Q: There are no notes for by-pass pumping the sewer house connections and/or how to get to the flow (example: install manhole or a large diameter cleanout that could be used to by-pass pump the sewer). Is there a recommended way to by-pass?

For the replacement of the laterals, it is anticipated that there will be minimal flow however it will be the responsibility of the contractor in coordination with the County for implementation. For the mainline replacement, bypass plan is the responsibility of the contractor and should be submitted to the county for approval prior to implementation, as per the notes on drawing sheet 13 of 46.
