      4) Locate at base of each vertical soil or waste stack.
   b. Install cleanout deck plates (covers), of types indicated, with top flush with finished floor, for floor cleanouts for piping below floors.
   c. Install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall, for cleanouts located in concealed piping.
   d. Install flashing flange and clamping device with each stack and cleanout passing through floors having waterproof membrane.
4. Floor Drain Installation

   a. Install floor drains according to manufacturer's written instructions, in locations indicated.
   b. Install floor drains at low points of surface areas to be drained, or as indicated. Set tops of drains flush with finished floor.
   c. Trap drains connected to sanitary building drain. Provide trap primers for all traps.
   d. Install drain flashing collar or flange so that no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes, where penetrated.
   e. Position drains for easy accessibility and maintenance.
5. Roof Drain Installation

   a. Install roof drains at low points of roof areas, according to the roof membranes manufacturer's installation instructions.
   b. Install drain flashing collar or flange so no leakage occurs between roof drain and adjoining roofing. Maintain integrity of waterproof membranes, where penetrated.

c. Position roof drains for easy accessibility and maintenance.

6. Interceptor Installation

a. General: Comply with unit manufacturer's written instructions and with local authority for trapping and venting.
b. Install units with clear space for servicing.
c. Install waste piping, flow control fitting, vent piping, and accessories as indicated.
   1) Install control panel for grease recovery unit as indicated.
   2) Coordinate oil storage tank and gravity drain with Division 23 Section: "Facility Fuel Storage Tanks."
d. Above-Floor Installation: Set unit with bottom resting on floor, except where otherwise indicated.
e. Flush with Floor Installation: Set unit and extension when required, with cover flush with finished floor.
f. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.

7. Flashing Installation

3.10 FIELD QUALITY CONTROL

A. Division 01 Section: "Quality Requirements": Field inspecting, testing, adjusting, and balancing.

B. Testing shall be performed by Installer of system being tested in presence of the Owner's representative. Provide seven (7) day advance notice prior to testing of systems.

C. Inspection of Piping Systems:

1. Do not enclose, cover, or put into operation any piping system until it has been inspected and approved by Owner's Representative.
2. During progress of installation, notify the authority having jurisdiction seven (7) days prior to time such inspection must be made. Perform tests specified in presence of Owner's Representative.

   a. Roughing-In Inspection: Arrange for inspection of piping system after system roughing-in, before concealing, and prior to setting fixtures.
   b. Final Inspection: Arrange for final inspection by Owner's Representative to observe tests specified below and to ensure compliance with requirements of Owner's Representative.
3. Re-inspections: Make required corrections and arrange for reinspection by Owner's Representative when piping system fails to pass test or inspection.
4. Reports: Prepare and submit inspection reports for approval by Owner's Representative.

D. Test domestic water, sanitary waste, vent, and storm drainage piping systems in accordance with all applicable codes and the local authority having jurisdiction.

E. Test swimming pool piping systems in accordance with ASME B31.9.

F. Test medical gas systems in accordance with NFPA 99.

G. Leak Testing

1. Drainage And Vent Piping Systems

a. Rough Plumbing Test Procedure: Except for outside leaders and perforated or open-jointed drain tile, test piping of plumbing drainage and venting systems on completion of roughing-in piping installation. Tightly close all openings in piping system and fill with water to 10 feet head of water. Water level shall not drop during the period from 15 minutes before inspection starts through completion of inspection. Inspect joints for leaks.
b. Finished Plumbing Test Procedure: After plumbing fixtures have been set and their traps filled with water, test connections and prove gastight and watertight. Plug stack openings on roof and building drain where it leaves the building and introduce air into the system equal to pressure of 1-inch water column. Use a U tube or manometer inserted in the trap of a water closet to measure this pressure. Air pressure shall remain constant without introducing additional air throughout period of inspection. Inspect plumbing fixture connections for gas and water leaks.
c. Repair leaks and defects using new materials and retest system or portion thereof until satisfactory results are obtained.
d. Prepare reports for tests and required corrective action.

3.11 CLEANING (Division 22 Section: "Plumbing Piping System Cleaning and Treatment.")

3.12 PAINTING

A. Mechanical Room Piping: All piping including insulated systems located in Mechanical Rooms and equipment spaces shall be completely painted. Refer to Division 09 Section: "Painting and Coating", Colors shall be as selected by the Architect.

B. Touching Up: Clean field welds and abraded areas of paint. Use same materials as used for shop painting. Comply with SSPC-PA 1, "Shop, Field, and Maintenance Painting," requirements for touching up field painted surfaces.

1. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A780.

D. Plastic Pipe shall be painted with Exterior Grade Latex Paint. DO NOT USE EPOXY OR OIL BASE PAINTS ON PLASTIC PIPE.

3.13 MANUFACTURER'S FIELD SERVICES

A. Division 01 Section: “Quality Requirements”: Requirements for manufacturer’s field services.

B. Furnish factory trained representative of system supplier for 16 hours of on-site time during leak detection and location system sensor and electronics installation.

C. Furnish factory trained representative of system supplier for 16 hours of on-site time during final checkout of leak detection and location system.

END OF SECTION

SECTION 22 05 13

COMMON MOTOR REQUIREMENTS FOR PLUMBING EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 22.

1.2 SUMMARY

A. Section includes:

1. Section includes single- and three-phase motors for application on equipment provided under other sections and for motors furnished loose to Project.
2. Source Quality Control.
3. Bearing Protection Ring.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 22 Section: “Common Work Results for Plumbing.”
2. Division 22 Section: “Identification for Plumbing Piping and Equipment.”
3. Division 22 Section: “Plumbing Pumps.”
4. Division 26 Section: “Common Work Results for Electrical”
5. Division 26 Section: “Grounding and Bonding for Electrical Systems.”
6. Division 26 Section: “Identification for Electrical Systems.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. American Bearing Manufacturers Association:

1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. National Electrical Manufacturers Association:

1. NEMA MG 1 - Motors and Generator.

C. International Electrical Testing Association:

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit catalog data for each motor furnished loose. Indicate nameplate data, standard compliance, electrical ratings and characteristics, and physical dimensions, weights, mechanical performance data, and support points.

C. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.

D. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years experience.

B. Testing Agency: Company who is a member of the International Electrical Testing Association and specializing in testing products specified in this section with minimum five years experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Product storage and handling requirements.

B. Lift only with lugs provided. Handle carefully to avoid damage to components, enclosure, and finish.

C. Protect products from weather and moisture by covering with plastic or canvas and by maintaining heating within enclosure.

D. For extended outdoor storage, remove motors from equipment and store separately.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR MOTORS

A. General: Requirements below apply to motors covered by this Section except as otherwise indicated.

1. Motors 3/4 hp and Larger: Three-phase motor as specified below.

2. Motors Smaller Than 3/4 hp: Single-phase motor as specified below

3. Frequency Rating: 60 Hz.

4. Voltage Rating: Determined by voltage of circuit to which motor is connected for the following motor voltage ratings (utilization voltages):

   a. 120 V Circuit: 115 V - motor rating.
   b. 208 V Circuit: 200 V - motor rating.
   c. 240 V Circuit: 230 V - motor rating.
   d. 480 V Circuit: 460 V - motor rating.

5. Minimum service factor shall be 1.15 and shall apply at frequency and utilization voltage at which motor is connected. Provide motors, which will not operate in service factor range when supply voltage is within 10 percent of motor voltage rating.

6. Capacity: Sufficient to start and operate connected loads at designated speeds in indicated environment, and with indicated operating sequence, without exceeding nameplate ratings. Provide motors rated for continuous duty at 100 percent of rated capacity.

7. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.

8. Enclosure: Open driproof, unless otherwise specified. Provide screen over slots, where slots will permit passage of human extremities.

9. Provide adjustable motor slide base for belt driven equipment. Include adjusting bolts and locknuts.

10. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

11. Motors that operate with Variable Frequency Drives to meet the MG 1 Part 31 specifications with insulation that can withstand 1600 V peak voltage and a 1 msec rise time and improved baring lubrication for higher temperature operation

B. Minimum nominal full load efficiency for NEMA design B motors shall be as follows:

	Open Motors			Enclosed Motors		
	2-pole	4-pole	6-pole	2-pole	4-pole	6-pole
HP	3600 RPM	1800 RPM	1200 RPM	3600 RPM	1800 RPM	1200 RPM
1	77.0	85.5	82.5	77.0	85.5	82.5

1.0	77.0	83.5	82.5
1.5	84.0	86.5	83.8
2.0	85.5	86.5	No Req.
3.0	85.5	86.9	No Req.

D. Minimum full load efficiency for capacitor-start capacitor-run and capacitor-start induction-run small electric motors shall be as follows:

	Open Motors		
	2-pole	**4-pole**	**6-pole**
HP	**3600 RPM**	**1800 RPM**	**1200 RPM**
0.25	66.6	68.5	62.2
0.33	70.5	72.4	66.6
0.50	72.4	76.2	76.2
0.75	76.2	81.8	80.2
1.0	80.4	82.6	81.1
1.5	81.5	83.8	No Req.
2.0	82.9	84.5	No Req.
3.0	84.1	No Req.	No Req.

E. Three-phase Motors

1. NEMA MG 1, Design B, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds as indicated on Drawings.

2. Insulation System: NEMA Class F.

3. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.

4. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay with wiring to terminal box.

5. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA 9, L-10 life of 200,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.

6. Sound Power Levels: Conform to NEMA MG 1.

7. Multi-Speed Motors: Separate winding for each speed.

8. Variable Speed Motors for Use With Solid-State Drives: Energy efficient, squirrel-cage induction, design B units and ratings, characteristics, and features coordinated with and approved by drive manufacturer. Motors shall be labeled to indicate that they are provided with inverter duty capability in accordance with the National Electrical Manufacturers Association NEMA MG-1, Part 31.

9. Rugged Duty Motors: Totally enclosed with 1.25 minimum service factor. Provide motors with regreasable bearings and equipped with capped relief vents. Insulate windings with nonhygroscopic material. External finish shall be chemical resistant paint over corrosion resistant primer. Provide integral condensate drains.

10. Motors for Reduced Inrush Starting: Coordinate with indicated reduced controller type and with characteristics of driven equipment load. Provide required wiring leads in motor terminal box to suit control method.

11. All motors shall be provided with manufacturer’s stamped nameplate, to include all pertinent and capacity data.

F. Single-phase Motors

1. General: Conform to the following requirements except as otherwise indicated.

2. Energy Efficient Motors: One of the following types as selected to suit the starting torque and other requirements of the specific motor application.

   a. Permanent Split Capacitor.
   b. Split-Phase Start, Capacitor-Run.
   c. Capacitor-Start, Capacitor-Run.

3. Shaded-Pole Motors: Use only for motors smaller than 1/20 hp.

4. Internal Thermal Overload Protection for Motors: Protection shall automatically opens the power supply circuit to the motor, or a control circuit arranged for external connection. Protection operates when winding temperature exceeds a safe value calibrated to the temperature rating of the motor insulation. Provide device that automatically resets when motor temperature returns to normal range except as otherwise indicated.

5. Bearings: Belt connected motors and other motors with high radial forces on motor shaft shall be ball bearing type. Sealed, prelubricated sleeve bearings may be used for other single phase motors.

2.2 SOURCE QUALITY CONTROL

A. Test motors in accordance with National Electrical Manufacturers Association NEMA MG 1, including winding resistance, no-load speed and current, locked rotor current, insulation high-potential test, and mechanical alignment tests.

2.3 BEARING PROTECTION RING

A. All motors driven by a variable frequency PWM drive shall include a maintenance free, circumferential, conductive micro fiber shaft grounding ring to discharge shaft currents to ground.

B. Provide AEGIS SGR Bearing Protection Ring as manufactured by Electro Statis Technology.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned motors.

B. Maintain access to existing motors and other installations remaining active and requiring access.

C. Clean and repair existing motors to remain or are to be reinstalled.

3.2 INSTALLATION

A. General: The following requirements apply to field-installed motors.

1. Install motors in accordance with manufacturer’s published instructions and the following:

   a. Direct Connected Motors: Mount securely in accurate alignment. Connect to driven equipment with coupler of appropriate type and material for the given duty. Coupler shall be selected for high and range of motor application.
   b. Belt Drive Motors: Use adjustable motor mounting bases. Align pulleys and install belts. Use belts identified by the manufacturer and tension belts in accordance with manufacturer recommendations.

B. Install engraved plastic nameplates in accordance with Division 26.

C. Ground and bond motors in accordance with Division 26.

3.3 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements”: Field inspection, testing, adjusting, and balancing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.15.

D. Install Bearing Protection Ring in accordance with manufacturer’s recommendations.

END OF SECTION

SECTION 22 05 16

EXPANSION FITTINGS AND LOOPS FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 22

1.2 SUMMARY

A. Section includes:

1. Flexible pipe connectors.
2. Expansion joints.
3. Pipe alignment guides.
4. Swivel Joints
5. Pipe anchors.
6. Flexible Pre-Fabricated expansion loops
7. Powder-Actuated Fasteners
8. Concrete
9. Grout

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 03 Section: “Cast-in-Place Concrete”: Product and execution requirements for formwork, reinforcement, and concrete.
2. Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment”: Product and installation requirements for piping hangers and supports.
3. Division 22 Section: “Vibration and Seismic Controls for Plumbing Piping and Equipment”: Product and installation requirements for vibration isolators used in piping systems.

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

1. ANSI/AWWA C111, Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.

D. IMC (International Mechanical Code)

E. IPC (International Plumbing Code)

1.4 DESIGN REQUIREMENTS

A. Provide structural work and equipment required for expansion and contraction of piping. Verify anchors, guides, and expansion joints and adequately protect all systems.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Requirements for submittals.

B. Shop Drawings: Indicate layout of piping systems, including flexible connectors, expansion joints, expansion compensators, loops, offsets and swing joints.

C. Product Data:

1. Flexible Pipe Connectors: Indicate maximum temperature and pressure rating, face-to-face length, live length, hose wall thickness, hose convolutions per foot and per assembly, fundamental frequency of assembly, braid structure, and total number of wires in braid.
2. Expansion Joints: Indicate maximum temperature and pressure rating, and maximum expansion compensation.

D. Design Data: Indicate criteria and show calculations. Submit sizing methods and calculations.

E. Manufacturer's Installation Instructions: Submit special procedures.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Manufacturer’s Field Reports: Indicate results of inspection by manufacturer’s representative.

H. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of flexible pipe connectors, expansion joints, anchors, and guides.

C. Operation and Maintenance Data: Submit adjustment instructions.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.

B. Perform Work in accordance with all applicable codes and standards.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years experience.

B. Installer: Company specializing in performing work of this section with minimum 5 years experience.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Product storage and handling requirements.

B. Accept expansion joints on site in factory packing with shipping bars and positioning devices intact. Inspect for damage.

C. Protect equipment from exposure by leaving factory coverings, pipe end protection, and packaging in place until installation.

1.11 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for leak free performance of packed expansion joints.

1.12 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Supply two 12 ounce containers of packing lubricant and cartridge style grease gun.

PART 2 - PRODUCTS

2.1 FLEXIBLE PIPE CONNECTORS:

A. Furnish materials in accordance with Authority Having Jurisdiction Standards

B. Steel Piping:

1. Inner Hose: Stainless Steel.
2. Exterior Sleeve: Double braided stainless steel.
3. Pressure Rating: 200 psig WOG and 250 degrees F.
4. Joint: As specified for pipe joints.
5. Size: Use pipe-sized units.
6. Maximum offset: 3/4 inch on each side of installed center line.

C. Copper Piping:

1. Inner Hose: Bronze
2. Exterior Sleeve: Braided bronze.
3. Pressure Rating: 200 psig WOG and 250 degrees F
4. Joint: As specified for pipe joints
5. Size: Use pipe sized units
6. Maximum offset: 3/4 inch on each side of installed center line

D. Flexible Sprinkler Hose Fittings:

1. Hose fittings – general:

a. Hose fittings shall be stainless steel for use in connecting sprinkler heads in commercial suspended ceilings. A one-piece, open gate bracket attaches to suspended ceilings or hard-lid ceiling grids for supporting the hose (the bracket shall allow for sprinkler installation before or after the bracket is secured to the sprinkler grid). Union joints shall be provided for ease of installation Victaulic Vic-Flex® Style AB.

b. Hose fittings shall be braided stainless steel, with a 2” minimum bend radius sprinkler services to 200 psi. Victaulic Vic Flex® Series AH.

c. Hose fittings and accessories shall be unbraided type 304 stainless steel with a minimum bend radius of 4 inches, fittings and accessories shall be UL 2443 listed for sprinkler services to 175 psi.

2.2 EXPANSION JOINTS

A. Furnish materials in accordance with Authority Having Jurisdiction Standards

B. Stainless Steel Bellows Type:

1. Pressure Rating: 200 psig WOG and 250 degrees F.
2. Maximum Compression: 1-3/4 inch.
3. Maximum Extension: 1/4 inch.
4. Joint: As specified for pipe joints.
5. Size: Use pipe sized units.
6. Application: Steel piping 3 inch and smaller.

C. External Ring Controlled Stainless Steel Bellows Type:

1. Pressure Rating: 200 psig WOG and 250 degrees F.
2. Maximum Compression: 1-1/4 inch.
3. Maximum Extension: 3/8 inch.
4. Maximum Offset: 1/8 inch.
5. Joint: Flanged.
6. Size: Use pipe sized units.
7. Accessories: Internal flow liner.
8. Application: Steel piping 3 inch and larger.

D. Double Sphere, Flexible Compensators:

1. Body: Neoprene and nylon.
2. Working Pressure: 125 psi.
3. Maximum Temperature: 400 degrees F.
4. Maximum Compression: 1-1/8 inch.
5. Maximum Elongation: 7/8 inch.
6. Maximum Offset: 3/4 inch.
7. Maximum Angular Movement: 15 degrees.
8. Joint: Galvanized flanges.
9. Size: Use pipe sized units.
10. Accessories: Control rods.
11. Application: Steel piping 2 inch and larger.

E. Two-ply Bronze Bellows Type:

1. Construction: Bronze with anti-torque device, limit stops, internal guides.
2. Pressure Rating: 200 psi WOG and 250 degrees F.
3. Maximum Compression: 1-3/4 inch.
4. Maximum Extension: 1/4 inch.
5. Joint: As specified for pipe joints.
6. Size: Use pipe sized units.
7. Application: Copper piping.

F. Low Pressure Compensators with two-ply Bronze Bellows:

1. Working Pressure: 75 psig.
2. Maximum Temperatures: 250 degrees F.
3. Maximum Compression: 1/2 inch.
4. Maximum Extension: 5/32 inch.
5. Joint: Soldered.
6. Size: Use pipe sized units.
7. Application: Copper or steel piping 2 inch and smaller.

G. Copper with Packed Sliding Sleeve:

1. Maximum Temperature: 250 degrees F.
2. Joint: As specified for pipe joints.
3. Size: Use pipe sized units.
4. Copper or steel piping 2 inches and larger.
5. Application: Copper or steel piping 2 inch and larger.

H. Fernco, XJ Series: Furnish and install in PVC and cast iron drain pipe risers, at every other floor, or as indicated on the contract drawings.

2.3 PIPE ALIGNMENT GUIDES

A. Furnish materials in accordance with Authority Having Jurisdiction Standards

B. Systems greater than 70°F operating temperature: Provide Erico (formerly known as Michigan) Model No. 650, or an acceptable comparable product.

C. Systems less than 70°F operating temperature: Provide Erico (formerly known as Michigan) Model No. 651, or an acceptable comparable product.

D. Style IV – Pipe Alignment Guide (Spider Type): Primary and intermediate guides shall be of the radial type employing a heavy wall guide cylinder with weld down or bolt down anchor base. A two section guide spider, having 1/8” maximum diametrical clearance with guide cylinder inside diameter, bolted or welded tight to the carrier pipe which slides through the guide cylinder I.D. Cylinder shall be of sufficient size to clear pipe insulation and long enough to prevent over travel of the spider. Pipe alignment guides shall be style “PGIV” as manufactured by The Metraflex Company, or an an acceptable comparable product.

2.4 SWIVEL JOINTS

A. Furnish materials in accordance with Authority Having Jurisdiction Standards

B. Ductile Iron body, double ball bearing race, field lubricated, with rubber o-ring seals.

2.5 PIPE ANCHORS

A. Furnish materials in accordance with Authority Having Jurisdiction Standards

B. Steel Shapes and Plates: ASTM A 36/A 36M.

C. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel, hex head.

D. Washers: ASTM F 844, steel, plain, flat washers.

E. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened Portland cement concrete, and tension and shear capacities appropriate for application.

1. Stud: Threaded, zinc-coated carbon steel.
2. Expansion Plug: Zinc-coated steel.
3. Washer and Nut: Zinc-coated steel.

F. Chemical Fasteners: Insert-type-stud bonding system anchor for use with hardened Portland cement concrete, and tension and shear capacities appropriate for application.

1. Bonding Material: ASTM C 881, Type IV, Grade 3, 2-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
2. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
3. Washer and Nut: Zinc-coated steel.

G. Concrete: Portland cement mix, 3000 psi minimum. Refer to Division 03 Section: “Cast-in-Place Concrete” for formwork, reinforcement, and concrete.

H. Grout: Refer to Division 22 Section: “Common Work Results for Plumbing.”

2.6 FLEXIBLE PRE-FABRICATED EXPANSION LOOPS

A. Metraloop® – Flexible Expansion Loop (thermal applications):

1. Provide flexible expansion loops of size and type noted on drawings. Flexible loops shall consist of two flexible sections of hose and braid, two 90° elbows, and a 180° return assembled in such a way that the piping does not change direction, but maintains its course along a single axis. Flexible loops shall have a factory supplied, center support nut located at the bottom of the 180°return, and a drain/air release plug. Flexible loops shall impart no thrust loads to system support anchors or building structure. Loops shall be installed in a neutral, pre-compressed or pre-extended condition as required for the application. For steam service, loops must be installed with flexible legs horizontal to prevent condensate buildup. Install and guide per manufacturer’s recommendations. Materials of construction and end fitting type shall be consistent with pipe material and equipment/pipe connection fittings. For natural gas service, connectors shall be A.G.A. certified. Flexible expansion loops shall be “Metraloop®” as manufactured by The Metraflex Company®, Chicago, IL or an acceptable comparable product.

B. Metraloop® - Flexible Expansion Loop (seismic applications):

1. All equipment, either rigidly mounted or mounted on vibration isolators, shall be attached to the piping system using flexible loops designed for seismic movement. Flexible loops shall be capable of movement in the ±X, ±Y, and ±Z planes shall completely isolate the

equipment from the piping, System design engineer shall determine the amount of seismic movement required by the Uniform Building Code and/or other applicable codes.

2. All piping passing through building seismic joints shall contain flexible expansion loops designed for seismic movement. Flexible loops shall be located at, or near the building seismic joint. A vertical support hanger, located within 4 pipe diameters, shall be installed on each side of the flexible loop. Each hanger shall be transversely and longitudinally braced per local codes. Seismic bracing shall not pass through building seismic joint and shall not connect or tie together different sides or parts of building structure. Flexible loops shall be capable of move in the $\pm$X, $\pm$Y, and $\pm$Z planes. System design engineer shall determine the required amount of seismic movement required by the Uniform Building Code and/or other applicable codes.
3. Flexible loops attached to fuel gas lines, shall be specifically manufactured for fuel gas applications and certified by the American Gas Associate. Flexible loops connected to medical gas piping shall be specifically manufactured for medical gas and installed by a certified installer. Unless specified otherwise by system design engineer or governing codes, all flexible loop connections to medical gas piping shall be cleaned, installed, inspected, and tested in accordance with current NFPA-99 standards.
4. Flexible expansion/seismic loops shall consist of two flexible sections of hose and braid, two 90° elbows, and a 180° return assembled in such a way that the piping does not change direction, but maintains its course along a single axis. Flexible loops shall have a factory supplied, center support nut located at the bottom of the 180° return, and a drain/air release plug. Flexible loops shall impart no thrust loads to system support anchors or building structure. Flexible loops may be installed to accommodate both thermal and seismic motion. For steam service, loops shall be installed with flexible legs horizontal to prevent condensate buildup. Materials construction and end fitting type shall be consistent with pipe material and equipment/pipe connection fittings. Movement capabilities and location, relative to seismic separation, shall be determined by system design engineer and manufacturers recommendations. Flexible expansion/seismic loops to be the “Metraloop®” as manufactured by The Metraflex Company®, Chicago, IL. or an acceptable comparable product.

2.7 Powder-Actuated Fasteners: Attachments with pull-out and shear capacities appropriate for supported loads and building materials where used.

2.8 Concrete: Portland-cement mix, 3000 psi:

A. Cement: ASTM C150, Type I.

B. Fine Aggregate: ASTM C33, sand.

C. Coarse Aggregate: ASTM C33, crushed gravel.

D. Water: Potable.

2.9 Grout: ASTM C 1107, Grade B, non-shrink, nonmetallic:

A. Characteristics include post-hardening volume-adjusting dry hydraulic-cement-type grout that is non-staining, noncorrosive, nongaseous and is recommended for both interior and exterior applications.

B. Design Mix: 5000 psi, 28-day compressive strength.

C. Water: Potable.

D. Packaging: Premixed and factory-packaged.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install Work in accordance with ASME B31.1, ASME B31.5, and ASME B31.9.

B. Install flexible pipe connectors on pipes connected to equipment supported by vibration isolation. Refer to Division 22. Provide line size flexible connectors.

C. Install flexible connectors at right angles to displacement. Install one end immediately adjacent to isolated equipment and anchor other end. Install in horizontal plane unless indicated otherwise.

D. Rigidly anchor pipe to building structure. Provide pipe guides to direct movement only along axis of pipe. Erect piping so strain and weight is not on cast connections or apparatus.

E. Provide support and anchors for controlling expansion and contraction of piping. Provide loops, pipe offsets, and swing joints, or expansion joints where required. Refer to Division 22 for pipe hanger installation requirements.

F. Provide grooved piping systems with minimum one joint per inch pipe diameter instead of flexible connector supported by vibration isolation. Grooved piping systems need not be anchored.

G. Provide expansion loops as indicated on Drawings.

H. Pipe Expansion Joint Installation:

1. Install pipe expansion joints according to manufacturer's written instructions.
2. Align expansion joints to avoid end-loading and torsional stress.

I. Fabricated-type Pipe Expansion Compensation Installation:

1. Install pipe expansion loops cold-sprung in tension or compression as required to absorb 50 percent of total compression or tension that will be produced during anticipated change in temperature.
2. Connect risers to mains with at least 5 pipe fittings including tee in main.
3. Connect risers to terminal units with at least 4 pipe fittings including tee in riser.

J. Pipe Alignment Guide Installation:

1. Install pipe alignment guides on piping that adjoins pipe expansion joints.
2. Install pipe alignment guides on piping that adjoins pipe expansion loops.
3. Install pipe alignment guides on piping elsewhere as indicated.
4. Secure pipe alignment guides to building substrate.

K. Pipe Anchor Installation:

1. Install pipe anchors at proper locations to prevent stresses from exceeding those permitted by ASME B31.9, and to prevent transfer of loading and stresses to connected equipment.
2. Fabricate and install anchors by welding steel shapes, plates, and bars to piping and to structure. Comply with ASME B31.9 and with AWS D1.1.
3. Construct concrete pipe anchors of poured-in-place concrete of dimensions indicated, include embedded fasteners.
4. Where pipe expansion joints are indicated, install pipe guides according to expansion unit manufacturer's written instructions to control movement to compensators.
5. Pipe Anchor Spacings: Where not otherwise indicated, install pipe anchors at ends of principal pipe runs, at intermediate points in pipe runs between expansion loops and bends. Preset anchors as required to accommodate both expansion and contraction of piping.
6. Use grout to form flat bearing surfaces for pipe expansion joints, pipe alignment guides, and pipe anchors that are installed on or in concrete.

L. Expansion Loops:

1. Fabricate expansion loops as indicted on contract documents, and elsewhere as required for adequate control of thermal expansion of installed piping system(s). Subject loops to cold springing which shall absorb 50% of the total expansion between hot and cold conditions. Provide pipe anchors and pipe alignment guides as required to properly anchor and guide piping in relationship to the expansion loops.

3.2 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements”: Manufacturer’s field services.

B. Certified Manufacturer’s Installation Report: Flexible pipe manufactured representative shall prepare a certified report covering installation of pipe expansion joints, pipe alignment guides, and pipe anchors, and that all performing satisfactorily.

END OF SECTION

SECTION 22 05 23

GENERAL DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 22.

1.2 SUMMARY

A. Section includes:

1. Globe valves
2. Check valves.
3. Ball valves.
4. Butterfly valves.
5. Drain valves.
6. Lubricated plug valves.
7. Valving specialties.
8. Trap priming systems.
9. Multi-purpose valves.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 22 Section: “Common Work Results for Plumbing.”
2. Division 22 Section: “Hangers and Supports for Plumbing and Equipment”: Product and installation requirements for pipe hangers and supports.
3. Division 22 Section: “Vibration and Seismic Controls for Plumbing Piping and Equipment.”
4. Division 22 Section: “Plumbing Insulation”: Product and installation requirements for insulation for valves.
5. Division 22 Section: “Pipes and Tubes for Plumbing and Equipment”: Product and installation requirements for piping materials applying to various system types.

1.4 DEFINITIONS

A. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead.

B. PP-R – Polypropylene random pipe, a proprietary blend of polypropylene and glass fibers such as manufactured by Aquatherm and meeting the requirements of STM F2389.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Requirements for Submittals.

B. Product Data: Submit manufacturers catalog information with valve data and ratings for each service.

C. Manufacturer's Installation Instructions: Submit hanging, support methods, and joining procedures.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for Submittals.

B. Project Record Documents: Record actual locations of valves.

C. Operation and Maintenance Data: Submit installation instructions, spare parts list, explained assembly views.

1.7 QUALITY ASSURANCE

A. Valves shall be provided by the same manufacturer when applicable.

B. Grooved end valves shall be of the same manufacturer as the adjoining couplings.

C. MSS Compliance: Comply with the various MSS Standard Practice documents referenced.

D. Material shall be certified by NSF International as complying with NSF 14, NSF 61, NSF 372 and ASTM F 2389 or CSA B137.11.

E. Material shall comply with manufacturers specifications.

F. Material and installation shall be in accordance with NFPA 99, and as specified.

G. Perform work in accordance with AHJ requirements.

H. Special Engineered products shall be certified by NSA International as complying with NSF 14.

I. Lead Free:

1. Valves in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooling, shall be “lead free” containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing work of this section with minimum 5 years experience.

1. Installers of PP-R shall be certified by the piping manufacturer and shall carry their certification certificate cards with them at all times while on the project.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Requirements for transporting, handling, storing and protecting products.

B. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

C. Provide temporary protective coating on cast iron and steel valves.

D. Prepare for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Set globe and gate valves closed to prevent rattling.
3. Set ball and plug valves open to minimize exposure of functional surfaces.
4. Set butterfly valves closed or slightly open.
5. Block check valves in either closed or open position.

E. Use the following precautions during storage:

1. Store indoors and maintain temperature higher than ambient dew-point temperature. If outdoor storage is necessary, store off the ground in watertight enclosures.

F. Use a sling to handle large valves. Rig to avoid damage to exposed parts. Do not use handwheels and stems as lifting or rigging points.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental Conditions affecting products on site.

B. Do not install valves underground when bedding is wet or frozen

1.12 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Requirements for warranties.

B. Furnish five year manufacturer warranty for valves excluding packing.

1.13 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Requirements for extra materials.

B. Furnish two packing kits for each size valve.

PART 2 - PRODUCTS

2.1 VALVES - BASIC, COMMON FEATURES

A. Pressure and Temperature Ratings: As indicated in the “Application Schedule” of Part 3 of this Section and as required to suit system pressures and temperatures.

B. Sizes: Same size as upstream pipe, unless otherwise indicated.

C. Operators: Use specified operators and handwheels, except provide the following special operator features:

1. Chain-Wheel Operators: For valves 3 inches and larger, installed 120 inches or higher above finished floor elevation.
2. Gear-Drive Operators: For valves 8 inches and larger. Operator shall be factory installed prior to delivery of job-site.
3. Lever Operators: Ball and butterfly valves 10" and less.

D. Extended Stems: Where insulation is indicated or specified, provide extended stems arranged to receive insulation.

E. Threads: ANSI/ASME B1.20.1.

F. Flanges: ASME B16.1, ASME B16.5, and ASME B16.24.

G. Hexagonal Threaded Packing Adjustment: All ball valves.

H. Bypass and Drain Connections: Comply with MSS SP-45.

I. Memory Stops: Provide memory stops for all “Balancing” valves.

2.2 VALVE APPLICATION SCHEDULE:

A. Domestic Water:

1. Globe Valves:

a. 1/8” through 2":
1) Globe valves shall be class 250# CWP, rising stem, threaded bonnet, body with integral seat. The body, bonnet, union nut, disc holder & stem shall be ASTM B584 C89833, cast bronze (1/4” through 3/4” disc holder ASTM B16.) Bronze Disc. Hand wheel shall be Malleable iron. MSS SP-80, Type 2. Basis of Design:
Milwaukee Model: UP502 (Threaded)
Milwaukee Model: UP1502 (Sweat)
Conbraco Industries; Apollo Model 120 TF (Threaded)
Conbraco Industries; Apollof Model – 120 SLF (Sweat)
Other manufacturers: Hammond, Lunkenhimer

2) Design valves in accordance with requirements of ANSI NSF-372, Senate law S.3874.

b. 2 ½” through 10":

1) Globe valves shall be class 125# SWP, 200# CWP, rising stem, bolted bonnet. Body, bonnet, & Handwheel shall be ASTM A126, Class B cast iron. Stem & Packing Gland shall be ASTM B16, Brass. Seat Ring, Disc through 3" or disc ring for 4" through 10," yoke bushing, & swivel nut shall be cast ASTM B62, Bronze. 125 Lb. flanged ends. Packing will be Aramid Fiber & Graphite with a Neoprene binder for service up to 550°F, MSS SP-85. Basis of Design:

Conbraco Industries; Apollo Model – 711F - LF
Other manufacturers: Hammond, Lunkenhimer

2) Design valves in accordance with requirements of ANSI NSF 372, Senate law S.3874.

2. Check Valves:

a. Horizontal Swing ¼" through 2":

1) Check valves shall be class, 200# CWP, horizontal swing check, body with 5° integral seat. Body, cap, & Disc shall be of ASTM, B584 C89833 cast bronze. (Disc on ¼" through ¾" ASTM B16) Lever, retaining ring, and Hinge Pin shall be stainless steel. Plug shall be ATSM B16, Lever, MSS SP-80, Type 3. Basis of Design:

Milwaukee Model: UP509 (Threaded)
Milwaukee Model: UP1509 (Sweat)
NIBCO Model: T413-Y-LF (Threaded)
NIBCO Model: S413-Y-LF (Sweat)
Conbraco Industries; Apollo Model – 163T-LF (Threaded)
Conbraco Industries; Apollo Model – 163S-LF (Sweat)

2) Design valves in accordance with requirements of ANSI NSF-372, Senate law S.3874.

b. Horizontal Swing- 2 ½" through 12":

1) Check valves shall be class 125# SWP, 200# CWP, horizontal swing Check. Body, bonnet, Hanger & disc shall be of ASTM A536, Class B cast iron. Hanger Pin, disc nut, & side plug shall be ASTM B16, Brass. Seat Ring & Disc or disc Face Ring of ASTM A126 Class B, Bronze. 125 Lb. flanged ends. bolted bonnet. MSS SP-71, Type 1. Basis of Design:
Milwaukee Model: F-2974 M26
Conbraco Industries; Apollo Model – 910F-LF

2) Design valves in accordance with requirements of ANSI NSF-372, Senate law S.3874.

c. Horizontal Swing – 14” through 24”:

1) Check valves shall be class 125# SWP, 200# CWP, horizontal swing Check. Body, bonnet, Hanger & disc shall be of ASTM A536, Class B cast iron. Hanger Pin, disc nut, & side plug shall be ASTM B16, Brass. Seat Ring & Disc or disc Face Ring of Cast ASTM B62 Class B, Bronze. 125 Lb. flanged ends. bolted bonnet. MSS SP-71, Type 1. Basis of Design:

Milwaukee Model: F-2974 M26
Conbraco Industries; Apollo Model – 910F-LF

2) Design valves in accordance with requirements of ANSI NSF-372, Senate law S.3874.

d. Spring Loaded “Silent” Lift- 3/8” through 2":

1) Check valves shall be 250# CWP. ASTM B584 C89833, cast bronze body with integral seat, Tail Piece, & center guided disc holder. ASTM B104, bronze Spring. Buna or PTFE disc ring. Basis of Design:
Milwaukee Valve Figure Number UP548B (Threaded)
Milwaukee Valve Figure Number UP1548T (Sweat)
NIBCO Model: T480-Y-LF (Threaded)
NIBCO Model: S480-Y-LF (Sweat)
Conbraco Industries; Apollo Model – 61F-500 (Threaded)
Conbraco Industries; Apollo Model – 61F-600 (Sweat)
Other manufacturers: Hammond, Lunkenhimer

2) Design valves in accordance with requirements of California AB1953 and Vermont S152.

e. Wafer Style “Silent”- 2 1/2” through 10":

1) Check valves shall be Wafer style Class 125, 200 PSIG CWP minimum. (2 ½” through 6” shall be combination ANSI 125 & 250 class valves using ANSI class 125 dimensions) Body shall be of ASTM A126, Class B cast iron. Stainless steel plug, bushing, & seat ring. Stainless Steel spring and seat ring screws. Basis of Design:

Milwaukee Model: 1400 Series

NIBCO Model: W910-B
Other manufacturers: Hammond, Lunkenhimer

2) Design valves in accordance with requirements of ANSI NSF 372 Senate Law S.3874

f. Wafer Body “Silent” Double Disc- 12” through 60”:

1) Check valves shall be wafer body, spring loaded, dual disc class 125 valves. Monobody of ASTM A278, class 40 cast iron. The discs shall be constructed of ASTM B148, grade 9-A Aluminum Bronze. The valve seat shall be Buna-N and will be bonded into a machined grove in the body. Buna-N seat rated for operating temperatures from B20 through 250°F. The springs, shaft, hinge stop, & thrust bushing shall be type 316 Stainless Steel. Double disc wafer check valves will be manufactured in accordance with API standard 594, and inspected and tested in accordance with API standard 598. The manufacturer will permanently engrave the serial number into the valve body. Basis of Design:

Gulf Valve Model: MB12-5081-SF
Other manufacturers: Gulf, Titan

g. Lug Style Wafer Body “Silent” Double Disc- 12” through 60":

1) Check valves shall be wafer style lug body, spring loaded, dual disc class 125 valves. Monobody of ASTM A278, class 40 cast iron. The discs shall be constructed of ASTM B148, grade 9-A Aluminum Bronze and will open to a maximum of 85° to insure disc closure. A thrust bushing will be installed between the body and the outboard disc hinge to minimize friction and increase the disc response. The valve seat shall be Buna-N and will be bonded into a machined grove in the body. Buna-N seat rated for operating temperatures from B20 through 250°F. The springs shall be type 316 Stainless Steel and shall be designed such that the spring leg extends beyond the center of the disc to eliminate body seat wear. The shaft, hinge stop, & thrust bushing shall be type 316 Stainless Steel. Double disc wafer check valves will be manufactured in accordance with API standard 594, ANSI B16.34, API 6A & 6D, (as applicable) and inspected and tested in accordance with API standard 598. The manufacturer will permanently engrave the serial number into the valve body. MSS SP-25, MSS SP-55, MSS SP-61. Basis of Design:

Gulf Valve Model: MBTL12-5081-SF
Other manufacturers: Gulf, Titan

3. Ball Valves:

a. ¼" through 2":

1) Ball valves shall be 600 CWP, ASTM B584 C89833, cast bronze two piece adapter loaded single reduced bore with chrome plated solid ASTM B16, brass tunnel drilled ball, blow-out proof brass stem, RPTFE 15% glass filled seats & thrust washer, PTFE packing, hexagonal threaded packing nut of ASTM B16, brass, Lever handle of Zinc plated steel with vinyl handle grip, MSS SP-110. Fed. Spec. WW-V-35C II, BZ, 3. Basis of Design:

Milwaukee Model: UPBA100 (Threaded)
Milwaukee Model: UPBA150 (Sweat)
NIBCO T/S 685-80-LF
Conbraco Industries; Apollo Model – 70LF 100 (Threaded)
Conbraco Industries; Apollo Model – 70LF 200 (Sweat)
Other manufacturers: Worcester, Hill McCena

2) Design valves in accordance with requirements of ANSI NSF 372, Senate Law S. 3874.

b. 3 Piece- ¼" through 3":

1) Ball valves shall be 600# CWP, ASTM B584 C899833, cast bronze three piece, exposed bolt design, full bore, chrome plated solid ASTM B16, brass tunnel drilled ball, blow-out proof brass stem, one piece RPTFE 15% glass filled seat and body seal, 25% glass filled RPTFE thrust washer, PTFE packing, hexagonal threaded packing nut of ASTM B16, brass, Grade 8 Zinc plated steel body bolts & nuts, Lever handle of Zinc plated steel with vinyl handle grip, MSS SP-110. Fed. Spec. WW-V-35C II, BZ, 1. Basis of Design:

Milwaukee Model: UPBA-300-A (Threaded)
Milwaukee Model: UPBA-350-A (Sweat)
NIBCO Model: T595-Y-LF (Threaded)
NIBCO Model: S595-Y-LF (Sweat)
Conbraco Industries; Apollo Model – 82LF 100 (Threaded)
Conbraco Industries; Apollo Model – 82LF 200 (Sweat)
Other manufacturers: Worcester, Hill, McCena

2) Design valves in accordance with requirements of ANSI NSF 372, Senate Law S. 3874.

3) Victaulic Series P569, stainless steel ball valve with Vic-Press ends, full port, pressure rating to 400-psig CWP. UL classified in accordance with

NSF-61 for potable water service. The system shall meet the low-lead requirements of NSF-372.

c. 2 ½" Carbon Steel:

1) Ball valves shall be ANSI class 150 Lb., split body, full bore. Body of ASTM A216, grade WCB. Steel solid tunnel drilled & grounded ball, vented from the body cavity to the tunnel of the ball. Spiral wound graphite & 304 SS body seals, Multiple piece PTFE/Graphite packing, Threaded hexagonal packing nut or two bolt packing adjustment, lever operator, RPTFE seats (200 PSI @ 350°F). API 607, Valves must be tested in accordance with ANSI B16.34, API 598, and be compliant with NACE MR0175, ANSI/ASME B16.5, MSS SP-72, API 608. Basis of Design:

Carbon Steel Body:
Milwaukee Model: F20CS150F-02 (lever)
NIBCO Model: F-515-CS-R-66-FS (lever)
Conbraco Industries; Apollo Model – 88A (Lever)
Other manufacturers: Fischer, Hammond

d. 2 ½" Stainless Steel:

1) Ball valves shall be ANSI class 150 Lb., split body, full bore. Body of ASTM A216, grade WCB or ASTM A351, grade CF8M stainless steel solid tunnel drilled & grounded ball, vented from the body cavity to the tunnel of the ball. Spiral wound graphite & 304 SS body seals, Multiple piece PTFE/Graphite packing, Threaded hexagonal packing nut or two bolt packing adjustment, lever operator, RPTFE seats (200 PSI @ 350°F). API 607, four bolt actuator mounting configuration to ISO 5211 standards, Valves must be tested in accordance with ANSI B16.34, API 598, and be compliant with NACE MR0175, ANSI/ASME B16.5, MSS SP-72, API 608. Basis of Design:

Stainless Steel Body:
Milwaukee Model: F20SS150F-02 (lever)
NIBCO Model: F-515-S6-R-66-FS-LL (lever)
Conbraco Industries; Apollo Model – 87A
Other manufacturers: Worcester, Hill McCena

e. CPVC: 2 inches and Smaller:

1) 150 psi at 73 degrees F water temperature, maximum service temperature: 210 degrees F, ASTM D1785, CPVC body and ball, double lever handle, EPDM seals, Teflon seals, full port, double union type with socket ends

4. Butterfly Valves:

a. 3” through 48":

1) Materials & Construction:

a) Butterfly valves shall be, Cast Iron ASTM A126, Class B Lug Style Body with through tapped lugs. Valves shall be suitable for “Dead End Service”. Elastomer seat will be made of EPDM, ASTM D2000, suitable for continuous operation from 30°F through + 250°F, ASTM B148, Alloy 954 Aluminum Bronze or Nyon-11 coated Disc with a Broached Stem to Disc Drive Connection. (14” & larger valves to have a plug & pin stem to disc connection) Upper & Lower Blowout proof stems of ASTM A582, Type 416 Stainless Steel. Buna N “O” Ring stem and Dirt seals, 2”+ extended neck to accommodate insulation. Valves to be “Bubble Tight” up to the maximum rated working pressure in either direction. Valves to be factory tested for “Bubble Tight” shut off in accordance with ANSI Class 6. Zero leakage preferred.

b) Maximum Rated Working Pressure:

(1) For 3” through 12” valves is 200 PSIG

(2) For 14” through 48” valves is 150 PSIG

c) Actuator / Operator:

(3) For all valves 3” through 6” use a 10 position Lever handle with locking Trigger.

(4) For all valves 8” through 48” use an Enclosed Manual Self-Locking Worm Gear Operator with Handwheel and Position Indicator. Both types of operators are to be equipped with Travel Stops. Basis of Design:

Bray Series: 31 or 31H - 119

Conbraco Industries; Apollo Model – LD 141

Milwaukee Model: ML-233-E 3” through 5”

Milwaukee Model: ML-333-E 6” through 12”

Milwaukee Model: ML-333-E 14 through 48”

NIBCO Model: LD20003 3” through 5”

NIBCO Model: LD20005 6” through 24”

NIBCO Model: LD10005 30” through 48”

b. 2-1/2" – 6, 300psi maximum pressure rating with copper tubing sized grooved ends. Cast brass body to UNSC87850. (Alloy code shall be cast or stamped into the valve body.) Aluminum bronze disc to UNS C95500, with pressure responsive elastomer seat. Stem shall be offset from the disc centerline to provide complete 360 – degree circumferential seating. Bubble tight, dead-end or bi-directional service, with memory stops for throttling, metering or balancing service. Valve may be automated with electric, pneumatic, or hydraulic operators. Certified to the low lead requirements of NSF-372 Victaulic Series 608N.

c. Design valves in accordance with requirements of ANSI NSF 372, Senate Law S. 3874.

d. CPVC – 2 inches through 10 inches: 150 psi at 73 degrees F water temperature, maximum service temperature: 140 degrees F, one piece body, ASTM D1785 PVC, lig type flange, facing disc encapsulated with EPDM, stainless steel shaft, locking lever handle.

5. Hose End Drain Valves ½" and ¾":

a. Hose end drain valves shall be class 600# CWP, ASTM B584, cast bronze two piece adapter loaded single reduced bore with chrome plated solid ASTM B16, brass tunnel drilled ball, blow-out proof brass stem, RPTFE 15% glass filled seats & 25% glass filled thrust washer, PTFE packing, hexagonal threaded packing nut of ASTM B16, brass, Lever handle of Zinc plated steel with vinyl handle grip, ASTM B16, brass tail piece with standard hose end threads, brass bead chain and Zinc die cast cap, MSS SP-110, Fed. Spec. WW-V-35C II, BZ, 3. Basis of Design:

Conbraco Industries; Apollo Model – 70 HCLF
Milwaukee Model: UPBA 100 H (Threaded)
Milwaukee Model: UPBA 150 H (Sweat)
NIBCO Model: T585-70-HC (Threaded)
NIBCO Model: S585-70-HC (Sweat)

b. Design valves in accordance with requirements of ANSI NSF 372, Senate Law S. 3874.

B. Natural Gas and LPG Service

1. Ball Valves:

a. Forged Brass - ¼" through 2" Ball valves shall be class 600 CWP / 150 SWP, forged brass two piece adapter loaded, full bore, with chrome plated solid ASTM B584, brass tunnel drilled ball, blow-out proof brass stem, PTFE seats, PTFE packing, & Buna-N "O" Ring, hexagonal threaded packing nut, Zinc Plated steel lever handle & nut, AGA and CGA approved, UL/FM, MSS SP-110, WW-V-35C, Type II, Comp. BZ, End A. Basis of Design:

Conbraco Industries; Apollo Model – 77F-100F

Milwaukee Model: BA-475 B
NIBCO T/S FP600A
Other manufacturers: Worcester, Hills McCena

2. Lubricated Plug Valves: Sizes 2 ½" through 4":

   a. Bodies, plugs and bonnets shall be made from ASTM A126 Class B cast iron. Valves shall be full port design.
   b. Ends of threaded valves shall have taper pipe threads conforming to ANSI B2.1.
   c. End flanges shall be integral with the valve body. Flange drilling and thickness shall conform to ANSI B16.1 for pressure Class 125. Flanges shall be finished in accordance with MSS SP-6.
   d. Face-to-Face dimensions of flanged valves shall conform to ANSI B16.10.
   e. Pressure-Temperature rating shall be per ANSI B16.1 flanges, Class 125.
   f. Valves shall conform to MSS-SP-78, Type IV.
   g. Valves shall conform to ANSI B16.38 (2 ½" through 4").
   h. Provide one wrench operator for each size valve.
   i. Valves 2 ½" – 4" shall carry AGA, CGA, CSA and UL certifications and approvals.

      Homestead Model: 602
      Other manufacturers: Walworth, Rockwell Norstrom

3. Lubricated Plug Valves: Sizes 5" and above.

   a. Bodies, plugs and bonnets shall be made from ASTM A126 Class B cast iron. Valves shall be standard port design.
   b. Ends of threaded valves shall have taper pipe threads conforming to ANSI B2.1.
   c. End flanges shall be integral with the valve body. Flange drilling and thickness shall conform to ANSI B16.1 for pressure Class 125. Flanges shall be finished in accordance with MSS SP-6.
   d. Face-to-Face dimensions of flanged valves shall conform to ANSI B16.10.
   e. Pressure-Temperature rating shall be per ANSI B16.1 flanges, Class 125.
   f. Valves shall conform to MSS-SP-78, Type IV.
   g. Valves shall conform to ANSI B16.38 (2 ½" through 6").
   h. Valves 5" and above shall carry AGA, CGA, CSA and UL certifications and approvals.

      Homestead Model: 612G (Gear Op.)
      Other manufacturers: Walworth, Rockwell Norstrom

C. Water Service Drains:

1. Piping Hose Bibbs:

   a. All valves at low points in piping systems used for drain valve duty shall be provided with brass or bronze valve body with threaded end connections, chromium plated ball, brass stem, RPTFE seats, seals and stuffing box ring, adjustable packing gland, valve handle, and three quarter (3/4) inch hose connection with cap and chain. All valves shall be as manufactured by Apollo, or Milwaukee. Valve model numbers shall be as listed below:
      Apollo – 70 LF HC (3/4 x 3/4)
      Milwaukee - BA100H (3/4 x 3/4)
      NIBCO T/S 585-70-HC

2. Equipment Hose Bibbs:

   a. All valves at low points in piping systems used for drain valve duty shall be provided with brass or bronze valve body with threaded end connections, chromium plated ball, brass stem, RPTFE seats, seals and stuffing box ring, adjustable packing gland, valve handle, and three quarter (3/4") inch hose connection with cap and chain. All valves shall be as manufactured by Apollo, or Milwaukee. Valve model numbers shall be as listed below:

      Apollo – 70 LF HC
      Milwaukee - BA100H
      NIBCO T/S 585-70-HC

2.3 VALVING SPECIALTIES

A. Gas Solenoid Valves: Provide "normally closed" 2-way solenoid valve as manufactured by ASCO, or equivalent. Valves shall be UL and FM approved and labeled.

B. Gas Pressure Reducing Valves: Valve shall be Sensus Model No. 243, or an acceptable comparable product with internal relief valve and capacities as indicated on the contract drawings. Size valve and springs to deliver scheduled pressures and gas flows.

   1. Pounds-to-inches line pressure regulators shall be available in several sizes:

      a. REG 3: 1/2 inch threads
      b. REG 5A: 3/4 inch threads
      c. REG 7: 1-1/4 inch threads.
      d. Regulators with Over Pressure Devices (OPD) are required for pressures above 2 psi. Regulators shall be listed per ASNI Z21.80 or a recognized national standard for pressure regulators. Regulators must be mounted in an accessible location.
   2. Regulators with included approved vent-limiting device (REG 3 and REG 5A) shall not require venting to atmosphere provided they are mounted in a ventilated location (e.g. near a gas appliance which also required placement in a ventilated area). Ventilated locations include (but are not limited to) mechanical rooms, attics, garages and basements.
   3. Approved vent limiters shall limit the fuel gas leakage to 2.5 cc per hour in the event of a diaphragm failure.
   4. Shut-off valves shall be approved for fuel gas service and shall be rated for the pressure of the gas piping system installed. For elevated pressure sections an approved valve shall be located upstream from the pounds-to-inches regulator.
   5. Overpressure protection devices shall be installed for elevated system higher than 2-PSI to prevent downstream pressure from exceeding 2-PSI in the event of regulator failure.

C. Pressure Reducing Valves:

   1. Pressure reducing valves shall be lead free and shall be as manufactured by Watts Regulator, Zurn, Spence, Conbraco Industries; Apollo Valve, or an acceptable comparable product.

2. Domestic Water Systems: Provide Watts Model 115-7, or equivalent 125 pound, cast iron ASTM A126, Class B, fused epoxy coated inside and outside, stainless steel seat, stainless steel stem, suitable for dead-end service.
3. Factory assembled pressure reducing valve (PRV) Station consisting of a Victaulic Style 972 main line PRV with a bypass line PRV. Assembly includes required Schedule 10S, type 304L, stainless steel pipe conforming to ASTM A312, with Victaulic stainless steel fittings, (4) Series 461 butterfly valves for isolation, (2) Style 732 wye pattern strainers with NSF-61 approved coating upstream of the PRV's, joined with Victaulic installation-ready rigid couplings, Style 107N. All components shall be UL classified in accordance with ANSI / NSF-61 for potable water service, and shall be certified to the low lead requirements of NSF-372.

D. Safety Relief Valves:

1. Provide as manufactured by Conbraco Industries; Apollo Valve, Watts Regulator, Spence, or an acceptable comparable product.
2. 125 psig working pressure and 250°F maximum operating temperature; designed, manufactured, tested, and labeled in accordance with the requirements of Section IV of the ASME Boiler and Pressure Vessel Code.
3. Valve body shall be cast-iron.
4. Valve shall have forged copper alloy disc, fully enclosed cadmium plated steel spring with adjustable pressure range and positive shut-off.
5. Factory set valves to relieve at 10 psi above operating pressure.

E. Combined Pressure/Temperature Relief Valves:

1. Provide as manufactured by Conbraco Industries; Apollo Valve, Watts Regulator, Spence, or an acceptable comparable product.
2. Hydronic Systems: diaphragm operated, cast-iron or brass body valve, with low inlet pressure check valve, inlet strainer removable without system shut-down, and noncorrosive valve seat and stem. Select valve size, capacity, and operating pressure to suit system. Valve shall be factory-set at operating pressure and have the capability for field adjustment. Safety relief valve designed, manufactured, tested, and labeled in accordance with the requirements of Section IV of the ASME Boiler and Pressure Vessel Code. Valve body shall be cast-iron, with all wetted internal working parts made of brass and rubber; 125 psig working pressure and 250°F maximum operating temperature. Select valve to suit actual system pressure and Btu capacity. Provide with fast fill feature for filling hydronic system.

F. Domestic Hot Water Return Balancing Valve:

1. Thermostatic balancing:

a. Provide ITT Bell & Gosset Thermostatic Balancing Valve: Model TSB, or acceptable comparable product as manufactured by Circuitsolver
b. The valve shall be certified lead free according to NSF/ANSI 61 standards.
c. The valve body shall be constructed out of 316 stainless steel.
d. The valve shall be rated for 145 PSIG working pressure.
e. The valve shall have a temperature adjustment dial in GPM. The dial shall have an adjustment range of 98°F to 150°F.
f. The valve shall have a temperature accuracy of ±3.6°F.

g. Temperature dial shall have a built in magnifying glass cover.
h. The valve shall have a wax thermostatic element that is out of contact with the circulating water.
i. The valve shall include a polystyrene (EPS) thermal insulation block with Velcro straps.
j. The valve shall include a built in bypass to allow for thermal disinfection of the domestic how water recirculation system.
k. The valve bypass shall have a flow range of 0.06 – 0.29 GPM.
l. The valve bypass shall be manually adjustable with a GPM dial to set the bypass flow rate.
m. The valve bypass dial shall have a built in magnifying glass cover.
n. Install Thermostatic Balance Valve in accordance with manufacturer's instructions

G. Trap Priming Systems:

1. Flush Valve Type:

a. Where applicable, trap primer make-up lines may be connected to the tailpiece of a diaphragm operated flush valve. The tailpiece shall be chrome and consist of a vacuum breaker, compression fitting, chrome make-up line and wall escutcheon.
b. Unit shall be Precision Plumbing Products FVP-1VB or an acceptable comparable product as manufactured by: Sioux Chief or Sloan.

2. Pressure Differential Valve Type:

a. Trap Primers shall be pressure drop activated and be of all brass construction with ½" male NPT inlet and ½" female NPT discharge. Internal components shall consist of a stainless steel debris screen, brass piston and brass discharge jet. Trap primers shall be installed on fresh cold water lines of 1 ½" diameter or less and shall be located where they will be subject to frequent pressure drops of 5 to 10 psi. Working pressure shall be 20 to 80 psi and valves shall be listed to ASSE 1018.
b. Units shall be Precision Plumbing Products P1-500, P2-500, PR-500 or an acceptable comparable product as manufactured by: Jay R. Smith or Souix Chief.
c. Model P1-500 and P1-500 LL P Series primer valves shall be capable of serving up to 4 floor drains, utilizing distribution unit models: DU-4/DU-U.
d. Model P2-500 and P2-500 LL P Series primer valves shall be capable of serving up to 2 floor drains, utilizing distribution units DU-4/DU-U.

3. Trap Priming Station Type:

a. Furnish and install an automatic trap priming system consisting of the following:
b. Trap primer stations shall be factory assembled, pre-piped and shall include a bronze ¾" NPT inlet ball valve, a stainless steel ¾" electronic solenoid valve; a code approved atmospheric vacuum breaker and a type L copper manifold with ½" or 5/8" brass compression fittings. Unit shall include a single point power connection, 120V/60Hz, a 2 amp breaker, a manual override test switch and a timer preset to energize and open the normally closed solenoid for 10 seconds

every 24 hours. Unit shall be provided complete in a flush mount 16 gauge steel box with access door or a surface mount NEMA 1 rated box with a screw on cover.

c. Unit shall be Precision Plumbing Products “Prime Time” series (PT/PTS), or an acceptable comparable product as manufactured by: Zurn.

4. Trap Primer – Low Flow:

a. Furnish and install Precision Plumbing Products: Prime – Pro-Model: PRO1-500 or comparable acceptable product.

H. Multi-Purpose Valves:

1. Valves shall be Bell & Gossett Model 3DV in sizes 1 – 2” and Model 3DS for sizes 2 ½” – 14” or comparable product as manufactured by TACO or Armstrong. With spring loaded check valve feature, isolation/shut off valve feature, and a calibrated balancing valve with nameplate and memory stop/button.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Verification of existing conditions before starting work.

B. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance of valves. Do not proceed with installation until unsatisfactory conditions have been corrected.

C. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

D. Operate valves from fully open to fully closed positions. Examine guides and seats made accessible by such operation.

E. Examine threads on valve and mating pipe for form and cleanliness.

F. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.

G. Examine grooved ends for form and cleanliness. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from valve/pipe end to groove.

H. Do not attempt to repair defective valves; replace with new valves.

3.2 INSTALLATION OF VALVES

A. Valves shall be placed in such manner as to be easily accessible for smooth and easy handwheel operation and packing maintenance.

B. Install valves in piping where shown and where listed herein:

1. To balance flows in water piping systems.
2. To isolate all items of equipment.
3. To isolate branch lines and risers at mains.
4. To drain low points in piping systems.
5. To drain pipe risers.
6. To drain equipment.

C. Where piping or equipment may be subsequently removed, provide valves with bodies having integral flanges or full lugs drilled and tapped to hold valve in place so that downstream piping or equipment can be disconnected and replaced with blank-off plate while valve is still in service.

D. Valves for equipment and controls shall be installed full size of pipe before reducing size to make equipment connection.

E. Where there is not interference, gate and globe shut-off valves shall be installed with handwheel up on horizontal runs of pipe to prevent accumulation of foreign matter in working parts of valves. In no case shall the stem be installed below the pipe centerline.

F. Butterfly valves shall be installed with handle position in the horizontal position: i.e., butterfly pivot point parallel with the floor.

G. Install valves with unions or flanges at each piece of equipment arranged to allow servicing, maintenance, and equipment removal without system shutdown.

H. Install valves in a position to allow full handle movement.

I. For chain-wheel operators, provide chains to 60 inches above finished floor elevation.

J. Installation of Check Valves: Install for proper direction of flow as follows:

1. Swing Check Valves: Horizontal position with hinge pin level.
2. Lift Check Valve: With stem upright and plumb.
3. Install check valves on each pump discharge and elsewhere as required to control flow direction.

K. Install drain valves at low points in mains, risers, branch lines, and everywhere else required to permit drainage of the entire system.

L. Install shut-off valves on natural gas and compressed air systems upstream of each pressure regulator. Where two pressure regulators are installed in series in a single line, a manual valve is not required at the second regulator.

M. Install pump discharge valves with stem in upward position.

N. Install safety relief valves on hot water generators, boilers, pressure vessels, etc. and elsewhere as required by ASME Boiler and Pressure Vessel Code. Pipe discharge without valves as shown on drawings or to nearest floor drain if not shown on drawings. Comply with ASME Boiler and Pressure Vessel Code Section VIII, Division 1 for installation requirements.

O. Provide balancing valves as shown on drawings and as required to permit complete balancing of all systems.

P. Provide access where valves and fittings are not accessible.

Q. Install spring loaded check valves on discharge of water pumps.

R. Install lug end butterfly valves adjacent to equipment when functioning to isolate equipment.

3.3 INSTALLATION OF THREADED CONNECTIONS

A. Note the internal length of threads in valve ends and proximity of valve internal seat or wall to determine how far pipe should be threaded into valve.

B. Align threads at point of assembly.

C. Apply appropriate tape or thread compound to the external pipe threads, except where dry seal threading is specified.

D. Assemble joint, wrench tight. Wrench on valve shall be on the valve end into which the pipe is being threaded.

3.4 INSTALLATION OF FLANGED CONNECTIONS

A. Align flange surfaces parallel.

B. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

C. For dead-end service, butterfly valves require flanges both upstream and downstream for proper shutoff and retention.

3.5 INSTALLATION OF VALVING SPECIALTIES SPECIFIC TO WATER SYSTEMS

A. Install pump discharge valves in horizontal or vertical position with stem in upward position. Allow clearance above stem for check mechanism removal.

B. Install pressure-regulating and reducing valves with inlet and outlet shutoff valves and balance valve bypass. Install pressure gage on valve outlet and install valved bypass where indicated. Install unions at inlet and outlet connections.

C. Install hose bibbs with integral or field-installed vacuum breaker.

D. Install trap seal primer valves with valve outlet piping pitched down toward drain trap a minimum of 1/8” inch per foot (1 percent) and connect to floor drain body, trap, or inlet fitting. Adjust valve for proper flow.

E. Adjusting

1. Adjust operation and correct deficiencies discovered during commissioning.

a. Electrical Connections: Power wiring and disconnect switches are specified in Division 26
b. Grounding & Bonding for Electrical Systems: Connect unit components to ground according to the National Electrical Code and Specification Section “Grounding.”

3.6 ADJUSTING VALVES

A. VALVES: Adjust or replace packing after piping systems have been tested and put into service, but before final adjusting and balancing. Replace valves if leak persists.

3.7 TRAP PRIMING STATION INSTALLATIONS

A. Consult with trap priming station sales representative to verify mounting locations and requirements.

B. Trap priming stations shall not be installed below the drains they serve.

END OF SECTION

SECTION 22 05 29

HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 22.

1.2 SUMMARY

A. General Requirements:

1. Incorporate in construction pipe hangers and supports to manufacturer's recommendations utilizing manufacturer's regular production components, parts, and assemblies.
2. Comply with maximum load ratings with consideration for allowable stresses prescribed by ASME B31.1 or MSS SP-58.
3. Provide support, guides and anchors that do not transmit unacceptable heat and vibration to building structure.
4. Installation of pipe hangers and supports shall be based upon the overall design concept of the piping system. The support system shall provide for an control the free movement of piping including its movement in relation to that connected equipment.
5. Provide for vertical adjustments after installation of supported material and during commissioning, where feasible, to ensure pipe is at design elevation and slope.

B. Section Includes:

1. Pipe hangers and supports.
2. Hanger rods.
3. Inserts.
4. Flashing.
5. Acoustical Sealant
6. Mechanical sleeve seals.
7. Formed steel channel.
8. Firestopping relating to plumbing work.
9. Firestopping accessories.
10. Equipment bases and supports.
11. Non-penetrating rooftop pipe hangers and supports.

C. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 03 Section: "Concrete Forming and Accessories": Execution requirements for placement of inserts in concrete forms specified by this section.

2. Division 03 Section: “Cast-In-Place Concrete” : Execution requirements for placement of concrete housekeeping pads specified by this section.
3. Division 07 Section: “Firestopping” : requirements for firestopping for placement by this section.
4. Division 07 Section: “Joint Protection”: Product requirements for sealant materials for placement by this section.
5. Division 09 Section: “Painting and Coating”: Product and execution requirements for painting specified by this section.
6. Division 22 Section: “Common Work Results for Plumbing”.
7. Division 22 Section: “Plumbing Insulation”.
8. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment”: Execution requirements for placement of hangers and supports specified by this section.
9. Division 22 Section: “Vibration and Seismic Controls for Plumbing Piping and Equipment”: Product and execution requirements for vibration isolators.

1.4 DEFINITIONS

(Unless otherwise noted, references apply to “latest editions.”)

A. Terminology used in this Section is defined in Manufacturer’s Standardization Society Specification - 90, Valve and Fittings Standards.

B. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal procedures.

B. Shop Drawings: Indicate system layout with location including critical dimensions, sizes, and pipe hanger and support locations and detail of trapeze hangers.

C. Product Data:

1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
2. Firestopping: Submit data on product characteristics, performance and limitation criteria.

D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

E. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers. Submit sizing methods sealed by a registered professional engineer.

F. Manufacturer's Installation Instructions:

1. Hangers and Supports: Submit special procedures and assembly of components.
2. Firestopping: Submit preparation and installation instructions.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Firestopping Engineering Judgments: For conditions not covered by UL or WH listed designs, submit judgments by licensed professional engineer suitable for presentation to authority having jurisdiction for acceptance as meeting code fire protection requirements.

I. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

J. Submission of samples may be requested for each type of hanger device. After approval, samples shall be returned for installation at job site.

K. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 QUALITY ASSURANCE

(Unless otherwise noted, references apply to “latest editions.”)

A. Qualify welding processes and welding operators according to AWS D1.1 "Structural Welding Code – Steel.”

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

B. Qualify welding processes and welding operators according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

C. NFPA Compliance: Comply with NFPA 13, “Installation of Sprinkler Systems,” for hangers and supports used as components of fire protection systems.

D. Listing and Labeling: Provide hangers and supports that are listed and labeled as defined in NFPA 70 “Definitions.”

1. UL and FM Compliance: Hangers, supports, and components include listing and labeling by UL and FM where used for fire protection piping systems.
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7, “Definition and requirements for a nationally recognized testing laboratory.”

E. Licensed Operators: Use operators that are licensed by powder-operated tool manufacturers to operate their tools and fasteners.

F. Supply and install incidental materials needed to meet requirements, even if not expressly specified or shown on drawings without claim for additional payment.

G. Verify correctness of equipment model numbers and conformance of each component with manufacturer's specifications.

H. Should any rotating equipment cause excessive noise or vibration, rebalance, realign or do other remedial work to reduce noise and vibration levels. Excessive is defined as exceeding manufacturer's specifications for unit in question.

I. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

    a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

J. Through Penetration Firestopping of Non-Fire Rated Floor and Roof assemblies: Materials to resist free passage of flame and products of combustion.

1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

K. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

L. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

M. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

N. Perform Work in accordance with AWS D1.1 for welding hanger and support attachments to building structure.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with a minimum of five years documented experience.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with Division 01 Section: “Product Requirements” for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

C. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental conditions affecting products on site.

B. Do not apply firestopping materials when temperature of substrate material and ambient air is not in accordance with the manufacturer’s installation procedures.

C. Maintain manufacturer’s required temperature before, during, and after installation of firestopping materials for minimum periods of time as required by the manufacturer.

D. Provide ventilation in areas to receive solvent cured materials.

1.11 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.12 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for pipe hangers and supports.

PART 2 - PRODUCTS

(Unless otherwise noted, references apply to “latest editions.”)

MATERIALS

A. Structural Steel: ASTM A 36, “Carbon Structural Steel,” steel plates, shapes, and bars, black and galvanized.

B. Bolts and Nuts: ASME B18.10 or ASTM A 183, “Track Bolts and Nuts,” steel, hex-head, track bolts and nuts.

C. Washers: ASTM F 844, “Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use,” steel, plain, flat washers.

D. Grout: ASTM C 1107, Grade B, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink),” non-shrink, nonmetallic.

1. Characteristics include post-hardening, volume-adjusting, dry, hydraulic-cement-type grout that is non-staining, noncorrosive, nongaseous and is recommended for both interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Water: Potable.
4. Packaging: Premixed and factory-packaged.

2.2 PIPE HANGERS AND SUPPORTS

A. Hangers, Supports, and Components: Provide factory-fabricated products as manufactured by B-Line, AITT Grinnel, Pipe Shields, Inc., or Erico CADDY. Basis of Design shall be B-Line.

1. Components include galvanized coatings where installed for piping and equipment that will not have a field-applied finish.
2. Pipe attachments include nonmetallic coating for electrolytic protection where attachments are in direct contact with copper tubing.
3. Pipe attachments shall include vinyl coated or felt lined where attachments are in direct contact with Polypropylene ((PP-R) piping systems.

B. Upper attachments to structures shall have an allowable load not exceeding 3 of the failure (proof test) load but are not limited to the specific methods indicated.

C. Horizontal Non-Insulated Waste, Vent and Storm Water Piping Hangers:

1. Two inch and smaller: Figure No. B3170.
2. Two and one-half inch and larger: Figure No. B3100.

D. Horizontal Non-Insulated Copper Piping Hangers:

1. Two inches and smaller: Figure No. B3104 CTC.
2. Two and one-half inch and larger: Figure No. B3104 CT.

E. Insulated Horizontal Piping hangers; Cold and Hot Water (Domestic)

1. Two inches and smaller: Figure No. B3108 with metal shield, Figure No. B3151.
2. Two and one-half inches and larger: Figure No. B3108 with metal shield, Figure No. B3151.

F. Vertical Piping Riser Clamps:

1. Copper Pipe: Figure No. B3373CT.
2. Steel Pipe: Figure No. B3136 and B3137.

G. Plastic Polypropylene (PP-R), Poly propylene Deionized Water, Acid Waste Pipe, PVC, and CPVC Piping:

1. Figure No. B3106 with No. B3106V channel, plastic-coated.
2. For piping 1 inch and smaller, use continuous support system only.

H. Hangers for Brass Piping or to Eliminate Electrolytic Action:

1. Figure No. B3104C.

I. Beam Clamps and Attachments:

1. For bolt-on locations to structure, Figure Nos. B3291, B3036, or B3050.
2. Welded beam attachments, Figure No. B3083.

J. Brackets:

1. For equipment and piping adjacent to walls or steel columns, Figure Nos. B3066, B3063 and B3067 depending on weight to be supported.

K. Pipe Rests:

1. For pipes close to floor where no expansion provision is required, Figure No. B3088T base stand with B3093 adjustable pipe saddle support.

L. Hanger Rods:

1. Hanger rod, Figure No. B3205.
2. Continuous threaded rod, Figure No. ATR.
3. Eye rods, Figure No. B3210 or B3211, depending on load supported.

M. Trapeze Hangers - Direct Mounting Hangers:

1. Grinnell, Figure No. 46.

N. Protection Saddles:

1. Cast iron pipe, insulated, Figure No. B3108 with metal shield, Figure No. B3151.
2. For high temperature steel pipe, insulated, No. B3160, B3161, B3162, B3163, B3164, or B3165.

O. Pipe Roll Stands:

1. For support of pipe where axial movement is encountered: Figure No. B3117SL where no vertical adjustment is required; and Figure No. B3118SL where vertical adjustment is required.

P. Horizontal AWWA Piping (Flanged or Bell-spigot) Hangers:

1. Cast iron pipe, Figure No. B3102.

2.3 ACCESSORIES

A. Hanger Rods: Mild steel threaded both ends, threaded on one end, or continuous threaded.

2.4 INSERTS

A. Hangers, Supports, and Components: Provide factory-fabricated products as manufactured by B-Line, AITT Grinnel, Pipe Shields, Inc., or Erico CADDY. Basis of Design shall be B-Line.

B. Thermal-Hanger Shield Inserts: 100-psi average compressive strength, waterproofed calcium silicate or treated lumber inserts, encased with sheet metal shield. Insert and shield cover entire circumference of pipe and are of length indicated by manufacturer for pipe size and thickness of insulation.

C. Powder-Actuated Drive-Pin Fasteners: Powder-actuated-type, drive-pin attachments with pull-out and shear capacities appropriate for supported loads and building materials where used. Fasteners for fire protection systems include UL listing and FM approval.

D. Mechanical-Anchor Fasteners: Insert-type attachments with pull-out and shear capacities appropriate for supported loads and building materials where used. Fasteners for fire protection systems include UL listing and FM approval.

E. Concrete Inserts:

1. For concrete spot inserts at single locations for casting into structure, Figure No. B3014 for pre- determined rod size and Figure No. B2500 for universal use.
2. For continuous slot concrete insert at multi-locations for casting into structure, Figure No. B2505.

F. Inserts: Malleable iron case of galvanized steel shell and expander plug for threaded connection with lateral adjustment, top slot for reinforcing rods, lugs for attaching to forms; size inserts to suit threaded hanger rods.

2.5 FLASHING

A. Metal Flashing: 26 gage thick galvanized steel.

B. Metal Counterflashing: 22 gage thick galvanized steel.

C. Lead Flashing:

1. Waterproofing: 5 lb./sq. ft sheet lead.
2. Soundproofing: 1 lb./sq. ft sheet lead.

D. Flexible Flashing: 47 mil thick sheet butyl; compatible with roofing.

E. Caps: Steel, 22 gage minimum; 16 gage at fire resistant elements.

2.6 SLEEVES

A. Sleeves for Pipes Through Non-fire Rated Floors: 18 gage thick galvanized steel.

B. Sleeves for Pipes Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.

C. Sealant: Acrylic.

2.7 MECHANICAL SLEEVE SEALS

A. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.8 FORMED STEEL CHANNEL

A. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.9 FIRESTOPPING

A. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.

1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
2. Foam Firestopping Compounds: Single component foam compound.
3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
4. Fiber Stuffing and Sealant Firestopping: Composite of mineral or ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
7. Firestop Pillows: Formed mineral fiber pillows.

2.10 FIRESTOPPING ACCESSORIES

A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.

B. Dam Material: Permanent:

1. Mineral fiberboard.
2. Mineral fiber matting.
3. Sheet metal.
4. Plywood or particle board.
5. Alumina silicate fire board.

C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

D. General:

1. Furnish UL listed products.Select products with rating not less than rating of wall or floor being penetrated.

E. Non-Rated Surfaces:

1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where piping is exposed.
2. For exterior wall openings below grade, furnish mechanical sealing device to continuously fill annular space between piping and cored opening or water-stop type wall sleeve.

2.11 ACOUSTICAL SEALANT

A. Sealants for acoustical purposes shall be one of following non-setting sealants:

Acoustical sealant .....D.A.P.

BR – 96.....Pecra

Acoustical sealant.....Tremco

Acoustical sealant .....U.S.G.

2.12 NON-PENETRATING ROOFTOP PIPE HANGERS AND SUPPORTS

A. Supports, hangers, accessories, walk pads, etc… shall be as manufactured by Miro Industries, comparable products as manufactured by PHP Systems design or Advanced Support products OR Erico CADDY may be submitted for review as comparable products.

B. Provide with bases that rest upon walk pads. Bases shall have rounded edges to prevent damage to the roof, carbon black additive in polycarbonate for UV stabilization, and stainless steel all threads for adjustability.

C. Plumbing and gas piping shall be supported by rollers, similar to Miro Industries Model 4-RAH series or Erico CADDY PYRAMID RL series.

D. Condensate lines shall be supported by strut, similar to Miro Industries Model 2.5 CS-5" or Erico CADDY PYRAMID EZ series.

E. The walk pads shall be supplied by the roofing manufacturer, or prefabricated non-penetrating piping system manufacturer's support pads are acceptable.

F. Accessories:

1. Support Pads: pads shall be 15-3/4 by 19-3/4 inch square, 1/8 inch thick, flexible PVC with carbon black additive for UV stabilization.
2. Deck Plates: Provide square metal deck plates with curved up edges, to spread load and protect roof membrane, sizes and quantities of Deck Plates shall be per prefabricated non-penetrating piping system manufacturer's recommendations.
3. Rollers:

    a. Provide pipe rollers in sizes and quantities as recommended by manufacturer.

2.13 NO-HUB FITTING RESTRAINTS

A. Provide Holdrite model #117-LL or approved comparable product series no-hub fitting restraints in accordance with the installation instruction of US cast iron soil pipe manufacturers. CISPI designation 310-11 and the 20006 CISPI installation handbook. The system shall restrain (2) 45 degree 1/8 bend onto the adjoining pipe. The system shall be stainless steel bands that meet a torque of 60 in/lbs minimum. The restraint system shall meet a thrust pressure rating equal to 50 feet of head of water pressure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: "Administrative Requirements": Verification of existing conditions before starting work.

B. Verify openings are ready to receive sleeves.

C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material.

B. Install damming materials to arrest liquid material leakage.

C. Remove incompatible materials affecting bond.

D. Drilling or cutting of structural members shall be as detailed / directed by structural engineer.

3.3 INSTALLATION - INSERTS

A. Install inserts for placement in concrete forms.

B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION OF HANGERS AND SUPPORTS

(Unless otherwise noted, references apply to “latest editions.”)

A. General

1. Comply with MSS SP-69 and SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure. Piping shall be supported independently from equipment connections. Supports shall not interfere with removal of equipment.
2. Arrange for grouping of parallel runs of horizontal piping supported together on field-fabricated, heavy-duty trapeze hangers where possible.
3. Install supports with maximum spacings complying with MSS SP-69.
4. Where pipes of various sizes are supported together by trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
5. Install building attachments within concrete or to structural steel. Space attachments within maximum piping span length indicated in MSS SP-69,”Pipe Hangers and Supports C Selection and Application.” Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts in new construction prior to placing concrete. Install reinforcing bars through openings at top of inserts.
6. Install powder-actuated drive-pin fasteners in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool

manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual. Do not use in lightweight concrete slabs or in concrete slabs less than 4 inches thick.

7. Install mechanical-anchor fasteners in concrete after concrete is placed and completely cured. Install according to fastener manufacturer's written instructions. Do not use in lightweight concrete slabs or in concrete slabs less than 4 inches thick.
8. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.
9. Heavy-Duty Steel Trapezes: Field-fabricate from ASTM A 36, steel shapes selected for loads being supported. Weld steel according to AWS D-1.1.
10. Install hangers and supports to allow controlled movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
11. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.
12. Place hangers within 12 inches of each horizontal elbow.
13. Use hangers with 1-1/2 inch minimum vertical adjustment.
14. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.
15. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.
16. Support riser piping independently of connected horizontal piping.
17. Provide copper plated hangers and supports for copper piping.
18. Design hangers for pipe movement without disengagement of supported pipe.
19. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.
20. Provide clearance in hangers and from structure and other equipment for installation of insulation.
21. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.
22. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ASME B31.9, is not exceeded.
23. Insulated Piping: Provide continuous insulation and vapor barrier through hangers and supports. Comply with the following installation requirements.
24. Riser Clamps: Attach riser clamps, including spacers (if any), to piping with clamps projecting through insulation; do not exceed pipe stresses allowed by ASME B31.9. Insulate clamps on piping with insulation and vapor barrier.
25. Saddles: Install protection saddles MSS Type 39 where insulation without vapor barrier is indicated. Fill interior voids with segments of insulation that match adjoining pipe insulation.
26. Shields: Install MSS Type 40, protective shields on cold piping with vapor barrier. Shields span an arc of 180 degrees and have dimensions in inches not less than the following:

NPS (Inches)	LENGTH (Inches)	THICKNESS (Inches)
1/4 to 3 1/2	12	0.048
4	12	0.060
5 and 6	18	0.060
8 to 14	24	0.075

NPS (Inches)	LENGTH (Inches)	THICKNESS (Inches)
16 to 24	24	0.105

27. Pipes 4 Inches and Larger: Include treated wood inserts.
28. Insert Material: Length to equal to the length of the protective shield.
29. Conform to the table below for maximum spacing of supports and rod sizes:

a. Steel and Copper Pipe:

Nom. Pipe Size – In.	Steel Pipe Max. Span – Ft.	Copper Tube Max. Span – Ft.	Min. Rod Dia. – In.
Up to 3/4	7	5	3/8
1	7	6	3/8
1 1/4	7	7	3/8
1 1/2	9	8	3/8
2	10	8	3/8
2 1/2	11	9	1/2
3	12	10	1/2
3 1/2	13	11	1/2
4	14	12	5/8 (1/2 for copper)
5	16	13	5/8 (1/2 for copper)
6	17	14	3/4 (5/8 for copper)
8	19	16	3/4 (3/4 for copper)
10	22	18	3/4 (3/4 for copper)
12	23	19	3/4 (3/4 for copper)

b. Support vertical steel pipe and copper tube at each floor.

30. Drain Piping:

Pipe Material	Horizontal In Feet	Vertical In Feet
ABS Plastic Pipe	4	4
Cast-Iron Soil Pipe	5	15

CPVC Plastic Pipe	3	3
PVC Plastic Pipe	4	4

a. Support plastic pipe and tubing in accordance with manufacturer's recommendations.
b. Support cast-iron piping at each hub.

31. Equipment Supports:

a. Fabricate structural steel stands to suspend equipment from structure above or support equipment above floor.
b. Grouting: Place grout under supports for equipment and concrete bases. Make a smooth bearing surface.

3.5 METAL FABRICATION

A. Cut, drill, and fit miscellaneous metal fabrications for pipe and equipment supports.

B. Fit exposed connections together to form hairline joints. Field-weld connections that cannot be shop-welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 procedures for manual shielded metal-arc welding, appearance and quality of welds, methods used in correcting welding work, and the following:

D. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

E. Obtain fusion without undercut or overlap.

F. Remove welding flux immediately.

G. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours of welded surfaces match adjacent contours.

3.6 PAINTING

A. Touching Up: Clean field welds and abraded areas of factory paint and paint exposed areas immediately after erection of hangers and supports. Use same materials as used for factory painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

B. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.

C. Touching Up: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of factory paint on miscellaneous metal is specified in Division 09 Section "Painting and Coating".

D. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780.

3.7 APPLICATIONS FOR HANGER AND SUPPORT

A. Specific hanger requirements are specified in the Section specifying the equipment and systems.

B. Comply with MSS SP-69, for pipe hanger selections and applications that are not specified in piping specification Sections.

3.8 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 3 ½" thick and extending 6" beyond supported equipment.

B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.

C. Construct supports of steel members. Brace and fasten with flanges bolted to structure.

D. Provide rigid anchors for pipes after vibration isolation components are installed. Refer to Division 22 Section: "Vibration and Seismic Controls for Plumbing and Equipment."

3.9 INSTALLATION - FLASHING

A. Provide flexible flashing and metal counterflashing where piping penetrates weather or waterproofed walls, floors, and roofs.

B. Flash vent and soil pipes projecting 3 inches minimum above finished roof surface with lead worked 1 inch minimum into hub, 8 inches minimum clear on sides with 24 x 24 inches sheet size. For pipes through outside walls, turn flanges back into wall and caulk, metal counter-flash, and seal.

C. Flash floor drains in floors with topping over finished areas with lead, 10 inches clear on sides with minimum 36 x 36 inch sheet size. Fasten flashing to drain clamp device.

D. Seal floor drains and floor sinks watertight to adjacent materials.

E. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

3.10 INSTALLATION - SLEEVES

A. Exterior watertight entries: Seal with mechanical sleeve seals.

B. Set sleeves in position in forms. Provide reinforcing around sleeves.

C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

D. Extend sleeves through floors 2 inches above finished floor level. Caulk sleeves.

E. Where piping penetrates floor, ceiling, or wall, close off space between pipe and adjacent work with firestopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.

F. Install stainless steel escutcheons at finished surfaces.

3.11 INSTALLATION - FIRESTOPPING

A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping and other items, requiring firestopping.

B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating to uniform density and texture.

D. Compress fibered material to maximum 40 percent of its uncompressed size.

E. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.

F. Place intumescent coating in sufficient coats to achieve rating required.

G. Remove dam material after firestopping material has cured.

H. Fire Rated Surface:

1. Seal opening at floor, wall, partition, ceiling, and roof as follows:
2. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
3. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
4. Pack void with backing material.
5. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
6. Where pipe, duct, conduit, etc. penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.

I. Non-Rated Surfaces:

1. Seal opening through non-fire rated wall, partition, floor, ceiling, and roof opening as follows:
2. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
3. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
4. Install type of firestopping material recommended by manufacturer.
5. Install escutcheons floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
6. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.

7. Interior partitions: Seal pipe penetrations at all rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.12 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements”: Requirements for inspecting, testing.

B. Inspect installed firestopping for compliance with specifications and submitted schedule.

C. Licensed Engineer's Report: Prepare hanger and support installation report. Include seal and signature of Registered Engineer, licensed in jurisdiction where Project is located, certifying compliance with specifications.

3.13 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Clean adjacent surfaces of firestopping materials.

3.14 PROTECTION OF FINISHED WORK

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for protecting finished work.

B. Protect adjacent surfaces from damage by material installation.

3.15 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Adjust for pipe alignment and final equipment connections. Flexible connections shall not be used for adjustment of alignment.

3.16 NON-PENETRATING ROOFTOP PIPE HANGERS AND SUPPORTS

A. Determine that roof structure, roof insulation, and roof membrane are structurally adequate to support weight of pipe, duct, conduit, and supports and hangers.

B. Install supports and hangers in accordance with non-penetrating roof pipe support manufacturer’s recommendations.

C. Install supports at maximum spacing of 10’, unless closer spacing is required due to weight of pipe. Do not exceed non-penetrating manufacturer’s recommended load limits.

D. Support Pads: Remove rock from area to be covered by pad, apply pad on cleaned area, and center bases on top of support pads.

E. Set pipe in support without dropping or causing undue impact.

3.17 NO-HUB FITTING RESTRAINTS

A. A. Shall be installed at the base on all drainage risers.

END OF SECTION

SECTION 22 05 48

VIBRATION AND SEISMIC CONTROLS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 22

1.2 SUMMARY

A. This Section includes vibration, wind, and seismic control for plumbing systems piping and equipment. It is the intent of the seismic portion of this specification to keep all plumbing building system components in place during a seismic event.

B. The requirements for seismic protection measures to be applied to mechanical equipment and systems specified herein are in addition to any other items called for in other Sections of the Specifications. Provide seismic bracing for equipment and systems within the project area. Seismic forces shall be calculated by a qualified Licensed Professional Engineer. Seismic bracing and anchors shall be designed by the Licensed Professional Engineer to withstand the calculated seismic forces per the specified project conditions.

C. All components mounted outside of the building envelope (on-grade, on roof, on exterior walls, etc.) shall be mounted and supported to resist wind loads as required by the International Building Code (IBC), edition in effect by local authority having jurisdiction. Wind forces shall be calculated by a qualified licensed Professional Engineer to withstand the calculated wind forces per the specified project conditions.

D. Section includes:

1. Materials.
2. Seismic controls.
3. Vibration Isolation Mount types.
4. Equipment bases.
5. Resilient Penetration sleeve/seal.
6. Seismic snubber.
7. Flexible electrical connections.
8. Restraints.
9. Gromments.
10. Acoustical sealant.
11. Vibration isolation schedule.

E. Related Sections: The following sections contain requirements that relate to this section:

1. Division 03 Section: “Cast-in-Place Concrete”: Product requirements for concrete for placement by this section.

2. Division 07 Section: “Joint Protection”: Product requirements for joint sealers specified for placement by this section.
3. Division 22 Section: “Common Work Results for Plumbing.”
4. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment.”
5. Division 22 Section: “Expansion Fittings and Loops for Plumbing Piping”: Product requirements for anchors and piping expansion compensation.
6. Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment”: Product requirements for pipe hangers and supports.
7. Division 23 Section: “Testing, Adjusting, and Balancing for HVAC”: requirements for sound and vibration measurements performed independent of this section.

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”) (FOR SEISMIC AND WIND ONLY- references apply to the edition adopted and / or referenced by the building code applicable to the project).

A. American National Standards Institute:

1. ANSI S1.4 - Sound Level Meters.
2. ANSI S1.8 - Reference Quantities for Acoustical Levels.
3. ANSI S12.36 - Survey Methods for the Determination of Sound Power Levels of Noise Sources.

B. Air-Conditioning and Refrigeration Institute:

1. ARI 575 - Method of Measuring Machinery Sound within Equipment Space.

C. American Society of Heating, Refrigerating and:

1. ASHRAE Handbook - HVAC Applications. Manufacturer’s Standardization Society of the Valves and Fittings Industry:

D. American Welding Society:

1. AWS D1.1 – Structural Welding Code – Steel.

E. American Society of Mechanical Engineers:

1. ASME B18.10 or ASTM A183, Track Bolts, and Nuts. Steel, Hex Head, Track Bolts and Nuts

1.4 DEFINITIONS

A. Terminology used in this Section is defined in Manufacturer’s Standardization Society Specification 90, “Valve and Fittings Standards,” “latest edition”.

B. Life Safety Systems:

1. All systems involved with fire protection including sprinkler piping, and service water supply piping systems.

2. All plumbing systems involved with and/or connected to emergency power supply including all generators, transfer switches, transformers and all flowpaths to fire protection.

C. Positive Attachment:

1. A positive attachment is defined as a cast-in anchor, a drill-in wedge anchor, a double sided beam clamp loaded perpendicular to a beam, or a welded or bolted connection to structure. Single sided “C” type beam clamps for support rods of overhead piping, fire protection, or any other equipment are not acceptable on this project as seismic attachment points.

D. Transverse Bracing:

1. Restraint(s) applied to limit motion perpendicular to the centerline of the pipe.

E. Longitudinal Bracing:

1. Restraint(s) applied to limit motion parallel to the centerline of the pipe, duct or conduit.

1.5 PERFORMANCE REQUIREMENTS

A. Provide vibration isolation on motor driven equipment over 0.5 hp, plus connected piping.

1.6 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit schedule of vibration isolator type with location and load on each. Submit catalog information indicating, materials and dimensional data.

C. Design Data: Submit calculations indicating maximum room sound levels are not exceeded.

D. Manufacturer's Installation Instructions: Submit special procedures and setting dimensions.

E. Manufacturer's Certificate: Certify isolators meet or exceed specified requirements.

F. Manufacturer's Field Reports: Indicate sound isolation installation is complete and in accordance with instructions.

G. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

H. Shop drawings for each type of isolator, indicating dimensions, weights, required clearances, and methods of component assembly.

I. Submit following in accordance with Conditions of Contract and Division 1 Specifications:

1. Shop drawings of items.

2. Complete description of products to be supplied including product data, dimensions materials of construction and specifications.
3. Installation instructions for each product.
4. Tabulation showing for each vibration isolator supporting equipment:

    a. Equipment identification tag no.
    b. Isolator type.
    c. Actual load.
    d. Static deflection expected under actual load.
    e. Specified minimum static deflection.
    f. Additional deflection to solid under actual load.
    g. Ratio of spring height under actual load to spring diameter.
5. Layout of piping to be isolated including vertical risers showing:

    a. Support points.
    b. Weight at support points.
    c. Isolator type.
    d. Static deflection expected under actual load.
    e. Specified static deflection.
    f. Additional deflection to solid under actual load.
    g. Ratio of spring height under load to spring diameter.
6. Steel rails, steel base frames, and concrete inertia bases showing all steel work, reinforcing, vibration isolator mounting attachment method and location of equipment attachment bolts.
7. Special details at large scale and other necessary information to convey understanding of work.

J. Seismic Certification and Analysis:

1. Seismic restraint calculations must be provided for all connections of equipment to the structure. Calculations must be stamped by a registered professional engineer with at least five years of seismic design experience, licensed in the state of the job location.
2. All restraining devices shall be tested or calculated showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Calculations (including the combining of tensile and shear loadings) to support seismic restraint designs must be stamped by a registered professional engineer with at least five years of seismic design experience and licensed in the state of the job location. Testing and calculations must include both shear and tensile loads as well as one test or analysis at 45E to the weakest mode.
3. Analysis must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in section 1.5 acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.

K. Submission of samples may be requested for each type of vibration isolation device. After approval, samples shall be returned for installation at job site.

L. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with ARI 575.

B. Qualify welding processes and welding operators according to AWS D1.1 “Structural Welding Code – Steel”, “latest edition”.

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

C. Qualify welding processes and welding operators according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

D. Manufacturer of vibration isolation and seismic control equipment shall have the following responsibilities:

1. Determine vibration isolation and seismic restraint sizes and locations.
2. Provide calculations and materials if required for restraint of un-insulated equipment.
3. Provide installation instructions, drawings and trained field supervision to insure proper installation and performance.

E. Licensed Operators: Use operators that are licensed by power operated tool manufacturers to operate their tools and fasteners.

F. Coordinate size, location, and special requirements of vibration isolation equipment and systems with other trades. Coordinate plan dimensions with size of housekeeping pads.

G. Provide vibration isolators of appropriate sizes and proper loading to meet specified deflection requirements.

H. Supply and install incidental materials needed to meet requirements, even if not expressly specified or shown on drawings without claim for additional payment.

I. Verify correctness of equipment model numbers and conformance of each component with manufacturer's specifications.

J. Should any rotating equipment cause excessive noise or vibration, rebalance, realign or do other remedial work to reduce noise and vibration levels. Excessive is defined as exceeding manufacturer's specifications for unit in question.

K. Speed And Balance Requirements For Rotating Equipment:

1. Fans and other rotating mechanical equipment shall not operate at speeds in excess of 80% of their critical speed.
2. Vertical vibration of rotating equipment shall not be greater than levels indicated elsewhere. Measure vibration on equipment or steel frame equipment base when equipment is mounted on its vibration isolation mounts. If equipment has inertia base, allowable vibration level is reduced by ratio of equipment weight alone to equipment weight plus inertia base weight.

Equipment Speed (RPM)	Vibration Displacement (mils, peak-to-peak)
Under 600	4

600 to 1000	3
1000 to 2000	2
Over 2000	1

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.

C. Store materials according to manufacturer instructions.

D. Protection:

1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
2. Provide additional protection according to manufacturer instructions.

1.10 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.11 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

B. Indicate field measurements on shop drawings.

1.12 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for inertia bases.

PART 2 - PRODUCTS

2.1 INTENT

A. All vibration isolators and seismic/wind restraints described in this Section shall be the product of a single manufacturer. Acceptable manufacturers include: Vibro-Acoustics, Kinetics Noise Control, Mason Industries or a comparable acceptable manufacturer who is an active member of the Vibration Isolation and Seismic Control Manufacturers Association (VISCMA).

2.2 MATERIALS

A. Structural Steel: ASTM A 36/A 36M, “Carbon Structural Steel,” “latest edition”, steel plates, shapes, and bars, black and galvanized.

B. Bolts and Nuts: ASME B18.10 or ASTM A 183, “Track Bolts and Nuts,” “latest edition”, steel, hex-head, track bolts and nuts.

C. Washers: ASTM F 844, “Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use,” steel, plain, flat washers.

D. Grout: ASTM C 1107, Grade B, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrink),” non-shrink, nonmetallic.

1. Characteristics include post-hardening, volume-adjusting, dry, hydraulic-cement-type grout that is non-staining, noncorrosive, nongaseous and is recommended for both interior and exterior applications.
2. Design Mix: 5000-psi (34.5MPa), 28-day compressive strength.
3. Water: Potable.
4. Packaging: Premixed and factory-packaged.

2.3 SEISMIC RESTRAINT

A. Insulated Horizontal Piping Hangers:

1. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cables must be rated to achieve a certified minimum modulus of elasticity. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize clamping mechanisms to provide proper cable engagement. Cables must not be allowed to bend across sharp edges. Seismic cable assemblies are the preferred method of restraint where applicable. Cable assemblies shall be model BB/BBR as manufactured by Vibro-Acoustics, Model KSCU, KSWC, and/or KSCC as manufactured by Kinetics Noise Control, or type SCB, SCBH or SCBV as manufactured by Mason Industries, Inc., or comparable acceptable product.

2. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of 2 and arranged to provide all directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two through bolts to provide proper attachment. Solid seismic brace assemblies shall be manufactured and supplied by Vibro-Acoustics type RRK, Kinetics

Noise Control or type SSB, SSBS or SSRF as manufactured by Mason Industries, Inc., or comparable acceptable product.

a. Steel angles, sized to prevent buckling, shall be clamped to duct or equipment rods utilizing ductile iron clamps at each restraint location when required after seismic force analysis completed by restraint supplier and/or restraint manufacturer's engineers. Welding of support rods is not acceptable. Hanger rod stiffener kits shall be Model VAC as manufactured by Vibro-Acoustics, Model KHRC-B and/or KHRC-C as manufactured by Kinetics Noise Control or type SRC or UC as manufactured by Mason Industries, Inc., or comparable acceptable product.

b. Pipe clevis cross bolt braces are required in all solid brace type restraint locations. They shall be special purpose preformed channels deep enough to be held in place by bolts passing over the cross bolt. Clevis hanger brace kit shall be Model KCHB as manufactured by Kinetics Noise Control or type CCB as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. Vertical Piping Riser Seismic Restraints:

1. All-directional acoustical pipe anchor, consisting of cable restraint assemblies or two sizes of steel tubing separated by a minimum 1/2" thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction. All-directional anchors shall be Model KPA as manufactured by Kinetics Noise Control or type ADA as manufactured by Mason Industries, Inc., or comparable acceptable product.

2. Pipe guides shall consist of spring assemblies or a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of 1 5/8" motion, or to meet location requirements. Pipe guides shall be Model KPG as manufactured by Kinetics Noise Control or type VSG as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.4 VIBRATION ISOLATION MOUNT TYPES

A. General

1. Metal parts of vibration isolation units installed out-of-doors shall be hot-dip galvanized, cadmium- plated or Neoprene-coated after fabrication. Galvanizing shall meet ASTM 144 "Salt Spray Test Standards and Federal Test Standard."

2. Isolator types are scheduled to establish minimum standards. Optionally, labor-saving accessories can be an integral part of isolators supplied to provide initial lift of equipment to operating height, hold piping at fixed elevations during installation and initial system filling operations, and similar installation advantages. Accessories shall not degrade vibration isolation system.

B. Unit FSN (Floor Spring and Neoprene) (Type 3)

1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" neoprene acoustical friction pad between the base plate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height. Mountings shall be type FS as manufactured by Vibro-Acoustics, Model FDS as manufactured by Kinetics Noise Control or type SLF as manufactured by Mason Industries, Inc., or comparable acceptable product.

C. Unit FSN-R (or FSNTL) (Floor Spring and Neoprene – Restrained) (or Travel Limited) (Type 4)

1. Restrained spring mountings shall have an FSN mounting within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. Installed and operating heights are equal. A minimum clearance of 1/2" shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Restraining Bolts shall have a neoprene bushing between the bolt and the housing. Limit stops shall be out of contact during normal operation. Housing shall be designed to withstand wind loads when located outdoors. Housing shall be designed to resist all seismic forces if applicable. Mountings shall be type SFS, CSR, or SCSR as manufactured by Vibro-Acoustics, Model FLS, FLSS, or FHS as manufactured by Kinetics Noise Control or type SLR (including all variants) or SSLFH as manufactured by Mason Industries, Inc., or comparable acceptable product.

D. Unit FN-M (Floor Neoprene-Mount) (Type 1)

1. Bridge-bearing neoprene mountings shall have a minimum static deflection of 0.12" to 0.50” and all directional seismic capability if applicable. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Mountings shall be type RD or SRD as manufactured by Vibro-Acoustics, Model RD or RQ as manufactured by Kinetics Noise Control or type BR as manufactured by Mason Industries, Inc., or comparable acceptable product.

E. Unit FN-P (Floor Neoprene-Pad) (Type 1)

1. Isolation pads shall be neoprene elastomer in-shear pads, used in conjunction with steel shims where required, having static deflections as tabulated. Pads shall have a durometer as required for suitable loading and service life. Pads shall be designed for a maximum deflection of approximately 20% of their unloaded thickness. All pads shall be elastomer in-shear and shall be molded using 2000 psi minimum tensile strength oil resistant neoprene compounds with no color additives, LDS rubber or bridge-bearing neoprene. Pad shall be type NEO+ as manufactured by Vibro-Acoustics or Model Super W as manufactured by Mason Industries or comparable acceptable product.

F. Unit HSN (Hanger Spring and Neoprene) (Type 3)

1. Hangers shall consist of rigid steel frames containing minimum 1 1/4" thick neoprene or pre-compressed elastomer coated fiberglass elements at the top and a steel spring with general characteristics as in specification 5 seated in an optional steel washer reinforced neoprene cup on the bottom. The neoprene element and the optional cup shall have neoprene bushings projecting through the steel box. To maintain stability the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 degree E arc from side to side before contacting the rod bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30 degree E capability. Hangers shall be type SHR/B as manufactured by Vibro-Acoustics, Model SRH or SFH as manufactured by Kinetics Noise Control or type 30N as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.5 EQUIPMENT BASES

A. Unit BSR (Base - Steel Rail) (Type B)

1. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is limited. Pump bases for split case pump shall include supports for suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14” provided that the deflection and misalignment is kept within acceptable limits as determined by the equipment manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of a minimum of 1.5". Bases shall be type IFB as manufactured by Vibro-Acoustics, Model SFB-W, SFB-C, or KFB-A as manufactured by Kinetics Noise Control or any various types as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. Unit BIB (Base - Inertia Base) (Type C)

1. Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Centrifugal refrigeration machines and pump bases by be T or L shaped where space is a problem. Bases for split case pumps shall be large enough to provide for suction and discharge elbows. Bases for end suction pumps shall be large enough to provide support for suction diffusers. Bases shall be a minimum of 1/12 of the longest dimension of the base but not less than 6". The base depth need not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2" bars welded in place on 6" centers running both ways in a layer 1 1/2" above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a minimum 1.5" clearance below the base. Wooden formed bases leaving a concrete rather than a steel finish are not acceptable. Base shall be type CIB or TCIB as manufactured by Vibro-Acoustics, Model CIB-L or CIB-T as manufactured by Kinetics Noise Control or type BMK or K as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.6 RESILIENT PENETRATION SLEEVE/SEAL

A. Unit RPS-A (Resilient Penetration Sleeve/Seal)

1. The horizontal thrust restraint shall consist of a spring element in series with a neoprene molded cup as described in specification 5 with the same deflection as specified for the mountings or hangers. The spring element shall be designed so it can be preset for thrust at the factory and adjusted in the field to allow for a maximum of 1/4” movement at start and stop. The assembly shall be furnished with 1 rod and angle brackets for attachment to both the equipment and the ductwork or the equipment and the structure. Horizontal restraints shall be attached at the centerline of thrust and symmetrical on either side of the unit. Horizontal thrust restraints shall be type WBI/WBD as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.7 SEISMIC SNUBBER

A. For equipment base: All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4" thick. Rated loadings shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Neoprene bushings shall be rotated to insure no short circuits exist before systems are activated. Snubber shall be type SS as manufactured by Vibro-Acoustics, Model HS-5 as manufactured by Kinetics Noise Control or type Z-1225 as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. For equipment direct connection: All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" thick. Rated loadings shall not exceed 1000 psi. Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" (3mm) no more than 1/4". Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable “G” force. Submittals shall include the load deflection curves up to 1/2" deflection in the x, y and z planes. Snubbers shall be type SRB as manufactured by Vibro-Acoustics, Model HS-5 as manufactured by Kinetics Noise Control or Type Z-1011 as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.8 FLEXIBLE ELECTRICAL CONNECTION

A. Unit FEC-A (Flexible Electrical Connection Type A):

1. Flexible electrical coupling shall be prefabricated units incorporating flexible watertight outer jacket, grounding strap, plastic inner sleeve to maintain smooth wire way and end hubs with standard tapered electrical threads to fit standard threaded, rigid metal conduit.
2. Unit FEC-A shall be as specified in section “Raceways and Boxes for Electrical Systems” for liquid tight flexible metal conduit.

B. Unit FEC-B (Flexible Electrical Connection Type B):

1. Flexible electrical couplings shall be field-fabricated using minimum 2 ft length of flexible conduit or cable installed in grossly slack "U" shape.
2. Unite FEC-B shall be as specified in section “Raceways and Boxes for Electrical Systems” for flexible metal conduit.

2.9 RESTRAINTS

A. Thrust Restraint

1. Thrust restraints shall consist of spring element in series with Neoprene pad.
2. Thrust restraint shall be designed to have same deflection as specified for isolators supporting equipment generating thrust.
3. Spring element shall be contained within steel frame and be designed to be factory-preset for thrust and be field-adjustable to allow for maximum of 1/4" movement during starting or stopping of equipment.
4. Furnish assembly complete with rods and angle brackets for attachment to both equipment generating thrust and adjacent fixed structural anchor.
5. Thrust restraint shall be type AHCS or HCS as manufactured by Vibro-Acoustics, Model HSR as manufactured by Kinetics Noise Control or Mason Industries Type WB, or comparable acceptable product.

2.10 GROMMETS

A. Grommets shall be one piece molded bridge-bearing neoprene washer/bushing type. The bushing shall surround the anchor bolt and have a flat washer force to avoid all contact between bolt and base plate. Grommets shall be type GW as manufactured by Vibro-Acoustics, model HG as manufactured by Mason Industries or comparable acceptable product.

B. Neoprene shall be between 40 and 50 durometer.

C. Grommets shall be specially formed to prevent fastening bolts from directly contacting isolator base plate.

2.11 ACOUSTICAL SEALANT

A. Sealants for acoustical purposes shall be one of following non-setting sealants:

1. Acoustical sealant ..... D.A.P.
2. BR-96 ..... Pecra
3. Acoustical sealant ..... Tremco
4. Acoustical sealant ..... U.S.G.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Provide access to existing piping and other installations remaining active and requiring access.

B. Extend existing piping and ductwork installations using materials and methods as specified

3.2 EXAMINATION

A. Division 01 - Administrative Requirements: Coordination and project conditions.

B. Verify equipment and piping is installed before work in this section is started.

3.3 INSTALLATION

A. Install isolation for motor driven equipment.

B. Bases:

1. Set steel bases for 1 inch clearance between housekeeping pad and base.
2. Set concrete inertia bases for 2 inch clearance between housekeeping pad and base.

C. Adjust equipment level.

D. Install spring hangers without binding.

E. On closed spring isolators, adjust so side stabilizers are clear under normal operating conditions.

F. Prior to making piping connections to equipment with operating weights substantially different from installed weights, block up equipment with temporary shims to final height. When full load is applied, adjust isolators to load to allow shim removal.

G. Provide pairs of horizontal limit springs on fans with more than 6.0 inches static pressure, and on hanger supported, horizontally mounted axial fans.

H. Provide resiliently mounted equipment and piping with seismic snubbers. Provide each inertia base with minimum of four seismic snubbers located close to isolators. Snub equipment designated for post disaster use to 0.05 inch maximum clearance. Provide other snubbers with clearance between 0.15 inch and 0.25 inch.

I. Support piping connections to isolated equipment resiliently to nearest flexible pipe connector as follows:

1. Up to 4 inch Diameter: First three points of support.
2. 5 to 8 inch Diameter: First four points of support.
3. 10 inch Diameter and Over:First six points of support.
4. Select three hangers closest to vibration source for minimum 1.0 inch static deflection or static deflection of isolated equipment. Select remaining isolators for minimum 1.0 inch static deflection or 1/2 static deflection of isolated equipment.

3.4 FIELD QUALITY CONTROL

A. Division 01 - Quality Requirements: Field inspecting, testing, adjusting, and balancing.

B. Inspect isolated equipment after installation and submit report. Include static deflections.

3.5 INSTALLATION OF SEISMIC HANGERS AND SUPPORTS

A. General: Comply with MSS SP-69, “Pipe Hangers and Supports C Selection and Application,” “latest edition”, and SP-89, “Pipe Hangers and Supports -- Fabrication and Installation Practices,” “latest edition”. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure. Piping shall be supported independently from equipment connections. Supports shall not interfere with removal of equipment.

1. At locations where cable assemblies’ restraints are located, the support rods must be braced when necessary to accept compressive loads.
2. At all locations where cable assemblies’ restraints are attached to pipe clevis’s, the clevis cross bolt must be reinforced.

B. Seismic restraints, shall be provided for all installed plumbing equipment having a component importance factor of 1.5 where the Seismic Design Category is C or importance factor of 1.0 where the Seismic Design Category is D, E, or F.

C. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment, or piping resulting in stresses or misalignment.

D. Vibration isolated seismic restraints.

1. The contractor shall not install seismic restraints on vibration isolated equipment and systems which makes rigid connections with the building.

2. Any conflicts with other trades which will result in rigid contact with equipment or piping due to inadequate space or other unforeseen conditions should be brought to the architects/engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor’s expense.

a. Cable restraints shall be installed slightly slack to avoid short circuiting the vibration isolated suspended equipment, piping or conduit.
b. Cable assemblies are installed taut on non-vibration isolation systems. Seismic solid braces may be used in place of cables on rigidly attached systems only, but cable restraints are the preferred method of installation. Hose fittings and accessories shall be unbraided type 304 stainless steel with a minimum bend radius of 4 inches, fittings and accessories shall be UL 2443 listed for sprinkler services to 175 psi.
c. Restraints shall have a positive connection to the building structure. Connections made to drywall or other nonbuilding structure are not acceptable.

E. Seismic restraints for non-vibration isolated systems:

1. At locations where specification 12 or 13 restraints are located, the support rods must be braced when necessary to accept compressive loads with specification 14 braces.

F. Arrange for grouping of parallel runs of horizontal piping supported together on field-fabricated, heavy-duty trapeze hangers where possible.

G. Install supports with maximum spacings complying with MSS SP-69, “Pipe Hangers and Supports C Selection and Application,” “latest edition”, and as specified in Section Building Services Piping.

3.6 INSTALLATION OF VIBRATION ISOLATION EQUIPMENT

A. General

1. Locations of vibration isolation equipment shall be selected for ease of inspection and adjustment as well as for proper operation.
2. Installation of vibration isolation equipment shall be in accordance with manufacturer's written instructions.
3. Seismic restraints, if applicable, shall be provided for all installed mechanical equipment having a component importance factor of 1.5.

B. Isolation Mounts

1. Squarely align vibration isolators above or below mounting points of supported equipment.
2. Isolators for equipment with bases shall be located on sides of bases, which are parallel to equipment shaft unless this is not possible because of physical constraints.
3. If housekeeping pad is provided, isolators shall bear on housekeeping pad and isolator base plate shall rest entirely on pad. Maintain at least ten bolt diameters from isolator anchors to edge of pad.
4. Hanger rods for vibration isolated support shall be connected to structural beams or joists; not from floor slab between beams and joists. Provide intermediate support members as necessary.
5. Position vibration isolation hanger elements as high as possible in hanger rod assembly but not in contact with building structure, and so that hanger housing may rotate full 360 degrees about rod axis without contacting any object.
6. Parallel-running pipes may be hung together on trapeze, which is isolated from building. Isolator deflections must be largest determined by provisions for pipe isolation. Do not mix isolated and non-isolated pipes on same trapeze.

7. No pipes or equipment shall be supported from other pipes or equipment.
8. Resiliently-isolated pipes shall not contact rigid building structure or equipment.
9. Installed and operating heights of vibration-isolated equipment mounted on Unit FSN isolators shall be identical. Limit stops shall be out of contact during normal operation.
10. Adjust leveling bolts and hanger rod bolts so isolated equipment is level and in proper alignment with connecting ducts or pipes.

C. Bases

1. No equipment unit shall bear directly on vibration isolators unless its own frame is suitably rigid to span between isolators and such direct support is approved by equipment manufacturer. This provision shall apply whether or not base frame is specified or indicated on drawings. If base frame is required for unit because of equipment manufacturer's requirements and is not specifically called for, base frame recommended by equipment manufacturer shall be provided at no additional expense.
2. Unless otherwise indicated, provide minimum operating clearance of 1.5" between inertia bases or structural steel frames and concrete housekeeping pad on floor beneath equipment. Position isolator mounting brackets so that required clearance is maintained. Check clearance space to ensure that no construction debris has been left to short-circuit or restrict proper operation of vibration isolation system.

D. Thrust Restraints

1. Attach thrust restraints at centerline of thrust and symmetrically on each side of equipment generating thrust.
2. Adjust restraints to limit equipment movement to specified limit.

E. Resilient Penetration Sleeve/Seals

1. Penetration seals shall maintain airtight seal around penetrating element and shall prevent contact of penetrating element and building structure. Fit sleeve tightly to building construction and with acoustical sealant seal airtight on both sides of construction penetrated.

3.7 SEISMIC RESTRAINT OF PIPING

A. Transverse piping restraints shall be at 40’ maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads. Spacing shall be reduced to 20’ maximum spacing for piping containing hazardous/flammable materials and/or built from nonductile materials such as cast iron and PVC. Minimum of two transverse restraints are required per pipe run.

B. Longitudinal restraints shall be at 80' maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads. Spacing shall be reduced to 40’ maximum spacing for piping containing hazardous/flammable materials and/or built from nonductile materials such as cast iron and PVC. Minimum of one longitudinal restraint is required per pipe run.

C. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.

D. For fuel oil and all gas piping transverse restraints must be at 20’ maximum and longitudinal restraints at 40’ maximum spacing.

E. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24” of the elbow or TEE or combined stresses are within allowable limits at longer distances.

F. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.

G. Branch lines may not be used to restrain main lines.

H. Cast iron pipe of all types, glass pipe and any other pipes joined with a four band shield and clamp assembly shall be braced as in sections 3.3.B. and C.

3.8 SEISMIC RESTRAINT EXCLUSIONS

A. Pipe Exclusions

1. All piping less than 2 1/2" inside diameter.
2. All piping suspended by clevis hangers where the distance from the top of the pipe to the suspension point is 12" or less for all connection points for the entire pipe run provided that all connections avoid the possibility of significant bending of the hanger rod (swivel connections and/or vibration isolated hangers satisfy this).
3. All trapezed piping where the distance from the suspension point to the trapeze member is 12" or less for all connection points for the entire pipe run provided that all connections avoid the possibility of significant bending of the hanger rod (swivel connections and/or vibration isolated hangers satisfy this).
4. If any suspension location in the run exceeds the above, the entire run must be braced.

3.9 APPLICATIONS FOR VIBRATION CONTROLS

A. Major Equipment

1. Unless otherwise shown or specified, major floor-mounted equipment shall be set on housekeeping type concrete pads. See architectural or structural drawings for details.
2. Thrust Restraints shall be installed on equipment as called for in schedule on drawings or specified hereunder.
3. Electrical connections to vibration-isolated equipment exposed to weather shall be Unit FEC-A.
4. Electrical connections to vibration-isolated equipment located indoors shall be Unit FEC-B.

B. Pipes

1. Isolators for first three support points adjacent to connected equipment shall achieve half of specified static deflection of isolators supporting connected equipment. When required static deflection of these pipe isolators is greater than 0.50,” Unit FSN or HSN isolators, (whichever is applicable for mounting condition) shall be used.
2. Where lateral support of pipe risers is required within specified limits, use resilient lateral supports.

3. Pipes within specified limits that penetrate building construction shall be isolated from building structure by (Unit RPS-A or Unit RPS-B) resilient penetrating sleeve/seals.
4. Drain piping connected to vibration-isolated equipment shall not contact building structure or other non-isolated system unless it is resiliently mounted as described above.

3.10 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Adjust for pipe alignment and final equipment connections. Flexible connections shall not be used for adjustment of alignment.

END OF SECTION

SECTION 22 05 53

IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 022.

1.2 SUMMARY

A. Section Includes:

Engraved Plastic-Laminate Signs.

1. Valve Tags.
2. Painted Identification Materials.
3. Plastic Pipe Markers.
4. Underground-Type Plastic Line Marker.
5. Ceiling Tacks
6. Plasticized Tags.

B. Related Sections The following Sections contain requirements that relate to this Section:

1. Division 09 Section: “Painting and Coating”: Execution requirements for painting specified by this section.
2. Division 22 Section: “Common Work Results for Plumbing.”
3. Division 22 Section: “Plumbing Pumps.”
4. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment.”
5. Division 22 Section: “General Duty Valves for Plumbing Piping.”
6. Division 22 Section: “Plumbing Fixtures.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. American Society of Mechanical Engineers:

1. ASME A13.1 - Scheme for the Identification of Piping Systems.

B. National Fire Protection Association:

1. NFPA 99 - Standard for Health Care Facilities.

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit manufacturer's technical product data and installation instructions for each identification material and device required.

C. Shop Drawings: Submit list of wording, symbols, letter size, and color coding for mechanical identification and valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Samples: Submit samples of each color, lettering style and other graphic representation required for each identification material or system.

E. Schedules: Submit valve schedule for each piping system, typewritten and reproduced on 8 1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags", in margin of schedule. Furnish copies for Maintenance Manuals as specified in Division 01 Section: “Execution and Closeout Requirements.”

F. Maintenance Data: Include product data and schedules in maintenance manuals, in accordance with requirements of Division 01.

G. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.

H. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

1.6 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of identification devices of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.

B. Codes and Standards:

1. ANSI Standards: Comply with ANSI A13.1, for lettering size, length of color field, colors, and viewing angles of identification devices.

2. Conform to NFPA 99 requirements for labeling and identification of medical gas piping systems and accessories.

C. Equipment Lettering and Graphics:

1. General: Coordinate names, abbreviations and other designations used in plumbing identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of plumbing systems and equipment.

a. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification, which indicates individual system number as well as service (for example; Water Heater No. 3).

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements:”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements": Spare parts and maintenance products.

B. Furnish two containers of spray-on adhesive

C. Furnish minimum of 5% extra stock of each plumbing identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping systems identification markers, and additional plastic laminate engraving blanks of assorted sizes.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering identification materials which may be incorporated in the work include, but are not limited to, the following:

B. Manufacturer: Subject to compliance with requirements, provide plumbing identification materials of one of the following:

1. Brady (W.H.) Co.; Signmark Div.
2. Industrial Safety Supply Co., Inc.
3. Seton Name Plate Corp.

2.2 MATERIALS

A. General: Provide manufacturer's standard products of categories and types required for each application as referenced in other Division 22 sections. Where more than single type is specified for application, selection is Installer's option, but provide single selection for each product category.

B. Provide pipe markers with the following background colors and designations:

SERVICE	STENCIL DESIGNATION	LETTER COLOR	BACKGROUND COLOR	JACKET
Sanitary/Vent	Sanitary Sewer/Vent	White	Safety Green	Brown
Storm Water/Rain Leaders	Storm Water	White	Safety Green	Purple
Domestic Cold Water	Domestic Cold Water	White	Safety Green	Blue
Domestic Hot Water	Domestic Hot Water (F)	White	Safety Green	Red
Domestic Hot Water Return	Domestic Hot Water Return (F)	White	Safety Green	Red
Condensate Drain	Drain Water	White	Safety Green	Tan
Natural Gas	Natural Gas (psig)	Black	Safety Yellow	Yellow
Liquid Propane	Liquid Propane Gas	Black	Safety Yellow	Yellow

SERVICE	STENCIL DESIGNATION	LETTER COLOR	BACKGROUND COLOR	JACKET
Non-Potable Water	Caution: Non-Potable Water – Do Not Drink	White	Safety Purple	Purple

2.3 ENGRAVED PLASTIC-LAMINATE SIGNS (Nameplates):

A. General: Provide engraving stock melamine plastic laminate, complying with FS L-P-387, in the sizes and thicknesses indicated, engraved with engraver's standard letter style of the sizes and wording indicated, black with white core (letter color) except as otherwise indicated, punched for mechanical fastening except where adhesive mounting is necessary because of substrate.

B. Thickness: 1/8", except as otherwise indicated.

C. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.

D. Nomenclature: Include the following, matching terminology on schedules as closely as possible:

1. Name and plan number.
2. Equipment service.
3. Design capacity.
4. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.

E. Size: Provide approximate 2 1/2" x 4" markers for control devices, dampers, and valves; and 4 1/2" x 6" for equipment.

2.4 VALVE TAGS:

A. Plastic Laminate Valve Tags: Provide manufacturer's standard 3/32" thick engraved plastic laminate valve tags, with piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.

1. Provide 1 1/2" sq. black tags with white lettering, except as otherwise indicated.
2. Provide size, shape and color combination as specified or scheduled for each piping system.

B. Plastic Valve Tags: Provide manufacturer's standard solid plastic valve tags with printed enamel lettering, with piping system abbreviation in approximately 3/16" high letters and sequenced valve numbers approximately 3/8" high, and with 5/32" hole for fastener.

1. Provide 1 1/8" sq. white tags with black lettering.

2. Provide size, shape and color combination as specified or scheduled for each piping system.

C. Metal Tags:

1. Brass with stamped letters; tag size minimum 1-1/2 inches square with finished edges.

D. Valve Tag Fasteners: Provide manufacturer's standard solid brass chain (wire link or beaded type), or solid brass S-hooks of the sizes required for proper attachment of tags to valves, and manufactured specifically for that purpose.

E. Tag Chart: Typewritten letter size list of applied tags and location in anodized aluminum frame

2.5 PAINTED IDENTIFICATION MATERIALS:

A. Stencils: With clean cut symbols and letters of following size:

1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2 inch high letters.
2. 2-1/2 to 6 inches Outside Diameter of Insulation or Pipe: 1-inch high letters.
3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
4. Ductwork and Equipment: 1-3/4 inches high letters

B. Stencils shall not be utilized on piping and plumbing equipment.

C. Stencil Paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray-can form and grade.

D. Identification Paint and Background Color; Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems and plumbing equipment comply with ANSI A13.1 for colors.

2.6 PLASTIC PIPE MARKERS:

A. Snap-On Type: Provide manufacturer's standard pre-printed, semi-rigid snap-on, UV-resistant color-coded pipe markers, complying with ANSI/ASME A13.1

B. Small Pipes: For external diameters less than 6" (including insulation if any), provide full-band pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:

1. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
2. Adhesive lap joint in pipe marker overlap.
3. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 3/4" wide; full circle at both ends of pipe marker, tape lapped 1 1/2".

C. Large Pipes: For external diameters of 6" and larger (including insulation if any), provide either full-band or strip-type pipe markers, but not narrower than 3 times letter height (and of required length), fastened by one of the following methods:

1. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 1 1/2" wide; full circle at both ends of pipe marker, tape lapped 3".
2. Strapped-to-pipe (or insulation) application of semi-rigid type, with manufacturer's standard stainless steel bands.

D. Lettering: Comply with piping system nomenclature as specified, scheduled or shown, and abbreviate only as necessary for each application length.

1. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as a separate unit of plastic.

2.7 UNDERGROUND TYPE PLASTIC LINE MARKER:

A. General: Manufacturer's standard permanent, bright-colored, continuous-printed plastic tape, intended for direct-burial service; not less than 6" wide x 4 mils thick. Provide tape with printing which most accurately indicates the type of service of buried pipe.

1. Provide multi-ply tape consisting of solid aluminum foil core between 2-layers of plastic tape.

2.8 CEILING TACKS

A. Description: Steel with 3/4 inch diameter color-coded head.

B. Color code as follows:

1. Plumbing valves: Green.

2.9 PLASTICIZED TAGS:

A. General: Manufacturer's standard pre-printed or partially pre- printed accident-prevention tags, of plasticized card stock with matt finish suitable for writing, approximately 3 1/4" x 5 5/8", with brass grommets and wire fasteners, and with appropriate pre- printed wording including large-size primary wording (as examples; DANGER, CAUTION, DO NOT OPERATE).

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

3.2 INSTALLATION

A. General:

1. Coordination: Where identification is to be applied to surfaces, which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.
2. Confined Spaces: Provide labels and signs on all duct and equipment doors, plenums, etc. to indicate service and provide operator warnings as required by OSHA, NFPA, and authority having jurisdiction.

B. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.

C. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.

D. Piping System Identification:

1. General: Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:

    a. Plastic pipe markers, with application system as indicated under "Materials" in this section.
2. Locate pipe markers and color bands as follows on all piping in occupied spaces, above ceilings, machine rooms, accessible maintenance spaces (shafts, tunnels, plenums) and exterior non-concealed locations.

    a. Near each valve and control device.
    b. Near each branch, excluding short take-offs for fixtures and terminal units; mark each pipe at branch, where there could be question of flow pattern.
    c. Near locations where pipes pass through walls or floors/ ceilings, or enter non-accessible enclosures.
    d. At access doors, manholes and similar access points, which permit view of concealed piping.
    e. Near major equipment items and other points of origination and termination.
    f. Spaced intermediately at maximum spacing of 25' along each piping run, except reduce spacing to 10' in congested areas.
        1) All exposed natural gas piping, > 0.5 PSIG shall be marked at intervals not exceeding 5 feet.
3. Non-Potable Water Identification:
   Change Summary: Whenever nonpotable water systems are installed, including outside of the building, the piping must be identified.

    a. Where nonpotable water systems are installed, the piping conveying the nonpotable water shall be identified either by color marking or metal tags in accordance with plumbing code. All nonpotable water outlets such as hose connections, open-ended pipes, and faucets shall be identified at the point of use for each outlet with the words, “Nonpotable-not safe for drinking.” The words shall be indelibly printed on a tag or sign constructed of corrosion-resistant waterproof material or shall be indelibly printed on the fixture. The letters of the words shall be not less than 0.5 inches in height and in colors in contrast to the background on which they are applied.
    b. All systems and outlets for nonpotable water should be identified regardless of location.

4. Labeling of water distribution pipes in bundles:

    a. Where water distribution piping is bundled at installation, each pipe in the bundle shall be identified per project specification. The identification shall indicate the pipe contents and the direction of flow in the pipe. The interval of the identification markings on the pipe shall not exceed 25 feet. There shall be not less than one identification label on each pipe in each room, space, or story.
5. For exposed natural gas lines other than steel pipe, attach yellow pipe labels with "GAS" in black lettering, at maximum 5 foot spacing.

E. Underground Piping Identification:

1. General: During back-filling/top-soiling of each exterior underground piping system, install continuous underground-type plastic line marker, located directly over buried line at 6" to 8" below finished grade. Where multiple small lines are buried in common trench and do not exceed overall width of 16", install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

F. Valve Identification:

1. General: Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, plumbing fixture faucets, convenience and lawn-watering hose bibs, and shut-off valves at plumbing fixtures. List each tagged valve in valve schedule for each piping system.
2. Label all medical gas valves as follows:

    a. NAME or CHEMICAL SYMBOL OF MEDICAL GAS OR VACUUM SYSTEM
    b. ROOM or AREAS SERVED
    c. A CAUTION TO NOT CLOSE OR OPEN THE VALVE EXCEPT IN EMERGENCY

G. Equipment Identification:

1. General: Install engraved plastic laminate sign on or near each major item of plumbing equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:

    a. Main control and operating valves, including safety devices and hazardous units such as gas outlets.
    b. Water meters and flow meters.
    c. Fuel-burning units.
    d. Pumps, compressors, and similar motor- driven units.
    e. Heat exchangers, expansion tanks, and similar equipment.
    f. Tanks and pressure vessels.
    g. Filters, water treatment systems and similar equipment.
    h. Domestic water heater, RO/DI equipment, vacuum pump units, sumps, sewage ejectors, etc.
2. Lettering Size: Minimum 1/4" high lettering for name of unit where viewing distance is less than 2'-0", 1/2" high for distances up to 6'-0", and proportionately larger lettering for greater distances. Provide secondary lettering of 2/3 to 3/4 of size of the principal lettering.

3. Text of Signs: In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety precautions, and warn of hazards and improper operations.

H. Provide ceiling tacks to locate valves above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

3.3 ADJUSTING

A. Adjusting: Relocate any identification device, which has become visually blocked by work of this division or other divisions.

3.4 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Cleaning: Clean face of identification devices.

3.5 EXTRA STOCK

A. Furnish minimum of 5% extra stock of each identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping system identification markers, and additional plastic laminate engraving blanks of assorted sizes.

1. Where stenciled markers are provided, clean and retain stencils after completion of stenciling and include used stencils in extra stock, along with required stock of stenciling paints and applicators.

END OF SECTION

SECTION 22 05 93

TESTING, ADJUSTING AND BALANCING FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 22.

1.2 SUMMARY

A. Coordinate work of this section with all trades.

B. Work covered in this Section shall be performed after completion of work specified in all Divisions as they related to this work.

C. Review of design drawings and specifications, and comment on potential problem areas.

D. Site inspections of ongoing plumbing installation with written report from each visit.

E. Measurement and setting of all domestic hot water systems provided or specified in accordance with these contract documents, recording data, making tests, and preparing reports, all as hereinafter specified.

F. Coordinate with all trades to provide all incidental items not indicated on drawings or in specifications that belong to work described or are required for complete systems balancing, at no additional cost to Owner.

G. Refer to paragraph “Closeout Submittals” in Division 22 Section: “Common Work Results for Plumbing.”

1.3 SUBMITTALS

(Unless otherwise noted, references apply to “latest edition”.)

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Agency Data:

1. Submit proof that proposed testing, adjusting, and balancing agency meets the qualifications specified within 30 days of award of contract.

C. Engineer and Technicians Data:

1. Submit proof that Test and Balance Engineer assigned to supervise procedures, and technicians proposed to perform procedures meet qualifications specified within 30 days of award of contract.

D. Procedures and Agenda: Submit synopsis of testing, adjusting, and balancing procedures and agenda proposed to be used for this project within 90 days of award of contract.

E. Document Review:

1. Submit certification in writing that all design drawings and specifications have been reviewed, and comment on potential problems within 90 days of award of contract.

F. Maintenance Data: Submit maintenance and operating data that include how to test, adjust, and balance the building systems. Include this information in maintenance data specified in Division 01 and Division 22 Section: “Common Work Results for Plumbing.”

G. Certified Reports: Submit testing, adjusting, and balancing reports bearing the seal and signature of Test and Balance Engineer. Reports shall be certified proof that systems have been tested, adjusted, and balanced in accordance with referenced standards; are an accurate representation of how systems have been installed; are true representation of how systems are operating at completion of testing, adjusting, and balancing procedures; and are accurate record of final quantities measured, to establish normal operating values of the systems. Follow procedures and format specified below:

1. Report Format: Report forms shall be those standard forms prepared by referenced standard for each respective item and system to be tested, adjusted, and balanced. Bind report forms complete with schematic systems diagrams and other data in reinforced, vinyl, three-ring binders. Provide binding edge labels with project identification and a title descriptive of contents. Divide contents of binder into divisions listed below, separated by divider tabs:

    a. General Information and Summary
    b. Domestic hot Water Systems
    c. Automatic Temperature Controls
    d. Special Systems

2. Report Contents: Provide following minimum information, forms and data:

    a. General Information and Summary: Inside cover sheet to identify testing, adjusting, and balancing agency, Contractor, Owner, Architect, Engineer, and Project. Include addresses, and contact names and telephone numbers. Include certification sheet containing seal and name address, telephone number, and signature of Certified Test and Balance Engineer. Include in this division listing of the instrumentations used for the procedures along with proof of calibration.
    b. Remainder of the report shall contain appropriate forms containing as minimum, information indicated on standard report forms prepared by AABC and NEBB, for each respective item and system. Prepare schematic diagram for each item of equipment and system to accompany each respective report form.

H. NIST Calibration Reports: Submit proof that all testing and balancing instruments and equipment used for this project has been calibrated in accordance with NIST Standards, within period of twelve months prior to starting project.

I. Final submittal shall include but not be limited to following:

1. List of equipment used to perform test and procedures.
2. Equipment performance data and equipment curves with actual points of performance indicated on curves as compiled during balancing.
3. Domestic hot water system component flow rates, pressures and temperatures.
4. On balance report documents record date and time of reading.

J. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.4 QUALITY ASSURANCE

(Unless otherwise noted, references apply to “latest edition”)

A. Agency Qualifications:

1. Employ services of independent testing, adjusting, and balancing agency meeting qualifications specified below, to be single source of responsibility to test, adjust, and balance the building domestic hot water systems to produce design objectives. Services shall include checking installations for conformity to design, measurement and establishment of fluid quantities of plumbing systems as required to meet design specifications, and recording and reporting results.
2. Certified by National Environmental Balancing Bureau (NEBB) or by Associated Air Balance Council (AABC) in those testing and balancing disciplines required for this project, and having at least one Professional Engineer registered in State in which services are to be performed, certified by NEBB or AABC as Test and Balance Engineer.

B. Work shall be accomplished in accordance with specifications. Procedures specified shall be followed and, if not specifically described herein, in general, shall be in accordance with Associated Air Balance Council's National Standards or National Environmental Balancing Bureau's Procedural Standards.

C. Design Review:

1. Review all design drawings and specifications. Review shall include:

a. Control device location and balancing devices location in piping systems.
b. Indicate additional balancing devices required for proper balancing.
c. Specifications on all devices required for balancing.
d. Note any potential noise problems.

2. Within 90 days of award of contract, meet with the Architect, Mechanical Contractor, and Building Automation System Contractor to review procedures and agenda and comments on design documents as to potential problem areas.

D. Shop Drawing Review:

1. Review “Instrumentation and Control for HVAC” shop drawing submittals noting any potential balancing problems. Note comments on submittal, sign, stamp and return to General Contractor. All “Instrumentation and Control for HVAC” submittals must be reviewed by balancing agency prior to review by Architect.

E. Pre-Balancing Conference: Prior to beginning of testing, adjusting, and balancing procedures, schedule and conduct conference with Architect and representatives of installers of mechanical systems. Objective of conference is final coordination and verification of system operation and readiness for testing, adjusting, and balancing.

F. During construction, balancing agency shall inspect the installation of pipe systems, temperature controls, and other component parts of plumbing system. Inspections shall be performed periodically as work progresses. Minimum of two inspections are required as follows: (1) when 60 percent of piping is installed; (2) when 90 percent of equipment is installed. Balancing agency shall submit brief written report of each inspection to Owner and Architect.

G. Standards:

1. Associated Air Balance Council (AABC) Publication:

    a. National Standards for Testing and Balancing Heating, Ventilating and Air Conditioning Systems, Latest Edition.
    b. NSF/ANSI 61 & Annex G: Drinking Water Systems Components – Health Effects.
    c. NSF/ANSI 372: Drinking Water Systems Components – Lead Content.
2. American Society of Heating, Refrigeration and air Conditioning Engineers (ASHRAE) Publications:

    a. "ASHRAE Research Report No. 1162, "Air Flow Measurements at Intake and Discharge Openings and Grilles," ASHVE Transactions, Volume 46.
    b. ASHRAE Handbook of Fundamentals, Latest Edition.
3. American National Standards Institute (ANSI) Publications:

    a. ANSI/AIHA Z9.5 American National Standard for Laboratory Ventilation, Latest Edition.
4. National Environmental Balancing Bureau (NEBB)

    a. Procedural Standards for Testing-Balancing- Adjusting of Environmental Systems, Latest Edition.
5. Scientific Equipment & Furniture Association (SEFA) Standard SEFA1 – Laboratory Fume Hoods.

1.5 OWNER'S INSTRUCTIONS

A. Balancing contractor's technician along with his balancing engineer shall provide four (4) hours of instruction to Owner's engineers on balancing methods, procedures and equipment.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 SYSTEM BALANCE - GENERAL REQUIREMENTS

A. Balance domestic hot water systems to obtain water quantities indicated and required for proper operation of system.

B. Field work performed under this Section shall be provided under direct supervision of a Registered Professional Engineer.

C. Furnish services for complete adjustment of water system distribution and controls.

D. During all tests, it shall be demonstrated that systems shall be free from leaks and all parts of system will operate correctly. If not, report deficiencies to Contractor and Owner. Balancing Firm shall make final adjustments to system as may be required for proper operation, maintaining correct flow rates in all parts of the building.

E. Preliminary Work:

1. Inspect project site prior to starting adjustments to verify completion of trades, including general construction, piping system, building automation systems, and electrical systems, as they relate to balancing work. Verification shall include but not be limited to following:

    a. Piping System (domestic hot water):
    b. Already cleaned and flushed by mechanical contractor.
    c. Chemical treatment operating, or applicable to system.
    d. System filled and vented of air under Division 22.
    e. Proper direction of rotation for motor-driven equipment and for proper speed on multi-speed motors.
    f. Balancing devices are installed and accessible.
    g. Control device connections.
    h. Note problems in general construction of the building that might effect systems performance such as sealing of windows, building joints, exhaust shafts, etc.
    i. Problems discovered during this inspection shall be reported to General Contractor and Owner.

2. Contractor shall certify in writing that each piping system has been prepared as per this Section, indicating dates procedures were done and which contractor did work. Submit in writing to Architect before beginning balancing work.

F. Balancing of domestic hot water circulation systems and parts installed under this Contract to obtain water quantities and temperature drops in all parts of system shown on plans, in specifications on approved shop drawings or as required by Architect.

3.2 DOMESTIC HOT WATER SYSTEM BALANCE

A. In conjunction with Instrumentation and Controls System Technician, pumps shall be started per design sequence. With manual valves open, and control valves in normal position, adjust discharge balancing valve to obtain design flow. Compare data with pump submittal curve. If test point falls on curve, proceed with balancing. If recorded data does not fall on pump curve, plot new curve parallel with other curves on chart, from zero to maximum flow. Open discharge balancing valve to full and record discharge pressure, suction pressure and total head. Readjust balancing valve to obtain suction and discharge design flow and pressure, and record data. Check and record pump motor voltage and amperage. Pump motor shall not be overloaded.

B. With pump system adjusted, perform following tests, compile data and submit report:

1. Pumps:

a. Design Data
   1) Flow and total dynamic head.
   2) Pump speed, and motor output.
b. Installed equipment
   1) Manufacturer, size and model number.
   2) Type drive.
   3) Motor rating, voltage, and phase.
   4) Full-load amperes.
c. Field Test
   1) Discharge pressures: Full flow and zero flow.
   2) Suction pressures: Full flow and zero flow.
   3) Operating flow and total dynamic head
   4) No-load amperes (where possible.)
   5) Full-flow amperes, zero-flow amperes.
   6) Calculated motor output.

C. With pump system properly adjusted, proceed with following tests adjustments and compilation of data:

1. Pipe Mains and Branches:

a. Adjust branch balancing valves to obtain pressure and flowrates required.
b. Provide the following:
   1) Manufacturer's model number, size of heat exchanger, number of passes.
   2) Design and actual flow rate and pressure drop.
c. Heat transfer equipment including domestic hot water.
   1) Measured Parameters
      a) Flowrate.
      b) Heat transfer.
      c) Entering and leaving temperatures.
      d) Pressure drops.
   2) Equipment data
      a) Manufacturer and model number.
      b) Motor output horsepower.
      c) Serial numbers.

3) Design Data
   a) Include design data in submittal for comparison.

3.3 CALIBRATION

A. During testing and balancing, inspect temperature sensors, pressure sensors, digital indicators, and thermometers, etc. provided under Division 22. Report discrepancies to the Contractor for replacement or recalibration.

3.4 RE-BALANCE

A. After Architect's review of test and balance report submittal, make adjustment in any balancing point as required by Architect, to correct discrepancies between balance report and design, at no additional cost.

3.5 FINAL BALANCE

A. Visit site within one year after building occupancy if necessary to adjust and rebalance, any system required by Owner, to resolve any and all complaints. After final balance, revise previous submittal and resubmit to architect for record purpose. Rebalance and resubmittals shall be done at no additional cost to Owner.

3.6 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section: “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable.

END OF SECTION

SECTION 22 07 00

PLUMBING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of the contract, including General and Supplemental Conditions and Division 01 Specifications, apply to this section and the other sections of Division 22.

1.2 SUMMARY

A. This section Includes:

1. Insulation Materials:
    a. Cellular glass.
    b. Flexible elastomeric.
    c. Glass Mineral Wool
2. Insulating cements.
3. Adhesives.
4. Mastics.
5. Lagging adhesives.
6. Sealants.
7. Factory-applied jackets.
8. Field-applied fabric-reinforcing mesh.
9. Field-applied cloths.
10. Field-applied jackets.
11. Tapes.
12. Securements.
13. Corner angles.
14. Insulation for handicapped fixtures.

B. Related Sections: The following sections contain requirements that relate to this section.

1. Division 07 Section: “Firestopping:” Product requirements for firestopping for placement by this section.
2. Division 09 Section: “Painting and Coating:” Execution requirements for painting insulation jackets and covering specified by this section.
3. Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment:” Product and Execution requirements for inserts at hanger locations.
4. Division 22 Section: “Identification for Plumbing Piping and Equipment:” Product requirements for plumbing piping and equipment identification.

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. ASTM International:

1. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
2. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
3. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
5. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
6. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
7. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
8. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
9. ASTM C518 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
10. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
11. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
12. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
13. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation.
14. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
15. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
16. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
17. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
18. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).
19. ASTM C610 - Standard Specification for Molded Expanded Perlite Block and Pipe Thermal Insulation.
20. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
21. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
22. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
23. ASTM C1126 - Standard Specification for Faced or Unfaced Rigid Cellular Phenolic Thermal Insulation.
24. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
25. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
26. ASTM C1393 - Standard Specification for Perpendicularly Oriented Mineral Fiber Roll and Sheet Thermal Insulation for Pipes and Tanks.

27. ASTM C1617 – Standard Practice for Quantitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals
28. ASTM C1639 – Standard Specification for Fabrication of Cellular Glass Pipe and Tubing Insulation
29. ASTM D1784 - Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
30. ASTM D1785 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedule 40, 80, and 120.
31. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
32. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
33. ASTM E2231 – Standard Practice for Specimen Preparation and Mounting of Pipe and Duct Insulation Materials to Assess Surface Burning Characteristics

B. Underwriters Laboratories Inc.:

1. UL 723 – Standard Test Method for Surface Burning Characteristics of Building Materials

C. American Society of Heating, Refrigerating, and Air Conditioning Engineers, Inc. (ASHRAE).

D. North American Insulation Manufacturers Association (NAIMA).

E. NAIMA – "Guide to Insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation."

F. "National Commercial & Industrial Insulation Standards" – MICA Manual.

G. National Fire Protection Association (NFPA).

H. Underwriter's Laboratories Environmental (UL Environment).

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.

C. LEED Submittals Comply with Section 018113:

1. MR Credit 2: Environmental Product Declarations

a. Pipe insulation, if available

2. MR Credit 4: Material Ingredients

a. Report: Pipe insulation, if available

D. Samples: Submit two samples of representative size illustrating each insulation type.

E. Manufacturer's Installation Instructions: Submit manufacturers published literature indicating proper installation procedures.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements

G. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 QUALITY ASSURANCE

A. Pipe Insulation shall be UL/ULC Classified per UL 723 or have maximum flame spread index of 25 and maximum smoke developed index of not exceeding 50 in accordance with ASTM E84 using specimen procedures and mounting procedures of ASTM E 2231.

B. Pipe insulation manufactured in accordance with ASTM C585 for inner and outer diameters.

C. Factory fabricated fitting covers manufactured in accordance with ASTM C450.

D. Perform Work in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

E. Fire-Test-Response Characteristics: Insulation and related materials shall be UL/ULC Classified per UL 723 or have fire-test response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

F. Insulation materials shall be tested and rated according to ASTM Test Method C-177 to determine k-factors. ASTM C 335 is for pre-formed pipe insulation. Note: C177 is for flat slab materials ONLY; such as board products, etc.

G. Formaldehyde Free: Third party certified with UL Environment Validation.

H. Biosoluble: As determined by research conducted by the International Agency for Research on Cancer (IARC) and supported by revised reports from the National Toxicology Program (NTP) and the California Office of Environmental Health Hazard Assessment. Certified by European Certification Board for Mineral Wool Products (EUCEB).

I. Recycled Content: A minimum of 50 percent recycled glass content certified and UL Validated.

J. Low Emitting Materials: For all thermal and acoustical applications of Glass Mineral Wool Insulation Products, provide materials complying with the testing and products requirements of UL GREENGUARD Gold Certification.

K. Living Building Challenge-Declare Red List Free.

L. Products shall contain no polybrominated diphenyl ethers (PBDE) such as Penta-BDE,

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Applicator: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

C. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping. Remove and replace any wet or damaged unsatisfactory insulation at the architect’s direction.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental conditions affecting products on site.

B. Install insulation only when ambient temperature and humidity conditions are within range recommended by manufacturer.

C. Maintain temperature during and after installation for minimum period of 24 hours.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product Warranties and product bonds.

B. Furnish minimum two year manufacturer warranty for man made fiber.

1.12 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Requirements for coordination.

B. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment.”

C. Coordinate clearance requirements with piping Installer for piping insulation application, and equipment Installer for equipment insulation application. Before preparing piping Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.

1.13 DEFINITIONS

A. Thermal Conductivity (K value): Units of Btu-inch/hour per square foot per degree F.

B. UL GREENGUARD: Provides independent third party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC's), including formaldehyde and other specific product related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.

C. EPA: Environmental Protection Agency.

D. WHO: World Health Organization.

E. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with a polypropylene outer film layer leaving no paper exposed.

F. ASJ: Al-service jacket.

G. FSK: Foil, scrim, Kraft paper.

H. FSP: Foil, Scrim, polyethylene.

I. PVDC: Polyvinylidene chloride.

J. SSL+: Self-Sealing Lap with Advanced Closure System.

K. SSL: Self-sealing lap.

L. ASJ Max: All service jacket composed of aluminum foil with tri-directional reinforcing scrim bonded to Kraft paper with a polypropylene outer layer leaving no exposed paper.

M. PSK: Poly Scrim Kraft.

N. PVC: Polyvinyl Chloride.

O. Glass Mineral Wool: Interchangeable with fiber glass, but replacing the term in the attempt to disassociate and differentiate Glass Mineral Wool from the potential health and safety of special

purpose or reinforcement products that do not meet the bio solubility criteria of insulation made from glass. Rock Mineral Wool will replace the traditional Mineral Wool label. Both are used in lieu of the Mineral Fiber label.

P. ECOSE® Technology: a revolutionary binder chemistry that enhances the sustainability of products. The "binder" is the bond that holds the Glass Mineral Wool product together and gives the product its shape and brown color. ECOSE Technology is a plant based sustainable chemistry that replaces the phenol/formaldehyde (PF) binder traditionally used in Glass Mineral Wool products. Products using ECOSE Technology are formaldehyde free and have greater reduced global warming potential than compared to products of the past.

Q. UL GREENGUARD Gold Certification: (formerly known as GREENGUARD Children & Schools Certification) offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced; by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy Environmental Design (LEED) Building Rating Systems.

R. UL Environment Formaldehyde Free Verification Requirements: For a product to be verified as formaldehyde free, product samples must have a measured emission factor of less than or equal to 5 $\mu g/m^2h$ at 24 elapsed hours or 3 $\mu g/m^2h$ at 336 elapsed hours. An emission factor of 5 $\mu g/m^2h$ corresponds to measured chamber concentration of 2.5 $\mu g/m^3$ for a typical building ratio of 0.5 m^2/m^3. This chamber concentration is comparable to, or below typical outdoor air concentrations. This demonstrates that the formaldehyde exposure from products labeled as formaldehyde free will not contribute to airborne formaldehyde concentrations at greater levels than those found in the natural outdoor environment.

S. Declare and The Living Building Challenge – The Living Building Challenge is a philosophy, advocacy tool and certification program that addresses development at all scales. The purpose of The Living Building Challenge is to define the most advanced measure of sustainability in the built environment today and acts to diminish the gap between current limits and ideal solutions. Declare supports The Living Building Challenge by providing a transparent materials database that project teams can select from to meet Imperative 11.

T. Imperative 11, Red List – requires that manufacturers disclose the ingredients in their products to insure that they are free of Red List chemicals and materials. The Red List represents the “worst in class” materials, chemicals and elements known to pose serious risks to human health and the greater ecosystem.

U. Underwriters Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification. UL GREENGUARD provides third party credibility for sustainable products.

V. UL Environment Claims Validation (ECV): service and label tests a manufacturer’s product and validates that the environmental claims they make in their marketing and packaging materials are factual. This Environmental Claims Validation (ECV) service will allow manufacturers to verify that their products contain a quantifiable amount of recycled content and, as such, help limit raw material extraction and reduce landfill waste. It also will enable products to qualify for LEED® points under Pilot Credit 43: MR – Certified Products.

W. EUCEB: exonerated fiber from a health and safety standpoint by the European Certification Board process.

X. Recycled Content: materials such as bottled glass collected at curbside or other collection sites after consumer use and/or materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.

Y. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE or Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.

Z. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL Classifies products to:

1. Applicable UL requirements.
2. Standards for safety.
3. Standards of other National and International organizations.

AA. EPD: Environmental Product Declaration. A third party verified document that reports environmental data of products based on the Life Cycle Assessment (LCA) and other relevant information, and in accordance with the International Standard ISO 14025 (Type III Environmental Declarations).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply to product selection.

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 INSULATION MATERIALS

A. Refer to Part 3 execution: schedule for requirements regarding where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury, or mercury compounds.

C. Insulation products shall contain no formaldehyde-based binders or shall be third-party certified for conformance with GREENGUARD Gold or Indoor Advantage Gold. (GREENGUARD Children and Schools is now called GREENGUARD Gold)

D. When product to be in contact with austenitic stainless steel is tested according to ASTM C795 (which includes ASTM C692 and ASTM C871), the PH of the leach water from the specific material supplied shall be greater than 7.0 but not greater than 11.7 at 77°F (25°C). An acceptable proportion of sodium plus silicate ions to the chloride ions as found by leaching from the insulation is shown in the “plot point” of figure 6 in ASTM C795.

E. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

F. Insulation materials applied to carbon steel shall be Mass Load Corrosion Rate (MLCR) tested per ASTM 1617.

G. Cellular Glass: Inorganic, incombustible, foamed or celluated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

1. Products:

    a. Pittsburgh Corning; FOAMGLAS® ONE™ Insulation.
    b. Specialty Products & Insulation Company (SPI), Lancaster, PA., Cellular, glass fabricator.
2. Block Insulation: ASTM C 552, Type I.
3. Special-Shaped Insulation: ASTM C 552, Type III.
4. Board Insulation: ASTM C 552, Type IV.
5. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Grade 6.
6. Maximum K-Factor: 0.29 at 75 deg. F. mean temperature.
7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.

H. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Products:

    a. Aeroflex USA Inc.: Aerocel.
    b. Armacell LLC; AP Armaflex (rectangular)
    c. Armacell LLC; AP Coilflex (round/oval)
    d. Nomaco; K-Flex Pipe
2. Water Vapor Permeability: 0.02 perm-inch per ATM E96 Procedure A.
3. Thermal Conductivity: 0.27 at 75 degrees F
4. Warranty: 25 year warranty against breakdown of the membrane due to ultraviolet radiation.
5. Seal Tape: Thermoplastic rubber membrane backed with pressure sensitive adhesive.

I. Glass Mineral Wool Blanket Insulation: Glass mineral wool bonded with a thermosetting resin. Comply with ASTM C 553, Types I, II and III, ASTM C 1136, Type II and ASTM C 1290, Type I or Type III, UL/ULC Classified per UL 723 or FHC 25/50 per ASTM E 84. UL GREENGUARD Gold Certified and Validated to be formaldehyde free by UL Environment. Product shall contain no polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE or Deca-BDE. Factory applied FSK jacket. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

J. Glass Mineral Wool Board Insulation: Glass mineral wool bonded with a thermosetting resin. UL/ULC Classified per UL 723 or FHC 25/50. Comply with ASTM C 612, Type IA or Type IB. Living Building Challenge – Declare Red List Free. For equipment applications, provide insulation with factory-applied ASJ+. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

1. Products:

a. Knauf Insulation; Earthwool Insulation Board with ECOSE Technology
b. CertainTeed Corp.; Commercial Board.
c. Johns Manville; 800 Series Spin-Glas, Type 814.
d. Owens Corning; Fiberglas 700 Series.

2. Thermal Conductivity: 0.23 at 75 degrees F

K. Glass Mineral Wool, Preformed Pipe Insulation:

1. Products:

a. Johns Manville; Micro-Lok HP Ultra
b. Knauf Insulation; Earthwool 1000 Pipe insulation with Ecose® Technology.
c. Knauf Insulation; Earthwool Redi-Klad 1000 Pipe insulation with Ecose® Technology. . (for chilled water or outdoor applications)
d. Owens Corning; Fiberglas Pipe Insulation SSLII with ASJ Max.

2. Type I, 850 deg F or Type IV, 1000 deg F. Materials: Glass mineral wool bonded with a thermosetting resin. UL/ULC Classified per UL 723 or FHC 25/50 per ASTM E 84. Living Building Challenge – Declare Red List Free for Redi-Klad Pipe or unjacketed Earthwool Pipe only. Comply with ASTM C 585, ASTM C 411, ASTM C 795 and ASTM C 547, Type I and Type IV, with factory-applied ASJ+ - SSL+ or ASJ+ - SSL. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.
3. Type II, 1200 degree F Materials: Mineral or glass fibers bonded with thermosetting resin. Comply with ASTM C547, Type II, Grade A, with Factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.
4. Maximum K-Factor: 0.23 at 75 deg. F mean temperature; 0.34 at 250 deg. F mean temperature.

L. Glass Mineral Wool, Pipe and Tank Insulation: Glass mineral wool bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ Max, ASJ+, or PSK complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

1. Products:

a. Certain Teed Corp.; CrimpWrap.
b. Johns Manville; MicroFlex.
c. Knauf Insulation; Pipe and Tank Insulation, with Ecose® Technology - 850°F.
d. Knauf Insulation; Kwik Flex Pipe & Tank Insulation -850° F with Ecose ® Technology.
e. Owens Corning; Fiberglas® Pipe and Tank Insulation with white ASJ Max for systems operating at temperatures to 650°.
f. Owens Corning; Flexwrap for operating temperatures up to 850°

2. Maximum K-Factor: 0.29 at 100 deg F. Mean temperature; 0.45 at 300° F Mean temperature Minimum Density: 2.5 pounds per cubic foot.
3. Minimum Density: 2.5 pounds per cubic foot.

2.3 INSULATING CEMENTS

A. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

B. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

C. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

2.4 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Cellular-Glass and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 81-84.
b. Pittsburgh Corning, PC 99 2k Adhesive.

C. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II, Class I

1. Products:

a. Armacell LCC; Armaflex 520 Adhesive, Armaflex 520 BLV Low-VO Adhesive.
b. Foster Products Corporation, H. B. Fuller Company; 85-60.

D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 85-70.
b. Eagle Bridges - Marathon Industries, Inc.; 225.

E. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 85-70.
b. Eagle Bridges - Marathon Industries, Inc.; 225.

F. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products:

a. Dow Chemical Company (The); 739, Dow Silicone.

2.5 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.

B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.

1. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 30-90.
    b. Eagle Bridges - Marathon Industries, Inc.; 590.
    c. Mon-Eco Industries, Inc.; 55-40.
    d. Vimasco Corporation; 749.
2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
5. Color: White.

C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 35-00.
    b. Eagle Bridges - Marathon Industries, Inc.; 550.
    c. Mon-Eco Industries, Inc.; 55-50.
    d. Pittsburgh Corning, PITTCOTE 404 Coating
    e. Vimasco Corporation; WC-1/WC-5.
2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 200 deg F.
4. Solids Content: 63 percent by volume and 73 percent by weight.
5. Color: White.

2.6 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.

1. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 81-42W.
    b. Eagle Bridges - Marathon Industries, Inc.; 130.
    c. Vimasco Corporation; 713/714.
2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct, equipment, and pipe insulation.
3. Service Temperature Range: Minus 50 to plus 180 deg F.
4. Color: White.

2.7 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass and Polyisocyanurate Products:

    a. Foster Products Corporation, H. B. Fuller Company; 30-45.
    b. Eagle Bridges - Marathon Industries, Inc.; 405.
    c. Mon-Eco Industries, Inc.; 44-05.
    d. Pittsburgh Corning Corporation; PITTSEAL® 444Ns Sealant.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.

B. FSK and Metal Jacket Flashing Sealants:

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 95-44.
b. Eagle Bridges - Marathon Industries, Inc.; 405.
c. Mon-Eco Industries, Inc.; 44-05.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.

C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

2.8 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ+ - SSL+; ASJ+ jacket with Self-Sealing Advanced Closure System; complying with ASTM C 1136 Type I, II, III, IV and VII secured with self-sealing longitudinal laps and matching ASJ+ butt strips.
2. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with a polypropylene outer film layer.
3. ASJ Max: All service jacket made using aluminum foil and tri-directional reinforcing scrim bonded to Kraft paper with polypropylene outer layer complying with ASTM C 1136, Type I.
4. Redi-Klad Jacket: Factory applied venture clad 5-ply weather and abuse resistant with self-sealing lap. Zero permeability per ASTM E 96-05; puncture resistance 35.4 kg (189.3_N) per ASTM D 1000; tear strength 4.3lb (19.4_N) per ASTM D 624, thickness 14.5 mils (0.0145”); tensil strength 68 lb/inch width [306 N (32K9)/25mm.]
5. FSK (FRK) Jacket: Aluminum-foil, fiberglass-reinforced scrim with Kraft-paper backing; complying with ASTM C 1136, Type II.
6. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
7. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according toASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
8. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.

a. Products:
   1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
   2) HiCube Coating: HC1000 Vapor Barrier

9. Vinyl Jacket: UL-rated white vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.
10. PSK Jacket, Polypropylene scrim with Kraft.
11. Aluminum-Polyester Self-Adhesive Jacket: 12 mils (0.22 mm) thick, made with alternating layers of aluminum foil and polyester film coated with cold weather acrylic adhesive. Construction of laminate designed to provide UV resistance, high puncture and tear resistance.

    a. Products:
       1) Armacell LLC; Armatuff
       2) Venture Tape; Venture Clad

2.9 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch for covering pipe and pipe fittings.

   1. Products:

      a. Vimasco Corporation; Elastafab 894.

B. Woven Glass-Fiber Fabric for Duct and Equipment Insulation: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. inch for covering equipment.

C. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch, in a Leno weave, for duct, equipment, and pipe.

   1. Products:

      a. Foster Products Corporation, H. B. Fuller Company; Mast-A-Fab.
      b. Vimasco Corporation; Elastafab 894.
      c. Pittsburgh Corning Corporation; PC Fabric 79.

2.10 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with Kraft-paper backing.

C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; 30 mil thickness; roll stock Ready for shop or field cutting and forming.

   1. Products:

      a. Johns Manville; Zeston.
      b. P.I.C. Plastics, Inc.; FG Series.
      c. Proto PVC Corporation; LoSmoke.

d. Speedline Corporation; SmokeSafe.

2. Adhesive: As recommended by jacket material manufacturer.
3. Color: white
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

   a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps and mechanical joints minimum 30 mil thickness.

5. Factory-fabricated tank heads and tank side panels.
6. Provide preformed Fiberglass 1 lb. density 2” thick insulation inserts to comply with ASHRAE 90.1 and ASTM C547 requirements.

D. Metal Jacket:

1. Products:

   a. Childers Products, Division of ITW; Metal Jacketing Systems.
   b. PABCO Metals Corporation; Surefit.
   c. RPR Products, Inc.; Insul-Mate.

2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.

   a. Sheet and roll stock ready for shop or field sizing.
   b. Thickness:
      1) Up to 24 inch diameter, width, or height: 0.016 inch minimum.
      2) 25 inch to 59 inch diameter, width, or height: 0.024 inch minimum.
      3) 60 inch and larger diameter, width, or height: 0.032 inch minimum.
   c. Finish: Smooth finish.
   d. Color: White
   e. Moisture Retarder: 3-mil- thick Polysurlyn (co-extrusion of polyethylene and Dupont Surlyn®, heat laminated to the metal jacketing).
   f. Factory-Fabricated Fitting Covers:
      1) Same material, finish, and thickness as jacket.
      2) Preformed 2-piece or gore, 45- and 90-degree, short- and longradius elbows.
      3) Tee covers.
      4) Flange and union covers.
      5) End caps.
      6) Beveled collars.
      7) Valve covers.
      8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

E. Self-Adhesive Outdoor Jacket: 60-mil thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross laminated polyethylene film covered with stucco-embossed aluminum-foil facing.

1. Products:

   a. Polygaurd; Alumaguard 60.
   b. MFM Building Products Corp., Flex Clad 400.
   c. Venture Clad Jacketing.
   d. HiCube Coating Jacketing

F. Underground Direct-Buried Jacket: 125-mil- thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.

1. Products:

a. Pittsburgh Corning Corporation; PITTWRAP® HS Jacketing.
b. Polyguard; Insulrap No Torch 125.

G. Pipe Sound Lagging: Loaded vinyl with fibrous glass scrim reinforced aluminum foil facing over 2-inch thick quilted fiberglass decoupler. Loaded vinyl shall be 2 psf minimum surface weight. Glass fiber pipe wrap shall be semi-rigid, preformed type, 2- inch minimum thickness, 1-1/2 pcf density.

1. Manufacturers:

a. Kinetics.
b. Sound Seal.
2. Sound Transmission Class (STC) Rating: 26.

2.11 TAPES

A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136 and UL listed.

1. Products:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
b. Compac Corp.; 104 and 105.
c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
e. HiCube Coating: HC108
2. Width: 3 inches.
3. Thickness: 11.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136 and UL listed.

1. Products:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
b. Compac Corp.; 110 and 111.
c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
e. HiCube Coating: HC106
2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.

5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

C. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.

1. Products:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0555.
b. Compac Corp.; 130.
c. Ideal Tape Co., Inc., an American Biltrite Company; 370 White PVC tape.
d. Venture Tape; 1506 CW NS.
e. HiCube Coating: HC404

2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch in width.

D. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive and UL listed.

1. Products:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
b. Compac Corp.; 120.
c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
d. Venture Tape; 3520 CW.
e. HiCube Coating: HC100

2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

E. Elastomeric Foam Tape: Black vapor-retarder foam tape with acrylic adhesive containing, EPA approved anit-microbial additive.

1. Products: Subject to Compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Armacell LLC; AP/Armaflex Insulation Tape

2.12 SECUREMENTS

A. Bands:

1. Products:

a. Childers Products; Bands.
b. PABCO Metals Corporation; Bands.
c. RPR Products, Inc.; Bands.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 316; 0.015 inch thick, 3/4 inch wide with wing or closed seal.
3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.

    a. Products:
        1) AGM Industries, Inc.; CWP-1.
        2) GEMCO; CD.
        3) Midwest Fasteners, Inc.; CD.
        4) Nelson Stud Welding; TPA, TPC, and TPS.
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.

    a. Products:
        1) AGM Industries, Inc.; CWP-1.
        2) GEMCO; Cupped Head Weld Pin.
        3) Midwest Fasteners, Inc.; Cupped Head.
        4) Nelson Stud Welding; CHP.
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

    a. Products:
        1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
        2) GEMCO; Perforated Base.
        3) Midwest Fasteners, Inc.; Spindle.
    b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
    c. Spindle: Copper- or zinc-coated, low carbon steel, fully annealed, 0.106- inch-diameter shank, length to suit depth of insulation indicated.
    d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

    a. Products:
        1) GEMCO; Nylon Hangers.
        2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
    b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
    c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.

d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

5. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inchthick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

a. Products:
1) AGM Industries, Inc.; RC-150.
2) GEMCO; R-150.
3) Midwest Fasteners, Inc.; WA-150.
4) Nelson Stud Welding; Speed Clips.

b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

6. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

a. Manufacturers:
1) GEMCO.
2) Midwest Fasteners, Inc.

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

D. Insulation Pipe Hanger Supports: Support piping system using high-density inserts with sufficient compressive strength, embedded within flexible elastomeric foam, with thickness equal to or greater than the pipe insulation.

a. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but not limited to, the following
1) Armacell LLC; Armafix IPH

E. Wire: 0.062-inch soft-annealed, stainless steel.

1. Manufacturers:

a. ACS Industries, Inc.
b. C & F Wire.
c. Childers Products.
d. PABCO Metals Corporation.
e. RPR Products, Inc.

2.13 CORNER ANGLES

A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

B. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or 316.

2.14 HANDICAPPED WHEEL/CHAIR PLUMBING FIXTURE PIPING INSULATION

A. Manufacturer:

1. TRUEBRO, INC. or comparable acceptable product.

B. Product:

1. ADA-conforming, wheelchair accessible lavatory P-trap and angle valve assemblies shall be covered with white, molded, antimicrobial TRUEBRO, INC. Lav Guard 2 under sink pipe covers. Cover shall have internal, E-Z Tear-To-Fit trim feature for square, clean trimming-internal ribs-and built-in, concealed E-Z Grip fasteners (no cable-tie fasteners allowed.)

C. Undersink Protection Systems

1. Provide Lav Shield® ADA-compliant under sink protection to meet requirements for wheelchair accessibility. Single-piece construction shall conceal piping, electronic faucet connections, mixing valves, trap primers and instantaneous hot water heaters. (Lavatory “rough in” shall be considered to allow mounting room for water heater-contact vendor for specifications.) Pre-cut Lav Shield shall be cut to fit various lavatory models.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Execution and Closeout Requirements:” Coordination and project conditions.

B. Verify piping and equipment to be insulated has been tested before applying insulation materials.

C. Verify surfaces to be insulated are clean and dry, with foreign material removed.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.

C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 COMMON INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Install insulation continuously through hangers and around anchor attachments.

K. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at anchors and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

L. Apply adhesives, mastics, and sealants at manufacturer’s recommended coverage rate and wet and dry film thicknesses.

M. Install insulation with self-sealing factory-applied jackets as follows:

1. Locate all longitudinal pipe insulation jacketing laps in least visible location.
2. Draw jacket tight and smooth.
3. For proper sealing, seal lap joints with reasonable pressure being applied with a plastic squeegee or sealing tool.
4. Vapor seal all circumferential joints with factory furnished matching pressure sensitive butt strips installed with reasonable pressure being applied with a plastic squeegee or sealing tool

N. Install insulation with non-self-sealing factory-applied jackets as follows:

1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive selfsealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.

   a. For below ambient services, apply vapor-barrier mastic over staples.
4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.

O. Cut and install insulation in a manner to avoid compressing insulation more than 25 percent of its original nominal thickness.

P. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

Q. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

R. Replace insulation on existing piping, and equipment where indicated on the drawings. Match insulation type and thickness indicated by the insulation schedule at the end of this section.

S. Replace insulation on new, and equipment where insulation is damaged during construction or removed for testing and balancing work.

T. For above ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.
7. Unions.
8. Flanges.

3.4 PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.

4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.

F. Insulation Installation at Floor Penetrations:

1. Install insulation continuously through floor penetrations.

3.5 EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Secure insulation with anchor pins and speed washers. Insulation for tanks and vessels should only be applied using weld pins or self-adhesive pins (depending on the circumstances) and speed washers. Adhesive should not be used to secure insulation to the tanks or vessels except when utilizing flexible elastomeric insulation.

1. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
2. Protect exposed corners with secured corner angles.
3. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:

a. Do not weld anchor pins to ASME-labeled pressure vessels.
b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
d. Do not overcompress insulation during installation.
e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
f. Impale insulation over anchor pins and attach speed washers.

g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.
5. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one circumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
6. Stagger joints between insulation layers at least 3 inches.
7. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
8. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
9. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. PIPE & TANK INSULATION AND KWIKFLEX

1. Apply on clean, dry surfaces
2. Cut to appropriate length using manufacturers' stretch out guide for the specific pipe size. Add an additional 2 inches to 4 inches for staple flap.
3. Install insulation around the equipment and pipe circumference in a manner that ensures a firm fiber mesh at all joints. Fasten the longitudinal with outward clinches staples placed 3 inches on center. As an alternative, individual sections may be fastened in lace using continuous and overlapping strands of ¾" wide glass fiber filament tape around the insulation jacketing O.D. Longitudinal and circumferential joints shall be sealed with 4" wide matching pressure sensitive tape squeegeed along the entire length.
4. For equipment and pipe exposed to the elements, jacketing shall be or 0.016 inches thick aluminum with factory applied moisture barrier 0.010 inches thick stainless steel with a factory applied moisture barrier or laminated self-adhesive water and weather seals. Fitting covers shall be similar materials. The insulation and jacketing shall be held firmly in place with a friction type Z lock or a minimum 2" overlap joint. For systems operating below ambient, all joints shall be sealed completely along the longitudinal and circumferential seams and installed so as to shed water. All circumferential joints shall be sealed by use of preformed butt strips; minimum 2" wide or a minimum 2" overlap. Butt strips shall overlap the adjacent jacketing a minimum ½ inch and be completely weather sealed. For systems operating above ambient, circumferential joints should overlap a minimum of 2" and not be sealed. Insulation thickness for duct covered by Jacketing shall be such that the surface temperature of the does not exceed 125°F.
5. On below ambient straight duct, vapor retarder mastic shall be applied to raw glass fiber ends at 12 foot to 21 foot intervals, and on either side of fittings, flanges or valves before taping. Mastic shall extend a minimum of 2 inches onto the bore of the pipe and 2 inches onto the jacketing.

C. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.

1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
2. Seal longitudinal seams and end joints.

D. Insulation Installation on Pumps:

1. Fabricate removable, re-useable metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Covers for split case pumps shall be constructed with insulated housing in two sections with upper section removable for access to casing. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8-inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
2. Fabricate boxes from aluminum or stainless steel, at least 0.050 inch thick.
3. For below ambient services, install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.6 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this Article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
2. Fittings shall be insulated to same thickness as the adjoining insulation. Apply fittings per fitting manufacturer's instructions. When required by specification, a hard insert of sufficient length shall be utilized to avoid compression of the insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.

8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
9. Stencil or label the outside insulation jacket of each union with the word UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.7 GLASS MINERAL WOOL INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes.

1. Secure pipe insulation to pope using self-sealing lap system.
2. On high temperature piping, above 500°F, apply insulation using double layer and staggered joints. For double layer installation, secure the unjacketed inner layer using filament tape; without deforming insulation material. All joints and ends must be firmly butted and secured with appropriate securing material.
3. Firmly rub all longitudinal and circumferential joints using a squeegee or sealing tool.
4. Longitudinal jacket laps for pope insulation installed on piping systems with operating temperatures below ambient shall be vapor sealed with factory-applied pressure-sensitive adhesive vapor retarder, self-sealing lap. For proper sealing, firmly rub lap joints with reasonable pressure being applied with a plastic squeegee or sealing tool. Vapor seal all circumferential joints with factory-furnished, matching pressure-sensitive butt strips installed with reasonable pressure being applied with a plastic squeegee or sealing tool. Additionally, coat raw edges of pipe insulation sections with vapor retarder mastic at 12 foot to 21 foot intervals, and on either side of all fittings, flanges, or valves. Vapor retarder mastic shall completely coat the ends of the pipe and extend onto the bore of the pope insulation and onto the jacketing a minimum of 2 inches. Follow

NAIMA's "Guide to Insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation" for additional details.

5. Install metal shields between hangers or supports and the pope insulation. Install rigid insulation inserts as required between the pope and the insulation shields. Inserts shall be of equal thickness to the adjacent insulation and shall be vapor sealed as required. Insulation shields shall be no less than the following lengths:

    a. 1 – 1/2 inch to 2- 1/2 inch IPS: 10 inch long.
    b. 3 inch to 6 inch IPS: 12 inch long
    c. 8 inch to 10 inch IPS: 16 inch long
    d. 12 inch and over IPS: 22 inch
6. For piping subject to abuse in mechanical rooms or high traffic areas, protect insulation from mechanical abuse by the use of appropriate thickness of PVC jacketing, metal jacketing, or laminated self-adhesive water and weather seal.
7. For piping exposed to the elements, install Redi-Klad Insulation with 4 inch butt stripes and self-sealing lap, a jacket that shall be a minimum of 0.016 inch thick aluminum jacket with factory-applied moisture barrier or a minimum 0.010 inch thick stainless steel jacket with factory-applied moisture barrier. Fittings shall be of similar materials. Apply all jacketing per manufacturer's recommendations for the conditions.
8. For piping operating below ambient temperature or in high abuse areas, install Redi-Klad Pipe Insulation with 4 inch butt strips and self-sealing lap. Follow the same guide lines with using Redi0Klad as indicated for ASJ+-SSL+above.

B. Insulation installation for pipe flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with Glass Mineral Wool blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed formaldehyde free Glass Mineral Wool fittings; minimum 50 percent recycled glass content, of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed formaldehyde free fittings; minimum 50 percent recycled glass content, of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.8 CELLULAR-GLASS INSULATION INSTALLATION

A. A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellularglass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer’s written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with tape or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.9 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.10 ROCK MINERAL WOOL INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials, unless jacketing with self-sealing laps are used.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with tape or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.11 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer’s recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer’s recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

1. Where rubber membrane jackets are indicated, install the membrane using the manufacturer’s recommended adhesive. Before use thoroughly stir the adhesive. Replace the container lid when work is interrupted. If required thin the adhesive as recommended by the manufacturer.
2. Using a sheepskin or similar roller apply a primer coat of adhesive to the roof surface, priming only the area of roof where the membrane will be laid the same day. Allow adhesive to dry.
3. Unroll the membrane and fold back approximately half its length.
4. Apply adhesive with a sheepskin or similar roller to the underside of the membrane ensuring the weld area is kept free of adhesive and allow to touch dry.
5. Carefully roll out the membrane over the previously primed surface and roll with water filled roller.
6. Fold back other half of the roll of membrane and repeat the procedure.

7. Unroll the next roll of membrane, ensuring the end laps are staggered and the side overlaps the previously installed sheet by 2 inches.
8. Repeat the adhering process.
9. Fully hot air weld the 2-inch side lap, allow to cool completely.
10. Mechanically check the integrity of the cooled weld by running a 3/16-inch wide screwdriver (with rounded edges) along the seam applying pressure into the seam.
11. Install Peel Stop and PVC Welding Cord at all perimeters, penetrations and changes of roof direction.

E. Pipe Sound Lagging:

1. Seal and fasten in accordance with manufacturer's written instructions to maintain specified STC rating.
2. Cover entire pipe with glass fiber wrap. Fill all voids with clean glass fiber scrap. Apply over this wrap an airtight cover of loaded vinyl. Do not connect the cover rigidly to pipe or hangers. Overlap longitudinal seams in loaded vinyl 2-inch minimum and tape with cloth-backed tape. Overlap edge seams 1-inch minimum and tape with cloth-backed tape or with acoustical sealant. Extend ends of cover within 1/2-inch of penetration through wall, ceiling, and/or floor. Seal annular gap between pipe lagging and penetration airtight with acoustic sealant.

3.12 FINISHES

A. Finish Equipment, and Pipe Insulation with ASJ, Glass-Cloth, or Other Paintable Jacket Material: Refer to Division 09 painting Sections.

B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed Work.

D. Do not field paint aluminum or stainless-steel jackets.

E. Clad-type weather-resistant jacket such as Venture clad may be used to finish plumbing equipment exposed to weather.

F. Piping exposed to weather Knauf Earthwool Redi-Klad 1000 Pipe Insulation with Ecose® Technology may be utilized as long as it is installed per the manufacturer's installation procedures.

3.13 INSULATION APPLICATION SCHEDULE

A. Acceptable insulation materials, thickness and vapor retarder requirements are identified for each application and size range. If more than one material is listed for an application and size range, selection from the materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Fire-suppression piping.
2. Drainage piping located in crawl spaces.

3. Below-grade piping.
4. Chrome-plated pipes and fittings unless there is a potential for personnel injury.
5. Vibration-control devices.
6. Factory-insulated access panels and doors.

3.14 PLUMBING PIPING INSULATION APPLICATION SCHEDULE:

A. Unconditioned spaces include locations where summer temperature and humidity conditions are similar to outdoor conditions (such as mechanical rooms ventilated with unconditioned outdoor air, parking garages, pedestrian tunnels, etc.) Pipes in these spaces to be insulated similar to outdoor requirements.

B. Where rigid pipe insulation (cellular glass, etc.) is scheduled, provide mineral fiber through and 6 inches beyond pipe sleeves, to allow for pipe expansion.

SERVICE	INSULATION MATERIAL	VAPOR RETARDER REQUIRED	PIPE SIZE	INSULATION THICKNESS REQUIRED
Domestic cold water, potable and non-potable (Indoor)	Glass Mineral Wool	Yes	<8”	1”
			≥ 8”	1.5”
Domestic cold water, potable and non-potable (Outdoor)	Flexible Elastomeric	Yes	All	2”
Domestic hot water and hot water recirculating, potable and non-potable (Indoor)	Glass Mineral Wool	No	<1.5”	1”
			≥ 1.5”	1.5”
Domestic hot water and hot water recirculating, potable and non-potable (Outdoor).	Flexible Elastomeric	No	All	2”
Storm Water	Glass Mineral Wool	Yes	All	1”
Storm water roof drain bodies	Mineral Fiber Blanket	Yes	All	1”
Air conditioning condensate drain, equipment drain, and non-steam humidifier drain	Flexible Elastomeric	No	<1”	0.5”
			1” to <8”	1”
			≥ 8”	1.5”
Above floor: floor drains, traps, and drain piping receiving condensate and	Glass Mineral Wool	Yes	All	1.5”

equipment drain water. Hot and cold service				
Exposed sanitary drains and domestic water supplies and stops for fixtures	TruBro LAV-guard-2	Yes	All	Per Specification
Exposed piping, electronic faucet connections, mixing valves, trap primers and hot water heaters	Truebro Lav Shield	Yes	All	Per Specification
Outdoor sanitary waste piping where heat trace is installed (above and below ground)	Cellular Glass	Yes	All	2”
Outdoor sanitary waste	Glass Mineral Wool	Yes	All	2”

3.15 PLUMBING EQUIPMENT INSULATION APPLICATION SCHEDULE

SERVICE	INSULATION MATERIAL	INSULATION THICKNESS	VAPOR RETARDER REQUIRED
DOMESTIC WATER PUMP	Glass Mineral Wool	1”	Yes
DOMESTIC HOT WATER PUMP	Glass Mineral Wool	1”	No
EXPANSION / COMPRESSION TANKS AND HYDROPNEUMATIC TANKS (FOR DOMESTIC WATER, AND DOMESTIC CHILLED / POTABLE WATER DUTY	Flexible Elastomeric	1”	No
EXPANSION / COMPRESSION TANKS AND HYDROPNEUMATIC TANKS (FOR DOMESTIC HOT WATER DUTY	Glass Mineral Wool Board; or Glass Mineral Wool Pipe and Tank	1”	No
DOMESTIC HOT WATER STORAGE TANKS	Glass Mineral Wool Board; or Glass Mineral Wool Pipe and Tank	4”	No
DOMESTIC WATER AND DOMESTIC CHILLED WATER (POTABLE) STORAGE TANKS	Flexible Elastomeric	1”	No

3.16 FIELD APPLIED JACKET APPLICATION SCHEDULE

SERVICE	FIELD APPLIED JACKET TYPE
Indoor, exposed insulated piping within 12 feet of floor, for service temperatures 200 degrees F and below.	PVC or Earthwool Redi-Klad
Indoor, exposed insulated piping greater than 12 feet above floor, generally.	None
Indoor, cold service piping (domestic cold water) greater than 12 feet above the floor, within spaces subject to outdoor temperature and humidity conditions (such as mechanical and electrical rooms ventilated with unconditioned outdoor air, parking garages, pedestrian tunnels, etc.)	PVC or Earthwool Redi-Klad
Indoor concealed piping	None
Outdoor exposed piping	Aluminum
Indoor, All Locations, Fittings and valves in piping systems at service temperatures 200 degrees F and below.	Factory Fabricated PVC covers
Outdoor underground insulated piping	Underground Direct Buried Jacket
Piping in sound sensitive areas (as indicted on the drawings)	Pipe Sound Lagging (Note 3)
Equipment, generally (Refer to Notes 1 & 2)	Woven Glass Fiber Fabric
Equipment, cold surface (Refer to Notes 1 & 2)	PVC or Self-Adhesive Outdoor Jacket

A. Jacket Application Schedule Notes:

1. Refer to Part 3 specification section titled “Equipment, Tank, and Vessel Insulation Installation” for requirements for removable, re-usable metal boxes lined with insulation at pumps.
2. Including factory insulated equipment without factory applied jacket.
3. If ductwork or piping indicated to have sound lagging also requires an additional field jacket, install sound lagging between insulation and additional field jacket.

END OF SECTION

SECTION 22 08 00 - COMMISSIONING OF PLUMBING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes requirements for commissioning plumbing systems, assemblies, equipment, and components.

1. Commissioning is a third-party quality assurance process. It does not take the place of or duplicate the Contractor's quality control services required per Division 01 Section "Quality Requirements" or testing, adjusting, and balancing and other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.

B. The following plumbing systems, assemblies, equipment, and components are to be commissioned on this Project:

Plumbing	CxP Submittal Review	Construction Checklist	Functional Test Sampling
22 33 00 Electric Domestic-Water Heaters	Yes	Yes	100%

C. Related Sections:

1. Division 01 Section "General Commissioning Requirements" for definitions of terms used in this Section, and for commissioning requirements applicable to all systems, including Plumbing.

1.2 DEFINITIONS

A. Refer to Section 019113 "General Commissioning Requirements" for commissioning related definitions.

1.3 ABBREVIATIONS

A. Refer to Section 019113 "General Commissioning Requirements" for commissioning related abbreviations.

1.4 COMMISSIONING TEAM (CxT)

A. Refer to Section 019113 "General Commissioning Requirements" for details on the commissioning team.

1.5 ACTION SUBMITTALS

A. Comply with requirements in Section 013300 "Submittal Procedures" for submittal procedure general requirements for commissioning process.

B. Comply with requirements in Section 019113 “General Commissioning Requirements” for submittal requirements.

1.6 CLOSEOUT SUBMITTALS

A. Comply with requirements in section 019113 “General Commissioning Requirements” for submittal requirements including Certificate of Construction-Phase Commissioning Process Completion and the Certificate of Commissioning Process Completion.

B. The Contractor shall be responsible for providing the information below in PDF format for inclusion in the Systems Manual:

1. All Pre-Startup Test reports
2. All Startup Documentation (factory & on-site startups)
3. All Sensors and Actuators:

    a. Calibration reports for BAS & Equipment furnished sensors and actuators
    b. Calibration schedule based on sensor manufacturer’s recommendations and requirements

4. BAS Point-to-Point Checkout
5. Final TAB Report
6. As-built Control Drawings & Sequences
7. List of all commissioned equipment with the following setpoints where applicable:

    a. Schedules
    b. Temperature setpoints

8. All Training & Demonstration Sign-in Sheets

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. General: Provide test equipment, instrumentation, and tools necessary to perform function performance testing. Use test equipment and instrumentation that has been calibrated, certified, and properly maintained.

1. Test equipment and instrumentation required to perform the commissioning shall remain the property of Contractor unless otherwise indicated.

2. Proprietary test equipment, instrumentation, and tools shall become the property of Architect at Substantial Completion.

    a. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of equipment warranty, or as otherwise required to service, repair, adjust, calibrate or perform work on its equipment.

2.2 WEB-BASED COMMISSIONING PORTAL

A. All Contractors participating in the Cx process shall use the web-based Cx Portal ('Portal') to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxP and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process. The respective Contractors are required to complete the Construction Checklists electronically on the portal. Submittal of scanned copies of the completed documentation will not be accepted.

B. PDFs of all commissioning documents will be provided to all parties and will be distributed via e-mail. Access to the web-based commissioning software will not be required to view any of the documentation developed by the CxP.

C. The CxP will, at the direction of the Owner, upload all commissioning documentation to the Owner's FPT site.

PART 3 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS (DEVELOPED BY CxP)

A. Construction Checks are provided for each system being commissioned within the discipline specific Commissioning specifications. These Construction Checklists are based on the Contract Documents. The checklists will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.2 FUNCTIONAL PERFORMANCE TEST (FPT) FORMS (DEVELOPED BY CxP):

A. FPT forms are provided for each system being commissioned within the discipline specific Commissioning specifications. These forms are based on the Contract Documents. The FPT forms will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.3 MEETINGS

A. Commissioning Provider will schedule and conduct commissioning meetings. Commissioning Meetings shall be attended by the following:

1. Contractor (GC)
2. Plumbing Contractor
3. Controls Contractor
4. Electrical Contractor
5. TAB Contractor
6. CxP and assigned staff
7. Owner
8. A/E Team

9. Installers, suppliers, and specialists that the Contractor identifies appropriate for a particular portion of the commissioning process.

B. Meetings shall occur on an as-needed basis determined by the CxP during active construction of any system required to be commissioned. During functional performance testing, commissioning meetings shall occur on a weekly basis.

C. The CxP will schedule special commissioning meetings as follows. The Contractor and relevant staff from the contractor and subcontractor shall attend. The A/E will also be requested to attend when determined by the CxP.

1. Startup Scheduling Meetings: Meeting shall be held for each major system, assembly, and piece of equipment being commissioned. Additional Startup Scheduling Meetings will be held prior to Startups repeated due to failure.
2. Functional Performance Test Scheduling Meetings: Meeting shall be held for each system being commissioned. Additional FPT Scheduling Meetings will be held prior to FTPs repeated due to failure, delay, seasonal, or deferred testing.

3.4 COMMISSIONING PROVIDER RESPONSIBILITIES

A. Construction Phase

1. Commissioning Plan: The Construction Phase Commissioning Plan is issued by the CxP to the team following construction Notice to Proceed. The Commissioning Plan is updated by the CxP throughout construction to reflect schedule updates.
2. Commissioning Kickoff Meeting: The CxP shall schedule the Commissioning Kickoff meeting following construction Notice to Proceed. An agenda and meeting minutes shall be issued by the CxP.
3. Construction Checklists: Final Construction Checklists updated and issued by CxP after approval of submittals. CxP monitors contractor progress completing Construction Checklists and provides final acceptance of completed Construction Checklists.
4. Construction Submittals: Submittals reviewed by CxP concurrently with the A/E.
5. Functional Performance Test (FPT) Procedure Forms: Final FTP procedure forms updated and issued by CxP after submittal approval.
6. Inspections, Pre-Startup Tests, and Startups: Site visits performed by CxP to verify installation, pre-startup tests, and startups.
7. Pre-Test and Startup Reports: CxP reviews pre-test and startup reports for all commissioned systems.
8. Pre-Functional Performance Testing: Pre-Functional Performance Testing performed by the Contractor using CxP prepared FPT forms is witnessed by the CxP.
9. Certificates of Readiness. CxP issues Certificates of Readiness to contractors. CxP issues Certificates of Readiness to contractors to complete.
10. Functional Performance Testing: CxP, with assistance of relevant Contractors, witnesses and directs functional performance testing performed in accordance with the FPT procedure forms. CxP records FPT results.
11. Issues Log:

    a. The CxP records as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with Construction Checklists, or Functional Performance Test procedures.
    b. CxP records corrective action by Contractor before signing off the Issue.

c. The CxP tracks resolution of each Issue until it is resolved or accepted by the Owner.

12. System Acceptance: The CxP recommends system acceptance by the Owner upon completion of the Functional Performance Testing and resolution of all issues. For systems requiring deferred testing, systems may be recommended by the CxP for partial acceptance by the Owner prior to the deferred testing if they comply with all construction contract and accepted design requirements that can be tested during initial Functional Performance Tests.
13. Final Commissioning Report: The CxP issues the final commissioning report upon completion of all Functional Performance Testing and resolution of all items on the Issues Log.
14. Commissioning Systems Manual: The CxP issues the commissioning system manual upon completion of all Functional Performance Testing.

3.7 CONTRACTOR RESPONSIBILITIES

A. Management and Coordination: Manage and coordinate commissioning process, including, but not limited to, the following:

1. Coordinate with subcontractors on their commissioning responsibilities and activities.
2. Obtain, assemble, and submit commissioning documentation.
3. Attend periodic on-site commissioning meetings. Comply with requirements in Division 01.
4. Review and comment on preliminary test procedures and data forms.
5. Report inconsistencies and issues in system operations.
6. Verify that tests have been completed and results comply with acceptance criteria, and that systems are ready before scheduling test demonstrations.
7. Prepare and submit specified commissioning reports.
8. Track commissioning issues until resolution and retesting is successfully completed.
9. Retain original records of Commissioning-Process Work, organized as required for the commissioning report. Provide the Owner’s representative access to these records on request.

B. Scheduling: Schedule the commissioning process:

1. Commence commissioning process within 14 days of Notice to Proceed.
2. Commissioning Schedule: Integrate commissioning activities into Construction Schedule. See Division 01.

a. Include detailed commissioning activities in monthly updated Construction Schedule and short-interval schedule submittals.
b. Schedule the start date and duration for the following commissioning activities. Break out activities, where applicable, to match the phasing required to commission each system independently:

1) Submittals
2) Preliminary operation and maintenance (O&M) manual submittals
3) Construction Checklists
4) System and Equipment Startups
5) Testing and Balancing
6) Pre-Functional Performance Tests

7) Functional Performance and Integrated systems Tests
8) TAB Verification
9) Final O&M Manual submission
10) Training and Demonstration

c. Schedule shall include a line item for each installation check, pre-startup test, startup, and factory test activity specific to the equipment or systems involved.
d. Show milestones and prerequisites for commissioning process as detailed in the Cx Plan. Show commissioning milestones, prerequisites, and dependencies in monthly updated critical-path-method construction schedule and short-interval schedule submittals.

3. Two-Week Look-Ahead Commissioning Schedule:

a. Two weeks prior to the beginning of startup pre-tests, factory testing, and equipment and system startups, submit a detailed two-week look-ahead schedule. Thereafter, submit updated two-week look-ahead schedules weekly for the duration of commissioning process.
b. Two-week look-ahead schedules shall identify the date, time, beginning location, Contractor personnel required, and anticipated duration for each startup or test activity.
c. Use two-week look-ahead schedules to notify and coordinate participation of Owner's witnesses.

C. Contractor is responsible for the commissioning of all installed equipment and systems as required in the Contract Documents.
D. Include all costs of commissioning requirements including manufacturer-certified start-up and testing of installed equipment.
1. Provide utility services, personnel, materials, tools, testing equipment, instrumentation and all other resources required for the commissioning process.

E. Installation Verification:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Construction Checklists will be provided by the CxP after submittal approval to ensure checklists are accurate to the actual equipment furnished. Final Construction Checklists shall be issued by the CxP after approval of the submittals.
3. The responsible Installing Contractor(s) and any additional commissioning team members identified on the checklist shall initial and date the appropriate forms for each task indicated in these Checklists. One form shall be completed for each piece of commissioned equipment or system. By initialing and dating the entry, the responsible Installing Contractor(s) and identified additional commissioning team members shall indicate completion and verification of proper installation in accordance with contract requirements and acceptance of responsibility for the installation of the equipment and/or systems.

F. Pre-Startup Test Procedures:

1. Comply with Section 019113 “General Commissioning Requirements”.

G. Startup Procedures:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Submit startup plans, perform startups, and submit completed startup reports for the following:

a. Instantaneous Electric Water Heaters
b. Water Meters

H. Pre-Functional Performance Tests:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Pre-Functional Performance Tests are performed by the Contractor independently of the CxP using the approved FPT procedures. CxP shall be invited to witness testing.
3. FPT forms will be submitted for Contractor review after submittal approval.

I. BAS Graphics Review:

1. Refer to Section 230800 “Commissioning of HVAC” for the BAS Graphics review performed by the CxP with the BAS Contractor and Owner’s Facility Personnel.
2. Plumbing systems that are monitored or controlled by the BAS shall be included in the BAS Graphics review. The review shall include:

a. Verifying all graphics are representative of the systems and that all points and control elements are in the same location on the graphic as they are in the field.
b. Verifying operator control of all commandable control system points including proper security access.
c. Verifying all schedules and setpoints are shown and editable.
d. Verifying all alarm points are shown and set to the correct priority.
e. Verifying all alarm messages are routed to the correct phone and e-mail accounts.

J. Certificate of Readiness:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Certificates of Readiness for each system will be provided to the Contractor for signature 14 days prior to Functional Performance Testing.

K. Functional Performance Tests

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Testing includes both Deferred and Delayed Functional Performance Testing.
3. FPT forms will be submitted for Contractor review after submittal approval.
4. The following shall be present during Functional Performance Testing of the Plumbing systems:

a. Contractor
b. Plumbing Contractor
c. BAS Contractor
d. Owner’s Facility Personnel (optional)

5. Functional Performance Testing of the Plumbing systems shall include, but is not limited to, the following:

a. Verify all alarm and high and low limit functions and messages generated on all points with alarm settings.
b. Verify integrated performance of all components and control system components, including all interlocks and interactions with other equipment and systems.
c. Verify shut down and restart capabilities both for scheduled and unscheduled events (e.g. power failure recovery and normal scheduled start/stop).

d. When applicable, demonstrate a full cycle from off to on and no load to full load and then to no load and off.
e. Verify setpoints and those coordinated with TAB contractor.
f. Verify all energy saving control strategies.

6. Common Acceptance Criteria: The following acceptance criteria apply to all Plumbing systems, assemblies, equipment, components, and features indicated to be commissioned:

a. For the conditions, sequences and modes tested, the equipment, integral components and related equipment shall respond to varying loads and changing conditions and parameters appropriately as expected, according to the sequences of operation, as specified, according to acceptable operating practice and the manufacturer's performance specifications. Verify that equipment operates within tolerances specified in governing codes, acceptance criteria contained in the construction documents, manufacturer's literature and according to good operating practice.
b. Systems shall accomplish their intended function and performance.
c. All safety trips shall require a manual reset to allow a system restart.
d. Resetting a manual safety shall result in a stable, safe, and predictable return to normal operation by the system.
e. Safety circuits and permissive control circuits shall function in all possible combinations of selector switch positions (hand, auto, inverter, bypass, etc.).
f. Additional acceptance criteria developed by the CxP as part of FPT test procedures.

3.8 TAB VERIFICATION

A. TAB Verification shall be scheduled to occur during the Functional Performance Testing activities. Refer to Section 230953 “Testing, Adjusting, and Balancing”.

3.9 OPERATIONS AND MAINTENANCE MANUAL

A. Contractor shall submit O&M Manuals in accordance with Division 01 and 22.

B. Manuals must be submitted a minimum of 90 days prior to substantial completion for review by the A/E and CxP.

C. Manuals shall be available for reference by all parties present at the training and demonstration sessions.

3.10 TRAINING AND DEMONSTRATION

A. Contractor shall develop and submit to the CxP and Owner a training plan which identifies all training required by specification sections associated with commissioned systems. Refer to Division 01 and 22 Sections, and Section 019113 “General Commissioning Requirements”.

B. Document training attendance using training attendance rosters and provide completed attendance rosters to the CxP the Owner no later than 7 calendar days following the completion of training for each system to be commissioned.

C. Approved O&M manuals shall be available for reference by all parties present at the training and demonstration sessions.

D. The Plumbing Contractor shall be present during all training and demonstration sessions to respond to general questions regarding installation and operations.

E. The Controls Contractor shall be present during all training and demonstration sessions on equipment and systems being controlled or monitored by the BAS. The Controls Contractor shall be prepared to show the BAS Graphics with associated monitoring and control during the individual equipment and systems training and provide a general description of the BAS controls and any associated control sequences. This is in addition to the specified BAS control system training in Section 230900 “Building Automation System (BAS)”.

F. If, during training and demonstration, additional important maintenance information is provided that isn’t included in the O&M manuals, it shall be written down by the contractor and inserted as an amendment to the relevant O&M manual.

G. The CxP shall be present to witness and respond to questions regarding the commissioning and functional performance testing of the equipment and systems.

3.11 SYSTEMS MANUAL

A. The CxP shall be responsible for final submission of the Systems Manual to the Owner. The Contractor shall be responsible for providing the information required in Part 1 “Action Submittals”

3.12 NEAR END-OF-WARRANTY REVIEW

A. General: Participate in the Near End-of-Warranty review and walkthrough conducted by the CxP.
   1. The review will cover current building operation with input from the operation and facility staff. Outstanding issues related to the construction, particularly those related to Owner’s Project Requirements (OPR), and warranty related deficiencies will be addressed. Operational problems and concerns from the facility staff and occupants will be reviewed for compliance with design intent.
   2. The CxP will provide a plan for corrective measures to the Architect and the Contractor for action.
      a. Corrective Action: Where deficiencies and problems result from work not in compliance with the Contract Documents or are covered under warranty, provide the corrective actions indicated at no additional cost to Architect.

3.13 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Substantial Completion.

D. Certificate shall be provided for each phase.

3.14 CERTIFICATE OF COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. When the commissioning process is complete, inclusive of all phases and Seasonal Functional Performance Testing, the CxP will prepare a Certificate of Commissioning Process Completion that shall establish the date of completion of the commissioning process.

END OF SECTION 22 08 00

SECTION 22 10 00

PLUMBING PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and the other sections of Division 22.

1.2 SUMMARY

A. Section includes:

1. Elevator oil minder sump pumps system.
2. Domestic water cartridge circulator pumps.
3. Domestic water circulating in-line booster pump.
4. Domestic water in-line pumps 3-piece (permanently lubricated).
5. In-line domestic hot water circulation pumps (ECM motor).
6. Duplex submersible sump pump.
7. Duplex sewage ejector pump.
8. Air conditioning condensate pumps (non-plenum rated.
9. Air conditioning condensate pumps (plenum rated).

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 22 Section: “Common Motor Requirements”: Product requirements for motors for placement by this section.
2. Division 22 Section: “Vibration and Seismic Controls for Plumbing Piping and Equipment”: Product requirements for vibrations isolators installed with pumps.
3. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment”: Execution requirements for connection to pumps specified by this section.
4. Division 22 Section: “General-Duty Valves for Plumbing Piping”: Product requirements for valves used in hydronic piping systems.
5. Division 26 Section: “Low Voltage Electrical Power Conductors & Cables”: Requirements for electrical wiring and cable connections to pumps specified by this section.
6. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements of conduits and boxes housing electrical wiring and electric connections for pumps specified in this section.”

1.3 REFERENCES

(“Unless otherwise noted, references apply to “latest” “editions”)

A. National Electrical Manufacturers Association:

1. NEMA 250 – Enclosures for Electrical Equipment (1000 Volts Maximum).

B. Underwriters Laboratories, Inc.:

1. UL 778 – Motor Operated Water Pumps.

C. American National Standards Institute:

1. NSF/ANSI 372 – Drinking Water Systems Components – Lead Content.
2. NSF/ANSI 61 & Annex G – Drinking Water Systems Components - Health Effects.

D. American Society of Heating, Refrigeration and air Conditioning Engineers:

1. ASHRAE 90.1 – 2010 – Energy Standard for Buildings, Except Low-Rise Residential Buildings.

1.4 DEFINITIONS

A. Lead Free:

1. Circulator pumps shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
3. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead free.

1.5 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Requirements for submittals.

B. Product Data: Submit certified pump curves showing performance characteristics with pump and system operating point plotted. Include NPSH curve when applicable. Include electrical characteristics and connection requirements. Submit also, manufacturer model number, dimensions, service sizes, and finishes.

C. Plumbing drainage specialties: Submit manufacturers catalog information with sizes, capacities, rough-in requirements, service sizes, and finishes.

D. Plumbing supply specialties: Submit manufacturers catalog information with sizes, capacities, rough-in requirements, service sizes, and finishes.

E. Pumps: Include capacities, pump curves, equipment performance, and electrical characteristics.

F. Manufacturer's Installation Instructions: Submit installation instructions for material and equipment.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section – "Execution and Closeout Requirements": Requirements for Submittals.

B. Operation and Maintenance Data: Submit installation instructions, servicing requirements, assembly views, lubrication instructions, and replacement parts list.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products in this section with minimum three years documented experience.

1. Manufacturer shall be listed by UL as a manufacturer of packaged pumping systems under UL/CUL category QCZJ and pump package shall bear labeling noting this.

B. Installer: Company specializing in performing work of this section with minimum three years experience and approved by manufacturer.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section – "Product Requirements": Requirements for transporting, handling, storing and protecting products.

B. Prepare pumps and accessories for shipment to prevent entry of foreign matter into product body.

C. Store products in areas protected from weather, moisture, or possible damage; do not store products directly on the ground; handle products to prevent damage to interior or exterior surfaces.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section – "Execution and Closeout Requirements": Product warranties.

B. Furnish five year manufacturer's warranty for pumps.

1.12 DEFINITIONS

A. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead free.

PART 2 - PRODUCTS

2.1 ELEVATOR OIL MINDER SIMPLEX PUMP SYSTEM

A. Manufacturer:

1. Pumps shall meet model numbers, types, sizes, capacities, and electrical characteristics as indicated on the contract drawings. Acceptable manufacturers: Stancor, Zoeller, B&G, or federal Pump Company.

B. General:

1. Sump pump and control shall allow water to be automatically pumped from a sump basin without danger of ejecting potentially harmful oily substances into sewers or drainage system.
2. System shall include one (1) control panel, and junction box.
3. The system shall function automatically and shall provide for an alarm and separate LED lights in the event of the presence of oil in the sump, high liquid in the sump or, high amps or a locked rotor condition. In addition LED lights shall be provided for (1) power and (2) pump run function.
4. An alarm shall sound in the event of a high liquid condition.
5. The Pump, Control Panel, Junction Box, Float and Sensor Probe shall be ENTELA tested, Certified and Approved by the local governing jurisdiction.
6. Include cover, valves, piping and GFI duplex 115V/1ϕ/60HZ convenience outlet and any other required items as necessary to provide a completely functional installation.

C. Pump Basin & Cover:

1. The pump basin shall be constructed of concrete; 24”x24”x24” deep. Provide with a 24”x24” perforated steel cover.

D. Submersible Sump Pump:

1. The pump shall be approved at UL 778 standards and shall include thermal and overload protection.
2. The motor shall be rated ½ HP, 1 phase, 115 volt and capable of operating continuously or intermittently.
3. The motor housing shall be constructed of #304 stainless steel and mechanical seals shall be housed in a separate oil-filled chamber.

E. Mechanical Seal/Impeller:

1. A double mechanical seal system shall be furnished. The entire double mechanical seal assembly shall be housed in a seal chamber filled with clean dielectric oil. Impeller shall be of cast iron construction.

F. Control Panel:

1. The main control shall be approved to UL 508 standards and housed in a gasketed NEMA 4X enclosure with a see-through window for observation of operating functions.
2. The control shall be equipped with an 8-pin twist lock receptacle, dual solid state Oil-Minder relays with variable sensitivity settings, an over current relay, self cleaning stainless steel sensor probe, high decibel warning horn with alarm silencing switch, dual floats, clearly marked terminal board and remote monitoring contact.
3. A NEMA 4X junction box with 8-pin twist-lock electrical receptacle and 25’ of mating 8 conductor cable. All cables between the pump and junction box shall be 16’ long and the cable and plug from the control unit shall be 8’ long.
4. The control unit, junction box, pump, floats and sensor probe shall be factory assembled as a complete, ready to use system.
5. The system shall allow for the main control to be located outside of the elevator hoist way to be monitored for all functions without having to enter the elevator shaft.
6. Provide Mechanical Float Switches, one for Normal On-Off operation and one for High Water Alarm, with 16’ Cables.

2.2 IN-LINE DOMESTIC HOT WATER CIRCULATION PUMPS (ECM MOTOR)

A. The circulator pumps, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.

B. Pumps shall meet model numbers, types, sizes, capacities and characteristics as scheduled on the equipment schedule drawings acceptable manufacturers: Bell & Gossett, Taco, Grundfos, Aurora, or Wilo.

C. The pumps shall be of the high efficiency type specifically designed for quiet operation.

D. Pump shall be suitable for the 203 degree F operation at 145 psi working pressure.

E. The pumps shall have a ceramic ball bearing lubricated by the system fluid.

F. Pump body shall be lead free (less than 0.25%Pb) brass or stainless steel.

G. Motors shall be spherical rotor permanent magnet electrically commutated motor (ECM).

H. Motor shall be non-overloading at any point on the pump curve and shall have built in overload.

2.3 IN-LINE DOMESTIC HOT WATER CIRCULATION PUMPS (ECM MOTOR)

A. The circulator pumps, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.

B. Pumps shall meet model numbers, types, sizes, capacities and characteristics as scheduled on the equipment schedule drawings acceptable manufacturers: Bell & Gossett, Taco, Grundfos, Aurora, or Wilo.

1. Basis of design is Ecocirc XL as manufactured by Bell & Gossett.

C. The pumps shall be of the high efficiency type specifically designed for quiet operation.

D. The pumps shall be a wet rotor inline pump, in cast iron or lead free bronze body construction specifically designed for quiet operation. Suitable standard operations at 230° F and 175 PSIG working pressure. The pump internals shall be capable of being serviced without disturbing piping connections.

E. The pump internals shall be capable of being serviced without disturbing piping connections.

F. Pump shall be equipped with a water-tight seal to prevent leakage.

G. Pump volute shall be of a cast iron design for heating systems or lead free bronze or stainless steel for domestic water systems. The connection style on the cast iron and bronze pumps shall be flanged.

H. Flange to Flange dimension shall be standard Bell & Gossett booster sizes such as 6-3/8”, 8-1/2”, 11-1/2”, and 12”. Flange dimensions shall be HVAC industry standard 2 or 4 bolts sizes.

I. Motor shall be a synchronous, permanent-magnet (PM) motor and tested with the pump as one unit. Conventional induction motors will not be acceptable.

J. Each motor shall have an Integrated Variable Frequency Drive tested as one unit by the manufacturer.

K. Integrated motor protection shall be verified by UL to protect the pump against over/under voltage, over temperature of motor and/or electronics, over current, locked rotor and dry run (no load condition).

L. Pump shall have MODBUS or BACnet connections built into the VFD as standard options.

M. Analog inputs, such as 0-10V and 4-20mA, are standard inputs built into the VFD.

N. Pumps shall be UL 778 listed and bear the UL Listed Mark for USA and Canada with on-board thermal overload protection.

O. Pumps shall be UL 778 listed and bear the UL Listing Mark for USA and Canada with on-board thermal overload protection.

P. Each pump shall be factory performance tested before shipment.

Q. OPERATING MODES

1. Proportional Pressure – The differential pressure will continuously increase or decrease along a linear curve based on the flow demand.
2. Constant Pressure – The pump maintains a constant differential pressure set by the user at any flow demand until the maximum speed is reached.

3. Constant Speed – The pump maintains a constant speed at any flow rate
4. Night Set Back – The pump will recognize a 10°C water temperature reduction and will switch to nighttime operation.
5. T-Constant – This control will use a PI algorithm to vary the speed of the pump in order to maintain a constant temperature of the fluid media.
6. Delta-T Constant – This control mode will use a PI algorithm to vary the speed of the pump in order to maintain a constant differential temperature between the built-in temperature sensor and external temperature sensor.
7. Delta-P-T – This control mode is paired with proportional or constant pressure mode. The nominal differential pressure setpoint will vary according to the fluid temperature.
8. Delta-P-Delta-T – This control mode is paired with proportional or constant pressure mode. The nominal differential pressure setpoint will vary according to the differential temperature between the built-in temperature sensor and external temperature sensor.

2.4 DUPLEX SUBMERSIBLE SUMP PUMP

A. Manufacturer:

1. Pumps shall meet model numbers, types, sizes, capacities, and characteristics as scheduled on the Equipment Schedule Drawings. Acceptable manufacturers: Weil, B&G, Flowserve, Aurora, or Tsurmi.

B. General:

1. System shall include two (2) wastewater pumps with quick removal fittings, stainless steel guide rails, discharge elbows and bottom guide rail supports, steel main cover with pump access covers and top guide rail supports.
2. Provide a NEMA 3R steel control panel for remote mounting.
3. All to be assembled in a fiberglass basin to include all necessary discharge piping, valves and fittings.

C. Pump, Basin, & Cover:

1. The pump basin shall be constructed of fiberglass. The steel cover shall be bolted to the top flange of the basin.
2. Pump mounting base shall be bolted to the steel anti-floatation plate that is embedded in the bottom of the fiberglass basin.
3. The discharge piping from the pumps shall be 2” with 2” gate and weight and lever swing check valves, all connected to common 2” discharge pipe.

D. Submersible Sump Pump:

1. Pump casing, impeller and discharge elbow shall be manufactured from heavy-duty, close grain, high-density cast iron.

E. Motors:

1. The pump motors shall be NEMA 6 Submersible, Design Type B equivalent.
2. The pump motors shall be of an air filled design. Oil filled motor shells shall not be considered equal.

3. Motor end bell shall be designed as a terminal box and separated from the motor shell by combination bearing support and inspection plate.
4. Motors shall be housed in a watertight cast iron shell with extended cooling fins and shall have class “F” insulation and permanently lubricated double seal ball bearings that have a rated life of 17,500 hours. Motors using sleeve type bearing shall not be considered equal.
5. The mating surfaces between the motor end bell, motor shell, and seal housing shall be sealed by means of “X” cross section quad rings.
6. Motor shaft shall be stainless steel with keyway for positive positioning of impeller.
7. Carbon steel shafts shall not be considered equal. Each motor shall be furnished with 25 feet of neoprene jacketed power cable.

F. Mechanical Seal:

1. A double mechanical seal system shall be furnished. The entire double mechanical seal assembly shall be housed in an oil seal chamber filled with clean dielectric oil. Seal surfaces shall be of solid silicon carbide. Carbon ceramic, tungsten carbide, or systems that allow the lower seal mechanism to come in contact with the pumped media shall not be considered equal.

G. Impeller:

1. The impeller shall be non-clog type and shall be made of close grain cast iron, accurately machined to the proper diameter. All impellers are to be statically and dynamically balanced.

H. Quick Removal System:

1. Units shall be furnished with a sliding guide rail so that the motor and pump end can be raised and lowered in the pit without un-bolting or disturbing the discharge piping.
2. The pump elbows shall be a heavy duty four bolt pattern and provided by the pump manufacturer and shipped with 20 feet of stainless steel lifting cable.

I. Control Panel:

1. Control shall be from a duplex control panel. Panel shall be a NEMA 3R steel enclosure. Panel shall be wall mounted. The following items shall be standard:

(2) Fused disconnect switches with lockout handles thru cover for main sewage pumps

(2) Magnetic starters with overload and low voltage protection

(2) Hand-Off-Automatic selector switches

(1) Electric alternator and PLC

(2) Control circuit transformers, 120 volt

(2) Pump running lights

(2) Overload reset buttons

(1) Wired and numbered terminal strip

(1) High water alarm with light, alarm buzzer and silencing switch with dry contacts for remote monitoring

(4) Mercury float switches

2.5 AIR CONDITIONING CONDENSATE PUMP (NON-PLENUM RATED)

A. Manufacturer:

1. Pumps shall meet model numbers, types, sizes, capacities, and characteristics as scheduled on the Equipment Schedule Drawings. Acceptable manufacturers: Little Giant, Bell & Gossett or Hartell.

B. Unit shall come with vertical type pump unit.

C. Motor shall come with stainless steel shaft, and thermal overload protection.

D. Pump shall be UL listed.

E. Unit shall come with:

1. ABS housing, ABS cover, and ABS volute.
2. Leakproof, rust proof, ABS tank, with mounting tabs.
3. 3/8” O.D. barbed discharge adapter.
4. 3 drain holes.
5. Built-in check valve.
6. 6’ long power chord.
7. 20’ shut-off head.

F. Provide unit with optional safety switch.

G. Impeller shall be glass filled polypropylene.

H. Pump shall be suitable for intermittent liquid temperatures up to 120°F and for high-efficiency gas furnace condensate as well as standard HVAC unit condensate.

2.6 AIR CONDITIONING CONDENSATE PUMPS (PLENUM RATED)

A. Manufacturer:

1. Pumps shall meet model numbers, sizes, capacities and characteristics as indicated on the contract drawings. Acceptable manufacturers: Hartell Model: A2-X-1965 or comparable acceptable product.

B. Pumps shall be UL 2043 Plenum Rated.

C. Pumps shall be Dual Voltage Commercial.

D. Pumps shall come with Heavy Duty Cast Aluminum Reservoir.

E. Pumps shall have Dual Voltage Thermally Protected Motor.

F. Pumps shall have Stainless Steel Motor Shafts.

G. Pump Voltages shall be as indicated on pump schedule on the contract drawings.

H. Inlet Diameter = 1-3/8 inches

I. Outlet Size = 3/8 inches

J. Outlet Connection Type = FNPT

K. Pumps shall come with hard wire leads only.

L. Provide each pump with an Auxiliary Switch.

M. Flow Rates

1.	Flow Rate at Lift of 6’	185 gal/h (3.08 GPM)
2.	Flow Rate at Lift of 12’	139 gal/h (2.31 GPM)
3.	Flow Rate at Lift of 18’	79 gal/h (1.31 GPM)
4.	Flow Rate at Lift of 20’	51 gal/h (.85 GPM)

N. Pump Reservoirs shall hold a minimum of 1 gallon.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section – “Administrative Requirements”: Verification of existing conditions before starting work.

B. Verify excavations are to required grade, dry, and not over-excavated.

3.2 INSTALLATION - PUMPS

A. Install line size valving as indicated on the contract drawings on pump suctions and discharges.

B. Install pumps with shaft length allowing sump pumps to be located minimum 24 inches (600 mm) below lowest invert into sump pit and minimum 6 inches (150) clearance from bottom of sump pit.

C. Lubricate pumps before start-up.

D. All power and control wiring shall be performed per manufacturer’s instructions and applicable codes, standards and the authority having jurisdiction.

E. Install flexible connectors at or near pumps where piping configuration does not absorb vibration. Refer to Division 22 Section “Vibration and Seismic Controls for Plumbing Piping and Equipment”.

F. Third Party Testing, NSF, and OSHA Requirement:

1. The package shall be UL Listed as a system for its intended use, a NSF 61 approved system per NSF 61 guidelines so meeting OSHA Federal Regulations 29 CFR 1910.303 and 399 as well as NFPA Pamphlet #70 (National Electric Code) Article 90-7, City of Los Angeles Approval Code, CMR248 Massachusetts State Plumbing Code Approval.

G. Factory Test:

1. The package shall be electrically and hydrostatically tested before shipment, in addition, each system shall be factory tested from 0-100% of flow and pressure. Provide certified x-y test report.

H. Startup:

1. The factory authorized local representative shall provide (2) hours of startup and field training.

3.3 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.4 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 22 25 01

PLUMBING PIPING SYSTEMS CLEANING AND TREATMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes:

1. Potable Water Systems
2. Gravity Drains

B. Related Sections: The following Sections contain requirements that relate to this Section

1. Division 23: “Common Motor Requirements”: Product requirements for motors for placement by this section.
2. Division 26: “Wiring Devices”: Execution requirements for electrical connection specified by this section.

1.3 DEFINITIONS

A. Compressed Air Systems (Excluding Automatic Temperature Controls, Hospital, and Laboratory Grade Air): ASME B31.9, “Building Services Piping” for systems operating at pressure of 125 psi or less, and temperature 200°F or less.

B. Gas Distribution Piping: Piping which conveys gas from the point of delivery to the points of usage.

C. Point of Delivery is the outlet of the service meter assembly, or the outlet of the service regular (service shutoff valve when no meter is provided).

D. Domestic Water Systems: A system conveying domestic potable or non-potable water, such as Cold Water, Hot Water, Hot Water circulating, etc.

E. Gravity Drainage Systems: A system of gravity fed effluent conveying storm water, sanitary, and laboratory acid waste, etc.

1.4 REFERENCES

A. Unless otherwise noted, references included throughout this specification section apply to “Latest Edition”.

1.5 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Product data for each type of product specified. Include manufacturer's technical product data, rated capacities of selected equipment clearly indicated, water-pressure drops, weights (shipping, installed, and operating), furnished specialties, accessories, and installation and startup instructions. Provide a list of all chemicals and quantities, including material safety data sheets.

C. Shop drawings from manufacturer detailing equipment assemblies and indicating dimensions, weights, loadings, required clearances, method of field assembly, components, and location and size of each field connection.

D. System diagram showing all piping, valving, tubing, treatment equipment, etc.

E. Wiring diagrams detailing power and control wiring and differentiating clearly between manufacturer-installed wiring and field-installed wiring.

F. Field test reports indicating and interpreting test results relative to compliance with specified requirements.

G. Maintenance data for chemical water treatment to include in the operation and maintenance manual specified in Division 01. Include detailed manufacturer's instructions and parts list for each item of equipment, control, and accessory. Include troubleshooting maintenance guide.

H. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 QUALITY ASSURANCE

A. Qualifications: A recognized chemical water treatment supplier with documented experience. The supplier shall employ an experienced consultant, available at reasonable times during the course of the Work to consult with Contractor, Architect, and Owner about water treatment.

1. Provide a list of at least five (5) projects of similar size and type, which have been in operation for at least 5 years.
2. Supplier shall provide 24-hour emergency service, and shall be capable of being on-site within 4 hours notice.

B. Chemical Standards: Meet state and local pollution-control regulations.

C. Comply with NFPA 70, “National Electrical Code,” for components and installation.

D. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.

E. Provide cleaning of the piping systems and submit a certificate of compliance with the specification.

1.7 MAINTENANCE

A. Extra Materials

1. Furnish the following extra materials, matching products installed, packaged with protective covering for storage and with identification labels clearly describing contents.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Chemical Water Treatment Products:

a. Arc Water Treatment Co.
b. Aqua-Chem, Inc.
c. Ecolab.
d. Nalco Chemical Co.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install treatment equipment level and plumb, according to manufacturer's written instructions, rough-in drawings, the original design, and referenced standards.

B. Connections

1. Piping installation requirements are specified in other Division 22 Sections. The Drawings indicate the general arrangement of piping, fittings, and specialties. The following are specific connection requirements:

a. Install piping adjacent to equipment to allow servicing and maintenance.
b. Piping: Conform to applicable requirements of Division 22 Section: "Pipes and Tubes for Plumbing Piping and Equipment."

2. Electrical: Conform to applicable requirements of Division 26 Sections for connecting electrical equipment.

a. Install electrical devices furnished with boiler but not specified to be factory mounted.

3.2 FIELD QUALITY CONTROL

A. Testing Agency: Provide the services of a qualified independent testing agency to perform field quality control testing.

3.3 STERILIZATION OF DOMESTIC WATER SYSTEMS

A. Sterilization:

1. After final testing for leaks, all new potable water lines shall be thoroughly flushed by plumbing contractor to remove foreign material. Before placing the systems in service, contractor shall engage a qualified service organization, Arc Water Treatment Company of Maryland, Inc. or approved equal, to sterilize the new water lies in accordance with the following procedure:

    a. Through a ¾" hose connection in the main entering the building pump in sufficient sodium hypochlorite to produce a free available chlorine residual of not less than 200 ppm. Plumbing contractor shall provide plumbing connections and power for pumping chlorine into the system.
2. Proceed upstream from the point of chlorine application opening all faucets and taps until chlorine is detected. Close faucets and taps when chlorine is evident.
3. When chlorinated water has been brought to every faucet and tap with a minimum concentration of 200 ppm chlorine, retain this water in the system for three (3) hours. CAUTION: Over-concentration of chlorine and more than three (3) hours o retention may result in damage to piping system. It is not necessary to retain chlorine in any system for twenty-four hours to achieve sterilization. AWWA states that 200 ppm chlorine for three hours is sufficient.
4. At the end of the retention period, no less than 100 ppm of chlorine shall be present at the extreme end of the system.
5. Proceed to open all faucets and taps and thoroughly flush all new lines until the chlorine residual in the water is less than 1.0 ppm.
6. Obtain representative water sample from the system for analysis by a recognized bacteriological laboratory.
7. If the sample tested for coliform organism is negative, a letter and laboratory report shall be submitted by the service organization to the contractor, certifying successful completion of the sterilization.
8. If any samples tested indicate the presence of coliform organisms, the entire sterilization procedure shall be repeated.

B. Special Testing: Waterborne Pathogens:

1. Sample collection procedures:

    a. Select a minimum of three (3) distal sites from every floor of a residential building and four (4) random samples from each community building. The random samples (faucets or showers) should represent the water distribution system (i.e., sites on each floor and wing).
    b. Take samples (water or swab) from each distal site as described in section "Collection Procedure."

c. Sample bottles and swabs can be obtained from special pathogens lab. Testing should occur within two (2) weeks of building occupancy.

C. Collection Procedure:

1. Potable Water

a. Fill out SPL chain of custody
b. Use waterproof pen to label bottle and swab with sample location, description, and date.
c. Swab collection:
   1) Remove aerator if present.
   2) Moisten the outlet by turning on the hot water – briefly.
   3) Insert swab into faucet opening rotating four times against the inner surface as it moves up into the opening (for shower head, rotate the swab over the entire surface of the showerhead four times).
   4) Replace swab in transport tube.
d. Water collection:
   1) Turn on hot water and immediately fill the bottle.
   2) Close bottle and invert to mix the sodium thiosulfate neutralizer.
e. Repeat steps b,c, and d with next sample location.

2. Hot Water Storage Tanks

a. Open the drain valve at the base of the heater or tank and immediately fill the bottle.
b. Let the water continue to drain for 15-30 seconds to flush out the residual water within the drain pipe.
c. Fill a second sample bottle.
d. Submit both samples, labeled “Immediate” and “Post Flush”.

3.4 SYSTEM START-UP

A. Startup Services: Provide the services of a factory-authorized service representative to provide startup service and to demonstrate and train Owner's maintenance personnel as specified below.

B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

C. Startup Procedures: During boiler system startup, operate boiler water treatment system (after charging with specified chemicals) to maintain required steady-state characteristics of feedwater.

3.5 DEMONSTRATION

A. Division 01 Section – “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Provide services of supplier's technical representative for half a day to instruct Owner's personnel in operation, maintenance, and testing procedures of boiler water treatment system.

C. Train Owner's maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, and preventive maintenance.

D. Review data in the operation and maintenance manuals Division 01. Refer to Division 01 Section: "Execution and Closeout Requirements."

E. Schedule training with Owner, through the Architect, with at least 7 days' advance notice.

3.6 SIX MONTH FOLLOW-UP SERVICE

A. The contractor shall return to the project site under warranty phase in six months to flush / blow down all: Domestic Water strainers.

3.7 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 22 33 00

ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of the contract, including General and Supplementary Conditions and Division 01 specification sections, apply to this section and all sections of Division 22.

1.2 SUMMARY

A. Section includes:

1. Commercial electric water heaters.

B. Related Sections: The following sections contain requirements that relate to this section:

1. Division 03 Section – “Cast-in-Place Concrete”: Execution requirements for concrete housekeeping pads specified by this section.
2. Division 22 Section: “Plumbing Insulation” for applied insulation for domestic water heaters.
3. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment” connections to domestic water heaters.
4. Division 22 Section: “General Duty Valves for Plumbing Piping”
5. Division 26 Section: “Low Voltage Electric Conductors and Power Cables:” Requirements for electric wiring and cable connections for water heaters specified in this section.
6. Division 26 Section: “Raceways and Boxes for Electrical Systems: “Requirements for conduits and boxes housing electrical wiring and connections specified in this section.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest edition.”)

A. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.

B. American Society of Mechanical Engineers:

1. ASME PTC 25 - Pressure Relief Devices.
2. ASME Section VIII - Boiler and Pressure Vessel Code - Pressure Vessels.

C. American National Standards Institute:

1. NSF/ANSI 61 & Annex G: Drinking Water Systems Components – Health Effects.
2. NSF/ANSI 372: Drinking Water Systems Components – Lead Content.

1.4 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate water heater(s) dimensions, size of taps, and performance data. Indicate dimensions of tanks, tank lining methods, anchors, attachments, lifting points, taps, and drains.

C. Product Data: Submit dimensioned drawings of water heaters indicating components and connections to other equipment and piping. Submit electrical characteristics and connection locations.

D. Manufacturer's Installation Instructions: Submit mounting and support requirements.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section – “Execution and Closeout Requirements”: Closeout procedures.

B. Operation and Maintenance Data: Submit replacement part numbers and availability.

1.6 QUALITY ASSURANCE

A. Conform to ASME Section VIII for construction of water heaters. Provide boilers registered with National Board of Boiler and Pressure Vessel Inspectors.

B. Water Heater Performance Requirements: Equipment efficiency not less than prescribed by ASHRAE 90.1.

C. Perform work in accordance with all applicable codes, standards and local authorities jurisdiction requirements.

D. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.

E. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years experience and approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section – “Product Requirements”: Product storage and handling requirements.

B. Accept water heaters on site in original labeled cartons. Inspect for damage.

C. Protect tanks with temporary inlet and outlet caps. Maintain caps in place until installation.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section – “Execution and Closeout Requirements”: Product warranties and bonds.

B. Furnish five year manufacturer warranty for domestic water heaters and water storage tanks.

PART 2 - PRODUCTS

2.1 INSTANTANEOUS HOT WATER HEATERS

A. THERMOSTATIC WATER HEATER WITH MIXING VALVE

1. Tankless Water Heater shall be an Eemax Thermostatic Model, with digital microprocessing temperature control capable of maintaining outlet temperature of +/– 1°F accuracy, and uses an ASSE 1070 approved integrated mixing valve, MT010277T, with 10 kW to heat 1.5 GPM @ 110 a temperature rise of 46 degrees F. Unit shall have ABS-UL 94Vo rated cover. Element shall be replaceable cartridge insert. Unit shall have replaceable filter in the inlet connector. Element shall be iron free, Nickel Chrome material. Heater shall be fitted with 1/2” pipe compression nuts (5/8” OD) or 3/8” sleeves,

to eliminate need for soldering. Maximum operating pressure of 150 PSI. Hot water storage tanks prohibited. Unit shall be Eemax or approved equal.

B. THERMOSTATIC WATER HEATER

1. Tankless water heater shall be an Eemax Series Two model EX200TC with 20 kW to heat 2.0 GPM at a rise of 68°F. Heater shall have two heating modules. Element shall be replaceable cartridge insert. Unit shall have a replaceable filter in the inlet connector. Heater shall be fitted with 3/4" npt water connections. Maximum operating pressure of 150 psi. Unit shall be Eemax or approved equal.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Maintain manufacturer's recommended clearances around and over water heaters.

B. Connect domestic hot water and domestic cold water piping to supply and return water heater connections.

C. Install valves and piping accessories in accordance with details as indicated on the contract documents. Refer to Division 22 Section: "Pipes and Tubes for Plumbing Piping and Equipment" and to Division 22 Section: "General Duty Valves for Plumbing Piping and Equipment".

D. Install discharge piping from relief valves and drain valves to nearest floor drain.

E. Install water heater trim and accessories furnished loose for field mounting.

F. Install electrical devices furnished loose for field mounting.

G. Install control wiring between water heater control panel and field mounted control devices.

H. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

I. Provide die-electric connections when dissimilar metals are present.

3.2 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.3 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section "Commissioning".

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 22 40 00

PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this section, and the other sections of Division 22.

1.2 SUMMARY

A. Section Includes:

1. Water closets.
2. Urinals.
3. Lavatories.
4. Counter Top Sink.
5. Kitchen Sinks.
6. Showers.
7. Mop Sink / Service Sinks.
8. Water Coolers.
9. Hospitality Sink.
10. Penal Fixtures.
11. Healthcare Facilities
12. Schools
13. Fire Rated Plumbing Enclosures

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 22 Section: “Common Work Results for Plumbing.”
2. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment”: Supply connections to plumbing fixtures.
3. Division 26 Section: “Low Voltage Electric Power Conductors and Cables”: Requirements for electrical wiring and cable connections for sensor valves and faucets specified in this section.
4. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements for conduits and boxes housing electrical wiring and connections for items specified in this section.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

4. ASME A112.19.2M - Vitreous China Plumbing Fixtures.
5. ASME A112.19.3 - Stainless Steel Plumbing Fixtures (Designed for Residential Use).
6. ASME A112.19.4 - Porcelain Enameled Formed Steel Plumbing Fixtures.
7. ASME A112.19.5 - Trim for Water-Closet Bowls, Tanks and Urinals.

D. Drinking Water System Components – Lead Content:

1. NSF/ANSI 372

1.4 DEFINITIONS

A. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead free

1.5 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit catalog illustrations of fixtures, sizes, [rough-in dimensions,] utility sizes, trim, and finishes.

C. Manufacturer's Installation Instructions: Submit installation methods and procedures.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

E. LEED Submittals Comply with Section 018113:

1. Water Efficiency Prerequisite 2: Indoor Water Use Reduction
    a. For water closet and urinal, documentation indicating flush rate in gallons per flush (gpf).
        1) Urinals and Tank-type Water Closets: Include documentation indicating WaterSense Label. Exclude security plumbing fixtures.
    b. For faucets, aerators, and showerheads, documentation indicating flow rate in gallons per minute (gpm).
        1) Showerheads and aerators: Include documentation indicating WaterSense Label.
2. MR Credit 2: Environmental Product Declarations
    a. Plumbing fixtures, if available
3. MR Credit 4: Material Ingredients
    a. Report: Plumbing fixtures, if available: Material Ingredient Report.

F. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section – “Execution and Closeout Requirements”: Closeout procedures.

B. Operation and Maintenance Data: Submit fixture, trim, exploded view and replacement parts lists.

1.7 QUALITY ASSURANCE

A. Perform Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

B. Provide products requiring electrical connections listed and classified by Underwriters Laboratories Inc., and/or a testing firm acceptable to authority having jurisdiction as suitable for purpose specified and indicated.

C. Provide plumbing fixture fittings in accordance with ASME A112.18.1 that prevent backflow from fixture into water distribution system.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience, and with service facilities within 50 miles of Project.

B. Installer: Company specializing in performing Work of this section with minimum three years experience, approved by manufacturer and with service facilities within 50 miles of project.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section – “Product Requirements”: Product storage and handling requirements.

B. Accept fixtures on site in factory packaging. Inspect for damage.

C. Protect installed fixtures from damage by securing areas and by leaving factory packaging in place to protect fixtures and prevent use.

1.11 WARRANTY

A. Division 01 Section – “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish minimum two year manufacturer warranty for plumbing fixtures.

1.12 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements:” Spare parts and maintenance products.

B. Furnish two sets of faucet washers’ flush valve service kits lavatory supply fittings, shower heads, and toilet seats.

C. Furnish special wrenches and other devices necessary for servicing plumbing fixtures and trim to the Owner with receipt. Furnish one (1) device for every ten (10) units.

1.13 DEFINITIONS

A. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead free

PART 2 - PRODUCTS

2.1 PLUMBING FIXTURES

A. Furnish and install all fixtures and trim necessary to complete fixture installation. Provide approved stop valve, to match fittings, on both hot and cold water supplies to each fixture, all fixtures requiring hot and cold water shall have cold water faucets on right and hot water faucets on left. Exposed metal work shall be chrome plated red brass. Fixtures shall be white, unless otherwise specified. (Note: The “P” identification symbol with each fixture identified type shown on drawings.) Where fixtures tailpieces, traps and stop valves are not indicated, same shall be provided to suit fixture.

B. Water Conserving Plumbing Fixtures: Provide water usage not to exceed, or to improve upon the following baselines for water conservation.

1. Water Closets: Maximum 1.0 gallons per flush (gpf)

    a. Water Closets with tanks: WaterSense Labeled

2. Urinals: Maximum 0.5 gallons per flush (gpf), WaterSense Labeled

3. Kitchen Sink Faucets: Maximum 1.5 gallons per minute (gpm) at 60 psi

4. Public Lavatory Sink Faucets: Maximum 0.5 gallons per minute (gpm) at 60 psi

5. Showerhead: Maximum 1.5 gallons per minute (gpm) at 80 psi, WaterSense Labeled

C. Unless otherwise specified, the specified fixtures are taken from the catalogue of Zurn for convenience only. Provide similar fixtures of American Standard, Crane, Eljer Company, Elkay, Kohler, Sloan or an acceptable comparable product.

D. Coordinate flush valve mounting heights for all water closets with the locations of grab bars; refer to Architectural Contract Drawings for exact grab bar locations.

E. Refer to Architectural Drawings for mounting heights of all fixtures.

F. All exposed bolts, screws, fasteners, etc. shall be vandal proof.

G. Utilize Sani-Sett setting compound for fixtures.

H. All plumbing materials, equipment and fixtures shall be new and of best grade, free of defects and complete with all required appurtenances and accessories.

I. Provide supports necessary to adequately and substantially hang and set fixtures. Supports shall be Zurn, Watts, Josam or J.R. Smith and shall be suitable for wall types and thicknesses and piping arrangements shown.

1. Wall mounted, urinal supports, Watts CA-321 plate type or Zurn Z1222m plate type with cast iron headers, box steel stanchions, block type cast iron feet with bearing plate.
2. Support for wall mounted, urinals, lavatories, sinks, water coolers, etc.:

a. Where fixtures are supported from concrete or cinder block walls, install No. 10 USSG steel plate on the opposite side of the wall and bolt hangers or supports through plate. Where opposite side of wall is exposed to view, place bolts in core of blocks and fill core with cement.
b. Were lavatories with wall hangers have been specified and fixtures are supported from metal stud frame partitions, fixture brackets or mounting lugs shall be through bolted to steel channel crosspieces not less than 1 ½" wide anchored to studs. Bolt heads shall be welded to channel web.
c. Concealed arm type lavatory supports, Zurn Z1231, or Watts TCA-411 with cast iron headers, box steel stanchions, block type cast iron fee and header and chrome plated cast brass threaded escutcheons for slab type lavatories.

3. Wall mounted water closet chair carriers, Watts ISCA-101 series or Zurn Z-1203 Series for horizontal installation.

J. Plumbing fixtures shall be caulked at walls and floors with silicone caulking material of same color as fixture(s).

K. Locate countertop sinks and/or under counter sinks furnished under this Division. Furnish templates to the countertop fabricator for cutting of required holes.

L. For sinks and fixtures specified under other divisions or other contracts and not provided with faucets, tailpieces, traps, stop valves and supply tubes, provide necessary fittings and completely connect the sinks and fixtures.

M. Where sensor operated flush valves and faucets are specified hereinafter, furnish transformer(s) to serve the maximum recommended number of fixtures per the fixture manufacturer's recommendations. Each transformer shall be suitable for a 120v primary voltage. Wiring shall be installed under Division 26.

N. Hot and cold water connections to fixtures shall be provided with a stop valve, stop valves, flexible braided risers, etc. Stop valves shall be ¼ turn and brass type: ½ "nominal compression inlet x 3/8" O.D. compression outlet, ¼ turn angle valve, 1 piece body construction, chrome plated, compatible with copper, cross-linked polyethylene, temperature rating: 40°F to 140°F, pressure rating: 125 PSI, no lead certified, IAPMO and CSA listed to ASME A 112.18.1/CSA B 125.1 as manufactured by Brasscraft Mfg. Co: Model: G2CR19 or an acceptable comparable product as manufactured by Chicago Faucet, or McGuire.

O. Refer to specification section "Pipes and Tubes for Plumbing Piping and Equipment", for tempered water public hand washing, bathtub, and shower mixing valve requirements. All public hand washing fixtures to be provided with ASSE 1070 Mixing Valve. All bathtub and shower fixtures to be provided with ASSE 1016 Mixing Valve.

P. Provide piping, fittings, drain pans and components to provide washing machine overflow protection. Install per applicable code(s) and/or the authority having jurisdiction's requirements. Provide drain pans under washing machines with indirect connections to drainage system.

2.2 FIRE RATED PLUMBING ENCLOSURES

A. One hour rated wall enclosure to protect shower valves installed in rated walls. Product shall comply with ASTM E-119, UL263, NFPA 251, ANSI A2.1, UBC 7-1, and ULC S101. Fire Rated Product Specialties Corp FN-Z-14-14-3 Fire Enclosure or approved equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Coordination and project conditions.

B. Verify walls and floor finishes are prepared and ready for installation of fixtures.

C. Verify electric power is available and of correct characteristics.

D. Confirm millwork is constructed with adequate provision for installation of counter top lavatories and sinks.

3.2 PREPARATION

A. Rough-in fixture piping connections in accordance with minimum sizes indicated in fixture rough-in schedule for particular fixtures.

3.3 INSTALLATION

A. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

B. Install each fixture with trap, easily removable for servicing and cleaning.

C. Provide chrome plated flexible braided supplies to fixtures with ¼ turn handle stops, reducers, and escutcheons.

D. Install components level and plumb.

E. Install and secure fixtures in place with wall supports or wall carriers and bolts as recommended by fixture manufacturer.

F. Seal joints between fixtures and walls, floors and counters using sanitary type one part mildew resistant sealant. Color to match fixture.

G. Solidly attach water closets to floor with lag screws. Lead flashing is not intended hold fixture in place.

H. For ADA accessible water closets, install flush valve with handle to wide side of stall.

I. Provide piping, fittings, drain pans and components to provide washing machine overflow protection. Install per applicable code(s) and/or the authority having jurisdiction’s requirements. Provide drain pans under washing machines with indirect connections to drainage system.

J. Provide fire rated plumbing enclosures at locations where valves, including shower valves, are installed in rated walls.

3.4 INTERFACE WITH OTHER PRODUCTS

A. Review millwork shop-drawings. Confirm location and size of fixtures and openings before rough in and installation.

3.5 ADJUSTING

A. Division 01 Section: “Execution and Closeout Requirements”: Testing, adjusting, and balancing requirements.

B. Adjust stops or valves for intended water flow rate to fixtures without splashing, noise, or overflow.

3.6 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.7 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Final cleaning requirements.

B. Clean plumbing fixtures and equipment.

3.8 PROTECTION OF INSTALLED CONSTRUCTION

A. Division 01 Section: “Execution and Closeout Requirements”: Protecting installed construction.

B. Do not permit use of fixtures before final acceptance.

3.9 SCHEDULES

A. Refer to contract drawings for plumbing fixture schedule.

B. Fixture Rough-in: Refer to plumbing fixture schedule on contract drawings

3.10 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 05 00

COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this and the other sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. General administrative and procedural requirements, as well as the following basic mechanical materials and methods.
2. Submittals.
3. Coordination drawings.
4. Record documents.
5. Operation and Maintenance manuals.
6. Rough-ins.
7. Mechanical installations.
8. Cutting and patching.
9. Concrete equipment base construction requirements.
10. Equipment nameplate data requirement.
11. Labeling and identifying mechanical systems and equipment is specified in Division 23 Section: “Identification for HVAC Piping and Equipment.”
12. Non-shrink grout for equipment installations.
13. Field-fabricated metal and wood equipment supports.
14. Installation requirements common to equipment specification Sections.
15. Mechanical demolition.
16. Touchup painting and finishing.

1.3 ACRONYMS

A. The following list of abbreviations are utilized within the specifications and are provided as a reference:

1. AABC - Associated Air Balance Council
2. ADA - American Disability Act
3. ADC - Air Diffusion Council
4. AGA - American Gas Association
5. AMCA - Air Moving and Conditioning Association
6. ANSI - American National Standards Institute
7. ARI - Air Conditioning and Refrigeration Institute
8. ASHRAE - American Society of Heating, Refrigerating and Air Conditioning Engineers
9. ASME - American Society of Mechanical Engineers

10. ASTM - American Society for Testing and Materials
11. AWS - American Welding Society
12. AWWA - American Water Works Association
13. IBC - International Building Code
14. CS - Commercial Standard
15. CSA - Canadian Standards Association
16. IBR - Institute of Boiler and Radiator Manufacturers
17. IEEE - Institute of Electrical and Electronics Engineers
18. IMC - International Mechanical Code
19. IPC - International Plumbing Code
20. MOSHA - Maryland Occupational Safety and Health Administration
21. MSSP - Manufacturers Standards Society of the Valve and Fittings Industry
22. NEC - National Electrical Code
23. NEMA - National Electrical Manufacturers Association
24. NFPA - National Fire Protection Association
25. OSHA - Occupational Safety and Health Administration
26. SMACNA - Sheet Metal and Air Conditioning Contractors National Association
27. TEMA - Tubular Exchanger Manufacturers Association
28. UL - Underwriters' Laboratories

1.4 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term product includes the terms material, equipment, system, and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.
3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes proposed by Contractor in products, materials, equipment, and methods of construction required by the Contract Documents.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named, or a product is accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Extended Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

1.5 SYSTEM DESCRIPTION

A. Design Requirements: Contract drawings are generally diagrammatic and do not indicate all offsets, fittings, transitions, access panels and other specialties required.

1. Furnish and install all items as may be required at no additional cost to fit the work to the conditions encountered.
2. Arrange piping, ductwork, equipment and other work generally as shown on the contract drawings, providing proper clearances and access.
3. Where departures are proposed because of field conditions or other causes, prepare and submit detailed shop drawing submittal for approval in accordance with Submittals specified below.
4. Subject to the provisions of Division 01, Architect may make reasonable changes in location of equipment piping and ductwork up to the time of rough-in or fabrication.

1.6 SUBMITTALS

A. Comply with Division 01 Section: "Submittal Procedures".

B. Shop Drawings and Product Data:

1. Clearly identify all submittals:

a. Indicate intended application, location, etc.
b. Each submittal shall indicate the associated specification section, and paragraphs. Do not combine product data and shop drawing submittals from different spec sections into a single submittal package, even though they may be the same distributor, vendor or part of a single material order.
c. Clearly indicate the exact type, model number, size and special features of the proposed item.
d. Include catalog spec sheets to completely describe proposed equipment.
e. Factory order forms only showing the required capacities are not acceptable.
f. Identify all options furnished to meet specifications.
g. The Architect shall not select equipment ratings and/or options. Submittals not properly marked shall be returned without review.

C. Product Substitutions: Comply with requirements of Division 01.

D. Comparable Products Submission:

1. Document each request for a proposed comparable product with supporting data substantiating compliance of proposed product with Basis-of-Design product.
2. Use the attached “Comparable Product Submittal Form” in addition to the requirements specified herein.
3. Comparable products will not be reviewed without completion of the attached form.

E. Coordination Drawings:

1. Building Information Model (BIM):

    a. Coordination drawings shall be created from 3D BIM model of all Mechanical, Electrical, Fire Protection, and Plumbing systems. Assign an individual to serve as the main point of contact for the BIM related issues. This individual shall have sufficient BIM experience required for the size and complexity of the project and shall have relevant proficiency in the BIM process.
    b. Coordinate construction sequencing and scheduling activities and assure they are integrated with the BIM documents.
    c. All design modifications in the field, RFI Responses, Submittals, and Owner requested changes shall be documented and updated in the BIM documents in a timely manner.
    d. All coordination efforts and BIM updates shall be provided without changes to the contract cost and/or schedule.
2. Prepare coordination drawings to a scale of ¼”=1’0” or larger, detailing major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components.
3. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the work, including (but not necessarily limited to) the following:

    a. The proposed locations of piping, valving, ductwork, equipment, and materials.
    b. Planned piping layout, including valve and specialty locations and valve stem movement.
    c. Planned duct systems layout, including elbow radii and duct accessories.
    d. Clearances for installing and maintaining insulation.
    e. Clearances for serving and maintaining equipment, including tube removal, filter removal, and space for equipment disassembly required for periodic maintenance.
    f. Equipment connections and support details.
    g. Exterior wall and foundation penetrations.
    h. Fire-rated wall and floor penetrations.
    i. Sizes and location of required concrete pads and bases.
    j. Duct fire dampers.
    k. Access doors.
    l. Clearances at electrical components in accordance with the National Electrical Code.
    m. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
    n. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations. Show all wall mounted access doors for devices in ductwork or piping.
    o. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets light fixtures, communication systems components, cable trays, sprinklers, access doors and other ceiling mounted items.

F. Closeout Submittals:

1. Record Drawings: Prepare record documents in accordance with the requirements in Division 01 Section: "Execution and Closeout Requirements". In addition to the requirements specified in Division 01, indicate the following installed conditions:

    a. Ductwork mains and branches, size and location, for both exterior and interior; locations of dampers and other control devices; filters, boxes, and terminal units requiring periodic maintenance or repair.

b. Mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e., traps, strainers, expansion compensators, tanks, etc.). Valve location diagrams, complete with valve tag chart. Refer to Division 23 Section: “Identification for HVAC Piping and Equipment." Indicate actual inverts and horizontal locations of underground piping.
c. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
d. Approved substitutions, Contract Modifications, Responses to Contractor’s Request for Information, and actual equipment and materials installed.
e. Record the locations and invert elevations of underground installations.

2. Operation and Maintenance Data: Prepare operation and maintenance data in accordance with Division 01 Section: "Execution and Closeout Requirements." In addition to the requirements specified in Division 01, include the following information for equipment items:

a. List of systems and equipment requiring service manuals.
b. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.
c. Manufacturer's printed operating procedures to include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions.
d. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.
e. Servicing instructions and lubrication charts and schedules.
f. Systems and Equipment test reports.

3. Commissioning Report.

G. Color Selection: Color of finishes shall be as selected by the Architect. Submit colors of factory finished equipment for acceptance prior to ordering.

H. Products and Materials:

1. Submit complete descriptive data for all materials as follows:

a. Material specifications.
b. Data sheets.
c. Samples.
d. Capacity ratings.
e. Performance curves.
f. Operating characteristics.
g. Catalog cuts.
h. Dimensional drawings.
i. Wiring diagrams.
j. Installation instruction.
k. Any other information necessary to indicate compliance with contract documents.

2. Edit submittal data specifically for application to this project.
3. Submit actual operating conditions and characteristics for all equipment.
4. Catalogs or catalog cuts are not acceptable unless the particular item and all relative data has been marked in such a manner as to be clearly defined.
5. Color of finishes shall be as selected by the Architect. Submit colors of factory finished equipment for acceptance prior to ordering.

6. No mechanical item shall be fabricated, purchased, delivered to the site or installed, until reviewed by the Architect.

    a. After the proposed materials have been approved, no substitution will be permitted except where approved by the Architect.
7. Provide shop drawing and product data submittals as indicated under individual specification sections.
8. Provide any other equipment requested by the Architect.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.7 QUALITY ASSURANCE

A. Underwriter's Laboratory (UL) Requirements: All equipment containing electrical components and provided under Division 23 shall bear the Underwriter's Laboratory (UL) label, as a complete packaged system.

1. Equipment not provided with a UL label shall be tested in the field, certified and provided with a listed label at the installer's expense.

    a. Field testing shall be performed by a testing agency approved by the authority having jurisdiction.
    b. Provide services of a UL recognized, independent Electrical Testing Laboratory (ETL) to provide field inspection and testing. Provide and ETL Label on all such equipment.

B. Fire Safe Materials: Unless otherwise indicated, materials shall conform to UL, National Fire Protection Agency (NFPA) or American Society for Testing and Materials (ASTM) standards for fire safety with smoke and fire hazard rating not exceeding flame spread of 25 and smoke developed of 50.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with Division 01 Section: "Product Requirements" : Product storage and handling requirements.

1. Deliver, store, and handle products according to manufacturer's recommendations, using means and methods that will prevent damage, deterioration, and loss, including theft.
2. Schedule delivery to minimize long-term storage at Project Site and to prevent overcrowding of construction spaces.
3. Coordinate delivery with installation time to assure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
4. Deliver products to Project Site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
5. Inspect products upon delivery to ensure compliance with Contract Documents and to ensure that products are undamaged and properly protected.
6. Store products in manner that will facilitate inspection and measurement.
7. Store materials in a manner that will not endanger project structure.

8. Store products subject to damage by elements above ground, under cover in a weather tight enclosure, with ventilation adequate to prevent condensation.
9. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather protection requirements for storage.

1.9 PROJECT CONDITIONS

A. Existing Conditions: Prior to preparing the bid, visit the site and become familiar with all existing conditions. Make all necessary investigations as to locations of utilities and all other matters, which can affect the work. No additional compensation will be made for failure to determine the conditions under which the work will be performed.

B. Outages

1. All mechanical outages which will interfere with the normal use of the building in any manner shall be done at such times as shall be mutually agreed upon with the Owner.
2. Unless otherwise specified, outages of any services required for the performance of this contract and affecting areas other than the immediate work area shall be scheduled with the Owner at least fourteen days (14) days in advance. All such outages shall be performed on other than normal work hours, Monday through Friday 8 a.m. to 5 p.m.
3. The bid price shall include the cost of all premium time required for outages and other work which interferes with the normal use of the building.
4. The operation of valves or switches required to achieve an outage shall be accomplished by the Owner or the Contractor. Unauthorized operation of valves, power switches, or other control devices shall not be permitted.

1.10 SEQUENCING

A. Coordinate mechanical equipment installation with other building components.

B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for mechanical installations.

C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

D. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

E. Coordinate connection of electrical services.

F. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate requirements for access panels and doors where mechanical items requiring access are concealed behind finished surfaces.

H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar concealment.

1.11 PRODUCT WARRANTIES

A. Division 01 Sectin: “Execution and Closeout Requirements”: Product warranties and product bonds

B. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

C. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1. Manufacturer's Standard Form: Modified to include project-specific information and properly executed.
2. Refer to Divisions 01 through 26 Sections for specific content requirements and particular requirements for submitting special warranties.

D. Submittal Time: Comply with requirements in Division 01 Section: “Execution and Closeout Requirements.”

1.12 DISCREPANCIES

A. Where discrepancies occur between the drawings and specifications or within either document itself, the item or arrangement of better quality, greater quantity or higher cost shall be included in the contract price. The Architect shall decide on the item and manner in which the work shall be provided, based on the design intent of the documents.

1.13 SPECIAL TOOLS & OPERATING ACCESSORIES

A. A. Whenever any products provided under this Division have tamperproof, special or restrictive hardware, as specified or where provided from the manufacturer as standard or optional construction, provide a minimum of two (2) matching tools, bits, sockets, etc. needed for operation and/or access to such items. This shall include, but is not limited to:

1. Tamperproof screws, bolts, etc. on devices, enclosures, covers, etc.
2. Penta-head bolts used on handhole and/or manhole lids.
3. Penta-head bolts used on switchgear, transformers, etc.
4. Any other special tools which are unique to that product.

1.14 PRE-SUBMITTAL MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-Installation Meeting.

B. Pre-Submittal Meetings: After approval of the material and equipment list and prior to submitting equipment (boilers, chillers, cooling towers, variable speed drives, building automatic temperature control system, and remote energy management system, etc.) shop drawings, the pre-submittal coordination meeting(s) shall be held at the Engineer's Office. The attendees shall include at the minimum:

1. Equipment Sales Representative responsible for the preparing the shop
2. drawings
3. Mechanical Contractor
4. Building ATC Contractor (Sales Representative, Control Engineer, and
5. Lead Project Installation Technician)
6. Electrical Contractor
7. Mechanical Engineer

C. The Equipment Representative and/or the Mechanical Contractor shall be responsible for e-mailing, a minimum of 48 hours in advance, a copy of the Preliminary Submittal to all named parties. The purpose of the meeting is to coordinate requirements and gain a full understanding form all parties as to what is required for a fully turnkey installation, as well as to minimize potential rejection of shop drawings. The Mechanical Contractor shall coordinate these meetings and shall document and publish minutes of all meetings."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with Contract Documents that are undamaged and new at time of installation.

1. Provide products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
2. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Where products are accompanied by the term as selected, Architect will make selection.
4. Where products are accompanied by the term match sample, sample to be matched is Architect's.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.

B. General Compliance Requirements: Compliance requirements for individual products, as indicated in Contract Documents, are multiple in nature and may include generic descriptions, performance requirements, compliance with reference standards, conformance with graphic details and other similar forms and methods of indicating requirements, all of which must be complied with.

C. Procedures for Selecting Products: Contractor's options for selecting products are limited by Contract Document requirements, and are not controlled by industry traditions or procedures experienced by Contractor on previous construction projects.

D. Products specified by Reference Standards, Codes and Regulations: Select from among products, which can be shown to comply with referenced documents.

E. Products specified by Naming Products and Manufacturers: Select from among products listed.

F. Products specified by Naming One Manufacturer's Product as the Basis-of-Design with Reference to Other Manufacturers: Select either the specified Basis-of-Design product or an approved comparable product by one of the other named manufacturers.

1. Comply with provisions in Comparable Products Article to obtain approval for use of a comparable product by one of the named manufacturers.

G. Products specified by Naming One Manufacturer's Product and Indicating Option of Selecting Comparable Products by stating or Approved Equivalent or similar language: Select either the specified product or an approved comparable product.

1. Comply with provisions in Comparable Products Article to obtain approval for use of a comparable product by one of the named or un-named manufacturers.

H. Visual Matching Specification: Where Specifications require matching an established Sample, select a product that complies with requirements and, matches Architect's sample. Architect's decision will be final on whether proposed product matches satisfactorily.

I. Visual Selection Specification: Where Specifications include the phrase as selected from manufacturer's standard colors, patterns, textures or similar phrase, select a product that complies with other specified requirements. Architect will select color, pattern, and texture.

1. Standard Range: Where Specifications include the phrase standard range of colors, patterns, textures or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that does not include premium items.
2. Full Range: Where Specifications include the phrase full range of colors, patterns, textures or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that includes both standard and premium items.

2.2 COMPARABLE PRODUCTS

A. Where Basis-of-Design products are specified by name, submit the following, in addition to other required submittals, to obtain approval of a comparable product by one of the named manufacturers:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work. Use the attached Comparable Products Submittal Form in addition to requirements listed herein.
2. Detailed comparison of significant qualities of proposed product with the Basis-of-Design product in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, serviceability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

2.3 GROUT

A. Non-shrink, Nonmetallic Grout: ASTM C 1107, Grade B, “Packaged Dry, Hydraulic-Cement Grout (Nonshrink)”, “latest edition”.

1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory-packaged.

2.4 ACCESS DOORS AND PANELS

A. Provide manufactured steel door assemblies consisting of:

1. Hinged door.
2. Flush screwdriver camlocks and frame.

B. Doors shall be Milcor Metal Access doors. Provide key locks where indicated.

C. Design shall be provided for the following installations:

1. Masonry or Dry Wall: Style M.
2. Hard Finish Plaster: Style AP.
3. Fire rated dry wall ceilings: Style CFRAD, 1 hour combustible floor ceiling system, 1 hour non-combustible floor ceiling system, 3 hour non-combustible floor ceiling system.
4. Suspended ceilings: Style CT.
5. Security: Style 3211.

PART 3 - EXECUTION

3.1 PREPARATION

A. Interface With Site Utility Companies:

1. Contact MISS UTILITY prior to any excavation or underground work.
2. Contact local utility companies (gas, water, sewer, etc.) immediately upon award of contract. Do not install related equipment until fully coordinated with appropriate utilities.
3. Provide all construction schedules, dates of requested services, outage windows, equipment locations, etc. necessary for utility work.
4. Gas Utility:

    a. Coordinate service entrance equipment and related layout with gas company prior to ordering or installing any equipment or systems.
    b. Furnish and install all incoming concrete pads, sleeves, connections, etc.

3.2 INSTALLATION

A. General: Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate mechanical systems, equipment, and materials installation with other building components.
2. Verify all dimensions by field measurements.
3. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for mechanical installations.
4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
5. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning prior to closing in the building.
6. Where systems, materials and equipment are intended for overhead installation, and where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.
7. Coordinate connection of mechanical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.
8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Architect.
9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components.
10. Install mechanical equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
11. Install access panel or doors where units are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section: "Access Doors and Frames" and within this section.
12. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

B. Rough-In

1. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
2. Refer to equipment specifications in Divisions 2 through 16 for rough-in requirements.

C. Housekeeping and Equipment Pads

1. Construct pads of dimensions indicated, but not less than 4 inches larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000-psi, 28-day compressive strength concrete and reinforcement bars as specified in Division 03 Section: "Cast-in-Place Concrete."

D. Erection of Metal Supports and Anchorage

1. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
2. Field Welding: Comply with AWS D1.1, "Structural Welding Code -Steel", "latest edition".

E. Erection of Wood Supports and Anchorage

1. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.
2. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
3. Attach to substrates as required to support applied loads.

F. Grouting

1. Install nonmetallic non-shrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.
2. Clean surfaces that will come into contact with grout.
3. Provide forms for placement of grout, as required.
4. Avoid air entrapment when placing grout.
5. Place grout to completely fill equipment bases.
6. Place grout on concrete bases to provide a smooth bearing surface for equipment.
7. Place grout around anchors.
8. Cure placed grout according to manufacturer's printed instructions.

G. Lintels

1. Lintels shall be provided for openings in masonry, brick, concrete, etc. walls to accommodate work of this division.

    a. Lintels shall be provided under this division when not being provided under other divisions. Lintels shall be approved by the Architect.

3.3 CUTTING AND PATCHING

A. General: Perform cutting and patching in accordance with Division 01 Section: "Execution and Closeout Requirements". In addition to the requirements specified in Division 01, the following requirements apply:

1. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.

B. Perform cutting, fitting, and patching of mechanical equipment and materials required to:

1. Uncover Work to provide for installation of ill-timed Work.
2. Remove and replace defective Work.
3. Remove and replace Work not conforming to requirements of the Contract Documents.
4. Remove samples of installed Work as specified for testing.
5. Install equipment and materials in existing structures.
6. Upon written instructions from the Architect, uncover and restore Work to provide for Architect observation of concealed Work.

C. Cut, remove and legally dispose of selected mechanical equipment, components, and materials as indicated, including but not limited to removal of mechanical piping, heating units, ductwork, plumbing fixtures and trim, and other mechanical items made obsolete by the new Work.

D. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.

E. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.

F. Patch finished surfaces and building components using new materials specified for the original installation and using experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.

3.4 PAINTING AND FINISHING

A. Division 09 Section: "Painting and Coating" for field painting requirements.

B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

C. Do not paint manufacturer's labels or tags.

3.5 MECHANICAL DEMOLITION

A. Disconnect, demolish, and remove work specified under Division 23 and as indicated. Remove pipes and ducts back to the active pipe and duct to remain and cap.

B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.

C. Accessible Work: Remove indicated exposed pipe and ductwork in its entirety.

D. Abandoned Work: Cut and remove buried pipe abandoned in place, 2 inches beyond the face of adjacent construction. Cap and patch surface to match existing finish.

E. Removal: Remove indicated equipment from the Project site.

F. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.

3.6 CONSTRUCTION

A. Cutting, Welding, Burning

1. Before commencing any cutting, welding, burning, brazing (pipe sweating), obtain a hot work permit from Environmental Health and Safety.
2. The hot work permit copy shall remain on the job site at the hot work location until such work is completed at which time the permit shall be returned to Environmental Health and Safety.

3.7 PENETRATION OF WATERPROOF CONSTRUCTION

A. Coordinate the work to minimize penetration of waterproof construction, including roofs, exterior walls and interior waterproof construction.

B. Furnish and install drains, curbs, vent assemblies, sleeves, flashing, etc. specifically designed for application to the particular construction. Install system in accordance with the roofing manufacturer's instructions.

3.8 EXCAVATION AND BACKFILLING

A. General

1. Perform all necessary excavation, for installation of work under Division 23**,** in accordance with Division 31.

3.9 CLEANING

A. Clean surfaces prior to application of insulation, adhesives, coating, and paint.

B. Provide factory applied finish where specified.

C. Protect all finishes, and restore all finishes to their original condition if damaged as a result of work under Division 23.

D. Remove all construction marking and writing from exposed equipment, ductwork, piping and building surfaces.

E. General: General cleaning during construction is required by the General Conditions and included in Section Temporary Facilities.

F. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to the condition expected in a normal, commercial building cleaning and maintenance program. Comply with manufacturer's instructions.

G. Remove all mechanical clipping, wiring, nuts, bolts, etc. left on top of ceilings and ceiling tiles.

3.10 PROTECTION

A. Protect work, material and equipment from weather and construction operations before and after installation.

B. Properly store and handle all materials and equipment.

C. Cover temporary openings in piping, ductwork and equipment to prevent the entrance of water, dirt, debris, and other foreign matter.

3.11 LUBRICATION

A. All bearings, motors and all equipment requiring lubrication shall be provided with accessible fittings.

B. Before turning over the equipment to the Owner, provide the following:

1. Fully lubricate each item of equipment.
2. Provide 1 year's supply of lubricant for each type of lubricant.
3. Provide complete written lubricating instructions, together with diagram locating the points requiring lubrication.

C. Motors and equipment shall be provided with grease lubricated roller or ball bearings with Alemite or equal extended grease fittings and drain plugs.

3.12 ELECTRICAL WORK

A. It is the intent to provide a complete and operational system. The work between Division 23 and 26 is complementary and is meant to produce a single and operating system. Contractor shall make its own determination as to the distribution of responsibility among the various trades.

B. All electrical work performed under Division 23 shall be provided in accordance with Division 26.

3.13 PROVISIONS FOR ACCESS

A. Furnish and install adequate access to all HVAC and plumbing components. The following list shall be used as a guide only:

1. Mechanical equipment.
2. Valves.
3. Dampers and operators.
4. Filters.
5. Heating and air conditioning units.
6. Controls.
7. Cleanouts.
8. Traps.
9. Automatic temperature control panels.
10. Coils.

B. Access shall be adequate as determined by the Architect.

C. Refer to contract drawings where panels have been specifically located.

D. Provide additional panels for adequate access as indicated in paragraph A above.

E. Where access is by means of liftout ceiling tiles or panels mark each panel using small color-coded or numbered tabs. Provide an index chart for identification. Place markers in corner of tile.

3.14 OPERATION OF EQUIPMENT

A. Clean all systems and equipment prior to initial operation for testing and balancing.

B. Do not operate equipment unless all proper safety devices or controls are operational.

C. Provide all maintenance and service for equipment, which is operated during construction.

D. Where specified and otherwise required, provide the services of a manufacturer's factory trained service organization to start the equipment.

E. Do not use mechanical systems for temporary services during construction unless authorized in writing by the Architect.

1. Where such authorization is granted, temporary use of equipment shall not limit or otherwise affect warranties or guarantees of the work.

F. Upon completion of work, clean and restore all equipment to new conditions and replace all filters.

3.15 DEMONSTRATION

A. Demonstrate operation and maintenance of equipment and systems to Owner’s personnel a minimum two (2) weeks prior to date of final inspection.

1. For equipment requiring seasonal operation, perform instructions for other seasons at the same time.
2. Training period shall be performed within 1 - two week period.

B. Use operation and maintenance manuals and video as basis of instruction. Review contents of manual and video with personnel in detail to explain all aspects of operation and maintenance.

C. Demonstrate the following:

1. Start up.
2. Operation.
3. Control.
4. Adjustment.
5. Trouble shooting.
6. Servicing.
7. Maintenance.
8. Shutdown.

D. Provide at least 40 hours straight time instruction to the operating personnel.

1. This instruction period shall consist of not less than five-8 hour days.
2. Time of instruction shall be designated by the Owner.
3. This instruction shall be in addition to instructional requirements of specific equipment specified elsewhere in Division 23.

3.16 WALL AND FLOOR PENETRATION

A. All penetrations of partitions, walls and floors by ducts, piping or conduit under Division 23 shall be sealed and caulked. Provide U.L. listed fire stopping systems at penetrations through fire rated walls.

3.17 EQUIPMENT PROVIDED UNDER ANOTHER DIVISION AND BY OTHERS

A. Make all system connections required to equipment furnished and installed under another division and by others.

B. It shall be the responsibility of the Contractor to coordinate all necessary data from the equipment supplied under other Divisions.

3.18 MECHANICAL EQUIPMENT SERVICE PALTFORMS

A. Where mechanical equipment is located on a roof or elevated structure that requires access such that personnel will have to climb over ductwork or higher than 16 feet above grade to access the equipment, a means to access the equipment shall be provided.

B. Provide catwalks around the entire perimeter of equipment to match manufacturer required clearance area. Minimum 36” from perimeter of unit

C. Provide side edge railings that extend above the catwalk not less than 30” above the catwalk

3.19 PROJECT PUNCH OUT

A. Architect/Engineer will perform punch out reviews and will provide the Contractor with a list of punch list items to be completed before contract close out. Each and every punch list item shall be initialed and dated by the Contractor when the work is complete. The Architect/ Engineer will not perform any punch list verification until all items have been completed, initialed, dated and the list returned to the Architect/Engineer. If any items have been initialed as being completed by the Contractor and the Architect/Engineer determines that the work is not complete, the Architect/Engineer shall be reimbursed by the Contractor at his regular hourly rate for any and all items requiring revisiting of the site by the Architect/Engineer. Reimbursement will be made by deducting the Architect/Engineer fee from the Contractor's final payment.

3.20 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

COMPARABLE PRODUCT SUBMITTAL FORM

Table of Compliance (Sample)

Shop Drawing and Product Data Submittal

The Contractor shall prepare a Table of Compliance Form similar in format to the sample shown below to facilitate and expedite the Shop Drawing and Product Data Review. Failure to comply with this requirement will be basis for rejecting the Submittal.

The Table of Compliance Form will list and compare the performance parameters as the submitted equipment to that listed on equipment schedule and specifications as basis of design. All non-compliance items (differences) must be explained in full, indicating their impact, if any, on maintainability, durability, energy use, operating costs, code compliance and environmental considerations.

SECTION 23 05 13

COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Section includes single- and three-phase motors for application on equipment provided under other sections and for motors furnished loose to Project.
2. Source Quality Control.
3. Bearing Protection Ring.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 23 Section: “Common Work Results for HVAC.”
2. Division 23 Section: “Identification for HVAC piping and Equipment.”
3. Division 23 Section: “Hydronic Pumps.”
4. Division 23 Section: “HVAC Fans.”
5. Division 26 Section: “Common Work Results for Electrical”
6. Division 26 Section: “Grounding and Bonding for Electrical Systems.”
7. Division 26 Section: “Identification for Electrical Systems.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. American Bearing Manufacturers Association:

1. ABMA 9 - Load Ratings and Fatigue Life for Ball Bearings.

B. National Electrical Manufacturers Association:

1. NEMA MG 1 - Motors and Generator.

C. International Electrical Testing Association:

1. NETA ATS - Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems.

1.4 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit catalog data for each motor furnished loose. Indicate nameplate data, standard compliance, electrical ratings and characteristics, and physical dimensions, weights, mechanical performance data, and support points.

C. Test Reports: Indicate procedures and results for specified factory and field testing and inspection.

D. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years experience.

B. Testing Agency: Company who is a member of the International Electrical Testing Association and specializing in testing products specified in this section with minimum five years experience.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section – “Product Requirements”: Product storage and handling requirements.

B. Lift only with lugs provided. Handle carefully to avoid damage to components, enclosure, and finish.

C. Protect products from weather and moisture by covering with plastic or canvas and by maintaining heating within enclosure.

D. For extended outdoor storage, remove motors from equipment and store separately.

PART 2 - PRODUCTS

2.1 REQUIREMENTS FOR MOTORS

A. General: Requirements below apply to motors covered by this Section except as otherwise indicated.

1. Motors 3/4 hp and Larger: Three-phase motor as specified below.

2. Motors Smaller Than 3/4 hp: Single-phase motor as specified below

3. Frequency Rating: 60 Hz.

4. Voltage Rating: Determined by voltage of circuit to which motor is connected for the following motor voltage ratings (utilization voltages):

a. 120 V Circuit: 115 V - motor rating.
b. 208 V Circuit: 200 V - motor rating.
c. 240 V Circuit: 230 V - motor rating.
d. 480 V Circuit: 460 V - motor rating.

5. Minimum service factor shall be 1.15 and shall apply at frequency and utilization voltage at which motor is connected. Provide motors, which will not operate in service factor range when supply voltage is within 10 percent of motor voltage rating.

6. Capacity: Sufficient to start and operate connected loads at designated speeds in indicated environment, and with indicated operating sequence, without exceeding nameplate ratings. Provide motors rated for continuous duty at 100 percent of rated capacity.

7. Design for continuous operation in 40 degrees C environment, with temperature rise in accordance with NEMA MG 1 limits for insulation class, service factor, and motor enclosure type.

8. Enclosure: Open driproof, unless otherwise specified. Provide screen over slots, where slots will permit passage of human extremities.

9. Provide adjustable motor slide base for belt driven equipment. Include adjusting bolts and locknuts.

10. Wiring Terminations: Furnish terminal lugs to match branch circuit conductor quantities, sizes, and materials indicated.

11. Motors that operate with Variable Frequency Drives to meet the MG 1 Part 31 specifications with insulation that can withstand 1600 V peak voltage and a 1 msec rise time and improved baring lubrication for higher temperature operation

B. Minimum nominal full load efficiency for NEMA design B motors shall be as follows:

	Open Motors			Enclosed Motors		
	2-pole	4-pole	6-pole	2-pole	4-pole	6-pole
HP	3600 RPM	1800 RPM	1200 RPM	3600 RPM	1800 RPM	1200 RPM
1	77.0	85.5	82.5	77.0	85.5	82.5
1.5	84.0	86.5	86.5	84.0	86.5	87.5
2	85.5	86.5	87.5	85.5	86.5	88.5
3	85.5	89.5	88.5	86.5	89.5	89.5
5	86.5	89.5	89.5	88.5	89.5	89.5
7.5	88.5	91.0	90.2	89.5	91.7	91.0
10	89.5	91.7	91.7	90.2	91.7	91.0
15	90.2	93.0	91.7	91.0	92.4	91.7
20	91.0	93.0	92.4	91.0	93.0	91.7
25	91.7	93.6	93.0	91.7	93.6	93.0
30	91.7	94.1	93.6	91.7	93.6	93.0
40	92.4	94.1	94.1	92.4	94.1	94.1

50	93.0	94.5	94.1	93.0	94.5	94.1
60	93.6	95.0	94.5	93.6	95.0	94.5
75	93.6	95.0	94.5	93.6	95.4	94.5
100	93.6	95.4	95.0	94.1	95.4	95.0
125	94.1	95.4	95.0	95.0	95.4	95.0
150	94.1	95.8	95.4	95.0	95.8	95.8
200	95.0	95.8	95.4	95.4	96.2	95.8
250	95.0	95.8	95.8	95.8	96.2	95.8
300	95.4	95.8	95.8	95.8	96.2	95.8
350	95.4	95.8	95.8	95.8	96.2	95.8
400	95.8	95.8	No Req.	95.8	96.2	No Req.
450	96.2	96.2	No Req.	95.8	96.2	No Req.
500	96.2	96.2	No Req.	95.8	96.2	No Req.

C. Minimum full load efficiency for polyphase small electric motors shall be as follows:

	Open Motors		
	2-pole	**4-pole**	**6-pole**
HP	**3600 RPM**	**1800 RPM**	**1200 RPM**
0.25	65.6	69.5	67.5
0.33	69.5	73.4	71.4
0.50	73.4	78.2	75.3
0.75	76.8	81.1	81.7
1.0	77.0	83.5	82.5
1.5	84.0	86.5	83.8
2.0	85.5	86.5	No Req.
3.0	85.5	86.9	No Req.

D. Minimum full load efficiency for capacitor-start capacitor-run and capacitor-start induction-run small electric motors shall be as follows:

	Open Motors		
	2-pole	**4-pole**	**6-pole**
HP	**3600 RPM**	**1800 RPM**	**1200 RPM**
0.25	66.6	68.5	62.2
0.33	70.5	72.4	66.6
0.50	72.4	76.2	76.2
0.75	76.2	81.8	80.2
1.0	80.4	82.6	81.1
1.5	81.5	83.8	No Req.
2.0	82.9	84.5	No Req.
3.0	84.1	No Req.	No Req.

E. Three-phase Motors

1. NEMA MG 1, Design B, energy-efficient squirrel-cage induction motor, with windings to accomplish starting methods and number of speeds as indicated on Drawings.

2. Insulation System: NEMA Class F.

3. Motor Frames: NEMA Standard T-Frames of steel, aluminum, or cast iron with end brackets of cast iron or aluminum with steel inserts.

4. Thermistor System (Motor Frame Sizes 254T and Larger): Three PTC thermistors embedded in motor windings and epoxy encapsulated solid state control relay with wiring to terminal box.

5. Bearings: Grease lubricated anti-friction ball bearings with housings equipped with plugged provision for relubrication, rated for minimum ABMA 9, L-10 life of 200,000 hours. Calculate bearing load with NEMA minimum V-belt pulley with belt center line at end of NEMA standard shaft extension. Stamp bearing sizes on nameplate.

6. Sound Power Levels: Conform to NEMA MG 1.

7. Multi-Speed Motors: Separate winding for each speed.

8. Variable Speed Motors for Use With Solid-State Drives: Energy efficient, squirrel-cage induction, design B units and ratings, characteristics, and features coordinated with and approved by drive manufacturer. Motors shall be labeled to indicate that they are provided with inverter duty capability in accordance with the National Electrical Manufacturers Association NEMA MG-1, Part 31.

9. Motors for Reduced Inrush Starting: Coordinate with indicated reduced controller type and with characteristics of driven equipment load. Provide required wiring leads in motor terminal box to suit control method.

10. All motors shall be provided with manufacturer’s stamped nameplate, to include all pertinent and capacity data.

F. Single-phase Motors

1. General: Conform to the following requirements except as otherwise indicated.

2. Energy Efficient Motors: One of the following types as selected to suit the starting torque and other requirements of the specific motor application.

   a. Permanent Split Capacitor.
   b. Split-Phase Start, Capacitor-Run.
   c. Capacitor-Start, Capacitor-Run.

3. Shaded-Pole Motors: Use only for motors smaller than 1/20 hp.

4. Internal Thermal Overload Protection for Motors: Protection shall automatically opens the power supply circuit to the motor, or a control circuit arranged for external connection. Protection operates when winding temperature exceeds a safe value calibrated to the temperature rating of the motor insulation. Provide device that automatically resets when motor temperature returns to normal range except as otherwise indicated.

5. Bearings: Belt connected motors and other motors with high radial forces on motor shaft shall be ball bearing type. Sealed, prelubricated sleeve bearings may be used for other single phase motors.

2.2 SOURCE QUALITY CONTROL

A. Test motors in accordance with National Electrical Manufacturers Association NEMA MG 1, including winding resistance, no-load speed and current, locked rotor current, insulation high-potential test, and mechanical alignment tests.

2.3 BEARING PROTECTION RING

A. All motors driven by a variable frequency PWM drive shall include a maintenance free, circumferential, conductive micro fiber shaft grounding ring to discharge shaft currents to ground.

B. Provide AEGIS SGR Bearing Protection Ring as manufactured by Electro Statis Technology.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Disconnect and remove abandoned motors.

B. Maintain access to existing motors and other installations remaining active and requiring access.

C. Clean and repair existing motors to remain or are to be reinstalled.

3.2 INSTALLATION

A. General: The following requirements apply to field-installed motors.

1. Install motors in accordance with manufacturer’s published instructions and the following:

   a. Direct Connected Motors: Mount securely in accurate alignment. Connect to driven equipment with coupler of appropriate type and material for the given duty. Coupler shall be selected for high and range of motor application.
   b. Belt Drive Motors: Use adjustable motor mounting bases. Align pulleys and install belts. Use belts identified by the manufacturer and tension belts in accordance with manufacturer recommendations.

B. Install engraved plastic nameplates in accordance with Division 26.

C. Ground and bond motors in accordance with Division 26.

3.3 FIELD QUALITY CONTROL

A. Division 01 Section – “Quality Requirements”: Field inspection, testing, adjusting, and balancing.

B. Inspect and test in accordance with NETA ATS, except Section 4.

C. Perform inspections and tests listed in NETA ATS, Section 7.15.

3.4 VARIABLE FREQUENCY MOTORS

A. Install Bearing Protection Ring in accordance with manufacturer’s recommendations.

END OF SECTION

SECTION 23 05 29

HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 23.

1.2 SUMMARY

A. General Requirements

1. Incorporate in construction pipe hangers and supports to manufacturer's recommendations utilizing manufacturer's regular product components, parts, and assemblies.
2. Comply with maximum load ratings with considering for allowable stresses prescribed by ASME B31.1 or MS SP-58.
3. Provide support, guides and anchors that do not transmit unacceptable heat and vibration to building structure.
4. Installation of pipe hangers and supports shall be based upon the overall design concept of the piping system. The support system shall provide for and control the free movement of piping including its movement in relation to the connected equipment.
5. Provide for vertical adjustments after installation of supported material and during commissioning, where feasible, to ensure pipe is at design elevation and slope.

B. Section Includes:

1. Pipe hangers and supports.
2. Hanger rods.
3. Inserts.
4. Flashing.
5. Equipment curbs.
6. Sleeves.
7. Mechanical sleeve seals.
8. Formed steel channel.
9. Firestopping relating to HVAC work.
10. Firestopping accessories.
11. Equipment bases and supports.
12. Acoustical Sealant.
13. Non-penetrating rooftop pipe hangers, supports and equipment supports.

C. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 03 Section: “Cast-In-Place Concrete”: Execution requirements for placement of concrete housekeeping pads specified by this section.
2. Division 03 Section: “Concrete Forming and Accessories”: Execution requirements for placement of inserts or sleeves in concrete forms specified by this section.
3. Division 07 Section: “Firestopping”: Product requirements for firestopping for placement by this section.
4. Division 07 Section: “Joint Protection”: Product requirements for sealant materials for placement by this section.
5. Division 09 Section: “Painting and Coating”: Product and execution requirements for painting specified by this section.
6. Division 23 Section: “Common Work Results for HVAC.”
7. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment”: Product and execution requirements for vibration isolators.
8. Division 23 Section: “HVAC Insulation.”
9. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”: Execution requirements for placement of hangers and supports specified by this section.
10. Division 23 Section: “General Duty Valves for HVAC Piping.”

1.4 DEFINITIONS

(Unless otherwise noted, references apply to “latest editions.”)

A. Terminology used in this Section is defined in Manufacturer’s Standardization Society Specification 90, “Valve and Fittings Standards.”

B. Firestopping (Through-Penetration Protection System): Sealing or stuffing material or assembly placed in spaces between and penetrations through building materials to arrest movement of fire, smoke, heat, and hot gases through fire rated construction.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal procedures.

B. Shop Drawings: Indicate system layout with location including critical dimensions, sizes, and pipe hanger and support locations and detail of trapeze hangers.

C. Product Data:

1. Hangers and Supports: Submit manufacturers catalog data including load capacity.
2. Firestopping: Submit data on product characteristics, performance and limitation criteria.

D. Firestopping Schedule: Submit schedule of opening locations and sizes, penetrating items, and required listed design numbers to seal openings to maintain fire resistance rating of adjacent assembly.

E. Design Data: Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers. Indicate calculations used to determine load carrying capacity of trapeze, multiple pipe, and riser support hangers. Submit sizing methods sealed by a registered professional engineer.

F. Manufacturer's Installation Instructions:

1. Hangers and Supports: Submit special procedures and assembly of components.
2. Firestopping: Submit preparation and installation instructions.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Firestopping Engineering Judgments: For conditions not covered by UL or WH listed designs, submit judgments by licensed professional engineer suitable for presentation to authority having jurisdiction for acceptance as meeting code fire protection requirements.

I. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

J. Submit following in accordance with Conditions of Contract and Division 1 Specifications:

1. Shop drawings of items.
2. Complete description of products to be supplied including product data, dimensions materials of construction and specifications.
3. Installation instructions for each product.
4. Layout of piping and ductwork to be isolated including vertical risers showing:

    a. Support points.
    b. Weight at support points.
    c. Isolator type.
    d. Static deflection expected under actual load.
    e. Specified static deflection.
    f. Additional deflection to solid under actual load.
    g. Ratio of spring height under load to spring diameter.
5. Steel rails, steel base frames, and concrete inertia bases showing all steel work, reinforcing, vibration isolator mounting attachment method and location of equipment attachment bolts.
6. Special details at large scale and other necessary information to convey understanding of work.

K. Submission of samples may be requested for each type of vibration isolation device. After approval, samples shall be returned for installation at job site.

L. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of valves, equipment and accessories.

C. Operation and Maintenance Data: Submit instructions for installation and changing components, spare parts lists, exploded assembly views.

1.7 QUALITY ASSURANCE

(Unless otherwise noted, references apply to “latest editions.”)

A. Qualify welding processes and welding operators according to AWS D1.1 "Structural Welding Code – Steel.”

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

B. Qualify welding processes and welding operators according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

C. NFPA Compliance: Comply with NFPA 13, “Installation of Sprinkler Systems,” for hangers and supports used as components of fire protection systems.

D. Listing and Labeling: Provide hangers and supports that are listed and labeled as defined in NFPA 70 “Definitions.”

1. UL and FM Compliance: Hangers, supports, and components include listing and labeling by UL and FM where used for fire protection piping systems.
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7, “Definition and requirements for a nationally recognized testing laboratory.”

E. Licensed Operators: Use operators that are licensed by powder-operated tool manufacturers to operate their tools and fasteners.

F. Supply and install incidental materials needed to meet requirements, even if not expressly specified or shown on drawings without claim for additional payment.

G. Verify correctness of equipment model numbers and conformance of each component with manufacturer's specifications.

H. Should any rotating equipment cause excessive noise or vibration, rebalance, realign or do other remedial work to reduce noise and vibration levels. Excessive is defined as exceeding manufacturer's specifications for unit in question.

I. Through Penetration Firestopping of Fire Rated Assemblies: UL 1479 or ASTM E814 with 0.10 inch water gage minimum positive pressure differential to achieve fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

1. Wall Penetrations: Fire F-Ratings as indicated on Drawings, but not less than 1-hour.
2. Floor and Roof Penetrations: Fire F-Ratings and temperature T-Ratings as indicated on Drawings, but not less than 1-hour.

    a. Floor Penetrations Within Wall Cavities: T-Rating is not required.

J. Through Penetration Firestopping of Non-Fire Rated Floor and Roof Assemblies: Materials to resist free passage of flame and products of combustion.

1. Noncombustible Penetrating Items: Noncombustible materials for penetrating items connecting maximum of three stories.
2. Penetrating Items: Materials approved by authorities having jurisdiction for penetrating items connecting maximum of two stories.

K. Fire Resistant Joints in Fire Rated Floor, Roof, and Wall Assemblies: ASTM E1966 or UL 2079 to achieve fire resistant rating as indicated on Drawings for assembly in which joint is installed.

L. Fire Resistant Joints Between Floor Slabs and Exterior Walls: ASTM E119 with 0.10 inch water gage minimum positive pressure differential to achieve fire resistant rating as indicated on Drawings for floor assembly.

M. Surface Burning Characteristics: Maximum 25/450 flame spread/smoke developed index when tested in accordance with ASTM E84.

N. Perform Work in accordance with ASME B31.1 and ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.

O. Perform Work in accordance with AWS D1.1 for welding hanger and support attachments to building structure.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements” for transporting, handling, storing, and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification.

C. Protect from weather and construction traffic, dirt, water, chemical, and damage, by storing in original packaging.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental conditions affecting products on site.

B. Do not apply firestopping materials when temperature of substrate material and ambient air are not in accordance with the manufacturer’s installation procedures.

C. Maintain manufacturer’s required temperature before, during, and after installation of firestopping materials for minimum periods of time as required by the manufacturer.

D. Provide ventilation in areas to receive solvent cured materials.

1.12 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.13 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for pipe hangers and supports.

PART 2 - PRODUCTS

(Unless otherwise indicated, references apply to “latest editions.”)

2.1 MATERIALS

A. Structural Steel: ASTM A 36, “Carbon Structural Steel,” steel plates, shapes, and bars, black and galvanized.

B. Bolts and Nuts: ASME B18.10 or ASTM A 183, “Track Bolts and Nuts,” steel, hex-head, track bolts and nuts.

C. Washers: ASTM F 844, “Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use,” steel, plain, flat washers.

D. Grout: ASTM C 1107, Grade B, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrink),” non-shrink, nonmetallic.

1. Characteristics include post-hardening, volume-adjusting, dry, hydraulic-cement-type grout that is non-staining, noncorrosive, nongaseous and is recommended for both interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Water: Potable.
4. Packaging: Premixed and factory-packaged.

2.2 HANGERS AND SUPPORTS

A. Hangers, Supports, and Components: Provide factory-fabricated products as manufactured by B-Line, Tyco – (Anvil Hangers), Pipe Shields, Inc., or Erico CADDY. Basis of Design shall be B-Line.

1. Components include galvanized coatings where installed for piping and equipment that will not have a field-applied finish.
2. Pipe attachments include nonmetallic coating for electrolytic protection where attachments are in direct contact with copper tubing.

B. Install rigid round, rectangular, and flat oval metal duct with support systems indicated in SMACNA “HVAC Duct Construction Standards,” Tables 4-1 through 4-3 and Figures 4-1 through 4-8.

C. Support horizontal ducts within 2 feet of each elbow and within 4 feet of each branch intersection.

D. Support vertical ducts at a maximum interval of 16 feet and at each floor.

E. Upper attachments to structures shall have an allowable load not exceeding 3 of the failure (proof test) load but are not limited to the specific methods indicated.

F. Horizontal Non-Insulated Copper Piping Hangers:

1. Two inch and smaller: Figure No. B3104 CTC.
2. Two and one-half inch and larger: Figure No. B3104 CT.

G. Insulated Horizontal Piping Hangers: Reheat Water, Glycol Solution, Heating Hot Water, steam and condensate return, refrigerant piping:

1. Two inch and smaller: Figure No. B3108 with metal shield, Figure No. B3151.
2. Two and one-half inch and larger: Figure No. B3108 with metal shield, Figure No. B3151.

H. Vertical Piping Riser Clamps:

1. Copper Pipe: Figure No. B3373CT.
2. Steel Pipe: Figure No. B3136 and B3137.

I. Beam Clamps and Attachments:

1. For bolt-on locations to structure, Figure Nos. B3291, B3036, or B3050.
2. Welded beam attachments, Figure No. B3083.

J. Brackets:

1. For equipment and piping adjacent to walls or steel columns, Figure Nos. B3066, B3063 and B3067 depending on weight to be supported.

K. Pipe Rests:

1. For pipes close to floor where no expansion provision is required, Figure No. B3088T base stand with B3093 adjustable pipe saddle support.

L. Hanger Rods:

1. Hanger rod, Figure No. B3205.
2. Continuous threaded rod, Figure No. ATR.
3. Eye rods, Figure No. B3210 or B3211, depending on load supported.

M. Trapeze Hangers - Direct Mounting Hangers:

1. Grinnell, Figure No. 46.

N. Protection Saddles:

1. Cast iron pipe, insulated, Figure No. B3108 with metal shield, Figure No. B3151.
2. For high temperature steel pipe, insulated, No. B3160, B3161, B3162, B3163, B3164, or B3165.

O. Pipe Roll Stands:

1. For support of pipe where axial movement is encountered: Figure No. B3117SL where no vertical adjustment is required; and Figure No. B3118SL where vertical adjustment is required.

2.3 THERMAL-HANGER SHIELD INSERTS

A. Description: 100-psig- minimum, compressive-strength insulation insert encased in sheet metal shield.

B. Manufacturers:

1. Carpenter & Paterson, Inc.
2. Erico/Michigan Hanger Co.
3. PHS Industries, Inc.
4. Pipe Shields, Inc.
5. Rilco Manufacturing Company, Inc.
6. Value Engineered Products, Inc.

C. Insulation-Insert Material for Cold Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass with vapor barrier.

D. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass.

E. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.

F. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.

G. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

2.4 EQUIPMENT CURBS

A. General

1. Fabrication: Welded 18 gage galvanized steel shell and base, mitered 3 inch cant, 1-1/2 inch thick insulation, factory installed wood nailer.

B. Rooftop Units, Dedicated Outside Air Units, and Makeup Air Units

1. Curbs shall to be fully gasketed between the curb top and unit bottom with the curb providing full perimeter support, cross structure support and air seal for the unit. Curb

gasket shall be furnished within the control compartment of the rooftop unit to be mounted on the curb immediately before mounting of the rooftop unit.

2. Solid bottom curb shall be factory assembled and fully lined with 1 inch neoprene coated fiberglass insulation and include a wood nailer strip.
3. Manufacturers

    a. Basis of Design shall be BRD Noise and Vibration Control
    b. Alternate manufacturers shall be submitted for review.
4. Seismic/Vibration curbs

    a. HUSH MOUNT™ model RSVC-200: 2" static deflection
    b. The structural steel spring isolation curbs shall bear directly on the roof support structure and be flashed and waterproofed into the roof's membrane waterproofing system.
        1) The curb shall be capable of being re-flashed without lifting the unit.
    c. Equipment manufacturer's or field fabricated curbs shall not be used.
    d. Curb sides and ends shall be manufactured from minimum 14 ga. G90 galvanized sheet metal (expanded metal or painted steel is not acceptable), reinforced and cross braced as required.
    e. All springs shall provide a minimum of 85% vibration isolation efficiency
        1) All springs shall be adjustable for leveling.
        2) Spring assemblies shall contain restraints and snubbers to resist wind and seismic forces.
    f. Spring static deflection and seismic performance criteria shall be as shown or indicated on the drawings, schedules or in the vibration control specification.
    g. The curb shall accept standard 2" roof insulation supplied and installed by the roofing contractor.
    h. An air tight neoprene seal shall be incorporated into the curb design to prevent air leakage or infiltration. The seal shall be affixed after spring adjustments and leveling have been completed.
    i. Wood nailer and flashing shall be provided and curbs shall be manufactured to NRCA standards.
    j. Curb height shall be 24" high minimum or as shown on the drawings.
    k. Curbs shall be shipped pre-assembled. Knocked down kits are not acceptable.
    l. All non-galvanized materials shall be prime paint finished.
    m. All duct supports, bracing, flashing and safing as required.
    n. Unless otherwise recommended by the RTU manufacturer, all curbs shall be full perimeter type. Curbs with condenser pedestal rails are unacceptable.
5. In-Curb Composite Acoustical Treatment

    a. HUSHCORE™ BUB-755 acoustical composite
    b. The overall installed thickness shall be no greater than 10" for BUB-755 products
    c. Shall have a thermal value of R-27
    d. Shall meet Class "A" per ASTM E84 for flammability
    e. The composite panels shall get HUSH SEALANT™ model HSAC-100 acoustical grade caulk at seams and all perimeter edges inside the curb
    f. Shall have 65% post-consumer recycled content
6. Decking

    a. Decking shall be maintained inside the RTU roof curb to a clearance of ¼" maximum around all duct drops but never contact the duct.

b. Pack all air gaps around duct drops for return and supply with HBNF-400-NC and seal with HUSH SEALANT™ HSAC-100.

7. Inspections

a. The manufacturer or their local authorized agent shall inspect the in-curb deck system work on site prior to lowering of the units and issue a letter of certification stating that the products have been properly installed and sealed around all ductwork and drops to eliminate air gaps which can compromise performance.

8. Performance

a. To assure optimized aerodynamic and acoustic performance as well as proper integration and coordination of the final installation, the PLUS™ System shall be supplied by the rooftop unit manufacturer as part of a turnkey package.

b. HUSHCORE™ In-Curb Composite Acoustical Treatment Performance

1) The combination of all layers shall be tested for Sound Transmission Loss in accordance with procedure ASTM E-90-10. The assembly shall be rated at not less than STC-52 with 1/3 octave performance values as listed below for sound radiation through the deck inside the curb.

Freq. (Hz)	80	100	125	160	200	250	315	400	500	630	800	1K
TL (dB)	26	27	33	32	35	42	45	45	50	56	59	60

Freq. (Hz)	1250	1600	2000	2500	3150	4000	5000	6300	8000	10000	STC
TL (dB)	62	63	64	65	67	71	74	78	80	80	52

c. A copy of the test report by an accredited lab shall be included in the submittals to document the above performance

2.5 FLASHING

A. Metal Flashing: 26 gage thick galvanized steel.

B. Metal Counterflashing: 22 gage thick galvanized steel.

C. Lead Flashing:

1. Waterproofing: 5 lb./sq. ft sheet lead.
2. Soundproofing: 1 lb./sq. ft sheet lead.

D. Flexible Flashing: 47 mil thick sheet butyl; compatible with roofing.

E. Caps: Steel, 22 gage minimum; 16 gage at fire resistant elements

2.6 SLEEVES

A. Sleeves for Pipes Through Non-fire Rated Floors: 18 gage thick galvanized steel.

B. Sleeves for Pipes Through Non-fire Rated Beams, Walls, Footings, and Potentially Wet Floors: Steel pipe or 18 gage thick galvanized steel.

C. Sleeves for Round Ductwork: Galvanized steel.

D. Sleeves for Rectangular Ductwork: Galvanized steel or wood.

E. Sealant: Acrylic

2.7 MECHANICAL SLEEVE SEALS

A. Product Description: Modular mechanical type, consisting of interlocking synthetic rubber links shaped to continuously fill annular space between object and sleeve, connected with bolts and pressure plates causing rubber sealing elements to expand when tightened, providing watertight seal and electrical insulation.

2.8 FORMED STEEL CHANNEL

A. Product Description: Galvanized 12 gage thick steel. With holes 1-1/2 inches on center.

2.9 FIRESTOPPING

A. Product Description: Different types of products by multiple manufacturers are acceptable as required to meet specified system description and performance requirements; provide only one type for each similar application.

1. Silicone Firestopping Elastomeric Firestopping: Single component silicone elastomeric compound and compatible silicone sealant.
2. Foam Firestopping Compounds: Single component foam compound.
3. Formulated Firestopping Compound of Incombustible Fibers: Formulated compound mixed with incombustible non-asbestos fibers.
4. Fiber Stuffing and Sealant Firestopping: Composite of mineral or ceramic fiber stuffing insulation with silicone elastomer for smoke stopping.
5. Mechanical Firestopping Device with Fillers: Mechanical device with incombustible fillers and silicone elastomer, covered with sheet stainless steel jacket, joined with collars, penetration sealed with flanged stops.
6. Intumescent Firestopping: Intumescent putty compound which expands on exposure to surface heat gain.
7. Firestop Pillows: Formed mineral fiber pillows.

2.10 FIRESTOPPING ACCESSORIES

A. Primer: Type recommended by firestopping manufacturer for specific substrate surfaces and suitable for required fire ratings.

B. Dam Material: Permanent:

1. Mineral fiberboard.
2. Mineral fiber matting.
3. Sheet metal.
4. Plywood or particle board.
5. Alumina silicate fire board.

C. Installation Accessories: Provide clips, collars, fasteners, temporary stops or dams, and other devices required to position and retain materials in place.

D. General:

1. Furnish UL listed products or products tested by independent testing laboratory
2. Select products with rating not less than rating of wall or floor being penetrated.

E. Non-Rated Surfaces:

1. Stamped steel, chrome plated, hinged, split ring escutcheons or floor plates or ceiling plates for covering openings in occupied areas where piping is exposed.
2. For exterior wall openings below grade, furnish mechanical sealing device to continuously fill annular space between piping and cored opening or water-stop type wall sleeve.

2.11 ACOUSTICAL SEALANT

A. Sealants for acoustical purposes shall be one of following non-setting sealants:

Acoustical sealant.....D.A.P.

BR – 96 .....Pecra

Acoustical sealant .....Tremco

Acoustical sealant .....U.S.G.

2.12 NON-PENETRATING ROOFTOP PIPE HANGERS, SUPPORTS AND EQUIPMENT SUPPORTS

A. Provide with bases that rest upon walk pads. Bases shall have rounded edges to prevent damage to the roof, carbon black additive in polycarbonate for UV stabilization, and edges to prevent damage to the roof, carbon black additive in polycarbonate for UV stabilization, and stainless steel all threads for adjustability.

B. Mechanical piping shall be supported by rollers.

C. Condensate lines shall be supported by strut, similar to Miro Industries Model 2.5 CS-5".

D. Piping shall be supported in clevis hangers. Similar to the Miro Model 6-H series.

E. Mechanical Rooftop Mounted Equipment Supports: Provide bases supporting; hot-dip galvanized grating to spread weight across roof membrane. <Select paragraph 1 or 2>

1. Light Duty: Base Material Polycarbonate Resin; total load up to 2lb. per square inch, 7-1/2 by 10 inch base (similar to Miro Industries Model Mechanical Support-LD).
2. Heavy Duty: Base Material Stainless Steel or hot-dip galvanized total load up to 2lb. per square inch, 12 by 16 inch base (similar to Miro Industries Model Mechanical Support-HD).

F. Accessories:

1. Support Pads: Pads shall be 15-3/4 by 19-3/4 inch square, 1/8 inch thick, flexible PVC with carbon black additive for UV stabilization
2. Deck Plates: Provide square metal deck plates with curved up edges, to spread load and protect roof membrane, sizes and quantities manufacturer's recommendations.
3. Rollers:

a. Provide pipe rollers in sizes and quantities as recommended by prefabricated non-penetrating roof system manufacturer.

PART 3 - EXECUTION

(Unless otherwise noted, references apply to "latest editions.")

3.1 EXAMINATION

A. Division 01 Section: "Administrative Requirements": Verification of existing conditions before starting work.

B. Verify openings are ready to receive sleeves.

C. Verify openings are ready to receive firestopping.

3.2 PREPARATION

A. Clean substrate surfaces of dirt, dust, grease, oil, loose material, or other matter affecting bond of firestopping material. Install damming material to arrest liquid material leakage.

B. Install damming materials to arrest liquid material leakage.

C. Remove incompatible materials affecting bond.

D. Drilling or cutting of structural members shall be as detailed / directed by structural engineer.

3.3 INSTALLATION - INSERTS

A. Install inserts for placement in concrete forms.

B. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION OF HANGERS AND SUPPORTS

A. General: Comply with MSS SP-69 “Pipe Hangers, and Supports C Selection and Application”, and SP-89, “Pipe Hangers and Supports - Fabrication and Installation Practices”. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure. Piping shall be supported independently from equipment connections. Supports shall not interfere with removal of equipment.

B. Arrange for grouping of parallel runs of horizontal piping supported together on field-fabricated, heavy-duty trapeze hangers where possible.

C. Install supports with maximum spacings complying with MSS SP-69, “Pipe Hangers, and Supports C Selection and Application” and as specified in Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment.”

D. Where pipes of various sizes are supported together by trapeze hangers, space hangers for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.

E. Install building attachments within concrete or to structural steel. Space attachments within maximum piping span length indicated in MSS SP-69, “Pipe Hangers, and Supports C Selection and Application”. Install additional attachments at concentrated loads, including valves, flanges, guides, strainers, expansion joints, and at changes in direction of piping. Install concrete inserts in new construction prior to placing concrete. Install reinforcing bars through openings at top of inserts.

F. Install powder-actuated drive-pin fasteners in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual. Does not use in lightweight concrete slabs or in concrete slabs less than 4 inches (100 mm) thick.

G. Install mechanical-anchor fasteners in concrete after concrete is placed and completely cured. Install according to fastener manufacturer's written instructions. Do not use in lightweight concrete slabs or in concrete slabs less than 4 inches (100 mm) thick.

H. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.

I. Heavy-Duty Steel Trapezes: Field-fabricate from ASTM A 36, “Carbon Structural Steel,” 2001, steel shapes selected for loads being supported. Weld steel according to AWS D-1.1, “Structural Welding Code – Steel.”

J. Install hangers and supports to allow controlled movement of piping systems, permit freedom of movement between pipe anchors, and facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

K. Install hangers with minimum 1/2 inch space between finished covering and adjacent work.

L. Place hangers within 12 inches of each horizontal elbow.

M. Use hangers with 1-1/2 inch minimum vertical adjustment.

N. Support vertical piping at every floor. Support vertical cast iron pipe at each floor at hub.

O. Where piping is installed in parallel and at same elevation, provide multiple pipe or trapeze hangers.

P. Support riser piping independently of connected horizontal piping.

Q. Provide copper plated hangers and supports for copper piping.

R. Design hangers for pipe movement without disengagement of supported pipe.

S. Prime coat exposed steel hangers and supports. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

T. Provide clearance in hangers and from structure and other equipment for installation of insulation.

U. Load Distribution: Install hangers and supports so that piping live and dead loading and stresses from movement will not be transmitted to connected equipment.

V. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so that maximum pipe deflections allowed by ASME B31.9 "Building Services Piping" is not exceeded.

W. Insulated Piping: Provide continuous insulation and vapor barrier through hangers and supports. Comply with the following installation requirements.

1. Riser Clamps: Attach riser clamps, including spacers (if any), to piping with clamps projecting through insulation; do not exceed pipe stresses allowed by ASME B31.9. Insulate clamps on piping with insulation and vapor barrier.
2. Saddles: Install protection saddles MSS Type 39 where insulation without vapor barrier is indicated. Fill interior voids with segments of insulation that match adjoining pipe insulation.
3. Shields: Install MSS Type 40, protective shields on cold piping with vapor barrier. Shields span an arc of 180 degrees (3.1 rad) and have dimensions in inches (mm) not less than the following:

NPS (Inches)	LENGTH (Inches)	THICKNESS (Inches)
1/4 to 3 1/2	12	0.048
4	12	0.060
5 and 6	18	0.060
8 to 14	24	0.075
16 to 24	24	0.105

4. Pipes 4 Inches and Larger: Include treated wood inserts.
5. Insert Material: Length to equal to the length of the protective shield.
6. Conform to the table below for maximum spacing of supports and rod sizes:

a. Steel and Copper Pipe:

Nom. Pipe Size – In.	Steel Pipe Max. Span – Ft.	Copper Tube Max. Span – Ft.	Min. Rod Dia. – In.
Up to 3/4	7	5	3/8
1	7	6	3/8
1 1/4	7	7	3/8
1 1/2	9	8	3/8
2	10	8	3/8
2 1/2	11	9	1/2
3	12	10	1/2
3 1/2	13	11	1/2
4	14	12	5/8 (1/2 for copper)
5	16	13	5/8 (1/2 for copper)
6	17	14	3/4 (5/8 for copper)
8	19	16	3/4 (3/4 for copper)
10	22	18	3/4 (3/4 for copper)
12	23	19	3/4 (3/4 for copper)

b. Support vertical steel pipe and copper tube at each floor.

X. Equipment Supports:

1. Fabricate structural steel stands to suspend equipment from structure above or support equipment above floor.
2. Grouting: Place grout under supports for equipment and concrete bases. Make a smooth bearing surface.
3. Provide housekeeping pads of concrete, minimum 3-1/2 inches thick and extending 6" beyond supported equipment.
4. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.
5. Construct supports of steel members. Brace and fasten with flanges bolted to structure.
6. Provide rigid anchors for pipes after vibration isolation components are installed.

3.5 METAL FABRICATION

A. Cut, drill, and fit miscellaneous metal fabrications for pipe and equipment supports.

B. Fit exposed connections together to form hairline joints. Field-weld connections that cannot be shop-welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1 procedures for manual shielded metal-arc welding, appearance and quality of welds, methods used in correcting welding work, and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections so that no roughness shows after finishing, and so that contours of welded surfaces match adjacent contours.

3.6 INSTALLATION - EQUIPMENT BASES AND SUPPORTS

A. Provide housekeeping pads of concrete, minimum 3 ½" thick and extending 6" beyond supported equipment.

B. Using templates furnished with equipment, install anchor bolts, and accessories for mounting and anchoring equipment.

C. Construct supports of steel members. Brace and fasten with flanges bolted to structure.

D. Provide rigid anchors for pipes after vibration isolation components are installed. Refer to Division 22 Section: "Vibration and Seismic Controls for Plumbing and Equipment."

3.7 INSTALLATION - FLASHING

A. Provide flexible flashing and metal counterflashing where piping penetrates weather or waterproofed walls, floors, and roofs.

B. Flash vent and soil pipes projecting 3 inches minimum above finished roof surface with lead worked 1 inch minimum into hub, 8 inches minimum clear on sides with 24 x 24 inches sheet size. For pipes through outside walls, turn flanges back into wall and caulk, metal counter-flash, and seal.

C. Flash floor drains in floors with topping over finished areas with lead, 10 inches clear on sides with minimum 36 x 36 inch sheet size. Fasten flashing to drain clamp device.

D. Seal floor drains and floor sinks watertight to adjacent materials.

E. Adjust storm collars tight to pipe with bolts; caulk around top edge. Use storm collars above roof jacks. Screw vertical flange section to face of curb.

3.8 INSTALLATION - SLEEVES

A. Exterior watertight entries: Seal with mechanical sleeve seals.

B. Set sleeves in position in forms. Provide reinforcing around sleeves.

C. Size sleeves large enough to allow for movement due to expansion and contraction. Provide for continuous insulation wrapping.

D. Extend sleeves through floors 2 inches above finished floor level. Caulk sleeves.

E. Where piping penetrates floor, ceiling, or wall, close off space between pipe and adjacent work with firestopping insulation and caulk airtight. Provide close fitting metal collar or escutcheon covers at both sides of penetration.

F. Install stainless steel escutcheons at finished surfaces.

3.9 INSTALLATION - FIRESTOPPING

A. Install material at fire rated construction perimeters and openings containing penetrating sleeves, piping and other items, requiring firestopping.

B. Apply primer where recommended by manufacturer for type of firestopping material and substrate involved, and as required for compliance with required fire ratings.

C. Apply firestopping material in sufficient thickness to achieve required fire and smoke rating to uniform density and texture.

D. Compress fibered material to maximum 40 percent of its uncompressed size.

E. Place foamed material in layers to ensure homogenous density, filling cavities and spaces. Place sealant to completely seal junctions with adjacent dissimilar materials.

F. Place intumescent coating in sufficient coats to achieve rating required.

G. Remove dam material after firestopping material has cured.

H. Fire Rated Surface:

1. Seal opening at floor, wall, partition, ceiling, and roof as follows:

    a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
    b. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
    c. Pack void with backing material.
    d. Seal ends of sleeve with UL listed fire resistive silicone compound to meet fire rating of structure penetrated.
2. Where pipe, duct, conduit, etc. penetrates fire rated surface, install firestopping product in accordance with manufacturer's instructions.

I. Non-Rated Surfaces:

1. Seal opening through non-fire rated wall, partition, floor, ceiling, and roof opening as follows:

    a. Install sleeve through opening and extending beyond minimum of 1 inch on both sides of building element.
    b. Size sleeve allowing minimum of 1 inch void between sleeve and building element.
    c. Install type of firestopping material recommended by manufacturer.
2. Install escutcheons floor plates or ceiling plates where conduit, penetrates non-fire rated surfaces in occupied spaces. Occupied spaces include rooms with finished ceilings and where penetration occurs below finished ceiling.
3. Exterior wall openings below grade: Assemble rubber links of mechanical sealing device to size of piping and tighten in place, in accordance with manufacturer's instructions.
4. Interior partitions: Seal pipe penetrations at all rooms. Apply sealant to both sides of penetration to completely fill annular space between sleeve and conduit.

3.10 FIELD QUALITY CONTROL

1. Division 01 Section: “Quality Requirements”: Field inspection, testing, adjusting, and balancing.
2. Inspect installed firestopping for compliance with specifications and submitted schedule.

3.11 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Clean adjacent surfaces of firestopping materials.

3.12 PROTECTION OF FINISHED WORK

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for protecting finished work.

B. Protect adjacent surfaces from damage by material installation.

3.13 APPLICATIONS FOR HANGER AND SUPPORT

A. Specific hanger requirements are specified in the Section specifying the equipment and systems.

B. Comply with MSS SP-69, “Pipe Hangers and Supports C Selection and Application,” for pipe hanger selections and applications that are not specified in piping specification Sections.

3.14 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Adjust for pipe alignment and final equipment connections. Flexible connections shall not be used for adjustment of alignment.

3.15 NON-PENETRATING ROOFTOP PIPE HANGERS AND SUPPORTS

A. Determine that roof structure, roof insulation, and roof membranes are structurally adequate to support weight of pipe and supports and hangers.

B. Install supports and hangers in accordance with manufacturer’s recommendations.

C. Install supports at maximum spacing of 10’, unless closer spacing is required due to weight of pipe or the authority having jurisdiction’s requirements. Do not exceed manufacturer’s recommended load limits.

D. Support Pads: Remove rock from area to be covered by pads, apply pads on cleaned area, and center bases on top of support pads.

E. Set pipes in support without dropping or causing undue impact.

END OF SECTION

SECTION 23 05 48

VIBRATION AND SEISMIC CONTROLS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 23.

1.2 SUMMARY

A. This Section includes vibration, wind, and seismic control for mechanical systems piping ductwork, and equipment. It is the intent of the seismic portion of this specification to keep all mechanical and electrical building system components in place during a seismic event.

B. The requirements for seismic protection measures to be applied to mechanical equipment and systems specified herein are in addition to any other items called for in other Sections of the Specifications. Provide seismic bracing for equipment and systems within the project area. Seismic forces shall be calculated by a qualified Licensed Professional Engineer. Seismic bracing and anchors shall be designed by the Licensed Professional Engineer to withstand the calculated seismic forces per the specified project conditions.

C. All HVAC components mounted outside of the building envelope (on-grade, on roof, on exterior walls, etc.) shall be mounted and supported to resist wind loads as required by the International Building Code (IBC), edition in effect by local authority having jurisdiction. Wind forces shall be calculated by a qualified licensed Professional Engineer to withstand the calculated wind forces per the specified project conditions.

D. Section Includes:

1. Materials
2. Seismic Restraints
3. Vibration Isolation Mount Types
4. Equipment Bases
5. Resilient Penetration Sleeve/Seal
6. Seismic Snubber
7. Flexible Duct Connections
8. Flexible Electrical Connection
9. Restraints
10. Grommets
11. Acoustical Sealant
12. Vibration Isolation Schedule

E. Related Sections: The following sections contain requirements that relate to this section:

1. Division 03 Section: “Cast-In-Place Concrete”: Product requirements for concrete for placement by this section.
2. Division 07 - Joint Protection: Product requirements for joint sealers specified for placement by this Section.
3. Division 08 - Louvers: Product requirements for acoustic wall louvers.
4. Division 09 Section: “Painting and Coating”: Product and execution requirements for painting specified by this Section.
5. Division 23 Section: “Common Work Results for HVAC.”
6. Division 23 Section: “HVAC Insulation.”
7. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment.”
8. Division 23 Section: “Expansion Fittings and Loops for HVAC Piping”: Product requirements for anchors and piping expansion compensation.
9. Division 23 Section: “Hangers and Supports for HVAC Piping and Equipment”: Product requirements for pipe hangers and supports.
10. Division 23 - Testing, Adjusting, and Balancing for HVAC: Requirements for sound and vibration measurements performed independent of this Section.

1.3 REFERENCES

1.4 DEFINITIONS

A. Terminology used in this Section is defined in Manufacturer's Standardization Society Specification - 90, "Valve and Fittings Standards," "latest edition".

B. Life Safety Systems:

1. All systems involved with fire dampers and smoke damper systems.
2. All HVAC systems involved with and/or connected to emergency power supply including all generators, transfer switches, transformers and all flowpaths to fire protection.

C. Positive Attachment:

1. A positive attachment is defined as a cast-in anchor, a drill-in wedge anchor, a double sided beam clamp loaded perpendicular to a beam, or a welded or bolted connection to structure. Single sided "C" type beam clamps for support rods of overhead ductwork, hydraulic piping, bus duct, or any other equipment are not acceptable on this project as seismic attachment points.

D. Transverse Bracing:

1. Restraint(s) applied to limit motion perpendicular to the centerline of the piping or duct.

E. Longitudinal Bracing:

1. Restraint(s) applied to limit motion parallel to the centerline of the piping or duct.

1.5 PERFORMANCE REQUIREMENTS

A. Provide vibration isolation on motor driven equipment over 0.5 hp, plus connected piping and ductwork.

1.6 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Product Data:

1. Submit schedule of vibration isolator type with location and load on each.
2. Submit manufacturer catalog information indicating materials, dimensional data, pressure losses, and acoustical performance for standard sound attenuation products.

C. Shop Drawings:

1. Indicate static and dynamic load of both inertia bases and vibration isolators.
2. Indicate assembly, materials, thickness, dimensional data, pressure losses, acoustical performance, layout, and connection details for fabricated sound attenuation products.
3. Shop drawings for each type of isolator, indicating dimensions, weights, required clearances, and methods of component assembly.

D. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.

E. Delegated Design Submittals: Submit signed and sealed Shop Drawings with design calculations and assumptions indicating that maximum room sound levels are not exceeded.

F. Manufacturer Instructions:

1. Submit special procedures and setting dimensions.
2. Indicate installation requirements maintaining integrity of sound isolation.

G. Field Quality-Control Submittals: Indicate results of Contractor-furnished tests and inspections.

H. Manufacturer Reports: Certify that sound isolation installation is complete and complies with instructions.

I. Qualifications Statements:

1. Review by duly authorized manufacturer’s representative with at least six (6) years’ experience on projects of similar scope.

J. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

K. Submit the following in accordance with Conditions of Contract and Division 1 Specifications:

1. Shop drawings of items.
2. Complete description of products to be supplied including product data, dimensions materials of construction and specifications.
3. Installation instructions for each product.
4. Tabulation showing for each vibration isolator supporting equipment:

a. Equipment identification tag no.

b. Isolator type.
c. Actual load.
d. Static deflection expected under actual load.
e. Specified minimum static deflection.
f. Additional deflection to solid under actual load.
g. Ratio of spring height under actual load to spring diameter.

5. Layout of piping to be isolated including vertical risers showing:

a. Support points.
b. Weight at support points.
c. Isolator type.
d. Static deflection expected under actual load.
e. Specified static deflection.
f. Additional deflection to solid under actual load.
g. Ratio of spring height under load to spring diameter.

6. Steel rails, steel base frames, and concrete inertia bases showing all steel work, reinforcing, vibration isolator mounting attachment method and location of equipment attachment bolts.
7. Special details at large scale and other necessary information to convey understanding of work.

L. Seismic Certification and Analysis:

1. Seismic restraint calculations must be provided for all connections of equipment to the structure. Calculations must be stamped by a registered professional engineer with at least five years of seismic design experience, licensed in the state of the job location.
2. All restraining devices shall be tested or calculated showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Calculations (including the combining of tensile and shear loadings) to support seismic restraint designs must be stamped by a registered professional engineer with at least five years of seismic design experience and licensed in the state of the job location. Testing and calculations must include both shear and tensile loads as well as one test or analysis at 45° to the weakest mode.
3. Analysis must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in section 1.5 acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.

M. Submission of samples may be requested for each type of vibration isolation device. After approval, samples shall be returned for installation at job site.

N. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.7 QUALITY ASSURANCE

A. Perform Work according to AMCA 300, ANSI S1.13, AHRI 575 standards and ASHRAE 68 recommendations.

B. Qualify welding processes and welding operators according to AWS D1.1 "Structural Welding Code - Steel," "latest edition".

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

C. Qualify welding processes and welding operators according to ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications."

D. Manufacturer of vibration isolation and seismic control equipment shall have the following responsibilities:

1. Determine vibration isolation and seismic restraint sizes and locations.
2. Provide calculations and materials if required for restraint of un-insulated equipment.
3. Provide installation instructions, drawings and trained field supervision to insure proper installation and performance.

E. Licensed Operators: Use operators that are licensed by powder-operated tool manufacturers to operate their tools and fasteners.

F. Coordinate size, location, and special requirements of vibration isolation equipment and systems with other trades. Coordinate plan dimensions with size of housekeeping pads.

G. Provide vibration isolators of appropriate sizes and proper loading to meet specified deflection requirements.

H. Supply and install incidental materials needed to meet requirements, even if not expressly specified or shown on drawings without claim for additional payment.

I. Verify correctness of equipment model numbers and conformance of each component with manufacturer's specifications.

J. Should any rotating equipment cause excessive noise or vibration, rebalance, realign or do other remedial work to reduce noise and vibration levels. Excessive is defined as exceeding manufacturer's specifications for unit in question.

K. Speed And Balance Requirements For Rotating Equipment:

1. Fans and other rotating mechanical equipment shall not operate at speeds in excess of 80% of their critical speed.
2. Vertical vibration of rotating equipment shall not be greater than levels indicated elsewhere. Measure vibration on equipment or steel frame equipment base when equipment is mounted on its vibration isolation mounts. If equipment has inertia base, allowable vibration level is reduced by ratio of equipment weight alone to equipment weight plus inertia base weight.

Equipment Speed (rpm)	Vibration Displacement (mils, peak-to-peak)
Under 600	4
600 to 1000	3
1000 to 2000	2
over 2000	1

1.8 PREINSTALLATION MEETINGS

A. Division 01 Section - Administrative Requirements: Requirements for preinstallation meeting.

B. Convene minimum two weeks prior to commencing work of this Section.

1.9 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 - Product Requirements: Requirements for transporting, handling, storing, and protecting products.

B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.

C. Store materials according to manufacturer instructions.

D. Protection:

1. Protect materials from moisture and dust by storing in clean, dry location remote from construction operations areas.
2. Provide additional protection according to manufacturer instructions.

1.11 FIELD MEASUREMENTS:

A. Verify field measurements prior to fabrication.

B. Indicate field measurements on Shop Drawings.

1.12 WARRANTY

A. Division 01 - Execution and Closeout Requirements: Requirements for warranties.

B. Furnish two-year manufacturer's warranty for inertia bases.

PART 2 - PRODUCTS

2.1 INTENT

A. All vibration isolators and seismic/wind restraints described in this Section shall be the product of a single manufacturer. Acceptable manufacturers include: Vibro-Acoustics, Kinetics Noise Control, Mason Industries or a comparable acceptable manufacturer who is an active member of the Vibration Isolation and Seismic Control Manufacturers Association (VISCMA).

2.2 MATERIALS

A. Structural Steel: ASTM A 36/A 36M, “Carbon Structural Steel,” “latest edition”, steel plates, shapes, and bars, black and galvanized.

B. Bolts and Nuts: ASME B18.10 or ASTM A 183, “Track Bolts and Nuts,” 2000, steel, hex-head, track bolts and nuts.

C. Washers: ASTM F 844, “Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use,” steel, plain, flat washers.

D. Grout: ASTM C 1107, Grade B, “Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink),” nonshrink, nonmetallic.

1. Characteristics include post-hardening, volume-adjusting, dry, hydraulic-cement-type grout that is nonstaining, noncorrosive, nongaseous and is recommended for both interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Water: Potable.
4. Packaging: Premixed and factory-packaged.

2.3 SEISMIC RESTRAINT

A. Seismic Cable Restraints shall consist of galvanized steel aircraft cables sized to resist seismic loads with a minimum safety factor of two and arranged to provide all-directional restraint. Cables must be rated to achieve a certified minimum modulus of elasticity. Cable end connections shall be steel assemblies that swivel to final installation angle and utilize clamping mechanisms to provide proper cable engagement. Cables must not be allowed to bend across sharp edges. Seismic cable assemblies are the preferred method of restraint where applicable. Cable assemblies shall be model BB/BBR as manufactured by Vibro-Acoustics, Model KSCU,

KSWC, and/or KSCC as manufactured by Kinetics Noise Control, or type SCB, SCBH or SCBV as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. Seismic solid braces shall consist of steel angles or channels to resist seismic loads with a minimum safety factor of 2 and arranged to provide all directional restraint. Seismic solid brace end connectors shall be steel assemblies that swivel to the final installation angle and utilize two through bolts to provide proper attachment. Solid seismic brace assemblies shall be manufactured and supplied by Vibro-Acoustics type RRK, Kinetics Noise Control or type SSB, SSBS or SSRF as manufactured by Mason Industries, Inc., or comparable acceptable product.

1. Steel angles, sized to prevent buckling, shall be clamped to duct or equipment rods utilizing ductile iron clamps at each restraint location when required after seismic force analysis completed by restraint supplier and/or restraint manufacturer's engineers. Welding of support rods is not acceptable. Hanger rod stiffener kits shall be Model VAC as manufactured by Vibro-Acoustics, Model KHRC-B and/or KHRC-C as manufactured by Kinetics Noise Control or type SRC or UC as manufactured by Mason Industries, Inc., or comparable acceptable product.

C. Insulated Horizontal Piping Hangers: Steam and Condensate, Chilled Water, Glycol Solution, Heating Hot Water:

1. Pipe clevis cross bolt braces are required in all single clevis solid brace type restraint locations. They shall be special purpose preformed channels or angles deep enough to be held in place by bolts or straps passing over the cross bolt. Clevis cross brace shall be Model KCHB as manufactured by Kinetics Noise Control or type CCB as manufactured by Mason Industries, Inc., or comparable acceptable product.

D. Vertical Piping Riser Seismic Restraints:

1. All-directional acoustical pipe anchor, consisting of cable restraint assemblies or two sizes of steel tubing separated by a minimum 1/2" thick 60 durometer neoprene. Vertical restraint shall be provided by similar material arranged to prevent vertical travel in either direction. Allowable loads on the isolation material should not exceed 500 psi and the design shall be balanced for equal resistance in any direction. All-directional anchors shall be Model KPA as manufactured by Kinetics Noise Control or type ADA as manufactured by Mason Industries, Inc., or comparable acceptable product.

2. Pipe guides shall consist of spring assemblies or a telescopic arrangement of two sizes of steel tubing separated by a minimum 1/2" thickness of 60 durometer neoprene. The height of the guides shall be preset with a shear pin to allow vertical motion due to pipe expansion or contraction. Shear pin shall be removable and reinsertable to allow for selection of pipe movement. Guides shall be capable of 1 5/8" motion, or to meet location requirements. Pipe guides shall be Model KPG as manufactured by Kinetics Noise Control or type VSG as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.4 VIBRATION ISOLATION MOUNT TYPES

A. General

1. Metal parts of vibration isolation units installed out-of-doors shall be hot-dip galvanized, cadmium- plated or Neoprene-coated after fabrication. Galvanizing shall meet ASTM 144 “Salt Spray Test Standards and Federal Test Standard.”

2. Isolator types are scheduled to establish minimum standards. Optionally, labor-saving accessories can be an integral part of isolators supplied to provide initial lift of equipment to operating height, hold piping at fixed elevations during installation and initial system filling operations, and similar installation advantages. Accessories shall not degrade vibration isolation system.

B. Unit FSN (Floor Spring and Neoprene) (Type 3)

1. Spring isolators shall be free standing and laterally stable without any housing and complete with a molded neoprene cup or 1/4" neoprene acoustical friction pad between the base plate and the support. All mountings shall have leveling bolts that must be rigidly bolted to the equipment. Spring diameters shall be no less than 0.8 of the compressed height of the spring at rated load. Springs shall have a minimum additional travel to solid equal to 50% of the rated deflection. Submittals shall include spring diameters, deflection, compressed spring height and solid spring height. Mountings shall be type FS as manufactured by Vibro-Acoustics, Model FDS as manufactured by Kinetics Noise Control or type SLF as manufactured by Mason Industries, Inc., or comparable acceptable product.

C. Unit FSN-R (or FSNTL) (Floor Spring and Neoprene – Restrained) (or Travel Limited) (Type 4)

1. Restrained spring mountings shall have an FSN mounting within a rigid housing that includes vertical limit stops to prevent spring extension when weight is removed. The housing shall serve as blocking during erection. Installed and operating heights are equal. A minimum clearance of 1/2" shall be maintained around restraining bolts and between the housing and the spring so as not to interfere with the spring action. Restraining Bolts shall have a neoprene bushing between the bolt and the housing. Limit stops shall be out of contact during normal operation. Housing shall be designed to withstand wind loads when located outdoors. Housing shall be designed to resist all seismic forces if applicable. Mountings shall be type SFS, CSR, or SCSR as manufactured by Vibro-Acoustics, Model FLS, FLSS, or FHS as manufactured by Kinetics Noise Control or type SLR (including all variants) or SSLFH as manufactured by Mason Industries, Inc., or comparable acceptable product.

D. Unit FN-M (Floor Neoprene-Mount) (Type 1)

1. Bridge-bearing neoprene mountings shall have a minimum static deflection of 0.12" to 0.50” and all directional seismic capability if applicable. The mount shall consist of a ductile iron casting containing two separated and opposing molded neoprene elements. The elements shall prevent the central threaded sleeve and attachment bolt from contacting the casting during normal operation. The shock absorbing neoprene materials shall be compounded to bridge-bearing specifications. Mountings shall be type RD or SRD as manufactured by Vibro-Acoustics, Model RD or RQ as manufactured by Kinetics Noise Control or type BR as manufactured by Mason Industries, Inc., or comparable acceptable product.

E. Unit FN-P (Floor Neoprene-Pad) (Type 1)

1. Isolation pads shall be neoprene elastomer in-shear pads, used in conjunction with steel shims where required, having static deflections as tabulated. Pads shall have a durometer as required for suitable loading and service life. Pads shall be designed for a maximum deflection of approximately 20% of their unloaded thickness. All pads shall be elastomer in-shear and shall be molded using 2000 psi minimum tensile strength oil resistant neoprene compounds with no color additives, LDS rubber or bridge-bearing neoprene. Pad shall be type NEO+ as manufactured by Vibro-Acoustics or Model Super W as manufactured by Mason Industries or comparable acceptable product.

F. Unit HSN (Hanger Spring and Neoprene) (Type 3)

1. Hangers shall consist of rigid steel frames containing minimum 1-1/4" thick neoprene or pre-compressed elastomer coated fiberglass elements at the top and a steel spring with general characteristics as in specification 2.4.b.1 seated in an optional steel washer reinforced neoprene cup on the bottom. The neoprene element and the optional cup shall have neoprene bushings projecting through the steel box. To maintain stability the boxes shall not be articulated as clevis hangers nor the neoprene element stacked on top of the spring. Spring diameters and hanger box lower hole sizes shall be large enough to permit the hanger rod to swing through a 30 degree arc from side to side before contacting the rod bushing and short circuiting the spring. Submittals shall include a hanger drawing showing the 30 degree capability. Hangers shall be type SHR/B as manufactured by Vibro-Acoustics, model SRH or SFH as manufactured by Kinetics Noise Control or type 30N as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.5 EQUIPMENT BASES

A. Unit BSR (Base - Steel Rail) (Type B)

1. Vibration isolation manufacturer shall furnish integral structural steel bases. Rectangular bases are preferred for all equipment. Centrifugal refrigeration machines and pump bases may be T or L shaped where space is limited. Pump bases for split case pump shall include supports for suction and discharge elbows. All perimeter members shall be steel beams with a minimum depth equal to 1/10 of the longest dimension of the base. Base depth need not exceed 14” provided that the deflection and misalignment is kept within acceptable limits as determined by the equipment manufacturer. Height saving brackets shall be employed in all mounting locations to provide a base clearance of a minimum of 1.5". Bases shall be type IFB as manufactured by Vibro-Acoustics, Model SFB-W, SFB-C, or KFB-A as manufactured by Kinetics Noise Control or any various types as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. Unit BIB (Base - Inertia Base) (Type C)

1. Vibration isolation manufacturer shall furnish rectangular steel concrete pouring forms for floating and inertia foundations. Centrifugal refrigeration machines and pump bases by be T or L shaped where space is limited. Bases for split case pumps shall be large enough to provide support for suction and discharge elbows. Bases for end suction pumps shall be large enough to provide support for suction diffusers. Depth of bases shall be a

minimum of 1/12 of the longest dimension of the base but not less than 6". The base depth need not exceed 12" unless specifically recommended by the base manufacturer for mass or rigidity. Forms shall include minimum concrete reinforcing consisting of 1/2" bars welded in place on 6" centers running both ways in a layer 1-1/2" above the bottom. Forms shall be furnished with steel templates to hold the anchor bolts sleeves and anchors while concrete is being poured. Height saving brackets shall be employed in all mounting locations to maintain a minimum 1.5" clearance below the base. Wood form bases leaving a concrete rather than a steel finish are not acceptable. Base shall be type CIB or TCIB as manufactured by Vibro-Acoustics, Model CIB-L or CIB-T as manufactured by Kinetics Noise Control or type KSL or BMK as manufactured by Mason Industries, Inc., or comparable acceptable product.

C. Unit RCI (Type D)

1. General Requirements for Restrained Vibration Isolation Roof-Curb Rails: Factory-assembled, fully enclosed, insulated, air and watertight curb and rail designed to resiliently support equipment and to withstand seismic and wind forces.

   a. Complete curb and isolation assembly shall be stamped by a Professional Engineer licensed in the jurisdiction of the project certifying capacity to resist wind loads.
   b. Provide sloped and/or extended height curb assemblies as necessary to coordinate with roof slope and buildup.

2. Sheet Metal Restraint/Spring Isolation Curbs: Upper frame shall consist of extruded aluminum or galvanized steel top rail, shall provide continuous support for equipment, and shall be captive to resiliently resist seismic and wind forces. Lower support assembly to be constructed out of formed heavy gauge sheet metal, shall have means for attaching to building structure, contain a wood nailer for attaching roof materials, and shall be insulated with a minimum of 2 inches of rigid, glass-fiber insulation on inside of assembly. Isolation curb shall be type VCR as manufactured by Vibro-Acoustics, Model KSCR as manufactured by Kinetics Noise Control or Model CMAB by Mason Industries, CPC-4+VIR by Curbs Plus or comparable acceptable product.

3. Structural Steel Restraint/Spring Isolation Curbs: Upper frame shall consist of a structural steel C channel to provide continuous support for the equipment and provide a place of attachment to the equipment. The lower frame shall be constructed from structural steel and shall provide adequate support to resist seismic and wind loads. The springs shall be adjustable, restrained with ¼-inch-(6-mm) thick, elastomeric vibration isolation pads and shall have access ports, for level adjustment, with removable waterproof covers at all isolator locations. Isolators shall be located so they are accessible for adjustment at any time during the life of the installation without interfering with the integrity of the roof. Structural steel isolation curb shall be model ESR as manufactured by Kinetics Noise Control or comparable acceptable product.

   a. Restrained Spring Isolators: Freestanding, steel, open-spring isolators with seismic/wind restraint.
      1) Housing: Steel with resilient vertical-limit stops and a adjustable equipment mounting and leveling bolt.

2) Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3) Minimum Additional Travel: 50 percent of the required deflection at rated load.
4) Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5) Overload Capacity: Support 150 percent of rated load, fully compressed, without deformation or failure.

b. Pads: Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a non-slip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
1) Resilient Material: Oil and water-resistant hermetically sealed compressed fiberglass.

c. Snubber Bushings: All-directional, elastomeric snubber bushings at least ¼ inch thick.

d. Water Seal: Galvanized sheet metal with EPDM seals at corners, attached to upper support frame, extending down past wood nailer of lower support assembly, and counter flashed over roof materials.

e. Extend height of curb as necessary to allow for spring isolator access after roof buildup is installed.

2.6 RESILIENT PENETRATION SLEEVE/SEAL

A. Unit RPS-A (Resilient Penetration Sleeve/Seal)

1. Split wall seals shall consist of two bolted pipe halves with minimum 3/4” thick neoprene sponge bonded to the inner faces. The seal shall be tightened around the pipe to eliminate clearance between the inner sponge face and the piping. Seals shall project a minimum of 1” past each face of the wall. Other resilient media may be substituted as required to handle higher temperatures, as approved by Sleeve/Seal manufacturer. Seals shall be type SWS as manufactured by Mason Industries or a comparable acceptable product.

2.7 SEISMIC SNUBBER

A. For equipment base: All-directional seismic snubbers shall consist of interlocking steel members restrained by a one-piece molded neoprene bushing of bridge bearing neoprene. Bushing shall be replaceable and a minimum of 1/4" thick. Rated loadings shall not exceed 1000 psi. A minimum air gap of 1/8" shall be incorporated in the snubber design in all directions before contact is made between the rigid and resilient surfaces. Snubber end caps shall be removable to allow inspection of internal clearances. Neoprene bushings shall be rotated to insure no short circuits exist before systems are activated. Snubber shall be type SS as manufactured by Vibro-Acoustics, Model HS-5 as manufactured by Kinetics Noise Control or type Z-1225 as manufactured by Mason Industries, Inc., or comparable acceptable product.

B. For equipment direct connection: All directional seismic snubbers shall consist of interlocking steel members restrained by shock absorbent rubber materials compounded to bridge bearing

specifications. Elastomeric materials shall be replaceable and a minimum of 3/4" thick. Rated loadings shall not exceed 1000 psi. Snubbers shall be manufactured with an air gap between hard and resilient material of not less than 1/8" not more than ¼". Snubbers shall be installed with factory set clearances. The capacity of the seismic snubber at 3/8" deflection shall be equal or greater than the load assigned to the mounting grouping controlled by the snubber multiplied by the applicable "G" force. Submittals shall include the load deflection curves up to 1/2" deflection in the x, y and z planes. Snubbers shall be type SRB as manufactured by Vibro-Acoustics, Model HS-5 as manufactured by Kinetics Noise Control or type Z-1011 as manufactured by Mason Industries, Inc., or comparable acceptable product.

2.8 FLEXIBLE DUCT CONNECTIONS

A. Flexible duct connections shall be fabricated from Neoprene, loaded vinyl or canvas. Clear space between connected parts shall be a minimum of three inches and connection shall have 1.5" minimum of slack material.

2.9 FLEXIBLE ELECTRICAL CONNECTION

A. Unit FEC-A (Flexible Electrical Connection Type A):

1. Flexible electrical coupling shall be prefabricated units incorporating flexible watertight outer jacket, grounding strap, plastic inner sleeve to maintain smooth wire way and end hubs with standard tapered electrical threads to fit standard threaded, rigid metal conduit.
2. Unit FEC-A shall be as specified in section "Raceways and Boxes for Electrical Systems" for liquid tight flexible metal conduit.

B. Unit FEC-B (Flexible Electrical Connection Type B):

1. Flexible electrical couplings shall be field-fabricated using minimum 2 ft length of flexible conduit or cable installed in grossly slack "U" shape.
2. Unite FEC-B shall be as specified in section "Raceways and Boxes for Electrical Systems" for flexible metal conduit.

2.10 THRUST RESTRAINTS

A. Thrust Restraint

1. Thrust restraints shall consist of spring element in series with Neoprene pad.
2. Thrust restraint shall be designed to have same deflection as specified for isolators supporting equipment generating thrust.
3. Spring element shall be contained within steel frame and be designed to be factory-preset for thrust and be field-adjustable to allow for maximum of 1/4" movement during starting or stopping of equipment.
4. Furnish assembly complete with rods and angle brackets for attachment to both equipment generating thrust and adjacent fixed structural anchor.

5. Thrust restraint shall be type AHCS or HCS as manufactured by Vibro-Acoustics, Model HSR as manufactured by Kinetics Noise Control or Mason Industries Type WB, or comparable acceptable product.
6. Provide pairs of horizontal limit springs on fans with more than 6.0 inches of static pressure and on hanger-supported, horizontally mounted axial fans. This is required at lesser of 2" of water or more total static (per ASHRAE) or when thrust exceeds 10% of equipment weight.

2.11 GROMMETS

A. Grommets shall be one piece molded bridge-bearing neoprene washer/bushing type. The bushing shall surround the anchor bolt and have a flat washer force to avoid all contact between bolt and base plate. Grommets shall be type GW as manufactured by Vibro-Acoustics, model HG as manufactured by Mason Industries or comparable acceptable product.

B. Neoprene shall be between 40 and 50 durometer.

C. Grommets shall be specially formed to prevent fastening bolts from directly contacting isolator base plate.

2.12 EXPANSION JOINTS / FLEXIBLE CONNECTORS

A. Rubber expansion joints shall be double sphere peroxide cured EPDM throughout (cover, liner, and cord fractioning) with Kevlar tire cord fabric reinforcement. Joints shall have raised face rubber flanges that encase solid steel retention rings. Cable/flexible reinforcement is not acceptable. Split flanges shall interlock and include a pivot fulcrum to increase clamp load at the sealing face. Sizes 1-1/2" through 24" shall have a reinforcing ring molded in between the spheres. Safety factor shall be a minimum of 3 to 1. All joints must be factory tested to 150% of maximum pressure for 4 minutes prior to shipping.

B. Sizes ¾" through 2" shall be single sphere, with bolt-on flanges and shall be model SFU as manufactured by Mason Industries, Inc.

C. Sizes 1-1/2" through 24" shall be model SFDEJ as manufactured by Mason Industries, Inc. Reducing versions of the specified models are required when available.

2.13 ACOUSTICAL SEALANT

A. Sealants for acoustical purposes shall be one of following non-setting sealants:

1. Acoustical sealant ..... D.A.P.
2. BR-96 ..... Pecora
3. Acoustical sealant ..... Tremco
4. Acoustical sealant ..... U.S.G.

The following note applies to all equipment types listed in Tables before and hereinafter:

*Additional floor deflection caused by the equipment must be first determined prior to examining minimum isolation deflection. If additional floor deflection is 0.25" or less, deflection equal 10 times the deflection is to be chosen. If additional floor deflection is greater than 0.25", floor stiffening must be added and/or the unit must be moved to a stiffer area of the floor.

PART 3 - EXECUTION

3.1 EXISTING WORK

A. Provide access to existing piping and ductwork and other installations remaining active and requiring access.

B. Extend existing piping and ductwork installations using materials and methods as specified

3.2 INSTALLATION

A. Install isolation for motor-driven equipment.

B. Make equipment level.

C. Install spring hangers without binding.

D. Isolators:

1. Closed Spring Isolators: Adjust such that side stabilizers are clear under normal operating conditions.
2. Prior to making piping connections to equipment with operating weights substantially different from installed weights, block up equipment with temporary shims to final height; when full load is applied, adjust isolators to load to allow shim removal.

E. Provide pairs of horizontal limit springs on fans with more than 6.0 inches of static pressure and on hanger-supported, horizontally mounted axial fans.

F. Snubbers:

1. Provide resiliently mounted equipment, piping, and ductwork with seismic snubbers.
2. Provide each inertia base with minimum of four seismic snubbers located close to isolators.
3. Equipment Designated for Post-Disaster: Snub to 0.05-inch maximum clearance.
4. Other Snubbers: Provide clearance between 0.15 and 0.25 inch

G. Support piping connections to isolated equipment resiliently as follows:

1. Up to 4-Inch diameter: First three points of support.
2. 5- to 8-Inch diameter: First four points of support.
3. 10-Inch diameter and Larger: First six points of support.
4. Support all piping in equipment rooms and minimum 50 fifty feet from vibration isolated equipment and PRV stations. The first 3 hangers from the equipment shall have same deflection as the equipment isolators. The remaining hangers shall have 0.75 inch deflection.

3.3 FIELD QUALITY CONTROL

A. Division 01 - Quality Requirements: Requirements for inspecting and testing.

B. Inspect isolated equipment after installation and submit report, including static deflections.

3.4 EXAMINATION

A. Division 01 - Execution and Closeout Requirements: Requirements for installation examination.

B. Verify that equipment, ductwork, and piping are installed before starting Work of this Section.

3.5 INSTALLATION OF SEISMIC CONTROLS

A. General: Comply with MSS SP-69, “Pipe Hangers and Supports C Selection and Application,” “latest edition”, and SP-89, “Pipe Hangers and Supports -- Fabrication and Installation Practices,” “latest edition”. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure. Piping shall be supported independently from equipment connections. Supports shall not interfere with removal of equipment.

1. At locations where cable assemblies’ restraints are located, the support rods must be braced when necessary to accept compressive loads.
2. At all locations where cable assemblies’ restraints are attached to pipe clevis’s, the clevis cross bolt must be reinforced.

B. Seismic restraints, shall be provided for all installed mechanical equipment having a component importance factor of 1.5 where the Seismic Design Category is C or importance factor of 1.0 where the Seismic Design Category is D, E, or F.

C. Installation of vibration isolators and seismic restraints must not cause any change of position of equipment or piping resulting in stresses or misalignment.

D. Vibration isolated seismic restraints.

1. The contractor shall not install seismic restraints which make rigid connections with the building on vibration isolated equipment and systems.

2. Any conflicts with other trades which will result in rigid contact with equipment ductwork, or piping due to inadequate space or other unforeseen conditions should be brought to

the architects/engineers attention prior to installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.

a. Cable restraints shall be installed slightly slack to avoid short circuiting the vibration isolated suspended equipment, piping or conduit.
b. Cable assemblies are installed taut on non-vibration isolation systems. Seismic solid braces may be used in place of cables on rigidly attached systems only, but cable restraints are the preferred method of installation. Hose fittings and accessories shall be unbraided type 304 stainless steel with a minimum bend radius of 4 inches, fittings and accessories shall be UL 2443 listed for sprinkler services to 175 psi.
c. Restraints shall have a positive connection to the building structure. Connections made to drywall or other nonbuilding structure are not acceptable.

E. Seismic restraints for non-vibration isolated systems:

1. At locations where specification paragraphs 2.3. A or B restraints are located, the support rods must be braced when necessary to accept compressive loads with specification paragraph 2.3-C. braces.

3.6 INSTALLATION OF VIBRATION ISOLATION CONTROLS

A. General

1. Locations of vibration isolation equipment shall be selected for ease of inspection and adjustment as well as for proper operation.
2. Installation of vibration isolation equipment shall be in accordance with manufacturer's written instructions.
3. Any conflicts with other trades which will result in rigid contact with equipment, ductwork, or piping due to inadequate space or other unforeseen conditions should be brought to the Architect/Engineer's attention prior to the installation. Corrective work necessitated by conflicts after installation shall be at the responsible contractor's expense.

B. Isolation Mounts

1. Squarely align vibration isolators above or below mounting points of supported equipment.
2. Isolators for equipment with bases shall be located on sides of bases, which are parallel to equipment shaft unless this is not possible because of physical constraints.
3. If housekeeping pad is provided, isolators shall bear on housekeeping pad and isolator base plate shall rest entirely on pad. Maintain at least ten bolt diameters from isolator anchors to edge of pad.
4. Hanger rods for vibration isolated support shall be connected to structural beams, joists, or slabs. Provide intermediate support members as necessary.
5. Position vibration isolation hanger elements as high as possible in hanger rod assembly but not in contact with building structure, and so that hanger housing may rotate full 360 degrees about rod axis without contacting any object.
6. Parallel-running pipes may be hung together on trapeze, which is isolated from building. Isolator deflections must be largest determined by provisions for pipe isolation. Do not mix isolated and non-isolated pipes on same trapeze.
7. No pipes or equipment shall be supported from other pipes or equipment.
8. Vibration isolated pipes shall not contact rigid building structure or equipment.

9. Installed and operating heights of vibration-isolated equipment mounted on Unit FSN isolators shall be identical. Limit stops shall be out of contact during normal operation.
10. Adjust leveling bolts and hanger rod bolts so isolated equipment is level and in proper alignment with connecting ducts or pipes.

C. Bases

1. No equipment unit shall bear directly on vibration isolators unless its own frame is suitably rigid to span between isolators and such direct support is approved by equipment manufacturer. This provision shall apply whether or not base frame is specified or indicated on drawings. If base frame is required for unit because of equipment manufacturer's requirements and is not specifically called for, base frame recommended by equipment manufacturer shall be provided at no additional expense.
2. Unless otherwise indicated, provide minimum operating clearance of 1.5" between inertia bases or structural steel frames and concrete housekeeping pad on floor beneath equipment. Position isolator mounting brackets so that required clearance is maintained. Check clearance space to ensure that no construction debris has been left to short-circuit or restrict proper operation of vibration isolation system.

D. Flexible Duct Connections

1. Sheet metal ducts or plenum openings shall be squarely aligned with fan discharge, fan intake or adjacent duct section prior to installation of flexible connection, so that clear length is approximately equal all way around perimeter. Flexible duct connections shall not be installed until this provision is met.
2. Fan or adjacent duct section shall be able to move 1" in any direction without causing metal to metal contact or stretching flexible connection taut.

E. Thrust Restraints

1. Attach thrust restraints at centerline of thrust and symmetrically on each side of equipment generating thrust for fans with a static pressure of 2” water column or more.
2. Adjust restraints to limit equipment movement to specified limit.

F. Resilient Penetration Sleeve/Seals

1. Penetration seals shall maintain airtight seal around penetrating element and shall prevent contact of penetrating element and building structure. Fit sleeve tightly to building construction and with acoustical sealant seal airtight on both sides of construction penetrated.

3.7 SEISMIC RESTRAINT OF PIPING

A. Transverse piping restraints shall be at 40’ maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads. Spacing shall be reduced to 20’ maximum spacing for piping containing hazardous/flammable materials and/or built from nonductile materials such as cast iron and PVC. Minimum of two transverse restraints are required per pipe run.

B. Longitudinal restraints shall be at 80' maximum spacing for all pipe sizes, except where lesser spacing is required to limit anchorage loads. Spacing shall be reduced to 40’ maximum spacing

for piping containing hazardous/flammable materials and/or built from nonductile materials such as cast iron and PVC. Minimum of one longitudinal restraint is required per pipe run.

C. Where thermal expansion is a consideration, guides and anchors may be used as transverse and longitudinal restraints provided they have a capacity equal to or greater than the restraint loads in addition to the loads induced by expansion or contraction.

D. Transverse restraint for one pipe section may also act as a longitudinal restraint for a pipe section of the same size connected perpendicular to it if the restraint is installed within 24" of the elbow or TEE or combined stresses are within allowable limits at longer distances.

E. Hold down clamps must be used to attach pipe to all trapeze members before applying restraints in a manner similar to clevis supports.

F. Branch lines may not be used to restrain main lines.

3.8 SEISMIC RESTRAINT OF DUCTWORK

A. Transverse restraints shall occur at 30’ intervals or at both ends of the duct run if less than the specified interval. Minimum of two transverse restraints are required per duct run.

B. Longitudinal restraints shall occur at 60’ intervals with at least one restraint per duct run. Minimum of one longitudinal restraint is required per duct run.

C. Restraint spacing and capacity shall be per current code requirements and exemptions. Any exemptions mentioned herein are subject to current code requirements and acceptance of AHJ.

D. Ductwork shall be reinforced at the restraint locations. Rectangular duct shall have steel angle/strut on top of the duct work at trapeze locations. Fasten duct to both the trapeze and the addition reinforcement member.

E. Where multiple ducts share a common support the combined weights/dimensions shall determine the need or seismic restraint.

F. Walls, including gypsum wall board partitions, may replace a transvers brace when detailed and rated for the load.

G. Friction connection type (c-clamp style) supports are not allowed.

H. Isolation hanger locations where seismic restraints are attached shall have type RW Rebound Washers.

3.9 SEISMIC RESTRAINT EXCLUSIONS

A. Pipe Exclusions

1. Any exclusions/exemptions to seismic restraint requirements described in the building code and as approved by the AHJ are acceptable.

3.10 APPLICATIONS FOR VIBRATION CONTROLS

A. Major Equipment

1. Unless otherwise shown or specified, major floor-mounted equipment shall be set on housekeeping type concrete pads. See architectural or structural drawings for details.
2. Flexible duct connections shall be installed at fan unit intakes, fan unit discharges, and wherever else shown on drawings.
3. Electrical connections to vibration-isolated equipment exposed to weather shall be unit FEC-A.
4. Electrical connections to vibration-isolated equipment located indoors shall be unit FEC-B.
5. Thrust Restraints shall be installed on equipment as called for in schedule on drawings or specified hereunder.

B. Miscellaneous Mechanical Equipment

1. Miscellaneous pieces of mechanical equipment such as heat exchangers, pressure reducing stations, domestic water heaters, storage tanks, condensate receiver tanks and expansion tanks shall be vibration-isolated from building structure by Unit FN isolators unless their position in piping system requires higher degrees of isolation as called for under pipe isolation requirements.

C. Pipes

1. Chilled water, heating water, and reheat piping within mechanical rooms or within 50 ft total pipe length (whichever is longer) of connected vibration-isolated equipment (chillers, pumps, air handling units, pressure reducing stations, etc.), and all of above piping that is 6" or larger, shall be isolated from building structure by vibration mounts, resilient pipe guides, and resilient penetration sleeve/seals.
2. Isolators for first three support points adjacent to connected equipment shall achieve half of specified static deflection of isolators supporting connected equipment. When required static deflection of these pipe isolators is greater than 0.50," Unit FSN or HSN isolators, (whichever is applicable for mounting condition) shall be used.
3. Where lateral support of pipe risers is required within specified limits, use resilient lateral supports.
4. Pipes within specified limits that penetrate building construction shall be isolated from building structure by (Unit RPS-A or Unit RPS-B) resilient penetrating sleeve/seals.

3.11 ADJUSTING

A. Hanger Adjustment: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Adjust for pipe alignment and final equipment connections. Flexible connections shall not be used for adjustment of alignment.

END OF SECTION

SECTION 23 05 53

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 23.

1.2 SUMMARY:

A. Section Includes:

1. Engraved Plastic-Laminate Signs.
2. Valve Tags.
3. Painted Identification Materials
4. Plastic Pipe Markers.
5. Underground-Type Plastic Line Marker.
6. Ceiling Tacks
7. Plasticized Tags.
8. Duct Markers.

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 09 Section: “Painting and Coating”: Execution requirements for painting specified by this section.
2. Division 23 Section: “Common Work Results for HVAC.”
3. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment.”
4. Division 23 Section: “General Duty Valves for HVAC Piping.”
5. Division 23 Section: “Hydronic Pumps.”
6. Division 23 Section: “Steam Condensate Pumps.”
7. Division 23 Section: “Refrigerant Piping.”
8. Division 23 Section: “Facility Fuel Oil Pumps.”
9. Division 23 Section: “HVAC Air Distribution.”
10. Division 23 Section: “HVAC Fans.”
11. Division 33 Section: “Steam and Chilled Water Underground Distribution Systems.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. American Society of Mechanical Engineers:

1. ASME A13.1 - Scheme for the Identification of Piping Systems.

B. National Fire Protection Association:

1. NFPA 99 - Standard for Health Care Facilities.

1.4 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit manufacturer's technical product data and installation instructions for each identification material and device required.

C. Shop Drawings: Submit list of wording, symbols, letter size, and color coding for mechanical identification and valve chart and schedule, including valve tag number, location, function, and valve manufacturer's name and model number.

D. Samples: Submit samples of each color, lettering style and other graphic representation required for each identification material or system.

E. Schedules: Submit valve schedule for each piping system, typewritten and reproduced on 8 1/2" x 11" bond paper. Tabulate valve number, piping system, system abbreviation (as shown on tag), location of valve (room or space), and variations for identification (if any). Mark valves which are intended for emergency shut-off and similar special uses, by special "flags", in margin of schedule. Furnish copies for Maintenance Manuals as specified in Division 01 Section: “Execution and Closeout Requirements.”

F. Maintenance Data: Include product data and schedules in maintenance manuals, in accordance with requirements of Division 01.

G. Manufacturer's Installation Instructions: Indicate installation instructions, special procedures, and installation.

H. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of tagged valves; include valve tag numbers.

1.6 QUALITY ASSURANCE:

A. Manufacturer's Qualifications: Firms regularly engaged in manufacturer of identification devices of types and sizes required, whose products have been in satisfactory use in similar service for not less than 5 years.

B. Codes and Standards:

1. ANSI Standards: Comply with ANSI A13.1, for lettering size, length of color field, colors, and viewing angles of identification devices.

C. Equipment Lettering and Graphics:

1. General: Coordinate names, abbreviations and other designations used in HVAC identification work, with corresponding designations shown, specified or scheduled. Provide numbers, lettering and wording as indicated or, if not otherwise indicated, as recommended by manufacturers or as required for proper identification and operation/maintenance of HVAC systems and equipment.

a. Multiple Systems: Where multiple systems of same generic name are shown and specified, provide identification, which indicates individual system number as well as service (for example; Unit Heater No. 3).

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum five years documented experience approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.10 EXTRA MATERIALS

A. Division 01 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two containers of spray-on adhesive.

C. Furnish minimum of 5% extra stock of each mechanical identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping system identification markers, and additional plastic laminate engraving blanks of assorted sizes.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering identification materials which may be incorporated in the work include, but are not limited to, the following:

B. Manufacturer: Subject to compliance with requirements, provide HVAC identification materials of one of the following:

1. Brady (W.H.) Co.; Signmark Div.
2. Industrial Safety Supply Co., Inc.
3. Seton Name Plate Corp.

2.2 MATERIALS:

A. General: Provide manufacturer's standard products of categories and types required for each application as referenced in other Division 23 sections. Where more than single type is specified for application, selections is Installer’s option, but provide single selection for each product category.

B. Provide pipe markers with the following background colors and designations:

SERVICE	STENCIL DESIGNATION	LETTER COLOR	BACKGROUND COLOR	JACKET
Refrigerated Suction	Refrigerant Suction	Black	Safety Orange	Black
Refrigerated Liquid	Refrigerant Liquid	Black	Safety Orange	Black

2.3 ENGRAVED PLASTIC-LAMINATE SIGNS (Nameplates):

A. General: Provide engraving stock melamine plastic laminate, complying with FS L-P-387, in the sizes and thicknesses indicated, engraved with engraver's standard letter style of the sizes and wording indicated, black with white core (letter color) except as otherwise indicated, punched for mechanical fastening except where adhesive mounting is necessary because of substrate.

B. Thickness: 1/8", except as otherwise indicated.

C. Fasteners: Self-tapping stainless steel screws, except contact-type permanent adhesive where screws cannot or should not penetrate the substrate.

D. Nomenclature: Include the following, matching terminology on schedules as closely as possible:

1. Name and plan number.
2. Equipment service.
3. Design capacity.
4. Other design parameters such as pressure drop, entering and leaving conditions, rpm, etc.

E. Size: Provide approximate 2 1/2" x 4" markers for control devices, dampers, and valves; and 4 1/2" x 6" for equipment.

2.4 VALVE TAGS:

A. Plastic Laminate Valve Tags: Provide manufacturer's standard 3/32" thick engraved plastic laminate valve tags, with piping system abbreviation in 1/4" high letters and sequenced valve numbers 1/2" high, and with 5/32" hole for fastener.

1. Provide 1 1/2" sq. black tags with white lettering, except as otherwise indicated.
2. Provide size, shape and color combination as specified or scheduled for each piping system.

B. Plastic Valve Tags: Provide manufacturer's standard solid plastic valve tags with printed enamel lettering, with piping system abbreviation in approximately 3/16" high letters and sequenced valve numbers approximately 3/8" high, and with 5/32" hole for fastener.

1. Provide 1 1/8" sq. white tags with black lettering.
2. Provide size, shape and color combination as specified or scheduled for each piping system.

C. Metal Tags:

1. Brass with stamped letters; tag size minimum 1-1/2 inches square with finished edges.

D. Valve Tag Fasteners: Provide manufacturer's standard solid brass chain (wire link or beaded type), or solid brass S-hooks of the sizes required for proper attachment of tags to valves, and manufactured specifically for that purpose.

E. Tag Chart: Typewritten letter size list of applied tags and location in anodized aluminum frame

2.5 PAINTED IDENTIFICATION MATERIALS:

A. Stencils: With clean cut symbols and letters of following size:

1. Up to 2 inches Outside Diameter of Insulation or Pipe: 1/2 inch high letters.
2. 2-1/2 to 6 inches Outside Diameter of Insulation or Pipe: 1-inch high letters.
3. Over 6 inches Outside Diameter of Insulation or Pipe: 1-3/4 inches high letters.
4. Ductwork and Equipment: 1-3/4 inches high letters.

B. Stencil Paint: Standard exterior type stenciling enamel; black, except as otherwise indicated; either brushing grade or pressurized spray-can form and grade.

C. Identification Paint and Background Color; Standard identification enamel of colors indicated or, if not otherwise indicated for piping systems and HVAC equipment comply with ANSI A13.1 for colors. For ductwork, use green paint. For hazardous exhaust, use colors per ANSI A13.1.

2.6 PLASTIC PIPE MARKERS:

A. Snap-On Type: Provide manufacturer's standard pre-printed, semi-rigid snap-on, UV-resistant color-coded pipe markers, complying with ANSI/ASME A13.1

B. Small Pipes: For external diameters less than 6" (including insulation if any), provide full-band pipe markers, extending 360 degrees around pipe at each location, fastened by one of the following methods:

1. Snap-on application of pre-tensioned semi-rigid plastic pipe marker.
2. Adhesive lap joint in pipe marker overlap.
3. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 3/4" wide; full circle at both ends of pipe marker, tape lapped 1 1/2".

C. Large Pipes: For external diameters of 6" and larger (including insulation if any), provide either full-band or strip-type pipe markers, but not narrower than 3 times letter height (and of required length), fastened by one of the following methods:

1. Taped to pipe (or insulation) with color-coded plastic adhesive tape, not less than 1 1/2" wide; full circle at both ends of pipe marker, tape lapped 3".
2. Strapped-to-pipe (or insulation) application of semi-rigid type, with manufacturer's standard stainless steel bands.

D. Lettering: Comply with piping system nomenclature as specified, scheduled or shown, and abbreviate only as necessary for each application length. Operating pressure of steam systems shall be indicated.

1. Arrows: Print each pipe marker with arrows indicating direction of flow, either integrally with piping system service lettering (to accommodate both directions), or as a separate unit of plastic.

2.7 UNDERGROUND-TYPE PLASTIC LINE MARKER:

A. General: Manufacturer's standard permanent, bright-colored, continuous-printed plastic tape, intended for direct-burial service; not less than 6" wide x 4 mils thick. Provide tape with printing which most accurately indicates the type of service of buried pipe.

1. Provide multi-ply tape consisting of solid aluminum foil core between 2-layers of plastic tape.

B. Underground Warning Tape

1. Description: Polyethylene tape with metallic core for detection and location of piping with metal detector resistant to acids, alkalis and other soil components.

a. Size: 0.004 inch thick; 6 inches wide.
b. Service Marking: Printed text as selected by Architect/Engineer in contrasting color and repeated at maximum 40 inches intervals.

C. Ceiling Grid and Access Panel Markers: Provide Kroy type clear adhesive printed labels with 3/16" high letters to identify the type of concealed HVAC devices.

2.8 CEILING TACKS

A. Description: Steel with 3/4 inch diameter color-coded head.

B. Color code as follows:

1. HVAC equipment: Yellow.
2. Fire dampers/smoke dampers: Red.
3. Plumbing valves: Green.
4. Heating/cooling valves: Blue.

2.9 PLASTICIZED TAGS:

A. General: Manufacturer's standard pre-printed or partially pre- printed accident-prevention tags, of plasticized card stock with matt finish suitable for writing, approximately 3 1/4" x 5 5/8", with brass grommets and wire fasteners, and with appropriate pre- printed wording including large-size primary wording (as examples; DANGER, CAUTION, DO NOT OPERATE).

2.10 DUCT MARKERS:

A. Identify air: supply, return, exhaust, intake and relief ducts with duct markers or provide stenciled signs and arrows showing service and direction of air flow.

1. Locate signs near points where ducts enter into concealed spaces and at maximum intervals of 25 feet.
2. Provide identification labels at access panels to locate concealed duct accessories.

PART 3 - EXECUTION

3.1 PREPARATION

A. Degrease and clean surfaces to receive adhesive for identification materials.

B. Prepare surfaces in accordance with Division 09 Section: “Painting and Coating”

3.2 INSTALLATION:

A. General:

1. Coordination: Where identification is to be applied to surfaces, which require insulation, painting or other covering or finish, including valve tags in finished mechanical spaces, install identification after completion of covering and painting. Install identification prior to installation of acoustical ceilings and similar removable concealment.
2. Confined Spaces: Provide labels and signs on all duct and equipment doors, plenums, etc. to indicate service and provide operator warnings as required by OSHA, NFPA, and authority having jurisdiction.

B. Install plastic nameplates with corrosive-resistant mechanical fasteners, or adhesive.

C. Install labels with sufficient adhesive for permanent adhesion and seal with clear lacquer. For unfinished canvas covering, apply paint primer before applying labels.

D. Piping System Identification:

1. General: Install pipe markers of one of the following types on each system indicated to receive identification, and include arrows to show normal direction of flow:

   a. Plastic pipe markers, with application system as indicated under "Materials" in this section.
2. Locate pipe markers and color bands as follows on all piping in occupied spaces, above ceilings, machine rooms, accessible maintenance spaces (shafts, tunnels, plenums) and exterior non-concealed locations.

   a. Near each valve and control device.
   b. Near each branch, excluding short take-offs for equipment and terminal units; mark each pipe at branch, where there could be question of flow pattern.
   c. Near locations where pipes pass through walls or floors/ ceilings, or enter non-accessible enclosures.
   d. At access doors, manholes and similar access points, which permit view of concealed piping.
   e. Near major equipment items and other points of origination and termination.
   f. Spaced intermediately at maximum spacing of 25' along each piping run, except reduce spacing to 10' in congested areas.

E. Underground Piping Identification:

1. General: During back-filling/top-soiling of each exterior underground piping systems, install continuous underground-type plastic line marker, located directly over buried line at 6" to 8" below finished grade. Where multiple small lines are buried in common trench and do not exceed overall width of 16", install single line marker. For tile fields and similar installations, mark only edge pipe lines of field.

F. Valve Identification:

1. General: Provide valve tag on every valve, cock and control device in each piping system; exclude check valves, valves within factory-fabricated equipment units, and shut-off valves at HVAC equipment. List each tagged valve in valve schedule for each piping system.

G. Equipment Identification:

1. General: Install engraved plastic laminate sign on or near each major item of HVAC equipment and each operational device, as specified herein if not otherwise specified for each item or device. Provide signs for the following general categories of equipment and operational devices:

    a. Main control and operating valves, including safety devices and hazardous units.
    b. Flow meters.
    c. Fuel-burning units.
    d. Pumps, compressors, and similar motor- driven units.
    e. Heat exchangers, expansion tanks, and similar equipment.
    f. Tanks and pressure vessels.
2. Lettering Size: Minimum 1/4" high lettering for name of unit where viewing distance is less than 2'-0", 1/2" high for distances up to 6'-0", and proportionately larger lettering for greater distances. Provide secondary lettering of 2/3 to 3/4 of size of the principal lettering.
3. Text of Signs: In addition to name of identified unit, provide lettering to distinguish between multiple units, inform operator of operational requirements, indicate safety precautions, and warn of hazards and improper operations.

H. Identify air handling units, pumps, heat transfer equipment, tanks, and water treatment devices with plastic nameplates. Identify in-line pumps and other small devices with tags.

I. Identify control panels and major control components outside panels with plastic nameplates.

J. Identify air terminal units and radiator valves with numbered tags.

K. Tag automatic controls, instruments, and relays. Key to control schematic.

L. Apply stencil painting in accordance with Division 09 Section: “Painting and Coating”

M. Identify ductwork with stenciled painting. Identify with air handling unit identification number and area served. Locate identification at air handling unit, at each side of penetration of structure or enclosure, and at each obstruction.

N. Provide ceiling tacks to locate valves or dampers above T-bar type panel ceilings. Locate in corner of panel closest to equipment.

3.3 ADJUSTING:

A. Adjusting: Relocate any identification device, which has become visually blocked by work of this division or other divisions.

3.4 CLEANING:

A. Cleaning: Clean face of identification devices.

3.5 EXTRA STOCK:

A. Furnish minimum of 5% extra stock of each identification material required, including additional numbered valve tags (not less than 3) for each piping system, additional piping system identification markers, and additional plastic laminate engraving blanks of assorted sizes.

1. Where stenciled markers are provided, clean and retain stencils after completion of stenciling and include used stencils in extra stock, along with required stock of stenciling paints and applicators.

END OF SECTION

SECTION 23 05 93

TESTING, ADJUSTING AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section and the other Sections of Division 22.

1.2 SUMMARY

A. Coordinate work of this section with all trades.

B. Work covered in this Section shall be performed after completion of work specified in all Divisions as they related to this work.

C. Review of design drawings and specifications, and comment on potential problem areas.

D. Site inspections of ongoing plumbing installation with written report from each visit.

E. Air leak testing of ductwork system. See Division 23 Section: “HVAC Air Distribution.”

F. Section Includes:

1. Testing adjusting, and balancing of air systems.
2. Testing adjusting, and balancing of hydronic and refrigerating systems.
3. Testing adjusting, and balancing of steam systems.
4. Measurement of final operating condition of HVAC systems.
5. Sound measurement of equipment operating conditions.
6. Vibration measurement of equipment operating conditions.

G. Coordinate with all trades to provide all incidental items not indicated on drawings or in specifications that belong to work described or are required for complete systems balancing, at no additional cost to Owner.

H. Related Sections: The following sections contain requirements that relate to this section:

1. Division 23 Section: “Instrumentation and Control for HVAC”: Requirements for coordination between DDC System and Testing, Adjusting, and Balancing, and Sequences of operation.
2. Division 23 Section: “Common Work Results for HVAC”: Execution Requirements, Closeout Requirements.
3. Division 01 Section: “Commissioning”.

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Agency Data:

1. Submit proof that proposed testing, adjusting, and balancing agency meets the qualifications specified within 30 days of award of contract.

C. Engineer and Technicians Data:

1. Submit proof that Test and Balance Engineer assigned to supervise procedures, and technicians proposed to perform procedures meet qualifications specified within 30 days of award of contract.

D. Procedures and Agenda: Submit synopsis of testing, adjusting, and balancing procedures and agenda proposed to be used for this project within 90 days of award of contract.

1. Prior to commencing work, submit report forms or outlines indicating adjusting, balancing, and equipment data required. Include detailed procedures, agenda, sample report forms, and copy of AABC National Project Performance Guaranty, NEBB Certificate of Conformance Certification, or TABB International Quality Assurance program guarantee.

E. Document Review:

1. Submit certification in writing that all design drawings and specifications have been reviewed, and comment on potential problems within 90 days of award of contract.

F. Maintenance Data: Submit maintenance and operating data that include how to test, adjust, and balance the building systems. Include this information in maintenance data specified in Division 01 and Division 23 Section: “Common Work Results for HVAC.”

G. Certified Reports: Submit testing, adjusting, and balancing reports bearing the seal and signature of Test and Balance Engineer. Reports shall be certified proof that systems have been tested, adjusted, and balanced in accordance with referenced standards; are an accurate representation of how systems have been installed; are true representation of how systems are operating at completion of testing, adjusting, and balancing procedures; and are accurate record of final quantities measured, to establish normal operating values of the systems. Follow procedures and format specified below:

1. Report Format: Report forms shall be those standard forms prepared by referenced standard for each respective item and system to be tested, adjusted, and balanced. Bind report forms complete with schematic systems diagrams and other data in reinforced, vinyl, three-ring binders. Provide binding edge labels with project identification and a title descriptive of contents. Divide contents of binder into divisions listed below, separated by divider tabs:

    a. General Information and Summary
    b. Air Systems
    c. Hydronic Systems
    d. Automatic Temperature Controls
    e. Special Systems
    f. Sound and Vibration Systems

2. Report Contents: Provide following minimum information, forms and data:

    a. General Information and Summary: Inside cover sheet to identify testing, adjusting, and balancing agency, Contractor, Owner, Architect, Engineer, and Project. Include addresses, and contact names and telephone numbers. Include certification sheet containing seal and name address, telephone number, and signature of Certified

Test and Balance Engineer. Include in this division listing of the instrumentations used for the procedures along with proof of calibration.

b. Remainder of the report shall contain appropriate forms containing as minimum, information indicated on standard report forms prepared by AABC and NEBB, for each respective item and system. Prepare schematic diagram for each item of equipment and system to accompany each respective report form.

H. Field Reports: Indicate deficiencies preventing proper testing, adjusting, and balancing of systems and equipment to achieve specified performance.

I. NIST Calibration Reports: Submit proof that all testing and balancing instruments and equipment used for this project has been calibrated in accordance with NIST Standards, within period of twelve months prior to starting project.

1. For pharmaceutical GMP facilities, certified cleanrooms, etc. calibration period shall be within six (6) months.

J. Submit draft copies of report for review prior to final acceptance of Project.

K. Furnish reports complete with table of contents page and indexing tabs, with cover identification at front and side. Include set of reduced drawings with air outlets and equipment identified to correspond with data sheets, and indicating thermostat locations.

L. Final submittal shall include but not be limited to following:

1. List of equipment used to perform test and procedures.
2. Equipment performance data and equipment curves with actual points of performance indicated on curves as compiled during balancing.
3. Air Devices including VAV Boxes (supply, return and exhaust) and all air outlets.
4. Duct traverse readings during balancing.
5. Room sound pressure levels.
6. Hydronic, domestic hot water, and steam system components flow rates, pressures and temperatures.
7. On balance report documents record date and time of reading.
8. Field verification of fume hood face velocities based on SEFA test procedure.

M. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of flow measuring stations, balancing valves, and rough setting.

C. Operation and Maintenance Data: Furnish final copy of testing, adjusting, and balancing report inclusion in operating and maintenance manuals.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with Authority Having Jurisdiction requirements.

B. Agency Qualifications:

1. Employ services of independent testing, adjusting, and balancing agency meeting qualifications specified below, to be single source of responsibility to test, adjust, and balance the building heating, ventilating and air conditioning systems to produce design objectives. Services shall include checking installations for conformity to design, measurement and establishment of fluid quantities of mechanical systems as required to meet design specifications, and recording and reporting results.
2. Certified by National Environmental Balancing Bureau (NEBB) or by Associated Air Balance Council (AABC) in those testing and balancing disciplines required for this project, and having at least one Professional Engineer registered in State in which services are to be performed, certified by NEBB or AABC as Test and Balance Engineer.

C. Work shall be accomplished in accordance with specifications. Procedures specified shall be followed and, if not specifically described herein, in general, shall be in accordance with Associated Air Balance Council's National Standards or National Environmental Balancing Bureau's Procedural Standards.

D. Design Review:

1. Review all design drawings and specifications. Review shall include:

a. Duct pressure classification.
b. Control device location and balancing devices location in duct systems and piping systems.
c. Indicate additional balancing devices required for proper balancing.
d. Specifications on all devices required for balancing.
e. Note any potential noise problems.

2. Within 90 days of award of contract, meet with the Architect, Mechanical Contractor, and Building Automation System Contractor to review procedures and agenda and comments on design documents as to potential problem areas.

E. Shop Drawing Review:

1. Review “Instrumentation and Control for HVAC” shop drawing submittals noting any potential balancing problems. Note comments on submittal, sign, stamp and return to General Contractor. All “Instrumentation and Control for HVAC” submittals must be reviewed by balancing agency prior to review by Architect.

F. Pre-Balancing Conference: Prior to beginning of testing, adjusting, and balancing procedures, schedule and conduct conference with Architect and representatives of installers of mechanical systems. Objective of conference is final coordination and verification of system operation and readiness for testing, adjusting, and balancing.

G. During construction, balancing agency shall inspect the installation of pipe systems, temperature controls, and other component parts of heating, ventilating, and air conditioning systems. Inspections shall be performed periodically as work progresses. Minimum of two inspections are

required as follows: (1) when 60 percent of ductwork is installed; (2) when 90 percent of equipment is installed. Balancing agency shall submit brief written report of each inspection to Owner and Architect.

1.7 QUALIFICATIONS

A. Agency: Company specializing in testing, adjusting, and balancing of systems specified in this section with minimum five years' experience certified by AABC, NEBB, or TABB.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: "Administrative Requirements": Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 SEQUENCING

A. Divison 01 Section: "Summary Of Work" : Work sequence.

B. Sequence balancing between completion of systems tested and Date of Substantial Completion.

1.10 SCHEDULING

A. Division 01 Section: "Administrative Requirements": Coordination and project conditions.

B. Schedule and provide assistance in final adjustment and test of life safety, smoke evacuation, or smoke control system with Fire Authority.

1.11 OWNER'S INSTRUCTIONS

A. Balancing contractor's technician along with his balancing engineer shall provide four (4) hours of instruction to Owner's engineers on balancing methods, procedures and equipment.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: "Administrative Requirements": Coordination and project conditions.

B. Preliminary Work:

1. Inspect project site prior to starting adjustments to verify completion of trades, including general construction, piping system, ductwork system, building automation systems, and electrical systems, as they relate to balancing work. Verify systems are complete and operable before commencing work. Verification shall include but not be limited to following:

   a. Systems are started and operating in safe and normal condition.

   b. Ductwork System:
      1) Duct joints sealed.
      2) Witness leakage tests required under sheet metal section.
      3) Dampers and control devices installed.
      4) Duct systems are clean of debris.
      5) Fire and volume dampers are in place and open

   c. Piping System
      1) Already cleaned and flushed by mechanical contractor
      2) Chemical treatment operating, or applicable to system.
      3) System filled and vented of air under Division 23.
      4) Proper strainer baskets are clean and in place or in normal position.
      5) Service and balancing valves are open.

   d. Proper direction of rotation for motor-driven equipment and for proper speed on multi-speed motors.
      1) Fans are rotating correctly.
      2) Pumps are rotating correctly.

   e. Balancing devices are installed and accessible.

   f. Control device connections.
      1) HVAC control systems are installed complete and operable.

   g. Note problems in general construction of the building that might effect systems performance such as sealing of windows, building joints, exhaust shafts, etc.

   h. Problems discovered during this inspection shall be reported to General Contractor and Owner.

   i. Proper thermal overload protection is in place for electrical equipment.

   j. Final filters are clean and in place. If required, install temporary media in addition to final filters.

   k. Air coil fins are cleaned and combed.

   l. Access doors are closed and duct end caps are in place.

   m. Air outlets are installed and connected.

2. Contractor shall certify in writing that each piping system has been prepared as per this Section, indicating dates procedures were done and which contractor did work. Submit in writing to Architect before beginning balancing work.

3.2 PREPARATION

A. Furnish instruments required for testing, adjusting, and balancing operations.

B. Make instruments available to Architect/Engineer to facilitate spot checks during testing.

3.3 INSTALLATION TOLERANCES

A. Air Handling Systems: Adjust to within plus or minus 10 percent of design.

B. Air Outlets and Inlets: Adjust total to within plus or minus 5 percent of design to space. Adjust outlets and inlets in space to within plus or minus 5 percent of design.

C. Hydronic Systems: Adjust to within plus or minus 10 percent of design.

3.4 ADJUSTING

A. Division 01 Section: “Execution and Closeout Requirements”: Testing, adjusting, and balancing.

B. Verify recorded data represents actual measured or observed conditions.

C. Permanently mark settings of valves, dampers, and other adjustment devices allowing settings to be restored. Set and lock memory stops.

D. After adjustment, take measurements to verify balance has not been disrupted. If disrupted, verify correcting adjustments have been made.

E. Report defects and deficiencies noted during performance of services, preventing system balance.

F. Leave systems in proper working order, replacing belt guards, closing access doors, closing doors to electrical switch boxes, and restoring thermostats to specified settings.

G. At final inspection, recheck random selections of data recorded in report. Recheck points or areas as selected and witnessed by Owner.

H. Check and adjust systems approximately six months after final acceptance and submit report.

3.5 SYSTEM BALANCE - GENERAL REQUIREMENTS

A. Balance heating, ventilating, and air conditioning to obtain air and water quantities indicated and required for proper operation of system.

B. Field work performed under this Section shall be provided under direct supervision of a Registered Professional Engineer.

C. Furnish services for complete adjustment of water systems, steam systems and air handling and exhaust systems, water, steam and air distribution and controls.

D. During all tests, it shall be demonstrated that systems shall be free from leaks and all parts of system will operate correctly. If not, report deficiencies to Contractor and Owner. Balancing Firm shall make final adjustments to equipment as may be required for proper operation, maintaining correct temperatures in all parts of the building. Controls shall be adjusted by "Instrumentation and Control for HVAC" technicians in conjunction with Balancing Firm. Coordinate setpoints and adjustments with "Instrumentation and Control for HVAC."

E. Balancing of hydronic systems and parts installed under this Contract to obtain water quantities and temperature drops in all parts of system shown on plans, in specifications on approved shop drawings or as required by Architect.

F. Balancing of heating and air conditioning, special exhaust and ventilating systems to achieve air quantities specified at each air inlet, outlet, or damper shown on plans at proper conditions of static pressure and temperature differential.

G. Study and report on excessive noise conditions, which may develop during system balancing. Report shall be sent to Architect.

3.6 AIR SYSTEM BALANCE

A. Prior to air balance, witness duct leak tests as performed under Division 23 Section: "HVAC Air Distribution."

B. In conjunction with Division 23 "Instrumentation and Controls for HVAC," equipment shall be started per design sequence. Determine fan airflow at rated speed. If airflow is not within 10% of design capacity of rated speed, review system conditions, procedures, and recorded data. Check and record pressure drops across filters, compensate for clean versus dirty filters, coils, sound traps, airflow sensors, etc., to indicate excessive pressure loss or leakage. Resolve problems with appropriate contractor. If systems are properly operating, and airflow is still unacceptable, adjust fan drive in accordance with manufacturer's recommendations to obtain proper airflow and static pressure. Systems shall be balanced and operated at lowest feasible static pressure with allowance for filter loading. Record fan suction pressure, fan discharge pressure, amperage and airflow measurement. Correct fan curves to indicate new points of balance. Fan motor shall not be overloaded.

C. With fan systems adjusted and dampers set to handle normal minimum outdoor air, perform following tests and compile following information:

1. Air Handling Equipment:

   a. Design Conditions
      1) Supply, Return and Exhaust Airflow
      2) Static and Total Pressure
      3) Outdoor Airflow
      4) Motor rating
      5) Fan speed
      6) Outlet Velocity
   b. Installed Equipment
      1) Manufacturer
      2) Motor serial number
      3) Motor type and efficiency, rating, voltage, phase, full-load amperes.

c. Field Test
   1) Fan Speed
   2) No-load operating amperes
   3) Fan motor operating amperes
   4) Calculated motor output

d. Test for Total Air
   1) Sum of discharge, exhaust, return air and outside air ducts.
   2) Number and locations of velocity readings taken.
   3) Duct average velocity
   4) Total airflow

e. After completion of tests, adjustments, and balancing under minimum outdoor air conditions, set system for 100% outdoor air. Repeat the total airflow tests to check field versus design conditions. Results under 100% outdoor air cycle shall agree with conditions found under “minimum fresh air operation” before system is considered to be in balance. Adjustments of proper dampers shall be made to achieve balance.

D. Vary total system air quantities by adjustment of fan speeds. Provide sheave drive changes to vary fan speed. Vary branch air quantities by damper regulation.

E. Provide system schematic with required and actual air quantities recorded at each outlet or inlet.

F. Measure static air pressure conditions on air supply units, including filter and coil pressure drops, and total pressure across fan. Make allowances for 50 percent loading of filters.

G. Adjust outside air automatic dampers, outside air, return air, and exhaust dampers for design conditions.

H. Measure temperature conditions across outside air, return air, and exhaust dampers to check leakage.

I. At modulating damper locations, take measurements and balance at extreme conditions. Balance variable volume systems at maximum airflow rate and at minimum airflow rate.

J. Measure building static pressure and adjust supply, return, and exhaust air systems to obtain required relationship between each to maintain approximately 0.05 inches differential static pressure near building entries.

K. Check multi-zone units for motorized damper leakage. Adjust air quantities with mixing dampers set first for cooling, then heating, then modulating.

L. For variable air volume system powered units set volume controller to airflow setting indicated. Confirm connections properly made and confirm proper operation for automatic variable-air-volume temperature control.

M. On fan powered VAV boxes, adjust airflow switches for proper operation.

N. With supply, return, and exhaust systems properly adjusted for airflow and static pressure, conduct following test, adjustments and compilation of data:

1. Duct Mains and Branches:

a. Adjust, measure and record airflow, static pressure of duct mains and branch ducts to provide required pressure and airlflow terminal devices.
b. Make air flow rate measurements in main ducts by Pitot tube traverse of entire cross sectional area of duct.

2. Terminal Devices:

a. Manufacturer, Model No. and Size of airflow control valves (supply, return and exhaust).
b. Inlet velocity, static pressure, minimum and maximum airflow setpoints of valves.
c. Outlet airflow of valve.
d. Adjust minimum or maximum setting of valves as required to obtain required airflow of outlets in accordance with manufacturer's procedures and recommendations.
e. In conjunction with "Instrumentation and Control for HVAC", operate controls, i.e., thermostats, switches and pressure controls in accordance with design sequence to verify proper operation.
f. Report control problems in writing to the Contractor. Resolve sequence problems with Section "Instrumentation and Control for HVAC", the Contractor and Architect at no additional cost.

3. Air Inlets and Outlets (supply, return and exhaust registers diffusers and grilles)

a. Manufacturer, model number, size of outlet and number of throw directions.
b. Design and actual airflow.
c. Use volume control devices to regulate air quantities only to extent adjustments do not create objectionable air motion or sound levels. Effect volume control by using volume dampers located in ducts.
d. Adjust general HVAC systems to design airflow within the following tolerances:
    1) Total system supply, return, and exhaust: (design to plus 10 percent).
    2) Outdoor air: (minus 5 percent to plus 5 percent).
    3) Total supply, return, and exhaust for a room or space: (minus 5 percent to plus 5 percent).
    4) Grilles, registers, and diffusers:
        a) One per room or space: (minus 5 percent to plus 5 percent).
        b) Two or more per room or space: (minus 10 percent to plus 10 percent).
e. Adjust direction of throw as required to match final installation location to prevent drafts.
f. With supply, return and exhaust balanced to design airflow, report room pressurization, (positive or negative). Report pressure readings relative to adjacent spaces only where requested by Owner or Architect.

O. Sheaves And Belts:

1. Should the air balance not meet acceptable industry standard tolerances as referenced herein, change and replace sheaves and belts to provide a final acceptable air balance. Replacement of sheaves and belts shall be provided at no additional cost.

P. Airflow Measuring Stations

1. Airflow Measuring Stations shall be field calibrated.

3.7 ACOUSTICS AND NOISE CRITERIA

A. Verify that mechanical systems comply with noise criteria as specified and indicated in Division 23. Where compliance is questionable or where additional testing requested by Owner, Architect or Contractor, take sound pressure level reading and record. Diagnose equipment causing deviations and report deviations to appropriate trade contractor and Contractor. Resolve noise problems with Contractor and appropriate Installer.

3.8 SOUND-LEVEL MEASUREMENTS

A. Perform sound-pressure-level measurements with an octave-band analyzer complying with ANSI S1.4 for Type 1 sound-level meters and ANSI S1.11 for octave-band filters. Comply with requirements in ANSI S1.13, unless otherwise indicated.

B. Calibrate sound meters before each day of testing. Use a calibrator provided with the sound meter complying with ANSI S1.40 and that has NIST certification.

C. Use a microphone that is suitable for the type of sound levels measured. For areas where air velocities exceed 100 fpm, use a windscreen on the microphone.

D. Perform sound-level testing after air and water balancing and equipment testing are complete.

E. Close windows and doors to the space.

F. Perform measurements when the space is not occupied and when the occupant noise level from other spaces in the building and outside are at a minimum.

G. Clear the space of temporary sound sources so unrelated disturbances will not be measured. Position testing personnel during measurements to achieve a direct line-of-sight between the sound source and the sound-level meter.

H. Take sound measurements at a height approximately 48 inches above the floor and at least 36 inches from a wall, column, and other large surface capable of altering the measurements.

I. Take sound measurements in dBA and in each of the 8 unweighted octave bands in the frequency range of 65 to 8000 Hz.

J. Take sound measurements with the HVAC systems off to establish the background sound levels and take sound measurements with the HVAC systems operating.

   Calculate the difference between measurements. Apply a correction factor depending on the difference and adjust measurements.

K. Perform sound testing at 5 locations on Project for each of the following space types. For each space type tested, select a measurement location that has the greatest sound level. If testing multiple locations for each space type, select at least one location that is near and at least one location that is remote from the predominant sound source. Test sound levels after all phases of project are complete. Coordinate with Owner for selection of spaces to be tested.

   1. Private offices.
   2. Open office areas.

3. Conference rooms.
4. Each space with a noise criterion of RC or NC 25 or lower.
5. Each space with an indicated noise criterion of RC or NC 35 and lower that is adjacent to a mechanical equipment room or roof mounted equipment.
6. Inside each mechanical equipment room.

3.9 SCHEDULES

A. Report Forms

1. Title Page:

    a. Name of Testing, Adjusting, and Balancing Agency
    b. Address of Testing, Adjusting, and Balancing Agency
    c. Telephone and facsimile numbers of Testing, Adjusting, and Balancing Agency
    d. Project name
    e. Project location
    f. Project Architect
    g. Project Engineer
    h. Project Contractor
    i. Project altitude
    j. Report date

2. Summary Comments:

    a. Design versus final performance
    b. Notable characteristics of system
    c. Description of systems operation sequence
    d. Summary of outdoor and exhaust flows to indicate building pressurization
    e. Nomenclature used throughout report
    f. Test conditions

3. Instrument List:

    a. Instrument
    b. Manufacturer
    c. Model number
    d. Serial number
    e. Range
    f. Calibration date

4. Electric Motors:

    a. Manufacturer
    b. Model/Frame
    c. HP/BHP and kW
    d. Phase, voltage, amperage; nameplate, actual, no load
    e. RPM
    f. Service factor
    g. Starter size, rating, heater elements
    h. Sheave Make/Size/Bore

5. V-Belt Drive:

    a. Identification/location
    b. Required driven RPM
    c. Driven sheave, diameter and RPM
    d. Belt, size and quantity
    e. Motor sheave diameter and RPM
    f. Center to center distance, maximum, minimum, and actual

6. Pump Data:

    a. Identification/number
    b. Manufacturer
    c. Size/model
    d. Impeller
    e. Service
    f. Design flow rate, pressure drop, BHP and kW
    g. Actual flow rate, pressure drop, BHP and kW
    h. Discharge pressure
    i. Suction pressure
    j. Total operating head pressure
    k. Shut off, discharge and suction pressures
    l. Shut off, total head pressure

7. Air Cooled Condensing Unit:

    a. Identification/number
    b. Location
    c. Manufacturer
    d. Model number
    e. Serial number
    f. Entering DB air temperature, design and actual
    g. Leaving DB air temperature, design and actual
    h. Number of compressors

8. Cooling Coil Data:

    a. Identification/number
    b. Location
    c. Service
    d. Manufacturer
    e. Air flow, design and actual
    f. Entering air DB temperature, design and actual
    g. Entering air WB temperature, design and actual
    h. Leaving air DB temperature, design and actual
    i. Leaving air WB temperature, design and actual
    j. Water flow, design and actual
    k. Water pressure drop, design and actual
    l. Entering water temperature, design and actual
    m. Leaving water temperature, design and actual

n. Saturated suction temperature, design and actual
o. Air pressure drop, design and actual

9. Heating Coil Data:

a. Identification/number
b. Location
c. Service
d. Manufacturer
e. Air flow, design and actual
f. Water flow, design and actual
g. Water pressure drop, design and actual
h. Entering water temperature, design and actual
i. Leaving water temperature, design and actual
j. Entering air temperature, design and actual
k. Leaving air temperature, design and actual
l. Air pressure drop, design and actual

10. Electric Duct Heater:

a. Manufacturer
b. Identification/number
c. Location
d. Model number
e. Design kW
f. Number of stages
g. Phase, voltage, amperage
h. Test voltage (each phase)
i. Test amperage (each phase)
j. Air flow, specified and actual
k. Temperature rise, specified and actual

11. Induction Unit Data:

a. Manufacturer
b. Identification/number
c. Location
d. Model number
e. Size
f. Design air flow
g. Design nozzle pressure drop
h. Final nozzle pressure drop
i. Final air flow

12. Unit Ventilator and Fan Coil Data:

a. Manufacturer
b. Identification/number
c. Location

d. Model number
e. Size
f. Air flow, design and actual
g. Water flow, design and actual
h. Water pressure drop, design and actual
i. Entering water temperature, design and actual
j. Leaving water temperature, design and actual
k. Entering air temperature, design and actual
l. Leaving air temperature, design and actual

13. Air Moving Equipment:

a. Location
b. Manufacturer
c. Model number
d. Serial number
e. Arrangement/Class/Discharge
f. Air flow, specified and actual
g. Return air flow, specified and actual
h. Outside air flow, specified and actual
i. Total static pressure (total external), specified and actual
j. Inlet pressure
k. Discharge pressure
l. Sheave Make/Size/Bore
m. Number of Belts/Make/Size
n. Fan RPM

14. Return Air/Outside Air Data:

a. Identification/location
b. Design air flow
c. Actual air flow
d. Design return air flow
e. Actual return air flow
f. Design outside air flow
g. Actual outside air flow
h. Return air temperature
i. Outside air temperature
j. Required mixed air temperature
k. Actual mixed air temperature
l. Design outside/return air ratio
m. Actual outside/return air ratio

15. Exhaust Fan Data:

a. Location
b. Manufacturer
c. Model number
d. Serial number
e. Air flow, specified and actual

f. Total static pressure (total external), specified and actual
g. Inlet pressure
h. Discharge pressure
i. Sheave Make/Size/Bore
j. Number of Belts/Make/Size
k. Fan RPM

16. Duct Traverse:

a. System zone/branch
b. Duct size
c. Area
d. Design velocity
e. Design air flow
f. Test velocity
g. Test air flow
h. Duct static pressure
i. Air temperature
j. Air correction factor

17. Duct Leak Test:

a. Description of ductwork under test
b. Duct design operating pressure
c. Duct design test static pressure
d. Duct capacity, air flow
e. Maximum allowable leakage duct capacity times leak factor
f. Test apparatus
    1) Blower
    2) Orifice, tube size
    3) Orifice size
    4) Calibrated
g. Test static pressure
h. Test orifice differential pressure
i. Leakage

18. Air Monitoring Station Data:

a. Identification/location
b. System
c. Size
d. Area
e. Design velocity
f. Design air flow
g. Test velocity
h. Test air flow

19. Flow Measuring Station:

a. Identification/number
b. Location
c. Size
d. Manufacturer
e. Model number
f. Serial number
g. Design Flow rate
h. Design pressure drop
i. Actual/final pressure drop
j. Actual/final flow rate
k. Station calibrated setting

20. Terminal Unit Data:

a. Manufacturer
b. Type, constant, variable, single, dual duct
c. Identification/number
d. Location
e. Model number
f. Size
g. Minimum static pressure
h. Minimum design air flow
i. Maximum design air flow
j. Maximum actual air flow
k. Inlet static pressure

21. Air Distribution Test Sheet:

a. Air terminal number
b. Room number/location
c. Terminal type
d. Terminal size
e. Area factor
f. Design velocity
g. Design air flow
h. Test (final) velocity
i. Test (final) air flow
j. Percent of design air flow

22. Sound Level Report:

a. Location
b. Octave bands - equipment off
c. Octave bands - equipment on
d. RC level - equipment on

23. Vibration Test:

a. Location of points:

1) Fan bearing, drive end
2) Fan bearing, opposite end
3) Motor bearing, center (when applicable)
4) Motor bearing, drive end
5) Motor bearing, opposite end
6) Casing (bottom or top)
7) Casing (side)
8) Duct after flexible connection (discharge)
9) Duct after flexible connection (suction)

b. Test readings:
1) Horizontal, velocity and displacement
2) Vertical, velocity and displacement
3) Axial, velocity and displacement

c. Normally acceptable readings, velocity and acceleration
d. Unusual conditions at time of test
e. Vibration source (when non-complying)

3.10 CALIBRATION

A. During testing and balancing, inspect temperature sensors, pressure sensors, digital indicators, and thermometers, etc. provided under Division 23. Report discrepancies to the Contractor for replacement or recalibration.

3.11 RE-BALANCE

A. After Architect's review of test and balance report submittal, make adjustment in any balancing point as required by Architect, to correct discrepancies between balance report and design, at no additional cost.

3.12 FINAL BALANCE

A. Visit site within one year after building occupancy if necessary to adjust and rebalance, any system required by Owner, to resolve any and all complaints. After final balance, revise previous submittal and resubmit to architect for record purpose. Rebalance and resubmittals shall be done at no additional cost to Owner.

3.13 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 07 00

HVAC INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and General Provisions of the contract, including General and Supplemental Conditions and Division 01 Specifications, apply to this section and the other sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Insulation Materials:
    a. Cellular Glass
    b. Flexible Elastomeric
    c. Glass Mineral Wool Blanket Insulation
    d. High-Temperature, Glass Mineral Wool Blanket Insulation
    e. Glass Mineral Wool Board Insulation
    f. High-Temperature Glass Mineral Wool Board Insulation
    g. Glass Mineral Wool, Preformed Pipe Insulation
    h. Glass Mineral Wool, Pipe and Tank Insulation
    i. Polyurethane Foam Board Insulation
2. Insulating cements.
3. Adhesives.
4. Mastics.
5. Lagging adhesives.
6. Sealants.
7. Factory-applied jackets.
8. Field-applied fabric-reinforcing mesh.
9. Field-applied cloths.
10. Field-applied jackets.
11. Tapes.
12. Securements.
13. Corner angles.

B. Related Sections: The following sections contain requirements that relate to this section.

1. Division 07 Section: “Firestopping”: Product requirements for firestopping for placement by this section.
2. Division 09 Section: “Paints and Coatings”: Execution requirements for painting insulation jackets and covering specified by this section.
3. Division 23 Section: “Hangers and Supports for HVAC Piping and Equipment”: Product and Execution requirements for inserts at hanger locations.
4. Division 23 Section: “Identification for HVAC Piping and Equipment”: Product requirements for HVAC piping and equipment identification.

1.3 REFERENCES

(Unless otherwise noted, references apply to "latest editions.")

A. ASTM International:

1. ASTM A167 - Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
2. ASTM A240 - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications.
3. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar.
4. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate.
5. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate (Metric).
6. ASTM C177 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Guarded-Hot-Plate Apparatus.
7. ASTM C195 - Standard Specification for Mineral Fiber Thermal Insulating Cement.
8. ASTM C423 – Standard for Reverberation Room Method.
9. ASTM C449 - Standard Specification for Mineral Fiber Hydraulic-Setting Thermal Insulating and Finishing Cement.
10. ASTM C450 - Standard Practice for Fabrication of Thermal Insulating Fitting Covers for NPS Piping, and Vessel Lagging.
11. ASTM C518 - Standard Test Method for Steady-State Heat Flux Measurements and Thermal Transmission Properties by Means of the Heat Flow Meter Apparatus.
12. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
13. ASTM C534 - Standard Specification for Preformed Flexible Elastomeric Cellular Thermal Insulation in Sheet and Tubular Form.
14. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
15. ASTM C552 - Standard Specification for Cellular Glass Thermal Insulation.
16. ASTM C553 - Standard Specification for Mineral Fiber Blanket Thermal Insulation for Commercial and Industrial Applications.
17. ASTM C578 - Standard Specification for Rigid, Cellular Polystyrene Thermal Insulation.
18. ASTM C585 - Standard Practice for Inner and Outer Diameters of Rigid Thermal Insulation for Nominal Sizes of Pipe and Tubing (NPS System).
19. ASTM C591 - Standard Specification for Unfaced Preformed Rigid Cellular Polyisocyanurate Thermal Insulation.
20. ASTM C592 - Standard Specification for Mineral Fiber Blanket Insulation and Blanket-Type Pipe Insulation (Metal-Mesh Covered) (Industrial Type).
21. ASTM C610 - Standard Specification for Molded Expanded Perlite Block and Pipe Thermal Insulation.
22. ASTM C612 - Standard Specification for Mineral Fiber Block and Board Thermal Insulation.
23. ASTM C795 - Standard Specification for Thermal Insulation for Use in Contact with Austenitic Stainless Steel.
24. ASTM C921 - Standard Practice for Determining the Properties of Jacketing Materials for Thermal Insulation.
25. ASTM C1071 - Standard Specification for Thermal and Acoustical Insulation (Glass Fiber, Duct Lining Material).
26. ASTM C1126 - Standard Specification for Faced or Unfaced Rigid Cellular Phenolic Thermal Insulation.

27. ASTM C1136 - Standard Specification for Flexible, Low Permeance Vapor Retarders for Thermal Insulation.
28. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
29. ASTM C1393 - Standard Specification for Perpendicularly Oriented Mineral Fiber Roll and Sheet Thermal Insulation for Pipes and Tanks .
30. ASTM C1617 – Standard Practice for Qualitative Accelerated Laboratory Evaluation of Extraction Solutions Containing Ions Leached from Thermal Insulation on Aqueous Corrosion of Metals.
31. ASTM 1622 - Standard Test Method for apparent density, apparent density, apparent overall density.
32. ATSM C1639 – Standard Specification for Fabrication of Cellular Glass Pipe and Tubing Insulation.
33. ASTM D1784 - Standard Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
34. ASTM D1785 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
35. ASTM D3575 - Standard Test Methods for flexible cellular materials made from Olefin Polymers, closed cell materials, flexible cellular, Olefin Polymers, Buoyancy, etc.
36. ASTM D4637 - Standard Specification for EPDM Sheet Used in Single-Ply Roof Membrane.
37. ASTM C1290 - Standard Specification for Flexible Fibrous Glass Blanket Insulation Used to Externally Insulate HVAC Ducts.
38. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
39. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.
40. ASTM E162 - Standard Test Method for Surface Flammability of Materials Using a Radiant Heat Energy Source.
41. ASTM E2231 – Standard Practice for Specimen Preparation of Mounting of Pipe and Duct Insulation Materials to Assess Surface Burning Characteristics.
42. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. Sheet Metal and Air Conditioning Contractors':

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

C. Underwriters Laboratories Inc.:

1. UL 1978 - Standard for Safety for Grease Ducts.

D. American Society of Heating, Refrigerating and Air Conditioning Engineers, Inc. (ASHRAE).

E. North American Insulation Manufacturers Association (NAIMA).

F. NAIMA – "Guide to Insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation."

G. "National Commercial & Industrial Insulation Standards" – MICA Manual

H. National Fire Protection Association (NFPA)

I. Underwriter's Laboratories Environmental (UL Environment).

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: Submit product description, thermal characteristics and list of materials and thickness for each service, and location.

C. EPD Submittals: As certified by UL Environment.

D. LEED Submittals:

1. LEED v 4, Product Data for Credit EA 2: For products and materials significant to the energy performance of a structure, provide documentation that indicates that insulation levels are significant to increasing the level of energy performance beyond the prerequisite standard.
2. LEED v 4, Product Data for Credit MR 2: For products and materials to comply with Building Product Disclosure & Optimization, provide data/evidence that substantiates Environmental Product Declaration and Multi Attribute Optimization requirements.
3. LEED v 4, Product Data for Credit MR 4: For products having recycled content documentation; indicating percentages by weight of post-consumer and pre-consumer recycled content. Include statement indicating cost for each product having recycled content.
4. Laboratory Test Reports for Credit IEQ 4: For adhesives and sealants, documentation indicating that products comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

E. Samples: Submit two samples of representative size illustrating each insulation type.

F. Manufacturer's Installation Instructions: Submit manufacturers published literature indicating proper installation procedures.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Skilled mechanics who have successfully completed an apprenticeship program or another craft training program certified by the Department of Labor, Bureau of Apprenticeship and Training.

B. Pipe insulation manufactured in accordance with ASTM C585 for inner and outer diameters.

C. Factory fabricated fitting covers manufactured in accordance with ASTM C450.

D. Duct insulation, Coverings, and Linings: UL/ULC Classified per UL 723 or Maximum 25/50 flame spread/smoke developed index, when tested in accordance with ASTM E84, using specimen procedures and mounting procedures of ASTM E 2231.

E. Perform Work in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

F. Fire-Test-Response Characteristics: Insulation and related materials shall be UL/ULC Classified per UL 723 or have fire-test response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to authorities having jurisdiction. Factory label insulation and jacket materials and adhesive, mastic, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke developed index of 150 or less.

G. Formaldehyde Free: Third party certified with UL Environment Validation.

H. Biosoluble: As determined by research conducted by the International Agency for Research on Cancer (IARC) and supported by revised reports from the National Toxicology Program (NTP) and the California Office of Environmental Health Hazard Assessment. Certified by European Certification Board for Mineral Wool Products (EUCEB).

I. Recycled Content: A minimum of 50 percent recycled glass content certified and UL Validated.

J. Low Emitting Materials: For all thermal and acoustical applications of Glass Mineral Wool Insulation Products, provide materials complying with the testing and products requirements of UL GREENGUARD Gold Certification.

K. Living Building Challenge-Declare Red List Free.

L. Products shall contain no polybrominated diphenyl ethers (PBDE) such as Penta-BDE.

M. Insulation materials shall be tested and rated according to ASTM Test Method C-177 to determine k-factors. ASTM C 335 is for pre-formed pipe insulation. C177 is for flat slab materials ONLY; such as board products, etc.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Applicator: Company specializing in performing Work of this section with minimum three years experience.

1.7 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Requirements for transporting, handling, storing and protecting products.

B. Accept materials on site in original factory packaging, labeled with manufacturer's identification, including product density and thickness.

C. Protect insulation from weather and construction traffic, dirt, water, chemical, and damage, by storing in original wrapping. Remove and replace any wet or damaged unsatisfactory insulation at the Architect’s direction.

1.9 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental conditions effecting products on site.

B. Install insulation only when ambient temperature and humidity conditions are within range recommended by manufacturer.

C. Maintain temperature during and after installation for minimum period of 24 hours.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish two year manufacturer warranty for manmade fiber.

1.12 DEFINITIONS

A. Thermal Conductivity (K value): Units of Btu-inch/hour per square foot per degree F.

B. UL GREENGUARD: Provides independent third party, Indoor Air Quality (IAQ) certification of products for emissions of respirable particles and Volatile Organic Compounds (VOC's), including formaldehyde and other specific product related pollutants. Certification is based upon criteria used by EPA, OSHA, and WHO.

C. EPA: Environmental Protection Agency.

D. WHO: World Health Organization.

E. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with a polypropylene outer film layer leaving no paper exposed.

F. ASJ: Al-service jacket.

G. FSK: Foil, scrim, Kraft paper.

H. FSP: Foil, Scrim, polyethylene.

I. PVDC: Polyvinylidene chloride.

J. SSL+: Self-Sealing Lap with Advanced Closure System.

K. SSL: Self-sealing lap.

L. ASJ Max: All service jacket composed of aluminum foil with tri-directional reinforcing scrim bonded to Kraft paper with a polypropylene outer layer leaving no exposed paper.

M. PSK: Poly Scrim Kraft.

N. PVC: Polyvinyl Chloride.

O. Glass Mineral Wool: Interchangeable with fiber glass, but replacing the term in the attempt to disassociate and differentiate Glass Mineral Wool from the potential health and safety of special purpose or reinforcement products that do not meet the bio solubility criteria of insulation made from glass. Rock Mineral Wool will replace the traditional Mineral Wool label. Both are used in lieu of the Mineral Fiber label.

P. UL GREENGUARD Gold Certification: (formerly known as GREENGUARD Children & Schools Certification) offers stricter certification criteria, considers safety factors to account for sensitive individuals (such as children and the elderly), and ensures that a product is acceptable for use in environments such as schools and healthcare facilities. It is referenced; by both The Collaborative for High Performance Schools (CHPS) and the Leadership in Energy Environmental Design (LEED) Building Rating Systems.

Q. UL Environment Formaldehyde Free Verification Requirements: For a product to be verified as formaldehyde free, product samples must have a measured emission factor of less than or equal to 5 µg/m²h at 24 elapsed hours or 3 µg/m²h at 336 elapsed hours. An emission factor of 5 µg/m²h corresponds to measured chamber concentration of 2.5 µg/m³ for a typical building ratio of 0.5 m²/m³. This chamber concentration is comparable to, or below typical outdoor air concentrations. This demonstrates that the formaldehyde exposure from products labeled as formaldehyde free will not contribute to airborne formaldehyde concentrations at greater levels than those found in the natural outdoor environment.

R. Underwriters Laboratories Environment (UL Environment): offers independent green claims validation, product assessment and certification. UL GREENGUARD provides third party credibility for sustainable products.

S. UL Environment Claims Validation (ECV): service and label tests a manufacturer’s product and validates that the environmental claims they make in their marketing and packaging materials are factual. This Environmental Claims Validation (ECV) service will allow manufacturers to verify that their products contain a quantifiable amount of recycled content and, as such, help limit raw material extraction and reduce landfill waste. It also will enable products to qualify for LEED® points under Pilot Credit 43: MR – Certified Products.

T. Recycled Content: materials such as bottled glass collected at curbside or other collection sites after consumer use and/or materials used or created from one manufacturing process which are collected as scrap and placed back into another manufacturing process rather than being placed in a landfill or incinerated.

U. Polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE or Deca-BDE fire retardants: have been linked to adverse health effects after exposure in low concentrations.

V. UL Classified: UL has tested and evaluated samples of the product with respect to certain properties of the product. UL Classifies products to:

1. Applicable UL requirements.
2. Standards for safety.
3. Standards of other National and International organizations.

W. EPD: Environmental Product Declaration. A third party verified document that reports environmental data of products based on the Life Cycle Assessment (LCA) and other relevant information, and in accordance with the International Standard ISO 14025 (Type III Environmental Declarations).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles blow introduce lists, the following requirements apply to product selection.

1. Products: Subject to compliance with requirements, provide one of the products specified.
2. Manufacturers: Subject to compliance with requirements, provide products by one of the manufacturers specified.

2.2 INSULATION MATERIALS

A. Refer to Part 3 execution schedule for requirements regarding where insulating materials shall be applied.

B. Products shall not contain asbestos, lead, mercury or mercury compounds.

C. Insulation products shall contain no formaldehyde-based binders or shall be third-party certified for conformance with GREENGUARD Gold or Indoor Advantage Gold. (GREENGUARD Children and Schools is now called GREENGUSARD Gold)

D. When product to be in contact with austenitic stainless steel is tested according to ASTM C795 (which includes ASTM C692 and ASTM C871), the PH of the leach water from the specific material supplied shall be greater than 7.0 but not greater than 11.7 at 77°F. An acceptable proportion of sodium plus silicate ions to the chloride ions as found by leaching from the insulation is shown in the “plot point” of figure 6 in ASTM C795.

E. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.

F. Insulation materials applied to carbon steel shall be Mass Load Corrosion Rate (MLCR) tested per ASTM 1617.

G. Foam insulation materials shall not utilize CFC or HCFC blowing agents n the manufacturing process.

H. Cellular Glass: Inorganic, incombustible, foamed or celluated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

1. Products:

   a. Pittsburgh Corning Corporation; FOAMGLASS® ONE™ Insulation.
   b. Specialty Products & Insulation Company (SPI), Lancaster, PA.
2. Block Insulation: ASTM C 552, Type I.
3. Special-Shaped Insulation: ASTM C 552, Type III.
4. Board Insulation: ASTM C 552, Type IV.
5. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Grade 6.
6. Maximum K-Factor: 0.29 at 75 deg. F. mean temperature.
7. Factory fabricates shapes according to ASTM C 450 and ASTM C 585.

I. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.

1. Products:

   a. Aeroflex USA Inc.: Aerocel.
   b. Armacell LLC; AP Armaflex.
   c. Nomaco; K-Flex Pipe
2. Water Vapor Permeability: 0.02 perm-inch per ASTM E96 Procedure A.
3. Thermal Conductivity: 0.27 at 75 degrees F
4. Warranty: 25 year warranty against breakdown of the membrane due to ultraviolet radiation.
5. Seal Tape: Thermoplastic rubber membrane backed with pressure sensitive adhesive.

J. Polyester: An engineered nonwoven, thermally bonded Polyester with a smooth an durable FSK facing. Liner must have a noise reduction coefficient of at least 0.65 and have thermal values greater or equal to an R-4/2 at 1”, R-5 at 1 ¼”, R-6 at 1 ½” and R-8 at 2” respectively.

1. Products

   a. Ductmate Industries, Inc.: PolyArmor
   b. Polyester liner shall be able to withstand a constant internal temperature up to 250°F must be complaint with Greenguard Environmental Institute, and contain zero VOC’s per ASTM D5116. Liner shall comply with all applicable standards including ASTM E84, ASTM C518, ASTM G-21, NFPA 90A and 90B, and UL 181.
   c. Polyester duct liner must be attached using a non-flammable, low VOC water based adhesive. When applicable, apply a non-flammable, low VOC water based lagging

adhesive to the exposed leading edge of the insulation. Install fasteners per SMACNA HVAC Duct Liner installation instructions.

d. Polyester duct liner must be installed per section 7.4 of the 2005 SMACNA Manual, "HVAC Duct Construction Standards, Metal and Flexible," Third Edition unless otherwise specified.

K. Glass Mineral Wool Blanket Insulation: Glass mineral wool bonded with a thermosetting resin. Comply with ASTM C 553, Types I, II and III, ASTM C 1136, Type II and ASTM C 1290, Type I or Type III, UL/ULC Classified per UL 723 or FHC 25/50 per ASTM E 84. UL GREENGAURD Gold Certified and UL Environment Validated to be formaldehyde free. Product shall contain no polybrominated diphenyl ethers (PBDE) such as Penta-BDE, Octa-BDE or Deca-BDE. Factory-applied FSK jacket. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.

1. Products:

   a. Knauf Insulation; Atmosphere Duct Wrap with Ecose® Technology
   b. CertainTeed Corp.; Duct Wrap.
   c. Johns Manville; Microlite Duct Wrap or Microlite EQ.
   d. Owens Corning; All-Service Duct Wrap Type 150.
2. Maximum K-Factor: 0.24 at 75 deg. F. and material thickness compressed 25%.
3. Minimum Density: 1.5 pounds per cubic foot.

L. High-Temperature, Glass Mineral Wool Blanket Insulation: Glass mineral wool bonded with a thermosetting resin. Comply with ASTM C 553, Type V, flexible, noncombustible meeting ASTM C 447, without factory-applied jacket.

1. Products:

   a. Knauf Insulation; Elevated Temperature (ET) Blanket with Ecose® Technology
   b. Johns Manville; HTB 23 Spin-Glas.
   c. IIG Industries (Rock Mineral Wool)
   d. Owens Corning Utilicore L2.5
2. Maximum K-Factor: 0.23 at 75 deg. F.
3. Minimum Density: 2.0 pounds per cubic foot.

M. Glass Mineral Wool Board Insulation: Glass mineral wool bonded with a thermosetting resin. UL/ULC Classified per UL 723 or FHC 25/50 per ASTM E 84. Comply with ASTM C 612, Type IA or Type IB. Living Building Challenge – Declare Red List Free. For duct and plenum applications, provide insulation with factory-applied FSK jacket. For equipment applications, provide insulation with factory-applied ASJ+ or ASJ. Factory-applied jacket requirements are specified in Part 2 "Factory-Applied Jackets" Article.

1. Products:

   a. Knauf Insulation; Earthwool Insulation Board with Ecose® Technology for temperatures up to 450° F.
   b. CertainTeed Corp.; Commercial Board.
   c. Johns Manville; 800 Series Spin-Glas, Type 814.
   d. Owens Corning; Fiberglas 700 Series for operating temperatures up to 450°F.
2. Maximum K-Factor: 0.23 at 75° F.
3. Minimum density: 2.8 pounds per cubic foot.

N. High-Temperature Glass Mineral Wool or Rock Mineral Wool Board Insulation: Glass mineral wool or rock mineral wool bonded with a thermosetting resin. Comply with ASTM C 612, Type IA, IB, II – Category I or III, without factory-applied jacket.

1. Products:

   a. Knauf Insulation: Elevated Temperature Board with Ecose® Technology for operating temperatures to 1000°F.
   b. Johns Manville: 1000 Series Spin-Glas for temperatures to 850° F.
   c. IIG Industries
   d. Rock Wool Manufacturing Company; Delta Board.
   e. Owens Corning: Insul-Quick for operating temperatures up to 850°F
   f. Owens Corning: SCR Board for temperatures up to 1000°F
   g. Owens Corning: Industrial Board for operating temperatures up to 1200°F
2. Maximum K-Factor: 0.23 at 75 deg. F mean temperature; 0.33 at 300 deg. F mean temperature.
3. Minimum Density: 2.8 Pounds per cubic foot.

O. Glass Mineral Wool, Preformed Pipe Insulation:

1. Products:

   a. Johns Manville: Micro-Lok HP Ultra
   b. Knauf Insulation: Earthwool 1000 Pipe Insulation with Ecose® Technology.
   c. Knauf Insulation: Earthwool Redi-Klad 1000 pipe insulation with Ecose® Technology. (for chilled water or outdoor applications)
   d. Owens Corning; Fiberglas Pipe Insulation SSLII with ASJ Max
2. Type I, 850 deg F or Type IV, 1000 deg F. Materials: Glass mineral wool bonded with a thermosetting resin. UL/ULC Classified per UL 723 or FHC 25/50 per ASTM E 84. Living Building Challenge – Declare Red List Free for Redi-Klad Pipe or unjacketed Earthwool Pipe only. Comply with ASTM C 585, ASTM C 411, ASTM C 795 amd ASTM C 547, Type I and Type IV, with factory-applied ASJ+ -SSL+ or ASJ-SSL. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.
3. Type II, 1200 degree F Materials: Mineral or glass fibers bonded with thermosetting resin. Comply with ASTM C547, Type II, Grade A, with Factory-applied ASJ+-SSL. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.
4. Maximum K-Factor: 0.23 at 75 deg. F mean temperature; 0.34 at 250 deg. F mean temperature.

P. Glass Mineral Wool Pipe and Tank Insulation: Glass mineral wool bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ Max, ASJ+, or PSK complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612,Type IB. Factory-applied jacket requirements are specified in Part 2 “Factory-Applied Jackets” Article.

1. Products:

   a. Certain Teed Corp.; CrimpWrap.
   b. Johns Manville; MicroFlex.
   c. Knauf Insulation; Pipe and Tank Insulation, with Ecose® Technology.
   d. Knauf Insulation: Kwik-Flex pipe and tank insulation with Ecose® Technology.
   e. Owens Corning; Fiberglas® Pipe and Tank Insulation with white ASJ Max poly encapsulated facing for systems operating at temperatures to 650°.

2. Maximum K-Factor: 0.29 at 100 deg. F mean temperature; 0.45 at 300 deg. F mean temperature.
3. Minimum Density: 2.5 pounds per cubic foot.

Q. Polyurethane Foam Board Insulation: Rigid CFC and HCFC free polyurethane insulation board, with glass fiber tissue top facing to provide a smooth, firm surface suited for mechanically fastened and adhered membrane applications.

1. Products:

a. Sarnafil Sarna-therm.
2. Compressive strength shall exceed 3000 pounds per square foot.
3. Maximum K-factor: 0.18 at 75 deg. F.
4. Field-Applied Jacket: Requirements are specified in Part 2 “Field-Applied Jackets.”

2.3 FIRE RATED INSULATION KITCHEN HOOD/EQUIPMENT FLUE EXHAUST SYSTEMS

A. Fire-Rated Board: Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to 1700 deg F. Comply with ASTM C656, Type II, Grade 6. UL tested and certified to provide a 2-hour fire rating.

1. Products:

a. 11G Super Firetemp M.

B. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is UL tested and certified to provide a 2-hour fire rating.

1. Products:

a. CertainTeed Corp.; FlameChek.
b. Ceramics Firemaster Wrap.
c. 3M; Fire Master Wrap Products.

2.4 INSULATING CEMENTS

A. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

B. Mineral-Fiber Insulating Cement: Comply with ASTM C 195.

C. Expanded or Exfoliated Vermiculite Insulating Cement: Comply with ASTM C 196.

D. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

2.5 ADHESIVES

A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.

B. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

C. Cellular-Glass and Polyisocyanurate Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 81-84.
b. Pittsburg Corning, PC 99 2k Adhesive.

D. Flexible Elastomeric and Polyolefin Adhesive: Comply with MIL-A-24179A, Type II Class I.

1. Products:

a. Armacell LCC; Armaflex 520 Adhesive, Armaflex 520 BLV Low-VOC Adhesive….
b. Foster Products Corporation, H. B. Fuller Company; 85-60.

E. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 85-70.
b. Eagle Bridges - Marathon Industries, Inc.; 225.

F. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 85-70.
b. Eagle Bridges - Marathon Industries, Inc.; 225.

G. PVC Jacket Adhesive: Compatible with PVC jacket.

1. Products:

a. Dow Chemical Company (The); 739, Dow Silicone.

H. Polyurethane Foam Insulation Board: Manufacturer’s recommended synthetic adhesive compatible with polyurethane insulation.

1. Products:

a. Sarnafil Sarnacol 2170 or Sarnacol 21425.

2.6 MASTICS

A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.

B. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

C. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.

1. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 30-90.
    b. Eagle Bridges - Marathon Industries, Inc.; 590.
    c. Mon-Eco Industries, Inc.; 55-40.
    d. Pittsburg Corning, PITTCOTE 404 Coating.
    e. Vimasco Corporation; 749.
2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
3. Service Temperature Range: Minus 20 to plus 180 deg F.
4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
5. Color: White.

D. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.

1. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 35-00.
    b. Eagle Bridges - Marathon Industries, Inc.; 550.
    c. Mon-Eco Industries, Inc.; 55-50.
    d. Vimasco Corporation; WC-1/WC-5.
2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
3. Service Temperature Range: Minus 20 to plus 200 deg F.
4. Solids Content: 63 percent by volume and 73 percent by weight.
5. Color: White.

2.7 LAGGING ADHESIVES

A. Description: Comply with MIL-A-3316C Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.

1. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”
2. Products:

    a. Foster Products Corporation, H. B. Fuller Company; 81-42W.
    b. Eagle Bridges - Marathon Industries, Inc.; 130.
    c. Vimasco Corporation; 713/714.
3. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct, equipment, and pipe insulation.
4. Service Temperature Range: Minus 50 to plus 180 deg F.

5. Color: White.

2.8 SEALANTS

A. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

B. Joint Sealants:

1. Joint Sealants for Cellular-Glass and Polyisocyanurate Products:

a. Foster Products Corporation, H. B. Fuller Company; 30-45.
b. Eagle Bridges - Marathon Industries, Inc.; 405.
c. Mon-Eco Industries, Inc.; 44-05.
d. Pittsburgh Corning Corporation; PITTSEAL® 444Ns Sealant.
e. Pittsburgh Corning Corporation: PITTSEAL® CW Sealant.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Permanently flexible, elastomeric sealant.
4. Service Temperature Range: Minus 100 to plus 300 deg F.
5. Color: White or gray.

C. FSK and Metal Jacket Flashing Sealants:

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; 95-44.
b. Eagle Bridges - Marathon Industries, Inc.; 405.
c. Mon-Eco Industries, Inc.; 44-05.

2. Materials shall be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.
5. Color: Aluminum.

D. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:

1. Materials shall be compatible with insulation materials, jackets, and substrates.
2. Fire- and water-resistant, flexible, elastomeric sealant.
3. Service Temperature Range: Minus 40 to plus 250 deg F.
4. Color: White.

2.9 FACTORY-APPLIED JACKETS

A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:

1. ASJ+ -SSL+; ASK+ jacket with Self-Sealing Advanced Closure system; complying with ASTM C 1136 Type I, II, III, IV and VII secured with self-sealing longitudinal laps and matching ASK+ butt strips.
2. ASJ+: All Service Jacket composed of aluminum foil reinforced with glass scrim bonded to a kraft paper interleaving with a polypropylene outer film layer.

3. ASJ Max: All service jacket made using aluminum foil and tri-directional reinforcing scrim bonded to Kraft paper with polypropylene outer layer complying with ASTM C 1136, Type I.
4. Redi-Klad Jacket: Factory applied Venture Clad 5-ply weather ad abuse resistant with self-sealing lap. Zero permeability per ASTM E 96-05; puncture resistance 35.4 kg (189.3 N) per ASTM D 1000; tear strength 4.3 lb (19.4 N) per ASTM D 624; thickness 14.5 mils (0.0145”); tensile strength 68 lb/inch width [306 N (32 kg)/25 mm].
5. FSK (FRK) Jacket: Aluminum-foil, fiberglass-reinforced scrim with Kraft-paper backing; complying with ASTM C 1136, Type II.
6. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
7. PVDC Jacket for Outdoor Applications: 6-mil- thick, white PVDC biaxially oriented barrier film with a permeance at 0.01 perms when tested according to ASTM E 96 and with a flame-spread index of 5 and a smoke-developed index of 25 when tested according to ASTM E 84.
8. PVDC Jacket for Indoor Applications: 4-mil thick, white PVDC bioxially oritented barrier film with a permeance at 0.02 perms when tested according to ASTM E96 and with a flame-spread index of 5 and a smoke-developed index of 20 when tested according to ASTM E 84.
9. PVDC-SSL Jacket: PVDC jacket with a self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip.

    a. Products:
        1) Dow Chemical Company (The); Saran 540 Vapor Retarder Film and Saran 560 Vapor Retarder Film.
        2) HiCube Coating: HC1000 Vapor Barrier
10. Vinyl Jacket: UL-rated white vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.
11. PSK Jacket, Polypropylene scrim with Kraft.
12. Aluminum-Polyester Self-Adhesive Jacket: 12 mils thick, made with alternating layers of aluminum foil and polyester film coated with cold weather acrylic adhesive. Construction of laminate designed to provide UV resistance, high puncture and tear resistance.

    a. Products:
        1) Armacell LLC; ArmaTuff

2.10 FIELD-APPLIED FABRIC-REINFORCING MESH

A. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

B. Woven Glass-Fiber Fabric for Pipe Insulation: Approximately 2 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch for covering pipe and pipe fittings.

1. Products:

    a. Vimasco Corporation; Elastafab 894.

C. Woven Glass-Fiber Fabric for Duct and Equipment Insulation: Approximately 6 oz./sq. yd. with a thread count of 5 strands by 5 strands/sq. inch for covering equipment.

D. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch, in a Leno weave, for duct, equipment, and pipe.

1. Products:

a. Foster Products Corporation, H. B. Fuller Company; Mast-A-Fab.
b. Vimasco Corporation; Elastafab 894.
c. Pittsburgh Corning Corporation; PC Fabric 79.

2.11 FIELD-APPLIED JACKETS

A. Field-applied jackets shall comply with ASTM C 921, Type I, unless otherwise indicated.

B. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restriction.”

C. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with Kraft-paper backing.

D. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; 30 mil thickness; roll stock Ready for shop or field cutting and forming.

1. Products:

a. Johns Manville; Zeston.
b. P.I.C. Plastics, Inc.; FG Series.
c. Proto PVC Corporation; LoSmoke.
d. Speedline Corporation; SmokeSafe.

2. Adhesive: As recommended by jacket material manufacturer.
3. Color: white
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.

a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps and mechanical joints minimum 30 mil thickness.

5. Factory-fabricated tank heads and tank side panels.
6. Provide preformed Fiberglass 1 lb. density 2” thick insulation inserts to comply with ASHRAE 90.1 and ASTM C547 requirements.

E. Metal Jacket:

1. Products:

a. Childers Products, Division of ITW; Metal Jacketing Systems.
b. PABCO Metals Corporation; Surefit.
c. RPR Products, Inc.; Insul-Mate.

2. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, and Temper H-14.

a. Sheet and roll stock ready for shop or field sizing.
b. Thickness:
1) Up to 24 inch diameter, width, or height: 0.016 inch minimum.
2) 25 inch to 59 inch diameter, width, or height: 0.024 inch minimum.

3) 60 inch and larger diameter, width, or height: 0.032 inch minimum.

c. Finish: Smooth finish.
d. Color: White
e. Moisture Retarder: 3-mil- thick Polysurlyn (co-extrusion of polyethylene and Dupont Surlyn®, heat laminated to the metal jacketing).
f. Factory-Fabricated Fitting Covers:
1) Same material, finish, and thickness as jacket.
2) Preformed 2-piece or gore, 45- and 90-degree, short- and longradius elbows.
3) Tee covers.
4) Flange and union covers.
5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

3. Stainless-Steel Jacket: ASTM A 167 or ASTM A 240/A 240M

a. Sheet and roll stock ready for shop or field sizing.
b. Thickness: 0.016 inch minimum.
c. Finish: 3/16” corrugations with dull finish.
d. Moisture Retarder: 3-mil- thick Polysurlyn (co-extrusion of polyethylene and Dupont Surlyn®, heat laminated to the metal jacketing).
e. Factory-Fabricated Fitting Covers:
1) Same material, finish, and thickness as jacket.
2) Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
3) Tee Covers.
4) Flange and union covers.
5) End caps.
6) Beveled collars.
7) Valve covers.
8) Field fabricate fitting covers only if factory-fabricated fitting covers are not available.

F. Underground Direct-Buried Jacket: 125-mil- thick vapor barrier and waterproofing membrane consisting of a rubberized bituminous resin reinforced with a woven-glass fiber or polyester scrim and laminated aluminum foil.

1. Products:

a. Pittsburgh Corning Corporation; PITTWRAP® HS Jacketing.
b. Polyguard; Insulrap No Torch 125.

G. Self-Adhesive Outdoor Jacket: 60-mil thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross laminated polyethylene film covered with stucco-embossed aluminum-foil facing.

1. Products:

a. Polygaurd; Alumaguard 60.
b. MFM Building Products Corp., Flex Clad 400.
c. Venture Clad Jacketing.
d. HiCube Coating Jacketing

H. Rubber Membrane: 48-mil thick membrane consisting of a glass fiber carrier coated on both sides with liquid PVC-P Plastisol, and laminated to polyester fleece.

I. Pipe Sound Lagging: Loaded vinyl with fibrous glass scrim reinforced aluminum foil facing over 2-inch thick quilted fiberglass decoupler. Loaded vinyl shall be 2 psf minimum surface weight. Glass fiber pipe wrap shall be semi-rigid, preformed type, 2- inch minimum thickness, 1-1/2 pcf density.

1. Manufacturers:

    a. Kinetics.
    b. Sound Seal.
2. Sound Transmission Class (STC) Rating: 26.

J. Duct Sound Lagging: Reinforced, loaded vinyl noise barrier.

1. Products:

    a. Kinetics; KNM-100 AL
    b. Sound seal; B-10R
    c. Unger Technologies, Inc.; Model DL-10-LAG
2. Sound Transmission Class (STC) rating: 26.
3. Density: 1 pound per square foot.

K. Refrigerant Piping Insulation Covering for Outdoor Installations.

1. An insulation protective cover shall be provided and installed to be flexible, U/V and weather resistant. The PVC plastic pipe insulation cover as manufactured by AIREX E FLEXGUARD or comparable acceptable product, and shall feature an integrated, outdoor-rated durability, industrial-grade, full-enclosure fastening system that is double secured by molecular bonding, allowing custom, cut-to-length installations. The cut-to-length installations shall comprise of a non-unraveling PVC cover material that does not compromise long-term-effectiveness or require specialized tools and cutting equipment. The engineered fastening system shall allow the cover to be removable and reusable for maintenance without the use of adhesives as an attachment in any shape or form, including either in the protector's construction, installation, or attachment to pipe insulation, as this will negatively affect insulation permeance performance and promote insulation material degradation which causes added energy usage by equipment. WRAPPING TAPE OR ADHESIVE TAPE SHALL NOT BE PERMITTED AS PER ENERGY CODES. Insulation Protector shall be tested and meet the following testing: ASTM E 96 (Vapor Transmission of Materials), ASTM G 153 (Carbon Arc Light Exposure – Accelerated Weathering), ASTM D 412 (Tensile Strength after UV Exposure and Water Immersion), ASTM 570 (Water Absorption of Plastics), ASTM E 84/UL 723 (Surface Burning Characteristics of Building Materials, ASTM G 21 (Fungal Growth). UV/Protector Pipe Insulation Material shall meet Class II vapor retarder per ASTM E 96 (vapor/moisture permeability test) "1 perm or less". THE USE OF U/V PAINT OR NON-PERMEABLE MATERIALS OR ADHESIVES ARE NOT PERMITTED FOR THIS APPLICATION.

2.12 TAPES

A. Comply with VOC limits specified in Division 01 Section “Volatile Organic Compound (VOC) Content Restrictions.”

B. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136 and UL listed.

1. Products:

   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
   b. Compac Corp.; 104 and 105.
   c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
   d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
   e. HiCube Coating: HC108
2. Width: 3 inches.
3. Thickness: 11.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.

C. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136 and UL listed.

1. Products:

   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
   b. Compac Corp.; 110 and 111.
   c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
   d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
   e. HiCube Coating: HC106
2. Width: 3 inches.
3. Thickness: 6.5 mils.
4. Adhesion: 90 ounces force/inch in width.
5. Elongation: 2 percent.
6. Tensile Strength: 40 lbf/inch in width.
7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

D. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.

1. Products:

   a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0555.
   b. Compac Corp.; 130.
   c. Ideal Tape Co., Inc., an American Biltrite Company; 370 White PVC tape.
   d. Venture Tape; 1506 CW NS.
   e. HiCube Coating: HC404
2. Width: 2 inches.
3. Thickness: 6 mils.
4. Adhesion: 64 ounces force/inch in width.
5. Elongation: 500 percent.

6. Tensile Strength: 18 lbf/inch in width.

E. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive and UL listed.

1. Products:

a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
b. Compac Corp.; 120.
c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
d. Venture Tape; 3520 CW.
e. HiCube Coating: HC100

2. Width: 2 inches.
3. Thickness: 3.7 mils.
4. Adhesion: 100 ounces force/inch in width.
5. Elongation: 5 percent.
6. Tensile Strength: 34 lbf/inch in width.

F. Elastomeric Foam Tape: Black vapor-retarder foam tape with acrylic adhesive containing, EPA approved anti-microbial additive.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Armacell LLC; AP/Armaflex Insulation Tape
b. Approved Equal

2.13 SECUREMENTS

A. Bands:

1. Products:

a. Childers Products; Bands.
b. PABCO Metals Corporation; Bands.
c. RPR Products, Inc.; Bands.

2. Stainless Steel: ASTM A 167 or ASTM A 240/A 240M, Type 316; 0.015 inch thick, 3/4 inch wide with wing or closed seal.
3. Aluminum: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 3/4 inch wide with wing or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.
5. Tape:

a. 3M: Scotch Brand #880

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated.

a. Products:

1) AGM Industries, Inc.; CWP-1.
2) GEMCO; CD.
3) Midwest Fasteners, Inc.; CD.
4) Nelson Stud Welding; TPA, TPC, and TPS.

2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.135-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.

   a. Products:
      1) AGM Industries, Inc.; CWP-1.
      2) GEMCO; Cupped Head Weld Pin.
      3) Midwest Fasteners, Inc.; Cupped Head.
      4) Nelson Stud Welding; CHP.

3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

   a. Products:
      1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
      2) GEMCO; Perforated Base.
      3) Midwest Fasteners, Inc.; Spindle.
   b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
   c. Spindle: Copper- or zinc-coated, low carbon steel, fully annealed, 0.106- inch-diameter shank, length to suit depth of insulation indicated.
   d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:

   a. Products:
      1) GEMCO; Nylon Hangers.
      2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
   b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
   c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
   d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.

5. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inchthick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

   a. Products:
      1) AGM Industries, Inc.; RC-150.
      2) GEMCO; R-150.
      3) Midwest Fasteners, Inc.; WA-150.
      4) Nelson Stud Welding; Speed Clips.

b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.

6. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

   a. Manufacturers:
      1) GEMCO.
      2) Midwest Fasteners, Inc.

7. Insulation Pipe Hanger Supports: Support piping system using high-density inserts with sufficient compressive strength, embedded within flexible elastomeric foam, with thickness equal to or greater than the pipe insulation.

   a. Products: subject to compliance with requirements, available products that may be incorporated into the work include, but not limited to, the following:
      1) Armacell LLC; Armafix IPH
      2) Approved Equal

C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

D. Wire: 0.062-inch soft-annealed, stainless steel.

1. Manufacturers:

   a. ACS Industries, Inc.
   b. C & F Wire.
   c. Childers Products.
   d. PABCO Metals Corporation.
   e. RPR Products, Inc.

2.14 CORNER ANGLES

A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

B. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or 316.

2.15 DUCT SOUND LINING (Refer to Division 23 Section: “HVAC Air Distribution.”)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements:” Coordination and project conditions.

B. Verify piping, equipment and ductwork has been tested before applying insulation materials.

C. Verify surfaces are clean and dry, with foreign material removed.

3.2 PREPARATION

A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that applies to insulation.

C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 COMMON INSTALLATION REQUIREMENTS

A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.

B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.

C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.

D. Install insulation with longitudinal seams at top and bottom of horizontal runs.

E. Install multiple layers of insulation with longitudinal and end seams staggered.

F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.

G. Keep insulation materials dry during application and finishing.

H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.

I. Install insulation with least number of joints practical.

J. Install insulation continuously through hangers and around anchor attachments.

K. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at anchors and other projections with vapor-barrier mastic.

1. Install insulation continuously through hangers and around anchor attachments.
2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.

3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

L. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

M. Install insulation with self-sealing factory-applied jackets as follows:

1. Locate all longitudinal pipe insulation jacketing laps in least visible location.
2. Draw jacket tight and smooth.
3. For proper sealing, seal lap joints with reasonable pressure being applied with a plastic squeegee or sealing tool.
4. Vapor seal all circumferential joints with factory furnished matching pressure sensitive butt strips installed with reasonable pressure being applied with a plastic squeegee or sealing tool.

N. Install insulation with non-self-sealing factory-applied jackets as follows:

1. Draw jacket tight and smooth.
2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive selfsealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.

    a. For below ambient services, apply vapor-barrier mastic over staples.
4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.

O. Cut and install insulation in a manner to avoid compressing insulation more than 25 percent of its original nominal thickness.

P. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.

Q. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

R. Replace insulation on existing piping, and equipment where indicated on the drawings. Match insulation type and thickness indicated by the insulation schedule at the end of this section.

S. Replace insulation on new and existing piping, and equipment where insulation is damaged during construction or removed for testing and balancing work.

T. For above ambient services, do not install insulation to the following:

1. Vibration-control devices.
2. Testing agency labels and stamps.
3. Nameplates and data plates.
4. Manholes.
5. Handholes.
6. Cleanouts.
7. Unions.
8. Heating water strainers (1-inch and less).
9. Flanges.
10. Expansion joints.
11. Heating water valves (1-inch and less).

U. Duct and plenum liner application: Refer to Division 23 Section: “HVAC Air Distribution.”

V. For hot equipment containing fluids over 140 degrees F, insulate flanges and unions with removable sections and jackets.

W. Heat Traced Piping: Insulate fittings, joints, and valves with insulation of like material, thickness, and finish as adjoining pipe. Size insulation large enough to enclose pipe and heat trace. Cover with aluminum jacket with seams located at 3 or 9 o’clock position on side of horizontal piping with overlap facing down to shed water.

X. Equipment Requiring Access for Maintenance, Repair, or Cleaning: Install insulation for easy removal and replacement without damage.

Y. Exterior Applications: Provide vapor retarder jacket. Insulate fittings, joints, and valves with insulation of like material and thickness as adjoining pipe, and finish with glass mesh reinforced vapor retarder cement. Cover with aluminum jacket with seams located at 3 or 9 o’clock position on side of horizontal piping with overlap facing down to shed water or on bottom side of horizontal equipment.

Z. Insulate chilled water valves and strainers with closed cell insulation.

3.4 BUILDING PENETRATIONS

A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
4. Seal jacket to roof flashing with flashing sealant.

B. Insulation Installation at Below-Grade Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.

1. Seal penetrations with flashing sealant.
2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
4. Seal jacket to wall flashing with flashing sealant.

D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.

F. Insulation Installation at Floor Penetrations:

1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
2. Pipe: Install insulation continuously through floor penetrations.

3.5 DUCT AND PLENUM INSULATION INSTALLATION

A. Blanket Insulation Installation on Ducts and Plenums: Secure with insulation pins.

1. Install either capacitor discharge weld pins and speed washers or cupped head, capacitor discharge weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

   a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches oc.
   b. On duct sides with dimensions larger than 18 inches, place pins 16 inches oc. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
   c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
   d. Do not over compress insulation during installation; maximum 25 percent compression.
   e. Impale insulation over pins and attach speed washers.
   f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
   g. Pressure sensitive foil tapes shall be a minimum 3” wide and shall be applied with moving pressure using a squeegee or other appropriate sealing tool.
2. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with ½ inch outward clinching staples, 1 inch

oc. Install vapor barrier consisting of vapor barrier acrylic based tape; matching the facing, or factory or field-applied jacket, adhesive, vapor barrier mastic, and sealant at joints, seams, and protrusions. Follow NAIMA's "Guide to insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation" for additional details when installing Pipe and Tank Insulation.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor barrier seal.
b. Install vapor stops for ductwork and plenums operating below 50 deg. F at 18 foot intervals. Vapor stops shall consist of vapor barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
c. Where vapor retarder performance is required, all penetrations and damage to the facing shall be repaired using pressure sensitive foil tape or mastic prior to system startup.
d. Pressure sensitive foil tapes shall be a minimum 3” wide and shall be applied with moving pressure using a squeegee or other appropriate sealing tool.

3. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches oc.
4. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat oval duct elbows with individually mitered gores cut to fit the elbow.
5. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6 inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches oc.

B. Board Insulation Installation on Ducts and Plenums: Secure with insulation pins.

1. Install either capacitor discharge weld pins and speed washers or cupped head, capacitor discharge weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

a. Apply insulation with joints butted as close as possible to the duct surface.
b. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches oc.
c. On duct sides with dimensions larger than 18 inches, space pins 16 inches oc. Each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
d. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
e. Do not over compress insulation during installation.
f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
g. All joints shall be sealed using minimum 3 inch wide pressure sensitive, acrylic based tape; matching the facing. Tape shall be firmly rubbed; using a plastic squeegee or sealing tool to assure complete bond.

2. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Install vapor barrier consisting of vapor barrier acrylic based tape; matching the facing, or factory or field applied jacket, adhesive, vapor barrier mastic, and sealant at joints, seams, and protrusions.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor barrier seal.
b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18 foot intervals. Vapor stops shall consist of vapor barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
c. All joints shall be sealed using minimum 3 inch wide pressure sensitive, acrylic based vapor barrier tape; matching the facing. Tape shall be firmly rubbed; using a plastic squeegee or sealing tool to assure complete bond.

3. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat oval duct elbows with individually mitered gores cut to fit the elbow.
4. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6 inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches oc.

(The use of adhesive to secure insulation to ductwork is not advised. It MAY affect the FHC of the insulation. It also adversely affects the installation; particularly of Duct Wrap because the insulation is more difficult to position on the ductwork; especially in tight spaces.)

3.6 MECHANICAL PIPE EQUIPMENT, TANK, AND VESSEL INSULATION INSTALLATION

A. Rigid and Semi-Rigid Insulation: Secure insulation with anchor pins and speed washers. Insulation for tanks and vessels should only be applied using weld pins or self-adhesive pins (depending on the circumstances) and speed washers. Adhesive should not be used to secure insulation to the tanks or vessels, unless flexible elastomeric insulation is utilized.

1. Groove and score insulation materials to fit as closely as possible to equipment, including contours. Bevel insulation edges for cylindrical surfaces for tight joints. Stagger end joints.
2. Protect exposed corners with secured corner angles.
3. Install adhesively attached or self-sticking insulation hangers and speed washers on sides of tanks and vessels as follows:

a. Do not weld anchor pins to ASME-labeled pressure vessels.
b. Select insulation hangers and adhesive that are compatible with service temperature and with substrate.
c. On tanks and vessels, maximum anchor-pin spacing is 3 inches from insulation end joints, and 16 inches o.c. in both directions.
d. Do not overcompress insulation during installation.
e. Cut and miter insulation segments to fit curved sides and domed heads of tanks and vessels.
f. Impale insulation over anchor pins and attach speed washers.
g. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. Secure each layer of insulation with stainless-steel or aluminum bands. Select band material compatible with insulation materials.

5. Where insulation hangers on equipment and vessels are not permitted or practical and where insulation support rings are not provided, install a girdle network for securing insulation. Stretch prestressed aircraft cable around the diameter of vessel and make taut with clamps, turnbuckles, or breather springs. Place one ircumferential girdle around equipment approximately 6 inches from each end. Install wire or cable between two circumferential girdles 12 inches o.c. Install a wire ring around each end and around outer periphery of center openings, and stretch prestressed aircraft cable radially from the wire ring to nearest circumferential girdle. Install additional circumferential girdles along the body of equipment or tank at a minimum spacing of 48 inches o.c. Use this network for securing insulation with tie wire or bands.
6. Stagger joints between insulation layers at least 3 inches.
7. Install insulation in removable segments on equipment access doors, manholes, handholes, and other elements that require frequent removal for service and inspection.
8. Bevel and seal insulation ends around manholes, handholes, ASME stamps, and nameplates.
9. For equipment with surface temperatures below ambient, apply mastic to open ends, joints, seams, breaks, and punctures in insulation.

B. PIPE & TANK INSULATION AND KWIKFLEX

1. Apply on clean, dry surfaces.
2. Cut to appropriate length using manufacturers' stretch out guide for the specific pipe size. Add an additional 2 inches to 4 inches for a staple flap.
3. Install insulation around the equipment and pipe circumference in a manner that ensures a firm fiber mesh at all joints. Fasten the longitudinal with outward clinching staples placed 3 inches on center. As an alternative, individual sections may be fastened in place using continuous and overlapping strands of ¾" wide glass fiber filament tape around the insulation jacketing O.D. Longitudinal and circumferential joints shall be sealed with 4" wide matching pressure sensitive tape squeegeed along the entire length.
4. For equipment and pipe exposed to the elements, jacketing shall be 0.016 inches thick aluminum with factory applied moisture barrier or 0.010 inches thick stainless steel with a factory applied moisture barrier or laminated self-adhesive water and weather seals. Fitting covers shall be of similar materials. The insulation and jacketing shall be held firmly in place with a friction type Z lock or a minimum 2″ overlap joint. For systems operating below ambient, all joints shall be sealed completely along the longitudinal and circumferential seams and installed so as to shed water. All circumferential joints shall be sealed by use of preformed butt strips; minimum 2″ wide or a minimum 2″ overlap. Butt strips shall overlap the adjacent jacketing a minimum ½ inch and be completely weather sealed. For systems operating above ambient, circumferential joints should overlap a minimum of 2″ and not be sealed. Insulation thickness for duct covered by Jacketing shall be such that the surface temperature of the does not exceed 125°F.
5. On below ambient straight duct, vapor retarder mastic shall be applied to raw glass fiber ends at 12 foot to 21 foot intervals and on either side of fittings, flanges or valves before taping. Mastic shall extend a minimum of 2 inches onto the bore of the pipe and 2 inches onto the jacketing.

C. Flexible Elastomeric Thermal Insulation Installation for Tanks and Vessels: Install insulation over entire surface of tanks and vessels.

1. Apply 100 percent coverage of adhesive to surface with manufacturer's recommended adhesive.
2. Seal longitudinal seams and end joints.

D. Insulation Installation on Pumps:

1. Fabricate removable, re-useable metal boxes lined with insulation. Fit boxes around pumps and coincide box joints with splits in pump casings. Covers for split case pumps shall be constructed with insulated housing in two sections with upper section removable for access to casing. Fabricate joints with outward bolted flanges. Bolt flanges on 6-inch centers, starting at corners. Install 3/8- inch- diameter fasteners with wing nuts. Alternatively, secure the box sections together using a latching mechanism.
2. Fabricate boxes from aluminum or stainless steel, at least 0.050 inch thick.
3. For below ambient services (chilled water, chilled glycol, ground source heat pump, etc.), install a vapor barrier at seams, joints, and penetrations. Seal between flanges with replaceable gasket material to form a vapor barrier.

3.7 GENERAL PIPE INSULATION INSTALLATION

A. Requirements in this Article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.

B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:

1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
2. Fittings shall be insulated to same thickness as the adjoining insulation. Apply fittings per fitting manufacturer's instructions. When required by specification, a hard insert of sufficient length shall be utilized to avoid compression of the insulation.
3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe wire. Bond pieces with adhesive.
4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.
6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and

unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.

9. Stencil or label the outside insulation jacket of each union with the word UNION." Match size and color of pipe labels.

C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.

D. Install removable insulation covers at locations indicated. Installation shall conform to the following:

1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.8 GLASS MINERAL WOOL INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes.

1. Secure pipe insulation to pipe using self-sealing lap system.
2. On high temperature piping, above 500° F apply insulation using double layer and staggered joints. For double layer installation, secure the unjacketed inner layer using filament tape; without deforming insulation material. All joints and ends must be firmly butted and secured with appropriate securing material.
3. Firmly rub all longitudinal and circumferential joints using a squeegee or sealing tool.
4. Longitudinal jacket laps for pipe insulation installed on piping systems with operating temperatures below ambient shall be vapor sealed with factory-applied pressure-sensitive adhesive vapor retarder, self-sealing lap. For proper sealing, firmly rub lap joints with reasonable pressure being applied with a plastic squeegee or sealing tool. Vapor seal all circumferential joints with factory-furnished, matching pressure-sensitive butt strips installed with reasonable pressure being applied with a plastic squeegee or sealing tool. Additionally, coat raw edges of pipe insulation sections with vapor retarder mastic at 12 foot
to 21 foot intervals and on either side of all fittings, flanges, or valves. Vapor retarder mastic shall completely coat the ends of the pipe and extend onto the bore of the pipe insulation and onto the jacketing a minimum of 2 inches. Follow NAIMA's "Guide to

Insulating Chilled Water Piping Systems with Mineral Fiber Pipe Insulation" for additional details.

5. Install metal shields between hangers or supports and the pipe insulation. Install rigid insulation inserts as required between the pipe and the insulation shields. Inserts shall be of equal thickness to the adjacent insulation, and shall be vapor sealed as required. Insulation shields shall be no less than the following lengths:

    a. 1-1/2 inch to 2-1/2 inch IPS: 10 inch long.
    b. 3 inch to 6 inch IPS: 12 inch long.
    c. 8 inch to 10 inch IPS: 16 inch long.
    d. 12 inch and over IPS: 22 inch.
6. For piping subject to abuse in mechanical rooms or high traffic areas, protect insulation from mechanical abuse by the use of appropriate thickness of PVC jacketing, metal jacketing, or laminated self-adhesive water and weather seal.
7. For piping exposed to the elements, install Redi-Klad Pipe Insulation with 4 inch butt strips and self-sealing lap, a jacket that shall be a minimum 0.016 inch thick aluminum jacket with factory-applied moisture barrier, or a minimum 0.010 inch thick stainless steel jacket with factory-applied moisture barrier. Fittings shall be of similar materials. Apply all jacketing per manufacturer's recommendations for the conditions.
8. For piping operating below ambient temperature or in high abuse areas, install Redi-Klad Pipe Insulation with 4 inch butt strips and self-sealing lap. Follow the same guide lines when using Redi-Klad as indicated for ASJ+-SSL+ above.

B. Insulation Installation for Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with Glass Mineral Wool blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed formaldehyde free Glass Mineral Wool fittings; minimum 50 percent recycled glass content, of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed formaldehyde free fittings; minimum 50 percent recycled glass content, of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.9 CELLULAR-GLASS INSULATION INSTALLATION

A. A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with tape or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellularglass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer’s recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer’s written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with tape or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.10 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

A. Seal longitudinal seams and end joints with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

B. Insulation Installation on Pipe Flanges:

1. Install pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of sheet insulation of same thickness as pipe insulation.
4. Secure insulation to flanges and seal seams with manufacturer’s recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install mitered sections of pipe insulation.
2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed valve covers manufactured of same material as pipe insulation when available.
2. When preformed valve covers are not available, install cut sections of pipe and sheet insulation to valve body. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.
4. Secure insulation to valves and specialties and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

E. Insulation Installation on Ductwork:

1. Cut to bottom piece first, making it the same width as the duct. Then cut the two side pieces, so that they extend down over the edges of the bottom insulation; keep top edges flush with the top of the duct. The top insulation should be sized so that it extends over the side insulations.
2. Cut elastomeric insulation pieces cleanly using a sharp knife and a straightedge.
3. Apply manufacturers recommended adhesive. First brush- or roller-coat adhesive on the metal duct surface. Then coat the back side of the insulation sheet, leaving a 1/2"-wide uncoated border at butt-edge seams. Allow the adhesive to dry to the touch but still tacky under slight pressure before joining surfaces.
4. Position the sheet so that it overlaps the edges of previously installed sheet or sheets by 1/8". Hold the sheet in this position, and spot-adhere it in the center. Compress the butt edges into place for a tight joint with adjoining sheets. Then bond the remainder of the sheet by pressing it firmly into place. Use a small hand roller to apply pressure.
5. Spread the joint, and with a small brush, apply adhesive to both butt edges. Do not flood joint with adhesive. Align carefully for good appearance, and apply pressure to joint.
6. Insulate standing seams with strips of elastomeric insulation sheet.
7. Refer to Part 3 Section "Field-Applied Jacket Installation" for jacket installation requirements.

3.11 ROCK MINERAL WOOL INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials, unless ASJ SSL jacketing is being used.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch, and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

E. Blanket Insulation Installation on Ducts and Plenums: Secure with insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

    a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    d. Do not overcompress insulation during installation.
    e. Impale insulation over pins and attach speed washers.
    f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure

laps to adjacent insulation section with 1/2- inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
b. (10 deg C) at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated width equal to 2 times the insulation thickness but not less than 3 inches.

5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

F. Board Insulation Installation on Ducts and Plenums: Secure with insulation pins.

1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:

a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
d. Do not overcompress insulation during installation.
e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.

4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2- inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover

insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.

5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.12 POLYURETHANE BOARD INSULATION INSTALLATION

A. A. Insulation Installation on Outdoor Ductwork.

1. Ensure the substrate is solvent resistant, dry and free from oil and grease. Use manufacturer's recommended cleaning solution.
2. Adhere the polyurethane insulation boards to the ductwork using the manufacturer's recommended adhesive. Cut insulation board for bottom of duct so that it is the same width as the exterior duct width. Cut insulation for sides of the duct such that it starts flush with the top of the duct and overlaps the insulation on the bottom of the duct. Cut the insulation for the top of the duct such that it overlaps the insulation on each side of the duct. Provide multiple layers of insulation board as required to ensure that the specified insulation thickness is maintained over all flanges. Install insulation boards such that joints are staggered.
3. Apply aluminum tape at all joints.

3.13 FIELD-APPLIED JACKET INSTALLATION

A. Where glass-cloth jackets are indicated, install directly over bare insulation or insulation with factory-applied jackets.

1. Draw jacket smooth and tight to surface with 2-inch overlap at seams and joints.
2. Embed glass cloth between two 0.062-inch- thick coats of lagging adhesive.
3. Completely encapsulate insulation with coating, leaving no exposed insulation.

B. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

C. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.

2. For exterior refrigerant piping utilize PVC plastic pipe insulation cover, cut-to-length full enclosure fastening system. NO ADHESIVE TAPE OR WRAPPING TAPE SHALL BE PERMITTED PER ENERGY CODE.

D. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

1. Where rubber membrane jackets are indicated, install the membrane using the manufacturer's recommended adhesive. Before use thoroughly stir the adhesive. Replace the container lid when work is interrupted. If required thin the adhesive as recommended by the manufacturer.
2. Using a sheepskin or similar roller apply a primer coat of adhesive to the roof surface, priming only the area of roof where the membrane will be laid the same day. Allow adhesive to dry.
3. Unroll the membrane and fold back approximately half its length.
4. Apply adhesive with a sheepskin or similar roller to the underside of the membrane ensuring the weld area is kept free of adhesive and allow to touch dry.
5. Carefully roll out the membrane over the previously primed surface and roll with water filled roller.
6. Fold back other half of the roll of membrane and repeat the procedure.
7. Unroll the next roll of membrane, ensuring the end laps are staggered and the side overlaps the previously installed sheet by 2 inches.
8. Repeat the adhering process.
9. Fully hot air weld the 2-inch side lap, allow to cool completely.
10. Mechanically check the integrity of the cooled weld by running a 3/16-inch wide screwdriver (with rounded edges) along the seam applying pressure into the seam.
11. Install Peel Stop and PVC Welding Cord at all perimeters, penetrations and changes of roof direction.

E. Pipe Sound Lagging:

1. Seal and fasten in accordance with manufacturer's written instructions to maintain specified STC rating.
2. Cover entire pipe with glass fiber wrap. Fill all voids with clean glass fiber scrap. Apply over this wrap an airtight cover of loaded vinyl. Do not connect the cover rigidly to pipe or hangers. Overlap longitudinal seams in loaded vinyl 2-inch minimum and tape with cloth-backed tape. Overlap edge seams 1-inch minimum and tape with cloth-backed tape or with acoustical sealant. Extend ends of cover within 1/2-inch of penetration through wall, ceiling, and/or floor. Seal annular gap between pipe lagging and penetration airtight with acoustic sealant.
3. Duct lagging shall be independently supported gypsum board with batt insulation.

3.14 FINISHES

A. Finish Duct, Equipment, and Pipe Insulation with ASJ, Glass Cloth, or Other Paintable Jacket Material. Clad-Type Jacketing such as Venture RediKlad or Venture Clad may be utilized.

B. Flexible Elastomeric Thermal Insulation: after adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

C. Color: Final color as selected by Architect. Vary first and second coats to allow visual inspection of the completed work.

D. Do not field paint aluminum or stainless-steel jackets.

3.15 INSULATION APPLICATION SCHEDULE

A. Acceptable insulation materials, thickness and vapor retarder requirements are identified for each application and size range. If more than one material is listed for an application and size range, selection from the materials listed is Contractor's option.

B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:

1. Fire-suppression piping.
2. Drainage piping located in crawl spaces.
3. Below-grade piping.
4. Chrome-plated pipes and fittings unless there is a potential for personnel injury.
5. Exhaust ductwork
6. Factory-insulated flexible ducts.
7. Factory-insulated plenums and casings.
8. Flexible connectors.
9. Vibration-control devices.
10. Factory-insulated access panels and doors.

C. All supply and outside air ductwork with internal sound lining shall be externally insulated.

D. Where metal ducts are specified to have internal duct liner, the thickness of the external insulation may be reduced by one inch, except minimum duct external insulation thickness shall be 1 inch.

3.16 HVAC PIPING INSULATION APPLICATION SCHEDULE:

1. Unconditioned spaced include locations where summer temperature and humidity conditions are similar to outdoor conditions (such as mechanical rooms ventilated with unconditioned outdoor air, parking garages, pedestrian tunnels, etc.). Pipes in these spaces to be insulated similar to outdoor requirements.
2. Where rigid pipe insulation (cellular glass, etc.) is scheduled, provide mineral fiber through and 6 inches beyond pipe sleeves, to allow for pipe expansion.

Miscellaneous (all supply and return)	Type of Insulation Material	Vapor Retarder Required	Pipe Size	Insulation Thickness Required
Air conditioning condensate drain, equipment drain, and non-steam humidifier drain	Flexible Elastomeric	No	<1”	0.5”
			1” to <8”	1”
			≥8”	1.5”
Refrigerant pipe	Flexible Elastomeric	No	All	1”

Above floor: floor drains, traps, and drain piping receiving condensate and equipment drain water. Hot and cold service	Glass Mineral Wool	Yes	All	1.5”

3.17 HVAC DUCTWORK INSULATION APPLICATION SCHEDULE

1. Unconditioned spaced include locations where summer temperature and humidity conditions are similar to outdoor conditions (such as mechanical rooms ventilated with unconditioned outdoor air, parking garages, pedestrian tunnels, etc.)
2. Top of ductwork located outdoors shall be provided with polyurethane board insulation of equal thickness to sides and bottoms. Taper insulation to shed water, minimum ¼” per foot slope, with insulation thickness at low edges equal to scheduled insulation thickness.
3. All diffuser cones, air valves, damper boxes, HVAC equipment, coils, coil headers, casings, plenums, air measuring devices, chilled beams, etc. shall be insulated.

Supply air ductwork, plenums, and accessories including DOAS	Type of Insulation Material	Vapor Retarder Required	Insulation Thickness Required
Concealed (Indoor)	Glass Mineral Wool Blanket	Yes	1.5”
Exposed (Indoor)	Glass Mineral Wool Board	Yes	1.5”
Attic and unconditioned spaces (Indoor)	Glass Mineral Wool Board	Yes	2”
Heating only (Indoor)	None	No	
(Outdoor)	Glass Mineral Wool Board or Polyurethane Foam Board (Note 2)	Yes	2”

Return and transfer air ductwork, plenums, and accessories including DOAS	Type of Insulation Material	Vapor Retarder Required	Insulation Thickness Required
In locations other than attics and unconditioned spaces (Indoor)	None	No	
Attic and unconditioned spaces (Indoor)	Glass Mineral Wool Board	Yes	2”
Between relief air damper and outdoors, louver, louver penthouse, etc.	Glass Mineral Wool Board	Yes	2”

(Outdoor)	Glass Mineral Wool Board or Polyurethane Foam Board (Note 2)	Yes	1.5”

Outdoor air ductwork, plenums, and accessories	Type of Insulation Material	Vapor Retarder Required	Insulation Thickness Required
Concealed (Indoor)	Glass Mineral Wool Blanket	Yes	1.5”
Exposed (Indoor)	Glass Mineral Wool Board	Yes	2”
Attic and unconditioned spaces (Indoor)	Glass Mineral Wool Board	Yes	2”

Kitchen hood exhaust air ductwork and accessories	Type of Insulation Material	Vapor Retarder Required	Insulation Thickness Required
Concealed (Indoor)	Fire Rated Blanket	No	As required for fire rating
Exposed (Indoor)	Fire Rated Board	No	As required for fire rating
Attic and unconditioned spaces (Indoor)	Fire Rated Board	No	As required for fire rating

3.18 FIELD APPLIED JACKET APPLICATION SCHEDULE

SERVICE	FIELD APPLIED JACKET TYPE
Indoor, exposed insulated piping within 12 feet of floor, for service temperatures 200 degrees F and below	PVC
Indoor, exposed insulated piping within 12 feet of floor, for service temperatures 200 degrees F and above	Aluminum
Indoor, exposed insulated piping greater than 12 feet above floor, generally	None
Indoor, cold service piping (cold water make-up, chilled water, dual service, etc) greater than 12 feet above the floor, within spaces subject to outdoor temperature and humidity conditions (such as mechanical and electrical rooms ventilated with unconditioned outdoor air, parking garages, pedestrian tunnels, etc)	PVC
Indoor concealed piping	None
Outdoor exposed piping	Aluminum
Indoor, All Locations, Fittings and valves in piping systems at service temperatures 200 degrees F and below	Factory Fabricated PVC covers
Indoor, All Locations, Fittings and valves in piping systems at service temperatures 200 degrees F and above	Aluminum
Indoor, exposed insulated ductwork within 12 feet of floor	Woven Glass Fiber Fabric
Indoor, exposed insulated ductwork greater than 12 feet of floor	None
Indoor, concealed insulated ductwork	None
Indoor, exposed insulated ductwork	Aluminum or Self-Adhesive Outdoor Jacket
Outdoor, exposed insulated ductwork	Aluminum or Self-Adhesive Outdoor Jacket
Outdoor, underground insulated piping	Underground Direct Buried Jacket
Outdoor exposed insulated ductwork, Alternative jacket material	Self Adhesive Outdoor Jacket
Ductwork in high noise areas (as indicated on the drawings)	Duct Sound Lagging (Refer to Note 3)
All insulated piping within custom AHU service corridors for service temperatures 200 degrees F and below	PVC
All insulated piping within custom AHU service corridors for service temperatures 200 degrees F and below	Aluminum or Earthwool Redi-Klad

Piping in sound sensitive areas (as indicated on the drawings)	Pipe Sound Lagging (Refer to Note 3)
Equipment, generally (Refer to Notes 1 & 2)	Woven Glass Fiber Fabric
Equipment, Cold surface (Refer to Notes 1 & 2)	PVC

Jacket Application Schedule Notes:

1. Refer to Part 3 specification section titled “Mechanical Equipment, Tank, and Vessel Insulation Installation” for requirements for revocable, re-usable metal boxes lined with insulation at pumps.
2. Including factory insulated equipment without factory applied jacket.
3. If ductwork or piping indicated to have sound lagging also requires an additional field jacket, install sound lagging between insulation and additional field jacket.

END OF SECTION

SECTION 23 08 00 - COMMISSIONING OF HVAC SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes requirements for commissioning HVAC systems, assemblies, equipment, and components.

1. Commissioning is a third-party quality assurance process. It does not take the place of or duplicate the Contractor’s quality control services required per Division 01 Section "Quality Requirements" or testing, adjusting, and balancing and other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.

B. The following HVAC systems, equipment and components are to be commissioned on this Project:

HVAC	CxP Submittal Review	Construction Checklist	Functional Test Sampling
23 05 93 Testing Adjusting Balancing for HVAC	Yes		
23 09 00 Instrumentation & Control for HVAC	Yes		100%
23 34 00 HVAC Fans	Yes	Yes	100%
23 52 01 Variable Frequency Drives	Yes		100%
23 81 06 Packaged Rooftop ACs	Yes	Yes	100%
23 81 26 Split System AC Units	Yes	Yes	100%
23 81 29 VRF Split System ACs	Yes	Yes	20%
23 82 00 Terminal Heating and Cooling Units	Yes	Yes	20%

C. Related Sections:

1. Division 01 Section "General Commissioning Requirements" for definitions of terms used in this Section, and for commissioning requirements applicable to all systems, including HVAC.

1.2 DEFINITIONS

A. Refer to Section 019113 “General Commissioning Requirements” for commissioning related definitions.

1.3 ABBREVIATIONS

A. Refer to Section 019113 “General Commissioning Requirements” for commissioning related abbreviations.

1.4 COMMISSIONING TEAM (CxT)

A. Refer to Section 019113 “General Commissioning Requirements” for details on the commissioning team.

1.5 ACTION SUBMITTALS

A. Comply with requirements in Division 01 and 23 for submittal procedure general requirements for commissioning process.

B. Comply with requirements in Section 019113 “General Commissioning Requirements” for submittal requirements.

C. BAS Graphics: Graphics shall be submitted 60 days after approval of the control submittal showing the following:

1. Home Screen

2. Floor Plans

3. Schematics for each central plant.

4. Schematics for each air handling equipment.

5. Schematic for one terminal unit (VRF, etc.)

6. Place holder boxes for values that will be mapped from sensors and control devices.

7. Place holder boxes for setpoints and modes of operation.

Graphics do not need to include any mapped values. The intent is to review the layouts and make sure the equipment schematics match the actual furnished equipment and installed systems.

D. BAS Contractor’s Staff Qualification Data: Staff performing the BAS Contractor’s commissioning activities shall demonstrate their capabilities and experience as specified in “Quality Assurance”.

1.6 CLOSEOUT SUBMITTALS

E. Comply with requirements in section 019113 “General Commissioning Requirements” for submittal requirements including Certificate of Construction-Phase Commissioning Process Completion and the Certificate of Commissioning Process Completion.

F. Contractor shall submit at substantial completion in PDF format the following documents for inclusion in the Systems Manual:

1. All Pre-Startup Test reports
2. All Startup Documentation (factory & on-site startups)
3. All Sensors and Actuators:

    a. Calibration reports for BAS & Equipment furnished sensors and actuators
    b. Calibration schedule based on sensor manufacturer's recommendations and requirements

4. BAS Point-to-Point Checkout
5. Final TAB Report
6. As-built Control Drawings & Sequences
7. List of all commissioned equipment with the following setpoints where applicable:

    a. Schedules
    b. Temperature setpoints
    c. Humidity setpoints
    d. Static pressure setpoints
    e. Differential pressure setpoints
    f. Temperature reset schedules
    g. Static pressure reset schedules
    h. Economizer temperature/humidity/enthalpy parameters
    i. Minimum outdoor airflow setpoints
    j. Space static pressure setpoints
    k. Duct static pressure setpoints
    l. Water differential pressure setpoints
    m. DOAS and Pump motor minimum & maximum speeds (Hz)

8. All Training & Demonstration Sign-in Sheets

1.7 QUALITY ASSURANCE

A. BAS Commissioning Staff. Staff that are part of the BAS Contractor team shall have the following qualifications:

1. The primary BAS staff assisting the Commissioning Team with the Functional Performance Tests (including Seasonal), shall have at a minimum the following experience on this project:

    a. Performed the majority of the programming for the central plant equipment.
    b. Has full administration capability on the BAS system.
    c. Capable of interrogating the programming.
    d. Capable of troubleshooting programming and sequences.
    e. Has functional knowledge of the installed HVAC systems and their sequences.
    f. Directed and performed the Pre-Functional Performance Tests.

2. Secondary BAS staff assisting the Commissioning Team with the Functional Performance Tests (including Seasonal), shall have at a minimum the following experience:

    a. Fully conversant with terminal equipment controllers and their programming.
    b. Capable of performing calibration of sensors.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. General: Provide test equipment, instrumentation, and tools necessary to perform function performance testing. Use test equipment and instrumentation that has been calibrated, certified, and properly maintained.

1. Test equipment and instrumentation required to perform the commissioning shall remain the property of Contractor unless otherwise indicated.

2. Proprietary test equipment, instrumentation, and tools shall become the property of Architect at Substantial Completion.

a. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of equipment warranty, or as otherwise required to service, repair, adjust, calibrate or perform work on its equipment.

2.2 WEB-BASED COMMISSIONING PORTAL

A. All Contractors participating in the Cx process shall use the web-based Cx Portal ('Portal') to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxP and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process. The respective Contractors are required to complete the Construction Checklists electronically on the portal. Submittal of scanned copies of the completed documentation will not be accepted.

B. PDFs of all commissioning documents will be provided to all parties and will be distributed via e-mail. Access to the web-based commissioning software will not be required to view any of the documentation developed by the CxP.

C. The CxP will, at the direction of the Owner, upload all commissioning documentation to the Owner's FPT site.

PART 2 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS (DEVELOPED BY CxP)

A. Construction Checks are provided for each system being commissioned within the discipline specific Commissioning specifications. These Construction Checklists are based on the Contract Documents. The checklists will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.2 FUNCTIONAL PERFORMANCE TEST (FPT) FORMS (DEVELOPED BY CxP):

A. FPT forms are provided for each system being commissioned within the discipline specific Commissioning specifications. These forms are based on the Contract Documents. The FPT forms will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.3 MEETINGS

A. Commissioning Provider will schedule and conduct commissioning meetings. Commissioning Meetings shall be attended by the following:

1. Contractor
2. Mechanical Contractor
3. Controls Contractor
4. Electrical Contractor
5. TAB Contractor
6. CxP and assigned staff
7. Owner
8. A/E Team
9. Installers, suppliers, and specialists that the Contractor identifies appropriate for a particular portion of the commissioning process.

B. Meetings shall occur on a biweekly basis during active construction of any system required to be commissioned. During functional performance testing, commissioning meetings shall occur on a weekly basis.

C. The CxP will schedule special commissioning meetings as follows. Relevant staff from the contractor and subcontractor shall attend. The A/E will also be requested to attend when determined by the CxP.

1. BAS Submittal Meeting: Meeting shall be held to review the contract document requirements and the Owner’s requirements for the BAS submittal.
2. Startup Scheduling Meetings: Meeting shall be held for each major system, assembly, and piece of equipment being commissioned. Additional Startup Scheduling Meetings will be held prior to Startups repeated due to failure.
3. Functional Performance Test Scheduling Meetings: Meeting shall be held prior to FPTs.
4. TAB and Controls Coordination Meeting: Meeting shall be held prior to the start of TAB work to coordinate balancing with the HVAC controls contractor.

3.4 COMMISSIONING PROVIDER RESPONSIBILITIES

A. Construction Phase

1. Commissioning Plan: The Commissioning Plan is issued by the CxP to the team following construction Notice to Proceed. The Commissioning Plan is updated by the CxP throughout construction to reflect schedule updates.
2. Commissioning Kickoff Meeting: The CxP shall schedule the Commissioning Kickoff meeting following construction Notice to Proceed. An agenda and meeting minutes shall be issued by the CxP.
3. Construction Checklists: Final Construction Checklists updated and issued by CxP after approval of submittals. CxP monitors contractor progress completing Construction Checklists and provides final acceptance of completed Construction Checklists.

4. Construction Submittals: Submittals reviewed by CxP concurrently with the A/E.
5. Functional Performance Test (FPT) Procedure Forms: Final FTP procedure forms updated and issued by CxP after submittal approval.
6. Inspections, Pre-Startup Tests, and Startups: Site visits performed by CxP to verify installation, pre-startup tests, and startups.
7. Testing, Adjusting, and Balancing (TAB) Report and Field Acceptance Testing: CxP witnesses TAB contractor performing balancing in accordance with 230593 “Testing, Adjusting and Balancing”. Preliminary and Final TAB reports are reviewed by the CxP. TAB verification witnessed by the CxP.
8. Pre-Test and Startup Reports: CxP reviews pre-test and startup reports for all commissioned systems.
9. Pre-Functional Performance Testing: Pre-Functional Performance Testing performed by the Contractor using CxP prepared FPT forms is witnessed by the CxP.
10. Trend Logs: CxP reviews all Trend Log data submissions.
11. Certificates of Readiness. CxP issues Certificates of Readiness to contractors. CxP issues Certificates of Readiness to contractors to complete.
12. Functional Performance Testing: CxP, with assistance of relevant Contractors, witnesses and directs functional performance testing performed in accordance with the FPT procedure forms. CxP records FPT results.
13. Issues Log:

    a. The CxP records as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with Construction Checklists, or Functional Performance Test procedures.
    b. CxP records corrective action by Contractor before signing off the Issue.
    c. The CxP tracks resolution of each Issue until it is resolved or accepted by the Owner.

14. System Acceptance: The CxP recommends system acceptance by the Owner upon completion of the Functional Performance Testing and resolution of all issues. For systems requiring deferred or seasonal testing, systems may be recommended by the CxP for partial acceptance by the Owner prior to the deferred or seasonal testing if they comply with all construction contract and accepted design requirements that can be tested during initial Functional Performance Tests.
15. Final Commissioning Report: The CxP issues the final commissioning report upon completion of all Functional Performance Testing and resolution of all items on the Issues Log.
16. Commissioning Systems Manual: The CxP issues the commissioning system manual upon completion of all Functional Performance Testing.

3.6 CONTRACTOR RESPONSIBILITIES

A. Management and Coordination: Manage and coordinate commissioning process, including, but not limited to, the following:

1. Coordinate with subcontractors on their commissioning responsibilities and activities.
2. Obtain, assemble, and submit commissioning documentation.
3. Attend periodic on-site commissioning meetings. Comply with requirements in Division 01.
4. Review and comment on preliminary test procedures and data forms.
5. Report inconsistencies and issues in system operations.
6. Verify that tests have been completed and results comply with acceptance criteria, and that systems are ready before scheduling test demonstrations.

7. Prepare and submit specified commissioning reports.
8. Track commissioning issues until resolution and retesting is successfully completed.
9. Retain original records of Commissioning-Process Work, organized as required for the commissioning report. Provide Owner's representative access to these records on request.

B. Scheduling: Schedule the commissioning process:

1. Commence commissioning process within 14 days of Notice to Proceed.
2. Commissioning Schedule: Integrate commissioning activities into Construction Schedule. See Division 01.

    a. Include detailed commissioning activities in monthly updated Construction Schedule and short-interval schedule submittals.
    b. Schedule the start date and duration for the following commissioning activities. Break out activities, where applicable, to match the phasing required to commission each system independently:

        1) BAS Pre-submittal meeting
        2) Submittals
        3) Preliminary operation and maintenance (O&M) manual submittals
        4) Pre-construction meetings
        5) Factory Acceptance Testing
        6) Construction Checklists
        7) System and Equipment Startups
        8) Testing and Balancing
        9) Pre-Functional Performance Tests
        10) Pre-Functional Smoke Purge Test
        11) BAS Graphics Review
        12) BAS Point-to-Point Checkout
        13) Trend Log submission
        14) Functional Performance and Integrated systems Tests
        15) TAB Verification
        16) Final O&M Manual submission
        17) Training and Demonstration
        18) Deferred and Seasonal Functional Performance Tests

    c. Schedule shall include a line item for each installation check, pre-startup test, startup, and factory test activity specific to the equipment or systems involved.
    d. Show milestones and prerequisites for commissioning process as detailed in the Cx Plan. Show commissioning milestones, prerequisites, and dependencies in monthly updated critical-path-method construction schedule and short-interval schedule submittals.

3. Two-Week Look-Ahead Commissioning Schedule:

    a. Two weeks prior to the beginning of startup pre-tests, factory testing, and equipment and system startups, submit a detailed two-week look-ahead schedule. Thereafter, submit updated two-week look-ahead schedules weekly for the duration of commissioning process.
    b. Two-week look-ahead schedules shall identify the date, time, beginning location, Contractor personnel required, and anticipated duration for each startup or test activity.

c. Use two-week look-ahead schedules to notify and coordinate participation of Owner's witnesses.

C. Contractor is responsible for the commissioning of all installed equipment and systems as required in the Contract Documents.

D. Include all costs of commissioning requirements including manufacturer-certified start-up and testing of installed equipment.

1. Provide utility services, personnel, materials, tools, testing equipment, instrumentation and all other resources required for the commissioning process.
2. Contractor must:

a. Manage, schedule, and coordinate commissioning process. Participate in, and perform commissioning team activities including, but not limited to, those described in this specification section and each individual discipline specific commissioning specification.
b. Assign Subcontractor representatives with expertise and authority to perform commissioning team activities described in this specification section and each individual discipline specific commissioning specification.
c. Manage and verify Subcontractors provide technicians who are familiar with the construction and operation of installed systems to participate in testing of installed systems, subsystems, and equipment.

E. Installation Verification:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Construction Checklists will be provided by the CxP after submittal approval to ensure checklists are accurate to the actual equipment furnished. Final Construction Checklists shall be issued by the CxP after approval of the submittals.
3. The responsible Installing Contractor(s) and any additional commissioning team members identified on the checklist shall initial and date the appropriate forms for each task indicated in these Checklists. One form shall be completed for each piece of commissioned equipment or system. By initialing and dating the entry, the responsible Installing Contractor(s) and identified additional commissioning team members shall indicate completion and verification of proper installation in accordance with contract requirements and acceptance of responsibility for the installation of the equipment and/or systems.

F. Pre-Startup Test Procedures:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Pre-Startup Tests shall be performed for the following:

a. Duct leakage tests. Comply with Section 23 30 00 “HVAC Air Distribution”

G. Startup Procedures:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Submit startup plans, perform startups, and submit completed startup reports for the following:

a. DOAS Units
b. Rooftop Unit

c. VRF
d. Split System ACs
e. VFDs

H. Sensor and Actuator Calibration

1. All field-installed temperature, relative humidity, CO, CO_2 enthalpy and pressure sensors and gages, and all actuators (dampers and valves) on all equipment shall be calibrated using the methods described below. Alternate methods may be used if approved by the CxP beforehand. All test instruments shall have had a certified calibration within the last 12 months. Sensors installed in the unit at the factory with calibration certification provided need not be field-calibrated.
2. All procedures used shall be fully documented on the construction checklists or other approved forms, clearly referencing the procedures followed and written documentation of initial, intermediate, and final results.
3. Sensor Calibration Methods

a. All Sensors: Verify that all sensor locations are appropriate and away from causes of erratic operation. Verify that sensors with shielded cable are grounded only at one end. For sensor pairs that are used to determine a temperature or pressure difference, make sure they are reading within 0.2°F of each other for temperature and within a tolerance equal to 2% of the reading of each other for pressure. Tolerances for critical applications may be tighter.
b. Sensors Without Transmitters--Standard Application: Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage, or building automation system (BAS)) is within the tolerances in the table below of the instrument-measured value. If not, install offset in BAS, calibrate or replace sensor.
c. Analog Signal Validation – Verify voltage loss across analog signal wiring
d. Sensors With Transmitters--Standard Application: Disconnect sensor. Connect a signal generator in place of sensor. Connect ammeter in series between transmitter and BAS control panel. Using manufacturer's resistance-temperature data, simulate minimum desired temperature. Adjust transmitter potentiometer zero until the ammeter reads 4 mA. Repeat for the maximum temperature matching 20 mA to the potentiometer span or maximum and verify at the BAS. Record all values and recalibrate controller as necessary to conform to specified control ramps, reset schedules, proportional relationship, reset relationship, and P/I reaction. Reconnect sensor. Make a reading with a calibrated test instrument within 6 inches of the site sensor. Verify that the sensor reading (via the permanent thermostat, gage, or building automation system [BAS]) is within the tolerances in the table below of the instrument-measured value. If not, replace sensor and repeat. For pressure sensors, perform a similar process with a suitable signal generator.

4. Tolerances, Standard Applications

Sensor	Required Tolerance (+/-)		Sensor	Required Tolerance (+/-)
Cooling coil, chilled and condenser water temps	0.4F		Flow rates, water Relative humidity	4% of design 4% of design
AHU wet bulb or dew point	2.0F		Combustion flue temps	5.0F
Hot water coil and boiler water temp	1.5F		Oxygen or CO_2 monitor	0.1 % pts

Outside air, space air, duct air temps	0.4F		CO monitor	0.01 % pts
Watthour, voltage and amperage	1% of design		Natural gas and oil flow rate	1% of design
Pressures, air, water and gas	3% of design		Steam flow rate	3% of design
Flow rates, air	10% of design		Barometric pressure	0.01 in. of Hg

5. Valve and Damper Stroke Setup and Check

    a. BAS Readout: For all valve and damper actuator positions checked, verify the actual position against the BAS readout.
    b. Set pumps or fans to normal operating mode. Command valve or damper closed, visually verify that valve or damper is closed and adjust output zero signal as required. Command valve or damper open, verify position is full open and adjust output signal as required. Command valve or damper to a few intermediate positions. If actual valve or damper position doesn't reasonably correspond, replace actuator or add pilot position indicator (for pneumatics).
    c. Closure for heating coil valves (NO): Set heating setpoint 20°F above room temperature. Observe valve open. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set heating setpoint to 20°F below room temperature. Observe the valve close. Restore to normal.
    d. Closure for cooling coil valves (NC): Set cooling setpoint 20°F above room temperature. Observe the valve close. Remove control air or power from the valve and verify that the valve stem and actuator position do not change. Restore to normal. Set cooling setpoint to 20°F below room temperature. Observe valve open. Restore to normal.

I. Pre-Functional Performance Tests:

1. Comply with Section 019113 "General Commissioning Requirements".
2. Pre-Functional Performance Tests are performed by the Contractor independently of the CxP using the approved FPT procedures. CxP shall be invited to witness testing.
3. FPT forms will be submitted for Contractor review after submittal approval.

J. BAS Graphics Review:

1. Initial Graphics submittal generated by the controls contractor for review (see Action Submittals) shall be reviewed.
2. Final Graphics that are live on the BAS shall be reviewed 15 days prior to functional performance testing.
3. The CxP shall schedule a review of the BAS Graphics with the BAS Contractor and Owner's Facility Personnel.
4. The review shall include:

    a. Verifying all graphics are representative of the systems and that all points and control elements are in the same location on the graphic as they are in the field.
    b. Verifying operator control of all commandable control system points including proper security access.
    c. Verifying all schedules and setpoints are shown and editable.
    d. Verifying all alarm points are shown and set to the correct priority.

e. Verifying all alarm messages are routed to the correct phone and e-mail accounts.

5. BAS Graphics are critical to successful and efficient Functional Performance Testing. All issues shall be rectified by the BAS Contractor prior to on-site Functional Performance Testing.
6. Where BAS Graphics are initially reviewed on the BAS Contractor's laptop or other work-station, a final review shall be performed at the Owner's central plant BAS head-end computer to verify all changes and up-dates have been deployed on the system correctly.

K. Trend Logs:

1. Prior to Functional Performance Testing, trend log submission and approval are required. Water and air balancing shall be complete, and the Contractor shall have the software completely loaded and functional at least one week prior to the trends submission.
2. Trends shall be submitted to the Engineer and the CxP for review. The intent of this is to determine whether installed software is functioning as intended. Prior to submitting trends, the Contractor shall perform a self-review to identify and correct problems.
3. Trends shall be presented at hourly intervals for a 24 hour period, unless directed otherwise.
4. Trends shall be submitted for days identified by the CxP. For seasonal trend review the CxP shall request trends for days when outdoor air temperatures have risen to at least 85°F or dropped below 35°F during the 24 hour trended period. For shoulder seasons, the CxP shall request trends for days when the outdoor air temperature crosses the air economizer range between 45°F and 65°F.
5. Trends shall be run with all systems being operated with an occupancy schedule; i.e. indications that a system was scheduled off for the 24 hours of the history and remained off are of no value.
6. Trends submission shall include:

    a. Hardwired, virtual, BACnet, and LON control and monitoring points
    b. All system setpoints (both calculated and manual inputs). Floating setpoints (e.g. heating water reset; adjustable space temperatures) shall be trended hourly as done for all other points. Fixed setpoints may be trended or provided in a cover sheet statement (e.g. "All cabinet heaters have 70ºF space temperature setpoint.")
    c. All occupancy schedules shall be provided (e.g. Zone 1, 0600 – 1800). Overrides of occupancy scheduled shall be trended.
    d. Electrical system points that are monitored or controlled through the BAS. This includes, but is not limited to, lighting controls and power monitoring.
    e. Plumbing system points that are monitored or controlled through the BAS. This includes, but is not limited to, pump alarms and temperatures.
    f. Trends shall be submitted in Microsoft Excel form. Format shall provide an English language descriptor header for each point trended with 24 hourly samples printed in columns below the header. Points pertinent to the system trended shall be grouped on a single page when possible; e.g. all AHU control points should be printed on the same or contiguous pages. Separate tabs on an Excel spreadsheet may be used for each piece of equipment.

7. BAS trends shall be submitted by the Contractor up to four times a year to the CxP for review. The submission of trends may be increased or decreased pursuant to their evaluation; i.e., decreased if all is well, increased if problems exist.
8. Deficiencies noted via trends will be documented in the Issues Log for rectification. After notification that deficiencies have been rectified, trends will be re-run and submitted to the CxP for verification. This process will be repeated as necessary until trends indicate suitably appropriate operations to warrant site observation.

9. The list of points to be included in the trend submissions shall be issued by the CxP after approval of the control submittal.

L. Certificate of Readiness:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Certificates of Readiness for each system will be provided to the Contractor for signature 14 days prior to Functional Performance Testing.

M. Functional Performance Tests

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Testing includes both Deferred and Delayed Functional Performance Testing.
3. FPT forms will be submitted for Contractor review after submittal approval.
4. The following shall be present during Functional Performance Testing of the HVAC systems:

   a. Contractor
   b. Mechanical Contractor
   c. BAS Contractor
   d. Equipment Manufacturer’s Technician for the following package controlled equipment:
      1) DOAS
      2) RTU
      3) VRF
   e. TAB Contractor (for TAB Verification)
   f. Owner’s Facility Personnel (optional)

5. Weather-Dependent Verification Procedures:

   a. Seasonal Functional Performance Testing on the HVAC systems shall be implemented on this project as follows:

      1) Initial FPT shall occur prior to substantial completion. Depending on the time of year, this may coincide with peak heating (outdoor air temperature below 35°F), peak cooling (outdoor air temperature above 85°F), or a shoulder season (outdoor air between 45°F and 65°F).
      2) If the initial FPT is performed during a shoulder season, the closest mode shall be simulated to peak conditions. FPT shall then be repeated in the opposite mode for the peak heating season or the peak cooling season.
      3) If the initial FPT is performed during a peak heating or cooling season, FPT shall be repeated in the opposite peak season.

   b. Weather-dependent Functional Performance Testing that cannot be adequately achieved by simulation shall be performed in the appropriate climatic season. When simulation is used, the actual results may also require re-verification in the appropriate season.
   c. Simulated conditions may be imposed to initially test systems; however, this does not relieve the Contractor of his duty to perform deferred testing. Alter set points and sensor values when simulating conditions is not practical.

6. Functional Performance Testing of the HVAC systems shall include, but is not limited to, the following:

a. Verify all alarm and high and low limit functions and messages generated on all points with alarm settings.
b. Verify integrated performance of all components and control system components, including all interlocks and interactions with other equipment and systems.
c. Verify shut down and restart capabilities both for scheduled and unscheduled events (e.g. power failure recovery and normal scheduled start/stop).
d. When applicable, demonstrate a full cycle from off to on and no load to full load and then to no load and off.
e. Verify setpoints and those coordinated with TAB contractor.
f. Verify all energy saving control strategies.

7. Common Acceptance Criteria: The following acceptance criteria apply to all HVAC systems, assemblies, equipment, components, and features indicated to be commissioned:

a. For the conditions, sequences and modes tested, the equipment, integral components and related equipment shall respond to varying loads and changing conditions and parameters appropriately as expected, according to the sequences of operation, as specified, according to acceptable operating practice and the manufacturer's performance specifications. Verify that equipment operates within tolerances specified in governing codes, acceptance criteria contained in the construction documents, manufacturer's literature and according to good operating practice.
b. Systems shall accomplish their intended function and performance.
c. All safety trips shall require a manual reset to allow a system restart.
d. Resetting a manual safety shall result in a stable, safe, and predictable return to normal operation by the system.
e. Safety circuits and permissive control circuits shall function in all possible combinations of selector switch positions (hand, auto, inverter, bypass, etc.).
f. Additional acceptance criteria developed by the CxP as part of FPT test procedures.

3.7 TAB VERIFICATION

A. TAB Verification shall be scheduled to occur during the Functional Performance Testing activities. Refer to Section 230953 “Testing, Adjusting and Balancing” for the TAB contractor’s requirements to support the Functional Performance Testing.

3.8 OPERATIONS AND MAINTENANCE MANUAL

A. Contractor shall submit O&M Manuals in accordance with Division 01 and 23.

B. Manuals must be submitted a minimum of 90 days prior to substantial completion for review by the A/E and CxP.

C. Manuals shall be available for reference by all parties present at the training and demonstration sessions.

3.9 TRAINING AND DEMONSTRATION

A. Contractor shall develop and submit to the CxP and Owner a training plan which identifies all training required by specification sections associated with commissioned systems. Refer to Division 01 and 23, and Section 019113 “General Commissioning Requirements”.

B. Document training attendance using training attendance rosters and provide completed attendance rosters to the CxP the Owner no later than 7 calendar days following the completion of training for each system to be commissioned.

C. Approved O&M manuals shall be available for reference by all parties present at the training and demonstration sessions.

D. The Mechanical Contractor shall be present during all training and demonstration sessions to respond to general questions regarding installation and operations.

E. The Controls Contractor shall be present during all training and demonstration sessions on equipment and systems being controlled or monitored by the BAS. The Controls Contractor shall be prepared to show the BAS Graphics with associated monitoring and control during the individual equipment and systems training and provide a general description of the BAS controls and any associated control sequences. This is in addition to the specified BAS control system training in Section 230900 “Building Automation System (BAS)”.

F. If, during training and demonstration, additional important maintenance information is provided that isn’t included in the O&M manuals, it shall be written down by the contractor and inserted as an amendment to the relevant O&M manual.

G. The CxP shall be present to witness and respond to questions regarding the commissioning and functional performance testing of the equipment and systems.

3.10 SYSTEMS MANUAL

A. The CxP shall be responsible for final submission of the Systems Manual to the Owner. The Contractor shall be responsible for providing the information required as noted in the Submittal requirements.

3.11 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Substantial Completion.

D. Certificate shall be provided for each phase.

3.12 CERTIFICATE OF COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. When the commissioning process is complete, inclusive of all phases and Seasonal Functional Performance Testing, the CxP will prepare a Certificate of Commissioning Process Completion that shall establish the date of completion of the commissioning process.

END OF SECTION 23 08 00

SECTION 23 09 00

INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Control system software.
2. Control system hardware.
3. Wiring
4. Sensors.
5. Thermostats.
6. Control valving.
7. Control dampers.
8. Control components, etc.
9. Uninterruptible Power Supplies

B. Related Sections: The following Sections contain requirements that relate to this section:

1. Division 23 Section: “Common Work Results for HVAC”: Submittal execution requirements for work under this section.
2. Division 23 Section: “Common Motor Requirements For HVAC Equipment”.
3. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”: Product requirements for thermometer sockets.
4. Division 23 Section: “HVAC Air Distribution”: Product requirements for duct mounted thermometers.
5. Division 26 Section: “Common Work Results for Electrical”: Execution requirements for electric connections specified by this section.
6. Division 26 Section: “Common Work Results for Electrical.”
7. Division 26 Section: “Low Voltage Electrical Power Conductors & Cables.”
8. Division 26 Section: “Raceways & Boxes for Electrical Systems”: Wiring and raceway requirements.
9. Division 26 Section: “Low Voltage Controllers”: for interface with starters under electrical division.
10. Division 28 Section: “Fire Detection and Alarm: Wiring for duct detectors.

1.3 REFERENCES

(Unless otherwise noted, references apply to "latest editions.")

A. All work shall conform to the following Codes and Standards, as applicable.

B. Americans Disability Act (ADA).

C. Air Movement and Control Association International, Inc.:

1. AMCA 500-D - Laboratory Methods of Testing Dampers for Rating.

D. American National Standards Institute (ANSI).

P. National Fire Protection Association:

1. NFPA 70 - National Electrical Code.
2. NFPA 72 - National Fire Alarm and Signaling Code.
3. NFPA 90A - Installation of Air-Conditioning and Ventilating Systems.
4. NFPA 92A Standard for Smoke-Control Systems Utilizing Barriers and Pressure Differences.
5. NFPA 92B Standard for Smoke Management Systems in Malls, Atria, and Large Spaces.

Q. Occupational Safety and Health Administration (OSHA).

R. Underwriters Laboratories, Inc.:

1. UL 268 Smoke Detectors for Fire Alarm Systems.
2. UL 864 Control Units and Accessories for Fire Alarm Systems.
3. UL 916 Energy Management Equipment.
4. UL 1820 - Fire Test of Pneumatic Tubing for Flame and Smoke Characteristics.

S. In the case of conflicts or discrepancies, the more stringent regulation shall apply.

T. All work shall meet the approval of the Authorities Having Jurisdiction at the project site.

1.4 DEFINITIONS

A. Analog: A continuously variable system or value not having discrete levels. Typically exists within a defined range of limiting values.

B. Binary: A two-state system where an “ON” condition is represented by one discrete signal level and an “OFF” condition is represented by a second discrete signal level.

C. Building Automation System (BAS): The total integrated system of fully operational and functional elements, including equipment, software, programming, and associated materials, to be provided by this Section and to be interfaced to the associated work of other related trades.

D. BAS Contractor: The single Contractor to provide the work of this Section. This Contractor shall be the primary manufacturer, installer, BAS commissioning agent, and ongoing service provider for the BAS work.

E. Control Sequence: A BAS pre-programmed arrangement of software algorithms, logical computation, target values and limits as required to attain the defined operational control objectives.

F. Direct Digital Control: The digital algorithms and pre-defined arrangements included in the BAS software to provide direct closed-loop control for the designated equipment and controlled

variables. Inclusive of Proportional, Derivative and Integral control algorithms together with target values, limits, logical functions, arithmetic functions, constant values, timing considerations and the like.

G. BAS Network: The total digital on-line real-time interconnected configuration of BAS digital processing units, workstations, panels, sub-panels, controllers, devices and associated elements individually known as network nodes. May exist as one or more fully interfaced and integrated sub-networks, LAN, WAN or the like.

H. Node: A digitally programmable entity existing on the BAS network.

I. BAS Integration: The complete functional and operational interconnection and interfacing of all BAS work elements and nodes in compliance with all applicable codes, standards and ordinances so as to provide a single coherent BAS as required by this Division.

J. PC: IBM-compatible Personal Computer from a recognized major manufacturer.

K. Wiring: The term “Wiring” and its derivatives when used in this Division shall mean provide the BAS wiring and terminations, including all low voltage and power (line voltage) wiring.

L. Protocol: The term “protocol” and its derivatives when used in this Division shall mean a defined set of rules and standards governing the on-line exchange of data between BAS network nodes.

M. Software: The term “software” and its derivatives when used in this Division shall mean all of programmed digital processor software, preprogrammed firmware and project specific digital process programming and database entries and definitions as generally understood in the BAS industry for real-time, on-line, integrated BAS configurations.

N. The use of words in the singular shall not be considered as limiting when other indications in these documents denote that more than one such item is being referenced.

O. Headings, paragraph numbers, titles, shading, bolding, underscores, clouds and other symbolic interpretation aids included in the Division documents are for general information only and are to assist in the reading and interpretation of these Documents.

1.5 ACRONYMS

A. The following abbreviations and acronyms may be used in describing the work of this Division:

1.	ADC	-	Analog to Digital Converter
2.	AI	-	Analog Input
3.	AN	-	Application Node
4.	ANSI	-	American National Standards Institute
5.	AO	-	Analog Output
6.	ASCII	-	American Standard Code for Information Interchange
7.	ASHRAE		American Society of Heating, Refrigeration and Air Conditioning Engineers
8.	AWG	-	American Wire Gauge
9.	CPU	-	Central Processing Unit
10.	CRT	-	Cathode Ray Tube
11.	DAC	-	Digital to Analog Converter

12. DDC - Direct Digital Control
13. DI - Digital Input
14. DO - Digital Output
15. EEPROM Electronically Erasable Programmable Read Only Memory
16. EMI - Electromagnetic Interference
17. FAS - Fire Alarm Detection and Annunciation System
18. GUI - Graphical User Interface
19. HOA - Hand-Off-Auto
20. ID - Identification
21. IEEE - Institute of Electrical and Electronics Engineers
22. I/O - Input/Output
23. LAN - Local Area Network
24. LCD - Liquid Crystal Display
25. LED - Light Emitting Diode
26. MCC - Motor Control Center
27. NC - Normally Closed
28. NIC - Not In Contract
29. NO - Normally Open
30. OWS - Operator Workstation
31. OAT - Outdoor Air Temperature
32. PC - Personal Computer
33. RAM - Random Access Memory
34. RF - Radio Frequency
35. RFI - Radio Frequency Interference
36. RH - Relative Humidity
37. ROM - Read Only Memory
38. RTD - Resistance Temperature Device
39. SPDT - Single Pole Double Throw
40. SPST - Single Pole Single Throw
41. XVGA - Extended Video Graphics Adapter
42. TBA - To Be Advised
43. TCP/IP - Transmission Control Protocol/Internet Protocol
44. TTD - Thermistor Temperature Device
45. UPS - Uninterruptible Power Supply
46. VAC - Volts, Alternating Current
47. VAV - Variable Air Volume
48. VDC - Volts, Direct Current
49. WAN - Wide Area Network

1.6 BAS DESCRIPTION

A. The Building Management System (BAS) shall be a complete system designed for use with the enterprise IT systems. This functionality shall extend into the equipment rooms. Devices residing on the automation network located in equipment rooms and similar shall be fully IT compatible devices that mount and communicate directly on the IT infrastructure in the facility. Contractor shall be responsible for coordination with the owner's IT staff to ensure that the BAS will perform in the owner's environment without disruption to any of the other activities taking place on that LAN.

B. Automatic temperature controls field monitoring and control system using field programmable microprocessor based units.

C. Base system on distributed system of fully intelligent, stand-alone controllers, operating in a multi-tasking, multi-user environment on token passing network, with central and remote hardware, software, and interconnecting wire and conduit.

D. Provide computer software and hardware, operator input/output devices, control units, local area networks (LAN), sensors, control devices, actuators.

E. All points of user interface shall be on standard PCs that do not require the purchase of any special software from the BAS manufacturer for use as a building operations terminal. The primary point of interface on these PCs will be a standard Web Browser.

F. Where necessary and as dictated elsewhere in these Specifications, Servers shall be used for the purpose of providing a location for extensive archiving of system configuration data, and historical data such as trend data and operator transactions. All data stored will be through the use of a standard data base platform: Microsoft Data Engine (MSDE) or Microsoft SQL Server as dictated elsewhere in this specification.

G. The work of the single BAS Contractor shall be as defined individually and collectively in all Sections of this Division specification together with the associated Point Sheets and Drawings and the associated interfacing work as referenced in the related documents.

H. The BAS work shall consist of the provision of all labor, materials, tools, equipment, software, software licenses, software configurations and database entries, interfaces, wiring, tubing, installation, labeling, engineering, calibration, documentation, samples, submittals, testing, commissioning, training services, permits and licenses, transportation, shipping, handling, administration, supervision, management, insurance, temporary protection, cleaning, cutting and patching, warranties, services, and items, even though these may not be specifically mentioned in these Division documents which are required for the complete, fully functional and commissioned BAS.

I. Provide a complete, neat and workmanlike installation. Use only manufacturer certified employees who are skilled, experienced, trained, and familiar with the specific equipment, software, standards and configurations to be provided for this Project.

J. Manage and coordinate the BAS work in a timely manner in consideration of the Project schedules. Coordinate with the associated work of other trades so as to not impede or delay the work of associated trades.

K. The BAS as provided shall incorporate, at minimum, the following integrated features, functions and services:

1. Operator information, alarm management and control functions.
2. Enterprise-level information and control access.
3. Information management including monitoring, transmission, archiving, retrieval, and reporting functions.
4. Diagnostic monitoring and reporting of BAS functions.
5. Offsite monitoring and management access.
6. Energy management
7. Standard applications for terminal HVAC systems.
8. Uninterruptible Power Supplies.

L. Provide installation and calibration, supervision, adjustments, and fine tuning necessary for complete and fully operational system.

1.7 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings, Product Data, and Samples:

1. The BAS contractor shall submit a list of all shop drawings with submittal dates within 30 days of contract award.
2. Submittals shall be in defined packages. Each package shall be complete and shall only reference itself and previously submitted packages. The packages shall be as approved by the Architect and Engineer for Contract compliance.
3. Allow 15 working days for the review of each package by the Architect and Engineer in the scheduling of the total BAS work.
4. Equipment and systems requiring approval of local authorities must comply with such regulations and be approved. Filing and permitting shall be at the expense of the BAS Contractor. Provide a copy of all related correspondence and permits to the Owner.
5. Prepare an index of all submittals and shop drawings for the installation. Index shall include a shop drawing identification number, Contract Documents reference and item description.
6. At a minimum, submit the following:

    a. BAS network architecture diagrams including all nodes and interconnections.
    b. Systems schematics, sequences and flow diagrams.
    c. Floor plan drawings showing detailed locations of all field installed control components such as sensors, dampers, actuators, control panels, etc.
        1) AutoCAD mechanical drawings will be provided to the BAS contractor, upon receipt of Bowman’s Electronic Document Release Form, per Division 23 Section: “Common Work Results for HVAC.”
        2) Indicate all provisions required for adequate maintenance access.
    d. Points schedule for each point in the BAS, including: Point Type, Object Name, Expanded ID, Display Units, Controller type, and Address.
    e. Samples of Graphic Display screen types and associated menus.
    f. Detailed Bill of Material list for each system or application, identifying quantities, part numbers, descriptions, and optional features.
    g. Control Damper Schedule including a separate line for each damper provided under this section and a column for each of the damper attributes, including: Code Number, Fail Position, Damper Type, Damper Operator, Duct Size, Damper Size, Mounting, and Actuator Type.
    h. Control Valve Schedules including a separate line for each valve provided under this section and a column for each of the valve attributes: Code Number, Configuration, Fail Position, Pipe Size, Valve Size, Body Configuration, Close off Pressure, Capacity, Valve CV, Design Pressure, and Actuator Type.
    i. Room Schedule including a separate line for each VAV box and/or terminal unit indicating location and address
    j. Details of all BAS interfaces and connections to the work of other trades.
    k. Product data sheets or marked catalog pages including part number, photo and description for all products including software.
    l. Detailed training agendas.

m. Start-up and controls commissioning checklist.

C. Samples: Submit two of each type of room thermostat / temperature sensor and humidistat / humidity sensor, including covers and guards.

D. Manufacturer's Installation Instructions: Submit.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.8 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements.” For Closeout Procedures.

B. Project Operation and Maintenance Manuals:

1. Three (3) hardbound copies of the Operation and Maintenance Manuals shall be provided to the Owner's Representative upon completion of the project. The entire Operation and Maintenance Manual shall also be furnished on Compact Disc media. Operation and Maintenance Manual shall include the following:

a. Table of contents.
b. As-built system record drawings. Computer Aided Drawings (CAD) record drawings shall represent the as-built condition of the system, floor, including floor plans, incorporating all information supplied with the approved submittal.
c. Manufacturers’ product data sheets or catalog pages for all products including software.
d. System Operator’s manuals, including inspection periods, cleaning methods, calibration procedures, etc.
e. Archive copy of all site-specific databases and sequences.
f. BAS network diagrams.
g. Interfaces to all third-party products and work by other trades.
h. The Operation and Maintenance Manual CD shall be self-contained, and include all necessary software required to access the product data sheets. A logically organized table of contents shall provide dynamic links to view and print all product data sheets. Viewer software shall provide the ability to display, zoom, and search all documents.
i. Point to point complete checklists.
j. Start-up and commissioning completed checklists.

1.9 QUALITY ASSURANCE AND QUALIFICATIONS

A. General:

1. The Building Management System Contractor shall be the primary manufacturer-owned branch office or certified partner that is regularly engaged in the engineering, programming, installation and service of total integrated Building Management Systems.

2. The BAS Contractor shall be a recognized national manufacturer, installer and service provider of BAS.
3. The BAS Contractor shall supply complete maintenance and support services on a 24 hour, 7-day-a-week basis.
4. As evidence and assurance of the contractor's ability to support the Owner's system with service and parts, the contractor must have been in the BAS business for at least the last ten (10) years and have successfully completed total projects of at least 10 times the value of this contract in each of the preceding five years.
5. The Building Management System architecture shall consist of the products of a manufacturer regularly engaged in the production of Building Management Systems, and shall be the manufacturer's latest standard of design at the time of bid.

B. Workplace Safety And Hazardous Materials:

1. Provide a safety program in compliance with the Contract Documents.
2. The BAS Contractor shall have a corporately certified comprehensive Safety Certification Manual and a designated Safety Supervisor for the Project.
3. Comply with federal, state and local safety regulations.
4. Ensure that all subcontractors and employees have written safety programs in place that covers their scope of work, and that their employees receive the training required by the OSHA have jurisdiction for at least each topic listed in the Safety Certification Manual.
5. Hazards created by the Contractor or its subcontractors shall be eliminated before any further work proceeds.
6. Hazards observed but not created by the Contractor or its subcontractors shall be reported to either the General Contractor or the Owner within the same day. Avoid the hazard area until the hazard has been eliminated.
7. Sign and date a safety certification form prior to any work being performed, stating that the Contractors' company is in full compliance with the Project safety requirements.
8. The safety program shall include written policy and arrangements for the handling, storage and management of all hazardous materials to be used in the work in compliance with the requirements of the AHJ at the Project site.
9. The Contractor's employees and subcontractor's staff shall have received training as applicable in the use of hazardous materials and shall govern their actions accordingly.

C. Quality Management Program:

1. Designate a competent and experienced employee to provide BAS Project Management. The designated Project Manger shall be empowered to make technical, scheduling and related decisions on behalf of the BAS Contractor. At minimum, the Project Manager shall:

    a. Manage the scheduling of the work to ensure that adequate materials, labor and other resources are available as needed.
    b. Manage the financial aspects of the BAS Contract.
    c. Coordinate as necessary with other trades.
    d. Be responsible for the work and actions of the BAS workforce on site.

1.10 PRE-SUBMITTAL MEETINGS

A. Pre-Submittal Meetings: After approval of the material and equipment list and prior to submitting equipment shop drawings, the pre-submittal coordination meeting(s) shall be held at the Owner's Office. The attendees shall include at the minimum:

1. Equipment Sales Representative responsible for the preparing the shop drawings
2. Mechanical Contractor
3. Building ATC Contractor
4. ATC Product Rep. (Sales Representative, Control Engineer, and
5. Lead Project Installation Technician)
6. Owner
7. Electrical Contractor
8. Mechanical Engineer

B. The Equipment Representative and/or the Mechanical Contractor shall be responsible for e-mailing, a minimum of 48 hours in advance, a copy of the Preliminary Submittal to all named parties. The purpose of the meeting is to coordinate requirements and gain a full understanding form all parties as to what is required for a fully turnkey installation, as well as to minimize potential rejection of shop drawings. The Mechanical Contractor shall coordinate these meetings and shall document and publish minutes of all meetings."

1.11 COORDINATION

A. The demarcation of work and responsibilities between the BAS Contractor and other related trades shall be as outlined in the BAS RESPONSIBILITY MATRIX

BAS RESPONSIBILITY MATRIX				
WORK	FURNISH	INSTALL	Low Volt. WIRING/TUBE	LINE POWER
BAS low voltage and communication wiring	BAS	BAS	BAS	N/A

1.12 DELIVERY, STORAGE, AND HANDLING

A. Refer to Division 01 Section: "Product Requirements": Product storage and handling requirements.

B. Accept controls on site in original factory packaging Inspect for damage.

1.13 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.14 WARRANTY

A. Refer to Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Standard Material and Labor Warranty:

1. Provide a two-year labor and material warranty on the BAS.
2. If within 24 months from the date of acceptance any work is found to be defective in operation, workmanship or materials, it shall be replaced, repaired or adjusted at the cost of the BAS Contractor.
3. Maintain an adequate supply of materials within 100 miles of the Project site such that replacement of key parts and labor support, including programming. Warranty work shall be performed within 24 hour notice, 7 days per week.

C. Special Warranty

1. During the warranty period, provide up to three (3) - eight (8) hour site visits, when requested in writing by the Owner, to adjust and calibrate components and to assist the Owner in making program changes, adjusting sensors, controls, etc.

1.15 MAINTENANCE SERVICE

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for maintenance service.

B. Furnish service and maintenance of control systems for one year from Date of Substantial Completion.

C. Furnish complete service of controls systems, including callbacks. Make minimum of eight complete normal inspections of approximately four hours duration in addition to normal service calls to inspect, calibrate, and adjust controls. Submit written report after each inspection.

D. Furnish four complete inspections per year, one in each season, to inspect, calibrate, and adjust controls. Submit written report after each inspection.

E. Examine unit components monthly. Clean, adjust, and lubricate equipment.

F. Include systematic examination, adjustment, and lubrication of unit, and controls checkout and adjustments. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use parts produced by manufacturer of original equipment.

G. Perform work without removing units from service during building normal occupied hours.

H. Provide emergency call back service at all hours for this maintenance period.

I. Maintain locally, near Place of the Work, adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.

J. Perform maintenance work using competent and qualified personnel under supervision of manufacturer or original installer.

K. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

1.16 SOFTWARE OWNERSHIP

A. The Owner shall have full ownership and full access rights for all network management, operating system server, engineering and programming software required for the ongoing maintenance and operation of the BAS.

PART 2 - PRODUCTS

2.1 GENERAL DESCRIPTION:

A. The Building Management System (BAS) shall use an open architecture and fully support a multi-vendor environment. To accomplish this effectively, the BAS shall support open communication protocol standards and integrate a wide variety of third-party devices and applications. The system shall be designed for use on the Internet, or intranets using off the shelf, industry standard technology compatible with other owner provided networks.

B. The Building Management System shall consist of the following:

1. Standalone Network Automation Engine(s)/Server(s)
2. Field Equipment Controller(s)
3. Input/Output Module(s)
4. Local Display Device(s)
5. Portable Operator's Terminal(s)
6. Distributed User Interface(s)
7. Network processing, data storage and communications equipment
8. Other components required for a complete and working BAS

C. The system shall be modular in nature, and shall permit expansion of both capacity and functionality through the addition of sensors, actuators, controllers and operator devices, while re-using existing controls equipment.

D. System architectural design shall eliminate dependence upon any single device for alarm reporting and control execution. The failure of any single component or network connection shall not interrupt the execution of control strategies at other operational devices.

E. Uninterruptible Power Supplies (UPS)

1. Provide UPS back-up for all servers, Network Automation Engines/Servers, Building Controllers, Equipment Controllers,etc. serving HVAC equipment and systems which are supplied by an emergency generator and/or emergency back-up power.

F. Acceptable Manufacturers:

1. Johnson Controls, Metasys
2. Honeywell, Enterprise Building Integrator (EBI)

2.2 BAS ARCHITECTURE

A. Automation Network:

1. The automation network shall be based on a PC industry standard of Ethernet TCP/IP. Where used, LAN controller cards shall be standard “off the shelf” products available through normal PC vendor channels.
2. The BAS shall network multiple user interface clients, automation engines, system controllers and application-specific controllers. Provide application and data server(s) as required for systems operation.
3. The automation network shall be capable of operating at a communication speed of 100 Mbps, with full peer-to-peer network communication.
4. Network Automation Engines (NAE)/Servers shall reside on the automation network.
5. The automation network will be compatible with other enterprise-wide networks. Where indicated, the automation network shall be connected to the enterprise network and share resources with it by way of standard networking devices and practices.

B. Control Network:

1. Network Automation Engines/Servers shall provide supervisory control over the control network and shall support a minimum of three (3) of the following communication protocols:

    a. BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9.
    b. LonWorks enabled devices using the Free Topology Transceiver (FTT-10a).
    c. Modbus TCP, client and server serial, RS-485, master or slave.
    d. The Johnson Controls N2 Field Bus.
2. Control networks shall provide either “Peer-to-Peer,” Master-Slave, or Supervised Token Passing communications, and shall operate at a minimum communication speed of 38k baud.
3. DDC Controllers shall reside on the control network.
4. Control network communication protocol shall be BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135.
5. A BACnet Protocol Implementation Conformance Statement shall be provided for each controller device (master or slave) that will communicate on the BACnet MS/TP Bus.
6. The Conformance Statements shall be submitted 10 day prior to bidding.

C. Integration:

1. Hardwired:

a. Analog and digital signal values shall be passed from one system to another via hardwired connections.
b. There will be one separate physical point on each system for each point to be integrated between the systems.

2. Direct Protocol (Integrator Panel):

a. The BAS system shall include appropriate hardware equipment and software to allow bi-directional data communications between the BAS system and 3rd party manufacturers' control panels. The BAS shall receive, react to, and return information from multiple building systems, including but not limited to the chillers, boilers, variable frequency drives, power monitoring system, and medical gas.
b. All data required by the application shall be mapped into the Automation Engine's/Server's database, and shall be transparent to the operator.
c. Point inputs and outputs from the third-party controllers shall have real-time interoperability with BAS software features such as: Control Software, Energy Management, Custom Process Programming, Alarm Management, Historical Data and Trend Analysis, Totalization, and Local Area Network Communications.

3. BACnet Protocol Integration – BACnet:

a. The neutral protocol used between systems will be BACnet over Ethernet and comply with the ASHRAE BACnet standard 135-2003.
b. A complete Protocol Implementation Conformance Statement (PICS) shall be provided for all BACnet system devices.

4. The ability to command, share point object data, change of state (COS) data and schedules between the host and BACnet systems shall be provided.

2.3 USER INTERFACE

A. Dedicated Web Based User Interface:

1. The BAS Contractor shall provide and install a personal computer for command entry, information management, network alarm management, and database management functions. All real-time control functions, including graphics, scheduling, history collection and alarming, shall be resident in the BAS Network Automation Engines/Server to facilitate greater fault tolerance and reliability. Coordinate location for personal computer with Owner/Maintenance personnel.
2. Dedicated User Interface Architecture – The architecture of the computer shall be implemented to conform to industry standards, so that it can accommodate applications provided by the BAS Contractor and by other third party applications suppliers, including but not limited to Microsoft Office Applications. Specifically it must be implemented to conform to the following interface standards.

a. Microsoft Internet Explorer for user interface functions
b. Microsoft Office Professional for creation, modification and maintenance of reports, sequences other necessary building management functions
c. Microsoft Outlook or other e-mail program for supplemental alarm functionality and communication of system events, and reports
d. Required network operating system for exchange of data and network functions such as printing of reports, trends and specific system summaries.

3. PC Hardware – The personal computer(s) shall be configured as follows:

a. Memory – 8 GB
b. CPU– 4 Quad Core processor. 3.6 GHz Clock Speed
c. Hard Drive – 500 GB free hard drive space
d. Hard drive backup system – DVD/RW, BluRay, LED display or network backup software provided by IT department
e. DVD/Blu-ray Drive – 16X performance
f. Ports – (1) Serial and (4) USB ports
g. Keyboard – 101 Keyboard and 2 Button Mouse
h. Monitors: 1-2 LED touchscreen display as follows:
   1) Each Display – 17" 1920 x 1080 resolution.
   2) DVI, HDMI, or Display Port interface.
   3) Display card with multiple monitor support and the above interfaces.
i. LAN communications 1 GB – Ethernet interface.

4. Operating System Software:

   a. Windows 10 Professional 64 bit to support software.
   b. Where user interface is not provided via browser, provide complete operator workstation software package, including any hardware or software keys. Include the original installation disks and licenses for all included software, device drivers, and peripherals.
   c. Provide software registration cards to the Owner for all included software.

5. Peripheral Hardware:

   a. Reports printer:
      1) Printer Make – Hewlett Packard DeskJet or equivalent Color printer.
      2) Print Quality – 600 DPI Black, 600 DPI Color
      3) Buffer minimum – 256 K Input Print Buffer.

B. Distributed Web Based User Interface :

1. All features and functions of the dedicated user interface previously defined in this document shall be available on any computer connected directly or via a wide area or virtual private network (WAN/VPN) to the automation network and conforming to the following specifications.
2. The software shall run on the Microsoft Internet Explorer browser.

C. User Interface Application Components:

1. Operator Interface:

   a. An integrated browser based client application shall be used as the user operator interface program.
   b. All Inputs, Outputs, Setpoints, and all other parameters as defined within Part 3, shown on the design drawings, or required as part of the system software, shall be displayed for operator viewing and modification from the operator interface software.
   c. The user interface software shall provide help menus and instructions for each operation and/or application.
   d. All controller software operating parameters shall be displayed for the operator to view/modify from the user interface. These include: setpoints, alarm limits, time delays, PID tuning constants, run-times, point statistics, schedules, and so forth.
   e. The Operator Interface shall incorporate comprehensive support for functions including, but not necessarily limited to, the following:

1) User access for selective information retrieval and control command execution.
2) Monitoring and reporting.
3) Alarm, non-normal, and return to normal condition annunciation.
4) Selective operator override and other control actions.
5) Information archiving, manipulation, formatting, display and reporting.
6) FMS internal performance supervision and diagnostics.
7) On-line access to user HELP menus.
8) On-line access to current FMS as-built records and documentation.
9) Means for the controlled re-programming, re-configuration of FMS operation and for the manipulation of FMS database information in compliance with the prevailing codes, approvals and regulations for individual FMS applications.

f. The operation of the control system shall be independent of the user interface, which shall be used for operator communications only. Systems that rely on an operator workstation to provide supervisory control over controller execution of the sequences of operations or system communications shall not be acceptable.

2. Navigation Trees:

a. The system will have the capability to display multiple navigation trees that will aid the operator in navigating throughout all systems and points connected. At minimum provide a tree that identifies all systems on the networks.
b. Provide the ability for the operator to add custom trees. The operator will be able to define any logical grouping of systems or points and arrange them on the tree in any order. It shall be possible to nest groups within other groups. Provide at minimum 5 levels of nesting.
c. The navigation trees shall be “dockable” to other displays in the user interface such as graphics. This means that the trees will appear as part of the display, but can be detached and then minimized to the Windows task bar or closed altogether. A simple keystroke will reattach the navigation to the primary display of the user interface.

3. Alarms:

a. Alarms shall be routed directly from Network Automation Engines/Servers to supervisory PCs and servers. It shall be possible for specific alarms from specific points to be routed to specific PCs and servers. The alarm management portion of the user interface shall, at the minimum, provide the following functions:
1) Log date and time of alarm occurrence.
2) Generate a “Pop-Up” window, with audible alarm, informing a user that an alarm has been received.
3) Allow a user, with the appropriate security level, to acknowledge, temporarily silence, or discard an alarm.
4) Provide an audit trail on hard drive for alarms by recording user acknowledgment, deletion, or disabling of an alarm. The audit trail shall include the name of the user, the alarm, the action taken on the alarm, and a time/date stamp.
5) Provide the ability to direct alarms to an e-mail address or alphanumeric pager. This must be provided in addition to the pop up window described above. Systems that use e-mail and pagers as the exclusive means of annunciating alarms are not acceptable.
6) Any attribute of any object in the system may be designated to report an alarm.

b. The FMS shall annunciate diagnostic alarms indicating system failures and non-normal operating conditions
c. The FMS shall annunciate application alarms at minimum, as required by Part 3.

4. Reports and Summaries:

a. Reports and Summaries shall be generated and directed to the user interface displays, with subsequent assignment to printers, or disk. As a minimum, the system shall provide the following reports:
   1) All points in the BAS.
   2) All points in each BAS application.
   3) All points in a specific controller.
   4) All points in a user-defined group of points.
   5) All points currently in alarm.
   6) All points locked out.
   7) All BAS schedules.
   8) All user defined and adjustable variables, schedules, interlocks and the like.
b. Summaries and Reports shall be accessible via standard UI functions and not dependent upon custom programming or user defined HTML pages.
c. Selection of a single menu item, tool bar item, or tool bar button shall print any displayed report or summary on the system printer for use as a building management and diagnostics tool.
d. The system shall allow for the creation of custom reports and queries via a standard web services XML interface and commercial off-the-shelf software such as Microsoft Access, Microsoft Excel, or Crystal Reports.

5. Schedules:

a. A graphical display for time-of-day scheduling and override scheduling of building operations shall be provided. At a minimum, the following functions shall be provided:
   1) Weekly schedules.
   2) Exception Schedules.
   3) Monthly calendars.
b. Weekly schedules shall be provided for each group of equipment with a specific time use schedule.
c. It shall be possible to define one or more exception schedules for each schedule including references to calendars
d. Monthly calendars shall be provided that allow for simplified scheduling of holidays and special days for a minimum of five years in advance. Holidays and special days shall be user-selected with the pointing device or keyboard, and shall automatically reschedule equipment operation as previously defined on the exception schedules.
e. Changes to schedules made from the User Interface shall directly modify the Network Automation Engine schedule database.
f. Schedules and Calendars shall comply with ASHRAE SP135/2003 BACnet Standard.
g. Selection of a single menu item or tool bar button shall print any displayed schedule on the system printer for use as a building management and diagnostics tool.

6. Password:

a. Multiple-level password access protection shall be provided to allow the user/manager to user interface control, display, and database manipulation capabilities deemed appropriate for each user, based on an assigned password.

b. Each user shall have the following: a user name (24 characters minimum), a password (12 characters minimum), and access levels.
c. The system shall allow each user to change his or her password at will.
d. When entering or editing passwords, the system shall not echo the actual characters for display on the monitor.
e. A minimum of five levels of access shall be supported individually or in any combination as follows:
   1) Level 1 = View Data
   2) Level 2 = Command
   3) Level 3 = Operator Overrides
   4) Level 4 = Database Modification
   5) Level 5 = Database Configuration
   6) Level 6 = All privileges, including Password Add/Modify
f. A minimum of 100 unique passwords shall be supported.
g. Operators shall be able to perform only those commands available for their respective passwords. Display of menu selections shall be limited to only those items defined for the access level of the password used to log-on.
h. The system shall automatically generate a report of log-on/log-off and system activity for each user. Any action that results in a change in the operation or configuration of the control system shall be recorded, including: modification of point values, schedules or history collection parameters, and all changes to the alarm management system, including the acknowledgment and deletion of alarms.

7. Screen Manager - The User Interface shall be provided with screen management capabilities that allow the user to activate, close, and simultaneously manipulate a minimum of 4 active display windows plus a network or user defined navigation tree.
8. Dynamic Color Graphics:

a. The graphics application program shall be supplied as an integral part of the User Interface. Browser or Workstation applications that rely only upon HTML pages shall not be acceptable.
b. The graphics applications shall include a create/edit function and a runtime function. The system architecture shall support an unlimited number of graphics documents (graphic definition files) to be generated and executed.
c. The graphics shall be able to display and provide animation based on real-time data that is acquired, derived, or entered.
d. Graphics runtime functions – A maximum of 16 graphic applications shall be able to execute at any one time on a user interface or workstation with 4 visible to the user. Each graphic application shall be capable of the following functions:
   1) All graphics shall be fully scalable
   2) The graphics shall support a maintained aspect ratio.
   3) Multiple fonts shall be supported.
   4) Unique background shall be assignable on a per graphic basis.
   5) The color of all animations and values on displays shall indicate if the status of the object attribute.
e. Operation from graphics – It shall be possible to change values (setpoints) and states in system controlled equipment by using drop-down windows accessible via the pointing device
f. Graphic editing tool – A graphic editing tool shall be provided that allows for the creation and editing of graphic files. The graphic editor shall be capable of performing/defining all animations, and defining all runtime binding.

1) The graphic editing tool shall in general provide for the creation and positioning of point objects by dragging from tool bars or drop-downs and positioning where required.
2) In addition, the graphic editing tool shall be able to add additional content to any graphic by importing backgrounds in the SVG, BMP, PNG or JPG file formats.

g. Aliasing – Many graphic displays representing part of a building and various building components are exact duplicates, with the exception that the various variables are bound to different field values. Consequently, it shall be possible to bind the value of a graphic display to aliases, as opposed to the physical field tags.

9. Historical trending and data collection:

a. Each Automation Engine/Server shall store trend and point history data for all analog and digital inputs and outputs, as follows:
1) Any point, physical or calculated, may be designated for trending. Three methods of collection shall be allowed:
a) Defined time interval
b) Upon a change of value
2) Each Automation Engine/Server shall have the capability to store multiple samples for each physical point and software variable based upon available memory, including an individual sample time/date stamp. Points may be assigned to multiple history trends with different collection parameters.

10. Trend data viewing and analysis:

a. Provide a trend viewing utility that shall have access to all database points.
b. It shall be possible to retrieve any historical database point for use in displays and reports by specifying the point name and associated trend name.
c. The trend viewing utility shall have the capability to define trend study displays to include multiple trends
d. Displays shall be able to be single or stacked graphs with on-line selectable display characteristics, such as ranging, color, and plot style.
e. Display magnitude and units shall both be selectable by the operator at any time without reconfiguring the processing or collection of data. This is a zoom capability.
f. Display magnitude shall automatically be scaled to show full graphic resolution of the data being displayed.
g. Trend studies shall be capable of calculating and displaying calculated variables including highest value, lowest value and time based accumulation.

D. Portable Operator Terminal:

1. For systems that do not provide full access to systems configuration and definition via the Browser Based user interface the BAS Contractor shall provide a portable operator terminal for programming purposes. The terminal shall be configured as follows:

a. Personal Laptop Computer Manufacturer – Dell, Microsoft, or HP.
b. 8 GB RAM – Windows 10
c. 3.6 GHz Clock Speed quad-core processor.
d. 500 GB Hard Drive.
e. DVD-RW Drive, 32x speed.
f. (1) Serial (4) USB ports.
g. 1 Keyboard with 83 keys (minimum).
h. Integral 2 button Track Point or Track Ball.

i. 13” 1920x1080 resolution color display.
j. Ethernet LAN card.
k. Complete operator workstation software package, including any hardware or software.
l. Original printed manuals for all software and peripherals.
m. Original installation disks or CD for all software, device drivers, and peripherals.
n. Software registration cards for all included software shall be provided to the Owner.
o. Carrying case.
p. Spare battery.
q. External power supply/battery charger.

2. Proprietary Portable Terminal:

a. Manufacturers providing proprietary portable terminals shall submit technical data sheets for the terminal and all associated software and hardware.
b. The proprietary terminal shall meet the same operator interface software requirements as specified above.

3. Software:

a. Portable operator terminals shall support all controllers within the system on a direct-connect communications basis.
b. When used to access First or Second Tier controllers, the portable operator terminal shall utilize the standard operator workstation software, as previously defined.
c. When used to access Application Specific Controllers, the portable operator terminal shall utilize either the standard operator workstation software, as previously defined, or controller-specific utility software.

2.4 NETWORK AUTOMATION ENGINES (NAE) / AUTOMATION SERVERS (AS)

A. Network Automation Engine (NAE) / Automation Server (AS):

1. The Network Automation Engine (NAE)/Automation Server (AS) shall be a fully user-programmable, supervisory controller. The NAE/AS shall monitor the network of distributed application-specific controllers, provide global strategy and direction, and communicate on a peer-to-peer basis with other Network Automation Engines/Automation Servers.
2. Automation network – The NAE/AS shall reside on the automation network and shall support a subnet of system controllers.
3. User Interface – Each NAE/AS shall have the ability to deliver a web based User Interface (UI) as previously described. All computers connected physically or virtually to the automation network shall have access to the web based UI.

a. The web based UI software shall be imbedded in the NAE/AS. Systems that require a local copy of the system database on the user’s personal computer are not acceptable.
b. The NAE/AS shall support up four (4) concurrent users.
c. The web based user shall have the capability to access all system data through one NAE/AS.
d. Remote users connected to the network through an Internet Service Provider (ISP) or telephone dial up shall also have total system access through one NAE/AS.
e. Systems that require the user to address more than one NAE/AS to access all system information are not acceptable.

f. The NAE shall have the capability of generating web based UI graphics. The graphics capability shall be imbedded in the NAE/AS.
g. Systems that support UI Graphics from a central database or require the graphics to reside on the user's personal computer are not acceptable.
h. The web based UI shall support the following functions using a standard version of Microsoft Internet Explorer and shall be independent of any JAVA applications and services, preferred graphical format shall be HTML5:
   1) Configuration
   2) Commissioning
   3) Data Archiving
   4) Monitoring
   5) Commanding
   6) System Diagnostics
i. Systems that require workstation software or modified web browsers are not acceptable.
j. The NAE/AS shall allow temporary use of portable devices without interrupting the normal operation of permanently connected modems.

4. Processor – The NAE/AS shall be microprocessor-based with a minimum word size of 32 bits. The NAE/AS shall be a multi-tasking, multi-user, and real-time digital control processor. Standard operating systems shall be employed. NAE/AS size and capability shall be sufficient to fully meet the requirements of this Specification.
5. Memory – Each NAE/AS shall have sufficient memory to support its own operating system, databases, and control programs, and to provide supervisory control for all control level devices.
6. Hardware Real Time Clock – The NAE/AS shall include an integrated, hardware-based, real-time clock.
7. The NAE/AS shall include troubleshooting LED indicators to identify the following conditions:

   a. Power - On/Off
   b. Ethernet Traffic – Ethernet Traffic/No Ethernet Traffic
   c. Ethernet Connection Speed – 10 Mbps/100 Mbps
   d. FC Bus – Normal Communications/No Field Communications
   e. Peer Communication – Data Traffic Between NAE Devices
   f. Run – NAE/AS Running/NAE/AS In Startup/NAE/AS Shutting Down/Software Not Running
   g. Bat Fault – Battery Defective, Data Protection Battery Not Installed
   h. Fault – General Fault
   i. Modem RX – NAE/AS Modem Receiving Data
   j. Modem TX – NAE/AS Modem Transmitting Data
8. Communications Ports – The NAE shall provide the following ports for operation of operator Input/Output (I/O) devices, such as industry-standard computers, modems, and portable operator's terminals:

   a. Up to two (2) USB port
   b. Up to two (2) RS-485 port
   c. Two (2) Ethernet port
9. Diagnostics – The NAE/AS shall continuously perform self-diagnostics, communication diagnosis, and diagnosis of all panel components. The Network Automation Engine/Server shall provide both local and remote annunciation of any detected component failures, low battery conditions, or repeated failures to establish communication.

10. Power Failure – In the event of the loss of normal power, The NAE/AS shall continue to operate for a user adjustable period of up to 10 minutes after which there shall be an orderly shutdown of all programs to prevent the loss of database or operating system software.

    a. During a loss of normal power, the control sequences shall go to the normal system shutdown conditions. All critical configuration data shall be saved into Flash memory.
    b. Upon restoration of normal power and after a minimum off-time delay, the controller shall automatically resume full operation without manual intervention through a normal soft-start sequence.
11. Certification – The NAE/AS shall be listed by Underwriters Laboratories (UL).
12. Controller network – The NAE/AS shall support the following communication protocols on the controller network:

    a. The NAE shall support BACnet Standard MS/TP Bus Protocol ASHRAE SSPC-135, Clause 9 on the controller network.
        1) A BACnet Protocol Implementation Conformance Statement shall be provided for each controller device (master or slave) that will communicate on the BACnet MS/TP Bus.
        2) The Conformance Statements shall be submitted 10 day prior to bidding.
        3) The NAE/AS shall support a minimum of 100 control devices.
    b. The NAE/AS shall support LonWorks enabled devices using the Free Topology Transceiver FTT10.
        1) All LonWorks controls devices shall be LonMark certified.
        2) The NAE/AS shall support a minimum of 64 LonWorks enabled control devices.
    c. The NAE/AS shall support the Johnson Controls N2 Field Bus.
        1) The NAE/AS shall support a minimum of 100 N2 control devices
        2) The Bus shall conform to Electronic Industry Alliance (EIA) Standard RS-485.
        3) The Bus shall employ a master/slave protocol where the NAE/AS is the master.
        4) The Bus shall employ a four (4) level priority system for polling frequency.
        5) The Bus shall be optically isolated from the NAE/AS.
        6) The Bus shall support the Metasys Integrator System.

2.5 OPERATING SYSTEM SOFTWARE

A. Input/output Capability From Operator Station:

1. Request display of current values or status in tabular or graphic format.
2. Command selected equipment to specified state.
3. Initiate logs and reports.
4. Change analog limits.
5. Add, delete, or change points within each control unit or application routine.
6. Change point input/output descriptors, status, alarm descriptors, and unit descriptors.
7. Add new control units to system.
8. Modify and set up maintenance scheduling parameters.
9. Develop, modify, delete or display full range of color graphic displays.
10. Automatically archive select data even when running third party software.
11. Capability to sort and extract data from archived files and to generate custom reports.

12. Support two printer operations.
13. Alarm printer: Print alarms, operator acknowledgments, action messages, system alarms, operator sign-on and sign-off.
14. Data printer: Print reports, page prints, and data base prints.
15. Select daily, weekly or monthly as scheduled frequency to synchronize time and date in digital control units. Accommodate daylight savings time adjustments.
16. Print selected control unit database.

B. Operator System Access: Via software password with minimum 30 access levels at work station and minimum 3 access levels at each control unit.

C. Data Base Creation and Support: Use standard procedures for changes. Control unit automatically checks workstation data base files upon connection and verify data base match. Include the following minimum capabilities:

1. Add and delete points.
2. Modify point parameters.
3. Change, add, or delete English language descriptors.
4. Add, modify, or delete alarm limits.
5. Add, modify, or delete points in start/stop programs, trend logs, and other items.
6. Create custom relationship between points.
7. Create or modify DDC loops and parameters.
8. Create or modify override parameters.
9. Add, modify, and delete applications programs.
10. Add, delete, develop, or modify dynamic color graphic displays.

D. Dynamic Color Graphic Displays:

1. Utilizes custom symbols or system supported library of symbols.
2. Sixteen (16) colors.
3. Sixty (60) outputs of real-time live dynamic data for each graphic.
4. Dynamic graphic data.
5. 1,000 separate graphic pages.
6. Modify graphic screen refresh rate between 1 and 60 seconds.

E. Operator Station:

1. Accept data from LAN as needed without scanning entire network for updated point data.
2. Interrogate LAN for updated point data when requested.
3. Allow operator command of devices.
4. Allow operator to place specific control units in or out of service.
5. Allow parameter editing of control units.
6. Store duplicate data base for every control unit and allow down loading while system is on line.
7. Control or modify specific programs.
8. Develop, store and modify dynamic color graphics.
9. Data archiving of assigned points and support overlay graphing of this data using up to four (4) variables.

F. Alarm Processing:

1. Off normal condition: Cause alarm and appropriate message, including time, system, point descriptor, and alarm condition. Select alarm state or value and alarms causing automatic dial-out.
2. Critical alarm or change-of-state: Display message, stored on disk for review and sort, or print.
3. Print on line changeable message, up to 60 characters in length, for each alarm point specified.
4. Display alarm reports on video. Display multiple alarms in order of occurrence.
5. Define time delay for equipment start-up or shutdown.
6. Allow unique routing of specific alarms.
7. Operator specifies when alarm requires acknowledgment.
8. Continue to indicate unacknowledged alarms after return to normal.
9. Alarm notification:
10. Print automatically.
11. Display indicating alarm condition.
12. Selectable audible alarm indication.

G. Event Processing: Automatically initiate commands, user defined messages, take specific control actions or change control strategy and application programs resulting from event condition. Event condition may be value crossing operator defined limit, change of state, specified state, or alarm occurrence or return to normal.

H. Automatic Restart: Automatically start field equipment on restoration of power. Furnish time delay between individual equipment restart and time of day start/stop.

I. Messages:

1. Automatically display or print user-defined message subsequent to occurrence of selected events.
2. Compose, change, or delete message.
3. Display or log message at any time.
4. Assign any message to event.

J. Reports:

1. Manually requested with time and date.
2. Long term data archiving to hard disk.
3. Automatic directives to download to transportable media including floppy diskettes for storage.
4. Data selection methods to include data base search and manipulation.
5. Data extraction with mathematical manipulation.
6. Data reports to allow development of XY curve plotting, tabular reports (both statistical and summary), and multi-point timed based plots with not less than four (4) variables displayed.
7. Generating reports either normally at operator direction, or automatically under workstation direction.
8. Either manually display or print reports. Automatically print reports on daily, weekly, monthly, yearly or scheduled basis.
9. Include capability for statistical data manipulation and extraction.
10. Capability to generate four types of reports: Statistical detail reports, summary reports, trend graphic plots, x-y graphic plots.

K. Parameter Save/Restore: Store most current operating system, parameter changes, and modifications on disk or diskette.

L. Data Collection:

1. Automatically collect and store in disk files.
2. Daily electrical energy consumption, peak demand, and time of peak demand for up to electrical meters over 2-year period.
3. Daily consumption for up to 30 meters over a 2 year period.
4. Daily billable electrical energy consumption and time for up to 1024 zones over a 10 year period.
5. Archiving of stored data for use with system supplied custom reports.

M. Graphic Display: Support graphic development on work station with software features:

1. Page linking.
2. Generate, store, and retrieve library symbols.
3. Single or double height characters.
4. Sixty (60) dynamic points of data for each graphic page.
5. Pixel level resolution.
6. Animated graphics for discrete points.
7. Analog bar graphs.
8. Display real time value of each input or output line diagram fashion.

N. Maintenance Management:

1. Run time monitoring, for each point.
2. Maintenance scheduling targets with automatic annunciation, scheduling and shutdown.
3. Equipment safety targets.
4. Display of maintenance material and estimated labor.
5. Target point reset, for each point.

O. Advisories:

1. Summary containing status of points in locked out condition.
2. Continuous operational or not operational report of interrogation of system hardware and programmable control units for failure.
3. Report of power failure detection, time and date.
4. Report of communication failure with operator device, field interface unit, point and programmable control unit.

2.6 LOAD CONTROL PROGRAMS

A. General: Support inch-pounds and S.I. metric units of measurement.

B. Demand Limiting:

1. Monitor total power consumption for each power meter and shed associated loads automatically to reduce power consumption to an operator set maximum demand level.
2. Input: Pulse count from incoming power meter connected to pulse accumulator in control unit.

3. Forecast demand (kW): Predicted by sliding window method.
4. Automatically shed loads throughout the demand interval selecting loads with independently adjustable on and off time of between one and 255 minutes.
5. Demand Target: Minimum of 3 for each demand meter; change targets based upon (1) time, (2) status of pre-selected points, or (3) temperature.
6. Load: Assign load shed priority, minimum "ON" time and maximum "OFF" time.
7. Limits: Include control band (upper and lower limits).
8. Output advisory when loads are not available to satisfy required shed quantity, advise shed requirements and requiring operator acknowledgment.

C. Duty Cycling:

1. Periodically stop and start loads, based on space temperature, and according to various On/Off patterns.
2. Modify off portion of cycle based on operator specified comfort parameters. Maintain total cycle time by increasing on portion of cycle by equal quantity off portion is reduced.
3. Set and modify following parameters for each individual load.

    a. Minimum and maximum off time.
    b. On/Off time in one-minute increments.
    c. Time period from beginning of interval until cycling of load.
    d. Manually override the DDC program and place a load in an On or Off state.
    e. Cooling Target Temperature and Differential.
    f. Heating Target Temperature and Differential.
    g. Cycle off adjustment.

D. Automatic Time Scheduling:

1. Self-contained programs for automatic start/stop/scheduling of building loads.
2. Support up to seven (7) normal day schedules, seven (7) "special day" schedules and two (2) temporary day schedules.
3. Special day’s schedule supporting up to 30 unique date/duration combinations.
4. Number of loads assigned to time program; with each load having individual time program.
5. Each load assigned at least 16 control actions for each day with 1 minute resolution.
6. Furnish the following time schedule operations:

    a. Start.
    b. Optimized Start.
    c. Stop.
    d. Optimized Stop.
    e. Cycle.
    f. Optimized Cycle.
7. Capable of specifying minimum of 30 holiday periods up to 100 days in length for the year.
8. Create temporary schedules.
9. Broadcast temporary "special day" date and duration.

E. Start/Stop Time Optimization:

1. Perform optimized start/stop as function of outside conditions, inside conditions, or both.
2. Adaptive and self-tuning, adjusting to changing conditions unattended.

3. For each point under control, establish and modify:

    a. Occupancy period.
    b. Desired temperature at beginning of occupancy period.
    c. Desired temperature at end of occupancy period.

F. Night Setback/Setup Program: Reduce heating space temperature set point or raise cooling space temperature set-point during unoccupied hours; in conjunction with scheduled start/stop and optimum start/stop programs.

G. Calculated Points: Define calculations and totals computed from monitored points (analog/digital points), constants, or other calculated points.

1. Employ arithmetic, algebraic, Boolean, and special function operations.
2. Treat calculated values like any other analog value; use for any function where a "hard wired point" might be used.

H. Event Initiated Programming: Any data point capable of initiating event, causing series of controls in a sequence.

1. Define time interval between each control action between 0 to 3600 seconds.
2. Output may be analog value.
3. Provide for "skip" logic.
4. Verify completion of one action before proceeding to next action. When not verified, program capable of skipping to next action.

I. Direct Digital Control: Furnish with each control unit Direct Digital Control software so operator is capable of customizing control strategies and sequences of operation by defining appropriate control loop algorithms and choosing optimum loop parameters.

1. Control loops: Defined using "modules" are analogous to standard control devices.
2. Output: Paired or individual digital outputs for pulse width modulation, and analog outputs.
3. Firmware:

    a. PID with analog or pulse-width modulation output.
    b. Floating control with pulse-width modulated outputs.
    c. Two-position control.
    d. Primary and secondary reset schedule selector.
    e. Hi/Low signal selector.
    f. Single pole double-throw relay.
    g. Single pole double throw time delay relay with delay before break, delay before make and interval time capabilities.
4. Direct Digital Control loop: Downloaded upon creation or on operator request. On sensor failure, program executes user defined failsafe output.
5. Display: Value or state of each of lines interconnecting DDC modules.

J. Fine Tuning Direct Digital Control PID or floating loops:

1. Display information:

    a. Control loop being tuned.

b. Input (process) variable.
c. Output (control) variable.
d. Set-point of loop.
e. Proportional band.
f. Integral (reset) Interval.
g. Derivative (rate) Interval.

2. Display format: Graphic, with automatic scaling; with input and output variable superimposed on graph of "time" versus "variable".

K. Trend logging:

1. Each control unit capable of storing samples of control unit's data points.
2. Update file continuously at operator assigned intervals.
3. Automatically initiate upload requests and then stores data on hard disk.
4. Time synchronize sampling at operator specified times and intervals with sample resolution of one minute.
5. Co-ordinate sampling with specified on/off point- state.
6. Display trend samples on workstation in graphic format. Automatically scale trend graph with minimum 60 samples of data in plot of time versus data.

2.7 HVAC CONTROL PROGRAMS

A. General:

1. Support Inch-pounds and S.I. metric units of measurement.
2. Identify each HVAC Control system.

B. Optimal Run Time:

1. Control start-up and shutdown times of HVAC equipment for both heating and cooling.
2. Base on occupancy schedules, outside air temperature, seasonal requirements, and interior room mass temperature.
3. Start-up systems by using outside air temperature, room mass temperatures, and adaptive model prediction for how long building takes to warm up or cool down under different conditions.
4. Use outside air temperature to determine early shut down with ventilation override.
5. Analyze multiple building mass sensors to determine seasonal mode and worse case condition for each day.
6. Operator commands:

a. Define term schedule.
b. Add/delete fan status point.
c. Add/delete outside air temperature point.
d. Add/delete mass temperature point.
e. Define heating/cooling parameters.
f. Define mass sensor heating/cooling parameters.
g. Lock/unlock program.
h. Request optimal run-time control summary.
i. Request optimal run-time mass temperature summary.
j. Request HVAC point summary.
k. Request HVAC saving profile summary.

7. Control Summary:

    a. HVAC Control system begin/end status.
    b. Optimal run time lock/unlock control status.
    c. Heating/cooling mode status.
    d. Optimal run time schedule.
    e. Start/Stop times.
    f. Selected mass temperature point ID.
    g. Optimal run-time system normal start-times.
    h. Occupancy and vacancy times.
    i. Optimal run time system heating/cooling mode parameters.
8. Mass temperature summary:

    a. Mass temperature point type and ID.
    b. Desired and current mass temperature values.
    c. Calculated warm-up/cool-down time for each mass temperature.
    d. Heating/cooling season limits.
    e. Break point temperature for cooling mode analysis.
9. HVAC point summary:

    a. Control system identifier and status.
    b. Point ID and status.
    c. Outside air temperature point ID and status.
    d. Mass temperature point ID and status.
    e. Calculated optimal start and stop times.
    f. Period start.

C. Enthalpy Switchover:

1. Calculate outside and return air enthalpy using measured temperature and relative humidity; determine energy expended and control outside and return air dampers.
2. Operator commands:

    a. Add/delete fan status point.
    b. Add/delete outside air temperature point.
    c. Add/delete discharge controller point.
    d. Define discharge controller parameters.
    e. Add/delete return air temperature point.
    f. Add/delete outside air dewpoint/humidity point.
    g. Add/delete return air dewpoint/humidity point.
    h. Add/delete damper switch.
    i. Add/delete minimum outside air.
    j. Add/delete atmospheric pressure.
    k. Add/delete heating override switch.
    l. Add/delete evaporative cooling switch.
    m. Add/delete air flow rate.
    n. Define enthalpy deadband.
    o. Lock/unlock program.
    p. Request control summary.
    q. Request HVAC point summary.
3. Control summary:

a. HVAC control system begin/end status.
b. Enthalpy switchover optimal system status.
c. Optimal return time system status.
d. Current outside air enthalpy.
e. Calculated mixed air enthalpy.
f. Calculated cooling cool enthalpy using outside air.
g. Calculated cooling cool enthalpy using mixed air.
h. Calculated enthalpy difference.
i. Enthalpy switchover deadband.
j. Status of damper mode switch.

2.8 PROGRAMMING APPLICATION FEATURES

A. Trend Point:

1. Sample multiple points, real or computed, with each point capable of collecting all samples at intervals specified in minutes, hours, days, or month.
2. Output trend logs as line-graphs or bar graphs. Output graphic on terminal, with each point for line and bar graphs designated with a unique pattern and color, vertical scale either actual values or percent of range, and horizontal scale time base. Print trend logs up to 12 columns of one point/column.

B. Alarm Messages:

1. Allow definition of multiple messages, each having minimum length of 120 characters for each individual message.
2. Assign alarm messages to system messages including point's alarm condition, point's off-normal condition, totaled point's warning limit, hardware elements advisories.
3. Output assigned alarm with "message requiring acknowledgment".
4. Operator commands include define, modify, or delete; output summary listing current alarms and assignments; output summary defining assigned points.

C. Weekly Scheduling:

1. Automatically initiate equipment or system commands, based on selected time schedule for points specified.
2. Program times for each day of week, for each point, with one minute resolution.
3. Automatically generate alarm output for points not responding to command.
4. Allow for holidays, minimum of 366 consecutive holidays.
5. Operator commands:

a. System logs and summaries.
b. Start of stop point.
c. Lock or unlock control or alarm input.
d. Add, delete, or modify analog limits and differentials.
e. Adjust point operation position.
f. Change point operational mode.
g. Open or close point.
h. Enable/disable, lock/unlock, or execute interlock sequence or computation profile.
i. Begin or end point totals.
j. Modify total values and limits.

k. Access or secure point.
l. Begin or end HVAC or load control system.
m. Modify load parameter.
n. Modify demand limiting and duty cycle targets.

6. Output summary: Listing of programmed function points, associated program times, and respective day of week programmed points by software groups or time of day.

D. Interlocking:

1. Permit events to occur, based on changing condition of one or more associated master points.
2. Binary contact, high/low limit of analog point or computed point capable of being used as master. Master capable of monitoring or commanding multiple slaves.
3. Operator commands:

a. Define single master/multiple master interlock process.
b. Define logic interlock process.
c. Lock/unlock program.
d. Enable/disable interlock process.
e. Execute terminate interlock process.
f. Request interlock type summary.

2.9 DDC SYSTEM CONTROLLERS

A. Field Equipment Controller (FEC):

1. The Field Equipment Controller (FEC) shall be a fully user-programmable, digital controller that communicates via BACnet MS/TP protocol.
2. The FEC shall employ a finite state control engine to eliminate unnecessary conflicts between control functions at crossover points in their operational sequences. Suppliers using non-state based DDC shall provide separate control strategy diagrams for all controlled functions in their submittals.
3. Controllers shall be factory/field programmed with a continuous adaptive tuning algorithm that senses changes in the physical environment and continually adjusts loop tuning parameters appropriately.
4. The FEC shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.
5. The FEC shall include a removable base to allow pre-wiring without the controller.
6. The FEC shall include troubleshooting LED indicators to identify the following conditions:

a. Power On
b. Power Off
c. Download or Startup in progress, not ready for normal operation
d. No Faults
e. Device Fault
f. Field Controller Bus - Normal Data Transmission
g. Field Controller Bus - No Data Transmission
h. Field Controller Bus - No Communication
i. Sensor-Actuator Bus - Normal Data Transmission
j. Sensor-Actuator Bus - No Data Transmission
k. Sensor-Actuator Bus - No Communication

7. The FEC shall accommodate the direct wiring of analog and binary I/O field points.
8. The FEC shall support the following types of inputs and outputs:

    a. Universal Inputs - shall be configured to monitor any of the following:
        1) Analog Input, Voltage Mode
        2) Analog Input, Current Mode
        3) Analog Input, Resistive Mode
        4) Binary Input, Dry Contact Maintained Mode
        5) Binary Input, Pulse Counter Mode
    b. Binary Inputs - shall be configured to monitor either of the following:
        1) Dry Contact Maintained Mode
        2) Pulse Counter Mode
    c. Analog Outputs - shall be configured to output either of the following
        1) Analog Output, Voltage Mode
        2) Analog Output, current Mode
    d. Binary Outputs - shall output the following:
        1) 24 VAC Triac
    e. Configurable Outputs - shall be capable of the following:
        1) Analog Output, Voltage Mode
        2) Binary Output Mode
9. The FEC shall have the ability to reside on a Field Controller Bus (FC Bus).

    a. The FC Bus shall be a Master-Slave/Token-Passing (MS/TP) Bus supporting BACnet Standard protocol SSPC-135, Clause 9.
    b. The FC Bus shall support communications between the FECs and the NAE/AS.
    c. The FC Bus shall also support Input/Output Module (IOM) communications with the FEC and with the NAE/AS.
    d. The FC Bus shall support a minimum of 50 IOMs and FEC in any combination.
    e. The FC Bus shall operate at a maximum distance of 15,000 Ft. between the FEC and the furthest connected device.
10. The FEC shall have the ability to monitor and control a network of sensors and actuators over a Sensor-Actuator Bus (SA Bus).

    a. The SA Bus shall be a Master-Slave/Token-Passing (MS/TP) Bus supporting BACnet Standard protocol SSPC-135, Clause 9.
    b. The SA Bus shall support a minimum of 10 devices per trunk.
    c. The SA Bus shall operate at a maximum distance of 1,200 Ft. between the FEC and the furthest connected device.
11. The FEC shall have the capability to execute complex control sequences involving direct wired I/O points as well as input and output devices communicating over the FC Bus or the SA Bus.
12. The FEC shall support, but not be limited to, the following:

    a. Hot water, chilled water/central plant applications
    b. Built-up air handling units for special applications
    c. Terminal units
    d. Special programs as required for systems control

2.10 FIELD DEVICES

A. Input/Output Module (IOM):

1. The Input/Output Module (IOM) provides additional inputs and outputs for use in the FEC.
2. The IOM shall communicate with the FEC over either the FC Bus or the SA Bus using BACnet Standard protocol SSPC-135, Clause 9.
3. The IOM shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.
4. The IOM shall have a minimum of 4 points to a maximum of 17 points.
5. The IOM shall support the following types of inputs and outputs:

    a. Universal Inputs - shall be configured to monitor any of the following:
        1) Analog Input, Voltage Mode
        2) Analog Input, Current Mode
        3) Analog Input, Resistive Mode
        4) Binary Input, Dry Contact Maintained Mode
        5) Binary Input, Pulse Counter Mode
    b. Binary Inputs - shall be configured to monitor either of the following:
        1) Dry Contact Maintained Mode
        2) Pulse Counter Mode
    c. Analog Outputs - shall be configured to output either of the following
        1) Analog Output, Voltage Mode
        2) Analog Output, current Mode
    d. Binary Outputs - shall output the following:
        1) 24 VAC Triac
    e. Configurable Outputs - shall be capable of the following:
        1) Analog Output, Voltage Mode
        2) Binary Output Mode
6. The IOM shall include troubleshooting LED indicators to identify the following conditions:

    a. Power On
    b. Power Off
    c. Download or Startup in progress, not ready for normal operation
    d. No Faults
    e. Device Fault
    f. Normal Data Transmission
    g. No Data Transmission
    h. No Communication

B. Networked Thermostat (TEC):

1. The Networked Thermostats shall be capable of controlling the following:

    a. A four pipe fan coil system with multi-speed fan control.
    b. A pressure dependant Variable Air Volume System or similar zoning type system using reheat.
    c. A two pipe fan coil with a single speed fan.
2. The Networked Thermostat shall communicate over the Field Controller Bus using BACnet Standard protocol SSPC-135, Clause 9.

    a. The Networked Thermostat shall support remote read/write and parameter adjustment from the web based User Interfaceable through a Network Automation Engine.
3. The Networked Thermostat shall include an intuitive User Interface providing plain text messages.

a. Two line, 8 character backlit display
b. LED indicators for Fan, Heat, and Cool status
c. Five (5) User Interface Keys
    1) Mode
    2) Fan
    3) Override
    4) Degrees C/F
    5) Up/Down
d. The display shall continuously scroll through the following parameters:
    1) Room Temperature
    2) System Mode
    3) Schedule Status – Occupied/Unoccupied/Override
    4) Applicable Alarms

4. The Networked Thermostats shall provide the flexibility to support the following inputs:

    a. Integral Indoor Air Temperature Sensor
    b. Duct Mount Air Temperature Sensor
    c. Remote Indoor Air Temperature Sensor with Occupancy Override and LED Indicator.
    d. Two configurable binary inputs

5. The Networked Thermostats shall provide the flexibility to support the following outputs:

    a. Three Speed Fan Control
    b. On/Off Control
    c. Floating Control
    d. Proportional (0 to 10V) Control

6. The Networked Thermostat shall provide a minimum of six (6) levels of keypad lockout.
7. The Networked Thermostat shall provide the flexibility to adjust the following parameters:

    a. Adjustable Temporary Occupancy from 0 to 24 hours
    b. Adjustable heating/cooling deadband from 2º F to 5º F
    c. Adjustable heating/cooling cycles per hour from 4 to 8

8. The Networked Thermostat shall employ nonvolatile electrically erasable programmable read-only memory (EEPROM) for all adjustable parameters.

C. VAV Modular Assembly (VMA):

1. The VAV Modular Assembly shall provide both standalone and networked direct digital control of pressure-independent, variable air volume terminal units. It shall address both single and dual duct applications.
2. The VAV Modular Assembly shall communicate over the FC Bus using BACnet Standard protocol SSPC-135, Clause 9.
3. The VAV Modular Assembly shall have internal electrical isolation for AC power, DC inputs, and MS/TP communications. An externally mounted isolation transformer shall not be acceptable.
4. The VAV Modular Assembly shall be a configurable digital controller with integral differential pressure transducer and damper actuator. All components shall be connected and mounted as a single assembly that can be removed as one piece.
5. The VAV Modular Assembly shall be assembled in a plenum-rated plastic housing with flammability rated to UL94-5VB.

6. The integral damper actuator shall be a fast response stepper motor capable of stroking 90 degrees in 30 seconds for quick damper positioning to speed commissioning and troubleshooting tasks.
7. The controller shall determine airflow by dynamic pressure measurement using an integral dead-ended differential pressure transducer. The transducer shall be maintenance-free and shall not require air filters.
8. Each controller shall have the ability to automatically calibrate the flow sensor to eliminate pressure transducer offset error due to ambient temperature / humidity effects.
9. The controller shall utilize a proportional plus integration (PI) algorithm for the space temperature control loops.
10. Each controller shall continuously, adaptively tune the control algorithms to improve control and controller reliability through reduced actuator duty cycle. In addition, this tuning reduces commissioning costs, and eliminates the maintenance costs of manually re-tuning loops to compensate for seasonal or other load changes.
11. The controller shall provide the ability to download and upload VMA configuration files, both locally and via the communications network. Controllers shall be able to be loaded individually or as a group using a zone schedule generated spreadsheet of controller parameters.
12. Control setpoint changes initiated over the network shall be written to VMA non-volatile memory to prevent loss of setpoint changes and to provide consistent operation in the event of communication failure.
13. The controller firmware shall be flash-upgradeable remotely via the communications bus to minimize costs of feature enhancements.
14. The controller shall provide fail-soft operation if the airflow signal becomes unreliable, by automatically reverting to a pressure-dependent control mode.
15. The controller shall interface with balancer tools that allow automatic recalculation of box flow pickup gain (“K” factor), and the ability to directly command the airflow control loop to the box minimum and maximum airflow setpoints.
16. Controller performance shall be self-documenting via on-board diagnostics. These diagnostics shall consist of control loop performance measurements executing at each control loop’s sample interval, which may be used to continuously monitor and document system performance. The VMA shall calculate exponentially weighted moving averages (EWMA) for each of the following. These metrics shall be available to the end user for efficient management of the VAV terminals.

    a. Absolute temperature loop error.
    b. Signed temperature loop error.
    c. Absolute airflow loop error.
    d. Signed airflow loop error.
    e. Average damper actuator duty cycle.
17. The controller shall detect system error conditions to assist in managing the VAV zones. The error conditions shall consist of:

    a. Unreliable space temperature sensor.
    b. Unreliable differential pressure sensor.
    c. Starved box.
    d. Actuator stall
    e. Insufficient cooling.
    f. Insufficient heating.
    g. The controller shall provide a flow test function to view damper position vs. flow in a graphical format. The information would alert the user to check damper position.

The VMA would also provide a method to calculate actuator duty cycle as an indicator of damper actuator runtime.

18. The controller shall provide a compliant interface for ASHRAE Standard 62-1989 (indoor air quality), and shall be capable of resetting the box minimum airflow Based on the percent of outdoor air in the primary air stream.
19. The controller shall comply with ASHRAE Standard 90.1 (energy efficiency) by preventing simultaneous heating and cooling, and where the control strategy requires reset of airflow while in reheat, by modulating the box reheat device fully open prior to increasing the airflow in the heating sequence.
20. Inputs:

    a. Analog inputs with user defined ranges shall monitor the following analog signals, without the addition of equipment outside the terminal controller cabinet:
        1) 0-10 VDC Sensors
        2) 1000ohm RTDs
        3) NTC Thermistors
    b. Binary inputs shall monitor dry contact closures. Input shall provide filtering to eliminate false signals resulting from input “bouncing.”
    c. For noise immunity, the inputs shall be internally isolated from power, communications, and output circuits.
    d. Provide side loop application for humidity control.
21. Outputs:

    a. Analog outputs shall provide the following control outputs:
    b. 0-10 VDC
    c. Binary outputs shall provide a SPST Triac output rated for 500mA at 24 VAC.
    d. For noise immunity, the outputs shall be internally isolated from power, communications, and other output circuits.
22. Application Configuration:

    a. The VAV Modular Assembly shall be configured with a software tool that provides a simple Question/Answer format for developing applications and downloading.
23. Sensor Support:

    a. The VAV Modular Assembly shall communicate over the Sensor-Actuator Bus (SA Bus) with a Network Sensor.
    b. The VMA shall support an LCD display room sensor.
    c. The VMA shall also support standard room sensors as defined by analog input requirements.
    d. The VMA shall support humidity sensors defined by the AI side loop.

D. Network Sensors (NS):

1. The Network Sensors (NS) shall have the ability to monitor the following variables as required by the systems sequence of operations:

    a. Zone Temperature
    b. Zone humidity
    c. Zone setpoint
2. The NS shall transmit the zone information back to the controller on the Sensor-Actuator Bus (SA Bus) using BACnet Standard protocol SSPC-135, Clause 9.
3. The Network Sensors shall include the following items:

a. A backlit Liquid Crystal Display (LCD) to indicate the Temperature, Humidity and Setpoint.
b. An LED to indicate the status of the Override feature.
c. A button to toggle the temperature display between Fahrenheit and Celsius.
d. A button to initiate a timed override command

4. The NS shall be available with either screw terminals or phone jack.
5. The NS shall be available in either surface mount or wall mount styles.

2.11 SYSTEM TOOLS

A. System Configuration Tool (SCT):

1. The Configuration Tool shall be a software package enabling a computer platform to be used as a stand-alone engineering configuration tool for a Network Automation Engine (NAE) or a Network Integration Engine (NIE).
2. The configuration tool shall provide an archive database for the configuration and application data.
3. The configuration tool shall have the same look-and-feel at the User Interface (UI) regardless of whether the configuration is being done online or offline.
4. The configuration tool shall include the following features:

a. Basic system navigation tree for connected networks
b. Integration of Metasys N1, LonWorks, and BACnet enabled devices
c. Customized user navigation trees
d. Point naming operating parameter setting
e. Graphic diagram configuration
f. Alarm and event message routing
g. Graphical logic connector tool for custom programming
h. Downloading, uploading, and archiving databases

5. The configuration tool shall have the capability to automatically discover field devices on connected buses and networks. Automatic discovery shall be available for the following field devices:

a. BACnet Devices
b. LonWorks devices
c. N2 Bus devices
d. Metasys N1 networks

6. The configuration tool shall be capable of programming the Field Equipment Controllers.

a. The configuration tool shall provide the capability to configure, simulate, and commission the Field Equipment Controllers.
b. The configuration tool shall allow the FECs to be run in Simulation Mode to verify the applications.
c. The configuration tool shall contain a library of standard applications to be used for configuration.

7. The configuration tool shall be capable of programming the field devices.

a. The configuration tool shall provide the capability to configure, simulate, and commission the field devices.
b. The configuration tool shall allow the field devices to be run in Simulation Mode to verify the applications.

c. The configuration tool shall contain a library of standard applications to be used for configuration

8. A wireless access point shall allow a wireless enabled portable PC to make a temporary Ethernet connection to the automation network.

   a. The wireless connection shall allow the PC to access configuration tool through the web browser using the User Interface (UI).
   b. The wireless use of configuration tool shall be the same as a wired connection in every respect.
   c. The wireless connection shall use the Bluetooth Wireless Technology.

2.12 INPUT DEVICES

A. General Requirements:

1. Installation, testing, and calibration of all sensors, transmitters, and other input devices shall be provided to meet the system requirements.

B. Temperature Sensors:

1. General Requirements:

   a. Sensors and transmitters shall be provided, as outlined in the input/output summary and sequence of operations.
   b. All temperature devices shall use precision thermistors accurate to +/- 1 degree F over a range of -30 to 230 degrees F. Space temperature sensors shall be accurate to +/- .5 degrees F over a range of 40 to 100 degrees F.
   c. The following point types (and the accuracy of each) are required, and their associated accuracy values include errors associated with the sensor, lead wire, and A to D conversion:

Point Type	Accuracy
Chilled Water	+ .5°F.
Room Temp	+ .5°F.
Duct Temperature	+ .5°F.
All Others	+ .75°F.

2. Room Temperature Sensors:

   a. Room sensors shall be constructed for either surface or wall box mounting.
   b. Room sensors shall have the following options when specified:
      1) Setpoint reset slide switch providing a +3 degree (adjustable) range.
      2) Individual heating/cooling setpoint slide switches.
      3) A momentary override request push button for activation of after-hours operation.

4) Analog thermometer.

3. Room Temperature Sensors with Integral Display:

   a. Room sensors shall be constructed for either surface or wall box mounting.
   b. Room sensors shall have an integral LCD display and four button keypad with the following capabilities:
      1) Display room and outside air temperatures.
      2) Display and adjust room comfort setpoint.
      3) Display and adjust fan operation status.
      4) Timed override request push button with LED status for activation of after-hours operation.
      5) Display controller mode.
      6) Password selectable adjustment of setpoint and override modes.

4. Thermo Wells:

   a. When thermo wells are required, the sensor and well shall be supplied as a complete assembly, including wellhead and Greenfield fitting.
   b. Thermo wells shall be pressure rated and constructed in accordance with the system working pressure.
   c. Thermo wells and sensors shall be mounted in a threadolet or 1/2” NFT saddle and allow easy access to the sensor for repair or replacement.
   d. Thermo wells shall be constructed of 316 stainless steel.

5. Outside Air Sensors:

   a. Outside air sensors shall be designed to withstand the environmental conditions to which they will be exposed. They shall also be provided with a solar shield.
   b. Sensors exposed to wind velocity pressures shall be shielded by a perforated plate that surrounds the sensor element.
   c. Temperature transmitters shall be of NEMA 3R construction and rated for ambient temperatures.

6. Duct Mount Sensors:

   a. Duct mount sensors shall mount in an electrical box through a hole in the duct, and be positioned so as to be easily accessible for repair or replacement.
   b. Duct sensors shall be insertion type and constructed as a complete assembly, including lock nut and mounting plate.
   c. For outdoor air duct applications, a weatherproof mounting box with weatherproof cover and gasket shall be used.

7. Averaging Sensors:

   a. For ductwork greater in any dimension that 48 inches and/or where air temperature stratification exists, an averaging sensor with multiple sensing points shall be used.
   b. For plenum applications, such as mixed air temperature measurements, a string of sensors mounted across the plenum shall be used to account for stratification and/or air turbulence. The averaging string shall have a minimum of 4 sensing points per 12-foot long segment.
   c. Capillary supports at the sides of the duct shall be provided to support the sensing string.
   d. Acceptable Manufacturers: Johnson Controls, Setra, Siemens.

C. Humidity Sensors:

1. The sensor shall be a solid-state type, relative humidity sensor of the Bulk Polymer Design. The sensor element shall resist service contamination.
2. The humidity transmitter shall be equipped with non-interactive span and zero adjustments, a 2-wire isolated loop powered, 4-20 mA, 0-100% linear proportional output.
3. The humidity transmitter shall meet the following overall accuracy, including lead loss and Analog to Digital conversion. 3% between 20% and 80% RH @ 77 Deg F unless specified elsewhere.
4. Outside air relative humidity sensors shall be installed with a rain proof, perforated cover. The transmitter shall be installed in a NEMA 3R enclosure with sealtite fittings and stainless steel bushings.
5. A single point humidity calibrator shall be provided, if required, for field calibration. Transmitters shall be shipped factory pre-calibrated.
6. Duct type sensing probes shall be constructed of 304 stainless steel, and shall be equipped with a neoprene grommet, bushings, and a mounting bracket.
7. Acceptable Manufacturers: Johnson Controls, Veris Industries, Siemens and Mamac.

D. Carbon Dioxide Sensors:

1. Provide a complete installation of ETL certified to ANSI/UL 61010-1, CAN/CSA C22.2 No 61010-1, EN 61010:2010, IEC 61010:2010 IAQ Point 2 sensors which will provide continuous readings of Carbon Dioxide (CO2) and optional Temperature and Relative Humidity which will facilitate demand controlled ventilation. These sensors will be capable of interlocking with visual and audible alarms, horns, louvers, drives, VAV's, make-up air and or exhaust systems with its built in dry contacts, digital and analog outputs.

    a. Dedicated 4-20 mA output signal for each of the following parameters: CO2, Temperature and Relative Humidity to interface with the BAS. The sensor shall use Non-Dispersive Infrared sensing technology (NDIR) and be able to monitor Carbon Dioxide (CO2) concentration within two selectable ranges: 0-2000 ppm or 0-5000 ppm with an accuracy of +/- 30ppm, +/- 3% of reading at 25□C. The 1.9" H x 2.6" W multicolor touch screen display shall be easy to navigate and menu driven to allow a customizable display readings.
    b. The detector shall also be able to simultaneously monitor the ambient temperature (either in Celsius or Fahrenheit) and the Relative Humidity in addition to Carbon Dioxide levels. The temperature range shall be within +/-0.5 deg C at 25□C and 50% rH +/- 1.5 deg C over range. The relative humidity range shall be within +/-5% at 25 deg C and 50% rH.
    c. The detector's power requirements are 20 to 30 Vac or 18 to 28 Vdc (150mA minimum and 281 mA maximum). The single dry contact DPDT relay shall be rated 3A @ 250Vac / 3A @ 30Vdc.
    d. The IAQ Point 2 Carbon Dioxide detector shall have a footprint not larger than 3"x 4.6" x 1.5"(WxHxD). It shall be easily installed into an electrical box when wall-mounted and shall be also available in a duct-mount version.
    e. Acceptable Manufacturers: Honeywell Analytics, Veris Industries, GE.

E. Differential Pressure Transmitters:

1. General Air and Water Pressure Transmitter Requirements:

    a. Pressure transmitters shall be constructed to withstand 100% pressure over-range without damage, and to hold calibrated accuracy when subject to a momentary 40% over-range input.

b. Pressure transmitters shall transmit a 0 to 5 VDC, 0 to 10 VDC, or 4 to 20 mA output signal.
c. Differential pressure transmitters used for flow measurement shall be sized to the flow sensing device, and shall be supplied with Tee fittings and shut-off valves in the high and low sensing pick-up lines to allow the balancing Contractor and Owner permanent, easy-to-use connection.
d. A minimum of a NEMA 1 housing shall be provided for the transmitter. Transmitters shall be located in accessible local control panels wherever possible.

2. Low Differential Water Pressure Applications (0” - 20” w.c.)

a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of flow meter differential pressure or water pressure sensing points.
b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
    1) .01-20” w.c. input differential pressure range.
    2) 4-20 mA output.
    3) Maintain accuracy up to 20 to 1 ratio turndown.
    4) Reference Accuracy: +0.2% of full span.
c. Acceptable Manufacturers: Setra and Mamac.

3. Medium to High Differential Water Pressure Applications (Over 21” w.c.)

a. The differential pressure transmitter shall meet the low pressure transmitter specifications with the following exceptions:
    1) Differential pressure range 10” w.c. to 300 PSI.
    2) Reference Accuracy: +1% of full span (includes non-linearity, hysteresis, and repeatability).
b. Standalone pressure transmitters shall be mounted in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with high and low connections piped and valved. Air bleed units, bypass valves, and compression fittings shall be provided.
c. Acceptable Manufacturers: Setra and Mamac.

4. Building Differential Air Pressure Applications (-1” to +1” w.c.)

a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.
b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
    1) -1.00 to +1.00 w.c. input differential pressure ranges. (Select range appropriate for system application)
    2) 4-20 mA output.
    3) Maintain accuracy up to 20 to 1 ratio turndown.
    4) Reference Accuracy: +0.2% of full span.
c. Acceptable Manufacturers: Johnson Controls and Setra.

5. Low Differential Air Pressure Applications (0” to 5” w.c.)

a. The differential pressure transmitter shall be of industrial quality and transmit a linear, 4 to 20 mA output in response to variation of differential pressure or air pressure sensing points.

b. The differential pressure transmitter shall have non-interactive zero and span adjustments that are adjustable from the outside cover and meet the following performance specifications:
   1) (0.00 - 1.00" to 5.00") w.c. input differential pressure ranges. (Select range appropriate for system application.)
   2) 4-20 mA output.
   3) Maintain accuracy up to 20 to 1 ratio turndown.
   4) Reference Accuracy: +0.2% of full span.
c. Acceptable Manufacturers: Johnson Controls and Setra.

6. Medium Differential Air Pressure Applications (5" to 21" w.c.)

   a. The pressure transmitter shall be similar to the Low Air Pressure Transmitter, except that the performance specifications are not as severe. Differential pressure transmitters shall be provided that meet the following performance requirements:
      1) Zero & span: (c/o F.S./Deg. F): .04% including linearity, hysteresis and repeatability.
      2) Accuracy: 1% F.S. (best straight line) Static Pressure Effect: 0.5% F.S. (to 100 PSIG.
      3) Thermal Effects: <+.033 F.S./Deg. F. over 40°F. to 100°F. (calibrated at 70°F.).
   b. Standalone pressure transmitters shall be mounted in a bypass valve assembly panel. The panel shall be constructed to NEMA 1 standards. The transmitter shall be installed in the panel with high and low connections piped and valved. Air bleed units, bypass valves, and compression fittings shall be provided.
   c. Acceptable manufacturers: Johnson Controls and Setra.

F. Occupancy Sensor:

1. Type: Passive infrared.
2. Mounting: Flush.
3. Accessories:

   a. Time delay.
   b. Daylight sensor lockout.
   c. Sensitivity control.
   d. 180-degree field of view, with vertical sensing adjustment.

G. Gas and Specialty Sensors:

1. Oxygen Sensor and Transmitter:

   a. Transmitter can be either standalone or part of a network of transmitters.
   b. Unit shall be powered by <120 Vac (standalone only)> or< 24Vac/Vdc (standalone or network)>. Honeywell <E3SA/E3SAH (standalone)> or <E3SM (network) plus E3O2 oxygen cartridge.>
   c. The gas transmitter shall incorporate an electrochemical cell sensor for oxygen level detection. Unit sensing cell shall compensate for variations in relative humidity and temperature to maintain high levels of accuracy.
   d. For local activation of fans or louvers (or other equipment), on-board DPDT relays 5 A, 30 Vdc or 250 Vac (resistive load) shall be activated at programmable set points (and programmable time delays).

e. An LCD display shall provide local gas concentration readings. Transmitter shall be capable of operating within relative humidity ranges of 5-95% non-condensing and temperature ranges of -4° F to 104° F.
f. Unit shall be certified to ANSI/UL 61010-1 label and CAN/CSA-C22.2 No. 61010-1. Transmitter shall be manufactured in an ISO 9001-2000 production environment.
g. Standalone units shall include (2) DPDT Relays and a 4-20mA output.
h. Network sensors shall include (1) DPDT Relay and RS485-Modbus and bacnet MS/TP output (selectable).
i. The transmitter shall have a plug-in capability for a gas cartridge with a smart sensor capable of self-testing.
j. When system is used as network of transmitters, Honeywell 301-C-DLC controller shall be used. 301-C-DLC shall be capable of accepting up to (96) transmitters and will include option to add bacnet IP output (-BIP version)
k. Network system shall have ability to expand the number of available relays via a relay module (Honeywell 301-R8) which shall provide (8) programmable relays.

2. CO Sensors:

a. Unit will be certified to UL 2075. Transmitter shall be manufactured in an ISO 9001-2000 production environment.
b. Transmitter can be either standalone or part of a network of transmitters.
c. Unit shall be powered by <120 Vac (standalone only)> or <24Vac/Vdc (standalone or network)>. Honeywell <E3SA/E3SAH (standalone)> or <E3SM (network) plus E3SCO (carbon monoxide cartridge)>.
d. The gas transmitter will incorporate an electrochemical cell sensor for carbon monoxide level detection. Unit sensing cell must compensate for variations in relative humidity and temperature to maintain high levels of accuracy.
e. For local activation of fans or louvers (or other equipment), on-board DPDT relays 5 A, 30 Vdc or 250 Vac (resistive load) shall be activated at programmable set points (and programmable time delays).
f. An LCD display shall provide local gas concentration readings. Transmitter shall be capable of operating within relative humidity ranges of 5-95% non-condensing and temperature ranges of -4° F to 104° F.
g. Standalone units shall include (2) DPDT Relays and a 4-20mA output.
h. Network sensors shall include (1) DPDT Relay and RS485-Modbus and bacnet MS/TP output (selectable).
i. The transmitter shall have a plug-in capability for a gas cartridge with a smart sensor capable of self-testing
j. When system is used as network of transmitters, Honeywell 301-C-DLC controller to be used. 301-C-DLC is capable of accepting up to (96) transmitters and shall include option to add bacnet IP output (-BIP version)
k. Network system must have ability to expand the number of available relays via a relay module (Honeywell 301-R8) which shall provide (8) programmable relays

3. NO_2 / Diesel Fume Gas Sensor:

a. Transmitter can be either standalone or part of a network of transmitters.
b. Unit will be powered by <120 Vac (standalone only)> or<24Vac/Vdc (standalone or network)>. Honeywell <E3SA/E3SAH (standalone)> or <E3SM (network) plus E3NO2 (nitrogen dioxide cartridge)>.
c. The gas transmitter will incorporate an electrochemical cell sensor for nitrogen dioxide level detection. Unit sensing cell must compensate for variations in relative humidity and temperature to maintain high levels of accuracy.

d. For local activation of fans or louvers (or other equipment), on-board DPDT relays 5 A, 30 Vdc or 250 Vac (resistive load) will be activated at programmable set points (and programmable time delays).
e. An LCD display shall provide local gas concentration readings. Transmitter shall be capable of operating within relative humidity ranges of 5-95% non-condensing and temperature ranges of -4° F to 104° F.
f. Unit shall be certified to ANSI/UL 61010-1 label and and UL2075. Transmitter shall be manufactured in an ISO 9001-2000 production environment.
g. Standalone units shall include (2) DPDT Relays and a 4-20mA output.
h. Network sensors shall include (1) DPDT Relay and RS485-Modbus and bacnet MS/TP output (selectable).
i. The transmitter shall have a plug-in capability for a gas cartridge with a smart sensor capable of self-testing.
j. When system is used as network of transmitters, Honeywell 301-C-DLC controller shall be used. 301-C-DLC is capable of accepting up to (96) transmitters and will include option to add bacnet IP output (-BIP version)
k. Network system shall have ability to expand the number of available relays via a relay module (Honeywell 301-R8) which shall provide (8) programmable relays

H. Air Flow Monitoring:

1. Supply and Return Fan Inlet Air Flow Measuring Stations

a. Basis of design shall be EBTRON Model GTX108-F. Comparable product as manufactured by Greentrol, Kurz Instruments, or Sierra Instruments shall be submitted for review as a comparable product.
b. Fan Airflow Measurement Devices with Temperature and Airflow Alarming Capability.
c. Airflow measurement devices shall use the principle of thermal dispersion and provide one self-heated bead-in-glass thermistor and one zero power bead-in-glass thermistor at each sensing node.
d. General:
    1) Provide one AMD for each measurement location provided on the plans, schedules and/or control diagrams to determine the average airflow rate and temperature at each measurement location.
    2) Each AMD shall be provided with a microprocessor-based transmitter and one or more sensor probes.
        a) Devices that have electronic signal processing components on or in the sensor probe are not acceptable
    3) Airflow measurement shall be field configurable to determine the average actual or standard mass airflow rate.
        a) Actual airflow rate calculations shall have the capability of being corrected by the transmitter for altitudes other than sea level.
    4) Temperature measurement shall be field configurable with velocity weighted average as the default, or manual selection of arithmetic average temperature.
e. Sensor Probes:
    1) Sensor probes shall consist of one sensor node mounted on a 304 stainless steel block with two adjustable zinc plated steel rods connected to 304 stainless steel pivoting mounting feet.
    2) Sensor node internal wiring connections shall be sealed and protected from the elements and suitable for direct exposure to water.

3) Each sensor probe shall be provided with an integral, FEP jacket, plenum rated CMP/CL2P, UL/cUL Listed cable rated for exposures from -67°F to 392 °F and continuous and direct UV exposure.
   a) Plenum rated PVC jacket cables are not acceptable.
4) Sensor node airflow and temperature calibration data shall be stored in a serial memory chip in the cable connecting plug and not require matching or adjustments to the transmitter in the field.
5) Each sensor node shall be provided with two bead-in-glass, hermetically sealed thermistors potted in a marine grade waterproof epoxy with sensor housings constructed of glass-filled polypropylene.
6) Each thermistor shall be individually calibrated at a minimum of 3 temperatures to NIST-traceable temperature standards.
7) Each sensor node shall be individually calibrated at 16 measurement points to airflow standards directly calibrated at NIST to the NIST Laser Doppler Anemometer (LDA) primary velocity standard and have an accuracy of ±2% of reading over the entire calibrated airflow range of 0 to 10,000 FPM.
   a) Devices calibrated against standards other than the NIST LDA or against NIST temperature standards only are not acceptable.
8) Each sensor node shall have a temperature accuracy of ±0.15° F over an operating range of -20° F to 160° F and humidity range of 0 to 100% RH.
9) The number of independent sensor nodes provided shall be as follows:
   a) SWSI and DWDI fans: 2 probes x 1 sensor node/per probe in each fan inlet.
   b) Fan Arrays (1 to 8 fans): 1 probe x 1 sensor node probe in each fan inlet

f. Transmitter:
1) A remotely located microprocessor-based transmitter shall be provided for each measurement location.
2) The transmitter shall be comprised of a main circuit board and interchangeable interface card.
3) The transmitter shall be capable of determining the airflow rate and temperature of each fan.
   a) Separate integration buffers shall be provided for display airflow output, airflow signal output (analog and network) and individual sensor output (IR-interface).
4) The transmitter shall have startup firmware to facilitate setup of multiple fans and fan areas.
5) The transmitter shall be capable of providing a low and/or high airflow set point alarm.
6) The transmitter shall be capable of providing individual fan alarming on fan array configurations.
7) The transmitter shall be capable of identifying a malfunction via the system status alarm and ignore any sensor node that is in a fault condition.
8) The transmitter shall be capable of field configuration, diagnostics and include Field Output Adjustment Wizard that allows for a one or two point field adjustment to factory calibration for installations that require adjustment.
9) The transmitter shall be provided with a 16-character, alpha-numeric, LCD display.
10) The transmitter shall be provided with two field selectable (0-5/0-10 VDC or 4-20mA), scalable, isolated and over-current protected analog output signals (AO1=airflow, AO2=temperature or alarm), in combination with

a) one isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection.

11) Analog signal capability shall include two output terminals: the first (AO1), shall provide the total airflow rate; while the second output (AO2) shall be field configurable to provide one of the following:
    a) temperature
    b) low and/or high airflow user-defined set point alarm
    c) individual fan alarm; or
    d) system status alarm
12) Network communications RS 485 (BACnet MS/TP or Modbus RTU) or Ethernet (BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) shall provide: the average airflow rate, temperature, hi and/or low airflow set point alarm, system status alarm, individual sensor node airflow rates and individual sensor node temperatures.
13) The transmitter shall use a “watchdog” timer circuit to ensure automatic reset after power disruption, transients and brown-outs.
14) Each transmitter shall have an operating range of -20° F to 120° F and humidity range of 5 to 95% RH.

g. Listings and Certifications
    1) The Air Measurement Station shall be UL/cUL 873 Listed as an assembly.
        a) Devices claiming compliance with the UL Listing based on individual UL component listing are not acceptable.
    2) All network-capable AMD models supplied with RS-485 interface and BACnet protocol shall be BTL Listed.

h. Installation
    1) Install in accordance with manufacturer’s placement and installation guidelines

2. Duct Mounted Air Flow Measuring Stations:

    a. Basis of design shall be EBTRON Model GTX116-P+. Comparable product as manufactured by Greentrol, Kurz Instruments, or Sierra Instruments shall be submitted for review as a comparable product.
    b. Airflow Measurement Devices with Temperature Output and Airflow Alarming Capability.
    c. Airflow measurement devices shall use the principle of thermal dispersion and provide one self-heated bead-in-glass thermistor and one zero power bead-in-glass thermistor at each sensing node.
    d. General:
        1) Provide one AMD for each measurement location provided on the plans, schedules and/or control diagrams to determine the average airflow rate and temperature at each measurement location.
        2) Each AMD shall be provided with a microprocessor-based transmitter and one or more sensor probes.
            a) Devices that have electronic signal processing components on or in the sensor probe are not acceptable.
        3) Airflow measurement shall be field configurable to determine the average actual or standard mass airflow rate.
            a) Actual airflow rate calculations shall have the capability of being corrected by the transmitter for altitudes other than sea level.
        4) Temperature measurement shall be field configurable with velocity weighted average as the default, or manual selection of arithmetic average temperature.

e. Sensor Probes:
   1) Sensor probes shall be constructed of gold anodized, 6063 aluminum alloy tube.
   2) Sensor probe mounting brackets shall be constructed of 304 stainless steel.
   3) Probe internal wiring between the connecting cable and sensor nodes shall be Kynar coated copper.
      a) PVC jacketed internal wiring is not acceptable.
   4) Probe internal wiring connections shall consist of solder joints and spot welds.
      a) Internal wiring connections shall be sealed and protected from the elements. They shall be capable of direct exposure to water without affecting instrument operation.
      b) Connectors of any type within the probe are not acceptable.
      c) Printed circuit boards within the probe are not acceptable.
   5) Each sensor probe shall be provided with an integral, FEP jacket, plenum rated CMP/CL2P, UL/cUL Listed cable rated for exposures from -67° F to 392° F and continuous and direct UV exposure.
      a) Plenum rated PVC jacket cables are not acceptable.
   6) Each sensor probe shall contain one or more independently wired sensing nodes.
   7) Sensor node airflow and temperature calibration data shall be stored in a serial memory chip in the cable connecting plug and not require matching or adjustments to the transmitter in the field.
   8) Each sensor node shall be provided with two bead-in-glass, hermetically sealed thermistors potted in a marine grade waterproof epoxy with sensor housings constructed of glass-filled polypropylene.
   9) Each thermistor shall be individually calibrated at a minimum of 3 temperatures to NIST-traceable temperature standards.
   10) Each sensor node shall be individually calibrated at 16 measurement points to airflow standards directly calibrated to the NIST Laser Doppler Anemometer (LDA) primary velocity standard and have an accuracy of ±2% of reading over the entire calibrated airflow range of 0 to 5,000 FPM.
      a) Devices claiming NIST traceability to third party laboratories and not directly to NIST are not acceptable
      b) Devices calibrated against standards other than the NIST LDA are not acceptable.
   11) The installed airflow accuracy shall be:
      a) Ducts - ±3% of reading when installed in accordance with the manufactures recommended placement guidelines.
      b) Non-ducted Outdoor Air intakes – better than or equal to ±5% of reading when installed in accordance with the manufactures recommended placement guidelines.
   12) Each sensing node shall have a temperature accuracy of ±0.15° F over an operating range of -20° F to 160° F and humidity range of 0 to 100% RH.
   13) The number of independent sensor nodes provided shall be as follows:

Area ft^2	# Sensor Nodes
≤ 0.5	1
> 0.5 & ≤ 1	2

> 1 & ≤ 2	4
> 2 & ≤ 4	6
> 4 & ≤ 8	8
> 8 & ≤ 12	12
> 12 & ≤ 14	14
> 14	16

a) A total of 4 probes shall be required for openings with an aspect ratio ≤ 1.5 and with an area ≥ 25 ft2.

f. Transmitter:
1) A remotely located microprocessor-based transmitter shall be provided for each measurement location.
2) The transmitter shall be comprised of a main circuit board and interchangeable interface card.
3) The transmitter shall be capable of determining the airflow rate and temperature average of all connected sensor nodes in an array for a single location.
a) Separate integration buffers shall be provided for display airflow output, airflow signal output (analog and network) and individual sensor output (IR-interface).
4) The transmitter shall be capable of providing a high and/or low airflow alarm with user-defined set point and % of set point tolerance. Alarm shall be capable of being manually or automatically reset and low-limit cutoff value may be selected to disable the alarm. An alarm delay function shall also be field defined.
5) The transmitter shall be capable of identifying a malfunction via the system status alarm and ignore any sensor node that is in a fault condition.
6) The transmitter shall be capable of field configuration, diagnostics and include Field Output Adjustment Wizard that allows for a one or two point field adjustment to factory calibration for installations that require adjustment.
7) The transmitter shall be provided with a 16-character, alpha-numeric, LCD display.
8) The transmitter shall be provided with two field selectable (0-5/0-10 VDC or 4-20mA), scalable, isolated and over-current protected analog output signals (AO1=airflow, AO2=temperature or alarm), in combination with
a) one isolated Ethernet (simultaneously supported BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) network connection.
9) The analog signal capability shall include two output terminals: the first (AO1), shall provide the total airflow rate and the second output (AO2) shall be field configurable to provide one of the following:
a) temperature
b) low and/or high airflow user-defined set point alarm, or
c) system status alarm
10) The network communications RS-485 (BACnet MS/TP or Modbus RTU) or Ethernet (BACnet Ethernet or BACnet IP, Modbus TCP and TCP/IP) shall provide: the average airflow rate, temperature, hi and/or low airflow set point alarm, system status alarm, individual sensor node airflow rates and individual sensor node temperatures.

11) The transmitter shall use a “watchdog” timer circuit to ensure automatic reset after power disruption, transients and brown-outs.
12) Each transmitter shall have an operating temperature range of -20° F to 120° F and humidity range of 5 to 95% RH.

g. Listings and Certifications:
1) The Airflow Measurement Station shall be UL/cUL 873 Listed as an assembly.
a) Devices claiming compliance with the UL Listing based on individual UL component listing are not acceptable.
2) All network-capable AMD models supplied with RS-485 interface and BACnet protocol shall be BTL Listed.

h. Installation:
1) Install in accordance with manufacturer’s placement guidelines.

3. VAV Box Airflow and Temperature Measuring Station:

.

a. Basis of design shall be EBTRON Model EF-X1001T. Comparable product as manufactured by Greentrol, Kurz Instruments, or Sierra Instruments shall be submitted for review as a comparable product.
b. Airflow Measurement Device with Temperature Output.
c. Airflow measurement devices shall use the principle of thermal dispersion and provide one self-heated bead-in-glass thermistor and one zero power bead-in-glass thermistor at each sensing node.
d. General:
1) Provide one AMD for each measurement location provided on the plans, schedules and/or control diagrams to determine the average airflow rate at each measurement location.
2) Each AMD shall be provided with one sensor probe with a maximum of two sensor nodes and an integral microprocessor-based electronic transmitter.
a) Devices that have electronic signal processing components in the sensor probe are not acceptable.
3) Airflow measurement shall determine the average actual airflow rate.
4) Temperature output shall provide the velocity weighted average temperature from multiple sensing nodes.
e. Sensor Probes:
1) Sensor probes shall be constructed of 6063 extruded aluminum alloy tube.
2) Sensor probe mounting brackets shall be constructed of 304 stainless steel.
3) Probe internal wiring between the connecting cable and sensor nodes shall be Kynar coated copper.
a) PVC jacketed internal wiring is not acceptable.
4) Probe internal wiring connections shall consist of solder joints and spot welds.
a) Connectors of any type within the probe are not acceptable.
b) Printed circuit boards within the probe are not acceptable.
5) Each sensor node shall be provided with two bead-in-glass, hermetically sealed thermistors potted in a marine grade waterproof epoxy.
6) Each thermistor shall be individually calibrated at a minimum of 3 temperatures to NIST-traceable temperature standards.
7) Each sensor node shall be calibrated to volumetric standards at a minimum of 7 calibration points.
8) The number of independent sensor nodes provided shall be as follows:

Diameter - in	# Sensor Nodes
4	1
≥ 5 & ≤ 16	2

f. Transmitter:
   1) An integral microprocessor-based transmitter shall be provided for each measurement location, with simple DIP switch user interface for set up.
   2) The transmitter shall be capable of determining the average airflow rate and average velocity-weighted temperature of the sensor nodes in the array.
   3) The transmitter shall be capable of identifying an AMD malfunction and ignore any sensor node that is in a fault condition.
   4) The transmitter shall be provided with one of the following:
      a) One scalable, protected and field selectable analog output signal for airflow (0-5/1-5 VDC or 0-10/2-10 VDC, AO1= Airflow)
      b) Two scalable, protected and field selectable analog output signals (0-5/1-5 VDC or 0-10/2-10 VDC, AO1= Airflow, AO2= Temperature)
      c) One non-isolated RS-485 network connection (field selectable BACnet MS/TP or Modbus RTU). Provide individual 24 VAC transformers at each network transmitter requiring isolated RS-485 connection.
   5) The transmitter shall provide a sensor diagnostic system on board, with system status alarm (trouble indication), with visual indication of LED on the circuit board.
   6) Network communications shall provide the average airflow rate, temperatures, individual sensor node airflow rates and individual sensor node temperatures.
   7) The transmitter shall use a “watchdog” timer circuit to ensure continuous operation in the event of brown-out and/or power failure.

g. Performance and calibration:
   1) Each sensing node shall have an airflow accuracy of ±3% of reading (typical) ±4% max. from 0 to 3,000 FPM over a temperature range of 0° F to 160° F. Airflow accuracy shall be maintained at lower operating temperatures of -20° F to 160° F but the velocity range shall be limited to 0 – 2,000 FPM.
      a) Accuracy shall include the combined uncertainty of the sensor nodes and transmitter.
      b) Devices whose overall performance at the host controller input terminals is the combined accuracy of the transmitter and sensor probes shall demonstrate that the total accuracy meets the performance requirements of this specification throughout the measurement range.
   2) Each sensor node shall be factory calibrated at a minimum of 7 airflow rates including zero (still air), to NIST Traceable standards.
   3) Each thermistor shall be individually calibrated at a minimum of 3 temperatures to standards that are traceable to the National Institute of Standards and Technology (NIST).
   4) Each sensing node shall have a temperature accuracy of ± 0.15° F over a calibrated range of -20° F to 160° F.
   5) Minimum calibrated and operating temperature range for the sensor probes shall be -20° F to 160° F.
   6) Operating temperature range for the transmitter shall be -20° F to 120° F.

h. Listings and Certifications:
   1) The Airflow Measurement Station shall be UL 60730-1 and 60730-2-9 Listed as an assembly and subscribed to the UL Follow-up Services.
      a) Devices claiming compliance with the UL Listing based on individual UL component listings are not acceptable.
i. Installation:
   1) Install in accordance with manufacturers placement and installation guidelines.
   2) The Airflow Measurement Station is to be installed at each supply, return, and exhaust VAV box.

4. Static Pressure Traverse Probe:

   a. Duct static traverse probes shall be provided where required to monitor duct static pressure. The probe shall contain multiple static pressure sensors located along exterior surface of the cylindrical probe.
   b. Acceptable manufacturers: Cleveland Controls, Air Monitor.

5. Shielded Static air Probe:

   a. A shielded static pressure probe shall be provided at each end of the building. The probe shall have multiple sensing ports, an impulse suppression chamber, and airflow shielding. A suitable probe for indoor and outdoor locations shall be provided.

I. Thermal Mass Flow Meter (Gas Meter for BAS Metering):

1. Description:

   a. Thermal Mass Flow Meters for gas metering shall be as manufactured by Fox Thermal; Series FT2 or comparable acceptable product as manufactured by Rosemount, GE, Krone, or Onicon. The Thermal Mass Flow Meter shall be utilized for measuring flow of natural gas, compresed air, propane, oxygen, and most common gases. The flow meters shall measure both flow rate and temperature with isolated 4-20 mA outputs for both variables. A separate pulse output shall be used for logging total gas flow. The FT2 mass flow meter shall measure gas flow velocity as low as 50 sfpm (standard feet/minute) and as high as 50,000 sfpm.
   b. Each flow meter shall be calibrated at the factory using the same gas as per the application. Meters shall meet EPA accuracy requirements.
   c. Standard models shall include a 2 x 16 character backlit display for viewing flow rate, flow total, elapsed time, process gas temperature and alarms, and an integral keypad for setting parameters i.e.: signal spans, pulse frequency scaling, pipe area, zero cutoff, filtering, diagnostics and alarms.
   d. For pipe sizes ½" to 2", provide inline flow meter. Inline models shall (male NPT) include built-in flow conditioners which shall reduce the need for long straight runs of upstream and downstream pipe.
   e. For pipe sizes 2 ½" and above, provide insertion flow meter. Install in a field provided ¾" coupling.
   f. Both inline and insertion styles shall come standard with stainless steel wetted parts, an integral NEMA 4X enclosure rated for Class I, Div. 2, Groups B, C, D hazardous areas, and a NIST calibration certificate.

2. Applications:

a. Applications for meters shall include: <Natural gas>, <air>,< ammonia>, <biogas>, <butane>, <chlorine>, <compressed air>, <carbon monoxide>, <carbon dioxide>, <ethane>, <ethylene>,< helium>, <hydrogen>, <methane>, <nitrogen>, <oxygen>, <propane>, and more.

3. Mass Flow Meter features shall be as follows:

a. Measure gas flow rate in SCFM, SCFH, NM3M, NM3H, KG/M, KG/H, and more, for complete choice in units.
b. Two- 4-20 mA analog outputs, for both flow rate and temperature.
c. RS422/RS485-Modbus, Profibus-DP, DeviceNet and Ethernet models available for network communication.
d. Insertion or inline mounting styles for installation choices.
e. All welded 316SS sensor construction and no moving parts.
f. Field programmable.
g. Standard NEMA 4X enclosure designed for Class I, Division 2, Groups B, C, and D.
h. NIST traceable calibration standard to assure accuracy.

4. Specifications:

a. Supply Voltage:
   1) 24 VDC, ± 10%, 85-250 VAC 50/60 Hz
b. Supply Watts:
   1) 20 W (VDC powered models)
c. Supply Current:
   1) 0.75A (VAC powered models)
d. Output Signal:
   1) 2 isolated 4-20 mA outputs (one for flow and one for temperature); 1 isolated pulse output 0-100 Hz, 10V p/p for flow (can be used for alarming)
e. Wiring:
   1) Two ¾" NPT conduit connections on sides of housing.
f. Wiring Terminations: Screw terminals
g. Communication Interface: RS 232 for connection to computer, models available with RS422/RS485-Modbus, Profibus-DP, DeviceNet and Ethernet Modbus TCP
h. Accuracy:
   1) Flow, ± 1% of reading/ Temperature ± 1.8°F (± 1.0°C)
i. Repeatability:
   1) ± 0.2% of full scale
j. Mounting:
   1) ½" MNPT pipe section to 2" MNPT pipe section (standard inline), ¾" MNPT coupling, 6" length probe for 1-1/2" to 6" pipes (standard insertion).
k. Operating Temperature:
   1) 32° to 140°F (0° to 60°C)
l. Media Compatibility:
   1) Standard configuration for natural gas; other gases such as air, biogas, butane, carbon monoxide, carbon dioxide, nitrogen, methane, oxygen, propane, etc. optional.
m. Media Temperature Range:
   1) -40° to 250°F (-40° to 121°C)
n. Maximum Pressure Rating:
   1) 300 psig (21 bar)
o. Materials of Construction: 316 stainless steel sensor and flow body.
p. Enclosure Rating:
   1) NEMA 4X, designed for Class I, Division 2, Groups B, C & D hazardous areas.

q. Weight:
   1) 8.0 lb (3.6 kg) to 10.0 lb (4.5 kg) inline models, 6.0 lb (2.7 kg) 6" insertion model.
r. Approvals:
   1) CE
s. Warranty:
   1) 2-Year

J. Power Monitoring Devices:

1. Current Measurement (Amps):

   a. Current measurement shall be by a combination current transformer and a current transducer. The current transformer shall be sized to reduce the full amperage of the monitored circuit to a maximum 5 Amp signal, which will be converted to a 4-20 mA DDC compatible signal for use by the Facility Management System.
   b. Current Transformer – A split core current transformer shall be provided to monitor motor amps.
      1) Operating frequency – 50 - 400 Hz.
      2) Insulation – 0.6 Kv class 10Kv BIL.
      3) UL recognized.
      4) Five amp secondary.
      5) Select current ration as appropriate for application.
      6) Acceptable manufacturers: Veris Industries
   c. Current Transducer – A current to voltage or current to mA transducer shall be provided. The current transducer shall include:
      1) 6X input over amp rating for AC inrushes of up to 120 amps.
      2) Manufactured to UL 1244.
      3) Accuracy: +.5%, Ripple +1%.
      4) Minimum load resistance 30kOhm.
      5) Input 0-20 Amps.
      6) Output 4-20 mA.
      7) Transducer shall be powered by a 24VDC regulated power supply (24 VDC +5%).
      8) Acceptable manufacturers: Veris Industries

K. Refrigerant Leak Detectors

1. Basis of design is MSA model MVR-300 VRF Refrigerant Leak Detector
2. Provide refrigerant detector indicated on the drawings.
3. Refrigerant gas is R-410A
4. NEMA 1 enclosure
5. Low alarm: 2000 PPM
6. High alarm: 4000 PPM
7. Range: 10,000 PPM
8. UL approved
9. Complies with ANSI/ASHRAE 15
10. Small discrete packaging for ceiling or wall mount installations
11. Signal output: BACNET
12. 2 SPDT relay to indicate fault or alarm at BAS station
13. Internal LED to indicate fault or alarm
14. Power requirements: 120V, 4W

15. Mounting height” 12” above finished floor.

L. Smoke Detectors :

1. Duct detectors shall be furnished as specified elsewhere in Division 28 for installation under Division 23 All wiring for air duct detectors shall be provided under Division 28 Fire Alarm System.

M. Status and Safety Switches:

1. General Requirements

   a. Switches shall be provided to monitor equipment status, safety conditions, and generate alarms at the BAS when a failure or abnormal condition occurs. Safety switches shall be provided with two sets of contacts and shall be interlock wired to shut down respective equipment.

2. Current Sensing Switches

   a. The current sensing switch shall be self-powered with solid-state circuitry and a dry contact output. It shall consist of a current transformer, a solid state current sensing circuit, adjustable trip point, solid state switch, SPDT relay, and an LED indicating the on or off status. A conductor of the load shall be passed through the window of the device. It shall accept over-current up to twice its trip point range.
   b. Current sensing switches shall be used for run status for fans, pumps, and other miscellaneous motor loads.
   c. Current sensing switches shall be calibrated to show a positive run status only when the motor is operating under load. A motor running with a broken belt or coupling shall indicate a negative run status.
   d. Acceptable manufacturers: Veris Industries

3. Air Filter Status Switches

   a. Differential pressure switches used to monitor air filter status shall be of the automatic reset type with SPDT contacts rated for 2 amps at 120VAC.
   b. A complete installation kit shall be provided, including: static pressure tops, tubing, fittings, and air filters.
   c. Provide appropriate scale range and differential adjustment for intended service.
   d. Acceptable manufacturers: Johnson Controls, Cleveland Controls, Siemens

4. Air Flow Switches

   a. Differential pressure flow switches shall be bellows actuated mercury switches or snap acting micro-switches with appropriate scale range and differential adjustment for intended service.
   b. Acceptable manufacturers: Johnson Controls, Cleveland Controls, Siemens

5. Air Pressure Safety Switches

   a. Air pressure safety switches shall be of the manual reset type with SPDT contacts rated for 2 amps at 120VAC.
   b. Pressure range shall be adjustable with appropriate scale range and differential adjustment for intended service.
   c. Acceptable manufacturers: Johnson Controls, Cleveland Controls, Siemens

6. Water Flow Switches

a. Water flow switches shall be equal to the Johnson Controls P74.

7. Low Temperature Limit Switches

a. The low temperature limit switch shall be of the manual reset type with Double Pole/Single Throw snap acting contacts rated for 16 amps at 120VAC.
b. The sensing element shall be a minimum of 15 feet in length and shall react to the coldest 18-inch section. Element shall be mounted horizontally across duct in accordance with manufacturers recommended installation procedures.
c. For large duct areas where the sensing element does not provide full coverage of the air stream, additional switches shall be provided as required to provide full protection of the air stream.
d. The low temperature limit switch shall be equal to Johnson Controls A70.

2.13 OUTPUT DEVICES

A. Actuators:

1. General Requirements:

a. Damper and valve actuators shall be electronic and/or pneumatic, as specified in the System Description section.
b. Heater:
   1) Shall include a self-regulating temperature control to prevent condensation build-up.
   2) Shall be pre-wired to the terminal block for ease of connection to external source.
   3) Rated output shall be 5 W at 120 or 220 VAC.

2. Electronic Damper Actuators:

a. Electronic damper actuators shall be direct shaft mount.
b. Modulating and two-position actuators shall be provided as required by the sequence of operations. Damper sections shall be sized Based on actuator manufacturer's recommendations for face velocity, differential pressure and damper type. The actuator mounting arrangement and spring return feature shall permit normally open or normally closed positions of the dampers, as required. All actuators (except terminal units) shall be furnished with mechanical spring return unless otherwise specified in the sequences of operations. All actuators shall have external adjustable stops to limit the travel in either direction, and a gear release to allow manual positioning.
c. Modulating actuators shall accept 24 VAC or VDC power supply, consume no more than 15 VA, and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA, and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal and may be used to parallel other actuators and provide true position indication. The feedback signal of one damper actuator for each separately controlled damper shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.
d. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Isolation, smoke, exhaust fan, and other dampers, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop associated fan. Two-position actuators, as specified in sequences of operations as "quick acting," shall

move full stroke within 20 seconds. All smoke damper actuators shall be quick acting.

e. Acceptable manufacturers: Johnson Controls, Belimo, or Siemens.

3. Electronic Valve Actuators:

a. Electronic valve actuators shall be manufactured by the valve manufacturer.
b. Each actuator shall have current limiting circuitry incorporated in its design to prevent damage to the actuator.
c. Modulating and two-position actuators shall be provided as required by the sequence of operations. Actuators shall provide the minimum torque required for proper valve close-off against the system pressure for the required application. The valve actuator shall be sized Based on valve manufacturer's recommendations for flow and pressure differential. All actuators shall fail in the last position unless specified with mechanical spring return in the sequence of operations. The spring return feature shall permit normally open or normally closed positions of the valves, as required. All direct shaft mount rotational actuators shall have external adjustable stops to limit the travel in either direction.
d. Modulating Actuators shall accept 24 VAC or VDC and 120 VAC power supply and be UL listed. The control signal shall be 2-10 VDC or 4-20 mA and the actuator shall provide a clamp position feedback signal of 2-10 VDC. The feedback signal shall be independent of the input signal, and may be used to parallel other actuators and provide true position indication. The feedback signal of each valve actuator (except terminal valves) shall be wired back to a terminal strip in the control panel for trouble-shooting purposes.
e. Two-position or open/closed actuators shall accept 24 or 120 VAC power supply and be UL listed. Butterfly isolation and other valves, as specified in the sequence of operations, shall be furnished with adjustable end switches to indicate open/closed position or be hard wired to start/stop the associated pump or chiller.
f. Acceptable manufacturers: Johnson Controls, Belimo, or Siemens

B. Control Dampers:

1. The BAS Contractor shall furnish all automatic dampers. All automatic dampers shall be sized for the application by the BAS Contractor or as specifically indicated on the Drawings.
2. All dampers used for throttling airflow shall be of the opposed blade type arranged for normally open or normally closed operation, as required. The damper is to be sized so that, when wide open, the pressure drop is a sufficient amount of its close-off pressure drop to shift the characteristic curve to near linear.
3. All dampers used for two-position, open/close control shall be parallel blade type arranged for normally open or closed operation, as required.
4. Damper frames and blades shall be constructed of either galvanized steel or aluminum. Maximum blade length in any section shall be 60". Damper blades shall be 16-gauge minimum and shall not exceed eight (8) inches in width. Damper frames shall be 16-gauge minimum hat channel type with corner bracing. All damper bearings shall be made of reinforced nylon, stainless steel or oil-impregnated bronze. Dampers shall be tight closing, low leakage type, with synthetic elastomer seals on the blade edges and flexible stainless steel side seals. Dampers of 48"x48" size shall not leak in excess of 8.0 cfm per square foot when closed against 4" w.g. static pressure when tested in accordance with AMCA Std. 500.
5. Airfoil blade dampers of double skin construction with linkage out of the air stream shall be used whenever the damper face velocity exceeds 1500 FPM or system pressure

exceeds 2.5" w.g., but no more than 4000 FPM or 6" w.g. Acceptable manufacturers are Johnson Controls D-7250 D-1250 or D-1300, Ruskin CD50, and Vent Products 5650.

6. One piece rolled blade dampers with exposed or concealed linkage may be used with face velocities of 1500 FPM or below. Acceptable manufacturers are: Johnson Controls D-1600, Ruskin CD36, and Vent Products 5800.
7. Multiple section dampers may be jack-shafted to allow mounting of piston pneumatic actuators and direct connect electronic actuators. Each end of the jackshaft shall receive at least one actuator to reduce jackshaft twist.
8. Provide Ruskin Model SP100 End Switch Package for control dampers or comparable products as manufactured by Johnson Controls or Vent Products.

C. Control Relays:

1. Control Pilot Relays

   a. Control pilot relays shall be of a modular plug-in design with retaining springs or clips.
   b. Mounting Bases shall be snap-mount.
   c. DPDT, 3PDT, or 4PDT relays shall be provided, as appropriate for application.
   d. Contacts shall be rated for 10 amps at 120VAC.
   e. Relays shall have an integral indicator light and check button.
   f. Acceptable manufacturers: Johnson Controls, Lectro

2. Lighting Control Relays

   a. Lighting control relays shall be latching with integral status contacts.
   b. Contacts shall be rated for 20 amps at 277 VAC.
   c. The coil shall be a split low-voltage coil that moves the line voltage contact armature to the ON or OFF latched position.
   d. Lighting control relays shall be controlled by:
      1) Pulsed Tri-state Output – Preferred method.
      2) Pulsed Paired Binary Outputs.
      3) A Binary Input to the Facility Management System shall monitor integral status contacts on the lighting control relay. Relay status contacts shall be of the "dry-contact" type.
   e. The relay shall be designed so that power outages do not result in a change-of-state, and so that multiple same state commands will simply maintain the commanded state. Example: Multiple OFF command pulses shall simply keep the contacts in the OFF position.

D. Control Valves (Pressure Dependent):

1. All automatic control valves shall be fully proportioning and provide near linear heat transfer control. The valves shall be quiet in operation and fail-safe open, closed, or in their last position. All valves shall operate in sequence with another valve when required by the sequence of operations. All control valves shall be sized by the control manufacturer, and shall be guaranteed to meet the heating and cooling loads, as specified. All control valves shall be suitable for the system flow conditions and close against the differential pressures involved. Body pressure rating and connection type (sweat, screwed, or flanged) shall conform to the pipe schedule elsewhere in this Specification.
2. Chilled water control valves shall be modulating plug, ball, and/or butterfly, as required by the specific application. Modulating water valves shall be sized per manufacturer's

recommendations for the given application. In general, valves (2 or 3-way) serving variable flow air handling unit coils shall be sized for a pressure drop equal to the actual coil pressure drop, but no less than 5 PSI. Valves (3-way) serving constant flow air handling unit coils with secondary circuit pumps shall be sized for a pressure drop equal to 25% the actual coil pressure drop, but no less than 2 PSI. Mixing valves (3-way) serving secondary water circuits shall be sized for a pressure drop of no less than 5 PSI. Valves for terminal reheat coils shall be sized for a 2 PSIG pressure drop, but no more than a 5 PSI drop.

3. Ball valves shall be used for hot and chilled water applications, water terminal reheat coils, radiant panels, unit heaters, package air conditioning units, and fan coil units except those described hereinafter.
4. Modulating plug water valves of the single-seat type with equal percentage flow characteristics shall be used for all special applications as indicated on the valve schedule. Valve discs shall be composition type. Valve stems shall be stainless steel.
5. Butterfly valves shall be acceptable for modulating large flow applications greater than modulating plug valves, and for all two-position, open/close applications. In-line and/or three-way butterfly valves shall be heavy-duty pattern with a body rating comparable to the pipe rating, replaceable lining suitable for temperature of system, and a stainless steel vane. Valves for modulating service shall be sized and travel limited to 50 degrees of full open. Valves for isolation service shall be the same as the pipe. Valves in the closed position shall be bubble-tight.
6. Acceptable manufacturers: Johnson Controls, Siemens Honeywell.

E. Control Valves (Pressure Independent):

1. Chilled water control valves shall be modulating plug or ball as required by the specific application. Modulating water valves shall be sized per manufacturer’s recommendations for the given application. In general, valves serving variable flow air handling unit coils shall be sized for a pressure drop equal to the actual coil pressure drop, but no less than 5 PSI. Valves for terminal reheat coils shall be sized for a 2 PSIG pressure drop, but no more than a 5 PSI drop.
2. Acceptable Manufacturers:

    a. BELIMO, Schneider Electric, Griswald, Danfoss, or Siemens.
3. Control Valves: Factory fabricated of type, body material, and pressure class based on maximum pressure and temperature rating of piping system, unless otherwise indicated.
4. The manufacturer shall warrant all components for a period of 5 years from the date of product, with the first two years being unconditional.
5. Pressure Independent Control Valves (Hydronic)

    a. NPS 2 and Smaller: Forged brass body rated at no less then 400 PSI, chrome plated brass ball and stem, female NPT union ends, dual EPDM lubricated O rings and TEFZEL characterizing disc.
6. Accuracy: The control valves shall accurately control the flow from 0 to 100% full rated flow. The flow shall not vary more than +/- 5% due to system pressure fluctuations across the valve with a minimum of 5 PSID across the valve.
7. Flow Characteristics: Equal percentage characteristics.
8. Close-Off Pressure Rating: 200 PSI.
9. All actuators shall be electronically programmed by use of external computer software.
10. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory with a single screw2 on a four-way DIN mounting-base.
11. The control valve shall require no maintenance or shall include replaceable cartridges.

12. The manufacturer shall warrant all components for a period of 5 years from the date of product, with the first two years unconditional.
13. The use of pressure independent valves piped in parallel to achieve the rated coil flow shall be permitted. Actuators shall be electronically programmed to permit sequencing the flow with a single control output point. The use of external devices to permi sequencing is NOT acceptable.
14. Sizing:

    a. Two-Position: Lien size or size using a pressure differential of 1 psi.
    b. Two-Way Modulating: 3 psig or twice the load pressure drop, whichever is more.
    c. There-Way Modulating: Twice the load pressure drop, but not more than 3 psig.
15. Close-Off Pressure Rating: 100 PSI, except NPS ¾" and Smaller for Terminal Units: 200 PSI.
16. The actuator shall be the same manufacturer as the valve, integrally mounted to the valve at the factory with a single screw on a four-way DIN mounting base.

F. Electronic Signal Isolation Transducers:

1. A signal isolation transducer shall be provided whenever an analog output signal from the BAS is to be connected to an external control system as an input (such as a chiller control panel), or is to receive as an input signal from a remote system.
2. The signal isolation transducer shall provide ground plane isolation between systems.
3. Signals shall provide optical isolation between systems.
4. Acceptable manufacturers: Advanced Control Technologies

G. External Manual Override Stations:

1. External manual override stations shall provide the following:

    a. An integral HAND/OFF/AUTO switch shall override the controlled device pilot relay.
    b. A status input to the Facility Management System shall indicate whenever the switch is not in the automatic position.
    c. A Status LED shall illuminate whenever the output is ON.
    d. An Override LED shall illuminate whenever the HOA switch is in either the HAND or OFF position.
    e. Contacts shall be rated for a minimum of 1 amp at 24 VAC.

H. Electronic/Pneumatic Transducers:

1. Electronic to Pneumatic transducers shall provide:

    a. Output: 3-15 PSIG.
    b. Input: 4-20 mA or 0-10 VDC.
    c. Manual output adjustment.
    d. Pressure gauge.
    e. External replaceable supply air filter.
    f. Acceptable manufacturers: Johnson Controls, Mamac

2.14 MISCELLANEOUS DEVICES

A. Local Control Panels:

1. All control panels shall be factory constructed, incorporating the BAS manufacturer's standard designs and layouts. All control panels shall be UL inspected and listed as an assembly and carry a UL 508 label listing compliance. Control panels shall be fully enclosed, with perforated sub-panel, hinged door, and slotted flush latch.
2. In general, the control panels shall consist of the DDC controller(s), display module as specified and indicated on the plans, and I/O devices—such as relays, transducers, and so forth—that are not required to be located external to the control panel due to function. Where specified the display module shall be flush mounted in the panel face unless otherwise noted.
3. All I/O connections on the DDC controller shall be provide via removable or fixed screw terminals.
4. Low and line voltage wiring shall be segregated. All provided terminal strips and wiring shall be UL listed, 300-volt service and provide adequate clearance for field wiring.
5. All wiring shall be neatly installed in plastic trays or tie-wrapped.
6. A convenience 120 VAC duplex receptacle shall be provided in each enclosure, fused on/off power switch, and required transformers.

B. Power Supplies:

1. DC power supplies shall be sized for the connected device load. Total rated load shall not exceed 75% of the rated capacity of the power supply.
2. Input: 120 VAC +10%, 60Hz.
3. Output: 24 VDC.
4. Line Regulation: +0.05% for 10% line change.
5. Load Regulation: +0.05% for 50% load change.
6. Ripple and Noise: 1 mV rms, 5 mV peak to peak.
7. An appropriately sized fuse and fuse block shall be provided and located next to the power supply.
8. A power disconnect switch shall be provided next to the power supply.

C. Thermostats:

1. Electric room thermostats of the heavy-duty type shall be provided for unit heaters, cabinet unit heaters, and ventilation fans, where required. All these items shall be provided with concealed adjustment. Finish of covers for all room-type instruments shall match and, unless otherwise indicated or specified, covers shall be manufacturer's standard finish.

D. Uninterruptible Power Supplies (UPS)

1. UPS output rating shall be 125% of the connected load equipment. Each UPS device shall provide 5 minute back-up at full load rating of equipment served by UPS.
2. UPS Devices shall be provided within metal housing cabinet, with a removable cover.
3. Provide Repalceable batterie(s) with minimum 5 year rated life.
4. UPS Devices shall be provided with low battery alarm output contact for monitoring by BAS.

2.15 UNIVERSAL THERMOSTAT GUARDS

A. Provide size to match thermostat

B. Guards shall be constructed of smoke-colored transparent polycarbonate.

C. Provide tamper-resistant lock; key can be removed only when in the locked position.

D. Shall be suitable for vertical or horizontal mount.

E. Guard base vents shall allow airflow for optimum thermostat performance.

F. Basis of design shall be Honeywell Versaguard™ or comparable acceptable product.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Execution and Closeout Requirements:” Requirements for installation examination.

B. Division 01 Section: “Administrative Requirements”: Coordination and project conditions.

C. Verify building systems to be controlled are ready to operate.

D. Verify that air handling units and ductwork have been accepted and air filters are in place before installing sensors in air streams.

E. Verify location of thermostats, humidistats and other exposed control sensors with Drawings before installation.

F. Verify conditioned power supply is available to control units and to operator workstation.

G. Verify field end devices and wiring are installed prior to installation proceeding.

3.2 INSTALLATION

A. BAS Specific Requirements:

1. Graphic Displays :

    a. Provide a color graphic system flow diagram display for each system with all points as indicated on the point list. All terminal unit graphic displays shall be from a standard design library.
    b. User shall access the various system schematics via a graphical penetration scheme and/or menu selection. .
2. Custom Reports:

    a. Provide custom reports as required for this project:
3. Sequence of Operation:

a. The sequence of operation text shall be easily accessed from the appropriate graphic screen.

B. BAS Wiring:

1. All conduit, wiring, accessories and wiring (low and power line voltage) connections required for the installation of the Building Management System, as herein specified, shall be provided by the BAS Contractor unless specifically shown on the Electrical Drawings under Division 26. All wiring shall comply with the requirements of applicable portions of Division 26 and all local and national electric codes, unless specified otherwise in this section.
2. All BAS wiring materials and installation methods shall comply with BAS manufacturer recommendations.
3. The sizing, type and provision of cable, conduit, cable trays, and raceways shall be the design responsibility of the BAS Contractor. If complications arise, however, due to the incorrect selection of cable, cable trays, raceways and/or conduit by the BAS Contractor, the Contractor shall be responsible for all costs incurred in replacing the selected components.
4. Class 2 Wiring:

    a. All Class 2 (24VAC or less) wiring shall be installed in conduit unless otherwise specified.
    b. Conduit is not required for Class 2 wiring in concealed accessible locations. Class 2 wiring not installed in conduit shall be supported every 5’ from the building structure utilizing metal hangers designed for this application. Wiring shall be installed parallel to the building structural lines. All wiring shall be installed in accordance with local code requirements.
5. Class 2 signal wiring and 24VAC power can be run in the same conduit. Power wiring 120VAC and greater cannot share the same conduit with Class 2 signal wiring.
6. Provide for complete grounding of all applicable signal and communications cables, panels and equipment so as to ensure system integrity of operation. Ground cabling and conduit at the panel terminations. Avoid grounding loops.

C. BAS Line Voltage Power Source:

1. 120-volt AC circuits used for the Building Management System shall be taken from circuit breakers designated as spare in nearby electrical panels. Refer to electrical drawings and specs.
2. Circuits used for the BAS shall be dedicated to the BAS and shall not be used for any other purposes.
3. DDC terminal unit controllers may use AC power from motor power circuits.

D. BAS Raceway:

1. All wiring shall be installed in conduit or raceway except as noted elsewhere in this specification. Minimum control wiring conduit size 1/2”.
2. Where it is not possible to conceal raceways in finished locations, surface raceway (Wiremold) may be used only as pre-approved by the Architect. Submit request for approval in writing, via a request for information.
3. All conduits and raceways shall be installed level, plumb, at right angles to the building lines and shall follow the contours of the surface to which they are attached.

4. Flexible Metal Conduit shall be used for vibration isolation and shall be limited to 3 feet in length when terminating to vibrating equipment. Flexible Metal Conduit may be used within partition walls. Flexible Metal Conduit shall be UL listed.
5. Penetrations

    a. Provide fire stopping for all penetrations used by dedicated BAS conduits and raceways.
    b. All openings in fire proofed or fire stopped components shall be closed by using approved fire resistive sealant.
    c. All wiring passing through penetrations, including walls shall be in conduit or enclosed raceway.
    d. Penetrations of floor slabs shall be by core drilling. All penetrations shall be plumb, true, and square.

E. BAS Identification Standards:

1. Node Identification. All nodes shall be identified by a permanent label fastened to the enclosure. Labels shall be suitable for the node location.
2. Cable types specified in Item A shall be color coded for easy identification and troubleshooting.

F. BAS Panel Installation:

1. The BAS panels and cabinets shall be located as indicated at an elevation of not less than 2 feet from the bottom edge of the panel to the finished floor. Each cabinet shall be anchored per the manufacturer's recommendations.
2. The BAS contractor shall be responsible for coordinating panel locations with other trades and electrical and mechanical contractors.

G. Input Devices:

1. All Input devices shall be installed per the manufacturer recommendation
2. Locate components of the BAS in accessible local control panels wherever possible.

H. HVAC Input Devices – General:

1. All Input devices shall be installed per the manufacturer recommendation
2. Locate components of the BAS in accessible local control panels wherever possible.
3. The mechanical contractor shall install all in-line devices such as temperature wells, pressure taps, airflow stations, etc.
4. Input Flow Measuring Devices shall be installed in strict compliance with ASME guidelines affecting non-standard approach conditions.
5. Outside Air Sensors:

    a. Sensors shall be mounted on the North wall to minimize solar radiant heat impact or located in a continuous intake flow adequate to monitor outside air conditions accurately.
    b. Sensors shall be installed with a rain proof, perforated cover.
6. Water Differential Pressure Sensors:

    a. Differential pressure transmitters used for flow measurement shall be sized to the flow-sensing device.

b. Differential pressure transmitters shall be supplied with tee fittings and shut-off valves in the high and low sensing pick-up lines.
c. The transmitters shall be installed in an accessible location wherever possible.

7. Medium to High Differential Water Pressure Applications (Over 21” w.c.):

a. Air bleed units, bypass valves and compression fittings shall be provided.

8. Building Differential Air Pressure Applications (-1” to +1” w.c.):

a. Transmitters’ exterior sensing tip shall be installed with a shielded static air probe to reduce pressure fluctuations caused by wind.
b. The interior tip shall be inconspicuous and located as shown on the drawings.

9. Air Flow Measuring Stations:

a. Where the stations are installed in insulated ducts, the airflow passage of the station shall be the same size as the inside airflow dimension of the duct.
b. Station flanges shall be two inch to three inch to facilitate matching connecting ductwork.

10. Duct Temperature Sensors:

a. Duct mount sensors shall mount in an electrical box through a hole in the duct and be positioned so as to be easily accessible for repair or replacement.
b. The sensors shall be insertion type and constructed as a complete assembly including lock nut and mounting plate.
c. For ductwork greater in any dimension than 48 inches or where air temperature stratification exists such as a mixed air plenum, utilize an averaging sensor.
d. The sensor shall be mounted to suitable supports using factory approved element holders.

11. Space Sensors:

a. Shall be mounted per ADA requirements.
b. Provide lockable tamper-proof covers where indicated on the plans or elsewhere in this Section.

12. Low Temperature Limit Switches:

a. Install on the discharge side of the first water or steam coil in the air stream.
b. Mount element horizontally across duct in a serpentine pattern insuring each square foot of coil is protected by 1 foot of sensor.
c. For large duct areas where the sensing element does not provide full coverage of the air stream, provide additional switches as required to provide full protection of the air stream.

13. Air Differential Pressure Status Switches:

a. Install with static pressure tips, tubing, fittings, and air filter.

14. Water Differential Pressure Status Switches:

a. Install with shut off valves for isolation.

15. HVAC Output Devices:

a. All output devices shall be installed per the manufacturer’s recommendation. The mechanical contractor shall install all in-line devices such as control valves, dampers, airflow stations, pressure wells, etc.

b. Actuators: All control actuators shall be sized capable of closing against the maximum system shut-off pressure. The actuator shall modulate in a smooth fashion through the entire stroke. When any pneumatic actuator is sequenced with another device, pilot positioners shall be installed to allow for proper sequencing.
   1) All actuator openings including conduit are to be properly sealed to prevent air movement and condensate buildup.
c. Control Dampers: Shall be opposed blade for modulating control of airflow. Parallel blade dampers shall be installed for two position applications.
d. Control Valves: Shall be sized for proper flow control with equal percentage valve plugs. The maximum pressure drop for water applications shall be 5 PSI. The maximum pressure drop for steam applications shall be 7 PSI.
e. Electronic Signal Isolation Transducers: Whenever an analog output signal from the Building Management System is to be connected to an external control system as an input (such as a chiller control panel), or is to receive as an input a signal from a remote system, provide a signal isolation transducer. Signal isolation transducer shall provide ground plane isolation between systems. Signals shall provide optical isolation between systems.

I. UPS DEVICES

1. Connect all UPS devices to emergency power circuits.
2. Connect low battery alarm to BAS alarm points.

J. Controls Contractor Shall Install Wiring, Controls Shall Be Furnished By Equipment Manufacturers Such As Thermostats For Split Systems

3.3 TAB COORDINATION AND SOFTWARE

A. Provide the Testing and Balancing Agency all control system software that would provide their capability to calibrate the following devices through the BAS system:

1. Terminal equipment controllers, VAV controllers, etc.
2. Air flow measuring stations and devices.
3. Water flow measuring stations and devices.

3.4 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements”: Requirements for inspecting and testing.

B. Manufacturer’s Field Service: Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including wiring and electrical connections. Report results in writing.

1. Operational Test: After electrical circuitry has been energized, start units to confirm proper unit operation. Remove malfunctioning units, replace with new units, and retest.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment, and retest.
3. Calibrate Test controllers by disconnecting input sensors and stimulating operation with compatible signal generator.

C. Engage a factory-authorized service representative to perform startup services.

D. Replace damaged or malfunctioning controls and equipment.

1. Start, test, and adjust control systems.
2. Demonstrate compliance with requirements, including calibration and testing, and control sequences.
3. Adjust, calibrate, and fine tune circuits and equipment to achieve sequence of operation specified.

E. Place Building Management System (BAS) in the required modes of operation as requested by the Testing and Balancing Contractor (TAB). Provide programming changes and reporting of data from the BAS needed to achieve proper performance.

F. Re-check fan static pressure control setpoints to ensure that the static pressure set points are the lowest value which enables terminal units to deliver design maximum flow plus or minus 10 percent with the variable frequency controller at maximum speed. The TAB Contractor shall make any fan adjustments needed. Adjust setpoint as requested by the TAB Contractor.

G. Re-check pump differential pressure control setpoints to ensure that the differential pressure setpoints are the lowest value which enables coil control valves to deliver design maximum flows plus or minus 10 percent. Adjust setpoint as requested by the TAB Contractor.

H. Verify DDC as follows:

1. Verify software including automatic restart, control sequences, scheduling, reset controls, and occupied/unoccupied cycles.
2. Verify operation of operator workstation.
3. Verify local control units including self-diagnostics.
4. Coordinate with commissioning agent.

3.5 DEMONSTRATION AND TRAINING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Demonstrate complete operation of systems, including sequence of operation prior to Date of Substantial Completion.

C. Demonstrate complete and operating system to Owner.

D. The BAS contractor shall provide the following minimum basic training services:

1. One day of on-site orientation by a system technician who is fully knowledgeable of the specific installation details of the project. This orientation shall, at a minimum, consist of a review of the project as-built drawings, the BAS software layout and naming conventions, and a walk through of the facility to identify panel and device locations.

3.6 MAINTENANCE

A. Division 01 Section: “Execution and Closeout Requirements: Requirements for maintenance service.

B. Provide service and maintenance of control system for one year from date of Substantial Completion.

C. Furnish complete service of controls systems, including callbacks.

D. Inspections:

1. Perform minimum of eight complete normal inspections of approximately four hours' duration in addition to normal service calls to inspect, calibrate, and adjust controls.
2. Furnish four complete subsequent inspections per year, one in each season, to inspect, calibrate, and adjust controls.
3. Submit written report after each inspection.

E. Examine unit components monthly and clean, adjust, and lubricate equipment.

F. Provide systematic examination, adjustment, and lubrication of unit and controls checkout and adjustments.

G. Repair or replace parts according to manufacturer's operating and maintenance data, using parts produced by manufacturer of original equipment.

H. Perform Work without removing units from service during normal building occupied hours.

I. Provide emergency callback service at all hours for this maintenance period.

J. Replacement Parts:

1. Maintain adequate stock of parts locally for replacement or emergency purposes.
2. Ensure personnel availability to fulfill parts service without unreasonable loss of time.

K. Perform Work using personnel under supervision of manufacturer or original installer.

L. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

3.7 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

C. Fully commission all aspects of the Building Management System work.

D. Support all commissioning activities and testing as outlined in the Commissioning Plan.

1. Refer to detailed roles and responsibilities of Controls Contractor in the Commissioning Plan.
2. Attend all commissioning meetings as outlined in the Commissioning Plan.
3. The technician who programmed the job shall be present on site to work with the Commissioning Agent for all functional performance testing.
4. Promptly rectify all controls related issues recorded in the Commissioning Issues Log and submit to the Owner, Commissioning Agent (CxA) and Engineer when each item is corrected. (Note: The CxA does not provide any directives, so any deviation from the original scope must be approved by the Owner or Engineer prior to performing work.

3.8 ADDITIONAL PROGRAMMING

A. Provide additional 40 hours of programming and re-programming to adjust and alter control sequences to be performed after the original sequence of operation is programmed and operational. Time shall be accounted for by hourly work tickets with copies of work tickets provided to the Architect.

3.9 ON-SITE ASSISTANCE

A. Occupancy Adjustments: Within one year of date of Substantial Completion, provide up to three Project site visits, when requested by Owner, to adjust and calibrate components and to assist Owner's personnel in adjusting sensors, settings, and controls, etc... to suit actual conditions.

B. Return to site in season to demonstrate (and instruct operating personnel) so that both heating and cooling season operation is demonstrated.

END OF SECTION

SECTION 23 23 00

REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this and the other Sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Pipes, tubing, fittings, and specialties.
2. Special duty valves.
3. Refrigerants.
4. Installation of refrigerant piping.
5. Engineered Wall Seal and Insulation Protection System.

B. Products installed but not furnished under this Section include pre-charged tubing, refrigerant specialties, and refrigerant accessories furnished as an integral part of packaged air conditioning equipment.

C. Design and installation shall be provided in accordance with equipment manufacturer’s recommendations.

D. Related Sections: The following sections contain requirements that relate to this section:

1. Division 07 Section: “Firestopping”: Product requirements for firestopping for placement by this section.
2. Division 07 Section: “Joint Sealants” For materials and methods for sealing penetrations through walls.
3. Division 08 Section: “Access Doors and Frames”: Access Doors for concealed valves and accessories
4. Division 09 Section: “Painting and Coating”: Product requirements for painting for placement by this section.
5. Division 23 Section: "Common Work Results for HVAC": Labeling and identification of refrigerant piping.
6. Division 23 - HVAC Insulation: Product requirements for Piping Insulation for placement by this section.
7. Division 23 Section: “Hangers and Supports for HVAC Piping and Equipment.”
8. Division 23 Section: “Identification for HVAC Piping and Equipment.”
9. Section: "HVAC Insulation": Pipe insulation.
10. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment.” Product requirements for Vibration Isolation for placement by this section.
11. Division 26 Section: “Raceways and Boxes for Electrical Systems”: Requirements of conduits and boxes housing electrical connections specified by the section.

3. MSS SP 89 - Pipe Hangers and Supports - Fabrication and Installation Practices.

G. Underwriters Laboratories Inc.:

1. UL 429 - Electrically Operated Valves.

1.4 SYSTEM DESCRIPTION

A. Where more than one piping system material is specified, provide compatible system components and joints. Use non-conducting dielectric connections when joining dissimilar metals in systems.

B. Provide flanges, unions, or couplings at locations requiring servicing. Use unions, flanges, or couplings downstream of valves and at equipment connections. Do not use direct welded or threaded connections to valves or equipment.

C. Provide pipe hangers and supports in accordance with ASME B31.5, ASTM F708, MSS SP 58, MSS SP 69, and MSS SP 89.

D. Flexible Connectors: Use at or near compressors where piping configuration does not absorb vibration.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product data for the following products:

1. Each type valve specified.
2. Each type refrigerant piping specialty specified.

C. Submit Shop Drawings showing:

1. The design and layout of refrigerant piping, valves, expansion valves, heat recovery boxes, branch selector boxes, drains, accumulators, traps, hot gas bypass, filters, and miscellaneous specialties, etc.
2. Pipe and tube sizes, valve arrangements and locations, slopes of horizontal runs, wall and floor penetrations, and equipment connection details.
3. Interface and spatial relationship between piping and proximate to equipment.

D. Provide a letter from the equipment manufacturer certifying the refrigerant pipe layout indicated on the refrigerant pipe shop drawing is being provided in accordance with the equipment manufacturer’s criteria including layout, pipe length, pipe offsets, and pipe size.

E. Brazer's Certificates signed by Contractor certifying that Brazer’s comply with requirements specified under "Quality Assurance" below.

F. Maintenance data for refrigerant valves and piping specialties, for inclusion in Operating and Maintenance Manual specified in Division 01 and in Division 23 Section: "Common Work Results for HVAC.”

G. Product Data:

1. Piping: Submit data on pipe materials, fittings, and accessories.
2. Valves: Submit manufacturers catalog information with valve data and ratings for each service.
3. Hangers and Supports: Submit manufacturers catalog information including load capacity.

4. Refrigerant Specialties: Submit manufacturers catalog information including capacity, component sizes, rough-in requirements, and service sizes for the following:

    a. Refrigerant moisture and liquid indicators.
    b. Refrigerant strainers.
    c. Refrigerant pressure regulators.
    d. Refrigerant pressure relief valves.
    e. Refrigerant filter-driers.
    f. Refrigerant solenoid valves.
    g. Refrigerant expansion valves.
    h. Electronic expansion valves.

H. Design Data: Indicate pipe size. Indicate load carrying capacity of trapeze, multiple pipe, and riser support hangers.

I. Test Reports: Indicate results of refrigerant leak test and piping system pressure test.

J. Manufacturer's Installation Instructions: Submit hanging and support methods, joining procedures and isolation.

K. Manufacturer's Certificate: Certify Products meet or exceed specified requirements

L. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within previous 12 months.

M. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of valves, equipment and refrigerant accessories.

C. Operation and Maintenance Data: Submit instructions for installation and changing components, spare parts lists, exploded assembly views.

1.7 QUALITY ASSURANCE

A. Qualify brazing processes and brazing operators in accordance with ASME "Boiler and Pressure Vessel Code," Section IX, "Welding and Brazing Qualifications".

B. Perform Work in accordance with authority having jurisdiction and AWS D1.1 for welding hanger and support attachments to building structure.

C. Regulatory Requirements: Comply with provisions of the following codes:

1. ANSI B31.5: ASME Code for Pressure Piping - Refrigerant Piping, latest edition.
2. ANSI/ASHRAE Standard 15: Safety Code for Mechanical Refrigeration, latest edition.

3. International Mechanical and Plumbing Codes, latest edition.
4. PHCC: National Standard Plumbing Code, latest edition.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Fabricator or Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

C. Design piping system and hangers and supports under direct supervision of Professional Engineer experienced in design of this Work and licensed at Project location.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Product storage and handling requirements.

B. Dehydrate and charge refrigeration components including piping and receivers, seal prior to shipment. Maintain seal until connected into system.

C. Accept valves on site in shipping containers with labeling in place. Inspect for damage.

D. Provide temporary end caps and closures on piping and fittings. Maintain in place until installation.

E. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

1.11 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”.

B. Do not install underground piping when bedding is wet or frozen.

1.12 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.13 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Requirements for coordination.

B. Coordinate the installation of roof piping supports and roof penetration with Division 07.

1.14 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for valves excluding packing.

1.15 MAINTENANCE MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish two refrigerant oil test kits each containing everything required for conducting one test.

1.16 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish two packing kits for each size and valve type.

C. Furnish two refrigerant filter-dryer cartridges of each type.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Refrigerant Valves and Specialties:

    a. Alco Controls Div, Emerson Electric.
    b. Danfoss Electronics, Inc.
    c. EATON Corporation, Control Div.
    d. Henry Valve Company.
    e. Parker-Hannifin Corporation, Refrigeration and Air Conditioning Division.
    f. Sporlan Valve Company.

2.2 PIPE AND TUBING MATERIALS

A. General: Refer to Part 3, Article "Pipe Application" for identification of systems where the below specified pipe and fitting materials are used.

B. Drawn-Temper Copper Tubing: ASTM B 280, Type ACR, hard-drawn straight lengths, and soft-annealed coils, seamless copper tubing. Tubing shall be factory cleaned, ready for installation, and have ends capped to protect cleanliness of pipe interiors prior to shipping.

C. Annealed-Temper Copper Tubing: ASTM B280, Type ACR

1. Contractor Option: Pre-Insulated Line Sets

a. UL-Recognized
b. ASTM C-534 and ASTM E-84
c. Closed Cell Elastomeric
d. UV Resistant Rated Insulation

2.3 FITTING AND JOINING MATERIALS

A. Fitting Materials

1. Wrought-Copper Fittings: ANSI B16.22, streamlined pattern.

B. Joining Materials

1. Brazing Filler for Joining Similar Metals: AWS A5.8, Classification BCuP series, with melting range from 1190 to 1480°F.
2. Brazing Filler for Joining Dissimilar Metals: AWS A5.8, Classification BAg series, with melting range from 1125 to 1370°F.

2.4 VALVES

A. Service shut-off valves shall be field-provided/installed for each branch to allow service to any indoor unit without field interruption to overall system operation.

B. General: Complete valve assembly shall be UL-listed and designed to conform to ARI 760.

C. Ball Valves:

1. Two piece bolted forged brass body with teflon ball seals and copper tube extensions, brass bonnet and seal cap, chrome plated ball, stem with neoprene ring stem seals, soldered ends.
2. Maximum working pressure: 700 psig
3. Maximum working temperature: 325 degrees F

D. Check Valves - Smaller Than 7/8 inch: 700 psig maximum operating pressure, 300 °F maximum operating temperature; cast brass body, with removable piston, Teflon seat, and stainless steel spring; straight through globe design. Valve shall be straight through pattern, with solder-end connections.

E. Check Valves - 7/8 inch and Larger: 700 psig maximum operating pressure, 300°F maximum operating temperature; cast bronze body, with cast bronze or forged brass bolted bonnet; floating piston with mechanically retained Teflon seat disc. Valve shall be straight through or angle pattern, with solder-end connections.

F. Solenoid Valves: ARI 760, 250°F temperature rating, 700 psig working pressure; forged brass, with Teflon valve seat, two-way straight through pattern, and solder end connections. Provide manual operator to open valve. Furnish complete with NEMA 1 solenoid enclosure with 1/2 inch conduit adapter, and 24 volt, 60 Hz. normally closed holding coil.

G. Evaporator Pressure Regulating Valves: pilot-operated, forged brass or cast bronze; complete with pilot operator, stainless steel bottom spring, pressure gage tappings, 24 volts DC, 50/60 Hz, standard coil; and wrought copper fittings for solder end connections.

H. Thermal Expansion Valves: thermostatic adjustable, modulating type; size as required for specific evaporator requirements, and factory set for proper evaporator superheat requirements. Valves shall have copper fittings for solder end connections; complete with sensing bulb, a distributor having a side connection for hot gas bypass line, and an external equalizer line.

I. Refrigerant Pressure Relief Valves: Straight Through or Angle Type: Brass body and disc, neoprene seat, factory sealed and stamped with ASME UV and National Board Certification NB; for standard 700 psig setting; selected to ASHRAE 15.

J. Hot Gas Bypass Valve: adjustable type, sized to provide capacity reduction beyond the last step of compressor unloading; and wrought copper fittings for solder end connections.

K. Electronic Expansion Valves

1. Brass bodies with flared or solder connection, needle valve with floating needle and machined seat, stepper motor drive.
2. Evaporation Control System: Electronic microprocessor based unit in enclosed case, proportional integral control with adaptive superheat, maximum operating pressure function, pre-selection allowance for electrical defrost and hot gas bypass.
3. Refrigeration System Control: Electronic microprocessor based unit in enclosed case, with proportional integral control of valve, on/off thermostat, air temperature alarm (high and low), solenoid valve control, liquid injection adaptive superheat control, maximum operating pressure function, night setback thermostat, timer for defrost control.

2.5 REFRIGERANT PIPING SPECIALTIES

A. General: Complete refrigerant piping specialty assembly shall be UL-listed and designed to conform to ARI 760.

B. Strainers: 700 psig maximum working pressure; forged brass body with monel 80-mesh screen, and screwed cleanout plug; Y-pattern, with solder end connections.

C. Moisture/liquid Indicators: 700 psig maximum operation pressure, 200°F maximum operating temperature; forged brass body, with replaceable polished optical viewing window, and solder end connections.

D. Filter-driers: ARI 710, 700 psig maximum operation pressure; steel shell, flange ring, and spring, ductile iron cover plate with steel capscrews, and wrought copper fittings for solder end connections. Furnish complete with replaceable filter-drier core kit, including gaskets, as follows:

1. Standard capacity desiccant sieves to provide micronic filtration.

E. Suction Line Filter-Drier: ARI 710, 700 psig maximum operation pressure, 225°F maximum operating temperature; steel shell, and wrought copper fittings for solder end connections. Permanent filter element shall be molded felt core surrounded by a desiccant for removal of acids and moisture for refrigerant vapor.

F. Suction Line Filters: 700 psig maximum operation pressure; steel shell, flange ring, and spring, ductile iron cover plate with steel capscrews, and wrought copper fittings for solder end connections. Furnish complete with replaceable filter core kit, including gaskets, as follows:

G. Flanged Unions: 700 psig maximum working pressure, 330°F maximum operating temperature; two brass tailpiece adapters for solder end connections to copper tubing; flanges for 7/8 inch through 1-5/8 inch unions shall be forged steel, and for 2-1/8 inch through 3-1/8 inch shall be ductile iron; four plated steel bolts, with silicon bronze nuts and fiber gasket. Flanges and bolts shall have factory-applied rust-resistant coating.

H. Flexible Connectors: 700 psig maximum operating pressure; seamless tin bronze or stainless steel core, high tensile bronze braid covering, solder connections, and synthetic covering; dehydrated, pressure tested, minimum 7 inch in length.

I. Suction Accumulators: Provide as manufactured by Refrigeration Research, Inc.

J. Refrigerant Receivers

1. Internal Diameter 6 inch and Smaller: ARI 495, UL listed, steel, brazed; 700 psig pressure rating, with taps for inlet, outlet, and pressure relief valve.
2. Internal Diameter 6 inch and Larger: ARI 495, welded steel, tested and stamped in accordance with ASME Section VIII; 700 psig with taps for liquid inlet and outlet valves, pressure relief valve, and magnetic liquid level indicator.

2.6 REFRIGERANT:

A. Type shall be provided to suit equipment being served.

2.7 LOCKING ACCESS PORT CAPS

A. Provide locking cap(s) with multi-key(s) for all refrigerant circuit access ports located outdoors.

B. Locking caps shall be as manufactured by Win Air Company or comparable acceptable product.

2.8 PROTECTIVE ENCLOSURES

A. Provide 26 Gauge Steel with a 40-year Valspar Baked on Paint Finish.

B. All metal construction, no plastic

C. Tapering ends for easy joining pieces together

D. Completely adjustable for exact length of coverage

E. Basis of design PermaCover model HVAC Line Set Cover Kit – Metal Line. Comparable products shall be submittal for approval as a comparable product.

2.9 ENGINEERED WALL SEAL AND INSULATION PROTECTION SYSTEM:

A. Provide a combined 2-in-1 protection system to be provided and installed for sealing wall penetrations of HVAC refrigerant line and protecting the refrigerant line set piping insulation. System basis of design shall be AIREX Pro-System Kit™ or a comparable acceptable product. The use of a combined sustainable compression gasket and seal system shall meet the requirements of the energy codes, to seal refrigerant line wall penetrations to prevent wall air-leakage, moisture intrusion, weather intrusion, rodent intrusion, vibration control, physical wall damage, when connecting with refrigerant piping or thermal insulated refrigerant piping.

B. FLEXIBLE PVC PLASTIC COVERS: Provide Flexible PVC Plastic UV/Weather Protective Cover for Pipe Insulation. Basis of design shall be as manufactured by AIREX E-FLEX GUARD™ by Airex Manufacturing Inc. shall be provided and installed, the pipe insulation UV/protective cover shall feature an outdoor industrial grade combined method with molecular bonding and an integral pre-fastening system that allows removable/ reusable use for maintenance and full-enclosure including cut to length capabilities without the use of adhesives as an attachment in any way shape or form including either in the protectors construction or the protectors installation or on any attachment to pipe insulation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Coordination and project conditions.

B. Examine rough-in for refrigerant piping systems to verify actual locations of piping connections prior to installation.

C. Verify excavations are to required grade, dry, and not over excavated.

3.2 PREPARATION

A. Pre-Cleaning:

1. Before installation of copper tubing other than Type ACR tubing, clean the tubing and fitting using following cleaning procedure:

    a. Remove coarse particles of dirt and dust by drawing a clean, lintless cloth through the tubing by means of a wire or an electrician’s tape.

b. Draw a clean, lintless cloth saturated with trichloroethylene through the tube or pipe. Continue this procedure until cloth is not discolored by dirt.
c. Draw a clean, lintless cloth, saturated with compressor oil, squeezed dry, through the tube or pipe to remove remaining lint. Inspect tube or pipe visually for remaining dirt and lint.
d. Finally, draw a clean, dry, lintless cloth through the tube or pipe.

3.3 INSTALLATION - INSERTS

A. Provide inserts for placement in concrete forms.

B. Provide inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.

C. Provide hooked rod to concrete reinforcement section for inserts carrying pipe 4 inches and larger.

D. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

E. Where inserts are omitted, drill through concrete slab from below and provide through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

3.4 INSTALLATION OF HANGERS AND SUPPORTS

A. General: Hangers, supports, and anchors are specified in Division 23 Section: "Hangers and Supports for HVAC Piping and Equipment."

3.5 INSTALLATION OF VALVING

A. General: Install refrigerant valves where indicated, and in accordance with manufacturer's instructions.

B. Install stop/ball valves:

1. The suction inlet of each compressor, compressor unit, or condensing unit
2. The discharge outlet of each compressor, compressor unit, or condensing unit
3. Each inlet and each outlet of each condenser where more than one condenser is used in parallel.
4. The inlet and outlet of each liquid receiver
5. On each side of strainers and driers
6. In liquid and suction lines at evaporators
7. Elsewhere in accordance with manufacturer’s instructions.

C. Stop/ball valves shall be supported to prevent detrimental stress and strain on the refrigerant piping system.

D. Stop/ball valves shall be identified where their intended purpose is not obvious.

E. Install a full sized, 3-valve bypass around each drier.

F. Install solenoid valves ahead of each expansion valve and hot-gas bypass valve. Install solenoid valves in horizontal lines with coil at the top.

1. Electrical wiring for solenoid valves is specified in Division 26. Coordinate electrical requirements and connections.

G. Thermostatic expansion valves may be mounted in any position, as close as possible to the evaporator.

1. Where refrigerant distributors are used, mount the distributor directly on the expansion valve outlet.
2. Install the valve in such a location so that the diaphragm case is warmer than the bulb.
3. Secure the bulb to a clean, straight, horizontal section of the suction line using two bulb straps. Do not mount bulb in a trap or at the bottom of the line.
4. Where external equalizer lines are required, make the connection where it will clearly reflect the pressure existing in the suction line at the bulb location.

H. Install pressure regulating and relieving valves as required by ASHRAE Standard 15.

3.6 PIPING APPLICATION

A. Provide Type ACR drawn copper tubing with wrought copper fittings and brazed joints above ground, within building. Provide Type K, annealed temper copper tubing for 2 inch and smaller without joints, within enclosed areas. Mechanical fittings (crimp or flair) are not permitted.

1. Install annealed temper tubing in pipe duct. Vent pipe duct to the outside.

3.7 INSTALLATION OF PIPING

A. Route piping parallel to building structure and maintain gradient.

B. Install piping to conserve building space, and not interfere with use of space.

C. Group piping whenever practical at common elevations.

D. Sleeve pipe passing through partitions, walls and floors.

E. Install pipe identification

F. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

G. Provide access where valves and fittings are not exposed.

H. Arrange refrigerant piping to return oil to compressor. Provide traps and loops in piping, and provide double risers as required. Slope horizontal piping 0.40 percent in direction of flow.

I. Flood refrigerant piping system with nitrogen when brazing.

J. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welds.

K. Prepare unfinished pipe, fittings, supports, and accessories, ready for finish painting.

L. Install valves with stems upright or horizontal, not inverted.

M. Insulate piping and equipment

N. Provide replaceable cartridge filter-dryers, with isolation valves and bypass with valve.

O. Locate expansion valve sensing bulb immediately downstream of evaporator on suction line.

P. Provide external equalizer piping on expansion valves with refrigerant distributor connected to evaporator.

Q. Install flexible connectors at right angles to axial movement of compressor, parallel to crankshaft.

R. Provide electrical connection to solenoid valves.

S. Fully charge completed system with refrigerant after testing.

T. Follow ASHRAE 15 procedures for charging and purging of systems and for disposal of refrigerant.

U. Install refrigerant piping in accordance with ASME B31.5.

V. Size piping and install refrigerant piping, traps, specialties as necessary for a complete and operational system in accordance with equipment manufacturer’s recommendations.

W. General: Install refrigerant piping in accordance with ASHRAE Standard 15 "The Safety Code for Mechanical Refrigeration". Unless specified otherwise by the Section, comply with “Installation of Piping - General” as specified in Division 22 Section; “Pipes and Tubes for Plumbing Piping and Equipment” and Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment.”

X. Install piping in as short and direct arrangement as possible to minimize pressure drop.

Y. Install piping for minimum number of joints using as few elbows and other fitting as possible.

Z. Arrange piping to allow normal inspection and servicing of compressor and other equipment. Install valves and specialties in accessible locations to allow for servicing and inspection.

AA. Provide adequate clearance between pipe and adjacent walls and hanger, or between pipes for insulation installation. Use sleeves through floors, walls, or ceilings, sized to permit installation of full thickness insulation.

BB. Insulate suction lines. Liquid lines are not required to be insulated, except where they are installed adjacent and clamped to suction lines, where both liquid and suction lines shall be insulated as a unit.

1. Do not install insulation until system testing has been completed and all leaks have been eliminated.

CC. Install branch tie-in lines to parallel compressors equal length, and pipe identically and symmetrically.

DD. Install copper tubing in rigid or flexible conduit in locations where copper tubing will be exposed to mechanical injury.

EE. Slope refrigerant piping as follows:

1. Install horizontal hot gas discharge piping with 1/2" per 10 feet downward slope away from the compressor.
2. Install horizontal suction lines with 1/2" per 10 feet downward slope to the compressor, with no long traps or dead ends which may cause oil to separate from the suction gas and return to the compressor in damaging slugs.
3. Install traps and double risers and where required in accordance with equipment manufacturer’s recommendations to entrain oil in vertical runs.
4. Liquid lines may be installed level.

FF. Use fittings for all changes in direction and all branch connections.

GG. Install exposed piping at right angles or parallel to building walls. Diagonal runs are not permitted, unless expressly indicated.

HH. Install piping free of sags or bends and with ample space between piping to permit proper insulation applications.

II. Conceal all pipe installations in walls, pipe chases, utility spaces, above ceilings, below grade or floors, unless indicated to be exposed to view.

JJ. Install piping tight to slabs, beams, joists, columns, walls, and other permanent elements of the building. Provide space to permit insulation applications, with 1” clearance outside the insulation. Allow sufficient space above removable ceiling panels to allow for panel removal.

KK. Locate groups of pipes parallel to each other, spaced to permit applying insulation and servicing of valves.

LL. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and mechanical sleeve seals. Pipe sleeves smaller than 6” shall be steel; pipe sleeves 6” and larger shall be sheet metal.

MM. Fire Barrier Penetrations: Where pipes pass through fire rated walls, partitions, ceilings, and floors, maintain the fire rated integrity. Refer to Division 07 for special sealers and materials.

NN. Make reductions in pipe sizes using eccentric reducer fittings installed with the level side down.

OO. Install strainers immediately ahead of each expansion valve, solenoid valve, hot gas bypass valve, compressor suction valve, and as required to protect refrigerant piping system components.

PP. Install moisture/liquid indicators in liquid lines between filter/driers and thermostatic expansion valves and in liquid line to receiver.

1. Install moisture/liquid indicators in lines larger than 2 1/8” OD, using a bypass line.

QQ. Install unions to allow removal of solenoid valves, pressure regulating valves, expansion valves, and at connections to compressors and evaporators.

RR. Install flexible connectors at the inlet and discharge connection of compressors.

SS. Refrigerant circuit access ports located outdoors shall be fitted with locking-type-tamper-resistance caps.

TT. Exposed refrigerant pipe in open spaces shall not be installed less than 7 feet 3 inches above the finished floor.

UU. Refrigerant piping that penetrates two or more floor/ceiling assemblies shall be installed in a fire rated shaft enclosure.

VV. Refrigerant piping located in concealed locations where tubing is installed in studs, joists, rafters, or similar member spaces, and located less than 1-1/2 inches from the nearest edge of the member shall be continuously protected by shield plates. Protective shield plates having a minimum thickness of 0.0575 inch (16 gage) shall cover the area of the pipe plus the area extending not less than 2 inches beyond both sides of the pipe.

3.8 INSTALLATION - REFRIGERANT SPECIALTIES

A. Refrigerant Liquid Indicators:

1. Install line size liquid indicators in main liquid line downstream of condenser.
2. When receiver is provided, install line size liquid indicators in liquid line downstream of receiver.
3. Install line size liquid indicators downstream of liquid solenoid valves.

B. Refrigerant Valves:

1. Install service valves on compressor suction and discharge.
2. Install gage taps at compressor inlet and outlet.
3. Install gage taps at hot gas bypass regulators, inlet and outlet.
4. Install check valves on compressor discharge.
5. Install check valves on condenser liquid lines on multiple condenser systems.
6. Install refrigerant charging valve in liquid line between receiver shut-off valve and expansion valve.

C. Strainers:

1. Install line size strainer upstream of each automatic valve.
2. Where multiple expansion valves with integral strainers are used, install single main liquid-line strainer.
3. On steel piping systems, install strainer in suction line.
4. Install shut-off valves on each side of strainer.

D. Install pressure relief valves on ASME receivers. Install relief valve discharge piping to terminate outdoors.

E. Filter-Dryers:

1. Install permanent filter-dryers in low temperature systems.
2. Install permanent filter-dryer in systems containing hermetic compressors.
3. Install replaceable cartridge filter-dryer vertically in liquid line adjacent to receivers.
4. Install replaceable cartridge filter-dryer upstream of each solenoid valve.

F. Solenoid Valves:

1. Install in liquid line of systems operating with single pump-out or pump-down compressor control.
2. Install in liquid line of single or multiple evaporator systems.
3. Install in oil bleeder lines from flooded evaporators to stop flow of oil and refrigerant into suction line when system shuts down.

G. Refrigerant pipe enclosures:

1. All refrigerant piping shall be protected by locating within building elements or protective enclosures
2. Provide protective enclosures where piping is exposed within the building or outside on grade/roof.
3. Protective enclosures are not required:

    a. Where piping is installed without ready access or located more than 7 feet 3 inches above the finished floor
    b. Where located within 6 feet of the refrigerant unit or appliance
    c. Where located in a machinery room per IMC 1105.

3.9 CONSTRUCTION

A. Pipe Joints:

1. Brazed Joints: Comply with the procedures contained in the AWS "Brazing Manual."

    a. WARNING: Some filler metals contain compounds which produce highly toxic fumes when heated. Avoid breathing fumes. Provide adequate ventilation.
    b. CAUTION: When solenoid valves are being installed, remove the coil to prevent damage. When sight glasses are being installed, remove the glass. Remove stems, seats, and packing of valves, and accessible internal parts of refrigerant specialties before brazing. Do no apply heat near the bulb of the expansion valve.
2. Fill the pipe and fittings during brazing, with an inert gas (i.e., nitrogen or carbon dioxide) to prevent formation of scale.
3. Heat joints using oxy-acetylene torch. Heat to proper and uniform brazing temperature.

B. Equipment Connections:

1. The Drawings indicate the general arrangement of piping and fittings.
2. Install piping adjacent to machine to allow servicing and maintenance.

3.10 REFRIGERANT PIPING SYSTEMS

A. Inspect, test and perform corrective action of refrigerant piping in accordance with ASME Code B31.5, Chapter VI, “Refrigerant Piping and Heat Transfer Components”, 2001, and as follows:

1. All refrigerant tubing shall be tested before tube insulation is applied.
2. Note: The use of compressed air for pressure testing refrigerant tubing will not be permitted.
3. Refrigerant relieve valves, if installed, shall be removed prior to pressure testing and shell openings plugged. After system is tested and found to be completely tight, relief valves shall be reinstalled prior to system evacuation.
4. Each tubing system shall be pressure tested with dry nitrogen. Leaks shall be repaired by removing and remaking the defective joint. No caulking will be permitted. After repair of leaks, system shall be retested and provided tight.
5. Tubing shall be tested per refrigerant manufacturer’s recommendations. Tubing shall be tested at a minimum of 550 psig on the high side and on the low side. Do not exceed manufacturer recommendations.
6. Repair leaking joints using new materials, and retest for leaks.

3.11 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements and Execution and Closeout Requirements”: Field inspecting, testing, adjusting, and balancing.

B. Test refrigeration system in accordance with ASME B31.5 and International Mechanical Code section 1110.

C. Repair leaks.

D. Retest until no leaks are detected.

3.12 ADJUSTING AND CLEANING

A. Verify actual evaporator applications and operating conditions, and adjust thermostatic expansion valve to obtain proper evaporator superheat requirements.

B. Clean and inspect refrigerant piping systems in accordance with industry standards.

C. Adjust controls and safeties. Replace damaged or malfunctioning controls and equipment with new materials and products.

3.13 ENGINEERED WALL SEAL AND INSULATION SYSTEM

A. The wall seal outlet shall be comprised of an elastomeric sleeve and stainless steel clamp. The connecting refrigerant lines exposed to weather shall be thermal insulated. All pipe insulation material (whether it is exterior surface coated or non-coated) shall be completely covered and protected from sunlight, moisture, equipment maintenance, wind, snow, ice, rodent damage, physical damage, and shall provide shielding from solar radiation that can cause degradation of the material.

3.14 FLEXIBLE PVC PLASTIC COVERS:

A. All pipe insulation material (whether it is exterior surface coated or non-coated) must be completely covered and protected. THE USE OF ANY ADHESIVES IS NOT PERMITTED FOR THIS APPLICATION. Insulation Protector shall be tested and meet the following testing: ASTM E 96 (Vapor Transmission of Materials), ASTM G 153 (Carbon Arc Light Exposure – Accelerated Weathering), ASTM D 412 (Tensile Strength after UV Exposure and Water Immersion), ASTM 570 (Water Absorption of Plastics), ASTM E 84 (Surface Burning Characteristics of Building Materials), ASTM G 21 (Fungal Growth). UV/Protector Pipe Insulation Material shall meet Class II vapor retarder per ASTM E 96 (vapor/moisture permeability test) “1 perm or less”. Wrapping Tape or Adhesive Tape shall not be permitted as per energy codes.

3.15 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

C. Charge system using the following procedure:

1. Install core in filter dryer after leak test but before evacuation.
2. Evacuate refrigerant system with vacuum pump; until temperature of 35°F is indicated on vacuum dehydration indicator.
3. During evacuation, apply heat to pockets, elbows, and low spots in piping.
4. Maintain vacuum on system for minimum of 5 hours after closing valve between vacuum pump and system.
5. Break vacuum with refrigerant gas; allow pressure to build up to 2 psi.
6. Complete charging of system, using new filter dryer core in charging line. Provide full operating charge.

D. Train Owner's maintenance personnel on procedures and schedules related to start-up and shut-down, troubleshooting, servicing, and preventative maintenance of refrigerant piping valves and refrigerant piping specialties.

E. Review data in Operating and Maintenance Manuals. Refer to Division 01 Section: "Execution and Closeout Requirements."

F. Schedule training with Owner through the Architect, with at least seven (7) days advance notice.

END OF SECTION

SECTION 23 30 00

HVAC AIR DISTRIBUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and all sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Duct Materials
2. Duct Applications
3. Duct Systems Fabrication
    a. General
    b. Crossbreaking or Cross Beading
    c. Rectangular Duct Fittings
    d. Transverse Duct Connection
    e. Manufactured Turning Vanes
    f. Round Branch Fittings
    g. Spin-in Fittings
    h. Splitter Dampers
    i. Hangers and Supports
    j. Sealing Materials
    k. Casings
4. Duct Sound Lining
5. Single Wall Spiral Round Ducts
6. Single Wall Spiral Flat Oval Ducts
7. Dryer Vents and Dryer Box
8. Grease Ducts
9. Flexible Duct
10. Flexible Duct Connectors
11. Air Devices
12. Ductwork Accessories
    a. Backdraft Dampers
    b. Manual Volume Control Dampers
    c. Duct Access Doors
13. Instrument Test Ports
14. Duct Thermometers
15. Smoke Detectors
16. Fire-Stopping
17. Fire Dampers
18. Ceiling Fire Dampers

19. Smoke Dampers
20. Combination Fire and Smoke Dampers
21. Duct Sound Attenuators
22. Variable Air Volume Terminal Units
23. Louvers
24. Louver Blank-Off Panels
25. Air Filtration Equipment
26. Insulated Equipment Enclosures
27. Ductwork Painting

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 03 Sections: “Cast-in-Place Concrete: Requirements for concrete encasements and curbs specified by this section.
2. Division 09 Section: “Painting and Coatings”: Requirements for painting or coating as specified in this Section.
3. Division 23 Section: “HVAC Insulation”: Execution requirements for insulation as specified by this Section.
4. Division 23: Common Motor Requirements for HVAC Equipment: Product requirements for fan powered terminal units for placement by this section.
5. Division 23 Section: “Instrumentation and Control for HVAC”: Product requirements for connection and control of Combination Smoke and Fire Dampers for placement as specified by this Section.
6. Division 26 Section: “Low Voltage Electrical Power Conductors and Cables”: Requirements for electric wiring and connection to devices and units as specified by this Section.
7. Division 26 Section: “Raceways and Boxes for Electrical Systems”: Requirements of conduits and boxes housing electrical wiring and connections as specified by this Section.

1.4 DEFINITIONS OF SEAMS AND JOINTS FOR FIELD FABRICATED DUCTWORK

A. Sealing Requirements Definitions: For the purposes of duct systems sealing requirements specified in this Section, the following definitions apply:

1. Seams: A seam is defined as joining of two longitudinally (in the direction of airflow) oriented edges of duct surface material occurring between two joints. All other duct surface connections made on the perimeter are deemed to be joints. Seams also refer to circumferential seams on manufactured fittings.

2. Joints: Joints include girth joints; branch and sub branch intersections; so-called duct collar tap-ins; fitting subsections; louver and air terminal connections to ducts; access door and access panel frames and jambs; duct, plenum, and casing abutments to building structures.

1.5 SYSTEM PERFORMANCE REQUIREMENTS

A. The duct system design, as indicated, has been used to select and size air moving and distribution equipment and other components of the air system. Changes or alterations to the layout or configuration of the duct system must be specifically approved in writing. Accompany requests for layout modifications with calculations showing that the proposed layout will provide the original design results without alteration of system performance, including increasing the system total pressure.

B. Variation of duct configuration or sizes other than those of equivalent or lower loss coefficient is not permitted except by written permission of Architect/Engineer.

C. Size round ducts installed in place of rectangular ducts according to ASHRAE Handbook - Fundamentals.

1.6 PREINSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Requirements for pre installation meeting.

B. Convene minimum two weeks prior to commencing Work of this Section.

1.7 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submitted procedures.

B. Product data including performance data and manufacturers technical details of construction relative to materials, weights, dimensions of individual components, schedules for each type of air devices, terminal units, etc. (fire dampers, smoke dampers, etc.) with location/designation/size/model number, profiles, accessories and finishes for the following items:

1. Duct Materials
2. Duct Applications
3. Duct Systems Fabrication

    a. General
    b. Crossbreaking or Cross Beading
    c. Rectangular Duct Fittings
    d. Transverse Duct Connection
    e. Manufactured Turning Vanes
    f. Round Branch Fittings
    g. Spin-in Fittings
    h. Splitter Dampers
    i. Hangers and Supports
    j. Sealing Materials

k. Casings

4. Duct Sound Lining
5. Single Wall Spiral Round Ducts
6. Single Wall Spiral Flat Oval Ducts
7. Dryer Vents and Dryer Box
8. Grease Ducts
9. Flexible Duct
10. Flexible Duct Connectors
11. Air Devices
12. Ductwork Accessories

    a. Backdraft Dampers
    b. Manual Volume Control Dampers
    c. Duct Access Doors

13. Instrument Test Ports
14. Duct Thermometers
15. Smoke Detectors
16. Fire-Stopping
17. Fire Dampers
18. Ceiling Fire Dampers
19. Smoke Dampers
20. Combination Fire and Smoke Dampers
21. Duct Sound Attenuators
22. Variable Air Volume Terminal Units
23. Louvers
24. Louver Blank-Off Panels
25. Air Filtration Equipment
26. Insulated Equipment Enclosures
27. Ductwork Painting

C. LEED Submittals:

1. Credit EQ. 4.1: Manufacturer’s product data for adhesives and sealants used on interior of building, demonstrating compliance with low –emitting materials requirements, including printed statement of VOC content.

D. Maintenance data for volume control devices, fire dampers, smoke dampers and combination fire/smoke dampers, in accordance with Division 15 Section and Division 01.

E. Test Reports:

1. Indicate variable air volume, fan powered terminal units and dual duct terminal units meet or exceed specified requirements.
2. Indicate pressure tests performed, including date, section tested, test pressure, and leakage rate according to SMACNA 016.

F. Shop Drawings:

1. Submit duct fabrication drawings, drawn to scale not smaller than 1/4 inch equals 1 foot, on sheets same size as Contract Drawings, indicating following:

a. Fabrication, assembly, and installation details, including plans, elevations, sections, details of components, and attachments to other Work.
b. Duct layout that further indicates pressure classifications and sizes in plan view; exhaust duct systems that further indicate classification of materials handled as specified in this Section.
c. Fittings.
d. Reinforcing details and spacing.
e. Seam and joint construction details.
f. Penetrations through fire-rated and other walls.
g. Terminal unit, coil, and humidifier installations.
h. Hangers and supports, including methods for vibration isolation and building and duct attachment.

G. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

H. Welder Certificates: Certify welders and welding procedures employed on Work, verifying AWS qualification within previous 12 months.

I. Manufacturer's Field Reports: Indicate condition of equipment after start-up including control settings and performance chart of control system.

J. Manufacturer Instructions:

1. Submit detailed instructions on installation requirements, including storage and handling procedures.
2. Submit special procedures for glass-fiber ducts.

K. Qualifications Statements:

1. Submit qualifications for manufacturer, installer, and licensed professional.
2. Submit manufacturer's approval of installer.
3. Welders: Qualify procedures and personnel according to AWS D1.1 for hangers and supports, AWS D1.2 for aluminum supports, and AWS D9.1 for duct joint and seam welding.

L. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.8 CLOSEOUT SUBMITTALS

A. Division 01 Section: "Execution and Closeout Requirements": Closeout Procedures.

B. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, cleaning procedures, replacement parts list, and maintenance and repair data/procedure.

C. Record drawings including duct systems routing, fittings details, reinforcing, support, and installed accessories and devices, in accordance with Division 23 Section and Division 01

1.9 QUALITY ASSURANCE

A. Installer: A firm with at least 5 years experience on projects with medium ductwork system, terminal units, etc. similar to this project.

B. Welded ductwork shall meet the following:

1. Qualify welding processes and welding operators in accordance with AWS D1.1 “Structural Welding Code - Steel” for hangers and supports and AWS D9.1 “Sheet Metal Welding Code.”
2. Qualify each welder in accordance with AWS qualification tests for welding processes involved. Certify that their qualification is current.
3. Welding certificates including welding procedures specifications, welding procedures qualifications test records, and welders’ qualifications test records complying with requirements specified in “compliance listings” below.

C. NFPA Compliance; Comply with:

1. NFPA 90A, “Standard for the Installation of Air Conditioning and Ventilating Systems, “for system components.
2. NFPA 90B, “Standard for the Installation of Warm Air Heating and Air Conditioning Systems”.
3. Comply with NFPA 255 where applicable for sound attenuators.
4. NFPA 96, “Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors for Commercial Cooking Equipment,” Chapter 3, “Duct System,” for kitchen hood duct systems, except as indicated otherwise.

D. U.L. Compliance; comply with:

1. U.L. Standard 181, Class 1 for flexible ductwork.
2. Furnish labeled fire dampers; in accordance with Underwriters Laboratories (UL) Standard 555 “Fire Dampers and Ceiling Dampers” furnish labeled smoke dampers in accordance with UL Standard 555S “Leakage Systems.” Furnish duct liner that meets the erosion test as detailed in UL Publication 181.

E. ARI Compliance; Comply with:

1. Test and rate air outlets and inlets in accordance with ARI 650 “Standard for Air Outlets and Inlets”.

F. ASHRAE Compliance: Test and rate air outlets and inlets in accordance with ASHRAE 70 “Method of Testing for Rating the Air Flow Performance of Outlets and Inlets”.

G. ADC Compliance: Test and rate air outlets and inlets in certified laboratories under requirements of ADC 1062 “Certification, Rating and Test Manual”.

H. ADC Seal: Provide air outlets and inlets bearing ADC Certified Rating Seal.

I. AMCA Compliance: Test and rate louvers in accordance with AMCA 500 “Test Method for Louvers, Dampers and Shutters”.

J. AMCA Seal: Provide louvers bearing AMCA Certified Rating Seal.

K. SMACNA Compliance: Comply with SMACNA duct construction standards (high, medium and low pressure) latest editions as of date of issue of these specifications.

1. Perform Work according to SMACNA 1884 and 1966.

L. Dampers tested, rated and labeled in accordance with the latest UL requirements.

M. Damper pressure drop ratings based on tests and procedures performed in accordance with AMCA 500.

N. Manufacturers shall be regularly engaged in manufacture of components listed herein with characteristics, sizes, capacities and finished required, and whose products have been proven satisfactory in use for a period of not less than five years.

1.10 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years' documented experience.

B. Installer: Company specializing in performing Work of this Section with minimum three years' documented experience and approved by manufacturer.

C. Welders: AWS qualified within previous 12 months for employed weld types.

D. Licensed Professional: Professional engineer experienced in design of specified Work and licensed at Project location

1.11 DELIVERY, STORAGE AND HANDLING

A. Division 01 Section: “Product Requirements”: Product Storage and handling requirements.

B. Inspection: Accept materials on Site in manufacturer's original packaging and inspect for damage.

C. Store materials according to manufacturer instructions.

D. Deliver sealant and fire-stopping materials to site in original unopened containers or bundles with labels informing about manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.

E. Store and handle sealant fire-stopping materials in compliance with manufacturers’ recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

F. Deliver and store stainless steel sheets on exposed ducts, care shall be taken to minimize scratches and marks caused by manufacturing and installation process.

G. Deliver diffusers, grilles, registers, transfer air devices, etc. wrapped in factory fabricated fiberboard type containers. Each container on outside of container shall include the equipment tag, type of diffuser, griller, register, transfer etc. or air terminal location to be installed and special

handling/stacking requirements. Avoid crushing or bending of containers in any way. Prevent dirt or debris, rain, etc, from entering the container during shipment, handling and storage.

H. Store equipment and devices in original cartons and protect from weather, construction work traffic, and vandalism. Where possible, all equipment/terminals, etc. shall be stored indoors. When necessary to store products outdoors, store above grade on pallets or in trailers and enclose with waterproof wrapping to protect from moisture and weather damage.

I. Protect dampers from damage to operating linkages and blades.

J. Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly indicating manufacturer and material.

K. Handling: Handle and lift dampers in accordance with manufacturer's instructions. Protect materials and finishes during handling and installation to prevent damage.

L. Covers on all containers shall be removed in time to eliminate the possibility of mold growth due to moisture.

1.12 AMBIENT CONDITIONS

A. Division 01 Section: “Temporary Facilities and Controls”: Requirements for ambient condition control facilities for product storage and installation.

B. Minimum Conditions: Do not install duct sealant when temperatures are less than those recommended by sealant manufacturer.

C. Subsequent Conditions: Maintain temperatures during and after installation of duct sealant.

1.13 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

B. Indicate field measurements on Shop Drawings.

1.14 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Coordination and project conditions.

B. Coordinate Work where appropriate with building control Work.

1.15 WARRANTY

A. Refer to Division 01 Section: “Execution and Closeout Requirements”: for product warranties and product bonds.

B. Furnish five year manufacturer’s warranty for ducts and air terminal units.

1.16 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish two of each size and type of fusible link.

C. Furnish extra fusible links to the Owner; one (1) link for every ten (10) installed of each temperature range.

PART 2 - PRODUCTS

2.1 DUCT MATERIALS

A. Galvanized Steel Ducts: ASTM A653 galvanized steel sheet, lock-forming quality, having G60 zinc coating of in conformance with ASTM A90.

B. Steel Ducts: ASTM A568, A1008, or A1011

C. Aluminum Ducts: ASTM B209 with dimensional tolerances of ANSI Standard H 35; aluminum sheet, alloy 3003-H14. Aluminum Connectors and Bar Stock: Alloy 6061-T6 or of equivalent strength. Ductwork shall be constructed in accordance with SMACNA Guidelines for aluminum ductwork.

D. Stainless Steel Ducts: ASTM A167, A240, or A666 Type 304**,** provide #2B or #4 Finish. Provide passivation of welds to remove weld burn on duct surfaces.

E. Concrete Ducts: ASTM C14; hub and spigot concrete sewer pipe with ASTM C443 joints, rubber gaskets.

F. Fasteners: Rivets, bolts, or sheet metal screws.

G. Hanger Rod: ASTM A36; galvanized steel continuously threaded.

H. Carbon Steel Sheet: Where indicated, provide carbon steel complying with ANSI/ASTM A 1008. Carbon steel sheet shall be equal to Armco, Toncan or Youngstown.

I. Reinforcing Shapes and Plates: Unless otherwise indicated, provide galvanized steel reinforcing where installed on galvanized sheet metal ducts. For aluminum and stainless steel ducts provide reinforcing of compatible materials.

J. Tie Rods: Galvanized steel. ¼-inch minimum diameter for 36-inch length or less; 3/8-inch, minimum diameter for lengths longer than 36 inches.

K. General: Furnish and install miscellaneous materials and products of types and sizes indicated and, where not otherwise indicated, provide type and sizes necessary to comply with duct system requirements, including proper connection of ductwork and equipment.

2.2 DUCT APPLICATIONS AND SEALING

A. Static-Pressure and Seal Classes: Unless otherwise indicated, construct according to the following:

DUTY	DUCT SYSTEM	SMACNA PRESSURE CLASS (INCHES WG)	GAGE PRESSURE
Supply	Supply Fan to Terminal Box	4”	Positive
Supply	Terminal Box to Terminal Diffuser/Grille/Register	2”	Positive
Supply	Supply Fan to Terminal Diffuser/Grille/Register	3”	Positive
Return/Exhaust	Terminal Box to Return Fan/Exhaust Fan	4”	Negative
Return/Exhaust	Terminal Equipment (Diffuser/Grille/Register) To Return/Exhaust Box	2”	Negative
Return/Exhaust	Terminal Equipment (Diffuser/Grille/Register) To Return Fan/Exhaust Fan	3”	Negative
Exhaust	Laboratory Exhaust Ductwork	4”	Negative
Outdoor Air	All Outdoor Air Ductwork	2”	Negative
Relief Air	All Relief Air Ductwork	2”	Positive
Transfer Air	All Transfer Air Ductwork	1”	Neutral

1. Provide 18 gauge minimum duct construction for the first ten (10) feet of supply and return ducts connected to all air handling units. Additionally, provide 18 gauge minimum duct construction for all ductwork located in shafts, including top and bottom elbows/tees.

B. Duct Sealing:

1. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in “Duct Schedule” Article according to SMACNA’s “HVAC Duct Construction Standards – Metal and Flexible”. All ducts shall be completely sealed.
2. All ducts shall be sealed. As a minimum, seal ducts to the following seal classes according to SMACNA’s “HVAC Duct Construction Standards – Metal and Flexible”:

Type	SMACNA PRESSURE CLASS (INCHES WG)	Positive or Negative Service	Seal Class	Leakage Class
Rectangular Metal	2”	Negative	C	24
Rectangular Metal	3”	Negative	B	12
Rectangular Metal	4”+	Negative	A	6
Round Metal	2”	Negative	C	12

Round Metal	3”	Negative	B	6
Round Metal	4”+	Negative	A	3
Round or Rectangular Metal	2”	Positive	C	6
Round or Rectangular Metal	3”	Positive	B	3
Round or Rectangular Metal	4”+	Positive	A	2
Round or Rectangular Metal Serving Hazardous Exhaust	All	Negative	A	2

2.3 DUCT SYSTEMS FABRICATION

A. General: Except as otherwise indicated, fabricate rectangular ducts with galvanized sheet steel or aluminum; in accordance with SMACNA 1966 "HVAC Duct Construction Standards," Latest Edition, Tables 2-1 through 2-52, including their associated details. Conform to the requirements in the referenced standard for metal thickness, reinforcing types and intervals, tie rod applications, and joint types and intervals.

1. Fabricate rectangular ducts in lengths appropriate to reinforcement and rigidity class required for pressure classification.
2. Provide materials that are free from visual imperfections such as pitting, seam marks, roller marks, stains, and discolorations.
3. Make allowance for internal duct lining where required.
4. Determine duct gauges for the longest duct side and use for all 4 sides. Joints and reinforcing requirements apply to the longest duct side.
5. Reinforce all ducts to prevent buckling, vibration or noise as recommended in the referenced construction standards and as required to suit the installed conditions.
6. Do not crossbreak duct which will receive rigid insulation covering.
7. Where tap sizes of divided flow fittings are not indicated, make branch and main connection sizes proportional to their respective air flows and maintain uniform transverse velocities in the fittings.
8. Make radius elbows and radius tee connection with throat radius equal to or greater than 1-1/2 centerline width of the duct. Use vaned elbows where shown and where radius elbows will not fit the space in all square bends.
9. Turning vanes shall be the airfoil type with extended trailing edges 36" maximum length. Where longer vanes are required, use 2 or more sets of vanes with intermediate runners securely fastened together.
10. Bolts, screws, rivet or spot weld reinforcing members securely to the duct on not less than 6" centers.
11. Where ducts are open ended without grilles, registers or other means of stiffening, reinforce and stiffen the open end with standing seams or an angle frame.
12. Paint all cut ends on galvanized angles, rods and other uncoated surfaces with aluminum paint.
13. Where ductwork is not painted or otherwise finished, remove all exposed traces of joint sealers, manufacturer's identification and other markings.
14. Aluminum sheet shall be 3003 H14 alloy or duct sheet, 16,000 PSI minimum tensile strength and capable of being formed to a Pittsburgh lock seam.
15. Reinforcing members for aluminum ductwork may be galvanized steel or aluminum, unless otherwise indicated. Where aluminum reinforcing is used, size the member in accordance with ASHRAE recommendations to have rigidity equivalent to listed mild steel angle sizes.

16. Where aluminum ductwork is used, make allowance for increased thermal expansion. Particularly avoid direct contact between aluminum and concrete or masonry walls subject to dampness.
17. Refer to paragraph 2.26 B for Manual Volume Control Dampers specification.

B. Crossbreaking or Cross Beading: Crossbreak or bead duct sides that are 19 inches and larger and are 20 gauge or less, with more than 10 sq. ft. of unbraced panel area, as indicated in SMACNA "HVAC Duct Construction Standard," Figures: 4-1 and 4-2, unless they are lined or are externally insulated.

C. Rectangular Duct Fittings: Fabricate elbows, transitions, offsets, branch connections, and other duct construction in accordance with SMACNA "HVAC Metal Duct Construction Standard," Latest Edition, Figures 2-1 through 2-10.

1. Slide-on Transverse Joint Connectors
   Prefabricated slide-on transverse duct connectors and components will be accepted.

   a. Duct constructed using prefabricates systems will refer to the manufacturer's guidelines for sheet gauge, intermediate reinforcement size and spacing and proper joint reinforcement(s).
   b. Manufacturers of prefabricated systems must have duct construction and reinforcement guidelines along with supporting independent leakage and deflection performance testing. Manufacturer's prefabricated systems printed assembly and installation procedures must be adhered to during all phases.
   c. All components of prefabricated system must be clearly embossed with manufacturer's marking and systems manufacturer clearly identified on all duct labels. No substitution of system components is permitted. Approved Manufacturer: Ductmate Industries or Ward Duct Connectors Incorporated "W.D.C.I."

D. Transverse Duct Connection System

1. Manufacturers:

   a. Ductmate Industries, Inc.
   b. TDC
   c. MEZ Industries
2. Furnish materials in accordance with all applicable codes, standards and local authorities having jurisdiction requirements. Provide SMACNA recommended rigidity class connections, interlocking angle and duct edge connection systems with sealant gaskets, cleats, and corner clips.
3. All transverse joints and intermediate reinforcement on rectangular ducts shall be as shown in SMACNA standards. Transverse joints shall be selected consistent with the specified pressure classification, material and other provisions for proper assembly of ductwork.

   a. Slide-on Flanges:
      1) Description: Add on factory-fabricated, slide-on transverse flange connectors, gaskets, and components.
      2) Material: galvanized steel, Stainless 304 or 316, Aluminum, Aluminized, PVC coated, Galvannealed, or Black Iron.

3) Gauge and Shape: For duct constructed using prefabricated systems, refer to the manufacturer's guidelines for sheet gauge, intermediate reinforcement size and spacing, and proper joint reinforcement.
4) Manufacturers or prefabricated systems must provide duct construction and reinforcement guidelines along with independent testing for leakage, deflection, and seismic performance.
5) Independent leakage testing must be for operating pressures of 10 inch wg positive and negative.
6) Manufacturer's prefabricated systems printed assembly and installation procedure must be adhered to at all times.
7) Manufacturer's procedures must include fastener and clean spacing along with details for all system variations including break-away and roofing connections.
8) All manufactured system components must be clearly embossed with manufacturer's name or markings. No substitution of manufacturer's system components is permitted.

b. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards – Metal and Flexible", Figure 2-2, "Rectangular Duct/Longitudinal Seams", for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards – Metal and Flexible".
c. Elbows, Transitions, Offsets, Branch Connections, and other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards – Metal and Flexible", Chapter 4, "Fittings and Other Construction" for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provision in SMACNA's "HVAC Construction Standards – Metal and Flexible".

4. Casings

a. Fabricate casings in accordance with SMACNA HVAC Duct Construction Standards – Metal and Flexible and construct for operating pressures indicated.
b. Reinforce access door frames with steel angles tied to horizontal and vertical plenum supporting angles. Furnish hinged access doors where indicated or required for access to equipment for cleaning and inspection. Furnish clear wire glass observation ports, minimum 6 x 6 inch size.
c. Fabricate acoustic casings with reinforcing turned inward. Furnish 16 gage back facing and 22 gauge perforated front facing with 3/32 inch diameter holes on 5/32 inch centers. Construct panels 3 inches thick packed with 4.5 lb./cu ft minimum glass fiber media, on inverted channels of 16 gage.

E. Welding:

1. Continuously Welded Round and Oval Duct Fittings: Two gages heavier than duct gages according to SMACNA 1966.
2. Cemented Slip Joints:

a. Minimum 4 inches.
b. Brazed or electric welded.

3. Prime coat welded joints.

F. Manufactured Turning Vanes:

1. Furnish and install single thickness, multiple radius, airfoil steel turning vanes. Static pressure loss for square ducts shall be no more than 20% of velocity head. Turning vanes shall be furnished with a mounting plate to facilitate installation in ductwork. Turning vanes shall be Harper double wall turning vanes fabricated from the same material as the duct. Turning vane front and back panels shall be securely locked together with adequate crimping to prevent twisting of vane. Vane shall be capable of withstanding 250 pounds of tensile load when secured according to the manufacturer's instruction. Rails for mounting turning vanes shall have self locking friction fit tabs designed to facilitate proper alignment of vanes. Tab spacing shall be as specified in Figure 4-3 of the 2005 SMACNA Manual, "HVAC Duct Construction Standards, Metal & Flexible" Third Edition standard. Rail systems with non-compliant tab spacing shall not be accepted. Acoustical Turning Vane: Shall be used in applications that required quiet operating systems. Mounting rails shall have friction insert tabs that align the vanes automatically. Turning vanes shall be Tuttle and Bailey Model AOOA, Ductmate "PRO-rail," or acceptable comparable product.

G. Round Branch Fittings:

1. Provide take off fittings manufactured with airtight seams using a locking double seam. Units shall be constructed of 26 gauge galvanized steel (minimum). Units shall have a factory installed volume damper with locking spring loaded quadrant. Damper regulator shall be elevated 2" to allow for insulation thickness. Fitting shall be conical type as described on the plans with a base mounting flange secured by a minimum of four sheet metal screws or pop-rivets. See drawings for alternate "Streamline" branch take-off fittings. All High Efficiency Take-Offs, Conicals, and Collars must have a factory applied gasket along all rivets, co-latches, and flange. All fittings shall be constructed from a minimum of 26 gauge steel. All dampered fittings must have low-leakage hardware with closed-end bearings. Manufacturer: Ductmate Industries "GreenSeam Fittings" or acceptable comparable product.

H. Spin-in Fittings

1. Furnish and install spin-in fittings where indicated on the contract drawings, Royal Metal Products Model No. 168 or acceptable comparable product, provide with balancing damper as manufactured by Duro Dyne, Ductmate Industries or acceptable comparable product.

    a. Material shall be of same construction as duct main.

I. Splitter Dampers

1. Provide splitter dampers in accordance with SMACNA Standards as manufactured by Titus, Hart & Cooley or approved equal. Dampers shall be of steel construction and shall be provided with manual adjusting lever and locking device.

J. Hangers and Supports

1. Building Attachments: Concrete inserts, powder actuated fasteners, or structural steel fasteners appropriate for building materials. Do not use powder actuated concrete fasteners for lightweight aggregate concretes or for slabs less than 4 inches thick.
2. Hangers: Galvanized sheet steel, or round, uncoated steel, threaded rod.

a. Hangers Installed In Corrosive Atmospheres: Electro galvanized, all thread rod or hot dipped galvanized rods with threads painted after installation.
b. Straps and Rod Sizes: Conform with Table 5-1, 5-1M, 5-2 in SMACNA HVAC Duct Construction Standards, Latest Edition, for sheet steel width and gage and steel rod diameters.

3. Duct Attachments: Sheet metal screws, blind rivets, or self tapping metal screws, compatible with duct materials.
4. Trapeze and Riser Supports: Steel shapes conforming to ASTM A 36.

a. Where galvanized steel ducts are installed, provide hot –dipped- galvanized steel shapes and plates.
b. For stainless steel ducts, provide stainless steel support materials.
c. For aluminum ducts, provide aluminum support materials, except where materials are electrolytically separated from ductwork.

5. Aircraft cable hanging system with easy lightweight mechanical adjustment system may be used for hanging HVAC and other mechanical applications. Aircraft cable and mechanical hanger shall have a 5 to 1 safety factor. Manufacturers: Ductmate Industries “Clutcher” Cable Hanging System, Gripple, Inc. Cable Hanger System, Erico CADDY SPEED LINK, or acceptable comparable product.

a. Cable hanging systems with adjustable mechanical devices shall be compliant with SMACNA HVAC duct construction standards, and the authority having jurisdiction’s requirements.

K. Sealing Materials

1. Joint and seam sealants:

a. UL-723
b. Maximum flame spread of 0 and maximum smoke development of 0
c. Seal to 15” water gauge and meet the requirements of all SMACNA seal classes
d. Application method: Brush, spray, or caulk.
e. Solid Content: Minimum 68% +/-2%
f. Water resistant
g. Mold and mildew resistant
h. Service: Indoor and outdoor
i. Static pressure rating: 15” water gauge
j. VOC: 0 g/l
k. LEED: Meets LEED v4 requirements or later
l. Emissions: Certified compliant under CDPH V1.1 small chamber emissions testing
m. Other requirements: Meet FDA, USDA, and EPA standards
n. UL 181 B-M listed
o. Acceptable manufacturers: Design Polymerics DP 1010, Ductmate Industries Proseal, or Hardcast Inc. IG-601 Iron Grip

2. Flanged gasket

a. Gasket size: 5/8” x 3/16”, no exceptions
b. UL 723
c. Maximum flame spread of 5 and maximum smoke development of 5
d. For use in TDC and TDF flanges
e. Mold and mildew resistant
f. Solid content: 100%

g. Water resistant
h. Elongation 600%
i. Service temperature: -40F to +245F
j. Other requirements: Meet FDA, USDA, and EPA standards
k. Acceptable manufacturers: Design Polymerics DP 1040 or Ductmate Industries 440 Butyl gasket tape.

3. Seam sealant

a. For use in Pittsburg, button punch, and snap lock seams
b. Non-curing and non-shrinking
c. Permanently flexible
d. Pumpable
e. Water resistant
f. Service temperature: -40F to +200F
g. Acceptable manufacturers: Design Polymerics seam sealant or Ductmate Industries 5511M.

L. Casings

1. Fabricate casings in accordance with SMACNA HVAC Duct Construction Standards – Metal and Flexible and construct for operating pressures indicated.
2. Reinforce access door frames with steel angles tied to horizontal and vertical plenum supporting angles. Furnish hinged access doors where indicated or required for access to equipment for cleaning and inspection. Furnish clear wire glass observation ports, minimum 6 x 6 inch size.
3. Fabricate acoustic casings with reinforcing turned inward. Furnish 16 gage back facing and 22 gauge perforated front facing with 3/32 inch diameter holes on 5/32 inch centers. Construct panels 3 inches thick packed with 4.5 lb./cu ft minimum glass fiber media, on inverted channels of 16 gage.

2.4 DUCT SOUND LINING

A. Rectangular Ductwork

1. Products:

a. K-Flex Gray Duct Liner with PSA
b. Armacell AP/Coilflex
1) Material shall have a density ranging from 6 lb/ft^3 (ASTM D1622, ASTM D3575).
2) Material shall have a maximum thermal conductivity (k) of 0.25 Btu-in/hr-ft^2-°F @ 75°F mean temperature (ASTM C518, ASTM C177).
3) Material shall have a maximum Water Vapor Transmission rate of 0.10 Perm-in. (ASTM E96, Desiccant Method).
4) Material shall have a minimum sound absorption coefficient (NRC) of 0.50 at a nominal 1” thickness (ASTM C423).
5) Material shall have a flame spread rating not greater than 25 and a smoke developed rating not greater than 50 when tested in accordance with ASTM E84 at a thickness required to attain a minimum 6 R-value.
6) Material shall have a minimum R-value of 6 at a nominal 1 ½” thickness.

7) Application of K-Flex gray duct liner with PSA shall be per manufacturer's recommendations and per SMACNA requirements.
8) Low VOC adhesive to meet South Coast AQMD Rule 1168.
9) Duct liners shall not break away, flake off, or show evidence of delamination at velocities of 10,000 ft/min per ASTM C1071.

B. Round/Oval Ductwork: Insulation material shall be a flexible, closed-cell or conformable, elastomeric insulation in sheet form as manufactured by Armacell: AP Spiralflex or a comparable acceptable product. This product shall meet the requirements as defined in ASTM C 534, Grade 1 Type II, "Specification for performed elastomeric cellular thermal insulation in sheet and tubular form".

1. Insulation materials shall be manufactured without the use of CFC's, HFC;s or HCFC's. It is also formaldehyde-free, low VOCs, fiber free, dust free and resists mold and mildew.
2. The insulation material shall conform to meet the requirements as defined in ASTM C 1534, Standard "Specification for Flexible Polymeric Foam Sheet Insulation Used as a Thermal and Sound Adsorbing Liner for Duct Systems"
3. Materials 1" thickness and below, shall have a flame spread index of less than 25 and a smoke developed index of less than 50 when tested in accordance with ASTM E 84, latest revision. In addition, the product, when tested, shall not melt or drip flaming particles, the flame shall not be progressive and all materials shall pass simulated end-use fire tests.
4. Materials shall have a maximum water absorption rate of 0/2% (% by volume), when tested in accordance with ASTM C 209.
5. The material shall be manufactured under an independent third party supervision testing program covering the properties for fire performance, thermal conductivity and water vapor transmission.
6. Materials shall be approved for air plenums.
7. Materials shall meet NFPA 90A, NFPA 90B and UL 181 Class 1 specification.
8. Materials shall meet ASTM C 411. Materials to perform up to 250°F.
9. Pertinent Duct Lining Specification Compliance.
10. Sound lining shall adhere to:

    a. ASTM C 1071 – Erosion Resistance.
    b. ASTM G 21 – Fungi Resistance.
    c. ASTM C 1338 – Fungi Resistance.
    d. ASTM G 22 – Bacterial Resistance.
    e. ASTM C 665 – Non Corrosiveness and no objectionable odors.
    f. NRC rating 0.40 – Test Method ASTM C 423 with ASTM E 795 Type A Mounting.
11. Sound lining shall be dust free and fiber free. Non particulating.
12. AP Spiralflex shall be applied to the inside of round ducts according to the installation guide written specifically for the AP Spiralflex.

2.5 SINGLE WALL SPIRAL ROUND DUCTS

A. Fabrication Requirements: All round duct shall meet SMACNA "HVAC Duct Construction Standards – Metal and Flexible" – current edition.

B. Manufacturers:

1. McGill AirFlow Corporation

2. Semco Incorporated
3. Tangent Air Corp.
4. Spiral Mfg. Co., Inc.
5. Eastern Sheet Metal, LLC
6. TNT Manufacturing
7. Linx Industries.
8. Ductmate Industries

C. Furnish materials in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

D. Transverse Joints: Select joint types according to SMACNA “HVAC Duct Construction Standards – Metal and Flexible” – current edition. Utilize Figure 3-2 – “Transverse Joints - Round Duct”.

1. Transverse Joints larger than 60” diameter – Flanged.

a. Unexposed Duct 3 inch to 30 inch Diameter: Round duct connects with a one-piece interior slip coupling at least two gages heavier than duct wall, beaded at center and fasted to duct with screws. Seal joint with an approved sealant applied continuously around both ends of coupler prior to assembling and after fastening.
b. All Exposed Duct and Unexposed Duct 30 inch to 72 inch Diameter. Three-piece, gasket flanged joint consisting of two internal flanges, with integral mastic sealant, and one external closure ring, for connecting the internal flanges and securing the closed cell neoprene gasketing in place.

E. Longitudinal Seams: Select joint types according to SMACNA “HVAC Duct Construction Standards – Metal and Flexible” – current edition. Utilize Figure 3-1 – “Seams – Round Duct and Fitting”.

1. Round duct larger than 72” in diameter shall have butt-welded longitudinal seams.

F. All round duct in excess of 1” W.G. positive or negative shall be spiral wound.

G. Product Description: UL 181, Class 1, round spiral lockseam duct constructed of galvanized steel.

H. Duct Coating: Polyvinyl chloride plastic, 4 mil thick on both sides. Temperature range: minus 30 degrees F to 200 degrees F.

I. Construct duct with the following minimum gauges:

Diameter	Gauge
2 inches to 14 inches	26
15 inches to 26 inches	24
27 inches to 36 inches	22
37 inches to 50 inches	20
51 inches to 60 inches	18

J. Construct fittings with the following minimum gauges:

Diameter	Gauge

2 inches to 14 inches	24
15 inches to 26 inches	22
27 inches to 36 inches	20
37 inches to 60 inches	18
61 inches to 84 inches	16

K. Stainless Steel Duct: Provide Type 304 stainless steel.

L. Round Ductwork Exposed to Weather:

1. On all high pressure round ductwork not welded and exposed to weather, join round and oval duct using flanges equal to “Accuflange or “Spiralmate” by Ductmate.” Flange shall be a SMACNA H transverse joint, constructed of 18 gauge (up to 58” round) or 16 gauge (60” to 94” round) galvanized Steel.

2.6 DRYER VENTS AND DRYER BOX

A. Dryer Vent

1. Furnish and install complete vent system, which is specifically designed for conveying moisture laden vapors conforming to requirements of NFPA 211. Duct material shall be minimum 24 gauge galvanized sheet metal. Ducts shall not be fastened with sheet metal screws or any other fastening means which extend into the duct (metal clamps or bands are recommended).

a. Ductmate Industries Quicksleeves or comparable acceptable product.

B. Dryer Box

1. Provide dryer exhaust box located in wall directly behind dryer
2. Dryerbox model DB-480

2.7 GREASE DUCTS

A. Listed Round Grease Duct System (Kitchen Hood Exhaust)

1. Round Grease Duct

a. Description: The factory-built modular grease duct shall be laboratory tested and listed by Underwriters Laboratories Standard UL 1978. Sections shall bear the UL listing mark and the cUL listing mark for Canada. Products listed “to” UL standards by other testing agencies are not allowed.
b. Assembly: Pipe sections shall be joined using a 1\2” flange connection with factory supplied vee bands and joint sealant. Products joined utilizing a method other than a 1\2” flange connection, or those using perforated vee bands, will not be accepted.
c. Construction: Between the inner and outer shells there shall be a minimum 4" of low conductivity ceramic fiber insulation. The insulation is to be securely attached to the inner shell with steel straps and insulating pins welded to the inner shell. Stainless steel centering clips shall be welded to the outer shell to maintain the 2" spacing and

ensure concentricity of the shells. Breeching and chimney sections, when installed according to manufacturer's instructions, shall comply with national safely standards and building codes.

d. Inner Shell: Inner shell material shall be type 304 stainless steel. Inner shell thickness shall be .035" for 5" to 36" diameter systems and .048" for 38" diameter systems. All inner shell seams shall be fully penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

e. Outer Jacket: Outer shell material shall be aluminized steel with a thickness of .034" for 5" to 36" diameter systems and .052" for 38" systems. (Outer shell thickness of optional type 304 or 316 stainless steel shall be .034" for 5" to 36" diameter systems and .048" for 38" diameter systems). All outer shell seams shall be full penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

f. Aluminized steel surfaces exposed to the elements shall be protected by a minimum of one base coat of primer and one finish coat of corrosion resistant paint suitable for outer jacket skin temperatures of the given application. All primer and paint shall be supplied by the installing contractor and shall be equivalent to series 4100 or 9400 as manufactured by Rust-Oleum. Alternatively, an outer jacket constructed of 304 or 316 stainless steel may also be considered in lieu of painting.

g. Accessories: Tees, elbows, increasers, hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, fire-stop assembly, and fasteners; fabricated from similar materials and designs as the grease duct straight sections; all listed for same assembly.

h. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1) Schebler Chimney Systems – Model P2
   2) Security Chimney
   3) Metal-Fab

B. Listed Round Grease Duct System (Zero-Clearance, 2-Hour Fire Rated)

1. Round Grease Duct:

a. Description: The factory-built modular grease duct shall be laboratory tested and listed by Underwriters Laboratories Standard UL 1978 & UL 2221 classification for zero clearance to combustibles with a 2 hour fire rating. Sections shall bear the UL listing mark and the cUL listing mark for Canada. Products listed "to" UL standards by other testing agencies are not allowed.

b. Assembly: Pipe sections shall be joined using a 1/2" flange connection with factory supplied vee bands and joint sealant. Products joined utilizing a method other than a 1/2" flange connection, or those using perforated vee bands, will not be accepted.

c. Construction: Between the inner and outer shells there shall be a minimum 4" of low conductivity ceramic fiber insulation. The insulation is to be securely attached to the inner shell with steel straps and insulating pins welded to the inner shell. Stainless steel centering clips shall be welded to the outer shell to maintain the 4" spacing and ensure concentricity of the shells. Breeching and chimney sections, when installed according to manufacturer's instructions, shall comply with national safely standards and building codes.

d. Inner Shell: Inner shell material shall be type 304 stainless steel. Inner shell thickness shall be .035" for 5" to 36" diameter systems and .048" for 38" diameter systems. All inner shell seams shall be fully penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

e. Outer Jacket: Outer shell material shall be aluminized steel with a thickness of .034" for 5" to 36" diameter systems and .052" for 38" systems. (Outer shell thickness of optional type 304 or 316 stainless steel shall be .034" for 5" to 36" diameter systems and .048" for 38" diameter systems). All outer shell seams shall be full penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

f. Accessories: Tees, elbows, increasers, hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, fire-stop assembly, and fasteners; fabricated from similar materials and designs as the grease duct straight sections; all listed for same assembly.

g. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1) Schebler Chimney Systems – Model FyreGaurd
   2) Security Chimney
   3) Metal-Fab

C. Listed Obround Grease Duct System (Kitchen Hood Exhaust)

1. Obround (Oval) Grease Duct:

a. Description: The factory-built modular grease duct shall be laboratory tested and listed by Underwriters Laboratories Standard UL 2221 classification for zero clearance to combustibles with a 2 hour fire rating. Sections shall bear the UL listing mark and the cUL listing mark for Canada. The product profile shall be a flat oval shape to allow overhead and sidewall clearance when installed. Joint sections shall be a ½" flange to flange connection sealed with banded flanges and joint sealant supplied by the manufacture.

b. Construction: Between the inner and outer shells there shall be a minimum 4" of low conductivity ceramic fiber insulation. The insulation is to be securely attached to the inner shell with steel straps and insulating pins welded to the inner shell. Stainless steel centering clips shall be welded to the outer shell to maintain the 4" spacing and ensure concentricity of the shells. Breeching and chimney sections, when installed according to manufacturer's instructions, shall comply with national safely standards and building codes.

c. Inner Shell: Inner shell material shall be type 304 or 316 stainless steel. Inner shell thickness shall be .035". All inner shell seams shall be fully penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

d. Outer Jacket: Outer shell material shall be aluminized steel with a thickness of .034". (Outer shell optional type 304 or 316 stainless steel). All outer shell seams shall be full penetration welded the entire length of the pipe section. Riveted, tack or spot welded seams shall not be permitted.

e. Accessories: Tees, elbows, increasers, hood connectors, terminations, adjustable roof flashings, storm collars, support assemblies, thimbles, fire-stop assembly, and fasteners; fabricated from similar materials and designs as the grease duct straight sections; all listed for same assembly.

f. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1) Schebler Chimney Systems – Model SlimVent
   2) Security Chimney
   3) Metal-Fab

D. Rectangular Grease Exhaust Duct

1. Interior ductwork shall be 16 gauge black steel or 18 gauge stainless steel constructed with liquid tight continuous external weld.
2. Exterior ductwork shall be 18 gauge stainless steel constructed with liquid tight continuous external weld.
3. All turns shall be made with 1½ radius turns. Turning vanes shall not be allowed.
4. Cleanouts shall be provided at each 90 degree elbow, base of riser and on horizontal sections of duct spaced not more than 20 feet apart.

    a. Grease exhaust duct doors shall be grease and air tight, UL 1978 listed, meeting NFPA 96 standards and all mechanical codes. Grease duct access doors can be sandwich type or with a weld on frame, with/without hinge.
    b. All grease duct access doors used shall be accompanied by independent testing in conjunction with each manufacturer's respective wrap system for high temperature applications.
        1) Doors shall be as manufactured by Ductmate Industries Ultimate style door or comparable acceptable product.

2.8 WET AIR EXHAUST SYSTEM DUCTWORK:

A. Furnish and install a complete wet air liquid tight duct system with continuous external weld for all seams and joints. Provide neoprene gaskets at flanged connections to equipment. Where ducts are not self draining back to the equipment, provide low point drain pocket with copper drain pipe to sanitary sewer. Provide access door in side of duct at drain pockets.

B. General Construction:

1. Sheet steel shall be prime grade and free of scale, 18 gauge 304 stainless. Exposed duct shall have polished #3 finish and 2B finish where concealed.
2. Duct shall be heliarc-welded watertight. The maximum length for one section ten (10) feet.

2.9 FLEXIBLE DUCT

A. Air Devices to Supply/Return Branch Ducts:

1. Flexible ductwork shall be Atco UPC #036 or comparable acceptable product, UL listed for Class 1 Air Ducts, Standard 181. Ducts shall be rated for positive pressure of 10" W.G. and negative pressure of 2" W.G. per UL 181.
2. Description:

    a. UL 181, Class 1, aluminum laminate and polyester film with latex adhesive supported by helical-wound spring steel wire.
    b. Insulation: Fiberglass.
    c. Vapor Barrier Film: polyethylene
    d. Pressure Rating: 10-inch wg positive and 1.0-inch wg negative.
    e. Maximum Velocity: 4,000 fpm
    f. Temperature Range: Minus 20 to plus 210 degrees F

3. Limit flexible duct 6' maximum. Install flexible ducts, using all recommended fittings, couplings and accessories. Support ducts with wide straps spaced so that horizontal runs do not sag more than 3" in 3'. Cover with duct tape and fasten with duct strap clamps. 180^{o} bends in flexible duct are prohibited.

B. Flexible Ducts at Fan Coil Units:

1. Flexible ducts shall be rated for a negative working pressure of 2 inches w.g.
2. Flexible ducts shall comply with latest NFPA Bulletin 90A.
3. Flexible ducts shall be Quietflex Type HPD Flex^{TM} or comparable acceptable product.
4. Flexible ducts shall be ISO 9001: 2000 certified.
5. Flexible ducts shall be Formaldehyde-free and shall be GreenGuard certified.

C. Flexible Duct Elbow Supports:

1. Flexible Duct Elbow Supports shall be Build Right Products-Flex® or comparable acceptable product.

a. Universal-mount 1-piece, fully adjustable, radius-forming brace to support 4-inch through 16-inch diameter flexible air ducts.
b. Classified: UL 2043.
c. Material: 100 percent recycled copolymer polypropylene.
d. Support Frame Radius: 8 inches.
e. Compliance for Flexible Duct Radius:
   1) SMACNA HVAC Duct Construction Standards.
   2) ASHRAE Advanced Energy Design Guides.
   3) ADC Flexible Duct Performance and Installation Standards.

2.10 FLEXIBLE DUCT CONNECTORS

A. Indoor Installation: UL listed fire retardant neoprene or vinyl-coated woven fiberglass fabric. Minimum density 30 oz./sq. yd. Rated to constant maximum temperature of 200 deg. F.

1. Acceptable Manufacturers, subject to compliance with requirements:

a. VentFabrics, Inc, model “Ventglas”.
b. Duro-Dyne Corp, model 10012 MF6N Specification Grade Neoprene, Super Metalfab.”
c. Ductmate Industries, Inc., model PROflex.

B. Outdoor Weather-Exposed Installations: UL listed ozone and UV-resistant hypalon-coated woven fiberglass fabric. Minimum density 24 oz./sq. yd. Rated to constant maximum temperature of 250 deg. F.

1. Acceptable Manufacturers, subject to compliance with requirements:

a. VentFabrics, Inc., model “Ventlon.”
b. Duro-Dyne Corp., model “#10011 MF6D Durolon or Dynalon Super Metalfab.”
c. Ductmate Industries, Inc., model PROflex.

2.11 AIR DEVICES

A. General:

1. Furnish and install air devices where indicated on the contract drawings. Diffusers, registers and grilles shall be of sizes, shapes, capacities and types as indicated on the contract drawings, as required for a complete installation.
2. Performance: Provide diffusers, registers, and grilles that have, as minimum, throw, pressure drop, and noise criteria ratings for each size device as listed in manufacturer's current data.
3. Ceiling Compatibility: Provide diffusers, registers and grilles with border styles that are compatible with adjacent ceiling systems, and that are specifically manufactured to fit into ceiling system with accurate fit and adequate support. Refer to general construction drawings and specifications for types of ceiling systems, which will contain each type of ceiling air diffuser.
4. For flush mounting, diffuser housing shall be mounted above ceiling surface with flush perimeter flange and gasket to seal against ceiling.
5. For lay-in mounting, diffuser housing shall be sized to fit between ceiling exposed suspension tee bars and rest on top surface of tee bar.
6. For wet or humid areas the air devices shall be of aluminum construction.

B. Air device selections are based on manufacturers Model numbers indicated on the contract drawings. The following products of: Titus, Hart & Cooley, Greenheck, Kruger, Metalaire, US Aire, Price, Nailer, or Tuttle & Bailey, Inc. will be accepted provided they meet application, performance and design criteria requirements.

C. Diffusers, registers and grilles shall be furnished with factory installed adjustable baffles to provide air patterns shown on the plans.

D. Air distribution devices have been specifically selected based on Titus performance data. If devices are submitted, other than those specified, the submittal must include an item by item selection of substitutions listed by space location. This list must include model number, size, air pattern, airflow, pressure drop, throw, NC noise level, finish and mounting method for both the submitted and specified device. Where compliance with performance required different dimensions, such as neck or ace size, than the specified item, the submittal must note where these dimension changes occur listing both the original and new dimensions.

E. Finishes of all air devices shall be baked on enamel, colors shall be selected by Architect.

F. Where air terminal devices are installed in duct collars or branches, furnish and install air extractors. Furnish and install control grids, volume dampers and/or other accessories necessary to ensure uniform air flow across the terminal devices. Accessories shall be of the same material as the terminal device. Install fixed blade terminals so that blades block the normal line of vision. Furnish 3 of each type of removable key operators.

2.12 DUCTWORK ACCESSORIES

A. Backdraft Dampers

1. General

a. Provide and install factory fabricated backdraft dampers suitable for horizontal or vertical installations.
b. Frame construction shall be based upon individual application and based on manufacturer's installation instructions for each damper assembly.
c. Mill finish is standard unless specified otherwise.

2. Manufacturers

a. Subject to compliance with requirements, provide dampers of one of the following:
   1) Ruskin Manufacturing.
   2) American Warming and Ventilating.
   3) Greenheck Corporation.
b. Model numbers and features listed below are based on Ruskin Manufacturing.

3. Light to Medium Duty Backdraft Damper (1000 to 1500 FPM maximum velocity)

a. Frame: 6063T5 extruded aluminum, 0.090" wall thickness, mitered corners.
b. Blades: (1000 FPM maximum velocity) - Ruskin BD2/A1, 0.025" formed aluminum, extruded vinyl edge seals. (1500 FPM maximum velocity) - Ruskin BD2/A2, 6063T5 extruded aluminum, 0.050" wall thickness, extruded vinyl edge seals.
c. Bearings: Synthetic.
d. Linkage: Concealed in frame.
e. Temperature limits: -40°F to +200°F.
f. Operational pressures: BD2A1 blades open at 0.03 in. wg. and are fully open at 0.10 in. wg. BD2A2 blades open at 0.10 in. wg. and are fully open at 0.15 in. w.g.
g. Accessories:
   1) Rear mounted bird screen.
   2) Kynar finish.
   3) Baked enamel finish.
   4) (Color and finish selection by Architect/Owner)

4. Heavy Duty Backdraft Damper (1500 to 2500 FPM maximum velocity)

a. Frame: 6063T5 extruded aluminum, 0.0125" wall thickness, galvanized steel braced corners.
b. Blades: 6063T5 extruded aluminum, 0.070" wall thickness, mechanically locked extruded vinyl blade edge seals. Ruskin Model BDG.
c. Bearings: Synthetic.
d. Linkage: ½" tiebars with stainless steel pivot pins.
e. Temperature limits: -40°F to +200°F.
f. Operational pressures:
   1) BDG blades open at 0.12 in. wg. and are fully open at 0.20 in. wg.
g. Accessories:
   1) Rear mounted bird screen.
   2) Adjustable static pressure control.
   3) Kynar finish.
   4) Baked enamel finish.
   5) (Color and finish to be selected by Architect/Owner)

5. Counterbalanced Backdraft Damper

a. Frame: 6063T5 extruded aluminum, 0.090" wall thickness, mitered corners with 12 gauge galvanized braces.
b. Blades: 0.025" roll formed aluminum with extruded vinyl blade seals mechanically locked into blade edge.
c. Bearings: Synthetic.

d. Linkage: χ" x ½" aluminum tiebars concealed in frame.
e. Counterbalance: Zinc plate steel weights, field adjustable.
f. Temperature limits: -40°F to +200°F.
g. Operational pressures:
h. CBD2 to relieve at 0.02 in. wg.
i. Accessories:
    1) Kynar finish.
    2) Baked enamel finish.
    3) (Color and finish to be selected by Architect/Owner)

B. Manual Volume Control Dampers

1. General:

a. Provide factory-fabricated volume-control dampers, complete with required hardware and accessories. Stiffen damper blades to provide stability under operating conditions. Provide locking device to hold single-blade dampers in a fixed position without vibration. Close duct penetrations for damper components to seal duct consistent with pressure class. Provide end bearings or other seals for ducts with pressure classifications of 3 inches or higher. Extend axles full length of damper blades. Provide bearings at both ends of operating shaft. All dampers shall be provided with shaft seals to prevent air leakage.
b. Where damper or splitter control rods extend through finished walls or ceilings, terminate rods in approved access box equal to Young No. 1 surface mounted quadrant regulator.
c. All splitter rods shall be provided with Young No. 656-3/8" or 659 – ½" end bearings using two (2) bearings per splitter damper.
d. All ducts larger than 12 x 12 shall be provided with opposed blade dampers.
e. For square ductwork smaller then 12x12 utilize the following damper:
    1) Control dampers meeting the following specifications shall be furnished and installed where shown on plans and/or as described in schedules.
    2) Damper blades shall be 16 ga. Galvanized steel 3V type with three longitudinal grooves for reinforcement. Blades shall be completely symmetrical relative to their axle pivot point, presenting identical resistance to airflow and operation in either direction through the damper (blades that are non-symmetrical relative to their axle pivot point or utilize blade stops larger than ½ inch are unacceptable). Blade seals shall to TPE. Linkage shall be blade-to-blade concealed in jamp (out of the airstream) to protect linkage and reduce pressure drop and noise.
    3) Damper frame shall be 16 ga. galvanized steel formed into a structural hat channel shape with reinforced corners to meet 11 ga. criteria. Bearings shall be corrosion resistant, permanently lubricated, synthetic (acetal) sleeve type rotating in extruded holes in the damper frame for maximum service. Axles shall be square and positively locked into the damper blade. Jamp seals shall be flexible stainless steel compression type to prevent leakage between blade end and damper frame.
    4) The damper manufacturer's submittal data shall certify all air leakage and air performance pressure drop data in licensed in accordance with the AMCA Certified Rating Program for Test Figures 5.2, 5.3 and 5.5. Damper air performance dat shall be developed in accordance with the latest edition of AMCA Standard 500-D.

5) Basis of design shall be Greenheck model VCD-23, comparable products as manufactured by Ruskin or American Warming and Ventilation may submitted for consideration.

f. For Round Ductwork 12" in. Diameter and Smaller Utilize the following damper:
   1) Round control dampers meeting the following specifications shall be furnished and installed where shown on plans and/or as described in schedules. Dampers shall consist of 20 ga. galvanized steel frame, blades fabricated from 20 ga. galvanized steel, and ½ in. dia. plated steel axles turning in bronze bearings and EPDM blade seals.
   2) Damper manufacturer's printed application and performance data including pressure, velocity, and temperature limitations shall be submitted for approval velocities to 3,000 fpm temperatures to 250°F and leakage to 4cfm/ft^2 @ 1 in. wg.
   3) Testing and rating to be in accordance with AMCA Standard 500-D.
   4) Basis of design shall be Greenheck model VCDR-53, comparable products as manufactured by Ruskin or American Warming and Ventilation may be submitted for consideration.

2. Manufacturers:

   a. Subject to compliance with requirements, provide dampers of one of the following:
      1) Ruskin Manufacturing.
      2) American Warming & Ventilating
      3) Greenheck Corporation
   b. Model numbers and features listed below are based on Ruskin Manufacturing.

3. Standard Duty Manual Volume Dampers:

   a. Frame: 16 gauge galvanized steel structural hat channel with reinforced tabbed corners.
   b. Blades: 6" wide, single skin, 16 gauge galvanized steel with three longitudinal grooves for reinforcement.
   c. Linkage: Concealed in frame, out of the airstream.
   d. Axles: ½" plated steel hex, positively locked.
   e. Bearings: Molded synthetic, corrosion resistant.
   f. Blade seals: PVC coated polyester fabric mechanically locked into the blade edge. Jamb seals shall be flexible metal between blade and frame.
   g. Control shaft: ½" diameter, removable steel shaft.
   h. Maximum system velocity: 1500 FPM.
   i. Temperature range: -25□F to +180□F.
   j. Maximum system pressure:
      1) 48" width = 2.5 in. wg.
      2) 36" width = 3.0 in. wg.
      3) 24" width = 4.0 in. wg.
      4) 12" width = 5.0 in. wg.
   k. Selection based on Ruskin Model No. CD36.
   l. Application: Parallel blade for mixing air streams and exhaust air duty. Opposed blade for outdoor air ductwork upstream of air monitoring station and adjacent to intake louvers suitable for horizontal or vertical installations.

4. High Performance/Low Leak Manual Volume Damper (Aluminum):

   a. Frame: 6063T5 extruded aluminum h
   b. at channel with hat mounting flanges on both sides of frame. Reinforced corner construction shall be machine staked with two die formed internal braces.

c. Blades: 6" wide, 6063-T5 aluminum air foil type extruded aluminum with integral structural reinforcing tube running full length of each blade.
d. Linkage: concealed in frame, out of airstream.
e. Axles: ½" plated steel hex, positively locked.
f. Bearings: Molded synthetic, non corrosive.
g. Blade seals: Mechanically locked, neoprene rubber construction. Removable/replaceable.
h. Control shaft: ½" diameter, removable steel shaft.
i. Maximum system velocity: 3000 FPM to 6000 FPM depending on width.
j. Temperature range: -50°F to +250°F.
k. Maximum system pressure: 3.5 in. wg. To 13.0 in. wg. depending on width.
l. Selection based on Ruskin Model CD50.
m. Application:
    1) Parallel blade for mixing air streams and exhaust air duty.
    2) Opposed blade for outdoor air ductwork upstream of air monitoring station and adjacent to intake louvers. Suitable for horizontal or vertical installations.

5. High Performance/Low Leak Manual Volume Damper (Galvanized steel):

a. Frame: 16 gauge galvanized steel structural hat channel with reinforced tabbed corners to meet 13 gauge criteria.
b. Blades: 6" wide, 14 gauge galvanized steel, roll formed air foil type.
c. Linkage: concealed in frame, out of airstream.
d. Axles: ½" plated steel hex, positively locked.
e. Bearings: Molded synthetic, non corrosive.
f. Blade seals: Mechanically locked, neoprene rubber construction. Removable/replaceable.
g. Control shaft: ½" diameter, removable steel shaft.
h. Maximum system velocity: 3000 FPM to 6000 FPM depending on width.
i. Temperature range: -76°F to +302°F.
j. Maximum system pressure: 3.5 in. wg. To 13.0 in. wg. depending on width.
k. Selection based on Ruskin Model CD60.
l. Application:
    1) Parallel blade for mixing air streams and exhausts air duty.
    2) Opposed blade for outdoor air ductwork upstream of air monitoring station and adjacent to intake louvers. Suitable for horizontal or vertical installations.

6. Damper End Switch

a. Refer to Division 23 Section "Instrumentation and Control for HVAC."

7. Damper Actuators

a. Refer to Division 23 Section "Instrumentation and Control for HVAC."

C. Automatic Airflow Dampers

1. Automatic Airflow Dampers shall be as manufactured by American ALDES Ventilation Corporation, Model: CAR-11 or comparable products as manufactured by Systemair or Trox Technik.
2. Dampers shall solely operate on duct pressure and require no external power supply. Each damper shall be pre-set and factory calibrated, requiring no field adjustment to the airflows as indicated on the schedule, and shall be rated for use in air temperatures ranging from -25" to 140°F.

3. Automatic Air Flow Dampers shall be capable of maintaining constant airflow within ± 10% of scheduled flow rates (15% for units 50 CFM or less), within the operating range of:

    a. 0.2 to 0.8 in. w.g. differential pressure
    b. 0.6 to 2.4 in. w.g. on high-pressure models
    c. 0.1 to 0.42 in. w.g. on low-pressure models
4. Dampers shall be provided as an assembly consisting of an ABS plastic body housed within a round sleeve for mounting in round duct. Each round sleeve shall be fitted with a lip gasket to ensure perimeter air tightness within the interior surface of the duct.
5. All dampers shall be classified per UL 2043 and carry the UL mark indicating compliance. All Automatic Air Flow Dampers shall require no maintenance and shall be warranted for a period of no less than five years.
6. Constant Airflow Regulators shall be installed in ducting systems in accordance with all applicable codes and manufacturer's instructions.

D. Furnish and install access doors and/or panels in high and low pressure ducts, where indicated or required to provide access for control devices, including but not limited to; control dampers, fire dampers, smoke dampers, airflow monitoring stations, etc.

1. Access doors in low velocity ducts shall be equal to Prefco CAD-101 or Ductmate "Square Framed Access Doors." Doors shall have galvanized steel frame, with 1" thick, 1-1/2 pcf fiberglass insulation with 24 gauge galvanized steel inner and outer panels. Doors shall be furnished with cam locks.
2. Doors shall be rated for installation in duct systems with pressures up to 8 in w.g. Where required for fire dampers, doors shall be furnished as a factory fabricated unit along with extended sleeve and fire damper (installed downstream of fire damper). Frame shall be 20 gauge galvanized steel with reinforced corners. Doors shall be 20 gauge galvanized steel sheet with 1" inch thick foil faced duct liner insulation, sandwiched to 22 gauge perforated inner line. Door panels shall have spring clips designed to relieve a minimum of 150 cfm at 2 ½" negative. Panels shall be: 10" x 10" on ducts less than 12" diameter; 12" x 18" on ducts from 12" to 24" diameter; and 18" x 18" on ducts from 26" to 36" diameter.
3. Systems 4" w.g. and above shall utilize a sandwich-type access door. Construct doors in accordance with Figure 7-3 of the 2005 SMACNA Manual, "HVAC Duct Construction Standards, Metal & Flexible" Third Edition. Manufacturer: Ductmate Industries "Sandwich" style door or acceptable comparable product.
4. Grease exhaust duct doors shall be grease and air tight, UL 1978 listed, meet NFPA 96 standards and all mechanical codes. Grease duct access doors can be sandwich type or with a weld on frame, with/without hinge. Manufacturer: Ductmate Industries "Ultimate" style door or acceptable comparable product.
5. All grease duct access doors used shall be accompanied by independent testing in conjunction with each manufacturer's respective wrap system for high temperature applications.

2.13 INSTRUMENT TEST PORTS

A. Furnish and install instrument test ports in the ductwork to allow use of pilot tube traverses in testing and balancing air systems. Install ports in each main, submain and branch main of all systems including supply, return and exhaust. Place holes on more than 2 sides of larger ducts

if required by available pilot tube length. Equip holes with Ventlok #699 instrument ports. Fittings shall extend beyond duct covering.

2.14 DUCT THERMOMETERS

A. Duct thermometers shall be Johnson Service Co., Powers Regulator Co. or approved equal, 4½" dial, 2˚F divisions, cast aluminum case, mercury actuated, brass movement, 8' copper averaging bulb with bronze braided armor, stainless steel connecting tube as required.

B. Duct thermometers shall be furnished and installed at air handling units as follows:

LOCATION	RANGE
Outdoor Air Duct	-40°F to 120°F
Return Air Duct	30°F to 180°F
Mixed Air Plenum	30°F to 180°F
Supply Air Duct	30°F to 180°F

2.15 SMOKE DETECTORS

A. Smoke detectors and associated wiring shall be provided under Division 26 and located and installed under Division 23.

2.16 FIRE-STOPPING

A. Fire-Resistant Sealant: Provide two-part, foamed-in-place, fire-stopping silicone sealant formulated for use in a through-penetrations through walls and floors, having fire-resistance ratings indicated as established by testing identical assemblies per ASTM E 814 by Underwriters Laboratory, Inc. or other testing and inspecting agency acceptable to authorities having jurisdiction.

B. Fire-Resistant Sealant: Provide one-part elastomeric sealant formulated for use in a through-penetration fire-stop system for filling openings around duct penetrations through walls and floors, having fire-resistance ratings indicated as established by testing identical assemblies per ASTM E 814 by Underwriters Laboratory, Inc. or other testing and inspecting agency acceptable to authorities having jurisdiction.

C. Products: Subject to compliance with requirements, provide one of the following:

1. “Dow Corning Fire Stop Foam”; Dow Corning Corp.
2. “Pensil 851"; General Electric Co.
3. “Dow Corning Fire Stop Sealant”; Dow Corning Corp.
4. “3M Fire Barrier Caulk CP-25"; Electrical Products Div./3M.
5. “RTV 7403"; General Electric Co.

2.17 FIRE DAMPERS

A. General: U.L. labeled according to U.L. Standard 555 “Standard for Fire Dampers.” Dynamic fire dampers shall be used in systems where the use of the air moving system may be “on” or “off” to control the movement of smoke during a fire. Static fire dampers shall be used in systems where the air moving systems are automatically shut down during the event of fire. All dampers shall bear the UL555 label and be tested in accordance with AMCA Standard 500 for air pressure drop ratings.

B. Manufacturers:

1. Subject to compliance with requirements, provide fire dampers of one of the following:

    a. Air Balance, Inc.
    b. Ruskin Manufacturing.
    c. Greenheck.
    d. United Enertech.
2. Model numbers and features listed below are based on Ruskin Manufacturing.

C. Static Type Fire Dampers:

1. Fire Rating: 1½ hour, curtain with 80-90% free area, or multi-blade type when applicable.

    a. Blades must be out of airstream
2. Blade/Frame: Galvanized or Stainless Steel to match adjoining ductwork. Gauge thickness per UL Listing. Sleeve may be omitted if wall thickness matches damper construction per UL 555.
3. Closure springs: 301 stainless steel (horizontal only) constant force as required by UL listing.
4. Mounting: Horizontal or vertical (floor or wall).
5. Replaceable Fusible Link: 165°F (standard) or 212°F.
6. Selection based on Ruskin Model IBD2 and FD series, or FDR25 (true round type).
7. Factory provided damper/sleeve assembly shall be provided with single side (FAST) or 2-side (PFMA) mounting angles, per manufacturer’s requirement for duct size and fire rating. Duct/sleeve breakaway connections are per SMACNA Fire Smoke Installation Guide and/or damper manufactures installation instructions.

D. Dynamic Type Fire Damper:

1. Fire Rating: 1½ hour, curtain type with 80-90% free area or multi-blade type when applicable.

    a. Blades must be out of airstream
2. Blade/Frame: Galvanized or Stainless Steel to match adjoining ductwork. Gauge thickness per UL Listing. Sleeve may be omitted if wall thickness matches damper construction per UL 555.
3. Closure springs: 301 stainless steel constant force or spring clip type as required by UL listing.
4. Mounting: Horizontal or vertical (floor or wall).
5. Replaceable Fusible Link: 165°F (standard), 212°F or 285°F
6. Selection based on Ruskin Model DIBD2 and DFD series, or FDR25 (true round type).

7. Factory provided damper/sleeve assembly shall be provided with single side (FAST) or 2-side (PFMA) mounting angles per manufacturer's requirement for duct size and fire rating. Duct/sleeve breakaway connections are per SMACNA Fire Smoke Installation Guide and/or damper manufactures installation instructions.

2.18 SMOKE DAMPERS:

A. General: U.L. labeled according to UL Standard 555S, "Standard Leakage Rated Dampers for Use in Smoke Control Systems." Dampers shall bear the U.L. classification label. As part of the U.L. qualification, dampers shall be rated to a minimum 2000 FPM at 4" W.G. and 250°F.

B. Manufacturers:

1. Subject to compliance with requirements, provide smoke dampers of one of the following:

   a. Air Balance, Inc.
   b. Ruskin Manufacturing.
   c. Greenheck.
   d. United Sheet Metal.
2. Model numbers and features listed below are based on Ruskin Manufacturing.

C. Smoke Damper:

1. Assembly Rating: 250°F, or 350°F
2. Actuator: Electric – (Factory mounted) Damper and actuator shall be factory cycled to verify proper operation prior to shipping.
3. Provide damper position indicator (linked directly to blade, integral to actuator, or shaft mounted type) to remotely indicate damper position.
4. Provide damper test switch (DTS). Damper mounted or remote mounted.
5. Blade Material: Galvanized, stainless Steel or aluminum to match adjoining ductwork. Single piece airfoil, V-groove or double skin low profile aerodynamic shaped. Gauge as required by UL listing.
6. Frame: Galvanized, stainless steel, or aluminum to match adjoining ductwork. Gauge thickness per manufacturer's requirement for duct size and rating.
7. Bearings: Stainless steel, pressed in frame.
8. Blade Seal: Silicone edge type for smoke seal to 450°F, or stainless steel flexible compression type.
9. Axle: ½" diameter steel.
10. Provide LP series for ducts 6"x6" up to 36"to14". Provide SDRS25 for round duct up to 24" diameter. Provide SD36 series for duct systems under 2,000fpm. Provide SD60 (galvanized) or SD50 (aluminum) for duct systems that exceed 2,000fpm.

2.19 COMBINATION FIRE AND SMOKE DAMPERS:

A. General: U.L. labeled according to UL Standard 555S, "Standard for Leakage Rated Dampers for Use in Smoke Control Systems." Dampers shall bear the UL classification label. As part of the UL qualification, dampers shall be rated to a minimum 2000 FPM at 4" W.G. and 250°F.

B. Manufacturers:

1. Subject to compliance with requirements, provide combination fire and smoke dampers of one of the following:

    a. Air Balance, Inc.
    b. Ruskin Manufacturing.
    c. Greenheck.
    d. United Sheet Metal.
2. Model numbers and features listed below are based on Ruskin Manufacturing.

C. Combination Fire and Smoke Damper:

1. Fire/ Leakage Rating: 1½ hour/ Class 1 or Class 2, 3 hour /Class 1.
2. Assembly Rating: 250°F (standard), or 350°F (optional)
3. Actuator: Electric or pneumatic – (Factory mounted) Damper and actuator shall be factory cycled to verify proper operation prior to shipping.
4. Heat actuated responsive device for controlled closure: 165°F (standard), 212°F, 250°F or 350°F
5. Provide damper position indicator (linked directly to blade, integral to actuator, or shaft mounted type) to remotely indicate damper position.
6. Provide damper test switch (DTS). Damper mounted or remote mounted.
7. Blade Material: Galvanized, or Stainless Steel to match adjoining ductwork. Single piece airfoil, V-groove or double skin low profile aerodynamic shaped. Gauge as required by UL listing.
8. Frame: Galvanized, stainless steel or aluminum to match adjoining ductwork. Gauge thickness per manufacturer's requirement for duct size and rating.
9. Bearings: Stainless steel, pressed in frame.
10. Blade Seal: Silicone edge type for smoke seal to 450°F, or stainless steel flexible compression type.
11. Axle: ½" diameter steel.
12. Provide LP series for ducts 6"x6" up to 36"x14". Provide FSDRS25 for round duct up to 24" diameter. Provide FSD36 series for duct systems under 2,000fpm. Provide FSD60 for duct systems that exceed 2,000fpm.

2.20 DUCT SOUND ATTENUATORS

A. General:

1. Silencers shall be of the size, configuration, capacity and acoustic performance as scheduled on the drawings. Silencers shall be fabricated by the same manufacturer.
2. Silencer inlet and outlet connection dimensions must be equal to the duct sizes shown on the drawings. Duct transitions at silencers are not permitted unless shown on the contract drawings or approved by the project engineer.

B. Construction:

1. Silencers shall be constructed in accordance with ASHRAE and SMACNA Standards for the pressure and velocity classification specified for the air distribution system in which it is installed.
2. Casing seams and joints shall be lock-formed and sealed or stitch welded and sealed except as noted, to provide leakage-resistant construction.

3. Airtight construction shall be achieved by use of a duct-sealing compound supplied and installed by the contractor at the jobsite.
4. Perforated steel shall be adequately stiffened to insure flatness and form. Spot welds shall be painted as required.
5. Fire-Performance Characteristics:

    a. Silencer assemblies, including acoustic media fill, natural cotton fiber, sealants and acoustical spacers shall have Class 1 flame- spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E84, NFPA 255 or UL 723.
6. Material gauge thickness:

    a. Material gauges noted in other sections are minimums and shall increase as required for the system pressure and velocity classification.
    b. The silencers shall not fail structurally when subjected to a differential air pressure of 8 inches water gauge.

C. Outer casing shall be ASTM A 653/A 653M, G90 galvanized sheet steel, gauge as listed below

1. Rectangular Silencers, including STC-rated models: 22 gauge

D. Rectangular Elbow Silencers:

1. Acoustical splitter/baffles shall be internally radiused and aerodynamically designed for efficient turning of the air.

E. Inner perforated metal liner shall be supplied in accordance with ASTM A 653/A 653M, G90 galvanized sheet steel in the following gauge thicknesses according to silencer type or connection size:

1. Rectangular Silencers: 22 gauge

F. Principal Sound-Absorbing Mechanism:

1. Absorptive (Dissipative) and Film Lined Silencers:

    a. Standard Acoustic media:
        1) Media shall be of acoustic quality, shot-free glass fiber insulation with long, resilient fibers bonded with a thermosetting resin. Glass fiber density and compression shall be as required to insure conformance with laboratory test data.
        2) Media shall be packed with a minimum of 15% compression during silencer assembly.
        3) Media shall be resilient such that it will not pull apart during normal applications, and shall resist settling, breakdown, and sagging from vibration. Media shall not rot, mildew, or otherwise deteriorate, and shall have sufficient flexibility to readily form around corners and curved surfaces.
        4) Media shall not cause or accelerate corrosion of aluminum or steel.

G. Media Protection:

1. Film Lined:

a. The acoustic media shall be completely wrapped with polymer film to help prevent shedding, erosion and impregnation.
b. The wrapped acoustic media shall be separated from the perforated metal by a factory-installed acoustically transparent spacer.
c. The spacer shall be flame retardant and erosion resistant.
d. Mesh, screen or corrugated perforated liner will not be acceptable as a substitute for the specified spacer.
e. Silencer manufacturer shall provide a written test report showing silencer assemblies have Class 1 flame-spread index not exceeding 25 and smoke-developed index not exceeding 50 when tested according to ASTM E 84, NFPA 255 or UL 723.

2.21 LOUVERS

A. Louvers are provided under another division.

B. General:

1. Louvers shall be provided under this division and installed under another division.
2. All louvers shall be by the same manufacturer.
3. Louvers shall be AMCA 511 rated and carry this seal.
4. Louvers shall always be caulked, whether they are provided under Architectural Division or provided under Division 23.

C. Manufacturer:

1. Subject to compliance with requirements, provide louvers of one of the following:

   a. Ruskin Corporation.
   b. American Air Warming and Ventilating, Inc.
   c. Greenheck Fan Corporation.
   d. Penn Ventilation Company.
2. Model numbers and features listed below are based on Ruskin model number ELF 375 DX.

D. Louvers are subject to the following:

1. Performance: High performance with 55% free area with free area velocity of not more than 700 fpm. Louver shall be drainable style.
2. Frame: 4" deep, 6063-T5, .0.80" thick extruded aluminum.
3. Blades: 6063-T5, .0.80" thick extruded aluminum.
4. Blade angle: 37.5 degrees.
5. Function: Stationary.
6. Accessories: Birdscreen
7. Finish: Baked enamel
8. Color: The standard color chart shall be submitted for selection by the Architect or Owner.

2.22 LOUVER BLANK-OFF PANELS

A. Provide blank off panels over unused portions of exterior louvers. Blank off panels shall be 1" air enterprises, Inc. Panel shall be caulked and sealed and shall be attached to aluminum angle frames to provide a neat weathertight enclosure. Paint panels per Architect's directive.

2.23 INSULATED EQUIPMENT ENCLOSURES

A. Provide double-walled, insulated, air-pressure-tight equipment housing. The housing shall be supplied by a recognized manufacturer of insulated housing and casings, with published standards of construction and performance equal to Semco Inc.

B. Panel Construction:

1. Wall and roof panels shall be 4" thick and completely enclosed with 22 gauge galvanized steel inside panel and 18 gauge outside panel and interior completely filled with mineral wool insulation, 3.0 pounds per cubic foot minimum density, having mylar liner, with the following UL Fire Resistance Ratings:

    a. Flame Spread: 15
    b. Fuel Contributed: 0
    c. Smoke Developed: 0
2. Panels shall have minimum 18 gauge galvanized longitudinal stiffeners spaced a minimum of 16 inches apart.
3. Where interior panel perforated surface is indicated, sheet shall be 18 gauge with 3/32" round holes on 3/16" centers.
4. Housings or sections of housings upstream of the housing interior liner. The housing containing the cooling coils and final filters and all downstream sections shall have a continuous metal liner.
5. Insulation shall not settle, shed or dust.

C. Structural Construction:

1. Panels shall be tongue and groove type, with adjacent panels held rigidly in position by the use of an integral continuous self-locking joint, effective on inside and outside. The completed enclosure shall provide maximum panel deflections of 1/240 of free span when enclosure is subjected to a test pressure of 10 inches w.c., without the use of fasteners at panel joints. Structural steel required to limit the deflections specified, shall be designed and furnished by the enclosure manufacturer and installed by the contractor. Equipment supports shall not be attached to the enclosure by the contractor without prior consultation and approval from the enclosure manufacturer.

D. Testing:

1. The installed housing, when under normal fan pressure, shall not leak sufficient to cause audible sound.
2. Certified test data from an independent acoustical laboratory giving sound absorption and transmission loss characteristics of the panels. Sound absorption coefficients when tested on accordance with ASTM C423 and ASTM E-90 shall not be less than:

    a. Octave Band: 2 3 4 5 6 7

b.	Frequency:	125	250	500	1000	2000	4000
c.	Transmission Loss:	26	32	38	51	60	67

E. Insulation: The thermal conductivity of the panel shall not exceed 0.06 BTU/hr/sq. ft./°F at 50° Mean Temperature Differential. The overall Heat Transfer Coefficient “U” of the assembled structure shall not exceed .16 BTU/hr/sq.ft/°F at 50° temperature differential.

F. Access Doors:

1. Provide insulated access doors where indicated on the drawings and shall be 24” W x 60” H unless otherwise indicated. The opening shall be clear with no restricting flanges or sills.
2. Construct doors and frames of 18 gauge min. galvanized steel; factory installed in a door panel, with the panel opening reinforced. The door to be substantially mounted on two ball bearing hinges and secured by two latches, operable from either side.
3. Doors shall open against the air pressure and shall have 12 x 12 double pane wire glass viewing window.
4. Doors shall seat against neoprene gaskets for air-tight seal. Gaskets shall be positioned so that door closing will provide direct compression, with no sliding action between the door and gasket.

G. Openings: All duct and fan openings shall be provided by the panel manufacturer. All piping and conduit penetrations shall be field located and cut and sealed in accordance with manufacturer’s instructions.

H. Provide removable panel sections as indicated on the drawings to facilitate repair work to the supply fan. Removable panels shall have similar construction to standard panels.

I. Trim of 16 gauge galvanized shall be provided and installed to erect casing leaving no exposed panel edges. Base channel shall have 9/16 inch holes pre-punched 24 inches on center of securing with approved fasteners to curb or pad. Sufficient panel sealant and self-drilling fasteners to curb or pad. Sufficient panel sealant and self-drilling fasteners shall be provided to erect enclosure per manufacturer’s instructions.

J. Panel sealant shall be a single component, non-sag, non-staining, permanently flexible, gunnable butyl rubber conforming to federal specification TT-S-001657 for “sealing compounds, single component, butyl rubber base, solvent release type.” Sealant for door frame to panel application shall be silicone rubber sealant conforming to the provisions of MIL-a-46106A Type I and certified to federal specification TT-S-001543A.

2.24 DUCTWORK PAINTING

A. Paint uninsulated exterior ductwork by applying one base coat, and one finish coat of rust-preventing paint, equal to Rust-Oleum Rust-O-Crylic.

B. Color shall be as directed by Architect and Owner.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for installation examination.

B. Verify sizes of equipment connections before fabricating transitions.

C. Verify rated walls are ready for fire damper installation.

D. Verify ducts and equipment installations are ready for accessories.

E. Verify ductwork is ready for air terminal installation.

F. Check location of air outlets and inlets and make necessary adjustments in position to conform to architectural features, symmetry, and lighting arrangement

3.2 PREPARATION

A. Division 01 Section: “Execution and Closeout Requirements:: Requirements for installation preparation.

B. Obtain manufacturer's inspection and acceptance of fabrication and installation at beginning of installation.

C. Install temporary closures of metal or taped PE on open ductwork to prevent construction dust from entering ductwork system.

3.3 DUCT INSTALLATION, GENERAL

A. Metal Ducts: Install in accordance with SMACNA 1966 Duct Construction Standards – metal and flexible.

B. Glass-Fiber-Reinforced Ducts: Comply with SMACNA 1884.

C. Insulated Flexible Duct Fittings:

1. Join each flexible duct section to main trunk duct through sheet metal fittings.
2. Material: Galvanized steel.
3. Equip fittings with factory-installed volume damper having positive locking regulator.
4. Provide insulation guard with fittings installed in lined ductwork.

D. Duct System Pressure Class: Construct and install each duct system for the specific duct pressure classification indicated.

E. Install ducts with the fewest possible joints.

F. Install louvers and accessories complete with mounting frames as indicated on the drawings. Coordinate all rough opening requirements with all trades prior to fabrication or procurement of any penetrations.

G. Make all penetrations in exterior walls watertight and weatherproof in accordance with manufacturer's specific installations instructions.

H. Use fabricated fittings for all changes in directions, changes in size and shape, and connections.

I. Install couplings tight to duct wall surface with projections into duct at connections kept to a minimum.

J. Locate ducts, except as otherwise indicated, vertically and horizontally, parallel and perpendicular to building lines; avoid diagonal runs. Install duct systems in shortest route that does not obstruct useable space or block access for servicing building and its equipment.

K. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.

L. Provide clearance of 1 inch where furring is shown for enclosure or concealment of ducts, plus allowance for insulation thickness, if any.

M. Install insulated ducts with 1-inch clearance outside of insulation.

N. Conceal ducts from view in finished and occupied spaces by locating in mechanical shafts, hollow wall construction, or above suspended ceilings. Do not encase horizontal runs in solid partitions, except as specifically shown.

O. Coordinate layout with suspended ceiling and lighting layouts and similar finished work.

P. Electrical Equipment Spaces: Route ductwork to avoid passing through transformer vaults and electrical equipment spaces and enclosures.

Q. Non-Fire-Rated Partition Penetrations: Where ducts pass interior partitions and exterior walls, and are exposed to view, conceal space between construction opening and duct or duct insulation with sheet metal flanges of same gage as duct. Overlap opening on 4 sides by at least 1-½ inches.

R. Outdoor Ductwork: Protect ductwork and ductwork supports, linings, and coverings from weather.

S. Kitchen Hood Exhaust Duct Installations:

1. Provide for thermal expansion of ductwork through 2,000-deg F temperature range.
2. Install without dips or traps that may collect residues, except where traps have continuous or automatic residue removal.
3. Install access openings at each change in direction and at 50-foot intervals. Locate on sides of duct 1-½ inches minimum from bottom, and fit with grease-tight covers of same material as duct.

    a. Doors shall be as manufactured by Ductmate Industries "Ultimate" style door or comparable acceptable product.
4. Do not penetrate fire-rated assemblies.

5. According to NFPA 96 and as specified in Division 11 Section: “Foodservice Equipment”.
6. Provide residue traps in kitchen hood exhaust ducts at base of vertical risers with provisions for cleanout.
7. Exhaust Ducts: Provide stainless-steel ductwork where exposed to view, and stainless steel or carbon steel where ducts are concealed.

T. Dishwasher Exhaust Duct Installations:

1. Install dishwasher exhaust duct systems in accordance with SMACNA “HVAC Duct Construction Standards.
2. Pitch horizontal ducts to drain condensed vapor back to the equipment.
3. Fabricate exposed and concealed ductwork of stainless steel with continuously external welded joints and seams.

U. Seam and Joint Sealing:

1. General: Seal duct seams and joints as follows:

   a. Seal all transverse joints, longitudinal seams, and duct penetrations.
2. Seal externally insulated ducts prior to insulation installation.

V. Connections:

1. General: Installation specified is for conventional connections not exposed to the weather, high heat, or corrosive agents.
2. Equipment Connections: Connect equipment with flexible connectors in accordance with Division 23 Section: “HVAC Distribution.”
3. Branch Connections: Comply with SMACNA “HVAC Air Duct Construction Standards,” Figures 2-7 and 2-8.
4. Outlet and Inlet Connections: Comply with SMACNA “HVAC Duct Construction Standards,” Figures 2-16 through 2-18.
5. Terminal Units Connections: Comply with SMACNA “HVAC Duct Construction Standards,” Figure 2-19.
6. Thermometers and controllers: Cut openings in ductwork to accommodate thermometers and controllers. Cut pitot tube openings for testing of systems, complete with metal can with spring device or screw to eliminate against air leakage.

W. Field Quality Control:

1. Disassemble, reassemble, and seal segments of the systems as required to accommodate leakage testing, and as required for compliance with test requirements.

X. Adjusting and Cleaning:

1. Adjust volume control devices as required by the testing and balancing procedures to achieve required air flow. Refer to Division 23 Section: “TESTING, ADJUSTING, AND BALANCING for HVAC” for requirements and procedures for adjusting and balancing air systems.
2. Vacuum duct systems prior to final acceptance to remove dust and debris.
3. During construction install temporary closures of metal or taped polyethylene on open ductwork to prevent dust from entering ductwork system.

Y. Duct Liner Application

1. Adhere insulation with 90% adhesive coverage with mechanical pin fasteners.
2. Secure insulation with mechanical liner fasteners. Comply with SMACNA Standards for spacing.
3. Seal and smooth joints. Seal and coat transverse joints.
4. Seal liner surface penetrations with adhesive.
5. Duct dimensions indicated are net inside dimensions required for airflow. Increase duct size to allow for insulation thickness.
6. Follow liner manufacturer's installation instructions.

Z. Installation of Flexible Duct Elbow Supports

1. Install flexible duct elbow supports in accordance with manufacturer's instructions.
2. Install flexible duct elbow supports over outer jacket of flexible ducts to form smooth, 90-degree ends to eliminate flexible duct kinks and airflow restrictions.
3. Make bends in flexible ducts with minimum of 1-duct diameter centerline radius.
4. Install flexible duct elbow supports at flexible duct 90-degr bends at following locations:

    a. Diffusers.
    b. Grilles.
    c. Registers.
    d. Air devices with round inlets and outlets.
    e. HVAC equipment with round inlets and outlets.
    f. Flexible ducts used as elbows.
    g. As indicated on the Drawings.

AA. Installation of Textile Duct Systems

1. Examine area and conditions under which the textile duct systems are to be installed. Do not continue any installation until unsatisfactory conditions have been corrected.
2. Install chosen suspension system in accordance with the requirements of the manufacturer. Installation Instructions shall be provided by the manufacturer with the product.
3. Coordinate layout with suspended ceiling, lighting layouts, and all other trades that may interfere with the installation of textile duct systems.

BB. Cleaning of Textile Duct Systems

1. Clean air handling unit and other ductwork prior to the textile duct system as it is installed. Ensure that all construction debris, including dust, is removed from the air handling unit and other ductwork before connecting the textile duct system.
2. If the textile duct system becomes soiled during the installation, it shall be removed and cleaned following the manufacturers cleaning instructions.

3.4 LEAK TESTING AIR DISTRIBUTION AND DUCT SYSTEMS

A. Duct Leak Testing:

1. Test the entire ductwork air distribution system.

2. Disassemble, reassemble, and seal segments of systems to accommodate leak testing and for compliance and test requirements.
3. Prior to installing insulation, conduct tests in accordance with SMACNA HVAC air duct leakage testing procedures of reach section of the system. If pressure classifications are not indicated, test entire system at the maximum system operating pressure. Do not pressurize systems above the maximum design operating pressure.
4. Determine leakage from entire system or from each section of the system being tested by relating leakage to the surface area of the test section.
5. Maximum Allowable Leakage: As described in SMACNA HVAC Air Duct Leakage Test Manual “latest edition”. Comply with requirements for leakage listed in Division 23 Section: “Air Distribution” – Duct Applications and Sealing.
6. Remake leaking joints as required and apply sealants to achieve specified maximum allowable leakage.
7. Record leakage testing results on forms from the SMACNA HVAC Air Duct Leakage Test Manual, “latest edition”. Submit results within one week of testing.

3.5 FIRESTOPPING

A. All fire stopping shall be applied in accordance with manufacturers published data and in compliance with UL systems application requirements.

B. Firestopping shall not be applied until all sleeves are permanently secured in place and ductwork successfully tested air tight.

C. Application of firestopping shall be in accordance standard UL directory details, provided by the manufacturer, for the specified wall type as shown on the drawings. Each individual detail of the UL system shall be application specific for duct size, duct construction, insulation application, wall construction and wall rating as indicated by the drawings or specifications.

3.6 HANGERS AND SUPPORTS

A. Install rigid round, rectangular, and flat oval metal duct with support systems indicated in SMACNA “HVAC Duct Construction Standards,” Tables 5-1 through 5-4 and Figures 5-1 through 5-11.

B. Fabricate and support ducts according to SMACNA 1884 and 1966.

C. Threaded Rods: Provide double nuts and lock washers.

D. Building Attachments:

1. Provide concrete inserts or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
2. If possible, install concrete inserts before placing concrete.
3. Powder-Actuated Concrete Fasteners:

    a. Use only for slabs more than 4 inches thick.
    b. Install after concrete is placed and completely cured.
    c. Do not use powder-actuated concrete fasteners for seismic restraints.

E. Hanger Spacing:

1. Comply with SMACNA 1884 and 1966.
2. Install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
3. Extend strap supports down both sides of ducts and turn under bottom at least 1 inch.
4. Secure hanger to sides and bottom of ducts with sheet metal screws.

F. Hangers Exposed to View: Provide threaded rod and angle or channel supports.

G. Vertical Ducts:

1. Support with steel angles or channel secured to sides of duct with welds, bolts, sheet metal screws, or blind rivets.
2. Support at each floor and at maximum intervals of 16 feet.

H. Upper Attachments:

1. Attach to structures.
2. Selection and Sizing: Provide pull-out, tension, and shear capacities as required for supported loads and building materials.

I. Penetrations:

1. Avoid penetrations of ducts with hanger rods.
2. If unavoidable, provide airtight rubber grommets at penetrations.

J. Domestic Clothes Dryer Exhaust Ducts shall be supported at 4-foot intervals and secured in place.

3.7 AIR DEVICE INLETS AND OUTLETS

A. Inspection:

1. Examine areas and conditions under which air outlets and inlets are to be installed. Do not proceed with work until unsatisfactory conditions have been corrected.

B. Installation:

1. General: Install air outlets and inlets in accordance with manufacturer's written instructions and in accordance with recognized industry practices to insure that products serve intended functions.
2. Coordinate with other work, including ductwork and duct accessories, as necessary to interface installation of air outlets and inlets with other work including, but not limited to; sprinkler heads, exit signs, lights, speaker systems, electrical pullbox access, architectural features and ceiling support system.
3. Locate ceiling air diffusers, registers, and grilles, as indicated on the contract drawings. Unless otherwise indicated, locate air device units in center of acoustical ceiling modules or between plaster framing supports/framing in hard ceiling construction.
4. Paint ductwork visible behind air outlets matte black in accordance with Division 09 Section: "Paints and Coatings."

5. Insulate the backs of supply diffusers and tape all around insulation seems.

C. Spare Parts:

1. Furnish to Owner, with receipt, 3 operating keys for each type of air outlet and inlet that require them.
2. Operating keys shall be tagged similar to piping valve tags and labeled in the Owner's operating and maintenance manual.

3.8 AIR TERMINAL UNIT INSTALLATION

A. Connect to ductwork

B. Install ceiling access doors or locate units above easily removable ceiling components.

C. Support units individually from structure. Do not support from adjacent ductwork.

D. Support air terminal units connected by flexible duct independently of flexible duct.

E. Install transition piece to match flexible duct size to inlet or outlet of variable air volume terminal.

F. Install minimum of 6 ft of 1 inch thick lined ductwork downstream of units.

3.9 DAMPERS, GENERAL:

A. Provide access to damper components for maintenance of linkage, adjustments and visual inspection.

B. All dampers shall be installed with their flange outside of the airstream.

C. Coordinate access to damper with all trades.

D. Coordinate motor operated damper requirements with Division 23 Section: "Instrumentation and Control for HVAC."

E. Fire dampers, smoke dampers and combination fire/smoke dampers shall be installed per manufacturer's U.L. approved printed installation instructions. Provide access panels for fusible links with a minimum size requirement of 12" x 16" inside clear or as required by the Engineer to successfully reach the fusible link assembly for replacement.

F. Install volume control dampers in lined duct with methods to avoid damage to liner and to avoid erosion of duct liner material.

G. Make all adjustments to dampers for proper operation. Backdraft dampers shall be set by the Balancing Contractor upon final system adjustment.

H. Install balancing dampers on duct take-off to diffusers and grilles and registers, regardless of whether dampers are specified as part of diffuser, or grille and register assembly.

I. Test and inspect fire and fire/smoke dampers after the first year of installed service, per NFPA 80 and NFPA 105 requirements.

J. Furnish and install ceiling radiation dampers at all penetrations of the UL listed ceiling assembly. These locations include, but are not limited to, air device locations, duct penetrations, and equipment locations. Refer to detail-typical UL floor/ceiling/roof rated assembly penetrations for more information.

3.10 DUCT MOUNTED ACCESS DOORS:

A. Install duct mounted access doors at the following locations, and as shown on the contract drawings:

1. Spaced every 50 feet of straight duct.
2. Upstream of each elbow (for grease ducts only)
3. Upstream of each re-heat coil.
4. Before and after each duct mounted filter.
5. Before and after each duct mounted coil.
6. Before and after each duct mounted fan.
7. Before and after each automatic control damper.
8. Before and after each Fire damper, smoke damper, combination fire and smoke damper
9. Install at locations for cleaning kitchen exhaust ductwork in accordance with NFPA 96.

B. Duct access doors shall be installed centered in the width of the horizontal dimension or vertical dimension taking advantage of the most accessible installation for maintenance.

C. Access doors shall not be covered with insulation.

D. Install doors prior to performance of ductwork leak testing.

3.11 DUCT SOUND ATTENUATORS:

A. Install duct silencers with flanged connection outside of the airstream.

B. Locate duct silencers in the airstream as indicated on the contract drawings and in accordance with manufacturer’s published data for optimum performance location.

C. Coordinate and label direction of airflow prior to installation.

D. Label duct silencers for supply air or return air, etc. duty.

E. Seal all joints as specified.

3.12 TERMINAL HEATING UNITS, GENERAL:

A. Inspection - Examine all areas and conditions under which Terminal Reheat Units are to be installed. Do not proceed with work in questionable areas until conditions have been corrected in a manner acceptable to meet installation requirements.

B. Installation of Terminals:

1. General: Install Terminal Reheat Units as indicated and in accordance with manufacturer's printed installation instructions.
2. Locate each unit level and accurately in position indicated in relation to other work. Maintain sufficient clearance around operating parts for maintenance. Control panels shall have a minimum of 36" unobstructed space for controller access, but in no case less space than recommended by the manufacturer.
3. Fan powered terminal units shall be installed to allow removal of the unit bottom providing full access to the unit. This access shall not be subject to removal of light fixtures or ceiling air devices, etc.
4. Duct inlet connections to air terminals shall be in accordance with manufacturer's recommendations for straight length of duct and diameter required for maximum controller performance. Reductions to inlets are not permitted.
5. Coordinate units with reheat coils to locate the heating coil control valve and terminal unit control box are on the same side. (This applies to electric and hydronic heating coils.)
6. Transition ductwork from terminal unit with soundlining as detailed on the contract drawings or as recommended by the manufacturer to deaden sound transmission.
7. Install fan powered terminal units with vibration isolation.
8. Demonstrate that all air terminal units and duct connections are leak tight prior to operation. Repair or replace any damaged units prior to system operation and retest for compliance.
9. Insulate terminal units to avoid condensation at duct connections and on hydronic heating coil to minimize heat loss. Refer to Division 23 Section: **"**HVAC Insulation".
10. Label all terminal units in accordance with Division 23 Section: "Identification for HVAC Piping and Equipment" and clearly position identification for unit within plain sight.

C. Cleaning: Clean all factory exposed surfaces, inside and out prior to operation. Repair any marred surfaces with manufacturer's touch-up paint to match factory finish in color and texture.

3.13 INSTALLATION OF INSULATED EQUIPMENT ENCLOSURES

A. Install enclosure per manufacturer's recommendations. Make all mechanical joints leak-proof with duct sealer, retained between adjoining flat metal surfaces. Panel construction shall hold the assembly motionless to avoid wet sealer displacement. Sufficient sealer shall be used to allow extrusion of surplus sealer to give visible evidence of the sealer. The assembled structure shall have deflection under load limited to 1/240 of the span at 10 w.g. pressure.

B. Panel edges shall have factory installed insulation to eliminate any voids at joints after erection. Connect roof to wall panels by means of 16 gauge angles held by sheet metal screws, using a suitable sealer to provide an air-tight seal.

C. Equipment supports shall not be attached to the enclosure by the contractor without prior consultation and approval from the enclosure manufacturer.

3.14 SYSTEM START UP

A. System start-up shall be provided by a factory-authorized representative of the LACS manufacturer. Start-up shall include calibrating the fume hood monitor and any combination sash sensing equipment, as required. Start-up shall also provide electronic verification of airflow (fume

hood exhaust, supply, make-up, general exhaust or return), system programming and integration to BMS (when applicable).

B. The balancing contractor shall be responsible for final verification and reporting of all airflows.

3.15 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Clean duct system and force air at high velocity through duct to remove accumulated dust.

C. To obtain sufficient airflow, clean one half of system completely before proceeding to other half.

D. Vacuuming:

1. Clean duct systems with high-power vacuum machines.
2. Install access openings into ductwork for cleaning purposes.

E. Protect sensitive equipment with temporary filters or bypass during cleaning.

3.16 CLOSEOUT ACTIVITIES

A. Training

1. The LACS supplier shall furnish a minimum of eight hours of owner training by factory trained and certified personnel. The training will provide an overview of the job specific airflow control components, verification of initial fume hood monitor calibration, general procedures for verifying airflows of air valves and general troubleshooting procedures.
2. Operation and maintenance manuals, including as-built wiring diagrams and component lists, shall be provided for each training attendee.

3.17 DUCTWORK PAINTING

A. Apply paint to ductwork per paint manufacturer’s written instructions and in accordance with all code requirements.

3.18 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 34 00

HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and other sections of Division 23.

1.2 SUMMARY

A. Section Includes:

1. Centrifugal roof mounted supply fans.
2. Wall mounted propeller fans.
3. Downblast centrifugal roof fans.
4. Upblast centrifugal roof fans.
5. Centrifugal wall fans.
6. Ceiling fans.
7. Inline ceiling fans.
8. Centrifugal square inline cabinet fans.
9. Utility set centrifugal fans.
10. Laboratory exhaust fans.
11. Gravity intake and relief ventilators.

B. Related Sections: The following sections contain requirements that relate to this section:

1. Division 07 Section: “Roof Accessories”. Product and Execution requirements for roof curbs etc…
2. Division 23 Section: “Common Motor Requirements”: Product requirements for motors for placement by this section.
3. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment”: Product requirements for resilient mountings and snubbers for fans for placement by this section.
4. Division 23 Section: “HVAC Insulation”: Product requirements for power ventilators for placement by this section.
5. Division 23 Section: “HVAC Air Distribution.”
6. Division 23 Section: “Instrumentation and Control for HVAC”: Product requirements for control components to interface with fans.
7. Division 23 Section: “Pneumatic and Electric Control System for HVAC”: Product requirements for pneumatic control components to interface with fans.
8. Division 26 Section: “Low Voltage Electrical Power Conductors and Cables:” Requirements for electrical wiring and cable connections for units specified in this section.
9. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements for electrical conduits and boxes housing electrical wiring and connections specified by this section.

1.4 SUBMITTALS

A. Division 01 Section – “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate size and configuration of fan assembly, mountings, weights, and ductwork and accessory connections.

C. Product Data: Submit data on each type of fan and include accessories, fan curves with specified operating point plotted, power, RPM, sound power levels for both fan inlet and outlet at rated capacity, electrical characteristics and connection requirements.

D. Manufacturer's Installation Instructions: Submit Manufacturer's installation, operations, and maintenance manual, including instructions on installation, operations, maintenance, pulley adjustment, receiving, handling, storage, safety information and cleaning. A troubleshooting guide, parts list, warranty and electrical wiring diagrams.

E. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

F. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section – "Execution and Closeout Requirements": Closeout Procedures.

B. Operation and Maintenance Data: Submit instructions for lubrication, motor and drive replacement, spare parts list, and wiring diagrams.

1.6 QUALITY ASSURANCE

A. Performance Ratings: Conform to AMCA standard 211 and 311. Fans must be tested in accordance with ANSI/AMCA Standard 210-99 and AMCA Standard 300-96 in an AMCA accredited laboratory. Fans shall be certified to bear the AMCA label for air performance seal.

B. Classification for Spark Resistant Construction, levels A, B, and C conform to AMCA 99

C. Sound Ratings: AMCA 301, tested to AMCA 300, and bear AMCA Certified Sound Rating Seal.

D. UL Compliance: UL listed and labeled, designed, manufactured, and tested in accordance with UL 705.

E. Balance Quality: Conform to AMCA 204.

F. Comply with the National Electrical Manufacturers Association (NEMA), standards for motors and electrical accessories.

G. The High Wind models have been analyzed and stamped by a state license P.E. to the ASCE 7-02 Standard which meets the IBC, Florida and Miami-Dade codes.

H. Each High Wind model is subject to be certified by a third party to the ASTM E330 Static Pressure Difference Standard.

I. All High Wind models have been analyzed using Computational Fluid Dynamics (CFD). The CFD simulates the flow of high speed (150MPH) winds over the surface of objects.

J. The Finite Element Analysis (FEA) is the results from the CFD and it can accurately predict the stress, strain, and deflection resulting from high wind loads.

K. Energy Recovery Unit Wheel Energy Transfer Rating: Meet ARI 1060.

L. Perform Work in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section – “Product Requirements”: Product Storage and Handling requirements.

B. Accept fans and components on site in factory protective containers, with factory shipping skids and lifting lugs, inspect for damage.

C. Protect motors, shafts, and bearings from weather and construction dust.

D. Delivery: Deliver materials to site in manufacturer’s original, unopened containers and packaging, with labels clearly indicating manufacturer, material, products included, and location of installation.

E. Storage: Store materials in a dry area indoor, protected from damage, and in accordance with manufacturer’s instructions. For long term storage follow manufacturer's Installation, Operations, and Maintenance Manual.

F. Handling: Handle and lift fans in accordance with the manufacturer’s instructions. Protect materials and finishes during handling and installation to prevent damage. Follow all safety warnings posted by the manufacturer.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section – “Execution and Closeout Requirements”: Product Warranties and Product Bonds.

B. Furnish two year manufacturer's warranty for fans.

C. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document executed by authorized company official. Manufacturer's warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

1. The warranty of this equipment is to be free from defects in material and workmanship for a period of two years from the purchase date. Any units or parts which prove defective during the warranty period will be replaced at the Manufacturers option when returned to Manufacturer, transportation prepaid.
2. Motor Warranty is warranted by the motor manufacturer for a period of two years. Should motors furnished by us prove defective during this period, they should be returned to the nearest authorized motor service station.

1.12 MAINTENANCE SERVICE

A. Refer to Manufacturer's Installation, Operation and Maintenance Manual (IOM), to find maintenance procedures.

B. Division 01 Section – "Execution and Closeout Requirements": Requirements for Maintenance Service.

C. Furnish service and maintenance of fans for five years from Date of Substantial Completion.

D. Examine each fan's components, per fan manufacturer's recommendations. Clean, adjust, and lubricate equipment.

E. Include systematic examination, adjustment, and lubrication of fans, and controls checkout and adjustments. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use parts produced by manufacturer of original equipment.

F. Perform work without removing fans from service during building normal occupied hours.

G. Provide emergency call back service at all hours for this maintenance period.

H. Maintain locally, near Place of the Work, adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.

I. Perform maintenance work using competent and qualified personnel under supervision of manufacturer or original installer.

J. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

1.13 EXTRA MATERIALS

A. Division 01 Section – "Execution and Closeout Requirements": Spare Parts and Maintenance Materials.

B. Furnish two sets of belts for each belt driven fan.

PART 2 - PRODUCTS

2.1 ROOF MOUNTED CENTRIFUGAL SUPPLY FANS

2.2 CENTRIFUGAL SQUARE INLINE CABINET FANS

A. Direct Drive Backward Inclined Inline Fan:

1. General

    a. Manufacturer: Greenheck
    b. Fans shall meet model numbers, types, sizes, capacities and electric characteristics as indicated on the contract drawings. Acceptable manufacturers: Acme, Cook, Penn Ventilator or Twin City Blower Company.
    c. Shall have a normal operating temperature of up to 130 Fahrenheit (54.4 Celsius).
    d. Each fan shall bear a permanently affixed manufacture's engraved metal nameplate containing the model number and individual serial number.
    e. Fan arrangement shall be either supply or exhaust. Refer to contract drawings for arrangement.
    f. Fans shall be suitable for maximum continuous operating temperature 130 Fahrenheit (54.4 Celsius).
    g. Each fan shall bear a permanently affixed manufacture's engraved metal nameplate containing the model number and individual serial number.

2. Wheel:

    a. Shall be non-overloading, backward inclined centrifugal wheel.
    b. Shall be constructed of aluminum.
    c. Shall be statically and dynamically balanced in accordance to AMCA Standard 204-05.
    d. The wheel cone and fan inlet shall be matched and shall have precise running tolerances for maximum performance and operating efficiency.
    e. Single thickness blades shall be securely riveted or welded to a heavy gauge back plate and wheel cone.

3. Motors:

    a. Motor enclosures: Open type.
    b. Motor shall be a DC electronic commutation type motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable. Examples of unacceptable motors are: Shaded Pole, Permanent Split Capacitor (PSC), Split Phase, Capacitor Start and 3 phase induction type motors.
    c. Motors shall be permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase.
    d. Internal motor circuitry shall convert AC power supplied to the fan to DC power to operate the motor.
    e. Motor shall be speed controllable down to 20% of full speed (80% turndown). Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 0-10 VDC signal.

f. Motor shall be a minimum of 85% efficient at all speeds.

4. Housing/Cabinet Construction:

   a. Construction material: Galvanized
   b. Square design constructed shall be of heavy gauge galvanized steel and shall include square duct mounting collars.
   c. Housing and bearing supports shall be constructed of heavy gauge bolted and welded steel construction to prevent vibration and to rigidly support the shaft and bearing assembly.

5. Housing Supports and Drive Frame:

   a. Housing supports shall be constructed of structural steel with formed flanges.
   b. Drive frame shall be welded steel which supports the motor.

6. Disconnect Switches:

   a. Disconnect provided under Division 26.
   b. Disconnect shall be:
      1) NEMA 1: indoor application no water: factory standard.
      2) Shall have positive electrical shut-off.
      3) Shall be wired from fan motor to junction box.

7. Duct Collars:

   a. Shall be of square design to provide a large discharge area.

8. Access Panel:

   a. Provide two sided access panels, to allow access to all internal components.
   b. Locate perpendicular to the motor mounting panel.

9. Options/Accessories:

   a. Dampers:
      1) Types: Gravity
      2) Provide galvanized frames with prepunched mounting holes.
      3) Shall be balanced for minimal resistance to flow.
   b. Finishes:
      1) Types: None
   c. Inlet and Outlet Guards:
      1) Shall be constructed of expanded metal mounted in a steel frame to provide protection for non-ducted installations.
   d. Insulated Housing:
      1) Shall be thickness: 0.5 inches
      2) Provide for noise reduction and condensation control.
      3) Constructed of fiberglass liner.
   e. Isolation:
      1) Refer to Division 23 Section - “Vibration and Seismic Controls for HVAC Piping and Equipment”.
   f. Motor Cover:
      1) Shall be constructed of galvanized steel.
      2) Shall cover motor and drives for safety.
      3) Shall be standard on units specified with UL.

2.3 UPBLAST CENTRIFUGAL ROOF FANS

A. Belt Drive Roof Upblast Centrifugal Fan:

1. Manufacturer:

   a. Unit shall be Greenheck
   b. Fans shall meet model numbers, types, sizes, capacities and electric characteristics as indicated on the contract drawings. Acceptable manufacturers: Acme, Cook, Penn Ventilator or Twin City Blower Company may be submitted for approval as a comparable product

2. General:

   a. Fan shall discharge air up and away from the mounting surface.
   b. Upblast fan shall be for roof mounted applications.
   c. Shall have a maximum continuous operating temperature is 400 Fahrenheit..
   d. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number.

3. Wheel:

   a. Shall be constructed of aluminum. Non-stick coating similar to Teflon, coating allows buildup on wheel to be easily removed.
   b. Shall be non-overloading, backward inclined centrifugal.
   c. Shall be statically and dynamically balanced in accordance to AMCA Standard 204-05.
   d. The wheel cone and fan inlet shall be matched and shall have precise running tolerances for maximum performance and operating efficiency.

4. Motors:

   a. AC Induction Motor:
      1) Motor enclosures: Totally enclosed fan cooled
      2) Motors shall be permanently lubricated, heavy duty ball bearing type to match with the fan load and furnished at the specific voltage and phase.
      3) Motor shall be mounted on vibration isolators, out of the airstream.
      4) For motor cooling there shall be fresh air drawn into the motor compartment through an area free of discharge contaminants.
      5) Motor shall be accessible for maintenance.
   b. Electronically Commutated Motor:
      1) Motor enclosures: Open type.
      2) Motor shall be a DC electronic commutation type motor (ECM) specifically designed for fan applications. AC induction type motors are not acceptable. Examples of unacceptable motors are: Shaded Pole, Permanent Split Capacitor (PSC), Split Phase, Capacitor Start and 3 phase induction type motors.
      3) Motors shall be permanently lubricated, heavy duty ball bearing type to match with the fan load and pre-wired to the specific voltage and phase.
      4) Internal motor circuitry shall convert AC power supplied to the fan to DC power to operate the motor.
      5) Motor shall be speed controllable down to 20% of full speed (80% turndown). Speed shall be controlled by either a potentiometer dial mounted at the motor or by a 0-10 VDC signal.
      6) Motor shall be a minimum of 85% efficient at all speeds.

5. Shaft and Bearings:

    a. Fan shaft shall be ground and polished solid steel with an anti corrosive coating.
    b. Permanently sealed bearings or pillow block ball bearings.
    c. Bearing shall be selected for a minimum L10 life in excess of 100,000 hours (equivalent to L50 average life of 500,000 hours), at maximum cataloged operating speed.
    d. Bearings shall be 100 percent factory tested.
    e. Fan Shaft first critical speed shall be at least 25 percent over maximum operating speed.

6. Housing:

    a. Shall be constructed of heavy gauge aluminum including exterior housing, curb cap, windband, and motor compartment housing. Galvanized material is not acceptable.
    b. Housing shall have a rigid internal support structure.
    c. Windband shall be of one piece spun aluminum construction and maintain original material thickness throughout the housing.
    d. Windband shall include an integral rolled bead for strength.
    e. Curb cap base shall be fully welded to windband to ensure a leak proof construction.
    f. Tack welding, bolting, and caulking are not acceptable.
    g. Curb cap shall have integral deep spun inlet venturi and pre-punched mounting holes to ensure correct attachment to curb.
    h. Drive frame assemblies shall be constructed of heavy gauge steel and mounted on vibration isolators.
    i. Breather tube shall be 10 square inches in size for fresh air motor cooling, and designed to allow wiring to be run through it.

7. Housing Supports and Drive Frame:

    a. Drive frame assemblies shall be constructed of heavy gauge steel and mounted on vibration isolators.

8. Motor Cover:

    a. Shall be constructed of aluminum

9. Vibration Isolation:

    a. Shall be double studded or pedestal mount true isolators.
    b. Shall have no metal to metal contact.
    c. Shall be sized to match the weight of each fan.

10. Disconnect Switches:

    a. Disconnect shall be:
        1) NEMA 3: outdoor application falling rain water.
        2) Shall have positive electrical shut-off.
        3) Shall be wired from fan motor to junction box installed within motor compartment.

11. Drain Trough

    a. Allows for one-point drainage of water, grease, and other residues.

12. Auto Belt Tensioner:

    a. Automatic tensioning device that adjusts for the correct belt tension, only for single drives.

13. Accessories:

a. Birdscreen:
   1) Material Type: Aluminum
   2) Shall protect fan discharge.
b. Clean Out Port:
   1) Provide removable grease repellent compression rubber plug which shall allow access for cleaning wheel through windband.
c. Roof Curbs:
   1) Types: GPI- Welded, straight sided curb with 2 inches of flashing flange and wood nailer
   2) Mounted onto roof with fan.
   3) Material: Aluminum
   4) Insulation thickness: 1 inch.
d. Curb Extension:
   1) Types shall be: GPE-bolted access door and damper holding gray
   2) Material Type: Aluminum
   3) Coating: None
e. Curb Seal:
   1) Rubber seal between the fan and the roof curb.
f. Dampers:
   1) Type shall be: Gravity
   2) Damper shall be balanced for minimal resistance to flow.
   3) Damper shall have galvanized frames with prepunched mounting holes.
   4) Provide end switch for motorized damper assembly.
g. Drain Connection:
   1) Shall be constructed of aluminum.
   2) Shall allow singe-point drainage of grease, water, or other residues
h. Finishes:
   1) Types: None
i. Grease Trap:
   1) Shall be constructed of aluminum.
   2) Shall include drain connection.
   3) Shall collect grease residue.
j. Hinge Kit:
   1) Shall be provided with aluminum hinges
   2) Allows the fan to tilt always for access to wheel and ductwork for inspection and cleaning.
k. Hinge Base:
   1) Provide Aluminum hinges
   2) Hinges and restraint cables shall be mounted to a base (sleeve)
   3) Allows the fan to tilt always for access to wheel and ductwork for inspection and cleaning.
l. Heat Baffle:
   1) 1 inch thick insulation shield that prevents heat from radiating into the motor compartment.
m. Tie-Down Points:
   1) Provide four heavy gauge aluminum brackets to secure the fan in heavy wind applications
n. Windband Extension:
   1) Fan shall be constructed of aluminum with rolled beads.
o. Variable Frequency Drive:
   1) Factory programmed, mounted and wired.

2) Input speed control <<Potentiometer>> <<4-20 mA>> <<0-10VDC>>
3) 24VDC damper power output
4) Motor: (VFD Rated) compatible with induction and permanent magnet motors.
5) Parameters of acquainted motor shall be set to include voltage, speed, FLA, acceleration/deceleration time and minimum & maximum motor frequency.
6) R3 Filtering for harmonic mitigation
7) UL Recognized for 3 phase input at specified voltages.
8) NEMA 4X Enclosure
9) LED indication for Power, Run, and Fault

2.4 UTILITY SET FANS

A. Belt Driven Backward Inclined Utility Set Fan:

1. Manufacturer:

   a. Fans shall meet model numbers, types, sizes, capacities, and electrical characteristics as indicated on the contract drawings. Acceptable manufacturers: Acme, Cook, Greenheck, Penn Ventilator or Twin City Blower Company.

2. General:

   a. Fans selected shall be capable of accommodating static pressure and flow variations of +/-15% of scheduled values.
   b. Each fan shall be built in AMCA arrangement 1, 3, 9 or 10 according to drawings.
   c. Fans shall be equipped with lifting lugs.
   d. After fabrication all carbon steel components shall be cleaned and chemically treated by a phosphatizing process to insure proper removal of grease, oil, scale, etc. Fan shall then be coated with a minimum of 2-4 mils of Permatector (Polyester Urethane), electrostatically applied and baked. Finish color shall be industrial gray. Coating must exceed 1,000-hour salt spray under ASTM B117 test method.

3. Fan Housing and Outlet:

   a. Fan housing shall be aerodynamically designed with high-efficiency inlet, engineered to reduce incoming air turbulence.
   b. All interior and exterior surface steel shall be coated with a minimum of 2-4 mils of Permatector (Polyester Urethane), electrostatically applied and baked. Finish color shall be gray. No uncoated metal fan parts are allowed.
   c. Housing and bearing support shall be constructed of welded structural steel members to prevent vibration and rigidly support the shaft and bearings.
   d. An OSHA compliant belt guard shall be included to completely cover the motor pulley and belt(s).

4. Fan Wheel:

   a. The fan wheel shall be of the non-overloading single width backward inclined centrifugal type. Wheels shall be statically and dynamically balanced to balance grade G6.3 per ANSI S2.19.
   b. Fan wheel shall be manufactured with continuously welded steel blades and coated with a minimum of 2-4 mils of Permatector (Polyester Urethane), electrostatically applied and baked. Finish color shall be industrial gray.
   c. The wheel and fan inlet shall be matched and shall have precise running tolerances for maximum performance and operating efficiency.

5. Fan Motors and Drive:

    a. Motors shall meet or exceed EPACT (Energy Policy ACT) efficiencies. Motors shall be NEMA T-frame, 1800 RPM, Open Drip Proof (ODP) with a 1.15 service factor.
    b. Drive belts and sheaves shall be sized for 150% of the fan operating brake horsepower, and shall be readily and easily accessible for service, if required.
    c. Fan shaft shall be turned and polished steel that is sized so the first critical speed is at least 25% over the maximum operating speed for each pressure class.
    d. Fan shaft bearings shall be Air Handling Quality, bearings shall be heavy-duty grease lubricated, self-aligning or roller pillow block type.
    e. Air Handling Quality bearings shall be designed with low swivel torque to allow the outer race of the bearing to pivot or swivel within the cast pillow block. Bearings shall be 100% tested for noise and vibration by the manufacturer. Bearings shall be 100% tested to insure the inner race diameter is within tolerance to prevent vibration.
    f. Bearings shall be selected for a basic rating fatigue life (L-10) of 80,000 hours at maximum operating speed for each pressure class [Average Life or (L-50) of 400,000 hours].
    g. Bearings shall be fixed to the fan shaft using concentric mounting locking collars, which reduce vibration, increase service life, and improve serviceability. Bearings that use set screws shall not be allowed.
    h. Bearings shall have Zerk fittings to allow for lubrication.

6. Accessories

    a. Weatherhoods for Arr. 10 and SWO-9: Vented steel weatherhoods shall protect the motor and drive components from rain, moisture, dust, and dirt. Weatherhoods shall meet OSHA guidelines and shall be easily removed for service access.
    b. Belt Guard*: Belt guards shall be designed to allow access to the belts and pulleys for service. All belt guards shall include tachometer openings to monitor the fan speed as well as an access panel for testing belt tension. Belt guards shall meet OSHA guidelines.
    c. Shaft Guard*: Shaft guards shall be designated to cover shafts and bearings on arrangements 1, 8, 9, or 10 configuration. Extended lube lines shall be included for bearing lubrication without removal of the guard. Shaft guards shall meet OSHA guidelines.
    d. Inlet and Outlet Guards*: Provide removable inlet and outlet guards to provide protection for personnel and equipment in non-ducted installations. Inlet and outlet guards shall meet OSHA guidelines.
    e. Inlet and Outlet Flanges*: Provide inlet flanges on all single width fans that are pre-punched and welded to the inlet collar.
    f. Inlet Box*: Provide an inlet box to minimize entry losses when a 90° turn is required at the fan inlet. Inlet boxes shall come with dampers, access doors and drains.
    g. Access Doors*: Provide bolted or hinged (quick-opening) access doors to provide access for cleaning or inspection. Access doors shall be standard on downblast discharge fans. Raised bolted access doors shall be available to allow for up to 4 in. (102 mm) of field-applied insulation on the fan housing.
    h. Companion Flanges*: Provide punched companion inlet flanges for all single width fan sizes.
    i. Drain Connection*: Provide a 1 inch (25 mm) threaded drain connection to be located at the bottom of the fan housing to drain water.
    j. Heat Slingers: Provide heat slinger in a aluminum cooling disc mounted on the fan shaft between the inboard bearing and the blower housing to dissipate heat conducted along the fan shaft.

k. Stainless Steel Shafts: Provide stainless steel fan shafts for excessive corrosive conditions.
l. Shaft Seals: Provide a neoprene shaft seal with an aluminum rub ring for operation at high temperatures for exhausting contaminated air. Stuffing boxes shall be provided upon request.
m. Extended Life Bearings: Provide extended life bearings for a basic rating fatigue life (L10) per ABMA Standards in excess of 200,000 hours at the maximum RPM for each pressure class. L10 is the life associated with 80% reliability of a bearing.
n. Split Pillow Block Bearings: Provide split pillow block bearings which contain double-row roller bearings and a two-piece cast iron housing. Split pillow block bearing life shall be selected to exceed L(10) life in excess of 80,000 hours.
o. Extended Lubrication Lines: Provide flexible nylon tubing extending from the bearings to grease fittings mounted on the fan drive frame (or on the fan housing if a weatherhood is supplied).
p. Disconnect Switches:
q. Disconnect provided under Division 26.
r. Vibration Isolators and Structural Bases: Provide structural isolation base including motor slide base for belt adjustment. Base shall come with height savings brackets to keep the base and fan center of gravity lower to the mounting surface.
s. Vibration isolator options include: <<neoprene>>, <<free standing spring>>, <<housed spring>> and <<restrained spring isolators>>. Seismic isolators and calculations shall be provided on request for all centrifugal configurations. .
t. Motors: Provide NEMA Premium efficiencies. Variable Frequency Drive (VFD) compatible motor.
u. Gravity and Volume Control Dampers: Provide Backdraft Dampers. Provide dampers in the following material: painted steel. Provide counterweights for tight closure when the fan is de energized. Control dampers shall be stainless steel. Provide end switch for motorized damper assembly.
v. Protective Coatings: All coatings shall be electrostatically applied. Provide baked powders that offer durable, long lasting finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section – “Administrative Requirements”: Coordination and project Conditions.

B. Verify roof curbs are installed and dimensions are as shown on shop drawings and instructed by manufacturer.

3.2 PREPARATION

A. Furnish roof curbs to Division 07 Section “Roof Accessories” for installation.

B. Ensure that roof openings are square and/or round and accurately aligned, correctly located, and in tolerance.

C. Ensure that ducts are plumb, sized correctly, and to proper elevation above roof decks.

3.3 INSTALLATION

A. Secure roof fans and gravity ventilators with cadmium plated steel lag screws to structure.

B. Suspended Fans: Install flexible connections between fan and ductwork. Ensure metal bands of connectors are parallel with minimum one inch (25 mm) flex between ductwork and fan while running.

C. Install backdraft dampers on inlet to roof exhaust fans and gravity ventilators used in relief air applications.

D. Provide backdraft dampers on outlet from cabinet and ceiling fans and as indicated on Drawings.

E. Install safety screen where inlet or outlet is exposed.

F. Pipe scroll drains to nearest floor drain.

G. Install backdraft dampers on the discharges of exhaust fans when they are not integral with fans and as indicated on the Contract Drawings.

H. Provide adjustable sheaves as required for final air balance.

I. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

J. Install fans in accordance with the fan manufacturer’s instructions and as indicated on the contract drawings.

3.4 MANUFACTURER'S FIELD SERVICES

A. Division 01 Section – “Quality Requirements”: Requirements for Manufacturer’s Field Services..

B. Furnish services of factory trained representative for minimum of day to start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.5 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.6 CLEANING

A. Division 01 Section – “Execution and Closeout Requirements”: Requirements for Cleaning.

B. Vacuum clean coils and inside of fan cabinet.

3.7 DEMONSTRATION

A. Division 01 Section – “Execution and Closeout Requirements”: Requirements for Demonstration and Training.

B. Demonstrate fan operation and maintenance procedures.

3.8 PROTECTION OF FINISHED WORK

A. Refer to Division 01 Section: “Execution Requirements”: Requirements for protecting finished Work.

B. Do not operate fans until ductwork is clean, filters are in place, bearings are lubricated, and each fan has been test run under observation.

3.9 ADJUSTING

A. Adjust fans to function properly.

B. Adjust belt tension on belt driven fans.

C. Lubricate bearing.

D. Adjust drives for final system balancing.

E. Check wheel overlap.

3.10 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 52 01

VARIABLE FREQUENCY DRIVES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Sections, and the other sections of Division 23.

1. Division 23 Section: “Common Work Results for HVAC.”
2. Division 26 Section: “Grounding and Bonding for Electrical Systems” – for grounding requirements of VFD’s.
3. Division 26 Section: “Low Voltage Electrical Power Conductors and Cables”: - for control wiring requirements.
4. Division 26 Section: “Raceways and Boxes for Electrical Systems”: - for control wiring raceway requirements.

1.2 SUMMARY

A. Section includes:

1. Variable frequency drives.
2. Harmonic distortion input filters.
3. Auxiliary control devices.

B. Related Sections: The following sections contain requirements that relate to this section:

1.3 REFERENCES

A. Unless otherwise noted, references included throughout this specification section apply to “latest editions”.

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product data for products specified in this Section. Include dimensions, ratings, and data on features and components.

C. Certified reports of field tests and observations specified in “Field Quality Control” in this Section.

D. Maintenance data for products for inclusion in Operating and Maintenance Manual specified in Division 01 and in Division 23 Section: “Common Work Results for HVAC.”

E. Units to suit actual motor nameplate full load currents.

F. Submit VFD wiring diagrams showing all field input/output connections, internal power control devices, breakers, fuses, disconnects, main/bypass/isolation contactors, overload protection, etc.

G. Submit Harmonic Filters, as required in these specifications. Submittal shall identify individual VFD's and associated harmonic filtering method/ratings.

H. Qualification data for field-testing organization certificates, signed by the Contractor, certifying that the organization complies with the requirements specified in "Quality Assurance" below. Include list of completed projects with project names, addresses, names of Architects and Owners, plus other information specified.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Provide solid-state variable frequency drives from manufacturers regularly engaged in the manufacturer of equipment of the types and capacities indicated, with such products in satisfactory use in similar service for not less than 5 years.

B. Components and Installation: NFPA 70, "National Electrical Code."

C. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The terms "listed" and "labeled" shall be defined as they are in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA regulation 1910.7.

D. UL Compliance

1. UL 508, "Electric Industrial Control Equipment."

E. Single-Source Responsibility: Provide all variable frequency drives from a single manufacturer.

F. Field-Testing Organization Qualifications: To qualify for acceptance, a testing organization must demonstrate, based on evaluation of organization-submitted criteria conforming to ASTM E 699, "Standard Practice for Evaluation of Agencies Involved in Testing, Quality Assurance, and Evaluating of Building Components," that it has the experience and capability to conduct satisfactorily the testing indicated.

G. Comply with IEEE C2 "National Electrical Safety Code", latest edition.

1.6 COORDINATION

A. Division 01 Section: "Administrative Requirements": Requirements for coordination.

B. General: Coordinate features of controllers and control devices with pilot devices and control circuits provided under Division 23 Sections covering control systems.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Variable frequency drives.

a. Square D. Company
b. General Electric Co.
c. Eaton
d. Yaskawa
e. Eurotherm
f. ABB
g. Reliance

2.2 VARIABLE FREQUENCY DRIVES

A. Variable Frequency Drives (VFD) shall be provided as indicated or scheduled on the drawings.

B. The Variable Frequency Drive (VFD) shall convert 460 volt, three (3) phase, sixty (60) hertz utility power to adjustable voltage and frequency, three (3) phase, AC power for stepless motor control from ten (10) percent to one hundred ten (110) percent of base speed. The manufacturer shall provide VFDs of the same basic model number for all the drives. The VFD shall be a PWM-V design.

C. The manufacturer shall provide on site start-up services for each VFD. A training period of four (4) hours shall be provided by factory personnel to instruct the Owner's personnel in the use of the VFD.

D. The VFD shall be a voltage source type with Pulse Width Modulation (PWM) output utilizing power transistor semi-conductors.

1. Complete efficiency versus load and speed shall be submitted for approval.

E. Circuits shall provide DV/DT and DI/DT protection for semi-conductors. VFD shall be capable of starting into a rotating load without damage to the drive. Protective circuits shall cause instantaneous trip should any of the following faults occur:

1. 110 percent of VFD duty wave current rating for 60 seconds.
2. 135 percent of VFD current rating for 2 seconds.
3. Output phase to phase and phase to ground short circuit condition.
4. High input line voltage.
5. Low input line voltage.
6. Loss of input phase.

7. External fault. This protective circuit shall permit, by means of the terminal strip, wiring of remote normally closed safety contacts such as high static, firestat, etc. to shut down the drive.

F. The following adjustments shall be available in the controller:

1. Maximum frequency (fifteen (15) to two hundred fifty (250) Hz) factory set at sixty (60) Hz.
2. Minimum frequency (three (3) to sixty (60) Hz) factory set at six (6) Hz.
3. Acceleration adjustable from 0.1 to 360 seconds factory set at twenty (20) seconds.
4. Deceleration adjustable from 0.1 to 360 seconds factory set at twenty (20) seconds.
5. Volts/Hertz ratio factory set for 480V at 60 Hz.
6. Voltage offset or boost factory set at 100 percent torque.
7. Current limit (fifty (50%) percent to one hundred ten (110%) percent sine wave current rating) factory set at 100% current.

G. The VFD shall have the following basic features:

1. PWM Inverter Design & Ratings:

   a. VFD’s 100 HP and less: 6-Pulse with 5% impedance dual link reactor.
   b. VFD’s >100 HP and less than 200HP: Passive filter or 18-Pulse.
   c. VFD’s 200 HP and larger: 18-Pulse with phase shifting transformer. The transformer shall be single-wound, rated 480V, UL recognized, 180 degree C insulation system. Performance shall be achieved without exceeding the temperature rise in a 50 degree C ambient. Transformer shall be integral to the VFD cabinet.
2. A complete factory wired and tested bypass system consisting of a door interlocked, padlockable disconnect, output contactor and mechanically interlocked bypass contactor, and a VFD isolation service switch. UL Listed motor overload protection shall be provided in both drive and bypass modes.
3. The VFD shall have an RS-485 port as standard. The standard protocols shall be Modbus, BACnet/IP, BACnet MS/TP, Modbus TCP, Modbus RTU. Optional protocols shall include Johnson Controls N2 bus and Seimens Building Technologies FLN. Each individual drive shall have the protocol in the base VFD. The use of third party gateways and multiplexers is not acceptable. All protocols shall be “certified” by the governing authority (i.e. BTL Listing for BACnet). Use of non-certified protocols is not allowed.
4. Door-mounted operator controls consisting of a membrane command center which allows manual stop/start and speed control, local/remote indication and manual/automatic speed control selection. In addition, the command center will serve as a means to configure controller parameters such as minimum speed, maximum speed, acceleration and deceleration times, volts/Hz ratio, torque boost, etc. Potentiometers will not be allowed for these settings.
5. Main input circuit breaker shall provide a positive disconnect of all phases of the incoming A-C line to both the controller and the bypass circuitry. This circuit breaker shall be mounted inside the controller enclosure and have through-the-door interlocking toggle with provisions for padlocking in the OFF position.
6. Main input circuit breaker for overload and short circuit protection.
7. Run permissive circuit – there shall be a run permissive circuit for damper valve control. Regardless of the source of a run command (keypad, input contact closure, time-clock control, or serial communications), the VDF shall provide a dry contract closure that will signal the damper to open (VFD motor does not operate). When the damper is fully open, a normally open dry contact (end-switch) shall close. The closed end-switch is wired to a VFD digital input and allows VFD motor operation. Two separate safety

interlock inputs shall be provided. When either safety is opened, the motor shall be commanded to coast to stop and the damper shall be commanded to close.

8. Automatic restart after power outage, drive fault (except ground fault or short circuit) or external fault, with drive in automatic mode. The circuit shall allow the user to select up to nine (9) restart attempts as well as the dwell time between attempts. The reset time between fault occurrences shall also be selectable, set at twenty (20) seconds. All settings shall be via the membrane command center.
9. Door-mounted LED display for digital indication of:

    a. Frequency output
    b. Voltage output
    c. Current output
    d. First fault indication
10. Relay contacts for remote indication of drive fault and motor running.
11. Three (3) critical frequency avoidance bands, field programmable via the membrane command center. Each critical frequency avoidance band shall have a bandwidth adjustable via keypad entry of up to ten (10) Hz.
12. Three (3) programmable preset speeds which will force the VFD to a preset speed upon a user contact closure.
13. Process follower to enable VFD to respond to any of the following signals:

    a. A pneumatic 3 - three (3) to fifteen (15) pound signal or
    b. 0 -10VAC or
    c. 4 - 20MA signal.
14. The VFD shall have the capability to ride through power dips up to 500 msec without a controller trip depending on load and operating condition.
15. Electronic motor solid-state overload protection provided for controller:

    a. Overload circuit shall provide for 3:1 FLA range.
    b. Class 10, 20 or 30 (programmable) electronic motor overload protection shall be included.
    c. 2% tripping accuracy.
    d. True single phase protection by detecting loss of, or low voltage and tripping within 3 seconds.
    e. Inherently protection from short circuit damage by saturation of current sensors.
16. Bypass – Bypasses shall be furnished and mounted by the drive manufacturer as defined on the VFD schedule. All VFD with bypass configurations shall be UL Listed by the drive manufacturer as a complete assembly and carry a UL508 label.

    a. A complete factory wired and tested bypass system consisting of a door interlocked, padlockable disconnect, output contactor and mechanically interlocked bypass contactor, and a VFD isolation service switch. UL Listed motor overload protection shall be provided in both drive and bypass modes.
    b. The bypass enclosure door and VFD enclosure must be mechanically interlocked such that the disconnecting device must be in the “Off” position before either enclosure may be accessed.
    c. The VFD and bypass package shall have a UL listed short circuit current rating (SCCR) of 100,000 AMPS and this rating shall be indicated on the UL data label.
    d. The bypass shall maintain positive contactor control through the voltage tolerance window of nominal voltage +30%, -35%. This feature is designed to avoid contactor coil failure during brown out / low line conditions and allow for input single phase operation when in the VFD mode. Designs that will not allow input single phase operation in the VFD mode are not acceptable.

e. Motor protection form single phase power conditions – utilize a digital bypass signal and an electromechanical switch as back-up.

f. The user shall be able to select the text to be displayed on the keypad when an external safety opens. Example test display indications include “FireStat”, “FreezStat”, “Over pressure” and “Low suction”. The user shall also be able to determine which of the four (4) safety contacts is open over the serial communications connection.

g. Smoke Control Override Mode (Override 1) – The bypass shall include a dedicated digital input that will transfer the motor from VFD mode to Bypass mode upon receipt of a dry contact closure from the Fire / Smoke Control System. The Smoke Control Override Mode action is not programmable and will always function as described in the bypass User’s Manual documentation. In this mode, the system will ignore low priority safeties and acknowledge high priority safeties. All keypad control, serial communications control, and normal customer start / stop control inputs will be disregarded. This smoke Control Mode shall be designed to meet the intent of UL964/UUKL.

h. Fireman’s Override Mode (Override 2) – the bypass shall include a second, programmable override input which will allow the user to configure the unit to acknowledge some digital inputs, all digital inputs, ignore digital inputs or any combination of the above. This programmability allows the user to program the bypass unit to react in whatever manner the local Authority Having Jurisdiction (AHJ) requires. The Override 2 action may be programmed for “Run-to-Destruction”. The user may also force the unit into Override 2 via the serial communications link.

17. Serial Communications:

a. The VFD shall have an RS-485 port as standard. The standard protocols shall be Modbus, BACnet/IP, BACnet MS/TP, Modbus TCP, Modbus RTU. Optional protocols shall include Johnson Controls N2 bus and Seimens Building Technologies FLN. Each individual drive shall have the protocol in the base VFD. The use of third party gateways and multiplexers is not acceptable. All protocols shall be “certified” by the governing authority (i.e. BTL Listing for BACnet). Use of non-certified protocols is not allowed.

b. The BACnet connection shall be an RS485, MSTP interface operating at 9.6, 19.2, 38.4, or 76.8 Kbps. The connection shall be tested by the BACnet Testing Labs (BTL) and be BTL Listed. The BACnet interface shall conform to the BACnet standard device type of an Applications Specific Control (B-ASC). The interface shall support all BIBBs defined by the BASnet standard profile for a B-ASC including, but not limited to:
   1) Data Sharing – Read Property – B.
   2) Data Sharing – Write Property – B.
   3) Device Management – Dynamic Device Binding (Who-Is; I-AM).
   4) Device Management – Dynamic Object Binding (Who-Has; I-Have).
   5) Device Management – Communication Control – B.

c. Serial communication capabilities shall include, but not be limited to; run-stop control, speed set adjustment, proportional/integral/derivative PID control adjustments, current limit, accel/decal time adjustments, and lock and unlock the keypad. The drive shall have the capability of allowing the DDC to monitor feedback such as process variable feedback, output speed/frequency, current (in amps), % torque, power (kW), kilowatt hours (resettable), operating hours (resettable), and drive temperature. The DDC shall also be capable of monitoring the VFD relay output status, digital input status, and all analog input and analog output values.

"Pass thru I/O" All diagnostic warning and fault information shall be transmitted over the serial communications bus. Remote VFD fault reset shall be possible.

H. Integral Line Conditioning and Harmonic Filtering

1. Input Line Conditioning: Provide input filtering, to limit TDD and THD(V) at the defined PCC per IEEE 519. Input Line Reactors or DC Chokes shall be provided for all 6 pulse drives. 200HP VFD's shall utilize an integral phase-shifting transformer.
2. Every 6 pulse VFD shall be provided with integral or factory means to minimize AC input line surges, line notching, and input current and voltage distortions due to harmonic current. The manufacturer's method shall provide mitigation equal to, or better than, that of 5% AC Line Reactors.
3. Provide one of the following means to achieve required harmonic mitigation:

    a. 5% AC Line Reactors
    b. DC Bus Chokes (installed on both positive and negative busses)
    c. Passive Filters (filters must not create resonance condition)
4. Where required harmonic filters, reactors or chokes require an additional enclosure, it shall be close coupled to the VFD enclosure, and shall be a metal enclosure with same NEMA rating as that of the VFD.
5. The VFD manufacturer shall provide harmonic calculations, per IEEE 519, to show the effect of the motor and VFD (for all 6 or 18-pulse drives) on the electrical distribution system. The calculations and report shall determine and include the following:

    a. Point of Common Coupling (PCC) for the harmonic calculation(s) shall be defined as the building's main distribution switchboard or main panel on the secondary side of the service transformer.
    b. Calculations shall be based on the upstream distribution system characteristics, feeder size, supply transformer impedances (assumed loaded to 70%) and VFD impedances. Base calculations on all VFD controlled motors running with VFD's at full load..
    c. Calculate the input voltage THD at the PCC.
    d. Calculate Total current Demand Distortion (TDD) at PCC.

I. The VFD together with all options and modifications shall be mounted within a standard **NEMA 3R** enclosure suitable for continuous operation at ambient temperature of zero (0) to forty (40) degrees Celsius with relative humidity of ninety-five (95) percent non- condensing. All high voltage components within enclosure shall be isolated with steel covers. The complete unit shall be UL listed and UL labeled.

J. The VFD manufacturer shall maintain and staff nationwide service centers. These service engineers shall be employed by the manufacturer and shall provide start-up service including physical inspection of the drive and connected wiring and final adjustments to meet specified performance requirements.

K. The VFD shall carry a full parts and labor warranty for the time period of two (2) years from the date of acceptance (or start-up) by the Owner.

L. The Contractor shall coordinate the connections between the VFD and the individual motors provided. This coordination shall take place prior to shop drawing submittals and shall be reflected in the shop drawings, which are submitted for review.

M. The Contractor shall verify that the motors served by the VFD's are compatible with the supplied VFDs.

2.3 AUXILIARY CONTROL DEVICES

A. General: Factory installed in controller enclosure except as otherwise indicated. Where separately mounted, provide NEMA, "National Electrical Manufacturers Association," enclosure except as otherwise indicated.

B. Pushbutton Stations and Selector Switches: Heavy-duty type, oil tight.

C. Control Relays: Auxiliary and adjustable time-delay relays.

D. Elapsed Time Meters: Heavy duty with digital readout in hours.

E. Current Sensors: Rated to suit application.

F. Phase-Failure and Undervoltage Relays: Solid-state sensing circuit with isolated output contacts for hardwired connection. Provide adjustable undervoltage setting.

G. Current-Sensing, Phase-Failure Relay: Solid-state sensing circuit with isolated contacts for hard-wired connection. Arranged to operate on phase failure, phase reversal, current unbalance of from 30 to 40 percent, or loss of supply voltage. Provide adjustable response delay.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install variable frequency drives in accordance with manufacturer's written instructions.

B. Manufacturer's Field Services: Arrange and pay for the services of a factory-authorized service representative to inspect the field assembly and connection of components, and supervise the pretesting and adjustment of solid-state controllers.

C. Mounting: For control equipment at walls, bolt units to wall or mount on light-weight structural steel channels bolted to the wall. For controllers not at walls, provide freestanding racks fabricated of structural steel members and light-weight slotted structural steel channels. Use feet consisting of 3/8 inch thick steel plates, 6 inches square, bolted to the floor. Use feet for welded attachment of 1 ½ inch by 1 ½ inch by ¼ inch vertical angle posts not over three feet on centers. Connect the posts with horizontal lightweight slotted steel channels and bolt the control equipment to the channels.

D. AC motor conductor length from VFD to motor shall not exceed 100 LF.

3.2 IDENTIFICATION

A. Identify variable frequency drives in accordance with Division 23 Section: "Common Work Results for HVAC."

3.3 CONTROL WIRING INSTALLATION

A. Install wiring between motor control devices and control/indicating devices as specified in Division 23 Section: “Instrumentation and Control for HVAC” for hard-wired connections.

B. Install wiring in enclosures neatly bundled, trained, and supported.

3.4 CONNECTIONS

A. Tighten connectors, terminals, bus joints, and mountings. Tighten field connected connectors and terminals’, including screws and bolts, in accordance with equipment manufacturer’s published torque tightening values. Where manufacturer’s torqueing requirements are not indicated, comply with tightening torques specified in UL 486A.

3.5 FIELD QUALITY CONTROL

A. Division 01 Section: “Quality Requirements”: For quality control requirements.

B. Schedule visual and mechanical inspections and electrical tests with at least one week’s advance notification.

C. Visual and mechanical inspection: Include the following inspections and related work.

1. Inspect for defects and physical damage NRTL labeling, and nameplate compliance with current project drawings.
2. Exercise and perform operational tests of mechanical components and other operable devices in accordance with manufacturer’s instructions.
3. Check tightness of electrical connections of devices with calibrated torque wrench. Use manufacturer’s recommended torque values.
4. Clean devices using manufacturer’s approved methods and materials.
5. Verify proper fuse types and ratings in fusible devices.

D. Electrical Tests: Perform the following in accordance with manufacturer’s instructions:

1. Insulation resistance test of motor control devices conducting parts to the extent permitted by the manufacturer’s instructions. Insulation resistance less than 100 megohms is not acceptable. Tests are required for all motors > 10 HP.
2. Use primary current injection to check performance characteristics of motor-circuit protectors and for overload relays of controllers for motors 15 horsepower and larger. Trip characteristics not within manufacturer’s published time-current tolerances are not acceptable.
3. Make adjustments for final settings of adjustable-trip devices based on installed motor nameplates. Test auxiliary protective features such as loss of phase, phase unbalance and undervoltage to verify operation.
4. Check for improper voltages at terminals in controllers that have external control wiring when controller disconnect is opened. Any voltage over 30 V is unacceptable.
5. Test ground fault protection devices by current injection method.
6. Retesting: Correct deficiencies and retest. Verify by the retests that specified requirements are met.

3.6 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.7 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish. Clean devices internally using methods and materials as recommended by manufacturer.

3.8 DEMONSTRATION

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Training: Arrange and pay for the services of a factory-authorized service representative to demonstrate solid-state and variable-speed controllers and train Owner’s maintenance personnel.

C. Conduct a minimum of 4 hours of training in operation and maintenance. Include training relating to equipment operation and maintenance procedures.

D. Schedule training with at least seven days’ advance notification.

3.9 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 81 06

PACKAGED ROOFTOP AIR CONDITIONING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and the other sections of Division 23.

1.2 SUMMARY

A. Section Includes:

1. Packaged rooftop air conditioning unit.
2. Roof curb.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 23 Section: “Instrumentation and Control for HVAC” for control system remote from unit.
2. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment”: Vibration isolators.
3. Division 22 Section: “Pipes and Tubes for Plumbing Piping and Equipment”:
4. Division 23 Section: “HVAC Air Distribution Systems”: Flexible connections.
5. Division 26 Section: “Low voltage Electrical Power Conductors & Cables”: Requirements for electrical wiring and cable connections for units specified in this section.
6. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements for conduits and boxes housing electrical wiring and electric connections specified by this section.”

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. Air-Conditioning Heating, and Refrigeration Institute:

1. ARI 210/240 – Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
2. ARI 270 - Sound Rating of Outdoor Unitary Equipment.
3. ARI 340/360 - Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment.

B. Air Movement and Control Association International, Inc.:

1. AMCA 500 - Test Methods for Louvers, Dampers, and Shutters.

C. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
2. ASHRAE 62 - Ventilation for acceptable Indoor Air Quality.
3. ASHRAE 90.1 - Energy Standard for Buildings except Low-Rise Residential Buildings.

D. ASTM International:

1. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

E. National Electrical Manufacturers Association:

1. NEMA 250 - Enclosures for Electrical Equipment (1000 Volts Maximum).
2. NEMA MG 1 - Motors and Generators.

F. National Fire Protection Association:

1. NFPA 54 - National Fuel Gas Code.
2. NFPA 58 - Liquefied Petroleum Gas Code.
3. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.

1.4 DEFINITIONS

A. Energy Efficiency Ratio (EER) - Ratio of net cooling capacity in Btuh to total rate of electric input in watts under designated operating conditions.

B. Seasonal Energy Efficiency Ratio (SEER) - Total cooling output of an air conditioner during its normal annual usage period for cooling (in Btu) divided by total electric energy input during the same period (in Wh).

C. Integrated Part-Load Value (IPLV): Single-number figure of merit based on part-load EER, COP, or kW/ton expressing part-load efficiency for air-conditioning and heat pump equipment on basis of weighted operation at various load capacities for the equipment.

D. Integrated energy efficiency ratio (IEER) single number figure of merit expressing cooling part load EER efficiency for commercial unitary air conditioning and heat pump equipment on the basis of weighted operations of various load capacities for the equipment.

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate air handling unit dimensions, performance data, lifting points, piping connections, roof curb data, and attachments.

C. Product Data: Submit data indicating:

1. Cooling and heating capacities.
2. Dimensions.

3. Weights.
4. Rough-in connections and connection requirements.
5. Duct connections.
6. Electrical requirements with electrical characteristics and connection requirements.
7. Controls: Provide the following items:

    a. A detailed description of the programmed sequence.
    b. Control interface (BACNet, ModBus, LonWorks, hardwired, etc).
    c. List of all available control points (points that can be changed by the central control system remotely).
    d. List of all available monitoring points (points that can be viewed by the central control system remotely).
    e. Provide a description for each point in non-coded language.
    f. Provide the address or name of the point or SNVT (Standard Network Variable Type).
    g. Indicate the read/write capability for each point.
8. Accessories.

D. Test Reports: Submit results of factory test at time of unit shipment.

E. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Blank Pre-functional checklists and start-up forms: Submit these forms to the Commissioning Agent (CxA) prior to conducting any start-ups.

H. Manufacturer’s Field Reports: Submit start-up report and completed pre-functional checklists for each unit.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout Procedures.

B. Project Record Documents: Record actual locations of controls installed remotely from units.

C. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

1.7 QUALITY ASSURANCE

A. Cooling Capacity: Rate in accordance with ARI 210/240 and ARI 340/360.

B. Sound Rating: Measure in accordance with ARI 270.

C. Insulation and adhesives: Meet requirements of NFPA 90A.

D. Performance Requirements: Conform to minimum EER/SEER prescribed by ASHRAE 90.1 when tested in accordance with ARI 210/240 and ARI 340/360.

E. Outside Air Damper Leakage: Test in accordance with AMCA 500.

F. Perform Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

1.8 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.9 PRE-INSTALLATION MEETINGS

A. Division 01 Section: "Administrative Requirements": Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: "Product Requirements": Product storage and handling requirements.

B. Accept units on site. Inspect for damage.

C. Protect units from damage by storing off roof until roof mounting curbs are in place.

1.11 COORDINATION

A. Division 01 Section: "Administrative Requirements": Requirements for coordination.

B. Coordinate installation of roof curbs with roof structure, roof deck and roof membrane installation.

C. Coordinate all controls with BMS contractor to ensure proper communication between the central control system and the unit as required by the contract documents. Provide a list of all available points (non-coded language description) to the BMS contractor. Ensure RTU can accept all required control points from BMS and that the BMS can read all required monitoring points. Ensure that the controls interface between the packaged RTU controls and the BMS is operational.

D. Coordinate with Engineer regarding control sequence. Any deviation of the programmed controls from the specified controls should be clarified in writing and provided to the Engineer and Commissioning Agent (CxA) for review.

E. Contractor is responsible for providing all control devices shown on the ATC diagram or points list in the contract documents unless otherwise specified. Prior approval by the Engineer is required, in writing, to change this requirement. If there are issues regarding these devices they should be documented in writing and provided to the Engineer (and CxA) for review.

1.12 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer’s warranty for compressors.

C. Furnish five year manufacturers warranty for heat exchangers.

1.13 MAINTENANCE SERVICE

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for maintenance service.

B. Furnish service and maintenance of equipment for one year from Date of Substantial Completion. Include maintenance items as shown in manufacturer's operating and maintenance data, including filter replacements, fan belt replacement, and controls checkout and adjustments.

C. Examine unit components monthly. Clean, adjust, and lubricate equipment.

D. Include systematic examination, adjustment, and lubrication of unit, including filter replacements, fan belt replacement, and controls checkout and adjustments. Repair or replace parts in accordance with manufacturer's operating and maintenance data. Use parts produced by manufacturer of original equipment.

E. Perform work without removing units from service during building normal occupied hours.

F. Furnish 24-hour emergency service on breakdowns and malfunctions for this maintenance period.

G. Maintain locally, near Place of the Work, adequate stock of parts for replacement or emergency purposes. Have personnel available to ensure fulfillment of this maintenance service, without unreasonable loss of time.

H. Perform maintenance work using competent and qualified personnel under supervision and in direct employ of manufacturer or original installer.

I. Do not assign or transfer maintenance service to agent or subcontractor without prior written consent of Owner.

1.14 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish one (1) spare set of belts for each belt-driven air handling unit. Deliver to the Owner's representative and mark with the air handling unit's number.

C. Furnish one (1) extra set of filters for each air handling unit to the owner. In addition, install new filters at completion of air handling system work, and prior to testing, adjusting, and balancing work. Do not operate fans unless filters are in place.

D. Furnish Baltimore County any specialized tools, equipment or software that owner will need to operate, adjust, maintain, and diagnose the equipment.

PART 2 - PRODUCTS

2.1 DEDICATED OUTDOOR AIR UNITS

A. General:

1. Unit(s) furnished and installed shall be packaged outdoor air unit(s) as scheduled on contract documents and described in these specifications. Unit(s) shall be designed for dehumidification, cooling and/or heating of 100% Outdoor Air. For dehumidification and cooling modes the evaporator temperature or supply air dewpoint shall be monitored, reported at unit controller. Compressor controls shall modulate capacity to maintain evaporator leaving set point for dehumidification mode. Hot Gas Bypass shall not be used to control compressor capacity. Compressor Hot Gas Reheat (HGRH) shall be factory installed. To prevent rehydration of evaporator condensate the reheat coil face shall be located a minimum of 6” downstream from the leaving face of the evaporator coil. Heating system shall include modulating controls. Compressor on-off only or primary heating on-off only controls shall not be acceptable control strategies.
2. Unit(s) shall have labels, decals, and/or tags to aid in the service of the unit and indicate caution areas.
3. Unit discharge airflow configuration shall be:

    a. Vertical discharge thru unit base.

B. Cabinet:

1. Cabinet panels: 2” double-wall foamed panel with thermal break construction throughout the indoor section of unit to provide nonporous, cleanable interior surfaces. All interior seams exposed to airflow shall be sealed.
2. Insulation: 2” polyurethane foam metal encapsulated with no exposed edges. Initial R value of 6.6 per inch of thickness.
3. Cabinet base shall be double wall construction designed to prevent trapping or ponding of water within the unit base. Cabinet floor shall be insulated with 2” double-wall foamed panel with thermal break construction throughout the indoor section of unit to provide nonporous, cleanable interior surfaces. All interior seams exposed to airflow shall be sealed. Insulation shall not be applied to underside of unit base.
4. Cabinet Base Rails: Side base rails shall include openings for forklift and/or tie-down and lift access. To protect unit base from fork damage side rails shall include removable heavy gauge fork pockets.
5. Shipping anchors attach to and/or through unit base rails. Straps over unit shall not be used to secure unit for shipping.

6. Cabinet material interior and base rails: shall be G-90 zinc-coated galvanized steel. Material gauge shall be a minimum of 14-gauge for base rails, 16-gauge for structural members and 22-gauge for access doors and cabinet panels.
7. Exterior Corrosion Protection: Exterior cabinet panels shall be a base coat of G-90 galvanized steel with both exterior and interior surfaces cleaned, phosphatized, and finished with a weather-resistant baked enamel finish. Unit's surface shall be in compliance with ASTM B117 salt spray testing at a minimum of 672-hour duration.
8. Cabinet construction shall provide hinged panels providing easy access for all parts requiring routine service.
9. Cabinet top cover shall be one-piece construction or where seams exist, it shall be double-hemmed and gasket-sealed.
10. Hinged Access Panels: Water- and air-tight hinged access panels shall provide access to all areas requiring routine service including air filters, heating section, electrical and control cabinet sections, optional ERV and power exhaust fan section, supply air fan section, evaporator and reheat coil sections. Insulated doors shall be constructed to allow the access door to open in either direction or be removed without removal of a hinge.

    a. Latches with locking hasp or tool operated closure devices shall be factory installed on all hinged access panels.
11. Drain Pan material shall be Type 304 Stainless steel drain and constructed to slope in two directions to ensure positive drainage with corners exposed to standing water and drain fittings welded liquid tight to prevent leaks. Pan shall have a minimum depth of 2" and be fully insulated by no less than 1" of R-6.6 insulation.
12. Provide openings on either side of unit or thru the base for power, control, and gas connections.
13. Cabinet shall include optional interior liner constructed of Type 304 stainless steel with sealed seams.
14. Air inlet hood shall be factory installed and shall not require field assembly. Hood shall include 2" thick removable aluminum mesh mist eliminators sized for a velocity not to exceed 500 FPM at maximum unit rated airflow. Service access shall be hinged and held in place with thumb latches that shall not require tools for service access.
15. Unit shall be equipped with a 6" filter rack upstream of the evaporator. Frame shall be field-adjustable to match any filter combination specified in the following section.

C. Unit Top:

1. The top cover shall be one piece construction or, where seams exist, it shall be double-hemmed and gasket-sealed. The ribbed top adds extra strength and enhances water removal from unit top.

D. Sensors:

1. A factory installed combination outdoor air sensor located in the outdoor air hood is designed to sense both outdoor air temperature and relative humidity for use by the microprocessor controller to make required ventilation, cooling, dehumidification and heating decisions.
2. Refer to the Sequence of Operations section of the Installation, Operation and Maintenance manual for detailed unit control and operational modes.
3. A factory installed sensing tube is designed to sense the supply air temperature downstream of the indoor fan section.

E. Refrigerant and Capacity Control:

1. R-454B – Low GWP Refrigerant & No RCC Valve.
2. Unit shall be fully charged with R-454B. Unit shall be ETL listed and labeled, classified in accordance with UL 60335-2-40/CS C22.2 No. 60335-2-40 for Central Cooling Air Conditioners.

F. Dehumidification/Cooling:

1. Compressors

a. All units shall have direct drive, scroll type compressors.
b. Optional Digital Scroll Compressor
   1) Circuit One
c. Motor shall be suction gas-cooled and shall have a voltage utilization range of plus or minus 10 percent of unit nameplate voltage.
d. Internal overloads shall be provided with the scroll compressors.
e. Each compressor shall have a crankcase heater or equivalent to minimize the amount of liquid refrigerant present in the oil sump during off cycles.
f. Each compressor shall be mounted on rubber vibration isolators, to reduce the transmission of noise.
g. Provide each unit with hermetically sealed refrigerant circuit(s) factory-supplied completely piped with liquid line filter-drier, liquid line charging port, suction and liquid line pressure ports, sight glass, and thermal expansion valve.
h. Provide each circuit with automatic reset high and low pressure and high temperature switches for safety control.

G. Coils:

1. Evaporator, Condenser and Hot Gas Reheat coils shall be constructed with copper tubes mechanically bonded to configured aluminum plate fins.
2. Coils shall be factory leak tested in accordance ANSI/ASHRAE 15-1992 at a minimum pressure of 500 PSIG.
3. The condenser coil shall have a fin designed for ease of cleaning.
4. Evaporator coil shall include (six / four) rows of cooling interlaced for superior sensible and latent cooling with a maximum of 14 FPI for ease of cleaning.
5. Reheat coil shall be fully integrated into the supply airstream and be capable of delivering design supply air temperature.
6. To prevent re-hydration of condensate from evaporator coil, the evaporator coil face and the hot gas reheat coil face shall be separated by a minimum of six inches.
7. Condenser coil hail guards shall be factory installed.

H. Hot Gas Reheat:

1. This option shall consist of a modulating hot-gas reheat coil located on the leaving air side of the evaporator coil pre- piped and circuited with a low pressure switch.
2. Refer to the Sequence of Operations section of the Installation, Operation and Maintenance manual for detailed unit control and operational modes.

I. Compressor:

1. (Mechanical Control: shall be equipped with Refrigerant Capacity Control (RCC) on the lead circuit to modulate compressor capacity during Dehumidification or Cooling modes to prevent evaporator frosting or freezing. RCC shall be (standard mechanical). Hot gas bypass shall not be an acceptable compressor capacity control strategy. The RCC setpoint is factory set, and field adjustable, to maintain desired suction pressure and compressor discharge pressure.

    a. Electronic Control: (Requires Digital Scroll Compressor or Variable Speed Compressor be selected in compressor section of this specification.) Compressor output capacity shall be controlled by the Main Control Module. (refer to unit control and sequence sections of this specification)

J. Condenser:

1. Outdoor Fans: Shall be direct drive vertical discharge design with low-noise corrosion resistant glass reinforced polypropylene props, powder coated wire discharge guards and electro-plated motor mounting brackets.
2. Fans shall be statically and dynamically balanced.

K. Fans and Motors:

1. Indoor fan shall be direct drive plenum fan, factory installed and wired to on-board Variable Frequency Drive and shall be equipped with slide out service access.
2. All fan motors shall be premium efficiency ODP and meet the U.S. Energy Policy Act of 2005/10 (EPACT).
3. All fan motors shall either be permanently lubricated and/ or have internal thermal overload protection.
4. Outdoor fans shall be direct drive with premium efficiency motors, statically and dynamically balanced, draw through in the vertical discharge position with either internal or external thermal protection. .
5. Provide shafts constructed of solid hot rolled steel, ground and polished, with keyway, and protectively coated with lubricating oil.

L. Electric Heater:

1. Modulating Electric Resistance Heating System

    a. Completely assembled and factory installed electric heating system shall be fully modulating, SCR controlled and listed for use in roof top handler. The heating section will include open coil heating elements, automatic and manual cut-outs, low voltage controls, air proving switch, maximum 48 amps per circuit and fusing for heaters over 48 amps. Electric heater shall be located:
        1) In the Primary heating position located beneath the indoor fan assembly.
        2) In the Secondary heating position located upstream of the unit return air section and will be staged and of fin tubular type.
2. Heater shall be UL or CSA listed and approved and provide single point power connection.

M. Controls:

1. No factory controls provided.

2. Controls shall be by controls contractor. Refer to sequences and drawings for more information.

N. Powered Exhaust:

1. Provide a factory installed power exhaust assembly that shall be designed to ventilate return air to atmosphere.
2. Plenum mounted direct drive airfoil design exhaust wheel material shall be heavy gauge aluminum, welded construction and rated for up to Class III speed/pressure performance. Factory install and wire fan motor to on-board Variable Frequency Drive. Belt-drive and/or forward curve plenums fans shall not be used.
3. Exhaust to discharge through powered isolation dampers in place of gravity dampers of gravity dampers.

O. Energy Recovery (Aluminum Energy Recovery Wheel):

1. General Requirements:

   a. The energy recovery cassette shall incorporate a rotary wheel in a non-insulated cassette frame complete with energy transfer media, seals, drive motor and drive belt.
   b. Energy recovery wheel performance shall be AHRI 1060 certified and bear the AHRI certified label. Components that are independently tested or “rated in accordance with” shall not be acceptable. Manufacturer membership in AHRI is not an acceptable substitute. Certified components must be listed as active in the AHRI Directory. (www.ahridirectory.org)
   c. The energy recovery cassette shall be an Underwriters Laboratory UR recognized component for fire, smoke and electrical safety and bear the UR symbol. Recognized components shall be listed in the UL directory. (http://database.ul.com)
   d. The energy recovery cassette shall comply with NFPA 90A by virtue of UL standard 1812 and UL900 or UL723 fire test for determination of flammability and smoke density.
   e. The energy recovery cassette shall carry a 2-Year standard warranty on the entire cassette assembly (excluding the motor) from the date of shipment. Motors shall carry the manufacturers standard 18-month warranty from the date of manufacture.
2. Cassette Frame and Wheel Construction.

   a. Cassette frame and structural components shall be constructed of G90 galvanized steel for corrosion resistance.
   b. Wheel structure shall consist of a welded hub, spoke and continuous rolled rim assembly of stainless steel, and shall be self-supporting without energy transfer media present.
   c. Wheel structure shall be connected to the shaft by means of taper lock bushings.
   d. Wheel bearings shall be permanently sealed and selected for a minimum 30-year L-10 life of 400,000 hours. Bearings requiring external grease fittings or periodic maintenance are not acceptable.
   e. Standard cassette may be affixed within the cabinet in any orientation without the need for factory modification.
3. Energy Transfer Media.

   a. The energy transfer media shall be made of aluminum.

b. All media surfaces shall be coated with a non-migrating solid absorbent layer prior to being formed into the flat plat separated media structure to ensure that all surfaces are coated, and that adequate latent capacity is provided.
c. The media shall have a flame spread of less than 25 and a smoke developed of less than 50.
d. Media shall be wound continuously with one flat and one structural layer in an ideal parallel plate geometry. Airflow across heat exchanger surface shall remain laminar.
e. Energy transfer media shall not exceed 4” in depth.

4. Coatings and Desiccant.

a. The desiccant shall be inorganic and specifically developed for the selective adsorption of water vapor.
b. The desiccant shall utilize a 3A molecular sieve certified by the manufacturer.
c. Desiccant shall be non-migrating nor shall it dissolve or deliquesce in the presence of water or high humidity.

5. Seals.

a. All diameter and perimeter seals shall be provided as part of the cassette assembly and shall be factory set.
b. Seals shall be non-contact nylon pile brush seal orientated in a labyrinth style configuration.
c. Diameter Seals shall be fully adjustable and easily accessible and set to within 0.05 inch of the rotor surface.
d. Perimeter seals shall be permanently mounted to the wheel rim and not require adjustment. Seals that mount to the frame are not acceptable.

6. Drive System:

a. The wheel drive motor shall be an Underwriters Laboratory Recognized Component and shall be mounted in the cassette frame and supplied with a service connector or junction box.
b. Three phase motors shall be suitable for use in both standard and inverter rated applications.
c. The drive system shall be easily accessible and visible for inspection and maintenance and have a minimum life expectancy of 90,000 hours.
d. Motor
    1) Inverter rated AC motor.
    2) Provides with shaft grounding rings similar to AEGIS.
e. Wheel drive system shall not require periodic adjustment.

7. Maintenance.

a. The media shall be cleanable by vacuuming the media surface, without degrading the latent recovery.

8. Purge.

a. A mechanical purge shall be available as an optional accessory.
b. When required the mechanical purge sector shall be factory installed and field adjustable.
c. Purge settings shall be calculated using AHRI certified data and adjusted per the wheel manufacturers selection software.
d. Purge shall be capable of limiting Exhaust Air Transfer Ratio (EATR) values to 0.4% through proper fan and purge adjustment.

P. Outdoor Air Damper:

1. Unit shall include a motor operated outdoor air damper constructed of galvanized steel.
2. Damper blades shall be v-groove design with rubber edge seals designed not to exceed a 4 CFM/SQ FT leakage rate exceeding ASHRAE 90.1 damper leakage requirements. Airfoil design Class 1A rated dampers are optional.
3. Damper actuator shall be factory mounted and wired sealed spring return and either two-position or fully modulating.
4. Dampers air velocity shall not exceed 2000 fpm.

Q. Filters:

1. Unit inlet hood shall include 2” thick aluminum mesh removable mist eliminators with hinged access cover. Inlet velocity shall not exceed 500 FPM.
2. Evaporator Inlet shall include a full complement of pleated media air filters. Filters shall be:
3. 2” deep MERV 8
4. 2” deep MERV 13

R. Electrical:

1. All high voltage power components such as fuses, switches and contactors shall include a service personnel protection barrier or shall be a listed as touch-safe design.
2. Field wiring access to be provided thru unit base into isolated enclosure with removable cover.
3. Power wiring to be single point connection.
4. Wiring internal to the unit shall be colored and labeled for identification.
5. Unit shall be factory wired to field wiring terminal block mounted in isolated enclosure.
6. Factory wired main power disconnect and overcurrent device shall be rated for total unit connected power
7. Unit SCCR rating shall be a minimum of 5kA
8. Factory wired Voltage/Phase monitor shall be included as standard. In the event of any of the following, the units will be shut down and a fault code will be stored in the monitor for the most recent 25 faults. Upon correction of the fault condition the unit will reset and restart automatically.

    a. Phase Unbalance Protection: Factory set 3%
    b. Over/Under/Brown Out Voltage Protection: +/-10% of nameplate voltage
    c. Phase Loss/Reversal
9. Factory to mount and wire optional 115-volt convenience outlet. Field wiring of convenience outlet not acceptable.
10. All low voltage field wiring connections shall be made at factory installed low voltage terminal strip.

S. Air Flow Monitoring:

1. Outdoor Air w/ Display and IFM w/ Piezo Ring/Tap.
2. The Greentrol GF-2100-A and GF-2200-A are high quality economical programmable dual-output airflow/temperature measurement and control instruments with options for analog air flow, temperature,and alarm.

a. It is designed for installation in specified critical applications that require precise measurement of air flow (down to zero flow).
b. The instrument includes factory calibrated probes and an advanced microprocessor-controlled transmitter/controller.
    1) Each sensor probe is equipped with a high reliability bead-in-glass heated thermistor element, factory calibrated to NIST traceable standards from zero flow to 2,000 FPM.
    2) The transmitter is fully independent of the probe and does not require field matching to the probe.
    3) An advanced microprocessor processes the raw probe signals and provides versatile programmable airflow measurement and alarm options with direct LED drive or N.O./N.C. relay dry contacts, and selectable analog output signal options.
    4) A powerful variable input signal integration option can be engaged to reduce the effects of transient input signal variations, and an innovative Field Calibration Wizard allows for simple, automated field adjustment of the instrument if required.
    5) A 16 character LCD display indicates airflow, temperature, system status and is also used for configuration and diagnostics.
    6) Field configuration is accomplished using a simple four-button user interface.

T. Refrigerant Detection System (RDS):

1. Systems with refrigerant classified as A2L shall include RDS.
2. RDS shall engage mitigation measures at 12% of LFL.
3. Mitigation will continue for 5 minutes once the alarm is cleared.
4. Detection of refrigerant leak(s) in the airstream shall:
    a. De-energize compressors, UV Lights, heaters, and fan motors, excluding Indoor Fan Motor(s).
    b. Run indoor fan motor(s) at minimum Hz.
    c. For building comfort, to avoid freezing or overheating the space, the damper command will not change, and the unit will still provide full dilution of any leaked refrigerant.
        1) Except for units with 2 position dampers and no return duct. In which case the damper shall be commanded open.
    d. 24VAC status terminal will energize on OAUTS.
5. Detection of refrigerant leak(s) in a non-airstream compartment shall:
    a. De-energize all loads including: compressors, motors and heaters.
    b. Energize the mechanical ventilation fans internal to the unit.
6. E-stop shall be given priority control of the unit over that of the RDS.

2.2 Curbs

A. The work consists of furnishing a HUSHCORE™ *Plus*™ System Model HIC-DS-52 for Rooftop units as described in this specification.

B. Curbs shall to be fully gasketed between the curb top and unit bottom with the curb providing full perimeter support, cross structure support and air seal for the unit. Curb gasket shall be furnished within the control compartment of the rooftop unit to be mounted on the curb immediately before mounting of the rooftop unit.

C. Solid bottom curb shall be factory assembled and fully lined with 1 inch neoprene coated fiberglass insulation and include a wood nailer strip.

D. Manufacturers

1. Basis of Design shall be BRD Noise and Vibration Control
2. Alternate manufacturers shall be submitted for review.

E. Materials

1. HUSHCORE™ *Plus*™ System Model HIC-DS-52 shall consist of a HUSHCORE™ HUSH CURB™ model HIC-2 Seismic/Vibration Curb and a HUSHCORE™ model DS-52 In-Curb Acoustical Treatment System.
2. HUSHCORE™ *Base*™ System Model HIC-2 Seismic/Vibration Curbs where indicated

    a. HUSH MOUNT™ model HIC-2 for 2” static deflection
    b. The structural steel spring isolation curbs shall bear directly on the roof support structure and be flashed and waterproofed into the roof’s membrane waterproofing system.
        1) The curb shall be capable of being re-flashed without lifting the unit.
    c. Equipment manufacturer’s or field fabricated curbs shall not be used.
    d. Curb sides and ends shall be manufactured from minimum 14 ga. G90 galvanized sheet metal (expanded metal or painted steel is not acceptable), reinforced and cross braced as required.
    e. All springs shall provide a minimum of 85% vibration isolation efficiency
        1) All springs shall be adjustable for leveling.
        2) Spring assemblies shall contain restraints and snubbers to resist wind and seismic forces.
    f. Spring static deflection and seismic performance criteria shall be as shown or indicated on the drawings, schedules or in the vibration control specification.
    g. The curb shall accept standard 2” roof insulation supplied and installed by the roofing contractor
    h. A resilient weather seal shall be incorporated into the curb design between the isolated top frame and the base curb assembly.
    i. Wood nailer and flashing shall be provided and curbs shall be manufactured to NRCA standards.
    j. Curb height shall be 24” high minimum or as shown on the drawings.
    k. Curbs shall be shipped pre-assembled. Knocked down kits are not acceptable.
    l. All non-galvanized materials shall be prime paint finished.
    m. All duct supports, bracing, flashing and safing as required.
    n. Unless otherwise recommended by the RTU manufacturer, all curbs shall be full perimeter type. Curbs with condenser pedestal rails are unacceptable.
3. In-Curb Composite Acoustical Treatment

    a. HUSHCORE™ DS-52 acoustical composite
    b. The overall installed thickness shall have an installed thickness of 8” for the DS-52 composite
    c. Shall have a thermal value of R-27
    d. Shall meet Class “A” per ASTM E84 for flammability
    e. The composite panels shall get HUSH SEALANT™ model HSAC-100 acoustical grade caulk at seams and all perimeter edges inside the curb
    f. Shall have 65% post-consumer recycled content

g. Seams for each layer shall be staggered

4. Decking

a. Decking shall be maintained inside the RTU roof curb to a clearance of ¼" maximum around all duct drops but never contact the duct.
b. Pack all air gaps around duct drops for return and supply with HUSH BATT™ and seal with HUSH SEALANT™ HSAC-100.

5. Inspections

a. The manufacturer or their local authorized agent shall inspect the in-curb deck system work on site prior to lowering of the units and issue a letter of certification stating that the products have been properly installed and sealed around all ductwork and drops to eliminate air gaps which can compromise performance.

6. Performance

a. To assure optimized aerodynamic and acoustic performance as well as proper integration and coordination of the final installation, the PLUS™ System shall be supplied by the rooftop unit manufacturer as part of a turnkey package.
b. HUSHCORE™ Model DS-52 In-Curb Composite Acoustical Treatment Performance
1) The combination of all layers shall be tested for Sound Transmission Loss in accordance with procedure ASTM E-90-10. The assembly shall be rated at not less than STC-52 with 1/3 octave performance values as listed below for sound radiation through the deck inside the curb.

Freq. (Hz)	80	100	125	160	200	250	315	400	500	630	800	1K
TL (dB)	26	27	33	32	35	42	45	45	50	56	59	60

Freq. (Hz)	1250	1600	2000	2500	3150	4000	5000	6300	8000	10000	STC
TL (dB)	62	63	64	65	67	71	74	78	80	80	52

c. A copy of the test report by an accredited lab shall be included in the submittals to document the above performance

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: "Administrative Requirements": Coordination and project conditions.

B. Verify roof curbs are installed and dimensions are as shown on shop drawings or instructed by manufacturer

3.2 PREPARATION

A. Furnish roof curbs Refer to Division 07 Sections for additional installation information.

3.3 INSTALLATION

A. Roof Curb:

1. Assemble roof curb.
2. Install roof curb level.
3. Coordinate curb installation and flashing with Division 07 Section: “Roof Accessories”:
4. Install units on roof curb providing watertight enclosure to protect ductwork and utility services.
5. Install gasket material between unit base and roof curb.
6. Unless otherwise indicated, fill all voids between curbs and ductwork with heavy density rigid board insulation of thickness to match height of roof curb.

B. Install units on vibration isolators. Refer to Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment”.

C. Install flexible connections between unit and inlet and discharge ductwork. Install metal bands of connectors parallel with minimum 3 inch flex between ductwork and fan while running. Refer to Division 23 Section: “HVAC Air Distribution”.

D. Install condensate piping with trap and route from drain pan to splash block on roof or nearest roof drain. Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”.

E. Install components furnished loose for field mounting.

F. Install electrical devices furnished loose for field mounting.

G. Install control wiring between unit and field installed accessories.

H. Remove from roof and dispose off-site panels removed from units during installation of economizer and dampers.

I. Locate remote panels as indicated on the Contract Drawings.

J. Provide adjustable sheaves required for final air balance.

K. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction.

L. All wiring within the AHU, where inside a control panel, shall be installed in UL approved conduit or raceway.

3.4 MANUFACTURER'S FIELD SERVICES

A. Division 01 Section: “Quality Requirements”: Requirements for field services.

B. Furnish initial start-up and shutdown during first year of operation, including routine servicing and checkout.

C. Provide technical support to ensure the communication interface between the RTU and the BMS is operational.

3.5 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.6 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for cleaning.

B. Vacuum clean coils and inside of cabinets.

C. Install temporary filters during construction period. Replace with permanent filters at Substantial Completion.

3.7 DEMONSTRATION

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Engage a factory authorized service representative to train owner’s maintenance personnel to adjust, operate and maintain systems.

1. Train Owner’s maintenance personnel on procedures and schedules for starting up and shutting down, trouble shooting, servicing and maintaining air handling units.
2. Review data in maintenance manuals.
3. Schedule training with owner with at least seven (7) days advance notice.

3.8 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 81 26

SPLIT SYSTEM AIR CONDITIONING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and the other sections of Division 23.

1.2 SUMMARY

A. Section Includes:

1. Air handling unit.
2. Condensing unit.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 03 Section: “Cast-In-Place Concrete.” Execution requirement for concrete foundations specified by this section.
2. Division 23 Section: “Common Motor Requirements:” Product requirements for electric motors for placement by this section.
3. Division 23 Section: “Instrumentation and Control for HVAC:” Control systems remote from unit, direct digital controls remote from unit.
4. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment:” Vibration isolators.
5. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment:” Execution requirements for connection to hot water and drain piping specified by this section.
6. Division 23 Section: “Refrigerant Piping:” Execution requirements for connection to refrigerant piping specified by this section.
7. Division 23 Section: “HVAC Air Distribution:” Flexible connections.
8. Division 23 Section: “Instrumentation and Control for HVAC:” Sequences of operation applying to units in this section.
9. Division 26 Section: “Low Voltage Electrical Power Conductors and Cables:” Requirements for electrical wiring and cable connection for units.
10. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements for conduits and boxes housing electrical wiring and connections specified by this section.”

1.3 REFERENCES

(Unless otherwise noted, references listed below and throughout this specification section apply to “latest editions.”)

A. Air-Conditioning Heating, and Refrigeration Institute:

1. ARI 210/240 - Unitary Air-Conditioning and Air-Source Heat Pump Equipment.
2. ARI 270 - Sound Rating of Outdoor Unitary Equipment.
3. ARI 340/360 - Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment.
4. ARI 365 - Commercial and Industrial Unitary Air-Conditioning Condensing Units.

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
2. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.

C. ASTM International:

1. ASTM B117 - Standard Practice for Operating Salt Spray (Fog) Apparatus.

D. National Electrical Manufacturers Association:

1. NEMA MG 1 - Motors and Generators.

E. National Fire Protection Association:

1. NFPA 90A - Standard for the Installation of Air Conditioning and Ventilating Systems.

F. Underwriters Laboratories Inc:

1. UL-508 - Industrial Control Equipment

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate assembly, unit dimensions, weight loading, required clearances, construction details, field connection details, and electrical characteristics and connection requirements.

C. Product Data: Submit data indicating:

1. Cooling and heating capacities.
2. Dimensions.
3. Weights.
4. Rough-in connections and connection requirements.
5. Duct connections.
6. Electrical requirements with electrical characteristics and connection requirements.
7. Controls.
8. Accessories.

D. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

E. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

F. Manufacturer's Field Reports: Submit start-up report for each unit.

G. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section: "Execution and Closeout Requirements": Closeout Procedures.

B. Project Record Documents: Record actual locations of controls installed remotely from units.

C. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

1.6 QUALITY ASSURANCE

A. Performance Requirements: Conform to minimum, Energy Efficiency Rating (EER) not less than prescribed by ASHRAE 90.1 when used in combination with compressors and evaporator coils when tested in accordance with <<ARI 210/240>> <<ARI 340/360>> <<ARI 365>>

B. Cooling Capacity: Rate in accordance with <<ARI 210/240>> <<ARI 340/360>> or <<ARI 365>>.

C. Sound Rating: Measure in accordance with ARI 270.

D. Insulation and adhesives: Meet requirements of NFPA 90A.

E. Perform Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: "Administrative Requirements": Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: "Product Requirements": Requirements for transporting, handling, storing and protecting products.

B. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.

C. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.

D. Protect units from weather and construction traffic by storing in dry, roofed location.

1.10 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Requirements for coordination.

B. Coordinate installation of condensing units with <<concrete pad>> <<roof structure>>.

C. Coordinate installation of air handling units with building structure.

1.11 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for warranties.

B. Furnish five year manufacturer’s warranty for compressors.

1.12 MAINTENANCE SERVICE

A. Division 01 Section: “Execution and Closeout Requirements”: Maintenance service.

B. Furnish service and maintenance of equipment for one year from Date of Substantial Completion. Include maintenance items as shown in manufacturer's operating and maintenance data, including filter replacements, fan belt replacement, and controls checkout and adjustments.

C. Furnish 24-hour emergency service on breakdowns and malfunctions for this maintenance period.

1.13 MAINTENANCE MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for maintenance materials.

B. Furnish one set for each unit of fan belts and filters.

PART 2 - PRODUCTS

2.1 Manufacturer

A. Unit shall be Mitsubishi

B. Comparable products as manufactured by LG or Panasonic may be submitted for approval as a comparable product.

2.2 General

A. Provide low ambient 0F operation

B. The outdoor unit shall be compatible with the five different types of indoor units (PCA - ceiling suspending, PEAD – horizontal ducted, PKA - wall mounted, PLA - ceiling cassette, PVA – ducted air handler). The connected indoor unit shall be of the same capacity as the outdoor unit. Option: Indoor unit Twinning is allowed as described in 3.02 below.

C. Models PUZ(Y)-A24NHA7 and PUZ(Y)-A36NKA7 shall have the option to connect to two, one-half capacity, indoor units (PKA, PEAD, PLA and/or PVA type), within the same confined space, to improve air distribution (total combined indoor unit capacity shall be equal to that of the outdoor unit).

D. The outdoor unit shall be equipped with an electronic control board that interfaces with the indoor unit to perform all necessary operation functions.

E. The outdoor unit shall be capable of cooling operation down to ambient temperature of 0°F for heat pump systems and -20°F (-29°C) for cooling only systems without additional low ambient controls (optional wind baffle shall be required).

F. The outdoor unit shall be able to operate with a maximum height difference of 100 feet (30 meters) between indoor and outdoor units.

G. Models PUZ(Y)-A12/18/24/30NH/KA7 shall be pre-charged for a maximum of 70 feet (21 meters) of refrigerant tubing – PUZ(Y)-A36/42NKA7 for 100 feet (30 meters).

H. The outdoor unit shall be completely factory assembled, piped, and wired. Each unit must be test run at the factory.

I. Outdoor unit sound level shall not exceed 53dba

J. Cabinet

1. The casing shall be constructed from galvanized steel plate, finished with an electrostatically applied, thermally fused acrylic or polyester powder coating for corrosion protection and have a Munsell 3Y 7.8/1.1 finish.
2. Mounting feet shall be provided and shall be welded to the base of the cabinet and be of sufficient size to afford reliable equipment mount and stability.
3. Easy access shall be afforded to all serviceable parts by means of removable panel sections.
4. The fan grill shall be of ABS plastic.
5. Cabinet mounting and construction shall be sufficient to withstand 155 MPH wind speed conditions for use in Hurricane condition areas. Mounting, base support, and other installation to meet Hurricane Code Conditions shall be by others.

K. Fan

1. Models PUZ(Y)-A12/18/24/30NH/KA7 shall be furnished with a single DC fan motor. Model PUZ(Y)-A36/42NH/KA7 shall have two (2) DC fan motors.
2. The fan blade(s) shall be of aerodynamic design for quiet operation, and the fan motor bearings shall be permanently lubricated.
3. The outdoor unit shall have horizontal discharge airflow. The fan shall be mounted in front of the coil, pulling air across it from the rear and dispelling it through the front. The fan shall be provided with a raised guard to prevent external contact with moving parts.

L. Coil

1. The L shaped condenser coil shall be of copper tubing with flat aluminum fins to reduce debris build up and allow maximum airflow. The coil shall be protected with an integral metal guard.
2. Refrigerant flow from the condenser shall be controlled by means of an electronic linear expansion valve (LEV) metering device. The LEV shall be control by a microprocessor controlled step motor.
3. All refrigerant lines between outdoor and indoor units shall be of annealed, refrigeration grade copper tubing, ACR Type, meeting ASTM B280 requirements, individually insulated in twin-tube, flexible, closed-cell, CFC-free (ozone depletion potential of zero), elastomeric material for the insulation of refrigerant pipes and tubes with thermal conductivity equal to or better than 0.27 BTU-inch/hour per Sq Ft / °F, a water vapor transmission equal to or better than 0.08 Perm-inch and superior fire ratings such that insulation will not contribute significantly to fire and up to 1” thick insulation shall have a - Flame-Spread Index of less than 25 and a Smoke-development Index of less than 50 as tested by ASTM E 84 and CAN / ULC S-102.

M. Compressor

1. The compressor for models PUZ(Y)-A12/18/24/30/36/42NH/KA7 shall be a DC twin-rotor rotary compressor with Variable Speed Inverter Drive Technology.
2. The compressor shall be driven by inverter circuit to control compressor speed. The compressor speed shall dynamically vary to match the room load for significantly increasing the efficiency of the system which shall result in significant energy savings.
3. To prevent liquid from accumulating in the compressor during the off cycle, a minimal amount of current shall be automatically, intermittently applied to the compressor motor windings to maintain sufficient heat to vaporize any refrigerant. No crankcase heater is to be used.
4. The outdoor unit shall have an accumulator and high pressure safety switch. The compressor shall be mounted to avoid the transmission of vibration.

N. Electrical

1. The electrical power of the unit shall be 208volts or 230 volts, single phase, 60 hertz. The unit shall be capable of satisfactory operation within voltage limits of 198 volts to 253 volts.
2. Power for the indoor unit shall be supplied from the outdoor unit via Mitsubishi Electric A-Control using three (3) fourteen (14/16) gauge AWG conductors plus ground wire connecting the units.
3. The outdoor unit shall be controlled by the microprocessor located in the indoor unit.
4. The control signal between the indoor unit and the outdoor unit shall be pulse signal 24 volts DC.
5. The unit shall have Pulse Amplitude Modulation circuit to utilize 98% of input power supply.

O. Operating Range

1. Unit shall be able to provide 100% cooling capacity when operating at PUZ: 0°F (-18°C)* / PUY: -20°F outdoor air temperature when a wind baffle is used.

2.3 PKA Wall Mounted Type

A. General:

1. The wall-mounted indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, and a test run switch. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory.
2. Cabinet:
    a. All casings, regardless of model size, shall have the same white finish
    b. Multi directional drain and refrigerant piping offering four (4) directions for refrigerant piping and two (2) directions for draining are required.
    c. There shall be a separate back plate which secures the unit firmly to the wall.
3. Fan:
    a. The indoor fan shall be statically and dynamically balanced to run on a single motor with permanently lubricated bearings.
    b. A manual adjustable guide vane shall be provided with the ability to change the airflow from side to side (left to right).
    c. A motorized air sweep louver shall provide an automatic change in airflow by directing the air up and down to provide uniform air distribution.
4. Filter:
    a. Return air shall be filtered by means of an easily removable, washable filter.
5. Coil:
    a. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing. The tubing shall have inner grooves for high efficiency heat exchange. All tube joints shall be brazed with phos-copper or silver alloy.
    b. The coils shall be pressure tested at the factory.
6. Electrical:
    a. The electrical power of the unit shall be 208 volts or 230 volts, 1 phase, 60 hertz. The system shall be capable of satisfactory operation within voltage limits of 198 volts to 253 volts. The power to the indoor unit shall be supplied from the outdoor unit, using the Mitsubishi Electric A-Control system. For A-Control, a three (3) conductor AWG-14/16 wire with ground shall provide power feed and bi-directional control transmission between the outdoor and indoor units.
7. Wired MA Remote Controller
    a. The Backlit Wired MA Remote Controller shall be capable of controlling up to 16 indoor units (defined as 1 group).
    b. The Backlit Wired MA Remote Controller shall only be used in same group with Wireless MA Remote Controllers (PAR-FL32MA-E / PAR-FA32MA-E) or with other

Backlit Wired MA Remote Controllers (PAR-33MAA), with up to two remote controllers per group.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Verification of existing conditions before starting work.

B. Verify concrete pad for condensing unit is ready for unit installation.

3.2 INSTALLATION - AIR HANDLING UNIT

A. Install air handling units on vibration isolators. Refer to Division 23 Section: "Vibration and Seismic Controls for HVAC Piping and Equipment.”

B. Install floor mounted units on 4” high concrete housekeeping pads. Pad to be 6” wider then the unit on all sides. Refer to Division 23 Section: Cast-In-Place Concrete.”

C. Install flexible connections between unit and inlet and discharge ductwork. Install metal bands of connectors parallel with minimum 3 inch flex between ductwork and fan while running. Refer to Division 23 Section: “HVAC Air Distribution.”

D. Install components furnished loose for field mounting.

E. Install connection to electrical power wiring in accordance with Division 26.

F. Unless otherwise indicated install condensate piping with trap and route from drain pan to nearest floor drain Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”.

G. Water-level monitoring devices: On down flow units and all other coils that do not have a secondary drain or provisions to install a secondary or auxiliary drain pan, a water-level monitoring device shall be installed inside the primary drain pan. This device shall shut off the equipment served in the event that the primary drain becomes restricted. Devices installed in the drain line shall not be permitted.

H. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

I. All wiring within the unit, where inside a control panel, shall be installed in UL approved conduit or raceway.

J. Refrigerant circuit access ports located outdoors shall be fitted with locking-type-tamper-resistance caps.

3.3 INSTALLATION - CONDENSING UNIT

A. Install condensing units on vibration isolators. Refer to Division 23 Section: "Vibration and Seismic Controls for HVAC Piping and Equipment."

B. Install units on 4" high concrete pads. Pad to be 6" wider then equipment on all sides. Refer to Division 03 Section: "Cast-In-Place Concrete."

C. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties specified in Division 23 Section: **"**Refrigerant Piping."

D. Evacuate refrigerant piping and install initial charge of refrigerant.

E. Install electrical devices furnished loose for field mounting.

F. Install control wiring between air handling unit, condensing unit, and field installed accessories.

G. Install connection to electrical power wiring in accordance with Division 26.

H. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction.

3.4 MANUFACTURER'S FIELD SERVICES

A. Division 01 Section: "Quality Requirements": Requirements for manufacturer's field services.

B. Furnish initial start-up and shutdown during first year of operation, including routine servicing and checkout.

3.5 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.6 CLEANING

A. Division 01 Section: "Execution and Closeout Requirements": Requirements for cleaning.

B. Vacuum clean coils and inside of unit cabinet.

C. Install temporary filters during construction period. Replace with permanent filters at Substantial Completion.

3.7 DEMONSTRATION

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Demonstrate air handling unit operation and maintenance.

C. Demonstrate starting, maintenance, and operation of condensing unit including low ambient temperature operation.

D. Engage a factory authorized service representative to train owner’s maintenance personnel to adjust, operate and maintain systems.

1. Train Owner’s maintenance personnel on procedures and schedules for starting up and shutting down, trouble shooting, servicing and maintaining air handling units.
2. Review data in maintenance manuals. Refer to Division 1 Section: “Contract Closeout Procedures”.
3. Schedule training with owner with at least seven (7) days advance notice.

E. Furnish services of manufacturer's technical representative for one 8 hour day to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner, provide at least 7 days’ notice to Architect/Engineer of training date.

3.8 PROTECTION OF FINISHED WORK

A. Division 01 Section**:** “Execution and Closeout Requirements” for requirements for protecting finished work.

B. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

3.9 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 81 29

VARIABLE REFRIGERANT FLOW SPLIT SYSTEM AIR-CONDITIONERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including the General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and the other Sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Variable refrigerant Flow Split System Heat Pump Units.

    a. Air cooled

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 03 Section: “Cast-In-Place Concrete.” Execution requirement for concrete foundations specified by this section.
2. Division 23 Section: “Common Motor Requirements:” Product requirements for electric motors for placement by this section.
3. Division 23 Section: “Vibration and Seismic Controls for HVAC Piping and Equipment”: Vibration isolators.
4. Division 23 Section: “Mechanical Insulation” – Insulation materials, thickness, jacketing, etc…
5. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”: Water and drain piping connections.
6. Division 23 Section: “Refrigerant Piping”: Piping and appurtenances related to system.
7. Division 23 Section: “Air Distribution Systems”: Flexible connections.
8. Division 23 Section: “Instrumentation and Control for HVAC”:
9. Division 26 Section: “Low voltage Electrical Power Conductors & Cables”: Requirements for electrical wiring and cable connections for units specified in this section.
10. Division 26 Section: **“**“Raceways and Boxes for Electrical Systems”: requirements for conduits and boxes housing electrical wiring and electrical connections specified in this section.

1.3 REFERENCES

(Unless otherwise noted, references listed below and throughout this specification section apply to “latest edition”)

A. Air-Conditioning Heating, and Refrigeration Institute:

1. AHRI 1230

B. American Society of Heating, Refrigerating and Air-Conditioning Engineers:

1. ASHRAE 62.1 – “Ventilation For Acceptable Indoor Quality”.
2. ASHRAE 15 – “Safety Standard for Refrigeration Systems”.
3. ASHRAE 52.1 - Gravimetric and Dust-Spot Procedures for Testing Air-Cleaning Devices Used in General Ventilation for Removing Particulate Matter.
4. ASHRAE 90.1 - Energy Standard for Buildings Except Low-Rise Residential Buildings.

C. ASTM International:

1. ASTM B117 – Standard Practice for Operating Salt Spray (Fog) Apparatus.

D. American National Standards Institute/Underwriting Laboratories:

1. ANSI/UL 1995 - Heating and Cooling Equipments and bear the Listed Mark.

E. ASCE – 7 – Minimum Design Loads for Buildings and other structures.

F. National Fire Protection Association:

1. NFPA 70 – National Electric Code
2. NFPA 90A – Standard for the Installation of Air Conditioning and Ventilating Systems.

I. Underwriters Laboratories Inc:

1. UL-508 - Industrial Control Equipment

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and furnished specialties and accessories. Include performance data in terms of capacities, outlet velocities, static pressures, sound power characteristics, motor requirements, and electrical characteristics.

C. Product Data: Submit data indicating:

1. Cooling and heating capacities.
2. Dimensions.
3. Weights.
4. Rough-in connections and connection requirements.
5. Duct connections.
6. Electrical requirements with electrical characteristics and connection requirements.

7. Controls.
8. Accessories.

D. If basis of design is not submitted or comparable acceptable product is not submitted, the substituted manufacturer shall provide all required design and equipment modifications for a complete and operable system that meets the performance requirements indicated in the contract documents.

1. If a substituted manufacturer's system is provided, the contractor shall be responsible for all revisions to design and construction scope required by all trades including but not limited to piping, ductwork, equipment, controls, electrical power, architectural, and structural support at no additional cost to the owner for the use of alternate manufacturer's system.
2. Contractor shall submit all required revisions caused by the use alternate manufacturer's system for review per Division 01 Section: "Submittal Procedures".

E. LEED Submittals:

1. Product Data for Credit EA 4: For refrigerants, documentation, including printed statement that refrigerants are free of HCFCs.

F. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

1. Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
2. Wiring Diagrams: For power, signal, and control wiring.

a. Installing contractor shall provide coordinated AS-BUILT control wiring drawings.
b. Control wiring drawings shall detail VRF wiring, thermostat wiring, thermostat locations, and wiring to the BAS.

G. Samples for Initial selection: For units with factory-applied color finishes.

H. Manufacturer's Installation Instructions: Submit assembly, support details, connection requirements, and include start-up instructions.

I. Manufacturer's Certificate: Certify Products meet or exceed specified requirements.

J. Manufacturer's Field Reports: Submit start-up report for each unit.

K. Operation and Maintenance Data: For split-system air conditioning units to include in emergency, operation, and maintenance manuals.

L. Warranty: Sample of special warranty.

M. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section: "Execution and Closeout Requirements": Closeout Procedures.

B. Project Record Documents: Record actual locations of controls installed remotely from units.

C. Operation and Maintenance Data: Submit manufacturer's descriptive literature, operating instructions, installation instructions, and maintenance and repair data.

1.6 QUALITY ASSURANCE

A. The units shall be tested by a Nationally Recognized Testing Laboratory (NRTL), in accordance with ANSI/UL – Heating and Cooling Equipment and bear the Listed Mark.

B. All wiring shall be in accordance with the National Electric Code (NEC).

C. The system shall be produced in an ISO 14001 facility, which are standards set by the International Standard Organization (ISO). The system shall be factory tested for safety and function.

D. Any approved manufacturer shall be rated and certified in accordance with AHRI standard 1230 and meet minimum efficiencies as scheduled.

E. The approved manufacturer shall have parts, equipment and materials stocked.

F. The approved manufacturer shall have factory trained service technicians available.

G. Mechanical equipment for wind-born debris regions shall be designed in accordance with ASCE 7-2010 and installed to resist the wind pressures on the equipment and the supports.

H. The condensing unit will be factory charged with R410A.

I. Electrical components Devices and Accessories: listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

J. ASHRAE Compliance:

1. Fabricate and label refrigeration system to comply with ASHRAE 15, “Safety Standards for Refrigeration Systems”.
2. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1 Section 4 – “Outdoor Air Quality”, Section 5 – “Systems and Equipment”, Section 6 – “Procedures” and Section 7 – “Construction and Startup”.

K. ASHRAE /IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.

L. Sound Rating: Measure in accordance with ARI 270.

M. Insulation and adhesives: Meet requirements of NFPA 90A.

N. Perform Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

1.7 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Requirements for coordination.

B. Coordinate installation of condensing units with <<concrete pad>> <<roof structure>>.

C. Coordinate installation of air handling units with building structure.

1.8 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Special Warranty: Manufacturer’s standard form in which manufacturer agrees to repair or replace components of spilt-system air-conditioning units that fall in materials or workmanship within specified warranty period.

1. Warranty Period:

a. For Compressor: Five years from date of Substantial Completion.
b. For Parts: Two years from date of Substantial Completion.
c. For Labor: Two years from date of Substantial Completion.

1.9 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Filters: One set of each air-handling unit.
2. Gaskets: Sets for each access door.
3. Fan Belts: One sets for each air-handling unit fan.

1.10 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Product storage and handling requirements.

B. Accept units and components on site in factory protective containers, with factory shipping skids and lifting lugs. Inspect for damage.

C. Comply with manufacturer's installation instruction for rigging, unloading and transporting units.

D. Protect units from weather and construction traffic by storing in dry, roofed location.

1.12 INSTALLATION QUALIFICATIONS

A. The system shall be installed by a factory trained contractor/dealer. The bidders shall be required to submit training certification proof with bid documents. The mechanical contractor's installation price shall be based on the systems installation requirements. The mechanical contractor bids with complete knowledge of the HVAC system requirements. Untrained contractors who wish to bid this project must contact the representative for the manufacturer shown on the drawings to arrange training prior to bid day.

B. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

C. Installer: Company specializing in performing Work of this section with minimum three years' experience.

1.13 MAINTENANCE MATERIALS

A. Division 01 Section: "Execution and Closeout Requirements": Requirements for maintenance materials.

1. Furnish one set for each unit of fan belts and filters.
2. Furnish Baltimore County any specialized tools, equipment or software that owner will need to operate, adjust, maintain, and diagnose the equipment.

1.14 MAINTENANCE SERVICE

A. Division 01 Section: "Execution and Closeout Requirements": Maintenance service.

B. Furnish service and maintenance of equipment for one year from Date of Substantial Completion. Include maintenance items as shown in manufacturer's operating and maintenance data, including filter replacements, fan belt replacement, and controls checkout and adjustments.

C. Furnish 24-hour emergency service on breakdowns and malfunctions for this maintenance period.

1.15 OPERATING RANGE

A. The operating range in cooling shall be <<-4°F DB ~ 122°F DB>>.

B. The operating range in heating shall be <<0°F DB ~ 77°F DB/-4°F WB- 60°F WB>>.

PART 2 - PRODUCTS

2.1 General

A. Manufacturer

1. Unit shall be Mitsubishi

2. Comparable products as manufactured by LG or York may be submitted for approval as a comparable product.

2.2 R2-SERIES HIGH EFFICIENCY (HEAT RECOVERY), AIR COOLED OUTDOOR UNITS

A. Outdoor Unit

1. The outdoor unit modules shall be air-cooled, direct expansion (DX), multi-zone units used specifically with VRF components described in this section and Part 5 (Controls). The outdoor unit modules shall be equipped with a single compressor which is inverter-driven and multiple circuit boards—all of which must be manufactured by the branded VRF manufacturer. Each outdoor unit module shall be completely factory assembled, piped and wired and run tested at the factory.
2. Outdoor unit systems may be comprised of multiple modules with differing capacity if a brand other than basis of design is proposed. All units requiring a factory supplied twinning kits shall be piped together in the field, without the need for equalizing line(s). If an alternate manufacturer is selected, any additional material, cost, and labor to install additional lines shall be incurred by the contractor. Contractor responsible for ensuring alternative brand compatibility in terms of availability, physical dimensions, weight, electrical requirements, etc.
3. Outdoor unit shall have a sound rating no higher than 68 dB(A) individually or 70 dB(A) twinned. Units shall have a sound rating no higher than 52 dB(A) individually or 55 dB(A) twinned while in night mode operation. Units shall have 5 levels sound adjustment via dip switch selectable fan speed settings. If an alternate manufacturer is selected, any additional material, cost, and labor to meet published sound levels shall be incurred by the contractor.
4. Refrigerant lines from the outdoor unit to the indoor units shall be insulated in accordance with the installation manual.
5. The outdoor unit shall have the capability of installing the main refrigerant piping through the bottom of the unit.
6. The outdoor unit shall have an accumulator with refrigerant level sensors and controls. Units shall actively control liquid level in the accumulator via Linear Expansion Valves (LEV) from the heat exchanger.
7. The outdoor unit shall have a high pressure safety switch, over-current protection, crankcase heater and DC bus protection.
8. VRF system shall meet performance requirements per schedule and be within piping limitations & acceptable ambient temperature ranges as described in respective manufacturers' published product catalogs. Non-published product capabilities or performance data are not acceptable.
9. The outdoor unit shall be capable of operating in heating mode down to -25F ambient temperatures or cooling mode down to 23F ambient temperatures, without additional low ambient controls. If an alternate manufacturer is selected, any additional material, cost, and labor to meet low ambient operating condition and performance shall be incurred by the contractor.
10. The outdoor unit shall have a high efficiency oil separator plus additional logic controls to ensure adequate oil volume in the compressor is maintained. Oil return sequences must be enabled only during extended periods of reduced refrigerant flow to ensure no disruption to correct refrigerant flow to individual zones during peak loads. Systems which might engage oil return sequence based on hours of operation risk oil return during inopportune periods are not allowed. Systems which rely on sensors (which may fail) to engage oil return sequence are not allowed.
11. Unit must defrost all circuits simultaneously in order to resume full heating more quickly during extreme low ambient temperatures (below 23F). Partial defrost, also known as hot

gas defrost which allows reduced heating output during defrost, is permissible only when ambient temperature is above 23F.

12. While in hot gas defrost the system shall slow the indoor unit fan speed down to maintain a high discharge air temperature, systems that keep fan running in same state shall not be allowed as they provide an uncomfortable draft to the indoor zone due to lower discharge air temperatures.
13. In reverse defrost all refrigerant shall be bypassed in the main branch controller and shall not be sent out to the indoor units, systems that flow refrigerant through indoor units during reverse defrost shall not be allowed.
14. Unit Cabinet:

    a. The casing(s) shall be fabricated of galvanized steel, bonderized and finished.
    b. Panels on the outdoor unit shall be scratch free at system startup. If a scratch occurs the salt spray protection is compromised and the panel should be replaced immediately.
15. Fan:

    a. Each outdoor unit module shall be furnished with direct drive, variable speed propeller type fan(s) only. Fans shall be factory set for operation at 0 in. WG. external static pressure, but capable of normal operation with a maximum of 0.32 in. WG. external static pressure via dipswitch.
    b. All fan motors shall have inherent protection, have permanently lubricated bearings, and be completely variable speed.
    c. All fans shall be provided with a raised guard to prevent contact with moving parts.
16. Refrigerant and Refrigerant Piping:

    a. R410A refrigerant shall be required for systems.
    b. Polyolester (POE) oil—widely available and used in conventional domestic systems—shall be required. Prior to bidding, manufacturers using alternate oil types shall submit material safety data sheets (MSDS) and comparison of hygroscopic properties for alternate oil with list of local suppliers stocking alternate oil for approval at least two weeks prior to bidding.
    c. Refrigerant piping shall be phosphorus deoxidized copper (copper and copper alloy seamless pipes) of sufficient radial thickness as defined by the VRF equipment manufacturer and installed in accordance with manufacturer recommendations.
    d. All refrigerant piping must be insulated with ½” closed cell, CFC-free foam insulation with flame-Spread Index of less than 25 and a smoke-development Index of less than 50 as tested by ASTM E 84 and CAN / ULC S-102. R value of insulation must be at least 3.
    e. Refrigerant line sizing shall be in accordance with manufacturer specifications. Future changes to indoor unit styles or sizes must be possible without resizing/replacing refrigerant piping to any other branch devices or indoor units.
17. Coil:

    a. Outdoor Coil shall be constructed to provide equal airflow to all coil face surface are by means of a 4-sided coil
    b. Outdoor Coil shall be elevated at least 12” from the base on the unit to protect coil from freezing and snow build up in cold climates. Manufacturer’s in which their coil extends to within a few inches from the bottom of their cabinet frame shall provide an additional 12” of height to their stand or support structure to provide equal protection from elements as Mitsubishi Electric basis of design. Any additional support costs, equipment fencing, and tie downs required to meet this additional height shall be responsibility of Mechanical Contractor to provide.

c. The outdoor heat exchanger shall be of zinc coated aluminum construction with turbulating flat tube construction. The coil fins shall have a factory applied corrosion resistant finish. Uncoated aluminum coils/fins are not allowed.
d. The coil shall be protected with an integral metal guard.
e. Refrigerant flow from the outdoor unit shall be controlled by means of an inverter driven compressor.
f. Unit shall have prewired plugs for optional panel heaters in order to prevent any residual ice buildup from defrost. Panel heaters are recommended for operating environments where the ambient temperature is expected to stay below -1F for 72 hours.
g. Condenser coil shall have active hot gas circuit direct from compressor discharge on lowest coil face area to shed defrost condensate away from coil and protect from Ice formation after returning to standard heat pump operation. While in Heat Pump operation this lower section of the Outdoor Evaporator coil shall continually run hot gas from the compressor discharge to protect the coil from ice buildup and coil rupture. Manufacturers who do not have an active hot gas circuit in the lower section of the Outdoor coil to protect coil from freezing shall not be allowed to bid on project in markets where the outdoor unit will see temperatures below freezing.

18. Compressor:

a. Each outdoor unit module shall be equipped with only inverter driven scroll hermetic compressors. Non inverter-driven compressors, which may cause inrush current (demand charges) and require larger generators for temporary power shall not be allowed.
b. Each compressor shall be equipped with a multi-port discharge mechanism to eliminate over compression at part load. Manufacturer's that rely on a single compressor discharge port and provide no means of eliminating over compression and energy waste at part load shall not be allowed.
c. Crankcase heat shall be provided via induction-type heater utilizing eddy currents from motor windings. Energy-wasting "belly-band" type crankcase heaters are not allowed. Manufacturers that utilize belly-band crankcase heaters will be considered as alternate only.
d. Compressor shall have an inverter to modulate capacity. The capacity for each compressor shall be variable with a minimum turndown not greater than 15%.
e. The compressor shall be equipped with an internal thermal overload.
f. Field-installed oil equalization lines between modules are not allowed. Prior to bidding, manufacturers requiring equalization must submit oil line sizing calculations specific to each system and module placement for this project.
g. Manufacturers that utilize a compressor sump oil sensor to equalize compressor oil volume within a single module shall not be allowed unless they actively shut down the system to protect from compressor failure.

19. Controls:

a. Outdoor unit shall include Variable Evaporator Temperature or comparable method of varying system evaporator (refrigerant) temperature in order to reduce compression ratio and power consumption during light load or mild ambient temperatures. Multiple evaporator refrigerant temperature settings shall be required in order to optimize efficiency within required system-specific performance and installation constraints. System shall reduce compression ratio only when/if all indoor units are within 1.8F of setpoint; reducing compression ratio based solely on ambient temperature risks discomfort and is not allowed. Variable Evaporator Temperature or comparable method shall incorporate override or disable capability based on external signal to allow for space humidity control or load demand.The unit shall be an integral part of the system & control network described in Part 5

(Controls) and react to heating/cooling demand as communicated from connected indoor units over the control circuit. Required field-installed control voltage transformers and/or signal boosters shall be provided by the manufacturer.

b. Each outdoor unit module shall have the capability of 4 levels of demand control based on external input.

20. Electrical:

a. The outdoor unit electrical power shall be 208/230 volts, 3-phase, 60 hertz or 460 volts, 3-phase, 60 hertz per equipment schedule.
b. The outdoor unit shall be controlled by integral microprocessors.
c. The control circuit between the indoor units, BC Controller and the outdoor unit shall be 24VDC completed using a 2-conductor, twisted pair shielded cable to provide total integration of the system.

B. Branch Circuit Controllers as required for simultaneous heat/cool systems

1. BC (Branch Circuit) Controllers (or comparable branch devices) shall include multiple branches to allow simultaneous heating and cooling by allowing either hot gas refrigerant to flow to indoor unit(s) for heating or subcooled liquid refrigerant to flow to indoor unit(s) for cooling. Refrigerant used for cooling must always be subcooled for optimal indoor unit LEV performance; alternate branch devices which do not include controlled refrigerant subcooling risk bubbles in liquid supplied to indoor unit LEVs and are not allowed.
2. BC Controllers (or comparable branch devices) shall be equipped with a circuit board that interfaces to the controls system and shall perform all functions necessary for operation. The unit shall have a galvanized steel finish and be completely factory assembled, piped and wired. Each unit shall be run tested at the factory. This unit shall be mounted indoors, with access and service clearance provided for each controller. BC Controllers (or comparable branch devices) shall be suitable for use in plenums in accordance with UL1995 ed 4.
3. BC Unit Cabinet:

a. The casing shall be fabricated of galvanized steel.
b. Each cabinet shall house a liquid-gas separator and multiple refrigeration control valves.
c. The unit shall house two tube-in-tube heat exchangers.

4. Refrigerant Piping (specifications in addition to those for outdoor unit):

a. All refrigerant pipe connections shall be brazed.
b. Future changes to indoor unit quantities or sizes served by BC Controller or comparable branch device must be possible with no piping changes except between the branch device and indoor unit(s) changing. Systems which might require future piping changes between branch device and outdoor unit—if changes to indoor unit quantities or sizes are made—are not considered equal and are not allowed.

5. Refrigerant Valves:

a. Service shut-off valves shall be field-provided/installed for each branch to allow service to any indoor unit without field interruption to overall system operation.

6. Condensate Management:

a. BC Controller (or comparable branch device) must have integral resin drain pan or insulate refrigeration components with removable insulation that allows easy access for future service needs. Cabinets filled with solid foam insulation do not allow for future service and are not allowed.

7. Electrical:

   a. The unit electrical power shall be 208/230 volts, 1 phase, 60 Hertz. The unit shall be capable of satisfactory operation within voltage limits of 187-228 (208V/60Hz) or 207-253 (230/60Hz).
   b. The BC Controller shall be controlled by integral microprocessors
   c. The control circuit between the indoor units and outdoor units shall be 24VDC completed using a 2-conductor, twisted pair shielded cable to provide total integration of the system.

2.3 INDOOR UNITS

A. WALL MOUNTED INDOOR UNIT

1. The wall-mounted indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, and a test run switch. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory.
2. Unit Cabinet:

   a. All casings, regardless of model size, shall have the same white finish
   b. Multi directional drain and refrigerant piping offering four (4) directions for refrigerant piping and two (2) directions for draining are required.
   c. There shall be a separate back plate which secures the unit firmly to the wall.
3. Fan:

   a. The indoor fan shall be statically and dynamically balanced to run on a single motor with permanently lubricated bearings.
   b. A manual adjustable guide vane shall be provided with the ability to change the airflow from side to side (left to right).
   c. A motorized air sweep louver shall provide an automatic change in airflow by directing the air up and down to provide uniform air distribution.
4. Filter:

   a. Washable
5. Coil:

   a. Basis of design indoor units include factory-installed LEV/EEV. Alternative brands which require field-installed, accessory LEV or EEV kits are permissible only with written Engineer and Architect approval for the location of kits being submitted two weeks prior to bid date. EEV kits mounted in cavities inside fire-rated interior walls shall be mounted inside three hour fire rated enclosures with access panels supplied by the manufacturer. Enclosure type and placement require prior approval.
   b. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing. The tubing shall have inner grooves for high efficiency heat exchange. All tube joints shall be brazed with phos-copper or silver alloy.
   c. The coils shall be pressure tested at the factory.
6. Electrical

   a. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.

b. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz)

7. Controls:

a. The unit shall include an IR receiver for wireless remote control flexibility
b. Indoor unit shall compensate for the higher temperature sensed by the return air sensor compared to the temperature at level of the occupant when in HEAT mode. Disabling of compensation shall be possible for individual units to accommodate instances when compensation is not required.
c. Control board shall include contacts for control of external heat source. External heat may be energized as second stage with 1.8°F – 9.0°F adjustable deadband from set point.
d. Indoor unit shall include no less than four (4) digital inputs capable of being used for customizable control strategies.
e. Indoor unit shall include no less than three (3) digital outputs capable of being used for customizable control strategies.

B. 4-WAY CEILING-RECESSED CASSETTE WITH GRILLE INDOOR UNIT

1. The ceiling-recessed indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit shall have a self-diagnostic function, 3-minute time delay mechanism, an auto restart function, an emergency operation function, a test run switch, and the ability to adjust airflow patterns for different ceiling heights. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory. The unit shall be suitable for use in plenums in accordance with UL1995 ed 4.
2. Unit Cabinet:

a. The cabinet panel shall have provisions for a field installed filtered outside air intake. Branch ducting shall be allowed from cabinet.
b. Four-way grille shall be fixed to bottom of cabinet allowing two, three or four-way blow.
c. The grille vane angles shall be individually adjustable from a wired remote controller to customize the airflow pattern for the conditioned space

3. Fan:

a. The indoor fan shall be an assembly with a statically and dynamically balanced turbo fan direct driven by a single motor with permanently lubricated bearings.
b. The indoor unit shall include an AUTO fan setting capable of maximizing energy efficiency by adjusting the fan speed based on the difference between controller set-point and space temperature. The indoor fan shall be capable of five (5) speed settings, Low, Mid1, Mid2, High and Auto.
c. The indoor unit shall have an adjustable air outlet system offering 4-way airflow, 3-way airflow, or 2-way airflow.
d. The indoor unit fan logic must include multiple setting that can be changed to provide optimum airflow based on ceiling height and number of outlets used.
e. The indoor unit vanes shall have 5 fixed positions and a swing feature that shall be capable of automatically swinging the vanes up and down for uniform air distribution.
f. The vanes shall have an Auto-Wave selectable option in the heating mode that shall randomly cycle the vanes up and down to evenly heat the space.
g. Grille shall include a factory-installed “3D i-see” sensor, or equal, to work in conjunction with indoor unit control sequence to prevent unnecessary cooling or heating in unoccupied areas of the zone without decreasing comfort levels. Sensor

must detect occupancy (not simply motion) and location of occupants by measuring size & temperature of objects within a 39' detecting diameter (based on 8.8ft mounting height) with 1,856 or more measuring points.

4. Filter:

   a. Washable

5. Coil:

   a. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing. The tubing shall have inner grooves for high efficiency heat exchange. All tube joints shall be brazed with phos-copper or silver alloy.
   b. The coils shall be pressure tested at the factory.
   c. The unit shall be provided with an integral condensate lift mechanism that will be able to raise drain water 33 inches above the condensate pan.

6. Electrical:

   a. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.
   b. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

7. Controls:

   a. Indoor unit shall compensate for the higher temperature sensed by the return air sensor compared to the temperature at level of the occupant when in HEAT mode. Disabling of compensation shall be possible for individual units to accommodate instances when compensation is not required.
   b. Control board shall include contacts for control of external heat source. External heat may be energized as second stage with 1.8°F – 9.0°F adjustable deadband from set point.
   c. Indoor unit shall include no less than four (4) digital inputs capable of being used for customizable control strategies.
   d. Indoor unit shall include no less than three (3) digital outputs capable of being used for customizable control strategies.
   e. A factory-installed drain pan sensor shall provide protection against drain pan overflow by sensing a high condensate level in the drain pan. Should this occur the control shuts down the indoor unit before an overflow can occur. A thermistor error code will be produced should the sensor activate indicating a fault which must be resolved before the unit re-starts.
   f. Control board shall include contacts for control of no less than two stages of external heat. The first stage of external heat may be energized when the space temperature is 2.7°F from set point for between 10-25 minutes (user adjustable). The second stage of external heat may be energized when the first stage has been active for no less than 5 minutes and the space temperature has not risen by more than 0.9°F.
   g. Indoor unit shall include no less than four (4) digital inputs capable of being used for customizable control strategies.
   h. Indoor unit shall include no less than three (3) digital outputs capable of being used for customizable control strategies.

C. MEDIUM STATIC CEILING-CONCEALED DUCTED INDOOR UNIT

1. General:

   a. The ceiling-concealed ducted indoor unit shall be factory assembled, wired and run tested. Contained within the unit shall be all factory wiring, piping, electronic modulating linear expansion device, control circuit board and fan motor. The unit

shall have a self-diagnostic function, 3-minute time delay mechanism, and an auto restart function. Indoor unit and refrigerant pipes shall be charged with dehydrated air before shipment from the factory. The unit shall be suitable for use in plenums in accordance with UL1995 ed 4.

2. Unit Cabinet

   a. The unit shall be ceiling-concealed, ducted – with a 2-position, field adjustable return and a fixed horizontal discharge supply.
   b. The cabinet panel shall have provisions for a field installed filtered outside air intake.

3. Fan

   a. Indoor unit shall feature multiple external static pressure settings ranging from 0.14 to 0.60 in. WG.
   b. The indoor unit shall be an assembly with statically and dynamically balanced Sirocco fan(s) direct driven by a single motor with permanently lubricated bearings.
   c. The indoor fan shall consist of three (3) speeds, High, Mid, and Low plus the Auto-Fan function

4. Filter:

   a. Return air shall be filtered by means of a standard factory installed return air filter.
   b. Optional return filter box (rear or bottom placement) with high-efficiency filter as noted on equipment schedule.
   c. Optional Filter Frame and Filter:
      1) Filter frame shall be constructed of 20 gauge G-60 galvanized steel. Knurled thumb screws on access door allow filter replacement. Foam gasket provides air-tight connection to indoor unit and access door. Filter frame shall be configurable for rear or bottom return.
      2) Filter shall be rated MERV 13 when tested in accordance with ANSI/ASHRAE 52.2 Standard Rated Class 2 under U.L. Standard 900.

5. Coil:

   a. The indoor coil shall be of nonferrous construction with smooth plate fins on copper tubing. The tubing shall have inner grooves for high efficiency heat exchange. All tube joints shall be brazed with phos-copper or silver alloy.
   b. The coils shall be pressure tested at the factory.
   c. Coil shall be provided with a sloped drain pan. Units without sloped drain pans which must be installed cockeyed to ensure proper drainage are not allowed.
   d. The unit shall be provided with an integral condensate lift mechanism able to raise drain water 27 inches above the condensate pan.

6. Electrical:

   a. The unit electrical power shall be 208/230 volts, 1-phase, 60 hertz.
   b. The system shall be capable of satisfactory operation within voltage limits of 187-228 volts (208V/60Hz) or 207-253 volts (230V/60Hz).

7. Controls:

   a. Indoor unit shall compensate for the higher temperature sensed by the return air sensor compared to the temperature at level of the occupant when in HEAT mode. Disabling of compensation shall be possible for individual units to accommodate instances when compensation is not required.
   b. Control board shall include contacts for control of external heat source. External heat may be energized as second stage with 1.8°F – 9.0°F adjustable deadband from set point.

c. Indoor unit shall include no less than four (4) digital inputs capable of being used for customizable control strategies.
d. Indoor unit shall include no less than three (3) digital outputs capable of being used for customizable control strategies.

D. Controls System

1. The control system shall consist of a low voltage communication network and a web-based interface. The controls system shall gather data and generate web pages accessible through a conventional web browser on each PC connected to the network. Operators shall be able to perform all normal operator functions through the web browser interface.
2. Furnish energy conservation features such as optimal start, request-based logic, and demand level adjustment of overall system capacity as specified in the sequence.
3. System shall be capable of email generation for remote alarm annunciation.
4. Electrical Characteristics:

a. Controller power and communications shall be via a common non-polar communications bus and shall operate at 30VDC.
b. Wiring:
1) Control wiring shall be installed in a daisy chain configuration from indoor unit to indoor unit, to the BC controller (main and subs, if applicable) and to the outdoor unit. Control wiring to remote controllers shall be run from the indoor unit terminal block to the controller associated with that unit.
2) Control wiring for centralized controllers shall be installed in a daisy chain configuration from outdoor unit to outdoor unit, to the system controllers (centralized controllers and/or integrated web based interface), to the power supply.
3) Wiring shall be 2-conductor (16 AWG), twisted, stranded, shielded wire as defined by the Diamond System Builder output.
4) Network wiring shall be CAT-5 with RJ-45 connection.

5. CITY MULTI CONTROLS NETWORK

a. The CITY MULTI Controls Network (CMCN) consists of remote controllers, centralized controllers, and/or integrated web based interface communicating over a high-speed communication bus. The CITY MULTI Controls Network shall support operation monitoring, scheduling, occupancy, error email distribution, personal web browsers, tenant billing, online maintenance support, and integration with Building Management Systems (BMS) using either LonWorks® or BACnet® interfaces. The below figure illustrates a sample CMCN System Configuration.

6. CENTRALIZED CONTROLLER (WEB-ENABLED)

a. Master Centralized Controller:
1) The Master Centralized Controller shall be capable of controlling a maximum of two hundred (200) indoor units across multiple CITY MULTI outdoor units with the use of three expansion controllers. The Master Centralized Controller shall be approximately 11-5/32” x 7-55/64” x 2-17/32” in size and shall be powered with an integrated 100-240 VAC power supply. The Master Centralized Controller shall support system configuration, daily/weekly scheduling, monitoring of operation status, night setback settings, free contact interlock configuration and malfunction monitoring. When being used alone without the expansion controllers, the Master Centralized Controller shall

have five basic operation controls which can be applied to an individual indoor unit, a collection of indoor units (up to 50 indoor units), or all indoor units (collective batch operation). This basic set of operation controls for the Master Centralized Controller shall include on/off, operation mode selection (cool, heat, auto (R2/WR2-Series only), dry, setback (R2/WR2-Series only) and fan), temperature setting, fan speed setting, and airflow direction setting. Since the master provides centralized control it shall be able to enable or disable operation of local remote controllers. In terms of scheduling, the Master Centralized Controller shall allow the user to define both daily and weekly schedules (up to 24 scheduled events per day) with operations consisting of ON/OFF, mode selection, temperature setting, air flow (vane) direction, fan speed, and permit/prohibit of remote controllers.

2) All Master Centralized Controllers shall be equipped with two RJ-45 Ethernet ports to support interconnection with a network PC via a closed/direct Local Area Network (LAN) or to a network switch for IP communication to up to three expansion controllers for display of up to two hundred (200) indoor units on the main master centralized controller interface.
3) The Master Centralized Controller shall be capable of performing initial settings via the high-resolution, backlit, color touch panel on the controller or via a PC browser using the initial settings.
4) Standard software functions shall be available so that the building manager can securely log into each master centralized controller via the PC's web browser to support operation monitoring, scheduling, error email, interlocking and online maintenance diagnostics. Additional optional software functions of personal browser for PCs and MACs and Energy shall be available but are not included. The Energy Apportionment function shall require a LIC-Charge software license
5) Expansion Controller:
6) The Expansion Controller shall serve as a standalone centralized controller or as an expansion module to the Master Centralized Controller for the purpose of adding up to 50 indoor units to either the main touch screen interface of the master centralized controller. Up to three (3) expansion controllers can be connected to the master via a local IP network (and their IP addresses assigned on the master) to the master to allow for up to two hundred (200) indoor units to be monitored and controlled from the master interface.
7) The expansion controllers have all of the same capabilities to monitor and control their associated indoor units as the features specified above. Even when connected to the master and configured to display their units on the main controller, the individual indoor units connected to the expansion can still be monitored and controlled from the interface of the expansion. The last command entered will take precedence, whether at the wall controller, the expansion or the master Centralized Controller.
8) Non Touch Screen, Networked Centralized Controller:
9) The Non Touch Screen, Networked Centralized Controller shall be capable of controlling a maximum of 50 indoor units across multiple CITY MULTI outdoor units. The controller shall be approximately 8-1/2"x10" in size and shall be powered by its internal power supply. The controller shall support system configuration, daily/weekly scheduling, monitoring of operation status, free contact interlock configuration and malfunction monitoring. The

controller shall have five basic operation controls which can be applied to an individual indoor unit, a group of indoor units (up to 50 indoor units), or all indoor units (collective batch operation). This basic set of operation controls for the controller shall include on/off, operation mode selection (cool, heat, auto (R2/WR2-Series only), dry, temperature setting, fan speed setting, and airflow direction setting. Since the controller provides centralized control it shall be able to enable or disable operation of local remote controllers. In terms of scheduling, the controller shall allow the user to define both daily and weekly schedules with operations consisting of ON/OFF, mode selection, temperature setting, air flow (vane) direction, fan speed, and permit/prohibit of remote controllers.

10) All Non Touch Screen, Networked Centralized Controller shall be equipped with two RJ-45 Ethernet port to support interconnection with a network PC and BACnet/IP communication via a closed/direct Local Area Network (LAN). The controller shall be capable of performing initial settings online via a PC using the controller's initial setting browser or online/offline with the Initial Setting Tool.

11) Standard software functions shall be available so that the building manager can securely log into each controller via the PC's web browser to support operation monitoring, scheduling, error email, interlocking and online maintenance diagnostics. Standard software functions shall not expire. Additional optional software functions of personal browser for PCs and MACs and Energy Allocation shall be available. The Energy Allocation function shall require Master Centralized Controller Energy Allocation Integrated System in conjunction with Non Touch Screen, Networked Centralized Controller.

b. GRAPHICAL USER INTERFACE

1) The Graphical User Interface (Integrated Centralized Control Web) shall require a field supplied PC or Tablet.

2) Integrated Centralized Control Web System (ICCW)

a) ICCW interface shall enable the user to control multiple networked central controllers and shall provide additional functions such as energy apportionment from a single network PC configured with the Charge Calculation Tool. The ICCW shall be capable of controlling up to forty networked Centralized Controllers with a maximum of 2,000 indoor units across multiple CITY MULTI outdoor units. The ICCW shall be required if the user wants to simultaneously control more than 1 Centralized Controllers from a single PC or tablet using a single web browser session. Licensing per function, per Centralized Controller shall be required for the ICCW. Optional software features shall be available through the ICCW including energy apportionment and personalized web. These optional software features shall require the ICCW, advance purchase from the customer, and licensing from ICCW.

c. ENERGY APPOINTMENT METHOD FOR CITY MULTI CENTRALIZED CONTROLLERS

1) For centralized systems serving multiple tenants for which one-to-one electricity metering is not possible, an apportioned electricity billing function that attributes just the electrical energy consumed by each individual tenant's

air conditioner is required. The Energy Apportionment function takes the information on the electrical energy usage gathered from Watt Hour Meters (WHM) connected to dedicated breaker panels serving the system's outdoor units and synthesizes it with the information on the operating status of the indoor units that is collected by the CITY MULTI centralized controller(s).

2) Watt Hour Meters Requirements:
   a) The Watt Hour Meters (WHMs) to be used to read the electrical energy consumption of the outdoor units must be capable of a pulse output, which would be configured based on the current rating of the units. The associated current transformers/ transducers (CTs) must also be sized based on the current rating of either the individual outdoor units or the dedicated air conditioning electrical panels they are to be reading. The proper quantity of meters for a particular sized system must be selected in order to ensure sufficient resolution and hysteresis in the unit pulse output of the meters so as to ascribe an acceptable level of accuracy to the apportionment of energy usage for each tenant's system. The system is designed to work with any WHM capable of a pulse output that meets ANSI C12.20 class 0.2% or 0.5% accuracy standards.
3) Connection:
   a) The WHMs are to be physically connected to the integrated pulse input module or an external Mitsubishi Electric PI Controller if such an input is not available or if there is a wiring length limitation or installation hardship. The cable type of the interconnecting wiring shall be according to the wiring specifications of the WHM manufacturer.

d. CITY MULTI Centralized Controller Requirements
1) Each centralized controller to which units are assigned that require the energy apportionment function must have the "LIC-Charge" software license purchased and properly unlocked in order to enable the operating status of the indoor units to be passed to the energy apportionment tool. The procedure for licensing the centralized controllers with this function and the necessary forms can be found on Mitsubishi Electric's technical documentation repository, mylinkdrive.com. Purchase Order information for the licenses will be required at the time of submission of the licensing request forms.
2) Dedicated master centralized controller for apportionment (no MNET connection)
3) A dedicated master centralized controller, for which the LIC-Charge license is purchased and the energy apportionment function enabled, must be provided in order to serve as the portal for exporting metering device and energy management data to a USB drive or to a PC via LAN connection. This means that by virtue of selecting this master centralized controller to serve this function, the MNET capability of this particular centralized controller will be disabled. All indoor units must be physically wired via MNET to other expansion centralized controllers, which must be physically wired via LAN with Static IP addresses and a network hub or switch to the master apportionment controller.
4) PC for collecting charge calculation results
5) A networked PC, which does not necessarily have to be dedicated to the task of collecting energy apportionment data, can be provided and loaded with the Charge Calculation Tool software for exporting data necessary to generate

billing documentation to be performed by a third party. The system requirements of the PC are as follows:

e. CMCN: System Integration
   1) BACnet® Integration:
      a) The Mitsubishi Electric Cooling & Heating BACnet® hardware, which is built into all networked central controllers, shall be compliant with BACnet® Protocol (ANSI/ASHRAE 135-2010) and be Certified by the (BTL) BACnet® Testing Laboratories. The BACnet® interface shall support BACnet Broadcast Management (BBMD). The BACnet® interface shall support a maximum of 50 indoor units. Operation and monitoring points include, but are not limited to, on/off, operation mode, fan speed, prohibit remote controller, filter sign reset, alarm state, error code, and error address.
   2) Licenses:
      a) LIC-BACnet Master: Master Controller license for Master Centralized Controller and Non Touch Screen, Networked Centralized Controller
      b) LIC-BACnet Expansion: Expansion Controller license for Expansion Controller and Non Touch Screen, Networked Centralized Controller
      c) LIC-BACnet Specifications:
   3) Control up to 50 groups
   4) 1 to 16 indoor units can be collectively controlled in a group
   5) Supports dual set point functionality (connected model dependant)
   6) BTL Compliant
   7) BACnet communication specifications are based on ANSI/ASHRAE Standards 135-2010
   8) PC Requirements:
      a) CPU: 1GHz or higher
      b) Memory: 1GB or more
      c) HDD Space: 100 MB or more
      d) Screen Resolution: 1024 x 768 or higher
      e) OS: Microsoft Windows 7 32-bit/64-bit, Microsoft 8.1 32-bit/64-bit. Not compatible with Windows Vista
      f) Execution Environment: Microsoft .NET Framework 4.5 or later
      g) Others: Pointing device such as a mouse, internet connection (required when installing a .NET Framework)

2.4 ISOLATION VALVES

A. Service shut-off valves shall be field-provided/installed for each branch to allow service to any indoor unit without field interruption to overall system operation.

2.5 SOLENOID VALVES

A. Solenoid valves shall be field-provided or factory installed at each branch selector box (BS-Box) and at each condensing unit.

B. Refer to specification section 23 23 00, Refrigerant piping, for solenoid valve requirements

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of units.

B. Examine roughing-in for refrigerant piping systems to verify actual locations of piping connections before equipment installation.

C. Examine walls, floors, and roofs for suitable conditions where condensing units will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

E. Verify concrete pad for condensing unit is ready for unit installation.

3.2 INSTALLATION

A. Install units level and plumb, firmly anchored in locations indicated; maintain manufacturer's recommended clearances.

B. Install roof-mounting units on equipment supports specified in Division 07.

C. Vibration Isolation: Mount condensing units on Vibration isolation devices. Installation requirements are specified in Division 23 Section: "Vibration and Seismic Controls for HVAC Piping and Equipment.

D. Maintain manufacturer's recommended clearances for service and maintenance.

E. Install floor mounted units on 4" high concrete housekeeping pads. Pad to be 6" wider then the unit on all sides. Refer to Division 23 Section: Cast-In-Place Concrete."

F. Install flexible connections between unit and inlet and discharge ductwork. Install metal bands of connectors parallel with minimum 3 inch flex between ductwork and fan while running. Refer to Division 23 Section: "HVAC Air Distribution."

G. Install components furnished loose for field mounting.

H. Install connection to electrical power wiring in accordance with Division 26.

I. Unless otherwise indicated install condensate piping with trap and route from drain pan to nearest floor drain Refer to Division 23 Section: "Pipes and Tubes for HVAC Piping and Equipment".

J. Water-level monitoring devices: On down flow units and all other coils that do not have a secondary drain or provisions to install a secondary or auxiliary drain pan, a water-level monitoring device shall be installed inside the primary drain pan. This device shall shut off the equipment served in the event that the primary drain becomes restricted. Devices installed in the drain line shall not be permitted.

K. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction requirements.

L. All wiring within the unit, where inside a control panel, shall be installed in UL approved conduit or raceway.

M. Refrigerant circuit access ports located outdoors shall be fitted with locking-type-tamper-resistance caps.

N. Install refrigerant piping from unit to condensing unit. Install refrigerant specialties specified in Division 23 Section: "Refrigerant Piping."

O. Evacuate refrigerant piping and install initial charge of refrigerant.

P. Install control wiring between air handling unit, condensing unit, and field installed accessories.

Q. Install Work in accordance with all applicable codes, standards, and local authorities having jurisdiction.

3.3 CONNECTIONS

A. Piping installation requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

B. Install piping adjacent to units to allow service and maintenance.

C. Connect refrigerant piping to air-cooled units; maintain required access to unit. Install furnished field-mounted accessories. Refrigerant piping and specialties are specified in Division 23 Section: "Refrigerant Piping".

D. Ground equipment according to Division 26 Section: Grounding and Bonding for Electrical Systems".

E. Connect wiring according to Division 26 Section "Low-Voltage Electrical Power Conductors and Cables".

3.4 FIELD QUALITY CONTROL

A. Perform the following field tests and inspections and prepare test reports:

1. Perform electrical test and visual and mechanical inspection.
2. Leak Test: After installation, change systems with refrigerant and oil and test for leaks. Repair leaks, replace lost refrigerant and oil, and retest until no leaks exist.
3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation, product capability, and compliance with requirements.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
5. Verify proper airflow over coils.

B. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

C. Remove and replace malfunctioning condensing units and retest as specified above.

3.5 STARTUP SERVICE

A. Complete installation and startup checks according to manufacturer's written instructions and perform the following:

1. Inspect for physical damage to unit casing.
2. Verify that access doors move freely and are weather tight.
3. Clean units and inspect for construction debris.
4. Verify that all bolts and screws are tight.
5. Adjust vibration isolation and flexible connections.
6. Verify that controls are connected and operational.

B. Lubricate bearings on fans.

C. Verify that fan wheel is rotating in the correct direction and is not vibrating or binding.

D. Start unit according to manufacturer's written instructions and complete manufacturer's startup checklist.

E. Measure and record airflow over coils.

F. Verify proper operation of condenser capacity control device.

G. Verify that vibration isolation and flexible connections properly dampen vibration transmission to structure.

H. After startup and performance test, lubricate bearings.

3.6 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.7 CLEANING

A. Division 01 Section – "Execution and Closeout Requirements": Requirements for cleaning.

B. Vacuum clean coils and inside of unit cabinet.

C. Install temporary filters during construction period. Replace with permanent filters at Substantial Completion.

3.8 DEMONSTRATION AND TRAINING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for demonstration and training.

B. Demonstrate air handling unit operation and maintenance.

C. Demonstrate starting, maintenance, and operation of condensing unit including low ambient temperature operation.

D. Engage a factory authorized service representative to train owner’s maintenance personnel to adjust, operate and maintain systems.

1. Train Owner’s maintenance personnel on procedures and schedules for starting up and shutting down, trouble shooting, servicing and maintaining air handling units.
2. Review data in maintenance manuals. Refer to Division 1 Section: “Contract Closeout Procedures”.
3. Schedule training with owner with at least seven (7) days advance notice.

E. Furnish services of manufacturer's technical representative for one 8 hour day to instruct Owner's personnel in operation and maintenance of units. Schedule training with Owner, provide at least 7 days’ notice to Architect/Engineer of training date.

3.9 VARIABLE REFRIGERANT FLOW SYSTEM

A. General

1. The installation shall be in accordance with the manufacturer’s Installation, Operating and Maintenance Instructions with regard to application, mechanical and electrical requirements. It shall be the responsibility of the contractor to carry out proper installation and guarantee operational status.
2. Refrigerant piping associated with equipment that must be relocated due to field conditions shall be resized and approved by the VRV system manufacturer.

3.10 MANUFACTURER'S FIELD SERVICES

A. Division 01 Section: “Quality Requirements”: Requirements for field services.

B. The manufacturer shall furnish complete submittal wiring diagrams of the package unit as applicable for field maintenance and service.

C. Furnish initial start-up and shutdown during first year of operation, including routine servicing and checkout.

D. Furnish services of factory; trained representative for minimum of two days to leak test, refrigerant pressure test, evacuate, dehydrate, charge, start-up, calibrate controls, and instruct Owner on operation and maintenance.

3.11 PROTECTION OF FINISHED WORK

A. Division 01 Section**:** “Execution and Closeout Requirements” for requirements for protecting finished work.

B. Do not operate units until ductwork is clean, filters are in place, bearings lubricated, and fan has been test run under observation.

3.12 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 23 82 00

TERMINAL HEATING AND COOLING UNITS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 specifications, apply to this section, and the other sections of Division 23.

1.2 SUMMARY

A. Section includes:

1. Electric radiant heaters.
2. Electric baseboard radiation.
3. Electric unit heaters.
4. Electric wall heaters.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Division 23 Section: “Common Motor Requirements”: Product requirements for electric motors for placement by this section.
2. Division 23 Section: “HVAC Insulation”: Product requirements for insulation for placement by this section.
3. Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”:
4. Division 23 Section: “Refrigerant Piping”: Execution requirements for connection of refrigerant piping to units specified by this section.
5. Division 23 Section: HVAC Air Distribution”: Product requirements for flexible duct connections for placement by this section.
6. Division 26 Section: “Low Voltage Electrical Power Conductors and Cables:” Requirements for electric wiring and connections to units specified by this section.
7. Division 26 Section: “Raceways and Boxes for Electrical Systems:” Requirements of conduits and boxes housing electrical wiring and connections specified by this section.

1.3 REFERENCES

(Unless otherwise noted, references apply to “latest editions.”)

A. Air-Conditioning and Refrigeration Institute:

1. ARI 410 - Forced-Circulation Air-Cooling and Air-Heating Coils.

B. Sheet Metal and Air Conditioning Contractors:

1. SMACNA - HVAC Duct Construction Standard - Metal and Flexible.

1.4 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate cross sections of cabinets, grilles, bracing and reinforcing, and typical elevations. Indicate schedules of equipment and enclosures typically indicating length and number of pieces of element and enclosure, corner pieces, end caps, cap strips, access doors, pilaster covers.

C. Product Data: Submit coil and frame configurations, dimensions, materials, rows, connections, and rough-in dimensions. Submit mechanical and electrical service locations, capacities and accessories or optional items.

D. Samples: Submit one sample of each radiation cabinet detailed.

E. Manufacturer's Installation Instructions: Submit assembly, support details, and connection requirements.

F. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

G. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.5 CLOSEOUT SUBMITTALS

A. Division 01 Section: “Execution and Closeout Requirements”: Closeout procedures.

B. Project Record Documents: Record actual locations of components and locations of access doors in radiation cabinets required for access to valves.

C. Operation and Maintenance Data: Submit manufacturers descriptive literature, operating instructions, installation instructions, maintenance and repair data, and parts listings.

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum two weeks prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Product storage and handling requirements.

B. Accept units on site in factory packing. Inspect for damage. Store under roof.

C. Protect coil fins from crushing and bending by leaving in shipping cases until installation, and by storing indoors. Protect coils from entry of dirt and debris with pipe caps or plugs.

1.10 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.11 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer’s warranty for equipment

1.12 EXTRA MATERIALS

A. Division 01 Section: “Execution and Closeout Requirements”: Spare parts and maintenance products.

B. Furnish one (1) extra set of filters for each terminal unit to the owner. In addition, install new filters at completion of terminal unit work, and prior to testing, adjusting, and balancing work. Do not operate fans unless filters are in place.

C. Furnish one (1) spare set of belts for distinct terminal unit size. Deliver to the Owner's representative and mark with the terminal unit size.

PART 2 - PRODUCTS

2.1 Electric Infrared Unit Heater

1. General

    a. The electric infrared heater shall be InvizathermThin as manufactured by Indeeco, St. Louis, MO. The construction and design shall permit it to be ceiling or wall

mounted, with the use of the mounting brackets supplied, or chain hung according to supplied instructions. Heaters shall include the features listed below.

2. Heating Assembly:

   a. The heating assembly shall be cULus listed under standard 2021 and shall consist of single stranded, non-coiled Ni-Chrome wire embedded in vitrified ceramic fiber and backed with high density, low biopersistent Fiberfrax insulation. The emitting surface is covered with a black-coated high temperature fiberglass cloth.

3. Wiring:

   a. For connection to the power supply, Invizatherm heaters will include an indoor outdoor rate j-box mounted to the heaters raceway.

4. Construction:

   a. The heaters are formed and welded together out of 16 ga. and 20 ga. CRS or stainless steel. If CRS, the heater must be powder coated with a high temp black or white finish.

2.2 ELECTRIC UNIT HEATERS

A. Unit heater shall be Trane model UHEC. Comparable products as manufactured by Qmark and Markel may be submitted for review as a comparable product.

B. Unit mounts either horizontally or vertically.

C. Heavy gauge die-formed steel housing. Two- toned.

D. Advanced pull-through air flow design draws air across heating element for more even air distribution and cooler element operation.

E. Specially designed venturi outlet to meet that added throw as required in vertical position.

F. Branch circuit fusing.

G. Completely enclosed fan motor.

H. Aluminum-finned, copper clad steel sheath heating element has longer useful life, because of cooler sheath temperature and faster heat dissipation.

I. 24V control transformer.

J. Automatic reset linear thermal cut-out, capillary type, provides protection over entire length of element areas

K. Fan delay feature eliminates cold drafts. Element heats up before fan cuts in, then fan continues to distribute heat after element shuts off.

L. Individually adjustable discharge louvers to control air flow.

M. Choice of optional diffusers for variety of air patterns, maximizing heat concentration and coverage in the vertical position.

N. Meets all UL, NEC, and OSHA requirements.

2.3 ELECTRIC WALL HEATERS

A. Wall heater shall be Trane model UHWA. Comparable products as manufactured by Qmark and Markel may be submitted for review as a comparable product.

B. Heater Assembly: The heater assembly which fits into the back box shall consist of an 0.120" thick, powder coated aluminum die cast part fan panel / panel grille which are mounted all of the operational parts of the heater. The front grille shall be of the louvered type finished in polyester powder coating which resists fading and abrasion.

C. Heating Elements: The heating elements shall be warranted for five years and shall be of non-glowing design consisting of 80-20 Ni/Cr resistance wire enclosed in a steel sheath to which steel plate fins are brazed. The heating element shall cover the entire air discharge area to ensure uniform heating of all discharge air.

D. Thermal Limit: The heater shall be equipped with a manual-reset safety limit control that will automatically shut off heater in event of overheating due to any cause. The safety cutouts shall directly interrupt power to the elements. A red warning light will illuminate (visible at top of heater grille) to alert that this control has been activated.

E. Fan and Motor Assembly: The motor and fan assembly shall be direct drive and mounted on rigid heavy gauge brackets for quiet operation. The fan shall be five-bladed aluminum. The fan motor shall be totally enclosed.

F. Fan Delay Control: Fan control shall delay fan startup of the fan motor until the heating elements have warmed up. It shall maintain motor operation after heating elements have been de-energized to dissipate residual heat build-up.

G. Temperature Control: The heating unit is designed to be controlled using a mechanical type two pole thermostat. The tamperproof thermostat shall be of the bi-metallic, snap-action with enclosed contacts. It shall be completely concealed behind the front cover to become tamper-proof.

H. Disconnect Switch: This ON/OFF switch shall be mounted in the back box to disconnect single point connection to power supply for the internal electrical components, including the heating element. It will be completely concealed behind the front grille panel.

I. Low Voltage Relays: Normally "open" 24-volt and 120-volt low voltage holding coil relays shall be available as optional equipment to control 208, 240, and 277 volt heaters in conjunction with central energy control systems. The built-in thermostat can then be used as one of the thermostats in a automatic set back operation.

2.4 ELECTRIC CEILING HEATERS

A. Ceiling heater shall be Trane model UHCA. Comparable products as manufactured by Qmark and Markel may be submitted for review as a comparable product.

B. HEATER ASSEMBLY: The heater assembly, which fits in the back box, shall consist of a fan panel upon which is mounted all of the operational parts of the heater.

C. HEATING ELEMENT: The heating element shall be of the non-glowing design consisting of 80/20 NiCh resistance wire enclosed in a steel sheath to which plate fins are copper- brazed. It shall be warranted for 5 years.

D. FAN MOTOR: The fan motor shall be totally enclosed and permanently lubricated.

E. FAN DELAY SWITCH: Fan control shall be of bi-metallic, snap-action type and shall activate fan after heating element reaches operating temperature. The fan shall continue to operate after the temperature is satisfied and until the heating element is cool.

F. THERMAL CUTOUT: A thermal cutout shall be built into the system to shut off the heater in the event of overheating.

G. DISCONNECT SWITCH: A double-pole single throw disconnect switch shall be factory installed for positive disconnect of power supply. It will be completely concealed behind the faceplate.

H. BACK BOX: The back box shall be designed for duty as a recessed rough-in box in either masonry or frame installations and is also used with the surface mounting frame in surface mounting installations. The back box shall be 20-gauge galvanized steel and shall contain knockouts through which power leads are brought.

I. FACEPLATE: The louvered faceplate shall be of commercial grade steel finished in Navajo White baked enamel. It will attach to the heating unit via snaps in the plastic trim pieces and shall have no exposed screw heads.

J. THREE-PIECE DESIGN: The heater shall be made up of a back box, a heater assembly and a faceplate.

K. SURFACE MOUNTING FRAME: The surface mounting frame, designed to allow full surface mounting, shall be commercial grade cold-rolled steel, phosphatized, then electrostatically painted Navajo White by a baked enamel process

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Coordination and project conditions.

B. For recessed units, verify recess dimensions are correct size.

C. Verify wall construction is ready for installation.

D. Verify ductwork is ready for installation.

E. Verify concealed blocking and supports are in place and connections are correctly located.

3.2 INSTALLATION

A. Install air coils in ducts and casings in accordance with SMACNA HVAC Duct Construction Standards, Metal and Flexible. Refer to Division 23 Section: “HVAC Air Distribution.”

B. Support air coil sections independent of piping on steel channel or double angle frames and secure to casings. Furnish frames for maximum three coil sections. Arrange supports to avoid piercing drain pans. Install with airtight seal between coil and duct or casing.

C. Protect coils to prevent damage to fins and flanges. Comb out bent fins.

D. Install coils level. Install cleanable tube fluid coils and level frame steam coils with 1: 50 pitch.

E. Make connections to coils with unions and flanges.

F. On water coils, install valving and piping accessories as indicated on the contract documents. Install water coils to be drainable and install drain connection at low points. Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment” and Division 23 Section: “General Duty Valves for HVAC.”

G. On water <<and glycol>> heating coils, and chilled water cooling coils, connect water supply piping to leaving airside of coil (counter flow arrangement). Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment.”

H. For cooling coils where air velocity exceeds 550 ft/min install three break moisture eliminators of 24 gage galvanized steel.

I. Install insulation air coil casings. Refer to Division 23 Section: “HVAC Insulation.”

J. Install drain pan and drain piping connection for cooling coils. Fabricate drain pan from 20 gage galvanized steel. Extend 3 inches from face of coil entering air side, 6 inches from face of coil leaving air side and 4 inches from face of eliminators. Pipe drain pans individually to floor drain[s] with water seal trap. Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”.

K. In steam coils, install vacuum breaker in steam piping at or in header. Install steam traps with outlet minimum 12 inches) below coil return connection. Refer to Division 23: “Pipes and Tubes for HVAC Piping and Equipment.”

L. On refrigerant coils, install sight glass in liquid piping within 12 inches of coil. Refer to Division 23 Section: “Refrigerant Piping.”

M. Insulate headers located outside airflow, insulate as specified for piping. Refer to Division 23 Section: “HVAC Insulation”.

N. Wire electric duct coils. Refer to Division 26.

O. Install equipment exposed to finished areas after walls and ceilings are finished and painted. Avoid damage.

P. Protection: Install finished cabinet units with protective covers during remainder of construction.

Q. Baseboard Radiation: Locate on outside walls and run cover continuously wall-to-wall unless otherwise indicated. Center elements under windows. Where multiple windows occur over units, divide element into equal segments centered under each window. Install end caps where units butt against walls.

R. Finned Tube Radiation: Locate on outside walls and run cover wall-to-wall unless otherwise indicated. Center elements under windows. Where multiple windows occur over units, divide element into equal segments centered under each window.>> <<Align cabinet joints with window mullions. Install wall angles where units butt against walls.

S. Convectors: Install at locations as indicated on Contract Drawings. Coordinate to assure correct recess size for recessed convectors.

T. Unit Heaters: Hang from building structure, with pipe hangers anchored to building, not from piping. Mount as high as possible to maintain greatest headroom unless otherwise indicated.

U. Cabinet Unit Heaters: Install at locations as indicated on Contract Drawings. Coordinate to assure correct recess size for recessed units.

V. Fan-Coil Units: Install at locations as indicated on Contract Drawings. Coordinate to assure correct recess size for recessed units.

W. Unit Ventilators: Install at locations as indicated on Contract Drawings. Install level and shim units, and anchor to structure. Coordinate exact location of wall louvers. Install shelving and auxiliary cabinetry. Install wall trim pieces for continuous wall-to-wall installation.

X. Induction Units: Install at locations as indicated on Contract Drawings. Support base units from continuous wall mounting strip or wall mounting brackets. Support cabinet enclosures from wall mounting strip or attach direct to wall and floor.

Y. Units with Cooling Coils: Install drain piping to nearest floor drain. Refer to Division 23 Section: “Pipes and Tubes for HVAC Piping and Equipment”:

Z. Install electric heating equipment including devices furnished by manufacturer but not factory-mounted. Furnish copy of manufacturer's wiring diagram submittal. Install electrical wiring in accordance with manufacturer's submittals and Division 26.

AA. Install Work in accordance with all applicable codes, standards and local authorities having jurisdiction requirements.

3.3 MOCK-UPS

A. Provide a mock up unit complete with piping trim, insulation, condensate drain trap, controller, lights, disconnect switches, ATC panels, etc. prior to installation of units. The engineer and owner will review the mock-up. The contractor shall make all modifications as requested by the owner or engineer.

3.4 CLEANING

A. Division 01 Section: “Execution and Closeout Requirements”: Requirements for final cleaning.

B. After construction is completed, including painting, clean exposed surfaces of units. Vacuum clean coils and inside of cabinets.

C. Touch-up marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

D. Install new filters.

3.5 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

END OF SECTION

SECTION 26 05 00

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this and other sections of Electrical and Special Construction Divisions.

1.2 SUMMARY

A. This section includes qualification requirements of the installer and suppliers, submittal procedures, record keeping, required testing and general electrical procedures.

B. Section Includes:

1. Additional submittal requirements.
2. Installer and product requirements.
3. Identification of equipment.
4. Firestopping for electrical installations.
5. Supporting devices for electrical components.
6. Concrete equipment pads.
7. Equipment bollards.
8. Fuses.
9. Equipment connections.
10. Cutting and patching for electrical construction.
11. Touch up painting.
12. Electrical demolition.
13. Project conditions.
14. Additional warranties.
15. Utility coordination.

C. Related Sections:

1. Section “Vibration & Seismic Controls for Electrical Systems” for special project conditions, supporting products and requirements.
2. Section “Packaged Generator Assemblies” for concrete pad and bollard requirements.
3. Section “Low Voltage Electrical Distribution” for concrete pad or bollard requirements.
4. Section “Low Voltage Transformers” for concrete pad requirements.
5. Section “Low Voltage Controllers” for motor control center concrete pad requirements.

D. Products installed but not supplied under this Section:

1. Provide electrical connections and materials required for the installation and connections to products of other section, including but not limited to:
   a. Countertops, Casework & Cabinets.
   b. Elevators.
   c. Conference Room or other area A/V equipment including projectors,

screens, wall monitors, etc.
d. Break room and lounge appliances.
e. Magnetic door holders.
f. Electrically locked doors, door strikes, maglocks, etc.
g. Motorized and automatic doors, push plates, sensors, etc.

2. Coordinate electrical connections with installation requirements and manufacturers' nameplates and written instructions.
3. Verify equipment nameplates and connection requirements prior to rough in.

E. Permits and Fees:

1. Apply, pay for and secure all permits, required by the Authorities Having Jurisdiction prior to start of work, in accordance with contract General Conditions and Division 01.
2. Deliver all certificates to the Owner prior to final acceptance of work.

F. Conflicts:

1. Where variances occur within drawings and/or specifications, procedures of the General Conditions shall be followed.
2. In cases where clarification is not requested, provide the item or arrangement of better quality, greater value, or higher cost in the Contract Price.
3. Bring to the Architect's attention, any field conflicts or existing conditions, which prevent the intended work as designed.

1.3 ACRONYMS

A. The following acronyms are used throughout the Electrical Division specifications, defined as follows:

1.	AASHTO	American Association of State Highway and Transportation Officials
2.	ADA	Amer. With Disabilities Act
3.	ANSI	American National Standards Institute
4.	ASME	American Society of Mechanical Engineers
5.	ASTM	American Society for Testing and Materials
6.	IBC	International Building Code
7.	IEEE	Institute of Electrical and Electronics Engineers
8.	ETL	Electrical Testing Laboratory
9.	FM	Factory Mutual Research Corporation
10.	NEC	National Electrical Code
11.	NECA	National Electrical Contractors Association
12.	NEMA	National Equipment Manufacturers Association
13.	NESC	National Electrical Safety Code
14.	NETA	National Electrical Testing Association
15.	NFPA	National Fire Protection Association
16.	NLPI	Lightning Protection Institute
17.	UL	Underwriter's Laboratories

1.4 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term product includes the terms material, equipment, system, and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature, which is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.
3. Comparable Product: Product that is to be demonstrated and approved through the submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes proposed by Contractor in products, materials, equipment, and methods of construction required by the Contract Documents.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is the only named manufacturer or is the “first” named manufacturer, or is accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimensions, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner

E. Extended Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

1.5 SUBMITTALS

A. General: Submit each item in this Section according to the conditions of the contract and Division 01 Specification Sections.

B. Comply with Division 01 Section "Submittal Procedures".

C. General:

1. Shop Drawings
2. Product Data
3. Installation and Coordination Drawings
4. Record Documents
5. Operation and Maintenance Manuals
6. Construction Phasing and Outage Schedule

D. Submittal Deviations from Contract Documents:

1. Submittals shall explicitly identify any deviations from the drawings, specifications or design intent, including, but not limited to:
   a. Different products used.
   b. Products used in different locations from where shown or specified.
   c. Changes to intended application, location, etc.
   d. Changes to capacity, rating or size.

e. Differences in physical sizes, dimensions and/or weights which will create installation, clearance or access problems or Code violations.

2. Contractor shall clearly and specifically identify each such deviation, substitution or change to the contract documents to Architect's attention via note, clarification, etc. It is NOT considered to be explicitly identified simply by showing a device on the plans or including a product page in the submittal.

E. Basis-of-Design Comparable Products Submission:

1. Contract Drawings are based on only the named "Basis of Design" products.
2. Engineer has not verified that any Comparable Products by manufacturers other than the "Basis of Design" equipment will properly fit, perform or meet the design intent and contract documents.
3. Contractor must verify sizes, ratings, dimensions, clearance requirements, weight, etc. of any/all manufacturers. Contractor is responsible for the fitment of their proposed equipment, and resulting impacts to other construction or disciplines, Code compliance, etc.
4. Document each Submittal, Comparable Product or Substitution request with supporting data substantiating compliance of proposed product with Basis-of-Design product.

F. Product Substitutions: Comply with all requirements of Division 01.

G. Comparable Products Submission:

1. Document each request for a proposed comparable product with supporting data substantiating compliance of proposed product with Basis-of-Design product.

H. Coordination of Submittals: Coordinate Electrical and Special Construction Division submittals with those of all other Divisions. Also, review submittals of all other disciplines' submittals specifically for proper coordination of electrical circuits, including locations, ratings and types of required connections. Coordinate all electrical provisions and rough-ins with all other project disciplines.

I. Electrical Division additional submittal requirements: On projects where Div 01 does not specify otherwise, and where Owner does not have a defined submittal procedure, provide submittals, as follows. Where Div 1 specs are applicable, also provide the following.

1. Clearly identify all submittals, as follows:
   a. Number each submittal starting with the specification section associated with the product(s). Each successive product from same spec section shall utilize a sequential suffix (i.e. -01, -02).
   b. Following each number, include specific English name of each product. (i.e. Spec Section # - Panelboards).
   c. Do not combine product data from different spec sections into a single submittal package as this may prevent approval of one product due to resubmission requirement of another.
   d. Provide catalog spec and/or data sheets to completely describe proposed equipment. A product model number alone, with no supporting description or data will not be approved.
   e. Where numerous models or product numbers appear, clearly indicate the exact type, model number, size, options, and special features of the proposed item.
   f. Factory order forms showing only required capacities, are not

acceptable.
g. Identify all options furnished to meet specifications.
h. The Architect shall not select or mark equipment ratings and/or options. Submittals not properly and specifically marked shall be returned without review.

2. Identify any discrepancies in the contract documents affecting submittals and seek clarification.
3. Product data PDF's shall contain only product cut sheets, data sheets or catalog pages as pertain the proposed products. Use of manufacturer's PDF catalog pages shall be limited to only those pages relevant to the proposed products. Submittals consisting of entire catalogs of other products, irrelevant data, etc. shall be returned without review.
4. Submit all related product drawings, data sheets, layout drawings, etc. for each system or product in a single submittal. Do NOT submit product data, wiring diagrams and calculations for one product submittal as multiple separate submittals or PDF's.

J. Product Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Wiring & connection diagrams.
6. Capacity ratings, performance curves.
7. Information required indicating contract compliance.
8. Clearly indicate the exact size or rating proposed.

K. Shop Drawings:

1. All specially fabricated items.
2. Modifications to standard items.
3. Specially designed systems or products.

L. Closeout Submittals: Submit in accordance with the General Conditions and Division 1 requirements.

1. Electrical Division Operation and Maintenance Manuals:
   a. Arrange material in sections according to Electrical Division spec sections.
   b. Include a cover sheet, which contains the name and phone number of the Installer, Distributor, Supplier, Local Service Company, etc. for each system or product group.
   c. O & M Manuals shall also include the following:
   d. Material and Equipment List.
   e. Copies of all approved submittals.
   f. Acceptance Test Reports (ground resistance, etc.)
   g. Manufacturer's Product Warranties.
   h. Factory data sheets, wiring diagrams, etc.
   i. Spare parts lists.
   j. All operation and instruction papers.
   k. Maintenance schedules.

2. Record Drawings:
   a. During construction, maintain drawings on blue or black line white prints.

b. Record all changes and alterations in red ink.
c. Record the installed electric feeders, equipment, etc.
d. Actual installed locations of panels, switchboards, transformers, etc.
e. All feeders overhead, underslab or in chases.
f. Pullboxes, handholes and splice box locations.
g. All underground feeders, conduit, ducts, cables, handholes, manholes, etc. with installed dimensions from permanent construction elements.
h. All modifications, changes, deletions or additions made during construction.
i. Submit one (1) complete set of contract drawing prints with "as-built" information neatly recorded in RED at project completion. Submit files in PDF format.

M. Required Submittals: Submit the following items, as a minimum requirement for this project:

1. Section “Common Work Results for Electrical”:
   a. Material and Equipment List
   b. Coordination Drawings for Electrical, Mechanical, IT Rooms, etc.
   c. Electrical Installer Qualifications
   d. Fire Stop materials
   e. Access Panels
   f. Copies of Electrical Inspection Reports
   g. Equipment Acceptance Test Reports
   h. Completed Punchlist with contractors’ initials/dates
   i. Record drawings
   j. O&M Manuals
2. Section “Low Voltage Electrical Power Conductors and Cables”:
   a. Building wires and conductors.
   b. Cables and cable assemblies.
   c. Splices and connectors.
   d. Acceptance testing of conductors, feeders, etc.
3. Section “Grounding and Bonding for Electrical Systems”:
   a. Ground rods
   b. Ground buses
   c. Exothermic Welds
   d. Ground Resistance testing
4. Section “Raceways and Boxes for Electrical Systems”:
   a. Conduits.
   b. Surface raceways.
   c. Floor mounted devices.
5. Section “Underground Ducts and Raceways for Electrical”:
   a. Conduits.
   b. Handholes
   c. Utility Marker Tape
6. Section “Vibration and Seismic Controls for Electrical Systems”:
   a. Engineering calculations/design for supports/bracing
   b. Product data
7. Section “Overcurrent Device Coordination, Short Circuit & Arc Flash Studies”:
   a. Short-circuit, coordination & arc flash studies -draft.
   b. Short-circuit, coordination & arc flash studies – revision(s) as required.
   c. Tabulations of circuit breaker, fuse and device ratings
   d. Protective device time current coordination curves.
   e. Fault current calculations.
   f. Arc flash incident energy and flash protection boundary calculations

g. Recommendations for system improvements, where needed
h. One-line diagram
i. Arc flash labels.

8. Section “Low Voltage Electrical Distribution”:
   a. Current Transformer cabinets.
   b. Enclosed and automatic circuit breakers.
   c. Elevator Main Line Disconnects.
   d. Surge Protective Devices (SPD)
   e. Submeters.
   f. Safety Disconnect Switches.
   g. Time Clocks.
   h. Panelboards.
   i. Generator Docking Stations.
   j. Post Installation acceptance testing reports.
9. Section “Low Voltage Transformers”:
   a. Product data for transformers and all accessories/components
   b. Elevation and plan view drawings.
   c. 1-line diagram showing all internal/external components, connections, accessories, etc.
   d. Post Installation acceptance testing report.
10. Section “Wiring Devices”:
   a. A/C switches.
   b. Receptacles.
   c. Connectors.
   d. Device plates and covers.
11. Section “Low Voltage Controllers”:
   a. Thermal manual motor starter switches.
   b. Motor starters.
12. Section “Photovoltaic Collectors”:
   a. Product Data: For each type of product.
   b. Shop Drawings: For PV modules.
   c. Plans, elevations, sections, and mounting details.
   d. Diagrams for power, signal, and control wiring.
13. Section “Packaged Generator Assemblies”:
   a. Product data for Engine-generator assembly and all accessories
   b. Post installation startup test report.
   c. Post Installation Load Test report.
14. Section “Transfer Switches”:
   a. Product Data for transfer switches, accessories, and components.
   b. Dimensional drawings.
   c. Startup and initial programming reports.
   d. Post Installation acceptance testing reports.
15. Section **“**Lightning Protection for Structures”:
   a. Roof plan showing system components and layout
   b. Product data including Air terminals conductors, connectors, fasteners, sealants.
   c. Post Installation Ground Resistance Test Report
16. Section “Lighting”:
   a. Product data for all Individual lighting fixtures.
   b. LED drivers.
   c. Occupancy sensors.
   d. Line or low voltage room lighting control devices and systems.
   e. Lighting poles.
   f. FC calculations
   g. Wiring diagrams for lighting controls, etc.

17. Section “Emergency Responder Radio Repeater System”:
    a. Bill of materials showing quantities and model numbers.
    b. Manufacturer's product data on all proposed equipment.
    c. Floor plans showing location of amplifiers, antennae, cable routes, etc.
    d. System wiring schematics.
    e. Scaled plans and elevations,
    f. System design and calculations.
    g. Pre-system and post-installation radio signal strength surveys.
    h. FCC Licensing data.
    i. Copy of AHJ Final Inspection / Approval.

1.6 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman’s Electronic Document Release Form. Only floor plans and part plan drawings shall be provided.

1.7 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.

B. Underwriter’s Laboratory (UL) Requirements: All equipment containing electrical components and provided under electrical, mechanical, or other Divisions shall bear the Underwriter’s Laboratory (UL) label, as a complete packaged system.

C. Field Certifications and Labeling:

1. Equipment not provided with a UL label shall be tested in the field certified and provided with a listed label at the installer’s expense.
    a. Field testing shall be performed by a testing agency approved by the authority having jurisdiction.
    b. Provide services of a UL recognized, independent Electrical Testing Laboratory (ETL) to provide field inspection and testing. Provide an ETL Label on all such equipment as proof of satisfactory inspection.

D. Fire Safe Materials: Unless otherwise indicated, materials shall conform to UL, National Fire Protection Agency (NFPA) or American Society for Testing and Materials (ASTM) standards for fire safety with smoke and fire hazard rating not exceeding flame spread of 25 and smoke developed of 50.

E. Install all components and equipment per manufacturer’s written instructions.

F. Installer Qualifications:

1. Provide proof of qualification. Submit the following, when requested:
    a. Five (5) comparable completed projects.
    b. Reference letters from minimum of three (3) registered professional engineers, general contractors, or building owners, explaining proficiency, quality of work, or other attribute on projects of similar size or

substance.
c. Copy of Master Electrician's License.
d. Local or State license.

2. Electrical installer shall utilize a fulltime project foreman in charge of all electrical work.
   a. Fully qualified and experienced in such work.
   b. Available on site at all times during construction.
   c. All communication shall be through this person.
3. Installer of specialized systems such as Fire Alarms, telecommunication systems, etc. shall meet the requirements of the associated spec section(s).

G. Installation Quality: In accordance with listed Codes, recognized trade organizations and standards.

1.	ADA	Americans with Disabilities Act Accessibility Guidelines
2.	ANSI/EIA/TIA	American National Standards Institute
3.	ASME	American Society of Mechanical Engineers
4.	IEEE C2	National Electrical Safety Code
5.	NEMA	National Equipment Manufacturers Association
6.	NECA	National Electrical Contractors Assn Standards of Installation
7.	NEMA	National Electrical Manufacturer’s Association
8.	NETA	National Electrical Testing Association
9.	UL	Underwriter’s Laboratories

H. Comply with the latest version of following Codes, Standards and regulations as adopted by the Authority Having Jurisdiction, unless otherwise specified.

1. NFPA
2. NFPA 70 “National Electrical Code”.
3. IBC
4. IECC
5. COMAR (Code of Maryland Regulations).
6. State of Maryland Fire Prevention Code
7. Baltimore County Electrical Code
8. Local Amendments to the above Codes

1.8 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Arrange for proper shipping methods for all materials.
2. Provide for handling and unloading of all materials at site or at offsite storage facility.
3. Provide for proper transportation between offsite storage and project site.
4. Provide rigging and other handling services, when necessary.

B. Storage and Protection:

1. Store all materials in dry, heated areas, unless manufacturers permit other storage environments.
2. Store equipment according to manufacturers’ written instructions.
3. Protect materials subject to damage or corrosion from excessive moisture.
4. Protect equipment subject to damage from excessive heat or sunlight in ventilated environments.
5. Protect equipment from dripping, splashing or sprayed materials.

C. Repair and Replacement of Damaged Equipment: Repair equipment damaged as a result of improper storage or handling at no expense to Owner. If, in the opinion of the Architect, equipment cannot operate properly after repairs are made, replace at no cost to Owner.

1.9 PROJECT CONDITIONS

A. Occupied Building: Allowances shall be considered and included in bids for performing work within existing, occupied buildings. Certain functions, i.e. core drilling, may be limited in their allowed times, due to disturbance of other occupants. Work occurring within occupied areas may require scheduling of work during unoccupied periods.

B. Access Delays: Allowances shall be considered and included in bids for delays upon entering/exiting secure facilities, controlled access areas.

C. Inmate/Prisoner Detention Areas: Project includes work and equipment to be installed in detention environments. All materials and methods shall be suitable for such “Maximum Security” environment. This includes requirements for heavy duty equipment construction, tamperproof equipment and hardware and special construction tolerances/workmanship, as specified herein.

1.10 SEQUENCING

A. General Sequencing:

1. Coordinate electrical work with other trades based on phasing and sequence of construction, as identified elsewhere in the contract documents.
2. Provide all scheduling, phased installation, etc. to coordinate with overall phasing plans.

B. Electrical Division Sequencing, Coordination, and Integration:

1. Coordinate systems, equipment, and materials installation with other building components.
2. Verify all dimensions by field measurements.
3. Arrange for chases, slots, and openings in building structure during progress of construction to allow for electrical installations.
4. Coordinate the installation of required supporting devices, sleeves and conduit to be set in poured-in-place concrete and other structural components, as they are constructed.
5. Sequence, coordinate, and integrate installations of electrical materials and equipment for efficient flow of the Work. Make provisions for large equipment requiring positioning prior to closing in the building.
6. Coordinate connection of electrical systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.
7. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.
8. Coordinate requirements for access panels and doors where electrical items requiring access are concealed behind finished surfaces.

1.11 COMMISSIONING

A. Provide post-installation commissioning for particular products and systems, as specified within individual specification sections.

1.12 WARRANTY

A. Provide warranty in accordance with the General Conditions and Division 01 requirements, and as stated herein.

B. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

C. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1. Manufacturer's Standard Form: Modified to include project-specific information and properly executed.
2. Refer to other specification Sections for specific content requirements and particular requirements for submitting special warranties.

D. Special Warranties: Provide additional product and/or installation warranties for particular products, as specified within individual specification sections.

E. Obtain all warranty papers and records from the Original Equipment Manufacturer (OEM) according to their warranty policy and deliver the same to the Owner. Fulfill all the OEM's requirements to validate the warranty at conclusion of project. Include copies of warranty papers with Closeout Submittals.

1.13 MAINTENANCE

A. Extra Materials: Provide extra, loose and/or spare materials, as required by individual specification sections.

B. Maintenance Service: Provide preventative maintenance services or maintenance services as required by individual specification sections.

PART 2 PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with Contract Documents, which are undamaged and new at time of installation.

1. Provide products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
2. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Where products are accompanied by the term as selected, Architect will make selection.
4. Where products are accompanied by the term match sample, sample to be matched is Architect's.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.

B. General Compliance Requirements: Compliance requirements for individual products, as indicated in Contract Documents, are multiple in nature and may include generic descriptions, performance requirements, compliance with reference standards, conformance with graphic details and other similar forms and methods of indicating requirements, all of which must be complied with.

C. Procedures for Selecting Products: Contractor's options for selecting products are limited by Contract Document requirements and are not controlled by industry traditions or procedures experienced by Contractor on previous construction projects.

D. Products specified by Reference Standards, Codes and Regulations: Select from among products, which can be shown to comply to, referenced documents.

E. Products specified by Naming Products and Manufacturers: Select from among products listed.

F. Products specified by Naming One Manufacturer's Product as the Basis-of-Design with Reference to Other Manufacturers: Select either the specified Basis-of-Design product or an approved comparable product by one of the other named manufacturers.

1. Comply with provisions in Comparable Products Article to obtain approval for use of a comparable product by one of the named manufacturers.

G. Products specified by Naming One Manufacturer's Product and Indicating Option of Selecting Comparable Products by stating or Approved Equivalent or similar language: Select either the specified product or an approved comparable product.

1. Comply with provisions in Comparable Products Article to obtain approval for use of an unnamed comparable product by another manufacturer.

H. Visual/Aesthetic Match Requirements: Certain products may have been specified or scheduled to achieve a particular appearance, shape, color, etc. This may apply to light fixtures and other products. Where specs or schedules indicate “Color by Architect”, a final color selection shall be made from the product manufacturer's product line that includes both standard and premium colors.

2.2 COMPARABLE PRODUCTS

A. Where Basis-of-Design products are specified by name, submit the following, in addition to other required submittals, to obtain approval of a comparable product by one of the named manufacturers:

1. Evidence that the proposed comparable product does not require revisions to the Contract Documents and is consistent with the Contract Documents.
2. Documentation that the proposed comparable product will produce the indicated results and is compatible with other portions of the Work.
3. Detailed comparison of significant qualities of proposed product with the Basis-of-Design product in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, serviceability, visual effect, and specific features and requirements indicated.
4. Evidence that proposed product provides specified warranty.
5. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
6. Samples, if requested.

2.3 IDENTIFICATION PLATES

A. General:

1. Dimensions: Minimum of 1" H x 2 1/2" W.
2. Lettering: All capitals, 1/4"H x 1/16" stroke. Indicate circuit number, device (EXHAUST FAN 1, PUMP No. 2, etc.).
3. Indoor Tags:
   a. Laminated phenolic plastic.
   b. White with black engraved letters.
   c. Stainless steel attaching screws.
4. Outdoor Tags:
   a. Stainless steel tag.
   b. Stainless steel attaching screws.
5. Manhole/Handhole Cable Tags:
   a. Stainless steel tag.
   b. Nylon cable ties.

2.4 LOW VOLTAGE TERMINAL IDENTIFICATION

A. Permanent identification in accordance with the manufacturer’s shop drawings or product data.

B. Identify all control cables and wires:

1. All indoor locations:
   a. Nylon, self-adhesive.
   b. Factory printed with permanent numerals/letters on white background.
2. LEM Wire Markers, or comparable product by 3M or Panduit.

2.5 FIRE STOPPING MATERIALS

A. General:

1. UL 1479 Listed, Fire Tests For Through-Penetration

B. For large openings:

1. 2-part, RTV silicone elastomer expanding foam.
2. 3-4X expansion.
3. STI Pensil Series PEN Foam, Dow Corning Fire Stop Foam, or comparable product by 3M.

C. For small openings and voids (less than 1"):

1. 1-part, Intumescent sealant.
2. Permanent, flexible and resilient.
3. 5X free expansion.
4. Red color for instant identification as fire barrier.
5. 4-hour fire rating.
6. STI Spec Seal Intumescent Sealant, 3M Fire Barrier Sealant, or comparable product by Dow..

D. For openings around cable tray penetrations:

1. Intumescent pillows.
2. Compressible, lightweight, removable.
3. Sealed poly bags.
4. 1/2" expansion in all directions.
5. STI Spec Seal SSB Pillows, or comparable product by Dow or 3M.

2.6 TAMPER PROOF HARDWARE

A. Provide tamper proof hardware for all panels, devices, pull boxes, junction boxes, cover plates, and any other equipment or items accessible to inmates, as indicated on the drawings. Equipment requiring tamperproof hardware, includes but is not limited to:

1. Electrical Panels
2. Junction/pull boxes
3. Receptacles, switch, CATV or IT outlet coverplates
4. Light fixtures
5. Fire pull stations or wire guards covering detectors, horn/strobe units.
6. Speaker housings or grills
7. Fire alarm devices and protective grills
8. Intercom cover plates
9. CCTV cameras and housings

B. Hardware shall use standard manufactured design, using center-pin torx screws.

C. Provide Owner with two (2) sets of each size of hardware wrenches, drivers, etc. needed for all hardware sizes installed on this project.

2.7 SPECIAL TOOLS & OPERATING ACCESSORIES

A. Wherever any products provided under this Division have tamperproof, special or restrictive hardware, as specified or where provided from the manufacturer as standard or optional construction, provide a minimum of two (2) matching tools, bits, sockets, etc. needed for operation and/or access to such items. This shall include, but is not limited to:

1. Tamperproof screws, bolts, etc. on devices, enclosures, covers, etc.
2. Penta-head bolts used on handhole and/or manhole lids.
3. Penta-head bolts used on switchgear, transformers, etc.
4. Any other special tools which are unique to that product.

2.8 POWER DISTRIBUTION BLOCKS

A. For connections and/or taps made within auxiliary wiring troughs, junction boxes, etc. Install within wiring troughs, with all necessary clearances around blocks, with required wire bending radii.

1. Plated aluminum terminal blocks.
2. Lexan, fiberglass, or other insulating material molded around to insulate block from mounting surface and provide side protection from adjacent wiring and surfaces.
3. UL Listed for 600 volts.
4. 1, 2, 3 or 4 terminal blocks on a common insulated mounting, as required.
5. Uninsulated terminal block for ground conductors to ground mounting surface, trough, etc.
6. Hex drive set screws for conductor connections.
7. Suitable for copper conductors.

8. Ilsco type PDB, or comparable product by Littelfuse or Marathon.

2.9 LOW VOLTAGE FUSES (0 - 600 VOLTS)

A. UL 248, “Low Voltage Fuses” Listed, 250 or 600 volt, ratings per drawings or protected equipment manufacturer's nameplate.

B. Class L:

1. Current limiting, time delay.
2. Interrupting rating of 200,000 amps rms symmetrical.
3. Time delay shall permit (5) times rating for minimum of 4 seconds.
4. Buss KRP-C Hi-Cap or Littlefuse KLP-C.

C. Class RK-1:

1. Current limiting, dual element, time delay.
2. Interrupting rating of 200,000 amps rms symmetrical.
3. Class R rejection clips.
4. Buss Low Peak LPS-RK (600 V) or LPN-RK (250 V), Littlefuse LLSRK (600 V) LLNRK (250 V).

D. Blown Fuse Indication:

1. For all fuses 100A and larger.
2. Automatic indication of blown (open) fuse.
3. Viewing window or indicating light.
4. Buss SAMI fuse covers or Littelfuse Indicator.

E. Spare Fuses:

1. Provide spares for each installed type and rating.
2. Minimum of (3) for 1-9 installed, (6) for 10-18 and (10) spares where more than 18 are installed.
3. Deliver to OWNER at completion of contract.

F. Spare Fuse Cabinet:

1. Provide in main electrical room, or as directed by Owner.
2. Construction of 0.08" aluminum, 30"H x 24"W x 12"D.
3. Door with continuous piano hinge and locking handle.
4. Buss Cat. No. SFC, , or comparable product by Little;fuse or Hoffman.

2.10 SUPPORTING DEVICES

A. Channel and angle support systems, hangers, anchors, sleeves, brackets, fabricated items, and fasteners are designed to provide secure support from the building structure for electrical components.

1. Material: Steel, except as otherwise indicated, protected from corrosion with zinc coating or with treatment of equivalent corrosion resistance using approved alternative finish or inherent material characteristics.
2. Metal Items for Use Outdoors or in Damp Locations: Hot-dip galvanized steel, except as otherwise indicated.

B. Steel channel supports have 9/16-inch diameter holes at a maximum of 8” on center, in at least one surface.

1. Fittings and accessories mate and match with channels and are from the same manufacturer.

C. Raceway and Cable Supports: Manufactured clevis hangers, riser clamps, straps, threaded C-clamps with retainers, ceiling trapeze hangers, wall brackets, and spring steel clamps or "click"- type hangers.

D. Sheet-Metal Sleeves: 0.0276-inch or heavier galvanized sheet steel, round tube, closed with welded longitudinal joint.

E. Pipe Sleeves: ASTM A 53, Type E, Grade A, Schedule 40, galvanized steel, plain ends.

F. Expansion Anchors: Carbon-steel wedge or sleeve type.

G. Toggle Bolts: All-steel springhead type.

H. Powder-Driven Threaded Studs: Heat-treated steel.

2.11 CONCRETE EQUIPMENT PADS

A. Materials:

1. Interior Pads: 3000 PSI concrete at 28 days.
2. Exterior Pads: 3500 PSI concrete at 28 days; air entrained mix.
3. Steel mesh or rebar reinforcing, where required.

2.12 EQUIPMENT BOLLARDS

A. At outdoor generators, switchgear, transformers, EV Chargers, and other gear, where indicated, for damage protection by vehicles.

1. Standard Bollard: 5" rigid galvanized schedule 40 steel pipe, concrete filled.
2. Removable Bollard: 5" rigid galvanized schedule 40 steel pipe set in concrete, with 4" pipe inside 5" pipe.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions:

1. Examine site and existing conditions prior to submitting bids.
2. Carefully examine proposed locations where work will occur in existing buildings and excavation near existing piping, conduit, cable, structures, etc.
3. Make required allowances for the conditions.
4. Request clarifications and or directions in writing, if required.
5. No allowance will be made for any errors, oversights or other negligence on the part of the Installer.

3.2 PREPARATION

A. Protection:

1. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.
2. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.

B. Construction Power:

1. Obtain and pay for temporary electrical service for construction power, trailers, etc.
2. Provide all underground and/or overhead equipment, transformers, overcurrent devices, wires, connections, etc. for obtaining power from utility company or Owner's electrical lines.
3. Pay all charges for connections, accounts, metering and consumption charges for construction power.

C. Temporary Power:

1. Provide temporary power connections, transformers or generators for existing buildings during all outages.
2. Provide full power availability at all times unless directed otherwise by Owner.
3. Installer shall determine temporary power requirements of buildings in order to size temporary transformer or generator.
4. Remove all temporary power installations and connections after permanent power is established and/or prior to completion of project.

D. Interface With Site Utility Companies:

1. Contact MISS UTILITY prior to any excavation or underground work.
2. Contact serving utility companies immediately upon award of contract. Do not install related equipment until fully coordinated with appropriate utilities.
3. Provide all construction schedules, dates of requested services, outage windows, equipment locations, etc. necessary for utility work.
4. Contractor shall contact each serving utility company to schedule the performance of work by utility company(ies) when site conditions are ready (including raceways, handholes/manholes, backboards, etc. installed by contractors).
5. Electric Utility:
    a. Coordinate service entrance equipment and layout with power company prior to ordering or installing any service entrance equipment.
    b. Furnish and install all incoming raceway, metering cabinets and meter sockets.
    c. Coordinate cable, conduit, lug and C/T cabinet sizes for proper interface between utility owned/installed equipment and contractor-installed equipment.
    d. Provide concrete pad for utility company's transformer as required by Utility.
6. Telephone Utility:
    a. Coordinate raceways with telephone utility company.
    b. Coordinate for installation of POTS lines, as required for operation of elevator cab phones, fire and security system communicators, etc. Provide sufficient notice for phone line procurement and installation.

E. Utility Outages:

1. Schedule, stage, and perform all work such that interruptions to existing utilities and services are kept to a minimum.
2. No outages shall occur without prior written notification of Owner and/or User.
3. All required outages should be approved by the owner for optimum time scheduling.
4. Written notice of not less than 15 calendar days shall precede all power outages.

3.3 INSTALLATION

A. General Requirements:

1. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings.
2. Install work, generally as shown. Carefully examine all contract drawings and fit the work in each location without substantial alteration. Where departures are proposed or required, submit detailed drawings for acceptance.
3. Installation shall provide the maximum possible headroom where mounting heights or other location criteria are not indicated.
4. Install all items level, plumb, and parallel and perpendicular to other building systems and components, except where otherwise indicated.
5. Install equipment with proper service and access clearances as required by NEC and manufacturers' requirements.
6. Install such that future service or replacement shall not require interference with or removal of other installations.
7. Provide access to all equipment, splice boxes, switches, controls and other devices, without use of poles, ladders, scaffolding, etc.
8. Where equipment requiring access or service is concealed behind finished surfaces, provide access panel(s) or door(s).

B. Penetration of Fire Rated Construction:

1. Seal all in and around conduits and other electrical materials penetrating or creating openings in fire-rated, fire resistant or fire-stopped walls, ceilings, partitions and floors.
2. Contractor is responsible for the coordination, means & methods, and costs for all penetrations required for the installation of the work.

C. Miscellaneous Supports: Install metal channel racks for mounting cabinets, panelboards, disconnects, control enclosures, pull boxes, junction boxes, transformers, and other devices except where components are mounted directly to structural features of adequate strength.

D. Sleeves: Install for cable and raceway penetrations of concrete slabs and walls, except where core-drilled holes are used. Install for cable and raceway penetrations of masonry and fire-rated gypsum walls and of all other fire-rated floor and wall assemblies. Install sleeves during erection of concrete and masonry walls.

E. Fastening: Unless otherwise indicated, securely fasten electrical items and their supporting hardware to the building structure. Perform fastening according to the following:

1. Fasten by means of wood screws or screw-type nails on wood; toggle bolts on hollow concrete masonry units; concrete inserts or expansion bolts on concrete or solid masonry; and by machine screws, welded threaded studs, or spring-tension clamps on steel.

2. Threaded studs driven by a powder charge and provided with lock washers and nuts may be used instead of expansion bolts, machine screws, or wood screws.
3. Welding to steel structure may be used only for threaded studs, not for conduits, pipe straps, or any other items.
4. In partitions of light steel construction use sheet-metal screws.
5. Drill holes in concrete beams so holes more than 1-1/2 inches deep do not cut main reinforcing bars.
6. Drill holes in concrete so holes more than 3/4 inch deep do not cut main reinforcing bars.
7. Fill and seal holes drilled in concrete and not used.
8. Select fasteners so the load applied to any fastener does not exceed 25 percent of the proof-test load.

F. Rough-in:

1. Contract drawings are generally diagrammatic.
2. Provide all offsets, bends, fittings and accessories, required to fit the work to the conditions, even though not specifically shown.
3. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
4. Refer to equipment specifications in all other Divisions for rough-in requirements.
5. The Owner, and/or his/her representative, reserves the right to make reasonable changes in location of equipment, conduit and wiring up to the time of rough-in or fabrication.

G. Cutting and Patching: Provide all cutting and patching in accordance with Division 1 and per the following requirements.

1. Perform all required cutting, fitting, and patching necessary for installation of Electrical Division work.
2. Cut, remove and legally dispose of selected electrical equipment, components, and materials as indicated, including but not limited to removal of electrical systems and equipment as indicated on the drawings and specifications and other electrical items made obsolete by the new Work.

H. Tamper Proof Hardware:

1. Provide tamper proof hardware for all equipment, devices, cover plates, outlets, and all other equipment provided under Electrical and Special Construction Divisions, where such equipment is accessible to inmates at any time. Inmate locations are indicated on the contract drawings.

3.4 CONCRETE EQUIPMENT PAD INSTALLATION

A. Interior Equipment Pads: Install concrete equipment (housekeeping) pads and bases for all transformers, switchgear, motor control centers, or other free-standing equipment.

B. Exterior Equipment Pads: Install concrete pads with foundations for all on-grade transformers, switchgear, generators, control cabinets and other equipment.

C. Interior Pad Installation:

1. Steel dowel rods and bonding agent for anchoring to existing slabs.
2. 2" wider than equipment in all directions.
3. 1" x 45^{o} chamfer on all sides.

D. Exterior Pad Installation:

1. 4" wider than equipment in all directions.
2. 1" x 45° chamfer on all sides.
3. Reinforce with steel mesh or rebar.
4. Provide minimum 30" deep (below grade) foundation on all sides.
5. Pour footings against undisturbed or compacted earth. Extend footings below the frost line for the location where installed.
6. Turn down rebar or mesh into all foundation walls.
7. Lowest side minimum of 6" above final grade.
8. Install vapor barrier between earth and concrete.
9. Provide PVC sleeves for all cables, conductors, grounding, etc. to penetrate pad.

3.5 EQUIPMENT BOLLARD INSTALLATION

A. Install steel pipe bollards for all pad mounted, exterior transformers, switchgear, generators, control cabinets and other equipment to prevent damage from vehicles.

B. Installation:

1. Locations as indicated on drawings.
2. Coordinate installation:
   a. Avoid ground rods, ground wires, etc.
   b. Permit full opening of enclosure door swings.
   c. Allow required access and clearances for maintenance and servicing.
3. Burial Depth 36" below grade.
4. Height: 42" above grade, unless noted otherwise.
5. 12" diameter concrete foundation to 36" deep.
6. Standard bollards: Fill with concrete and crown at top of pipe.
7. Removable bollards: Provide welded or threaded steel caps on removable pipe. Embedded pipe shall extend 2-4” above concrete at grade.
8. Slope concrete at base for water drainage.

3.6 CONSTRUCTION

A. Connections to Existing Work:

1. Keep all existing systems in operation during the progress of the work.
2. Provide temporary connections, where necessary to maintain continuous operation until the new systems and equipment are ready for operation.
3. Provide all necessary alterations, cuttings, fitting, etc. of existing work to make satisfactory connections between the new and existing work.
4. Leave the complete work in a finished and workmanlike condition.
5. Relocate existing equipment, conduits, wiring, etc. required. Make changes to existing work as may be required.

B. Interface with Other Work:

1. Mechanical and Plumbing Division Equipment and Systems:
   a. Provide the following for equipment furnished and/or installed under mechanical/plumbing Divisions, unless specifically noted otherwise:
   b. Line voltage power wiring connections to equipment such as motors, AHU’s, heaters, etc.
   c. Disconnect means per NEC.

d. Manual or automatic starting contactors, starters, switches, etc.
e. Furnish duct smoke detectors and sampling tubes. Install detectors into bases and make all wiring connections (mechanical Division to install sampling tubes into ductwork).
f. Provide power to all motor operated smoke dampers furnished and installed under other Divisions. Coordinate control operation through fire alarm duct detectors, per Section “Fire Detection and Alarm”.
g. Mounting and connection of starters, speed controls, variable frequency drives and other such equipment furnished by mechanical Division.
h. Low voltage wiring between transformers and plumbing fixtures (faucets, toilets, urinals, etc.) for automatic controls, or line voltage wiring to fixtures, as required by equipment furnished under mechanical Divisions.

2. All electrical work performed under mechanical and/or plumbing Divisions shall be provided in accordance with electrical specification Divisions.
   a. Work performed/provided by mechanical Division shall include the following, unless specifically noted otherwise:
   b. All low voltage and line voltage control wiring including conduits, wiring, branch circuit breakers, etc.
   c. BMS or ATC system wiring and connections.
   d. Line voltage connections to all motor operated dampers, automatic valves, etc.
   e. Line voltage thermostats and associated wiring.
   f. All relays, contacts and other control equipment required for operation of mechanical Division equipment.
   g. Fuses within equipment, switches, control panels, etc. furnished from the factory with the equipment.
   h. Installation of duct smoke detector sampling tubes. Tubes furnished under Section “Fire Detection and Alarm”.
3. It is the intent to provide a complete and operational system. The work between mechanical and electrical Divisions is complementary and is meant to produce a single and operating system. Contractor shall make its own determination as to the distribution of responsibility among the various trades.
4. Equipment specified in other Divisions: Provide the following for equipment furnished and/or installed under Divisions, unless specifically noted otherwise:
   a. Kitchen, kitchenette, coffee or break room equipment and appliances: Provide all rough-ins, outlets, and/or hardwired connections.
   b. Elevators: Provide all power and low voltage rough-ins and connections to elevators and associated equipment, including:
      1) Elevator controller(s)
      2) Cab lights
      3) Fire alarm connections for recall and/or shunt trip operations.
   c. Televisions and flat screen monitors: Provide power outlets and low voltage wiring backbox/conduit to all wall or ceiling mounted devices.

C. Routing of Electrical Feeds to Roof Mounted Equipment:

1. Conduit routing to roof mounted equipment shall be made to minimize the amount of conduit exposed above the roof.
2. Route conduit from building interior within roof curbs, where possible.
3. For condensing units and similar equipment, route conduit with refrigerant lines, using common penetrations through roof, coordinated with piping.
4. Where conduit must be run horizontally on roof surface, follow other piping, refrigerant lines, etc. Provide blocking, etc. to support conduit at regular intervals, per NEC. Secure conduit to blocks, supports, etc. to prevent movement.

D. Penetration of Waterproof Construction:

1. Minimize penetration of roofs, exterior walls and interior waterproof construction.
2. Provide necessary curbs, sleeves, shields, flashing, fittings and caulking to make the penetrations watertight.
3. All penetrations shall comply with roof manufacturer's recommended materials and methods.

E. Penetration of Fire Rated Construction:

1. Seal all in and around conduits and other electrical materials penetrating or creating openings in fire-rated, fire resistant or fire-stopped walls, ceilings, partitions and floors.

3.7 DEMOLITION

A. Remove and dispose of all existing materials not required for re-use or re-installation.

B. Deliver on the premises, where directed, existing material and equipment which is to be salvaged and remain property of Owner.

C. All other materials removed shall become the property of the Contractor and shall be removed from the premises.

D. Remove conduit, hangers, supports, etc. to a point below the finished floors or behind finished walls and cap. Cut such items flush with masonry surfaces.

E. Remove wiring and conduit back to source panelboard or switch, or to last remaining device on the circuit. Remove conduit, hangers, supports, etc. unless otherwise noted. Conduit may remain to be reused for new work provided it is of the specified size and type and in condition acceptable to Architect.

F. Any conduit abandoned in concrete slabs, walls, or other inaccessible locations shall be left with a nylon pull wire. Ends shall be capped with push plugs for future use.

G. Abandoned Wiring & Cables: Remove all abandoned line voltage and low voltage cabling and wiring from the project scope area (including above ceilings and below access floors) per NEC requirements. This shall include all control wiring, IT/telecomm, security, video, power, lighting and any other electrical systems where the wiring is no longer in use. Removal shall include wiring and cables abandoned under this project, and those previously abandoned under prior construction projects.

H. Outdoor/Exterior Demolition Work:

1. If cable cannot be removed due to collapsed duct, etc., cut cable at conduit entrance at each end and tag cable ends as "Abandoned Cable, Collapsed Duct" or similar reason.
2. Remove outdoor pad-mounted gear, including concrete pads, ducts, etc. down to 48" below final grade.
3. Remove overhead lines, poles, lights, etc. including service drops or laterals, conduit stubups, cable, pole base foundations and hardware.
4. Remove and/or relocate all lighting, poles, wires, conduits, base foundations, etc. associated with roads and fences being demolished or affected by such work.

3.8 RE-INSTALLATION

A. Where equipment is to be removed, and relocated or re-installed, provide careful removal of all items.

B. Temporarily store all materials and equipment, which are to be re-installed. Protect from damage. Replace any items damaged during removal, storage or re-installation.

C. Notify Owner immediately of any damaged or non-functioning equipment prior to removal or disconnecting. Document in writing or with photographs. Replace any damaged items for which Owner was not notified, at no cost to Owner.

D. Where outlets, panelboards, loadcenters, or other devices and equipment are noted as being relocated or installed in a new location, new mounting height, etc., provide all required modifications to raceways, backboxes, wiring, mounting, supports, etc. and provide pullboxes, splice boxes, etc. as required for the modifications and/or relocation.

3.9 REPAIR/RESTORATION

A. Restore all finishes, equipment and surfaces to original condition, where affected by the work. Provide the following, as applicable:

1. Replace damaged ceiling tiles.
2. Replace ceiling tiles where removal has left holes or cuts in original tiles.
3. Patch, repair and repaint all walls and surfaces cut, penetrated or otherwise disturbed by the work.
4. Patch holes and penetrations in masonry and plaster.
5. Provide suitable coverplates for all recessed backboxes of equipment removed and not covered by new devices.
6. Provide larger trim or cover plates for new devices, where old backboxes, holes, etc. are not concealed by new work.
7. Patch finished surfaces and building components using new materials matching existing materials and experienced Installers qualified with the materials and methods required for the surface and building components being patched.

B. Disturbance of Existing Fire Proofing:

1. Where work of this contract causes disturbance, damage or removal of any existing fire proofing material, the contractor shall restore the original fireproofing after work is completed. Fire proofing shall be as specified in another section of the contract specifications or shall match the existing conditions.

3.10 FIELD QUALITY CONTROL

A. General:

1. Provide all circuits free from ground faults, short circuits and open circuits
2. Perform tests specified or required to demonstrate that the work is installed and operating properly.
3. Where specific tests are required, give proper notice and perform all necessary preliminary tests to assure that the work is complete and ready for final test.
4. Other tests of a specific nature for special equipment shall be as specified under the respective equipment.

B. Inspections:

1. Schedule, pay for (as applicable) and attend all inspections required by the Authorities Having Jurisdiction.
2. Deliver all certificates to the Owner prior to final acceptance of work.
3. Notify Architect in advance of scheduled inspections.
4. An electrical foreman, superintendent or other supervisor shall be in attendance for all scheduled electrical inspections.
5. Schedule preliminary and rough-in inspections in a timely manner. Any work covered prior to any inspection in a manner which, in the inspector's opinion, precludes a complete inspection, shall be uncovered at the installer's cost.
6. Uncover Work to provide for installation of ill-timed Work.
7. Disconnect installed work as specified for testing.

C. Acceptance Testing: Provide for acceptance testing of electrical equipment, as follows, and as required in other electrical Division specification sections.

1. Pay for and schedule all required acceptance testing.
2. Testing shall be by independent electrical testing contractor, licensed and certified by NETA.
3. Testing company shall be independent of installing company (i.e. no subsidiaries).
4. All tests shall be performed in accordance with the National Electrical Testing Association (NETA).
5. Notify Architect and Owner in advance of all testing.
6. Deliver all reports to Architect for approval.
7. Retest all failed equipment after adjustment, repairs, etc.
8. Provide all fuel, labor, etc. required for tests.
9. All costs associated with preparations for actual testing shall be borne by the installer.
10. Provide letter or statement on Testing Agency letterhead attesting to the satisfactory test results and suitability of the equipment to be energized and/or placed into service, as applicable. If testing reveals any problems or marginal results, the letter shall state these.

D. Replacement of Faulty Work or Materials:

1. Replace any equipment, which fails NETA test results at the direction of the Owner. All replaced equipment shall be retested at no cost to Owner.
2. Remove and replace all defective Work or materials.
3. Remove and replace Work not conforming to requirements of the Contract Documents.
4. Materials not installed per recognized standards, manufacturers' instructions, contract documents or design intent shall be removed and replaced when so directed by the Architect, at the Contractor's expense.

E. Project Punchout Inspection: Architect/Engineer will perform punch out reviews and will provide the Contractor with a list of punch list items to be completed before contract close out. Each and every punch list item shall be initialed and dated by the Contractor when the work is complete. The Architect/ Engineer will not perform any punch list verification until all items have been completed, initialed, dated and the list returned to the Architect/Engineer. If any items have been initialed as being completed by the Contractor and the Architect/Engineer determines that the work is not complete, the Architect/Engineer shall be reimbursed by the Contractor at his regular hourly rate for any and all items requiring revisiting of the site by the Architect/Engineer. Reimbursement shall be made by deducting the Architect/Engineer's fee from the Contractor's final

payment.

3.11 ADJUSTING

A. General:

1. Lubricate, clean, adjust and test all equipment and systems in accordance with the manufacturer's instructions prior to initial operation.
2. Do not operate equipment unless proper safety devices and controls are operational.
3. Provide all maintenance and service for equipment, which is operated during construction, and protect the equipment.
4. Provide services of the manufacturer's factory-trained technicians to start up the equipment where required or specified.

3.12 IDENTIFICATION

A. Permanently identify all equipment in accordance with the project nomenclature.

1. Panelboards - identify panel as per contract, voltage, emergency or UPS power, and source panel as applicable.
2. i.e. PANEL RP1
   120/208 VOLTS
   EMERGENCY POWER
   FED FROM PANEL MDP
3. Starters, disconnects - identify fan, pump or load served and source circuit using contract nomenclature.
   i.e. EXHAUST FAN N0. 1
   Circuit RP1-1
4. Miscellaneous controls, terminal boards, etc.
   i.e. FIRE ALARM POWER SUPPLY
   Circuit ELSR-3
5. General purpose receptacles - identify branch circuit panel and circuit number on back of coverplate with permanent marker.

B. Provide manufacturer’s Arc Flash Hazard Warning labels on all electrical switchboards, switchgear, panelboards, MCC’s, meter sockets and meter stacks, industrial control panels, etc. per NEC 110.16.

C. On all service equipment 1200 amps or more, provide a permanent label with the following information:
1. Nominal voltage
2. Available fault current at the service overcurrent protective device(s)
3. The clearing time of service overcurrent protective device(s) based on the available fault current at the service equipment.
4. The date the label was applied.

D. Where Selective Coordination is conducted for elevator OCPD’s provide signage on device enclosure with the following label (per NEC 620.65):

CAUTION:
OVERCURRENT DEVICES IN THIS ENCLOSURE
ARE SELECTIVLY COORDINATED. EQUIVALENT
REPLACEMENT AND TRIP SETTINGS ARE REQUIRED

E. Identify all power conductors via colored insulation, or individual identification of phase

wires with colored electrical tape at each junction box, panel or enclosure where conductors are visible. Color coding as listed below, on all building wiring and feeders:

1. 208/120-V System: As follows:
   a. Phase A: Black.
   b. Phase B: Red.
   c. Phase C: Blue.
   d. Neutral: White.
   e. Ground: Green.
2. 480/277-V System: As follows:
   a. Phase A: Brown.
   b. Phase B: Orange.
   c. Phase C: Yellow.
   d. Neutral: Gray.
   e. Ground: Green.

F. Manhole/Handhole Cable Identification:

1. Identify all individual cables and phases in all handholes and manholes.
   a. Provide stamped stainless steel tags.
   b. Attach with nylon cable ties.
   c. Include feeder or circuit number, phase, etc.

3.13 LOW VOLTAGE TERMINATION IDENTIFICATION

A. Permanently identify all cables, wires, terminal boards, terminal blocks and other equipment in accordance with the manufacturer’s shop drawings or product data.

B. Identify all control cables and wires:

1. All indoor locations:
   a. Length to permit a minimum of 2-3 revolutions around cable or wire.

C. Identification shall be applied to both ends of all control cables, wires, etc., within 2 inches of termination. Marking pens, embossed plastic tape markers or other temporary methods will not be acceptable.

3.14 EQUIPMENT MOUNTING

A. Disconnects & Control Equipment:

1. In sight of equipment served, with operating handle at 48-54" AFF.
2. As close as practical to motor, etc.
3. For large on-grade or roof mounted equipment, (i.e. chillers, ACU’s, etc.), mount to equipment housing or frames.

B. Allow for proper clearance of electrical items and equipment served.

3.15 DEMONSTRATION

A. Provide for equipment manufacturers' established representatives to demonstrate to Owner, the correct operation, safety, adjustments and maintenance of all electrical equipment and systems under this contract.

END OF SECTION

SECTION 26 05 19

LOW VOLTAGE ELECTRICAL POWER CONDUCTORS & CABLES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Building wires and conductors.
2. Cables and cable assemblies.
3. Splices and connectors.
4. Cord reels.
5. Fabricated drop cord assemblies.
6. Mineral Insulated Cable.
7. Acceptance testing of conductors, feeders, etc.
8. Load balancing.

B. Related Sections:

1. Section “Common Work Results for Electrical.”
2. Section “Grounding & Bonding for Electrical Systems” for coordination with grounding equipment and attachments.
3. Section “Raceways and Boxes for Electrical Systems.”

1.3 REFERENCES

A. American Society for Testing and Materials (ASTM):

1.	ASTM B3	Soft or Annealed Copper Wire
2.	ASTM B8	Concentric Lay Stranded Copper Conductors
3.	ASTM B174	Standard Specification for Bunch-Stranded Copper Conductors for Electrical Conductors
4.	ASTM B496	Standard Specification for Compact Round Concentric-Lay-Stranded Copper Conductors
5.	ASTM B787	Standard Specification for 19 Wire Combination Unilay-Stranded Copper Conductors for Subsequent Insulation

B. Underwriters Laboratory (UL):

1.	UL 4	Standard for Armored Cable
2.	UL 44	Standard for Thermoset-Insulated Wires and Cables
3.	UL 62	Standard for Flexible Cord and Cables
4.	UL 83	Thermoplastic-Insulated Wires and Cables
5.	UL 486A	Standard For Wire Connectors and Soldering Lugs for Use With Copper Conductors.
6.	UL 854	Service-Entrance Cables

7.	UL 910	Standard for Test for Flame-Propagation and Smoke-Density Values for Electrical and Optical-Fiber Cables Used in Spaces Transporting Environmental Air
8.	UL 1424	Standard for Cables for Power-Limited Fire-Alarm Circuits
9.	UL 1569	Standard for Metal-Clad Cables
10.	UL 1479	Standard for Fire Tests of Through-Penetration Firestops
11.	UL 1581	Reference Standard for Electrical Wires, Cables, and Flexible Cords

1.4 SUBMITTALS

A. Submittal Requirements of this section:

1. Building wires and conductors.
2. Cables and cable assemblies.

B. Product data, including construction, materials, performance data, etc.

C. Product Test Reports: Certified copies of manufacturer's design and routine factory tests required by the referenced standards.

D. Provide submittal data for each cable or conductor type.

1. To verify specifications have been met/exceeded.
2. Indicate UL listing for all products.

1.5 DELIVERY, STORAGE AND PROTECTION OF EQUIPMENT

A. Packing, Shipping, Handling and Unloading:

1. Deliver wire and cable according to NEMA WC-26, “Binational Wire and Cable Packaging Standard.”

B. Storage and Protection:

1. Store wires and cables out of rain.
2. Protect from physical damage.
3. Guard against nicks and scratches.

PART 2 PRODUCTS

2.1 METAL CLAD CABLE (MC)

A. Type MC metal clad cable for branch circuit applications.

1. Interlocking aluminum or galvanized steel armor.
2. THHN/THWN-2 insulation, 90^{o}C rated dry or wet.
3. Solid Conductors through #10 AWG: Soft or annealed per ASTM B3.
4. Stranded copper conductors for #8 AWG and larger, per ASTM B8 or B787
5. Phase identified conductors.
6. Insulated (green) equipment grounding conductor.
7. Internal, overall, non-metallic tape shield around all conductors.
8. UL 83, 1479, 1569, 1581 listed and tested per UL 2556. .
9. NEC 230, 300, 320, 330, 518, 520, 530, 605 and 645 compliant.

10. AFC MC, MC-Tuff, MC-Lite, or comparable product by Encore Wire, Southwire or Service Wire.

2.2 LUMINARY METAL CLAD CABLE (MC)

A. Type MC metal clad cable with insulated power and control conductors:

1. For use with 0-10V dimming controlled light fixtures, aa applicable.
2. Interlocking aluminum or galvanized steel armor.
3. Identifying blue spiral stripe or other approved markings along armor.
4. Solid copper conductors, white or gray neutral conductor.
5. Insulated (green) equipment grounding conductor.
6. Separate, #16 AWG, TFN-insulated purple/gray or colored control conductors.
7. UL 66, 83, 1479, 1569 listed and tested per UL 2556.
8. NEC 250, 300, 330, 392, 396, 501, 502, 503, 504, 505, 518, 520, 530, 645 and 725 compliant.
9. AFC Luminary Type MC Cables or comparable product by Southwire or Encore.

2.3 FIRE ALARM METAL CLAD CABLE (MC)

A. Type MC metal clad cable with ground conductor:

1. For use on fire alarm system circuits, as required.
2. Interlocking galvanized steel or aluminum armor.
3. Continuous red identifying stripe or other approved markings.
4. Non-shielded or shielded FPLP, twisted pair conductors, as required by fire alarm manufacturer for application.
5. Minimum #16 AWG, TFN insulated, solid copper conductors.
6. Fire resistant and low smoke per NFPA 262.
7. UL Listed Fire Alarm Cable
8. Rated for use in plenums.
9. UL Listed for cable trays.
10. Rated for through penetrations of 1, 2 and 3-hour firewalls per UL 1479.
11. UL 62, 83, 910, 1424, 1569, 1581 listed and tested per UL 2556.
12. NEC 300.21, 330, 518, 530, 645, 725, 760 compliant.
13. AFC Type MC Fire Alarm/Control Cable or comparable product by Southwire, Encore, or Windy City Wire.

2.4 600 VOLT BUILDING WIRE

A. Copper Building Wire:

1. UL 44, 83 and 854 Listed, 600 volt, 90^{o}C:
2. All conductor sizes indicated are based on copper conductors.
3. Copper, stranded for #8 AWG, and larger.
   a. Concentric per ASTM B3, B8, B787.
   b. Compact round per ASTM B496.
4. #12 AWG minimum conductor size.
5. Thermoplastic Insulation:
   a. Interior #8 and smaller: THWN-2 or THHN
   b. Interior #6 and larger: THWN-2 or THW-2
   c. All exterior wiring: THWN-2 or THW-2
6. Provide wires as manufactured by Pirelli or comparable product by Service Wire Corp, Okonite Company, Encore Wire, Southwire, Carol Cable, OmniCable, or

Regency.

2.5 SPLICES & CONNECTORS

A. Splices & Connectors for copper conductors:

1. Dry locations:
   a. #10 AWG and smaller: Insulated, solderless pressure type.
   b. #8 AWG and larger: Hydraulic pressure indentation type, Burndy "Hy-dent", or comparable product by T&B.
2. In handholes, manholes and direct buried locations:
   a. Silicone filled wire-nuts (King, or equal).
   b. Compound filled splice or connectors.
   c. Suitable for immersion in water.

B. Splices & Connectors for aluminum conductors:

1. All locations: Use only with UL Listed bolted pressure or compression type connectors.
   a. UL Listed, marked AL7CU or AL9CU per UL 486B.
   b. Use with oxide inhibiting compound.
   c. Use aluminum alloy hardware per ANSI requirements.

2.6 UNDERGROUND LIGHTING FEEDER TAPS & CONNECTORS

A. Feeder Tap Connection for tapping underground copper conductors:

1. General Construction:
   a. 3:1 heat-shrink tubing, ANSI C119-1 Sealed Insulated Underground Connector Systems Rated 600 Volts.
   b. Cross-linked polyolefin tubing, 600V insulation.
   c. Flame retardant per IEEE 383, “Standard for Type Test of Class 1E Electric Cables, Field Splices, and Connections,” and ICEA S-19-81.
   d. Hot melt adhesive to form watertight seal.
2. Straight Splice: To splice underground feeder with no reduction in conductor sizes:
   a. Hydraulic crimp sleeve, Burndy or equal.
   b. Heat shrink splice kit, Raychem WCSM Tubing:
3. Wye-Splice: To split underground feeder with no reduction in conductor sizes:
   a. Hydraulic crimp sleeve to match conductors, Burndy or T&B..
   b. Heat shrink splice kit, Raychem CRSM-CT Cable Tap Splice Kit, or comparable product by 3M or Ideal.
4. Tap-Splice: To splice underground feeder with no reduction in through-conductor size and smaller tap conductor:
   a. Hydraulic crimp sleeve to match main and tap conductors, Burndy or equal.
   b. Heat shrink splice kit, Raychem CRSM-CT Cable Tap Splice Kit or comparable product by 3M or Ideal.

2.7 LOW VOLTAGE CABLING

A. Cables for low voltage systems shall be as specified in other sections. If not specified, cables shall be per system manufacturer’s recommendations.

B. All low voltage cabling installed on this project shall be UL Listed, plenum rated cable, unless installed in metal conduit.

2.8 FLEXIBLE POWER CORDS

A. Flexible power cords for equipment drops in kitchens, labs and/or manufacturing areas:

1. EDPM insulated stranded bare copper per ASTM B174.
2. Non-hygroscopic fillers.
3. Yellow jacket impervious to oils, water, acids, sunlight, etc.; ozone, cut and abrasion resistant. Jacket shall bear manufacturer's name, cable size and rating, etc. along the entire length with permanent printing.
4. UL Listed, type SOOW-A (600V) or SJOOW-A (300V).
5. Carol Super VuTron III, Royal 5-Crown Powerflex 105 Plus, American Mustang.

PART 3 EXECUTION

3.1 APPLICATION

A. Service Entrance:

1. Type XHHW-2, THW-2 or THWN-2, copper conductor, in raceway.

B. Feeders:

1. Type THW-2, THHN/THWN-2, XHHW-2 copper conductor, in raceway.
2. Type MC, multi-conductor copper, 90C insulation, interlocked steel or aluminum armor sheath.

C. Emergency System Feeders & Engine Start Wiring Circuits (from Rooftop, Indoor or Outdoor Generators to Emergency Equipment Room or ATS's):
1. Within Generator Room: THW/THWN-2 or RHH/RHW-2 copper conductors, 90C insulation in EMT conduit
2. Below Slab or Below Grade in Conduit: THW/THWN-2 or RHH/RHW-2 copper conductors, 90C insulation in PVC or RGS conduit.

D. Branch Circuits:

1. Type THHN/THWN-2, copper conductor, in raceway.
2. Type MC cable, copper conductor, 90C insulation.

E. Fire Alarm Circuits:

1. Type THHN/THWN-2, copper conductor, in raceway.
2. Type MC Fire Alarm cable, copper conductor, 90C insulation.

F. Class 1 Control Circuits:

1. Type THHN/THWN-2, copper conductor, in raceway.

G. Class 2 Control Circuits:

1. Power-limited cable, concealed in building finishes.

2. Type THHN/THWN-2, copper conductor, in raceway.
3. Type MC cable, copper conductors.

3.2 INSTALLATION

A. Install wires and cables as indicated, according to manufacturer's written instructions and the NECA “Standard of Installation.”

B. Remove existing wire from raceways before pulling in new wire and cable.

C. Pull conductors into raceway simultaneously where more than one is being installed in same raceway.

1. Use pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation.
2. Use pulling means, including fish tape, cable, rope, and basket-weave wire/cable grips that will not damage cables or raceway.

D. Install exposed cable, parallel and perpendicular to surfaces or exposed structural members, and follow surface contours where possible.

E. Conductor Splices: Keep to minimum.

1. Install splices and taps that possess equivalent or better mechanical strength and insulation ratings than conductors being spliced.
2. Use splice and tap connectors that are compatible with conductor material.

F. Terminations:

1. Terminate all conductors on distribution or utilization equipment as indicated.
2. Strip insulation per manufacturers’ instructions.
3. Where equipment is not furnished with manufacturer’s lugs, provide properly rated and sized lugs.
4. Where conductors have been oversized due to voltage drop or other requirements and cannot be accommodated under the standard lugs, contractor shall provide larger lugs to fit the conductors.
5. If lugs are not available to terminate the oversized conductors, contractor shall provide in-line (straight) splices at an approved location as close to the termination lugs as possible. Conductor size shall be reduced at the splice to the maximum size which the lug can accommodate.
6. In no case shall the conductors be reduced to a size rated less than the feeder or circuit overcurrent protection.
7. Removal of individual conductor strands is not permitted.
8. Where feeders contain conductor quantities which exceed the available lugs, contractor shall provide larger lugs to accommodate the additional conductors.
9. If lugs are not available the installed conductor quantity, contractor shall provide splices at an approved location (external to the equipment), but as close to the termination lugs as possible. Conductor quantities shall be reduced at the splice to the maximum number which the lug can accommodate.

G. Wiring at Outlets: Install with at least 12 inches of slack conductor at each outlet.

H. Connect outlets and components to wiring and to ground as indicated and instructed by manufacturer. Tighten connectors and terminals, including screws and bolts, per

manufacturer's published torque values or per UL 486A.

I. Use of Aluminum Conductors:

1. Not Permitted

J. AC & MC Cable Installation Requirements:

1. Installed concealed in finished areas.
2. Do not expose, except for final connections to modular furniture.
3. Group all AC/MC cables running together in bundles with nylon cable ties.
4. Route bundles neatly through ceiling cavities.
5. In high ceiling, or large plenum areas, install all AC/MC cables in groups, tight to underside of deck, within steel joist webbing.
6. Avoid constant changes in direction and elevation of bundles.
7. Install perpendicular and parallel to column lines, except for final separation from bundles.
8. Support bundles at regular intervals, per NEC, independent from ceiling hanger wires.
9. Provide adequate clearance above accessible ceiling tiles, minimum of 18."
10. Where circuits exit panelboards not located in electrical rooms or closets, conductors shall be installed in EMT conduit to a wire trough above the panel and finished ceiling, in an accessible location. AC/MC cable shall then be permitted to extend to the branch circuit devices.
11. Where circuits exit panelboards located in electrical rooms or closets, conductors shall be installed in EMT conduit to a wire trough outside the electric room, above the finished ceiling in an accessible location. AC/MC cable shall then be permitted to extend to the branch circuit devices.

3.3 CONSTRUCTION

A. Generators, motors, vibrating or rotating equipment shall be stranded copper for all sizes. Solid wire not permitted.

3.4 FIELD QUALITY CONTROL

A. General:

1. Before making tests, complete all connections at panels, fixtures and other equipment.
2. Install fuses and have all wiring continuous from service equipment to utilization outlets.
3. Correct all undesirable ground, open and short circuit conditions.
4. Provide source of temporary power for making tests if normal building power is not available at the time.

B. Acceptance Testing: Take and record the following readings on systems 600 volts and below:

1. Provide megger tests of all feeder conductors, including ground conductors for the following:
   a. Service entrance conductors
   b. Panelboard and dry transformer feeder conductors
   c. Emergency system feeders including feeders between generators, ATS',

panels, switchboards.
d. Fire Pump feeders (normal and emergency feeders)

2. Indicate measured Ammeter readings on all phases and neutral of each feeder to indicate balance.
3. Ammeter readings on all phases of each poly-phase motor. Include nameplate full load current of each motor on data sheet.

C. Test Reports:

1. Certify that all overload devices have been set in accordance with data shown on the drawings and/or manufacturer's recommended setting.
2. Send final certified test reports and Certifications to Architect and Owner for approval, in accordance with Section “Submittals.”

3.5 ADJUSTING

A. General:

1. Make and perform all adjustments after building distribution system and all branch circuits are installed and operating.
2. Make all ammeter measurements during regular working hours, when all personnel and equipment are working, to represent typical building conditions.

B. Feeder Balancing:

1. Make adjustments to branch circuit connections within branch circuit panelboards. Balance the load between each phase, as practicable.
2. After branch panels are balanced, perform balancing of phase loads on distribution panels and switchboards.
3. Report ammeter readings before and after adjustments for each panel or switchboard.

END OF SECTION

SECTION 26 05 26

GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Solid grounding of electrical systems and equipment.
2. Basic requirements for grounding for protection of life, equipment, circuits, and systems.
3. Specialized grounding systems for specific installations.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Section “Underground Ducts and Raceways for Electrical.”
2. Section “Lightning Protection For Structures” for grounding, bonding and interconnection of components and systems.
3. Section “Fire Detection and Alarm.”
4. Section “Elevators, Escalators and Materials Handling” for bonding and grounding requirements.
5. Section “Common Work Results for Electrical.”
6. Section “Vibration & Seismic Controls for Electrical Systems” for special project conditions, supporting products and requirements.
7. Section “Low Voltage Electrical Power Conductors and Cables” for grounding conductors and attachments.
8. Section “Packaged Generator Assemblies” for grounding, bonding and interconnection of generator and frames.
9. Section “Low Voltage Electrical Distribution” for grounding, bonding and interconnection of 600V class distribution equipment.
10. Section “Low Voltage Transformers” for grounding and bonding of equipment.
11. Section “Transfer Switches” for grounding, bonding and interconnection of neutral conductors within transfer switches.
12. Section “Structured Cabling” for grounding, bonding and interconnection of voice/data components and systems.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. Ground Rods.
2. Exothermic Weld materials.
3. Grounding/bonding clamps.
4. Main Electrical Grounding bus bars.
5. Telecomm MDF and IDF ground bus bars.

1.4 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

B. Installation Quality: In accordance with recognized trade organizations and standards.

1. NFPA 70, “National Electrical Code.”
2. UL 467, “Grounding & Bonding Equipment.”
3. IEEE.
4. ANSI/EIA/TIA 607, “Commercial Building Grounding and Bonding Requirements for Telecommunications.”

C. Conform to requirements of local power company, relating to grounding of utility company transformer pads.

1.5 SEQUENCING

A. General Sequencing:

1. Install all subsurface grounding equipment after completion of grading and excavations to avoid disturbance of components.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. A.B. Chance Co.
2. Cooper Power Systems
3. O-Z/Gedney Co.
4. Erico Cadweld
5. Harger

2.2 GROUNDING AND BONDING PRODUCTS

A. Products: Of types indicated and of sizes and ratings to comply with NEC. Where types, sizes, ratings, and quantities indicated are in excess of NEC requirements, the more stringent requirements and the greater size, rating, and quantity indications govern.

B. Conductor Materials: Copper.

2.3 WIRE AND CABLE CONDUCTORS

A. General: Comply with Section “Low Voltage Power Conductors and Cables.” Conform to NEC, except as otherwise indicated, for conductor properties, including stranding.

B. Grounding Electrode Conductor: Stranded cable.

C. Insulated Ground Wire:

1. Minimum sizes per NEC or larger as indicated.
2. Quantities and sizes as per drawings.
3. Green insulation.

D. Bare Ground Wires:

1. For equipment bonding jumpers, equipment enclosures to the ground bus or lug, bonding conduit grounding fitting, and elsewhere as required.
2. # 6 AWG minimum for bonding jumpers.
3. Solid Conductors: Soft or annealed per ASTM B3, “Soft or Annealed Copper Wire.”
4. Stranded copper per ASTM B8, “Concentric Lay Stranded Copper Conductors.”

2.4 MISCELLANEOUS CONDUCTORS

A. Ground Bus: Bare annealed copper bars of rectangular cross section.

B. Braided Bonding Jumpers: Copper tape, braided No. 30 gauge bare copper wire, terminated with copper ferrules.

C. Bonding Strap Conductor/Connectors: Soft copper, 0.05 inch thick and 2 inches wide, except as indicated.

2.5 GROUNDING ELECTRODE SYSTEM MAIN GROUND BUS BAR

A. Bus bar shall serve as the main grounding point for the grounding electrode system, and shall provide a visible connection point for all interconnected grounding and bonding conductors in main electrical room.

1. Bare annealed copper bars of rectangular cross section, 1/4" thick x 2" H x 18" L.
   a. Pre-drilled for single and double-hole, solderless lug connectors.
2. Insulated standoff mounting brackets with 1-1/2" insulators and 1" offset stainless steel bolts for rigid support.
3. Erico, or comparable product by Harger or Burndy.

2.6 TELECOMM MAIN GROUND BUS BAR (TMGB)

A. TMGB shall serves as the main grounding point for incoming telephone/data service(s) and/or building telecomm system:

1. UL467 Listed.
2. Tinned, plated annealed copper bars of rectangular cross section, dimensions as noted below.
3. Pre-drilled per BICSI with the following holes for bolted 1-hole solderless lug connections, as noted below.
1. 1/4" thick x 4" H x 20" L with 27 pair of 5/16” and 3 pair of 7/16” holes.
2. Insulated standoff mounting brackets with 1 1/2" insulators and 1" offset stainless steel bolts for rigid support.
3. Erico Eritech #TMGB-A**L**PT series, or comparable product by Harger or Burndy.

2.7 TELECOMM GROUNDING BUS BAR (TGB)

A. TGB shall serve as the grounding point within each telephone, data, fiber or patch room

or closet, or other similar areas serving as IDF points.

1. UL467 Listed.
2. Tinned, plated annealed copper bars of rectangular cross section, dimensions as noted below.
3. Pre-drilled per BICSI with the following holes for bolted 1-hole, solderless lug connections, as noted below.
4. 1/4" thick x 2" H x 18" L with 10 pair of 5/16” and 3 pair of 7/16” holes.
5. Insulated standoff mounting brackets with 1 1/2" insulators and 1" offset stainless steel bolts for rigid support.
6. Erico Eritech #TGB-A**L**PT series, or comparable product by Harger or Burndy.

2.8 CONNECTOR PRODUCTS

A. General: Listed and labeled as grounding connectors for the materials used.

B. Pressure Connectors: High-conductivity-plated units.

C. Bolted Clamps: Heavy-duty units listed for the application.

D. Exothermic Welded Connections: Provided in kit form and selected for the specific types, sizes, and combinations of conductors and other items to be connected.

2.9 GROUNDING ELECTRODES

A. Ground Rods:

1. One piece, copper-clad steel with high-strength steel core and electrolytic-grade copper outer sheath, molten welded to core.
2. Size: ¾ inch by 10 feet.

2.10 FLEXIBLE BONDING STRAPS

A. Flexible grounding/bonding straps for water meter jumpers, raised floor bonding, etc.

1. Flexible, tinned, pure copper braid.
2. Unplated, seamless pure copper rectangular ferrules at each end.
3. Burndy Type B, or equal.

2.11 PERIMETER & SECURITY FENCE GROUNDING CLAMPS

A. Provide grounding clamps at fence upright posts, per drawings.

B. Clamp Construction:

1. Made of tinned electrolytic copper
2. Stainless steel hardware
3. Ground cable connections to be field-welded via exothermic cadweld process.

C. Erico Series A23##-XL Fence Post and Gate Grounding clamps, or approved equal.

2.12 FENCE POST TO GATE GROUNDING CLAMPS

A. Provide factory fabricated fence gate to post grounding clamp assemblies at every swinging gate leaf in the perimeter and security fence system.

B. Clamp Construction:

1. Made of tinned electrolytic copper
2. Stainless steel hardware
3. Two ground clamps, for clamping moveable gate leaf and adjacent fixed fence post.
4. Ground clamps joined by #4/0 AWG flexible bonding conductor, cadwelded to each post, with minimum 24” long slack loop to allow full gate travel without binding or stress on connections.
5. Ground cable connections to be field-welded via exothermic cadweld process to tab on fixed post clamp.

C. Erico Series A239##2S-XL Factory Fabircated Fence Post and Gate Grounding Clamp Assembly, or approved equal.

PART 3 EXECUTION

3.1 APPLICATION

A. Equipment Grounding Conductor Application: Comply with NEC Article 250, “Grounding” for sizes and quantities of equipment grounding conductors, except where larger sizes or more conductors are indicated.

1. Feeders and Branch Circuits: Install separate insulated equipment grounding conductors with circuit conductors. Terminate on panelboard or switchboard grounding bus bar, or on ground lug or bus in equipment enclosure, cabinet, etc. Splicing of equipment grounding conductors is not permitted.
2. Panelboards: All equipment grounding conductors shall terminate on a single ground busbar within the equipment enclosure. Bus bar shall be bonded to enclosure.
3. Busways and Busducts:
   a. Feeder: Provide separate insulated equipment ground conductor from the ground bus in the switchgear, switchboard, or distribution panel to the equipment ground bar terminal on the busway.
   b. Bus Taps or Circuits: Provide separate insulated equipment ground conductor from the ground bus in busway, installed in conduit with circuit conductors.
4. Nonmetallic Raceways: Provide insulated equipment ground conductor in raceways with each branch circuit unless raceway is designated for telephone or data cables.
5. Air Duct Equipment Circuits: Provide insulated equipment grounding conductor to duct-mounted electrical devices operating at 120VAC and above, including humidifiers, air cleaners, heaters, etc. Bond the grounding conductor to each such unit and to the air duct.
6. Heat Tracing and Snow Melting Cables: Provide separate insulated equipment ground conductor for each electric heat tracing or snow melting cable. Bond this conductor to cable connection box, and to piping or other connected metallic equipment or components. Provide ground fault protection for heat tracing and snow melting circuits, per NEC.
7. Water Heaters: Provide separate insulated equipment ground conductor to each electric water heater. Bond grounding conductor to water heater and connected

piping.

B. Underground Conductors: Bare, stranded copper except as otherwise indicated.

C. Telecommunications: Provide ground at all closets, server or IS rooms, MDF, IDF and equipment frame locations per ANSI EIA/TIA-607, “Commercial Building Grounding and Bonding Requirements for Telecommunications” and as specified herein.

1. Provide grounding system which bonds all remote equipment rooms, racks, cabinets and/or frames to a ground bar in the main equipment room per ANSI.
2. Main telephone/data service room or MDF room:
   a. Provide TMGB with insulated, standoff brackets. Mount 18" AFF.
   b. Bond TMGB via #3/0 AWG stranded, insulated copper wire to the following:
   c. Building structural steel at nearest vertical column or beam via exothermic weld.
   d. Electrical system grounding electrode system directly to the main switchboard or panelboard ground bus, if accessible.
   e. Use hydraulic crimped lugs at TMGB and electrical ground bus connections.
   f. Each radial Telephone Bonding Backbone conductor shall connect directly to the TMGB.
3. All IDF and similar telephone/data room locations:
   a. Provide TGB with insulated, standoff brackets. Mount 18" AFF.
   b. Bond directly to the TMGB via #3/0 AWG TBB conductor, following the same route as the backbone or riser cables.
   c. Provide additional bond to nearest vertical steel column via exothermic weld.
4. Provide a Telephone Bonding Backbone (TBB) conductor to link closet or room TGB’s located remote from the TMGB. The TBB shall consist of the following:
   a. #3/0 AWG stranded, insulated copper wire installed along the same path as the telecomm riser or backbone cables.
   b. Bond directly to the TMGB.
   c. Bond to each TGB in closets or rooms through which the TBB passes.
5. All grounding and bonding conductors shall be stranded copper, with green insulation (or black with green identification at all connection points).
6. All connections to TMGB and TGB’s shall utilize hydraulic crimped copper lugs, with bolted connections to bus bars.
7. All connections to steel columns shall be made with exothermic weld process.
8. Split-bolt connectors are not permitted for any connections.
9. Bonding conductors shall be continuous between connection points. Do not splice bonding conductors.
10. Do not install in metallic conduit. Where physical protection is required, utilize PVC conduit (except in plenums).

D. Metal Lighting Poles: Ground pole to a local driven ground rod and bond to equipment grounding conductor run with supply branch circuit.

E. Lightning Protection System:

1. Bond grounding conductors and grounding conductor conduits to lightning protection down conductors or grounding conductors in compliance with NFPA 780, “Lightning Protection Code.”
2. Common Ground Bonding With Lightning Protection System: Bond electric power

system ground directly to lightning protection system grounding conductor at closest point to electric service grounding electrode. Use bonding conductor sized same as system ground conductor and installed in conduit.

F. Building Structure & Grounding Electrode System Requirements:

1. Provide bonding jumpers to make all sections of building structural steel electrically continuous per NEC Article 250, “Grounding and Bonding.” Connections shall be mechanical or exothermic weld type.
2. Bond building steel to foundation rebar by welding rebar to column, or 500 MCM stranded copper wire with exothermic weld connection to rebar and columns.
3. Provide driven ground electrode (rods). Spacing of multiple rods shall be at least twice the length of each rod.
4. Provide connections to building water services (domestic and fire) via mechanical clamps.
5. Provide UFER Ground (Concrete-encased electrode) at building footing or foundation, as required by NEC Article 250, “Grounding and Bonding.”
   a. Fabricate with minimum of 20 LF of 500MCM bare copper conductor laid lengthwise in excavation for foundation or footings.
   b. Install conductor within 2 inches of the bottom of the concrete.
   c. Where base of foundation is less than 20 feet in length, coil excess conductor at base of foundation.
   d. Bond conductor to reinforcing steel at four locations, minimum.
   e. Extend conductor below grade and connect to building grounding grid or grounding electrode.

G. Dry Transformer Grounding:

1. Ground all transformer components per NEC.
   a. Secondary neutral.
   b. Primary and secondary grounding conductors.
   c. Enclosure.
   d. Electrostatic shield (shielded units).
   e. Bond all together and to building steel per NEC Article 250 “Grounding and Bonding”.
   f. Provide equipment ground conductor in primary feeder. Connect to transformer ground lug or bus.

3.2 INSTALLATION

A. General: Ground electrical systems and equipment in accordance with NEC requirements except where the Drawings or Specifications exceed NEC requirements.

B. Main Electrical Room and Substation Room Main Ground Busbar:

1. Size, location, and arrangement as specified, and as indicated on plans.
2. Space 2 inch from wall and support from wall 18 inches above finished floor, except as otherwise indicated.
3. Install using stainless steel mounting brackets and hardware, and non-conducting insulators.

C. Ground Rods:

1. Locate a minimum of two-rod lengths from each other and at least the same

distance from any other grounding electrode.

2. Interconnect ground rods with bare conductors buried at least 24 inches below grade.
3. Connect bare-cable ground conductors to ground rods by means of exothermic welds except as otherwise indicated.
4. Make connections without damaging the copper coating or exposing the rod steel.
5. Drive rods until tops are 6 inches below finished floor or final grade except as otherwise indicated.

D. Metallic Water Service Pipe:

1. Provide insulated copper ground conductors, sized as indicated, in conduit from the building main service equipment, or the ground bus, to main metallic water service.
2. Connect ground conductors to the main metallic water service pipes by means of ground clamps.
3. Where a dielectric main water fitting is installed, connect the ground conductor to the street side of the fitting. Do not install a grounding jumper around dielectric fittings.
4. Bond the ground conductor conduit to the conductor at each end.

E. Water Meter Jumpers: Provide braided, flexible bonding straps to connect ground clamps on water meter piping to bypass water meters electrically.

F. Route grounding conductors along the shortest and straightest paths possible without obstructing access or placing conductors where they may be subjected to strain, impact, or damage, except as indicated.

G. Perimeter & Security Fence Grounding System:

1. Provide driven ground rods for grounding of the perimeter (interior and exterior fence lines), all site security fences at intervals not to exceed 150 LF, as indicated on the drawings.
2. Provide buried ground conductor from connection point at fence post to driven ground rod or alternate ground point, as specified herein.
3. Provide a minimum of one (1) driven rod at each fence ground location.
4. Interconnect with counterpoise. Provide #4/0 AWG BCSD ground conductor at 24" depth from rods to fence post.
5. Utilize fence grounding clamps, do not weld directly to posts.
6. Exothermic weld all driven rod connections.
7. Drive first fence post grounding rod minimum of 10 LF and maximum of 25LF from the fence post.
8. Should the first rod location encounter sub-grade rock or obstructions, abandoned structures, etc., remove the partially installed rod and re-drive a rod within 25-30 LF of the fence post.
9. All post grounding clamps shall be installed with bolts/hardware facing away from inmate accessible area.
10. Tack weld U-bolt clamp nuts to U-bolt after tightening to prevent removal.
11. Exothermic weld grounding conductor to fence post ground clamp tab specifically designed for such connection. Cadweld shall be inaccessible to inmates.

3.3 CONNECTIONS

A. General: Make connections in such a manner as to minimize possibility of galvanic action or electrolysis. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.

1. Use electroplated or hot-tin-coated materials to assure high conductivity and make contact points closer in order of galvanic series.
2. Make connections with clean bare metal at points of contact.
3. Aluminum to steel connections shall be with stainless steel separators and mechanical clamps.
4. Aluminum to galvanized steel connections shall be with tin-plated copper jumpers and mechanical clamps.
5. Coat and seal connections involving dissimilar details with inert material such as red lead paint to prevent future penetration of moisture to contact surfaces.
6. Aluminum conductors shall have antioxidant coatings at all connections and shall have UL Listed AL-CU lugs as needed.
7. Tighten grounding and bonding connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors" and 486B, "Wire Connectors for Use with Aluminum Conductors."

B. Exothermic Welded Connections:

1. Use for connections to structural steel and for underground connections of conductors and rods.
2. Install at connections to ground rods and plate electrodes.
3. Comply with manufacturer's written recommendations.
4. Re-make any welds that are puffed up or that show convex surfaces indicating improper cleaning.

C. Conductor Terminations:

1. Terminate insulated equipment grounding conductors for feeders and branch circuits with pressure-type grounding lugs.

D. Metallic Raceways:

1. Where metallic raceways terminate at metallic housings without mechanical and electrical connection to the housing, terminate each conduit with a grounding bushing.
2. Connect grounding bushings with a bare grounding conductor to the ground bus in the housing.
3. Bond electrically non-continuous conduits at both entrances and exits with grounding bushings and bare grounding conductors.

E. Compression-Type Connections:

1. Use hydraulic compression tools.
2. Use tools and dies recommended by the manufacturer of the connectors.
3. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on the ground conductor.

F. Moisture Protection:

1. Where insulated ground conductors are connected to ground rods or ground buses, insulate the entire area of the connection and seal against moisture penetration of the insulation and cable.

3.4 PAD-MOUNTED EQUIPMENT GROUNDING

A. Padmounted Transformers and Switchgear:

1. Provide a minimum of two (2) driven rods, installed at opposite corners.
2. Interconnect with #4/0 AWG BCSD counterpoise at 24" depth.
3. Exothermic weld connections.
4. Provide ground conductor from one rods thru PVC conduit sleeve in bottom of pad to equipment ground bus connection.

3.5 UNDERGROUND DISTRIBUTION SYSTEM GROUNDING

A. Manholes & Large Handholes:

1. Provide driven ground rod thru hole in bottom of manhole, close to one wall.
2. Install rod such that 4 inches will extend above the finished floor.
3. Where necessary, install ground rod before the manhole is placed and provide a No. 1/0 bare copper conductor from the ground rod into the manhole through a waterproof sleeve in the manhole wall.
4. Protect rods passing through concrete floor with a double wrapping of pressure-sensitive tape or heat-shrunk insulating sleeve from 2 inches above to 6 inches below the concrete.
5. Seal floor opening with waterproof non-shrink grout.

B. Connections of Manhole/Handhole Components:

1. Connect all exposed metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole to the ground rod or ground conductor.
2. Make connections with minimum No. 4 AWG stranded hard-drawn copper wire.
3. Provide exothermic weld connection to rod.
4. Provide mechanical clamp connections to ladders, racks, etc.
5. Train conductors plumb or level around corners and fasten to manhole walls.
6. Connect to cable armor and/or cable shields by means of tinned terminals soldered to the armor or shield, or as recommended by manufacturer of splicing and termination kits.

C. Grounding System: Ground non-current-carrying metallic items associated with manholes, substations, and pad-mounted equipment by connecting them to bare underground cable and grounding electrodes arranged as indicated.

3.6 REPAIR/RESTORATION

A. Restore all areas or surfaces disturbed by work of this contract, to pre-existing conditions.

1. Restore surface features at areas disturbed by excavation and reestablish original grades except as otherwise indicated.
2. Where sod has been removed, replace it as soon as possible after backfilling is

completed.

3. Restore areas disturbed by trenching, storing of dirt, cable laying, and other Work to their original condition.
4. Include necessary topsoil, fertilizing, liming, seeding, sodding, sprigging, or mulching.

3.7 FIELD QUALITY CONTROL

A. General:

1. Before making tests, complete all connections at panels, fixtures and other equipment.
2. Install fuses and have all wiring continuous from service equipment to utilization outlets.
3. Correct all undesirable ground, open and short circuit conditions.
4. Arrange and pay for the services of a qualified independent electrical testing organization to perform tests described below.

B. Acceptance Testing: Take and record the following readings on applicable systems, as described below:

1. Site Tests:
   a. Provide tests of the completed grounding system using a megohmeter at each location where a maximum ground resistance level is specified.
   b. Measure ground resistance at least 48 hours after any precipitation and without the soil being moistened by any other natural or artificial means.
   c. Tests shall be performed without chemical treatment or other artificial means of reducing natural ground resistance.
   d. Perform test by the Fall of Potential (3-point) method in accordance with IEEE 81 Guide for Measuring Earth Resistivity, Ground Impedance and Earth Surface Potentials of a Grounding System.
2. Ground resistance maximum values shall be as follows:
   a. Building Grounding electrode driven rods:
   b. Rated 500 kVA and less: 10 Ohms
   c. Rated >500 kVA: 5 Ohms
   d. Lightning protection system ground: 5 Ohms
   e. Lighting pole grounds: 15 Ohms
   f. Utility pole arrester & transformer grounds: 10 Ohms.
   g. Emergency generator local ground: 10 Ohms
3. Feeder Equipment Grounding Conductor Tests:
   a. Perform test by the 2-point method to verify impedance in the ground system between installed components, including, but not limited to the following:
      1) Medium Voltage switchgear or transformers and main grounding busbar.
      2) Service switchgear, switchboard, panelboard or transformer and main grounding busbar.
      3) Branch panelboards to feeder source.
      4) Dry transformers to primary feeder source.
      5) Grounding equipment riser(s) (for transformers) from farthest point to point of connection at building main grounding busbar, switchboard ground, or other source connection point.
4. Neutral-Ground Bond Testing:
   a. Test distribution system for presence of neutral-to-ground bonds at

points other than service entrance and/or separately derived sources.

b. Remove permitted N-G bond at point of common coupling, and verify no continuity between neutral and ground systems.
c. Record the measured isolation (megohms) between the neutral and ground systems.
d. Where continuity is found, provide further investigation to locate and remove such bonds.

3.8 ADJUSTING

A. General:

1. Make and perform all adjustments after all building grounding systems are complete.

B. Deficiencies of Service or Building Ground Systems:

1. Where ground resistance exceeds specified values, notify the Architect immediately.
2. Modify the grounding system to reduce resistance values.
3. Provide additional ground rods, interconnected with the others, installed at least 10 feet between rods.
4. Retest ground resistance after modifications.
5. Where values still exceed those specified, the Architect will provide additional direction.

C. Unintentional Bonding of Grounds, Neutrals, etc. of Service or Building Ground Systems:

1. Perform additional testing and measurements to locate the unintentional bonds.
2. Remove unintentional bonds.
3. Retest system(s) to prove desired isolation of systems.

D. Reports:

1. Prepare test reports, certified by the testing organization, of the ground resistance at each test location.
2. Include observations of weather and other phenomena that may affect test results.
3. Indicate measures taken to improve test results.
4. Provide all final measurements of system isolation tests (megohms).

END OF SECTION

SECTION 26 05 33

RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Conduits.
2. Conduit fittings and supports.
3. Wireways.
4. Multi-outlet assemblies.
5. Device and outlet boxes.
6. A/V Wall Connection boxes.
7. Pull and splice boxes.
8. Floor mounted devices.

B. Related Sections: The following sections contain requirements that relate to this Section:

1. Section “Common Work Results for Electrical.”
2. Section “Grounding & Bonding for Electrical Systems” for coordination with grounding equipment and attachments.
3. Section “Low Voltage Electrical Power Conductors and Cables” for conductors to be installed in raceways.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. Conduits.
2. Multi-outlet assemblies.
3. A/V wall connection boxes.
4. Floor mounted devices.

B. Descriptive Data:

1. To verify specifications have been met/exceeded.
2. Indicate UL listing for all products.
3. Manufacturer's specifications, data sheets.
4. Catalog cuts.
5. Dimensional drawings.
6. Capacity ratings.
7. Information required indicating contract compliance.
8. Clearly indicate the exact size or rating proposed.

C. Closeout Submittals: Submit in accordance with the General Conditions and Division 01

requirements.

1.4 DELIVERY, STORAGE AND PROTECTION OF EQUIPMENT

A. Packing, Shipping, Handling and Unloading:

1. Transport and handle all equipment to prevent bending, distortion or damage to products.

B. Storage and Protection:

1. Store all materials out of rain.
2. Protect from physical damage.
3. Guard against nicks and scratches on finished surfaces.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide the named “Basis of Design” manufacturer and model (“Basis of Design” fixtures are indicated on the drawing fixture schedule), or a comparable product of one of the other following named manufacturers:

1. Steel Conduits & Fittings:
   a. Allied Tube & Conduit
   b. American Electric/Steel City
2. Non-Metallic Conduits & Fittings:
   a. Carlon
   b. Cantex
3. Surface raceways & Multi-outlet assemblies:
   a. Wiremold
   b. MonoSystems, Inc.
   c. Hubbell
4. Floor mounted devices:
   a. Wiremold
   b. Hubbell
   c. MonoSystems, Inc.

2.2 METAL CONDUIT AND TUBING

A. Rigid Galvanized Steel Conduit (RGS):

1. ANSI C80.1 Rigid Steel Conduit, Hot dip Galvanized
2. UL 6 Electrical Rigid Metal Conduit - Steel.
3. Meets NEC Article 344, “Rigid Metal Conduit.”
4. Material: Steel heavy-wall, hot dip galvanized inside and outside.
5. Joints: Standard pipe thread; furnished with coupling; shipped with thread protector through 2-inch size.
6. Minimum Size: 3/4 inch.

B. Intermediate Metal Conduit (IMC):

1. ANSI C80.6 Intermediate Metal Conduit - Zinc Coated.

2. UL 1242 Intermediate Metal Conduit.
3. Meets NEC Article 342 Intermediate Metal Conduit.
4. Material: Steel only, intermediate wall thickness, hot dipped galvanized.
5. Joints: Standard Pipe Thread, furnished with coupling, shipped with thread protector through 2-inch size.
6. Minimum Size: 3/4 inch.

C. Electrical Metallic Tubing (EMT):

1. ANSI C80.3 Electrical Metallic Tubing - Zinc Coated.
2. UL 6 Rigid Metal Conduit.
3. Meets NEC Article 358, “Electrical Metallic Tubing.”
4. Material: Steel, thin-wall, electro-galvanized.
5. Minimum Size: 3/4 inch.

D. Flexible Metal Conduit (Greenfield):

1. UL 1 Flexible Metal Conduit.
2. Meets NEC Article 348, “Flexible Metal Conduit.”
3. Material: Electro-galvanized, or zinc-coated steel.
4. Minimum Size: 3/4 inch.

E. Liquid tight Flexible Metal Conduit (Sealtite):

1. UL 360 Liquidtight Flexible Steel Conduit.
2. Meets NEC Article 350, “Liquidtight Flexible Metal Conduit and Liquidtight Flexible Nonmetallic Conduit.”
3. Flexible steel conduit with PVC jacket.
4. Galvanized flexible steel core.
5. Extruded PVC jacket, gray or black.
6. Minimum Size: 3/4 inch.

2.3 NONMETALLIC CONDUIT AND TUBING

A. Rigid Nonmetallic Conduit (RNC):

1. Schedule 40 or 80 PVC.
2. Meeting NEMA publication TC-2, “Electrical Plastic Tubing” (EPT) and “Conduit” (EPC-4 and EPC-80).
3. UL-651 Schedule 40 and 80, “Rigid PVC Conduit.”
4. Material complies with ASTM D 1784, “Standards for PVC compounds and CPVC compounds.”
5. Meets NEC Article 352, “Rigid PVC Conduit.”

2.4 CONDUIT FITTINGS

A. All fittings to match conduit material and to be suitable for the purpose intended. All fittings shall be UL Listed.

B. Hazardous Location seal off fittings:

1. Compound filled, malleable iron.
2. Class & Division as required
3. 40% fill capacity.

4. Listed under UL 886, “Outlet Boxes and Fittings for Use in Hazardous (Classified) Locations”, vertical or horizontal application, as required.
5. Crouse Hinds, OZ Gedney, Killark.

C. Expansion Fittings:

1. Weather tight construction.
2. Copper braid bonding strap & clamps.
3. Crouse Hinds, or equal.

D. RGS/IMC Fittings:

1. Threaded with insulated bushings.
2. Galvanized steel or malleable iron.
3. Double locknuts.
4. Crouse Hinds, Steel City, Bridgeport, or equal.

E. EMT Fittings:

1. Compression type "Concretight" or "Raintight.”
2. Zinc plated steel body and steel nut.
3. Insulated throats.
4. Setscrew fittings not permitted.

F. Sealtite Conduit Fittings:

1. Threaded ferrule, malleable iron compression nut and body.
2. Nylon sealing ring.
3. NEMA FB-1, “Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.”

G. Flexible Metal Conduit/MC Cable Fittings:

1. 360^{o} squeeze type.
2. Malleable iron or cast zinc bodies.
3. Insulated throat.
4. Anti-short bushings

H. PVC Conduit Fittings:

1. Formed PVC, sunlight and UV resistant, UL Listed.
2. Schedule 40 or 80 to match conduit or tubing type and material.
3. Material complies with ASTM D 1784, “Standards for PVC compounds and CPVC compounds.”
4. Meets NEC Article 347, “Rigid Nonmetallic Conduit.”
5. Meeting NEMA publications TC-3, “PVC Fittings for use with Rigid PVC Conduit and Tubing.”
6. Fittings Listed under UL-514B, “Fittings for Cable and Conduit.”
7. Medium voltage underground or sub-slab conduit systems:
   a. Minimum 36” bend radius for all conduit turn-ups into gear or pads.
   b. 25 ft radius, long-sweep bends for all bends and offsets in underground or sub-slab runs.
   c. End bells with smooth, flared ends for all conduits terminating under pad-mounted switchgear, switchboards, transformers, etc.

8. Telecommunication underground or sub-slab conduits:
   a. Minimum 36” bend radius for all 2” and larger conduits.
   b. 25 ft radius, long-sweep bends for all bends and offsets in underground or sub-slab runs.
9. Conduit and elbows with factory belled end.
10. Carlon Plus 40 conduit and fittings, or equal.

2.5 CONDUIT SUPPORTS

A. Single suspended feeder conduit:

1. 1/2" - 2" Conduit: Adjustable hangers with 3/8" rods.
2. > 2" Conduit: Adjustable hangers with 1/2" rods.
3. Kindorf C-149 or C-150, B-line, or equal.

B. Groups of suspended conduits:

1. Steel channels with conduit straps.
2. 1/2" threaded rods, minimum.
3. Kindorf, B-Line, or equal.

C. Flexible metal conduit, MC Cable:

1. UL Listed Caddy Clips, or similar attachment methods.

D. Surface mounted conduit:

1. 1 or 2-hole pipe straps.

2.6 WIREWAYS

A. Material: Sheet metal sized and shaped as indicated.

B. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireway as required for complete system.

C. Wireway Covers: Hinged type, secured with stainless steel screws.

D. Finish: Manufacturer's standard enamel finish, ANSI 49 or 61 gray.

E. NEMA Rating:

1. NEMA 1 for dry, indoor locations.
2. NEMA 3R for outdoor or areas exposed to weather or severe moisture.

2.7 SURFACE RACEWAYS & MULTI-OUTLET ASSEMBLIES

A. General Construction

1. Steel construction, ivory, scratch resistant finish.
2. Two-piece, separable base and coverplate.
3. Complete with entrance junction boxes, wire retainer clips, device brackets, end plates, etc.

B. Divided, 2-compartment metal raceway.

1. Separate power and low voltage compartments.
2. Power outlets of NEMA type and locations per drawings.
3. Duplex RJ-45, snap-in data/voice jacks in LV compartment, where indicated, as specified in Section "Structured Cabling."
4. Metallic device coverplates. Ends cut flush and tight to adjacent raceway cover ends.
5. With manufacturer's precut corners, endplates, and fittings.
6. Wiremold V4000 Series (white finish).

2.8 DEVICE & OUTLET BOXES

A. Indoor boxes - zinc-coated or cadmium plated steel, NEMA OS-1.

B. Wiring device boxes for surface mounting in unfinished spaces:

1. Full-size (4" high) boxes required for all wiring devices (switches, outlets, etc.). 3"x2" switch boxes, handy boxes or other reduced-size boxes are not permitted. One-piece, zinc-coated drawn steel, NEMA OS-1.
2. Square boxes with rounded corners and no sharp, protruding edges.
3. Knockouts on all four sides.
4. Pre-drilled mounting holes, and ground wire screw holes.
5. Raised device coverplates for switches or outlets, as required. T&B RS Series.
6. Thomas & Betts, or equal.

C. Unheated, "damp" and "wet" locations and outdoor locations:

1. NEMA 4 cast-aluminum, cast steel or cast iron.
2. Threaded hubs for surface mounted boxes.
3. "White metal" boxes rated NEMA 4 are not acceptable.
4. NEMA FB 1 Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.

D. Outlet boxes in un-plastered brick or block walls shall be provided with deep square-cut device covers.

E. Surface boxes in Inmate-accessible locations:

1. NEMA 4 cast steel or cast iron.
2. No exposed or accessible knockouts or unused threaded hubs.
3. Threaded hubs for surface mounted boxes. Single or multi-hubs as required.
4. "White metal" boxes rated NEMA 4 are not acceptable.
5. Stainless steel tamper-proof hardware as specified elsewhere.
6. NEMA FB 1 Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.

F. All boxes sized to meet the requirements of the NEC.

G. Provide "stud-to-stud" or "dual box to stud" mounting brackets to insure all adjacent boxes are level. Thomas & Betts, or equal

H. Furnish all boxes with appropriate covers.

I. No sectionalized boxes shall be used.

2.9 FIRE STOP PUTTY PADS FOR ELECTRICAL BOXES

A. Moldable putty or putty pads to be used to seal around device or outlet boxes and/or cable penetrations where installed in fire rated walls, ceilings or floors to maintain fire rating.

B. Description:

1. Intumescent putty for up to 4-hour fire rating.
2. Forms a continuous seal against fire, smoke, and hot gases.
3. Available in bars or preformed pads.
4. Remains pliable and workable for the lifetime of the installation.
5. Acoustically tested.
6. Will not harden over time.

C. STI SpecSeal Putty and Putty Pads, or comparable product by 3M.

2.10 TELECOMMUNICATION OUTLET BOXES

A. Back boxes:

1. Recessed outlets:
   a. 4" x 4" x 2-1/2” deep steel, recessed device box.
   b. Single-gang steel reducer plate (plaster ring).
2. Surface mounted outlets in finished areas:
   a. Single or multi-gang box as required by drawings and application.
   b. NEMA 1 smooth steel construction.
   c. Ivory finish to match surface raceways.
   d. Concealed knockouts for entry of surface raceway.
   e. No visible or open unused knockouts.
   f. Minimum 1 ¾ “ deep.
   g. Wiremold # V5748.
3. Surface mounted outlets in unfinished areas:
   a. Single or multi-gang box as required by drawings and application.
   b. One-piece, zinc-coated drawn steel, NEMA OS-1.
   c. Square boxes with rounded corners and no sharp, protruding edges.
   d. Knockouts on all four sides.
   e. Minimum 1 ¾ “ deep.
   f. Thomas & Betts, or equal.

2.11 JUNCTION AND PULL BOXES

A. Dry locations:

1. 12 gauge galvanized sheet steel minimum.
2. Flat covers secured in position by round head brass or stainless steel 300 grade machine screws.
3. NEMA OS-1, “Sheet Steel Outlet Boxes, Covers and Box Supports.”

B. Exterior and wet locations:

1. Cast aluminum or galvanized cast-iron type.
2. Threaded hubs.
3. Gasketed screw-on cover plates.
4. NEMA FB-1, “Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.”

C. Boxes imbedded in concrete:

1. NEMA 4X PVC.
   a. Glue-in conduit hubs.
   b. Gasketed coverplates.
   c. Sunlight (UV) resistant.

D. Surface boxes in Inmate-accessible locations:

1. NEMA 4 cast steel or cast iron.
2. No exposed or accessible knockouts or unused threaded hubs.
3. Threaded hubs for surface mounted boxes. Single or multi-hubs as required.
4. "White metal" boxes rated NEMA 4 are not acceptable.
5. Stainless steel tamper-proof hardware as specified elsewhere.
6. NEMA FB 1 Fittings, Cast Metal Boxes, and Conduit Bodies for Conduit and Cable Assemblies.

E. All boxes sized to meet the requirements of the NEC.

2.12 RECESSED A/V WALL BOXES

A. Provide recessed wall boxes for concealed power and low voltage cabling connections to wall mounted flat panel TV’s, flat screens, etc., where indicated.

1. Recessed main body, designed to fit within 2x4 stud wall construction.
2. Top and bottom concentric conduit knockouts for (1) ¾” to 1-1/4” and (1) 1-1/4” to 2”.
3. Feed-thru side tunnels for passing power or LV cabling thru housing.
4. Removable dividers for separating power and low voltage devices/cabling.
5. Removable interior device module designed to accept two (2) standard 2x4 wiring devices and coverplates.
6. Wiring device locations shall accept power, A/V, data or other connectors using standard 2x4 box mounting. No proprietary wiring devices or mountings.
7. Front paintable trim ring, and decorative cover to conceal devices/plugs, with room to pass cables out to flat panel.
8. U.L. Listed.
9. Wiring devices, as specified elsewhere.
10. Wiremold Evolution Series (#EFSB2) wall boxes, or comparable product.

2.13 FLOOR MOUNTED DEVICES (POKE-THRU TYPE)

A. Poke Through Floor Outlets – 4” Diameter, 2-gang devices.:

1. Mounted in 4" core drilled hole in slab.
2. Recessed device mounting below hinged cover.
3. Capacity for 2-gangs of devices.
4. Fitted with duplex 20 amp power receptacles, flush service head.
5. Low voltage ports with Cat 5E RJ45 jacks, per IT design drawings.

6. Integral fire and smoke barrier – 2-hour rated.
7. Separate low voltage and power raceways.
8. Flush hinged metal cover. Operable without tools.
9. Slide plates to allow cable passage with cover closed.
10. Satin nickel, satin brass or brushed aluminum finish to be selected by architect.
11. ADA compliant.
12. LeGrande Wiremold Evolution 4” Series Poke-Thru, or approved equal.

2.14 FLUSH MULTI-SERVICE FLOOR BOXES

A. Complete in-floor multi-service box consisting of floor box housing, flush removable cover, and wiring devices, as specified, all fittings, materials and labor.

1. Adjustable leveling and placement during rough in to accommodate structural and architectural elements, and other equipment.

B. Construction:

1. Galvanized steel per ASTM 525 G-60.
2. Concrete-tight for in-floor use.
3. Hinged access lid with grommeted cable ports to allow lid closure with receptacles in use.
4. UL scrubwater compliant.
5. ADA compliant.
6. Adjustable legs for leveling and adjustment prior to pour.
7. Knockouts for conduit entry and feed through use.
8. 4 compartment box, individually sectionalized.
9. 2 - Duplex 5-20R power receptacles.
10. 2 - Duplex data RJ45 jacks, Category 5E.
11. UL Listed, with separation of power and low voltage.
12. Completely flush, rectangular, brass cover with hinged access lids. Floor covering trim, as required.

C. Wiremold RFB4 Multi-service steel recessed floor boxes or MonoSystems Concrete Floor Boxes, or comparable product.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive raceways, boxes, enclosures, and cabinets for compliance with installation tolerances and other conditions affecting performance of the raceway system. Do not proceed with installation until unsatisfactory conditions have been corrected.

B. Examine areas to receive cable trays. Make adjustments to elevations, routing, etc. to coordinate with other work including beams, lights, ducts, pipes, etc.

3.2 APPLICATION

A. General Exterior Conduit Applications:

1. Direct buried: PVC, RGS
2. Concrete ductbank: PVC

3. Above grade, building surfaces: IMC, RGS
4. Roof surfaces: IMC
5. Below covered roofs/overhangs: IMC, EMT
6. Motors, pumps, etc. Sealtite

B. General Interior Conduit Applications:

1. All panelboard or ATS feeders:
   a. Above slab: EMT
   b. Below floor slab: RGS, PVC*
      1) *RGS required where conduit penetrates through slab.
2. HVAC equipment circuits:
   a. (>30 amps): EMT
   b. (≤ 30 amps): EMT, MC Cable
   c. Below floor slab: RGS, PVC*
      1) *RGS required where conduit penetrates through slab.
3. Branch circuits (lighting, receptacles):
   a. Above accessible ceilings: EMT, MC Cable
   b. Above inaccessible ceilings: EMT, MC Cable
   c. Concealed in CMU walls: EMT, PVC
   d. Within solid masonry walls: EMT, PVC
   e. Concealed within stud walls: EMT, MC Cable
   f. In or below slab on grade to flush floor boxes: PVC
4. Final Connections to Lights, dry transformers, small motors, vibrating equipment:
   a. Indoor, dry locations: Greenfield
   b. Outdoor, damp locations: Sealtite
5. All inmate accessible areas:
   a. Above accessible ceilings: EMT, MC Cable
   b. Above inaccessible ceilings: EMT, MC Cable
   c. Surface mounted: IMC, RGS

3.3 INSTALLATION

A. General:

1. Coordinate layout and installation of all raceways, cable trays, boxes and other equipment with other construction elements to ensure adequate headroom, working clearance, and access and to eliminate interference problems.
2. Install raceways, boxes, enclosures, and cabinets as indicated, according to manufacturer's written instructions.
3. Do not cut or drill structural members without permission of Architect. Provide reinforcing for opening as directed by Architect.
4. Pierce metal deck where required for installation of electrical equipment.
5. Support raceways and equipment as required by NEC, manufacturers, and as specified elsewhere.
6. Provide grounding connections for raceway, boxes, and components as indicated and instructed by manufacturer.
7. Tighten connectors and terminals, including screws and bolts, per manufacturer's published torque values, or per UL 486A, “Standard For Wire Connectors and Soldering Lugs for Use With Copper Conductors” where not specified.

B. Tamper Proof Hardware

1. Provide tamper proof hardware for all panels, pullboxes, junction boxes,

coverplates, and any other equipment or items accessible to inmates, as indicated on the drawings.

3.4 CONSTRUCTION

A. Flexible Connections: Use maximum of 6 feet of flexible conduit for connections to equipment subject to vibration, noise transmission, or movement, and for all motors. Use liquid tight flexible conduit in wet or damp locations. Install separate ground conductor across flexible connections. Provide flexible connections as follows:

1. Connections to motors between rigid conduit and connection box on motor.
2. Connections to equipment containing motors (power and control conduits).
3. Connections to generators (ALL power, control and monitoring conduits).
4. Connections to equipment subject to movement, rotation, vibration or oscillation.
5. Connections from rigid conduit system to recessed lights.
6. Connections to dry-type transformers.
7. Other applications, as indicated.

B. Supports: Provide all supports, hangers, braces and attachments required for the work of this section.

3.5 CONDUIT INSTALLATION

A. General Installation Requirements:

1. Install all conduit concealed, unless not possible.
2. Surface mounting only as approved by Architect.
3. Minimum size 3/4” inch, unless noted otherwise.
4. Minimum 6" clearance from flues, heating pipes, or other hot surfaces above 80^{o}F.
5. Parallel and perpendicular to walls, structural members, ceilings and interior surfaces; install plumb.
6. Polypropylene or nylon pull line in each empty conduit.
7. Use capped bushings or plugs during construction.
8. Clean and cap all conduits left empty for future use.
9. In masonry, install prior to wall construction and accurately set all outlets.
10. On walls below grade, use stand-off brackets. Maintain minimum 2" space between conduit and wall surface.
11. Where conduit passes through exterior walls, floor or roof, install appropriate fittings and materials to make openings watertight. Repair pierced vapor barriers vapor-proof. Provide flashing for each conduit piercing the roof.

B. Exposed Conduit in Exposed Ceiling Areas:

1. Install all conduit tight to underside of deck, above all ducts, piping, etc.
2. Install conduits within joist webbing and through spaces between steel beams and structure, as high as possible.
3. Install parallel with building walls, beams and main structural elements.
4. Minimize offsets by coordinating with other trades prior to installation.
5. Install pull and junction boxes where least visible. Install on far side of ducts, etc., as visible from the majority of room viewpoints.

C. Raceways Embedded in Slabs: Install in slabs only where explicitly shown on drawings. Install in middle third of the slab thickness where practical, and leave at least 1” inch

concrete cover.

1. Secure raceways to reinforcing rods to prevent sagging or shifting during concrete placement.
2. Space raceways laterally to prevent voids in concrete.
3. Run conduit larger than 1” inch trade size parallel to or at right angles to main reinforcement. When at right angles to reinforcement, place conduit close to slab support.
4. Transition rigid nonmetallic conduit to rigid galvanized steel (RGS) conduit before rising above floor slab.
5. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portion of bends is not visible above the finished slab.
6. Stub-Up Connections: Extend conduits through concrete floor for connection to freestanding equipment with an adjustable top or coupling threaded inside for plugs, and set flush with the finished floor. Extend conductors to equipment with rigid steel conduit; flexible metal conduit may be used 6” inches above the floor. Where equipment connections are not made under this Contract, install screwdriver-operated threaded flush plugs flush with floor.

D. Flexible Conduit Installation Requirements:

1. Group all flexible conduits running together in bundles with nylon cable ties.
2. Route bundles neatly through ceiling cavities.
3. Avoid constant changes in direction and elevation of bundles.
4. Install perpendicular and parallel to column lines, except for final separation from bundles.
5. Support bundles at regular intervals, per NEC, independent from ceiling hanger wires.
6. Provide adequate clearance above accessible ceiling tiles, minimum of 18.”
7. Where flexible conduit or MC cable is used for final connections to motors, lights, etc., maximum length shall be 6 feet.

E. Installation in Inmate Cells, Dayrooms and All Areas Accessible to Inmates.

1. Surface Installations:

   a. All conduit connections shall be threaded for connections of IMC or RGS conduits.
   b. Conduits shall be strapped to wall with 2-hole straps within 2 ft of each termination into box, etc.
   c. Conduit runs shall be attached to masonry surfaces every 8-10 LF with 2-hole pipe straps.

F. Fittings & Terminations:

1. Provide expansion fittings in all conduit where crossing building expansion joints.
2. Provide expansion fittings in all runs of PVC conduit, a minimum of 1 between every 2 fixed points.
3. Tighten compression fittings within wrenches.
4. Terminations: Use two locknuts, one inside and one outside the box. Provide insulated bushings or throats.
5. Where terminating in threaded hubs, screw the raceway or fitting tight into the hub so the end bears against the wire protection shoulder. Where chase nipples are used, align the raceway so the coupling is square to the box, and tighten the

chase nipple so no threads are exposed.

6. Sealing Fittings: Install per manufacturer's instructions. Locate fittings at suitable, approved, accessible locations and fill them with UL-listed sealing compound. Install raceway sealing fittings on conduit at the following points and elsewhere as indicated:
   a. Entering/leaving hazardous locations.
   b. Passing from warm locations to cold locations, such as the boundaries of refrigerated spaces.
   c. Where otherwise required by the NEC.

3.6 WIREWAY INSTALLATION

A. Install per NEC Article 362. Provide hinged connectors to join adjacent lengths. Connect all sections solidly to insure effective grounding of wireway system.

B. Mount wireway in accessible location, with hinged section facing in proper direction.

C. Use standard manufactured lengths to fit in available space. Do not cut standard lengths in field. Provide cut-off fitting where non-standard length is required, and cut in field as required.

D. Clear all obstructions encountered in field. Provide offsets and appropriate fittings as required to clear obstructions.

E. Provide closing plate at ends of wireway. Install wire retainers in wireway after conductors are in place. Provide adapter where wireway is connected to box and cabinet.

F. Use 12" section of wireway to pass through wall, to allow maximum accessible length on each side. Provide special escutcheon plate on each side of wall to finish opening neatly.

3.7 SURFACE RACEWAY & MULTI-OUTLET ASSEMBLY INSTALLATION

A. General:

1. Install level and plumb.
2. Install tight to mounting surface.
3. Cut ends of all raceways perpendicular. Leave no sharp edges or burrs.
4. Provide separate low voltage and power feeds to all multichannel raceways.
5. Securely mount wiring devices into raceways.
6. Provide manufacturer’s wire retaining clips to secure wires.
7. Provide manufacturers fittings for all corners, box entries, etc.

3.8 DEVICE & OUTLET BOX INSTALLATION

A. General Requirements:

1. Install all boxes plumb and level.
2. Install boxes at heights required. Refer to Section “Wiring Devices.”
3. Install recessed boxes flush with final finished surface.
4. Secure all boxes such that no movement occurs during normal use.
5. Install ceiling mounted boxes with sufficient support and rigidity to prevent movement during normal connecting and disconnecting procedures.
6. Install power and low voltage device boxes at same heights from floor or

counters.

7. Consistent Mounting Heights: Provide installation of boxes at the same and consistent mounting heights throughout project. Where multiple switch boxes or power and low voltage boxes are installed in close proximity, use “stud-to-stud” or “dual box to stud” mounting brackets to insure all boxes are level.

B. Installation in Inmate Cells, Dayrooms and All Areas Accessible to Inmates.

1. Recessed Installations:
   a. Where installed in concrete, CMU or other masonry wall construction, box openings shall be carefully cut to size with no noticeable play or gaps.
   b. Fill all voids behind and around boxes so that masonry prevents any and all movement in the box and attaching conduits.
   c. Boxes shall be precisely set to the exact depth so that NO gaps exist between coverplate and wall surface, or between coverplate and box.
   d. All box covers, coverplates or devices shall be attached via stainless steel tamper-proof screws as specified elsewhere.

2. Surface Mount Installations:

   a. Install backboxes, junction boxes and other device mounting boxes with minimum of two (2) concrete anchors per box.
   b. All conduit to box connections shall be threaded for connections of IMC or RGS conduits.
   c. Boxes shall be installed tight to surface with no voids behind box.
   d. Conduits shall be strapped to wall with 2-hole straps within 2 ft of each termination into box, etc.
   e. All box covers, coverplates or devices shall be attached via stainless steel tamper-proof screws as specified elsewhere.

3.9 RECESSED A/V WALL BOX INSTALLATION

A. A/V Wall Boxes:

1. Install boxes plumb and level.
2. Coordinate installed boxes heights with proposed flat panel TV’s, etc. such that wall box is fully concealed by flat panel.
3. and.
4. Coordinate recessed box location and concealed conduit with flat panel mounting brackets and support blocking to avoid interference with flat panel mounting bracket(s)
5. Install recessed boxes flush with final finished surface.
6. Install power (3/4”) and low voltage (2”) conduits from ceiling cavity and or floor, per drawings.
7. Install power and low voltage wiring devices in wall box. Refer to Section “Wiring Devices.”

3.10 FLOOR MOUNTED DEVICE BOX INSTALLATION

A. Floor Mounted Devices - General:

1. Set floor boxes level and adjust to floor surface.
2. Make adjustments in fittings, lengths and placement during rough in to

accommodate structural and architectural elements, and other equipment.

3. Coordinate exact locations and orientation with Owner prior to concrete pour.

B. Poke Through Floor Outlets:

1. Provide core-drilled hole in slab, size per outlet manufacturer.
2. Mount device flush in slab.

C. Flush In-Floor Device Boxes:

1. Set boxes prior to concrete pour.
2. Coordinate exact positions with Architect, Owner and related equipment.
3. Provide separate conduit connections for power and low voltage sections.
4. Protect housing with cover during concrete pour.
5. Adjust for final height and make level after pour.
6. Set trim rings and covers, adjust for flush fit with final floor covering or finish.

3.11 REPAIR/RESTORATION

A. Restore all finishes, equipment and surfaces to original condition, where affected by the work of this section.

3.12 CLEANING

A. General:

1. Remove paint splatters and other spots, dirt, and debris.
2. Touch up scratches and marred finishes to match original finishes.
3. Clean front of all coverplates, etc. using methods and materials recommended by manufacturer.

END OF SECTION

SECTION 26 05 43

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Utility coordination.
2. Marker tape.
3. Underground ductbanks.
4. Direct Buried conduit.
5. Manholes.

B. Related Sections:

1. Section “Common Work Results for Electrical” for concrete pads, bollards and other related equipment.
2. Section “Grounding and Bonding For Electrical Systems” for ground rods, grounding and bonding requirements of utility structure components.
3. Section “Low Voltage Power Conductors and Cables” for grounding conductors and attachments
4. Section “Raceways and Boxes For Electrical Systems” for conduit specifications.
5. Section “Packaged Generator Assemblies” for generators and related equipment installed in/or the ground.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. Utility Marker Tape
2. Ductbank spacers
3. Handholes, covers & accessories

B. Product data, including construction, materials, ratings, etc.

C. Submit the following for each handhole:

1. Manufacturer/cat. number.
2. Manufacturer’s dimensional drawing(s).
3. Indicate open or closed bottom.
4. Type, rating, color and labels of covers.
5. Type and material of lid hardware.
6. Additional information to show compliance with specifications or drawings.

D. Product Test Reports: Certified copies of handhole or manhole manufacturer's design,

factory tests, required by the referenced standards.

1.4 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.

B. Manufacturer/Vendor Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.

C. Installation Quality: In accordance with recognized trade organizations and standards.

1. ANSI (American National Standards Institute)
2. NEC (National Electrical Code)
3. NECA “Standards of Installation”
4. NEMA (National Electrical Manufacturers Association)

1.5 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of equipment to site.
2. Provide for rigging needed for unloading, and setting large manholes or handholes into final position.

B. Storage and Protection:

1. Protect all utility structures from damage prior to installation.

1.6 SEQUENCING

A. General Sequencing:

1. Coordinate with other underground utilities and structures such that deeper equipment is installed first, where possible.
2. Provide stakeout of all underground and in-ground equipment to identify conflicts prior to trenching or excavation.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the work include, but are not limited to, the following:

1. Composite Handholes:

a. Hubbell Power Systems, Inc. Quazite
b. Mansfield Oldcastle Precast, Inc.
c. Fiberlyte

2.2 BURIED UTILITY MARKER TAPE

A. Non-biodegradable 3" wide plastic marker tape 12" below grade above every ductbank and buried conduit or cable. A system description (i.e. "ELECTRIC") shall appear continuously along its length. Tape shall meet ASTM D1712, “Standard Practice for Resistance of Plastics to Sulfide Staining” tests for color fastness. Tape shall contain a metallic core, which can be detected after burial in ground. Color coding per ANSI Z535.1.

1.	Electric	Red
2.	Communications	Orange

2.3 UNDERGROUND DUCTBANKS

A. General:

1. Underground ductbanks shall be arrangements of single bore, PVC plastic conduits, concrete encased with (where indicated) steel rebar.

B. Materials:

1. Conduit and Fittings:
   a. UL Listed, Type II, heavy-wall schedule 40 PVC.
   b. Conduit and fittings shall be as specified in Section ”Raceways and Boxes For Electrical Systems.”
2. Concrete:
   a. 3,000 psi test at 28 days.
   b. Pea gravel aggregate for void-free duct penetration.
3. Reinforcing:
   a. Deformed conforming to ASTM A615, “Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement,” Grade 40 or Grade 60, minimum ½.”
   b. Coated rebar where exposed to earth, such as on ductbank stubouts.
4. Spacers:
   a. Precast plastic, base and intermediate.
5. Joint Sealant:
   a. Watertight as per by conduit manufacturer.
6. Cable Sealing Bushings:
   a. OZ type CSB, with PVC coated discs, or equal.
7. Thruwall and Floor Seals:
   a. OZ type "FSK" or "WSK", or equal.

2.4 DIRECT BURIED CONDUIT

A. For direct buried 600 volt electrical circuits:

1. PVC schedule 40 or PVC coated galvanized steel conduit, as indicated.
2. Conduit as specified in Section “Raceways & Boxes For Electrical Systems.”

2.5 IN-GROUND HANDHOLES

A. Construction:

1. Minimum size 18"x18"x24"D, unless noted otherwise.
2. Lightweight composite construction.
3. Sand/aggregate mixture bound with polymer and reinforced with woven glass strands.
4. Compressive strength 11,000 psi.
5. Flexural strength 7,500 psi.
6. Structural capacity of handhole and lid meeting AASHTO Tier 15 for loading (15,000 pound design load)
7. Heavy duty textured covers, tan or gray color.
8. All components sunlight resistant.
9. Threaded inserts and stainless steel bolts for covers.
10. Logo shall be integral with cover to indicate "ELECTRIC", "COMMUNICATION", "TELEPHONE", “SITE LIGHTING”, etc.
11. Open bottom.
12. Hubbell Power Systems, Inc. Quazite Composolite, or comparable product by Fiberlyte.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions:

1. Examine the site where the work is proposed.
2. Make allowances where proposed work shall cross, intersect or otherwise be affected by existing conditions.

3.2 PREPARATION

A. Utility Coordination:

1. Contact MISS UTILITY, national “811” and/or (1-800-257-7777) prior to any excavation or underground work. Arrange for marking of all utilities.
2. Contact serving utility companies immediately upon award of contract. Do not install related equipment until fully coordinated with appropriate utilities.
3. Provide all construction schedules, dates of requested services, outage windows, equipment locations, etc. necessary for utility work.
4. Electric Utility:
   a. Coordinate underground service entrance equipment and layout with Power Company prior to ordering or installing any service related equipment.
5. Telephone Utility:
   a. Coordinate incoming raceway with telephone utility company. Provide required conduit size as determined by telephone company.

3.3 ENCASED & DIRECT BURIED CONDUIT INSTALLATION

A. General Requirements:

1. Install nonmetallic conduit and duct as indicated according to manufacturer’s

written instructions.

2. Determine exact plans and profiles of underground conduit and ducts, based on field information and available as-built plans.
3. Perform test pits at all utility crossings as shown on plans and available as-built drawings. Locate all shown utilities and structures, and make adjustments to proposed work.
4. Verify location and inverts of existing utilities at proposed points of connection.
5. Slope: Pitch ducts minimum of 4 inches per 100 feet (1:300) to drain toward manholes and handholes and away from buildings and equipment. Slope ducts from a high point in runs between manholes or handholes to drain in both directions.
6. Make all conduit joints and fittings watertight per to manufacturer's instructions.
7. Stagger couplings so those of adjacent ducts do not lie in the same plane.

B. Curves and Bends: Use manufactured elbows with a minimum radius of 36" for stub-ups only at equipment and at building entrances. Use manufactured long sweep bends with a minimum radius of 25 feet both horizontally and vertically at other locations and for all telecomm applications.

C. Duct Entrances to Manholes: Space and bells approximately 10 inches on center for 5-inch ducts and varied proportionately for other duct sizes. Change from regular spacing to end-bell spacing 10 feet from the end bell without reducing duct line slope and without forming a trap in the line. Grout end bells into manhole walls from both sides to provide watertight entrances.

D. Duct Connections: Provide connection of new ducts into existing manholes to prevent settling/cracking of ductbanks at manhole.

1. Properly compact the soil below the proposed ductbank connection at the manhole, as specified elsewhere in this section.
2. Extend ductbank and form ductbank concrete into the interior face wall of the manhole in a single application. Do NOT stop ductbank outside manhole and grout remaining gaps around conduit.
3. Provide a minimum of 8 LF of rebar in the ductbank from the interior manhole wall face into the buried ductbank.
4. Provide duct end bells where exiting ductbank into manhole.
5. Completely fill openings around entrance of duct lines with reinforced concrete and for a watertight installation.

E. Duct Entrances to Handholes: Provide horizontal penetration of conduit into handholes. Utilize manufacturer's knockouts or field cut a punched hole opening for conduit. Gradually transition conduit from specified buried depth to knockout locations.

F. Separation Between Direct-Buried, Non-encased Ducts: 3 inches minimum for like services, and 6 inches minimum between power and signal ducts.

G. Concrete-Encased Nonmetallic Ducts:

1. Support on plastic separators coordinated with duct size and required duct spacing.
2. Separator Installation: Space separators close enough to prevent sagging and deforming of ducts, and secure separators to the earth and to ducts to prevent floating during concreting. Do not use tie wires or reinforcing steel that may form conductive or magnetic loops around ducts or duct groups.

3. Concreting: Spade concrete carefully during pours to prevent voids under and between conduits and at exterior surface of envelope. Do not use power-driven agitating equipment unless specifically designed for duct bank application. Pour each run of envelope between manholes or other terminations in 1 continuous operation. When more than one pour is necessary, terminate each pour in a vertical plane and install: 1-inch reinforcing rod dowels extending 18 inches into the concrete on both sides of joint near the corners of the envelope.
4. Reinforcing: Reinforce duct banks where they cross disturbed earth and where indicated.
5. Forms: Use the walls of the trench to form the sidewalls of the duct bank where the soil is self-supporting and concrete envelope can be poured without soil inclusions; otherwise, use forms.
6. Minimum Clearances Between Ducts: 3 inches between ducts and exterior envelope wall, 2 inches between ducts for like services, and 4 inches between power and signal ducts. Concrete envelope - 4 inches beyond surface of any conduit or duct.

H. Stub-Ups: Use Schedule 40 PVC conduit for stub-ups to equipment. For equipment mounted on outdoor concrete pads, extend conduit and terminate with end bell a minimum of 3" above pad.

I. Sealing: Provide temporary closure at terminations of ducts that are wired under this Project. Seal spare ducts at terminations. Use sealing compound and plugs to withstand at least 15 psi hydrostatic pressure.

J. Pulling Cord: Install 200-pound-test nylon cord in ducts, including each and every spare.

K. Buried Utility Marker Tape installed 12" below grade above every ductbank and buried conduit.

L. For direct buried 600 volt electrical circuits:

1. Burial depth as required by NEC Article 300-5 and Table 300-5.
2. Minimum separation from other utilities of 18."

M. Ductbank Burial Depth and Separations:

1. Top of envelope below grade - minimum as follows:
   a. 36 inches
2. Separation from other buried utilities as follows:
   a. All utilities: 24"
   b. Uninsulated Steam: 48"

N. Ductbank stubouts:

1. Five feet out from manholes, minimum.
2. Do not terminate under other ducts, concrete pads, pipes, etc. Extend stubout 5 feet past obstacle.
3. Extend PVC ducts and rebar 18" past end of concrete to allow future tie in.
4. Cap and seal all ducts to prevent water penetration.

3.4 HANDHOLE INSTALLATION

A. General:

1. Install approximately where shown and where required for underground conduit runs exceeding 150LF. Exact location of each handhole shall be determined after careful consideration has been given to the location of other utilities, grading and paving.
2. The location of each handhole shall be staked in field and approved before setting the handhole.
3. Coordinate exact placement and elevation based on local grade, slope, other utilities, fences, roads and walkways, etc. which may affect location.
4. Set level, and adjust for final, surrounding grade, such that lid is even with surrounding asphalt, concrete or soil.

B. Conduit and Duct Connections:

1. Sidewall conduit penetrations shall be sealed with grout or waterproof sealant.
2. All conduit ends shall have bell fittings, or nylon or plastic bushings to prevent damage to wire insulation when pulling.

C. Handhole Drainage:

1. Set handholes on minimum 6-8" layer of clean, compacted gravel or stone for drainage (no dust).
2. Provide filter fabric, placed between gravel and earth below handhole, and wrapped up along sides to prevent contamination of stone.

3.5 CONSTRUCTION

A. Excavation and Backfilling:

1. Perform all excavating and backfilling necessary to install underground ductbanks, manholes, cables, etc., included in this Division of the work. Excavation and back fill shall be performed in accordance with the requirements specified under Site Work Divisions.

B. Cutting and Patching:

1. Provide all cutting and patching necessary for the installation of the electrical work. Any damage done to the work already in place by reason of this work, shall be repaired at the Installer's expense by a qualified mechanic experienced in such work. Patching shall be uniform in appearance and shall match with the surrounding surface.

C. Grounding:

1. Refer to Section “Grounding & Bonding For Electrical Systems” for specific requirements.

3.6 FIELD QUALITY CONTROL

A. General:

1. Inspect all installed work after completion of rough and final grading to ensure no damage has occurred to installed components.
2. Ensure final grading matches elevation of all installed components. Make adjustments, as required, to correct for settling, etc.
3. Verify all handhole and manhole lid logos match the contained systems.

3.7 ADJUSTING

A. General:

1. Make adjustments to manhole or handhole lid elevations to match final grades.
2. Where lids will more than 1 inch lower than surrounding final grade, concrete, or asphalt, make adjustments to structure elevation, collar height, grading or concrete/asphalt installation to provide matched elevations.

3.8 CLEANING

A. Manholes & Handholes:

1. Remove all wire clippings, tape, loose debris, etc. from inside of all manholes and handholes.

B. Ducts & Conduit:

1. After installation, but prior to installing cables, pull a mandrel sized ¼" less than conduit ID to confirm no blockages or collapsed ducts.
2. Clean each installed conduit with a stiff brush to remove debris.

END OF SECTION

SECTION 26 05 48

VIBRATION & SEISMIC CONTROLS FOR ELECTRICAL SYSTEMS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. This Section includes vibration and seismic control for electrical fire protection and life safety systems, conduit, wiring and equipment. It is the intent of the seismic portion of this specification to keep all required mechanical and electrical building system components in place during a seismic event.

B. The requirements for seismic protection measures to be applied to electrical, fire alarm and life safety equipment and systems specified herein are in addition to any other items called for in other Sections of the Specifications. Provide seismic bracing for equipment and systems within the project area. Seismic forces shall be calculated by a qualified Licensed Professional Engineer. Seismic bracing and anchors shall be designed by the Licensed Professional Engineer to withstand the calculated seismic forces per the specified project conditions.

C. All components mounted outside of the building envelope (on-grade, on roof, on exterior walls, etc.) shall be mounted and supported to resist wind loads as required by the International Building Code (IBC), edition in effect by local authority having jurisdiction. Vibration and seismic controls shall be provided for all exterior equipment with $I_P > 1.0$ (including generators, ATS, etc.)

D. Section Includes:
1. Materials
2. Seismic Restraints
3. Vibration Isolation Mount Types
4. Equipment Bases
5. Resilient Penetration Sleeve/Seal
6. Seismic Snubber
7. Flexible conduit/raceway sections
8. Flexible Electrical Connection
9. Restraints
10. Grommets
11. Acoustical Sealant
12. Vibration Isolation Schedule

E. Related Sections:

1. Section “Fire Detection and Alarm” for associated raceways and other materials requiring special and/or additional bracing and anchoring.
2. for description of fire alarm raceways and devices.
3. Section “Common Work Results for Electrical” for other requirements of anchors, supports, equipment pads, etc.

4. Section “Low Voltage Electrical Power Conductors and Cables”
5. Section “Raceways and Boxes for Electrical Systems” for conduit and other materials requiring special and/or additional bracing and anchoring.
6. Section “Packaged Generator Assemblies” for generator equipment requiring special anchoring.
7. Section “Low Voltage Electrical Distribution” for switchgear and other equipment requiring special anchoring and bracing.
8. Section “Low Voltage Transformers” for transformers requiring special anchoring and bracing.
9. Section “Transfer Switches” Section “Transfer Switches” for equipment requiring special anchoring and bracing.
10. Section “Lighting” for fixtures and equipment requiring special supports and bracing.

1.3 DEFINITIONS

A. IBC International Building Code

B. Seismic Restraint: A fixed device (a seismic brace, an anchor bolt or stud, or a fastening assembly) used to prevent vertical or horizontal movement, or both vertical and horizontal movement, of an electrical system component during an earthquake.

C. Mobile Structural Element: A part of the building structure such as a slab, floor structure, roof structure, or wall that may move independent of other mobile structural elements during an earthquake.

D. Life Safety Systems:

1. All systems involved with fire detection and alarm.
2. All systems involved with power, control, actuation or monitoring of fire pumps, smoke exhaust fans, stair/elevator pressurization fans, smoke dampers.
3. All electrical power, control and/or monitoring systems associated with emergency generators, transfer switches and emergency power distribution, including panelboards, dry transformers, raceways, etc.
4. All electrical power systems associated with emergency egress and exit lighting.
5. All electrical and/or monitoring systems involved with and/or connected to elevators, when provided with emergency power.

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: This is a performance specification. It is the full responsibility of the installer to insure that the design and installation conforms to all applicable standards and Codes.

1.5 SUBMITTALS

A. Submittal Requirements of this section:

1. Illustrate and indicate types, styles, materials, strength, fastening provisions, and finish for each type and size of seismic restraint component used.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.

2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Capacity ratings, performance curves.
6. Information required to indicate contract compliance.
7. Clearly indicate the exact size or rating proposed.
8. Anchor Bolts and Studs: Tabulate types and sizes, complete with report numbers and rated strength in tension and shear as evaluated by an agency approved by authorities having jurisdiction.

C. Product Certificates: Signed by manufacturers of seismic restraints certifying that products furnished comply with requirements.

D. Shop Drawings: For anchorage and bracing not defined by details and charts on Drawings. Indicate materials, and show designs and calculations signed and sealed by a professional engineer.

1. Design Analysis: To support selection and arrangement of seismic restraints. Include calculations of combined tensile and shear loads.
2. Details: Detail fabrication and arrangement. Detail attachment of restraints to both structural and restrained items. Show attachment locations, methods, and spacings, identifying components and listing their strengths. Indicate direction and value of forces transmitted to the structure during seismic events.
3. Preapproval and Evaluation Documentation: By agency or testing firm acceptable to the AHJ, showing maximum ratings of restraints and the basis for approval (tests or calculations).

E. Material Test Reports: From a qualified testing agency indicating and interpreting test results of seismic control devices for compliance with requirements indicated.

F. Seismic Certification and Analysis:

1. Seismic restraint calculations must be provided for all connections of equipment to the structure. Calculations must be stamped by a registered professional engineer with at least five years of seismic design experience, licensed in the state of the job location.
2. All restraining devices shall have a preapproval number from California OSHPD or some other recognized government agency showing maximum restraint ratings. Preapprovals based on independent testing are preferred to preapprovals based on calculations. Where preapproved devices are not available, submittals based on independent testing are preferred. Calculations (including the combining of tensile and shear loadings) to support seismic restraint designs must be stamped by a registered professional engineer with at least five years of seismic design experience and licensed in the state of the job location. Testing and calculations must include both shear and tensile loads as well as one test or analysis at 45E to the weakest mode.
3. Analysis must indicate calculated dead loads, static seismic loads and capacity of materials utilized for connections to equipment and structure. Analysis must detail anchoring methods, bolt diameter, embedment and/or welded length. All seismic restraint devices shall be designed to accept, without failure, the forces detailed in section 1.5 acting through the equipment center of gravity. Overturning moments may exceed forces at ground level.

G. Coordination Drawings: Plans and sections drawn to scale and coordinating seismic

bracing for electrical components with other systems and equipment, including other seismic restraints, in the vicinity.

H. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Common Work Results For Electrical”, and as follows:

1.6 QUALITY ASSURANCE

A. Comply with seismic restraint requirements within the jurisdiction of the project, unless requirements in this Section are more stringent.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing seismic engineering services, including the design of seismic restraints, that are similar to those indicated for this Project.

C. Testing Agency Qualifications: An independent testing agency, acceptable to authorities having jurisdiction, with the experience and capability to conduct the testing indicated.

D. Single-Source Responsibility:

1. The complete performance of the assembled system, including all accessories shall be the sole responsibility of the supplier. It is the installer’s responsibility to ensure that all factory and field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.

E. Installer Qualifications:

1. The installer shall be fully trained and knowledgeable in the application and installation of seismic controls, or shall employ a firm with such capabilities to perform the work of this section.

F. Installation Quality: In accordance with recognized trade organizations and standards.

1. NEMA.
2. ANSI.
3. NECA (National Electrical Contractor’s Association) “Standards of Installation”
4. NEMA (National Electrical Manufacturer’s Association).

1.7 PROJECT CONDITIONS

A. Buidling Occupancy Category for Structural Design per IBC 1604.5: Risk Category IV

B. Seismic Design Category: C

C. Site Class: D

1.8 COORDINATION

A. Coordinate layout and installation of seismic bracing with building structural system and architectural features, and with mechanical, fire-protection, electrical, and other building features in the vicinity.

B. Coordinate concrete bases with building structural system.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. Structural Steel Channel
   a. Cooper B-Line Systems, Inc.
   b. Mason Industries, Inc.
   c. Unistrut Corporation.

2.2 MATERIALS:

A. Use the following materials for restraints.

1. Indoor Dry Locations: Steel, zinc plated.
2. Outdoors and Damp Locations: Galvanized steel.
3. Corrosive Locations: Stainless steel.

2.3 ANCHORAGE AND STRUCTURAL ATTACHMENT COMPONENTS

A. Coordinate products in this Article with structural engineer and with Drawings.

B. Strength: Defined in reports by ICBO Evaluation Service or another agency acceptable to authorities having jurisdiction.

1. Structural Safety Factor: Strength in tension and shear of components used shall be at least two times the maximum seismic forces to which they will be subjected.

C. Concrete and Masonry Anchor Bolts and Studs: Steel-expansion wedge type.

D. Concrete Inserts: Steel-channel type.

E. Through Bolts: Structural type, hex head, high strength. Comply with ASTM A 325.

F. Welding Lugs: Comply with MSS SP-69, Type 57.

G. Beam Clamps for Steel Beams and Joists: Double sided. Single-sided type is not acceptable.

H. Bushings for Floor-Mounted Equipment Anchors: Neoprene units designed for seismically rated rigid equipment mountings, and matched to the type and size of anchor bolts and studs used.

I. Bushing Assemblies for Wall-Mounted Equipment Anchorage: Assemblies of neoprene elements and steel sleeves designed for seismically rated rigid equipment mountings, and matched to the type and size of attachment devices used.

2.4 SEISMIC BRACING COMPONENTS:

A. Slotted Steel Channel: 1-5/8 x 1-5/8-inch cross section, formed from 0.1046-inch thick steel, with 9/16 x 7/8-inch slots at a maximum of 2 inches on center in webs, and flange edges turned toward web.

1. Materials for Channel: ASTM A 570, GR 33.
2. Materials for Fittings and Accessories: ASTM A 575, ASTM A 576, or ASTM A 36.
3. Fittings and Accessories: Products of the same manufacturer as channels and designed for use with that product.
4. Finish: Baked, rust-inhibiting, acrylic-enamel paint applied after cleaning and phosphate treatment, unless otherwise indicated.

B. Channel-Type Bracing Assemblies: Slotted steel channel, with adjustable hinged steel brackets and bolts.

PART 3 EXECUTION

3.1 INSTALLATION

A. General Requirements:

1. Install seismic restraints according to applicable codes and regulations and as approved by authorities having jurisdiction, unless more stringent requirements are indicated.

B. Structural Attachment:

1. Use bolted connections with steel brackets, slotted channel, and slotted-channel fittings to spread structural loads and reduce stresses.
2. Attachments to New Concrete: Bolt to channel-type concrete inserts or use expansion anchors.
3. Holes for Expansion Anchors in Concrete: Drill at locations and to depths that avoid reinforcing bars.
4. Attachments to Solid Concrete Masonry Unit Walls: Use expansion anchors.
5. Attachments to Hollow Walls: Bolt to slotted steel channels fastened to wall with expansion anchors.
6. Attachments to Wood Structural Members: Install bolts through members.
7. Attachments to Steel: Bolt to clamps on flanges of beams or on upper truss chords of bar joists.

C. Electrical Equipment Anchorage:

1. Coordinate with Sections specifying products referenced in paragraphs below. See Evaluations.
2. Anchor rigidly to a single mobile structural element or to a concrete base that is structurally tied to a single mobile structural element.
3. Anchor panelboards, motor controls, transformers, transfer switches, and distribution units as follows:
   a. Size concrete bases so expansion anchors will be a minimum of 10 bolt diameters from the edge of the concrete base.
   b. Concrete Bases for Floor-Mounted Equipment: Use female expansion anchors and install studs and nuts after equipment is positioned.
   c. Anchor Bolt Bushing Assemblies for Wall-Mounted Equipment: Install to

allow for resilient media where equipment or equipment-mounting channels are attached to wall.

d. Torque bolts and nuts on studs to values recommended by equipment manufacturer.

D. SEISMIC BRACING INSTALLATION:

1. Expansion and Contraction: Install to allow for thermal movement of braced components.
2. Cable Braces: Install with maximum cable slack recommended by manufacturer.
3. Attachment to Structure: If specific attachment is not indicated, anchor bracing to the structure at flanges of beams, upper truss chords of bar joists, or at concrete members.

3.2 CONSTRUCTION

A. Accommodation Of Differential Seismic Motion:

1. Make flexible connections in raceways, cables, wireways, cable trays, and busways where they cross expansion and seismic control joints, where adjacent sections or branches are supported by different structural elements, and where they terminate at electrical equipment anchored to a different mobile structural element from the one supporting them.

3.3 FIELD QUALITY CONTROL

A. General:

1. Perform inspections and testing to ensure installation complies with Contract Documents, performance is within industry and manufacturer's tolerances, is adjusted to specific project parameters.
2. Schedule tests and provide notification at least one week in advance of test commencement.
3. Provide a set of Contract Drawings to the testing agency.
4. Provide manufacturer's installation and testing instructions to the testing agency.
5. Provide complete shop drawing data on all equipment.
6. Provide written results of all tests. Include date, equipment ID, name of testing company and technician, and results of each individual test. Provide pass/fail indication for each test.

B. Pre-Testing Inspections:

1. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration, and to ensure removal of temporary shipping bracing. Do not proceed with tests until deficiencies are corrected.
2. Inspect bolted electrical connections for tightness according to manufacturer's published torque values.

C. Acceptance Testing: Provide for acceptance testing of seismic bracing specified in this section, as follows.

1. Testing Agency: Engage a qualified testing agency to perform the following field quality-control testing:

D. Acceptance Tests: Test pull-out resistance of seismic anchorage devices.

1. Provide necessary test equipment required for reliable testing.
2. Provide evidence of recent calibration of test equipment by a testing agency acceptable to authorities having jurisdiction.
3. Schedule test with Owner, through Architect, before connecting anchorage device to restrained component (unless post-connection testing has been approved), and with at least seven days' advance notice.
4. Obtain Architect's approval before transmitting test loads to the structure. Provide temporary load-spreading members.
5. Edit sampling frequency in subparagraph below to suit Project.
6. Test at least four of each type and size of installed anchors and fasteners selected by Architect.
7. Test to 90 percent of rated proof load of device.
8. If a device fails the test, modify all installations of same type and retest until satisfactory results are achieved.
9. Record all test results and include in project O&M Manuals.

END OF SECTION

SECTION 26 05 73

OVERCURRENT PROTECTIVE DEVICE COORDINATION, SHORT CIRCUIT & ARC FLASH STUDY

PART 1 GENERAL

1.1 GENERAL REQUIREMENTS

A. The contractor shall furnish the following engineering studies as part of this contract:

1. Short Circuit & Device Evaluation Study
2. Overcurrent Protective Device Coordination Study
3. Arc Flash Hazard Analysis Study

B. The study(ies) shall be prepared by the major electrical equipment manufacturer, or an approved professional engineering firm, registered in the State of Maryland, to perform all the required calculations and studies, required by this section.

C. The Arc Flash Hazard Analysis Study shall be performed per the requirements set forth in NFPA 70E - Standard for Electrical Safety in the Workplace. The arc flash hazard analysis shall be performed according to the latest version of IEEE 1584 equations that are presented in NFPA 70E (current edition), Annex D.

D. The scope of the studies shall include all new distribution equipment supplied by the equipment Manufacturer and installed under this contract, as well as all directly affected existing distribution equipment at the customer facility.

E. The type and content of each study is specified in the following sections.

1.2 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman’s Electronic Document Release Form. Refer to Section “Common Work Results for Electrical” for additional information.

1.3 REFERENCES

A. Institute of Electrical and Electronics Engineers, Inc. (IEEE):

C. The National Fire Protection Association (NFPA)
1. NFPA 70 - National Electrical Code, latest edition
2. NFPA 70E – Standard for Electrical Safety in the Workplace

1.4 QUALIFICATIONS

A. The short-circuit, protective device coordination and arc flash hazard analysis studies shall be conducted under the supervision and approval of a Professional Electrical Engineer, registered in the state of where the project is located. The Engineer shall be skilled in performing and interpreting the power system studies.

B. The Registered Professional Electrical Engineer shall be a full-time employee of the equipment manufacturer, or an approved engineering firm.

C. The Registered Professional Electrical Engineer shall have a minimum of five (5) years of experience in performing power system studies. The equipment manufacturer or approved engineering firm shall demonstrate experience with Arc Flash Hazard Analysis by submitting names of at least ten actual arc flash hazard analysis completed in the past two years, upon request.

1.5 COMPUTER ANALYSIS SOFTWARE

A. The studies shall be performed using a computer simulation software package, specifically designed for short circuit, coordination and arc flash studies. Utilize the latest revision of the SKM Systems Analysis Power*Tools for Windows (PTW) software program, or an approved equal.

1.6 SUBMITTALS

A. General: Submit items in this Section according to the conditions of the contract and Division 01 Specification Sections.

B. Submittals shall also comply with the submittal procedures and requirements of electrical Specification Sections.

C. The short-circuit and protective device coordination studies shall be submitted to the design engineer prior to receiving final approval of the distribution equipment shop drawing submittals, and/or prior to release of equipment drawings for manufacturing. If formal completion of the studies may cause delay in equipment manufacturing, approval from the engineer may be obtained for preliminary submittal of sufficient study data to ensure that the selection of device and characteristics will be satisfactory.

D. The results of the short-circuit, protective device coordination and arc flash hazard analysis studies shall be summarized in a final report. Bound copies of the report shall be submitted for review and approval. The short-circuit input and output data shall be included in the report. The report shall include the following sections:

1. Executive Summary.
2. Descriptions, purpose, basis and scope of the study
3. Tabulations of circuit breaker, fuse and other protective device ratings versus calculated short circuit duties
4. Protective device time versus current coordination curves, tabulations of relay and circuit breaker trip unit settings, fuse selections
5. Fault current calculations including a definition of terms and guide for interpretation of the computer printout
6. Details of the incident energy and flash protection boundary calculations
7. Recommendations for system improvements, where needed
8. One-line diagram
9. Arc flash labels in hard paper copy. Adhesive labels shall be installed on all panels at completion of project.

E. Provide electronic copies (in PDF format) of the completed protective device time-current coordination analysis to the Owner and Architect for review and approval.

F. The contract shall provide for corrections, adjustments, etc. as identified during the Architect's review of the initial report. A resubmission of the report shall be made to address all issues.

PART 2 PRODUCTS

2.1 STUDIES:

A. Contractor to furnish short-circuit and protective device coordination studies, as prepared by equipment manufacturer, or an approved engineering firm.

B. The contractor shall furnish an Arc Flash Hazard Analysis Study per NFPA 70E – Standard for Electrical Safety in the Workplace, reference Article 130.3 and Annex D.

2.2 DATA COLLECTION

A. Contractor shall obtain and furnish all data as required by the power system studies. The firm or Engineer performing the short-circuit, protective device coordination and arc flash hazard analysis studies shall furnish the Contractor with a listing of required data immediately after award of the contract. The Contractor shall expedite collection of the data to assure completion of the studies as required for final approval of the distribution equipment shop drawings and/or prior to the release of the equipment for manufacturing.

B. Source combination shall include present and future motors ($\geq$ 50HP) and all emergency generators.

C. Load data utilized may include existing and proposed loads obtained from Contract Documents provided by Owner, or Contractor.

D. If applicable, include fault contribution of existing motors ($\geq$ 50HP) in the study. The Contractor shall obtain required existing equipment data, as necessary, to satisfy the study requirements.

2.3 SHORT-CIRCUIT AND DEVICE EVALUATION STUDY

A. The study shall originate at the incoming utility company BGE service connection in the customer-owned C/T Cabinet and shall include:

1. Main secondary or secondary service breaker(s).
2. Low voltage panels.
3. Low voltage transformers.
4. Disconnect switches.
5. Enclosed circuit breakers.
6. Emergency Generators.
7. Automatic transfer switches.
8. Portable Generator Docking stations.
9. Elevator disconnect switches or breakers.
10. Other equipment as noted.

B. Input Data:

1. Use actual conductor impedances, if known. If unknown, use typical conductor impedances based on IEEE Standard 141-1993.
2. Transformer design impedances shall be used when manufacturer's test impedances are not available. Use nameplate impedances for all existing transformers.
3. The contractor shall be responsible for supplying conductor information (lengths, types, number per phase, etc.) in a timely manner to allow the short-circuit analysis to be completed prior to final installation.
4. Include the actual parameters of the proposed or existing emergency generator(s) in the study.

C. Provide the following:

1. Calculation methods and assumptions
2. Selected base per unit quantities
3. One-line diagram of the system being evaluated
4. Source impedance data, including electric utility system contribution characteristics
5. Tabulations of calculated quantities
6. Results, conclusions, and recommendations.

D. Calculate short-circuit momentary and interrupting duties for a three-phase bolted fault at each equipment bus or connection lugs:
1. Main secondary or secondary service breaker(s) or fusible switches.
2. Outgoing feeder breakers or fusible switches in switchgear(s), switchboard(s) or panelboard with trip ratings/settings $\geq$ 60 amps.
3. Low voltage panelboards.
4. Low voltage transformers.
5. Disconnect switches $\geq$ 60 amps
6. Enclosed circuit breakers $\geq$ 60 amps
7. Emergency Generators and output breaker(s) of any rating.
8. Automatic transfer switches.
9. Portable Generator Docking stations.
10. Elevator disconnect switches or breakers of any rating.
11. Motor control centers.
12. Other equipment as noted.

E. For grounded systems, provide a bolted line-to-ground fault current study for areas as defined for the three-phase bolted fault short-circuit study.

F. Study Report Content:

1. The study shall include a computer printout of input circuit data including conductor lengths, number of conductors per phase, conductor impedance values, insulation types, transformer impedances and X/R ratios, motor contributions, and other circuit information as related to the short-circuit calculations.
2. A tabular computer printout shall be included which lists the calculated short-circuit currents, X/R ratios, equipment short-circuit interrupting or withstand current ratings, and notes regarding the adequacy or inadequacy of the equipment sizes and ratings.
3. Include a bus-to-bus computer printout identifying the maximum available short-circuit current in rms symmetrical amperes and the X/R ratio of the fault current for each bus-to-bus calculation.
4. The system one-line diagram shall be computer generated and will clearly identify individual equipment buses, bus numbers used in the short-circuit analysis, cable and bus connections between the equipment, calculated maximum short-circuit current at each bus location and other information pertinent to the computer analysis.

G. Overcurrent Protective Device Evaluation:

1. Provide evaluation of the adequacy or inadequacy of the distribution system equipment, based on calculated short circuit ratings.
2. Evaluate all equipment and protective devices and compare to short circuit ratings as designed.
3. Adequacy of switchgear, switchboards, switches, circuit breakers, and or panelboard bus bars to withstand short-circuit stresses.
4. Provide clear indication where specified/designed ratings are not sufficient to interrupt calculated fault currents.

2.4 OVERCURRENT PROTECTIVE DEVICE COORDINATION STUDY

A. The Overcurrent Protective Device Coordination Study shall use the applicable information from the Short Circuit Study, and shall include:

1. Main secondary or secondary service breaker(s) or fused switch(es).
2. Outgoing feeder breakers or fused switches in switchgear(s), switchboard(s) or panelboard with trip ratings/settings $\geq$ 100 amps.
3. Disconnect switches $\geq$ 100 amps
4. Enclosed circuit breakers $\geq$ 70 amps
5. Generator output breaker(s) of any rating and protection settings, as recommended by manufacturer, and coordination with other relays, settings, etc. of the equipment.
6. Automatic transfer switches.
7. Portable Generator Docking station breaker(s).
8. Elevator disconnect switches or breakers of any rating.
9. Ground fault protection device settings on all above equipment.
10. Motor starters and downstream motors for motors rated $\geq$ 25 HP.
11. Other equipment as noted.

B. Time Current Curves:

1. Proposed protective device coordination time-current curves (TCC) shall be

displayed on log-log scale graphs.

2. Include on each TCC graph, a complete title and applicable one-line diagram with legend identifying the specific portion of the system covered.
3. Terminate device characteristic curves at a point reflecting maximum symmetrical or asymmetrical fault current to which the device is exposed.
4. Identify the device associated with each curve by manufacturer type, function, and, if applicable, tap, time delay, and instantaneous settings recommended.
5. Plot the following characteristics on the TCC graphs, as applicable:
   a. Electric utility's available faut current and overcurrent protective devices
   b. LV fuses including manufacturer's minimum melt, total clearing, tolerance, and damage bands
   c. LV Transformer full-load current, magnetizing inrush current, and ANSI through-fault protection damage curves
   d. LV conductor damage curves
   e. Generator short circuit and protection device curves
   f. Elevator motor starting curves with applicable starter type(s).
   g. Motor starting curves with applicable starter type(s).
   h. All ground fault protective devices, as applicable.

C. Provide adequate time margins between device characteristics such that selective operation is provided, while providing proper protection.

1. A sufficient number of computer generated log-log plots shall be provided to indicate the degree of system protection and coordination by displaying the time-current characteristics of series connected overcurrent devices and other pertinent system parameters.
2. Computer printouts shall accompany the log-log plots containing descriptions for each of the devices shown, settings of the adjustable devices, the short-circuit current availability at the device location when known, and device identification numbers to aid in locating the devices on the log-log plots and the system one-line diagram.
3. The study shall include a separate, tabular computer printout containing the suggested device settings of all adjustable overcurrent protective devices, the equipment where the device is located, the device number corresponding to the device on the system one-line diagram, and the number of the time-current log-log graphs where they are illustrated.

D. Study Summary & Report:

1. A comprehensive discussion section evaluating the overall system coordination, areas of reduced protection or coordination and areas where either coordination and/or protection is not adequate.
2. Provide recommendations, as required for increasing system protection or device coordination, and reasoning for selecting protection or coordination over the other.
3. Where necessary, an appropriate compromise shall be made between system protection and service continuity with system protection and service continuity considered to be of equal importance. All such assumptions shall be clearly identified in the report with the proposed solution approach.
4. Significant deficiencies in protection and/or coordination shall be called to the attention of the Architect, and recommendations made for improvements as soon as any they are identified.

2.5 ARC FLASH HAZARD ANALYSIS STUDY

A. The Arc Flash Hazard Analysis Study shall include all new and existing equipment shown on the drawings including the following:

1. Distribution panelboards.
2. Branch circuit panelboards.
3. Disconnect switches ≥ 60 amps.
4. Enclosed circuit breakers ≥ 60 amps.
5. Generators and associated output breaker(s) of any rating.
6. Automatic transfer switches.
7. Portable Generator Docking station.
8. Elevator disconnect switches or breakers of any rating.
9. Enclosed motor starts rated ≥ 60 amps.
10. Other equipment as noted.

B. The flash protection boundary and the incident energy shall be calculated in the electrical distribution system (at locations listed above) where work could be performed on energized parts.

C. Safe working distances shall be based upon the calculated arc flash boundary considering incident energy of 1.2 cal/cm².

D. When appropriate, the short circuit and the clearing times of the phase overcurrent devices will be retrieved from the short circuit and coordination study model.

E. The short circuit calculations and the corresponding incident energy calculations for multiple system scenarios must be compared and the greatest incident energy must be uniquely reported for each equipment location. Calculations must be performed to represent the maximum and minimum contributions of fault current magnitude for all normal and emergency operating conditions. The minimum calculation will assume that the utility contribution is at a minimum and will assume a minimum motor contribution (all motors off). Conversely, the maximum calculation will assume a maximum contribution from the utility and will assume the maximum amount of motors to be operating.

F. The incident energy calculations must consider the accumulation of energy over time when performing arc flash calculations on busses with multiple sources. Iterative calculations must take into account the changing current contributions, as sources are interrupted or decremented with time. Fault contribution from motors and generators should be decremented as follows:
1. Fault contribution from induction motors should not be considered beyond 3-5 cycles.
2. Fault contribution from synchronous motors and generators should be decayed to match the actual decrement of each as closely as possible (e.g. contributions from permanent magnet generators will typically decay 10 per unit to 3 per unit after 10 cycles).

G. For each equipment location with a separately enclosed main device (where there is adequate separation between the line side terminals of the main protective device and the work location), calculations for incident energy and flash protection boundary shall include both the line and load side of the main breaker.

H. When performing incident energy calculations of the line side of a mina breaker (as required per above), the line side and load side contributions must be included in the fault calculation.

I. Mis-coordination should be checked amongst all devices within the branch containing the immediate protective device upstream of the calculation location and the calculation should utilize the fastest device to compute the incident energy for the corresponding location.

J. Arc Flash calculations shall be based on the actual overcurrent protective device clearing time. Maximum clearing time will be capped at 2 seconds based on IEEE 1584-2018 section B.1.2. Where it is not physically possible to move outside of the flash protection boundary in less than 2 seconds during an arc flash event, a maximum clearing time based on the specific locations shall be utilized.

K. The report shall include incident energy and flash protection boundary calculations:

1. Arc fault magnitude
2. Protective device clearing time
3. Duration of arc
4. Arc flash boundary
5. Working distance
6. Incident energy
7. Hazard Risk Category
8. Recommendation for arc flash energy reduction

L. The contractor of the Arc Flash Hazard Analysis shall provide a 3.5 in x 5 in thermal transfer type label of high adhesion polyester for each equipment and work location analyzed.

M. All labels shall be based on recommended overcurrent device settings and will be provided after the results of the analysis have been presented to the owner and after any system changes, upgrades or modifications have been incorporated in the system.

N. The labels shall include the following information, at a minimum: location designation, nominal voltage, flash protection boundary, hazard risk category, incident energy, working distance, engineering report number, revision number and issue date.

O. Labels shall be machine printed, with no field markings

P. The contractor of the Arc Flash Hazard Analysis shall train the owners qualified electrical personnel of the potential arc flash hazards associated with working on energized equipment (minimum 4 hours). The training shall be certified for continuing education units (CEU's) by the International Association for Continuing Education Training (ACET) or equivalent

PART 3 EXECUTION

3.1 GENERAL

A. Studies are to be completed prior to release of any distribution equipment included in or affected by the studies. If any changes to specified ratings are required as a result of the study(ies), the changes shall be identified prior to order release. The owner shall not be responsible for costs related to equipment returns, restocking fees, removal and reinstallation, etc. of equipment ordered or installed prior to completion of study(ies).

3.2 INSTALLATION

A. Contractor shall be responsible for verifying installed equipment matches the equipment used as the basis for the studies. Where differences exist, the contractor shall notify the Engineer which performed the studies and obtain corrected settings applicable to the installed equipment.

B. Arc Flash Identification Labels:

1. Contractor shall affix all Arc Flash Hazard labels to all equipment.
2. Clean surface prior to applying labels.
3. Apply labels, per NFPA 70E, level and without air bubbles or wrinkles.
4. Do not affix labels over screws or hardware such that labels will be damaged during removal of equipment covers, etc.

3.3 FIELD QUALITY CONTROL

A. General:

1. Provide a set of approved Study documents to the distribution system testing agency.
2. All settings, as specified in the report, shall be properly set and verified prior to equipment testing.

3.4 ADJUSTING

A. Relay settings, breaker interrupting rating, bus bracing shall be minimum as shown on drawings and specifications. Final settings and sizing shall be according to the approved short circuit and coordination studies

B. Set all field adjustable circuit breaker parameters.

C. Set field adjustable pickup and time delay ranges of Ground Fault Systems and solid state breakers.

Fuses: Provide fuses, installed in fusible switches, switchgear, etc.

END OF SECTION

SECTION 26 08 00 - COMMISSIONING OF ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes requirements for commissioning electrical & lighting systems, assemblies, and equipment.

1. Commissioning is a third-party quality assurance process. It does not take the place of or duplicate the Contractor’s quality control services required per Division 01 Section "Quality Requirements" or testing, adjusting, and balancing and other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.

B. The following electrical systems, equipment and components are to be commissioned on this project:

Electrical	CxP Submittal Review	Construction Checklist	Functional Test Sampling
26 20 00 Low Voltage Electrical Distribution (electrical meters)	Yes	Yes	
26 27 26 Wiring Devices	Yes	Yes	20%
26 29 00 Low Voltage Controllers (motor starters)	Yes	Yes	20%
26 31 00 Photovoltaic Collectors	Yes	Yes	100%
26 50 00 Lighting	Yes		

C. Related Sections:

1. Division 01 Section "General Commissioning Requirements" for definitions of terms used in this Section, and for commissioning requirements applicable to all systems, including lighting.

1.2 DEFINITIONS

A. Refer to Section 019113 “General Commissioning Requirements” for commissioning related definitions.

1.3 ABBREVIATIONS

A. Refer to Section 019113 “General Commissioning Requirements” For commissioning related abbreviations.

1.4 COMMISSIONING TEAM (CxT)

A. Refer to Section 019113 “General Commissioning Requirements” for details on the commissioning team.

1.5 ACTION SUBMITTALS

A. Comply with requirements in Division 01 for submittal procedure general requirements for commissioning process.

B. Comply with requirements in Section 019113 “General Commissioning Requirements” for submittal requirements.

1.6 CLOSEOUT SUBMITTALS

A. Comply with requirements in section 019113 “General Commissioning Requirements” for submittal requirements including Certificate of Construction-Phase Commissioning Process Completion and the Certificate of Commissioning Process Completion.

B. At substantial completion the Contractor shall be responsible for providing the information below in PDF format for inclusion in the Systems Manual:

1. All Pre-Startup and Electrical Test reports
2. All Startup Documentation
3. All Electrical Meter and Energy Monitoring System reports.
4. As-built Control Drawings & Sequences
5. All Training & Demonstration Sign-in Sheets

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. General: Provide test equipment, instrumentation, and tools necessary to perform function performance testing. Use test equipment and instrumentation that has been calibrated, certified, and properly maintained.

1. Test equipment and instrumentation required to perform the commissioning shall remain the property of Contractor unless otherwise indicated.

2. Proprietary test equipment, instrumentation, and tools shall become the property of Architect at Substantial Completion.

a. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of equipment warranty, or as otherwise required to service, repair, adjust, calibrate or perform work on its equipment.

2.2 WEB-BASED COMMISSIONING PORTAL

A. All Contractors participating in the Cx process shall use the web-based Cx Portal ('Portal') to document the Cx procedures. The Portal is a Web-based Internet hub used to electronically collaborate and coordinate activities and deliverables throughout the Cx process. The Portal is hosted by the CxP and shall be accessible to all Parties participating in the Cx program. The Portal provides a common location to store Start-Up Documentation, Functional Performance Tests and results, project documents and deliverables. It also serves as a collaborative email hub to facilitate, automate, and track communications between Parties relating to the Cx process. The respective Contractors are required to complete the Construction Checklists electronically on the portal. Submittal of scanned copies of the completed documentation will not be accepted.

B. PDFs of all commissioning documents will be provided to all parties and will be distributed via e-mail. Access to the web-based commissioning software will not be required to view any of the documentation developed by the CxP.

C. The CxP will, at the direction of the Owner, upload all commissioning documentation to the Owner's FPT site.

PART 2 - EXECUTION

3.1 CONSTRUCTION CHECKLISTS (DEVELOPED BY CxP)

A. Construction Checks are provided for each system being commissioned within the discipline specific Commissioning specifications. These Construction Checklists are based on the Contract Documents. The checklists will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.2 FUNCTIONAL PERFORMANCE TEST (FPT) FORMS (DEVELOPED BY CxP):

A. FPT forms are provided for each system being commissioned within the discipline specific Commissioning specifications. These forms are based on the Contract Documents. The FPT forms will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.3 MEETINGS

A. Commissioning Provider will schedule and conduct commissioning meetings. Commissioning Meetings shall be attended by the following:

1. Contractor
2. Electrical Contractor
3. CxP and assigned staff
4. Owner
5. A/E Team
6. Installers, suppliers, and specialists that the Contractor identifies appropriate for a particular portion of the commissioning process.

B. Meetings shall occur on a biweekly basis during active construction of any system required to be commissioned. During functional performance testing, commissioning meetings shall occur on a weekly basis.

C. The CxP will schedule special commissioning meetings as follows. Relevant staff from the contractor and subcontractor shall attend. The A/E will also be requested to attend when determined by the CxP.

1. Startup Scheduling Meetings: Meeting shall be held for each major system, assembly, and piece of equipment being commissioned. Additional Startup Scheduling Meetings will be held prior to Startups repeated due to failure.
2. Functional Performance Test Scheduling Meetings: Meeting shall be held for each system being commissioned. Additional FPT Scheduling Meetings will be held prior to FTPs repeated due to failure, delay, seasonal, or deferred testing.

3.4 COMMISSIONING PROVIDER RESPONSIBILITIES

A. Construction Phase

1. Commissioning Plan: The Commissioning Plan is issued by the CxP to the team following construction Notice to Proceed. The Commissioning Plan is updated by the CxP throughout construction to reflect schedule updates.
2. Commissioning Kickoff Meeting: The CxP shall schedule the Commissioning Kickoff meeting following construction Notice to Proceed. An agenda and meeting minutes shall be issued by the CxP.
3. Construction Checklists: Final Construction Checklists updated and issued by CxP after approval of submittals. CxP monitors contractor progress completing Construction Checklists and provides final acceptance of completed Construction Checklists.
4. Construction Submittals: Submittals reviewed by CxP concurrently with the A/E.
5. Functional Performance Test (FPT) Procedure Forms: Final FTP procedure forms updated and issued by CxP after submittal approval.
6. Inspections, Pre-Startup Tests, and Startups: Site visits performed by CxP to verify installation, pre-startup tests, and startups.
7. Pre-Test and Startup Reports: CxP reviews pre-test and startup reports for all commissioned systems.
8. Pre-Functional Performance Testing: Pre-Functional Performance Testing performed by the Contractor using CxP prepared FPT forms is witnessed by the CxP.
9. Certificates of Readiness. CxP issues Certificates of Readiness to contractors. CxP issues Certificates of Readiness to contractors to complete.
10. Functional Performance Testing: CxP, with assistance of relevant Contractors, witnesses and directs functional performance testing performed in accordance with the FPT procedure forms. CxP records FPT results.
11. Issues Log:

    a. The CxP records as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with Construction Checklists, or Functional Performance Test procedures.
    b. CxP records corrective action by Contractor before signing off the Issue.
    c. The CxP tracks resolution of each Issue until it is resolved or accepted by the Owner.

12. System Acceptance: The CxP recommends system acceptance by the Owner upon completion of the Functional Performance Testing and resolution of all issues. For systems requiring deferred testing, systems may be recommended by the CxP for partial acceptance by the Owner prior to the deferred or seasonal testing if they comply with all construction contract and accepted design requirements that can be tested during initial Functional Performance Tests.

13. Final Commissioning Report: The CxP issues the final commissioning report upon completion of all Functional Performance Testing and resolution of all items on the Issues Log.
14. Commissioning Systems Manual: The CxP issues the commissioning system manual upon completion of all Functional Performance Testing.

3.5 CONTRACTOR RESPONSIBILITIES

A. Management and Coordination: Manage and coordinate commissioning process, including, but not limited to, the following:

1. Coordinate with subcontractors on their commissioning responsibilities and activities.
2. Obtain, assemble, and submit commissioning documentation.
3. Attend periodic on-site commissioning meetings. Comply with requirements in Division 01.
4. Review and comment on preliminary test procedures and data forms.
5. Report inconsistencies and issues in system operations.
6. Verify that tests have been completed and results comply with acceptance criteria, and that systems are ready before scheduling test demonstrations.
7. Prepare and submit specified commissioning reports.
8. Track commissioning issues until resolution and retesting is successfully completed.
9. Retain original records of Commissioning-Process Work, organized as required for the commissioning report. Provide Owner's representative access to these records on request.

B. Scheduling: Schedule the commissioning process:

1. Commence commissioning process within 14 days of Notice to Proceed.
2. Commissioning Schedule: Integrate commissioning activities into Construction Schedule. See Division 01 Requirements for scheduling.

    a. Include detailed commissioning activities in monthly updated Construction Schedule and short-interval schedule submittals.
    b. Schedule the start date and duration for the following commissioning activities. Break out activities, where applicable, to match the phasing required to commission each system independently:

        1) Submittals
        2) Preliminary operation and maintenance (O&M) manual submittals
        3) Construction Checklists
        4) System and Equipment Startups
        5) Pre-Functional Performance Tests
        6) BAS Graphics Review
        7) Functional Performance and Integrated systems Tests
        8) Final O&M Manual submission
        9) Training and Demonstration
        10) Deferred Functional Performance Tests

    c. Schedule shall include a line item for each installation check, pre-startup test, startup, and factory test activity specific to the equipment or systems involved.
    d. Show milestones and prerequisites for commissioning process as detailed in the Cx Plan. Show commissioning milestones, prerequisites, and dependencies in monthly updated critical-path-method construction schedule and short-interval schedule submittals.

3. Two-Week Look-Ahead Commissioning Schedule:

    a. Two weeks prior to the beginning of startup pre-tests, factory testing, and equipment and system startups, submit a detailed two-week look-ahead schedule. Thereafter, submit updated two-week look-ahead schedules weekly for the duration of commissioning process.
    b. Two-week look-ahead schedules shall identify the date, time, beginning location, Contractor personnel required, and anticipated duration for each startup or test activity.
    c. Use two-week look-ahead schedules to notify and coordinate participation of Owner's witnesses.

C. Contractor is responsible for the commissioning of all installed equipment and systems as required in the Contract Documents.

D. Include all costs of commissioning requirements including manufacturer-certified start-up and testing of installed equipment.

1. Provide utility services, personnel, materials, tools, testing equipment, instrumentation and all other resources required for the commissioning process.
2. Contractor must:

    a. Manage, schedule, and coordinate commissioning process. Participate in, and perform commissioning team activities including, but not limited to, those described in this specification section and each individual discipline specific commissioning specification.
    b. Assign Subcontractor representatives with expertise and authority to perform commissioning team activities described in this specification section and each individual discipline specific commissioning specification.
    c. Manage and verify Subcontractors provide technicians who are familiar with the construction and operation of installed systems to participate in testing of installed systems, subsystems, and equipment.

E. Installation Verification:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Sample Construction Checklists are provided in Appendix A of this specification section. Construction Checklists will be revised by the CxP after submittal approval to ensure checklists are accurate to the actual equipment furnished. Final Construction Checklists shall be issued by the CxP after approval of the submittals.
3. The responsible Installing Contractor(s) and any additional commissioning team members identified on the checklist shall initial and date the appropriate forms for each task indicated in these Checklists. One form shall be completed for each piece of commissioned equipment or system. By initialing and dating the entry, the responsible Installing Contractor(s) and identified additional commissioning team members shall indicate completion and verification of proper installation in accordance with contract requirements and acceptance of responsibility for the installation of the equipment and/or systems.

F. Startup Procedures:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Submit startup plans, perform startups, and submit completed startup reports for the following:

a. Lighting Controls
b. Electrical Metering System
c. Solar PV

G. Pre-Functional Performance Tests:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Pre-Functional Performance Tests are performed by the Contractor independently of the CxP using the approved FPT procedures. CxP shall be invited to witness testing.
3. Final FPT forms will be submitted for Contractor review after submittal approval.

H. BAS Graphics Review:

1. The CxP shall schedule a review of the BAS Graphics with the BAS Contractor and Owner’s Facility Personnel.
2. The review of Electrical systems and equipment integrated with the BAS shall include:

a. Verifying all graphics are representative of the systems and that all points and control elements are in the same location on the graphic as they are in the field.
b. Verifying operator control of all commandable control system points including proper security access.
c. Verifying all metered values are being read.
d. Verifying all schedules and setpoints are shown and editable.
e. Verifying all alarm points are shown and set to the correct priority.
f. Verifying all alarm messages are routed to the correct phone and e-mail accounts.

I. Certificate of Readiness:

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Certificates of Readiness for each system will be provided to the Contractor for signature 14 days prior to Functional Performance Testing.

J. Functional Performance Tests

1. Comply with Section 019113 “General Commissioning Requirements”.
2. Testing includes both Deferred and Delayed Functional Performance Testing.
3. Sample FPT forms are provided in Appendix B of this specification section. Final FPT forms will be submitted for Contractor review after submittal approval.
4. The following shall be present during Functional Performance Testing of the Electrical systems:

a. Contractor
b. Electrical Contractor
c. Lighting Controls Contractor
d. Electrical Metering Contractor
e. Equipment Manufacturer’s Technical for the following:
    1) Solar PV
    2) Electrical Metering
    3) Lighting Controls
f. BAS Contractor (where electrical systems are integrated with BAS)
g. Owner’s Facility Personnel

5. Functional Performance Testing of the Electrical systems shall include, but is not limited to, the following:

    a. Control of all lighting and integration with BAS
    b. Electrical metering system and integration with BAS
    c. Verify integrated performance of all components and control system components, including all interlocks and interactions with other equipment and systems.
    d. Verify shut down and restart capabilities both for scheduled and unscheduled events (e.g. power failure recovery and normal scheduled start/stop).
    e. Verify all energy saving control strategies.
    f. Verify power monitoring.
    g. Verify integration with BAS.

6. Common Acceptance Criteria: The following acceptance criteria apply to all Electrical systems, assemblies, equipment, components, and features indicated to be commissioned:

    a. For the conditions, sequences and modes tested, the equipment, integral components and related equipment shall respond to varying loads and changing conditions and parameters appropriately as expected, according to the sequences of operation, as specified, according to acceptable operating practice and the manufacturer's performance specifications. Verify that equipment operates within tolerances specified in governing codes, acceptance criteria contained in the construction documents, manufacturer's literature and according to good operating practice.
    b. Systems shall accomplish their intended function and performance.
    c. Additional acceptance criteria developed by the CxP as part of FPT test procedures.

3.6 OPERATIONS AND MAINTENANCE MANUAL

A. Contractor shall submit O&M Manuals in accordance with Division 01 and 26.

B. Manuals must be submitted a minimum of 90 days prior to substantial completion for review by the A/E and CxP.

3.7 TRAINING AND DEMONSTRATION

A. Contractor shall develop and submit to the CxP and Owner a training plan which identifies all training required by specification sections associated with commissioned systems. Refer to Divisions 01, 26, and Section 019113 “General Commissioning Requirements”.

B. Document training attendance using training attendance rosters and provide completed attendance rosters to the CxP the Owner no later than 7 calendar days following the completion of training for each system to be commissioned.

C. Approved O&M manuals shall be available for reference by all parties present at the training and demonstration sessions.

D. The Mechanical Contractor shall be present during all training and demonstration sessions to respond to general questions regarding installation and operations.

E. The Controls Contractor shall be present during all training and demonstration sessions on equipment and systems being controlled or monitored by the BAS. The Controls Contractor shall be prepared to show the BAS Graphics with associated monitoring and control during the individual equipment and systems training and provide a general description of the BAS controls and any associated control sequences. This is in addition to the specified BAS control system training in Section 230900 “Building Automation System (BAS)”.

F. If, during training and demonstration, additional important maintenance information is provided that isn’t included in the O&M manuals, it shall be written down by the contractor and inserted as an amendment to the relevant O&M manual.

G. The CxP shall be present to witness and respond to questions regarding the commissioning and functional performance testing of the equipment and systems.

3.8 SYSTEMS MANUAL

A. The CxP shall be responsible for final submission of the Systems Manual to the Owner.

3.9 NEAR END-OF-WARRANTY REVIEW

A. General: Participate in the Near End-of-Warranty review and walkthrough conducted by the CxP.

1. The review will cover current building operation with input from the operation and facility staff. Outstanding issues related to the construction, particularly those related to Owner’s Project Requirements (OPR), and warranty related deficiencies will be addressed. Operational problems and concerns from the facility staff and occupants will be reviewed for compliance with design intent.

2. The CxP will provide a plan for corrective measures to the Architect and the Contractor for action.

a. Corrective Action: Where deficiencies and problems result from work not in compliance with the Contract Documents or are covered under warranty, provide the corrective actions indicated at no additional cost to Architect.

3.10 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Substantial Completion.

D. Certificate shall be provided for each phase.

3.11 CERTIFICATE OF COMMISSIONING PROCESS COMPLETION

A. Comply with Section 019113 “General Commissioning Requirements”.

B. Contractor shall submit applicable documentation to CxP for review.

C. When the commissioning process is complete, inclusive of all phases and Seasonal Functional Performance Testing, the CxP will prepare a Certificate of Commissioning Process Completion that shall establish the date of completion of the commissioning process.

END OF SECTION 26 08 00

SECTION 26 20 00

LOW VOLTAGE ELECTRICAL DISTRIBUTION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section includes:

1. Current Transformer Cabinets
2. Automatic Circuit Breakers
3. Elevator Main Line Disconnects
4. Surge Protective Devices
5. Submeters
6. Submetering & Data Collection System
7. Disconnect Switches
8. Contactors
9. Time Clock
10. Panelboards
11. Generator Docking Stations

B. Related Sections:

1. Section “Underground Ducts and Raceways For Electrical Systems” for coordination with connecting buried conduits, manholes, etc.
2. Section “Lightning Protection For Structures” for bonding and interconnection of electric service equipment.
3. Section “Common Work Results for Electrical” for concrete pads, bollards, labeling, and other general requirements.
4. Section “Grounding & Bonding for Electrical Systems” for grounding and bonding requirements.
5. Section “Low Voltage Power Conductors and Cables” for 600V conductors.
6. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. Current Transformer Cabinets
2. Automatic Circuit Breakers & Enclosures
3. Elevator Main Line Disconnects
4. Surge Protective Devices
5. Submeters
6. Submetering & Data Collection system
7. Emergency Shutoff Switches
8. Pushbutton operators.
9. Disconnect Switches

10. Contactors
11. Time Clocks
12. Panelboards
13. Generator Docking Stations

B. Product data: Include dimensions, construction, materials, performance data, etc.

C. Provide submittal data for each product type.

1. To verify specifications have been met/exceeded.
2. Independent laboratory test data where requested.
3. Clearly indicate or state all options, etc.:

D. Submit the following for each Surge Protective Device:

1. Manufacturer/cat. number.
2. UL Listed and labeled per UL 1449 4th Edition and UL 1283.
3. Designation Type of the SPD and Type 1 Device Listing
4. Indicate surface or integral panel/switchboard mounting.
5. System voltage & configuration.
6. Short Circuit Current Rating (SCCR)
7. Voltage Protection Ratings (VPRs) for all modes
8. Maximum Continuous Operating Voltage rating (MCOV)
9. I-nominal rating (I-n)
10. Indicate options and/or accessories.
11. Suppression circuit design and components.
12. Proof of manufacturer’s 5-year warranty.
13. Manufacturer’s installation instruction manual.
14. Manufacturer’s recommended wire and breaker sizes clearly identified and marked.
15. Clearly identify manufacturer’s required external OCP breaker or fuse ratings.
16. Additional information to show compliance with specifications or drawings.
17. Shop drawings including and 1-line drawings detailing dimensions and weight of enclosure, internal wiring diagram illustrating all modes of protection in each type of SPD required, wiring diagram showing all field connections.

E. Submit the following for each panelboard:

1. Manufacturer/cat. number.
2. Surface or flush mounting.
3. Main lugs or breaker ratings.
4. Integral surge protection devices (SPD).
5. Special lug configurations (double main lugs, feed through lugs, etc.).
6. Non-linear ratings, oversized neutrals, etc.
7. Specific listing of all installed breakers, spares and spaces, including installed position within panel or switchboard.
8. Interrupting rating of components and assemblies.
9. Bus materials and ratings.
10. Additional information to show compliance with specifications or drawings.

F. Product Test Reports: Certified copies of manufacturer's design and routine factory tests required by the referenced standards.

G. Closeout Submittals: Submit in accordance with the General Conditions and Division 01

requirements, Section “Common Work Results For Electrical”, and as follows:

1. All post-installation inspection checklists.
2. Installer’s pre-startup checklist.
3. Post installation load test results.
4. Preventative maintenance schedule for each unit.

1.4 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Single-Source Responsibility:

1. The complete performance of assembled panelboards and/or switchboards, including all integral accessories, shall be the sole responsibility of the equipment supplier. It is the installer’s responsibility to ensure that all factory and field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.

C. Manufacturer/Vendor Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.
2. Manufacturer shall be experienced in manufacturing equipment of the types and capacities indicated that have a record of successful in-service performance for a minimum of 10 years.
3. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility. Service shall be available on a 24-hour basis.
4. Start-up services and post installation tests, as specified.

D. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	ASTM	American Society for Testing and Materials
4.	IEEE	Institute of Electrical and Electronics Engineers
5.	IEEE C2	National Electrical Safety Code
6.	NEC	National Electrical Code
7.	NECA	National Electrical Contractors’ Association “*Standards of Installation*”
8.	NEMA	National Equipment Manufacturers Association
9.	NETA	National Electrical Testing Association
10.	NFPA	National Fire Protection Association
11.	UL	Underwriter’s Laboratories

1.5 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of equipment to site.
2. Provide for rigging needed for unloading and setting large panels or switchboards into final position.

B. Storage and Protection:

1. Where unit is to be installed indoors, without enclosure, store in covered building or offsite to prevent exposure to weather, etc.
2. Apply temporary heat according to manufacturer's recommendations within enclosure of each switchgear or switchboard section throughout periods during which equipment is not energized and is not under normal control of temperature and humidity.

1.6 PROJECT CONDITIONS

A. Electrical service to the facility:

1. 480Y/277 volt.
2. 3 phase, 4 wire.
3. Grounded wye.

1.7 SEQUENCING

A. General Sequencing:

1. Coordinate panelboard and switchboard installation with exterior and/or interior construction.
2. Provide for sub-grade or subslab roughins.
3. Coordinate construction of concrete pads with switchboard location.
4. Provide positioning and roughins such that required clearances are maintained after final installation.

1.8 WARRANTY

A. Special Warranty: Extended product warranties over and above that required by General Conditions of this contract.

1. Warranty shall be by the product manufacturer(s), as identified in each product specification.
2. Warranty includes all parts, labor, travel expenses, with no deductibles.
3. Installer/contractor shall complete and file all necessary documents with manufacturer, etc. to assure fulfillment of warranty requirements.
4. Deliver all extended warranty documents to Owner in O & M manuals with each product.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, provide a system by the named “Basis of Design” manufacturer, or a comparable product of one of the other following named manufacturers:

1. C/T Cabinets:
   a. Approved for use by BGE for use on BGE systems.
   b. Hoffman Enclosures
   c. S.A.R. Sheetmetals
   d. Meter Devices, Inc.
   e. Atlantic Sheet Metal
   f. Square D
2. Automatic Circuit Breakers & Enclosures:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Eaton - Cutler-Hammer
3. Elevator Main Line Disconnects:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Eaton - Cutler-Hammer
   d. Bussman
4. Surge Protective Devices:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Eaton - Cutler-Hammer
   d. Advanced Protection Technologies, Inc.
   e. Surge Supression, Inc.
   f. Liebert
5. Submeters:
   a. Leviton Manufacturing Co., Inc. (basis of design)
   b. E-MON Corporation
   c. Osaki
   d. TigerTec Electronics, Inc.
6. Submetering & Data Collection System
   a. Leviton/Tehama Wireless (basis of design)
7. Safety Disconnect Switches:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Eaton - Cutler-Hammer
   d. Menekes
8. Contactors:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Cutler-Hammer
9. Time Clocks:
   a. Intermatic (basis of design)
   b. Tork
   c. Paragon
10. Panelboards:
    a. Square D/Schneider Electric (basis of design)
    b. ABB (GE)
    c. Eaton - Cutler-Hammer
11. Generator Docking Station
    a. Trystar, Inc. (basis of design)
    b. Power Temp Systems, Inc.

c. Square D/Schneider Electric
d. ABB (GE)
e. Eaton - Cutler-Hammer

2.2 CURRENT TRANSFORMER CABINETS

A. Current transformer (C/T) cabinet for power company's metering equipment.

1. NEMA 3R cabinet.
2. UL Listed, Labeled "For Use on BGE Systems".
3. Welded Aluminum Construction.
4. Hinged doors with sealing studs.
5. Approved for use, and in accordance with BGE standards.
6. Rated 300 through 3000 amps of load.
7. 3-sided trough below for incoming conductors.

2.3 AUTOMATIC CIRCUIT BREAKERS

A. UL Listed, automatic circuit breakers for installation within panelboards and switchboards, or with enclosed cabinets and trim.

B. Circuit breakers:

1. Molded case, thermal magnetic, inverse time, unless noted otherwise.
2. Adjustable magnetic trip settings for thermal-magnetic breakers $\geq$225 amps.
3. Ratings as per drawings.
4. Accessories, as noted.
   a. Mechanical kirk key interlocking.
   b. Under-voltage trip.
5. Arc Flash Energy-Reduction Maintenance Switch: Per NEC 240.87, provide a manual switch that changes the trip settings on any adjustable trip breaker (with available trip settings of 1200A or higher) so as to minimize arc flash energy to downstream devices when active by lowering the instantaneous trip to the lowest possible setting. Provide with visual status indicator light on the breaker that indicates breaker is in Maintenance Mode.
6. Solid state electronic trip units for ground fault, long time pick-up and delay, short time pick-up and delay and instantaneous settings, where indicated. All breakers identified on drawings, or specified herein as having Electronic Trip Units (ETU) shall have the following features:
   a. Long Time Pickup and Delay.
   b. Short Time Pickup and Delay.
   c. Instantaneous.
   d. Ground Fault Pickup & Delay.
   e. Zone Selective Interlocking on Short Time and Ground Fault.
   f. True RMS sensing.
   g. Adjustable setpoints via clearly marked dials.
   h. Clear lexan cover to seal adjustable settings from tampering or accidental contact.
   i. Square D MicroLogic 6.0 Electronic Trip Units or product of comparable named manufacturer.
7. UL Listed Service Entrance use, where required.
8. Rated for 3φ delta systems where applicable.
9. Square D or comparable product from named manufacturers.

C. Ground Fault Circuit Interrupter (GFCI) branch breakers:

1. Installed in branch circuit panelboards and loadcenters where indicated.
2. Single or two pole, per panel schedule.
3. Class A protection, 6 mA trip for receptacle circuits.
4. Equipment ground fault protection, 30mA trip for heat trace or other non-receptacle circuits.

D. Enclosure and trim:

1. NEMA 1 enclosure, unless noted otherwise.
2. Deadfront cover.
3. Padlock provisions for locking breaker handle in ON or OFF position.
4. Rust-inhibiting phosphatized primer.
5. Factory finish paint (ANSI 61 gray).

2.4 ELEVATOR MAIN LINE DISCONNECTS

A. UL Listed, automatic circuit breakers or fusible disconnect switches for installation within elevator machine rooms, with enclosed cabinets and trim, serving as main line disconnect for elevator(s).

B. General:
1. UL Listed, dead-front device, providing overcurrent and short circuit protection of elevator motor.
2. Meets all requirements of NEC Article 620.
3. ANSI/ASME compliant for elevator main line disconnects.
4. Handle pad-lockable only in the "OFF" position.
5. Form C Auxiliary contacts (minimum of 2) to operate with main contacts (open when device is OFF). (Used for operation of battery lowering systems).
6. Provide relay for shunt trip voltage monitoring.

C. Fusible Elevator Control & Disconnect Switch:

1. Fusible Switch, heavy duty, 600V.
2. Dual Element, Class J fuses. Ratings as per drawings.
3. NEMA 4 or 12 enclosure with externally operable handle.
4. Handle lockable in OFF position.
5. 120 VAC shunt trip for operation via fire alarm relay (heat detector activated).
6. Keyed Test switch to operate the shunt trip mechanism.
7. Integral fused control power transformer (120VAC secondary for shunt trip coil operation).
8. Integral relay for monitoring status of 120VAC control power, per NFPA, by the fire alarm system. Relay shall change state upon loss of control voltage power, and not when switch is manually turned OFF.
9. Form C auxiliary contacts, mechanically interlocked with main disconnect switch, for interface with hydraulic elevator battery lowering system.
10. Cooper Bussman *Power Module Switches*, Eaton *Elevator Control ES Switch,* or comparable product from named manufacturers.

2.5 SURGE PROTECTIVE DEVICES

A. Minimum Design Standards, latest editions:

1. UL 1449. Latest Edition, “Surge Protective Devices”
2. UL 1283, “Standard for Electromagnetic Interference Filters Listed.”
3. ANSI/IEEE C62.33, “Standard Test Specifications for Varistor Surge-Protective Devices.”
4. ANSI/IEEE C62.41.1 – 2002, “IEEE Guide on the Surge Environment in Low-Voltage (1000 V and Less) AC Power Circuits” and C62.41.2 – 2002, “IEEE Recommended Practice on Characterization of Surges in Low-Voltage (1000 V and Less) AC Power Circuits.”
5. ANSI/IEEE C62.45 - 2002, “IEEE Recommended Practice on Surge Testing for Equipment Connected to Low-Voltage (1000 V and Less) AC Power Circuits.”
6. ANSI/NFPA 70, “National Electrical Code Article 242.”

B. Surge Protection:
1. SPD shall provide surge current paths for all modes of protection:
   a. Wye systems: 10-modes; L-L, L-N, L-G, and N-G
2. Minimum surge current capability (single pulse rated) per phase shall be:
   a. Distribution Panels 160,000 A per phase
   b. Branch Panels 100,000 A per phase
3. UL 1449 Listed Voltage Protection Ratings (VPRs) shall not exceed the following:

System Voltage	L-N	L-G	L-L	N-G
208Y/120	700V	700V	1200V	700V
480Y/277	1200V	1200V	1800V	1200V

4. UL 1449 Listed Maximum Continuous Operating Voltage (MCOV):

System Voltage	Allowable System Voltage Fluctuation (%)	MCOV
208Y/120	25%	150V
480Y/277	15%	320V

5. SPD shall be UL labeled with 200kA Short Circuit Current Rating (SCCR). Fuse ratings shall not be considered in lieu of demonstrated withstand testing of SPD, per NEC 242.10.
6. SPD shall be UL labeled as Type 1 (intended for use without need for external or supplemental overcurrent controls). Every suppression component of every mode, including N-G, shall be protected by internal overcurrent and thermal over-temperature controls. SPDs relying upon external or supplementary installed safety disconnects do not meet the intent of this specification.
7. SPD shall be UL labeled with 20kA I-nominal (I-n) for compliance to UL 96A Lightning Protection Master Label and NFPA 780.
8. SPD’s in main service switchboards or panelboards shall include a serviceable, replaceable modules (excludes Branch and Distribution Panel SPD’s).
9. Type 1 SPD’s shall also meet UL800 for use on line side of main disconnect.

C. EMI/RFI Filtering:

1. SPD shall have UL 1283 EMI/RFI filtering with minimum attenuation of -50dB at 100kHz.
2. Protection for common and normal mode noise.

D. Construction:

1. Stand-alone or integral panelboard/switchboard mounting, per drawings.
2. Separate enclosure mounting:
   a. Finished areas: Flush NEMA 1 steel enclosure, removable screw cover.
   b. Unfinished areas: Surface mounted NEMA 1 steel enclosure, piano hinged cover.
   c. Exterior installations: NEMA 4 gasketed housing, or SPD panel installed

in NEMA 4 outer housing.
d. Integral main fused disconnect switch, service entrance rated.

3. Integral with panelboard/switchboard:
   a. NEMA 1, dead-front installation within the steel enclosure of panel or switchboard.
4. SPD shall be provided with integral disconnect switch when 3-pole breaker is not available for connecting the suppressor

E. Internal connections:

1. Connected in parallel with wiring system.
2. All internal wiring subject to surge currents shall utilize low-impedance copper bus bar and/or minimum #4 AWG copper conductors.
3. Compression solderless-type lugs bolted to bus bars.
4. No quick-disconnect terminals or PC boards permitted in surge current-carrying paths.
5. Externally visible status LED's (Green – OK, Red-Service), 1 pair per phase.
6. Audible alarm sounder for module failure.
7. Test/silence switch for LED’s/audible alarm.
8. 1 set of NO/NC dry contacts (Service Entrance switchboard or service entrance panelboard applications only)
9. Surge event counter with backup power source or EPROM memory to prevent loss of data (Service Entrance switchboard or service entrance panelboard applications only)

F. Manufacturer’s Warranty:

1. Ten (10) year unlimited module or unit replacement from initial start-up.
2. Warranty includes all parts, labor, travel expenses, with no deductibles.

G. Manufacturer:

1. Basis of Design is the following Square D models or comparable product by previously named manufacturers:
   a. Service Entrance: *Surgelogic* EMA Series
   b. Distribution Panels: *Surgelogic* EMA Series
   c. Branch Panels: *Surgelogic* EBA Series

2.6 SUBMETERS

A. Fully electronic, digital kilowatt-hour and demand meters for submetering.

1. Submeter shall record energy consumption (kw-hrs).
2. Peak demand (kw) display, with peak reset.
3. LCD display.
4. NEMA 1 steel enclosure
5. Rated for use on 277/480 or 120/208V, 3φ, 4W systems, or as indicated
6. Amp rating, to match application
7. 3P-15A circuit breaker voltage source connection to panelboard.
8. Solid or split core CT's with ratio to match submeter rating.
9. Capable of paralleling up to 3 CT's per phase for cumulative metering (provide multiple CT’s with identical ratios, per manufacturer).
10. UL 916 Listed meters and CT's.
11. ANSI C12.1 & C12.20 at 0.5% Accuracy Class.

12. Isolated pulse output.
13. Meter data capable of use for energy monitoring and tenant billing applications.
14. Non-volatile memory with no loss of metering data upon power loss.
15. 10 year warranty.
16. Leviton VerifEye Metering System, Series 2000 Meter; or comparable product by other named manufacturers.

2.1 SUBMETERING SYSTEMS

A. Provide fully electronic, digital kilowatt-hour data collection system, including CT's, submeters, equipment cabinets, pulse-modules, data hubs, all interconnecting cabling, and wireless communication equipment for submetering data collection system. Provide energy data collection and monitoring software.

B. Standards:
1.
2. All meters, software and equipment of this section shall comply with the following applicable portions of the latest revisions of the following standards:
   a. ANSI C12.1 & C12.20 at 0.5% Accuracy Class
   b. UL Certified to IEC/EN/UL/CSA 61010-1 2nd Edition.
   c. UL 916 Listed meters and CT's.

C. Current Transformers:

1. 0.5% accuracy class 0.1A secondary solid core CT's that conform to applicable ANSI requirements or 1.0% accuracy split core CT's.
2. Solid or split core current transformers with full scale output of 0.1A.
3. Split core current transformers available from 100-5,000A
4. Current transformer secondary wiring can be extended up to 300 feet.

D. Meters:

1. Rated for use on 277/480V or 120/208V/3φ/4W systems, or as indicated.
2. Amp rating, to match applications.
3. Meters shall be mounted in one or more multi-meter cabinet enclosures.
4. Meters to be complete with a Liquid Crystal Display (LCD) to access energy measurements and phase diagnostics when needed
5. Meter data capable of use for energy monitoring and tenant billing applications.
6. Isolated pulse output.
7. Non-volatile memory with no loss of metering data upon power loss.
8. Energy Parameters:
   a. kWh real consumption
   b. kW instantaneous consumption
   c. kVAh apparent consumption
   d. kVA apparent power
   e. kVARh reactive consumption
   f. kVAR reactive power
9. Phase Diagnostics: Parameters to be displayed for each individual phase of each metered load:
   a. Voltage Phase to neutral or phase to phase
   b. Amps Instantaneous amperage for each phase
   c. kW Instantaneous real energy
   d. PF Power factor
   e. PA Phase angle

f. kVA Instantaneous apparent energy
g. KVAR Instantaneous reactive energy

E. Data Collection And Communication:

1. Energy Monitor Hub:
   a. 120VAC input via Class 2 plug-in power supply transformer.
   b. NEMA 4 enclosure.

F. Warranty: 10 year manufacturer warranty.

G. Collection and Monitoring Software

1. Provide a web hosted software platform which is fully functional without software other than standard web browsers including, but not limited to, Microsoft Internet Explorer and Mozilla Firefox.
2. Software shall be used for the collection, analysis, and reporting of energy data from sub-metering equipment used to capture measurements from electrical utility.
3. Software shall collect and report data in intervals from one (1) to sixty (60) minutes and illustrate information in real time.
4. Software shall produce customized reports and display data for all energy management components including cost, kW, kVA, kVAR, and power factor
5. Software shall include an automatic reporting system and instant alarm notification system.
6. Enterprise Energy Management Software: Leviton Energy Manager.
7. Software shall be completely free to owner, without setup, use, application, or yearly maintenance or license fees.
8. Building Management Software; Leviton BMO 2.0 or comparable product from named manufacturers.

2.2 ELEVATOR SHUNT TRIP TEST BUTTONS

A. Shunt trip test pushbutton stations for testing operation of shunt trip breakers serving elevator feeders. Provide one test button for each shunt trip breaker.

1. Pushbutton operators, contact blocks, & mounting base.
2. Rated 120V, momentary contacts.
3. Recessed mounting in finished areas.
4. 1" diameter, black pushbutton with metal ring guard.
5. Contact blocks with (1) N.O. and (1) N.C. rated 10 Amps.
6. Square D, or comparable product from named manufacturers.

2.3 SAFETY DISCONNECT SWITCHES

A. Provide safety disconnect switches as shown on the drawings and where required by the National Electrical Code.

1. Horsepower rated for motor applications.
2. Solid neutral terminals where applicable.
3. Shielded phase conductor terminals.
4. Heavy duty type; 200kA Interrupting rating.
5. General duty type; 100kA Interrupting rating.
   a. NEMA 1 for interior.

b. NEMA 3R for exterior, damp, or wet locations, on roof or on grade.
6. Cover interlock to prevent operation with cover open.
7. Rejection feature (Class R) fuses, for fused units.
8. Externally operated, with all current carrying parts silver or tin plated. Side handle, quick-make, quick-break operation.
9. Pad-lockable, minimum of 2.
10. Disconnects for boilers shall comply with ASME CSD-1-2012, “Controls & Safety Devices for Automatically Fired Boilers.”
11. Square D, or comparable product by previously named manufacturers.

2.4 LIGHTING CONTACTORS

A. UL listed for tungsten, fluorescent and/or HID ballast lighting application, 600 VAC.

1. Electrically operated, electrically held.
2. 120V control power transformer with prim/sec fusing.
3. 120 volt coil, controlled as indicated.
4. Number of poles per drawings.
5. Minimum 30 Amp rating without derating for load.
6. Enclosure: NEMA 1 for dry, indoor areas; NEMA 3R for damp, wet or exterior locations.
7. HOA switch installed on enclosure door.
8. Square D, or comparable product by previously named manufacturers.

2.5 TIME CLOCK

A. For lighting contactor control, etc.

B. Features:

1. Electronic, programmable, 120V input
2. 7-day scheduling (separate schedules per day).
3. Skip a day program capable.
4. DPST contacts rated 30 amps each, 120/277 VAC.
5. Manual On/Off/Automatic override control.
6. Integral battery backup to maintain programming for 3 years, minimum.
7. NEMA 1, side hinged enclosure (for indoors), NEMA 3R (for outdoors).

C. Intermatic #ET2125C, or comparable product by Tork or Paragon.

2.6 PANELBOARDS

A. UL Listed, factory assembled, circuit breaker panelboards with cabinets and trim, branch breakers.

B. Enclosure and trim:

1. NEMA 1 enclosure unless noted otherwise.
2. Front-hinged door with lock.
   a. All panels keyed alike.
   b. Factory finish paint (ANSI 61 gray) on all surfaces.
   c. Rust-inhibiting phosphatized primer.
   d. Provide minimum (2) keys per lock.

3. Galvanized back box.
4. Recessed or surface mounting as indicated.

C. Ratings:

1. Fully rated interrupting ratings as per schedules.
2. UL Listed for Service Entrance, where applicable.
   a. Provide neutral to ground bonding.
3. Amp ratings as per drawing schedules.

D. Construction:

1. Main lugs or breaker per drawing schedules.
2. Main breakers with additional line side lugs or termination lugs for connection of line side Type 1 SPD.

3. All phase, neutral and ground bus bars shall be copper.
4. Interior equipment ground bar bonded to enclosure. Fully sized per NEC and UL, with sufficient lugs to accommodate all incoming and outgoing equipment grounding conductors.
5. Panels shall accept plug-on and bolt-on branch breakers.
6. Plug-on branch breakers for ratings $\leq$60 Amps.
7. Bolt-on branch breakers, unless noted, for ratings > 60 Amps.
   a. Use of connecting links, bars, etc. not permitted.
8. Sequence (A-B-C) bussing.
9. Up to 84 poles in single width panel, as noted on drawings.
10. Provide double width panels, where indicated, to include.
    a. Separate back boxes and front cover for each section.
    b. Poles equally divided between sections.
11. Molded case, thermal magnetic branch and main breakers.
12. Arc Flash Energy-Reduction Maintenance Switch: Per NEC 240.87, provide a manual switch that changes the trip settings on any adjustable trip breaker (with available trip settings of 1200A or higher) so as to minimize arc flash energy to downstream devices when active by lowering the instantaneous trip to the lowest possible setting. Provide with visual status indicator light on the breaker that indicates breaker is in Maintenance Mode.

E. Spare Breakers and Spaces:

1. As indicated on panel schedules.

F. Accessories:

1. Typewritten directory on panel door interior.
2. Internal or external SPD protection, for panels indicated on drawing riser diagram.

G. Panelboard types (Square D models, or comparable product by previously named manufacturers):

1.	277/480V distribution (>600A)	I-Line
2.	277/480V distribution ($\leq$600A)	NF
3.	277/480V branch circuit ($\leq$600A)	NF
4.	120/208V distribution ($\leq$600A)	NQ

5. 120/208V distribution (>600A) I-Line
6. 120/208V branch circuit (≤600A) NQ

2.7 DISTRIBUTION PANELBOARD (800 A THROUGH 1200 A)

A. Circuit breaker type distribution panelboard (drawings may indicate "switchboard") with circuit breaker branch circuit devices.

B. Enclosure and trim:

1. NEMA 1, dead front enclosure, unless noted otherwise.
2. Factory assembled frame and cover plates.
3. Front-hinged door(s) with lock.
   a. All panels keyed alike.
   b. Provide minimum (2) keys per lock.
4. Galvanized back box.
5. Factory finish painted front cover (ANSI 61 gray).
6. Recessed or surface mounting as indicated.

C. Ratings:

1. Fully rated interrupting ratings as per schedules.
2. UL Listed for Service Entrance, where applicable.
   a. Provide neutral to ground bonding.
3. Amp ratings as per drawing schedules.

D. Construction:

1. Main lugs or breaker per drawing schedules.
2. All phase, neutral and ground bus bars shall be copper.
3. Tin-plated bus at joints and connections.
4. Interior equipment ground bar bonded to enclosure.
5. 100% neutral bus.
6. Removable solid bar neutral link to permit disconnecting neutral bus from incoming neutral conductor on "Service Entrance" rated switchboards.
7. Plug-on bus connection breakers (I-Line).
   a. Use of connecting links, bars, etc. not permitted.
   b. Panel shall be capable of accepting branch breakers up to the frame size of the main lug or breaker rating.
8. Sequence (A-B-C) bussing.
9. Molded case, thermal magnetic branch and main breakers, unless noted otherwise.
10. Adjustable magnetic trip for all thermal-magnetic breakers ≥ 225 Amps.
11. Arc Flash Energy-Reduction Maintenance Switch on main and any feeder breakers rated ≥ 1200A.

E. Spare Breakers and Spaces:

1. As indicated on panel schedules.

F. Accessories:

1. Main Breaker with Ground Fault Protection.
2. Permanent ID plates for each breaker.

G. Square D I-Line, or comparable product by previously named manufacturers.

2.8 QUICK CONNECT EMERGENCY GENERATOR DOCKING STATION

A. Emergency Generator docking station to permit quick field connections of temporary rental generator to power life safety building load (ATS-1), when needed, and consisting of:

1. Quick-connect lugs section for temporary, removable generator feeder connections.
2. Breakers for incoming conductors of permanent and temporary generator connections.
3. Main output lugs for permanent conductor terminations.
4. Auto start terminals

B. Enclosure Construction and Features:

1. Outdoor, NEMA 3R, rain-tight, 304 GA aluminum enclosure.
2. Entire package must be listed to ETL or UL 1008 Standards
3. Roof, with overhanging drip edges, and anti-condensation treatment on underside.
4. Factory assembled frame and cover plates rigidly welded and bolted together.
5. Rust-inhibiting phosphatized primer.
6. Exterior grade, factory powder coat paint after fabrication finish (ANSI 49 gray), meeting all requirements of ANSI C57.12.28.
7. All hardware (including door fittings, fasteners, etc.), all operating-mechanism parts, and other parts subject to abrasive action from mechanical motion shall be of either nonferrous materials, or galvanized or zinc-nickel-plated materials.
8. Pad-lockable front door shall include a hinged access plate at the bottom for entry of cables from portable generator. NEMA 3R integrity shall be maintained with access plate open for cable entry.
9. Doors shall have a minimum of three high-strength latches.
10. Fully self-supporting, mounted on concrete slab, back to wall.

C. Ratings:

1. Integrated, fully rated short circuit interrupting ratings as per schedules.
2. System Ratings:
   a. 480/277 volt.
   b. 3 phase, 4 wire.
   c. Grounded wye.
3. Bus braced for minimum 65,000 amp withstand rating.
4. Amp ratings as per drawings.

D. Construction:

1. Phase and neutral bus bars shall be copper.
2. Plated bus.
3. Interior equipment ground bar bonded to enclosure.
4. 100% neutral bus.
5. Outgoing feeders through bottom of enclosure.
6. Lifting eyes.

7. Pad lockable.
8. Wall mount with factory installed external leg stands.

E. Incoming Generator Feeder Termination and Main Lugs Section:

1. Hinged front outer door, to allow access for terminating/removing temporary generator feeder conductors.
2. Designed to permit incoming generator conductors through bottom of panel. A hinged panel shall be provided to make connectors accessible. Generator feeders shall pass through access slots to reach connectors, but shall prevent accidental contact with energized components.
3. Outer Compartment door shall be capable of being locked closed after connecting incoming conductors.
4. Lockable rake system to prevent theft of installed/connected cables.
5. Generator conductor male camlock connectors with flip covers, color coded:
   a. 208/120V (Black, Red, Blue, White and Green).
6. Mechanical compression lugs for permanent outgoing wiring to ATS, concealed behind removable inner access panel. Lugs per phase to accommodate #4-1/0 copper conductors.
7. Fully rated main lugs and bus bars.
8. Factory installed phase rotation monitor.

F. Key Interlocked Docking Station Breakers:

1. UL Listed, automatic circuit breakers for manual switching of permanent and portable generator connections, and protection of downstream conductors and equipment.
2. Ratings as per drawings.
3. Mechanical kirk key interlocking (interlocked with permanent generator incoming feeder breaker within docking station) to prevent paralleling with portable generator.
4. Solid state electronic trip units for all breakers. Electronic Trip Units (ETU) shall have the following features:
   a. Long Time Pickup and Delay.
   b. Short Time Pickup and Delay.
   c. Instantaneous.
   d. Ground Fault Pickup & Delay.
   e. True RMS sensing.
   f. Adjustable set-points via clearly marked dials.
   g. Clear lexan cover to seal adjustable settings from tampering or accidental contact.
   h. Auxiliary contacts
   i. Square D MicroLogic 6.0 Electronic Trip Units, or approved equal.
5. Square D, or approved equal.

G. Trystar, Inc. Model DBDS-025L-LM-AS2, or comparable product by previously named manufacturers.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for operation, access

and maintenance of the equipment, per Codes and manufacturers.

3.2 INSTALLATION

A. General Requirements:

1. Install all equipment, as indicated.
2. Maintain minimum working space at live parts according to manufacturer's written instructions and NEC.
3. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.

B. Rough-in:

1. Roughin all underslab or below grade conduits, ducts, etc. prior to setting panels, switchboards or other equipment in place.
2. Coordinate exact stubups with proposed manufacturer's equipment installation drawings and the work of other trades in this contract.
3. Roughin for all required circuits, controls, connections, etc. as required by proposed equipment, even if not explicitly indicated on plans.
4. Make minor adjustments to locations so as to maintain required front working clearances and clearance above and below per NEC.

C. Current Transformer Cabinet Installation:

1. Comply with all requirements of the serving utility company.
2. Mount CT cabinet securely to building wall or other solid surface.
3. Train incoming conduits to enter below cabinet footprint, unless noted otherwise.
4. Provide meter socket directly above CT cabinet, with short conduit section between for utility wiring (minimum of 1-1/4").

D. Switchboard Installation:

1. Comply with all requirements of NFPA 70, "National Electrical Code," Article 110, "Requirements for Electrical Installations," and Article 408, "Switchboards and Panelboards."
2. Provide concrete foundation/equipment pad or housekeeping pad, per Section "Common Work Results For Electrical".
3. Mount switchboard assembly, including all sections, on a concrete housekeeping pad.
4. Securely bolt switchboard frame sections to concrete pad.
5. Maintain 42" minimum clearance in front of all sections of switchboard.
6. On switchboards on exterior, below-grade walls, maintain a minimum of 4 inches of clearance between wall and rear of switchboard.
7. Provide engraved phenolic plastic nameplates, installed adjacent to each feeder breaker, to identify the load served.

E. SPD Panel Installation:

1. Comply with all requirements of NFPA 70, "National Electrical Code," and "Article 242," Surge Protection Devices."
2. Mount as close as practicable to protected panel or equipment.
3. Close nipple conduit connection to panel or switchboard, through vertical side.
4. Minimize conductor lengths (maximum of 12" lead lengths).

5. Coordinate location of breaker serving SPD.
   a. Mount breaker directly adjacent to SPD conduit/conductor entry.
6. Install conductors with few or no bends if possible.
   a. Utilize sweeping bends, where bending is required.
   b. Gently twist all conductors together between SPD and breaker.
7. Mount SPD unit adjacent to panel or switchboard at 6' AFF, if space permits. Mount directly above or below panel or switchboard if necessary.
8. Field connections:
   a. Full size for each phase, neutral and ground.
   b. #4 AWG for service entrance connections and distribution panel SPD applications.
   c. #8 AWG for Branch Circuit Panel SPD connections.
9. At Service Entrance and Transfer Switch applications, a UL approved disconnect switch shall be provided as a means of servicing disconnect if a 60A breaker is not available. SPD shall be installed on the load side of the main service disconnect.
10. At Distribution, MCC and Branch panels, SPD shall have an independent means of servicing disconnect such that the protected panel remains energized. A 40A breaker (or larger) may serve this function.
11. Before energizing, installer shall verify service and separately derived system Neutral to Ground bonding jumpers are installed per NEC

F. Customer/Tenant Submeter Installation:

1. Comply with all requirements of NFPA 70, “National Electrical Code,” and manufacturer.
2. Mount meters, as indicated on plans, generally adjacent to metered equipment.
3. Label each submeter as to tenant, floor, and application.
4. Provide overcurrent protection for voltage sensing leads, connected to metered panel per manufacturer’s instructions.
5. Install CT’s in panelboard enclosure, per manufacturer’s instructions.
6. Install CT and voltage conductors from sensing location to meter location in EMT or flexible metal conduit.
7. Provide CT and voltage lead wiring type and size per manufacturer.
8. Do not install wiring from separate meters in common conduit.
9. Where submeter is connected to 2 or 3 sets of CT’s, in order to meter multiple source, provide engraved phenolic plate on meter face to indicate,
   METER CONNECTED TO # SOURCES
   MULTIPLY VALUE SHOWN BY #
10. Provide NEMA 1 enclosure(s), with removable front cover, above each source panelboard, for gathering and submetering of multiple branch circuits from panelboard below.
    a. One (1) CT enclosure for all “Lighting” branch circuits.
    b. One (1) CT enclosure for all “Outlets and Plug Load” branch circuits.
    c. One (1) CT enclosure for all “HVAC” branch circuits.
11. Mount enclosure directly above source panelboard, in electrical closet or above finished ceiling, as applicable.
12. Mount submeter CT’s in enclosure, following manufacturer’s instructions.
13. Route all branch circuits of each type to be metered through corresponding CT enclosure.
14. Within CT enclosure, separate all A-phase branch circuit conductors and route through A-phase CT. Do the same for B and C phase conductors, respectively.
15. Provide engraved phenolic plate on each CT enclosure to indicate,
    “LIGHTING BRANCH CKTS

& METER CT'S", or similar.

G. Wireless Dwelling Unit Tenant Submeter Installation:

1. Comply with all requirements of NFPA 70, "National Electrical Code," and manufacturer.

H. Panelboard Installation:

1. Comply with all requirements of NFPA 70, "National Electrical Code," Article 110, "Requirements for Electrical Installations," and Article 408, "Switchboards and Panelboards."
2. Install panels with sufficient support from structure to prevent movement.
3. Arrange for blocking in stud walls, as required.
4. For multiple section panels, provide all nipples, conduit and conductors to continue the full feeder size between sections. For sections not installed side by side, provide extended feeder length, as required in rigid metallic raceway.
5. Install conduits for recessed panels 2" back from front edge of panel.
6. Provide recessed panelboards with 1" empty conduits installed from the panelboard top to accessible ceiling space as below:

TOTAL NUMBER OF SINGLE POLE SPARES AND SPACES	NUMBER OF 1" EMPTY CONDUITS
1 - 5	Two
6 - 10	Four
11 - 20	Five
More than 21	Ten

7. Balance loading on all panelboards as closely as possible and to the satisfaction of the Architect, after all branch circuits are connected and loads energized.
8. Provide typed panelboard directories in each section to properly identify the circuits. Labeling shall include:
   a. Type of circuit: Lights, Outlets, etc.
   b. Room or rooms served, by room name or number.
   c. Special equipment: Fire alarm, copier, etc.

I. Circuit Breaker Installation:

1. Install circuit breakers in panelboards, or with enclosure, as required.
2. GFCI and AFCI circuit breakers: Provide circuits with dedicated neutral conductors. Connect neutral through breaker at panelboards, per manufacturer's instructions.
3. Provide labels on all protected outlet coverplates to indicate "GFCI PROTECTED" or "AFCI PROTECTED", as applicable.

J. Elevator Main Line Circuit Breaker Installation:

1. Comply with all requirements of ANSI/ASME 17.1, "Elevators and Escalators."
2. Provide elevator fused safety switch for each elevator in Elevator Machine Room.
3. Install on EMR wall on strike side of door, per State Elevator Code requirements.
4. Provide phenolic ID label to clearly indicate which elevator the breaker supplies. Label as "ELEVATOR DISCONNECT, ELEVATOR."
5. For shunt trip breakers, install shunt trip test button immediately adjacent to elevator breaker in Elevator Machine Room.

a. Mounting height 48", directly adjacent to the elevator main line breaker.

6. Provide engraved red ID plate with white letters, at the shunt trip test button(s), to read: “ELEVATOR # SHUNT TRIP TEST”
7. Connect shunt trip wiring through fire alarm system relay or heat detectors, as indicated.
8. Provide all interconnecting wiring between pushbutton, fire alarm relay and shunt trip breaker.

K. Generator Docking Station Installation:

1. Comply with all requirements of NFPA 70, “National Electrical Code,” Article 110, “Requirements for Electrical Installations,” and Article 408, “Switchboards and Panelboards.”
2. Mount assembly securely to wall, as shown.
3. Provide conc pad below units with support legs, as applicable.
4. Securely bolt frame legs to concrete pad.
5. Maintain 42" minimum clearance in front.
6. Provide engraved phenolic plastic nameplates to ID rotary switch and/or circuit breaker positions, as applicable.
7. Connect with ATS generator start circuit wiring and route thru docking station to allow auto start control of portable generator unit from ATS when connected.

L. Tamper Proof Hardware

1. Do not install any distribution or control equipment where accessible to inmates.
2. Where equipment is located in areas which are accessible to inmates,
   a. All equipment shall be lockable.
   b. Provide tamper proof hardware for all panels, switches etc. and any other equipment or items accessible to inmates, as indicated on the drawings.

3.3 CONSTRUCTION

A. Interface with Other Work:

1. Provide connections between proposed distribution equipment and other work of this contract:
   a. Underground services and feeders.
   b. Fire Pump.
   c. Automatic transfer switches.

B. Grounding: Ground switchboards, panelboards, all metallic service and distribution equipment frames and enclosures per NEC and as specified in Section “Grounding & Bonding For Electrical”.

C. Connections: Tighten joints, connectors and terminals, including screws and bolts, in accordance with manufacturer’s published torque tightening values for connectors and bolts. Where manufacturer’s torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors,” and 486B, “Wire Connectors for Use with Aluminum Conductors.”

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

B. Comply with all requirements as specified in Section “Common Work Results For Electrical”.

3.5 FIELD QUALITY CONTROL

A. General:

1. Perform inspections and testing to ensure installation complies with Contract Documents, is operational within industry and manufacturer's tolerances, is adjusted to specific project parameters, and is suitable for energizing.
2. Acceptance Testing: Provide for acceptance testing of electrical equipment specified in this section, as follows, and as required in Section “Common Work Results for Electrical”.
3. Schedule tests and provide notification at least one week in advance of test commencement.
4. Provide a set of Contract Drawings to the testing agency.
5. Provide manufacturer's installation and testing instructions to the testing agency.
6. Provide complete shop drawing data on all equipment.
7. Provide written results of all tests. Include date, equipment ID, name of testing company and technician, and results of each individual test. Provide pass/fail indication for each test.

B. Pre-Testing Inspections:

1. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration, and to ensure removal of temporary shipping bracing. Do not proceed with tests until deficiencies are corrected.
2. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, where not available, those of UL Standards 486A and 486B.
3. All settings, as specified in this section, shall be properly set and verified prior to equipment testing.

C. Acceptance Testing:

1. Switchboard and Panelboard Tests: After installing equipment, perform the following tests, at a minimum:
   a. Perform insulation resistance tests, phase-phase and phase-ground for all buses and main breaker(s).
   b. Perform continuity tests of all grounds, and bonded components.
   c. Perform tests to confirm proper bonding of neutrals to ground, where intended.
   d. Perform tests to confirm isolation of neutrals and grounds, except at intended locations.
   e. Perform tests to confirm isolation of isolated grounds and equipment grounds, except at single intended location.
   f. Perform overpotential tests per ANSI 37.20c.
   g. Operation of auxiliary contacts and devices.
   h. Operation of all gauges, displays and control equipment.

D. Ground Fault Sensors and Breakers:

1. Test entire GFP system including CT's, wiring, polarity, solid state device operation, and breaker or motor operated switch.
   a. Test using AC current injection method between each phase, neutral and ground.
   b. Verify proper operation including breaker trip for all possible ground fault conditions (i.e. Phase-Ground & Neutral-Ground).
   c. Verify that system does not nuisance trip with single phase (Phase-Neutral) loads, where applicable.
   d. Test each GFP system and breakers.

E. Test Failures: Compare test results with specified performance or manufacturer's data. Correct deficiencies identified by tests and retest. Remove and replace malfunctioning components with new, and retest.

F. Test Labeling: Upon satisfactory completion of tests for each transformer, attach a dated and signed "Satisfactory Test" label to the unit.

3.6 IDENTIFICATION

A. Identify all distribution system components and wiring in accordance with Section “Common Work Results For Electrical”.

1. Provide engraved nameplate for each individual switchboard, switchgear, panelboard, fusible switch, enclosed breaker, etc. , which identifies the equipment per project nomenclature.
2. Meter Stacks: Provide an engraved nameplate for each meter stack meter/main breaker identifying the apartment or dwelling unit served.

B. Provide permanent warning signs on all electrical switchgear, switchboards, on electrical room doors, and on fenced yards containing such equipment. Warning signs shall be as specified in section “Common Work Results for Electrical”.

3.7 ADJUSTING

A. General:

1. Set all field adjustable parameters to those as specified.
2. Set field adjustable pickup and time delay ranges of Ground Fault Systems and solid state breakers as indicated.

3.8 CLEANING

A. General:

1. Inspect interior and exterior of installed equipment and switchgear.
2. Remove paint splatters and other spots, dirt, and debris.
3. Touch up scratches and mars of finish to match original finish.
4. Remove protective films, etc. from all devices, controls, etc.
5. Remove debris, insulation and wire clippings, dirt, etc. from interior of all equipment.
6. Remove dirt, debris, etc. from top of all equipment.

3.9 DEMONSTRATION

A. Owner Demonstrations: Provide a factory trained representative for each system and type of equipment, for the purpose of training owner's personnel:

1. Discuss proper operation, maintenance, and use of all equipment.
2. Demonstrate periodic Owner testing and/or inspection of equipment.
3. Demonstrate adjustment to Owner-accessible equipment and systems.
4. Instructors shall be fully knowledgeable of the installed equipment and all components.
5. Training shall be completed at the project site following Owner occupancy, at Owner’s discretion.
6. Schedule after all final tests, adjustments and Owner's acceptance.
7. Training shall consist of a minimum of (4) hours of training and instruction, including use of delivered O&M manuals for each system or equipment.

3.10 COMMISSIONING

A. This project includes Commissioning of selected systems and components. Provide for commissioning of the low voltage distribution system(s), as required per Section “Commissioning of Electrical Systems”, and the Commissioning Plan.

END OF SECTION

SECTION 26 22 00

LOW VOLTAGE TRANSFORMERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Low Voltage dry type transformers.

B. Related Sections:

1. Section “Common Work Results for Electrical” for concrete pads, labeling, and other general requirements.
2. Section “Grounding & Bonding for Electrical Systems” for grounding and bonding requirements.
3. Section “Low Voltage Power Conductors and Cables” for 600V conductors.
4. Section “Raceways and Boxes for Electrical Systems” for conduit and raceway connections.
5. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. Low Voltage dry type transformers.

B. Provide submittal data for each product type.

1. To verify specifications have been met/exceeded.
2. Independent laboratory test data where requested.
3. Clearly indicate or state all options, etc.

C. Submit the following for each dry type transformer:

1. Overall dimensions.
2. Weight.
3. Winding materials.
4. Insulation materials and Class.
5. Bus and lug materials.
6. Capacity rating.
7. Primary and secondary voltages and phases.
8. Winding configurations, delta, wye, etc.
9. Wiring diagrams.
10. Efficiency at full and part loads.

11. Total watts lost to space (BtuH).
12. Temperature rise rating.
13. Tap quantities and ratings.
14. Sound ratings.
15. Efficiency ratings, compliant with NEMA TP-1 and DOE 2016.
16. Enclosure and NEMA rating.
17. UL Listing.

D. Product Test Reports: Certified copies of manufacturer's design and routine factory tests required by the referenced standards.

1. Sound Level Test Reports: Certified copies of manufacturer's sound level tests applicable to equipment for this Project.

E. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Common Work Results For Electrical”, and as follows:

1. All post-installation inspection checklists.
2. Post installation load test results.
3. Preventative maintenance and testing schedule for each unit.

1.4 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.

B. Manufacturer/Vendor Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.
2. Manufacturer shall be experienced in manufacturing equipment of the types and capacities indicated that have a record of successful in-service performance for a minimum of 10 years.
3. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility. Service shall be available on a 24-hour basis.
4. Start up services and post installation tests, as specified.

C. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	ASTM	American Society for Testing and Materials
4.	IEEE	Institute of Electrical and Electronics Engineers
5.	IEEE C2	National Electrical Safety Code
6.	NEC	National Electrical Code
7.	NECA	National Electrical Contractor’s Association “Standards of Installation.”
8.	NEMA	National Equipment Manufacturers Association

9. NESC National Electrical Safety Code
10. NETA National Electrical Testing Association
11. NFPA National Fire Protection Association
12. UL Underwriter's Laboratories

1.5 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of unit(s) to site.
2. Provide for rigging needed for unloading, and setting into final position.

B. Storage and Protection:

1. Where unit is to be installed indoors, store in covered building or offsite to prevent exposure to weather, etc. until building is suitable for transformer installation.
2. Temporary Heating: Apply temporary heat according to manufacturer's recommendations within the enclosure of each ventilated type unit throughout periods during which equipment is not energized and is not in a space that is continuously under normal control of temperature and humidity.

1.6 SEQUENCING

A. General Sequencing:

1. Coordinate transformer installation with exterior and/or interior construction.
2. Provide for sub-grade or subslab roughins.
3. Coordinate construction of concrete pads with transformer locations.

B. Sequencing, Coordination, and Integration:

1. Provide positioning and unit roughin such that required clearances are maintained after final installation of all finishes, surface treatments, ceilings, ducts, etc.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, provide a system by the named "Basis of Design" manufacturer, or a comparable product of one of the other following named manufacturers:

1. Low Voltage Transformers:
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE).
   c. Siemens
   d. Cutler-Hammer
   e. Sola/Hevi-Duti
   f. Olsun Electrics Corp.
   g. Acme Electric Corp.

2.2 MATERIALS

A. General:

1. Comply with NEMA Standard ST 20, “Dry-Type Transformers for General Applications.”
2. Sound levels shall comply with NEMA Standard TR 1, “Transformers, Regulators, and Reactors” for dry type transformers.
3. Life expectancies as defined by ANSI/IEEE C57.96, “IEEE Guide for Loading Dry Type Distribution and Power Transformers.”
4. Design, manufacture and testing per ANSI, NEMA and IEEE.
5. Efficiency ratings shall meet or exceed:
   a. NEMA TP1
   b. Department of Energy – 10 CFR Part 431 - Energy Conservation Program: Energy Conservation Standards for Distribution Transformers; Final Rule (DOE 2016).

B. Finishes:

1. Indoor Units: Manufacturer's standard paint over corrosion-resistant pretreatment and primer.
2. Outdoor Units: Comply with "Enclosure Coating System" Article of ANSI/IEEE Standard C57.12.28, “Switchgear & Transformers - Pad Mounted Equipment Enclosure Integrity.”

C. Insulation:

1. Non-hygroscopic materials.
2. Self-extinguishing, non-flammable construction.

2.3 LOW VOLTAGE DRY TYPE TRANSFORMERS

A. Two-winding type, 3-phase units using 1 coil per phase in primary and secondary, unless noted otherwise on drawings.

B. General:

1. UL Listed, general purpose, 600 volt class.
2. 480 volt, 3 phase delta primary, unless noted.
3. 208/120 volts, 3 phase, grounded wye secondary, unless noted.
4. Self-cooled, two winding type with NEMA 2 drip proof enclosures.
5. Floor mounted, wall mounted, or suspended per drawings.
6. Internal rubber vibration isolation mounts to minimize noise.
7. Heavy gauge steel, primed and finished in ANSI 61 gray weather resistant enamel.
8. For all units not mounted directly on slab or concrete pad, provide a perforated metal bottom plate to prevent contact with exposed bus or lugs from below.
9. Efficiency ratings shall meet or exceed the requirements of NEMA TP-1.

C. Construction (30 kVA and above):

1. Ventilated housing with epoxy laminated windings.
2. Class H insulation, 220°C rated for 150°C temperature rise over a 40°C ambient.
3. Temperature Rise:
   a. 150°C maximum rise above 40°C,

4. (6) 22% taps, two (2) taps FCAN and four (4) taps FCBN.
5. 30 kVA units and larger shall be constructed of self-extinguishing Class 1 materials.

D. Cores:

1. High grade, grain oriented silicon steel.
2. Low hysteresis and eddy current losses.

E. Coils:

1. Aluminum or copper windings.
2. Impregnated with cured, non-hygroscopic epoxy resin.
3. Brazed or pressure connection of windings.

2.4 SOURCE QUALITY CONTROL:

A. Tests & Inspections: Manufacturer shall provide inspections and tests of transformers, as required by referenced standards.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for operation, access and maintenance of the equipment, per Codes and manufacturers.

3.2 INSTALLATION

A. General Requirements:

1. Comply with all requirements of NFPA 70, National Electrical Code, Article 110 “Requirements for Electrical Installations,” and Article 450, “Transformers and Transformer Vaults.”
2. Install all equipment, as indicated.
3. Maintain minimum working space at live parts according to manufacturer’s written instructions and NEC.
4. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.
5. Maintain all required clearances for cooling, per manufacturer, and as per NEC.

B. Rough-in:

1. Roughin all underslab or below grade conduits, prior to setting transformers in place.
2. Coordinate exact stubups with proposed manufacturer’s equipment installation drawings and the work of other trades in this contract.

C. Make minor adjustments to locations so as to maintain required front working clearances and clearance above and below per NEC.

D. Floor Mounted Units:

1. Bolt to floor or concrete pad, with concrete anchors.
2. Rubber vibration isolation pads under mounting surfaces.
3. All wiring connections to use flexible metal conduit.
4. Mount a minimum of 6 inches from walls.

E. Suspended Units:

1. Support by four (4) threaded rods.
2. Provide steel angle or strut bridging, intermediate steel beams, etc. for suspension from structure above.
3. Where bridging is attached to steel joists, locate bridging perpendicular to joist and within 4 inches of the bottom of chord “V”’s.
4. Spring vibration isolators in each support rod within 12 inches of connection to structure.
5. Double nuts and lock washers at all bolted connections and support rods.
6. Support below unit with double steel strut or steel angle, washers and double nuts on threaded rods.
7. Provide diagonal sway bracing to prevent movement in two horizontal directions.
8. All wiring connections to use flexible metal conduit.
9. Mount a minimum of 24 inches from walls and ceiling or structure, where practicable. Twelve inches from combustibles are required for units 112.5 kVA and larger, per NEC.
10. Maintain minimum clear “working space” below transformer and supporting elements, per NEC Article 110.

3.3 CONSTRUCTION

A. Grounding: Ground transformers, all equipment frames and enclosures per NEC and as specified in Section “Grounding & Bonding For Electrical Systems.”

B. Connections: Tighten all connectors, terminals, lugs, etc. including screws and bolts, in accordance with manufacturer’s published torque tightening values for connectors and bolts. Where manufacturer’s torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors” and 486B, “Wire Connectors for Use with Aluminum Conductors.”

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

B. Comply with all requirements as specified in Section “Common Work Results For Electrical.”

3.5 FIELD QUALITY CONTROL

A. General:

1. Perform inspections and testing to ensure installation complies with Contract Documents, is operational within industry and manufacturer's tolerances, is adjusted to specific project parameters, and is suitable for energizing.
2. Acceptance Testing: Provide for acceptance testing of electrical equipment specified in this section, as follows, and as required in Section “Common Work

For Electrical."

3. Schedule tests and provide notification at least one week in advance of test commencement.
4. Provide a set of Contract Drawings to the testing agency, where applicable.
5. Provide manufacturer's installation and testing instructions to the testing agency, where applicable.
6. Provide complete shop drawing data on all equipment.
7. Provide written results of all tests. Include date, equipment ID, name of testing company and technician, and results of each individual test. Provide pass/fail indication for each test.

B. Pre-Testing Inspections:

1. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration, and to ensure removal of temporary shipping bracing. Do not proceed with tests until deficiencies are corrected.
2. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, where not available, those of UL Standards 486A and 486B.

C. Acceptance Tests: Perform the following minimum tests according to the manufacturer's instructions and NETA recommendations. Conform to ANSI C57.12.91, "IEEE Standard Test Code for Dry-Type Distribution and Power Transformers" for dry-type units, test method, and data correction factors.

1. Ratio tests at rated voltage connection and all tap connections.
2. Polarity and phase-relation tests at rated voltage.
3. Applied potential tests.
4. Induced potential tests.

D. Test Failures: Compare test results with specified performance or manufacturer's data. Correct deficiencies identified by tests and retest. Remove and replace malfunctioning components with new, and retest.

E. Test Labeling: Upon satisfactory completion of tests for each transformer, attach a dated and signed "Satisfactory Test" label to the unit.

3.6 ADJUSTING

A. Adjust transformer taps to provide optimum (nominal) voltage conditions at utilization equipment throughout the normal operating cycle of the facility. Record voltages and tap settings to submit with test results.

3.7 CLEANING

A. General:

1. Inspect interior and exterior of installed transformers.
2. Remove paint splatters and other spots, dirt, and debris.
3. Touch up scratches and mars of finish to match original finish.
4. Remove labels, stickers, and protective films, etc. from all enclosures.
5. Remove debris, insulation and wire clippings, dirt, etc. from interior of all equipment.

6. Remove dirt, debris, etc. from top of all equipment.

B. Finish Touch Up: After completing installation, cleaning, and testing, touch up scratches and mars on finish to match original finish.

3.8 COMMISSIONING

A. This project includes Commissioning of selected systems and components. Provide for commissioning of the LV transformer(s), as required per Section “Commissioning of Electrical Systems”, and the Commissioning Plan.

END OF SECTION

SECTION 26 27 26

WIRING DEVICES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. A/C switches.
2. Receptacles.
3. Connectors.
4. Device plates and covers.

B. Related Sections:

1. Section “Common Work Results for Electrical.”
2. Section “Low Voltage Electrical Power Conductors and Cables” for connecting wiring, cables and conductors.
3. Section “Raceways & Boxes for Electrical Systems” in which devices are to be installed.
4. Section “Lighting” for additional low voltage switches, occupancy sensor switches and dimming devices.

1.3 SUBMITTALS

A. Submittal Requirements of this section:

1. A/C switches.
2. Receptacles.
3. Connectors.
4. Device plates and covers.

B. Product data for each device type:

1. Manufacturer's specifications, data sheets.
2. Capacity ratings, NEMA configurations, etc.
3. Information required indicating contract compliance.
4. Device color.
5. UL Listing.

C. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, and Section “Common Work Results For Electrical”.

1.4 QUALITY CONTROL

A. Product Coordination Responsibility

1. The contractor shall insure that all proposed control and/or dimmer switches are fully compatible and matched with the proposed light fixtures.
2. Contractor shall confirm compatibility of proposed controls/switches with proposed lighting fixtures prior to submitting for approval or ordering.

1.5 DELIVERY, STORAGE AND HANDLING

A. Storage and Protection:

1. Deliver and store wiring devices and accessories according to manufacturers' instructions.
2. Do not store in unheated areas of high humidity, which might create corrosion or other deterioration.
3. Do not store in areas subject to high temperatures, which might cause deterioration or deformation of products.

1.6 SEQUENCING

A. General Sequencing:

1. Sequence installation of devices and equipment of this section such that damage to installed equipment is minimized.
2. Install device plates after all wall finishes have been completed.

B. Electrical Division Sequencing, Coordination, and Integration:

1. Provide installation of wiring devices after supporting raceways and boxes are permanently installed.
2. Provide coordination of proposed wiring devices with actual cord/plug requirements of attached equipment.
3. Match wiring devices to plug connectors for Owner-furnished equipment.
4. Match wiring devices to plug connectors for equipment furnished under other Divisions.
5. Do not install permanently wired flexible connectors and associated cables/service cords until attached equipment is in place.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, provide products by the named "Basis of Design" manufacturer, or a comparable product of one of the other following named manufacturers:

1. Switches & Receptacles:
   a. Eaton Arrow-Hart Cooper
   b. Hubbell
   c. Leviton
   d. Pass & Seymour

2.2 WIRING DEVICES - GENERAL

A. Comply with NEMA Standard WD 1, "General Purpose Wiring Devices"

B. Color: WHITE except as otherwise indicated or required by Code.

C. UL Listed.

D. All devices shall be of one manufacturer.

E. Prewired pigtail connectors that accommodate Fed Spec receptacles, GFCIs and switches are approved. Must be crimped and welded terminal right angle application within the connector.

F. All receptacles in dwelling units and any areas accessible to the public, including exterior locations, shall be of tamper resistant (TR) construction.

2.3 A/C SWITCHES

A. Toggle Switches:

1. Silent mechanical type rated 20 ampere, 120/277VAC.
2. Fed. Specification #WS896-E.
3. 1-piece Lexan cam and toggle.
4. 20 amp rating.
5. Single pole, 3-way or 4-way, per drawings.
6. Back and side wiring provisions.
7. Arrow-Hart #1991 Series.

2.4 RECEPTACLES

A. Receptacles:

1. Construction, spec-grade.
2. Duplex NEMA 5-20R, 120 volt, 20 amp, 3 wire, U-ground.
3. Federal Specification #WS596-F.
4. Lexan or nylon body, metal yokes.
5. Arrow Hart #5362.

B. Ground Fault Interrupting (GFI) Receptacles:

1. Class A, UL943 listed, feed-thru type.
2. Screw terminal connections.
3. GFCI Receptacles shall have SafeLock protection. If critical components are damaged and ground fault protection is lost or if mis-wired, power to receptacle is disconnected.
4. End-of-life provision shall render outlet incapable of delivering power upon failure of GFCI function.
5. Reverse Line Mis-wire: receptacle shall not provide power if the hot and neutral wires are reverse wired.
6. Arrow-Hart #VGF20.

C. Weather & Tamper Resistant Ground Fault Interrupting (WR-GFI-TR) Receptacles (for exterior use and interior damp/wet locations):

1. Class A, UL943 listed, feed-thru type.
2. 120VAC, 20 Amp rated. NEMA 5-20R

3. Screw terminal connections.
4. GFCI Receptacles shall have Safe-Lock protection. If critical components are damaged and ground fault protection is lost or if mis-wired, power to receptacle is disconnected.
5. End-of-life provision shall render outlet incapable of delivering power upon failure of GFCI function.
6. Reverse Line Mis-wire: receptacle shall not provide power if the hot and neutral wires are reverse wired.
7. UL Listed as “Tamper Resistant” and “Weather Resistant” with identifying “TWR” label.
8. Arrow-Hart #TWRSGF20, Leviton, Pass & Seymour, Hubbell, or equal.

D. Weather & Tamper Resistant Duplex Receptacle (TWR) (for exterior use and interior damp/wet locations):

1. Construction, spec-grade.
2. Duplex NEMA 5-20R, 120 volt, 20 amp, 3 wire, U-ground.
3. Federal Specification #WS596-G.
4. Lexan or nylon body, metal yokes.
5. UL Listed as “Tamper Resistant” and “Weather Resistant” with identifying “TWR” label.
6. Arrow Hart #TWRBR20.

E. Special Receptacles:

1. NEMA configurations per drawings.
2. Specification grade.
3. Lexan or nylon body, metal yokes.
4. Locking or straight-blade configurations, per plans.
5. Leviton V-0-MAX.

2.5 SPECIALTY RECEPTACLES

A. Combination Tamper-Resistant Duplex Receptacle & USB Charger:

1. Duplex NEMA 5-20R, 120 volt, 20 amp, 3 wire, U-ground.
2. Commercial spec grade.
3. Tamper Resistant (TR) construction with dual spring-loaded shutters to block single object insertion into either H or N openings.
4. Dual 5VDC, USB charging ports, one USB-A and one USB-C ports.
5. Capable of charging two USB devices simultaneously.
6. Total of 5.0 Amps of charging capacity.
7. Decora style for mounting in single gang box.
8. Eaton Arrow-Hart TRUSBAC20* 7756* series.

2.6 CONNECTORS

A. Cord Receptacles & Connectors:

1. Spec grade, industrial duty, and impact resistant nylon construction.
2. High visibility yellow exterior.
3. Cord grip to prevent terminal strain.
4. Deep well wire terminals, captive brass screws.
5. Dead front, captive screws, NEMA configuration molded in.

6. Female: deep set, triple wipe brass contacts.
7. Males: Solid brass blades molded into body.
8. Leviton Industrial, or equal.

2.7 DEVICE PLATES & COVERS

A. Single and combination types that mate and match with corresponding wiring devices. Provide for every switch and outlet.

B. Interior Plate Finishes:

1. Finished Spaces: Stainless steel, satin-finish, type 302, 0.04” thick.
2. Unfinished Spaces: Galvanized steel.

C. Features include the following:

1. Plate-Securing Screws: Stainless steel, galvanized or colored, to match plate finish.
2. Arrow-Hart, Leviton, Pass & Seymour, or equal.

D. Weatherproof Covers:

1. Non-Metallic Damp & Wet Location Covers:
   a. Non-metallic, polycarbonate.
   b. Gasketed, self-closing.
   c. Clear, hinged lift lid.
   d. Weatherproof during operation per NEC
   e. Eagle WeatherBox, Pass & Seymour, or equal.

E. Security/Detention/Prison covers for inmate accessible areas:

1. Plate-Securing Screws: Hardened stainless steel, tamper proof screws (torx-center pin).
2. Back plate: 10 gauge galvanized steel with offset corners.
3. Wiring device attaches directly to steel backplate (not to outer coverplate).
4. Cover plate: Die formed, 14 gauge CRS with tamperproof securing screws at each of four corners.
5. Switch cover plates shall have two vertical steel “fins” on each side of each toggle switch, to protect toggle mechanism from damage
6. Finish: 5-stage polyester or Urethane powder coat.
7. UL Listed.
8. Provide one matching torx center pin driver for every 100 covers installed.
9. Kenall Mighty Mac or New Star Lighting NSH series.

PART 3 EXECUTION

3.1 INSTALLATION

A. General Requirements:

1. Install all equipment plumb and level.
2. Install devices tight to boxes, etc. such that no movement occurs during normal connecting and disconnecting procedures or operation.
3. Install coverplates tight to surrounding surface. Coverplate shall not provide the

only means of support for wiring devices.

4. Where multiple devices are installed at the same location and elevation, use a single, multi-gang box and single cover plate, as applicable.
5. Do not install receptacles directly behind any sinks, or within 36” of showers or bathtubs.
6. Where wiring devices, such as occupancy, dimmer, timer or other control switches, require a grounded conductor (neutral) connection for operation, install neutral conductor to the mounting box. Do not connect device neutral to equipment ground wire.
7. Where standard toggle switches are installed serving lighting loads in areas described in NEC 404.2(C), provide a grounded conductor (neutral) to the switch device box location as specified. Do not connect device neutral to equipment ground wire.

B. Rough-in: Unless noted otherwise, the following mounting heights shall be used:

1.	Wall receptacles:	18" AFF to center.
2.	Counter top receptacles:	6" above counter to bottom of box.
3.	Wall switches:	48" AFF to center.
4.	Exterior receptacles:	24" above grade.
5.	Roof receptacles:	24" above roof surface.
6.	Elevator Pits:	36” above bottom of pit.
7.	Full-size frig/freezer:	42" AFF to center.

C. Ceiling Mounted Outlets:

1. Install all ceiling mounted receptacles as follows:
   a. Flush mounted back box, with stainless steel coverplate installed tight to ceiling tile, plaster, or GWB ceiling.
   b. Support back box independently of ceiling, with rigid support from structure.
   c. Twistlock outlets, unless noted otherwise.

D. Identification:

1. Permanently identify all general-purpose and dedicated equipment receptacles in all spaces in accordance with the project nomenclature.
   a. At every receptacle, identify source panel and circuit number (i.e. RP1-12) via machine printed label (i.e. Brother P-Touch, or equal) applied at top of cover plate. Printing shall be black, minimum 1/4” high text. Label shall be visible with plug installed, as practicable.

E. Tamper Proof Hardware

1. Provide tamper proof hardware for all cover plates, device plates, outlets, switches, etc. installed under this Division where such equipment is accessible to inmates at any time. Such locations are indicated on the contract drawings.

3.2 REPAIR/RESTORATION

A. Restore all finishes, equipment and surfaces to original condition, where affected by the work of this section.

3.3 RE-INSTALLATION

A. Reinstall all outlets, coverplates and similar devices, where removed to accomplish the work of these documents.

B. Where the devices are damaged during removal or reinstallation, replace with new devices of similar quality, color, etc. to existing.

3.4 CLEANING

A. General:

1. Clean all construction debris from within outlet boxes, prior to close up.
2. Remove all paint, joint compound and other marks from devices and coverplates.

END OF SECTION

SECTION 26 29 00

LOW VOLTAGE CONTROLLERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Thermal manual motor starter switches.
2. General purpose relays.
3. Full voltage motor starters.

B. Related Sections:

1. Section “Common Motor Requirements” for coordination with motors furnished and/or installed as part of mechanical division.
2. Section “Variable Frequency Drives” for coordination with and installation requirements for VFD driven motors.
3. Section “Instrumentation And Control For HVAC” for interface and control requirements.
4. Section “Common Work Results for Electrical” for labeling, and other general requirements.
5. Section “Grounding & Bonding for Electrical Systems” for grounding and bonding requirements.
6. Section “Low Voltage Power Conductors and Cables” for 600V conductors.
7. Section “Raceways & Boxes For Electrical Systems” for required connections of motors.
8. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements.

C. Products Installed But Not Supplied Under This Section:

1. Variable frequency drives furnished under mechanical Section “Variable Frequency Drives”.
2. Speed control switches furnished under mechanical divisions for control of small motors, fans, etc.

1.3 REFERENCES

A. National Electrical Code:

1. NEC 430 Motors, Motor Circuits and Controllers

B. NEMA:

1. NEMA AB 1 Molded Case Circuit Breakers

2. NEMA ICS 2 Industrial Control and Systems: Controllers, Contactors, and Overload Relays Rated 600 Volts
3. NEMA ICS 6 Enclosures for Industrial Controls and Systems
4. NEMA KS 1 Enclosed Switches

C. Underwriters Laboratory:

1. UL 845 Standard for Motor Control Centers
2. UL 508 Standard for Industrial Control Equipment

1.4 SUBMITTALS

A. Submittal Requirements of this section:

1. Thermal manual motor starter switches.
2. Full voltage motor starters.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Wiring & connection diagrams.
6. Capacity ratings, performance curves.
7. Information required to indicate contract compliance.
8. Clearly indicate the exact size or rating proposed.

C. Submit for all motor starters:

1. Material list for each starter indicating:
   a. NEMA rating/size.
   b. NEMA enclosure rating and overall dimensions.
   c. Overload protection type and ranges.
   d. Auxiliary components such as pushbuttons, pilot lights, control transformers, etc.
   e. Switch, fuse or circuit breaker ratings for combination starters.
   f. Type, relays and controls for multi-speed starters.
   g. Type, relays and steps for reduced voltage starters.

D. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Common Work Results For Electrical”, and as follows:

1. All post-installation inspection checklists.
2. Installer’s pre-startup checklist.
3. Post installation test results.
4. Preventative maintenance schedule for each MCC starter unit.

1.5 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code,

Article 100.

2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled, or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Single-Source Responsibility:

1. The complete performance of the assembled system, including all accessories shall be the sole responsibility of the supplier. It is the installer’s responsibility to ensure that all factory and field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.

C. Manufacturer/Vendor Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.
2. Manufacturer shall be experienced in manufacturing equipment of the types and capacities indicated that have a record of successful in-service performance for a minimum of 10 years.
3. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility. Service shall be available on a 24-hour basis.
4. Start up services and post installation tests, as specified.

D. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	ASTM	American Society for Testing and Materials
4.	IEEE	Institute of Electrical and Electronics Engineers
5.	IEEE C2	National Electrical Safety Code
6.	NEC	National Electrical Code
7.	NECA	National Electrical Contractors’ Association “Standards of Installation”.
8.	NEMA	National Equipment Manufacturers Association
9.	NESC	National Electrical Safety Code
10.	NETA	National Electrical Testing Association
11.	NFPA	National Fire Protection Association
12.	UL	Underwriter’s Laboratories

1.6 COORDINATION

A. General: Coordinate features of controllers and control devices with pilot devices and control circuits provided under mechanical Division covering control systems.

B. Coordinate controllers provided under electrical Divisions with motors provided under mechanical Divisions. Coordinate electrical Division product and installation requirements with approved mechanical Division equipment shop drawings, to include, but not limited to:

1. Coordinate multi-speed, or multi-step starters with motor winding requirements (2

windings, wye-delta, etc.)

2. Coordinate control circuit voltages of coils and control transformers with control systems and/or circuits provided under mechanical Divisions.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide a system by the named “Basis of Design” manufacturer, or a comparable product of one of the other following named manufacturers:

1. 600VAC motor controllers.
   a. Square D/Schneider Electric (basis of design)
   b. ABB (GE)
   c. Cutler-Hammer
   d. Siemens

2.2 MOTOR CONTROLLERS, GENERAL

A. Coordinate the features of each motor controller with the ratings and characteristics of the supply circuit, the motor, control sequence, motor duty cycle, motor load, pilot device(s), and control circuit affecting controller functions. Provide controllers that are horsepower rated to suit the motor controlled, per drawings.

B. Contacts shall open each ungrounded connection to the motor.

C. Provide solid state overload protection on all individual full voltage, reduced voltage and solid state controllers, and on controllers furnished as part of an assembly or Motor Control Center.

1. Overload circuit shall provide for 3:1 FLA range.
2. Adjustable dial marked in true amperes (those marked with percentage of nominal or other relative scales are not acceptable.
3. 2% tripping accuracy.
4. True single phase protection by detecting loss of, or low voltage and tripping within 3 seconds.
5. Inherently protection from short circuit damage by saturation of current sensors.
6. Square D Motor Logic Overload Relay, or comparable product from one of the previously listed manufacturers.

D. Enclosures: For individually mounted motor controllers and control devices, comply with NEMA 250, “Enclosures for Electrical Equipment (1000 Volts Maximum).” Provide enclosures suitable for the environmental conditions at the controller location, as follows, (unless indicated otherwise):

1. NEMA 1 for interior.
2. NEMA 3R for exterior, damp, or wet locations, on roof or on grade.

2.3 THERMAL MANUAL MOTOR STARTING SWITCHES

A. Provide for fractional HP motors (1 HP and less) without factory overload protection, and as indicated.

1. NEMA ICS 2, AC general purpose, Class A, manually operated, full-voltage controller with overload element.
2. Manual operated toggle switch type. Quick make and break type with self indicating trip free handle.
3. Melting alloy thermal overload, interchangeable type.
4. Switch shall not operate without thermal unit.
5. Size thermal unit per motor FLA's.
6. Enclosure: NEMA 1 for interior use and NEMA 4 stainless steel or cast iron for exterior, damp, or wet locations.
7. Handle guard with locking provisions.
8. Flush mounted in finished areas.
9. HOA switches: Where indicated.
10. Pilot light (red) mounted in the same enclosure.
    a. Switches more than 25 feet from motor or out of sight from motor.
    b. Where indicated.
11. Square D Class 2510, or comparable product by previously named manufacturers.

B. For motors 1 HP, manual starters shall be as above except;

1. Square D Class 2510 Type M, or comparable product by previously named manufacturers.

2.4 GENERAL PURPOSE RELAYS

A. For control of small fans, pumps, etc. as indicated, from ATC or HVAC control circuits.

1. Plug-in type with blade type connections.
2. Matching base for screw terminations of control and power wiring. NEMA 1 enclosure for mounting of relay and base.
3. Power contacts rated 120 volt, 10 amps, SPST, SPDT as required, rated for motor duty through 2 HP.
4. Coil voltage per Division 15 for proper interface between control wiring and relay coils.
5. Square D Class 8501, or equal.

2.5 FULL VOLTAGE MAGNETIC MOTOR STARTERS

A. NEMA ICS 2, ac general-purpose Class A magnetic controller for induction motors, full-voltage, magnetic type, non-reversing, across-the-line, controller, except where another type as indicated.

1. NEMA horsepower rated, 600 VAC, 3 pole, 60 Hz.
2. NEMA Size as per drawings. Minimum Size 0.
3. NEMA enclosure as specified previously.

B. Provide all starters with the following accessories unless noted otherwise:

1. Red "RUNNING" pilot light.
2. N.O./N.C. auxiliary contacts.
3. Control Power Transformer with Prim/Second Fusing.
4. Hand-Off-Automatic selector switches.
5. Solid state overload, single phasing and phase loss protection, as specified previously.

C. Provide starters with the following accessories, as indicated on drawings:

1. Start-stop pushbuttons.
2. Green "OFF" pilot light

D. Full voltage, non-reversing AC magnetic starters.

1. Square D Company Class 8536 Type S, or comparable product by previously named manufacturers.

E. Combination starters with fused disconnect switches.

1. Factory wired NEMA KS 1, enclosed knife switch with externally operable handle and visible blades.
2. Quick-make, quick-break switch with external operator handle
3. Interlock switch with unit cover or door.
4. Rejection clip fuse holder and UL Class R fuses, as indicated.
5. Square D Class 8538 Type S, or comparable product by previously named manufacturers.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for operation, access and maintenance of the equipment, per Codes and manufacturers.

3.2 INSTALLATION - INDEPENDENT CONTROLLERS

A. General:

1. Install independently mounted motor control devices in accordance with manufacturer’s written instructions.
2. Install all equipment, as indicated.
3. Maintain minimum working space at live parts according to manufacturer’s written instructions and NEC.
4. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.

B. Location:

1. Locate controllers as indicated and within sight of motors controlled.
2. Install with proper clearances as required for access, operate, service and/or adjust, per manufacturer and NEC requirements.

C. Mounting:

1. Wall mounting: Bolt units to wall or mount on light-weight structural steel channels bolted to the wall.
2. For controllers not at walls, provide freestanding racks fabricated of structural steel members and slotted structural steel channels. Use channel manufacturer’s standard L mounting plates, bolted to the floor. Connect the posts with horizontal

slotted steel channels and bolt the control equipment to the channels.

3. For rooftop equipment, it shall be acceptable to mount controllers to equipment frames, etc. where suitable support is available.

3.3 INSTALLATION – VARIABLE FREQUENCY DRIVES

A. General:

1. Provide mounting, installation, power raceway and conductors for variable frequency drives (VFD's), specified and furnished in Section "Variable Frequency Drives".
2. Coordinate all installation with mechanical Division.
3. Install independently mounted VFD's in accordance with manufacturer's written instructions.
4. Install all equipment, as indicated.
5. Maintain minimum working space at live parts according to manufacturer's written instructions and NEC.
6. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.
7. Install with proper clearances as required for access, operate, service and/or adjust, per manufacturer and NEC requirements.

B. Location:

1. Locate VFD's as indicated and within sight of motors controlled.

C. Mounting:

1. Wall mounting: Bolt units to wall or mount on light-weight structural steel channels bolted to the wall.
2. For VFD's not at walls, provide freestanding racks fabricated of structural steel members and slotted structural steel channels. Use channel manufacturer's standard L mounting plates, bolted to the floor. Connect the posts with horizontal slotted steel channels and bolt the control equipment to the channels.
3. For rooftop mounted VFD's, it shall be acceptable to mount controllers to equipment frames, etc. where suitable support is available.

D. VFD Electrical Connections:

1. Provide power conduit and conductors to the VFD, terminating on input lugs or disconnect device.
2. Provide power conduit and conductors between the VFD and the associated motor, terminating all conductors.
3. All conduit used for input and output connections to the VFD's shall include a 12-36" long section of sealtite conduit at the VFD.

3.4 IDENTIFICATION

A. Identify motor control components and control wiring in accordance with Section "Common Work Results For Electrical".

1. Provide engraved nameplate for each individual controller, and each MCC cubicle, which identifies the motor or load per project nomenclature.

B. Provide permanent warning signs on all motor control centers, on room doors, and on fenced yards containing such equipment. Warning signs shall be as specified in section “Common Work Results for Electrical”.

3.5 CONTROL WIRING INSTALLATION

A. Install wiring between motor control devices and control/indicating devices as specified in Section “Low Voltage Power Conductors and Cables” for hard-wired connections.

B. Install wiring in enclosures neatly bundled, trained, and supported.

3.6 CONSTRUCTION

A. Interface with Other Work:

1. Provide connections between proposed motor control equipment and other work of this contract:
   a. Motors
   b. Variable Frequency (speed) Drives
   c. Automatic temperature control systems.
   d. Remote pushbuttons, HOA switches, or other manual control points.

B. Grounding: Ground motor controllers and motor control center equipment frames and enclosures per NEC and as specified in Section “Grounding & Bonding For Electrical Systems”.

C. Connections: Tighten all connectors, terminals, lugs, etc. including screws and bolts, in accordance with manufacturer’s published torque tightening values for connectors and bolts. Where manufacturer’s torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors.”

3.7 FIELD QUALITY CONTROL

A. Install and test all motor control devices per NEMA ICS 2.

B. Reports: Prepare written reports certified by testing organization of tests and observations. Report defective materials and workmanship and unsatisfactory test results. Include records of repairs and adjustments made.

C. Schedule visual and mechanical inspections and electrical tests with at least one week’s advance notification to Owner and Architect.

D. Pretesting: On completing installation of the system, perform the following preparations for tests:

1. Provide insulation resistance tests of conducting parts of motor control components; and of connecting supply, feeder, and control circuits. For devices containing solid-state components, use test equipment and methods recommended by the manufacturer.
2. Make continuity tests of all circuits.

E. Visual and mechanical inspection: Include the following inspections and related work.

1. Overload protection and control settings:
   a. Set solid state overload settings based on motor FLA's, service factor and temperature rise, per NEC
   b. Provide proper setting of all current and time acceleration and deceleration ramps, overload protection devices, current limitation, etc. as determined by ATC system installer and/or control system installer. Programmer shall work in conjunction and with the ATC system installer to provide proper settings for motor operation.
2. Inspect for defects and physical damage NRTL labeling, and nameplate compliance with current project drawings.
3. Exercise and perform operational tests of mechanical components and other operable devices in accordance with manufacturer's instructions.
4. Check tightness of electrical connections of devices with calibrated torque wrench. Use manufacturer's recommended torque values.
5. Clean devices using manufacturer's approved methods and materials.
6. Verify proper fuse types and ratings in fusible devices.

F. Electrical Tests: Perform the following in accordance with manufacturer's instructions:

1. Insulation resistance test of motor control devices conducting parts to the extent permitted by the manufacturer's instructions. Insulation resistance less than 100 megohms is not acceptable.
2. Use primary current injection to check performance characteristics of motor-circuit protectors and for overload relays of controllers for motors 15 horsepower and larger. Trip characteristics not within manufacturer's published time-current tolerances are not acceptable.
3. Test auxiliary protective features such as loss of phase, phase unbalance and undervoltage to verify operation.
4. Check for improper voltages at terminals in controllers that have external control wiring when controller disconnect is opened. Any voltage over 30 V is unacceptable.
5. Test ground fault protection devices by current injection method.
6. Test for proper phasing of all motors, controllers, etc.
7. Retesting: Correct deficiencies and retest. Verify by the retests that specified requirements are met.

3.8 ADJUSTING

A. General:

1. Set all field adjustable parameters to those as specified.
2. Set solid state overload sensors and devices to 115%-125% of motor nameplate FLA's, per NEC Art. 430.
3. Select and install thermal, melting alloy type overload protection at 115%-125% of motor nameplate FLA's, per NEC Art. 430.
4. Set field adjustable pickup and time delay ranges of Ground Fault Systems, as indicated, for coordination with upstream protection devices. GFP pickup settings for motors feeder protection shall not exceed 80% of the value of the upstream overcurrent protection device setting.
5. Auto-transformer starters: Set reduced voltage starting tap at 65% of nominal voltage.
6. Soft start solid state motor starters:
   a. Inrush current limiting: Set at 300% of FLA's.
   b. Acceleration/deceleration ramping time: Set as required for each

motor/load to achieve steady acceleration under load.

c. Acceleration/deceleration current adjustments: Set as required for each motor/load to achieve steady acceleration under load.

d. Stopping method: Set for freewheel, solid state soft-stop, and/or intelligent braking as required for application.

3.9 CLEANING

A. General:

1. Inspect interior and exterior of installed equipment.
2. Remove paint splatters and other spots, dirt, and debris.
3. Touch up scratches and mars of finish to match original finish.
4. Remove protective films, etc. from all devices, controls, etc.
5. Remove debris, insulation and wire clippings, dirt, etc. from interior of all equipment.
6. Remove dirt, debris, etc. from top of all equipment.

3.10 DEMONSTRATION

A. Owner Demonstrations: Provide a factory trained representative for each system and type of equipment, for the purpose of training owner's personnel:

1. Discuss proper operation, maintenance, and use of all equipment.
2. Demonstrate periodic Owner testing and/or inspection of equipment.
3. Demonstrate adjustment to Owner-accessible equipment and systems.
4. Instructors shall be fully knowledgeable of the installed equipment and all components.
5. Training shall be completed at the project site following Owner occupancy, at Owner’s discretion.
6. Schedule after all final tests, adjustments and Owner's acceptance.
7. Training shall include sufficient time for owner training and instruction, including use of delivered O&M manuals for each system or equipment.

END OF SECTION

SECTION 263100

PHOTOVOLTAIC SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This section provides requirements for a complete and functional contractor/vendor design, procurement, installation, testing, commissioning and maintenance for a roof-top photovoltaic grid-tie, energy production system.

B. Section Includes:

1. PV system description.
2. Manufactured PV modules..
3. PV module framing.
4. PV array construction.
5. DC wiring system, conductors and raceways.
6. DC system overcurrent and overvoltage protection.
7. DC to AC Inverters.
8. System overcurrent protection.
9. Mounting structures.
10. Interconnection with building and/or utility power system.
11. Coordination with local utility company.

C. Related Sections:

1. Section “Common Work Results For Electrical.”
2. Section “Grounding & Bonding For Electrical Systems” for grounding, bonding and interconnection of equipment to building and service grounds.

D. Permits and Fees:

1. Apply for, make payment, secure and obtain all necessary and required permits relative to work of this section.

E. Utility Coordination:

1. Provide all coordination with local utility for interconnection, net-metering, etc. of the proposed PV system, including all utility applications, energy production calculations, etc. as required by utility company.

1.3 SYSTEM DESCRIPTION

A. The PV system described in this document is a facility-scale less than 1 megawatt with system voltage not exceeding 1,000 VDC, single PV systems with a single service, and is of the grid-connected type which provides a direct interconnection of PV system and grid power service supplying building that has backup power systems that would never operate in parallel with the grid power and PV system because backup power generator is supplying power via an automatic transfer switch. The PV system does not include battery/backup storage or secondary electrical generation devices. PV system feeds AC power into the local services when solar energy is available and immediately disconnects from the grid upon loss of grid power to the service in accordance with IEEE 1547and local utility regulations

B. PV system must comply with these specifications, all applicable construction document drawings, all applicable codes, and all local authorities having jurisdiction. System must comply with all policies and standards required by the electrical utility having jurisdiction and all applicable incentive program guidelines. PV system equipment includes, but is not limited to, PV modules and electrical insulating components such as encapsulants and backsheets, raceways, inverters, combiner boxes, disconnect switches, wire, conduit, junction boxes, mounting hardware, mounting structure for modules (racking), monitoring and communication equipment. Monitoring of PV System shall have remote capabilities.

C. Provide surge protective device (SPD) complying with NFPA 780 requirements and listed to UL 1449.

D. Design Requirements:

1. System design shall be by certified PV system designer or registered Professional Engineer qualified in Photovoltaic System System design.
2. Component sizing and selection for a complete system.
3. Design shall appear as a part of the building or structure, with conductors concealed within columns, walls and roof construction, where possible and practicable.
4. Select locations for equipment, which shall minimize need to disturb for future building maintenance and repair of roofing.
5. Final PV system design shall be signed/sealed by a licensed professional engineer in the state of Maryland.

E. Performance Requirements: This is a performance specification. It is the full responsibility of the installer to ensure that the design and installation conforms to all applicable standards and Codes.

1. Minimum PV System Requirements (Basis of Design)
    1) 9,000 SF of Photovoltaics. Refer to Architectural Roof plan.
    2) Approx. 207kW Peak Power Output
2. Single point tie in to utility power.

1.4 SUBMITTALS

A. General: Submit each item in this Section according to the conditions of the contract and Division 01 Specification Sections.

B. Submittals shall also comply with the submittal procedures and requirements of electrical Specification Sections.

A. Submittal Requirements of this section:

1. Roof plan showing system components.
2. Manufactured PV modules..
3. PV module framing & mounting structures.
4. PV array construction.
5. DC wiring system, conductors and raceways.
6. DC system overcurrent and overvoltage protection.
7. DC to AC Inverters.
8. System overcurrent protection devices.
9. Rooftop wiring diagrams.
10. Ground and bonding connections.
11. Roof ballast system.
12. All other miscellaneous hardware.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Clearly indicate the exact size or rating proposed.
6. To verify specifications have been met/exceeded.
7. Indication of UL Listings.
8. Clearly indicate or state options, etc.:
    a. Manufacturer/catalogue number.
    b. Construction data, materials, as applicable.
    c. Label each conductor or cable type, and its proposed application or location.
    d. Identify each component with a cross reference to the drawings.
    e. Drawings and installation instructions.
    f. Details to demonstrate that the system has been coordinated and will function as one unit.

C. System Design Drawings:

1. Identify each component used in the system.
2. Indicate all building penetrations, and method proposed at each location.
3. Indicate attaching methods for all components.
4. Indicate proposed layout, including relationship to other parts of work.
5. Show proposed protection for all building accessories, roof top equipment, etc.
6. Drawings shall be stamped and signed by a licensed PV System engineer.
7. Include plans, elevations, sections, and mounting details.
8. Include details of equipment assemblies. Indicate dimensions, weights, loads,

required clearances, method of field assembly, components, and location and size of each field connection.
9. Detail fabrication and assembly.
10. Include diagrams for power, signal, and control wiring.

D. LEED Submittals
1. EA Credit 5: Renewable energy
a. Provide documentation showing total annual production of solar array.

E. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Common Work Results For Electrical”, and as follows:

1. Post installation commissioning and performance testing of the PV system.
2. Field quality-control reports.
3. Sample Warranty: For manufacturer's special materials and workmanship warranty and minimum power output warranty.
4. Operation and Maintenance Data: For PV modules to include in operation and maintenance manuals.

1.5 DEFINITIONS

A. CEC: California Energy Commission.

B. ETFE: Ethylene tetrafluoroethylene.

C. FEP: Fluorinated ethylene propylene.

D. IP Code: Required ingress protection to comply with IEC 60529.

E. MPPT: Maximum power point tracking.

F. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."

G. PV: Photovoltaic.

H. PVUSA: Photovoltaics for Utility Systems Applications.

I. STC: Standard Test Conditions defined in IEC 61215.

1.6 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman’s Electronic Document Release Form. Refer to Section “Common Work Results for Electrical” for additional information.

1.7 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

B. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100 (NEC).

C. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.

D. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled, or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

E. Manufacturer’s Requirements:

1. Engaged in manufacturing of PV systems and equipment at least 10 years.
2. Provide local maintenance and service with location less than 100 miles from project site.
3. Provide technical support to installer.
4. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility.
5. Materials shall be UL listed.

F. Single-Source Responsibility:

1. The complete installation and performance of the installed system, including all accessories shall be the sole responsibility of the PV system installer. It is the installer’s responsibility to ensure that all field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.
2. Coordinate the components of the system and their arrangements electrically and mechanically.

G. Installer Qualifications:

1. Has installed a minimum of fifteen (15) PV systems of similar size and conditions within the local area.
2. Factory-authorized installer to perform work of this Section.
3. Provide references upon request:
   a. Names of six (6) similar projects in size and scope.
   b. Contact person and phone number for each project.

H. Installation Quality: In accordance with the following Codes and Standards.

1. NEC National Electrical Code
2. NETA National Electrical Testing Association
3. NFPA National Fire Protection Association
4. UL Underwriters Laboratories

I. Certification of all system components:

1. Catalogued by the system manufacturer.
2. UL Listing of each component individually.

1.8 DELIVERY, STORAGE AND HANDLING

A. Storage and Protection:

1. Store all materials under cover, in trailers, buildings, etc.
2. Protect all materials from physical damage and exposure to weather, prior to installation.

1.9 PROJECT CONDITIONS

A. The PV system and components shall be installed on the structure rooftop. Refer to all other project specification sections and drawings for coordination with roof, structural and mechanical systems.

1.10 SEQUENCING

A. General Sequencing:

1. Coordinate PV system installation with roof, steel, mechanical and electrical components and construction.
2. Coordinate PV system installation with mechanical system components on roof, grade, etc. Do not install PV components prior to completion of mechanical equipment on roof.
3. Coordinate PV system installation with lightning protection system components on roof.
4. Provide for roof penetrations.
5. Coordinate PV system interconnections with building electrical system and utility metering.

1.11 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace components of PV modules that fail in materials or workmanship within specified warranty period.

1. Manufacturer's materials and workmanship warranties include, but are not limited to, the following:

a. Faulty operation of PV modules.
b. Glass breakage.

2. Warranty Period: Twelve (12) years from date of Substantial Completion.

B. Manufacturer's Special Minimum Power Output Warranty: Manufacturer agrees to repair or replace components of PV modules that fail to exhibit the minimum power output within specified warranty period. Special warranty, applying to modules only, applies to materials only, on a prorated basis, for period specified.

1. Manufacturer's minimum power output warranties include, but are not limited to, the following warranty periods, from date of Substantial Completion:

a. Specified minimum power output to 80.68 percent or more, for a period of twenty five (25) years.

1.12 MAINTENANCE AND INSPECTION

A. Term: Beginning at Commercial Operation Date for the Solar PV System, provide five year's inspection and maintenance services by skilled employees of installer's approved service organization.

B. Inspection: The following activities should be performed as part of a low-rigor inspection program at a frequency of at least twice per year. Personnel performing system inspections must follow all Occupational Safety and Health Administration (OSHA) requirements regarding safety. Although none of the activities described in this section requires the individual to access or work with electrical conductors or equipment, staff should be trained to work near high-voltage electrical systems.
   1. Investigate the data that the monitoring system or production meter generates to confirm that performance aligns with expectations and that no data is missing or erroneous
   2. Remove any vegetation or debris that may be shading the modules and ensure that no new objects like satellite dishes are shading the array.
   3. Observe whether excessive soiling may require cleaning to be scheduled.
   4. Look for signs of animal infestation, such as nests, excessive bird droppings, or wires that have been chewed on.
   5. Take note of any wire connectors emanating from the modules that do not appear to be well connected.
   6. Record the location of any wires that are poorly fastened to the racking structure, that are rubbing against an abrasive surface, that are showing breakdown from ultraviolet exposure, or that are bent in such a way that might damage the integrity of the conductor.
   7. Inspect the modules for discoloration, signs of breakage, delamination, vandalism, or theft.
   8. Ensure that roof drainage is not blocked and that there are no signs of pooled water near the array or conduit
   9. Verify that conduit is well supported and firmly intact.
   10. Ensure roof penetrations are water tight and that no damage is apparent on the rooftop.
   11. Confirm that the racking system is structurally secure and shows no signs of corrosion.
   12. Visually inspect the exterior of all electrical cabinets, such as combiner boxes, junction boxes, disconnects, and inverters for corrosion, discoloration, debris, and solid attachment to a stable structure.
   13. Check that all inverters are operational, and record the inverter error logs.
   14. Lastly, thermal imaging using infrared equipment can be used to record the location of excessive heat dissipation in module cells, wire connections, and electrical cabinets (only the exterior of electrical cabinets should be imaged).

C. Maintenance: The following activities should be performed as part of a high-rigor maintenance program with a frequency of once per year or as issues arise. Individuals performing maintenance on a PV system must follow all OSHA requirements regarding safety. Because many of these tasks involve working with high-voltage conductors and electrical equipment, the staff must meet the National Electrical Code's (NEC's) definition of "qualified personnel." Due to the high direct current (DC) voltages that can be present in PV systems, staff must be trained in arc flash protection and wear all appropriate arc flash protection equipment.

   1. Ensure sensors related to the data monitoring systems are properly attached and orientated and clean irradiance sensors.
   2. Compare readings from sensors to recently calibrated sensors to ensure sensor accuracy, and check the voltages of power supplies to the sensors and communication devices.

3. Measure the power at the production meter, and compare it to the meter's readings to ensure meter accuracy.
4. Clean modules.
5. Eliminate opportunities for animal infestation.
6. Reconnect any loose wire connectors.
7. Fasten any hanging wires to a supportive structure, and repair or replace any damaged wires.
8. Replace broken, delaminated, malfunctioning, or stolen modules.
9. Correct any issues with water drainage or any issues that are degrading the integrity of the rooftop.
10. Repair conduit that is not intact or firmly supported.
11. Correct any issues with the structural integrity of the racking system, and replace any corroded components.
12. Verify the continuity of all equipment grounding of racking systems, junction boxes, combiner boxes, disconnects, and inverters.
13. Replace or repair any corroded electrical cabinets, and ensure that all electrical cabinets are weather tight.
14. Measure module string open-circuit voltage, maximum power current, and short-circuit current, and compare these measurements against expected values or perform I-V curve tests to identify malfunctioning modules.
15. Perform Megger resistance tests to verify that wire insulation is intact and suitable.
16. Test continuity of system grounds to all major components.
17. Test continuity of fuses in combiner boxes, disconnects, and inverters; tighten all wire terminals; and inspect components for discoloration or excessive heat dissipation.
18. Measure the DC input power and alternating current (AC) output power from the inverter and confirm that appropriate efficiencies are being realized and that inverter readings are accurate.
19. Clean or replace air filters on inverters.
20. Test fans on inverters for proper operation.
21. Use infrared thermal imaging to identify faulty wire connections and subcomponents within electrical cabinets.
22. Coordinate installation with all other trades.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide a system by one of the following named manufacturers, or approved equals:

B. PV Modules:
1. Trina Solar
2. Qcells
3. Canadian Solar
4. First Solar

C. DC-AC Inverters:
1. Siemens
2. Solar Edge
3. Yaskawa Solectria Solar
4. TMEIC

2.2 PERFORMANCE REQUIREMENTS

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.3 PV CAPACITIES AND CHARACTERISTICS

A. Minimum Electrical Characteristics:

1. Rated Open-Circuit Voltage: 37.5V DC.
2. Maximum System Voltage: 1500V DC.
3. Maximum Power at Voltage (Vmpp): 31.2V DC
4. Short-Circuit Temperature Coefficient: -0.25%/deg C.
5. Rated Short-Circuit Current (Isc): 18.41A.
6. Maximum Power Current (Impp): 17.33A.

B. Additional Electrical Characteristics:

1. Series Fuse Rating: 30A.

C. Normal Operating Temperature Characteristics (NOTC):

1. Temperature at Nominal Operating Cell Temperature: 43 deg C.
2. Temperature Coefficient (NOTC Open-Circuit Voltage): -0.25%/deg C.
3. Temperature Coefficient (NOTC Short Circuit Current): 0.04%/deg C.
4. Temperature Coefficient (NOTC Maximum Power Voltage): -0.34%/deg C.

2.4 PV SYSTEM DESCRIPTION

A. Collectors connected to provide power ac loads, connected to utility through interactive inverters.
1. System Components:

a. PV modules.
b. Array frame.
c. Charge controller.
d. System control.
e. Inverter
f. Overcurrent protection, disconnect, and rapid shutdown devices.
g. Mounting structure.

2.5 MANUFACTURED PHOTOVOLTAIC MODULES

A. Cell Materials: Monocrystalline.

B. Module Construction:

1. Nominal Size: 43.15 inches (1096 mm) wide by 93.85 inches (2384 mm) long.
2. Weight: 62.39 lb (28.3 kg).

C. Encapsulant: Ethyl vinyl acetate.

D. Front Panel: Fully tempered glass.
1. 0.13-inch- (3.2-mm-) thick glass.

E. Backing Material:
1. White.

F. Bypass Diode Protection: Internal.

G. Junction Box:
1. IP Code: IP 68.

H. Output Cabling:
1. Photovoltaic Technology Cable 4.0 mm2 (0.006 inches2)
2. Portrait: 350/280 mm(13.78/11.02 inches)
3. Length can be customized.

I. Series Fuse Rating: 30A.

2.6 PV MODULE FRAMING

A. PV laminates mounted in anodized extruded-aluminum frames.

1. Entire assembly UL listed for electrical and fire safety, Class A, according to UL 1703, and complying with IEC 61215.
2. Frame strength exceeding requirements of certifying agencies in subparagraph above.
3. Finish: Anodized aluminum.

a. Alloy and temper recommended by framing manufacturer for strength, corrosion resistance, and application of required finish.
b. Color: As indicated by manufacturer's designations.

2.7 INVERTER

1. Array-to-inverter kW ratio must not exceed manufacturer recommendations. Inverter must be IEEE 1547 compliant, listed to UL 1741, comply with the latest applicable ANSI and FCC standards and addenda, and inspected before commissioning, testing, and operation of the system. Submit documentation validating system performance requirements.
2. All same-sized inverters supplied must be of the same manufacturer and model number.
3. Provide inverter with anti-islanding protection to prevent back-feeding inverter generated power to the grid in the event of a utility outage. Anti-islanding protection must be listed to UL 1741 and IEEE 1547.
4. Overcurrent protection, ground fault protection, arc fault circuit interrupter (AFCI), and rapid shutdown must comply with the requirements of NFPA 70.

2.8 SYSTEM OVERCURRENT PROTECTION

A. Circuit Breakers: 350A

2.9 MOUNTING STRUCTURES

A. Flat-Roof Mounting:

1. No roof penetrations.
2. Self-ballasting.
3. Wind-tunnel tested.
4. Service Life: 25 years.

2.10 GROUNDING AND BONDING

A. Provide properly sized equipment grounding conductors. Equipment grounding conductors must be insulated stranded copper, except that sizes 10 AWG and smaller must be solid copper. Insulation color must be continuous green for all equipment grounding conductors, except that wire sizes 4 AWG and larger shall be identified per NFPA 70.

B. Provide grounding lugs for aluminum PV solar module frames of either stainless steel or tin-coated copper.

C. Bonding conductors must be bare stranded copper, except that sizes 10 AWG and smaller must be bare solid copper. Bonding conductors must be stranded for final connection to motors, transformers, and vibrating equipment.

D. Provide bonding fittings on concentric/eccentric knockouts with metal conduits for circuits over 250 volts in accordance with NFPA 70.

E. Provide bonding fittings for ferrous metal conduits enclosing grounding electrode conductors in accordance with NFPA 70.

2.11 LIGHTNING PROTECTION SYSTEM

A. Provide PV Lightning Protection for electrical and mechanical systems in accordance with Section 26 41 13 LIGHTING PROTECTION SYSTEM and NFPA 780.

PART 3 - EXECUTION

A. EXAMINATION: Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for installation and maintenance of the equipment, per Codes and component manufacturers.

B. Examine substrate areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

C. Do not begin installation until mounting surfaces have been properly prepared.

D. If preparation of mounting surfaces is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

E. Examine modules and array frame before installation. Reject modules and arrays that are wet, moisture damaged, or mold damaged.

F. Examine roofs, supports, and supporting structures for suitable conditions where PV system will be installed.

G. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General Requirements:
1. Install all equipment, as indicated and per manufacturer's written instructions.
2. Do not install equipment where location impedes access to other equipment or creates unsafe conditions. Install in suitable, alternate location.
3. Coordinate the installation of the PV system with the work of other trades and contractors prior to laying out system or beginning work.
4. Coordinate layout and installation of PV panels with roof assembly and other construction.

B. Comply with NECA 1.

C. Support PV panel assemblies independent of supports for other elements such as roof and support assemblies, enclosures, vents, pipes, and conduits. Support assembly to prevent twisting from eccentric loading.

D. Install PV inverters in locations coordinated with all disciplines and roof equipment.

E. Install weather seal fittings and flanges where PV panel assemblies penetrate exterior elements such as walls or roofs. Seal around openings to make weathertight. See Section 079200 "Joint Sealants" for materials and application. Field Wiring:

1. Comply with National Electrical Code.
2. Install all AC power cabling in conduit or metal raceway according to Section "Raceways & Boxes for Electrical Systems."
3. Exposed raceways shall be properly supported per NEC and PV system manufacturer.
4. Do not mix PV system cabling in same raceways/boxes with wiring of any other systems.
5. Do not run PV system conduits parallel and within 18" of any other AC or DC system cabling or conduits.
6. Install all cables in raceways.
7. Furnish and install conductors required to connect incoming and outgoing circuits.
8. Install conductors with conduits, boxes, and terminal cabinets in a totally enclosed installation.

F. Wiring within Enclosures: Bundle, lace, and train conductors to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

G. Disconnects:

1. Provide disconnecting means in accordance with NFPA 70 requirements.
2. Install disconnects for all current carrying conductors of the PV source.
3. Install disconnects for the PV equipment. For inverters and other equipment that are energized from more than one source, group and identify the disconnecting means. Equipment disconnecting means or its remote operating device or the enclosure providing access to the disconnecting means must be capable of being locked in the open position when not within sight or not within 10 ft of the equipment.
4. Install disconnects and overcurrent protection for all ungrounded conductors in ungrounded (transformerless) PV power systems.
5. Install disconnecting means with a rapid shutdown function using the rapid shutdown initiation devices as specified in NFPA 70. Each device's "off" position must indicate that the rapid shutdown function has been initiated for all PV systems connected to that rapid shutdown initiation device.
6. Disconnecting means equipment that performs the rapid shutdown function, other than initiating devices, must be listed for providing rapid shutdown protection.
7. Buildings with rapid shutdown disconnecting means must have a permanent label as specified in NFPA 70.

H. Overcurrent and Overvoltage Protection:

1. Install the PV interconnect overcurrent protective device as indicated in accordance with NFPA 70. Overcurrent devices used in PV system dc circuits must be listed for use in PV systems.
2. Install overvoltage surge protective device (SPD) as indicated and in accordance with NFPA 780 and NFPA 70. PV surge protective devices must be listed for use in PV system and marked "DC" or "PV SPD." If the system inverter is more than 30 m 100 ft from the closest combiner or recombiner box, provide additional PV SPDs at the PV output circuit adjacent to the inverter.

I. PV System Grounding:

1. NFPA 70 and IEEE C2, except provide grounding systems with a resistance to solid earth ground not exceeding 25 ohms. Ground according to racking manufacturer's recommendations.
2. Install grounding lugs in locations on the solar PV module as designated by the module manufacturer, using stainless steel machine screws of the thread size provided in the pre-tapped holes, along with a stainless steel star washer placed between the grounding lug and the solar module frame.

3.3 CONNECTIONS

A. Coordinate PV panel cabling to equipment enclosures to ensure proper connections.

B. Coordinate interconnection of utility with BGE prior to rough-in including but not limited to service application and all correspondence with BGE.

C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A-486B.

D. Make splices, terminations, and taps that are compatible with conductor material.

3.4 FIELD QUALITY CONTROL

A. Installation shall meet all the requirements of NEC and component manufacturers.

B. Installer's Field Services:

1. Provide services of a factory-authorized service technician to make all connections of all system cabling at modules, combiners, disconnects, inverters and associated components and accessories.
2. Be present and supervise all pretesting of PV system prior to connections to utility power.
3. Be present and supervise the adjustment of all settings, components and accessories.
4. Provide all system adjustments, fine tuning, etc., based on project conditions.
5. Assist in the troubleshooting, as necessary to provide a system free from all faults, trouble conditions, etc. prior to required testing by AHJ.

C. Inspections by AHJ:
1. Arrange all required inspections by the local Fire Department, Fire Marshal, and/or Authority Having Jurisdiction
2. Notify all parties, including owner and architect, at least 2 weeks in advance of scheduled Inspections.
3. Attend all inspections of system, wiring, etc. by local authorities.
4. Document and distribute results of testing to all parties.
5. Perform all adjustments, changes, etc. required.
Provide for re-inspections, if required.
6. Address and correct all inspection deficiencies such that system passes all required inspections and certifications.

D. Utility Coordination:

1. Schedule and attend all inspections of system, wiring, etc. by local utility company.
2. Comply with all utility requirements for interconnecting with utility power.
3. Provide and submit all required documentation to utility for interconnection and net utility metering.
4. Address and correct all inspection deficiencies such that system passes all required inspections and certifications.

E. Site Tests:

1. Schedule tests and provide notification at least one week in advance of any test commencement.
2. PV System Module Electrical Testing:
    a. Continuity measurements.
    b. Open circuit voltage.
    c. Short circuit current.
    d. Insulation resistance.
    e. Irradiance.
    f. Individaul PV module outputs.
    g. DC Withstand test (negative and positive polarity)
3. PV Inverter Electrical Testing:
    a. Verify input voltages to inverter from array.
    b. Verify AC output voltages with fluctuating DC inputs.
    c. Verify anti-islanding for shutdown upon loss of utility power.

d. Verify PV system remains OFF when building is running on generator power.

4. Post-Installation Testing: After completing system installation, perform the following preparations for tests:
   a. Make ground resistance tests for system, per Section “Grounding & Bonding For Electrical Systems.” Verify proper grounding of all rooftop metal structures and framing.
   b. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration. Correct all deficiencies are corrected.
   c. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, where not available, those of UL Standards 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors.” Provide a written inspection checklist, which verifies all components have been inspected and are satisfactory.

3.5 DEMONSTRATION

A. System Installer shall provide a factory trained representative for purpose of training owner's personnel:

1. Discuss proper operation, maintenance, and use of system.
2. Instructor shall be fully knowledgeable of the installed system and all components.
3. Training shall be completed at the project site following Owner occupancy.
4. Schedule after all final tests, adjustments and Owner's acceptance.
5. Training shall include use of delivered O&M manuals.

END OF SECTION 263100

SECTION 26 32 00

PACKAGED GENERATOR ASSEMBLIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Diesel powered generator(s).
2. Weatherproof Sound Enclosures.
3. Fuel tanks.
4. Auxiliary equipment.

B. Related Sections:

1. Section “Common Work Results For Electrical” for concrete pads and bollards requirements.
2. Section “Grounding & Bonding For Electrical Systems” for grounding, bonding and interconnection of equipment.
3. Section “Low Voltage Electrical Power Conductors and Cables” for grounding conductors and attachments and conductors used of low voltage controls.
4. Section “Raceways and Boxes for Electrical Systems” for raceways and conduit requirements for generator connections, etc.
5. Section “Low Voltage Electrical Distribution” for generator output circuit breaker requirements.
6. Section “Transfer Switches” for coordination with power switching and control equipment.
7. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements of the generator system(s).

C. Permits and Fees:

1. Apply, pay for and secure all permits, required by the Authorities Having Jurisdiction prior to start of work, in accordance with contract General Conditions and Division 01.
2. For projects in the State of Maryland, provide the following:
   a. Contractor shall complete, file, pay for, and secure a “Permit to Construct - Application for Fuel Burning Equipment” (Form 11) from the Maryland Department of the Environment (MDE).
3. Deliver all certificates to the Owner prior to final acceptance of work.

1.3 REFERENCES

A. IEEE:

1. IEEE 241 IEEE Recommended Practice for Electric Power Systems in

Commercial Buildings

2. IEEE 446 IEEE Recommended Practice for Emergency and Standby Power Systems for Industrial and Commercial Applications

B. National Electrical Code (NEC):

1. NEC 700 Emergency Systems
2. NEC 701 Legally Required Standby Systems
3. NEC 702 Optional Standby Systems

C. National Fire Protection Association (NFPA):

1. NFPA 70 National Electrical Code
2. NFPA 99 Essential Electrical Systems for Health Care Facilities
3. NFPA 110 Emergency And Standby Power Systems

B. National Equipment Manufacturers Association (NEMA):

1. NEMA Standards of Construction and Testing.
2. NEMA MG-1 Motors and Generators

C. Underwriters Laboratories (UL):

1. UL 508 Industrial Control Equipment
2. UL 2200 Standard for Safety for Stationary Engine Generator Assemblies

1.4 SUBMITTALS

A. Submittal Requirements of this section:

1. Engine-generator assembly.
2. Sound attenuating enclosure.
3. Engine muffler/silencer.
4. Engine control panel and instrumentation.
5. Remote status panel.
6. Subbase fuel tank.
7. Engine jacket heater.
8. Battery charger.
9. Starting batteries.

B. Basis-of-Design Comparable Products Submission:

1. Contract Drawings are based on only the named “Basis of Design” manufacturer and model of generator, alternator and specified accessories.
2. Engineer has not verified that any Comparable Products by manufacturers other than the “Basis of Design” equipment will properly fit, perform or meet the design intent and contract documents.
3. Contractor must verify sizes, ratings, dimensions, clearance requirements, weight, fuel flow and storage requirements, air flow, etc. of any/all manufacturers. Contractor is responsible for the fitment of their proposed equipment within the space, room or area shown, and the resulting impacts to other construction or disciplines, Code compliance, etc.
4. Document each Submittal, Comparable Product or Substitution request with supporting data substantiating compliance of proposed product with

Basis-of-Design product.

5. Use the attached “Comparable Product Submittal Form” in addition to the requirements specified herein.
6. Comparable products will not be reviewed without completion of the attached form.

C. Descriptive Data:

1. Clearly indicate or state options, etc.:
   a. Manufacturer/cat. number.
   b. Manufacturer’s options.
   c. Accessories.
2. Manufacturer's specifications, data sheets.
3. Catalog cuts.
4. Dimensional drawings.
5. Drawing(s) to indicate muffler mounting location (in or on) enclosure).
6. Drawing(s) to indicate exhaust discharge direction and angle, pipe cap, etc.
7. Installation Instructions.
8. Wiring & connection diagrams. Indicate point of connections with other equipment or systems.
9. Capacity ratings of all components and accessories..
10. Manufacturer or vendor furnished load/starting calculations.
11. Clearly indicate the exact size or rating proposed.

D. Shop Drawings:

1. For all weatherproof and sound attenuating enclosures.
2. Factory drawings shall clearly show the mounting height to top of all breakers and controls (EPO, etc.) to verify maximum mounting height of 72” per NEC.

E. Product Test Reports:

1. Prototype test reports for proposed engine-generator assemblies.
2. Prototype testing shall have been performed on an identical generator unit, per ISO 8528, as configured for this project, including all accessories which can affect power output, including: water pump, fuel pump, radiator fan, alternator, etc.
3. Certified copies of manufacturer's design and routine factory tests required by the referenced standards.
4. Computer load acceptance, starting and running calculations, when requested, performed by the manufacturer’s authorized vendor.
5. Sound level test results of assembled engine-generator and sound attenuating enclosure. Demonstrate unenclosed sound levels versus enclosed levels. Provide calculations and test reports from the sound enclosure manufacturer or authorized vendor.

F. Factory Test Reports:

1. Perform in-factory testing of the actual generator to be shipped for this project.
2. Factory testing shall include:
   a. Full load running test at rated load for minimum of two (2) hours.
   b. Record all engine, alternator, fuel and alternator system parameters every 10 minutes.
   c. Cold start testing.

d. 100% load acceptance testing.
e. Safety Shutdown testing.

3. Factory test reports of the engine-generator assembly shall include the specific model and serial number of the unit.
4. Certified copies of manufacturer's design and factory tests required above or per the referenced standards.

G. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, spec section “Common Work Results For Electrical”, and as follows:

1. Original load acceptance, starting and running load calculations.
2. All post-installation inspection checklists.
3. Installer’s pre-startup checklist.
4. Post installation load test results.
5. Preventative maintenance schedule for each unit.

1.5 QUALITY ASSURANCE

A. Manufacturer’s Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.
2. Manufacturer shall be experienced in manufacturing equipment of the types and capacities indicated that have a record of successful in-service performance for a minimum of 10 years.
3. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility. Service shall be available on a 24-hour basis.
4. Start up services and post installation tests, as specified.
5. Preventative Maintenance program as specified.

B. Single-Source Responsibility:

1. The complete performance of the assembled engine generator system, including all accessories shall be the sole responsibility of the generator supplier. It is the installer’s responsibility to ensure that all factory and field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.
2. For exterior units, the manufacturer shall be responsible for the proper fit and performance of the weatherproof enclosure, exhaust system, including attachment hardware, support of mufflers, etc.

C. Certification and Compliance with Standards: Comply with the following specific Code and/or Standards requirements, and all other applicable Codes/standards of these agencies or publications.

1. Underwriters Laboratories (UL):
   a. UL2200 Listed Generator Assembly,
      1) Minimum working space requirements per UL2200.
      2) Wire bending space per UL2200 and NEC.
      3) Unit shall bear a UL2200 label.
   b. UL Listing of loose components, individually, where such standards exist.

2. National Electrical Code (NFPA 70)

a. NEC Article 700 Emergency Systems
b. NEC Article 701 Legally Required Standby Systems.
c. NEC Article 702 Optional Standby Systems.

3. National Fire Protection Association (NFPA):
   a. NFPA 110 Emergency Power Systems

D. Installer Qualifications:

1. Has installed a minimum of five (5) generators of similar size and conditions.
2. Has installed a minimum of three (3) generators manufactured by the proposed manufacturer.

E. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	IEEE	Institute of Electrical and Electronics Engineers
4.	IEEE C2	National Electrical Safety Code
5.	NEC	National Electrical Code
6.	NECA	National Electrical Contractors Association “Standards of Installation”
7.	NEMA	National Electrical Manufacturer’s Association
8.	NETA	National Electrical Testing Association
9.	NFPA	National Fire Protection Association
10.	UL	Underwriter’s Laboratories

1.6 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of unit(s) to site.
2. Provide for rigging needed for unloading, and setting into final position.

B. Storage and Protection:

1. Where unit is to be installed indoors, without enclosure, store in covered building or offsite to prevent exposure to weather, etc.

1.7 PROJECT CONDITIONS

A. The emergency power system level, classification and type shall meet the requirements of NFPA 110, as follows:

1.	Level:	1 (critical to Life safety)
2.	Classification:	Class 96 (96 hour operation)
3.	Type:	10 (power restored in 10 seconds)

B. The generator shall be capable of starting and operating the following loads in step increments under the specified parameters.

C. Step Load:

Group 1 (Non-Concurrent)	Miscellaneous : Fire Alarm 1 X 2.50 kVA @ 1.00 PF Harmonics: THID = 0.00%	2.5	2.5	2.5	2.5	0%	0%	0	25.00%	15 Hertz
Group 1 (Non-Concurrent)	Motor : Sprinkler - Compressor 1 X 0.30 HP Code G (6 kVA/Hp) Across the Line Rated torque at start running at 100%	1.08	1.8	0.6	0.8	0%	0%	0	35.00%	15 Hertz
Group 1 (Non-Concurrent)	Lighting : Life Safety Lighting 1 X 2.00 kVA @ 0.95 PF Harmonics: THID = 20.00%	1.9	2	1.9	2	20%	20%	2	25.00%	10 Hertz
Group 2 (Non-Concurrent)	Miscellaneous : Water Heaters 1 X 226.10 kVA @ 1.00 PF Harmonics: THID = 0.00%	226.1	226.1	226.1	226.1	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Resistive : Resistive #1 (Heating) 1 X 77.00 kVA @ 1.00 PF Harmonics: THID = 0.00%	77	77	77	77	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Miscellaneous : Receptacles 1 X 94.00 kVA @ 1.00 PF Harmonics: THID = 0.00%	52.4	52.4	94	94	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Battery Charger : EV Chargers 4 X 6.20 kVA @ 0.97 PF Harmonics: THID = 30.00%	6.01	6.2	24.06	24.8	30%	30%	24.8	15.00%	5 Hertz
Group 2 (Non-Concurrent)	Miscellaneous : IT, Sec, Etc 1 X 8.00 kVA @ 0.90 PF Harmonics: THID = 0.00%	7.2	8	7.2	8	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Motor : DOAS 1 X 324.00 Amps Code G (6 kVA/Hp) 6 Pulse Rectifier VFD Commercial(115%) Rated torque at start running at 100%	73.55	81.72	255.22	283.58	30%	30%	283.6	15.00%	5 Hertz
Group 2 (Non-Concurrent)	Motor : CU's 1 X 145.50 Amps Code G (6 kVA/Hp) Across the Line Rated torque at start running at 100%	212.98	734.4	107.63	120.93	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Motor : FCU Units 1 X 121.00 Amps Code G (6 kVA/Hp) Across the Line Rated torque at start running at 100%	83.36	252.6	37.91	43.57	0%	0%	0	35.00%	15 Hertz
Group 2 (Non-Concurrent)	Elevator-Cable : Elevator-Cable #1 1 X 13.00 Amps Code H (6.7 kVA/Hp) 6 Pulse Rectifier VFD Commercial(115%) Rated torque at start running at 100%	2.24	2.67	9.54	11.36	30%	30%	11.4	15.00%	5 Hertz
Group 2 (Non-Concurrent)	Lighting : Lighting #2 1 X 15.70 kVA @ 0.95 PF Harmonics: THID = 0.00%	14.91	15.7	14.91	15.7	0%	0%	0	25.00%	10 Hertz

D. Performance Parameters:

1. Max loading 100% of rated generator capacity.
2. Max frequency dip 5%.
3. Starting voltage dip max 25%.
4. Max running voltage dip max 5%.

1.8 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of unit(s), fuel tanks, enclosures and all components to site.
2. Provide for rigging needed for unloading generators and equipment.
3. Provide all rigging for setting equipment into final position.

B. Storage and Protection:

1. Store generators and all accessories in covered building or in factory weatherproof housing to prevent exposure to weather, etc. until building is weathertight and suitable for installation.
2. Maintain unit in factory shrink-wrap or similar protection until installed in final position.
3. After setting in final position, cover unit to protect from construction debris, fireproofing sprays, paint, etc. until ready for connections and startup.
4. Do not install control panels, PLC’s, or other electronic components or systems in

buildings unless the room is stabilized with permanent or temporary HVAC and humidity control.

1.9 SEQUENCING

A. General Sequencing:

1. Coordinate generator installation with exterior grading, utilities and site construction.
2. Provide for sub-grade rough-ins.
3. Coordinate construction of concrete pads with final grading and underground utilities.

1.10 WARRANTY

A. Special Warranty: Extended product warranty over and above that required by General Conditions of this contract.

1. Covers complete standby power generation system:
   a. Engine.
   b. Alternator.
   c. Controls.
   d. Accessories.
   e. Transfer switches.
   f. Remote annunciation devices.
2. Warranty shall be by the manufacturer or authorized representative.
3. Warranty period of five (5) years or 1500 operating hours, whichever occurs first, from initial startup.
4. Warranty includes all parts, labor, travel expenses, with no deductibles.
5. Installer shall complete and file all necessary documents to assure fulfillment of warranty requirements.
6. Deliver warranty documents to Owner in O & M manuals.

1.11 SYSTEM STARTUP

A. Manufacturer's Services: Provide services of a factory-authorized service representative to supervise the field assembly and connection of generator, associated components and accessories, and the pre-startup adjustment of all settings, components and accessories.

1.12 MAINTENANCE

A. Provide all materials and services of factory authorized service company to return at the end of twelve (12) and twenty four (24) months following completion of original contract. Preventative maintenance and testing of each new generator shall be performed at each visit, including, but not limited to the following items:

1. 4-hour full rated load test with test load bank, as specified previously.
2. Test and adjust all monitoring systems and annunciation devices.
3. Test and adjust all safety, starting and shutdown systems and devices, including all manual and automatic controls.
4. Test and adjust operation of all associated ATS's, battery chargers, daytanks and pumps, louvers, etc.
5. Replace all oil, air and coolant filters. Drain and replace associated fluids.
6. Adjust tension on all belts. Replace belts, as needed.

7. Check battery condition, specific gravity, electrolyte level. Add water as needed. Clean all terminals and connections. Apply anti-corrosion treatment.
8. Make adjustments to engine, fuel and starting systems to insure optimum starting and running efficiency.
9. Perform a fuel quality test on the fuel stored in the tank(s) in accordance with ASTM and the generator manufacturer's recommendations. Advise owner of any conditions which require attention.

B. Provide a full report on each engine-generator at each adjustment/testing visit listing all maintenance procedures performed, all filter/fluid changes, adjustments, replacements, etc. Report shall also document the load test, indicating, voltages, amperes, oil pressure, alternator amps, engine temperature, battery charging current/voltage, etc. every 15 minutes. Also indicate any changes to the normal readings and at which point it/they occurred.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, provide a system by the named "Basis of Design" manufacturer, or a comparable product of one of the other following named manufacturers:

1. Kohler (Basis of Design)
2. Cummins
3. Caterpillar

2.2 RATINGS AND CONDITIONS

A. The following is based upon Kohler Model KD900.

1.	KW/kVA @ 0.8 PF:	900/1125
2.	Voltage:	277/480V
3.	Phase:	3 φ
4.	Wire:	4 W

B. Engine Generator Specs:

1.	Fuel Consumption @ Full Load:	64.7 gal/hr
2.	Housed/Wet Weight:	61,113 lbs.
3.	Motor Starting kVA:	3,774 skVA
4.	Max. Voltage Dip for skVA	35 %

2.3 ENGINE

A. Engine shall be specifically matched to the generator to provide specified performance.

1. Full pressurized lubrication system, gear driven pump.
2. Vertical, multi-cylinder.
3. Manufacturer's nameplate identifying engine type, serial number, etc. for proper servicing.
4. Factory prototype testing, with test results available.
5. Engine shall not exceed greater than 10% lubricating oil consumption/loss over 100 hours of operation at any load (0-100%).

6. 4 cycle diesel (2 cycle engines are not permitted).
7. Designed for commercial grade ASTM D975 Number 2 diesel fuel.
8. Solid injection, full diesel type. The lubrication system shall be of the full pressure type.

B. Emissions: Provide an engine certified to meet EPA Non-road Source Emissions Standards, 40 CFR 89, Tier 3 or the appropriate Tier Schedules, based on engine kW and application. Contractor is responsible for providing proper Tier rating, coordination of manufacturing, shipping and startup dates. Owner will not accept incorrect Tier rating due to delays in installation, etc. which affect the required Tier rating.

C. Furnish engine with the following accessories:

1. Replaceable full flow oil filters.
2. Dry type air cleaners.
3. Fuel filter with replaceable element.
4. Battery charging alternator.
5. Isochronous governor to control engine speed. Frequency variation shall not exceed ± 0.25 % for constant loads from 0-100%. Cummins EFC or Woodward DSLC.
6. Heavy duty 12 or 24 volt starting system.
7. Gear driven starter motor. Cranking via gear drive.
8. Safety shutdown via control panel.
9. Water cooled oil cooler.
10. Coolant water pumps, centrifugal type, gear driven by engine, starting simultaneously with engine. System shall be designed for operation up to 125˚F without derating.
11. Engine mounted radiator, belt-driven fan, and thermostat.
12. No exposed moving parts. Guards installed on all rotating belts, blades, etc. per UL2200, “Standard for Safety for Stationary Engine Generator Assemblies.”
13. Jacket water heater, thermostatically controlled. Sized per manufacturer to maintain engine for cold start and load acceptance per NFPA 110. 4 KW (480V/60Hz/1φ), or as required by manufacturer. Provide isolation valves for servicing. Provide disconnect switch at generator.

2.4 GENERATOR

A. Generators shall be rated for continuous standby operation.

1. Heavy duty, single bearing, pre-lubricated type.
2. Temperature Rise: 125˚C.
3. Self-ventilating via direct drive blower.
4. Maximum speed not greater than 1800 rpm.
5. Flexible coupling of generator shaft to engine flywheel.
6. Self-regulating: Revolving field, 4-pole, brushless AC exciter with rotating rectifiers or static-exciter regulator assembly.
7. Stator twice impregnated with varnish, skewed to minimize heating and harmonics.
8. Excitor shall be full-wave rectified with silicon diodes mounted on rotor shaft. Manual reset circuit breaker shall protect field circuit.
9. Class "H" for 150˚C rise over a 40˚C ambient, as defined by NEMA Standard MG1-1.65, “Motors and Generators.”
10. 2/3 pitch. Sub-transient Reactance: Maximum of 12%
11. Re-connectable 12-lead bus bar system.

B. Solid state automatic voltage regulator with manual digital voltage adjustment.

1. Terminal voltage regulation of ±0.5% from 0-100% load.
2. Synchronous operation for immunity to SCR tracking.
3. Steady state output voltage maintained at ±0.5% of rated voltage from 0-100%
4. Output voltage recovery to ±1% of final voltage in less than 4 seconds after adding/removal 25 % load increments.

2.5 OUTPUT CIRCUIT BREAKERS

A. UL Listed output circuit breaker(s) on or at the generator.

1. Thermal magnetic, molded case type.
2. All generator-mounted circuit breakers shall be UL Service Entrance rated and shall bear a UL nameplate indicating this rating.
3. Breaker(s) shall have Form C aux contacts that indicate the position (open or closed) for each output breaker.
4. Rating as per drawings.
5. Breaker(s) shall meet requirements of Section “Low Voltage Electrical Distribution”.

2.6 CONTROLS

A. Integrated Control System: Control shall be via integrated generator set control system providing governing, voltage regulation, engine protection and operator interface functions. Major features include:

1. Integral Protective Relay providing a full range of alternator protection functions that are matched to the alternator provided.
2. Battery monitoring and testing features and smart starting control system.
3. Three phase sensing, full wave rectified voltage regulation system, with a PWM output for stable operation with all load types.
4. Standard PCC Net™ and optional Echelon LONWORKS® network interface.
5. Control suitable for operation in ambient temperature from -40 °C to +70 °C (-40 °F to +158 °F) and altitudes to 5000 meters (13,000 feet).
6. Prototype tested; UL, CSA, and CE compliant.

B. Operator/display panel:

1. Off/manual/auto mode switch
2. Manual run/stop switch
3. Panel lamp test switch
4. Emergency stop switch
5. Alpha-numeric display with pushbutton access for viewing engine and alternator data and providing setup, controls and adjustments
6. LED lamps indicating genset running, not in auto, common warning, common shutdown.
7. Configurable LED lamps (5).

C. Engine protection:

1. Over-speed shut down
2. Low oil pressure warning and shut down

3. High coolant temperature warning and shut down
4. High oil temperature warning (some models)
5. Low coolant level warning or shut down
6. Low coolant temperature warning
7. High and low battery voltage warning
8. Weak battery warning
9. Dead battery shut down
10. Fail to start (over-crank) shut down
11. Fail to crank shut down
12. Redundant start disconnect
13. Cranking lockout
14. Sensor failure indication.

D. Engine data:

1. DC voltage
2. Lube oil pressure
3. Coolant temperature
4. Lube oil temperature (some models)
5. Engine speed.

E. AC protection:

1. Over current and short-circuit shut down
2. Over current warning
3. Single and three phase fault regulation
4. Over and under voltage shut down
5. Over and under frequency shut down
6. Overload warning with alarm contact
7. Reverse power and reverse Var shut down
8. Excitation fault

F. Alternator data:

1. Line-to-line and line-to-neutral AC volts
2. Three phase AC current
3. Frequency
4. Total and individual phase power factor, kW and KVA

G. Other Data:

1. Genset model data
2. Start attempts, starts, running hours
3. kW hours (total and since reset)
4. Fault history
5. Load profile (hours less than 30% and hours more than 90% load)

H. Governing:

1. Digital electronic isochronous governor
2. Temperature dynamic governing
3. Smart idle speed mode
4. Glow plug control (some models)

I. Voltage regulation:

1. Digital PWM electronic voltage regulation
2. Three phase line-to-neutral sensing
3. Suitable for PMG or shunt excitation
4. Single and three phase fault regulation
5. Configurable torque matching

J. Control functions:

1. Data logging on faults
2. Time delay start and cooldown
3. Cycle cranking
4. Configurable customer inputs (4)
5. Configurable customer outputs (4)
6. Remote emergency stop

K. Control Panel:

1. Generator mounted, microprocessor based control panel.
2. Sealed front panel with gasketed doors.
3. Meets requirements of NFPA 99, “Health Care Facilities,” NFPA 110, “Emergency and Standby Power Systems” for Level 1 systems
4. Dead front type, NEMA 1 construction.
5. Separate customer interconnection/termination box, completely separate from control panel.
6. Vibration absorbing mountings.
7. Listed under UL 508, and UL2200.

L. Control Panel Functions:

1. Cycle cranking control.
2. Emergency stop switch/button.
3. Idle mode control.
4. Panel backlighting with switch.
5. Reset switch.
6. Run-Off-Auto switch.
7. Lamp test switch.
8. Audible alarm sounder.
9. "NOT IN AUTO" light signal at generator and remote panels whenever if out of "Automatic" position.
10. Automatic starting controls.
11. Auxiliary Run relays.
12. Common Failure Relays.
13. Spare pre-wired, Form C, dry contacts for remote monitoring, to indicate functions listed under Remote Monitoring Panel.

M. Standard Gauges, Meters & Warnings:

1. Ammeter (Analog or digital).
2. AC Voltmeter (Analog or digital).
3. Ammeter and voltmeter phase selector switches (L-L, L-N).
4. Voltage adjusting rheostat.
5. Current and potential transformers.

6. Frequency meter (Analog or digital).
7. DC Voltmeter
8. Engine oil pressure gauge.
9. Engine temperature gauge.
10. Running time meter.
11. Indicator lamps for the following:
    a. Over-crank
    b. Low Oil Pressure
    c. High Engine Temperature
    d. Over-speed
    e. Not In Auto
    f. System Ready
    g. Low Battery Voltage
    h. Battery Charger Fault
    i. Low Fuel
    j. Pre-Alarm - High Engine Temperature
    k. Pre-Alarm - Low Oil Pressure
    l. Low Water Temperature
    m. Auxiliary Alarm
    n. Auxiliary Pre-Alarm
    o. Liquid in rupture Tank
    p. Ground Fault Indication

N. Starting controls (Initiated via contact closure in ATS):

1. Starting control shall disconnect automatically after firing via speed sensing switch.
2. Lock out of start control for start failure or any safety shutdown. Manual reset required.
3. 3 start attempts of 15 seconds cranking each
4. 15 seconds between each attempt.
5. Total actual cranking time for the complete cranking cycle shall be 45 seconds during a 90 second interval.
6. After the engine has stopped, the cranking control shall reset.
7. OVER-CRANK signal light shall energize, start system shall lock-out and audio/visual alarm for failure.

O. Automatic Shutdown Controls:

1. Emergency Stop
2. Fail to Crank
3. High AC Voltage
4. High Coolant Temp
5. Low AC Voltage
6. Low Oil Pressure
7. Over-crank
8. Over-speed
9. Short Circuit
10. Under-frequency
11. Low Coolant Level

2.7 REMOTE MONITORING PANEL

A. Solid state remote monitoring panel with audible and LED visual alarm lamps to indicate

the following functions:

1. Generator Running
2. Normal Power
3. Low Coolant Temperature (A)
4. High Coolant Temperature (A)
5. Pre-High Coolant Temp. (A)
6. Low Oil Pressure (A)
7. Pre-Low Oil Pressure (A)
8. Over-crank (A)
9. Over-speed (A)
10. Low Battery Voltage
11. Charger Fault (A)
12. Normal Battery Voltage
13. Low Engine Temp. (A)
14. Not in Auto Mode (A)
15. Emergency Stop (A)
16. Low Fuel (Main Tank) (A)
17. Liquid in Rupture Tank (Subbase Tank)

(A) indicates audio/visual alarm. Others are visual only.

B. Panel test button shall be provided to check all indicator lights. An audible alarm with silence button shall warn user of generator trouble in addition to visual lamps.

2.8 BATTERY CHARGER

A. The battery charger shall be furnished as part of the engine/generator package from the manufacturer.

1. NEMA 1 enclosure.
2. Automatic equalize-charge & float modes.
3. DC volt and ammeter.
4. On-Off" control switch.
5. Fused AC input and DC output, with terminals for input and output connections.
6. DC output of 12 or 24 volts, as required.
7. Dry output contacts for AC input or DC output failure.
8. Relays for high and low DC voltage.
9. Inherently self-protected against shorts, overloads and reversed leads.
10. Fuses accessible from the front of the charger.

2.9 BATTERIES

A. For engine starting, provide heavy duty battery.

1. Lead calcium type batteries.
2. 12 or 24 volt as required by engine.
3. Batteries shipped dry.
4. CCA rated per engine manufacturer for 0˚F starting.
5. Non-metallic, corrosion resistant rack.
6. All cabling, connections and accessories.
7. Champion, Interstate, Exide, C&D Charter, or equal.

2.10 SUBBASE FUEL STORAGE TANK

A. Provide a sub base fuel storage tank under generator.

1. Listed per UL 142, “Steel Aboveground Tanks for Flammable and Combustible Liquids.”
2. Double wall tank, pressure tested to 5 psi on both inner and outer tank.
3. 5025 gallon capacity (96 hour runtime).
4. 12 gauge corrosion resistant steel tank.
5. 12 gauge top bottom and baffles, 7 gauge steel channel side supports.
6. All required fittings and connections, including, but not limited to, fuel supply and return, fuel level gauge, low fuel alarm, manual fill, vent, fuel in rupture tank alarm, etc. Pressure relief vent caps shall be supplied for both the inner and outer tank.
7. Normal vent and Emergency relief valve per NFPA 30, “Flammable and Combustible Liquids Code.”
8. Maximum height of 30 inches.
9. Manufacture shall insure that top of all circuit breakers and controls (ie EPO) shall be less than 72”, per NEC. Where higher mounting heights are required, manufacturer shall include permanent service platforms at all such devices.
10. Dimensions of tank shall be the same as the generator skid dimensions.
11. Finish shall be black, or shall match the color of Generator Enclosure.

2.11 WEATHERPROOF ENCLOSURE

A. The generator set shall be housed in a weatherproof outdoor housing as follows:

1. Welded and bolted, reinforced sheet steel.
2. Weatherproof enclosure, electrostatically painted with paint inside and out.
3. Inspection doors located for access to control equipment and maintenance points.
4. Doors with continuous piano hinge (on units up to 350 KW) and key locking handles.
5. Expanded metal louvers for air intake and radiator.
6. Exhaust piping and silencer mounting sealed or flanged to insure a weatherproof installation.
7. Enclosure bolted to the generator set base.
8. Coolant and oil drain line extensions.
9. Two lifting eyes.
10. Sized to house the various control components herein specified. Mounting of components shall be accomplished in such a way that vibration effect is not an inherent problem.
11. Enclosure factory assembled/installed with generator and shipped as single unit.

B. Sound Attenuation:

1. Provide manufacturer’s Level 2 custom designed enclosure to provide additional sound attenuation.
2. Construction shall include additional features listed below:
   a. Fully enclosed exhaust system.
   b. Non-hygroscopic internal sound absorbing materials.
   c. Vertical radiator discharge, as noted on drawings, with discharge plenum bird screen and drain.
   d. All access and inspection doors fully gasketed.
3. Expanded metal louvers or hoods shall be located for cooling air inlet.

4. Sound attenuation shall limit the sound to 75 db(A), measured at 7 meter distance from the enclosure, within the 500Hz - 2000Hz frequency range. Kohler Sound enclosure, or equal

2.12 FLUIDS

A. All fluids of type and rating per engine manufacturer:

1. Engine oil.
2. Ethylene Glycol Coolant with corrosion inhibitors.

2.13 REMOTE EMERGENCY SHUTDOWN SWITCH

A. Description: Remote Emergency Shutdown Switch for shut down of generator from each ATS location.

1. Mounted adjacent to ATS within each building's electrical room.
2. With all required wiring, contacts, and interface for interrupting generator "run" circuit to cause immediate engine/generator shutdown.
3. Yellow lexan housing, surface mounting.
4. Maintained position, red pushbutton (Turn to reset). PUSH label on center of button.
5. Label as EMERGENCY GENERATOR SHUTOFF
6. Safety Technology International, Inc. #SS2-2-3-1, or equal.

2.14 STEEL SERVICE PLATFORM:

A. Provide a permanent, elevated service platform providing level access to all internal electrical and mechanical components for service, inspection, etc. Platform shall include permanent access stairs, railings, grating, supports, etc. Platform is not required on the radiator discharge end of the unit, unless the unit has serviceable equipment requiring access on that end.

B. Platform Construction and Features:

1. All steel, hardware, etc. shall be hot-dipped galvanized.
2. 54 inch wide service platform on sides and rear for accessing engine, alternator and internal components at level of the generator base rails. Exact extent of platform required shall be coordinated with generator manufacturer.
3. Steel grating walking surface with openings approximately 1" x 4".
4. Galvanized pipe safety railings on all elevated portions and on stairs.
5. Integrated access stairs from concrete pad level to service platform, complying with all building codes. Step surfaces shall be metal grating to match platform.
6. Steel support columns, with anchor bolts into generator's concrete pad.

2.15 CONCRETE EQUIPMENT PADS

A. As specified in Section "Common Work Results For Electrical."

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall

be delivered, installed, and operated. Make all allowances required for operation and maintenance of the equipment, per Codes and manufacturer.

3.2 INSTALLATION

A. General Requirements:

1. Install all equipment, as indicated.
2. Maintain minimum working space at live parts according to manufacturer's written instructions. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.

B. Rough-in:

1. Rough-in all underslab, below grade or below roof conduits, ducts, etc. prior to setting generator in place.
2. Coordinate exact stub-ups with proposed manufacturer's equipment installation drawings. All conduit shall be within the generator footprint.
3. Rough-in for all required circuits, controls, connections, etc. as required by proposed equipment, even if not explicitly indicated on plans.

C. Generator Installation On Exterior Concrete Equipment Pad:

1. Provide concrete foundation/equipment pad or housekeeping pad, per "Common Work Results For Electrical."
2. Construct concrete pads such that pad is a minimum of 6 inches above surrounding grade.
3. Coordinate conduit and fuel line stub-ups within generator frame and/or sub-base tank. No conduit is permitted outside of generator footprint.
4. Install generator so as to direct radiator airflow away from buildings, fences, walls, etc. Maintain clear airflow for a minimum of 10 LF, or as per manufacturer.
5. Install exhaust discharge parallel to ground in same direction as radiator discharge, or vertically upward, per drawings.
6. Ensure that all service access doors can be fully opened for access.
7. Maintain 42" minimum width around entire generator set for maintenance access.
8. Seal all penetrations for conduit, piping, exhaust, etc. to maintain weatherproof and/or sound attenuating properties.
9. Where generator is mounted atop a sub-base fuel tank, securely anchor the subbase tank to concrete pad.
10. Provide ribbed rubber sound pads between tank and concrete pad.
11. Mount generator assembly steel skid on a minimum of four spring type vibration isolators (where required by specifications) between skid and subbase fuel tank.
12. Adjust internal isolator leveling bolts for level installation.
13. Where gensets use internal vibration isolation, securely bolt the genset skid directly to the subbase tank.
14. Provide steel service platform, stairs and railings, as indicated.

D. Generator Fuel Line Connections:

1. Provide flexible stainless steel fuel lines in within first 18" between engine and all rigid fuel supply and/or return line(s), sub-base tanks, skid mounted day-tanks, or connections to rigid gas piping system.

E. Generator Sub-base Tank:

1. Securely attach sub-base tank to the concrete slab.
2. Provide all required fittings and connections, including, but not limited to, fuel supply and return, fuel level gauge, low fuel alarm, manual fill, vent, fuel in rupture tank alarm, etc.
3. Provide pressure relief vent caps for both the inner and outer tank.
4. Connect all alarms to the control panel and remote annunciator, where applicable.
5. Coordinate tank installation with electrical and plumbing connections.
6. Make provisions for electrical stub-up access after tank installation.
7. Vent all tank(s) per NFPA 30, “Flammable and Combustible Liquids Code.”

F. Fluids: Provide all fluids of type and rating per engine manufacturer, for initial starting, testing and final delivery to Owner including:

1. Engine oil.
2. Completely fill entire system including radiator and all piping with coolant and softened water in 50:50 ratio. Add corrosion inhibitor.
3. ASTM D975 Number 2 Diesel Fuel:
4. Provide as required for startup and testing.
5. Completely fill storage tanks, sub-base tank, and/or all daytanks prior to delivery to owner, after all startup and testing.

G. Electrical Accessories:

1. Provide local disconnecting means for all generator accessories for servicing, to comply with NEC:
   a. Battery Chargers - provide toggle switch.
   b. Jacket Heaters - provide non-fused safety switch.

H. Starting Batteries:

1. Fill dry battery cells with distilled water per manufacturer’s instructions.
2. Provide hold-downs for each battery cell to prevent movement.
3. Apply spray-on corrosion inhibitor with red dye to all battery terminals.

I. Remote Equipment: Install all remote equipment, as specified, indicated on contract drawings, or required for proper operation of generator system. Provide all raceways, wiring, connections, testing of remote equipment:

1. Remote Monitoring Panels.
2. Emergency Generator Stop Buttons.
3. Connections to sensors and other equipment displayed and/or monitored by the generator control system and status panel.
   a. Fuel leak detection sensors.
   b. High/low fuel level sensors.
   c. Daytank alarms.
   d. Battery charger failure.
4. Connections to automatic transfer switch(es) connected to the generator control system.
   a. Engine start/stop controls.

3.3 CONSTRUCTION

A. Interface with Other Work:

1. Provide connections between generator and other work of this contract:
   a. Auto transfer switch(es).
   b. Panelboards, switchboards, etc.
   c. Fire alarm system.

B. Sequences of Operation: Where multiple automatic transfer switches are coupled to a single generator, the starting control system shall be such that Engine Start contacts at any transfer switch will start the engine. Engines shall not shut down until all associated transfer switches have transferred back to normal source and all cool-down time delays have expired.

3.4 GROUNDING & BONDING

A. Connections: Ground generators, frame and enclosures per NEC Article 250, “Grounding” and as specified in Section “Grounding & Bonding for Electrical Systems.”

B. Ground generator system as follows:

1. Connect alternator equipment ground lug to generator frame and housing.
2. Provide grounding electrode conductor to bond generator ground bus to the building ground system through the ATS ground lug.
3. Driven ground rod at the generator location for grounding frame and housing.
4. For rooftop units, bond generator steel skid frame to the structural steel on roof via #4/0AWG copper conductor and exothermic welds.
5. All sizes shall be as per NEC or as indicated on drawings, whichever is larger.

C. Provide a separately derived system:

1. Ground the generator neutral bus to the ground lug on the generator frame.
2. The size of the neutral grounding conductor (jumper) shall equal the size of the neutral conductor indicated on the plans on the load side of the circuit breaker.

3.5 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

3.6 FIELD QUALITY CONTROL

A. Independent Testing Agency: Provide services of an independent electrical testing agency, according to the requirements of Section "Quality Control” to perform tests on generator installations.

B. Test Objectives: To ensure generator installation complies with Contract Documents, is operational within industry and manufacturer's tolerances, is adjusted to specific project parameters, and is suitable for energizing.

C. Site Tests:

1. Schedule tests and provide notification at least one week in advance of test commencement.
2. Pre-Startup Testing: After completing system installation, perform the following

preparations for tests:
a. Make insulation-resistance tests for generator, output breaker(s).
b. Make continuity tests of windings and remote alarm circuits.
c. Verify(measure) frame and equipment ground resistance.
d. Verify (measure) alternator neutral bonding to, or isolation from ground, as applicable.
e. Check torque on cable terminations.
f. Provide a set of Contract Drawings to the testing agency.
g. Provide manufacturer's installation and testing instructions to the testing agency.
h. Provide complete shop drawing data on all equipment.

3. Start-Up Services:
a. The complete installation shall be initially started and checked for operational compliance by factory trained manufacturer's representative(s).
b. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration, and to ensure removal of temporary shipping bracing. Do not proceed with tests until deficiencies are corrected.
c. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, where not available, those of Standards 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors.”
d. All settings, as specified in this section, shall be properly set and verified by start-up personnel.
e. Provide a written start-up and testing checklist, which verifies all settings and features are properly set and functioning. Written report shall indicate final setting of all adjustable features.

4. Generator Tests: After installing generator, perform the following tests, at a minimum:
a. Phase rotation. Matched to load requirements.
b. All protective and shutdown features tested.
c. Complete integrated test of generator and automatic transfer switch and control.
d. Specified pickup, dropout, transfer, retransfer, engine start and cool down, and exercise timer settings.
e. Operation of transfer and retransfer operation, including failure of emergency source.
f. Operation of auxiliary contacts and devices.
g. Operation of all gauges, displays and control equipment.
h. Ground-Fault Systems: Perform inspections and tests stated in NETA ATS, Section 7.14.

D. Remove and replace malfunctioning components with new, and retest.

E. Test Failures: Compare test results with specified performance or manufacturer's data. Correct deficiencies identified by tests and retest.

F. Load Testing:

1. Schedule and perform a post-installation load test to demonstrate the load capacity of the unit. Installer shall be present during the start-up and testing. Notify Owner and Architect at least one week in advance of start up/test date.
2. A resistive load bank shall be used to test the generator.

a. Load generator to nameplate rating.
b. Maintain records for duration of test. Record:
c. Time of day.
d. Ambient air temperature
e. Coolant temperature.
f. Cranking time to start.
g. Output voltage, frequency, current.
h. Oil pressure.
i. Battery charger rate at 5 minute intervals for the first 15 minutes and at 15 minute intervals thereafter.
j. Load test shall be run as follows, recording load changes and the result on voltage and frequency.
k. 25% rated load for 20 minutes
l. 50% rated load for 20 minutes
m. 75% rated load for 20 minutes
n. 100% rated load for 3 hours

3. Following running load test, allow generator to run unloaded for a cool down period of 5 minutes.
4. After shutdown and another 5 minute period (not running), apply full rated load (nameplate KW). Apply load in one increment of 100% full load pick-up immediately upon reaching rated RPM. Test shall be run at full load for 30 minutes. Allow all proper cool down periods.

3.7 IDENTIFICATION

A. Provide permanent warning signs on generator housings and on fenced yards containing generators and associated equipment. Warning signs shall be as specified in section “Common Work Results for Electrical”.

B. Provide Red identification plate(s) with white engraved letters on the main service equipment to identify the type and location of emergency generator, per NEC articles 700, 701, 702, as applicable.

3.8 ADJUSTING

A. General:

1. Set all field adjustable parameters to those as specified.

3.9 CLEANING

A. Inspect interior and exterior of installed generators and enclosures. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish.

3.10 DEMONSTRATION

A. Training: Arrange and pay for the services of a factory-authorized service representative to demonstrate generator and accessories and train Owner's staff. Include a minimum of 8 hours of training in operation and maintenance. Provide both classroom training and hands-on equipment operation covering the following:

1. Safety precautions.
2. Features and construction of project equipment and accessories.

3. Routine inspection, test and maintenance procedures.
4. Routine cleaning.
5. Changing of filters, fluids, etc.
6. Features, operation, and maintenance of unit and protective devices.
7. Interpretation of readings of indicating and alarm devices.
8. Coordination with transfer switch(es).
9. Ground fault protection systems.

B. Schedule training with at least 7 days' advance notice.

3.11 COMMISSIONING

A. This project includes Commissioning of selected systems and components. Provide for commissioning of the generator system(s), as required per Section “Commissioning of Electrical Systems”, and the Commissioning Plan.

END OF SECTION

SECTION 26 36 00

TRANSFER SWITCHES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Automatic transfer switches.

B. Related Sections:

1. Section “Common Work Results for Electrical” for concrete pads, labeling, and other general requirements.
2. Section “Grounding & Bonding for Electrical Systems” for grounding and bonding requirements.
3. Section “Low Voltage Power Conductors and Cables” for conductors and attachments.
4. Section “Raceways and Boxes for Electrical Systems” for conduit and raceway connections.
5. Section “Packaged Generator Assemblies” for coordination with generators for interface and control requirements, and grounding/bonding of alternator neutrals.
6. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements.

C. Submittal Requirements of this section:

1. Automatic transfer switches.
2. Remote shutoff switches.

D. Descriptive Data:

1. Clearly indicate or state options, etc.:
   a. Manufacturer/catlogue number.
   b. Manufacturer’s options.
   c. Accessories.
2. Information on all adjustable features including adjustment range and manufacturers’ settings.
3. Manufacturer's specifications, data sheets.
4. Catalog cuts.
5. Dimensional drawings.
6. Installation Instructions.
7. Wiring & connection diagrams. Indicate point of connections with other equipment or systems.
8. Capacity ratings.
9. Clearly indicate the exact size or rating proposed.

E. Product Test Reports:

1. Prototype test reports for proposed switches.
2. Certified copies of manufacturer's design and routine factory tests required by the referenced standards.

F. Closeout Submittals: Submit in accordance with the General Conditions and Division 10 requirements, Section “Common Work Results For Electrical”, and as follows:

1. All post-installation inspection checklists.
2. Installer’s pre-startup checklist.
3. Preventative maintenance and testing schedule for each unit.

1.3 REFERENCES

A. IEEE:

1.	IEEE 241	IEEE Recommended Practice for Electric Power Systems in Commercial Buildings
2.	IEEE 446	IEEE Recommended Practice for Emergency and Standby Power Systems for Industrial and Commercial Applications

B. National Electrical Code (NEC):

1.	NEC 700	Emergency Systems
2.	NEC 701	Legally Required Standby Systems
3.	NEC 702	Optional Standby Systems

C. National Fire Protection Association (NFPA):

1.	NFPA 70	National Electrical Code
2.	NFPA 99	Essential Electrical Systems for Health Care Facilities
3.	NFPA 110	Emergency And Standby Power Systems

D. Underwriters Laboratory (UL):

1.	UL 508	Industrial Control Equipment
2.	UL 1008	Standard for Transfer Switch Equipment, 7th Edition (or latest)

1.4 SUBMITTALS

A. Submittal Requirements of this section:

1. Automatic Transfer Switches.

B. Product data: Include dimensions, construction, materials, performance data, etc.

C. Provide submittal data for each product type.

1. To verify specifications have been met/exceeded.
2. Independent laboratory test data where requested.
3. Clearly indicate or state all options, etc.:

D. Submit the following for each transfer switch unit:

1. Manufacturer/cat. number.
2. Listed and labeled per UL 1008.
3. System voltage & configuration.
4. Withstand and Close Ratings.
5. Indicate all options and/or accessories.
6. Indicate field adjustable settings, setpoint ranges, and factory setpoints.
7. Bus materials and ratings.
8. 1-line diagram showing all components, connections, accessories, etc.
9. Additional information to show compliance with specifications or drawings.

E. Product Test Reports: Certified copies of manufacturer's design and routine factory tests required by the referenced standards.

F. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Common Work Results For Electrical, and as follows:

1. All post-installation inspection checklists.
2. Installer’s pre-startup checklist.
3. Final setpoint of all adjustable parameters.
4. Post installation load test results.
5. Preventative maintenance schedule for each unit.

1.5 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Manufacturer’s Requirements:

1. Coordinate the components of the system and their arrangements electrically and mechanically.
2. Manufacturer shall be experienced in manufacturing equipment of the types and capacities indicated that have a record of successful in-service performance for a minimum of 10 years.
3. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility. Service shall be available on a 24-hour basis.
4. Start up services and post installation tests, as specified.
5. Preventative Maintenance program as specified.

C. Installer Qualifications:

1. Has installed a minimum of five (5) switches of similar size and conditions.
2. Has installed a minimum of three (3) switches manufactured by the proposed

manufacturer.

D. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	ASTM	American Society for Testing and Materials
4.	IEEE	Institute of Electrical and Electronics Engineers
5.	IEEE C2	National Electrical Safety Code
6.	NEC	National Electrical Code
7.	NECA	National Electrical Contractor's Association "Standards of Installation".
8.	NEMA	National Equipment Manufacturers Association
9.	NESC	National Electrical Safety Code
10.	NETA	National Electrical Testing Association
11.	NFPA	National Fire Protection Association
12.	UL	Underwriter's Laboratories

1.6 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of equipment to site.
2. Provide for rigging needed for unloading and setting large switches into final position.

B. Storage and Protection:

1. Store in covered building or offsite to prevent exposure to weather, etc. until building is protected from the elements.
2. Apply temporary heat according to manufacturer's recommendations within enclosures of large each switches, throughout periods during which equipment is not energized and is not under normal control of temperature and humidity.

1.7 SEQUENCING

A. General Sequencing:

1. Coordinate switch installation with exterior and/or interior construction.
2. Provide for sub-grade or subslab roughins.
3. Coordinate all power and control conduit locations, roughins and destinations with switch location.

1.8 WARRANTY

A. Special Warranty: Extended product warranty over and above that required by General Conditions of this contract.

1. Covers complete automatic transfer system:
   a. Auto-transfer switches.
   b. Controls.
   c. Accessories.
   d. Remote annunciation devices.
2. Warranty shall be by the manufacturer or authorized representative.

3. Warranty period of five (5) years or 1500 operating hours, whichever occurs first, from initial start-up.
4. Warranty includes all parts, labor, and travel expenses, with no deductibles.
5. Installer shall complete and file all necessary documents to assure fulfillment of warranty requirements.
6. Deliver warranty documents to Owner in O & M manuals.

1.9 SYSTEM STARTUP

A. Manufacturer's Services: Provide services of a factory-authorized service representative to supervise the field connections with normal and emergency sources, associated components and accessories, and the pretesting and adjustment of all settings, components and accessories.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Available Manufacturers: Subject to compliance with requirements, provide a system by the named “Basis of Design” manufacturer, or a comparable product of one of the other following named manufacturers:

B. Automatic Transfer Switch sets shall be manufactured by one of the following:

1. Kohler (basis of design)
2. Cummins
3. Caterpillar

2.2 AUTOMATIC TRANSFER SWITCHES

A. General Construction:

1. NEMA 1 enclosure, key lockable.
2. Microprocessor control panel.
3. Voltage and Ampere ratings as indicated.
4. 4-pole switch with switched neutral for use in a separately derived system and on Ground Fault Protection equipped systems.
5. Listed per UL 1008. All accessories for the transfer switch (and/or control panel) shall be UL recognized.
6. 100% continuous current rated.
7. Comply with IEEE 241-1990 and IEEE 446-1995.
8. Comply with NEC Articles 700 and 701.
9. Withstand and Close (WCR) ratings to per UL1008.
10. DPDT Engine start contacts, 10 amps, 32 VDC.
11. Silver or tin plated copper bus, and UL Listed lugs.
12. Equipment ground lug.
13. Flash memory storage of all programmed settings.
14. Integral battery backup of real-time clock settings.

B. Contacts and Operation:

1. Spring-loaded, over-center main contacts, silver alloy plated.
2. Electrically operated (momentarily energized) from source being transferred to.
3. Single linear motor operator. Capacitors, fuses, or thermal protection in the main

operator control circuit are prohibited.

4. Mechanically held contacts.
5. Mechanical and electrical interlocks to prevent paralleling sources.
6. Contact pressure shall be maintained and shall be unaffected by momentary outages.
7. All stationary and moveable contacts shall be replaceable without removing power conductors, lugs or bus bars.
8. Switches rated ≥ 800 amps shall have segmented, blow-on construction for high withstand and close-on capability and protected by separate arcing contacts.
9. Use of molded case circuit breakers or contactors is not acceptable.

C. Adjustable Settings:

	Range	Setting
1. Under-Voltage Sensing (3-phase normal, 1-phase emergency):		
Pickup (% of nominal):	85%-100%	95%
Dropout (% of pickup):	70%- 98%	95%
Dropout Time Delay:	0.1-1.0 sec	0.5 sec
2. Over-Voltage Sensing (3-phase normal, 1-phase emergency):		
Pickup (% of nominal):	105%-135%	115%
Dropout (% of pickup):	95%- 99%	95%
Dropout Time Delay:	0.5-120 sec	30 sec
3. Over/Under Frequency sensing:		
Pickup (% of nominal):	+5 - +20%	+5%
Dropout: (% beyond pickup):	+1%	+1%
Dropout Time Delay:	0.1-15 sec	5

D. Accessories:

1. LED Status pilot lights.
   a. Green = normal source available.
   b. Red = emergency source available.
   c. Green = connected to normal source.
   d. Red = connected to emergency source
2. Momentary test switch to simulate normal source failure.
3. Control panel disconnect plug.
4. In-Phase monitor:
   a. Transfer/retransfer between live sources only when the two sources are approaching synchronism and the two sources are within 15 electrical degrees maximum.
   b. Function over a frequency difference range of up to ± 2.0 Hz.
   c. Maximum operating transfer time of 1/6 second.
   d. If the voltage of the load carrying source drops below 75%, the in-phase function shall be automatically bypassed.
   e. Monitor shall not require interconnection with the generator controls, or active control of the governor.
5. Engine Start Delay (0 – 15 sec, set at 3 sec).
6. Retransfer Emergency to Normal Time Delay (0-30 min, set at 5 min).
7. Engine cool down timer, no load (0-30 min, set at 5 min).
8. Transfer to Emergency Time Delay (0- 120 sec, set at 1 sec).
9. Auxiliary contacts:
   a. 1 closed for normal.
   b. 1 closed for emergency.
   c. Rated 10 amps, 250VAC, 60 Hz.

d. Provide in addition to any specific function contacts specified elsewhere.
e. All contacts shall be factory wired to a terminal strip.

10. Elevator –pre signal relay (0-60 seconds) to prevent interruption of power during elevator operation.

E. Exercise timer.

1. Solid state, with battery reserve power supply.
2. With Load/No-Load selector switch (set for No-Load).
3. Adjustable for: Time of Day, Day of week, Week of month, and test duration.
4. Set for 30 minutes every 7 days, unless instructed otherwise.

F. All delays and functions shall be field adjustable and shall maintain accuracy within □1% of set values of frequency, □2% for voltages, and □10% on time delays. Control panels for each switch shall be solid state and shall include an isolating disconnect plug. Controls switches and related devices shall operate over a temperature range of -20°C to +50°C.

G. Withstand and Closing Ratings (WCR):

1. The ATS shall be UL listed in accordance with UL 1008 and be labeled in accordance with that standard's 1½ and 3 cycle, long-time ratings. ATSs which are not tested and labeled with 1½ and 3 cycle (any breaker) ratings and have series, or specific breaker ratings only, are not acceptable.
2. WCR's shall be rated to close on and withstand the available RMS symmetrical short circuit current at the ATS terminals with the type of overcurrent protection shown on the plans, and those proposed by the contractor for this project.

		WCR (Amps) w/Max MCCB Rating	
ATS Rating	Voltage	Specific MCCB	Amps @ WCR
150-260 A	480 V	30,000	400
1200 A	480 V	85,000	1600

3-Cycle Ratings:

		WCR (Amps) w/Max MCCB Rating	
ATS Rating	Volt (Max)	Specific MCCB	Amps @ WCR
300-600 A	600 V	25,000	1200
800-1000 A	600 V	35,000	1400
1200 A(Open)	480 V	50,000	1600

H. Manual Operation: ATS shall have permanently attached, insulated handle for manual operation. Handles shall manually operate the same contacts used for automatic operation.

I. Open Transition Transfer Switches: Kohler KSS or KCS Series, Cummins OPTC, Generac GTS Series, or comparable product by a previously named manufacturer.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for operation and maintenance of the equipment, per Codes and manufacturer.

3.2 INSTALLATION

A. General Requirements:

1. Install all equipment, as indicated.
2. Maintain minimum working space at live parts according to manufacturer's written instructions and NEC.
3. Provide all required access space per NEC for controls, fuses and items requiring maintenance access.
4. Maintain isolation of load, normal and emergency conductors, except within the switch enclosure(s).
5. Install freestanding equipment on concrete housekeeping pads as per Section "Common Work Results For Electrical", and as indicated.
6. On switches on exterior, below-grade walls, maintain a minimum of 1 inch of clearance between wall and rear of switch enclosure.

B. Rough-in:

1. Rough-in all underslab or below grade conduits, ducts, etc. prior to setting switches or other equipment in place.
2. Coordinate exact stubups with proposed manufacturer's equipment installation drawings and the work of other trades in this contract.
3. Roughin for all required circuits, controls, connections, etc. as required by proposed equipment, even if not explicitly indicated on plans.
4. Make minor adjustments to locations so as to maintain required front working clearances and clearance above and below per NEC.

C. Remote Equipment: Install all remote equipment, as specified, indicated on contract drawings, or required for proper operation of transfer switch system. Provide all raceways, wiring, connections, testing of remote equipment:
1. Connections to engine/generator(s) for engine start/stop controls.

3.3 CONSTRUCTION

A. Interface with Other Work:

1. Provide connections between transfer switch(es) and other work of this contract:
   a. Building electrical system.
   b. Emergency generator.

B. Sequences of Operation: Where multiple automatic transfer switches are coupled to a single generator, the starting control system shall be such that Engine Start contacts at any transfer switch will start the engine. Engines shall not shut down until all associated transfer switches have transferred back to normal source and all cool-down time delays have expired.

C. Grounding: Ground ATS cabinets, all metallic service and distribution equipment frames and enclosures per NEC and as specified in Section "Grounding & Bonding For Electrical Systems". Ground transfer switch system as follows:

1. Connect transfer switch ground lug to enclosure and to normal, emergency and load circuit equipment grounding conductors.
2. All sizes shall be as per NEC or as indicated on drawings, whichever is larger.

3. Maintain isolation of all grounded equipment conductors (neutrals) within the transfer switch enclosure from ground.

D. Connections: Tighten joints, connectors and terminals, including screws and bolts, in accordance with manufacturer's published torque tightening values for connectors and bolts. Where manufacturer's torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, "Wire Connectors and Soldering Lugs for Use with Copper Conductors" and 486B."

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

3.5 FIELD QUALITY CONTROL

A. General:

1. Perform inspections and testing to ensure installation complies with Contract Documents, is operational within industry and manufacturer's tolerances, is adjusted to specific project parameters, and is suitable for energizing.
2. Test all system functions, operations, and protective features according to manufacturer's written instructions.
3. Acceptance Testing: Provide for acceptance testing of electrical equipment specified in this section, as follows, and as required in Section "Common Work Results For Electrical."
4. Schedule tests and provide notification at least one week in advance of test commencement.
5. Provide a set of Contract Drawings to the testing agency.
6. Provide manufacturer's installation and testing instructions to the testing agency.
7. Provide complete shop drawing data on all equipment.
8. Provide written results of all tests. Include date, equipment ID, name of testing company and technician, and results of each individual test. Provide pass/fail indication for each test.

B. Pre-Testing Inspections:

1. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration, and to ensure removal of temporary shipping bracing. Do not proceed with tests until deficiencies are corrected.
2. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, where not available, those of UL Standards 486A and 486B.
3. Inspect to confirm proper isolation of neutrals to ground.
4. All settings, as specified in this section, shall be properly set and verified prior to equipment testing.

C. Acceptance Testing:

1. Transfer Switch Tests: After installing equipment, perform the following tests, at a minimum:
   a. Perform inspections and tests stated in NETA ATS, "Acceptance Testing Specifications for Electrical Power Distribution Equipment and Systems,"

b. Tests shall be performed with switch in both normal and emergency positions.
c. Set & calibrate all settings per specifications.
d. Perform insulation-resistance tests for all buses and contactor assemblies.
e. Perform insulation resistance tests, phase-phase and phase-ground.
f. Perform continuity tests of all grounds, and bonded components.
g. Perform overpotential tests per ANSI 37.20c.
h. Phase rotation. Matched to load requirements.
i. All protective and shutdown features tested.
j. Specified pickup, dropout, transfer, retransfer, engine start and cool down, and exercise timer settings.
k. Operation of transfer and retransfer operation, including failure of emergency source.
l. Operation of all warning and safety shutdown features, annunciation panels and lights, by simulating failure of each component.
m. Operation of isolation bypass switch, where so equipped, in normal and emergency source modes.
n. Operation of auxiliary contacts and devices.
o. Operation of all gauges, pilot lights, test switches, and other control equipment.

D. Test Failures: Compare test results with specified performance or manufacturer's data. Correct deficiencies identified by tests and retest. Remove and replace malfunctioning components with new, and retest.

E. Test Labeling: Upon satisfactory completion of tests for each transformer, attach a dated and signed "Satisfactory Test" label to the unit.

F. Manufacturer’s Field Services:

1. Provide on-site, post installation by factory-trained manufacturer's representative(s).
2. Assist installer and verify that all adjustable parameters are set, as specified in this section.
3. Provide a written start-up and testing checklist, which verifies all settings and features are properly set and functioning.

3.6 ADJUSTING

A. General:

1. Set all adjustable parameters to those as specified.
2. Provide written report, included in O&M Manuals, to indicate final setting of all adjustable features.

3.7 IDENTIFICATION

A. Identify all distribution system components and wiring in accordance with Section “Common Work Results For Electrical”.

1. Provide engraved nameplate for each transfer switch, which identifies the equipment per project nomenclature, and load served. Label as follows:

ATS-1

3.8 CLEANING

A. Inspect interior and exterior of installed switches. Remove paint splatters and other spots, dirt, and debris. Touch up scratches and mars of finish to match original finish.

3.9 DEMONSTRATION

A. Training: Arrange and pay for the services of a factory-authorized service representative to demonstrate transfer switch operation and accessories to Owner's staff. Include discussion on all conditions of operation and maintenance. Provide hands-on equipment operation using the actual installed switch(es), covering the following:

1. Safety precautions.
2. Features and construction of project equipment and accessories.
3. Routine inspection, test and maintenance procedures.
4. Routine cleaning.
5. Adjustable parameters, how and why to adjust.
6. Features, operation, and maintenance of unit and protective devices.
7. Manual switch operation.
8. Setting of exercise timer and load/no load selection.
9. Use of test switch to test switch and generator operation.
10. Coordination with generators.

B. Schedule training with at least 7 days' advance notice, and in conjunction with generator discussions, where applicable.

3.10 COMMISSIONING

A. This project includes Commissioning of selected systems and components. Provide for commissioning of the transfer switch(es), as required per Section “Commissioning of Electrical Systems”, and the Commissioning Plan.

END OF SECTION

SECTION 26 41 13

LIGHTNING PROTECTION FOR STRUCTURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Provide a complete lightning protection system for the building(s) and/or structure(s) included in this project. The system(s) shall comply with the latest specifications and standards of NFPA 780, “Standard for the Installation of Lightning Protection Systems,” 2017.

B. Section Includes:

1. System design.
2. Air terminals.
3. Roof conductors.
4. Down conductors.
5. Counterpoise.
6. Ground connections.
7. Ground rods.
8. Connections, clamps and all misc. hardware.

C. Related Sections:

1. Section “Common Work Results For Electrical.”
2. Section “Grounding & Bonding For Electrical Systems” for grounding, bonding and interconnection of equipment to building and service grounds.

D. Permits and Fees:

1. Apply for, make payment, secure and obtain all necessary and required permits relative to work of this section.

1.3 SYSTEM DESCRIPTION

A. Design Requirements:

1. System design shall be by certified technician or registered Professional Engineer qualified in Lightning Protection System design.
2. Component sizing and selection for a complete system.
3. Design shall appear as a part of the building or structure, with conductors concealed within columns, walls and roof construction, where possible and practicable.
4. Select locations for equipment, which shall minimize need to disturb for future building maintenance and repair of roofing.

B. Performance Requirements: This is a performance specification. It is the full responsibility of the installer to ensure that the design and installation conforms to all applicable standards and Codes.

C. Structures less than 75 feet in height shall utilize Class 1 materials. Structures equal or greater than 75 feet in height shall utilize Class 2 materials.

D. Provide UL Master Label system, as specified.

1.4 SUBMITTALS

A. General: Submit each item in this Section according to the conditions of the contract and Division 01 Specification Sections.

B. Submittals shall also comply with the submittal procedures and requirements of electrical Specification Sections.

A. Submittal Requirements of this section:

1. Roof plan showing system components.
2. Air terminals.
3. Roof, down, and counterpoise conductors.
4. Couplings, bonding plates and connectors.
5. Ground and bonding connections.
6. Adhesive and mechanical fasteners.
7. Roof penetrations and sealants.
8. Steel grounding connectors.
9. All other miscellaneous hardware.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Clearly indicate the exact size or rating proposed.
6. To verify specifications have been met/exceeded.
7. Indication of UL Listings.
8. Clearly indicate or state options, etc.:
    a. Manufacturer/catalogue number.
    b. Construction data, materials, as applicable.
    c. Label each conductor or cable type, and its proposed application or location.
    d. Identify each component with a cross reference to the drawings.
    e. Drawings and installation instructions.
    f. Details to demonstrate that the system has been coordinated and will function as one unit.

C. System Design Drawings:

1. Identify each component used in the system.
2. Indicate all building penetrations, and method proposed at each location.
3. Indicate attaching methods for all components.
4. Indicate proposed layout, including relationship to other parts of work.

5. Show proposed protection for all building accessories, roof top equipment, etc.
6. Drawings shall be stamped and signed by a licensed lightning protection engineer.

D. Closeout Submittals: Submit in accordance with the General Conditions and Division 01requirements, Section "Common Work Results For Electrical", and as follows:

1. Post installation ground resistance test results, per Section "Grounding & Bonding for Electrical Systems."

1.5 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman's Electronic Document Release Form. Refer to Section "Common Work Results for Electrical" for additional information.

1.6 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms "Listed and Labeled": As defined in the National Electrical Code, Article 100 (NEC).
2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled, or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Manufacturer's Requirements:

1. Engaged in manufacturing of lightning protection systems and equipment at least 10 years.
2. Provide local maintenance and service with location less than 100 miles from project site.
3. Provide technical support to installer.
4. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility.
5. Materials shall be manufactured by an accredited member of the Lightning Protection Institute, in compliance with UL material Code 96.

C. Single-Source Responsibility:

1. The complete installation and performance of the installed system, including all accessories shall be the sole responsibility of the lightning protection system installer. It is the installer's responsibility to ensure that all field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.
2. Coordinate the components of the system and their arrangements electrically and mechanically.

D. Installer Qualifications:

1. Has installed a minimum of fifteen (15) lightning protection systems of similar

size and conditions within the local area.
2. Has installed a minimum of five (5) UL Master Label systems, with successful UL Listing upon completion.
3. Factory-authorized installer to perform work of this Section.
4. Provide references upon request:
   a. Names of six (6) similar projects in size and scope.
   b. Contact person and phone number for each project.

E. Installation Quality: In accordance with the following Codes and Standards.

1. NEC National Electrical Code
2. NETA National Electrical Testing Association
3. NFPA National Fire Protection Association
4. NLPI National Lightning Protection Institute
5. UL Underwriters Laboratories

F. Certification of all system components:

1. Catalogued by the system manufacturer.
2. UL Listing of each component individually.

1.7 DELIVERY, STORAGE AND HANDLING

A. Storage and Protection:

1. Store all materials under cover, in trailers, buildings, etc.
2. Protect all materials from physical damage and exposure to weather, prior to installation.

1.8 PROJECT CONDITIONS

A. The lightning protection system and components shall be installed on the structure and all rooftop components, equipment and appurtenances. Refer to all other project specification sections and drawings for coordination with roof, structural and mechanical systems.

1.9 SEQUENCING

A. General Sequencing:

1. Coordinate lightning protection system installation with roof, steel, exterior and/or interior construction.
2. Coordinate lightning protection system installation with mechanical system components on roof, grade, etc. Do not install lightning protection components prior to completion of mechanical equipment requiring same.
3. Coordinate lightning protection system installation with solar system components on roof. Do not install lightning protection components prior to completion of solar system.
4. Provide for roof penetrations.
5. Provide for connections to steel, where applicable, prior to wall close-in or ceiling installations.
6. Provide for sub-grade roughins and stubouts.
7. Coordinate trenching and installation of sub-grade components to avoid damage. Do not install ground rods or counterpoise, prior to establishment of final grade

elevations.

1.10 COORDINATION

A. Installer shall examine the structure and all items of construction affecting his work.

B. Coordinate installation with other trades, especially roofing and structural steel.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide a system by one of the following named manufacturers:

1. Erico-A/C, Inc.
2. Heary Brothers.
3. East Coast Lightning Equipment, Inc.
4. Harger Lightning and Grounding.
5. Dillon Lightning Protection Systems, Inc.

2.2 MATERIALS

A. System components shall be of copper or aluminum complying with the requirements of LPI, UL and NFPA for type and height of building.

2.3 CONDUCTORS

A. In compliance with NFPA 780, “Standard for the Installation of Lightning Protection Systems,” and UL 96, “Lightning Protection Components” as applicable for materials specified.

B. Main Copper Conductors:

1. Smooth weave construction.
2. Minimum 375 lbs/1000 LF.
3. Minimum #14 AWG individual conductor strands.
4. Minimum total area of conductivity: 115 kcmil.

C. Secondary Copper Conductors:

1. Concentric strand or solid construction.
2. Minimum #4 AWG conductor.
3. Minimum total area of conductivity: 41 kcmil.

D. Copper Counterpoise Conductor:

1. Concentric stranded construction.
2. Bare copper, soft temper per ASTM B8, “Standard Specification for Concentric-Lay-Stranded Copper Conductors, Hard, Medium-Hard, or Soft."
3. Minimum #4/0 AWG.

2.4 AIR TERMINALS

A. Construction:

1. In compliance with NFPA 780, “Lightning Protection Code” and UL 96, “Lightning Protection Components.”
2. Minimum 18" in length.
3. Minimum 1/2" diameter.
4. Solid aluminum or nickel-plated copper, subject to installation requirements.
5. Threaded base.
6. Project a minimum of 10" above the protected object.
7. Supported by suitable, UL Listed braces with guides >50% the height of the terminal.

B. Safety tips for rods posing impalement risk.

1. Blunt safety tip to prevent injury to personnel.

C. Terminal Bases:

1. Cast bronze for copper air terminals.
2. Cast aluminum for aluminum air terminals.
3. Positive bolt tension cable clamping.
4. Suitable for bolted, adhesive, or nailed attachment to surfaces, as required.

2.5 GROUND RODS

A. As specified in Section “Grounding & Bonding For Electrical Systems.”

2.6 CONNECTORS

A. Construction:

1. In compliance with NFPA 780, “Lightning Protection Code” and UL 96, “Lightning Protection Components,” class as applicable.
2. Positive bolt tension cable clamping.
3. Dual CU/AL rated connectors where joining copper and aluminum conductors.
4. Cast bronze for copper air terminals.
5. Cast aluminum for aluminum air terminals.

2.7 MISCELLANEOUS COMPONENTS

A. Other components required for a complete lightning protection system such as bonding plates, terminal supports, clip, fasteners, etc. shall conform to NFPA 780, “Lightning Protection Code” and UL 96, “Lightning Protection Components” for applicable classes.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for installation and maintenance of the equipment, per Codes and manufacturer.

3.2 INSTALLATION

A. General Requirements:

1. Install all equipment, as indicated and per manufacturer's written instructions.
2. Do not install equipment where location impedes access to other equipment or creates unsafe conditions. Install in suitable, alternate location.
3. Coordinate the installation of the lightning protection system with the work of other trades and contractors prior to laying out system or beginning work.
4. Install per requirements of NFPA 780, "Lightning Protection Code" and UL 96A, "Installation Requirements for Lightning Protection Systems."

B. Air Terminals:

1. Rigidly connect to structure.
2. Make electrically continuous with roof conductors by means of pressure connectors or crimped joints.
3. At ends of structures, set <24" from end of ridge or edges and corners of roof.
4. Maximum spacing along ridges or roof edges of 20 feet.
5. Minimum height above protected objects: 10 inches.
6. Prevent overturning by means of tripod or braces.
7. Attach to mechanical equipment or other flat surfaces via adhesive, approved by terminal manufacturer for the intended application.
8. Provide terminals with safety tips in all locations on flat roofs, low parapets, and other locations where personnel may become injured due to falls onto the air terminal.

C. Roof Conductors:

1. Connect directly to roof or ridge at intervals not to exceed 36."
2. Avoid creation of U or V pockets on roof surfaces that can trap water or debris.
3. Prevent sharp bends or turns.
4. Minimum bend radius of 8 inches.
5. A minimum of two current paths shall be formed from every air terminal.
6. Provide a downward or horizontal course.
7. All connections shall be electrically continuous.
8. Follow contours of flat roofs, ridges, parapets & edges.
9. Concealed conductors shall be fastened as required to maintain position and hold permanently in place.

D. Down Conductors:

1. Interconnect secondary conductors with grounded parts within the building.
2. Electrically continuous from air terminals and roof conductors to ground rods and counterpoise.
3. Conceal down conductors within the building, as practicable. Protect in rigid non-metallic raceway (Sched 40 PVC) where passing through walls, floors, etc. Where conduit shall be exposed in plenum spaces, or where PVC is not permitted by Codes, install in EMT conduit.
4. Provide multiple ground paths between protection system and ground.
5. Minimum of two down conductors located as widely separated as possible, at diagonally opposite corners. Provide additional down conductors on larger buildings and structures.
6. All roof and down conductor connections and splices shall be compression type.

E. Bonding of Metal Bodies:

1. All metal bodies or objects permanently affixed to the structure and subject to direct lightning strike shall be provided with two current paths to the lightning protection system via full sized conductors.
2. Bond all grounded metal bodies within the protection zone(s) if within the calculated bonding distance.
3. Bond ungrounded metal bodies to the lightning protection system, as required by calculations and Codes.

F. Roof Penetrations:

1. Where the system requires penetration of the roof, make such penetration utilizing manufacturer's recommended products, approved by the roofing system installer.

G. Ground Conductor Connections:

1. Provide ground connection for each down conductor.
2. Protect ground connections from mechanical damage.
3. In making ground connections, utilize permanently moist areas as applicable.

H. Grounding Electrode System:

1. Provide a minimum of 2 ground rods.
2. Ground rods shall be not less than 2, nor more than 10 feet from the foundation or structure.
3. Drive electrode into earth a minimum of 11 feet.
4. Install counterpoise around perimeter of the structure in a trench not less than 2 feet deep at a distance not less than 2 nor more than 10 feet from the structure.
5. Provide connections to counterpoise for each ground rod.
6. Bond all underground metal water pipes and other large metallic objects to the grounding counterpoise electrode system.
7. All underground connections between conductors, rods, etc. shall be exothermic weld type.
8. Interconnect lightning protection grounding electrode system to building electrical system ground.
9. Comply with NEC Article 250, "Grounding."

3.3 CONSTRUCTION

A. Corrosion Protection:

1. Avoid combination of materials, which form electrolytic couple of dissimilar metal.
2. Avoid connections in which corrosion is accelerated with moisture, unless moisture is permanently excluded from the union of such metals.
3. Use protective coatings where required.
4. Do not install copper components on aluminum roofing, flashing or near aluminum components where moisture can run off copper onto aluminum trim or surfaces.
5. Do not embed aluminum components in concrete or masonry.
6. Aluminum components shall not be in contact with soil.

B. Mechanical Protection:

1. Oversize conductors to compensate for physical hazard or protect with nonmagnetic molding or tubing.
2. Where metallic conduit is used, conductors shall be bonded to the conduit at upper and lower ends.

C. Steel Frame Buildings:

1. Steel framework shall be made electrically continuous by bolting, riveting or welding frame, or as specified in another section.
2. Connect air terminals to steel framework at the ridge. Short runs of conductors shall be used to join air terminals to the metal framework so as to maintain proper terminal placement.
3. Connections to steel shall be bolted or exothermic weld.
4. Column to ground rod/counterpoise connections shall be made at the bottom of steel columns. At least half of steel columns shall have ground connections, spaced equally around perimeter, including the four corners.
5. Metal doors, windows, gutters, etc. shall be bonded to the steel of the structure.

D. Building Grounding Electrode System Connections:

1. Provide direct connection from the Lightning Protection system to the building's main grounding bus bar.
2. Bonding to building grounding electrode system, including bonds to building steel, footing (UFER) ground, water service framework shall be made via common bonding to the main grounding bus bar.
3. Bonding to building electrical and ancillary systems, including telecommunications, CATV, etc. shall be made via common bonding to the main grounding bus bar.
4. LPS connections to main grounding bus bar shall be made via hydraulic crimped lugs, and bolted connection to bus bar.

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

3.5 FIELD QUALITY CONTROL

A. Installation shall meet all the requirements of UL Master Label for such systems.

B. Site Tests:

1. Schedule tests and provide notification at least one week in advance of any test commencement.
2. Post-Installation Testing: After completing system installation, perform the following preparations for tests:
   a. Make ground resistance tests for system, per Section "Grounding & Bonding For Electrical Systems."
   b. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration. Correct all deficiencies are corrected.
   c. Inspect bolted electrical connections for tightness according to

manufacturer's published torque values or, where not available, those of UL Standards 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors” and 486B, “Wire Connectors for Use with Aluminum Conductors.” Provide a written inspection checklist, which verifies all components have been inspected and are satisfactory.

C. System Certification:

1. The Installer and Owner shall complete the UL application for inspection.
2. The Owner’s representative shall witness and sign for the concealed grounding portion of the system, prior to covering with earth.
3. Installer shall complete all required UL forms indicating completion and authorizing a UL representative inspection.

D. UL Inspection:

1. Installer shall replace, repair or otherwise correct any deficiencies noted by the UL inspector.
2. Installer shall post the UL issued Certificate to the UL website,
3. Installer shall deliver a hard copy of the UL Certificate to the Owner.
4. System shall not be considered complete until final approval is received from UL as a Master Label system and UL issues the Certificate.

END OF SECTION

SECTION 26 50 00

LIGHTING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Section Includes:

1. Lighting fixtures
2. LED Modules & Drivers
3. Photocells
4. Occupancy sensors
5. Digital Lighting Management System

B. Related Sections:

1. Section “Finishes” for coordination with mounting surfaces and materials.
2. Section “Common Work Results for Electrical” for labeling and other general requirements.
3. Section “Grounding & Bonding for Electrical Systems” for grounding and bonding requirements.
4. Section “Low Voltage Power Conductors and Cables” for 600V conductors.
5. Section “Raceways and Boxes for Electrical Systems” for conduit and raceway connections.
6. Section “Commissioning of Electrical Systems” for specific commissioning and functional performance testing requirements.

1.3 REFERENCES

A. ANSI

1. ANSI C78.377 Specifications for the Chromaticity of Solid State Lighting Products

1.4 SYSTEM DESCRIPTION

A. Performance Requirements: Performance of the lighting fixtures and controls is based on the specified and/or indicated products. It is the full responsibility of the installer to ensure that any differences in products do not deviate from the intended design or performance.

1.5 SUBMITTALS

A. Submittal Requirements of this section:

1. Individual lighting fixtures.
2. LED Modules/Drivers

3. Energy Star compliance for exit lights & selected fixtures
4. Occupancy sensors.
5. Digital lighting management system and components.
6. Lighting poles.
7. Certain fixtures have been selected based not only on performance, but on appearance, finish, shape, etc. Any substitutions shall be equal in performance and construction, as well as in appearance, as judged by the Owner or Architect. Where no equals are available, as determined by the Architect, submit the specified fixture.
8. Lighting control building layout
9. LEED Submittals: Comply with Section 018113
    a. SS Credit 6: Light Pollution Reduction
        1) For exterior luminaires, documentation indicating backlight, uplight, and glare ratings (BUG) rating.
    b. IN Credit 1: Reduced Mercury in Lamps
        1) Product data for all mercury-containing lamps, indicating mercury content and lamp life.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Wiring & connection diagrams.
6. Capacity ratings, performance curves.
7. Information required to indicate contract compliance.
8. Clearly indicate and/or mark options, etc.:
    a. Manufacturer/cat. number.
    b. Energy Star ratings.
    c. Design Light Consortium (DLC) compliance/listing.
    d. LED lamp input wattage, lumen output and color temperature (K).
    e. Coefficient of Utilization (C.U.) charts.
    f. Isofootcandle curves for exterior fixtures.
    g. Construction data, materials, lens type, reflector material, housing, as applicable.
    h. Warranty data.
    i. Color charts, where applicable.
    j. Fixture samples when requested.

C. Calculations:

1. Computer footcandle calculations, for any area when requested, and for the following areas:
    a. Parking Lots
    b. Corridors
    c. Offices
    d. Holding Cells
    e. Additional areas as requested
2. Interior Calculations, shall utilize the following parameters:
    a. 0.80 maintenance factor.
    b. 80/50/20 reflectances.
    c. Work plane – 30 inches AFF.
    d. Include racks or other solid obstacles, as shown.

3. Exterior Calculations, shall utilize the following parameters:
   a. 0.80 maintenance factor.
   b. Work plane – Finished grade.
4. Calculations, shall indicate the following information:
   a. Fc printout showing fc levels at 2 ft intervals, throughout illuminated areas (10 ft intervals for exterior calculations).
   b. Average, maximum and minimum fc levels.
   c. Ave/min and Ave/max ratios.
   d. Total quantity of fixtures.
   e. Total input watts for lighting system.

D. Wiring Diagrams:

1. Occupancy sensors and controls.
2. Digital lighting management systems.

E. Shop Drawings:

1. Digital lighting management systems.

F. Samples:

1. Provide fixture samples, when requested.
2. Sample shall be identical to the proposed fixture in color, lamp, physical size, etc.
3. Sample shall have a cord and plug, for connection to 120V, 20A wall receptacle.

G. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, Section “Submittals”, and as follows:

1. Control system programming, setup and user controls.

1.6 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman’s Electronic Document Release Form. Refer to Section “Common Work Results for Electrical” for additional information.

1.7 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100.
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled, or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Single-Source Responsibility

1. The complete performance of the assembled fixtures, mounts, poles, etc. including all accessories shall be the sole responsibility of the supplier. It is the

installer's responsibility to ensure that all factory and field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.

2. Ensure that the complete fixture assembly complies with all individual component specifications, including LED's, drivers, etc.
3. Pole mounted fixtures: The manufacturer shall be responsible for the proper fit and performance of the fixture and pole, including attachment hardware, support arms, etc.

C. Manufacturer/Vendor Requirements:

1. Fixture manufacturer(s) shall have a minimum 15-year record of fixture manufacturing and in-service products of similar construction in the North American market.
2. All fixtures shall be domestically manufactured. Off-shore manufactured/assembled, imported fixtures are NOT permitted.
3. Ballast manufacturers shall have a minimum of 15 years of producing electronic ballasts for the North American market. Manufacturers shall be certified to ISO 9001 Quality System Standards.
4. Furnish lighting fixtures indicated, complete with LED's, drivers and mounting and/or suspension hardware.
5. Furnish interior lighting fixtures with proper trim kits, framing kits, supports, etc.
6. Furnish exterior fixtures mounted on the building with required back boxes to match mounting surfaces. Also include all pole mounted fixtures with pole standards.
7. Drawing fixture schedule generally indicates required features and/or performance. Manufacturers' catalog numbers are noted for reference and may not include all suffixes and prefixes of required features. Provide fixtures with all the features of the base catalog number provided and all additional options indicated.
8. Verify that proposed controls, dimming and other components which are to interface with the fixtures, drivers, etc. are fully compatible with the fixture, ballast or driver manufacturers' written instructions.
9. LED source manufacturers shall provide testing in accordance with LM-80. Along with a valid method of projecting LM-80 test results to L50 & L70 lumen maintenance values based on recommended operating conditions.
10. LED fixture manufacturers shall perform their own of junction temperature, drive current and other relevant factors and base the fixtures L50 & L70 values on LM-80 extrapolations provided by the LED source manufacturer.
11. LED fixture manufacturers shall base published photometric data on test results from an independent NI ST – traceable testing lab using photometry in accordance with LM-79.

D. Product Coordination Responsibility

1. The contractor and equipment vendor(s) shall insure that all proposed fixtures are fully compatible and matched with the proposed switches, lighting controls, dimmers and related lighting control components.

E. Installer Qualifications:

1. Experienced in the installation and connection of all proposed fixture types, control components, and all other specified equipment.

F. Installation Quality: In accordance with recognized trade organizations and standards.

1.	ANSI	American National Standards Institute
2.	ASME	American Society of Mechanical Engineers
3.	ASTM	American Society for Testing and Materials
4.	IEEE	Institute of Electrical and Electronics Engineers
5.	NEC	National Electrical Code
6.	NECA	National Electrical Contractors' Association "Standards of Installation."
7.	NEMA	National Equipment Manufacturers Association
8.	NETA	National Electrical Testing Association
9.	NFPA	National Fire Protection Association
10.	UL	Underwriter's Laboratories

1.8 DELIVERY, STORAGE AND HANDLING

A. Packing, Shipping, Handling and Unloading:

1. Provide all transportation of unit(s) to site.
2. Provide for rigging needed for unloading poles/crossarm assemblies, and other large equipment, and setting into final position.

B. Storage and Protection:

1. Store all fixtures in original packaging, as recommended by manufacturer.
2. Store all fixtures in covered storage or building, out of the weather, until installation.
3. Protect from physical damage and deterioration from heat, moisture, etc.
4. Do not store electronic or sensitive components (i.e. occupancy sensors, control systems, etc.) in areas of high heat or humidity, which might create corrosion or other deterioration.
5. Store poles in horizontal position, on-grade with proper supports to prevent sagging and scratches.

1.9 PROJECT CONDITIONS

A. Inmate/Prisoner Detention Areas: Project includes work and equipment to be installed in detention environments. All materials and methods shall be suitable for such "Maximum Security" environment. This includes requirements for heavy duty equipment construction, tamperproof equipment and hardware and special construction tolerances/workmanship, as specified herein.

1. Detention facilities shall have "maximum security" correctional grade fixtures, unless indicated otherwise.

1.10 SEQUENCING

A. General Sequencing:

1. Coordinate layout and installation of fixtures with other installations.
2. Provide input to coordinated construction layout drawings to ensure fixtures are installed as designed. Revisions to locations and elevations from those indicated shall be made only after consulting the Engineer/Architect, as required to suit field conditions and as approved by the Owner.

3. Coordinate actual fixture depths and locations with piping, ductwork, cable trays, bulkheads, and other ceiling mounted equipment, etc. prior to rough-in.

1.11 WARRANTY

A. Special Warranty: Extended product warranty over and above that required by the Contract and General Conditions of this contract.

1. LED fixtures (complete assembly): 5 years
2. Vandal-resistant fixture housing/lenses: Lifetime
3. Exterior pole finishes: 5 years
4. Occupancy sensors & switches: 5 years
5. Digital and low voltage switches: 5 years
6. Digital lighting management system: 5 years

1.12 SYSTEM STARTUP

A. Manufacturer's Services: Provide services of a factory-authorized service representative to supervise the field assembly and connection of the following system, associated components and accessories, and the pretesting, programming and/or adjustment of all settings, components and accessories.

1. Digital lighting management systems.

1.13 ATTIC STOCK

A. Lighting Fixtures

1. Contractor shall include [2] exit light fixtures, in addition to the fixtures shown on the drawings, inclusive of associated labor and material to install after final walk-thru by Fire Marshal.
2. Devices shall be installed in locations as directed by Fire Marshal, and shall include all cutting, patching and finishing of walls. All unused fixtures shall be turned over to the owner for use as spares.
3. Contractor shall include [2] emergency light fixtures inclusive of associated labor and material to install after final walk-thru by Fire Marshal. Devices shall be installed in locations as directed by Fire Marshal and shall include all cutting, patching and finishing of walls. All unused fixtures shall be turned over to the Owner for use as spares.
4. Furnish extra materials described below, or as described in the Lighting Fixture Schedule, that match product installed and that are packaged with protective covering for storage and identified with labels describing contents.
5. Glass and Plastic Lenses, Covers, Louvers, and Other Optical Parts: 10% or one dozen (whichever is less) of each type and rating installed. Furnish at least one of each type.
6. Globes and Guards: 5% of each type and rating installed. Furnish at least one of each type.
7. Adjustable Accent Lights (track, recessed, or surface mounted): 10% or one dozen (whichever is less) additional lenses, color filters, louvers, and other accessories to be used during final focusing.
8. LED light engines, drivers, and power supplies: 10% extra individual modular LED strips or replaceable source modules, drivers and power supplies. If product does not have replaceable components, furnish at least 10% extra entire fixture

assembly. Furnish at least one of each type.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide the named "Basis of Design" manufacturer and model ("Basis of Design" fixtures are indicated on the drawing fixture schedule), or a comparable product of one of the other following named manufacturers:

1. Interior Lighting Fixtures:
   a. H.E. Williams
   b. Lithonia Lighting
   c. Pinnacle Lighting
   d. Spectrum Lighting
   e. Elite Lighting
   f. Visa Lighting
   g. Alphabet Lighting
   h. Emergilite
   i. Columbia Lighting
   j. Cooper Lighting
   k. Kenall Lighting
   l. Daybrite Lighting
   m. Finelite, Inc
   n. Ledalite
   o. Focal Point Lighting
   p. New Star
   q. Hubbell Lighting
2. Exterior Lighting Fixtures:
   a. U.S. Architectural Lighting
   b. Lithonia Lighting
   c. Cooper Industries - Crouse Hinds Lighting
   d. General Electric Co.
   e. Kenall Lighting
   f. New Star
   g. Spaulding
   h. Gardco
   i. FC Lighting
   j. LSI Industries
   k. Cree Lighting
   l. Cole Lighting
3. Vandal Resistant Lighting Fixtures:
   a. New Star
   b. Lithonia Lighting
   c. Columbia Lighting
   d. Cooper Industries
   e. Kenall Lighting
   f. Luminaire Lighting
4. LED Modules & Drivers:
   a. Philips Advance
   b. CREE
   c. Samsung
5. Occupancy Sensors & Switches:

a. Leviton
b. LeGrand - Watt Stopper
c. Sensor Switch
d. Hubbell

6. Digital Lighting Management Systems & Sensors:
   a. Leviton
   b. Legrand - Watt Stopper
   c. Sensor Switch
   d. Hubbell

2.2 GENERAL REQUIREMENTS

A. Listing/Labeling:

1. UL listed and labeled fixtures and wiring.
2. UL Damp or Wet location listed, as indicated or required.
3. UL hazardous area listed for Class, Division, and Group.

B. Mounting Accessories:

1. Fixture schedule generally indicates catalog number for lay-in tile ceilings.
2. Refer to Architectural drawings for ceiling types.
3. Provide fixture surface mounting kits, recessed framing kits, hardware, supports, hangers, etc., as required.

2.3 CONSTRUCTION FEATURES

A. LED Fixtures:

1. LED light source shall be shielded from direct view (interior fixtures).
2. One piece die-cast housing designed specifically for LED lamps/drivers.
3. Thermal control to ensure cool running LED’s.
4. All LED fixtures shall have a similar color temperature (degree K) rating to prevent visible lamp color differences.
5. Replaceable LED module and driver.
6. All LED fixtures, modules and drivers shall be RoHS compliant.

B. LED Exit Light Fixtures:

1. Backlit LED lamp source through stencil face(s) with translucent diffuser panel(s).
2. Listed as a qualifying NEMA Premium Exit Sign Program fixture.
3. Compliant with NEMA’s “*EM-1 Standard for Premium Exit Signs*”.
4. Tested in accordance with applicable UL and CSA Standards.
5. Products shall bear a special mark to indicate NEMA compliance.
6. Thermal control to ensure cool running LED’s.
7. GREEN LED’s and/or panels for Baltimore County projects.

C. Exterior Fixtures:

1. Cast aluminum housing, unless noted.
2. Dark bronze finish, or as selected by Architect.
3. UL Listed for Damp or Wet Location, as required.
4. Weatherproof gasketing.
5. Corrosion resistant hardware and materials.

6. Photocell, as indicated.

D. Tamper Proof Hardware

1. Provide tamper proof hardware for all fixtures, housings, fixture guards, etc. installed under this Division where such equipment is accessible to inmates at any time. Such locations are indicated on the contract drawings.

2.4 LED MODULES & DRIVERS

A. Minimum Requirements:

1. U.L. Listed.
2. High Efficiency, solid state driver.
3. Minimum rated life of 50,000 hours at 70%.
4. 3500K color temperature, unless otherwise noted or specified.
5. CRI of 80 (minimum).
6. RoHS compliant.
7. Dimmable and compatible with all 0-10V dimming switches.
8. Philips Xitanium drivers, or approved equal.
9. All LED fixtures shall be supplied with integral or external/remote drivers. Where LED fixtures do not have integral driver(s), provide required LED driver(s) as recommended by the LED manufacturer, matching all operational requirements of the LED lamps, modules, etc.

B. Construction Features:

1. Driver shall include all metal-can construction for optimal thermal performance.
2. Driver shall operate from 50/60 Hz input source of 120V through 277V with sustained variations of +/- 10% (voltage) with no damage to the Driver.
3. Output shall be regulated to +/- 5% across published load range.
4. Minimum input Power Factor > 0.90 for for 50-100% of full load.
5. Input current Total Harmonic Distortion (THD) < 20%.
6. Class A sound rating.
7. Minimum operating temperature of -4^{o}F.
8. Driver shall tolerate sustained open circuit and short circuit output conditions without fail and auto-resetting without need for external fuses or trip devices.
9. UL Listed for Damp and Dry locations.
10. Integral common mode and differential mode surge protection of 2.5kV(100kHz 30ohm ring wave).
11. Integral thermal fold-back to reduce driver power above rated case temperature to protect the driver if temperatures reach unacceptable levels.
12. Meets NEMA 410 for in-rush current limits.
13. Integral means of limiting surges to the LEDs.
14. Underwriters Laboratories (UL) recognized Class 2 per UL1310.
15. 5-year limited warranty from date of manufacture against defects in material or workmanship, including replacement.
16. Dimmable drivers shall be controlled by a Class 2 low voltage 0-10VDC controller with dimming range controlled between 1 and 8VDC with source current 150µA.

C. Outdoor LED Driver Construction Features:

1. Integral common mode and differential mode surge protection of 3kV (1.2/50µs, 2ohm combination wave).

2. Minimum operating temperature of -40°F.
3. Backlight Rating
4. Luminaire Up light Rating
5. Glare Rating
6. LED Fixtures

2.5 PHOTOCELLS

A. For single fixture control:

1. Integral with fixture where applicable.
2. Control only fixture where mounted.
3. Separately mounted photocells, not acceptable, unless otherwise indicated.

B. For multiple fixture/contactor control:

1. Permanently wired & mounted in weatherproof box.
2. 1/2" threaded fitting for knockout or threaded hub.
3. Omni-directional via threaded fitting.
4. UV treated translucent dome.
5. Adjustable photocell shield.
6. 2000W tungsten, 1800 VA ballast load.
7. 120, 208 or 277 V, as required.
8. Tork Model 2000, or equal.

C. All Photocells:

1. Delayed action on and off to prevent false switching.
2. Positive, snap action switching to prevent on-off cycling at dawn and dusk.
3. Integral photocells by the fixture manufacturer, installed at the factory. Integral twist-lock type photocells are acceptable if installed as a permanent part of the fixture.

2.6 LINE VOLTAGE OCCUPANCY SENSORS

A. Device Color: WHITE except as otherwise indicated.

B. Sensor requirements:

1. 120V or 277V operation, as applicable.
2. Sensitivity adjustment with LED for calibration.
3. Manual-On control of load(s) per latest IECC requirements.
4. 5 year warranty from manufacturer.
5. Adjustable sensitivity and time delay settings.

C. Wall Switch PIR Sensor:

1. Passive infrared.
2. 180° coverage.
3. Coverage: 900 sq. ft. maximum, 300 sq. ft. for desktop activity.
4. Maximum load; 800W @ 120V, 1200W @ 277V.
5. 2 level, 36 segment fresnel lens.
6. Button(s) for Manual-On of load(s) in compliance with IECC.
7. 2-Relay switches with two individual manual buttons for dual-circuit lighting, bi-

level lighting, or lighting & plug-load controls, where indicated.
8. Leviton, or approved equal.

D. Wall Switch Dual Technology Sensor:

1. Combination Passive Infrared and Ultrasonic sensing.
2. 180° coverage.
3. Coverage: 900 sq. ft. maximum, 300 sq. ft. for desktop activity.
4. Maximum load 800W @ 120V, 1200W @ 277V.
5. 2 level, 36 segment fresnel lens.
6. 40kHz ultrasonic detection.
7. Button(s) for Manual-On of load(s) in compliance with IECC.
8. 2-Relay switches with two individual manual buttons for dual-circuit lighting, bi-level lighting, or lighting & plug-load controls, where indicated.
9. Leviton, or approved equal.

E. Wall 0-10V Dimmer Switch PIR Sensor:

1. Passive infrared.
2. 180° coverage.
3. Coverage: 1000 sq. ft. maximum.
4. Maximum load (fluor); 1000W.
5. 2 level, 36 segment fresnel lens.
6. 0-10VDC dimming control.
7. Button(s) for Manual-On of load(s) in compliance with IECC.
8. Individual buttons for ON/OFF and UP/DOWN dimming control.
9. Leviton, or approved equal.

F. Wall 0-10V Dimmer Switch Dual Technology Sensor:

1. Combination Passive Infrared and Ultrasonic sensing.
2. 180° coverage.
3. Coverage: 900 sq. ft. maximum, 300 sq. ft. for desktop activity.
4. Maximum load 800W @ 120V, 1200W @ 277V.
5. 2 level, 36 segment fresnel lens.
6. 40kHz ultrasonic detection.
7. 0-10VDC dimming control.
8. Button(s) for Manual-On of load(s) in compliance with IECC.
9. Individual buttons for ON/OFF and UP/DOWN dimming control.
10. Leviton, or approved equal.

2.7 DIGITAL LIGHTING MANAGEMENT SYSTEM

A. Sensor requirements:

1. Suitable for use on 120V or 277V lighting systems, as applicable.
2. 24VDC operation.
3. Sensitivity adjustment with LED for calibration.
4. Uses Cat 5e cable for interconnection of components.
5. 5 year warranty from manufacturer.
6. Adjustable sensitivity and time delay settings.
7. Manual-On control of load(s) per IECC requirements.

B. Ceiling Mount Digital Dual Technology Sensor

1. Input voltage: 24VDC from DLM network.
2. DML local network connection: 2-RJ45 ports.
3. Infrared (IR) transceiver.
4. Ultrasonic frequency.
5. Plug n' Go automatic configuration.
6. Leviton GreenMAX DRC Wired Series.

C. Ceiling Mount Digital Ultrasonic Sensor

1. Input voltage: 24VDC from DLM network.
2. DML local network connection: 2-RJ45 ports.
3. Infrared (IR) transceiver.
4. Ultrasonic frequency.
5. Plug n' Go automatic configuration.
6. Leviton GreenMAX DRC Wired Series.

D. Ceiling Mount Digital PIR Sensor

1. Input voltage: 24VDC from DLM network.
2. DML local network connection: 2-RJ45 ports.
3. Infrared (IR) transceiver.
4. Ultrasonic frequency.
5. Plug n' Go automatic configuration.
6. Leviton GreenMAX DRC Wired Series.

E. Dimming and On/Off Photosensor

1. Single zone or multiple zone
2. Ceiling mounted
3. Infrared transceiver
4. 100 º spatial response
5. DLM local network connection: 1-RJ45 port via RJ45 plug and coupler (included)
6. Setpoints from 1-1553 footcandles
7. Leviton GreenMAX DRC Wired Series.

F. Dimming Room Controller (for dimming control of 0-10V dimmable fixtures)

1. Maximum 20A combined load per Room Controller; each output rated for 20A
2. Operates on 120/277 VAC 50/60Hz
3. Class 2 dimming control signal : 0-10VDC, sinking or sourcing (automatic adjustment based on load)
4. Class 2 outputs to DLM local network: 24VDC, 250mA across 4-RJ45 ports
5. Plug n' Go automatic configuration.
6. On/Off/Dim button for each load.
7. Leviton GreenMAX DRC Wired Series.

G. Universal Dimming Room Controller (for fixtures to be dimmed that do not have 0-10v dimming capability)

1. Maximum 20A combined load per Room Controller; each output rated for 20A:

tungsten, MLV, ELV or LED (forward phase compatible transformers or drivers)
2. Operates on 120/277 VAC 50/60Hz
3. Class 2 outputs to DLM local network: 24VDC, 150mA across 4-RJ45 ports
4. Plug n' Go automatic configuration.
5. On/Off/Dim button for each load.
6. Leviton GreenMAX DRC Wired Series.

H. 0-10V to Phase Adaptive Converter (for dimming non 0-10v fixtures)

1. Voltage: 120–277VAC; 60Hz
2. Power: 750W at 120VAC, 1300W at 277VAC
3. Control: 0-10V Input
4. 24W minimum load
5. Standby Power:
   – 0.75W@120V
   – 1.87W@277V
6. Housing: Aluminum
7. Operating Temperature: -40°F to 140°F (-40°C to 60°C)
8. Mounting: Screws or through-hole hardware via built-in bracket
9. Plenum rated
10. 5 year warranty
11. Leviton GreenMAX DRC Wired Series.

I. Room Controller (for ON-OFF switching control of fixtures)

1. 1 relay or 2 relay.
2. Operates on 120/230/277 VAC 50/60Hz 20 amp feed.
3. Class 2 outputs to DLM local network: 24VDC, 250mA across 3-RJ45 ports
4. Plug n' Go automatic configuration.
5. On/Off button for each load.
6. Leviton GreenMAX DRC Wired Series.

J. Emergency Lighting Control Unit

1. Provides interface between normal lighting room controller and emergency fixtures to be similarly controlled.
2. Wired as shunt (bypass) device to allow emergency circuit fixtures to be switched/dimmed with regular room fixtures.
3. UL924 Listed device.
4. Leviton GreenMAX DRC Wired Series.

K. Digital Wireless Configuration Tool(for digital occupancy sensor configuration)

1. Easy to read LED screen
2. Adjustable occupancy sensor parameters include sensitivity, time delay, trigger and re-trigger modes.
3. Remotely reconfigures DLM daylighting controller settings (day and night set point, raise and lower levels)
4. Leviton GreenMAX DRC Wired Series.

2.8 DIGITAL SWITCHES

A. Device Color: WHITE except as otherwise indicated.

B. Digital On/Off Wall Switches

1. 24VDC from DLM local network
2. DLM local network connection: (2) RJ45 ports
3. Buttons can be programmed for on-off or dimming up-down controls.
4. Infrared transceiver
5. Hidden configuration button to access “Push ‘n’ Learn” feature.
6. 1, 2, 3, 4 or 8 control button(s) each with LED status indicator button.
7. Mounts in decora style wall plate.
8. Leviton GreenMAX DRC Wired Series.

C. Digital Dimmer Wall Switches (for single zone location)

1. 24VDC from DLM local network
2. DLM local network connection: (2) RJ45 ports
3. Single button for ON/raise, or lower/OFF controls.
4. Infrared transceiver.
5. Hidden configuration button to access “Push ‘n’ Learn”.
6. Blue ON LED indicator.
7. 7 LED dimming level indicator.
8. Single Control Button with LED level indicator.
9. Mounts in decora style wall plate.
10. Leviton GreenMAX DRC Wired Series.

D. Digital 5-Button Scene-Control Dimmer Switch (for multi-zone(scene) controls)

1. 24VDC from DLM local network
2. DLM local network connection: (2) RJ45 ports
3. Infrared transceiver
4. Hidden configuration button to access “Push ‘n’ Learn”
5. Control button with 4 scene/zone buttons
6. ON/Off-Raise/Lower Master Paddle
7. Control Button with LED indicator.
8. Custom engraving to identify each scene/zone button.
9. Mounts in decora style wall plate.
10. Leviton GreenMAX DRC Wired Series.

2.9 LOW VOLTAGE CONTROL CABLING

A. Cables for low voltage dimming or control systems shall be as recommended by the control system manufacturer.

B. All low voltage cabling installed on this project shall be UL Listed, plenum rated cable.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for operation, access and maintenance of the equipment, per Codes and manufacturers.

3.2 INSTALLATION

A. Fixture Installation - General:

1. Provide even, symmetrical spacing of fixtures.
2. Coordinate with diffusers, grilles and access panels in ceilings to establish a symmetrical pattern.
3. Support all fixtures independent of ceiling systems, ducts and piping.
4. Provide hangers from purlins, joists, beams, etc., for support of all boxes and fixtures.
5. Provide trapeze hanger supports for fixtures under ducts, large pipes, etc.
6. Galvanized steel for all hangers, channels, bolts, etc.
7. No fixtures shall be supported solely by grid or gypsum board ceilings.
8. Maintain required clearances around fixtures according to manufacturer's written instructions.
9. Drawings are general in nature and show approximate mounting locations of fixtures. Follow spacing dimensions, where indicated on architectural or reflected ceiling plans.
10. Coordinate exact roughins during construction to center and align fixtures, as applicable.
11. Coordinate wall mounted fixtures with other wall materials and items (TV/monitors, fire alarm devices, downspouts, etc.).

B. Recessed Fixtures:

1. Support recessed fixtures with galvanized tie wires, at two opposite corners of fixture.
2. Provide framing for all recessed fixtures.
3. Plaster frames for plaster or GWB ceilings.
4. Provide sloped ceiling adapters, where applicable.
5. Make electrical connections using flexible conduit, concealed above finished ceilings.

C. Surface Mounted Fixtures:

1. Install fixtures tight to ceiling or wall surface with no visible gaps.
2. Support fixture using rigid rods, channels, etc. Do not support from ceiling grid system or with wires.
3. Tighten attaching hardware evenly and per manufacturer's instructions to prevent warping or distortion of fixtures.
4. Provide recessed backbox to allow fixture mounting tight to surface.
5. Make electrical connections through rear of fixture, concealed as practicable.

D. Suspended Fixtures:

1. Provide hangers, rods, suspension cables, etc. for suspended fixtures, per drawings.
2. Install fixtures level and will all support rods or cables plumb.
3. Securely attach fixture to rigid supports, where applicable, to prevent wobble.
4. For continuous row fixtures, install rows straight and level. Provide supports at intervals, per manufacturer.
5. Make electrical connections from above, through top of fixture(s). Minimize visible cable or hollow rod wiring drops by using through-wiring of continuous row fixtures, as permitted by manufacturer.

E. LED Tape Light Mounting in Ceiling Light Coves:

1. Install LED tape light using 45-degree mounting channels, allowing for LED aiming up and out of cover.
2. Insure LED's are not visible to room occupants.
3. Install associated drivers in lighting cove, if concealment from view is possible. Where cove dimensions, etc. do not permit concealed mounting, install drivers above accessible tile ceiling or in GWB ceiling with access panel.
4. Provide multiple drivers where LED tape light length exceeds the output rating of a single driver.

F. Remote LED Drivers:

1. Where LED fixtures have external or remote LED drivers, provide complete installation of fixtures, drivers, and all interconnecting wiring.
2. Mount drivers where accessible for maintenance or replacement.
3. Drivers shall mount in UL listed metal enclosures, suitable for the indoor or outdoor location where installed, following instructions of the driver manufacturer.
4. Provide flexible metal conduit for enclosing low voltage LED driver wiring to the fixture, as required for protecting the wiring from damage.

G. Electrical, Mechanical and Utility Room Fixture Installation:

1. Drawings provide the general layout of fixtures, quantities, circuiting, etc.
2. Provide adjustments to fixture locations, elevations and supports, as required to coordinate fixtures with installed mechanical and electrical system equipment and maintain an even lighting distribution.
3. Do not install fixtures fully or partially above pipes, conduits, flues, hangers, or other equipment.
4. Install fixtures over walkways and where light will illuminate equipment fronts, controls, etc. Do not locate directly above boilers, chillers, switchboards, etc.
5. Fixtures shall be installed where accessible for future lamp and ballast maintenance, without need for special scaffolding, other than step ladders.

H. Security, Detention and Inmate Area Fixture Installation:

1. Fixtures shall be installed per manufacturer's instructions to prevent any and all movement of fixture.
2. Fixtures shall be substantially supported and attached to the building structure or secure ceiling structure.
3. All fixtures shall have tamperproof hardware (torx center pin).
4. Recessed fixtures shall not permit upward movement such that contraband or items can be inserted between fixture and surrounding ceiling or trim.
5. Surface fixtures shall be installed to prevent any gaps between fixture and mounting surface. Fixture shall be sealed to permanent surfaces (drywall, security ceiling or concrete) with permanent sealant/adhesive to prevent insertion of paper or other objects between fixture housing and mounting surface.

I. Pole Mounted Fixtures:

1. Coordinate pole lights and foundations, anchor bolts and fixture orientations.
2. Properly aim all fixtures per the specified distribution patterns.
3. Provide driven rod at each foundation for grounding each lighting pole.
4. Determine exact pole base location prior to excavation or drilling.

5. Mark all pole locations and verify coordinate with all other trades prior to installation.
6. Repair damage to new or existing utilities, caused during installation, shall at no cost to Owner.
7. Provide foundations for all light poles.
8. Poured in place concrete with reinforcing steel and PVC conduit wiring sleeves.
9. Foundation reinforcing shall be per drawings, or as follows, if not indicated:

	Footings		Rebar Size	
Pole Hgt (H)	Depth	Diam	Vert	Ties
H<15'	48"	18"	#5	#3
15'≤H<20'	48"	24"	#6	#3
20'≤H<25'	60"	24"	#8	#4
25'≤H<30'	72"	24"	#8	#4

10. Bases shall extend a minimum of 4" above finished grade (exposed), or as indicated on drawings.
11. Sonotube bases shall be bagged and rubbed.
12. Grout all spaces between top of foundation and bottom of pole base with non-shrink grout. Taper grout for water runoff.

J. Occupancy/Vacancy Sensor Installation:

1. Install in ceiling or wall, per actual manufacturer's instructions. Drawings are not to be used for exact placement.
2. Infrared sensors:
   a. Position sensor for optimal coverage and sensing within the control zone, per manufacturer's instructions.
   b. Locate so that sensors are not aimed directly through normally open doorways, cased openings, etc.
   c. Do not aim sensing elements at open doors or windows.
   d. Provide masking of IR coverage pattern to avoid detection outside the control zone.
   e. Maintain maximum distance from heating registers, convectors, unit heaters, and other moving hot air sources.
3. Ultrasonic sensors:
   a. Position sensor for optimal coverage and sensing within the control zone, per manufacturer's instructions.
   b. Locate so that sensors are not aimed directly through normally open doorways, cased openings, etc.
   c. Maintain maximum distance from air devices, and other sources of moving air.
   d. Do not aim sensing elements at open doors or windows.
4. Wall PIR Sensor Switch:
   a. Position sensor on wall for optimal coverage of the room control zone, per manufacturer's instructions.
   b. Locate so that sensors are not aimed directly through normally open doorways, cased openings, etc.
   c. Do not place sensors on walls perpendicular and distant from the main room activity (ie an office desk area).
   d. Provide masking of IR coverage pattern to avoid detection outside the control zone.

K. Control Switches, Devices and Occupancy Sensor Switch Installation:

1. Install all equipment plumb and level.
2. Install devices tight to boxes, etc. such that no movement occurs during normal operation.
3. Install cover plates tight to surrounding surface. Cover plate shall not provide the only means of support for wiring devices.
4. Where multiple devices are installed at the same location and elevation, use a single, multi-gang box and single cover plate, as applicable.
5. Where wiring devices, such as occupancy, dimmer, timer or other control switches, require a grounded conductor (neutral) connection for operation, install neutral conductor to the mounting box. Do not connect device neutral to equipment ground wire.
6. Where standard toggle switches are installed serving lighting loads in areas described in NEC 404.2(C), provide a grounded conductor (neutral) to the switch device box location as specified. Do not connect device neutral to equipment ground wire.
7. Match the rough-in heights of similar wiring devices in the project. Unless noted otherwise, the following mounting heights shall be used:
   a. Line and Low Voltage wall switches: 48" AFF to center.
   b. Occupancy sensor switches: 48" AFF to center

3.3 CONSTRUCTION

A. Grounding: Ground fixtures, housings, poles, and supporting equipment frames and enclosures per NEC and as specified in Section “Grounding & Bonding For Electrical Systems.”

B. Connections: Tighten joints, connectors and terminals, including screws and bolts, in accordance with manufacturer’s published torque tightening values for connectors and bolts. Where manufacturer’s torque requirements are not indicated, tighten connections to comply with torque tightening values specified in UL 486A, “Wire Connectors and Soldering Lugs for Use with Copper Conductors”.

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment and surfaces to original condition, where affected by the work of this section.

3.5 ADJUSTING

A. General:

1. Adjust aiming of all fixtures with adjustable optics or housings.
2. Rotate downlight trims for proper orientation of louver blades or wall wash reflectors.

B. Occupancy Sensor Adjustments:

1. Provide masking or blocking of PIR sensors and wall switches, as required to limit sensitivity to within the intended room/area only.
2. Provide field adjustments to sensitivity and range, appropriate to the activity planned in the area, coverage area, etc.
3. Provide shielding to limit sensitivity to nearby illumination sources, as required.

4. Re-adjust any sensors for improved operation per Owner direction.
5. Adjust footcandle level settings for sensors with daylight sensing.
6. Set “Time Delay Off” adjustments, as follows:
   a. Toilet Rooms: 15 minutes
   b. Classrooms: 15 minutes
   c. Individual Offices: 15 minutes
   d. Conference Rooms: 15 minutes
   e. Copy Rooms: 15 minutes
   f. Break/Lunch Rooms: 15 minutes
   g. Storage Rooms: 15 minutes
   h. Public Corridors: 20 minutes
   i. Other areas not listed: 20 minutes

C. Interior Photo-Sensor Adjustments (For Daylighting/Dimming Applications):

1. Provide field setup and adjustments for all individual spaces with daylight harvesting and automatic fixture on-off or dimming controls.
2. Adjust initial photo-sensor for desired interior footcandle levels with no daylight contributions (to be accomplished at night).
3. Adjust photosensor and control system to maintain fc levels by gradually dimming the fixtures in the daylighting zone, while maintaining the target fc levels in the space.
4. Re-adjust any sensors and dimming processes for improved operation per Owner direction.

D. Exterior Photocell Sensor Adjustments:

1. Where possible, set photocell aiming toward North sky.
2. Provide field adjustments to lighting sensitivity, appropriate to the activity planned in the area.
3. Provide shielding to limit sensitivity to any nearby illumination sources, as required.
4. Re-adjust any sensors for improved operation per Owner direction.

3.6 CLEANING

A. General: Clean all fixtures after work of all trades is complete, and prior to turnover to Owner.

1. Remove paint splatters and other spots, dirt, and debris.
2. Touch up scratches and mars of finish to match original finish.
3. Remove protective films, etc. from all devices, controls, etc.
4. Remove all wire clippings, etc. from interior of fixtures.
5. Adjust louvers, shielding, etc. for proper and consistent orientation.
6. Thoroughly wipe clean all surfaces with degreaser/cleaner, suitable for material.
7. Leave no visible dirt or fingerprints on lenses, louvers, housings, reflectors, lamps, etc.

3.7 DEMONSTRATION

A. Owner Demonstrations: Provide a factory trained representative for each system and type of equipment, for the purpose of training owner's personnel:

1. Discuss proper operation, maintenance, and use of all equipment.

2. Demonstrate periodic Owner testing and/or inspection of equipment.
3. Demonstrate adjustment to Owner-accessible equipment and systems.
4. Instructors shall be fully knowledgeable of the installed equipment and all components.
5. Training shall be completed at the project site following Owner occupancy, at Owner’s discretion.
6. Schedule after all final tests, adjustments and Owner's acceptance.
7. Training shall include use of delivered O&M manuals for each system or equipment.

B. Occupancy Sensor Demonstration:

1. Provide working demonstration for each type of sensor installed.
2. Explain function, delay settings, adjustments, etc.

3.8 COMMISSIONING

A. This project includes Commissioning of selected systems and components. Provide for commissioning of the Lighting and control systems, as required per Section “Commissioning of Electrical Systems”, and the Commissioning Plan.

END OF SECTION

SECTION 27 05 26 GROUNDING AND BONDING FOR COMMUNICATIONS SYSTEMS

1.1 GENERAL

1.2 SUMMARY

A. Section Includes:

1. Grounding/Earthing and bonding for Low Voltage systems such as telecommunications and audiovisual systems.

2. Primary Bonding Busbar (PBB)

3. Secondary Bonding Busbar (SBB)

4. Telecommunications Bonding Backbone (TBB)

5. Backbone Bonding Conductor (BBC)

6. Rack Bonding Busbar (RBB)

7. Telecommunications Equipment Bonding Conductor (TEBC)

8. Telecommunications bonding conductor (TBC)

9. Pathways.

B. Related Sections:

1. Division 26 Section *Grounding and Bonding* for building systems with which to interface with Work of this Section.

1.3 DEFINITIONS

A. AFC: Above Finished Ceiling

B. BICSI: Building Industry Consulting Service International.

C. Bonding: Permanent joining of metallic parts to form an electrically conductive path to ensure electrical continuity and capacity to safely conduct current.

D. Common Bonding Network (CBN) – The principal means for affecting bonding and earthing inside a building.

E. Cross-Connect: A facility enabling the termination of cable elements and their interconnection or cross-connection.

F. EMI: Electromagnetic interference.

G. Ground/Earth – A conducting connection, whether intentional or incidental, by which an electric circuit or equipment is connected to ground, or to some conducting body of relatively large extent that serves in place of the ground.

H. HC: Horizontal Cross Connect

I. IDC: Insulation displacement connector.

J. LAN: Local Area Network.

K. MC: Main Cross-connect

L. NEBS: Network Equipment Building System.

1. NEBS Level 3: Equipment complies with strict specifications for fire suppression, thermal margin testing, vibration resistance including seismic, airflow patterns, acoustic limits, failover and partial operational requirements such as chassis fan failures, failure severity levels, RF emissions and tolerances, and testing/certification requirements.

M. NEC: National Electric Code

N. RCDD: Registered Communications Distribution Designer.

O. TR: Telecommunications Room

P. UTP: Unshielded twisted pair.

1.4 SYSTEM DESCRIPTION

A. Provide a complete and functioning Telecommunications grounding/earthing system inclusive of all hardware, software and training to meet or exceed the performance features outlined in this document.

B. Purpose: Telecommunications grounding/earthing system creates a low impedance path to earth ground to prevent damage to equipment and disruption in service due to electrical surges and transient voltages.

C. Grounding/earthing system comply with following:

1. NEC and local electrical codes

2. ANSI/TIA-607-D or latest version.

3. ISO/IEC 30129

4. IEEE 1100

D. Secondary Bonding Busbar (SBB): Ground/earth each telecommunications space to the Primary Bonding Busbar (PBB) located at the telecommunications entrance room.

1.5 SUBMITTALS

A. Comply with Division 01330 Section *Submittal Procedures*.

B. Submittal data is to be submitted electronically. Each submittal shall contain the below in the following order:

1. Cover Sheet.

    a. Include name of supplying contractor and project name.

2. Detailed Bill of Materials.

    a. Include a listing of: component quantities, equipment manufacturer, model number, and description of each component being supplied, and the specification paragraph or drawing sheet that corresponds to the product. Failure to provide this information will result in the rejection of submittals.

3. Product Data.

    a. Include a catalog sheet per product of equipment listed in the Detailed Bill of Materials, in the exact order as the Detailed Bill of Materials. Each catalog sheet shall describe mechanical, electrical and functional equipment specifications. The catalog sheet must also include an image of the product. Photocopy duplications of the manufacturer's original equipment catalog sheets will be allowed as long as they provide adequate clarity of both the printed word and graphics/pictures. If more than one product is shown on the catalog sheet the intended product must be denoted by either an arrow or highlight.

C. Shop Drawings

1. Wiring diagram to show grounding schematics, including the following: Busbars and bonding backbone. Detail mounting assemblies and show elevations and physical relationship between the installed components.

2. Show the relationship of TR's, the pathway between them, and cable connectivity to be installed.

3. Drawings should be at project standard scale clearly legible.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements, grounding/earthing and bonding systems:

1. TIA/EIA

    a. TIA-942 Telecommunications Infrastructure Standard for Data Centers

    b. J-STD-607-D Commercial Building Grounding/Bonding Requirements

    c. TIA/EIA-606 Administration Standard for the Telecommunications Infrastructure of Commercial Buildings

2. IEEE

    a. Std 1100 IEEE Recommend Practice for Powering and Grounding Electronic Equipment (IEEE Emerald Book)

3. Telcordia:

    a. NEBS 3 as defined for RBOC-CO compliance.

4. NFPA

    a. NFPA-70 National Electric Code (NEC)

B. Testing Procedures:

1. NEBS GR-63-CORE: Network Equipment-Building System Requirements: Physical Protection.

2. NEBS GR-1089-CORE: Electromagnetic Compatibility and Electrical Safety -- Generic Criteria for Network Telecommunications Equipment

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers, Grounding/Earthing Systems:

1. Panduit

2. Chatsworth

3. Harger

4. Burndy

5. Ortronics/Legrand

6. Erico

B. Acceptable Manufacturers, Telecommunications Bonding Busbars:

1. Panduit

2. Chatsworth

3. Harger

4. Burndy

5. Ortronics/Legrand

6. Erico

C. Acceptable Manufacturers, Rack Bonding Kits:

1. Panduit

2. Chatsworth

3. Harger

4. Burndy

5. Ortronics/Legrand

6. Erico

2.2 GROUNDING/EARTHING AND BONDING

A. General:

1. Conductors: Provide copper grounding/earthing conductors.

2. Lugs, grounding strips, and busbars: UL Listed.

3. Fabricate with premium quality tin-plated electrolytic copper, providing low electrical resistance while inhibiting corrosion.

4. Provide antioxidant for field- bonding connections.

5. Lugs: NEBS Level 3. Provide two-hole lugs with irreversible compression and inspection windows, certified for use in non-corrosive environments so that connections may be inspected for full conductor insertion.

6. Die index numbers: Embossed on compression connections to allow crimp inspection.

7. Cable assemblies: UL Listed and CSA Certified.

a. Cables: Green or green/yellow.

b. Jackets: UL Listed, VW-1 flame rated.

B. Telecommunications Bonding Backbone (TBB): A cable used to ground/earth PBB. Connect PBB to SBB; comply with J-STD-607-D guidelines and provide gauge not lighter than the following:

Table 1 – TBB/BBC/TBC conductor size vs length	
TBB Length in Linear meters (feet)	TBB Size (AWG)
Less than 4 (13)	6
4 - 6 (14 - 200)	4
6 - 8 (21 - 26)	3
8 - 10 (27 - 33)	2
10 - 13 (34 - 41)	1
13 - 16 (42 - 52)	1/0
16 - 20 (53 - 66)	2/0
20 - 26 (67-84)	3/0
26 - 32 (85 - 105)	4/0
32 - 38 (106 - 125)	250 kcmil
38 -46 (126 - 150)	300 kcmil
46 - 53 (151 - 175)	350 kcmil
53 - 76 (176 - 250)	500 kcmil
76 - 91 (251 - 300)	600 kcmil

Greater than 91 (301)	750 kcmil

C. Sizing the Telecommunications Bonding Conductor (TBC)

1. The TBC shall be, as a minimum, the same size as the largest TBB.

D. Sizing the Backbone Bonding Conductor (BBC)

1. The BBC shall be, as a minimum, the same size as the largest TBB to which it is connected.

E. Structural metal

1. The bonding conductor from the structural metal to the PBB or SBB shall be sized according to Table 1. Additionally, this conductor should be no smaller than any conductor that comprises the telecommunications bonding backbone system. Bonds to structural metal shall be made using listed exothermic welding, listed compression connections, or listed mechanical connectors and shall be accessible.

F. Telecommunications Equipment Bonding Conductor (TEBC): A cable used from the PBB or SBB to Rack and Rack Bonding Busbar (RBB) – minimum Size 6AWG.

G. Bonding Cable, Typical: For applications other than TBB, TEBC and BBC, provide gauge not lighter than the following:

Table 2- Cable Sizes for Other Grounding/Earthing Applications	
Purpose	Copper Code Cable Size
Aisle grounds (overhead or under floor) of the common bonding network	#2 AWG or larger (1/0 preferred)
Bonding conductor to each PDU or panel board serving the room.	Size per NEC 250.122 & manufacturer recommendations
Bonding conductor to HVAC equipment	6 AWG
Building columns	4 AWG
Cable ladders and trays	6 AWG
Conduit, water pipe, duct	6 AWG

2.3 COMPONENTS, KITS AND HARDWARE

A. Provide BICSI/J-STD-607-D telecommunications Primary Bonding Busbar PBB. Locate PBB at the telecommunications entrance room.

B. Provide BICSI/J-STD-607-D Telecommunications Bonding Conductor (TBC) from the telecommunications entrance room to the AC service entrance. Bonds to AC service entrance shall be made using listed exothermic welding, listed compression connections, or listed mechanical connectors and shall be accessible.

C. Provide BICSI/J-STD-607-D telecommunications Secondary Bonding Busbar (SBB) at typical telecommunications/equipment spaces throughout the building.

1. Provide additional SBB's as needed for number of termination points within each telecommunications/equipment space or upsize the SBB to a PBB.

2. Multiple SBB's within a room shall be bonded together with a conductor the same size as the TBB or with splice bars.

D. Provide BICSI/J-STD-607-D telecommunications Rack Bonding Busbar (RBB) at rack and cabinet locations.

E. Provide compression type two-hole lugs for connecting conductors to PBB, SBB and RBB.

PART 3 - EXECUTION

3.1 ROUTING TBB, TBC AND SBB

A. Route the TBB to each SBB in as straight a path as possible. The TBB should be installed as a continuous conductor, avoiding splices where possible. When more than one TBB is used, bond them together on the top floor and every third floor in-between with a conductor known as a Backbone Bonding Conductor (BBC). When sizing the BBC, it must be at least the same size as the largest TBB.

B. Bend The inside bend radius of telecommunications bonding conductors terminated at the primary bonding busbar (PBB) or secondary bonding busbar (SBB) shall have an inside bend radius of 200 mm (8 in). At other locations, bends in the bonding conductors should be limited to the greatest practical inside bend radius with a minimum bend radius of 10 times the bonding conductor diameter recommended. In all cases, the minimum bend radius angle shall be 90° or greater.

C. Avoid routing grounding/earthing conductors in metal conduits. If the grounding/earthing conductor must be routed through a metal conduit, bond each end of the conduit to the grounding/earthing conductor. Use grounding clamps to bond to the conduit and #6 AWG copper conductor to connect the grounding clamp to the TBB.

3.2 RACK GROUNDING/EARTHING

A. Bonding Equipment and Racks: Comply with BICSI/J-STD-607-D.

B. To provide electrical continuity between rack elements, use paint piercing grounding washers where rack sections bolt together, on both sides, under the head of the bolt, and between the nut and rack.

C. Utilize full-length rack ground strips attached to the rear of the side rail with thread-forming screws provided to ensure metal-to-metal contact.

D. Mount an electrostatic discharge (ESD) port kit, directly to the Rack Bonding Busbar. Mount a second electrostatic discharge (ESD) port kit directly to the vertical mounting rail of the rack in the front at approximately the same height. Use the thread-forming screws provided to form a bond to the rack.

E. When the equipment manufacturer provides a location for mounting a grounding connection, that connection shall be utilized. Use the appropriate jumper for the equipment being installed and the thread-forming screws provided in the kit.

F. Do not bond racks or cabinets serially.

G. Bond patch panels to racks using bonding screws.

H. Patch panels for shielded cabling shall be bonded to the telecommunications bonding system in accordance with manufacturer instructions

3.3 TESTING

A. Perform continuity testing measurements of the grounding system with resistance to not exceed 0.1 ohm between:

1. The PBB and the nearest grounding electrode.

2. Each SBB and the nearest grounding electrode.

3. Each SBB and pathway(s), rack(s), cabinet(s), and applicable equipment.

3.4 GROUNDING SYSTEM

A. Communications grounding system: Comply with ANSI/TIA-942 and ANSI/TIA-607-D.

B. Connection to Building ground/earth: Ensure connection is made by a licensed, electrical Installer, including installation and termination of the main bonding conductor to the building service entrance ground.

C. Bond PBB to building steel; ground/earth to electrical service ground. Comply with BICSI TDM Manual and ANSI/TIA-607-D guidelines.

D. Utilize UL listed exothermic two-hole lugs to make connections to the primary bonding busbar (PBB).

END OF SECTION 27 05 26

SECTION 27 05 28 TELECOMMUNICATIONS CABLING INFRASTRUCTURE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 REFERENCES

A. Building Industry Consulting Services International (BiCSi),"Telecommunications Distributions Methods Manual," Fourteenth Edition

B. ANSI/TIA-569-E, "Commercial Building Standard for Telecommunications Pathways and Spaces"

C. ANSI/TIA-606-C, “Administration Standard for the Telecommunications Infrastructure of Commercial Buildings”

D. ANSI/TIA-607-D, “Commercial Building Grounding/Bonding Requirements”

E. National Electrical Code (NEC), 2020 - National Fire Protection Agency (NFPA) 70

1.3 SUMMARY

A. Section Includes:

1. Cable management system.
2. Cabling identification products.
3. Backboards.
4. Telecommunications equipment racks and cabinets.
5. Telecommunications service entrance pathways.
6. Grounding.
7. Pathways.
8. Telecommunications mounting elements.
9. Multiuser telecommunications outlet assemblies.

B. Related Sections:

1. Division 27 05 26 “Grounding and Bonding for Communications Systems “for grounding conductors and connectors.

C. Bidding Requirements:

1. Bidder shall submit complete detailed proposals with line item cost representation for components and associated installation labor. Lump sum bids will not be accepted.

2. Bidders shall include as part of the bid response the following items:
   a. Installation schedule with proposed manpower assignments,
   b. Resumes for project manager and lead technician for this project.

3. Unspecified Equipment and Material: Any item of equipment or material not specifically addressed on the drawings or in this document and required to provide complete and functional Structured Cabling System shall be provided in a level of quality consistent with other specified items.

1.4 DEFINITIONS

A. AFC: Above Finished Ceiling Riser:

B. BICSI: Building Industry Consulting Service International.

C. EF: Entrance Facility

D. EMI: Electromagnetic interference.

E. HC: Horizontal Cross Connect

F. IDC: Insulation displacement connector.

G. Ladder Cable Tray: A fabricated structure consisting of two longitudinal side rails connected by individual transverse members (rungs).

H. LAN: Local Area Network.

I. MC: Main Cross-connect

J. NRTL: Nationally Recognized Testing Laboratory

K. Outlet/Connectors: A connecting device in the work area on which horizontal cable or outlet cable terminates.

L. RCDD: Registered Communications Distribution Designer.

M. TR: Telecommunications Room

1.5 SYSTEM DESCRIPTION

A. Provide a complete and functioning Structured Cabling System infrastructure inclusive of all hardware to meet or exceed the performance features outlined in this document.

B. A work area is approximately 100 sq. ft. and includes the components that extend from the telecommunications outlet/connectors to the station equipment.

C. Communications equipment room shall provide the space to house the equipment for the backbone and horizontal cabling.

1.6 SUBMITTALS

a. Cover Sheet
   1) Include name of supplying contractor and project name.
   2) Include submittal and revision number.
b. Detailed Bill of Materials
   1) Include a listing of component quantities, equipment manufacturers, model numbers, and descriptions of each component being supplied and the specification paragraphs or drawing sheets that correspond to each product.
   2) The bill of materials shall include page numbers for each product data sheet and be index referenced within the PDF file so that each product name is clickable, linked to the first page of the corresponding product data.
   3) Failure to provide this information will result in the rejection of submittals.
c. Product Data
   1) Include a catalog sheet per product of equipment listed in the Detailed Bill of Materials, in the exact order as the Detailed Bill of Materials. Each catalog sheet shall describe mechanical, electrical and functional equipment specifications. The catalog sheet must also include an image of the product.
   2) Photocopy duplications of the manufacturer's original equipment catalog sheets will be allowed as long as they provide adequate clarity of both the printed word and graphics/pictures.
   3) If more than one product is shown on the catalog sheet the intended product must be denoted by either an arrow or highlight.
d. Prequalification Certificate
   1) Copy of the installing technician(s) certificate of completion from the manufacturer's training school for the equipment being provided.
e. Submittal shall be a single PDF file.
   1) Partial submittals, or submittals comprised of multiple PDF files, will be rejected.

B. Shop Drawings are to be submitted on project standard full size and bound. Each shop drawing set is to include the below in the following order:

1. Title Sheet.
   a. Containing, at a minimum, a list of all drawings in the set and a symbols legend defining each symbol used in the package.

1. Telecommunications Room Details.
   a. Plan Details of infrastructure and room fittings with clearances, Elevation details of wall fields and rack details.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Cabling Installer must have personnel certified by BICSI on staff.

1. Layout Responsibility: Preparation of Shop Drawings and Cabling Administration Drawings by an RCDD.

2. Installation Supervision: Installation shall be under the direct supervision of Level 2 Installer and manufactures certified installer, who shall be present at all times when Work of this Section is performed at Project site. One half of remainder of the crew shall be at a minimum Registered Technicians by manufacture as part of their Certified Installer Program.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Telecommunications Pathways and Spaces: Comply with ANSI/TIA-569-E.

D. Administration Standard for the Telecommunications Infrastructure of Commercial Buildings, 2017 ANSI/ANSI/TIA–606-C.

E. Grounding: Comply with ANSI-J-STD-607-D.

F. NFPA 70 – National Electric Code, latest edition

G. BICSI – Telecommunications Distribution Methods Manual, Fourteenth Edition

H. NEMA – VE-1 – Metal Cable Tray Systems, 2017

I. NEMA – VE-2 – Metal Cable Tray Installation Guidelines, 2013

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install equipment frames and ladder racking until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and work above ceilings is complete.

1.9 COORDINATION

A. Coordinate layout and installation of communications equipment with Owner's telecommunications and LAN equipment and service suppliers.

1. Meet jointly with telecommunications and LAN equipment suppliers, local exchange carrier representatives, and Owner to exchange information and agree on details of equipment arrangements and installation interfaces.

2. Record agreements reached in meetings and distribute them to other participants.

3. Adjust arrangements and locations of distribution frames, cross-connects, and patch panels in equipment rooms to accommodate and optimize arrangement and space requirements of telephone switch and LAN equipment.

4. Adjust arrangements and locations of equipment with distribution frames, cross-connects, and patch panels of cabling systems of other communications, electronic safety and security, and related systems that share space in the equipment room.

B. Coordinate layout and installation of telecommunications pathways and cabling with Owner's telecommunications and LAN equipment and service suppliers.

C. Coordinate telecommunications outlet/connector locations with location of power receptacles at each work area.

D. Coordinate location of power raceways and receptacles with locations of communications equipment requiring electrical power to operate.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where subparagraph titles below introduce lists, the following requirements apply for product selection:

1. Manufacturers: Subject to compliance with requirements, provide products by the manufacturers specified.

2.2 PATHWAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following available manufacturers offering products that may be incorporated into the Work include, and are limited to, the following:

1. Basis of design: nVent Caddy

2. Approved equals by:
   a. Eaton/B-line
   b. Hilti Inc.

B. General Requirements: Comply with TIA/EIA-569-E.

C. Cable Support: NRTL labeled. Cable support brackets in Telecommunications Rooms shall be designed to prevent degradation of cable performance and pinch points that could damage cable.

D. Provide bend limiters, if not built into the cable support, to maintain cable type bend radius whenever cable exists pathways or makes transition between two pathways.

E. Non-continuous cable supports shall be used in any area above the finished ceiling where cable tray is not available.

F. Adjustable non-continuous cable support slings shall be used in corridors as outlined on “TA”

G. Non-continuous cable supports

1. Cable Support: NRTL labeled for support of Category 6 cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.

2. Non-continuous cable supports shall provide a bearing surface of sufficient width to comply with required bend radii of high-performance cables; cULus Listed.

3. Non-continuous cable supports shall have flared edges to prevent damage while installing cables.

4. Non-continuous cable supports sized 1 5/16” and larger shall have a cable retainer strap to provide containment of cables within the hanger. The cable retainer strap shall be removable and reusable and be suitable for use in air handling spaces.

5. Non-continuous cable supports shall have an electro-galvanized or G60 finish and shall be rated for indoor use in non-corrosive environments.

6. Non-continuous cable supports shall be ERICO CableCatTM J-hook series CAT12, CAT21, CAT32, CAT64, CAT21SS, CAT32SS, CAT64SS; CAT-CMTM Double J-Hook CAT100CM; CAT-CMTM U-hook series CAT200CMLN, CAT300CMLN; and CAT-CMTM retainer CATRT200CM, CATRT300CM or approved equal.

H. Adjustable non-continuous cable support sling

1. Constructed from steel and woven laminate; sling length can be adjusted to hold up to 425 4-pair UTP; rated for indoor use in non-corrosive environments. Rated to support Category 5 and higher cable, or optical fiber cable; cULus Listed.

2. Adjustable non-continuous cable support sling shall have a static load limit of 100 lbs.

3. Adjustable non-continuous cable support sling shall be suitable for use in air handling spaces.

4. If required, assemble to manufacturer recommended specialty fasteners including beam clips, flange clips, C and Z purlin clips.

5. Acceptable products: ERICO CADDY CableCat™ CAT425; or approved equal.

I. Non-continuous cable support assemblies from drop wire/ceiling

1. Fastener to wire/rod with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments; cULus Listed.

2. Acceptable products: ERICO CADDY CAT124Z34, CAT126Z34, CAT214Z34, CAT216Z34, CAT324Z34 or CAT326Z34; or approved equal.

J. Non-continuous cable support assemblies from beam, flange

1. Fastener to beam or flange with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments; cULus Listed.

2. Acceptable products: ERICO CableCatTM J-hook series CAT12, CAT21, CAT32, CAT64 with CADDY beam clamps and CADDY flange clips; or approved equal.

K. Non-continuous cable support assemblies from C & Z Purlin

1. Fastener to C or Z purlin with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments, cULus listed.

2. Acceptable products: ERICO CableCatTM J-hook series CAT12, CAT21, CAT32, CAT64 with CADDY Purlin hangers; or approved equal.

L. Non-continuous cable support assemblies from wall, concrete, or joist

1. Fastener to wall, concrete, or joist with one non-continuous cable support, factory or jobsite assembled; rated for indoor use in non-corrosive environments, cULus listed.

2. Acceptable products: ERICO CableCatTM J-hook series CAT12, CAT21, CAT32, CAT64, with CADDY angle bracket; or approved equal.

M. Non-continuous cable support assemblies from threaded rod

1. Fastener to threaded rod with one non-continuous cable support, factory or jobsite assembled, rated for indoor use in non-corrosive environments, cULus Listed.

2. The multi-tiered support bracket shall have a static load limit of 300 lbs.

3. U-hooks and Double J-hook shall attach directly to threaded rod using standard nuts.

4. Acceptable products: ERICO CableCatTM J-hook, CAT12, CAT21, CAT32, CAT64 with CADDY CATHBA series; CAT-CMTM Double J-hook CAT100CM, CAT-CMTM Direct mount U-hook CAT200CMLN, CAT300CMLN; or AFAB series; or approved equal.

N. Raised floor non-continuous cable support assemblies

1. Fastener to raised (access) floor pedestal with one non-continuous cable support, factory or jobsite assembled, rated for indoor use in non-corrosive environments; cULus Listed.

2. Acceptable products: ERICO CADDY CAT12CD1B, CAT21CD1B or CAT32CD1B; CAT64CD1B; or approved equal.

O. Cantilever-Mounted cable supports

1. U-hook shall be able to be assembled to a wide variety of wall mount brackets.

2. Spacing of individual U-hooks as needed, max of 4’ to 5’ apart.

3. U-hooks may have the optional attachment of a cable roller for ease in pulling cables.

4. Acceptable products: ERICO CAT-CMTM U-hooks CAT200CMLN, CAT300CMLN: CAT-CM roller assemblies CATRL200CM, CATRL300CM; CATWMCM bracket; or approved equal.

2.3 METAL CONDUIT AND TUBING

A. Manufacturers:

1. AFC Cable Systems, Inc.

2. Alflex Inc.

3. Anamet Electrical, Inc.; Anaconda Metal House.

4. Electri-Flex Co.

5. Grinnell Co./Tyco International; Allied Tube and Conduit Div.

6. O-Z Gedney; Unit of General Signal.

7. Wheatland Tube Co.

B. Rigid Steel Conduit: ANSI C80.1.

C. IMC: ANSI C80.6.

D. EMT and Fittings: ANSI 80.3.

1. Fittings: Set-screw or compression type.

E. FMC: Zinc-coated steel.

F. LFMC: Flexible steel conduit with PVC jacket.

G. Fittings: NEMA FB 1; compatible with conduit and tubing materials.

2.4 METAL WIREWAYS

A. Manufacturers:

1. Hoffman.

2. Square D.

B. Material and Construction: Sheet metal sized and shaped as indicated, NEMA 1 for interior & NEMA 4 for exterior.

C. Fittings and Accessories: include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for complete system.

D. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70.

E. Wireway Covers: Flanged-and-gasketed type or As indicate.

F. Finish: Manufacturer's standard enamel finish.

2.5 SURFACE RACEWAYS

A. Surface Metal Raceways: Galvanized steel with snap-on covers. Finish with manufacturer's standard prime coating.

B. Manufacturers:

1. Airey-Thompson Sentinel Lightning; Wiremold Company (The).

2. Thomas & Betts Corporation.

3. Walker Systems, Inc.; Wiremold Company (The).

4. Wiremold Company (The); Electrical Sales Division.

C. Types, sizes, and channels as indicated and required for each application, with fittings that match and mate with raceways.

2.6 BOXES, ENCLOSURES, AND CABINETS

A. Manufacturers:

1. Coooper Crouse-Hinds; Div. Of Cooper Industries, Inc.

2. Emerson/General Signal; Appleton Electric Company.

3. Hoffman.

4. Hubbell, Inc.; Killark Electric Manufacturing Co.

5. O-Z/Gedney; Unit of General Signal

6. RACO; Division of Hubbell, Inc.

7. Robroy Industries, Inc.; Enclosure Division.

8. Spring City Electrical Manufacturing Co.

9. Thomas & Betts Corporation.

10. Walker Systems, Inc.; Wiremold Company (The)

B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.

C. Cast-Metal Outlet and Device Boxes: NEMA FB 1, Type FD, with gasketed cover.

D. Floor Boxes: Cast metal, fully adjustable, rectangular.

E. Small sheet Metal Pull and Junction Boxes: NEMA OS 1.

F. Cast-Metal Pull and Junction Boxes: NEMA FB 1, cast aluminum with gasketed cover.

G. Hinged-Cover Enclosures: NEMA 250, Type 1, with continuous hinge cover and flush latch.

H. Metal Enclosures: Steel, finished inside and out with manufacturer's standard enamel.

I. Cabinets: NEMA 250, Type 1, galvanized steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel. Hinged door in front cover with flush latch and concealed hinge. Key latch to match panelboards. Include metal barriers to separate wiring of different systems and voltage and include accessory feet where required for freestanding equipment.

J. FACTORY FINISHES

1. Finish: For raceway, enclosure, or cabinet components, provide manufacturer's standard paint applied to factory assembled surface raceways, enclosures, and cabinet before shipping.

2.7 FIRE STOP CABLE PASS-THRU SLEEVES

A. Manufacturers: Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and are limited to, the following:

1. Basis of design: Specified Technologies Inc.

2. Approved equal by:
   a. 3M Corporation
   b. Hilti Corporation
   c. Wiremold- Legrand Corporation

B. Fire Rated Cable Pathways: STI EZ-PATH Brand device modules comprised of steel raceway with intumescent foam pads allowing 0 to 100 percent cable fill, the following products are acceptable:

1. Specified Technologies Inc. (STI) EZ-PATH Series 44 Fire Rated Pathway

2. Specified Technologies Inc. (STI) EZ-PATH Series 33 Fire Rated Pathway

C. Fire stop sleeves located in the floor of each TR shall be quantity as shown on contract drawings STI EZ-path MAX Series 44 cast in concrete.

D. Horizontal cable pathway locations shall be quantity as shown on contract drawings.

2.8 FIRE STOP CABLE MODULAR FLOOR GRID SYSTEM

A. Manufacturers: Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and are limited to, the following:

1. Basis of design: Specified Technologies Inc.

2. Approved equal by:
   a. Hilti Corporation
   b. 3M Corporation

B. Fire stop sleeves located in the floor of TR's shall be STI EZ PATH Series 44 Modular Grid System quantities as shown on contract drawings.

1. Product EZDG444 single slot grid complete with EZ-PATH Series 44 modules.

2. Product EZG844 with EZD444MB pathway modules.

3. Product EZG1644 with EZD444MB pathway modules.

2.9 NON-RATED CABLE PASS-THRU SLEEVES

A. Manufacturers: Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and are limited to, the following:

1. Basis of design: Specified Technologies Inc.

2. Approved equal by:
   a. 3M Corporation
   b. Hilti Corporation
   c. Wiremold- Legrand Corporation

B. Non-Rated Cable Pathways: STI EZ-PATH Brand device modules The smoke and acoustical pathway shall contain a built-in sealing system and shall automatically adjust to the installed cable loading and shall permit cables to be installed, removed, or retrofitted without the need to remove or reinstall acoustical materials. The following products are acceptable:

1. Specified Technologies Inc. (STI) EZ Path® Series 44 NEZ Smoke and Acoustical Pathway

2. Specified Technologies Inc. (STI) EZ Path® Series 33 NEZ Smoke and Acoustical Pathway

3. SpecSeal® Smoke 'N' Sound Smoke and Acoustical Sealant
   a. SNS120W 20 Oz Sausage - 36 cu in (592 ml)
   b. SNS129W 730573111529 29 Oz Tube - 52 cu in (858 ml)
   c. SNS105W 730573111543 5 Gallon Pail - 1,155 cu in (19.0 L) (White)

C. Horizontal cable pathway locations greater than 20 cables fire stop sleeves shall be STI EZ-Path series 33 or 44 as needed for pathway cable capacity

D. Horizontal cable pathway locations fewer than 20 cables EMT sleeve with mineral or ceramic fiber stuffing insulation and smoke/acoustical Sealant.

E. Fill ratio for fire stop EMT sleeves shall not exceed 20% fill capacity.

2.10 GROUNDING

A. Comply with requirements in Division 27 05 26 "Grounding and Bonding for Communications Systems" for grounding conductors and connectors.

B. Comply with ANSI-J-STD-607-D.

2.11 LADDER RACK, SUPPORTS, AND ACCESSORIES

A. Ladder Rack (Universal Cable Runway)

1. Ladder rack shall be manufactured from 3/8" wide by 1-1/2" high tubular steel with .065" wall thickness.

2. Ladder rack (side stringers) will be 9'-11½" long. Cross members will be welded in between stringers on 12" centers beginning 5-3/4" from one end so that there are 10 cross members per ladder rack. There will be 10-1/2" of open space in between each cross member.

3. Ladder rack will be delivered individually boxed, and available in the multiple widths.

4. Finish shall be epoxy-polyester hybrid powder coat (paint) black in color.

5. Design Make: Chatsworths Products, Inc. (CPI), Universal Cable Runway: Part Number 10250-712, Universal Cable Runway, 12" Wide, Black 10250-718, Universal Cable Runway, 18" Wide, Black or approved equal.

6. Design Make: Chatsworths Products, Inc. (CPI), Universal Cable Runway: Part Number 10250-724, Universal Cable Runway, 24" Wide, Black placed in vertical positions or approved equal.

B. Ladder Rack Splices

1. Splice kits will provide a method of mechanically connecting ladder rack sections and turns together end-to-end or side-to-end to form a continuous pathway for cables.

2. Grounding kits will provide a method of bonding ladder rack sections and turns together that is independent of the pathway splices. The grounding kit should be constructed of UL Listed components. The preferred solution is a #6 AWG green insulated stranded copper

conductor connected on both ends to ladder rack using two-hole compression lugs and stainless steel hardware.

3. Splices (splice plates) will be manufactured from steel. Splice, grounding and insulator bar kits will include installation hardware.

4. Finish (of splice plates and hardware) shall be zinc plate in the color(s) specified below. Colors are applied as a chem. film over the zinc plate.

5. Design Make: Chatsworths Products, Inc. (CPI), Cable Runway Splices or approved equal.

C. Ladder Rack Supports

1. Supports will be sized to match the width of the ladder rack that is supported. Some supports will work with all widths of ladder rack.

2. Each support will include a means of securing ladder rack to the support.

3. Supports will be manufactured from steel or aluminum.

4. Finish shall be epoxy-polyester hybrid powder coat (paint) in the color(s) specified below or zinc plate with a gold chem. finish specified gold. Included hardware shall be zinc plated with a gold chem. finish.

5. Design Make: Chatsworths Products, Inc. (CPI), Cable Runway Supports or approved equal.

D. Ladder Rack Accessories

1. Cable straps used for attaching cable bundles to the ladder rack cross members must be reusable with a hook and loop-style closure, at least ¾” wide, and sized for cable bundles that are 2”, 3” or 4” in diameter.

2. Cable retaining posts used to keep cable from falling off of the side of the ladder rack shall be manufactured from 1” by ½” tubular steel with .065” wall thickness. Cable retaining posts will be 8” high and will attach to the side stringer of the ladder rack with included hardware. The top of the cable retaining posts will be fitted with a rubberized end cap to protect cables.

3. End caps used to cover the ends of ladder rack will be manufactured from a black fire-retardant rubberized material. End caps will be sized for 3/8” wide by 1-1/2” high side stingers and will be sold in pairs.

4. End closing kits used to cover the end of ladder rack will be manufactured from 3/8” wide by 1-1/2” high tubular steel with .065” wall thickness. Kits will consist of a bar cut to match the width of the ladder rack and the hardware required to attach the bar to the end of a length of ladder rack.

5. Radius drops used to create a radius to form cables over as the cables exit or enter the ladder rack will be manufactured from aluminum extrusion. The extrusion will be formed in a 90° arc with a minimum bend radius of 3”. Radius drops will attach to either the side stringer or the cross member of the ladder rack using a clevis pin. Radius drops will include 1-1/2” high cable spools that attach to the top of the radius drop to guide cables.

6. Movable cross members used to support cross member radius drops in between welded cross members on ladder rack will be manufactured from 3/8” by 1-1/2” aluminum bar. Movable cross members will attach to ladder rack at the side stringers with included hardware so that the location of the movable cross member can be adjusted. Moveable cross member will support a cross member radius drop.

7. Cable spools used to separate ladder rack into multiple cable pathways will be made from a black flame retardant ABS. Cable spools will attach to the cross members with a clip that allows the width of the ladder rack to be divided into any proportion. The spools will be 3.94” tall, with a 1.94” diameter top, and a body that tapers from .88” (diameter) at the top to .62” (diameter) at the bottom.

8. Auxiliary support brackets used to support cables that should be physically separated from the cables in the ladder rack will be made from 1/8” x 1” steel bar. The bracket will be L-shaped and will attach to the side stringer of the ladder rack. The bracket will hang below the ladder rack a minimum of 4”. The bracket support surface will be 4” long. The bracket will be zinc plated with a gold chem. finish.

9. Touch-up paint used on ladder rack and ladder rack system components will be color-matched to the finish on the ladder rack or component. A spray on and brush on option will be available.

10. Unless otherwise noted, finish on all metal components shall be epoxy-polyester hybrid powder coat (paint) black in color. Hardware will be zinc plated with a gold chem. finish.

11. Design Make: Chatsworths Products, Inc. (CPI), Cable Runway Accessories or approved equal.

2.12 BACKBOARDS

A. Backboards: Plywood, fire-retardant treated, 3/4 by 48 by 96 inches A-C Grade.

1. Provide materials that comply with performance requirements in AWPA C27. Identify fire-retardant-treated wood with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.

2. Use treatment for which chemical manufacturer publishes physical properties of treated wood after exposure to elevated temperatures, when tested by a qualified independent testing agency according to ASTM D 5516, for plywood.

B. All 4 walls shall be covered with rigidly fixed 3/4 inch A-C plywood with the A grade side facing outward. The plywood shall be void free and extend from 6 inches above the finished floor (AFF) to 102 inches AFF and capable of supporting the attached equipment.

C. Comply with requirements in Division 09 Section “Paints and Coatings" for fire-retardant plywood.

2.13 IDENTIFICATION PRODUCTS

A. Comply with TIA/EIA-606-C and UL 969 for labeling materials, including label stocks, laminating adhesives, and inks used by label printers.

B. Comply with requirements in Division 16 Section "Electrical Identification."

PART 3 - EXECUTION

3.1 RACEWAY APPLICATION

A. Comply with TIA/EIA-569-E for pull-box sizing and length of conduit and number of bends between pull points.

B. Outdoors:

1. Exposed: Rigid Steel

2. Concealed: Rigid Steel

3. Underground, Single Run: RNC.

4. Underground, Grouped: RNC.

5. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): LFMC.

6. Boxes and Enclosures: NEMA 250, Type 4.

C. Indoors:

1. Exposed: RNC.

2. Concealed: EMT.

3. Connection to Vibrating Equipment (Including Transformers and Hydraulic, Pneumatic, Electric Solenoid, or Motor-Driven Equipment): FMC; except use LFMC in damp or wet locations.

4. Damp or Wet locations: Rigid steel conduit.

5. Boxes and Enclosures: NEMA 250, Type 1, except as follows:
   a. Damp or Wet Locations: NEMA 250, Type 4, stainless steel

D. Minimum Raceway Size: 3/4-inch trade size (DN 21).

E. Raceway Fittings: Compatible with raceways and suitable for use and location.

F. Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.

3.2 CONDUIT AND RACEWAY INSTALLATION

A. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot water pipes. Install horizontal raceway runs above water and steam piping.

B. Complete raceway installation before starting conductor installation.

1. Support raceways as specified in Division 16 Section “Electrical Supports.”

2. Install temporary closures to prevent foreign matter from entering raceways.

C. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portions of bends are not visible above the finished slab.

D. Make bends and offsets so ID is not reduced. Keep legs of bends in the same plane and keep straight legs of offsets parallel, unless otherwise indicated.

E. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.

1. Install concealed raceways with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.

F. Raceways Embedded in Slabs: Not permitted, unless indicated otherwise on the drawings. Install in middle 1/3 of slab thickness where practical and leave at least 2 inches (50 mm) of concrete cover.

G. Install exposed raceways parallel or at right angles to nearby surfaces or structural members and follow surface contours as much as possible.

1. Run parallel or banked raceways together on common supports.

2. Make parallel bends in parallel or banked runs. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.

H. Join raceways with fittings designed and approved for that purpose and make joints tight.

1. Use insulating bushings to protect conductors.

I. Tighten set screws of threadless fittings with suitable tools.

J. Terminations:

1. Where raceways are terminated with locknuts and bushings, align raceways to enter squarely and install knockouts with dished part against box. Use two locknuts, one inside and one outside box.

2. Where raceways are terminated with threaded hubs, screw raceways or fittings tightly into hub so end bears against wire protection shoulder. Where chase nipples are used, align raceways so coupling is square to box; tighten chase nipple so no threads are exposed.

K. Install pull wires in empty raceways. Use polypropylene or monofilament plastic line with not less than 200-lb (90 kg) tensile strength. Leave at least 12 inches (300 mm) of slace at each end of pull wire. Pulling strings used for AV outlets and raceways shall have measuring indication on both ends.

L. Telephone and Signal System Raceways, 2-inch trade size (DN 53) and smaller: In addition to above requirements, install raceways in maximum lengths of 150 feet (45 m) and with a maximum of two 90-degree bends or equivalent. Separate lengths with pull or junction boxes where necessary to comply with these requirements.

M. Install raceway sealing fittings at suitable, approved, and accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box

with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points:

1. Where conduits pass from warm to cold locations, such as boundaries of refrigerated spaces.

2. Where otherwise required by NFPA 70.

N. Stub-up Connections: Exntend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment with rigid steel conduit; FMC may be used 6 inches (150 mm) above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections.

O. Flexible Connections: Use maximum of 72 inches (1830 mm) of flexible conduit for recessed and semirecessed lighting fixtures; for equipment subject to vibration, noise transmission, or movement; and for all motors. Use LFMC in damp or wet locations. Install separate ground conductor across flexible connections.

P. Surface Raceways: Install a separate, green, ground conductor in raceways from junction box supplying raceways to receptacle or fixture ground terminals.

Q. Trim after installation to fit flush with finished floor surface.

R. Install hinged-cover enclosures and cabinets plumb. Support at each corner.

3.3 INSTALLATION OF PATHWAYS

A. Pathway Installation in Communications Equipment Rooms:

1. Position conduit ends adjacent to a corner on backboard where a single piece of plywood is installed, or in the corner of room where multiple sheets of plywood are installed around perimeter walls of room.

2. Install cable trays to route cables if conduits cannot be located in these positions.

3. Secure conduits to backboard when entering room from overhead.

4. Extend conduits 3 inches (76 mm) above finished floor.

5. Install metal conduits with grounding bushings and connect with grounding conductor to grounding system.

3.4 NON-CONTINUOUS CABLE SUPPORTS

A. Installation and configuration shall conform to the requirements of the current revision levels of ANSI/ EIA/TIA Standards 568 & 569, NFPA 70 (National Electrical Code), applicable local codes, and to the manufacturer’s installation instructions.

B. Do not exceed load ratings specified by manufacturer.

C. Adjustable non-continuous support sling shall have a static load limit of 100 lbs.

D. Follow manufacturer's recommendations for allowable fill capacity for each size non-continuous cable support.

3.5 WIRING METHODS

A. Wiring Method: Install cables in raceways, J hooks, and cable trays except within consoles, cabinets, desks, and counters. Conceal raceway and cables accessible ceilings, walls, and floors except in unfinished spaces.

B. Install plenum cable in environmental air spaces, including plenum ceilings.

C. Wiring within Enclosures: Bundle, lace, and train cables to terminal points with no excess and without exceeding manufacturer's limitations on bending radii. Provide and use lacing bars and distribution spools.

D. Comply with BICSI TDMM for layout and installation of communications equipment rooms.

E. Provide equipment frames and ladder racking as outlined in telecommunications series drawings.

3.6 INSTALLATION TELECOMMUNICATIONS ROOMS

A. Bundle, lace, and train conductors and cables to terminal points without exceeding manufacturer's limitations on bending radii. Install lacing bars and distribution spools.

B. Bond the shield of any shielded cable to the grounding bus bar in communications rooms and spaces.

C. Backboards: Install backboards with 96-inch dimension vertical. Butt adjacent sheets tightly, and form smooth gap-free corners and joints.

D. Ladder Rack

1. Provide all components of the ladder rack system (ladder rack, turns, splices, supports, and accessories) from a single manufacturer.

2. Ladder rack shall be installed with side stringers facing down so that the ladder forms an inverted U-shape and so that welds between the stringers (sides) and cross members (middle) face away from cables.

3. Ladder rack shall be secured to the structural ceiling, building truss system, wall, floor or the tops of equipment racks and/or cabinets using the manufacturer's recommended supports and appropriate installation hardware and methods as defined by local code or the authority having jurisdiction (AHJ).

4. Ladder rack splices will be made in mid-span, not over a support, with the manufacturer's recommended splice hardware.

5. Ladder rack shall be supported every 5' or less in accordance with TIA-569-E. Ladder rack shall be supported within 2' of every splice and within 2' on both/all sides of every intersection. Support ladder rack within 2' on both sides of every change in elevation. Support ladder rack every 2' when attached vertically to a wall.

6. Heavy-duty splices are recommended for ladder rack in excess of 18” width (18” wide ladder rack). Heavy-duty splices are required for any splice formed in the vertical orientation including changes in elevation formed using vertical-to-horizontal 90° turns or horizontal-to-vertical 90° turns. Use heavy-duty splices to secure all overhead turns to the overhead horizontal pathway(s).

7. When the pathway is overhead, ladder rack shall be installed with a minimum clearance of 12” above the ladder rack. Leave a minimum of 12” in between ladder rack and ceiling/building truss structure. Leave a minimum of 3” in between ladder rack and the tops of equipment racks and/or cabinets. Multiple tiers of ladder rack shall be installed with a minimum clearance of 12” in between each tier of ladder rack. When located above an acoustical drop ceiling, leave a minimum of 3” clearance between the top of the drop ceiling tiles and the bottom of the ladder rack.

8. When installed under a raised floor, ladder rack shall be installed with a minimum 3” clearance between the top of the ladder rack and the bottom of the floor tiles or floor system stringers, whichever is lower in elevation. Maintain a 3” clearance between ladder racks wherever ladder racks cross.

9. Within each telecommunications room, ladder rack should be bonded together, electrically continuous, and bonded to the TGB, unless otherwise noted in the specifications and contract documents. Ladder rack and turns shall be bonded across each splice with a bonding kit. Ladder rack shall be bonded to the Telecommunications Grounding Busbar (TGB) using an approved ground lug on the ladder rack and a minimum #6 grounding wire or as recommended by the AHJ. Remove paint from the ladder rack where bonding/ground lugs contact the ladder rack so that the lug will contact bare metal. Use antioxidant joint compound in between the bare metal on the ladder rack and ground lug. Use antioxidant joint compound in between the bus bar and the ground lug. Verify continuity through the bonds at splices and intersections between individual ladder rack sections and turns and through the bond to the TGB.

10. The quantity of cables within the ladder rack will not exceed a whole number value equal to 50% of the interior area of the ladder rack divided by the cross-sectional area of the cable. The interior area of ladder rack will be considered to be the width of the ladder rack multiplied by a height of 2”, unless cable retaining posts are added to the ladder rack. The interior area of ladder rack equipped with cable retaining posts will be considered to be the width of the ladder rack multiplied by a height of 6”. Actual cable fill for ladder rack that is not equipped with cable retaining posts will not exceed 2” in height. Actual cable fill for ladder rack equipped with cable retaining posts will not exceed 6” in height.

11. The combined weight of cables within the ladder rack will not exceed the stated load capacity of the ladder rack as stated in the manufacturer’s product specifications or load/design tables.

12. Cables (cable bundles) will be secured to the cross members of ladder rack with ¾” wide reusable straps. Straps are not required when ladder rack is equipped with cable retaining posts.

13. Add 8” high cable retaining posts to the open sides of ladder rack when cable fill exceeds 2” in height or when cable bundles cannot be secured directly to the ladder rack cross members with a strap. Cable fill within any ladder rack should not exceed 6” in height.

14. When a single ladder rack supports different types of cable media, the cable media will be separated within the pathway by cable spools that attach to the cross members on the

ladder rack. Treat each type of cable media and divided area of the ladder rack separately when determining cable fill limits.

15. Use a radius drop to guide cables wherever cable exits overhead ladder rack to access a rack, frame, cabinet or wall-mounted rack, cabinet or termination field. If necessary, provide a moveable cross member also to attach and align the radius drop in between the welded cross members of a ladder rack.

16. Cover the exposed ends of cable runway that do not terminate against a wall, the floor or the ceiling with end caps or an end closing kit.

17. Use auxiliary support brackets that attach to the side stringer of the ladder rack to support interconnect cabling (patch cords, equipment cords, jumper cords) that is routed between racks using the ladder rack. Auxiliary support brackets can be used to support other conductors that should be physically separated from cables within the ladder rack as defined by local code or the authority having jurisdiction (AHJ).

18. Whenever possible, maintain a 2’ separation between ladder rack used for communications cables and pathways for other utilities or building services.

19. Provide touch-up paint color-matched to the finish on the ladder rack and correct any minor cosmetic damage (chips, small scratches, etc.) resulting from normal handling during the installation process prior to delivery. If a component is cosmetically damaged to the extent that correction in the field is obvious against the factory finish, the component will be replaced with a new component finished from the factory. If a component is physically damaged due to mishandling or modification during the installation process, it shall not be used as part of the ladder rack system.

3.7 FIRESTOPPING

A. Comply with requirements in Division 07 Section "Penetration Firestopping."

B. General: Install through-penetration firestop systems in accordance with Performance Criteria and in accordance with the conditions of testing and classification as specified in the published design.

C. Install EZ Path Series 44 in Telecommunications Rooms as shown on contract drawings.

D. Install EZ Path or EMT sleeve where horizontal cables penetrate a fire or smoke rated wall.

E. Manufacturer’s Instructions: Comply with manufacturer’s instructions for installation of firestopping products.

F. Comply with TIA/EIA-569-E, "Firestopping."

G. Comply with BICSI TDMM, "Firestopping Systems" Article.

H. Any penetrations created for the passage of telecommunications shall be fire stopped.

I. Install fire stop units as per manufactures Instructions.

3.8 GROUNDING

A. Install grounding according to BICSI TDMM, "Grounding, Bonding, and Electrical Protection" Chapter.

B. Comply with requirements in division 270526 “Grounding and Bonding for Communications Systems” for grounding conductors and connectors.

C. Comply with ANSI-J-STD-607-D.

D. Bond metallic equipment to the grounding bus bar, using not smaller than No. 6 AWG equipment grounding conductor.

3.9 IDENTIFICATION

A. Identify system components complying with TIA/EIA-606-C. Comply with requirements for identification specified in Division 16 Section "Electrical Identification."

B. Comply with requirements in Division 9 Section "Interior Painting" for painting backboards. For fire-resistant plywood, do not paint over manufacturer's label.

3.10 REPAIR/RESTORATION

1. Provide final protection and maintain conditions that ensure coatings, finishes, and cabinets are without damage or deterioration at time of substantial completion.

2. Protect adjacent surfaces. Repair damage to any surfaces occurring as a result of the work of this Section. Repair of surfaces shall include re-painting in accordance with Division 09 Section “Painting.”

3. Repair damage to galvanized finishes with zinc-rich paint recommended by manufacturer.

4. Repair damage to PVC or paint finishes with matching touchup coating recommended by manufacturer.

3.11 CLEANING

A. After completing installation of exposed, factory-finished raceways and boxes, inspect exposed finishes and repair damaged finishes.

B. At the completion of the System, restore aspects of the project site to its former condition. Remove daily waste and excess materials, rubbish debris, tools and equipment resulting from or used in the services provided under this Contract. Remove trash from all work areas. Do not use dumpsters or trash disposal without prior approval.

END OF SECTION 27 05 28

SECTION 27 05 28.36 - CABLE TRAYS FOR COMMUNICATIONS SYSTEMS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Continuous, rigid, welded steel wire mesh cable tray system used in industrial, commercial, and telecommunications applications

B. Cable tray systems are defined to include, but are not limited to, straight sections, supports and accessories.

1.2 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.3 SUMMARY

A. Related Sections:

1. Comply with Section 27 10 00, “Telecommunications Structured Cabling,” for voice and data cabling associated with system panels and devices.

B. Bidding Requirements:

1. Submit complete detailed proposals with line item cost representation for components and associated installation labor. Lump sum bids will not be accepted.

2. Include as part of the bid response the following items:
   a. Installation schedule with proposed manpower assignments.
   b. Resumes for project manager and lead technician for this project.

3. Review associated electrical, audiovisual, and telecommunications infrastructure drawings to verify that necessary conduit and boxes will be provided. Understand and coordinate shared infrastructure locations for AV and voice/data outlets. No additional infrastructure to support the telecommunications cabling systems (inside plant/outside plant) will be provided. Any discrepancies with the identified infrastructure to support these systems should be questioned in the form of a request for information (RFI) during the bidding process. Be responsible for any additional infrastructure requirements after receipt of contract for this project.

4. No wiremold or surface mounted raceways shall be approved on this project except where explicitly identified.

1.5 SYSTEM DESCRIPTION

A. This section outlines the performance for the noted cable tray support systems, as indicated on the low voltage drawings. The tray system shall provide a common raceway for telecommunications cable into and out of the Telecommunications Rooms (TR). Cable tray systems shall also be installed above finished ceiling in the common area hallways that are located on all floors of the building. The common area cable tray is intended to support telecommunications cabling from any of the station cable wall/floor outlet locations on any floor. Each station cable wall/floor outlet shall have a configuration of conduit pipe run to the tray system to support the aforementioned station cabling. It is intended to have this tray system transition (via a Cable Dropout or Runway Radius Drop) into the ladder tray installed above the noted equipment racks within the TR's.

1.6 DESIGN REQUIREMENTS

A. Maximum Deflection between Supports: L/240

1.7 SUBMITTALS

A. Related Sections

1. Comply with requirements of Section 01 33 00, "Submittal Procedures."

B. Submittal Data

1. Submittal data is to be submitted as a complete, single digital file. All documents shall be clearly legible. Each submittal shall contain the below in the following order:
   a. Cover Sheet
      1) Include name of supplying contractor and project name.
      2) Include submittal and revision number.

b. Detailed Bill of Materials
   1) Include a listing of: component quantities, equipment manufacturers, model numbers, descriptions of each component being supplied, and the specification paragraphs or drawing sheets that correspond to each product.
   2) The bill of materials shall be index referenced within the PDF file so that each product name is clickable, linked to the first page of the corresponding product data.
   3) Failure to provide this information will result in the rejection of submittals.
c. Product Data
   1) Include a catalog sheet per product of equipment listed in the Detailed Bill of Materials, in the exact order as the Detailed Bill of Materials. Each catalog sheet shall describe mechanical, electrical and functional equipment specifications. The catalog sheet must also include an image of the product.
   2) Photocopy duplications of the manufacturer's original equipment catalog sheets will be allowed if they provide adequate clarity of both the printed word and graphics/pictures.
   3) If more than one product is shown on the catalog sheet the intended product must be denoted by either an arrow or highlight. All optional components and selections shall be clearly indicated.
d. Prequalification Certificate.
   1) Copy of the installing technician(s) certificate of completion from the manufacturer's training school for the equipment being provided.
e. Manufacturer Qualifications
   1) Submit manufacturer's certification indicating ISO 9002 quality certified.
f. Design Calculations
   1) Verify loading capacities for supports.
g. Submit Factory-certified test reports of specified products, complying with IEC 61537, NEC, and NEMA VE 1/CSA C22.2 No. 126.1.

C. Shop Drawings

1. Prior to fabrication submit contractor-generated drawings for approval for all supplied systems. These drawings shall include, but are not limited to, the following:
   a. Title Sheet with sheet index and symbols legend
   b. Coordination Drawings: Include floor plans and sections drawn to scale. Include scaled cable tray layout and relationships between components and adjacent structural and mechanical elements. Data presented on these drawings are as accurate as preliminary surveys and planning can determine. Field verification of all dimensions, routing, etc., is directed.
   c. Cable Tray Drawings: Submit drawing indicating materials, finish, dimensions, and accessories. Show layout, support, and installation details.

2. Drawings should be at project standard scale and clearly legible.

3. Resubmission of contract drawings does not constitute a complete shop drawings submittal and is unacceptable. Such submittals will be rejected.

D. Form

1. Submit all materials for review as described above, specifically referenced to the specification paragraph number (where applicable).
   a. Submit all drawings on sheets of one size, preferably the project standard size.
   b. On submittal drawings, maintain 3/32" minimum lettering height. Submittals with text less than 1/16" in height may be rejected.

2. Partial Submittals may be rejected. If submitted individually and each in its entirety, the following submittals shall not be considered partial:
   a. Personnel
   b. Milestones
   c. Conduit Verification Statement and Notifications
   d. Rigging and Mounting Drawings
   e. As-Built Documentation

3. Product Data and shop drawings must be submitted together in order to be reviewed.

1.8 QUALITY ASSURANCE

A. Source Limitations: Obtain cable tray components through one source from a single manufacturer.

B. Manufacturer Qualifications: ISO 9002 quality certified

C. Comply with NFPA 70. National Electrical Code, Article 392: Cable Trays; provide UL Classification and labels.

D. Provide ETL test documentation showing cable compression/deformation testing.

1.9 COORDINATION

A. Coordinate layout and installation of cable tray with other installations.

1. Revise locations and elevations from those indicated as required to suit field conditions and as approved by the Architect.

B. Storage and Handling: Avoid breakage, denting and scoring finishes. Damaged products will not be installed. Store cable trays and accessories in original cartons and in clean dry space; protect from weather and construction traffic. Wet materials will be unpacked and dried before storage. Protect materials and finishes during handling and installation to prevent damage

C. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly indicating manufacturer and material.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Manufacturers: Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and are limited to, the following:

1. Cablofil, Inc. (Basis of design)

2. NVent/WBT

3. Bline

4. Chatsworth

5. Snake Tray

6. approved equal.

2.2 CABLE TRAY SYSTEM

A. Description: Cablofil EZ Tray continuous, rigid, welded steel wire mesh cable tray system

1. Mesh System: Permits continuous ventilation of cables and maximum dissipation of heat

2. Safety Edge: Continuous safety edge T-welded wire lip

3. Wire Mesh: Welded at all intersections

B. UL Classification: Straight sections 4 x 8, 12, 18 and 24 inches (108 x 200, 300, 450, and 600 mm), UL classified. Width of tray shall be determined based on not exceeding industry standards for fill ratios.

C. Material: Carbon steel wire, ASTM A 510, Grade 1008. Wire welded, bent, and surface treated after manufacture

D. Finish for Carbon Steel Wire: Finish applied after welding and bending of mesh

1. Electro-Plated Zinc Galvanizing: ASTM B 633, Type III, SC-1

2. Hot-Dip Galvanizing: ASTM A 123

E. Nominal Dimensions:

1. Mesh: 2 x 4 inches (50 x 100 mm)

2. Straight Section Lengths: 80 inches (2,000 mm) and 118 inches (3,000 mm)

3. Width: Cable tray widths shall be selected based on cable density. No tray shall exceed 50% manufacturer’s stated capacity at time of initial installation.
   a. 2 inches (50 mm)
   b. 4 inches (100 mm)
   c. 6 inches (150 mm)
   d. 8 inches (200 mm)
   e. 12 inches (300 mm)
   f. 18 inches (450 mm)
   g. 24 inches (600 mm)

4. Depth: 4 inches (108 mm)

5. Wire Diameter: 0.177 inch (4.5 mm), minimum

F. Fittings: Field fabricated in accordance with manufacturer's instructions from straight sections

G. Support System: Standard

1. Wall Installation: CS Bracket. Maximum tray width of 12 inches (300 mm)

2. Trapeze Mounting to Ceilings: CS Profile. Maximum tray width of 18 inches (450 mm)

3. Ceiling Installation: CSC Bracket. Maximum tray width of 12 inches (300 mm)

4. Fasteners: As required by tray widths. Furnished by manufacturer.

H. Support System: Caloric FAS System

1. Floor and Wall Installation: FAS Profile

2. Wall Installation:
   a. FAS Universal Bracket. Maximum tray width of 24 inches (600 mm)
   b. FAS L Bracket. Maximum tray width of 12 inches (300 mm)

3. Ceiling Installation: FAS C Bracket. Maximum tray width of 12 inches (300 mm)

4. Fasteners: Not required

I. Hardware: Hardware, including splice connectors and support components, shall be furnished by the manufacturer.

2.3 ACCESSORIES

A. Shielding Divider Strips: Divider strips to follow contour of cable tray run for shielding to run power and control cables in same tray. Pre-galvanized steel, [4 x 1-1/2 inches (108 x 30 mm)]

B. Fittings: Provide tees, crosses, risers, elbows, radius tees, and other fittings as indicated, of the same materials and finishes as cable tray.

C. Grounding: Provide GNDSB grounding lugs for attachment on tray of continuous ground conductor fixing system.

2.4 FIRE STOP CABLE PASS-THRU SLEEVES

A. Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and arelimited to, the following:

1. Basis of design: Specified Technologies Inc.

2. Approved equal by:
   a. 3M Corporation
   b. Hilti Corporation
   c. Wiremold- Legrand Corporation

B. Fire Rated Cable Pathways: Provide STI EZ-PATH ™ Brand device modules comprised of steel raceway with intumescent foam pads allowing 0 to 100 percent cable fill. The following products are acceptable:

1. Specified Technologies Inc. (STI) EZ-PATH Series 44 Fire Rated Pathway

2. Specified Technologies Inc. (STI) EZ-PATH Series 33 Fire Rated Pathway

PART 3 - EXECUTION

3.1 EXAMINATION

A. Exam areas to receive cable management system. Notify the Architect of conditions that would adversely affect the installation or subsequent utilization of the system. Do not proceed with installation until unsatisfactory conditions are corrected.

3.2 INSTALLATION

A. Install cable tray level and plumb according to manufacturer's written instructions, Coordination Drawings, original design, and referenced standards.

B. Install cable management system at locations indicated on the drawings and in accordance with manufacturer's instructions. Install the cable tray system directly above the racks positioned within the space to allow for ease in cable management to and from the racks. Provide firestopping at penetration into/out of all telecommunications rooms.

C. Load Span Criteria: Install and support cable management system in accordance with span load criteria of L/240.

D. Cutting:
   a. Cut cable tray wires in accordance with manufacturer’s instructions.
   b. Cable tray wires must be cut with side-action bolt cutters with offset head to ensure integrity of protective galvanic layer.
   c. Remove burrs and sharp edges from cable trays.

E. Install cable management system using hardware, splice connectors, support components, and accessories furnished by manufacturer.

F. Install expansion connectors where cable tray crosses building expansion joint and in cable tray runs that exceed 90 feet.

G. Ground cable tray according to manufacturer’s written instructions.

H. The cable tray and ceiling installation shall allow for re-entry to accommodate additional cable to be pulled from all occupied spaces to their respective IDF locations on each floor. Provide the following clearance for all installation locations.

   1. A minimum of 3” clear vertical space between ceiling tile and cable tray.

   2. A minimum of 8” access headroom above the cable tray system

   3. Enough clearance on both sides of the tray to maintain accessibility with a human hand.

I. Provide bend limiters to maintain cable type bend radius whenever cable exists cable tray into TR rooms.

J. Provide radius kits at all 90-degree turns.

K. Certified Installers: Cable tray installers must have successfully completed Cablofil’s Certified Installer program.

3.3 FIRESTOPPING

A. Firestopping In Telecommunications Room at Cable Tray Entrance

1. Install EZ Path Series 44 as shown on contract drawings.

B. Firestopping where cable tray passes through a rated wall assembly.

1. Install quantity of EZ Path series 33 or series 44 to 100% fill ratio of the size of cable tray at entrance to opening.

C. General: Install through-penetration firestop systems in accordance with Performance Criteria and in accordance with the conditions of testing and classification as specified in the published design.

D. Manufacturer’s Instructions: Comply with manufacturer’s instructions for installation of firestopping products.

END OF SECTION 27 05 28.36

SECTION 27 41 13 - MULTIMEDIA SYSTEMS FLOORBOX

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Multimedia Systems Floorboxes

1.2 PERFORMANCE REQUIREMENTS

A. General: Floor boxes provide interface between power, audiovisual, and telecommunications cabling in concrete floors and decks at workstations or at activation locations requiring power, audiovisual, or communication device outlets.

1. ADA Compliance: Flush-mounted floor device outlets shall not create tripping hazards.

B. Floor Mounted Connector Assembly: Watertight, rubber cable pass thru gasketed door and cover assembly, utilizing basket and connector mounting panel inserts. Customize cover/door opening so that cable pass-thru will accommodate the bundle of AV cabling specified, while maintaining the ability to fully close with cables connected.

C. Labeling: Floor boxes shall bear the “cULus mark” issued by UL for units complying with both US and Canadian Standards.

D. Standards: Comply with the following:

1. UL 514A

2. National Electrical Code

1.3 SUBMITTALS

A. Related Sections

1. Comply with requirements of Section 01 33 00, “Submittal Procedures.”

B. Submittal Data

1. Submittal data is to be submitted as a complete, single digital file. All documents shall be clearly legible. Each submittal shall contain the below in the following order:
   a. Cover Sheet
      1) Include name of supplying contractor and project name.
      2) Include submittal and revision number.
   b. Detailed Bill of Materials
      1) Include a listing of: component quantities, equipment manufacturers, model numbers, descriptions of each component being supplied, and the specification paragraphs or drawing sheets that correspond to each product.
      2) The bill of materials shall be index referenced within the PDF file so that each product name is clickable, linked to the first page of the corresponding product data.

3) Failure to provide this information will result in the rejection of submittals.

c. Product Data
   1) Include a catalog sheet per product of equipment listed in the Detailed Bill of Materials, in the exact order as the Detailed Bill of Materials. Each catalog sheet shall describe mechanical, electrical and functional equipment specifications. The catalog sheet must also include an image of the product.
   2) Photocopy duplications of the manufacturer's original equipment catalog sheets will be allowed as long as they provide adequate clarity of both the printed word and graphics/pictures.
   3) If more than one product is shown on the catalog sheet the intended product must be denoted by either an arrow or highlight. All optional components and selections shall be clearly indicated.
   4) Indicate floor box models, trim, finish, and accessories.

2. Informational Submittals
   a. Submit Manufacturer's installation instructions.

3. Partial submittals, or submittals comprised of multiple PDF files, will not be accepted.

C. Photographs

1. Submit photographs of each placed floorbox with associated conduit prior to slab pour.

D. Shop Drawings

1. Prior to fabrication submit contractor-generated drawings for approval for all supplied systems. These drawings shall include, but are not limited to, the following:
   a. Title Sheet with sheet index and symbols legend
   b. All panels, plates, and designation strips, including connectivity, layout, labeling, and details relating to terminology, engraving, finish and color
   c. All unusual equipment modifications
   d. Equipment location drawings, dimensioned to column lines
   e. Include detailed elevation drawings, showing conduit runs and associated box knockout locations
   f. Furniture coordination drawings, depicting planned cable pathway to furniture raceway or outlets, where applicable

2. Drawings should be at project standard scale and clearly legible.

3. Resubmission of contract drawings does not constitute a complete shop drawings submittal and is unacceptable. Such submittals will be rejected.

E. Form

1. Submit all materials for review as described above, specifically referenced to the specification paragraph number (where applicable).
   a. Submit all drawings on sheets of one size, preferably the project standard size.
   b. On submittal drawings, maintain 3/32" minimum lettering height. Submittals with text less than 1/16" in height may be rejected.

2. Partial Submittals may be rejected. If submitted individually and each in its entirety, the following submittals shall not be considered partial:
   a. Personnel
   b. Milestones

c. Conduit Verification Statement and Notifications
d. Rigging and Mounting Drawings
e. As-Built Documentation

3. Product Data and shop drawings must be submitted together in order to be reviewed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Subject to compliance with the specified requirements, provide products by one of the following available manufacturers. Manufacturers offering products that may be incorporated into the work include, and are limited to, the following:

1. Legrand/Wiremold
2. Approved equal

B. Multimedia Systems Floorbox:

1. In-slab: EFB8S-OG

2. Raised floor: EFB8S

3. Fire classified: EFB8S-FC

2.2 MATERIALS

A. Door and Cover: Not lighter than 11-gauge steel with integral, self-trimming carpet trim ring. Mount trim ring flush with floor covering. Secure with security socket head screws.

1. Finish: Satin black coating

2. Trim: Door, cover, and integral trim ring shall have radiused corners.

B. Device Plates

1. Provide device plates as detailed on drawings.

2. Provide blank plates for all unused openings.

C. In-slab Boxes

1. 11-gauge steel, 15 13/16 inches by 12 3/4 inches by 6 1/16 inches deep

2. Mount on manufacturer’s backbox.

D. Raised floor Boxes

1. 11-gauge steel, 15 13/16 inches by 12 3/4 inches by 6 1/16 inches deep

2. Provide toggle clamps to allow box to be secured to raised floors.

E. Fire classified floor Boxes

1. 11-gauge steel, 15 13/16 inches by 12 3/4 inches by 6 1/16 inches deep

2. Provide fire-rated backbox and install per manufacturer's instructions.

3. All boxes shall maintain a minimum of 1 hour of fire rating.

F. Provide pull strings in each conduit at floor box location. Coordinate conduit to box knockout location with telecommunication cabling and audiovisual systems requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. The minimum concrete pour depth shall be 7 inches less decking. For pour depths less than 7 inches, provide structural bracing and firestopping as necessary.

B. With Installer present, verify that manufacturer's requirements for floor opening and infrastructure conditions have been satisfactorily met. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Arrange for jobsite approval of the equipment prior to installation.

B. Verify exact locations of floorbox installation.

C. Coordinate all box locations with furniture onsite prior to installation.

3.3 INSTALLATION

A. Install equipment in compliance with approved shop drawings and manufacturer's installation instructions.

B. Install in position and relationship to adjoining work indicated, securely anchored to supporting structure, sealed and finished, and in a manner which produces a level box with square, plumb, and straight edges.

C. Coordinate installation with floor covering to finish each floor box. Install floor covering with oversized cable management pop-up pass-thru in top, matching surrounding floor covering in cover insert.

3.4 ADJUSTING

A. Adjust door/cover for proper operation.

3.5 PROTECTION

A. Protect installed equipment in original undamaged condition until Substantial Completion. Replace damaged components for units that cannot be repaired prior to Substantial Completion.

END OF SECTION 27 41 13

SECTION 27 60 00

EMERGENCY RESPONDER RADIO COMMUNICATION SYSTEM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions, and Division 01 Specification Sections, apply to this section.

1.2 SUMMARY

A. Provide a complete Emergency Responder Radio Repeater System (ERRCS) for the entire building(s) and/or structure(s) included in this project. The system(s) shall comply with the latest specifications and standards of NFPA 72, and shall meet all requirements of International Building Code IBC Section 915, and the International Fire Code IFC Section 510.

B. The ERRCS shall be approved by the city, county or local AHJ and shall amplify the agency's two-way radio signals to provide adequate radio coverage throughout the building or structure for first responders.

C. The system design, components and performance shall meet all operational requirements of the Fire Department and other agencies in the jurisdiction in which system shall be installed.

D. Section Includes:

1. System design.
2. Rooftop donor antenna(s).
3. Bi-directional amplifiers (BDA's).
4. Battery backup system.
5. Equipment racks and supports.
6. Remote annunciators.
7. Indoor distributed omni-directional antennas.
8. Coaxial and fiber optic cables.
9. Splitters.
10. Grounding.
11. Terminations, connections, clamps and all misc. hardware.
12. Testing and commissioning.
13. Adjustments.

E. Related Sections:

1. Section "Common Work Results For Electrical."
2. Section "Grounding & Bonding For Electrical Systems" for grounding, bonding and interconnection of equipment to building and service grounds.
3. Section "Raceways & Boxes for Electrical Systems" for conduit, raceway and box requirements.
4. Section "Low Voltage Electrical Power Conductors and Cables" for cabling requirements.

F. Permits and Fees:

1. Apply for, make payment, secure and obtain all necessary and required permits relative to work of this section.
2. System designer/installer shall submit all system information, design, etc. to the Fire Department and local Building Permit/Inspection Department for review and approval.

1.3 SYSTEM DESCRIPTION

A. Design Requirements:

1. System design shall be by certified technician or registered Professional Engineer specifically trained and qualified in the design of Emergency Responder Radio Communication Systems, distributed antennae systems and emergency communications.
2. Designer shall estimate ERRCS signal levels at the donor location and provide a detailed system design that will meet the coverage and capacity requirements of the AHJ. System shall be designed to provide better than -90 dBm coverage to greater than 95% of the structure, as required by applicable Codes.
3. The system shall consist of directional amplifiers with a discrete distributed antenna system.
4. Address all areas that typically have poor communications, including:
   a. Below grade rooms, rooms and floors
   b. Parking garages
   c. Stairwells
   d. Elevators and machine rooms
   e. Areas surrounded by metal and/or concrete.
5. ERRCS shall support all local First Responder's radio network frequencies. It shall operate at the Fire Command Center and elevators, elevator lobbies, emergency and standby power rooms, standpipe hose connection locations, the building engineer's office, mechanical and electrical rooms, elevator equipment rooms, fire pump rooms, areas of refuge, entries into required exit stairways, rooms containing the main electrical service disconnecting means, stair enclosures, penthouses, and basements shall also be transparent to communication signals.
6. Amplifiers shall be powered by a dedicated uninterruptible power source (UPS) with a minimum backup time of twelve (12) hours with all amplifiers at rated output. The UPS input circuit shall be a dedicated circuit and connected to the emergency/standby generator.
7. All components, cables, and system shall be sized and selected for complete and functional system.
8. Design shall appear as a part of the building or structure, with conductors concealed within columns, walls and above ceilings, where possible and practicable.
9. System components shall be located or rated for required system survivability, including routing of riser cables within 2-hour rated enclosures/chases/rooms or use of 2-hour rated cables.
10. Select locations for equipment, which shall minimize need to disturb for future building maintenance and repair of roofing. Cable runs on roof surface shall be minimized, where practicable.

B. Performance Requirements: This is a performance specification. It is the full responsibility of the designer/installer to insure that the design and installation conforms

to all applicable standards and Codes, and is acceptable to the AHJ.

C. Antenna Isolation: Provide antenna isolation of 15 db higher than the gain of the amplifier per NFPA. If required for proper isolation, provide directional antenna(s) in addition, or in place of omnidirectional antenna(s) to provide for proper coverage and signal strength and antenna isolation.

D. Local System Compatibility: System installation, components and performance shall be fully compatible with:
1. Baltimore County, to ensure their macro radio network is not disrupted.
2. System shall operate on both 700MHz and 800MHz.

1.4 SUBMITTALS

A. General: Submit each item in this Section according to the conditions of the contract and Division 01 Specification Sections.

B. Submittals shall also comply with the submittal procedures and requirements of electrical Specification Sections.

A. Submittal Requirements of this section:

1. Roof plan showing donor antenna location(s).
2. Indoor plans for each level showing antennae, risers, splitters, amps, etc.
3. Antennas and mounting and anchoring components.
4. Amplifiers.
5. Equipment racks, enclosures, etc.
6. Cables and associated terminations and connectors.
7. Ground and bonding connections.
8. Indoor active amplifiers and/or repeater devices.
9. Indoor omni-directional antennas.
10. Battery Backup Units.
11. All other miscellaneous hardware.

B. Descriptive Data:

1. Manufacturer's specifications, data sheets.
2. Catalog cuts.
3. Dimensional drawings.
4. Installation Instructions.
5. Clearly indicate the exact size or rating proposed.
6. To verify specifications have been met/exceeded.
7. UL Listing of each component individually.
8. Clearly indicate or state options, etc.:
   a. Manufacturer/cat. number.
   b. Construction data, materials, as applicable.
   c. Label each conductor or cable type, and its proposed application or location.
   d. Identify each component with a cross reference to the drawings.
   e. Drawings and installation instructions.
   f. Details to demonstrate that the system has been coordinated and will function as one unit.

C. System Design Drawings:

1. Identify each component used in the system.
2. Indicate all building penetrations, and method proposed at each location.
3. Indicate attaching methods for all components.
4. Indicate proposed layout, including relationship to other parts of work.
5. Drawings shall be stamped and signed by a licensed professional engineer experienced in the design of RF systems.

D. Floor Plans & Elevations:

1. Scaled Floor Plans of each building level shall be furnished, to indicate:
   a. Scaled floor plans of all building areas and floor plans.
   b. Location and type of all proposed devices.
   c. Minimum of (1) building elevation depicting the location of any/all outdoor antennas. Include height of antenna centerline above building, orientation, and location of all external grounding connections.
   d. Detail elevation view(s) of all rack(s) and/or enclosure(s) housing the Emergency Responder Radio Communication System equipment. Identify each piece of equipment by brand, model number and equipment type (e.g. RF amplifier).

E. Wiring Diagrams:

1. Wiring connection diagrams for each proposed component.
2. Schematic wiring diagram for entire system, showing all connected devices, cable types, cable sizes, etc.
3. Differentiate clearly between factory and field-installed wiring.
4. Indicate all points of connection between proposed system and other systems, such as AC power connections.

F. Approval of Authority Having Jurisdiction:

1. Submit copies of Shop Drawings to Authority having Jurisdiction. Submit for review and approval, as required for permit.
   a. Proposed system and all components.
2. Comply with all comments. Make necessary corrections.
3. Provide copy of all written comments and direction to Owner and Architect.

G. Closeout Submittals: Submit in accordance with the General Conditions and Division 01 requirements, and Section “Common Work Results for Electrical”, and as follows:

1. Operational Information: Provide full instruction manual to cover all aspects and components of the installed system and to be used to supplement the Owner Demonstration:
   a. System equipment locations.
   b. Component reset.
   c. Power on/off procedures.
2. Installed Product Data: Product data sheets for all electronic equipment, fiber and coaxial cable, splitters, couplers and antennas
3. Maintenance Data: Provide for all equipment and accessories to include in the "Operating and Maintenance Manual" specified in Division 01.
   a. Include recommended periodic tests of equipment in service, and test parameters. Provide manufacturer’s recommended test procedures,

frequency and type of tests.
b. Specify cleaning procedures for all components.

4. As-Built Drawings: Provide three (3) full-size copies of all plans, drawings and schematics to the owner after the acceptance test. The drawings shall show all terminal designations, location of all junction boxes, terminal cabinets, devices, wiring and conduit routings. Drawings, etc. shall be delivered as part of the O&M Manual package.
5. As-built system design documentation including design assumptions, power budgets, system block diagram, and floor plans showing cable routing, antenna locations, and equipment locations.
6. Post Installation signal strength test results, indicating acceptable transmit/receive signals in all building areas.
   a. Results of test showing RSSI and MOS scores measured at discrete points within a 50’ or less grid pattern verifying >95% coverage at -90 dBm or greater.
   b. RSSI levels at each interior antenna.
   c. BDA commissioning documentation including date of commission, actual off-air downlink levels at the donor antenna and BDA, isolation between the donor antenna(s) and the DAS, and BDA gain and AGC settings.

1.5 ELECTRONIC AUTOCADD DOCUMENTS

A. Requests for electronic Autocadd documents will be accommodated to the contractors and installers upon receipt of Bowman’s Electronic Document Release Form. Refer to Section “Common Work Results for Electrical” for additional information.

1.6 QUALITY ASSURANCE

A. Listing and Labeling: Provide products specified in this Section that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in the National Electrical Code, Article 100 (NEC).
2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.
3. Where equipment consists of multiple components, the entire assembly or product shall be UL Listed and Labeled, or Labeled by a testing organization acceptable to the Authority Having Jurisdiction per the NEC.

B. Manufacturer’s Requirements:

1. Engaged in manufacturing of distributed antenna systems and equipment for emergency responders at least 5 years.
2. Provide local maintenance and service with location less than 100 miles from project site.
3. Provide technical support to installer.
4. Maintain, within 50 miles from site, a maintenance and service organization complete with parts inventory and repair facility.

C. Single-Source Responsibility:

1. Obtain radio system components from a single source who assumes responsibility for compatibility of all system components
2. The complete installation and performance of the installed system, including all

accessories shall be the sole responsibility of the Radio Repeater system installer. It is the installer's responsibility to ensure that all field installed accessories and loose components used in the system, meet these specifications, and perform up to the stated and tested standards.

3. Coordinate the components of the system and their arrangements electrically and mechanically.

D. Installer Qualifications:

1. System planning, design and installation shall be performed by a Certified ERRCS designer.
2. Has installed a minimum of fifteen (15) similar radio repeater systems of similar size and conditions within the local area.
3. Has installed a minimum of three (3) similar radio repeater systems within the same jurisdiction and for the same fire department, AHJ, etc. as this project,
4. Factory-authorized installer to perform work of this Section.
5. Provide references upon request:
   a. Names of six (6) similar projects in size and scope.
   b. Contact person and phone number for each project.

E. Installation Quality: In accordance with the following Codes and Standards.

1. Federal Communications Commission (FCC)
   a. FCC 47 CFR Private Land Mobile Radio
   b. FCC Rules Part 22, Part 90 and Part 101
   c. FCC's OET 65 Standards "Guidelines for Human Exposure to Radio Frequency Electromagnetic Fields"
2. NETA National Electrical Testing Association
3. NFPA National Fire Protection Association
   a. NFPA 1 National Fire Code
   b. NFPA 70 National Electrical Code
   c. NFPA 72 National Fire Alarm Code
   d. NFPA 101 Life Safety Code
   e. NFPA 1221 Installation, Maintenance and Use of Emergency Services Communications Systems
4. UL Underwriters Laboratories

F. Certification of all system components:

1. Catalogued by the system manufacturer.
2. UL Listing of each component individually.

1.7 DELIVERY, STORAGE AND HANDLING

A. Storage and Protection:

1. Store all materials under cover, in trailers, buildings, etc.
2. Protect all materials from physical damage and exposure to weather, prior to installation.

1.8 PROJECT CONDITIONS

A. The radio repeater system and components shall be installed on and in the structure during or following the overall project construction. Walls, ceilings and other finishes

may be in progress or complete at the time of the radio repeater system installation. All work shall be coordinated to accommodate such conditions and avoid damages to such prior or existing construction.

1.9 SEQUENCING

A. General Sequencing:

1. Coordinate radio repeater system installation with roof, steel, exterior and/or interior construction.
2. Provide for roof penetrations, attachments to roof or structural components.
3. Provide for grounding connections to steel.
4. Provide concealed conduit and cable installations, where applicable, prior to wall close-in or ceiling installations.
5. Coordinate core drilling or similar penetrations early in construction to avoid damage to installation of final finishes and materials, and to limit debris/dust.

1.10 COORDINATION

A. Installer shall examine the structure, walls, finishes and all items of construction affecting his work.

B. Coordinate installation with all other trades.

PART 2 PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, provide a system by one of the following named manufacturers/installers, or approved equal:

1. Notifier/Honeywell
2. Stat Communications.
3. Morcom International, Inc.
4. Atek Communications.
5. Axell Wireless.
6. CommScope/Andrew
7. Corning
8. Times Microwave
9. Tessco
10. CCI (Communication Components Inc.)
11. Solid Technologies

2.2 MATERIALS

A. All equipment and materials shall be new.

B. All system components shall be UL Listed or ETL tested/labeled.

C. Provide fire rated coaxial cable with connectors from the roof level down to system head

end equipment.

D. Provide plenum rated ½ inch coaxial cable with connectors for all horizontal runs.

E. Provide plenum rated fiber optic cable and connectors meeting manufacturer's recommendations for all fiber runs.

F. All materials installed in the plenum including passive devices, hangers, and ties shall be plenum rated.

G. All passive system components including but not limited to splitters, taps, directional couplers and indoor antennas shall support 700 MHz to 2500 MHz.

2.3 POWER SUPPLIES

A. At least two (2) independent and reliable power supplies shall be provided, one primary and one secondary.

B. Primary power source shall be supplied from a dedicated 20 ampere branch circuit and comply with 4.4.1.4 of NFPA 72.

C. Secondary power source shall be a dedicated battery unit, capable of operating the in-building radio system for at least 12 hours of 100% system operation. The battery system shall automatically charge in the presence of external power input. The battery system shall be contained in one NEMA 4 or 4X type enclosures. Monitoring the integrity of power supplies shall be in accordance with 4.4.7.3 of NFPA 72.

2.4 SURVIVABILITY

A. Physical Protection: All wiring and fiber optics shall be installed in conduit.

B. Fire Performance: All main riser or trunk cables of the antenna system shall be installed with resistance fire using one of the following methods:

1. A 2-hour fire rated cable or cable system.
2. Routing the cable through a 2-hour fire rated enclosure(s) or shaft(s).
3. A system configured in a looped design, routed through 1-hour fire rated enclosure(s) or shaft(s).
4. The circuit shall be capable of transmitting and receiving a signal during a single open or non-simultaneous single ground fault on a circuit conductor.
5. Performance alternative approved by the authority having jurisdiction.

C. Cabinets: The signal booster and all associated RF filters shall be housed in a single, NEMA 4 certified, painted steel weather tight box. The cabinet shall be large enough to dissipate internal heat without venting the inside of the cabinet to the outside atmosphere. Operating temperatures: –22 degrees F to +120 degrees F minimum temperature range, including microprocessors.

D. Equipment installed on the roof of structures shall be rated for the expected extreme temperatures associated with rooftop installations.

E. Passive Equipment: Passband shall be 700-900 MHz, IP rating of 2 GHz.

F. Cable: Passband shall be 700-900 MHz. Cable shall be rated for fire plenum and riser

rating.

2.5 SYSTEM COMPONENTS

A. Signal Strength:

1. Downlink: A minimum signal strength of -95 dBm shall be provided throughout the coverage area.
2. Uplink: Minimum signal strength of -95 dBm received at the local Fire Department Radio System from the coverage area.
3. A donor antenna must maintain isolation from the distributed antenna system. The donor antenna signal level shall be a minimum of 15 dB above the distributed antenna system under all operating conditions.

B. Permissible Systems:

1. Buildings and structures shall be equipped with an FCC Certificated Class B Bi-Directional UHF Amplifier(s) as needed.
2. The distributed antenna system may utilize a radiating cable, fixed antennas or a combination of both.

C. Supported Frequencies: The radio system shall support frequencies in the 700 and 800 MHz public safety bands as utilized by the local Fire Department.

D. Reject Filters: Notch filter sections shall be incorporated to minimize adjacent channel cellular and SMR (Nextel) degradation of the signal booster performance. The minimum downlink band adjacent band rejection shall be 35 dB or greater at 865 MHz and 870 MHz.

E. Band Migration Capability: The signal booster shall include re-tunable or replaceable filters to accommodate rapid and economic passband changes in the event of mandatory FCC changes within the NPSPAC band. The use of non-adjustable and non-replaceable RF input and output filters is prohibited.

F. Output Level Control: An automatic output leveling circuit shall be included for both passbands with a minimum dynamic range of 60 dB, less any gain reduction setting, to maintain FCC out of band and spurious emission compliance.

G. Degraded Performance in Emergencies: The system shall be designed to allow degraded performance in adverse conditions, such as abnormally high temperatures resulting from nearby fires, extreme voltage fluctuations or other abnormal conditions that may occur during an emergency. Circuits that intentionally disable the signal booster in such situations (i.e. under/over voltage, over/under current, over/under temperature, etc.) will not be implemented as the standard mode for public safety applications.

H. Mode of Operation: The system shall be normally powered on and shall continuously provide passing of frequencies within the Public Safety and First Responder bands.

I. All in-building radio systems shall be compatible with both analog and digital communications simultaneously at the time of installation.

2.6 SYSTEM MONITORING

A. The ERRC system shall include a connection to the fire alarm system to monitor the

integrity of the circuits of the signal booster(s) and power supplies and annunciate this malfunction on the fire alarm system shall comply with 4.4.7.1 of NFPA 72.

B. A sign shall be located at the fire alarm panel with the name and telephone number of the local Fire Department indicating that they shall be notified of any failures that extend past the 2 hour time limit.

2.7 EQUIPMENT BACKBOARDS

A. Equipment backboards for use in mounting all radio repeater system equipment, racks, etc.

1. 3/4" BC grade fire retardant treated plywood.
2. Shall contain no urea-formaldehyde.
3. Shall bear a “UL Classified” marking from the manufacturer.
4. Minimum size of 48"W x 84"H, or as noted.
5. Hoover *Pyro-Guard* treated wood, or equal.
6. Paint with white, intumescent fire retardant paint.
   a. Class A fire rated.
   b. Low VOC, interior flat latex, fire retardant paint.
   c. Intumescent when exposed to flame.
   d. Flame Control Coatings, LLC. Intumescent Fire Retardant Paint, or equal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Site Verification of Conditions: Examine the conditions under which the equipment shall be delivered, installed, and operated. Make all allowances required for installation and maintenance of the equipment, per Codes and manufacturer.

3.2 SITE SURVEY

A. Before designing the radio repeater system for the new or existing building, a comprehensive site survey shall be conducted to obtain all information needed to ensure a successful system design. During the site survey:
   1. Test existing signal levels
   2. Test for signal interference
   3. Identify areas that need to be reinforced (as well as any that do not)
   4. Review building pathways for constructability planning
   5. Review potential donor antenna locations
   6. Review possible equipment locations for headend equipment, fiber infrastructure and power.

3.3 INSTALLATION

A. General Requirements:

1. The system shall be provided in accordance with the applicable International Fire Code and its amendments.
2. Provide necessary donor antenna(s) on the roof level.
3. Fire stopping shall be installed at any new or existing fire rated wall and ceiling penetrations.
4. All equipment and materials shall be installed according to manufacturers’

recommendations.
5. Install all equipment, as indicated and per manufacturer's written instructions.
6. Do not install equipment where location impedes access to other equipment or creates unsafe conditions. Install in suitable, alternate location.
7. Coordinate the installation of the radio repeater system with the work of other trades and contractors prior to laying out system or beginning work.

B. Roof Antenna:

1. Install roof yagi antenna using permanent, fixed mounting to roof structural components such as elevator or stair tower extensions above roof, or permanently mounted pipe support.
2. Ballasted antenna trays and racks are not acceptable.
3. All hardware shall be galvanized steel or stainless steel.
4. Install such that no components present a tripping or other risk to workers on roof.

C. Roof Antenna Cables:

1. Avoid creation of U or V pockets on roof surfaces that can trap water or debris.
2. Prevent sharp bends or turns.
3. Concealed conductors shall be fastened as required to maintain position and hold permanently in place.

D. Grounding of Roof Antenna:

1. Ground all metal roof antenna bodies, per manufacturer, and NEC to protect against lightning strike.
2. Bond to rooftop lightning protection system, where building is so equipped.

E. Roof Penetrations:

1. Where the system requires penetration of the roof, make such penetration utilizing manufacturer's recommended products, approved by the roofing system installer.

F. Bi-Directional Amplifier(s):

1. Locate, with preference being in IT rooms/closets. Avoid locations in electrical rooms/closets.
2. Install per manufacturer's written instructions.
3. Surface mount, using equipment rack or mounting hardware.
4. Provide ceiling smoke detector in room with BDA.

G. Cabling:

1. Comply with all manufacturer's written installation instructions.
2. Install vertical cable through core drilled holes in slabs. Follow pathways through stacked IT closets, where practicable.
3. Fire stop all penetrations through rated floors, walls or ceilings.
4. Wires or cables routed between consoles, cabinets, racks, and other equipment shall be installed in an approved conduit or cable tray that is secured to building structure.
5. Support horizontal cable runs on J-hooks, or similar approved support method.

Do not rest cables on ducts, ceilings, etc.

6. Route cables to provide sufficient separation from sources of interference, including: power cables, IT cables, VFD's, control panels, etc.
7. Cables shall not be kinked, or bent beyond limits stated by manufacturers.
8. Provide "S" loops where cables connect to field antennas, to allow for movement, and/or filed adjustment to antenna location.
9. Wires and cables shall enter each equipment enclosure, console, cabinet or rack in such a manner that all doors or access panels can be opened and closed without removal or disruption of the cables.
10. Completely test all of the cables after installation and replace any that are found to be defective.

H. Omni-directional Antennas:

1. Locate in ceilings, where determined by design.
2. Support independently from ceiling grid or tiles.
3. Install per manufacturer's written instructions.

I. Splitters and Taps:

1. Locate in IT closets, or other space below ceilings, where determined by design.
2. Mount on fire rated plywood backboards.
3. Provide grounding, as applicable, to building steel.
4. Install per manufacturer's written instructions.

J. Field Wiring:

1. Comply with National Electrical Code.
2. Install all AC power cabling in conduit or metal raceway according to Section "Raceways & Boxes for Electrical Systems." Conceal raceways except in unfinished spaces and as indicated.
3. Do not mix radio repeater system cabling in same raceways/boxes with wiring of any other system.

K. Grounding:

1. Refer to Section "Grounding & Bonding for Electrical Systems" for general requirements, in addition to those specified herein.
2. Ground cable shields and equipment according to system manufacturer's instructions to eliminate shock hazard and to minimize, to the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments.
3. Ground equipment and conductor and cable shields.

L. Electrical Power:

1. Connect all radio repeater system components, requiring power to the building's 120VAC power system, as indicated. Connect to Emergency Power system (life safety), where so equipped.
2. Provide dedicated circuit for each system amplifier, remote unit, distributed amp, etc.
3. Clearly label "EMERG RESP COMM SYSTEM" on panelboard directory.
4. Locking clip for breaker handle to lock in "ON" position, but not prevent tripping of breaker.

M. Identification: Identify system components, wiring, cabling, and terminals according to Section “Common Work Results for Electrical”.

3.4 REPAIR/RESTORATION

A. Restore all finishes, equipment, surfaces and/or grade to original condition, where affected by the work of this section.

B. Comply with all requirements as specified in Section “Common Work Results for Electrical”.

3.5 FIELD QUALITY CONTROL

A. Installation shall meet all the requirements of UL Master Label for such systems.

B. Installer's Field Services:

1. Provide services of a factory-authorized service representative to make all connections of all system cabling at amplifiers, antennae, converters, splitters, and associated components and accessories.
2. Be present and supervise all pretesting of cabling system prior to connections to control equipment.
3. Be present and supervise the adjustment of all settings, components and accessories.
4. Provide all system adjustments, fine tuning, etc., based on project conditions.
5. Assist in the troubleshooting, as necessary to provide a system free from all faults, trouble conditions, etc. prior to required testing by AHJ.

C. Pretesting:

1. After installation adjust, and balance the system and perform complete pretesting.
2. Determine, through pretesting, the conformance of the system to the requirements of the Drawings and Specifications, and local AHJ requirements.
3. Correct deficiencies observed in pretesting. Replace malfunctioning or damaged items with new ones and retest until satisfactory performance and conditions are achieved.
4. Prepare forms to document the systematic recording of acceptance test results.

D. Report of Pretesting: After pretesting is complete, provide a letter certifying the installation is complete and fully operable, including the names and titles of the witnesses to the preliminary tests.

E. Final Test Notice: Provide a 10-day minimum notice in writing when the system is ready for final acceptance testing.

F. Provide all testing to certify the system is complete and fully operable.

1. All tests required by Authority Having Jurisdiction.
2. Provide written statement of successful test results.
3. Submit letter to Owner and Architect.
4. Perform tests in presence of Owner or Authorized Representative.
5. Manufacturer's technician shall be present to make adjustments related to the

testing.

G. Site Tests:

1. Schedule tests and provide notification at least one week in advance of any test commencement.
2. Post-Installation Testing: After completing system installation, perform the following tests, in addition to any/all testing per NFPA.
   a. Connect carrier and public safety systems to the headend;
   b. Optimize power levels per design and carrier specifications;
   c. Test live system performance and provide coverage map;
   d. Absences of grounded, shorted or open circuits.
   e. All antennae, amplifiers, and other active components, function as required.
   f. UPS System batteries can operate the system for minimum time duration required.
   g. Test all copper conductors for short circuits or grounds, using an insulation-testing device.
   h. Make ground resistance tests for system, per Section “Grounding & Bonding For Electrical Systems.”
   i. Inspect accessible components for cleanliness, mechanical, and electrical integrity, for presence of damage or deterioration. Correct all deficiencies are corrected.
   j. Inspect all electrical connections for tightness.
   k. Using a spectrum analyzer, test all building spaces to prove adequate signal strength in all areas, across all applicable frequencies, and in both transmit and receive modes.
   l. Record and document all test results.

H. Submit a completed installers’ checklist and forms indicating all components have been tested and found operational and satisfactory.

I. Retesting: Correct deficiencies indicated by tests and completely retest work affected by such deficiencies. Verify by the system test that the total system meets the Specifications and complies with applicable standards.

J. Report of Tests and Inspections: Provide a written record of inspections, tests, and detailed test results in the form of a test log. Submit log upon the satisfactory completion of tests.

K. Inspections by AHJ:

1. Arrange all required inspections by the local Fire Department, Fire Marshal, and/or Authority Having Jurisdiction.
2. Notify all parties, including owner and architect, at least 2 weeks in advance of scheduled Inspections.
3. Document and distribute results of testing to all parties.
4. Perform all adjustments, changes, etc. required.
5. Provide for re-inspections, if required.

3.6 APPROVAL TESTING

A. The local Fire Department will review plans and specifications. Upon acceptance, plans will be stamped to indicate approval. Stamped plans are required to be present at the

acceptance test. Any field changes that occur during construction shall be incorporated into new As-Built plans, including any manufacturer's data sheets for any equipment changes not submitted in the original submittal. As-Built plans, if required due to system changes, shall be submitted to the local Fire Department for approval.

B. Tests shall be made using frequencies close to the frequencies used by the Fire Department and appropriate emergency services. If testing is done on the actual frequencies, then this testing must be coordinated with the local Fire Department unit. All testing must be done on frequencies authorized by the FCC. A valid FCC license will be required if testing is done on frequencies different from the police, fire or emergency medical frequencies.

C. Testing Procedures:

1. Minimum Signal Strength: For testing system signal strength and quality, the testing shall be based on the delivered audio quality (DAQ) system. A DAQ level below 3.0 shall be considered a failed test for a given grid cell.
2. Measurements shall be made with the antenna held in a vertical position at 3 to 4 feet above the floor to simulate a typical portable radio worn on the belt or turnout coat pocket.

D. Final Acceptance Testing

1. All acceptance testing shall be done in the presence of a local Fire Department representative or by the local Fire Department unit at no expense to the City.
2. Small scale drawings (11 inch x 17 inch maximum) of the structure shall be provided by the Contractor to the Owner. The plans shall show each floor divided into the grids as described above, and the results of the pre-testing. Each grid shall be labeled to indicate the DAQ result from the final acceptance testing.
3. The Contractor shall provide the latest approved plans for the system, including any manufacture's data sheets for any equipment changes not submitted in the original submittal to the Owner.
4. Include testing results of the repeater (output wattage, gain level, etc) and connection to the fire alarm.

3.7 ADJUSTING

A. Sensitivity Adjustments:

1. Initial Settings: Provide initial setting of all antennae, amplifiers, etc. prior to final testing, based on original calculated distances, cables, construction, etc.
2. Final adjustments: Provide all required adjustments after installation to provide peak performance.
3. Provide additional adjustments, as required, from AHJ inspections and testing.

3.8 CLEANING

A. General:

1. Remove paint splatters and other spots, dirt, and debris.
2. Touch up scratches and marred finishes to match original finish.
3. Clean front panels of all control panels, amplifiers, etc. using methods and materials recommended by manufacturer.

3.9 LICENSING

A. All fees associated with the licensing shall be paid by the Owner.

B. All testing must be done on frequencies authorized by the FCC.

3.10 DEMONSTRATION

A. System Installer shall provide a factory trained representative for purpose of training owner's personnel:

1. Discuss proper operation, maintenance, and use of system.
2. Instructor shall be fully knowledgeable of the installed system and all components.
3. Training shall be completed at the project site following Owner occupancy, at Owner’s discretion.
4. Schedule after all final tests, adjustments and Owner's acceptance.
5. Training shall include use of delivered O&M manuals.

3.11 MAINTENANCE AND ANNUAL TESTING

A. Annual tests will be conducted by the local Fire Department unit or authorized company.

1. The re-testing will be done at no expense to the City or the appropriate emergency services departments as required in the original testing procedures.

B. Maintenance Contract

1. Maintenance contract with a Radio Service Provider in place with name of authorized company, who will provide a 24 hour by 7 day emergency response within two (2) hours after notification. The system shall be maintained in accordance with FCC requirements. The contract shall be for 5 years.
2. All tests shall be conducted, documented, and signed by a person in possession of a current FCC General Radio telephone Operator License, or a technician certification issued by the Association of Public-Safety Communications Officials International (APCO) or equivalent as determined by the local Fire Department.
3. Maintain a list of contact personnel with phone numbers at the radio repeater system cabinet. The contact personnel shall have knowledge of the building and the repeater system and be available to respond to the building in the case of an emergency.
4. Radio Service Provider maintenance contract shall include but not limited to:

a. Annual Test
   1) All active components of the distributed antenna system, including but not limited to amplifier, power supplies, and back-up batteries, shall be tested a minimum of once every 12 months.
   2) Amplifiers shall be tested to insure that the gain is the same as it was upon initial installation and acceptance. The original gain shall be noted and any change in gain shall be documented.
   3) Back-up batteries and power supplies shall be tested under load for a period of 1 hour to verify that they will operate during an actual power outage.
   4) Active components shall be checked to determine that they are

operating within the manufacturer's specifications for their intended purpose.

5) Documentation of the test shall be maintained on site and a copy forwarded to the local Fire Department Radio Supervisor upon completion of the test.

5. Fire Department Radio personnel, after providing reasonable notice to the Owner or their representative, shall have the right to enter onto the property to conduct field testing to be certain that the required level of radio coverage is present

END OF SECTION

SECTION 28 46 21.11 - ADDRESSABLE FIRE-ALARM SYSTEMS

A.GENERAL

A.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

A.2 SUMMARY

A. Section Includes:

1. Addressable fire-alarm system.
2. Fire-alarm control unit (FACU).
3. Manual fire-alarm boxes.
4. System smoke detectors.
5. Duct smoke detectors.
6. Heat detectors.
7. Fire-alarm notification appliances.
8. Fire-alarm LCD annunciators.
9. Fire-alarm addressable interface devices.
10. Digital alarm communicator transmitters (DACTs).

A.3 DEFINITIONS

A. DACT: Digital alarm communicator transmitter.

B. EMT: Electrical metallic tubing.

C. FACU: Fire-alarm control unit.

D. NICET: National Institute for Certification in Engineering Technologies.

E. Voltage Class: For specified circuits and equipment, voltage classes are defined as follows:

1. Control Voltage: Listed and labeled for use in remote-control, signaling, and power-limited circuits supplied by a Class 2 or Class 3 power supply having rated output not greater than 150 V and 5 A, allowing use of alternate wiring methods complying with NFPA 70, Article 725.
2. Low Voltage: Listed and labeled for use in circuits supplied by a Class 1 or other power supply having rated output not greater than 1000 V, requiring use of wiring methods complying with NFPA 70, Article 300, Part I.

A.4 ACTION SUBMITTALS

A. Approved Permit Submittal: Submittals must be approved by authorities having jurisdiction prior to submitting them to Architect.

B. Product Data: For each type of product, including furnished options and accessories.

1. Include construction details, material descriptions, dimensions, profiles, and finishes.
2. Include rated capacities, operating characteristics, and electrical characteristics.

C. Shop Drawings: For fire-alarm system.

1. Comply with recommendations and requirements in "Documentation" section of "Fundamentals" chapter in NFPA 72.
2. Include plans, elevations, sections, and details, including details of attachments to other Work.
3. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and locations. Indicate conductor sizes, indicate termination locations and requirements, and distinguish between factory and field wiring.
4. Graphic Annunciator panel details as required by authorities having jurisdiction.
5. Detail assembly and support requirements.
6. Include voltage drop calculations for notification-appliance circuits.
7. Include battery-size calculations.
8. Include input/output matrix.
9. Include written statement from manufacturer that equipment and components have been tested as a system and comply with requirements in this Section and in NFPA 72.
10. Include performance parameters and installation details for each detector.
11. Verify that each duct detector is listed for complete range of air velocity, temperature, and humidity possible when air-handling system is operating.
12. Provide control wiring diagrams for fire-alarm interface to HVAC; coordinate location of duct smoke detectors and access to them.

    a. Show critical dimensions that relate to placement and support of sampling tubes, detector housing, and remote status and alarm indicators.
    b. Show field wiring and equipment required for HVAC unit shutdown on alarm.
    c. Locate detectors in accordance with manufacturer's written instructions.
    d. Show air-sampling detector pipe routing.
13. Include floor plans to indicate final outlet locations showing address of each addressable device. Show size and route of cable and conduits and point-to-point wiring diagrams.

D. Delegated Design Submittal: For notification appliances and smoke and heat detectors, in addition to submittals listed above, indicate compliance with performance requirements and design criteria, including analysis data signed and sealed by qualified professional engineer responsible for their preparation.

1. Drawings showing location of each notification appliance and smoke and heat detector, ratings of each, and installation details as needed to comply with listing conditions of device.
2. Design Calculations: Calculate requirements for selecting spacing and sensitivity of detection, complying with NFPA 72. Calculate spacing and intensities for strobe signals and sound-pressure levels for audible appliances.

3. Indicate audible appliances required to produce square wave signal per NFPA 72.

A.5 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

B. Qualification Statements: For Installer.

C. Sample Warranty: Submittal must include line item pricing for replacement parts and labor.

A.6 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-alarm systems and components to include in emergency, operation, and maintenance manuals.

1. In addition to items specified in Section 017823 "Operation and Maintenance Data," include the following and deliver copies to authorities having jurisdiction:

a. Comply with "Records" section of "Inspection, Testing and Maintenance" chapter in NFPA 72.
b. Provide "Fire-Alarm and Emergency Communications System Record of Completion Documents" in accordance with "Completion Documents" Article in "Documentation" section of "Fundamentals" chapter in NFPA 72.
c. Complete wiring diagrams showing connections between devices and equipment. Each conductor must be numbered at every junction point with indication of origination and termination points.
d. Riser diagram.
e. Device addresses.
f. Record copy of site-specific software.
g. Provide "Inspection and Testing Form" in accordance with "Inspection, Testing and Maintenance" chapter in NFPA 72, and include the following:

1) Equipment tested.
2) Frequency of testing of installed components.
3) Frequency of inspection of installed components.
4) Requirements and recommendations related to results of maintenance.
5) Manufacturer's user training manuals.

h. Manufacturer's required maintenance related to system warranty requirements.
i. Abbreviated operating instructions for mounting at FACU and each annunciator unit.

B. Software and Firmware Operational Documentation:

1. Software operating and upgrade manuals.
2. Program Software Backup: On USB media, approved online or cloud solution.
3. Device address list.
4. Printout of software application and graphic screens.

A.7 EXTRA MATERIALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Deliver materials to UMB Project Manager with Bill of Materials in accordance with UMB general conditions. Include list of extra materials with the shop drawing submittal.

Contractor shall supply the Owner with a minimum of one (1) replacement for each six (6) devices (or fraction thereof) installed of the following devices:

1. Analog Smoke Detectors`
2. Manual Stations
3. Interface Monitor Modules
4. Interface Control Modules
5. Speaker/Strobe Signals (voice system only)
6. Strobe Signals
7. Duct Smoke Detector
8. Heat Detectors
9. Horn/Strobe Signals
10. Speakers (voice system only)
11. Amplifiers (voice system only)
12. CO Detectors with sounder bases

B. PROGRAMMING AND TEST DEVICES OR TOOLS

Contractor shall furnish all devices necessary to conduct tests of all devices and equipment prior to substantial completion. Upon satisfactory completion of required tests, the contractor shall furnish the owner with two of each device, tool or accessory used and required to perform complete periodic tests and maintenance. Such devices or tools may include interface devices, interface module programming tools, keys, program codes, software and the like. These devices, tools and accessories shall become the property of the Owner.

A.8 QUALITY ASSURANCE

A. Installer Qualifications:

1. Personnel must be trained and certified by manufacturer for installation of units required for this Project.
2. Installation must be supervised by personnel certified by NICET as fire-alarm Level III technician.
3. Obtain certification by NRTL in accordance with NFPA 72.
4. Licensed or certified by authorities having jurisdiction.

A.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace fire-alarm system equipment and components that fail because of defects in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

B.PRODUCTS

B.1 ADDRESSABLE FIRE-ALARM SYSTEM

A. Description:

1. Noncoded, UL-certified addressable system, with multiplexed signal transmission and horn-and-strobe notification for evacuation.

B. Performance Criteria:

1. Regulatory Requirements:

a. Fire-Alarm Components, Devices, and Accessories: Listed and labeled by a NRTL in accordance with NFPA 70 for use with selected fire-alarm system and marked for intended location and application.

2. General Characteristics:

a. Automatic sensitivity control of certain smoke detectors.
b. Fire-alarm signal initiation must as indicated on drawings (*Refer to Matrix on drawings for specific sequence*):

c. Document Storage Box:

1) Description: Enclosure to accommodate standard 8-1/2-by-11 inch manuals and loose document records. Legend sheet will be permanently attached to door for system required documentation, key contacts, and system information. Provide two key ring holders with location to mount standard business cards for key contact personnel.
2) Material and Finish: 18-gauge cold-rolled steel; four mounting holes.
3) Color: Red powder-coat epoxy finish.
4) Labeling: Permanently screened with 1 inch high lettering "SYSTEM RECORD DOCUMENTS" with white indelible ink.
5) Security: Locked with 3/4 inch barrel lock. Provide solid 12 inch stainless steel piano hinge.

B.2 FIRE-ALARM CONTROL UNIT (FACU)

A. Manufacturer shall be: Silent Knight

B. Description: Field-programmable, microprocessor-based, modular, power-limited design with electronic modules.

C. Performance Criteria:

1. Regulatory Requirements: Comply with NFPA 72 and UL 864.

2. General Characteristics:

   a. System software and programs must be held in nonvolatile flash, electrically erasable, programmable, read-only memory, retaining information through failure of primary and secondary power supplies.
   b. Include real-time clock for time annotation of events on event recorder and printer.
   c. Provide communication between FACU and remote circuit interface panels, annunciators, and displays.
   d. FACU must be listed for connection to central-station signaling system service.
   e. Provide nonvolatile memory for system database, logic, and operating system and event history. System must require no manual input to initialize in the event of complete power down condition. FACU must provide minimum 500-event history log.
   f. Addressable Initiation Device Circuits: FACU must indicate which communication zones have been silenced and must provide selective silencing of alarm notification appliance by building communication zone.

      1) Addressable Control Circuits for Operation of Notification Appliances and Mechanical Equipment: FACU must be listed for releasing service.

   g. Fire-Alarm Annunciator: Arranged for interface between human operator at FACU and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and programming and control menu.

      1) Annunciator and Display: LCD, 80 characters, minimum.
      2) Keypad: Arranged to permit entry and execution of programming, display, and control commands.

   h. Alphanumeric Display and System Controls: Arranged for interface between human operator at FACU and addressable system components including annunciation and supervision. Display alarm, supervisory, and component status messages and programming and control menu.

      1) Annunciator and Display: LCD, three line(s) of 80 characters, minimum.
      2) Keypad: Arranged to permit entry and execution of programming, display, and control commands and to indicate control commands to be entered into system for control of smoke-detector sensitivity and other parameters.

   i. Initiating-Device, Notification-Appliance, and Signaling-Line Circuits:

      1) Pathway Class Designations: NFPA 72, SLC: Riser – Class X; Floor circuit: Class B. NAC, IDC: Class B.
      2) Pathway Survivability: Level 1.
      3) Install no more than 80% addressable devices on each signaling-line circuit.
      4) Install fault circuit isolators to comply with circuit performance requirements of NFPA 72 or with manufacturer's written instructions, whichever is more conservative.

   j. Serial Interfaces:

1) One dedicated RS 485 port for supervising station operation using point ID DACT.
2) One RS 485 port for remote annunciators, Ethernet module, or multi-interface module (printer port).

k. Notification-Appliance Circuit:

1) Audible appliances must sound in three-pulse temporal pattern, as defined in NFPA 72.
2) Visual alarm appliances must flash in synchronization where multiple appliances are in same field of view, as defined in NFPA 72.

l. Elevator Recall: Initiate by one of the following alarm-initiating devices:

1) Elevator lobby detectors except lobby detector on designated floor.
2) Smoke detectors in elevator machine room.
3) Smoke detectors in elevator hoistway.

m. Elevator controller must be programmed to move cars to alternate recall floor if lobby detectors located on designated recall floors are activated.

n. Heat detector alarm connected to sprinkler in elevator shaft and elevator machine room must shut down elevators associated with location.

1) Heat detector associated with sprinkler in elevator pit may have delay to allow elevators to move to designated floor.

o. Door Controls: Door hold-open devices that are controlled by smoke detectors at doors in smoke-barrier walls must be connected to fire-alarm system.

p. Remote Smoke-Detector Sensitivity Adjustment: Controls must select specific addressable smoke detectors for adjustment, display their current status and sensitivity settings, and change those settings. Allow controls to be used to program repetitive, time-scheduled, and automated changes in sensitivity of specific detector groups. Record sensitivity adjustments and sensitivity-adjustment schedule changes in system memory, and print out final adjusted values on system printer.

q. Transmission to Remote Alarm Receiving Station: Automatically transmit alarm, supervisory, and trouble signals to remote alarm station.

r. Printout of Events: On receipt of signal, print alarm, supervisory, and trouble events. Identify zone, device, and function. Include type of signal (alarm, supervisory, or trouble) and date and time of occurrence. Differentiate alarm signals from other printed indications. Also, print system reset event, including same information for device, location, date, and time. Commands initiate printing of list of existing alarm, supervisory, and trouble conditions in system and historical log of events.

s. Primary Power: 24 V(dc) obtained from 120 V(ac) service and power-supply module. Initiating devices, notification appliances, signaling lines, trouble signals, supervisory and DACT must be powered by 24 V(dc) source.

t. Alarm current draw of entire fire-alarm system must not exceed 80 percent of power-supply module rating.

u. Secondary Power: 24 V(dc) supply system with batteries, automatic battery charger, and automatic transfer switch.

v. Batteries: Sealed lead calcium.

D. Accessories:

1. Instructions: Computer printout or typewritten instruction card mounted behind plastic or glass cover in stainless steel or aluminum frame. Include interpretation and describe appropriate response for displays and signals. Briefly describe functional operation of system under normal, alarm, and trouble conditions.

B.3 MANUAL FIRE-ALARM BOXES

A. Manufacturer shall be compatible with FACU.

B. General Requirements for Manual Fire-Alarm Boxes: Comply with UL 38. Boxes must be finished in red with molded, raised-letter operating instructions in contrasting color; must show visible indication of operation; and must be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
1. Double-action mechanism requiring two actions to initiate alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to FACU.
2. Station Reset: Key- or wrench-operated switch.
3. Indoor Protective Shield: Factory-fabricated, clear plastic enclosure hinged at top to permit lifting for access to initiate alarm. Lifting cover actuates integral battery-powered audible horn intended to discourage false-alarm operation.
4. Weatherproof Protective Shield: Factory-fabricated, clear plastic enclosure hinged at top to permit lifting for access to initiate alarm.
5. Able to perform at up to 90 percent relative humidity at 90 deg F.
6. Material: Manual stations made of Lexan polycarbonate.
7. Able to be used in indoor or outdoor areas.

B.4 SYSTEM SMOKE DETECTORS

A. Photoelectric Smoke Detectors:

1. Manufacturer shall be compatible with FACU.
2. Performance Criteria:

a. Regulatory Requirements:

1) NFPA 72.
2) UL 268.

b. General Characteristics:

1) Detectors must be two-wire type.
2) Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACU.
3) Base Mounting: Detector and associated electronic components must be mounted in twist-lock module that connects to fixed base. Provide terminals in fixed base for connection to building wiring.
4) Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.

5) Integral Visual-Indicating Light: LED type, indicating detector has operated and power-on status.
6) Detector address must be accessible from FACU and must be able to identify detector's location within system and its sensitivity setting.
7) Operator at FACU, having designated access level, must be able to manually access the following for each detector:

   a) Primary status.
   b) Device type.
   c) Present average value.
   d) Present sensitivity selected.
   e) Sensor range (normal, dirty, etc.).

8) Detector must have functional humidity range within 10 to 90 percent relative humidity.
9) Color: White.
10) Remote Control: Unless otherwise indicated, detectors must be digital-addressable type, individually monitored at FACU for calibration, sensitivity, and alarm condition and individually adjustable for sensitivity by FACU.
11) Rate-of-rise temperature characteristic of combination smoke- and heat-detection units must be selectable at FACU for 15 or 20 deg F per minute.
12) Fixed-temperature sensing characteristic of combination smoke- and heat-detection units must be independent of rate-of-rise sensing and must be settable at FACU to operate at 135 or 155 deg F.
13) Multiple levels of detection sensitivity for each sensor.
14) Sensitivity levels based on time of day.

B.5 DUCT SMOKE DETECTORS

A. Manufacturer shall be compatible with FACU.

B. Description: Photoelectric-type, duct-mounted smoke detector.

C. Performance Criteria:

1. Regulatory Requirements:

   a. NFPA 72.
   b. UL 268A.

2. General Characteristics:

   a. Detectors must be two-wire type.
   b. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACU.
   c. Self-Restoring: Detectors do not require resetting or readjustment after actuation to restore them to normal operation.
   d. Integral Visual-Indicating Light: LED type, indicating detector has operated and power-on status.
   e. Detector address must be accessible from FACU and must be able to identify detector's location within system and its sensitivity setting.

f. Operator at FACU, having designated access level, must be able to manually access the following for each detector:

1) Primary status.
2) Device type.
3) Present average value.
4) Present sensitivity selected.
5) Sensor range (normal, dirty, etc.).

g. Weatherproof Duct Housing Enclosure: NEMA 250, Type 4X; NRTL listed for use with supplied detector for smoke detection in HVAC system ducts.
h. Each sensor must have multiple levels of detection sensitivity.
i. Sampling Tubes: Design and dimensions as recommended by manufacturer for specific duct size, air velocity, and installation conditions where applied.
j. Relay Fan Shutdown: Fully programmable relay rated to interrupt fan motor-control circuit.

B.6 HEAT DETECTORS

A. Combination-Type Heat Detectors:

1. Manufacturer shall be compatible with FACU.
2. Performance Criteria:

a. Regulatory Requirements:

1) NFPA 72.
2) UL 521.

b. General Characteristics:

1) Temperature sensors must test for and communicate sensitivity range of device.

c. Actuated by fixed temperature of 135 deg F or rate of rise that exceeds 15 deg F per minute unless otherwise indicated.
d. Mounting: Twist-lock base interchangeable with smoke-detector bases.
e. Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACU.
f. Detector must have functional humidity range of 10 to 90 percent relative humidity.
g. Color: White.

B. Fixed-Temperature-Type Heat Detectors:

1. Manufacturer shall be: Silent Knight
2. Performance Criteria:

a. Regulatory Requirements:

1) NFPA 72.
2) UL 521.

b. General Characteristics:

1) Actuated by temperature that exceeds fixed temperature of 190 deg F.
2) Mounting: Twist-lock base interchangeable with smoke-detector bases.
3) Integral Addressable Module: Arranged to communicate detector status (normal, alarm, or trouble) to FACU.
4) Detector must have functional humidity range of 10 to 90 percent.
5) Color: White.

B.7 FIRE-ALARM NOTIFICATION APPLIANCES

A. Fire-Alarm Audible Notification Appliances:

1. Manufacturer shall be: System Sensor, Wheelock, or approved equal.
2. Description: Horns, bells, or other notification devices that cannot output voice messages.
3. Performance Criteria:

a. Regulatory Requirements:

1) NFPA 72.

b. General Characteristics:

1) Connected to notification-appliance signal circuits, zoned as indicated, equipped for mounting as indicated, and with screw terminals for system connections.
2) Audible notification appliances must have functional humidity range of 10 to 95 percent relative humidity.
3) ISO Temporal 3 Alert Tone: 95 plus or minus 5 dB at 24 V.
4) Horns: Electric-vibrating-polarized type, 24 V(dc); with provision for housing operating mechanism behind grille. Comply with UL 464. Horns must produce sound-pressure level of 90 dB(A-weighted), measured 10 ft. (3 m) from horn, using coded signal prescribed in UL 464 test protocol.
5) Combination Devices: Factory-integrated audible and visible devices in single-mounting assembly, equipped for mounting as indicated, and with screw terminals for system connections.

B.8 FIRE-ALARM LCD ANNUNCIATORS

A. Shall be compatible with FACU.

B. Performance Criteria:

1. Regulatory Requirements:

a. NFPA 72.

2. General Characteristics:

a. Graphic Annunciator Panel: Message hall mimic message displayed on FACU.

B.9 FIRE-ALARM ADDRESSABLE INTERFACE DEVICES

A. Manufacturer shall be compatible with FACU.

B. Performance Criteria:

1. Regulatory Requirements:

a. NFPA 72.

2. General Characteristics:

a. Include address-setting means on module.
b. Store internal identifying code for control panel use to identify module type.
c. Listed for controlling HVAC fan motor controllers.
d. Monitor Module: Microelectronic module providing system address for alarm-initiating devices for wired applications with normally open contacts.
e. Integral Relay: Capable of providing direct signal to elevator controller to initiate elevator recall and to circuit-breaker shunt trip for power shutdown'

1) Allow control panel to switch relay contacts on command.
2) Have minimum of two normally open and two normally closed contacts available for field wiring.

f. Control Module:

1) Operate notification devices.
2) Operate solenoids for use in sprinkler service.

B.10 DIGITAL ALARM COMMUNICATOR TRANSMITTERS (DACT)

A. Manufacturer shall be compatible with FACU.

B. Performance Criteria:

1. Regulatory Requirements:

a. NFPA 72.

2. General Characteristics:

a. DACT must be acceptable to remote central station and must be listed for fire-alarm use.
b. Functional Performance: Unit must receive alarm, supervisory, or trouble signal from FACU and automatically capture two telephone line(s) and dial preset number for remote central station. When contact is made with central station(s), signals must be transmitted. If service on either line is interrupted for longer than 45 seconds, transmitter must initiate local trouble signal and transmit signal indicating loss of telephone line to remote alarm receiving station over remaining line. Transmitter must automatically report telephone service restoration to central

station. If service is lost on both telephone lines, transmitter must initiate local trouble signal.

c. Local functions and display at DACT must include the following:

1) Verification that both telephone lines are available.
2) Programming device.
3) LED display.
4) Manual test report function and manual transmission clear indication.
5) Communications failure with central station or FACU.

d. Digital data transmission must include the following:

1) Address of alarm-initiating device.
2) Address of supervisory signal.
3) Address of trouble-initiating device.
4) Loss of ac supply.
5) Loss of power.
6) Low battery.
7) Abnormal test signal.
8) Communication bus failure.

e. Secondary Power: Integral rechargeable battery and automatic charger.

f. Self-Test: Conducted automatically every 24 hours with report transmitted to central station.

C.EXECUTION

C.1 EXAMINATION

A. Examine areas and conditions for compliance with requirements for ventilation, temperature, humidity, and other conditions affecting performance of the Work.

1. Verify that manufacturer's written instructions for environmental conditions have been permanently established in spaces where equipment and wiring are installed, before installation begins.

B. Examine roughing-in for electrical connections to verify actual locations of connections before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

C.2 PREPARATION

A. Preinstallation Testing: Perform verification of functionality of installed components of existing system prior to starting work. Document equipment or components not functioning as designed.

B. Interruption of Existing Fire-Alarm Service: Do not interrupt fire-alarm service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary guard service in accordance with requirements indicated:

1. Notify Owner no fewer than seven days in advance of proposed interruption of fire-alarm service.
2. Do not proceed with interruption of fire-alarm service without Owner's written permission.

C. Protection of In-Place Conditions: Protect devices during construction unless devices are placed in service to protect facility during construction.

C.3 INSTALLATION OF EQUIPMENT

A. Comply with NECA 305, NFPA 72, NFPA 101, and requirements of authorities having jurisdiction for installation and testing of fire-alarm equipment. Install electrical wiring to comply with requirements in NFPA 70 including, but not limited to, Article 760, "Fire Alarm Systems."

1. Devices placed in service before other trades have completed cleanup must be replaced.
2. Devices installed, but not yet placed, in service must be protected from construction dust, debris, dirt, moisture, and damage in accordance with manufacturer's written storage instructions.

B. Connecting to Existing Equipment: Connect new system to existing fire protection system.

C. Equipment Floor and Wall Mounting: Install FACU on finished floor.

D. Install wall-mounted equipment, with tops of cabinets not more than 78 inch above finished floor.

E. Manual Fire-Alarm Boxes:

1. Install manual fire-alarm box in normal path of egress within 60 inch of exit doorway.
2. Mount manual fire-alarm box on background of contrasting color.
3. Operable part of manual fire-alarm box must be between 42 and 48 inch above floor level. Devices must be mounted at same height unless otherwise indicated.

F. Smoke- and Heat-Detector Spacing:

1. Comply with "Smoke-Sensing Fire Detectors" section in "Initiating Devices" chapter in NFPA 72, for smoke-detector spacing.
2. Comply with "Heat-Sensing Fire Detectors" section in "Initiating Devices" chapter in NFPA 72, for heat-detector spacing.
3. Smooth ceiling spacing must not exceed 30 ft.
4. Spacing of detectors for irregular areas, for irregular ceiling construction, and for high ceiling areas must be determined in accordance with Annex B in NFPA 72.
5. HVAC: Locate detectors not closer than 36 inch from air-supply diffuser or return-air opening.
6. Lighting Fixtures: Locate detectors not closer than 12 inch from lighting fixture and not directly above pendant mounted or indirect lighting.

G. Install cover on each smoke detector that is not placed in service during construction. Cover must remain in place except during system testing. Remove cover prior to system turnover.

H. Duct Smoke Detectors: Comply with NFPA 72 and NFPA 90A. Install sampling tubes so they extend full width of duct. Tubes more than 36 inch long must be supported at both ends.

1. Do not install smoke detector in duct smoke-detector housing during construction. Install detector only during system testing and prior to system turnover.

I. Elevator Shafts: Coordinate temperature rating and location with sprinkler rating and location. Do not install smoke detectors in sprinklered elevator shafts.

J. Remote Status and Alarm Indicators: Install in visible location near each smoke detector, sprinkler water-flow switch, and valve-tamper switch that is not readily visible from normal viewing position.

K. Audible Alarm-Indicating Devices: Install not less than 6 inch below ceiling. Install bells and horns on flush-mounted back boxes with device-operating mechanism concealed behind grille. Install devices at same height unless otherwise indicated.

L. Visible Alarm-Indicating Devices: Install adjacent to each alarm bell or alarm horn and at least 6 inch below ceiling. Install devices at same height unless otherwise indicated.

M. Device Location-Indicating Lights: Locate in public space near device they monitor.

C.4 ELECTRICAL CONNECTIONS

A. Connect wiring in accordance with Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

B. Ground equipment in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

C. Install electrical devices furnished by manufacturer, but not factory mounted, in accordance with NFPA 70 and NECA 1.

D. Install nameplate for each electrical connection, indicating electrical equipment designation and circuit number feeding connection.

1. Nameplate must be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
2. Nameplate must be laminated acrylic or melamine plastic signs with black background and engraved white letters at least 1/2 inch high.

C.5 CONTROL CONNECTIONS

A. Install control and electrical power wiring to field-mounted control devices.

B. Connect control wiring in accordance with Section 260523 "Control-Voltage Electrical Power Cables."

C. Install nameplate for each control connection, indicating field control panel designation and I/O control designation feeding connection.

C.6 PATHWAYS

A. Pathways above recessed ceilings and in inaccessible locations may be routed exposed.

1. Exposed pathways located less than 96 inch above floor must be installed in EMT.

B. Pathways must be installed in EMT.

C. Concealed EMT must be painted red enamel. Exposed EMT color shall be coordinated with the architect.

C.7 CONNECTIONS

A. For fire-protection systems related to doors in fire-rated walls and partitions and to doors in smoke partitions, comply with requirements in Section 087100 "Door Hardware." Connect hardware and devices to fire-alarm system.

1. Verify that hardware and devices are listed for use with installed fire-alarm system before making connections.

B. Make addressable connections with supervised interface device to the following devices and systems. Install interface device less than 36 inch from device controlled. Make addressable confirmation connection when such feedback is available at device or system being controlled.

1. Smoke dampers in air ducts of designated HVAC duct systems.
2. Magnetically held-open doors.
3. Electronically locked doors and access gates.
4. Alarm-initiating connection to elevator recall system and components.
5. Alarm-initiating connection to activate emergency lighting control.
6. Supervisory connections at valve supervisory switches.
7. Supervisory connections at low-air-pressure switch of each dry-pipe sprinkler system.
8. Supervisory connections at elevator shunt-trip breaker.
9. Data communication circuits for connection to building management system.
10. Supervisory connections at fire-pump power failure including dead-phase or phase-reversal condition.
11. Supervisory connections at fire-pump engine control panel.

C.8 IDENTIFICATION

A. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 270553 "Identification for Communications Systems."

B. Install framed instructions in location visible from FACU.

C.9 GROUNDING

A. Ground FACU and associated circuits in accordance with Section 260526 "Grounding and Bonding for Electrical Systems."

B. Ground shielded cables at control panel location only. Insulate shield at device location.

C.10 FIELD QUALITY CONTROL

A. Field tests must be witnessed by authorities having jurisdiction.

B. Administrant for Tests and Inspections:

1. Owner will engage qualified testing agency to administer and perform tests and inspections.
2. Engage qualified testing agency to administer and perform tests and inspections.
3. Engage factory-authorized service representative to administer and perform tests and inspections on components, assemblies, and equipment installations, including connections.
4. Administer and perform tests and inspections with assistance of factory-authorized service representative.

C. Tests and Inspections:

1. Visual Inspection: Conduct visual inspection prior to testing.

    a. Inspection must be based on completed record Drawings and system documentation that is required by "Completion Documents, Preparation" table in "Documentation" section of "Fundamentals" chapter in NFPA 72.
    b. Comply with "Visual Inspection Frequencies" table in "Inspection" section of "Inspection, Testing and Maintenance" chapter in NFPA 72; retain "Initial/Reacceptance" column and list only installed components.

2. System Testing: Comply with "Test Methods" table in "Testing" section of "Inspection, Testing and Maintenance" chapter in NFPA 72.
3. Test audible appliances for public operating mode in accordance with manufacturer's written instructions. Perform test using portable sound-level meter complying with Type 2 requirements in ASA S1.4 Part 1/IEC 61672-1.
4. Test audible appliances for private operating mode in accordance with manufacturer's written instructions.
5. Test visible appliances for public operating mode in accordance with manufacturer's written instructions.
6. Factory-authorized service representative must prepare "Fire Alarm System Record of Completion" in "Documentation" section of "Fundamentals" chapter in NFPA 72 and "Inspection and Testing Form" in "Records" section of "Inspection, Testing and Maintenance" chapter in NFPA 72.

D. Reacceptance Testing: Perform reacceptance testing to verify proper operation of added or replaced devices and appliances.

E. Fire-alarm system will be considered defective if it does not pass tests and inspections.

F. Prepare test and inspection reports.

G. Maintenance Test and Inspection: Perform tests and inspections listed for weekly, monthly, quarterly, and semiannual periods. Use forms developed for initial tests and inspections.

H. Annual Test and Inspection: One year after date of Substantial Completion, test fire-alarm system complying with visual and testing inspection requirements in NFPA 72. Use forms developed for initial tests and inspections.

C.11 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain fire-alarm system. Allow Owner to record training.

C.12 MAINTENANCE

A. Maintenance Service: Beginning at Substantial Completion, maintenance service must include 12 months' full maintenance by skilled employees of manufacturer's designated service organization. Include preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper operation. Parts and supplies must be manufacturer's authorized replacement parts and supplies.

1. Include visual inspections in accordance with "Visual Inspection Frequencies" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.
2. Perform tests in "Test Methods" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.
3. Perform tests per "Testing Frequencies" table in "Testing" paragraph of "Inspection, Testing and Maintenance" chapter in NFPA 72.

C.13 SOFTWARE SERVICE AGREEMENT

A. Comply with UL 864.

B. Technical Support: Beginning at Substantial Completion, service agreement must include software support for two years.

C. Upgrade Service: At Substantial Completion, update software to latest version. Install and program software upgrades that become available within two years from date of Substantial Completion. Upgrading software must include operating system and new or revised licenses for using software.

1. Upgrade Notice: At least 30 days to allow Owner to schedule access to system and to upgrade computer equipment if necessary.

END OF SECTION 284621.11

SECTION 31 10 00 - SITE CLEARING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Section Includes:

1. Protecting existing vegetation to remain.
2. Removing existing vegetation.
3. Clearing and grubbing.
4. Stripping and stockpiling topsoil.
5. Stripping and stockpiling rock.
6. Removing below-grade improvements pertains to those items shown on the drawings, and those associated with the above grade improvements to be removed, if they impede the proposed work.
7. Disconnecting, capping or sealing, and removing site utilities and/or abandonment of utilities and appurtenances.
8. Temporary erosion and sedimentation control.

B. Related Requirements:

1. Section 015000 "Temporary Facilities and Controls" for temporary erosion- and sedimentation-control measures.

1.3 DEFINITIONS

A. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

B. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil," but in disturbed areas such as urban environments, the surface soil can be subsoil.

C. Topsoil: Top layer of the soil profile consisting of existing native surface topsoil or existing in-place surface soil; the zone where plant roots grow. Its appearance is generally friable, pervious, and black or a darker shade of brown, gray, or red than underlying subsoil; reasonably free of subsoil, clay lumps, gravel, and other objects larger than 2 inches (50 mm) in diameter; and free of weeds, roots, toxic materials, or other non-soil materials.

D. Plant-Protection Zone: Area surrounding individual trees, groups of trees, shrubs, or other vegetation to be protected during construction and indicated on Drawings.

E. Vegetation: Trees, shrubs, groundcovers, grass, and other plants.

1.4 PROJECT CONDITIONS

A. Traffic: Conduct site-clearing operations to ensure minimum interference with roads, streets, walks, and other adjacent occupied or used facilities. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from authorities having jurisdiction.

B. Protection of Existing Improvements: Provide protections necessary to prevent damage to existing improvements indicated to remain in place.

1. Protect improvements on adjoining properties and on Owner’s property.

2. Restore damaged improvements to their original condition, as acceptable to property owners, in a timely manner and at no additional cost to the Owner.

C. Soil Erosion and Sediment Control: Soil erosion and sediment control measures are required for this site in accordance with the approved plans. Soil erosion and sediment control measures disturbed or damaged by clearing operations shall be restored to operating condition in accordance with the requirements of the approved plan before the end of the work day.

D. Protection of Existing Trees and Vegetation: Protect existing trees and other vegetation indicated to remain in place against unnecessary cutting, breaking or skinning of roots, skinning or bruising of bark, smothering of trees by stockpiling construction materials or excavated materials within drip line, excess foot or vehicular traffic, or parking of vehicles within drip line. Provide temporary guards to protect trees and vegetation to be left standing.

1. Water trees and other vegetation to remain within limits of contract work as required to maintain their health during course of construction operations.

2. Provide protection for roots over 1-1/2 inch in diameter that are cut during construction operations. Coat cut faces with an emulsified asphalt or other acceptable coating formulated to use on damaged plant tissues. Temporarily cover exposed roots with wet burlap to prevent roots from drying out, cover with earth as soon as possible.

3. Repair or replace trees and vegetation indicated to remain that are damaged by construction operations in manner acceptable to Architect. Employ a licensed arborist to repair damage to trees and shrubs.

4. Replace trees that cannot be replaced and restored to full-growth status, as determined by arborist.

1.5 EXISTING SERVICES

A. General: Indicated locations are approximate, determine exact locations before commencing Work.

B. Arrange and pay for disconnecting, removing, capping, and plugging, utility services. Notify affected utility companies in advance and obtain approval before starting this Work.

C. Place markers to indicated location of disconnected services. Identify service lines and capping locations on Project Record Documents.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.7 MATERIAL OWNERSHIP

A. Except for materials indicated to be stockpiled or otherwise remain Owner's property, cleared materials shall become Contractor's property and shall be removed from Project site.

1.8 INFORMATIONAL SUBMITTALS

A. Existing Conditions: Documentation of existing trees and plantings, adjoining construction, and site improvements that establishes preconstruction conditions that might be misconstrued as damage caused by site clearing.

1. Use sufficiently detailed photographs or video recordings.
2. Include plans and notations to indicate specific wounds and damage conditions of each tree or other plant designated to remain.

B. Topsoil stripping and stockpiling program.

C. Rock stockpiling program.

D. Record Drawings: Identifying and accurately showing locations of capped utilities and other subsurface structural, electrical, and mechanical conditions.

1.9 QUALITY ASSURANCE

A. Comply with standards of authorities having jurisdiction.

B. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction, the more stringent will apply.

C. Topsoil Stripping and Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

D. Rock Stockpiling Program: Prepare a written program to systematically demonstrate the ability of personnel to properly follow procedures and handle materials and equipment during the Work. Include dimensioned diagrams for placement and protection of stockpiles.

1.10 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during site-clearing operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.
2. Provide alternate routes around closed or obstructed trafficways if required by Owner or authorities having jurisdiction.

B. Improvements on Adjoining Property: Authority for performing site clearing indicated on property adjoining Owner's property will be obtained by Owner before award of Contract.

1. Do not proceed with work on adjoining property until directed by Architect.

C. Salvageable Improvements: Carefully remove items indicated to be salvaged and store on Owner's premises where indicated.

D. Utility Locator Service: Notify Miss Utility for area where Project is located before site clearing.

E. Do not commence site clearing operations until temporary erosion- and sedimentation-control and plant-protection measures are in place.

F. Soil Stripping, Handling, and Stockpiling: Perform only when the soil is dry or slightly moist.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Satisfactory Soil Material: Requirements for satisfactory soil material are specified in Section 312000 "Earth Moving."

1. Obtain approved borrow soil material off-site when satisfactory soil material is not available on-site.

PART 3 - EXECUTION

3.1 PREPARATION

A. The contractor shall review the Construction Manager’s construction staging plan prior to beginning any construction.

B. Protect and maintain benchmarks and survey control points from disturbance during construction.

C. Protect existing site improvements to remain from damage during construction.

1. Restore damaged improvements to their original condition, as acceptable to Owner.

3.2 TEMPORARY EROSION AND SEDIMENT CONTROL

A. Provide temporary erosion and sedimentation control measures to prevent soil erosion and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways, according to erosion and sediment control Drawings and requirements of authorities having jurisdiction.

B. Verify that flows of water redirected from construction areas or generated by construction activity do not enter or cross protection zones.

C. Inspect, maintain, and repair erosion and sediment control measures during construction until permanent vegetation has been established.

D. With permission from Erosion & Sediment Control Inspector, remove erosion and sediment controls, and restore and stabilize areas disturbed during removal.

3.3 EXISTING UTILITIES

A. The contractor will locate, identify, disconnect, and seal or cap utilities indicated to be removed or abandoned in place.

1. The contractor will coordinate with owner and with approval arrange with utility companies to shut off indicated utilities.

B. Interrupting Existing Utilities: Do not interrupt utilities serving facilities occupied by Owner or others, unless permitted under the following conditions and then only after arranging to provide temporary utility services according to requirements indicated:

1. Notify Architect/Owner not less than two days in advance of proposed utility interruptions.
2. Do not proceed with utility interruptions without Architect's written permission.

C. Excavate for and remove underground utilities indicated to be removed.

D. Removal of underground utilities is included in earthwork sections; in applicable fire suppression, plumbing, HVAC, electrical, communications, electronic safety and security, and utilities sections; and in Section 024116 "Structure Demolition" and Section 024119 "Selective Demolition."

E. Abandonment or removal of certain underground pipe or conduits may be indicated on mechanical or electrical drawings and is included under work of related Section 024113. Removing abandoned underground piping or conduits interfering with construction shall be as follows:

a. Underground improvements shall be completely removed to a depth of two feet below indicated subgrade under structures and paving or finished grade in other areas or where it conflicts with proposed construction.

b. Pipes and other utilities indicated to be abandoned in place shall have open ends plugged with concrete for a minimum length of one foot. Structures, manholes, and other utility appurtenances shall be filled with compacted subgrade materials.

3.4 CLEARING AND GRUBBING

A. Remove obstructions, trees, shrubs, and other vegetation to permit installation of new construction.

1. Do not remove trees, shrubs, and other vegetation indicated to remain or to be relocated.
2. Grind down stumps and remove roots larger than 2 inches (50.8 mm) in diameter, obstructions, and debris to a depth of 18 inches (457.2 mm) below exposed subgrade in turf areas and 36 inches (914.4) below exposed subgrade in hardscape areas..
3. Use only hand methods or air spade for grubbing within protection zones.
4. Chip removed tree branches and dispose of off-site.

B. Fill depressions caused by clearing and grubbing operations with satisfactory soil material unless further excavation or earthwork is indicated.

1. Place fill material in horizontal layers not exceeding 8 inches loose depth, and thoroughly compact each layer to a density not less than 95 percent of the maximum dry density when tested in accordance with AASHTO T-180 within the building footprint and extending out ten feet (10') either side of the exterior wall lines. Beyond this zone, fill may be compacted to a density not less than 92 percent of the maximum dry density when tested in accordance with AASHTO T-180.

3.5 TOPSOIL STRIPPING

A. Remove sod and grass before stripping topsoil.

B. Topsoil: Topsoil is defined as friable clay loam surface soil found in a depth of not less than 6 inches. Satisfactory topsoil is reasonably free of subsoil, clay lumps, stones, and other objects over 1 inch in diameter, and without weeds, roots, and other objectionable material.

1. Strip topsoil to whatever depths encountered in a manner to prevent intermingling with underlying subsoil or other waste materials. Remove heavy growths of grass from areas before stripping.

a. Where existing trees are indicated to remain, leave existing topsoil in place within drip lines to prevent damage to root system.

2. Remove subsoil and non-soil materials from topsoil, including clay lumps, gravel, and other objects larger than 2 inches (50.8 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

C. Stockpile topsoil away from edge of excavations without intermixing with subsoil or other materials. Grade and shape stockpiles to drain surface water. Cover to prevent windblown dust and erosion by water.

1. Limit height of topsoil stockpiles to 144 inches (3658 mm) or as indicated on the sediment control plans.
2. Do not stockpile topsoil within protection zones.
3. Stockpile surplus topsoil to allow for respreading deeper topsoil.
4. Dispose of unsuitable as specified in Section 31 23 00 – Excavating and Filling for disposal of waste material.

3.6 STOCKPILING ROCK

A. Remove from construction area naturally formed rocks that measure more than 1 foot (304.8 mm) across in least dimension. Do not include excavated or crushed rock.

1. Separate or wash off non-rock materials from rocks, including soil, clay lumps, gravel, and other objects larger than 2 inches (50.8 mm) in diameter; trash, debris, weeds, roots, and other waste materials.

B. Stockpile rock away from edge of excavations without intermixing with other materials. Cover to prevent windblown debris from accumulating among rocks.

1. Limit height of rock stockpiles to 144 inches (3658 mm).
2. Do not stockpile rock within protection zones.
3. Dispose of surplus rock. Surplus rock is that which exceeds quantity indicated to be stockpiled or reused.

3.7 SITE IMPROVEMENTS

A. Remove existing above- and below-grade improvements as indicated and necessary to facilitate new construction.

B. Remove slabs, paving, curbs, gutters, and aggregate base as indicated.

1. Unless existing full-depth joints coincide with line of demolition, neatly saw-cut along line of existing pavement to remain before removing adjacent existing pavement. Saw-cut faces vertically.
2. Paint cut ends of steel reinforcement in concrete to remain with two coats of anti-rust coating, following coating manufacturer's written instructions. Keep paint off surfaces that will remain exposed.
3. Removal of pavement, including base courses, sidewalk, curb, and combination curb and gutter, shall be for the full depth thereof.
4. The Contractor shall use suitable equipment, tools, and methods for cutting and trimming as well as removing the materials to the neat lines set by the Owner and shall not in any manner disturb or damage the sections of base or pavement to be salvaged.
5. Damage done by the Contractor’s equipment or methods to those areas designated for salvaging shall be replaced at the Contractor’s expense.
6. Where the old subgrade is satisfactory as to condition and elevation, special care shall be taken in the removal operation in order to avoid the disturbing of the old grade.

3.8 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Remove surplus soil material, unsuitable topsoil, obstructions, demolished materials, and waste materials including trash and debris, and legally dispose of them off Owner's property in accordance with local regulations.

B. Burning on Owner’s Property: Burning is not permitted on Owner’s property.

C. Separate recyclable materials produced during site clearing from other nonrecyclable materials. Store or stockpile without intermixing with other materials, and transport them to recycling facilities. Do not interfere with other Project work.

3.9 RECORD DRAWINGS

A. Survey and include on record drawings location and depth of all utilities encountered which have not been removed.

END OF SECTION 31 10 00

SECTION 31 20 00 - EARTH MOVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials dated July, 2025 and as amended.

D. Manual on Uniform Traffic Control Devices for Streets and Highways, 2012 Edition and as amended.

E. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Section Includes:

1. Excavating and filling for rough grading the Site.

2. Preparing subgrades for slabs-on-grade, walks, pavements, turf and grasses, and plants.

3. Excavating and backfilling for buildings and structures.

4. Drainage and moisture control fill course for concrete slabs-on-grade.

5. Subbase course for concrete walks and pavements.

6. Subsurface drainage backfill for walls and trenches.

7. Excavating and backfilling trenches for utilities and pits for buried utility structures.

8. Excavating and backfilling trenches within building lines.

9. Excavating well hole to accommodate elevator-cylinder assembly.

B. Related Requirements:

1. Section 31 10 00 "Site Clearing" for site stripping, grubbing, stripping and stockpiling topsoil, and removal of above- and below-grade improvements and utilities.

2. Section 31 50 00 "Excavation Support and Protection" for shoring, bracing, and sheet piling of excavations.

3. Section 32 92 00 "Turf and Grasses" for finish grading in turf and grass areas, including preparing and placing planting soil for turf areas.

4. Section 32 93 00 "Plants" for finish grading in planting areas and tree and shrub pit excavation and planting.

5. Section 01 77 00 “Closeout Procedures”

6. Section 01 32 00 "Construction Progress Documentation" for recording pre-excavation and earth-moving progress.

1.3 SOIL INVESTIGATION DATA

A. Investigation:

1. Soil and subsurface investigations were conducted at the site, the results of which are to be found in the boring logs report prepared by Findling Inc. dated August 30, 2024.

B. Subsurface Soil Data:

1. Data concerning subsurface materials or conditions, which is based upon test pits, or test borings, has been obtained by Owner, the Architect, and the Engineers for their own use in designing the project. Its accuracy or completeness is not guaranteed by the Owner, the Architect or the Engineers, and Contractor must assume all responsibility in excavating for this project and shall not rely on subsurface information obtained from Architect, or Engineers, or indirectly from the Owner. Bidders shall make their own investigation of existing subsurface conditions. Neither the Owner, the Architect, or the Engineers will be responsible in any way for additional compensation for excavation work performed under the Contract, due to Contractor's assumptions based on subsoil data prepared solely for the Owner, the Architects, and the Engineers, use.

C. A copy of the results of the subsurface investigation is available for informational purposes only.

1.4 UNIT PRICES

A. Work of this Section is affected by unit prices for earth moving specified in Section 01 22 00 "Unit Prices."

B. Quantity allowances for earth moving are included in Section 01 21 00 "Allowances."

C. Rock Measurement: Volume of rock actually removed, measured in original position, but not to exceed the following. Unit prices for rock excavation include replacement with approved materials.

1. 24 inches (610 mm) outside of concrete forms other than at footings.

2. 12 inches (305 mm) outside of concrete forms at footings.

3. 6 inches (152 mm) outside of minimum required dimensions of concrete cast against grade.

4. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.

5. 6 inches (152 mm) beneath bottom of concrete slabs-on-grade.

6. 6 inches (152 mm) beneath pipe in trenches, and the greater of 24 inches (610 mm) wider than pipe or 42 inches (1067 mm) wide.

1.5 DEFINITIONS

A. Backfill: Soil material or controlled low-strength material used to fill an excavation.

1. Initial Backfill: Backfill placed beside and over pipe in a trench, including haunches to support sides of pipe.

2. Final Backfill: Backfill placed over initial backfill to fill a trench.

B. Base Course: Aggregate layer placed between the subbase course and hot-mix asphalt paving.

C. Bedding Course: Aggregate layer placed over the excavated subgrade in a trench before laying pipe.

D. Borrow Soil: Satisfactory soil imported from off-site for use as fill or backfill.

E. Drainage Course: Aggregate layer supporting the slab-on-grade that also minimizes upward capillary flow of pore water.

F. Excavation: Removal of material encountered above subgrade elevations and to lines and dimensions indicated.

1. Additional excavation: When excavation has reached required subgrade elevations, notify the Inspection Agency, who will make an inspection of conditions. The Contractor is responsible for scheduling the inspections such that there is no delay in the Project. If the Inspection Agency determines that bearing material at required subgrade elevations are unsuitable, continue excavation until suitable bearing materials are encountered and replace excavated material as directed by them.

2. Authorized Additional Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions as directed by Architect. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.

3. Bulk Excavation: Excavation more than 10 feet (3 m) in width and more than 30 feet (9.1 m) in length.

4. Unauthorized Excavation: Excavation below subgrade elevations or beyond indicated lines and dimensions without direction by Architect. Unauthorized excavation, as well as remedial work directed by Architect, shall be without additional compensation.

G. Fill: Soil materials used to raise existing grades.

H. Rock: Rock material in beds, ledges, unstratified masses, conglomerate deposits, and boulders of rock material that exceed 1 cu. yd. (0.76 cu. m) for bulk excavation or 1/2 cu. yd. (0.38 cu. m) for footing, trench, and pit excavation that cannot be removed by rock-excavating equipment

equivalent to the following in size and performance ratings, without systematic drilling, ram hammering, ripping, or blasting, when permitted:

1. Equipment for Footing, Trench, and Pit Excavation: Late-model, track-mounted hydraulic excavator, equivalent to Caterpillar Model No. 215-LC; equipped with a 42-inch- (1067-mm-) maximum-width, short-tip-radius rock bucket; rated at not less than 138-hp (103-kW) flywheel power with bucket-curling force of not less than 28,700 lbf (127.7 kN) and stick-crowd force of not less than 18,400 lbf (81.8 kN) with extra-long reach boom.

2. Equipment for Bulk Excavation: Late-model, track-mounted loader, Caterpillar Model No. D-8N; rated at not less than 285-hp (212.5-kW) flywheel power and developing a minimum of 45,000-lbf (200.2-kN) breakout force with a general-purpose bare bucket.

I. Structures: Buildings, footings, foundations, retaining walls, slabs, tanks, curbs, mechanical and electrical appurtenances, or other man-made stationary features constructed above or below the ground surface.

J. Subbase Course: Aggregate layer placed between the subgrade and base course for hot-mix asphalt pavement, or aggregate layer placed between the subgrade and a cement concrete pavement or a cement concrete or hot-mix asphalt walk.

K. Subgrade: Uppermost surface of an excavation or the top surface of a fill or backfill immediately below subbase, drainage fill, drainage course, or topsoil materials.

L. Utilities: On-site underground pipes, conduits, ducts, and cables as well as underground services within buildings.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct pre-excavation conference at Project site.

1. Review methods and procedures related to earthmoving, including, but not limited to, the following:

a. Personnel and equipment needed to make progress and avoid delays.

b. Coordination of Work with utility locator service.

c. Coordination of Work and equipment movement with the locations of tree- and plant-protection zones.

d. Extent of trenching by hand or with air spade.

e. Field quality control.

f. Confirmation that the contractor will provide required equipment for Bulk and Trench rock removal.

1.7 ACTION SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specification Sections.

B. Test Reports: In addition to test reports required under field quality control, submit the following:

1. Laboratory analysis of each soil material proposed for fill and backfill from on-site and borrow sources.

2. One moisture density curve for each soil material.

3. Reports of actual unconfined compressive strength and/or results of bearing tests of each stratum tested.

C. Product Data: For each type of the following manufactured products required:

1. Geotextiles.

2. Warning tapes.

D. Samples for Verification: For the following products, in sizes indicated below:

1. Geotextile: 12 by 12 inches (304.8 by 304.8 mm).

2. Warning Tape: 12 inches (304.8 mm) long; of each color.

E. LEED Submittals: Comply with Section 01 81 13

1. SS Credit 2: Protect or Restore Habitat

a. Provide documentation that confirms all criteria listed in Part 2 of this Section is met for all imported soils.

1.8 QUALITY ASSURANCE

A. Codes and Standards: Perform earthwork complying with requirements of Baltimore County.

B. Testing and Inspection Service: The Contractor will employ a qualified independent geotechnical engineering testing agency to classify proposed on-site and borrow soils to verify that soils comply with specified requirements and to perform required field and laboratory testing during earthwork operations. Check bearing capacities of excavated footings to confirm bearing capacity prior to installation of reinforcing steel and concrete.

1. The Agency's responsibilities shall include:

a. Having an Inspector present on-site during all earthwork operations and as a minimum from 7:00 a.m. to 5:00 p.m. during all earthwork and trenching operations.

b. Testing and approving all materials used for fill and/or backfill and borrow.

c. Testing and approving on-site and borrow topsoil for compliance with this specification.

d. Maintaining accurate records in regard to excavation and fill or backfill for approved undercutting or over-excavation.

e. Maintain accurate records in regards to rock excavation in open excavations and in trench excavations.

f. Approving all backfilling procedures and mechanical compaction equipment.

g. Verifying compaction by in-place density tests. Tests to be submitted to the Architect for review. A minimum of one (1) density test shall be performed for each 2,500 square feet of lift area or pavement area, or more often if directed by the Architect.

h. Inspect exposed subgrade after clearing and grubbing prior to preparation of site.

i. Observe and inspect all proofrolling operations and determine whether additional excavation and backfilling is required.

j. Inspect and test that no loose or soft pockets exist beneath the bearing surface. Approve the bearing surfaces or recommend undercutting and structural fills, as necessary.

k. Submitting weekly written reports as to the status of the fill. Submit a final report indicating that the fill meets the requirements of the Specifications.

l. Determine all earthwork quantities for which unit price payments apply.

m. Verify in-place compacted depth of topsoil.

n. Monitor the movement of settlement plates.

2. It shall be the responsibility of the Contractor to notify the Inspection Agency three days prior to the beginning of work so that the Inspection Agency can have a soils engineer and/or soils technician on the site during the work. All costs of this Inspection service incurred due to lack of coordination by the Contractor of the earthwork, causing unnecessary visits by the Inspection Agency, shall be paid for by the Contractor.

C. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County requirements, or other guidelines set forth by the authorities having jurisdiction, the more stringent will apply.

D. Geotechnical Testing Agency Qualifications: Qualified according to ASTM E329 and ASTM D3740 for testing indicated.

1.9 AS-BUILTS

A. The Contractor shall provide, and pay for, an as-built survey to verify that proposed elevations have been achieved. A 50-foot grid shall be staked on all areas to verify finish grade elevations. In addition to the grid, all swales shall have top and bottom located, grade breaks located, top and bottom of retaining walls, shall be surveyed. Building finished floor elevation shall be surveyed at a minimum of one opening per building side, where possible.

B. A final as-built survey drawing shall be submitted to the Engineer and Owner for their review and verification.

C. Provide As-Built information as required for site and SWM per Section 01 71 23.

1.10 FIELD CONDITIONS

A. Traffic: Minimize interference with adjoining roads, streets, walks, and other adjacent occupied or used facilities during earth-moving operations.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.

2. Provide alternate routes around closed or obstructed traffic ways if required by Owner or authorities having jurisdiction.

B. Utility Locator Service: Notify "Miss Utility" for area where Project is located before beginning earth-moving operations.

C. Do not commence earth-moving operations until temporary site fencing and erosion- and sedimentation-control measures specified in Section 01 50 00 "Temporary Facilities and Controls" and Section 31 10 00 "Site Clearing" are in place.

D. The following practices are prohibited within protection zones:

1. Storage of construction materials, debris, or excavated material.

2. Parking vehicles or equipment.

3. Foot traffic.

4. Erection of sheds or structures.

5. Impoundment of water.

6. Excavation or other digging unless otherwise indicated.

7. Attachment of signs to or wrapping materials around trees or plants unless otherwise indicated.

E. Do not direct vehicle or equipment exhaust towards protection zones.

F. Prohibit heat sources, flames, ignition sources, and smoking within or near protection zones.

G. Backfilling below-grade areas: The backfilling operation required to bring actual grades to the grade elevations shown on the drawings as proposed grades.

1. The borrow material shall be removed and then either stored or disposed. If the testing agency verifies that the borrow material complies with these specifications for backfill material, then the Contractor may use it to backfill this area to grade.

2. Note that high or low moisture contents do not render a soil as "unsuitable" as the contractor is wholly responsible for moisture conditioning of the soils (i.e., scarifying/loosening and wetting or drying). Undercuts will only be authorized if the soils remain unsuitable when the soil in question is at optimal moisture content.

3. All suitable materials removed in excavation shall be used in accordance with the provisions of this section. It shall be the obligation of the Contractor to utilize all suitable materials from excavation in the construction of fills throughout the entire area of the Contract.

4. Any additional backfill material necessary to complete this operation shall comply with these specifications.

5. This backfilling operation shall be the first earthwork operation performed on site after establishment of the sediment control devices.

6. All backfilling operations must be performed in accordance with the Geotechnical Engineer's report, including undercut and all protective measures.

H. Site Information: Data in subsurface investigation reports was used for the basis of the design. The data in the subsurface investigation report is not a part of the Contract. Conditions are not intended as representations or warranties of accuracy or continuity between soil borings. The Owner, Architect or Engineers will not be responsible for interpretations or conclusions drawn from this data by the Contractor.

1. Additional test borings and other exploratory operations may be performed by the Contractor, at the Contractor's option; however, no change in the Contract Sum will be authorized for such additional exploration. The contractor shall, at the request of the Owner and/or Architect, provide subsurface assumptions, cut & fill analysis and/or computer models used in generation of base bid earthwork quantities.

I. Existing Utilities: Do not interrupt existing utilities serving facilities occupied by the Owner or others except when permitted in writing by the Architect and then only after acceptable temporary utility services have been provided. If existing utilities are indicated to be abandoned, the Contractor shall remove such utility, if necessary, at no additional cost to the Owner.

1. Provide a minimum 48 hours notice to the Architect and receive written notice to proceed before interrupting any utility.

J. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies to shutoff services if lines are active.

K. Should uncharted or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility owner.

L. Protection of Persons and Property: Barricade open excavations occurring as part of this work and post with warning lights. Open trench excavations within the limits of the State right-of-way shall be protected in accordance with the requirements of applicable permits. Open excavation within the roadways shall be plated and shall be posted with warning devices in accordance with the Manual of Uniform Traffic Control Devices 2009 Version and as amended.

1. Perform excavation by hand within dripline of large trees to remain. Protect root systems from damage or dryout to the greatest extent possible. Maintain moist condition for root system and cover exposed roots with moistened burlap.

M. Moisture Sensitive Soils:

1. The on-site founding materials are moisture sensitive and will be easily disturbed by excessive construction activity.

2. The exposed founding materials shall be protected against detrimental changes in engineering qualities as a result of disturbance from rain or frost.

3. Surface runoff shall be drained away from the excavations and not allowed to pond.

4. If possible, concrete shall be placed in the footings the same day the excavations are made, or the founding materials may be covered by mud mats in order to protect the founding soil from becoming saturated due to forecasted precipitation and/or disturbed due to excessive construction activity during the placement of steel reinforcement.

5. The presence of moisture sensitive fine-grained soils poses the potential for high moisture content. Soils may be found to be at or near their plastic limit; consequently, the on-site soils may require dicing, aeration, and/or manipulation to achieve efficient compaction.

6. Any regions exhibiting poor drainage characteristics, and low lying areas, shall be expected to display moisture contents, which are excessively high for normal earthwork operations.

7. Note that high or low moisture contents do not render a soil as "unsuitable" as the contractor is wholly responsible for moisture conditioning of the soils (i.e., scarifying/loosening and wetting or drying). Undercuts will only be authorized if the soils remain unsuitable when the soil in question is at optimal moisture content.

8. All suitable materials removed in excavation shall be used in accordance with the provisions of this section. It shall be the obligation of the Contractor to utilize all suitable materials from excavation in the construction of fills throughout the entire area of the Contract.

9. Any standing water shall be drained or pumped into approved sediment control facilities prior to commencement of earthwork

10. Excavations near to subgrade and all fills should be protected from traffic of heavy equipment, including heavy compaction equipment, when on-site soils exhibit high moisture contents, in order to minimize pumping and a generalized deterioration of these materials.

N. The Contractor is solely responsible for the protection of the sub-grade until it receives final surface treatment and shall maintain the sub-grade as suitable and acceptable to the Owner or Owner’s Representative at all times. He shall be completely responsible for restoration or replacement of the sub-grade due to moisture damage, construction traffic, or any other cause. Repair or replacement of the sub-grade shall be performed at no additional cost to the Owner.

O. Rock Excavation: The Contractor shall provide the Owner with rock surface elevations that have been confirmed by the onsite geotechnical engineer for quantity verification prior to any rock removal. Upon completing the necessary rock removal, volume measurements must be quantified and confirmed by geotechnical engineer. Failure to provide required quantity confirmation will result in the material being classified as standard excavation.

1.11 PROTECTION OF PROPERTY

A. The Contractor shall be responsible for all damages caused by his work to adjoining property and/or buildings. Care shall also be exercised to prevent a nuisance to neighboring properties by uncontrolled drainage of water or airborne dust.

B. The Contractor is cautioned to avoid the disturbance of existing settlement plates installed. Highly visible protective measures should be taken to prevent disturbances. Any costs associated with corrective measures for a disturbed settlement plate will the responsibility of the contractor.

PART 2 - PRODUCTS

2.1 SOIL MATERIALS

A. General: Provide borrow soil materials when sufficient satisfactory soil materials are not available from excavations Classification of materials shall be made by the Contractor's independent testing agency.

B. Satisfactory Soils: Soil Classification Groups GW, GP, GM, SW, SP, and SM according to ASTM D2487, or a combination of these groups; free of rock or gravel larger than 3 inches (76.2 mm) in any dimension and 1.5 inches within the top 18 inches of fill, debris, waste, frozen materials, vegetation and other deleterious matter. The proposed fill soil should have a maximum dry density of no less than 120 pcf. GC and SC materials may be utilized as compacted structural fill if they contain less than 35% passing the No. 200 sieve and a Plasticity Index of less than 15.

C. Unsatisfactory Soils: Soil Classification Groups GC, SC, CL, ML, OL, CH, MH, OH, and PT according to ASTM D2487, or a combination of these groups. The soils classified as GC, SC, CL, ML; and CH/MH with a maximum Liquid Limit of 60% and Plasticity Index of 30% can be used as structural fills at depths greater than 4 ft below pavement subgrades and within non-structural areas. In addition, these soils can be used as a fill for site grading with a maximum dry density greater than 105 pcf.

1. Unsatisfactory soils also include satisfactory soils not maintained within 2 percent of optimum moisture content at time of compaction.

D. Subbase Material: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with graded aggregate for subbase courses shall meet the requirements for G A S/B as shown in Table 312300-1. RC-6 is not acceptable.

Table 31 23 00-1

SIEVES		**MASS PERCENT PASSING**	
mm	Standard	BRG S/B	G A S/B
100	4 in.		
90	3 ½ in.		
63	2 ½ in.	100	
50	2 in.		100, ± 3
37.5	1 ½ in.		90 - 100, ± 5
25	1 in.	90 – 100	
19	¾ in.		
12.5	½ in.	60 - 100	

Table 31 23 00-1			
SIEVES		**MASS PERCENT PASSING**	
9.5	3/8 in.		
4.75	#4		30 - 60, ± 10
2.36	#8		
2.0	#10	35 - 90	
0.60	#30		
0.425	#40	20 - 55	
0.075	#200	5 - 25	0 - 12, ± 5

E. Base Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; with at least 95 percent passing a 1-1/2-inch (38.1-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

F. Engineered Fill: Subbase or base materials. Soils used for compacted fill should be free of unsuitable materials such as topsoil, debris and other organics, rubble and rocks larger than 4 inches in diameter. Open-graded materials, such as Gravels (GW and GP), which contain void space in their mass should not be used in structural fill unless properly encapsulated with filter fabric. Lean concrete can also be used as a select fill under the foundation.

G. Bank Run Gravel for subbases: Bank Run Gravel for subbase courses shall meet the requirements for BRG S/B as shown in Table 31 23 00-1.

H. Bedding Course: Naturally or artificially graded mixture of natural or crushed gravel, crushed stone, and natural or crushed sand; ASTM D2940/D2940M; except with 100 percent passing a 1-inch (25.4-mm) sieve and not more than 8 percent passing a No. 200 (0.075-mm) sieve.

I. Drainage Course: Narrowly graded mixture of washed crushed stone, or crushed or uncrushed gravel; ASTM D448; coarse-aggregate grading Size 57; with 100 percent passing a 1-1/2-inch (38.1-mm) sieve and zero to 5 percent passing a No. 8 (2.36-mm) sieve.

J. Filter Material: Narrowly graded mixture of natural or crushed gravel, or crushed stone and natural sand; ASTM D448; coarse-aggregate grading Size 67; with 100 percent passing a 1-inch (25.4-mm) sieve and zero to 5 percent passing a No. 4 (4.75-mm) sieve.

K. Sand: ASTM C33/C33M; fine aggregate.

L. Impervious Fill: Clayey gravel and sand mixture capable of compacting to a dense state.

M. Imported Soils: Comply with the following criteria:

1. Original function is comparable to reuse function

2. Not classified as prime farmland, unique farmland or farmland of statewide or local importance.

3. Not extracted from a greenfield site.

4. Does not include sphagnum peat moss.

2.2 GEOTEXTILES

A. Subsurface Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: As follows:

a. Grab Tensile Strength: 157 lbf (698.4 N); ASTM D4632.

b. Sewn Seam Strength: 142 lbf (631.6 N); ASTM D4632.

c. Tear Strength: 56 lbf (249.1 N); ASTM D4533.

d. Puncture Strength: 56 lbf (249.1 N); ASTM D4833.

2. Apparent Opening Size: No. 40 (0.425-mm) sieve, maximum; ASTM D4751.

3. Permittivity: 0.5 per second, minimum; ASTM D4491.

4. UV Stability: 50 percent after 500 hours' exposure; ASTM D4355.

B. Separation Geotextile: Woven geotextile fabric, manufactured for separation applications, made from polyolefins or polyesters; with elongation less than 50 percent; complying with AASHTO M 288 and the following, measured per test methods referenced:

1. Survivability: As follows:

a. Grab Tensile Strength: 247 lbf (1098.7 N); ASTM D4632.

b. Sewn Seam Strength: 222 lbf (987.5 N); ASTM D4632.

c. Tear Strength: 90 lbf (400.3 N); ASTM D4533.

d. Puncture Strength: 90 lbf (400.3 N); ASTM D4833.

2. Apparent Opening Size: No. 60 (0.250-mm) sieve, maximum; ASTM D4751.

3. Permittivity: 0.02 per second, minimum; ASTM D4491.

4. UV Stability: 50 percent after 500 hours' exposure; ASTM D4355.

2.3 ACCESSORIES

A. Detectable Warning Tape: Acid- and alkali-resistant, polyethylene film warning tape manufactured for marking and identifying underground utilities, a minimum of 6 inches (152.4 mm) wide and 4 mils (0.1 mm) thick, continuously inscribed with a description of the utility, with

metallic core encased in a protective jacket for corrosion protection, detectable by metal detector when tape is buried up to 30 inches (762 mm) deep; colored as follows:

1. Red: Electric.
2. Yellow: Gas, oil, steam, and dangerous materials.
3. Orange: Telephone and other communications.
4. Blue: Water systems.
5. Green: Sewer systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by earth-moving operations.

B. Protect and maintain erosion and sedimentation controls during earth-moving operations.

C. Protect subgrades and foundation soils from freezing temperatures and frost. Remove temporary protection before placing subsequent materials.

3.2 DEWATERING

A. Provide dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

B. Prevent surface water and ground water from entering excavations, from ponding on prepared subgrades, and from flooding Project site and surrounding area.

C. Protect subgrades from softening, undermining, washout, and damage by rain or water accumulation.

1. Reroute surface water runoff away from excavated areas. Do not allow water to accumulate in excavations. Do not use excavated trenches as temporary drainage ditches.

D. Do not allow water to accumulate in excavations. Remove water to prevent softening of foundation bottoms, undercutting footings, and soil changes detrimental to stability of subgrades and foundations. Provide and maintain pumps, well points, and sumps, suction and discharge lines, and other dewatering system components necessary to convey water away from excavations.

1. Establish and maintain temporary drainage ditches and other diversions outside excavation limits to convey rain water and water to be removed from excavation to collecting or runoff areas. Do not use foundation or pipeline excavations as temporary drainage ditches.

E. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

F. During Construction, the grading operations shall be performed in a manner such that the excavation will be well drained at all times. When necessary, excavations shall be drained to sumps, which shall be pumped continuously, if required, to an approved sediment control device. The Contractor shall maintain and keep all ditches open and free from soil and debris while in service or until final acceptance of the work, and all grading shall be done on neat, regular lines conforming to the sections and contours shown on the plans. All work done in proper sequence with all other associated operations. Before slab or surfacing is placed, all drainage facilities shall be installed which are required to permit free and uninterrupted flow of the surface and underground water from the site or to pumping sumps, etc.

3.3 EXPLOSIVES

A. Explosives: Do not use explosives.

3.4 EXCAVATION, GENERAL

A. Classified Excavation: Excavate to subgrade elevations. Material to be excavated will be classified as earth and rock. Do not excavate rock until it has been classified and cross sectioned by Architect. The Contract Sum will be adjusted for rock excavation according to unit prices included in the Contract Documents. Changes in the Contract Time may be authorized for rock excavation. Excavation, including undercut, shall be performed in accordance with the Geotechnical Engineer's report.

1. Earth excavation includes excavating pavements and obstructions visible on surface; underground structures, utilities, and other items indicated to be removed; and soil, boulders, and other materials not classified as rock or unauthorized excavation.

    a. Intermittent drilling; blasting, if permitted; ram hammering; or ripping of material not classified as rock excavation is earth excavation.

2. Rock excavation includes removal and disposal of rock. Remove rock to lines and subgrade elevations indicated to permit installation of permanent construction without exceeding the following dimensions:

    a. 24 inches (609.6 mm) outside of concrete forms other than at footings.

    b. 12 inches (304.8 mm) outside of concrete forms at footings.

    c. 6 inches (152.4 mm) outside of minimum required dimensions of concrete cast against grade.

    d. Outside dimensions of concrete walls indicated to be cast against rock without forms or exterior waterproofing treatments.

    e. 6 inches (152.4 mm) beneath bottom of concrete slabs-on-grade.

    f. 6 inches (152.4 mm) beneath pipe in trenches and the greater of 24 inches (609.6 mm) wider than pipe or 42 inches (1066.8 mm) wide.

3.5 EXCAVATION FOR STRUCTURES

A. Excavate to indicated elevations and dimensions within a tolerance of plus or minus 1 inch (25.4 mm). If applicable, extend excavations a sufficient distance from structures for placing and removing concrete formwork, for installing services and other construction, and for inspections.

1. Excavations for Footings and Foundations: Do not disturb bottom of excavation. Excavate by hand to final grade just before placing concrete reinforcement. Trim bottoms to required lines and grades to leave solid base to receive other work.

B. Excavations at Edges of Tree- and Plant-Protection Zones:

1. Excavate by hand or with an air spade to indicated lines, cross sections, elevations, and subgrades. If excavating by hand, use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.

2. Cut and protect roots according to requirements in Section 01 56 39 "Temporary Tree and Plant Protection."

3.6 EXCAVATION FOR WALKS AND PAVEMENTS

A. Excavate surfaces under walks and pavements to indicated lines, cross sections, elevations, and subgrades.

3.7 EXCAVATION FOR UTILITY TRENCHES

A. Excavate trenches to indicated gradients, lines, depths, and elevations.

1. Beyond building perimeter, excavate trenches to allow installation of top of pipe below frost line.

B. Excavate trenches to uniform widths to provide the following clearance on each side of pipe or conduit. Excavate trench walls vertically from trench bottom to 12 inches (304.8 mm) higher than top of pipe or conduit unless otherwise indicated.

1. Clearance: 12 inches (304.8 mm) each side of pipe or conduit.

C. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes and conduit. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits. Remove projecting stones and sharp objects along trench subgrade.

1. For pipes and conduit less than 6 inches (152.4 mm) in nominal diameter, hand-excavate trench bottoms and support pipe and conduit on an undisturbed subgrade.

2. For pipes and conduit 6 inches (152.4 mm) or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe or conduit circumference. Fill depressions with tamped sand backfill.

3. For flat-bottomed, multiple-duct conduit units, hand-excavate trench bottoms and support conduit on an undisturbed subgrade.

4. Excavate trenches 6 inches (152.4 mm) deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

D. Trenches in Tree- and Plant-Protection Zones:

1. Hand-excavate to indicated lines, cross sections, elevations, and subgrades. Use narrow-tine spading forks to comb soil and expose roots. Do not break, tear, or chop exposed roots. Do not use mechanical equipment that rips, tears, or pulls roots.

2. Do not cut main lateral roots or taproots; cut only smaller roots that interfere with installation of utilities.

3. Cut and protect roots according to requirements in Section 01 56 39 "Temporary Tree and Plant Protection."

3.8 SUBGRADE INSPECTION

A. Notify Testing Agent when excavations have reached required subgrade.

B. When Testing Agent determines that unforeseen unsatisfactory soil is present, continue excavation and replace with compacted backfill or fill material as directed by the Testing Agent.

1. Unforeseen additional excavation and replacement material will be paid according to the Contract provisions for changes in Work.

C. Proof-roll subgrade below the building slabs and pavements with a pneumatic-tired and loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes) to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph (4.8 km/h).

2. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

D. Authorized additional excavation and replacement material will be paid for according to Contract provisions for unit prices.

E. Reconstruct subgrades damaged by freezing temperatures, frost, rain, accumulated water, or construction activities, as directed by Architect, without additional compensation.

3.9 UNAUTHORIZED EXCAVATION

A. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation. Lean concrete fill, with 28-day compressive strength of 2500 psi (17.2 MPa), may be used when approved by Architect.

B. In locations other than those above, backfill and compact unauthorized excavations as specified for authorized excavations of same classification, unless otherwise directed by the Architect.

3.10 STORAGE OF SOIL MATERIALS

A. Stockpile borrow soil materials and excavated satisfactory soil materials without intermixing. Place, grade, and shape stockpiles to drain surface water. Cover to prevent windblown dust.

1. Stockpile soil materials away from edge of excavations. Do not store within drip line of remaining trees.

3.11 BACKFILL

A. Place and compact backfill in excavations promptly, but not before completing the following:

1. Construction below finish grade including, where applicable, subdrainage, dampproofing, waterproofing, and perimeter insulation.

2. Surveying locations of underground utilities for Record Documents.

3. Testing and inspecting underground utilities.

4. Removing concrete formwork.

5. Removing trash and debris.

6. Removing temporary shoring, bracing, and sheeting.

7. Installing permanent or temporary horizontal bracing on horizontally supported walls.

B. Place backfill on subgrades free of mud, frost, snow, or ice.

3.12 UTILITY TRENCH BACKFILL

A. Place backfill on subgrades free of mud, frost, snow, or ice.

B. Place and compact bedding course on trench bottoms and where indicated. Shape bedding course to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, and bodies of conduits.

C. Trenches under Footings: Backfill trenches excavated under footings and within 18 inches (457.2 mm) of bottom of footings with satisfactory soil; fill with concrete to elevation of bottom of footings. Concrete is specified in Section 03 30 00 "Cast-in-Place Concrete."

D. Trenches under Roadways: Provide 4 inch (101.6 mm) thick, concrete-base slab support for piping or conduit less than 30 inches (762 mm) below surface of roadways. After installing and testing, completely encase piping or conduit in a minimum of 4 inches (101.6 mm) of concrete before backfilling or placing roadway subbase course. Concrete is specified in Section 03 30 00 "Cast-in-Place Concrete."

E. Backfill voids with satisfactory soil while removing shoring and bracing.

F. Initial Backfill:

1. Soil Backfill: Place and compact initial backfill of subbase material, free of particles larger than 1 inch (25.4 mm) in any dimension, to a height of 12 inches (304.8 mm) over the pipe or conduit.

a. Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of piping or conduit to avoid damage or displacement of piping or conduit. Coordinate backfilling with utilities testing.

G. Final Backfill:

1. Soil Backfill: Place and compact final backfill of satisfactory soil to final subgrade elevation.

2. Controlled Low-Strength Material: Place final backfill of controlled low-strength material to final subgrade elevation.

H. Warning Tape: Install warning tape directly above utilities, 12 inches (304.8 mm) below finished grade, except 6 inches (152.4 mm) below subgrade under pavements and slabs.

3.13 SOIL FILL

A. Plow, scarify, bench, or break up sloped surfaces steeper than 1 vertical to 4 horizontal so fill material will bond with existing material.

B. Place and compact fill material in layers to required elevations as follows:

1. Under grass and planted areas, use satisfactory soil material.

2. Under walks and pavements, use satisfactory soil material.

3. Under steps and ramps, use engineered fill.

4. Under building slabs, use engineered fill.

5. Under footings and foundations, use engineered fill.

C. Place soil fill on subgrades free of mud, frost, snow, or ice.

3.14 SOIL MOISTURE CONTROL

A. Uniformly moisten or aerate subgrade and each subsequent fill or backfill soil layer before compaction to within 2 percent of optimum moisture content.

1. Do not place backfill or fill soil material on surfaces that are muddy, frozen, or contain frost or ice.

2. Remove and replace, or scarify and air dry, otherwise satisfactory soil material that exceeds optimum moisture content by 2 percent and is too wet to compact to specified dry density.

3.15 COMPACTION OF SOIL BACKFILLS AND FILLS

A. Place backfill and fill soil materials in layers not more than 8 inches (203.2 mm) in loose depth for material compacted by heavy compaction equipment and not more than 4 inches (101.6 mm) in loose depth for material compacted by hand-operated tampers.

B. Place backfill and fill soil materials evenly on all sides of structures to required elevations and uniformly along the full length of each structure. Compacted structural fill should be placed at least 5 ft beyond the edge of the building.

C. Compact soil materials to not less than the following percentages of maximum dry density according to ASTM D1557:

1. Under structures, building slabs, steps, and pavements, scarify and recompact top 12 inches (304.8 mm) of existing subgrade and each layer of backfill or fill soil material at 95 percent.

2. Under turf or unpaved areas, scarify and recompact top 6 inches (152.4 mm) below subgrade and compact each layer of backfill or fill soil material at 85 percent.

3. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.

3.16 GRADING

A. General: Uniformly grade areas to a smooth surface, free of irregular surface changes. Comply with compaction requirements and grade to cross sections, lines, and elevations indicated.

1. Provide a smooth transition between adjacent existing grades and new grades.

2. Cut out soft spots, fill low spots, and trim high spots to comply with required surface tolerances.

B. Site Rough Grading: Slope grades to direct water away from buildings and to prevent ponding. Finish subgrades to elevations required to achieve indicated finish elevations, within the following subgrade tolerances:

1. Turf or Unpaved Areas: Plus or minus 2 inches (50.8 mm).

2. Walks: Plus or minus 2 inches (50.8 mm).

3. Pavements: Plus or minus 1 inch (25.4 mm).

C. Grading inside Building Lines: Finish subgrade to a tolerance of 1/2 inch (12.7 mm) when tested with a 10-foot (3-m) straightedge.

3.17 SUBSURFACE DRAINAGE

A. Subsurface Drain: Place subsurface drainage geotextile around perimeter of subdrainage trench. Place a 6 inch (152.4 mm) course of filter material on subsurface drainage geotextile to support subdrainage pipe. Encase subdrainage pipe in a minimum of 12 inches (304.8 mm) of filter material, placed in compacted layers 6 inches (152.4 mm) thick, and wrap in subsurface drainage geotextile, overlapping sides and ends at least 6 inches (152.4 mm).

1. Compact each filter material layer to 85 percent of maximum dry density according to ASTM D698.

B. Drainage Backfill: Place and compact filter material over subsurface drain, in width indicated, to within 12 inches (304.8 mm) of final subgrade, in compacted layers 6 inches (152.4 mm) thick. Overlay drainage backfill with one layer of subsurface drainage geotextile, overlapping sides and ends at least 6 inches (152.4 mm).

1. Compact each filter material layer to 85 percent of maximum dry density according to ASTM D698 with a minimum of two passes of a plate-type vibratory compactor.

3.18 SUBBASE AND BASE COURSES UNDER PAVEMENTS AND WALKS

A. Place subbase course and base course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place subbase course and base course under pavements and walks as follows:

1. Install separation geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.

2. Place base course material over subbase course under hot-mix asphalt pavement.

3. Shape subbase course and base course to required crown elevations and cross-slope grades.

4. Place subbase course and base course 6 inches (152.4 mm) or less in compacted thickness in a single layer.

5. Place subbase course and base course that exceeds 6 inches (152.4 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (152.4 mm) thick or less than 3 inches (76.2 mm) thick.

6. Compact subbase course and base course at optimum moisture content to required grades, lines, cross sections, and thickness. The aggregate base course should meet the specifications of MSHA GA Base or CR-6, and be compacted to at least 97% of the maximum dry density per AASHTO T180. The moisture content of the material shall be maintained within 2% of the material’s optimum moisture content. Approved subgrade consists of a firm and unyielding proof rolled soil subgrade or compacted select fill. For the compacted select fill, the top 1 ft of select fill material shall be compacted to a minimum of 97% of the maximum dry density and the material below the top 1 ft shall be compacted to a minimum of 92% of the maximum dry density as per AASHTO T180, with a moisture content within 2% of optimum.

3.19 DRAINAGE COURSE UNDER CONCRETE SLABS-ON-GRADE

A. Place drainage course on subgrades free of mud, frost, snow, or ice.

B. On prepared subgrade, place and compact drainage course under cast-in-place concrete slabs-on-grade as follows:

1. Install subdrainage geotextile on prepared subgrade according to manufacturer's written instructions, overlapping sides and ends.

2. Place drainage course 6 inches (152.4 mm) or less in compacted thickness in a single layer.

3. Place drainage course that exceeds 6 inches (152.4 mm) in compacted thickness in layers of equal thickness, with no compacted layer more than 6 inches (152.4 mm) thick or less than 3 inches (76.2 mm) thick.

4. Compact each layer of drainage course to required cross sections and thicknesses to not less than 95 percent of maximum dry unit weight according to ASTM D698.

3.20 FIELD QUALITY CONTROL

A. Special Inspections: Contractor will engage a qualified special inspector to perform the following special inspections:

1. Determine prior to placement of fill that site has been prepared in compliance with requirements.

2. Determine that fill material classification and maximum lift thickness comply with requirements.

3. Determine, during placement and compaction, that in-place density of compacted fill complies with requirements.

B. Testing Agency: Contractor will engage a qualified geotechnical engineering testing agency to perform tests and inspections.

C. The Inspection Agency shall inspect the site after it has been stripped and excavated. Determine if undercutting or in-place densification is necessary to prepare the subgrade for fill placement or for footing, slab or pavement support.

D. Allow testing agency to inspect and test subgrades and each fill or backfill layer. Proceed with subsequent earth moving only after test results for previously completed work comply with requirements.

E. Footing Subgrade: At footing subgrades, at least one test of each soil stratum will be performed to verify design bearing capacities. Subsequent verification and approval of other footing subgrades may be based on a visual comparison of subgrade with tested subgrade when approved by Architect.

F. Testing agency will test compaction of soils in place according to ASTM D1556, ASTM D2167, ASTM D2937, and ASTM D6938, as applicable. Tests will be performed at the following locations and frequencies:

1. Paved and Building Slab Areas: At subgrade and at each compacted fill and backfill layer, at least one test for every 2000 sq. ft. (0.005 ac.) or less of paved area or building slab but in no case fewer than three tests.

2. Foundation Wall Backfill: At each compacted backfill layer, at least one test for every 100 feet (30.5 m) or less of wall length but no fewer than two tests.

3. Trench Backfill: At each compacted initial and final backfill layer, at least one test for every 150 feet (45.7 m) or less of trench length but no fewer than two tests.

G. When testing agency reports that subgrades, fills, or backfills have not achieved degree of compaction specified, scarify and moisten or aerate, or remove and replace soil materials to depth required; recompact and retest until specified compaction is obtained.

H. Tests for Displacement of Drains: Drains will be checked by the Inspection Agency Architect to determine whether any displacement of pipe has occurred after trench has been backfilled to about two feet above pipe and compacted as specified. These will be as follows: A light will be flashed

between manholes, or, if manholes have not yet been constructed between locations of manholes, by means of flashlight or by reflecting sunlight with a mirror. If illuminated interior of pipe lines shows poor alignment, displaced pipe, or any other defects designated by Architect, it shall be corrected by the Contractor at no additional cost to the Owner.

3.21 PROTECTION

A. Protecting Graded Areas: Protect newly graded areas from traffic, freezing, and erosion. Keep free of trash and debris.

B. Repair and reestablish grades to specified tolerances where completed or partially completed surfaces become eroded, rutted, settled, or where they lose compaction due to subsequent construction operations or weather conditions.

1. Scarify or remove and replace soil material to depth as directed by Architect; reshape and recompact.

C. Where settling occurs before Project correction period elapses, remove finished surfacing, backfill with additional soil material, compact, and reconstruct surfacing.

1. Restore appearance, quality, and condition of finished surfacing to match adjacent work, and eliminate evidence of restoration to greatest extent possible.

3.22 DISPOSAL OF SURPLUS AND WASTE MATERIALS

A. Transport surplus satisfactory soil to designated storage areas on Owner's property. Stockpile or spread soil as directed by Architect.

1. Remove waste materials, including unsatisfactory soil, trash, and debris, and legally dispose of them off Owner's property.

PART 4 - MEASUREMENT AND PAYMENT

4.1 MEASUREMENT

A. There will be no measurement of the following:

1. Excavation for site grading to accommodate proposed grades and for all materials above the indicated undercut elevation.

2. Excavation to rough grading required by indicated elevations within neat lines of building footings.

3. Excavation to bottoms of utility trenches.

4. Excavation to rough grades of miscellaneous structures.

5. Over-excavation.

6. Unauthorized excavation.

7. Borrow material.

8. Rehandling, and drying and/or wetting of on-site soils.

9. Select backfill material as indicated on plans.

10. Stripping of all organic material.

B. Measurement will be made of the following:

1. Authorized over-excavation or undercutting required to remove unsatisfactory subgrade material which occurs below indicated subgrade elevations, miscellaneous structures, except where noted to be removed as part of the drawings.

2. Measurement of Rock Excavation in Open Excavation as defined herein and approved by the Inspection Agency, including excavation; disposal; filling and/or backfilling, if required; and compaction shall be on a Cubic Yard basis.

3. Measurement of Rock Excavation in Excavation Trenches and Pits defined herein and approved by the Inspection Agency, including excavation; disposal; filling and/or backfilling, if required; and compaction shall be on a Cubic Yard basis.

4.2 PAYMENT

A. For items not measured: All work shall be paid for under the Base Bid Price.

B. Authorized over-excavation or undercutting, including excavation, backfilling, compacting, and disposal of unsatisfactory material shall be paid for at the unit price per cubic yard as submitted on the Bid Form.

C. Rock Excavation in Open Excavation as defined herein and approved by the Inspection Agency. Excavations for this contract is to include 500 cubic yards of Rock Excavation in Open Excavations under the Base Bid Price. Final Payment will be made as follows:

1. If the final quantity of Rock Excavation in Open Excavations is more than 500 cubic yards, Payment will be made for the cubic yards exceeding 500 cubic yards at the unit price per cubic yard indicated in the Proposal Form.

2. If the final quantity of Rock Excavation in Open Excavation is less than 500 cubic yards, the Contractor's Base Bid price will be reduced as determined by the difference between 500 cubic yards and the actual measured quantity times the unit price per cubic yards, indicated in the proposal Price.

D. Rock Excavation in Trench Excavations and Pits, as defined herein and approved by the Inspection Agency in this Contract, is to include 500 cubic yards of Rock excavation in Trench Excavation and Pits under the Basic Bid Price. Final Payment will be made as follows:

1. If the final quantity of Rock Excavation in Trench Excavation and Pits is more than 500 cubic yards, Payment will be made for the cubic yards exceeding 500 cubic yards at the unit price per cubic yard, indicated in the Proposal Form.

2. If the final quantity of Rock Excavation in Trench Excavations and Pits is less than 500 cubic yards, the Contractor's Base Bid Price will be reduced as determined by the difference

between 500 cubic yards and the actual measured quantity times the unit price per cubic yards, indicated in the Proposal Form.

END OF SECTION 31 20 00

SECTION 31 23 19 - DEWATERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

1.2 SUMMARY

A. Section includes construction dewatering.

B. Related Requirements:

1. Section 01 32 00 "Construction Progress Documentation" for recording preexisting conditions and dewatering system progress.
2. Section 31 20 00 "Earth Moving" for excavating, backfilling, site grading, and controlling surface-water runoff and ponding.

1.3 ALLOWANCES

A. Dewatering observation wells are part of dewatering allowance.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Verify availability of Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
2. Review condition of site to be dewatered including coordination with temporary erosion-control measures and temporary controls and protections.
3. Review geotechnical report.
4. Review proposed site clearing and excavations.
5. Review existing utilities and subsurface conditions.
6. Review observation and monitoring of dewatering system.

1.5 ACTION SUBMITTALS

A. Shop Drawings: For dewatering system, prepared by or under the supervision of a qualified professional engineer.

1. Include plans, elevations, sections, and details.
2. Show arrangement, locations, and details of wells and well points; locations of risers, headers, filters, pumps, power units, and discharge lines; and means of discharge, control of sediment, and disposal of water.

3. Include layouts of piezometers and flow-measuring devices for monitoring performance of dewatering system.
4. Include written plan for dewatering operations including sequence of well and well-point placement coordinated with excavation shoring and bracings and control procedures to be adopted if dewatering problems arise.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer and professional engineer.

B. Field quality-control reports.

C. Existing Conditions: Using photographs or video recordings, show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by dewatering operations. Submit before Work begins.

D. Record Drawings: Identify locations and depths of capped wells and well points and other abandoned-in-place dewatering equipment.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer that specializes in dewatering work.

1.8 FIELD CONDITIONS

A. Project-Site Information: A geotechnical report has been prepared for this Project and is available for information only. The opinions expressed in this report are those of a geotechnical engineer and represent interpretations of subsoil conditions, tests, and results of analyses conducted by a geotechnical engineer. Owner is not responsible for interpretations or conclusions drawn from this data.

1. Make additional test borings and conduct other exploratory operations necessary for dewatering according to the performance requirements.
2. The geotechnical report is included elsewhere in Project Manual.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Dewatering Performance: Design, furnish, install, test, operate, monitor, and maintain dewatering system of sufficient scope, size, and capacity to control hydrostatic pressures and to lower, control, remove, and dispose of ground water and permit excavation and construction to proceed on dry, stable subgrades.

1. Design dewatering system, including comprehensive engineering analysis by a qualified professional engineer.
2. Continuously monitor and maintain dewatering operations to ensure erosion control, stability of excavations and constructed slopes, prevention of flooding in excavation, and prevention of damage to subgrades and permanent structures.
   Prevent surface water from entering excavations by grading, dikes, or other means.
3. Accomplish dewatering without damaging existing buildings, structures, and site improvements adjacent to excavation.

4. Remove dewatering system when no longer required for construction.

B. Regulatory Requirements: Comply with governing EPA notification regulations before beginning dewatering. Comply with water and debris disposal regulations of authorities having jurisdiction.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards created by dewatering operations.

1. Prevent surface water and subsurface or ground water from entering excavations, from ponding on prepared subgrades, and from flooding site or surrounding area.
2. Protect subgrades and foundation soils from softening and damage by rain or water accumulation.

B. Install dewatering system to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Provide temporary grading to facilitate dewatering and control of surface water.

D. Protect and maintain temporary erosion and sedimentation controls, which are specified in Section 01 50 00 "Temporary Facilities and Controls," during dewatering operations.

3.2 INSTALLATION

A. Install dewatering system utilizing wells, well points, or similar methods complete with pump equipment, standby power and pumps, filter material gradation, valves, appurtenances, water disposal, and surface-water controls.

1. Space well points or wells at intervals required to provide sufficient dewatering.
2. Use filters or other means to prevent pumping of fine sands or silts from the subsurface.

B. Place dewatering system into operation to lower water to specified levels before excavating below ground-water level.

C. Provide sumps, sedimentation tanks, and other flow-control devices as required by authorities having jurisdiction.

D. Provide standby equipment on-site, installed and available for immediate operation, to maintain dewatering on a continuous basis if any part of system becomes inadequate or fails.

3.3 OPERATION

A. Operate system continuously until drains, sewers, and structures have been constructed and fill materials have been placed or until dewatering is no longer required.

B. Operate system to lower and control ground water to permit excavation, construction of structures, and placement of fill materials on dry subgrades. Drain water-bearing strata above and below bottom of foundations, drains, sewers, and other excavations.

1. Do not permit open sump pumping that leads to loss of fines, soil piping, subgrade softening, and slope instability.
2. Reduce hydrostatic head in water-bearing strata below subgrade elevations of foundations, drains, sewers, and other excavations.
3. Maintain piezometric water level a minimum of 24 inches (609.6 mm) below bottom of excavation.

C. Dispose of water removed by dewatering in a manner that avoids endangering public health, property, and portions of work under construction or completed. Dispose of water and sediment in a manner that avoids inconvenience to others.

D. Remove dewatering system from Project site on completion of dewatering. Plug or fill well holes with sand or cut off and cap wells a minimum of 36 inches (914.4 mm) below overlying construction.

3.4 FIELD QUALITY CONTROL

A. Observation Wells: Provide observation wells or piezometers, take measurements, and maintain at least the minimum number indicated; additional observation wells may be required by authorities having jurisdiction.

1. Observe and record daily elevation of ground water and piezometric water levels in observation wells.
2. Repair or replace, within 24 hours, observation wells that become inactive, damaged, or destroyed. In areas where observation wells are not functioning properly, suspend construction activities until reliable observations can be made. Add or remove water from observation-well risers to demonstrate that observation wells are functioning properly.
3. Fill observation wells, remove piezometers, and fill holes when dewatering is completed.

B. Survey-Work Benchmarks: Resurvey benchmarks monthly during dewatering and maintain an accurate log of surveyed elevations for comparison with original elevations. Promptly notify Architect if changes in elevations occur or if cracks, sags, or other damage is evident in adjacent construction.

C. Provide continual observation to ensure that subsurface soils are not being removed by the dewatering operation.

D. Prepare reports of observations.

3.5 PROTECTION

A. Protect and maintain dewatering system during dewatering operations.

B. Promptly repair damages to adjacent facilities caused by dewatering.

END OF SECTION

SECTION 31 25 00 - SOIL EROSION AND SEDIMENT CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. 2011 Maryland Standards and Specifications for Soil Erosion and Sediment Control, and as amended.

C. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

D. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 SUMMARY

A. The extent of soil erosion and sediment control facilities is shown on the Erosion and Sediment Control Plans, approved by the Baltimore County Soil Conservation District.

B. The contractor will assume responsibility for the erosion and sediment controls that currently exist on the site at the time the contract is executed, and will be responsible for the conversion of the erosion and sediment controls from their existing state to those outlined in the construction documents. Additionally, the contractor will also be responsible for all erosion and sediment controls outlined within the contract documents and/or any additional erosion and sediment controls required by the inspector at no additional cost to the Owner.

1.3 QUALITY ASSURANCE

A. Comply with local codes where applicable and with the requirements of all permits.

B. Comply with the provisions outlined in Division 1.

PART 2 - PRODUCTS

2.1 MATERIALS REQUIREMENTS

A. Material requirements are specified on the drawings.

PART 3 - EXECUTION

3.1 GENERAL

A. Installation of the soil erosion and sediment control facilities shall be as shown and specified on the Sediment/Erosion Control Plans and Detail sheets of the Contract Drawings.

3.2 TIMING

A. All perimeter control shall be installed and approved by the Sediment Control Inspector as specified in the “Sequence of Construction” on the Contract Drawings.

3.3 MAINTENANCE

A. All soil erosion and sediment control measures shall be maintained continuously during the construction period.

B. Soil erosion and sediment control measures shall be inspected daily, and any measure which has been disturbed or damaged shall be repaired and restored to operating condition in accordance with the approved plan before the end of each workday at no additional cost to the Owner.

3.4 REMOVAL

A. Soil erosion and sediment control measures shall not be removed until the removal has been authorized by the Sediment Control Inspector.

END OF SECTION

SECTION 31 31 16 - TERMITE CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

1.2 SUMMARY

A. Section Includes:

1. Soil treatment.
2. Wood treatment.
3. Bait-station system.
4. Metal mesh barrier system.

B. Related Requirements:

1. Section 06 10 00 "Rough Carpentry" for wood preservative treatment by pressure process.
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for custom-fabricated, metal termite shields.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components, and profiles for termite control products.
2. Include the EPA-Registered Label for termiticide products.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Certificates: For each type of termite control product.

C. Soil Treatment Application Report: After application of termiticide is completed, submit report for Owner's records and include the following:

1. Date and time of application.
2. Moisture content of soil before application.
3. Termiticide brand name and manufacturer.
4. Quantity of undiluted termiticide used.
5. Dilutions, methods, volumes used, and rates of application.
6. Areas of application.

7. Water source for application.

D. Wood Treatment Application Report: After application of termiticide is completed, submit report for Owner's records and include the following:

1. Date and time of application.
2. Termiticide brand name and manufacturer.
3. Quantity of undiluted termiticide used.
4. Dilutions, methods, volumes used, and rates of application.
5. Areas of application.

E. Bait-Station System Installation Report: After installation of bait-station system is completed, submit report for Owner's records and include the following:

1. Location of areas and sites conducive to termite feeding and activity.
2. Plan drawing showing number and locations of bait stations.
3. Dated report for each monitoring and inspection occurrence, indicating level of termite activity, procedure, and treatment applied before time of Substantial Completion.
4. Termiticide brand name and manufacturer.
5. Quantities of nontoxic termite bait used.
6. Schedule of inspections for one year from date of Substantial Completion.

F. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: A specialist who is licensed according to regulations of authorities having jurisdiction to apply termite control treatment and products in jurisdiction where Project is located and who employs workers trained and approved by manufacturer to install manufacturer's products.

1.7 FIELD CONDITIONS

A. Soil Treatment:

1. Environmental Limitations: To ensure penetration, do not treat soil that is water saturated or frozen. Do not treat soil while precipitation is occurring. Comply with requirements of the EPA-Registered Label and requirements of authorities having jurisdiction.
2. Related Work: Coordinate soil treatment application with excavating, filling, grading, and concreting operations. Treat soil under footings, grade beams, and ground-supported slabs before construction.

1.8 WARRANTY

A. Soil Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor, certifying that termite control work consisting of applied soil termiticide treatment will prevent infestation of subterranean termites, including Formosan termites (Coptotermes formosanus). If subterranean termite activity or damage is discovered during warranty period, re-treat soil and repair or replace damage caused by termite infestation.

1. Warranty Period: Three years from date of Substantial Completion.

B. Wood Treatment Special Warranty: Manufacturer's standard form, signed by Applicator and Contractor, certifying that termite control work consisting of applied wood termiticide treatment will prevent infestation of subterranean termites, including Formosan termites (Coptotermes formosanus). If subterranean termite damage is discovered during warranty period, repair or replace damage caused by termite infestation and treat replacement wood.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain termite control products from single source.

2.2 SOIL TREATMENT

A. Termiticide: EPA-Registered termiticide acceptable to authorities having jurisdiction, in an aqueous solution formulated to prevent termite infestation.

1. Service Life of Treatment: Soil treatment termiticide that is effective for not less than three years against infestation of subterranean termites.

2.3 WOOD TREATMENT

A. Borate: EPA-Registered borate termiticide acceptable to authorities having jurisdiction, in an aqueous solution for spray application and a gel solution for pressure injection, formulated to prevent termite infestation in wood.

2.4 BAIT-STATION SYSTEM

A. Description: EPA-Registered system acceptable to authorities having jurisdiction. Provide bait stations based on the dimensions of building perimeter indicated on Drawings, according to product's EPA-Registered Label and manufacturer's written instructions.

2.5 METAL MESH BARRIER SYSTEM

A. Stainless-Steel Mesh: 0.025 inch by 0.018 inch (0.64 mm by 0.46 mm) mesh of 0.08 inch (2.0 mm) diameter, stainless-steel wire, Type 316.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for moisture content of soil per termiticide label, interfaces with earthwork, slab and foundation work, landscaping, utility installation, and other conditions affecting performance of termite control.

B. Proceed with application only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Prepare work areas according to the requirements of authorities having jurisdiction and according to manufacturer's written instructions before beginning application and installation of termite control treatment(s). Remove extraneous sources of wood cellulose and other edible materials, such as wood debris, tree stumps and roots, stakes, formwork, and construction waste wood from soil within and around foundations.

B. Soil Treatment Preparation: Remove foreign matter and impermeable soil materials that could decrease treatment effectiveness on areas to be treated. Loosen, rake, and level soil to be

treated, except previously compacted areas under slabs and footings. Termiticides may be applied before placing compacted fill under slabs if recommended in writing by termiticide manufacturer.

1. Fit filling hose connected to water source at the site with a backflow preventer, according to requirements of authorities having jurisdiction.

3.3 APPLYING SOIL TREATMENT

A. Application: Mix soil treatment termiticide solution to a uniform consistency. Distribute treatment uniformly. Apply treatment at the product's EPA-Registered Label volume and rate for maximum specified concentration of termiticide to the following so that a continuous horizontal and vertical termiticidal barrier or treated zone is established around and under building construction.

1. Slabs-on-Grade and Basement Slabs: Underground supported slab construction, including footings, building slabs, and attached slabs as an overall treatment. Treat soil materials before concrete footings and slabs are placed.
2. Foundations: Soil adjacent to and along the entire inside perimeter of foundation walls; along both sides of interior partition walls; around plumbing pipes and electric conduit penetrating the slab; around interior column footers, piers, and chimney bases; and along the entire outside perimeter, from grade to bottom of footing.
3. Crawlspaces: Soil under and adjacent to foundations. Treat adjacent areas, including around entrance platform, porches, and equipment bases. Apply overall treatment only where attached concrete platform and porches are on fill or ground.
4. Masonry: Treat voids.
5. Penetrations: At expansion joints, control joints, and areas where slabs and below-grade walls will be penetrated.

B. Post warning signs in areas of application.

C. Reapply soil treatment solution to areas disturbed by subsequent excavation, grading, landscaping, or other construction activities following application.

3.4 APPLYING WOOD TREATMENT

A. Wood Treatment: Apply wood treatment after framing, sheathing, and exterior weather protection is completed but before electrical and mechanical systems are installed.

B. Application: Mix borate wood treatment solution to a uniform consistency. Apply treatment at the product's EPA-Registered Label volume and rate for the maximum borate concentration allowed for each specific use so that wood framing, sheathing, siding, and structural members subject to infestation receive treatment. Apply treatment to the height of 8 feet (2438 mm) above grade.

1. Framing and Sheathing: Apply termiticide solution by spray to bare wood and with complete coverage.
2. Heavy Wood Members: For wood greater than 4 inches (101.6 mm) thick, inject termiticide gel solution under pressure into holes of size and spacing required by manufacturer for treatment.
3. Exterior Uncoated Wood Trim and Siding: Apply termiticide solution to bare wood only when forecasted weather conditions indicate no precipitation or fog before application of seal coat. After 48 hours, verify that surface is sufficiently dry for seal coat and apply seal coat of paint as specified in Section 09 91 13 "Exterior Painting.".

3.5 INSTALLING BAIT-STATION SYSTEM

A. Bait-Station System: Install during construction to determine areas of termite activity.

B. Place bait stations according to product's EPA-Registered Label and manufacturer's written instructions, in the following locations:

1. Conducive sites and locations indicated on Drawings.
2. In and around infested trees and stumps.
3. In mulch beds.
4. Where wood directly contacts soil.
5. Areas of high soil moisture.
6. Near irrigation sprinkler heads.
7. Each area where roof drainage system, including downspouts and scuppers, drains to soil.
8. Along driplines of roof overhangs without gutters.
9. Where condensate lines from mechanical equipment drip or drain to soil.
10. At plumbing penetrations through ground-supported slabs.
11. Other sites and locations as determined by licensed Installer.

C. Spacing: Place bait stations according to manufacturer's written instructions and at a frequency no less than the following:

1. One cluster of bait stations per 20 linear feet (6.1 linear meters), with no fewer than three bait stations per cluster.

3.6 INSTALLING METAL MESH BARRIER SYSTEM

A. Install metal mesh barrier system to provide a continuous barrier to entry of subterranean termites, according to manufacturer's written instructions.

1. Fit mesh tightly around pipes and other penetrations and terminate at slab and foundation perimeters.
2. Install mesh under the perimeter of concrete slab edges and joints after vapor retarder and reinforcing steel are in place.

3.7 PROTECTION

A. Avoid disturbance of treated soil after application. Keep off treated areas until completely dry.

B. Protect termiticide solution dispersed in treated soils and fills from being diluted by exposure to water spillage or weather until ground-supported slabs are installed. Use waterproof barrier according to EPA-Registered Label instructions.

3.8 MAINTENANCE SERVICE

A. Maintenance Service: Beginning at Substantial Completion, maintenance service shall include 12 months' full maintenance by skilled employees of termite-control-treatment Installer. Include monthly maintenance as required for proper performance according to the product's EPA-Registered Label and manufacturer's written instructions. Parts and supplies shall be manufacturer's authorized replacement parts and supplies.

B. Continuing Maintenance Proposal: Provide from termite-control-treatment Installer to Owner, in the form of a standard yearly (or other period) maintenance agreement, starting on date initial maintenance service is concluded. State services, obligations, conditions, and terms for agreement period and for future renewal options.

1. Include annual inspection for termite activity and effectiveness of termite treatment according to manufacturer's written instructions.

END OF SECTION 31 31 16

SECTION 31 50 00 - EXCAVATION SUPPORT AND PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. 2011 Maryland Standards and Specifications for Soil Erosion and Sediment Control, and as amended.

1.2 SUMMARY

A. Section includes temporary excavation support and protection systems.

B. Related Requirements:

1. Section 31 20 00 "Earth Moving" for excavating and backfilling, for controlling surface-water runoff and ponding, and for dewatering excavations.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review geotechnical report.

2. Review existing utilities and subsurface conditions.

3. Review coordination for interruption, shutoff, capping, and continuation of utility services.

4. Review proposed excavations.

5. Review proposed equipment.

6. Review monitoring of excavation support and protection system.

7. Review coordination with waterproofing.

8. Review abandonment or removal of excavation support and protection system.

1.4 ACTION SUBMITTALS

A. Delegated-Design Submittal: For excavation support and protection systems, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For the following:

1. Land surveyor.

2. Professional Engineer: Experience with providing delegated-design engineering services of the type indicated, including documentation that engineer is licensed in the State of Maryland.

B. Contractor Calculations: For excavation support and protection system. Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

C. Existing Conditions: Using photographs or video recordings, show existing conditions of adjacent construction and site improvements that might be misconstrued as damage caused by inadequate performance of excavation support and protection systems. Submit before Work begins.

1.6 CLOSEOUT SUBMITTALS

A. Record Drawings: Identify locations and depths of capped utilities, abandoned-in-place support and protection systems, and other subsurface structural, electrical, or mechanical conditions.

1.7 FIELD CONDITIONS

A. Interruption of Existing Utilities: Do not interrupt any utility-serving facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary utility according to requirements indicated:

1. Notify Architect and Owner no fewer than two days in advance of proposed interruption of utility.

2. Do not proceed with interruption of utility without Architect's and Owner's written permission.

B. Survey Work: Engage a qualified land surveyor or professional engineer to survey adjacent existing buildings, structures, and site improvements; establish exact elevations at fixed points to act as benchmarks. Clearly identify benchmarks, and record existing elevations.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design excavation support and protection systems to resist all lateral loading and surcharge, including but not limited to, retained soil, groundwater pressure, adjacent building loads, adjacent traffic loads, construction traffic loads, material stockpile loads, and seismic loads, based on the following:

1. Compliance with OSHA Standards and interpretations, 29 CFR 1926, Subpart P.

2. Compliance with AASHTO Standard Specification for Highway Bridges or AASHTO LRFD Bridge Design Specification, Customary U.S. Units.

3. Compliance with requirements of authorities having jurisdiction.

4. Compliance with utility company requirements.

5. Compliance with railroad requirements.

2.2 MATERIALS

A. Provide materials that are either new or in serviceable condition.

B. Structural Steel: ASTM A36/A36M, ASTM A690/A690M, or ASTM A992/A992M.

C. Steel Sheet Piling: ASTM A328/A328M, ASTM A572/A572M, or ASTM A690/A690M; with continuous interlocks.

1. Corners: Site-fabricated mechanical interlock.

D. Wood Lagging: Lumber, mixed hardwood, nominal rough thickness of size and strength required for application.

E. Shotcrete: Comply with Section 033713 "Shotcrete" for shotcrete materials and mixes, reinforcement, and shotcrete application.

F. Cast-in-Place Concrete: ACI 301, of compressive strength required for application.

G. Reinforcing Bars: ASTM A615/A615M, Grade 60 (Grade 420), deformed.

H. Tiebacks: Steel bars, ASTM A722/A722M.

I. Tiebacks: Steel strand, ASTM A416/A416M.

PART 3 - EXECUTION

3.1 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities from damage caused by settlement, lateral movement, undermining, washout, and other hazards that could develop during excavation support and protection system operations.

1. Shore, support, and protect utilities encountered.

3.2 INSTALLATION - GENERAL

A. Locate excavation support and protection systems clear of permanent construction, so that construction and finishing of other work is not impeded.

B. Install excavation support and protection systems to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction.

2. Provide alternate routes around closed or obstructed traffic ways if required by authorities having jurisdiction.

C. Install excavation support and protection systems without damaging existing buildings, structures, and site improvements adjacent to excavation.

3.3 SOLDIER PILES AND LAGGING

A. Install steel soldier piles before starting excavation.

1. Extend soldier piles below excavation grade level to depths adequate to prevent lateral movement.

2. Space soldier piles at regular intervals not to exceed allowable flexural strength of wood lagging.

3. Accurately align exposed faces of flanges to vary not more than 2 inches (50.8 mm) from a horizontal line and not more than 1:120 out of vertical alignment.

B. Install wood lagging within flanges of soldier piles as excavation proceeds.

1. Trim excavation as required to install lagging.

2. Fill voids behind lagging with soil, and compact.

C. Install wales horizontally at locations indicated on Drawings and secure to soldier piles.

3.4 SHEET PILING

A. Before starting excavation, install one-piece sheet piling lengths and tightly interlock vertical edges to form a continuous barrier.

B. Accurately place the piling using templates and guide frames unless otherwise recommended in writing by the sheet piling manufacturer.

1. Limit vertical offset of adjacent sheet piling to 60 inches (1524 mm).

2. Accurately align exposed faces of sheet piling to vary not more than 2 inches (50.8 mm) from a horizontal line and not more than 1:120 out of vertical alignment.

C. Cut tops of sheet piling to uniform elevation at top of excavation.

3.5 TIEBACKS

A. Drill, install, grout, and tension tiebacks.

B. Test load-carrying capacity of each tieback, and replace and retest deficient tiebacks.

1. Have test loading observed by a qualified professional engineer responsible for design of excavation support and protection system.

C. Maintain tiebacks in place until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.6 BRACING

A. Locate bracing to clear columns, floor framing construction, and other permanent work. If necessary to move brace, install new bracing before removing original brace.

1. Do not place bracing where it will be cast into or included in permanent concrete work unless otherwise approved by Architect.

2. Install internal bracing if required to prevent spreading or distortion of braced frames.

3. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

3.7 MAINTENANCE

A. Monitor and maintain excavation support and protection system.

B. Prevent surface water from entering excavations by grading, dikes, or other means.

C. Continuously monitor vibrations, settlements, and movements to ensure stability of excavations and constructed slopes and to ensure that damage to permanent structures is prevented.

3.8 FIELD QUALITY CONTROL

A. Survey-Work Benchmarks: Resurvey benchmarks weekly during installation of excavation support and protection systems, excavation progress, and for as long as excavation remains open.

1. Maintain an accurate log of surveyed elevations and positions for comparison with original elevations and positions.

2. Promptly notify Architect if changes in elevations or positions occur or if cracks, sags, or other damage is evident in adjacent construction.

B. Promptly correct detected bulges, breakage, or other evidence of movement to ensure that excavation support and protection system remains stable.

C. Promptly repair damages to adjacent facilities caused by installation or faulty performance of excavation support and protection systems.

3.9 REMOVAL AND REPAIRS

A. Remove excavation support and protection systems when construction has progressed sufficiently to support excavation and earth and hydrostatic pressures.

1. Remove in stages to avoid disturbing underlying soils and rock or damaging structures, pavements, facilities, and utilities.

2. Remove excavation support and protection systems to a minimum depth of 48 inches (1219 mm) below overlying construction, and abandon remainder.

3. Fill voids immediately with approved backfill compacted to density specified in Section 312000 "Earth Moving."

4. Repair or replace, as approved by Architect, adjacent work damaged or displaced by removing excavation support and protection systems.

END OF SECTION 31 50 00

SECTION 32 12 16 - ASPHALT PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Section Includes:

1. Hot-mix asphalt paving.

2. Hot-mix asphalt overlay.

3. Cold milling of existing asphalt pavement.

4. Hot-mix asphalt patching.

5. Asphalt curbs.

6. Asphalt traffic-calming devices.

7. Asphalt surface treatments.

B. Related Requirements:

1. Division 02 "Selective Demolition" for demolition and removal of existing asphalt pavement.

2. Section 31 20 00 "Earth Moving" for subgrade preparation, fill material, separation geotextiles, unbound-aggregate subbase and base courses, and aggregate pavement shoulders.

3. Section 32 13 13 "Concrete Paving" for concrete pavement and for separate concrete curbs, gutters, and driveway aprons.

4. Section 32 13 73 "Concrete Paving Joint Sealants" for joint sealants and fillers at pavement terminations.

5. Section 32 17 23: “Pavement Markings”.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to hot-mix asphalt paving including, but not limited to, the following:

a. Review proposed sources of paving materials, including capabilities and location of plant that will manufacture hot-mix asphalt.

b. Review requirements for protecting paving work, including restriction of traffic during installation period and for remainder of construction period.

1.4 SYSTEM DESCRIPTION

A. Provide hot-mix asphalt pavement according to the materials, workmanship, and other applicable requirements of the Baltimore County Standards and the Standard Specifications for Construction and Materials of the Maryland Department of Transportation, State Highway Administration, latest edition, are hereby by reference made a part of these specifications where applicable with the exception of “Method of Measurement and Basis of Payment”. No adjustments to contract will be made as a result of material escalation.

B. Bituminous concrete pavement shall consist of aggregate asphalt mixed and constructed in accordance with these specifications and placed to the depth, grade, and cross section shown on the Construction Details.

1.5 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Herbicide.

2. Paving geotextile.

3. Joint sealant.

B. Hot-Mix Asphalt Designs:

1. Certification, by authorities having jurisdiction, of approval of each hot-mix asphalt design proposed for the Work.

2. For each hot-mix asphalt design proposed for the Work.

C. Samples for Verification: For the following product, in manufacturer's standard sizes unless otherwise indicated:

1. Paving Geotextile: 12 by 12 inches (304.8 by 304.8 mm) minimum.

D. LEED Submittals: Comply with Section 01 81 13.
1. MR Credit 3: Sourcing of Raw Materials
a. Recycled content: Asphalt. Provide material cost values.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For paving-mix manufacturer and testing agency.

B. Material Certificates:

1. Aggregates.

2. Asphalt binder.

3. Asphalt cement.

4. Cutback prime coat.

5. Emulsified asphalt prime coat.

6. Tack coat.

7. Fog seal.

8. Undersealing asphalt.

C. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications:

1. The paving-mix manufacturer shall be a registered and approved paving mix manufacturer with the Baltimore County Department of Public Works or with the Maryland State Highway Administration

2. The paving-mix manufacturer shall be registered with and approved by Maryland Department of Transportation State Highway Administration.

B. Installer Qualifications: Engage an experienced installer who has completed hot-mix asphalt paving similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.

C. Testing Agency Qualifications: Qualified in accordance with ASTM D3666 for testing indicated.

D. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of Baltimore County Department of Public Works Standard Details for Construction dated February 2007 and as amended, of for asphalt paving work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

E. Asphalt-Paving Publication: Comply with AI's "The Asphalt Handbook", except where more stringent requirements are indicated.

F. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not apply asphalt materials if subgrade is wet or excessively damp, if rain is imminent or expected before time required for adequate cure, or if the following conditions are not met:

1. Prime Coat: Minimum surface temperature of 60 deg F (15.6 deg C).

2. Tack Coat: Minimum surface temperature of 60 deg F (15.6 deg C).

3. Slurry Coat: Comply with weather limitations in ASTM D3910.

4. Asphalt Base Course: Minimum surface temperature of 40 deg F (4.4 deg C) and rising at time of placement.

5. Asphalt Surface Course: Minimum surface temperature of 60 deg F (15.6 deg C) at time of placement.

PART 2 - PRODUCTS

2.1 AGGREGATES

A. General: Use locally available materials and gradation that exhibit a satisfactory record of previous installations. Bituminous concrete shall meet the requirements of the S.H.A. Specifications, Section 904, as later specified herein or as indicated on the drawings.

B. Coarse Aggregate: ASTM D692/D692M, sound; angular crushed stone, crushed gravel, or cured, crushed blast-furnace slag.

C. Fine Aggregate: ASTM D1073, sharp-edged natural sand or sand prepared from stone, gravel, cured blast-furnace slag, or combinations thereof.

1. For hot-mix asphalt, limit natural sand to a maximum of 20 percent by weight of the total aggregate mass.

2.2 ASPHALT MATERIALS

A. Asphalt Binder: ASTM D6373 binder designation PG 64-22.

B. Asphalt Cement: ASTM D3381/D3381M for viscosity-graded material, ASTM D946/D946M for penetration-graded material.

C. Emulsified Asphalt Prime Coat: ASTM D977 emulsified asphalt, or ASTM D2397/D2397M cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

D. Tack Coat: ASTM D977 emulsified asphalt, or ASTM D2397/D2397M cationic emulsified asphalt, slow setting, diluted in water, of suitable grade and consistency for application.

E. Fog Seal: ASTM D977 emulsified asphalt, or ASTM D2397/D2397M cationic emulsified asphalt, slow setting, factory diluted in water, of suitable grade and consistency for application.

F. Water: Potable.

G. Undersealing Asphalt: ASTM D3141/D3141M; pumping consistency.

H. Recycled Content: Provide minimum 25 percent reclaimed asphalt pavement (RAP) in asphalt mix with Authority Having Jurisdiction's approval.

2.3 AUXILIARY MATERIALS

A. Herbicide: Commercial chemical for weed control, registered by the EPA, and not classified as "restricted use" for locations and conditions of application. Provide in granular, liquid, or wettable powder form.

B. Sand: ASTM D1073, Grade No. 2 or No. 3.

C. Paving Geotextile: AASHTO M 288 paving fabric; nonwoven polypropylene; resistant to chemical attack, rot, and mildew; and specifically designed for paving applications.

D. Joint Sealant: ASTM D6690, Type I, hot-applied, single-component, polymer-modified bituminous sealant.

2.4 MIXES

A. Hot-Mix Asphalt: Dense-graded, hot-laid, hot-mix asphalt plant mixes approved by authorities having jurisdiction and complying with the following requirements:

1. Provide mixes with a history of satisfactory performance in geographical area where Project is located.

2. Base Course: Hot Mix Asphalt Superpave 12.5 mm – PG 64-22 Level 2

3. Surface Course: Hot Mix Asphalt Superpave 9.5 mm – PG 64-22 Level 2.

B. Emulsified-Asphalt Slurry: ASTM D3910, Type 1.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that subgrade is dry and in suitable condition to support paving and imposed loads.

B. Notify Architect in writing of any unsatisfactory conditions. Do not begin paving installation until these conditions have been satisfactorily corrected.

C. Proceed with paving only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protection: Provide protective materials, procedures, and worker training to prevent asphalt materials from spilling, coating, or building up on curbs, driveway aprons, manholes, and other surfaces adjacent to the Work.

B. Proof-roll subgrade below pavements with heavy pneumatic-tired equipment to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.

1. Completely proof-roll subgrade in one direction, repeating proof-rolling in direction perpendicular to first direction. Limit vehicle speed to 3 mph (4.8 km/h).

2. Proof-roll with a loaded 10-wheel, tandem-axle dump truck weighing not less than 15 tons (13.6 tonnes).

3. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Architect, and replace with compacted backfill or fill as directed.

3.3 COLD MILLING

A. Clean existing pavement surface of loose and deleterious material immediately before cold milling. Remove existing asphalt pavement, including hot-mix asphalt and as necessary, unbound-aggregate base course, by cold milling to grades and cross sections indicated.

1. Mill to a depth of 2 inches (50.8 mm).

2. Mill to a uniform finished surface free of excessive gouges, grooves, and ridges.

3. Control rate of milling to prevent tearing of existing asphalt course.

4. Repair or replace curbs, driveway aprons, manholes, and other construction damaged during cold milling.

5. Excavate and trim unbound-aggregate base course, if encountered, and keep material separate from milled hot-mix asphalt.

6. Patch surface depressions deeper than 1 inch (25.4 mm) after milling, before wearing course is laid.

7. Handle milled asphalt material in accordance with approved waste management plan required in Section 01 74 19 "Construction Waste Management and Disposal."

8. Keep milled pavement surface free of loose material and dust.

9. Do not allow milled materials to accumulate on-site.

3.4 PATCHING

A. Asphalt Pavement: Saw cut perimeter of patch and excavate existing pavement section to sound base. Excavate rectangular or trapezoidal patches, extending 12 inches (304.8 mm) into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Remove excavated material. Recompact existing unbound-aggregate base course to form new subgrade.

B. Portland Cement Concrete Pavement: Break cracked slabs and roll as required to reseat concrete pieces firmly.

1. Undersealing: Pump hot undersealing asphalt under rocking slab until slab is stabilized or, if necessary, crack slab into pieces and roll to reseat pieces firmly.

2. Remove disintegrated or badly cracked pavement. Excavate rectangular or trapezoidal patches, extending into perimeter of adjacent sound pavement, unless otherwise indicated. Cut excavation faces vertically. Recompact existing unbound-aggregate base course to form new subgrade.

C. Tack Coat: Before placing patch material, apply tack coat uniformly to vertical asphalt surfaces abutting the patch. Apply at a rate of 0.05 to 0.15 gal./sq. yd. (0.23 to 0.68 L/sq. m).

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.

2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

D. Placing Single-Course Patch Material: Fill excavated pavement areas with hot-mix asphalt base mix for full thickness of patch and, while still hot, compact flush with adjacent surface.

E. Placing Two-Course Patch Material: Partially fill excavated pavements with hot-mix asphalt base course mix and, while still hot, compact. Cover asphalt base course with compacted layer of hot-mix asphalt surface course, finished flush with adjacent surfaces.

3.5 REPAIRS

A. Leveling Course: Install and compact leveling course consisting of hot-mix asphalt surface course to level sags and fill depressions deeper than 1 inch (25.4 mm) in existing pavements.

1. Install leveling wedges in compacted lifts not exceeding 3 inches (76.2 mm) thick.

B. Crack and Joint Filling: Remove existing joint filler material from cracks or joints to a depth of 1/4 inch (6.4 mm).

1. Clean cracks and joints in existing hot-mix asphalt pavement.

2. Use emulsified-asphalt slurry to seal cracks and joints less than 1/4 inch (6.4 mm) wide. Fill flush with surface of existing pavement and remove excess.

3. Use hot-applied joint sealant to seal cracks and joints more than 1/4 inch (6.4 mm) wide. Fill flush with surface of existing pavement and remove excess.

3.6 SURFACE PREPARATION

A. Ensure that prepared subgrade has been proof-rolled and is ready to receive paving. Immediately before placing asphalt materials, remove loose and deleterious material from substrate surfaces.

1. Sweep loose granular particles from surface of unbound-aggregate base course. Do not dislodge or disturb aggregate embedded in compacted surface of base course.

B. Herbicide Treatment: Apply herbicide in accordance with manufacturer's recommended rates and written application instructions. Apply to dry, prepared subgrade or surface of compacted-aggregate base before applying paving materials.

1. Mix herbicide with prime coat if formulated by manufacturer for that purpose.

2. Protect primed substrate from damage until ready to receive paving.

C. Cutback Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.15 to 0.50 gal./sq. yd. (0.68 to 2.3 L/sq. m). Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.

2. Protect primed substrate from damage until ready to receive paving.

D. Emulsified Asphalt Prime Coat: Apply uniformly over surface of compacted unbound-aggregate base course at a rate of 0.10 to 0.30 gal./sq. yd. per inch depth (0.45 to 1.36 L/sq. m per 25.4 mm depth). Apply enough material to penetrate and seal, but not flood, surface. Allow prime coat to cure.

1. If prime coat is not entirely absorbed within 24 hours after application, spread sand over surface to blot excess asphalt. Use enough sand to prevent pickup under traffic. Remove loose sand by sweeping before pavement is placed and after volatiles have evaporated.

2. Protect primed substrate from damage until ready to receive paving.

E. Tack Coat: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd. (0.23 to 0.68 L/sq. m).

1. Allow tack coat to cure undisturbed before applying hot-mix asphalt paving.

2. Avoid smearing or staining adjoining surfaces, appurtenances, and surroundings. Remove spillages and clean affected surfaces.

3.7 INSTALLATION OF PAVING GEOTEXTILE

A. Apply tack coat uniformly to existing pavement surfaces at a rate of 0.20 to 0.30 gal./sq. yd. (0.91 to 1.36 L/sq. m).

B. Place paving geotextile promptly in accordance with manufacturer's written instructions. Broom or roll geotextile smooth and free of wrinkles and folds. Overlap longitudinal joints 4 inches (101.6 mm) and transverse joints 6 inches (152.4 mm).

C. Protect paving geotextile from traffic and other damage, and place hot-mix asphalt overlay the same day.

3.8 HOT-MIX ASPHALT PLACEMENT

A. Bituminous concrete shall not be placed when the ambient air and surface temperature is below 60^{o} F. When the surface temperature falls below these limits, material enroute may be placed at the risk of the Contractor.

B. Apply prime and tack coats when ambient temperature is above 60^{o} F and when temperature has not been below 40^{o} F for 12 hours immediately prior to applications. Do not apply when base is wet or contains an excess of moisture.

C. Machine place hot-mix asphalt on prepared surface, spread uniformly, and strike off. Place asphalt mix by hand in areas inaccessible to equipment in a manner that prevents segregation of mix. Place each course to required grade, cross section, and thickness when compacted.

1. Place hot-mix asphalt base course in number of lifts and thicknesses indicated.

2. Place hot-mix asphalt surface course in single lift.

3. Spread mix at a minimum temperature of 250 deg F (121.1 deg C).

4. Begin applying mix along centerline of crown for crowned sections and on high side of one-way slopes unless otherwise indicated.

5. Regulate paver machine speed to obtain smooth, continuous surface free of pulls and tears in asphalt-paving mat.

D. Place paving in consecutive strips not less than 10 feet (3 m) wide unless infill edge strips of a lesser width are required.

1. After first strip has been placed and rolled, place succeeding strips and extend rolling to overlap previous strips. Overlap mix placement about 1 to 1-1/2 inches (25.4 to 38.1 mm) from strip to strip to ensure proper compaction of mix along longitudinal joints.

2. Complete a section of asphalt base course before placing asphalt surface course.

E. Promptly correct surface irregularities in paving course behind paver. Use suitable hand tools to remove excess material forming high spots. Fill depressions with hot-mix asphalt to prevent segregation of mix; use suitable hand tools to smooth surface.

3.9 JOINTS

A. Construct joints to ensure a continuous bond between adjoining paving sections. Construct joints free of depressions, with same texture and smoothness as other sections of hot-mix asphalt course.

1. Clean contact surfaces and apply tack coat to joints.

2. Offset longitudinal joints, in successive courses, a minimum of 6 inches (152.4 mm).

3. Offset transverse joints, in successive courses, a minimum of 24 inches (609.6 mm).

4. Construct transverse joints at each point where paver ends a day's work and resumes work at a subsequent time. Construct these joints using either "bulkhead" or "papered" method in accordance with AI MS-22, for both "Ending a Lane" and "Resumption of Paving Operations."

5. Compact joints as soon as hot-mix asphalt will bear roller weight without excessive displacement.

6. Compact asphalt at joints to a density within 2 percent of specified course density.

B. Longitudinal and transverse joints shall be made in a careful manner.

1. Well bonded and sealed joints are required. If necessary, in order to obtain this result, joints shall be painted with asphalt.

2. Both longitudinal and transverse joints in successive courses shall be staggered so as not to be one above the other.

3. Longitudinal joints shall be staggered a minimum of 6 inches and shall be arranged so that the longitudinal joint in the top course being constructed shall be at the location of the lane dividing the traffic lanes.

C. Joints between old and new pavements, or between successive days work, shall be carefully made in such a manner as to ensure a thorough and continuous bond between old and new surfaces.

1. In the case of surface courses, the edge of the old and new surface course shall be cut back for its full depth so as to expose a fresh surface.

2. To obtain a well bonded joint, the surface shall be painted with hot asphalt, after which the hot surface mixture shall be placed in contact with it and raked to a proper depth and grade.

3. Before placing the mixture against them, all contact surfaces, of curbs, gutters, headers, manholes, etc., shall be painted with a thin uniform coating of hot asphalt cement or asphalt cement dissolved in Naptha.

3.10 COMPACTION

A. General: Begin compaction as soon as placed hot-mix paving will bear roller weight without excessive displacement. Compact hot-mix paving with hot hand tampers or with vibratory-plate compactors in areas inaccessible to rollers.

1. Complete compaction before mix temperature cools to 185 deg F (85 deg C).

B. Breakdown Rolling: Complete breakdown or initial rolling immediately after rolling joints and outside edge. Examine surface immediately after breakdown rolling for indicated crown, grade, and smoothness. Correct laydown and rolling operations to comply with requirements.

C. Intermediate Rolling: Begin intermediate rolling immediately after breakdown rolling while hot-mix asphalt is still hot enough to achieve specified density. Continue rolling until hot-mix asphalt course has been uniformly compacted to an in-place density of 92.0 to 97.0 percent of the maximum density.

D. Finish Rolling: Finish roll paved surfaces to remove roller marks while hot-mix asphalt is still warm.

E. Edge Shaping: While surface is being compacted and finished, trim edges of pavement to proper alignment. Bevel edges while asphalt is still hot; compact thoroughly.

F. Repairs: Remove paved areas that are defective or contaminated with foreign materials and replace with fresh, hot-mix asphalt. Compact by rolling to specified density and surface smoothness.

G. Protection: After final rolling, do not permit vehicular traffic on pavement until it has cooled and hardened.

H. Erect barricades to protect paving from traffic until mixture has cooled enough not to become marked.

3.11 ASPHALT CURBS

A. Construct hot-mix asphalt curbs over compacted pavement surfaces. Apply a light tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of 250 deg F (121.1 deg C).

1. Hot-Mix Asphalt: Same as pavement surface-course mix.

B. Place hot-mix asphalt to curb cross section indicated or, if not indicated, to local standard shapes, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.12 ASPHALT TRAFFIC-CALMING DEVICES

A. Construct hot-mix asphalt speed bumps over compacted pavement surfaces. Apply a tack coat unless pavement surface is still tacky and free from dust. Spread hot-mix asphalt at a minimum temperature of 250 deg F (121.1 deg C).

1. Tack Coat Application: Apply uniformly to surfaces of existing pavement at a rate of 0.05 to 0.15 gal./sq. yd. (0.23 to 0.68 L/sq. m).

2. Hot-Mix Asphalt: Same as pavement surface-course mix.

3. Before installation, mill pavement that will be in contact with bottom of traffic-calming device. Mill to a depth of 1 inch (25.4 mm) from top of pavement to a clean, rough profile.

B. Place and compact hot-mix asphalt to cross section indicated, by machine or by hand in wood or metal forms. Tamp hand-placed materials and screed to smooth finish. Remove forms after hot-mix asphalt has cooled.

3.13 INSTALLATION TOLERANCES

A. Pavement Thickness: Compact each course to produce thickness indicated within the following tolerances:

1. Base Course: Plus or minus 1/2 inch (12.7 mm).

2. Surface Course: Plus 1/4 inch (6.35 mm), no minus.

B. Pavement Surface Smoothness: Compact each course to produce surface smoothness within the following tolerances as determined by using a 10-foot (3-m) straightedge applied transversely or longitudinally to paved areas:

1. Base Course: 1/4 inch (6.35 mm).

2. Surface Course: 1/8 inch (3.18 mm).

3. Crowned Surfaces: Test with crowned template centered and at right angle to crown. Maximum allowable variance from template is 1/4 inch (6.35 mm).

C. Asphalt Traffic-Calming Devices: Compact and form asphalt to the shapes indicated and within a tolerance of plus or minus 1/8 inch (3.18 mm) of height indicated above pavement surface.

3.14 SURFACE TREATMENTS

A. Fog Seals: Apply fog seal at a rate of 0.10 to 0.15 gal./sq. yd. (0.45 to 0.68 L/sq. m) to existing asphalt pavement and allow to cure. With fine sand, lightly dust areas receiving excess fog seal.

B. Slurry Seals: Apply slurry coat in a uniform thickness in accordance with ASTM D3910 and allow to cure.

1. Roll slurry seal to remove ridges and provide a uniform, smooth surface.

3.15 FIELD QUALITY CONTROL

A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.

B. Thickness: In-place compacted thickness of hot-mix asphalt courses will be determined in accordance with ASTM D3549/D3549M.

C. Surface Smoothness: Finished surface of each hot-mix asphalt course will be tested for compliance with smoothness tolerances.

D. Asphalt Traffic-Calming Devices: Finished height of traffic-calming devices above pavement will be measured for compliance with tolerances.

E. In-Place Density: Testing agency will take samples of uncompacted paving mixtures and compacted pavement in accordance with ASTM D979/D979M.

1. Reference maximum theoretical density will be determined by averaging results from four samples of hot-mix asphalt-paving mixture delivered daily to site, prepared in accordance with ASTM D2041/D2041M, and compacted in accordance with job-mix specifications.

2. In-place density of compacted pavement will be determined by testing core samples in accordance with ASTM D1188 or ASTM D2726/D2726M.

a. One core sample will be taken for every 1000 sq. yd. (836 sq. m) or less of installed pavement, with no fewer than three cores taken.

b. Field density of in-place compacted pavement may also be determined by nuclear method in accordance with ASTM D2950/D2950M and coordinated with ASTM D1188 or ASTM D2726/D2726M.

F. Replace and compact hot-mix asphalt where core tests were taken.

G. Remove and replace or install additional hot-mix asphalt where test results or measurements indicate that it does not comply with specified requirements.

3.16 WASTE HANDLING

A. General: Handle asphalt-paving waste in accordance with approved waste management plan required in Section 017419 "Construction Waste Management and Disposal."

END OF SECTION 32 12 16

SECTION 32 13 13 - CONCRETE PAVING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Section Includes Concrete Paving, including the following:

1. Driveways.
2. Roadways.
3. Parking lots.
4. Curbs and gutters.
5. Walks.
6. Dumpster Pads

B. Related Requirements:

1. Section 03 30 00 "Cast-in-Place Concrete" for general building applications of concrete.
2. Section 32 13 73 "Concrete Paving Joint Sealants" for joint sealants in expansion and contraction joints within concrete paving and in joints between concrete paving and asphalt paving or adjacent construction.
3. Section 32 17 13 "Parking Bumpers."
4. Section 32 17 23 "Pavement Markings."
5. Section 32 17 26 "Tactile Warning Surfacing" for detectable warning tiles, mats, and/or pavers.
6. Section 32 33 00 "Site Furnishings" for items embedded in concrete.

1.3 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of blended hydraulic cement, fly ash, slag cement, and other pozzolans.

B. W/C Ratio: The ratio by weight of water to cementitious materials.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to concrete paving, including but not limited to, the following:
   a. Concrete mixture design.
   b. Quality control of concrete materials and concrete paving construction practices.

2. Require representatives of each entity directly concerned with concrete paving to attend, including the following:
   a. Contractor's superintendent.
   b. Independent testing agency responsible for concrete design mixtures.
   c. Ready-mix concrete manufacturer.
   d. Concrete paving Subcontractor.
   e. Manufacturer's representative of stamped concrete paving system used for stamped detectable warnings.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals: Comply with Section 01 81 13.
1. MR Credit 3: Sourcing of Raw Materials
   a. Recycled Content: Asphalt. Provide material cost values.

C. Samples for Initial Selection: For each type of product, ingredient, or admixture requiring color selection.

D. Design Mixtures: For each concrete paving mixture. Include alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments.

1.6 INFORMATIONAL SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specifications Sections.

B. Product data for proprietary materials and items, including reinforcement and forming accessories, admixtures, joint systems, curing compounds, dry-shake finish materials, and others if requested by Architect.

C. Qualification Data: For qualified Installer of stamped detectable warnings, ready-mix concrete manufacturer, and testing agency.

D. Material certificates in lieu of material laboratory test reports when permitted by Architect. Material certificate shall be assigned by manufacturer and Contractor certifying that each material item complies with or exceed requirements. Provide certification from admixture manufacturers that chloride content complies with requirements

1. Material Certificates: For the following, from manufacturer:
   a. Cementitious materials.
   b. Steel reinforcement and reinforcement accessories.
   c. Fiber reinforcement.
   d. Admixtures.
   e. Curing compounds.
   f. Applied finish materials.

g. Bonding agent or epoxy adhesive.
h. Joint fillers.

E. Material Test Reports: For each of the following:

1. Aggregates: Include service-record data indicating absence of deleterious expansion of concrete due to alkali-aggregate reactivity.

F. Field quality-control reports.

1.7 QUALITY ASSURANCE

A. Concrete Standards: Comply with provisions of the following standards, except where more stringent requirements are indicated.

1. American Concrete Institute (ACI) 301, “Specifications for Structural Concrete for Buildings.”
2. ACI 318, “Building Code Requirements for Reinforced Concrete.”
3. Concrete Reinforcing Steel Institute (CRSI) “Manual of Standard Practice.”

B. Stamped Detectable Warning Installer Qualifications: An employer of workers trained and approved by manufacturer of stamped concrete paving systems.

C. Ready-Mix-Concrete Manufacturer Qualifications: A firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C94/C94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" (Quality Control Manual - Section 3, "Plant Certification Checklist").

D. Concrete Testing Service: The Contractor will engage a qualified independent testing agency to perform material evaluation tests and to design concrete mixes.

1. The contractor shall provide the Testing Agency a minimum of 24 hours notice prior to the performance of such testing required.

E. Testing Agency Qualifications: Qualified according to ASTM C1077 and ASTM E329 for testing indicated.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or an equivalent certification program.

F. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of full-thickness sections of concrete paving to demonstrate typical joints; surface finish, texture, and color; curing; and standard of workmanship.
2. Build mockups of concrete paving in the location and of the size indicated or, if not indicated, build mockups where directed by Architect and not less than 96 inches (2438.4 mm) by 96 inches (2438.4 mm). Include full-size detectable warning.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

G. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

1.8 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified independent testing agency to perform preconstruction testing on concrete paving mixtures.

1.9 FIELD CONDITIONS

A. Traffic Control: Maintain access for vehicular and pedestrian traffic as required for other construction activities.

B. Cold-Weather Concrete Placement: Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing, or low temperatures. Comply with ACI 306.1 and the following:

1. When air temperature has fallen to or is expected to fall below 40 deg F (4.4 deg C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50 deg F (10 deg C) and not more than 80 deg F (26.7 deg C) at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in design mixtures.

C. Hot-Weather Concrete Placement: Comply with ACI 301 (ACI 301M) and as follows when hot-weather conditions exist:

1. Cool ingredients before mixing to maintain concrete temperature below 90 deg F (32.2 deg C) at time of placement. Chilled mixing water or chopped ice may be used to control temperature, provided water equivalent of ice is calculated in total amount of mixing water. Using liquid nitrogen to cool concrete is Contractor's option.
2. Cover steel reinforcement with water-soaked burlap, so steel temperature will not exceed ambient air temperature immediately before embedding in concrete.
3. Fog-spray forms, steel reinforcement, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft spots, or dry areas.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. ACI Publications: Comply with ACI 301 (ACI 301M) unless otherwise indicated.

B. Regional Content: Provide steel, cement and aggregate manufactured and of recycled raw materials recovered within 100-mile radius of Project Site.

2.2 FORMS

A. Form Materials: Plywood, metal, metal-framed plywood, or other approved panel-type materials to provide full-depth, continuous, straight, and smooth exposed surfaces.

1. Use flexible or uniformly curved forms for curves with a radius of 100 feet (30.5 m) or less. Do not use notched and bent forms.

B. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and that will not impair subsequent treatments of concrete surfaces.

2.3 STEEL REINFORCEMENT

A. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from galvanized-steel wire into flat sheets.

B. Reinforcing Bars: ASTM A615/A615M, Grade 60 (Grade 420); deformed.

C. Joint Dowel Bars: ASTM A615/A615M, Grade 60 (Grade 420) plain-steel bars; zinc coated (galvanized) after fabrication according to ASTM A767/A767M, Class I coating. Cut bars true to length with ends square and free of burrs.

D. Epoxy-Coated, Joint Dowel Bars: ASTM A775/A775M; with ASTM A615/A615M, Grade 60 (Grade 420) plain-steel bars.

E. Tie Bars: ASTM A615/A615M, Grade 60 (Grade 420); deformed.

F. Hook Bolts: ASTM A307, Grade A (ASTM F568M, Property Class 4.6), internally and externally threaded. Design hook-bolt joint assembly to hold coupling against paving form and in position during concreting operations, and to permit removal without damage to concrete or hook bolt.

G. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars, welded-wire reinforcement, and dowels in place. Manufacture bar supports according to CRSI's "Manual of Standard Practice" from steel wire, plastic, or precast concrete of greater compressive strength than concrete specified, and as follows:

1. Equip wire bar supports with sand plates or horizontal runners where base material will not support chair legs.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

H. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating, compatible with epoxy coating on reinforcement.

I. Zinc Repair Material: ASTM A780/A780M.

J. Recycled Content: Provide steel reinforcement with minimum 90 percent total recycled content, including at least 60 percent post-consumer recycled content; provide cement with minimum 25 percent recycled content, with Structural Engineer’s approval.

2.4 CONCRETE MATERIALS

A. Cementitious Materials: Use the following cementitious materials, of same type, brand, and source throughout Project:

1. Portland Cement: ASTM C150/C150M, white portland cement Type I.
   a. Use one brand of cement throughout project unless otherwise acceptable to Architect.
   b. Mix shall be in accordance with the Portland Association publication #IS174.02T “Concrete for Small Jobs”.
   c. All concrete shall be 3000 psi (MDSHA mix no.2), air-entrained (5% $\pm$ 1%) and the proportions by volume shall be in accordance with Table 32 13 00-1.
   d. Contractor shall furnish to the Owner delivery tickets for the concrete at the time of delivery.

TABLE 32 13 00-1
PROPORTIONS BY VOLUME

Maximum Size Coarse Aggregate	Cement	Sand	Aggregate	Water
3/8”	1	2 ¼	1 ½	½
½”	1	2 ¼	2	½
¾”	1	2 ¼	2 ½	½
1”	1	2 ¼	2 ¾	½
1 ½”	1	2 ¼	3	½

B. Normal-Weight Aggregates: ASTM C33/C33M, Class 4S, uniformly graded. Provide aggregates from a single source.

1. Maximum Coarse-Aggregate Size: 1 ½ inches nominal.
2. Do not use fine or coarse aggregates that contain substances that cause spalling.
3. Local aggregates not complying with ASTM C33 that have been shown to produce concrete of adequate strength and durability by special tests or actual service may be used when acceptable to Architect.

C. Air-Entraining Admixture: ASTM C260/C260M. Subject to compliance with requirements, provide one of the following:

1. Air-Tite or Amex 210; Cormix Construction Chemicals.
2. Air-Mix or Perma-Air; Euclid Chemical Co.
3. Darex AEA or Daravair; W.R. Grace & Co.
4. MB-VR or Micro-Air, Master Builders, Inc.
5. Sealtight AEA; W.R. Meadows, Inc.
6. Sika AER; Sika Corp.

D. Chemical Admixtures: Admixtures certified by manufacturer to be compatible with other admixtures and to contain not more than 0.1 percent water-soluble chloride ions by mass of cementitious material.

1. Water-Reducing Admixture: ASTM C494/C494M, Type A. Subject to compliance with requirements, provide one of the following:
   a. Chemtard; ChemMasters Corp.
   b. Type A Services; Cormix Construction Chemicals.
   c. Eucon WR-75; Euclid Chemical Co.
   d. WRDA; W.R. Grace & Co.
   e. Pozzolith Normal or Polyheed; Master Builders, Inc.
   f. Metco W.R.; Metalcrete Industries.
   g. Plastocrete 161; Sika Corp.

2. Retarding Admixture: ASTM C494/C494M, Type B.
3. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
4. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
5. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
6. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.

E. Color Pigment: ASTM C979/C979M, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable, free of carbon black, nonfading, and resistant to lime and other alkalis.

1. Color: As selected by Architect from manufacturer's full range.

F. Water: Potable and complying with ASTM C94/C94M.

2.5 FIBER REINFORCEMENT

A. Synthetic Fiber, Monofilament Fibers: Monofilament polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, 1/2 to 1-1/2 inches (12.7 to 38.1 mm) long.

B. Synthetic Fiber, Fibrillated Fibers: Fibrillated polypropylene fibers engineered and designed for use in decorative concrete paving, complying with ASTM C1116/C1116M, Type III, 1/2 to 1-1/2 inches (12.7 to 38.1 mm) long.

2.6 CURING MATERIALS

A. Absorptive Cover: AASHTO M 182, Class 3, burlap cloth made from jute or kenaf, weighing approximately 9 oz./sq. yd. (305.2 g/sq. m) dry or cotton mats.

B. Moisture-Retaining Cover: ASTM C171, polyethylene film or white burlap-polyethylene sheet.

C. Water: Potable.

D. Liquid Membrane-Forming Curing Compound: AASHTO M-148. Products: Subject to compliance with requirements, provide one of the following:

1. Clear Cure; Anti-Hydro Co., Inc.
2. Spartan-Cote; The Burke Co.
3. All Resin; Conspec Marketing & Mfg. Co.
4. Sealco 309; Cormix Construction Chemicals
5. Day-Chem Cure and Seal; Dayton Superior Corp.
6. Diamond Clear; Euclid Chemical Corp.
7. #64 Resin Cure-Clear; Lambert Corp.
8. L&M Cure R; L&M Construction Chemicals
9. Masterkure; Master Builders, Inc.
10. 3100 Series; W.R. Meadows, Inc.
11. Seal N Kure; Metalcare Industries
12. Kure-N-Seal; Sonneborn-Chemrex
13. Horn Clear Seal; Tamms/A.C. Horn

2.7 RELATED MATERIALS

A. Joint Fillers: ASTM D1751, asphalt-saturated cellulosic fiber ASTM D1752, cork or self-expanding cork or ASTM D8139, semirigid, closed-cell polypropylene foam in preformed strips.

B. Slip-Resistive Aggregate Finish: Factory-graded, packaged, rustproof, non-glazing, abrasive aggregate of fused aluminum-oxide granules or crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials.

C. Bonding Agent: ASTM C1059/C1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene. Subject to compliance with requirements, provide one of the following:

1. Acrylic Bondcrete; the Burke Co.

2. Strongbond; Conspec Marketing and Mfg. Co.
3. Day-Chem Ad Bond (J-40); Dayton Superior Corp.
4. SBR Latex; Euclid Chemical Co.
5. Daraweld C; W.R. Grace & Co.
6. Everbond; L&M Construction Chemicals, Inc.
7. Acryl-Set; Master Builders, Inc.
8. Intralok; W.R Meadows, Inc.
9. Acrylpave; Metalcare Industries.
10. Sonocrete, Sonneborn-Chemrex
11. Stonlok LB2; Stonhard, Inc.
12. Strong Bond; Symons Corp.

D. Epoxy-Bonding Adhesive: ASTM C881/C881M, two-component epoxy resin capable of humid curing and bonding to damp surfaces; of class suitable for application temperature, of grade complying with requirements, and of the following types:

1. Types IV and V, load bearing, for bonding hardened or freshly mixed concrete to hardened concrete.
2. Epoxy-Bonding Adhesive: Subject to compliance with requirements, provide one of the following:
   a. Burke Epoxy M.V.; the Burke Co.
   b. Spec-Bond 100; Conspec Marketing and Mfg. Co.
   c. Resi-Bond (J-58); Dayton Superior.
   d. Euco-Epoxy System #452 or #620; Euclid Chemical Co.
   e. Concresive Standard Liquid; Master Builders, Inc.
   f. Rezi-Weld 1000; W.R. Meadows, Inc.
   g. Metco Hi-Mod Epoxy; Metalcrete Industries.
   h. Sikadur 32 Hi-Mod; Sika Corp.
   i. R-6000 Series; Symons Corp.
   j. Epoxtite Binder 2390; Tamms/A.C. Horn, Inc

E. Pigmented Mineral Dry-Shake Hardener: Factory-packaged, dry combination of Portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

1. Color: As selected by Architect from manufacturer's full range.

F. Rock Salt: Sodium chloride crystals, kiln dried, coarse gradation with 100 percent passing 3/8-inch (9.5 mm) sieve and 85 percent retained on a No. 8 (2.36 mm) sieve.

2.8 STAMPED DETECTABLE WARNING MATERIALS

A. Detectable Warning Stamp: Semirigid polyurethane mats with formed underside capable of imprinting detectable warning pattern on plastic concrete; perforated with a vent hole at each dome.

1. Size of Stamp: One piece, matching detectable warning area shown on Drawings.

B. Liquid Release Agent: Manufacturer's standard, clear, evaporating formulation designed to facilitate release of stamp mats.

2.9 CONCRETE BOLLARD BAND

A. Manufacturer : Davis Colors

B. Color : Outback (#677)

C. Finish : Medium broom finish, perpendicular to path of travel

D. Location : Concrete bollard band 2' – 6" wide as shown in plan on L1.02, L4.01 and Detail 1 on sheet L5.02

2.10 CONCRETE MIXTURES

A. Prepare design mixtures, proportioned according to ACI 301 (ACI 301M), for each type and strength of normal-weight concrete, and as determined by either laboratory trial mixtures or field experience.

1. Use a qualified independent testing agency for preparing and reporting proposed concrete design mixtures for the trial batch method. Do not use the Owner's field quality-control testing agency as the independent testing agency.
2. When automatic machine placement is used, determine design mixtures and obtain laboratory test results that comply with or exceed requirements.

B. Add air-entraining admixture at manufacturer's prescribed rate to result in normal-weight concrete at point of placement having an air content as follows:

1. Air Content, 1-1/2 inch (38.1 mm)

C. Limit water-soluble, chloride-ion content in hardened concrete to 0.15 percent by weight of cement.

D. Chemical Admixtures: Use admixtures according to manufacturer's written instructions.

1. Use water-reducing admixture in concrete as required for placement and workability.
2. Use water-reducing and retarding admixture when required by high temperatures, low humidity, or other adverse placement conditions.

E. Synthetic Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 1.5 lb/cu. yd. (0.89 kg/cu. m).

F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

G. Concrete Mixtures: Normal-weight concrete.

1. Compressive Strength (28 Days): 4000 psi (27.6 MPa).
2. Maximum W/C Ratio at Point of Placement: 0.42.
3. Slump Limit: 2 inches (50.8 mm) to 5 inches (127 mm).
4. Nominal Coarse Aggregate Size: No. 7 stone (2.83 mm).

2.11 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Furnish batch certificates for each batch discharged and used in the Work.

1. When air temperature is between 85 and 90 deg F (29.4 and 32.2 deg C), reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 90 deg F (32.2 deg C), reduce mixing and delivery time to 60 minutes.

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C94/C94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For concrete batches of 1 cu. yd. (0.76 cu. m) or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For concrete batches larger than 1 cu. yd. (0.76 cu. m), increase mixing time by 15 seconds for each additional 1 cu. yd. (0.76 cu. m).
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixing time, quantity, and amount of water added.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine exposed subgrades and subbase surfaces for compliance with requirements for dimensional, grading, and elevation tolerances.

B. Proof-roll prepared subbase surface below concrete paving to identify soft pockets and areas of excess yielding.

1. Completely proof-roll subbase in one direction and repeat in perpendicular direction. Limit vehicle speed to 3 mph (4.8 km/h).
2. Proof-roll with a pneumatic-tired and loaded, 10-wheel, tandem-axle dump truck weighing not less than 15 tons (15.2 tonnes).
3. Correct subbase with soft spots and areas of pumping or rutting exceeding depth of 1/2 inch (12.7 mm) according to requirements in Section 31 20 00 "Earth Moving."

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove loose material from compacted subbase surface immediately before placing concrete.

3.3 EDGE FORMS AND SCREED CONSTRUCTION

A. Set, brace, and secure edge forms, bulkheads, and intermediate screed guides to required lines, grades, and elevations. Install forms to allow continuous progress of work and so forms can remain in place at least 24 hours after concrete placement.

B. Clean forms after each use and coat with form-release agent to ensure separation from concrete without damage.

1. Top of Forms: Not more than ½ inch in 10 feet.
2. Vertical Face on Longitudinal Axis: Not more than ½ inch in 10 feet.

C. Clean forms after each use and coat with form release agent as required to ensure separation from concrete without damage.

3.4 INSTALLATION OF STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for fabricating, placing, and supporting reinforcement.

B. Clean reinforcement of loose rust and mill scale, earth, ice, or other bond-reducing materials.

C. Arrange, space, and securely tie bars and bar supports to hold reinforcement in position during concrete placement. Maintain minimum cover to reinforcement.

D. Install welded-wire reinforcement in lengths as long as practicable. Lap adjoining pieces at least one full mesh, and lace splices with wire. Offset laps of adjoining widths to prevent continuous laps in either direction.

E. Zinc-Coated Reinforcement: Use galvanized-steel wire ties to fasten zinc-coated reinforcement. Repair cut and damaged zinc coatings with zinc repair material.

F. Epoxy-Coated Reinforcement: Use epoxy-coated steel wire ties to fasten epoxy-coated reinforcement. Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D3963/D3963M.

G. Install fabricated bar mats in lengths as long as practicable. Handle units to keep them flat and free of distortions. Straighten bends, kinks, and other irregularities, or replace units as required before placement. Set mats for a minimum 2 inch (50.8 mm) overlap of adjacent mats.

3.5 JOINTS

A. General: Form construction, isolation, and contraction joints and tool edges true to line, with faces perpendicular to surface plane of concrete. Construct transverse joints at right angles to centerline unless otherwise indicated.

1. When joining existing paving, place transverse joints to align with previously placed joints unless otherwise indicated.

B. Construction Joints: Set construction joints at side and end terminations of paving and at locations where paving operations are stopped for more than one-half hour unless paving terminates at isolation joints:

1. Provide preformed galvanized steel or plastic keyway-section forms or bulkhead forms with key, unless indicated otherwise. Embed keys at least 1 ½ inches into concrete.
2. Continue steel reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of paving strips unless otherwise indicated.
3. Provide tie bars at sides of paving strips where indicated.
4. Use bonding agent one existing concrete surfaces that will be joined with fresh concrete.
5. Butt Joints: Use bonding agent at joint locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.
6. Keyed Joints: Provide preformed keyway-section forms or bulkhead forms with keys unless otherwise indicated. Embed keys at least 1-1/2 inches (38.1 mm) into concrete.
7. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

C. Isolation Joints: Form isolation joints of preformed joint-filler strips abutting concrete curbs, catch basins, manholes, inlets, structures, other fixed objects, and where indicated.

1. Locate expansion joints at intervals of 25 feet for sidewalks and 40 feet for curb and gutter, unless indicated otherwise.
2. Extend joint fillers full width and depth of joint, not less than ½ inch or more than 1 inch below finished surface where joint sealant is indicated. Place top of joint filler flush with finished concrete surface when no joint sealant is required.
3. Terminate joint filler not less than 1/2 inch (12.7 mm) or more than 1 inch (25.4 mm) below finished surface if joint sealant is indicated.
4. Place top of joint filler flush with finished concrete surface if joint sealant is not indicated.

5. Furnish joint fillers in one-piece lengths. Where more than one length is required, lace or clip joint-filler sections together.
6. During concrete placement, protect top edge of joint filler with metal, plastic, or other temporary preformed cap. Remove protective cap after concrete has been placed on both sides of joint.

D. Contraction Joints: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for a depth equal to at least one-fourth of the concrete thickness, as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint with grooving tool to a ¼ inch (6.35 mm) radius. Repeat grooving of contraction joints after applying surface finishes. Eliminate grooving-tool marks on concrete surfaces.

   a. Tolerance: Ensure that grooved joints are within 3 inches (76.2 mm) either way from centers of dowels.
2. Inserts: Form contraction joints by inserting premolded plastic, hardboard, or fiberboard strips into fresh concrete until top surface of strip is flush with paving surface. Radius each joint edge with a jointer tool. Carefully remove strips or caps of two-piece assemblies after concrete has hardened. Clean groove of loose debris
3. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 1/8 inch (3.2 mm) wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before developing random contraction cracks.

   a. Tolerance: Ensure that sawed joints are within 3 inches (76.2 mm) either way from centers of dowels.
4. Doweled Contraction Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or coat with asphalt one-half of dowel length to prevent concrete bonding to one side of joint.

E. Edging: After initial floating, tool edges of paving, gutters, curbs, and joints in concrete with an edging tool to a ¼ inch (6.35 mm) radius. Repeat tooling of edges after applying surface finishes. Eliminate edging-tool marks on concrete surfaces.

F. Walks shall be constructed to match existing concrete.

1. Expansion joints between building and pavement shall be bituminous fiber type.
2. Expansion joints shall be installed between existing concrete pavement and new pavement.
3. Pavements shall be separated from curbs by a construction joint using felt roofing paper material.
4. “Vinylex Waterstop Cap Strip” control joint to be installed at a maximum of 25' and between existing walks and new concrete.
5. Saw cut control joints are not permitted.
6. Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt-coat one half of dowel length to prevent concrete bonding to one side of joint.

3.6 CONCRETE PLACEMENT

A. Before placing concrete, inspect and complete formwork installation, steel reinforcement, and items to be embedded or cast-in.

B. Remove snow, ice, or frost from subbase surface and steel reinforcement before placing concrete. Do not place concrete on frozen surfaces.

C. Moisten subbase to provide a uniform dampened condition at time concrete is placed. Do not place concrete around manholes or other structures until they are at required finish elevation and alignment.

D. Comply with ACI 301 (ACI 301M) requirements for measuring, mixing, transporting, and placing concrete.

E. Do not add water to concrete during delivery or at Project site. Do not add water to fresh concrete after testing.

F. Deposit and spread concrete in a continuous operation between transverse joints. Do not push or drag concrete into place or use vibrators to move concrete into place.

1. When concrete placing is interrupted for more than ½ hour, place a construction joint.

G. Use a bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

H. Consolidate concrete according to ACI 301 (ACI 301M) by mechanical vibrating equipment supplemented by hand spading, rodding, or tamping.

1. Consolidate concrete along face of forms and adjacent to transverse joints with an internal vibrator. Keep vibrator away from joint assemblies, reinforcement, or side forms. Use only square-faced shovels for hand spreading and consolidation. Consolidate with care to prevent dislocating reinforcement dowels and joint devices.

I. Screed paving surface with a straightedge and strike off. Use bull floats or darbies to form a smooth surface plane before excess moisture or bleed water appears on the surface. Do not further disturb concrete surfaces prior to beginning finishing operations.

J. Place concrete in two operations; strike off initial pour for entire width of placement and to the required finish surface. Lay welded wire fabric or fabricated bar mats immediately in final position. Place top layer of concrete, strike off, and screed.

1. Remove and replace portions of bottom layer of concrete that have been placed more than 15 minutes without being covered by top layer or use bonding agency if acceptable to Architect.

K. Commence initial floating using bull floats or darbies to impart an open-textured and uniform surface plane before excess moisture or bleedwater appears on the surface. Do not further disturb concrete surfaces before beginning finishing operations or spreading surface treatments.

L. Curbs and Gutters: When automatic machine placement is used for curb and gutter placement, submit revised mix design and laboratory test results that meet or exceed requirements. Produce curbs and gutter to required cross section, lines, grade, finish and jointing as specified for formed concrete. If results are not acceptable, remove and replace with formed concrete.

M. Slip-Form Paving: When automatic machine placement is used for paving, submit revised mix design and laboratory test results that meet or exceed requirements. Produce paving to required thickness, lines, grades, finish, and jointing as required for formed paving.

1. Compact subbase and prepare subgrade of sufficient width to prevent displacement of slip-form paving machine during operations.

N. When adjoining pavement lanes are placed in separate pours, do not operate equipment on concrete until pavement has attained 85 percent of its 28-day compressive strength.

O. Cold Weather Placement: Comply with provision of ACI 306R and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When air temperature has fallen to or is expected to fall below 40°F, uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50° F and not more than 80° F at point of placement.
2. Do not use frozen materials or materials containing ice or snow.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agent or chemical accelerators unless otherwise accepted in mix designs.

P. Hot Weather Placement: Place concrete complying with ACI 305R and as specified when hot weather conditions exist.

1. Cool ingredients before mixing to maintain concrete temperature at time of placement to below 90° F. Mixing water may be chilled or chopped ice may be used to control temperature, provided water equivalent of ice is calculated to total amount of mixing water. Using liquid nitrogen to concrete is Contractor's option.
2. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperation immediately before embedding in concrete.
3. Fog spray forms, reinforcing steel, and subgrade just before placing concrete. Keep subgrade moisture uniform without standing water, soft sport, or dry areas.

3.7 FLOAT FINISHING

A. General: Do not add water to concrete surfaces during finishing operations.

B. Float Finish: Begin the second floating operation when bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operations. Float surface with power-driven floats or by hand floating if area is small or inaccessible to power units. Finish surfaces to true planes. Cut down high spots and fill low spots. Refloat surface immediately to uniform granular texture.

1. Burlap Finish: Drag a seamless strip of damp burlap across float-finished concrete, perpendicular to line of traffic, to provide a uniform, gritty texture.
2. Medium-to-Fine-Textured Broom Finish: Draw a soft-bristle broom across float-finished concrete surface, perpendicular to line of traffic, to provide a uniform, fine-line texture.
3. Medium-to-Coarse-Textured Broom Finish: Provide a coarse finish by striating float-finished concrete surface 1/16 to 1/8 inch (1.6 to 3.2 mm) deep with a stiff-bristled broom, perpendicular to line of traffic.

C. Final Tooling: Tool edges of paving, gutter, curbs, and joints formed in fresh concrete with a jointing tool to the following radius. Repeat tooling of edges and joints after applying surface finishes. Eliminate tool marks on concrete surfaces.

1. Radius: 3/8 inch

3.8 INSTALLATION OF DETECTABLE WARNINGS

A. Blockouts: Form blockouts in concrete for installation of detectable paving units specified in Section 321726 "Tactile Warning Surfacing."

1. Tolerance for Opening Size: Plus 1/4 inch (6.35 mm), no minus.

B. Cast-in-Place Detectable Warning Tiles: Form blockouts in concrete for installation of tiles specified in Section 321726 "Tactile Warning Surfacing." Screed surface of concrete where tiles are to be installed to elevation, so that edges of installed tiles will be flush with surrounding

concrete paving. Embed tiles in fresh concrete to comply with Section 321726 "Tactile Warning Surfacing" immediately after screeding concrete surface.

C. Stamped Detectable Warnings: Install stamped detectable warnings as part of a continuous concrete paving placement and according to stamp-mat manufacturer's written instructions.

1. Before using stamp mats, verify that the vent holes are unobstructed.
2. Apply liquid release agent to the concrete surface and the stamp mat.
3. Stamping: While initially finished concrete is plastic, accurately align and place stamp mats in sequence. Uniformly load, gently vibrate, and press mats into concrete to produce imprint pattern on concrete surface. Load and tamp mats directly perpendicular to the stamp-mat surface to prevent distortion in shape of domes. Press and tamp until mortar begins to come through all of the vent holes. Gently remove stamp mats.
4. Trimming: After 24 hours, cut off the tips of mortar formed by the vent holes.
5. Remove residual release agent according to manufacturer's written instructions, but no fewer than three days after stamping concrete. High-pressure-wash surface and joint patterns, taking care not to damage stamped concrete. Control, collect, and legally dispose of runoff.

3.9 CONCRETE PROTECTION AND CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.

B. Comply with the recommendations of ACI 306R for cold weather protection and ACI 305R for hot weather protection during curing.

C. Evaporation Retarder: Apply evaporation retarder to concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb/sq. ft. x h (1 kg/sq. m x h) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete but before float finishing.

D. Begin curing after finishing concrete but not before free water has disappeared from concrete surface.

E. Curing Methods: Cure concrete by moisture curing, moisture-retaining-cover, curing curing compound, or a combination of these as follows:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:
   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated and kept continuously wet. Cover concrete surfaces and edges with 12 inch (304.8 mm) lap over adjacent absorptive covers.
2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover, placed in widest practicable width, with sides and ends lapped at least 12 inches (304.8 mm), and sealed by waterproof tape or adhesive. Immediately repair any holes or tears occurring during installation or curing period, using cover material and waterproof tape.
3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating, and repair damage during curing period.

3.10 PAVING TOLERANCES

A. Comply with tolerances in ACI 117 (ACI 117M) and as follows:

1. Elevation: 3/4 inch (19.05 mm).
2. Thickness: Plus 3/8 inch (9.5 mm), minus 1/4 inch (6.35 mm).
3. Surface: Gap below 10 feet (3 m) long; unleveled straightedge not to exceed 1/2 inch (12.7 mm).
4. Alignment of Tie-Bar End Relative to Line Perpendicular to Paving Edge: 1/2 inch per 12 inches (12.7 mm per 304.8 mm) of tie bar.
5. Lateral Alignment and Spacing of Dowels: 1 inch (25.4 mm).
6. Vertical Alignment of Dowels: 1/4 inch (6.35 mm).
7. Alignment of Dowel-Bar End Relative to Line Perpendicular to Paving Edge: 1/4 inch per 12 inches (6.35 mm per 304.8 mm) of dowel.
8. Joint Spacing: 3 inches (76.2 mm).
9. Contraction Joint Depth: Plus 1/4 inch (6.35 mm), no minus.
10. Joint Width: Plus 1/8 inch (3.2 mm), no minus.

3.11 FIELD QUALITY CONTROL

A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.

B. Testing Services: Testing and inspecting of composite samples of fresh concrete obtained according to ASTM C172/C172M shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 100 cu. yd. (76.45 cu. m) or fraction thereof of each concrete mixture placed each day.
   a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.
2. Slump: ASTM C143/C143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C231/C231M, pressure method; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
4. Concrete Temperature: ASTM C1064/C1064M; one test hourly when air temperature is 40 deg F (4.4 deg C) and below and when it is 80 deg F (26.7 deg C) and above, and one test for each composite sample.
5. Compression Test Specimens: ASTM C31/C31M; one set of four standard cylinders for each compressive-strength test, unless directed otherwise. Mold and store cylinders for laboratory-cured test specimens except when field-cured test specimens are required.
6. Compressive-Strength Tests: ASTM C39/C39Mone set for each day’s pour of each concrete class exceeding 5 cu. yd. But less than 25 cu. yd., plus one set for each additional 50 cu. yd. Test one specimen at 7 days, test two specimens at 28 days, and retain one specimen in reserve for later testing if required.

C. When frequency of testing will provide fewer than five strength tests for a given class of concrete, conduct testing from at least five randomly selected batches or from each batch if fewer than five are used.

D. When total quantity of a given class of concrete is less than 50 cu. yd., Architect may waive strength testing if adequate evidence of satisfactory strength is provided.

E. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, evaluate current operation and provide corrective procedures for protecting and curing the in-place concrete.

F. Strength of each concrete mixture will be satisfactory if average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no

compressive-strength test value falls below specified compressive strength by more than 500 psi (3.45 MPa).

G. Test results shall be reported in writing to Architect, concrete manufacturer, and Contractor within 48 hours of testing. Reports of compressive-strength tests shall contain Project identification name and number, date of concrete placement, name of concrete testing and inspecting agency, location of concrete batch in Work, design compressive strength at 28 days, concrete mixture proportions and materials, compressive breaking strength, and type of break for both 7- and 28-day tests.

H. Nondestructive Testing: Impact hammer, sonoscope, or other nondestructive device may be permitted by Architect but will not be used as sole basis for approval or rejection of concrete.

I. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Architect.

J. Concrete paving will be considered defective if it does not pass tests and inspections.

K. Additional testing and inspecting: The testing agency will make additional tests of the concrete when test results indicate slump, air entrainment, concrete strengths, or other requirements have not been met, as directed by Architect. Testing agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42, or by other methods as directed.

L. Prepare test and inspection reports.

3.12 REPAIR AND PROTECTION

A. Remove and replace concrete paving that is broken, damaged, or defective or that does not comply with requirements in this Section. Remove work in complete sections from joint to joint unless otherwise approved by Architect.

B. Drill test cores, where directed by Architect, when necessary to determine magnitude of cracks or defective areas. Fill drilled core holes in satisfactory paving areas with Portland cement concrete bonded to paving with epoxy adhesive.

C. Protect concrete paving from damage. Exclude traffic from paving for at least 14 days after placement. When construction traffic is permitted, maintain paving as clean as possible by removing surface stains and spillage of materials as they occur.

D. Maintain concrete paving free of stains, discoloration, dirt, and other foreign material. Sweep paving not more than two days before date scheduled for Substantial Completion inspections.

END OF SECTION 32 13 13

SECTION 32 13 73 - CONCRETE PAVING JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 SUMMARY

A. Section Includes:

1. Cold-applied joint sealants.

2. Hot-applied joint sealants.

3. Cold-applied, fuel-resistant joint sealants.

4. Hot-applied, fuel-resistant joint sealants.

5. Joint-sealant backer materials.

6. Primers.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Verification: For each kind and color of joint sealant required, provide Samples with joint sealants in ½ inch (12.7 mm) wide joints formed between two 6 inch (152.4 mm) long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

C. Paving-Joint-Sealant Schedule: Include the following information:

1. Joint-sealant application, joint location, and designation.

2. Joint-sealant manufacturer and product name.

3. Joint-sealant formulation.

4. Joint-sealant color.

1.5 INFORMATIONAL SUBMITTALS

A. General: Submit the following according to the Conditions of the Contract and Division 1 Specifications Sections.

B. Product data for proprietary materials and items, including joint systems, and others if requested by Architect

C. Qualification Data: For firms and persons specified in the “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Product Certificates: For each type of joint sealant and accessory.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Product Testing: Test joint sealants using a qualified testing agency.

C. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

1.7 FIELD CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer or are below 40 deg F (4.44 deg C).

2. When joint substrates are wet.

3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.

4. Where contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backing materials, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by joint-sealant manufacturer, based on testing and field experience.

2.2 JOINT MATERIALS

A. Vinylex waterstop cap strip control joint manufactured by Vinylex or approved equal.

B. Preformed Joint Fillers:

1. The bituminous fiber type shall be in accordance with AASHTO M213 with the bituminous content determined by AASHTO T164.

2. The weathering test shall be deleted for either type of material

2.3 JOINT SEALANTS

A. Compatibility: Sealant fillers and all adjacent materials shall be compatible as demonstrated by sealant manufacturer testing.

B. Colors - Provide color of exposed joint sealants to comply with the following:

1. Match colors of concrete.

2.4 COLD-APPLIED JOINT SEALANTS

A. Cold Applied Joint Sealants shall be one part, polyurethane-base sealant for concrete pourable, chemically curing elastomeric formulation complying with the following requirements relative to formulation with ASTM C 920 for Type S, Grade NS, Class 25, and Uses indicated.

B. Single-Component, Nonsag, Silicone Joint Sealant: ASTM D5893/D5893M, Type NS.

C. Single-Component, Self-Leveling, Silicone Joint Sealant: ASTM D5893/D5893M, Type SL.

D. Multicomponent, Nonsag, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade NS, Class 25, for Use T.

E. Single Component, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.

F. Multicomponent, Pourable, Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 25, for Use T.

2.5 HOT-APPLIED JOINT SEALANTS

A. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I.

B. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I or Type II.

C. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type I, II, or III.

D. Hot-Applied, Single-Component Joint Sealant: ASTM D6690, Type IV.

2.6 COLD-APPLIED, FUEL-RESISTANT JOINT SEALANTS

A. Fuel-Resistant, Single-Component, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type S, Grade P, Class 25, for Use T.

B. Fuel-Resistant, Multicomponent, Pourable, Modified-Urethane, Elastomeric Joint Sealant: ASTM C920, Type M, Grade P, Class 12-1/2 or 25, for Use T.

2.7 HOT-APPLIED, FUEL-RESISTANT JOINT SEALANTS

A. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants: ASTM D7116, Type I or Type II.

B. Hot-Applied, Fuel-Resistant, Single-Component Joint Sealants: ASTM D7116, Type III.

2.8 JOINT-SEALANT BACKER MATERIALS

A. Joint-Sealant Backer Materials: Non-staining; compatible with joint substrates, sealants, primers, and other joint fillers; and approved for applications indicated by joint-sealant manufacturer, based on field experience and laboratory testing.

B. Backer Rods for Cold Applied Sealants: Performed, compressible, resilient, non-waxing, non-extruding strips of flexible, plastic foam of material indicated below and of size, shape, and density to control sealant depth and otherwise contribute to producing optimum sealant performance.

1. Closed cell polyethylene foam, nonabsorbent to liquid water and gas, and non-outgassing in unruptured state.

2. Proprietary, reticulated, closed-cell polymeric foam, non-outgassing, with a density of 2.5 pcf and tensile strength of 35 psi per ASTM D 1623, and with water absorption less than 0.02 gram/cubic centimeter per ASTM C 1083.

3. Either material indicated above.

C. Bond Breaker Type: Polyethylene tape of other plastic tape as recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint filler materials or joint surfaces at back of joint where such adhesions would result in sealant failure. Provide self-adhesive tape where applicable.

D. Round Backer Rods for Cold- and Hot-Applied Joint Sealants: ASTM D5249, Type 1, of diameter and density required to control sealant depth and prevent bottom-side adhesion of sealant.

E. Round Backer Rods for Cold-Applied Joint Sealants: ASTM D5249, Type 3, of diameter and density required to control joint-sealant depth and prevent bottom-side adhesion of sealant.

F. Backer Strips for Cold- and Hot-Applied Joint Sealants: ASTM D5249; Type 2; of thickness and width required to control joint-sealant depth, prevent bottom-side adhesion of sealant, and fill remainder of joint opening under sealant.

2.9 PRIMERS

A. Primers: Product recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Before installing joint sealants, clean out joints immediately to comply with joint-sealant manufacturer's written instructions.

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

B. Joint Priming: Prime joint substrates where indicated or where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions. Confine primers to areas of joint-sealant bond; do not allow spillage or migration onto adjoining surfaces.

3.3 INSTALLATION OF JOINT SEALANTS

A. Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated unless more stringent requirements apply.

B. Joint-Sealant Installation Standard: Comply with recommendations in ASTM C1193 for use of joint sealants as applicable to materials, applications, and conditions.

C. Install joint-sealant backings to support joint sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of joint-sealant backings.

2. Do not stretch, twist, puncture, or tear joint-sealant backings.

3. Remove absorbent joint-sealant backings that have become wet before sealant application and replace them with dry materials.

D. Install joint sealants immediately following backing installation, using proven techniques that comply with the following:

1. Place joint sealants so they fully contact joint substrates.

2. Completely fill recesses in each joint configuration.

3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

E. Tooling of Nonsag Joint Sealants: Immediately after joint-sealant application and before skinning or curing begins, tool sealants according to the following requirements to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint:

1. Remove excess joint sealant from surfaces adjacent to joints.

2. Use tooling agents that are approved in writing by joint-sealant manufacturer and that do not discolor sealants or adjacent surfaces.

F. Provide joint configuration to comply with joint-sealant manufacturer's written instructions unless otherwise indicated.

3.4 CLEANING AND PROTECTION

A. Clean off excess joint sealant as the Work progresses, by methods and with cleaning materials approved in writing by joint-sealant manufacturers.

B. Protect joint sealants, during and after curing period, from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately and replace with joint sealant so installations in repaired areas are indistinguishable from the original work.

END OF SECTION 32 13 73

SECTION 32 17 13 - PARKING BUMPERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

C. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

D. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

E. Manual on Uniform Traffic Control Devices for Streets and Highways, 2023 Edition and as amended.

1.2 SUMMARY

A. Section Includes:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Precast concrete wheel stops.
2. Resilient wheel stops.
3. Resilient-shell, concrete-filled wheel stops

B. Samples for Initial Selection: For each type of exposed finish requiring color selection.

Samples for Verification: For wheel stops, 6 inches (152.4 mm) long, showing color and cross section; with mounting hardware.

PART 2 - PRODUCTS

2.1 PARKING BUMPERS

A. Precast Concrete Wheel Stops: Precast, steel-reinforced (minimum of 2 - #5 bars required), air-entrained concrete; 4000-psi (27.6-MPa) minimum compressive strength; by 6 inches high by 8 inches wide by 72 inches (1829 mm) long. Provide chamfered corners, transverse drainage slots

on underside, and a minimum of two factory-formed or drilled vertical holes through wheel stop for anchoring to substrate.

1. Source Limitations: Obtain wheel stops from single source from single manufacturer.
2. Surface Appearance: Smooth, free of pockets, sand streaks, honeycombs, and other obvious defects. Corners shall be uniform, straight, and sharp.
3. Surface Sealer: Manufacturer's standard salt-resistant, clear sealer, applied at precasting location.
4. Mounting Hardware: Galvanized-steel spike or dowel, ½ inch (12.7 mm) diameter, 14-inch (355.6 mm) minimum length.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation in accordance with manufacturer's written instructions.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install wheel stops in accordance with manufacturer's written instructions unless otherwise indicated.

B. Install wheel stops in bed of adhesive before anchoring to substrate.

C. Securely anchor wheel stops to substrate with hardware in each preformed vertical hole in wheel stop as recommended in writing by manufacturer. Recess head of hardware beneath top of wheel stop.

END OF SECTION 32 17 13

SECTION 32 17 23 - PAVEMENT MARKINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. Manual on Uniform Traffic Control Devices for Streets and Highways, 2023 Edition and as amended.

1.2 SUMMARY

A. Section Includes:

1. Painted markings applied to asphalt paving.
2. Painted markings applied to concrete surfaces.

B. Related Requirements:

1. Section 01 77 00: Closeout Procedures.
2. Section 32 12 16: Asphalt Paving.
3. Section 32 13 13: Concrete Paving.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to marking asphalt paving or concrete surfaces including, but not limited to, the following:
   a. Asphalt-paving or concrete-surface aging period before application of pavement markings.
   b. Review requirements for protecting pavement markings, including restriction of traffic during installation period.

1.4 ACTION SUBMITTALS

A. Product Data: Include technical data and tested physical and performance properties.

1. Pavement-marking paint, acrylic.
2. Pavement-marking paint, latex.
3. Glass beads.

B. Shop Drawings:

1. Indicate pavement markings, colors, lane separations, defined parking spaces, and dimensions to adjacent work.

2. Indicate, with international symbol of accessibility, spaces allocated for people with disabilities.

C. Qualification Data: For firms and persons specified in the “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

D. Material Test Reports: Indicate and interpret test results for compliance of materials with requirements indicated.

E. Material Certificates: Certificates signed by manufacturers certifying that each material complies with requirements.

F. Samples: For each exposed product and for each color and texture specified; on rigid backing, 8 inches (203.2 mm) square.

1.5 QUALITY ASSURANCE

A. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

B. Regulatory Requirements: Comply with materials, workmanship, and other applicable requirements of Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July 2023 and as amended for pavement-marking work.

1. Measurement and payment provisions and safety program submittals included in standard specifications do not apply to this Section.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pavement-marking materials to Project site in original packages with seals unbroken and bearing manufacturer’s labels containing brand name and type of material, date of manufacture, and directions for storage,

B. Store pavement-marking materials in a clean, dry, protected location and within temperature range required by manufacturer. Protect stored materials from direct sunlight.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Proceed with pavement marking only on clean, dry surfaces and at a minimum ambient or surface temperature of 40 deg F (4.4 deg C) for alkyd materials or 55 deg F (12.8 deg C) for water-based materials, and not exceeding 95 deg F (35 deg C).

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain pavement-marking paints from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design".

2.3 PAVEMENT MARKING PAINT

A. Pavement Marking Paint, Acrylic: Acrylic, waterborne emulsion, lead and chromate free, ready mixed, complying with FS TT-P-1952F, Type II, with drying time of less than 45 minutes.
   1. Color: White, Yellow, and Blue.

B. Pavement Marking Paint, Latex: MPI #97, latex traffic-marking paint.
   1. Color: White, Yellow, and Blue.

C. Glass Beads: AASHTO M 247, Type 1 or FS TT-B-1325D, Type 1.
   1. Roundness: Minimum 75 percent true spheres by weight.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement-marking substrate is dry and in suitable condition to begin pavement marking in accordance with manufacturer's written instructions.

B. Proceed with pavement marking only after unsatisfactory conditions have been corrected.

3.2 PAVEMENT MARKING

A. Pavement surfaces shall be dried free of oil, dirt, grease, and other contaminants prior to application of pavement markings surfaces not in conformance shall be cleaned by the Contractor to a width of 4 to 6 inches wider than the markings to be applied.

B. Do not apply pavement-marking paint until layout, colors, and placement have been verified with Architect.

C. Allow asphalt paving or concrete surfaces to age for a minimum of 30 days before starting pavement marking.

D. Sweep and clean surface to eliminate loose material and dust.

E. Apply paint with mechanical equipment to produce pavement markings, of dimensions indicated, with uniform, straight edges. Apply at manufacturer's recommended rates to provide a minimum wet film thickness of 15 mils (0.38 mm).
   1. Apply graphic symbols and lettering with paint-resistant, die-cut stencils, firmly secured to asphalt paving or concrete surface. Mask an extended area beyond edges of each stencil to prevent paint application beyond stencil. Apply paint so that it cannot run beneath stencil.
   2. Broadcast glass beads uniformly into wet markings at a rate of 6 lb/gal. (0.72 kg/L).

F. Existing pavement markings that conflict with new or altered traffic pattern shall be completely removed by the Contractor. The method used by the Contractor for removal shall not damage the pavement surface and shall be approved by the Engineer. Any pavement damaged shall be repaired or replaced as determined by the Engineer at no additional cost to the Owner.

3.3 PROTECTING AND CLEANING

A. Protect pavement markings from damage and wear during remainder of construction period.

B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 32 17 23

SECTION 32 17 26 - TACTILE WARNING SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. ADA Standards for Accessible Design, dated 2010, and as amended.

C. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

D. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

E. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Section Includes:

1. Cast-in-place detectable warning tiles.

2. Surface-applied detectable warning tiles.

3. Detectable warning mats.

4. Cast-in-place detectable warning metal tiles.

5. Surface-applied detectable warning metal tiles.

6. Detectable warning unit pavers.

B. Related Requirements:

1. Section 32 13 13 "Concrete Paving" for concrete walkways serving as substrates for tactile warning surfacing.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples for Initial Selection: For each type of exposed finish requiring color selection.

C. Samples for Verification: For each type of tactile warning surface, in manufacturer's standard sizes unless otherwise indicated, showing edge condition, truncated-dome pattern, texture, color, and cross section; with fasteners and anchors.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For tactile warning surfacing, to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.7 PROJECT CONDITIONS

A. Cold-Weather Protection: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen subgrade or setting beds. Remove and replace unit paver work damaged by frost or freezing.

B. Weather Limitations for Adhesive Application:

1. Apply adhesive only when ambient temperature is above 50 deg F (10 deg C) and when temperature has not been below 35 deg F (1.7 deg C) for 12 hours immediately before application. Do not apply when substrate is wet or contains excess moisture.

C. Weather Limitations for Mortar and Grout:

1. Cold-Weather Requirements: Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

2. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602. Provide artificial shade and windbreaks, and use cooled materials as required. Do not apply mortar to substrates with temperatures of 100 deg F (37.8 deg C) and higher.

a. When ambient temperature exceeds 100 deg F (37.8 deg C), or when wind velocity exceeds 8 mph (12.9 km/h) and ambient temperature exceeds 90 deg F (32.2 deg C), set unit pavers within 1 minute of spreading setting-bed mortar.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of tactile warning surfaces that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Deterioration of finishes beyond normal weathering and wear.

b. Separation or delamination of materials and components.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 TACTILE WARNING SURFACING, GENERAL

A. Accessibility Requirements: Comply with applicable provisions in the U.S. Architectural & Transportation Barriers Compliance Board's ADA-ABA Accessibility Guidelines for Buildings and Facilities and ICC A117.1 for tactile warning surfaces.

1. For tactile warning surfaces composed of multiple units, provide units that when installed provide consistent side-to-side and end-to-end dome spacing that complies with requirements.

B. Source Limitations: Obtain each type of tactile warning surfacing, joint material, setting material, anchor, and fastener from single source with resources to provide materials and products of consistent quality in appearance and physical properties.

2.2 DETECTABLE WARNING TILES

A. Cast-in-Place Detectable Warning Tiles: Accessible truncated-dome detectable warning tiles with replaceable surface configured for setting flush in new concrete walkway surfaces, with slip-resistant surface treatment on domes and field of tile.

1. Material: Cast-fiber-reinforced polymer concrete tile.
2. Color: Safety yellow or Red brick.
3. Shapes and Sizes:
    a. Rectangular panel, Length : Full width of flush curb / ADA sidewalk compliant ramp by 2 feet minimum depth from face of flush curb / edge of traveled way.
4. Dome Spacing and Configuration: 2.35-inch (59.7-mm) spacing, in square pattern.
5. Mounting:
    a. Replaceable detectable warning tile wet-set into freshly poured concrete and surface-fastened to permanently embedded anchors.

2.3 DETECTABLE WARNING UNIT PAVERS

A. Detectable Warning Concrete Unit Pavers: Solid paving units, made from normal-weight concrete with a compressive strength of not less than 5000 psi (34.5 MPa), water absorption of not more than 5 percent according to ASTM C 140, and no breakage and not more than 1 percent mass loss when tested for freeze-thaw resistance according to ASTM C 67, with accessible detectable warning truncated domes on exposed surface of units.

1. Shapes and Sizes:
    a. Thickness: 2-1/2 inches (63.5 mm) at field of tile.
    b. Face Size: Nominal 12 by 12 inches (304.8 by 304.8 mm).
2. Dome Spacing and Configuration: 2.35-inch (59.7-mm) spacing, in square pattern.
3. Color: As selected by Architect from manufacturer's full range.

B. Setting Bed: Comply with requirements in Section 321400 "Unit Paving."

C. Mortar Setting Bed:

1. Portland Cement: ASTM C 150/C 150M, Type I or Type II.
2. Sand: ASTM C 33/C 33M.
3. Latex Additive: Manufacturer's standard water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed Portland cement and aggregate mortar bed, and not containing a retarder.
4. Thinset Mortar: Latex-modified Portland cement mortar complying with ANSI A118.4.
5. Water: Potable.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of tactile warning surfaces, noncorrosive and compatible with each material joined, and complying with the following:

1. Furnish Type 304 stainless-steel fasteners for exterior use.
2. Fastener Heads: For nonstructural connections, use flathead or oval countersunk screws and bolts with tamper-resistant heads, colored to match tile.

B. Adhesive: As recommended by manufacturer for adhering tactile warning surfacing unit to pavement.

C. Sealant: As recommended by manufacturer for sealing perimeter of tactile warning surfacing unit.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that pavement is in suitable condition to begin installation according to manufacturer's written instructions. Verify that installation of tactile warning surfacing will comply with accessibility requirements upon completion.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF TACTILE WARNING SURFACING

A. General: Prepare substrate and install tactile warning surfacing according to manufacturer's written instructions unless otherwise indicated.

B. Place tactile warning surfacing units in dimensions and orientation indicated. Comply with location requirements of AASHTO MP 12.

3.3 INSTALLATION OF DETECTABLE WARNING TILES

A. Removable Cast-in-Place Detectable Warning Tiles:

1. Concrete Paving Installation: Comply with installation requirements in Section 321313 "Concrete Paving." Mix, place, and finish concrete to conditions complying with detectable

warning tile manufacturer's written requirements for satisfactory embedment of removable tile.

2. Set each detectable warning tile accurately and firmly in place with embedding anchors and fasteners attached, and firmly seat tile back in wet concrete by tamping or vibrating. If necessary, temporarily apply weight to tiles to ensure full contact with concrete.

3. Set surface of tile flush with surrounding concrete and adjacent tiles, with variations between tiles and between concrete and tiles not exceeding plus or minus 1/8 inch (3.2 mm) from flush.

4. Protect exposed surfaces of installed tiles from contact with wet concrete. Complete finishing of concrete paving surrounding tiles. Remove concrete from tile surfaces.

5. Clean tiles using methods recommended in writing by manufacturer.

3.4 INSTALLATION OF DETECTABLE WARNING UNIT PAVERS

A. Unit Paver Installation, General:

1. Setting-Bed and Unit Paver Installation: Comply with installation requirements in Section 321400 "Unit Paving."

2. Mix unit pavers from several pallets or cubes, as they are placed, to produce uniform blend of colors and textures.

3. Cut unit pavers with motor-driven masonry saw equipment to provide pattern indicated and to fit adjoining work neatly. Use full units without cutting where possible.

4. Tolerances: Do not exceed 1/4 inch in 10 feet (6.35 mm in 3 m) from level, or indicated slope, for finished surface of paving.

B. Mortar Setting-Bed Applications:

1. Saturate concrete subbase with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.

2. Apply mortar-bed bond coat over surface of concrete subbase about 15 minutes before placing mortar bed. Limit area of bond coat to avoid its drying out before placing setting bed. Do not exceed 1/16 inch (1.6 mm) thickness for bond coat.

3. Apply mortar bed over bond coat; spread and screed mortar bed to uniform thickness at subgrade elevations required for accurate setting of pavers to finished grades indicated.

4. Mix and place only that amount of mortar bed that can be covered with pavers before initial set. Before placing pavers, cut back, bevel edge, and remove and discard setting-bed material that has reached initial set.

5. Place pavers before initial set of cement occurs. Immediately before placing pavers on mortar bed, apply uniform 1/16 inch (1.6 mm) thick bond coat to mortar bed or to back of each paver with a flat trowel.

6. Tamp or beat pavers with a wooden block or rubber mallet to obtain full contact with setting bed and to bring finished surfaces within indicated tolerances. Set each paver in a single operation before initial set of mortar; do not return to areas already set or disturb pavers for purposes of realigning finished surfaces or adjusting joints.

7. Spaced Joint Widths: Provide 3/8 inch (9.5 mm) nominal joint width with variations not exceeding plus or minus 1/16 inch (1.6 mm).

8. Grouted Joints: Grout paver joints complying with ANSI A108.10. Grout joints as soon as possible after initial set of setting bed.

   a. Force grout into joints, taking care not to smear grout on adjoining surfaces.

   b. Tool exposed joints slightly concave when thumbprint hard.

   c. Cure grout by maintaining in a damp condition for seven days unless otherwise recommended by grout or liquid-latex manufacturer.

9. Remove excess grout from exposed paver surfaces; wash and scrub clean.

10. Protect installation from traffic until grout has set.

3.5 QUALITY ASSURANCE

A. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

3.6 WARRANTY

A. General Warranty: The special warranty specified in this Article shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by the Contractor under requirements of the Contract Documents.

3.7 CLEANING AND PROTECTION

A. Remove and replace tactile warning surfacing that is broken or damaged or does not comply with requirements in this Section. Remove in complete sections from joint to joint unless otherwise approved by Architect. Replace using tactile warning surfacing installation methods acceptable to Architect.

B. Protect tactile warning surfacing from damage and maintain free of stains, discoloration, dirt, and other foreign material.

END OF SECTION 32 17 26

SECTION 32 31 19 - DECORATIVE METAL FENCES AND GATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Perimeter Security Fence (F1, G1, G2)

B. Related Requirements:

   1. Section 033000 "Cast-in-Place Concrete"
   2. Category 500 "Paving" (Baltimore County Standard Specifications and Details for Construction).

1.3 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each fence material and for each color specified.

   1. Provide Samples 12 inches in length for linear materials.

   2. Shop drawings for all fence and gates. Drawings should be signed and sealed by contractor’s structural engineer.

1.5 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Include 10-foot length of fence complying with requirements.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage on a pallet or in a durable bin and identified with labels describing contents.
1. Fence replacement privacy slats: No less than 25% attic stock.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Lightning-Protection System: Maximum grounding-resistance value of 25 ohms under normal dry conditions.

2.2 DECORATIVE STEEL FENCES WITH SWING GATES

A. PERIMETER SECURITY FENCE (F1, G1, G2)

Manufacturer: Long Fence

Type: Barbed Wire Security Fence w/ vinyl coating

Color: Black

Anti-scale, 120” height, posts at 10’-0 O.C. spacing max.

2-3/8” Dia. Intermediate posts; 2-7/8” Dia. Terminal posts (PC-20) (or per manufacturer’s standards).

Standard 9-gauge chain link; 40 weight posts (or per manufacturer's standards).

45° arms attached to fence for barbed wire, angled out.

Vehicular and pedestrian swing gates to match fence.

B. PRODUCTS

Manufacturer: FenceScreen https://www.fencescreen.com

Type: Fenpro Blade Slat, Bottom Locking.

Model: 4000 Series.

Color: Obsidian Black.

Size: 8 ft.

Location:

2.3 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for strength and compatibility in fabricated items.

B. Concrete: Normal-weight, air-entrained, ready-mix concrete complying with requirements in Section 033000 "Cast-in-Place Concrete" with a minimum 28-day compressive strength of 3000 psi, 3-inch slump, and 1-inch maximum aggregate size or dry, packaged, normal-weight concrete mix complying with ASTM C 387/C 387M mixed with potable water according to manufacturer's written instructions.

C. Non-shrink Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M and specifically recommended by manufacturer for exterior applications.

2.4 GROUNDING MATERIALS

A. Grounding Conductors: Bare, solid wire for No. 6 AWG and smaller; stranded wire for No. 4 AWG and larger.

1. Material above Finished Grade: Copper.
2. Material on or below Finished Grade: Copper.
3. Bonding Jumpers: Braided copper tape, 1 inch wide, woven of No. 30 AWG bare copper wire, terminated with copper ferrules.

B. Grounding Connectors and Grounding Rods: Comply with UL 467.

1. Connectors for Below-Grade Use: Exothermic-welded type.
2. Grounding Rods: Copper-clad steel.

a. Size: 5/8 by 96 inches.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for site clearing, earthwork, pavement work, construction layout, and other conditions affecting performance of the Work.

B. Do not begin installation before final grading is completed unless otherwise permitted by Architect.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Stake locations of fence lines, gates, and terminal posts. Do not exceed intervals of 500 feet or line of sight between stakes. Indicate locations of utilities, lawn sprinkler system, underground structures, benchmarks, and property monuments.

1. Construction layout and field engineering are specified in Section 017300 "Execution."

3.3 DECORATIVE FENCE INSTALLATION

A. Install fences according to manufacturer's written instructions.

B. Install fences by setting posts as indicated and fastening rails and infill panels to posts. Peen threads of bolts after assembly to prevent removal.

C. Post Excavation: Drill or hand-excavate holes for posts in firm, undisturbed soil. Excavate holes to a diameter of not less than 4 times post size and a depth of not less than 24 inches plus 3 inches for each foot or fraction of a foot that fence height exceeds 4 feet.

D. Post Setting: Set posts in concrete at indicated spacing into firm, undisturbed soil.

1. Verify that posts are set plumb, aligned, and at correct height and spacing, and hold in position during setting with concrete or mechanical devices.
2. Concrete Fill: Place concrete around posts and sleeves and vibrate or tamp for consolidation. Protect aboveground portion of posts from concrete splatter.

a. Exposed Concrete: Extend 1 inch above grade. Finish and slope top surface to drain water away from post.
b. Concealed Concrete: Top 2 inch below grade to allow covering with surface material. Slope top surface of concrete to drain water away from post.

3. Posts Set in Concrete: Extend post to within 6 inches of specified excavation depth, but not closer than 3 inches to bottom of concrete.
4. Posts Set into Concrete in Sleeves: Use galvanized-steel pipe sleeves with inside diameter at least 3/4 inch larger than outside diagonal dimension of post, preset and anchored into concrete for installing posts.

a. Extend posts at least 5 inches into sleeve.
b. After posts have been inserted into sleeves, fill annular space between post and sleeve with non-shrink grout, mixed and placed to comply with grout manufacturer's written instructions; shape and smooth to shed water. Finish and slope top surface of grout to drain water away from post.

5. Posts Set into Voids in Concrete: Form or core drill holes not less than 3/4 inch larger than outside diagonal dimension of post.

a. Extend posts at least 5 inches into concrete.
b. Clean holes of loose material, insert posts, and fill annular space between post and concrete with non-shrink grout, mixed and placed to comply with grout manufacturer's written instructions. Finish and slope top surface of grout to drain water away from post.

6. Space posts uniformly at 5 feet o.c.

3.4 GATE INSTALLATION

A. Install gates according to manufacturer's written instructions, level, plumb, and secure for full opening without interference. Attach hardware using tamper-resistant or concealed means. Install ground-set items in concrete for anchorage. Adjust hardware for smooth operation and lubricate where necessary.

3.5 GROUNDING AND BONDING

A. Fence Grounding: Install at maximum intervals of 1500 feet except as follows:

1. Fences within 100 Feet of Buildings, Structures, Walkways, and Roadways: Ground at maximum intervals of 750 feet.

B. Protection at Crossings of Overhead Electrical Power Lines: Ground fence at location of crossing and at a maximum distance of 150 feet on each side of crossing.

C. Fences Enclosing Electrical Power Distribution Equipment: Ground as required by IEEE C2 unless otherwise indicated.

D. Grounding Method: At each grounding location, drive a grounding rod vertically until the top is 6 inches below finished grade. Connect rod to fence with No. 6 AWG conductor. Connect conductor to each fence component at grounding location.

E. Connections: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact are galvanically compatible.

1. Use electroplated or hot-tin-coated materials to ensure high conductivity and to make contact points closer in order of galvanic series.
2. Make connections with clean, bare metal at points of contact.
3. Make aluminum-to-steel connections with stainless-steel separators and mechanical clamps.
4. Make aluminum-to-galvanized-steel connections with tin-plated copper jumpers and mechanical clamps.
5. Coat and seal connections having dissimilar metals with inert material to prevent future penetration of moisture to contact surfaces.

F. Bonding to Lightning-Protection System: If fence terminates at lightning-protected building or structure, ground the fence and bond the fence grounding conductor to lightning-protection down conductor or lightning-protection grounding conductor, complying with NFPA 780.

3.6 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Grounding-Resistance Tests: Subject completed grounding system to a megger test at each grounding location. Measure grounding resistance not less than two full days after last trace of precipitation, without soil having been moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of

reducing natural grounding resistance. Perform tests by two-point method according to IEEE 81.

2. Excessive Grounding Resistance: If resistance to grounding exceeds specified value, notify Architect promptly. Include recommendations for reducing grounding resistance and a proposal to accomplish recommended work.
3. Report: Prepare test reports of grounding resistance at each test location certified by a testing agency. Include observations of weather and other phenomena that may affect test results.

3.7 ADJUSTING

A. Gates: Adjust gates to operate smoothly, easily, and quietly, free of binding, warp, excessive deflection, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Confirm that latches and locks engage accurately and securely without forcing or binding.

B. Lubricate hardware and other moving parts.

END OF SECTION 32 31 19

SECTION 32 31 00 - VEHICULAR GATE OPERATORS

PART 1 GENERAL

1.1 THE TRACKLESS SPEEDGATE IS A POST DRIVEN ELECTRICALLY OPERATED FAST ACTING BI-FOLD GATE.

1.2 ALL STRUCTURAL COLUMNS, DRIVE UNIT, CONTROLLER, GATE PANELS BY WALLACE PERIMETER SECURITY.

1.3 RELATED SECTIONS

1. Section 01 33 13 - Submittal Procedures.
2. Section 01 74 20 - Construction Waste Management and Disposal.
3. Section 01 78 00 - Closeout Submittals.
4. Section 03 30 00 - Cast-in-Place Concrete: Structural portal foundations.
5. Division 26 - Requirements for electrical connections.

1.4 SUBMITTALS

A. Shop Drawings:

1. Submit final assembly drawings in accordance with Section 01 33 13 – Submittal Procedures.
2. Indicate electric power requirements, installation details, wiring diagrams.

B. Installation Instructions:

1. Submit two copies of manufacturer's written installation instructions.
2. Submit reference list of five (5) installations of the specified type within the last 2 years.

C. Test Reports:

1. Drive unit shall bear a label indicating that the gate controller/operator mechanism has been tested certified to UL 325 and CSA C22.2 No. 247 standards for all electrical components.

1.5 CLOSEOUT SUBMITTALS

A. Provide operation and maintenance data for gate for incorporation into manual specified in Section 01 78 00 – Closeout Submittals.

B. Conduct comprehensive demonstration for maintenance staff on operation and care of gate.

1.6 QUALITY ASSURANCE

A. Manufacturer: A company specializing in the manufacture of automated gate systems.

B. Installer: A minimum of three years' experience installing similar equipment and approved by manufacturer.

PART 2 PRODUCTS

2.1 HIGH SPEED ELECTRONIC SECURITY GATE

1. Manufacturers:

a. Wallace Perimeter Security Model PDXT Series SpeedGate

Contact Wallace Perimeter Security:

115 Lowson Crescent, Winnipeg, Manitoba Canada, R3P 1A6

T. 866.300.1110

www.wallaceperimetersecurity.com

2.2 MATERIALS

1. Steel sheet: hot dipped galvanized to ASTM A653/A653M, A36 pre galvanized steel.

2. Steel sections: to ASTM (Canadian Equivalent - CAN/CSA-G40.21) Grade 350W.

3. Welding materials: to ASWD1.1 (Canadian Equivalent - CSA W59).

4. Electrical components: Complete gate system to be UL325 listed and/or CSA C22.2 No.247 and complying with local requirements.

5. Power Supply: 208/240 V – 20 Amp single phase 60 hertz power supply.

2.3 COMPONENTS

1. Gate Columns:

1. Formed steel columns, anchored to concrete foundation.

2. Columns to be 12" square with a wall thickness of .250"

2. Model PDXT:

1. Dimensions: 8' Ht. x Min. 23' clear opening.

2. Panels to be capable of fully opening within 7 seconds.

3. Panels: Standard wire infill.

4. Manufacturer's standard corrosion resistant hinges. Hinges are to be serviceable heavy duty corrosion resistant base material with a minimum 1" stainless steel shaft.

5. Fully compliant with ASTM F2200 – 05, Class I through Class IV.

3. Safety/Obstruction Devices:

1. Provide reduced speed sensor – absolute encoder mounted directly to drive motor to act as primary entrapment detection device.

2. Photoelectric transmitter and receiver: Equip each column with 1 built-in photocell(s) at 20” above the base plate. To be mounted within the columns.

3. Provide 2 channel obstruction loop relay card for integration of dual obstruction loops.

4. Provide sensing edges as per UL update.

3. Drive Unit:

1. Provide variable frequency drive with programmable logic controller for controlling electro-mechanical drive system. Drive system to incorporate encoders with reduced speed sensing software as primary entrapment detection device.

2. All drive electrical components to be enclosed in weather-resistant housing.

3. Dual .75HP 3 Phase gear motors with integrated brake and 360:1 gear reduction box with synthetic lubricant.

4. Emergency override: Provide secured access panel for manual opening and closing in case of power failure/malfunction.

2.4 FINISHES

1. Powder coated to 80 micron thickness – submit full range of standard colors for final selection.

2.5 PRODUCT OPTIONS

1. Anti climb top guard.

2. Fence Mounting Devices: Provide mounting brackets for mounting adjoining fence material to columns.

3. UPS Backup: Provide Uninterruptible Power Supply to variable speed gate controller for emergency operation in event of power outages – client to confirm during shop drawing stage.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Provision of concrete foundations as determined by local engineer according to drawings provided.

B. Install high-speed security gate to manufacturer’s written instructions, by contractor certified by Wallace Perimeter Security.

C. Submit certificate of installation to manufacturer upon completion of installation for warranty validation.

3.2 CLEANING AND MAINTENANCE

A. Perform cleaning and maintenance procedures in strict accordance with manufacturer's written instructions.

B. Maintain logbook of repairs and maintenance.

END OF SECTION 32 31 33

SECTION 32 32 23 - SEGMENTAL BLOCK RETAINING WALL

PART 1 – GENERAL

1.01 DESCRIPTION

A. Work shall consist of designing, permitting, furnishing and construction of a segmental block retaining wall system in accordance with these specifications and in reasonably close conformity with the lines, grades, design and dimensions shown on the plans. Alternate wall systems will be considered.

B. Work includes preparing foundation soil, furnishing and installing leveling pad, unit facing system, unit drainage fill and reinforced backfill to the lines and grades shown on the construction drawings.

C. Work includes furnishing and installing geogrid soil reinforcement of the type, size, location and lengths designated on the construction drawings.

1.02 RELATED SECTIONS

19. ASTM D6638 Standard Test Method for Determining Connection Strength Between Geosynthetic Reinforcement and Segmental Concrete Units
20. ASTM D6706 Standard Test Method for Measuring Geosynthetic Pullout Resistance in Soil
21. ASTM D6916 Standard Test Method for Determining the Shear Strength Between Segmental Concrete Units

C. National Concrete Masonry Association (NCMA)

1. NCMA SRWU-1 Test Method for Determining Connection Strength of SRW
2. NCMA SRWU-2 Test Method for Determining Shear Strength of SRW

1.04 DEFINITIONS

A. Segmental Block Unit – a dry-stacked concrete retaining wall unit machine made from Portland cement, water, aggregates, manufactured by a licensed manufacturer.

B. Structural Geogrid – a polymeric material formed by a regular network of connected tensile elements with apertures of sufficient size to allow interlocking with surrounding soil, rock or earth and function primarily as reinforcement.

C. Unit Drainage Fill – drainage aggregate that is placed within and immediately behind the segmental concrete units.

D. Reinforced Backfill – compacted soil that is placed within the reinforced soil volume as outlined on the plans.

E. Retained Soil – the soil mass behind the reinforced backfill.

F. Foundation Soil – the soil mass below the leveling pad and reinforced backfill.

G. Leveling Pad – crushed stone, sand and gravel or unreinforced concrete material placed to provide a level surface for placement of the segmental concrete units.

H. Geosynthetic Reinforcement – polymeric material designed specifically for soil reinforcement.

1.05 PERFORMANCE REQUIREMENTS

A. The Contractor will be responsible for the complete design and permitting of all segmental block walls called for on the construction plans. Segmental block wall permit must be received prior to bulk earthwork commencing.

B. Contractor shall provide engineered plans and calculations to the Owner, Architect, and Engineer prior to submittal to permitting agency for acceptance of style of segmental block unit, color, texture, etc.

1.06 SUBMITTALS AND CERTIFICATION

A. Contractor shall submit a Manufacturer's certification, prior to the start of work, that the retaining wall system components meet the requirements of this specification and the structure design.

B. Contractor shall submit construction drawings and design calculations for the retaining wall system prepared and stamped by a Professional Engineer registered in the State of Maryland.

1.07 QUALITY ASSURANCE

A. Contractor shall submit a list of five (5) previously constructed projects of similar size and magnitude by the wall installer where the segmental block retaining wall system has been constructed successfully. Contact names and phone numbers shall be listed for each project.

B. Contractor shall provide evidence that the design engineer has a minimum of five years documented experience in the design of reinforced soil structures. The design engineer shall provide proof of current professional liability insurance with an aggregate coverage limit of not less than $2,000,000.

C. Owner shall/may provide quality assurance inspection and testing during earthwork and wall construction operations. Contractor shall provide all quality control testing and inspection not provided by the owner. Owner's quality assurance program does not relieve the contractor of responsibility for quality control and wall performance.

1.08 DELIVERY HANDLING AND STORAGE

A. Contractor shall check all materials upon delivery to assure that the proper type, grade, color, and certification have been received.

B. Contractor shall protect all materials from damage due to jobsite conditions and in accordance with manufacturer's recommendations. Damaged materials shall not be incorporated into the work and cost of replacing damaged materials is the responsibility of the contractor.

C. The Contractor shall store and handle all materials in accordance with manufacturer's recommendations and in a manner to protect all materials from damage due to job site conditions.

D. All geosynthetic material labeling, shipment and storage shall follow ASTM D 4873.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

1. Keystone Retaining Wall Systems LLC, 4444 West 78th Street, Minneapolis, MN 55435, Phone: 800-747-8971, Website: https://www.keystonewalls.com

2. Allan Block Corp., 7424 West 78th Street, Bloomington, MN 55439, Phone: 952-835-5309, Website: https://www.allanblock.com/

3. Techo-Bloc, 6710 Binder Lane, Elkridge, MD 21075, Phone: 877-832-4625, Website: https://www.techo-bloc.com

4. Vers-Lok, 6348 Hwy. 36 Blvd. Suite 1, Oakdale, MN 55128, Phone: 651-770-3166, Website: https://www.versa-lok.com

2.02 CONCRETE RETAINING WALL UNITS

A. Segmental retaining wall units shall conform to the following architectural requirements

1. Face color - concrete gray, unless otherwise specified. The Owner may select from standard manufacturers' colors.
2. Face finish - hard split in angular tri-plane or straight face configuration. Other face finishes will not be allowed without written approval of Owner.
3. Bond configuration - running with bonds nominally located at midpoint in vertically adjacent units.
4. Exposed surfaces of units shall be free of chips, cracks or other imperfections when viewed from a distance of 20 feet (6 m) under diffused lighting.

B. Concrete units shall conform to the requirements of ASTM C1372 - Standard Specifications for Segmental Retaining Wall Units.

C. Concrete units shall conform to the following structural and geometric requirements measured in accordance with ASTM C140 Sampling and Testing Concrete Masonry Units:

1. Compressive strength: ≥ 3000 psi (21 MPa).
2. Absorption: ≤ 8 % for standard weight aggregates.
3. Dimensional tolerances: ± 1/8" (3 mm) from nominal unit dimensions not including rough split face.
4. Unit Size options:
   (a) 8" (203 mm) (H) x 18" (457 mm) (W) x 18" to 21.5" (457 to 546 mm)(D) minimum.
   (b) 5 7/8" (150mm) (H) x 11" (279mm) (D) x 16" (406mm) (L)
   (c) Substitution of similar sizes to (a) or (b), with owner approval.

D. Concrete units shall conform to the following constructability requirements:

1. Vertical setback: 1/8 inch (3 mm) ± per course (near vertical) or 1 1/8 inch (28 mm) + per course, per the design.
2. Alignment and grid attachment mechanism - fiberglass pins, two per unit.
3. Maximum horizontal gap between erected units shall be ≤ 1/2 inch (13 mm).

2.03 SHEAR AND REINFORCEMENT PIN CONNECTORS

A. Shear and reinforcement pin connectors shall be 1/2-inch (12 mm) diameter thermoset isopthalic polyester resin pultruded fiberglass reinforcement rods to provide connection between vertically and horizontally adjacent units and geosynthetic reinforcement, with the following requirements:

1. Flexural Strength in accordance with ASTM D4476: 128,000 psi (882 MPa) minimum.
2. Short Beam Shear in accordance with ASTM D4475: 6,400 psi (44 MPa) minimum.

B. Shear and reinforcement pin connectors shall be capable of holding the geogrid in the proper design position during grid pre-tensioning and backfilling.

2.04 BASE LEVELING PAD MATERIAL

A. Material shall consist of a compacted crushed stone base, sand and gravel or unreinforced concrete, as shown on the construction drawings.

2.05 UNIT DRAINAGE FILL

A. Unit drainage fill shall consist of clean 1 inch (25 mm) minus crushed stone or crushed gravel meeting the following gradation tested in accordance with ASTM D-422:

Sieve Size	Percent Passing
1 inch (25 mm)	100
3/4-inch (19mm)	75 – 100
No. 4 (4.75 mm)	0 – 10
No. 50 (300 um)	0 - 5

B. Drainage fill shall be placed within the cores of, between, and behind the units as indicated on the design drawings. Not less than 1.2 cubic foot (0.033 m^3), of drainage fill shall be used for each square foot (0.093 m^2) of wall face unless otherwise specified.

2.06 REINFORCED BACKFILL

A. Reinforced backfill shall be free of debris and meet the following gradation tested in accordance with ASTM D-422:

Sieve Size	Percent Passing
1 1/2 inch (38 mm)	100
3/4-inch (19 mm)	75 – 100
No. 40 (425 um)	0 – 60
No. 200 (75 um)	0 – 35

Plasticity Index (PI) < 15 and Liquid Limit < 40, per ASTM D4318

B. The maximum aggregate size shall be limited to 3/4 inch (19 mm) unless installation damage tests have been performed to evaluate potential strength reductions to the geogrid design due to increased installation damage during construction.

C. Material can be site-excavated soils where the above requirements can be met. Soils not meeting the above criteria, including highly plastic clays and organic soils, shall not be used in the backfill or reinforced backfill soil mass.

D. Contractor shall submit reinforced fill sample and laboratory test results to the Architect/Engineer for approval, prior to the use of any proposed reinforced backfill material.

2.07 GEOGRID SOIL REINFORCEMENT

A. Geosynthetic reinforcement shall consist of geogrids manufactured for soil reinforcement applications and shall be manufactured from high tenacity polyester yarn or high density polyethylene. Polyester geogrid shall be made from high tenacity polyester filament yarn with a molecular weight exceeded 25,000 g/m and with a carboxyl end group value less than 30. Polyester geogrid shall be coated with an impregnated PVC coating that resists peeling, cracking and stripping.

B. Ta – Long Term Allowable Tensile Design Load. Ta of the geogrid material shall be determined as follows: Ta = Tult/(RFcr * RFd * RFid * FS). Ta shall be evaluated based on a 75 year design life.

1. Tult – Short Term Ultimate Tensile Strength. Tult shall be determined in accordance with ASTM D4595 or ASTM D6637. Tult is based on the minimum average roll values (MARV).

2. RFcr – Reduction Factor for Long Term Tension Creep. RFcr shall be determined from 10,000 hour creep testing performed in accordance with ASTM D5262. RFcr = 1.45 minimum.

3. RFd – Reduction Factor for Durability. RFd shall be determined from polymer specific durability testing covering the range of expected soil environments. RFd = 1.10 minimum.

4. RFid – Reduction Factor for Installation Damage. RFid shall be determined from product specific construction damage testing performed in accordance with ASTM D5818. Test results shall be provided for each product to be used with project specific or more severe soil types. RFid = 1.05 minimum.

5. FS – Overall Design Factor of Safety. FS hall be 1.5 unless noted for the maximum allowable working stress calculation.

C. The maximum design tensile load of the geogrid shall not exceed the laboratory tested ultimate strength of the geogrid/facing unit connection divided by a factor of safety of 1.5. The connection strength testing and computation procedures shall be in accordance with ASTM D6638 Connection Strength between Geosynthetic Reinforcement and Segmental Concrete Units or NCMA SRWU-1.

D. Ci – Coefficient of Soil Interaction. Ci values shall be determined per ASTM D6706 at a maximum 0.75 inch (19 mm) displacement.

E. The geogrid manufacturer shall have a Manufacturing Quality Control program that includes QC testing by an independent laboratory. The QC testing shall include Tensile Strength testing, Melt Flow Index testing for HDPE geogrids and Molecular Weight testing for polyester geogrids.

2.08 DRAINAGE PIPE

A. If required, drainage pipe shall be perforated or slotted PVC pipe manufactured in accordance with ASTM D3034.

2.09 GEOTEXTILE FILTER FABRIC

A. When required, geotextile filter fabric shall be a needle-punched nonwoven fabric that meets the requirements of AASHTO M288.

PART 3 – EXECUTION

3.01 EXCAVATION

A. Contractor shall excavate to the lines and grades shown on the construction drawings. The Contractors on site materials testing agency QA/QC representative shall inspect the excavation and test the foundation soils and approve prior to placement of the leveling pad material or fill soils. Any over-excavation required to remove unsuitable soils shall be oversized from the front of the leveling pad and back of the geogrid reinforcement.

B. Over-excavation and replacement of unsuitable soils and replacement with approved compacted fill will be compensated as agreed upon with the Owner.

3.02 BASE LEVELING PAD

A. Leveling pad material shall be placed to the lines and grades shown on the construction drawings to a minimum thickness of 6 inches (150 mm) and extend laterally a minimum of 6 inches in front and behind the segmental block wall unit.

B. Soil leveling pad materials shall be compacted to a minimum of 95% of Standard Proctor density per ASTM D697 or 92% Modified Proctor density per ASTM D1557.

C. Leveling pad shall be prepared to insure full contact with the base surface of the concrete units.

3.03 UNIT INSTALLATION

A. First course of segmental block units shall be placed on the leveling pad at the appropriate line and grade. Alignment and level shall be checked in all directions and insure that all units are in full contact with the base and properly seated.

B. Place the front of the segmental block units side-by-side. Do not leave gaps between adjacent units. Layout of corners and curves shall be in accordance with manufacturer's recommendations.

C. Install shear/connecting pins per manufacturer's recommendations.

D. Place and compact drainage fill within and behind wall units. Place and compact reinforced backfill soil behind drainage fill.

E. Maximum stacked vertical height of wall units, prior to drainage fill and backfill placement and compaction, shall not exceed two courses.

3.04 STRUCTURAL GEOGRID INSTALLATION

A. Geogrid shall be installed with the highest strength direction perpendicular to the wall alignment.

B. Geogrid reinforcement shall be placed at the strengths, lengths and elevations shown on the construction drawings, or as directed by the engineer.

C. The geogrid shall be laid horizontally on compacted backfill and attached to the wall unit pins and within 1 inch of the face of the units. Place the next course of segmental block units over the geogrid. The geogrid shall be pulled taut and anchored prior to backfill placement on the geogrid.

D. Geogrid reinforcements shall be continuous throughout their embedment lengths and placed side-by-side to provide 100% coverage at each level. Spliced connections between shorter pieces of geogrid or gaps greater than 2 inches between adjacent pieces of geogrid are not permitted.

3.05 REINFORCED BACKFILL PLACEMENT

A. Reinforced backfill shall be placed, spread and compacted in such a manner that minimizes the development of slack in the geogrid and installation damage to the geogrid.

B. Reinforced backfill shall be placed and compacted in lifts not to exceed 6 inches (150 mm) where hand operated compaction equipment is used, or 8 – 10 inches (200 to 250 mm) where heavy compaction equipment is used. Lift thickness shall be decreased to achieve the required density, as needed.

C. Reinforced backfill shall be compacted to a minimum of 95% of Standard Proctor density per ASTM D697 or 92% Modified Proctor density per ASTM D1557. The moisture content of the reinforced backfill material during compaction shall be uniformly distributed throughout each layer and shall be dry of optimum by 0 to 3 percentage points of moisture.

D. Only hand operated compaction equipment shall be allowed within 3 feet (1 M) from the back of the segmental concrete units.

E. Tracked construction equipment shall not be operated directly upon the geogrid reinforcement. A minimum fill thickness of 6 inches (150 mm) is required prior to operation of tracked vehicles over the geogrid. Tracked vehicle turning should be kept to a minimum to prevent tracks from displacing the fill and damaging or displacing the segmental units or geogrid.

F. Rubber tired equipment may pass over geogrid reinforcement at slow speeds, less than 10 MPH. Sudden braking and turning shall be avoided.

G. At the end of each day's operation, the Contractor shall slope the last lift of reinforced backfill away from the wall units to direct runoff away from the wall face. The Contractor shall not allow surface runoff from adjacent areas to enter the wall construction site.

3.06 CAP INSTALLATION

A. Prior to placement of the cap units, the upper surface of the top course of wall units shall be cleaned of soil and any other material.

B. Cap units shall be adequately glued to the underlying wall units with an all-weather exterior construction adhesive.

3.07 AS-BUILT CONSTRUCTION TOLERANCES

A. Vertical alignment: ± 1.5 inches (40 mm) over any 10 foot (3 m) distance.

B. Wall batter: within 2 degrees of design batter. Overall wall batter shall be ≥ 0 degrees.

C. Horizontal alignment: ± 1.5 inches (40 mm) over any 10 foot (3 m) distance.

D. Corners and curves: ± 1 foot (300 mm) to theoretical location.

E. Maximum horizontal gap between erected units shall be ≤ 1/2 inch (13 mm).

3.08 FIELD QUALITY CONTROL

A. Quality Assurance – The owner shall/may engage inspection and testing services, including independent laboratories, to provide quality assurance and testing services during

construction. This does not relieve the Contractor from securing the necessary construction quality control testing.

B. Quality assurance should include foundation soil inspection and testing and verification of the geotechnical design parameters and verification that the contractor's quality control testing is adequate as a minimum. Quality assurance shall also include observation of the construction for general compliance with the design drawings and project specifications. Quality assurance is usually best performed by the site geotechnical engineer.

C. Quality Control – The Contractor shall engage independent inspection and testing services to perform the minimum quality control testing described in the retaining wall design plans and specifications. Only qualified and experienced technicians and engineers shall perform quality control testing and inspection services.

D. Quality control testing shall include soil and backfill testing to verify soil types and strengths, compaction and moisture conditions and verification that the retaining wall is being constructed in accordance with the design plans and specifications.

SECTION 32 33 00 - SITE FURNISHINGS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Bike Rack (BR)
   2. Trash and Recycle Receptacles (LRa, LRb, & RR)
   3. Bench (B)
   4. Bollard (BD)
   5. Flagpole (FPa & FPb)
   6. Detectable Warning Surface (P2)

B. Related Requirements:

   1. Section 033000 "Cast-in-Place Concrete" for installing pipe sleeves cast, formed voids in concrete footings.
   2. Section 312000 "Earth Moving" for excavation for installing concrete footings.
   3. Division 26 Electrical and Division 23 – Plumbing

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For each exposed product and for each color and texture specified.

C. Samples for Initial Selection: For units with factory-applied finishes.

D. Samples for Verification: For each type of exposed finish, not less than 6-inch-long linear components and 4-inch-square sheet components.

E. Product Schedule: For site furnishings. Use same designations indicated on Drawings.

F. Shop Drawings: Submit manufacturer’s shop drawings, including plans and elevations, indicating overall dimensions and materials.

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates: For site furnishings.

1. Wood Preservative Treatment: Include certification by treating plant stating type of preservative solution and pressure process used, net amount of preservative retained, and compliance with applicable standards.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For site furnishings to be included in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer has been regularly engaged in manufacture of site furnishings since last 25 years. Provide a minimum of five similar reference projects with direct contact information.

B. Product Support: Products are supported with complete engineering drawings.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Bench Replacement Slats: No fewer than 10 full-size units for each size indicated.
2. Trash Receptacle Inner Containers: Five full-size units for each size indicated, but no fewer than two units.
3. Anchors: 15 of each size.

PART 2 - PRODUCTS

2.1 BIKE RACK (BR)

A. Manufacturer: Victor Stanley

B. Style: BRQS-101

C. Color: Powdercoat Black

2.2 TRASH AND RECYCLE RECEPTACLES (LRa, LRb, & RR)

LRa

A. Manufacturer: Victor Stanley

B. Type: SDC-36

C. Capacity: 36 gal.

D. Color: Powdercoat Black

E. Lid: Standard Solid Convex Lid w/ Heavy Steel Latch

F. Galvanized Steel Liner (Powdercoat Black)

G. Installation Method: Surface Mounted

H. Contractor to submit order form as part of submittal for landscape architect to select accessories.

LRb

I. Manufacturer: Victor Stanley

J. Type: SDC-36

K. Capacity: 36 gal.

L. Color: Powdercoat Black

M. Lid: Standard Solid Convex Lid w/ Covered Ashtray (Open) w/ Heavy Steel Latch

N. Galvanized Steel Liner (Powdercoat Black)

O. Installation Method: Surface Mounted

P. Contractor to submit order form as part of submittal for landscape architect to select accessories.

RR

Q. Manufacturer: Victor Stanley

R. Type: SDC-36

S. Capacity: 36 gal.

T. Color: Powdercoat Black w/ Recycle Decals

U. Lid: Standard Solid Convex Recycle Lid w/ Heavy Steel Latch

V. Galvanized Steel Liner (Powdercoat Black)

W. Installation Method: Surface Mounted

X. Contractor to submit order form as part of submittal for landscape architect to select accessories.

2.3 BENCH (B)

A. Manufacturer: Victor Stanley

B. Model: RB-28 (6’ Length)

C. Color & Finish: Powdercoat Black

D. Installation Method: Surface Mounted

2.4 BOLLARDS (BD)

BD (Decorative Metal Bollard Cover)

A. Manufacturer: Reliance Foundry www.reliance-foundry.com

B. Style: R-7743 Decorative Bollard w/ 5/16” bollard chain, quick link connectors, and bollard chain eye (see contract drawings for locations).

C. Size: 44” height (11.75” dia., 10.75” Max. Internal Pipe dia.)

D. Color: Powdercoat Black

E. Material: Steel

BD (Crash Rated Bollard)

F. Manufacturer: Reliance Foundry www.reliance-foundry.com

G. Style: R-1009-04 M30 Crash-Rated Bollards

H. Size: 38.5” height (above grade), 72” total height

I. Material: Steel

2.5 FLAGPOLE (FPa & FPb)

FPa

A. Manufacturer: Federal Flags

B. Style: 30’-0” Commercial Flagpole with External Rope Halyard

C. Overall length: 33’

D. Finish: Satin

E. Flag size: 5’ x 8’

F. Finial: HD Gold Anodized Aluminum Ball

G. Truck: In-Line Truck, Single Revolving

H. Cleat: 7.5’ from bottom – finish to match pole

I. Collar: FC-11 Spun Aluminum

FPb

J. Manufacturer: Federal Flags

K. Height: 25’-0” Commercial Flagpole with External Rope Halyard

L. Overall length: 27’

M. Finish: Satin

N. Flag size: 4’ x 6’

O. Finial: HD Gold Anodized Aluminum Ball; Botonée Cross for pole with Maryland flag (https://www.flagpolestore.com/products/8-botonee-cross.html or approved equal)

P. Truck: In-Line Truck, Single Revolving

Q. Cleat: 7’ from bottom – finish to match pole

R. Collar: FC-11 Spun Aluminum

2.6 DETECTABLE WARNING PANELS (P2)

A. Manufacturer: ADA Solutions

B. Model: Cast-In-Place Replaceable

C. Color: Yellow

2.7 MATERIALS

A. Aluminum: Alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated; free of surface blemishes and complying with the following:

1. Rolled or Cold-Finished Bars, Rods, and Wire: ASTM B 211.
2. Extruded Bars, Rods, Wire, Profiles, and Tubes: ASTM B 221.
3. Structural Pipe and Tube: ASTM B 429/B 429M.
4. Sheet and Plate: ASTM B 209.
5. Castings: ASTM B 26/B 26M.

B. Steel and Iron: Free of surface blemishes and complying with the following:

1. Plates, Shapes, and Bars: ASTM A 36/A 36M.
2. Steel Pipe: Standard-weight steel pipe complying with ASTM A 53/A 53M, or electric-resistance-welded pipe complying with ASTM A 135/A 135M.
3. Tubing: Cold-formed steel tubing complying with ASTM A 500/A 500M.
4. Mechanical Tubing: Cold-rolled, electric-resistance-welded carbon or alloy steel tubing complying with ASTM A 513, or steel tubing fabricated from steel complying with

ASTM A 1011/A 1011M and complying with dimensional tolerances in ASTM A 500/A 500M; zinc coated internally and externally.
5. Sheet: Commercial steel sheet complying with ASTM A 1011/A 1011M.
6. Expanded Metal: Carbon-steel sheets, deburred after expansion, and complying with ASTM F 1267.
7. Malleable-Iron Castings: ASTM A 47/A 47M, grade as recommended by fabricator for type of use intended.
8. Gray-Iron Castings: ASTM A 48/A 48M, Class 200.

C. Stainless Steel: Free of surface blemishes and complying with the following:

1. Sheet, Strip, Plate, and Flat Bars: ASTM A 666.
2. Pipe: Schedule 40 steel pipe complying with ASTM A 312/A 312M.
3. Tubing: ASTM A 554.

D. Anchors, Fasteners, Fittings, and Hardware: Stainless steel Manufacturer's standard, corrosion-resistant-coated or non-corrodible materials; commercial quality, tamperproof, vandal and theft resistant, concealed, recessed, and capped or plugged.

1. Angle Anchors: For inconspicuously bolting legs of site furnishings to below-grade substrate; one per leg.
2. Antitheft Hold-Down Brackets: For securing site furnishings to substrate; two per unit extent as indicated on Drawings.

E. Non-shrink, Nonmetallic Grout: Premixed, factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M; recommended in writing by manufacturer, for exterior applications.

F. Erosion-Resistant Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with potable water at Project site to create pourable anchoring, patching, and grouting compound; resistant to erosion from water exposure without needing protection by a sealer or waterproof coating; recommended in writing by manufacturer, for exterior applications.

G. Galvanizing: Where indicated for steel and iron components, provide the following protective zinc coating applied to components after fabrication:

1. Zinc-Coated Tubing: External, zinc with organic overcoat, consisting of a minimum of 0.9 oz./sq. ft. of zinc after welding, a chromate conversion coating, and a clear, polymer film. Internal, same as external or consisting of 81 percent zinc pigmented coating, not less than 0.3 mil thick.
2. Hot-Dip Galvanizing: According to ASTM A 123/A 123M, ASTM A 153/A 153M, or ASTM A 924/A 924M.

2.8 WOOD-PRESERVATIVE-TREATED MATERIALS

A. Preservative Treatment: Pressure-treat wood according to AWPA U1 and the following:

1. Use preservative chemicals acceptable to authorities having jurisdiction and containing no arsenic or chromium. Use chemical formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.

2. Kiln-dry lumber and plywood after treatment to a maximum moisture content, respectively, of 19 and 15 percent. Do not use materials that are warped or do not comply with requirements for untreated materials.

2.9 FABRICATION

A. Metal Components: Form to required shapes and sizes with true, consistent curves, lines, and angles. Separate metals from dissimilar materials to prevent electrolytic action.

B. Welded Connections: Weld connections continuously. Weld solid members with full-length, full-penetration welds and hollow members with full-circumference welds. At exposed connections, finish surfaces smooth and blended so no roughness or unevenness shows after finishing and welded surface matches contours of adjoining surfaces.

C. Pipes and Tubes: Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail and railing components.

D. Preservative-Treated Wood Components: Complete fabrication of treated items before treatment if possible. If cut after treatment, apply field treatment complying with AWPA M4 to cut surfaces.

E. Exposed Surfaces: Polished, sanded, or otherwise finished; all surfaces smooth, free of burrs, barbs, splinters, and sharpness; all edges and ends rolled, rounded, or capped.

F. Factory Assembly: Assemble components in the factory to greatest extent possible to minimize field assembly. Clearly mark units for assembly in the field.

2.10 GENERAL FINISH REQUIREMENTS

A. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.11 ALUMINUM FINISHES

A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.12 STEEL AND GALVANIZED-STEEL FINISHES

A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

B. PVC Finish: Manufacturer's standard, UV-light stabilized, mold-resistant, slip-resistant, matte-textured, dipped or sprayed-on, PVC-plastisol finish, with flame retardant added; complying with

coating manufacturer's written instructions for pretreatment, application, and minimum dry film thickness.

2.13 IRON FINISHES

A. Baked-Enamel, Powder-Coat Finish: Manufacturer's standard, baked, polyester, powder-coat finish complying with finish manufacturer's written instructions for surface preparation, including pretreatment, application, baking, and minimum dry film thickness.

2.14 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run directional finishes with long dimension of each piece.
2. Dull Satin Finish: No. 6

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for correct and level finished grade, mounting surfaces, installation tolerances, and other conditions affecting performance of the Work.

B. Notify architect of conditions that would adversely affect installation or subsequent use.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Comply with manufacturer's written installation instructions unless more stringent requirements are indicated. Complete field assembly of site furnishings where required.

B. Unless otherwise indicated, install site furnishings after landscaping and paving have been completed.

C. Install site furnishings level, plumb, true, and securely anchored and positioned at locations indicated on Drawings.

D. Finish and repair any damages caused to finish or product in accordance with manufacturer’s instructions and as approved by Landscape Architect.

E. Component Damage: Remove and replace damaged components that cannot be successfully repaired as determined by Landscape Architect.

F. Clean products promptly after installation in accordance with manufacturer’s instructions. Do not use harsh cleaning materials or methods that could damage finish.

G. Post Setting: Set cast-in support posts in concrete footing with smooth top, shaped to shed water. Protect portion of posts above footing from concrete splatter. Verify that posts are set plumb or at correct angle and are aligned and at correct height and spacing. Hold posts in position during placement and finishing operations until concrete is sufficiently cured.

H. Posts Set into Voids in Concrete: Form or core-drill holes for installing posts in concrete to depth recommended in writing by manufacturer of site furnishings and 3/4 inch larger than OD of post. Clean holes of loose material, insert posts, and fill annular space between post and concrete with non-shrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

I. Pipe Sleeves: Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with non-shrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions, with top smoothed and shaped to shed water.

END OF SECTION 32 33 00

SECTION 32 91 13 - SOIL PREPARATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

D. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration and the Owner for approval. Those judged to be equal to that specified will receive written approval unless otherwise noted within these specifications.

E. 2011 Maryland Standards and Specifications for Soil Erosion and Sediment Control, and as amended.

1.2 SUMMARY

A. Section includes planting soils specified by composition of the mixes.

B. Related Requirements:

1. Section 32 33 00 "Site Furnishings" for placing planting soil in exterior unit planters.
2. Section 31 10 00 "Site Clearing" for topsoil stripping and stockpiling.
3. Section 32 92 00 "Turf and Grasses" for placing planting soil for turf and grasses.
4. Section 32 93 00 "Plants" for placing planting soil for plantings.

1.3 ALLOWANCES

A. Preconstruction and field quality-control testing are part of testing and inspecting allowance.

1.4 UNIT PRICES

A. Work of this Section is affected by unit prices specified in Section 012200 "Unit Prices."

1.5 DEFINITIONS

A. AAPFCO: Association of American Plant Food Control Officials.

B. Backfill: The earth used to replace or the act of replacing earth in an excavation. This can be amended or unamended soil as indicated.

C. CEC: Cation exchange capacity.

D. Compost: The product resulting from the controlled biological decomposition of organic material that has been sanitized through the generation of heat and stabilized to the point that it is beneficial to plant growth.

E. Duff Layer: A surface layer of soil, typical of forested areas, that is composed of mostly decayed leaves, twigs, and detritus.

F. Imported Soil: Soil that is transported to Project site for use.

G. Layered Soil Assembly: A designed series of planting soils, layered on each other, that together produce an environment for plant growth.

H. Manufactured Soil: Soil produced by blending soils, sand, stabilized organic soil amendments, and other materials to produce planting soil.

I. NAPT: North American Proficiency Testing Program. An SSSA program to assist soil-, plant-, and water-testing laboratories through interlaboratory sample exchanges and statistical evaluation of analytical data.

J. Organic Matter: The total of organic materials in soil exclusive of undecayed plant and animal tissues, their partial decomposition products, and the soil biomass; also called "humus" or "soil organic matter."

K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified as specified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

L. RCRA Metals: Hazardous metals identified by the EPA under the Resource Conservation and Recovery Act.

M. SSSA: Soil Science Society of America.

N. Subgrade: Surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

O. Subsoil: Soil beneath the level of subgrade; soil beneath the topsoil layers of a naturally occurring soil profile, typified by less than 1 percent organic matter and few soil organisms.

P. Surface Soil: Soil that is present at the top layer of the existing soil profile. In undisturbed areas, surface soil is typically called "topsoil"; but in disturbed areas such as urban environments, the surface soil can be subsoil.

Q. USCC: U.S. Composting Council.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.7 LEED

1.8 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include recommendations for application and use.
2. Include test data substantiating that products comply with requirements.
3. Include sieve analyses for aggregate materials.
4. Material Certificates: For each type of imported soil and soil amendment and fertilizer before delivery to the site, according to the following:
    a. Manufacturer's qualified testing agency's certified analysis of standard products.
    b. Analysis of fertilizers, by a qualified testing agency, made according to AAPFCO methods for testing and labeling and according to AAPFCO's SUIP #25.
    c. Analysis of nonstandard materials, by a qualified testing agency, made according to SSSA methods, where applicable.

B. Samples: For each bulk-supplied material, 1 quart (0.95 L) volume of each in sealed containers labeled with content, source, and date obtained. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of composition, color, and texture.

C. Material test reports from qualified independent testing agency, recommended by the University of Maryland indicating and interpreting test results relative to compliance of the following materials with requirements indicated.

1. Analysis of existing surface soil. At least 3 random composite tests in Owner defined areas.
2. Analysis of imported topsoil. At least 3 random composite tests (Owner defined) per location.
3. Topsoil analysis converted to Maryland FIV figures and used to prepare a report of suitability of topsoil for plant growth and required amendments by a Turfgrass Agronomist or Certified Arborist familiar with Maryland’s climatic conditions and Maryland's unique growing conditions.
4. Analysis of subsoil. At least 3 random composite tests in Owner Defined Areas.
5. Subsoil analysis converted to Maryland FIV figures and used to prepare a report of suitability of topsoil for plant growth and required amendments by a Turfgrass Agronomist or Certified Arborist familiar with Maryland’s climatic conditions and Maryland's unique growing conditions.
6. All fertility and amendment recommendations must comply with Maryland's Nutrient Management and Maryland's Fertilizer Applicator Laws and Regulations.

D. Delivery ticket noting quantity and location/source of imported topsoil per truck load.

1.9 INFORMATIONAL SUBMITTALS

A. Qualification Data: For each testing agency.

B. Preconstruction Test Reports: For preconstruction soil analyses specified in "Preconstruction Testing" Article.

C. Field quality-control reports.

1.10 QUALITY ASSURANCE

A. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing, and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in types of tests to be performed.

1. Soil Testing Laboratory Qualifications: The soil testing shall be completed by an independent laboratory, recognized by the Maryland Department of Agriculture with experience and capability to conduct the testing indicated including but not limited to soil texture, pH, macro and micro nutrient levels, soluble salts, Cation Exchange Capacity and organic matter in a timely manner to prevent delays.

Camille, GA 31730-0382

1.11 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage a qualified testing agency to perform preconstruction soil analyses on existing, on-site soil and / or imported soil.

1. Notify Architect seven days in advance of the dates and times when laboratory samples will be taken.

B. Preconstruction Soil Analyses: For each unamended soil type, perform testing on soil samples and furnish soil analysis and a written report containing soil-amendment and fertilizer recommendations by a qualified testing agency performing the testing according to "Soil-Sampling Requirements" and "Testing Requirements" articles.

1. Topsoil Analysis for Existing and Imported Material: Furnish soil analysis from a qualified soil testing laboratory stating as a minimum the percentages of organic matter; soil texture (gradations of sand, silt and clay) with the USDA soil classification; cation exchange capacity; soluble salts; pH and the macro and micro mineral content.

2. Have testing agency identify and label samples and test reports according to sample collection and labeling requirements. A report of the suitability of the topsoil for plant growth shall be provided. The report shall include the conversion of the laboratory test results to

Maryland FIV figures before the recommended quantities of organic matter, nitrogen, phosphorus, potassium, calcium, and magnesium plus any needed micro nutrients soil amendments to produce satisfactory topsoil within the scope of the Maryland State Nutrient Management and the Maryland Fertilizer Applicator Laws and Regulations. This report should be completed by a Turfgrass Agronomist, a Certified Arborist, or similar individual who is familiar with Maryland's unique turfgrass growing conditions and can make the fertility recommendations within the Maryland regulations and the specifications of this project.

3. Baltimore County Office of Budget and Finance reserves the right to have their samples also tested by the same accredited laboratory for determining compliance and uniformity of the amendments and the topsoil.

   a. If the tests indicate the topsoil to be within expected variations after amendments have been applied, then Baltimore County Office of Budget and Finance shall pay for the soil testing.

   b. If the tests are found to be outside the expected variations the contractor shall pay for the testing and shall amend the soil further to comply with these soil tests and or remove and replace the topsoil.

1.12 SOIL-SAMPLING REQUIREMENTS

A. General: Extract soil samples according to requirements in this article.

B. Sample Collection and Labeling: Have samples taken and labeled by state-certified, -licensed, or -registered soil scientist under the direction of the testing agency.

1. Number and Location of Samples: Minimum of three representative soil samples from varied locations for each soil to be used or amended for landscaping purposes.

2. Procedures and Depth of Samples: According to USDA-NRCS's "Field Book for Describing and Sampling Soils."

3. Division of Samples: Split each sample into two, equal parts. Send half to the testing agency and half to Owner for its records.

4. Labeling: Label each sample with the date, location keyed to a site plan or other location system, visible soil condition, and sampling depth.

1.13 TESTING REQUIREMENTS

A. General: Perform tests on soil samples according to requirements in this article.

B. The contractor shall pay the cost of the soil testing and suitability reporting.

C. All soil testing shall be performed by the same laboratory.

D. Physical Testing:

1. Soil Texture: Soil-particle, size-distribution analysis by the following methods according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods":

   a. Sieving Method: Report sand-gradation percentages for very coarse, coarse, medium, fine, and very fine sand; and fragment-gradation (gravel) percentages for fine, medium, and coarse fragments; according to USDA sand and fragment sizes.

   b. Hydrometer Method: Report percentages of sand, silt, and clay.

2. Total Porosity: Calculate using particle density and bulk density according to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."

3. Water Retention: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods."

4. Saturated Hydraulic Conductivity: According to SSSA's "Methods of Soil Analysis - Part 1-Physical and Mineralogical Methods"; at 85% compaction according to ASTM D698 (Standard Proctor).

E. Chemical Testing:

1. CEC: Analysis by sodium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."

2. Clay Mineralogy: Analysis and estimated percentage of expandable clay minerals using CEC by ammonium saturation at pH 7 according to SSSA's "Methods of Soil Analysis - Part 1- Physical and Mineralogical Methods."

3. Metals Hazardous to Human Health: Test for presence and quantities of RCRA metals including aluminum, arsenic, barium, copper, cadmium, chromium, cobalt, lead, lithium, and vanadium. If RCRA metals are present, include recommendations for corrective action.

F. Fertility Testing: Soil-fertility analysis according to standard laboratory protocol of SSSA NAPT NEC-67, including the following:

1. Percentage of organic matter.

2. CEC, calcium percent of CEC, and magnesium percent of CEC.

3. Soil reaction (acidity/alkalinity pH value).

4. Buffered acidity or alkalinity.

5. Nitrogen ppm.

6. Phosphorous ppm.

7. Potassium ppm.

8. Manganese ppm.

9. Manganese-availability ppm.

10. Zinc ppm.

11. Zinc availability ppm.

12. Copper ppm.

13. Sodium ppm.

14. Soluble-salts ppm.

15. Presence and quantities of problem materials including salts and metals cited in the Standard protocol. If such problem materials are present, provide additional recommendations for corrective action.

16. Other deleterious materials, including their characteristics and content of each.

G. Organic-Matter Content: Analysis using loss-by-ignition method according to SSSA's "Methods of Soil Analysis - Part 3- Chemical Methods."

H. Recommendations: Based on the test results, state recommendations for soil treatments and soil amendments to be incorporated to produce satisfactory planting soil suitable for healthy, viable

plants indicated. Include, at a minimum, recommendations for nitrogen, phosphorous, and potassium fertilization, and for micronutrients.

1. Fertilizers and Soil Amendment Rates: State recommendations in weight per 1000 sq. ft. (92.9 sq. m) for 6 inch (152.4 mm) depth of soil.
2. Soil Reaction: State the recommended liming rates for raising pH or sulfur for lowering pH according to the buffered acidity or buffered alkalinity in weight per 1000 sq. ft. (92.9 sq. m) for 6 inch (152.4 mm) depth of soil.

1.14 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials, discharge of soil-bearing water runoff, and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Do not move or handle materials when they are wet or frozen.
4. Accompany each delivery of bulk fertilizers and soil amendments with appropriate certificates.

PART 2 - PRODUCTS

2.1 MATERIALS

2.2 PLANTING SOILS SPECIFIED BY COMPOSITION

A. General: Soil amendments, fertilizers, and rates of application specified in this article are guidelines that may need revision based on testing laboratory's recommendations after preconstruction soil analyses are performed.

B. Planting-Soil Type: Existing, on-site surface soil, with the duff layer, if any, retained; and stockpiled on-site; modified to produce viable planting soil. Blend existing, on-site surface soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:

1. Particle Size Distribution by USDA Textures: Classified as sandy loam, loam, silt loam, loamy sand, or clay loam soil according to USDA textures.
2. Topsoil shall meet the analysis of sand, silt, and clay when determined in accordance with ASSHTO T 88 with the following exceptions:

Fraction Sizes	Percentage Passing by Weight
Sand (2.0-0.050 mm)	20-75
Silt (0.050-0.002 mm)	10-60
Clay (less than 0.002 mm)	5-18

3. Ratio of Loose Compost to Soil: 1:4 by volume.
4. Percentage of Organic Matter: Minimum 3 percent by volume.
5. Where the subsoil is either highly acidic or composed of heavy clays, spread ground limestone at the rate of 4 to 8 tons/acre (183.7-367.31 pounds per 1,000 square feet) prior to the placement of topsoil.
6. Weight of Slow-Release Fertilizer: 15 pounds per 1000 sq. ft. (92.9 sq. m) per 3-5 inches of soil depth.

C. Planting-Soil Type: Imported, naturally formed soil from off-site sources and consisting of sandy loam, loam, silt loam, loamy sand, or clay loam soil according to USDA textures and modified to produce viable planting soil.

1. Sources: Take imported, unamended soil from sources that are naturally well-drained sites where topsoil occurs at least 4 inches (101.6 mm) deep, not from agricultural land, bogs, or marshes; and that do not contain undesirable organisms; disease-causing plant pathogens; or obnoxious weeds and invasive plants including, but not limited to, quackgrass, Johnsongrass, poison ivy, nutsedge, nimblewill, Canada thistle, bindweed, bentgrass, wild garlic, ground ivy, perennial sorrel, and bromegrass.
    a. Imported soils may not include the following:
        1) Any soils defined regionally by the Natural Resources Conservation Service (NRCS) web soil survey (or local equivalent for projects outside the U.S.) as prime farmland, unique farmland, or farmland of statewide or local importance;
        2) Soils from other greenfield sites; or
        3) Sphagnum peat moss.
2. Additional Properties of Imported Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 2 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
3. Unacceptable Properties: Clean soil of the following:
    a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
    b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 8 percent by dry weight of the imported soil.
    c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 1 inches (25.4 mm) in any dimension.
4. Amended Soil Composition: Blend imported, unamended soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:
    a. Ratio of Loose Compost to Soil: 1:4 by volume.
    b. Weight of Slow-Release Fertilizer: 50 pounds per 1000 sq. ft. (92.9 sq. m) per 6 inches (152.4 mm) of soil depth.

D. Planting-Soil Type: Manufactured soil consisting of manufacturer's basic topsoil, sandy loam according to USDA textures, blended in a manufacturing facility with sand, stabilized organic soil amendments, and other materials to produce viable planting soil.

1. Additional Properties of Manufacturer's Basic Soil before Amending: Soil reaction of pH 6 to 7 and minimum of 3 percent organic-matter content, friable, and with sufficient structure to give good tilth and aeration.
2. Unacceptable Properties: Manufactured soil shall not contain the following:
    a. Unacceptable Materials: Concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
    b. Unsuitable Materials: Stones, roots, plants, sod, clay lumps, and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
    c. Large Materials: Stones, clods, roots, clay lumps, and pockets of coarse sand exceeding 1-1/2 inches (38.1 mm) in any dimension.
3. Blend manufacturer's basic soil with the following soil amendments and fertilizers in the following quantities to produce planting soil:
    a. Ratio of Loose Compost to Soil: 1:4 by volume.
    b. Weight of Lime: 50 pounds per 1,000 square feet (92.9 sq. m).
    c. Ureaform fertilizer – Application Rate: 15 pounds per 1,000 square feet unless otherwise directed.
    d. Weight of Commercial Fertilizer: 5-10-10 Fertilizer at rate of 50 pounds per 1,000 square feet (92.9 sq. m).

2.3 INORGANIC SOIL AMENDMENTS

A. Lime: ASTM C602, agricultural liming material containing a minimum of 80 percent calcium carbonate equivalent and as follows:
    1. Class: T, with a minimum of 99 percent passing through a No. 8 (2.36 mm) sieve and a minimum of 75 percent passing through a No. 60 (0.25 mm) sieve.

2.4 ORGANIC SOIL AMENDMENTS

A. Compost: Well-composted, stable, and weed-free organic matter produced by composting feedstock, and bearing USCC's "Seal of Testing Assurance," and as follows:
    1. Feedstock: Limited to leaves May include animal waste.
    2. Reaction: pH of 5.5 to 8.
    3. Soluble-Salt Concentration: Less than 4 dS/m.
    4. Moisture Content: 35 to 55 percent by weight.
    5. Organic-Matter Content: 30 to 40 percent of dry weight.
    6. Particle Size: Minimum of 98 percent passing through a 1 inch (25.4 mm) sieve.

B. Manure: Well-rotted, unleached, stable or cattle manure containing not more than 25 percent by volume of straw, sawdust, or other bedding materials; free of toxic substances, stones, sticks, soil, weed seed, debris, and material harmful to plant growth.

2.5 FERTILIZERS

A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: 1 lb/1000 sq. ft. (0.5 kg/100 sq. m) of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.

2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified testing agency.

C. Chelated Iron: Commercial-grade FeEDDHA for dicots and woody plants, and commercial-grade FeDTPA for ornamental grasses and monocots.

PART 3 - EXECUTION

3.1 GENERAL

A. Place planting soil and fertilizers according to requirements in other Specification Sections.

B. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in planting soil.

C. Proceed with placement only after unsatisfactory conditions have been corrected.

3.2 PREPARATION OF UNAMENDED, ON-SITE SOIL BEFORE AMENDING

A. Excavation: Excavate soil from designated area(s) to a depth of 6 inches (152.4 mm) and stockpile until amended.

B. Unacceptable Materials: Clean soil of concrete slurry, concrete layers or chunks, cement, plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.

C. Unsuitable Materials: Clean soil to contain a maximum of 8 percent by dry weight of stones, roots, plants, sod, clay lumps, and pockets of coarse sand.

D. Screening: Pass unamended soil through a 2 inch (50.8 mm) sieve to remove large materials.

3.3 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply and mix unamended soil with amendments on-site to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 6 inches (152.4 mm). Remove stones larger than 1-1/2 inches (38.1 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

1. Apply, add soil amendments, and mix approximately half the thickness of unamended soil over prepared, loosened subgrade according to "Mixing" Paragraph below. Mix thoroughly into top 4 inches (101.6 mm) of subgrade. Spread remainder of planting soil.

C. Mixing: Spread unamended soil to total depth of 4 inches (101.6 mm), but not less than required to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Amendments: Apply soil amendments and fertilizer, if required, evenly on surface, and thoroughly blend them with unamended soil to produce planting soil.

a. Mix lime with dry soil before mixing fertilizer.

b. Mix fertilizer with planting soil no more than seven days before planting.

2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8 inches (203.2 mm) in loose depth for material compacted by compaction equipment, and not more than 6 inches (152.4 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each blended lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D698 and tested in-place.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.4 PLACING MANUFACTURED PLANTING SOIL OVER EXPOSED SUBGRADE

A. General: Apply manufactured soil on-site in its final, blended condition. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Subgrade Preparation: Till subgrade to a minimum depth of 6 inches (152.4 mm). Remove stones larger than 1-1/2 inches (38.1 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

C. Application: Spread planting soil to total depth of 6 inches (152.4 mm), but not less than required to meet finish grades after natural settlement. Do not spread if soil or subgrade is frozen, muddy, or excessively wet.

1. Lifts: Apply planting soil in lifts not exceeding 8 inches (203.2 mm) in loose depth for material compacted by compaction equipment, and not more than 6 inches (152.4 mm) in loose depth for material compacted by hand-operated tampers.

D. Compaction: Compact each lift of planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D698.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.5 BLENDING PLANTING SOIL IN PLACE

A. General: Mix amendments with in-place, unamended soil to produce required planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Preparation: Till unamended, existing soil in planting areas to a minimum depth of 6 inches (152.4 mm). Remove stones larger than 1-1/2 inches (38.1 mm) in any dimension and sticks, roots, rubbish, and other extraneous matter and legally dispose of them off Owner's property.

C. Mixing: Apply soil amendments and fertilizer, if required, evenly on surface, and thoroughly blend them into full depth of unamended, in-place soil to produce planting soil.

1. Mix lime with dry soil before mixing fertilizer.

2. Mix fertilizer with planting soil no more than seven days before planting.

D. Compaction: Compact blended planting soil to 75 to 82 percent of maximum Standard Proctor density according to ASTM D698.

E. Finish Grading: Grade planting soil to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.6 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

A. Application: Apply compost component of planting soil mix 4 inches (101.6 mm) of compost to surface of in-place planting soil. Do not apply materials or till if existing soil or subgrade is frozen, muddy, or excessively wet.

B. Finish Grading: Grade surface to a smooth, uniform surface plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.

B. Perform the following tests and inspections:

1. Compaction: Test planting-soil compaction after placing each lift and at completion using a densitometer or soil-compaction meter calibrated to a reference test value based on laboratory testing according to ASTM D698. Space tests at no less than one for each 1000 sq. ft. (92.9 sq. m) of in-place soil or part thereof.

C. Soil will be considered defective if it does not pass tests and inspections.

D. Prepare test and inspection reports.

E. Label each sample and test report with the date, location keyed to a site plan or other location system, visible conditions when and where sample was taken, and sampling depth.

3.8 PROTECTION

A. Protect areas of in-place soil from additional compaction, disturbance, and contamination. Prohibit the following practices within these areas except as required to perform planting operations:

1. Storage of construction materials, debris, or excavated material.

2. Parking vehicles or equipment.

3. Vehicle traffic.

4. Foot traffic.
5. Erection of sheds or structures.
6. Impoundment of water.
7. Excavation or other digging unless otherwise indicated.

B. If planting soil or subgrade is overcompacted, disturbed, or contaminated by foreign or deleterious materials or liquids, remove the planting soil and contamination; restore the subgrade as directed by Architect and replace contaminated planting soil with new planting soil.

3.9 CLEANING

A. Protect areas adjacent to planting-soil preparation and placement areas from contamination. Keep adjacent paving and construction clean and work area in an orderly condition.

B. Remove surplus soil and waste material including excess subsoil, unsuitable materials, trash, and debris and legally dispose of them off Owner's property unless otherwise indicated.

1. Dispose of excess subsoil and unsuitable materials on-site where directed by Owner.

END OF SECTION 32 91 13

SECTION 32 92 00 - TURF AND GRASSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Seeding
2. Sodding

B. Related Requirements:

1. Section 329300 "Plants" for trees, shrubs, ground covers, and other plants as well as border edgings and mow strips.
2. Section 334600 "Subdrainage" for below-grade drainage of landscaped areas.

1.3 DEFINITIONS

A. Finish Grade: Elevation of finished surface of planting soil.

B. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.

C. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

D. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 329115 "Soil Preparation (Performance Specification)" and drawing designations for planting soils.

E. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference at Project site.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer.

B. Certification of Grass Seed: From seed vendor for each grass-seed monostand or mixture, stating the botanical and common name, percentage by weight of each species and variety, and percentage of purity, germination, and weed seed. Include the year of production and date of packaging.

1. Certification of each seed mixture for turfgrass sod. Include identification of source and name and telephone number of supplier.

C. Product Certificates: For fertilizers, from manufacturer.

D. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of turf during a calendar year. Submit before expiration of required maintenance periods.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful turf establishment.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: Five years' experience in turf installation in addition to requirements in Section 014000 "Quality Requirements."
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certifications: Installer's field supervisor shall have certification in one of the following categories from the Professional Landcare Network:

a. Landscape Industry Certified Technician - Exterior.
b. Landscape Industry Certified Lawncare Manager.
c. Landscape Industry Certified Lawncare Technician.

5. Pesticide Applicator: State licensed, commercial.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws, as applicable.

B. Sod: Harvest, deliver, store, and handle sod according to requirements in "Specifications for Turfgrass Sod Materials" and "Specifications for Turfgrass Sod Transplanting and Installation" sections in TPI's "Guideline Specifications to Turfgrass Sodding." Deliver sod within 24 hours of harvesting and in time for planting promptly. Protect sod from breakage and drying.

C. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

1.9 FIELD CONDITIONS

A. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with initial maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: April 1 to May 15
2. Fall Planting: September 1 to October 15

B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 SEED

A. Grass Seed: Fresh, clean, dry, new-crop seed complying with AOSA's "Rules for Testing Seeds" for purity and germination tolerances.

B. Seed Species:

1. Quality: State-certified seed of grass species as listed below for solar exposure.
2. Quality: Seed of grass species as listed below for solar exposure, with not less than 85 percent germination, not less than 95 percent pure seed, and not more than 0.5 percent weed seed:
3. Full Sun: Kentucky bluegrass (Poa pratensis), a minimum of three cultivars.

4. Sun and Partial Shade: Proportioned by weight as follows:

   a. 90 percent Turf Type Tall Fescue, minimum of three cultivars.
   b. 10% Kentucky Bluegrass (Poa pratensis).

5. Shade: Proportioned by weight as follows:

   a. 50 percent chewings red fescue (Festuca rubra variety).
   b. 30 percent Creeping Red Fescue (Festuca rubra).
   c. 20 percent Rough Bluegrass (Poa trivialis).

2.2 TURFGRASS SOD

A. Turfgrass Sod: Certified and approved and Number 1 Quality/Premium, including limitations on thatch, weeds, diseases, nematodes, and insects, complying with "Specifications for Turfgrass Sod Materials" in TPI's "Guideline Specifications to Turfgrass Sodding." Furnish viable sod of uniform density, color, and texture that is strongly rooted and capable of vigorous growth and development when planted.

B. Manufacturer: Royal Sod Farms, LLC

C. Product: Royal Sod Fescue Blend

- Barvado Tall Fescue
- Xtreme Green Tall Fescue
- Titanium Tall Fescue
- Raven KY Blue (max. of 10%)

D. Turfgrass Species: Sod of grass species, with not less than 85 percent germination, not less than 95 percent pure seed, and not more than 0.5 percent weed seed

E. MD preferred sod mix - 3 species of tall fescue and max. 10% of Bluegrass

2.3 FERTILIZERS

A. Commercial Fertilizer: Commercial-grade complete fertilizer of neutral character, consisting of fast- and slow-release nitrogen, 50 percent derived from natural organic sources of urea formaldehyde, phosphorous, and potassium in the following composition:

1. Composition: 1 lb/1000 sq. ft. of actual nitrogen, 4 percent phosphorous, and 2 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

B. Slow-Release Fertilizer: Granular or pelleted fertilizer consisting of 50 percent water-insoluble nitrogen, phosphorus, and potassium in the following composition:

1. Composition: 20 percent nitrogen, 10 percent phosphorous, and 10 percent potassium, by weight.
2. Composition: Nitrogen, phosphorous, and potassium in amounts recommended in soil reports from a qualified soil-testing laboratory.

2.4 MULCHES

A. Straw Mulch: Provide air-dry, clean, mildew- and seed-free, salt hay or threshed straw of wheat, rye, oats, or barley.

B. Muck Peat Mulch: Partially decomposed moss peat, native peat, or reed-sedge peat, finely divided or of granular texture, with a pH range of 6 to 7.5, and having a water-absorbing capacity of 1100 to 2000 percent, and containing no sand.

C. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH range of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through 1-inch sieve; soluble salt content of 2 to 5 decisiemens/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; bio-solids; yard trimmings; or source-separated or compostable mixed solid waste.

D. Fiber Mulch: Biodegradable, dyed-wood, cellulose-fiber mulch; nontoxic and free of plant-growth or germination inhibitors; with a maximum moisture content of 15 percent and a pH range of 4.5 to 6.5.

E. Non asphaltic Tackifier: Colloidal Tackifier recommended by fiber-mulch manufacturer for slurry application; nontoxic and free of plant-growth or germination inhibitors.

F. Asphalt Emulsion: ASTM D 977, Grade SS-1; nontoxic and free of plant-growth or germination inhibitors.

2.5 PESTICIDES

A. General: Pesticide, registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to be planted for compliance with requirements and other conditions affecting installation and performance of the Work.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.
2. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
3. Uniformly moisten excessively dry soil that is not workable or which is dusty.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

3.2 PREPARATION

A. Protect structures; utilities; sidewalks; pavements; and other facilities, trees, shrubs, and plantings from damage caused by planting operations.

1. Protect adjacent and adjoining areas from hydro seeding and hydro mulching overspray.
2. Protect grade stakes set by others until directed to remove them.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

3.3 TURF AREA PREPARATION

A. General: Prepare planting area for soil placement and mix planting soil according to Section 329115 "Soil Preparation" – for planting soil.

B. Placing Planting Soil: Place manufactured planting soil over exposed subgrade.

1. Reduce elevation of planting soil to allow for soil thickness of sod.

C. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.

D. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.4 SEEDING

A. Sow seed with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph.

1. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
2. Do not use wet seed or seed that is moldy or otherwise damaged.
3. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.

B. Sow seed at a total rate of 5 to 8 lb/1000 sq. ft..

C. Rake seed lightly into top 1/8 inch of soil, roll lightly, and water with fine spray.

D. Protect seeded areas with slopes exceeding 1:4 with erosion-control blankets and 1:6 with erosion-control fiber mesh installed and stapled according to manufacturer's written instructions.

E. Protect seeded areas with erosion-control mats where indicated on Drawings; install and anchor according to manufacturer's written instructions.

F. Protect seeded areas with slopes not exceeding 1:6 by spreading straw mulch. Spread uniformly at a minimum rate of 2 tons/acre to form a continuous blanket 1-1/2 inches in loose thickness over seeded areas. Spread by hand, blower, or other suitable equipment.

1. Anchor straw mulch by crimping into soil with suitable mechanical equipment.
2. Bond straw mulch by spraying with asphalt emulsion at a rate of 10 to 13 gal./1000 sq. ft.. Take precautions to prevent damage or staining of structures or other plantings adjacent to mulched areas. Immediately clean damaged or stained areas.

G. Protect seeded areas from hot, dry weather or drying winds by applying compost mulch or peat mulch within 24 hours after completing seeding operations. Soak areas, scatter mulch uniformly to a thickness of 3/16 inch, and roll surface smooth.

3.5 HYDROSEEDING

A. Hydroseeding: Mix specified seed, slow-release fertilizer, and fiber mulch in water, using equipment specifically designed for hydroseed application. Continue mixing until uniformly blended into homogeneous slurry suitable for hydraulic application.

1. Mix slurry with fiber-mulch manufacturer's recommended tackifier.
2. Spray-apply slurry uniformly to all areas to be seeded in a one-step process. Apply slurry at a rate so that mulch component is deposited at not less than 1500-lb/acre dry weight, and seed component is deposited at not less than the specified seed-sowing rate.
3. Spray-apply slurry uniformly to all areas to be seeded in a two-step process. Apply first slurry coat at a rate so that mulch component is deposited at not less than 500-lb/acre dry weight, and seed component is deposited at not less than the specified seed-sowing rate. Apply slurry cover coat of fiber mulch (hydromulching) at a rate of 1000 lb/acre.

3.6 SODDING

A. Lay sod within 24 hours of harvesting. Do not lay sod if dormant or if ground is frozen or muddy.

B. Lay sod to form a solid mass with tightly fitted joints. Butt ends and sides of sod; do not stretch or overlap. Stagger sod strips or pads to offset joints in adjacent courses. Avoid damage to soil or sod during installation. Tamp and roll lightly to ensure contact with soil, eliminate air pockets, and form a smooth surface. Work sifted soil or fine sand into minor cracks between pieces of sod; remove excess to avoid smothering sod and adjacent grass.

1. Lay sod across slopes exceeding 1:3.
2. Anchor sod on slopes exceeding 1:6 with wood pegs or steel staples spaced as recommended by sod manufacturer but not less than two anchors per sod strip to prevent slippage.

C. Saturate sod with fine water spray within two hours of planting. During first week after planting, water daily or more frequently as necessary to maintain moist soil to a minimum depth of 1-1/2 inches below sod.

3.7 TURF MAINTENANCE

A. General: Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and re-mulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation.

1. Fill in as necessary soil subsidence that may occur because of settling or other processes. Replace materials and turf damaged or lost in areas of subsidence.
2. In areas where mulch has been disturbed by wind or maintenance operations, add new mulch and anchor as required to prevent displacement.
3. Apply treatments as required to keep turf and soil free of pests and pathogens or disease. Use integrated pest management practices whenever possible to minimize the use of pesticides and reduce hazards.

B. Watering: Install and maintain temporary piping, hoses, and turf-watering equipment to convey water from sources and to keep turf uniformly moist to a depth of 4 inches.

1. Schedule watering to prevent wilting, puddling, erosion, and displacement of seed or mulch. Lay out temporary watering system to avoid walking over muddy or newly planted areas.
2. Water turf with fine spray at a minimum rate of 1 inch per week unless rainfall precipitation is adequate.

C. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than one-third of grass height. Remove no more than one-third of grass-leaf growth in initial or subsequent mowings. Do not delay mowing until grass blades bend over and become matted. Do not mow when grass is wet. Schedule initial and subsequent mowings to maintain the following grass height:

1. Mow bentgrass to a height of 1/2 inch or less.

2. Mow bermudagrass to a height of 1/2 to 1 inch.
3. Mow Kentucky bluegrass to a height of 1-1/2 to 2 inches.
4. Mow Turf-Type Tall Fescue to a height of 2 to 3 inches.

D. Turf Postfertilization: Apply slow-release fertilizer after initial mowing and when grass is dry.

1. Use fertilizer that provides actual nitrogen of at least 1 lb/1000 sq. ft. to turf area.

3.8 SATISFACTORY TURF

A. Turf installations shall meet the following criteria as determined by Architect:

1. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. and bare spots not exceeding 5 by 5 inches.
2. Satisfactory Sodded Turf: At end of maintenance period, a healthy, well-rooted, even-colored, viable turf has been established, free of weeds, open joints, bare areas, and surface irregularities.

B. Use specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf is satisfactory.

3.9 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents according to requirements of authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.10 CLEANUP AND PROTECTION

A. Promptly remove soil and debris created by turf work from paved areas. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material, including excess subsoil, unsuitable soil, trash, and debris, and legally dispose of them off Owner's property.

C. Erect temporary fencing or barricades and warning signs as required to protect newly planted areas from traffic. Maintain fencing and barricades throughout initial maintenance period and remove after plantings are established.

D. Remove non-degradable erosion-control measures after grass establishment period.

3.11 MAINTENANCE SERVICE

A. Turf Maintenance Service: Provide full maintenance by skilled employees of landscape Installer. Maintain as required in "Turf Maintenance" Article. Begin maintenance immediately after each area is planted and continue until acceptable turf is established, but for not less than the following periods:

1. Seeded Turf: 60 days from date of planting completion.

a. When initial maintenance period has not elapsed before end of planting season, or if turf is not fully established, continue maintenance during next planting season.

2. Sodded Turf: 60 days from date of planting completion.

END OF SECTION 32 92 00

SECTION 32 93 00 - PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Plants
2. Tree stabilization
3. Tree-watering devices
4. Warranty

B. Related Requirements:
1. Section 329200 "Turf and Grasses" for turf (lawn), hydroseeding, and erosion-control materials.
2. Category 700 "Landscaping" (Baltimore County Standard Specifications and Details for Construction).

1.3 DEFINITIONS

A. Backfill: The earth used to replace or the act of replacing earth in an excavation.

B. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they were grown, with a ball size not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required; wrapped with burlap, tied, rigidly supported, and drum laced with twine with the root flare visible at the surface of the ball as recommended by ANSI Z60.1.

C. Balled and Potted Stock: Plants dug with firm, natural balls of earth in which they are grown and placed, unbroken, in a container. Ball size is not less than diameter and depth recommended by ANSI Z60.1 for type and size of plant required.

D. Bare-Root Stock: Plants with a well-branched, fibrous-root system developed by transplanting or root pruning, with soil or growing medium removed, and with not less than the minimum root spread according to ANSI Z60.1 for type and size of plant required.

E. Container-Grown Stock: Healthy, vigorous, well-rooted plants grown in a container, with a well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized according to ANSI Z60.1 for type and size of plant required.

F. Fabric Bag-Grown Stock: Healthy, vigorous, well-rooted plants established and grown in-ground in a porous fabric bag with well-established root system reaching sides of fabric bag. Fabric bag size is not less than diameter, depth, and volume required by ANSI Z60.1 for type and size of plant.

G. Finish Grade: Elevation of finished surface of planting soil.

H. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. Pesticides include insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.

I. Pests: Living organisms that occur where they are not desired or that cause damage to plants, animals, or people. Pests include insects, mites, grubs, mollusks (snails and slugs), rodents (gophers, moles, and mice), unwanted plants (weeds), fungi, bacteria, and viruses.

J. Planting Area: Areas to be planted.

K. Planting Soil: Existing, on-site soil; imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth. See Section 329115 "Soil Preparation (Performance Specification)" for drawing designations for planting soils.

L. Plant; Plants; Plant Material: These terms refer to vegetation in general, including trees, shrubs, vines, ground covers, ornamental grasses, bulbs, corms, tubers, or herbaceous vegetation.

M. Root Flare: Also called "trunk flare." The area at the base of the plant's stem or trunk where the stem or trunk broadens to form roots; the area of transition between the root system and the stem or trunk.

N. Stem Girdling Roots: Roots that encircle the stems (trunks) of trees below the soil surface.

O. Subgrade: The surface or elevation of subsoil remaining after excavation is complete, or the top surface of a fill or backfill before planting soil is placed.

1.4 COORDINATION

A. Coordination with Turf Areas (Lawns): Plant trees, shrubs, and other plants after finish grades are established and before planting turf areas unless otherwise indicated.

1. When planting trees, shrubs, and other plants after planting turf areas, protect turf areas, and promptly repair damage caused by planting operations.

1.5 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference at Project site.

1.6 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Plant Materials: Include quantities, sizes, quality, and sources for plant materials.
2. Plant Photographs: Include color photographs in digital format of each required species and size of plant material as it will be furnished to Project. Take photographs from an angle depicting true size and condition of the typical plant to be furnished. Include a scale rod or other measuring device in each photograph. For species where more than 20 plants are required, include a minimum of three photographs showing the average plant, the best quality plant, and the worst quality plant to be furnished. Identify each photograph with the full scientific name of the plant, plant size, and name of the growing nursery.

B. LEED Submittals: Comply with Section 018113.

1. SS Credit 2: Protect or Restore Habitat

2. Provide documentation that confirms all criteria listed in Part 2 of this Section is met for all imported soils.

C. Samples for Verification: For each of the following:

1. Trees and Shrubs: Three Samples of each variety and size delivered to site for review. Maintain approved Samples on-site as a standard for comparison.
2. Organic Compost Mulch: 1-quart volume of each organic mulch required; in sealed plastic bags labeled with composition of materials by percentage of weight and source of mulch. Each Sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.
3. Weed Control Barrier: 12 by 12 inches.
4. Proprietary Root-Ball-Stabilization Device: One unit.
5. Slow-Release, Tree-Watering Device: One unit of each size required.
6. Tree Grates, Frames, and Accessories: Manufacturer's standard size delivered to site for review, to verify design and color selected.
7. Root Barrier: Width of panel by 12 inches.

1.7 INFORMATIONAL SUBMITTALS

A. Qualification Data: For landscape Installer. Include list of similar projects completed by Installer demonstrating Installer's capabilities and experience. Include project names, addresses, and year completed, and include names and addresses of owners' contact persons.

B. Product Certificates: For each type of manufactured product, from manufacturer, and complying with the following:

1. Manufacturer's certified analysis of standard products.
2. Analysis of other materials by a recognized laboratory made according to methods established by the Association of Official Analytical Chemists, where applicable.

C. Pesticides and Herbicides: Product label and manufacturer's application instructions specific to Project.

D. Sample Warranty: For special warranty.

1.8 CLOSEOUT SUBMITTALS

A. Maintenance Data: Recommended procedures to be established by Owner for maintenance of plants during a calendar year. Submit before expiration of required maintenance periods.

1.9 QUALITY ASSURANCE

A. Installer Qualifications: A qualified landscape installer whose work has resulted in successful establishment of plants.

1. Professional Membership: Installer shall be a member in good standing of either the Professional Landcare Network or the American Nursery and Landscape Association.
2. Experience: Five years' experience in landscape installation in addition to requirements in Section 014000 "Quality Requirements."
3. Installer's Field Supervision: Require Installer to maintain an experienced full-time supervisor on Project site when work is in progress.
4. Personnel Certifications: Installer's field supervisor shall have certification in one of the following categories from the Professional Landcare Network:

    a. Landscape Industry Certified Technician - Exterior.
    b. Landscape Industry Certified Horticultural Technician.

5. Pesticide Applicator: State licensed, commercial.

B. Provide quality, size, genus, species, and variety of plants indicated, complying with applicable requirements in ANSI Z60.1.

1. Selection of plants purchased under allowances is made by Architect, who tags plants at their place of growth before they are prepared for transplanting.

C. Measurements: Measure according to ANSI Z60.1. Do not prune to obtain required sizes.

1. Trees and Shrubs: Measure with branches and trunks or canes in their normal position. Take height measurements from or near the top of the root flare for field-grown stock and container-grown stock. Measure main body of tree or shrub for height and spread; do not measure branches or roots tip to tip. Take caliper measurements 6 inches above the root flare for trees up to 4-inch caliper size, and 12 inches above the root flare for larger sizes.
2. Other Plants: Measure with stems, petioles, and foliage in their normal position.

D. Plant Material Observation: Landscape Architect may observe plant material either at place of growth or at site before planting for compliance with requirements for genus, species, variety, cultivar, size, and quality. Landscape Architect may also observe trees and shrubs further for size and condition of balls and root systems, pests, disease symptoms, injuries, and latent defects and may reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.

1. Notify Landscape Architect of sources of planting materials seven days in advance of delivery to site.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws if applicable.

B. Bulk Materials:

1. Do not dump or store bulk materials near structures, utilities, walkways and pavements, or on existing turf areas or plants.
2. Provide erosion-control measures to prevent erosion or displacement of bulk materials; discharge of soil-bearing water runoff; and airborne dust reaching adjacent properties, water conveyance systems, or walkways.
3. Accompany each delivery of bulk materials with appropriate certificates.

C. Deliver bare-root stock plants within 24 hours of digging. Immediately after digging up bare-root stock, pack root system in wet straw, hay, or other suitable material to keep root system moist until planting. Transport in covered, temperature-controlled vehicles, and keep plants cool and protected from sun and wind at all times.

D. Do not prune trees and shrubs before delivery. Protect bark, branches, and root systems from sun scald, drying, wind burn, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during shipping and delivery. Do not drop plants during delivery and handling.

E. Handle planting stock by root ball.

F. Store bulbs, corms, and tubers in a dry place at 60 to 65 deg F until planting.

G. Apply antidesiccant to trees and shrubs using power spray to provide an adequate film over trunks (before wrapping), branches, stems, twigs, and foliage to protect during digging, handling, and transportation.

1. If deciduous trees or shrubs are moved in full leaf, spray with antidesiccant at nursery before moving and again two weeks after planting.

H. Wrap trees and shrubs with burlap fabric over trunks, branches, stems, twigs, and foliage to protect from wind and other damage during digging, handling, and transportation.

I. Deliver plants after preparations for planting have been completed, and install immediately. If planting is delayed more than six hours after delivery, set plants and trees in their appropriate aspect (sun, filtered sun, or shade), protect from weather and mechanical damage, and keep roots moist.

1. Heel-in bare-root stock. Soak roots that are in less than moist condition in water for two hours. Reject plants with dry roots.
2. Set balled stock on ground and cover ball with soil, peat moss, sawdust, or other acceptable material.
3. Do not remove container-grown stock from containers before time of planting.

4. Water root systems of plants stored on-site deeply and thoroughly with a fine-mist spray. Water as often as necessary to maintain root systems in a moist, but not overly wet condition.

1.11 FIELD CONDITIONS

A. Field Measurements: Verify actual grade elevations, service and utility locations, irrigation system components, and dimensions of plantings and construction contiguous with new plantings by field measurements before proceeding with planting work.

B. Planting Restrictions: Plant during one of the following periods. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion.

1. Spring Planting: April 1 to May 15
2. Fall Planting: September 1 to October 15

C. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit planting to be performed when beneficial and optimum results may be obtained. Apply products during favorable weather conditions according to manufacturer's written instructions and warranty requirements.

1.12 WARRANTY

A. Special Warranty: Installer agrees to repair or replace plantings and accessories that fail in materials, workmanship, or growth within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Death and unsatisfactory growth, except for defects resulting from abuse, lack of adequate maintenance, or neglect by Owner.
b. Structural failures including plantings falling or blowing over.
c. Faulty performance of tree stabilization
d. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

2. Warranty Periods: From date of Substantial Completion.

a. Trees, Shrubs, Vines, and Ornamental Grasses: 24 months.
b. Ground Covers, Biennials, Perennials, and Other Plants: 12 months.
c. Annuals: Three months.

3. Include the following remedial actions as a minimum:

a. Immediately remove dead plants and replace unless required to plant in the succeeding planting season.
b. Replace plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.
c. A limit of one replacement of each plant is required except for losses or replacements due to failure to comply with requirements.

d. Provide extended warranty for period equal to original warranty period, for replaced plant material.

PART 2 - PRODUCTS

2.1 PLANT MATERIAL

A. General: Furnish nursery-grown plants true to genus, species, variety, cultivar, stem form, shearing, and other features indicated in Plant List, Plant Schedule, or Plant Legend indicated on Drawings and complying with ANSI Z60.1; and with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock, densely foliated when in leaf and free of disease, pests, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

1. Trees with damaged, crooked, or multiple leaders; tight vertical branches where bark is squeezed between two branches or between branch and trunk ("included bark"); crossing trunks; cut-off limbs more than 3/4 inch in diameter; or with stem girdling roots are unacceptable.
2. Collected Stock: Do not use plants harvested from the wild, from native stands, from an established landscape planting, or not grown in a nursery unless otherwise indicated.

B. Do not use nurseries that have a different soil structure than Maryland’s (e.g. do not use nurseries from the South, Tennessee and Georgia to name a few)

C. Provide plants of sizes, grades, and ball or container sizes complying with ANSI Z60.1 for types and form of plants required. Plants of a larger size may be used if acceptable to Architect, with a proportionate increase in size of roots or balls.

D. Root-Ball Depth: Furnish trees and shrubs with root balls measured from top of root ball, which begins at root flare according to ANSI Z60.1. Root flare shall be visible before planting.

E. Labeling: Label each plant of each variety, size, and caliper with a securely attached, waterproof tag bearing legible designation of common name and full scientific name, including genus and species. Include nomenclature for hybrid, variety, or cultivar, if applicable for the plant.

F. If formal arrangements or consecutive order of plants is indicated on Drawings, select stock for uniform height and spread, and number the labels to assure symmetry in planting.

G. Annuals and Biennials: Provide healthy, disease-free plants of species and variety shown or listed, with well-established root systems reaching to sides of the container to maintain a firm ball, but not with excessive root growth encircling the container. Provide only plants that are acclimated to outdoor conditions before delivery and that are in bud but not yet in bloom.

H. Do not install plants if they appear to be damaged during transit or on site.

I. Trees to be protected during transit so that they do not get wind burn etc.

J. Imported soils: Comply with the following criteria:

Original function is comparable to reuse function

Not classified as prime farmland, unique farmland or farmland of statewide or local importance

Not extracted from a greenfield site

Does not include sphagnum peat moss

2.2 FERTILIZERS

A. Planting Tablets: Tightly compressed chip-type, long-lasting, slow-release, commercial-grade planting fertilizer in tablet form. Tablets shall break down with soil bacteria, converting nutrients into a form that can be absorbed by plant roots.

1. Size: 5-gram tablets.
2. Nutrient Composition: 20 percent nitrogen, 10 percent phosphorous, and 5 percent potassium, by weight plus micronutrients.

2.3 PLANT WATERING DEVICES

A. Shade trees

Manufacturer: TreeGator Original, www.treegator.com (size of bag dependent on tree size)

B. Evergreen and multi-stem trees:

Manufacturer: TreeGator Jr. Pro, www.treegator.com (size of bag dependent on tree size)

2.4 MULCHES

A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees and shrubs, consisting of one of the following:

1. Type: Shredded hardwood.
2. Size Range: 3 inches maximum, 1/2 inch minimum.
3. Color: Natural.

B. Compost Mulch: Well-composted, stable, and weed-free organic matter, pH of 5.5 to 8; moisture content 35 to 55 percent by weight; 100 percent passing through a 1-inch sieve; soluble-salt content of 2 to 5 dS/m; not exceeding 0.5 percent inert contaminants and free of substances toxic to plantings; and as follows:

1. Organic Matter Content: 50 to 60 percent of dry weight.
2. Feedstock: Agricultural, food, or industrial residuals; bio-solids; yard trimmings; or source-separated or compostable mixed solid waste.

2.5 WEED-CONTROL BARRIERS

A. Nonwoven Geotextile Filter Fabric: Polypropylene or polyester fabric, 3 oz./sq. yd. minimum, composed of fibers formed into a stable network so that fibers retain their relative position. Fabric shall be inert to biological degradation and resist naturally encountered chemicals, alkalis, and acids.

B. Composite Fabric: Woven, needle-punched polypropylene substrate bonded to a nonwoven polypropylene fabric, 4.8 oz./sq. yd..

2.6 PESTICIDES

A. General: Pesticide registered and approved by the EPA, acceptable to authorities having jurisdiction, and of type recommended by manufacturer for each specific problem and as required for Project conditions and application. Do not use restricted pesticides unless authorized in writing by authorities having jurisdiction.

B. Pre-Emergent Herbicide (Selective and Nonselective): Effective for controlling the germination or growth of weeds within planted areas at the soil level directly below the mulch layer.

C. Post-Emergent Herbicide (Selective and Nonselective): Effective for controlling weed growth that has already germinated.

2.7 TREE-STABILIZATION MATERIALS

A. Trunk-Stabilization Materials:

1. Upright and Guy Stakes: Rough-sawn, sound, new hardwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by length indicated, pointed at one end.
2. Wood Deadmen: Timbers measuring 8 inches in diameter and 48 inches long, treated with specified wood pressure-preservative treatment.
3. Flexible Ties: Wide rubber or elastic bands or straps of length required to reach stakes or turnbuckles or compression springs.
4. Guys and Tie Wires: ASTM A 641/A 641M, Class 1, galvanized-steel wire, two-strand, twisted, 0.106 inch in diameter.
5. Tree-Tie Webbing: UV-resistant polypropylene or nylon webbing with brass grommets.
6. Guy Cables: Five-strand, 3/16-inch-diameter, galvanized-steel cable, with zinc-coated turnbuckles or compression springs, a minimum of 3 inches long, with two 3/8-inch galvanized eyebolts.
7. Flags: Standard surveyor's plastic flagging tape, white, 6 inches long.
8. Proprietary Staking-and-Guying Devices: Proprietary stake or anchor and adjustable tie systems to secure each new planting by plant stem; sized as indicated and according to manufacturer's written recommendations.
   a. Platipus anchoring system (http://www.platipus-anchors.us/)

B. Root-Ball Stabilization Materials:

1. Upright Stakes and Horizontal Hold-Down: Rough-sawn, sound, new hardwood or softwood, free of knots, holes, cross grain, and other defects, 2-by-2-inch nominal by

length indicated (min. 8’-0 out of ground and 2’-0 underground); stakes pointed at one end.

2. Wood Screws: ASME B18.6.1.
3. Proprietary Root-Ball Stabilization Devices: Proprietary at- or below-grade stabilization systems to secure each new planting by root ball and that do not encircle the trunk; sized according to manufacturer's written recommendations unless otherwise indicated.
   a. Platipus anchoring system – Plati Mat – model # depends on size of the tree specified in planting schedule (http://www.platipus-anchors.us/)

2.8 MISCELLANEOUS PRODUCTS

A. Wood Pressure-Preservative Treatment: AWPA U1, Use Category UC4a; acceptable to authorities having jurisdiction, and containing no arsenic or chromium.

B. Root Barrier: Black, molded, modular panels 24 inches high (deep), 85 mils thick, and with vertical root deflecting ribs protruding 3/4 inch out from panel surface; manufactured with minimum 50 percent recycled polyethylene plastic with UV inhibitors.

C. Antidesiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for trees and shrubs. Deliver in original, sealed, and fully labeled containers and mix according to manufacturer's written instructions.

D. Burlap: Non-synthetic, biodegradable.

E. Planter Drainage Gravel: Washed on site after delivery with no fines, #57 stone.

F. Planter Filter Fabric: Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

G. Concrete Parking Stops: For anchoring trees on structure. Use minimum 3 parking stops per tree. 200 lbs+ per parking stop minimum weight. Parking stops to be installed prior to infilling soil trench. Document via photos that the parking stops were installed correctly for each tree pit.

H. Mycorrhizal Fungi: Dry, granular inoculant containing at least 5300 spores per lb of vesicular-arbuscular mycorrhizal fungi and 95 million spores per lb of ectomycorrhizal fungi, 33 percent hydrogel, and a maximum of 5.5 percent inert material.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive plants, with Installer present, for compliance with requirements and conditions affecting installation and performance of the Work.

1. Verify that no foreign or deleterious material or liquid such as paint, paint washout, concrete slurry, concrete layers or chunks, cement, plaster, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, or acid has been deposited in soil within a planting area.

2. Verify that plants and vehicles loaded with plants can travel to planting locations with adequate overhead clearance.
3. Suspend planting operations during periods of excessive soil moisture until the moisture content reaches acceptable levels to attain the required results.
4. Uniformly moisten excessively dry soil that is not workable or which is dusty.

B. If contamination by foreign or deleterious material or liquid is present in soil within a planting area, remove the soil and contamination as directed by Architect and replace with new planting soil.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect structures, utilities, sidewalks, pavements, and other facilities and turf areas and existing plants from damage caused by planting operations.

B. Install erosion-control measures to prevent erosion or displacement of soils and discharge of soil-bearing water runoff or airborne dust to adjacent properties and walkways.

C. Lay out individual tree and shrub locations and areas for multiple plantings. Stake locations, outline areas, adjust locations when requested, and obtain Architect's acceptance of layout before excavating or planting. Make minor adjustments as required.

D. Lay out plants at locations directed by Landscape Architect. Stake locations of individual trees and shrubs and outline areas for multiple plantings.

3.3 PLANTING AREA ESTABLISHMENT

A. General: Prepare planting area for soil placement and mix planting soil according to Section 329115 "Soil Preparation."

B. Placing Planting Soil: Place manufactured planting soil over exposed subgrade.

C. Before planting, obtain Architect's acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

D. Application of Mycorrhizal Fungi: At time directed by Architect, broadcast dry product uniformly over prepared soil at application rate according to manufacturer's written recommendations.

3.4 EXCAVATION FOR TREES AND SHRUBS

A. Planting Pits and Trenches: Excavate circular planting pits.
1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable and will be rejected.
2. Trim perimeter of bottom leaving center area of bottom raised slightly to support root ball and assist in drainage away from center. Do not further disturb base. Ensure that root ball will sit on undisturbed base soil to prevent settling. Scarify sides of planting pit smeared or smoothed during excavation.

3. Excavate three times as wide as ball diameter for balled and Burlapped, balled and potted, container-grown and fabric bag-grown stock.
4. Excavate at least 12 inches wider than root spread and deep enough to accommodate vertical roots for bare-root stock.
5. Do not excavate deeper than depth of the root ball, measured from the root flare to the bottom of the root ball.
6. If area under the plant was initially dug too deep, add soil to raise it to the correct level and thoroughly tamp the added soil to prevent settling.
7. Maintain angles of repose of adjacent materials to ensure stability. Do not excavate subgrades of adjacent paving, structures, hardscapes, or other new or existing improvements.
8. Maintain supervision of excavations during working hours.
9. Keep excavations covered or otherwise protected after working hours.
10. If drain tile is indicated on Drawings or required under planting areas, excavate to top of porous backfill over tile.

B. Backfill Soil: Subsoil and topsoil removed from excavations may not be used as backfill soil unless otherwise indicated.

C. Obstructions: Notify Architect if unexpected rock or obstructions detrimental to trees or shrubs are encountered in excavations.

1. Hardpan Layer: Drill 6-inch-diameter holes, 24 inches apart, into free-draining strata or to a depth of 10 feet, whichever is less, and backfill with free-draining material.

D. Drainage: Notify Architect if subsoil conditions evidence unexpected water seepage or retention in tree or shrub planting pits.

E. Fill excavations with water and allow it to percolate away before positioning trees and shrubs.

3.5 TREE, SHRUB, AND VINE PLANTING

A. Inspection: Contractor to layout all plants prior to installation and get landscape architect’s approval on the layout. Installation to occur only after landscape architect has approved the layout. Contractor to notify landscape architect minimum 7 days in advance for conducting a site visit to approve the planting layout. Layout of plants to be in accordance with contract documents.

B. At time of planting, verify that root flare is visible at top of root ball according to ANSI Z60.1. If root flare is not visible, remove soil in a level manner from the root ball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that root ball still meets size requirements.

C. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

D. Balled and Burlapped Stock: Set each plant plumb and in center of planting pit or trench with root flare 1 inch above adjacent finish grades.

1. Backfill: Planting soil. For trees, use excavated soil for backfill.

2. After placing some backfill around root ball to stabilize plant, carefully cut and remove burlap, rope, and wire baskets from tops of root balls and from sides, but do not remove from under root balls. Remove pallets, if any, before setting. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.

    a. Quantity: Two per plant.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

E. Balled and Potted and Container-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 2 inches above Insert requirement adjacent finish grades.

1. Backfill: Planting soil. For trees, use excavated soil for backfill.
2. Carefully remove root ball from container without damaging root ball or plant.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.

    a. Quantity: Two per plant.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

F. Fabric Bag-Grown Stock: Set each plant plumb and in center of planting pit or trench with root flare 2 inches above adjacent finish grades.

1. Backfill: Planting soil. For trees, use excavated soil for backfill.
2. Carefully remove root ball from fabric bag without damaging root ball or plant. Do not use planting stock if root ball is cracked or broken before or during planting operation.
3. Backfill around root ball in layers, tamping to settle soil and eliminate voids and air pockets. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
4. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside the root ball about 1 inch from root tips; do not place tablets in bottom of the hole.

    a. Quantity: Two per plant.

5. Continue backfilling process. Water again after placing and tamping final layer of soil.

G. Bare-Root Stock: Set and support each plant in center of planting pit or trench with root flare 2 inches above adjacent finish grade.

1. Backfill: Planting soil. For trees, use excavated soil for backfill.

2. Spread roots without tangling or turning toward surface. Plumb before backfilling, and maintain plumb while working.
3. Carefully work backfill in layers around roots by hand. Bring roots into close contact with the soil.
4. When planting pit is approximately one-half filled, water thoroughly before placing remainder of backfill. Repeat watering until no more water is absorbed.
5. Place planting tablets equally distributed around each planting pit when pit is approximately one-half filled. Place tablets beside soil-covered roots about 1 inch from root tips; do not place tablets in bottom of the hole or touching the roots.

    a. Quantity: Two per plant.

6. Continue backfilling process. Water again after placing and tamping final layer of soil.

H. Watering Pipe: During backfilling, install watering pipe 4 feet deep into the planting pit outside the root ball with top of pipe 1 inch above the mulched surface.

I. Slopes: When planting on slopes, set the plant so the root flare on the uphill side is flush with the surrounding soil on the slope; the edge of the root ball on the downhill side will be above the surrounding soil. Apply enough soil to cover the downhill side of the root ball.

3.6 MECHANIZED TREE-SPADE PLANTING

A. Trees may be planted with an approved mechanized tree spade at the designated locations. Do not use tree spade to move trees larger than the maximum size allowed for a similar field-grown, balled-and-burlapped root-ball diameter according to ANSI Z60.1, or larger than manufacturer's maximum size recommendation for the tree spade being used, whichever is smaller.

B. Use the same tree spade to excavate the planting hole as will be used to extract and transport the tree.

C. When extracting the tree, center the trunk within the tree spade and move tree with a solid ball of earth.

D. Cut exposed roots cleanly during transplanting operations.

E. Plant trees following procedures in "Tree, Shrub, and Vine Planting" Article.

F. Where possible, orient the tree in the same direction as in its original location.

3.7 TREE, SHRUB, AND VINE PRUNING

A. Remove only dead, dying, or broken branches. Do not prune for shape.

B. Prune, thin, and shape trees, shrubs, and vines as directed by Architect.

C. Prune, thin, and shape trees, shrubs, and vines according to standard professional horticultural and arboricultural practices. Unless otherwise indicated by Architect, do not cut tree leaders;

remove only injured, dying, or dead branches from trees and shrubs; and prune to retain natural character.

D. Do not apply pruning paint to wounds.

3.8 TREE STABILIZATION

A. Trunk Stabilization by Upright Staking and Tying: Install trunk stabilization as follows unless otherwise indicated:

1. Upright Staking and Tying: Stake trees of 2- through 5-inch caliper. Stake trees of less than 2-inch caliper only as required to prevent wind tip out. Use a minimum of two stakes of length required to penetrate at least 18 inches below bottom of backfilled excavation and to extend one-third of trunk height above grade. Set vertical stakes and space to avoid penetrating root balls or root masses.
2. Upright Staking and Tying: Stake trees with two stakes for trees up to 12 feet high and 2-1/2 inches or less in caliper; three stakes for trees less than 14 feet high and up to 4 inches in caliper. Space stakes equally around trees.
3. Support trees with bands of flexible ties at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.
4. Support trees with two strands of tie wire, connected to the brass grommets of tree-tie webbing at contact points with tree trunk. Allow enough slack to avoid rigid restraint of tree.

B. Trunk Stabilization by Staking and Guying: Install trunk stabilization as follows unless otherwise indicated on Drawings. Stake and guy trees more than 14 feet in height and more than 3 inches in caliper unless otherwise indicated.

1. Site-Fabricated, Staking-and-Guying Method: Install no fewer than three guys spaced equally around tree.

a. Securely attach guys to stakes 30 inches long, driven to grade. Adjust spacing to avoid penetrating root balls or root masses. Provide turnbuckle or compression spring for each guy wire and tighten securely.
b. For trees more than 6 inches in caliper, anchor guys to wood deadmen buried at least 36 inches below grade. Provide turnbuckle or compression spring for each guy wire and tighten securely.
c. Support trees with bands of flexible ties at contact points with tree trunk and reaching to turnbuckle or compression spring. Allow enough slack to avoid rigid restraint of tree.
d. Support trees with guy cable, connected to the brass grommets of tree-tie webbing at contact points with tree trunk and reaching to turnbuckle or compression spring. Allow enough slack to avoid rigid restraint of tree.
e. Attach flags to each guy wire, 30 inches above finish grade.
f. Paint turnbuckles or compression springs with luminescent white paint.

2. Proprietary Staking and Guying Device: Install staking and guying system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

C. Root-Ball Stabilization: Install at- or below-grade stabilization system to secure each new planting by the root ball unless otherwise indicated.

1. Wood Hold-Down Method: Place vertical stakes against side of root ball and drive them into subsoil; place horizontal wood hold-down stake across top of root ball and screw at each end to one of the vertical stakes.

a. Install stakes of length required to penetrate at least 18 inches below bottom of backfilled excavation. Saw stakes off at horizontal stake.
b. Install screws through horizontal hold-down and penetrating at least 1 inch into stakes. Predrill holes if necessary to prevent splitting wood.
c. Install second set of stakes on other side of root trunk for larger trees.

2. Proprietary Root-Ball Stabilization Device: Install root-ball stabilization system sized and positioned as recommended by manufacturer unless otherwise indicated and according to manufacturer's written instructions.

3.9 ROOT-BARRIER INSTALLATION

A. Install root barrier where trees are planted within 60 inches of paving or other hardscape elements, such as walls, curbs, and walkways, unless otherwise indicated on Drawings.

B. Align root barrier with bottom edge angled at 20 degrees away from the paving or other hardscape element and run it linearly along and adjacent to the paving or other hardscape elements to be protected from invasive roots.

C. Install root barrier continuously for a distance of 60 inches in each direction from the tree trunk, for a total distance of 10 feet per tree. If trees are spaced closer, use a single continuous piece of root barrier.

1. Position top of root barrier according to manufacturer's written recommendations.
2. Overlap root barrier a minimum of 12 inches at joints.
3. Do not distort or bend root barrier during construction activities.
4. Do not install root barrier surrounding the root ball of tree.

3.10 PLACING SOIL IN PLANTERS

A. Place a layer of drainage gravel at least 4 inches thick in bottom of planter. Cover bottom with filter fabric and wrap filter fabric 6 inches up on all sides. Duct tape along the entire top edge of the filter fabric, to secure the filter fabric against the sides during the soil-filling process.

B. Fill planter with planting soil. Place soil in lightly compacted layers to an elevation of 1-1/2 inches below top of planter, allowing natural settlement.

3.11 GROUND COVER AND PLANT PLANTING

A. Set out and space ground cover and plants other than trees, shrubs, and vines as indicated on Drawings in even rows with triangular spacing.

B. Use planting soil for backfill.

C. Dig holes large enough to allow spreading of roots.

D. For rooted cutting plants supplied in flats, plant each in a manner that minimally disturbs the root system but to a depth not less than two nodes.

E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water.

F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

G. Protect plants from hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.

3.12 PLANTING AREA MULCHING

A. Install weed-control barriers before mulching according to manufacturer's written instructions. Completely cover area to be mulched, overlapping edges a minimum of 6 inches and secure seams with galvanized pins.

B. Mulch backfilled surfaces of planting areas and other areas indicated.

1. Trees and Treelike Shrubs in Turf Areas: Apply organic or mineral mulch ring of 2-inch average thickness, with 36-inch radius around trunks or stems. Do not place mulch within 6 inches of trunks or stems.
2. Organic Mulch in Planting Areas: Apply 2-inch average thickness of organic mulch extending 12 inches beyond edge of individual planting pit or trench and over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 6 inches of trunks or stems.
3. Mineral Mulch in Planting Areas: Apply 2-inch average thickness of mineral mulch extending 12 inches beyond edge of individual planting pit or trench and over whole surface of planting area, and finish level with adjacent finish grades. Do not place mulch within 6 inches of trunks or stems.

3.13 EDGING INSTALLATION

A. Shovel-Cut Edging: Separate mulched areas from turf areas, curbs, and paving with a 45-degree, 4- to 6-inch-deep, shovel-cut edge.

B. Mow-Strip Installation:

1. Excavate for mow strip.
2. Compact subgrade uniformly beneath mow strip.
3. Apply nonselective, pre-emergent herbicide that inhibits growth of grass and weeds.
4. Install shovel-cut edge, delineating the edge of mow strip.
5. Install weed-control barrier before mulching, covering area of mow strip, and overlapping and pinning edges of barrier at least 6 inches and according to manufacturer's written instructions.
6. Place indicated thickness of organic or mineral mulch, fully covering weed barrier.

7. Rake mulch to a uniform surface level with adjacent finish grades.

3.14 INSTALLING SLOW-RELEASE WATERING DEVICE

A. Provide one device for each tree.

B. Place device on top of the mulch at base of tree stem and fill with water according to manufacturer's written instructions.

3.15 PLANT MAINTENANCE

A. Maintain plantings by pruning, cultivating, and watering, weeding, fertilizing, mulching, restoring planting saucers, adjusting and repairing tree-stabilization devices, resetting to proper grades or vertical position, and performing other operations as required to establish healthy, viable plantings.

B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch materials damaged or lost in areas of subsidence.

C. Apply treatments as required to keep plant materials, planted areas, and soils free of pests and pathogens or disease. Use integrated pest management practices when possible to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage, mechanical controls such as traps, and biological control agents.

3.16 PESTICIDE APPLICATION

A. Apply pesticides and other chemical products and biological control agents according to authorities having jurisdiction and manufacturer's written recommendations. Coordinate applications with Owner's operations and others in proximity to the Work. Notify Owner before each application is performed.

B. Pre-Emergent Herbicides (Selective and Nonselective): Apply to tree, shrub, and ground-cover areas according to manufacturer's written recommendations. Do not apply to seeded areas.

C. Post-Emergent Herbicides (Selective and Nonselective): Apply only as necessary to treat already-germinated weeds and according to manufacturer's written recommendations.

3.17 REPAIR AND REPLACEMENT

A. General: Repair or replace existing or new trees and other plants that are damaged by construction operations, in a manner approved by Architect.

1. Submit details of proposed pruning and repairs.
2. Perform repairs of damaged trunks, branches, and roots within 24 hours, if approved.
3. Replace trees and other plants that cannot be repaired and restored to full-growth status, as determined by Architect.

B. Remove and replace trees that are more than 25 percent dead or in an unhealthy condition before the end of the corrections period or are damaged during construction operations that Architect determines are incapable of restoring to normal growth pattern.

1. Provide new trees of same size as those being replaced for each tree of 6 inches or smaller in caliper size.
2. Provide two new tree(s) of 6-inch caliper size for each tree being replaced that measures more than 6 inches in caliper size.
3. Species of Replacement Trees: Species selected by Architect.

3.18 CLEANING AND PROTECTION

A. During planting, keep adjacent paving and construction clean and work area in an orderly condition. Clean wheels of vehicles before leaving site to avoid tracking soil onto roads, walks, or other paved areas.

B. Remove surplus soil and waste material including excess subsoil, unsuitable soil, trash, and debris and legally dispose of them off Owner's property.

C. Protect plants from damage due to landscape operations and operations of other contractors and trades. Maintain protection during installation and maintenance periods. Treat, repair, or replace damaged plantings.

D. After installation and before Substantial Completion, remove nursery tags, nursery stakes, tie tape, labels, wire, burlap, and other debris from plant material, planting areas, and Project site.

E. At time of Substantial Completion, verify that tree-watering devices are in good working order and leave them in place. Replace improperly functioning devices.

3.19 MAINTENANCE SERVICE

A. Maintenance Service for Trees and Shrubs: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:

1. Maintenance Period: 24 months from date of Substantial Completion.

B. Maintenance Service for Ground Cover and Other Plants: Provide maintenance by skilled employees of landscape Installer. Maintain as required in "Plant Maintenance" Article. Begin maintenance immediately after plants are installed and continue until plantings are acceptably healthy and well established, but for not less than maintenance period below:

1. Maintenance Period: 12 months from date of Substantial Completion.

END OF SECTION 32 93 00

SECTION 32 93 10 – DECORATIVE STONE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Mexican beach pebble
   2. Natural landscape boulder
   3. Steel edging
   4. Separation fabrics

B. Related Requirements:

   1. Section 329200 "Turf and Grasses" for turf (lawn) planting
   2. Section 329300 “Plants” for plants in and around the boulders.

1.2 COORDINATION

A. Coordination with Lawn and Plants: Install decorative stone before planting and turf areas unless otherwise indicated.

B. Pre-Installation Meeting: Convene a pre-installation site meeting at least 7 days prior to commencing work at site. Require attendance of parties directly affecting work of this section, including Landscape Architect. Review work activities and design goals. Anticipate sending Landscape Architect progress photos of initial installations for approval and/or other recommendations.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Source: Include quarry source of Stream gravel, river jack, and boulders.
   2. Photographs: Include color photographs in digital format of each required stone as it will be furnished to Project. Include a tape measure or other measuring device in each photograph.

B. Samples for Verification: For each of the following:

   1. Beach pebbles: 1-quart (1-L), or 1-gallon containers of required material as necessary per the stone samples; in sealed plastic bag labeled. Each sample shall be typical of the lot of material to be furnished; provide an accurate representation of color, texture, and organic makeup.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of stone from one source with resources to provide materials and products of consistent quality in appearance and physical properties.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Handle large boulders with non-metal straps or other devices that prohibit scarring of boulders. Scarred boulders will not be accepted.

PART 2 - PRODUCTS

2.1 MEXICAN BEACH PEBBLE (P3)

A. Materials:

1. The Stone Store.com, Mexican Beach Pebbles World (Mexicanbeachpebbles.com), or approved equal.
2. Beach pebbles shall range in size from 3” to 5” – min. 3 layers deep
3. Color: Natural black with no polish

2.2 NATURAL LANDSCAPE BOULDER (BO)

A. Materials: Natural stone/granite boulders. No drill holes to be visible.

B. Size: +/- 2 ton: 6’ long x 4’ wide x 2’ height.

C. Color: To match building.

D. Boulders to be selected by landscape architect and field located by landscape architect.

E. Basis of Design: Patapsco Natural Stone Quarry or approved equal.

2.3 EDGE RESTRAINT

A. Edging for Beach Pebbles: Steel landscape edging 1/8” x 5.5”. Black duraflex. 18” minimum length stakes. Select from anchor stake loops stamped in the face of each section, spacing 36” O.C. maximum intervals.

B. Manufacturer: Permaloc

C. Type: CleanLine

2.4 SEPARATION FABRIC

A. Filter fabric for use under Beach Pebbles. Nonwoven geotextile manufactured for separation applications and made of polypropylene, polyolefin, or polyester fibers or combination of them.

B. Geotextile for use under Boulders. Drainage Geotextile: Nonwoven needle-punched geotextile, manufactured for subsurface drainage applications, made from polyolefins or polyesters; with elongation greater than 50 percent.

1. Apparent Opening Size: No. 70 to 100 sieve, maximum; ASTM D 4751.
2. Minimum Grab Tensile Strength: 110 lb.; ASTM D 4632.
3. Minimum Weight: 4 oz./sq. yd..

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas to receive Boulders for compliance with requirements and conditions affecting installation and performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect drains, steam vents, sidewalks, pavements, and other facilities from damage caused by stone installation operations.

3.3 CLEANING AND PROTECTION

A. Remove surplus stone and waste material legally dispose of them off Owner's property.

B. After installation and before Substantial Completion, remove dirt and debris from all boulders.

END OF SECTION 32 93 10

SECTION 33 10 00 - WATER UTILITIES

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. This Section includes water systems piping for potable water service and fire protection service outside the building.

B. Related Specifications: The following standard specifications are made a part of this specification to the extent referenced herein.

1. Baltimore County "Standard Specifications for Construction," with current revisions. Delete all references to method of Measure and basis of Payment.

2. National Fire Protection Association "Standard for Installation of Private Fire Supply Mains and Their Appurtenances - NFPA 24".

C. Related Sections:

1. Division 21: Fire Protection

2. Division 22 : Plumbing

3. Section 31 20 00: Earth Moving

1.3 PERFORMANCE REQUIREMENTS

A. The Contractor will be responsible for securing all appropriate utility permits, including but not limited to a Capitol Connection permit and an on-site water permit.

B. Minimum Pressure Rating: Except where otherwise indicated, the following are minimum pressure requirements for water system piping.

1. Underground Piping: 280 psig with an actual operating pressure of 125 psig.

2. All materials shall be in accordance with the requirements of the Baltimore County Plumbing Code and the Baltimore County Department of Public Works.

1.4 SUBMITTALS

A. General: Submit the following according to Conditions of the Contract and Division I Specification Sections.

B. Product data for the following:

1. Identification materials and devices.

C. Shop drawings for the following: piping; valves; valve vaults; tapping valve; water meter; motor vault; bends and fire hydrants.

D. Coordination drawings showing pipe sizes and elevations. Include details for connections, anchors, and reaction backing. Show other piping in same trench and clearances from water system piping. Indicate interface and spatial relationship between piping and proximate structures.

E. Record drawings at Project closeout of installed water system piping and products according to Division 1 Section “Closeout Procedures”.

F. Test reports specified in “Field Quality Control” Article in Part 3.

1.5 QUALITY ASSURANCE

A. Comply with standards of authorities having jurisdiction for fire protection systems. Include materials, hose threads, installation, and testing.

B. Comply with standards of authorities having jurisdiction for potable water piping and plumbing systems. Include materials, installation, testing, and disinfection.

C. Comply with NFPA 24 “Standards for the Installation of Private Fire Service Mains and Their Appurtenances” for materials, installations, tests and flushing.

D. Listing and Labeling: Provide equipment and accessories that are listed and labeled.

1. The Terms “Listed and Labeled”: As defined in “National Electrical Code,” Article 100.

2. Listing and Labeling Agency Qualifications: A “Nationally Recognized Testing Laboratory” (NRTL) as defined in OSHA Regulation 1910.7.

E. Product Options: Water systems specialties and accessories are based on specific types, manufacturers, and model indicated. Components by other manufacturers but having equal performance characteristics may be considered, provided deviations in dimensions, operation, and other characteristics do not change design concept or intended performance as judged by Architect. The burden of proof of equality of products is on Contractor. Refer to Division 1 Section “Substitutions.”

F. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction, the more stringent will apply.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver pipes and tubes with factory-applied end-caps. Maintain end-caps through shipping,

storage, and handling, to prevent pipe-end damage and to prevent entrance of dirt, debris, and moisture.

B. Protect stored pipes and tubes from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor when storing inside.

C. Protect flanges, fittings, and piping specialties from moisture and dirt.

D. Store plastic pipes protected from direct sunlight. Support to prevent sagging and bending.

1.7 PROJECT CONDITIONS

A. Site Information: Data obtained from a field survey & plans obtained from Baltimore County were used for the basis of the design. The Owner, Architect or Engineer will not be responsible for interpretations or conclusions drawn from this data by the Contractor.

1. Additional test bores and other exploratory operations may be performed by the Contractor, at the Contractor's option; however, no change in the Contract Sum will be authorized for such additional exploration.

B. Existing Utilities: Do not interrupt existing utilities serving facilities occupied by the Owner or others except when permitted in writing by the Architect and then only after acceptable temporary utility services have been provided. If existing utilities are indicated to be abandoned, the Contractor shall remove such utility, if necessary, at no additional cost to the Owner.

1. Provide a minimum 48-hours notice to the Architect and receive written notice to proceed before interrupting any utility.

C. Should uncharted or incorrectly charted, piping, or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility owner.

D. Protection of Persons and Property: Barricade open excavations occurring as part of this work and post with warning lights. Open trench excavations within the limits of the right-of-way shall be protected in accordance with the requirements of applicable permits. Open excavation within other roadways shall be plated and shall be posted with warning devices in accordance with the Manual on Uniform Traffic Control Devices.

1. Perform excavation by hand within dripline of large trees to remain. Protect root systems from damage or dryout to the greatest extent possible. Maintain moist condition for root system and cover exposed roots with moistened burlap.

2. Work which affects the public right-of-way shall be in accordance with Baltimore County requirements and regulations based on the Ownership of the affected road.

1.8 SEQUENCING AND SCHEDULING

A. Coordinate with pipe materials, sizes, entry locations, and pressure requirements of building fire protection systems piping.

B. Coordinate with pipe materials, sizes, and entry locations, and pressure requirements of building water distribution systems piping.

C. Coordinate with other utility work.

D. Coordinate electrical requirements of actual equipment furnished with requirements specified in Division 16.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated in the Work include, but are not limited to, the following:

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Drilling Machine Corporation Stops:

a. Ford Meter Box Co., Inc.

b. Hays Div., Romac Industries.

c. Mueller Co., Grinnell Corp.

2. Bronze Corporation Stops and Valves:

a. Ford Meter Box Co., Inc.

b. Hays Div., Romac Industries.

c. A.Y. McDonald Mfg. Co.

d. Mueller Co., Grinnell Corp.

3. Tapping Valves:

a. Clow Valve Co. Div., McWane, Inc.

b. East Jordan Iron Works, Inc.

c. Kennedy Valve Div., McWane, Inc.

d. Mueller Co., Grinnell Corp.

e. U.S. Pipe & Foundry Co.

4. Gate Valves:

a. American Darling Valve Div., American Cast Iron Pipe Co.

b. Clow Valve Co. Div., McWane, Inc.

c. East Jordan Iron Works, Inc.

d. Gem Sprinkler Co. Div., Grinnell Corp.

e. Hammond Valve Corp.

f. Kennedy Valve Div., McWane, Inc.

g. Milwaukee Valve Co., Inc.

h. Mueller Co., Grinnell Corp.

i. Nibco, Inc.

2.2 PIPES AND TUBES

A. Refer to Part 3 Article "Piping Applications" for identification of systems where pipe and tube materials specified below are used.

B. Ductile-Iron Pipe: AWWA C151, Classes 150, 200, and 250.

1. Lining: AWWA C104, cement mortar, seal coated.

2. Gaskets, Glands, and Bolts and Nuts: AWWA C111.

3. Mechanical-Joint-Type Pipe: AWWA C111, rubber gaskets, ductile retain- or glands, and steel bolts and nuts.

4. Encasement: AWWA C105, polyethylene film tube.

C. Copper Tube: ASTM B 88, Types K and L (ASTM B 88M, Types A and B), seamless water tube, annealed temper.

2.3 PIPE AND TUBE FITTINGS

A. Refer to Part 3 Article "Piping Applications" for identification of systems where pipe and tube fitting materials specified below are used.

B. Ductile-Iron Pipe Fittings: AWWA C110, ductile-iron, 250-psig (1725-kPa) minimum pressure rating; or AWWA C153, ductile-iron compact fittings, 350-psig (2400-kPa) pressure rating.

1. Lining: AWWA C104, cement mortar.

2. Gaskets: AWWA C111, rubber.

C. Polyethylene Encasement: AWWA C105, 8-mils (2 mm) minimum thickness, tube or sheet.

2.4 JOINING MATERIALS

A. Refer to Part 3 Article "Piping Applications" for identification of systems where joining materials specified below are used.

B. Ductile-Iron Pipe and Ductile-Iron Fittings: The following materials apply:

1. Mechanical Joints: AWWA C111 ductile-iron retainer glands, high-strength steel bolts and nuts, and rubber gaskets.

2.5 PIPING SPECIALTIES

A. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150-psig (1035-kPa) or 300-psig (2070-kPa) minimum pressure to suit system pressures.

B. Dielectric-Flange Insulation Kits: Field-assembled companion-flange assembly, full-face or ring type. Components include neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers.

1. Provide separate companion flanges and steel bolts and nuts for 150-psig (1035-kPa) or 300-psig (2070-kPa) minimum working pressure to suit system pressures.

2.6 VALVES

A. Nonrising Stem Gate Valves 3 Inches (DN 80) and Larger: AWWA C500, cast-iron double disc, bronze disc and seat rings, bronze stem, cast-iron or ductile-iron body and bonnet, stem nut, 200-psig (1380-kPa) working pressure, mechanical joint ends.

B. Nonrising Stem Gate Valves 4 Inches (DN 100) and Larger: UL 262, FM approved, iron body and bonnet with flange for indicator post, bronze seating material, inside screw, 175-psig (1200-kPa) working pressure, mechanical joint ends. Provide with flanged ends for pit installation.

C. Valve Boxes: Cast-iron box having top section and cover with lettering "WATER," bottom section with base of size to fit over valve and barrel approximately 5 inches (124 mm) in diameter, and adjustable cast-iron extension of length required for depth of bury of valve.

1. Provide a steel tee-handle operating wrench with each valve box. Wrench shall have tee handle with one pointed end, stem of length to operate valve, and socket-fitting valve-operating nut.

D. Tapping Sleeve and Tapping Valve: Complete assembly, including tapping sleeve, tapping valve, and bolts and nuts. Use sleeve and valve compatible with tapping machine.

1. Tapping Sleeve: Cast-iron or ductile-iron 2-piece bolted sleeve with flanged outlet for new branch connection. Sleeve may have mechanical joint ends with rubber gaskets or sealing rings in sleeve body. Use sleeve that mates with size and type pipe material being tapped. Outlet flange shall be size required for branch connection.

E. Service Clamps and Corporation Stops: Complete assembly, including service clamp, corporation stop, and bolts and nuts. Use service clamp and stop compatible with drilling machine.

1. Service Clamp: Cast iron or ductile iron with gasket and AWWA C800 threaded outlet for corporation stop, and threaded end straps.

2. Corporation Stops: Bronze body and ground key plug, with AWWA C800 threaded inlet and outlet matching service piping material.

3. Manifold: Copper with 2 to 4 inlets as required, with ends matching corporation stops and outlet matching service piping.

2.7 WATER METERS

A. General: Provide water meter with registration in gallons.

B. Domestic Water Meter: As approved by Baltimore City.

C. Fire Service Water Meter: As approved by Baltimore City

2.8 PITS

A. Concrete: Portland cement mix, 3000 psi (20.7 MPa).

1. Cement: ASTM C 150, Type I.

2. Fine Aggregate: ASTM C 33, sand.

3. Coarse Aggregate: ASTM C 33, crushed gravel.

4. Water: Potable.

B. Reinforcement: Steel conforming to the following:

1. Fabric: ASTM A 185, welded wire fabric, plain.

2. Reinforcement Bars: ASTM A 615, Grade 60 (ASTM A 615, Grade 400), deformed.

3. Ladder: ASTM A 36 (ASTM A 36M), steel or polyethylene-encased steel steps.

4. Manhole: ASTM A 48, Class 35, gray-iron, 24-inch (610-mm) minimum diameter traffic frame and cover, of size and weight indicated.

5. Manhole: ASTM A 536, Grade 60-40-18, ductile-iron, 24-inch (610-mm) minimum diameter traffic frame and cover, of size and weight indicated.

6. Drain: ASME A112.21.1M, cast-iron area drain, of size indicated. Include body anchor flange, light-duty cast-iron grate, bottom outlet, and integral or field-installed bronze ball or clapper-type backwater valve.

2.9 FIRE HYDRANTS

A. General: Cast-iron body, compression-type valve, opening against pressure and closing with pressure, 6-inch (DN 150) mechanical joint inlet, 150-psig (1035-kPa) working pressure.

B. Outlet Threads: NFPA 1963, with external hose thread used by local fire department. Include cast-iron caps with steel chains.

C. Operating and Cap Nuts: Pentagon 12 inch (40 mm) point to flat.

D. Direction of Opening: Open hydrant valve by turning operating nut to the left, or counterclockwise.

E. Finish: The outside of all fire hydrants above the breakaway flange shall be factory painted with two coats of safety yellow industrial enamel paint B54 Y27 (Lead Free) as manufactured by Sherwin Williams, or approved equal.

F. Dry-Barrel Fire Hydrants: UL 246, FM-approved, two 22-inch (DN 65) and one 42-inch (DN 115) outlets, 53-inch (133 mm) main valve, drain valve, and 6-inch (DN 150) mechanical joint inlet.

2.10 ANCHORAGES AND BUTTRESSES

A. General: All anchorages and buttresses shall be in conformance with the Baltimore County Specifications and Standard Detail.

B. Concrete Reaction Backing: Portland cement mix, 3000 psi.

1. Cement: ASTM C 150, Type I.

2. Fine Aggregate: ASTM C 33, sand.

3. Coarse Aggregate: ASTM C 33, crushed gravel.

4. Water: Potable

2.11 IDENTIFICATION

A. Metallic-Lined Plastic Underground Warning Tapes: polyethylene plastic tape with metallic core, 6 inches wide, by 4 mils thick, solid blue in color with continuously printed caption in black letters “CAUTION - WATER LINE BURIED BELOW.”

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavation, trenching, and backfilling are specified in Division 31 Section 312300.

3.2 SERVICE ENTRANCE PIPING

A. Extend water system piping and building water distribution and fire protection systems 5' (five feet) from the face of the building wall in locations and pipe sizes indicated.

1. Terminate water system piping 5' (five feet) from the face of the building wall until building water systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building water systems when those systems are installed.

B. Water distribution systems and fire protection systems are specified in Division 15 Sections. Sleeves and mechanical sleeve seals are specified in Division 15 Section “Basic Mechanical Materials and Methods.”

3.3 PIPING APPLICATIONS

A. Refer to Part 2 of this Section for detailed specifications for pipe and fittings products listed below. Use pipe, tube, fittings, and joining methods according to the following applications. Piping in pits and inside building may be joined with flanges or couplings, instead of joints indicated, for grooved-end AWWA-size piping.

B. Use pipe, tube, fittings, and joining methods according to following applications:

1. 22 inches (DN 65) to 32 inches (DN 90): Schedule 80 polyvinyl chloride (PVC) plastic pipe, Schedule 80 PVC fittings, and solvent-cemented joints.

2. 4 inches (DN 100) to 8 inches (DN 200): Class 250, ductile-iron pipe, ductile-iron compact fittings, and mechanical joints with retainer glands.

3.4 VALVE APPLICATIONS

A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:

1. Buried Valves 3 inches (DN 80) and Larger: AWWA, gate valves, nonrising stem, with valve box.

3.5 JOINT CONSTRUCTION

A. Ductile-Iron Piping Gasketed Joints: Construct joints according to AWWA C600.

B. Flanged Joints: Align flanges and install gaskets. Assemble joints by sequencing bolt tightening. Use lubricant on bolt threads.

C. Threaded Joints: Thread pipes with tapered pipe threads according to ASME B1.20.1, apply tape or joint compound, and apply wrench to valve ends into which pipes are being threaded.

D. AWWA Polyvinyl Chloride (PVC) Piping Gasketed Joints: Use AWWA C900 joining materials. Construct joints with elastomeric seals and lubricant according to ASTM D 2774 or ASTM D 3139 and pipe manufacturer's written instructions.

E. Polyvinyl Chloride (PVC) Piping Solvent-Cement Joints: Construct joints according to ASTM D 2672 and ASTM D 2855.

1. Handling of Solvent Cements, Primers and Cleaners: Comply with procedures in ASTM F 402 for safe handling when joining plastic pipe and fittings with solvent cements.

F. Dissimilar Materials Piping Joints: Construct joints using adapters that are compatible with both piping materials, outside diameters, and system working pressure. Refer to "Piping Systems - Common Requirements" Article for joining piping of dissimilar metals.

3.6 PIPING SYSTEMS - COMMON REQUIREMENTS:

A. Installation: Installation shall be in accordance with the Baltimore County Specification Category 300 and the written recommendations of the pipe manufacturer, except that in the case where there are conflicts among the provision of the various installation requirements, the more stringent or restrictive requirements shall govern.

B. General Locations and Arrangements: Drawings indicate general locations and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate

friction loss, expansion, and other design considerations. Install piping as indicated except where deviations to layout are approved on coordination drawings.

C. Install components having pressure rating equal to or greater than system rated pressure (280 psig).

D. Install piping free of sags and bends.

E. Install fittings for changes in direction.

F. Piping Connections: Except as otherwise indicated, making piping connections as specified below.

1. Install flanges, in piping 22 inches and larger, adjacent to flanged valves and at final connection to each piece of equipment having flanged pipe connection.

3.7 PIPING INSTALLATION

A. Comply with requirements of Baltimore County Specification Category 300 for materials and installation.

1. Bury piping at minimum depth of 48 inches below finished grade, and not less than 18 inches below average local frost depth.

3.8 ANCHORAGE INSTALLATION:

A. Anchorages: Install anchorages for tees, plugs/caps, and bends. Include anchorages for the following piping systems:

1. Gasketed-Joint, Ductile-Iron Piping: According to AWWA C600.

2. Gasketed-Joint, Polyvinyl Chloride (PVC) Piping: According to AWWA M23.

3. Fire Service Piping: According to NFPA 24.

B. Apply full coat of asphalt or other acceptable corrosion-retarding to surfaces of installed ferrous anchorage devices.

C. Anchorage blocks shall be constructed of a poured reinforced concrete pad, which partially encapsulates the fitting and prevents any relative movement between the straight section of the fitting and the branch section.

3.9 IDENTIFICATION INSTALLATION

A. Install continuous plastic underground warning tape during back-filling of trench for underground water service piping. Locate 6 inches to 8 inches below finished grade, directly over piping.

3.10 FIELD QUALITY CONTROL

A. Piping Tests: Conduct piping tests before joints are covered and after thrust blocks have hardened sufficiently. Fill pipeline 24 hours prior to testing and apply test pressure to stabilize system. Use only potable water. Notify Owner 24 hours in advance for any tests.

B. Hydrostatic Tests: Test at not less than 2 times operating pressure for 2 hours.

1. Increase pressure in 50-psig increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig. Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts per hour per 1000 joints. Remake leaking joints with new materials and repeat test until leakage is within above limits.

3.11 CLEANING

A. Clean and disinfect water distribution piping as follows:

1. Purge new water distribution piping systems and parts of existing systems that have been altered, extended, or repaired prior to use.

2. Use purging and disinfecting procedures prescribed by Baltimore County Specifications, Category 300.

B Prepare reports for purging and disinfecting activities.

END OF SECTION 33 10 00

SECTION 33 30 00 - SANITARY SEWERAGE UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

D. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 SUMMARY

A. This Section includes sewage disposal systems.

B. Related Sections:

1. Section 017700: Closeout Procedures
2. Section 033000: Cast-In-Place Concrete
3. Section 312000; Earth Moving

1.3 DEFINITIONS

A. Wastewater: Sewage, water or other liquid requiring disposal.

1.4 PERFORMANCE REQUIREMENTS

A. The Contractor will be responsible for securing all appropriate utility permits, including but not limited to an on-site sewer permit.

B. Solid Piping Rating: At least equal to system operating pressure.

1.5 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Shop drawings for the following precast, reinforced-concrete structures, including manhole openings, covers, pipe connections, and accessories.

C. Coordination drawings showing piping, underground structures, and other utilities. Indicate size and invert elevations of piping and structures.

D. Record drawings at project closeout of installed sanitary sewer system piping and products according to Division 1 Section “Closeout Procedures”, and “Project Record Documents”.

1.6 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with provisions of the local health department and authorities having jurisdiction.

B. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction, the more stringent will apply.

C. Cast iron fittings and ductile iron pipe (DIP) and fittings shall be sound and without defects that might impair its service. Defective areas shall not exceed the maximum allowable minus wall thickness tolerance specified in AWWA C110 or C151. Repair of defects by welding or other methods will not be allowed. Defective or damaged lining areas may be repaired by cutting out the defective or damaged lining to the metal so that the edges of the lining not removed are perpendicular or slightly undercut. The cutout area and the adjoining lining shall be thoroughly wetted, and a stiff mortar applied and troweled smooth with the adjoining lining. After any surface water has evaporated, but while the patch is still moist, it shall be cured by the application of a seal coat.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic pipe or fittings in direct sunlight.

B. Protect pipe, pipe fittings, and seals from dirt and damage.

C. Handle pre-cast concrete structures according to manufacturers rigging instructions.

1.8 PROJECT CONDITIONS

A. Site Information Data in subsurface investigation reports was used for the basis of the design. The data in the subsurface investigation report is not a part of the Contract. Conditions are not intended as representations or warranties of accuracy or continuity between soil borings. The Owner, Architect or Engineers will not be responsible for interpretations or conclusions drawn from this data by the Contractor.

1. Additional test borings and other exploratory operations may be performed by the Contractor, at the Contractor’s option; however, no change in the Contract Sum will be authorized for such additional exploration.

B. Existing Utilities: Do not interrupt existing utilities serving facilities occupied by the Owner or others except when permitted in writing by the Architect and then only after acceptable temporary utility services have been provided. If existing utilities are indicated to be abandoned, the Contractor shall remove such utility, if necessary, at no additional cost to the Owner.

1. Provide a minimum 48-hours’ notice to the Architect and receive written notice to proceed before interrupting any utility.

PART 2 - PRODUCTS

2.1 PIPES AND FITTINGS

A. Refer to Part 3 “Piping Applications” Article for identification of systems where piping materials specified below are used.

B. Polyvinyl Chloride (PVC) Sewer Pipe and Fittings: ASTM D 3034, SDR 26, nonperforated, for solvent-cement or elastomeric gasket joints.

1. Solvent Cement: ASTM D 2564.
2. Gaskets: ASTM F 477, elastomeric seal.

C. Ductile Iron Pipe and fittings

1. Pipe
   a) Pipe shall be manufactured in accordance with the requirements of AWWA C151 except that the metal thickness shall be as described herein. Pipe nominal lengths may be 16 through 20 feet.
   b) All pipe and fittings shall be designed and constructed to withstand all external pressure caused by overburden as indicated on the profile and traffic loads to which the pipe may be subjected.
   c) Ductile iron pipe and ductile iron and cast iron fittings shall be cement-lined in accordance with AWWA C 104, double thickness. This lining shall be sealed with a bituminous seal coat. The outside surfaces shall be bituminous coated.
2. Joints
   a) Joints may be mechanical or rubber gasketed push-on type. Unless otherwise noted, all joints shall be in accordance with AWWA C111.
3. Fittings
   a) All fittings shall be manufactured in accordance with AWWA C110 or AWWA C 153 for compact fittings sizes 3 inch through 16 inch. Fittings shall be designed and constructed to withstand a pressure not less than that for the adjacent pipe.
4. Lining and Coating
   a) All pipe and fittings shall be cement-lined in accordance with AWWA C104, double thickness. This lining shall be sealed with a bituminous seal coat. The outside surface shall be bituminous coated.

D. Sleeve-Type Couplings: Rubber or elastomeric sleeve and band assembly fabricated to match outside diameters of pipes to be joined.

1. Sleeves for Plastic Pipe: ASTM F 477, elastomeric seal.
2. Bands: Stainless steel, at least one at each pipe insert.

F. Gasket-Type Couplings: Rubber or elastomeric compression gasket, made to match outside diameter of smaller pipe and inside diameter or hub or adjoining larger pipe.

1. Gaskets for Plastic Pipe: ASTM F 477, elastomeric seal.
2. Gaskets for Dissimilar Pipes: Compatible with pipe materials being joined.

2.2 CLEANOUTS

A. Description: ASME A112.36.2M, with round, flanged, cast-iron housing, and secured scoriated, medium-dry loading class, cast-iron cover. Include cast-iron ferrule and countersunk brass cleanout plug.

2.3 MANHOLES

A. Precast Concrete Manholes: ASTM C 478, precast reinforce concrete, of depth indicated, with provision for rubber gasket joints, and frame and cover; all in accordance with Baltimore County Standard Details. Include indented top design with lettering, equivalent to the following cast into cover:

1. Sanitary Sewer Piping Systems: BALTIMORE COUNTY SANITARY SEWER

2.4 PROTECTIVE COATINGS

A. General: Include factory or field-applied protective coatings to structures and appurtenances according to the following:

1. In accordance with the Baltimore County Department of Public Works Specifications for Sanitary Sewer Manholes.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Division 31 Section 312000.

3.2 IDENTIFICATION

A. Identification materials and their installation are specified in Division 2 Section “Excavating and Filling”. Arrange for installation of green warning tapes directly over piping (including absorption field piping), at outside edges of underground structures, and at outside edges of seepage pits.

1. Use detectable warning tape over edges of underground structures, edges of seepage pits, and over nonferrous piping.

3.3 GENERAL INSTALLATION

A. Installation: Installation shall be in accordance with the requirements of the Baltimore County Specifications, and in accordance with the Drawings.

B. Where installation details are not shown on the Drawings, installation shall be in accordance with the Baltimore County Standard Details.

C. Termination: Terminate piping 5' from building foundation in location as indicated. Provide temporary pipe plug for piping extension into building by work of Division 22.

3.4 PIPING APPLICATIONS

A. Use pipes, fittings, and joining methods, for all piping sizes, according to the following applications.

3.5 PIPE JOINT CONSTRUCTION AND INSTALLATION

A Join and install polyvinyl chloride (PVC) pipe as follows:

1. Join solvent-cement type pipe and fitting with solvent cement according to ASTM D 2855 and ASTM F402.
2. Join gasketed pipe and fittings with elastomeric seals according to ASTM D 3212.
3. Install solid piping according to ASTM D 2321.

3.6 CLEANOUT INSTALLATION

A. Install cleanouts and extension for mapping to cleanout at grade as indicated. Set cleanout housing and cover in concrete block 18 by 18 by 12 inches deep, except where location is in concrete paving. Set top of cleanout 1 inch above surrounding earth grade, or flush with grade when installed in paving.

B. Cleanout installed in paving shall have countersunk lid.

C. Refer to Division 3 Section “Cast-in-Place Concrete” for formwork, reinforcing and concrete.

3.7 CONNECTIONS

A. Install standard manhole over existing sanitary sewer and connect proposed sanitary.

3.8 FIELD QUALITY CONTROL

A. System Tests: After installation, pipe shall be inspected visually for deflections and misaligned pipe sections.
1. All sewers shall be tested in accordance with Section 361 of the Baltimore County Specifications, except that Contractor shall supply all materials needed for testing.
2. All sewers shall be air tested in accordance with Baltimore County requirements, except that Contractor shall supply all materials needed for testing.
3. Additional Tests: Fill underground structures with water and let stand overnight. If water level recedes, locate and repair leaks and retest. Repeat tests and repair until there is no leakage.
4. Cleaning: Clear interior of piping and structures of dirt and other superfluous materials as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of day or whenever work stops.

END OF SECTION 33 30 00

SECTION 33 40 00 - STORM DRAINAGE UTILITIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

B. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 SUMMARY

A. This Section includes drainage systems outside the building. Systems include the following:

1. Storm drainage
2. Stormwater Management Facility

B. Related Sections:

1. Section 017700: Closeout Procedures
2. Section 312000: Earth Moving
3. Refer to sections relating to plumbing piping, drainage and vent systems and laboratory systems in Division 22.

1.3 DEFINITIONS

A. Drainage Piping: System of sewer pipe, fittings, and appurtenances for gravity flow of storm drainage.

1.4 PERFORMANCE REQUIREMENTS:

A. Gravity-Flow, Nonpressure-Piping Pressure Ratings: At least equal to system test pressure.

B. Stormwater Management Permit: Stormwater management facilities shall be constructed in accordance with the approved drawings and the provisions of the Stormwater Management Permit.

C. Certification of Completed Facilities: As-Built and Certifications are required for this stormwater management facility. In order to properly prepare these documents, this stormwater management facility must be inspected by a Registered Professional Engineer at specific stages of the construction. The Contractor shall notify the Certifying Engineer and Owner at least five (5) working days prior to starting work on this stormwater management facility. The

Contractor shall also contact the Certifying engineer at least two (2) working days prior for each required inspection item shown on the contract documents. Preparation and processing of the As-Built Plans and Certification will be the responsibility of the Owner.

1.5 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 1 Specification Sections.

B. Product data for the following:

1. Cleanouts.
2. Piping.
3. Fittings.

C. Shop drawings for precast concrete manholes and other structures. Include frames, covers and grates.

D. Shop drawings for cast-in-place concrete or field-erected masonry manholes and other structures. Include frames, covers and grates.

E. Reports and calculations for design mixes for each class of cast-in-place concrete.

F. Inspection and test reports specified in the “Field Quality Control” Article.

G. Record drawings at Project closeout of installed water system piping and products according to Division 1 Section “Closeout Procedures”, and “Project Record Documents”.

1.6 QUALITY ASSURANCE

A. Environmental Agency Compliance: Comply with regulations pertaining to sanitary sewerage and storm drainage systems.

B. Utility Compliance: Comply with regulations pertaining to sanitary sewerage and storm drainage systems. Include standards of water and other utilities where appropriate.

C. Product Options: Drawings indicate sizes, profiles, connections, and dimensional requirements of system components and are based on specific manufacturer types indicated. Other manufacturer’s products with equal performance characteristics may be considered.

D. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County requirements, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Do not store plastic structures in direct sunlight.

B. Do not store plastic pipe or fittings in direct sunlight.

C. Protect pipe, pipe fittings, and seals from dirt and damage.

D. Handle precast concrete manholes and other structures according to manufacturer’s rigging instructions.

1.8 PROJECT CONDITIONS

A. Site Information: Data in subsurface investigation reports was used for the basis of the design. The data in the subsurface investigation report is not a part of the Contract. Conditions are not intended as presentations or warranties of accuracy or continuity between soil borings. The Owner, Architect or Engineers will not be responsible for interpretations or conclusions drawn from this data by the Contractor.

1. Additional test borings and other exploratory operations may be performed by the Contractor, at the Contractor's option; however, no change in the Contract Sum will be authorized for such additional exploration.

B. Locate existing structures and piping to be closed and abandoned.

C. Existing Utilities: Do not interrupt existing utilities serving facilities occupied by the Owner or others except when permitted under the following conditions and then only after arranging to provide acceptable temporary utility services.

1. Notify Architect not less than 48 hours in advance of proposed utility interruptions.

2. Do not proceed with utility interruptions without receiving Architect's written permission.

D. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility owner immediately for directions. Cooperate with Owner and utility companies in keeping respective services and facilities in operation. Repair damaged utilities to satisfaction of utility owner.

1.9 SEQUENCING AND SCHEDULING

A. Coordinate with interior building drainage systems.

B. Coordinate with other utility work.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Cleanouts

a. Ancon, Inc.

b. Jones Manufacturing Co., Inc.

c. Josam Co.

d. Rockford Sanitary Systems, Inc.

e. Jay R. Smith Mfg. Co. Div., Smith Industries, Inc.

f. Wade Div., Tyler Corp.

g. Zurn Industries, Inc., Hydromechanics Div.

2. High Density Polyethylene (HDPE) pipe and fittings

a. Hancor

b. Advance Drainage Systems (ADS)

c. Lane Enterprises

d. JM Eagle

2.2 PIPES AND FITTINGS

A. Polyvinyl Chloride Schedule 40 (P.V.C. SCH40)(watertight).

B. Polyvinyl Chloride SDR 26 (P.V.C. SDR26)(watertight)

C. Reinforced-Concrete Sewer Pipe and Fittings: ASTM C 76, Class IV, Wall B, for gasketed joints.

1. Gaskets: ASTM C 443, rubber.

D. High Density Polyethylene (HDPE) pipe and fittings. Watertight Joint

2.3 SPECIAL PIPE COUPLINGS AND FITTINGS

A. Sleeve-Type Pipe Couplings: Rubber or elastomeric sleeve and band assembly fabricated to match outside diameters of pipes to be joined, for nonpressure joints.

1. Sleeves for Concrete Pipe: ASTM C 443 (ASTM C 443M), rubber.

2. Sleeves for Plastic Pipe: ASTM F 477, elastomeric seal.

3. Sleeves for Dissimilar Pipes: Compatible with pipe materials being joined.

4. Bands: Stainless steel, at least one at each pipe insert.

2.4 MANHOLES

A. Precast Concrete Manholes: ASTM C 478, precast, reinforced concrete, of depth indicated, with provision for rubber gasket joints, and frame and cover, all in accordance with Baltimore County Standard Details. Include indented top design with lettering, equivalent to the following, cast into cover:

1. Storm Drainage Piping Systems: BALTIMORE COUNTY STORM DRAIN.

2.5 STORM DRAIN INLETS

A. General: Pre-cast reinforced concrete, or cast-in-place concrete complete with frames and grates, all in accordance with Baltimore County Standard Details or as otherwise noted on the plans.

2.6 CONCRETE

A. General: Cast-in-place concrete according to ACI 318, ACI 350R, and the following:

1. Cement: ASTM C 150, Type II.

2. Fine Aggregate: ASTM C 33, sand.

3. Coarse Aggregate: ASTM C 33, crushed gravel.

4. Water: Potable.

B. Structures: Portland-cement design mix, 4000 psi minimum, with 0.45 maximum water-cement

ratio.

1. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
2. Reinforcement Bars: ASTM A 615, Grade 60, deformed steel.

C. Structure Channels and Benches: Factory or held formed from concrete. Portland-cement design mix, 4000 psi minimum, with 0.45 maximum water-cement ratio.

1. Include channels and benches in manholes.
   a. Manholes Channels: Concrete invert, formed to same width as connected piping, with height of the vertical sides to 3/4 of the pipe diameter. Form curved channels with smooth, uniform radius and slope.
      (1) Invert Slope: 2.5 percent (1:40) through manhole.
      (2) Manhole Benches: Concrete, sloped to drain into channel.
         (a) Slope: 1 inch per foot (1:12).
   b. Include channels and benches in storm drain inlets.
      (1) Storm Drain Inlet Channels: Concrete invert, formed to same width as connected piping, with height of the vertical sides to 3/4 of the pipe diameter. Form curved channels with smooth, uniform radius and slope.
         (a) Invert Slope: 2.5 percent (1:40) through inlet.
      (2) Storm Drain Inlet Benches: Concrete, sloped to drain into channel.
         (b) Slope: 1 inch per foot (1:12).
2. Ballast and Pipe Supports: Portland-cement design mix, 3000 psi minimum, with 0.58 maximum water-cement ratio.
   a. Reinforcement Fabric: ASTM A 185, steel, welded wire fabric, plain.
   b. Reinforcement Bars: ASTM A 615, Grade 60, deformed steel.

2.7 PROTECTIVE COATINGS

A. General: Include factory - or field-applied protective coatings to structures and appurtenances according to the following:

1. In accordance with the Baltimore County Department of Public Works Specifications for Storm Drain Manholes.
2. Coating: Apply 2-coats, coal-tar epoxy, 15-mil minimum thickness, except where otherwise indicated.
   a. Manholes: On exterior surfaces.
   b. Storm Drain Inlets: On exterior surfaces.

2.8 CLEANOUTS

A. Description: ASME A112.36.2M, round, cast-iron housing with clamping device and found, secured, scoriated, cast-iron cover. Include cast-iron ferrule with inside calk or spigot connection and countersunk, tapered-thread, brass closure plug. Use units with top-loading classifications according to the following applications:

1. Light Duty: In earth or grass, foot-traffic areas.
2. Medium Duty: In paved, foot-traffic areas.

3. Heavy Duty: In vehicle-traffic service areas.2.9 RIPRAP

A. Stone for riprap shall be uniformly graded from the smallest to the largest pieces as specified in the Contract Documents. The stone will be accepted upon visual inspection at the point of usage, and shall conform to the following:

CLASS OF RIPRAP	WEIGHT RANGES lb (kg)	APPROX. SIZE in. (mm)
0	1-33 (0.5 – 15)	2-7 (50-175)
I	2-150 (1-70)	3-12 (75-300)
II	20-700 (10-320)	6-20 (150-500)
III	40-2000 (20-910)	8-28 (200-700)

2.9 GEOTEXTILES

A. Geotextiles shall conform to the class specified in the Contract Documents. The geotextile shall be manufactured from fibers consisting of long chain synthetic polymers, composed of a minimum 85 percent by weight of polyolephins, polyesters or polyamides. The geotextile shall resist deterioration from ultraviolet exposure. Geotextiles used in the construction of silt fence shall contain sufficient amounts of ultraviolet ray inhibitors and stabilizers to provide a minimum of 12 months of expected usable construction life at a temperature range of 0 to 120F (-18 to 49 C).

B. All values specified are minimum or maximum roll values.

C. Classes A through E Geotextiles shall have a 0.010 cm/sec minimum permeability when tested in conformance with D4491, and an apparent minimum elongation of 20 percent when tested for conformance with the grab tensile strength requirements specified below. Classes A through E Geotextiles shall also conform to the following additional requirements:

GEOTEXTILE CLASS	MAXIMUM APPARENT OPENING SIZE mm	GRAB TENSILE STRENGTH lb (N) min	MINIMUM BURST STRENGTH psi (MPa)
A	0.30	250 (1110)	500 (3.4)
B	0.60	200 (890)	320 (2.2)
C	0.30	200 (890)	320 (2.2)
D	0.60	90 (400)	145 (1.0)
E	0.30	90 (400)	145 (1.0)

D. Class F Geotextiles (Silt Fence) shall have a 50 lb/in. (8.8kN/m) minimum tensile strength and a 20 lb/in. (3.5kN/m) minimum tensile modulus when tested in conformance with D4595. The material shall also have a 0.3 gal/ft² (12.21/m²) per minute minimum flow rate and a 75 percent minimum filtering efficiency when tested in conformance with D 5141.

E. The properties shall be determined as follows:

TEST	METHOD
Apparent Opening Size	D 4751
Grab Tensile Strength	D 4632, Grab Test – 4 x 8 in. (100 x 200 mm) specimen, 1 x 2 in. (25 x 50 mm) clamps; 12 in. (300 mm)/minute strain rate both principal directions of geotextile.
Burst Strength	D 3786

Sewing of the geotextile will be allowed provided it conforms to the following:

a) Seams shall be either “J” or “butterfly” type and shall utilize a lock stitch.

b) Seams shall conform to the tensile strength requirements for the geotextile when tested across the seam.

c) The thread for seaming shall be of equal or greater durability than the geotextile itself.

PART 3 - EXECUTION

3.1 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Division 2 Section 312300 “Excavating and Filling.”

3.2 IDENTIFICATION

A. Materials and their installation are specified in Division 2 Section 312300. Arrange for installation of green detectable warning tapes directly over piping and at outside edges of underground structures.

3.3 PIPING APPLICATIONS

A. General: Include watertight, silttight, or soiltight joints, except where watertight or silttight joints are indicated.

B. Refer to Part 2 of this Section for detailed specifications for pipe and fitting products listed below. Use pipe, fittings, and joining methods according to the following applications.

C. High Density Polyethylene Pipe (HDPE), Hancor Blue Seal corrugated polyethylene pipe installed per manufacturers’ specifications.

D. Reinforced-concrete sewer pipe and fittings; rubber gaskets; and gasketed joints.

E. Polyvinyl Chloride (PVC) pipe: ASTM D 3034, PVC, solvent-cemented, sewer pipe fittings; and solvent-cemented joints.

3.4 SPECIAL PIPE COUPLING AND FITTING APPLICATIONS

A. Special Pipe Couplings: Use where indicated and where required to join piping and no other

appropriate method is specified. Do not use instead of specified joining methods.

1. Use the following pipe couplings for nonpressure applications:
   a. Straight-pattern, sleeve type to join piping, of same size, with small difference in outside diameters.
   b. Increaser/reducer-pattern, sleeve type to join piping of different sizes.
   c. Gasket type to join piping of different sizes where annular space between smaller piping's outside diameter and larger piping's inside diameter permits installation.
   d. Internal-expansion type to join piping with same inside diameter.

B. Special Pipe Fittings: Use where indicated.

3.5 INSTALLATION, GENERAL

A. General Locations and Arrangements: Drawings (plans and details) indicate the general location and arrangement of underground drainage systems piping. Location and arrangement of piping layout take into account many design considerations. Install piping as indicated, to extent practical and in accordance with the requirements of the Baltimore County Specifications and in accordance with the pipe manufacturer's written instructions. Where installation details are not shown on the Drawings, installation shall be in accordance with the Baltimore County Standard Details.

B. Install piping beginning at low point of systems, true to grades and alignment indicated with unbroken continuity of invert. Place bell ends of piping facing upstream. Install gaskets, seals, sleeves, and couplings according to manufacturer's recommendations for use of lubricants, cements, and other installation requirements. Maintain swab or drag in line and pull past each joint as it is completed.

C. Use manholes for changes in direction.

D. Use proper size increasers, reducers, and couplings, where different sizes or materials of pipes and fittings are connected. Reduction of the size of piping in the direction of flow is prohibited, except as indicated on the plans.

E. Install piping at constant slope between points and elevations indicated. Install straight piping runs at constant slope, not less than that specified, where slope is not indicated.

F. Extend piping and connect to building's storm drains, of sizes and in locations indicated. Terminate piping as indicated.

G. Install piping pitched down in direction of flow, at minimum slope of 1 percent (1:100) and 30-inch minimum cover, except where otherwise indicated.

3.6 PIPE JOINT CONSTRUCTION AND INSTALLATION

A. General: Join and install pipe and fittings according to the following.

B. Polyvinyl Chloride Schedule 40 Pipe (P.V.C. SCH40) Pipe and Fittings: Join and install in accordance with manufacturer's instructions.

C. Concrete Pipe and Fittings: Install according to ACPA "Concrete Pipe Handbook." Use the following seals:

1. Round Pipe and Fittings: ASTM C 443 (ASTM C 443M), rubber gaskets.

D. Join piping made of different materials or dimensions with couplings made for this application. Use couplings that are compatible with and fit both systems' materials and dimensions.

3.7 MANHOLE INSTALLATION

A. General: Install manholes, complete with accessories, as indicated.

B. Form continuous concrete channels and benches between inlets and outlet, where indicated.

C. Set tops of frames and covers flush with finished surface where manholes occur in pavements. Set tops 3 inches above finished surface elsewhere, except where otherwise indicated.

D. Place precast concrete manhole sections as indicated, and install according to ASTM C 891.

1. Provide rubber joint gasket complying with ASTM C 443, at joints of sections.
2. Apply bituminous mastic coating at joints of sections.

E. Construct cast-in-place manholes as indicated.

3.8 STORM DRAIN OUTFALL INSTALLATION

A. Install end sections as indicated.

B. Construct rip-rap of broken stone, as indicated.

3.9 CONCRETE PLACEMENT

A. Place cast-in-place concrete according to ACI 318, ACI 350R, and as indicated.

3.10 CLEANOUT INSTALLATION

A. Install cleanouts and riser extension from sewer pipe to cleanout at grade. Use cast-iron soil pipe fittings in sewer pipes at branches for cleanouts and cast-iron soil pipe for riser extensions to cleanouts. Install piping so cleanouts open in direction of flow in pipe.

B. Set cleanout frames and covers in concrete paving with tops flush with surface of paving.

C. Cleanouts located in paving shall have countersunk lids.

3.11 CLOSING ABANDONED DRAINAGE SYSTEMS

A. Abandoned Piping: Close open ends of abandoned underground piping that is indicated to remain in place. Include closures strong enough to withstand hydrostatic and earth pressures that may result after ends of abandoned piping have been closed. Use either of the following procedures:

1. Close open ends of piping with at least 8-inch-thick brick masonry bulkheads.
2. Close open ends of piping with threaded metal caps, plastic plugs, or other acceptable methods suitable for size and type of material being closed. Do not use wood plugs.

B. Abandoned Structures: Excavate around structure as required and use either of the following procedures:

1. Remove structure and close open ends of remaining piping.
2. Remove top of structure down to at least 36 inches below final grade. Fill to within 12 inches of top with stone, rubble, gravel, or compacted dirt. Fill to top with concrete.
3. Backfill to grade according to Division 2 Section 312000 “Earth Moving.”

3.12 FIELD QUALITY CONTROL

A. Clear interior of piping and structures of dirt and superfluous material as the work progresses. Maintain swab or drag in piping and pull past each joint as it is completed.
   1. In large, accessible piping, brushes and brooms may be used for cleaning.
   2. Place plug in end of incomplete piping at end of day and whenever work stops.
   3. Flush piping between manholes and other structures, if required by authorities having jurisdiction, to remove collected debris.

B. Inspect interior of piping to determine whether line displacement or other damage has occurred. Inspect after approximately 24 inches of backfill is in place, and again at completion of the Project.
   1. Submit separate reports for each system inspection.
   2. Defects requiring correction include the following:
      a. Alignment: Less than full diameter of inside of pipe is visual between structures.
      b. Deflection: Flexible piping with deflection that prevents passage of a ball or cylinder of a size not less than 92.5 percent of piping diameter.
      c. Crushed, broken, cracked, or otherwise damaged piping.
      d. Infiltration: Water leakage into piping.
      e. Exfiltration: Water leakage from or around piping.
   3. Replace defective piping using new materials and repeat inspections until defects are within allowances specified.
   4. Reinspect and repeat procedures until results are satisfactory.

C. Test new piping systems and parts of existing systems that have been altered, extended, or repaired for leaks and defects.
   1. Do not enclose, cover, or put into service before inspection and approval.
   2. Test completed piping systems according to authorities having jurisdiction.
   3. Schedule tests, and their inspections by authorities having jurisdiction, with at least 24 hours advance notice.
   4. Submit separate reports for each test.
   5. Where authorities having jurisdiction do not have published procedures, perform tests as follows:
      a. Storm Drainage: Perform hydrostatic test.
         (1) Allowable leakage is a maximum of 200 gallons per inch nominal pipe size, for every mile of pipe, during a 24-hour period.
         (2) Close openings in system and fill with water.
         (3) Purge air and refill with water.

(4) Disconnect water supply.

(5) Test and inspect joints for leaks.

(6) Option: Test ductile-iron piping according to AWWA C600, Section 4 “Hydrostatic Testing.” Use test pressure of at least 5 psig.

(7) Option: Test concrete piping according to ASTM C 969.

(8) Option: Test concrete arch piping and elliptical piping according to authorities having jurisdiction.

b. Storm Drainage: Perform hydrostatic test. Close openings in system and fill with water to not less than 10-foot head of water. Disconnect water supply. Water level must not drop for 15 minutes. Inspect joints for leaks.

(1) Option: Test concrete arch piping and elliptical piping according to authorities having jurisdiction.

c. Storm Drainage: Perform air test according to UNI-B-6.

(1) Option: Test round concrete piping, 24 inches and smaller, according to ASTM C 924.

(2) Option: Test concrete arch piping and elliptical piping according to authorities having jurisdiction.

6. Manholes: Perform hydraulic test according to ASTM C 969.

7. Leaks and loss in test pressure constitute defects that must be repaired.

8. Replace leaking piping using new materials and repeat testing until leakage is within allowances specified.

END OF SECTION 33 40 00

SECTION 33 46 00 - SUBDRAINAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 SUMMARY

A. Section Includes:

1. Perforated-wall pipe and fittings.
2. Drainage conduits.
3. Drainage panels.
4. Geotextile filter fabrics.

1.3 ACTION SUBMITTALS

A. Product Data:

1. Drainage conduits, including rated capacities.
2. Drainage panels, including rated capacities.
3. Geotextile filter fabrics.

PART 2 - PRODUCTS

2.1 PERFORATED-WALL PIPES AND FITTINGS

A. Perforated PE Pipe and Fittings:

1. NPS 6 (DN 150) and Smaller: ASTM F405 or AASHTO M 252, Type CP; corrugated, for coupled joints.
2. NPS 8 (DN 200) and Larger: ASTM F667; AASHTO M 252, Type CP; or AASHTO M 294, Type CP; corrugated; for coupled joints.
3. Couplings: Manufacturer's standard, band type.

B. Perforated PVC Sewer Pipe and Fittings: ASTM D2729, bell-and-spigot ends, for loose joints.

2.2 DRAINAGE CONDUITS

A. Molded-Sheet Drainage Conduits: Prefabricated geocomposite with cuspated, molded-plastic drainage core wrapped in geotextile filter fabric.

1. Nominal Size: 12 inches (304.8 mm) high by approximately 1 inch (25.4 mm) thick.

a. Minimum In-Plane Flow: 30 gpm (113.6 L/min.) at hydraulic gradient of 1.0 when tested according to ASTM D4716.

2. Filter Fabric: PP geotextile.

3. Fittings: HDPE with combination NPS 4 and NPS 6 (DN 100 and DN 150) outlet connection.

B. Single-Pipe Drainage Conduits: Prefabricated geocomposite with perforated corrugated core molded from HDPE complying with ASTM D3350 and wrapped in geotextile filter fabric.

1. Nominal Size: 12 inches (304.8 mm) high by approximately 1 inch (25.4 mm) thick.

a. Minimum In-Plane Flow: 30 gpm (113.6 L/min.) at hydraulic gradient of 1.0 when tested according to ASTM D4716.

2. Filter Fabric: PP geotextile.

3. Fittings: HDPE with combination NPS 4 and NPS 6 (DN 100 and DN 150) outlet connection.

4. Couplings: Corrugated HDPE band.

C. Mesh Fabric Drainage Conduits: Prefabricated geocomposite with plastic-filament drainage core wrapped in geotextile filter fabric. Include fittings for bends and connection to drainage piping.

1. Nominal Size: 6 inches (152.4 mm) high by approximately 0.9 inch (22.9 mm) thick.

a. Minimum In-Plane Flow: 2.4 gpm (9.1 L/min.) at hydraulic gradient of 1.0 when tested according to ASTM D4716.

2. Filter Fabric: Nonwoven geotextile made of PP or polyester fibers or combination of both. Flow rates range from 120 to 200 gpm/sq. ft. (81.5 to 135.8 L/s per sq. m) when tested according to ASTM D4491.

2.3 DRAINAGE PANELS

A. Molded-Sheet Drainage Panels: Prefabricated geocomposite, 36 to 60 inches (914.4 to 1524 mm) wide with drainage core faced with geotextile filter fabric.

1. Drainage Core: Three-dimensional, nonbiodegradable, molded PP.

a. Minimum Compressive Strength: 10,000 lbf/sq. ft. (478.8 kPa) when tested according to ASTM D1621.

b. Minimum In-Plane Flow Rate: 2.8 gpm/ft. (34.8 L/min. per m) of unit width at hydraulic gradient of 1.0 and compressive stress of 25 psig (172.4 kPa) when tested according to ASTM D4716.

2. Filter Fabric: Nonwoven needle-punched geotextile, manufactured for subsurface drainage, made from polyolefins or polyesters; with elongation greater than 50 percent; complying with the following properties determined according to AASHTO M 288:

a. Survivability: Class 1.

b. Apparent Opening Size: No. 40 (0.425-mm) sieve, maximum.

c. Permittivity: 0.5 per second, minimum.

3. Film Backing: Polymeric film bonded to drainage core surface.

B. Mesh Fabric Drainage Panels: Prefabricated geocomposite with drainage core faced with geotextile filter fabric.

1. Drainage Core: Open-construction, resilient, plastic-filament mesh, approximately 0.4 inches (10.2 mm) thick.

a. Minimum In-Plane Flow Rate: 2.4 gpm/ft. (29.8 L/min. per m) of unit width at hydraulic gradient of 1.0 and normal pressure of 25 psig (172.4 kPa) when tested according to ASTM D4716.

2. Filter Fabric: Nonwoven geotextile of PP or polyester fibers or combination of both. Flow rates range from 120 to 200 gpm/sq. ft. (81.5 to 135.8 L/s per sq. m) when tested according to ASTM D4491.

2.4 SOIL MATERIALS

A. Soil materials are specified in Section 312000 "Earth Moving."

2.5 GEOTEXTILE FILTER FABRICS

A. Description: Fabric of PP or polyester fibers or combination of both, with flow rate range from 110 to 330 gpm/sq. ft. (4488 to 13,446 L/min. per sq. m) when tested according to ASTM D4491.

B. Structure Type: Nonwoven, needle-punched continuous filament.

1. Survivability: AASHTO M 288 Class 2.

2. Styles: Flat and sock.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces and areas for suitable conditions where subdrainage systems are to be installed.

B. If subdrainage is required for landscaping, locate and mark existing utilities, underground structures, and aboveground obstructions before beginning installation and avoid disruption and damage of services.

C. Verify that drainage panels installed as part of foundation wall waterproofing is properly positioned to drain into subdrainage system.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 EARTHWORK

A. Excavating, trenching, and backfilling are specified in Section 312000 "Earth Moving."

3.3 FOUNDATION DRAINAGE INSTALLATION

A. Place impervious fill material on subgrade adjacent to bottom of footing after concrete footing forms have been removed. Place and compact impervious fill to dimensions indicated, but not less than 6 inches (152.4 mm) deep and 12 inches (304.8 mm) wide.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than 4 inches (101.6 mm).

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with adhesive or tape.

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for foundation subdrainage.

F. Add drainage course to width of at least 6 inches (152.4 mm) on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping to width of at least 6 inches (152.4 mm) on side away from footing and above top of pipe to within 12 inches (304.8 mm) of finish grade.

H. Install drainage course and wrap top of drainage course with flat-style geotextile filter fabric.

I. Place layer of flat-style geotextile filter fabric over top of drainage course, overlapping edges at least 4 inches (101.6 mm).

J. Install drainage panels on foundation walls as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at base of footing. Install as indicated in Part 3 "Piping Installation" Article.
3. Separate 4 inches (101.6 mm) of fabric at beginning of roll and cut away 4 inches (101.6 mm) of core. Wrap fabric around end of remaining core.
4. Attach panels to wall beginning at subdrainage pipe. Place and secure molded-sheet drainage panels, with geotextile facing away from wall.

K. Place backfill material over compacted drainage course. Place material in loose-depth layers not exceeding 6 inches (152.4 mm). Thoroughly compact each layer. Final backfill to finish elevations and slope away from building.

3.4 UNDERSLAB DRAINAGE INSTALLATION

A. Excavate for underslab drainage system after subgrade material has been compacted but before drainage course has been placed. Include horizontal distance of at least 6 inches (152.4 mm) between drainage pipe and trench walls. Grade bottom of trench excavations to required slope, and compact to firm, solid bed for drainage system.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than 4 inches (101.6 mm).

D. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with adhesive or tape.

E. Install drainage piping as indicated in Part 3 "Piping Installation" Article for underslab subdrainage.

F. Add drainage course to width of at least 6 inches (152.4 mm) on side away from wall and to top of pipe to perform tests.

G. After satisfactory testing, cover drainage piping with drainage course to elevation of bottom of slab, and compact and wrap top of drainage course with flat-style geotextile filter fabric.

H. Install horizontal drainage panels as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at inside edge of footing.
3. Place drainage panel over drainage pipe with core side up. Peel back fabric and wrap fabric around pipe. Locate top of core at bottom elevation of floor slab.
4. Butt additional panels against other installed panels. If panels have plastic flanges, overlap installed panel with flange.

3.5 RETAINING-WALL DRAINAGE INSTALLATION

A. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

B. Place supporting layer of drainage course over compacted subgrade to compacted depth of not less than 4 inches (101.6 mm).

C. Encase pipe with sock-style geotextile filter fabric before installing pipe. Connect sock sections with adhesive or tape.

D. Install drainage piping as indicated in Part 3 "Piping Installation" Article for retaining-wall subdrainage.

E. Add drainage course to width of at least 6 inches (152.4 mm) on side away from wall and to top of pipe to perform tests.

F. After satisfactory testing, cover drainage piping to width of at least 6 inches (152.4 mm) on side away from footing and above top of pipe to within 12 inches (304.8 mm) of finish grade.

G. Place drainage course in layers not exceeding 3 inches (76.2 mm) in loose depth; compact each layer placed and wrap top of drainage course with flat-style geotextile filter fabric.

H. Place layer of flat-style geotextile filter fabric over top of drainage course, overlapping edges at least 4 inches (101.6 mm).

I. Install drainage panels on wall as follows:

1. Coordinate placement with other drainage materials.
2. Lay perforated drainage pipe at base of footing as described elsewhere in this Specification. Do not install aggregate.

3. If weep holes are used instead of drainage pipe, cut ½ inch (12.7 mm) diameter holes on core side at weep-hole locations. Do not cut fabric.

4. Mark horizontal calk line on wall at a point 6 inches (152.4 mm) less than panel width above footing bottom. Before marking wall, subtract footing width.

5. Separate 4 inches (101.6 mm) of fabric at beginning of roll and cut away 4 inches (101.6 mm) of core. Wrap fabric around end of remaining core.

6. Attach panel to wall at horizontal mark and at beginning of wall corner. Place core side of panel against wall. Use concrete nails with washers through product. Place nails from 2 to 6 inches (50.8 to 152.4 mm) below top of panel, approximately 48 inches (1219.2 mm) apart. Construction adhesives, metal stick pins, or double-sided tape may be used instead of nails. Do not penetrate waterproofing. Before using adhesives, discuss with waterproofing manufacturer.

7. If another panel is required on same row, cut away 4 inches (101.6 mm) of installed panel core and wrap fabric over new panel.

8. If additional rows of panel are required, overlap lower panel with 4 inches (101.6 mm) of fabric.

9. Cut panel as necessary to keep top 12 inches (304.8 mm) below finish grade.

10. For inside corners, bend panel. For outside corners, cut core to provide 3 inches (76.2 mm) for overlap.

J. Fill to Grade: Place satisfactory soil fill material over compacted drainage course. Place material in loose-depth layers not exceeding 6 inches (152.4 mm). Thoroughly compact each layer. Fill to finish grade.

3.6 LANDSCAPING DRAINAGE INSTALLATION

A. Provide trench width to allow installation of drainage conduit. Grade bottom of trench excavations to required slope, and compact to firm, solid bed for drainage system.

B. Lay flat-style geotextile filter fabric in trench and overlap trench sides.

C. Place supporting layer of drainage course over compacted subgrade and geotextile filter fabric, to compacted depth of not less than 4 inches (101.6 mm).

D. Install drainage conduits as indicated in Part 3 "Piping Installation" Article for landscaping subdrainage with horizontal distance of at least 6 inches (152.4 mm) between conduit and trench walls. Wrap drainage conduits without integral geotextile filter fabric with flat-style geotextile filter fabric before installation. Connect fabric sections with adhesive or tape.

E. Add drainage course to top of drainage conduits.

F. After satisfactory testing, cover drainage conduit to within 12 inches (304.8 mm) of finish grade.

G. Install drainage course and wrap top of drainage course with flat-style geotextile filter fabric.

H. Place layer of flat-style geotextile filter fabric over top of drainage course, overlapping edges at least 4 inches (101.6 mm).

I. Fill to Grade: Place satisfactory soil fill material over drainage course. Place material in loose-depth layers not exceeding 6 inches (152.4 mm). Thoroughly compact each layer. Fill to finish grade.

3.7 PIPING INSTALLATION

A. Install piping beginning at low points of system, true to grades and alignment indicated, with unbroken continuity of invert. Bed piping with full bearing in filtering material. Install gaskets, seals, sleeves, and couplings according to manufacturer's written instructions and other requirements indicated.

1. Foundation Subdrainage: Install piping level and with a minimum cover of 36 inches (914.4 mm) unless otherwise indicated.

2. Underslab Subdrainage: Install piping level.

3. Retaining-Wall Subdrainage: When water discharges at end of wall into stormwater piping system, install piping level and with a minimum cover of 36 inches (914.4 mm) unless otherwise indicated.

4. Landscaping Subdrainage: Install piping pitched down in direction of flow, at a minimum slope of 0.5 percent and with a minimum cover of 36 inches (914.4 mm) unless otherwise indicated.

5. Lay perforated pipe with perforations down.

6. Excavate recesses in trench bottom for bell ends of pipe. Lay pipe with bells facing upslope and with spigot end entered fully into adjacent bell.

B. Use increasers, reducers, and couplings made for different sizes or materials of pipes and fittings being connected. Reduction of pipe size in direction of flow is prohibited.

C. Install thermoplastic piping according to ASTM D2321.

3.8 PIPE JOINT CONSTRUCTION

A. Join perforated PE pipe and fittings with couplings according to ASTM D3212 with loose banded, coupled, or push-on joints.

B. Join perforated PVC sewer pipe and fittings according to ASTM D3212 with loose bell-and-spigot, push-on joints.

C. Special Pipe Couplings: Join piping made of different materials and dimensions with special couplings made for this application. Use couplings that are compatible with and fit materials and dimensions of both pipes.

3.9 BACKWATER VALVE INSTALLATION

A. Comply with requirements for backwater valves specified in Section 33 40 00 "Storm Drainage Utilities."

B. Install horizontal backwater valves in header piping downstream from perforated subdrainage piping.

C. Install horizontal backwater valves in piping in manholes or pits where indicated.

3.10 CLEANOUT INSTALLATION

A. Comply with requirements for cleanouts specified in Section 33 40 00 "Storm Drainage Utilities."

B. Cleanouts for Retaining-Wall and Landscaping Subdrainage:

1. Install cleanouts from piping to grade. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.

2. In vehicular-traffic areas, use NPS 4 (DN 100) cast-iron soil pipe and fittings for piping branch fittings and riser extensions to cleanout. Set cleanout frames and covers in a cast-in-place concrete anchor, 18 by 18 by 12 inches (457.2 by 457.2 by 304.8 mm) deep. Set top of cleanout flush with grade.

3. In nonvehicular-traffic areas, use NPS 4 (DN 100) PVC pipe and fittings for piping branch fittings and riser extensions to cleanout. Set cleanout frames and covers in a cast-in-place concrete anchor, 12 by 12 by 4 inches (304.8 by 304.8 by 101.6 mm) deep. Set top of cleanout 1 inch (25.4 mm) above grade.

4. Comply with requirements for concrete specified in Section 03 30 00 "Cast-in-Place Concrete."

C. Cleanouts for Underslab Subdrainage:

1. Install cleanouts and riser extensions from piping to top of slab. Locate cleanouts at beginning of piping run and at changes in direction. Install fittings so cleanouts open in direction of flow in piping.

2. Use NPS 4 (DN 100) cast-iron soil pipe and fittings for piping branch fittings and riser extensions to cleanout flush with top of slab.

3.11 CONNECTIONS

A. Comply with requirements for piping specified in Section 33 40 00 "Storm Drainage Utilities."

B. Drawings indicate general arrangement of piping, fittings, and specialties.

C. Connect low elevations of subdrainage system to solid-wall-piping storm drainage system.

3.12 IDENTIFICATION

A. Arrange for installation of green warning tapes directly over piping. Comply with requirements for underground warning tapes specified in specified in Section 31 20 00 "Earth Moving."

1. Install PE warning tape or detectable warning tape over ferrous piping.

2. Install detectable warning tape over nonferrous piping and over edges of underground structures.

3.13 FIELD QUALITY CONTROL

A. Tests and Inspections:

1. After installing drainage course to top of piping, test drain piping with water to ensure free flow before backfilling.

2. Remove obstructions, replace damaged components, and repeat test until results are satisfactory.

B. Drain piping will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

3.14 CLEANING

A. Clear interior of installed piping and structures of dirt and other superfluous material as work progresses. Maintain swab or drag in piping and pull past each joint as it is completed. Place plugs in ends of uncompleted pipe at end of each day or when work stops.

SECTION 1.0

INTRODUCTION

A pre-demolition/renovation hazardous materials survey was conducted by Batta Environmental Associates, Inc. (BEA) for the Essex Police Station, Precinct #11, located at 216 Marylyn Avenue in Essex, Maryland. Services performed on June 27th, 2024. The scope consisted of a hazardous materials survey within the main police station and annex office building.

The purpose of the pre-demolition/renovation survey was to identify all environmentally hazardous materials located within the scope of work at the subject property to include asbestos containing materials (ACM), lead based paint (LBP), and other hazardous materials regulated under the Resource Conservation and Recovery Act (RCRA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Toxic Substances Control Act (TSCA), or the Universal Waste Rule (UWR). The hazardous materials survey is in support of future plans to demolish/renovate the structures.

This hazardous materials inspection report has been prepared by BEA in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions. No other warranty, expressed or implied is made. The intent of this survey report is to assist the building owner or management in locating environmentally hazardous materials in support of future demolition activities. This document is not intended to be utilized as a proposal or a project design document for the remediation of hazardous materials discovered during this investigation.

The survey was conducted to identify environmentally hazardous materials on the interior and exterior areas of the property. Some hazardous materials may not have been discovered due to inaccessibility. Any suspect materials discovered subsequent to the issue of this survey report should be assessed, sampled, and analyzed to determine the nature of the hazard and to initiate appropriate responses.

BEA's interpretations and recommendations are based upon the results of sample collection and analyses in compliance with environmental regulations, quality control and assurance standards, and the scope of work. The results, conclusions, and recommendations contained in this report pertain to conditions observed at the time of the survey.

SECTION 2.0

BUILDING DESCRIPTION

The police station consisted of a single story structure with a basement. The exterior walls of the building were composed of masonry. The interior walls were mostly cement block with some areas with drywall and joint compound. Ceilings were comprised of two types of 2'x2' ceiling tiles and 2x2 "drywall-like" ceiling tiles and 2x4 ceiling tiles. The floors consisted of various floor coatings, 12"x12:" floor tile, carpet, and exposed concrete. Pipes were observed to be insulated with fiberglass with non-asbestos hard pipe fitting insulation. All HVAC systems were un-insulated with non-asbestos canvas duct tape at the seams.

A detached from the police station is a single annex office building, no basement. The interior walls of the annex were drywall and joint compound. Ceilings were comprised of 2'x2' ceiling tiles. The floors consisted of 12x12 floor tile and carpet. Pipes were observed to be uninsulated or insulated with non-suspect material such as fiberglass. All HVAC systems were un-insulated.

SECTION 3.0

METHODS AND LIMITATIONS

3.1 ASBESTOS SURVEY METHODS

The site was inspected for suspect ACM, unless otherwise noted. Each observed suspect material was assigned a homogenous area number, described, and measured. Each observed suspect material was sampled or assumed to be asbestos. Samples of suspect ACM were collected using procedures established by the United States (US) Environmental Protection Agency (EPA) Code of Federal Regulations (CFR) Title 40 Part 763 Subpart E, Asbestos-Containing Materials in Schools.

At the beginning of the survey, the inspector(s) conducted a walkthrough of the areas identifying and sampling different types of probable ACM and categorizing these materials.

Each probable ACM was grouped into homogenous areas, which group a particular material by similar characteristics such as appearance, texture, manufacturer, etc. All similar materials within a particular building or process area were in their own homogenous area groups.

ACM's were also further divided into three categories:

- "***Surfacing Materials***" material that is sprayed-on, trowelled on, or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing or other purposes.

- "***Thermal System Insulation***" material applied to pipes, fittings, boilers, breeching, tanks, ducts, or other structural components to prevent heat loss or gain, or water condensation, or for other purposes.

- "***Miscellaneous ACM*** " interior building material on structural components, structural members or fixtures, such as floor and ceiling tiles, and does not include surfacing material or thermal insulation.

ACM's inventoried in this survey are classified as either friable or non-friable. Friable ACM can be crumbled or reduced to powder by hand pressure whereas non-friable ACM cannot.

Ph: 855.862.2882
Fx: 302.737.5764

BATTA Environmental Associates, Inc
6 Garfield Way
Newark, DE. 19713

info@battaenv.com
Battaenv.com

The EPA asbestos NESHAP regulation further classifies nonfriable ACM into two categories.

- Category I. Nonfriable ACM includes any asbestos-containing packing, gasket, resilient floor covering or asphalt roofing product.
- Category II. Nonfriable ACM includes any nonfriable ACM other than Category I nonfriable ACM.

Samples were collected in air tight, sealed bags for transportation to Batta Laboratories, LLC for analysis. During sample collection procedures, good safety and hygiene practices were implemented to prevent asbestos airborne contamination from being introduced into the building's atmosphere.

All field records pertaining to samples collected during this inspection can be found in Appendix B of this report and each sample is listed as follows:

1. Field Number
2. Lab Number
3. AHERA Classification
4. Sample Location
5. Material Sampled
6. Lab Results

All lab data pertaining to the samples analyzed can be found in Appendix A of this report and each sample is listed as follows:

1. Date Analyzed
2. Field Sample Number
3. Lab Sample Number
4. Sample Location
5. Asbestos Content
6. Non-Asbestos Content

Samples were analyzed using an A,B,C… positive stop protocol for each set of homogenous materials (*materials with similar characteristics)*. If a sample in the homogenous set tested **positive** for **asbestos** (***greater than 1% by composition****)* then the other samples in that set were not analyzed. If asbestos was not detected in a sample then all samples from that homogenous set were analyzed for asbestos until one tested positive.

3.2 LABORATORY ANALYSIS METHODS

All samples collected during the survey were analyzed at Batta Laboratories, LLC, an A.I.H.A., NVLAP certified laboratory. Upon arrival at the laboratory, the samples were logged-in and submitted for analysis.

PLM samples were analyzed utilizing the Environmental Protection Agency's test method: "Methods for the determination of Asbestos in Bulk Building Materials" (EPA 600/R-93/116, July 1993) and the McCrone Research Institute's "The Asbestos Particle Atlas" as the principal analytical references. Additional treatment and tests may be required to accurately define composition (i.e. ashing, extraction, acetone treatment, and TEM).

The PLM method utilizes a light microscope equipped with polarizing filters. The identification of asbestos fiber bundles is determined by the visual properties displayed when the sample is treated with various dispersion staining liquids. Identification is substantiated by the actual structure of the fiber and the effect of polarized light on the fiber, all of which is viewed by a trained technician. The limit of detection of asbestos by PLM is about one percent (1%) by area. Samples containing lower levels of asbestos are not reliably detectable by this technique.

Analysis was performed by using the bulk sample for visual observation and slide preparation(s) for microscopic examination and identification. The samples analyzed for asbestos (chrysotile, amosite, crocidolite, anthophyllite, and actinolite/tremolite), silicon carbide whiskers, carbon fibers, fibrous non-asbestos constituents (cellulose, synthetic, etc.), and non-fibrous constituents. Using a stereoscope, the microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample.

The asbestos NESHAP recommends that asbestos bulk samples that are less than 10% by PLM are to be analyzed by point counting for friable ACM and mandates point counting when PLM results for friable ACM are in trace amounts (< 1%) in order to declare that the material is non-asbestos containing. The point-count procedure mandated by NESHAP is in the EPA "Interim" Bulk Method. For each layer to be point counted, eight mounts are made by dispersing 8 pinches of sample in suitable fluid. Each of the mounts is examined under the polarizing light microscope using an eyepiece reticule that superimposes a grid of points over the field of view. Fifty non-empty points are examined for each mount, yielding 400 points – some of which would be identified as asbestos and the rest as non-asbestos material.

3.3 LIMITATIONS

This survey was limited in scope to hazardous material survey of the Essex Police Station, Precinct #11, as defined by contract documents and the project scope of work.

This survey report has been prepared by BEA in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions. No other warranty, expressed or implied is made. The intent of this survey report is to assist the building owner or management in locating hazardous materials. This document is not intended to be utilized as a proposal or a project design document for the remediation of hazardous materials discovered during this investigation.

The survey was conducted to identify hazardous materials on the interior and exterior areas of the buildings. Some hazardous materials may not have been discovered due to inaccessibility. Any suspect materials discovered subsequent to the issue of this survey report should be evaluated or sampled and analyzed to determine the nature of the suspect hazardous material.

BEA's interpretations and recommendations are based upon the results of sample collection and analyses in compliance with environmental regulations, quality control and assurance standards, and the scope of work. The results, conclusions, and recommendations contained in this report pertain to conditions observed at the time of the survey.

SECTION 4.0

SURVEY RESULTS

4.1 ASBESTOS ANALYSIS RESULTS

A total of Ninety-seven (97) samples were collected. Ninety-three (93) samples were analyzed by PLM and four (4) samples were not analyzed due to positive stop protocols. The original laboratory report / certificates of analysis are found in Appendix A and survey field records are found in Appendix B.

The following table summarizes the samples collected. **Building materials from this survey were found to contain asbestos in amounts greater than 1 %** (NAD = No Asbestos Detected, RACM = Regulated Asbestos Containing Material, CAT I NF = Category I Non-friable ACM, & CAT II NF = Category II Non-friable ACM).

Material	Location	% ACM	Category	Condition	Quantity
Orange Floor Coating	Lobby	NAD	NA	NA	NA

4.2 ADDITIONAL OBSERVATIONS

In addition to the results presented in Section 4.1, BEA observed the following:

- Only visibly accessible areas were inspected.
- Additional suspect materials may be present within the chases or walls cavities.
- If any new suspect asbestos materials are discovered during the renovation/demolition phase of this project then they should be tested for asbestos prior to handling.

SECTION 5.0
LEAD SURVEY

5.1 LEAD BASED PAINT XRF TESTING

BATTA ENVIRONMENTAL ASSOCIATES, INC. performed an evaluation for lead based paint for the Essex Police Station , Precinct #11, located at 216 Marylyn Avenue in Essex, Maryland on June 27, 2024. The inspection was performed using an Heuresis Pb 200i Portable X-Ray fluorescence (XRF) Analyzer (Serial Number 1568) by Stephen Woronicak, a trained XRF sampling technician.

Various painted surfaces were analyzed using the hand-held XRF Analyzer and a visual assessment of the identified lead-based surfaces was performed. Identified lead-based paint components were visually assessed for paint condition as per the United States Department of Housing & Urban Development (HUD) guidelines.

A total of 63 XRF readings were collected on the interior and exterior areas of the structures. HUD guidelines define paints with 1.0 mg/cm^2 or greater (State of Maryland defines LBP as greater than 0.7 mg/cm^2) of lead as measured on a hand held XRF analyzer as "lead-based paint". No readings indicated lead based paint. The following table depicts the results of the XRF Testing.

5.2 LEAD DUST TESTING

Fifteen (15) dust wipe samples were collected in and around the former firing range, currently gym. ASTM E1728 Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques SOP NIOSH 9100 & 7082 was utilized for this sampling event.

Samples were collected in accordance with one or more of the following protocols to sample dust: U.S. Department of Housing and Urban Development Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing; U.S. Environmental Protection Agency Guidance on Residential Lead-Based Paint, Lead-Contaminated Dust, and Lead-Contaminated Soil; U.S. Environmental Protection Agency Residential Sampling for Lead: Protocols for Dust and Soil Sampling, Report Number EPA 747-R-95-001; and ASTM E1728 Standard Practice for Field Collection of Settled Dust Samples Using Wipe Sampling Methods for Lead Determination by Atomic Spectrometry Techniques.

EPA/HUD lead hazard action levels:

- **Floors:** **$\geq$ 10 µg/ft^2**
- **Windowsills:** **$\geq$ 100 µg/ft2**
- **Window Wells:** **$\geq$ 400 µg/ft^2**

Dust wipe samples were analyzed by Batta Laboratories, LLC, located at 6 Garfield Way, Newark, Delaware 19713 (302) 737-3376. Batta Laboratories, LLC meets the requirements of the National Lead Laboratory Accreditation Program (NLLAP) and EPA.

The following table summarizing the results of the dust wipe sampling.

SECTION 6.0
HAZARDOUS MATERIALS EVALUATION

Environmentally hazardous materials other than asbestos or lead may be present in the subject property that are regulated under the Resource Conservation and Recovery Act (RCRA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Toxic Substances Control Act (TSCA), or the Universal Waste Rule (UWR).

A qualified environmental technician performed a detailed inspection of the subject area for electrical equipment that may contain polychlorinated biphenyls (PCBs), mercury switches gauges or thermostats, batteries for exit signs and emergency lighting, HID lamps, fluorescent light tubes, refrigerants, fire extinguishers, oil filled storage tanks or equipment, and other electronic equipment or stored chemicals. The investigation was performed to identify and locate all environmentally hazardous materials on the site so they may be remediated or disposed of properly prior to the demolition/renovation of the building.

HAZARDOUS MATERIALS IDENTIFICATION PROCEDURES

For a waste to be deemed hazardous, the U.S. Environmental Protection Agency (EPA) must list it under the Resource Conservation and Recovery Act (RCRA) regulations - i.e., listed wastes. If a waste does not appear on one of these lists, it still might be a hazardous waste if it has one or more of the following characteristics:

- It is easily combustible or flammable. This is called an ignitable waste, which can include solvents, paint wastes and gasoline.
- It corrodes metals and other materials or is very acidic or very alkaline. Corrosive wastes can include battery acid, caustic paint strippers, and some alkaline or lime-based floor cleaners.
- It is unstable and explodes or produces toxic fumes, gases, and vapors when mixed with water or under other conditions, such as heat or pressure. Examples of reactive waste are certain cyanides or sulfide-bearing wastes.
- It is harmful or fatal when ingested or absorbed, or it leaches toxic chemicals into the soil or groundwater. Toxic wastes can include gasoline, solvents and paint solids.

The toxicity characteristic leaching procedure (TCLP) is a standard test used to determine the toxicity of a solid waste. The test is based on the ability of a waste to leach specific metals and chemicals. If the leachate contains more than the regulatory level for a specific chemical, the material is considered a hazardous waste.

Ph: 855.862.2882
Fx: 302.737.5764

BATTA Environmental Associates, Inc
6 Garfield Way
Newark, DE 19713

info@battaenv.com
Battaenv.com

The EPA lists a waste because it has been shown to be harmful to health and the environment when not managed properly. The EPA regulations - 40 CFR Part 261 - list more than 400 hazardous wastes. If a waste is not found on any of these federal lists, it still might be on a state hazardous waste list.

Common types of hazardous-containing materials that can be found in buildings are:

- LIGHT BALLASTS: Some light ballasts contain a mixture of chemicals called polychlorinated biphenyls (PCBs). Types of light ballasts that may contain PCBs include magnetic, electronic, HID, and emergency lighting.
- BATTERIES. These include nickel-cadmium (NiCad) and small sealed lead-acid batteries, which are found in many common items, including electronic equipment, mobile telephones, portable computers, and emergency backup lighting.
- THERMOSTATS. These products can contain as much as 3 grams of liquid mercury and are located in almost any building, including institutional, commercial and industrial facilities.
- LAMPS. These include the bulb or tube portion of electric lighting devices. Examples of common universal waste electric lamps include, but are not limited to, fluorescent, high-intensity-discharge, neon, mercury vapor, high-pressure-sodium, and metal-halide lamps. Many used lamps are considered hazardous wastes under the RCRA because they contain mercury or occasionally lead.
- REFRIGERANTS: These are used in refrigeration or air conditioning systems which include Chlorofluorocarbons (CFCs), Hydrochlorofluorocarbons (HCFCs), or Hydrofluorocarbons (HFCs).
- CHEMICALS: Can include different types of cleaning agents, agricultural pesticides, laboratory chemicals, paint, etc. Usually not considered a building product because they are stored materials but should be disposed of properly.

The following table lists the hazardous materials identified during the evaluation of the Essex Police Station, Precinct #11, in Essex, Maryland.

SECTION 7.0

RECOMMENDATIONS

7.1 RECOMMENDATIONS FOR REGULATED ACM (RACM)

Fire Door Insulation was identified as RACM during this inspection.

If present, these materials must be removed prior to any activity that would release asbestos fibers from this material. Specifically, any renovation or demolition activity that will crush, abrade, or dissolve the matrix of this material must be performed by a Maryland licensed Asbestos Contractor. If these materials are in good condition and not impacted by the renovation/demolition and will remain on/in the facility, no other special handling, or action is required for these materials.

7.2 RECOMMENDATIONS FOR CATEGORY I NONFRIABLE ACM

Red 12x12 Floor Tile, White with Tan 12”x12” Floor Tile, and Gray with Black 12”x12” Floor Tile were identified to be Category I Non-friable ACM during this investigation.

This material is required to be removed by a New Jersey licensed asbestos contractor if proposed renovations or demolition will impact these materials in such a manner as to render them friable and thus RACM. Specifically, any renovation or demolition activity that will crush, abrade, or dissolve the matrix of these materials must be performed by a Maryland-licensed Asbestos Contractor. If these materials are in good condition and not impacted by the renovation/demolition or if renovation/demolition work will not render the material friable then they may remain on/in the facility. If demolished, this material and the building components associated with it must be disposed of in a Construction/Demolition landfill and must not be reused or recycled.

7.3 RECOMMENDATIONS FOR CATEGORY II NONFRIABLE ACM

No materials were identified as Category II Non-friable ACM during this inspection:

If present, these materials identified as Category II Nonfriable ACM must be removed prior to any renovation or demolition activity that will crush, abrade, or dissolve the matrix of this material. The removal of this material must be performed by a Maryland-licensed Asbestos Contractor. If this material is in good condition and not impacted by the renovation/demolition and will remain on/in the facility, no other special handling, or action is required for this material.

BATTA Environmental Associates, Inc
6 Garfield Way
Newark, DE 19713

info@battaenv.com
Battaenv.com

7.4 ASBESTOS 10-DAY NOTIFICATION

The Maryland Department of the Environment, and the US Environmental Protection Agency – Region III, require notification of intent to renovate or demolish when asbestos is present. Notification must be sent at least 10 working days prior to the start of any construction activities. The general contractor should also keep a copy of this survey at the construction site during the entire construction project as proof of compliance with 40 CFR 61 (NESHAP).

7.5 RECOMMENDATIONS FOR LEAD BASED PAINT

Lead Containing Paint was identified.

Lead Based Paint (LBP), is defined by the Department of Housing and Urban Development (HUD) as paint that contains lead in concentrations greater than one milligram per square centimeter (1.0 mg/cm^2) (Maryland is Greater than 0.7 cm^2) or 0.50% by weight. Lead in paint at any level is regulated under OSHA 29 CFR 1926.62 which applies to all construction work where an employee may be occupationally exposed to lead which includes the demolition or salvage of structures and torch cutting where lead or materials containing lead are present.

Lead Toxicity Characteristic Leaching Procedure (TCLP) samples need to be collected for outgoing demolition waste which contains known or suspected LBP to determine whether or not it is classified as Hazardous Waste under the Resource Conservation and Recovery Act (RCRA) Toxicity Characteristic (TC) Rule (40 CFR 261.24). Certain activities may trigger the necessity of Personal Protective Equipment (PPE) for the renovation/demolition workers based on their work methods as required by OSHA 29 CFR 1926.62.

7.6 RECOMMENDATIONS FOR HAZARDOUS MATERIALS

Recommendations for the handling/disposal of hazardous waste are as follows:

Fluorescent Light Bulbs: Fluorescent lamps illuminate by exciting mercury atoms enclosed in a glass bulb with an electrical current. Spent bulbs must be managed appropriately because of the mercury content in them. Most of the mercury associated with a fluorescent bulb is encountered in the phosphor coating inside the bulb. Only a small fraction of the mercury is found as vapor inside the bulb which readily escapes if the bulb is broken.

Fluorescent light bulbs should be stored in containers such as 55 gallon drums and shipped to a recycling facility that is capable of recovering mercury from the glass, metal, and mercury contaminated phosphor powder in the bulb.

Ph: 855.862.2882
Fx: 302.737.5764

BATTA Environmental Associates, Inc
6 Garfield Way
Newark, DE 19713

info@battaenv.com
Battaenv.com

Light Ballasts: Ballasts are electrical devices which are present in association with all Fluorescent and HID lighting. Ballasts made before 1979 contained capacitors filled with a dielectric fluid which consisted largely of Polychlorobiphenyls (PCBs). Although TSCA officially banned the manufacture of PCBs in 1979, PCB ballasts that were already in use were permitted to remain in use by EPA regulation 40 CFR 761. Since ballasts can operate about 30 years before failure many PCB-ballasts are still in use today.

Identifying PCB containing ballasts in the field can be accomplished by checking if there is a "No PCBs" label on the ballast as was put on most ballasts manufactured after 1979 or if it can be determined that the ballast was manufactured after 1979. If the ballast contains no label and the date of manufacture is unknown then it should be assumed to contain PCBs.

Ballasts assumed to contain PCBs should be stored in containers such as 55 gallon drums and shipped to an appropriate recycling facility.

Car Batteries: Old car batteries - especially lead-acid batteries - contain a lot of toxic chemicals which, if let to simply rot in the ground, will contaminate the soil with lead, chemicals, acids, and non-biodegradable plastics. Dispose of car batteries at a battery recycling center or a local auto supply store.

Refrigerants: If any refrigerators, cold vending machines, water fountains, or air conditioners are not being reused at the facility and need to be disposed then the refrigerant should be recovered by a qualified services contractor before disposal.

Fire Extinguishers: To dispose of an old fire extinguisher that cannot be recharged or you do not wish to keep, let the canister sit for a few days after discharging to make sure the pressure has been released. Once there is no longer any pressure, dispose in a trash bag in general waste stream or send to a metal recycling company.

WARNING: Extinguishers made prior to 1960 can be very dangerous. These extinguishers may contain carbon tetrachloride. Carbon tetrachloride is a known carcinogen. Exposure can be fatal if enough of the chemical is inhaled or absorbed through the skin. When heated, carbon tetrachloride produces phosgene gas, commonly known as nerve gas. Use extreme caution when handling older fire extinguishers and contact your local fire department for guidance on how to transport and dispose of them safely.

Antifreeze, Cleaners, Chemicals, Oil, Gasoline: Antifreeze, Chemicals, and Household cleaners (ammonia, drain cleaner, rust remover, tile/shower cleaner and more) are considered

Ph: 855.862.2882
Fx: 302.737.5764

BATTA Environmental Associates, Inc
6 Garfield Way
Newark, DE 19713

info@battaenv.com
Battaenv.com

hazardous waste and must be either reused or sent to a proper disposal facility for household hazardous waste.

Tires: It is illegal dispose of tires in the general waste stream because the steel-belt inside auto tires can puncture the liners of landfills, which can lead to ground contamination. Tires are not considered hazardous waste but can pose problems if not properly recycled.

Tires can be dropped off with a reputable tire dealer for a fee or the local solid waste transfer station/landfill may accept used tires.

Recycling of Demolition Waste: Recycling on a demolition project ranges from "deconstruction" of a building with separation of the materials at the demolition site to the processing of mixed demolition waste for recyclable material recovery. The removal of a structure's hazardous materials is necessary to ensure worker safety and the value of the products recovered. Building components cannot be recycled if hazardous materials are present. The cost of remediation vs. landfill costs without recycling savings must be considered with materials such as lead paint or asbestos resilient flooring, mastics, or roofing which can be landfilled with the Construction and Demolition Waste provided the ACM is not rendered friable or the waste load with LBP is not determined to be hazardous waste through TCLP testing.

In most cases the demolition contractor will decide whether to remediate or landfill materials based on local and federal regulations, the requirements of the project work plan or design, and the cost effectiveness of different approaches to managing hazardous wastes.

CERTIFICATE OF PLM ANALYSIS

Test Method: EPA/600/R-93/116 in conjunction with Batta SOP

Report Date: 08/02/24

Sampling Data

Date Sampled: 06/27/24
BLI Project #: L381024
Sampled By: S.WORONIC
Project Name: 1103624K-ESSEX POLICE STATION #11 - 216 MARYLN AVENUE,ESSEX,MD
Date Analyzed: 08/01/24

Sample ID		Client-supplied Data			Analytical Data		Reported Results	
Lab Sample#	Client Sample#	Sample Description	Material Type	Friable?	Texture/ Gross	Color	Non-asbestiform Components	Asbestiform Components
1509034	01A	Lobby	Floor Coating	No	Firm Homogeneous	Orange	100% Non-fibrous Material	No Asbestos Found
1509035	01B	Lobby	Floor Coating	No	Firm Homogeneous	Orange	100% Non-fibrous Material	No Asbestos Found
1509036	02A	Bathroom Lobby	12"x12" Floor Tile	No	Firm Homogeneous	Tan	100% Non-fibrous Material	No Asbestos Found
1509037	02B	Bathroom Lobby	12"x12" Floor Tile	No	Firm Homogeneous	Tan	100% Non-fibrous Material	No Asbestos Found
1509038	03A	Bathroom Lobby	Mastic 12"x12" Floor Tile	No	Soft Homogeneous	Yellow	100% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies. PLM analyses do not fall under the purview of AIHA LAP.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

COC#: N/A

CERTIFICATE OF PLM ANALYSIS

Test Method: EPA/600/R-93/116 in conjunction with Batta SOP

Report Date: 08/02/24

Sampling Data

Date Sampled: 06/27/24
BLI Project #: L381024
Sampled By: S.WORONIC
Project Name: 1103624K-ESSEX POLICE STATION #11 - 216 MARYLN AVENUE,ESSEX,MD
Date Analyzed: 08/01/24

Sample ID		Client-supplied Data			Analytical Data		Reported Results	
Lab Sample#	Client Sample#	Sample Description	Material Type	Friable?	Texture/ Gross	Color	Non-asbestiform Components	Asbestiform Components
1509049	08B	Lobby Vestibule	Drywall	No	Soft Homogeneous	Gray Brown	15% Cellulose 85% Non-fibrous Material	No Asbestos Found
1509050	09A	Front Hall	Floor Coating	No	Firm Homogeneous	Tan Orange	100% Non-fibrous Material	No Asbestos Found
1509051	09B	Front Hall	Floor Coating	No	Firm Homogeneous	Tan Orange	100% Non-fibrous Material	No Asbestos Found
1509052	10A	Hall to Processing	Floor Coating	No	Firm Homogeneous	Brown	100% Non-fibrous Material	No Asbestos Found
1509053	10B	Hall to Processing	Floor Coating	No	Firm Homogeneous	Brown	100% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

1509080	25B	Utility Room - Basement	2" Pipe Fitting	No	Soft Homogeneous	Gray	30% Mineral Wool 70% Non-fibrous Material	No Asbestos Found
1509081	26A	Gym	Floor Mastic	No	Soft Homogeneous	Yellow	100% Non-fibrous Material	No Asbestos Found
1509082	26B	Gym	Floor Mastic	No	Soft Homogeneous	Yellow	100% Non-fibrous Material	No Asbestos Found
1509083	27A	Gym	Floor Mastic	No	Soft Homogeneous	Black	100% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Document Security Note: *Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies. PLM analyses do not fall under the purview of AIHA LAP.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

CERTIFICATE OF PLM ANALYSIS

Test Method: EPA/600/R-93/116 in conjunction with Batta SOP

Report Date: 08/02/24

Sampling Data

Date Sampled: 06/27/24
BLI Project #: L381024
Sampled By: S.WORONIC
Project Name: 1103624K-ESSEX POLICE STATION #11 - 216 MARYLN AVENUE,ESSEX,MD
Date Analyzed: 08/01/24

Sample ID		Client-supplied Data			Analytical Data		Reported Results	
Lab Sample#	Client Sample#	Sample Description	Material Type	Friable?	Texture/ Gross	Color	Non-asbestiform Components	Asbestiform Components
1509114	42A	Annex-Throughout	Drywall	No	Soft Homogeneous	Gray Brown	15% Cellulose 85% Non-fibrous Material	No Asbestos Found
1509115	42B	Annex-Throughout	Drywall	No	Soft Homogeneous	Gray Brown	15% Cellulose 85% Non-fibrous Material	No Asbestos Found
1509116	43A	Annex-Throughout	Joint Compound	No	Firm Homogeneous	White	100% Non-fibrous Material	No Asbestos Found
1509117	43B	Annex-Throughout	Joint Compound	No	Firm Homogeneous	White	100% Non-fibrous Material	No Asbestos Found
1509118	44A	Annex-Throughout	Baseboard Mastic	n/a	Soft Homogeneous	Yellow	100% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Document Security Note: *Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alterations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies. PLM analyses do not fall under the purview of AIHA LAP.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

SECTION 1.0 INTRODUCTION

A hazardous survey was performed at a single family home located at 222 N Marlyn Avenue in Essex, Maryland. The survey was conducted on June 2nd, 2025, by Mr. Andrew Kim and Mr. Donovan Nelson of Batta Environmental Associates, Inc. (BEA).

The purpose of the pre-demolition hazardous materials survey was to identify all environmentally hazardous materials located within the scope of work at the subject property to include lead based paint (LBP), Asbestos-Containing Materials (ACMs), and other hazardous materials regulated under the Resource Conservation and Recovery Act (RCRA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Toxic Substances Control Act (TSCA), or the Universal Waste Rule (UWR). The hazardous materials survey is in support of future plans to demolish the structure.

This hazardous materials inspection report has been prepared by BEA in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions. No other warranty expressed or implied is made. The intent of this survey report is to assist the building owner or management in locating environmentally hazardous materials in support of future demolition/renovation activities. This document is not intended to be utilized as a proposal or a project design document for the remediation of hazardous materials discovered during this investigation.

The survey was conducted to identify environmentally hazardous materials on the interior and exterior of each Site structure. Some hazardous materials may not have been discovered due to inaccessibility. Any suspect materials discovered subsequent to the issue of this survey report should be assessed, sampled, and analyzed to determine the nature of the hazard and to initiate appropriate responses.

BEA's interpretations and recommendations are based upon the results of sample collection and analyses in compliance with environmental regulations, quality control and assurance standards, and the scope of work. The results, conclusions, and recommendations contained in this report pertain to conditions observed at the time of the survey.

SECTION 2.0 BUILDING DESCRIPTION

The Site Building located at 222 N Marlyn Avenue in Essex, Maryland is a two-story single-family residential structure with a basement. The interior walls were comprised of drywall with joint compound layered on top of two-coat plaster and concrete block. Ceilings were open drywall and joint compound layered on two-coat plaster. Stipple-style texturing was found on ceilings sporadically in the structure. The interior floors consisted of hardwood flooring covered by 12”x12” floor tiles, ceramic tiles, sheet flooring or exposed concrete. The exterior walls constructed of wooden boards covered by Styrofoam-insulated vinyl siding. Roofing materials consisted of various asphalt shingles, caulks and mastics.

SECTION 3.0 ASBESTOS SURVEY

3.1 ASBESTOS SURVEY METHODS

The site was inspected for suspect ACM, unless otherwise noted. Each observed suspect material was assigned a homogenous area number, described, and measured. Each observed suspect material was sampled or assumed to be asbestos. Samples of suspect ACM were collected using procedures established by the United States (US) Environmental Protection Agency (EPA) Code of Federal Regulations (CFR) Title 40 Part 763 Subpart E, Asbestos-Containing Materials in Schools.

At the beginning of the survey, the inspector(s) conducted a walkthrough of the areas identifying and sampling different types of probable ACM and categorizing these materials.

Each probable ACM was grouped into homogenous areas, which group a particular material by similar characteristics such as appearance, texture, manufacturer, etc. All similar materials within a particular building or process area were in their own homogenous area groups.
ACM's were also further divided into three categories:

- "***Surfacing Materials***" material that is sprayed-on, troweled on, or otherwise applied to surfaces, such as acoustical plaster on ceilings and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, or other purposes.
- "***Thermal System Insulation***" material applied to pipes, fittings, boilers, breeching, tanks, ducts, or other structural components to prevent heat loss or gain, or water condensation, or for other purposes.
- "***Miscellaneous ACM***" interior building material on structural components, structural members, or fixtures, such as floor and ceiling tiles, and does not include surfacing material or thermal insulation.

ACM's inventoried in this survey are classified as either friable or non-friable. Friable ACM can be crumbled or reduced to powder by hand pressure whereas non-friable ACM cannot.

The EPA asbestos NESHAP regulation further classifies nonfriable ACM into two categories.

- Category I. Nonfriable ACM includes any asbestos-containing packing, gasket, resilient floor covering or asphalt roofing product.
- Category II. Nonfriable ACM includes any nonfriable ACM other than Category I nonfriable ACM.

Samples were collected in airtight, sealed bags for transportation to Batta Laboratories, LLC for analysis. During sample collection procedures, good safety and hygiene practices were implemented to prevent asbestos airborne contamination from being introduced into the building's atmosphere.

All field records pertaining to samples collected during this inspection can be found in Appendix B of this report and each sample is listed as follows:

1. Field Number
2. Lab Number
3. AHERA Classification
4. Sample Location
5. Material Sampled
6. Lab Results

All lab data pertaining to the samples analyzed can be found in Appendix A of this report and each sample is listed as follows:

1. Date Analyzed
2. Field Sample Number
3. Lab Sample Number
4. Sample Location
5. Asbestos Content
6. Non-Asbestos Content

Samples were analyzed using an A, B, C… positive stop protocol for each set of homogenous materials (*materials with similar characteristics)*. If a sample in the homogenous set tested **positive** for **asbestos** (***greater than 1% by composition****)* then the other samples in that set were not analyzed. If asbestos was not detected in a sample, then all samples from that homogenous set were analyzed for asbestos until one tested positive.

3.2 LABORATORY ANALYSIS METHODS

All samples collected during the survey were analyzed at Batta Laboratories, LLC, an A.I.H.A., NVLAP certified laboratory. Upon arrival at the laboratory, the samples were logged-in and submitted for analysis.

PLM samples were analyzed utilizing the Environmental Protection Agency's test method: "Methods for the determination of Asbestos in Bulk Building Materials" (EPA 600/R-93/116, July 1993) and the McCrone Research Institute's "The Asbestos Particle Atlas" as the principal

analytical references. Additional treatment and tests may be required to accurately define composition (i.e. ashing, extraction, acetone treatment, and TEM).

The PLM method utilizes a light microscope equipped with polarizing filters. The identification of asbestos fiber bundles is determined by the visual properties displayed when the sample is treated with various dispersion staining liquids. Identification is substantiated by the actual structure of the fiber and the effect of polarized light on the fiber, all of which is viewed by a trained technician. The limit of detection of asbestos by PLM is about one percent (1%) by area. Samples containing lower levels of asbestos are not reliably detectable by this technique.

Analysis was performed by using the bulk sample for visual observation and slide preparation(s) for microscopic examination and identification. The samples analyzed for asbestos (chrysotile, amosite, crocidolite, anthophyllite, and actinolite/tremolite), silicon carbide whiskers, carbon fibers, fibrous non-asbestos constituents (cellulose, synthetic, etc.), and non-fibrous constituents. Using a stereoscope, the microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample.

The asbestos NESHAP recommends that asbestos bulk samples that are less than 10% by PLM are to be analyzed by point counting for friable ACM and mandates point counting when PLM results for friable ACM are in trace amounts (< 1%) in order to declare that the material is non-asbestos containing. The point-count procedure mandated by NESHAP is in the EPA “Interim” Bulk Method. For each layer to be point counted, eight mounts are made by dispersing 8 pinches of sample in suitable fluid. Each of the mounts is examined under the polarizing light microscope using an eyepiece reticule that superimposes a grid of points over the field of view. Fifty non-empty points are examined for each mount, yielding 400 points – some of which would be identified as asbestos and the rest as non-asbestos material.

3.3 ASBESTOS ANALYSIS RESULTS

A total of 75 samples were collected. A total of 70 samples were analyzed by PLM and 5 samples were not analyzed due to positive stop protocol. The original laboratory report / certificates of analysis and survey field records are found in Appendix A.

The following table summarizes the samples collected. **Building materials from this survey were found to contain asbestos in amounts greater than 1 %** (NAD = No Asbestos Detected, RACM = Regulated Asbestos Containing Material, CAT I NF = Category I Non-friable ACM, & CAT II NF = Category II Non-friable ACM).

3.4 ADDITIONAL OBSERVATIONS

In addition to the results presented in Section 4.1, BEA observed the following:

- Only visibly accessible interior and exterior areas were inspected.
- ACM two-coat plaster was observed behind drywall and joint compound in walls along the exterior envelope, as well as on ceilings. It should be noted that demolition of drywall and joint compound will be necessary to access ACM plaster, and estimations may were limited due to limited visibility of the material.
- If any new suspect asbestos materials are discovered during the renovation/demolition phase of this project, they should be tested for asbestos prior to handling.

3.5 COST ESTIMATE FOR ASBESTOS ABATEMENT

Material	Quantity	% Asbestos	Estimated Removal Cost
Rough Coat Plaster	5,500 SF	2% Chrysotile	$ 38,500.00 to 82,500$
Linoleum Sheet Flooring	120 SF	20% Chrysotile	$ 600.00
TOTAL COST OF ASBESTOS ABATEMENT			**$ 39,100.00 to $83,100.00**

SECTION 4.0 LEAD SURVEY

4.1 LEAD BASED PAINT EVALUATION

BATTA ENVIRONMENTAL ASSOCIATES, INC. performed a screening for lead-based paint for the single-family residence located at 222 N Marlyn Avenue in Essex, Maryland on June 2nd, 2025. The inspection was performed using a Heuresis Pb 200i Portable X-Ray fluorescence (XRF) Analyzer (Serial Number 1568) by Donovan Nelson, a trained XRF sampling technician.

Various painted surfaces were analyzed using the hand-held XRF Analyzer and a visual assessment of the identified lead-based surfaces was performed. Identified lead-based paint components were visually assessed for paint condition as per the United States Department of Housing & Urban Development (HUD) guidelines.

A total of 25 XRF readings were collected on the interior and exterior areas of the structure. HUD guidelines define paints with 1.0 mg/cm^2 or greater of lead as measured on a hand-held XRF analyzer as "lead-based paint". **Lead-based paint was not identified as a result of this screening.** The following table describes the results of the XRF testing.

Table 1: X-Ray Fluorescence Analyzer Results
222 N Marlyn Avenue
Essex, Maryland 21221

Reading	Location	Wall	Component	Color	Substrate	Result

SECTION 5.0 HAZARDOUS MATERIALS EVALUATION

Environmentally hazardous materials other than asbestos or lead may be present in the subject property that are regulated under the Resource Conservation and Recovery Act (RCRA), the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the Toxic Substances Control Act (TSCA), or the Universal Waste Rule (UWR).

A qualified environmental technician performed a detailed inspection of the subject area for electrical equipment that may contain polychlorinated biphenyls (PCBs), mercury switches gauges or thermostats, batteries for exit signs and emergency lighting, HID lamps, fluorescent light tubes, refrigerants, fire extinguishers, oil filled storage tanks or equipment, and other electronic equipment or stored chemicals. The investigation was performed to identify and locate all environmentally hazardous materials on the site so they may be remediated or disposed of properly prior to the demolition of the building.

HAZARDOUS MATERIALS IDENTIFICATION PROCEDURES

For a waste to be deemed hazardous, the U.S. Environmental Protection Agency (EPA) must list it under the Resource Conservation and Recovery Act (RCRA) regulations - i.e., listed wastes. If a waste does not appear on one of these lists, it still might be a hazardous waste if it has one or more of the following characteristics:

- It is easily combustible or flammable. This is called an ignitable waste, which can include solvents, paint wastes and gasoline.
- It corrodes metals and other materials or is very acidic or very alkaline. Corrosive wastes can include battery acid, caustic paint strippers, and some alkaline or lime-based floor cleaners.
- It is unstable and explodes or produces toxic fumes, gases, and vapors when mixed with water or under other conditions, such as heat or pressure. Examples of reactive waste are certain cyanides or sulfide-bearing wastes.
- It is harmful or fatal when ingested or absorbed, or it leaches toxic chemicals into the soil or groundwater. Toxic wastes can include gasoline, solvents, and paint solids.

The toxicity characteristic leaching procedure (TCLP) is a standard test used to determine the toxicity of a solid waste. The test is based on the ability of a waste to leach specific metals and chemicals. If the leachate contains more than the regulatory level for a specific chemical, the material is considered a hazardous waste.

The EPA lists a waste because it has been shown to be harmful to health and the environment when not managed properly. The EPA regulations - 40 CFR Part 261 - list more than 400 hazardous wastes. If a waste is not found on any of these federal lists, it still might be on a state hazardous waste list.

Common types of hazardous-containing materials that can be found in buildings are:

- LIGHT BALLASTS: Some light ballasts contain a mixture of chemicals called polychlorinated biphenyls (PCBs). Types of light ballasts that may contain PCBs include magnetic, electronic, HID, and emergency lighting.
- BATTERIES. These include nickel-cadmium (NiCad) and small sealed lead-acid batteries, which are found in many common items, including electronic equipment, mobile telephones, portable computers, and emergency backup lighting.
- THERMOSTATS. These products can contain as much as 3 grams of liquid mercury and are located in almost any building, including institutional, commercial, and industrial facilities.
- LAMPS. These include the bulb or tube portion of electric lighting devices. Examples of common universal waste electric lamps include, but are not limited to, fluorescent, high-intensity-discharge, neon, mercury vapor, high-pressure-sodium, and metal-halide lamps. Many used lamps are considered hazardous wastes under the RCRA because they contain mercury or occasionally lead.
- REFRIGERANTS: These are used in refrigeration or air conditioning systems which include Chlorofluorocarbons (CFCs), Hydrochlorofluorocarbons (HCFCs), or Hydrofluorocarbons (HFCs).
- CHEMICALS: Can include different types of cleaning agents, agricultural pesticides, laboratory chemicals, paint, etc. Usually not considered a building product because they are stored materials but should be disposed of properly.

The following table lists the hazardous materials identified during the evaluation of the structure.

HAZARDOUS MATERIALS INVENTORY

Main Building		
Material	**Quantity**	**Regulation**
Florescent Light Fixtures (Ballasts)	7 Ea.	TSCA - 40 CFR Part 761 RCRA - 40 CFR 261.8
4' Fluorescent Light Tubes	12 Ea.	RCRA - Universal Waste
Exit Signs (Batteries)	0 Ea.	RCRA - Universal Waste
Emergency Lighting (Batteries)	1 Ea.	RCRA - Universal Waste
Fire Extinguishers	0 Ea.	Household Hazardous Waste
Mercury Switch	1 Ea.	TSCA - 40 CFR Part 761 RCRA - 40 CFR 261.8
Smoke Detectors	1 Ea.	Household Hazardous Waste
No Visible Mold Growth	---	---
Miscellaneous Chemical Containers	~12 Gallons	Household Hazardous Waste

SECTION 6.0 LIMITATIONS

This survey was limited in scope to an interior asbestos survey, lead survey, and hazardous material inventory for the single-family residence located at 222 N Marlyn Avenue in Essex, Maryland, as defined by contract documents and the project scope of work. Hazardous materials such as lead based paint, PCBs, fluorescent light tubes, mercury switches, HID lamps, lead acid batteries, refrigerants, stored chemicals, or other environmentally sensitive materials were assessed as part of this inspection.

This survey report has been prepared by BEA in a manner consistent with that level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions. No other warranty expressed or implied is made. The intent of this survey report is to assist the building owner or management in locating hazardous materials. This document is not intended to be utilized as a proposal or a project design document for the remediation of hazardous materials discovered during this investigation.

The survey was conducted to identify asbestos, lead, and hazardous materials on the interior areas of the building. Some materials may not have been discovered due to inaccessibility. Any suspect materials discovered subsequent to the issue of this survey report should be evaluated or sampled and analyzed to determine the nature of the suspect asbestos material.

BEA's interpretations and recommendations are based upon the results of sample collection and analyses in compliance with environmental regulations, quality control and assurance standards, and the scope of work. The results, conclusions, and recommendations contained in this report pertain to conditions observed at the time of the survey.

SECTION 7.0 RECOMMENDATIONS

7.1 RECOMMENDATIONS FOR REGULATED ACM (RACM)

Rough Coat Plaster was identified to be RACM

These materials must be removed prior to any activity that would release asbestos fibers from this material. Specifically, any renovation or demolition activity that will crush, abrade, or dissolve the matrix of this material must be performed by a Maryland-licensed Asbestos Contractor. If these materials are in good condition and not impacted by the renovation/demolition and will remain on/in the facility, no other special handling, or action is required for these materials.

7.2 RECOMMENDATIONS FOR CATEGORY I NONFRIABLE ACM

Linoleum Sheet Flooring was identified to be Category I Non-friable ACM during this investigation.

This material is required to be removed by a Maryland-licensed asbestos contractor if proposed renovations or demolition will impact these materials in such a manner as to render them friable and thus RACM. Specifically, any renovation or demolition activity that will crush, abrade, or dissolve the matrix of these materials must be performed by a Maryland-licensed Asbestos Contractor. If these materials are in good condition and not impacted by the renovation/demolition or if renovation/demolition work will not render the material friable then they may remain on/in the facility. If demolished, this material and the building components associated with it must be disposed of in a Construction/Demolition landfill and must not be reused or recycled.

7.3 RECOMMENDATIONS FOR CATEGORY II NONFRIABLE ACMS

No materials were identified as Category II Non-friable ACM during this inspection:

If present, these materials identified as Category II Nonfriable ACM must be removed prior to any renovation or demolition activity that will crush, abrade, or dissolve the matrix of this material. The removal of this material must be performed by a Maryland-licensed Asbestos Contractor. If this material is in good condition and not impacted by the renovation/demolition and will remain on/in the facility, no other special handling, or action is required for this material.

7.4 ASBESTOS 10-DAY NOTIFICATION

The Maryland Department of the Environment, and the US Environmental Protection Agency – Region II, require notification of intent to renovate or demolish when asbestos is present.

Notification must be sent at least 10 working days prior to the start of any construction activities. The general contractor should also keep a copy of this survey at the construction site during the entire construction project as proof of compliance with 40 CFR 61 (NESHAP).

7.5 RECOMMENDATIONS FOR LEAD-BASED PAINT

Lead-Based Paint (LBP) is defined by the Department of Housing and Urban Development (HUD) as paint that contains lead in concentrations greater than one milligram per square centimeter (1.0 mg/cm2) or 0.50% by weight. Lead in paint at any level is regulated under OSHA 29 CFR 1926.62 which applies to all construction work where an employee may be occupationally exposed to lead which includes the demolition or salvage of structures and torch cutting where lead or materials containing lead are present.

Lead Toxicity Characteristic Leaching Procedure (TCLP) samples need to be collected for outgoing demolition waste which contains known or suspected LBP to determine whether or not it is classified as Hazardous Waste under the Resource Conservation and Recovery Act (RCRA) Toxicity Characteristic (TC) Rule (40 CFR 261.24). Certain activities may trigger the necessity of Personal Protective Equipment (PPE) for the renovation/demolition workers based on their work methods as required by OSHA 29 CFR 1926.62.

7.6 RECOMMENDATIONS FOR HAZARDOUS MATERIALS

The fluorescent light tubes, fluorescent light ballasts, exit lights, emergency lights, and fire extinguishers should be removed and properly disposed of or recycled in accordance with State and federal regulations. Recommendations for the handling/disposal of hazardous waste are as follows:

Fluorescent Light Bulbs: Fluorescent lamps illuminate by exciting mercury atoms enclosed in a glass bulb with an electrical current. Spent bulbs must be managed appropriately because of the mercury content in them. Most of the mercury associated with a fluorescent bulb is encountered in the phosphor coating inside the bulb. Only a small fraction of the mercury is found as vapor inside the bulb which readily escapes if the bulb is broken. Fluorescent light bulbs should be stored in containers such as 55-gallon drums and shipped to a recycling facility that is capable of recovering mercury from the glass, metal, and mercury contaminated phosphor powder in the bulb.

Light Ballasts: Ballasts are electrical devices which are present in association with all Fluorescent and HID lighting. Ballasts made before 1979 contained capacitors filled with a dielectric fluid which consisted largely of Polychlorobiphenyls (PCBs). Although TSCA officially banned the manufacture of PCBs in 1979, PCB ballasts that were already in use were permitted to remain in

use by EPA regulation 40 CFR 761. Since ballasts can operate about 30 years before failure many PCB-ballasts are still in use today. Identifying PCB containing ballasts in the field can be accomplished by checking if there is a "No PCBs" label on the ballast as was put on most ballasts manufactured after 1979 or if it can be determined that the ballast was manufactured after 1979. If the ballast contains no label and the date of manufacture is unknown, then it should be assumed to contain PCBs. Ballasts assumed to contain PCBs should be stored in containers such as 55-gallon drums and shipped to an appropriate recycling facility.

Car Batteries: Old car batteries - especially lead-acid batteries - contain a lot of toxic chemicals which, if let to simply rot in the ground, will contaminate the soil with lead, chemicals, acids, and non-biodegradable plastics. Dispose of car batteries at a battery recycling center or a local auto supply store.

Refrigerants: If any refrigerators, cold vending machines, water fountains, or air conditioners are not being reused at the facility and need to be disposed then the refrigerant should be recovered by a qualified services contractor before disposal.

Fire Extinguishers: To dispose of an old fire extinguisher that cannot be recharged or you do not wish to keep, let the canister sit for a few days after discharging to make sure the pressure has been released. Once there is no longer any pressure, dispose in a trash bag in general waste stream or send to a metal recycling company. WARNING: Extinguishers made prior to 1960 can be very dangerous. These extinguishers may contain carbon tetrachloride. Carbon tetrachloride is a known carcinogen. Exposure can be fatal if enough of the chemical is inhaled or absorbed through the skin. When heated, carbon tetrachloride produces phosgene gas, commonly known as nerve gas. Use extreme caution when handling older fire extinguishers and contact your local fire department for guidance on how to transport and dispose of them safely.

Antifreeze, Cleaners, Chemicals, Oil, Gasoline: Antifreeze, Chemicals, and Household cleaners (ammonia, drain cleaner, rust remover, tile/shower cleaner and more) are considered hazardous waste and must be either reused or sent to a proper disposal facility for household hazardous waste.

Tires: It is illegal dispose of tires in the general waste stream because the steel-belt inside auto tires can puncture the liners of landfills, which can lead to ground contamination. Tires are not considered hazardous waste but can pose problems if not properly recycled.

Tires can be dropped off with a reputable tire dealer for a fee or the local solid waste transfer station/landfill may accept used tires.

Recycling of Demolition Waste: Recycling on a demolition project ranges from "deconstruction" of a building with separation of the materials at the demolition site to the processing of mixed demolition waste for recyclable material recovery. The removal of a structure's hazardous materials is necessary to ensure worker safety and the value of the products recovered. Building components cannot be recycled if hazardous materials are present. The cost of remediation vs. landfill costs without recycling savings must be considered with materials such as lead paint or asbestos resilient flooring, mastics, or roofing which can be landfilled with the Construction and Demolition Waste provided the ACM is not rendered friable or the waste load with LBP is not determined to be hazardous waste through TCLP testing. In most cases the demolition contractor will decide whether to remediate or landfill materials based on local and federal regulations, the requirements of the project work plan or design, and the cost effectiveness of different approaches to managing hazardous wastes.

7.7 GENERAL RECOMMENDATIONS

Based on the results of this survey, BEA has the following general recommendations:

- If any suspect materials are discovered after this inspection that were not assessed in this survey, should be sampled and analyzed to determine its hazardous nature and to initiate appropriate responses.

Sample ID		Client-supplied Data		Analytical Data			Reported Results	
Lab Sample#	Client Sample#	Sample Description	Material Type	Friable?	Texture/	Gross Color	Non-asbestiform Components	Asbestiform Components
1598690	006A	Kitchen	Mastic	No	Soft Homogeneous	Black	2% Cellulose 98% Non-fibrous Material	No Asbestos Found
1598691	006B	Kitchen	Mastic	No	Soft Homogeneous	Black	2% Cellulose 98% Non-fibrous Material	No Asbestos Found
1598692	007A	Laundry	Linoleum	No	Soft Homogeneous	White	1% Cellulose 99% Non-fibrous Material	No Asbestos Found
1598693	007B	Hall	Linoleum	No	Soft Homogeneous	White	1% Cellulose 99% Non-fibrous Material	No Asbestos Found
1598694	008A	Laundry	Leveler	No	Firm Homogeneous	Gray	2% Cellulose 98% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Document Security Note: *Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies. PLM analyses do not fall under the purview of AIHA LAP.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

CERTIFICATE OF PLM ANALYSIS

Test Method: EPA/600/R-93/116 in conjunction with Batta SOP

Report Date: 06/09/25

Sampling Data

BLI Project #: L436425
Project Name: 1103625C 222 N. MARLYN AVE.-

Date Sampled: 06/02/25
Sampled By: D.NELSON
Date Analyzed: 06/05/25

Sample ID		Client-supplied Data			Analytical Data			Reported Results	
Lab Sample#	Client Sample#	Sample Description	Material Type	Friable?	Texture/	Gross	Color	Non-asbestiform Components	Asbestiform Components
1598725	020A	Basement	Mortar	Yes	Firm Homogeneous		Tan	100% Non-fibrous Material	No Asbestos Found
1598726	020B	Basement	Mortar	No	Firm Homogeneous		Tan	100% Non-fibrous Material	No Asbestos Found
1598727	021A	Basement	Waterproofing	No	Firm Homogeneous		Gray	100% Non-fibrous Material	No Asbestos Found
1598728	021B	Basement	Waterproofing	No	Firm Homogeneous		Gray	100% Non-fibrous Material	No Asbestos Found
1598729	021C	Basement	Waterproofing	No	Firm Homogeneous		Gray	100% Non-fibrous Material	No Asbestos Found

Note 1 *Due to limitations of the EPA PLM method, floor tiles may yield false negative (<1%) results by this method. As such, the EPA recommends further analysis by electron microscopy. Batta recommends the NY 198.4 over the Chatfield method.*

Note 2 Unless otherwise specified, Tr=Trace and correlates to <0.25% (based on a 400-point EPA point count).

Note 3 Materials containing vermiculite are not good candidates for analysis using standard EPA 600 PLM protocol. Results may be low-biased due to inherent limitations caused by the material. The EPA recommends that vermiculite attic insulation (VAI) be prepped and analyzed using EPA 600/R-04/004, known as "The Cincinnati Method".

Document Security Note: *Due to the unsecure nature of electronic files, it is the responsibility of the client (herein defined as the recipients of this or these electronic files) to verify the authenticity and accuracy of data included in the attached electronic file(s). Batta Laboratories, LLC is not liable for any discrepancies, alternations, reproduction (including copying and pasting), redistribution or any other actions that may alter or change the accuracy or the nature of the originally transmitted files. It is recommended that the recipient of these documents verify the data in electronic format with the corresponding hard copy data report.*

*This report does not constitute endorsement by NVLAP and/or any other US government agencies. PLM analyses do not fall under the purview of AIHA LAP.

*The test data pertain only to the items tested. No assumptions or conclusions should be made to materials or samples not analyzed. Furthermore, Batta Laboratories, LLC assumes no responsibility for the accuracy of results influenced by the use of improper collection techniques or equipment.

*Organically-bound, nonfriable material may interfere with the accurate and reproducible quantification of asbestos. In these cases, the EPA recommends further analysis by a matrix-reduction method. Batta recommends the NY ELAP Item 198.6/198.4 over the Chatfield method. When point count techniques are utilized on organically-bound, nonfriable materials without the EPA-recommended matrix reduction steps, Batta Laboratories assumes no responsibility regarding the accuracy or precision associated with these results. In these cases, Batta employs a modified version of the EPA point count method.

*WRTA refers to a group of fibrous Amphiboles typically associated with 'Libby Amphibole'. Within this classification are: winchite, richterite, tremolite, and actinolite.

JOB SAFETY ANALYSIS

Prepared by: Andrew Kim **Date:** 06/02/25

Project Name: 222 N. Market St. **BEA#:** 110362SC

Site Inspected: 222 N. Market St.

Task Description: ☐ Air Monitoring ☒ Bulk Sampling ☒ XRF/Pb Survey ☐ Mold Sampling
☐ Other: _____

Instructions: Identify the steps that you will have to perform to complete the assigned task. Review the following safety subjects and place a checkmark next to the ones that apply to this task. Also, place a checkmark next to any sub-item that is a concern.

☒ **Tools & Equipment** – 1. ✓ Do you have the proper tools & equipment to safely perform the task? 2. ✓ Are your tools in safe condition? 3. ✓ Are you trained to safely use the required tools & equipment?

☐ **~~Hazardous Energy Control~~** – 1. __ Will you be exposed to hazards from equipment movement or excessive heat/cutting/etc.? 2. __ Have all hazardous energy sources been identified? 3. __ Do you need a hazardous energy source(s) locked out / tagged out? 4. __ Have you verified with the owner or owners representative that all hazardous energy sources are controlled?

☐ **~~Fall Protection~~** – 1. __ Will the task require you to be at heights more than six feet? 2. __ Will you have to lean out over platform guard rails to perform the task? 3. __ Will you be using a manlift, aerial lift, or scaffolding? 4. __ If using a manlift, aerial lift, or scaffolding have they been inspected and approved for use? 5. __ Will a qualified ground person be present when using a lift? 6. __ Are there any roof or floor openings in the area where you will be working? 7. __ Will you be working next to an unguarded roof edge? 8. __ Is your ladder proper for the task and in safe condition?

☐ **~~Confined Space~~** – 1. __ Will you be working in a permit required confined space? 2. __ Have you inspected the confined space to identify any potential safety hazards? 3. __ Are you knowledgeable of all the confined space entry procedures? 4. __ Will you continuously monitor the air when in a confined space?

☐ **~~Hazardous Materials~~** – 1. __ Are you familiar with all the hazards of any chemicals you will be using? 2. __ Are you knowledgeable about any potential chemical exposure that might be created by the task? 3. __ Will you need to wear a respirator?

☐ **~~Cutting & Welding~~** – 1. __ Is a Hot Work Permit required before starting the task? 2. __ Do you have a fire watch person on each floor level that is exposed to weld sparks? 3. __ Will the fire watch remain at the scene for one-half hour after completion of the task? 4. __ Is there proper ventilation for the task being performed?

☐ **~~Mobile Equipment Operation~~** – 1. __ Have you been trained and issued a permit (must be displayed) to operate this type of Mobile equipment? 2. __ Do you perform a Safety Inspection of the mobile equipment before operation?

☐ **Personal Protective Equipment** – 1. __ Will performing this task require the use of Personal Protective Equipment?

Eye_____	Face ✓ _____	Head_____
Clothing ✓ _____	Hand _____	Other_____
Foot ✓ _____	Respiratory _____	Other_____

☐ **Safety Training** – 1. __ Have you been trained in the safety procedures required to perform the task? Ex: Lockout, confined space, fall protection, respirator usage, etc.

☐ **Other Safety Hazards** – 1. __ Are there any other potential safety hazards that you feel are present in performing this task? (Hidden electrical / piping / materials behind walls or equipment skins, etc.) Explain:

_____

_____

_____

☐ **I/We have reviewed this task for the above safety subjects and made a plan for all the areas that have been checked.**

Signed: _____ **Date:** 06/02/25

Re: Geotechnical Investigation Report
Essex Police Precinct #11
Essex, Maryland
Findling Project No. 22-1034-03

Dear Ms. McCormick:

Findling, Inc. is pleased to submit this report containing the results of the geotechnical investigation for the proposed Police Precinct #11 building additions at Essex, Maryland (see Figure 1: Site Vicinity Map, in the Appendix). The work described within the report was performed in accordance with the proposal dated May 18, 2023.

We wish to advise you that we will store the soil samples obtained from the soil test borings for a period of thirty (30) days from the date of this letter, during which time they will be available for inspection. After that time the samples will be discarded unless another disposition is requested.

We appreciate the opportunity to be of service to you on this project. If you have any questions, please call us.

Sincerely,

FINDLING, INC.

APPENDIX

GEOTECHNICAL INVESTIGATION REPORT
Essex Police Precinct #11
Essex, Maryland
Findling Project No. 22-1034-03

1.0 INTRODUCTION

This report contains the results of the geotechnical investigation conducted for the Police Precinct Building Additions in Essex, MD (see Figure 2: Project Location Map, in the Appendix). The work described within this report was performed in accordance with the proposal dated May 18, 2023.

2.0 PROJECT DESCRIPTION

2.1 Existing Conditions

The existing Essex Police Precinct is located at 216 N. Marlyn Avenue, Essex, Maryland 21221. The site is approximately 2.6 acres and is bound on the east by a county road, N. Marlyn Avenue, and bound on the north, south, and east by a residential area. A portion of the northern edge abuts a stormwater management pond for an adjacent community. The western edge and a portion of the southern edge of the site are bounded by a Baltimore County Fire Department.

The site consists of a one-story Police Precinct Building with a basement and a footprint of about 9,000 sq. ft. on the west side of the site. An Annex Building, one story with a footprint of about 2,800 sq. ft., is present to the north of the existing Precinct Building. The site has a Parking Lot west of the existing Precinct Building and partially occupies the Fire Department Parcel. At present, the areas of the proposed construction are mostly grass-covered. Within the vicinity of the proposed construction, the site slopes from EL 35 ft. on the northwest to about EL 30 ft. on the southeast. The access road on the south is at EL 32 ft.

2.2 Proposed Construction

The project consists of the construction of two Building Additions and the renovation of the existing Precinct Building. Two one-story additions proposed are one with a building footprint of 1,400 sq. ft. on the west as Sallyport and the other with a building footprint of 16,800 sq. ft. on the east of the existing building (see Figure 3: New Work Order, in the Appendix). A portion of the east building will have a basement level, where the addition meets the existing building.

The building addition on the west and east of the existing building will have a floor finish elevation (FFE) of El 35.8 and El 36.25 respectively. The maximum column load of 70 kips and a maximum wall load of 5 kips per foot are anticipated in these additions.

The parking areas will be located at the south of the proposed building.

3.0 PURPOSE AND SCOPE

The purpose of this geotechnical investigation was to determine the subsurface conditions in the vicinity of the proposed construction and prepare a report containing geotechnical-related design and construction considerations for the Police Precinct Building Additions, Parking area, and SWM facilities. The report is based on the information provided to us, the field investigation performed, available geological data, and our experience in the area.

The Subsurface Investigation consisted of the following (see Figure 4: Boring Location Plan, in the Appendix):

i. Nine (9) borings (B-1 through B-9) for the proposed Building Additions to a depth ranging from 26.5 ft. to 41.5 ft. below the existing grade

ii. Five (5) borings (P-1 through P-5) for proposed Pavement Areas to a depth ranging from 10 ft. to 11.5 ft. below the existing grade.

iii. Four (4) borings (SWM-1 through SWM-4) for proposed Stormwater Management Facilities to a depth ranging from 15 ft. to 18 ft. below the existing grade. Infiltration tests were performed in offset borings at a depth ranging from 2 ft. to 10.8 ft. below the existing grade.

The field investigation was performed using two types of rigs: a rig mounted on an All-terrain-vehicle (ATV) and a Truck-mounted drill rig.

Following the completion of the fieldwork, the scope of work included conducting laboratory tests in order to classify and establish the engineering properties of the underlying materials.

The scope of this work did not include an environmental investigation at the site.

4.0 SUBSURFACE INVESTIGATION

4.1 Field Investigation

The boring locations were staked in the field based on a site plan provided by Murphy & Dittenhafer and the as-drilled locations were surveyed after the drilling operations were completed. Prior to the drilling operation, a Miss Utility Ticket was opened, as required by law (The New Maryland “Miss Utility Dig Law” or Title XII went into effect March 12, 2021), to clear/mark the utilities on site. In addition, a Private Utility Locator was contracted to clear/mark the utilities that were not cleared by Miss Utility. The borings in close proximity to existing utilities on the field were offset to a nearby location. The test borings were drilled to a depth ranging from 10 ft. to 41.5 ft. below the existing grade.

These test borings were monitored for groundwater level during the drilling operations, at the end of drilling operations, and after 24 hours, where possible; and later backfilled with auger soil cuttings. The borings on the paved areas were patched with cold asphalt after completion. The boring data from the field investigation is summarized in Table 1 and included in the Appendix.

4.2 Soil Test Borings

The boreholes were drilled using two drill rigs, one truck-mounted and the other mounted on an all-terrain vehicle, with an Automatic hammer, using hollow stem augers. Standard penetration tests (SPT) were conducted and split spoon samples were obtained at various intervals by driving a 1-3/8-inch ID (2-inch OD) split-spoon sampler in accordance with ASTM D-1586 specifications. The sampler was first seated about 6 inches to penetrate through the loose cuttings and then driven an additional 1 foot with blows of a 140-pound hammer falling 30 inches. The number of hammer blows required to drive the sampler through the second and third 6-inch increment (i.e., the summation of the second and third blow counts) is typically designated as the Standard Penetration Resistance (N) value. The penetration resistance is an index of the soil's strength, density, and behavior under applied loads.

A representative portion of each sample was placed in an airtight glass jar and was appropriately marked. All samples were sent to our laboratory for further evaluation and testing. The recovered soil samples were inspected and classified by a Geotechnical Engineer using the Unified Soil Classification System (USCS). The descriptions of the soils and conditions encountered at the test boring locations are presented on the Boring Logs and included in the Appendix.

4.3 Laboratory Testing

Selected soil samples were subjected to various tests to determine additional engineering characteristics of the existing on-site soils. The laboratory tests that were conducted on selected soil samples included the natural moisture content test (ASTM D2216), Atterberg limits (ASTM D4318), and sieve analysis (ASTM D422). The moisture vs. density relation (ASTM D698/1557) tests were performed on bulk samples collected from borings B-4, P-2, and P-4 to evaluate the suitability of these materials for use as compacted fill. CBR test (ASTM D1883) was also performed on the bulk sample collected from boring P-2 to assist in pavement design.

The results of these tests are summarized in Table 2 in the Appendix. All tests were performed in general accordance with the ASTM procedures.

5.0 SUBSURFACE CONDITIONS

The Boring Logs and Subsurface Profile included in the Appendix contain details related to the subsurface conditions encountered at the boring locations. It should be noted that stratification lines shown on the Boring Logs and Subsurface Profile represent approximate transitions between material types. Strata changes can occur gradually or at different levels than those shown on the Boring Logs and Subsurface Profile and depict conditions at the indicated locations and depths at the time of our subsurface investigation program. Groundwater levels are variable and are influenced by the existing soil conditions and seasonal and climatic changes.

5.1 Site Geology

Geologically, the site lies on the Western Shore of Coastal Plain Province, where the on-site materials consist of unconsolidated sediments. Published geologic information indicates that the near-surface materials at the site belonged to the Potomac group-Patapsco formation. These soils typically consist of Sand, Silt, Clay, and Gravel materials. The geology of the site is shown in Figure 5: Site Geology Map, in the Appendix. The soils encountered on the site during our site investigation, are as discussed below.

5.2 Soil Conditions

As indicated previously, details of subsurface conditions disclosed by the borings are contained in the individual Boring Logs. The subsurface condition revealed by the borings is also presented in Figure 6: Generalized Subsurface Profile.

Stratum 1: FILL

Man-placed Fill was encountered in borings SWM-1, SWM-2 and SWM-3. The fill materials consist of CLAY and Silty SAND with various percentages of Gravel. The fill stratum extended to a depth ranging from 4 ft. to 6 ft. below the existing grade. The standard penetration resistance (SPT) N-values ranged from 8 blows per foot to 25 blows per foot.

Stratum 2: PATAPSCO FORMATION

Beneath the Fill stratum in borings SWM-1, SWM-2, and SWM-3; and the surficial layer on the rest of the borings, natural soils consisting of CLAY, Silty SAND, and Sandy SILT, with various percentages of Clay and Gravel were encountered to the maximum depth of drilling. The standard penetration resistance (SPT) N-values ranged from 4 blows per foot to 50+ blows per foot.

5.3 Groundwater

Groundwater levels were noted in the borings during drilling operations, immediately and after 24 hrs. of completion of drilling. Groundwater was observed on the drill rods and samples during drilling operations in some of the test borings. Groundwater readings at the

end of drilling and after the HSA auger is pulled out were noted. Some of the test borings were left open for the 24 hrs. stabilized groundwater readings. The groundwater depth and the corresponding groundwater reading time were recorded. These are included in the boring logs and are summarized in Table 1, in the Appendix.

In the areas of the proposed building additions, the groundwater was observed to vary from a depth ranging from 6.8 ft. to 12 ft. below the existing grade. It should be noted that a shallow perched water table was encountered in boring P-1 underneath the Asphalt pavement surface. In addition, the borings showed the presence of a Clay and Silt layer with very low permeability, which could lead to ponding of water at the surface during wet seasons.

In addition, the groundwater levels shown on exploration logs may not have stabilized, particularly in less permeable cohesive soil, prior to backfilling. Consequently, the indicated groundwater levels, or lack thereof, may not represent present or future levels.

The fluctuations of the water table or the development of a perched water level at shallower depths above less permeable layers may occur depending upon the amount of precipitation and water runoff to the site from higher elevations during a wet season. Groundwater levels encountered during construction may differ from those encountered during our subsurface investigation, especially if construction is performed during a wet season of the year.

6.0 SEISMIC SITE CLASSIFICATION

The ASCE 7 Standard requires the use of Standard Penetration Test Resistance (test borings), Shear Wave Velocity (geophysical methods), and/or Undrained Shear Strength (soil laboratory testing) to categorize the Seismic Site Classification. Based on the explored soil properties in the test borings performed for this site and the assumption that the Bedrock encountered continues to 100 ft., the Seismic Site Classification was determined to be Site Class D.

7.0 CONCLUSIONS AND RECOMMENDATIONS

The evaluations and recommendations presented in subsequent sections of this report were based on our understanding of the proposed construction and the general subsurface condition indicated by the test borings. Should the project characteristics be altered from those discussed or should different subsurface conditions be encountered during construction, this Office should be consulted, as the evaluations and recommendations presented herein may no longer be valid.

7.1 Foundation Design Considerations

Based on the information provided to us, the maximum column loads will be about 70 kips per column and the maximum wall loads will be about 5 kips per lineal foot. In addition, it is our understanding that the building addition on the west and east of the existing building will have a floor finish elevation (FFE) of El 35.8 ft. and El 36.25 ft. respectively. The building addition on the east is planned to be mostly on the existing open ground, which has a relatively uniform elevation of about EL 31± ft. That is, the new building addition on the east will be on new fill. After proposed cuts, if any, have been performed and prior to placing new fill in areas that receive fill, the exposed subgrade should be proofrolled, and any soft or otherwise unsuitable materials that are located should be undercut and replaced with compacted select fill. Based on this information the foundation options for the building additions are discussed below.

7.1.1 Spread Footings Founded on Natural Soil or Compacted Soil Fill

An allowable bearing pressure of 2,500 psf is recommended for the footing subgrade when installed as described herein. We recommend that the exposed foundation subgrade must be inspected by an experienced Geotechnical Engineer, either using a Dynamic Cone Penetrometer (DCP) or other methods, in order to verify that the subgrade is capable of providing the recommended design bearing capacity If unsuitable soil such as elastic SILT (MH) or CLAY (CL/CH) are encountered, the footing subgrades should be undercut to a suitable subgrade approved by the field Geotechnical Engineer. The undercut excavation should be backfilled with compacted select fill or lean concrete. In general, the undercutting of less than 4 ft. is anticipated in localized areas.

In general, all exterior shallow footings (and footing in unheated areas) should be placed at least 30 inches below the final exterior grade for frost protection. Interior footings in heated areas can be located at nominal depths below the floor slab if supported on the natural firm soil subgrade or approved subgrade soil.

In order to preclude punching-type bearing capacity failures, wall footings shall have minimum widths of 24 inches, and any column footing shall have a minimum width of 36 inches. It is also recommended that wall footings be provided with some reinforcement (such as bottom temperature steel) such that sufficient bending strength is available to span

across isolated small pockets of soft or loose soils (that may go undetected during construction).

Based on the boring data and the anticipated structural loads, we estimate that total settlements for the foundation supported on the approved subgrade should not exceed one inch with differential settlements expected to be less than ¾ -inch. The magnitude of differential settlements will be influenced by the distribution of loads and the variability of underlying materials. These settlement values are based on our engineering experience of the soil and the anticipated structural loading and are to guide the structural engineer with his design. Quality control during construction is considered to be of extreme importance to ensure that subsequent settlements, following the construction process, are kept to a minimum.

7.1.2 Foundations at different elevations

The new foundations for the basement, in areas adjacent to the existing foundations, should be located at or near the same elevations as that of the existing foundations in order to not overstress the existing foundations. In order to prevent additional stressing of foundations at different elevations, if any, the foundations should be placed within a zone extending above and outward or down and outward extending from the bottom of the adjacent footings as shown in Figure 7: Limits of Adjacent Foundations, in the Appendix. In addition, the foundations for the walls that approach the lower level foundations at 90º can be stepped down to match the existing foundations. The step down should be at least 2 (Horizontal) to 1 (Vertical).

7.2 Mat Foundation - *For Additions with new basement level adjacent to the existing building with basement level*

The foundation subgrades for the basement are expected to be below the groundwater table. A Mat Foundation with a monolithic basement wall can be designed to be watertight and constructed to avoid the issues associated with the groundwater. As such, this “bathtub” type of construction can be helpful to avoid sump pumps and continuous groundwater pumping during the rainy seasons. The average contact stress under the mat foundation can be taken as 1,200 psf and the maximum allowable bearing capacity of 2500 psf is recommended for the mat foundation subgrade. A modulus of subgrade reaction of 100 pci may be used in the design of the mat slab. Note that, the mat foundation recommended for the basement is based on the geotechnical feasibility and we expect that the structural feasibility of the mat foundation option should be checked by the structural engineer.

As discussed previously, groundwater was encountered above the lowest floor finish elevation, and an under-slab subdrainge system is required to maintain groundwater below the basement level. However, the mat foundation system with monolithic perimeter walls designed for hydrostatic pressure can avoid the under-slab drainage system and its

accessories. In addition, the construction time and hence the required dewatering during construction might be less for the mat foundation.
The Basement Wall design is discussed in the following sections of the report (see Section 7.4, Below-Grade Wall).

7.3 Floor Slab - *For Structures that will not have a basement level*

Based on the information provided to us, the building additions will be mostly constructed on a new select fill. Before the placement of the new select fill, the topsoil needs to be removed and the exposed surface should be inspected thoroughly by proofrolling. If soft soils or otherwise unsuitable soils (such as wet soil or soils containing deleterious components) are encountered, then those soils should be undercut to a suitable subgrade and backfilled with select fill.

The floor slab can be designed as slab on grade after the placement of the select fill or can be designed as slab supported on grade beam. Furthermore, if the mat foundation option is not utilized, the slabs for the lowest floor will be constructed directly on the subgrade. If slab on grade is selected, a modulus of subgrade reaction of 100 pci may be used in the design of the floor slab.

Groundwater was not encountered at shallow depths during our field investigation. However, the borings showed the presence of a Clay and Silt layer with very low permeability, which could lead to ponding of water at the surface during wet seasons. Therefore, a special under-floor subdrainage system is considered necessary to maintain groundwater below the floor slab. A typical subdrainage system sketch (Figure 8), intended to graphically depict our preliminary recommendations, is included in the Appendix. The actual design including sizing of sump pumps, pipes, etc. should be done by the civil engineer. The subdrainage system should be placed shortly before slab construction to minimize damage to the piping from construction operations.

On most projects, there exists a significant lag time between the initial grading and the placement of the floor slab. Environmental conditions and construction traffic often disturb the soil subgrade during this lag time. The contractor should make provisions in the construction specifications for the restoration of the subgrade to a stable condition prior to the placement of the floor slab at no additional cost to the Owner.

A layer of polyethylene sheeting should be placed between the concrete and the subdrainage gravel layer to prevent concrete intrusion and serve as a vapor barrier. We recommend a “true” vapor barrier similar to a 15-mil Stego Wrap Vapor Barrier if moisture-sensitive flooring materials are to be used over a slab on grade within a humidity-conditioned space. A “true” vapor barrier with characteristics that conform to the requirements of ASTM E-1745, "*Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs*." is recommended. The

standard requires that the permeance (a measure of how much vapor can pass through) must be less than 0.3 perms. The other characteristic of a good vapor barrier that makes it effective is resistance to punctures and tears. ACI 302.1, *Guide for Concrete Floor and Slab Construction*, states that the minimum thickness of an effective vapor barrier is 10 mils. A 10-mil vapor barrier may be sufficient for residential construction in terms of puncture resistance, although the 10-mil barriers can't completely isolate the slab from ground moisture. The newer very low permeability barriers are available with 15-mil (15 thousandths of an inch) or greater. This thicker material is much less susceptible to tears or punctures and has a lower permeance. A 15-mil "true" vapor barrier can be used for this project.

7.4 Below-Grade Wall

Based on our understanding, the below-grade walls will be subjected to lateral (i.e., horizontal) loads. The wall will be a non-yielding wall and should be designed for the at-rest condition of lateral earth pressure. A below-grade wall that is configured as discussed above can be designed for a lateral at-rest earth pressure coefficient (Ko) of 0.5 (or equivalent fluid pressure of 60 pcf). Any surcharge loading must also be considered in the design of the wall. Lateral earth pressures may be resisted by interface friction between the soil and the base of the footing.

It is anticipated that the below-grade walls will be subjected to hydrostatic pressure from the groundwater around the walls. To avoid hydrostatic pressures on the walls, it is recommended that an approved vertical drain be constructed along the entire exterior of the sub-level walls. The drain would most likely be a commercial product such as Enka Drain or Geotech Drainboard. The commercial product would have filter fabric on the outer face. The system would incorporate drain tile to route the water to a gravity drain or sump pump. Note that, if the mat foundation option is selected, the walls can be designed to resist the hydrostatic pressure and the vertical drains may be avoided.

Clayey soil should not be used as a backfill behind the wall. The backfill behind the below-grade walls should consist of Silty SAND (SM) or SAND (SP-SW). Bank-run gravel can also be used as backfill material. However, the percentage of fines should be limited to facilitate compaction. Use of heavy compaction equipment should not be allowed within 10 ft. of the walls during backfilling operations. Compaction equipment exceeding 3,000 pounds in dead weight should not be used within 5 ft. of the walls in order to avoid overloading the walls; a hand-operated tamper is recommended for such use.

8.0 GENERAL GRADING CONSIDERATIONS

8.1 Site Preparation

Site preparation will consist of the removal of any topsoil or pavements in the area of the proposed structures, usually extending horizontally up to 5 to 10 ft beyond the footprint peripheral line of the structures. There are many utilities within the footprint of the proposed building additions. All existing utilities that may interfere with the proposed grading scheme should be removed and the utility trenches should be backfilled with compacted select fill.

8.2 Inspection of Subgrades and Undercutting

Following the excavation to establish the proposed subgrade level of the structure, the exposed subgrade should be inspected and tested for adequate support conditions. As discussed previously, undercutting of soft, loose, or unsuitable soils may be required in order to establish a suitable bearing surface. Please note that undercutting may be required at isolated locations and not under the entire footprint of the proposed building. The undercutting should be extended beyond the edge of the proposed structure by a distance equal to at least half the depth of the undercut, or a minimum of 1 ft. The limits of undercutting are shown in Figure 9, in the Appendix.

Exposed subgrades must be sloped to facilitate surface runoff away from the construction area and to prevent ponding of surface water. If ponding of surface water does occur, it should be removed by pumping, ditching, or as otherwise directed by the inspecting geotechnical engineer. During periods of anticipated inclement weather, exposed surfaces shall be graded and sealed to preclude infiltration of surface water. Subgrades, that become disturbed due to inclement weather or construction traffic and require over-excavation, should be reworked at no additional cost to the project.

8.3 Proofrolling

Following the removal of topsoil and any soft soils, the subgrade should be thoroughly proofrolled under the observation of a qualified Geotechnical Engineer. Proofrolling should be performed with a heavily loaded, rubber-tired piece of construction equipment, such as a fully loaded 20-ton tandem axle dump truck or equivalent (at least a 3,000 lb walk-behind roller), to detect any soft, loose, or otherwise unstable deposits. Any unsuitable soils, including elastic Silt (MH) and plastic Clay (CH), should be removed and replaced with compacted select fill. The approved subgrade should then be scarified, and moisture conditioned to within 3% of the soil's optimum moisture content and re-compacted.

8.4 Fill Selection, Placement, and Compaction

All materials to be used as fill or backfill should be inspected, tested, and approved by the Geotechnical Engineer.

On-Site Materials:

The proposed building additions will be supported on fill and no significant on-site material will be available for fill.

Borrow Materials – Select Fill:

Compacted select fill and backfill for use retaining structures should consist of satisfactory soils classified as SM or better in accordance with the Unified Soil Classification System, ASTM D-2487. Soils meeting this requirement are classified as SM, SP, SW, GM, GP, GW, and combinations of these groups. GC and SC materials may be utilized as compacted structural fill if they contain less than 35% passing the No. 200 sieve and a Plasticity Index (PI) of less than 15. Unsatisfactory soils are those classified as OL, OH, CH, CL, MH, and ML. The soils classified as GC, SC, CL, ML; and CH/MH with a maximum Liquid Limit of 60% and Plasticity Index of 30% can be used as structural fills at depths greater than 4 ft. below pavement subgrades and within non-structural areas. In addition, these soils can be used as a fill for site grading. As such, we recommend a maximum dry density greater than 105 pcf be achieved.

Soils used for compacted fill should be free of unsuitable materials such as topsoil, debris, and other organics, rubble, and rocks larger than 4 inches in diameter. Open-graded materials, such as Gravels (GW and GP), which contain void space in their mass should not be used in structural fills unless properly encapsulated with filter fabric. Lean Concrete can also be used as a select fill under the foundation.

Fill Compaction:

Compacted select fill should be placed in approximately horizontal layers, each layer having a loose thickness of not more than 8 inches. All select fill should be compacted to 95% of the maximum dry density in accordance with ASTM D1557, Modified Proctor. The contractor should select appropriate compaction equipment to achieve the required compaction. Fill placement should commence at the toe of the proposed slopes and progress upwards as additional fill is placed in horizontal lifts.

Field moisture contents of the fill may have to be adjusted in order to obtain suitable degrees of compaction. It is anticipated that field moisture contents of fill materials will need to be controlled to the range of optimum moisture content, plus or minus 3% if stable fills with adequate degrees of compaction are to be obtained.

Fill Placement:

We recommend that compacted structural fill be placed at least 5 ft. beyond the edge of the building. All fill placement and compaction operations in critical areas (i.e., structural areas) should be monitored by an experienced Soil Inspector on a full-time basis to ensure that fill materials are being placed and compacted in compliance with the project specifications. Should any compaction problems develop during grading operations, the Geotechnical Engineer should be consulted for an evaluation of the problems.

Fill materials should not be placed on frozen soils, frost-heaved soils, and/or excessively wet soils. Borrow fill materials should not contain frozen or frost-heaved materials at the time of placement. Excessively wet soils or aggregates should be scarified, aerated, and moisture conditioned. At the end of each work day, all fill areas should be graded to facilitate drainage of any precipitation and the surface should be sealed by use of a smooth-drum roller to limit infiltration of surface water. During placement and compaction of new fill at the beginning of each workday, the Contractor may need to scarify existing subgrades to a depth on the order of 4 inches so that a weak plane will not be formed between the new fill and the existing subgrade soils. Drying and compaction of wet soils is typically difficult during the cold, winter months. Accordingly, earthwork should be performed during the warmer, drier times of the year, if practical. Proper drainage should be maintained during the earthwork phases of construction to prevent ponding of water which has a tendency to degrade subgrade soils.

We recommend that the earthwork contractor have equipment on site for both drying and wetting fill soils. We do not anticipate significant problems in controlling moisture within the fill during dry weather, but moisture control may be difficult during winter months or extended periods of rain. The control of moisture content of higher plasticity soils is difficult when these soils become wet. Further, such soils are easily degraded by construction traffic when the moisture content is elevated.

8.5 Construction Dewatering

The groundwater was encountered at a depth ranging from 6.8 ft. to 12 ft. below grade. It should be noted that groundwater levels will fluctuate due to seasonal changes, precipitation, and construction activity. The groundwater is anticipated to be encountered above the proposed lowest floor finish level. Therefore, dewatering during construction is needed and provisions should be made in the project specifications for dewatering.

It is essential to control the groundwater during demolition, excavation, and backfilling. Before excavation below the water table, dewatering should be performed to a depth of at least 2 ft. below the proposed subgrade for workability and to maintain the consistency of the soil subgrade. However, if soft soils are encountered and undercutting is required, dewatering depth will need to increase accordingly. Based on the subsurface conditions indicated by the borings, highly permeable Sand and Silty SAND layers, in addition to less

permeable Clay layers, could be encountered above the depths of excavation. This permeable Sandy stratum may warrant the use of an extensive dewatering system to control/lower the groundwater. There are several dewatering systems available such as deep wells, well points, cut-off walls, slurry walls, pressure grouting, chemical grouting, etc. Each of the systems has certain requirements and limitations. The proposed dewatering system should be considered in conjunction with the method of earth retaining system as they might interfere with each other. In addition, extensive dewatering will increase the effective stress on the subsurface soils and may cause settlement of the adjacent structures (including tunnels), adjacent roadways, and utilities. It is recommended that the contractor be advised to carefully analyze the pros and cons of the method of the dewatering system before selecting a system(s).

The on-site soils could lose their in-situ strength with an increase in moisture content. Therefore, adequate drainage should be provided at the site to minimize any increase in the moisture content of the foundation soils. All pavement or parking areas should be sloped away from the structure to prevent ponding of water around the structures and paved areas. The site drainage should also be such that the run-off onto adjacent properties is controlled properly.

8.6 Excavation Considerations

The excavation can be performed mostly using conventional earth-moving equipment. However, it is possible that the dense Cemented Sand may be encountered within the Sand Stratum. Therefore, provisions should be made in the project for the removal of hard materials if encountered, which will require intensive efforts such as jackhammering and/or the use of a hoe ram.

Typically, temporary excavations are sloped at an angle of 1½H (Horizontal):1V (Vertical) or flatter, where possible, to provide stable sides for the excavation. However, due to the presence of the existing precinct building and the wooded area close to the proposed additions, the excavation may not be sloped as it may interfere with the existing structure and other properties. In such areas where sloping is not possible and excavations are deeper than 4 ft., in accordance with applicable OSHA regulations, lateral earth support will be required.

The type of excavation support system should take into consideration the possibility of encountering dense Cemented Sand layers within the Sand Stratum. The actual stability of the excavations along with a method of dewatering should be evaluated by the contractor in accordance with OSHA and MOSHA regulations, and excavation support system(s) will require design by a Professional Engineer.

The type of retaining system should be based on the factors mentioned on next page:

Depth of Excavation & Geology: Because of the depth of excavation and, the possibility of encountering dense Cemented Sand and groundwater, the excavation support system such as drilled soldier piles and lagging may be needed. Installing the steel sheet piles may be difficult if cemented Sand in the form of seams or layers of relatively thick boulders are encountered.

Proximity to Existing Structures and Utilities: The installation (vibration) of a certain retaining system may cause settlement and/or distress to the adjacent structures and utilities. Careful installation might avoid damage. The Contractor should take the location of the existing structure and utilities and the vibrations into consideration in selecting the earth retaining system(s). The use of pre-drilling or special installation techniques may be required in these areas.

Interference with Utilities and Structures: The installation of anchors/tiebacks, if selected, may interfere with the utilities and adjacent structure foundation system. The location, length, and angle of anchors/tiebacks may have to be adjusted to avoid the utilities and the structure foundation. In order to avoid interference with utilities and structure foundations, internal bracing (and struts) may be required (instead of anchors/tiebacks).

Method of Dewatering: The dewatering may affect the method of excavation and the type of retaining system. On the other hand, certain types of retaining systems may also affect the method of dewatering.

Method of Installation: The installation of certain earth retaining systems may encounter interference with existing active utilities at the site. The Contractor should consider this fact in selecting a system(s). Also, the method of installation should not disturb the proposed subgrade of the new structure.

Migration or Loss of Soil: Installing certain earth retaining systems, such as soldier beams and lagging, may cause loss of soil over a period of time, depending on the method and quality of the construction. Loss of soil could cause damage to the utility lines and adjacent structures; therefore, the system must be designed to minimize soil loss.

The method of earth retaining system(s) should be left to the Contractor. However, the Contractor is advised to carefully analyze the pros and cons of each system along with a method of dewatering before selecting a system(s).

9.0 PAVEMENT CONSIDERATIONS

It is our understanding that the existing access road and the parking lot on the periphery of the existing building will be demolished and a new access road and parking lot will be constructed. According to the information provided to us, two types of pavement sections

are proposed as shown in Figure 10, in the Appendix. The majority of the pavement section will have Flexible Pavement and the section north and south of the building addition to the west will have Concrete Pavement. The subsurface investigation for the improvement of the existing parking lot occupying the Fire Department Parcel, highlighted in the Paving Plan, was not part of our scope, and the recommendation provided below does not apply to this area.

9.1 Flexible Pavement

Based on our experience on similar projects and the anticipated traffic volume provided, an Equivalent Single Axle Load (ESAL) of 0.1 million is used. Soil laboratory testing for the on-site soil at the planned pavement area indicated a CBR value of 11.2 for the upper 6 ft. soils. This CBR value generally is considered "fair" for pavement support. However, based on the information provided to us, the new parking lot proposed will be placed on a new fill and no significant on-site material is anticipated to be available for fill. Therefore, the following asphalt pavement section is based on the above traffic condition and a new fill with a CBR value of 5.

1.5" - Surface Course (HMA Superpave, 9.5mm, PG 70-22, N_m-160 Gyr.) – 1 layer, 1.5" thick
3" - Binder Course (HMA Superpave, 19.0 mm, PG 64-22, N_m -160 Gyr.) – 1 layer, 3" thick
6" - Graded Aggregate Base (GAB) – 1 layer, 6" thick
Firm Compacted Subgrade (With a minimum Design CBR of 5)

The symbols in parenthesis represent recommended material types in accordance with Maryland State Highway Administration Superpave specifications.

If the existing subgrade consists of SILT or CLAY, it should be undercut by 2 ft. below the proposed grade and replaced with select borrow having a minimum CBR value of 5.

The aggregate base course should meet the specifications of MSHA GA Base or CR-6, and be compacted to at least 97% of the maximum dry density per AASHTO T180. The moisture content of the material shall be maintained within 2% of the material's optimum moisture content. Approved subgrade consists of a firm and unyielding proof-rolled soil subgrade or compacted select fill. For the compacted select fill, the top 1 ft. of select fill material shall be compacted to a minimum of 97% of the maximum dry density and the material below the top 1 ft. shall be compacted to a minimum of 92% of the maximum dry density as per AASHTO T180, with a moisture content within 2% of optimum.

The pavement design assumes that a continual maintenance program will be implemented during the service life of the project. This should include crack and surface sealing, and patching of deteriorated areas.

It should be noted that the construction traffic conditions (including concrete trucks, forklifts, etc.) could be much more severe than in-service conditions. Therefore, paving operations should be delayed until near the end of the construction period and construction traffic should not be allowed on the newly placed pavement section. If construction traffic such as heavy supply trucks and concrete trucks is to be allowed on the newly paved surface, then some maintenance and/or repair of pavement including adding a surface course upon completion of the construction operations may be needed.

9.2 Rigid Pavement

9.2.1 Normal Concrete Section

For the concrete pavement section where excessive wheel shearing forces could damage a flexible pavement, we recommend a rigid section of 6-inch thick Reinforced Portland Cement Concrete (RPCC) placed on a 6-inch thick compacted Dense Graded Aggregate. The concrete should be a minimum of 4,000 psi, air-entrained, and reinforced with a minimum of 6x6, W1.4xW1.4, welded wire fabric. Construction and expansion joints should be dowelled at 12 inches o.c., with an ½ inches diameter, 16 inches long smooth dowels (slip dowels with plastic sleeves). Joint spacing should not exceed 15 ft. in any horizontal direction.

9.2.2 Heavy-Duty Concrete Section

For the concrete pavement section, where concentrated repeated heavy wheel loads are anticipated, we recommend a rigid section of 8-inch thick Reinforced Portland Cement Concrete (RPCC) placed on a 6-inch thick compacted Dense Graded Aggregate. The concrete should be a minimum of 4,000 psi, air-entrained, and reinforced with a minimum of 6x6, W2.9xW2.9, welded wire fabric. Construction and expansion joints should be dowelled at 12 inches o.c., with an ½ inches diameter, 16 inches long smooth dowels (slip dowels with plastic sleeves). Joint spacing should not exceed 20 ft. in any horizontal direction.

In addition, a Snow Melt System and associated insulation can be installed between the Concrete Slab and the Graded Aggregate Base if deemed necessary.

10.0 STORMWATER MANAGEMENT FACILITIES

Four borings, (SWM-1 through SWM-4) were drilled in the vicinity of the Stormwater Management Facilities. The borings were drilled to depths ranging from 15 ft. to 18 ft. below the existing grade. Infiltration tests were performed adjacent to these borings at a depth of 2 ft. to 10.8 ft. below the existing grade. The field infiltration test results are included in Table 4, in the Appendix.

The Stormwater Management Administration of the Maryland Department of the Environment (MDE) has set particular standards and specifications for the design and construction of Stormwater infiltration devices. These regulations include parameters on soil textures, depth of limiting zone, and other considerations, which are described in the publication "Maryland Stormwater Design Manual, 2000."

The MDE publication recommends that a four-foot distance be provided between the bottom of the infiltration system and any limiting zones. Limiting zones are defined as seasonal high-water tables or bedrock. The founding of infiltration facilities within existing fill soils is also prohibited, in accordance with the publication. Infiltration facilities adjacent to the proposed foundation should also be avoided.

11.0 ENVIRONMENTAL CONSIDERATIONS

The scope of this work did not include an environmental investigation at the site. Health and Safety issues, if any, should be determined by others.

12.0 REMARKS

This report has been prepared to evaluate the feasibility of constructing the proposed Police Precinct Building Additions in Essex, MD. This geotechnical study has been conducted in accordance with generally accepted geotechnical engineering practices. It is considered that adequate recommendations have been provided to serve as a basis for the design and preparation of plans and specifications. Additional recommendations can be provided as needed.

These analyses and recommendations are based on information made available to us at the time of our investigation and the actual conditions encountered at the test boring locations at that time. General assumptions have been made that the limited exploratory test borings represent the site conditions in relation to the lateral extent and depths of the borings. It should be noted, however, that the actual subsurface conditions between the test boring locations might vary from the conditions indicated on the appended test boring logs. Should the actual conditions encountered during construction differ significantly from those indicated by the test boring logs, we should be notified immediately so that the analyses and recommendations can be reviewed and/or revised as necessary.

Kps Kpc

Patapsco Formation

Kpc *Clay facies. Typically buff, red, yellow, and brown mottled kaolinitic clay. Variable amounts of quartz sand and silt as pods and interbeds, or disseminated thru the clay. Rare siderite concretions and lignitized plant remains. Sporadic laminated silt-clay couplets bearing plant debris. Deposition in flood plain-mud flat environment under oxidizing conditions.*

Kps *Sand facies. Well-sorted, medium to fine quartz sand with locally abundant quartz gravel and clay clasts. Minor silt-clay matrix in sand interstices. Sands commonly planar to high-angle cross-bedded, and in places exhibit 3 to 5 meter fining-upward sequences. Ferruginous cements are typical at sand-clay contacts or as small spheroids and pods within the sand. Heavy mineral suite consists of tourmaline, zircon, and minor staurolite and rutile. Deposited in and near channels of meandering, high bed-load rivers.*

Total thickness 2 to 80 meters.

Commissioning Plan – Construction Phase
Essex Police Precinct -11

I. Commissioning Overview

Advanced Building Performance, Inc. (ABP) has been retained to serve as the Commissioning Provider (CxP) for Essex Police Precinct -11 project. It is of primary concern that all systems and assemblies in the project perform in accordance with the design intent and the Owner's operational needs. ABP's role is to verify that the commissioned equipment and systems as defined in Section III have been installed, started up, and perform according to the contract documents.

The Commissioning Plan (Plan) will serve as a reference document that identifies the strategies and responsibilities of the commissioning process for the project team. The Plan outlines the overall process, milestone schedules, roles & responsibilities and documentation of the commissioning process. It does not replace or supersede the contract documents (CDs).

Project Background: The project involves the renovation and expansion of the Essex Police Precinct #11, located at 216 N. Marlyn Avenue, Baltimore, MD 21221. The design and construction will utilize the existing property and follow a phased construction approach to maintain police operations throughout the project. The design will incorporate a large addition on the east side of the existing building, a major renovation of the existing first and basement floors, and a Sallyport addition to the west side. Preliminary spaces to be included are administrative offices, armory, locker rooms (men, women, and gender-neutral), break room, roll call room, squad rooms, exercise room, evidence rooms, holding cells, precinct control rooms, intake area, sally port (pull-thru preferred), community room, entrance lobby, storage rooms, restrooms, lactation room, and other back of the house support spaces. The project will also include the installation of an emergency generator system to support the entire building and ensure compliance with Baltimore County building standards, including ADA and LEED considerations.

The project is being designed in compliance to Baltimore County building standards including ADA & LEED considerations.

Implementation Strategy: Commissioning is a team effort and requires cooperation and direct involvement by all parties throughout the construction process. Successful commissioning requires that installation of all building systems and assemblies not only comply with contract requirements but also that they are fully operational, checked-out, calibrated and adjusted in order to allow for functional testing prior to Substantial Completion. In addition to fulfilling scheduling and planning requirements, the Contractor is further responsible for documenting the equipment and system installation, startup, and operational verification for all systems and assemblies. Commissioning is a performance verification process and ABP does not act as an inspector or serve as a quality control manager for the project.

LEED™ Goal: The project is seeking certification with a goal of reaching Silver under the U.S. Green Building (USGBC) BD+C: New Construction (LEED™) v4.

Copyright 2024, Advanced Building Performance

As a LEED certified project, a commissioned building provides optimized energy and water efficiencies, indoor air quality, and occupant comfort, and sets the stage for minimal operation and maintenance costs. This typically results in optimized mechanical, electrical and architectural systems – maximizing energy efficiency, and thereby minimizing environmental impacts. It serves as a tool for both the Owner and the Contractor to minimize post-occupancy remedial work, and warranty callbacks.

II. Commissioning Team

The commissioning team consists of the following entities:

Role	Company	Name	Contact Info
Commissioning Provider **CxP**	Advanced Building Performance	Philip Wright Project Director	571-535-6491 philip@abpcx.com
		Michael Tseng Project Manager	202-256-1714 michael@abpcx.com

III. Systems to be Commissioned

The following systems (with sampling rates) will be commissioned by ABP:

1. Mechanical:
   a) DOAS-1 (100%)
   b) RTU-1 (100%)
   c) VRF: Indoor terminals (Total 79), Outdoor units (Total 8) (20%)
   d) Split System Heat Pumps, FCU-S-1 & 2 (100%)
   e) EF-1 & 2 (100%)
   f) SF-1 (100%)
   g) Infrared Heaters, IRH-1 through 8 (100%)
   h) Electric Heaters, EUH-1 through 7 & EWH-1 through 4 (20%)
   i) BAS and temperature controls (100%)

2. Plumbing:
   a) Domestic Water Heaters, IWH-1 through 25 (100%)
   b) Plumbing fixtures (20%)
   c) Submeters tied to BAS (100%)

3. Electrical:
   a) Exterior Lighting Controls (100%)
   b) Interior Lighting Controls (20%)
   c) Electrical Metering (100%)
   d) Solar PV

4. Emergency Power
   a) Generator (750kW/ 938kVA) (100%)
   b) Docking Station (100%)
   c) Automatic Transfer Switches, ATS-LS & ATS-OE (100%)

V. Commissioning Process Description

Commissioning is usually completed before the Substantial Completion Date, except for trend log monitoring, seasonal/deferred testing, near-warranty end activities, and possible verification of system training sessions. The following narrative provides a brief overview of the typical commissioning tasks before and during construction and the general order in which they occur.

1. **Design Phase:**
   a. The Owner's Project Requirements (OPR), completed by the Owner, and the Basis of Design (BOD), completed by the Design Team, was distributed to the CxP. The OPR and BOD will serve as the basis of verification for the CxP. The OPR and BOD are "living" documents and will continue to be updated throughout the design and construction process until project closeout. It is the Owner's responsibility to update the OPR and the Design Team's responsibility to update the BOD.
   b. The CxP completed design reviews during the following phases: 90%CD and a back-check review at the end of the construction documents phase (usually considered 100% phase). The CxP provided a commissioning focused design review report for the Owner and the Design Team at each review. Comments were reviewed with the Design Team. Final design issues close out was coordinated between the CxP and the Design Team.
2. **Construction Phase:**
   a. **Commissioning Kickoff Meeting (Construction Team):** Commissioning during construction begins with a team kick-off meeting, conducted by the CxP, where the commissioning process is reviewed with the construction phase commissioning team members and roles and responsibilities are clarified.
   b. **Submittal Reviews:** Equipment submittals are provided to the CxP at the same time as the Design Team for concurrent review. The CxP will review the submittals for information such as detailed startup procedures, energy efficiency ratings, early version of O&M data and manufacturer's warranty requirements. The CxP will return comments to the Design Team directly. It is understood that there may be time-sensitive submittals that will require short review times. The CxP will comply and adjust review time accordingly to meet requirements.
   c. **Commissioning Meetings:** Progress meetings will be held throughout construction, facilitated by the CxP with the Contractor and any necessary parties to plan, coordinate, schedule future activities, and resolve problems.
   d. **Field Observations:** During construction, the CxP performs periodic site observations and completes field observation reports. At any time during the field visits if issues arise that are to be resolved they will be logged into the issues log.
   e. **Mockups:** The mockup may be the first unit installed on the project. Contractor shall construction the static (non-functional) mockup in place using processes and techniques intended for use throughout. Integrate the work of all trades which will be required to complete the system. Individual workers who will perform the work for the Project will produce the mockup. It is critical that all aspects of the units be completed (unit placement, electrical disconnect controls, piping with all the valves etc..) at the time of the mockup review. The Owner, Architect, Engineer, Contractor and applicable Sub will need to be in attendance during this review. The review should look at unit installation, access issues, deviation from CDs (if any) and acceptability of such deviation, and any other applicable installation issues. The

Copyright 2024, Advanced Building Performance

team must approve the final mockup prior to further installation. The accepted mockup will provide the standard for all installations. Mockups include:

i. HVAC Fans in accordance with 233400 ¶3.5
ii. Variable Frequence Drives in accordance with 235201 ¶3.6
iii. Packaged Rooftop AC Units in accordance with 238106 ¶3.5
iv. Split System AC Units in accordance with 238126 ¶3.5
v. VRF Split System ACs in accordance with 238129 ¶3.6
vi. Terminal Heating and Cooling Units in accordance with 238200 ¶3.3

f. **Pre-Tests:** The CxP shall witness pre-tests specified in each technical specification section. This may include the following:
   i. Duct Leakage Tests in accordance with 233000 ¶3.4
g. **Construction Checklists:** The CxP provides construction checklists for the Contractors' use during construction as a means of installation progress review. These checklists will include installation criteria per contract documents as well as pre-functional activities such as startup, controls checkout, balancing, and pre-functional sequence pre-checks. It is the intent of the CxP to use the software commissioning tool BlueRithm to track all checklists for pre-functional readiness. The Contractors are expected to be completing the checklists as installation progresses and the CxP will use the checklists to verify installation. A sample construction checklist has been provided in Appendix C. The CxP shall provide the necessary training to the Contractors to access the checklists on BlueRithm.
h. **Functional Test Procedures (FPT) Development:** The CxP provides project specific equipment and system functional test procedures (FPT) for use with the Contractors to demonstrate functional performance. The FPT procedures rely on specified requirements and acceptance criteria of the contract document, the manufacturers' recommendations, the final approved mechanical, controls, and relevant electrical submittals, as well as Owner/Design Team-approved Sequences of Operation (SOO). If the SOO have not been developed, the Owner will ensure the Design Team provide the final SOO for use during testing. The test procedures are executed by the responsible Contractors. The CxP will witness and document verification of operational compliance with design intent and CDs. Deferred seasonal tests may be necessary.
i. **Startup Checkout**: The Contractors, under their own direction, performs startup and initial checkout. Full startup by factory certified technicians may be required. Integration between trades may also be needed to ensure proper communications between equipment/system with the building automation system (BAS). The CxP verifies completion.
   i. 233400 ¶3.4: HVAC Fans startup by factory trained representative
   ii. 238106 ¶3.4: DOAS-1 and 2 startup by manufacturer's representative
   iii. 238126 ¶3.4: Split System Heat Pumps, FCUs startup by manufacturer's representative
   iv. 238129 ¶3.10: VRF startup by manufacturer's representative
j. **Point to Point Controls Checkout:** The CC performs point to point checkout of equipment that includes all points required to be monitored and/or controlled via the BAS. At this stage, checkout should include sensor calibration verification between actual sensor and reading at the BAS. Sensors whose readings are not matched should be replaced. Also at this stage, the project graphics should be nearing completion.
k. **Testing, Adjusting, and Balancing (TAB):** The TAB Contractor should visit the site prior to balancing activities and note all deficiencies that would hinder completion of

Copyright 2024, Advanced Building Performance

balancing activities. Working with the CC, air and water balancing activities should be completed and preliminary balancing report submitted prior to functional testing.

l. **EMS Trending:** The controls contractor shall submit trends in accordance with 230800 in advance of the HVAC Functional Performance Testing. The CxP shall review the trends to verify the system is operating properly prior to the on-site FPT.

m. **Pre-Functional Testing and Checkout:** The Contractors, using the CxP-provided draft procedures, perform pre-testing of the equipment and systems' sequence of operations to ensure proper operations. Notes regarding how the sequence was achieved should be recorded for re-verification during functional testing.

1. **Notice of Test Readiness (Certificate of Readiness):** The Contractor shall give written notice, not less than 5 days, to the Owner and the CxP of their readiness for tests with appropriate duration allocated in their schedule and their named personnel. The notice constitutes readiness and attests to the Owner and the CxP that the equipment to be tested has been fully checked out and installation verified. The Certificate of Readiness must be completed prior to scheduling functional testing. The Certificate of Readiness template is found in Appendix A. Each system or equipment should be provided with a fully-executed certificate.

n. **Functional Performance Testing:** The CxP and/or the Owner directs functional performance testing of components, then systems, based on the testing procedures. The test procedures are executed by the responsible Contractors. The CxP and/or Owner will witness and document verification of operational compliance with Design Intent and CDs. Deferred seasonal tests may be necessary.

1. **Retest and Deficiency Resolution:** Items of non-compliance in material, installation or setup are corrected at the Contractor or the Sub's expense and the system retested. Failed tests will be repeated as required at no additional cost to the Owner. Deficiencies, once identified are to be corrected expeditiously. The Contractor will incur additional costs for retesting on the same piece of equipment or system, beyond the first retest attempt. Full test provisions are included in the general commissioning specifications.
2. **Issues Log:** Items of non-compliance in material, installation, setup, or operations from the Contract Documents will be documented by the CxP and compiled into an Issues Log. The log will be maintained by the CxP with issues remaining open until verified corrected.
3. **TAB Verification:** The Testing and Balancing contractor shall be present for one full day during the FPT to perform TAB verification on 10% of the report measurements. The same airflow measuring equipment shall be utilized as was used to generate the report. The CxP shall select the air devices and locations for the measurements to be taken. No TAB verification is required during the deferred seasonal testing.
4. **Seasonal Trends and FPT:** EMS Trends shall be submitted for review prior to the CxP scheduling the on-site FPT. FPTs shall be repeated for the HVAC system in the opposite season in accordance with 230800.

3. Owner Training: The Owner review the training plan provided by the Contractors and verifies that training was completed. This may include a training preparation conference. Training shall be scheduled by the Contractor and conducted by the appropriate Sub per the requirements of the CDs. Upon completion of accepted training, the Owner will complete the Training Verification Form, attached in Appendix B.

4. Project Closeout:

Copyright 2024, Advanced Building Performance

a. **O&M and As-Built Documentation:** The CxP receives a copy of the O&M materials and as-built drawings for inclusion in the final Commissioning Record and development of the Systems Manual.
b. **Systems Manual Development:** The CxP will be responsible for completing a Systems Manual. The Systems Manual will include documentation on how the project's commissioned systems operate. It is companion document of the O&M manual. Included in the Systems Manual are blank test forms that the OPS team can use to re-commission or retest the systems. The final controls as-built shop drawings, with final setpoints and sequences, are also included.
c. **Final Commissioning Record:** CxP will develop the final commissioning record to the Owner to include all commissioning-related documentation associated with the project.

5. **10-Month Warranty Review:** The CxP will complete a building operations review meeting with the OPS teams approximately 8-10 months after project completion. Any warranty items and/or operations deficiencies will be discussed and addressed by the team. The CxP will submit a plan for resolutions of any outstanding commissioning-related items for the Project Team to address.

I. Roles & Responsibilities

Below is a matrix of responsibilities assigned to the major roles within the commissioning process. This list does not exempt the responsible party from performing duties per the contract documents such as providing the Owner with a quality, complete and functional system.

Cx Activity	Commissioning Provider (CxP)	Contractors	Owner's Representatives	Design Team
Cx Process Management	**LEAD:** manages the Cx process	Reviews for understanding and scope issues	Reviews and accepts	Reviews and comments
Construction Process, Schedule, and Sequencing	Reviews and provides milestones and durations to be included in the master schedule	**LEAD:** Develops master schedule and sequencing; Updates and distributes schedule continually	May review	May review; Notifies Owner of concerns
Construction Submittals of Commissioned Equipment	Receives a copy of the approved submittal	**LEAD:** Submit for review.	Reviews CxP and A/E comments and reviews selected submittals where concerned raised	Reviews and provide official comments
Coordination Drawings, if applicable	Ensures that they are being developed; Receives a final copy	**LEAD:** Produces the drawings and identify conflicting field conditions	None	Reviews drawings; Helps resolve issues
Construction Checklists	**LEAD:** Develop checklists and forms with review for scope issues.	Uses equipment checklists and forms	May review and comment	May review and comment
Construction Site Observations	Performs regular site observation of installed equipment; Provides deficiency list	Observes to ensure subcontractors are properly executing and installing equipment; Corrects deficiencies in a timely manner	Performs periodic walk-through.	Performs per contract provision for construction administration.

Copyright 2024, Advanced Building Performance

Cx Activity	Commissioning Provider (CxP)	Contractors	Owner's Representatives	Design Team
Commissioning Meetings	**LEAD:** Plans and conducts; takes and distributes minutes for regular meetings	Attends meetings	Attends meetings	Attends selected meetings, if in scope.
Functional Test Procedure Development	**LEAD:** Writes procedures for all tests.	Reviews for acceptability, warranty and schedule	May review	Reviews for compliance with design intent
Management of Issues Log	**LEAD:** Manages issues logs; Verifies deficiencies have been corrected	Respond to and resolve issues on the issues log	May add issues based on observations	Responds to and resolve issues as needed; May add all open issues to punch list near end of construction
Start-Ups and Verification	Reviews startup plans and sequencing; Witnesses selected systems, if applicable. Reviews completed startup reports	**LEAD:** Coordinates startup tasks and schedules with subcontractors	Observes selected systems	May witness selected systems if in scope.
Controls Checkout and Verification	May witness checkout; Reviews controls checkout reports	**LEAD:** Performs checkout and provides reports	None	Reviews controls checkout reports
Testing, Adjusting, and Balancing (TAB)	May witness balancing activities; Reviews preliminary balancing reports; Performs verification as needed	**LEAD:** Performs balancing activities and provides preliminary and final reports; Notifies team of deficiencies that will hinder balancing completion	None	Reviews balancing reports
Functional Test Execution	**LEAD:** Oversees, directs, witnesses, and documents all tests	Executes testing per prescribed Functional Test Procedures at the direction of the CxP	May participate in selected tests	Provides normal construction administration per contract; Resolves issues as needed
O&M Manuals, As-Built Drawings, Closeout Documents	Receives final copies of As-builts, O&M, and closeout documentation for Systems Manual and Cx Record	**LEAD:** Develops O&M manual and submits to A/E; Provide electronic copy to CxP	Reviews and comments	Reviews, comments and accepts
Preliminary Cx Report	**LEAD:** To be issued by CxP as prerequisite to the certificate of occupancy.	Resolves all issues prior to preliminary report being generated	Reviews and comments	Reviews and comments
Commissioning Record, System Manual	**LEAD:** Receives data from contractor and develops other required data and compiles into System Manual and final record	Provides specified data and information and submits to CxP	Assists in initial outline and reviews and comments on final	If in scope, provides updated design narratives and submits to CxP

Copyright 2024, Advanced Building Performance

Cx Activity	Commissioning Provider (CxP)	Contractors	Owner's Representatives	Design Team
Training	Review training plan & agenda; Meets with Owner to determine needs; Provides overview of systems at beginning of training	**LEAD:** Develops and submits training plan and agenda to Owner & CxP; Conducts training.	Receives and accepts training	In accordance with their contract, provides a system overview and design and operational intent at the beginning of each primary equipment/ system training
Seasonal and Deferred Testing	**LEAD:** Same as for functional testing	Same as for functional testing, but may not need if tests for both seasons are completed during construction	Same as for functional testing	Same as for functional testing
Near-Warranty End Review	**LEAD** Performs review with O&M and Owner's staff	Addresses deficiencies if found	Works with CxP	Per contract

Copyright 2024, Advanced Building Performance

VI. Commissioning Protocols

1. Submittal Protocols
   a. Submittals are to be sent by the Contractor to the CxP and Design Team concurrently for review.
   b. CxP will review for LEED™ compliance, energy performance compliance, warranty requirements, and operational & maintenance items.
   c. Comments will be sent from the CxP to the Design Team directly.
   d. Design Team to submit consolidated responses and approvals to Contractor.
2. Site Visit Protocols
   a. ABP will check in with Contractor upon arrival on site.
   b. ABP will complete site visits and note observations without escort unless required.
   c. Observations of deficiencies will be reviewed with the Contractors.
   d. An official field observation report in PDF will be issued to the Project Team within three business days via e-mail.
   e. All items observed to be non-compliant with the CDs will be added to the issues log in BlueRithm to be addressed by the team. A PDF of the issues log shall be provided with each report e-mailed to the team.
   f. Issues log items will be reviewed until remediation has been verified for issues closeout.
3. Communications Protocol
   a. All meeting agendas and minutes will be issued as PDFs via e-mail and will be available for review on BlueRithm.
   b. All other correspondences from the CxP will be distributed to the Owner, Design Team, Contractor. Contractor shall distribute to subcontractors.

Copyright 2024, Advanced Building Performance

VII. Required Documents

The following documents are required to satisfy the commissioning process. These documents may be provided throughout the project's progress. It is critical that the Responsible Party provide these documents upon availability to ensure the commissioning process is smooth.

Document	**Responsible Party**
Design Review	CxP
Submittal Reviews	CxP to provide to Design Team
Construction Project Schedule	CONTRACTOR – updates provided as necessary
Commissioning Plan	CxP
Commissioning Specifications	CxP
Construction Drawings, ASIs, RFIs, Bulletins, etc.	CONTRACTOR – updates provided as necessary
Submittals	A/E
Startup Reports	CONTRACTOR/MC/EC
Point-to-Point Checkout Reports, Preliminary and Final	CONTRACTOR/CC
TAB Reports, Air & Water, Preliminary and Final	CONTRACTOR/TAB
Construction (Pre-Functional) Checklists	CxP to provide; CONTRACTOR to manager; MC/CC/TAB/EC to complete
Pre-Functional Certificate of Readiness	CxP to provide; CONTRACTOR to manage; MC/CC/TAB/EC to sign
Functional Performance Test Procedures and Results	CxP
O&Ms and Closeout Documentation – HVAC, Electrical, and ATC	CONTRACTOR/MC/EC/CC
Issues Logs	CxP
Commissioning Record	CxP
Owner Demonstration Agenda and Attendance Sheets	CONTRACTOR
Training Verification Form	CxP to provide; OWNER/OPS to sign
Systems Manual	CxP

Appendix A: Pre-Functional Certificate of Readiness

Functional Performance Test Certificate of Readiness

Project Name: Catonsville Fire Station #4	**System to be Tested:**
Project Address:	**Equipment to be Tested:**

Certificate of Readiness

Requirement: Provide Certificates of Readiness on each commissioned piece of equipment, component, system and assembly prior to functional performance testing. This signed certificate is a prerequisite of functional performance testing for each system to be commissioned.

Intent: Installing contractors affirm this form and provide supporting documentation as needed to acknowledge systems, subsystems and components to be commissioned comply with the Contract Documents (CDs) and Owner's Project Requirements (OPR). The goal of the certificate is to avoid costly delays or invalid test results due to lack of readiness, absence of commissioning team members, incomplete installation of the work, incomplete sensor calibration, component malfunction, parts unavailability or similar preventable circumstances.

Completion Date	By	Requirement Pre-Functional Checks
_____	_____	Manufacturer's required **pre-start and start-up** procedures completed.
_____	_____	Related **electrical distribution and service connections** installed and functional per CDs.
_____	_____	Related **refrigeration and cooling components/equipment** installed and functional per CDs.
_____	_____	Related **heating components/equipment** installed and functional per CDs.
_____	_____	Associated **control devices and sensors** installed, calibrated, and functional per CDs.
_____	_____	Required **testing, adjusting and balancing (TAB)** work complete.
_____	_____	**Control point-to-point** checkout completed.
_____	_____	**Sequence of operations** successfully pre-tested through each mode as defined in CDs.
Date	**By**	**Documentation**
_____	_____	**Pre-start/start-up checkout forms** completed and attached/submitted.
_____	_____	**Control point-to-point checklists** completed and attached/submitted.
_____	_____	Preliminary **TAB reports** completed and attached/submitted.
_____	_____	Preliminary **trend reports** compiled and attached/submitted.

Notes _____

I, the undersigned, hereby certify that the above indicated system, assembly, equipment or component has been installed in accordance with the CDs and manufacturer requirements as verified by the construction checklists and this form; startup has been completed according to manufacturer requirements and the CDs; and it is ready for functional performance testing.

BACK CHARGES WILL BE INCURRED IF ERRONEOUS INFORMATION RESULTS IN EXTRA SITE VISITS BY THE CXP.

Docusign Envelope ID: 6E8298C7-B1C8-4702-BE02-10C35D1AE131

BGE Revenue Processing
5th Floor
PO Box 1475
Baltimore, MD 21203-1475

November 4, 2025
BGE W/O Job Number: 20079289

BALTIMORE COUNTY GOVERNMENT
12200 LONG GREEN PIKE
GLEN ARM, MD, 21057

BGE has prepared a detailed gas and electric installation design, including the specific plans needed for our construction crews to perform work at: 216 F N MARLYN AVE.

BGE requires a minimum of 25 business days from completion of all customer requirements to start construction
BGE WILL NOT schedule the service and meter without reciept of the Certificate-of-Inspection from the local municipality

Step 1: To keep your project moving forward, use the enclosed envelope to return all items indicated below or send to the address above, or sign as indicated online via Sertifi.

☐ Signed Right of Way Agreement (Signed by the owner(s) and notarized as indicated.)

☑ Review and Sign the Final BGE Design Drawing.
This will serve as the approval for the location of BGE's facilities.

☑ Remaining Payment Due: $18,852.00
The amount above represents the balance of the customer contribution amount due. To ensure proper credit for payment, please note the BGE W/O Job Number & Job Address on your check and return with cut-off below. Please use the following account number 2246254762 for all billable construction charges on your work order.

The pricing is valid for 90 calendar days from the date of this contract and is subject to change after the 90 day period.

Step 2: Comply with the following agreed-upon site preparation for our equipment:

☑ Site to be within six inches of final grade.	☑ Install load cables and/or gas piping through the building wall Install CT cabinet or meter socket, if applicable
☑ Install and mark in 3' intervals: Water, Sewer, Telephone, Storm Drain, and other Non-BGE Utilities	☑ Install all road crossings
☑ Locate and clearly mark all private under-ground facilities on job site: Well Water Line, Septic Field, Private Lighting, Underground Sprinkler Systems, Invisible Fence Wires, Etc.	☑ Install conduits with pull strings per BGE specifications. Conduit will be min. 4" inside dimension IPS UL SCH 40. The customer will pull a mandrel through each duct prior to BGE cable installation, follwed by a pulling line which shall remain in each duct.
☑ Install soil erosion and sediment controls.	☑ Clear the site of all building materials, trees, stumps, and other obstructions along the route of the proposed BGE facilities
☑ Locate and clearly mark proposed property lines, curb & gutter on the job site.(if applicable) Important	☑ Install gas meter pads, transformer pads per BGE specifications
☑ Stake transformer/switchgear location.	☑ Review the available customer information booklets at BGE.com to assist with fulfilling your requirements. Contact your BGE representative with any questions

Once the site is ready, contact your BGE New Business Job Owner to schedule the job.

Upon receipt of the items indicated above, all applicable utility permits, and a certificate of approval from the jurisdictional authority, BGE will schedule construction of your job. To assist us in providing hassle-free customer service, have your BGE W/O Job Number available. The charge for this project is for BGE work only and does not include any other utilites. If the BGE pre-site inspection fails or any of the requirements are not satisfied in a timely manner the project may be delayed and pushed back in the schedule a minimum of 15 business days.

If you have any questions about this information, please contact me at 667-313-3666.

Sincerely,

Garrett John Colly
New Business Job Owner
667-313-3666

☑ Option A - Payment in Full with Contract	1. Total Customer Charges (A&B) $18,852.00	Office Use Only:
☐ Option B - 10% Down & 90% Prior to Construction	2. Payment with Contract	PO No.
☐ Option C - More then 10% Down & Balance Prior to Construction	3. Balance Due Prior to Construction	CIS. No.

*Explanation of Charge for "Tax": This charge represents a reimbursement for interest costs that BGE will incur as a result of Customer's payment under this Contract. This payment is taxable income to BGE under Subsection 824 of the Tax Reform Act of 1986 - Amendment to Section 118(b) of the Internal Revenue Code. BGE must pay federal and state income taxes on this payment in the tax year it is received. Additionally, the IRS requires BGE to capitalize and depreciate the project costs over 20 years. This results in an interest cost to BGE for paying out tax dollars in the current year which BGE will not fully recover until 20 years later. It is general utility industry practice to charge the gross-up amount to the customer who directly benefits from the work rather than burdening all utility customers through higher rates.

By signing below, Customer and BGE understand and accept all of the terms and conditions of this Contract, including, but not limited to, the General Terms and Conditions.

General Terms and Conditions

1. Parties. "BGE" mean Baltimore Gas and Electric Company, and "Customer" means the person or business identified on page 1 of this Extension/Relocation Contract (the "Contract"). BGE and Customer shall be referred to collectively as the "Parties" and individually as a "Party".
2. Contract Effective Date. The Contract shall not become effective until it has been duly executed by both Customer and BGE, after which the effective date of the Contract shall be as shown on page 1 of this Contract.
3. Request for Services. Customer has requested that BGE perform certain services, as described on page 1 of this Contract and any other pages attached to this Contract and/or incorporated by reference (the "Services").
4. Work Schedule. BGE shall perform the Services according to its own schedule and workforce requirements, which BGE shall determine in its sole discretion.
5. Estimated Completion Time. Any estimated completion time provided by BGE to Customer in connection with the performance of the Services is subject to modification or extension at BGE's sole discretion.
6. Payment for Construction. BGE shall perform the Services in consideration for Customer's payment of all costs and charges set forth in this Contract. If Customer fails to timely pay such costs and charges, BGE shall have the right to immediately terminate this Contract and exercise any of the rights and remedies set forth in this Contract and/or as otherwise provided by law.
7. Obligations of Customer Related to Performance of the Services. The term "Site" shall refer to the location at which BGE shall perform the Services, as described in this Contract and/or any agreed-upon construction or site plan drawings. BGE shall have no obligation to perform the Services until Customer has submitted payment(s) to BGE for all costs and charges set forth in this Contract and completed the following tasks and work at the sole cost of Customer:
   - Furnish all on-Site and off-Site easements required by BGE for the Services and to provide electric and/or gas service to Customer and to other customers and users of the Facilities, using BGE's standard forms or other forms acceptable to BGE.
   - Provide accurate Site plans, grading plans, utility plans, and any other plans requested by BGE related to the Site.
   - Locate and mark all private underground facilities at the Site and otherwise comply with the requirements of Title 12 of the Public Utilities Article of the Annotated Code of Maryland (commonly referred to as the "Miss Utility Law").
   - Clear the Site of all trees, stumps, and other obstructions.
   - Grade the Site to within six (6) inches of final grade.
   - Supply and install conduit, ducts, splice boxes, manholes, transformer pads, gas meter pads, switchgear tubs, and/or other facilities, as required by BGE to perform the Services and in accordance with applicable BGE construction standards.
   - Supply and install non-BGE utilities at the Site.
   - Locate and mark property and curb lines at the Site.
   - Perform any other work reasonably required by BGE to provide satisfactory conditions for performance of the Services at the Site and/or to assure compliance with BGE's electric and gas service tariffs and construction standards and any applicable laws, regulations, or permitting requirements.
8. Ownership of BGE-Installed Facilities. The facilities and equipment installed by BGE as part of the Services described in this Contract and any future repairs, replacements, upgrades, or adjustments thereof shall be collectively referred to in this Contract as the "BGE-Installed Facilities". With the sole exception of the "Customer Main Gas Valve", which is installed at the outlet of the gas meter set, the BGE-Installed Facilities shall remain the sole and exclusive property of BGE. The Customer Main Gas Valve shall become the property of the Customer after BGE completes installation and checks for leaks and proper operation.
9. Transfer of Title to Customer-Installed Facilities. Upon BGE's inspection and final acceptance of any conduits, ducts, splice boxes, manholes, transformer pads, gas meter pads, switchgear tubs, and/or other facilities related to the Services installed by Customer in connection with this Contract (collectively, the "Customer-Installed Facilities"), title to all such Customer-Installed Facilities shall automatically transfer to BGE free and clear of all liens, claims, and encumbrances and neither Customer nor any other party shall continue to maintain any interest in the Customer-Installed Facilities (or any parts or components thereof).
10. Confirmation of Title to the Facilities. The BGE-Installed Facilities and the Customer-Installed Facilities are collectively, the "Facilities". BGE may, in its sole discretion, affix to the Facilities (or any parts or components thereof) labels or other markings indicating BGE's ownership of the Facilities. Use by the Customer of the Facilities does not divest BGE of its exclusive rights to such ownership, use, and possession. The Customer shall, upon the request of BGE, execute and deliver to BGE all documents reasonably necessary or advisable to confirm, perfect, or evidence the rights of BGE in and to the Facilities.
11. BGE Right to Terminate. BGE has the right to immediately terminate this Contract for cause upon written notice to Customer. The following shall constitute cause for termination: (1) the failure of Customer to timely and properly perform any of its obligations set forth in this Contract to the satisfaction of BGE; and (2) the inability of BGE to commence the Services within ninety (90) calendar days of the Contract Effective Date as a result of the actions or inactions of Customer. In the event of such a termination for cause, BGE shall provide Customer a pro-rata refund of any amounts previously paid for Services that BGE did not perform as of the effective date of termination, less any additional administration or other costs incurred by BGE related to the termination for cause. BGE also has the right to terminate this Contract if performance of the Services or any obligation of BGE under this Contract would interfere or conflict with BGE's ability to satisfactorily comply with any duties, requirements, obligations, or responsibilities that may exist under applicable law, including, but not limited to, any rule, regulation, or decision issued by the Maryland Public Service Commission or any federal, state, or local government permitting authority. In the event of such a termination, BGE shall fully refund to Customer any amounts previously paid for the Services.
12. Customer Right to Terminate. Upon thirty (30) calendar days' prior written notice, Customer shall have the right to terminate this Contract, with or without cause. In the event of such a termination, BGE shall provide Customer a pro-rata refund of any amounts previously paid for Services that BGE did not perform as of the effective date of termination, less any additional administration or

other costs incurred by BGE related to the termination or performance of the Services or Contract.

13. Customer Payment of Damages or Costs. Customer shall be required to pay BGE an amount equal to any damages or costs incurred by BGE related to the following:
    - The failure of Customer to perform any of its obligations under this Contract, including, but not limited to, the failure to provide BGE with a Site suitable for performance of the Services.
    - Any action or inaction of Customer that delays completion of the Services.
    - The failure of Customer (or another responsible party) to initiate the gas and/or electric service described in this Contract at the capacity and load requested within twelve (12) months of completion of the Services.
    - The failure of Customer (or another responsible party) to use the gas and/or electric service described in this Contract at the capacity and load requested for the term of contract of the applicable rate schedule, as described in BGE's electric and/or gas service tariffs.
    - A change in the location of the Site, conditions of the Site, or scope of work to be performed by BGE.
    - The failure of Customer to disclose all Site conditions related to performance of the Services.
14. Waiver of Jury Trial. BGE AND CUSTOMER KNOWINGLY, WILLINGLY, VOLUNTARILY, AND IRREVOCABLY WAIVE ANY RIGHT TO HAVE ANY CLAIM OR DISPUTE RELATED TO THIS CONTRACT HEARD BY A JURY. ANY SUCH CLAIMS OR DISPUTES, THEREFORE, WILL BE HEARD ONLY BY A JUDGE.
15. Limitation of Liability. In no event shall BGE or its officers, directors, employees, agents, representatives, affiliates, and assigns be liable for any special, indirect, incidental, exemplary, punitive, or consequential damages of any sort whatsoever, including, but not limited to, any delay damages or lost profits/revenues, arising out of or related, in whole or in part, to this Contract, regardless of whether the liability arises in tort or contract, at law or equity. Notwithstanding anything contained in this Contract to the contrary, in no event shall BGE's total liability resulting from or occurring in connection with its obligations or performance of any Services or other work under this Contract exceed the amount paid to BGE by Customer.
16. Indemnification. To the fullest extent permitted by law, Customer agrees to indemnify, hold harmless, and at Customer's sole cost defend BGE, its officers, directors, employees, agents, representatives, affiliates, and assigns from and against any and all claims, liabilities, damages, expenses, suits, or demands (including, but not limited to, reasonable attorneys' fees and expenses) arising out of or in any manner related to the acts, omissions, or responsibilities of Customer in connection with this Contract.
17. Force Majeure. BGE may at any time extend, suspend, or delay performance of this Contract if due to causes beyond BGE's reasonable control, including, but not limited to, acts of God, fire, explosion, shortages of fuel, any act or failure to act of any civil or military authority, or strikes.
18. Warranty Disclaimer. BGE MAKES NO PROMISE, GUARANTEE, REPRESENTATION, OR WARRANTY, WHETHER EXPRESS OR IMPLIED, AS TO THE SERVICES PERFORMED UNDER THIS CONTRACT, AND BGE EXPRESSLY DISCLAIMS ANY SUCH WARRANTY, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR COURSE OF DEALING.
19. Survival. The rights and obligations of the Parties set forth in Paragraphs 8, 9, 10, 13, 14, 15, 16, 18, 19, 20, 21, 22, 23, and 25, and any other right or obligation of the Parties in this Contract which, by its express terms or nature and context is intended to survive termination or expiration of this Contract, shall survive any termination or expiration of this Contract.
20. Binding Effect; Assignment. This Contract shall be binding upon and shall inure to the benefit of the successors and assigns of the Parties hereto. Customer shall not assign any part of this Contract without the written consent of BGE.
21. No Waiver. Unless otherwise stated in this Contract, the Parties agree that the failure by either Party to enforce any term of this Contract shall not constitute a waiver of any rights or deprive either Party of the right to insist thereafter upon strict adherence to that or any other term of this Contract, nor shall a waiver of any breach of this Contract constitute a waiver of any preceding or succeeding breach. No waiver of any of the provisions of this Contract, unless expressly stated otherwise in this Contract, shall be valid and binding unless it is in writing and signed by the Party against whom it is sought to be enforced.
22. Severability. This Contract shall be enforceable to the fullest extent allowed by law. If any provision of this Contract shall be found to be null, unlawful, void, or inoperative for any reason, such provision shall be struck from this Contract and otherwise the Contract shall continue in full force and effect.
23. Governing Law; Jurisdiction. The validity and construction of this Contract or of any of its terms or provisions shall be determined under the laws of the State of Maryland, regardless of any principles of conflicts of laws or choice of laws of any jurisdiction. The Parties further agree that the courts of the State of Maryland shall have exclusive jurisdiction to resolve disputes that may arise between the Parties.
24. Counterparts. This Contract may be executed by the Parties in one or more identical counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.
25. Entire Agreement. This Contract constitutes the entire agreement and understanding between the Parties and supersedes all prior agreements and understandings, whether written or oral, relating to the subject matter of this Contract. This Contract may be amended or modified only by a written instrument executed each Party. The language of all parts of this Contract shall in all cases be construed as a whole, according to its fair meaning, and not strictly for or against any of the Parties, notwithstanding any statutory or common law provisions which would suggest otherwise.

BGE Revenue Processing
5th Floor
PO Box 1475
Baltimore, MD 21203-1475

November 4, 2025
BGE W/O Job Number: 20121515

BALTIMORE COUNTY GOVERNMENT
12200 LONG GREEN PIKE
GLEN ARM, MD, 21057

BGE has prepared a detailed gas and electric installation design, including the specific plans needed for our construction crews to perform work at: 216 N MARLYN AVE BLDG 99.

BGE requires a minimum of 25 business days from completion of all customer requirements to start construction
BGE WILL NOT schedule the service and meter without reciept of the Certificate-of-Inspection from the local municipality

Step 1: To keep your project moving forward, use the enclosed envelope to return all items indicated below or send to the address above, or sign as indicated online via Sertifi.

☐ Signed Right of Way Agreement (Signed by the owner(s) and notarized as indicated.)

☑ Review and Sign the Final BGE Design Drawing.
This will serve as the approval for the location of BGE's facilities.

☑ Remaining Payment Due: $23,067.00
The amount above represents the balance of the customer contribution amount due. To ensure proper credit for payment, please note the BGE W/O Job Number & Job Address on your check and return with cut-off below. Please use the following account number 0188582890 for all billable construction charges on your work order.

The pricing is valid for 90 calendar days from the date of this contract and is subject to change after the 90 day period.

Step 2: Comply with the following agreed-upon site preparation for our equipment:

☑ Site to be within six inches of final grade.	☑ Install load cables and/or gas piping through the building wall Install CT cabinet or meter socket, if applicable
☑ Install and mark in 3' intervals: Water, Sewer, Telephone, Storm Drain, and other Non-BGE Utilities	☑ Install all road crossings
☑ Locate and clearly mark all private under-ground facilities on job site: Well Water Line, Septic Field, Private Lighting, Underground Sprinkler Systems, Invisible Fence Wires, Etc.	☑ Install conduits with pull strings per BGE specifications. Conduit will be min. 4" inside dimension IPS UL SCH 40. The customer will pull a mandrel through each duct prior to BGE cable installation, follwed by a pulling line which shall remain in each duct.
☑ Install soil erosion and sediment controls.	☑ Clear the site of all building materials, trees, stumps, and other obstructions along the route of the proposed BGE facilities
☑ Locate and clearly mark proposed property lines, curb & gutter on the job site.(if applicable) Important	☑ Install gas meter pads, transformer pads per BGE specifications
☑ Stake transformer/switchgear location.	☑ Review the available customer information booklets at BGE.com to assist with fulfilling your requirements. Contact your BGE representative with any questions

Once the site is ready, contact your BGE New Business Job Owner to schedule the job.

Upon receipt of the items indicated above, all applicable utility permits, and a certificate of approval from the jurisdictional authority, BGE will schedule construction of your job. To assist us in providing hassle-free customer service, have your BGE W/O Job Number available. The charge for this project is for BGE work only and does not include any other utilites. If the BGE pre-site inspection fails or any of the requirements are not satisfied in a timely manner the project may be delayed and pushed back in the schedule a minimum of 15 business days.

If you have any questions about this information, please contact me at 667-313-3666.

Sincerely,

Garrett John Colly
New Business Job Owner

General Terms and Conditions

1. Parties. "BGE" mean Baltimore Gas and Electric Company, and "Customer" means the person or business identified on page 1 of this Extension/Relocation Contract (the "Contract"). BGE and Customer shall be referred to collectively as the "Parties" and individually as a "Party".
2. Contract Effective Date. The Contract shall not become effective until it has been duly executed by both Customer and BGE, after which the effective date of the Contract shall be as shown on page 1 of this Contract.
3. Request for Services. Customer has requested that BGE perform certain services, as described on page 1 of this Contract and any other pages attached to this Contract and/or incorporated by reference (the "Services").
4. Work Schedule. BGE shall perform the Services according to its own schedule and workforce requirements, which BGE shall determine in its sole discretion.
5. Estimated Completion Time. Any estimated completion time provided by BGE to Customer in connection with the performance of the Services is subject to modification or extension at BGE's sole discretion.
6. Payment for Construction. BGE shall perform the Services in consideration for Customer's payment of all costs and charges set forth in this Contract. If Customer fails to timely pay such costs and charges, BGE shall have the right to immediately terminate this Contract and exercise any of the rights and remedies set forth in this Contract and/or as otherwise provided by law.
7. Obligations of Customer Related to Performance of the Services. The term "Site" shall refer to the location at which BGE shall perform the Services, as described in this Contract and/or any agreed-upon construction or site plan drawings. BGE shall have no obligation to perform the Services until Customer has submitted payment(s) to BGE for all costs and charges set forth in this Contract and completed the following tasks and work at the sole cost of Customer:
   - Furnish all on-Site and off-Site easements required by BGE for the Services and to provide electric and/or gas service to Customer and to other customers and users of the Facilities, using BGE's standard forms or other forms acceptable to BGE.
   - Provide accurate Site plans, grading plans, utility plans, and any other plans requested by BGE related to the Site.
   - Locate and mark all private underground facilities at the Site and otherwise comply with the requirements of Title 12 of the Public Utilities Article of the Annotated Code of Maryland (commonly referred to as the "Miss Utility Law").
   - Clear the Site of all trees, stumps, and other obstructions.
   - Grade the Site to within six (6) inches of final grade.
   - Supply and install conduit, ducts, splice boxes, manholes, transformer pads, gas meter pads, switchgear tubs, and/or other facilities, as required by BGE to perform the Services and in accordance with applicable BGE construction standards.
   - Supply and install non-BGE utilities at the Site.
   - Locate and mark property and curb lines at the Site.
   - Perform any other work reasonably required by BGE to provide satisfactory conditions for performance of the Services at the Site and/or to assure compliance with BGE's electric and gas service tariffs and construction standards and any applicable laws, regulations, or permitting requirements.
8. Ownership of BGE-Installed Facilities. The facilities and equipment installed by BGE as part of the Services described in this Contract and any future repairs, replacements, upgrades, or adjustments thereof shall be collectively referred to in this Contract as the "BGE-Installed Facilities". With the sole exception of the "Customer Main Gas Valve", which is installed at the outlet of the gas meter set, the BGE-Installed Facilities shall remain the sole and exclusive property of BGE. The Customer Main Gas Valve shall become the property of the Customer after BGE completes installation and checks for leaks and proper operation.
9. Transfer of Title to Customer-Installed Facilities. Upon BGE's inspection and final acceptance of any conduits, ducts, splice boxes, manholes, transformer pads, gas meter pads, switchgear tubs, and/or other facilities related to the Services installed by Customer in connection with this Contract (collectively, the "Customer-Installed Facilities"), title to all such Customer-Installed Facilities shall automatically transfer to BGE free and clear of all liens, claims, and encumbrances and neither Customer nor any other party shall continue to maintain any interest in the Customer-Installed Facilities (or any parts or components thereof).
10. Confirmation of Title to the Facilities. The BGE-Installed Facilities and the Customer-Installed Facilities are collectively, the "Facilities". BGE may, in its sole discretion, affix to the Facilities (or any parts or components thereof) labels or other markings indicating BGE's ownership of the Facilities. Use by the Customer of the Facilities does not divest BGE of its exclusive rights to such ownership, use, and possession. The Customer shall, upon the request of BGE, execute and deliver to BGE all documents reasonably necessary or advisable to confirm, perfect, or evidence the rights of BGE in and to the Facilities.
11. BGE Right to Terminate. BGE has the right to immediately terminate this Contract for cause upon written notice to Customer. The following shall constitute cause for termination: (1) the failure of Customer to timely and properly perform any of its obligations set forth in this Contract to the satisfaction of BGE; and (2) the inability of BGE to commence the Services within ninety (90) calendar days of the Contract Effective Date as a result of the actions or inactions of Customer. In the event of such a termination for cause, BGE shall provide Customer a pro-rata refund of any amounts previously paid for Services that BGE did not perform as of the effective date of termination, less any additional administration or other costs incurred by BGE related to the termination for cause. BGE also has the right to terminate this Contract if performance of the Services or any obligation of BGE under this Contract would interfere or conflict with BGE's ability to satisfactorily comply with any duties, requirements, obligations, or responsibilities that may exist under applicable law, including, but not limited to, any rule, regulation, or decision issued by the Maryland Public Service Commission or any federal, state, or local government permitting authority. In the event of such a termination, BGE shall fully refund to Customer any amounts previously paid for the Services.
12. Customer Right to Terminate. Upon thirty (30) calendar days' prior written notice, Customer shall have the right to terminate this Contract, with or without cause. In the event of such a termination, BGE shall provide Customer a pro-rata refund of any amounts previously paid for Services that BGE did not perform as of the effective date of termination, less any additional administration or

Docusign Envelope ID: 1D7C054B-26B2-4386-B321-DA0DCFC0C08F

other costs incurred by BGE related to the termination or performance of the Services or Contract.

13. Customer Payment of Damages or Costs. Customer shall be required to pay BGE an amount equal to any damages or costs incurred by BGE related to the following:
    - The failure of Customer to perform any of its obligations under this Contract, including, but not limited to, the failure to provide BGE with a Site suitable for performance of the Services.
    - Any action or inaction of Customer that delays completion of the Services.
    - The failure of Customer (or another responsible party) to initiate the gas and/or electric service described in this Contract at the capacity and load requested within twelve (12) months of completion of the Services.
    - The failure of Customer (or another responsible party) to use the gas and/or electric service described in this Contract at the capacity and load requested for the term of contract of the applicable rate schedule, as described in BGE's electric and/or gas service tariffs.
    - A change in the location of the Site, conditions of the Site, or scope of work to be performed by BGE.
    - The failure of Customer to disclose all Site conditions related to performance of the Services.
14. Waiver of Jury Trial. BGE AND CUSTOMER KNOWINGLY, WILLINGLY, VOLUNTARILY, AND IRREVOCABLY WAIVE ANY RIGHT TO HAVE ANY CLAIM OR DISPUTE RELATED TO THIS CONTRACT HEARD BY A JURY. ANY SUCH CLAIMS OR DISPUTES, THEREFORE, WILL BE HEARD ONLY BY A JUDGE.
15. Limitation of Liability. In no event shall BGE or its officers, directors, employees, agents, representatives, affiliates, and assigns be liable for any special, indirect, incidental, exemplary, punitive, or consequential damages of any sort whatsoever, including, but not limited to, any delay damages or lost profits/revenues, arising out of or related, in whole or in part, to this Contract, regardless of whether the liability arises in tort or contract, at law or equity. Notwithstanding anything contained in this Contract to the contrary, in no event shall BGE's total liability resulting from or occurring in connection with its obligations or performance of any Services or other work under this Contract exceed the amount paid to BGE by Customer.
16. Indemnification. To the fullest extent permitted by law, Customer agrees to indemnify, hold harmless, and at Customer's sole cost defend BGE, its officers, directors, employees, agents, representatives, affiliates, and assigns from and against any and all claims, liabilities, damages, expenses, suits, or demands (including, but not limited to, reasonable attorneys' fees and expenses) arising out of or in any manner related to the acts, omissions, or responsibilities of Customer in connection with this Contract.
17. Force Majeure. BGE may at any time extend, suspend, or delay performance of this Contract if due to causes beyond BGE's reasonable control, including, but not limited to, acts of God, fire, explosion, shortages of fuel, any act or failure to act of any civil or military authority, or strikes.
18. Warranty Disclaimer. BGE MAKES NO PROMISE, GUARANTEE, REPRESENTATION, OR WARRANTY, WHETHER EXPRESS OR IMPLIED, AS TO THE SERVICES PERFORMED UNDER THIS CONTRACT, AND BGE EXPRESSLY DISCLAIMS ANY SUCH WARRANTY, INCLUDING, BUT NOT LIMITED TO, WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR COURSE OF DEALING.
19. Survival. The rights and obligations of the Parties set forth in Paragraphs 8, 9, 10, 13, 14, 15, 16, 18, 19, 20, 21, 22, 23, and 25, and any other right or obligation of the Parties in this Contract which, by its express terms or nature and context is intended to survive termination or expiration of this Contract, shall survive any termination or expiration of this Contract.
20. Binding Effect; Assignment. This Contract shall be binding upon and shall inure to the benefit of the successors and assigns of the Parties hereto. Customer shall not assign any part of this Contract without the written consent of BGE.
21. No Waiver. Unless otherwise stated in this Contract, the Parties agree that the failure by either Party to enforce any term of this Contract shall not constitute a waiver of any rights or deprive either Party of the right to insist thereafter upon strict adherence to that or any other term of this Contract, nor shall a waiver of any breach of this Contract constitute a waiver of any preceding or succeeding breach. No waiver of any of the provisions of this Contract, unless expressly stated otherwise in this Contract, shall be valid and binding unless it is in writing and signed by the Party against whom it is sought to be enforced.
22. Severability. This Contract shall be enforceable to the fullest extent allowed by law. If any provision of this Contract shall be found to be null, unlawful, void, or inoperative for any reason, such provision shall be struck from this Contract and otherwise the Contract shall continue in full force and effect.
23. Governing Law; Jurisdiction. The validity and construction of this Contract or of any of its terms or provisions shall be determined under the laws of the State of Maryland, regardless of any principles of conflicts of laws or choice of laws of any jurisdiction. The Parties further agree that the courts of the State of Maryland shall have exclusive jurisdiction to resolve disputes that may arise between the Parties.
24. Counterparts. This Contract may be executed by the Parties in one or more identical counterparts, each of which shall be deemed an original, but all of which together shall constitute one and the same instrument.
25. Entire Agreement. This Contract constitutes the entire agreement and understanding between the Parties and supersedes all prior agreements and understandings, whether written or oral, relating to the subject matter of this Contract. This Contract may be amended or modified only by a written instrument executed each Party. The language of all parts of this Contract shall in all cases be construed as a whole, according to its fair meaning, and not strictly for or against any of the Parties, notwithstanding any statutory or common law provisions which would suggest otherwise.

SPECIAL PROVISIONS

Builder's Risk Insurance

A. The Contractor shall, at his/her own cost, insure the work and keep it insured at all times during the period of construction, and until final acceptance of it by the County against loss of damage covered by an "All Risk" Builders Risk type of policy. The amount of insurance shall be the 100% estimated replacement cost of the work.

B. The policies shall be made payable to the County and the Contractor, as their interest may appear, and the policies shall be left in the possession of the Engineer, prior to the start of construction.

MEMORANDUM

TO: Baltimore County Planning & Zoning
Karen L. Lewis - KLLewis@baltimorecountymd.gov

Rebecca L. McCormick, AIA
Murphy & Dittenhafer Architects
rlm@murphdittarch.com

FROM: Jennifer Romanowski, Airport Planner
Office of Planning & Environmental Services
jromanowski@bwiairport.com

DATE: October 1, 2025

SUBJECT: MAA Approval – Airport Zoning Permit 25-179
Essex Police Precinct-11 Renovation & Addition BCPM 1528
216 North Marlyn Avenue, Essex MD 21221

All outstanding SWM and Landscaping comments have been addressed. Airport Zoning Permit 25-179 is approved as requested.

SWM and E&S Review
Acceptable to the MAA.

Landscape Plan Review
Acceptable to the MAA.

Airport Zoning Permit 25-179
The proposed building and crane elevations have been evaluated for potential obstructions to the airspace surrounding Martin State Airport. The building elevation (24 feet AGL and 61 feet AMSL) and the crane elevation (40 feet AGL and 77 feet AMSL) pose no hazard to air navigation.

SECTION I V

Proposal

This Section to be Completed by Time of Bid

Include page 2271 Hazmat Unit Prices with the Bid Submission

SECTION – IV
PROPOSAL

DESCRIPTION OF WORK

Bid Opening via Teleconference WebEx: Thursday, January 22, 2026 @ 10:30 a.m. EST.
WebEx Phone Number 1-415-655-0001, Access Code Number 2310 687 1438##.

Begin Work Within Fifteen (15) Days After NOTICE TO PROCEED

Calendar Days for Completion: Seven Hundred Thirty (730)

Liquidated and Other Damages: FIFTEEN HUNDRED DOLLARS ($1500.00 PER CALENDAR DAY)

Cost Group "H" ($15,000,001 to $30,000,000) (Prequalified contractors with a Cost Group restriction must bid within the dollar amount stated on their Certificate of Prequalification)

Work Classification: I1 w/ a prequalified I2 & I7 subcontractors

TO BALTIMORE COUNTY, MARYLAND: The work includes the phased construction of a new single-story police precinct addition of approximately 16,000 GSF plus Sallyport addition (1,400 GSF) and then major renovation of the existing single-story precinct building with below grade basement of approximately 16,000 GSF. While the current Essex Police Precinct building lies within parcel 833, the north end of the adjacent parcels that are deeded to the County for County fire department use under parcel 843 are being utilized for the majority of the parking for the police precinct building. The additional site at 222 N. Marlyn Avenue has been acquired by BCPM and will be used primarily for stormwater management for the newly renovated facility. All buildings on the 222 N. Marlyn Avenue site shall be demolished. **Essex – District 15c7.**

The following listed Drawing Number(s) are collectively the "Drawings", and are hereby incorporated in the Contract.

Workday Number	Drawing Number(s)
10000636	2025-0892 thru 1186 & 2024–3872 thru 3873

A pre-bid meeting will be held on Wednesday, December 17, 2025 at 10:00 a.m. EST via WebEx. *Phone-In (Audio Only)* – 1-415-655-0001, Meeting Number 2311 187 8991##. *Video Conference* – Meeting Number 2311 187 8991, **Password**: **dBaMfsVt223,** go to https://signin.webex.com/join,or for the WebEx link go to www.baltimorecountymd.gov/departments/public-works/engineering/contracts/current-solicitations

NOTE: No successful bidder may withdraw their bid within NINETY (90) days after the opening thereof.

The Contractor hereby declares that it has carefully examined the solicitation, plans and specifications, form of contract, Special Provisions and Drawings (collectively the "Contract Documents"). The Contractor also hereby declares that it has carefully examined the September 2023 "Standard Specifications for Construction and Materials" and "Standard Details for Contraction", collectively the "Applicable County Law" and any and all Department of Public Works and Transportation revisions thereto as of the date of advertisement. The Contract Documents, the Applicable County Law and the Department of Public Works and Transportation revisions thereto are collectively the "Specifications" and are incorporated herein. Copies of any and all Department of Public Works and Transportation revisions including but not limited to the General Conditions Building Projects, are available online at www.baltimorecountymd.gov/departments/public-works/standards. Also, the Contractor has, to its satisfaction, examined the locality of the proposed work and agrees to furnish all labor, tools, materials, machinery, equipment, and other means of construction called for in the manner provided in the Specifications for the prices shown on the next page(s) and as evidenced by Contractor's signature on the last page thereof.

SCHEDULE OF PRICES

NOTE: The Bidder shall fill out this Proposal, write in the unit prices in clear numerals, and make the extensions.

For complete information concerning these items see Specifications and contract forms.

PROPOSAL AFFIDAVIT

1. AUTHORIZED REPRESENTATIVE

I HEREBY AFFIRM THAT:

I am the [title]_____and the duly authorized representative of [business]_____(the "Business") and that I possess the legal authority to make this Affidavit on behalf of myself and the Business for which I am acting.

2. PROPOSAL CERTIFICATION

THE UNDERSIGNED HEREBY ACKNOWLEDGES receipt of the following Addenda (list by number and date):

_____

_____

Accompanying this Proposal is a Bid Bond in an amount of 5% of the bid, the exact amount to be determined by the difference between the low bid and the next lowest bid, if two or more bids are received, or 5% of the bid if one bid is received. This guarantees payment to Baltimore County of the amount thus determined as liquidated damages in case of default in any matter specified as required before award or in any matter resulting in failure to execute and deliver an Agreement, together with Payment and Performance Bonds, after award.

3. AFFIRMATION REGARDING BRIBERY CONVICTIONS

I FURTHER AFFIRM THAT:

Neither I, nor to the best of my knowledge, information, and belief, the Business, nor any of its officers, directors, partners, or any of its employees directly involved in obtaining or performing contracts with public bodies (as is defined in Section 16-101(f) of the State Finance and Procurement Article of the Annotated Code of Maryland), has been convicted of, or has had probation before judgment imposed pursuant to Section 6-225 of the Criminal Procedure Article of the Annotated Code of Maryland, or has pleaded nolo contendere to a charge of, bribery, attempted bribery, or conspiracy to bribe in violation of Maryland law, or of the law of any other state or federal law, except as follows [indicate the reasons why the affirmation cannot be given and list any conviction, plea, or imposition of probation before judgment with the date, court, official or administrative body, the sentence or disposition, the name(s) of person(s) involved, and their current positions and responsibilities with the Business]:

_____

_____

4. AFFIRMATION REGARDING OTHER CONVICTIONS

I FURTHER AFFIRM THAT:

Neither I, nor to the best of my knowledge, information, and belief, the Business, nor any of its officers, directors, partners, or any of its employees directly involved in obtaining or performing contracts with public bodies, has:

(1) Been convicted under state or federal statute of a criminal offense incident to obtaining, attempting to obtain, or performing a public or private contract, fraud, embezzlement, theft, forgery, falsification or destruction of records, or receiving stolen property;

(2) Been convicted of any criminal violation of a state or federal antitrust statute;

(3) Been convicted under the provisions of Title 18 of the United States Code for violation of the Racketeer Influenced and Corrupt Organization Act, 18 U.S.C. §1961, et seq., or the Mail Fraud Act, 18 U.S.C. §1341, et seq., for acts arising out of the submission of bids or proposals for a public or private contract;

(4) Been convicted of a violation of the State Minority Business Enterprise Law, Section 14-308 of the State Finance and Procurement Article of the Annotated Code of Maryland;

(5) Been convicted of conspiracy to commit any act or omission that would constitute grounds for conviction or liability under any law or statute described in subsection (1), (2), (3), or (4) above;

(6) Been found civilly liable under a state or federal antitrust statute for acts or omissions in connection with the submission of bids or proposals for a public or private contract;

(7) Admitted in writing or under oath, during the course of an official investigation or other proceedings, acts or omissions that would constitute grounds for conviction or liability under any law or statute described above, except as follows [indicate reasons why the affirmations cannot be given, and list any conviction, plea, or imposition of probation before judgment with the date, court, official or administrative body, the sentence or disposition, the name(s) of the person(s) involved and their current positions and responsibilities with the Business, and the status of any debarment]:

_____

_____

5. AFFIRMATION REGARDING DEBARMENT

I FURTHER AFFIRM THAT:

Neither I, nor to the best of my knowledge, information, and belief, the Business, nor any of its officers, directors, partners, or any of its employees directly involved in obtaining or performing contracts with public bodies, has ever been suspended or debarred (including being issued a limited denial of participation) by any public entity, except as follows [list each debarment or suspension providing the dates of the suspension or debarment, the name of the public entity and the status of the proceeding, the name(s) of the person(s) involved and their current positions and responsibilities with the Business, the grounds of the debarment or suspension, and the details of each person's involvement in any activity that formed the grounds of the debarment or suspension]:

_____

_____

6. AFFIRMATION REGARDING DEBARMENT OF RELATED ENTITIES

I FURTHER AFFIRM THAT:

(1) The Business was not established and it does not operate in a manner designed to evade the application of or defeat the purpose of debarment pursuant to Sections 16-101, et seq., of the State Finance and Procurement Article of the Annotated Code of Maryland; and

(2) The Business is not a successor, assignee, subsidiary, or affiliate of a suspended or debarred business, except as follows: [you must indicate the reasons why the affirmations cannot be given without qualification]:

_____

_____

7. SUB-CONTRACT AFFIRMATION

I FURTHER AFFIRM THAT:

Neither I, nor to the best of my knowledge, information, and belief, the Business, has knowingly entered into a contract with a public body under which a person debarred or suspended under Title 16 of the State Finance and Procurement Article of the Annotated Code of Maryland will provide, directly or indirectly, supplies, services, architectural services, construction related services, leases of real property, or construction.

8. AFFIRMATION REGARDING COLLUSION

I FURTHER AFFIRM THAT:

Neither I, nor to the best of my knowledge, information, and belief, the Business, nor any of its officers, directors, members or partners, nor any of its employees, have in any way:

(1) Agreed, conspired, connived, or colluded to produce a deceptive show of competition in the compilation of the accompanying bid or offer that is being submitted;

(2) In any manner, directly or indirectly, entered into any agreement of any kind to fix the bid price or price proposal of the bidder or offeror or of any competitor, or otherwise take any action in restraint of free competitive bidding in connection with the contract for which the accompanying bid or offer is submitted;

(3) Colluded with anyone to obtain information concerning the bid that would give the Business an unfair advantage over others.

9. POLITICAL CONTRIBUTION DISCLOSURE AFFIRMATION

I FURTHER AFFIRM THAT:

The Business affirms that it is aware of, and will comply with, the provisions of Sections 14- 101 through 14-108 of the Election Law Article of the Annotated Code of Maryland, which require that every person who makes, during any 12-month period, one or more contracts, with one or more Maryland governmental entities involving cumulative consideration, or at least $200,000.00, shall file with the State Board of Elections certain specified information to include disclosure of attributable political contributions in excess of $500 during defined reporting periods.

l0. CERTIFICATION OF CORPORATION REGISTRATION AND TAX PAYMENT

I FURTHER AFFIRM THAT:

(1) The Business is a _____ *(State)* (Corporation), (LLC), (Partnership), (Sole Proprietor/Individual), (Other:_____), that it **is** registered in accordance with the Corporations and Associations Article of the Annotated Code of Maryland, that it **is** in good standing in the State of Maryland, and that it **has** filed all of its annual reports, together with filing fees, with the Maryland State Department of Assessments and Taxation, and that the name and address of its resident agent filed with the State Department of Assessments and Taxation is:

Name: _____

Address: _____

_____

(If none, so state)

(2) Except as validly contested, the Business has paid, or has arranged for payment of, all taxes due the State of Maryland and Baltimore County, and has filed all required returns and reports with the Comptroller of the Treasury, the State Department of Assessments and Taxation, and the Employment Security Administration, as applicable, and will have paid all withholding taxes due the State of Maryland prior to final settlement.

11. CONTINGENT FEES

I FURTHER AFFIRM THAT:

The Business has not employed or retained any person, partnership, corporation, or other entity, other than a bona fide employee or agent working for the Business, to solicit or secure the Contract, and that the Business has not paid or agreed to pay any person, partnership, corporation, or other entity, other than a bona fide employee or agent, any fee or other consideration contingent on the making of the Contract.

12. NONDISCRIMINATION IN EMPLOYMENT STATEMENT

I FURTHER AFFIRM THAT:

During the performance of any contract awarded of which this affidavit is a part:

(1) The Business will not discriminate against any employee or applicant for employment because of race, color, religion, sex, age, national origin, marital status, sexual orientation, genetic information, or disability unrelated in nature and extent so as to reasonably preclude the performance of the employment, or because of the individual's refusal to submit to a genetic test or make available the results of a genetic test. The Business will take affirmative action to ensure that applicants are employed, and that employees are treated during employment, without regard to their race, color, religion, sex, age, national origin, marital status, sexual orientation, genetic information, or disability unrelated in nature and extent so as to reasonably preclude the performance of the employment, or because of the individual's refusal to submit to a genetic test or make available the results of a genetic test. Such action shall include, but not be limited to the following: employment, promotion, upgrading, demotion or transfer, rates of pay or other forms of compensation; and selection for training, including apprenticeship. The Business agrees to post in conspicuous places, available to employees and applicants for employment, notices to be provided by the owner setting forth provisions of this nondiscrimination clause.

(2) The Business will, in all solicitations or advertisements for employees placed by or on behalf of the Business, state that all qualified applicants will receive consideration for employment without regard to race, color, religion, sex, age, national origin, marital status, sexual orientation, genetic information, or disability unrelated in nature and extent so as to reasonably preclude the performance of the employment, or because of the individual's refusal to submit to a genetic test or make available the results of a genetic test.

(3) The Business shall send to each labor union or representative of workers with which the Business has a collective bargaining agreement or other contract or understanding, a notice, to be provided by the owner, advising the said labor union or workers' representative of these commitments, and shall post copies of the notice in conspicuous places available to employees and applicants for employment.

(4) The Business shall furnish, if requested by the County, a compliance report concerning our employment practices and policies in order for the County to ascertain compliance with the special provisions of this affidavit concerning nondiscrimination in employment.

(5) In the event of the Business's noncompliance with the nondiscrimination clause of this affidavit, the contract may be canceled, terminated, or suspended in whole or in part, and the Business may be declared ineligible for further County work.

(6) The Business shall include the special provisions outlined herein pertaining to nondiscrimination in employment in every subcontract, so that such nondiscrimination in employment provisions shall be binding on each subcontractor or vendor.

13. FOREIGN CONTRACTS

I FURTHER AFFIRM THAT:

The Business affirms that it is aware of, and will comply with, the provisions of Sections 10-2-110 Article 10. Finance, Title 2 – Purchasing, Baltimore County Code 2003, which requires that prior to the award of a contract for services under the provisions of this title, and during the entire term of a contract award, the bidder or vendor shall disclose to the County whether any services covered by the bid or contract, including any subcontracted services, will be performed outside the United States. The disclosure shall be made to the Office of Budget and Finance, Purchasing Bureau.

14. MINORITY BUSINESS ENTERPRISE AND FEMALE CONTRACTORS

THIS BUSINESS INTENDS to affirmatively seek out and consider minority business enterprises to participate in this contract as subcontractors and/or suppliers of materials and services.

THE UNDERSIGNED UNDERSTANDS AND AGREES: that any and all subcontracting of supplies and services in connection with this contract, whether undertaken before or after award of contract, will be in accordance with the Minority Business Enterprise and Female Contractor requirement included in the Bid Proposal package and incorporated herein as if fully set forth; and

THE UNDERSIGNED ALSO UNDERSTANDS AND AGREES that no subcontracting will be approved until Baltimore County has reviewed and approved the affirmative actions taken by this firm.

15. REQUIREMENTS FOR EXECUTING AFFIDAVIT & PROPOSAL

The Affidavit must be signed in ink in order for the bid to be accepted and that the Proposal must be typewritten or filled out in ink.

THE UNDERSIGNED ALSO UNDERSTANDS that:

Proposals submitted by an INDIVIDUAL must be signed by an individual.

Proposals submitted by a PARTNERSHIP must be signed by the partner who is legally authorized authority to bind the partnership. Attach a copy of the Partnership Agreement and a duly certified resolution evidencing the authority of the partner so signing on behalf of the partnership.

Proposals submitted by a CORPORATION must be signed by a legally authorized officer of the corporation and attested to by the Corporate Secretary. Attach a copy of the Articles of Incorporation, By-Laws and a duly certified Board Resolution evidencing the authority of the officer so signing on behalf of the corporation.

Proposals submitted by a LIMITED LIABILITY COMPANY must be signed by a legally authorized member of the company and attested to. Attach a copy of the Operating Agreement, Articles of Organization and a duly certified resolution evidencing the authority of the member so signing on behalf of the limited liability company.

NOTE: The contractor may file with the County a list of the names of those officers, partners or members, as applicable, having legal authority to execute documents on behalf of and legally bind the contractor, duly certified, as applicable and legally required, together with the aforesaid corporate documents, which shall remain in full force and effect until such time as the County Department of Public Works and Transportation, Construction Contract Administration is advised in writing to the contrary.

16. ACKNOWLEDGMENT

I ACKNOWLEDGE THAT this Affidavit is to be furnished to the County and may be distributed to units of (1) Baltimore County; (2) the State of Maryland; (3) other counties or political subdivisions of the State of Maryland; (4) other states; and (5) the federal government. I further acknowledge that this Affidavit is subject to applicable laws of the United States and the State of Maryland, both criminal and civil, and that nothing in this Affidavit or any contract resulting from the submission of this bid or proposal shall be construed to supersede, amend, modify or waive, on behalf of Baltimore County, or the State of Maryland or any unit of the State of Maryland having jurisdiction, the exercise of any statutory right or remedy conferred by the Constitution and the laws of Maryland with respect to any misrepresentation made or any violation of the obligations, terms and covenants undertaken by the Business with respect to (a) this Affidavit, (b) the contract, and (3) other Affidavits comprising part of the contract.

I DO SOLEMNLY DECLARE AND AFFIRM UNDER THE PENALTIES OF PERJURY THAT THE CONTENTS OF THIS AFFIDAVIT ARE TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE, INFORMATION, AND BELIEF.

BID BOND

Principal | **Business Address of Principal**

Surety

Obligee: **BALTIMORE COUNTY, MARYLAND**
A body corporate and politic

A Corporation of the State of _____ and authorized to do business in Maryland

Five Percent of Bid Amount **$** **5% of Bid**
Penal Sum of Bond [shall be determined pursuant to latest revised Specification / G.P. 2.07 (2000 Ed.)]

Essex Police Precinct 11 New Addition & Renovations
Contract Name

25022 PP0
Contract Number/Proposal Item Number

KNOW ALL MEN BY THESE PRESENTS, that we, the Principal, above named, and Surety, above named, and authorized to do business in the State of Maryland, are held and firmly bound unto the Obligee, above named, in the penal sum of the amount stated above, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

THE CONDITION OF THIS OBLIGATION is such that if the aforesaid Principal is the apparent low bidder and complies with all specified matters required before award or if the aforesaid Principal is awarded the contract, the said Principal will, within the time required, execute and deliver to the Obligee a formal contract and good and sufficient payment and performance bonds in the form provided by the Obligee, then, this obligation to be void; otherwise the Principal and Surety will, upon demand, pay unto the Obligee the entire Penal Sum of this Bid Bond as liquidated damages.

THE SURETY FURTHER GUARANTEES No Proposal will be considered unless accompanied by a guaranty of the amount specified in the Proposal in the form of either a certified check, bank cashier's check or a Bid Bond on the form provided therein or an exact facsimile thereof. The Bid Bond must be executed by a Surety that is, as of the date of the Bid: (a) licensed in the State of Maryland, (b) rated "B" or better by the A.M. Best Company, (c) on federal funded projects, authorized by the underwriting limitation contained in the U.S. Department of the Treasury Circular 570, as amended, to guaranty the amount of the Bid, and (d) in good standing as determined by the County's Engineer. The Bid Bond must guaranty payment to the County of liquidated damages as follows: (a) if only one Bid is received, the guaranteed payment shall be five (5%) percent of the Bidder's Bid amount, (b) if two or more Bids are received, the guaranteed payment shall be the difference between the Bidder's Bid amount and the next lowest Bid amount, subject to the limitation that the guaranteed payment not be greater than five (5%) percent of the Bidder's Bid amount. This Bid Bond is required in case the successful Bidder, after issuance of notice of Award, fails to comply, timely and completely, with each of the requirements set forth under Section GP-3.04.

BALTIMORE COUNTY
PREVAILING WAGE AND LOCAL HIRING

AFFIDAVIT

(Project Name) _____
Proposal No.: _____
Project No.: _____

On behalf of_____, I do solemnly declare and affirm,
(Contractor)
under penalty of perjury, that to the best of my knowledge, information, and belief:

1. I have submitted all documentation in accordance with Baltimore County Code § 10-2- 506 and § 10-2-507 regarding the prevailing wage and local hiring laws and requirements of the prevailing wage guidelines located at (Prevailing Wage and Local Hire Laws), and acknowledge that I have read and agree to all provisions of said law, as amended, and have a continuing obligation to be compliant with the law and any changes to the law.

2. I shall not knowingly provide any false information relating to payroll documentation and/or hiring of local employees for capital improvement contracts that are subject to the prevailing wage and/or local hiring laws of Baltimore County. I further attest and certify that all documentation relating to the same will be accurate and complete and will remain accurate and complete on an ongoing basis, and will reflect the payroll and/or local hiring status of contractors, subcontractors, apprentices, and independent contractors performing work for the Contract (contract number_____). I acknowledge that I have been informed and am aware of the foregoing requirements and that I am authorized to make this certification on behalf of myself and all subcontractors and parties performing work pursuant to this Contract.

3. I certify and attest that I am an officer or agent of the Contractor or subcontractor who supervises the payment of employees. I understand and agree that all documentation related to prevailing wages and/or local hiring required by law shall be submitted to Baltimore County's Prevailing Wage Administrator or designee before any surety is released or final payment due under the terms of the Contract is made.

4. I further certify and attest that I will have personal knowledge of the wages paid to all employees of_____for work performed on the Contract and of all of the hours worked, and that I am an authorized agent of the Contractor and assume responsibility for my actions.

5. I further certify and attest that_____will comply with prevailing wage rates set by the State of Maryland as the same apply to the Contract and are a part of the bid documents and Contract, and that_____will comply with applicable local hiring requirements.

6. I attest and certify that, if the Contract is subject to the local hiring requirement under §10-2-507 of the Baltimore County Code, _____ will make best efforts to ensure that residents of Baltimore County constitute at least 51% of the new hires made for the Contract, subject to all exceptions allowable by law.

7. I certify and attest that, if the Contract is subject to prevailing wage requirements, no rebates or deductions will be made, directly or indirectly, from any wages paid in connection with the Contract, other than those provided for by law.

8. I certify and attest that, if awarded the Contract and if the Contract is subject to prevailing wage law, I will submit certified payroll to the County through its electronic compliance system or as instructed by the Prevailing Wage and Local Hire Unit.

9. I certify that if awarded the Contract, I will provide a list of subcontractors who will participate as a beneficiary of this project to the agency and the Prevailing Wage and Local Hire Unit at PrevailingWage@baltimorecountymd.gov.

10. I understand that no funds will be dispersed by the County until an Employment Analysis has been issued to the Prevailing Wage and Local Hire Unit in compliance with the local hire law. The Employment Analysis will include how many jobs will be required to complete the project; how many current employees are available to complete the project, and how many of those jobs will require new hires.

BALTIMORE COUNTY, MARYLAND

Prevailing Wage and Local Hiring Contract Requirements and Policies

The Contractor and all Subcontractors must comply with the Prevailing Wage and Local Hiring Laws, contained in Baltimore County Code § 10-2-506 and § 10-2-507, respectively, as amended. Prevailing wage means the wage rate paid by employers that is determined by a governmental authority, based upon a particular geographic area, for a given class of labor and type of project. The County will use the prevailing wage established by the State of Maryland (the "State") Department of Labor for state funded construction contracts in the County at the time of award. These rates include the basic hourly rate and fringe benefits. Apprentices must be paid at least the rate that the State's Apprenticeship and Training Council sets for an apprentice in the trade involved, based on a percentage of the prevailing wage rate in that trade. Any Contractor that is subject to the prevailing wage or local hiring law will be required to agree to the below provisions:

For the purposes of these requirements, an employee means an apprentice, laborer or mechanic employed by a contractor or subcontractor on a capital improvement project with a value of over $300,000 or a County-subsidized capital project with a value over $5,000,000.

Capital Improvement Project does not include blanket order or open-end agreements, capital improvement projects subject to a federal or state prevailing wage law, awarded without competition; with another governmental entity; to the extent the contractor is precluded from compliance by the terms of any federal or state law, contract or grant; entered into pursuant to Baltimore County Code § 10-2-310(e); entered into as a joint or cooperative purchase; or entered into as an emergency purchase.

The purpose of a prevailing wage is to ensure that contractors institute local hiring practices for Capital Improvement contracts and Capital Projects under certain circumstances as required by law, and that the Contractor's employees who work on capital improvement contracts are paid the going rate for their services. The prevailing wage rates are established by the State of Maryland Department of Labor and apply to all of the Contractor's employees and any and all Subcontractors. The Contractor and all Subcontractors must comply with all of the requirements of the Prevailing Wage Law including, but not limited to, the following:

1. Pay employees the prescribed rate as annually established by the State's Department of Labor; the prevailing wage rates in effect on the date a solicitation is issued and will apply throughout the term of a contract resulting from that solicitation. Contractor or subcontractors may NOT split or subdivide a capital improvement contract, pay an employee through a third party, treat an employee as a subcontractor or independent contractor to avoid any requirement of the County's prevailing wage law; or employ an individual classified as a helper or trainee to perform direct and measurable work on a capital improvement contract.

2. Pay employees at a rate equal to or more than the prevailing wage rate currently in effect for the type of work performed.

3. Pay employees overtime for work (I) more than eight hours in any single calendar day; (II) more than 40 hours in a work week; or (III) on a Sunday or a legal holiday.

4. Classify employees in their proper work classification in conformance with the schedule established by the State's Department of Labor.

5. May only make fair and reasonable deductions that are (a) required by law; (b) authorized in a written agreement between an employee and contractor or subcontractor signed at the beginning of employment (any deductions taken from employee paychecks including healthcare, pension, 401K, IRA, etc., child/spouse support, or tax levies); and submitted by the contractor or subcontractor to the Director of the County's Prevailing Wage Program; or required or allowed by a collective bargaining agreement between a bona fide labor organization and a contractor or subcontractor.

> Electronically submit a certified copy of payroll records through the County's designated certified payroll and compliance system within 14 days after the end of payroll week ending date, to verify that Prevailing Wage rates have been paid to employees.

6. Backup documentation may be required upon demand from the County to be submitted for all 3rd party benefits being claimed, to include, but not limited to: *one month's healthcare transmittal showing employee name and amount company pays on their behalf, company vacation/sick policy, etc. or if Union, a Union transmittal for one month in which work has been performed*.

7. Retain records for a period of five (5) years after the work is completed and permit the Director of the County Prevailing Wage Program, or his/her designee, to inspect the payroll records at a reasonable time and as often as necessary.

8. Payroll records shall contain a statement signed by the contractor or subcontractor (including tiered subcontractors) certifying that the payroll records are complete and correct; the wage rates are not less than required by the Prevailing Wage Law; and the rate of pay and classification for each employee accurately reflects the work the employee performed.

9. All payroll records shall include the name, address, telephone number and email address of the contractor or subcontractor; the name and location of the job; and each employee's name, current address, unless previously reported; specific work classification; daily basic time and overtime hours; total basic time and overtime hours for the payroll period; rate of pay; fringe benefits by type and amount; and gross wages, and any deductions taken from employees' paychecks including, but not limited to, healthcare, pension/401K/IRA. Late submission of copies of any payroll records may be deemed deficient by the County until the required records are provided, and the County may postpone processing payments due under the Contract or under an agreement to finance the Contract.

10. Submit to random or regular audits and investigation of any complaint of a violation of the County's Prevailing Wage and Local Hiring Laws and requirements.

11. Make best efforts to fill at least 51% of new jobs required to complete the capital improvement contract or capital project with Baltimore County residents.

12. Submit monthly reports to the Director of the County's Prevailing Wage Unit relating to local hiring with respect to capital improvement contracts over $300,00 or County-subsidized capital construction projects receiving assistance over $5,000,000, that includes (a) the number of new hires needed for the contract or project, (b) the number of County residents hired during the reporting period, (c) the total number of all employees hired during the contract period, (d) best efforts made to fill open positions with County residents, and(e) 5) for new hires: name, last four (4) digits of the social security number, job title, hire date, address and referral source.

13. Agree that any and all disputes will be handled as set forth in the County's Prevailing Wage and Local Hire as a condition of award.

14. In the event the County determines that a provision of the Prevailing Wage and/or Local Hire Law has been violated, the County shall issue a written decision, including appropriate sanctions, and may withhold payment due the Contractor in an amount sufficient to pay each employee of the Contractor or any subcontractors the full amount of wages due under the Prevailing Wage Law, and an amount sufficient to satisfy a liability of the Contractor for liquidated damages as provided under the Prevailing Wage Law, pending a final decision on the violation by the County. The Contractor may appeal a written decision of the Director of the County's Prevailing Wage Unit that the Contractor violated a provision of the Prevailing Wage and/or Local Hire Law, to the Office of Administrative Hearings ("OAH"), within ten (10) working days after receiving a copy of the decision. OAH will conduct a hearing upon the receipt of a timely appeal. If no appeal, the decision of the Director of the County's Prevailing Wage Unit or his/her designee becomes final. A Contractor who is found to have violated the provisions of the Prevailing Wage or Local Hiring Laws intentionally, may not be awarded a County contract or work on any County project for a period of one year from the date of the OAH determination.

15. May not discharge, or otherwise retaliate against, an employee for asserting any right under the Prevailing Wage Law or for filing a complaint of a violation;

16. An aggrieved employee is a third-party beneficiary of the Contract and may by civil action recover the difference between the prevailing wage for the type of work performed and the amount actually received, with interest and a reasonable attorney's fee.

17. Each Contract subject to the Prevailing Wage and Local Hire Laws may specify the payment of liquidated damages to the County by the Contractor for any noncompliance with the Prevailing Wage and Local Law. Liquidated damages are:

a. $10 for each calendar day that the payroll records are late (payrolls are to be submitted no later than 14 days after the week ending date shown on Certified Payroll Record CPR); $20 for each day that an employee is misclassified and/or paid less than the prevailing

wage rate; and a civil penalty of $50 per violation of the requirement to post the prevailing wage rates at the work site.

b. $50 per month for each month the Local Hire report is not submitted by the last day of the existing month due.

These liquidated damages are solely related to prevailing wage and local hiring compliance and do not negate any other remedies available or set forth in the Contract, including delay damages or actual damages. These remedies are separate from, in addition to, and not in lieu of, any remedies available and set forth in the Contract, or at law, for other breaches or defaults under the Contract.

18. Where the initial Contract Sum is $300,000 or below, but it is subsequently increased and exceeds $300,000 due to an approved Contract Modification, the amount of any such Contract Modification that causes the Contract Sum to exceed $300,000 is subject to the Prevailing Wage and Local Hiring Laws.

19. The Contractor and all subcontractors must post a clearly legible statement of each prevailing wage rate in a prominent and easily accessible place at the Work Site during the entire time Work is being performed, in English and any other language that is primarily spoken by the employees, at the Work Site.

20. A contract may include the actual cost of health and dental insurance, pension or retirement plan, paid time off such as vacation or sick daysand life insurance. In calculating the cost per hour, divide the annual cost of benefits by 2,080 hours for each employee. Other benefits such as the use of a company vehicle, cell phones, lodging reimbursement, company owned tools **may not be credited towards the fringe benefit amount**.

21. All apprentices must be registered with the Maryland Apprenticeship and Training Council, V.A., or US DOL as well as be currently enrolled in, and attending appropriate classes, to which is considered “actively enrolled”. Only actively enrolled apprentices may be employed on the project at the apprentice prevailing wage rate.

PROSPECTIVE BIDDERS/OFFERORS

Baltimore County Executive Order 2022-005 Use of Minority Business Enterprises and Women's Business Enterprises states:

SECTION 6. BID REQUIREMENTS.
(A)(l) All bidders shall submit a list of all subcontractors contacted in preparation of their bid package or proposal.
(2) The list shall include the service to be performed, bid amount, and the race/ethnicity/gender of the business owner(s).
(B)(l) All bidders shall submit a list of all subcontractors to be used on a county contract in the bid package.
(2) This list shall include all subcontractors (both MWBE and non-MWBE) used, the service to be performed, the total amount to be paid, and the race/ethnicity/gender of the owner.

If the solicitation includes a MWBE **subcontracting** goal, you **MUST** demonstrate **"Good Faith" effort** either by**:**

1. Complete and sign FORM A, FORM B (to include FORM B-Prime if MWBE Prime wishes to count towards the goal) and FORM C **listing all subcontractors** with the initial bid submission.
    a. *All Forms must be completed and signed. However, FORM C **MUST** be completed and signed by both the prime and the MWBE subcontractor.*

OR

2. If you are unable to meet any portion of the goal, you **MUST** do one of the following**:**

    a. If you are requesting a **partial waiver**, complete and sign FORM A with initial bid submission. FORM B (to include FORM B-Prime if MWBE Prime wishes to count towards the goal) and FORM C **(listing all subcontractors**). In addition, complete, sign and submit FORM D and FORM E **accompanied with all supporting documentation** for the portion of the goal that will not be achieved as specified on FORM A.
    b. If you are requesting a **full waiver**, complete and sign FORM A indicating your intent to request a full waiver **accompanied with a completed and signed FORM C listing all subcontractors**, FORM D and FORM E **accompanied with all supporting documentation**. **This MUST be submitted with the initial bid as specified on FORM A.**
    c. *All Forms must be completed and signed. FORM C and FORM D **MUST** be completed and properly signed **by both** the Prime **AND the MWBE subcontractor(s).***

NOTE: The MWBE **subcontracting** goal applies to **ALL** prime/general contractors including certified and non-certified minority and women owned firms. **However, a Minority-owned or a Women-owned prime may self-perform up to 50% of MWBE subcontracting goal set in the solicitation. The MWBE primes that wish to count towards the goal must list themselves on all appropriate forms.**

12/2023

BALTIMORE COUNTY, MARYLAND
MWBE PARTICIPATION SUMMARY

Executive Order: Minority Business Enterprises and Women Business Enterprises (MWBE) shall have the maximum opportunity to participate in the performance of contracts financed in whole, or in certain circumstances, in part with County funds. Accordingly, on December 6, 2022, the County Executive adopted the EXECUTIVE ORDER No. 2022-005 addressing MWBE participation in County contracts. The December 6, 2022 Executive Order may be found on the Baltimore County website at www.baltimorecountymd.gov/go/mwbe.

Each Contract: The County shall establish a minimum MWBE participation amount for each contract, as applicable.

Bidder/Offeror Responsibility: The bidder/offeror shall ensure that MWBE participation occurs in accordance with the contract requirements and the County Executive's Executive Order. All bidder/offerors shall ensure that MWBE have the maximum opportunity to compete for and perform County contracts, as applicable. Baltimore County, Maryland, and/or its bidder/offerors and contractors shall not discriminate on the basis of race, color, national origin, disability or sex in the award and performance of any County contract.

Mobilization Payments: For subcontractors, project start-up costs can also be significant. A subcontractor that has limited resources and access to credit may find that start-up expenses inhibit its ability to bid County contracts. Under circumstances where mobilization payments are approved for the prime contractor, the subcontractor should be paid an amount equal to their participation percentage no later than five (5) business days before they are required to mobilize to perform the contracted work.

Mobilization costs represent pre-contract costs incurred by a contractor to prepare a job site before the actual commencement of the contract. These costs can include movement of personnel and equipment to the project site and for the establishment of the Contractor's offices, buildings, and other facilities necessary to begin work.

APPROVED MWBE LISTINGS

Published compilations of approved and certified MWBE, contractors, subcontractors, material suppliers, etc. include:

DIRECTORY OF MINORITY BUSINESS ENTERPRISE (MDOT):

https://marylandmdbe.mdbecert.com

MINORITY BUSINESS DIRECTORY OF THE CITY OF BALTIMORE:

https://baltimorecity.diversitycompliance.com

BIDDER/OFFEROR'S ACTIONS

Seeking Firms:

The bidder/offeror will seek commitments by subcontract or otherwise from MWBE firms for supplies and/or services, any combined value of which equals or exceeds the required percentage of MWBE participation goal for the County contract. However a MWBE Prime that affirms its MWBE status on the Minority and/or Women Prime Participation Affidavit may count up to 50% of the goal.

Expenditures for Materials and Supplies:
A bidder/offeror may count toward its MWBE contract requirements all expenditures for materials and supplies obtained from MWBE suppliers and manufacturers, provided that the MWBE firm is furnishing and installing the materials and is certified to perform these services. If the MWBE firm is only being used as a supplier, wholesaler and/or regular dealer or is not certified to install the supplies/materials, for purposes of achieving the MWBE participation goal, you may only count sixty percent (60%) of the value of the subcontract for these supplies/products (60% Rule). To apply the 60% Rule, first divide the amount of the subcontract for these supplies/products only (not installation) by the total Contract value. Then, multiply the result by sixty percent (60%) and insert the percentage in the Percent of Total Contract field of Form B Subcontractor Participation Schedule.

BALTIMORE COUNTY, MARYLAND
MWBE PARTICIPATION SUMMARY

Information to be supplied: All bidder/offerors shall submit the following information to the County at the time of bid submission:

1. The name of an employee designated as the bidder/offeror's liaison to the County's Minority Business Enterprise Office.

2. The following forms shall be completed and submitted:
   - Certified MWBE Utilization and Fair Solicitation Affidavit (**Form A);** from among those names appearing in the Approved MWBE Listings (excepting Federal Highway Administration projects, which exclusively require DBE approved and certified by the Maryland Department of Transportation MBE Advisory Committee);
   - A Subcontractor Participation Schedule (**Form B**) completed by the prime contractor for each MWBE listed on the Form.
   - A MWBE Prime Participation Schedule (Form B-Prime) completed by a MWBE prime contractor if the firm wishes to self-perform up to 50% of the MBE/WBE goal.
   - A MWBE Disclosure and Participation Statement (**Form C**) completed and signed by the prime contractor and MWBE firm for each MWBE listed on the Form. Form C **must match** what is stated on Form B.

   - If applicable, MWBE Subcontractor Unavailable Certificate (**Form D**) completed and signed by the prime contractor and MWBE for each MWBE listed on the Form.

3. If applicable, MWBE Outreach Efforts - Compliance Statement (**Form E**) completed and signed by the Bidder/Offeror. The prime shall submit a list of all subcontractors.

4. For DPW contracts, if the bidder/offeror intends to fulfill the MWBE requirements by use of a joint venture, he/she must submit a Joint Venture Disclosure Affidavit (**Form D-EEO-006-A** and **B** showing the extent of MWBE participation. If a bidder/offeror intends to use a MWBE joint venture as a subcontractor to meet its MWBE requirements, the affidavit must be submitted through the bidder/offeror by the proposed subcontractors and signed by all parties.

5. If the bidder/offeror's proposed MWBE participation does not meet the MWBE contract requirements, information sufficient to demonstrate that the bidder/offeror has made every effort to meet the requirements must be submitted. (See DETERMINATION OF BID RESPONSIVENESS hereafter)

RECORDS AND REPORTS

Returning Records: The bidder/offeror must keep such records as are necessary to determine compliance with its MWBE utilization requirements:

1. The MWBE and non-minority contractors, type of work being performed, actual values of work and services.

2. Documentation of all correspondence, contacts, telephone calls, etc., to obtain MWBE services for the contract.

3. All prime contractors and MWBE sub-contractors are required to report monthly, by the 10th of each month, to the County through an online system called PRISM. If the contractor cannot submit his/her report on time, he/she will notify the County MWBE office and request additional time to submit the report. Failure of the contractor to report in a timely manner may result in a finding of noncompliance. The County in its sole discretion and/or upon written request may require additional reports regarding MWBE. In the event you are not able to enter your payments in PRiSM, a spreadsheet is attached for your use. Please be sure to list the PO for each invoice/ payment reported and include in your submission any corresponding documentation (e.g. copies of invoices or cancelled checks).

Retaining Records: All MWBE records must be retained for 3 years following the expiration or any earlier termination of the contract and shall be available for inspection and photocopying by the County.

Investigation and Notification: Whenever the County believes the bidder/offeror, contractor, or any subcontractor may not be operating in compliance with the MWBE requirements, the County may, in its sole discretion, conduct an investigation. If the County finds the bidder/offeror, contractor, or any subcontractor is not in compliance with the MWBE requirements, the County may exercise any and all rights and remedies available to the County, under the contract, at law or equity, as deemed applicable and appropriate by the County in its sole discretion.

BALTIMORE COUNTY, MARYLAND
MWBE PARTICIPATION SUMMARY

DETERMINATION OF BID RESPONSIVENESS

Request for Deviation: If the bidder/offeror is unable to procure from MWBE firms (by subcontract or otherwise), supplies and services, any combined value of which equals the required percentage of the total value of the contract, the bidder/ offeror may request, in writing, a deviation or waiver of the contract requirements. To obtain such a waiver, the bidder/ offeror must submit the following information at the time bids are due:

1. The request for waiver request shall include (1) a signed unavailability statement (Form D) executed by all MBEs and WBEs that the bidder/offeror solicited for participation and (2) Outreach Efforts/Compliance Statement (Form E) that demonstrates the bidder/offeror's good faith efforts to comply with the contract requirements, including copies of solicitation documentation to all potential subcontractors:

2. Emails, letters, facsimile transmittals and confirmations containing plans, specifications, and anticipated time schedule for portions of the work to be performed and meeting notes and agendas clearly identifying the certified MBE or WBE classification and dates that the bidder/offeror contacted each MWBE; and

3. Telephone logs containing names, addresses, dates, telephone numbers, work to be performed, anticipated time schedule and classification of certified MBEs and WBEs contacted.

Bid Rejection: The failure of any bidder/offeror (including the apparent low bidder/offeror) to provide a responsive MWBE Plan as required by the solicitation may result in the bidder/offeror being deemed non-responsive and the County's rejection of the bid.

Liquidated Damages If the County issues a notice of intent to awards contract to the apparent low bidder/offeror who provided a responsive MWBE Plan, but, if after said notice and before execution of Contract Documents, it is determined by the County that the apparent low bidder/offeror has failed to comply with the MWBE Plan, such failure may result in the recommendation by the appropriate Procurement Official to annul the award and forfeit the bidder/offeror's Proposal Guaranty to the County, not as a penalty, but as liquidated damages, it being acknowledged that actual damages will be difficult if not impossible to accurately measure. In addition, the County may proceed as it determines to be in its best interest, including but not limited to, the Notice of Award may be made to the next lowest responsive and responsible bidder/offeror or the work may be re-advertised.

Contract Breach: If, after execution of a County contract, the contractor becomes aware it may or will fail to fulfill the applicable MWBE requirements and/or may or will deviate from the contractor's bid response/contract terms, the contractor shall promptly advise the County of this in writing. Thereafter, the County will determine what action or remedy is appropriate on a case-by-case basis, in the County's sole discretion.

Approval Required for Changes: Any and all changes to the MWBE subcontractors or the type or amount of work to be performed by such subcontractors during the contract term must be mutually agreeable to the County and the contractor and shall be documented via a contract amendment, executed by legally authorized representatives of the County and the contractor.

Cooperation in Reviews: The bidder/offeror will cooperate with the County in any reviews of the contractor's procedures and practices with respect to MBE or WBE firms, which the County may from time to time conduct in its sole discretion.

Other: If the documents used to determine the contractor's efforts, achievement of, and/or the status of an MWBE requirement or fulfillment thereof contain false, misleading or misrepresented information, the contractor may be declared in breach of the contract and the County may take any and all actions and/or remedies available to the County under the contract, at law, or in equity. If an MWBE is disqualified by any public entity, including but not limited to, Baltimore City, the State or MDOT, at any time after award or during the term of the contract, the County may, in its sole discretion, require the prime contractor to promptly submit for County approval, the contractor's plans for fulfilling the required MWBE participation under the contract, and/or request such detail and additional information as the County, in its discretion deems appropriate.

PRIME CONTRACTOR MINORITY AND WOMEN PARTICIPATION AFFIDAVIT

A. AUTHORIZED REPRESENTATIVE

I HEREBY AFFIRM THAT:

I am the [title]_____and the duly authorized representative of [business] _____ (the "Business") and that I possess the legal authority to make this Affidavit on behalf of myself and the Business for which I am acting.

B. AFFIRMATION REGARDING MINORITY AND WOMEN PARTICIPATION

I FURTHER AFFIRM THAT:

I am aware that, pursuant to the December 6, 2022 Executive Order of Baltimore County, Maryland, the following words have the meanings indicated.

(A) "Minority Business Enterprise" or "MBE" means a business enterprise that is owned, operated and controlled by one or more minority group members (African American, Hispanic American, Asian American, or Native American) who have at least 51% ownership and in which the minority group members have operational and managerial control, interest in capital and earnings commensurate with their percentage of ownership.

(B) "Women's Business Enterprise" or "WBE" means a business enterprise that is owned, operated and controlled by one or more women who have at least 51% ownership and in which the women have operational and managerial control, interest in capital and earnings commensurate with their percentage of ownership.

____ The Prime is a MBE ☐ or WBE ☐

☐ Maryland State Department of Transportation (MDOT) #_____

☐ City of Baltimore #_____

☐ Name Other Jurisdiction:_____#_____

☐ The ownership of the Noncertified MWBE business consists of___ ___% minorities and ___% women (for a total of____ %), each of which has operational and managerial control, interest in capital and earnings commensurate with their percent ownership.

_____ % African American_____% Hispanic American_____% Women
_____ % Asian American _____% Native American _____% Disadvantaged (DBE)

___The MWBE prime anticipates meeting up to 50% of the stated participation goal with its own workforce. **MWBE primes percentage must be stated on the MWBE PRIME PARTICIPATION SCHEDULE (FORM B-PRIME) to count towards the goal**.

___The prime anticipates ☐ does not anticipate ☐ utilizing subcontractors for_____% of the work of the contract requirements, of which it anticipates_____% will be MBEs and_____% will be WBEs.

I DO SOLEMNLY DECLARE AND AFFIRM UNDER THE PENALTIES OF PERJURY THAT THE CONTENTS OF THIS AFFIDAVIT ARE TRUE AND CORRECT TO THE BEST OF MY KNOWLEDGE, INFORMATION, AND BELIEF.

Date: _____ By:_____
(Authorized Representative and Affiant's Name and Title)

BALTIMORE COUNTY, MARYLAND
Certified MWBE Utilization and Fair Solicitation Affidavit
(FORM A)

This document must be completed and submitted with Bid/Proposal to Baltimore County.

NOTE: If you do not complete and submit this form with your bid or offer to the County, the County may, in its sole discretion, deem your bid or offer NON-RESPONSIVE and accordingly the COUNTY WILL NOT CONSIDER YOU FOR CONTRACT AWARD.

* * * * * * * * * * * * * * *

I acknowledge the goal for solicitation #25022 PP0 is a minimum of 30 %. This goal must be met by any combination of the MWBE subcontractors. However, for instances where the Prime is counting up to 50% of the goal, the remaining goal balance must be met by any combination of the MWBE subcontractors.

- The goal breakdown is as follows:
  - ____% Minority/Women Prime
  - ____ % for certified MBE-owned businesses and/or
  - ____ % for certified WBE-owned businesses.

I have made a good-faith effort to achieve this MWBE solicitation requirement. If awarded the contract, I will comply with this MWBE contract requirement and will continue to use my best efforts to increase MWBE participation during the contract term.

PLEASE CHECK ONE BOX (EITHER 1, 2, OR 3)

1 ☐ Prime has met the MWBE contract requirements for this solicitation and contract. I submit the Subcontractor Participation Form B and Form C, along with this Affidavit, which details how the Prime will achieve the contract requirements. Submit a complete list of all additional subcontractors

Or

2 ☐ After having made a good-faith effort to achieve the MWBE requirements, the Prime can only achieve partial success. I submit the Subcontractor Participation Form B, Form C, Form D and Form E along with this Affidavit, which details how the Prime will partially achieve the contract requirements. Submit a complete list of all additional subcontractors

I request a partial waiver and will meet the following MWBE participation goals:

- Partial waiver of MWBE subcontract participation:
  - ____% Minority/Women Prime
  - ____ % for certified MBE-owned businesses and/or
  - ____ % for certified WBE-owned businesses.

Or

3 ☐ After having made a good faith effort to achieve the MWBE requirements for this contract, the Prime is unable to achieve the requirements and/or sub requirements for this contract. I submit the MWBE Participation Form D and Form E, along with this Affidavit, which details the steps the Prime has taken in an attempt to achieve the contract requirements. Therefore, I request a full waiver.

IF YOU HAVE CHECKED BOX 2 OR 3, THE FOLLOWING IS APPLICABLE:

1) If a bidder is unable to comply with the goals established in a bid for a project, the bidder may submit a request for a waiver at the time of bid submission. However, occasions for granting waivers will be limited.

2) The request for waiver shall include documentation that demonstrates the bidder's good faith efforts to comply with the goals, including:
   a. Signed unavailability statements from all MBEs and WBEs that the bidder solicited for participation; and
   b. Copies of solicitation documentation to include the scope of services to be performed by the subcontractors accompanied with the following:
      i. Emails, letters, facsimile transmittals and confirmations containing plans, specifications, and anticipated time schedule for portions of the work to be performed and meeting notes and agendas clearly identifying the certified MBE or WBE classification and dates that the bidder contacted each; and
      ii. Telephone logs containing names, addresses, dates, telephone numbers, work to be performed, anticipated time schedule and classification of certified MBEs and WBEs contacted.
      iii. Responses from MWBE firms contacted to fulfill the goal.

As I have checked Box 2 or 3 of this Affidavit, I understand I must submit the following supporting documentation with the bid:

- *Subcontractor Participation Schedule* (Form B)
- *MWBE Subcontractor Disclosure and Participation Statement* (Form C)
- *MWBE Subcontractors Unavailable Certificate* (Form D) (if applicable)
- *MWBE Outreach Efforts – Compliance Statement* (Form E) (if applicable)

I acknowledge that the MWBE subcontractors/suppliers listed on the *Subcontractor Participation Schedule* (Form B) will be used to accomplish the percentage of MWBE participation that the Prime shall achieve. A fully executed Form C must match Form B.

In the solicitation of subcontract quotations or offers, MWBE subcontractors were provided the same information and amount of time to respond, as were non-MWBE subcontractors.

The solicitation process was conducted in such a manner so as to not place MWBE subcontractors at a competitive disadvantage to non-MWBE subcontractors.

I solemnly affirm under the penalties of perjury that this Affidavit is true to the best of my knowledge, information, and belief.

Subject: Compliance Reporting and Penalties

Baltimore County, Maryland (the "County") requires all Prime Contractors and all Subcontractors to submit payment reports by the 10th of each month through an online MWBE Compliance Portal (PRISM). The Portal can be found under Compliance Reporting for Primes and Subcontractors at www.baltimorecountymd.gov/ go/mwbe. In the event you are not able to enter your payments in PRiSM, a spreadsheet is attached for your use. Please be sure to list the PO for each invoice/ payment reported and include in your submission any corresponding documentation (e.g. copies of invoices or canceled checks).

The County has found that a number of companies are failing to file reports in a timely manner, which makes it difficult for the County to verify compliance. As a result, the County has determined to assess penalties for non-compliance, effective September 1, 2018, as follows:

(a) For failure to file timely monthly reports:
   a. Assessment of a late fee of $10 per day per task, up to a maximum of $1,500 per task; and/or
   b. For multiple violations, termination of the contract for convenience or for default, with the contractor suspended from participating in County contracts for five (5) years.

(b) For failure to meet MWBE requirements:
   a. Assessment of a penalty of up to 10% of the contract value; and/or
   b. Termination of the contract for convenience, with the contractor suspended from participating in County contracts for five (5) years together with assessment of a penalty of up to 10% of the contract value; and/or
   c. Termination of the contract for default together with assessment of a penalty of 10% of the contract value.

Each action and/or remedy described above is at the sole discretion of the County, and is in addition to any damages which the County may be entitled to under the contract.
This short video can be used as guidance on submitting the Prime to Subcontractor Payment Reporting:
http://stage.prismcompliance.com/etc/movies/vendor_contractpayment_tutorial.htm

If after contract expiration, it has been determined the MWBE firms named were not used or were under used, by the contractor and supporting documentation was not provided and approved by the County the contractor may be assessed a penalty of up to 10% of the contract value and/or suspended from participating in County contracts for 5 years.

Questions regarding this correspondence and/or the use of this system can be directed to the MWBE Office at mwbe@baltimorecountymd.gov or call (410) 887-3407.

POST AWARD DOCUMENTS

This Section to be Completed
by Successful Bidder after Award

CONTRACT AGREEMENT

THIS CONTRACT AGREEMENT ("Contract"), IS MADE THIS _____ day of _____ 20_____, by and between Baltimore County, Maryland, a body corporate and politic ("County"), and _____, ("Contractor").

WITNESSETH, that the Contractor, for and in consideration of the payment or payments herein specified and agreed to by the County, hereby covenants and agrees to furnish and deliver all the materials and to do and perform all the work, services, and labor in fulfillment of the requirements of Contract Number **25022 PP0** "Project") in strict conformity with the solicitation, plans, specifications, special provisions, any and all addenda, and the proposal, at the prices named therein, and all of which are collectively the Proposal, and said Proposal is attached hereto and made a part thereof.

The Project shall be done in strict compliance with (i) the Proposal, (ii) the Baltimore County Department of Public Works and Transportation September 2023 "Standard Specifications for Construction and Materials" and "Standard Details for Construction" (iii) and any and all revisions thereto as of the date of advertisement, including but not limited to the General Conditions Building Projects, as applicable, and all of which (i-iii) are made a part hereof and incorporated herein (collectively, the "Specifications"). Contractor understands and agrees it is Contractor's responsibility and obligation to obtain a copy of the "Specifications" and agrees the Specifications are incorporated herein. Copies are available on the County's website at www.baltimorecountymd.gov/departments/public-works/standards.

The Project shall be subject to the inspection and approval of the Office of Budget and Finance – Property Management for Baltimore County, or his authorized representative, and in the event any portion thereof shall be rejected by said Director or his representative as defective or unsuitable, then the said portion shall be removed and replaced and be performed anew to the satisfaction and approval of the said Director or his representative at the cost and expense of the Contractor.

THE CONTRACTOR AFFIRMS that it is aware of, and will comply with, the provisions of Sections 14-101 through 14-108 of the Election Law Article of the Annotated Code of Maryland, as the same may be amended from time to time, which require that every person who makes, during any 12-month period, one or more contracts, with one or more Maryland governmental entities involving cumulative consideration, of at least $200,000.00, to file with the State Board of Elections certain specified information to include disclosure of attributable political contributions in excess of $500 during defined reporting periods.

THE CONTRACTOR FURTHER COVENANTS AND AGREES that all the Project shall be furnished, performed and delivered, in every respect, to the satisfaction and approval of the Office of Budget and Finance – Property Management, aforesaid, on or before the expiration of **Seven Hundred Thirty (730) CALENDAR DAYS** (the "Contract Period") after written notice has been given by the Director or their authorized representative to begin the work.

IT IS AGREED THAT TIME IS OF THE ESSENCE. In the event the Contractor fails to achieve Final Completion and Final Acceptance of the Contract work within the Contract Period specified herein, plus any extensions thereto agreed to in writing by a legally authorized representative of the County pursuant to the terms of this Contract, then Contractor shall pay the County the sum of **FIFTEEN HUNDRED DOLLARS ($1500.00)** as Liquidated Damages for each **CALENDAR DAY** after the expiration of the Contract Period, as may be extended by the County, until the Contractor achieves Final Completion and Final Acceptance of the Project.

_____

Contractor's Initials

_____

Date

IT IS FURTHER AGREED that:

(a) These Liquidated Damages are a reasonable estimate of the County's damages solely due to the public's loss of use of the Project during the delay period and is not a penalty.

(b) It is very difficult, if not impossible, to accurately measure the damages to the County due to the public's loss of use of the Project during the delay period.

(c) Notwithstanding GP 8.09 of the Baltimore County Standard Specification for Construction, in addition to the damages due to the public's loss of use of the Project during the delay period, the County is likely to incur additional direct costs during the delay period, including but not limited to, costs for construction management, consultants, architectural services, office trailer and supplies, utilities, County employees' time, County vehicles, and such other costs that the County will incur to continue administration of the construction and the Contract during the delay period, all of which will be monitored by the County, and if so required by the County, the Contractor shall pay such actual damages incurred during the delay period. THE PARTIES HERETO UNDERSTAND AND AGREE THAT CONTRACTOR'S OBLIGATION TO PAY THE COUNTY FOR ACTUAL DAMAGES DURING THE DELAY PERIOD SHALL BE IN ADDITION TO THE CONTRACTOR'S OBLIGATION TO PAY THE LIQUIDATED DAMAGES DUE TO THE PUBLIC'S LOSS OF USE OF THE PROJECT.

(d) The County shall have the right, but not the obligation, to deduct the Liquidated Damages due to the public's loss of use of the Project, and the County's actual costs and costs to continue administration of the construction and the Contract, from any monies due or any monies that may become due to the Contractor.

IT IS DISTINCTLY UNDERSTOOD AND AGREED that no claim for extra work, material or overhead not specifically provided for in the Contract will be allowed by the County, nor shall the Contractor do any work or furnish any materials not covered by this Contract and the Specifications, unless the same is ordered in writing by a legally authorized representative of the Office of Budget and Finance – Property Management in accordance with the terms of the Contract. Any such work or materials which may be done or furnished by the Contractor without any such written order first being given shall be at said Contractor's sole risk, cost and expense and Contractor hereby covenants and agrees that without such written order, Contractor shall make no claim for compensation for work, materials, or overhead so done or furnished.

NOTWITHSTANDING GP 4.06 OF THE BALTIMORE COUNTY STANDARD SPECIFICATIONS FOR CONSTRUCTION, IT IS SPECIFICALLY AGREED that the Contractor shall have no entitlement to damages arising out of delay, disruption, interference or hindrance from any cause whatsoever. However, this provision shall not preclude recovery or damages by the Contractor for hindrances or delays due solely to fraud or gross negligence on the part of the County or its agents.

IT IS FURTHER DISTINCTLY AGREED that the said Contractor shall not assign this Contract, nor any part thereof, nor any right to any of the monies to be paid hereunder, nor shall any part of the work to be done or material furnished under said Contract be sublet without the prior written consent of a legally authorized representative of the Office of Budget and Finance – Property Management in accordance with the terms of this Contract. Further, the acceptance of the final payment by the Contractor shall effectuate a release in full of all claims against County and its officials, employees, representatives, and agents arising out of, or by reason of the Project and this Contract.

The Contractor shall review government issued identification and badge all employees of the Contractor and its subcontractors. The Contractor shall also review all federal forms, including but not limited to I-9's, for compliance as well as copies of all employment eligibility and identity documentation maintained to the extent required by law.

The Bonds, given by the Contractor in a sum equal to the total contract price of the Project in compliance with the terms and provisions of this Contract, are hereby attached and incorporated herein.

IT IS AGREED that in the event that the County is delayed or prevented from timely execution of this Contract, the Contractor releases County and agrees Contractor shall have no action, claim or demand against County therefore.

Date

THE CONTRACTOR HEREBY FURTHER AGREES to receive the prices set forth in the Proposal incorporated herein as full compensation for the completion of the Project and, in all respects, to complete said Contract to the satisfaction of the County.

THE CONTRACTOR REPRESENTS AND WARRANTS:

(i) it is duly formed and validly existing under the laws of the State of _____;

(ii) it is in good standing in the State of Maryland;

(iii) it has the power and authority to consummate the obligations and responsibilities contemplated hereby, and has taken all necessary action to authorize the execution, delivery and performance required under this Contract;

(iv) the Contractor and the person executing this Contract for the Contractor each warrant that he/she is duly authorized by the Contractor to execute and seal this Contract on the Contractor's behalf;

(v) the warranties of merchantability and fitness for a particular purpose and use and warranties of title and against infringement, and all express warranties contained in this Contract, including but not limited to the Proposal (and any sample or model presented by Contractor and expressly accepted by the County) shall apply to the portion of this Contract pertaining to or for goods;

(vi) all representations and warranties made in the Proposal and herein remain true and correct in all respects when made, as of the date of this Contract, and throughout the term of this Contract; and

(vii) there exists no actual or potential conflict of interest between its performance under this Contract and its engagement or involvement in any other personal or professional activities and in the event such conflict or potential conflict arises during the term of this Contract, the Contractor shall immediately advise the County in writing thereof.

THE CONTRACTOR shall not disclose any documentation and information of any kind or nature disclosed to the Contractor in the course of its performance of duties hereunder without the express prior written consent of the County.

Those sections in this Contract which by their nature are intended to survive, including but not limited to, Contractor's representations and warranties, confidential information, and indemnification shall survive the termination of this Contract.

IN WITNESS WHEREOF, the Contractor has hereunto set its hand and seal the day and year first above written.

KNOW ALL MEN BY THESE PRESENTS, that we, the PRINCIPAL, above-named, and SURETY, above-named, and authorized to do business in the State of Maryland, are held and firmly bound unto the OBLIGEE, above-named, in the penal sum of the amount stated above, for the payment of which sum well and truly to be made, we bind ourselves, our heirs, executors, administrators, successors and assigns, jointly and severally, firmly by these presents.

WHEREAS, THE PRINCIPAL entered into a certain contract with the OBLIGEE described and dated as shown above and is required to provide this bond pursuant to Maryland State law and/or County law and the contract.

NOW, THEREFORE, if the aforesaid PRINCIPAL shall well and truly perform and fulfill all the undertakings, covenants, terms, conditions, and agreements of said contract during the original term of said contract and any extensions thereof that may be granted by the OBLIGEE with or without notice to the SURETY, and during the life of any guaranty required under the contract, and shall also well and truly perform and fulfill all the undertakings covenants, terms, conditions and agreements of any and all duly authorized modifications of said contract that may hereafter be made, notice of which modifications to the SURETY being hereby waived, then, this obligation to be void; otherwise to remain in full force and effect.

THE SURETY FURTHER GUARANTEES That it is (a) licensed in the State of Maryland, (b) rated "B" or better by the A.M. Best Company, (c) on federal funded projects, authorized by the underwriting limitation contained in the U.S. Department of the Treasury Circular 570, as amended, to guaranty the amount of the Bid, and (d) in good standing as determined by the County's Engineer. A Performance Bond is required for each and every Contract in excess of twenty-five thousand ($25,000). A Performance Bond shall be in the amount equal to at least one hundred (100%) percent of the Contract price. The fully executed Performance Bond shall be delivered by the Bidder to the Department's Division of Construction Contracts Administration no later than the time the Contract is to be executed by the Contractor.

IN WITNESS WHEREOF, the above-bounded parties have executed this instrument under their several seals on the date indicated above, the name and seal of each party being hereto affixed and these presents duly signed by its undersigned representative, pursuant to authority of its governing body.

Revised
February 4, 2015

BALTIMORE COUNTY, MARYLAND

INSURANCE PROVISIONS

1. **GENERAL REQUIREMENTS**

1.1 Coverages Required:
Unless otherwise required by the specifications or the contract, the Contractor/Vendor shall purchase and maintain the insurance coverage's listed herein.

1.2 Certificate of Insurance:
Before starting work on the contract, or prior to the execution of the Contract on those bid, the Contractor/Vendor shall provide Baltimore County, Maryland with verification of insurance coverage evidencing the required coverages.

1.3 Baltimore County as Insured:
The coverage required, excluding Workers' Compensation and Employers' Liability and Medical Malpractice Liability/Professional Liability/Errors and Omissions Liability, must include Baltimore County, Maryland and its agents, employees, officers, directors, and appointed and elected officials as an additional insured.

1.4 Contractor's/Vendor's Responsibility:
The providing of any insurance herein does not relieve the Contractor/Vendor of any of the responsibilities or obligations the Contractor/Vendor has assumed in the contract or for which the Contractor/Vendor may be liable by law or otherwise.

1.5 Failure to Provide Insurance:
Failure to provide and continue in force the required insurance shall be deemed a material breach of the contract. The Contractor/Vendor must maintain the insurance coverages required under the terms and conditions on this Contract while this Contract is in effect including renewal and extension terms.

2. **INSURANCE COVERAGES**

2.1 General Liability Insurance

2.1.1 Minimum Limits of Coverage:
Personal Injury Liability and Property Damage Liability
Combined Single Limit - $500,000 each occurrence.

2.1.2 Such insurance shall protect the Contractor/Vendor from claims which may arise out of, or result from, the Contractor's/Vendor's operations under the contract, whether such operations be by the Contractor/Vendor, any subcontractor, anyone directly or indirectly employed by the Contractor/Vendor or Subcontractor, or anyone for whose acts any of the above may be liable.

2.1.3 Minimum Coverages to be Included:
(a) Independent Contractor's coverage;
(b) Completed Operations and Products Liability coverage;
(c) Contractual Liability coverage.

2.1.4 Damages not to be Excluded:
Such insurance shall contain no exclusions applying to operations by the Contractor/Vendor or any Subcontractor in the performance of the Contract including but not limited to:
(a) Collapse of, or structural injury to, any building or structure;
(b) Damage to underground property; or
(c) Damage arising out of blasting or explosion.

2.2 Automobile Liability Insurance

2.2.1 Minimum Limits of Coverage:
Bodily Injury Liability and Property Damage Liability
Combined Single Limit - $500,000 any one accident.

2.2.2 Minimum Coverages to be Included:
Such insurance shall provide coverage for all owned, non-owned and hired automobiles.

2.3 Workers' Compensation and Employers' Liability Insurance

Such insurance must contain statutory coverage, including
Employers' Liability insurance with limits of at least:
Bodily Injury by Accident - $250,000 each accident
Bodily Injury by Disease - $500,000 policy limit
Bodily Injury by Disease - $250,000 each employee

2.4 Valuable Papers and Records Coverage and Electronic Data Processing (Data and Media) Coverage

Minimum Limits of Coverage:
$100,000 Per Claim and Each Occurrence
$100,000 in the Aggregate

2.5 Other

Such other insurance in form and amount as may be customary for the type of business being under taken by the Contractor/Vendor.

2.6 Builder's Risk

See Special Provisions page 2256 and General Conditions page 34,35, Article 33.
