just a reconfirmation of your position last year?

A. Actually I met with Mr. Bishop prior to that, and we went back through, back through all the comments and basically that was an up to date, that was

up to date.

Q. Okay. So you did do, you actually did take another look at the situation?

A. I did look at the latest red line development plan that I have an August 24th date stamped in here at the county. I have the, I also have I think the date on it is the one that everybody has been talking about, November 10, 2021.

Q. Any significant difference from the plan you looked at last year with reference to open space and landscaping?

A. I don’t know that there was, no.

Q. Okay. And in fairness to the developer, area 2 alone provides more than enough space by itself from a quantitative point of view?

A. Yes.

Q. Okay. Are the three open space areas that were mentioned in my questioning of Mr. Brett Williams, are those the three spaces? Are there any other locations that we’ve missed?

A. Well, let me make this statement from the

standpoint that with regards to my review, with regards to Rec and Parks, I reviewed with Section 32, I reviewed for Rec and Parks with regards to 326108, with regards to open space.

Q. I'm just asking you if the three numbered areas are, is that it? I mean, I just want to double check that we haven't missed one, that's all.

A. Those are the three areas, the one north of Foxwood Drive, the larger pieces that's below units 2 through 9, and the smaller area that's between Lankford Court and Foxwood Drive. That is correct.

Q. How far is area number 1 from Joppa Road?

A. I don't know. I don't have a scale. I could go get one.

Q. Do you have one immediately available?

A. Gino is going to get me one, or Mr. [indiscernible]

Q. While you're doing that, let me ask you out of curiosity. The bike or walking path that you've described, is that connected to the next subdivision?

A. It is connected --

Q. Meadows at Greenspring?

A. Is that the development that's down below it?

Q. It's actually above it, but --

A. Above it on the plan?

Q. Where Mays Chapel Road ends.

A. Well, from the trail and connectivity standpoint, the trail connects to the public roadway with sidewalks on both sides, and that connects up with Mays Chapel on the right-hand side of the plan.

Q. I mean, the path doesn't go straight through to Mays Chapel Road by itself.

A. No.

Q. Okay. Can you scale the distance of the area number 1 from Joppa Road?

A. Yes, sir. It's about 240 feet.

Q. Okay. Eighty yards. Did you, okay. Were you in attendance when I asked Mr. Brett Williams some questions about residential performance standards on open space?

A. Yes, I was.

Q. Did you do a point by point finding on the extent to which based on locations the plan satisfied Section 260.3 of the residential performance standards?

A. Again, from my standpoint, I review with Rec and Parks, and I review based on the open space manual, and it's Section 326108.

Q. Okay. Would you like to make any comment on how the plan relates to Section 260.3 of the zoning regulations?

THE JUDGE: Well, how can he do that if he doesn't review it for that? He only reviews for the 32108 in the open space manual.

MR. ZIMMERMAN: Maybe he has some knowledge of it, I don't know.

THE JUDGE: But he just said he doesn't review it for the residential performance standards.

MR. ZIMMERMAN: Okay. All right. Fair enough, Judge. Fair enough.

BY MR. ZIMMERMAN:

Q. And the same goes for Section 260.5 of the zoning regulations, right? You don't, that's not part of

your review obviously?

A. That is correct. I don't normally take the zoning code out and review it on those instances.

Q. I'm not being critical, I'm just asking, that's all.

A. That's okay. [indiscernible]

Q. Yeah, that's, yeah. I'm just trying to get information.

MR. ZIMMERMAN: Judge, that's all I've got. Thank you.

THE JUDGE: Okay, Mr. Herman. All right.

MR. HERMAN: Thank you.

THE JUDGE: You're free. We've got your two exhibits. Thank you.

MR. HERMAN: If you need anything else, just let me know.

THE JUDGE: Thank you. All right. Last but not least we have Mr. Cauley is there I heard.

SPEAKER: Yes, he is, Your Honor.

THE JUDGE: So is he still awake?

SPEAKER: He's right here.

THE JUDGE: All right. All right.

Whereupon,

EUGENE CAULEY

was called as a witness, being first duly sworn to tell the truth, the whole truth, and nothing but the truth, testified as follows:

EXAMINATION BY THE COURT

BY JUDGE MURPHY:

Q. Go ahead and let us know who you're reviewing for.

A. Yes. Hello, good afternoon. My name is Mr. Eugene Cauley, I review for DPR, and also DPW. Just going back through a little bit of history of this, we originally reviewed these plans I believe back in September, September of 2020.

At that point, DPR generated comments which were submitted for their incorporation into the plans. It was basically our boilerplate comments in addition to 28 site specific comments. Most of the comments were pretty much taken care of. Some of them had been maybe moved forward. I will discuss those in detail.

Specifically, and this goes back to our, I guess our memo that we sent into your office on August 26th, I believe, and the first one is the landscape comment, just a general comment that we provide all the time in terms of final landscape approval. That's actually done in phase 2.

The site specific comments are kind of sitting out there. There has been some resolution, but people probably want to know what's going on. The floodplain study, the review and acceptance of the floodplain study has been moved to phase 2, and in accordance to our general comments from our original review, the floodplain must be accepted for filing by the county prior to our recordation, and prior to building permits being issued. That's where the floodplain is situated at at this time, floodplain study.

Q. Is there a reason why it got moved to phase 2? Is that typical?

A. Yeah, it happens. I mean, it just happened recently in another project. I think there maybe a few outstanding items that need to be resolved, but

that does happen, yes.

Q. Okay. Go ahead.

A. I'm going to go to item number 3 in terms of the traffic impact study. The traffic impact study has been approved by SHA, and the county has no further comment. I did talk to the traffic engineer this morning, he, his no further comments is he considers that approved.

Now, I want to make this very clear. The traffic, the outcome based on talking to our traffic engineer, the traffic shed will be somewhat improved with the improvements that have been discussed prior. Those improvements I believe are at the intersection of Falls and Joppa and Falls and Greenspring Valley Road.

They will be approved, there will be no negative impact to the traffic shed from the additional traffic generated from this proposed development with said improvements, okay? So he did indicate that the traffic will still be operating at a level of service of F.

Now, I'm going to go back to the access gate.

Q. Well, with the traffic study, who is the traffic engineer you talked to that approved this?

A. County traffic engineer is Kris Nebre.

Q. Nebre, okay. All right. Do I understand that he's an Engineer III, and he's the only one in that department, right?

A. He's not, well, there's more in that department. I know he's an engineer. I believe his boss is an engineer also. I believe they are both engineers.

Q. Oh, she's an engineer as well. Okay, I didn't know that.

A. I'm clarifying who is an engineer in the office I guess.

Q. So what's the reason why DPR is testifying for DPWT? [indiscernible]

A. We've been doing that for as long as I have been here.

Q. For how long is that?

A. I've been here since, September 25th will be five years.

Q. For five years? Okay. I mean, because

basically what you do is you reiterate what they tell you, right?

A. To some extent, yes, for the most part. We typically in our department do not review the traffic impact study, we rely on the traffic, DPW traffic, to review them.

Q. Yeah, all right. So, okay. So what I understand then is what Mr. Nebre's opinion is that it looks like in here is the traffic shed will be somewhat improved with the improvements that are going to be made, right?

A. Yes, yes, correct. The improvements have been made at the two intersections, yes.

Q. Is it, are you sure it's both intersections? I was, I thought that SHA was not recommending the improvements at Falls and Greenspring Valley, but only at Falls and Joppa.

A. My understanding is that Falls, if I could, and I'm sure somebody can answer this from the design side, but talking to Chris is at Falls and Joppa, they are doing some I guess phasing and lane improvement,

and because that may impact Falls and Greenspring further out, they are doing some timing. No real I guess capital, I mean, fiscal improvement of more timing improvement with the lights I believe.

Q. So Joppa and Falls Road, they are doing a lane extension, or not?

A. I believe they're doing a lane on each side [indiscernible] lane on each side coming from, what is it, Joppa Road and the other lane, there's a easy passthrough.

Q. Okay. So yeah, I mean, the design team from the developer is going to say what they're going to say, but we always like to know what the county says, as opposed to hearing only from what they --

A. They're doing some capital improvement. For the Falls and Joppa Road, they are doing capital improvement to the road itself, and then they're doing some improvement to the phasing of the lights, and that's going to make that operate and function much better. That's based on the report.

Q. Phasing of the lights and Falls and Joppa

--

A. The traffic impact study, the traffic impact study.

Q. Okay. So --

A. From Falls, go ahead. I'm sorry.

Q. No, I'm sorry. Go ahead.

A. Falls and Greenspring, we're going to change the timing, because of what they're doing so that they work together. That's my understanding. That the two intersections work together.

Q. Right. And did you discuss with Mr. Nebre whether or not the Joppa and Falls intersection and the Falls and Greenspring intersection are part of the same traffic shed that need to be considered? I mean, they have to have, for this development you have to consider both of those, right?

A. Yes. Yes. And I believe they are part of the shed, yes.

Q. Right. And so, and then the Seminary and Falls Road as I understand it is a part of a different traffic shed, is that right? Do you know?

A. I'm not sure. I've got to be honest, I'm not sure about that.

Q. Okay. All right.

A. There is some improvement going there, I don't know much about that.

Q. So, and then number four, you were going to get to this, but Mr. Nebre is indicating that it will still be a level of service of F, even after the improvements?

A. With that, yes, yes.

Q. Even after the improvements are done --

A. If I could explain this. He's saying that the additional traffic generated by this development will no be any, will not cause any negative impact to the shed itself because of these improvements, but the overall improvement to the overall shed will be very minimal. That's what he's saying. I hope I'm saying that clearly to you.

Q. See, here's the problem with you coming in. I mean, it puts you in the hot seat on a topic that, you know, you're more sewers and --

A. Correct, yes.

Q. Sewer, storm drains and everything else, and you're in here trying to, I mean --

A. I want to make sure I explained that correctly, that the traffic generated by this development will not cause less of a level of operation or level of service because of those improvements that we're making at the intersection.

Q. Well, there's no lesser level of service than F, right?

A. Well, I think what, let me explain that. I think what Chris is saying is there might be a little bit, I think there might be, you [indiscernible] range, and it might be a little bit better, but not much, much better I guess is what he's trying to, is what he told me, okay?

Q. So the way I read this then, the development can't make the intersection that is F worse?

A. Right, correct. Right. Basically the improvements, those two improvements are supposed to improve the Falls Road corridor in terms of traffic, and

traffic that's generated by the development will not cause a greater impact.

Q. Okay. But I thought you said that the whole traffic shed, which is the whole corridor of Joppa and Falls, Greenspring Valley and Falls, that whole shed, that's one shed, that will still be, that also will still be an F?

A. In discussions with Chris, it will still be an F level of service, yes.

Q. But they do review these intersections every year, right? They take the traffic counts every year for the F intersections? D, E and F I think, right?

A. I, to be honest with you, I do not know that. I have to refer back to Chris on that. It makes sense, but I do not know that.

Q. Yeah. I did have them come in another case, so that might be the case here.

A. Okay.

Q. He came, and so he's been here. By the way, it probably would be easier for you all honestly if DPW and T just kind of was part of this process and was

one more witness, you know, rather than jumping in on, I'm saying it the wrong way. You know what I mean.

A. I'm not totally, I'm not disagreeing with you.

Q. Right, right, okay. All right. So, and then you were, I'm sorry, I cut you off, and you were going to go back up to the gate.

A. Yeah. In terms of, well, I'm going to talk about the development, development traffic shed operating at level of service F, basically DPWT would defer this issue to the ALJ.

Q. Well, that's me.

SPEAKER: That is exactly you.

BY JUDGE MURPHY:

Q. So there's a lot of deferring here. So the thing is I can't change the level of service, right? I have no way of changing that, so I don't know what the deferral is. I'm not sure, what does that mean, number 4? Development of traffic shed operating will continue, and you're deferring it to --

A. I think there's a, I believe there's a

variance, is part of the variance in terms of developing level of service F.

Q. Right. And so what happens with the variances in the section for the special variance in the zoning regulations, it requires Department of Planning to provide a report to me before I can consider it, and their report they generated was the hearing officer's hearing report, which you saw this morning perhaps on the screen, and that says we defer to DPW&T, and DPW&T is referring it to me.

So, you know, we are looking for some kind of, you know, some kind of expertise on the part of traffic engineers to say whether or not, but what I understand that you're saying is traffic engineering is saying under number 3 that it's not going to be any worse if this development is here in terms of the Joppa and Falls Road intersection.

A. Right. Yes.

Q. Okay. So that is their opinion, so I'm not sure why they say 4, because 4 doesn't really make sense to me. In terms, I mean, I know I have to decide

the variance, but I need their opinion. So, you know, these issues, that's probably just maybe a note for Mr. Chad if he's taking notes. All right. Go ahead, so what were you going to say next?

A. If I can, just go to the proposed access gate. If you see on the plan basically have a note on there, and the note, let's see, the note, this is another one of those deferrals.

Q. They have no opinion at all about whether or not this gate should be for emergency access only?

A. Yes, the gate, and this is put on the plan, based on some internal discussions that are requested to be put on the plan, gate for emergency access only to be approved by the administrative law judge, which is you.

Q. Which is me. But again, they don't have any position one way or the other as traffic engineers about whether or not that gate has to be open all the time?

A. I'm not getting an answer, but in terms of our DPR development policy, our policy basically

specifies, let me pull it out for a second just so you're clear, is that access guidelines, minimal number of use with one means of access should be 100 units with no, okay. I'm going to do this, okay?

Access minimum, this is DPR's policy manual. Maximum number of units with one means of access limits of units, 100 units with no future street extension proposed, so that 150 units when the [indiscernible] extension is proposed and is feasible, okay, greater than 150 units, second means of access must be constructed. There are some exceptions to these rules also.

Q. And this --

A. And between, this is a development plan review policy manual, and there are exceptions to these rules. One is emergency access points, well, these limits may be increased and restricted by a limited or controlled access highway or other barrier or limitations as advised by the Department of Public Works.

In order to see access points in place of full use access points generally will be discouraged, but may be approved in unusual circumstances.

Q. Okay. So is it the position of DPR that there should be full access, and not just emergency?

A. We try to be consistent with DPW, but based on our design manual, I think between the three communities that are being served, I think we have 61 in one community, one community to the north of us, I guess northwest has I think 99, and the other community to the northeast, which are all tied into the same road I believe has 26 or 27 units, so there would be a total of I think, I'm doing the math in my head, 186 units maybe between the three of them, and that's greater than 150.

So therefore, if you're greater than 150, there should be a second means of access, means of, second means of access must be constructed.

Q. Okay. So what I've got here on the screen is your, the DPR development plan conference comments dated August 10, 2021 under Section 3, the site specific comments that DPR issued said that since the number of off site units are over 100, Mays Chapel Road needs to be a full access road and not an emergency access road?

A. Correct, correct.

Q. Does DPR still believe that that's the case?

A. Since there are 150, yes, that is our claim.

Q. So you're not consistent then with I guess it's the Department of Planning?

A. Department of, no, Department of DPW&T.

Q. Well, DPW&T, I don't know what their position is on it. They are just deferring to --

A. They, they want that note put at the plan there, because they are a part of the review process, and that, I think that's their position.

Q. Which is that [indiscernible]

A. They [indiscernible] they want to defer to you I guess is the question.

Q. Yeah. So they want the emergency access, or they don't?

A. By deferring, I'm assuming they don't want it. I'd have to talk to them again about this, to be honest with you.

Q. So, but DPR's position is the same though

as it was in, on the screen, the DPR, I'm sorry, DPR/DPC comments dated August 10th which says number, you know, again, number 3, is that still DPR's position? Yes?

A. That is DPR's position, yes.

Q. Okay. And so that is supported by the design policy manual of DPR?

A. Yes.

Q. Okay. So you were, I think you were on, I'm just trying to move along here. So that was all the, go ahead.

A. That was all those outstanding items at this point in time, yes.

Q. So, all right. Well, that was the gate. So that's, so based on this note that you sent us, which is, sorry, let me go back. Final comment, this is the one dated August 26, 2022 that you sent over to us.

A. Right.

Q. Is DPR and DPW, are they recommending approval of the plan?

A. The DPR, they can't recommend the approval plan based on the fact that the gate doesn't meet our

requirements within the, in accordance with our development policy.

DPW&T is basically saying approve the plan with the understanding that they are deferring those two items to the judge. That's how I read this right now.

Q. Yeah. Okay. All right. So we really don't know one way or the other, I mean, I guess from DPW's standpoint whether they want the gate closed or not. Okay. Let me ask you, let me just ask you this.

So in this same DPR/DPC comments, in the site specific comments, we get down here to a different topic, which is --

A [indiscernible]

Q. It was 18 first of all, I guess the storm drains, they had to be checked for adequacy and upgraded to, or provide stormwater management as needed, or was DPR satisfied that that was met?

A. Well, in terms of storm management, that's a comment that actually comes from DPW&C, and I believe they are satisfied with that. I think that the storm management conceptual plan is approved, so they would be

okay with that, yes.

Q. Okay. All right. And then we have number 20, the following eight sewer segments do not have adequate capacity to accommodate the proposed 61 home subdivision that's being proposed here. Six of those segments have to be addressed by another developer.

A. Yes.

Q. What other development is there? Which development is --

A. Okay. There's actually, could you go further down on those comments? I believe there might be a chart below, an immediate chart below. Okay. So the two that are starred are required to be taken care of by the developer, which in, he has already designed those two upgrades for those pipes. They're already designed.

They are, I believe they are trying to get the UAO for that design, but the plans have been approved. In terms of the other six sections, they are to be done by Johns Hopkins University, and I don't believe they have, I'm not sure exactly where they are in the process of designing and getting those upgrades, basically

upsizing those pipes at this point in time.

Q. So hwo do we know? I mean, how do we find out?

A. They are, DPW&T has been in contact with Johns Hopkins in order to get them to complete that work, and they're working with, but I'm not, I don't believe the plans have been completed as of yet.

Q. So how long ago were they, was Johns Hopkins University supposed to, or maybe it's Johns Hopkins Hospital, how long ago were they supposed --

A. I think it's Johns Hopkins University, and I believe that was part of a development from years ago I believe, and they haven't done it as of yet. I cannot remember, to be honest, I don't remember which development that was, but that was something that was supposed to be taken care of I believe, I think a couple years ago.

Q. Would it have been in Greenspring Station?

A. I think it's, well, it's probably below where we are. I'd have to research those exact type segments where they are. I really didn't do that, I just

looked at it from our pipe segments to make sure that they're done. SO yeah, they are required to get that done, and DPW&T have been chasing them to get that work completed.

Q. So who is the developer then that has to do the two ones that are starred?

A. The two ones that are being done by the developer that is working on this particular development, and they have been very aggressive in getting that done.

Q. Okay. They're the ones with the design plans already in the works?

A. Yes, they are. The design plans are already approved, signed and approved.

Q. Okay. All right. So let's go down here to 27. This has to do back, again, with the traffic study. As of the date of this DPC comment, which again was a year ago in fairness, August 10, 2021, the developer submitted the traffic compact study, and this is going back to this issue. DPW&T had not completed their review of the study at the time.

A. Yes.

Q. Right. So then, and then what happened was we got this comment that was in the file from Mr. Curtis. Is he still doing these?

A. Yes, he is. Yes, he is.

Q. Have you seen this comment from Mr. Curtis?

A. Let me see. I probably have awhile ago. Which particular comment? All of them? Or which one?

Q. Well, yeah, I mean it is part of one comment. It was a comment to the, for the special variance request, and so he indicates he has now reviewed it, because it's after the August, it's after your August the 10th, 2021 DPR/DPC comments, so he's now responding. He has now had a chance to review the traffic impact study.

He reviewed the supplemental traffic impact study. He says that, you know, he had reviewed it, and he said the traffic impact study didn't even say that it was in a traffic shed at the time.

A. Well, that may have, the report does not note that the proposed development has any level of

service F traffic. It probably, it is in a level of service F traffic shed, it would probably get noted in the study, and I don't recall, if I could, this is going to sound really, I want to step back for a second.

We used to work together with DPW&T in putting together the variances. Their comments used to be, our comments would be one common package. For awhile back in the Covid period, I believe that they separated and we did our comments separate from DPW&T. So I may not have seen these specific comments at that time, that's what I'm, and now going back and doing them jointly, so I may not have seen that at that time.

Q. So now you're back jointly kind of putting the comments together?

A. Yes, we're jointly putting the comments together, yes. I know you didn't want to hear that.

Q. I mean, he indicates here that, you know, in number four, however, this development is currently in an F traffic shed which by definition is at capacity, cannot handle anymore volume. And so he talks about the Mays Chapel bypass. Is that the gateway? Is that the

gate?

A. That Mays Chapel bypass accounted for, already showed an increase in CLV's on Falls Greenspring. I'd have to go back and talk to him to find out, in all fairness I believe he is actually getting these comments from Kris Nebre, and he incorporated them in this document. So I'd have to go back and get a clear definition of what he means by Mays Chapel bypass accounted for already showed an increase in CLV at Falls and Greenspring Valley full build out condition.

Supplemental report does not address Falls and Seminary with the scenario of no bypass, oh, okay. Yeah, I believe, the further I read this, I think the context is that, you're right, the Falls Chapel bypass, I believe he's kind of saying that without the gate, that's considered a bypass. I believe that's what he's trying to insinuate there.

Q. Without the gate, it's a bypass?

A. Without, I think without the gate, I think he's saying that's the bypass.

Q. Okay. So in the end sentence, what he

does is he says the development should have some improvements, which you've already indicated are being proposed here?

A. Yes, yes.

Q. Okay.

A. You see zero net critical [indiscernible] so he is basically saying, I think the same thing. There will be no net, there's no impact due to these improvements. That's what it's saying. The shed still offers [indiscernible] but there's no real impact, so the operation is already failing.

Q. Well, at this point he is, this is September of 2021, he's looking for the improvements here, but you've indicated in your final comment that we just looked at that there is improvements, that they are going to improve the traffic shed, and there's no net impact to the traffic shed, right? So this is from --

A. Correct.

Q. Yeah. Okay. All right. So that's Mr. Curtis'. And then we had, we're going in chronological order here, we had October 18, 2021, Mr., that's you, Mr.

Cauley, actually this is your initial.

A. Yes, it is.

Q. That's you. Now you write at the bottom, no development allowed within a traffic shed or along local roads with an F level of service. This request needs to be coordinated and discussed with DPW&T.

A. Yes.

Q. So you can't have the development obviously within the F traffic, so was this then discussed with DPW&T? Is that how we got to your recent comment, which was --

A. Yes, a lot has happened in the meantime in terms of I think some revisions to the traffic study, the improvements that were added, and that type. That's what brought us to where we are today, yes.

Q. Okay. So what I'm going to do is mark, go ahead, I'm sorry.

A. No, go ahead. I'm sorry.

Q. I'm going to mark as exhibits, I'm going to mark the, it's going to be the, so DPR, just hold with me for a second. DPR, DPC comments, they are dated

August the 10th, back up to the top here, August the 10th of 2021, that's going to be exhibit 12, Exhibit 12A actually. That's going to be 12A, because I want to put these all together in one packet.

(County Exhibit No. 12A was marked for identification and entered into evidence.)

THE JUDGE: Okay. 12B in chronological order is going to be Mr. Curtis' ZAC [phonetic] comment from 9/21/21, the ZAC comment, and then 12C is going to be the, Mr. Cauley's comment dated October 18, 2021, and this was for another ZAC meeting it looks like for September the 21st.

(County Exhibit No. 12B was marked for identification and entered into evidence.)

(County Exhibit No. 12C was marked for identification and entered into evidence.)

A. I believe they're the same case item, are they not? The one, yes, okay.

BY JUDGE MURPHY:

Q. It's the zoning filed for the special hearing, it's case number 2021250. So you were providing

this for the ZAC meeting? The zoning advisory comments.

A. Correct.

Q. And then his was, Mr. Curtis's say the same thing, the ZAC agenda, and that was for the same case, 250SBH.

A. Right.

Q. All right.

A. We were doing that separately at that time.

Q. Separately. That makes sense. So that's when you did it separately, okay. All right. And then the last one is going to be 12D, and that is going to be the August 26, 2022, these are the DPR and DPW&T final comments.

(County Exhibit No. 12D was marked for identification and entered into evidence.)

THE JUDGE: Okay. All right. I've got those four. I'm going to turn it over to Mr. Rosenblatt. Any questions?

MR. ROSENBLATT: Yes, I do have some questions. Can I have permission to share, please?

THE JUDGE: Yes.

DIRECT EXAMINATION

BY MR. ROSENBLATT:

Q. Good afternoon, Mr. Cauley.

A. Good afternoon, Mr. Rosenblatt.

Q. I'm going to ask you a couple of questions, starting with the floodplain comments, so I'm turning to your August 10, 2021 development plan conference comments, and on page 6 I have highlighted, and again, this is back in August 10, 2021. I don't know if you can see the screen from where you're sitting, but I'll zoom in.

A. Yes.

Q. And it stated that floodplain studies will be necessary to be reviewed and approved prior to the recording of any record plat or issuance of any grading or building permits. Do you see that language?

A. Correct.

Q. So back in 2021 over a year ago, the comment today saying that the floodplain study will be in phase 2 is consistent with this statement that it will

be, must be approved prior to the recording of a record plat or issuance of grading and building permits, right?

A. That's fair, yes, true.

Q. Okay. On the traffic study, I think your words were a lot has happened since last year. Did I hear that correctly?

A. That is correct.

Q. I agree, and to follow up on the exhibits that you just went over, which were county exhibits 12A through D, I want to show you an email from Kris Nebre, which I'm wondering if, looking at it today, I see that Vishnu Dasai [phonetic] is copied on this. Vishnu is in DPR as well, right?

A. Yes, he is.

Q. Is he the super-, basically the supervisor DPR?

A. He is the Chief of DPR, yes.

Q. Okay. I can zoom in more. Have you seen this email from August 16, 2022 from Kris Nebre to a number of people, including Visnu Dasai?

A. I don't know. I don't think I have.

MR. ROSENBLATT: Judge, I wasn't sure whether to make this a County or Developer exhibit, but I'd like --

BY MR. ROSENBLATT:

Q. Mr. Cauley, if you could take a look at this email that was sent to the supervisor of DPR, and --

A. [indiscernible] maintained by SHA along with a traffic signal to be [indiscernible] improvements along Joppa [indiscernible] yes, and [indiscernible] result in a net zero impact along the corridor, correct. I agree. The scope of [indiscernible] study are SHA intersections.

We agree that the proposed development along with the intersection would not have a negative impact on the intersection [indiscernible] may request a copy of the traffic impact study supplemental analysis, Bates stamped and signed by a professional engineer.

We do not have additional comments to offer. The developments its in a current level of service traffic shed and therefore [indiscernible] defer findings to Lenhart traffic and SHA response [indiscernible]

reviewed from the Zoning Commission to determine if this development would be eligible for a waiver based off the zoning regulations.

Q. Okay. And my question for you based on this email, is this the basis for several of the statements in your hearing officer's hearing comment dated August 26, 2022? In other words, you state in number 3 the traffic impact study has been approved by SHA, and the county has no further comment.

A. Right.

MR. ZIMMERMAN: I have an objection. Excuse me, I have an objection. Judge? Judge, can I make an objection?

THE JUDGE: All right. Mr. Zimmerman, go ahead.

MR. ZIMMERMAN: Yeah. Number one, unless Mr. Nebre is brought in to testify, this witness should not be allowed to testify based on some email, and so I think we need to get Mr. Nebre in here, number one. And number two, so far as I know, this email has not been shared with the public. Unless you correct me, I don't think it's in the file.

THE JUDGE: I have not seen it.

MR. ZIMMERMAN: And I don't even think Mr. McCann has it. He'll correct me. So, you know, that's, this is not proper process really.

MR. MCCANN: If I may add to that, Judge, I'm sorry, I didn't get my objection in quick enough.

THE JUDGE: Sure.

MR. MCCANN: I think Mr. Cauley has already candidly admitted that he has not seen the email before, and Mr. Rosenblatt's question, if I'm correct, said is the email the basis for this comment? He's trying to connect that email, which Mr. Cauley hasn't ever seen before, with the site specific comments, which by the way aren't really generated by Mr. Cauley anyway.

He clearly didn't do any of this traffic analysis to even make his comment in number three, so I think it's way too, lacks complete foundation to try to make that connection between the two.

THE JUDGE: And that's what I also heard Mr. Rosenblatt, I heard that Mr. Cauley, in fairness to him, he had not seen that email and then, you know, he

proceeded as you asked to read it, looking at it, and then you're trying to make a connection, and I understand, but, you know, it can't come in through him.

I do believe that we need, again, Mr. Nebre here as he did, in another case that we had, similar issue. It really needs to be as a matter of course, and that's not anyone's fault here, other than, I mean, it's just been a custom that DPR testifies for DPW&T and Mr. Cauley is in the hot seat and trying to answer questions, but, you know, we wouldn't be asking DPW&T to answer questions about sewers, and I don't know why we're asking DPR to answer questions about traffic. You could always just keep it, mark it, and then we could bring in Mr. Nebre again.

MR. MCCANN: Actually to be clear, I'm okay with the exhibit coming in. I have seen the email before. It's the same document that I had gotten in response to my request, so I don't have a problem with the email itself. I just need to see the rest of it, and if we call Mr. Nebre or not, I'm just saying it's okay for it to come in now from my perspective.

THE JUDGE: I thought that was your objection, that you didn't want it to come in.

MR. MCCANN: My objection to the question asked of Mr. Cauley --

MR. ZIMMERMAN: My objection is to both. I don't think it should be admitted until Mr. Nebre comes in and we can cross-examine him.

THE JUDGE: Right, yeah. And I'm sure, Mr. McCann, you probably did a public record, maybe a request or something like that, that's how you got it I'm thinking?

MR. MCCANN: Yes.

THE JUDGE: Right. Okay. So Mr. Rosenblatt, I would just would rather, you know, Mr. Nebre has to authenticate that.

MR. ROSENBLATT: I understand. In the interest of time and everything else, I'm going to reserve. I just want to the record to be clear. I obviously have a lot of questions of the county about traffic, but I'm going to try and reserve most of them if you said Mr. Nebre is going to be part of this case, or someone will

be part of this case, then I'll skip that issue altogether and we'll just, we'll come back to it, and I'll come back to this email so that selfishly I don't have to renumber a whole bunch of exhibits that we've already numbered.

THE JUDGE: That makes sense, right, yeah, that makes sense to do that. It's not in your exhibits that you produced.

MR. ROSENBLATT: Okay.

BY MR. ROSENBLATT:

Q. So Mr. Cauley, I just want to focus on one or two more issues and I'll get you to the next lawyer. So you were reading from the DPR policy manual, and you're reading the policy about means of access.

A. Correct.

Q. I just highlighted that, and I'm asking you, it's at the bottom of page 22 into page 23 of the manual. Is this the standard that you were discussing in determining whether the Mays Chapel extension could be gated for emergency access, or had to be open for full access?

A. That is the, what I was referring to, correct.

Q. Okay. And you explained the requirements when there is 100 units or 150 units, and then the exceptions which include as relates to this case potentially that emergency access points in place of full use access points generally will be discouraged, but may be approved in unusual circumstances, right?

A. Correct, correct.

Q. And you have relayed that DPWT has deferred that issue to the ALJ, right?

A. That's correct.

Q. And your personal position is that --

A. DPR’s position.

Q. DPR’s position is that there are a sufficient number of units, that that needs to be full, open access?

A. Yes.

Q. And you would agree with me that if we can convince the judge that this is a “unusual circumstance,” that that gate could be left in place and meet this

exception here?

A. Yeah. Yes.

Q. And you had said that DPR is not recommending approval of the plan at this point solely because of this gate issue, right?

A. Right.

MR. ZIMMERMAN: Objection, objection.

THE JUDGE: Mr. Zimmerman?

MR. ZIMMERMAN: I don't think that's what he's been saying the whole time. I just don't think that's accurate.

[Crosstalk]

THE JUDGE: Hold on, hold on, I can't, there's too many people talking at once. So Mr. Zimmerman, does this issue with the gate have to do with your authority in regard to zoning and master plan?

MR. ZIMMERMAN: It's part of the special variance issue.

THE JUDGE: Okay.

MR. ZIMMERMAN: Yeah, it's all part of the special variance issue. Obviously if you have a Mays

Chapel Road connection, it increases circulation, it reduces the impact to some extent on the F level intersections. It's mentioned in Terry Curtis' email relating to the special variance. It's all wrapped up in the F level intersection special variance circulation issue.

THE JUDGE: Okay.

MR. ZIMMERMAN: So yes. It's a zoning issue, it's a zoning issue. I just thought that this [indiscernible] and it is kind of a misstatement to try to boil it down to one sentence. I just didn't think that made any sense, but I'll defer to the Judge, of course.

THE JUDGE: So Mr. Cauley, I think the question was whether or not DPR, their position as an agency was that there should be full access unless the developer can prove that there's unusual circumstances under the policy manual? Did I hear that right?

MR. CAULEY: Yes.

THE JUDGE: So what in your mind are unusual circumstances under the policy manual? When have you seen

this in other cases? What are unusual circumstances?

MR. CAULEY: I guess if there's safety concerns through there, too much traffic going through might be an unusual situation. I guess if this scenario or cut through pass doesn't occur elsewhere, which I'm not sure if that exists, but I think safety is really the issue here.

If it's an unusual safety concern going from 7 to 9 in the morning, or from 3 to 5 in the afternoon might be an unusual circumstance.

THE JUDGE: Okay. Thank you.

MR. CAULEY: [indiscernible] kids running around out there maybe. You might have kids running around.

THE JUDGE: Kids running around, okay. So the DPR policy manual, is that within the county website? Or is that something you've got to find? It's like only a paper copy, and you can't scroll through it?

MR. CAULEY: I am not sure if it's on the website, I'd have to check that. I have a paper copy here. I can send you over the section of it if you want, if you want --

THE JUDGE: I might not be ablet, I might not have that. I might be able to find it, but if we, if you see an email from me asking for that, I'll copy everyone.

MR. ZIMMERMAN: I will follow up.

THE JUDGE: Okay. Thank you. All right. Mr. Rosenblatt?

BY MR. ROSENBLATT:

Q. Just to follow up on my last question, I believe you testified, and correct me if I'm wrong, that DPR is the only issue preventing your recommendation of approval of this plan is this gate issue to Mays Chapel Road?

A. Yes.

Q. Other than the gate, DPR is satisfied that this plan meets all other requirements and can be approved?

A. Yes.

Q. Okay. DPWT is recommending plan approval and deferring the gate issue to the Judge?

A. Correct.

MR. ZIMMERMAN: I object, because I don't think

that’s consistent with the documents we’ve seen. I think the documents we’ve seen are much more ambiguous, so I don’t think it’s a fair question or comment by the witness.

THE JUDGE: Okay. Well, Mr., but Mr. Cauley, he’s seasoned and he’s been here a long time, he knows what the documents say, he can answer as he sees fit, so overruled. Go ahead, Mr. Cauley.

THE WITNESS: What’s the question? I’m sorry.

BY MR. ROSENBLATT:

Q. Yes, sir. The question was DPWT is recommending approval of the plan and deferring the gate issue to the ALJ?

A. Correct.

Q. Okay. All right.

MR. ROSENBLATT: Judge, with the understanding that we’re going to have other opportunities to talk about traffic, I’m going to ask no further questions. Thank you, Mr. Cauley.

THE JUDGE: All right. I’ll do my best to send Mr. Nebre an email, so Mr. Cauley you’ll have to just

warn Mr. Nebre that it's coming. I told him before that I might be bugging him again, and so --

SPEAKER: I already warned him.

THE JUDGE: You already warned him?

SPEAKER: Yes.

THE JUDGE: He loves, he loves coming, he loves coming. All right. So next person, Mr. McCann?

MR. MCCANN: Thank you. Can I have the ability to share, please?

DIRECT EXAMINATION

BY MR. MCCANN:

Q. Hello, Mr. Cauley.

A. Hello.

Q. I wanted to address the floodplain issue first. Let me show you this August 11th, I'm sorry, August 10, 2001 development plan comments of DPR. Do you see that?

A. Yes.

Q. I believe that is 12A.

THE JUDGE: Yes.

MR. MCCANN: Okay. Judge, I definitely don't

have exhibits, some of the other 12 exhibits, 12B and, that I'll have to get from you. In fact, 12D I definitely need to ask some questions, if that could be sent to me.

THE JUDGE: Mr. Curtis' email?

MR. MCCANN: Yes. August 26th was just a couple days ago, so --

THE JUDGE: Actually the August 26th one is 12D. Mr. Terry Curtis's was the September 20, 2021 ZAC comment. I'm sure you've seen that, because that was that --

MR. MCCANN: No, I've seen that. I'm talking about 12D as in dog.

THE JUDGE: D, okay. I will, I'll email that right now to both of you.

MR. MCCANN: Great. That way we don't have to call Mr. Cauley back.

BY MR. MCCANN:

Q. So this DPC comment of August 10th, which are as I said, exhibit 12A, County exhibit 12A, Mr. Rosenblatt referred you to under general comments to a provision that said, actually --

A. It's under the stormwater section, page 6.

Q. Page 6.

A. Yes.

Q. And it may not be under general comments, I may have mischaracterized that. But you referred to, on page 6, to this note that says floodplain studies will be necessary to be reviewed and approved prior to the recording of any record plat, issuance of any grading or building permits, correct?

A. Right, correct.

Q. And, but I wanted to direct you to another revision of these very same comments, the site specific comments, specifically, excuse me, note 26. It says right here, a revised study was submitted to DPR, and it's under review. Did I read that correctly?

A. Yes, you did.

Q. Okay. And when I read that, it suggests to me that we're, you know, that there will be some review and comment on the study prior to phase 2. Am I misreading that entirely?

A. Yes. No, you're not. There was a review,

and there were comments generated, and I believe they were in our file.

Q. Okay. There have been, as you said, comments on the floodplain study, but the floodplain study has not been completed and approved yet, has it?

A. Correct, correct.

Q. Okay. And then with regard to this phase 1 versus phase 2 concept, would you agree with me that there's nothing in Baltimore County regulations anywhere that says that floodplain studies can or should be, or must be reviewed only in phase 2 of the development review process? In other words, are you aware of anything that says that?

A. No, I'm not aware of anything that says that. I, in the five years or almost five years that I've been here, we have reviewed them both in phase 1 and in phase 2.

Q. Okay. And just for everybody's benefit, when you say phase 1 and phase 2, phase 1 is the process --

A. [indiscernible]

Q. Let me finish. Is the process that we're in right now that is review and approval by the agencies and by the administrative law judge, correct?

A. Correct.

Q. So when things are allocated to phase 2 like they are sometimes, there is no public hearing on that, correct?

A. Correct.

Q. Okay. And in this case, we know that a substantial portion of this site, in fact, the whole front of it, is in a floodplain, correct?

A. A large portion of the front of it, yes, is in a floodplain, yes.

Q. Okay. Let me show you another document. Bear with me one second. This is, and I'll scroll down so you can see it, it's a three page document that has your initials on it dated April 26, 2001. Do you see that?

A. Yes, I see it, yes.

Q. Three pages, I'll go down. Just let me know if you need me to go any slower to verify what it

is. Does that look familiar to you?

A. Yes.

Q. Okay. And these are, correct me if I'm wrong, based on this introduction right here, let me blow it up for you, this appears to be a memo that is related strictly to the floodplain issue, right?

A. Correct, correct.

Q. And I direct you to, I'll blow it up a little bit. This was authored by, number 9, this was approved by you, correct? It has your initials, right?

A. Yes.

Q. Okay. So number 9, I'll just read it to you. The engineering shows the proposed entrance to this site is located within the existing floodplain. A waiver request to permit such an improvement shall be submitted to the county, Department of Public Works, for approval. Did I read that correctly?

A. Correct.

Q. So it was your position, and I take it the position of DPR at the time that a waiver is required in order --

A. Yes.

Q. Okay. In order for it to be more specific. Everything that's happening at the entrance to occur within the floodplain, right?

A. Correct.

Q. Okay.

MR. MCCANN: Your Honor, I would this in as the next exhibit, which I'm starting to lose track as I tend to do.

THE JUDGE: I have 7 as the next one. Is that right? 7? No?

MR. MCCANN: Let me see. I actually have been marking as we go. Yeah, it is 7, yep. Great.

THE JUDGE: Okay. And this is called?

MR. MCCANN: I'll get back to it. It is I would say DPR comments dated April 26, 2021 regarding floodplain. That's how, I think that's a fair description.

THE JUDGE: Okay. Any objection, Mr. Rosenblatt?

MR. ROSENBLATT: It looks like a county comment

letter, so --

THE JUDGE: Okay. Mr. Zimmerman, no comment, right?

MR. ZIMMERMAN: No objection.

THE JUDGE: Thank you.

(Protestant Exhibit No. 7 was marked for identification and entered into evidence.)

MR. MCCANN: Let me show you something else. I'll have this marked as exhibit 8.

BY MR. MCCANN:

Q. This is a two page document dated August 18, 2021, and I'll go through it slowly, just let me know if you need me to slow down.

A. No, I have it right here.

Q. So you recognize this document, which we'll mark as exhibit --

A. Yes, I do.

Q. This is an approval letter from the director of DPW, Ms. Walker.

A. Correct.

Q. Which determines I guess in a nutshell

that a waiver will not be required under the Baltimore County [indiscernible], correct?

A. Yeah. Waiver, request for [indiscernible] will not, will not have negative impacts to upstream or downstream properties, and are not detrimental to floodplain management programs. Oh, based on this criteria noted above, the development will not require a waiver under that particular section.

Q. Okay. So are you, number one, have you drafted the memo that we just looked at April 26, 2021?

A. Right.

Q. Do you necessarily agree with Ms. Walker's conclusion that a waiver is not required?

A. No, because I believe what they're saying is that, and I thought a waiver was required, but I believe what they're saying is for insulation of ponds, culverts, bridges, streets, utilities or drain facilities that the county finds not detrimental to the floodplain or management programs, so, and that's code, so I had misstated that, to be honest with you.

Q. Just so I'm clear, when you stated in your

April 26, 2021 comment that we just looked at, Protestant's exhibit 7, that a waiver was required, as we sit here today, you believe that was a mistake?

A. That was a mistake on my part.

Q. Okay. Are there any other waivers required under the Baltimore County code, other than the one that's identified here?

A. Well --

Q. I'm sorry. To be more specific, just to finish that thought, is for the proposed aspects of this development in the floodplain.

A. I guess there may be one, may be one required down the line due to possible flooding of the road out on Joppa Road.

Q. Okay.

A. It depends on how, it depends on what the proposed remedy is for the floodplain crossing West Chapel Road.

Q. Okay.

MR. MCCANN: Your Honor, I would move in exhibit 8 as well.

MR. ROSENBLATT: No objection.

THE JUDGE: Thank you. Mr. Zimmerman, no objection?

MR. ZIMMERMAN: No objections. Sorry, I just unmuted.

THE JUDGE: Thank you.

(Protestant Exhibit No. 8 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Let’s talk about this cut through issue, Mr. Cauley. I’m a little bit confused, but I’ll ask my questions anyway.

A. Okay.

Q. I’m going to show you, one second. So this again is I think exhibit 12A, it’s the county exhibit. I won’t mark it separately, but this is, it’s the August 10, 2021 comments. I’ll scroll up to the top so you can see it. Do you see that?

A. Yes.

Q. Okay. And I’m going down to site specific comment number 3, and it says right here, since the

number of off site units are over 100, Mays Chapel Road needs to be a full access road, and not an emergency access road. Did I read that correctly?

A. Yes.

Q. Okay.

A. Yes, but there are exceptions to that, obviously.

Q. Right. Well, let's, let me pull up the design manual, because I think the Judge said she didn't have a copy of it, but I do have a copy, and I will mark it, bear with me one second.

MR. MCCANN: So this would be, Your Honor, number 9.

(Protestant Exhibit No. 9 was marked for identification and entered into evidence.)

MR. MCCANN: I'm going to identify it first, but this is an excerpt, this is the cover page.

BY MR. MCCANN:

Q. Do you recognize that as the cover page of the design manual?

A. Yeah. The development plan review --

Q. Policy manual. I'm sorry, policy manual.

A. No problem.

Q. And this is pages, this, oh, my goodness.

A. Page 24.

Q. I'm missing a page.

A. 22, I apologize, 22 and 23.

Q. I don't know why the copy didn't come out. But you have it in front of you, right?

A. Yes, I do.

Q. So this page forward, my page here, it actually says, does it not say maximum number of units with single means of access?

A. Maximum units with one means of access, 100 units with no --

Q. Hold on, hold on, hold on. The heading of this section A, which is not in my exhibit right now, I'll have to grab it, read that, the heading of A. Just read A itself.

A. Maximum number of units with one means of access.

Q. Okay. And then underneath that, it says

100, right?

A. Correct.

Q. Okay. 100 units. Let me show you what's marked as exhibit 10. This is my neighborhood map. Do you see that?

A. Yes.

Q. Okay. I'm going to blow it up. So do you recognize where we are here? This is Joppa Road. Do you see that there?

A. Yes, I do.

Q. And here's the subject site.

A. Yep, I see it.

Q. Okay. Let's talk about the on-site developments, and hopefully you're familiar enough with them. I am going to circle this development right here, which is the development at which we've been talking about about connecting to. Do you see that? I just circled.

A. Yeah, I think it was 99 units in there, I believe.

Q. Yeah, 99, right?

A. Yep.

Q. Okay. Not 100, but 99.

A. Correct.

Q. Okay. And that development, are you familiar with its name?

A. I am not familiar.

Q. It’s called the Meadows, is it not?

A. I can’t, I’m sorry, I don’t remember.

Q. But would you agree with me based on this my neighborhood map that this development, which I’ll represent to you is called the Meadows of Greenspring --

A. Correct.

Q. -- has one means of access, correct?

A. Correct.

Q. Okay. So let’s look at the next development over to the east, which I’ll represent to you is called Boxwood.

A. Yep.

Q. Right in here, right?

A. Yes. I think you might be missing, are you missing two units?

Q. Yeah, I may.

A. That's fine.

Q. I don't want to be inexact about it.

A. We got you. I think there's 27 in there.

Q. Right. And that development has a means of access, correct, right here? Same --

A. Correct.

Q. And then if we go a little further to the east, this development right here, you can see where it says Seminary Drive. That, do you know how many homes are there?

A. I do not know off the top of my head.

Q. Okay. That development has one means of access, does it not?

A. Correct, correct.

Q. Okay. And then the subject development is going to have one means of access onto West Joppa Road, right?

A. Through the connection it's going to have two means of access.

Q. Well, if it's as proposed, as we sit here

today, the development plan shows one means of access, right?

A. It shows, it shows one means of access with one other gated means of access. But yeah, okay.

Q. Yeah. Well, that's fair. Put it this way, it shows at least one means of access, right?

A. Okay. Okay.

Q. Correct?

A. Correct.

Q. Okay. And so each of these developments, the proposed development, the Meadows, Boxwood and this development that I last highlighted, which I'll represent to you is Seminary Ridge, all of those developments, number one, have less than 100 units, 99 or less, and each of those developments has one means of access, correct?

A. Well, the two, the one that is going on Mays Chapel now actually if you look at, they are two separate communities, it's 126 units, and it's 126 units with one means of access. Just so I'm being clear. Do I make myself clear?

Q. Yeah, but each of the developments, again, the question is I understand what you're saying, but each of the developments that we've gone through has one means of access, correct?

A. One means and one shared means, yes.

Q. Okay. All right. Let me show you one more exhibit. This is the comment of the fire marshal in this case. I'll blow it up. It's dated March 8, 2021. Do you see that?

A. Yeah, I do see it.

Q. Okay. I did not see any development plan comment from the fire marshal, only this comment. Are you familiar with whether or not, maybe not, maybe Mr. Chen will correct me, but are you familiar with a development plan comment being issued by the fire marshal?

A. I am not off the top of my, I'd probably have to go back and look through my file real quick. I've got water, sewer, I don't see anything from, that is for, is that for the concept plan? Or is that for the development? That's concept plan.

Q. It says concept plan on it. I just, as I said, I haven't seen --

A. There hasn't been, oh, I gotcha. Let me check, sir, I'm sorry. We've got a little bit of a pile here. Concept plan comments. Environmental. What's that for? That's Department of Rec. I don't seem to have one from the fire department for the development plan. Oh.

Q. Okay. You may or may not have seen this, but there isn't any reference in any of the comments by the fire marshal to any safety concerns from the fire marshal about making this the access or connection with Mays, with the Meadows, to be emergency only and gated from vehicular access. Do you agree with that?

A. I'd have to read the whole thing, but I'm assuming you are, let me see. Can you go down a little bit more? [mumbling while reading] Is it only nine comments? Is there more to the bottom? I'm sorry. No problem. [mumbling while reading] fire code requires that the address numbers be [mumbling while reading]. Yeah, there is no mention of the emergency access.

Q. Okay. I mean, are you as a representative

of DPR, and I guess as DPW&T as well, are you aware of anyone conveying any concerns to you or anyone else regarding the ability of the fire department to access this proposed development, if approved, because of the limited access that's been proposed? Have you heard that from anybody at all?

A. No, I have not.

Q. Okay. And in fact, it's not, that kind of access is not really uncommon. You can, there are, there is other places in the county where that same type of access is provided for, correct?

A. In terms of two access points?

Q. No, I'm talking about an access that is not, that's blocked off for vehicular access, other than emergency, and is dated. It's not unusual at all, is it?

A. I don't, I know, I have heard that there are blocked off access points. I haven't seen them myself personally.

Q. Okay. Just to be clear, we keep on talking about a gate. How about in your experience, what will actually be there? Will it be, I don't want anybody

to be left with the impression that it's an iron gate that's 12 feet high. What will be there in your experience, if approved?

A. I don't, I will not know that until the details come in, but considering the fluency of the area, I would think it would probably be, I would assume it would be a pretty decorative gate, that's what I would guess. I do not know how it opens, if it swings open, if it's slide open, or how it is. I just haven't seen the details at this time.

Q. But it will be such, I think we've talked about this already, it will be such that pedestrians can walk between the two developments, just vehicles cannot, correct?

A. I would think that the developer would think both neighborhoods would want that, yes. I would think that. I just haven't seen any, once we get the construction drawings, that'll become much more defined.

Q. Okay.

A. I would think.

Q. And then lastly on this issue, you

mentioned something about unusual circumstances when there's 150 or so units or more. I don't think we get there, as I think I've already indicated, but when you were asked about what type of unusual circumstances you think you were referring to, you said safety concerns. And by that --

A. [indiscernible]

Q. Go ahead, I'm sorry.

A. That's what I'm saying, maybe. Continue.

Q. So in other words, if we, if there are concerns from the community about the vehicles, not pedestrians, but vehicles going from one development to another, from the proposed development to Meadows, that may, in your experience, that may be something that would allow this access to remain the way it is, if that's proven to, is that fair?

A. Yes, I would think for the safety, yes.

Q. Okay. For instance, do you know whether or not the Meadows, the community next door has sidewalks or not? Do you even know that?

A. No, I haven't been involved in

development. I would need to go out there and look at that.

Q. Do you know how wide the road is, for instance? Mays Chapel Road.

A. I think the road leading, I think the road leading up is 24 feet wide, and it comes up to the other development, I believe.

Q. Okay. All right. Lastly, on the sewer issue, let me show you, this is a four-page document, looks to be, correct me if I'm wrong, looks to be the development plan comments for DPR, March 8, 2020.

A. Yeah. They are the concept plan comments, yes.

Q. Oh, they are? You're right, I'm sorry.

A. Yes. Yes, they are.

Q. So I'll mark these as exhibit 12. Let me go to the bottom to number 18, which was discussed before by you, where it indicates eight sewer segments that don't have adequate capacity, correct?

A. One second. Is this the development, I apologize.

Q. I'll blow it up so you can see it. You've already said it was a concept plan comments.

A. Yeah. Okay. This was, I didn't know these were added to the concept plan. I thought these were just added to the development plan comments. Yeah, they are the eight sections that are to be improved, yes.

Q. Okay. And it says, to be more precise, it says the following existing eight sewer segments do not have adequate capacity to accommodate the proposed 61 homes, correct?

A. Yes.

Q. Okay. And then I think you've indicated that the bottom six segments on this chart below were to have been completed by Hopkins, correct?

A. Yes, yes.

Q. And that the first two segments in that chart are to be improved by this developer in this case, correct?

A. Correct.

Q. And by the way, these improvements are not just the lining of these pipes, but we're talking

replacement, altogether replacement of these eight inch diameter sewer lines with larger sewer lines, correct?

A. Yes. They are to be upsized, correct.

Q. Okay.

A. It's not a rehab, it's a replacement. You are correct.

Q. And I think you indicated that the developer in this case has already prepared, is ahead of the game apparently, has already prepared sewer design plans for these two sewer segments, correct?

A. Correct.

Q. One thing I don't think you mentioned, let's go down to the beginning of page 3, I'll blow it up a little. It actually says, does it not, that this development cannot connect to public sewer until all of the sewer improvements are completed, correct?

A. Correct.

Q. So that would include the two that, as you've indicated, the county believes that this developer is responsible for, and it would include the other six that the county believes Hopkins is responsible for,

correct?

A. Correct.

Q. Okay. And then it says, and I highlight this, umber 19, says developer is responsible for acquisition of off-site easements for sewer improvements. I take it improvements that are being referred to here and 19 of the same ones we're talking about in Section 18?

A. Yeah, the first, they are responsible for the easement relating to their two sections, and they did, that's, they have access, and it's shown on, and it is actually shown on our construction drawing.

Q. Okay. So they have easements, and they have acquired easements for the two segments, correct?

A. Correct, absolutely.

Q. All right.

MR. MCCANN: Your Honor, I don't think this has been introduced, so I would move this in as exhibit 12 without the highlighting.

THE JUDGE: Yes, exhibit 12. We do not have this.

(Protestant Exhibit No. 12 was marked for identification and entered into evidence.)

MR. MCCANN: Great. Thank you.

BY MR. MCCANN:

Q. Next, bear with me. I'm usually faster than this. So I'll mark this as exhibit 13. This is a one-page document, this time from Mr. Bayer, [phonetic] acting chief of sewer design, to Mr. Dasai, addressing the same issue, correct? And I'll blow it up.

A. Correct, correct.

Q. Okay. And this memo likewise says that the Greenspring Manor development may not connect public sewer until the agreement with Hopkins is enforced, and all sewer improvements are completed, correct?

A. Correct.

Q. Okay.

MR. MCCANN: Your Honor, I would move that in as exhibit 13.

THE JUDGE: What was the date on that one?

MR. MCCANN: Date is March 3, 2021.

THE JUDGE: March 3rd, okay. Thank you. Any

objection, there's no objection, right?

MR. ROSENBLATT: No objection.

THE JUDGE: Thank you.

MR. ZIMMERMAN: No objections.

(Protestant Exhibit No. 13 was marked for identification and entered into evidence.)

BY MR. MCCANN:

Q. Next, this likewise is a one-page memorandum, this time from Lisa Icolt, [phonetic] chief of the sewer design section. Do you see that?

A. Yes.

Q. Okay. One page, also dealing with the same issue of the sewer segments, correct?

A. Right.

Q. Okay. And Ms. Icolt indicates in this paragraph, and I think you said as much, that the improvements that Hopkins was to undertake have not been completed, correct?

A. Correct.

MR. MCCANN: Your Honor, I would move that as exhibit 14.

THE JUDGE: And the date on that one?

MR. MCCANN: That is August 2, 2021.

MR. ZIMMERMAN: No objection.

THE JUDGE: Thank you.

(Protestant Exhibit No. 14 was marked for identification and entered into evidence.)

MR. MCCANN: We're getting there.

BY MR. MCCANN:

Q. All right. Going back to March 3, 2021 memo, which is I think is exhibit 13, I forgot to ask you this question. It says in the second paragraph, again, March 3rd, 2021, it says in the second paragraph, PAI could not enforce this requirement, and the project was completed without the necessary sewer system improvements being completed. Did I read that correctly?

A. Yes, you did.

Q. Okay. What, if anything, can you tell us about that? That is --

A. I have to be honest, that is before my time. I became aware of that as I read it at that moment. I don't know anything about the past project

that was required. I wasn't here. I can do research if you need me to.

Q. That's okay. And I think you indicated, I'm trying to avoid going there if we don't have to, but I think you've indicated that you do not know, or maybe you said you didn't look to see where these sewer segments are located in relationship --

A. No, I didn't know where they were specifically located, no, I do not.

Q. Okay. Okay. I think that's all I have. Bear with me one second, Mr. Cauley.

A. Sure, sure.

Q. Oh, I'm sorry.

MR. MCCANN: I would like to take a look if I could at that 12D, Your Honor. I'm not sure if it was sent.

THE JUDGE: Do you have it?

MR. MCCANN: I do. Thank you for doing that.

BY MR. MCCANN:

Q. So this is 12D, which I just received from Judge Murphy. Remember this August 26, 2022 --

A. Yes.

Q. So you spoke, real quick, I know it sounds like we're going to have Mr. Nebre here.

A. Right.

Q. But anything that you know or conveyed about during the course of the hearing today regarding traffic that was based on your communications solely, or was solely based on your communications with Mr. Nebre, correct?

A. Correct.

Q. In other words, you did not, you personally did not look into any issue in this case regarding the traffic impact study, the level of service or the --

A. Well, we have a map that basically tells us the level of service, so I can see that pretty readily. But in terms of sitting down and reviewing and analyzing the traffic impact study, no, I did not. I refer back to Mr. [indiscernible]

Q. Okay. And I don't want to belabor it, but this language in 3, that's not your language, that's Mr.

Nebre's correct?

A. Yes, it is.

Q. Okay. Did you draft this? Or did he draft it?

A. I drafted it. I drafted it based on discussions with Chris to get some follow up.

Q. Okay.

A. Because I knew this was going to be a little problematic.

Q. So you drafted number 3?

A. I drafted the whole, yes.

Q. Okay. Okay.

MR. MCCANN: That's all I have. To the extent I didn't do 13 or 14, I would do so now, Your Honor. Thank you.

THE JUDGE: Yes, those are accepted.

MR. MCCANN: Okay. Thank you, Mr. Cauley.

MR. CAULEY: Thank you.

THE JUDGE: Hold on, Mr. Cauley. We've still got Mr. Zimmerman.

MR. CAULEY: Oh, I'm here.

THE JUDGE: Mr. Zimmerman?

MR. ZIMMERMAN: Excuse me. May I begin? Let me see if I can share my, do a little better job on sharing myself with People's Counsel 6, public works department. Sorry.

THE JUDGE: I sent it to you.

MR. ZIMMERMAN: Let's see, I'm trying to, here we go, I think. I don't know if I have to go to Adobe, or, wait a minute. Okay. I think I got it, wait a minute.

THE JUDGE: You do, you got it.

MR. ZIMMERMAN: Here we go, here we go.

DIRECT EXAMINATION

BY MR. ZIMMERMAN:

Q. So Mr. Cauley, you can see this? People's Counsel 6? We're going to scroll down in a minute.

A. Okay.

Q. I don't know if I can, let me see if I can, okay. So this is the, I'll go to 75. Okay. So this is an August 12th comment from the Public Works Department.

A. Yes.

Q. Have you ever seen this, Mr. Cauley?

A. Yes, I believe, yes, I have.

Q. Okay. You didn't produce it today though, did you?

A. It's in our file. I did not produce it, no.

Q. Okay. You didn't show, I'm not criticizing, I'm just getting the information. You didn't happen to show it today?

A. No, I did not.

THE JUDGE: So just to be clear, Mr. Zimmerman, all the documents I put on the screen are what I chose out of the file to show him. He didn't choose them, just so we're clear.

MR. ZIMMERMAN: Okay. All right. Excuse me. I'm not trying to attach any blame here.

THE JUDGE: I'm just making clear.

MR. ZIMMERMAN: Right. Okay.

BY MR. ZIMMERMAN:

Q. Anyway, we haven't seen this before today,

for whatever reason. So let's take a look at the next page.

A. If I could clarify that?

Q. Sure, go ahead.

A. Can you go to the top of the page for a real quick second?

Q. I'm trying to go up now, and I'm being kind of blocked. Let's see. On the right hand, wait a minute.

A. I think that's their, is that their comment? Wait a second, let me just see. Development, development, intersection, this is response to, yeah, I believe these are the comments, it's DPWT's development plan comments that they send down to us, and then we incorporate, yes.

Q. Okay.

A. Go ahead.

Q. And by the way, just for the record, although most of us don't, Falls Road is a state road, but Joppa Road is a county road, am I correct?

A. You are correct. Falls Road is I believe,

yes, I'm pretty sure. I'm just making sure if Joppa Road, I believe Joppa Road is a county road, yeah.

Q. And Seminary Avenue is a county road or state road?

A. Seminary, let me just see real quick. Seminary I believe there's no, there's no route number I believe on Seminary. Hang on. There's no route number.

THE JUDGE: It should be Maryland 131, I think.

MR. CAULEY: Seminary?

THE JUDGE: Should be.

MR. CAULEY: Seminary is, maybe it is. If it has a route number on it, it is a state road.

BY MR. ZIMMERMAN:

Q. Okay. We'll get that confirmed. I think you're right. By the way, I think Greenspring Valley Road is a state road, too, isn't it? Or is it?

A. I'm not sure off the top of my, I'd have to go back.

Q. Sorry, didn't mean to interrupt. I'm going to scroll down to the next page of this comment, and I don't want to put you on the spot. Some of it looks

similar to what we saw. I'm going to scroll for a minute to say this exhibit also includes the Terry Curtis comment that we've seen, right? So it's, part of it, the Public Works comment I would suggest to --

A. [indiscernible] that's a zoning, they are two separate, I believe they are two separate documents, because the one up top is comments, and that's a zoning, that's a variance comment, I believe.

Q. Right, exactly. Combined two, I've combined two different documents in this exhibit, yes.

A. Okay.

Q. To point out to you that some of the language, and, you know, people can study, some of the language is the same on both documents. For example, number 4, or even number 1 on the Meadows of Greenspring and the regulation and so on, right? Do you see there's some overlap with these two documents, right?

MR. ROSENBLATT: Judge, at this point I'm objecting. Again, this is not an email even from Mr. Cauley's department. I don't know what purpose this serves, and it is information that you've already had

before you but being asked about someone's opinion that is not even here for examination.

THE JUDGE: So is --

MR. ZIMMERMAN: Do I need to respond to this?

THE JUDGE: So Mr. Zimmerman, just, if you could just move up one page. So what it is, it's actually a county document, so Department of Public Works memo, and attached to it is the comment, and I've actually read it, and it mirrors the Terry Curtis ZAC comment, just two different I guess piles. One went into the ZAC pile, one went into this one.

I mean, there should be no objection. I mean, I've read it, so I, you're trying to tell me they're very similar. The ones from Terry Curtis is already a county exhibit, so we have that one.

MR. ZIMMERMAN: Right, right. Anyway --

THE JUDGE: You can ask him about it, I mean, he can't, he's not going to go through line by line.

MR. ZIMMERMAN: Well, let me, and I'm going to be --

BY MR. ZIMMERMAN:

Q. I understand Mr. Cauley, you're not really, you're not really the engineer to talk about traffic issues, but you have been asked by the other lawyers some different things about different documents, and this is kind of a segue to Mr. McCann's questioning.

First of all, let's see, I want to get back to, do I have the Public Works comment up? Yeah. So do you know whether this Public Works comment was really coordinated with Terry Curtis's comment? I mean, do you know who really worked on this one?

A. Which one would that be?

Q. Well, the Public Works comment here, and the overlapping language on the Public Works Department, official comment on the development plan, and then Terry Curtis's email relating to the special variance which have overlapping language. So do you know whether Terry Curtis contributed, do you know who contributed to the Public Works Department comment here?

MR. MUDD: Objection.

MR. CAULEY: I wasn't involved [indiscernible]

MR. MUDD: Objection.

THE JUDGE: Go ahead, Mr. Mudd.

MR. MUDD: Sorry, Judge Murphy. I know Mr. Rosenblatt tried this, but I think this is the exact same issue that you ruled on that we should not be hearing from Mr. Cauley regarding information that may have come from a different source who is not here. We can't cross-examine that person. It was the same ruling you made for the Nebre email.

THE JUDGE: I just didn't know if he was going to say oh, sure, I know what this is, you know, because there is overlap between these two departments whether he was going to say that. Mr. Zimmerman, it might be easier and better for everybody if you just wait until Mr. Nebre comes for this first document, and again, the second one was already put into evidence.

I mean, the County exhibit, because remember, the top of the first page of this document is the Department of Public Works transportation.

MR. ZIMMERMAN: All right.

BY MR. ZIMMERMAN:

Q. Let me just say, Mr. Cauley, are there any

other official Public Works Department comments on the transportation issue that you know of?

A. None except what has been shown today, no.

Q. Did any other departments respond specifically to this comment and indicate they agreed, disagreed, or --

THE JUDGE: So again, this is for the Department of Public Works and Transportation. So, I mean, let's have Mr. Nebre do that.

MR. ZIMMERMAN: All right. Got it, got it.

BY MR. ZIMMERMAN:

Q. This is, if I'm permitted, a sequel to Mr. McCann's questions about what unusual situation there might be that would justify not having access to Mays Chapel Road with a connection. Could it be an unusual situation where you have F level intersections and having an access road might reduce the pressure on those intersections? Or at least Falls and Joppa. Would that be an unusual situation?

A. Say again?

Q. Is it an unusual situation that you have F

level intersection at Falls and Joppa Road, and that if you put, if you connect these two subdivisions, if you connect in Mays Chapel to Joppa Road, then it relieves some of the pressure on that F level intersection. Isn't that an unusual condition as well, but a condition which would suggest maybe we should have an access?

MR. MUDD: Objection, objection. He's now testifying.

THE JUDGE: Well, he's asking a question, but it sounds like he's asking a question that would probably maybe it sounds like it's helpful for your client if it's relieving the F intersection. That's sort of what I heard.

MR. ZIMMERMAN: You know, I'm actually trying to be fair, believe it or not. We try to be fair to everybody.

THE JUDGE: [indiscernible] Mr. Rosenblatt?

MR. ROSENBLATT: I did not take it that way.

THE JUDGE: I think that's what he was suggesting, that if the access gat is open all the time, then it relieves the congestion with the F level

intersection at Joppa and Falls.

MR. ZIMMERMAN: To some extent, to some extent.

THE JUDGE: To some extent. All right. So we'll overrule that objection.

MR. ZIMMERMAN: Okay. All right.

MR. CAULEY: It may, but it would probably be a better question for Chris than myself.

MR. ZIMMERMAN: Fair enough, Mr. Cauley. I've just got a couple more questions. I guess you haven't, you've talked with Kris Nebre about a few things, but you haven't actually talked to Terry Curtis about the situation subsequent to his email?

A. No. I have to be honest, I didn't know that email, again, if we did the variances together, I would have seen that email. I didn't see that email until today.

BY MR. ZIMMERMAN:

Q. Okay. I've just got a couple more questions. Which department, or which particular engineer or other qualified person can comment on whether or not there are some issues relating to the master water

and sewer plan, the overall adequacy of the sewer system, the basic services situation for sewer and the sewer shed, those kind of issues? Who could address that?

A. I can in coordination with DPWT. When we do our development plan review process and our CPC review process, one of the things that's always asked and answered and provided a memo is is the water system and sewer system out there adequate to meet the new development?

Or the demands for the new development, and there was no comment to that fact that that feeder system would be problematic with this new development. That's always part of the early process of the CPC review and a DPDI review.

Q. Well, is there a specific comment that says exactly what you just said?

A. Well, yeah.

Q. Something in writing that says the [indiscernible]

A. [indiscernible]

Q. You know, sewer shed is adequate, and that

there are no --

THE JUDGE: Hold on, you guys are, excuse me, but both of you are speaking over one another.

MR. ZIMMERMAN: Sorry.

THE JUDGE: Remember, this is being recorded, and the problem is it's going to be all jumbled, so just give, Mr. Zimmerman, finish your question, then Mr. Cauley can answer.

MR. ZIMMERMAN: Okay.

BY MR. ZIMMERMAN:

Q. Is there anything in writing from your department that you can point us to, and when I say your department, I mean the Public Works Department also, to indicate that the Jones Falls sewer shed has adequate capacity --

A. [indiscernible]

Q. -- to handle everything, and that there's no sewer problems, and that the things that were, for example, identified in Judge Beverongan's [phonetic] decision of a few years ago on the Bear Hills case, the CPC Falls Road, that we don't have to worry about any of

that? Is there any study or comment?

A. I apologize, I misstated. I meant that in general, when we get general comments to that effect, and on this particular case, yes, we received, if you saw the prior email, we received from DPW&T that there was a problem with the sewer shed, and that's why we have this sewer relief that was done, and I was mentioning it earlier, I meant it as a general, I should have been specific to this, on this one, yes.

The comments were all pulled up earlier, saying that they have to improve those sewer lines, and I apologize. Go ahead.

Q. Sorry, I didn't mean to interrupt you. Were you finished?

A. No. If DPW sent those comments down to us, and you, we've already went through them I believe about five minutes ago.

Q. I saw the comments that indicated certain improvements.

A. Right.

Q. That Mr. McCann really focused on.

A. Right.

Q. But what I'm asking you is whether there's an overall analysis and assessment in writing that these improvements will in fact resolve any of the problems that have been identified as to the adequacy of the Jones Falls sewer shed.

A. I, and this is something that I have to go back and talk to sewer specifically, but I believe they have a model of their system, and they know where they have problems in terms of [indiscernible] stuff, and then from there, they make a requirement for improvements, and --

Q. Yeah. Who would be the best person to discuss that issue?

A. It would probably be the Chief of Sewer.

Q. And who would that be?

A. Amy, Amy, I'm not sure, I don't remember her last, she's relatively new. Amy, I can get her last name.

Q. Okay. You can let us know.

A. I can let you know, but if I could, it

generally, if I could, the entire water and sewer system is analyzed upstairs by each department, and they know pretty much where their problems are, and hence that's where this memo came out of.

Q. Do you think it would be a good idea for somebody from that department to come in and give us a summary?

A. If you want to have a lesson on sewer modeling, sure. But I'm not sure it's necessary.

Q. All right.

MR. ZIMMERMAN: Judge, I think that's enough for me for today. Thank you.

THE JUDGE: All right. I think, Mr. Cauley, I think we are finished.

MR. CAULEY: Okay.

THE JUDGE: I know you can't believe it, but it's 10 of 4, you've been here all day.

MR. CAULEY: All right. You guys have a great day, a great rest of the day.

THE JUDGE: Thank you, Mr. Cauley. All right. Let Mr. Nebre know that I'll be emailing him.

MR. CAULEY: Yes, I will most certainly tell him that.

THE JUDGE: Thanks so much.

MR. CAULEY: Have a good day.

THE JUDGE: Great. It's 10 of 4. I know everyone wanted to go, what is everyone's thought in terms of what we can accomplish? Mr. Rosenblatt, do you have other witnesses? This was an all day affair with the county.

MR. ROSENBLATT: I had no idea it was going to take this long, but I unfortunately don't have anything that can be accomplished in the remaining work day, so I'm not sure whether we're going to start with more county people, like Kris Nebre, or the developer's case next hearing. We'll come in ready to go, if it's us, or if it's better to do the county first.

THE JUDGE: Any objection, Mr. McCann? Because I know that the two of you had emailed me and said we have all day, right? And I said yes, we have all day, and so it's, you know, still all day. I mean, I just, it's up to you all. I didn't want to, you know

[indiscernible]

MR. MCCANN: I'm a little concerned about finishing in the days we have, but I'm okay with stopping now. So maybe Adam and I can talk about getting some subsequent days.

MR. ROSENBLATT: Yeah.

THE JUDGE: You might need to include Mr. Zimmerman.

MR. MCCANN: I'm sorry, Mr. Zimmerman and Mr. Wyatt as well.

THE JUDGE: And Mr. Wyatt, we've been ignoring you, but you said you were participating as an individual, so I didn't ask to you to ask questions, because I assumed you weren't asking questions given everyone else's questions.

And so, you know, we have two more days, I think it's the 20th and 21st I think in the afternoon as I said. I'll check with Mr. Nebre, and I'll see if Mr. Nebre can do either of those days. I don't know whether he's available. The last time it was a little bit more difficult to get that day, but I think that's because

it’s the first time he had come to a hearing, and now that he has done it, I don’t think it’s going to be as tough. I don’t know that, but I’ll certainly check with him.

So if he could come and he’s available on that first day, we’ll have him right away. If not, I mean, either way I’ll let you guys know.

SPEAKER: Okay. Great. Appreciate it.

THE JUDGE: Okay. All right. Anything else? Let’s see. So, Mr. McCann, you have your exhibits. Are you going to submit what you just talked about today, all 14 of them?

MR. MCCANN: Yeah. I mean, I’m going to try to do it today if not tomorrow.

THE JUDGE: You don’t have to do it today. I was just saying yeah, that’s probably good for you to at least submit it, I mean, whenever the next time over is, you know,

MR. MCCANN: Yeah, 1 through 14 I have with an exhibit list. I’ll bring it over.

THE JUDGE: Yeah, I know you all have to keep

revising your exhibit list when you add stuff, I mean, like the developer does, too, with exhibit 1B, but, you know, that's just the way it goes.

MR. MCCANN: Yeah, I can do that. Can I ask you before we go?

THE JUDGE: Yes.

MR. MCCANN: I was trying to listen to Mr. Zimmerman and get my exhibits together. Are you, what do you have, if you don't mind me asking, for exhibit 9? I can't seem to recall what that was.

THE JUDGE: Is that for you?

MR. MCCANN: Yeah, I'm sorry. Our exhibit 9.

THE JUDGE: You said the DPR policy manual, 3/27.

MR. MCCANN: If I could, I could find that missing page and I'll send it to you and Adam if it's all right.

THE JUDGE: I don't have any [indiscernible]

SPEAKER: [indiscernible] come over a second.

THE JUDGE: So anyway, Mr. McCann, I don't have any of your exhibits.

MR. MCCANN: Right. I'm going to send them all, but what I'm saying is [indiscernible]

SPEAKER: [indiscernible] get out of this.

MR. MCCANN: -- because I couldn't ask questions about it. I think I'll send it to you, if Adam has objections --

MR. ROSENBLATT: No, no objection. I know what page you meant to be there, you just add it and make that the exhibit.

MR. MCCANN: Okay. Sounds good.

THE JUDGE: Okay. Yours were all county exhibits anyway, at least I recall, that's what I recall. Okay. Anything else?

MR. ZIMMERMAN: I was going to say, if you think it will expedite the case next time, I'm willing to share all my exhibits with all the attorneys in advance so they can figure out, you know, what objections they want to make. That might, you know, make things quicker, although I think they're all public, I think they're all public records actually, but I'll be glad to share my exhibits, you know, with the other attorneys in the

meantime if that helps.

THE JUDGE: I'll let you all deal with that.

MR. ZIMMERMAN: All right.

THE JUDGE: Sound good? Okay. Anything else? I'm going to pause the record, or stop.

SPEAKER: Thank you, Judge.

THE JUDGE: See you guys next time.

SPEAKER: Bye bye.

THE JUDGE: Thank you, Your Honor.

(Whereupon the hearing was adjourned.)

TRANSCRIBER'S CERTIFICATE

I, Dana Dezarn, hereby certify that I transcribed from audio file the proceedings to the best of my ability in the foregoing-entitled matter; and I further certify that the foregoing is a full, true and correct transcript of the audio files produced.

IN WITNESS THEREOF, I have subscribed my name on July 5, 2023.

Dana Dezarn
