INFORMATION FOR BIDDERS

ELECTRONIC SUBMITTAL PROCESS

To be considered, Bids (Section IV – Proposal) shall be received by the bid closing date and time to the following email address dpwbid@baltimorecountymd.gov. The contract number and company name should be referenced in the Subject Line of the email. Bids may not be submitted by any other means. Bids that are mailed or otherwise delivered to the Purchasing Division (including emails which indicate links to locations where the bid may be downloaded) and/or emails sent to any other Baltimore County email address will not be accepted.

Late Bids will not be considered. Bidders are strongly encouraged not to wait until the last minute to submit bids. The time stated on the auto-receipt (described below) will be definitive of the time of receipt. Bids received after the deadline will not be accepted. Bidders are advised that the County cannot receive email attachments greater in size than twenty-five (25) megabytes and this size limitation may be further reduced by requirements of the Bidder's email provider which are beyond the control of the County. Bidder should consider separating any large bid attachment into multiple parts and emailing each part separately. In such case, Bidder will note that each email is *1 of 2*, *2 of 2*, etc. Multiple part bids will not be considered unless all parts are received by the bid closing date and time.

After submitting a Bid to dpwbid@baltimorecountymd.gov, and upon successful receipt by the County thereof, Bidder will receive an auto-receipt email. This receipt is proof that the bid has been received by the Division of Construction Contracts Administration and should be retained for Bidder's records. In the case of a bid submitted in multiple parts as described above, an auto-receipt email will be generated for each part. The County has no obligation to consider any Bid for which an auto-receipt was not generated.

As with any system, power outages or technology problems may arise that are outside of the County's control and could affect your submission. The County will not be held accountable for such issues that may delay the transmission of any Bid.

NOTE: Electronic copy of the Bid Bond will be accepted at bid opening. The apparent low bidder is required to submit the original Bid Bond within ten (10) days after the bid opening to the Division of Construction Contracts Administration, 111 West Chesapeake Avenue, Room 300B, Towson, Maryland 21204.

INSTRUCTIONS AND SPECIFICATIONS

Refer to the enclosed proposal sheets for quantities to be bid upon. All proposals submitted on the attached form must give the price in clear figures for each item of the proposed work and be signed by the bidder with his name and address. Bidders must not change any item in the proposal for which a price has been stipulated by the County. Any change will cause rejection of the proposal.

NOTE: STATEMENT UNDER OATH FORM TO ACCOMPANY BID as per Baltimore County Purchasing Act 65-98, Section 15-94 and 15-95 which requires that the enclosed affidavit (see Proposal Affidavit pages in Section IV) be completed and submitted as part of the sealed bid.

Proposals made on any other than the attached form will not be considered. All papers included in, bound thereto, or attached to the Proposal Form are necessary parts thereof and shall not be detached, separated, or altered in their intent.

Changes in the phraseology of the proposal, additions, or limiting provisions will render the proposal informal or void and may cause its rejection.

All right is hereby reserved by the Purchasing Agent to reject any or all proposals and to waive formalities and technicalities as the interest of the County may require.

No successful bidder may withdraw his bid within NINETY (90) days after the opening thereof.

The successful bidder will be required to be bonded to Baltimore County, Maryland to the sum of One Hundred per Cent (100%) of the amount of his proposal or proposals according to the form of bond hereto attached for projects in excess of $25,000.00.

This Proposal must be accompanied by a Bid Bond in an amount of 5% of the bid, the exact amount to be determined by the difference between the low bid and the next lowest bid if two or more bids are received, or 5% of the bid if one bid is received. This guarantees payment of the amount thus determined in case of a default in any matter specified as required before award or in any matter resulting in failure to execute and deliver an Agreement, together with Payment and Performance Bonds, after award. The Bid Bond must be in the form accompanying the Proposal executed by a Surety licensed in the State of Maryland. The Surety must be currently rated "B" or better by the A. M. Best Company, and the bid must be in an amount less than, or equal to, the underwriting limitation contained in Department of Treasury Circular 570 as amended at the time of the underwriting.

All work to be performed under this contract shall be done under strict compliance with Baltimore County Department of Public Works and Transportation September 2023 Standard Specifications for Construction and Materials and Standard Details for Construction and any and all proposed revisions thereto as of the date of advertisement and copies of which are available on the County's website at www.baltimorecountymd.gov/departments/public-works/standards, and all of which are made a part hereof and incorporated herein (collectively, the "Specifications").

If the bidder to whom an award is made shall fail to execute the contract and bond hereto attached and as herein provided, the award may be annulled and the contract awarded to the lowest responsible bidder who has consented to a time extension, and such bidder shall fulfill every stipulation embraced herein as if he were the original party to whom the award was made, or the Purchasing Agent may reject all of the bids as the interest of the County may require.

The Bid Bond of the three lowest bidders is deemed to be effective until the execution and delivery of the Contract Agreement, together with Payment and Performance Bonds for projects in excess of $25,000.00 or until rejection of all bids, whereupon Surety is deemed relieved of all further obligations under the bid bonds provided.

Bidders must examine the drawings and specifications carefully and must make a personal examination of the location and nature of the proposed work. In case doubt shall arise as to the

meaning or intent of anything shown on the drawings or comprised in the specification, inquiry shall be made of the Director of Public Works and Transportation at least five (5) days prior to the date of bid opening. The submission of the Proposal shall indicate that the bidder thoroughly understands the drawings and the terms of the Specifications.

To better ensure fair competition and to permit a determination of the lowest bidder, unresponsive bids or bids obviously unbalanced may be rejected by the Purchasing Agent.

Bidders are required to fill out the total price column and total their proposals so that the result of the bidding, barring possible arithmetical errors, will be known at once. Any errors in computations will be corrected by the Engineer when the proposals are canvassed. Where the unit price and the total price are at variance, the unit price will prevail.

Bidders must be prepared to complete the work within the time stated in the proposal.

NOTE: ONLY CONTRACTORS FORMALLY PRE-QUALIFIED WITHIN THE ADVERTISED WORK CLASSIFICATION BY THE DIRECTOR OF PUBLIC WORKS AND TRANSPORTATON OF BALTIMORE COUNTY 10 CALENDAR DAYS PRIOR TO BID OPENING WILL BE ELIGIBLE TO SUBMIT BIDS.

Contracts for work under this proposal will obligate the contractors and subcontractors not to discriminate in employment practices. Bidders must, if requested, submit a compliance report concerning their employment practices and policies in order to maintain their eligibility to receive the award of the contract. Successful bidders must be prepared to comply in all respects with the Contract Provisions regarding nondiscrimination.

Baltimore County has adopted a Minority Business Enterprise (MBE) program and Women's Business Enterprise (WBE) Program. The percentage of participation applies to the contract amount awarded to the Contractor. Qualified minority subcontractors are those certified as being a Minority Business Enterprise by the following:

1. Maryland Department of Transportation Certification Committee (MDOT)

2. City of Baltimore, Minority Business Certification Council

Projects funded by the Federal Highway Administration are limited to the certification listed under #1 (MDOT).

More detailed information regarding the County's MBE/WBE Program can be obtained from the County MBE Office, telephone (410) 887-3407. See Executive Order dated December 6, 2022. MBE/WBE Participation Summary and Forms A, B, C, D and E enclosed in this proposal booklet.

NOTE: If you do not complete and submit the enclosed forms with your bid or offer to the County, the County may, in its sole discretion, deem your bid or offer **NON-RESPONSIVE** and accordingly the **COUNTY WILL NOT CONSIDER YOU FOR CONTRACT AWARD**.

The County reserves the right to require the low bidder to produce evidence indicating that the company's financial condition is equal to, or better than, that enjoyed by the company at the time of prequalification. This additional information may be in the form of a financial statement or other evidence satisfactory to the Office of Budget and Finance.

Bidders' attention is directed to the requirement that a permit must be obtained from the Baltimore County Bureau of Highways and Bureau of Traffic Engineering prior to cutting any County road for the purpose of obtaining sub-surface soils information, and permission must be obtained from the State Highways Administration prior to making any openings in a State road.

Under no circumstances shall a bidder enter upon any property outside a County or State road for the purpose of securing sub-surface soils information until permission is received from the property owner. The fact that the County has obtained a utility easement does not give the bidder the right to enter upon the property.

Prevailing index price of asphalt cement/ton $630.00**.**

INCLEMENT WEATHER POLICY: If Baltimore County General Government Offices are open or open with liberal leave the day the bids are due, the bids are due as stated in the bid documents (date and time). **ONLY** when the Baltimore County General Government Offices are **OFFICIALLY CLOSED** the day the bids are due, the bid date will be postponed and an Addendum will be issued the next business (or next day buildings are officially open) day the county offices are open with the new bid date and time.

BID TABULATIONS: All bid tabulations will be confidential until after final award, at which time the total bid amounts for all bidders, as well as the complete bid tabulations for the top three (3) bidders, can be inspected by others when requested in writing pursuant to the Maryland Public Information Act.

ALTERNATIVE SOURCES OF CONTRACT BONDS: In the event your company is unable to qualify for bonding through a traditional commercial surety company, you may qualify for the required bonds through the State of Maryland, Department of Commerce (DOC). The **Maryland Small Business Development Financing Authority (MSBDFA, pronounced Mis-Bid-Fa)**, an agency of DOC, operates a Surety Bond Program designed to assist small businesses, based in Maryland, that are unable to obtain adequate bonding on reasonable terms in the commercial marketplace. MSBDFA provides bid, payment and performance bonds for contracts funded by government agencies, regulated utilities and private entities. The penal sums of the bonds are limited to the aggregate amount of $2,500,000 and companies may pre-qualify for multiple bonds within pre-approved terms and conditions. MSBDFA also provides lines of credit, term loans and loan guarantees to help qualified businesses purchase equipment and real property, make improvements to leased property, refinance existing debt and assist them with their working capital needs. For more information on how to apply, you may contact: Meridian Management Group, Inc. (MMG), (the Program's Manager), 826 E. Baltimore Street, Baltimore, Maryland 21202, Telephone: (410) 333-4270. Or visit their website at www.mmgcapitalgroup.com for information, applications and a checklist of required documents and reports that must accompany the application.

S E C T I O N I I

SPECIAL PROVISIONS

MAINTENANCE BOND

Per the Baltimore County Department of Public Works and Transportation September 2023 Standard Specifications for Construction and Materials, Section GP – 4.10 (C) states, the contractor is required to post a maintenance bond in the amount of five (5) percent of the total cost of the contract or withhold five (5) percent retainage for two (2) years from the date of Final Acceptance.

BALTIMORE COUNTY, MARYLAND

BOND NO. _____

CONTRACT NO. _____

MAINTENANCE BOND

THIS MAINTENANCE BOND is entered into on this _____ day of _____, 20____, by and between _____ as principal ("Principal") and _____, a business entity that is authorized to transact business in the State of Maryland and is organized and existing under the laws of the State of _____, as surety ("Surety"), are held and firmly bound unto Baltimore County, Maryland, a body corporate and politic of the State of Maryland ("County"), as Obligee.

WHEREAS, the above-named Principal has entered into a written contract known as Contract Number _____ dated _____, 20___ with Obligee for _____ (the "Agreement"), the terms of which are hereby incorporated by reference; and

WHEREAS, Principal has completed construction under the Agreement; and

WHEREAS, the Agreement includes a warranty on the quality of the Work performed that runs for a period of two (2) years from the date of the County's final acceptance and that runs for two (2) additional years beyond the repair date if any repair is done during the warranty period; and

WHEREAS, Principal is required to cause this instrument to be executed and delivered to Obligee as security for maintenance during the warranty period in an amount equal to 5% of the total value of the Contract.

NOW, THEREFORE, the Principal and Surety are held and firmly bound unto the Obligee in the sum of $_____ Dollars ($ _____), lawful money of the United States of America, for the payment of which sum of money the Principal and Surety do bind themselves and their personal representatives, legal representatives, successors, and assigns, jointly and severally, firmly by this maintenance bond.

The conditions of this bond are as follows:

1. The Principal shall, for a period of two (2) years from and after the date of completion and acceptance of same by Obligee, replace all defects arising in the Work, whether resulting from defective materials, equipment, design furnished or workmanship. After such period, this obligation shall be null and void; otherwise it shall remain in full force and effect.

2. In the event of a default on the part of the Principal that may be the subject of a claim under this bond, Obligee shall mail, by certified mail, to Surety at the address listed below, a written statement that a claim is being made under the bond and, with substantial accuracy, the amount of the claim. Surety shall have no obligation to Obligee under this bond until the notice of claim is mailed.

3. When the Obligee has satisfied the condition of Paragraph 2 that a notice of claim be mailed, the Surety shall promptly and at the Surety's expense send an answer to Obligee within 30 days after the date of the claim. The answer shall state the amounts that are undisputed and the basis for challenging any amounts that are disputed. The answer shall be accompanied by payment (or arrangements for immediate payment) of any undisputed amounts.

4. Surety expressly waives any right to receive notice of extensions of time or alterations or modifications to the Agreement that may be granted by Obligee and agreed upon by Principal, and any such extensions, alterations, or modifications shall not affect the obligation of the Surety under this bond.

5. This bond is a specialty governed by the twelve-year statute of limitations period set forth in the Annotated Code of Maryland Courts and Judicial Proceedings §5-102.

The Contract shall be done in strict compliance with the Baltimore County Department of Public Works and Transportation September 2023 "Standard Specifications for Construction and Materials" and "Standard Details for Construction", and any and all revisions thereto as of the date of the fully executed Contract, including but not limited to the General Conditions Building Projects, as applicable, and all of which are made a part hereof and incorporated herein (collectively, the **"Specifications").** Copies of which are available on the County's website at www.baltimorecountymd.gov/departments/public-works/standards. **IN ADDITION, THE CONTRACTOR UNDERSTANDS AND AGREES THAT THE FOLLOWING SECTIONS OF THE SPECIFICATIONS (GP-1.03 AND GP-5-15) SHALL BE STRICKEN AND THE FOLLOWING SHALL BE INSERTED IN AND INCORPORATED INTO THE CONTRACT IN LIEU THEREOF:**

GP-1.03 ORGANIZATIONAL DEFINITIONS

Administration - Baltimore County.

Administrator - The Director of the Office of Budget and Finance, Baltimore County.

Baltimore County - Baltimore County, Maryland: a body corporate and politic.

Department - The word "Department" shall mean the Office of Budget and Finance of Baltimore County.

Engineer - One of the following engineering executives:

Director of Office of Budget and Finance
Chief, Property Management Division of the Office of Budget and Finance

Any delegation of the Engineer's authority must be authorized in writing by any one of the above listed officials, and such delegation of authority will pertain only to the specific contract and/or contracts shown by the authorization. The title of the specific official will appear in those cases within these specifications where the word "Engineer" as defined herein is not sufficiently specific.

Inspector - The authorized representative of the procurement officer assigned to make detailed inspection of any or all portions of the work, or materials therefor.

Procurement Officer - See Engineer.

GP-5.15 DISPUTES

(a) Except as otherwise may be provided by applicable law or regulation, all disputes arising under or as a result of a breach of this Contract that are not disposed of by mutual agreement shall be resolved in accordance with this General Provision.

(b) As used herein, "claim" means a: written demand or assertion by one of the parties seeking, as a legal right, the payment of money, adjustment or interpretation of Contract terms, or other relief, arising under or relating to this Contract.

A voucher, invoice, or request for payment that is not in dispute when submitted is not a claim under this General Provision. However, if the submission subsequently is not acted upon in a reasonable time, or is disputed either as to liability or amount, it may be converted to a claim for the purpose of this General Provision.

(c) When a claim cannot be resolved by mutual agreement, the Contractor shall submit a written request for decision to the Department's Chief of the Property Management Division for his decision in consultation with the County Office of Law. The Contractor's written request shall set forth all the facts surrounding the controversy, including, but not limited to, those items listed in GP-5.14(b). Any claim by the County shall be decided in like manner.

(d) The Contractor, at the discretion of the Engineer, may be afforded an opportunity to be heard and to offer evidence in support of his claim. Pending resolution of a claim, the Contractor shall proceed diligently with the performance of the Contract.

(e) The Department's Chief of the Property Management Division shall decide any and all claims. The decision by the Department's Chief of the Property Management Division shall be issued within ninety (90) Days on matters of less than fifty thousand dollars ($50,000) and within one hundred eighty (180) Days on matters of fifty thousand dollars ($50,000) or more. The written decision of the Department's Chief of the Property Management Division shall be final and binding unless appealed in writing to the Director of the Department within thirty (30) Days of the Chiefs written opinion to the parties. If the Chiefs decision is timely appealed in writing to the Director of the Department, the Director of the Department, serving as referee, will review the written appeal submitted to assure all reasonable attempts were made to resolve the appeal.

(f) The Director shall issue his/her decision in writing within ninety (90) Days. The Director's decision shall be final and conclusive unless a written appeal is mailed or otherwise filed with the County Administrative Officer within thirty (30) Days of the Director's written decision.

(g) When the County Administrative Officer is satisfied all efforts at the Department level were made to resolve the dispute, a claim shall be resolved as follows:

(1) Subject to, and without in any way enlarging or limiting the other provisions of the Contract, the parties to any Agreement which adopts or incorporates by reference these Standard Specifications, appoint the County Administrative Officer as an administrative hearing officer pursuant to Article 25A, "Chartered Counties of Maryland", of the Annotated Code of Maryland.

(2) The parties further grant the County Administrative Officer the right to delegate this responsibility and authority in writing to a County official who is a registered professional engineer, independent of the Department of Public Works and Transportation’s Division of Construction Contracts Administration, or to any other County official.

(3) For disputes involving ten thousand dollars ($10,000) or more the decision of the administrative hearing officer shall be final and binding on both parties, subject only to such appeals on the record as provided by Article 25A. For disputes involving less than ten thousand dollars ($10,000), the decision of the administrative hearing officer shall be final and binding on both parties.

GENERAL CONDITIONS
DESIGN BUILD BUILDING PROJECTS

I. SPECIFICATIONS

Article 1 Applicable Specifications

All work performed under this Contract shall be done under strict compliance with the *Specifications* bound herewith, and with the *Baltimore County Standard Specifications for Construction and Materials* and the *Standard Details for Construction* dated September 2023 and subsequent addenda thereto, so far as the same may be applicable, copies of which are available on the County's website at www.baltimorecountymd.gov/departments/public-works/standards. These General Conditions are in addition to the aforementioned Specifications. Should there be any conflict with the aforementioned manuals, the *General Conditions* take preference.

II. DEFINITIONS

Article 2 Definitions

A. *Architect and/or Engineer* shall mean the registered Architect and/or Engineer commissioned by the County to prepare the plans and contract documents.

B. *Engineer* in these General Conditions and in the Construction Specifications in some instances refers to authorized representatives of the Office of Budget and Finance, Property Management.

C. *Subcontractor,* as employed herein, includes only those having a direct contract with the Contractor. It includes one who furnished material worked to a special design according to the Plans and Specifications for the "work." It excludes one who merely furnished material not so worked.

D. *Written Notice* shall be deemed to have been duly served if delivered in person to the individual or to a member of the firm or to an officer of the corporation for whom it is intended, or if delivered to or sent by registered mail to the last business address known to him who gives the notice.

E. *Repair* means to restore after injury, deterioration, or wear; to mend, to renovate, by such means as appropriate, and to supply such materials and labor as necessary to render the item to be repaired sound, solid, true, plumb, square, even, smooth, and fully serviceable. Upon completion of such repair it must be, unless otherwise stated, rendered to such condition as to present a first-class finished work, or in instances where the repaired item serves as a base for additional finish, the repaired work must be such as to permit a first-class finish, to be applied without extra cost to the County. When the word "repair" is used in connection with machinery or mechanical equipment, it shall mean, in addition to the above, rendering the equipment completely serviceable and efficient, ready for the normal use for which it was originally intended.

F. Some parts of the "Construction Specifications," bound herewith are of the abbreviated or "streamlined" type and includes incomplete sentences. Omissions of words or phrases such as "the Contractor shall", "in conformity therewith", "shall be", "as noted on the drawings", "according to the plans", "a", "an", "the", and "all" are intentional. Omitted words or phrases shall be supplied by inference in the same manner as they are when a "note" occurs on the drawings. Words "shall be" or "shall" will be supplied by inference when colon (:) is used within sentences or phrases.

Article 3 Time Limits

The proposal shall indicate whether the contract limit is based on Working Days or Calendar Days. If this is not indicated in the Proposal, then the time limits will be based on Calendar Days.

Article 4 Sunday, Night and Holiday Work

If Sunday, night or holiday work is necessary due to an emergency or is permitted by the Engineer, the Contractor shall secure and pay for any and all permits required in connection with this work.

III. CONTRACT DOCUMENTS AND SHOP DRAWINGS

Article 5 Contract Documents

A. Clarification

It is assumed that the Contractor has obtained clarification of all questions which may have arisen as to intent of the contract documents, or assumed, or actual conflict between two or more items in the Contract Documents as required in "Instructions to Bidders." Should the Contractor have failed to obtain such clarification as required by the "Instructions to Bidders," then the Engineer may direct the work to proceed by any method indicated, specified or required by the Contract Documents in the interest of maintaining the best construction practice. Such direction by the Engineer shall not constitute a claim for extra by the Contractor.

B. Jargon

Work described in words that have a well-known technical or trade meaning shall be held to refer to such recognized standard use.

C. Drawings

The Contractor shall do no work without proper drawings and instructions. Drawings are, in general, drawn to scale; however, symbols are used to indicate materials and structural and mechanical requirements. When symbols are used, the drawings are, of necessity, diagrammatic, as it is not possible to indicate all connections, fittings, fastenings, etc., which are included as a part of the work. Diagrammatic indication of mechanical piping, ducts, and conduit within the buildings is subject to adjustment in order to obtain proper grading, passage over, under or past obstructions, to avoid exposure in finished rooms and unsightly and obstructing conditions. The Contractor shall coordinate these adjustments.

1. Copies no longer Furnished

   The County will no longer furnish the Contractor any copies of the Drawings and Specifications. Additional copies may be obtained by the Contractor down loading drawings and specifications from the Baltimore County Solicitation Web Page.

2. Copies of the Work

   The Contractor shall keep in the office on the job a complete set of all drawings, specifications, shop drawings, schedules, etc., in good order and available to the Engineer and representatives of the County.

3. Ownership

   All documents as furnished by the County remain the property of the County. They must not be used on other work but shall be returned to the County upon completion of the work.

D. Large Scale Detail Drawings

The Architect shall furnish, when necessary, additional instructions in the form of large scale developments of the drawings used for bidding, or to amplify Construction Specifications for the proper execution of the work. These shall be true developments of the bidding documents and reasonably inferable there from. The work shall be executed in conformity herewith. [See Article 6, Paragraph A.3.(c)]

E. Dimensions

The Contractor shall carefully check all dimensions prior to execution of the particular work affected. Whenever inaccuracies or discrepancies are found, the Contractor shall consult the Engineer prior to any construction or demolition. Should any dimensions be missing, the Engineer will be consulted and supply them prior to execution of the work. Dimensions for items to be fitted into constructed conditions at the job will be taken at the job and will be the responsibility of the Contractor. The obvious intent of the documents or obvious requirements dictated by conditions existing or being constructed supersedes dimensions or notes which may be in conflict herewith.

Whenever a stock size manufactured item or piece of equipment is specified by its nominal size, it is the responsibility of the Contractor to determine the actual space requirements for setting or entrance to the setting space. No extra will be allowed by reason of work requiring adjustment in order to accommodate the particular item of equipment.

Whenever new work, building, addition or portions thereof are not accurately located by plan dimensions, the Engineer will supply exact position prior to execution of the work.

Article 6 Shop Drawings

A. Shop Drawings (those prepared by the Contractor or Vendor of Material)

The Contractor shall submit for the Architect's approval, at such times as agreed (see Article 8), shop drawings (to include setting drawings and schedules) as required for the work of the various trades. These drawings shall be prepared in conformity with the best practice and standards for the trade concerned. Due regard shall be given to speed and economy of fabrication and erection.

1. Items to be Detailed

Shop details shall be supplied for all items which are specially fabricated for the work or when the assembly of several items is required of a working unit. Shop drawings are required for all reinforcing and structural steel, specially made or cut masonry units, miscellaneous metal work, specially made flashings or roofing and sheet metal work, specially made millwork, special rough hardware and all heating, ventilating, plumbing and electrical requiring special fabrication or detailed connections, including ducts.

2. Submissions

Shop drawings, brochures and catalog cut submissions shall consist of sufficient copies to provide for the retention by the Architect and County of five (5) copies total plus such additional copies as the Contractor may require. Drawings shall not exceed 24 in. x 36 in. in size.

3. Examination and Approval

The Contractor shall review all shop drawings, brochures and catalog cuts provided by the subcontractors and vendors prior to submitting them to the Architect. The Architect shall examine shop drawings with reasonable promptness, noting desired corrections, or granting approval.

a. Field Dimensions and Conditions

The Architect is not responsible for the checking of dimensions or existing conditions in the field. This is the sole responsibility of the Contractor.

b. Resubmission

When the Architect's notations or corrections are extensive, then the Contractor shall resubmit the drawings with changes made on the drawings.

c. Contractor's Responsibility

Unless the Contractor has in writing, notified the Architect to the contrary, at the time of submission, it will be assumed that the drawings are in conformity with the Contract Documents and do not involve any change in the Contract price or any change which will alter the space within the structure or alter the manner of operation from that contemplated in the Contract Documents.

d. Architect's Notations

Should the Contractor consider any change or notation received in compliance with paragraph (c) above as increasing the cost of the work from that contemplated in the Contract Documents, then the Contractor shall desist from further action relative to the item he/she questions and shall notify the Engineer, in writing, within five (5) days of the additional cost involved. No work shall be executed until the entire matter is cleared or a Change Order issued, or the Contractor is ordered by the Engineer to proceed under the provisions of the County's Standard Specifications. Failure of the Contractor to serve written notice, as above required, shall constitute a waiver of any claim in relation thereto.

(1) Similarly, should the Architect's notation or change involve less work than is covered by the Contract Documents, the Contractor shall allow the County the credit resulting from the change.

(2) Should the Contractor consider that any notation or change made by the Architect under provisions of this paragraph, paragraph (c), above, as involving a complete change in the subcontractor's relation or the substitution of a material different from that on which the Contract was based, then the Contractor shall act as herein stated or as in paragraph (c) above.

4. Project Completion

At the completion of the project, the Contractor shall submit a list of shop drawings for the entire project. This list shall contain the following information: title, description, specialty (Architectural, Structural, Mechanical, etc.), decision (no exceptions taken, approved, approved as noted, etc.).

Article 7 Separate Contracts

A. The County reserves the right to let other contracts in connection with paving and utilities adjoining this work. The Contractor shall afford other contractors reasonable opportunity for the introduction and storage of their materials and the execution of their work, and shall properly connect and coordinate his work with theirs.

B. If any part of the Contractor's work depends for proper execution or results upon the work of any other contractor, the Contractor shall inspect and promptly report to the Engineer any defects in such work that render it unsuitable for such proper execution and results. Failure to inspect and report shall constitute an acceptance of the other contractor's work as fit and proper for the reception of the work, except as to the defects which may develop in the other contractor's work after the execution of the work.

C. To ensure the proper execution of his/her subsequent work, the Contractor shall verify work already in place and shall at once report to the Engineer any discrepancy between the executed work and the drawings.

IV. PAYMENTS

Article 8 Payments

A. Under this Contract payments will be made monthly on the valuation of work accomplished and on account of materials delivered on the site, for incorporation in the work, which are suitably stored.

B. At the first of each month, the Contractor shall submit to the Engineer an application for payment on a form provided by the Engineer. Prior to application for first payment, the Contractor shall submit to the Engineer a schedule of values for the various parts of the work, including quantities, aggregating to the total sum of the Contract. This shall be so divided as to facilitate payment to subcontractors in accordance with Article 28, Paragraph C.1. The form of this submission shall be such as the Contractor or Engineer have agreed upon, and, if required, shall be supported by such evidence as to its correctness as the engineer may direct. This schedule, when approved by the Engineer, shall be used as a basis for approval of payment unless it is found to be in error. In applying for payment, the Contractor shall submit a statement based upon the schedule, itemized in such form and supported by such evidence as the Engineer may require, showing the Contractor's right to the payment claimed. If required, the Contractor shall show receipts and other vouchers for the payments for materials and labor including payments to subcontractors, as required by Article 28.

C. Materials Purchased Under Allowance

The Engineer will provide schedules for all materials to be purchased from specified allowance.

Article 9 Approval of Payments

If the Contractor has made application, as above, the Engineer shall review and approve such payments as is decided to be properly due in accordance with the approved schedule. In approving such partial payments, there shall be retained no more than 10% of the total amount for the first 50% of the contract, after which only 5% of the total amount of the contract may be withheld unless the need is demonstrated for retaining more to protect the public interest.

Article 10 Payment Withheld

A. The Engineer may withhold, or on account of subsequently discovered evidence, nullify the whole or a part of any payment to such extent as may be necessary to protect the County from loss on account of:

1. Defective work not remedied.

2. Claims filed, or reasonable evidence indicating probable filing of claims, by parties other than the Contractor.

3. Failure of the Contractor to make payments properly to subcontractors or for material or labor.

4. A reasonable doubt that the Contract can be completed for the balance then unpaid.

5. Damage to another Contractor.

6. Failure of the Contractor to submit data required within the time limits stated in the Contract Documents.

Upon removal of the above, payment shall be made for the amounts withheld.

Article 11 Changes in Work

A. The County, without invalidating the Contract, may order changes in the work by altering, adding to or deduction from the work, the Contract sum being adjusted accordingly. Such change shall be executed under these *General Conditions.* Extension of time made necessary thereby shall be adjusted at the time of such Change Order.

B. The Engineer shall have authority to make minor changes in the work not involving extra cost and not inconsistent with the purpose of the project. Otherwise, except in an emergency endangering life or property, no extra work or change shall be made unless a written order for the Office Budget and Finance, Property Management signed or countersigned by the Director has been received by the Contractor. No claim for addition to the Contract sum shall be valid unless so ordered.

C. The value of any such extra work or change shall be determined in one or more of the following ways as determined by the Office of Budget and Finance, Property Management.

1. By Estimate and Acceptance of a Lump Sum

a. The prime Contractor shall furnish a breakdown of the estimated construction cost. The breakdown shall be of sufficient detail to describe the extra work and related costs for labor, material, overhead and profit.

b. Overhead and Profit

(1) Extra work by Subcontractor:

Subcontractor will be allowed 10% overhead and 10% profit added to the direct labor and material costs. The prime contractor will be allowed to increase the subcontractors total lump sum by 10% to cover his/her administration.

(2) Extra work by Prime Contractor:

The prime contractor will be allowed 10% overhead and 10% profit added to the labor and material costs.

c. The prime contractor will be allowed 1 % for the bond added to the labor and material costs.

d. The allowed overhead will include all supervision; no additional allowance will be made for it.

2. By Unit Prices Named in the Contract or Subsequently Agreed Upon

Such unit prices are to include all supervision, overhead, taxes, insurance and profit.

3. By Cost and a Fixed Fee

Added to the cost is a fixed fee portion which is to include supervision, overhead, insurance and profit.

4. By Force Account (Labor and Material Cost plus)

In accordance with the *Baltimore County Specifications for Construction and Materials* Section GP 9.02, the Contractor is allowed to add 65% mark-up.

D. Should none of the methods stated in Paragraph C. 1, 2, or 3 be determined, the Contractor shall, providing he/she receives an order as defined in Paragraph B, above, proceed with the work on the basis of Paragraph C. 4. Force Account.

The Contractor and Engineer shall keep accurate costs, in such form as the Engineer may direct, for presentation, together with vouchers, to the Office of Budget and Finance Property Management for determination of the value of the work included in each Change Order. Pending determination of the final value, the Engineer may include payments for materials and labor, as stated in Article 8, in monthly vouchers.

Article 12 Claims for Extra Cost

No claim for extra will be granted which includes cost of delays or work stoppage due to strikes, lockouts, fire, avoidable casualties or damage or delay in transportation for which the County or its agents are not responsible. (See also Article 14.)

Article 13 Deductions for Uncorrected Work

If the Engineer and County deem it expedient to correct work injured or done not in accordance with the Contract, an equitable deduction from the Contract price shall be made therefore.

Article 14 Delays and Extension of Time

If no schedule or agreement stating the dates upon which drawings shall be furnished is made (see Article 8), then no claim for delay shall be allowed on account of failure to furnish drawings until two (2) weeks after demand for such drawings, and then not unless such claim is reasonable.

Article 15 Correction of Work After Final Payment

Neither the final certificate nor payment nor any provision in the Contract Documents shall relieve the Contractor of responsibility for faulty materials and workmanship. Unless otherwise specified, the Contractor shall remedy any defects and pay for any damage to other work resulting there from that appears within the guarantee period. The County shall give notice of observed defects with reasonable promptness. All questions arising under this Article shall be decided by the Director of Budget and Finance, Property Management.

Article 16 (Deleted)

Article 17 Assignment

The Contractor shall not assign the Contract. It shall not be sublet as a whole or sublet by trades or other portions in an amount of more than 75% of the monetary value of the Contract. The remaining 25% shall be executed by the Contractor with labor and materials directly purchased and paid for by the Contractor. Costs for insurance, over-head, supervisions, etc., may not be claimed as a portion of the 25% mentioned above. The execution of work by a subsidiary of the Contractor is not considered direct employment. The Contractor shall not assign any monies due or to become due to him/her hereunder, without the previous written consent of the County.

Article 18 Maryland State Sales Tax

A. Contractors who are performing work for the State of Maryland or any of its political subdivisions are required to pay tax on materials and supplies which will be incorporated into the work.

B. The Contractor must pay the tax on all equipment which is purchased, Even though it may be used on a job for the State of any of its political subdivisions.

V. MATERIALS

Article 19 Materials

Materials include all manufactured products and processed and unprocessed natural substances required for completion of the Contract. The Contractor in accepting the Contract is assumed to be thoroughly familiar with the materials required and their limitations as to use and requirements for connections, setting, maintenance and operation.

Whenever an article, material or equipment is specified and a fastening, furring, connection (including utility connections), bed or accessory is normally considered essential to its installation in good quality construction, such shall be included as if fully specified. Nothing in the Construction Specifications shall be interpreted as authorizing any work in any manner contrary to applicable law, codes or regulations (See Article 31).

A. Approval

All materials are subject to the Architect's or Engineer's approval as to conformity with the specifications, quality, design, color, etc. No work for which approval is necessary shall be contracted for, or used, until written approval is given by the Architect or Engineer. Approval of a subcontractor, as such, does not constitute approval of a material which is other than that included in the Construction Specifications.

B. New Materials

Unless otherwise specified, all materials shall be new.

C. Quality

Unless otherwise specified, all material shall be of the best quality of the respective kinds.

D. Samples

The Contractor shall furnish for approval all samples as directed. The work shall be the same as the approved samples.

E. Painting and Color

The Architect and Contractor shall jointly prepare the paint and color schedules. The Architect shall direct the exact color, texture and finish.

F. Proof of Quality

The Contractor shall, if required, furnish satisfactory evidence as to the kind and quality of materials either before or after installation. The Contractor shall pay for any tests as may be deemed necessary in relation to "Substitutions" (Paragraph I. below).

G. Contractor's Option

When several products or manufacturers are named in the Construction Specifications for the same purpose or use, then the Contractor shall select any of those so named. However, all of the units of a thing required for a project must be the same in material and manufacture.

H. "Or Equal", "Equal", "Approved Equal"

The above terms are used as synonyms throughout the Construction Specifications. They are implied in reference to all named manufacturers. Only materials that, in the opinion of the Engineer, are fully equal in all details of construction, methods of assembly, finish and design quality will be considered. (See A, C, E, above, and I. below.)

I. Substitutions

Should the Contractor desire to substitute another material for one or more specified by name, the Contractor shall apply, in writing, for such permission and state the credit or extra involved by the use of such material. The Engineer will not consider the substitution of any material different in type or construction methods unless such substitution effects a benefit to the County. (See A. and D. above.)

The Contractor shall <u>not</u> submit for approval, materials other than those specified without a written statement why such a <u>Substitution</u> is proposed. Approval of a "substitute" material by the Architect or Engineer when the Contractor has not designated such material is a "substitute," shall not be binding on the County nor release the Contractor from any obligations of the Contract, unless the Architect or Engineer approves such "substitutions" in writing.

J. Standard Specifications

Whenever references are made in the Contract Documents to the *Baltimore County Standard Specifications for Construction and Materials* and *Standard Details for Construction,* it shall be understood that the latest standards and/or requirements are intended and shall apply. When no specification is cited and the quality, processing, composition or method of installation of a thing is only generally referred to then:

1. For things not otherwise specified below, the latest edition of the Applicable American Society for Testing Materials Specifications shall apply.

2. For things covered by the applicable portions, the National Bureau of Fire Underwriters Code shall apply.

3. For things generally considered as plumbing and those things requiring plumbing connections, the applicable portions of the latest edition of the American Society of Mechanical Engineers Code and the Baltimore County Plumbing Code shall apply.

4. For things generally considered as heating and ventilating work and not covered by A.S.M.E. Code, the applicable portions of the latest edition of the Heating and Ventilating Guide, published by the American Society of Heating and Ventilating Engineers, and the Baltimore County Building Code shall apply.

K. Storage

The contractor shall confine apparatus and storage of materials to the "off-road" area delineated as the "Limit of Contract." The Contractor shall not load or permit any part of the structure to be loaded with a weight that will endanger the safety of the structure or any part thereof.

VI. QUALIFICATION, EMPLOYEES, WORKMANSHIP, SUBCONTRACTORS AND ADVERTISING

Article 20 Qualification of Bidders

Bidders are required to be prequalified 10 days prior to bid opening, satisfactorily evidencing that they have the ability, equipment, organization and financial resources sufficient to enable completion of the work satisfactorily within the time specified in the Proposal.

Article 21 Employees and Workmanship

A. Employees

1. Qualification

Only personnel thoroughly trained and skilled in the task assigned them may be employed on any portion of the work, or they shall be removed.

2. Licensed

When County, State or Federal laws require that certain personnel (electricians, plumbers, etc.) be licensed, then all such personnel employed on the work shall be so licensed.

B. Quality of Labor

The Contractor shall employ on the work, at all times, sufficient personnel to complete the work within the time stated in the Proposal.

C. Work Areas

The Contractor shall confine the operations of his/her employees to the limits as provided by law, ordinance, permits or directions of the Office of Budget and Finance Property Management. Generally, the "off-road" area will be the same as the "limit of Contract" line.

D. Methods and Quality

1. All workmanship shall be of good quality. Whenever the method of the work or manner of procedure is not specifically stated or shown in the Contract Documents, then it is intended that the best standard practice shall be adhered to. Recommendations of the manufacturers of approved materials shall be considered as a part of Construction Specifications and all materials shall be applied, installed, connected, erected, used, cleaned and conditioned as so called for thereby. This, however, does not remove any requirement in Construction Specifications to add to the manufacturer's recommendations.

2. All materials shall be accurately assembled, set, etc., and when so required in good construction, shall be true to line, even, square, plumb, level and regularly spaced, coursed, etc. Under no circumstances, either in new or old work, shall any material be applied over another which has not been thoroughly cleaned, sanded or otherwise treated so as not to impair the finish, adhesion, or efficiency of the next applied item.

3. All methods, procedures and results are subject to the Engineer's approval as to finished result to be obtained. However, this is not to be interpreted as placing upon the Engineer any responsibility for the "work" management which is solely the responsibility of the Contractor.

E. Joining of Work

1. The Contractor shall so schedule the work as to ensure efficient and uninterrupted progress and to hold to an absolute minimum the cutting and patching of new work. All cutting, patching and digging necessary to the execution of the work is included.

2. The Contractor shall so schedule (to include subcontracts) the construction performed by each group or trade that each installation or portion of the construction shall member with and join with all other work as required for a complete installation, all according to accepted good construction practice.

F. Superintendent

The Contractor shall keep on the work, at all times during its progress, a competent superintendent and all necessary assistants, all approved by the

Office of Budget and Finance Property Management. Prior to commencement of the work, the Contractor shall submit in writing to the Office of Budget and Finance Property Management the name and qualifications of the person to be employed as Superintendent for the execution of the Contract. A written approval or rejection will be given following review of the data. Persons who have previously proved unsatisfactory on work executed for the County, or who are without proper qualifications, will not be approved. Should the Superintendent be complained of by the Office of Budget and Finance Property Management for cause, he/she shall be removed from the work. Should it be necessary to change the Superintendent, the above procedure shall be repeated. The Superintendent will represent the Contractor. All directions given to the Superintendent shall be as binding as if given to the Contractor. Important directions shall be confirmed on written request in each case.

G. Discipline

The Contractor shall at all times enforce strict discipline and good order among his/her employees and shall not employ or permit to remain on the work any unfit person. The Contractor shall enforce all instructions relative to use of water, heat, power, no smoking, and control any use of fires, as required by law and for the Office of Budget and Finance Property Management. Employees must not be allowed to loiter on the premises before or after job working hours.

Article 22 Employment Lists

The Contractor may contact MARYLAND STATE EMPLOYMENT SERVICE, Towson, MD, 21204, if so desired, for additional labor regarding this project.

Article 23 Contractor's Supervision (Also see Article 21, Paragraph F.)

The Contractor shall constantly maintain efficient supervision of the work, using his/her best skills and coordinating ability. The Contractor shall carefully study and compare all drawings, specifications, and other instructions and check them against conditions existing or being constructed on the project. The Contractor shall report to the Engineer any error inconsistency or omission which may be discovered. (See also Article 5, Paragraph E, and Instructions to Bidders.) The Contractor shall not be held responsible for the existence or discovery of such errors or conflicts and neither shall the adjustment of such errors or conflicts be grounds for claim for extra on the art of the Contractor unless such adjustment involves work not obviously contemplated by the Contract Documents or necessary to progress of the work. The Contractor shall be responsible for the coordination of the work of all subcontractors.

Article 24 The County’s Right to do Work

If the Contractor should neglect to prosecute the work properly or fail to perform any provision of this Contract, the County after three days' written notice to the Contractor may, without prejudice to any other remedy, make good such deficiencies and may deduct the cost thereof from the payment then or thereafter due the Contractor.

Article 25 County's Right to Terminate Contract

A. Terminate Contract

The Office of Budget and Finance, Property Management, upon proof that sufficient cause exists to satisfy such action, may without prejudice to any other right or remedy, and after giving the Contractor seven (7) days' written notice, terminate the employment of the Contractor and take possession of the premises and of all materials, tools, and appliances thereon and finish the work by whatever method may be deemed expedient, if any of the following conditions exists:

1. If the contractor should

   a. Be adjudged a bankrupt or make a general assignment for the benefit of creditors,

   b. Has a receiver appointed on account of insolvency.

   c. Fails to or repeatedly and persistently refuses to supply properly skilled workers or proper materials, except in cases for which extension of time is provided,

   d. Fails to make payment to subcontractors, or for materials and labor,

   e. Persistently disregards laws, ordinances or the instructions of the Engineer, or

   f. Is otherwise guilty of a substantial violation of any provision of the Contract.

2. Payment Status

   In cases such as identified above, the Contractor shall not be entitled to receive any further payment until the work is finished. If the unpaid balance of the Contract price shall exceed the expenses of finishing the work, including compensation for additional managerial and administrative services, such excess shall be paid to the Contractor. If such expense shall exceed such unpaid balance, the contractor shall pay the difference to the County. The expense incurred by the County as herein provided, and the damage incurred through the Contractor's default, shall be itemized by the Engineer and a certified copy supplied to the Contractor.

Article 26 Sanitary Conveniences

A. The Contractor shall arrange for the erection and Maintenance of temporary toilets equipped with running water and drain connection for use of employees. These conveniences shall be erected and kept clean and in good condition, as required by law, until ordered removed by the Engineer.

B. In lieu of A. above, the Contractor may install a portable approved chemical toilet at an approved location.

C. The permanent plumbing fixtures to be constructed under this Contract shall not be used during construction, under any circumstances.

Article 27 Subcontracts Deleted

Article 28 Relation of Contractor and Subcontractor

A. **The Contractor agrees** to bind every subcontractor and every subcontractor agrees to be bound by the terms of the Agreement, *Baltimore County's Standard Specifications for Construction and Materials* and *Standard Details for Construction* the *General Conditions,* the Drawings and Construction Specifications, as far as applicable, to his/her work, including the following provisions of this Article, unless specifically noted to the contrary in the subcontract approved in writing as adequate by the Office of Budget and Finance, Property Management.

B. **The Subcontractor agrees** to be bound to the Contractor by the terms of the Agreement, *Baltimore County's Standard Specifications for Construction and Materials* and *Standard Details for Construction, General Conditions,* Special Provisions, Construction Specifications, and to assume towards him/her all obligations and responsibilities that he/she, by those documents, assumes towards the County.

1. To submit to the Contractor applications for payment in such reasonable times as to enable the Contractor to apply for payment under Article 8 of these *General Conditions.*

2. To make all claims for extras, for extensions of time and for damages for delays or otherwise, to the Contractor in the manner provided in *Baltimore County's Standard Specifications for Construction and Materials* or those *General Conditions* for like claims by the Contractor upon the County, except that the time for making claims for extra cost is one (1) week.

C. **The Contractor agrees** to be bound to the Subcontractor by all the obligations the County assumes to the Contractor under Agreement, *Baltimore County's Standard Specifications for Construction and Materials, General Conditions,* Drawings and Construction Specifications, and by all the provisions thereof affording remedies and redress to the Contractor from the County.

1. To pay the Subcontractors:

   a. Upon receipt of payment, if issued under the schedule of values described in *Baltimore County's Standard Specifications for Construction and Materials,* G.P.-9.03 or Article 8 of these *General Conditions,* the amount allowed to the Contractor on account of the Subcontractor's work, to the extent of the Subcontractor's interest herein.

   b. Upon the receipt of payment, if issued otherwise than as in Paragraph C.1., above, so that at all times the total payments shall be as large in proportion to the value of the work done by him as the total amount certified to the Contractor is to the value of the work done by him/her.

   c. To such extent as may be provided by the Contract Documents or the subcontract, if either of these provides for earlier or larger payments than the above.

   d. On demand for his/her work or materials as far as executed and fixed in place, less the retained percentage, at the time the payment is requested, even though the Engineer fails to approve it for any cause not the fault of the Subcontractor.

   e. A just share of any fire insurance money received by him/her, the Contractor, under Article 35 of these *General Conditions.*

2. To make no demand for liquidated damages or penalty for delay in any sum in excess of such amount as may be specified in the subcontract.

3. That no claim for services rendered or materials furnished by the Contractor to the Subcontractor shall be valid unless written notice thereof is given by the Contractor to the Subcontractor during the first ten (10) days of the calendar month following that in which the claim was originated.

4. To give the Subcontractor an opportunity to be present and to submit evidence in any manner involving his/her rights.

5. The Contractor and the Subcontractor agree that nothing in this Article shall create any obligation on the part of the County to pay to or to see to the payment of any sums to any Subcontractor.

Article 29 Interlocking Contracts

The attention of the Contractor and all Subcontractors is specifically called to the necessity of reading the Specifications covering items of the work which connect with or are dependent upon the work specified under each heading, and each Contractor executing the work called for there under shall be responsible for arranging for proper provision for connecting and coordinating his/her work with such other items.

Article 30 Advertising Signs

A. The Contractor will furnish, erect and maintain a project sign for the duration of the project. The sign shall be placed on the site where and as directed by the Engineer. The sign shall be fastened to three posts spaced 4' apart. The posts shall be 4" x4", seven feet above ground and three feet below ground.

B. The project sign is shown on page GC-27 in this book.

VII. LAWS, PERMITS, LICENSES, INSURANCE, AND BONDS

Article 31 Laws, Permits and Regulations

A. Permit and Service Connections:

1. **BUILDING PERMIT** - The County will obtain the building permit at no cost to the Contractor.

2. **PERMANENT WATER SERVICE** - The County will apply for the water service and pay all related charges; i.e., water meter, water systems connection charge, water distribution charge and sewer systems connection charge. Total installation of the permanent water service is part of this Contract. Water service shall be installed by a County Prequalified Utility Contractor.

3. **PLUMBING PERMIT** - The Contractor shall apply for the Permit; however, the County will pay all related charges and fees.

4. **PERMANENT ELECTRIC SERVICE** - The Contractor shall apply for and pay for the electrical permit. The County shall obtain BGE permanent gas and electric service to the site at no cost to the Contractor.

   The Contractor shall coordinate the installation of permanent gas and electric service with Baltimore Gas & Electric

Company. Both the gas and electric services shall be activated at the same time under one account number showing Baltimore County as owner. The Contractor shall be responsible for payment of consumption charges for the use of gas and electric energy obtained through the permanent service until the building is accepted by the County or until agreed upon by the County in direct coordination with the Building Services Division of Baltimore County. Charges from BGE for removal of existing electric service will be paid by the County.

5. **PERMANENT TELEPHONE SERVICE** - The County shall pay for the telephone service and systems to and in the building. The Contractor is responsible for supplying and installing all conduit, cables and junction boxes as shown on the drawings or called out in the Specifications.

6. **CABLE** - The County shall pay for any cable television service into the building. The contractor is responsible for supplying and installing the remaining work as shown on the drawings and called out in the Specifications.

7. **TEMPORARY SERVICES** -All temporary services, such as water, electric, telephone, etc., shall be the Contractor's entire responsibility. (Also see Article 46.)

8. **MISCELLANEOUS PERMITS** - The Contractor shall procure any and all necessary permits not previously mentioned and pay any and all related charges and fees required and incidental to the due and lawful prosecution of the work.

B. The Contractor shall give all notices and comply with all State and Federal laws, ordinances, rules and regulations bearing on the conduct of the work as drawn and specified. If the Contractor observes that the Drawing and Contract Specifications are at variance therewith, he/she shall promptly notify the Engineer, in writing, and any necessary changes shall be adjusted as provided in the Contract for changes in the work. If the Contractor performs any work knowing it to be contrary to such laws, ordinances, rules and regulations, and without such notice to the Engineer, he/she shall bear all costs arising there from.

Article 32 Compensation, Liability, and Property Damage Insurance

(See Insurance Provision in Part VI of this Contract.)

Article 33 Builder's Risk Insurance

A. The Contractor shall, at his/her own cost, insure the work and keep it insured at all times during the period of construction, and until final acceptance of it by the County, against loss or damage covered by

an "All Risk" Builders Risk type of policy. The amount of insurance shall be the 100% estimated replacement cost of the work.

B. The policies shall be made payable to the County and the Contractor, as their interest may appear, and the policies shall be left in the possession of the Engineer, prior to the start of construction.

Article 34 Guaranty Bonds

A. Prior to signing of the Contract, the Contractor will be required to furnish bond covering the faithful performance of the Contract and the payment of all obligations arising there under, in such form as the County may prescribe with such sureties as the County may approve. The premiums shall be paid by the Contractor.

B. The Bond to be in the amount of the total Contract price.

C. At the direction of the Office of Budget and Finance, Property Management, the Contractor may be required to increase the above bond. Such addition will be paid for by the County in the amount of actual cost to the Contractor.

Article 35 Damages

A. If either party to this Contract should suffer damages in any manner because of the wrongful act or neglect of the other party or of anyone employed by him/her, then reimbursement shall be made by the other party for such damage.

B. Claims under this clause shall be made in writing to the party liable within a reasonable time at the first observance of such damage and not later than the time of final payment, except as expressly stipulated otherwise in the case of faulty work or materials, and shall be adjusted by agreement.

C. Should the Contractor cause damage to any separate contractor on the work, the Contractor agrees, upon due notice, to settle with such contractor by agreement or refer the matter to the Office of Budget and Finance, Property Management, who will render a decision after hearing all evidence in the matter. The Contractor shall pay or satisfy such decision.

VIII. INSPECTION AND SURVEYS

Article 36 Inspection

A. If the Construction Specifications, the Engineer's instructions, laws, ordinances, or any public authority require any work to be specially tested or approved, the Contractor shall give the Engineer timely notice of its readiness for inspection, and if the inspection is by another authority, the date fixed for such inspection. Inspections by

the Engineer shall be made promptly, and where practicable, at the source of supply. Any work covered without approval of the Engineer must, if required, be uncovered for examination at the Contractor's expense.

B. If initial tests and/or inspections show substandard products, materials, workmanship, etc. and the Contractor elects, with the Engineer's approval, to perform additional tests and/or inspections to prove the acceptability of the substandard products, materials, workmanship etc., he/she shall perform same at his/her expense.

Article 37 Surveys

A. The General Contractor shall, at his/her own expense, employ a registered surveyor to provide Elevation Bench Mark, and locate corners of the building and the limits of contract.

B. The General Contractor shall, at his/her own expense, employ a competent field engineer, to give the lines and levels for the building, sidewalks and footings, etc. The Contractor will be responsible for all lines and levels and will guarantee all lines and levels as are shown on drawings.

Article 38 Unauthorized Work

Work done without lines and grades being established, work done beyond the lines and grades shown on the Plans or as established, except as herein provided, or any extra work done without written authority will be considered as unauthorized and at the expense of the Contractor and will not be measured by the Engineer, or paid for by the County. Work so done may be ordered by the Engineer to be removed and replaced at the Contractor's expense.

IX. CONSTRUCTION

Article 39 Construction Schedule

The Contractor shall hold bi-weekly "progress meetings" at the site, at a time suitable to the Engineer, at which the progress of the work shall be reported upon in detail with reference to schedules. Each interested subcontractor shall be required to have present a competent representative to report the condition of his/her branch of the work and to receive instructions. Minutes of these "progress meetings" shall be taken by the Contractor who shall type them for distribution to members of the conference, the Office of Budget and Finance, Property Management, and other interested persons. These minutes shall be received by all parties prior to the next scheduled "progress meeting."

Article 40 Protection of Work and Property

A. All trees along the way of access shall be boxed, also all trees surrounding the building which are liable to injury by the moving, storing and working up of materials. No permanent tree shall be used for attachment of any ropes or derricks. Every public way, catch basin, conduit, tree, fence or things injured in carrying out this Contract, shall be replaced and put in good condition, unless the same shall be permanently done away with by order of the Engineer.

B. The Contractor shall erect and properly maintain at all times as required by the conditions and progress of the work, all necessary safeguards for the protection of workers and the public and shall post danger signs warning against the hazards created by such features of construction as protruding nails, hod hoists, well holes, elevator hatchways, scaffolding, window openings, stairways and falling material.

C. In an emergency affecting the safety of life, or of the work, or of the adjoining property, the contractor, without special instruction or authorization is hereby permitted to act, at his/her discretion, to prevent such threatened loss or injury, and he/she shall so act, without appeal, if so instructed or authorized. Any compensation claimed by the Contractor on account of emergency work shall be determined as outlined in Article 11.

Article 41 Shoring, Bracing and Sheeting

A. The Contractor shall do all necessary shoring, bracing and sheeting required, or as directed by the Engineer, to carryout the work, install the foundations and other building construction, to protect the street, sidewalks and all adjoining buildings and property. He/she shall thoroughly brace and protect all earth banks sides of pits, trenches, and other excavations to prevent danger to persons or structures, and to prevent injurious cavings or erosion of any sort. Shoring and sheeting shall be removed after, or as, the walls are built and properly set.

B. Full responsibility for both the design (by an Engineer licensed in Maryland) and the execution of all shoring, bracing, and sheeting work shall rest upon the contractor. While the Engineer shall be fully advised of all details for such work before the work itself is executed, this shall not in any way relieve the Contractor for full responsibility for all damage or expense arising from faulty installation of the said work of shoring, bracing, or sheeting.

Article 42 Tests

A. Soils testing shall be performed by an independent testing firm arranged and paid for by the County.

B. Materials testing shall be performed by an independent testing firm, paid for by the Contractor, which has previously been approved by the County and Architect/Engineer. Certified copies of all such test reports shall be submitted to the Engineer for approval.

Article 43 Cleaning Up

A. The Contractor shall at all times keep the premises free from accumulations of waste material or rubbish caused by his/her employees or work, and at the completion of the work, shall remove all his/her rubbish from and about the project site, and all his/her tools, scaffolding and surplus material.

   In case of dispute, the County may remove the rubbish and charge the cost to the several contractors as the Engineer shall determine to be just.

B. All debris shall be kept sprinkled to reduce dust and shall be promptly removed from the building, and no combustible materials shall be stored against perimeter walls.

C. The Contractor shall clean entirely the building as it is completed, wash all windows, scrub all floors at least once, and leave all floors free from spots and blemishes. The interior of the building and the project area shall be left "broom clean," or its equivalent.

Article 44 As-Built Drawings

The Contractor shall, as the project progresses, neatly record on a set of white prints any changes and all revisions to the work wherever they shall differ from the Contract Drawings. Upon completion of the work, the · Contractor shall turn over to the Architect this set of prints.

Article 45 Drainage and Pumping

The Contractor shall remove all water, including rain water, encountered during the entire progress of the work, using pumps, drains or other methods approved by the Engineer. Excavations and the project site shall be kept free from water until all backfilling is completed. The water shall be discharged to catch basins, or other drainage points as directed by the Engineer.

Article 46 Temporary Water, Electric and Other Services

A. The Contractor shall arrange for and pay for the installation of temporary connection to the County's water mains, including all incidental fees and expenses for water supply during construction of the project, and shall pay for all water used. Wasting of County water will not be permitted.

B. The Contractor shall arrange for and pay for temporary electric light and power service required during construction of the project, and shall pay for all electricity used. Gasoline or other torches for lighting will not be permitted.

C. The Contractor shall provide and pay for any other temporary services which may be required for the satisfactory completion of the project.

D. The Contractor shall provide, at his/her own expense, all cold weather protection, temporary heat and fuel as necessary to carry on the work expeditiously during inclement weather, to protect work and materials against injury from dampness and cold, to dry out the building and provide suitable working conditions. Refer to other sections for temperatures required for work under the various trades

The methods of heating and type of fuel and equipment used shall be subject to approval by Engineer.

With special permission, in writing, permanent heating system may be used to dry out building and provide suitable working conditions in all or various parts thereof as soon as practicable. If used, Contractor shall be responsible for use of permanent heating system for purpose described and all costs of fuel, attendance, etc. in connection therewith shall be borne by him/her. Such use shall not relieve Contractor of his/her responsibility to turn over system to Owner in perfect condition on completion of project, including the removal of all dust of construction from air handling units, etc., the replacing of all filters, etc., nor shall it shorten stipulated guarantee period which will commence upon the date of final acceptance of the work.

Article 47 Connecting to Existing Utilities

The Contractor shall, at his/her own cost and expense and as part of this work under the Contract, furnish all labor, materials, tools, and appliances, and do all work required for making connections to existing storm drains, sanitary sewer, water, gas and electric service connections, as shown on drawings, and the cost of making such connections shall be included in his/her bid.

Article 48 Existing Utilities Shown on Plans

Water mains, gas mains, storm drains, sanitary sewers, and other utilities are shown on the Plans, in accordance with the best information available, for the information of the Contractor. The County assumes no responsibility for accuracy or completeness of the information shown. Existing mains and services shall be carefully protected and any damage to them caused by the work shall be immediately repaired to the satisfaction of the Engineer by the Contractor at his own expense, using materials of the quality and kinds damaged.

X. MISCELLANEOUS ADDENDA

Article 49 Holidays

The word "holidays" used in these Contract Documents shall be taken to mean the below listed holidays, which in Baltimore County, occur as shown below:

January 1	New Year's Day
3rd Monday in January	Martin Luther King's Birthday
3rd Monday in February	President's Day
4th Monday in May	Memorial Day
June 19	Juneteenth Independence
July 4	Independence Day
1st Monday in September	Labor Day
2nd Monday in October	Indigenous Peoples' Day
November 11	Veteran's Day
4th Thursday in November	Thanksgiving Day
December 25	Christmas
All Days of General Elections	

If any holiday occurs on Sunday, the following Monday shall be considered a holiday. If the holiday occurs on Saturday, the Friday immediately preceding shall be considered a holiday.

Article 50 Buy American Steel Act

The State of Maryland has approved House Bill No. 1659 to "Buy American Steel" for all Public Works projects in the State of Maryland, effective July 1, 1978. Compliance with Article 20.17 Metal Pipe (Page 100) and Article 20.18 Metal for Structures (Page 102) in the *S.H.A. Specifications for Materials, Highways, Bridges and Incidental Structures* dated March 1968 will satisfy this condition. Also see *Baltimore County's Standard Specifications for Construction and Materials* Section GP 7.28.

Article 51 Guarantee

A. The Contractor guarantees all work against faulty or imperfect materials, against all imperfect or careless and/or unskilled workmanship, against all leaks and against all mechanical and electrical failure of equipment for a period of two (2) years from the date of acceptance of the project by the County. See other Sections of this Specification for other guarantees.

B. The Contractor shall remove, replace or re-execute, without cost to the Owner, any work found to be imperfect during the guarantee period.

Article 52 Offices and Telephones

A. The Contractor shall erect and maintain upon the project site, and where directed by the Engineer, suitable offices for his/her own use and that of the Engineer.

B. A room of adequate size shall be provided and maintained in the Contractor's office to be used for "Progress Meetings," which frequently involve fifteen (15 or more persons). This space shall be so arranged that they can be held without interference with or from the other office or supervisory work. The room shall be 300 sq. ft. minimum and 10 ft. minimum width.

These offices shall be provided with adequate heating and lighting, all at the expense of the Contractor. In addition to the above requirements, air-conditioning will be required, the cost of which is to be included in the lump sum bid price. The system must be capable of maintaining a temperature of 80 degrees F dry bulb and approximately 50% relative humidity in the conditioned area when outside temperatures are 95 degrees F dry bulb and 78 degrees F wet bulb.

C. The Engineer's office shall meet or exceed all requirements for a Type 1 office in accordance with *Baltimore County's Standard Specifications for Construction and Materials,* Section 103 Engineer's Office.

The Contractor shall provide telephone and FAX service in the Office of the Engineer. The Contractor shall pay all costs of installation and all charges for local and Baltimore City calls, but will not be expected to pay for long distance calls made from the Engineer's Office.

SECTION 01 10 00 – SUMMARY OF WORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Related Requirements:

1. Division 01 Section "Alternates" for add and deduct alternates.
2. Division 01 Section "Temporary Facilities and Controls" for limitations and procedures governing temporary use of Owner's facilities.
3. Division 02 Section “Structure Demolition” for salvage list.

B. Section Includes:

1. Project information
2. Work Covered by Contract Documents
3. Phased construction.
4. Work Performed by Owner
5. Owner-Furnished/Contractor-Installed (OFCI) Products
6. Owner-Furnished/Owner-Installed (OFOI) Products
7. Contractor’s Use of Site and Premises
8. Coordination with Occupants
9. Work Restrictions
10. Specifications and drawings conventions

1.3 DEFINITIONS

A. Work Package: A group of specifications, drawings, and schedules prepared by the design team to describe a portion of the Project Work for pricing, permitting, and construction.

1.4 PROJECT INFORMATION

A. Project Identification: Essex Police Precinct - 11
Renovation & Addition

B. Project Location: 216 & 222 N. Marlyn Avenue
Essex, Maryland 21221

C. Project Number: Contract Number: 25022 PP0
Job Order Number: 10000636

D. Owner: Baltimore County Property Management, Office of Budget & Finance

1. Owner's Representatives:
   a. David Earling, Senior Project Manager, Baltimore County Property Management; Ph: 410-887-2946.

E. Architect: Murphy & Dittenhafer Architects, Inc. 805 North Charles Street; Baltimore, Maryland 21201; Ph: 410-625-4823

F. Architect's Consultants: The Architect has retained the following design professionals who have prepared designated portions of the Contract Documents:

1. Structural Engineer: Columbia Engineering, 6210 Old Dobbin Lane #150, Columbia, MD; Ph. 410.992.9970
2. Civil Engineering: MK Consulting Engineers, The Star Building, 1801 Porter Street, Suite 401, Baltimore, MD 21230; Ph. 667.309.6193
3. MEP Engineer: Bowman Engineering, 300 East Joppa Road, Suite 501, Towson, MD 21286; Ph. 410.494.1111
4. Low Voltage Design: Convergent Technologies Group; 6501 York Road; Baltimore, Maryland 21212; Ph. 410-532-2395
5. Fire Protection: WFT Engineering, Inc, 1801 Research Blvd, Suite 100, Rockville, MD 21201; Ph. 301.230.0811
6. Landscape Architecture: Mahan Rykiel Associates, Inc. 3300 Clipper Mill Road, Baltimore, MD 21211; Ph. 410.235.6001
7. LEED Consultant: Sustainable Design Consulting, LLC, 1432 K Street NW, 3rd Floor, Washington, DC 20005; Ph. 202.667.1620

1.5 WORK COVERED BY CONTRACT DOCUMENTS

A. The Work of Project is defined by the Contract Documents and includes, but is not limited to, the following:

1. The work includes the phased construction of a new single-story police precinct addition of approximately 16,000 GSF plus Sallyport addition (1,400 GSF) and then major renovation of the existing single-story precinct building with below grade basement of approximately 16,000 GSF. While the current Essex Police Precinct building lies within parcel 833, the north end of the adjacent parcels that are deeded to the County for County fire department use under parcel 843 are being utilized for the majority of the parking for the police precinct building. The additional site at 222 N. Marlyn Avenue has been acquired by BCPM and will be used primarily for stormwater management for the newly renovated facility.

   All buildings on the 222 N. Marlyn Avenue site shall be demolished. The existing precinct building, built in 1970, and the existing Annex building will both ***remain operational*** during construction of the new addition (Phase 1). The Annex will be demolished after completion of the addition and the existing precinct building will be vacated and moved into the new addition prior to the Phase 2 renovation work. A temporary building phase will occur prior to Phase 1 to establish a new temporary entrance into the existing precinct building for the duration of Phase 1 construction. Site work will be finalized after the renovation is completed, see CS-5 for Site Phasing Diagrams.

   The renovated precinct building and new wings will be all electric and the new wing and sally port will include photovoltaic panels on the roofs. The existing precinct building will not have solar panels. The building will have a backup diesel-powered generator located outside. The building must keep its 800mHz Antenna active during construction and

renovation. Currently the antenna is located on the existing precinct roof; it will need to be relocated out of the area where new roof is provided and the new wing is connected. It will then need to be located at the top of the new lobby roof.

B. Type of Contract:

1. Project will be constructed under a General Construction Contract.

C. Removal and disposal of materials:

1. Non-hazardous materials shall be removed in accordance with Specification Section 01 74 19 – Construction and Demolition Waste Management and Disposal.
2. The existing 1970 precinct building and the 222 N. Marlyn Avenue residential building contain known hazardous materials. Refer to the Hazardous Material Reports attached in Appendix A and spec section 02 81 00 – Transportation and Disposal of Hazardous Materials. The Contractor is responsible for coordinating the proper removal of all hazardous materials during demolition of the existing buildings. All hazardous materials abatement packaging, transport, and disposal must be performed in strict compliance with all applicable local, state, and federal regulations, latest edition. The Contractor must maintain all licenses and certifications, in accordance with these regulations, which must be current for the entire term of this agreement.

D. LEED Certification:

1. LEED Silver Certification is required.

E. Refer to Bid Documents for other contract requirements.

1.6 PHASED CONSTRUCTION

A. Contractor shall construct the work in phases. Contractor shall provide any means and methods necessary to meet the required Operations and Access criteria listed below. The Contractor shall not be limited to a number of phases and those phases as indicated in the drawings and herein are only a suggestion.

1. Phasing Plan Submission:

a. The Contractor shall present a detailed phasing plan prior to the start of construction, within fifteen (15) days after contract is awarded. Owner and Design Team will provide verbal comments after the presentation. Within seven (7) days after the initial meeting, Contractor shall submit a formal written phasing plan, which incorporates the Owner and Design Team comments from the initial meeting, for approval by the Owner and Design Team.
b. Contractor shall not commence any construction activities until written approval of the submitted Phasing Plan has been provided by the Owner. The Contract time shall not be increased due a delay in Phasing Plan approval because of the Contractor not complying with Owner or Design Team direction on Phasing Plan revisions.
c. Deviations from the approved Phasing Plan shall not occur without written approval by the Owner. Contractor shall propose revisions to the Phasing Plan to the Owner at any time. Only once revisions have been approved shall they occur.

2. Operations & Access

a. Access: The Police Staff, BCPMs, and County OIT shall have access to the continuously operated portion of the building in each phase of construction. Access will include access to designated entrances for ingress and egress, a lane for vehicles to access parking and enter and exit freely. Access means 24 hour, seven days a week access. The public is to maintain access to the designated public parking and public building entrance. Any impacts to access shall be required to be submitted in writing in advance and is subject to owner and design team approval.

b. Continuous Operations: The Essex Police precinct and Annex shall be continuously able to operate and be provided with functional power and network operations, MEP systems and Fire Alarm & Sprinkler systems. The existing generator shall maintain backup power to the existing building through the duration of Phase 1. The Contractor shall provide notice and grant right of entry provided to Baltimore County Property Management's (BCPM) Information Technology staff to access the main IT room for the duration of the project. Major renovation work in the areas of the existing precinct building shall occur only after U&O is granted for the new precinct addition. Any temporary outages related to connection of new utilities shall be carefully coordinated with police operations so as to limit disruptions.

c. Utilities: All utilities are required for Police and Information Technology operations. Reference Civil, MEP, & TA drawings and specifications.
   a. The Police are to be notified of work that impacts underground utilities or requires an outage of service. The Contractor will need to provide 48 business hours' notice to the Police via BCPM for scheduled work that impacts daily operations.

d. Life Safety: The Contractor shall be responsible for coordination, permitting and inspection of all aspects of Life Safety and all other inspections required by the (AHJ) Authority Having Jurisdiction per the Contractor's phasing plans. Protect access and egress for all Police staff and BCPM IT staff in areas near the work. Pedestrian pathways shall be required. The Contractor shall provide a safety procedures plan.

3. Site Work – Phasing Requirements:

Note that the Tasks are not listed in a specific sequence and shall be sequenced by the means and methods of the general contractor to meet the requirements and complete the task in phases. Sequencing and phasing shall follow the Sequence of Construction (SOC) included in the approved Sediment and Erosion Control Plans.

Phase 1 tasks will include but not be limited to the following:
Phase 1A tasks:
- Install erosion and sediment control devices as noted in phase 1A sequence.
- Install storm drain needed for ESC including temp 15" storm drain pipe, swales, SSF and SFD and stabilize areas.
- Demolish and clear lot 222 Marlyn Avenue.
- Remove communication lines interfering with trap construction.
- Install modified pipe outlet trap.
- Install new 6" water line with temporary service to Annex Building.

Phase 1B tasks:
- Install additional erosion and sediment control devices as noted in phase 1B sequence.

- Install storm drain as indicated in phase 1B sequence.
- Rough grade site.
- Install new parking area, base paving only.
- New paved areas shall receive 4” base paving only. 1” to be milled at completion of site work with 2” surface applied at that time.
- Create and maintain access to new public parking area.
- Complete building addition and utilities including generator.
- Maintain access to existing building at all times.
- Provide new entrances at front and rear of new building, including portions of new patios necessary for entrance use.
- Install temporary access road.
- Stabilize disturbed areas.
- Building addition must be ready to occupy at the end of this phase.

Phase 2 tasks will include but not be limited to the following:

Phase 2A tasks:

- Install additional erosion and sediment control devices as noted in phase 2A sequence.
- Maintain access to existing rear parking lot at all times.
- Maintain access to both new building entrances at all times.
- Begin demolition of Annex building.
- Maintain temporary paving tie-ins between the existing driveway entrance and parking lots.
- Maintain police vehicular access via temporary road.
- Construction traffic and public vehicular access are provided by the existing driveway.
- Public parking lot is open during this phase.
- Perform remaining utility work.
- Complete Annex building removal.
- Construction of existing police station renovation and perimeter sitework.
- Complete construction of rear plaza and sidewalk areas.
- Construct Sallyport and rough grade in proposed micro-bioretention facility.
- Complete new curb and paving around existing islands.
- Stabilize all areas to micro-bioretention facility and complete paving tie-ins.

Phase 2B tasks:

- Install additional erosion and sediment control devices as noted in phase 2B sequence.
- Complete all final curb, gutter sidewalks and paving that is outside of the temporary access road.
- Build new driveway, and base pave.
- Remove temporary access drive.
- Build south parking bay and restore and stabilize all slopes and disturbed areas.
- Complete driveway apron tie-in at Marlyn Avenue.
- All vehicular access is provided by new driveway.
- Public parking lot is open during most of this phase.
- Complete micro-bio facilities.
- Convert sediment trap to submerged gravel wetland.

- Stabilize all areas, install plantings.
- Mill 1” from base paving and install 2” surface paving.
- Flush and inspect all storm drain systems.
- Prepare and submit SWM As-Built plans.

4. Temporary Building Phasing Requirements:

- In order to provide continuous operations for the precinct and continuous public access, a temporary building phase modifying the existing Sargent’s/front desk and existing lobby is required to provide a new, temporary ADA accessible entrance for the duration of Phase 1 which includes work on the site and construction of the new building wing. See CS-6 & CS-7 Temporary Phasing Plans.

Temp. Building Phase 1.1

- Temp. Building Phase 1.1 is to fit out the existing lobby area with a temporary secure front desk that is accessible for public access from the existing lobby entrance. Once the front desk is relocated and a temporary construction barrier is installed to all the demolition and fit out of the Temporary Phase 1 construction area.

- GC is to coordinate with the owner, County OIT & their venders to install/relocate access control, CCTV, av, and data lines.

Temp. Building Phase 1.2

- Temp. Building Phase 1.2 is to provide a protected area for construction where an entire bay of steel roof joists (see structural demolition roof framing) are to be removed. Work in this area will be scheduled with building phase 1 where the new and old wings of the building are joined.

- Temporary Phase 1.2 must be completed prior to the construction of the new wing addition. The public will use the existing entrance for the duration of Temp. Phase 1.1. OIT & BCPM furniture will need to coordinate and provide a temporary desk and tech for approximately 1 month for the duration of Temp. Phase 1.1 while the existing Sargent's desk is modified, a new entrance door and pavement is provided, and a meeting room is fitted out (this interview room is not required and must be confirmed because of the scope impact). Once Temp Phase 1.1 is completed the GC shall coordinate with the Owner and OIT to relocate the front desk that will operate until building Phase 1 is completed and the staff are moved into the new wing of the building. The front desk will temporarily be located in a new interview room in temp phase 1.3

Temp. Building Phase 1.3

- Temp. Building Phase 1.3 is to provide a temporary secure front desk in the completed new building wing while the existing building is renovated.

5. Substantial Completion:
   a. The first phase of construction will be considered completed once all Police operations resume in new precinct addition and occupancy U&O has been granted. The Contractor shall be responsible for any comments and provisions required for all sign off or certificates from AHJ and their inspectors. Contractor shall submit their proposed phasing and egress plans for AHJ’s approval. Subsequent phased work may begin after the Notice to Proceed.

b. Later phases will be considered completed once all building and site areas meet substantial completion.

B. Before commencing Work of each phase, submit an updated copy of Contractor's construction schedule, showing the sequence, commencement, and completion dates, and move-out and -in dates of Owner's personnel for all phases of the Work.

1.7 OWNER-FURNISHED/CONTRACTOR-INSTALLED (OFCI) PRODUCTS

A. Owner's Responsibilities: Owner will furnish products indicated and perform the following, as applicable:

1. Review and confirm with the Architect as needed Product Data, Shop Drawings, and Samples.
2. Provide for delivery of Owner-furnished products to Project site.
3. Upon delivery, inspect, with Contractor present, delivered items.

   a. If Owner-furnished products are damaged, defective, or missing, arrange for replacement.

4. Obtain manufacturer's inspections, service, and warranties.
5. Inform Contractor of earliest available delivery date for Owner-furnished products.

B. Contractor's Responsibilities: The Work includes the following, as applicable:

1. Designate delivery dates of Owner-furnished products in Contractor's construction schedule, utilizing Owner-furnished earliest available delivery dates.
2. Review Owner-reviewed Product Data, Shop Drawings, and Samples, noting discrepancies and other issues in providing for Owner-furnished products in the Work.
3. Receive, unload, handle, store, protect, and install Owner-furnished products.
4. Make building services connections for Owner-furnished products.
5. Protect Owner-furnished products from damage during storage, handling, and installation and prior to Substantial Completion.
6. Repair or replace Owner-furnished products damaged following receipt.

C. Owner-Furnished/Contractor-Installed (OFCI) Products:

1. Audio and Video Equipment as indicated on the Drawings.

2. Salvage List: Refer to spec section 02 41 16 – Structure Demolition. GC to coordinate salvage items prior to demolition work.

1.8 OWNER-FURNISHED/OWNER-INSTALLED (OFOI) PRODUCTS

A. The Owner will furnish and install products indicated as Not in Contract (NIC). All other fixtures & equipment documented in the drawings shall be provided by GC.

B. Owner-Furnished/Owner-Installed (OFOI) Products:

1. FF&E, new and existing to be reused furnishings will be stored off site and installed after U&O has been granted to completed phased areas.

1.9 SITE AND PREMISES

A. Use of Site: Contractor shall make full use of Project site for construction operations during construction period. Contractor's use of Project site is limited only by Owner's right to perform work or to retain other contractors on portions of Project.

B. Condition of Existing Grounds: Maintain portions of existing grounds, landscaping, and hardscaping affected by construction operations throughout construction period. Repair damage caused by construction operations.

1.10 COORDINATION WITH OCCUPANTS

A. Owner Limited Occupancy of Completed Areas of Construction: Owner reserves the right to occupy and to place and install equipment in completed portions of the Work, prior to Substantial Completion of the Work, provided such occupancy does not interfere with completion of the Work. Such placement of equipment and limited occupancy shall not constitute acceptance of the total Work.

1. Architect will prepare a Certificate of Substantial Completion for each specific portion of the Work to be occupied prior to Owner acceptance of the completed Work.
2. Obtain a Certificate of Occupancy from authorities having jurisdiction before limited Owner occupancy.
3. Before limited Owner occupancy, mechanical and electrical systems shall be fully operational, and required tests and inspections shall be successfully completed. On occupancy, Owner will operate and maintain mechanical and electrical systems serving occupied portions of Work.
4. On occupancy, Owner will assume responsibility for maintenance and custodial service for occupied portions of Work.

1.11 WORK RESTRICTIONS

A. Work restrictions are per the Baltimore County Ordinance and as noted in the Bid Documents.

1.12 SPECIFICATION AND DRAWING CONVENTIONS

A. Specification Content: The Specifications use certain conventions for the style of language and the intended meaning of certain terms, words, and phrases when used in particular situations. These conventions are as follows:

1. Imperative mood and streamlined language are generally used in the Specifications. The words "shall," "shall be," or "shall comply with," depending on the context, are implied where a colon (:) is used within a sentence or phrase.
2. Specification requirements are to be performed by Contractor unless specifically stated otherwise.

B. Division 01 General Requirements: Requirements of Sections in Division 01 apply to the Work of all Sections in the Specifications.

C. Drawing Coordination: Requirements for materials and products identified on Drawings are described in detail in the Specifications. One or more of the following are used on Drawings to identify materials and products:

1. Terminology: Materials and products are identified by the typical generic terms used in the individual Specifications Sections.
2. Abbreviations: Materials and products are identified by abbreviations scheduled on Drawings.
3. Keynoting: Materials and products are identified by reference keynotes referencing Specification Division numbers found in this Project Manual followed by a decimal and then an item number. This item number does not reference a specification section or paragraph.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 10 00

SECTION 01 21 00 - ALLOWANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes administrative and procedural requirements governing allowances.

B. Types of allowances include the following:

1. Lump-sum allowances.
2. Unit-cost allowances.
3. Quantity allowances.
4. Contingency allowances.

C. Related Requirements:

1. Section 012200 "Unit Prices" for procedures for using unit prices, including adjustment of quantity allowances when applicable.

2. Section 013300 "Submittal Procedures.

1.2 SELECTION AND PURCHASE

A. At the earliest practical date after award of the Contract, advise Architect of the date when final selection, or purchase and delivery, of each product or system described by an allowance must be completed by the Owner to avoid delaying the Work.

B. At Architect's request, obtain proposals for each allowance for use in making final selections. Include recommendations that are relevant to performing the Work.

C. Purchase products and systems selected by Architect from the designated supplier.

1.3 ACTION SUBMITTALS

A. Submit proposals for purchase of products or systems included in allowances in the form specified for Change Orders.

1.4 INFORMATIONAL SUBMITTALS

A. Submit invoices or delivery slips to show actual quantities of materials delivered to the site for use in fulfillment of each allowance.

B. Submit time sheets and other documentation to show labor time and cost for installation of allowance items that include installation as part of the allowance.

C. Coordinate and process submittals for allowance items in same manner as for other portions of the Work.

1.5 LUMP-SUM ALLOWANCES

A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight, and delivery to Project site.

B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by Owner or selected by Architect under allowance shall be included as part of the Contract Sum and not part of the allowance.

C. See Schedule of Allowances.

1.6 UNIT-COST ALLOWANCES

A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight, and delivery to Project site.

B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by Owner or selected by Architect under allowance shall be included as part of the Contract Sum and not part of the allowance.

C. See Schedule of Allowances.

1.7 QUANTITY ALLOWANCES

A. Allowance shall include cost to Contractor of specific products and materials ordered by Owner or selected by Architect under allowance and shall include taxes, freight and delivery to Project site.

B. Unless otherwise indicated, Contractor's costs for receiving and handling at Project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by Owner or selected by Architect under allowance shall be included as part of the Contract Sum and not part of the allowance.

C. See Schedule of Allowances.

1.8 ADJUSTMENT OF ALLOWANCES

A. Allowance Adjustment: To adjust allowance amounts, prepare a Change Order proposal based on the difference between purchase amount and the allowance, multiplied by final measurement of work-in-place where applicable. If applicable, include reasonable allowances for cutting losses, tolerances, mixing wastes, normal product imperfections, and similar margins.

1. Include installation costs in purchase amount only where indicated as part of the allowance.
2. If requested, prepare explanation and documentation to substantiate distribution of overhead costs and other markups.
3. Submit substantiation of a change in scope of Work, if any, claimed in Change Orders related to unit-cost allowances.
4. Owner reserves the right to establish the quantity of work-in-place by independent quantity survey, measure, or count.

B. Submit claims for increased costs because of a change in scope or nature of the allowance described in the Contract Documents, whether for the purchase order amount or Contractor's handling, labor, installation, overhead, and profit.

1. Do not include Contractor's or subcontractor's indirect expense in the Change Order cost amount unless it is clearly shown that the nature or extent of Work has changed from what could have been foreseen from information in the Contract Documents.
2. No change to Contractor's indirect expense is permitted for selection of higher- or lower-priced materials or systems of the same scope and nature as originally indicated.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine products covered by an allowance promptly on delivery for damage or defects. Return damaged or defective products to manufacturer for replacement.

3.2 PREPARATION

A. Coordinate materials and their installation for each allowance with related materials and installations to ensure that each allowance item is completely integrated and interfaced with related work.

3.3 SCHEDULE OF ALLOWANCES

A. Allowance No. 1: Lump-Sum Allowance: Include the sum of $50,000.00 for Memorial Garden.

1. This allowance includes material, receiving, handling, and installation costs, and Contractor overhead and profit.

B. Allowance No. 2: Lump-Sum Allowance: GC is to provide a lump sum allowance for the abatement of hazardous materials as listed within the Hazardous Materials Survey Reports in Appendices C and D and in accordance with spec Section 02 81 00 – Transportation and Disposal of Hazardous Materials.

1. This allowance includes the proper removal of materials, handling, transportation, and disposal costs by a certified abatement specialist, and Contractor overhead and profit.

END OF SECTION 012100

SECTION 01 22 00 - UNIT PRICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for unit prices.

B. Related Requirements:

1. Section 012100 “Allowances” for procedures related to providing an allowance for hazardous materials noted in the Hazardous Material Survey Reports.

2. Section 012600 "Contract Modification Procedures" for procedures for submitting and handling Change Orders.

1.3 DEFINITIONS

A. Unit price is an amount incorporated in the Agreement, applicable during the duration of the Work as a price per unit of measurement for materials, equipment, or services, or a portion of the Work, added to or deducted from the Contract Sum by appropriate modification, if the scope of Work or estimated quantities of Work required by the Contract Documents are increased or decreased.

1.4 PROCEDURES

A. Unit prices include all necessary material, plus cost for delivery, installation, insurance, applicable taxes, overhead, and profit, unless otherwise indicated.

B. Owner reserves the right to reject Contractor's measurement of work-in-place that involves use of established unit prices and to have this work measured, at Owner's expense, by an independent surveyor acceptable to Contractor.

C. List of Unit Prices: A schedule of unit prices is included in the Bid Form. Specification Sections referenced in the schedule contain requirements for materials described under each unit price. Unit prices are fixed.

1.5 SCHEDULE OF UNIT PRICES

A. Provide Unit Prices related to removal of Hazardous Materials per the table under PART 4; refer to Hazardous Materials Survey Reports in Appendix A.

1. The Unit Prices table in PART 4, in conjunction with the Hazardous Materials Survey Reports in Appendix A, is to be used to determine an allowance for known hazardous materials abatement. Refer to spec Section 01 21 00 – Allowances.

2. The Unit Prices provided are to be utilized, where applicable, for additional hazardous materials found above and beyond what is listed within the Hazardous Materials Survey Reports in Appendix A.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

PART 4 - HAZMAT MATERIALS UNIT PRICE SCHEDULE

A. To be included with Bid Submission.

Item	Description	Unit	Rate
1.0 Asbestos			
1.1	Tile and Mastic	SF	
1.2	Fire Door Insulation	EA	
1.3	Wall Plaster	SF	
1.4	Linoleum Sheet Flooring	SF	
2.0 Lead Based Paint Evaluation			
2.1	Per Room	SF	
3.0 Dust-Lead Hazards			
3.1	Per Room	SF	
4.0 Hazardous Materials Survey			
4.1	Fluorescent Light Fixtures (Ballasts)	EA	
4.2	4’ Fluorescent Light Tubes	EA	
4.3	U-Shared Fluorescent Lights	EA	
4.4	Batteries	EA	
4.5	Fire Extinguishers	EA	
4.6	Mercury Switch	EA

16.0	Labor Rate for Certified Asbestos Worker (Over time)	HR	

END OF SECTION

SECTION 01 23 00 - ALTERNATES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 1 Specification Sections, apply to this Section.

B. Baltimore County's general provisions, terms, and conditions included in each bid package shall also apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for alternates.

1.3 DEFINITIONS

A. Alternate: An amount proposed by bidders and stated on the Bid Form for certain work defined in the bidding requirements that may be added to or deducted from the base bid amount if Owner decides to accept a corresponding change either in the amount of construction to be completed or in the products, materials, equipment, systems, or installation methods described in the Contract Documents.

1. Alternates described in this Section are part of the Work only if enumerated in the Agreement.
2. The cost or credit for each alternate is the net addition to or deduction from the Contract Sum to incorporate alternate into the Work. No other adjustments are made to the Contract Sum.

1.4 PROCEDURES

A. Coordination: Revise or adjust affected adjacent work as necessary to completely integrate work of the alternate into Project.

1. Include as part of each alternate, miscellaneous devices, accessory objects, and similar items incidental to or required for a complete installation whether or not indicated as part of alternate.

B. Notification: Immediately following award of the Contract, notify each party involved, in writing, of the status of each alternate. Indicate if alternates have been accepted, rejected, or deferred for later consideration. Include a complete description of negotiated revisions to alternates.

C. Execute accepted alternates under the same conditions as other work of the Contract.

D. Schedule: A schedule of alternates is included at the end of this Section. Specification Sections referenced in schedule contain requirements for materials necessary to achieve the work described under each alternate.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 SCHEDULE OF ALTERNATES

A. Add Alternate No. 1: The Amount to be added to the total contract sum in connection with increasing the base bid level 3 ballistic ratings at the exterior storefront system and glazing to level 5 ballistic rating, where shown on the architectural drawings.

B Add Alternate No. 2: The Amount to be added to the total contract sum in connection with providing brick veneer, type A, in lieu of ground face CMU.

C. Add Alternate No. 3: The Amount to be added to the total contract sum in connection with providing vinyl privacy slats to the entire area of existing fence to remain.

D. Deduct Alternate No. 1: The Amount to be deducted from the total contract sum in connection with removing the rear staff entrance canopy on the north side of the Precinct as shown on the architectural, structural and electrical drawings. Deletes the staff entrance canopy in its entirety including the architectural, structural and electrical components.

E. Deduct Alternate No. 2: The Amount to be deducted from the total contract sum to delete the base bid area of ballistic 3 exterior storefront at the south wall of the lobby and provide patterned brick in lieu, where shown in the architectural drawings.

END OF SECTION 01 23 00

SECTION 01 25 00 - SUBSTITUTION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for substitutions made after award of the Contract.

1.3 DEFINITIONS

A. Substitutions: Products considered to be able to perform the same function but not necessarily have the same design, arrangement, details, utility requirements and/or dimensions. Changes in products, materials, and equipment required by the Contract Documents proposed by the Contractor after award of the Contract are considered to be requests for substitutions. The following are not considered to be requests for substitutions:

1. Revisions to the Contract Documents requested by the Owner or Architect.
2. Specified options of products or “approved equals” as permitted and included in the Contract Documents.
3. The Contractor's determination of and compliance with governing regulations and orders issued by governing authorities.

B. Substitutions for Cause: Changes proposed by Contractor that are required due to changed Project conditions, such as unavailability of product, regulatory changes, or unavailability of required warranty terms.

C. Substitutions for Convenience: Changes proposed by Contractor or Owner that are not required to meet other Project requirements but may offer advantage to Contractor or Owner.

1.4 ACTION SUBMITTALS

A. General: No substitution requests will be considered from manufacturer’s representatives or product vendors unless submitted through the Contractor. No substitution requests will be considered during the bid period. Bids shall be based on products from one of the manufacturers specified or an “or equal” product.

B. Substitution Requests: Submit documentation identifying product or fabrication or installation method to be replaced. Include Specification Section number and title and Drawing numbers and titles.
1. Documentation: Show compliance with requirements for substitutions and the following, as applicable:

a. Statement indicating why specified product or fabrication or installation method cannot be provided, if applicable.
b. Coordination of information, including a list of changes or revisions needed to other parts of the Work and to construction performed by Owner and separate contractors that will be necessary to accommodate proposed substitution.
c. Detailed comparison of significant qualities of proposed substitutions with those of the Work specified. Include annotated copy of applicable Specification Section. Significant qualities may include attributes, such as performance, weight, size, durability, visual effect, sustainable design characteristics, warranties, and specific features and requirements indicated. Indicate deviations, if any, from the Work specified.
d. Product Data, including drawings and descriptions of products and fabrication and installation procedures.
e. Samples, where applicable or requested.
f. Certificates and qualification data, where applicable or requested.
g. List of similar installations for completed projects, with project names and addresses as well as names and addresses of architects and owners.
h. Material test reports from a qualified testing agency, indicating and interpreting test results for compliance with requirements indicated.
i. Detailed comparison of Contractor's construction schedule using proposed substitutions with products specified for the Work, including effect on the overall Contract Time. If specified product or method of construction cannot be provided within the Contract Time, include letter from manufacturer, on manufacturer's letterhead, stating date of receipt of purchase order, lack of availability, or delays in delivery.
j. Cost information, including a proposal of change, if any, in the Contract Sum.
k. Contractor's certification that proposed substitution complies with requirements in the Contract Documents, except as indicated in substitution request, is compatible with related materials and is appropriate for applications indicated.
l. Contractor's waiver of rights to additional payment or time that may subsequently become necessary because of failure of proposed substitution to produce indicated results.

2. Architect's Action: If necessary, Architect will request additional information or documentation for evaluation within (7) days of receipt of a request for substitution. Architect will notify Contractor of acceptance or rejection of proposed substitution within (15) days of receipt of request, or (8) days of receipt of additional information or documentation, whichever is later.

a. Use product specified if Architect does not issue a decision on use of a proposed substitution within time allocated.

1.5 QUALITY ASSURANCE

A. Compatibility of Substitutions: Investigate and document compatibility of proposed substitution with related products and materials. Engage a qualified testing agency to perform compatibility tests recommended by manufacturers.

1.6 PROCEDURES

A. Coordination: Revise or adjust affected work as necessary to integrate work of the approved substitutions.

1.7 SUBSTITUTIONS

A. Prior to issuing substitution requests or changes, review for LEED compliance and include any impacts to meeting LEED requirement. Contractor is responsible for any and all consequences of its failure to conduct this review properly and to make required notifications.

B. Substitutions for Cause: Submit requests for substitution immediately on discovery of need for change, but not later than (15) days prior to time required for preparation and review of related submittals.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution is consistent with the Contract Documents and will produce indicated results.
b. Substitution request is fully documented and properly submitted.
c. Requested substitution will not adversely affect Contractor's construction schedule.
d. Requested substitution has received necessary approvals of authorities having jurisdiction.
e. Requested substitution is compatible with other portions of the Work.
f. Requested substitution has been coordinated with other portions of the Work.
g. Requested substitution provides specified warranty.
h. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

C. Substitutions for Convenience: Architect will consider requests for substitution if received within (60) days after the Notice of Award. Requests received after that time may be considered or rejected at discretion of Architect.

1. Conditions: Architect will consider Contractor's request for substitution when the following conditions are satisfied. If the following conditions are not satisfied, Architect will return requests without action, except to record noncompliance with these requirements:

a. Requested substitution offers Owner a substantial advantage in cost, time, energy conservation, or other considerations, after deducting additional responsibilities Owner must assume. Owner's additional responsibilities may include compensation to Architect for redesign and evaluation services, increased cost of other construction by Owner, and similar considerations.
b. Requested substitution does not require extensive revisions to the Contract Documents.
c. Requested substitution is consistent with the Contract Documents and will produce indicated results.
d. Substitution request is fully documented and properly submitted.
e. Requested substitution will not adversely affect Contractor's construction schedule.
f. Requested substitution has received necessary approvals of authorities having jurisdiction.
g. Requested substitution is compatible with other portions of the Work.
h. Requested substitution has been coordinated with other portions of the Work.
i. Requested substitution provides specified warranty.
j. If requested substitution involves more than one contractor, requested substitution has been coordinated with other portions of the Work, is uniform and consistent, is compatible with other products, and is acceptable to all contractors involved.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 25 00

SECTION 01 26 00 - CONTRACT MODIFICATION PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for handling and processing Contract modifications.

B. Related Requirements:

1. Division 01 Section "Substitution Procedures" for administrative procedures for handling requests for substitutions made after the Contract award.
2. Division 01 Section "Project Management and Coordination" for requirements for forms for contract modifications provided as part of web-based Project management software.

1.3 MINOR CHANGES IN THE WORK

A. Architect will issue supplemental instructions authorizing minor changes in the Work, not involving adjustment to the Contract Sum or the Contract Time.

1.4 PROPOSAL REQUESTS

A. Owner-Initiated Proposal Requests: The Architect will issue a detailed description of proposed changes in the Work that may require adjustment to the Contract Sum or the Contract Time. If necessary, the description will include supplemental or revised Drawings and Specifications.

1. Work Change Proposal Requests issued by the Architect are not instructions either to stop work in progress or to execute the proposed change.
2. Within (14) days, when not otherwise specified, after receipt of Proposal Request, submit a quotation estimating cost adjustments to the Contract Sum and the Contract Time necessary to execute the change.

    a. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
    b. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
    c. Include costs of labor and supervision directly attributable to the change.
    d. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and

finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.

B. Contractor-Initiated Proposals: If latent or changed conditions require modifications to the Contract, Contractor may initiate a claim by submitting a request for a change to the Owner.

1. Include a statement outlining reasons for the change and the effect of the change on the Work. Provide a complete description of the proposed change. Indicate the effect of the proposed change on the Contract Sum and the Contract Time.
2. Include a list of quantities of products required or eliminated and unit costs, with total amount of purchases and credits to be made. If requested, furnish survey data to substantiate quantities.
3. Indicate applicable taxes, delivery charges, equipment rental, and amounts of trade discounts.
4. Include costs of labor and supervision directly attributable to the change.
5. Include an updated Contractor's construction schedule that indicates the effect of the change, including, but not limited to, changes in activity duration, start and finish times, and activity relationship. Use available total float before requesting an extension of the Contract Time.
6. Comply with requirements in Section 012500 "Substitution Procedures" if the proposed change requires substitution of one product or system for product or system specified.

1.5 CHANGE ORDER PROCEDURES

A. On Owner's approval of a Work Change Proposal Request, the Contractor will issue a Change Order for signatures of Owner and Contractor.

1.6 CONSTRUCTION CHANGE DIRECTIVE

A. Construction Change Directive: The Architect may issue through Owner a Construction Change Directive. Construction Change Directive instructs the Contractor to proceed with a change in the Work, for subsequent inclusion in a Change Order.

1. The Construction Change Directive contains a complete description of change in the Work. It also designates method to be followed to determine change in the Contract Sum or the Contract Time.

B. Documentation: Maintain detailed records on a time and material basis of work required by the Construction Change Directive.

1. After completion of change, submit an itemized account and supporting data necessary to substantiate cost and time adjustments to the Contract.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 26 00

SECTION 01 29 00 - PAYMENT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements necessary to prepare and process Applications for Payment.

1.3 DEFINITIONS

A. Schedule of Values: A statement furnished by Contractor allocating portions of the Contract Sum to various portions of the Work and used as the basis for reviewing Contractor's Applications for Payment.

1.4 SCHEDULE OF VALUES

A. Coordination: Coordinate preparation of the schedule of values with preparation of Contractor's construction schedule.

1. Coordinate line items in the schedule of values with items required to be indicated as separate activities in Contractor's construction schedule.
2. Submit the schedule of values to Architect at earliest possible date, but no later than five (5) days after Notice to Proceed.

B. Format and Content: Use Project Manual table of contents as a guide to establish line items for the schedule of values. Provide at least one line item for each Specification Section.

1. Identification: Include the following Project identification on the schedule of values:

    a. Project name and location.
    b. Owner's name.
    c. Owner's Project number.
    d. Name of Architect.
    e. Architect's Project number.
    f. Contractor's name and address.
    g. Date of submittal.

2. Arrange the schedule of values in tabular form, with separate columns to indicate the following for each item listed:

    a. Related Specification Section or division.

b. Description of the Work.
c. Name of subcontractor.
d. Name of manufacturer or fabricator.
e. Name of supplier.
f. Change Orders (numbers) that affect value.
g. Dollar value of the following, as a percentage of the Contract Sum to nearest one-hundredth percent, adjusted to total 100 percent. Round dollar amounts to whole dollars, with total equal to Contract Sum.
   1) Labor.
   2) Materials.
   3) Equipment.

3. Provide a breakdown of the Contract Sum in enough detail to facilitate continued evaluation of Applications for Payment and progress reports. Principal subcontract amounts should be broken down into multiple Items. Each Item should be complete including its total cost and proportionate share of general and administrative overhead and profit. All dollar amounts should be rounded to the nearest whole dollar. The total of all the Items should equal the Contract price.

   a. The maximum value of any activity is $25,000.

4. Provide a separate line item in the schedule of values for each part of the Work where Applications for Payment may include materials or equipment purchased or fabricated and stored, but not yet installed.

   a. Differentiate between items stored on-site and items stored off-site.

5. Temporary Facilities: Show cost of temporary facilities and other major cost items that are not direct cost of actual work-in-place as separate line items.
6. Closeout Costs. Include separate line items under Contractor and principal subcontracts for Project closeout requirements in an amount totaling (5) percent of the Contract Sum and subcontract amount.
7. Schedule of Values Revisions: Revise the schedule of values when Change Orders or Construction Change Directives result in a change in the Contract Sum. Include at least one separate line item for each Change Order and Construction Change Directive.
8. Submittal for preliminary and monthly progress submittals for Building Product Calculator (BPC), Construction and Demolition Waste Management Plan and Indoor Air Quality Plan.

1.5 APPLICATIONS FOR PAYMENT

A. Each Application for Payment following the initial Application for Payment shall be consistent with previous applications and payments, as certified by Architect and paid for by Owner.

B. Payment Application Times: Submit Application for Payment to the Owner by the 25th of the month. The period covered by each Application for Payment is one month, ending on the last day of the month.

   1. Submit draft copy of Application for Payment (7) days prior to due date for review by Architect.

C. Application for Payment Forms: Use AIA Document G702 and AIA Document G703 as form for Applications for Payment.

1. Other Application for Payment forms proposed by the Contractor may be acceptable to Architect and Owner. Submit forms for approval with initial submittal of schedule of values.

D. Application Preparation: Complete every entry on form. Notarize and execute by a person authorized to sign legal documents on behalf of Contractor. The Owner will return incomplete applications without action.

1. Entries shall match data on the schedule of values and Contractor's construction schedule. Use updated schedules if revisions were made.
2. Include amounts for work completed following previous Application for Payment, whether or not payment has been received. Include only amounts for work completed at time of Application for Payment.
3. Include amounts of Change Orders and Construction Change Directives issued before last day of construction period covered by application.

E. Stored Materials: Include in Application for Payment amounts applied for materials or equipment purchased or fabricated and stored, but not yet installed. Differentiate between items stored on-site and items stored off-site.

1. Provide certificate of insurance, evidence of transfer of title to Owner, and consent of surety to payment for stored materials.
2. Provide supporting documentation that verifies amount requested, such as paid invoices. Match amount requested with amounts indicated on documentation; do not include overhead and profit on stored materials.
3. Provide summary documentation for stored materials indicating the following:

    a. Value of materials previously stored and remaining stored as of date of previous Applications for Payment.
    b. Value of previously stored materials put in place after date of previous Application for Payment and on or before date of current Application for Payment.
    c. Value of materials stored since date of previous Application for Payment and remaining stored as of date of current Application for Payment.

F. Transmittal: Submit (3) signed and notarized original copies of each Application for Payment to the Owner by a method ensuring receipt within 24 hours. One copy shall include waivers of lien and similar attachments if required.

1. Transmit each copy with a transmittal form listing attachments and recording appropriate information about application.

G. Waivers of Mechanic's Lien: With each Application for Payment, submit waivers of mechanic's lien from subcontractors, sub-subcontractors, and suppliers for construction period covered by the previous application.

1. Submit partial waivers on each item for amount requested in previous application, after deduction for retainage, on each item.
2. When an application shows completion of an item, submit conditional final or full waivers.
3. Owner reserves the right to designate which entities involved in the Work must submit waivers.
4. Submit final Application for Payment with or preceded by conditional final waivers from every entity involved with performance of the Work covered by the application who is lawfully entitled to a lien.
5. Waiver Forms: Submit executed waivers of lien on forms acceptable to Owner.

H. Initial Application for Payment: Administrative actions and submittals that must precede or coincide with submittal of first Application for Payment include the following:

1. List of subcontractors.
2. Schedule of values.
3. Contractor's construction schedule (preliminary if not final).
4. Products list (preliminary if not final).
5. Sustainable design action plans, including preliminary project materials cost data.
6. Submittal schedule (preliminary if not final).
7. List of Contractor's staff assignments.
8. List of Contractor's principal consultants.
9. Copies of building permits.
10. Copies of authorizations and licenses from authorities having jurisdiction for performance of the Work.
11. Initial progress report.
12. Report of preconstruction conference.
13. Submittal for preliminary and monthly progress submittals for Building Products Calculator (BPC), Low Emitting Materials (LEM) Calculator, Construction and Demolition Waste Management Plan, and Indoor Air Quality Plan. Include project material costs and volumes (liters) data.

I. Application for Payment at Substantial Completion: After Architect issues the Certificate of Substantial Completion, submit an Application for Payment showing 100 percent completion for portion of the Work claimed as substantially complete.

1. Include documentation supporting claim that the Work is substantially complete and a statement showing an accounting of changes to the Contract Sum.

    a. Complete administrative actions, submittals, and Work preceding this application, as described in Division 01 Section "Closeout Procedures."
    b. Completion of LEED Online documentation.

2. This application shall reflect Certificate(s) of Substantial Completion issued previously for Owner occupancy of designated portions of the Work.
3. Administrative actions and/or submittals that shall precede or coincide with this application include:

    a. Occupancy permits and similar approvals.
    b. Warranties (guarantees) and maintenance agreements.
    c. Test/adjust/balance records.
    d. Maintenance instructions.
    e. Startup performance reports.
    f. Changeover information related to Owner's occupancy, use, operation, and maintenance.
    g. Final cleaning.
    h. Application for reduction of retainage and consent of surety.
    i. Advice on shifting insurance coverages.
    j. List of incomplete Work, recognized as exceptions to Architect's Certificate of Substantial Completion.

J. Final Payment Application: After completing Project closeout requirements, submit final Application for Payment with releases and supporting documentation not previously submitted and accepted, including, but not limited, to the following:

1. Evidence of completion of Project closeout requirements.
2. Certification of completion of final punch list items.
3. Insurance certificates for products and completed operations where required and proof that taxes, fees, and similar obligations were paid.
4. Updated final statement, accounting for final changes to the Contract Sum.
5. AIA Document G706.
6. AIA Document G706A.
7. AIA Document G707.
8. Evidence that claims have been settled.
9. Final meter readings for utilities, a measured record of stored fuel, and similar data as of date of Substantial Completion or when Owner took possession of and assumed responsibility for corresponding elements of the Work.
10. Final liquidated damages settlement statement.
11. Proof that taxes, fees, and similar obligations are paid.
12. Waivers and releases.
13. Completion of LEED Online documentation.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 29 00

SECTION 01 31 00 - PROJECT MANAGEMENT AND COORDINATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative provisions for coordinating construction operations on Project, including, but not limited to, the following:

1. General coordination procedures.
2. Coordination drawings.
3. RFIs.
4. Project meetings.

B. Related Requirements:

1. Division 01 Section "Construction Progress Documentation" for preparing and submitting Contractor's construction schedule.
2. Division 01 Section "Execution" for procedures for coordinating general installation and field-engineering services, including establishment of benchmarks and control points.
3. Division 01 Section "Closeout Procedures" for coordinating closeout of the Contract.
4. Division 01 Section "General Commissioning Requirements" for coordinating the Work with Commissioning Authority.

1.3 DEFINITIONS

A. BIM: Building Information Modeling.

B. RFI: Request for Information. Request from Owner, Architect, or Contractor seeking information required by or clarifications of the Contract Documents.

1.4 INFORMATIONAL SUBMITTALS

A. Subcontract List: Prepare a written summary identifying individuals or firms proposed for each portion of the Work, including those who are to furnish products or equipment fabricated to a special design. Include the following information in tabular form:

1. Name, address, telephone number, and email address of entity performing subcontract or supplying products.
2. Number and title of related Specification Section(s) covered by subcontract.
3. Drawing number and detail references, as appropriate, covered by subcontract.

B. Key Personnel Names: Within 15 days of starting construction operations, submit a list of key personnel assignments, including superintendent and other personnel in attendance at Project site. Identify individuals and their duties and responsibilities; list addresses, cellular telephone numbers, and e-mail addresses. Provide names, addresses, and telephone numbers of individuals assigned as alternates in the absence of individuals assigned to Project.

1. Post copies of list in temporary field office. Keep list current at all times.

1.5 GENERAL COORDINATION PROCEDURES

A. Coordination: Coordinate construction operations included in different Sections of the Specifications to ensure efficient and orderly installation of each part of the Work. Coordinate construction operations included in different Sections that depend on each other for proper installation, connection, and operation.

1. Schedule construction operations in sequence required to obtain the best results, where installation of one part of the Work depends on installation of other components, before or after its own installation.
2. Coordinate installation of different components to ensure maximum performance and accessibility for required maintenance, service, and repair.
3. Make adequate provisions to accommodate items scheduled for later installation.

B. Prepare memoranda for distribution to each party involved, outlining special procedures required for coordination. Include such items as required notices, reports, and list of attendees at meetings.

1. Prepare similar memoranda for Owner and separate contractors if coordination of their Work is required.

C. Administrative Procedures: Coordinate scheduling and timing of required administrative procedures with other construction activities to avoid conflicts and to ensure orderly progress of the Work. Such administrative activities include, but are not limited to, the following:

1. Preparation of Contractor's construction schedule.
2. Preparation of the schedule of values.
3. Installation and removal of temporary facilities and controls.
4. Delivery and processing of submittals.
5. Progress meetings.
6. Preinstallation conferences.
7. Project closeout activities.
8. Startup and adjustment of systems.

1.6 COORDINATION DRAWINGS

A. Coordination Drawings, General: Prepare coordination drawings according to requirements in individual Sections, and additionally where installation is not completely indicated on Shop Drawings, where limited space availability necessitates coordination, or if coordination is required to facilitate integration of products and materials fabricated or installed by more than one entity.

1. Content: Project-specific information, drawn accurately to a scale large enough to indicate and resolve conflicts. Do not base coordination drawings on standard printed data. Include the following information, as applicable:

    a. Use applicable Drawings as a basis for preparation of coordination drawings. Prepare sections, elevations, and details as needed to describe relationship of various systems and components.
    b. Coordinate the addition of trade-specific information to coordination drawings by multiple contractors in a sequence that best provides for coordination of the information and resolution of conflicts between installed components before submitting for review.
    c. Indicate functional and spatial relationships of components of architectural, structural, civil, mechanical, and electrical systems.
    d. Indicate space requirements for routine maintenance and for anticipated replacement of components during the life of the installation.
    e. Show location and size of access doors required for access to concealed dampers, valves, and other controls.
    f. Indicate required installation sequences.
    g. Indicate dimensions shown on Drawings. Specifically note dimensions that appear to be in conflict with submitted equipment and minimum clearance requirements. Provide alternative sketches to Architect indicating proposed resolution of such conflicts. Minor dimension changes and difficult installations will not be considered changes to the Contract.

B. Coordination Drawing Organization: Organize coordination drawings as follows:

1. Floor Plans and Reflected Ceiling Plans: Show architectural and structural elements, and mechanical, plumbing, fire-protection, fire-alarm, and electrical Work. Show locations of visible ceiling-mounted devices relative to acoustical ceiling grid. Supplement plan drawings with section drawings where required to adequately represent the Work.
2. Plenum Space: Indicate subframing for support of ceiling, and wall systems, mechanical and electrical equipment, and related Work. Locate components within plenums to accommodate layout of light fixtures and other components indicated on Drawings. Indicate areas of conflict between light fixtures and other components.
3. Mechanical Rooms: Provide coordination drawings for mechanical rooms, showing plans and elevations of mechanical, plumbing, fire-protection, fire-alarm, and electrical equipment.
4. Structural Penetrations: Indicate penetrations and openings required for all disciplines.
5. Slab Edge and Embedded Items: Indicate slab edge locations and sizes and locations of embedded items for metal fabrications, sleeves, anchor bolts, bearing plates, angles, door floor closers, slab depressions for floor finishes, curbs and housekeeping pads, and similar items.
6. Mechanical and Plumbing Work: Show the following:

    a. Sizes and bottom elevations of ductwork, piping, and conduit runs, including insulation, bracing, flanges, and support systems.
    b. Dimensions of major components, such as dampers, valves, diffusers, access doors, cleanouts and electrical distribution equipment.
    c. Fire-rated enclosures around ductwork.

7. Electrical Work: Show the following:

    a. Runs of vertical and horizontal conduit 1-1/4 inches in diameter and larger.

b. Light fixture, exit light, emergency battery pack, smoke detector, and other fire-alarm locations.
c. Panel board, switchboard, switchgear, transformer, busway, generator, and motor-control center locations.
d. Location of pull boxes and junction boxes, dimensioned from column center lines.

8. Fire-Protection System: Show the following:

a. Locations of standpipes, mains piping, branch lines, pipe drops, and sprinkler heads.

9. Review: Architect will review coordination drawings to confirm that, in general, the Work is being coordinated, but not for the details of the coordination, which are Contractor's responsibility. If Architect determines that coordination drawings are not being prepared in sufficient scope or detail, or are otherwise deficient, Architect will so inform Contractor, who shall make suitable modifications and resubmit.

C. Coordination Drawing Process: Prepare coordination drawings in the following manner:

1. Schedule submittal and review of Fire Sprinkler, Plumbing, HVAC, and Electrical Shop Drawings to make required changes prior to preparation of coordination drawings.
2. Commence routing of coordination drawing files with HVAC Installer, who will provide drawing plan files denoting approved ductwork. HVAC Installer will locate ductwork and piping on a single layer, using orange color. Forward drawings to Plumbing Installer.
3. Plumbing Installer will locate plumbing and equipment on a single layer, using blue color.
4. Fire Sprinkler Installer will locate piping and equipment, using red color. Fire Sprinkler Installer shall forward drawing files to Electrical Installer.
5. Electrical Installer will indicate service and feeder conduit runs and equipment in green color. Electrical Installer shall forward drawing files to Communications and Electronic Safety and Security Installer.
6. Communications and Electronic Safety and Security Installer will indicate cable trays and cabling runs and equipment in purple color. Communications and Electronic Safety and Security Installer shall forward completed drawing files to Contractor.
7. Contractor shall perform the final coordination review. As each coordination drawing is completed, Contractor will meet with Architect to review and resolve conflicts on the coordination drawings.

1.7 REQUEST FOR INFORMATION (RFI)

A. General: Immediately on discovery of the need for additional information, clarification, or interpretation of the Contract Documents, Contractor shall prepare and submit an RFI in the form specified.

1. Architect will return without response those RFIs submitted to Architect by other entities controlled by Contractor.
2. Coordinate and submit RFIs in a prompt manner to avoid delays in Contractor's work or work of subcontractors.

B. Content of the RFI: Include a detailed, legible description of item needing information or interpretation and the following:

1. Project name.
2. Owner name.

3. Owner's Project number.
4. Name of Architect.
5. Architect's Project number.
6. Date.
7. Name of Contractor.
8. RFI number, numbered sequentially.
9. RFI subject.
10. Specification Section number and title and related paragraphs, as appropriate.
11. Drawing number and detail references, as appropriate.
12. Field dimensions and conditions, as appropriate.
13. Contractor's suggested resolution. If Contractor's suggested resolution impacts the Contract Time or the Contract Sum, Contractor shall state impact in the RFI.
14. Contractor's signature.
15. Attachments: Include sketches, descriptions, measurements, photos, Product Data, Shop Drawings, coordination drawings, and other information necessary to fully describe items needing interpretation.

    a. Include dimensions, thicknesses, structural grid references, and details of affected materials, assemblies, and attachments on attached sketches.

C. RFI Forms: Software-generated form with substantially the same content as indicated above, acceptable to Architect.

1. Attachments shall be electronic files in PDF format.

D. Architect's Action: Allow (5) days for Architect's response for each RFI. RFIs received by Architect after 1:00 p.m. will be considered as received the following working day.

1. The following Contractor-generated RFIs will be returned without action:

    a. Requests for approval of submittals.
    b. Requests for approval of substitutions.
    c. Requests for approval of Contractor's means and methods.
    d. Requests for coordination information already indicated in the Contract Documents.
    e. Requests for adjustments in the Contract Time or the Contract Sum.
    f. Requests for interpretation of Architect's actions on submittals.
    g. Incomplete RFIs or inaccurately prepared RFIs.

2. Architect's action may include a request for additional information, in which case Architect's time for response will date from time of receipt by Architect of additional information.
3. Architect's action on RFIs that may result in a change to the Contract Time or the Contract Sum may be eligible for Contractor to submit Change Proposal according to Division 01 Section "Contract Modification Procedures."

    a. If Contractor believes the RFI response warrants change in the Contract Time or the Contract Sum, notify Architect and Owner in writing within [3] days of receipt of the RFI response.

E. RFI Log: Prepare, maintain, and submit a tabular log of RFIs organized by the RFI number.

F. On receipt of Architect's action, update the RFI log and immediately distribute the RFI response to affected parties. Review response and notify Architect within (3) days if Contractor disagrees with response.

1.8 DIGITAL PROJECT MANAGEMENT PROCEDURES

A. Web-Based Project Management Software Package: Contractor may use web-based Project management software for purposes of hosting and managing Project communication and documentation with Architect until Final Completion; **however, all communication and documentation with the Owner must be directly via email**. The owner will not use the web-based project management software or have any responsibility for it. The proper Owner point of contact will be identified to receive copies of pdfs and emails generated from the software.

1. Web-based Project management software includes the following features:

a. Compilation of Project data, including Contractor, subcontractors, Architect, Architect's consultants, and other entities involved in Project. Include names of individuals and contact information. Note that the Owner will not utilize the project management software and all submittals to the Owner shall be via email.
b. Access control for each entity for each workflow process, to determine entity's digital rights to create, modify, view, and print documents.
c. Document workflow planning, allowing customization of workflow between project entities.
d. Creation, logging, tracking, and notification for Project communications required in other Specification Sections, including, but not limited to, RFIs, submittals, Minor Changes in the Work, Construction Change Directives, and Change Orders.
e. Track status of each Project communication in real time, and log time and date when responses are provided.
f. Procedures for handling PDFs or similar file formats, allowing markups by each entity. Provide security features to lock markups against changes once submitted.
g. Creating and distributing meeting minutes.
h. Document management for Drawings, Specifications, and coordination drawings, including revision control.
i. Management of construction progress photographs.
j. Mobile device compatibility, including smartphones and tablets.

2. At completion of Project, provide digital archive in format that is readable by common desktop software applications in format acceptable to Architect. Provide data in locked format to prevent further changes.

B. PDF Document Preparation: Where PDFs are required to be submitted to Architect, prepare as follows:

1. Assemble complete submittal package into a single indexed file, incorporating submittal requirements of a single Specification Section and transmittal form with links enabling navigation to each item.
2. Name file with submittal number or other unique identifier, including revision identifier.
3. Certifications: Where digitally submitted certificates and certifications are required, provide a digital signature with digital certificate on where indicated.

1.9 PROJECT MEETINGS

A. General: Contractor will schedule and conduct meetings and conferences at Project site unless otherwise indicated.

1. Attendees: Inform participants and others involved, and individuals whose presence is required, of date and time of each meeting. Notify Owner and Architect of scheduled meeting dates and times a minimum of seven days prior to meeting.
2. Agenda: Prepare the meeting agenda. Distribute the agenda to all invited attendees.
3. Include LEED requirements and status update with each Agenda.
4. Minutes: Entity responsible for conducting meeting will record significant discussions and agreements achieved. Distribute the meeting minutes to everyone concerned, including Owner and Architect, within (5) days of the meeting.

B. Preconstruction Conference: Owner will schedule and conduct a preconstruction conference before starting construction, at a time convenient to Owner and Architect, but no later than 15 days after execution of the Agreement.

1. Attendees: Authorized representatives of Owner**,** Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the conference. Participants at the conference shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Discuss items of significance that could affect progress, including the following:

a. Responsibilities and personnel assignments.
b. Tentative construction schedule.
c. Phasing, if applicable.
d. Critical work sequencing and long lead items.
e. Designation of key personnel and their duties.
f. Lines of communications.
g. Procedures for processing field decisions and Change Orders.
h. Procedures for RFIs.
i. Procedures for testing and inspecting.
j. Procedures for processing Applications for Payment.
k. Distribution of the Contract Documents.
l. Submittal procedures.
m. Sustainable design requirements.
n. Preparation of Record Documents.
o. Use of the premises**.**
p. Work restrictions.
q. Working hours.
r. Owner's occupancy requirements.
s. Responsibility for temporary facilities and controls.
t. Procedures for moisture and mold control.
u. Procedures for disruptions and shutdowns.
v. Construction waste management and recycling.
w. Parking availability.
x. Office, work, and storage areas.
y. Equipment deliveries and priorities.
z. First aid.
aa. Security.
bb. Progress cleaning.

3. Minutes: Entity responsible for conducting meeting will record and distribute meeting minutes.

C. Preinstallation Conferences: Conduct a preinstallation conference at Project site before each construction activity when required by other Sections and when required for coordination with other construction.

1. Attendees: Installer and representatives of manufacturers and fabricators involved in or affected by the installation and its coordination or integration with other materials and installations that have preceded or will follow, shall attend the meeting. Advise Architect, and Owner's Commissioning Authority of scheduled meeting dates.
2. Agenda: Review progress of other construction activities and preparations for the particular activity under consideration, including requirements for the following:

    a. Contract Documents.
    b. Options.
    c. Related RFIs.
    d. Related Change Orders.
    e. Purchases.
    f. Deliveries.
    g. Submittals.
    h. Sustainable design requirements.
    i. Review of mockups.
    j. Possible conflicts.
    k. Compatibility requirements.
    l. Time schedules.
    m. Weather limitations.
    n. Manufacturer's written instructions.
    o. Warranty requirements.
    p. Compatibility of materials.
    q. Acceptability of substrates.
    r. Temporary facilities and controls.
    s. Space and access limitations.
    t. Regulations of authorities having jurisdiction.
    u. Testing and inspecting requirements.
    v. Installation procedures.
    w. Coordination with other work.
    x. Required performance results.
    y. Protection of adjacent work.
    z. Protection of construction and personnel.

3. Record significant conference discussions, agreements, and disagreements, including required corrective measures and actions.
4. Reporting: Distribute minutes of the meeting to each party present and to other parties requiring information.
5. Do not proceed with installation if the conference cannot be successfully concluded. Initiate whatever actions are necessary to resolve impediments to performance of the Work and reconvene the conference at earliest feasible date.

D. Project Closeout Conference: Contractor will schedule and conduct a project closeout conference, at a time convenient to Owner and Architect, but no later than (90) days prior to the scheduled date of Substantial Completion.

1. Conduct the conference to review requirements and responsibilities related to Project closeout.
2. Attendees: Authorized representatives of Owner, Owner's Commissioning Authority, Architect, and their consultants; Contractor and its superintendent; major subcontractors; suppliers; and other concerned parties shall attend the meeting. Participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
3. Agenda: Discuss items of significance that could affect or delay Project closeout, including the following:

    a. Preparation of Record Documents.
    b. Procedures required prior to inspection for Substantial Completion and for final inspection for acceptance.
    c. Submittal of written warranties.
    d. Requirements for completing sustainable design documentation.
    e. Requirements for preparing operations and maintenance data.
    f. Requirements for delivery of material samples, attic stock, and spare parts.
    g. Requirements for demonstration and training.
    h. Preparation of Contractor's punch list.
    i. Procedures for processing Applications for Payment at Substantial Completion and for final payment.
    j. Submittal procedures.
    k. Owner's partial occupancy requirements.
    l. Installation of Owner's furniture, fixtures, and equipment.
    m. Responsibility for removing temporary facilities and controls.

4. Minutes: Entity conducting meeting will record and distribute meeting minutes.

E. Progress Meetings: Contractor will conduct progress meetings at biweekly intervals.

1. Attendees: In addition to representatives of Owner, Owner's Commissioning Authority, and Architect, each contractor, subcontractor, supplier, and other entity concerned with current progress or involved in planning, coordination, or performance of future activities shall be represented at these meetings. All participants at the meeting shall be familiar with Project and authorized to conclude matters relating to the Work.
2. Agenda: Review and correct or approve minutes of previous progress meeting. Review other items of significance that could affect progress. Include topics for discussion as appropriate to status of Project.

    a. Contractor's Construction Schedule: Review progress since the last meeting. Determine whether each activity is on time, ahead of schedule, or behind schedule, in relation to Contractor's construction schedule. Determine how construction behind schedule will be expedited; secure commitments from parties involved to do so. Discuss whether schedule revisions are required to ensure that current and subsequent activities will be completed within the Contract Time.

        1) Review schedule for next period.

    b. Review present and future needs of each entity present, including the following:

        1) Interface requirements.
        2) Sequence of operations.
        3) Status of submittals.
        4) Status of sustainable design documentation.

5) Deliveries.
6) Off-site fabrication.
7) Access.
8) Site use.
9) Temporary facilities and controls.
10) Progress cleaning.
11) Quality and work standards.
12) Status of correction of deficient items.
13) Field observations.
14) Status of RFIs.
15) Status of Proposal Requests.
16) Pending changes.
17) Status of Change Orders.
18) Pending claims and disputes.
19) Documentation of information for payment requests.
20) LEED requirements and status update.

3. Minutes: Entity responsible for conducting the meeting will record and distribute the meeting minutes to each party present and to parties requiring information.

   a. Schedule Updating: Revise Contractor's construction schedule after each progress meeting, where revisions to the schedule have been made or recognized. Issue revised schedule concurrently with the report of each meeting.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 31 00

SECTION 01 32 00 - CONSTRUCTION PROGRESS DOCUMENTATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for documenting the progress of construction during performance of the Work, including the following:

1. Startup construction schedule.
2. Contractor's Construction Schedule.
3. Construction schedule updating reports.
4. Daily construction reports.
5. Material location reports.
6. Site condition reports.
7. Unusual event reports.

B. Related Requirements:

1. Division 01 Section "Quality Requirements" for schedule of tests and inspections.
2. Division 01 Section "Payment Procedures" for schedule of values and requirements for use of cost-loaded schedule for Applications for Payment.
3. Section 018113 – “Sustainable Design Requirements”.

1.3 DEFINITIONS

A. Activity: A discrete part of a project that can be identified for planning, scheduling, monitoring, and controlling the construction Project. Activities included in a construction schedule consume time and resources.

1. Critical Activity: An activity on the critical path that must start and finish on the planned early start and finish times.
2. Predecessor Activity: An activity that precedes another activity in the network.
3. Successor Activity: An activity that follows another activity in the network.

B. Cost Loading: The allocation of the schedule of values for completing an activity as scheduled. The sum of costs for all activities must equal the total Contract Sum.

C. CPM: Critical path method, which is a method of planning and scheduling a construction project where activities are arranged based on activity relationships. Network calculations determine the critical path of Project and when activities can be performed.

D. Critical Path: The longest connected chain of interdependent activities through the network schedule that establishes the minimum overall Project duration and contains no float.

E. Event: The starting or ending point of an activity.

F. Float: The measure of leeway in starting and completing an activity.

1. Float time is not for the exclusive use or benefit of either Owner or Contractor, but is a jointly owned, expiring Project resource available to both parties as needed to meet schedule milestones and Contract completion date.
2. Free float is the amount of time an activity can be delayed without adversely affecting the early start of the successor activity.
3. Total float is the measure of leeway in starting or completing an activity without adversely affecting the planned Project completion date.

G. Resource Loading: The allocation of manpower and equipment necessary for completing an activity as scheduled.

1.4 INFORMATIONAL SUBMITTALS

A. Format for Submittals: Submit required submittals in the following format:

1. Working electronic copy of schedule file.
2. PDF file.

B. Startup construction schedule.

1. Submittal of cost-loaded startup construction schedule will not constitute approval of schedule of values for cost-loaded activities.

C. Startup Network Diagram: Of size required to display entire network for entire construction period. Show logic ties for activities.

D. Contractor's Construction Schedule: Initial schedule, of size required to display entire schedule for entire construction period.

1. Submit a working digital copy of schedule, using software indicated, and labeled to comply with requirements for submittals.

E. CPM Reports: Concurrent with CPM schedule, submit each of the following reports. Format for each activity in reports shall contain activity number, activity description, cost and resource loading, original duration, remaining duration, early start date, early finish date, late start date, late finish date, and total float in calendar days.

1. Activity Report: List of activities sorted by activity number and then early start date, or actual start date if known.
2. Logic Report: List of preceding and succeeding activities for each activity, sorted in ascending order by activity number and then by early start date, or actual start date if known.
3. Total Float Report: List of activities sorted in ascending order of total float.

F. Construction Schedule Updating Reports: Submit with Applications for Payment.

G. Daily Construction Reports: Submit at weekly intervals.

H. Material Location Reports: Submit at weekly intervals.

I. Site Condition Reports: Submit at time of discovery of differing conditions.

J. Unusual Event Reports: Submit at time of unusual event.

K. Qualification Data: For scheduling consultant.

1.5 QUALITY ASSURANCE

A. Scheduling Consultant Qualifications: An experienced specialist in CPM scheduling and reporting, with capability of producing CPM reports and diagrams within 24 hours of Architect's request.

B. Prescheduling Conference: Conduct conference at Project site to comply with requirements in Division 01 Section "Project Management and Coordination." Review methods and procedures related to the preliminary construction schedule and Contractor's Construction Schedule, including, but not limited to, the following:

1. Review software limitations and content and format for reports.
2. Verify availability of qualified personnel needed to develop and update schedule.
3. Discuss constraints, including phasing work stages area separations and interim milestones.
4. Review delivery dates for Owner-furnished products.
5. Review schedule for work of Owner's separate contracts.
6. Review submittal requirements and procedures.
7. Review time required for review of submittals and resubmittals.
8. Review requirements for tests and inspections by independent testing and inspecting agencies.
9. Review time required for Project closeout and Owner startup procedures, including commissioning activities.
10. Review and finalize list of construction activities to be included in schedule.
11. Review procedures for updating schedule.

1.6 COORDINATION

A. Coordinate Contractor's Construction Schedule with the schedule of values, list of subcontracts, submittal schedule, progress reports, payment requests, and other required schedules and reports.

1. Secure time commitments for performing critical elements of the Work from entities involved.
2. Coordinate each construction activity in the network with other activities, and schedule them in proper sequence.

1.7 CONTRACTOR'S CONSTRUCTION SCHEDULE

A. Computer Scheduling Software: Prepare schedules using current version of a program that has been developed specifically to manage construction schedules.

B. Scheduling Consultant: Engage a consultant to provide planning, evaluation, and reporting, using CPM scheduling.

1. In-House Option: Owner may waive requirement to retain a consultant if Contractor employs skilled personnel with experience in CPM scheduling and reporting techniques. Submit qualifications.
2. Meetings: Scheduling consultant shall attend all meetings related to Project progress, alleged delays, and time impact.

C. Time Frame: Extend schedule from date established for the Notice to Proceed to date of Final Completion.

1. Contract completion date shall not be changed by submission of a schedule that shows an early completion date, unless specifically authorized by Change Order.

D. Activities: Treat each floor or separate area as a separate numbered activity for each main element of the Work. Comply with the following:

1. Activity Duration: Define activities so no activity is longer than 20 days, unless specifically allowed by Architect.
2. Temporary Facilities: Indicate start and completion dates for the following as applicable:

a. Securing of approvals and permits required for performance of the Work.
b. Temporary facilities.
c. Construction of mock-ups, prototypes and samples.
d. Owner interfaces and furnishing of items.
e. Interfaces with Separate Contracts.
f. Regulatory agency approvals.
g. Punch list.

3. Procurement Activities: Include procurement process activities for the following long lead-time items and major items, requiring a cycle of more than 60 days, as separate activities in schedule. Procurement cycle activities include, but are not limited to, submittals, approvals, purchasing, fabrication, and delivery.

4. Submittal Review Time: Include review and resubmittal times indicated in Section 013300 "Submittal Procedures" in schedule. Coordinate submittal review times in Contractor's Construction Schedule with submittal schedule.
5. Startup and Testing Time: Include no fewer than 15 days for startup and testing.
6. Commissioning Time: Include no fewer than 15 days for commissioning.
7. Substantial Completion: Indicate completion in advance of date established for Substantial Completion and allow time for Architect's administrative procedures necessary for certification of Substantial Completion.
8. Punch List and Final Completion: Include not more than 30 days for completion of punch list items and Final Completion.

E. Constraints: Include constraints and work restrictions indicated in the Contract Documents and as follows in schedule and show how the sequence of the Work is affected.

1. Work Restrictions: Show the effect of the following items on the schedule:

    a. Coordination with existing construction.
    b. Uninterruptible services.
    c. Partial occupancy before Substantial Completion.
    d. Use-of-premises restrictions.
    e. Provisions for future construction.
    f. Seasonal variations.
    g. Environmental control.

2. Work Stages: Indicate important stages of construction for each major portion of the Work, including, but not limited to, the following:

    a. Subcontract awards.
    b. Submittals.
    c. Purchases.
    d. Mockups.
    e. Fabrication.
    f. Sample testing.
    g. Deliveries.
    h. Installation.
    i. Tests and inspections.
    j. Adjusting.
    k. Curing.
    l. Building flush-out.
    m. Startup and placement into final use and operation.
    n. Commissioning.

F. Milestones: Include milestones indicated in the Contract Documents in schedule, including, but not limited to, the Notice to Proceed, Substantial Completion, and Final Completion, and the following interim milestones:

1. Temporary enclosure and space conditioning.

G. Upcoming Work Summary: Prepare summary report indicating activities scheduled to occur or commence prior to submittal of next schedule update. Summarize the following issues:

1. Unresolved issues.
2. Unanswered Requests for Information.
3. Rejected or unreturned submittals.
4. Notations on returned submittals.
5. Pending modifications affecting the Work and the Contract Time.

H. Contractor's Construction Schedule Updating: At monthly intervals, update schedule to reflect actual construction progress and activities. Issue schedule one week before each regularly scheduled progress meeting.

1. Revise schedule immediately after each meeting or other activity where revisions have been recognized or made. Issue updated schedule concurrently with the report of each such meeting.
2. Include a report with updated schedule that indicates every change, including, but not limited to, changes in logic, durations, actual starts and finishes, and activity durations.
3. As the Work progresses, indicate Final Completion percentage for each activity.

I. Recovery Schedule: When periodic update indicates the Work is 14 or more calendar days behind the current approved schedule, submit a separate recovery schedule indicating means by which Contractor intends to regain compliance with the schedule. Indicate changes to working hours, working days, crew sizes, equipment required to achieve compliance, and date by which recovery will be accomplished.

J. Distribution: Distribute copies of approved schedule to Architect**,** Owner, separate contractors, testing and inspecting agencies, and other parties identified by Contractor with a need-to-know schedule responsibility.

1. Post copies in Project meeting rooms and temporary field offices.
2. When revisions are made, distribute updated schedules to the same parties and post in the same locations. Delete parties from distribution when they have completed their assigned portion of the Work and are no longer involved in performance of construction activities.

1.8 STARTUP CONSTRUCTION SCHEDULE

A. Startup Network Diagram: Submit diagram within thirty (30) days after award of contract.

B. Preparation: Indicate each significant construction activity separately. Identify first workday of each week with a continuous vertical line. Outline significant construction activities for first 90 days of construction. Include skeleton diagram for the remainder of the Work and a cash requirement prediction based on indicated activities.

1.9 CPM SCHEDULE REQUIREMENTS

A. Prepare network diagrams using AON (activity-on-node) format.

B. CPM Schedule: Prepare Contractor's Construction Schedule using a cost- and resource-loaded, time-scaled CPM network analysis diagram for the Work.

1. Develop network diagram in sufficient time to submit CPM schedule, so it can be accepted for use no later than 30 days after date established for the Notice to Proceed.

    a. Failure to include any work item required for performance of this Contract shall not excuse Contractor from completing all work within applicable completion dates.

2. Conduct educational workshops to train and inform key Project personnel, including subcontractors' personnel, in proper methods of providing data and using CPM schedule information.
3. Establish procedures for monitoring and updating CPM schedule and for reporting progress. Coordinate procedures with progress meeting and payment request dates.
4. Use "one workday" as the unit of time for individual activities. Indicate nonworking days and holidays incorporated into the schedule to coordinate with the Contract Time.

C. CPM Schedule Preparation: Prepare a list of all activities required to complete the Work. Using the startup network diagram, prepare a skeleton network to identify probable critical paths.

1. Activities: Indicate the estimated time duration, sequence requirements, and relationship of each activity in relation to other activities. Include estimated time frames for the following activities:

    a. Preparation and processing of submittals.
    b. Mobilization and demobilization.
    c. Purchase of materials.
    d. Delivery.
    e. Fabrication.
    f. Utility interruptions.
    g. Installation.
    h. Work by Owner that may affect or be affected by Contractor's activities.
    i. Testing and inspection.
    j. Commissioning.
    k. Punch list and Final Completion.
    l. Activities occurring following Final Completion.

2. Critical Path Activities: Identify critical path activities, including those for interim completion dates. Scheduled start and completion dates shall be consistent with Contract milestone dates.
3. Processing: Process data to produce output data on a computer-drawn, time-scaled network. Revise data, reorganize activity sequences, and reproduce as often as necessary to produce the CPM schedule within the limitations of the Contract Time.
4. Format: Mark the critical path. Locate the critical path near center of network; locate paths with most float near the edges.

    a. Subnetworks on separate sheets are permissible for activities clearly off the critical path.

5. Cost- and Resource-Loading of CPM Schedule: Assign cost to construction activities on the CPM schedule. Do not assign costs to submittal activities. Obtain Architect's approval prior to assigning costs to fabrication and delivery activities. Assign costs under main subcontracts for testing and commissioning activities, operation and maintenance manuals, punch list activities, Project record documents, sustainable design documentation, and demonstration and training (if applicable), in the amount of 5 percent of the Contract Sum.

    a. Each activity cost shall reflect an appropriate value subject to approval by Architect.
    b. Total cost assigned to activities shall equal the total Contract Sum.

D. Contract Modifications: For each proposed contract modification and concurrent with its submission, prepare a time-impact analysis using a network fragment to demonstrate the effect of the proposed change on the overall Project schedule.

E. Initial Issue of Schedule: Prepare initial network diagram from a sorted activity list indicating straight "early start-total float." Identify critical activities. Prepare tabulated reports showing the following:

1. Contractor or subcontractor and the Work or activity.
2. Description of activity.
3. Main events of activity.
4. Immediate preceding and succeeding activities.
5. Early and late start dates.

6. Early and late finish dates.
7. Activity duration in workdays.
8. Total float or slack time.
9. Average size of workforce.
10. Dollar value of activity (coordinated with the schedule of values).

F. Schedule Updating: Concurrent with making revisions to schedule, prepare tabulated reports showing the following:

1. Identification of activities that have changed.
2. Changes in early and late start dates.
3. Changes in early and late finish dates.
4. Changes in activity durations in workdays.
5. Changes in the critical path.
6. Changes in total float or slack time.
7. Changes in the Contract Time.

G. Value Summaries: Prepare two cumulative value lists, sorted by finish dates.

1. In first list, tabulate activity number, early finish date, dollar value, and cumulative dollar value.
2. In second list, tabulate activity number, late finish date, dollar value, and cumulative dollar value.
3. In subsequent issues of both lists, substitute actual finish dates for activities completed as of list date.
4. Prepare list for ease of comparison with payment requests; coordinate timing with progress meetings.

    a. In both value summary lists, tabulate "actual percent complete" and "cumulative value completed" with total at bottom.

1.10 REPORTS

A. Daily Construction Reports: Prepare a daily construction report recording the following information concerning events at Project site:

1. List of subcontractors at Project site.
2. List of separate contractors at Project site.
3. Approximate count of personnel at Project site.
4. Equipment at Project site.
5. Material deliveries.
6. High and low temperatures and general weather conditions, including presence of rain or snow.
7. Testing and inspection.
8. Accidents.
9. Meetings and significant decisions.
10. Unusual events.
11. Stoppages, delays, shortages, and losses.
12. Meter readings and similar recordings.
13. Emergency procedures.
14. Orders and requests of authorities having jurisdiction.
15. Change Orders received and implemented.
16. Construction Change Directives received and implemented.

17. Services connected and disconnected.
18. Equipment or system tests and startups.
19. Partial completions and occupancies.
20. Substantial Completions authorized.

B. Material Location Reports: At monthly intervals, prepare and submit a comprehensive list of materials delivered to and stored at Project site. List shall be cumulative, showing materials previously reported plus items recently delivered. Include with list a statement of progress on and delivery dates for materials or items of equipment fabricated or stored away from Project site. Indicate the following categories for stored materials:

1. Material stored prior to previous report and remaining in storage.
2. Material stored prior to previous report and since removed from storage and installed.
3. Material stored following previous report and remaining in storage.

C. Site Condition Reports: Immediately on discovery of a difference between site conditions and the Contract Documents, prepare and submit a detailed report. Submit with a Request for Information. Include a detailed description of the differing conditions, together with recommendations for changing the Contract Documents.

D. Unusual Event Reports: When an event of an unusual and significant nature occurs at Project site, whether or not related directly to the Work, prepare and submit a special report. List chain of events, persons participating, responses by Contractor's personnel, evaluation of results or effects, and similar pertinent information. Advise Owner in advance when these events are known or predictable.

1. Submit unusual event reports directly to Owner within one day of an occurrence. Distribute copies of report to parties affected by the occurrence.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 32 00

SECTION 01 32 33 - PHOTOGRAPHIC DOCUMENTATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes administrative and procedural requirements for the following:

1. Preconstruction photographs.
2. Periodic construction photographs.
3. Final Completion construction photographs.

B. Related Requirements:

1. Section 017700 "Closeout Procedures" for submitting photographic documentation as Project Record Documents at Project closeout.
2. Section 018113 “Sustainable Design Requirements - LEED.”
3. Section 024119 "Selective Demolition" for photographic documentation before selective demolition operations commence.

1.2 INFORMATIONAL SUBMITTALS

A. Key Plan: Submit key plan of Project site and building with notation of vantage points marked for location and direction of each photograph. Indicate elevation or story of construction. Include same information as corresponding photographic documentation.

B. Digital Photographs: Submit image files within five (5) days of taking photographs.

1. Submit photos on thumb drive. Include copy of key plan indicating each photograph's location and direction.
2. Identification: Provide the following information with each image description in file metadata tag:

a. Name of Project.
b. Name and contact information for photographer.
c. Name of Architect.
d. Name of Contractor.
e. Date photograph was taken.
f. Description of location, vantage point, and direction.
g. Unique sequential identifier keyed to accompanying key plan.

1.3 FORMATS AND MEDIA

A. Digital Photographs: Provide color images in JPG format, produced by a digital camera with minimum sensor size of 12 megapixels. Use flash in low light levels or backlit conditions.

B. Digital Images: Submit digital media as originally recorded in the digital camera, without alteration, manipulation, editing, or modifications using image-editing software.

1.4 CONSTRUCTION PHOTOGRAPHS

A. Photographer: Engage a qualified photographer to take construction photographs.

B. General: Take photographs with maximum depth of field and in focus.

1. Maintain key plan with each set of construction photographs that identifies each photographic location.

C. Preconstruction Photographs: Before commencement of the Work, take photographs of Project structures and surrounding site, including existing items to remain during construction, from different vantage points, as directed by Architect.

1. Flag construction limits before taking construction photographs.
2. Take 20 photographs to show existing conditions before starting the Work to accurately record physical conditions at start of construction.
3. Take additional photographs as required to record settlement or cracking of adjacent structures, pavements, and improvements.

D. Concealed Work Photographs: Before proceeding with installing work that will conceal other work, take photographs sufficient in number, with annotated descriptions, to record nature and location of concealed Work, including, but not limited to, the following:

1. Underground utilities.
2. Underslab services.
3. Piping.
4. Electrical conduit.
5. Waterproofing and weather-resistant barriers.

E. Periodic Construction Photographs: Take 20 photographs weekly. Select vantage points to show status of construction and progress since last photographs were taken.

F. Final Completion Construction Photographs: Take 50 photographs after date of Substantial Completion for submission as Project Record Documents.

G. LEED Documentation: Comply with photographic documentation requirements for IEQ credit 3 and SS prerequisite 1 in Section 018113 “Sustainable Design Requirements - LEED.”

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 32 33

SECTION 01 33 00 - SUBMITTAL PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Submittal schedule requirements.
2. Administrative and procedural requirements for submittals.

B. Related Requirements:

1. Division 01 Section "Payment Procedures" for submitting Applications for Payment and the schedule of values.
2. Division 01 Section "Project Management and Coordination" for submitting coordination drawings and subcontract list.
3. Division 01 Section "Construction Progress Documentation" for submitting schedules and reports, including Contractor's construction schedule.
4. Division 01 Section "Quality Requirements" for submitting test and inspection reports, and schedule of tests and inspections.
5. Division 01 Section "Closeout Procedures" for submitting closeout submittals and maintenance material submittals.
6. Division 01 Section "Operation and Maintenance Data" for submitting operation and maintenance manuals.
7. Division 01 Section "Project Record Documents" for submitting record Drawings, record Specifications, and record Product Data.
8. Division 01 Section "Demonstration and Training" for submitting video recordings of demonstration of equipment and training of Owner's personnel.

1.3 DEFINITIONS

A. Action Submittals: Written and graphic information and physical samples that require Architect's responsive action. Action submittals are those submittals indicated in individual Specification Sections as "action submittals."

B. Informational Submittals: Written and graphic information and physical samples that do not require Architect's responsive action. Submittals may be rejected for not complying with requirements. Informational submittals are those submittals indicated in individual Specification Sections as "informational submittals."

1.4 SUBMITTAL SCHEDULE

A. Submittal Schedule: Submit, as an action submittal, a list of submittals, arranged in chronological order by dates required by construction schedule. Include time required for review, ordering, manufacturing, fabrication, and delivery when establishing dates. Include additional time required for making corrections or revisions to submittals noted by Architect and additional time for handling and reviewing submittals required by those corrections.

1. Coordinate submittal schedule with list of subcontracts, the schedule of values, and Contractor's construction schedule.
2. Initial Submittal Schedule: Submit concurrently with startup construction schedule. Include submittals required during the first 60 days of construction. List those submittals required to maintain orderly progress of the Work and those required early because of long lead time for manufacture or fabrication.
3. Final Submittal Schedule: Submit concurrently with the first complete submittal of Contractor's construction schedule.

    a. Submit revised submittal schedule as required to reflect changes in current status and timing for submittals.

4. Format: Arrange the following information in a tabular format:

    a. Scheduled date for first submittal.
    b. Specification Section number and title.
    c. Submittal Category: Action; informational.
    d. Name of subcontractor.
    e. Description of the Work covered.
    f. Scheduled date for Architect's final release or approval.
    g. Scheduled dates for purchasing.
    h. Scheduled date of fabrication.
    i. Scheduled dates for installation.
    j. Activity or event number.

1.5 SUBMITTAL FORMATS

A. Submittal Information: Include the following information in each submittal:

1. Project name.
2. Date.
3. Name of Architect.
4. Name of Contractor.
5. Name of firm or entity that prepared submittal.
6. Names of subcontractor, manufacturer, and supplier.
7. Unique submittal number, including revision identifier. Include Specification Section number with sequential alphanumeric identifier and alphanumeric suffix for resubmittals.
8. Category and type of submittal.
9. Submittal purpose and description.
10. Number and title of Specification Section, with paragraph number and generic name for each of multiple items.
11. Drawing number and detail references, as appropriate.
12. Indication of full or partial submittal.
13. Location(s) where product is to be installed, as appropriate.
14. Other necessary identification.

15. Remarks.
16. Signature of transmitter.

B. Options: Identify options requiring selection by Architect.

C. Deviations and Additional Information: On each submittal, clearly indicate deviations from requirements in the Contract Documents, including minor variations and limitations; include relevant additional information and revisions, other than those requested by Architect on previous submittals. Indicate by highlighting on each submittal or noting on attached separate sheet.

D. Electronic Submittals: Prepare submittals as PDF files.

1.6 SUBMITTAL PROCEDURES

A. Prepare and submit submittals required by individual Specification Sections. Types of submittals are indicated in individual Specification Sections.

1. Web-Based Project Management Software: Prepare submittals in PDF form, and upload to the web-based Project management software website. Enter required data in web-based software site to fully identify submittal.

2. Email: Owner requires submittals as PDF package transmitted by sending via email or uploading to the Baltimore County File Share site. Include PDF transmittal form. Include information in email subject line as requested by Architect.

B. Coordination: Coordinate preparation and processing of submittals with performance of construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity.
2. Submit all submittal items required for each Specification Section concurrently unless partial submittals for portions of the Work are indicated on approved submittal schedule.
3. Submit action submittals and informational submittals required by the same Specification Section as separate packages under separate transmittals.
4. Coordinate transmittal of submittals for related parts of the Work specified in different Sections, so processing will not be delayed because of need to review submittals concurrently for coordination.

    a. Architect reserve the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Processing Time: Allow time for submittal review, including time for resubmittals, as follows. Time for review shall commence on Architect's receipt of submittal. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing, including resubmittals.

1. Initial Review: Allow (15) days for initial review of each submittal. Allow additional time if coordination with subsequent submittals is required. Architect will advise Contractor when a submittal being processed must be delayed for coordination.
2. Intermediate Review: If intermediate submittal is necessary, process it in same manner as initial submittal.

3. Resubmittal Review: Allow (15) days for review of each resubmittal.
4. Sequential Review: Where sequential review of submittals by Architect's consultants, Owner, or other parties is indicated, allow (21) days for initial review of each submittal.

D. Resubmittals: Make resubmittals in same form and number of copies as initial submittal.

1. Note date and content of previous submittal.
2. Note date and content of revision in label or title block, and clearly indicate extent of revision.
3. Resubmit submittals until they are marked with approval notation from Architect's action stamp.

E. Distribution: Furnish copies of final submittals to manufacturers, subcontractors, suppliers, fabricators, installers, authorities having jurisdiction, and others as necessary for performance of construction activities. Show distribution on transmittal forms.

F. Use for Construction: Retain complete copies of submittals on Project site. Use only final action submittals that are marked with approval notation from Architect's action stamp.

1.7 SUBMITTAL REQUIREMENTS

A. LEED Submittals: Submit LEED Submittal Form listing applicable products for use, with name of manufacturer and model number for each product; indicate material cost values and volumes (liters); indicate documents included in submittal.

1. Refer to Section 01 81 13 “Sustainable Design Requirements – LEED” for product documentation per credit requirements.

B. Product Data: Collect information into a single submittal for each element of construction and type of product or equipment.

1. If information must be specially prepared for submittal because standard published data are unsuitable for use, submit as Shop Drawings, not as Product Data.
2. Mark each copy of each submittal to show which products and options are applicable.
3. Include the following information, as applicable:

a. Manufacturer's catalog cuts.
b. Manufacturer's product specifications.
c. Standard color charts.
d. Statement of compliance with specified referenced standards.
e. Testing by recognized testing agency.
f. Application of testing agency labels and seals.
g. Notation of coordination requirements.
h. Availability and delivery time information.

4. For equipment, include the following in addition to the above, as applicable:

a. Wiring diagrams that show factory-installed wiring.
b. Printed performance curves.
c. Operational range diagrams.
d. Clearances required to other construction, if not indicated on accompanying Shop Drawings.

5. Submit Product Data before Shop Drawings, and before or concurrently with Samples.

C. Shop Drawings: Prepare Project-specific information, drawn accurately to scale. Do not base Shop Drawings on reproductions of the Contract Documents or standard printed data.

1. Preparation: Fully illustrate requirements in the Contract Documents. Include the following information, as applicable:

a. Identification of products.
b. Schedules.
c. Compliance with specified standards.
d. Notation of coordination requirements.
e. Notation of dimensions established by field measurement.
f. Relationship and attachment to adjoining construction clearly indicated.
g. Seal and signature of professional engineer if specified.

D. Samples: Submit Samples for review of type, color, pattern, and texture for a check of these characteristics with other materials.

1. Transmit Samples that contain multiple, related components, such as accessories together in one submittal package.
2. Identification: Permanently attach label on unexposed side of Samples that includes the following:

a. Project name and submittal number.
b. Generic description of Sample.
c. Product name and name of manufacturer.
d. Sample source.
e. Number and title of applicable Specification Section.
f. Specification paragraph number and generic name of each item.

3. Disposition: Maintain sets of approved Samples at Project site, available for quality-control comparisons throughout the course of construction activity. Sample sets may be used to determine final acceptance of construction associated with each set.

a. Samples that may be incorporated into the Work are indicated in individual Specification Sections. Such Samples must be in an undamaged condition at time of use.
b. Samples not incorporated into the Work, or otherwise designated as Owner's property, are the property of Contractor.

4. Samples for Initial Selection: Submit manufacturer's color charts consisting of units or sections of units, showing the full range of colors, textures, and patterns available.

a. Number of Samples: Submit one full set(s) of available choices where color, pattern, texture, or similar characteristics are required to be selected from manufacturer's product line. Architect will return submittal with options selected.

5. Samples for Verification: Submit full-size units or Samples of size indicated, prepared from same material to be used for the Work, cured and finished in manner specified, and physically identical with material or product proposed for use, and that show full range of color and texture variations expected. Samples include, but are not limited to, the following: partial sections of manufactured or fabricated components; small cuts or containers of materials; complete units of repetitively used materials; swatches showing

color, texture, and pattern; color range sets; and components used for independent testing and inspection.

a. Number of Samples: Submit three sets of Samples. Architect will retain two Sample sets; remainder will be returned. Mark up and retain one returned Sample set as a project record Sample.

1) Submit a single Sample where assembly details, workmanship, fabrication techniques, connections, operation, and other similar characteristics are to be demonstrated.
2) If variation in color, pattern, texture, or other characteristic is inherent in material or product represented by a Sample, submit at least three sets of paired units that show approximate limits of variations.

E. Product Schedule: As required in individual Specification Sections, prepare a written summary indicating types of products required for the Work and their intended location. Include the following information in tabular form:

1. Type of product. Include unique identifier for each product indicated in the Contract Documents or assigned by Contractor if none is indicated.
2. Manufacturer and product name, and model number if applicable.
3. Number and name of room or space.
4. Location within room or space.

F. Qualification Data: Prepare written information that demonstrates capabilities and experience of firm or person. Include lists of completed projects with project names and addresses, contact information of architects and owners, and other information specified.

G. Design Data: Prepare and submit written and graphic information indicating compliance with indicated performance and design criteria in individual Specification Sections. Include list of assumptions and summary of loads. Include load diagrams if applicable. Provide name and version of software, if any, used for calculations. Number each page of submittal.

H. Certificates:

1. Certificates and Certifications Submittals: Submit a statement that includes signature of entity responsible for preparing certification. Certificates and certifications shall be signed by an officer or other individual authorized to sign documents on behalf of that entity. Provide a notarized signature where indicated.
2. Installer Certificates: Submit written statements on manufacturer's letterhead, certifying that Installer complies with requirements in the Contract Documents and, where required, is authorized by manufacturer for this specific Project.
3. Manufacturer Certificates: Submit written statements on manufacturer's letterhead, certifying that manufacturer complies with requirements in the Contract Documents. Include evidence of manufacturing experience where required.
4. Material Certificates: Submit written statements on manufacturer's letterhead, certifying that material complies with requirements in the Contract Documents.
5. Product Certificates: Submit written statements on manufacturer's letterhead, certifying that product complies with requirements in the Contract Documents.
6. Welding Certificates: Prepare written certification that welding procedures and personnel comply with requirements in the Contract Documents. Submit record of AWS B2.1/B2.1M on AWS forms. Include names of firms and personnel certified.

I. Test and Research Reports:

1. Compatibility Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of compatibility tests performed before installation of product. Include written recommendations for substrate preparation and primers required.
2. Field Test Reports: Submit written reports indicating and interpreting results of field tests performed either during installation of product or after product is installed in its final location, for compliance with requirements in the Contract Documents.
3. Material Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting test results of material for compliance with requirements in the Contract Documents.
4. Preconstruction Test Reports: Submit reports written by a qualified testing agency, on testing agency's standard form, indicating and interpreting results of tests performed before installation of product, for compliance with performance requirements in the Contract Documents.
5. Product Test Reports: Submit written reports indicating that current product produced by manufacturer complies with requirements in the Contract Documents. Base reports on evaluation of tests performed by manufacturer and witnessed by a qualified testing agency, or on comprehensive tests performed by a qualified testing agency.
6. Research Reports: Submit written evidence, from a model code organization acceptable to authorities having jurisdiction, that product complies with building code in effect for Project. Include the following information:

    a. Name of evaluation organization.
    b. Date of evaluation.
    c. Time period when report is in effect.
    d. Product and manufacturers' names.
    e. Description of product.
    f. Test procedures and results.
    g. Limitations of use.

1.8 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are insufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated Design Services Certification: In addition to Shop Drawings, Product Data, and other required submittals, submit digitally signed PDF file of certificate, signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional.

1. Indicate that products and systems comply with performance and design criteria in the Contract Documents. Include list of codes, loads, and other factors used in performing these services.

1.9 CONTRACTOR'S REVIEW

A. Action Submittals and Informational Submittals: Review each submittal and check for coordination with other Work of the Contract and for compliance with the Contract Documents. Note corrections and field dimensions. Mark with approval stamp before submitting to Architect.

B. Contractor's Approval: Indicate Contractor's approval for each submittal. Include name of reviewer, date of Contractor's approval, and statement certifying that submittal has been reviewed, checked, and approved for compliance with the Contract Documents.

1. Architect will not review submittals received from Contractor that do not have Contractor's review and approval.

1.10 ARCHITECT'S REVIEW

A. Contractor will preview all submittals, verify compliance, and then submit to Architect for review. Incomplete submittals will be returned to Contractor.

B. Action Submittals: Architect will review each submittal, indicate corrections or revisions required, and return.

1. PDF Submittals: Architect will indicate, via markup on each submittal, the appropriate action.

C. Informational Submittals: Architect will review each submittal and will not return it, or will return it if it does not comply with requirements. Architect will forward each submittal to appropriate party.

D. Partial submittals prepared for a portion of the Work will be reviewed when use of partial submittals has received prior approval from Architect.

E. Incomplete submittals are unacceptable, will be considered nonresponsive, and will be returned for resubmittal without review.

F. Architect will return without review submittals received from sources other than Contractor.

G. Submittals not required by the Contract Documents will be returned by Architect without action.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 33 00

SECTION 01 40 00 - QUALITY REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for quality assurance and quality control.

B. Testing and inspection services are required to verify compliance with requirements specified or indicated. These services do not relieve Contractor of responsibility for compliance with the Contract Document requirements.

1. Specific quality-assurance and quality-control requirements for individual work results are specified in their respective Specification Sections. Requirements in individual Sections may also cover production of standard products.
2. Specified tests, inspections, and related actions do not limit Contractor's other quality-assurance and quality-control procedures that facilitate compliance with the Contract Document requirements.
3. Requirements for Contractor to provide quality-assurance and quality-control services required by Architect, Owner, Commissioning Authority, or authorities having jurisdiction are not limited by provisions of this Section.

C. Related Requirements:

1. Division 01 Section "Construction Progress Documentation" for developing a schedule of required tests and inspections.
2. Division 01 Section "Mockups" for additional construction requirements for integrated exterior mockups.
3. Division 01 Section "Execution" for Contract Document requirements for cutting and patching.
4. Divisions 02 through 33 Sections for specific test and inspection requirements.

1.3 DEFINITIONS

A. Experienced: When used with an entity or individual, "experienced," unless otherwise further described, means having successfully completed a minimum of five previous projects similar in nature, size, and extent to this Project; being familiar with special requirements indicated; and having complied with requirements of authorities having jurisdiction.

B. Field Quality-Control Tests and Inspections: Tests and inspections that are performed on-site for installation of the Work and for completed Work.

C. Installer/Applicator/Erector: Contractor or another entity engaged by Contractor as an employee, subcontractor, or sub-subcontractor, to perform a particular construction operation, including installation, erection, application, assembly, and similar operations.

1. Use of trade-specific terminology in referring to a Work result does not require that certain construction activities specified apply exclusively to specific trade(s).

D. Mockups: Physical assemblies of portions of the Work constructed to establish the standard by which the Work will be judged. Mockups are not Samples.

1. Mockups are used for one or more of the following:

a. Verify selections made under Sample submittals.
b. Demonstrate aesthetic effects.
c. Demonstrate the qualities of products and workmanship.
d. Demonstrate successful installation of interfaces between components and systems.
e. Perform preconstruction testing to determine system performance.

2. Product Mockups: Mockups that may include multiple products, materials, or systems specified in a single Section.
3. In-Place Mockups: Mockups constructed on-site in their actual final location as part of permanent construction.

E. Preconstruction Testing: Tests and inspections performed specifically for Project before products and materials are incorporated into the Work, to verify performance or compliance with specified criteria. Unless otherwise indicated, copies of reports of tests or inspections performed for other than the Project do not meet this definition.

F. Product Tests: Tests and inspections that are performed by a nationally recognized testing laboratory (NRTL) according to 29 CFR 1910.7, by a testing agency accredited according to NIST's National Voluntary Laboratory Accreditation Program (NVLAP), or by a testing agency qualified to conduct product testing and acceptable to authorities having jurisdiction, to establish product performance and compliance with specified requirements.

G. Source Quality-Control Tests and Inspections: Tests and inspections that are performed at the source (e.g., plant, mill, factory, or shop).

H. Testing Agency: An entity engaged to perform specific tests, inspections, or both. The term "testing laboratory" has the same meaning as the term "testing agency."

I. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work, to guard against defects and deficiencies and substantiate that proposed construction will comply with requirements.

J. Quality-Control Services: Tests, inspections, procedures, and related actions during and after execution of the Work, to evaluate that actual products incorporated into the Work and completed construction comply with requirements. Contractor's quality-control services do not include contract administration activities performed by Architect.

1.4 DELEGATED DESIGN SERVICES

A. Performance and Design Criteria: Where professional design services or certifications by a design professional are specifically required of Contractor by the Contract Documents, provide products and systems complying with specific performance and design criteria indicated.

1. If criteria indicated are not sufficient to perform services or certification required, submit a written request for additional information to Architect.

B. Delegated Design Services Statement: Submit a statement signed and sealed by the responsible design professional, for each product and system specifically assigned to Contractor to be designed or certified by a design professional, indicating that the products and systems are in compliance with performance and design criteria indicated. Include list of codes, loads, and other factors used in performing these services.

1.5 CONFLICTING REQUIREMENTS

A. Conflicting Standards and Other Requirements: If compliance with two or more standards or requirements is specified and the standards or requirements establish different or conflicting requirements for minimum quantities or quality levels, inform the Architect regarding the conflict and obtain clarification prior to proceeding with the Work. Refer conflicting requirements that are different, but apparently equal, to Architect for clarification before proceeding.

B. Minimum Quantity or Quality Levels: The quantity or quality level shown or specified is the minimum provided or performed. The actual installation may comply exactly with the minimum quantity or quality specified, or it may exceed the minimum within reasonable limits. To comply with these requirements, indicated numeric values are minimum or maximum, as appropriate, for the context of requirements. Refer uncertainties to Architect for a decision before proceeding.

1.6 ACTION SUBMITTALS

A. Mockup Shop Drawings:

1. Include plans, sections, elevations, and details, indicating materials and size of mockup construction.
2. Indicate manufacturer and model number of individual components.
3. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.

1.7 INFORMATIONAL SUBMITTALS

A. Contractor's Quality-Control Plan: For quality-assurance and quality-control activities and responsibilities.

B. Qualification Data: For Contractor's quality-control personnel.

C. Testing Agency Qualifications: For testing agencies specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include proof of qualifications in the form of a recent report on the inspection of the testing agency by a recognized authority.

D. Schedule of Tests and Inspections: Prepare in tabular form and include the following:

1. Specification Section number and title.
2. Entity responsible for performing tests and inspections.
3. Description of test and inspection.
4. Identification of applicable standards.
5. Identification of test and inspection methods.
6. Number of tests and inspections required.
7. Time schedule or time span for tests and inspections.
8. Requirements for obtaining samples.
9. Unique characteristics of each quality-control service.

E. Reports: Prepare and submit certified written reports and documents as specified.

F. Permits, Licenses, and Certificates: For Owner's record, submit copies of permits, licenses, certifications, inspection reports, releases, jurisdictional settlements, notices, receipts for fee payments, judgments, correspondence, records, and similar documents established for compliance with standards and regulations bearing on performance of the Work.

1.8 CONTRACTOR'S QUALITY-CONTROL PLAN

A. Quality-Control Plan, General: The Contractor will manage the Quality-Control Process through the Web-Based Project Management Software. Submit quality-control plan within 10 days of Notice to Proceed, and not less than five days prior to preconstruction conference. Submit in format acceptable to Architect and Owner. Identify personnel, procedures, controls, instructions, tests, records, and forms to be used to carry out Contractor's quality-assurance and quality-control responsibilities and to coordinate Owner's quality-assurance and quality-control activities. Coordinate with Contractor's Construction Schedule.

B. Quality-Control Personnel Qualifications: Engage qualified personnel trained and experienced in managing and executing quality-assurance and quality-control procedures similar in nature and extent to those required for Project.

C. Submittal Procedure: Describe procedures for ensuring compliance with requirements through review and management of submittal process. Indicate qualifications of personnel responsible for submittal review.

D. Testing and Inspection: In quality-control plan, include a comprehensive schedule of Work requiring testing or inspection, including the following:

1. Contractor-performed tests and inspections, including subcontractor-performed tests and inspections. Include required tests and inspections and Contractor-elected tests and inspections. Distinguish source quality-control tests and inspections from field quality-control tests and inspections.
2. Special inspections required by authorities having jurisdiction and indicated on the Statement of Special Inspections.
3. Owner-performed tests and inspections indicated in the Contract Documents, including tests and inspections indicated to be performed by Commissioning Authority.

E. Continuous Inspection of Workmanship: Describe process for continuous inspection during construction to identify and correct deficiencies in workmanship in addition to testing and inspection specified. Indicate types of corrective actions to be required to bring the Work into

compliance with standards of workmanship established by Contract requirements and approved mockups.

F. Monitoring and Documentation: Maintain testing and inspection reports, including log of approved and rejected results. Include Work Architect has indicated as nonconforming or defective. Indicate corrective actions taken to bring nonconforming Work into compliance with requirements. Comply with requirements of authorities having jurisdiction.

1.9 REPORTS AND DOCUMENTS

A. Test and Inspection Reports: Prepare and submit certified written reports specified in other Sections. Include the following:

1. Date of issue.
2. Project title and number.
3. Name, address, telephone number, and email address of testing agency.
4. Dates and locations of samples and tests or inspections.
5. Names of individuals making tests and inspections.
6. Description of the Work and test and inspection method.
7. Identification of product and Specification Section.
8. Complete test or inspection data.
9. Test and inspection results and an interpretation of test results.
10. Record of temperature and weather conditions at time of sample-taking and testing and inspection.
11. Comments or professional opinion on whether tested or inspected Work complies with the Contract Document requirements.
12. Name and signature of laboratory inspector.
13. Recommendations on retesting and reinspecting.

B. Manufacturer's Technical Representative's Field Reports: Prepare written information documenting manufacturer's technical representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of technical representative making report.
2. Statement on condition of substrates and their acceptability for installation of product.
3. Statement that products at Project site comply with requirements.
4. Summary of installation procedures being followed, whether they comply with requirements and, if not, what corrective action was taken.
5. Results of operational and other tests and a statement of whether observed performance complies with requirements.
6. Statement of whether conditions, products, and installation will affect warranty.
7. Other required items indicated in individual Specification Sections.

C. Factory-Authorized Service Representative's Reports: Prepare written information documenting manufacturer's factory-authorized service representative's tests and inspections specified in other Sections. Include the following:

1. Name, address, telephone number, and email address of factory-authorized service representative making report.
2. Statement that equipment complies with requirements.
3. Results of operational and other tests and a statement of whether observed performance complies with requirements.

4. Statement of whether conditions, products, and installation will affect warranty.
5. Other required items indicated in individual Specification Sections.

1.10 QUALITY ASSURANCE

A. Qualifications paragraphs in this article establish the minimum qualification levels required; individual Specification Sections specify additional requirements.

B. Manufacturer Qualifications: A firm experienced in manufacturing products or systems similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units. As applicable, procure products from manufacturers able to meet qualification requirements, warranty requirements, and technical or factory-authorized service representative requirements.

C. Fabricator Qualifications: A firm experienced in producing products similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

D. Installer Qualifications: A firm or individual experienced in installing, erecting, applying, or assembling work similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in-service performance.

E. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

F. Specialists: Certain Specification Sections require that specific construction activities be performed by entities who are recognized experts in those operations. Specialists will satisfy qualification requirements indicated and engage in the activities indicated.

1. Requirements of authorities having jurisdiction supersede requirements for specialists.

G. Testing and Inspecting Agency Qualifications: An NRTL, an NVLAP, or an independent agency with the experience and capability to conduct testing and inspection indicated, as documented in accordance with ASTM E329, and with additional qualifications specified in individual Sections; and, where required by authorities having jurisdiction, that is acceptable to authorities.

H. Manufacturer's Technical Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to observe and inspect installation of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

I. Factory-Authorized Service Representative Qualifications: An authorized representative of manufacturer who is trained and approved by manufacturer to inspect, demonstrate, repair, and perform service on installations of manufacturer's products that are similar in material, design, and extent to those indicated for this Project.

J. Preconstruction Testing: Where testing agency is indicated to perform preconstruction testing for compliance with specified requirements for performance and test methods, comply with the following Contractor's responsibilities, including the following:

1. Provide test specimens representative of proposed products and construction.
2. Submit specimens in a timely manner with sufficient time for testing and analyzing results to prevent delaying the Work.
3. Provide sizes and configurations of test assemblies, mockups, and laboratory mockups to adequately demonstrate capability of products to comply with performance requirements.
4. Build site-assembled test assemblies and mockups, using installers who will perform same tasks for Project.
5. When testing is complete, remove test specimens and test assemblies, and mockups; do not reuse products on Project.
6. Testing Agency Responsibilities: Submit a certified written report of each test, inspection, and similar quality-assurance service to Architect and Commissioning Authority, with copy to Contractor. Interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from the Contract Documents.

K. Mockups: Before installing portions of the Work requiring mockups, build mockups for each form of construction and finish required to comply with the following requirements, using materials indicated for the completed Work:

1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Architect.
3. Notify Architect seven days in advance of dates and times when mockups will be constructed.
4. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
5. Demonstrate the proposed range of aesthetic effects and workmanship.
6. Obtain Architect's and Owner’s approval of mockups before starting corresponding Work, fabrication, or construction.

    a. Allow seven days for initial review and each re-review of each mockup.

7. Promptly correct unsatisfactory conditions noted by Architect's preliminary review, to the satisfaction of the Architect, before completion of final mockup.
8. Approval of mockups by the Architect does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
9. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
10. Demolish and remove mockups when directed unless otherwise indicated.

L. Specialty Mockups: See Division 01 "Mockups" for additional construction requirements for integrated exterior mockups.

1.11 QUALITY CONTROL

A. Contractor Responsibilities: Tests and inspections not explicitly assigned to Owner are Contractor's responsibility. Perform additional quality-control activities, whether specified or not, to verify and document that the Work complies with requirements.

1. Unless otherwise indicated, provide quality-control services specified and those required by authorities having jurisdiction. Perform quality-control services required of Contractor by authorities having jurisdiction, whether specified or not.
2. Engage a qualified testing agency to perform quality-control services.

3. Notify testing agencies at least 24 hours in advance of time when Work that requires testing or inspection will be performed.
4. Where quality-control services are indicated as Contractor's responsibility, submit a certified written report, in duplicate, of each quality-control service.
5. Testing and inspection requested by Contractor and not required by the Contract Documents are Contractor's responsibility.
6. Submit additional copies of each written report directly to authorities having jurisdiction, when they so direct.

B. Retesting/Reinspecting: Regardless of whether original tests or inspections were Contractor's responsibility, provide quality-control services, including retesting and reinspecting, for construction that replaced Work that failed to comply with the Contract Documents.

C. Testing Agency Responsibilities: Cooperate with Architect, Commissioning Authority, and Contractor in performance of duties. Provide qualified personnel to perform required tests and inspections.

1. Notify Architect, Commissioning Authority, and Contractor promptly of irregularities or deficiencies observed in the Work during performance of its services.
2. Determine the locations from which test samples will be taken and in which in-situ tests are conducted.
3. Conduct and interpret tests and inspections, and state in each report whether tested and inspected Work complies with or deviates from requirements.
4. Submit a certified written report, in duplicate, of each test, inspection, and similar quality-control service through Contractor.
5. Do not release, revoke, alter, or increase the Contract Document requirements or approve or accept any portion of the Work.
6. Do not perform duties of Contractor.

D. Manufacturer's Field Services: Where indicated, engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including service connections. Report results in writing as specified in Section 013300 "Submittal Procedures."

E. Manufacturer's Technical Services: Where indicated, engage a manufacturer's technical representative to observe and inspect the Work. Manufacturer's technical representative's services include participation in preinstallation conferences, examination of substrates and conditions, verification of materials, observation of Installer activities, inspection of completed portions of the Work, and submittal of written reports.

F. Contractor's Associated Requirements and Services: Cooperate with agencies and representatives performing required tests, inspections, and similar quality-control services, and provide reasonable auxiliary services as requested. Notify agency sufficiently in advance of operations to permit assignment of personnel. Provide the following:

1. Access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Adequate quantities of representative samples of materials that require testing and inspection. Assist agency in obtaining samples.
4. Facilities for storage and field curing of test samples.
5. Delivery of samples to testing agencies.
6. Preliminary design mix proposed for use for material mixes that require control by testing agency.

7. Security and protection for samples and for testing and inspection equipment at Project site.

G. Coordination: Coordinate sequence of activities to accommodate required quality-assurance and quality-control services with a minimum of delay and to avoid necessity of removing and replacing construction to accommodate testing and inspection.

1. Schedule times for tests, inspections, obtaining samples, and similar activities.

H. Schedule of Tests and Inspections: Prepare a schedule of tests, inspections, and similar quality-control services required by the Contract Documents. Coordinate and submit concurrently with Contractor's Construction Schedule. Update and submit with each Application for Payment.

1. Schedule Contents: Include tests, inspections, and quality-control services, including Contractor- and Owner-retained services, commissioning activities, and other Project-required services paid for by other entities.
2. Distribution: Distribute schedule to Owner, Architect, Commissioning Authority, testing agencies, and each party involved in performance of portions of the Work where tests and inspections are required.

1.12 SPECIAL TESTS AND INSPECTIONS

A. Special Tests and Inspections: Contractor shall engage a qualified testing agency to conduct special tests and inspections required by authorities having jurisdiction as the responsibility of Contractor, and as follows:

1. Notifying Architect, Commissioning Authority, and Contractor promptly of irregularities and deficiencies observed in the Work during performance of its services.
2. Submitting a certified written report of each test, inspection, and similar quality-control service to Architect and Commissioning Authority, with copy to Contractor and to authorities having jurisdiction.
3. Submitting a final report of special tests and inspections at Substantial Completion, which includes a list of unresolved deficiencies.
4. Interpreting tests and inspections, and stating in each report whether tested and inspected Work complies with or deviates from the Contract Documents.
5. Retesting and reinspecting corrected Work.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 TEST AND INSPECTION LOG

A. Test and Inspection Log: Prepare a record of tests and inspections. Include the following:

1. Date test or inspection was conducted.
2. Description of the Work tested or inspected.
3. Date test or inspection results were transmitted to Architect.
4. Identification of testing agency or special inspector conducting test or inspection.

B. Maintain log at Project site. Post changes and revisions as they occur. Provide access to test and inspection log for Architect's, Commissioning Authority's, and authorities' having jurisdiction reference during normal working hours.

1. Submit log at Project closeout as part of Project Record Documents.

3.2 REPAIR AND PROTECTION

A. General: On completion of testing, inspection, sample-taking, and similar services, repair damaged construction and restore substrates and finishes.

1. Provide materials and comply with installation requirements specified in other Specification Sections or matching existing substrates and finishes. Restore patched areas and extend restoration into adjoining areas with durable seams that are as invisible as possible. Comply with the Contract Document requirements for cutting and patching in Division 01 Section "Execution."

B. Protect construction exposed by or for quality-control service activities.

C. Repair and protection are Contractor's responsibility, regardless of the assignment of responsibility for quality-control services.

END OF SECTION 01 40 00

SECTION 01 43 39 - MOCKUPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Integrated exterior mockups.

B. Related Requirements:

1. Division 01 Section "Quality Requirements" for quality assurance requirements for aesthetic and workmanship mockups specified in other Sections.
2. Division 02 through 33 Sections specifying components for mockups including products and installation requirements.

1.3 DEFINITIONS

A. Quality-Assurance Services: Activities, actions, and procedures performed before and during execution of the Work to guard against defects and deficiencies and substantiate that proposed construction will comply with Contract Document requirements.

B. Integrated Exterior Mockup: Full-size mockup of the exterior envelope constructed separately from the building but on the Project site as freestanding temporary built elements, consisting of multiple products, assemblies, and subassemblies.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, and installers of major systems whose Work is included in mockups.
2. Review location and extent of mockups.
3. Review and finalize schedule for mockups, and verify availability of materials, personnel, equipment, and facilities needed to complete mockups and maintain schedule for the Work.

1.5 ACTION SUBMITTALS

A. Shop Drawings: For integrated exterior mockups.

1. Include plans, elevations, sections, and mounting attachment and support details.
    a. Provide axonometric drawings for conditions difficult to illustrate in two dimensions.
2. Indicate manufacturer and model number of individual components, subassemblies, and assemblies.
3. Include site location drawing indicating orientation of mockups.
4. Revise and resubmit Shop Drawings to reflect approved modifications in details and component interfaces resulting from changes made during testing procedures.

B. Delegated Design Submittal: For temporary structural supports for mockups not attached to building structure, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 QUALITY ASSURANCE

A. Build mockup to do the following:
1. Verify constructability of exterior building envelope components and assemblies.
    a. Architect shall review primary air/water barrier (i.e., waterproofing, fluid-applied air barrier, roofing vapor retarder and underlayment) and flashings prior to installation of cladding, cornice/gutter, and slate shingles.
2. Demonstrate qualities of products and workmanship and establish the standard by which the Work will be judged.
3. Demonstrate aesthetic effects and verify initial material/finish sample selections.
4. Demonstrate acceptable coordination between components and systems and show interfaces between dissimilar component materials.
5. Demonstrate compliance with specified installation tolerances.

B. Fabrication: Before fabricating or installing portions of the Work included in mockup, build mockup for each form of construction and finish required. Use materials and installation methods as required for the Work.
1. Build mockups of size indicated.
2. Build mockups in location indicated or, if not indicated, as directed by Owner/Architect.
3. Employ supervisory personnel who will oversee mockup construction. Employ workers who will be employed to perform same tasks during the construction at Project.
4. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
5. Demolish and remove exterior mockup when directed.

C. Notifications:
1. Notify Architect (14) days in advance of the dates and times when the primary air/water barrier and flashings are installed but before they are concealed by cladding, cornice, or roofing materials.

D. Approval: Obtain Architect's approval of mockups before starting fabrication or construction of corresponding Work.

1. Unless otherwise indicated, approved mockups establish the standard by which the Work will be judged.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockup unless Architect specifically approves such deviations in writing.

1.7 COORDINATION

A. Coordinate schedule for construction of mockups, so construction and review of mockups do not impact Project schedule.

B. Prior to construction of mockup, submittals required by other Sections of these Specifications for component materials included in the mockup shall have been submitted and reviewed for use in the project.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design support structure for free-standing mockups.

B. Structural Performance:

1. Wind Loads: As indicated on Drawings.

2.2 INTEGRATED EXTERIOR MOCKUPS

A. Construct integrated exterior mockup of typical exterior wall and roof construction, full thickness, according to approved mockup Shop Drawings and as indicated on the Drawings. Construct mockups to demonstrate constructability, coordination of trades, and sequencing of Work; and to ensure materials, components, subassemblies, assemblies, and interfaces integrate into a system complying with indicated performance and aesthetic requirements.

B. Design and construct foundation and superstructure to support free-standing integrated exterior mockups.

C. Build integrated exterior mockups using installers and construction methods that will be used in completed construction.

D. Use specified products that have been approved by Architect. Coordinate installation of materials and products specified in individual Specification Sections that include Work included in integrated exterior mockups.

E. The Work of integrated exterior mockups includes, but is not limited to, the following:

1. Masonry veneer, including angled bricks and special shapes and patterns.
2. Cold-formed metal framing and sheathing.
3. Window

4. Air and weather barriers.
5. Thermal insulation.
6. Through-wall flashing.
7. Flashing and sheet metal trim.
8. Joint sealants.
9. Expansion Joints
10. Parapets

F. Provide and document modifications to construction details and interfaces between components and systems required to properly sequence the Work, or to pass performance testing requirements. Obtain Architect's approval for modifications.

PART 3 - EXECUTION

3.1 TESTING OF INTEGRATED EXTERIOR MOCKUPS

A. Integrated Exterior Mockup Testing Agency: The Contractor is to engage a qualified independent testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested Work complies with or deviates from requirements.

B. Integrated Exterior Mockup Testing Services:

1. Joint Sealant Pull Testing
   a. Testing Methodology: Testing of joint sealants shall be performed in accordance with ASTM C1521, Destructive Procedure, Method B.
   b. Frequency: Perform (2) test per sealant type per each project-specific substrate.
   c. Pass/Fail Criteria: Adequate surface preparation will be indicated by cohesive separation of the sealant from the substrate, not adhesive separation from the substrate.

C. Integrated exterior mockup will be considered defective if it does not pass tests and inspections.

1. Contractor must repair or replace any defects and retest until it passes, at no additional cost to the Owner.

D. Prepare test and inspection reports.

END OF SECTION 01 43 39

SECTION 01 50 00 - TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County's general provisions, terms, and conditions included in each bid package shall also apply to this Section.

1.2 SUMMARY

A. Section includes requirements for temporary utilities, support facilities, and security and protection facilities.

1.3 SUBMITTALS

A. Sustainable Design Submittals: Comply with Division 01 Section "Sustainable Design Requirements – LEED".

1. EQ Credit 3: Construction Indoor Air Quality Management Plan
   a. For filter media installed during construction and prior to occupancy: Documentation indicating MERV rating or filter class.

1.4 USE CHARGES

A. General: Cost or use charges for temporary facilities are not chargeable to the Owner or Architect unless specifically noted otherwise. The Owner will not accept a Contractor's cost or use charges for temporary services or facilities as a basis of claim for an adjustment in the Contract Sum or the Contract Time

1. Installation, removal, and use charges for temporary facilities shall be included in the Contract Sum unless otherwise indicated. Allow other entities engaged in the Project to use temporary services and facilities without cost, including, but not limited to, Architect, testing agencies, and authorities having jurisdiction.

B. Water Service: The Owner will pay water service use charges for all metered water used by all entities engaged in construction activities at the Project Site.

C. Electric Power Service: The Contractor will pay electric power service use charges for all metered electric power used by all entities engaged in construction activities at the Project Site.

D. Fuel for Temporary Heat: As described in the Temporary Heat paragraph.

1.5 INFORMATIONAL SUBMITTALS

A. Site Utilization Plan: Show temporary facilities, temporary utility lines and connections, staging areas, construction site entrances, vehicle circulation, and parking areas for construction personnel.

B. Implementation and Termination Schedule: Within 15 days of date established for commencement of the Work, submit schedule indicating implementation and termination dates of each temporary utility.

C. Noise and Vibration Control Plan: Identify construction activities that may impact the occupancy and use of existing spaces of adjacent existing buildings. Include the following:

1. Methods used to meet the goals and requirements of the Owner.
2. Concrete cutting method(s) to be used.
3. Location of construction devices on the site.
4. Show compliance with the use and maintenance of quieted construction devices for the duration of the Project.
5. Indicate activities that may disturb adjacent building occupants and that are planned to be performed during non-standard working hours as coordinated with the Owner.

D. Vibration Monitoring Surveys: Refer to Paragraph 3.6 for requirements of pre-demolition and post-demolition surveys.

1.6 QUALITY ASSURANCE

A. Regulations: Contractor shall comply with industry standards and with applicable laws and regulations of authorities having jurisdiction including, but not limited to, the following:

1. Building code requirements.
2. Health and safety regulations.
3. Utility company regulations.
4. Police, fire department and rescue squad rules.
5. Environmental protection regulations.

B. Standards: Contractor shall comply with NFPA 241 "Standard for Safeguarding Construction, Alterations, and Demolition Operations," ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition," and NECA Electrical Design Library "Temporary Electrical Facilities."

1. Trade Jurisdictions: Assigned responsibilities for installation and operation of temporary utilities are not intended to interfere with the normal application of trade regulations and union jurisdictions.
2. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service to comply with NFPA 70.

C. Tests and Inspections: Arrange for authorities having jurisdiction to test and inspect each temporary utility before use. Obtain required certifications and permits.

1.7 PROJECT CONDITIONS

A. Temporary Utilities: The Contractor shall prepare a schedule indicating dates for implementation and termination of each temporary utility for which the Contractor is responsible. At the earliest feasible time, when acceptable to the Owner, change over from use of temporary service to use of permanent service.

1. Temporary Use of Permanent Facilities: The Installer of each permanent service shall assume responsibility for its operation, maintenance, and protection during use as a construction facility prior to the Owner's acceptance, regardless of previously assigned responsibilities. The Contractor shall make permanent facilities available in accordance with the approved Project Schedule.
2. Warranty Period: The Warranty Period for the entire project shall begin on the date of Substantial Completion regardless of the start-up date for use as a temporary or permanent facility, including but not limited to materials and equipment.

B. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Relocate temporary services and facilities as the Work progresses. Do not overload facilities or permit them to interfere with progress. Take necessary fire-prevention measures. Do not allow hazardous, dangerous, or unsanitary conditions, or public nuisances to develop or persist on-site.

C. Contractor Parking: Contractor to provide off-site or street parking for Contractor’s employees.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Lumber and Plywood: Comply with the requirements of Division 06 Section "Rough Carpentry."

B. Tarpaulins: Provide waterproof, fire-resistant, UL-labeled tarpaulins with flame-spread rating of 15 or less. For temporary enclosures, provide translucent, nylon-reinforced, laminated polyethylene or polyvinyl chloride, fire-retardant tarpaulins.

C. Temporary Fencing: By Contractor

D. Dust-Control Adhesive-Surface Walk-Off Mats: Provide mats, minimum 36 by 60 inches.

E. Filter media installed during construction and prior to occupancy: Minimum MERV 8 or F5 filter class.

2.2 EQUIPMENT

A. Water Hoses: Provide 3/4-inch heavy-duty, abrasion-resistant, flexible rubber hoses 100 feet long, with pressure rating greater than the maximum pressure of the water distribution system. Provide adjustable shutoff nozzles at hose discharge.

B. Electrical Outlets: Provide properly configured, NEMA-polarized outlets to prevent insertion of 110- to 120-V plugs into higher voltage outlets. Provide 120-V, single phase, receptacle outlets

equipped with ground-fault circuit interrupters, reset button, and pilot light for connection of power tools and equipment.

C. Electrical Power Cords: Provide grounded extension cords. Use hard-service cords where exposed to abrasion and traffic. Provide waterproof connectors to connect separate lengths of electric cords if single lengths will not reach areas where construction activities are in progress. Do not exceed safe length-voltage ratio.

D. Lamps and Light Fixtures: Provide general service incandescent lamps of wattage required for adequate illumination. At a minimum, install weather-proof sockets complete with 100 watt lamps at 20' on center in all corridor areas, circulation areas and all spaces over 400 square feet. Provide guard cages or tempered-glass enclosures, where exposed to breakage. Provide exterior fixtures where exposed to moisture.

E. Fire Extinguishers: Portable, UL rated; with class and extinguishing agent as required by locations and classes of fire exposures.

1. Comply with NFPA 10 and NFPA 241 for classification, extinguishing agent, and size required by location and class of fire exposure.

F. HVAC Equipment: Unless Owner authorizes use of permanent HVAC system, provide vented, self-contained, liquid-propane-gas or fuel-oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
2. Heating, Cooling, and Dehumidifying Units: Listed and labeled for type of fuel being consumed, by a qualified testing agency acceptable to authorities having jurisdiction, and marked for intended location and application.
3. Permanent HVAC System: If Owner authorizes use of permanent HVAC system for temporary use during construction, provide filter with minimum MERV 8 or F5 filter class at each return-air grille in system and remove at end of construction and clean HVAC system as required in Division 01 Section "Closeout Procedures."

2.3 TEMPORARY FACILITIES

A. Field Offices: Prefabricated or mobile units with serviceable finishes, temperature controls, and foundations adequate for normal loading.

B. Common-Use Field Office: Contractor to provide field office for Architect.

1. Job Meetings to occur in Contractors field office location to be determined.

C. Temporary Toilet Units: Provide self-contained, single-occupant toilet units of the chemical, aerated recirculation, or combustion type. Provide units properly vented and fully enclosed with a glass-fiber-reinforced polyester shell or similar nonabsorbent material.

PART 3 - EXECUTION

3.1 TEMPORARY FACILITIES, GENERAL

A. Conservation: Coordinate construction and use of temporary facilities with consideration given to conservation of energy, water, and materials. Coordinate use of temporary utilities to minimize waste.

1. Salvage materials and equipment involved in performance of, but not actually incorporated into, the Work. See other Sections for disposition of salvaged materials that are designated as Owner's property.

3.2 INSTALLATION, GENERAL

A. Locate facilities where they will serve Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required by progress of the Work.

B. Provide each facility ready for use when needed to avoid delay. Do not remove until facilities are no longer needed or are replaced by authorized use of completed permanent facilities.

3.3 TEMPORARY UTILITY INSTALLATION

A. General: Install temporary service or connect to existing service.

1. Arrange with utility company, Owner, and existing users for time when service can be interrupted, if necessary, to make connections for temporary services.

B. Water Service: Install water service and distribution piping of sizes and pressures adequate for construction until permanent water service is in use.

1. Sterilization: Sterilize temporary water piping prior to use.

C. Temporary Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include meters, transformers, overload-protected disconnects, automatic ground-fault interrupters, and main distribution switch gear.

1. Power Distribution System: Install wiring overhead and rise vertically where least exposed to damage. Where permitted, wiring circuits not exceeding 125 V, ac 20 ampere rating, and lighting circuits may be nonmetallic sheathed cable where overhead and exposed for surveillance.

D. Temporary Lighting: When an overhead floor or roof deck has been installed, provide temporary lighting with local switching that provides adequate illumination for construction operations, observations, inspections, and traffic conditions.

1. Install and operate temporary lighting that fulfills security and protection requirements without operating the entire system.

E. Temporary Heat: Provide temporary heat required by construction activities, for curing or drying of completed installations, or protection of installed construction from adverse effects of low temperatures or high humidity. Select equipment that will not have a harmful effect on completed installations or elements being installed. Coordinate ventilation requirements to produce the ambient condition required and minimize consumption of energy.

1. Provide temporary heat at varying stages of the Project to allow construction operations to proceed in an orderly, sequential manner. The following stages are milestones that must be clearly identified on the CPM Schedule as described in Division 1 Section "Construction Progress Documentation." The stages of the project are defined as follows:

    a. Early Stage: The duration of the project from the start of construction to enclosure of the building. During this stage, the Contractor is responsible to provide temporary heat and any temporary enclosure to contain the heated air necessary for its own construction activities. The Contractor is responsible to furnish the equipment and fuel for their own temporary heating.
    b. Intermediate Stage: The duration of the project from the time the building is wholly or partially enclosed as determined by the Architect but prior to the operation of the permanent HVAC equipment for construction heating. During this stage, the Contractor shall provide temporary heating to establish an ambient air temperature in the building, or portion thereof, to maintain construction activities, including the provision of necessary equipment and fuel. An ambient air temperature of 50 degrees F must be capable of being maintained throughout the area of work receiving temporary heat.
    c. Final Stage: The duration of the project after building enclosure is attained and the permanent HVAC equipment is available to provide temporary heat and air conditioning as determined by the Architect. An ambient air temperature of 70 degrees F must be capable of being maintained uniformly. The Contractor is responsible to provide start-up, maintenance and operation of all permanent HVAC units and provide temporary automatic temperature control wiring and devices to properly regulate the permanent devices. The Contractor is responsible to have all permanent HVAC units that will provide temporary heat wired with their required power with service disconnects and all other NEC requirements. If power cannot be provided using the permanent electrical panel, wiring or distribution, then the Contractor must provide temporary means to meet the needs of the units. The Contractor is responsible to have all permanent gas-fired HVAC units that will be used to provide temporary heat, connected to a source for gas that will provide the necessary pressure and volume to operate the units as if they are in normal use, including compliance with applicable codes. If gas cannot be provided using the permanent gas system for the building, then the Contractor must provide temporary means to meet the needs of the units.

2. Temporary heat shall be initiated and maintained to allow the performance of work for which a particular minimum ambient temperature must be maintained to meet the criteria described in individual sections of the technical specifications and as set forth by manufacturers recommendations.
3. Temporary heat shall be provided to ensure that construction activities conform with the construction schedule and to the scheduling sequence established by the Contractor and as further directed by the Architect.
4. The term "building enclosure" refers to a level of completion of the building, or a designated portion thereof that consists of the following:

    a. Construction of roof structure, roof, insulation and roofing membrane.

b. Construction of back-up masonry or exterior metal studs with exterior sheathing.
c. Temporary enclosure of exterior wall openings. Refer to the “Temporary Enclosures” paragraph below for additional information.

5. Provide temporary dehumidification systems when required to reduce ambient and substrate moisture levels to level required to allow installation or application of finishes and their proper curing or drying.

F. Heating Facilities: Except where use of the permanent system is authorized, provide properly vented self-contained LP gas or fuel oil heaters with individual space thermostatic control.

1. Use of gasoline-burning space heaters, or open burning or salamander type heating units is prohibited.

G. Sanitary Facilities: Provide temporary toilets, wash facilities, safety shower and eyewash facilities, and drinking water for use of construction personnel. Comply with requirements of authorities having jurisdiction for type, number, location, operation, and maintenance of fixtures and facilities.

1. Provide separate facilities for male and female personnel.

H. Electronic Communication Service: Contractor to provide secure Wi-Fi wireless connection to internet with provisions for access by Architect and Owner only.

1. Subcontractors to provide own accommodations.

3.4 SUPPORT FACILITIES INSTALLATION

A. Storage and Fabrication Facilities: Install storage and fabrication sheds or mobile trailers, sized, furnished and equipped to accommodate materials and equipment involved. Facilities may be open shelters or fully enclosed.

B. Wash Facilities: Install wash facilities supplied with potable water at convenient locations for personnel involved in handling materials that require wash-up for a healthy and sanitary condition. Dispose of drainage properly. Supply cleaning compounds appropriate for each condition.
1. Provide safety showers, eye-wash fountains and similar facilities for convenience, safety and sanitation of personnel.

C. Drinking Water Facilities: Provide containerized tap-dispenser bottled-water type drinking water units, including paper supply.

D. Dewatering Facilities and Drains: Comply with requirements of authorities having jurisdiction. Maintain Project site, excavations, and construction free of water, ice, and snow.

1. Dispose of rainwater in a lawful manner that will not result in flooding Project or adjoining properties or endanger permanent Work or temporary facilities.
2. Remove snow and ice as required to minimize accumulations.

E. Project Signs: Contractor to provide project signs.

F. Waste Disposal Facilities: Comply with requirements specified in Division 01 Section "Construction and Demolition Waste Management and Disposal."

G. Waste Disposal Facilities: Provide waste-collection containers in sizes adequate to handle waste from construction operations. Comply with requirements of authorities having jurisdiction. Comply with progress cleaning requirements in Division 01 Section "Execution."

H. Lifts and Hoists: Provide facilities necessary for hoisting materials and personnel.

1. Truck cranes and similar devices used for hoisting materials are considered "tools and equipment" and not temporary facilities.

I. Temporary Elevator Use: See Division 14 elevator Section for temporary use of new elevators.

J. Temporary Stairs: Until permanent stairs are available, provide temporary stairs where ladders are not adequate.

K. Temporary Use of Permanent Stairs: Use of new stairs for construction traffic will be permitted, provided stairs are protected and finishes restored to new condition at time of Substantial Completion.

3.5 SECURITY AND PROTECTION FACILITIES INSTALLATION

A. Protection of Existing Facilities: Protect existing vegetation, equipment, structures, utilities, and other improvements at Project site and on adjacent properties, except those indicated to be removed or altered. Repair damage to existing facilities.

1. Where access to adjacent properties is required in order to affect protection of existing facilities, obtain written permission from adjacent property owner to access property for that purpose.

B. Environmental Protection: Provide protection, operate temporary facilities, and conduct construction as required to comply with environmental regulations and that minimize possible air, waterway, and subsoil contamination or pollution or other undesirable effects.

1. Avoid using tools and equipment that produce harmful noise. Restrict use of noise-making tools and equipment to hours that will minimize complaints from persons or firms near the site.

C. Stormwater Control: Comply with requirements of authorities having jurisdiction. Provide barriers in and around excavations and subgrade construction to prevent flooding by runoff of stormwater from heavy rains.

D. Tree and Plant Protection: Install temporary fencing located as indicated or outside the drip line of trees to protect vegetation from damage from construction operations. Protect tree root systems from damage, flooding, and erosion.

E. Rodent and Pest Control: Engage pest-control service to recommend practices to minimize attraction and harboring of rodents, roaches, and other pests and to perform extermination and control procedures at regular intervals, so Project will be free of pests and their residues at Substantial Completion. Perform control operations lawfully, using materials approved by authorities having jurisdiction.

F. Site Enclosure Fence: Contractor to provide site enclosure fence.

G. Security Enclosure and Lockup: Install temporary enclosure around partially completed areas of construction. Provide lockable entrances to prevent unauthorized entrance, vandalism, theft, and similar violations of security. Lock entrances at end of each workday.

1. Storage: Where materials and equipment must be stored, and are of value or attractive for theft, provide a secure lockup. Enforce discipline in connection with the installation and release of material to minimize the opportunity for theft and vandalism.

H. Barricades, Warning Signs, and Lights: Comply with requirements of authorities having jurisdiction for erecting structurally adequate barricades, including warning signs and lighting.

I. Temporary Egress: Provide temporary egress from existing occupied facilities as indicated and as required by authorities having jurisdiction. Provide signage directing occupants to temporary egress.

J. Covered Walkways: Contractor to provide covered walkways.

K. Temporary Enclosures: Provide temporary enclosures for protection of construction, in progress and completed, from exposure, foul weather, other construction operations, and similar activities. Provide temporary weathertight enclosure for building exterior.

1. Where heat is needed and the permanent building enclosure is not complete, provide temporary insulated enclosures where there is no other provision for containment of heat. Coordinate enclosure with ventilating and material drying or curing requirements to avoid dangerous conditions and effects.
2. Install tarpaulins securely, with incombustible wood framing and other materials. Close openings of 25 square feet or less with plywood or similar materials.
3. Close openings through floor or roof decks and horizontal surfaces with load-bearing wood-framed construction.

L. Temporary Fire Protection: Install and maintain temporary fire-protection facilities of types needed to protect against reasonably predictable and controllable fire losses. Comply with NFPA 241; manage fire-prevention program.

1. Prohibit smoking in construction areas. Comply with additional limits on smoking specified in other Sections.
2. Supervise welding operations, combustion-type temporary heating units, and similar sources of fire ignition in accordance with requirements of authorities having jurisdiction.
3. Develop and supervise an overall fire-prevention and -protection program for personnel at Project site. Review needs with local fire department and establish procedures to be followed. Instruct personnel in methods and procedures. Post warnings and information.

3.6 MOISTURE AND MOLD CONTROL

A. Moisture and Mold Protection: Protect stored materials and installed Work in accordance with Moisture and Mold Protection Plan.

B. Exposed Construction Period: Before installation of weather barriers, when materials are subject to wetting and exposure and to airborne mold spores, protect as follows:

1. Protect porous materials from water damage.
2. Protect stored and installed material from flowing or standing water.
3. Keep porous and organic materials from coming into prolonged contact with concrete.
4. Remove standing water from decks.
5. Keep deck openings covered or dammed.

C. Partially Enclosed Construction Period: After installation of weather barriers but before full enclosure and conditioning of building, when installed materials are still subject to infiltration of moisture and ambient mold spores, protect as follows:

1. Do not load or install drywall or other porous materials or components, or items with high organic content, into partially enclosed building.
2. Keep interior spaces reasonably clean and protected from water damage.
3. Periodically collect and remove waste containing cellulose or other organic matter.
4. Discard or replace water-damaged material.
5. Do not install material that is wet.
6. Discard and replace stored or installed material that begins to grow mold.
7. Perform work in a sequence that allows wet materials adequate time to dry before enclosing the material in gypsum board or other interior finishes.

D. Controlled Construction Period: After completing and sealing of the building enclosure but prior to the full operation of permanent HVAC systems, maintain as follows:

1. Control moisture and humidity inside building by maintaining effective dry-in conditions.
2. Use temporary or permanent HVAC system to control humidity within ranges specified for installed and stored materials.
3. Comply with manufacturer's written instructions for temperature, relative humidity, and exposure to water limits.

    a. Hygroscopic materials that may support mold growth, including wood and gypsum-based products, that become wet during the course of construction and remain wet for 48 hours are considered defective and require replacing.
    b. Measure moisture content of materials that have been exposed to moisture during construction operations or after installation. Record readings beginning at time of exposure and continuing daily for 48 hours. Identify materials containing moisture levels higher than allowed. Report findings in writing to Architect.
    c. Remove and replace materials that cannot be completely restored to their manufactured moisture level within 48 hours.

3.7 OPERATION, TERMINATION, AND REMOVAL

A. Supervision: Enforce strict discipline in use of temporary facilities. To minimize waste and abuse, limit availability of temporary facilities to essential and intended uses.

B. Maintenance: Maintain facilities in good operating condition until removal.

1. Maintain operation of temporary enclosures, heating, cooling, humidity control, ventilation, and similar facilities on a 24-hour basis where required to achieve indicated results and to avoid possibility of damage.

C. Temporary Facility Changeover: Do not change over from using temporary security and protection facilities to permanent facilities until Substantial Completion.

D. Termination and Removal: Remove each temporary facility when need for its service has ended, when it has been replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with temporary facility. Repair damaged Work, clean exposed surfaces, and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of Contractor. Owner reserves right to take possession of Project identification signs.
2. Remove temporary roads and paved areas not intended for or acceptable for integration into permanent construction. Where area is intended for landscape development, remove soil and aggregate fill that do not comply with requirements for fill or subsoil. Remove materials contaminated with road oil, asphalt and other petrochemical compounds, and other substances that might impair growth of plant materials or lawns. Repair or replace street paving, curbs, and sidewalks at temporary entrances, as required by authorities having jurisdiction.
3. At Substantial Completion, repair, renovate, and clean permanent facilities used during construction period. Comply with final cleaning requirements specified in Division 01 Section "Closeout Procedures."

END OF SECTION 01 50 00

SECTION 01 60 00 - PRODUCT REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for selection of products for use in Project; product delivery, storage, and handling; manufacturers' standard warranties on products; special warranties; and comparable products.

B. Related Requirements:

1. Division 01 Section "Summary" for Contractor requirements related to Owner-furnished products.
2. Division 01 Section "Substitution Procedures" for requests for substitutions.
3. Division 01 Section "Closeout Procedures" for submitting warranties.
4. Section 011813 – “Sustainable Design Requirements – LEED”.

1.3 DEFINITIONS

A. Products: Items obtained for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term "product" includes the terms "material," "equipment," "system," and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility. Salvaged items or items reused from other projects are not considered new products. Items that are manufactured or fabricated to include recycled content materials are considered new products, unless indicated otherwise.
3. Comparable Product: Product by named manufacturer that is demonstrated and approved through the comparable product submittal process described in Part 2 "Comparable Products" Article, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Basis-of-Design Product Specification: A specification in which a single manufacturer's product is named and accompanied by the words "basis-of-design product," including make or model number or other designation. Published attributes and characteristics of basis-of-design product establish salient characteristics of products.

1. Evaluation of Comparable Products: In addition to the basis-of-design product description, product attributes and characteristics may be listed to establish the significant qualities related to type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other special features and requirements for purposes of evaluating comparable products of additional manufacturers named in the specification. Manufacturer's published attributes and characteristics of basis-of-design product also establish salient characteristics of products for purposes of evaluating comparable products.

C. Subject to Compliance with Requirements: Where the phrase "Subject to compliance with requirements" introduces a product selection procedure in an individual Specification Section, provide products qualified under the specified product procedure. In the event that a named product or product by a named manufacturer does not meet the other requirements of the specifications, select another named product or product from another named manufacturer that does meet the requirements of the specifications; submit a comparable product request or substitution request, if applicable.

D. Comparable Product Request Submittal: An action submittal requesting consideration of a comparable product, including the following information:

1. Identification of basis-of-design product or fabrication or installation method to be replaced, including Specification Section number and title and Drawing numbers and titles.
2. Data indicating compliance with the requirements specified in Part 2 "Comparable Products" Article.

E. Basis-of-Design Product Specification Submittal: An action submittal complying with requirements in Division 01 Section "Submittal Procedures."

F. Substitution: Refer to Division 01 Section "Substitution Procedures" for definition and limitations on substitutions.

1.4 QUALITY ASSURANCE

A. Compatibility of Options: If Contractor is given option of selecting between two or more products for use on Project, select product compatible with products previously selected, even if previously selected products were also options.

B. Identification of Products: Except for required labels and operating data, do not attach or imprint manufacturer or product names or trademarks on exposed surfaces of products or equipment that will be exposed to view in occupied spaces or on the exterior.

1. Labels: Locate required product labels and stamps on a concealed surface, or, where required for observation following installation, on a visually accessible surface that is not conspicuous.
2. Equipment Nameplates: Provide a permanent nameplate on each item of service- or power-operated equipment. Locate on a visually accessible but inconspicuous surface. Include information essential for operation, including the following:

a. Name of product and manufacturer.
b. Model and serial number.
c. Capacity.
d. Speed.

e. Ratings.

3. See individual identification Sections in Divisions 21, 22, 23, and 26 for additional equipment identification requirements.

1.5 COORDINATION

A. Modify or adjust affected work as necessary to integrate work of approved comparable products and approved substitutions.

1.6 PRODUCT DELIVERY, STORAGE, AND HANDLING

A. Deliver, store, and handle products, using means and methods that will prevent damage, deterioration, and loss, including theft and vandalism. Comply with manufacturer's written instructions.

B. Delivery and Handling:

1. Schedule delivery to minimize long-term storage at Project site and to prevent overcrowding of construction spaces.
2. Coordinate delivery with installation time to ensure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
3. Deliver products to Project site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
4. Inspect products on delivery to determine compliance with the Contract Documents and that products are undamaged and properly protected.

C. Storage:

1. Provide a secure location and enclosure at Project site for storage of materials and equipment.
2. Store products to allow for inspection and measurement of quantity or counting of units.
3. Store materials in a manner that will not endanger Project structure.
4. Store products that are subject to damage by the elements under cover in a weathertight enclosure above ground, with ventilation adequate to prevent condensation and with adequate protection from wind.
5. Protect foam plastic from exposure to sunlight, except to extent necessary for period of installation and concealment.
6. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather-protection requirements for storage.
7. Protect stored products from damage and liquids from freezing.
8. Provide a secure location and enclosure at Project site for storage of materials and equipment by Owner's construction forces. Coordinate location with Owner.

1.7 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on

product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

1. Manufacturer's Warranty: Written standard warranty form furnished by individual manufacturer for a particular product and issued in the name of the Owner or endorsed by manufacturer to Owner.
2. Special Warranty: Written warranty required by the Contract Documents to provide specific rights for Owner and issued in the name of the Owner or endorsed by manufacturer to Owner.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution.

1. Manufacturer's Standard Form: Modified to include Project-specific information and properly executed.
2. Specified Form: When specified forms are included in the Project Manual, prepare a written document, using indicated form properly executed.
3. See other Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 01 Section "Closeout Procedures."

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION PROCEDURES

A. General Product Requirements: Provide products that comply with the Contract Documents, are undamaged and, unless otherwise indicated, are new at time of installation.

1. Provide products complete with accessories, trim, finish, fasteners, and other items needed for a complete installation and indicated use and effect.
2. Standard Products: If available, and unless custom products or nonstandard options are specified, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Owner reserves the right to limit selection to products with warranties meeting requirements of the Contract Documents.
4. Where products are accompanied by the term "as selected," Architect will make selection.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.
6. Or Equal: For products specified by name and accompanied by the term "or equal," "or approved equal," or "or approved," comply with requirements in "Comparable Products" Article to obtain approval for use of an unnamed product.

    a. Submit additional documentation required by Architect in order to establish equivalency of proposed products. Unless otherwise indicated, evaluation of "or equal" product status is by the Architect, whose determination is final.

B. Product Selection Procedures:

1. Sole Product: Where Specifications name a single manufacturer and product, provide the named product that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole product may be indicated by the phrase "Subject to compliance with requirements, provide the following."

2. Sole Manufacturer/Source: Where Specifications name a single manufacturer or source, provide a product by the named manufacturer or source that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Sole manufacturer/source may be indicated by the phrase "Subject to compliance with requirements, provide products by the following."

3. Limited List of Products: Where Specifications include a list of names of both manufacturers and products, provide one of the products listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Limited list of products may be indicated by the phrase "Subject to compliance with requirements, provide one of the following."

4. Non-Limited List of Products: Where Specifications include a list of names of both available manufacturers and products, provide one of the products listed or an unnamed product that complies with requirements.

    a. Non-limited list of products is indicated by the phrase "Subject to compliance with requirements, available products that may be incorporated in the Work include, but are not limited to, the following."
    b. Provision of an unnamed product is not considered a substitution, if the product complies with requirements.

5. Limited List of Manufacturers: Where Specifications include a list of manufacturers' names, provide a product by one of the manufacturers listed that complies with requirements. Comparable products or substitutions for Contractor's convenience will not be considered.

    a. Limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, provide products by one of the following."

6. Non-Limited List of Manufacturers: Where Specifications include a list of available manufacturers, provide a product by one of the manufacturers listed or a product by an unnamed manufacturer that complies with requirements.

    a. Non-limited list of manufacturers is indicated by the phrase "Subject to compliance with requirements, available manufacturers whose products may be incorporated in the Work include, but are not limited to, the following."
    b. Provision of products of an unnamed manufacturer is not considered a substitution, if the product complies with requirements.

7. Basis-of-Design Product: Where Specifications name a product, or refer to a product indicated on Drawings, and include a list of manufacturers, provide the specified or

indicated product or a comparable product by one of the other named manufacturers. Drawings and Specifications may additionally indicate sizes, profiles, dimensions, and other characteristics that are based on the product named. Comply with requirements in "Comparable Products" Article for consideration of an unnamed product by one of the other named manufacturers.

a. For approval of products by unnamed manufacturers, comply with requirements in Division 01 Section "Substitution Procedures" for substitutions for convenience.

C. Visual Matching Specification: Where Specifications require the phrase "match Architect's sample," provide a product that complies with requirements and matches Architect's sample. Architect's decision will be final on whether a proposed product matches.

1. If no product available within specified category matches and complies with other specified requirements, comply with requirements in Division 01 Section "Substitution Procedures" for proposal of product.

D. Visual Selection Specification: Where Specifications include the phrase "as selected by Architect from manufacturer's full range" or a similar phrase, select a product that complies with requirements. Architect will select color, gloss, pattern, density, or texture from manufacturer's product line that includes both standard and premium items.

E. Sustainable Product Selection: Where Specifications require product to meet sustainable product characteristics, select products complying with indicated requirements. Comply with requirements in Division 01 sustainability requirements Section and individual Specification Sections.

1. Select products for which sustainable design documentation submittals are available from manufacturer.

2.2 COMPARABLE PRODUCTS

A. Conditions for Consideration of Comparable Products: Architect will consider Contractor's request for comparable product when the following conditions are satisfied. If the following conditions are not satisfied, Architect may return requests without action, except to record noncompliance with the following requirements:

1. Evidence that proposed product does not require revisions to the Contract Documents, is consistent with the Contract Documents, will produce the indicated results, and is compatible with other portions of the Work.
2. Detailed comparison of significant qualities of proposed product with those of the named basis-of-design product. Significant product qualities include attributes, such as type, function, in-service performance and physical properties, weight, dimension, durability, visual characteristics, and other specific features and requirements.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects, with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

B. Architect's Action on Comparable Products Submittal: If necessary, Architect will request additional information or documentation for evaluation, as specified in Division 01 Section "Submittal Procedures."

1. Form of Approval of Submittal: As specified in Division 01 Section "Submittal Procedures."
2. Use product specified if Architect does not issue a decision on use of a comparable product request within time allocated.

C. Submittal Requirements, Single-Step Process: When acceptable to Architect, incorporate specified submittal requirements of individual Specification Section in combined submittal for comparable products. Approval by the Architect of Contractor's request for use of comparable product and of individual submittal requirements will also satisfy other submittal requirements.

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 60 00

SECTION 01 71 23- FIELD ENGINEERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work on this section.

B. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

C. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

D. 2000 Maryland Stormwater Design Manual Vol I & II, dated May 2010 and as amended.

1.2 SUMMARY

Work included: Provided at the Contractor's expense, such field engineering services as are required for proper completion of the Work including, but not necessarily limited to:

A. The Contractor shall be responsible for all stakeouts and elevation checks required for construction. All such Work shall be performed by a professional land surveyor. The surveyor shall verify adequacy of benchmarks before starting construction.

B. Before the start of any building construction, the Contractor shall have a professional land surveyor locate and stake building corners, driveway entrances, driveways, parking areas and playfields. If there are any discrepancies between the actual layout and the project site plan, they shall be brought to the attention of the Architect and resolved before Work proceeds. A building and site stake out drawing stamped and signed by a professional land surveyor may be submitted in lieu of this preliminary stake out.

C. After the corners of the exterior walls have been started, the Contractor shall obtain a wall check survey certificate made by a professional land surveyor. This survey shall show the accurate location of the building with reference to property lines.

D. After the first sections of slab-on-grade have been placed in the building, the Contractor shall have a professional land surveyor verify and record the finish floor elevations on the wall check survey.

E. At the end of the project, the Contractor shall have a professional land surveyor prepare and certify an as-built survey showing the accurate horizontal and vertical locations of all building corners, paved areas, sidewalks, utilities (including inverts), fencing, site walls, and grading, etc. located within the project area.

F. As-Built survey shall be included in a standard C.A.D. format such as AutoCAD and/or MicroStation and shall include 2-foot contours within the project limits.

G. The contractor will be responsible for scheduling the independent testing agent (ITA) during construction of the stormwater management facility and insuring that the ITA completes the necessary stormwater checklist(s) during construction.

H. A complete stormwater management as-built shall also be completed in accordance with Baltimore County's Standard Stormwater Management checklist. The Contractor shall have a professional land surveyor prepare and certify an as-built survey, and the testing and inspection agent shall have their professional engineer certify the construction checklist at the interim and final stages of stormwater management facility construction.

I. The contractor will be responsible for preparing and submitting to the project engineer five (5) copies of the final stormwater management facility as-built, testing and inspection checklist(s) and additional facility information in accordance with the requirements set forth by Baltimore County.

1.3 RELATED WORK

A. Documents affecting work of this Section include, but are not necessarily limited to, General Conditions, Supplementary Conditions, and Sections in Division 1 of these Specifications.

B. Additional requirements for field engineering also may be described in other Sections of these Specifications.

1.4 QUALITY ASSURANCE

A. Use adequate numbers of skilled workmen who are thoroughly trained and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

1.5 SUBMITTALS

A. Comply with pertinent provisions of Section 017700-Closeout Submittals.

B. Upon request of the Architect, submit;

1. Data demonstrating qualifications of persons proposed to be engaged for field engineering services.

2. Documentation verifying accuracy of field engineering work.

3. Certifications, signed by the Contractor's retained field engineer, certifying that elevations and locations of improvements are in conformance with requirements of the Contract Documents.

4. All certifications and surveys described in the Summary section of this specification.

1.6 PROCEDURES

A. In addition to procedures directed by the Contractor for the proper performance of the Contractor's responsibilities:

1. Locate and protect control points before starting Work on the site.

2. Preserve permanent reference points during process of the Work.

3. Do not change or relocate reference points or items of the Work without specific approval from the Architect.

4. Promptly advise the Architect when a reference point is lost or destroyed, or requires relations because of other changes in the Work.

    a) Upon direction of the Architect, require the field engineer to replace reference stakes or markers.

    b) Locate such replacements according to the original survey control.

PART 2 - PRODUCTS

Not Applicable

PART 3 - EXECUTION

Not Applicable

END OF SECTION 01 71 23

SECTION 01 73 00 - EXECUTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes general administrative and procedural requirements governing execution of the Work, including, but not limited to, the following:
   1. Construction layout.
   2. Field engineering and surveying.
   3. Installation of the Work.
   4. Cutting and patching.
   5. Coordination of Owner's portion of the Work.
   6. Progress cleaning.
   7. Starting and adjusting.
   8. Protection of installed construction.
   9. Correction of the Work.

B. Related Requirements:
   1. Division 01 Section "Summary" for coordination of Owner-furnished products and limits on use of Project site.
   2. Division 01 Section "Submittal Procedures" for submitting surveys.
   3. Division 01 Section "Closeout Procedures" for submitting final property survey with Project Record Documents, recording of Owner-accepted deviations from indicated lines and levels, replacing defective work, and final cleaning.
   4. Division 02 Section "Structure Demolition" for demolition and removal of the building.
   5. Division 07 Section "Penetration Firestopping" for patching penetrations in fire-rated construction.

1.3 DEFINITIONS

A. Cutting: Removal of in-place construction necessary to permit installation or performance of subsequent work.

B. Patching: Fitting and repair work required to restore construction to original conditions after installation of subsequent work.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For land surveyor and professional engineer.

B. Certified Surveys: Submit (3) copies signed by land surveyor or professional engineer.

C. Certificates: Submit certificate signed by land surveyor or professional engineer, certifying that location and elevation of improvements comply with requirements.

1.5 QUALITY ASSURANCE

A. Land Surveyor Qualifications: A professional land surveyor who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing land-surveying services of the kind indicated.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or product that is similar in material, design, and extent to those indicated for this Project.

C. Cutting and Patching: Comply with requirements for and limitations on cutting and patching of construction elements.
   1. Structural Elements: When cutting and patching structural elements, or when encountering the need for cutting and patching of elements whose structural function is not known, notify Architect of locations and details of cutting and await directions from Architect before proceeding. Shore, brace, and support structural elements during cutting and patching. Do not cut and patch structural elements in a manner that could change their load-carrying capacity or increase deflection.
   2. Operational Elements: Do not cut and patch operating elements and related components in a manner that results in reducing their capacity to perform as intended or that results in increased maintenance or decreased operational life or safety. Operational elements include the following:
      a. Primary operational systems and equipment.
      b. Fire separation assemblies.
      c. Air or smoke barriers.
      d. Fire-suppression systems.
      e. Plumbing piping systems.
      f. Mechanical systems piping and ducts.
      g. Control systems.
      h. Communication systems.
      i. Fire-detection and -alarm systems.
      j. Conveying systems.
      k. Electrical wiring systems.
      l. Operating systems of special construction.
   3. Other Construction Elements: Do not cut and patch other construction elements or components in a manner that could change their load-carrying capacity, that results in reducing their capacity to perform as intended, or that results in increased maintenance or decreased operational life or safety. Other construction elements include but are not limited to the following:
      a. Water, moisture, or vapor barriers.
      b. Membranes and flashings.
      c. Sprayed fire-resistive material.
      d. Equipment supports.
      e. Piping, ductwork, vessels, and equipment.
      f. Noise- and vibration-control elements and systems.

   4. Visual Elements: Do not cut and patch construction in a manner that results in visual evidence of cutting and patching. Do not cut and patch exposed construction in a manner

that would, in Architect's opinion, reduce the building's aesthetic qualities. Remove and replace construction that has been cut and patched in a visually unsatisfactory manner.

D. Manufacturer's Installation Instructions: Obtain and maintain on-site manufacturer's written recommendations and instructions for installation of specified products and equipment.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Comply with requirements specified in other Sections.
   1. Use products for patching that comply with sustainable design requirements.

B. In-Place Materials: Use materials for patching identical to in-place materials. For exposed surfaces, use materials that visually match in-place adjacent surfaces to the fullest extent possible.
   1. If identical materials are unavailable or cannot be used, use materials that, when installed, will provide a match acceptable to Architect for the visual and functional performance of in-place materials. Use materials that are not considered hazardous.

C. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Existing Conditions: The existence and location of underground and other utilities and construction indicated as existing are not guaranteed. Before beginning sitework, investigate and verify the existence and location of underground utilities, mechanical and electrical systems, and other construction affecting the Work.
   1. Before construction, verify the location and invert elevation at points of connection of sanitary sewer, storm sewer, gas service piping, and water-service piping; underground electrical services; and other utilities.
   2. Furnish location data for work related to Project that must be performed by public utilities serving Project site.

B. Examination and Acceptance of Conditions: Before proceeding with each component of the Work, examine substrates, areas, and conditions, with Installer or Applicator present where indicated, for compliance with requirements for installation tolerances and other conditions affecting performance. Record observations.
   1. Examine roughing-in for mechanical and electrical systems to verify actual locations of connections before equipment and fixture installation.
   2. Examine walls, floors, and roofs for suitable conditions where products and systems are to be installed.
   3. Verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Proceed with installation only after unsatisfactory conditions have been corrected. Proceeding with the Work indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Existing Utility Information: Furnish information to local utility and Owner that is necessary to adjust, move, or relocate existing utility structures, utility poles, lines, services, or other utility appurtenances located in or affected by construction. Coordinate with authorities having jurisdiction.

B. Field Measurements: Take field measurements as required to fit the Work properly. Recheck measurements before installing each product. Where portions of the Work are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

C. Space Requirements: Verify space requirements and dimensions of items shown diagrammatically on Drawings.

D. Review of Contract Documents and Field Conditions: Immediately on discovery of the need for clarification of the Contract Documents, submit a request for information to Architect in accordance with requirements in Division 01 Section "Project Management and Coordination."

3.3 CONSTRUCTION LAYOUT

A. Verification: Before proceeding to lay out the Work, verify layout information shown on Drawings, in relation to the property survey and existing benchmarks and existing conditions. If discrepancies are discovered, notify Architect promptly.

B. Engage a land surveyor or professional engineer experienced in laying out the Work, using the following accepted surveying practices:

1. Establish benchmarks and control points to set lines and levels at each story of construction and elsewhere as needed to locate each element of Project.
2. Establish limits on use of Project site.
3. Establish dimensions within tolerances indicated. Do not scale Drawings to obtain required dimensions.
4. Inform installers of lines and levels to which they must comply.
5. Check the location, level and plumb, of every major element as the Work progresses.
6. Notify Architect when deviations from required lines and levels exceed allowable tolerances.
7. Close site surveys with an error of closure equal to or less than the standard established by authorities having jurisdiction.

C. Site Improvements: Locate and lay out site improvements, including pavements, grading, fill and topsoil placement, utility slopes, and rim and invert elevations.

D. Building Lines and Levels: Locate and lay out control lines and levels for structures, building foundations, column grids, and floor levels, including those required for mechanical and electrical work. Transfer survey markings and elevations for use with control lines and levels. Level foundations and piers from two or more locations.

E. Record Log: Maintain a log of layout control work. Record deviations from required lines and levels. Include beginning and ending dates and times of surveys, weather conditions, name and duty of each survey party member, and types of instruments and tapes used. Make the log available for reference by Architect.

3.4 FIELD ENGINEERING

A. Reference Points: Locate existing permanent benchmarks, control points, and similar reference points before beginning the Work. Preserve and protect permanent benchmarks and control points during construction operations.
   1. Do not change or relocate existing benchmarks or control points without prior written approval of Architect. Report lost or destroyed permanent benchmarks or control points promptly. Report the need to relocate permanent benchmarks or control points to Architect before proceeding.
   2. Replace lost or destroyed permanent benchmarks and control points promptly. Base replacements on the original survey control points.

B. Benchmarks: Establish and maintain a minimum of two permanent benchmarks on Project site, referenced to data established by survey control points. Comply with authorities having jurisdiction for type and size of benchmark.
   1. Record benchmark locations, with horizontal and vertical data, on Project Record Documents.
   2. Where the actual location or elevation of layout points cannot be marked, provide temporary reference points sufficient to locate the Work.
   3. Remove temporary reference points when no longer needed. Restore marked construction to its original condition.

C. Certified Survey: On completion of foundation walls, major site improvements, and other work requiring field-engineering services, prepare a certified survey showing dimensions, locations, angles, and elevations of construction and sitework.

3.5 INSTALLATION

A. Locate the Work and components of the Work accurately, in correct alignment and elevation, as indicated.
   1. Make vertical work plumb, and make horizontal work level.
   2. Where space is limited, install components to maximize space available for maintenance and ease of removal for replacement.
   3. Conceal pipes, ducts, and wiring in finished areas unless otherwise indicated.
   4. Maintain minimum headroom clearance of 96 inches in occupied spaces and 84 inches in unoccupied spaces, unless otherwise indicated on Drawings.

B. Comply with manufacturer's written instructions and recommendations for installing products in applications indicated.

C. Install products at the time and under conditions that will ensure satisfactory results as judged by Architect. Maintain conditions required for product performance until Substantial Completion.

D. Conduct construction operations, so no part of the Work is subjected to damaging operations or loading in excess of that expected during normal conditions of occupancy of type expected for Project.

E. Sequence the Work and allow adequate clearances to accommodate movement of construction items on-site and placement in permanent locations.

F. Tools and Equipment: Select tools or equipment that minimize production of excessive noise levels.

G. Templates: Obtain and distribute to the parties involved templates for Work specified to be factory prepared and field installed. Check Shop Drawings of other portions of the Work to confirm that adequate provisions are made for locating and installing products to comply with indicated requirements.

H. Attachment: Provide blocking and attachment plates and anchors and fasteners of adequate size and number to securely anchor each component in place, accurately located and aligned with other portions of the Work. Where size and type of attachments are not indicated, verify size and type required for load conditions with manufacturer.
   1. Mounting Heights: Where mounting heights are not indicated, mount components at heights directed by Architect.
   2. Allow for building movement, including thermal expansion and contraction.
   3. Coordinate installation of anchorages. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

I. Joints: Make joints of uniform width. Where joint locations in exposed Work are not indicated, arrange joints for the best visual effect, as judged by Architect. Fit exposed connections together to form hairline joints.

3.6 CUTTING AND PATCHING

A. General: Employ skilled workers to perform cutting and patching. Proceed with cutting and patching at the earliest feasible time, and complete without delay.
   1. Cut in-place construction to provide for installation of other components or performance of other construction, and subsequently patch as required to restore surfaces to their original condition.

B. Existing Warranties: Remove, replace, patch, and repair materials and surfaces cut or damaged during installation or cutting and patching operations, by methods and with materials so as not to void existing warranties.

C. Temporary Support: Provide temporary support of Work to be cut.

D. Protection: Protect in-place construction during cutting and patching to prevent damage. Provide protection from adverse weather conditions for portions of Project that might be exposed during cutting and patching operations.

E. Existing Utility Services and Mechanical/Electrical Systems: Where existing services/systems are required to be removed, relocated, or abandoned, bypass such services/systems before cutting to minimize interruption to adjacent buildings.

F. Cutting: Cut in-place construction by sawing, drilling, breaking, chipping, grinding, and similar operations, including excavation, using methods least likely to damage elements retained or adjoining construction. If possible, review proposed procedures with original Installer; comply with original Installer's written recommendations.

1. In general, use hand or small power tools designed for sawing and grinding, not hammering and chopping. Cut holes and slots neatly to minimum size required, and with minimum disturbance of adjacent surfaces. Temporarily cover openings when not in use.
2. Finished Surfaces: Cut or drill from the exposed or finished side into concealed surfaces.
3. Concrete and Masonry: Cut using a cutting machine, such as an abrasive saw or a diamond-core drill.
4. Excavating and Backfilling: Comply with requirements in applicable Sections where required by cutting and patching operations.
5. Mechanical and Electrical Services: Cut off pipe or conduit in walls or partitions to be removed. Cap, valve, or plug and seal remaining portion of pipe or conduit to prevent entrance of moisture or other foreign matter after cutting.
6. Proceed with patching after construction operations requiring cutting are complete.

G. Patching: Patch construction by filling, repairing, refinishing, closing up, and similar operations following performance of other Work. Patch with durable seams that are as invisible as practicable, as judged by Architect. Provide materials and comply with installation requirements specified in other Sections, where applicable.

1. Inspection: Where feasible, test and inspect patched areas after completion to demonstrate physical integrity of installation.
2. Exposed Finishes: Restore exposed finishes of patched areas and extend finish restoration into retained adjoining construction in a manner that will eliminate evidence of patching and refinishing.
    a. Clean piping, conduit, and similar features before applying paint or other finishing materials.
    b. Restore damaged pipe covering to its original condition.
3. Floors and Walls: Where walls or partitions that are removed extend one finished area into another, patch and repair floor and wall surfaces in the new space. Provide an even surface of uniform finish, color, texture, and appearance. Remove in-place floor and wall coverings and replace with new materials, if necessary, to achieve uniform color and appearance.
    a. Where patching occurs in a painted surface, prepare substrate and apply primer and intermediate paint coats appropriate for substrate over the patch, and apply final paint coat over entire unbroken surface containing the patch, corner to corner of wall and edge to edge of ceiling. Provide additional coats until patch blends with adjacent surfaces.
4. Ceilings: Patch, repair, or rehang in-place ceilings as necessary to provide an even-plane surface of uniform appearance.
5. Exterior Building Enclosure: Patch components in a manner that restores enclosure to a weathertight condition and ensures thermal and moisture integrity of building enclosure.

H. Cleaning: Clean areas and spaces where cutting and patching are performed. Remove paint, mortar, oils, putty, and similar materials from adjacent finished surfaces.

3.7 COORDINATION OF OWNER'S PORTION OF THE WORK

A. Site Access: Provide access to Project site for Owner's construction personnel.

1. Provide temporary facilities required for Owner-furnished, Contractor-installed products.
2. Refer to Division 01 Section "Summary" for other requirements for Owner-furnished, Contractor-installed products.

B. Coordination: Coordinate construction and operations of the Work with work performed by Owner's construction personnel.

1. Construction Schedule: Inform Owner of Contractor's preferred construction schedule for Owner's portion of the Work. Adjust construction schedule based on a mutually agreeable timetable. Notify Owner if changes to schedule are required due to differences in actual construction progress.
2. Preinstallation Conferences: Include Owner's construction personnel at preinstallation conferences covering portions of the Work that are to receive Owner's work. Attend preinstallation conferences conducted by Owner's construction personnel if portions of the Work depend on Owner's construction.

3.8 PROGRESS CLEANING

A. Clean Project site and work areas daily, including common areas. Enforce requirements strictly. Dispose of materials lawfully.

1. Comply with requirements in NFPA 241 for removal of combustible waste materials and debris.
2. Do not hold waste materials more than seven days during normal weather or three days if the temperature is expected to rise above 80 deg F.
3. Containerize hazardous and unsanitary waste materials separately from other waste. Mark containers appropriately and dispose of legally, according to regulations.
   a. Use containers intended for holding waste materials of type to be stored.

B. Site: Maintain Project site free of waste materials and debris.

C. Work Areas: Clean areas where Work is in progress to the level of cleanliness necessary for proper execution of the Work.

1. Remove liquid spills promptly.
2. Where dust would impair proper execution of the Work, broom-clean or vacuum the entire work area, as appropriate.

D. Installed Work: Keep installed work clean. Clean installed surfaces according to written instructions of manufacturer or fabricator of product installed, using only cleaning materials specifically recommended. If specific cleaning materials are not recommended, use cleaning materials that are not hazardous to health or property and that will not damage exposed surfaces.

E. Concealed Spaces: Remove debris from concealed spaces before enclosing the space.

F. Exposed Surfaces: Clean exposed surfaces and protect as necessary to ensure freedom from damage and deterioration at time of Substantial Completion.

G. Waste Disposal: Do not bury or burn waste materials on-site. Do not wash waste materials down sewers or into waterways. Comply with waste disposal requirements in 017419 "Construction and Demolition Waste Management and Disposal."

H. During handling and installation, clean and protect construction in progress and adjoining materials already in place. Apply protective covering where required to ensure protection from damage or deterioration at Substantial Completion.

I. Clean and provide maintenance on completed construction as frequently as necessary through the remainder of the construction period. Adjust and lubricate operable components to ensure operability without damaging effects.

J. Limiting Exposures: Supervise construction operations to ensure that no part of the construction, completed or in progress, is subject to harmful, dangerous, damaging, or otherwise deleterious exposure during the construction period.

3.9 STARTING AND ADJUSTING

A. Coordinate startup and adjusting of equipment and operating components with requirements in Division 01 Section "General Commissioning Requirements."

B. Start equipment and operating components to confirm proper operation. Remove malfunctioning units, replace with new units, and retest.

C. Adjust equipment for proper operation. Adjust operating components for proper operation without binding.

D. Test each piece of equipment to verify proper operation. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

E. Manufacturer's Field Service: Comply with qualification requirements in Section 014000 "Quality Requirements."

3.10 PROTECTION OF INSTALLED CONSTRUCTION

A. Provide final protection and maintain conditions that ensure installed Work is without damage or deterioration at time of Substantial Completion.

B. Protection of Existing Items: Provide protection and ensure that existing items to remain undisturbed by construction are maintained in condition that existed at commencement of the Work.

C. Comply with manufacturer's written instructions for temperature and relative humidity.

3.11 CORRECTION OF THE WORK

A. Repair or remove and replace damaged, defective, or nonconforming Work. Restore damaged substrates and finishes.

1. Repairing includes replacing defective parts, refinishing damaged surfaces, touching up with matching materials, and properly adjusting operating equipment.

B. Repair Work previously completed and subsequently damaged during construction period. Repair to like-new condition.

C. Restore permanent facilities used during construction to their specified condition.

D. Remove and replace damaged surfaces that are exposed to view if surfaces cannot be repaired without visible evidence of repair.

E. Repair components that do not operate properly. Remove and replace operating components that cannot be repaired.

F. Remove and replace chipped, scratched, and broken glass or reflective surfaces.

END OF SECTION 01 73 00

SECTION 01 74 19 – CONSTRUCTION AND DEMOLITION WASTE MANAGEMENT AND DISPOSAL

PART 1 - GENERAL

1.1 SUMMARY

A. Reduce construction and demolition waste on project site and minimize waste sent to landfills and incineration through implementation of a Construction and Demolition Waste Management Plan as required by LEED® version 4.0 (v4.0) Building Design and Construction (LEED BD+C: New Construction) Rating System and as outlined within this section. Throughout this section, the term LEED is used in place of LEED BD+C: New Construction.

B. Related sections: The following sections contain requirements that relate to this section:
   1. Division 01 Section “Sustainable Design Requirements-LEED” for definitions and reference standards relating to waste management, referenced herein.
   2. Division 02 Sections referring to demolition.

1.2 REFERENCES

A. LEED v4.0 for Building Rating System and Getting Started Guide for Building Design and Construction (BD+C)
   1. Materials and Resources (MR) Prerequisite 2: Construction and Demolition Waste Management Planning
   2. MR Credit 5: Construction and Demolition Waste Management

B. Recycling Certification Institute certification program for recycling facilities

1.3 PRELIMINARY SUBMITTALS

A. Prior to any waste removal and in advance of the Pre-Construction Meeting, submit for approval a detailed Waste Management Plan in accordance with LEED MR Prerequisite 2 and Credit 5 requirements and as outlined in this Section.
   1. LEED v4.0 MR Prerequisite 2: Identify at least five materials (both structural and nonstructural) to be targeted for diversion.
      a. Provide an estimated percentage of the overall project waste that these materials represent, and diversion goals for each.
   2. LEED v4.0 MR Credit 5: Achieve the following waste management goal(s):
      a. Option 1, Path 2 – Divert at least 75 percent, of total construction and demolition waste, identifying at least four individual material waste streams, from landfill or incinerator, by weight or volume.
         1) Commingled waste is calculated as one material stream unless the sorting facility provides diversion rates for specific materials using weight or volume.
   3. Describe means and methods to achieve required goal.
      a. Indicate whether materials will be separated on site or comingled.
      b. Identify recycling contractors and haulers proposed for the project and locations accepting waste materials or entities providing related services.
      c. Describe how the recycling facility will process the material.
      d. For multiple waste streams: Provide statement that project specific diversion rates will be provided, by weight or volume.
      e. Commingled sorting facilities:

1) Provide end destination and intended use for diverted materials.
2) For one commingled waste stream: Provide average annual recycling rate for the facility provided by the regulating local or state government authority. Confirm alternative daily cover (ADC) is considered undiverted waste and is excluded from the average annual diversion rate.

f. Visual inspection is not an acceptable method of inspection for purposes of documenting percentage of comingled waste diverted from landfill.

1.4 INFORMATIONAL SUBMITTALS

A. With each Application for Payment, submit waste management progress reports, demonstrating MR Credit 5.
1. Project title, name of party completing report, and dates of period covered by the report.
2. Amount (by weight or volume) of recycled and/or salvaged construction and demolition waste to date, include the identified three material streams.
a. Exclude excavated soil, land-clearing waste from calculations.
b. Include materials destined for alternative daily cover (ADC) as landfilled waste.
c. Include materials reused on site as diverted from landfill in calculations.
d. Include materials sent to incinerators as diverted from landfill in calculations.
e. Include all materials donated, sent to reuse facility, or reused off-site as diverted from landfill in calculations.
f. Include wood waste converted to fuel (biofuel) or waste-to-energy as diverted from landfill in calculations.
1) Exclude all other types of waste-to-energy from calculations.
g. Comingling sorting facilities: Provide summary of diversion rates, type of materials recycled and description of the end destination of the recycled materials.

1.5 CLOSEOUT SUBMITTALS

A. LEED Online: At completion of construction and prior to contract closeout, complete the LEED Online Form on the LEED Online Project Database for MR Prerequisite 2 and Credit 5 and upload the associated required documentation.
1. MR Prerequisite 2: Construction and Demolition Waste Management Plan
2. MR Credit 5: Construction and Demolition Waste Management Calculator and summarize final waste management reports detailing all waste generated, including disposal and diversion rates for the project.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 WASTE MANAGEMENT PLAN IMPLEMENTATION, GENERAL

A. Designate one employee or consultant as the Contractor Waste Management Coordinator for this Project.
1. Maintain access to LEED Online at project award and throughout project.
2. Oversee the demolition and construction waste activities for the project.
3. Instruct workers concerning the sustainable building goals.
4. Prepare and oversee CWM related submittals.
5. Complete final LEED documentation for CWM prerequisite and credit.

B. Training and Coordination:

1. Furnish copies of approved Waste Management Plan to all on-site supervisors, each subcontractor, Owner, and Architect.
2. Instruction: Provide on-site instruction of appropriate separation, handling, and recycling, salvage, reuse, and return methods to be used by all entities at the appropriate stages of the Project.
3. Meetings: Include construction waste management on the agenda of all required regularly scheduled construction meetings.

C. Facilities: Provide designated facilities for co-mingling or separation and storage of materials for recycling, salvage, reuse, return, donation and waste disposal, per approved Waste Management Plan for use by all contractors and installers.
1. Provide adequate space, convenient to subcontractors, for pick-up and delivery.
2. Keep recycling and waste bin areas neat and clean to avoid contamination of materials.

D. Records: Maintain on-site logs for each load of materials removed from site:
1. Include type of material, load (by weight or volume), recycling/hauling service, and date accepted by service or non-profit receiver.
   a. Comingling waste as a single stream: provide documentation of percentages of diverted waste from the sorting facility for the corresponding month.
   b. Comingled waste as multiple streams: provide documentation of percentages of individual waste streams based on weight or volume.

E. Methods of waste disposal that are not acceptable for LEED compliance:
1. Burning or incinerating on or off project site, except as described in PART 1 of this section.
2. Burying on project site, other than fill.
3. Dumping or burying on other property, public or private, other than official landfill.
4. Illegal dumping or burying.

F. Reuse of Materials On-Site: Set aside, sort, and protect separated products in preparation for reuse.
1. Materials qualifying as reused for MR Credit 3: Sourcing of Raw Materials contribute as diverted waste in calculations for MR Credit 5, Option 1.
2. Concrete, masonry and asphalt crushed and reused on-site contribute as diverted waste to calculations for MR Credit 5, Option 1 and do not contribute to MR Credit 3: Sourcing of Raw Materials as reused materials.
   a. MR Credit 3: 100 percent recycled content and regional content.
   b. MR Credit 5: 100 percent diverted from land fill.
3. Reused materials do not contribute to MR Credit 5, Option 2.

G. Salvage of Materials: Set aside, sort, and protect products to be salvaged for reuse off-site.
1. For renovation projects: Re-sale of existing furniture is acceptable means for diversion.

H. Hazardous Waste Handling: Separate, store and dispose of hazardous wastes separately from other materials and in accordance with local regulations.

END OF SECTION 01 74 19

SECTION 01 77 00 - CLOSEOUT PROCEDURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Contract closeout, including, but not limited to, the following:

1. Substantial Completion procedures.
2. Final completion procedures.
3. Warranties.
4. Final cleaning.

B. Related Requirements:

1. Division 01 Section "Payment Procedures" for requirements for Applications for Payment for Substantial Completion and Final Completion.
2. Division 01 Section "Photographic Documentation" for submitting Final Completion construction photographic documentation.
3. Division 01 Section "Operation and Maintenance Data" for additional operation and maintenance manual requirements.
4. Division 01 Section "Project Record Documents" for submitting Record Drawings, Record Specifications, and Record Product Data.
5. Division 01 Section "Demonstration and Training" for requirements to train the Owner's maintenance personnel to adjust, operate, and maintain products, equipment, and systems.

1.3 DEFINITIONS

A. List of Incomplete Items: Contractor-prepared list of items to be completed or corrected, prepared for the Architect's use prior to Architect's inspection, to determine if the Work is substantially complete.

1.4 ACTION SUBMITTALS

A. Contractor's List of Incomplete Items: Initial submittal at Substantial Completion.

B. Certified List of Incomplete Items: Final submittal at Final Completion.

1.5 CLOSEOUT SUBMITTALS

A. Certificates of Release: From authorities having jurisdiction.

B. Certificate of Insurance: For continuing coverage.

C. Field Report: For pest-control inspection.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Schedule of Maintenance Material Items: For maintenance material submittal items required by other Sections.

1.7 SUBSTANTIAL COMPLETION PROCEDURES

A. Contractor's List of Incomplete Items: Prepare and submit a list of items to be completed and corrected (Contractor's "punch list"), indicating the value of each item on the list and reasons why the Work is incomplete.

B. Submittals Prior to Substantial Completion: Complete the following a minimum of (10) days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Certificates of Release: Obtain and submit releases from authorities having jurisdiction, permitting Owner unrestricted use of the Work and access to services and utilities. Include occupancy permits, operating certificates, and similar releases.
2. Submit closeout submittals specified in other Division 01 Sections, including Project Record Documents, operation and maintenance manuals, damage or settlement surveys, property surveys, and similar final record information.
3. Submit closeout submittals specified in individual Sections, including specific warranties, workmanship bonds, maintenance service agreements, final certifications, and similar documents.
4. Submit maintenance material submittals specified in individual Sections, including tools, spare parts, extra materials, and similar items, and deliver to location designated by Owner. Label with manufacturer's name and model number.

    a. Schedule of Maintenance Material Items: Prepare and submit schedule of maintenance material submittal items, including name and quantity of each item and name and number of related Specification Section. Obtain Owner's signature for receipt of submittals.

5. Submit testing, adjusting, and balancing records.
6. Submit sustainable design submittals not previously submitted.
7. Submit changeover information related to Owner's occupancy, use, operation, and maintenance.

C. Procedures Prior to Substantial Completion: Complete the following a minimum of (10) days prior to requesting inspection for determining date of Substantial Completion. List items below that are incomplete at time of request.

1. Advise Owner of pending insurance changeover requirements.

2. Make final changeover of permanent locks and deliver keys to Owner. Advise Owner's personnel of changeover in security provisions.
3. Complete startup and testing of systems and equipment.
4. Perform preventive maintenance on equipment used prior to Substantial Completion.
5. Instruct Owner's personnel in operation, adjustment, and maintenance of products, equipment, and systems.
6. Advise Owner of changeover in utility services.
7. Participate with Owner in conducting inspection and walkthrough with local emergency responders.
8. Terminate and remove temporary facilities from Project site, along with mockups, construction tools, and similar elements.
9. Complete final cleaning requirements.
10. Touch up paint and otherwise repair and restore marred exposed finishes to eliminate visual defects.

D. Inspection: Submit a written request for inspection to determine Substantial Completion a minimum of (10) days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare the Certificate of Substantial Completion after inspection or will notify Contractor of items, either on Contractor's list or additional items identified by Architect, that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.
2. Results of completed inspection will form the basis of requirements for Final Completion.

1.8 FINAL COMPLETION PROCEDURES

A. Submittals Prior to Final Completion: Before requesting final inspection for determining Final Completion, complete the following:

1. Submit a final Application for Payment in accordance with Division 01 Section "Payment Procedures."
2. Certified List of Incomplete Items: Submit certified copy of Architect's Substantial Completion inspection list of items to be completed or corrected (punch list), endorsed and dated by Architect. Certified copy of the list shall state that each item has been completed or otherwise resolved for acceptance.
3. Certificate of Insurance: Submit evidence of final, continuing insurance coverage complying with insurance requirements.
4. Submit pest-control final inspection report.
5. Submit Final Completion photographic documentation.

B. Inspection: Submit a written request for final inspection to determine acceptance a minimum of 10 days prior to date the Work will be completed and ready for final inspection and tests. On receipt of request, Architect will either proceed with inspection or notify Contractor of unfulfilled requirements. Architect will prepare a final Certificate for Payment after inspection or will notify Contractor of construction that must be completed or corrected before certificate will be issued.

1. Request reinspection when the Work identified in previous inspections as incomplete is completed or corrected.

1.9 LIST OF INCOMPLETE ITEMS

A. Organization of List: Include name and identification of each space and area affected by construction operations for incomplete items and items needing correction including, if necessary, areas disturbed by Contractor that are outside the limits of construction.

1. Organize list of spaces in sequential order, starting with exterior areas first and proceeding from lowest floor to highest floor, listed by room or space number.
2. Organize items applying to each space by major element, including categories for ceilings, individual walls, floors, equipment, and building systems.
3. Include the following information at the top of each page:

a. Project name.
b. Date.
c. Name of Architect.
d. Name of Contractor.
e. Page number.

1.10 SUBMITTAL OF PROJECT WARRANTIES

A. Time of Submittal: Submit written warranties on request of Architect for designated portions of the Work where warranties are indicated to commence on dates other than date of Substantial Completion, or when delay in submittal of warranties might limit Owner's rights under warranty.

B. Partial Occupancy: Submit properly executed warranties within 15 days of completion of designated portions of the Work that are completed and occupied or used by Owner during construction period by separate agreement with Contractor.

C. Organize warranty documents into an orderly sequence based on the table of contents of Project Manual.

D. Warranty Electronic File: Provide warranties and bonds in PDF format. Assemble complete warranty and bond submittal package into a single electronic PDF file with bookmarks enabling navigation to each item. Provide bookmarked table of contents at beginning of document.

1. Submit by uploading to web-based project software site.

E. Provide additional copies of each warranty to include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cleaning Agents: Use cleaning materials and agents recommended by manufacturer or fabricator of the surface to be cleaned. Do not use cleaning agents that are potentially hazardous to health or property or that might damage finished surfaces.

1. Use cleaning products that comply with Green Seal's GS-37, or if GS-37 is not applicable, use products that comply with the California Code of Regulations maximum allowable VOC levels.

PART 3 - EXECUTION

3.1 FINAL CLEANING

A. General: Perform final cleaning. Conduct cleaning and waste-removal operations to comply with local laws and ordinances and Federal and local environmental and antipollution regulations.

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to condition expected in an average commercial building cleaning and maintenance program. Comply with manufacturer's written instructions.

1. Complete the following cleaning operations before requesting inspection for certification of Substantial Completion for entire Project or for a designated portion of Project:

a. Clean Project site of rubbish, waste material, litter, and other foreign substances.
b. Sweep paved areas broom clean. Remove petrochemical spills, stains, and other foreign deposits.
c. Rake grounds that are not planted, mulched, or paved to a smooth, even-textured surface.
d. Remove tools, construction equipment, machinery, and surplus material from Project site.
e. Remove snow and ice to provide safe access to building.
f. Clean exposed exterior and interior hard-surfaced finishes to a dirt-free condition, free of stains, films, and similar foreign substances. Avoid disturbing natural weathering of exterior surfaces. Restore reflective surfaces to their original condition.
g. Remove debris and surface dust from limited-access spaces, including roofs, plenums, shafts, trenches, equipment vaults, manholes, attics, and similar spaces.
h. Clean flooring, removing debris, dirt, and staining; clean according to manufacturer's recommendations.
i. Vacuum and mop concrete.
j. Vacuum carpet and similar soft surfaces, removing debris and excess nap; clean according to manufacturer's recommendations if visible soil or stains remain.
k. Clean transparent materials, including mirrors and glass in doors and windows. Remove glazing compounds and other noticeable, vision-obscuring materials. Polish mirrors and glass, taking care not to scratch surfaces.
l. Remove labels that are not permanent.
m. Wipe surfaces of mechanical and electrical equipment, elevator equipment, and similar equipment. Remove excess lubrication, paint and mortar droppings, and other foreign substances.
n. Clean plumbing fixtures to a sanitary condition, free of stains, including stains resulting from water exposure.
o. Replace disposable air filters and clean permanent air filters. Clean exposed surfaces of diffusers, registers, and grills.
p. Clean ducts, blowers, and coils if units were operated during construction or that display contamination with particulate matter on inspection.
q. Clean luminaires, lamps, globes, and reflectors to function with full efficiency.
r. Clean strainers.
s. Leave Project clean and ready for occupancy.

C. Pest Control: Comply with pest control requirements in Division 01 Section "Temporary Facilities and Controls." Prepare written report.

D. Construction Waste Disposal: Comply with waste-disposal requirements in Division 01 Section "Construction and Demolition Waste Management and Disposal."

3.2 REPAIR OF THE WORK

A. Complete repair and restoration operations required by Division 01 Section "Execution" before requesting inspection for determination of Substantial Completion.

END OF SECTION 01 77 00

SECTION 01 78 23 - OPERATION AND MAINTENANCE DATA

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for preparing operation and maintenance manuals, including the following:

1. Operation and maintenance documentation directory manuals.
2. Emergency manuals.
3. Systems and equipment operation manuals.
4. Systems and equipment maintenance manuals.
5. Product maintenance manuals.

B. Related Requirements:

1. Division 01 Section "Submittal Procedures" for submitting copies of submittals for operation and maintenance manuals.
2. Division 01 Section "General Commissioning Requirements" for verification and compilation of data into operation and maintenance manuals.

1.3 CLOSEOUT SUBMITTALS

A. Submit operation and maintenance manuals indicated. Provide content for each manual as specified in individual Specification Sections, and as reviewed and approved at the time of Section submittals. Submit reviewed manual content formatted and organized as required by this Section.

1. Where applicable, clarify and update reviewed manual content to correspond to revisions and field conditions.

B. Format: Submit operation and maintenance manuals in the following format:

1. Submit as PDFs and by uploading to web-based project software site. Enable reviewer comments on draft submittals.

C. Initial Manual Submittal: Submit draft copy of each manual at least 30 days before commencing demonstration and training. Architect and Commissioning Agent will comment on whether general scope and content of manual are acceptable.

D. Final Manual Submittal: Submit each manual in final form prior to requesting inspection for Substantial Completion and at least 15 days before commencing demonstration and training. Architect and Commissioning Agent will return copy with comments.

1. Correct or revise each manual to comply with Architect's and Commissioning Agent's comments. Submit copies of each corrected manual within 15 days of receipt of comments and prior to commencing demonstration and training.

E. Comply with Division 01 Section "Closeout Procedures" for schedule for submitting operation and maintenance documentation.

1.4 FORMAT OF OPERATION AND MAINTENANCE MANUALS

A. General: Submit Final Manual electronically and provide (3) paper copies to the Owner.

B. Manuals, Electronic Files: Submit manuals in the form of a multiple file composite electronic PDF file for each manual type required.

1. Electronic Files: Use electronic files prepared by manufacturer where available. Where scanning of paper documents is required, configure scanned file for minimum readable file size.
2. File Names and Bookmarks: Bookmark individual documents based on file names. Name document files to correspond to system, subsystem, and equipment names used in manual directory and table of contents. Group documents for each system and subsystem into individual composite bookmarked files, then create composite manual, so that resulting bookmarks reflect the system, subsystem, and equipment names in a readily navigated file tree. Configure electronic manual to display bookmark panel on opening file.

C. Manuals, Paper Copy: Submit manuals in the form of hard-copy, bound and labeled volumes.

1. Binders: Heavy-duty, three-ring, vinyl-covered, loose-leaf binders, in thickness necessary to accommodate contents, sized to hold 8-1/2-by-11-inch paper; with clear plastic sleeve on spine to hold label describing contents and with pockets inside covers to hold folded oversize sheets.

a. If two or more binders are necessary to accommodate data of a system, organize data in each binder into groupings by subsystem and related components. Cross-reference other binders if necessary to provide essential information for proper operation or maintenance of equipment or system.
b. Identify each binder on front and spine, with printed title "OPERATION AND MAINTENANCE MANUAL," Project title or name, and subject matter of contents. Indicate volume number for multiple-volume sets.

2. Dividers: Heavy-paper dividers with plastic-covered tabs for each section of the manual. Mark each tab to indicate contents. Include typed list of products and major components of equipment included in the section on each divider, cross-referenced to Specification Section number and title of Project Manual.
3. Protective Plastic Sleeves: Transparent plastic sleeves designed to enclose diagnostic software storage media for computerized electronic equipment. Enclose title pages and directories in clear plastic sleeves.
4. Supplementary Text: Prepared on 8-1/2-by-11-inch white bond paper.
5. Drawings: Attach reinforced, punched binder tabs on drawings and bind with text.

a. If oversize drawings are necessary, fold drawings to same size as text pages and use as foldouts.
b. If drawings are too large to be used as foldouts, fold and place drawings in labeled envelopes and bind envelopes in rear of manual. At appropriate locations in manual, insert typewritten pages indicating drawing titles, descriptions of contents, and drawing locations.

1.5 REQUIREMENTS FOR EMERGENCY, OPERATION, AND MAINTENANCE MANUALS

A. Organization of Manuals: Unless otherwise indicated, organize each manual into a separate section for each system and subsystem, and a separate section for each piece of equipment not part of a system. Each manual shall contain the following materials, in the order listed:

1. Title page.
2. Table of contents.
3. Manual contents.

B. Title Page: Include the following information:

1. Subject matter included in manual.
2. Name and address of Project.
3. Name and address of Owner.
4. Date of submittal.
5. Name and contact information for Contractor.
6. Name and contact information for Architect.
7. Name and contact information for Commissioning Agent.
8. Names and contact information for major consultants to the Architect that designed the systems contained in the manuals.
9. Cross-reference to related systems in other operation and maintenance manuals.

C. Table of Contents: List each product included in manual, identified by product name, indexed to the content of the volume, and cross-referenced to Specification Section number in Project Manual.

1. If operation or maintenance documentation requires more than one volume to accommodate data, include comprehensive table of contents for all volumes in each volume of the set.

D. Manual Contents: Organize into sets of manageable size. Arrange contents alphabetically by system, subsystem, and equipment. If possible, assemble instructions for subsystems, equipment, and components of one system into a single binder.

E. Identification: In the documentation directory and in each operation and maintenance manual, identify each system, subsystem, and piece of equipment with same designation used in the Contract Documents. If no designation exists, assign a designation according to ASHRAE Guideline 4, "Preparation of Operating and Maintenance Documentation for Building Systems."

1.6 OPERATION AND MAINTENANCE DOCUMENTATION DIRECTORY MANUAL

A. Operation and Maintenance Documentation Directory: Prepare a separate manual that provides an organized reference to emergency, operation, and maintenance manuals. List items and their location to facilitate ready access to desired information. Include the following:

1. List of Systems and Subsystems: List systems alphabetically. Include references to operation and maintenance manuals that contain information about each system.
2. List of Equipment: List equipment for each system, organized alphabetically by system. For pieces of equipment not part of system, list alphabetically in separate list.
3. Tables of Contents: Include a table of contents for each emergency, operation, and maintenance manual.

1.7 EMERGENCY MANUALS

A. Emergency Manual: Assemble a complete set of emergency information indicating procedures for use by emergency personnel and by Owner's operating personnel for types of emergencies indicated.

B. Content: Organize manual into a separate section for each of the following:

1. Type of emergency.
2. Emergency instructions.
3. Emergency procedures.

C. Type of Emergency: Where applicable for each type of emergency indicated below, include instructions and procedures for each system, subsystem, piece of equipment, and component:

1. Fire.
2. Flood.
3. Gas leak.
4. Water leak.
5. Power failure.
6. Water outage.
7. System, subsystem, or equipment failure.
8. Chemical release or spill.

D. Emergency Instructions: Describe and explain warnings, trouble indications, error messages, and similar codes and signals. Include responsibilities of Owner's operating personnel for notification of Installer, supplier, and manufacturer to maintain warranties.

E. Emergency Procedures: Include the following, as applicable:

1. Instructions on stopping.
2. Shutdown instructions for each type of emergency.
3. Operating instructions for conditions outside normal operating limits.
4. Required sequences for electric or electronic systems.
5. Special operating instructions and procedures.

1.8 SYSTEMS AND EQUIPMENT OPERATION MANUALS

A. Systems and Equipment Operation Manual: Assemble a complete set of data indicating operation of each system, subsystem, and piece of equipment not part of a system. Include information required for daily operation and management, operating standards, and routine and special operating procedures.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: In addition to requirements in this Section, include operation data required in individual Specification Sections and the following information:

1. System, subsystem, and equipment descriptions. Use designations for systems and equipment indicated on Contract Documents.
2. Performance and design criteria if Contractor has delegated design responsibility.
3. Operating standards.
4. Operating procedures.
5. Operating logs.
6. Wiring diagrams.
7. Control diagrams.
8. Piped system diagrams.
9. Precautions against improper use.
10. License requirements including inspection and renewal dates.

C. Descriptions: Include the following:

1. Product name and model number. Use designations for products indicated on Contract Documents.
2. Manufacturer's name.
3. Equipment identification with serial number of each component.
4. Equipment function.
5. Operating characteristics.
6. Limiting conditions.
7. Performance curves.
8. Engineering data and tests.
9. Complete nomenclature and number of replacement parts.

D. Operating Procedures: Include the following, as applicable:

1. Startup procedures.
2. Equipment or system break-in procedures.
3. Routine and normal operating instructions.
4. Regulation and control procedures.
5. Instructions on stopping.
6. Normal shutdown instructions.
7. Seasonal and weekend operating instructions.
8. Required sequences for electric or electronic systems.
9. Special operating instructions and procedures.

E. Systems and Equipment Controls: Describe the sequence of operation, and diagram controls as installed.

F. Piped Systems: Diagram piping as installed, and identify color coding where required for identification.

1.9 SYSTEMS AND EQUIPMENT MAINTENANCE MANUALS

A. Systems and Equipment Maintenance Manuals: Assemble a complete set of data indicating maintenance of each system, subsystem, and piece of equipment not part of a system. Include manufacturers' maintenance documentation, preventive maintenance procedures and frequency, repair procedures, wiring and systems diagrams, lists of spare parts, and warranty information.

1. Engage a factory-authorized service representative to assemble and prepare information for each system, subsystem, and piece of equipment not part of a system.
2. Prepare a separate manual for each system and subsystem, in the form of an instructional manual for use by Owner's operating personnel.

B. Content: For each system, subsystem, and piece of equipment not part of a system, include source information, manufacturers' maintenance documentation, maintenance procedures, maintenance and service schedules, spare parts list and source information, maintenance service contracts, and warranties and bonds as described below.

C. Source Information: List each system, subsystem, and piece of equipment included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Manufacturers' Maintenance Documentation: Include the following information for each component part or piece of equipment:

1. Standard maintenance instructions and bulletins; include only sheets pertinent to product or component installed. Mark each sheet to identify each product or component incorporated into the Work. If data include more than one item in a tabular format, identify each item using appropriate references from the Contract Documents. Identify data applicable to the Work and delete references to information not applicable.

    a. Prepare supplementary text if manufacturers' standard printed data are not available and where the information is necessary for proper operation and maintenance of equipment or systems.

2. Drawings, diagrams, and instructions required for maintenance, including disassembly and component removal, replacement, and assembly.
3. Identification and nomenclature of parts and components.
4. List of items recommended to be stocked as spare parts.

E. Maintenance Procedures: Include the following information and items that detail essential maintenance procedures:

1. Test and inspection instructions.
2. Troubleshooting guide.
3. Precautions against improper maintenance.
4. Disassembly; component removal, repair, and replacement; and reassembly instructions.

5. Aligning, adjusting, and checking instructions.
6. Demonstration and training video recording, if available.

F. Maintenance and Service Schedules: Include service and lubrication requirements, list of required lubricants for equipment, and separate schedules for preventive and routine maintenance and service with standard time allotment.

1. Scheduled Maintenance and Service: Tabulate actions for daily, weekly, monthly, quarterly, semiannual, and annual frequencies.
2. Maintenance and Service Record: Include manufacturers' forms for recording maintenance.

G. Spare Parts List and Source Information: Include lists of replacement and repair parts, with parts identified and cross-referenced to manufacturers' maintenance documentation and local sources of maintenance materials and related services.

H. Maintenance Service Contracts: Include copies of maintenance agreements with name and telephone number of service agent.

I. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

J. Drawings: Prepare drawings supplementing manufacturers' printed data to illustrate the relationship of component parts of equipment and systems and to illustrate control sequence and flow diagrams. Coordinate these drawings with information contained in record Drawings to ensure correct illustration of completed installation.

1. Do not use original project record documents as part of maintenance manuals.

1.10 PRODUCT MAINTENANCE MANUALS

A. Product Maintenance Manual: Assemble a complete set of maintenance data indicating care and maintenance of each product, material, and finish incorporated into the Work.

B. Content: Organize manual into a separate section for each product, material, and finish. Include source information, product information, maintenance procedures, repair materials and sources, and warranties and bonds, as described below.

C. Source Information: List each product included in manual, identified by product name and arranged to match manual's table of contents. For each product, list name, address, and telephone number of Installer or supplier and maintenance service agent, and cross-reference Specification Section number and title in Project Manual and drawing or schedule designation or identifier where applicable.

D. Product Information: Include the following, as applicable:

1. Product name and model number.
2. Manufacturer's name.
3. Color, pattern, and texture.
4. Material and chemical composition.

5. Reordering information for specially manufactured products.

E. Maintenance Procedures: Include manufacturer's written recommendations and the following:

1. Inspection procedures.
2. Types of cleaning agents to be used and methods of cleaning.
3. List of cleaning agents and methods of cleaning detrimental to product.
4. Schedule for routine cleaning and maintenance.
5. Repair instructions.

F. Repair Materials and Sources: Include lists of materials and local sources of materials and related services.

G. Warranties and Bonds: Include copies of warranties and bonds and lists of circumstances and conditions that would affect validity of warranties or bonds.

1. Include procedures to follow and required notifications for warranty claims.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 78 23

SECTION 01 78 39 - PROJECT RECORD DOCUMENTS

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for Project Record Documents, including the following:

1. Record Drawings.
2. Record Samples.
3. Miscellaneous record submittals.

B. Related Requirements:

1. Division 01 Section "Closeout Procedures" for general closeout procedures.
2. Division 01 Section "Operation and Maintenance Data" for operation and maintenance manual requirements.

1.3 CLOSEOUT SUBMITTALS

A. Record Drawings: Comply with the following:

1. Number of Copies: Submit copies of Record Drawings as follows:

a. Initial Submittal:
   1) Submit PDF electronic files of scanned record prints.
   2) Submit Record Digital Data Files.
   3) Architect will indicate whether general scope of changes, additional information recorded, and quality of drafting are acceptable.

b. Final Submittal:
   1) Submit (1) paper-copy set of marked-up record prints.
   2) Submit PDF electronic files of scanned record prints.
   3) Submit Record Digital Data Files.
   4) Print each drawing, whether or not changes and additional information were recorded.

B. Record Samples: Immediately prior to date of Substantial Completion meet with the Architect and the Owner's personnel at the site to determine which of the Samples maintained during the construction period shall be transmitted to the Owner for record purposes. Comply with the Architect's instructions for packaging, identification marking, and delivery to the Owner's Sample storage space. Dispose of other Samples in a manner specified for disposing surplus and waste materials.

1.4 RECORD DRAWINGS

A. Record Prints: Maintain one set of marked-up paper copies of the Contract Drawings and Shop Drawings, incorporating new and revised drawings as modifications are issued.

1. Preparation: Mark record prints to show the actual installation, where installation varies from that shown originally. Require individual or entity who obtained record data, whether individual or entity is Installer, subcontractor, or similar entity, to provide information for preparation of corresponding marked-up record prints.

a. Give particular attention to information on concealed elements that would be difficult to identify or measure and record later.
b. Accurately record information in an acceptable drawing technique.
c. Record data as soon as possible after obtaining it.
d. Record and check the markup before enclosing concealed installations.
e. Cross-reference record prints to corresponding photographic documentation.

2. Content: Types of items requiring marking include, but are not limited to, the following:

a. Dimensional changes to Drawings.
b. Revisions to details shown on Drawings.
c. Depths of foundations.
d. Locations and depths of underground utilities.
e. Revisions to routing of piping and conduits.
f. Revisions to electrical circuitry.
g. Actual equipment locations.
h. Duct size and routing.
i. Locations of concealed internal utilities.
j. Changes made by Change Order or Construction Change Directive.
k. Changes made following Architect's written orders.
l. Details not on the original Contract Drawings.
m. Field records for variable and concealed conditions.
n. Record information on the Work that is shown only schematically.

3. Mark the Contract Drawings and Shop Drawings completely and accurately. Use personnel proficient at recording graphic information in production of marked-up record prints.
4. Mark record prints with erasable, red-colored pencil. Use other colors to distinguish between changes for different categories of the Work at same location.
5. Mark important additional information that was either shown schematically or omitted from original Drawings.
6. Note Construction Change Directive numbers, alternate numbers, Change Order numbers, and similar identification, where applicable.

B. Record Digital Data Files: Immediately before inspection for Certificate of Substantial Completion, review marked-up record prints with Architect. When authorized, prepare a full set of corrected digital data files of the Contract Drawings, as follows:

1. Format: Same digital data software program, version, and operating system as for the original Contract Drawings.
2. Incorporate changes and additional information previously marked on record prints. Delete, redraw, and add details and notations where applicable.
3. Refer instances of uncertainty to Architect for resolution.

C. Format: Identify and date each Record Drawing; include the designation "PROJECT RECORD DRAWING" in a prominent location.

1. Record Prints: Organize record prints into manageable sets. Bind each set with durable paper cover sheets. Include identification on cover sheets.
2. Format: Annotated PDF electronic file.
3. Record Digital Data Files: Organize digital data information into separate electronic files that correspond to each sheet of the Contract Drawings. Name each file with the sheet identification. Include identification in each digital data file.
4. Identification: As follows:

a. Project name.
b. Date.
c. Designation "PROJECT RECORD DRAWINGS."
d. Name of Architect.
e. Name of Contractor.

1.5 MISCELLANEOUS RECORD SUBMITTALS

A. Assemble miscellaneous records required by other Specification Sections for miscellaneous record keeping and submittal in connection with actual performance of the Work. Bind or file miscellaneous records and identify each, ready for continued use and reference.

B. Format: Submit miscellaneous record submittals as PDF electronic files and scanned PDF electronic files of marked-up miscellaneous record submittals.

1. Include miscellaneous record submittals directory organized by Specification Section number and title, electronically linked to each item of miscellaneous record submittals.

1.6 MAINTENANCE OF RECORD DOCUMENTS

A. Maintenance of Record Documents: Store Record Documents in the field office apart from the Contract Documents used for construction. Do not use Project Record Documents for construction purposes. Maintain Record Documents in good order and in a clean, dry, legible condition, protected from deterioration and loss. Provide access to Project Record Documents for Architect's reference during normal working hours.

PART 2 - PRODUCTS (Not Used)

PART 3 - EXECUTION (Not Used)

END OF SECTION 01 78 39

SECTION 01 79 00 - DEMONSTRATION AND TRAINING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes administrative and procedural requirements for instructing Owner's personnel, including the following:

1. Instruction in operation and maintenance of systems, subsystems, and equipment.

1.3 INFORMATIONAL SUBMITTALS

A. Attendance Record: For each training module, submit list of participants and length of instruction time.

1.4 QUALITY ASSURANCE

A. Facilitator Qualifications: A firm or individual experienced in training or educating maintenance personnel in a training program similar in content and extent to that indicated for this Project, and whose work has resulted in training or education with a record of successful learning performance.

B. Instructor Qualifications: A factory-authorized service representative, complying with requirements in Section 014000 "Quality Requirements," experienced in operation and maintenance procedures and training.

1.5 COORDINATION

A. Coordinate instruction schedule with Owner's operations. Adjust schedule as required to minimize disrupting Owner's operations and to ensure availability of Owner's personnel.

B. Coordinate instructors, including providing notification of dates, times, length of instruction time, and course content.

C. Coordinate content of training modules with content of approved emergency, operation, and maintenance manuals. Do not submit instruction program until operation and maintenance data have been reviewed and approved by Architect.

1.6 INSTRUCTION PROGRAM

A. Program Structure: Develop an instruction program that includes individual training modules for each system and for equipment not part of a system, as required by individual Specification Sections.

B. Training Modules: Develop a learning objective and teaching outline for each module. Include a description of specific skills and knowledge that participant is expected to master. For each module, include instruction for the following as applicable to the system, equipment, or component:

1. Basis of System Design, Operational Requirements, and Criteria: Include the following:

    a. System, subsystem, and equipment descriptions.
    b. Performance and design criteria if Contractor is delegated design responsibility.
    c. Operating standards.
    d. Regulatory requirements.
    e. Equipment function.
    f. Operating characteristics.
    g. Limiting conditions.
    h. Performance curves.

2. Documentation: Review the following items in detail:

    a. Emergency manuals.
    b. Systems and equipment operation manuals.
    c. Systems and equipment maintenance manuals.
    d. Product maintenance manuals.
    e. Project Record Documents.
    f. Identification systems.
    g. Warranties and bonds.
    h. Maintenance service agreements and similar continuing commitments.

3. Emergencies: Include the following, as applicable:

    a. Instructions on meaning of warnings, trouble indications, and error messages.
    b. Instructions on stopping.
    c. Shutdown instructions for each type of emergency.
    d. Operating instructions for conditions outside of normal operating limits.
    e. Sequences for electric or electronic systems.
    f. Special operating instructions and procedures.

4. Operations: Include the following, as applicable:

    a. Startup procedures.
    b. Equipment or system break-in procedures.
    c. Routine and normal operating instructions.
    d. Regulation and control procedures.
    e. Control sequences.
    f. Safety procedures.
    g. Instructions on stopping.
    h. Normal shutdown instructions.
    i. Operating procedures for emergencies.
    j. Operating procedures for system, subsystem, or equipment failure.

k. Seasonal and weekend operating instructions.
l. Required sequences for electric or electronic systems.
m. Special operating instructions and procedures.

5. Adjustments: Include the following:

a. Alignments.
b. Checking adjustments.
c. Noise and vibration adjustments.
d. Economy and efficiency adjustments.

6. Troubleshooting: Include the following:

a. Diagnostic instructions.
b. Test and inspection procedures.

7. Maintenance: Include the following:

a. Inspection procedures.
b. Types of cleaning agents to be used and methods of cleaning.
c. List of cleaning agents and methods of cleaning detrimental to product.
d. Procedures for routine cleaning.
e. Procedures for preventive maintenance.
f. Procedures for routine maintenance.
g. Instruction on use of special tools.

8. Repairs: Include the following:

a. Diagnosis instructions.
b. Repair instructions.
c. Disassembly; component removal, repair, and replacement; and reassembly instructions.
d. Instructions for identifying parts and components.
e. Review of spare parts needed for operation and maintenance.

1.7 PREPARATION

A. Assemble educational materials necessary for instruction, including documentation and training module. Assemble training modules into a training manual organized in coordination with requirements in Division 01 Section "Operation and Maintenance Data."

B. Set up instructional equipment at instruction location.

1.8 INSTRUCTION

A. Engage qualified instructors to instruct Owner's personnel to adjust, operate, and maintain systems, subsystems, and equipment not part of a system.

1. Owner will furnish Contractor with names and positions of participants.

B. Scheduling: Provide instruction at mutually agreed-on times. For equipment that requires seasonal operation, provide similar instruction at start of each season.

1. Schedule training with Owner through, with at least seven days' advance notice.

C. Training Location and Reference Material: Conduct training on-site in the completed and fully operational facility using the actual equipment in-place. Conduct training using final operation and maintenance data submittals.

D. Cleanup: Collect used and leftover educational materials and give to Owner. Remove instructional equipment. Restore systems and equipment to condition existing before initial training use.

PART 2 - PRODUCTS

PART 3 - EXECUTION

END OF SECTION 01 79 00

SECTION 01 81 13 – SUSTAINABLE DESIGN REQUIREMENTS - LEED

PART 1 - GENERAL

1.1 SUMMARY

A. This project is designed to achieve all Prerequisites and no less than 50 points under the US Green Building Council's LEED® v4 for Building Design and Construction (LEED BD+C: New Construction) Rating System for at least a LEED Silver-level rating. Throughout this section, the term LEED is used in place of LEED BD+C: New Construction.
   1. Certain LEED prerequisites and credits needed to obtain LEED certification are dependent on material selections. Compliance with LEED prerequisites and credits is a basis for evaluation of substitution requests.
   2. Additional LEED prerequisites and credits needed to obtain indicated LEED certification are dependent on Architect's design and other aspects of the Project that are not part of the Work of Contract.
   3. Substitute requirements for LEED v4.1 for the following credits.
      a. Integrated Process (IP) Credit 1: Integrated Process
      b. Location and Transportation (LT) Credit 4: Surrounding Density and Diverse Uses
      c. LT Credit 5: Access to Quality Transit
      d. LT Credit 7: Reduced Parking Footprint
      e. LT Credit 8: Green Vehicles (renamed Electric Vehicles)
      f. Sustainable Sites (SS) Credit 2: Protect and Restore Habitat
      g. Energy and Atmosphere (EA) Credit 5: Renewable Energy Production (renamed Renewable Energy)
      h. Materials and Resources (MR) Credit 1: Building Life-Cycle Impact Reduction
      i. MR Credit 2: BPDO – Environmental Product Declarations (renamed Environmental Product Declarations)
      j. MR Credit 3: BPDO – Sourcing of Raw Materials (renamed Sourcing of Raw Materials)
      k. MR Credit 4: BPDO – Material Ingredients (renamed Material Ingredients)
      l. Indoor Environmental Quality (EQ) Credit 1: Enhanced Indoor Air Quality Strategies
      m. EQ Credit 2: Low-Emitting Materials
      n. EQ Credit 2: Interior Lighting

B. Refer to LEED Scorecard accompanying this Section for LEED Prerequisites and Credits pursued for this project.

C. LEED has no published numbering system. This project manual imposes a numbering system based on that created by LEEDUser©. This numbering system is indicated on the LEED Scorecard and utilized throughout these specifications.

D. LEED credit pursuit is subject to change at the discretion of the Owner, Architect, and Sustainability Consultant.

E. Contractor is responsible for all requirements of LEED Prerequisites and Credits that are contained throughout these specifications.

F. Contractor is not responsible for the application for LEED certification.

1.2 RELATED WORK SPECIFIED ELSEWHERE

A. Division 01 Section “Construction and Demolition Waste Management and Disposal” for detailed LEED requirements to be incorporated into construction process.

B. Division 01 Section “General Commissioning Requirements” for detailed commissioning requirements.

C. Divisions 01 through 33: Sustainable requirements specific to the work of each of these Sections.

1.4 DEFINITIONS

A. BIO-BASED PRODUCTS: Products tested in accordance with ASTM Test Method D6866, legally harvested as defined by the exporting and receiving country. Hide products such as leather and other animal skin material are excluded.

B. BROWNFIELD: Expansion, redevelopment, or reuse of real property, complicated by the presence or potential presence of a hazardous substance, pollutant or contaminant (Public Law 107-118, H.R. 2869, Small Business Liability Relief and Brownfield Revitalization Act).

C. BUILDING WATERPROOFING MEMBRANE: Includes materials which make up the complete waterproofing system for the building exterior.

D. BUILDING INTERIOR: Includes materials and products installed within the building waterproofing membrane but excluding the waterproofing membrane itself.

E. BUILDING EXTERIOR: Includes materials and products installed outside and inclusive of the primary and secondary waterproofing system, including air-resistive and water-resistive barrier materials.

F. CERTIFIED WOOD: Wood grown in sustainably managed forest(s) certified by a Forest Stewardship Council (FSC) accredited certification agency. FSC-Certified wood products must have Chain-of-Custody (CoC) from forest to manufacturer.

G. CHAIN-OF-CUSTODY (CoC): Tracking procedure used to verify compliance with Forest Stewardship Council (FSC) guidelines for documenting the status of wood products from the forest to the ultimate consumer.

H. COMMINGLED WASTE: Construction and demolition waste streams combined on-site and sorted off-site into recyclable streams. Also known as single-stream recycling.

I. COMPOSITE WOOD: Products such as particleboard, medium density fiberboard (MDF), hardwood plywood, and door cores that are a composite of wood pressed and adhered together by synthetic resin or binder; as defined by the California Air Resources Board (CARB), Airborne Toxic Control Measure (ATCM) to Reduce Formaldehyde Emissions from Composite Wood Products Regulation, Phase II. Structural wood products such as hardboard, structural plywood, structural panels, structural composite lumber, oriented strand board (OSB), glue laminated lumber, prefabricated joists, or finger-jointed lumber which are exempt from CARB ATCM, however must comply with applicable alternative standards.

J. ENVIRONMENTAL PRODUCT DECLARATION (EPD): Product disclosure conforming to ISO 14025, 14044, 14071, and EN 15804 or ISO 21930 with at least cradle to gate scope. Other criteria may apply depending upon selected standard compliance.

K. EXTENDED PRODUCER RESPONSIBILITY (EPR): Measures to recover or recycle materials at the end of the useful life of the product for use in new products. Also known as closed-loop program or product take-back program.

L. FORMALDEHYDE EMISSIONS EVALUATION: Certification for testing COMPOSITE WOOD for low formaldehyde emissions compliance in accordance with CARB ATCM for formaldehyde requirements for ultra-low-emitting formaldehyde (ULEF) resins or no added formaldehyde resins (NAF). Structural composite wood must be manufactured with adhesives meeting ASTM 2559, have no surface treatments with added urea-formaldehyde resins or coatings, and certified according to applicable standards.

M. FURNITURE: Non-permanently affixed products that do not provide structural purpose and may be removed without damage to real property.

N. GREEN BUSINESS CERTIFICATION INSTITUTE (GBCI): Entity providing third-party project LEED certification and professional credentials recognizing excellence in green building performance and practice in support of the USGBC.

O. INHERENTLY NON-EMITTING SOURCES: Products that are inherently non-emitting sources of VOCs (stone, ceramic, powder-coated metals, plated or anodized metal, glass, concrete, clay brick, and unfinished or untreated solid wood flooring) that do not include integral organic-based surface coatings, binders, or sealants.

P. LEADERSHIP IN ENERGY AND ENVIRONMENTAL DESIGN (LEED): A voluntary green building rating system created and managed by the US Green Building Council (USGBC).

Q. LEED ONLINE: GBCI project management tool where projects are registered, tracked, and submitted to GBCI for project certification. Information, resources, and support are made available to registered projects. Project team members can upload information to credit forms, submit LEED Interpretation (LI) requests, manage key project details, view and respond to reviewer comments.

R. MATERIAL COST VALUE: The dollar value of materials being provided to the project, after any contractor mark-ups and expense to deliver to the site, excluding equipment or labor costs.

S. MINIMUM EFFICIENCY REPORTING VALUE (MERV): Standard method for comparing the efficiency of an air filter, as defined in ASHRAE 52.2-2007. Scale ranges from 1 to 16, which 16 being the most efficient at removing particles from air.

T. PERMANENTLY INSTALLED PRODUCT: In addition to those items that serve structural purposes, permanently installed products are items that are affixed without intention to be removed, either because the item is integral to the walls, ceiling, or floor, or removing the item will cause damage to the building.

U. RECYCLED CONTENT: The recycled content material cost value is determined by weight as a percentage of the total assembly. Recycled content is defined in accordance with ISO Standard 14021
   1. POST-CONSUMER RECYCLED CONTENT: Waste material generated by households or by commercial industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose.

2. PRE-CONSUMER RECYCLED CONTENT: Material diverted from the waste stream during the manufacturing process. Excluded is reutilization of materials such as rework, regrind and scrap generated in a process and capable of being reclaimed within the same process that generated it.

V. RECYCLING: Collection, reprocessing, marketing and use of materials that were recovered or diverted from solid waste stream.

W. REGIONALLY SOURCED (EXTRACTED, MANUFACTURED, PURCHASED): Refers to location where material was extracted, manufactured, purchased. For products containing multiple materials, each material must be calculated separately.

X. REGULARLY OCCUPIED SPACE: Enclosed area where people normally spend time, defined as more than one hour of continuous occupancy per person per day, on average; the occupants may be seated or standing as they work, study, or perform other activities. For spaces that are not used daily, the one-hour timeframe should be based on the time a typical occupant spends in the space when it is in use.
1. DENSELY OCCUPIED SPACE: A design occupant density of 25 people or more per 1,000 square feet (93 square meters), or 40 square feet (3.7 square meters) or less per person.
2. INDIVIDUAL OCCUPANT SPACE: An area where someone performs distinct tasks.
3. MULTIOCCUPANT SPACE: A place of congregation or a place where people pursue overlapping or collaborative tasks.

Y. SALVAGE: Removal of existing materials or assemblies for re-installation or other use.

Z. VOLATILE ORGANIC COMPOUNDS (VOC): Carbon compounds that participate in atmospheric photochemical reactions, (excluding carbon monoxide, carbon dioxide, carbonic acid, metallic carbides and carbonates, and ammonium carbonate). The compounds vaporize (become a gas) at normal room temperatures. VOC content is calculated in grams per Liter (g/L) according to 40 CFR 59, Subpart D (EPA method 24).

AA. VOC EMISSIONS EVALUATION: Manufacturer's or third-party evaluation confirming required building products have been tested and compliant in accordance with California Department of Public Health (CDPH) Standard Method, using the applicable exposure scenario. The default scenario is the private office scenario. The certification must state the exposure scenario used to determine compliance. Claims of compliance for wet-applied products must state the amount applied in mass per surface area and state the range of total VOCs after 14 days (336 hours), measured as specified in the CDPH Standard.

BB. WASTE: Extra material or material that has reached end of its useful life in its intended use.

1.5 CONTRACTOR LEED COORDINATOR ROLE

A. Designate one employee or consultant as the Contractor LEED Coordinator for this Project.
1. Maintain access to LEED Online at project award and throughout project.
2. Oversee the sustainable building activities for the project.
3. Instruct workers concerning the sustainable building goals.
4. Be present on site on a regular basis when Work is in progress.
5. Prepare and oversee all LEED related submittals.
6. Document all credits assigned to the Contractor.
7. Attend all LEED meetings.

8. Complete final LEED documentation including LEED online construction credits.

B. Contractor is responsible for completion and transmittal of all construction-related documentation required for LEED certification.
   1. Submit for approval information demonstrating LEED compliance.
   2. Highlight or circle pertinent LEED information within each submittal.
   3. Include LEED Submittal Form as the first page of the submittal. This form is provided at the end of this section.

C. Contractor is responsible for submitting and installing products in accordance with the Sustainable Design Requirements outlined as well as:
   1. LEED SUBMITTAL FORM: All project submittals shall be accompanied by a completed LEED coversheet. Submittal packages shall also include documentation in support of the sustainability claims made on the LEED coversheet, including:
      a. Name of manufacturer
      b. Model number for each material or product
      c. Material cost value of each material or product
      d. Volume of each wet-applied material or product in liters
      e. Indicate documents included within submittal package
   2. Contractor to maintain Building Products Calculator, Low Emitting Materials Calculator, and Construction and Demolition Waste Management Calculator monitoring the project's progress regarding Materials and Resources goals. Calculators to be presented at construction meetings.

D. Contractor shall complete documentation on the LEED Online Project Database. Assemble the LEED Submittal files in electronic format throughout project construction and organized per LEED credit (see Part 1 CLOSEOUT SUBMITTALS for LEED Online). Documentation includes:
   1. One consolidated electronic (Excel) copy:
      a. Building Products Calculator
      b. Low Emitting Materials Calculator
      c. Construction and Demolition Waste Management Calculator
   2. Electronic (PDF) copies:
      a. Waste Management Plan(s)
      b. Construction Indoor Air Quality Management Plan
      c. Cut sheets
      d. Material Transparency declarations and reports
      e. VOC emission evaluation certificates
      f. Wood vendor certificates and invoices
      g. Photographs and any other required information

E. Contractor shall respond to questions and requests from GBCI about LEED prerequisites and credits that are the Contractor's responsibility, that depend on product selection or product qualities, or that depend on Contractor's procedures until GBCI and USGBC have made their determination on Project's LEED certification application.

1.6 CONSTRUCTION MEETINGS

A. Pre-construction Conference: Contractor will schedule a LEED coordination conference at a time convenient to Owner, Architect, Sustainability Consultant, and Contractor.

1. Attendees: Authorized representatives of Owner, Architect, Sustainability Consultant, Contractor Representatives (including LEED Coordinator), and other concerned parties as appropriate.
2. Agenda: Discuss items of significance that could affect meeting LEED requirements, including the following:
   a. LEED Scorecard and required certification level
   b. Role of Contractor's LEED Coordinator
   c. General requirements for LEED-related procurement and documentation, including the LEED submittal review process
   d. Erosion and sedimentation control
   e. Commissioning participation and coordination
   f. Construction waste management
   g. Indoor air quality management
   h. Project closeout requirements and LEED certification procedures

B. Include the status of LEED-related work on the agenda of all regularly scheduled job-site meetings.

1.7 QUALITY ASSURANCE

A. Environmental claims must comply with FTC Guidelines for the Use of Environmental Marketing Claims.

B. EQ Credit 2: Low-Emitting Materials
1. First-party and third-party manufacturers' claims: Comply with the guidelines in California Department of Public Health (CDPH) Standard Method version 1.2–2017, Section 8.
   a. Organizations that certify manufacturers' claims: Demonstrate accreditation under ISO Guide 65.
2. Laboratories conducting emissions testing: Demonstrate accreditation under ISO/IEC 17025 for the applicable test methods.

C. EQ Credit 3: Construction IAQ Management
1. Coordinate maintaining indoor air quality during construction with all trades involved in the construction project. Give special attention to the sequencing of work to protect materials and safeguard the well-being of the construction staff in accordance with the Construction IAQ Management Plan.

1.8 PRELIMINARY SUBMITTALS

A. Within 60 days of contract award, submit qualifications for designated Contractor LEED Coordinator:
1. Option 1 - Demonstrate experience on at least one LEED Certified project.
2. Option 2 - LEED Green Associate or Accredited Professional (AP) with specialty.

B. Prior to any waste removal and in advance of the Pre-Construction Meeting, submit for approval a detailed Waste Management Plan in accordance with LEED MR Prerequisite 2 and Credit 5 requirements and as outlined in Section 017419 "Construction and Demolition Waste Management and Disposal."

C. Within 90 days of contract award, based upon the LEED scorecard, submit for approval plans to demonstrate the contractor's approach to the following:

1. MR Prerequisite 2 and Credit 5: Construction and Demolition Waste Management
   a. Refer to Division 01 Section "Construction and Demolition Waste Management and Disposal."
2. MR Credits 2, 3 and 4: Preliminary LEED Building Products (BP) Calculator indicating that credit requirement(s) will be met based on identified materials.
   a. MR Credit 2: Environmental Product Declarations (EPD)
      1) Option 1 – Environmental Product Declaration
   b. MR Credit 3: Sourcing of Raw Materials
   c. MR Credit 4: Material Ingredients
      1) Option 1 – Material Ingredient Reporting
3. EQ Credit 2: Low-Emitting Materials
   a. Preliminary LEED Low-Emitting Materials Calculator indicating that credit requirement(s) will be met based on identified material categories.
4. EQ Credit 3: Construction Indoor Air Quality (IAQ) Management
   a. Preliminary plan or checklist: Demonstrate all applicable control measures of Sheet Metal and Air Conditioning Contractors' National Association (SMACNA) Indoor Air Quality Guidelines for Occupied Buildings under Construction, 2nd Edition, 2007, ANSI-SMACNA 008-2008, Chapter 3.

1.9 ACTION SUBMITTALS

A. LT Credit 8: Electric Vehicles
   1. For electric vehicle supply equipment, documentation indicating:
      a. Charging capacity.
      b. Compliance with Society of Automotive Engineers (SAE) standard for electrical connectors.
      c. Confirmation of network control capabilities.

B. SS Credit 2: Protect or Restore Habitat
   1. Provide confirmation that all imported soils meet criteria listed in Part 2 of this Section.

C. SS Credit 6: Light Pollution Reduction
   1. Exterior luminaires: Product data indicating Backlight, Uplight, and Glare (Forward Light) ratings (BUG).

D. WE Prerequisite 2 and Credit 2: Indoor Water Use Reduction
   1. Provide confirmation of EPA WaterSense compliance for the following plumbing fixtures.
      a. Tank-type water closets
      b. Urinals
      c. Showerheads and aerators
   2. Provide flush rates in gallons per flush for urinals and water closets.
   3. Provide flow rates in gallons per minute for showerheads, lavatory faucets, handwash sink faucets, kitchen sink faucets and prerinse spray valves.
   4. Provide confirmation of ENERGY STAR compliance for the following appliances.
      a. Residential clothes washers
      b. Residential dishwashers (standard and compact)
      c. Ice machine

E. EA Prerequisite 4: Fundamental Refrigerant Management

1. Heating, ventilating, air-conditioning, and refrigeration (HVAC&R) equipment, commercial refrigerators, freezers, ice makers, and water coolers: Product data for refrigerant listed in pounds.

F. EA Credit 3: Advanced Energy Metering
1. Product data indicating data storage capabilities.

G. MR Credit 2: Environmental Product Declarations, Option 1
1. Option 1 – EPD: Minimum 40 declarations from at least five different manufacturers meeting criteria listed in Part 2 ENVIRONMENTAL PRODUCT DECLARATION.

H. MR Credit 3: Sourcing of Raw Materials
1. Where indicated, provide permanently installed products from at least five different manufacturers that demonstrate one the following criteria for at least 15 percent, by material cost value, of the total value of project materials. Demonstrate compliance with the extraction criteria described under Part 2 SOURCING OF RAW MATERIALS and the following, as applicable:
   a. Manufacturer-based Extended Producer Responsibility (EPR) Program: Program description, proof that product is included in the program.
   b. Third-party EPR program: Description of recycling process and average rate of return for the material.
   c. Bio-based materials: Confirmation of testing by ASTM Test Method D6866 or equivalent method ISO 16620-2, or certification by the USDA BioPreferred Program with Voluntary Labeling verification. Include statement indicating percentage by weight of the total assembly that has bio-based content.
   d. Certified Wood: Documentation indicating percentage new wood, percentage Forest Stewardship Council (FSC) and Chain-of-Custody (CoC) certificates for manufacturer and vendor indicating compliance with forest certification requirements. Include vendor invoice indicating FSC CoC number.
   e. Reused Materials: Invoices indicating source and end-use for reused materials.
   f. Recycled Content: Documentation indicating percentages by weight of total assembly pre-consumer and post-consumer recycled content.
   g. For products that meet one of the above and are regionally sourced material: Documentation indicating location of extraction, manufacture, purchase of primary raw materials.
2. Indicate material cost value or surface area for each material or product.

I. MR Credit 4: Material Ingredients
1. Option 1 – Material Ingredients Reports: Minimum 40 reports from at least five different manufacturers demonstrating compliance with criteria described under Part 2 MATERIAL INGREDIENT REPORTS.

J. EQ Credit 1: Enhanced Indoor Air Quality Strategies
1. Product data indicating MERV rating of final filtration media.
2. For wall-mounted carbon dioxide sensors: Documentation indicating accuracy in percent.

K. EQ Credit 2: Low-Emitting Materials
1. Documentation demonstrating compliance with the emission and VOC content criteria described under Part 2 LOW-EMITTING MATERIALS for the following product categories:
   a. Flooring

b. Ceilings
c. Insulation, thermal and acoustic
d. Composite wood

L. EQ Credit 6: Interior Lighting
1. Product data for any lighting controls or fixtures in regularly occupied spaces indicating multi-level or dimmable capabilities.

M. Innovation (IN) Credit 1: Reduced Mercury in Lamps
1. Product data for all LED and mercury-containing lamps, indicating mercury content in milligrams, mean lumen output, and lamp life in hours.

1.10 INFORMATIONAL SUBMITTALS

A. SS Prerequisite 1: Construction Activity Pollution Prevention
1. Provide periodic inspection reports or date-stamped photographs demonstrating the erosion and sedimentation control plan measures in compliance with the 2012 US Environmental Protection Agency (EPA) Construction General Permit (CGA) or local equivalent.
a. Include maintenance activities during construction.

B. EA Credit 5: Renewable Energy
1. Provide documentation showing total annual production of solar array.

C. With each Application for Payment, submit Construction and Demolition Waste Management Calculator and progress reports for waste disposed, diverted and/or salvaged to date. Demonstrating compliance with MR Credit 5.
1. Refer to Section 017419 “Construction and Demolition Waste Management and Disposal.”

D. With each Application for Payment, submit progress reports using the Building Products Calculator for procured or approved contributing materials to date. Include product name and all information pertaining to credit compliance and contribution.
1. MR Credit 2: Environmental Product Declarations
2. MR Credit 3: Sourcing of Raw Materials
3. MR Credit 4: Material Ingredients

E. With each Application for Payment, submit progress reports using the EQ Credit 2: Low-Emitting Materials Calculator for procured or approved contributing materials to date. Include product name and all information required to demonstrate credit compliance and contribution.

F. EQ Credit 3: Construction IAQ Management
1. Product data indicating MERV rating of temporary and final filtration media.
a. Include dates and locations of all filter replacement installations.
2. Provide date-stamped photographs from at least three different periods of time during construction demonstrating the implementation of SMACNA measures, annotation of measure in place, and general location of the photograph.
a. Alternative: Narrative demonstrating how the IAQ Plan was implemented and describing the protection of materials from moisture damage.

1.11 CLOSEOUT SUBMITTALS

A. LEED Online: At completion of construction and prior to contract closeout, complete the LEED Online Form, upload the associated required documentation to the LEED Online Project Database, and respond to GBCI preliminary review comments.
   1. SSp1: Construction Activity Pollution Prevention
   2. MR Prerequisite 2 and Credit 5: Construction and Demolition Waste Management
   3. MR Credit 2: Environmental Product Declarations
   4. MR Credit 3: Sourcing of Raw Materials
      a. Product cost is required. See Part 2 SOURCING OF RAW MATERIALS for determining product cost and overall project material cost.
   5. MR Credit 4: Material Ingredients
   6. EQ Credit 2: Low-Emitting Materials
      a. Product cost, volume or area may be required for compliance. See Part 2 LOW-EMITTING MATERIALS.
   7. EQ Credit 3: Construction IAQ Management Plan

PART 2 - PRODUCTS

2.1 ELECTRIC VEHICLE SUPPLY EQUIPMENT

A. Charging Capacity: Minimum Level 2 (208 – 240 volts).

B. Electrical Connectors: Comply with SAE Surface Vehicle Recommended Practice J1772 or SAE Electric Vehicle Conductive Charge Coupler.

C. Control: Network or internet addressable, capable of participating in a demand-response program or time-of-use pricing.

2.2 IMPORTED SOILS

A. Provide imported soils complying with the following criteria:
   1. Not classified as prime farmland, unique farmland or farmland of statewide or local importance
   2. Not extracted from a greenfield site
   3. Not sphagnum peat moss

2.3 EXTERIOR LIGHTING

A. Backlight, Uplight and Glare (OR Forward Light) Rating: Maximum based on SSc6 Light Pollution Reduction Tables 1-4 in the LEED Reference Guide.

2.4 PLUMBING FIXTURES AND APPLIANCES

A. Residential clothes washers and dishwashers (standard and compact): ENERGY STAR compliant.

B. Ice machine: ENERGY STAR compliant and either air-cooled or closed-loop cooling system.

C. Tank-type water closet, urinal and showerhead and aerator: WaterSense Labeled.

2.5 ENVIRONMENTAL PRODUCT DECLARATION (EPD)

A. Where indicated, provide permanently installed products with one of the following declarations for at least cradle to gate scope.
   1. Product-specific declaration that is publicly available, critically reviewed life-cycle assessment (LCA) conforming to ISO 14044: Contribute to LEED MR credit calculations as one (1) product.
   2. Environmental Product Declaration: Conform to ISO 14025, and to Product Category Rules (PCR) standard EN 15804 or ISO 21930:
      a. Industry-wide Type III EPD, with third party certification including external verification in which the manufacturer is recognized as participant by the program operator: Contribute to LEED MR credit calculations as one (1) product.
      b. Product-specific Type III EPD internally reviewed with LCA in accordance with ISO 14071: Contribute to LEED MR credit calculations as one (1) product.
      c. Product-specific Type III EPD with third-party certification and externally reviewed with LCA: Contribute to LEED MR credit calculations as one and one-half (1.5) product.

2.6 SOURCING OF RAW MATERIALS

A. Product purchased from a manufacturer that participates in a third-party EPR program or is directly responsible for such program. Product must be included in program: Contribute to LEED MR credit calculations at 50 percent of the material cost value.

B. Bio-based products: Legally harvested bio-based products (other than wood, leather, or other animal skin products) tested using ASTM Test Method D6866 or equivalent method ISO 16620-2, or certified by USDA Biopreferred Voluntary Labeling Initiative that includes verification via ASTM D6866 or ISO 16620-2 testing: Contribute to LEED MR calculations at 50 percent of the material cost value multiplied by the biobased content.
   1. Products that meet Sustainable Agriculture Network (SAN) Sustainable Agriculture Standard: Contribute to LEED MR calculations at 100 percent of the material cost value multiplied by the biobased content.

C. Wood products certified by FSC: Contribute to LEED MR credit calculations at 100 percent of the material cost value.
   1. FSC Pure and FSC Mixed Credit are valued at 100 percent of material cost value.
   2. FSC Mixed (NN) percent are valued at indicated percentage of their cost value.
   3. FSC Recycled and FSC Recycled Credit contribute 100 percent post-consumer recycled content value (not as certified wood).
   4. FSC bamboo-based products contribute to this credit.

D. Reused materials: Contribute to LEED MR credit calculations at 200 percent of the material cost value.

E. Recycled content products: Contribute to LEED MR credit calculations at 100 percent of the material cost value.
   1. Calculate recycled content as the sum of a product’s post-consumer recycled content plus one half (1/2) of the pre-consumer recycled content.

F. In addition to the credit base criteria, products that are regionally sourced (extracted, manufactured, purchased) within 100 miles (160 km) of the project site: Contribute to LEED MR credit calculation at 200 percent of material cost value.
   1. Before this regional source multiplier is applied to LEED MR credit calculations, a product material cost value must not exceed 100 percent.

2. Single product components compliant with multiple responsible extraction criteria contribute only once to LEED MR credit calculations.
3. No single product contributes more than 200 percent of material cost value to LEED MR credit calculations.

G. Calculate material cost value per LEED guidelines for MR credits.
1. Include hard costs from Divisions 03-10 and 31-32 products, and optional MEP components from Divisions 11 and 21-28.
   a. Optional MEP components, such as ductwork and conduit, may be included if consistently included in MR credits.
2. Include Division 12 products that are permanently installed products such as built-in casework.
   a. Division 12 moveable furniture may be included if consistently included in MR Credits.
3. Include all expenses to deliver material to the Project Site incurred by the Contractor including taxes and transportation costs.
4. Exclude installation labor and equipment, mechanical, electrical and plumbing components and specialty items such as elevators.

2.7 MATERIAL INGREDIENT REPORTS

A. Where indicated, provide permanently installed products that demonstrate at least one of the following chemical inventory programs to at least one tenth percent (0.1%) or 1000 parts per million (ppm) of the end use product:
1. Published manufacturer content inventory demonstrating one of the following.
   a. Publicly available inventory of all ingredients identified by name and Chemical Abstract Service Registration Number (CASRN).
   b. Materials defined as trade secret of intellectual property: Disclose role, amount and hazard screen using one of the following:
      1) Greencreen List Translator score or GreenScreen benchmark as defined in GreenScreen version 1.2
      2) Globally Harmonized System (GHS) of Classification and Labeling Chemicals revision 6 (2015). Hazard screen must be applied to each trade secret ingredient and the inventory lists the hazard category for each of the health hazards included in Part 3 of GHS.
2. Health Product Declaration (HPD): Demonstrate full disclosure of known hazards in compliance with the HPD Open Standard and published in the HPD Public Repository.
3. Cradle to Cradle Material Health Certificate
4. Cradle to Cradle version 3 Certification with Material Health achievement Bronze level or higher
5. Declare Product Label for one of the following:
   a. Red List Free
   b. LBC Red List Free
   c. Declared
   d. Living Product challenge or LBC Compliant (also known as LBC Red List Approved): Demonstrate compliance for content inventory to 1000 parts per million (0.1%).
6. UL’s Product Lens Certification
7. ACT’s Facts Certification (NSF /ANSI 336-2011): Any certification level.
8. Global Green TAG PHD label issued after January 1, 2020.

B. Material ingredient reports with third-party verification including verification of content inventory: Contribute to LEED MR credit calculations as one and a half (1.5) products.

2.8 LOW-EMITTING MATERIALS

A. VOC Emissions Evaluation: Provide the following materials compliant with emissions testing in accordance with California Department of Public Health (CDPH) Standard Method version 1.2–2017, including TVOC range, using the applicable exposure scenario. The default scenario is the private office scenario.
   1. Flooring (including wall base, underlayment and other floor covering) installed within building interior: Provide at least 90 percent in compliance (by material cost or surface area).
   2. Ceilings (ceiling panel, ceiling tile, gypsum board, plaster, suspended canopy and cloud): Provide at least 90 percent in compliance (by material cost or surface area).
   3. Insulation installed within the building interior (thermal and acoustic board, batt, roll, blanket, sound attenuation, fire blanket, foamed-in-place, loose-fill, blown, and sprayed): Provide at least 75 percent in compliance (by material cost or surface area).

B. Formaldehyde Emissions Evaluation: Provide at least 75 percent (by material cost or surface area) of composite wood permanently installed within the building interior in compliance with the California Air Resources Board (CARB), Airborne Toxic Control Measure (ATCM), Phase II, for formaldehyde emissions for ultra-low-emitting formaldehyde (ULEF) resins or containing no added formaldehyde (NAF) resins.
   1. Exemptions:
      a. Salvaged and reused architectural millwork more than one year old.
      b. Plywood made with phenol formaldehyde.
      c. Structural wood products made with moisture resistant adhesives meeting ASTM 2559, having no surface treatments with added urea-formaldehyde resins or coatings, and certified according to one of the following standards.
         1) Plywood:
            a) NIST / APA Product Standard (PS) 1-09
            b) NIST / APA PS 2-10
            c) CARB equivalent to PS 1 or PS 2
         2) Oriented Strand Board (OSB) - Exposure 1 or Exterior Bond: NIST / APA PS 2-10
         3) Structural Composite Lumber or Structural Glued Laminated Lumber: ANSI A190.1-2012
         4) I-Joists: ASTM D 5055-13
         5) Cross-Laminated Timber: ANSI / APA PRG 320
         6) Finger-Jointed Lumber Labeled HRA: NIST / AMSC PS-20 - 2015

C. Inherently non-emitting sources (stone, ceramic, powder-coated metals, plated or anodized metal, glass, concrete, clay brick, and unfinished or untreated solid wood flooring) that do not include integral organic-based surface coatings, binders, or sealants: Exempt from low-emitting materials requirements.

2.9 AIR FILTRATION MEDIA

A. Temporary filtration media: Filtration media rated for minimum efficiency reporting value (MERV) of 8 minimum, when tested in accordance with ASHRAE 52.2-2007.
   1. Alternative Compliance Path (ACP): Provide Class F5 or higher filtration media, in accordance with CEN Standard EN 779–2002.

B. Permanent filtration media for each ventilation system that supplies outdoor air to occupied spaces: Filtration media rated for minimum efficiency reporting value (MERV) of 13 minimum when tested in accordance with ASHRAE 52.2-2007.
   1. Alternative Compliance Path (ACP) Provide Class F7 or higher filtration media, in accordance with CEN Standard EN 779–2002.

2.10 INTERIOR LIGHTING

A. Lighting Controls: Multi-level or dimmable capabilities.

PART 3 - EXECUTION

3.1 GENERAL

A. Incorporate procedures and processes during Construction and prior to occupancy as described herein.

B. Provide and enforce Construction Indoor Air Quality Plan for all construction activities within the building.

3.2 HVAC PROTECTION

A. If permanent HVAC is used during construction: Use filtration media at each return air grill. All HVAC systems, equipment and pathways to be dust and particulate free at time of substantial completion of that phase of construction, in accordance with SMACNA “IAQ Guidelines for Occupied Buildings Under Construction.”
   1. Begin construction ventilation after building is substantially enclosed.
   2. Inspect filtration monthly and replace as needed with new MERV 8 filtration media throughout the HVAC system.
   3. Install new filtration media throughout the HVAC system after final phase of construction.

B. Keep HVAC system clean, free of dust, debris**,** moisture, gaseous and microbial contamination during storage, handling, installation and punch-out. Inspect all air inlets, air outlets, grilles, diffusers, plenums, and ducts upon completion of work.
   1. Cover and protect (taped plastic or similar method) all exposed air inlet and outlet openings, grilles, ducts, plenums, to prevent water, moisture, dust and other contaminate intrusion.
   2. Apply protection immediately after installation of equipment and ductwork.
   3. Protect at end of each work day duct runs that require more than a single day to install.
   4. Check and repair leaks in return ducts and air handlers.
   5. Do not use mechanical rooms for construction storage.
   6. Cleaning of ductwork is not part of this contract; however, if Contractor fails to protect ducts and equipment from construction pollutants as specified, provide ductwork cleaning at Contractor’s cost.

C. Install all ceiling tiles prior to HVAC use if an un-ducted plenum must be used over a construction zone.

3.3 SOURCE CONTROL

A. Prohibit smoking (including use of electronic cigarettes) within the building and within 25 feet (2.5 meters) of building entrances, operable windows, or outdoor-air intakes.

B. Limit use of fossil-fueled temporary heating units to propane-powered only inside the building and near building entrances, windows and intakes and within 25 feet of building entrances, operable windows, or outdoor-air intakes.

C. Provide direct exhaust to the exterior during use of fossil-fueled temporary heating units and installation of strong emitting materials, including touch-up activities.
   1. Protect intakes and occupied spaces from exhaust.

D. Protect “absorptive” or dry sink materials from exposure to dust, debris and moisture contamination during product delivery, storage and handling from construction, demolition and punch-out activities.

E. Provide adequate ventilation of packaged dry products prior to installation.

F. Prohibit “bake-out” or “super-heating” of spaces to accelerate the release of gaseous emissions.

3.4 PATHWAY INTERUPTION

A. Relocate pollutant sources when project equipment or staging areas coincide with critical air flow pathways.

B. Place barriers to contain construction areas.

C. Temporarily seal building, including air intakes and exhaust vents, and any other building openings, when dust-generating or strong-emitting construction products or procedures are used on the exterior of the building.

D. Once spaces within building become occupied, work areas must remain under negative pressure. Exhaust air at a rate at least 10 percent greater than the rate of supply.
   1. Do not exhaust air where it can be drawn back into occupied spaces.
   2. Place continuous plastic barriers creating a seal between construction areas and occupied spaces.

3.5 HOUSEKEEPING

A. Clean floors regularly to keep dust from accumulating during construction and demolition.

B. Remove debris from building daily and suppress dust during construction and demolition activities with wetting agents or sweeping compounds.

C. Prior to use of return air ductwork without intake filters, clean and remove dust and debris generated by construction activities.

D. Use HEPA-filter vacuum throughout for final detailed cleaning.

E. Remove spills or excess application of solvent-containing products when discovered.

F. Keep work areas as dry as possible. Replace any absorptive (dry sink) material that is exposed to moisture.

3.6 SCHEDULING

A. Coordinate construction activities to minimize or eliminate disruption of operations in occupied portions of building.

B. Schedule for storage, installation, and protection of all components of air distribution systems.

C. Schedule for storage, installation, and protection of absorptive materials (woven, fibrous or porous, such as carpet, ceiling tiles, insulation, and fabrics) from exposure to emissions during and after installation from materials and finishes with potential for short-term release of off-gassing volatile organic compounds.
   1. Highlight critical methods used to protect absorptive materials from airborne pollutants such as dust, debris, moisture, gaseous and microbial contamination.
   2. Sequence installation of absorptive materials after odor-emitting activities have occurred and have been mitigated by ventilation.

D. Do not store absorptive materials on-site if protection measures as described above cannot be ensured.

3.7 ATTACHMENTS

A. LEED Scorecard

LEED SUBMITTAL FORM

PROJECT NAME:	
Subcontractor Name:	
Sub's Point of Contact:	
CSI Section Number:	
Date:	
Submittal Number:	

INSTRUCTIONS:

1. Product-specific requirements are found in the CSI Specification. All columns may not be applicable to this project.
2. List each product on a separate row for products subject to LEED review in this package.
3. Product Cost ($) is required where indidcated with a $.
4. Mark with "X" the documents included in the submittal.

List all products in submittal below			ALL MATERIALS											WOOD		PAINTS & COATINGS			FLOORING	CEILING	INSULATION
			$			$	$	$	$					$	$				$	$	$
Manufacturer - Product Name		*Submittal Page Number*	PRODUCT COST Applicable to categories with a dark $ tab	ENVIRONMENTAL PRODUCT DECLARATION (1)	EMBODIED CARBON OPTIMIZATION (12)	RECYCLED CONTENT (2)	BIO-BASED MATERIAL (3)	EXTENDED PRODUCER RESPONSIBILITY (4)	REGIONAL MATERIALS (5)	MATERIAL INGREDIENT REPORT (6)	MATERIAL INGREDIENT OPTIMIZATION (13)	OTHER (14)	FSC WOOD (7)	NO ADDED FORMALDEHYDE / ULEF (8)	VOC CONTENT IN g/L (9)	CDPH (10)	PRODUCT VOLUME, LITERS (11)	CDPH (10)	CDPH (10)	CDPH (10)

SECTION 01 91 13 - GENERAL COMMISSIONING REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. The Owner's Project Requirements (OPR) and Basis of Design (BoD) are included by reference for information only.

1.2 SUMMARY

A. This section includes:

1. General requirements for coordinating and scheduling commissioning activities.
2. Commissioning meetings.
3. Commissioning reports.
4. Use of commissioning process test equipment, instrumentation, and tools.
5. Adjusting, verifying, and documenting identified systems and assemblies.
6. Requirements for completing Construction Checklists, Pre-functional Performance Testing, and Functional Performance Testing

B. Mechanical: The following HVAC systems, assemblies, equipment and components are to be commissioned on this Project:

1. Piping.
    a. Refrigerant Piping.
2. HVAC Air Distribution.
    a. HVAC Ducts.
    b. HVAC Fans
3. Central HVAC Equipment.
    a. DOAS
    b. RTU
4. Decentralized HVAC Equipment
    a. VRF System

b. Cabinet & Unit Heaters

c. Ductless Split ACs

d. Fans

e. Variable Frequency Motor Controllers (Div 26)

5. Building Automation System (BAS) controls, alarms, and monitoring functions.

C. Plumbing: The following plumbing systems, assemblies, equipment and components are to be commissioned on this Project:

1. Domestic hot water system, including the following:

a. Electric water heaters.

b. Submeters

c. Thermostatic Mixing Valves

D. Electrical: The following electrical systems, equipment, and components are to be commissioned on this project:

1. Electrical service and distribution that relate to LEED credits or are involved in controlling energy:

a. Energy meters & submeters

b. Solar PV

E. Lighting: The following lighting systems, equipment and components are to be commissioned on this project:

1. Interior and Exterior Lighting controls.

2. Daylighting controls.

F. Related Sections:

1. Division 01 Sections " Closeout Procedures", "Closeout Submittals", and "Demonstration and Training" for additional requirements affecting commissioning activities related to project closeout, warranties, operation and maintenance manuals, and demonstration and training.

2. Division 22 Section "Commissioning of Plumbing Systems" for technical commissioning requirements for plumbing systems, assemblies, equipment and components.

3. Division 23 Section "Commissioning of HVAC Systems" for technical commissioning requirements for HVAC systems, assemblies, equipment and components.

4. Division 23 for requirements for the Building Automation System (BAS).

5. Division 26 Section "Commissioning of Electrical Systems" for technical commissioning requirements for electrical systems, assemblies, equipment and components.

1.3 DEFINITIONS

A. Acceptance Criteria: Threshold of acceptable work quality or performance specified for a commissioning activity, including, but not limited to, construction checklists, performance tests, performance test demonstrations, commissioning tests, and commissioning test demonstrations.

B. BAS, Building Automation System: The centralized control and monitoring system for the building's mechanical, HVAC, electrical, lighting, plumbing, elevator, and fire protection and life safety systems. For commissioning purposes, it includes any new building automation and control systems, as well as the interconnection of new and existing building automation and control systems. See also Division 23 Section "Controls – Direct Digital".

C. BoD, Basis of Design: A document prepared by the Architect/Engineer team (AE) that outlines the set of assumptions and design parameters for calculations, decisions, system options and product selections to meet the Owner's Project Requirements (OPR) and applicable regulatory requirements.

D. Certificate of Readiness: Written certification prepared by the Contractor, using form provided by the CxP, certifying the indicated system, assembly, equipment or component has been installed in accordance with the Contract Documents and manufacturer requirements; startup has been completed according to manufacturer requirements and the Contract Documents; and the system, assembly, equipment or component is ready for functional performance testing.

1. The goal of the certificate is to avoid costly delays or invalid functional performance test results due to lack of readiness, absence of commissioning team members, incomplete installation, incomplete sensor calibration, component malfunction, parts unavailability or other similar preventable circumstances.

2. The certification is a prerequisite of functional performance testing for each system, assembly, piece of equipment, or component indicated to be commissioned.

E. Commissioning Provider (CxP): An independent entity engaged by the Owner and reporting to the Owner, The CxP facilitates and coordinates the commissioning activities in concert with the Contractors, Architect, Engineer, and Owner. The CxP is responsible for organizing and coordinating the actions of the commissioning team in implementing the commissioning process.

F. Commissioning Plan: A document, prepared by the Commissioning Provider, that outlines the organization, schedule, allocation of resources, and documentation of commissioning requirements. The intent of the Commissioning Plan is to consolidate the commissioning requirements and processes identified, provide guidance in the execution of the commissioning process.

G. Commissioning: A systematic quality assurance process of ensuring that all building systems are installed and perform interactively according to the design intent and the Owner's operational needs. The commissioning process encompasses and coordinates the traditionally separate processes of system documentation, installation verification, equipment startup, control system calibration, testing and balancing, performance testing and operator training. The requirements specified here are limited to the construction, post construction, and warranty phase commissioning activities. The scope of the commissioning process is defined in this section and other discipline related commissioning specifications.

1. Commissioning is a third-party quality assurance process. It does not take the place of or duplicate the Contractor's quality control services or testing, adjusting, and balancing and other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.

H. Commissioning Process Completion: The final stage of completion and acceptance of commissioning process when resolution of deficient conditions and issues, discovered during the commissioning process and retesting until acceptable results are obtained, has been accomplished.

1. Commissioning process is complete when the Work specified in this Section and related Sections has been completed and accepted, including, but not limited to, the following:

a. Completion of all deferred, delayed, and seasonal Functional Performance Testing.

b. Resolution of issues, as verified by retests performed and documented with acceptance of retest results.

I. Construction Checklist: A form used by the commissioning team during procurement and installation of systems, assemblies, equipment, and components with a list of items that once completed and "checked off" serves as written verification that each system, assembly, piece of equipment, or component to be commissioned has satisfactorily been delivered to the site, has been correctly installed, and successfully completed all Pre-startup Tests. The forms will be hosted by the CxP on web-based commissioning software.

J. Construction-Phase Commissioning-Process Completion: The stage of completion and acceptance of commissioning process when resolution of deficient conditions and issues discovered during commissioning process and retesting until acceptable results are obtained has been accomplished. Owner will establish in writing the date construction-phase commissioning-process completion is achieved.

1. Commissioning process is complete when the Work specified of this Section and related Sections has been completed and accepted, including, but not limited to, the following:

a. Completion of tests and acceptance of test results.

b. Resolution of issues, as verified by retests performed and documented with acceptance of retest results.

K. Deferred and Delayed Testing: Functional performance testing performed after Substantial Completion, and after occupancy, but before the warranty period is completed. Includes seasonal testing (described in this section) and may include delayed testing.

L. Issues Log: A list of issues, deficiencies, issues, and recommendations for improvements that require action, decision, correction, or closure. Items will be categorized as “open” or “closed” on a continuing basis throughout the project. The list is maintained and monitored for completion by the CxP on web-based commissioning software, but resolution and action is the responsibility of the entire commissioning team.

M. Issue or Deficiency: A condition in the installation or function of a component, piece of equipment, system, or assembly that is not in compliance with the Contract Documents or does not meet the acceptance criteria of functional performance testing.

1. Issues and Deficiencies resulting from work that is not in compliance with the Contract Documents are the responsibility of the Contractor to correct at no additional cost to the Owner, including costs for retesting, as applicable.

N. Functional Performance Testing (FPT): Performance testing covers the dynamic functions and operations of equipment and systems using manual or monitoring methods. Performance testing is the dynamic testing of systems under full operation. Systems testing is the dynamic testing of systems under full operation. Systems are tested under various modes, such as during low cooling loads, high loads, component failures, unoccupied, varying outside air temperatures, fire alarm, power failure, etc. The systems are run through all the control system's sequences of operation and components are verified to respond as the sequences state.

1. FPT is part of the commissioning process and is not meant to duplicate quality control services required per Division 01 or testing, adjusting, and balancing and other quality control testing or inspections required in individual Sections and normally the responsibility of the Contractor.

O. Functional Performance Test (FPT) Procedures: The written procedures and documentation forms of tests used to guide and record functional performance testing. FPT procedures are composed of repeatable, step-by-step procedures and include the test prerequisites, the test process, the expected outcomes, and acceptance criteria. Forms or space for recording the results of tests may be included integrally in the written procedures or attached on separate sheets.

1. Responsibility for developing FPT procedures is shared between the CxP, the A/E, the Contractor, and the responsible trade subcontractors, generally including the mechanical, electrical, TAB, and controls trades. The CxP is responsible for developing the final FPT procedures and acceptance criteria.

P. Pre-Functional Performance Tests: Testing of the equipment and systems in advance of the Functional Performance Testing directed by the CxP. Pre-Functional Performance Tests are performed by the Contractor’s team managed by the contractor’s Commissioning Team and utilizing the CxP issued final FPT procedure forms. Evidence of successful completion of the Pre-

Functional Performance Tests must be submitted to the CxP prior to scheduling the Functional Performance Testing with the CxP.

Q. Pre-Startup Tests: Tests specified in the Contract Document to verify proper installation and performance prior to system, assembly, or equipment startups. Example tests include pipe pressure tests, duct leakage tests, and factory tests.

R. Owner's Project Requirements (OPR): The documentation of the functional requirements of the facility and Owner's expectations of how it will be used and operated. This includes project and design goals, measurable performance criteria, budgets, schedules and supporting information. Sustainable design goals for energy and water efficiencies and indoor environmental qualities are articulated in this document.

S. Sampling: A process for evaluating a subset (sample) of the total population and statistically applying the results to the entire population. In commissioning, it is a defined strategy for functional performance testing where a predetermined percentage of randomly selected, identical pieces of non-critical equipment undergo FPT and the test results are used as a statistical representation of the performance of the remaining, untested pieces of equipment. Where equipment in the sampling fail to meet the FPT acceptance criteria, an additional sampling undergoes FPT until the sampling meets the acceptance criteria.

1. Sampling is not allowed on this Project except where indicated in the Commissioning Plan and a sampling strategy is clearly outlined in the commissioning specifications.

2. Sampling is not allowed for critical equipment and systems.

3. Sampling is not allowed for construction checklists, pre-functional checklists, TAB, and startup procedures.

T. Startup: The initial starting, energizing, or activating of dynamic equipment for permanent use, including programming, the verification of components and devices using and completing static pre-functional checklists, and the manufacturer's startup forms. Often performed by Factory Authorized Service Representatives, the Contractor shall reference individual equipment specification sections for startup requirements.

U. "Systems," "Assemblies," "Subsystems," "Equipment," and "Components": Where these terms are used together or separately, they shall mean "as-built" systems, assemblies, subsystems, equipment, and components.

V. TAB: Testing, Adjusting and Balancing.

W. Trend Logs, Trending: The monitoring, by the BAS or other electronic data gathering equipment, and analyzing of the data gathered over a period of time.

X. Warranty Period: Warranty period for the Project, including systems, assemblies, equipment, components and labor.

1. The warranty period commences on the date of Substantial Completion and extends for one year, unless specifically noted otherwise in the Contract Documents and accepted submittals.

2. Commencement of the warranty period and its duration is defined in the provisions of the Contract, including General and Supplementary Conditions.

1.4 ABBREVIATIONS

A. Abbreviations: The following are common abbreviations used in this Specification and in the Commissioning Plan.

A/E	Architect and design engineers	FPT	Functional Performance Test
BECx	Building Enclosure Commission-ing	Subs	Subcontractors to Prime Contractors
BAS	Building Automation System		
CxP	Commissioning Provider	TAB	Test and Balance Contractor
CC	Construction Checklist		
CQC	Construction Quality Control		
Cx	Commissioning		
Cx Plan	Commissioning Plan document		

1.5 REFERENCE STANDARDS

A. Comply with applicable requirements and recommendations of the following referenced standards:

1. American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).

a. ASHRAE Guideline 0-2005 The Commissioning Process.

b. ASHRAE Guideline 1.1-2007 HVAC+R Technical Requirements for the Commissioning Process.

c. ASHRAE Standard 202-2013 Commissioning Process for Buildings and Systems.

B. The referenced standards include additional definitions or clarification of industry standard terms affecting the commissioning work.

1.6 COMMISSIONING TEAM

A. Members Appointed by Contractor(s):

1. Project superintendent and other employees that GC may deem appropriate for a particular portion of the commissioning process.

2. Subcontractors, installers, suppliers, and specialists that GC may deem appropriate for a particular portion of the commissioning process. These will include at a minimum:

   a. Mechanical subcontractor

   b. Plumbing subcontractor

   c. Electrical subcontractor

   d. Testing, Adjusting, and Balancing subcontractor

   e. Controls subcontractor

3. Appointed team members shall have the authority to act on behalf of the entity they represent.

B. Members Appointed by Owner:

1. Commissioning Provider (CxP), plus consultants that Commissioning Provider may deem appropriate for a particular portion of the commissioning process.

2. Owner representative, project manager, facility operations and maintenance personnel, plus other employees, separate contractors, and consultants that Owner may deem appropriate for a particular portion of the commissioning process.

3. Architect, plus employees and consultants that Architect may deem appropriate for a particular portion of the commissioning process.

4. Engineer, plus employees and consultants that Engineer may deem appropriate for a particular portion of the commissioning process.

1.7 COMMISSIONING MEETINGS

A. Commissioning Kickoff Meeting: The CxP shall schedule the Commissioning Kickoff meeting following construction Notice to Proceed. An agenda and meeting minutes shall be issued by the CxP. The CxP shall provide a list of required attendees to the GC prior to the meeting.

B. Commissioning Provider will schedule and conduct subsequent commissioning meetings. Commissioning Meetings shall be attended by the following:

1. Relevant staff from the contractor and subcontractor.

2. CxP and assigned staff

3. Owner’s Representative

4. A/E Team (when needed upon CxP’s request)

C. The CxP shall determine the frequency of meetings based on project progress and commissioning milestones. The commissioning team should plan on meetings occurring on a biweekly basis during active construction of any system required to be commissioned. During functional performance testing, commissioning meetings shall occur on a weekly basis.

D. The CxP will schedule special commissioning meetings as follows. The GC's relevant staff from the contractor and subcontractor shall attend:

1. Startup Scheduling Meetings: Will be held for each major system, assembly, and piece of equipment being commissioned. Additional Startup Scheduling Meetings will be held prior to Startups repeated due to failure.

2. Functional Performance Test Scheduling Meetings: Will be held for each system being commissioned. Additional FPT Scheduling Meetings will be held prior to FTPs being repeated due to failure, delay, seasonal, or deferred testing.

3. TAB and Controls Coordination Meeting: Meeting will be held prior to the start of TAB work to coordinate balancing with the HVAC controls contractor.

4. Controls Coordination Meeting: Schedule and attend a controls coordination meeting after the preparation of the controls submittals specified in Division 23 Section "Instrumentation and Controls for HVAC". The CxP shall lead this meeting and shall prepare and distribute meeting minutes. The agenda for this meeting is to facilitate resolution of review comments and to verify the sequence of operation for each system is complete and coordinated amongst the respective trades.

1.8 ACTION SUBMITTALS

A. Comply with requirements in Division 01 for submittal procedure general requirements for commissioning process. All submittals for Divisions 22, 23, 26 shall be submitted by the Contractor to the CxP concurrently with the A/E team.

B. Commissioning Plan Information:

1. The following information must be submitted to the CxP within 30 days of Notice to Proceed:

a. List of Contractor-appointed commissioning team members and other specific personnel and subcontractors performing the various commissioning requirements. Personnel shall include but not be limited to those identified in Paragraph 1.6 “Commissioning Team” . Include title, name, e-mail address, office phone number, and mobile number for each Commissioning Team member.

b. CPM schedule that includes the schedule of commissioning activities integrated with the Construction Schedule. Comply with requirements in Division 01 for the Construction Schedule general requirements for commissioning process.

c. List of instrumentation required for each test to include identification of parties that will provide instrumentation for each test.

C. List test instrumentation, equipment, and monitoring devices. Include the following information:

1. Make, model, serial number, and application for each instrument, equipment, and monitoring device.

2. Brief description of intended use.

3. Calibration record showing the following:

a. Calibration agency, including name and contact information.

b. Last date of calibration.

c. Range of values for which calibration is valid.

d. Certification of accuracy.

e. Certification for calibration equipment traceable to NIST.

f. Due date of the next calibration.

D. Pre-Startup Test Reports: At the end of each day in which Pre-Startup Tests or Factory Testing is conducted, submit test data reports.

E. Commissioning Construction Checklists: Construction Checklists as provided by the CxP must be fully executed as part of Certificate of Readiness.

F. Startup Plans: 30 days after approved submittals for each system, assembly, and piece of equipment, develop and submit a written startup plan describing steps and procedures that will result in its successful startup and energization in accordance with manufacturer requirements and the Contract Documents. Indicate names and qualifications of personnel that will be conducting startup activities. Include manufacturer startup instructions and manufacturer's startup checklists, as applicable.

G. Startup Documents: Include report and fully executed startup checklists and related documents.

1. Draft Report: Submit draft start-up reports to the CxP within seven days following successful completion of Startup and energization.

2. Final Report: Submit final Startup reports to the A/E and to the CxP within fourteen days following successful completion of the start-up and energization.

H. Certificate of Readiness: Prior to scheduling Functional Performance Tests for each system, complete each Certificate of Readiness provided by the CxP. These certify the system is ready for Functional Performance Testing. The Certificate of Readiness must include, but is not limited to, for each system to be commissioned, all equipment and system start-up reports; Associated

Construction Checklists, Test Reports; Testing, Adjusting, and Balancing (TAB) Report; HVAC Trend Logs (where applicable) to the extent applicable to the system. The Contractor's Commissioning CQC team must sign and date the Certificate of Readiness. Submit the Certificate of Readiness for each system no later than 14 calendar days prior to Functional Performance Tests of that system.

I. Training Plan: Include a matrix listing each training requirement, content of the training, the trainer name, trainer contact information, and schedule and location of training. Submit an electronic copy of the Training Plan to the Commissioning Specialists and the Owner no later than 30 calendar days prior to the associated training. Refer to 017900 - Demonstration and Training.

J. Trend Logs: Refer to 230800 "Commissioning of HVAC" for trend log requirements. Trends are to be submitted in electronic format (Microsoft Excel, or Adobe PDF). Trends logs are to be submitted prior to the Functional Performance Testing and all subsequent deferred, seasonal, or delayed Functional Performance Testing.

K. System and Equipment Commissioning Submittals: In addition to product data and shop drawings required in individual sections, submit the following project-specific information for each system and assembly, and for each piece of equipment and component to be commissioned, in accordance with Division 01 "Submittal Procedures" for review by Architect and the CxP. This information will be reviewed by the CxP for compliance with the Contract Documents, OPR, and BoD, and will be used to finalize commissioning requirements and test procedures. CxP comments are returned to the Contractor via the AE team, with a copy directly to the Architect. Include the following:

1. Manufacturer's detailed installation requirements and checklists including access and clearance dimensions.

2. Manufacturer's detailed start-up requirements and checklists.

3. Detailed product performance data for each piece of equipment including part load capacities, performance curves, electrical components and requirements, etc.

4. Logic flow diagrams for temperature control systems and sequences of operation.

    a. Include applicable portions of the sequence of operation for related function groups.

    b. Annotate function groups for clarity.

    c. Indicate initial setpoints and reset schedules.

L. TAB Reports: Include initial draft and final versions.

1.9 CLOSEOUT SUBMITTALS

A. Operations and Maintenance Manual: Submit Operations and Maintenance (O&M) Manual(s) in electronic format to the CxP, prepared in accordance with Division 01 Section "Operation and Maintenance Data" and the following:

1. Complete commissioning submittals as specified in this Section.

2. Manufacturer's break-in instructions.

3. Manufacturer's suggested service requirements.

4. Spare parts list edited for specific equipment used on the project.

5. Copy of all equipment specifications.

6. Preventative maintenance instructions.

B. Training verification forms, including attendee lists.

C. Commissioning issues reports, showing resolution of issues.

1. Include correspondence or other documents related to resolution of issues.

2. List unresolved issues and reasons they remain unresolved and should be exempted from the requirements for Construction Phase Commissioning Completion.

D. Provide data trend logs in compiled electronic XLS format as defined in 23 0800.

E. Request for Certificate of Construction-Phase Commissioning Process Completion. Must be submitted prior to Substantial Completion as a requirement to achieve Substantial Completion.

F. Request for Certificate of Commissioning Process Completion. Must be submitted upon completion of all deferred, delayed, and seasonal Functional Performance Testing.

G. Calibration Agency Qualifications: Certified by The American Association for Laboratory Accreditation that the calibration agency complies with minimum requirements of ISO/IEC 17025.

1.10 COORDINATION

A. Schedule: Coordinate Contractor's Construction Progress Schedule developed in accordance with Division 01 requirements with commissioning activities. Determine, with CxP assistance, appropriate durations for each commissioning activity specified, and identify the following commissioning activities, including related milestones, in the Construction Progress Schedule:

1. Equipment submittal submission and review.

2. O&M Manual submission and review.

3. Training Plan submission and review.

4. TAB Plan submission and review.

5. TAB Work.

6. TAB Report submission and review.

7. Start-up and energization for each system or piece of equipment.

8. Pre-Functional Tests for each system.

9. Training sessions for each system.

10. System Readiness Checklist submission and review for each system.

11. Functional Performance Testing for each system.

12. Functional Performance Re-testing.

13. Flush-Out, if applicable, to occur after commissioning and before occupancy.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. Test equipment and instrumentation required to perform the commissioning process shall remain the property of Contractor unless otherwise indicated.

B. Test equipment and instrumentation required to perform commissioning process shall comply with the following criteria:

1. Be manufactured for the purpose of testing and measuring tests for which they are being used and have an accuracy to test and measure system performance within the tolerances required to determine acceptable performance.

2. Calibrated and certified.

a. Calibration performed and documented by a qualified calibration agency according to national standards applicable to the tools and instrumentation being calibrated. Calibration shall be current according to national standards or within test equipment and instrumentation manufacturer's recommended intervals, whichever is more frequent, but not less than within six months of initial use on Project. Calibration tags shall be permanently affixed.

b. Repair and recalibrate test equipment and instrumentation if dismantled, dropped, or damaged since last calibrated.

3. Maintain test equipment and instrumentation.

4. Use test equipment and instrumentation only for testing or monitoring Work for which they are designed.

2.2 PROPRIETARY TEST EQUIPMENT, INSTRUMENTATION, AND TOOLS

A. Proprietary test equipment, instrumentation, and tools are those manufactured or prescribed by tested equipment manufacturer and required for work on its equipment as a condition of

equipment warranty, or as otherwise required to service, repair, adjust, calibrate, or perform work on its equipment.

1. Identify proprietary test equipment, instrumentation, and tools required in the test equipment identification list submittal.

2. Proprietary test equipment, instrumentation, and tools shall become the property of Owner at Substantial Completion.

PART 3 - EXECUTION

3.1 COMMISSIONING, GENERAL

A. General: Do not operate or temporarily use systems, assemblies, equipment or components indicated to be commissioned, unless otherwise approved in writing by Architect.

1. Where the Architect approves temporary construction use of any system, assembly, equipment or component, provide extended warranty on the Contractor may need to provide the Architect with extended warranty protection on parts, labor and refrigerant through the manufacturer or manufacturer authorized representative pursuant to the General Conditions.

3.2 CONSTRUCTION CHECKLISTS (DEVELOPED BY CxP)

A. Construction Checks are provided for each system being commissioned within the discipline specific Commissioning specifications. These Construction Checklists are based on the Contract Documents. The checklists will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.3 FUNCTIONAL PERFORMANCE TEST (FPT) FORMS (DEVELOPED BY CxP):

A. FPT forms are provided for each system being commissioned within the discipline specific Commissioning specifications. These forms are based on the Contract Documents. The FPT forms will be updated by the CxP to match the actual installed equipment after all the equipment submittals have been approved.

3.4 COMMISSIONING PROVIDER (CxP) RESPONSIBILITIES

A. Commissioning Plan: The Construction Phase Commissioning Plan is issued by the CxP to the team following construction Notice to Proceed. The Commissioning Plan is updated by the CxP throughout construction to reflect schedule updates.

B. Commissioning Kickoff Meeting: The CxP shall schedule the Commissioning Kickoff meeting following construction Notice to Proceed. An agenda and meeting minutes shall be issued by the CxP.

C. Construction Checklists: Final Construction Checklists updated and issued by CxP after approval of submittals. CxP monitors contractor progress completing Construction Checklists and provides final acceptance of completed Construction Checklists.

D. Construction Submittals: Submittals reviewed by CxP concurrently with the A/E.

E. Functional Performance Test (FPT) Procedure Forms: Final FTP procedure forms updated and issued by CxP after submittal approval.

F. Inspections, Pre-Startup Tests, and Startups: Site visits performed by CxP to verify installation, pre-startup tests, and startups.

G. Testing, Adjusting, and Balancing (TAB) Report and Field Acceptance Testing: CxP witnesses TAB contractor performing balancing in accordance with 230593. Preliminary and Final TAB reports are reviewed by the CxP. TAB verification witnessed by the CxP.

H. Pre-Test and Startup Reports: CxP reviews pre-test and startup reports for all commissioned systems.

I. Pre-Functional Performance Testing: Pre-Functional Performance Testing performed by the Contractor using CxP prepared FPT forms is witnessed by the CxP.

J. Trend Logs: CxP reviews all Trend Log data submissions.

K. Certificates of Readiness. CxP issues Certificates of Readiness to contractors. CxP issues Certificates of Readiness to contractors to complete.

L. Functional Performance Testing: CxP, with assistance of relevant Contractors, witnesses and directs functional performance testing performed in accordance with the FPT procedure forms. CxP records FPT results.

M. Issues Log:

1. The CxP records as an installation compliance issue Work found to be incomplete, inaccessible, at variance with the Contract Documents, nonfunctional, or that does not comply with Construction Checklists, or Functional Performance Test procedures.

2. CxP records corrective action by Contractor before signing off the Issue.

3. The CxP tracks resolution of each Issue until it is resolved or accepted by the Owner.

N. System Acceptance: The CxP recommends system acceptance by the Owner upon completion of the Functional Performance Testing and resolution of all issues. For systems requiring deferred or seasonal testing, systems may be recommended by the CxP for partial acceptance by the Owner prior to the deferred or seasonal testing if they comply with all construction contract and accepted design requirements that can be tested during initial Functional Performance Tests.

O. Near-End-of-Warranty Walkthrough: The CxP shall conduct a review and walkthrough of the commissioned systems with the Architect’s Construction Manager and Operation and Maintenance staff.

P. Final Commissioning Report: The CxP issues the final commissioning report upon completion of all Functional Performance Testing and resolution of all items on the Issues Log.

Q. Commissioning Systems Manual: The CxP issues the commissioning system manual upon completion of all Functional Performance Testing.

3.5 CONTRACTOR RESPONSIBILITIES

A. Contractor Responsibilities: Contractor is responsible for the commissioning of all installed equipment and systems as required in the Contract Documents.

1. Include all costs of commissioning requirements including manufacturer-certified start-up and testing of installed equipment in the base contract price.

2. Provide utility services, personnel, materials, tools, testing equipment, instrumentation and all other resources required for the commissioning process.

3. Assign representatives with expertise and authority to act on behalf of the Contractor and schedule those individuals to participate in and perform commissioning team activities including, but not limited to, the following:

a. Attend commissioning team meetings, including a construction phase controls integration meeting.

b. Provide technicians who are familiar with the construction and operation of installed systems and participate in testing of installed systems, subsystems, and equipment.

c. Certify that Work is complete, and systems are operational according to the Contract Documents, including calibration of instrumentation and controls.

d. Perform commissioning tests, including deferred testing.

e. Participate in assemblies, equipment and component training as specified for systems to be commissioned.

f. Participate in the Near End-of-Warranty review meeting and walkthrough.

g. Provide information requested by the CxP for commissioning documentation for inclusion in the final commissioning report and systems manual.

3.6 INSTALLATION VERIFICATION

A. Construction Checklists: Using construction checklists, perform installation verification on each system and assembly indicated to be commissioned, including each individual piece of equipment and component. Verify that materials and components are complete and undamaged upon delivery to the Project site and prior to installation. Prior to installation, verify that materials and adjacent construction are acceptably prepared and ready for installation of system, assembly, equipment or component. Use manufacturer’s checklists to ensure installation has occurred in accordance with manufacturer requirements. Verify that systems, assemblies, equipment, and components have been installed in accordance with the Contract Documents and in a manner that will allow for access and ease of maintenance.

1. Installation verification shall be performed and certified by the individuals responsible for the component installation.

2. Verify installation and complete construction checklists for each individual piece of equipment and component, as well as each individual system and assembly. Sampling is not allowed.

B. Certification: Prior to beginning functional performance testing, certify that installation verification has been completed.

3.7 PRE-STARTUP TEST PROCEDURES

A. Pre-Startup Test Procedures:

1. For each piece of equipment, assembly, or system that is specified in the contract documents for pre-testing or factory testing, develop and submit a test plan describing tests, locations for tests, and provide names and qualifications of personnel that will be conducting the tests. Example tests include pipe pressure tests, duct leakage tests, and factory tests.

2. Test and evaluate performance of equipment and assemblies under a full range of operating conditions and loads as required by the contract documents.

3. Diagnose and correct failed test demonstrations as follows:

a. Perform diagnostic tests and activities required to determine the fundamental cause of test failure.

b. Record each step of the diagnostic procedure prior to performing the re-test.

c. Record the results of each step of the re-test procedure.

d. Determine and record corrective measures.

e. Submit diagnosis of fundamental cause of issue for inclusion in the CxP’s Issues Log.

4. Pre-Startup Retests:

a. Schedule and repeat the complete test procedure for each test demonstration for which acceptable results are not achieved. Obtain signature of CxP on retest data forms. Repeat test demonstration until acceptable results are achieved. Except for issues that are determined to result from design errors or omissions, or other conditions beyond Contractor's responsibility, compensate Owner for direct costs incurred as the result of repeated test demonstrations to achieve acceptable results.

b. For each repeated test demonstration, submit a new test data form, marked "Retest."

5. Do not correct commissioning compliance issues during test demonstrations.

    a. Exceptions will be allowed if the cause of the issue is obvious and resolution can be completed in less than ten (10) minutes. If corrections are made under this exception, note the deficient conditions on the test data.

3.8 STARTUP PROCEDURES

A. Startup Procedures:

1. Startup Plan: For each system, assembly, and piece of equipment, develop and submit a written startup plan describing steps and procedures that will result in its successful startup and energization in accordance with manufacturer requirements and the Contract Documents. Indicate names and qualifications of personnel that will be conducting startup activities. Include manufacturer startup instructions and manufacturer's startup checklists, as applicable.

2. Startup, General: Comply with startup requirements required in this Section as well as individual material and equipment sections.

    a. Notify CxP, AE and Owner 48 hours prior to startup testing.

    b. Use manufacturer's startup checklists to ensure pre-startup and startup procedures are performed in accordance with manufacturer requirements.

    c. Unless otherwise indicated, conduct startup using manufacturer technical representatives or manufacturer-certified technicians, experienced in startup of actual equipment or system being started.

    d. Comply with procedures indicated in approved start-up plan.

    e. Startup procedures are to make system, assembly, or equipment ready for permanent use. Once startup procedures have been completed, do not shut-down equipment. Do not temporarily startup systems, assemblies, or equipment for TAB, commissioning, or other reasons.

3. Startup Reports: Prepare and complete startup reports, documenting dates, activities and procedures performed, and results of startup.

    a. Startup reports shall be completed and certified by the individuals responsible for the startup.

4. Diagnose and correct failed startup demonstrations as follows:

    a. Perform diagnostic tests and activities required to determine the fundamental cause of startup failure.

    b. Record each step of the diagnostic procedure prior to performing the startup again.

c. Record the results of each step of repeated startup procedure.

d. Determine and record corrective measures.

e. Submit diagnosis of fundamental cause of issue for inclusion in the CxP's Issues Log.

5. Repeated Startups:

a. Schedule and repeat the startups for which acceptable results are not achieved. Obtain signature of CxP on new startup forms. Repeat startups until acceptable results are achieved. Except for issues that are determined to result from design errors or omissions, or other conditions beyond Contractor's responsibility, compensate Owner for direct costs incurred as the result of repeated startups to achieve acceptable results.

b. For each repeated startup, submit a new startup form, marked "Retest."

B. Sensor Calibration:

1. Calibrate sensors as part of startup procedures, prior to testing, adjusting, and balancing.

2. Comply with default sensor tolerance criteria listed below, except where alternative sensor tolerance criteria are approved in writing as part of the submittal process.

3. ITEM MEASURED BY SENSOR: REQUIRED TOLERANCE (+/-):

COOLING COIL, CHILLED AND CONDENSER WATER TEMPERATURE:	0.3 DEG F.
AHU WET BULB AND DEW POINT TEMPERATURE:	1.0 DEG F.
HOT WATER COIL AND BOILER WATER TEMPERATURES:	1.0 DEG F.
OUTSIDE AIR, SPACE AIR, AND COIL AIR TEMPERATURES:	0.5 DEG F.
PRESSURES FOR AIR, WATER, AND GAS:	3.0 PERCENT OF DESIGN VALUE.
FLOW RATES FOR AIR:	5.0 PERCENT OF DESIGN VALUE.
FLOW RATES FOR WATER:	4.0 PERCENT OF DESIGN VALUE.
FLOW RATES FOR NATURAL GAS OR OIL:	1.0 PERCENT OF DESIGN VALUE.
FLOW RATES FOR STEAM:	3.0 PERCENT OF DESIGN VALUE.
WATT-HOUR, VOLTAGE, AND AMPERAGE:	1.0 PERCENT OF DESIGN VALUE.
LIGHTING ILLUMINATION:	3.0 PERCENT OF DESIGN VALUE.
COMBUSTION FLUE TEMPERATURES:	5.0 DEG F.
OXYGEN OR CO2 MONITOR:	0.1 PERCENT POINTS.
BAROMETRIC PRESSURE:	0.1 IN OF HG.

C. Cleaning: Perform a progress cleaning of equipment and components according to requirements in Division 01.

1. Replace filter media immediately prior to occupancy.

D. Certification: Prior to beginning functional performance testing, certify that startup and sensor calibration has been completed.

3.9 TESTING, ADJUSTING, AND BALANCING

A. General: Perform testing, adjusting, calibration, and balancing indicated in individual system, material, and equipment Sections and Division 23 Sections "Testing, Adjusting, and Balancing" and "Instrumentation and Controls for HVAC".

1. Submit pipe and duct leak and pressure test reports to CxP.

B. Certification: Prior to beginning functional performance testing, certify that testing, adjusting, calibration, and balancing has been completed.

3.10 PRE-FUNCTIONAL PERFORMANCE TESTS

A. Pre-Functional Performance Tests

1. Review the Functional Performance Test procedures provided by the CxP. Provide comments within 14 days of receipt from CxP.

2. After Contractor has reviewed and commented on the Functional Performance Test procedures, CxP will revise and reissue the approved revised FPT procedures marked "Approved for Testing."

3. Use only approved test procedures and test data forms marked "Approved for Testing" to perform and document tests and test demonstrations.

4. The contractor and subcontractors shall schedule and perform Pre-functional Performance Tests in advance of scheduling the Functional Performance and Integrated Systems Tests with the CxP.

5. The Pre-functional Performance Tests must be performed by members of the contractor’s commissioning team and subcontractors.

6. Use the Functional Performance Test and Integrated Systems Test procedure forms issued by the CxP to guide the Functional Performance Tests and Integrated Systems Tests. Pre-functional Performance Tests must be performed for each item of equipment and each system required to be commissioned and verify all sensor calibrations, control responses, safeties, interlocks, operating modes, sequences of operation, capacities, lighting levels, and all other performance requirements comply with construction contract and accepted design requirements regardless of the specific items listed within the Functional Performance Test and Integrated Systems Test procedure forms provided.

7. The contractor shall invite the CxP to witness all Pre-Functional Performance Testing. Notify CxP 48 hours prior to testing.

8. The results of the Pre-Functional Performance Testing are to be provided to the CxP for review with the Certificates of Readiness.

3.11 TREND LOGS

A. For the HVAC systems, Trend Log data must be gathered and submitted to the CxP as required by 230800 “Commissioning of HVAC Systems”. Issues identified by the CxP in the Trend Log data review must be responded to by the Contractor. Resolution of issues must be demonstrated through subsequent Trend Log submissions and resolutions must be accepted by the CxP.

3.12 CERTIFICATE OF READINESS

A. General: Where certification is required prior to beginning functional performance testing, submit Certificate of Readiness a minimum of seven days before functional performance testing is scheduled to commence. The Certificate of Readiness is a prerequisite for functional

performance testing for each of the systems, assemblies, equipment, or components to be commissioned.

1. HVAC equipment & systems
2. BAS
3. Lighting Controls (interior & exterior)
4. Plumbing systems
5. Solar PV
6. Power & Water Meters & Monitoring System

B. Readiness: Review functional performance test procedures and coordinate attendance of necessary participants of the commissioning team for each test. Verify the following items have been completed and are in compliance with the Contract Documents:

1. Manufacturer's required pre-start and start-up procedures have been completed.
2. Related electrical distribution and service connections have been installed and are functional.
3. Related refrigeration and cooling components and equipment are installed and functional.
4. Related heating components and equipment is installed and is functional.
5. Associated control devices and sensors are installed, calibrated, and functional.
6. Required testing, adjusting, and balancing work has been completed.
7. Controls point-to-point checks have been completed.
8. Sequence of operations has been pretested successfully through each mode defined in the Contract Documents.
9. Construction checklists, manufacturer's startup checklists, and pre-functional checklists have been completed and submitted to CxP.
10. Preliminary TAB reports have been completed and submitted to CxP.

C. Penalty for Lack of Readiness: The CxP schedules testing once the completed Certificates have been signed off on and received. If the CxP finds that pre-checks have not been successfully completed and the systems are not ready for testing, back charges will be incurred by the Contractor. The Owner will impose financial penalties on the Contractor for unforeseen visits by the CxP pursuant to the General Conditions.

3.13 FUNCTIONAL PERFORMANCE TESTING, GENERAL

A. In coordination with the CxP, schedule Functional Performance Tests for each system only after the applicable Certificate of Readiness, and all Pre-Functional Performance Test results has been reviewed and approved by the CxP. All deficiencies on the Issues Log identified through any prior review, inspection, or test activity must be corrected and verified by the CxP before the start of Functional Performance Tests. Perform Integrated Systems Tests only after the Functional Performance Tests for each associated system are completed with all deficiencies resolved and after the related Functional Performance Test forms have been signed by each commissioning team member.

B. Owner's witness will be present to witness commissioning work requiring the signature of an owner's witness, including, but not limited to, test demonstrations. Owner's project manager will coordinate attendance by Owner's witness with Contractor's published Commissioning Schedule. Owner's witness will provide no labor or materials in the commissioning work. The only function of Owner's witness will be to observe and comment on the progress and results of commissioning process.

C. Functional Performance Tests and Integrated Systems Tests must be performed with the relevant members of the contractor’s commissioning team listed in “COMMISSIONING TEAM”.

D. Functional Performance Tests or Integrated Systems Tests must be aborted when any system deficiency requiring more than ten (10) minutes to resolve prevents the successful completion of the test.

E. Functional Performance Tests or Integrated Systems Tests must be aborted when any required commissioning team member is not present for the test.

F. Perform and complete each step of the approved test procedures in the order listed.

G. Record data observed during performance of tests on approved data forms at the time of test performance and when the results are observed.

H. Test results that are not within the range of acceptable results will be recorded by the CxP.

I. Functional Performance Testing:

1. Use the Functional Performance Test and Integrated Systems Test procedure forms issued by the CxP to guide the Functional Performance Tests and Integrated Systems Tests.

2. Functional Performance Tests must be performed for each item of equipment and each system required to be commissioned and verify all sensor calibrations, control responses, safeties, interlocks, operating modes, sequences of operation, capacities, lighting levels, and all other performance requirements comply with construction contract and accepted design requirements regardless of the specific items listed within the Functional Performance Test and Integrated Systems procedure forms provided.

3. Testing must progress from equipment or components to subsystems to systems to interlocks and connections between systems. Integrated Systems Tests must be performed for the interactive operation between systems such as HVAC systems, fire protection systems, back-up electrical supply, energy generation systems, and other systems, and verify correct interactive operation, acceptable speed of response, and other contract requirements for both normal and failure modes. Examples of Integrated Systems Tests include the correct operation of HVAC systems during emergency system activation, correct operation of uninterruptible power supplies or energy generators and connected systems, or lighting system operation during power outage or emergency system activation. Depending upon the complexity or coordination involved in certain functional performance tests or integrated systems tests, CxP may require that separate meetings be held prior to these tests occurring to review test procedures, logistics, resource allocation, etc.

4. The order of components and systems to be tested must be verified by the Contractor with the CxP.

5. Sampling: Functional performance test procedures developed by CxP include sampling strategies as outlined in the commissioning plan, such that a pre-determined percentage of identical pieces of non-critical equipment are functionally tested and when acceptance criteria are met and therefore successful performance is verified, the remaining pieces will not undergo functional performance testing. Comply with sampling strategies and procedures indicated in individual commissioning sections.

J. Re-Testing:

1. If tests indicate that system, assembly, equipment, or component does not meet acceptance criteria indicated, document the deficiency and report it to the Architect. Upon resolution of deficiencies, re-test using same original parameters unless otherwise directed by Architect and CxP. Notify Architect and CxP a minimum of three days of re-test date of rescheduled tests.

2. Deficiencies which prevent the verification of system performance may be uncovered during tests. Corrections of minor issues identified may be made during the tests at the discretion of the CxP. In cases where the issue cannot be resolved within a reasonable amount of time (ten (10) minutes), document the deficiency and report it to the Architect. Upon resolution of deficiencies, re-test using same original parameters unless otherwise directed by Architect and CxP. Notify Architect and CxP when the issue has been resolved and provide a minimum of three days' notice before re-test date of rescheduled tests.

3. Address all deficiencies in a timely manner. Make every effort to expedite the testing process and minimize unnecessary delays, but do not compromise the integrity of the test procedures. The CxP will not overlook deficient work or loosen acceptance criteria, except at the written direction of Architect.

K. Deferred Functional Performance Tests:

1. Deferred Test List: CxP and Contractor identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed deferred tests or other tests approved for deferral until specified seasonal or other conditions are available. When approved, deferred tests may be completed after the date of Construction-Phase Commissioning Completion. Identify proposed deferred tests in the request for Certificate of Construction-Phase Commissioning Process Completion as follows:

    a. Identify deferred tests by number and title.

    b. Provide a target schedule for completion of deferred tests.

2. Schedule and coordinate deferred tests. Schedule deferred tests when specified conditions are available. Notify Architect and CxP at least seven working days (minimum) in advance of tests.

3. Where deferred tests are specified, coordinate participation of necessary personnel and of CxP and Owner's witness. Schedule deferred tests to minimize occupant and facility impact. Obtain Owner’s approval of the proposed schedule.

L. Delayed Functional Performance Tests:

1. Delayed Test List: CxP and Contractor identify, in the request for Certificate of Construction-Phase Commissioning Process Completion, proposed delayed tests. Obtain Owner approval of proposed delayed tests, including proposed schedule of completion of each delayed test, before submitting request for Certificate of Construction-Phase Commissioning Process Completion. Include the following in the request for Certificate of Construction-Phase Commissioning Process Completion:

    a. Identify delayed tests by test number and title.

    b. Written approval of proposed delayed tests, including approved schedule of completion of delayed tests.

2. Schedule and coordinate delayed tests. Schedule delayed tests when conditions that caused the delay have been rectified. Notify Architect and CxP at least seven working days (minimum) in advance of tests.

3. Where delayed tests are approved, coordinate participation of necessary personnel and CxP and Owner's witness. Schedule delayed tests to minimize occupant and facility impact. Obtain Owner’s approval of the proposed schedule.

4. Delayed testing may require additional time for the CxP to be on-site due to inefficiencies of testing in an occupied building or work overtime.

M. Diagnose and correct failed Functional Performance Testing as follows:

1. Perform diagnostic tests and activities required to determine the fundamental cause of issues observed.

2. Record each step of the diagnostic procedure prior to performing the procedure. Update written procedure as changes become necessary.

3. Record the results of each step of the diagnostic procedure.

4. Record the conclusion of the diagnostic procedure on the fundamental cause of the issue.

5. Determine and record corrective measures.

6. Submit diagnosis of fundamental cause of issue for inclusion in the CxP's Issues Log and documentation within the FPT forms.

N. Deferred Testing:

1. Delayed Tests: If a test cannot be completed due to an unforeseen occupancy condition, or a deficiency, the functional testing may be delayed upon recommendation of the CxP and the approval of Architect.

2. Seasonal Testing: Systems requiring seasonal testing are identified in other commissioning Sections.

3. Schedule: Schedule and coordinate deferred tests. Schedule deferred tests when specified conditions are available. Notify Architect and CxP at least three days in advance of tests. Where deferred tests are specified, coordinate participation of necessary personnel and of Architect, CxP, and Associate Architect/Engineer (AE). Schedule deferred tests to minimize occupant and facility impact. Obtain Architect's approval of the proposed schedule.

O. FPT Retest:

1. Schedule and repeat the complete FPT procedure for each test demonstration for which acceptable results are not achieved. Repeat FPT test demonstration until acceptable results are achieved. Except for issues that are determined to result from design errors or omissions, or other conditions beyond Contractor's responsibility, compensate Owner for direct costs incurred as the result of repeated FPT demonstrations to achieve acceptable results.

P. Do not correct commissioning compliance issues during FPT demonstrations.

1. Exceptions will be allowed if the cause of the issue is obvious, and resolution can be completed in less than ten (10) minutes.

Q. Acceptance

1. The Contractor must indicate acceptance of each item of equipment and systems tested along with signatures of each commissioning team member that participated in each Functional Performance Test or Integrated Systems Test Checklist.

2. Tests for which test procedures and data forms are incomplete, not signed, or which indicate performance that does not comply with acceptance criteria will be rejected. Tests for which test procedures and data forms are rejected shall be repeated and results resubmitted.

3. System Acceptance: Systems may be partially accepted by the Owner prior to seasonal testing if they comply with all construction contract and accepted design requirements that can be tested during initial Functional Performance Tests. All Functional Performance Test procedures must be completed prior to full systems acceptance.

R. Aborted Functional Performance Tests and Re-Testing: Abort Functional Performance Tests, Integrated Systems Tests, or Seasonal Tests if any deficiency prevents successful completion of the test or if any required commissioning team member is not present for the test. Reimburse the Owner for all costs associated with the additional effort required for re-testing due to test failure and/or aborted tests. These costs must include salary, travel costs, and per diem for Owner commissioning team members. Re-test only after all deficiencies identified during the original tests have been corrected.

1. 100 Percent Sample:

a. Systems or equipment for which 100 percent sample size are tested fail if one or more of the test procedures results in discovery of a deficiency and the deficiency cannot be resolved within ten (10) minutes during the test.

b. Re-test to the extent necessary to confirm that the deficiencies have been corrected without negatively impacting the performance of the rest of the system.

2. Less than 100 Percent Sample

a. For systems tests with a sample size less than 100 percent, if one or more of the test procedures for an item of equipment or a system results in discovery of a deficiency, regardless of whether the deficiency is corrected during the sample tests, the item of equipment or system fails the test.

b. If the system failure rate is 5 percent or less, meaning that 5 percent or less of the equipment or systems had at least one deficiency, re-test only on the items which experienced the initial failures.

c. If the system failure rate is higher than 5 percent, meaning that more than 5 percent of equipment or systems tested had at least one deficiency, re-test the items which experienced the initial failures to the extent necessary to confirm that the deficiencies have been corrected. In addition, test another random sample of the same size as the initial sample for the first time. If the second random sample set has any failures, re-test those failed items and all remaining equipment and systems to complete 100 percent testing of that system type.

3.14 DEFICIENCIES, RECOMMENDATIONS AND RESOLUTION RECORDS

A. Deficiencies:

1. The CxP shall record deficiencies and non-conformance issues on the Deficiencies, Recommendations, and Resolution Log maintained by the CxP. The CxP shall notify the Architect and the commissioning team within two business days of the discovery of the deficiency or issue. The CxP shall distribute an updated, electronic copy of the log to the Architect, Contractor, AE, and commissioning team at intervals determined in the Commissioning Plan. .

2. The Architect and Contractor, in consultation with the AE when necessary, will determine the responsible party and a suitable plan for resolution. Once a plan for resolution is determined, the CxP will document it in the Deficiencies, Recommendations, and Resolution Log, and shall closet the item upon verification that the proposed resolution has been completed.

3.15 OPERATIONS AND MAINTENANCE DATA

A. General: Compile an operations and maintenance manual in accordance with requirements in Division 01 "Closeout Procedures" and "Operation and Maintenance Data" sections, this Section, and individual material and equipment sections. Include each commissioned system, assembly, piece of equipment, and component. Incorporate requirements contained in other sections of the specifications that have equipment and system specific requirements. Submit an electronic copy of the O&M manual to the CxP.

B. Systems Manual: Contractor to cooperate with the CxP by providing the following information and any additional documentation necessary for the compilation of a Systems Manual and Current Facilities Requirements Manual by the CxP for the Project. Provide electronic documentation in format required by CxP.

1. Final Sequences of Operations for commissioned systems, assemblies, and equipment, including detailed point listings with ranges and initial setpoints.

   a. Control As-Built Drawings must be provided upon request.

2. On-going operating instructions of commissioned equipment. This shall include the following:

   a. A sequence of operations for the building

   b. The building occupancy schedule

   c. Equipment run-time schedules

   d. Setpoints for all HVAC equipment

   e. Set lighting levels throughout the building

f. Minimum outside air requirements

g. Any changes in schedules or setpoints for different seasons, days of the week, and times of day

3. Other seasonal operational guidelines by the equipment and system manufacturers.

4. Data sheets for all sensors and actuators by type and use for the commissioned equipment including recommendations for recalibration.

5. Single line diagrams and system schematics of each commissioned equipment and system.

6. Troubleshooting and diagnostic table for the commissioned equipment and system.

7. Preventive maintenance procedures for the commissioned equipment.

3.16 DEMONSTRATION AND TRAINING

A. General: Coordinate, schedule, and conduct demonstration and training for each commissioned system, assembly, piece of equipment, and component in accordance with requirements in Division 01 “Closeout Procedures” and “Demonstration and Training” sections, this Section, and individual material and equipment sections.

B. Training Plan: Prior to training, submit a *project-specific* written training plan to Architect and the CxP for review for each training session. The Architect and CxP shall review the training plan for content, adequacy, and rigorousness. Describing in detail the following:

1. Description of system, assembly, equipment and components included in training.

2. Location and date and time proposed for training, including duration.

3. Intended audience and learning objectives.

4. Agenda, including breakdown of subjects covered including description of, duration of, and any special training methods for individual subjects.

a. Include name and qualifications for each instructor for each subject.

5. Methods of training, such as classroom lecture, pre-produced video, site walk-through, actual operational demonstrations, and/or written handouts.

C. Verification: Contractor to submit completed Training Verification Certificate attached at the end of this Section for each training session.

3.17 NEAR END-OF-WARRANTY REVIEW

A. General: Participate in the Near End-of-Warranty review and walkthrough conducted by CxP.

1. The review will cover current building operation with input from the operation and facility staff. Outstanding issues related to the construction, particularly those related to the Owner's Project Requirements, and warranty related deficiencies will be addressed. Operational problems and concerns from the facility staff and occupants will be reviewed for compliance with design intent.

2. The CxP will provide a plan for corrective measures to the Architect and the Contractor for action.

B. Corrective Action: Where deficiencies and problems result from work not in compliance with the Contract Documents or where corrective actions are covered under warranty, provide the corrective action at no additional cost to Architect.

3.18 CERTIFICATE OF CONSTRUCTION-PHASE COMMISSIONING PROCESS COMPLETION

A. When Contractor considers that construction-phase commissioning process, or a portion thereof which Owner agrees to accept separately, is complete, Contractor shall prepare and submit to Owner and CxP through Architect a comprehensive list of items to be completed or corrected. Failure to include an item on such list does not alter Contractor's responsibility to compete commissioning process.

B. On receipt of Contractor's list, the CxP will inspect to determine whether the construction-phase commissioning process or designated portion thereof is complete. If Commissioning Provider's inspection discloses items, whether included on Contractor's list or not, which is not sufficiently complete as defined in "Construction-Phase Commissioning Process Completion" Paragraph in the "Definitions" Article, Contractor shall, before issuance of the Certificate of Construction-Phase Commissioning Process Completion, complete or correct such items on notification by the CxP. In such case, Contractor shall then submit a request for another inspection by the CxP to determine construction-phase commissioning process completion.

C. Contractor shall promptly correct deficient conditions and issues discovered during commissioning process. Costs of correcting such deficient conditions and issues, including additional testing and inspections, the cost of uncovering and replacement, and compensation for Architect's and CxP's services and expenses made necessary thereby, shall be at Contractor's expense

D. When construction-phase commissioning process or designated portion is complete, the CxP will prepare a Certificate of Construction-Phase Commissioning Process Completion that shall establish the date of completion of construction-phase commissioning process. Certificate of Construction-Phase Commissioning Process Completion shall be submitted prior to requesting inspection for determining date of Substantial Completion

3.19 CERTIFICATE OF COMMISSIONING PROCESS COMPLETION

A. When Contractor considers that the commissioning process is complete, Contractor shall prepare and submit to Owner and CxP through Architect a comprehensive list of items completed and corrected as part of the delayed, deferred, and seasonal Functional Performance Testing. Failure to include an item on such list does not alter Contractor's responsibility to compete commissioning process.

B. On receipt of Contractor's list, the CxP will inspect to determine whether the commissioning process is complete. If Commissioning Provider’s inspection discloses items, whether included on Contractor's list or not, which is not sufficiently complete as defined in "Commissioning Process Completion" Paragraph in the "Definitions" Article, Contractor shall, before issuance of the Certificate of Commissioning Process Completion, complete or correct such items on notification by the CxP. In such case, Contractor shall then submit a request for another inspection by the CxP to determine construction-phase commissioning process completion.

C. Contractor shall promptly correct deficient conditions and issues discovered during commissioning process. Costs of correcting such deficient conditions and issues, including additional testing and inspections, the cost of uncovering and replacement, and compensation for Architect's and CxP’s services and expenses made necessary thereby, shall be at Contractor's expense.

D. When the commissioning process is complete, the CxP will prepare a Certificate of Commissioning Process Completion that shall establish the date of completion of the commissioning process.

3.20 APPENDIX

A. Sample Certificate of Readiness form

B. Sample Training Verification Certificate

END OF SECTION 01 91 13

Certificate of Readiness - Sample

Project Name:	System to be Tested:
Project Address:	Equipment to be tested:

Certificate of Readiness

Requirement: Provide Certificates of Readiness on each commissioned piece of equipment or system prior to testing. A signed certificate is a prerequisite of functional testing for each system to be commissioned.

Intent: Installing contractors affirm this form and provide supporting documentation as needed to acknowledge systems, sub-systems and components to be commissioned comply with the contract documents (CDs) and owner's project requirements. The goal of the certificate is to avoid costly delays due to lack of readiness, absence of team members (trade or subcontractor) integral to each scheduled test, incomplete installation of equipment or systems, and invalid test results due to lack of sensor calibration, component malfunction, parts unavailability.

Completion Date	By	Requirement
		Pre-Functional Checks
_____	_____	Manufacturer's required pre-start and start-up procedures completed.
_____	_____	Related electrical distribution and service connections installed and functional per CDs.
_____	_____	Related refrigeration and cooling components/equipment installed and functional per CDs.
_____	_____	Related heating components/equipment installed and functional per CDs.
_____	_____	Associated control devices and sensors installed, calibrated, and functional per CDs.
_____	_____	Required testing, adjusting and balancing (TAB) work complete.
_____	_____	Control point-to-point checkout completed.
_____	_____	Sequence of operations successfully pre-tested through each mode as defined in CDs.
		Documentation
_____	_____	Pre-start/start-up checkout forms completed and attached/submitted.
_____	_____	Control point-to-point checklists completed and attached/submitted.
_____	_____	Preliminary TAB reports completed and attached/submitted.

Notes _____

I, the undersigned, hereby certify that the above indicated system, assembly, equipment or component has been installed in accordance with the CDs and manufacturer requirements as verified by the construction checklists and this form; startup has been completed according to manufacturer requirements and the CDs; and it is ready for functional performance testing.

BACK CHARGES WILL BE INCURRED IF ERRONEOUS INFORMATION RESULTS IN EXTRA SITE VISITS BY THE CXP.

_____ _____ _____

Training Verification Certificate - Sample

Contractor Name | Signature | Date

Training & Demonstration Verification Certificate

General

Project Name: _____

Project Address: _____

Equipment to be Trained: _____

Hours Required: _____

Date of Training: _____

Location of Training: _____

Attendance

Instructor (Names, Company): _____

Attendees (Names, Company): _____

General Object and Scope of Training (Check only one)

____ Provide only a general overview of the purpose and operation of this equipment, including required interactions of trainees with the equipment.

____ Provide an overview plus technical information of the purpose, operation and maintenance at an intermediate level, expecting that serious malfunctions will be addressed by factory reps.

____ Provide an overview plus technical information regarding the purpose, operation, troubleshooting and maintenance of this equipment at a very detailed level, expecting that almost all operation, service and repair will be provided by the trainees.

Training Methods (Check all that apply)

____ Training agenda is attached (this item is required)

____ Use of the O&M manuals, illustrating where the verbal training information is found in writing

____ Site demonstration of equipment operation

____ Manufacturer training manuals

____ Classroom lecture

____ Other (Please explain):

Approval (Select one)

____ The training and demonstration has been completed to the satisfaction of the Operator of the equipment/system.

____ No training was required.

Building Operator (or Approving Representative) Date

SECTION 02 41 13 - SELECTIVE SITE DEMOLITION

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

B. Baltimore County Department of Public Works Standard Specifications for Construction and Materials, dated September 2024 and as amended.

C. Maryland Department of Transportation State Highway Administration Standard Specifications for Construction and Materials, dated July, 2025 and as amended.

1.2 DESCRIPTION

A. This Section includes the following:

1. Furnish all labor, materials, tools, equipment and services necessary for and reasonably
incidental to complete the selective demolition work as indicated on the drawings or specified.

2. General intent of selective demolition work is indicated on drawings and described herein.

B. Related Sections:

1. Division 1 Section “Summary” for use of the building and phasing requirements.
2. Division 2 Section “Demolition” for cutting and patching procedures for selective demolition operations.
3. Division 1 Section “Construction Progress Documentation” for demolition schedule requirements.
4. Division 1 Section “Temporary Facilities and Controls” for temporary utilities, temporary construction and support facilities, temporary security and protection facilities, and environmental protection measures for selective demolition operations.
5. Division 1 Section “Construction and Demolition Waste Management and Disposal” for LEED requirements relating to demolition.
6. Division 1 Section “Sustainable Design Requirements” for LEED requirements relating to demolition.
7. Division 31 Section “Site Clearing” for site clearing and removing above, and below, grade improvements.
8. Division 31 Section “Earth Moving” for soil materials, excavating, backfilling, and site grading.
9. Division 23 Sections for cutting, patching, or relocating mechanical items.
10. Division 26 Sections for cutting, patching, or relocating electrical items.

1.3. OWNERSHIP OF REMOVED MATERIALS

A. Prior to Notice to proceed, Owner will remove all equipment, material and fixtures he wishes to retain. After which, all equipment, material and fixtures become the property of the Contractor to be removed from the premises and disposed of by him and legally disposed of off site.

1.4. JOB CONDITIONS

A. Demolition Phasing

1. The contractor shall prepare and submit a demolition/construction staging plan to Baltimore County Property Management for approval prior to beginning any construction.

B. Condition of Structures: Owner assumes no responsibility for actual condition of structures to be demolished.

1. Conditions existing at time of inspection for bidding purpose will be maintained by Owner insofar as practicable. However, variations within structure may occur by Owner's removal and salvage operations prior to start of demolition work.

C. Salvage Materials: Items of salvable value to Contractor may be removed from structure as work progresses. Transport salvaged items from site as they are removed.

1. Storage or sale of removed items will not be permitted on site.
2. Owner's salvage list will be provided at Pre-Bid Meeting.

D. Explosives: Use of explosives will not be permitted.

E. Traffic: Conduct demolition operations and removal of debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other occupied or used facilities without permission from authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

F. Protections: Ensure safe passage of persons around area of demolition. Conduct operations to prevent damage to adjacent buildings, structures, and other facilities and injury to persons.

G. Damages: Promptly repair damages caused to adjacent facilities by demolition operations.

H. Utility Services: Maintain existing utilities indicated to stay in service and protect against damages during demolition operations.

1. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by authorities having jurisdiction. Provide temporary

services during interruptions to existing utilities, as acceptable to governing authorities.

C. Utility Services: Refer to Division 23 and 26 sections for disconnecting, removing, and capping of utility services. Do not start demolition work until utility disconnections have been completed and verified in writing.

1.5 REGULATIONS

A. All work shall comply with the rules and regulations of Occupational Safety and Health Administration and all other Federal, State and County agencies and authorities having jurisdiction.

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1. PROTECTION OF PERSONS AND PROPERTY

A. Provide barricades, fences and other means of protection, in compliance with Federal, State and County safety regulations.

B. Provide protection for property adjacent to area of demolition.

C. Protect from damage against existing surfaces or materials to remain in place during demolition. Protect with suitable coverings when necessary. Any surfaces or materials to remain that are damaged during demolition shall be repaired or replaced by Contractor at no cost to the Owner.

D. Protect existing underground utilities during demolition operations. Call “Miss Utility” (800-257-7777) at least 48 hours prior to starting work. Perform necessary test pits as required to complete the project. Existing utilities damaged during demolition operations shall be repaired at no cost to the Owner.

E. Rubbish and debris shall be constantly sprinkled to lay the dust. All possible precautions shall be exercised to protect against dust and noise as required by local authorities. Rubble and debris resulting from demolition shall be removed from the site daily.

3.2. EXISTING SITE IMPROVEMENTS DEMOLITION

A. Existing Subsurface Conditions: Verify existing conditions of each respective site during pre-bid inspection. Obtain written authorization from the Owner before conducting test hole explorations of existing pavements within the project site. Conditions existing during pre-bid inspections will not be altered or modified.

B. Miscellaneous: Demolish additional miscellaneous existing site improvements indicated, specified and required to construct project.

3.3 EXISTING UNDERGROUND UTILITY DEMOLITION

A. Excavate and expose existing underground utilities and related structures designated for, or as required to implement, removals. For excavation operations refer to Section 312300 – Excavating and Filling. Remove existing utility structure castings. Backfill excavations, upon completion of utility demolition operations. For backfill operations refer to Section 312300 – Excavation and Filling.

END OF SECTION 02 41 13

SECTION 02 41 16 - STRUCTURE DEMOLITION

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Demolition and removal of selected portions of buildings and site improvements.
2. Disconnecting, capping, or sealing, and removing site utilities.
3. Salvaging items for reuse by Owner.
4. Note Owner coordination of Fiber Optic Lines.
5. See Demolition Drawings in all disciplines as well as Phasing Plans and Temporary Building Phasing Plans.

B. Related Sections:

1. Section 01 74 19 – Construction and Demolition Waste Management and Disposal.
2. Section 01 81 13 – Sustainable Design Requirements – LEED.

1.2 MATERIALS OWNERSHIP

A. Unless otherwise indicated, demolition waste becomes property of Contractor.

B. Historic items and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, and other items of interest or value to Owner that may be uncovered during demolition remain the property of Owner.

1. Carefully salvage in a manner to prevent damage and promptly return to Owner.

2. Salvage List, see below.

1.3 PREINSTALLATION MEETINGS

A. Pre-demolition Conference: Conduct conference at Project site.

1.4 INFORMATIONAL SUBMITTALS

A. Engineering Survey: Submit engineering survey of condition of building.

B. Proposed Protection Measures: Submit report, including Drawings, that indicates the measures proposed for protecting individuals and property, for environmental protection, for dust control and, for noise control. Indicate proposed locations and construction of barriers.

C. Schedule of building demolition activities with starting and ending dates for each activity.

D. Pre-demolition photographs or video.

E. Demolition Plan: Submit a comprehensive demolition plan. The plan shall include proposed sequence, methods, and equipment for demolition, removal, and disposal of structural components.
   1. Demolition plans shall show all structural elements to be demolished or removed, temporary shoring and temporary bracing. Indicate stages or phases of the selective structure demolition work. Prepare calculations as needed to show that the demolition methods selected will not damage or overstress any existing structure that remains or any new sections of the structure. Drawings and calculations shall be prepared and signed and sealed by a professional structural engineer registered in Maryland.

F. Statement of Refrigerant Recovery: Signed by refrigerant recovery technician.

1.5 CLOSEOUT SUBMITTALS

A. Inventory of items that have been removed and salvaged.

1.6 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Engage an experienced firm that has successfully completed selective demolition Work similar to that indicated for this project.
   1. Demolition firm shall engage a qualified professional structural engineer registered in Maryland to conduct engineering surveys and analyses as needed related to any demolition and demolition procedure, to review proposed demolition sequences and to design temporary shoring and bracing related to the demolition work.

B. Refrigerant Recovery Technician Qualifications: Certified by EPA-approved certification program.

1.7 FIELD CONDITIONS

A. Buildings to be demolished will be vacated and their use discontinued before start of the Work.

B. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical.

   1. See phasing plan and Summary of Work 01 10 00

C. Hazardous Materials: See Hazardous Material Reports attached in Appendix A and spec section 02 81 00 – Transportation and Disposal of Hazardous Materials.

   1. GC is responsible for proper abatement and removal of hazardous materials during demolition.
   2. All hazardous materials abatement packaging, transport, and disposal must be performed in strict compliance with all applicable local, state, and federal regulations, latest edition. The Contractor must maintain all licenses and certifications, in accordance with these regulations, which must be current for the entire term of this agreement.

D. On-site storage or sale of removed items or materials is not permitted.

E. Arrange demolition schedule so as not to interfere with Owner's on-site operations.

1.8 SALVAGED ITEMS FROM EXISTING BUILDING

A. Salvage List: GC is to coordinate salvage of items.

1. All gun unloading stations / bullet traps are to be packed and transported into new facility from the existing facility.
2. Two gun safes (one from the existing Shift Commander's office, and one from the existing armory, measuring 60" H x 40" W x 27" D) are to be packed and transported into new facility from the existing facility.
3. Vending machines in existing lobby are to be packed and transported into new facility from existing facility.
4. Memorial Stones / Plaques from the memorial garden are to be packed and provided to owner for storage.
5. Prescription Drug Drop Box is to be packed and transported to new facility entrance from the existing facility.
6. The existing chiller and critical components are to be crated and shipped to North Point Government Center 1401 North Point Rd, Baltimore, MD 21222. Coordinate with owner for schedule and removal and delivery.
7. Large Metal Cabinet in Annex Building, measuring 36"W X 71 ½ H X 24D, is to be packed and transported to new facility
8. Essex Thunder Sign in Fitness Room will be stored and moved by Police.
9. Painting in existing vestibule, two thin canvas panels one is 96"H X 36"W the second one is 96"H X 47"W, are to be removed, packed, and transported to the new facility.
10. Existing Fitness equipment and accessories in the existing fitness room are to be packed and stored by contractor, then installed by the GC with the new purchased fitness equipment.:
    a. FE-1 – Matrix treadmill
    b. FE-2 – Matrix Upright Bike (electric required)
    c. FE-3 – (2) Matrix Elliptical Machines (electric required)
    d. FE-4 – Matrix Row Machine
    e. FE-5 – Life Fitness stepper machine
    f. FE-6 – Ladder Rack with Weights
    g. FE-7 – Cybex Pull Up Bar
    h. FE-8 – Punching Bag
    i. FE-9 – Precore stretcher machine
    j. FE-10 – Hammer strength incline press
    k. FE-11 – Life Fitness Bicep Curl
    l. FE-12 – Life Fitness Lat raise
    m. FE-13 – Life Fitness Tricep Press
    n. FE 14 - Life Fitness Shoulder Press
    o. FE-15 – Life Fitness Ab Crunch
    p. FE-16 – Life Fitness Leg Press Machine
    q. FE-17 – Life Fitness Leg Extension Machine
    r. FE-18 – Life Fitness Leg Curl Machine
    s. FE-19 – Life Fitness Fixed Pulldown
    t. FE-20 – Seated Row
    u. FE-21 – Back Extension
    v. FE-22 – Life Fitness Smith Machine
    w. FE-23 – Dumbbell Rack and Dumbells
    x. FE-25 – Hammer strength behind neck press
    y. FE 36 - Life Fitness Chest Press

z. FE 37 - Life Fitness Standalone bench press
aa. Fitness Room Scale

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Regulatory Requirements: Comply with governing EPA notification regulations before beginning demolition. Comply with hauling and disposal regulations of authorities having jurisdiction.

B. Standards: Comply with ASSE A10.6 and NFPA 241.

2.2 SOIL MATERIALS

A. Satisfactory Soils: Comply with requirements in Section 31 20 00 "Earth Moving."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that utilities have been disconnected and capped before starting demolition operations.

B. If available, review record documents of existing construction provided by Owner. Owner does not guarantee that existing conditions are the same as indicated in record documents.

C. Survey existing conditions and correlate with requirements indicated to determine the extent of selective demolition required.

D. Inventory and record the condition of items to be removed and salvaged.

E. Engage a professional engineer to survey the condition of the building to determine whether removing any element might result in structural deficiency or unplanned collapse of any portion of structure or adjacent structures during selective demolition operations.

F. Survey of Existing Conditions: Record existing conditions by use of measured drawings, preconstruction photographs, or preconstruction videotapes.

G. Perform surveys as the Work progresses to detect hazards resulting from selective demolition activities.

3.2 PREPARATION

A. Refrigerant: Before starting demolition, remove refrigerant from mechanical equipment according to 40 CFR 82 and regulations of authorities having jurisdiction.

B. Salvaged Items: Comply with the following:

1. Clean salvaged items of dirt and demolition debris.
2. Pack or crate items after cleaning. Identify contents of containers.
3. Store items in a secure area until delivery to Owner.
4. Transport items to storage area designated by Owner.
5. Protect items from damage during transport and storage.

3.3 UTILITY SERVICES AND MECHANICAL/ELECTRICAL SYSTEMS

A. Existing Utilities to be Disconnected: Locate, identify, disconnect, and seal or cap off utilities serving buildings and structures to be demolished.

1. Owner will arrange to shut off utilities when requested by Contractor.
2. Arrange to shut off utilities with utility companies.
3. If removal, relocation, or abandonment of utility services will affect adjacent occupied buildings, then provide temporary utilities that bypass buildings and structures to be demolished and that maintain continuity of service to other buildings and structures.
4. Cut off pipe or conduit a minimum of 24 inches (610 mm) below grade. Cap, valve, or plug and seal remaining portion of pipe or conduit after bypassing according to requirements of authorities having jurisdiction.
5. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.
6. Fiber Optic Line Relocation to be performed by owner. See TA Low Voltage site plan drawings for work in contract.

3.4 PROTECTION

A. Existing Facilities: Protect adjacent walkways, loading docks, building entries, and other building facilities during demolition operations.

B. Existing Utilities to Remain: Maintain utility services to remain and protect from damage during demolition operations. Do not interrupt existing utilities serving adjacent occupied or operating facilities unless authorized in writing by Owner and authorities having jurisdiction.

C. Temporary Protection: Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction and as indicated. Comply with requirements in Section 01 50 00 "Temporary Facilities and Controls."

1. Protect adjacent facilities from damage due to demolition activities.
2. Protect existing site improvements, appurtenances, and landscaping to remain.
3. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.

D. Remove temporary barriers and protections where hazards no longer exist. Where open excavations or other hazardous conditions remain, leave temporary barriers and protections in place.

3.5 DEMOLITION

A. General: Demolish indicated selected portions of building and site improvements completely. Use methods required to complete the Work within limitations of governing regulations and as follows:

1. Do not use cutting torches until work area is cleared of flammable materials. Maintain portable fire-suppression devices during flame-cutting operations.
2. Maintain fire watch during and for at least 24 hours after flame-cutting operations.
3. Maintain adequate ventilation when using cutting torches.
4. Locate building demolition equipment and remove debris and materials so as not to impose excessive loads on supporting walls, floors, or framing.

B. Site Access and Temporary Controls: Conduct building demolition and debris-removal operations to ensure minimum interference with roads, streets, walks, walkways, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, walkways, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed trafficways if required by authorities having jurisdiction.
2. Use water mist and other suitable methods to limit spread of dust and dirt. Comply with governing environmental-protection regulations.

C. Explosives: Use of explosives is not permitted.

D. Proceed with demolition of structural framing members systematically, from higher to lower level. Complete building demolition operations above each floor or tier before disturbing supporting members on the next lower level.

E. Remove debris from elevated portions of the building by chute, hoist, or other device that will convey debris to grade level in a controlled descent.

F. Salvage: Items to be removed and salvaged are indicated above.

G. Demolish foundation walls and other below-grade construction in it’s entirety.

H. Existing Utilities: Demolish and remove existing utilities and below-grade utility structures that are within shown on the plans within the area of new construction.

I. Below-Grade Areas: Completely fill below-grade areas and voids resulting from building demolition operations with **satisfactory soil materials** according to backfill requirements in Section 312000 "Earth Moving."

J. Site Grading: Uniformly rough grade area of demolished construction to a smooth surface, free from irregular surface changes. Provide a smooth transition between adjacent existing grades and new grades.

K. Promptly repair damage to adjacent buildings caused by demolition operations.

3.6 CLEANING

A. Remove demolition waste materials from Project site and dispose of them in an EPA-approved construction and demolition waste landfill acceptable to authorities having jurisdiction, and recycle or dispose of them according to Section 01 74 19 "Construction Waste Management and Disposal."

B. Do not burn demolished materials.

C. Clean adjacent structures and improvements of dust, dirt, and debris caused by building demolition operations. Return adjacent areas to condition existing before building demolition operations began.

END OF SECTION 02 41 16

SECTION 02 81 00 – TRANSPORTATION AND REMOVAL OF HAZARDOUS MATERIALS

PART 1 - GENERAL

1.1 HAZARDOUS WASTE ABATEMENT AND DISPOSAL REGULATIONS

A. As new and revised regulations are published by governmental authorities, they become a part of this specification at the time of their effective date. All hazardous materials abatement packaging, transport, and disposal must be performed in strict compliance with all applicable local, state, and federal regulations, latest edition. The Contractor must maintain all licenses and certifications, in accordance with these regulations, which must be current for the entire term of this agreement.

1.2 ASBESTOS ABATEMENT WORK

A. Contractor must have an asbestos license and have certified asbestos abatement specialists. Individual workers must be trained through the contractor.

B. Reference Standards

1. Federal Standards, latest editions:

   a. Occupational Safety and Health Act of 1970, Public Law 91-596 (84 Stat. 15900).
   b. Federal Register of 18 Oct. 1972, as amended (29CFR 1910.1001).
   c. Clean Air Act, as amended Public Law 91-604 (84 Stat. 1676).
   d. Federal Register of 6 April 1973 (40CFR61:38FR8820).
   e. U.S. Department of Labor, Occupational Safety and Health Administration, General Industry-Safety and Health Standards, OSHA 2206 (Revised Jan. 1976) as modified in 29 CFP K 1910 et seq. 1977.
   f. Environmental Protection Agency Hazardous Waste Regulations and Consolidated Permit Regulation (40CFR 260-265 and 40CFR 122-125).

1. American National Standard Institute (ANSI):
   a. ANSI Z 9.2 – 1979 Design and Operation of Local Exhaust Systems.

2. Department of Health, Education and Welfare (DHEW)/National Institute for Occupational Safety and Health (NIOSH) Publications:
   a. DHEW (NIOSH Publication No. 79-127, February 1979 USPHS/NIOSH Membrane Filter Method for Evaluating Airborne Asbestos Fibers.

3. State of Maryland Department of Mental Hygiene Regulations:
   a. COMAR, TITLE 10, Subtitle 18, Chapter 15, Toxic Air Pollutants and COMAR, TITLE 10, Subtitle 18, Chapter 23, License to Remove or Encapsulate Asbestos.

A. Definitions

1. Hazardous Material: A substance or material which has been determined by the Secretary of Transportation to be capable of posing an unreasonable risk to health, safety, and property when transported in commerce, and which has been so designated

pursuant to the Hazardous Materials Transportation Act, 49 U.S.C. Appendix Section 1801 et seq. The term includes materials designated as hazardous materials under the provisions of 49 CFR 172, Sections .101 and .102 and materials which meet the defining criteria for hazard classes and divisions in 49 CFR 173. EPA designated hazardous wastes are also hazardous materials.

2. Hazardous Waste: A waste which meets criteria established in RCRA or specified by the EPA in 40 CFR 261 or which has been designated as hazardous by a RCRA authorized state program.

B. Submittals

1. Proof that the Contractor has been licensed and certified by the State of Maryland for asbestos removal. All licenses and certifications must be current.
2. Proof that employees have had instruction on the dangers of asbestos exposure, respirator use, decontamination, and OSHA regulations.
3. Written procedures for evacuation of injured workers. Aid for a seriously injured worker will not be delayed for reasons of decontamination.
4. Proof that all required permits, site location, and arrangements for transport and disposal of asbestos containing contaminated materials, supplies, and the like have been obtained.
5. A description of plans for construction of decontamination enclosure systems and for isolation of work areas in compliance with this specification and applicable regulations.
6. A Notification of Intent must be filed with the Maryland Department of the Environment 10 working days prior to the start of demolition.

C. Posting Osha Regulations

1. The Contractor shall have at all times in his possession at his office (one copy) and in view at the job site (one copy), OSHA regulation 1910.1001, Asbestos, and Environmental Protection Agency 40 CFR part 61, Subpart B: National Emission Standards for asbestos, asbestos stripping work practices, and disposal of asbestos waste.

D. Worker's Dress & Equipment For Asbestos Removal

1. Work clothes shall consist of full body coverall, disposable head covers, boots, or sneakers, and respiratory protective equipment as required by OSHA regulations. Eye protection and hard hats should be available as appropriate.
2. Coveralls should be of a disposable paper type.
3. Respiratory protection for workers shall be provided by the Contractor as required by current OSHA regulations
4. The Contractor shall, at all times, have available for use by government representatives three (3) clean sets of safety equipment and clothing. This shall be stored in the clean room and be clearly marked FOR USE BY GOVERNMENT ONLY.

E. Decontamination

1. All workers without exception:
   a. Will change work clothes at designated areas prior to start of day's work. Lockers or acceptable substitutes will be provided by the Contractor for street and work clothes.
   b. Will remove all work clothes in work area prior to departure from this area. Workers should then proceed to showers. Workers will shower before lunch and

at end of each day's work. Hot water, towels, soap and hygienic conditions are the responsibility of the Contractor.

c. Will not smoke, eat or drink once beyond the clean room at the job site. Prior to smoking, eating or drinking, workers will fully decontaminate by showering. Each worker will then dress into a new clean disposable coverall to eat, smoke, or drink. This new cover can be used to re-enter the work area.
d. Will leave work footwear inside work area until completion of job.

F. Pre-Asbestos Removal Preparation
1. The Contractor will remove and dispose of all rubbish and debris from floor of work area first.
2. The Contractor shall thoroughly seal all openings and fixtures including, but not limited to, heating and ventilation ducts, doors, windows, and lighting with polyethylene taped securely in place.
3. Polyethylene sheets (6 mil minimum) will be used to cover entire floor and wall surfaces. Polyethylene sheets shall be used to cover all items left in place and not practical to move. Polyethylene shall be sealed so that it is secured in place during removal operations.
4. The Contractor shall set up a decontamination facility in an area pre-designated by the CCI, which will house the changing room, portable showers, toilets and equipment.
5. The Contractor shall notify Jerry Siewierski, Program Manager with the Department of Environmental Protection and Sustainability, 410-887-3745 three days in advance of beginning any asbestos abatement. The notification shall include the location of the project and the approximate amount of asbestos-containing material to be removed. It shall also include a statement that the abatement report will be provided to the Department when it becomes available.

G. Methods of Asbestos Removal
1. Asbestos abatement work shall not commence until arrangements have been made for disposal of waste at an acceptable site. The site must be identified prior to the start of work and must be approved by the PMDM or PAI.
2. The asbestos material will be sprayed with water containing an additive to enhance penetration. The additive or wetting agent will be 50% polyethylene-ester and 50% polyoxyethylene-ester at a concentration of 1 ounce per 5 gallons of water. A fine spray of this solution must be applied to prevent fiber disturbance preceding removal of asbestos material. The asbestos will be sufficiently saturated to prevent emission of airborne fibers in excess of exposure limits prescribed in the OSHA standards referenced in these specifications.
3. Removal of asbestos material will be done in small sections with two person teams, on staging platforms, if needed. Material will be packed into sealable plastic bags of 6 mil minimum thickness and place in labeled containers for transport. Place caution labels on containers in accordance with EPA Standards and OSHA Regulation 29 CFR 1910.1001 (g)(2).
4. Clean external surfaces of containers thoroughly by wet sponging in designated area of the work area which is part of the equipment decontamination enclosure system. Move containers to washroom, wet clean each container thoroughly, and move to holding area pending removal to uncontaminated areas. Insure that containers are removed from holding area by workers who entered from uncontaminated areas dressed in clean coveralls.
5. Remove visible accumulations of asbestos material and debris. Wet clean all surfaces within work area.
6. Remove plastic sheets from walls and floors, windows and doors.
7. Clean all surfaces in work area and any other contaminated area with water. After cleaning work area, wait 24 hours to allow for settlement of dust, and again wet clean

all surfaces in work area. After completion of second cleaning operation, perform a complete visual inspection of work area to ensure that work area is dust free.

8. All polyethylene material, tape, cleaning material, and clothing will be placed in plastic lined drums, sealed and labeled as described above for asbestos waste material.
9. All equipment at facility will be cleaned of asbestos material prior to leaving work area. Any damage to equipment and other items shall be repaired to original condition at no cost to the Government.

H. Air Monitoring

1. Throughout removal and cleaning operations, air sample monitoring will be conducted to ensure that the Contractor is complying with all codes, regulations and ordinances. The method to be used is described in OSHA Standards 1919.939.
2. Air monitoring will be performed to provide the following samples (per week) during the period of asbestos removal:

Areas	Samples	Min. Sample Vol.
Work Area	4	60
Outside	2	120
Outside Bldg.	2	240

3. Samples will be taken after the actual removal operation has begun.
4. Baltimore County shall provide the air monitoring firm for sampling, testing and reporting.

I. Clean-Up Guarantee

1. After the second cleaning operation, the following test should be performed: A complete visual inspection should be made to insure dust free conditions, and two air samples within 48 hours after completion of all cleaning work should be taken. (Minimum volume of air sample 240 liters).
2. If non-compliance occurs, repeat cleaning and measurement until space is in compliance. Refer to 26 CFR 1910.1001, 7A.

J. Disposal Of Asbestos Material and Related Debris

1. All asbestos materials and miscellaneous debris in sealed drums will be transported to pre-designated disposal sites in accordance with guidelines and requirements to the U.S. Environmental Protection Agency and applicable State and local jurisdictions.
2. Workers unloading sealed drums and machinery operators will wear respirators when handling material at disposal site.
3. Bags may be dumped from drums into burial site. Drums may be reused; however, if a bag is broken or damaged, the entire drum shall be buried.
4. Contractor shall be responsible for all storage disposal, transportation, and removal permits (re: State or District, EPA, etc.).

K. Violations

1. If, at any time, the Contracting Officer decides that work practice is violating pertinent regulations or endangering workers, he will immediately notify in writing the on-site Contractor representative that operations will cease until corrective action is taken.

1.3 HAZARDOUS WASTE REMOVAL AND DISPOSAL

A. Certification

1. All bidders shall be Environmental Protection Agency and Maryland State certified hazardous waste haulers. A copy of the hauler's certification, which must be current, must be provided prior to the award of the contract.

B. Packing
   1. The hazardous waste must be transported in suitable, Federal DOT approved, 55 gallon drum containers that shall preclude the loss of any of the material to the environment. The containers shall comply with all Federal Department of Transportation regulations. The Contractor shall provide all containers and all vermiculite packing materials. The Contractor must properly label each container with a label approved by the Federal Department of Transportation.

C. Licenses – Hazardous Waste
   1. The successful bidder must submit, prior to award of contract, Maryland Certified Haulers License, Certified Licensing for all trucks proposed for participation in the hauling process, Certified Haulers Licenses for all other additional haulers and their trucks involved during the course of this agreement, and Certified Disposal Site Licenses for the disposal/destruction locations to be employed during the term of this agreement.

D. Permits And Manifesting
   1. The Contractor shall be responsible for obtaining all necessary permits. All manifests required for hauling and disposal of materials must be prepared by the Contractor and are subject to review and approval by the Baltimore County Department of Environmental Protection and Sustainability (DEPS). A copy of each manifest shall be sent to the PMDM or PAI

E. Disposal
   1. The disposal facility shall be an Environmental Protection Agency approved treatment and storage or disposal facility. The Contractor must supply to the County a Certificate of Disposal and Destruction and a copy of the completed manifest (signed off by all handlers of the waste) for each shipment of hazardous waste generated under this contract. No invoices shall be paid by Baltimore County until both documents have been provided by the Contractor to the Property Management Division Manager, or his authorized representative.

F. Removal
   1. Pick-ups must be made within ten (10) calendar days after mobilization on site by the Contractor.

G. Placarding
   1 Certified vehicles shall display a Hazardous Waste Transporter Vehicle Certification Sticker on the outside of the left door of the cab, either on the door immediately below the window or immediately forward of the door at approximately the same elevation. If the vehicle is a combination vehicle, the sticker shall be prominently displayed on the left side of the trailer and must not be obstructed from view by other markings, attachments, or equipment.
   2 The vehicle operator shall compare labels and manifest to insure that the contents and quantities listed on the manifest are the same as those listed on the containers. Any discrepancies must be corrected.

H. Spills
1. In the event of a spill or loss of hazardous waste to the environment, any person engaged in the transportation of the waste shall not knowingly fail to report the incident immediately (within one hour) by phoning the Maryland Department of the Environment at (410) 974-3512 and the Baltimore County Fire Department (410) 887-4592. The person and vehicle involved must remain at the scene and available until clearance to leave is given by the appropriate officials. A copy of the Oil/Chemical Spills emergency numbers card must be carried in the vehicle transporting hazardous waste.

1.4 HAZARDOUS WASTE – LIGHT BALLASTS PCB REMOVAL

A. General
1. Small capacitors and fluorescent light ballasts manufactured after 1978 have been labeled “NO PCB’s” by the manufacturers. Prior to 1978, small capacitors and fluorescent light ballasts were not labeled as to whether they contained PCB; therefore, all unlabeled capacitors and ballasts shall be assumed to contain PCB.
2. Hereunder, all ballasts not labeled “NO PCB’s” will be considered to contain PCB and shall be removed and incinerated of as such. The following procedures have been developed to assure proper incineration of small capacitors and fluorescent light ballasts. *Note* All light ballasts that do not have “NO PCB’s “written on them, and all PCB contaminated materials are to be incinerated.

B. References
1. Code of Federal Regulations (CFR):
a. 29 CFR 1910, Occupational Safety and Health Act, General Industry.
b. 29 CFR 1926, Occupational Safety and Health Act, Construction Industry. 40 CFR 761, U.S. Environmental Protection Agency Regulations for PCB. 29 CFR 1910.120, OSHA General Industry, Hazardous Waste Operations Requirements.
2. Department of Transportation Regulations (DOT): 49 CFR Part 178.
3. State Regulations: Maryland Controlled Hazardous Substances (CHS) Regulations (COMAR 26.13.01.)

C. Contractor Responsibility
1. Compliance: The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and Local regulations pertaining to the protection of his workers, visitors to the site, and persons occupying areas adjacent to the site. The Contractor shall hold the government harmless for failure to comply with any applicable safety or health regulation on the part of himself, his employees, or his subcontractors.
2. Medical Review: The Contractor is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable Federal, State, and local regulations.

D. Preparation
1. Isolate the PCB area for the duration of the work so as to prevent unauthorized access by designating the area off limits to all but authorized personnel. Maintain a log of all persons visiting the PCB work site.
2. Post warning signs and labels as required by this contract 29, CFR 1910, 40 CFR 761, and as directed by the Baltimore County Government’s representative.

E. Work Procedure
1. General Procedures: Perform all PCB related work and comply with the general safety and health provisions in conformance with 29 CFR 19810, 29 CFR 1926, and 40 CFR, respectively. If a conflict arises, the more stringent application shall apply until a determination is made by the Baltimore County Government’s representative.

2. Coordination of Work of all Trades: Coordinate the work of all trades to assure that their work is performed in accordance with the applicable regulations and that the PCB control area remains separated from the remaining work areas.

F. Equipment
1. Equipment, including disposable protective clothing, i.e., type suits, respirator with filters NIOSH & OSHA approved to work with PCB's rubber gloves, etc. All equipment shall be used in the execution of this contract and be provided to visitors to the site. The equipment shall also comply with all applicable Federal, State and local regulations.

G. Field Quality Control
1. Site Inspection and Stop Work Orders: While performing this work, the Contractor shall be subject to onsite inspection by agency officials or agency contracted inspection services. Work shall also be subject to inspection by OSHA and EPA inspectors and/or State building or health officials. If found to be in violation by one of these officials, the Contractor shall cease all work immediately. Until the violation is resolved, standby time required to resolve the violation shall be at the Contractor's expense.
2. One complete set of equipment (such as respirators and disposable clothing) required for entry to the work area shall be made available within 2 hours of request by the Baltimore County Government's representative for inspection of work area. Such requests will only be made during normal working hours.

H. Cleanup and Disposal
1. Permits and Notifications: Secure necessary permits in conjunction with PCB removal, hauling and disposition and provide timely notification of such actions, as may be required by Federal authorities. Notify the Office of the United States Environmental Protection Agency and provide copies of the notification to the Baltimore County Government's representative 10 days prior to the commencement of the work.
2. Housekeeping: Essential parts of PCB control are housekeeping and cleanup procedures. Maintain all surfaces on the work area free of accumulation of debris to prevent further dispersion. Give meticulous attention to restricting the spread of debris, keep waste from being distributed over the general area or to other areas in the building. The blowing down of the work area with compressed air is forbidden. Post appropriate hazard warning signs. In all possible instances, workmen shall cleanup their own areas. Provide personnel in cleaning scrap and waste with personal protective clothing.
3. Incineration of PCB Containing Materials: Collect and dispose of all PCB Ballasts and contaminated waste, rags, scrap, debris, bags, containers, equipment, and PCB contaminated clothing in properly labeled PCB disposal drums. Waste PCB containing material shall be transported to an incineration site. The Contractor will provide the Baltimore County Government's representative with a copy of all manifests and continuation sheets resulting from the incineration of the PCB containing waste. In some instances, a temporary holding area can be established upon approval by the Baltimore County Government's representative for properly packaged PCB waste.

1.5 HAZARDOUS WASTE – POLE MOUNTED TRANSFORMER PCB REMOVAL

A. References
1. Code of Federal Regulations (CFR):
   a. 29 CFR 1910, Occupational Safety and Health Act, General Industry.
   b. 29 CFR 1926, Occupational Safety and Health Act, Construction Industry. 40 CFR 761, U.S. Environmental Protection Agency Regulations for PCB. 29 CFR 1910.120, OSHA General Industry, Hazardous Waste Operations Requirements.
2. Department of Transportation Regulations (DOT): 49 CFR Part 178.
3. State Regulations: Maryland Controlled Hazardous Substances (CHS) Regulations (COMAR 26.13.01.)

A. Contractor Responsibility
   1. Compliance: The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and Local regulations pertaining to the protection of his workers, visitors to the site, and persons occupying areas adjacent to the site. The Contractor shall hold the government harmless for failure to comply with any applicable safety or health regulation on the part of himself, his employees, or his subcontractors.
   2. Medical Review: The Contractor is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable Federal, State, and local regulations.

B. Equipment

   1. Equipment, including disposable protective clothing, i.e., type suits, respirator with filters NIOSH & OSHA approved to work with PCB's rubber gloves, etc. All equipment shall be used in the execution of this contract and be provided to visitors to the site. The equipment shall also comply with all applicable Federal, State and local regulations.

C. Preparation
   1. Isolate the PCB area for the duration of the work so as to prevent unauthorized access by designating the area off limits to all but authorized personnel. Maintain a log of all persons visiting the PCB work site.
   2. Post warning signs and labels as required by this contract 29, CFR 1910, 40 CFR 761, and as directed by the Baltimore County Government's representative.

D. Work Procedure
   1. General Procedures: Perform all PCB related work and comply with the general safety and health provisions in conformance with 29 CFR 1910, 29 CFR 1926, and 40 CFR, respectively. If a conflict arises, the more stringent application shall apply until a determination is made by the Baltimore County Government's representative.
   2. Coordination of Work of all Trades: Coordinate the work of all trades to assure that their work is performed in accordance with the applicable regulations and that the PCB control area remains separated from the remaining work areas.

E. Transformer Removal
   1. The following is a basic outline of the minimum steps that will be taken during the removal of PCB containing transformers. The procedure, plan of action, submitted for approval by the Contractor should address these points:
      a. The Contractor shall assure that all power to the poles has been cut off.
      b. The Contractor will prepare to dismantle each transformer and lower to the ground by wrapping 6 mil polyethylene or equivalent around the transformer and secure prior to lower from the pole.
      c. Lower transformer to the ground in preparation of draining PCB fluids.
      d. The PCB fluid inside transformers must be drained and containerized in accordance with COMAR 26.13.02.19.
      e. Disposal of this material will be in accordance with COMAR. Any concentrations or fluids testing greater than 50 ppm are considered PCB containing.
      f. Handling of this fluid must be by persons trained and certified in the 40 hour OSHA Hazardous Materials Worker Training Program.
      g. Disposal of this material must be in accordance with COMAR 26.13.02.19.

F. Field Quality Control
   1. Site Inspection and Stop Work Orders: While performing this work, the Contractor shall be subject to onsite inspection by agency officials or agency contracted inspection services. Work shall also be subject to inspection by OSHA and EPA inspectors and/or State building or health officials. If found to be in violation by one of these officials, the Contractor shall cease all work immediately. Until the violation is resolved, standby time required to resolve the violation shall be at the Contractor's expense.

2. One complete set of equipment (such as respirators and disposable clothing) required for entry to the work area shall be made available within 2 hours of request by the Baltimore County Government's representative for inspection of work area. Such requests will only be made during normal working hours.

G. Cleanup and Disposal
1. Permits and Notifications: Secure necessary permits in conjunction with PCB removal, hauling and disposition and provide timely notification of such actions, as may be required by Federal authorities. Notify the office of the United States Environmental Protection Agency and provide copies of the notification to the Baltimore County Government's representative 10 days prior to the commencement of the work.
2. Incineration of PCB Containing Materials: Collect and dispose of all PCB containers, equipment, and PCB contaminated clothing in properly labeled PCB disposal drums. Waste PCB containing material shall be transported to an incineration site. The Contractor will provide the Baltimore County Government's representative with a copy of all manifests and continuation sheets resulting from the incineration of the PCB containing waste. In some instances, a temporary holding area can be established upon approval by the Baltimore County Government's representative for properly packaged PCB waste.

1.6 LEAD ABATEMENT WORK

A. General
1. The Contractor shall assure Baltimore County that all lead-contaminated waste, scrap and debris is handled, stored, transported and disposed of in accordance with EPA, State and local regulatory agency requirements, latest editions.

B. Related Work
1. Title to Materials: Materials resulting from demolition work, except as specified otherwise, shall become the property of the Contractor, and shall be disposed of in accordance with the methods specified herein.

C. References
1. Code of Federal Regulations (CFR):
   a. 29 CFR 1910, Occupational Safety and Health Act, General Industry.
   b. 29 CFR 1926, Occupational Safety and Health Act, Construction Industry.
   c. 29 CFR 1910.120, OSHA General Industry, Hazardous Waste Operations Requirements.
2. Department of Transportation Regulations (DOT): 49 CFR Part 178.
3. State Regulations: Maryland Controlled Hazardous Substances (CHS) Regulations (COMAR 26.13.01.)

D. Contractor Responsibility
1. Compliance: The Contractor shall assume full responsibility and liability for compliance with all applicable Federal, State, and Local regulations pertaining to the protection of his workers, visitors to the site, and persons occupying areas adjacent to the site. The Contractor shall hold the government harmless for failure to comply with any applicable safety or health regulation on the part of himself, his employees, or his subcontractors.
2. Medical Review: The Contractor is responsible for providing medical examinations and maintaining medical records of personnel as required by the applicable Federal, State, and local regulations.
3. Air quality during the demolition process shall be monitored for air-born lead content and shall be in accordance with EPA, State and local regulations and requirements.

E. Work Procedure
1. Lead contaminated waste, scrap, and debris shall be disposed of as follows:

Lead contaminated waste, scrap, debris, bags, containers, equipment and lead- contaminated clothing, which may produce airborne concentrations of lead particles shall be stored in U.S. Department of Transportation CFR 49 Part 178 approved 200 liter (55 gallon) drums. Each drum shall be labeled to identify the type of waste as defined in CFR 49 Part 172 and the date lead-contaminated wastes were first put into the drum. The Uniform Hazardous Waste Manifest forms from the Federal and State agencies shall be obtained and completed. Land disposal restriction notifications shall be as required by CFR 40 Part 268. The Owner's Representative shall be notified at least 14 days prior to delivery to arrange for job site inspection of the drums and manifests. Lot deliveries of hazardous wastes shall be made as needed to ensure that drums do not remain on the work site longer than 90 calendar days from the date affixed to each drum.
The Contracting Officer will assign an area for interim storage of waste-containing drums.

2. Lead-contaminated waste shall be handled, stored, transported, and disposed of in accordance with CFR 40 Part 260, CFR 40 Part 261, CFR 40 Part 262, CFR 40 Part 263, CFR 40 Part 264, and CFR 40 Part 265, land disposal restriction notification shall be as required by CFR 40 Part 268.

F. Field Quality Control
   1. Site Inspection and Stop Work Orders: While performing this work, the Contractor shall be subject to onsite inspection by agency officials or agency contracted inspection services. Work shall also be subject to inspection by OSHA and EPA inspectors and/or State building or health officials. If found to be in violation by one of these officials, the Contractor shall cease all work immediately. Until the violation is resolved, standby time required to resolve the violation shall be at the Contractor's expense.
   2. One complete set of equipment (such as respirators and disposable clothing) required for entry to the work area shall be made available within 2 hours of request by the Baltimore County Government's representative for inspection of work area. Such requests will only be made during normal working hours.

G. Cleanup and Disposal
   1. Permits and Notifications: Secure necessary permits in conjunction with lead contaminated materials removal, hauling and disposition and provide timely notification of such actions, as may be required by Federal authorities. Notify the Office of the United States Environmental Protection Agency and provide copies of the notification to the Baltimore County Government's representative 10 days prior to the commencement of the work.
   2. Toxicity Characteristic Leaching Procedure (TCLP) Results: The results of the TCLP analysis performed during abatement shall be used to determine disposal procedures.
   3. Disposal Documentation: Written evidence shall be provided that the hazardous waste treatment, storage, or disposal facility is approved for lead disposal by the EPA and State or local regulatory agencies. One copy shall be submitted of the complete manifest; signed, and dated by the initial transporter in accordance with CFR 40 part 262.
   4. Payment for Hazardous Waste: Payment for disposal of hazardous waste will not be made until a signed copy of the manifest from the treatment or disposal facility certifying the amount of lead-containing materials delivered is returned and a copy is furnished to the Property Management Division Manager, or his authorized representative.

PART 2 – PRODUCTS (NOT USED)

PART 3 - EXECUTION

3.1 MEASURE AND PAYMENT

A. Track loader, minimum 3 cubic yard bucket, paid for by the hour, includes operator, fuel, vital fluids, full maintenance and repair.

B. Bulldozer, minimum 8’ blade, paid for by the hour, includes operator, fuel, vital fluids, full maintenance and repair.

C. Excavators with one (1) bucket, and grapple, and one (1) with mechanical pulverizer, minimum 70,000 lb. Capacity, paid for by the hour, includes operator, fuel, vital fluids, full maintenance and repair.

D. Truck, single axle dump, tandem axle dump, and tractor trailer dump, paid for by the hour, one (1) hour total travel time allowed for both Contractor’s yard to job site and dump to Contractor’s yard, from job site to dump and dump to job site; includes operator, fuel, vital fluids, and full maintenance and repair. The PMDM or PAI, or his authorized representative, must approve the dump site to be used by the Contractor for each job.

E. Dumping charges – paid for by the cubic yard, for construction debris/rubble landfill, concrete/blacktop reclamation operation, asbestos and asbestos contaminated material landfill, contaminated soil (by fuel) landfill.

F. Borrowed material – paid for by the cubic yard, furnished and installed.

G. Grounds restoration – paid for by the square foot, furnished and installed, topsoil, grass seed, straw mulch, hydroseeding with fiber mulch. The contaminated soil test is paid for by the each and includes all costs associated with the test.

H. Backhoe, rubber tired, minimum 24” bucket, and skid steer, minimum 50HP, paid for by the hour, includes operator, fuel, vital fluids, full maintenance and repair.

I. Excavator high reach, 70’ reach, universal processor, pulverizer/shear, paid for by the hour, includes operator, fuel, vital fluids, full maintenance and repair.

J. Mobilization, for track loader, bulldozer, excavators, backhoe, skid steer, and high reach excavator, individually paid once per job site.

K. Capping of well by licensed well driller, paid for per well.

Notification # _____

Postmark Date: _____

Date Received _____

Notification of Intent to Demolish Project Information

Structure Owner Baltimore County Maryland

Name:

Address: 400 Washington Avenue

City: Baltimore State: MD Zip: 21204

Contact Name: Matthew Leebel

Phone Number: 410-887-3834

Fax Number:

Structure Information

Building Name: Police Precinct

Address/Location: 216 North Marlyn Avenue

City: Essex State: MD Zip: 21221

Age (years): 55 Size (sq. ft.): 1600

Present Use of Building: residence

Prior Use of Building: residence

Type of Operation (check one): [X] Demo [ ] Ordered Demo [ ] Fire Training

Demolition Contractor:

Address:

City: State: Zip:

Contact Name:

Phone Number: Fax Number:

Dates of renovation, demolition or fire training burn:

Start Date:

End Date:

Hours of Operation:

Means of Demolition:

Emergency Demolition (complete only if this project is an Emergency Demo.)

1. Attach a copy of the Order to this notice:

2. Name of Authority Issuing Order: _____ Title: _____

3. Authority of Order (Citation of Code): _____

4. Date of Order (MM/DD/YY): _____ _____

Date Ordered to Begin

Description of procedures to be followed in the event that unexpected RACM is found or non-friable ACM becomes crumbled, pulverized, or reduced to powder.

Note: Federal regulations prohibit the intentional burning of any structure, including single-family homes, which have asbestos containing materials (ACMs), including floor tiles and exterior shingles.

Date of Inspection:

Note: You must inspect the structure of the presence of ACMs prior to demolition.

Are any ACMs present? [X] Yes [ ] No

Friable materials (can be crumbled under ordinary hand pressure), usually associated with thermal systems or fire- proofing, must be removed by a licensed asbestos contractor before demolition. You may remove exterior shingles, with care, on your own. Call your local Health Department or landfill for disposal instructions.

INSTRUCTIONS

1. **Structure Owner**
2. **Structure Information**
    a. Building Name (ex: Former Montgomery Wards Building)
    b. Address- Please give the correct address. (ex: 1800 Washington Blvd)
    c. City
    d. Age
    e. Present Use of Building (ex: offices)
    f. Prior Use of Building (ex: commercial)
3. **Type of Operation**
4. **Demolition Contractor**
5. **Dates of renovation, demolition or fire training**
    a. Start Date: (Date you are planning to start). If this is a commercial building, former commercial building, school, apartment complex, rental home with more than four apartment units this project needs to be notified at least **10 WORKING DAYS** prior to the demolition.
    b. End Date: (Date you are ending)
    c. Hours of Operation: (ex M-F 0700-1530, ex: Sat-Sun 8AM-12:30 PM)
6. **Means of Demolition**
7. **Emergency Demolition**
8. **Description of Procedures to be followed in the event that unexpected RACM is found or non-friable ACM becomes crumbled, pulverized, or reduced to powder**
    a. If friable acm (ex: pipe insulation) is found it will need to be removed by a licensed asbestos contractor.
    b. If non-friable ACM becomes friable it will need to be removed by a licensed asbestos contractor.
9. **Date of inspection** (ex: the date the building was inspected for asbestos)
10. **Are any ACMs present that will be staying in place for the demolition? (ex: floor tile, mastic)**
    a. If floor tile and mastic are in good condition they can stay during the demolition and be disposed of as construction debris at a C& D landfill.
    b. If you are planning to recycle the concrete pad then you will need to remove the floor tile and mastic beforehand.

The Notice of Intent to Demolish form can be faxed to the Maryland Department of the Environment Asbestos Division at 410-537-3924 or emailed to demo.mde@maryland.gov . If you have any questions please call the Asbestos Division at 410-537-3200.

SECTION 03 10 00 – CONCRETE FORMING AND ACCESSORIES

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Formwork for cast-in-place concrete, with shoring, bracing and anchorage.

B. Openings for other work.

C. Form accessories.

D. Form stripping.

1.2 REFERENCE STANDARDS

A. ACI 117 – Standard Specifications for Tolerances for Concrete Construction and Materials; American Concrete Institute.

B. ACI 301 – Specifications for Structural Concrete for Buildings; American Concrete Institute.

C. ACI 318 – Building Code Requirements for Structural Concrete and Commentary; American Concrete Institute.

D. ACI 347 – Guide to Formwork for Concrete; American Concrete Institute.

E. ASME A17.1 – Safety Code for Elevators and Escalators; The American Society of Mechanical Engineers.

1.3 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on void form materials.

C. Shop Drawings: Indicate pertinent dimensions, materials, bracing and arrangement of joints and ties.

1. Prepared by or under the supervision of a qualified professional engineer detailing fabrication, assembly, and support of formwork. Shop drawings shall be signed and sealed by an engineer registered in the local jurisdiction.
2. Indicate proposed schedule and sequence of stripping formwork, shoring removal, and installing and removing reshoring.
3. Indicate location of all slab joint types.

D. Sustainable Design Submittals: Refer to Division 01 Section, “Sustainable Design Requirements.”

1. If any wood or wood-based form materials, including supports, are permanently installed in the project, submit documentation required for sustainability harvested wood as required by Section 01 60 00 and appropriate forms.

2. Form releasing agents shall meet VOC requirements per Section 01 81 19, “Indoor Air Quality Requirements.”

1.4 QUALITY ASSURANCE

A. Perform work of this section in accordance with ACI 347, ACI 301, and ACI 318.

1. Maintain one copy of standards on project site.

PART 2 - PRODUCTS

2.1 FORMWORK – GENERAL

A. Provide concrete forms, accessories, shoring and bracing as required to accomplish cast-in-place concrete work.

B. Design and construct to provide resultant concrete that conforms to design with respect to shape, lines, and dimensions.

C. Comply with applicable State and local codes with respect to design, fabrication, erection, and removal of formwork.

D. Comply with relevant portions of ACI 347, ACI 301 and ACI 318.

2.2 WOOD FORM MATERIALS

A. Form Materials: At the discretion of the Contractor.

2.3 PREFABRICATED FORMS

A. Preformed Steel Forms: Minimum 16 gage matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

B. Glass Fiber Fabric Reinforced Plastic Forms: Matched, tight fitting, stiffened to support weight of concrete without deflection detrimental to tolerances and appearance of finished surfaces.

C. Void Forms: Moisture resistant treated paper faces, biodegradable, structurally sufficient to support weight of wet concrete mix until initial set; 2 inches thick.

2.4 FORMWORK ACCESSORIES

A. Form Ties: Snap-off type, galvanized metal, fixed length, cone type, with waterproofing washer, 1 inch back break dimension, free of defects that could leave holes larger than 1 inch in concrete surface.

B. Form Release Agent: Colorless mineral oil that will not stain concrete, absorb moisture, impair natural bonding of concrete finish coatings, or affect color characteristics of concrete finish coatings.

1. Product must meet VOC requirements per Section 01 81 19. “Indoor Air Quality Requirements.”

C. Corners: Chamfered, rigid plastic or wood strip type, ¾ x ¾ inch size, maximum possible lengths.

D. Dovetail Anchor Slot: Galvanized steel, 22 gage thick, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

E. Flashing Reglets: Galvanized steel, 22 gage thick, longest possible lengths, with alignment splines for joints, foam filled, release tape sealed slots, anchors for securing to concrete formwork.

F. Nails, Spikes, Lag Bolts, Through Bolts, Anchorages: Sized as required, of sufficient strength and character to maintain formwork in place while placing concrete.

G. Waterstops: Preformed mineral colloid strips, ¾ inch thick, moisture expanding.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify lines, levels and centers before proceeding with formwork. Ensure that dimensions agree with drawings.

3.2 EARTH FORMS

A. Hand trim sides and bottom of earth forms. Remove loose soil prior to placing concrete.

3.3 ERECTION – FORMWORK

A. Erect formwork, shoring and bracing to achieve design requirements, in accordance with requirements of ACI 301.

B. Provide bracing to ensure stability of formwork. Shore or strengthen formwork subject to overstressing by construction loads.

C. Provide chamfer strips on external corners of beams, joists, and columns.

D. Install void forms in accordance with manufacturer’s recommendations. Protect forms from moisture or crushing.

E. Coordinate this section with other sections of work that require attachment of components to formwork.

F. If formwork is placed after reinforcement, resulting in insufficient concrete cover over reinforcement, request instructions from Architect before proceeding.

3.4 APPLICATION – FORM RELEASE AGENT

A. Apply form release agent on formwork in accordance with manufacturer’s recommendations.

B. Apply prior to placement of reinforcing steel, anchoring devices, and embedded items.

C. Do not apply release agent where concrete surfaces will receive special finishes or applied coverings that are affected by agent. Soak inside surfaces of untreated forms with clean water. Keep surfaces coated prior to placement of concrete.

3.5 INSERTS, EMBEDDED PARTS AND OPENINGS

A. Provide formed openings where required for items to be embedded or passing through concrete work.

B. Locate and set in place items that will be cast directly into concrete.

C. Coordinate with work of other sections in forming and placing openings, slots, reglets, recesses, sleeves, bolts, anchors, other inserts, and components of other work.

D. Install accessories in accordance with manufacturer's instructions, so they are straight, level, and plumb. Ensure items are not disturbed during concrete placement.

E. Install waterstops in accordance with manufacturer's instructions, so they are continuous without displacing reinforcement.

F. Provide temporary ports or openings in formwork where required to facilitate cleaning and inspection. Locate openings at bottom of forms to allow flushing water to drain.

G. Close temporary openings with tight fitting panels, flush with inside face of forms, and neatly fitted so joints will not be apparent in exposed concrete surfaces.

3.6 FORM CLEANING

A. Clean forms as erection proceeds, to remove foreign matter within forms.

B. Clean formed cavities of debris prior to placing concrete.

1. Flush with water or use compressed air to remove remaining foreign matter. Ensure that water and debris drain to exterior through clean-out ports.
2. During cold weather, remove ice and snow from within forms. Do not use deicing salts. Do not use water to clean out forms, unless formwork and concrete construction proceed within heated enclosure. Use compressed air or other means to remove foreign matter.

3.7 FORMWORK TOLERANCES

A. Construct formwork to maintain tolerances required by ACI 117, unless more stringent tolerances are required within the contract documents.

B. Construct and align formwork for elevator hoistway in accordance with ASME A17.1.

3.8 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspection services shall conform to the Statement of Special Inspections noted in the structural drawings.

B. Inspect erected formwork, shoring and bracing to ensure that work is in accordance with formwork design, and to verify that supports, fastenings, wedges, ties, and items are secure.

C. Do not reuse wood formwork more than 3 times for concrete surfaces to be exposed to view. Do not patch formwork.

3.9 FORM REMOVAL

A. Do not remove forms or bracing until concrete has gained sufficient strength to carry its own weight and imposed loads.

B. Loosen forms carefully. Do not wedge pry bars, hammers, or tools against finished concrete surfaces scheduled for exposure to view.

C. Store removed forms to prevent damage to form materials or to fresh concrete. Discard damaged forms.

END OF SECTION 03 10 00

SECTION 03 20 00 – CONCRETE REINFORCING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Reinforcing steel for cast-in-place concrete.

B. Supports and accessories for steel reinforcement.

1.2 REFERENCE STANDARDS

A. ACI 301 – Specifications for Structural Concrete for Buildings; American Concrete Institute.

B. ACI 318 – Building Code Requirements for Structural Concrete and Commentary; American Concrete Institute.

C. ACI SP-66 – ACI Detailing Manual; American Concrete Institute.

D. ASTM A 615/A 615M – Standard Specification for Deformed and Plain Billet-Steel Bars for Concrete Reinforcement.

E. ASTM A 1064/A 1064M – Standard Specification for Carbon-Steel Wire and Welded Wire Reinforcement, Plain, Deformed, for Concrete.

F. CRSI (DA4) – Manual of Standard Practice; Concrete Reinforcing Steel Institute.

G. CRSI (P1) – Placing Reinforcing Bars; Concrete Reinforcing Steel Institute.

1.3 SUBMITTALS

A. See Section 01 30 00: Administrative Requirements, for submittal procedures.

B. Shop Drawings: Comply with requirements of ACI SP-66. Include bar schedules, shapes of bent bars, spacing of bars, and location of splices.

C. Manufacturer’s Certificate: Certify that reinforcing steel and accessories supplied for this project meet or exceed specified requirements.

D. Reports: Submit certified copies of mill test report of reinforcement materials analysis.

E. Sustainable Design Submittal: Refer to Division 01 Section, “Sustainable Design Requirements.”

1. Accurately document the use of recycled materials and local/regional materials.
2. MR Credit 2: BPDO – Environmental Product Declarations.

    a. Steel Reinforcement: Product-specific declaration or Industry-wide EPD or product-specific EPD.

3. MR Credit 3: BPDO – Sourcing of raw materials.

a. Recycled steel content: Documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include material cost value.
b. Regionally sourced steel: Documentation indicating locations of recovery, manufacture, purchase or recycled raw materials.

4. MR Credit 4: Material Ingredients

a. Report Steel reinforcement

1.4 QUALITY ASSURANCE

A. Perform work of this section in accordance with CRSI (DA4), CRSI (P1), ACI 301, ACI SP-66, and ACI 318.
1. Maintain one copy of each document on the project site.

PART 2 - PRODUCTS

2.1 REINFORCEMENT

A. Reinforcing Steel: ASTM A 615/A 615M Grade 60 (420).

1. Deformed billet-steel bars.
2. Unfinished.

B. Steel Welded Wire Reinforcement: ASTM A 1064/A 1064M, plain type.

1. Flat sheets.
2. Mesh Size and Wire Gage: As indicated on drawings.

C. Reinforcement Accessories:

1. Tie Wire: Annealed, minimum 16 gage.
2. Chairs, Bolsters, Bar Supports, Spacers: Sized and shaped for adequate support of reinforcement during concrete placement.
3. Supports and Spacers in Contact with the Ground:

a. Precast concrete supports with a surface area of not less than 4 in^2, a compressive strength equal to or greater than the specified compressive strength of the concrete being placed, and embedded tie wires for securing the reinforcement.
b. Chairs with plastic components and sand plates.
c. Spacers: Plastic.

4. Provide stainless steel components for placement within 1½ inches of weathering surfaces.

D. Recycled Content: Provide steel with minimum 90 percent total recycled content, including at least 60 percent post-consumer content

E. Regional Materials: Provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

2.2 FABRICATION

A. Fabricate concrete reinforcing in accordance with CRSI (DA4) – Manual of Standard Practice.

B. Welding of reinforcement is not permitted.

C. Locate reinforcing splices not indicated on drawings at point of minimum stress.

1. Review location of splices with Architect.

PART 3 - EXECUTION

3.1 PLACEMENT

A. Place, support and secure reinforcement against displacement before and during concrete placement. Do not deviate from required position.

B. Clean reinforcement of loose rust, mill scale, earth, ice and other foreign materials that would reduce bond to concrete.

C. Do not displace or damage vapor barrier.

D. Accommodate placement of formed openings.

E. Conform to structural drawings for concrete cover over reinforcement.

3.2 FIELD QUALITY CONTROL

A. An independent inspection agency, as specified in Division 1, will inspect installed reinforcement for conformance to contract documents before placing concrete. Inspection services shall conform to the Statement of Special Inspections noted in the structural drawings.

END OF SECTION 03 20 00

SECTION 03 30 00 – CAST IN PLACE CONCRETE

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Concrete for composite floor construction.

B. Floors and slabs on grade.

C. Concrete foundation walls and building walls.

D. Footings.

E. Columns and piers.

F. Joint devices associated with concrete work.

G. Miscellaneous concrete elements, including equipment pads.

1.2 RELATED REQUIREMENTS

A. Section 03 10 00 – Concrete Forming and Accessories.

B. Section 03 20 00 – Concrete Reinforcing.

C. Section 03 35 13 – High Tolerance Concrete Floor Finishing.

D. Section 03 39 00 – Concrete Curing.

E. Section 07 92 00 – Joint Sealants.

1.3 REFERENCE STANDARDS

A. ACI 211.1 – Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete; American Concrete Institute.

B. ACI 301 – Specifications for Structural Concrete for Buildings; American Concrete Institute.

C. ACI 302.1R – Guide for Concrete Floor and Slab Construction; American Concrete Institute.

D. ACI 304R – Guide for Measuring, Mixing, Transporting, and Placing Concrete; American Concrete Institute.

E. ACI 305R – Hot Weather Concreting; American Concrete Institute.

F. ACI 306R – Cold Weather Concreting: American Concrete Institute.

G. ACI 318 – Building Code Requirements for Structural Concrete and Commentary; American Concrete Institute.

H. ASTM C 33 – Standard Specification for Concrete Aggregates.

I. ASTM C 39/C 39M – Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.

J. ASTM C 94/C 94M – Standard Specification for Ready-Mixed Concrete.

K. ASTM C 150 – Standard Specification for Portland Cement.

L. ASTM C 173/C 173M – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.

M. ASTM C 260 – Standard Specification for Air-Entraining Admixtures for Concrete.

N. ASTM C 494/ C 494M – Standard Specification for Chemical Admixtures for Concrete.

O. ASTM C 618 – Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.

P. ASTM C 881/C 881M – Standard Specification for Epoxy-Resin Base Bonding Systems for Concrete.

Q. ASTM C 989 – Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.

R. ASTM C 1077 – Standard Practice for Laboratories Testing Concrete and Concrete Aggregates for Use in Construction and Criteria for Laboratory Evaluation.

S. ASTM C 1107/C 1107M – Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).

T. ASTM C 1240 – Standard Specification for Silica Fume Used in Cementitious Mixtures.

U. ASTM D 1751 – Standard Specification for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-Extruding and Resilient Bituminous Types).

V. ASTM E 96 – Standard Test Methods for Water Vapor Transmission of Materials.

W. ASTM E 329 – Standard Specification for Agencies Engaged in the Testing and/or Inspection of Materials used in Construction.

X. IBC 2021 – International Building Code.

1.4 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements for submittal procedures.

B. Product Data: Submit manufacturer’s data on manufactured products showing compliance with specified requirements.

C. Samples: Submit samples of under-slab vapor retarder to be used.

D. Design Mixtures:

1. Submit for each concrete mixture.
2. Submit alternate design mixtures when characteristics of materials, project conditions, weather, test results, or other circumstances warrant adjustments.
3. Indicate amounts of mixing water to be withheld for later addition at project site.

E. Sustainable Design Submittal: Refer to Division 01 Section, “Sustainable Design Requirements.”

1. MR Credit 2: BPDO – Environmental Product Declarations.

a. Cement, granulated blast furnace slag, silica fume, rice hull ash: Product-specific declaration or industry-wide EPD or product-specific EPD.

2. MR Credit 3: BPDO – Sourcing of raw materials.

a. Cementitious products containing recycled content (GGBFS, fly ash, etc.): Documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include material cost value.
b. Products having regionally sourced recycled material: Documentation indicating locations of recovery, manufacture, purchase or recycled raw materials

1.5 QUALITY ASSURANCE

A. Concrete Producer: Engage a firm with experience in producing concrete similar to that indicated for this project and within 15 percent of this project size, with a record of successful in-service performance as well as sufficient production capacity to supply concrete without delaying the work.

1. Provide documentation that concrete producer has supplied concrete for at least 3 projects within 15 percent of project size and complexity in the last six years.

B. Concrete Contractor: Engage a firm with experience in placing and finishing concrete similar to that indicated for this project and within 15 percent of this project size, with a record of successful in-service performance.

1. Provide documentation that the concrete contractor has installed concrete for at least 3 projects within 15 percent of project size and complexity in the last six years.

C. Perform work of this section in accordance with ACI 301 and ACI 318.

1. Maintain one copy of each document on site.

D. Follow recommendations of ACI 305R when concreting during hot weather.

E. Follow recommendations of ACI 306R when concreting during cold weather.

F. All form release agents and membrane curing compounds used for slabs and walls that are to be waterproofed shall be submitted to the manufacturer of hot fluid waterproofing system for compatibility review prior to application.

G. Testing Agency Qualifications: Qualified according to ASTM C 1077 and ASTM E 329 for testing indicated, as documented according to ASTM E 548.

1. Personnel conducting field tests shall be qualified as ACI Concrete Field Testing Technician, Grade 1.
2. Personnel performing laboratory tests shall be an ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician, Grade I. Testing Agency laboratory supervisor shall be an ACI-certified Concrete Laboratory Testing Technician, Grade II.

PART 2 - PRODUCTS

2.1 FORMWORK

A. Comply with requirements of Section 03 10 00.

2.2 REINFORCEMENT

A. Comply with requirements of Section 03 20 00.

2.3 CONCRETE MATERIALS

A. Cement: Acquire from the same source and use same type for entire Project.

1. Portland Cement: ASTM C 150, Type 1.
2. Blended Hydraulic Cement: ASTM C 595, Type IL, Portland-limestone.

B. Fine and Coarse Aggregates: ASTM C 33.

1. Acquire all aggregates for entire project from same source.

C. Ground Granulated Blast Furnace Slag: ASTM C 989, Grade 100 or 120.

D. Fly Ash: ASTM C 618 Class F.

E. Calcined Pozzolan: ASTM C 618 Class N.

F. Silica Fume: ASTM C 1240.

G. Water: Clean and not detrimental to concrete.

H. Recycled Content of Concrete Mix: Provide cement with minimum 25 percent recycled content, with Structural Engineer’s approval.

I. Regional Materials: Provide fly ash and slag manufactured and containing recycled raw materials within 100 mile radius of Project Site.

2.4 CHEMICAL ADMIXTURES

A. Do not use chemicals that will result in soluble chloride ions in excess of 0.1 percent by weight of cement.

B. Air Entrainment Admixture: ASTM C 260.

C. High Range Water Reducing and Retarding Admixture: ASTM C 494/C 494M, Type G.

D. High Range Water Reducing Admixture: ASTM C 494/C 494M, Type F.

E. Water Reducing and Accelerating Admixture: ASTM C 494/C 494M, Type E.

F. Water Reducing and Retarding Admixture: ASTM C 494/C 494M, Type D.

G. Accelerating Admixture: ASTM C 494/C 494M, Type C.

H. Retarding Admixture: ASTM C 494/C 494M, Type B.

I. Water Reducing Admixture: ASTM C 494/C 494M, Type A.

2.5 ACCESSORY MATERIALS

A. Underslab Vapor Barrier / Vapor Retarder: Comply with ASTM E 1745, Class A.

1. Maximum Permeance ASTM E 96: 0.018 perms (English).
2. Provide standard accessories and tape for complete system.
3. Acceptable Products:

a. Stego Wrap (15-mil) Vapor Barrier by Stego Industries LLC.
b. Perminator: 15 mils by W.R. Meadows, Inc.
c. 15 Mil Green by Reef Industries, Inc.
d. Vapor Block 15 by Raven Industries.
e. Yellow Guard 15-mil Vapor Barrier by Poly-America.

4. Single ply polyethylene is prohibited.

B. Non-Shrink Grout: ASTM C 1107/C 1107M; premixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing agents.

1. Minimum Compressive Strength at 48 Hours: 2,400 psi.
2. Minimum Compressive Strength at 28 Days: 7,000 psi.

C. Curing Materials: Comply with requirements of Section 03 39 00.

2.6 BONDING AND JOINTING PRODUCTS

A. Bonding Agent: Epoxy bonding system complying with ASTM C 881/C 881M and of Type required for specific application.

B. Waterproofing Admixture Slurry: Slurry coat of Portland cement, sand, and crystalline waterproofing additive, mixed with water in proportions recommended by manufacturer to achieve waterproofing at cold joints in concrete.

1. Manufacturers:

a. Aquafin, Inc.: www.aquafin.net.
b. Xypex Chemical Corporation: www.xypen.com.
c. Kryton International Inc: www.kryton.com.

C. Self-Expanding Strip Waterstops: Manufactured rectangular or trapezoidal strip, sodium bentonite or other hydrophilic material for adhesive bonding to concrete.

1. Available Products:

    a. CETCO Waterstop-RX: Mineral Technologies Inc.
    b. Conseal CS-231: Concrete Sealants Inc.
    c. De Neef Swellseal Joint: GCP Applied Technologies
    d. Hydrotite CJ: Sika Corporation.
    e. Mirastop BW: Henry Corporation.
    f. Adeka Ultra Seal: OCM Inc.
    g. Superstop: Tremco Construction Products Group

D. Joint Filler: Non-extruding, resilient asphalt impregnated fiberboard, cork or flexible foam, complying with ASTM D 1751, thickness as indicated on drawings and full depth of slab less ½ inch; tongue and groove profile.

E. Slab Construction Joint Devices: Combination keyed joint form and screed, galvanized steel, with minimum1 inch diameter holes for conduit or rebars to pass through at 6 inches on center, ribbed steel stakes for setting.

1. Provide removable plastic cap strip that forms wedge-shaped joint for sealant installation.
2. Height: To suit slab thickness.

F. Sealant and Primer: As specified in Section 07 92 00.

2.7 CONCRETE MIX DESIGN

A. Proportioning Normal Weight Concrete: Comply with ACI 211.1 recommendations.

1. Replace no less than 30% and no more than 50% of Portland cement in structural concrete with approved pozzolanic materials.
2. Ground Granulated Blast Furnace Slag Content: Not to exceed 50% of cementitious material by weight.

    a. GGBFS is not permitted in exposed concrete slabs designated to receive a polished finish.

3. Fly Ash or Calcined Pozzolan Content: Not to exceed 25% of cementitious material by weight.

    a. Fly ash is not permitted in exposed concrete elements designated as architectural concrete.

4. Silica Fume Content: Not to exceed 10% of total cementitious material by weight.

    a. Silica fume is not permitted in exposed concrete elements designated as architectural concrete.

5. Obtain approval in advance before submitting mix containing any other pozzolanic substances.

B. Concrete Strength: Establish required average strength for each type of concrete on the basis of field experience or trial mixtures, as specified in ACI 301.

1. For trial mixtures method, employ independent testing agency acceptable to Architect for preparing and reporting proposed mix designs.

C. Admixtures: Add acceptable admixtures as recommended in ACI 211.1 and at rates recommended by manufacturer.

D. Normal Weight Concrete:

1. Compressive Strength, when tested in accordance with ASTM C 39/C 39M at 28 days: As indicated on drawings.
2. Water-Cementitious Materials Ratio: Maximum 58% by weight. Maximum 40% by weight for exterior concrete.

   a. Interior slabs shall have a maximum water-cementitious material ratio of 50% by weight.

3. Concrete to Receive a Hard-Troweled Finish:

   a. Total air content shall not exceed 3%, determined in accordance with ASTM C 173/C 173M.
   b. Air entraining admixtures are prohibited.

4. Entrained air content for footings shall not exceed 4.5%, determined in accordance with ASTM C 173/C 173M
5. Air Content for Exterior Exposed Concrete: Add air entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content as follows with a tolerance of plus 1 or minus 1.5%, unless otherwise indicated.

   a. Air Content: 6% entrained air, determined in accordance with ASTM C 173/C 173M.

6. Maximum Slump: 4 inches.
7. Maximum Aggregate Size: 1 inch.

2.8 MIXING

A. Transit Mixers: Comply with ASTM C 94/C 94M.

B. Do not add water to concrete during delivery, at the project site or during placement except as predetermined by concrete mix, unless approved by the Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify lines, levels, and dimensions before proceeding with work of this section.

3.2 PREPARATION

A. Where new concrete is to be bonded to previously placed concrete, prepare existing surface by cleaning with steel brush and applying bonding agent, as indicated on the drawings, in accordance with the manufacturer's instructions.

B. Where new concrete with integral waterproofing is to be bonded to previously placed concrete, prepare surfaces to be treated in accordance with waterproofing manufacturer's instructions. Saturate cold joint surface with clean water, and remove excess water before application of coat of waterproofing admixture slurry. Apply slurry coat uniformly with semi-stiff bristle brush at rate recommended by waterproofing manufacturer.

C. In locations where new concrete is doweled to existing work, drill holes in existing concrete and insert steel dowels using an epoxy adhesive approved by the Architect.

D. Install vapor retarder under interior slabs on grade in accordance with manufacturer's instructions and ASTM E 1643.

3.3 PLACING CONCRETE

A. Place concrete in accordance with ACI 304R.

B. Place concrete for floor slabs in accordance with ACI 302.1R.

C. Ensure reinforcement, inserts, waterstops, embedded parts, and formed construction joint devices will not be disturbed during concrete placement.

D. Separate slabs on grade from vertical surfaces with joint filler.

E. Place joint filler in coordination with floor slab pattern placement sequence. Set top to required elevations. Secure to resist movement by wet concrete.

F. Extend joint filler from bottom of slab to within ½ inch of finished slab surface. Conform to Section 07 92 00 for finish joint sealer requirements.

G. Install joint devices in accordance with manufacturer's instructions.

H. Install construction joint devices in coordination with floor slab pattern placement sequence. Set top to required elevations. Secure to resist movement by wet concrete.

I. Install joint device anchors for expansion joint assemblies specified in Section 07 95 13. Maintain correct position to allow joint cover to be flush with floor and wall finish.

J. Apply sealants in joint devices in accordance with Section 07 92 00.

K. Maintain records of concrete placement. Record date, location, quantity, air temperature and test samples taken.

L. Place concrete continuously between predetermined expansion, control and construction joints.

M. Do not interrupt successive placement. Do not permit cold joints to occur.

N. Place slabs on grade with saw cut pattern indicated.

O. Saw cut joints as soon as the concrete is firm enough not to be damaged by the cutting action. Use 3/16 inch thick blade, cut into ¼ depth of slab thickness.

3.4 CONCRETE FINISHING

A. Repair surface defects, including tie holes, immediately after removing formwork.

B. Unexposed Form Finish: Rub down or chip off fins or other raised areas ¼ inch or more in height.

C. Exposed Form Finish: Rub down or chip off and smooth fins or other raised areas ¼ inch or more in height. Provide finish as follows:

1. Smooth Rubbed Finish: Wet concrete and rub with carborundum brick or other abrasive, not more than 24 hours after form removal.

D. Concrete Slabs: Finish to requirements of Section 03 35 13.

1. Do not apply a hard-troweled finish to air-entrained slabs or slabs containing a total air content greater than 3 percent.

3.5 CURING AND PROTECTION

A. Comply with requirements of Section 03 39 00.

3.6 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspection services shall conform to Section 1705.3 and Table 1705.3 of the 2021 IBC Code and the Statement of Special Inspections noted in the structural drawings. The exceptions noted in Section 1705.3 shall not be allowed.

B. Provide free access to concrete operations at project site and cooperate with appointed firm; inspection to occur for:

1. Steel reinforcement placement.
2. Anchor bolts and studs.
3. Verification of use of required design mixture.
4. Concrete placement, including conveying and depositing.
5. Curing procedures and maintenance of curing temperature.
6. Verification of concrete strength before removal of shores and forms from beams and slabs.

C. Submit proposed mix design of each class of concrete to inspection and testing firm for review prior to commencement of concrete operations.

D. Tests of concrete and concrete materials may be performed at any time to ensure conformance with specified requirements.

E. Test composite samples of fresh concrete obtained according to ASTM C 172.

F. Compressive Strength Tests: ASTM C 39/C 39M.

1. Compression Test Specimens: ASTM C31/C 31M; cast and laboratory cure five 6”x12” standard cylinder specimens or seven 4”x8” standard cylinder specimens for each composite sample.
2. Test one laboratory-cured specimen at 7 days and one set of two 6”x12” or three 4”x8” specimens at 28 days. Remaining cylinders shall be held in reserve.

3. Obtain test samples for every 75 cu.yd. or less of each class of concrete placed each day.
4. A compressive-strength test shall be the average compressive strength from all specimens obtained from same composite sample and tested at age indicated.
5. Strength of each concrete mixture will be satisfactory if every average of any three consecutive compressive-strength tests equals or exceeds specified compressive strength and no compressive-strength test value falls below specified compressive strength by more than 500 psi.

G. Perform one slump test, at point of discharge for each set of test cylinders taken, following procedures of ASTM C 143/C 143M.

H. Perform air content test for each set of test cylinders taken, following procedures of ASTM C 231.

I. Test concrete temperature each hour when air temperature is 40 degrees F and below and when 80 degrees F and above, and for each set of test cylinders taken, following procedures of ASTM C 1064/C 1064M.

3.7 DEFECTIVE CONCRETE

A. Test Results: The testing agency shall report test results in writing to the Architect and Contractor within 24 hours of test.

1. Testing and inspecting agency will make additional tests of concrete when test results indicate that slump, compressive strengths, or other requirements have not been met, as directed by the Architect.
2. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by the Architect.
3. Additional testing and inspecting, at Contractor’s expense, will be performed to determine compliance of replaced or additional work with specified requirements.
4. Correct deficiencies that test reports and inspections indicate do not comply with specified requirements.

B. Defective Concrete: Concrete not conforming to required lines, details, dimensions, tolerances or specified requirements. Repair or replace defective concrete, subject to the approval of the Architect.

C. Do not patch, fill, touch-up, repair or replace exposed concrete except upon express direction of the Architect for each individual area.

END OF SECTION 03 30 00

SECTION 03 35 13 – HIGH-TOLERANCE CONCRETE FLOOR FINISHING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Finishing slabs on grade and monolithic floor slabs.

B. Surface treatment with concrete hardener and sealer.

1.2 REFERENCE STANDARDS

A. ACI 301 – Specifications for Structural Concrete for Buildings; American Concrete Institute.

B. ACI 302.1R – Guide for Concrete Floor and Slab Construction; American Concrete Institute.

C. ASTM E 1155 – Standard Test Method for Determining F(F) Floor Flatness and F(L) Floor Levelness.

1.3 SUBMITTALS

A. Section 01 30 00 – Administrative Requirements for submittal procedures.

B. Product Data: Provide data on concrete hardener and sealer, including information on compatibility of different products and limitations.

C. Submit floor surface flatness and levelness measurements to determine compliance with specified tolerances.

D. Maintenance Data: Provide data on maintenance renewal of applied coatings.

1.4 QUALITY ASSURANCE

A. Perform work in accordance with ACI 301.

1. Maintain one copy on project site.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in manufacturer’s sealed packaging, including application instructions.

1.6 PROJECT CONDITIONS

A. Coordinate the work with concrete floor placement and concrete floor curing.

1.7 FIELD CONDITIONS

A. Maintain ambient temperature of 50 degrees F minimum.

B. Provide ventilation sufficient to prevent injurious gases from temporary heat or other sources affecting concrete.

PART 2 - PRODUCTS

2.1 COMPOUNDS – HARDENERS AND SEALERS

A. Chemical Hardener: Clear, chemically reactive, waterborne solution of inorganic siliconate materials and proprietary components, odorless, colorless, that penetrates, hardens, and densifies concrete surfaces.

1. Provide for exterior slabs and interior slabs not receiving a subsequent finish; regardless of Finish Schedule indicating concrete hardener or not.
2. VOC Content: Not to exceed 200 g/L.
3. Acceptable Products:

a. Ashford Formula, Concrete Chemical Company, Inc.
b. Seal Hard, L & M Concrete Chemicals, Inc.
c. Euco Diamond Hard, Euclid Chemical Company.

PART 3 - EXECUTION

3.1 FLOOR FINISHING

A. Finish concrete floor surfaces in accordance with ACI 301 and ACI 302.1R.

B. Steel trowel surfaces that will receive carpeting, resilient floors, seamless flooring, thin set terrazzo or thin set ceramic tile.

C. Steel trowel surfaces that are scheduled to be exposed.

D. Fine-broomed finish for exterior slabs.

3.2 FLOOR SURFACE TREATMENT

A. Apply hardener to floor surfaces in accordance with manufacturer’s instructions.

3.3 TOLERANCES

A. An independent testing agency, as specified in Division 1, will inspect finished slabs for flatness.

B. Measure for F(F) and F(L) tolerances for floors in accordance with ASTM E 1155, within 48 hours after slab installation.

C. Finish concrete to achieve the following tolerances:

1. Slabs to be Covered with Thin Floor Coverings (i.e., resilient flooring). Specified overall values of flatness F(F) 35 and of levelness F(L) 25; with minimum local values of flatness, F(F) 24 and of levelness F(L) 17.
2. Slabs to be Covered with Carpet and Other Slabs: Specified overall values of flatness F(F) 25 and of levelness F(L) 20; with minimum local values of flatness, F(F) 17 and of levelness F(L) 15.
3. The F(L) values listed above are not applicable to elevated slabs on deck. Only F(F) values apply to elevated slabs.

D. Correct the slab surface if tolerances are less than specified.

E. Correct defects by grinding or by removal and replacement of defective work. Areas requiring corrective work will be identified. Re-measure corrected areas by the same process.

END OF SECTION 03 35 13

SECTION 03 39 00 – CONCRETE CURING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Initial and final curing of horizontal and vertical concrete surfaces.

1.2 REFERENCE STANDARDS

A. ACI 301 – Specifications for Structural Concrete for Buildings; American Concrete Institute.

B. ACI 302.1R – Guide for Concrete Floor and Slab Construction; American Concrete Institute.

C. ACI 305R – Hot Weather Concreting; American Concrete Institute.

D. ACI 306R – Cold Weather Concreting; American Concrete Institute.

E. ACI 308R – Guide to Curing Concrete; American Concrete Institute.

F. ASTM C 171 – Standard Specification for Sheet Materials for Curing Concrete.

G. ASTM C 309 – Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

H. ASTM D 2103 – Standard Specification for Polyethylene Film and Sheeting.

1.3 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements, for submittal procedures.

B. Product Data: Provide data on curing compounds, moisture-retaining sheet, and polyethylene film, including compatibility of different products and limitations.

1.4 QUALITY ASSURANCE

A. Perform Work in accordance with ACI 301 and ACI 302.1R.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Evaporation Retarder: Waterborne, monomolecular film forming, manufactured for application to fresh concrete.

B. Membrane Curing Compound: ASTM C 309 Type 1 – Clear or translucent, Class B.

1. VOC Content not to exceed 350 g/L.

C. Moisture-Retaining Sheet: ASTM C 171.

1. Curing paper, regular.
2. Polyethylene film, clear, minimum nominal thickness of 0.0040 in.
3. White-burlap-polyethylene sheet, weighing not less than 10 oz/per linear yd., 40 inches wide.

D. Polyethylene Film: ASTM D 2103, 4 mil thick, clear.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that substrate surfaces are ready to be cured.

3.2 EXECUTION – HORIZONTAL SURFACES

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306R for cold-weather protection and ACI 305R for hot-weather protection during curing.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 0.2 lb./sq. ft./h before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Cure floor surfaces in accordance with ACI 308.

D. Moisture-Retaining Sheet: Lap strips not less than 3 inches and seal with waterproof tape or adhesive; secure at edges; maintain in place for not less than 4 days.

E. Absorptive Moisture-Retaining Sheet: Saturate burlap-polyethylene and place burlap side down over floor slab areas, lapping ends and sides; maintain in place for 7 days.

F. Membrane Curing Compound: Apply curing compound in accordance with manufacturer's instructions in one coat.

3.3 EXECUTION – VERTICAL SURFACES

A. Cure surfaces in accordance with ACI 308.

B. Membrane Curing Compound: Apply compound in accordance with manufacturer's instructions in one coat.

3.4 PROTECTION

A. Do not permit traffic over unprotected floor surface.

END OF SECTION 03 39 00

SECTION 034500 - PRECAST ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Precast architectural concrete units.
2. Mold materials.
3. Reinforcing materials.
4. Prestressing tendons.
5. Concrete materials.
6. Steel connection materials.
7. Grout materials.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings:

1. Detail fabrication and installation of architectural precast concrete units.
2. Indicate locations, plans, elevations, dimensions, shapes, and cross sections of each unit.
3. Indicate joints, reveals, drips, chamfers, and extent and location of each surface finish.
4. Indicate details at building corners.

C. Samples: Design reference samples for initial verification of design intent, for each type of finish indicated on exposed surfaces of architectural precast concrete units, in sets of three, representative of finish, color, and texture variations expected;

1. For each color and texture of cast stone required, 6 inches square in size.
2. For colored mortar.
3. Samples must be submitted in conjunction with samples for Division 4 Section “Unit masonry”.

D. Delegated Design Submittals: For architectural precast concrete indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Show governing panel types, connections, types of reinforcement, including special reinforcement, and concrete cover on reinforcement. Indicate location, type, magnitude,

and direction of loads imposed on the building structural frame from architectural precast concrete.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Provide locations, setting diagrams, templates, instructions, and directions, as required, for furnishing and installation of loose connection hardware and anchorage items to be embedded in or attached to other construction.

B. Welding certificates.

C. Material test reports.

D. Source Quality-Control Reports: For aggregate & cementitious materials.

E. Qualification Statements: For fabricator & Installer.

1.5 CLOSEOUT SUBMITTALS\

A. See 01 77 00 - Closeout Procedures

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm that assumes responsibility for engineering architectural precast concrete units to comply with performance requirements. This responsibility includes preparation of Shop Drawings and comprehensive engineering analysis by a qualified professional engineer.
   1. Quality-Control Standard: For manufacturing procedures and testing requirements, quality-control recommendations, and dimensional tolerances for types of units required, comply with PCI MNL 116 and PCI MNL 135.

B. Installer Qualifications: A precast concrete erector who has retained a "PCI-Certified Field Auditor" to conduct a field audit of a project in same category as this Project and who can produce an Erectors' Post-Audit Declaration.

1.7 MOCKUPS

A. Include full scale precast window sill in integrated exterior mockup that will be used to demonstrate aesthetic effects, perform preconstruction testing, and to set quality standards for materials and installation. See Division 01 Section "Mockups" for additional construction requirements.

   1. Build mockup complete with anchors, connections, flashings, and joint fillers. Coordinate with GC’s Mockup panel.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver architectural precast concrete units in such quantities and at such times to limit unloading units temporarily on the ground or other rehandling.

B. Store units with adequate dunnage and bracing, and protect units to prevent contact with soil, prevent staining, and prevent cracking, distortion, warping, or other physical damage.

C. Place stored units so identification marks are clearly visible, and units can be inspected.

D. Handle and transport units in a manner that avoids excessive stresses that cause cracking or damage.

E. Lift and support units only at designated points indicated on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," to design architectural precast concrete units.

B. Design Standards: Comply with ACI 318 and design recommendations of PCI MNL 120 applicable to types of architectural precast concrete units indicated.

C. Structural Performance: Provide architectural precast concrete units and connections capable of withstanding the indicated design loads within limits and under conditions indicated:

2.2 PRECAST WINDOWSILLS

A. Provide per the construction drawings for window sills. Coordinate joints in shop drawings. Provide cast miter return with butt joint. Do not provide mitered joints.

B. Fabricators: Subject to compliance with requirements, Basis of design: is based upon architectural precast units produced by Nelson Precast Products. Provide specified products or comparable products by one of the following fabricators, but not limited to:
1. Nelson Precast Products
2. Sun Precast Co., Inc.
3. Cast Stone Designs, Inc.

C. Source Limitations: Obtain precast architectural concrete units from single fabricator.

2.3 MOLD MATERIALS

A. Molds: Rigid, dimensionally stable, nonabsorptive material, warp and buckle free, that provides continuous and true precast concrete surfaces within fabrication tolerances indicated; nonreactive with concrete and suitable for producing required finishes.

B. Form Liners: Units of face design, texture, arrangement, and configuration to match those used for precast concrete design reference sample. Provide solid backing and supports to keep form liners in place during concrete placement.
   1. Face Pattern: Smooth.

C. Form-Release Agent: Commercially produced form-release agent that does not bond with, stain, or adversely affect precast concrete surfaces and does not impair subsequent surface or joint treatments of precast concrete.

2.4 REINFORCING MATERIALS

A. Reinforcing Bars: ASTM A615/A615M, Grade 60 (Grade 420), deformed.

B. Plain-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, fabricated from galvanized-steel wire into flat sheets.

C. Deformed-Steel Welded-Wire Reinforcement: ASTM A1064/A1064M, flat sheet.

D. Supports: Suspend reinforcement from back of mold. Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcement in place may only be used if they are not visible in the finished face.

2.5 PRESTRESSING TENDONS

A. Prestressing Strand: ASTM A416/A416M, Grade 270 (Grade 1860), uncoated, seven-wire, low-relaxation strand.

B. Post-Tensioning Bars: ASTM A722/A722M, uncoated high-strength steel bars.

2.6 CONCRETE MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type III.

   1. For surfaces exposed to view in finished structure, use gray and white cement, of same type, brand, and mill source.

      a. Standard gray cement is acceptable for use where not exposed to view.

B. Supplementary Cementitious Materials:

   1. Fly Ash: ASTM C618, Class C or F, with maximum loss on ignition of 3 percent.
   2. Metakaolin: ASTM C618, Class N.
   3. Silica Fume: ASTM C1240, with optional chemical and physical requirement, white.
   4. Ground Granulated Blast-Furnace Slag: ASTM C989/C989M, Grade 100 or 120.

C. Normal-Weight Aggregates: Except as modified by PCI MNL 117, ASTM C33/C33M, with coarse aggregates complying with Class 5S. Stockpile fine and coarse aggregates for each type of exposed finish from a single source (pit or quarry) for Project.

1. Face-Mixture-Coarse Aggregates: Selected, hard, and durable; free of material that reacts with cement or causes staining; to match approved finish sample.

    a. Gradation: Uniformly graded.

2. Face-Mixture-Fine Aggregates: Selected, natural or manufactured sand compatible with coarse aggregate; to match approved finish sample.

D. Coloring Admixture: ASTM C979/C979M, synthetic or natural mineral-oxide pigments or colored water-reducing admixtures, temperature stable, and nonfading[.] Architect to select from manufacture color range.

E. Water: Potable; free from deleterious material that may affect color stability, setting, or strength of concrete and complying with chemical limits of PCI MNL 117 and ASTM C1602/C1602M.

F. Chemical Admixtures: Certified by manufacturer to be compatible with other admixtures and to not contain calcium chloride, or more than 0.15 percent chloride ions or other salts by weight of admixture.

2.7 STEEL CONNECTION MATERIALS

A. Carbon Steel Shapes and Plates: ASTM A36/A36M.

B. Carbon Steel-Headed Studs: ASTM A108, Grades 1010 through 1020, cold finished, AWS D1.1/D1.1M, Type A or Type B, with arc shields and with minimum mechanical properties of PCI MNL 117, Table 3.2.3.

C. Carbon Steel Plate: ASTM A283/A283M, Grade C.

D. Malleable Iron Castings: ASTM A47/A47M, Grade 32510 or Grade 35028.

E. Carbon Steel Castings: ASTM A27/A27M, Grade 60-30 (Grade 415-205).

F. High-Strength, Low-Alloy Structural Steel: ASTM A572/A572M.

G. Carbon Steel Structural Tubing: ASTM A500/A500M, Grade B or Grade C.

H. Wrought Carbon Steel Bars: ASTM A675/A675M, Grade 65 (Grade 450).

I. Deformed-Steel Wire or Bar Anchors: ASTM A1064/A1064M or ASTM A706/A706M.

J. Carbon Steel Bolts and Studs: ASTM A307, Grade A, or ASTM F1554, Grade 36; carbon steel, hex-head bolts and studs; carbon steel nuts, ASTM A563 (ASTM A563M); and flat, unhardened steel washers, ASTM F844.

K. High-Strength Bolts, Nuts, and Washers: ASTM F3125/F3125M, Grade A325 (Grade A325M), Type 1, heavy-hex steel structural bolts; ASTM A563, Grade DH, (ASTM A563M, Class 10S) heavy-hex carbon steel nuts; and ASTM F436/F436M, Type 1, hardened carbon steel washers.

L. Zinc-Coated Finish: For exterior steel items, steel in exterior walls, and items indicated for galvanizing, apply zinc coating by hot-dip process in accordance with ASTM A123/A123M or ASTM A153/A153M.

1. For steel shapes, plates, and tubing to be galvanized, limit silicon content of steel to less than 0.03 percent or to between 0.15 and 0.25 percent, or limit sum of silicon and 2.5 times phosphorous content to 0.09 percent.
2. Galvanizing Repair Paint: High-zinc-dust-content paint with dry film containing not less than 94 percent zinc dust by weight, and complying with MIL-P-21035B or SSPC-Paint 20.

2.8 GROUT MATERIALS

A. Sand-Cement Grout: Portland cement, ASTM C150/C150M, Type I, and clean, natural sand, ASTM C144 or ASTM C404. Mix at ratio of 1 part cement to 2-1/2 to 3 parts sand, by volume, with minimum water required for placement and hydration. Water-soluble chloride ion content is to be less than 0.06 percent by weight of cement when tested in accordance with ASTM C1218/C1218M.

2.9 CONCRETE MIXTURES

A. Prepare design mixtures for each type of precast concrete required.

1. Use a single design mixture for units with more than one major face or edge exposed.
2. Where only one face of unit is exposed, use either a single design mixture or separate mixtures for face and backup.

B. Limit use of fly ash and ground granulated blast-furnace slag to 20 percent of portland cement by weight; limit metakaolin and silica fume to 10 percent of portland cement by weight.

C. Design mixtures may be prepared by a qualified independent testing agency or by qualified precast plant personnel at architectural precast concrete fabricator's option.

D. Limit water-soluble chloride ions to maximum percentage by weight of cement permitted by ACI 318 or PCI MNL 117 when tested in accordance with ASTM C1218/C1218M.

E. Normal-Weight Concrete Mixtures: Proportion full-depth mixture by either laboratory trial batch or field test data methods in accordance with ACI 211.1, with materials to be used on Project, to provide normal-weight concrete with the following properties:

1. Compressive Strength (28 Days): 5000 psi (34.5 MPa) minimum.
2. Maximum Water-Cementitious Materials Ratio: 0.45.

F. Water Absorption: Six percent by weight or 14 percent by volume, tested in accordance with ASTM C642, except for boiling requirement.

G. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having an air content complying with PCI MNL 117.

H. When included in design mixtures, add other admixtures to concrete mixtures in accordance with manufacturer's written instructions.

2.10 FABRICATION OF MOLDS

A. Molds: Accurately construct molds, mortar tight, of sufficient strength to withstand pressures due to concrete-placement operations and temperature changes and for prestressing and detensioning operations. Coat contact surfaces of molds with release agent before reinforcement is placed. Avoid contamination of reinforcement and prestressing tendons by release agent.

B. Maintain molds to provide completed architectural precast concrete units of shapes, lines, and dimensions indicated, within fabrication tolerances specified.

1. Form joints are not permitted on faces exposed to view in the finished Project.
2. Edge and Corner Treatment: Uniformly chamfered never mitered.

2.11 FABRICATION OF PRECAST ARCHITECTURAL CONCRETE

A. Cast-in Anchors, Inserts, Plates, Angles, and Other Anchorage Hardware: Fabricate anchorage hardware with sufficient anchorage and embedment to comply with design requirements. Accurately position for attachment of loose hardware, and secure in place during precasting operations. Locate anchorage hardware where it does not affect position of main reinforcement or concrete placement.

1. Weld-headed studs and deformed bar anchors used for anchorage in accordance with AWS D1.1/D1.1M and AWS C5.4.

B. Cast-in reglets, slots, holes, and other accessories in architectural precast concrete units, as indicated on the Drawings.

C. Reinforcement: Comply with recommendations in PCI MNL 117 for fabricating, placing, and supporting reinforcement.

D. Reinforce precast architectural concrete units to resist handling, transportation, and erection stresses and specified in-place loads.

E. Comply with requirements in PCI MNL 117 and requirements in this Section for measuring, mixing, transporting, and placing concrete. After concrete batching, no additional water may be added.

F. Place concrete in a continuous operation to prevent cold joints or planes of weakness from forming in precast concrete units.

1. Place backup concrete mixture to ensure bond with face-mixture concrete.

G. Thoroughly consolidate placed concrete by internal and external vibration without dislocating or damaging reinforcement and built-in items, and minimize pour lines, honeycombing, or entrapped air voids on surfaces. Use equipment and procedures complying with PCI MNL 117.

1. Place self-consolidating concrete without vibration in accordance with PCI TR-6. Ensure adequate bond between face and backup concrete, if used.

H. Comply with PCI MNL 117 for hot- and cold-weather concrete placement.

I. Identify pickup points of architectural precast concrete units and orientation in structure with permanent markings, complying with markings indicated on Shop Drawings. Imprint or permanently mark casting date on each architectural precast concrete unit on a surface that does not show in finished structure.

J. Cure concrete, in accordance with PCI MNL 117, by moisture retention without heat or by accelerated heat curing using low-pressure live steam or radiant heat and moisture. Cure units until compressive strength is high enough to ensure that stripping does not have an effect on performance or appearance of final product.

K. Discard and replace architectural precast concrete units that do not comply with requirements, including structural, manufacturing tolerance, and appearance, unless repairs comply with requirements in PCI MNL 117 and Architect's approval.

2.12 FABRICATION TOLERANCES

A. Fabricate architectural precast concrete units to shapes, lines, and dimensions indicated so each finished unit complies with PCI MNL 116 and PCI Category AD product tolerances as well as position tolerances for cast-in items.

2.13 FINISHES

A. Exposed faces to be free of joint marks, grain, and other obvious defects. Corners, including false joints to be uniform, straight, and sharp. Finish exposed-face surfaces of architectural precast concrete units to match approved design reference sample, mockups and as follows:
1. As-Cast Surface Finish: Provide surfaces to match approved sample for acceptable surface, air voids, sand streaks, and honeycomb.

B. Finish exposed top surfaces of architectural precast concrete units to match face-surface finish with smooth, steel-trowel finish.

2.14 SOURCE QUALITY CONTROL

A. Quality-Control Testing: Test and inspect precast concrete in accordance with PCI MNL 117 requirements. If using self-consolidating concrete, also test and inspect in accordance with PCI TR-6, ASTM C1610/C1610M, ASTM C1611/C1611M, ASTM C1621/C1621M, and ASTM C1712.

PART 3 - EXECUTION

3.1 INSTALLATION OF PRECAST ARCHITECTURAL CONCRETE UNITS

A. Install clips, hangers, bearing pads, and other accessories required for connecting architectural precast concrete units to supporting members and backup materials.

B. Erect architectural precast concrete level, plumb, and square within specified allowable tolerances. Provide temporary supports and bracing as required to maintain position, stability, and alignment of units until permanent connections are completed.

1. Maintain horizontal and vertical joint alignment and uniform joint width as erection progresses.
2. Unless otherwise indicated, maintain uniform joint widths of 3/4 inch (19 mm).

C. Connect architectural precast concrete units in position by bolting, welding, grouting, or as otherwise indicated on Shop Drawings. Remove temporary shims, wedges, and spacers as soon as practical after connecting and grouting are completed.

D. Welding: Comply with applicable requirements in AWS D1.1/D1.1M and AWS D1.4/D1.4M for welding, welding electrodes, appearance, quality of welds, and methods used in correcting welding work.

E. At bolted connections, use lock washers, tack welding, or other approved means to prevent loosening of nuts after final adjustment.

F. Grouting or Dry Packing Connections and Joints: Grout connections where required or indicated. Retain flowable grout in place until hard enough to support itself. Alternatively, pack spaces with stiff dry pack grout material, tamping until voids are completely filled. Place grout and finish smooth, level, and plumb with adjacent concrete surfaces. Promptly remove grout material from exposed surfaces before it affects finishes or hardens. Keep grouted joints damp for not less than 24 hours after initial set.

3.2 ERECTION TOLERANCES

A. ± ¼” tolerance is allowable for pieces less than 5ft long.

3.3 REPAIR

A. Repair architectural precast concrete units if permitted by Architect. Architect reserves the right to reject repaired units that do not comply with requirements.

B. Mix patching materials and repair units so cured patches blend with color, texture, and uniformity of adjacent exposed surfaces and show no apparent line of demarcation between original and repaired work, when viewed in typical daylight illumination from a distance of 20 ft. (6 m).

C. Prepare and repair damaged galvanized coatings with galvanizing repair paint in accordance with ASTM A780/A780M.

3.4 FIELD QUALITY CONTROL

A. Tests and Inspections:
   1. Visually inspect field welds and test in accordance with ASTM E165/E165M or to ASTM E709 and ASTM E1444/E1444M.

B. Prepare test and inspection reports.

C. Repair or remove and replace work where tests and inspections indicate that it does not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, to be performed to determine compliance of replaced or additional work with specified requirements.

3.5 CLEANING

A. Clean surfaces of precast concrete units exposed to view.

B. Clean mortar, plaster, fireproofing, weld slag, and other deleterious material from concrete surfaces and adjacent materials immediately.

C. Clean exposed surfaces of precast concrete units after erection and completion of joint treatment to remove weld marks, other markings, dirt, and stains.

   1. Perform cleaning procedures, if necessary, in accordance with precast concrete fabricator's recommendations. Protect other work from staining or damage due to cleaning operations.
   2. Do not use cleaning materials or processes that could change the appearance of exposed concrete finishes or damage adjacent materials.

END OF SECTION 034500

SECTION 04 20 00 - UNIT MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Concrete masonry units (CMU).
2. Architectural Block (FACE CMU)
3. Face brick.
4. Mortar and grout.
5. Reinforcement.
6. Ties and anchors.
7. Embedded flashing.
8. Accessories.

B. Products Installed but not Furnished under This Section:

1. Cast-stone trim in unit masonry.
2. Steel lintels in unit masonry.
3. Steel shelf angles for supporting unit masonry.

C. Related Sections:

1. Division 01 Section “Alternates” for alternates related to FACE CMU and face brick.

2. Division 01 Section "Mockups" for integrated exterior mockup requirements.
3. Division 04 Section "Cast Stone Masonry" cast stone trim.
4. Division 05 Section "Metal Fabrications" for furnishing steel lintels and shelf angles for unit masonry.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Comply with Section 01 81 13.
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 3: BPDO – Sourcing of Raw Materials: Corporate sustainability report for each manufacturer, if available.
   c. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.

1. Health Product Declaration (HPD): For each product. Provide documentation indicating that manufacturer has screened and publicly provided ingredient disclosure to 1000 ppm and has developed an action plan to mitigate known hazards.

2. Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.
3. Regional Materials: Verify CMUs and brick are manufactured within 100 miles (160 km) of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

C. Shop Drawings:

1. Masonry Units: Indicate sizes, profiles, coursing, and locations of special shapes.
2. Reinforcing Steel: Detail bending and placement of unit masonry reinforcing bars. Comply with ACI 315, "Details and Detailing of Concrete Reinforcement."
3. Fabricated Flashing: Detail corner units, end-dam units, and other special applications.
4. Special Shapes: Details and installation methods incorporating special shape units.

D. Samples for Initial Selection:

1. Colored mortar for each masonry assembly in the project.

E. Samples for Verification: For each type and color of the following:

1. Brick, full-size.
2. Special brick shapes, full-size.
3. Pigmented and colored-aggregate mortar for each masonry assembly in the project. Make Samples using same sand and mortar ingredients to be used on Project.
4. Weep/cavity vents in color to match mortar.
5. Cavity drainage material.
6. Accessories embedded in masonry.

1.4 INFORMATIONAL SUBMITTALS

A. Material Certificates: For each type and size of product indicated. For masonry units include data on material properties, material test reports substantiating compliance with requirements.

B. Mix Designs: For each type of mortar and grout. Include description of type and proportions of ingredients.

1. Include test reports for mortar mixes required to comply with property specification. Test according to ASTM C 109/C 109M for compressive strength, ASTM C 1506 for water retention, and ASTM C 91 for air content.
2. Include test reports, according to ASTM C 1019, for grout mixes required to comply with compressive strength requirement.

C. Cold-Weather and Hot-Weather Procedures: Detailed description of methods, materials, and equipment to be used to comply with requirements.

1.5 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified in accordance with ASTM C1093 for testing indicated.

B. Masonry Standard: Comply with ACI 530.1/ASCE 6/TMS 602 unless modified by requirements in the Contract Documents.

C. Preconstruction Testing Service**:** Contractor will hire a qualified independent testing agency to perform preconstruction testing on each type of unit required per test method indicated.

1. Clay Masonry Units: ASTM C 67.
2. Concrete Masonry Units: ASTM C 140.
3. Mortar: For proportions per ASTM C 780.
4. Grout: For compressive strength per ASTM C 1019.

1.6 MOCKUPS

A. Sample Panel Mockups: Build sample panels as described in the drawings for each masonry assembly visible to view in the project, to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as workmanship. Comply with requirements in Section 014000 "Quality Requirements" for mockups.

B. Sample panel(s) may be substituted by the Integrated Mockup per Section 014332, subject to Architect’s written approval.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store masonry units on elevated platforms in a dry location. If units are not stored in an enclosed location, cover tops and sides of stacks with waterproof sheeting, securely tied. If units become wet, do not install until they are dry.

1. Protect concrete masonry units from moisture absorption so that, at the time of installation, the moisture content is not more than the maximum allowed at the time of delivery.

B. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Deliver preblended, dry mortar mix in moisture-resistant containers. Store preblended, dry mortar mix in delivery containers on elevated platforms in a dry location or in covered weatherproof dispensing silos.

E. Store masonry accessories, including metal items, to prevent corrosion and accumulation of dirt and oil.

1.8 PROJECT CONDITIONS

A. Protection of Masonry: During construction, cover tops of walls, projections, and sills with waterproof sheeting at end of each day's work. Cover partially completed masonry when construction is not in progress.

1. Extend cover a minimum of 24 inches down both sides of walls, and hold cover securely in place.
2. Where one wythe of multiwythe masonry walls is completed in advance of other wythes, secure cover a minimum of 24 inches down face next to unconstructed wythe, and hold cover in place.

B. Do not apply uniform floor or roof loads for at least 12 hours and concentrated loads for at least three days after building masonry walls or columns.

C. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed or painted. Immediately remove grout, mortar, and soil that come in contact with such masonry.

1. Protect base of walls from rain-splashed mud and from mortar splatter by spreading coverings on ground and over wall surface.
2. Protect sills, ledges, and projections from mortar droppings.
3. Protect surfaces of window and door frames, as well as similar products with painted and integral finishes, from mortar droppings.
4. Turn scaffold boards near the wall on edge at the end of each day to prevent rain from splashing mortar and dirt onto completed masonry.

D. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and higher and will remain so until masonry has dried, but not less than seven days after completing cleaning.

E. Hot-Weather Requirements: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

1. Protect unit masonry work when temperature and humidity conditions produce excessive evaporation of water from mortar and grout. Provide artificial shade and wind breaks and use cooled materials as required.
2. When ambient temperature exceeds 90 deg F with a wind velocity greater than 8 mph, do not spread mortar beds more than 48 inches ahead of masonry. Set masonry units within one minute of spreading mortar.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. For exposed masonry units and cementitious mortar components, obtain each color and grade from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.2 MASONRY UNITS, GENERAL

A. Masonry Standard: Comply with TMS 602, except as modified by requirements in the Contract Documents.

B. Defective Units: Referenced masonry unit standards may allow a certain percentage of units to contain chips, cracks, or other defects exceeding limits stated in the standard. Do not use units where such defects will be exposed in the completed Work.

C. Fire-Resistance Ratings: Where indicated, provide units that comply with requirements for fire-resistance ratings indicated as determined by testing according to ASTM E 119, by equivalent masonry thickness, or by other means, as acceptable to authorities having jurisdiction.

2.3 CONCRETE MASONRY UNITS

A. Regional Materials: CMUs are manufactured within 100 miles (160 km) of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

B. Shapes: Provide shapes indicated and as follows:

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide bullnose units for all interior outside corners unless otherwise indicated.

C. CMU: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi for f'm=1500 psi.
2. Density Classification: Normal weight unless otherwise indicated.
3. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
4. Exposed Faces: Manufacturer's standard color and texture, unless otherwise indicated.

2.4 ARCHITECTURAL BLOCK (FACE CMU)

A. See 01 23 00 Alternates, Add Alternate No. 2: The Amount to be added to the total contract sum in connection with providing brick veneer, type A, in lieu of ground face CMU. See exterior elevations for areas show in base bid as CMU.

B. Regional Materials: CMUs are manufactured within 100 miles (160 km) of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

C. Shapes: Provide shapes indicated and as follows:

1. Provide special shapes for lintels, corners, jambs, sashes, movement joints, headers, bonding, and other special conditions.
2. Provide Special shapes units for where applicable, Cut in field if cut end is not visible.

D. CMU: ASTM C 90.

1. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 1900 psi for f'm=1500 psi.
2. Density Classification: Normal weight unless otherwise indicated.
3. Size (Width): Manufactured to dimensions 3/8 inch less than nominal dimensions.
4. Exposed Faces: Manufacturer's standard color and texture, unless otherwise indicated.

E. Manufacturer
1. Subject to compliance with requirements, provide the Basis-of-Design product or a comparable product by one of the following manufacturers, but not limited to:
   a. York Building Products
   b. Glen-Gery Corp.
   c. Beldon
   d. Or approved equal in close color match, text, and meeting all other requirements.

F. CMU FACE BLOCK
1. Basis of Design: Rustic Face Series by York Building Products
2. Finish: Rustic
3. Color: Glacier
4. Size: Nominal 4" face block, full bed CMU Veneer, 4"x8"x16"

2.5 BRICK

A. Regional Materials: Bricks are manufactured within 100 miles (160 km) of Project site from aggregates and cement that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

B. General: Provide shapes indicated and as follows, with exposed surfaces matching finish and color of exposed faces of adjacent units:

1. For building corners and for similar applications that would otherwise expose unfinished brick surfaces, provide units without cores or frogs and with exposed surfaces finished.
2. Provide special shapes for applications where shapes produced by sawing would result in sawed surfaces being exposed to view.
3. Provide special shapes for applications where stretcher units cannot accommodate special conditions, including those at corners, movement joints, bond beams, sashes, and lintels.

C. Face Brick: ASTM C 216, Grade SW, Type FBX, and as follows:

1. Subject to compliance with requirements, provide the Basis-of-Design product or a comparable product by one of the following manufacturers, but not limited to:
   a. Glen-Gery Corp. Basis of Design for colors

   b. Watsontown Brick Company
   c. Redland Brick, Inc.
   d. Endicott, Inc.
   e. General Shale, Inc.
   f. U.S. Brick
   g. Belden Brick Company

2. Brick Color A (FIELD): Belgian Grey Wirecut" by Glen-Gery (Basis-of-Design)
   a. Size: Manufactured to the following actual dimensions:
      1) Modular: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8" inches long.

3. Brick Color B (TRIM/HEADER): "Black Hills Smooth" by Glen-Gery (Basis-of-Design)
   a. Size: Manufactured to the following actual dimensions:
      1) Modular: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8" inches long.

4. Patterned Brick: Multiple patterned mixed listed below by Glen-Gery (Basis-of-Design). See Elevations for Coursing pattern.
   a. Pattern Colors:
      1) Belgian Grey Wirecut by Glen-Gery (Basis-of-Design)
      2) Silver City Wirecut by Glen-Gery (Basis-of-Design)
      3) Iced Grey Glazed by Glen-Gery (Basis-of-Design)
      4) Black Hills Smooth by Glen-Gery (Basis-of-Design)

   b. Size: Manufactured to the following actual dimensions:
      1) Modular: 3-5/8 inches wide by 2-1/4 inches high by 7-5/8" inches long.

5. Bond Pattern (FIELD): Running bond.
6. Bond Pattern (TRIM): See Elevations, includes soldier bond and sailor bonding.
7. Mortar Joint: Concave.
8. Unit Compressive Strength: Provide units with minimum average net-area compressive strength of 3000 psi.
9. Initial Rate of Absorption: Less than 10 g/30 sq. in. per minute when tested per ASTM C67.
10. Efflorescence: Provide brick that has been tested according to ASTM C67 and is rated "not effloresced."
11. Surface Coloring: Brick with surface coloring, other than flashed or sand-finished brick, shall withstand 50 cycles of freezing and thawing per ASTM C67 with no observable difference in the applied finish when viewed from 10 feet.

2.6 MORTAR AND GROUT MATERIALS

A. Regional Materials: Manufacture aggregate for mortar and grout within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

B. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

   1. Colored Portland Cement-Lime Mix:

a. Eaglebond; Blue Circle Cement.
b. Color Mortar Blend; Glen-Gery Corporation.
c. Rainbow Mortamix Custom Color Cement/Lime; Holnam, Inc.
d. Centurion Colorbond PL; Lafarge Corporation.
e. Lehigh Custom Color Portland/Lime; Lehigh Portland Cement Co.
f. Riverton Portland Cement Lime Custom Color; Riverton Corporation (The).

2. Mortar Pigments:

a. True Tone Mortar Colors; Davis Colors.
b. Centurion Pigments; Lafarge Corporation.
c. SGS Mortar Colors; Solomon Grind-Chem Services, Inc.

C. Portland Cement: ASTM C150, Type I or II, except Type III may be used for cold-weather construction. Provide natural color or white cement as required to produce mortar color indicated.

D. Hydrated Lime: ASTM 207, Type S.

E. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C150, Type I or Type III, and hydrated lime complying with ASTM C207, Type S; containing no other ingredients.

F. Masonry Cement: ASTM C91.

G. Aggregate for Mortar: ASTM C144.

1. For joints less than 1/4 inch thick, use aggregate graded with 100 percent passing the No. 16 sieve.
2. Colored-Mortar Aggregates: Natural sand or crushed stone of color necessary to produce required mortar color to match existing.

H. Aggregate for Grout: ASTM C404.

I. Cold-Weather Admixture: Nonchloride, noncorrosive, accelerating admixture complying with ASTM C494/C494M, Type C, and recommended by manufacturer for use in masonry mortar of composition indicated.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Euclid Chemical Company (The); Accelguard 80.
b. Grace Construction Products, W. R. Grace & Co. - Conn.; Morset.
c. Sonneborn Products, BASF Aktiengesellschaft; Trimix-NCA.

J. Water: Potable.

2.7 REINFORCEMENT

A. Uncoated Steel Reinforcing Bars: ASTM A615/A615M, Grade 60.

B. Masonry Joint Reinforcement, General: ASTM A951/A951M.

1. Hot-dip galvanized, carbon steel wire for both interior and exterior walls.
2. Wire Size and Side Rods: W1.7 or 0.148 inch diameter (9 gauge) unless otherwise noted.
3. Wire Size and Cross Rods: W1.7 or 0.148 inch diameter (9 gauge) unless otherwise noted.
4. Wire Size for Veneer Ties: W2.8 or 0.1875 inch diameter (3/16 inch).
5. Spacing for Cross Rods: Not more than 16 inches on center.
6. Provide in lengths of not less than 10 feet, with prefabricated corner and tee units.

C. Masonry Joint Reinforcement for Single-Wythe Masonry: Either ladder or truss type with single pair of side rods and cross rods spaced not more than 16 inches o.c. Truss type shall not be used in vertically reinforced unit masonry walls.

D. Masonry-Joint Reinforcement for Multiwythe Masonry:

1. Adjustable (2-piece) type with single pair of side rods and cross ties spaced not more than 16 inches o.c. and with separate adjustable veneer ties engaging the cross ties. Crossties are either U-shaped with eyes or rectangular. Space side rods for embedment within each face shell of backup wythe and size adjustable ties to extend at least halfway through outer wythe but with at least 5/8-inch cover on outside face. Unless otherwise indicated, install in first and second courses above finished floor and in alternating back-up masonry courses thereafter.

    a. Use where indicated and where horizontal joints of facing wythe do not align (1-1/4” or less) with those of backup wythe.
    b. Use where facing wythe is of different material than backup wythe.
    c. Provide “#270 Ladder Eye-Wire anchor system by Hohmann & Barnard, Inc., or equal product.

2. Adjustable (3-piece) type with ladder type reinforcement at back-up wythe which includes an extended cross rod. A vertical rod is hooked onto the extended cross rod and extends down to and behind the cross rod of the next lower truss type unit. An adjustable vee tie is hooked around the vertical rod for placement into the mortar joint of the face veneer.

    a. Use where indicated and where horizontal joints of facing wythe do not align (greater than 1-1/4”) with those of the back-up wythe.
    b. Provide “Tie-HVR” anchor system by Hohmann & Barnard, Inc., or equal product.

2.8 TIES AND ANCHORS

A. General: Ties and anchors extend at least halfway into veneer but with at least a 5/8-inch cover on outside face. Outer ends of wires are bent 90 degrees and extend 2 inches (50 mm) parallel to face of veneer.

B. Materials: Provide ties and anchors specified in this article that are made from materials that comply with the following unless otherwise indicated.

1. Hot-Dip Galvanized, Carbon-Steel Wire: ASTM A82/A82M; with ASTM A153/A153M, Class B-2 coating.
2. Galvanized-Steel Sheet: ASTM A653/A653M, Commercial Steel, G60 zinc coating.
3. Steel Sheet, Galvanized after Fabrication: ASTM A1008/A1008M, Commercial Steel, with ASTM A153/A153M, Class B coating.
4. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

C. Individual Wire Ties: Rectangular units with closed ends and not less than 4 inches wide.

1. Wire: Fabricate from 1/4-inch-diameter, hot-dip galvanized steel wire.

D. Adjustable Anchors for Connecting to Structural Steel Framing: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Anchor Section for Welding to Steel Frame: Crimped 1/4-inch-diameter, hot-dip galvanized steel wire.
2. Tie Section: Triangular-shaped wire tie made from 0.25-inch-diameter, hot-dip galvanized steel wire.

E. Adjustable Anchors for Connecting to Concrete: Provide anchors that allow vertical or horizontal adjustment but resist tension and compression forces perpendicular to plane of wall.

1. Connector Section: Dovetail tabs for inserting into dovetail slots in concrete and attached to tie section; formed from 0.060-inch-thick, steel sheet, galvanized after fabrication.
2. Tie Section: Triangular-shaped wire tie made from 0.25-inch-diameter, hot-dip galvanized steel wire.

F. Partition Top anchors: 0.105-inch-thick metal plate with 3/8-inch-diameter metal rod 6 inches long welded to plate and with closed-end plastic tube fitted over rod that allows rod to move in and out of tube. Fabricate from steel, hot-dip galvanized after fabrication.

G. Joint Stabilization Anchors

1. General: Provide stabilization anchors in horizontal joints of masonry units across the joint between walls at T-shape wall intersections as follows:

a. Use either a manufactured steel joint stabilizing anchor consisting of two steel rods, connected together on each side of masonry joint by sliding plate assemblies or 1-1/2” x ¼” x 32” steel strap anchor with 3” (90 degree) right-angle bent ends at masonry shear walls.
b. Anchors to be embedded in grout-filled cores of hollow concrete masonry units.
c. 16” o.c. vertical spacing.
d. Finish: Mill galvanized or hot-dip galvanized to comply with ASTM A 153

H. Adjustable Masonry-Veneer Anchors for Stud backup walls:

1. General: Provide anchors that allow vertical adjustment but resist tension and compression forces perpendicular to plane of wall, for attachment over sheathing to metal studs, and as follows:

a. Structural Performance Characteristics: Capable of withstanding a 100-lbf load in both tension and compression without deforming or developing play in excess of 0.05 inch.

2. Wire Ties: Triangular-, rectangular-, or T-shaped wire ties fabricated from 0.25-inch-diameter, hot-dip galvanized steel wire.
3. Screw-Attached, Masonry-Veneer Anchors: Wire tie and a rib-stiffened, sheet metal anchor section with screw holes top and bottom. Anchor to be installed before insulation installation.

a. Basis-of-Design Product: subject to compliance with requirements, provide Hohmann & Barnard; HB-213 Anchor or a comparable product by one of the following manufacturers, but not limited to

1) Wire-Bond
2) Heckmann Building Products

b. Anchor Section: Gasketed sheet metal plate with screw holes top and bottom; top and bottom ends bent to form pronged legs to penetrate insulation/sheathing and contact studs; and raised rib-stiffened strap stamped into center to provide a slot between strap and plate for connection of wire tie.
c. Plate 1-1/4 inches wide by 6 inches long with strap 5/8 inch wide by 6 inches long; slot clearance formed between face of plate and back of strap shall not exceed diameter of wire tie by more than 1/32 inch.
d. Provide anchor manufacturer's standard, self-adhering, gaskets manufactured to fit behind anchor plate and to prevent moisture from penetrating sheathing at pronged legs and screw holes.

I. Rigid Anchors: Fabricate from steel bars 1-1/2 inches wide by 1/4 inch thick by 24 inches long, with ends turned up 2 inches or with cross pins unless otherwise indicated.

1. Corrosion Protection: Hot-dip galvanized to comply with ASTM A153/A153M.

J. Anchor Bolts: Headed or L-shaped steel bolts complying with ASTM A307, Grade A; with ASTM A563/A563M hex nuts and, where indicated, flat washers; hot-dip galvanized to comply with ASTM A153/A153M, Class C; of dimensions indicated.

2.9 EMBEDDED FLASHING

A. Metal Flashing: Provide metal flashing complying with SMACNA's "Architectural Sheet Metal Manual" and as follows:
1. Stainless Steel: ASTM A240/A240M or ASTM A666, Type 304, 0.016 inch (0.40 mm) thick.
2. Fabricate continuous flashings in sections 96 inches long minimum, but not exceeding 12 ft. Provide splice plates at joints of formed, smooth metal flashing.
3. Fabricate through-wall flashing with snaplock receiver on exterior face where indicated to receive counterflashing.
4. Fabricate through-wall flashing with drip edge unless otherwise indicated. Fabricate by extending flashing 1/2 inch out from wall, with outer edge bent down 30 degrees and hemmed.
5. Solder metal items at corners.

B. Flexible Flashing: Use one of the following unless otherwise indicated:

1. Stainless Steel Fabric Flashing: Composite flashing product consisting of 2 mil (o.05mm) of Type 304 stainless steel sheet, bonded to a layer of polymeric fabric, to produce an overall thickness of 10mil (0.25mm) minimum.

a. Basis-of-Design Product: subject to compliance with requirements, provide York Flashings; “Multi-Flash Stainless Steel” or a comparable product by one of the following manufacturers but not limited to:

1) Illinois Products, Inc.
2) Prosoco, Inc.
3) STS Coatings, Inc.
4) TK Products, Inc.

C. Solder and Sealants for Sheet Metal Flashings:

1. Solder for Stainless Steel: ASTM B32, Grade Sn60, with acid flux of type recommended by stainless steel sheet manufacturer.
2. Butyl Sealant: ASTM C1311, single-component, solvent-release butyl rubber sealant; polyisobutylene plasticized; heavy bodied for hooked-type expansion joints with limited movement.

D. Adhesives, Primers, and Seam Tapes for Flexible Flashings: Flashing manufacturer's standard products or products recommended by flashing manufacturer for bonding flashing sheets to each other and to substrates.

E. Termination Bars for Flexible Flashing: Stainless steel bars 1/8 inch by 1 inch.

2.10 ACCESSORIES

A. Compressible Filler: Premolded filler strips complying with ASTM D1056, Grade 2A1; compressible up to 35 percent; of width and thickness indicated; formulated from neoprene.

B. Bond-Breaker Strips: Asphalt-saturated felt complying with ASTM D226/D226M, Type I (No. 15 asphalt felt).

C. Cavity Weep/Vents: Use the following unless otherwise indicated:

1. Cellular Plastic Weep/Vent: One-piece, flexible extrusion made from UV-resistant polypropylene copolymer, full height and width of head joint and depth 1/8 inch less than depth of outer wythe, in colors selected from manufacturer's standard.

D. Cavity Drainage Material: Free-draining mesh, made from polymer strands that will not degrade within the wall cavity to avoid being clogged by mortar droppings, thickness to match cavity air space.

1. Mortar deflector: strips not less than full depth of cavity thick and 16 inches high, with dovetail-shaped notches that prevent clogging with mortar droppings.

E. Proprietary Acidic Masonry Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cleaner manufacturer and manufacturer of masonry units being cleaned.

2.11 MORTAR AND GROUT MIXES

A. General: Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated.

1. Do not use calcium chloride in mortar or grout.

B. Preblended, Dry Mortar Mix: Furnish dry mortar ingredients in form of a preblended mix. Measure quantities by weight to ensure accurate proportions, and thoroughly blend ingredients before delivering to Project site.

C. Mortar for Unit Masonry: Comply with ASTM C270, Proportion Specification. Provide the following types of mortar for applications stated unless another type is indicated or needed to provide required compressive strength of masonry.

1. For masonry below grade or in contact with earth, use Type M.
2. For above-grade walls, use Type N.

D. Pigmented Mortar: Select and proportion pigments with other ingredients to produce color required.

1. Pigments do not exceed 10 percent of portland cement by weight.
2. Pigments do not exceed 5 percent of mortar cement by weight.
3. Mix to match approved sample.

E. Colored-Aggregate Mortar: Produce required mortar color by using colored aggregates and natural color or white cement as necessary to produce required mortar color.

1. Mix to match approved sample.

F. Grout for Unit Masonry: Comply with ASTM C476.

1. Use either pea gravel cement concrete or grout confirming to ASTM C476 with a minimum 28-day compressive strength of 3000 psi.
2. Provide grout with a slump of 8 to 11 inches as measured according to ASTM C143.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. For the record, prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.
2. Verify that foundations are within tolerances specified.
3. Verify that reinforcing dowels are properly placed.
4. Verify that substrates are free of substances that impair mortar bond.

B. Before installation, examine rough-in and built-in construction for piping systems to verify actual locations of piping connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Unit Masonry Assemblies shall be installed in accordance with Contract Documents, most recent technical standards published by International Masonry Institute, National Concrete Masonry Association, Brick Industry Association and the product manufacturer's printed recommendations.

B. Thickness: Build cavity and composite walls and other masonry construction to the full thickness shown. Build single-wythe walls to the actual widths of masonry units, using units of widths indicated.

C. Build chases and recesses to accommodate items specified in this Section and in other Sections of the Specifications.

D. Leave openings for equipment to be installed before completing masonry. After installing equipment, complete masonry to match the construction immediately adjacent to the opening.

E. Use full-size units without cutting if possible. If cutting is required to provide a continuous pattern or to fit adjoining construction, cut units with motor-driven saws; provide clean, sharp, unchipped edges. Allow units to dry before laying unless wetting of units is specified. Install cut units with cut surfaces and, where possible, cut edges concealed.

F. Select and arrange units for exposed unit masonry to produce a uniform blend of colors and textures. Mix units from several pallets or cubes as they are placed.

G. Wetting of Brick: Wet brick before laying if initial rate of absorption exceeds 20 g/30 sq. in. per minute when tested per ASTM C67. Allow units to absorb water so they are damp but not wet at time of laying.

H. No conduit or pipe shall be installed vertically or horizontally in the cavity, except for items such as wall hydrants, electrical fixtures, etc., for which penetrations shall be horizontal, perpendicular through cavity, located directly at the intended item.

3.3 TOLERANCES

A. Comply with tolerances in ACI 530.1/ASCE 6/TMS 602 and the following:

B. For conspicuous vertical lines, such as external corners, door jambs, reveals, and expansion and control joints, do not vary from plumb by more than 1/4 inch in 20 feet, nor 1/2 inch maximum.

C. For vertical alignment of exposed head joints, do not vary from plumb by more than 1/4 inch in 10 feet, nor 1/2 inch maximum.

D. For conspicuous horizontal lines, such as exposed lintels, sills, parapets, and reveals, do not vary from level by more than 1/4 inch in 20 feet, nor 1/2 inch maximum.

E. For exposed bed joints, do not vary from thickness indicated by more than plus or minus 1/8 inch, with a maximum thickness limited to 1/2 inch. Do not vary from bed-joint thickness of adjacent courses by more than 1/8 inch.

F. For exposed head joints, do not vary from thickness indicated by more than plus or minus 1/8 inch. Do not vary from adjacent bed-joint and head-joint thicknesses by more than 1/8 inch.

3.4 LAYING MASONRY WALLS

A. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint thicknesses and for accurate location of openings, movement-type joints, returns, and offsets. Avoid using less-than-half-size units, particularly at corners, jambs, and, where possible, at other locations.

B. Bond Pattern for Exposed CMU Masonry: Unless otherwise indicated above, lay exposed masonry in running bond; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

C. Bond Pattern for Exposed Brick Masonry: Unless otherwise indicated above, lay exposed masonry in Running bond; do not use units with less than nominal 4-inch horizontal face dimensions at corners or jambs.

D. Stopping and Resuming Work: Stop work by stepping back units in each course from those in course below; do not tooth. When resuming work, clean masonry surfaces that are to receive mortar, remove loose masonry units and mortar, and wet brick if required before laying fresh masonry.

E. Built-in Work: As construction progresses, build in items specified in this and other Sections. Fill in solidly with masonry around built-in items.

F. Fill cores in hollow CMUs with grout 24 inches under bearing plates, beams, lintels, posts, and similar items unless otherwise indicated in structural drawings.

3.5 MORTAR BEDDING AND JOINTING

A. Lay CMUs and hollow brick as follows:

1. Bed face shells in mortar and make head joints of depth equal to bed joints.
2. Bed webs in mortar in all courses of piers, columns, and pilasters.
3. Bed webs in mortar in grouted masonry, including starting course on footings.
4. Fully bed entire units, including areas under cells, at starting course on footings where cells are not grouted.
5. Fully bed units and fill cells with mortar at anchors and ties as needed to fully embed anchors and ties in mortar.

B. Lay solid masonry units and hollow brick with completely filled bed and head joints; butter ends with sufficient mortar to fill head joints and shove into place. Do not deeply furrow bed joints or slush head joints.

C. Set **cast-stone** trim units in full bed of mortar. Fill dowel, anchor, and similar holes.

1. Clean soiled surfaces with fiber brush and soap powder and rinse thoroughly with clear water.
2. Allow cleaned surfaces to dry before setting.
3. Wet joint surfaces thoroughly before applying mortar.

4. Rake out mortar joints for pointing with sealant.

D. Tool exposed joints slightly concave when thumbprint hard, using a jointer larger than joint thickness unless otherwise indicated.

3.6 CAVITY WALLS

A. Bond wythes of cavity walls together as follows:

1. Masonry Joint Reinforcement: Installed in horizontal mortar joints.

a. Where bed joints of both wythes align, use ladder-type reinforcement extending across both wythes.
b. Where bed joints of wythes do not align, use adjustable-type (two-piece-type) reinforcement with continuous horizontal wire in facing wythe attached to ties.

B. Keep cavities clean of mortar droppings and other materials during construction. Bevel beds away from cavity, to minimize mortar protrusions into cavity. Do not attempt to trowel or remove mortar fins protruding into cavity.

C. Installing Cavity-Wall Insulation: Place small dabs of adhesive, spaced approximately 12 inches o.c. both ways, on inside face of insulation boards, or attach with plastic fasteners designed for this purpose. Fit courses of insulation between wall ties and other confining obstructions in cavity, with edges butted tightly both ways. Press units firmly against inside wythe of masonry or other construction as shown.

1. Fill cracks and open gaps in insulation with crack sealer compatible with insulation and masonry.

3.7 MASONRY JOINT REINFORCEMENT

A. General: Provide continuous masonry joint reinforcement as indicated. Install entire length of longitudinal side rods in mortar with a minimum cover of 5/8 inch on exterior side of walls, 1/2 inch elsewhere. Lap reinforcement a minimum of 6 inches.

1. Space reinforcement not more than 16 inches o.c.
2. Space reinforcement not more than 8 inches o.c. in foundation walls and parapet walls.
3. Provide reinforcement not more than 8 inches above and below wall openings and extending 12 inches beyond openings in addition to continuous reinforcement.

B. Interrupt joint reinforcement at control and expansion joints unless otherwise indicated.

C. Provide continuity at wall intersections by using prefabricated T-shaped units.

D. Provide continuity at corners by using prefabricated L-shaped units.

E. At all flashing locations, reinforcement shall not interrupt the flashing.

3.8 CONTROL AND EXPANSION JOINTS

A. General: Install control- and expansion-joint materials in unit masonry as masonry progresses. Do not allow materials to span control and expansion joints without provision to allow for in-plane wall or partition movement.

B. Form control joints in concrete masonry as follows:

1. Fit bond-breaker strips into hollow contour in ends of CMUs on one side of control joint. Fill resultant core with grout, and rake out joints in exposed faces for application of sealant.
2. Install preformed control-joint gaskets designed to fit standard sash block.
3. Install interlocking units designed for control joints. Install bond-breaker strips at joint. Keep head joints free and clear of mortar, or rake out joint for application of sealant.
4. Install temporary foam-plastic filler in head joints, and remove filler when unit masonry is complete for application of sealant.

C. Form expansion joints in brick as follows:

1. Form open joint full depth of brick wythe and of width indicated; install compressible exterior expansion joint filler as per manufacturers' recommendation. Keep joint free and clear of mortar. Locations as indicated on drawings.

D. Provide horizontal, pressure-relieving joints by inserting a compressible filler of width required for installing sealant and backer rod specified in Section 079200 "Joint Sealants," but not less than **3/8 inch**.

1. Locate horizontal, pressure-relieving joints beneath shelf angles supporting masonry.

3.9 FLASHING, WEEP HOLES, CAVITY DRAINAGE, AND VENTS

A. General: Install embedded flashing and weep holes in masonry at shelf angles, lintels, ledges, other obstructions to downward flow of water in wall, and where indicated. Install cavity vents at shelf angles, ledges, and other obstructions to upward flow of air in cavities, and where indicated.

B. Install flashing as follows unless otherwise indicated:

1. Prepare masonry surfaces so they are smooth and free from projections that could puncture or damage flashing. Where flashing is within mortar joint, place through-wall flashing on sloping bed of mortar and cover with mortar. Before covering with mortar, seal penetrations in flashing with adhesive, sealant, or tape as recommended by flashing manufacturer.
2. Extend flashing through veneer, across airspace behind veneer, and up face of sheathing at least 8 inches (203 mm); with upper edge tucked under water-resistive / air barrier, lapping at least 4 inches (102 mm). Attach to wall with termination bar.
3. At lintels and shelf angles, extend flashing a minimum of 6 inches into masonry at each end. At heads and sills, extend flashing 6 inches at ends and turn up not less than 2 inches to form end dams.
4. Install metal drip edges beneath flexible flashing at exterior face of wall. Stop flexible flashing 1/2 inch back from outside face of wall and adhere flexible flashing to top of metal drip edge.

C. Place cavity drainage material in cavities to comply with configuration requirements for cavity drainage material in "Miscellaneous Masonry Accessories" Article.

D. Install vents in head joints in exterior wythes at spacing indicated. Use specified weep/vent products to form vents.

3.10 REINFORCED UNIT MASONRY INSTALLATION

A. Temporary Formwork and Shores: Construct formwork and shores as needed to support reinforced masonry elements during construction.

1. Construct formwork to provide shape, line, and dimensions of completed masonry as indicated. Make forms sufficiently tight to prevent leakage of mortar and grout. Brace, tie, and support forms to maintain position and shape during construction and curing of reinforced masonry.
2. Do not remove forms and shores until reinforced masonry members have hardened sufficiently to carry their own weight and other loads that may be placed on them during construction.

B. Placing Reinforcement: Comply with requirements in ACI 530.1/ASCE 6/TMS 602.

C. Grouting: Do not place grout until entire height of masonry to be grouted has attained enough strength to resist grout pressure.

1. Comply with requirements in ACI 530.1/ASCE 6/TMS 602 for cleanouts and for grout placement, including minimum grout space and maximum pour height.

3.11 FIELD QUALITY CONTROL

A. Inspections: Special inspections in accordance with Level 2 in TMS 402.

1. Begin masonry construction only after inspectors have verified proportions of site-prepared mortar.
2. Place grout only after inspectors have verified compliance of grout spaces and of grades, sizes, and locations of reinforcement.
3. Place grout only after inspectors have verified proportions of site-prepared grout.

B. Clay Masonry Unit Test: For each type of unit provided, in accordance with ASTM C67/C67M for compressive strength.

C. Concrete Masonry Unit Test: For each type of unit provided, in accordance with ASTM C140/C140M for compressive strength.

D. Mortar Aggregate Ratio Test (Proportion Specification): For each mix provided, in accordance with ASTM C780.

3.12 REPAIRING, POINTING, AND CLEANING

A. Remove and replace masonry units that are loose, chipped, broken, stained, or otherwise damaged or that do not match adjoining units. Install new units to match adjoining units; install in fresh mortar, pointed to eliminate evidence of replacement.

B. Pointing: During the tooling of joints, enlarge voids and holes, except weep holes, and completely fill with mortar. Point up joints, including corners, openings, and adjacent construction, to provide a neat, uniform appearance. Prepare joints for sealant application, where indicated.

C. In-Progress Cleaning: Clean unit masonry as work progresses by dry brushing to remove mortar fins and smears before tooling joints.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed masonry as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Test cleaning methods on sample wall panel; leave one-half of panel uncleaned for comparison purposes.
3. Protect surfaces from contact with cleaner.
4. Wet wall surfaces with water before applying cleaners; remove cleaners promptly by rinsing surfaces thoroughly with clear water.
5. Clean brick by bucket-and-brush hand-cleaning method described in BIA Technical Notes 20.
6. Clean concrete masonry by cleaning method indicated in NCMA TEK 8-2A applicable to type of stain on exposed surfaces.
7. Clean masonry with a proprietary acidic cleaner applied according to manufacturer's written instructions.

END OF SECTION 04 20 00

SECTION 04 72 00 - CAST STONE MASONRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Cast Stone Corner Stone, Signage Type
   2. CAST STONE BASE (4 PIECES)

B. Related Sections:
   1. Division 04 Section “Unit Masonry” for mortar mixes and flashing.
   2. Division 07 Section "Joint Sealants."
   3. Division 10 Section "Interior and Exterior Signage” for Corner Stone.

1.2 DEFINITIONS

A. Dry Cast Concrete Products are manufactured from zero-slump concrete.

   1. The Vibrant Dry Tamp (VDT) casting method: manufactured from earth-moist, zero-slump concrete using vibratory ramming against a rigid mold until it is densely compacted.
   2. The Machine Casting Method, manufactured from earth-moist, zero-slump concrete compacted by machinery using vibration and pressure against a rigid mold until it is densely compacted.

B. Wet Cast Concrete Products are manufactured from measurable-slump concrete.

   1. Wet casting method: Manufactured from measurable slump concrete and vibrated into a mold until it becomes densely consolidated.

C. Cast Stone is a refined architectural concrete building unit manufactured to simulate natural cut stone, used in unit masonry applications.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. For cast stone units, include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Samples for Verification:

   1. For each color and texture of cast stone required, 6 inches square in size.
   2. For colored mortar.
   3. Signage sample is to be full size and can be used if approved. Lettering and details of graphics are to be proofed by manufacturer and approved by owner and architect.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: Include list of completed projects with project names and addresses, names and addresses of architects and owners, and other information specified.

1. Include current plant certification from the Architectural Precast Association.

B. Material Test Reports: For each mix required to produce cast stone, based on testing according to ASTM C1364.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications:

1. Sole source requirement: Company specializing in production of architectural precast concrete and architectural cast stone with minimum of ten (10) years documented experience.
2. Has sufficient production capacity to produce required units without delaying the Work.
3. Manufacturer is a certified producing member of the Architectural Precast Association.

B. Installer Qualifications:

1. Installer shall have sufficient resources to install the cast stone and architectural precast shown in the architectural drawings in accordance with the project schedule.
2. Installer shall have not less than three (3) years continuous operational experience in successful installation of cast stone and architectural precast in types and quantities similar to the project.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Coordinate delivery of cast stone with unit masonry work to avoid delaying the Work and to minimize the need for on-site storage.

B. All cast stone units shall be labeled on a non-exposed face with the identification mark shown in the manufacturer's shop drawings.

C. Pack, handle, and ship cast stone units in suitable packs or pallets.

1. An itemized list of products shall be provided for each shipment of cast stone units.
2. All pallets shall be labeled with a complete list of the pallet contents.
3. Lift with wide-belt slings; do not use wire rope or ropes that might cause staining. Move cast stone units if required, using dollies with wood supports.
4. Store cast stone units on wood skids or pallets with nonstaining, waterproof covers, securely tied. Arrange to distribute weight evenly and to prevent damage to units. Ventilate under covers to prevent condensation.

1.7 PROJECT CONDITIONS

A. Cold-Weather Requirements: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Comply with cold-weather construction requirements in TMS 602.

1. Cold-Weather Cleaning: Use liquid cleaning methods only when air temperature is 40 deg F and above and will remain so until cast stone has dried, but no fewer than seven days after completing cleaning.

B. Hot-Weather Requirements: Comply with hot-weather construction requirements in TMS 602.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace architectural precast concrete units that fail in materials or workmanship within specified warranty period.

1. Warranty Period: (10) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of design: Design is based upon cast stone units produced by Nelson Precast Products. Provide specified products or comparable products by one of the following fabricators, but not limited to:
1. Nelson Precast Products
2. Sun Precast Co., Inc.
3. Cast Stone Designs, Inc.

B. Source Limitations: Obtain architectural precast and cast stone from a single manufacturer.

2.2 MATERIALS, GENERAL

A. Regional Materials: Manufacture cast stone units within 100 miles (160 km) of Project site from aggregates that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

B. Regional Materials: Manufacture aggregate for mortar and grout within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

2.3 CAST STONE MATERIALS

A. Portland Cement: ASTM C150/C150M, Type I or Type III, white and/or grey, ASTM C 150

B. Coarse Aggregates: Granite, quartz, or limestone, ASTM C 33 (except for gradation). Coarse aggregates shall be optional for units made using the Vibrant Dry Tamp (VDT) casting method.

C. Fine Aggregates: Manufactured or natural sands, ASTM C33/C33M (except for gradation).

D. Colors: Inorganic iron oxide pigments, ASTM C979/C979M (except that carbon black pigments shall not be used).

E. Admixtures:

1. ASTM C260/C260M for air-entraining admixtures (not for use in Dry Cast Concrete Products)
2. ASTM C494/C495M Types A – G for water reducing, retarding, accelerating, and high range admixtures.
3. Other admixtures for which no ASTM standard exists, including integral water repellants and other chemicals, shall be previously established as suitable for use in concrete by proven field performance or through laboratory testing.

F. Water: Clean and potable municipal water.

G. Reinforcing:

1. ASTM A615/A615M for reinforcing bars using grade 40 or 60 steel. Use galvanized or epoxy-coated reinforcement when covered with less than 1-1/2 inches of cast stone material.
2. ASTMA185 for welded wire fabric (not for use in Dry Cast Concrete Products)

H. All anchors, dowels, and other anchoring devices and shims shall be Type 304 stainless steel.

2.4 CAST STONE UNITS

A. Cast Stone Units: Comply with ASTM C1364.

B. Colors and Textures:

1. As selected by Architect from manufacturer’s full range.

C. Physical properties:

1. Compressive strength shall meet or exceed 6,500 psi at 28 days when tested according to ASTM C 1194.
2. Absorption shall not exceed 6% when tested according to the cold water method described in ASTM C 1195.
3. Air content shall be between 4-8% for units produced by the Wet Cast method in accordance with Test Method C173/C173M or Test Method C231/C231M. Air entrainment is not required for units produced by the Vibrant Dry Tamp (VDT) casting method.
4. Freeze-thaw: ASTM C666/C666M in accordance with ASTM C1364. The CPWL shall be less than 5.0% after 300 cycles of freezing and thawing.
5. Linear Drying Shrinkage: ASTM C426: Test and report in accordance with ASTM C1364.

D. Manufacturer shall test units for conformance to compressive strength requirements at least once for every 500 cubic feet of material produced.

E. Job site testing may be performed in accordance with ASTM C1194 and C1195.

2.5 CORNER STONE SIGNAGE (TYPE 19), See Signage Drawings Type 19

A. Type 19 Recessed County Seal & Lettering Cast Into Precast Panel – Cornerstone Signage **TO BE PROVIDED AND INSTALLED BY CAST STONE PROVIDER AND NOT SIGNAGE PROVIDER**
   1. Text: BALTIMORE COUNTY SEAL – POLICE DEPARTMENT - 2025.
   2. Provided & Coordinated with 03 45 00 PRECAST ARCHITECTURAL CONCRETE and precast installer.
   3. Dimensions: see elevations
      a. Depth: 1/2” beveled lettering on 3 5/8” (full bed)
      b. Height: see elevations
   4. LOCATION: See elevations
   5. Color: to be selected by the architect from neutral color range.
   6. ARTWORK: To be provided in a vector file from owner, approximately
   7.

2.6 15" DIA. CAST STONE BASE (4 PIECES per column)

A. See details at the base of the main public entrance columns.

2.7 MANUFACTURING TOLERANCES

A. Color and Finish:

   1. Cast Stone shall be appraised for color and finish quality under direct daylight illumination to avoid cross lighting conditions.

2. All surfaces exposed to view shall have a fine-grained texture similar to natural stone. Air voids shall not be obvious when viewed under direct daylight illumination at a 5 ft distance.
3. All units provided shall display a color and texture equal to the approved sample when viewed under direct daylight illumination at a 10 ft distance.
4. The range of total acceptable color (lightness, color saturation, and hue) variation shall not exceed a ΔE of 6.0 (CIELAB 1976) when measured per ASTM D 2244, provided that hue does not exceed a ΔE of 2.0.

B. Units:

1. All pieces shall be made exactly in accordance with approved shop drawings.
2. Variation in Cross Section: Do not vary from indicated dimensions by more than 1/8 inch.
3. Variation in Length: Do not vary from indicated dimensions by more than 1/360 of the length of unit or 1/8 inch, whichever is greater, but in no case by more than 1/4 inch.
4. Warp, Bow, and Twist: Not to exceed 1/360 of the length of unit or 1/8 inch, whichever is greater.
5. Location of Grooves, False Joints, Holes, Anchorages, and Similar Features: Do not vary from indicated position by more than 1/8 inch on formed surfaces of units and 3/8 inch on unformed surfaces.

C. Fabricate units with sharp arris and accurately reproduced details, with indicated texture on all exposed surfaces unless otherwise indicated.

1. Slope exposed horizontal surfaces 1:12 to drain unless otherwise indicated.
2. Provide drips on projecting elements unless otherwise indicated.

2.8 REINFORCING

A. Reinforcing to be provided where necessary to facilitate safe handling and setting or to withstand structural stresses.

B. Cast Stone panels, soffits, and similar stones greater than 24 inches in one direction shall be reinforced in that direction.

C. Cast Stone units less than 24 inches in both their length and width shall be non-reinforced unless otherwise specified.

2.9 CURING

A. Cure units in enclosed, moist curing room at 95 percent relative humidity and temperature of 90 deg F for 16 hours.

B. Keep units damp and continue curing to comply with one of the following:

1. No fewer than five days at mean daily temperature of 70 deg F or above.
2. No fewer than seven days at mean daily temperature of 50 deg F or above.

C. Form-cured units shall be protected from moisture evaporation with curing blankets or curing compounds after casting.

D. Acid etch units after curing to remove cement film from surfaces to be exposed to view.

2.10 ACCESSORIES

A. Anchors: Type and size indicated, fabricated from Type 304 stainless steel complying with ASTM A240/A240M, ASTM A276/A276M, or ASTM A666.

B. Dowels: 1/2-inch-diameter round bars, fabricated from Type 304 stainless steel complying with ASTM A240/A240M, ASTM A276/A276M, or ASTM A666.

C. Proprietary Acidic Cleaner: Manufacturer's standard-strength cleaner designed for removing mortar/grout stains, efflorescence, and other new construction stains from new masonry without discoloring or damaging masonry surfaces. Use product expressly approved for intended use by cast stone manufacturer and expressly approved by cleaner manufacturer for use on cast stone and adjacent masonry materials.

2.11 MORTAR MIXES

A. Comply with requirements in Division 04 Section "Unit Masonry" for mortar mixes.

1. For setting mortar, use Type S.
2. For pointing mortar, use Type N.
3. Pigmented Mortar: Use colored cement product.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Inspect all cast stone units prior to accepting delivery and check all cast stone units for fit and finish prior to installation. Do not set unacceptable units.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING TOLERANCES

A. Variation from Plumb: Do not exceed 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.

B. Variation from Level: Do not exceed 1/8 inch in 10 feet, 1/4 inch in 20 feet, or 1/2 inch maximum.

C. Variation in Joint Width: Do not deviate from specified joint thickness more than 1/16" over and 1/8" under the specified size.

D. Variation in Plane between Adjacent Surfaces (Lipping): Do not vary from flush alignment with adjacent units or adjacent surfaces indicated to be flush with units by more than 1/16 inch.

3.3 JOINTING

A. Stone/stone joints and stone/brick joints shall be 3/8" unless specified otherwise.

B. Joint material: Mortar, Type N, ASTM C 270.

C. Use a full bed of mortar at all bed joints.

D. Flush vertical joints full with mortar.

E. Leave all joints with exposed tops or under relieving angles open for sealant.

F. Leave head joints in copings and projecting components open for sealant.

3.4 SETTING CAST STONE IN MORTAR

A. Set units exactly in locations shown in Shop Drawings. Set units accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

1. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure units in place.
2. Coordinate installation of cast stone with installation of flashing specified in other Sections.

B. Drench units with clean water prior to setting.

C. Fill dowel holes and anchor slots completely with mortar or non-shrink grout.

D. Set units in full bed of mortar unless otherwise noted.

E. Rake mortar joints 3/4" for pointing.

F. Remove excess mortar from unit faces immediately after setting.

G. Tuck point unit joints to a slight concave profile.

H. Provide sealant joints at head joints of copings and other horizontal surfaces; at expansion, control, and pressure-relieving joints; and at locations indicated.

1. Keep joints free of mortar and other rigid materials.
2. Build in compressible foam-plastic joint fillers where indicated.
3. Form joint of width indicated, but not less recommended by Manufacturer.
4. Prime cast stone surfaces to receive sealant and install compressible backer rod in joints before applying sealant unless otherwise indicated.
5. Prepare and apply sealant of type and at locations indicated to comply with applicable requirements in Division 07 Section "Joint Sealants."

3.5 ADJUSTING AND CLEANING

A. Protect Cast Stone from staining and chipping before, during, and after installation.

B. Remove and replace stained and otherwise damaged units and units not matching approved Samples.

1. Replace units in a manner that results in cast stone matching approved Samples, complying with other requirements, and showing no evidence of replacement.
2. Minor chips in cast stone may be repaired with patching material furnished by manufacturer, following manufacturer's instructions for use, if approved by Architect.

C. In-Progress Cleaning: Clean cast stone as work progresses.

1. Remove mortar fins and smears before tooling joints.
2. Remove excess sealant immediately, including spills, smears, and spatter.

D. Final Cleaning: After mortar is thoroughly set and cured, clean exposed cast stone as follows:

1. Remove large mortar particles by hand with wooden paddles and nonmetallic scrape hoes or chisels.
2. Protect adjacent surfaces from contact with cleaner by covering them with liquid strippable masking agent or polyethylene film and waterproof masking tape.
3. Wet surfaces with water before applying cleaners; remove cleaners promptly by rinsing thoroughly with clear water.
4. Clean cast stone with proprietary acidic cleaner applied according to manufacturer's written instructions.
    a. Do not use any cleaner not designed for use on concrete without express approval of manufacturer.
    b. Do not clean Cast Stone by power washing or sandblasting without express approval of manufacturer.

3.6 INSPECTION AND ACCEPTANCE

A. Inspect finished work according to Cast Stone Institute Technical Bulletin #36.

B. Inspect under direct daylight conditions.

C. Inspect Cast Stone only when dry.

END OF SECTION 04 72 00

SECTION 05 12 00 – STRUCTURAL STEEL FRAMING

1.1 SECTION INCLUDES

A. Structural steel framing members, support members and struts.

B. Base plates, embedded plates, shear stud connectors and expansion joint plates.

C. Grouting under base plates.

1.2 REFERENCE STANDARDS

A. AISC (MANUAL) – Steel Construction Manual; American Institute of Steel Construction, Inc.

B. AISC S303 – Code of Standard Practice for Steel Buildings and Bridges; American Institute of Steel Construction, Inc.

C. AISC S348 – Specification for Structural Joints Using Grade A325 or A490 Bolts.

D. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.

E. ASTM A 53/A 53M – Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc Coated, Welded and Seamless.

F. ASTM A 108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold Finished.

G. ASTM A 123/A 123M – Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.

H. ASTM A 153/A 153M – Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

I. ASTM A 307 – Standard Specification for Carbon Steel Bolts and Studs, 60,000 PSI Tensile Strength.

J. ASTM A 500 – Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

K. ASTM A 563 – Standard Specification for Carbon and Alloy Steel Nuts.

L. ASTM A 992/A 992M – Standard Specification for Structural Steel Shapes.

M. ASTM C 1107/C 1107M – Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink).

N. ASTM E 94 – Standard Guide for Radiographic Examination.

O. ASTM E164 – Standard Practice for Ultrasonic Contact Examination of Weldments.

P. ASTM E 165 – Standard Test Method for Liquid Penetrant Examination.

Q. ASTM E 709 – Standard Guide for Magnetic Particle Examination.

R. ASTM F 436 – Standard Specification for Hardened Steel Washers.

S. ASTM F 959 – Standard Specification for Compressible-Washer-Type Direct Tension Indicators for Use with Structural Fasteners.

T. ASTM F 1554 – Standard Specification for Anchor Bolts, Steel, 36, 55 and 105 ksi Yield Strength.

U. ASTM F 3125 – Standard Specification for High Strength Bolts and Assemblies, Steel and Alloy Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength

V. AWS A2.4 – Standard Symbols for Welding, Brazing, and Non-Destructive Examination.
   1. American Welding Society.

W. AWS D1.1/D1.1M – Structural Welding Code – Steel; American Welding Society.

X. IBC 2021 – International Building Code.

1.3 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements, for submittal procedures.

B. Shop Drawings:
   1. Indicate profiles, sizes, spacing, and locations of structural members.
   2. Include details of cuts, openings, attachments, fasteners, splices and camber.
   3. Detail all connections.
      a. Indicate pre-tensioned and slip-critical high-strength bolted connections.
      b. Indicate welded connections with AWS welding symbols. Include type, size and length.
      c. Indicate all AWS weld designations for pre-qualified full and partial penetration welds and detail all joint preparations.
   4. Provide erection details for all field welded connections.
   5. For structural-steel connections indicated to comply with design loads, connections and structural analysis data shall be signed and sealed by the qualified professional engineer registered in the State of Maryland responsible for their preparation.

C. AISC certification for fabricator and erector or required additional documentation for non-AISC certified fabricator and erector.

D. Mill Test Reports: Signed by manufacturer certifying that the product complies with specified requirements. Indicate structural strength, destructive test analysis and non-destructive test analysis.

E. Welders Certificates: Certify welders employed on the Work, verifying AWS qualification within the previous 12 months.

F. Quality control test reports for shop and field including ultrasonic test results.
   1. Submit certification by a Professional Engineer registered in the State of Maryland that all joint preparation for complete joint penetration welds meet AISC requirements and that all welding procedure specification requirements have been met.

G. Sustainable Design Submittal: Refer to Division 01 Section, “Sustainable Design Requirements.”

1. Accurately document the use of recycled materials and local/regional materials.
2. MR Credit 2: BPDO – Environmental Product Declarations.

a. Steel: Product-specific declaration or Industry-wide EPD or product-specific EPD.

3. MR Credit 3: BPDO – Sourcing of raw materials.

a. Recycled steel content: Documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include material cost value.
b. Regionally sourced steel: Documentation indicating locations of recovery, manufacture, purchase or recycled raw materials.

1.4 QUALITY ASSURANCE

A. Structural steel shall be domestic origin, produced and supplied from the United States of America only. Refer to the federal “Buy American Act” and applicable local regulations.

B. Fabricate structural steel members in accordance with AISC “Steel Construction Manual” and AISC “Code of Standard Practice for Steel Buildings and Bridges”.

C. Comply with Section 10 of AISC “Code of Standard Practice for Steel Buildings and Bridges” for architecturally exposed structural steel.

D. Welding: Comply with AWS D1.1, “Structural Welding Code-Steel” for procedures, tolerances, appearance and quality.

E. Fabricator: Engage a firm experienced in fabricating structural steel similar to that indicated for this project and within 15 percent this project size, with a record of successful in-service performance, as well as sufficient production capacity to fabricate structural steel without delaying the Work.

1. Provide documentation that fabricator has provided material for and erected at least 3 projects within 15 percent of project size and complexity, in the last six years.
2. Allow the Owner’s representative to visit the fabrication plant as required to inspect in place quality control procedures and structural steel fabrication.
3. Fabricator shall be an AISC Certified Building Fabricator (BU) and shall maintain the certification for the duration of the project. Fabricators that are not AISC Certified shall meet the following additional requirements:

a. Demonstrate that the fabricator has in place a quality control program for meeting IBC requirements and compliance with AISC recommendations and standards.
b. At no additional cost to the Owner, provide an independent shop inspection for compliance with IBC, AISC and AWS recommendations and standards. The independent inspection agency shall be different than the testing agency engaged by the Owner.
c. Shop inspection tasks required by AISC 360 to be performed by the fabricator’s quality control personnel, shall be overseen by the independent inspector hired by the fabricator.

d. At completion of fabrication, and prior to erecting steel, submit a certificate of compliance signed and sealed by the third party inspector, stating that the steel fabrication complies with the requirements of the construction documents.
e. Shop drawings shall be signed and sealed by a professional engineer, registered in the local jurisdiction, responsible for the design of the connections. The professional engineer shall carry a minimum of $1,000,000.00 of professional liability insurance.
f. The steel fabricator shall provide field repair details, along with computations, for all required field modifications. The details and calculations shall be signed and sealed by the same professional engineer that certified the shop drawings.

F. Erector: Engage a firm experienced in erecting structural steel similar to that indicated for the project and within 15 percent of this project size, with a record of successful in-service performance.

1. Provide documentation that the erector has erected at least 3 projects within 15 percent of project size and complexity in the last six years.
2. Erector shall be an AISC Certified Building Steel Erector (CSE) and shall maintain the certification for the duration of the project. Erectors that are not AISC Certified shall meet the following additional requirements:

a. Provide an erection procedure safety document with cover letter, signed and sealed by a professional engineer registered in the State of Maryland, that states the document has been reviewed and is in conformance with erection procedures required by AISC.

G. Design connections not detailed on the drawings under direct supervision of a Professional Engineer experienced in design of this work and licensed in the State of Maryland.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store materials to permit easy access for inspection and identification. Keep steel members off the ground and spaced by using pallets, dunnage, or other supports and spacers. Protect steel members and packaged materials from erosion and deterioration.

1. Store fasteners in a protected place. Clean and re-lubricate bolts and nuts that become dry or rusty before use.
2. Do not store materials on structure in a manner that might cause deterioration, damage, or overload to members or supporting structures. Repair or replace damaged materials or structures as directed.

1.6 COORDINATION

A. Furnish anchorage items to be embedded in or attached to other construction without delaying the Work. Provide setting diagrams, sheet metal templates, instructions, and directions for installation.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Steel angles, Channels and Plates: ASTM A 36/A 36M. ASTM A 572 where plate is noted on plans to have a yield strength of 50 ksi.

B. Steel W Shapes and Tees: ASTM A 992/A 992M.

C. Cold-Formed Structural Tubing: ASTM A 500, Grade C.

D. Pipe: ASTM A 53/A 53M, Grade B, Finish black.

E. Shear Stud Connectors: Made from ASTM A 108 Grade 1015 bars. Headed stud type.

F. Rods: ASTM A 36/A 36M.

G. Structural Bolts and Nuts: Carbon steel, ASTM A 307, Grade A.

H. High-Strength Structural Bolts, Nuts, and Washers: Grade A 325, with matching ASTM A 563 nuts and ASTM F 436 washers; Type 1, medium carbon, plain. Bolts and nuts shall be heavy hex.

I. High Strength Structural Bolts: Grade A 490, with matching ASTM A 563 nuts and ASTM F 436 washers; Type 1 alloy steel. Bolts and nuts shall be heavy hex.

J. Anchor Rods: ASTM F 1554, Grade 36, plain, with matching ASTM A 563 nuts and ASTM F 436 washers.

K. Load Indicator Washers: Provide washers complying with ASTM F 959 at all connections requiring pre-tensioned high-strength bolts.

L. Welding Materials: AWS D1.1; type required for materials being welded.

M. Grout: Non-shrink, non-metallic aggregate type, complying with ASTM C 1107/C 1107M and capable of developing a minimum compressive strength of 7,000 psi at 28 days.

N. Shop and Touch-Up Primer: Type specified in Section 09 91 20, complying with VOC limitations of authorities having jurisdiction.

O. Touch-Up Primer for Galvanized Surfaces: Fabricator’s standard, complying with VOC limitations of authorities having jurisdiction.

P. Recycled Content:

1. Wide-flange shapes, tees, channels and angles: Minimum 90 percent total recycled content including at least 60 percent post-consumer recycled content.
2. Plate and Bars: Minimum 30 percent total recycled content.
3. Cold-Formed Hollow Structural Sections: Minimum 30 percent total recycled content.
4. Pipe: Minimum 30 percent total recycled content.
5. All Other Steel Materials: Minimum 30 percent total recycled content.

Q. Regional Materials: Provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

2.2 FABRICATION

A. Shop fabricate to the greatest extent possible.

B. Develop required camber for members.

C. Thermal Cutting: Perform thermal cutting by machine to greatest extent possible.

1. Plane thermally cut edges to be welded to comply with requirements of AWS D1.1.

D. Bolt Holes: Drill or punch standard bolt holes perpendicular to metal surfaces.

E. Finishing: Accurately finish ends of columns and other members transmitting bearing loads.

2.3 FINISH

A. Shop prime structural steel members. Do not prime surfaces that will be fireproofed, field welded, in contact with concrete, or high strength bolted with slip-critical connections.

B. Surface preparation: SSPC-SP2: “Hand Tool Cleaning” or SSPC-SP3, “Power Tool Cleaning”.

1. Refer to Division 9 for preparation of surfaces that are to receive coatings other than shop primer.

C. Provide a dry film thickness of not less than 1.5 mil.

D. Galvanize structural steel members to comply with ASTM A 123/A 123M. Provide minimum 1.7 oz/sq ft. galvanized coating. Galvanize shelf angles, lintels and hung plates located in exterior walls. Galvanize all exterior steel.

2.4 SOURCE QUALITY CONTROL

A. An independent testing agency will perform source quality control tests, as specified in Division 1. Inspection services shall conform to Section 1705.2 of the 2021 IBC Code, the quality assurance inspection requirements of AISC 360 and the Statement of Special inspections noted in the structural drawings.

B. High-Strength Bolts: Provide testing and verification of all shop-bolted connections in accordance with AISC “Specification for Structural Joints Using Grade A 325 or A 490 Bolts”.

1. Pre-tensioned and slip-critical bolts shall be installed using direct-tension-indicator washer method or twist-off type tension control bolt method.

C. Welded Connections: Visually inspect all shop-welded connections and test all full penetration welds using ultrasonic testing performed in accordance with ASTM E 164.

1. Inspect all joint preparations for complete joint penetration welds and verify compliance with welding procedure specification requirements.

PART 3 - EXECUTION

3.1 ERECTION

A. Erect structural steel in compliance with AISC “Code of Standard Practice for Steel Buildings and Bridges”.

B. Allow for erection loads, and provide sufficient temporary bracing to maintain structure in safe condition, plumb, and in true alignment until completion of erection and installation of permanent bracing.

C. Field weld components indicated on shop drawings.

D. Shear Connectors: Prepare steel surfaces as recommended by manufacturer of shear connectors. Use automatic end welding of headed-stud shear connectors according to AWS D1.1 and manufacturer's written instructions.

E. Use carbon steel bolts only for temporary bracing during construction, unless otherwise specifically permitted on drawings. Install high-strength bolts in accordance with AISC "Specification for Structural Joints Using Grade A 325 or A 490 Bolts".

F. Do not field cut or alter structural members without the approval of the Architect.

G. After erection, prime welds, abrasions, and surfaces not shop primed or galvanized, except surfaces to be in contact with concrete and surfaces that will be fireproofed. Repair damaged galvanized coatings with galvanized repair paint.

H. Grout solidly between column plates and bearing surfaces, complying with manufacturer's instructions for non-shrink grout. Trowel grouted surfaces smooth, splaying neatly to 45 degrees.

3.2 TOLERANCES

A. Maintain erection tolerances of structural steel and architecturally exposed structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges".

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspection services shall conform to Section 1705.2 of the 2021 IBC Code, the quality assurance inspection requirements of AISC 360 and the Statement of Special Inspections noted in the structural drawings.

B. High-Strength Bolts: Provide testing and verification of all field-bolted connections in accordance with AISC "Specification for Structural Joints Using Grade A 325 or A 490 Bolts".

1. Pre-tensioned and slip-critical bolts shall be installed using direct-tension-indicator washer method or twist-off type tension control bolt method.

C. Welded Connections: Visually inspect all field-welded connections and test all full penetration welds using ultrasonic testing performed in accordance with ASTM E 164.

1. Inspect all joint preparations for complete joint penetration welds and verify compliance with welding procedure specification requirements.

D. In addition to visual inspection, field-welded shear connectors shall be tested and inspected according to the requirements of AWS D1.1 for stud welding.

E. Correct deficiencies in work that inspections indicate does not comply with the specified requirements.

END OF SECTION 05 12 00

SECTION 05 21 00 – STEEL JOIST FRAMING

1.1 SECTION INCLUDES

A. Open web steel joists, with bridging, attached seats and anchors.

B. Loose bearing members, such as plates and anchor bolts for site placement.

C. Joist accessories.

1.2 REFERENCE STANDARDS

A. AISC S348 – Specification for Structural Joints Using Grade A 325 or A 490 bolts.

B. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.

C. ASTM F 3125 – Standard Specification for High Strength Bolts and Assemblies, Steel and Allow Steel, Heat Treated, Inch Dimensions 120 ksi and 150 ksi Minimum Tensile Strength

D. ASTM E 94 – Standard Guide for Radiographic Examination.

E. ASTM E 164 – Standard Practice for Ultrasonic Contact Examination of Weldments.

F. ASTM E 165 – Standard Test Method for Liquid Penetrant Examination.

G. ASTM E 709 – Standard Guide for Magnetic Particle Examination.

H. AWS D1.1/D1.1M – Structural Welding Code – Steel; American Welding Society.

I. SJI (SPEC) – Catalog of Standard Specifications and Load Tables for Steel Joists and Joist Girders; Steel Joist Institute.

J. SSPC-SP 2 – Hand Tool Cleaning; Society for Protective Coating.

K. IBC 2021 – International Building Code.

1.3 SPECIAL JOISTS

A. Design special joists to withstand design loads indicated with live load deflection no greater than L/360 of the span.

1.4 SUBMITTALS

A. See Section 01 30 00 – Administrative requirements for submittal procedures.

B. Shop Drawings: Show layout, designation, number, type, location, and spacing of joists. Include joining and anchorage details, bracing, bridging, joist accessories, splice and connection locations and details; and attachments to other construction.

1. Indicate locations and details of bearing plates to be embedded in other construction.

2. Comprehensive engineering analysis of special joists signed and sealed by the qualified professional engineer licensed in the State of Maryland who is responsible for its preparation.

C. Welding Certificates.

D. Manufacturer's Certificates: Signed by manufacturers certifying that joists comply with requirements.

E. Manufacturer's Mill Certificates: Signed by bolt manufacturers certifying that bolts comply with requirements.

F. Sustainable Design Submittal: Refer to Division 01 Section, "Sustainable Design Requirements."

1. Accurately document the use of recycled materials and local/regional materials.
2. MR Credit 2: BPDO – Environmental Product Declarations.

a. Steel: Product-specific declaration or Industry-wide EPD or product-specific EPD.

3. MR Credit 3: BPDO – Sourcing of raw materials.

a. Recycled steel content: Documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include material cost value.
b. Regionally sourced steel: Documentation indicating locations of recovery, manufacture, purchase or recycled raw materials.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: A manufacturer certified by SJI to manufacture joists complying with applicable specifications and load tables of SJI "Specifications".

1. Manufacturer's responsibilities include providing professional engineering services for designing special joists to comply with performance requirements.

B. SJI Specifications: Comply with standard specification in SJI's "Specifications" that are applicable to types of joists indicated.

C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M "Structural Welding Code – Steel".

PART 2 - PRODUCTS

2.1 MATERIALS

A. Open Web Joists: SJI Type K and KCS Joists:

1. Provide bottom and top chord extensions as indicated.
2. Finish: Shop primed.

B. Open Web Joists: SJI Type LH and DLH Joists:

1. Provide bottom and top chord extensions as indicated.

2. Finish: Shop primed.

C. Steel: Comply with SJI's Specifications for web and angle chord members.

D. High-Strength Bolts, Nuts, and Washers: Grade A 325, Type 1, heavy hex steel bolts with ASTM A 563 heavy hex nuts and ASTM F 436 washers; plain.

E. Structural Steel for Supplementary Framing: ASTM A 36/A 36M.

F. Welding Materials: AWS D1.1; type required for materials being welded.

G. Shop and Touch-Up Primer: Type specified in Section 09 91 20, complying with VOC limitations of authorities having jurisdiction.

H. Recycled Content:

1. Channels and Angles: Minimum 90 percent total recycled content including at least 60 percent post-consumer recycled content.
2. Plate and Bars: Minimum 30 percent total recycled content.
3. All Other Steel Materials: Minimum 30 percent total recycled content.

I. Regional Materials: Provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

2.2 FABRICATION

A. Manufacture steel joists to meet SJI's "Specifications", with steel angle top and bottom- chord members; of joist type and end and top-chord arrangements as indicated.

B. Comply with AWS requirements and procedures for shop welding, appearance, quality of welds, and methods used in correcting welding work.

C. Provide holes in chord members for connecting and securing other construction to joists.

D. Camber steel joists according to SJI's "Specifications".

E. Equip bearing ends of joists with manufacturer's standard beveled ends or sloped shoes if joist slope exceeds ¼ inch per twelve inches.

F. Bridging: Provide bridging anchors and number of rows of horizontal and diagonal bridging of material, size, and type required by SJI's "Specifications" for type of joist, chord size, spacing, and span. Provide additional erection bridging if required for stability and where indicated on the Drawings.

G. Fabricate steel bearing plates with integral anchorages of sizes and thicknesses indicated. Shop prime paint.

H. Supply ceiling extensions, either extended bottom-chord elements or a separate extension unit of enough strength to support ceiling construction. Extend ends to within ½ inch of finished wall surface unless otherwise indicated.

I. Supply miscellaneous accessories, including splice plates and bolts required by joist manufacturer to complete joist installation.

2.3 FINISH

A. Prepare surfaces to be finished in accordance with SSPC-SP 2.

B. Apply shop primer to joists and joist accessories to provide a continuous dry paint film not less than 2 mil thick; apply two coats of shop primer if necessary to meet specified dry film thickness.

PART 3 - EXECUTION

3.1 ERECTION

A. Erect joists with correct bearing on supports.

B. Allow for erection loads. Provide sufficient temporary bracing to maintain framing safe, plumb, and in true alignment.

C. After joist alignment and installation of framing, field weld joist seats to steel bearing surfaces.

D. Coordinate placement of anchors in concrete and masonry construction for securing bearing plates.

E. Position and field weld joist chord extensions and wall attachments as detailed.

F. Do not permit erection of decking until joists are braced, bridged, and secured or until completion of erection and installation of permanent bridging and bracing.

G. Do not field cut or alter structural members without approval of joist manufacturer.

H. After erection, prime welds and damaged shop primer, except surfaces specified not to be primed.

3.2 TOLERANCES

A. Maximum Variation From Plumb: ¼ inch.

B. Maximum Offset From True Alignment: ¼ inch.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspection services shall conform to Section 1705.2 of the 2021 IBC Code and the Statement of Special Inspections noted in the structural drawings.

B. High-Strength Bolts: Provide testing and verification of all field-bolted connections in accordance with AISC “Specification for Structural Joists Using Grade A 325 or A 490 Bolts”.

C. Welded Connections: Visually inspect all field-welded connections and test 100 percent of full-penetration welds using ultrasonic testing performed in accordance with ASTM E 164.

D. Correct deficiencies in work that inspections indicate are not in compliance with specified requirements.

END OF SECTION 05 21 00

SECTION 05 31 00 – STEEL DECKING

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Roof deck.

B. Composite floor deck.

C. Supplementary framing for openings up to and including 12 inches.

D. Bearing plates and angles.

E. Stud shear connectors.

1.2 REFERENCE STANDARDS

A. ASTM A 36/A 36M – Standard Specification for Carbon Structural Steel.

B. ASTM A 108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.

C. ASTM A 653/A 653M – Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

D. ASTM A 1008/A 1008M – Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low Alloy, and High-Strength Low-Alloy with Improved Formability, Solution Hardened, and Bake Hardened.

E. AWS D1.1/D1.1M – Structural Welding Code – Steel; American Welding Society.

F. AWS D1.3 – Structural Welding Code – Sheet Steel, American Welding Society.

G. SDI (DM) – Publication No. 31, Design Manual for Composite Decks, Form Decks, Roof Decks; Steel Deck Institute.

H. SSPC-Paint 20 – Zinc-Rich Primers (Type I, “Inorganic”, and Type II “Organic”); The Society for Protective Coatings.

1.3 SUBMITTALS

A. See Section 01 30 00 – Administrative Requirements, for submittals procedures.

B. Shop Drawings: Indicate deck plan, support locations, anchorage details, projections, openings, reinforcement, cellular raceways and outlet box locations, pertinent details, and accessories.

C. Product Data: Provide deck profile characteristics, dimensions, structural properties, and finishes.

D. Certificates: Certify that products furnished meet or exceed specified requirements.

E. Welders Certificates: Certify welders employed on the Work are certified to perform welding according to AWS requirements with AWS 1.3 qualification within the previous twelve months.

F. Sustainable Design Submittal: Refer to Division 01 Section, “Sustainable Design Requirements.”

1. Accurately document the use of recycled materials and local/regional materials.
2. MR Credit 2: BPDO – Environmental Product Declarations.

a. Steel: Product-specific declaration or Industry-wide EPD or product-specific EPD.

3. MR Credit 3: BPDO – Sourcing of raw materials.

a. Recycled steel content: Documentation indicating percentages by weight of pre-consumer and post-consumer recycled content. Include material cost value.
b. Regionally sourced steel: Documentation indicating locations of recovery, manufacture, purchase or recycled raw materials.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Company specializing in performing the work of this Section with minimum of 5 years of documented experience.

1.5 DELIVERY, STORAGE AND HANDLING

A. Cut plastic wrap to encourage ventilation.

B. Separate sheets and store deck on dry wood sleepers, slope for positive drainage.

PART 2 - PRODUCTS

2.1 STEEL DECK

A. Roof Deck: Non-composite type, fluted steel sheet.

1. Galvanized Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), with G60/Z180 galvanized coating.

a. Grade 40.

B. Canopy Roof Deck: Non-composite type, dovetail steel sheet

1. Galvanized Steel Sheet: ASTM A 653/A 653M, Structural Steel (SS), with G60/Z180 galvanized coating.

a. Grade 40.

b. Basis of Design: New Millenium Versa-Dek 2.0 S ES

C. Composite Floor Deck: Fluted steel sheet embossed to interlock with concrete.

1. Galvanized Steel Sheet: ASTM A 653/A 653M, Designation SS, with G60/Z180 galvanized coating.

    a. Grade 40.

2.2 ACCESSORY MATERIALS

A. Bearing Plates and Angles: ASTM A 36/A 36M steel.

B. Stud Shear Connectors: Made from ASTM A 108/A 108M Grade 1015 bars.

C. Welding Materials: AWS D1.1.

D. Fasteners: Galvanized hardened steel, self tapping screws, No. 10 minimum.

E. Weld Washers: Mild steel, uncoated, ¾ inch outside diameter, 1/8 inch thick.

F. Shop and Touch-Up Primer: Type specified in Section 09 91 20, complying with VOC limitations of authorities having jurisdiction.

G. Touch-Up Primer for Galvanized Surfaces: SSPC-Paint 20, complying with VOC limitations of authorities having jurisdiction.

H. Flute Closures: Closed cell foam rubber, 1 inch thick; profiled to fit tight to the deck.

2.3 FABRICATED DECK ACCESSORIES

A. Sheet Metal Deck Accessories: Metal closure strips, wet concrete stops, and cover plates, 20 gage minimum thick sheet steel; of profile and size as indicated; material and finish same as deck.

B. Cant Strips: Formed sheet steel, 16 gage thick, 45 degree slope, 3½ inch nominal width and height, flange for attachment.

2.4 Recycled Content: Provide steel with minimum 50 percent total recycled content including at least 25 percent post-consumer recycled content.

2.5 Regional Materials: Provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify existing conditions prior to beginning work.

3.2 INSTALLATION

A. Erect metal deck in accordance with SDI Design Manual and manufacturer’s instructions. Align and level.

B. Place deck panels on supporting frame and adjust to final position with ends accurately aligned and bearing on supporting frame before permanently fastening.

C. Provide additional reinforcement and closure pieces at openings as required for strength, continuity of deck and support of other work.

D. Weld deck in accordance with AWS D1.3.

E. Where deck changes direction, install 6 inch minimum wide sheet steel cover plates, of same thickness as deck. Fusion weld 12 inches on center maximum.

F. At floor edges, install concrete stops upturned to top surface of slab, to contain wet concrete. Provide stops of sufficient strength to remain stationary without distortion.

G. At openings between deck and walls, columns, and openings, provide sheet steel closures and angle flashings to close openings.

H. Close openings above walls and partitions perpendicular to deck flutes with single row of foam cell closures.

I. Place metal cant strips in position and field weld.

J. Weld stud shear connectors through steel deck to structural members below.

K. Immediately after welding deck and other metal components in position, coat welds, burned areas, and damaged surface coating, with touch-up primer.

3.3 ROOF DECK INSTALLATION

A. Fasten roof deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated or arc seam welds with an equal perimeter that is not less than 1½ inches long, and as follows:

1. Weld Diameter: 3/4 inch, nominal.
2. Weld Spacing: Weld edge ribs of panel at each support; space additional welds at 12” o.c. and as indicated on Drawings.

B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of 1/2 of the span or 36 inches, and as indicated on Drawings.

1. Mechanically fasten with self-drilling, No.10 diameter or larger, carbon-steel screws.
2. Fasten with a minimum of 1½ inch-long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1½ inches, with end joints lapped 2 inches minimum.

3.4 FLOOR DECK INSTALLATION

A. Fasten floor-deck panels to steel supporting members by arc spot (puddle) welds of the surface diameter indicated and as follows:

1. Weld Diameter: 3/4 inch, nominal.
2. Weld Spacing: Weld edge ribs of panel at each support and at 12” on center.

B. Side-lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports, at intervals not exceeding the lesser of half of the span or 36 inches, and as indicated on Drawings.

1. Fasten with a minimum of 1½ inch long welds.

C. End Bearing: Install deck ends over supporting frame with a minimum end bearing of 1½ inches, with end joints butted.

3.5 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspection services shall conform to Section 1705.2 of the 2021 IBC Code and the Statement of Special Inspections noted in the structural drawings.

B. Inspection shall include, but not be limited to, deck alignment, support, welds, side lap attachments and touch-up galvanizing.

C. Remove and replace work that does not comply with specified requirements.

END OF SECTION 05 31 00

SECTION 05 40 00 - COLD-FORMED METAL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Exterior non-load-bearing wall framing.
2. Interior non-load bearing wall framing.
3. Suspension systems for interior gypsum board ceilings and soffits.

B. Related Sections include the following:

1. Division 05 Section "Metal Fabrications" for miscellaneous steel shapes, masonry shelf angles, and connections used with cold-formed metal framing.
2. Division 07 Section "Thermal Insulation" for insulation installed in exterior wall framing.
3. Division 09 Section "Gypsum Board Shaft-Wall Assemblies" for interior non-load-bearing, metal-stud-framed, shaft-wall assemblies.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of cold-formed metal framing product and accessory indicated.

B. LEED Submittals: Comply with Section 018113.
1. MR Credit 2: Environmental Product Declarations
   a. Cold-formed metal framing
2. MR Credit 3: Sourcing of Raw Materials
   a. Recycled content: Steel. Provide material cost values.
   b. Regionally sourced recycled content: Steel
3. MR Credit 4: Material Ingredients
   a. Report: Steel, if available

C. Shop Drawings:

1. Include layout, spacings, sizes, thicknesses, and types of cold-formed steel framing; fabrication; and fastening and anchorage details, including mechanical fasteners.
2. Indicate reinforcing channels, opening framing, supplemental framing, strapping, bracing, bridging, splices, accessories, connection details, and attachment to adjoining work.
3. Indicate component details, framed openings, bearing, anchorage, loading, welds, type and location of fasteners, and accessories or items required of related work.

D. Delegated-Design Submittal: Provide details, shop drawings and calculations stamped by a Professional Structural Engineer licensed in the State of Maryland.

1.4 INFORMATIONAL SUBMITTALS

A. Welding certificates.

B. Product Certificates: For each type of code-compliance certification for studs and tracks.

C. Product Test Reports: For each listed product, for tests performed by a qualified testing agency.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips.
7. Miscellaneous structural clips and accessories.
8. 14 Gauge Rigid Connection Clips

D. Research/Evaluation Reports: For cold-formed metal framing.

1.5 QUALITY ASSURANCE

A. Engineering Responsibility: Preparation of Shop Drawings, design calculations, and other structural data by a qualified professional engineer.

B. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in jurisdiction where Project is located and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.

A. Testing Agency Qualifications: Qualified according to ASTM E329 for testing indicated.

B. Product Tests: Mill certificates or data from a qualified independent testing agency indicating steel sheet complies with requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, and metallic-coating thickness.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

D. AISI Specifications and Standards: Comply with AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members" and its "Standard for Cold-Formed Steel Framing - General Provisions."

1. Comply with AISI's "Standard for Cold-Formed Steel Framing - Header Design."
2. Maintain one copy of document on project site.

1.6 MOCKUPS

A. Include cold-formed metal framing in integrated exterior mockup that will be used to demonstrate perform preconstruction testing and to set quality standards for materials and installation. See Division 01 Section "Mockups" for additional construction requirements.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect cold-formed metal framing from corrosion, deformation, and other damage during delivery, storage, and handling.

B. Store cold-formed metal framing, protect with a waterproof covering, and ventilate to avoid condensation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering cold-formed metal framing that may be incorporated into the Work include, but are not limited to, the following:

1. ClarkDietrich.
2. Marino\WARE.
3. National Gypsum Co.; Gold Bond Building Products Division.

B. Recycled Content: Provide steel with at least 25 percent post-consumer recycled content.

C. Regional Materials: If necessary to meet required LEED threshold, provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

2.2 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design cold-formed steel framing.

B. Structural Performance: Provide cold-formed metal framing capable of withstanding design loads within limits and under conditions indicated.

1. Design Loads: Axial and lateral load bearing elements shall be designed to the following conditions unless more stringent requirements are imposed by governing code; these requirements take precedent when more stringent than governing code.
   a. Gravity Loads: Per ASCE 7-2016.
   b. Wind and Seismic Loads: Per ASCE 7-2016.

2. Deflection Limits: Design framing systems to withstand design loads without deflections greater than the following:
   a. Backing of Masonry Veneer and Stone: 1:600 of span.
   b. Other Systems: 1:240 of span.

3. Design framing systems to provide for movement of framing members located outside the insulated building envelope without damage or overstressing, sheathing failure, connection failure, undue strain on fasteners and anchors, or other detrimental effects when subject to a maximum ambient temperature change of 120 deg F.
4. Design to AISI SG-973 Cold-Formed Steel Design Manual.
5. Design to provide for movement of components without damage, failure of joint seals, undue stress on fasteners, or other detrimental effects when subject to seasonal or cyclic day/night temperature ranges.
6. Design to meet loading and anchorage requirements for window systems and curtainwall system based on calculations provided by the respective subcontractors.
7. Seismic Loads: Design and size components to withstand seismic loads and sway displacement as in accordance with IBC code.
8. Design framing system to maintain clearances at openings, to allow for construction tolerances, and to accommodate live load deflection of primary building structure as follows:

    a. Upward and downward movement of 1 inch.

9. Design exterior non-load-bearing wall framing to accommodate horizontal deflection without regard for contribution of sheathing materials.
10. Interior Non-Load-Bearing Wall Framing: Steel framing / studs shall be of a configuration and gage to provide sufficient stiffness, as controlled by the maximum allowable horizontal deflection of L/360 of the wall height under a horizontal load of 10 lbf/sq. ft. in all areas (U.N.O.).
11. Soffit / Ceiling Framing: Vertical deflection of 1/360 of the horizontally projected span for live load and 1/240 for total loads in all areas.

C. Cold-Formed Steel Framing Standards: Unless more stringent requirements are indicated, framing shall comply with AISI S100, AISI S200, and the following:

1. Floor and Roof Systems: AISI S210.
2. Wall Studs: AISI S211.
3. Headers: AISI S212.
4. Lateral Design: AISI S213.

2.3 MATERIALS

A. Recycled Content: Provide steel with at least 25 percent post-consumer recycled content.

B. Regional Materials: If necessary to meet required LEED threshold, provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

C. Steel Sheet: ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: ST33H or as required by structural performance.
2. Coating: G90.

D. Steel Sheet for Vertical Deflection clips: ASTM A 653/A 653M, structural steel, zinc coated, of grade and coating as follows:

1. Grade: As required by structural performance.

2. Coating: G90.

E. Steel studs 18 gauge and lighter components: Fabricate components of commercial quality steel sheet (ASTM A446 for galvanized finish) with a minimum yield point of 33,000 psi.

F. Steel studs 16 gauge and heavier components: Fabricate components of structural quality steel sheet (ASTM A446 for galvanized finish) with a minimum yield point of 50,000 psi.

G. Track and bridging components: Fabricate components of commercial quality steel sheet (ASTM A446 for galvanized finish) with a minimum yield point of 33,000 psi.

2.4 EXTERIOR AND INTERIOR NON-LOAD-BEARING WALL FRAMING

A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: 1-5/8 inches.
3. Galvanized Steel Sheet: ASTM A 653/A 653M Structural Steel (SS) with G90/Z275 hot-dipped galvanized coating.
4. Gage and depth: As indicated on the drawings and as required to meet specified performance levels.
5. Grade: As indicated on drawings.

B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: 1-1/4 inches.
3. Galvanized Steel Sheet: ASTM A 653/A 653M Structural Steel (SS) with G90/Z275 hot-dipped galvanized coating.
4. Gage and depth: As indicated on the drawings and as required to meet specified performance levels.
5. Grade: As indicated on drawings.

C. Vertical Deflection Clips: Manufacturer's standard head clips, capable of accommodating upward and downward vertical displacement of primary structure through positive mechanical attachment to stud web.

D. Single Deflection Track: Manufacturer's single, deep-leg, U-shaped steel track; unpunched, with unstiffened flanges, of web depth to contain studs while allowing free vertical movement, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure, and as follows:

1. Minimum Base-Metal Thickness: 0.0538 inch.
2. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications,

E. Double Deflection Tracks: Manufacturer's double, deep-leg, U-shaped steel tracks, consisting of nested inner and outer tracks; unpunched, with unstiffened flanges.

1. Outer Track: Of web depth to allow free vertical movement of inner track, with flanges designed to support horizontal and lateral loads and transfer them to the primary structure, and as follows:

    a. Minimum Base-Metal Thickness: 0.0538 inch.
    b. Flange Width: 1 inch plus the design gap for one-story structures and 1 inch plus twice the design gap for other applications,

2. Inner Track: Of web depth indicated, and as follows:

    a. Minimum Base-Metal Thickness: 0.0538 inch.
    b. Flange Width: Sum of outer deflection track flange width plus 1 inch.

F. Drift Clips: Manufacturer's standard bypass or head clips, capable of isolating wall stud from upward and downward vertical displacement and lateral drift of primary structure through positive mechanical attachment to stud web and structure.

G. 14 Gauge Rigid Connection Clip: Manufacturer’s rigid framing clip used to attach exterior wall studs to the structure of the building. Designed to transfer horizontal and vertical loads, the extended rigid clips install easily with screws, powder-actuated fasteners, or welds. This clip is ideal for all medium and large standoff conditions.

2.5 FRAMING ACCESSORIES

A. Fabricate steel-framing accessories from steel sheet, ASTM A 1003/A 1003M, Structural Grade, Type H, metallic coated, of same grade and coating weight used for framing members.

B. Provide accessories of manufacturer's standard thickness and configuration, unless otherwise indicated, as follows:

1. Supplementary framing.
2. Bracing, bridging, and solid blocking.
3. Web stiffeners.
4. Anchor clips.
5. End clips.
6. Foundation clips.
7. Gusset plates.
8. Stud kickers and knee braces.
9. Joist hangers and end closures.
10. Hole-reinforcing plates.
11. Backer plates.

2.6 ANCHORS, CLIPS, AND FASTENERS

A. Steel Shapes and Clips: ASTM A 36/A 36M, zinc coated by hot-dip process according to ASTM A 123/A 123M.

B. Anchor Bolts: ASTM F 1554, Grade 36, threaded carbon-steel hex-headed bolts and carbon-steel nuts; and flat, hardened-steel washers; zinc coated by hot-dip process according to ASTM A 153/A 153M, Class C.

C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.

E. Mechanical Fasteners: ASTM C 1513, corrosion-resistant-coated, self-drilling, self-tapping steel drill screws.

1. Head Type: Low-profile head beneath sheathing, manufacturer's standard elsewhere.

F. Welding Electrodes: Comply with AWS standards.

2.7 MISCELLANEOUS MATERIALS

A. Galvanizing Repair Paint: ASTM A780/A780M or SSPC-Paint 20.

B. Cement Grout: Portland cement, ASTM C150/C150M, Type I; and clean, natural sand, ASTM C404. Mix at ratio of 1 part cement to 2-1/2 parts sand, by volume, with minimum water required for placement and hydration.

C. Nonmetallic, Nonshrink Grout: Factory-packaged, nonmetallic, noncorrosive, nonstaining grout, complying with ASTM C1107/C1107M, and with a fluid consistency and 30-minute working time.

D. Shims: Load-bearing, high-density multimonomer, nonleaching plastic.

E. Sill Sealer Gasket: Closed-cell neoprene foam, 1/4 inch thick, selected from manufacturer's standard widths to match width of bottom track or rim track members as required.

2.8 FABRICATION

A. Fabricate cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened, according to referenced AISI's specifications and standards, manufacturer's written instructions, and requirements in this Section.

1. Fabricate framing assemblies using jigs or templates.
2. Cut framing members by sawing or shearing; do not torch cut.
3. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, pneumatic pin fastening, or riveting as standard with fabricator. Wire tying of framing members is not permitted.

    a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
    b. Locate mechanical fasteners and install according to Shop Drawings, with screws penetrating joined members by no fewer than three exposed screw threads.

4. Fasten other materials to cold-formed steel framing by welding, bolting, pneumatic pin fastening, or screw fastening, according to Shop Drawings.

B. Reinforce, stiffen, and brace framing assemblies to withstand handling, delivery, and erection stresses. Lift fabricated assemblies to prevent damage or permanent distortion.

C. Fabrication Tolerances: Fabricate assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Spacing: Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.
2. Squareness: Fabricate each cold-formed metal framing assembly to a maximum out-of-square tolerance of 1/8 inch.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, conditions, and abutting structural framing for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before sprayed fire-resistive materials are applied, attach continuous angles, supplementary framing, or tracks to structural members indicated to receive sprayed fire-resistive materials.

B. After applying sprayed fire-resistive materials, remove only as much of these materials as needed to complete installation of cold-formed framing without reducing thickness of fire-resistive materials below that required to obtain fire-resistance ratings indicated. Protect remaining fire-resistive materials from damage.

C. Install load-bearing shims or grout between the underside of load-bearing wall bottom track and the top of foundation wall or slab at locations with a gap larger than 1/4 inch (6 mm) to ensure a uniform bearing surface on supporting concrete or masonry construction.

D. Install sill sealer gasket at the underside of wall bottom track or rim track and at the top of foundation wall or slab at stud or joist locations.

3.3 INSTALLATION, GENERAL

A. Cold-formed steel framing may be shop or field fabricated for installation, or it may be field assembled.

B. Install cold-formed steel framing according to AISI S200, AISI S202, and manufacturer's written instructions unless more stringent requirements are indicated.

C. Install shop- or field-fabricated, cold-formed framing and securely anchor to supporting structure.

1. Screw, bolt, or weld wall panels at horizontal and vertical junctures to produce flush, even, true-to-line joints with maximum variation in plane and true position between fabricated panels not exceeding 1/16 inch.

D. Install cold-formed steel framing and accessories plumb, square, and true to line, and with connections securely fastened.

1. Cut framing members by sawing or shearing; do not torch cut.
2. Fasten cold-formed steel framing members by welding, screw fastening, clinch fastening, or riveting. Wire tying of framing members is not permitted.

a. Comply with AWS D1.3/D1.3M requirements and procedures for welding, appearance and quality of welds, and methods used in correcting welding work.
b. Locate mechanical fasteners, install according to Shop Drawings, and comply with requirements for spacing, edge distances, and screw penetration.

E. Install framing members in one-piece lengths unless splice connections are indicated for track or tension members.

F. Install temporary bracing and supports to secure framing and support loads equal to those for which structure was designed. Maintain braces and supports in place, undisturbed, until entire integrated supporting structure has been completed and permanent connections to framing are secured.

G. Do not bridge building expansion joints with cold-formed steel framing. Independently frame both sides of joints.

H. Install insulation, specified in Division 07 Section "Thermal Insulation," in built-up exterior framing members, such as headers, sills, boxed joists, and multiple studs at openings, that are inaccessible on completion of framing work.

I. Fasten hole reinforcing plate over web penetrations that exceed size of manufacturer's standard punched openings.

3.4 INSTALLATION OF EXTERIOR AND INTERIOR NON-LOAD BEARING WALL FRAMING

A. Install continuous tracks sized to match studs. Align tracks accurately and securely anchor to supporting structure.

B. Fasten both flanges of studs to top and bottom track, unless otherwise indicated. Space studs as follows:

1. Stud Spacing: 16 inches or as indicated.

C. Set studs plumb, except as needed for diagonal bracing or required for nonplumb walls or warped surfaces and similar requirements.

D. Isolate non-load-bearing steel framing from building structure to prevent transfer of vertical loads while providing lateral support.

1. Install single-leg deflection tracks and anchor to building structure.
2. Install double deep-leg deflection tracks and anchor outer track to building structure.

3. Connect vertical deflection clips to bypassing or infill studs and anchor to building structure.
4. Connect drift clips to cold formed steel framing and anchor to building structure.

E. Install horizontal bridging in wall studs, spaced in rows indicated on Shop Drawings but not more than 48 inches apart. Fasten at each stud intersection.

1. Channel Bridging: Cold-rolled steel channel, welded or mechanically fastened to webs of punched studs.
2. Strap Bridging: Combination of flat, taut, steel sheet straps of width and thickness indicated and stud-track solid blocking of width and thickness to match studs. Fasten flat straps to stud flanges and secure solid blocking to stud webs or flanges.
3. Bar Bridging: Proprietary bridging bars installed according to manufacturer's written instructions.

F. Top Bridging for Single Deflection Track: Install row of horizontal bridging within 12 inches of single deflection track. Install a combination of bridging and stud or stud-track solid blocking of width and thickness matching studs, secured to stud webs or flanges.

1. Install solid blocking at centers indicated on Shop Drawings.

G. Install miscellaneous framing and connections, including stud kickers, web stiffeners, clip angles, continuous angles, anchors, fasteners, and stud girts, to provide a complete and stable wall-framing system.

3.5 INSTALLATION TOLERANCES

A. Install cold-formed steel framing level, plumb, and true to line to a maximum allowable tolerance variation of 1/8 inch in 10 feet and as follows:

1. Space individual framing members no more than plus or minus 1/8 inch from plan location. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

3.6 FIELD QUALITY CONTROL

A. Testing: Engage a qualified independent testing and inspecting agency to perform field tests and inspections and prepare test reports.

B. Field and shop welds will be subject to testing and inspecting.

C. Testing agency will report test results promptly and in writing to Contractor and Architect.

D. Cold-formed steel framing will be considered defective if it does not pass tests and inspections.

E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.7 REPAIRS AND PROTECTION

A. Galvanizing Repairs: Prepare and repair damaged galvanized coatings on fabricated and installed cold-formed steel framing with galvanized repair paint according to ASTM A 780 and manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that cold-formed steel framing is without damage or deterioration at time of Substantial Completion.

END OF SECTION 05 40 00

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:

1. Steel framing and supports for overhead doors.
2. Steel framing and supports for mechanical and electrical equipment.
3. Steel framing and supports for applications where framing and supports are not specified in other Sections.
4. Steel shapes for supporting elevator door sills.
5. Elevator pit sump covers.
6. Miscellaneous steel trim including steel angle corner guards steel edgings.
7. Metal bollards for sally port.
8. Loose bearing and leveling plates for applications where they are not specified in other Sections.
9. Steel pipe and tube railings, removable pipe rail at basement elevator area.
10. Interior Steel Stairs.
11. Metal ladders.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.

C. Related Requirements:

1. Division 03 Section "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.
2. Division 04 Section "Unit Masonry" for installing loose lintels, anchor bolts, and other items built into unit masonry.
3. Division 05 Section "Structural Steel Framing" for steel framing, supports, elevator machine beams, hoist beams, divider beams, door frames, and other steel items attached to the structural-steel framing.
4. Division 05 Section “Decorative Railing Systems”.

1.3 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written instructions to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated

B. LEED Submittals: Comply with Section 018113.
   1. MR Credit 3: Sourcing of Raw Materials
      a. Recycled content: Steel. Provide material cost values.
      b. Regionally sourced recycled content: Steel

C. Shop Drawings: Show fabrication and installation details. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items. Provide Shop Drawings for the following:

   1. Steel framing and supports for overhead doors.
   2. Steel framing and supports for countertops.
   3. Steel framing and supports for mechanical and electrical equipment.
   4. Steel framing and supports for applications where framing and supports are not specified in other Sections.
   5. Steel shapes for supporting elevator door sills.
   6. Elevator pit sump covers.
   7. Miscellaneous steel trim including steel angle corner guards, steel edgings, and, loading-dock edge angles.
   8. Metal bollards.
   9. Loose steel lintels.

D. Delegated-Design Submittal: For ladders, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For professional engineer's experience with providing delegated-design engineering services of the kind indicated, including documentation that engineer is licensed in the jurisdiction in which Project is located.

1.6 QUALITY ASSURANCE

A. Welding Qualifications: Qualify procedures and personnel in accordance with the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."
3. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 014000 "Quality Requirements," and is to cover design components and connections of architectural elements including guardrails, handrails, metal stairs, ladders, and other miscellaneous appurtenances as indicated in the contract drawings. Submit to the Architect / Engineer, for approval, signed and sealed shop drawings prepared by the contractor’s engineer.

B. Structural Performance of Ladders: Provide ladders capable of withstanding the effects of loads and stresses within limits and under conditions specified in ANSI A14.

C. Thermal Movements: For exterior metalwork, allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2.2 METALS

A. Recycled Content: Provide steel with at least 25 percent post-consumer recycled content.

B. Regional Materials: If necessary to meet required LEED threshold, provide steel manufactured and containing recycled raw materials recovered within 100 mile radius of Project Site.

C. Recycled Content: Provide aluminum with recycled content.

D. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

E. Steel Plates, Shapes, and Bars: ASTM A36/A36M.

F. Stainless Steel Sheet, Strip, and Plate: ASTM A240/A240M or ASTM A666, Type 304.

G. Stainless Steel Bars and Shapes: ASTM A276/A276M, Type 304.

H. Rolled-Steel Floor Plate: ASTM A786/A786M, rolled from plate complying with ASTM A36/A36M or ASTM A283/A283M, Grade C or D.

I. Rolled-Stainless Steel Floor Plate: ASTM A793.

J. Steel Tubing: ASTM A500/A500M, cold-formed steel tubing.

K. Steel Pipe: ASTM A53/A53M, Standard Weight (Schedule 40) unless otherwise indicated.

L. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.

M. Cast Iron: Either gray iron, ASTM A48/A48M, or malleable iron, ASTM A47/A47M, unless otherwise indicated.

N. Aluminum Plate and Sheet: ASTM B209 (ASTM B209M), Alloy 6061-T6.

O. Aluminum Extrusions: ASTM B221 (ASTM B221M), Alloy 6063-T6.

P. Aluminum-Alloy Rolled Tread Plate: ASTM B632/B632M, Alloy 6061-T6.

Q. Aluminum Castings: ASTM B26/B26M, Alloy 443.0-F.

R. Nickel Silver Extrusions: ASTM B151/B151M, Alloy UNS No. C74500.

S. Nickel Silver Castings: ASTM B584, Alloy UNS No. C97600 (20 percent leaded nickel bronze).

2.3 FASTENERS

A. General: Unless otherwise indicated, provide Type 304 stainless steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide bronze fasteners for fastening bronze.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A307, Grade A (ASTM F568M, Property Class 4.6); with hex nuts, ASTM A563 (ASTM A563M); and, where indicated, flat washers.

C. Stainless Steel Bolts and Nuts: Regular hexagon-head annealed stainless steel bolts, ASTM F593 (ASTM F738M); with hex nuts, ASTM F594 (ASTM F836M); and, where indicated, flat washers; Alloy Group 1 (A1).

D. Anchor Bolts: ASTM F1554, Grade 36, of dimensions indicated; with nuts, ASTM A563 (ASTM A563M); and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

E. Anchors, General: Capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing in accordance with ASTM E488/E488M, conducted by a qualified independent testing agency.

F. Cast-in-Place Anchors in Concrete: Either threaded or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A47/A47M malleable iron or ASTM A27/A27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F2329/F2329M.

G. Post-Installed Anchors:

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B633 or ASTM F1941/F1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group 1 (A1) stainless steel bolts, ASTM F593 (ASTM F738M), and nuts, ASTM F594 (ASTM F836M).

2.4 METAL TREAD REPLACEMENT

A. Replace existing stairs treads and nosing with new abrasive cast safety threads and nosing
1. Basis of Design: Wooster Alum grit stair tread nosing type 101 or approved equal
   a. Durable outdoor corrosive resistant and anti-slip cast aluminum treads and nosing.
   b. Abrasive with #20 virgin grain aluminum oxide abrasive, integrally cast into the walking surface to a minimum depth of 1/32”.
   c. Concealed type anchors shall be slotted rivet type, integrally cast into the body of the nosing a minimum of 3/8 inch. (Not mushroom type).
   d. Cast metals used shall conform to the following specification: Cast aluminum: No. 43 secondary ingot; low copper content; corrosion resistant.
   e. All cast products shall have shot blasted finish.
   f. Cross hatching and fluting shall be 1/16 inch deep minimum and shall be clean and well defined.
   g. Nosings shall terminate not more than 4" from ends of steps for poured concrete stairs; for concrete filled steel pan stairs, nosings shall be full length of steps less 1/8 inch clearance.

2.5 MISCELLANEOUS MATERIALS

A. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat.

1. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

B. Shop Primer for Galvanized Steel: Primer formulated for exterior use over zinc-coated metal and compatible with finish paint systems indicated.

C. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D1187/D1187M.

E. Shrinkage-Resistant Grout: Factory-packaged, nonmetallic, nonstaining, noncorrosive, nongaseous grout complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

F. Concrete: Comply with requirements in Division 03 Section "Cast-in-Place Concrete" for normal-weight, air-entrained concrete with a minimum 28-day compressive strength of 3000 psi.

2.6 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 1/8 by 1-1/2 inches, with a minimum 6-inch embedment and 2-inch hook, not less than 8 inches from ends and corners of units and 24 inches o.c., unless otherwise indicated.

2.7 STEEL STAIRS

A. Description of Steel Stairs:

1. Fire Stairs: Shop fabricated steel stairs with concrete-filled treads. Steel pipe guardrails with steel pickets and steel pipe handrails as detailed on the drawings. Final assembly and welding in field.

2. Roof Stairs: In accordance with this specification and as detailed on the drawings.

B. Description of Steel Stair Framing:

1. Fabricate stringers of steel channels (Stair N1ST2) or steel plates (Stair N1ST1).

2. Construct platforms of steel channels and plate with steel headers and miscellaneous framing members.

3. If using bolts (Stairs N1ST2 only), fabricate and join so bolts are not exposed on finished surfaces.

4. Where masonry walls support metal stairs, provide temporary supporting struts designed for erecting steel stair components before installing masonry.

5. Metal-Pan Stairs: Form risers, subtread pans, and subplatforms to configurations shown from steel sheet of thickness needed to comply with performance requirements but not less than 0.0677 inch (1.7 mm).

C. Structural Performance of Metal Stairs: Capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved:

1. Treads and Platforms of Metal Stairs: Uniform load of 100 lbf/sq. ft. (4.79 kN/sq. m) or a concentrated load of 300 lbf (1.33 kN) on an area of 4 sq. in. (25.8 sq. cm), in addition to flooring and setting bed, whichever produces the greater stress.

2. Uniform and concentrated loads need not be assumed to act concurrently.

3. Stair Framing: Capable of withstanding stresses resulting from railing loads in addition to loads specified above.

4. Deflection: Limit deflection of treads, platforms, and framing members to L/240 for Fire Stairs.

2.8 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

1. Fabricate units from slotted channel framing where indicated.
2. Furnish inserts for units installed after concrete is placed.

2.9 ELEVATOR PIT SUMP COVERS

A. Fabricate from welded or pressure-locked steel bar grating. Limit openings in gratings to no more than 3/4 inch in least dimension.

B. Provide steel angle supports unless otherwise indicated.

2.10 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize and prime exterior miscellaneous steel trim.

D. Prime miscellaneous steel trim with zinc-rich primer.

2.11 METAL BOLLARDS

A. SEE LA FOR CRASH RATED BOLLARDS ON SITE, This section for other non rated bollards.

B. Fabricate metal bollards from Schedule 80 steel pipe located at the sallyport.

C. Fabricate interior bollards with 3/8-inch-thick, steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for 3/4-inch anchor bolts.

1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.

D. Fabricate internal sleeves for removable bollards from Schedule 80 steel pipe with an OD approximately 1/16 inch less than ID of bollards. Match drill sleeve and bollard for 3/4-inch steel machine bolt.

E. Galvanize and prime exterior steel bollards.

F. Prime steel bollards with zinc-rich primer.

G. Provide safety yellow exterior finishes paint.

H. Provide reflective paint stripe on exterior pf bollard.

2.12 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.

B. Galvanize bearing and leveling plates.

C. Prime plates with zinc-rich primer.

2.13 LOOSE STEEL LINTELS

A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

B. Galvanize and prime loose steel lintels located in exterior walls.

C. Prime loose steel lintels located in exterior walls with zinc-rich primer.

2.14 METAL LADDERS for ROOF HATCH

A. General:
1. Provide in coordination with the specified roof hatches and parapet transitions ladders.
2. Comply with ANSI A14.3, unless otherwise indicated.
3. Space siderails 18 inches apart, unless otherwise indicated.
4. Support each ladder at top and bottom and not more than 48 inches o.c. with welded or bolted brackets, made from same metal as ladder.

B. Steel Ladders:
1. Siderails: Continuous, 1/2-by-2-1/2-inch steel flat bars, with eased edges.
2. Rungs: 3/4-inch- diameter steel bars.
3. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
4. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
5. Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung by a proprietary process.
6. Prime interior ladders, including brackets and fasteners, with zinc-rich primer.

2.15 GENERAL FINISH REQUIREMENTS

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.16 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A153/A153M for steel and iron hardware and with ASTM A123/A123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Preparation for Shop Priming Galvanized Items: After galvanizing, thoroughly clean galvanized surfaces of grease, dirt, oil, flux, and other foreign matter, and treat with metallic phosphate process.

C. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

1. Shop prime with universal shop primer unless zinc-rich primer is indicated.

D. Preparation for Shop Priming: Prepare surfaces to comply with SSPC-SP 3, "Power Tool Cleaning."

E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. Corrosion Protection: Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:

1. Cast Aluminum: Heavy coat of bituminous paint.
2. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLATION OF MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for operable partitions, ceiling hung toilet partitions, and overhead doors securely to, and rigidly brace from, building structure.

3.3 INSTALLATION OF METAL BOLLARDS

A. Anchor bollards in place with concrete footings. Center and align bollards in holes 3 inches above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

B. Fill bollards solidly with concrete, mounding top surface to shed water.

1. Do not fill removable bollards with concrete.

3.4 INSTALLATION OF NOSINGS, TREADS, AND THRESHOLDS

A. Center nosings on tread widths unless otherwise indicated.

B. For nosings embedded in concrete steps or curbs, align nosings flush with riser faces and level with tread surfaces.

C. Seal thresholds exposed to exterior with elastomeric sealant complying with Division 07 Section "Joint Sealants" to provide a watertight installation.

D. Provide for new aluminum nosing and treads at the existing to remain stairs to basement.
1. Exist. Conc. Stair. Remove metal treads, grind, treat conc., rust & prepare concrete to receive new alum. Provide safety tread w/ knarled surface & radius edge (typ). Secure treads to concrete per manufacturer details.

3.5 INSTALLATION OF BEARING AND LEVELING PLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.

B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with shrinkage-resistant grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.6 REPAIRS

A. Touchup Painting:

1. Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

    a. Apply by brush or spray to provide a minimum 2.0-mil dry film thickness.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A780/A780M.

END OF SECTION 05 50 00

SECTION 05 73 00 – DECORATIVE METAL RAILING SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Provide ornamental guardrails and railings where shown on the Drawings, as specified herein, and as needed for a complete and proper installation.

B. Section Includes:

1. Interior railing system for stairs and landings.
2. Exterior railing system for stairs.

C. Similar work is specified as follows:

1. Steel pipe and tube handrails and railing systems not attached to metal stairs or to walls adjacent to metal stairs are specified in Division 5 Section Metal Fabrications.

D. Products Furnished but not Installed under this Section:

1. Cast-in-place anchors, inserts, and similar anchorage devices specified under other sections.

E. Related Documents/Sections: Carefully examine the Contract Documents for requirements which affect work of this Section. Documents and specification sections containing requirements which relate to this Section include, but are not necessarily limited to:

1. General and Supplementary Conditions and sections in Division 1 of these Specifications.
2. Division 3 Section - Cast-In-Place Concrete.

1.3 DEFINITIONS

A. Definitions in ASTM E 985 for railing-related terms apply to this Section.

1.4 PERFORMANCE REQUIREMENTS

A. General: In engineering guardrail and railing systems to withstand structural loads indicated, determine allowable design working stresses of materials based on the following:

1. Cold Formed Structural Steel: ANSI “Specifications for the Design of Cold-Formed Steel Structural Members”.

B. Structural Performance of Guardrails and Railing Systems: Engineer, fabricate, and install guardrails and railing systems to withstand the following structural loads without exceeding the allowable design working stress of the materials for guardrails, railing systems, anchors, and connections. Apply each

load to produce the maximum stress in each of the respective components comprising guardrails and railing systems.

1. Top Rail of Guardrail Systems: Capable of withstanding the following loads applied as indicated:

    a. Concentrated load of 200 lbf (890 N) applied at any point and in any direction.
    b. Uniform load of 50 lbf per linear foot (730 N/m) applied horizontally and concurrently with uniform load of 100 lbf per linear foot (1460 N/m) applied vertically downward.
    c. Concentrated and uniform loads above need not be assumed to act concurrently.

2. Guardrails Not Serving as Top Rails: Capable of withstanding the following loads applied as indicated:

    a. Concentrated load of 200 lbf (890 N) applied at any point and in any direction.
    b. Uniform load of 50 lbf per linear foot (730 N/m) applied in any direction.
    c. Concentrated and uniform loads above need not be assumed to act concurrently.

3. Infill Area of Guardrail Systems: Capable of withstanding a horizontal concentrated load of 200 lbf (890 N) applied to 1 sq. ft. (0.09 sq. m) at any point in the system, including panels, intermediate rails, balusters, or other elements composing the infill area.

    a. Above load need not be assumed to act concurrently with loads on top rails of railing systems in determining stress on guard.

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1.5 SUBMITTALS

A. General:

1. Identify proposed changes, differences, and discrepancies, including verbiage, terms, and definitions, between Contract Documents and submittals.

B. Product Data:

1. For each type of product indicated, submit manufacturer's specifications and other data needed to prove compliance with the specified requirements.

    a. Submit data for mechanically connected guardrails and railing systems, each kind of fitting and paint products.

C. LEED Submittals: Comply with Section 018113.
1. MR Credit 3: Sourcing of Raw Materials
    a. Recycled content: Aluminum, steel. Provide material cost values.

D. Shop Drawings:

1. Submit drawings in sufficient detail to show fabrication, installation, anchorage, and interface of the work of this Section with the work of adjacent trades.

a. Show fabrication and installation of guardrails and railing systems including plans, elevations, sections, details of components, and attachments to other units of Work.
b. For installed guardrails and railing systems indicated to comply with certain design loadings, include structural analysis data sealed and signed by the qualified professional engineer who was responsible for their preparation.

E. Samples:

1. Samples for Initial Selection:

a. Samples in the form of short sections of railing or flat sheet metal samples showing available mechanical finishes.

2. Samples for Verification Purposes:

a. Assembled finished sample of railing system, made from full-size components, including top rail, post, guardrail, and infill. Show finishing of members at intersections.
b. 6-inch-long sections of each distinctly different linear railing member, including guardrails, top rails, posts, and intermediate members.
c. Welded connections.
d. Each different fitting and bracket.

F. Quality Control Submittals:

1. Tests:

a. Product test reports from a qualified independent testing agency evidencing compliance of guardrails and railing systems with requirements based on comprehensive testing of current products.

2. Certificates:

a. Manufacturer's Certificate: Certify that products meet or exceed specified requirements.
b. Welder certificates signed by Contractor certifying that welders comply with requirements specified under "Quality Assurance" article.

3. Qualification Data:

a. Submit data for firms and persons specified under "Quality Assurance" article to demonstrate their capabilities and experience. Include list of completed projects with project name(s), address(es), names of Architect(s) and Owner(s), plus other specified information. This must be approved by the architect.

4. Manufacturer's Instructions:

a. Submit manufacturer's recommended installation procedures which, when reviewed by the Architect, may become the basis for accepting or rejecting actual installation procedures used on the work.

G. Contract Closeout Submittals:

1. Upon completion of this portion of the Work, and as a condition of its acceptance, deliver to the Architect requisite copies of the following:

    a. Project Record Documents.
    b. Operation and Maintenance Data.

1.6 QUALITY ASSURANCE

A. Testing Agency Qualifications: To qualify for acceptance, an independent testing agency must demonstrate to Architect's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.

B. Single-Source Responsibility: Obtain guardrails and railing systems of each type and material from a single manufacturer.

C. Engineer Qualifications: A professional engineer legally authorized to practice in the jurisdiction where Project is located and experienced in providing engineering services of the kind indicated that have resulted in the installation of guardrails and railing systems similar to this Project in material, design, and extent and that have a record of successful in-service performance.

D. Qualifications for Welding Work: Qualify welding procedures and welding operators in accordance with AWS "Qualification" requirements.

1. Provide certification that welders to be employed in work have satisfactorily passed AWS qualification tests (AWS D1.2) and can document a minimum of five years successful experience in aluminum TIG welding.
2. If recertification of welders is required, retesting will be Contractor's responsibility.

1.7 STORAGE

A. Store guardrails and railing systems inside a well-ventilated area, away from uncured concrete and masonry and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.

1.8 PROJECT CONDITIONS

A. Field Measurements: Where guardrails and railings are indicated to fit to other construction, check actual dimensions of other construction by accurate field measurements before fabrication; show recorded measurements on final shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabricating guardrails and railing systems without field measurements. Coordinate other construction to ensure that actual dimensions correspond to guaranteed dimensions.

1.9 SEQUENCING AND SCHEDULING

A. Sequence and coordinate installation of guardrails as follows:

1. Mount guardrails only on completed Work. Do not support guardrails temporarily by any means not satisfying structural performance requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Recycled Content: Provide steel and aluminum components with recycled content.

B. Railings: Subject to compliance with requirements provide railing systems by one but not limited to equals of the follow of the following:

1. Interior Railing System:

a. McNichols Company
9070 Junction Dr. #M
Annapolis Junction, MD 20701-1141
Tel: 1.877.884.4653

2. Expanded Metal Fabric:

a. McNichols Company
9070 Junction Dr. #M
Annapolis Junction, MD 20701-1141
Tel: 1.877.884.4653

2.2 METALS

A. General: Provide metal free from surface blemishes where exposed to view in the finished unit. Exposed-to-view surfaces exhibiting pitting, seam marks, roller marks, stains, discolorations, or other imperfections on finished units are not acceptable.

B. Brackets, Flanges, and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

C. Steel: Provide steel and iron in the form indicated complying with the following requirements:

a. Steel Tubing: Product type (manufacturing method) and other requirements as follows:

1) Cold-Formed Steel Tubing: ASTM A 500, grade as indicated below:
2) Grade A, unless otherwise indicated or required by structural loads.
3) Hot-Formed Steel Tubing: ASTM A 501.
4) Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

b. Steel Tube Posts: 1 ½” x 1 ½”” square steel powder coated in shop.
c. Steel Tube Toprail: 1 ½” x 2” rectangular steel powder coated in shop.

D. Brackets, Flanges, and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.

1. Railing brackets mounted on steel posts: McNichols, stainless steel No. 304.
2. Adapter for Wall Brackets mounted on steel posts; McNichols handrail adapter. Brushed stainless steel No. 304.

E. Ornamental Grade Stainless Steel No. 304 Finish Handrail Mouldings:

1. McNichols 1 ¼" nominal schedule 40 handrail pipe.
2. Ornamental Grade Finish finished and polished by the shop fabricator.
3. Handrail O.D. = 1.660".
4. Provide McNichols Connector pieces to be utilized with shop welded connections.
5. Provide custom welded closed end caps.

2.3 MISCELLANEOUS MATERIALS

A. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by producer of metal to be welded or brazed and as required for color match, strength, corrosion resistance, and compatibility in fabricated items.

2.4 FASTENERS

A. Fasteners for Anchoring Railings to Other Construction: Select fasteners of the type, grade, and class required to produce connections that are suitable for anchoring railing to other types of construction indicated and capable of withstanding design loadings.

1. Provide fasteners fabricated from type 304 or type 316 stainless steel.

B. Interconnecting Railing Components:

1. Provide structural TIG welds.

C. Cast-in-Place and Postinstalled Anchors: Anchors of type indicated below, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry and equal to 4 times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

1. Cast-in-place anchors.

D. For steel railings and fittings, use plated fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.

2.5 PAINT

A. Bituminous Paint: Cold-applied asphalt mastic complying with SSPC-Paint 12, except containing no asbestos fibers.

B. Shop Primers for Steel: Provide primers complying with applicable requirements of Division 9 Section "Painting".

2.6 GROUT AND ANCHORING CEMENT

A. Nonshrink, Nonmetallic Grout: Premixed, factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

B. Products: Subject to compliance with requirements, provide one of the following:

1. B-6 Construction Grout; W. R. Bonsal Co.
2. Euco N-S Grout; Euclid Chemical Co.
3. Masterflow 928 and 713; Master Builders Technologies, Inc.
4. Sonogrout 14; Sonneborn Building Products--ChemRex, Inc.

2.7 FABRICATION

A. Fabricate guardrails and railing systems to comply with requirements indicated for design, dimensions, details, finish, and member sizes, including wall thickness of hollow members, post spacings, and anchorage, but not less than that required to support structural loads.

B. Assemble railing systems and guardrails by use of structural TIG welds (both shop and field).

1. Obtain fusion without undercut or overlap.

a. Bevel edges as required to allow deep penetration.
b. Provide sufficient weld depth on front and back intersecting surfaces to allow welds to be ground smooth and flush for architectural quality appearance and to maintain structural adequacy.

2. Remove welding flux immediately.
3. Finish exposed welds and surfaces so that no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

C. Form changes in direction of railing members as indicated.

D. Ease exposed edges to a radius of approximately 1/32 inch (1 mm), unless otherwise indicated.

E. Close exposed ends of guardrail and railing members with prefabricated end fittings.

F. Provide wall returns at ends of wall-mounted guardrails, unless otherwise indicated. Close ends of returns unless clearance between end of the railing and wall is 1/4 inch (6 mm) or less.

G. Provide internal weep holes at intersections to allow discharge of moisture.

H. Assemble railing systems in shop to the greatest extent possible to minimize field splicing and assembly.

1. Disassemble units only as necessary for shipping and handling limitations.
2. Clearly mark units for reassembly and coordinated installation.

I. Provide brackets, flanges, miscellaneous fittings, and anchors to connect guardrail and railing members to other construction.

J. Provide inserts and other anchorage devices to connect guardrails and railing systems to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by guardrails and railing systems. Coordinate anchorage devices with supporting structure.

K. For steel railings to be radius bends as shown on the drawings.

2.8 FINISHES, GENERAL

A. Comply with NAAMM "Metal Finishes Manual" for recommendations relative to applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering prior to shipment.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one half of the range of approved samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved samples and they are assembled or installed to minimize contrast.

D. Finish: shop primed and painted for interior and exterior paint finish systems.

PART 3 - EXECUTION

3.1 PREPARATION

A. Coordinate setting drawings, diagrams, templates, instructions, and directions for installing anchorages, such as sleeves, concrete inserts, anchor bolts, and miscellaneous items having integral anchors, that are to be embedded in concrete as masonry construction. Coordinate delivery of such items to Project site.

3.2 INSTALLATION, GENERAL

A. Fit field connections accurately together to form tight, hairline joints.

B. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing guardrails and railings. Set guardrails and railings accurately in location, alignment, and elevation, measured from established lines and levels and free from rack.

1. Do not weld, cut, or abrade surfaces of guardrails and railing components that have been coated or finished after fabrication and are intended for field connection by mechanical or other means without further cutting or fitting.
2. Set posts plumb within a tolerance of 1/4 inch in 12 feet (2 mm in 1 m).
3. Align rails so that variations from level for horizontal members and from parallel with rake of steps and ramps for sloping members do not exceed 1/4 inch in 12 feet (2 mm in 1 m).

C. Shop and Field Welding:

1. Assemble railing systems and guardrails by use of structural TIG welds (both shop and field).
2. Obtain fusion without undercut or overlap.

a. Bevel edges as required to allow deep penetration.

b. Provide sufficient weld depth on front and back intersecting surfaces to allow welds to be ground smooth and flush for architectural quality appearance and to maintain structural adequacy.

3. Remove welding flux immediately.
4. Finish exposed welds and surfaces so that no roughness shows after finishing and welded surface matches contours and color of adjoining surfaces.

D. Adjust guardrails and railing systems prior to anchoring to ensure matching alignment at abutting joints. Space posts at interval indicated but not less than that required by structural loads.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing guardrails and railings systems and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components by welding. Cope or butt components to provide 100 percent contact, or use fittings designed for this purpose.

3.4 ATTACHING GUARDRAILS TO WALLS

A. Attach guardrails to wall with wall brackets and end fittings. Provide bracket with 1-1/2-inch (38-mm) clearance from inside face of guardrail and finished wall surface.

B. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

C. Secure wall brackets and wall return fittings to building construction as follows:

3.5 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material.

3.6 PROTECTION

A. Protect finishes of railing systems and guardrails from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at the time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so that no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.

END OF SECTION 05 73 00

SECTION 05 75 00 - DECORATIVE FORMED METAL COLUMN COVERS

PART 1 – GENERAL

1.01 SECTION INCLUDES

A. Interior or Exterior fabrications made of formed metal sheet, secondary supports, and anchors to structure, including:
   1. Factory fabricated column covers.

1.02 RELATED REQUIREMENTS

A. Division 5: Structural Steel

B. Division 5: Cold formed metal framing

C. Division 7: Caulking and sealants

1.03 REFERENCE STANDARDS

A. AAMA 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Aluminum Extrusions and Panels; 2013.

B. ASTM A240/A240M - Standard Specification for Chromium and Chromium-Nickel Stainless Steel Plate, Sheet, and Strip for Pressure Vessels and for General Applications; 2015b.

C. ASTM A449 - Standard Specification for Hex Cap Screws, Bolts and Studs, Steel, Heat Treated, 120/105/90 ksi Minimum Tensile Strength, General Use; 2010.

D. ASTM A480/A480M - Standard Specification for General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plate, Sheet, and Strip; 2015.

E. ASTM A666 - Standard Specification for Annealed or Cold-Worked Austenitic Stainless Steel Sheet, Strip, Plate, and Flat Bar; 2015.

F. ASTM B209 - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate; 2014.

G. ASTM B209M - Standard Specification for Aluminum and Aluminum-Alloy Sheet and Plate [Metric]; 2014.

H. AWS D1.6/D1.6M - Structural Welding Code - Stainless Steel; 2007.

I. NAAMM AMP 500-06 - Metal Finishes Manual; 2006.

1.04 SUBMITTALS

A. See Section 01 30 00 - Administrative Requirements, for submittal procedures.

B. LEED SUBMITTALS:
   1. Product Data for Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating cost for each product having recycled content.
   2. Environmental Product Declaration (EPD): For each product.
   3. Environmental Product Declaration (EPT) submittal.
   4. Health Product Declaration (HPE).

C. Product Data - Sheet Metal Material: Manufacturer's data sheets on each product to be used, including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Specimen warranty.

D. Shop Drawings: Show layout and elevations, dimensions and thickness of panels, connections, details and location of joints, sealants and gaskets, method of anchorage, number of anchors, supports, reinforcement, trim, flashings, and accessories.
1. Differentiate between shop and field fabrication.
2. Indicate substrates and adjacent work with which the fabrications must be coordinated.
3. Include large-scale details of anchorages and connecting elements.
4. Include large-scale details or schematic, exploded or isometric diagrams to fully explain flashing at a scale of not less than 1-1/2 inches per 12 inches (1:10).

E. Selection Samples: For each finish product specified, color chips representing manufacturer's full range of available colors and patterns.

F. Verification Samples: For each finish product specified, minimum size 12 inches (305 mm) square, representing actual product in color and texture.

G. Fabricator's Qualifications.

H. Installer’s Qualifications.

I. Maintenance Data: Care of finishes and warranty requirements.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Company specializing in fabricating products specified in this section.
1. With not less than three years of documented experience.
2. Submit contact names and phone numbers for at least three references connected with successful past projects.

B. Installer Qualifications: Company specializing in performing work of the type specified in this section.
1. With minimum 3 years of documented experience.

C. Mock-Up: Provide a mock-up for evaluation of fabrication workmanship.
1. Locate where directed.
2. Provide products finished as specified.
3. Mock-up may remain as part of the Work.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Deliver products in manufacturer's original, unopened, undamaged containers with identification labels intact.
1. Protect finishes by applying heavy duty removable plastic film during production.
2. Package for protection against transportation damage.
3. Provide markings to identify components consistently with drawings.
4. Exercise care in unloading, storing and installing panels to prevent bending, warping, twisting and surface damage.

B. Store products protected from exposure to harmful weather conditions and at temperature conditions recommended by manufacturer.
1. Store in well ventilated space out of direct sunlight.
2. Protect from moisture and condensation with tarpaulins or other suitable weather tight covering installed to provide ventilation.
3. Store at a slope to ensure positive drainage of any accumulated water.

4. Do not store in any enclosed space where ambient temperature can exceed 120 degrees F (49 degrees C).
5. Avoid contact with any other materials that might cause staining, denting, or other surface damage.

1.07 WARRANTY

A. WORKMANSHIP WARRANTY:

5. Written warranty signed by manufacturer and installer warranting that portions of the work involving metal panels are of good quality, free from defects, and in conformance with the requirements of the Contract Documents. Further guarantee to repair or replace defective work during a two-year period following Substantial Completion of the work.
6. Defective is defined to include failure of the system to meet structural performance requirements and/or permanent deformation resulting from pressures within the design criteria.

B. FINISH WARRANTY:

1. Written warranty signed by manufacturer warranting that the painted finish will not develop excessive fading or excessive non-uniformity of color or shade, and will not crack, pit, peel, corrode, or otherwise fail as a result of defect in materials and workmanship. Further guarantee to repair or replace defective work during a ten-year period following substantial completion of the work. Upon notification of defects within the warranty period, make necessary repairs or replacement at the convenience of the owner.

PART 2 – PRODUCTS

2.01 MANUFACTURERS

A. COLUMN COVER SYSTEMS:

1. Fabricators offering products which may be incorporated in the work, but are not limited to, the following:
   a. Basis of Design: Metalwërks® Metal-Lok Butt Joint Column Covers by Metal Sales & Service Inc. of Kennett Square, Pa 19348 (800-321-7816 or website: www.metalwerksusa.com).
   b. Tech Wall Column Covers by Alply Architectural Building Systems, LLC.Box 538 DeKalb, MS 39328. Tel: 601-743-2493.
   c. Pittcon Industries.
   d. Equal product by an equal manufacturer.

1. Butt Joint Column Covers: Curved or elliptical shaped column covers can be rolled as small as 12 ½" in diameter with a maximum length of 16'. Square and rectangular shape covers can be formed to 13' lengths and widths are restricted only by flat stock availability. Other lengths are available, consult Sales Dept. for limitations. Longer lengths of all column covers are available by adding joints.
   a. Basis of design requires a minimum ¾" gap at the top of the column cover for the keyhole design installation.

2.02 FORMED METAL FABRICATIONS - GENERAL

A. Shop Assembly: Preassemble items to greatest extent possible. Minimize field splices and field assembly. Disassemble only as necessary for transportation and handling. Mark items clearly for assembly and installation.

B. Coordination: Match dimensions and attachment of formed metal items to adjacent construction. Produce integrated assemblies. Closely fit joints; align edges and flat surfaces unless indicated otherwise.

C. Forming: Profiles indicated. Maximize lengths. Fold exposed edges to form hem indicated or ease edges to radius indicated with concealed stiffener. Provide flat, flush surfaces without cracking or grain separation at bends.

D. Reinforcement: Increase metal thickness; use concealed stiffeners, backing materials or both. Provide stretcher leveled standard of flatness and stiffness required to maintain flatness and hold adjacent items in flush alignment.

E. Anchors: Straps, plates and anchors as required to support and anchor items to adjacent construction.

F. Supports: Miscellaneous framing, mounting, clips, sleeves, fasteners and accessories required for installation.

G. Welding and Brazing: Weld or braze joints continuously. Grind, fill or dress to produce smooth, flush, exposed surfaces. Do not discolor metal. Grind smooth, polish, and restore damaged finishes to required condition.

2.03 FACTORY FABRICATED COLUMN COVERS

A. Factory Fabricated Column Covers: Factory fabricated and factory finished, solid metal plate column covers, mechanically fastened to structural support.
   1. Material: Manufacturer's standard aluminum plate.
   2. Aluminum: 0.125 inch (3.18 mm) ASTM B 209 for 3003H-14 or 5005-H32AQ alloys minimum.
   3. Column Section Length: up to 16 feet (4.88 m) between horizontal joints.
   4. Diameter: 1’-2”
   5. Joint Type: Butt Type
   6. Fasteners: Self-drilling; manufacturer's standard stainless steel or cadmium-plated.
   7. Shims: High impact plastic shims will be used to maintain planar surfaces.

2.04 FINISHES

A. Finishes, General: Comply with NAAMM AMP 500-06.
   1. Complete mechanical finishes before fabrication. After fabrication, finish joints, bends, abrasions and surface blemishes to match sheet.
   2. Protect mechanical finishes on exposed surfaces from damage.
   3. Apply organic and anodic finishes to formed metal after fabrication unless otherwise indicated.
   4. Appearance: Limit variations in appearance of adjacent to one-half the range represented in approved samples. Noticeable variations in the same piece are not acceptable. Install components within the range of approved samples to minimize contrast.

B. Aluminum Finishes:
   1. Superior Performing Organic Coatings: AAMA 2605 multiple coat, thermally cured polyvinylidene fluoride system (PVDF).
   2. Fluoropolymer (Three) Coat Coating System: Manufacturer’s standard, thermo-cured system composed of specially formulated inhibitive primer, fluorocarbon color coat, and a

clear fluorocarbon topcoat (applicable with three coat system). Both color coat and (3 coat clear topcoat) shall contain not less than 70% polyvinylidene resin by weight in compliance with AAMA 2605 for testing, performance, and application procedures.

3. Panels shall be chemically etched by an appropriate cleaner in accordance with manufacturer's written instructions.
4. Apply acid resistant primer to cleaned aluminum. Thickness range; 0.20 to 0.30 mils.
5. Apply polyvinylidene fluoride (PVF2) resinated color coat. Thickness range; 0.8 to 1.2 mils.
6. Kynar 500. Must be applied by certified Kynar coater.
7. Apply clear top-coat finish as extra protection, no less then 0.8 mils thick. Comply with AAMA standards.
8. Color: To be selected by Architect from manufacturer's standard range.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify dimensions, tolerances, and interfaces with other work.

B. Verify substrate on-site to determine that conditions are acceptable for product installation in accordance with manufacturer's written instructions.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. Notify Architect in writing of conditions detrimental to proper and timely completion of work. Do not proceed with erection until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Protect adjacent work areas and finish surfaces from damage during installation.

B. Deliver anchorage items to be cast into concrete or built into masonry to appropriate installer(s) together with setting templates.

C. Coat concrete and masonry surfaces that will be in contact with metal surfaces with bituminous coating.

3.03 INSTALLATION - SHEET METAL AND PLATE FABRICATIONS

A. Locate and place decorative formed sheet metal items level and plumb; align with adjacent construction. Cut, drill and fit as required to install.

B. Do not cut or abrade sheet metal finishes that cannot be completely restored in the field. Return such items to manufacturer or fabricator for required alterations and refinishing or provide new items.

C. Use concealed anchorages where possible. Provide washers where needed on bolts or screws to protect metal surfaces and make weather-tight connection.

D. Form tight joints with exposed connections accurately fitted together. Provide reveals and openings for sealants and joint fillers indicated.

E. Corrosion Protection: Apply permanent separation materials on concealed surfaces where metals would otherwise be in direct contact with incompatible substrate materials. Prevent corrosion damage to material and finish.

3.04 INSTALLATION

A. Do not install products that are defective, including warped, bowed, dented, and broken members, and members with damaged finishes.

B. Comply with instructions and recommendations of manufacturer and fabricator, and with approved shop drawings.

C. Install securely allowing for necessary thermal and structural movement; comply with fabricator's instructions for installation of concealed fasteners.

D. Do not handle or tool products during erection in manner that damages finish, decreases strength, or results in visual imperfection or failure in performance. Return component parts that require alteration to shop for re-fabrication, if possible, or for replacement with new parts.

E. Do not form panels in field unless required by fabricator and approved by the Architect; comply with manufacturer's instructions and recommendations for field forming.

F. Separate dissimilar metals; use gasket fasteners, isolation shims, or isolation tape where needed to eliminate possibility of electrolytic action between metals.

G. Where joints are designed for field applied sealant, seal joints completely with specified sealant.

H. Install square, plumb, straight, and true, accurately fitted, with tight joints and intersections maintaining the following installation tolerances:
   1. Variation From Plane or Location: 1/2 inch in 30 feet (12.7 mm in 9.1 m) of length and up to 3/4 inch in 300 feet (19 mm in 91.4 m), maximum.
   2. Deviation of Vertical Member From True Line: 1/8 inch in 25 feet (3.2 mm in 7.6 m) run, maximum.
   3. Deviation of Horizontal Member From True Line: 1/8 inch in 25 feet (3.2 mm in 7.6 m) run, maximum.
   4. Offset From True Alignment Between Two Adjacent Members Abutting End To End, In Line: 1/32 inch (0.8 mm), maximum.

I. Replace damaged products.

3.05 CLEANING

A. Restore finishes damaged during installation and construction period. Return items that cannot be refinished in the field to manufacturer or fabricator. Refinish entire unit or provide new units.

B. Remove protective film after installation of joint sealers, after cleaning of adjacent materials, and immediately prior to completion of work.

C. Remove temporary coverings and protection of adjacent work areas.

D. Clean installed products in accordance with manufacturer's instructions.

3.06 PROTECTION

A. Protect installed products from damage during construction.

END OF SECTION 05 75 00

SECTION 06 10 00 – ROUGH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Wood framing.
2. Wood boards.

1.2 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product indicated.

1. Include data for wood-preservative and fire-retardant treatment from chemical treatment manufacturer and certification by treating plant that materials comply with requirements.
2. Engineered wood products.
3. Boards.
4. Metal framing anchors.
5. Construction adhesives.

B. Material Certificates: For dimension lumber and boards specified to comply with minimum allowable unit stresses.

C. Research/Evaluation Reports: For the following:

1. Treated wood.
2. Engineered wood products.
3. Metal framing anchors.

D. Samples: Provide manufacturer’s full range of stain samples for architect review and approval.

E. LEED Submittals: Comply with Section 01 81 13.

1. MR Credit 3: Sourcing of Raw Materials

a. Certified wood: Plywood, lumber. Provide FSC certificate and invoice with COC number.

2. EQ Credit 2: Low-Emitting Materials

a. For Composite Wood: Certificate stating compliance with CARB or NAF standard.
b. Structural Composite Wood: Certificate stating compliance with applicable standards within section 01 81 13.

1.3 QUALITY ASSURANCE

A. Forest Certification: Provide wood products made from forests certified by an FSC-accredited certification body.

B. Composite wood installed within the building interior: Comply with low-emitting requirements of CARB, NAF or applicable standard in section 01 81 13.

PART 2 - PRODUCTS

2.1 WOOD PRODUCTS, GENERAL

A. Lumber: DOC PS 20 and applicable rules of lumber grading agencies certified by the American Lumber Standards Committee Board of Review.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber indicated, mark grade stamp on end or back of each piece, or omit grade stamp and provide certificates of grade compliance issued by grading agency.
3. Provide dressed lumber, S4S, unless otherwise indicated.
4. Provide dry lumber with 19 percent maximum moisture content at time of dressing for 2-inch nominal (38-mm actual) thickness or less, unless otherwise indicated.

B. Engineered Wood Products: Acceptable to authorities having jurisdiction and for which current model code research or evaluation reports exist that show compliance with building code in effect for Project.

1. Allowable Design Stresses: Meet or exceed those indicated per manufacturer's published values determined from empirical data or by rational engineering analysis and demonstrated by comprehensive testing performed by a qualified independent testing agency.

2.2 FIRE-RETARDANT-TREATED MATERIALS

A. General: Where fire-retardant-treated materials are indicated, provide materials that comply with performance requirements of AWPA C20 (lumber). Identify fire-retardant-treated wood with appropriate classification marking of UL, U.S. Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to authorities having jurisdiction.

1. Current Evaluation/Research Reports: Provide fire-retardant-treated wood for which a current model code evaluation/research report exists that is acceptable to authorities having jurisdiction and that evidences compliance of fire-retardant-treated wood for application indicated.

B. Interior Type A: For interior locations use fire-retardant chemical formulation that produces treated lumber with the following properties under conditions present after installation.

1. No reduction takes place in bending strength, stiffness, and fastener holding capacities below values published by manufacturer of chemical formulation that are based on tests by a qualified independent testing laboratory of treated wood products identical to those indicated for this Project under elevated temperature and humidity conditions simulating installed conditions.
2. No other form of degradation occurs due to acid hydrolysis or other causes related to manufacture and treatment.
3. No corrosion of metal fasteners results from their contact with treated wood.

C. Inspect each piece of treated lumber after drying and discard damaged or defective pieces.

D. Available Products: Subject to compliance with requirements, fire-retardant-treated wood products that may be incorporated in the Work include, but are not limited to, the following:

1. Interior Type A Fire-Retardant-Treated Wood:

a. Dricon, Hickson Corporation.
b. Pyro-Guard, Hoover Treated Wood Products.
c. Flameproof LHC-HTT, Osmose Wood Preserving Co., Inc.

E. Composite wood installed within the building interior: Comply with low-emitting requirements of CARB, NAF or applicable standard in section 01 81 13.

2.3 DIMENSION LUMBER

A. General: Of grades indicated according to the American Lumber Standard Committee National Grading Rule provisions of the grading agency indicated.

2.4 TONGUE AND GROOVE BOARDS

A. Tongue and Groove Exposed Boards: Where boards will be exposed in the finished work, provide the following:

1. Moisture Content: 19 percent maximum, S-DRY or KD-19.
2. Where exposed finish is indicated, provide No. 1 boards per SPIC rules, Select Merchantable Boards per WCLIB rules or No. 2 Common Boards and Better per WWPA rules.
3. Species: Douglas-Fir

B. Board Sizes: Provide sizes indicated.

2.5 ENGINEERED WOOD PRODUCTS

A. General: Provide engineered wood products for which current model code evaluation/research reports exist that are acceptable to authorities having jurisdiction and that evidence compliance for the application indicated with specified requirements and the building code in effect for this project.

B. Glued laminated timbers (glulam): manufactured by end joining individual pieces of dimension lumber or boards together with structural adhesive to create long-length laminations. Long-length laminations are then face bonded together with adhesives to create the desired glulam shape.

1. Size: As indicated on drawings
2. Species: Douglas-Fir
3. Allowable design values determined according to ASTM D 3737. Allowable design stresses:

a. Extreme Fiber Stress in Bending (F_b): 2400 psi
b. Modulus of Elasticity (E): 1,800,000 psi
c. Shear Parallel to Grain (F_v): 265 psi
d. All glulam beams shall be balanced sections.

2.6 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements, specified in this article for material and manufacture.

B. Nails, Wire, Brads and Staples: FS FF-N-105.

C. Wood Screws: ANSI B18.6.1.

D. Lag Bolts: ANSI B18.2.1.

E. Bolts: Steel bolts complying with ASTM A 307, Grade A; with ASTM A 563 hex nuts and where indicated, flat washers.

2.7 METAL FRAMING ANCHORS

A. General: Provide metal framing anchors of type, size, metal, and finish indicated that comply with requirements specified including the following:

1. Current Evaluation/Research Reports: Provide products for which model code evaluation/research reports exist that are acceptable to authorities having jurisdiction and that evidence compliance of metal framing anchors for application indicated with the building code in effect for this project.
2. Allowable Design Loads: Provide products for which manufacturer publishes allowable design loads that are determined from empirical data or by rational engineering analysis and that are demonstrated by comprehensive testing performed by a qualified independent testing laboratory.
3. Products:

a. Simpson.
b. USP.

2.8 MISCELLANEOUS MATERIALS

A. Adhesives for Field Gluing Panels to Framing: Formulation complying with APA AFG-01 that is approved for use with type of construction panel indicated by both adhesive and panel manufacturer.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Discard units of material with defects that impair quality of rough carpentry construction and that are too small to use in fabricating rough carpentry with minimum joints or optimum joint arrangement.

B. Set rough carpentry to required levels and lines, with members plumb and true to line and cut and fitted.

C. Fit rough carpentry to other construction, scribe and cope as required for accurate fit.

D. Securely attach rough carpentry work to substrate by anchoring and fastening as indicated.

E. Use common wire nails, unless otherwise indicated. Use finishing nails for finish work. Select fasteners of size that will not penetrate members where opposite side will be exposed to view of

will receive finish materials. Make tight connections between members. Install fasteners without splitting of wood; pre-drill as required.

3.2 WOOD FRAMING, GENERAL

A. Framing Standard: Comply with AWC “Wood Frame Construction Manual (WFCM)”, unless otherwise indicated.

B. Framing with Engineered Wood Products: Install framing composed of engineered wood products to comply with manufacturer’s directions.

C. Install framing members of size and spacing indicated.

D. Anchor and nail as shown, and to comply with the following:

1. Published requirements of manufacturer of metal framing anchors.
2. “Recommended Nailing Schedule” of referenced framing standard and with ANSI/AWC National Design Specification (NDS) for Wood Construction with Commentary.

E. Do not splice structural members between supports.

3.3 FIELD QUALITY CONTROL

A. An independent testing agency will perform field quality control tests, as specified in Division 1. Inspections shall include, but not be limited to, wood framing and sheathing for member plumbness, alignment, location and connections.

END OF SECTION 06 10 00

SECTION 06 16 00 - SHEATHING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:

1. Wall sheathing.

2. Roof Sheathing Coverboard

B. Related Requirements:

1. Division 06 Section "Rough Carpentry" for plywood backing panels.
2. Division 07 Section "Air Barriers" for air barrier applied over wall sheathing.
3. Division 07 Section "TPO Roofing" for Den's Deck Roof Sheathing.

1.3 PREINSTALLATION MEETINGS Division 07 Section "Air Barriers

A. Preinstallation Conference: Conduct conference at Project site.

1. Review air-barrier and water-resistant glass-mat gypsum sheathing requirements and installation, special details, transitions, mockups, air-leakage testing, protection, and work scheduling that covers air-barrier and water-resistant glass-mat gypsum sheathing.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials and dimensions and include construction and application details.

1. For air-barrier and water-resistant glass-mat gypsum sheathing, include manufacturer's technical data and tested physical and performance properties of products.

B. LEED Submittals - Comply with Section 018113.
1. MR Credit 2: Environmental Product Declarations
   a. Gypsum sheathing, if available
2. MR Credit 3: Sourcing of Raw Materials

a. Recycled content: Gypsum sheathing. Provide material cost values.
b. Certified wood: Wood sheathing. Provide FSC certificate and invoice with COC number.

3. MR Credit 4: Material Ingredients
   a. Report: Gypsum sheathing, if available

4. Material Ingredients: Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.
5. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
   a. Verify particleboard is made without added urea formaldehyde.

1.5 INFORMATIONAL SUBMITTALS

A. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.

B. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.

C. Evaluation Reports: For the following, from ICC-ES:

1.6 QUALITY ASSURANCE

A. Mockups: Refer to Division 07 Section “Air Barriers”

B. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.

C. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Refer to Division 07 Section “Air Barriers”

1.8 DELIVERY, STORAGE, AND HANDLING

A. Stack panels flat with spacers beneath and between each bundle to provide air circulation. Protect sheathing from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

PART 2 - PRODUCTS

2.1 RECYCLED CONTENT

A. Recycled Content: Provide minimum 30 percent recycled content gypsum sheathing.

2.2 WALL SHEATHING

A. Glass-Mat Gypsum Wall Sheathing: ASTM C 1177/1177M.

1. Type and Thickness: Regular, 5/8 inch thick.

2. Basis of Design: Dens Glass.

B. Exterior Grade Plywood

1. Type and Thickness: Pressure Treated, 5/8 inch thick. Pressure treated ½" thick

C. Plywood

1. Type and Thickness: Regular, 5/8 inch thick & ½" thick.

2.3 ROOF SHEATHING COVERBOARD

A. Glass-Mat Gypsum Roofing Coverboard: ASTM E84
1. Type & Thickness: 1/2" thick
2. Basis of Design: DensDeck by GAF or approved equal

2.4 FASTENERS

A. General: Provide fasteners of size and type indicated that comply with requirements specified in this article for material and manufacture.

B. Screws for Fastening Gypsum Sheathing to Cold-Formed Metal Framing: Steel drill screws, in length recommended by sheathing manufacturer for thickness of sheathing to be attached.

1. For steel framing less than 0.0329 inch (0.835 mm) thick, use screws that comply with ASTM C1002.
2. For steel framing from 0.033 to 0.112 inch (0.84 to 2.84 mm) thick, use screws that comply with ASTM C954.

2.5 SHEATHING JOINT-AND-PENETRATION TREATMENT MATERIALS

A. Refer to Division 7 Section "Air Barriers".

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Do not use materials with defects that impair quality of sheathing or pieces that are too small to use with minimum number of joints or optimum joint arrangement. Arrange joints so that pieces do not span between fewer than three support members.

B. Cut panels at penetrations, edges, and other obstructions of work; fit tightly against abutting construction unless otherwise indicated.

C. Securely attach to substrate by fastening as indicated, complying with the following:

1. NES NER-272 for power-driven fasteners.
2. Table 2304.9.1, "Fastening Schedule," in ICC's "International Building Code."
3. ICC-ES evaluation report for fastener.

D. Coordinate wall installation with flashing and joint-sealant installation so these materials are installed in sequence and manner that prevent exterior moisture from passing through completed assembly.

E. Do not bridge building expansion joints; cut and space edges of panels to match spacing of structural support elements.

3.2 GYPSUM SHEATHING INSTALLATION

A. Comply with GA-253 and with manufacturer's written instructions.

1. Fasten gypsum sheathing to wood framing with nails or screws.
2. Fasten gypsum sheathing to cold-formed metal framing with screws.
3. Install panels with a 3/8-inch gap where non-load-bearing construction abuts structural elements.
4. Install panels with a 1/4-inch gap where they abut masonry or similar materials that might retain moisture, to prevent wicking.

B. Apply fasteners so heads bear tightly against face of sheathing, but do not cut into facing.

C. Vertical Installation: Install vertical edges centered over studs. Abut ends and edges with those of adjacent panels. Attach at perimeter and within field of panel to each stud.

1. Space fasteners approximately 8 inches o.c. and set back a minimum of 3/8 inch (9.5 mm) from edges and ends of panels.

3.3 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Laps in strips and transition strips have complied with minimum requirements and have been shingled in the correct direction (or mastic has been applied on exposed edges), with no fishmouths.
3. Termination mastic has been applied on cut edges.
4. Strips and transition strips have been firmly adhered to substrate.
5. Compatible materials have been used.
6. Transitions at changes in direction and structural support at gaps have been provided.
7. Connections between assemblies (sheathing and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
8. All penetrations have been sealed.

B. Air barriers will be considered defective if they do not pass tests and inspections.

C. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

D. Prepare test and inspection reports.

END OF SECTION 06 16 00

SECTION 06 40 23 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Interior standing and running trim.
2. Shop finishing of interior woodwork.
3. Plastic-laminate cabinets.
4. Solid-surfacing-material countertops.
5. Stainless steel countertops and wall covering.
6. Adjustable Wall Shelving Rod
7. Closet Shelving Wire Mould
8. Countertop Supports.
9. Metal Grommets
10. Metal Bike Wall Mount

B. Related Requirements:

1. Division 06 Section "Rough Carpentry" for wood furring, blocking, shims, and hanging strips required for installing interior architectural woodwork that are concealed within other construction before interior architectural woodwork installation.
2. Division 09 Sections “Painting” and “Staining and Transparent Finishing” for field applied finishes.
3. See Temporary Building Phasing drawings for casework and temporary finishing items.

1.3 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that interior architectural woodwork can be supported and installed as indicated.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site. For interior frames, discuss coordination with hardware and access control installers.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.

1. MR Credit 2: Environmental Product Declarations

a. Composite wood and plastic laminate

2. MR Credit 3: Sourcing of Raw Materials

a. Recycled content: Plywood, particleboard, MDF

b. Certified wood: Plywood, particleboard, MDF

3. MR Credit 4: Material Ingredients

a. Report: Composite wood, if available

4. EQ Credit 2: Low-Emitting Materials

a. Products installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range.

1) Paints and Coatings: Include product data stating VOC content in grams per Liter (g/L).
2) Flooring: Wood paneling

b. For Composite Wood: Certificate stating compliance with CARB or NAF standard.

C. Shop Drawings: Show location of each item, dimensioned plans and elevations, large-scale details, attachment devices, and other components.

1. Show details full size.
2. Show locations and sizes of furring, blocking, and hanging strips, including concealed blocking and reinforcement specified in other Sections.
3. Show locations and sizes of cutouts and holes for plumbing fixtures faucets soap dispensers and other items installed in architectural woodwork.
4. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.

D. Samples:

1. Lumber with or for transparent finish, not less than 50 sq. in. or 5 inches wide by 24 inches long, for each species and cut, finished on 1 side and 1 edge.
2. Veneer leaves representative of and selected from flitches to be used for transparent-finished woodwork.
3. Veneer-faced panel products with or for transparent finish, 8 by 10 inches, for each species and cut. Include at least one face-veneer seam and finish as specified.
4. Plastic laminates, 8 by 10 inches, for each type, color, pattern, and surface finish, with 1 sample applied to core material and specified edge material applied to 1 edge.

5. Solid-surfacing materials, 6 inches square.
6. Corner pieces as follows:
   a. Miter joints for standing trim.

7. Exposed cabinet hardware and accessories, one unit for each type and finish.

E. Product Certificates: For each type of product, signed by product manufacturer.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

1.7 QUALITY ASSURANCE

A. Millwork shall be manufactured in accordance with the AWI Standards in the grades hereinafter specified. In event of a dispute as to the quality grades, all parties will call upon an inspection under AWI's inspection procedures and agree to abide by the decision of AWI.

B. Fabricator Qualifications: Shop that employs skilled workers who custom-fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

1. Shop Certification: AWI's Quality Certification Program accredited participant.

C. Installer Qualifications: Fabricator of products.

D. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups for each typical interior architectural woodwork.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Owner specifically approves such deviations by Change Order.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Forest Certification: Provide wood products made from forests certified by an FSC-accredited certification body. All non-FSC wood in assemblies with FSC-certified wood shall meet the FSC Controlled Wood (CW) criteria.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with the Architectural Woodwork Standards, Section 2.

B. Do not deliver interior architectural woodwork until painting and similar finish operations that might damage woodwork have been completed in installation areas.

C. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1.9 FIELD CONDITIONS

A. Environmental Limitations with Humidity Control: Do not deliver or install interior architectural woodwork until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.

B. Field Measurements: Where interior architectural woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being concealed by construction, and indicate measurements on Shop Drawings.

C. Established Dimensions: Where interior architectural woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

1.10 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural woodwork can be supported and installed as indicated.

B. Hardware Coordination: Distribute copies of approved hardware schedule specified in Division 08 Section "Door Hardware (Scheduled by Describing Products)" to fabricator of architectural woodwork; coordinate Shop Drawings and fabrication with hardware requirements.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with requirements of AWI's quality standard for each type of woodwork and quality grade specified, unless otherwise indicated.

B. Wood Species and Cut for Transparent Finish: White Maple, Flat-cut, Clear. Grade: Custom.

C. Wood Products: Comply with the following:
1. Hardboard: AHA A135.4.
2. Medium-Density Fiberboard: ANSI A208.2, Grade MD, made with binder containing no urea formaldehyde.
3. Particleboard: For all wood veneer panels in public spaces or egress corridors: Mat-formed wood particleboard, 45 pound density, complying with AWI 200-G-2. UL approved Class 1 fire retardant treated. ASTM E 84. Thickness: ¾". Flame Spread: 20. Representative Product: Duraflake FR by Weyerhaeuser.
4. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1, made with adhesive containing no urea formaldehyde.
5. Cleats: Veneer faced cleats at panel joints: ¾" Medium Density Fiberboard

D. Thermoset Decorative Panels: Particleboard or medium-density fiberboard finished with thermally fused, melamine-impregnated decorative paper complying with LMA SAT-1.

E. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or, if not indicated, as required by woodwork quality standard.

2.2 ARCHITECTURAL WOODWORK, GENERAL

A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.

1. The Contract Documents contain requirements that are more stringent than the Architectural Woodwork Standards. Comply with Contract Documents and Architectural Woodwork Standards.

2.3 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets, except for items specified in Division 08 Section "Door Hardware (Scheduled by Describing Products)."

B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 170 degrees of opening, self-closing.

1. Grass America; G393.
2. Salice; Series 200.
3. Blum; Clip Top Press-In 71T6580

C. Concealed hinges:

1. Hafele America Co.; A-Form hinge, 45/9.5, opening angle 175 degrees, or approved equal.

D. Magnetic Pressure Catch and Push-in magnetic catches, BHMA A156.9, B03131:

1. Hafele America Co.; black plastic, screw-on, 245.60.307.
2. Cabinet Pulls: Provide the following Bar Pull or approved equal:
    a. Manufacturer: Amerock
    b. Finish: Brushed Stainless Steel
    c. Size: 5” x 3/8”
    d. Number: AME 08279

E. Catches: Roller catches, BHMA A156.9, B03071.

F. Drawer Locks: BHMA A156.11, E07041.

1. Knape and Vogt: 986 lock, or approved equal.
2. Timberline Lock, Ltd.: CB-280, or approved equal.

G. Grommets for Cable Passage through Countertops: 2 1/2-inch(51-mm) OD, Metal, grommets and matching brushed nickel caps with slot for wire passage.

1. Product: Subject to compliance with requirements, provide "PS series" by Doug Mockett & Company, Inc., or approved equal.

H. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

1. Satin Stainless Steel: BHMA 630.

I. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

1. Shelf Support: Hafele #282.04.711, 5mm steel nickel plated, or approved equal.
2. Wall Panel Clips: Monarch Z clips #MFSS, 304 stainless steel – Exterior Clips, or approved equal.
3. Wall Panel Clips: Monarch Z clips #MFTH-624, 6063-T6 aluminum – Interior Clips, or approved equal.
4. Sliding Cabinet Door: European Style Sliding Door Hardware and recessed metal tracks by Rockler, or approved equal.
5. Sliding Glass Doors: E-Z Glide Tracks – Aluminum, shoe, tracks, nylon rollers and pulls by Rockler, or approved equal.

2.4 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Hanging Strips: Softwood or hardwood lumber, kiln dried to less than 15 percent moisture content.

B. Furring, Blocking, Shims, and Hanging Strips: Fire-retardant-treated softwood lumber, kiln dried to less than 15 percent moisture content.

C. Adhesives, General: Do not use adhesives that contain urea formaldehyde.

D. Metal strapping:
1. Provide over drywall substrate at panel joints.
2. Contractor’s option to use Zip-It Wall Anchors.

E. VOC Limits for Installation Adhesives and Glues: Use installation adhesives that comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):
1. Wood Glues: 30 g/L.
2. Contact Adhesive: 250 g/L.

F. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage.

1. Provide metal expansion sleeves or expansion bolts for post-installed anchors.
2. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

G. Installation Adhesive: Product recommended by fabricator for each substrate for secure anchorage.

H. Concealed Countertop Supports:
1. Provide steel concealed brackets by A&M Hardware, Inc. or approved equal.
2. Size: Coordinate with vanity detail for required supporting arm depth.
3. Install bracket within stud wall construction along with wood blocking.

I. Countertop Supports:
1. Provide steel brackets by Mockett or approved equal.
2. Size: Coordinate with vanity detail for required supporting arm depth.
3. Supports should be spaced no more than 16" to 24" apart for optimum performance.
4. Weight capacity: 400 lbs. per pair. Weight capacities valid for installation into studs or concrete only.
5. Finishes: Matte Black
6. Install bracket within stud wall construction along with wood blocking.

J. Coat Hooks:
1. Provide two-prong, chrome finish coat hooks by Maosifang or approved equal.

2.5 FABRICATION, GENERAL

A. Interior Woodwork Grade: Unless otherwise indicated, provide Custom -grade interior woodwork complying with referenced quality standard.

B. Wood Moisture Content: Comply with requirements of referenced quality standard for wood moisture content in relation to ambient relative humidity during fabrication and in installation areas.

C. Fabricate woodwork to dimensions, profiles, and details indicated. Ease edges to radius indicated for the following:

1. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members 3/4 Inch (19 mm) Thick or Less: 1/16 inch (1.5 mm).
2. Corners of Cabinets and Edges of Solid-Wood (Lumber) Members and Rails: 1/16 inch (1.5 mm).

D. Complete fabrication, including assembly, finishing, and hardware application, to maximum extent possible before shipment to Project site. Disassemble components only as necessary for shipment and installation. Where necessary for fitting at site, provide ample allowance for scribing, trimming, and fitting.

1. Notify Architect seven days in advance of the dates and times woodwork fabrication will be complete.
2. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting. Verify that various parts fit as intended and check measurements of assemblies against field measurements indicated on Shop Drawings before disassembling for shipment.

E. Shop-cut openings to maximum extent possible to receive hardware, appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately and use templates or

roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

1. Seal edges of openings in countertops with a coat of varnish.

F. Fill joints or seams between plastic laminate sheets with plastic seam filler.

G. Caulk inside joints of plastic laminate woodwork with colored caulk.

H. Install glass to comply with applicable requirements in Division 08 Section "Glazing" and in GANA's "Glazing Manual." For glass in wood frames, secure glass with removable stops.

2.6 INTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH

A. Grade: Custom.

B. Wood Species and Cut: White Maple, Flat-cut, clear.

C. Backout or groove backs of flat trim members and kerf backs of other wide, flat members, except for members with ends exposed in finished work.

D. Assemble casings in plant except where limitations of access to place of installation require field assembly.

2.7 SHOP FINISHING

A. Grade: Provide finishes of same grades as items to be finished.

B. General: Finish architectural woodwork at fabrication shop as specified in this Section. Defer only final touchup, cleaning, and polishing until after installation.

C. General: Shop finish transparent-finished interior architectural woodwork at fabrication shop as specified in this Section. Refer to Division 09 painting Sections for finishing opaque-finished architectural woodwork.

D. General: Drawings indicate items that are required to be shop finished. Finish such items at fabrication shop as specified in this Section. Refer to Division 09 painting Sections for finishing architectural woodwork not indicated to be shop finished.

E. Shop Priming: Shop apply the prime coat including back-priming, if any, for transparent-finished items specified to be field finished. Refer to Division 09 painting Sections for material and application requirements.

F. Preparation for Finishing: Comply with referenced quality standard for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing architectural woodwork, as applicable to each unit of work.

1. Back-priming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of woodwork. Apply two coats to back of paneling and to end-grain surfaces. Concealed surfaces of plastic-laminate-clad woodwork do not require back-

priming when surfaced with plastic laminate, backing paper, or thermoset decorative panels.

G. Transparent Finish:

1. Grade: Premium.
2. AWI Finish System 5 (previously #TR-4) Conversion varnish.
3. Flame Spread: Class A, Class 1 finish fire rating.
4. Staining: Match approved sample for color.
5. Wash Coat for Stained Finish: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
6. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.
7. Filled Finish for Open-Grain Woods: After staining (if any), apply paste wood filler to open-grain woods and wipe off excess. Tint filler to match stained wood.
   a. Apply wash-coat sealer after staining and before filling.
8. Sheen: Satin, 31-45 gloss units measured on 60-degree gloss meter per ASTM D 523.

2.8 PLASTIC-LAMINATE CABINETS

A. Grade: Custom.

B. AWI Type of Cabinet Construction: Flush overlay.

C. Laminate Cladding for Exposed Surfaces: High-pressure decorative laminate complying with the following requirements:

1. Horizontal Surfaces Other Than Tops: Grade HGS.
2. Vertical Surfaces: Grade HGS.
3. Edges: Grade HGS.

D. Materials for Semi-exposed Surfaces:

1. Surfaces Other Than Drawer Bodies: Thermoset decorative panels.
   a. For semi-exposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, Grade VGS.

2. Drawer Sides and Backs: Thermoset decorative panels.
3. Drawer Bottoms: Thermoset decorative panels.

E. Concealed Backs of Panels with Exposed Plastic Laminate Surfaces: High-pressure decorative laminate, Grade BKL.

F. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. As indicated by laminate manufacturer's designations.

G. Provide dust panels of 1/4-inch plywood or tempered hardboard above compartments and drawers, unless located directly under tops.

H. Schedule of Solid-Surfacing Materials:

PLAM-1
Manufacturer: Wilsonart
Color: Huntington Maple
Number: 7929-38
Finish: Fine Velvet Finish
Installation: Casework w/SSM-1 Countertops
Location: 004.1 Kitchenette, 209 Breakroom, 009 Wellness Lounge, 228, 229, 230 Locker Rooms

PLAM-2
Manufacturer: Wilsonart
Color: Frosty White
Number: 1753-60
Finish: Matte Finish
Installation: Restroom Sink Supports
Location: 125, 126 Public, 215.1 Captain's, 112, 130, 222 Staff Restrooms, 111, 227 Wellness

PLAM-3
Manufacturer: Wilsonart
Color: Misted Zephyr
Number: 4843-60
Finish: Matte Finish
Installation: Casework w/SSM-4 Countertops
Location: Typical Casework, 100 Community Room, 128 Reception

2.9 SOLID-SURFACING-MATERIAL COUNTERTOPS

A. Grade: Custom.

B. Solid-Surfacing-Material Thickness: 3/4 inch.

C. Colors, Patterns, and Finishes: Provide materials and products that result in colors of solid-surfacing material complying with the following requirements:

1. As indicated by manufacturer's designations.

D. Fabricate tops in one piece, unless otherwise indicated. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.

1. Fabricate tops with loose backsplashes for field application.

E. Drill holes in countertops for plumbing fittings and soap dispensers in shop.

F. Schedule of Solid-Surfacing Materials:

SSM-1
Manufacturer: Corian
Color: Designer White
Installation: Counter tops

Location: 004.1 Kitchenette, 209 Breakroom, 009 Wellness Lounge, 228, 229, 230 Locker Rooms

SSM-2
Manufacturer: Wilsonart
Color: Peace Grey
Installation: Counter tops
Location: 112, 130, 222 Staff Restrooms, 111, 227 Wellness , typical window sills.

SSM-3
Manufacturer: Corian
Color: Venetia Cream Leathered
Installation: Counter tops
Location: 125, 126 Public, 215.1 Captain's Restrooms

SSM-4
Manufacturer: Corian
Color: Carbon Concrete
Installation: Counter tops
Location: Typical Casework, 100 Community Room

2.10 STAINLESS STEEL COUNTERTOPS

A. Stainless Steel Countertop
1. Description: Fabricate units of stainless steel, Type 304, 16 gauge thick.
2. Stainless Steel Sheet: ASTM A240/A240M, austenitic stainless steel, type as indicated.
3. Stainless Steel Finish: Directional satin finish, ASTM A480/A480M, No. 4.
4. Fabricate countertop in one piece, unless otherwise indicated.
5. Square edge 1 ½" height, front edge.
6. Countertop Ends: hemmed and seam welded to square front edge.
7. Integral stainless steel, see drawings for dimension, under counter sink in countertop where shown (Gun Cleaning Room)
8. Backsplash: (ref. drawings) H. x 3/4" D. square edge stainless steel integral with countertop, with seamed closed ends.
9. Backer: (2) layers of moisture-resistant MDF.
10. Location: Gun Cleaning Room Rm 116, Processing Area Rm 137, Intox Rm 139.

2.11 RIGID VINYL WALL PANEL

A. Rigid Vinyl Wall Panel
1. Manufacture of Rigid Sheet Vinyl: Inpro Architectural Produces or approved equal
   a. Basis of Design: Palladium Rigid sheet .060" (1.5mm) thickness.
   b. Color: Graystone 0151
   c. OR approved equal having a matt grey vinyl finish
2. Description: Fabricate out of seamless surface and single panel, composed of a single sheet of Rigid Vinyl. Provide edge banding, and 6" perimeter cover on back/ mounting side of substrate panel
3. Bond to with MFG's recommended adhesive to a ¾" MDF panel.
4. Mount to CMU wall with concealed heavy duty 2" aluminum French cleats

2.12 ADJUSTABLE WALL SHELVING ROD: COAT HANGER AND ROD

A. Product: Heavy-Duty Single Slot Flanged Bracket System with PLAM Shelves.
   1. Basis of Design: Knape & Voigt 1195 Series Commercial Heavy-duty Closet rod and shelf bracket, with Closet-Pro HD RP0020 Adjustable Closet Rod, Chrome & 12 qty 2038 Series commercial garment hooks.
      a. Or approved equal.

B. Shelf Material: PLAM-1 ON MDF PANEL CUT TO SIZE

C. Size: 12 inch deep. Provide for width of the closet back wall.

D. Color: Chrome brackets

E. Adjustable: Vertically Adjustable to in 1” increments.

F. Mounting: Surface wall mounted.

G. Miscellaneous Material: Provide solid wood blocking behind wall brackets.

2.13 CLOSET WIRE MOULD SHELVING

A. Product: Wire shelving, by Closet Maid; SR shelf, or approved equal.
   1. Shelf Material: Vinyl coated steel
   2. Size: 12 inch deep x 2 inch height.
   3. Color: White
   4. Hardware: Support brackets, side wall clips, closet rod end caps, wall clips #12 wall anchors and #12 x2 inch pan head screws.
   5. Mounting: Surface wall mounted.
   6. Miscellaneous Material: Provide solid wood blocking behind wall brackets.
   7. Locations: Provide in all Closets in plans where noted.

2.14 WOOD AND ACRYLIC BROCHURE DISPLAY

A. Product: Wall mounted oak & acrylic racks constructed with solid oak sides and center dividers, and genuine oak veneer backs. Clear acrylic front panels hold literature neatly in place. Pockets are 2” deep x 9” wide for magazines, or 4-1/4" wide when divided for trifold brochures.
   1. Basis of Design: Wooden Mallet.com **AC34-12** - 12 Pocket Wall Display in Light Oak with 12 AC - DIV
      a. LM-16 from Magazine Racks Online.com
      b. WMLM12MO (three tiered) from Displays2GO.com
      c. Or approved equal.

B. Material: Solid Oak sides and veneer back with clear acrylic dividers

C. Size: 39-3/4”W 36-3/8”H 2-7/8”D - 2” deep pockets I 39 lbs. I 12 Magazines or 24 Brochure pockets

D. Color: Light Oak stained finish

E. Adjustable: Removable dividers - *included* - let you display 4” wide brochures, or 8-1/2”x11” magazines or literature

F. Mounting: Surface wall mounted. Predrilled, with mounting hardware. GC to provide for blocking

G. Miscellaneous Material: Provide solid wood blocking behind wall brackets.

H. Locations: Lobby

2.15 METAL BIKE WALL MOUNT

A. Provide vertical wall mount metal bike mounts in the Police Bike Room.

B. Basis of Design: Classic MTB Rack by Steadyrack or equal.

C. Swivel feature

PART 3 - EXECUTION

3.1 PREPARATION

A. Before installation, condition interior architectural woodwork to humidity conditions in installation areas for not less than 72 hours prior to beginning of installation.

B. Before installing interior architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming of concealed surfaces.

3.2 INSTALLATION

A. Grade: Install woodwork to comply with requirements for the same grade specified in Part 2 for fabrication of type of woodwork involved.

B. Assemble woodwork and complete fabrication at Project site to comply with requirements for fabrication in Part 2, to extent that it was not completed in the shop.

C. Install woodwork level, plumb, true, and straight. Shim as required with concealed shims. Install level and plumb (including tops) to a tolerance of 1/8 inch in 96 inches.

D. Scribe and cut woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Fire-Retardant-Treated Wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.

F. Anchor woodwork to anchors or blocking built in or directly attached to substrates. Secure with countersunk, concealed fasteners and blind nailing as required for complete installation. Use

fine finishing nails for exposed fastening, countersunk and filled flush with woodwork and matching final finish if transparent finish is indicated.

G. Standing and Running Trim: Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible. Do not use pieces less than 96-inches (2400 mm) long, except where shorter single-length pieces are necessary.

1. Fill gaps, if any, between top of base and wall with plastic wood filler, sand smooth, and finish same as wood base if finished.
2. Install wall railings on indicated metal brackets securely fastened to wall framing.
3. Install standing and running trim with no more variation from a straight line than 1/8 inch in 96 inches.

H. Paneling: Anchor paneling to supporting substrate with concealed panel-hanger clips. Do not use face fastening, unless covered by trim.

1. Install flush paneling with no more than 1/16 inch in 96-inch vertical cup or bow and 1/8 inch in 96-inch horizontal variation from a true plane.

I. Cabinets: Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.

1. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
2. Maintain veneer sequence matching of cabinets with transparent finish, for wood cabinets.
3. Fasten wall cabinets through back, near top and bottom, at ends and not more than 16 inches(400 mm) o.c. with No. 10 wafer-head screws sized for 1-inch(25-mm) penetration into wood framing, blocking, or hanging strips .

J. Countertops: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.

1. Align adjacent solid-surfacing material countertops and form seams to comply with manufacturer's written recommendations using adhesive in color to match countertop. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
2. Install countertops with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
3. Secure backsplashes to tops with concealed metal brackets at 16 inches(400 mm) o.c. and to walls with adhesive.
4. Seal seams between plastic laminate panels and between top and backsplash with plastic seam filler.
5. Caulk space between backsplash and wall with colored caulk.

K. Touch up finishing work specified in this Section after installation of woodwork. Fill nail holes with matching filler where exposed.

3.3 ADJUSTING AND CLEANING

A. Repair damaged and defective woodwork, where possible, to eliminate functional and visual defects; where not possible to repair, replace woodwork. Adjust joinery for uniform appearance.

B. Clean, lubricate, and adjust hardware.

C. Clean woodwork on exposed and semi-exposed surfaces. Touch up shop-applied finishes to restore damaged or soiled areas.

END OF SECTION 06 40 23

SECTION 07 13 26 - SELF-ADHERING SHEET WATERPROOFING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management’s general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:

1. Modified bituminous sheet waterproofing.
2. Molded-sheet drainage panels.

B. Related Requirements:

1. Division 7 Section “Thermal Insulation” for insulation.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review waterproofing requirements including surface preparation, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, testing and inspection procedures, and protection and repairs.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, and tested physical and performance properties of waterproofing.
2. Include manufacturer's written instructions for evaluating, preparing, and treating substrate.

B. Shop Drawings: Show locations and extent of waterproofing and details of substrate joints and cracks, expansion joints, sheet flashings, penetrations, inside and outside corners, tie-ins with adjoining waterproofing, and other termination conditions.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranties: For special warranties.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by waterproofing manufacturers.

B. Mockups: Build mockups to verify selections made under Sample submittals and to set quality standards for installation.

1. Build for each typical waterproofing installation including accessories to demonstrate surface preparation, crack and joint treatments, inside and outside corner treatments, and protection.

a. Size: Per Mockup Panel.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended in writing by waterproofing manufacturer. Do not apply waterproofing to damp or wet substrate.

1. Do not apply waterproofing in snow, rain, fog, or mist.

B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.8 WARRANTY

A. Manufacturer's Warranty:

1. Waterproofing Warranty: Manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.

a. Warranty Period: **5** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Waterproofing System: Obtain waterproofing materials, protection course, and molded-sheet drainage panels from single source from single manufacturer.

2.2 MODIFIED BITUMINOUS SHEET WATERPROOFING

A. Modified Bituminous Sheet Waterproofing: Minimum 60-mil (nominal thickness, self-adhering sheet consisting of 56 mils of rubberized asphalt laminated on one side to a 4-mil-thick, polyethylene-film reinforcement, and with release liner on adhesive side.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. GCP Applied Technologies (formerly W.R. Grace); Bituthene 3000. Basis of Design.
b. Henry Company; Blueskin WP 100/200.
c. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRI 860/861.
d. Meadows, W. R., Inc.; SealTight Mel-Rol.

2. Physical Properties:

a. Tensile Strength, Membrane: 250 psi minimum; ASTM D412, Die C, modified.
b. Ultimate Elongation: 300 percent minimum; ASTM D412, Die C, modified.
c. Low-Temperature Flexibility: Pass at minus 20 deg F; ASTM D1970/D1970M.
d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch movement; ASTM C836/C836M.
e. Puncture Resistance: 40 lbf minimum; ASTM E154/E154M.
f. Water Absorption: 0.2 percent weight-gain maximum after 48-hour immersion at 70 deg F; ASTM D570.
g. Water Vapor Permeance: 0.05 perm maximum; ASTM E96/E96M, Water Method.
h. Hydrostatic-Head Resistance: 200 feet minimum; ASTM D5385.

3. Sheet Strips: Self-adhering, rubberized-asphalt strips of same material and thickness as sheet waterproofing.

2.3 AUXILIARY MATERIALS

A. Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

B. Primer: Liquid primer recommended for substrate by sheet waterproofing material manufacturer.

C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by sheet waterproofing material manufacturer.

D. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, of trowel grade or low viscosity.

E. Substrate Patching Membrane: Low-viscosity, two-component, modified asphalt coating.

F. Metal Termination Bars: Type 304 Stainless stee bars, approximately 1 by 1/8 inch, predrilled at 9-inch centers.

2.4 MOLDED-SHEET DRAINAGE PANELS

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel without Polymeric Film: Composite subsurface drainage panel acceptable to waterproofing manufacturer and consisting of a studded, nonbiodegradable, molded-plastic-sheet drainage core; with a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 sieve laminated to one side of the core, without a polymeric film bonded to the other side; and with a vertical flow rate through the core of 9 to 21 gpm per ft.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. Grace, W. R., & Co. - Conn.; Hydroduct 220 (Vertical) Hydroduct 660 (Horizontal)
   b. Carlisle Coatings & Waterproofing Inc.; CCW MiraDRAIN 6000,CCW MiraDRAIN 6000XL, CCW MiraDRAIN 6200 or CCW MiraDRAIN 6200XL.

2.5 INSULATION

A. Insulation: Comply with Division 07 Section "Thermal Insulation" for below grade insulation.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of waterproofing.

1. Verify that concrete has cured and aged for minimum time period recommended in writing by waterproofing manufacturer.
2. Verify that substrate is visibly dry and within the moisture limits recommended in writing by manufacturer. Test for capillary moisture by plastic sheet method according to ASTM D4263.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing applications.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections.

E. Fill form tie holes, honeycomb, aggregate pockets, holes, and other voids.

F. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D4258.

G. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips of widths according to manufacturer's written instructions.

H. Corners: Prepare, prime, and treat inside and outside corners in accordance with manufacturer's instructions.

I. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions.

3.3 INSTALLATION OF MODIFIED BITUMINOUS SHEET WATERPROOFING

A. Install modified bituminous sheets according to waterproofing manufacturer's written instructions.

B. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch-minimum lap widths and end laps. Overlap and seal seams, and stagger end laps to ensure watertight installation.

1. When ambient and substrate temperatures range between 25 and 40 deg F, install self-adhering, modified bituminous sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F.

D. Apply continuous sheets over already-installed sheet strips, bridging substrate cracks, construction, and contraction joints.

E. Seal edges of sheet waterproofing terminations with mastic.

F. Install sheet waterproofing and auxiliary materials to tie into adjacent waterproofing.

G. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheet waterproofing extending 6 inches beyond repaired areas in all directions.

H. Immediately install drainage panels over waterproofing membrane.

3.4 INSTALLATION OF MOLDED-SHEET DRAINAGE PANELS

A. Place and secure molded-sheet drainage panels, with geotextile facing away from wall or deck substrate, according to manufacturer's written instructions. Use adhesive or another method that does not penetrate waterproofing. Lap edges and ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

1. For vertical applications, install board insulation after installing drainage panels.

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Contractor will engage a qualified testing agency to perform tests, and to furnish reports to Architect.

B. Manufacturer's Field Service: Engage a site representative qualified by waterproofing membrane manufacturer to inspect substrate conditions, surface preparation, membrane application, flashings, protection, and drainage components; and to furnish daily reports to Architect.

3.6 PROTECTION, REPAIR, AND CLEANING

A. Protect waterproofing from damage and wear during remainder of construction period.

B. Protect installed insulation and drainage panels from damage due to UV light, harmful weather exposures, physical abuse, and other causes. Provide temporary coverings where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

C. Correct deficiencies in or remove waterproofing that does not comply with requirements; repair substrates, reapply waterproofing, and repair sheet flashings.

D. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

END OF SECTION 07 13 26

SECTION 07 21 00 – THERMAL INSULATION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:
1. Mineral-wool blanket insulation
2. Mineral-wool blanket insulation (Acoustic)
3. Extruded-Polystyrene (XPS) Board Insulation for walls
4. Extruded-Polystyrene (XPS) Board Insulation for underslab
5. Spray polyurethane foam insulation.
6. Division 07 ROOF & DECK INSULATION for polyisocyanurate roof insulation

B. Related Sections:
1. Division 07 Section "TPO Roofing" for insulation specified as part of roofing construction.
2. Division 07 Section "Vapor Retarders".
3. Division 07 Section "Fire-Resistive Joint Systems" for insulation installed as part of a perimeter fire-resistive joint system.
4. Division 06 Section "Sheathing"

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals: Comply with Section 018113.
1. MR Credit 2: Environmental Product Declarations
   a. Insulation
2. MR Credit 3: Sourcing of Raw Materials
   a. Recycled content: Insulation. Provide material cost values.
   b. Bio-based: Insulation
3. MR Credit 4: Material Ingredients
   a. Report: Insulation, if available
4. EQ Credit 2: Low-Emitting Materials
   a. Insulation installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range. Provide material cost values.

5. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicating postconsumer and preconsumer recycled content and cost.
6. Verify adhesives have a VOC content of **70** g/L or less. For adhesives, indicating compliance with requirements for low-emitting materials.
7. Laboratory Test Reports: For insulation, indicating compliance with requirements for low-emitting materials.

1.4 QUALITY ASSURANCE

A. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings from an applicable testing agency.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.

B. Protect foam-plastic board insulation as follows:

1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 - PRODUCTS

2.1 RECYCLED CONTENT

A. Recycled Content: Provide mineral wool insulation with minimum 75 percent recycled content; provide polystyrene insulation with minimum 20 percent recycled content; provide glass fiber insulation with minimum 20 percent recycled content.

B. Bio-based Materials: Insulation with bio-based material per ASTM Test Method D6866 that is legally harvested and meeting the Sustainable Agriculture Network’s Sustainable Agriculture Standard.

C. Thermal and acoustic insulation installed within the building interior: Comply with emissions requirements of CDPH Standard Test Method in Section 018113.

2.2 MINERAL-WOOL BATT INSULATION

A. Mineral-Wool Batt Insulation, Unfaced: ASTM C665, Type I (batts without membrane facing); consisting of fibers; passing ASTM E136 for combustion characteristics.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Rockwool.; Comfortbatt.
    b. Owens Corning; Thermafiber UltraBatt
    c. Johns Manville; TempControl.

2. Thickness: 6-inch.
3. R-Value: R-14.
4. Facing: Unfaced
5. Flame-Spread Index: Not more than 5 when tested in accordance with ASTM E84.
6. Smoke-Developed Index: Not more than 5 when tested in accordance with ASTM E84.
7. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.3 MINERAL-WOOL BLANKET INSULATION (Acoustic)

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Fibrex Insulations Inc.
2. Owens Corning.
3. Roxul Inc.
4. Thermafiber.

B. Unfaced, Mineral-Wool Blanket Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.

2.4 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION FOR WALLS

A. Extruded-Polystyrene (XPS) Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

    a. Owens Corning; Foamular NGX Thermapink XPS. (Basis of Design)
    b. Dupont: Styrofoam Cavitymate Ultra
    c. Or Equal

2. Compressive Strength:
    a. Horizontal Applications: Minimum 40psi
    b. Vertical Applications: Minimum 25psi

3. Thickness: 3-inch as shown on details
4. Thermal Resistance: Meet R-Values per drawings.
5. Size: 48 by 96 inches.
6. Edge: Shiplap.
7. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84 - Class A

8. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
9. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.5 EXTRUDED POLYSTYRENE FOAM-PLASTIC BOARD INSULATION FOR BELOW GRADE

A. Extruded-Polystyrene (XPS) Board Insulation: ASTM C 578, of type and minimum compressive strength indicated below.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. Owens Corning; Foamular NGX 250 XPS.
   b. Dupont: Styrofoam Cavitymate Ultra

2. Compressive Strength:

   a. Horizontal applications: Minimum 40-psi (Type XIV).
   b. Vertical Applications: Minimum 25-psi (Type IV).

3. Thickness: 3-inch as shown on details
4. Thermal Resistance: Meet R-Values per drawings.
5. Size: 48 by 96 inches.
6. Edge: Shiplap.
7. Flame-Spread Index: Not more than 25 when tested in accordance with ASTM E84 - Class A
8. Smoke-Developed Index: Not more than 450 when tested in accordance with ASTM E84.
9. Labeling: Provide identification of mark indicating R-value of each piece of insulation 12 inches and wider in width.

2.6 SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84 for insulating around penetrations in exterior walls.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

   a. BASF Corporation.
   b. BaySystems NorthAmerica, LLC.
   c. Dow Chemical Company (The).
   d. ERSystems, Inc.
   e. Gaco Western Inc.
   f. Henry Company.
   g. NCFI; Division of Barnhardt Mfg. Co.
   h. SWD Urethane Company.
   i. Volatile Free, Inc.

2. Minimum density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F (43 K x m/W at 24 deg C).

2.7 INSULATION FASTENERS

A. Fasteners: Manufacturer’s standard for attachment to approved substrate.

2.8 ACCESSORIES

A. General: As recommended by manufacturer for intended use and compatibility with other components.

B. Insulation for Miscellaneous Voids:

1. Glass-Fiber Insulation: ASTM C764, Type II, loose fill; with maximum flame-spread and smoke-developed indexes of 5, per ASTM E84.
2. Spray Polyurethane Foam Insulation: ASTM C1029, Type II, closed cell, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E84.

C. Adhesive for Bonding Insulation: Product compatible with insulation and air and water barrier materials, and with demonstrated capability to bond insulation securely to substrates without damaging insulation and substrates.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to insulation, including removing projections capable of puncturing insulation or vapor retarders, or that interfere with insulation attachment.

3.2 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Install insulation with manufacturer's R-value label exposed after insulation is installed.

D. Extend insulation to envelop entire area to be insulated. Fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

E. Provide sizes to fit applications and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units unless multiple layers are otherwise shown or required to make up total thickness or to achieve R-value.

3.3 INSTALLATION OF XPS BOARD INSULATION ON BELOW GRADE WALLS

A. Butt panels together for tight fit.

B. Install board insulation after installing drainage panels.

C. Adhesive Installation: Install with adhesive according to manufacturer's written instructions.

3.4 INSTALLATION OF CAVITY-WALL INSULATION

A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately 24 inches o.c. both ways on inside face, and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates.

3.5 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Foam-Plastic Board Insulation: Seal joints between units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.

C. Glass-Fiber or Mineral-Wool Blanket Insulation: Install in cavities formed by framing members according to the following requirements:

1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
3. Maintain 3-inch (76-mm) clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
4. For wood-framed construction, install blankets according to ASTM C 1320 and as follows:

    a. With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.

5. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings and seal each continuous area of insulation to ensure airtight installation.

    a. Exterior Walls: Set units with facing placed toward interior of construction.

D. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:

1. Loose-Fill Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft.

2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

3.6 INSTALLATION OF INSULATION IN CEILINGS FOR SOUND ATTENUATION

A. Where insulation blankets are indicated for sound attenuation above ceilings, install blanket insulation over entire ceiling area in thicknesses indicated.

3.7 PROTECTION

A. Protect installed insulation and vapor retarders from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

END OF SECTION 07 21 00

SECTION 07 26 00 - VAPOR RETARDERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Polyimide film vapor retarders.

B. Related Requirements:

1. Division 3 Section "Cast-in-Place Concrete" for under-slab vapor barriers.
2. Division 7 Section "Thermal Insulation" for insulation products.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each product, for tests performed by a qualified testing agency.

PART 2 - PRODUCTS

2.1 VAPOR RETARDERS

A. Sheet Retarder: Polyimide film vapor retarder for use with unfaced, vapor permeable glass fiber and mineral wool insulation in wall and ceiling cavities.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. CertainTeed; MemBrain Continuous Air Barrier & Smart Vapor Retarder.
b. ProClima; Intello Plus

2. Water Vapor Permeance:

a. ASTM E 86, dry cup method: 1.0 perms.
b. ASTM E 86, wet cup method: 10.0 perms.

3. Fire Hazard Classification: ASTM E 84:

a. Maximum Flame Spread Index; 20.
b. Maximum Smoke Developed Index; 55.

2.2 ACCESSORIES

A. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

B. Adhesive for Vapor Retarders: Product recommended by vapor-retarder manufacturer and has demonstrated capability to bond vapor retarders securely to substrates indicated.

C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean substrates of substances that are harmful to vapor retarders, including removing projections capable of puncturing vapor retarders.

3.2 INSTALLATION OF VAPOR RETARDERS ON FRAMING

A. Place vapor retarders on side of construction indicated on Drawings.

B. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives, vapor retarder fasteners, or other anchorage system as recommended by manufacturer. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.

C. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs and sealing with vapor-retarder tape according to vapor-retarder manufacturer's written instructions. Locate all joints over framing members or other solid substrates.

D. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.

E. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

3.3 PROTECTION

A. Protect vapor retarders from damage until concealed by permanent construction.

END OF SECTION 07 26 00

SECTION 07 27 00 - AIR BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vapor-permeable, fluid-applied air barriers.

B. Related Requirements:
1. Division 01 Section “Mockups”
2. Division 06 Section "Sheathing" for glass-mat gypsum wall sheathing.

1.2 DEFINITIONS

A. Air-Barrier Accessory: A transitional component of the air barrier that provides continuity.

B. Air-Barrier Assembly: The collection of air-barrier materials and accessories applied to an opaque wall, including joints and junctions to abutting construction, to control air movement through the wall.

C. Air-Barrier Material: A primary element that provides a continuous barrier to the movement of air.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review air-barrier requirements and installation, special details, mockups, air-leakage and bond testing, air-barrier protection, and work scheduling that covers air barriers.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written instructions for evaluating, preparing, and treating each substrate; technical data; dry film thickness; and tested physical and performance properties of products.

B. Shop Drawings: For air-barrier assemblies.

1. Show locations and extent of sheathing, air barrier materials, accessories, and assemblies specific to Project conditions.
2. Include details for sheathing joints and cracks, counterflashing strips, penetrations, inside and outside corners, terminations, and tie-ins with adjoining construction.
3. Include details of interfaces with other materials that form part of air barrier.

1.5 INFORMATIONAL SUBMITTALS

A. Product Certificates: From air-barrier and water-resistant glass-mat gypsum sheathing manufacturer, certifying compatibility of sheathing accessory materials with Project materials that connect to or that come in contact with the sheathing.

B. Product Test Reports: For each air-barrier and water-resistant glass-mat gypsum sheathing assembly, indicating compliance with specified requirements, for tests performed by a qualified testing agency.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

1. Installer shall be licensed by ABAA according to ABAA's Quality Assurance Program and shall employ ABAA-certified installers and supervisors on Project.

B. Integrated Mockup: Build mockup to set quality standards for materials and execution and for preconstruction testing.
1. Coordinate construction of mockups to permit inspection and testing of air barrier before external insulation and cladding are installed.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Contractor will engage a qualified testing agency to perform preconstruction testing on field mockups.

B. Mockup Testing: Air-barrier assemblies shall comply with performance requirements indicated, as evidenced by reports based on mockup testing by a qualified testing agency.

1. Air-Leakage-Location Testing: Integrated Mockup will be tested for evidence of air leakage according to ASTM E1186, chamber pressurization or depressurization with smoke tracers or ASTM E1186, chamber depressurization with detection liquids.
2. Adhesion Testing: Integrated Mockup will be tested for required air-barrier adhesion to substrate according to ASTM D4541.
3. Notify Architect seven days in advance of the dates and times when mockups will be tested.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Remove and replace liquid materials that cannot be applied within their stated shelf life.

B. Protect stored materials from direct sunlight.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Apply air barrier within the range of ambient and substrate temperatures recommended in writing by air-barrier manufacturer.

1. Protect substrates from environmental conditions that affect air-barrier performance.
2. Do not apply air barrier to a damp or wet substrate or during snow, rain, fog, or mist.

1.10 WARRANTY

A. Manufacturer's Single Source Warranty: Manufacturer must warrant the material against product defect for a period of ten (10) years from date of purchase.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Source Limitations: Obtain primary air-barrier materials and air-barrier accessories from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Air-Barrier Performance: Air-barrier assembly and seals with adjacent construction shall be capable of performing as a continuous air barrier. Air-barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, penetrations, tie-ins to installed waterproofing, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

B. Air-Barrier Assembly Air Leakage: Maximum 0.04 cfm/sq. ft. of surface area at 1.57 lbf/sq. ft., when tested according to ASTM E2357.

2.3 FLUID-APPLIED VAPOR PERMEABLE MEMBRANE AIR BARRIER,

A. High-Build, Vapor-Permeable Air Barrier: synthetic polymer membrane with an installed dry film thickness, in accordance with manufacturer's written instructions, of 35 mils or thicker over smooth, void-free substrates.

1. Synthetic Polymer Standard Type: 40 deg F and higher.

a. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company ‘Air-Bloc 17 MR’ or comparable product by one of the following:

1) GCP Applied Technologies Inc. (formerly Grace Construction Products); Perm-a-Barrier VPL
2) Carlisle Coatings & Waterproofing, Inc.; Fire Resist Barritech VP

2. Physical and Performance Properties:

a. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
b. Vapor Permeance: Minimum 5 perms; ASTM E 96/E 96M, Water Method, Procedure B.
c. Vapor Permeance: Record value from manufacturer; ASTM E 96/E 96M, Desiccant Method, Procedure A.
d. Ultimate Elongation: Minimum 200 percent; ASTM D 412, Die C.
e. Adhesion to Substrate: Minimum 16 lbf/sq. in. when tested in accordance with ASTM D 4541.
f. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
g. UV Resistance: Can be exposed to sunlight for 90 days in accordance with manufacturer's written instructions.

2.4 ACCESSORY MATERIALS

A. Requirement: Provide primers, transition strips, termination strips, joint reinforcing fabric and strips, joint sealants, counterflashing strips, flashing sheets and metal termination bars, termination mastic, substrate patching materials, adhesives, tapes, foam sealants, lap sealants, and other accessory materials that are recommended in writing by air-barrier manufacturer to produce a complete air-barrier assembly and that are compatible with primary air-barrier material and adjacent construction to which they may seal.

B. Primer: Liquid primer recommended for substrate by air-barrier material manufacturer.

1. Basis of design: Henry® Blueskin® Adhesive

a. Color: Blue
b. Maximum VOC: 450 g/L
c. Drying time (initial set): 30 minutes
d. Low Application Temperature: 10 degrees F (-12 degrees C)

C. Liquid-Applied Flashing: Moisture-curing single component elastomeric liquid-applied flashing using a highly advanced Silyl-Terminated Polyether (STPE) polymer curing to a monolithic membrane; having the following typical physical properties:

1. Basis of design: Henry® Air-Bloc® LF Liquid-Applied Flashing

a. Color: Blue
b. Air Permeance (ASTM E2178): Pass
c. Water Vapor Permeance (ASTM E96): 21.8 perms @ 25 mils
d. Air Leakage of Air Barrier Assemblies (ASTM E2357): Pass
e. Water Resistance (AC212/ASTM D2247): Pass
f. Nail Sealability (AAMA 711): Pass
g. Surface Burning Characteristics (ASTM E84):

1) Flame Spread: Class A
2) Smoke Development: Class A

h. Elongation (D412): 264%
i. Low Application Temperature: 20 degrees F (-7 degrees C)

D. Self-Adhered Vapor Permeable Flashing: Self-adhered water resistive vapor permeable air barrier consisting of a reinforced modified polyolefin tri-laminate film surface and patented adhesive technology with split-back poly-release film; having the following typical physical properties:

1. Basis of design: Henry® Blueskin® VP160 Self-Adhered Water Resistive Air Barrier

a. Color: Blue
b. Thickness: 23 mils (0.58 mm)
c. Water Vapor Permeance (ASTM E96): 29 perms
d. Nail Sealability (ASTM D1970): Pass
e. Low Application Temperature: 20 degrees F (-7 degrees C)

E. Building Envelope Sealant: Moisture cure, medium modulus polymer modified sealing compound; having the following typical physical properties:

1. Basis of design: Henry® 925 BES Sealant

a. Color: Varies
b. Elongation: 450 – 550%.

F. Termination Sealant: One-part high performance synthetic rubber sealant; having the following typical physical properties:

1. Basis of design: Henry® 212 All Purpose Crystal Clear Sealant

a. Color: Clear
b. Elongation: 200% minimum

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that substrates are sound and free of oil, grease, dirt, excess mortar, or other contaminants.
2. Verify that substrates have cured and aged for minimum time recommended in writing by air-barrier manufacturer.
3. Verify that substrates are visibly dry and free of moisture.
4. Verify that masonry joints are flush and completely filled with mortar.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SURFACE PREPARATION

A. Clean, prepare, treat, fill, and seal substrate and joints and cracks in substrate according to manufacturer's written instructions and details. Provide clean, dust-free, and dry substrate for air-barrier application.

B. Mask off adjoining surfaces not covered by air barrier to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids in concrete with substrate-patching membrane.

E. Remove excess mortar from masonry ties, shelf angles, and other obstructions.

F. At changes in substrate plane, apply sealant or termination mastic beads at sharp corners and edges to form a smooth transition from one plane to another.

G. Cover gaps in substrate plane and form a smooth transition from one substrate plane to another with stainless-steel sheet mechanically fastened to structural framing to provide continuous support for air barrier.

H. Bridge joints and discontinuous wall-to-wall, deck-to-wall, and deck-to-deck joints with air-barrier accessory material that accommodates joint movement according to manufacturer's written instructions and details.

3.3 ACCESSORIES INSTALLATION

A. Install accessory materials in accordance with air-barrier manufacturer's written instructions and details to form a seal with adjacent construction and ensure continuity of air and water barrier.

1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
2. Install transition strip on roofing membrane or base flashing so that a minimum of 3 inches of coverage is achieved over each substrate.
3. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
4. Apply primer to substrates at required rate and allow it to dry. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.

B. Connect and seal exterior wall air-barrier material continuously to roofing-membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials.

C. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

D. Apply joint sealants forming part of air-barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

E. Wall Openings: Prime concealed, perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply **transition strip** so that a minimum of 3 inches of coverage is achieved over

each substrate. Maintain 3 inches of full contact over firm bearing to perimeter frames, with not less than 1 inch of full contact.

1. Transition Strip: Roll firmly to enhance adhesion.

F. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air-barrier material with foam sealant.

G. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

H. Seal top of through-wall flashings to air barrier with an additional 6-inch- (150-mm-) wide, transition strip.

I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counter flashings or ending in reglets with termination mastic.

J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.4 PRIMARY AIR-BARRIER MATERIAL INSTALLATION

A. Apply air-barrier material to form a seal with strips and transition strips and to achieve a continuous air barrier in accordance with air-barrier manufacturer's written instructions and details. Apply air-barrier material within manufacturer's recommended application temperature ranges.

1. Unless manufacturer recommends in writing against priming, apply primer to substrates at required rate and allow it to dry.
2. Limit priming to areas that will be covered by air-barrier material on same day. Reprime areas exposed for more than 24 hours.
3. Where multiple prime coats are needed to achieve required bond, allow adequate drying time between coats.

B. High-Build Air Barriers: Apply continuous unbroken air-barrier material to substrates in accordance with the following thickness. Apply air-barrier material in full contact around protrusions such as masonry ties.

1. Vapor-Permeable, High-Build Air Barrier: Total dry film thickness as recommended in writing by manufacturer to comply with performance requirements, but not less than 35 mils, applied in one or more equal coats.

C. Do not cover air barrier until it has been tested and inspected by testing agency.

D. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air-barrier components.

3.5 FIELD QUALITY CONTROL

A. ABAA Quality Assurance Program: Perform examinations, preparation, installation, testing, and inspections under ABAA's Quality Assurance Program.

B. Inspections: Air-barrier materials, accessories, and installation are subject to inspection for compliance with requirements. Inspections may include the following:

1. Continuity of air-barrier system has been achieved throughout the building envelope with no gaps or holes.
2. Air-barrier dry film thickness.
3. Continuous structural support of air-barrier system has been provided.
4. Masonry and concrete surfaces are smooth, clean, and free of cavities, protrusions, and mortar droppings.
5. Site conditions for application temperature and dryness of substrates have been maintained.
6. Maximum exposure time of materials to UV deterioration has not been exceeded.
7. Surfaces have been primed.
8. Laps in sheet materials have complied with the minimum requirements and have been shingled in the correct direction (or mastic applied on exposed edges), with no fishmouths.
9. Termination mastic has been applied on cut edges.
10. Air barrier has been firmly adhered to substrate.
11. Compatible materials have been used.
12. Transitions at changes in direction and structural support at gaps have been provided.
13. Connections between assemblies (air barrier and sealants) have complied with requirements for cleanliness, surface preparation and priming, structural support, integrity, and continuity of seal.
14. All penetrations have been sealed.

C. Air barriers will be considered defective if they do not pass tests and inspections.

1. Apply additional air-barrier material, according to manufacturer's written instructions, where inspection results indicate insufficient thickness.
2. Remove and replace deficient air-barrier components for retesting as specified above.

D. Repair damage to air barriers caused by testing; follow manufacturer's written instructions.

E. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Protect air-barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.

1. Protect air barrier from exposure to UV light and harmful weather exposure as recommended in writing by manufacturer. If exposed to these conditions for longer than recommended, remove and replace air barrier or install additional, full-thickness, air-barrier application after repairing and preparing the overexposed materials according to air-barrier manufacturer's written instructions.
2. Protect air barrier from contact with incompatible materials and sealants not approved by air-barrier manufacturer.

B. Clean spills, stains, and soiling from construction that would be exposed in the completed Work, using cleaning agents and procedures recommended in writing by manufacturer of affected construction.

C. Remove masking materials after installation.

END OF SECTION 07 27 00

SECTION 074210 - METAL PLATE WALL PANELS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY:

A. Section includes metal plate wall panels used for main, public entrance canopy.
B. Related Sections:
    1. Division 05 Section "Cold-Formed Metal Framing" for cold-formed metal framing supporting metal wall panels.
    2. Division 07 Section "Sheet Metal Flashing and Trim" for field-formed flashings and other sheet metal work not part of metal wall panel assemblies.
    3. Division 07 Section "Weather Resistive Barrier" for Air and Moisture barrier required as part of the metal wall panel assembly.

1.3 DEFINITION:

A. Metal Plate Wall Panel Assembly: Metal plate wall panels, attachment system components, miscellaneous metal framing, and accessories necessary for a complete weather tight wall system based on AAMA - CWRS -1-04 The Rain Screen Principle and Pressure Equalized Wall Design.

1.4 PERFORMANCE REQUIREMENTS:

A. General Performance: Metal plate wall panel assemblies shall comply with performance requirements without failure due to defective manufacturing, fabrication, installation, or other defects in construction. Testing shall be performed without any intermediate flashings or perimeter caulking. Design, fabricate, and erect a pressure equalized “rainscreen” aluminum wall panel system to meet the requirements of **AAMA 508-14** Voluntary Test Method and Specifications for Pressure Equalized Rain Screen Wall Cladding Systems, specifically as follows.
B. Pressure Equalization: ASTM E1233 Cyclic Static Air Pressure Differential Testing; Positive pressure loading to 1200 pa. (25psf) for 100 three second cycles.
    a. Air Leakage: Not more that 0.6 (cfm)/sf of wall area when tested at 1.57 psf in accordance with ASTM E283.
    b. Water Penetration; Static: No water infiltration under static pressure when tested in accordance with ASTM E331 at a differential of 10% of inward acting design load, 6.24 psf min. after 15 minutes.
    c. Structural: Provide systems that have been tested in accordance with ASTM E330 and have been certified to be without permanent deformation or failures of structural members.

1.5 SUBMITTALS:

A. Product Data: For each type of product indicated. Include construction details, material descriptions,
B. Dimensions of individual components and profiles, and finishes for each type of metal plate wall panel and accessory.

C. Shop Drawings: Show fabrication and installation layouts of metal plate wall panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Distinguish among factory-, shop-, and field-assembled work. Fully dimension and layout all panels and accessories.
    a. Accessories: Include details of the following items, at a full scale. Not less than 12inches in length.
    b. Manufacturers Standard Extrusions.
    c. Special extrusions required to meet with the intent of the Contract Documents and as required by the Architect.
    d. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below:
    e. Metal Plate Wall Panels: 2”x3” Sample Chips.
    f. Coordination Drawings: Exterior elevations, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
    g. Metal plate wall panels and attachments.
    h. Girts.
    i. Wall-mounted items including doors, windows, louvers, and lighting fixtures.
    j. Penetrations of wall by pipes and utilities.
D. Qualification Data: For Manufacturer and for Installer.
E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for each product.
F. Maintenance Data: For metal plate wall panels to include in maintenance manuals.
G. Warranties: Sample of Manufacturers standard warranty for not less than five years after date of substantial completion.

1.6 QUALITY ASSURANCE:

A. Installer Qualifications: An employer of workers trained and approved by manufacturer, having been in business for not less than five years.
B. Source Limitations:
C. Source Limitations: Obtain each type of metal plate wall panel from single source from single manufacturer.
D. Installer: Pre-Qualified Company specializing in performing the work of this Section shall install the system in strict compliance with the written “Installation Guide.”
E. Obtain each type of metal plate wall panel from single source from a single manufacturer located within 500 miles of the project. Manufacturer must meet Buy America requirements and have a completed five projects with interlocking panels as specified.

1.7 DELIVERY, STORAGE, AND HANDLING:

A. Deliver components, metal plate wall panels, and other manufactured items so as not to be damaged or deformed. Package panels for protection during transportation and handling. Store and handle in strict compliance with manufacturer’s instructions and recommendations. Protect from damage from weather, excessive temperatures and construction operations.
B. Store and erect metal plate wall panels in a manner to prevent bending, warping, twisting, and surface damage. Do not store panels horizontally. Always store vertically with top of panel down.
C. Store covered with suitable weather tight and ventilated covering. Store panels to ensure dryness, with positive slope for drainage of water. Do not store panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Remove strippable protective covering on metal plate wall panel prior to installation.

E. Protect installed panels from damage until final completion. Remove and replace any damaged panels at no cost to the owner if damaged prior to final acceptance.

1.8 PROJECT CONDITIONS:

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal plate wall panels to be performed according to manufacturer's written instructions and warranty requirements.
B. Field Measurements: Verify locations of structural members and wall opening dimensions by field measurements before metal plate wall panel fabrication and indicate measurements on Shop Drawings.
C. Installer is responsible for verifying that all existing site conditions are appropriate for installation of this
D. system. Review the conditions on site with the General Contractor and other trades prior to installation. Note any deficiencies in substrates that may affect the installation of this system. Do not proceed until conditions are acceptable for installation.

1.9 COORDINATION:

A. Coordinate metal plate wall panel assemblies with rain drainage work, flashing, trim, and construction of studs, soffits, and other adjoining work.

1.10 WARRANTY:

B. Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal plate wall panel assemblies that fail in materials or workmanship within specified two year warranty period.
    a. Failures include, but are not limited to, the following:
    b. Structural failures, including rupturing, cracking, or puncturing.
    c. Deterioration of metals and other materials beyond normal weathering.
C. Warranty Period: Two years from date of Substantial Completion.
D. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal plate wall panels that show evidence of deterioration of factory-applied finishes within specified warranty period.
E. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 – PRODUCTS

2.1 PANEL MATERIALS:

A. Aluminum Plate: Alloy and temper as recommended by manufacturer for application and in strict adherence to Manufacturers “Modular AL metal wall panel system” of 3105-H14 Aluminum. Thickness shall be .050” minimum .080” maximum.

2.2 MISCELLANEOUS METAL FRAMING:

B. Sub-girts: Minimum 16ga. 7/8” hat section, C- or Z-shaped sections, Minimum 16ga. flat strap, minimum 16ga. Nominal thickness.

2.3 MISCELLANEOUS MATERIALS:

C. Aluminum Extrusions: Alloy and temper recommended by manufacturer for type of use and finish indicated.
D. Panel Fasteners: Suitable fasteners designed to withstand design loads. Stainless or equivalent corrosive resistant fastener with a minimum 7/16” diameter head.

2.4 METAL PLATE WALL PANELS:

A. Metal Plate Wall Panels: Provide factory-formed, metal plate wall panels fabricated from single sheets of metal formed into dry-joint pressure equalized rainscreen system with interlocking gutter and drainage system integral to the panel with single horizontal factory pre-punched attachment to complete dry-joint rainscreen assembly. The use of secondary drainage channels, brackets, support pins, joint sealants or gaskets to manage the drainage of the system are not allowed.
B. Product Basis for Design: The basis for this design is the **Modular AL** manufactured by **Petersen Aluminum Corporation. (www.pacclad.com) 800-323-1960** Subject to compliance with manufacturers requirements, provide the following
    a. Centria
    b. Pohl Metal Panel Systems
    c. Or approved equal.
C. Material: Tension-leveled, smooth 3003-H14 Aluminum. Thickness shall be .050” minimum.
D. Panel Depth: 1.375” minimum.
E. Exterior Finish: Kynar finish as manufactured by Sherwin Williams.
F. Color: Architect shall choose from of 46 standard colors.

2.5 ACCESSORIES:

A. Metal Plate Wall Panel Accessories: Provide components required for a complete metal plate wall panel assembly including trim, copings, fascia, sills, corner units, flashings, and similar items. Match material and finish of panels unless otherwise indicated.
B. Manufacturers Extrusions: Formed from extruded aluminum. Provide integral drainage system and manufactures standard extrusions at termination of dissimilar materials.
C. Copings, Flashing and Trim Essential to System: Same material, finish, and color as adjacent metal plate panels, minimum .040 inch thick unless otherwise indicated. Provided by panel manufacturer and installed in accordance with approved shop drawings.
D. Weather Resistive Barriers: Provide a weather barrier with performance characteristics for Air Penetration, Water Vapor Transmission and Water Penetration Resistance. Weather Barriers can be climate specific. Subject to compliance with manufacturer's requirements provide the following:
    a. Carlisle air/vapor barrier 705 HT underlayment

2.6 FABRICATION:

A. General: Panels shall be factory fabricated and finished by manufacturer to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

2.7 GENERAL FINISH REQUIREMENTS:

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.8 ALUMINUM FINISHES:

A. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight. Prepare, pre-treat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION:

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal plate wall panel supports, and other conditions affecting performance of the Work.
B. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal plate wall panel manufacturer.
C. Verify that weather-resistant sheathing paper has been installed over sheathing or backing substrate to prevent air infiltration or water penetration.
D. Examine roughing-in for components and systems penetrating metal plate wall panels to verify actual locations of penetrations relative to seam locations of panels before installation.
E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION:

A. Miscellaneous Framing: Install subgirts, base angles, sills, furring, and other miscellaneous metal plate wall panel support members and anchorage according to ASTM C 754 and panel manufacturer's written instructions.

3.3 METAL PLATE WALL PANEL INSTALLATION:

A. General: Install metal plate wall panels according to manufacturer's written instructions in orientation, sizes, and locations indicated on Drawings. Install panels according to manufacturer's pressure equalized rainscreen installation method in strict accordance to the manufacturer’s installation guidelines. Anchor panels and other components of the Work securely in place, with provisions for thermal and structural movement.
    1. Commence metal plate wall panel installation
    2. Shim or otherwise plumb substrates receiving metal plate wall panels.
    3. Flash and seal metal plate wall panels with weather closures at perimeter of all openings. Do not begin installation until weather barrier and flashings that will be concealed by panels are installed.
    4. Install flashing and trim as metal plate wall panel work proceeds.
B. Fasteners:
    1. Aluminum Plate Wall Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior and aluminum or galvanized-steel fasteners for surfaces exposed to the interior.
    2. Metal Protection: Where dissimilar metals will contact each other or corrosive substrates, protect against galvanic action as recommended by metal plate wall panel manufacturer.
    3. Attachment System, General: Install attachment system required to support metal plate wall panels and to provide a complete weather tight wall system, including sub-girts, manufacturer’s extrusions, flashings and trim.
    4. Include attachment to supports and extrusion trims at dissimilar-materials
    5. Do not apply sealants to joints unless otherwise indicated on Drawings or Manufacturers Shop Drawings.
    6. Rainscreen-Principle Installation: Provide manufacturer's standard pressure-equalized rainscreen- principle system factory-formed, metal plate wall panels

fabricated from single sheets of metal formed with interlocking gutter and drainage system integral to the panel with single horizontal attachment to complete dry-joint rainscreen assembly. The use of secondary drainage channels, brackets, support pins, joint sealants or gaskets to manage the drainage of the system are not allowed. Attach metal plate wall panels in a progressive interlocking method by engaging bottom of panel in top of previous panel working left to right.

7. Install metal wall panels with top attachment in pre-punched holes to allow individual panels to expand & contract. Do not fasten perimeter of panel or compromise internal gutter.
8. Do not apply sealants to joints unless otherwise indicated on Drawings at dissimilar materials.

3.4 ACCESSORY INSTALLATION:

A. General: Install accessories with positive anchorage to building and weather tight mounting and provide for thermal expansion. Coordinate installation with flashings and other components.
   1. Install components required for a complete metal plate wall panel assembly including trim copings, corner and standard extrusion covers, flashings and similar items.
   2. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.
      a. Weather Resistive Barrier: Install Air & Moisture barrier behind metal plate panels over substrate according to the requirements specified in Division 07 Section “Weather Resistive Barrier”.

3.5 ERECTION TOLERANCES:

A. Installation Tolerances: Shim and align metal plate wall panel units within installed tolerance of 1/4 inch in 20 feet, non-cumulative, on level, plumb, and location lines as indicated.

3.6 CLEANING:

A. On completion of metal plate wall panel installation, clean finished surfaces as recommended by panel manufacturer.
B. After metal plate wall panel installation, clear weep holes and drainage channels of obstructions, dirt.
C. Replace metal plate wall panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07421

SECTION 07 42 93 – EXTERIOR SOFFIT PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

B. Section Includes:

1. Metal exterior soffit panel, linear metal ceiling panel, fascia, formed metal wall panel.

2. See also SECTION 07 42 13 – FORMED METAL WALL PANELS.

1.2 RELATED SECTIONS

A. Division 01 Section "Mockups" for integrated exterior mockup requirements.

B. Section 05 40 00 - Cold-Formed Metal Framing: Metal framing for support of aluminum soffits.

C. Section 07 62 00 - Sheet Metal Flashing and Trim

D. Section 07 90 00 - Joint Sealers

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
1. Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.
2. Category - Material & Resources
   a. MR Credit 2.1, 2.2 - Construction Waste Management Divert 50% or 75% from disposal
3. Category – Indoor Environment Quality
   a. EQ Credit 4.1 to 4.6 – Low Emitting Materials
4. Category – Innovation and Design Process
   a. ID Credit – Biophilic Design
5. Environmental Product Declaration (EPT) submittal.
   a. Health Product Declaration (HPE).

C. Shop Drawings: Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details. Include trim and layout of square recessed light fixtures, GC to coordinate with electrical subcontractor.

D. Samples: Submit duplicate 1.625 X 4 inch X 6 inch (41.28mm X 101.6mm X 150mm) samples of material, of color and profile specified.

1.4 INFORMATIONAL SUBMITTALS

A. Product test reports.

B. Warranties: Samples of special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 MOCKUPS

A. Include Wall Panel, Soffit Panel, & Linear Ceiling with attachments and recessed soffit light fixture trim (electrical not required) integrated exterior mockup that will be used to demonstrate aesthetic effects, perform preconstruction testing, and to set quality standards for materials and installation. See Division 01 Section "Mockups" for additional construction requirements. Provide shop drawing to be coordinated with mockup layout.

1.7 WARRANTY

A. Provide a written guarantee, signed and issued in the name of the owner, covering the metal cladding/siding material for 15 (fifteen) years from the date of Substantial Completion. Verify available warranties and warranty periods for metal panels.

1. Warranty Period: 15 (fifteen) years from date of Substantial Completion.

B. The manufacturer's warranty is limited to replacement of defective material only, rather than installation of the same. Faulty installation shall be corrected by the installing contractor. The warranty required herein is the sole remedy against the manufacturer and there are no other implied warranties. In any event, the manufacturer shall not be liable for incidentals or consequential damages.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. NOTE: the same metal panel system is to be used for wood look wall panels, wood look soffits, wood look ceilings in the vestibule and wood look fascia. Equals need to vertical joints to be

coordinated by the GC where this wood look system meets the Formed Metal Panels and their attachment systems.

B. See section 07 42 13 Formed Metal Wall Panels

C. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Basis of Design – Long Board - Mayne Inc. 27575 50Ave Langley, BC Canada V3A 0A2
em.info@longboardproducts.com
ph. 1.800.604.0343

2. Morin by Kingspan, Matrix MX10 with wood-look metal panel.
Morin Martix Series
a. Finish from the OCM custom wood grain finishes line, selected by architect.
b. Michael Moorhouse | CSI, LEED AP Partner + Design Consultant | Rainscreen Experto. (202) 869-3445 | m. (410) 422-6453
3. Knotwood - Alumarch.com, 30 Technology Pkwy S, Peachtree Corners, GA 30092
https://knotwood.com/
4. Or approved equal.

2.2 MATERIALS

A. Extruded Aluminum Siding and Soffit: Longboard Wood Grain Aluminum Siding and Soffit with Alluminate bonded film finish is extruded aluminum with integrated venting system.

a. Size:

#102311 6” V Groove Siding and Soffit - 8 pieces per box

B. Accessories: Prefinished aluminum: Provide with matching accessories and starter strips as required.

101957 2.5 inch perforated vent strip 12 ft length
102304 2.5 inch V groove siding 12 ft length
102000 J track 12 ft length
102044 Wide Starter Strip 12 ft length
102324 Inside Corner
102305 Outside Corner
102611 Finish Base & Cap (2pc set)
102612 Base & U Cap (2pc set)
102613 Base & Flat Cap (2pc set)
102044 Powder Coated Wide Starter Strip
102355 Quick Screen Clip

C. Aluminum L-Clip and T-Girt (clip sizes and girt lengths as required for wall construction).

2.3 FINISHES

A. Pretreatment: E-CLPS Chrome Free five stage aluminum pretreatment system. Complies with AAMA 2603 AAMA 2604 and AAMA 2605 Superior Performance Standard and meets EPA, OSHA, State and Local environmental requirements and contains no chromates, cyanides or

other heavy metals. Waste treatment is usually a simple pH neutralization and disposal to the sanitary sewer.

B. Super Durable Powder Coatings: Aluminate Premium Wood Finishes use a polyurethane powder coat with ink based wood grain patterns sublimated into the base powder effectively tattooing the powder. The combined effect creates all the aesthetic aspects of real wood while offering the same environmental advantages of powder coated finishes.
   1. Wood Grained : As selected by Architect from Manufacturer’s full range of grains. Retain “Sealant” Subparagraph below if required. Verify availability with manufacturers.

2.4 FABRICATIONS

A. Prepare surfaces, pre-treat and coat components in accordance with AAMA 2604 and 2605 Quality Standards and applicable European standards for the coating material specified.

B. Wrap and package coated components using methods suitable for transit and covered site storage without damage.

2.5 WARRANTY

A. Installation 10 Years

B. Finish 20 Years

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the material under the project conditions.

C. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C754 and metal panel manufacturer's written recommendations.

   1. Soffit Framing: Wire tie furring channels to supports.

   2. Trim in field for soffit light fixtures and coordinate with light fixtures submittals.

3.2 INSTALLATION

A. Install in accordance with manufacturer's installation instructions.

B. Barrier Protection: Do not install over cementitious materials, dissimilar metals or pressure treated material without adequate barrier protection.
   1. Install building paper horizontally on walls to receive metal siding.

2. Weather lap edges 6 inches (150 mm) and ends minimum 6 inches (150 mm).
3. Stagger vertical joints of each layer.
4. Securely staple, nail in place.

C. Fasten siding to structural supports; aligned, level, and plumb.

D. Locate joints over supports.

E. Use concealed fasteners unless otherwise approved by Architect.

F. Install wall and soffit panels, and accessories in accordance with best practice, with all joint members plumb and true.

3.3 FIELD QUALITY CONTROL

A. After installation of wall and soffit panels, check entire surface for obvious flaws or defects.

B. Replace and repair any problem areas, paying close attention to the substrate for causes of the problem.

3.4 CLEANING

A. After application of wall and soffit panels, clean as necessary to remove all fingerprints and soiled areas.

B. Upon completion of wall and soffit panels application, clean entire area, removing all scrap, packaging, and unused materials related to this work.

3.5 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION 07 42 93

SECTION 07 54 23 - THERMOPLASTIC POLYOLEFIN (TPO) ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Section Includes:
1. Adhered thermoplastic polyolefin (TPO) membrane roofing system.
2. Roof insulation.
3. Roof walkways.
4. Cover boards. See also 06 16 00 Sheathing for Glass-mat gypsum roofing coverboard
5. Slip sheet for PV ballast racking (basket)

C. Related Requirements:
1. Division 06 Section “Rough Carpentry” for Laminate Strand Lumber (LSL) Parapet Cap
2. Division 07 Section “Sheet Metal Flashing, Trim, And Copings”
3. Division 26 Section “Photovoltaic Collectors”

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals Comply with Section 018113.
1. SS Credit 5: Heat Island Reduction
   a. For roof surface materials: Documentation indicating initial Solar Reflectance Index (SRI) value or three-year aged SRI value.
2. MR Credit 2: Environmental Product Declarations
   a. Roofing membrane, if available
3. MR Credit 3: Sourcing of Raw Materials
   a. Recycled content: Insulation, cover board. Provide material cost values
4. Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.
5. Product Data for Credit EQc2: For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content.
   a. Verify adhesives and sealants comply with VOC content.

C. Shop Drawings: For roofing system. Include roof plans, sections, details, and attachments to other work, including the following:

D. Samples for Verification: For the following products:

1. Roof membrane and flashings, of color specified.
2. Walkway pads, of color required.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Manufacturer Certificates:

1. Performance Requirement Certificate: Signed by roof membrane manufacturer, certifying that roofing system complies with requirements specified in "Performance Requirements" Article.

a. Submit evidence of compliance with performance requirements.

2. Special Warranty Certificate: Signed by roof membrane manufacturer, certifying that all materials supplied under this Section are acceptable for special warranty.

3. Roof membrane manufacturer’s guidelines for PV are to be provided and coordinated to meet requirements and documented er the guidelines.

C. Product Test Reports: For roof membrane and insulation, for tests performed by a qualified testing agency, indicating compliance with specified requirements.

D. Evaluation Reports: For components of roofing system, from ICC-ES.

E. Field Test Reports:

1. Concrete internal relative humidity test reports.
2. Fastener-pullout test results and manufacturer's revised requirements for fastener patterns.

F. Field quality-control reports.

G. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For roofing system to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's special warranty.

B. Source Limitations: Obtain components including fasteners for membrane roofing system from same manufacturer as membrane roofing.

1.6 PREINSTALLATION MEETINGS

A. Preinstallation Roofing Conference: Conduct conference at Project site.

1. Meet with Owner, Architect, General Contractor, Owner's insurer if applicable, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, air barrier Installer, and installers whose work interfaces with or affects roofing, including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions.
3. Review and finalize construction schedule, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.
6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that affects roofing system.
7. Review governing regulations and requirements for insurance and certificates if applicable.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, approval or listing agency markings, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.

1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials, and place equipment in a manner to avoid permanent deflection of deck.

1.8 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.

1. Warranty Period: (20) years from date of Substantial Completion.

B. Special Project Warranty: Submit roofing Installer's warranty, on warranty form at end of this Section, signed by Installer, covering the Work of this Section, including all components of roofing system, for the following warranty period:

1. Warranty Period: (2) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General Performance: Installed roofing system and flashings shall withstand specified uplift pressures, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Roof system and flashings shall remain watertight.

1. Accelerated Weathering: Roof membrane shall withstand 2000 hours of exposure when tested according to ASTM G152, ASTM G154, or ASTM G155.
2. Impact Resistance: Roof membrane shall resist impact damage when tested according to ASTM D3746, ASTM D4272, or the "Resistance to Foot Traffic Test" in FM Approvals 4470.

B. Material Compatibility: Roofing materials shall be compatible with one another and adjacent materials under conditions of service and application required, as demonstrated by roof membrane manufacturer based on testing and field experience.

C. Wind Uplift Resistance: Design roofing system to resist the wind uplift pressures noted on the Structural Drawings when tested according to FM Approvals 4474, UL 580, or UL 1897.

D. Roofing System Design: Provide membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE/SEI 7.

1. Fire/Windstorm Classification: Class 1A-90.
2. Hail-Resistance Rating: MH.

E. ENERGY STAR Listing: Roofing system shall be listed on the DOE's ENERGY STAR "Roof Products Qualified Product List" for low-slope roof products.

F. Solar Reflectance Index (SRI): Three-year-aged SRI not less than 64 or initial SRI not less than 82 when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

G. Energy Performance: Roofing system shall have an initial solar reflectance of not less than 0.79 and an initial emissivity of not less than 0.78 when tested according to CRRC-1

H. Solar Reflectance Index (SRI) for low-sloped roof surface materials: Minimum 82 initial SRI; minimum 64 for 3-year aged SRI.

I. Recycled Content: Provide insulation with recycled content.

2.2 TPO MEMBRANE ROOFING

A. TPO Sheet: ASTM D6878/D6878M, internally fabric- or scrim-reinforced TPO sheet.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Tremco CPG Inc. (Basis of Design)

b. Versico Incorporated.
c. Carlisle SynTec Incorporated.
d. Firestone Building Products Company.
e. GAF Materials Corporation.
f. Johns Manville.

2. Thickness: 80 mils, nominal.
3. Breaking Strength: 335 lbf x 320 lbf
4. Factory Seam Strength: 160 lbf
5. Puncture Resistance: greater than 380 lb.
6. Exposed Face Color: White

2.3 AUXILIARY MEMBRANE ROOFING MATERIALS

A. General: Auxiliary membrane roofing materials recommended by roofing system manufacturer for intended use, and compatible with membrane roofing.

1. Adhesive and Sealants: Comply with VOC limits of authorities having jurisdiction.

B. Sheet Flashing: Manufacturer's standard unreinforced TPO sheet flashing, 55 mils thick, minimum, of same color as TPO sheet.

C. Prefabricated Pipe Flashings: As recommended by roof membrane manufacturer.

D. Bonding Adhesive: Manufacturer's standard.

E. Vented Base Sheet: ASTM D4897/D4897M, Type II; nonperforated, asphalt-impregnated fiberglass reinforced, with mineral granular patterned surfacing on bottom surface.

F. Metal Termination Bars: Manufacturer's standard, predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch thick; with anchors.

G. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer in keeping with warranty requirements.

H. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, lap sealants, termination reglets, and other accessories.

I. Precast concrete splash blocks set below roof downspouts.

2.4 ROOF INSULATION

A. General: Preformed roof insulation boards manufactured or approved by TPO roof membrane manufacturer, selected from manufacturer's standard sizes suitable for application, of thicknesses indicated.

B. Acceptable manufacturers include:

1. H-Shield Polyisocyanurate by Hunter Panels (Basis of Design)
2. AC Foam-II by Atlas
3. ISO95+GL by Firestone
4. Approved equal by others.

C. Polyisocyanurate Board Insulation: ASTM C 1289, Type II, Class 1, Grade 2, felt or glass-fiber mat facer on both major surfaces.

1. Compressive Strength: 20 psi.
2. Size: 48 by 96 inches, unless otherwise recommended by manufacturer.
3. Thickness: Provide 3 layers at minimum R value 13 per board. Built up minimum R38 roof

D. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48) unless otherwise indicated.

E. Tapered Insulation: Provide factory-tapered insulation boards.

1. Material: Match roof insulation.
   Slope: Saddles and Crickets: 1/2 inch per foot unless otherwise indicated on Drawings.

F. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes for sloping to drain. Fabricate to slopes indicated.

2.5 ROOF COVER BOARDS

A. Acceptable manufacturers include:
1. GAF
2. USG Corporation
3. Approved equals by others.

B. Cover Board ASTM C 1278/C 1278M, cellulosic-fiber water-resistant gypsum substrate:
1. Glass-Mat Gypsum Roofing Coverboard: ASTM E84
   a. Type & Thickness: 1/2” thick
   b. Basis of Design: DensDeck by GAF or approved equa
2. Securock by USG Corporation

C. Dimensions: 4 by 4 feet by 1/2 inch thick.

2.6 INSULATION ACCESSORIES

A. General: Roof insulation accessories recommended by insulation manufacturer for intended use and compatibility with other roofing system components.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates complying with corrosion-resistance provisions in FM Approvals 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

C. Insulation Adhesive: Insulation manufacturer's recommended adhesive formulated to attach roof insulation to substrate or to another insulation layer.

D. For adhesives and sealants used inside the weatherproofing system, documentation including printed statement of VOC content to verify compliance.

2.7 WALKWAYS

A. Flexible Walkways: Factory-formed, nonporous, heavy-duty, slip-resisting, surface-textured walkway rolls, approximately 3/16 inch thick, and acceptable to membrane roofing system manufacturer.

1. Size: Approximately 30 inches wide.
2. Color: White with yellow borders.

2.8 SLIP SHEETS

A. Material: Slip sheets for ballasted PVs shall be provided to meet the warranty requirements of the TPO manufacturer.
1. Coordinate locations and size with PV Installer, refer to drawings for areas of proposed PVs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

1. Verify that roof openings and penetrations are in place, curbs are set and braced, and roof-drain bodies are securely clamped in place.
2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
3. For areas of steel roof decks:

    a. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Decking."

4. For areas of lightweight concrete roof decks:

    a. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed,
    b. Verify that concrete substrate is visibly dry and free of moisture, and that minimum concrete internal relative humidity is not more than 75 percent, or as

recommended by roofing system manufacturer, when tested according to ASTM F2170.

1) Test Frequency: One test probe per each 1000 sq. ft. or portion thereof, of roof deck, with not less than three tests probes.
2) Submit test reports within 24 hours after performing tests.

c. Perform fastener-pullout tests according to roof system manufacturer's written instructions.

1) Submit test result within 24 hours after performing tests.

a) Include manufacturer's requirements for any revision to previously submitted fastener patterns required to achieve specified wind uplift requirements.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing system installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

3.3 INSTALLATION OF ROOFING, GENERAL

A. Install roofing system according to roofing system manufacturer's written instructions.

B. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at end of workday or when rain is forecast. Remove and discard temporary seals before beginning Work on adjoining roofing.

C. Install roof membrane and auxiliary materials to tie into existing roofing to maintain weathertightness of transition.

3.4 INSTALLATION OF INSULATION

A. Coordinate installing roofing system components, so insulation is not exposed to precipitation or left exposed at end of workday.

B. Comply with roofing system and roof insulation manufacturer's written instructions for installing roof insulation.

C. Installation Over Metal Decking:

1. Install base layer of insulation with long joints continuous at right angle to flutes of decking.

2. Install all layers of insulation with end joints staggered and offset from previous layer of insulation.
3. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.

    a. Trim insulation so that water flow is unrestricted.

4. Mechanically attach base layer of insulation using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to metal decks.

    a. Fasten insulation to resist specified uplift pressure at corners, perimeter, and field of roof.

5. Adhere each layer of insulation to substrate using adhesive according to FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification and FM Global Property Loss Prevention Data Sheet 1-29, as follows:

    a. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

D. Installation Over Lightweight Concrete Decks:

1. Mechanically fasten vented base sheet to lightweight insulating concrete, with vented side down, using mechanical fasteners specifically designed and sized for fastening to lightweight concrete decks.

    a. Fasten vented base sheet to resist specified uplift pressure at corners, perimeter, and field of roof.

2. Install all layers of insulation with end joints staggered and offset from previous layer of insulation.
3. At internal roof drains, slope insulation to create a square drain sump with each side equal to the diameter of the drain bowl plus 24 inches.

    a. Trim insulation so that water flow is unrestricted.

4. Adhere base layer of insulation to vented base sheet according to FM Approvals' RoofNav listed roof assembly requirements for specified Windstorm Resistance Classification and FM Global Property Loss Prevention Data Sheet 1-29, as follows:

    a. Set each layer of insulation in ribbons of bead-applied insulation adhesive, firmly pressing and maintaining insulation in place.

E. Install tapered insulation under area of roofing to conform to slopes indicated.

F. Install insulation under area of roofing to achieve the required thickness. Install two or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches in each direction.

3.5 ADHERED MEMBRANE ROOFING INSTALLATION

A. Adhere roof membrane over area to receive roofing according to roofing system manufacturer's written instructions.

B. Start installation of roofing in presence of roofing system manufacturer's technical personnel.

C. Accurately align roof membrane and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

D. Bonding Adhesive: Apply to substrate and underside of roof membrane at rate required by manufacturer and allow to partially dry before installing roof membrane. Do not apply to splice area of roof membrane.

E. In addition to adhering, mechanically fasten membrane roofing securely at terminations, penetrations, and perimeter of roofing.

F. Apply membrane roofing with side laps shingled with slope of roof deck where possible.

G. Seams: Clean seam areas, overlap roof membrane, and hot-air weld side and end laps of roof membrane and sheet flashings, to ensure a watertight seam installation.

1. Test lap edges with probe to verify seam weld continuity. Apply lap sealant to seal cut edges of roof membrane and sheet flashings.
2. Verify field strength of seams a minimum of twice daily, and repair seam sample areas.
3. Repair tears, voids, and lapped seams in roof membrane that do not comply with requirements.

3.6 INSTALLATION OF BASE FLASHING

A. Install sheet flashings and preformed flashing accessories and adhere to substrates according to roofing system manufacturer's written instructions.

B. Apply bonding adhesive to substrate and underside of sheet flashing at required rate and allow too partially dry. Do not apply to seam area of flashing.

C. Flash penetrations and field-formed inside and outside corners with cured or uncured sheet flashing.

D. Clean seam areas, overlap, and firmly roll sheet flashings into the adhesive. Hot-air weld side and end laps to ensure a watertight seam installation.

E. Terminate and seal top of sheet flashings and mechanically anchor to substrate through termination bars.

3.7 WALKWAY INSTALLATION

A. Flexible Walkways:

1. Install flexible walkways at the following locations:

a. Around perimeter of each rooftop unit and per roof drawings.
b. Between each rooftop unit location, creating a continuous path connecting rooftop unit locations, as show on plans.
c. Between each roof access location and each rooftop unit location or path connecting rooftop unit locations.
d. Top and bottom of each roof access ladder.
e. Between each roof access ladder and each rooftop unit location or path connecting rooftop unit locations.
f. As required by roof membrane manufacturer's warranty requirements.

2. Provide minimum 1-inch and maximum 4-inch gap between adjoining pads.
3. Heat weld to substrate or adhere walkway products to substrate with compatible adhesive according to roofing system manufacturer's written instructions.

3.8 FIELD QUALITY CONTROL

A. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion, in presence of Architect, and to prepare inspection report.

B. Repair or remove and replace components of roofing system where inspections indicate that they do not comply with specified requirements.

C. Additional inspecting, at Contractor's expense, will be performed to determine if replaced or additional work complies with specified requirements.

3.9 PROTECTING AND CLEANING

A. Protect roofing system from damage and wear during remainder of construction period. When remaining construction does not affect or endanger roofing system, inspect roofing system for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove roofing system that does not comply with requirements, repair substrates, and repair or reinstall roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

3.10 ROOFING INSTALLER'S WARRANTY

A. WHEREAS <Insert name> of <Insert Address>, herein called the "Roofing Installer," has performed roofing and associated work ("work") on the following project:

1. Owner: <Insert name of Owner>.
2. Address: <Insert address>.
3. Building Name/Type: <Insert information>.
4. Address: <Insert address>.
5. Area of Work: <Insert information>.
6. Acceptance Date: <Insert date>.

7. Warranty Period: <Insert time>.
8. Expiration Date: <Insert date>.

B. AND WHEREAS Roofing Installer has contracted (either directly with Owner or indirectly as a subcontractor) to warrant said work against leaks and faulty or defective materials and workmanship for designated Warranty Period,

C. NOW THEREFORE Roofing Installer hereby warrants, subject to terms and conditions herein set forth, that during Warranty Period Roofing Installer will, at Roofing Installer's own cost and expense, make or cause to be made such repairs to or replacements of said work as are necessary to correct faulty and defective work and as are necessary to maintain said work in a watertight condition.

D. This Warranty is made subject to the following terms and conditions:

1. Specifically excluded from this Warranty are damages to work and other parts of the building, and to building contents, caused by:

    a. lightning;
    b. peak gust wind speed exceeding <Insert mph>;
    c. fire;
    d. failure of roofing system substrate, including cracking, settlement, excessive deflection, deterioration, and decomposition;
    e. faulty construction of parapet walls, copings, chimneys, skylights, vents, equipment supports, and other edge conditions and penetrations of the work;
    f. vapor condensation on bottom of roofing; and
    g. activity on roofing by others, including construction contractors, maintenance personnel, other persons, and animals, whether authorized or unauthorized by Owner.

2. When work has been damaged by any of foregoing causes, Warranty shall be null and void until such damage has been repaired by Roofing Installer and until cost and expense thereof have been paid by Owner or by another responsible party so designated.
3. Roofing Installer is responsible for damage to work covered by this Warranty but is not liable for consequential damages to building or building contents resulting from leaks or faults or defects of work.
4. During Warranty Period, if Owner allows alteration of work by anyone other than Roofing Installer, including cutting, patching, and maintenance in connection with penetrations, attachment of other work, and positioning of anything on roof, this Warranty shall become null and void on date of said alterations, but only to the extent said alterations affect work covered by this Warranty. If Owner engages Roofing Installer to perform said alterations, Warranty shall not become null and void unless Roofing Installer, before starting said work, shall have notified Owner in writing, showing reasonable cause for claim, that said alterations would likely damage or deteriorate work, thereby reasonably justifying a limitation or termination of this Warranty.
5. During Warranty Period, if original use of roof is changed and it becomes used for, but was not originally specified for, a promenade, work deck, spray-cooled surface, flooded basin, or other use or service more severe than originally specified, this Warranty shall become null and void on date of said change, but only to the extent said change affects work covered by this Warranty.
6. Owner shall promptly notify Roofing Installer of observed, known, or suspected leaks, defects, or deterioration and shall afford reasonable opportunity for Roofing Installer to inspect work and to examine evidence of such leaks, defects, or deterioration.

7. This Warranty is recognized to be the only warranty of Roofing Installer on said work and shall not operate to restrict or cut off Owner from other remedies and resources lawfully available to Owner in cases of roofing failure. Specifically, this Warranty shall not operate to relieve Roofing Installer of responsibility for performance of original work according to requirements of the Contract Documents, regardless of whether Contract was a contract directly with Owner or a subcontract with Owner's General Contractor.

E. IN WITNESS THEREOF, this instrument has been duly executed this <Insert day>. day of <Insert month>, <Insert year>.

1. Authorized Signature: <Insert signature>.
2. Name: <Insert name>.
3. Title: <Insert title>.

END OF SECTION 07 54 23

SECTION 07 62 00 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:

1. Formed roof-drainage sheet metal fabrications.
2. Formed Low-sloped sheet metal flashing.
3. Manufactured sheet metal fascia and drip edge trim.
4. Box type Gutter

B. Related Sections:

1. Section 06 10 00 "Rough Carpentry**"** for wood nailers, curbs, and blocking, Laminate Strand Lumber (LSL) Parapet Cap.
2. Section 04 20 00 "Unit Masonry" for installation of manufactured sheet metal through-wall flashing and trim integral with masonry.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals:
1. Comply with Section 01 81 13
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
2. Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: For sheet metal flashing and trim.

1. Include plans, elevations, sections, and attachment details.

2. Distinguish between shop- and field-assembled work.
3. Include identification of finish for each item.
4. Include pattern of seams and details of termination points, expansion joints and expansion-joint covers, direction of expansion, roof-penetration flashing, and connections to adjoining work.
5. Shop drawings shall include project-specific interface conditions and depict integration with adjacent roof, wall panels and exterior wall conditions.

D. Samples: For each exposed product and for each color and texture specified.

1.4 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Product test reports.

C. Sample warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Employs skilled workers who custom fabricate sheet metal flashing and trim similar to that required for this Project and whose products have a record of successful in-service performance.

1.7 WARRANTY

A. Special Warranty on Finishes: Manufacturer agrees to repair finish or replace sheet metal flashing and trim that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.

B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual" and SMACNA's "Architectural Sheet Metal Manual" requirements for dimensions and profiles shown unless more stringent requirements are indicated.

C. SPRI Wind Design Standard: Manufacture and install roof edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressure:

1. Design Pressure: As indicated on Drawings.

D. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change**:** 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

2.2 SHEET METALS

A. General: Protect mechanical and other finishes on exposed surfaces from damage by applying strippable, temporary protective film before shipping.

B. Recycled Content of Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent. For recycled content, indicate postconsumer and preconsumer recycled content and cost.

C. Aluminum Sheet: ASTM B 209 (ASTM B 209M), alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat finish.

1. Exposed Coil-Coated Finish:
   a. Three-Coat Fluoropolymer: AAMA 620. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

2.3 SHEET METAL FABRICATIONS

A. Roof-Edge Fascia: Manufactured, roof-edge fascia consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet (3.6 m) and a continuous formed- or extruded-aluminum anchor bar with integral cleat to engage fascia cover. Provide matching corner units. Roof Edge Flashing shall meet ANSI/SPRI/FM 4435/ES-1 tested.
1. Basis-of-Design Product: Subject to compliance with requirements, provide EverGuard Fascia by GAF with tapered profile. TPO coated metal cover with weldable membrane.
   a. Hickmann
   b. Pac-Tite
   c. Or approved equal.
2. Material: Formed Aluminum: 0.050” thick.
3. Snap-on, single-ply fascia compatible with TPO.
4. Fascia Height: As dimensioned on the drawings.
5. Finish: Prefinished Kynar.

6. Colors: As selected by Architect from manufacturer's metallic and premium color selections:
   a. Color 1: "Silversmith"
   b. Color 2: "Weathered Zinc"

B. TPO Drip Edge Flashing: Manufactured, drip edge flashing consisting of snap-on metal fascia cover in section lengths not exceeding 12 feet (3.6 m) and a continuous formed- or extruded-aluminum anchor bar with integral cleat to engage fascia cover. Provide matching corner units. Roof Edge Flashing shall meet ANSI/SPRI/FM 4435/ES-1 tested.
   1. Basis-of-Design Product: Subject to compliance with requirements, provide EverGuard Drip Edge by GAF with TPO coated metal cover with weldable membrane.
      a. Hickmann
      b. Pac-Tite
      c. Or approved equal.
   2. Material: Formed Aluminum: .050" thick.
   3. 22 ga Galv. steel continuous cleat.
   4. Face Height: As dimensioned on the drawings.
   5. Finish: Prefinished Kynar.
   6. Colors: As selected by Architect from manufacturer's metallic and premium color selections:
      a. Color 1: "Silversmith"
      b. Color 2: "Weathered Zinc"

C. Box Gutter: Manufactured, .050" prefinished aluminum gutter box style 5.25"x5.25" in section lengths not exceeding 12 feet (3.6 m) and providing 2 piece extruded aluminum internal bracket 2-ft o.c.. Provide matching end cap and downspout.
   1. Basis-of-Design Product: EverGuard WR Box Gutter
      a. Hickmann
      b. Pac-Tite
      c. Or Approved Equal.

   2. Finish: Prefinished Kynar. Premium colors architect to select, basis color to be Silversmith

2.4 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Sheet: Minimum 30 mils (0.76 mm) thick, consisting of a slip-resistant polyethylene- or polypropylene-film top surface laminated to a layer of butyl- or SBS-modified asphalt adhesive, with release-paper backing; specifically designed to withstand high metal temperatures beneath metal roofing. Provide primer according to written recommendations of underlayment manufacturer.

   1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
      a. Englert Inc; Metalman HT.
      b. Carlisle Residential, a division of Carlisle Construction Materials; WIP 300HT.
      c. Grace Construction Products, a unit of W. R. Grace & Co.-Conn.; Grace Ice and Water Shield HT.
      d. Henry Company; Blueskin PE200 HT.
      e. Kirsch Building Products, LLC; Sharkskin Ultra SA.

f. Polyguard Products, Inc.; Deck Guard HT.
g. Protecto Wrap Company; Protecto Jiffy Seal Ice & Water Guard HT.
h. SDP Advanced Polymer Products Inc; Palisade SA-HT.

2. Thermal Stability: ASTM D 1970; stable after testing at 240 deg F (116 deg C) or higher.
3. Low-Temperature Flexibility: ASTM D 1970; passes after testing at minus 20 deg F (29 deg C) or lower.

2.5 MISCELLANEOUS MATERIALS

A. General: Provide materials and types of fasteners, solder, protective coatings, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation and as recommended by manufacturer of primary sheet metal or manufactured item unless otherwise indicated.

B. Fasteners: Wood screws, annular-threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.

1. General:

a. Exposed Fasteners: Heads matching color of sheet metal roofing using plastic caps or factory-applied coating. Provide metal-backed EPDM or PVC sealing washers under heads of exposed fasteners bearing on weather side of roofing.
b. Fasteners for Flashing and Trim: Blind fasteners or self-drilling screws, gasketed; with hex-washer head.
c. Blind Fasteners: High-strength aluminum or stainless-steel rivets suitable for metal being fastened.

2. Fasteners for Aluminum Sheet: Aluminum or Series 300 stainless steel.

C. Sealant Tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 1/2 inch (13 mm) wide and 1/8 inch (3 mm) thick.

D. Elastomeric Sealant: ASTM C 920, elastomeric silicone polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

E. Reglets: Units of type, material, and profile required, formed to provide secure interlocking of separate reglet and counterflashing pieces, and compatible with flashing indicated with interlocking counterflashing on exterior face, of same metal as reglet.
1. Manufacturer; OMG Edge Systems, Reglet and Flashing; Drive-Lock (In-Wall) DLR 625 or approved equal.
a. Material: Aluminum 0.050 ga, reglet and 0.032 ga. flashing.
b. Finish: Natural mill aluminum.

2.6 ROOF-DRAINAGE SHEET METAL FABRICATIONS

A. Hanging Gutters: Fabricate to cross section required, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96-inch- (2400-mm-) long sections.

Furnish hidden gutter strap brackets fabricated from same metal as gutters, of size recommended by cited sheet metal standard but with thickness not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, and gutter accessories from same metal as gutters. Shop fabricate interior and exterior corners.

B. Basis-of-Design Product: Subject to compliance with requirements, provide Hickman, Box Profile, or comparable products.
   1. Gutter Material: Formed Aluminum
   2. Expansion Joints: Lap type.

      a. Finish: Prefinished Kynar 500, two-coat.
      b. Shape: Style 'F' – box. See drawings for profile.
      c. Size: 6" x 5"
      d. Aluminum: 0.050 inch thick.
      e. Color: As selected by Architect from manufacturer's full range.

   1. Downspouts: Fabricate rectangular downspouts to dimensions indicated, complete with mitered elbows. Furnish with metal hangers from the same material as downspouts and anchors.

      a. Finish: Prefinished Kynar 500, two-coat.
      b. Hanger Style: Strap.
      c. Size: 6" x 4".
      d. Aluminum: 0.040 inch thick.
      d. Color: As selected by Architect from manufacturer's full range.

C. Conductor Heads: Fabricate conductor heads with flanged back and stiffened top edge and of dimensions and shape required, complete with outlet tubes, exterior flange trim, and built-in overflows. Fabricate from the following materials:
   1. Aluminum: 0.032 inch (0.81 mm) thick.
      d. Color: As selected by Architect from manufacturer's full range.

2.7 MANUFACTURED SHEET METAL FASCIA CLADDING AND TRIM

A. Aluminum cladding, 18-gauge, shop fabricated/extruded, with hemmed edges and concealed cleats/fasteners. Cladding shall have a 3-coat fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat, along with a removable temporary protective coverings and strippable films.

2.8 FABRICATION, GENERAL

B. General: Custom fabricate sheet metal flashing and trim to comply with details shown and recommendations in cited sheet metal standard that apply to design, dimensions, geometry, metal thickness, and other characteristics of item required. Fabricate sheet metal flashing and trim in shop to greatest extent possible.

   1. Obtain field measurements for accurate fit before shop fabrication.
   2. Form sheet metal flashing and trim to fit substrates without excessive oil canning, buckling, and tool marks; true to line, levels, and slopes; and with exposed edges folded back to form hems.

3. Conceal fasteners and expansion provisions where possible. Do not use exposed fasteners on faces exposed to view.

C. Expansion Provisions: Form metal for thermal expansion of exposed flashing and trim.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with butyl sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Sealant Joints: Where movable, nonexpansion-type joints are required, form metal to provide for proper installation of elastomeric sealant according to cited sheet metal standard.

E. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal.

F. Fabricate cleats and attachment devices of sizes as recommended by cited sheet metal standard for application, but not less than thickness of metal being secured.

G. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints where necessary for strength.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work securely in place, with provisions for thermal and structural movement. Use fasteners, solder, protective coatings, separators, sealants, and other miscellaneous items as required to complete sheet metal flashing and trim system.

1. Install sheet metal flashing and trim true to line, levels, and slopes. Provide uniform, neat seams with minimum exposure of solder, welds, and sealant.
2. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.
3. Space cleats not more than 12 inches (300 mm) apart. Attach each cleat with at least two fasteners. Bend tabs over fasteners.
4. Install exposed sheet metal flashing and trim with limited oil canning, and free of buckling and tool marks.
5. Torch cutting of sheet metal flashing and trim is not permitted.

B. Metal Protection: Where dissimilar metals contact each other, or where metal contacts pressure-treated wood or other corrosive substrates, protect against galvanic action or corrosion by painting contact surfaces with bituminous coating or by other permanent separation as recommended by sheet metal manufacturer or cited sheet metal standard.

C. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at maximum of 10 feet (3 m) with no joints within 24 inches (600 mm) of corner or intersection.

1. Form expansion joints of intermeshing hooked flanges, not less than 1 inch (25 mm) deep, filled with sealant concealed within joints.
2. Use lapped expansion joints only where indicated on Drawings.

D. Fasteners: Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

E. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.

F. Seal joints as required for watertight construction. Prepare joints and apply sealants to comply with requirements in Section 07 92 00 "Joint Sealants."

G. Expansion Joints: Where 2” expansion joints are indicated in the drawings stop trim/flashings and seal to each end. Then install a “slip” cover layer extending at least 4inches beyond 2” expansion joint. Fasten and seal only to one side of the expansion joint. Intent is to allow movement while covering expansion joint.

3.2 ROOF FLASHING INSTALLATION

A. General: Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard. Provide concealed fasteners where possible, and set units true to line, levels, and slopes. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

B. Install sheet metal flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and cited sheet metal standard.

1. Provide concealed fasteners where possible, and set units true to line, levels, and slopes.
2. Install work with laps, joints, and seams that are permanently watertight and weather resistant.

C. Install work with laps, joints, and seams that are permanently watertight and weatherproof.

D. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in cited sheet metal standard unless otherwise indicated. Interlock bottom edge of roof edge flashing with cleat anchored to substrate.

1. Reglets to occur where adhered elastomeric roof membrane meets masonry walls and extends up to meet the reglet. Reglet should be located a minimum of 8” above the roof surface.

E. Counterflashing: Coordinate installation of counterflashing with installation of base flashing.

1. Insert counterflashing in reglets or receivers and fit tightly to base flashing.
2. Extend counterflashing 4 inches (100 mm) over base flashing.
3. Lap counterflashing joints minimum of 4 inches (100 mm).
4. Secure in a waterproof manner by means of interlocking folded seam unless otherwise indicated.

F. Reglets: Installation of reglets is specified in Section 04 20 00 "Unit Masonry."

3.3 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean off excess sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed unless otherwise indicated in manufacturer's written installation instructions.

END OF SECTION 07 62 00

SECTION 077233 ROOF HATCHES

PART 1 - GENERAL

1.1 SUMMARY

A. Work Included:

1. Provide factory-fabricated roof hatches for ladder access.
2. Hatch railing system.

1.2 SUBMITTALS

A. Product Data: Submit manufacturer's product data.

B. Shop Drawings: Submit shop drawings including profiles, accessories, location, adjacent construction interface, and dimensions.

C. Warranty: Submit executed copy of manufacturer's standard warranty.

1.3 QUALITY ASSURANCE

A. Manufacturer: A minimum of 5 years experience manufacturing similar products.

B. Installer: A minimum of 2 years experience installing similar products.

C. Manufacturer's Quality System: Registered to ISO 9001:2008 Quality Standards including in-house engineering for product design activities.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver products in manufacturer's original packaging. Store materials in a dry, protected, well-vented area. Inspect product upon receipt and report damaged material immediately to delivering carrier and note such damage on the carrier's freight bill of lading.

1.5 WARRANTY

A. Manufacturer's Warranty: Provide manufacturer's standard warranty. Materials shall be free of defects in material and workmanship for a period of five years from the date of purchase. Should a part fail to function in normal use within this period, manufacturer shall furnish a new part at no charge.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis-of-Design Manufacturer: Type E Roof Hatch by The Bilco Company, P.O. Box 1203, New Haven, CT 06505, 1-800-366-6530, Fax: 1-203-933-8478, Web: www.bilco.com. Or Approved Equal.

B. Equal manufactures:

1. Groter, Roof hatch and ladder
2. WB Doors Roof hatch and ladder

2.2 ROOF HATCH

A. Furnish and install where indicated on plans metal roof hatch Type E, size width: 36" (914mm) x length: 36" (914mm). Length denotes hinge side. The roof hatch shall be single leaf. The roof hatch shall be pre-assembled from the manufacturer.

B. Performance characteristics:

1. Cover shall be reinforced to support a minimum live load of 40 psf (195kg/m^2) with a maximum deflection of 1/150th of the span or 20 psf (97 kg/m^2) wind uplift.
2. Operation of the cover shall be smooth and easy with controlled operation throughout the entire arc of opening and closing.
3. Operation of the cover shall not be affected by temperature.
4. Entire hatch shall be weather tight with fully welded corner joints on cover and curb.

C. Cover: Shall be 11 gauge (2.3mm) aluminum] with a 3” (76mm) beaded flange with formed reinforcing members. Cover shall have a heavy extruded EPDM rubber gasket that is bonded to the cover interior to assure a continuous seal when compressed to the top surface of the curb.

D. Cover insulation: Shall be fiberglass of 1” (25mm) thickness, fully covered and protected by a metal liner 18 gauge (1mm) aluminum.

E. Curb: Shall be 12” (305mm) in height and of 11 gauge (2.3mm) aluminum]. The curb shall be formed with a 3-1/2” (89mm) flange with 7/16” (11.1mm) holes provided for securing to the roof deck. The curb shall be equipped with an integral metal capflashing of the same gauge and material as the curb, fully welded at the corners, that features the Bil-Clip® flashing system, including stamped tabs, 6” (153mm) on center, to be bent inward to hold single ply roofing membrane securely in place.

F. Curb insulation: Shall be rigid, high-density fiberboard of 1” (25mm) thickness on outside of curb.

G. Lifting mechanisms: Manufacturer shall provide compression spring operators enclosed in telescopic tubes to provide, smooth, easy, and controlled cover operation throughout the entire arc of opening and closing. The upper tube shall be the outer tube to prevent accumulation of moisture, grit, and debris inside the lower tube assembly. The lower tube shall interlock with a flanged support shoe [for aluminum construction: welded to the curb assembly; for steel construction: through bolted to the curb assembly].

H. Hardware

1. Heavy pintle hinges shall be provided
2. Cover shall be equipped with a spring latch with interior and exterior turn handles
3. Roof hatch shall be equipped with interior and exterior padlock hasps.
4. The latch strike shall be a stamped component bolted to the curb assembly.
5. Cover shall automatically lock in the open position with a rigid hold open arm equipped with a 1” (25mm) diameter red vinyl grip handle to permit easy release for closing.

6. Compression spring tubes shall be an anti-corrosive composite material and all other hardware shall be zinc plated and chromate sealed. [For installation in highly corrosive environments or when prolonged exposure to hot water or steam is anticipated, specify Type 316 stainless steel hardware].
7. Cover hardware shall be bolted into heavy gauge channel reinforcing welded to the underside of the cover and concealed within the insulation space.

I. Finishes: Factory finish shall be mill finish aluminum.

J. Panted Finish, Kynar Paint in Signal White.

2.3 HATCH RAIL SYSTEM

A. Basis-of-Design Manufacturer: Type Bil-Guard® 2.0 Roof Hatch Railing System by The BILCO Company, P.O. Box 1203, New Haven, CT 06505, 800-366-6530, Fax: 1-203-535-1582, Web: www.bilco.com

1. Or approved equal.

a. Groter, Roof hatch and ladder
b. WB Doors Roof hatch and ladder

B. Furnish and install where indicated on plans hatch rail system Model compatible to the submitted roof hatch. The hatch rail system shall be field assembled and installed per the manufacturer's instructions.

C. Performance characteristics:

1. High visibility safety yellow powder coat paint finish.
2. Hatch rail system shall attach to the capflashing of the roof hatch and shall not penetrate any roofing material.
3. Hatch rail system shall satisfy the requirements of OSHA 29 CFR 1910.29 and shall meet OSHA strength requirements with a factor of safety of two.
4. Corrosion resistant construction with a five-year warranty.
5. Hinged gate shall ensure continuous barrier around the roof hatch.
6. Self-closing gate hinge and positive latching system provided with hatch rail system.

D. Posts and Rails: 1-1/4" (32mm) 6061 T6 schedule 40 aluminum pipe.

E. Hardware: Mounting brackets shall be 3/8" (9mm) thick extruded aluminum. Pivoting post guides with compression fittings and latching mechanism shall be cast aluminum. Self-closing hinges and all fasteners shall be type 316 stainless steel.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and openings for compliance with requirements for installation tolerances and other conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install products in strict accordance with manufacturer's instructions and approved submittals. Locate units level, plumb, and in proper alignment with adjacent work.

1. Test units for proper function and adjust until proper operation is achieved.
2. Repair finishes damaged during installation.
3. Restore finishes so no evidence remains of corrective work.

3.3 ADJUSTING AND CLEANING

A. Clean exposed surfaces using methods acceptable to the manufacturer which will not damage finish.

END OF SECTION

SECTION 07 84 13 - PENETRATION FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

C. Section Includes:

1. Penetrations in fire-resistance-rated walls.

1.2 ACTION SUBMITTALS

D. Product Data: For each type of product indicated.

E. LEED Submittals:
1. Product Data: For sealants, indicating VOC content.
   a. Verify sealant has a VOC content of 250 g/L or less.
2. For sealants, indicating compliance with requirements for low-emitting materials.
3. Comply with Section 01 81 13:
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
      1) Health Product Declaration (HPD). For each product.

F. Product Schedule: For each penetration firestopping system. Include location and design designation of qualified testing and inspecting agency.

1. Where Project conditions require modification to a qualified testing and inspecting agency's illustration for a particular penetration firestopping condition, submit illustration, with modifications marked, approved by penetration firestopping manufacturer's fire-protection engineer as an engineering judgment or equivalent fire-resistance-rated assembly.

1.3 INFORMATIONAL SUBMITTALS

A. Installer Certificates: From Installer indicating penetration firestopping has been installed in compliance with requirements and manufacturer's written recommendations. B. Product test reports.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: A firm that has been approved by FM Global according to FM Global 4991, "Approval of Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."
B. Fire-Test-Response Characteristics: Penetration firestopping shall comply with the following requirements:
   1. Penetration firestopping is identical to those tested per testing standard referenced in "Penetration Firestopping" Article. Provide rated systems bearing marking of qualified testing and inspection agency.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Grace Construction Products.
   2. Hilti, Inc.
   3. Nelson Firestop Products.
   4. 3M Fire Protection Products.
   5. Tremco, Inc.; Tremco Fire Protection Systems Group.

2.2 PENETRATION FIRESTOPPING

A. Provide penetration firestopping that is produced and installed to resist spread of fire according to requirements indicated, resist passage of smoke and other gases, and maintain original fire resistance rating of construction penetrated. Penetration firestopping systems shall be compatible with one another, with the substrates forming openings, and with penetrating items if any.

B. Penetrations in Fire-Resistance-Rated Walls: Ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).

   1. F-Rating: Not less than the fire-resistance rating of constructions penetrated.

C. Penetrations in Horizontal Assemblies: Ratings determined per ASTM E 814 or UL 1479, based on testing at a positive pressure differential of 0.01-inch wg (2.49 Pa).

   1. F-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated.
   2. T-Rating: At least 1 hour, but not less than the fire-resistance rating of constructions penetrated except for floor penetrations within the cavity of a wall.

D. Exposed Penetration Firestopping: Provide products with flame-spread and smoke-developed indexes of less than 25 and 450, respectively, as determined per ASTM E 84.

E. VOC Content: Penetration firestopping sealants and sealant primers shall comply with the following limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24):

1. Sealants: 250 g/L.
2. Sealant Primers for Nonporous Substrates: 250 g/L.
3. Sealant Primers for Porous Substrates: 775 g/L.

F. Accessories: Provide components for each penetration firestopping system that are needed to install fill materials and to maintain ratings required. Use only those components specified by penetration firestopping manufacturer and approved by qualified testing and inspecting agency for firestopping indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for opening configurations, penetrating items, substrates, and other conditions affecting performance of the Work.

B. Install penetration firestopping to comply with manufacturer's written installation instructions and published drawings for products and applications indicated.

C. Install forming materials and other accessories of types required to support fill materials during their application and in the position needed to produce cross-sectional shapes and depths required to achieve fire ratings indicated.

1. After installing fill materials and allowing them to fully cure, remove combustible forming materials and other accessories not indicated as permanent components of firestopping. D. Install fill materials for firestopping by proven techniques to produce the following results:

1. Fill voids and cavities formed by openings, forming materials, accessories, and penetrating items as required to achieve fire-resistance ratings indicated.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing the Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.2 IDENTIFICATION

A. Identify penetration firestopping with preprinted metal or plastic labels. Attach labels permanently to surfaces adjacent to and within 6 inches (150 mm) of firestopping edge so labels will be visible to anyone seeking to remove penetrating items or firestopping. Use mechanical fasteners or selfadhering-type labels with adhesives capable of permanently bonding labels to surfaces on which labels are placed. Include the following information on labels:

1. The words "Warning - Penetration Firestopping - Do Not Disturb. Notify Building Management of Any Damage."
2. Contractor's name, address, and phone number.
3. Designation of applicable testing and inspecting agency.
4. Date of installation.
5. Manufacturer's name.
6. Installer's name.

3.3 FIELD QUALITY CONTROL

A. Where deficiencies are found or penetration firestopping is damaged or removed because of testing, repair or replace penetration firestopping to comply with requirements.

B. Proceed with enclosing penetration firestopping with other construction only after inspection reports are issued and installations comply with requirements.

END OF SECTION 07 84 13

SECTION 07 92 00 - JOINT SEALANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes joint sealants, fillers and adhesives for the following applications, including those specified by reference to this Section:

1. Interior joints in the following vertical surfaces and horizontal surfaces:

a. Control and expansion joints on exposed surfaces of masonry walls.
b. Joints where countertops abut vertical surfaces.
c. Perimeter joints between interior wall surfaces and frames of interior doors windows, elevator entrances and wood bases.
d. Joints between plumbing fixtures and adjoining walls, floors, and counters.
e. Tile control and expansion joints.
f. Stone threshold setting.

B. Related Sections include the following:

1. Division 8 Section “Glazing” for butt glazing sealant.
2. Division 7 Section “ Built up Asphalt Roofing System” for roof expansion joints.
3. Division 9 Section "Gypsum Board Assemblies" for locations of perimeter joints of gypsum board partitions to reduce sound transmission, with products specified in this section.
4. Division 8 Sections “Wood Doors” and Hollow Metal Doors and Frames for sealants applied to junction of door frames and partitions.

1.3 PERFORMANCE REQUIREMENTS

A. Provide elastomeric joint sealants that establish and maintain watertight and airtight continuous joint seals without staining or deteriorating joint substrates.

B. Provide joint sealants for interior applications that establish and maintain airtight and water-resistant continuous joint seals without staining or deteriorating joint substrates.

1.4 SUBMITTALS

A. Product Data: For each joint-sealant product indicated.

B. LEED Submittals:
1. VOC Content: Verify sealants and sealant primers comply with the following:
a. Architectural sealants have a VOC content of 250 g/L or less.
b. Sealants and sealant primers for nonporous substrates have a VOC content of 250 g/L or less.
c. Sealants and sealant primers for porous substrates have a VOC content of **775** g/L or less.
d. Product Data: For sealants, indicating VOC content.
e. Laboratory Test Reports: For sealants, indicating compliance with requirements for lowemitting materials.
2. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
3. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
a. Health Product Declaration (HPD): For each product.

C. Samples for Initial Selection: Manufacturer's color charts consisting of strips of cured sealants showing the full range of colors available for each product exposed to view.

D. Samples for Verification: For each type and color of joint sealant required, provide Samples with joint sealants in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

E. Field Test Report Log: For each elastomeric sealant application.

F. Warranties: Special warranties specified in this Section.

1.5 PROJECT CONDITIONS

A. Do not proceed with installation of joint sealants under the following conditions:

1. When ambient and substrate temperature conditions are outside limits permitted by joint-sealant manufacturer.
2. When joint substrates are wet.
3. Where joint widths are less than those allowed by joint-sealant manufacturer for applications indicated.
4. Contaminants capable of interfering with adhesion have not yet been removed from joint substrates.

1.6 WARRANTY

A. Special Installer's Warranty: Installer's standard form in which Installer agrees to repair or replace elastomeric joint sealants that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Two (2) years from date of Substantial Completion.

B. Special Manufacturer's Warranty: Manufacturer's standard form in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that do not comply with performance and other requirements specified in this Section within specified warranty period.

1. Warranty Period: Five (5) years from date of Substantial Completion.

C. Special warranties specified in this Article exclude deterioration or failure of elastomeric joint sealants from the following:

1. Movement of the structure resulting in stresses on the sealant exceeding sealant manufacturer's written specifications for sealant elongation and compression caused by structural settlement or errors attributable to design or construction.
2. Disintegration of joint substrates from natural causes exceeding design specifications.
3. Mechanical damage caused by individuals, tools, or other outside agents.
4. Changes in sealant appearance are caused by accumulation of dirt or other atmospheric

contaminants. PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the products listed.

2.2 MATERIALS, GENERAL

A. Compatibility: Provide joint sealants, backings, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer, based on testing and field experience.

B. Colors of Exposed Joint Sealants: As selected by Architect from manufacturer's full range.

C. Architectural Sealants:

1. Toxicity/IEQ:

a. Comply with applicable regulations regarding toxic and hazardous materials, and as specified. Sealants must meet or exceed requirements South Coast Air Quality Management District (SCAQMD) #1168.
b. Sealants containing aromatic solvents, fibrous talc, formaldehyde, halogenated solvents, mercury, lead, cadmium, chromium and their compounds, are not permitted.

2.3 ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealants: Comply with ASTM C 920 and other requirements indicated for each liquidapplied chemically curing sealant specified, including those referencing ASTM C 920 classifications for type, grade, class, and uses related to exposure and joint substrates.

B. Stain-Test-Response Characteristics: Where elastomeric sealants are specified to be nonstaining to porous substrates, provide products that have undergone testing according to ASTM C 1248 and have not stained porous joint substrates indicated for Project.

C. Suitability for Contact with Food: Where elastomeric sealants are indicated for joints that will come in repeated contact with food, and for all countertop sealants provide products that comply with 21 CFR 177.2600.

D. Single-Component Neutral-Curing Silicone Sealant [ES-1]:

1. Available Products:

a. GE Silicones; SilPruf SCS2000.
b. Pecora Corporation; 864.
c. Pecora Corporation; 890.
d. Polymeric Systems Inc.; PSI-641.
e. Sonneborn, Division of ChemRex Inc.; Omniseal.
f. Tremco; Spectrem 3.

2. Type and Grade: S (single component) and NS (nonsag).
3. Class: 50.
4. Use Related to Exposure: NT (nontraffic).

E. Single-Component Mildew-Resistant Neutral-Curing Silicone Sealant [ES-2]:

1. Products:

a. Dow Corning; 786 Mildew Resistant.
b. Pecora Corporation; 898.
c. Tremco; Tremsil 600.

2. Type and Grade: S (single component) and NS (nonsag).
3. Class: 25.
4. Use Related to Exposure: NT (nontraffic).
5. Uses Related to Joint Substrates: M, G, A, and O.

2.4 LATEX JOINT SEALANTS

A. Latex Sealant [LS]: Comply with ASTM C 834, Type P, Grade NF.

B. Available Products:

1. Bostik Findley; Chem-Calk 600.
2. Pecora Corporation; AC-20+.
3. Schnee-Morehead, Inc.; SM 8200.
4. Sonneborn, Division of ChemRex Inc.; Sonolac.
5. Tremco; Tremflex 834.

2.5 ACOUSTICAL JOINT SEALANTS

A. Acoustical Sealant [AS] for Exposed and Concealed Joints [AS] Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834 and the following:

1. Product effectively reduces airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

2. Elastomeric Flexible Clear Sealants:

a. Sound Specialties Coatings Corporation: Slickthane high solids polyurethane-acrylic blend, single component ambient or heat cure, zero to low VOC, waterborne. B. Non-hardening fire-stop sealant:

1. Gun or trowel-applied intumescent sealant: 3M “CPW-25WB+” or approved equal.
2. Moldable intumescent putty: 3M “Fire Barrier Moldable Putty+” or approved equal.
3. Non-intumescent silicone sealant: 3M “Silicone Fire Stop”, USG “Smokeseal” or approved equal) may be used in lieu of the sealant on foam rod in noise sensitive walls that are also fire rated.

2.6 FOAM BACKER ROD

A. Closed cell polyethylene backer rod, ASTM C1193

B. Acceptable Manufacturers: ITP, Nomaco, or approved equal (available through Tom Brown, Inc. 800446-2298)

2.7 JOINT-SEALANT BACKING

A. General: Provide sealant backings of material and type that are non-staining; are compatible with joint substrates, sealants, primers, and other joint fillers; and are approved for applications indicated by sealant manufacturer based on field experience and laboratory testing.

B. Cylindrical Sealant Backings: ASTM C 1330, Type or any of the preceding types, as approved in writing by joint-sealant manufacturer for joint application indicated, and of size and density to control sealant depth and otherwise contribute to producing optimum sealant performance:

C. Elastomeric Tubing Sealant Backings: Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, nonabsorbent to water and gas, and capable of remaining resilient at temperatures down to minus 26 deg F (minus 32 deg C). Provide products with low compression set and of size and shape to provide a secondary seal, to control sealant depth, and to otherwise contribute to optimum sealant performance.

D. Bond-Breaker Tape: Polyethylene tape or other plastic tape recommended by sealant manufacturer for preventing sealant from adhering to rigid, inflexible joint-filler materials or joint

surfaces at back of joint where such adhesion would result in sealant failure. Provide self-adhesive tape where applicable.

2.8 EXPANSION JOINT FILLER

A. W.R. Meadows, Sealtight, multi-purpose expansion-contraction joint filler in recommended thickness for anticipated range of joint movement. Adhere to one plane surface.

2.9 MISCELLANEOUS MATERIALS

A. Primer: Material recommended by joint-sealant manufacturer where required for adhesion of sealant to joint substrates indicated, as determined from preconstruction joint-sealant-substrate tests and field tests.

B. Cleaners for Nonporous Surfaces: Chemical cleaners acceptable to manufacturers of sealants and sealant backing materials, free of oily residues or other substances capable of staining or harming joint substrates and adjacent nonporous surfaces in any way, and formulated to promote optimum adhesion of sealants to joint substrates.

C. Masking Tape: Non-staining, nonabsorbent material compatible with joint sealants and surfaces adjacent to joints.

2.10 ADHESIVES

A. Material recommended by adhesive manufacturer for application of material to substrate for intended application.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine joints indicated to receive joint sealants, with Installer present, for compliance with requirements for joint configuration, installation tolerances, and other conditions affecting joint-sealant performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Surface Cleaning of Joints: Clean out joints immediately before installing joint sealants to comply with joint-sealant manufacturer's written instructions and the following requirements:

1. Remove all foreign material from joint substrates that could interfere with adhesion of joint sealant, including dust, paints (except for permanent, protective coatings tested and

approved for sealant adhesion and compatibility by sealant manufacturer), old joint sealants, oil, grease, waterproofing, water repellents, water, surface dirt, and frost.

2. Clean porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants. Remove loose particles remaining after cleaning operations above by vacuuming or blowing out joints with oil-free compressed air. Porous joint substrates include the following:

    a. Concrete.
    b. Masonry.
    c. Unglazed surfaces of ceramic tile.
    d. Other porous substrates.

3. Remove laitance and form-release agents from concrete.
4. Clean nonporous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants. Nonporous joint substrates include the following:

    a. Porcelain enamel.
    b. Glazed surfaces of ceramic tile.
    c. Other porous substrates.

B. Joint Priming: Prime joint substrates, where recommended in writing by joint-sealant manufacturer, based on preconstruction joint-sealant-substrate tests or prior experience. Apply primer to comply with joint-sealant manufacturer's written instructions.

C. Masking Tape: Use masking tape where required to prevent contact of sealant with adjoining surfaces that otherwise would be permanently stained or damaged.

3.3 INSTALLATION OF JOINT SEALANTS

A. General: Comply with joint-sealant manufacturer's written installation instructions for products and applications indicated, unless more stringent requirements apply.

B. Sealant Installation Standard: Comply with recommendations in ASTM C 1193 for use of joint sealants as applicable to materials, applications, and conditions indicated.

C. Sealants for Stone Masonry: Provide non-staining sealant systems as certified by test data and as recommended by manufacturer for sealing interior and exterior stone facing joints.

D. Acoustical Sealant Application Standard: Comply with recommendations in ASTM C 919 for use of joint sealants in acoustical applications as applicable to materials, applications, and conditions indicated.

1. Furnish and install acoustical sealant at the following locations:

    a. All penetrations of partition, wall, and floor construction by ductwork, conduit, piping, or structure

b. All termination of partitions enclosing Noise Critical Spaces to abutting construction (e.g. partitions, structure, etc.)
c. Both sides of door frames to abutting construction where doors are scheduled to have acoustical seals
d. Both sides of window frames to adjacent construction at windows in partitions enclosing Noise Critical Spaces.
e. Perimeter of penetrations through sound isolating ceilings, roof systems, and floor systems

2. Backer Rod shall be used in all joints greater than ¼ inch. Product to be constructed of closed cell foam, or appropriate resilient material for sealant. Dimension shall be minimum 30% greater than joint width, unless otherwise indicated on details.

E. Install sealant backings of type indicated to support sealants during application and at position required to produce cross-sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability.

1. Do not leave gaps between ends of sealant backings.
2. Do not stretch, twist, puncture, or tear sealant backings.
3. Remove absorbent sealant backings that have become wet before sealant application and replace them with dry materials.

F. Install bond-breaker tape behind sealants where sealant backings are not used between sealants and backs of joints.

G. Install sealants using proven techniques that comply with the following and at the same time backings are installed:

1. Place sealants so they directly contact and fully wet joint substrates.
2. Completely fill recesses in each joint configuration.
3. Produce uniform, cross-sectional shapes and depths relative to joint widths that allow optimum sealant movement capability.

H. Tooling of Nonsag Sealants: Immediately after sealant application and before skinning or curing begins, tool sealants according to requirements specified below to form smooth, uniform beads of configuration indicated; to eliminate air pockets; and to ensure contact and adhesion of sealant with sides of joint.

1. Remove excess sealant from surfaces adjacent to joints.
2. Use tooling agents that are approved in writing by sealant manufacturer and that do not discolor sealants or adjacent surfaces.
3. Provide concave joint configuration per Figure 5A in ASTM C 1193, unless otherwise indicated.
4. Provide flush joint configuration where indicated per Figure 5B in ASTM C 1193.
5. Provide recessed joint configuration of recess depth and at locations indicated per Figure 5C in ASTM C 1193.

a. Use masking tape to protect surfaces adjacent to recessed tooled joints.

I. Installation of Preformed Silicone-Sealant System: Comply with the following requirements:

1. Apply masking tape to each side of joint, outside of area to be covered by sealant system.
2. Apply silicone sealant to each side of joint to produce a bead of size complying with preformed silicone-sealant system manufacturer's written instructions and covering a bonding area of not less than 3/8 inch. Hold edge of sealant bead 1/4 inch inside masking tape.
3. Within 10 minutes of sealant application, press silicone extrusion into sealant to wet extrusion and substrate. Use a roller to apply consistent pressure and ensure uniform contact between sealant and both extrusion and substrate.
4. Complete installation of sealant system in horizontal joints before installing in vertical joints. Lap vertical joints over horizontal joints. At ends of joints, cut silicone extrusion with a razor knife.

J. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, producing seal continuity at ends, turns, and intersections of joints. For applications at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant in compliance with sealant manufacturer's written instructions.

3.4 FIELD QUALITY CONTROL

1. Inspect joints for complete fill, for absence of voids, and for joint configuration complying with specified requirements. Record results in a field-adhesion-test log.
2. Inspect tested joints and report on the following:

    a. Whether sealants in joints connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate. Compare these results to determine if adhesion passes sealant manufacturer's field-adhesion hand-pull test criteria.
    b. Whether sealants filled joint cavities and are free of voids.
    c. Whether sealant dimensions and configurations comply with specified requirements.

3. Record test results in a field-adhesion-test log. Include dates when sealants were installed, names of persons who installed sealants, test dates, test locations, whether joints were primed, adhesion results and percent elongations, sealant fill, sealant configuration, and sealant dimensions.

4. Repair sealants pulled from test area by applying new sealants following same procedures used originally to seal joints. Ensure that original sealant surfaces are clean and that new sealant contacts original sealant.

B. Evaluation of Field Test Results: Sealants not evidencing adhesive failure from testing or noncompliance with other indicated requirements will be considered satisfactory. Remove sealants that fail to adhere to joint substrates during testing or to comply with other requirements. Retest failed applications until test results prove sealants comply with indicated requirements.

3.5 CLEANING

A. Clean off excess sealant or sealant smears adjacent to joints as the Work progresses by methods and with cleaning materials approved in writing by manufacturers of joint sealants and of products in which joints occur.

3.6 PROTECTION

A. Protect joint sealants during and after curing period from contact with contaminating substances and from damage resulting from construction operations or other causes so sealants are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated joint sealants immediately so installations with repaired areas are indistinguishable from original work.

3.7 Sealant Schedule:

LOCATION	SYSTEM NO.	CUSTOM COLOR
Masonry/Masonry	ES-1	Yes
Masonry/Metal	ES-1	Yes
Metal/Metal	ES-1	Yes
Tile/Fixtures	ES-2	Yes
Painter's Caulk	LS	No
Interior Acoustical Joints	AS	No

END OF SECTION 07 92 00

SECTION 07 95 00 – EXPANSION JOINTS

PART 1 – GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. Section includes:
B. Scope of Work
    1. Interior expansion control systems
    2. Exterior expansion control systems
    3. Expansion Joint accessories including provisions for moisture barriers, waterproofing, acoustic and thermal measures.
C. Provide all labor, materials and services to perform operations in connection with furnishing, delivery, and installation of work related to this section.

1.03 RELATED WORK

A. Related work includes but is not limited to:
    1. Cast-In-Place Concrete: Section 033000.
    2. Unit Masonry: Section 042000.
    3. Structural Steel: Section 051200.
    4. Light Gage Metal Framing: Section 054000.
    5. Roofing and Waterproofing: Section 075323
    6. Sheet Metal Flashing and Trim: Section 076200.
    7. Joint Sealants as Weather Seals: Section 079200
    8. Gypsum Wallboard: Section 092900.

1.04 REFERENCES

A. Work shall be performed following applicable Local, State, and Federal codes and regulations.
B. Publications listed herein are part of this specification. See below for standards where applicable to the product listed:
    1. American Society for Testing and Materials (ASTM):
        a. ASTM B221, “Standard Specifications for Aluminum and Aluminum-Alloy Extrusions.”
        b. ASTM B209, “Standard Specification for Aluminum and Aluminum Alloy Sheet and Plate.
        c. ASTM E1399 “Cyclic Movement and Measuring of Minimum/Maximum Joint Widths of Architectural Joint Systems.”
        d. ANSI/U.L. No. 263, UL2079, ULCS115, EN1366-4 Fire Rated Testing fort full rated period. Underwriter’s Laboratories shall classify adjacent substrate assemblies.
        e. ASTM E1612, Standard Specification for Preformed Architectural Compression Seals for Buildings and Parking Structures.
    2. American National Standards Institute (ANSI):

a. ANSI A137.1/A326.3 (2018), “Method for Measuring Dynamic Coefficient of Friction on Hard Flooring Materials”

1.05 DEFINITIONS

A. Product Movement capabilities
   1. Product operating range defined as a percentage of the nominal joint width.
   2. Industry standard requirements: 25%+- operating range for thermal conditions. 50%+- operating range for seismic and windsway conditions.
   3. Lateral shear capable systems allow for movement parallel to joint orientation.
B. Product “Load” descriptions:
   1. Standard Loads: common applications with high volume pedestrian crossing. Applicable for typical office settings or other spaces where occasional rubber wheeled traffic (i.e.- mail carts, trolleys, light weight cleaning equipment and luggage) will be encountered. 500 lb. [230 kg] maximum.

1.06 SYSTEM DESCRIPTION

A. Joint coverplate systems shall permit daily thermal expansion and contraction of building elements, minor foundation settlement, and common windsway movements of the structure without disengagement.
   1. Joint system details shall clearly indicate X-axis joint movement capabilities (horizontal contraction/ expansion). Y-axis joint movement (in-plane shear), and Z-axis movement (vertical shear) may be requested of the Manufacturer if applicable.
   2. Movement capabilities shall be clearly defined as a percentage of the nominal joint width or with distinct dimensions defined on product details.
B. Joint Systems shall allow for seismic movement (if applicable), matching requirements as defined within the Project Specific Structural Specifications.
C. Fire Rated Assemblies shall be tested by registered Third Party Testing Agencies in accordance with UL2079, ULC S115, or BS 476 classified systems. Expansion joint assembly fire rating shall match or exceed the fire rating of adjacent construction.

1.07 QUALITY ASSURANCE

A. Architectural Joint Cover Manufacturer: Furnish horizontal and vertical systems from a Manufacturer with a minimum of ten (10) years of experience in the design, engineering and fabrication of expansion joint systems.
B. Installer: Contractor with not less than three (3) years of successful experience in the installation of systems similar to those required by Project.

1.08 ACTION SUBMITTALS

A. Manufacturer’s Specifications, technical data, installation instructions, and detail drawings for each proposed system.
B. Listings/ Certifications of all Fire Rated Assemblies secured through Registered Third Party Testing Agency.
C. Representative sample of specified systems 4” [100mm] minimum length.
D. UL Environmental GreenGuard Gold Certification required for any Synthetic Rubber seals to be utilized in project.

1.09 DELIVERY AND STORAGE

A. Manufacturer to provide protective film on all exposed cover plate components.
B. Deliver joint systems to jobsite in new, clean, unopened cartons or crates of sufficient size and strength to protect materials during transit.
C. Inspect materials upon arrival. Store components in original containers in a clean, dry location. Ensure temperature or moisture sensitive components are stored in a tempered location.
D. Contractor to provide temporary protective covers on all installed finished surfaces. Protection is required to guard against both surface abrasions as well as overloading of horizontal deck components by construction traffic.

1.10 SEQUENCING

A. Submittals shall be completed and remitted to the Project Architect within 4 weeks after award of subcontract.
B. Subcontract for the work of this section shall be planned to allow sufficient time for Manufacturer's production and delivery scheduling.

1.11 WARRANTY

A. Standard limited warranty against material and manufacturing defects for a period of not less than five (5) years when installed in accordance with Manufacturer's recommendations.

PART 2 – PRODUCTS

2.01 MANUFACTURER

A. Manufacturer must be capable of providing a full range Interior and Exterior Architectural Joint Cover systems as well as a full complement of expansion joint accessories.
B. Manufacturer must be capable of providing project specific details accurate to the building construction type.
C. Requests for substitutions will be considered in accordance with provisions of Section 01 60 00
D. Basis of Design: InPro Corp, JointMaster, inprocorp.com. Expansion joint system and accessories, see series number for each product.
    a. Or Vibrant Power Inc
    b. Or Nystrom
    c. Or approved equal

2.02 MATERIALS

A. Aluminum: Alloy types of 6061-T6, 6063-T6, 6005A, or 5052-H32 sheet goods
    1. Floor systems: Mill finish standard
    2. Walls and Ceilings: Standard Class II Clear Anodized [Color Anodized, Kynar Painted, Custom Color Painted optional]
B. Stainless Steel: Alloy Type 304 for plates and strips.
    1. Brushed #4 surface finish standard
C. Elastomeric Seals: Synthetic rubber seals comprised of a dual extrusion Santoprene rubber for heat welding of all transitions and seams for a monolithic, weathertight installation. EPDM and Neoprene substitutions are not allowed due to their lack of ability to meet this specific requirement.

1. All Santoprene seals must be certified as low VOC as certified by UL Environmental GreenGuard Gold Certification

D. Horizontal and Vertical Moisture Barrier (optional accessory): Min. 45 mil thick fabric reinforced EPDM with optional watertight drain assemblies.
E. Horizontal and Vertical Insulated Moisture Barrier (optional accessory):
    1. Min. R Value of 15
    2. Must meet ASTM E1399 Cyclic movement requirements matching movement requirements specific to project.

2.03.01 INTERIOR FLOOR JOINT SYSTEMS

A. Single Seal Floor joint systems
    1. Recessed and Surface Mount systems
    2. Joint 2”
    3. Joint operating range 25%+- of total nominal joint width
    4. New and existing construction applications
    5. Santoprene Seal traits:
        a. Dual durometer extruded Santoprene with Shore Hardness of 60 Shore A and 40 Shore D to ensure longevity of installation. Single durometer seals shall not be allowed.
        b. Flat seal must maintain inherent dimensional stability and include structural spine inserts (where applicable) allowing for additional load resistance.
    6. Frames adaptable to multiple floor finishes
    7. Addresses Standard Loading conditions
    8. Finish: to be selected from standard range by architect.
    9. Basis of Design JointMaster by Inpro Recessed/ Flush system 101 Series, 2” joint.
        a. Or approved Equal.

2.03.02 INTERIOR WALL AND CEILING JOINT SYSTEMS

A. Single Flat Seal joint systems
    1. Recessed and Surface Mount framing systems
    2. Joint 2”
    3. Joint operating range 25%+- of total nominal joint width
    4. New and existing construction applications
    5. Flat Santoprene Seal traits:
        a. Dual durometer extruded Santoprene with Shore Hardness of 60 Shore A and 40 Shore D to ensure longevity of installation. Single durometer seals shall not be allowed.
        b. Flat seal must maintain inherent dimensional stability and include structural spine inserts (where applicable) allowing for additional load resistance.
    6. Finish: to be selected from standard range by architect.
    7. Basis of Design JointMaster by Inpro Recessed/ Flush system 101 Series, 2” joint.
        a. Or approved Equal.

2.03.03 EXTERIOR HORIZONTAL DECK JOINT SYSTEMS - NOT USED

2.03.04 EXTERIOR VERTICAL WALL JOINT SYSTEMS

A. Exterior Pleated Seal Flush Mount Expansion Joint system
   1. Standard Nominal Joint 2”
   2. Joint operating range 50%+- of total nominal joint width
   3. Integral flexible moisture barrier membrane. 2 ply reinforced EPDM 45 mil thick membrane
      with nylon mesh reinforcing element
   4. New and existing construction applications.
   5. Pleated Santoprene Seal traits:
      a. Overall seal bellows depth requires 5/8” [15.875 mm]. in order to maintain inherent stability and linear lines after installation
      b. Seal Wall thickness not less than 1/8” [3.175 mm] for high abrasion resistance.
      c. Seal durometer of 70 shore A
      d. No EPDM or Neoprene substitutions allowed
      e. Manufacturer must carry a color range of a minimum of (6) six standard color options. Custom seal colors must be available upon request.
   6. Finish: to be selected from standard range by architect.
   7. Basis of Design JointMaster by Inpro Recessed/ Flush system 615, 2” expansion joint. A07 – Wall to Wall & A09 – Wall to Corner.
      a. Or approved Equal.

D. Compressible Fill Expansion Joint- Vertical Open Cell Silicone Faced Water-resistant Foam:
   1. Standard Joint range applications 2”
   2. Joint operating range 50%+- of total nominal joint width
   3. Pre-compressed open micro-cell polyurethane foam impregnated with a polymer sealing compound (2% wax content required for optimal hydrophobic qualities). Manufactured of monolithic piece of non-laminated, open cell, high density (1.5lb/sqft min.) The foam sealant shall have a fully cured, modified silicone rubber top coat, factory applied when the material is fully expanded. The sealant shall be provided in a pre-compressed state. Bonding Adhesive the adhesive shall be waterproof epoxy adhesive that is compatible with concrete and steel as recommended by the manufacturer. Splice Adhesive the splice adhesive may be any polyurethane adhesive recommended by the manufacturer of the foam sealant.

PROPERTY	TEST METHOD	REQUIREMENTS
Tensile Strength	ASTM D3574	Meets 21 psi min.
Staining and bleeding	DIN 18 542	Meets requiremnt.
Elongation, Ultimate	ASTM D3574	150% min.
Resistance to UV & Moisture	DIN 18 542	Meets requiremnt
Density		10lb/cu.ft.
Compression Set	ASTM D3574	3% max.
Flammability	UL 94VO	Self Extinguishing

Low Temperature Flexibility	ASTM C711	No Cracking 32°F to 0° F
Water Resistance	ASTM E 331	12 psf min
Lateral exerted pressure		.8 psi(.006 kg/sq mm)

4. Surface coated with a colorized, elastomeric layer of silicone in (26) standard color options
5. Finish: to be selected from standard range by architect.
6. Basis of Design: JointMaster by Inpro Recessed/ Flush system 1200 Series, 2”

2.03.05 EXTERIOR ROOF JOINT SYSTEMS

A. Roof Expansion Joint Bellows System
1. Standard Joint range applications 2”
2. Joint operating range 50%+- of total nominal joint width
3. Flexible bellow combination of a flexible rubber membrane, supported by a closed cell foam to form flexible bellows, with two metal flanges, adhesively and mechanically combined to the bellows
a. Bellows: 0.060 in. (1.5 mm) thick non-reinforced EPDM bellows adhered and mechanically combined to metal flanges by bifurcation process.
b. Bellow Supports: Closed cell foam, 3⁄8 in. (9.5 mm) minimum thickness.
c. Flange Metal: Hot dipped Galvanized, Stainless Steel, Aluminum, or Copper.
d. Provide matching factory-fabricated corners, transitions, intersections and terminations.
4. Finish: to be selected from standard range by architect.
6. Basis of Design: JointMaster by Inpro 674 Series G01 Curb Flanged Roof/Roof, 2”.

2.03.06 ACCESSORY SYSTEMS

A. Insulated Thermal Moisture Barrier for vertical and horizontal applications
1. Reinforced EPDM 45 mil thk membranes sandwiching commercial grade batt insulation adhered and pinned together to resist slump and cyclic movement (movement must match the capabilities of the specified coverplate systems). Maintains R-value equivalent to the exterior and roof assemblies on project. Seams and directional transitions designed to ensure watertight seal and positive condensation drainage.
2. Submittal to include: ASTM test reports created by a certified third party Architectural product testing agency.
a. PRODUCT — TEST METHOD
Insulated Moisture Barrier — ASTM C1363 Thermal Performance Test
ASTM E283 Pressure Test for Rate of Air Leakage
ASTM E330 Dynamic Structural Performance Test
ASTM E331 Static Water Penetration Test
3. Basis of Design : JointMaster by Inpro IVB Series

D.

1. Open Cell Silicone Faced Precompressed Foam
   a. Submittal to include: ASTM test reports created by a certified third party Architectural

b. REQUIREMENTS	PROPERTY	TEST METHOD
Tensile Strength	ASTM D3574	Meets 21 psi min.
Staining and bleeding	DIN 18 542	Meets requiremnt.
Elongation, Ultimate	ASTM D3574	150% min.
Resistance to UV & Moisture	DIN 18 542	Meets requiremnt
Density		10lb/cu.ft.
Compression Set	ASTM D3574	3% max.
Flammability	UL 94VO	Self Extinguishing
Low Temperature Flexibility	ASTM C711	No Cracking 32°F to 0° F
Water Resistance	ASTM E 331	12 psf min
Lateral exerted pressure		.8 lbs/sf (3.9 kg/sq m)

   c. Joint operating range 50%+- of total nominal joint width
   d. Pre-formed, closed cell, crosslinked EVA copolymer polyethylene material. Low density, impermeable, ethylene vinyl acetate or nitrogen blown polyethylene foam installed in compression. Fastened with 2 part epoxy
   e. Finish: to be selected from standard range by architect.
   f. Basis of Design: JointMaster by Inpro 1200 Series

2.04 FABRICATION

A. Field assemble components provided in standard lengths with pre-packaged fasteners and accessories whenever possible.
B. Fabricate special transitions and corner fittings as required. Miter and heat weld elastomeric seals for monolithic splices and transitions.

PART 3 – EXECUTION

3.01 INSPECTION

A. Prior to starting work, verify that structural gap and blockout dimensions are in conformance with manufacturer's submittal data. Do not begin work until all unsatisfactory substrate conditions are resolved. See manufacturer for recommended tolerances.
B. Carefully inspect installed work of other Trades and verify that such work is complete to allow the work of this section to commence.
C. Schedule inspection of all Waterproofing measures and Fire Rated life safety product prior to
installation of coverplate systems –or- provide allowance for removal of 10% of coverplate systems for inspection before final acceptance.

3.02 INSTALLATION

A. Joint systems: Install in accordance with manufacturer's instructions.

B. Align work plumb, level and flush with adjacent surfaces. Mechanically anchor to substrate. Allowances should be made where actual structural gap at time of installation varies from nominal design gap. No shimming of frames is permitted.
C. Coordinate with work of other Sections.
D. If concrete blockouts (rebates) are required, ensure continuous support equal to surrounding substrate structural values.
E. Fire Rated Assemblies: Where required, install to manufacturer's instructions.
F. Moisture Barrier: Where required, install to manufacturer's instructions.

3.03 PROTECTION AND CLEANING

A. Protect the completed Expansion Control system work from damage during construction. Damage protection includes surface abrasion and overloading of coverplate by materials handling equipment and construction waste/debris,
B. Protection from environmental factors required throughout installation process until Project Closeout. Protection includes but is not limited to rain events, moisture protection, exposure to
temperature fluctuations or direct sunlight for temperature sensitive product offerings.
C. Prior to project closeout, clean all exposed surfaces with a suitable cleaner. Manufacturer suggests Xylene for Santoprene seals, ensure non-solvent cleansers are not utilized throughout
product lifespan.

END OF 07 95 00

SECTION 08 11 13 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management’s general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section includes:

1. Interior standard steel doors and frames.
2. Exterior standard steel doors and frames.
3. Steel sidelight, borrowed lite and transom frames.
4. Light frames and glazing installed in hollow metal doors.

B. Related Requirements:
1. Division 01 Section "General Conditions".
2. Division 04 Section "Unit Masonry" for embedding anchors for hollow metal work into masonry construction.
3. Division 08 Section “Flush Wood Doors” for interior solid-core wood doors installed in aluminum frames.
4. Division 08 Section “Aluminum-Framed Entrances” for aluminum door frames.
5. Division 08 Section "Glazing" for glass view panels in doors.
6. Division 08 Section “Door Hardware” for hardware requirements.
7. Division 09 Section “Painting” for field painting primed doors and frames.

C. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI/SDI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.
2. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, Frames Anchors and Hardware Reinforcing.
3. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames.
4. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
5. ANSI/SDI A250.11 - Recommended Erection Instructions for Steel Frames.
6. ASTM A1008 - Standard Specification for Steel Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
7. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

8. ASTM A924 - Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process.
9. ASTM C 1363 - Standard Test Method for Thermal Performance of Building Assemblies by Means of a Hot Box Apparatus.
10. ANSI/BHMA A156.115 - Hardware Preparation in Steel Doors and Frames.
11. ANSI/SDI 122 - Installation and Troubleshooting Guide for Standard Steel Doors and Frames.
12. ANSI/NFPA 80 - Standard for Fire Doors and Fire Windows; National Fire Protection Association.
13. ANSI/NFPA 105: Standard for the Installation of Smoke Door Assemblies.
14. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies; National Fire Protection Association.
15. UL 10C - Positive Pressure Fire Tests of Door Assemblies.
16. UL 1784 - Standard for Air Leakage Tests of Door Assemblies.

1.3 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.4 COORDINATION

A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Building Information Modeling (BIM) Support: Utilize designated BIM software tools and obtain training needed to successfully participate in the Project BIM processes. All technical disciplines are responsible for the product data integration and data reliability of their Work into the coordinated BIM applications.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. LEED Submittals: Comply with Section 018113
   1. MR Credit 2: Environmental Product Declarations
      a. Metal doors, if available
   2. MR Credit 3: Sourcing of Raw Materials
      a. Recycled content: Steel. Provide material cost values.
   3. MR Credit 4: Material Ingredients
      a. Report: Steel doors, if available

C. Shop Drawings: Include the following:

   1. Elevations of each door type.
   2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of each different wall opening condition.

6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
7. Details of anchorages, joints, field splices, and connections.
8. Details of accessories.
9. Details of moldings, removable stops, and glazing.

D. Door Schedule: Indicate door and frame location, type, size, fire protection rating, and swing. Use the same reference designations indicated on the Drawings in preparing schedule for doors and frames.

E. Samples for Verification:

1. Samples are only required by request of the architect and for manufactures that are not current members of the Steel Door Institute.

1.6 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For special warranty.

1.7 CLOSEOUT SUBMITTALS.

A. Special warranties.

B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.8 QUALITY ASSURANCE

A. Source Limitations: Obtain hollow metal doors and frames through one source from a single manufacturer wherever possible.

B. Quality Standard: In addition to requirements specified, furnish SDI-Certified manufacturer products that comply with ANSI/SDI A250.8, latest edition, "Recommended Specifications for Standard Steel Doors and Frames".

C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to UL10C (neutral pressure at 40” above sill) or UL 10C.

1. Oversize Fire-Rated Door Assemblies Construction: For units exceeding sizes of tested assemblies, attach construction label certifying doors are built to standard construction requirements for tested and labeled fire rated door assemblies except for size.
2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
3. Smoke Control Door Assemblies: Comply with NFPA 105.

a. Smoke "S" Label: Doors to bear “S” label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.

D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

E. Storm Shelter Openings: Provide complete door systems for hurricane or tornado storm shelters, and other areas of refuge, complying and tested according to ICC 500 (2014/2020), ICC/NSSA Standard for the Design and Construction of Storm Shelters.

1. Each unit to bear third party permanent label indicating compliance with the referenced testing standards.

F. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing hollow metal doors and frames and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow-metal doors and frames vertically under cover at Project site with head up. Place on minimum 4-inch-high wood blocking. Provide minimum 1/4-inch (6-mm) space between each stacked door to permit air circulation.

1.10 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: (5) years from date of Substantial Completion.

B. Installer's Warranty: Installer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: (2) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Recycled Content: Provide steel with minimum 25 percent post-consumer recycled content.

B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CECO Door Products.
2. Curries Company.
3. Steelcraft.

2.2 MATERIALS

2.3 MATERIALS

A. Recycled Content: Provide steel with minimum 25 percent post-consumer recycled content.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

D. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

E. Inserts, Bolts, and Fasteners: Hot-dip galvanized in accordance with ASTM A153/A153M.

F. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

G. Mineral-Fiber Insulation: ASTM C665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E136 for combustion characteristics.

2.4 PERFORMANCE REQUIREMENTS

A. Product Standard: Comply with AAMA/WDMA/CSA 101/I.S.2/A440 for minimum standards of performance, materials, components, accessories, and fabrication unless more stringent requirements are indicated.

1. Product Certification: AMMA certified with label attached to each door.

B. Thermal Transmittance: NFRC 100 maximum total fenestration product U-factor of 0.30 Btu/sq. ft. x h x deg F.

2.5 DOOR AND FRAMES, GENERAL

A. Hollow Metal Doors: Provide 1-3/4 inch doors of design indicated, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8 and ANSI/NAAMM HMMA 867.

B. Hollow Metal Frames: Comply with ANSI/SDI A250.8 and with details indicated for type and profile.

2.6 INTERIOR STANDARD STEEL DOORS AND FRAMES

A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Interior Doors: Face sheets fabricated of commercial quality cold rolled steel that complies with ASTM A 1008/A 1008M. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:

1. Basis-of-Design Products:

   a. Curries Company (CU) - Polystyrene Core - 707 Series.
   b. Curries Company (CU) - Steel-Stiffened - 747 Series.

2. Design: Flush panel.
3. Core Construction: Manufacturer's standard kraft-paper honeycomb, or one-piece polystyrene core, securely bonded to both faces.

   a. Fire Door Core: As required to provide fire-protection and temperature-rise ratings indicated.

4. Level/Model: Level 2 and Physical Performance Level B (Heavy Duty), Minimum 18 gauge (0.042-inch - 1.0-mm) thick steel, Model 2.
5. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet.
6. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
7. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

C. Interior Frames: Fabricated from cold-rolled steel sheet that complies with ASTM A 1008/A 1008M.

1. Basis of Design Product: Curries Company (CU) - M Series.
2. Fabricate frames with mitered or coped corners. Profile as indicated on drawings.
3. Frames: Minimum 16 gauge (0.053-inch -1.3-mm) thick steel sheet.

2.7 EXTERIOR STANDARD STEEL DOORS AND FRAMES

A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Exterior Doors: Face sheets fabricated of commercial quality hot-dipped zinc coated steel that complies with ASTM A 653/A 653M, Coating Designation A60. Provide doors complying with

requirements indicated below by referencing ANSI/SDI A250.8 for level and model and ANSI/SDI A250.4 for physical performance level:

1. Design: Flush panel.
2. Core Construction: Manufacturer's standard vertical steel-stiffener core. Minimum 22 gauge steel-stiffeners at 6 inches on-center construction attached by spot welds spaced not more than 5" on centers. Spaces between stiffeners filled with fiberglass insulation (minimum density 0.8#/cubic ft.).

    a. Thermal-Rated Doors: Provide doors fabricated with thermal-resistance value (R-value) of not less than 2.1 deg F x h x sq. ft./Btu when tested according to ASTM pC 1363.

3. Level/Model: Level 3 and Physical Performance Level A (Extra Heavy Duty), Minimum 16 gauge (0.053-inch - 1.3-mm) thick steel, Model 2.
4. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet. Doors with an inverted top channel to include a steel closure channel, screw attached, with the web of the channel flush with the face sheets of the door. Plastic or composite channel fillers are not acceptable.
5. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9" or minimum 14 gauge continuous channel with pierced holes, drilled and tapped.
6. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

C. Exterior Frames: Fabricated of hot-dipped zinc coated steel that complies with ASTM A 653/A 653M, Coating Designation A60.

1. Basis-of-Design Product: Curries Company (CU) - Thermal Break TQ Series.
2. Thermal Break Frames: Subject to the same compliance standards and requirements as standard hollow metal frames. Tested for thermal performance in accordance with NFRC 102, and resistance to air infiltration in accordance with NFRC 400. Where indicated provide thermally broken frame profiles available for use in both masonry and drywall construction. Fabricate with 1/16” positive thermal break and integral vinyl weatherstripping.
3. Fabricate fully welded frames with mitered or coped corners. Profile as indicated on drawings.
4. Frames: Minimum 14 gauge (0.067-inch -1.7-mm) thick steel sheet.

2.8 BALLISTIC RATED METAL DOORS

A. All interior ballistic rated metal doors are to be Level 3 bullet resistant 16-gauge steel doors.

B. Basis of design: Total Security Solutions, or approved equal.

2.9 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, formed from A60 metallic coated material, not less than 0.042 inch thick, with corrugated

or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.

2. Stud Wall Type: Designed to engage stud and not less than 0.042 inch thick.

B. Floor Anchors: Floor anchors to be provided at each jamb, formed from A60 metallic coated material, not less than 0.042 inches thick.

C. Mortar Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.10 LIGHT OPENINGS AND GLAZING

A. Stops and Moldings: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with butted or mitered hairline joints at fabricator’s shop. Fixed and removable stops to allow multiple glazed lites each to be removed independently. Coordinate frame rabbet widths between fixed and removable stops with the type of glazing and installation indicated.

B. Moldings for Glazed Lites in Doors and Loose Stops for Glazed Lites in Frames: Minimum 20 gauge thick, fabricated from same material as door face sheet in which they are installed. Provide Vision lite kit required per thickness of the fire resistant glazing scheduled per door.

C. Fixed Frame Moldings: Formed integral with hollow metal frames, a minimum of 5/8 inch (16 mm) high unless otherwise indicated. Provide fixed frame moldings and stops on outside of exterior and on secure side of interior doors and frames.

D. Preformed Metal Frames for Light Openings: Manufacturer's standard frame formed of 0.048-inch-thick, cold rolled steel sheet; with baked enamel or powder coated finish; and approved for use in doors of fire protection rating indicated. Match pre-finished door paint color where applicable.

2.11 ACCESSORIES

A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.

B. Grout Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.12 FABRICATION

A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.

B. Tolerances: Fabricate hollow metal work to tolerances indicated in ANSI/SDI A250.8.

C. Hollow Metal Doors:

1. Exterior Doors: Provide optional weep-hole openings in bottom of exterior doors to permit moisture to escape where specified.

2. Glazed Lites: Factory cut openings in doors with applied trim or kits to fit. Factory install glazing where indicated.
3. Louvers: Factory cut openings in door and install louvers into prepared openings where indicated.
4. Astragals: Provide overlapping astragals as noted in door hardware sets in Division 08 Section "Door Hardware" on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
5. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge strap for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
6. Electrical Raceways: Provide hollow metal doors to receive electrified hardware with concealed wiring harness and standardized Molex™ plug connectors on both ends to accommodate up to twelve wires. Coordinate connectors on end of the wiring harness to plug directly into the electrified hardware and the through-wire transfer hardware or wiring harness specified in hardware sets in Division 08 Sections "Door Hardware" and "Access Control Hardware". Wire nut connections are not acceptable.

D. Hollow Metal Frames:

1. Shipping Limitations: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
2. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.

    a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.

3. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
4. High Frequency Hinge Reinforcement: Provide high frequency hinge reinforcements at door openings 48-inches and wider with mortise butt type hinges at top hinge locations.
5. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge straps for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
6. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated for removable stops, provide security screws at exterior locations.
7. Mortar Guards: Provide guard boxes at back of hardware mortises in frames at all hinges and strike preps regardless of grouting requirements.
8. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.
9. Jamb Anchors: Provide number and spacing of anchors as follows:

    a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

        1) Two anchors per jamb up to 60 inches high.
        2) Three anchors per jamb from 60 to 90 inches high.
        3) Four anchors per jamb from 90 to 120 inches high.
        4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

1) Three anchors per jamb up to 60 inches high.
2) Four anchors per jamb from 60 to 90 inches high.
3) Five anchors per jamb from 90 to 96 inches high.
4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
5) Two anchors per head for frames above 42 inches wide and mounted in metal stud partitions.

10. Door Silencers: Except on weatherstripped or gasketed doors, drill stops to receive door silencers. Silencers to be supplied by frame manufacturer regardless if specified in Division 08 Section "Door Hardware".
11. Bituminous Coating: Where frames are fully grouted with an approved Portland Cement based grout or mortar, coat inside of frame throat with a water based bituminous or asphaltic emulsion coating to a minimum thickness of 3 mils DFT, tested in accordance with UL 10C and applied to the frame under a 3rd party independent follow-up service procedure.

E. Hardware Preparation: Factory prepare hollow metal work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."

1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.
2. Reinforce doors and frames to receive non-template, mortised and surface mounted door hardware.
3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.
4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.

2.13 STEEL FINISHES

A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded hollow metal frames for square, level, twist, and plumb condition.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.3 INSTALLATION

A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.

1. Set frames accurately in position, plumbed, leveled, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.
3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.
4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:

a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.
d. Between Bottom of Door and Top of Finish Floor (No Threshold): Maximum 3/4 inch.

D. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Contractor will engage a qualified testing agency to perform tests and inspections.

1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.

3.5 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal work immediately after installation.

C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

END OF SECTION 08 11 13

SECTION 08 14 16 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section Includes:

1. Solid-core flush wood veneer-faced doors for transparent finish.
2. Factory finishing flush wood doors.
3. Factory fitting flush wood doors to frames and factory machining for hardware.

B. Related Requirements:

1. Division 08 Section "Aluminum-Framed Entrances" for aluminum door frames.
2. Division 08 Section "Glazing" for glass view panels in flush wood doors.
3. Division 08 Section "Door Hardware" for hardware requirements.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site. Discuss coordination with hardware and access control installers.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product, including the following:

1. Door core materials and construction.
2. Door edge construction
3. Door face type and characteristics.
4. Door louvers.
5. Door trim for openings.
6. Door frame construction.
7. Factory-machining criteria.
8. Factory-finishing specifications.

B. LEED Submittals: Comply with Section 018113
1. MR Credit 2: Environmental Product Declarations

a. Wood doors, if available
2. MR Credit 3: Sourcing of Raw Materials
   a. Recycled content: Doors and frames. Provide material cost values.
   b. Certified wood: Door core, veneer, frames. Provide FSC certificate and invoice with COC number.
   c. Bio-based: Door core
3. MR Credit 4: Material Ingredients
4. Report: Wood doors, if available

C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each type of door; construction details not covered in Product Data; and the following:

1. Door elevations, dimension and locations of hardware, lite and louver cutouts, and glazing thicknesses.
2. Details of frame for each frame type, including dimensions and profile.
3. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
4. Dimensions and locations of blocking for hardware attachment.
5. Dimensions and locations of mortises and holes for hardware.
6. Clearances and undercuts.
7. Requirements for veneer matching.
8. Doors to be factory finished and application requirements.

D. Door Schedule: Indicate door and frame location, type, size, fire protection rating, and swing. Use the same reference designations indicated on the Drawings in preparing schedule for doors and frames.

E. Samples for Initial Selection: For factory-finished doors.

1. Color charts consisting of actual materials in small sections showing the full range of colors available for stained finishes.

F. Samples for Verification:

1. Factory finishes applied to actual door face materials, approximately 8 by 10 inches, for each material and finish. For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.
2. Light Opening Moldings: Minimum 6 inches long, for each material, type, and finish required.

1.5 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For special warranty.

1.6 CLOSEOUT SUBMITTALS

A. Special warranties.

B. Record Documents: For fire-rated doors, list of door numbers and applicable room name and number to which door accesses.

1.7 QUALITY ASSURANCE

A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer.

B. Quality Standard: Comply with WDMA Architectural Woodwork Quality Standards Illustrated.

1. Provide WDMA Quality Certification Labels or a WDMA letter of licensing for Project indicating that doors comply with requirements of grades specified.
2. When requested, provide evidence that the installer has successful experience completing projects of similar scope and with products as specified herein.

C. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.

D. Forest Certification: Provide wood products made from forests certified by an FSC-accredited certification body.

1. All non-FSC wood in assemblies with FSC-certified wood: Meet the FSC Controlled Wood (CW) criteria.

1.8 MOCKUPS

A. Room Mockups: Include doors for room mockups that will be used to demonstrate aesthetic effects, perform preconstruction testing, and to set quality standards for materials and installation. See Division 01 Section "Mockups" for additional construction requirements.

1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package doors individually in plastic bags or cardboard cartons.

C. Mark each door on top and bottom rail with opening number used on Shop Drawings.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature between 60 and 90 deg F and relative humidity between 25 and 55 percent during the remainder of the construction period.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Delamination of veneer.
b. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
c. Telegraphing of core construction in face veneers exceeding 0.01 inch in a 3-inch span.

2. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective doors.
3. Warranty shall be in effect during specified period of time from date of Substantial Completion.
4. Warranty Period for Solid-Core Interior Doors: Life of installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Recycled Content: Provide composite wood doors with minimum 60 percent recycled content.

B. Bio-based Materials: Door cores with bio-based material per ASTM Test Method D6866 that is legally harvested and meeting the Sustainable Agriculture Network’s Sustainable Agriculture Standard.

C. Source Limitations: Obtain flush factor-finished stained wood doors single manufacturer.

D. Basis-of-Design Product: subject to compliance with requirements, provide ‘Aspiro Series’ flush wood doors by Masonite Architectural or a comparable product by one of the following manufacturers, but not limited to:

1. VT Industries
2. RK Doors

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Rated Wood Door and Frame Assemblies: Complying with NFPA 80 that are listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings, based on testing at positive pressure according to UL 10C or NFPA 252.

1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
2. Temperature-Rise Limit: At vertical exit enclosures and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F above ambient after 30 minutes of standard fire-test exposure.

B. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

2.3 FLUSH WOOD DOORS, GENERAL

A. Quality Standard: In addition to requirements specified, comply with ANSI/WDMA I.S. 1A “Industry Standard for Interior Architectural Wood Flush Doors”.

2.4 SOLID-CORE FIVE-PLY FLUSH WOOD VENEER-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Doors:

1. Performance Grade: ANSI/WDMA I.S. 1A Heavy Duty.
2. ANSI/WDMA I.S. 1A Quality Grade: Premium.
3. Faces: Single-ply wood veneer not less than 1/50 inch thick.

    a. DR-1

    b. Species: White Birch.
    c. Cut: Plain sliced (flat sliced).
    d. Match between Veneer Leaves: Book match.
    e. Assembly of Veneer Leaves on Door Faces: Running match.
    f. Pair and Set Match: Provide for doors hung in same opening.
    g. Finish: Clear
    h. Installation: Typical Flush wood door per door schedule.

4. Exposed Vertical Edges: Same species as faces - Architectural Woodwork Standards edge Type A.

    a. Fire-Rated Single Doors: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed vertical edges.
    b. Fire-Rated Pairs of Doors: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.
    c. Mineral-Core Doors: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

        1) Screw-Holding Capability: 475 lbf in accordance with WDMA T.M. 10.

5. Core for Non-Fire-Rated Doors:

    a. ANSI A208.1, Grade LD-2 particleboard.

        1) Blocking: Provide wood blocking in particleboard-core doors as needed for installation of hardware and to eliminate through-bolting hardware.

6. Core for Fire-Rated Doors: As required to achieve fire-protection rating indicated on Drawings.

    a. Blocking for Mineral-Core Doors: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated on Drawings as follows:

        1) 5-inch top-rail blocking.
        2) 5-inch bottom-rail blocking, in doors indicated to have protection plates.
        3) 5-inch midrail blocking, in doors indicated to have armor plates.
        4) 5-inch midrail blocking, in doors indicated to have exit devices.

7. Construction: Five plies, hot-pressed bonded (vertical and horizontal edging is bonded to core), with entire unit abrasive planed before veneering.

2.5 LIGHT FRAMES AND LOUVERS

A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.

1. Wood Species: Same species as door faces.
2. Profile: Flush rectangular beads.
3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.

B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated on Drawings. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

2.6 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated.

1. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
2. Comply with NFPA 80 requirements for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied.

1. Locate hardware to comply with DHI-WDHS-3.
2. Comply with final hardware schedules, door frame Shop Drawings, ANSI/BHMA-156.115-W, and hardware templates.
3. Coordinate with hardware mortises in metal frames, to verify dimensions and alignment before factory machining.
4. For doors scheduled to receive electrified locksets, provide factory-installed raceway and wiring to accommodate specified hardware.
5. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.

C. Openings: Factory cut and trim openings through doors.

1. Light Openings: Trim openings with moldings of material and profile indicated.
2. Glazing: Factory install glazing in doors indicated to be factory finished. Comply with applicable requirements in Division 08 Section "Glazing."

2.7 FACTORY FINISHING

A. Comply with referenced quality standard for factory finishing.

1. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.
2. Finish faces, all four edges, edges of cutouts, and mortises.
3. Stains and fillers may be omitted on top and bottom edges, edges of cutouts, and mortises.

B. Factory finish doors.

C. Transparent Finish:

1. ANSI/WDMA I.S. 1A Grade: Premium.
2. Finish: ANSI/WDMA I.S. 1A TR-6 Catalyzed Polyurethane.
3. Staining: As selected by Architect from manufacturer's full range.
4. Effect: Open-grain finish.
5. Sheen: Satin.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames, with Installer present, before hanging doors.

1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Hardware: For installation, see Division 08 Section "Door Hardware."

B. Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.

C. Install frames level, plumb, true, and straight.

1. Shim as required with concealed shims. Install level and plumb to a tolerance of 1/8 inch in 96 inches.
2. Anchor frames to anchors or blocking built in or directly attached to substrates.

a. Secure with countersunk, concealed fasteners and blind nailing.

3. Install fire-rated doors and frames in accordance with NFPA 80.
4. Install smoke- and draft-control doors in accordance with NFPA 105.

D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

E. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 08 14 16

SECTION 08 32 00 - DETENTION DOORS AND FRAMES

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Hollow Metal detention doors and frames meeting ASTM F1450 Grades 1-4.
   2. Hollow Metal detention frames for interior vision panels.
   3. Hollow Metal detention framing system for glazed partitions (borrowed lights).
   4. Preparation of detention metal doors and frames to receive detention hardware, including reinforcing, drilling, and tapping.
   5. Furnishing anchors for building into masonry work.
   6. Factory prime painting of all hollow metal work.
   7. Installation and final adjustment of detention and finish hardware.

B. Related Sections:
   1. Division 04: Unit Masonry for anchoring and grouting of frames in masonry partitions.
   2. Division 08: Hollow Metal Doors and Frames.
   3. Division 08: Door Hardware.
   4. Division 08: Detention Hardware.
   5. Division 08: Glazing.
   6. Division 26: Electrical.

1.3 SYSTEM DESCRIPTION

A. Performance Requirements:
   1. Detention Rating: Must meet ASTM F1450 Grades 1-4 and ASTM F1577 as specified. Detention rating of glazing must meet ANSI 797.1.
   2. Testing Laboratory: Test must be conducted by a nationally recognized independent testing laboratory.

B. Listings and Labels:
   1. Detention rated doors and framing system shall be under current follow-up service by a nationally recognized independent laboratory approved by OSHA and maintain a current listing or certification. Assemblies shall be labeled in accordance with limits of listings.

C. Appearance:
   1. Detention door and door frame assembly shall have a neat finished appearance with minimum joints at decorative cover intersections.

1.4 SUBMITTALS

A. Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedure Section.

B. Product Data: Submit latest edition of manufacturer's product data providing product descriptions, technical data and installation instructions. Include door designation, type, level and model, material description, hardware preparation, core, label compliance, and finishes.

C. Shop Drawings: Submit shop drawings showing layout, profiles and product components of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, location and installation requirements of door and frame hardware reinforcements, and details of joints and connections. Show anchorage and accessory items.

D. Samples: Submit samples for finishes, colors and textures.

E. Door Schedule: Use same reference designations indicated on Drawings.
   1. Indicate coordination of glazing frames and stops with glass and glazing requirements.

1.5 QUALITY ASSURANCE

A. Except as amended herein, all detention hollow metal shall be manufactured, tested, and certified in conformance with standards ASTM Fl450-97 for grade 2 openings and NAAMM HMMA 863-97. Installation shall be per NAAMM HMMA 840-99.

1.6 DELIVERY, STORAGE AND HANDLING

A. General: Comply with Division1 Product Requirements Sections.

B. Ordering: Comply with manufacturer's ordering instructions and lead-time requirements to avoid construction delays.

C. Delivery: Deliver materials to specified destinations in manufacturer's or distributor's packaging undamaged, complete with installation instructions. Provide additional protection to prevent damage to finish of factory-finished doors and frames.

D. Inspect hollow metal work upon delivery for damage. Minor damages may be repaired provided refinished items are equal in all respects to new work and are acceptable to the Architect. Otherwise, remove and replace damaged or defective items as directed.

E. Storage and Protection: Store off ground, under cover, protected from weather and construction activities and at temperature conditions recommended by manufacturer.

1.7 FABRICATION DIMENSIONS

A. Field Measurements: Verify actual measurements for openings by field measurements before fabrication. Show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.

1.8 WARRANTY

A. Project Warranty: Refer to Conditions of the Contract for project warranty provisions.

B. Manufacturer's Warranty: Submit, for Owner's acceptance, manufacturer's standard warranty document. Manufacturer's warranty is not intended to limit other rights that the Owner may have under the Contract Documents.
   1. Warranty Period: 5 years from date of shipping.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Trussbilt, Inc.
   2. Apex Industries.
   3. Titan Metal Products.
   4. Habersham Metal Products.
   5. Architectural Opening, Inc., Longwood, FL

2.1 MATERIALS

A. Detention rated doors and door frames meeting ASTM F1450 Grades 1-4 and ASTM F1577 as specified. Detention rating of glazing must meet ASTM F1915 Grades 1-4 as specified.

B. Hot-Rolled Steel Sheets for frames: ASTM A 569/A 569M, prime quality carbon steel; free of scale, pitting, or surface defects; pickled and oiled.

C. Cold-Rolled Steel Sheets for doors and frames: ASTM A 366/A 366M, pickled; stretcher-leveled standard of flatness.

D. Galvanized Carbon Steel Sheet for exterior applications: ASTM A 526, G-90 zinc coating; mill phosphatized; suitable for exposed applications.

E. Provide manufacturer's standard units for supports, anchors, inserts, and fasteners, except hot-dip galvanized units for exterior use complying with ASTM A 1J3, Class B.

F. Factory Prime Paint: Rust-inhibitive zinc-chromate primer conforming to SSPC Paint Spec. No. 2-64 or No. 3-64 which is alkali and acid resistant and fully cured before shipment.

G. Steel plate reinforcement shall conform to ASTM A 283, Grade C.

H. Sound-Deadening Material: For hollow metal doors, provide a heat-retarding and sound deadening inorganic filler, such as mineral wool, conforming to the requirements of the American Insurance Association.

I. Door Vision Panel: Glazing must meet ASTM F1915 Grades 1-4 as specified. Individual lites shall be permanently identified with a listing mark.

2.2 FABRICATION

A. Connections shall be welded seams and joints including reinforcements. Fitting and fabrication shall be accurate with surfaces free from warp, wave, buckle, or other defects; made with square corners and angles, unless otherwise shown; members set in proper alignment; surfaces straight and true to plane; molds, edges, and arises straight and sharp. Trim moldings and like components shall be neatly and accurately mitered or coped together and joint welded. Welded joints shall be neatly made, dressed clean, smooth, and flush with surface of base metal. Exposed face jointing of all work shall be made invisible.

B. Concealed reinforcement of sheet or bar steel shall be provided for all hardware and for attached work where required for field conditions and as indicated.

C. Hardware fitting shall be done at the shop. Prepare hollow metal units to receive detention hardware, including cutouts, reinforcing, drilling, and tapping in accordance with final Finish Hardware Schedule and Templates provided by the hardware supplier. Comply with applicable requirements of ANSI A 115 “Specifications for Door and Frame Preparation for Hardware.”

D. Locate hardware as shown on final shop drawings in accordance with “Recommended Locations for Builder’s Hardware for Custom Doors” published by the Door and Hardware Institute.

E. Unless otherwise indicated, provide countersunk TORX security pin head screws and bolts for exposed locations.

F. Gauges: the following list of minimum gauges refer to the United States Standard Gauge for sheet steel:

1. Door face sheets:	No. 14 gauge
2. Frames:	No. 12 gauge
3. Interior and exterior rough bucks:	No. 12 gauge
4. Interior and exterior angle floor knees:	No. 10 gauge
5. Interior frame anchors:	No. 10 gauge
6. Interior and exterior T-type anchors:	No. 10 gauge
7. Interior and exterior channel spreaders:	No. 16 gauge
8. Interior mullions and framing for glazed partitions (security), including bases:	No. 12 gauge

9. Hardware reinforcement for hinges, strikes, overhead door holders, door check brackets, etc. unless otherwise specified:	Equal to the major dia. of screw
10. Glazing moldings:	No. 12 gauge

G. Glass Moldings: Loose moldings, 10-gauge minimum sheet steel, with mitered corners, on non-security side of door, secure to framed opening with countersunk cadmium or zinc-coated spanner head machine screws uniformly spaced 9-inches o.c. maximum. Moldings shall be flush with face of door.

2.3 DETENTION TYPE HOLLOW METAL FRAMES

A. Provide heavy gauged pressed steel frames for doors, glazed partitions of sizes and profiles indicated and scheduled, where security construction is required (refer to assemblies with security type locksets).

B. Frames for interior openings shall be either commercial grade cold-rolled steel conforming to ASTM A 366 or commercial grade hot-rolled and pickled steel conforming to ASTM A 569. All door frames shall have fully mitered corner joints, including stops, and shall be continuously welded and dressed to match adjacent metal.

C. Frames for multiple openings or glazed partitions shall have mullion and/ or rail members which are closed shapes, having no visible seams or joints on the faces. Joints between faces of abutting members shall be reinforced with splice plates and securely welded and dressed to match adjacent metal.

D. Frames shall be factory assembled to minimize field splicing, within practical limits. Splice details shall be clearly and completely indicated on manufacturer's shop drawings for the Architect's consideration' for approval.

E. Hardware:

1. Frames shall be mortised, reinforced, drilled, and tapped at the factory for templated hardware in accordance with the approved hardware schedules and templates provided by the hardware supplier.
2. Where surface mounted hardware is called for, frames shall have reinforcing plates only and drilling and tapping shall be done by field installation personnel.
3. Where electrical locks are used, a special housing shall be provided with a 3/16-inch backup for attachment of the lock and a lock cover plate.
4. For swing doors where applicable, the Work of this Section shall include the furnishing and installation of a rigid galvanized electric conduit concealed in frame and running between electric lock enclosure and junction box for door position switch. Conduit shall be secured to inside of frame. Junction box shall be positioned for easy access for running the wires and making final connections. Refer to Division 26 for electrical requirements.
5. For mortise butts, provide a 3/16-inch by I-1/2 inch by full height of jamb reinforcing plate, offset at each hinge location and factory drilled and tapped. Reinforcing plates shall be adequately welded to frames with fillet welds.
6. Lock or keeper preparation shall be in accordance with the recommendations of the hardware manufacturer. Reinforcements shall be not less than 3/16—inch thick. All cutouts and reinforcements shall be protected with pressed steel mortar guards on the inside of the frame.

F. For glazed partitions extending to the floor, provide 12-gauge continuous steel channel runner for securing all partition bases. Fasten to floor slab with expansion bolts spaced not more than 18 inches o.c.

G. Frames for installation in masonry walls shall be provided with non-removable adjustable jamb anchors. Anchor straps shall not be less than 10-gauge by 2-inches by 10-inches corrugated and/or perforated for bond. Two anchors shall be provided in each jamb for openings up to and including J feet in height and one additional anchor in each jamb for each additional 30 inches in height, or part thereof.

H. Frames over 3 feet wide shall have a channel stiffener formed of not less than 12-gauge steel welded into the head of the frame at the factory. Such head stiffeners shall not be used as lintels or load carrying members.

I. Frames shall be provided with steel spreader angles, or channels, temporarily attached to the bottoms of both jambs, one on each side of the opening to serve as a brace during shipping and handling.

J. Glazed openings in frames and borrowed lights shall be provided with removable individual glazing beads. Glazing beads shall be to suite bite and rabbet required for type of glass used and of the same gauge as the associated frame. Glazing beads shall be factory punched and countersunk for flathead machine screws and shall be spaced to fit glass and glazing specified. Glazing beads shall be secured at the factory with slotted flathead machine screws. Spanner flathead security machine screws and special screw drivers shall be used for glass and glazing in the field. Screws shall be located not more than 2 inches on center. Stops shall be primed and finished in the same fashion as frames.

2.4 DETENTION TYPE HOLLOW METAL DOORS

A. Door faces shall be made of commercial quality stretcher level cold-rolled steel free of scale, pining, and other blemishes or defects. Door shall be custom made full-flush design, internally reinforced, sound deadened and insulated, 2 inches thick.

B. Face sheets shall be internally stiffened and reinforced with vertical continuous steel of at least 16-gauge channels spaced 4 inches o.c., extending full height vertically and width horizontally and occupying the full thickness of the interior space between the door faces, and joined by spot welds. Welds shall not be more than 3 inches on center vertically and shall be invisible from the outside. All voids inside the door shall be sound deadened and insulated with 6 lb. density mineral rock wool and completely filled to prevent internal condensation.

C. Vertical door edges shall be beveled 1/8 inch in 2 inches and internally reinforced full length with 10- gauge minimum thickness steel channels welded at points not exceeding 3 inches on center inside both door faces. Top and bottom door edges shall be closed with continuous recessed 10-gauge channels extending the full width of the door and welded to the vertical door edge to form a single perimeter frame inside the door. No edge shall be visible.

D. Clearances between doors and frames shall not exceed 1/8 inch (3.2 mm) at jambs, heads, and between pairs of doors. Not more than 1/4 inch (6.4 mm) at bottoms with thresholds or 3/4 inch (19 mm) without thresholds. Doors may be further undercut if so scheduled.

E. Door edges shall be mortised and accurately cut, reinforced, drilled, and tapped to receive templated specified hardware in accordance with the approved hardware schedule and the

hardware manufacturer's recommendations for the proper installation of all hardware arid detention equipment.

F. A reinforced pocket shall be provided in each door scheduled to receive mortised locks. The lock shall be protected on each side by a minimum 3/16 inch thick steel plate welded inside the door frames.

G. For locks installed through the edge of the door, provide minimum 3/16 inch thick reinforcing seats, drilled and tapped, set back to the thickness of the face of the lock, and securely welded inside the edge channels. The lock edge reinforcing channel shall not be cut away more than necessary to pass the lock. Lock centering clips shall be provided on each side of the lock pocket and the faces of the door cut out as necessary to pass cylinders, knobs, spindles, etc.

H. The hinge edge reinforcing channel shall not be cut out more than necessary to pass mortise butts where required. An additional 3/16 inch by 1-1/2 inch by 10 inch offset reinforcing plate, drilled and tapped to receive mortise template hinges, shall be securely' welded inside the channel at each butt location. Each reinforcing plate shall have at least one fillet weld across each end in addition to two spot welds. The top hinge reinforcing preparation shall be additionally braced by a channel welded to the back of the hinge reinforcing plate and inside the edge reinforcing channel at each door face.

I. Reinforcing plates, not less than 3/8 inch by 1-1/2 inch by 10 inches shall be welded inside the door face for pull reinforcing.

J. Minimum 12-gauge reinforcing shall be provided, welded inside the door faces for all other surfaced hardware items.

K. Vision and food-pass openings in detention doors shall be framed inside the door with not less than 12-gauge steel channels welded to both faces. Glazing beads shall be factory drilled for TORX pin button head machine screws spaced for glass and glazing scheduled.

L. Sliding doors shall be of detention type construction, as specified herein, reinforced at the top to receive hangers and prepared at the edges and bottom as required by the hardware manufacturer for guides and locking mechanism. Provide the following support structure and guide rails for all sliding doors:
   1. Track mounting plate to be 3/16-inch steel.
   2. Housing cover to be 10-gauge steel.
   3. ½-inch by ¾-inch steel bar track and adjustable door stop.
   4. 3-3/4-inch steel roller doors.
   5. Door hanger.
   6. Masonry type steel plate floor track.
   7. Steel floor guide rail.
   8. Exposed fasteners to be security type spanner head screws.
   9. All other items necessary for a complete and finished installation.

M. Food passes shall be 16-inches wide, 5-inches high, framed in steel faces of door. Food passes shall be made with hinged 11-gauge steel plate and shall be constructed to form a shelf when in open position.

2.5 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designing finishes.

B. Covers shall be chemically cleaned and pretreated; then, finished with:
   1. Acrylic urethane custom color as selected by Architect.

C. Protect finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

D. Variations in appearance of abutting or adjacent pieces are acceptable. Noticeable variations in the same piece are not acceptable.

PART 3 EXECUTION

3.1 MANUFACTURER'S INSTRUCTIONS

A. Compliance: Comply with manufacturer's product data including product technical bulletins and installation instructions.

3.2 EXAMINATION

A. Site Verification of Conditions: Verify substrate conditions have been previously installed under other sections, and are acceptable for product installation in accordance with manufacturer's instructions. Openings shall be plumb, square and within allowable tolerances. The Architect shall be notified of any conditions that jeopardize the integrity of the proposed door framing system. Do not proceed until such conditions are corrected.

3.3 INSTALLATION

A. Installation shall be by a licensed contractor and in strict accordance with the approved shop drawings.

B. Setting Anchorage Devices:
   1. Provide specified or indicated anchorage devices where required for securing hollow metal frames to in-place construction.
   2. Set anchorage devices opposite each anchor location, in accordance with details on final shop drawings and anchorage device manufacturer's instructions. Leave drilled holes rough, not reamed, and free from dust and debris. Loose anchorage devices shall be furnished with each frame in proper quantity and temporarily secured to inside of frame with heavy duty tape or light gauge wire.

C. Placing Frames:
   1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces and spreaders leaving surfaces smooth and undamaged.
   2. Make field splices in frames as detailed on final shop drawings, welded and finished to match factory work.
   3. Remove spreader bars only after frames or bucks have been properly set and secured.

D. Adjustments: Check and readjust operating hardware items just prior to final inspection, leaving steel doors and frames undamaged and in complete and proper operating condition

Remove and replace defective work including doors or frames which are warped, bowed, or otherwise unacceptable.

3.4 CLEANING AND PROTECTION

A. Protect glass from contact with contaminating substances resulting from construction operations. Remove such substances by method approved by manufacturer.

B. Wash glass on both faces not more than four days prior to date schedule for inspections intended to establish date of Substantial Completion. Wash glass by method recommended by glass manufacturer.

C. Remove temporary coverings and protection of adjacent work areas.

D. Remove construction debris from project site and legally dispose of debris.

END OF SECTION 08 32 00

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management’s general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. Section Includes:

1. Insulated rolling service doors,

Related Requirements:

1. Division 05 Section "Metal Fabrications" for miscellaneous steel supports, door-opening framing and corner guards.

1.2 ACTION SUBMITTALS

A. Product Data: For each type and size of overhead coiling door and accessory.

1. Include construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.

B. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include plans, elevations, sections, and project specific mounting details.
2. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.
3. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
4. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
5. Include diagrams for power, signal, and control wiring.

C. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.

1. Include similar Samples of accessories involving color selection.

D. Samples for Verification: For each type of exposed finish on the following components, minimum 6 inches long:

1. Curtain slats.

1.3 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Sample Warranty: For special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Special warranty.

B. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in performing Work of this section with a minimum of five years' experience in the fabrication and installation of security closures.

B. Installer Qualifications: Installer Qualifications: Company specializing in performing Work of this section with minimum three years and approved by manufacturer.

1.6 PROJECT CONDITIONS

A. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.7 COORDINATION

A. Coordinate Work with other operations and installation of adjacent materials to avoid damage to installed materials.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: (3) years from date of Substantial Completion. B.

Finishes Warranty:

1. PowderGuard Zinc Base Coat applied to guides, bottom bar, headplates plus PowderGuard Premium applied to curtain and top coat for guides, bottom bar, headplates.
2. Warranty Period: (4) years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Location, provide two coiling doors at the sally port.

B. Source Limitations: Obtain overhead coiling doors from single source from single manufacturer.

1. Obtain operators and controls from overhead coiling-door manufacturer.

C. Basis-of-Design Product: Subject to compliance with requirements, provide “Model 625” by Overhead Door Corporation or a comparable product by one of the following manufacturers, but not limited to:
1. Overhead Door Corporation
2. Cornell Iron Works.
3. C.H.I. Overhead Doors.
4. Or approved equal

2.2 PERFORMANCE REQUIREMENTS

A. Structural Performance, Exterior Doors: Capable of withstanding the following design wind loads:

1. Design Wind Load: Uniform pressure (velocity pressure) of 20 lbf/sq. ft., acting inward and outward.
2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.

B. Operation: Design door assembly, including operator, to operate for not less than 20,000 cycles.

2.3 DOOR ASSEMBLY

A. Insulated Service Door: Overhead coiling door formed with curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices. Endlocks shall be attached to each end of alternate slats to prevent lateral movement.

1. Wall Mounting Condition: Face-of-wall mounting. B.

Performance:

1. Operation Cycles: Door components and operators capable of operating for not less than 20,000. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.
2. Air Infiltration: Maximum rate of 1.0 cfm/sq. ft. at 15 and 25 mph when tested according to ASTM E283.
3. Insulated Door Curtain R-Value: 7.7 deg F x h x sq. ft./Btu .
4. Insulated Door Assembly U-Factor: 0.91 Btu/deg F x h x sq. ft.
5. Through Curtain Sound Rating: Sound Rating: STC-28 (STC-30+ with HZ noise generator) as per ASTM E 90.
6. Installed System Sound Rating: STC-21 as per ASTM E 90. C. Door Curtain Slats: Flat profile slats.

1. Galvanized Steel: 24 gauge (0.0239 inch); thick, hot-dip galvanized-steel sheet with G90 (Z275) zinc coating, complying with ASTM A653/A653M.
2. Insulation: CFC-free foamed-in-place, polyurethane insulation.
   a. Maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, according to ASTM E84 or UL 723.
   b. Enclose insulation completely within slat faces.
3. Metal Interior Curtain-Slat Facing: Match metal of exterior curtain-slat face, with nominal sheet thickness (coated) of 24 gauge (0.0239 inch); and as required.
4. Gasket Seal. Manufacturer's standard continuous gaskets between slats.

D. Weatherseals: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.

1. Air infiltration perimeter seal package includes: guide cover, guide cap, dual brush exterior guide seal, 4 inch finned lintel brush seal and vinyl bottom seal.

E. Bottom Bar: (2) prime painted steel angles, each not less than 1-1/2 by 1-1/2 by 1/8 inch, bolted back-to-back to reinforce curtain in the guides. F. Guides: (3) galvanized structural steel angles.

G. Brackets: Hot rolled prime painted steel to support counterbalance, curtain and hood.

H. Counterbalance: Helical torsion spring type housed in a steel tube or pipe barrel, supporting the curtain with deflection limited to 0.03 inch per foot of span.

1. Counterbalance is adjustable by means of an adjusting tension wheel.

I. Hood: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Equip hood with intermediate support brackets as required to prevent sagging.

1. Provide with internal hood baffle weatherseal.
2. Galvanized Steel: 24 gauge (0.0239 inch); thick, hot-dip galvanized-steel sheet with G90 (Z275) zinc coating, complying with ASTM A653/A653M.
3. Shape: Square.
4. Mounting: Face of wall.

J. Locking Devices: Equip door with slide bolt for electric operation with interlock switch.

1. Slide Bolt: Fabricate with side-locking bolts to engage through slots in tracks for locking by padlock, located on both left and right jamb sides, operable from coil side.
2. Chain Lock Keeper: Suitable for padlock.
3. Safety Interlock Switch: Equip power-operated doors with safety interlock switch to disengage power supply when door is locked. K. Electric Door Operator:

1. Usage Classification: Standard duty, up to 25 cycles per hour and up to 90 cycles per day.
2. Operator Location: Front of hood.
3. Safety: Listed according to UL 325 by a qualified testing agency for commercial or industrial use; moving parts of operator enclosed or guarded if exposed and mounted at 8 ft. or lower.
4. Motor Exposure: Interior.
5. Motor Electrical Characteristics:

   a. Horsepower: Size as recommended by manufacturer to move door in either direction at not less than 2/3 foot nor more than 1 foot per second.

   b. Voltage: 115 or 230 V ac, single phase, 60 Hz.

6. Emergency Manual Operation: Chain type.

7. Obstruction-Detection Device: Automatic electric sensor edge on bottom bar.

   a. Sensor Edge Bulb Color: As selected by Architect from manufacturer's full range.

8. Control Stations: Interior mounted. Push-button operated control stations with open, close, and stop buttons L. Finishes:

1. Slats and Hood Finish: Slats and hood galvanized and receive rust-inhibitive, roll coating process, including 0.2 mils thick baked-on prime paint, and 0.6 mils thick baked-on polyester top coat.

   a. Powder-Coated Finish: ‘PowderGuard Premium’ color as selected by Architect from manufacturer's full range.
   b. Interior Curtain-Slat Facing: Match finish of exterior curtain-slat face.

2. Bottom Bar, Guides, Headplate and Brackets Finish:

a. ‘PowderGuard Zinc’ base coat with ‘PowderGuard Premium’ color as selected by Architect from manufacturer's full range.

2.4 MATERIALS, GENERAL

A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.5 ELECTRIC DOOR OPERATORS

A. General: Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.

1. Comply with NFPA 70.
2. Control equipment complying with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.

B. Usage Classification: Electric operator and components capable of operating for not less than number of cycles per hour indicated for each door.

C. Door Operator Location(s): Operator location indicated for each door.

1. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.

D. Motors: Reversible-type motor with controller (disconnect switch) for motor exposure indicated for each door assembly.

1. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at

   a speed not less than 8 in./sec. and not more than 12 in./sec., without exceeding nameplate ratings or service factor.
2. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
3. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

E. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.

F. Obstruction-Detection Devices: External entrapment protection consisting of indicated automatic safety sensor capable of protecting full width of door opening. For non-fire-rated doors, activation of device immediately stops and reverses downward door travel.

1. Electric Sensor Edge: Automatic safety sensor edge, located within astragal or weather stripping mounted to bottom bar. Contact with sensor activates device. Connect to control circuit using manufacturer's standard take-up reel or self-coiling cable.

G. Control Station: Three-button control station in fixed location with momentary-contact push-button controls labeled "Open" and "Stop" and sustained- or constant-pressure push-button control labeled "Close."

1. Interior-Mounted Units: Full-guarded, surface-mounted, heavy-duty type, with generalpurpose NEMA ICS 6, Type 1 enclosure.

H. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed 25 lbf.

I. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.

J. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.

2.6 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM/NOMMA 500 for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.7 STEEL AND GALVANIZED-STEEL FINISHES

A. Powder-Coat Finish: Manufacturer's standard finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry film thickness. Architect to secle from standard color line.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work. B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

3.3 INSTALLATION, GENERAL

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Install overhead coiling doors, hoods, controls, and operators at the mounting locations indicated for each door.

C. Accessibility: Install overhead coiling doors, switches, and controls along accessible routes in compliance with the accessibility standard.

D. Power-Operated Doors: Install according to UL 325.

3.4 STARTUP SERVICE

A. Engage a factory-authorized service representative to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.5 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.

1. Adjust exterior doors and components to be weather resistant.

B. Lubricate bearings and sliding parts as recommended by manufacturer.

C. Adjust seals to provide tight fit around entire perimeter.

3.6 CLEANING

A. Clean curtain and components using non-abrasive materials and methods recommended by manufacturer.

B. Remove labels and visible markings.

C. Touch-up, repair or replace damaged products before Substantial Completion.

3.7 PROTECTION

A. Protect installed products until completion of project.

3.8 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain overhead coiling doors.

END OF SECTION 08 33 23

SECTION 08 41 13 - ALUMINUM-FRAMED ENTRANCES AND STOREFRONTS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. Section Includes:

1. Interior and exterior storefront framing.
2. Interior and exterior manual-swing entrance doors.

1.2 REFERENCE SPECIFICATIONS

A. 08 43 33 - BULLET RESISTANT ALUMINUM STOREFRONT

B. 08 43 33.13 - SECURITY STOREFRONT BULLET RESISTANT ALUMINUM FRAMING & DOORS

C. 08 80 00 - GLAZING

1.3 PREINSTALLATION MEETINGS

A. Pre-installation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. LEED Submittals:
1. Comply with Section 01 81 13:
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 3: BPDO – Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

c. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
   1) Health Product Declaration (HPD): For each product.

C. Shop Drawings: For aluminum-framed entrances and storefronts. Include plans, elevations, sections, full-size details, and attachments to other work.

1. Include details of provisions for assembly expansion and contraction and for draining moisture occurring within the assembly to the exterior.
2. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
3. Include point-to-point wiring diagrams.

D. Samples for Initial Selection: For units with factory-applied color finishes.

E. Samples for Verification: For each type of exposed finish required, in manufacturer's standard sizes.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Energy Performance Certificates: For aluminum-framed entrances and storefronts, accessories, and components, from manufacturer.

1. Basis for Certification: NFRC-certified energy performance values for each aluminum-framed entrance and storefront.

C. Sample Warranties: For special warranties.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For aluminum-framed entrances and storefronts to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer and who is certified under the North American Contractor Certification Program (NACC) for Architectural Glass & Metal (AGM) contractors.

B. Product Options: Information on Drawings and Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, excessive deflection.
b. Noise or vibration created by wind and thermal and structural movements.
c. Deterioration of metals and other materials beyond normal weathering.
d. Water penetration through fixed glazing and framing areas.
e. Failure of operating components.

2. Warranty Period: 2 years from date of Substantial Completion.

B. Special Finish Warranty: Anodized Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of anodized finishes within specified warranty period.

1. Warranty Period: 5 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Provide glazed aluminum curtain-wall systems, including anchorage, capable of withstanding, without failure, the effects of the following:

1. Structural loads.
2. Thermal movements
3. Movements of supporting structure indicated on Drawings including, but not limited to, story drift, twist, column shortening, long-term creep, and deflection from uniformly distributed and concentrated live loads.
4. Dimensional tolerances of building frame and other adjacent construction.
5. Failure includes the following:

a. Deflection exceeding specified limits.
b. Thermal stresses transferred to building structure.
c. Framing members transferring stresses, including those caused by thermal and structural movements, to glazing.
d. Noise or vibration created by wind and thermal and structural movements.
e. Loosening or weakening of fasteners, attachments, and other components.
f. Sealant failure.

B. Structural Loads:
1. As indicated on the structural drawings.

C. Structural-Test Performance: Systems tested according to ASTM E 330 as follows:

1. When tested at positive and negative wind-load design pressures, systems do not evidence deflection exceeding specified limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, systems, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Duration: As required by design wind velocity but not less than 60 seconds.

D. Deflection of Framing Members:

1. Deflection Normal to Wall Plane: Limited to 1/175 of clear span for spans up to 13 feet 6 inches and to 1/240 of clear span plus 1/4 inch for spans greater than 13 feet 6 inches or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.

2. Cantilever Deflection: Where framing members overhang an anchor point, limited to 2 times the length of cantilevered member, divided by 175.

E. Air Infiltration: Test according to ASTM E 283 for infiltration as follows:

1. Fixed Framing and Glass Area:

a. Maximum air leakage of 0.06 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.

2. Entrance Doors:

a. Pair of Doors: Maximum air leakage of 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.
b. Single Doors: Maximum air leakage of 1.0 cfm/sq. ft. at a static-air-pressure differential of 1.57 lbf/sq. ft.

F. Energy Performance for exterior assemblies: Certify and label energy performance according to NFRC as follows:

1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall be thermally broken and have maximum u-factor of 0.32 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
2. Thermal Transmittance (U-factor): Entrance doors shall be thermally broken and have a maximum u-factor of 0.7 Btu/sq. ft. x h x deg F as determined according to NFRC 100.
3. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient (SHGC) of maximum 0.35 as determined according to NFRC 200.
4. Condensation Resistance Factor for Fixed glazing and framing areas: The glass to exterior CRF, when tested to AAMA Specification 1503, shall be 70 (frame) and 69 (glass) minimum.
5. Condensation Resistance Factor for exterior Entrance doors: when tested to AAMA Specification 1503, the CRF shall be 49 (frame) and 68 (glass) minimum.

G. Thermal Movements: Allow for thermal movements resulting from ambient and surface temperature changes:

1. Temperature Change: 120 deg F, ambient; 180 deg F, material surfaces.

2. Thermal Cycling: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

2.2 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include the following:

1. Kawneer Company, Inc.
2. EFCO Corporation.
3. YKK AP America Inc.
4. Oldcastle Building Envelope.

B. Basis-of-Design Products: Kawneer Company, Inc.

1. Exterior Framing: Trifab VG 451T Storefront System, Size: 2” x 4 1/2”
2. Interior Framing: Trifab 400, Size: 1 ¾” X 4”
3. Exterior Doors: 500T wide stile Insulpour Thermal door with 10” bottom rail
4. Interior Doors: 500 wide stiles with 10” bottom rail

C. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.

2.3 FRAMING

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Construction: Thermally broken exterior, non-thermal interior.
2. Glazing System: Retained mechanically with gaskets on four sides.
3. Glazing Plane: Center.
4. Finish: Anodic Finish – Clear Anodized.
5. Fabrication Method: Shop-assembled, Field-fabricated stick system.

B. Backer Plates: Manufacturer's standard, continuous backer plates for framing members, if not integral, where framing abuts adjacent construction.

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning system components.

D. Materials:

1. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.

a. Sheet and Plate: ASTM B 209.
b. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221.
c. Extruded Structural Pipe and Tubes: ASTM B 429/B 429M.
d. Structural Profiles: ASTM B 308/B 308M.

2.4 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing operation.

1. NOTE, SEE BALLISTIC

2. Door Construction: 2-1/4-inch or 1-3/4-inch overall thickness, with minimum 0.125-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
3. Door Design: Wide stile; 5-inch nominal width.
4. Glazing Stops and Gaskets: Beveled, snap-on, extruded-aluminum stops and preformed gaskets.

2.5 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Division 8 "Door Hardware."

B. General: Provide entrance door hardware and entrance door hardware sets indicated in door and frame schedule for each entrance door to comply with requirements in this Section.

1. Entrance Door Hardware Sets: Provide quantity, item, size, finish or color indicated, and products equivalent in function and comparable in quality to named products.
2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
3. Opening-Force Requirements:

a. Egress Doors: Not more than 15 lbf to release the latch and not more than 30 lbf to set the door in motion and not more than 15 lbf to open the door to its minimum required width.
b. Accessible Interior Doors: Not more than 5 lbf to fully open door.

C. Designations: Requirements for design, grade, function, finish, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:

1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
2. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.

D. Continuous-Gear Hinges: Manufacturer's standard with stainless-steel bearings between knuckles, fabricated to full height of door and frame.

E. Mortise Auxiliary Locks: BHMA A156.5, Grade 1.

F. Manual Flush Bolts: BHMA A156.16, Grade 1.

G. Panic Exit Devices: BHMA A156.3, Grade 1, listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305.

H. Cylinders: As specified in Division 8 "Door Hardware".

I. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing.

J. Operating Trim: BHMA A156.6.

K. Removable Mullions: BHMA A156.3, extruded aluminum.

1. When used with panic exit devices, provide removable mullions listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for panic protection, based on testing according to UL 305. Use only mullions that have been tested with exit devices to be used.

L. Closers: BHMA A156.4, Grade 1, with accessories required for a complete installation, sized as required by door size, exposure to weather, and anticipated frequency of use; adjustable to comply with field conditions and requirements for opening force.

M. Concealed Overhead Holders: BHMA A156.8, Grade 1.

N. Surface-Mounted Holders: BHMA A156.16, Grade 1.

O. Door Stops: BHMA A156.16, Grade 1, floor or wall mounted, as appropriate for door location indicated, with integral rubber bumper.

P. Weather Stripping: Manufacturer's standard replaceable components.

1. Compression Type: Made of ASTM D 2000, molded neoprene, or ASTM D 2287, molded PVC.
2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

Q. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.

R. Silencers: BHMA A156.16, Grade 1.

S. Thresholds: BHMA A156.21, raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch

2.6 GLAZING

A. Glazing: Comply with Division 8 "Glazing."

B. Glazing Gaskets: Manufacturer's standard sealed-corner pressure-glazing system of black, resilient elastomeric glazing gaskets, setting blocks, and shims or spacers.

C. Glazing Sealants: As recommended by manufacturer.

1. Verify sealant has a VOC content of 250 g/L or less.
2. For sealants, indicating compliance with requirements for low-emitting materials.

2.7 ACCESSORIES

A. Fasteners and Accessories: Manufacturer's standard corrosion-resistant, nonstaining, nonbleeding fasteners and accessories compatible with adjacent materials.

1. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
2. Reinforce members as required to receive fastener threads.
3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.

B. Anchors: Adjustable anchors with minimum adjustment of 1 inch that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.

1. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123/A 123M or ASTM A 153/A 153M requirements.

C. Concealed Flashing: Manufacturer's standard corrosion-resistant, non-staining, nonbleeding flashing compatible with adjacent materials.

D. Bituminous Paint: Cold-applied asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos, formulated for 30-mil thickness per coat.

2.8 FABRICATION

A. Form or extrude aluminum shapes before finishing.

B. Fabricate components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Physical and thermal isolation of glazing from framing members.
4. Accommodations for thermal and mechanical movements of glazing and framing to maintain required glazing edge clearances.
5. Provisions for field replacement of glazing.
6. Fasteners, anchors, and connection devices that are concealed from view to greatest extent possible.

C. Mechanically Glazed Framing Members: Fabricate for flush glazing without projecting stops.

D. Entrance Door Frames: Reinforce as required to support loads imposed by door operation and for installing entrance door hardware.

1. At exterior doors, provide compression weather stripping at fixed stops.
2. At interior doors, provide silencers at stops to prevent metal-to-metal contact. Install three silencers on strike jamb of single-door frames and two silencers on head of frames for pairs of doors.

E. Entrance Doors: Reinforce doors as required for installing entrance door hardware.

1. At pairs of exterior doors, provide sliding-type weather stripping retained in adjustable strip and mortised into door edge.
2. At exterior doors, provide weather sweeps applied to door bottoms.

F. Entrance Door Hardware Installation: Factory install entrance door hardware to the greatest extent possible. Cut, drill, and tap for factory-installed entrance door hardware before applying finishes.

G. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.

2.9 ALUMINUM DOOR FINISHES

A. Fluoropolymer Three Coat Coating System: Manufacturer's standard three coat, thermo-cured system composed of specially formulated inhibitive primer, fluorocarbon color coat, and a clear fluorocarbon topcoat (applicable with three coat system). Both color coat and clear topcoat shall contain not less than 70% polyvinylidene resin by weight in compliance with AAMA 2605 for testing, performance, and application procedures.

1. Panels shall be chemically etched by an appropriate cleaner in accordance with manufacturer's written instructions.

2. Apply acid resistant primer to cleaned aluminum. Thickness range; 0.20 to 0.30 mils.

3. Apply polyvinylidene fluoride (PVF2) resinated color coat. Thickness range; 0.8 to 1.2 mils.
   a. Kynar 500. Must be applied by certified Kynar coater.

4. Apply clear top coat finish as extra protection, no less then 0.8 mils thick. Comply with AAMA standards.
5. Color: Custom color to match architect's sample, or if none, from manufacturer's standard selection

2.10 ALUMINUM FRAME FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

B. Anodized Finishing: Prepare aluminum surfaces for specified finish; apply shop finish in accordance with the following:
1. Anodic Coating: Electrolytic color coating followed by an organic seal applied in accordance with the requirements of AAMA 612. Aluminum extrusions shall be produced from quality controlled billets meeting AA-6063-T5.
2. Exposed Surfaces shall be free of scratches and other serious blemishes.
3. Extrusions shall be given a caustic etch followed by an anodic oxide treatment and then sealed with an organic coating applied with an electrodeposition process.
4. The anodized coating shall comply with all of the requirements of AAMA 612: Voluntary Specifications, Performance Requirements and Test Procedures for Combined Coatings of Anodic Oxide and Transparent Organic Coatings on Architectural Aluminum. Testing

shall demonstrate the ability of the finish to resist damage from mortar, salt spray, and chemicals commonly found on construction sites, and to resist the loss of color and gloss
5. Overall coating thickness for finishes shall be a minimum of 0.7 mils

C. Finishes Testing:
1. Apply 0.5% solution NaOh, sodium hydroxide, to small area of finished sample area; leave in place for sixty minutes; lightly wipe off NaOh; Do not clean area further.
2. Submit samples with test area noted on each sample.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General:

1. Comply with manufacturer's written instructions.
2. Do not install damaged components.
3. Fit joints to produce hairline joints free of burrs and distortion.
4. Rigidly secure nonmovement joints.
5. Install anchors with separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
6. Seal perimeter and other joints watertight unless otherwise indicated.

B. Metal Protection:

1. Where aluminum is in contact with dissimilar metals, protect against galvanic action by painting contact surfaces with materials recommended by manufacturer for this purpose or by installing nonconductive spacers.
2. Where aluminum is in contact with concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

C. Set continuous sill members and flashing in full sealant bed as specified in Section 079200 "Joint Sealants" to produce weathertight installation.

D. Install components plumb and true in alignment with established lines and grades.

E. Install operable units level and plumb, securely anchored, and without distortion. Adjust weather-stripping contact and hardware movement to produce proper operation.

F. Install glazing as specified in Division 8 "Glazing."

G. Entrance Doors: Install doors to produce smooth operation and tight fit at contact points.

1. Exterior Doors: Install to produce weathertight enclosure and tight fit at weather stripping.
2. Field-Installed Entrance Door Hardware: Install surface-mounted entrance door hardware according to entrance door hardware manufacturers' written instructions using concealed fasteners to greatest extent possible.

3.3 ERECTION TOLERANCES

A. Erection Tolerances: Install aluminum-framed entrances and storefronts to comply with the following maximum tolerances:

1. Plumb: 1/8 inch in 10 feet; 1/4 inch in 40 feet.
2. Level: 1/8 inch in 20 feet; 1/4 inch in 40 feet
3. Alignment: limit offset from true alignment to 1/16 inch.
4. Location: Limit variation from plane to 1/8 inch in 12 feet; 1/2 inch over total length.

3.4 MAINTENANCE SERVICE

A. Entrance Door Hardware:

1. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of entrance door hardware.
2. Initial Maintenance Service: Beginning at Substantial Completion, provide six months' full maintenance by skilled employees of entrance door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper entrance door hardware operation at rated speed and capacity. Use parts and supplies that are the same as those used in the manufacture and installation of original equipment.

END OF SECTION 08 41 13

SECTION 08 43 33 - BULLET-RESISTANT ALUMINUM STOREFRONTS

PART 1GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. Section Includes:
1. Bullet-resistant aluminum storefront assemblies.
2. See 08 43 33.13 SECURITY STOREFRONT BULLET RESISTANT ALUMINUM FRAMING AND DOORS for ballistic door and frame system.

B. Related Sections:
1. Division 01: Administrative, procedural, and temporary work requirements.

1.2 REFERENCES

A. American Architectural Manufacturers Association (AAMA):
1. 611 - Voluntary Specification for Anodized Architectural Aluminum.
2. 2605 - Voluntary Specification, Performance Requirements and Test Procedures for Superior Performing Organic Coatings on Architectural Extrusions and Panels.

B. American Society of Civil Engineers (ASCE) 7 - Minimum Design Loads for Buildings and Other Structures.

C. American Welding Society (AWS) D1.2/D1.2M - Structural Welding Code - Aluminum.

D. ASTM International (ASTM) (www.astm.org):
1. B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.
2. C509 - Standard Specification for Elastomeric Cellular Preformed Gasket and Sealing Material.
3. C864 - Standard Specification for Dense Elastomeric Compression Seal Gaskets, Setting Blocks, and Spacers.
4. E283 - Standard Test Method for Rate of Air Leakage through Exterior Windows, Curtain Walls and Doors.
5. E330 - Standard Test Method for Structural Performance of Exterior Windows, Curtain Walls, and Doors under the Influence of Wind Loads.
6. E331 - Standard Test Method for Water Penetration of Exterior Windows, Doors, and Curtain Walls by Uniform Static Air Pressure Differential.

E. Federal Emergency Management Agency (FEMA) 361 - Safe Rooms for Tornadoes and Hurricanes: Guidance for Community and Residential Safe Rooms.

F. Underwriters Laboratories (UL) 752 - Bullet Resisting Equipment.

G. US General Services Administration (GSA) P-100 - Facilities Standards for the Public Buildings Service.

1.3 SYSTEM DESCRIPTION

A. Design Requirements: Design Exterior & Interior systems to withstand:
1. Design wind pressure in accordance with IBC 2018 with maximum allowable deflection of L/175, tested in accordance with ASTM E330.
2. Movement caused by an ambient temperature range of 120 degrees F and a surface temperature range of 160 degrees F.

B. Performance Requirements:
1. Air infiltration: Maximum 0.06 CFM per square foot of fixed area at static pressure differential of 6.24 PSF tested to ASTM E283.
2. Water infiltration: No uncontrolled water leakage, tested to ASTM E331 at minimum test pressure of 12.0 PSF.
3. Uniform structural loading: No glass breakage or permanent damage to fasteners or system components, tested to ASTM E330 at 1.5 times design pressure.

1.4 SUBMITTALS

A. Submittals for Review:
1. Shop Drawings: Include frame profiles and sizes, type and spacing of frame anchors, reinforcement size and locations, details of joints and connections, and welding details.
2. Product Data: Include product description for storefront assemblies including bullet-resistant rating.
3. Samples: [2 x 2]] inch coating samples in specified color.

B. Closeout Submittals:
1. Maintenance Data: Include instructions for cleaning of glazed panels.

1.5 QUALITY ASSURANCE

A. Storefront Assemblies:
1. Ballistic Level 3, & 5, tested to UL 75, see drawings and glazing types
2. GSA P-100, Classifications C Blast Resistant.
3. Rated to FEMA 361.

1.6 DELIVERY, STORAGE AND HANDLING

A. Do not cover with non vented coverings that create excessive humidity.

B. Remove wet coverings immediately.

1.7 ALTERNATES

A. Add Alternate No. 1: The Amount to be added to the total contract sum in connection with increasing the base bid level 3 ballistic ratings at the first-floor exterior storefront system and glazing to level 5 ballistic rating, as shown on the architectural drawings.

B Deduct Alternate No. 2: The Amount to be deducted from the total contract sum to delete the base bid area of ballistic 3 exterior storefront at the south wall of the lobby and provide patterned brick in lieu, where shown in the architectural drawings.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Contract Documents are based on Model TH600 by ARMORTEX, 5926 Corridor Parkway, Schertz, Texas, 800-880-8306, www.armortex.com.

B. Substitutions: [Under provisions of Division 01.] [Not permitted.]

2.2 MATERIALS

A. Aluminum Extrusions:
1. ASTM B221, 6061-T6 alloy and temper; minimum 38.0 KSI ultimate tensile strength and minimum 35.0 KSI yield strength.

2.3 ACCESSORIES

A. Internal Fasteners: Type 18-8 stainless steel.

B. Interior Glazing Gaskets: ASTM C509, Type II, Option 1 and ASTM C864; closed cellular neoprene, 40 to 50 Shore A durometer.

C. Exterior Glazing Gaskets: ASTM C864; solid neoprene, 65 to 75 Shore A durometer.

D. Glazing: Accept 1-1/4 to 2-1/16 inch thick glazing materials.

2.4 FABRICATION

A. Fabricate frames from extruded aluminum with 2-1/2 inch face width x 6 inch overall depth.

B. Fabricate with tight joints and connections providing hairline joints and true alignment of adjacent members.

C. Glazing not removable from threat side of assembly.

D. Welding: In accordance with AWS D1.2/D1.2M. Grind exposed welds flush and smooth.

2.5 FINISHES

A. Aluminum: AAMA 611, Architectural Class I anodized, clear.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install door and frame assemblies in accordance with manufacturer’s instructions and approved Shop Drawings.

B. Set plumb, square, and level.

C. Secure to adjacent construction using fastener type best suited to application.

D. Field alterations to door and frame assemblies other than drilling and tapping for surface-mounted hardware not permitted unless approved in advance by manufacturer and Architect.

3.2 ADJUSTING

A. Touch up minor scratches and abrasions to match factory finish.

END OF SECTION

SECTION 08 43 33.13 – SECURITY STOREFRONT BULLET RESISTANT ALUMINUM FRAMING AND DOORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SECTION INCLUDES

A. Bullet Resistant Aluminum Storefront Framing and Entrance Doors.

B. Bullet Resistant Glazing (insulated & non-insulated).

1.2 ACTION SUBMITTALS

A. Refer to Section 01 33 00 Submittal Procedures.

B. Product Data: For each type of framing and glazing including manufacturer recommended installation instructions.

C. Shop Drawings: Include plans, elevations, sections, details, attachment to other work and glazing details for field-glazed units.

D. Samples: For each exposed finish.

1.3 INFORMATIONAL SUBMITTALS

A. Product Test Reports: Indicating compliance with requirements.

B. Warranty: Sample of finish warranty

1.4 CLOSEOUT SUBMITTALS

A. Refer to 01 77 00 - Closeout Procedures.

B. Maintenance data.

1.5 QUALITY ASSURANCE

A. Mock-up: Install framing assembly at project site. Obtain Architect's approval prior to proceeding with installation of remaining storefront. Accepted mock-up may remain as portion of final work.

1.6 DELIVERY, STORAGE AND HANDLING

A. Refer to Section 01 60 00 Product Requirements.

1.7 WARRANTY

A. Finish Warranty: Manufacturer's warranty against deterioration of factory finishes for the period of 5 years from the date of Substantial Completion.

B. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 5 years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: 5 years from date of Substantial Completion.

D. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 5 years from date of Substantial Completion.

1.8 ALTERNATES

A. Add Alternate No. 1: The Amount to be added to the total contract sum in connection with increasing the base bid level 3 ballistic ratings at the exterior storefront system and glazing to level 5 ballistic rating, where shown on the architectural drawings.

B Deduct Alternate No. 2: The Amount to be deducted from the total contract sum to delete the base bid area of ballistic 3 exterior storefront at the south wall of the lobby and provide patterned brick in lieu, where shown in the architectural drawings.

PART 2 - PRODUCTS

2.1 MANUFACTURED UNITS

A. Basis of Design: Insulgard HP600/ HP500 Bullet and Resistant Architectural Aluminum Framing and Doors by Insulgard Security Products; Phone 800.624.6315; website www.insulgard.com,

B. Basis of Design: McGrory BallisticDefend Unico Bullet Resistant Framing and Doors by McGrory Glass; Phone 800.220.3749; website www.mcgrory.com

1. Subject to compliance with requirements, manufacturers of products of equivalent design may be acceptable if approved in accordance with Section 01 25 00 Substitution Procedures.

C. Description

1. Factory fabricated framing constructed from either 6105-T5 or 6005-T5 extruded aluminum with integral weep design to allow water to vent to the exterior along horizontal members.
2. Dimensions:

a. Head, Jamb, Sill, Mullion and Intermediate Horizontal Members: 2-1/2 inches by 6 inches.
b. Doors: Bottoms - 10”x3 5/8”, stiles and top rail – 5”x3 5/8”.

2.2 PERFORMANCE CRITERIA

A. Ballistic Resistant: Level 3 & Level 5 in accordance with UL 752 – Testing for Ballistic Resistance for the complete assembly including framing, glazing and panels.

2.3 FABRICATION

A. Tolerances: All joints and connections shall be tight, providing hairline joints and true alignment of adjacent members

2.4 ALUMINUM FRAME FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

B. Anodized Finishing: Prepare aluminum surfaces for specified finish; apply shop finish in accordance with the following:

1. Anodic Coating: Electrolytic color coating followed by an organic seal applied in accordance with the requirements of AAMA 612. Aluminum extrusions shall be produced from quality controlled billets meeting AA-6063-T5.
2. Exposed Surfaces shall be free of scratches and other serious blemishes.
3. Extrusions shall be given a caustic etch followed by an anodic oxide treatment and then sealed with an organic coating applied with an electrodeposition process.
4. The anodized coating shall comply with all of the requirements of AAMA 612: Voluntary Specifications, Performance Requirements and Test Procedures for Combined Coatings of Anodic Oxide and Transparent Organic Coatings on Architectural Aluminum. Testing shall demonstrate the ability of the finish to resist damage from mortar, salt spray, and chemicals commonly found on construction sites, and to resist the loss of color and gloss
5. Overall coating thickness for finishes shall be a minimum of 0.7 mils

C. Finishes Testing:
1. Apply 0.5% solution NaOh, sodium hydroxide, to small area of finished sample area; leave in place for sixty minutes; lightly wipe off NaOh; Do not clean area further.
2. Submit samples with test area noted on each sample.

2.5 ALUMINUM DOOR FINISHES

A. Fluoropolymer Three Coat Coating System: Manufacturer's standard three coat, thermo-cured system composed of specially formulated inhibitive primer, fluorocarbon color coat, and a clear fluorocarbon topcoat (applicable with three coat system). Both color coat and clear topcoat shall contain not less than 70% polyvinylidene resin by weight in compliance with AAMA 2605 for testing, performance, and application procedures.

1. Panels shall be chemically etched by an appropriate cleaner in accordance with manufacturer's written instructions.

2. Apply acid resistant primer to cleaned aluminum. Thickness range; 0.20 to 0.30 mils.

3. Apply polyvinylidene fluoride (PVF2) resinated color coat. Thickness range; 0.8 to 1.2 mils.
   a. Kynar 500. Must be applied by certified Kynar coater.

4. Apply clear top coat finish as extra protection, no less then 0.8 mils thick. Comply with AAMA standards.
5. Color: Custom color to match architect's sample, or if none, from manufacturer's standard selection

2.6 Ballistic Glazing

1. GL-3 1.717" Nom. Thickness Insulated Level 3 ballistic UL 752SEE 08 43 44.13

   a. Basis of Design: Baluln25 IG, by Insulgard Security products
   b. Thickness: 1.742" Nom.
   c. Light Transmittance: 69%
   d. U-Value: .43
   e. SHGC: .62
   f. Shading Coefficient: .71

2. GL-4 Add Alternate #2 2.010” Nom. Thickness Insulated Level 5 ballistic glazing SEE 08 43 44.13
   a. Basis of Design: Baluln32 IG, by Insulgard Security products
   b. Thickness: 2.010” Nom.
   c. Light Transmittance: 68%
   d. U-Value: .42
   e. SHGC: .62
   f. Shading Coefficient: .71

3. GL-8
   a. Basis of Design: Baluln25, by Insulgard Security products
   b. Thickness: 1.01” Nom.
   c. Light Transmittance: 77%
   d. U-Value: .84
   e. SHGC: .63
   f. Shading Coefficient: .72

4. Allowable Tolerances: Plus or minus 1/4 inch for frame opening width, height, diagonal dimensions, and overall width and height (outside to outside).

2.7 ACCESSORIES

A. Anchors: Fully concealed in accordance with requirements of delegated design requirements

PART 3 - EXECUTION

3.1 PREPARATION

A. Verify field dimensions of opening prior to fabrication of windows.

B. Coordinate structural requirements to ensure proper attachment and support.

3.2 INSTALLATION

A. Install windows in accordance with manufacturer's recommendations and approved shop drawings.

B. Provide required support and securely fasten and set windows plumb, square, and level without twist or bow.

C. Apply sealant in accordance with window and sealant manufacturer's recommendations as indicated in installation instructions. Wipe off excess, and leave exposed sealant surfaces clean and smooth.

3.3 PROTECTION

A. Clean and protect windows from damage during construction operations. If damage occurs, remove and replace as required to provide windows in their original, undamaged condition.

END OF SECTION 08 43 33.13

SECTION 08 45 13 - STRUCTURED-POLYCARBONATE-PANEL ASSEMBLIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management’s general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. Section includes aluminum-framed assemblies glazed with translucent polycarbonate panels as follows:

1. Translucent unit panel wall system. Or

2. Translucent wall panel.

1.3 PREINSTALLATION MEETING

A. Discussion topics should include the following: schedule; sequence; coordination of trades; substrate review and acceptance; protection; shop drawings and submittals; interface conditions and details; environmental constraints; mockups; testing requirements; field quality control efforts. Meetings shall be attended by owner, construction manager, sub-contractor, architect, engineers, etc. at the job site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for aluminum components of panel assemblies.

B. Shop Drawings: For panel assemblies.

1. Include plans, elevations, sections, details, and attachments to other work.
2. Include details of provisions for assembly expansion and contraction and for draining moisture within the assembly to the exterior.
3. Shop drawings shall include project-specific interface conditions and depict integration with adjacent exterior wall conditions.

C. Samples: In manufacturer's standard size.

1. For each type of structured-polycarbonate panel.
2. For each type of exposed finish for framing members.

D. Fabrication Samples: Of each framing system intersection and adjacent panels, made from 12-inch (305-mm) lengths of full-size framing members and showing details of the following:

1. Joinery.
2. Anchorage.
3. Expansion provisions.
4. Translucent polycarbonate panels.
5. Flashing and drainage.

E. Submittal: For panel assemblies indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each translucent polycarbonate-panel assembly, for tests performed by a qualified testing agency.

C. Evaluation Reports: For translucent polycarbonate-panel assemblies from ICC-ES.

D. Field quality-control reports.

E. Sample Warranties: For special warranties.

F. Manufacturer’s installation instructions.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For panel assemblies to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical panel assemblies as shown on Drawings.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 WARRANTY

A. Manufacturer's Warranty: Manufacturer agrees to repair or replace components of panel assemblies that fail in materials or fabrication workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including, but not limited to, excessive deflection.
b. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
c. Water leakage.

2. Warranty Period: Five years from date of Substantial Completion.

B. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace translucent polycarbonate panels that exhibit defects in materials or workmanship within specified warranty period.

1. Defects include, but are not limited to, the following:

a. Delamination.
b. Color changes exceeding requirements.
c. Losses in light transmission beyond 6 percent from original when measured after 10 years according to ASTM D 1003.

2. Warranty Period: 10 years from date of Substantial Completion.
3. Warranty Period for Hail Damage: Five years from date of Substantial Completion for hail stone penetration exceeding requirements.

C. Special Aluminum-Finish Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components on which finishes fail within specified warranty period. Warranty does not include normal weathering.

1. Failures include, but are not limited to, checking, crazing, peeling, chalking, and fading of finishes.
2. Warranty Period: 10 years from date of Substantial Completion.

D. Installer's Warranty: Installer agrees to repair or replace components of panel assemblies that fail in installation workmanship within specified warranty period.

1. Failures include, but are not limited to, installation defects and water leakage.
2. Warranty Period: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Section 01 40 00 "Quality Requirements," to design translucent polycarbonate-panel assemblies.

B. Structural Loads: As indicated on Drawings.

C. Deflection Limits:

1. Vertical Panel Assemblies: Limited to 1/120 of clear span for each assembly component of aluminum framing and panel joint according to the IBC, Table 1604.3 for exterior walls with flexible materials.
2. Overhead Panel Assemblies: Limited to 1/60 of clear span for each assembly component of aluminum framing and panel joint according to the IBC, Table 1604.3, footnote h.

D. Structural-Test Performance: Panel assemblies tested according to ASTM E 330, as follows:

1. When tested at positive and negative wind-load design pressures, assemblies do not show evidence of deflection exceeding specified deflection limits.
2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not show evidence of material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
3. Test Durations: As required by design wind velocity, but not less than 10 seconds.

E. Windborne-Debris-Impact-Resistance Performance: Panel assemblies that pass missile-impact and cyclic-pressure tests when tested according to ASTM E 1886 and the testing information in ASTM E 1996 for Wind Zone 2.

1. Large-Missile Test: For glazed openings located within 30 feet (9.1 m) of grade.
2. Small-Missile Test: For glazed openings located more than 30 feet (9.1 m) above grade.

F. Hail-Stone Impact Resistance: Panel assemblies that resist penetration by hail stone smaller than 1-3/16 inches (30 mm) in diameter, impacting panel surface at a final velocity up to 44 fps (13.4 m/s) per ASTM E 822.

G. Panel Clip Performance: Corrosion-resistant clips tested to meet a minimum 90-lb/sq. ft. (4.3-kPa) wind uplift when tested according to ASTM E 330.

H. Panel End Seals: Continuous factory-applied, self-adhered micro-filter tape over open panel cells and factory heat-seal-crimped open panel cells.

I. Panel Performance:

1. Smoke-Developed Index: 450 or less according to ASTM E 84, or 75 or less according to ASTM D 2843.
2. Flame Spread: 25 or less when tested according to ASTM E 84.
3. Combustibility Classification: Class CC1 based on testing according to ASTM D 635.
4. Interior Finish Classification: Class A based on testing according to ASTM E 84.
5. Visible Light Transmittance (VT) Loss: 6 percent maximum over 10 years, measured according to ASTM D 1003.
6. Thermal Aging: When exposed to 300 deg F (149 deg C) for 25 minutes, interior and exterior panels tested according to ASTM D 2244.

    a. Color Retention: 0.75 (Hunter) units ΔE maximum fade.
    b. Color Darkening: 0.3 (Hunter) units ΔL maximum.
    c. Cracking or Crazing: None when exposed to 300 deg F (149 deg C) for 25 minutes.
    d. Delamination: None when exposed to 300 deg F and 0 deg F (plus 149 and minus 17.8 deg C) for 25 minutes.

7. Impact Resistance: No failure at an impact of 500 lbf (677.9 Nm) when tested according to ASTM E 695.
8. Concentrated Loading: No damage while applying a load of 600 lbf (813.5 Nm) over 1 sq. ft. (0.093 sq. m.) when tested according to 29 CFR 1910.23(e)(8); and no damage while applying a load of 400 lbf (542.3 Nm) over 3 inches (152 mm) in diameter according to ASTM E 661.
9. Basis of Design NFRC Requirements:
    a. CPD#: KLA-M-5-00001-00005
    b. U-factor: 0.29
    c. SHGC: 0.23
    d. VT: 0.10
    e. Condensation Resistance: 40
    f. Anodized: M006.5 10mm UQ(white Matte)|10mm UQ(White Matte)

J. Water Penetration under Static Pressure: Provide panel assemblies that do not evidence water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure difference of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft. (300 Pa).

K. Thermal Movements: Allow for thermal movements from ambient- and surface-temperature changes. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

L. Energy Performance: Provide panel assemblies with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below and certified and labeled according to NFRC.

1. Thermal Transmittance (U-Factor): Fixed panel and mill finish aluminum framing whole assemblies shall have U-factor of not more than 0.29 Btu/sq. ft. x h x deg F (1.59 W/sq. m x K) vertical application and 0.31 Btu/sq. ft. x h x deg F (1.76 W/sq. m x K) sloped application as determined according to NFRC 100.
2. Solar-Heat-Gain Coefficient (SHGC): Panel assembly shall have an SHGC of no greater than 0.23 as determined according to NFRC 200.
3. Visible Light Transmittance (VT): White Matte, 0.10 or greater according to NFRC 202; White matte 0.10, according to ASTM E 972, ASTM E 1084.
4. Air Infiltration: Maximum air leakage through fixed glazing and skylight framing assemblies of 0.30 cfm/sq. ft. (1.50 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
5. Air Infiltration: Maximum air leakage through fixed window glazing and framing assemblies of 0.20 cfm/sq. ft. (1.02 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).
6. Air Infiltration: Maximum air leakage through fixed curtain wall and storefront glazing and framing assemblies of 0.06 cfm/sq. ft. (0.30 L/s per sq. m) of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 1.57 lbf/sq. ft. (75 Pa).

2.2 TRANSLUCENT POLYCARBONATE-PANEL ASSEMBLIES

A. Translucent Polycarbonate-Panel Assemblies: Translucent assemblies that are supported by aluminum framing and glazed with translucent polycarbonate panels.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Kingspan; UniQuad or an approved equal product by one of the following:

a. Wasco by Velux LumiWal System
b. Kalwall

2.3 TRANSLUCENT POLYCARBONATE WALL PANELS

A. Translucent, Multiwall Cellular Polycarbonate Panel Thermally Broken Assembly: Consisting of two independent, multiwall cellular cross-section, polycarbonate glazing panels with air-insulated spaces and coextruded UV protection, integrated into a panel assembly with concealed metal connecters consisting of a two-piece male/female battens with built-in silicone gaskets. Unitized panel assembly shall be incorporated into a complete aluminum frame system without exposed mullions. Design panels for exterior panel replacement, independent of interior single panel and without exposing the interior, or compromising weather-tightness, or interfering with the normal working functions of the building.

B. Panel Thickness: Overall assembly minimum 4 inch (102 mm).

C. Perimeter Frame Thermal Break: 0.25-inch- (6.4-mm-) minimum, poured and debridged separation consisting of a two-part chemically curing, high-density polyurethane, which is mechanically and adhesively joined to aluminum framing.

D. UV Resistance: Coextruded on weather-exposed surfaces during glazing panel manufacture.

E. Color: As selected by Architect from manufacturer's full range.

F. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 90 and classified according to ASTM E 413 by an independent testing agency.

1. Sound Transmission Class (STC): Paired-panel assemblies shall have a minimum overall acoustic value of the following STC:
a. Paired-Panel Assembly; 4 Inches (101 mm) Thick: STC 26.

G. Department of Defense Forced Entry Resistance: Provide "5-Minute-Forced-Entry" certification according to Department of State, SD-STD-01.01, Revision G (Amended), Code 2114 according to UFC 4-020-1, "DOD Security Engineering Planning Manual."

H. Department of Defense Antiterrorism Standard for Buildings: Provide stamped calculations for Project-specific conditions showing compliance according to UFC 4-010-01.

I. Human-Impact Resistance: For human-impact-resistant assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E 695; shall withstand impact loading by blunt object of 2000 ft.-lb (271 Nm).

J. Panel Performance:

1. Color Retention: 3.0 (Hunter) units ΔE, maximum fade as measured according to ASTM D 2244 when tested on minimum of two white color samples after panels have weathered outdoors in Arizona with panels exposed to a minimum 36.78 Langleys (1540 MJ/sq. m).
2. Haze Factor: Greater than 90 percent when tested according to ASTM D 1003.

2.4 ALUMINUM FRAMING SYSTEMS

A. Components: Manufacturer's standard extruded-aluminum members of thickness required and reinforced as required to support imposed loads.

B. Aluminum: Alloy and temper recommended in writing by manufacturer for type of use and finish indicated.

1. Sheet and Plate: ASTM B 209 (ASTM B 209M).
2. Extruded Bars, Rods, Profiles, and Tubes: ASTM B 221 (ASTM B 221M).
3. Extruded Structural Pipe and Tubes: ASTM B 429 (/B 429M).
4. Structural Profiles: ASTM B 308 (/B 308M).

C. Brackets and Reinforcements: Manufacturer's standard high-strength aluminum with nonstaining, nonferrous shims for aligning skylight components.

D. Fasteners and Accessories: Manufacturer's standard, corrosion-resistant, nonstaining, and nonbleeding fasteners and accessories; compatible with adjacent materials.

1. At closures, retaining caps, or battens, use ASTM A 193 (/A 193M), 300 series stainless-steel screws.
2. Use self-locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
3. At movement joints, use slip-joint linings, spacers, and sleeves of material and type recommended in writing by manufacturer.

E. Concrete and Masonry Inserts: Hot-dip galvanized cast-iron, malleable-iron, or steel inserts complying with ASTM A 123 (/A 123M) or ASTM A 153 (/A 153M) requirements.

F. Anchor Bolts: ASTM A 307, Grade A, galvanized steel.

G. Concealed Flashing: Corrosion-resistant, nonstaining, nonbleeding flashing compatible with adjacent materials.

H. Exposed Flashing and Closures: Aluminum sheet not less than 0.040-inch (1.02-mm) thick, finished to match framing.

I. Framing Gaskets: Manufacturer's standard gasket system with low-friction surface treatment designed specifically for retaining translucent polycarbonate panels.

J. Frame-System Sealants: As recommended in writing by manufacturer.

1. Sealant shall have a VOC content of 250 g/L or less.

K. Corrosion-Resistant Coating: Cold-applied asphalt mastic, compounded for 15-mil (0.4-mm) dry film thickness per coat. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

L. White Cover Board over Semi Rigid Insulation, where solid wall.

2.5 FABRICATION

A. Fabricate aluminum components that, when assembled, have the following characteristics:

1. Profiles that are sharp, straight, and free of defects or deformations.
2. Accurately fitted joints with ends coped or mitered.
3. Internal guttering systems or other means to drain water passing through joints and moisture migrating within assembly to exterior.

B. Fabricate aluminum sill closures with weep holes and for installation as continuous component.

C. Reinforce aluminum components as required to receive fastener threads.

2.6 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Comply with manufacturer's written instructions.

1. Do not install damaged components.
2. Fit joints between aluminum components to produce hairline joints free of burrs and distortion.
3. Rigidly secure nonmovement joints.
4. Install anchors with separators and isolators to prevent metal corrosion, electrolytic deterioration, and immobilization of moving joints.
5. Seal joints watertight unless otherwise indicated.

B. Metal Protection: Where aluminum components will contact dissimilar materials, protect against galvanic action by painting contact surfaces with corrosion-resistant coating or by installing nonconductive spacers as recommended in writing by manufacturer for this purpose.

C. Install components plumb and true in alignment with established lines and elevations.

D. Skylight Assemblies: Install continuous aluminum sill closures with weatherproof expansion joints and locked and sealed corners. Install components to drain water passing through joints and moisture migrating within assembly to exterior.

E. Erection Tolerances: Install panel assemblies to comply with the following maximum tolerances:

1. Alignment: Limit offset from true alignment to 1/32 inch (0.8 mm) where surfaces abut in-line, edge-to-edge, at corners, or where a reveal or protruding element separates aligned surfaces by less than 3 inches (76 mm); otherwise, limit offset to 1/8 inch (3.2 mm).
2. Location and Plane: Limit variation from true location and plane to 1/8 inch in 12 feet (3.2 mm in 3.7 m), but no greater than 1/2 inch (12 mm) over total length.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

1. Water-Spray Test: Before installation of interior finishes has begun, panel assemblies shall be tested according to AAMA 501.2 and shall not show evidence of water penetration.
2. Water Penetration under Static Pressure: Before installation of interior finishes has begun, areas shall be tested according to ASTM E 1105.

    a. Test Procedures: Test under uniform and cyclic static-air pressure.
    b. Static-Air-Pressure Difference: As indicated on the drawings.
    c. Water Penetration: None.

B. Repair or remove work where test results and inspections indicate that it does not comply with specified requirements.

C. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

END OF SECTION 08 45 13

SECTION 08 56 69 -BULLET-RESISTANT ALUMINUM TRANSACTION WINDOWS

PART 1GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. Section Includes:
1. Bullet-resistant fixed aluminum transaction window assemblies.
2. Bullet-resistant baffle type aluminum transaction window assemblies.

B. Related Sections:
1. Division 01: Administrative, procedural, and temporary work requirements.
2. 06 40 23 Interior Architectural Woodwork
3. 08 43 33 BULLET RESISTANT ALUMINUM STOREFRONT
4. 08 43 33.13 SECURITY STOREFRONT BULLET RESISTANT ALUMINUM FRAMING & DOORS
5. 08 80 00 GLAZING

1.2 REFERENCES

A. American Welding Society (AWS) D1.2/D1.2M - Structural Welding Code - Aluminum.

B. American Architectural Manufacturers Association (AAMA) 611 - Voluntary Specification for Anodized Architectural Aluminum.

C. ASTM International (ASTM) B221 - Standard Specification for Aluminum and Aluminum-Alloy Extruded Bars, Rods, Wire, Profiles, and Tubes.

D. Underwriters Laboratories (UL) 752 - Bullet Resisting Equipment.

1.3 SYSTEM DESCRIPTION

A. Design Requirements:
1. Provide window frames of "non-ricochet type" intended to permit capture and retention of attacking projectile, lessening potential of random injury or lateral penetration.
2. Two way "natural voice" communication permitted by design of vertical side frames and glazing technique.

1.4 SUBMITTALS

A. Submittals for Review:

1. Shop Drawings: Include window profiles and sizes, type and spacing of frame anchors, reinforcement size and locations, details of joints and connections, and welding details.
2. Product Data: Include product description for window assemblies including bullet-resistant ratings.
3. Samples: 2 x 2 inch coating samples showing available colors.

B. Closeout Submittals:
1. Maintenance Data: Include instructions for cleaning of glazed panels.

1.5 QUALITY ASSURANCE

A. Transaction Window Assemblies: Ballistic Level 3, tested to UL 752. GL-8 per glazing schedule.

1.6 DELIVERY, STORAGE AND HANDLING

A. Store window assemblies upright in protected, dry area, off ground or floor, with at least 1/4 inch space between individual units.

B. Do not cover with non-vented coverings that create excessive humidity.

C. Remove wet coverings immediately.

1.7 ALTERNATES

A. Add Alternate No. 1: The Amount to be added to the total contract sum in connection with increasing the base bid level 3 ballistic ratings at the first-floor exterior storefront system and glazing to level 5 ballistic rating, as shown on the architectural drawings.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Contract Documents are based on products by ARMORTEX, 5926 Corridor Parkway, Schertz, Texas, 800-880-8306, www.armortex.com.

2.2 MATERIALS

A. Aluminum Extrusions:
1. ASTM B221, 6061-T6 alloy and temper; minimum 38.0 KSI ultimate tensile strength and minimum 35.0 KSI yield strength.

B. Bullet-Resistant Composite: UL Listed Bullet Resistant Composite by ARMORTEX.

C. Glazing:
1. GL-8, Level 3 UL 752 Listed laminated glass.

2. Bottom edge of glazing panel provided with 18 gage stainless steel cap.

D. Track and Hangers:
1. Aluminum track and hangers.

2.3 FABRICATION

A. Frames:
1. Fabricate from aluminum extrusions lined with bullet-resistant composite.
2. Weld frame corners; knock-down and mechanical joints not acceptable.
3. Frame modules capable of being joined with other frame modules to form continuous line.
4. Replacement of glazing from secure side of window, not requiring removal of frame from opening.

B. Deal Tray: Model RMDT1016, 16 gage stainless steel, 10 x 16 inches to outside edge of flanges, clear 1-5/8 inch open depth under glazing. Coordinate with SSM countertop.

C. Provide 1 inch acrylic spacers and stainless steel security screws at baffles.

D. Welding: In accordance with AWS D1.2/D1.2M. Grind exposed welds flush and smooth.

E. Finish work neat and free from defects.

F. Allowable Tolerances: Plus or minus 1/16 inch for frame opening width, height, diagonal dimensions, and overall width and height (outside to outside).

2.4 FINISHES

A. Aluminum: AAMA 611, Architectural Class I anodized, clear.

PART 3 EXECUTION

3.1 INSTALLATION

A. GC shall coordinate with owner for fishing low voltage into the frame or through the frame and mount for owner provided intercom. Contact Baltimore County Project Management to reach AV and IT staff.
B. Install window assemblies in accordance with manufacturer’s instructions and approved Shop Drawings.

C. Set plumb, square, and level.

D. Secure to adjacent construction using fastener type best suited to application.

E. Field alterations to window assemblies not permitted unless approved in advance by manufacturer and Architect.

3.2 ADJUSTING

A. Touch up minor scratches and abrasions in [primer paint] [finish coat] to match factory finish.

END OF SECTION 08 56 69

SECTION 08 71 00 – DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes: Finish Hardware for door openings other than detention doors, except as otherwise specified herein.

1. Door hardware for steel (hollow metal) doors
2. Door hardware for aluminum doors
3. Door hardware for wood doors
4. Keyed cylinders as indicated.

B. Related Sections

1. Division 6: Rough Carpentry
2. Division 8: Aluminum-Framed Entrances and Storefronts
3. Division 8: Hollow Metal Doors and Frames
4. Division 8: Flush Wood Doors
5. Division 8: Detention Doors and Frames
6. Division 8: Detention Hardware
7. Division 10: Signage
8. Division 26: Electrical

C. References: Comply with applicable requirements of the following standards. Where these standards conflict with other specific requirements, the most restrictive shall govern.

1. ADA Standards - Americans with Disabilities Act (ADA) Standards for Accessible Design 2010.
2. ASTM E283/E283M - Standard Test Method for Determining Rate of Air Leakage Through Exterior Windows, Skylights, Curtain Walls, and Doors Under Specified Pressure Differences Across the Specimen 2019.
3. BHMA A156.1 - Standard for Butts and Hinges 2021.
4. BHMA A156.2 - Bored and Preassembled Locks and Latches 2017.
5. BHMA A156.3 - Exit Devices 2020.
6. BHMA A156.4 - Door Controls - Closers 2019.
7. BHMA A156.5 - Cylinders and Input Devices for Locks 2020.
8. BHMA A156.6 - Standard for Architectural Door Trim 2021.
9. BHMA A156.7 - Template Hinge Dimensions 2016.
10. BHMA A156.8 - Door Controls - Overhead Stops and Holders 2021.
11. BHMA A156.13 - Mortise Locks & Latches Series 1000 2017.
12. BHMA A156.15 - Release Devices - Closer Holder, Electromagnetic and Electromechanical 2021.
13. BHMA A156.16 - Auxiliary Hardware 2018.
14. BHMA A156.18 - Materials and Finishes 2020.
15. BHMA A156.19 - Power Assist and Low Energy Power Operated Swinging Doors 2019.
16. BHMA A156.21 - Thresholds 2019.
17. BHMA A156.22 - Standard for Gasketing 2021.
18. BHMA A156.23 - Electromagnetic Locks 2017.
19. BHMA A156.25 - Electrified Locking Devices 2018.
20. BHMA A156.26 - Standard for Continuous Hinges 2021.
21. BHMA A156.28 - Recommended Practices For Mechanical Keying Systems 2018.

22. BHMA A156.30 - High Security Cylinders 2020.
23. BHMA A156.31 - Electric Strikes and Frame Mounted Actuators 2019.
24. BHMA A156.36 - Auxiliary Locks 2020.
25. BHMA A156.115 - Hardware Preparation In Steel Doors And Steel Frames 2016.
26. BHMA A156.115W - Hardware Preparation in Wood Doors with Wood or Steel Frames 2006.
27. DHI (H&S) - Sequence and Format for the Hardware Schedule 2019.
28. DHI (KSN) - Keying Systems and Nomenclature 2019.
29. DHI (LOCS) - Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames 2004.
30. DHI WDHS.3 - Recommended Locations for Architectural Hardware for Flush Wood Doors 1993; also in WDHS-1/WDHS-5 Series, 1996.
31. ICC (IBC) - International Building Code, 2021 Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
32. ICC A117.1 - Accessible and Usable Buildings and Facilities 2017.
33. ISO 9001 - Quality management systems -- Requirements 2015.
34. ITS (DIR) - Directory of Listed Products Current Edition.
35. NFPA 70 - National Electrical Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
36. NFPA 80 - Standard for Fire Doors and Other Opening Protectives 2022.
37. NFPA 101 - Life Safety Code Most Recent Edition Adopted by Authority Having Jurisdiction, Including All Applicable Amendments and Supplements.
38. NFPA 105 - Standard for Smoke Door Assemblies and Other Opening Protectives 2022.
39. NFPA 252 - Standard Methods of Fire Tests of Door Assemblies 2022.
40. UL 10C - Standard for Positive Pressure Fire Tests of Door Assemblies Current Edition, Including All Revisions.
41. UL 437 - Standard for Key Locks Current Edition, Including All Revisions.
42. UL 1784 - Standard for Air Leakage Tests of Door Assemblies Current Edition, Including All Revisions.

D. Intent of Hardware Groups

1. Should items of hardware not specified be required for completion of the Work, furnish such items of type and quality comparable to adjacent hardware and appropriate for service required.
2. Where items of hardware aren’t specified, are required for completion of the Work, a written statement of such discrepancy to be submitted to Architect, prior to date specified for receipt of bids for clarification by addendum; or furnish such items in the type and quality established by this specification, and appropriate to the service intended.
3. The door hardware contractor shall bid and in construction submit coordinated hardware and components that are required but not defined within the hardware set. The owner has County Standards and pre-approved manufacturers listed below.

1.2 SUBSTITUTIONS

A. No substitutions are permitted. Components within a preapproved manufacturer may be substituted to better capture the requirements of the set.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.
   1. MR Credit 2: Environmental Product Declarations
      a. Hardware, if available.
   2. MR Credit 3: Sourcing of Raw Materials
      a. Recycled content: Steel, aluminum. Provide material cost values.

C. Door Hardware Schedule: Shall be prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

   1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

   2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

   3. Content: Include the following information:

      a. Type, style, function, size, label, hand, and finish of each door hardware item.
      b. Manufacturer of each item.
      c. Fastenings and other pertinent information.
      d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
      e. Explanation of abbreviations, symbols, and codes contained in schedule.
      f. Mounting locations for door hardware.
      g. Door and frame sizes and materials.
      h. Warranty information for each product.

   4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

D. Shop Drawings: Details of electrified access control hardware indicating the following:

   1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

      a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
      b. Complete (risers, point-to-point) access control system block wiring diagrams.
      c. Wiring instructions for each electronic component scheduled herein.

   2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

E. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

F. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

G. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Automatic Operator Supplier Qualifications: Power operator products and accessories are required to be supplied and installed through current members of the manufacturer's "Power Operator Preferred Installer" program. Suppliers are to be factory trained, certified, and a direct purchaser of the specified power operators and be responsible for the installation and maintenance of the units and accessories indicated for the Project.

F. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.
1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.
2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

G. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

H. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

I. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), Contractor(s), Owner, and Architect to confirm hardware sets and components, review proper methods and procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures.

J. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware.

Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: Two years from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:

1. Ten years for mortise locks and latches.
2. Five years for exit hardware.
3. Twenty five years for manual overhead door closer bodies.
4. Five years for motorized electric latch retraction exit devices.
5. Two years for electromechanical door hardware, unless noted otherwise.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below.

1. Provide one extra key blank for each lock.

1.9 MAINTENANCE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. The following manufacturers are approved subject to compliance with requirements of the Contract Documents.

Item:	Manufacturer:
Hinges	Stanley
Continuous Hinges	Stanley
Locksets	Marks USA
Occupancy Indicator Locks	Yale/ Accentra YPL02
Cylinders	Medeco
Exit Devices	Marks
Closers	Corbin Russwin DC6210-N54
Push/ Pull Plates	Don-Jo
Push/ Pull Bars	Don-Jo
Protection Plates	Don-Jo
Overhead Stops	Don-Jo
Door Stops	Don-Jo
Flush Bolts	Don-Jo
Coordinator & Brackets	Don-Jo
Threshold & Gasket	National Guard

2.2 MATERIALS

1. Recycled Content: Provide aluminum and steel components with recycled content.

2. Hinges:

    1. Template screw hole locations
    2. Minimum of 2 permanently lubricated non-detachable bearings
    3. Equip with easily seated, non-rising pins
    4. Sufficient size to allow 180-degree swing of door
    5. Furnish hinges with five knuckles and flush [concealed] bearings
    6. Provide hinge type as listed in schedule.
    7. Furnish 3 hinges per leaf to 7 foot 6 inch height. Add one for each additional 30 inches in height or fraction thereof.
    8. Tested and approved by BHMA for all applicable ANSI Standards for type, size, function and finish
    9. UL10C listed for Fire rated doors.

3. Geared Continuous Hinges:

    1. Tested and approved by BHMA for ANSI A156.26-1996 Grade 1
    2. Anti-spinning through fastener
    3. ULIOC listed for 3 hour Fire rating
    4. Non-handed

5. Lifetime warranty
6. Provide Fire Pins for 3-hour fire ratings
7. Sufficient size to permit door to swing 180 degrees

4. Electrified Functions for Hinges: Comply with the following:
   1. Power transfer: concealed PTFE-jacketed wires, secured at each leaf and continuous through hinge knuckle. Provide wire quantity and sizes required for electric hardware to be served.
   2. Monitoring: concealed electrical monitoring switch.
   3. Power transfer and monitoring: concealed PTFE-jacketed wires, secured at each leaf and continuous through hinge knuckle, and with concealed electrical monitoring switch.

5. Mortise Type Locks and Latches:

   1. Tested and approved by BHMA for ANSI A156.13, Series 1000, Operational Grade 1, Extra— Heavy Duty, Security Grade 2 and be UL10C.
   2. Furnish UL or recognized independent laboratory certified mechanical operational testing to 4 million cycles minimum.
   3. Provide 9001—Quality Management and 14001—Environmental Management.
   4. Fit ANSI A115.1 door preparation
   5. Functions and design as indicated in the hardware groups
   6. Solid, one—piece, 3/4—inch (l9mm) throw, antifriction latchbolt made of self-lubricating stainless steel
   7. Deadbolt functions shall have 1 inch (25mm) throw bolt made of hardened stainless steel
   8. Latchbolt and Deadbolt are to extend into the case a minimum of 3/8 inch (9.5mm) when fully extended
   9. Auxiliary deadlatch to be made of one piece stainless steel, permanently lubricated
   10. Provide sufficient curved strike lip to protect door trim
   11. Lever handles must be of forged or cast brass, bronze or stainless-steel construction and conform to ANSI A117.1. Levers that contain a hollow cavity are not acceptable
   12. Lock shall have self—aligning, thru—bolted trim
   13. Levers to operate a rofler bearing spindle hub mechanism
   14. Mortise cylinders of lock shall have a concealed internal setscrew for securing the cylinder to the lockset. The internal setscrew will be accessible only by removing the core, with the control key, from the cylinder body.
   15. Spindle to be designed to prevent forced entry from attacking of lever
   16. Provide locksets with 7-pin removable and interchangeable core cylinders
   17. Each lever to have independent spring mechanism controlling it
   18. Core face must be the same finish as the lockset.

6. Cylindrical Type Locks and Latches:

   a. Tested and approved by BHMA for ANSI Al56.2, Series 4000, Operational Grade 1, Extra-Heavy Duty, and be ULIOC listed.
   b. Provide 9001-Quality Management and 14001-Environmental Management.
   c. Fit modified ANSI A1l5.2 door preparation.
   d. Locksets and cores to be of the same manufacturer to maintain complete lockset warranty
   e. Locksets to have anti-rotational studs that are thru-bolted
   f. Keyed lever shall not have exposed “keeper” hole
   g. Each lever to have independent spring mechanism controlling it
   h. 2-3/4 inch (70 mm) backset
   i. 9/16 inch (14 mm) throw latchbolt

j. Provide sufficient curved strike lip to protect door trim
k. Outside lever sleeve to be seamless, of one-piece construction made of a hardened steel alloy
l. Keyed lever to be removable only after core is removed, by authorized control key
m. Provide locksets with 7-pin removable and interchangeable core cylinders
n. Hub, side plate, shrouded rose, locking pin to be a one-piece casting with a shrouded locking lug.
o. Locksets outside locked lever must withstand minimum 1400 inch pounds of torque. In excess of that, a replaceable part will shear. Key from outside and inside lever will still operate lockset.
p. Core face must be the same finish as the lockset.
q. Functions and design as indicated in the hardware groups.

7. Cylindrical Grade 2 Type Locks and Latches:

a. Certified by BHMA for ANSI A156.3, Series 4000, Operational Grade 2.
b. Fit modified ANSI A115.3 door preparation
c. Locksets and cores to be of the same manufacturer to maintain complete lockset warranty
d. 2-3/4 inch (70mm) backset, or 2 3/8 inch backset as needed
e. 1/2 inch (14mm) throw latchbolt
f. Provide locksets with 7-pin *code.*
g. Functions and design as indicated in the hardware groups

8. Exit Devices:

a. Exit devices to meet or exceed BHMA for ANSI 156.3, Grade 1.
b. Exit devices to be tested and certified by UL or by a recognized independent laboratory for mechanical operational testing to 9 million cycles minimum with inspection confirming Grade 1 Loaded Forces have been maintained.
c. Exit devices chassis to be investment cast steel, zinc dichromate.
d. Exit devices to have stainless steel deadlocking 3/4" through latch bolt.
e. Exit devices to be equipped with sound dampening on touchbar.
f. Non-fire rated exit devices to have cylinder dogging.
g. Non-fire rated exit devices to have 1/4" minimum turn hex key dogging.
h. Touchpad to be "T" style constructed of architectural metal with matching metal end caps.
i. Touchbar assembly on wide style exit devices to have a 1/4" clearance to allow for vision frames.
j. All exposed exit device components to be of architectural metals and "true" architectural finishes.
k. Provide strikes as required by application.
l. Fire exit hardware to conform to UL10C and UBC 7-2. UL tested for Accident Hazard.
m. Exit device to be heavy investment cast stainless steel with black powder coated finish.
n. Exit devices to have field reversible handing.
o. Provide heavy duty vandal resistant lever trim with heavy duty investment cast stainless steel components and extra strength shock absorbing overload springs. Lever shall not require resetting. Lever design to match locksets and latchsets.
p. Provide 9001-Quality Management and 14001 -Environmental Management.
q. Vertical Latch Assemblies to have gravity operation, no springs.

9. Cylinders:

a. Provide the necessary cylinder housings, collars, rings & springs as recommended by the manufacturer for proper installation.
b. Provide the proper cylinder cams or tail piece as required to operate all locksets and other keyed hardware items listed in the hardware sets.
c. Coordinate and provide as required for related sections.

10. Door Closers:

a. Tested and approved by BHMA for ANSI 156.4, Grade 1
b. UL10C certified
c. Provide 9001—Quality Management and 14001-Environmental Management.
d. Closer shall have extra—duty arms and knuckles
e. Conform to ANSI 117.1
f. Maximum 2 7/16 inch case projection with non-ferrous cover
g. Separate adjusting valves for closing and latching speed, and backcheck
h. Provide adapter plates, shim spacers and blade stop spacers as required by frame and door conditions
i. Full rack and pinion type closer with 1 1/2“ minimum bore
j. Mount closers on non-public side of door, unless otherwise noted in specification
k. Closers shall be non-handed, non-sized and multi-sized.

11. Door Stops:

a. Wall stop and floor stop shall be wrought bronze, brass or stainless steel.
b. Provide fastener suitable for wall construction.
c. Coordinate reinforcement of walls where wall stop is specified.
d. Provide dome stops where wall stops are not practical. Provide spacers or carpet riser for floor conditions encountered

12. Overhead Stops: Provide a Surface mounted or concealed overhead when a floor or wall stop cannot be used or when listed in the hardware set.

a. Concealed overhead stops shall be heavy duty bronze or stainless steel.
b. Surface overhead stops shall be heavy duty bronze or stainless steel.

13. Push Plates: Provide with four beveled edges ANSI J301, .050 thickness, size as indicated in hardware set. Furnish oval-head countersunk screws to match finish.

14. Pulls with Plates: Provide with four beveled edges ANSI J30l, .050 thickness plates with ANSI J401 Pull as listed in hardware set. Provide proper fasteners for door construction.

15. Push/ Pull Bars: Provide ANSI J504, 1” Dia. Pull and push bar model and series as listed in hardware set. Provide proper fasteners for door construction.

16. Kickplates: Provide with four beveled edges ANSI J102, 10 inches high by width less 2 inches on single doors and 1 inch on pairs of doors. Furnish oval-head countersunk screws to match finish.

17. Mop Plates: Provide with four beveled edges ANSI Jl03, 4 inches high by width less 1 inch on single doors and 1 inch on pairs of doors. Furnish oval-head countersunk screws to match finish.

18. Door Bolts: Flush bolts for wood or metal doors.
    a. Provide a set of Automatic bolts, Certified ANSI/BHMA 156.3 Type 25 for hollow metal label doors.
    b. Provide a set of Automatic bolts, Certified ANSUBHMA 156.3 Type 27 at wood label doors.
    c. Manual flush bolts, Certified ANSI/BHMA 156.16 at openings where allowed local authority.
    d. Provide Dust Proof Strike, Certified ANSI/BHMA 1J6.16 at doors with flush bolts without thresholds.

19. Coordinator and Brackets: Provide a surface mounted coordinator when automatic bolts are used in the hardware set.
    a. Coordinator, Certified ANSI/BHMA A1156.3 Type 2lA for full width of the opening.
    b. Provide mounting brackets for soffit applied hardware.
    c. Provide hardware preparation (cutouts) for latches as necessary.

20. Power Supply:
    a. Provide power supply for (ELR) Electric Latch Retraction exit devices
        i. Motherboard will accept up to four plug—in Control Modules. Provide the appropriate necessary control module to operate the number of ELR exit devices used at each opening. The Control Module shall include a Time delay Feature, variable (0-4 minutes) latch retraction period in response to a momentary input.
        ii. UL Listed for class II output
        iii. Include circuit breakers for protection of motherboard
        iv. 115 or 230 Volt user selectable switch, with AC input = 115 Volt at 1 Amp
        v. Control module shall include Fire alarm terminal and Auxiliary contacts for remote signaling.
        vi. Optional card for Battery Backup (BT) power tap module to operate a Card reader or when ELR devices require battery backup (Lead Acid Batteries are not included and is to be furnished by others)
    b. Provide power supply that is UL Listed, Field Selectable 12VDC or 24VDC output. The power supply will be specifically designed to support electric locks and access controls. The power supply uses 115 VAC at 800mA input. The power shall be able to be expanded to four station controls. The filtered and regulated output power is field selectable for 12 or 24 VDC.
        i. Fire Alarm/Life Safety emergency release included in power supply.
        ii. Available options for multiple door options four or more control stations, Adjustable Time delay relay, Battery charging, Battery Backup.

21. Power Transfer: Power transfer device shall be a steel housing and flexible tube. Secure and inconspicuous channel is to bring power from the frame to the door.
    a. Precision EPT-5
    b. Tube shall accept up to 5/16” wire bundle and accommodate a door swing of 120 Deg.
    c. Wires as required by others

22. Surface Mounted Door Loop Power Transfer: Armored flex conduit is to bring power from the frame to the door. The tube shall accept up to 1/4” wire bundle and is 18” long.
    a. Precision EPT-2
    b. Wires as required by others.

23. Electric Door Strike: Certified by ANSI/BHMA 1J6.31, Grade 1. and listed for Burglary Protection ANSI/ ULI034 Grade 1.

    a. For General use provide fail-secure electric strike and with fire-rated device.
    b. Listed UL10C for Fire Door assemblies
    c. Latchbolt monitor switch option when specified in hardware sets.
    d. Provide the electric strike in the appropriate model that will accept a 5/8” or 3/4" latchbolt.

24. Door Position Switch: Provided by Security Contractor for door status monitoring as indicated in hardware sets.

    a. At all fired rated doors the door and frames, position switch preparation will be provided by the door and frame manufacturer or by an authorized label service agent.

25. Seals: All seals shall be finished to match adjacent frame color. Seals shall be furnished as listed in schedule. Material shall be UL listed for labeled openings.

26. Weatherstripping: Provide at head and jambs only those units where resilient or flexible-seal strip is easily replaceable. Where bar-type weatherstrip is used with parallel arm mounted closers install weatherstrip first.

    a. Weatherstrip shall be resilient seal of Silicone
    b. ULIOC Positive Pressure rated seal set when required.

27. Door Bottom/ Sweeps: Surface mounted or concealed door bottom where listed in the hardware sets.

    a. Door seal shall be resilient seal of Silicone
    b. UL10C Positive Pressure rated seal set when required.

28. Thresholds: Thresholds shall be aluminum beveled type with maximum height of 1/2” for conformance with ADA requirements. Furnish as specified and per details. Provide fasteners and screws suitable for floor conditions.

29. Key Cabinet: Provide one wall mounted Telkee, Lund or MMF series key cabinet complete with hooks, index and tags to accommodate 50% expansion. Coordinate mounting location with architect.

30. Silencers: Furnish silencers on all interior frames, 3 for single doors, 2 for pairs. Omit where any type of seals occur.

3.3 FINISH

A. Designations used in Schedule of Finish Hardware - 3.05, and elsewhere to indicate hardware finishes are those listed in ANSI/BHMA A156.18 including coordination with traditional U.S. finishes shown by certain manufacturers for their products

B. Powder coat door closers to match other hardware, unless otherwise noted.

C. Aluminum items shall be finished to match predominant adjacent material. Seals to coordinate with frame color.

3.4 KEYS AND KEYING

A. Provide keyed brass construction cores and keys during the construction period. Construction control and operating keys and core shall not be part of the Owner's permanent keying system or furnished in the same keyway (or key section) as the Owner's permanent keying system. Permanent cores and keys (prepared according to the accepted keying schedule) will be furnished to the Owner.

B. Cylinders, removable and interchangeable core system: MEDECO.

C. Permanent keys and cores: stamped with the applicable key mark for identification. These visual key control marks or codes will not include the actual key cuts. Permanent keys will also be stamped “Do Not Duplicate.”

D. Transmit Grand Masterkeys, Masterkeys, and other Security keys to Owner by Registered Mail, return receipt requested.

E. Furnish Keys in the following quantities:

1. 1 each Grand Masterkeys
2. 4 each Masterkeys
3. 2 each Change keys each keyed core
4. 15 each Construction masterkeys
5. 1 each Control keys

F. The Owner, or the Owner's agent, will install permanent cores and return the construction cores to the Hardware Supplier. Construction cores and keys remain the property of the Hardware Supplier.

G. Keying Schedule: Arrange for a keying meeting, and programming meeting with Architect Owner and hardware supplier, and other involved parties to ensure locksets and locking hardware, are functionally correct and keying and programming complies with project requirements. Furnish 3 typed copies of keying and programming schedule to Architect.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Verification of conditions: Examine doors, frames, related items and conditions under which Work is to be performed and identify conditions detrimental to proper and or timely completion.

a. Do not proceed until unsatisfactory conditions have been corrected.

3.2 HARDWARE LOCATIONS

A. Mount hardware units at heights indicated in the following publications except as specifically indicated or required to comply with the governing regulations.

1. Recommended Locations for Builder’s Hardware for Standard Steel Doors and Frames, by the Door and Hardware Institute (DHI).
2. Recommended locations for Architectural Hardware for flush wood doors (DHI).
3. WDMA Industry Standard I.S.-IA-04, Industry Standard for Architectural wood flush doors.

3.3 INSTALLATION

A. Install each hardware item per manufacturer's instructions and recommendations. Do not install surface mounted items until finishes have been completed on the substrate. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.

B. Conform to local governing agency security ordinance.

C. Install Conforming to ICC/ANSI A117.1 Accessible and Usable Building and Facilities.

1. Adjust door closer sweep periods so that from the open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches from the latch, measured to the landing side of the door.

D. Installed hardware using the manufacturers fasteners provided. Drill and tap all screw holes located in metallic materials. Do not use “Riv-Nuts” or similar products.

3.4 FIELD QUALITY CONTROL AND FINAL ADJUSTMENT

A. Contractor/installers, Field Services: After installation is complete, contractor shall inspect the completed door openings on site to verify installation of hardware is complete and properly adjusted, in accordance with both the Contract Documents and final shop drawings.

1. Check and adjust closers to ensure proper operation.
2. Check latchset, lockset, and exit devices are properly installed and adjusted to ensure proper operation.

i. Verify levers are free from binding.
ii. Ensure latchbolts and dead bolts are engaged into strike and hardware is functioning.

4. Report findings, in writing, to architect indicating that all hardware is installed and functioning properly. Include recommendations outlining corrective actions for improperly functioning hardware if required.

3.5 SCHEDULE OF FINISH HARDWARE

Manufacturer List:

Code	Name
BY	By Related Section
CR	Corbin Russwin
DJ	Don-Jo
MA	Marks
MD	Medeco
NA	National Guard
ST	Stanley
BO	By Owner/ Others
Y/A	Yale/ Accentra

Finish List:

Code	Description

15	Satin Nickel Plate
28	Aluminum Anodized (Clear)
32D	Satin Stainless Steel
626	Satin Chromium Plated
628	Satin Aluminum, Clear Anodized
630	Satin Stainless Steel
689	Aluminum Painted
AL	Aluminum
CL	Clear
US32D	Stainless Steel, Dull

END OF SECTION 08 71 00

SECTION 08 71 20 - DETENTION HARDWARE

PART 1 GENERAL

1.1 SUMMARY

A. This Section includes the following:
   1. Detention door hardware and related accessories.
   2. Electronic security system hardware devices and coordination.
   3. Installation and Systems Testing after the control center is connected and operational.

B. Related Sections:
   1. Division 08: Door Hardware, including Part 1 requirements, which apply.
   2. Division 08: Detention Doors and Frames.
   3. Division 26: Electrical.

1.2 SUBMITTALS

A. Submit listed submittals in accordance with Conditions of the Contract and Division 1 Submittal Procedure Section.

B. Product Data: Include Manufacturer's specifications and installation details, material descriptions, dimensions of individual components and profiles, and finishes.
   1. Indicate by transmittal that installation instructions have been distributed to the installer.
   2. Include photographs, catalog cuts, marked templates, and other data as may be required to show compliance with these specifications.

C. Shop Drawings: Prepared by or under ae supervision of the supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Provide details of electrified door hardware, indicating the following.
   1. Wiring Diagrams: Detail wiring for power, signal, and control systems and differentiate between manufacturer-installed and field-installed wiring. Include the following:
      a. System schematic.
      b. Point-to-point wiring diagram.
      c. Riser diagram.
      d. Elevation of each door.
   2. Detail interface between electrified door hardware and security system

D. Samples: For exposed door hardware of each scheduled type, in specified finish, full size. Tag with full description for coordination with the Door Hardware Schedule. Submit samples before, or concurrent with, submission of the final Door Hardware Schedule.
   1. Units that are acceptable and remain undamaged through submittal, review, and field comparison process may, after final check of operation, be incorporated into the Work, within limitations of keying requirements.

E. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
   1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and

Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening.
   a. Organize door hardware sets in same order as in the Door Hardware Schedule at the end of Part 3.
3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of each door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.
   h. Description of each electrified door hardware function, including location, sequence of operation, and interface with other building control systems.
      i. Sequence of Operation: Include description of component functions that occur in the following situations: authorized person wants to enter; authorized person wants to exit; unauthorized person wants to enter; unauthorized person wants to exit.
4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.
5. Hardware Schedule Index: Furnish an index cross-referencing door number, Architect's hardware group, and supplier's hardware group.

F. Keying Schedule: Prepared by or under the supervision of supplier, detailing Owner's final keying instructions for locks. Include schematic keying diagram and index each key set to unique door designations.

G. Product Certificates: Signed by manufacturers of electrified door hardware certifying that products furnished comply with requirements.
   1. Certify that door hardware approved for use on types and sizes of labeled fire doors complies with listed fire door assemblies.

H. Qualification Data: For firms and persons specified in "Quality Assurance" Article.
   1. Include lists of completed projects with project names and addresses of architects and owners, and other information specified.

I. Product Test Reports: Based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency, indicating current products comply with requirements.

J. Maintenance Data: For each type of door hardware to include in maintenance manuals specified in Division 1.

K. Warranties: Special warranties specified in this Section.

1.3 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who has completed door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

B. Supplier Qualifications: Door hardware supplier with warehousing facilities in Project's vicinity and who is or employs a qualified Architectural Hardware Consultant, available during the course of the Work to consult with Contractor, Architect, and Owner about door hardware and keying.
   1. Electrified Door Hardware Supplier Qualifications: An experienced door hardware supplier who has completed projects with electrified door hardware similar in material, design, and extent to that indicated for this Project, whose work has resulted in construction with a record of successful in—service performance, and who is acceptable to manufacturer of primary materials.
      a. Engineering Responsibility: Prepare data for electrified door hardware, including Shop Drawings, based on testing and engineering analysis of manufacturer's standard units in assemblies similar to those indicated for this Project.
   2. Scheduling Responsibility: Preparation of door hardware and keying schedules.

C. Source Limitations: Obtain each type and variety of door hardware from a single manufacturer, unless otherwise indicated.
   1. Provide electrified door hardware from same manufacturer as mechanical door hardware, unless otherwise indicated. Manufacturers that are listed to perform electrical modifications, by a testing and inspecting agency acceptable to authorities having jurisdiction, are acceptable.

D. Regulatory Requirements: Comply with provisions of the following:
   1 Where indicated to comply with accessibility requirements, comply with Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG)," ANSI Al 17.1, as follows:
      a. Handles, Pulls, Latches, Locks, and other Operating Devices: Shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist.
      b. Door Closers: Comply with the following maximum opening-force requirements indicated:
         i. Interior Hinged Doors: 5 lbf (22.2 N) applied perpendicular to door.
         ii. Sliding or Folding Doors: 5 lbf (22.2 N) applied parallel to door at latch.
      c. Thresholds: Not more than 1/2 inch (13 mm) high. Bevel raised thresholds with a slope of not more than 1:2.
   2. NFPA 101: Comply with the following for means of egress doors:
      a. Latches, Locks, and Exit Devices: Not more than 15 lbf (67 N) to release the latch. Locks shall not require the use of a key, tool, or special knowledge for operation.
      b. Door Closers: Not more than 30 lbf (133 II) to set door in motion and not more than 15 1bf (67 I'd) to open door to minimum required width.
   3. Electrified Door Hardware: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction.

E. Fire-Rated Door Assemblies: Provide door hardware for assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.
   1. Test Pressure: Test at atmospheric pressure.

F. Keying Conference: Conduct conference at Project site to comply with

requirements in Division I Section "Project Meetings." incorporate keying conference decisions into final keying schedule after reviewing door hardware keying system including, but not limited to, the following:

1. Function of building, flow of traffic, purpose of each area, degree of security required, and plans for future expansion.
2. Preliminary key system schematic diagram.
3. Requirements for key control system.
4. Address for delivery of keys.

G. Pre-Installation Conference: Conduct conference at Project site. Review methods and procedures related to electrified door hardware including, but not limited to, the following:

1. Inspect and discuss electrical roughing-in and other preparatory work performed by other trades.
2. Review sequence of operation for each type of electrified door hardware.
3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review required testing, inspecting, and certifying procedures.

1.4 DELIVERY, STORAGE AND HANDLING

A. Inventory door hardware on receipt and provide dry, secure lock-up for door hardware delivered to Project site.

B. Provide a packing list and a copy of the approved Door Hardware Schedule for each shipment of detention hardware. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package. Include necessary screws, keys, and templates.

C. Prior to scheduled completion of the Project, deliver keys to Owner’s representative by registered mail or other secure means.

1.5 COORDINATION

A. Assume sole responsibility for provision, coordination, and function of security hardware required for every opening, whether or not listed in the schedule of hardware.

B. Coordinate layout and installation of hardware with adjacent construction, including, but not limited to, door’s and frames. Cast anchoring inserts into concrete. Concrete, reinforcement, and formwork requirements are specified in Division 3 Section "Cast-in-Place Concrete."

C. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing door hardware, including electronic security devices. Prior to ordering products, check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing door hardware to comply with indicated requirements, and that products selected will properly fit.

D. Electronic Security System and Hardware: Coordinate layout and installation of electrified door hardware and security system devices with connections to power supplies and security system for proper operation.

1.6 WARRANTY

A. General Warranty: Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Special Warranty: Written warranty, executed by manufacturer agreeing to repair or replace components of door hardware that fail in materials or workmanship within specified warranty period. Failures include, but are not limited to, the following:
   1. Structural failures including excessive deflection, cracking, or breakage.
   2. Faulty operation of operators and door hardware.
   3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.

C. Warranty Period: Three years from date of Substantial Completion, unless otherwise indicated.
   1. For the first 24 months of the warranty period, maintain or replace at no cost to the Owner, any material failing to perform in accordance with this Specification.
   2. After the first 24 months, and for the following 24 months, provide to the Owner for Owner’s installation, any material failing to perform in accordance with this Specification.

1.7 MAINTENANCE SERVICE AND OWNER INSTRUCTIONS

A. Manufacturer and supplier shall conduct a formal training course with the Owner’s security personnel. The course shall be given at the installation site or at a location agreed upon by the Owner.
   1. Provide a minimum of 80 hours of instruction, 40 of which shall be held prior to occupancy and the remaining 40 within two months following the completion of the maintenance period.
   2. Provide course emphasis on understanding system capabilities, routine preventive maintenance, and required security staff responses.
   3. Include a detailed training manual covering the items outlined above, for Owner’s use during instruction.

B. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and detailed maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

C. Maintenance Service: Beginning at Substantial Completion, provide twelve months' full maintenance by skilled employees of door hardware Installer. Include quarterly preventive maintenance, repair or replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door hardware operation. Provide parts and supplies as used in the manufacture and installation of original products.

PART 2 PRODUCTS

2.1 GENERAL

A. Materials: All materials required for the Work shall be produced especially for security applications and conform to standards of the security equipment industry and other requirements specified herein.

B. Security Hardware: Furnishing and installation of all security hardware and all incidental

items required to make the system properly function as specified herein are responsibility of the detention equipment Installer.

C. Available Products and Manufacturers: "Basis of Design" products are those included in the Schedule of Hardware Groups at the end of Part 3 of this Section. No substitutions are allowed.

2.2 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in this Section and the Door Hardware Schedule at ae end of Part 3.
   1. Door Hardware Sets: Requirements for quantity, item, design, grade, function, finish, size, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Schedule at the end of Part 3. Products are identified by descriptive titles corresponding to requirements specified in Part 2.
   2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
   3. Finish: All exposed hardware except closers shall be satin stainless steel, ANSI 630 (US32D). Closer finish shall match stainless steel. Items not available in stainless steel shall be furnished with a satin chrome finish ANSI 626 (US26D).

2.3 HINGES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Basis of Design: Stanley
   2. Other Acceptable manufacturers:
      a. Brink Locking Systems.
      b. Folger Adam
      c. Southern Steel Company.

B. Standards: Comply with the following:
   1. Butts and Hinges: BHMA A156.1.
   2. Template Hinge Dimensions: BHMA A156.7.

C. Quantity: Provide the following, unless otherwise indicated:
   1. Two Hinges: For doors with heights up to 60 inches (1524 mm), an additional unit for every additional 30 inches (762mm) in height or fraction thereof, and an additional unit for doors over 36 inches (9l5mm) in width.

D. Template Requirements: Provide only template-produced units.

E. Hinge Base Metal: Unless otherwise indicated, provide the following:
   1. Stainless steel, with stainless-steel pin.

F. Hinge Options: Comply with the following where indicated in the Door Hardware Schedule or on Drawings:
   1. Hospital Tips: Slope ends of hinge barrel.
   2. Shear resistant studs
   3. 1/4-20 TORX drive (with safety stud).
   4. Ball bearing or concealed bearing.

G. Fasteners: Comply with the following:
1. Screws: TORX head screws; machine screws (drilled and tapped holes) for metal doors. Finish screw heads to match surface of hinges.

2.4 LOCKS AND LATCHES, GENERAL

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Mechanical Locks and Latches: Medeco High Security Locks, Inc.
2. Electromechanical Locks and Latches:
a. Best — Stanley Security (Basis of Design)
b. Folger Adam Security Inc.: Assa Abloy.
c. Sargent Manufacturing Company; Assa Abloy
d. Schlage Lock Company; Allegion.
e. Southern Steel Co.

B. Standards: Comply with the following:
1. Mortise Locks and Latches: BHMA A156.13.

C. Certified Products: Provide door hardware listed in the following BHMA directories:
1. Mechanical Locks and Latches: BHMA's "Directory of Certified Locks & Latches."
2. Electrified Locking Devices.

D. Lock Functions: Function numbers and descriptions indicated in the Door Hardware Schedule comply with the following:
1. Mortise Locks: BHMA A156.13.

2.5 CYLINDERS AND KEYING

A. Manufacturers: Subject to compliance with requirements, provide products by the following:
1. Cylinders:
a. Medeco High Security Locks, Inc., NO SUBSTITUTIONS.
b. See Division 8 Section “Door Hardware” for cylinder and keying system requirements.
2. Key Quantity:
a. Six master keys per set.
b. Two change keys for each Mogul, plus 100 blanks.
c. Two change keys for each Medeco cylinder, plus 100 blanks.
d. Three cut Paracentric keys for each lock, plus 50 blanks.
3. Key Control Systems:
a. See Division 8 Section ‘Door Hardware”.

2.6 STRIKES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Electric Strikes:

a. Folger Adam Security Inc.
b. Locknetics Security Engineering; a Harrow Company.
c. Rutherford Controls Inc.; BEST — Stanley Security
d. Security Door Controls.

e. Von Duprin, Inc.; Allegion

B. Standards: Comply with the following:

1. Strikes for Bored Locks and Latches: BHMA Al56.2.
2. Strikes for Mortise Locks and Latches: BHMA A156.13.
3. Strikes for Auxiliary Deadlocks: BHMA A156.5.
4. Electric Strikes: BHMA Al56.5.

C. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim
3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.

2.7 OPERATING TRIM

A. For sliding door operation, as listed in the Schedule of Hardware Groups at the end of Part 3 of this Section.

2.8 CLOSERS

A. Manufacturers: Subject to compliance with requirements, provide products the following:

1. Surface-Mounted Closers:
   a. LCN Closers; Allegion.
   b. Stanley Commercial Hardware (Basis of Design)

B. Standards: Comply with the following:

1. Closers: BHMA A156.4.

2.9 STOPS AND HOLDERS

A. Wall/ Floor Stop Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include the following:

1. Basis of Design: Trimco Manufacturing.
2. Other Acceptable Manufacturers:
   a. Hager Companies.
   b. Rockwood Manufacturing Company.

B. Standards: Comply with the following:

1. Stops and Bumpers: BHMA A156.16.

C. Floor Stops: For doors, unless wall or other type stops are scheduled or indicated. Do not mount floor stops where they will impede traffic.

1. Where floor or wall stops are not appropriate, provide overhead holders.

2.10 DOOR GASKETING, GENERAL

A. Manufacturers: Subject to compliance with requirements, provide products by one of the

following:
1. Hager Companies.
2. National Guard Products, Inc. (Basis of Design)
3. Pemko Manufacturing Co., Inc.
4. Reese Enterprises, Inc.
5. Zero International, Inc.

B. Standard: Comply with BHMA A156.22.

C. General: Provide continuous gasketing on exterior doors where indicated or scheduled. Provide noncorrosive fasteners for exterior applications and elsewhere as indicated.
1. Perimeter Gasketing: Apply to head and jamb, forming seal between door and frame.
2. Door Bottoms: Apply to bottom of door, forming seal with threshold when door is closed.

D. Air Leakage: Not to exceed 0.50 cfm per foot (0.000774 cu. m/s per m) of crack length for gasketing other than for smoke control, as tested according to ASTM E 283.

E. Smoke-Labeled Gasketing: Assemblies complying with NFPA 105 are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke-control ratings indicated, based on testing according to UL 1784.
1. Provide smoke-labeled gasketing on 20-minute-rated doors and on smoke-labeled doors.

F. Fire-Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL 10B or NFPA 252.

G. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated, based on testing according to ASTM E 1408.

H. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

I. Gasketing Materials: Comply with ASTM D 2000 and AAMA 701/702.

2.11 THRESHOLDS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Hager Companies.
2. National Guard Products, Inc. (Basis of Design)
3. Pemko Manufacturing Co., Inc.
4. Reese Enterprises, Inc.
5. Zero International, Inc.

B. Standard: Comply with BHMA A156.21.

C. General:
1 Fabricate with continuous grooved top surface.
2 Provide ADAAG-compliant profile with bevel on each long edge and in lengths to suit door openings.

3 Furnish with continuous channel anchors for casting into slab or with expansion devices, and with countersunk flat head machine screws, for attachments to substrates.

2.12 SLIDING DOOR OPERATORS AND HARDWARE

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
1. Airteq Locking Systems.
2. Folger Adam.
3. Southern Steel Co. (Basis of Design)

B. Sliding Door Operators and Hardware: Provide complete sets consisting of rails, hangers, supports, bumpers, floor guides, and accessories indicated.
1. Motor operated devices with a "kick release" door operating and locking mechanisms with remote controls for unlocking.
2. Include control mechanisms and electrical components within horizontal housing.
3. Door Carriages: Furnish sliding door carriages with solid steel mechanized wheels with sealed ball or needle bearings mounted on hardened steel spindles.
   a. Include steel tracks in horizontal housing and bottom door guide to prevent door carriage from being dislodged.
   b. Door hanger assembly shall so engage the track that it cannot be lifted off or forced out of alignment.
4. Provide sealed bearings for the entire device including motor and all moving parts to minimize need for lubrication.
5. Housing: Provide horizontal housing above sliding door for protection of operating and locking mechanisms.
   a. Form front and top from one-piece 10-gauge sheet steel. Form back and bottom of housing from 3/16-inch open-hearth steel plate.
   b. Protect slots in bottom of housing with covering angles or channel to prevent entrance of contraband and foreign matter into the operating and locking mechanisms.
6. Fabrication: Fabricate items to be rigid, neat in appearance, and free of defects, warp or buckle. Accurately form metal to required sizes and profiles.
   a. Pre-assemble items in the shop to the greatest extent possible, so as to minimize field splicing and assembly of units at the Project site. Disassemble units only to extent necessary for shipping and handling limitations. Clearly mark units for re-assembly and coordinated installation.
   b. Form exposed work to true line and level with accurate angles and surfaces and straight, clean, and even edges. Ease exposed edges to a radius of approximately 1/32-inch unless otherwise shown. Form bent-metal corners to the smallest radius possible without causing grain separation or otherwise impairing the work.
   c. Weld corners and seams continuously and in accordance with the recommendations of AWS. At exposed connections, grind exposed welds smooth and flush to match and blend with adjoining surfaces.
   d. Provide for anchorage of the type shown coordinated with ae supporting structure. Fabricate and space anchoring devices to provide adequate support for the intended use of the Work.
   e. Cut, reinforce, drill, and tap metal work indicated to receive security hardware and similar items of work. Cut holes in strict accordance with templates.

2.13 MISCELLANEOUS DOOR HARDWARE

A. Monitor Switch Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Sentrol (Basis of Design).
   2. Airteq Locking Systems.
   3. Southern Steel (Basis of Design)

B. Boxed Power Supplies: Modular unit in NEMA ICS 6, Type 4 enclosure; filtered and regulated; voltage rating and type matching requirements of door hardware served; and listed and labeled for use with fire alarm systems.

C. Door Position Switches: Magnetically operated, triple-biased, balanced type switch designed for concealed mounting.
   1. Provide built-in, end-of-line resistors as required by the security control system.
   2. At swinging doors, locate switches in lock jamb 6 inches from head of door.

2.14 FABRICATION

A. Manufacturer's Nameplate: Do not provide manufacturers' products that have manufacturer's name or trade name displayed in a visible location (omit removable nameplates) except in conjunction with required fire-rated labels and as otherwise approved by Architect.
   1. Manufacturer's identification will be permitted on rim of lock cylinders only.

B. Base Metals: Produce door hardware units of base metal, fabricated by forming method indicated, using manufacturer's standard metal alloy, composition, temper, and hardness. Furnish metals of a quality equal to or greater than that of specified door hardware units and BHMA Al56.18 for finishes. Do not furnish manufacturer's standard materials or forming methods if different from specified standard.

C. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to commercially recognized industry standards for application intended. Provide Phillips flat—head screws with finished heads to match surface of door hardware, unless otherwise indicated.
   1. Concealed Fasteners: For door hardware units that are exposed when door is closed, except for units already specified with concealed fasteners. Do not use through bolts for installation where bolt head or nut on opposite face is exposed unless it is the only means of securely attaching the door hardware. Where through bolts are used on hollow door and frame construction, provide sleeves for each through bolt.
   2. Steel Machine or Wood Screws: For ae following fire—rated applications:
      a. Mortise hinges to doors.
      b. Strike plates to frames.
      c. Closers to doors and frames.

2.15 FINISHES

A. Standard: Comply with BHMA A156.18.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are

assembled or installed to minimize contrast.

D. BHMA Designations: Unless noted otherwise, comply with base material and finish requirements indicated by the following:
1. BHMA 630: Satin stainless steel, over stainless-steel base metal.

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance of door hardware.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Steel Doors and Frames: Comply with DHI Al l5 series.
1. Surface-Applied Door Hardware: Drill and tap doors and frames according to SDI 107.

3.3 INSTALLATION

A. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated, or required to comply with governing regulations:
1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."

B. Install each door hardware item to comply with manufacturer's written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.
1. Set units level, plumb, and true to line and location. Adjust and reinforce attachment substrates as necessary for proper installation and operation.
2. Drill and countersink units that are not factory prepared for anchorage fasteners. Space fasteners and anchors according to industry standards.

C. Key Control System: Place keys on markers and hooks in key control system cabinet, as determined by final keying schedule.

D. Thresholds: Set thresholds in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

3.4 ADJUSTING
A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of

heating and ventilating equipment and to comply with referenced accessibility requirements.

1. Electric Strikes: Adjust horizontal and vertical alignment of keeper to properly engage lock bolt.
2. Door Closers: Adjust sweep period so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches (75 mm) from the latch, measured to the leading edge of ae door.

B. Six-Month Adjustment: Approximately six months after date of Substantial Completion, Installer shall perform the following:

1. Examine and readjust each item of door hardware as necessary to ensure function of doors, door hardware, and electrified door hardware.
2. Consult with and instruct Owner's personnel on recommended maintenance procedures.
3. Replace door hardware items that have deteriorated or failed due to faulty design, materials, or installation of door hardware units.

3.5 CLEANING AND PROTECTION

A. Clean adjacent surfaces soiled by door hardware installation.

B. Clean operating items as necessary to restore proper function and finish.

C. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of Substantial Completion.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain door hardware and door hardware finishes. Comply with Division 8 Section “Door Hardware” for additional demonstration and training requirements.

3.7 SCHEDULE OF SECURITY HARDWARE GROUPS: The Groups listed below indicate the items of hardware required for each opening. It is the Bidder’s responsibility to accurately furnish the proper sizes, quantities, weights, gauge, and Design Intents as required by these specifications and as recommended by the manufacturers involved.

Manufacturer List:

Code	Name
ABH	ABH
BY	By Related Section
CR	Corbin Russwin
DJ	Don-Jo
MA	Marks
MD	Medeco
NG	National Guard
SA	Sargent
BO	By Owner/ Others

Finish List:

Code	Description
15	Satin Nickel Plate
28	Aluminum Anodized (Clear)
32D	Satin Stainless Steel
626	Satin Chromium Plated
628	Satin Aluminum, Clear Anodized
630	Satin Stainless Steel
689	Aluminum Painted
AL	Aluminum
CL	Clear
US32D	Stainless Steel, Dull

Hardware Sets

Set 10 – Detention Sliding – DHMD/DHMF Sliding Remote release
Doors: 154, 156, 157, 158, 159, 171, 172, 173, 174

1	Electric Locking System	316LX.b Sliding Door System	630	SO
2	Recessed Pull	214S	630	BO
1	Wiring Diagram	Furnished by Hardware Supplier		BY
1	Power Transfer	By HDW Contractor		PR
1	Door Position Switch	By HDW Contractor	WHITE	RCIN
1	Power Supply	By HDW Contractor		RC

Set 10.1 – Detention Swinging – DHMD/DHMF, Trim on outside of Room.
Doors: 164, 165, 166, 167

3	Hinges	IHTCB1995 SRS 4 ½ x 4 1x2 TORX SCREWS	US32D	ST
1	Entry Lock	195RAB/26D	630	MA
1	Cylinder Core	By HDW Contractor	626	MD
1	Wall Bumper	By HDW Contractor	626	DJ
1	Sound Gasketing	By HDW Contractor @ Head & Jambs		BY
1	Threshold	By HDW contractor	AL	NA
1	Kick Plate	By HDW contractor	630	DJ
1	Mop Plate	By HDW contractor	630	DJ
1	Wall Stop	By HDW contractor	US32D	BY

Set 10.2 – Detention Swinging – DHMD/DHMF w/ Access Control, intercom & remote release
Doors: 191C, 191D

3	Hinges	IHTCB1995 SRS 4 ½ x 4 1x2 TORX SCREWS	US32D	ST
1	Rim Cylinder	195RF/26D	626	BE
1	Core	By HDW contractor	626	BE
1	Electric Strike	By HDW contractor	630	RCIN1
	Door Stop	1214	626	DJ

2	Backup Battery	By HDW Contractor		BE
1	Power Supply	By HDW Contractor		RC

Set 10.5 – Detention Swinging DHMD/DHMF Storage Closet, Locking
Doors: 155, 163

3	Hinges	IHTCB1995 SRS 4 ½ x 4 1x2 TORX SCREWS	US32D	ST
1	Storeroom Lock	195RF/26D	630	MA
1	Core	By HDW contractor	626	BE
1	Closer	By HDW contractor	693	DM
1	Kick Plate	By HDW contractor	630	TR
1	Wall stop	By HDW Contractor		DJ
1	Door Sweep	By HDW contractor		NA

END OF SECTION 08 71 20

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section includes glazing for the following products and applications, including those specified in other Sections where glazing requirements are specified by reference to this Section:
   1. Aluminum Framed Entrances and Storefronts.
   2. Security Storefront and Doors
   3. Interior borrowed lites.

B. Related Sections:
   1. Division 8 section “Aluminum Storefront” for glass panels in exterior and interior windows and doors
   2. Division 8 Section "Security Storefront Bullet Resistant Aluminum Framing” for bullet resistant glazing.
   3. Division 8 Section "Bullet Resistant Aluminum Transaction Windows” for bullet resistant glazing.

1.3 DEFINITIONS

A. Glass Manufacturers: Firms that produce primary glass, fabricated glass, or both, as defined in referenced glazing publications.

B. Glass Thicknesses: Indicated by thickness designations in millimeters according to ASTM C 1036.

C. Interspace: Space between lites of an insulating-glass unit.

1.4 PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Delegated Design: Design glass, including comprehensive engineering analysis according to ICC's 2015 International Building Code by a qualified professional engineer, using the following design criteria:

   1. Design Wind Pressures: As indicated on Drawings.

2. Vertical Glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.

3. Maximum Lateral Deflection: For glass supported on all four edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or 1 inch (25 mm), whichever is less.

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature Change: 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

1.5 SUBMITTALS

A. Product Data: For each glass product and glazing material indicated.

B. Glass Samples: For each type of the following products; 12 inches (300 mm) square.
1. Coated glass.
2. Fire-resistive glazing products.
3. Insulating glass.
4. Ballistic Glazing
5. Tempered Glass
6. Tempered Impact Glass
7. Tempered One Way Impact Glass

C. Glazing Accessory Samples: For gaskets and sealants in 12-inch (300-mm) lengths.

D. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.

E. Delegated-Design Submittal: For glass indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

F. Qualification Data: For installers manufacturers of insulating-glass units with sputter-coated, low-e coatings glass testing agency.

G. Product Certificates: For glass and glazing products, from manufacturer.

H. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for coated glass, insulating glass, glazing sealants, and glazing gaskets.

I. Preconstruction adhesion and compatibility test report.

J. Warranties: Sample of special warranties.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications for Insulating-Glass Units with Sputter-Coated, Low-E Coatings: A qualified insulating-glass manufacturer who is approved by coated-glass manufacturer.

B. Installer Qualifications: A qualified installer who employs glass installers for this Project who are certified under the National Glass Association's Certified Glass Installer Program.

C. Glass Testing Agency Qualifications: A qualified independent testing agency accredited according to the NFRC CAP 1 Certification Agency Program.

D. Sealant Testing Agency Qualifications: An independent testing agency qualified according to ASTM C 1021 to conduct the testing indicated.

E. Source Limitations for Glass: Obtain coated float glass and insulating glass from single source from single manufacturer for each glass type.

F. Source Limitations for Glazing Accessories: Obtain from single source from single manufacturer for each product and installation method.

G. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated. Refer to these publications for glazing terms not otherwise defined in this Section or in referenced standards.

1. GANA Publications: GANA's "Glazing Manual."
2. AAMA Publications: AAMA GDSG-1, "Glass Design for Sloped Glazing," and AAMA TIR-A7, "Sloped Glazing Guidelines."
3. IGMA Publication for Sloped Glazing: IGMA TB-3001, "Guidelines for Sloped Glazing."
4. IGMA Publication for Insulating Glass: SIGMA TM-3000, "North American Glazing Guidelines for Sealed Insulating Glass Units for Commercial and Residential Use."

H. Safety Glazing Labeling: Where safety glazing labeling is indicated, permanently mark glazing with certification label of the SGCCthe manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

I. Fire-Protection-Rated Glazing Labeling: Permanently mark fire-protection-rated glazing with certification label of a testing agency acceptable to authorities having jurisdiction. Label shall indicate manufacturer's name, test standard, whether glazing is for use in fire doors or other openings, whether or not glazing passes hose-stream test, whether or not glazing has a temperature rise rating of 450 deg F (250 deg C), and the fire-resistance rating in minutes.

J. Insulating-Glass Certification Program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of IGCC.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Protect glazing materials according to manufacturer's written instructions. Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, or other causes.

B. Comply with insulating-glass manufacturer's written recommendations for venting and sealing units to avoid hermetic seal ruptures due to altitude change.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not proceed with glazing when ambient and substrate temperature conditions are outside limits permitted by glazing material manufacturers and when glazing channel substrates are wet from rain, frost, condensation, or other causes.

1. Do not install glazing sealants when ambient and substrate temperature conditions are outside limits permitted by sealant manufacturer or below 40 deg F (4.4 deg C).

1.9 WARRANTY

A. Manufacturer's Special Warranty for Coated-Glass Products: Manufacturer's standard form in which coated-glass manufacturer agrees to replace coated-glass units that deteriorate within specified warranty period. Deterioration of coated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning coated glass contrary to manufacturer's written instructions. Defects include peeling, cracking, and other indications of deterioration in coating.

1. Warranty Period: 10 years from date of Substantial Completion.

B. Manufacturer's Special Warranty on Laminated Glass: Manufacturer's standard form in which laminated-glass manufacturer agrees to replace laminated-glass units that deteriorate within specified warranty period. Deterioration of laminated glass is defined as defects developed from normal use that are not attributed to glass breakage or to maintaining and cleaning laminated glass contrary to manufacturer's written instructions. Defects include edge separation, delamination materially obstructing vision through glass, and blemishes exceeding those allowed by referenced laminated-glass standard.

1. Warranty Period: 5 years from date of Substantial Completion.

C. Manufacturer's Special Warranty on Insulating Glass: Manufacturer's standard form in which insulating-glass manufacturer agrees to replace insulating-glass units that deteriorate within specified warranty period. Deterioration of insulating glass is defined as failure of hermetic seal under normal use that is not attributed to glass breakage or to maintaining and cleaning insulating glass contrary to manufacturer's written instructions. Evidence of failure is the obstruction of vision by dust, moisture, or film on interior surfaces of glass.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 GLASS PRODUCTS, GENERAL

A. GLAZING SCHEDULE:
1. GL-1 1” Insulated Low E
2. GL-2 1” Insulated
3. GL-3 1.717” Nom. Thickness Insulated Level 3 ballistic UL 752
4. GL-4 Add Alternate #2 - 2.010” Nom. Thickness Insulated Level 5 ballistic UL 752
5. GL-5 3/16” 1 hr Fire Rating Glass at fire stair interior doors & sidelights.
6. GL-6 ¼” Clear Tempered Glass

7. GL-7 0.57” Nom. Thickness Impact Security Glazing: Clear 10-minutes of forced entry / physical attack protection
8. GL-8 1.01” Nom. Thickness Level 3 ballistic glazing UL 752
9. GL-9 0.74” Nom. Thickness Impact Security Glazing: One-Way-vision interlayer film in Clear 20-minutes of forced entry / physical attack protection
10. GL-10 0.74” Nom. Thickness Impact Security Glazing: Clear 20-minutes of forced entry / physical attack protection

B. Thickness: Where glass thickness is indicated, it is a minimum. Provide glass lites in thicknesses as needed to comply with requirements indicated.

1. Minimum Glass Thickness for Exterior Lites: Not less than 6.0mm.

C. Strength: Where float glass is indicated, provide annealed float glass, Kind HS heat-treated float glass, or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where heat-strengthened glass is indicated, provide Kind HS heat-treated float glass or Kind FT heat-treated float glass as needed to comply with "Performance Requirements" Article. Where fully tempered glass is indicated, provide Kind FT heat-treated float glass.

D. Thermal and Optical Performance Properties: Provide glass with performance properties specified, as indicated in manufacturer's published test data, based on procedures indicated below:

1. For monolithic-glass lites, properties are based on units with lites 6.0 mm thick
2. For laminated-glass lites, properties are based on products of construction indicated.
3. For insulating-glass units, properties are based on units of thickness indicated for overall unit and for each lite.
4. U-Factors: Center-of-glazing values, according to NFRC 100 and based on LBL's WINDOW 5.2 computer program, expressed as Btu/sq. ft. x h x deg F (W/sq. m x K).
5. Solar Heat-Gain Coefficient and Visible Transmittance: Center-of-glazing values, according to NFRC 200 and based on LBL's WINDOW 5.2 computer program.
6. Visible Reflectance: Center-of-glazing values, according to NFRC 300.

2.2 GLASS PRODUCTS

A. Float Glass: ASTM C 1036, Type I, Quality-Q3, Class I (clear) unless otherwise indicated.

B. Heat-Treated Float Glass: ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

1. Fabrication Process: By horizontal (roller-hearth) process with roll-wave distortion parallel to bottom edge of glass as installed unless otherwise indicated.
2. For uncoated glass, comply with requirements for Condition A.
3. For coated vision glass, comply with requirements for Condition C (other coated glass).

2.3 INSULATING GLASS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. VITRO
2. Old Castle
3. Pilkington
4. Or equal as approved by Architect

B. Insulating-Glass Units: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, qualified according to ASTM E 2190, and complying with other requirements specified.

1. Sealing System: Dual seal, with polyisobutylene and silicone primary and secondary.
2. Spacer: Manufacturer's standard spacer material and construction
3. Desiccant: Molecular sieve or silica gel, or blend of both.

C. Glass: Comply with applicable requirements in "Glass Products" Article as indicated by designations in "Insulating-Glass Types"

D. INSULATING-GLASS TYPES
1. GL-1 1” Insulated Low E
2. GL-2 NOT USED

A. GL-1 Insulating Glass Unit Type 1: Low-e coated (VITRO Solarban 70XL) Clear insulating glass. Tinted Interlayer.

1. Overall Unit Thickness: 1” inch (25 mm)
2. Thickness of Each Glass Lite: ¼”, 6.0 mm
3. Outdoor Lite: Annealed glass
4. Interspace Content: Air
5. Interlayer: Tinted per spec
6. Indoor Lite: Fully tempered float glass
7. Low-e coating: Sputtered on second surface
8. Visible Light Transmittance: 64 percent minimum
9. Winter Nighttime U-Factor: 0.28 maximum.
10. Summer Daytime U-Factor: 0.26 maximum.
11. Solar Heat Gain Coefficient: 0.27
12. Shading Coefficient: 0.32
13. Provide safety glazing labeling.

B. See Ballistic Glazing for insulated ballistic glazing-

2.4 BALLISTIC GLASS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. Reference Section 08 43 33.13 for ballistic framing systems & doors, and Section 08 56 69 bullet-resistant aluminum transaction window

C. (Basis of Design McGrory & Insulguard)
   1. Or equal as approved by Architect

D. GLAZING TYPE
   1. GL-3 1.717" Nom. Thickness Insulated Level 3 ballistic UL 752 SEE 08 43 44.13
      a. Basis of Design: Baluln25 IG, by Insulgard Security products or McGrory Glass
      b. Thickness: 1.717" Nom.
   2. GL-4 ADD ALTERNATE #2 - 2.010" Nom. Thickness Insulated Level 5 ballistic UL 752 SEE 08 43 44.13
      a. Basis of Design: Baluln32 IG, by Insulgard Security products or McGrory Glass
      b. Thickness: 2.010" Nom.
      c. GC is to have shop drawings coordinated with the change in frame depth and/or widths for all glazing elevations.
   3. GL-8 1.01 Nom Thickness Level 3 ballistic UL 752 SEE 08 34 44 13
      a. Basis of Design: Baluln25, by Insulgard Security products or McGrory Glass
      b. Thickness: 1.01" Nom.
      c. Light Transmittance: 77%
      d. U-Value: .84
      e. SHGC: .63
      f. Shading Coefficient: .72
   4. GL-10: 0.74" Nominal thickness ASTM F1915 20-minute attack rated and HP White 9mm low spall bullet resistant.
      a. Basis of Design: ¾" Clear AttackDefend 20 by McGrory Glass
      b. Thickness: .75" Nom.
      c. Light Transmittance: 75%
      d. U-Value: .76

   5. Allowable Tolerances: Plus or minus 1/4 inch for frame opening width, height, diagonal dimensions, and overall width and height (outside to outside).

2.5 FIRE-RESISTANCE-RATED

A. GL-5 Fire-resistance-Rated Glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 252 for door assemblies and NFPA 257 for window assemblies. GC is to coordinate with rated hollow metal door vision lites.

B. Monolithic Ceramic Glazing: Clear, ceramic flat glass; 7/8" nominal thickness.

C. Composition: Composed of multiple sheets of "Optiwhite" (BOD or equal) high visible light transmission glass laminated with an intumescent interlayer.

D. Properties:
   1. Thickness: For Interior Use: 7/8", #60-101.
   1. Weight: Varies with thickness (approximate range 9 to 22 lbs./sq. ft.).
   2. Approximate Visible Transmission: Varies with thickness (approximate range 88 to 75 percent).
   3. Fire-rating: 60 minutes
   4. Impact Safety Resistance: ANSI Z97.1 and CPSC 16CFR1201 (Cat. I and II).

E. Permanently label each piece of with the appropriate marking per code including, W60

F. Fire Rating – 60 Minutes and Greater: Fire rating classified and labeled by UL for fire rating scheduled at opening locations on drawings, when tested in accordance with ASTM E 119 and UL 263.

G. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Basis for Design: Technical Glass Products; Pilkington Pyrostop
b. Safti First; SuperLite II-XL60.
c. Schott North America, Inc, Pryan Platinum

2.6 IMPACT SAFETY-RATED GLAZING

A. GL-7 Impact Safety-rated glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, meeting ANSI Z97.1 and CPSC 16 CFR1201 (cat.1 and 2).
1. Monolithic Impact Safety Rated Glazing: Clear, Nominal 1/4" (6.8 mm) overall
a. Fire rating not required where GL-7. If equal product meeting the impact NSI Z97.1 and CPSC 16 CFR1201 (cat.1 and 2) then the requirements for this glazing type will be met
b. See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. See Section 016000 "Product Requirements."
c. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
1) Basis for Design: Technical Glass Products; Fireglass 20.
2) Safti First; SuperLite C/P.
3) Schott North America, Inc
4) Vetrotech Saint-Gobain; SGG Keralite FR-R.

B. GL-9 One-Way-Glass, Impact Safety-rated glazing, General: Listed and labeled by a testing agency acceptable to authorities having jurisdiction, meeting ANSI Z97.1 and CPSC 16 CFR1201 (cat.1 and 2).
1. Monolithic Impact Safety Rated Glazing: Clear, Nominal 1/4" (6.8 mm) overall
a. Fire rating not required where GL-7. If equal product meeting the impact NSI Z97.1 and CPSC 16 CFR1201 (cat.1 and 2) then the requirements for this glazing type will be met
b. See Editing Instruction No. 1 in the Evaluations for cautions about naming manufacturers and products. See Section 016000 "Product Requirements."
c. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
1) Basis for Design: Technical Glass Products; Fireglass 20.
2) Safti First; SuperLite C/P.
3) Schott North America, Inc
4) Vetrotech Saint-Gobain; SGG Keralite FR-R.

2.7 GLAZING GASKETS

A. Dense Compression Gaskets: Molded or extruded gaskets of profile and hardness required to maintain watertight seal, made from one of the following:

1. Neoprene complying with ASTM C 864.

2. EPDM complying with ASTM C 864.
3. Silicone complying with ASTM C 1115.
4. Thermoplastic polyolefin rubber complying with ASTM C 1115.

B. Soft Compression Gaskets: Extruded or molded, closed-cell, integral-skinned neoprene, EPDM, silicone or thermoplastic polyolefin rubber gaskets complying with ASTM C 509, Type II, black; of profile and hardness required to maintain watertight seal.

1. Application: Use where soft compression gaskets will be compressed by inserting dense compression gaskets on opposite side of glazing or pressure applied by means of pressure-glazing stops on opposite side of glazing.

C. Lock-Strip Gaskets: Neoprene extrusions in size and shape indicated, fabricated into frames with molded corner units and zipper lock-strips, complying with ASTM C 542, black.

2.8 GLAZING SEALANTS

A. General:

1. Compatibility: Provide glazing sealants that are compatible with one another and with other materials they will contact, including glass products, seals of insulating-glass units, and glazing channel substrates, under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.
2. Suitability: Comply with sealant and glass manufacturers' written instructions for selecting glazing sealants suitable for applications indicated and for conditions existing at time of installation.
3. Sealants used inside the weatherproofing system, shall have a VOC content of not more than 250 g/L when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
4. Sealants used inside the weatherproofing system shall comply with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."
5. Colors of Exposed Glazing Sealants: As selected by Architect from manufacturer's full range.

B. Glazing Sealants for Fire-Rated Glazing Products: Products that are approved by testing agencies that listed and labeled fire-resistant glazing products with which they are used for applications and fire-protection ratings indicated.

2.9 GLAZING TAPES

A. Back-Bedding Mastic Glazing Tapes: Preformed, butyl-based, 100 percent solids elastomeric tape; nonstaining and nonmigrating in contact with nonporous surfaces; with or without spacer rod as recommended in writing by tape and glass manufacturers for application indicated; and complying with ASTM C 1281 and AAMA 800 for products indicated below:

1. AAMA 804.3 tape, where indicated.
2. AAMA 806.3 tape, for glazing applications in which tape is subject to continuous pressure.
3. AAMA 807.3 tape, for glazing applications in which tape is not subject to continuous pressure.

B. Expanded Cellular Glazing Tapes: Closed-cell, PVC foam tapes; factory coated with adhesive on both surfaces; and complying with AAMA 800 for the following types:

1. AAMA 810.1, Type 1, for glazing applications in which tape acts as the primary sealant.
2. AAMA 810.1, Type 2, for glazing applications in which tape is used in combination with a full bead of liquid sealant.

2.10 MISCELLANEOUS GLAZING MATERIALS

A. General: Provide products of material, size, and shape complying with referenced glazing standard, requirements of manufacturers of glass and other glazing materials for application indicated, and with a proven record of compatibility with surfaces contacted in installation.

B. Cleaners, Primers, and Sealers: Types recommended by sealant or gasket manufacturer.

C. Setting Blocks: Elastomeric material with a Shore, Type A durometer hardness of 85, plus or minus 5.

D. Spacers: Elastomeric blocks or continuous extrusions of hardness required by glass manufacturer to maintain glass lites in place for installation indicated.

E. Edge Blocks: Elastomeric material of hardness needed to limit glass lateral movement (side walking).

F. Cylindrical Glazing Sealant Backing: ASTM C 1330, Type O (open-cell material), of size and density to control glazing sealant depth and otherwise produce optimum glazing sealant performance.

G. Perimeter Insulation for Fire-Resistive Glazing: Product that is approved by testing agency that listed and labeled fire-resistant glazing product with which it is used for application and fire-protection rating indicated.

2.11 FABRICATION OF GLAZING UNITS

A. Fabricate glazing units in sizes required to fit openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing publications, to comply with system performance requirements.

B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites to produce square edges with slight chamfers at junctions of edges and faces.

C. Grind smooth and polish exposed glass edges and corners.

2.12 INSULATING-GLASS TYPES

1. GL-1 1” Insulated Low E
2. GL-2 1” Insulated
3. GL-3 1.717” Nom. Thickness Insulated Level 3 ballistic UL 752
4. GL-4 2.010” Nom. Thickness Insulated Level 5 ballistic UL 752

B. GL-1 Insulating Glass Unit Type 1: Low-e coated (PPG Solarban 70) Clear insulating glass. Tinted Interlayer.

1. Overall Unit Thickness: 1” inch (25 mm)
2. Thickness of Each Glass Lite: ¼”, 6.0 mm
3. Outdoor Lite: Annealed glass
4. Interspace Content: Air
5. Interlayer: Tinted per spec
6. Indoor Lite: Fully tempered float glass
7. Low-e coating: Sputtered on second surface
8. Visible Light Transmittance: 64 percent minimum
9. Winter Nighttime U-Factor: 0.28 maximum.
10. Summer Daytime U-Factor: 0.26 maximum.
11. Solar Heat Gain Coefficient: 0.27
12. Shading Coefficient: 0.32
13. Provide safety glazing labeling.

C. GL-2 Insulating Glass Unit Type 1: Low-e coated (PPG Solarban 70XL) Clear insulating glass. Tinted Interlayer.

1. Overall Unit Thickness: 1” inch (25 mm)
2. Thickness of Each Glass Lite: ¼”, 6.0 mm
3. Outdoor Lite: Annealed glass
4. Interspace Content: Air
5. Interlayer: Tinted per spec
6. Indoor Lite: Fully tempered float glass
7. Low-e coating: Sputtered on second surface
8. Visible Light Transmittance: 64 percent minimum
9. Winter Nighttime U-Factor: 0.28 maximum.
10. Summer Daytime U-Factor: 0.26 maximum.
11. Solar Heat Gain Coefficient: 0.27
12. Shading Coefficient: 0.32
13. Provide safety glazing labeling.

D. See Ballistic Glazing for insulated ballistic glazing-

2.13 INTERIOR GLAZING

A. INTERIOR GLAING - HEAT-TREATED FLOAT GLASS (Unless otherwise noted as Pattern Glass):
1. ASTM C 1048; Type I; Quality-Q3; Class I (clear) unless otherwise indicated; of kind and condition indicated.

B. GL-5
1. 3/16” 1 hr Fire Rating Glass at fire stair interior doors & sidelights.

C. GL-6
1. Glass Type - Interior: Clear fully tempered float glass.
2. Thickness: ¼”

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing, glazing channels, and stops, with Installer present, for compliance with the following:

1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
2. Presence and functioning of weep systems.
3. Minimum required face and edge clearances.
4. Effective sealing between joints of glass-framing members.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

B. Examine glazing units to locate exterior and interior surfaces. Label or mark units as needed so that exterior and interior surfaces are readily identifiable. Do not use materials that will leave visible marks in the completed work.

3.3 GLAZING, GENERAL

A. Comply with combined written instructions of manufacturers of glass, sealants, gaskets, and other glazing materials, unless more stringent requirements are indicated, including those in referenced glazing publications.

B. Adjust glazing channel dimensions as required by Project conditions during installation to provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances.

C. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.

D. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction testing.

E. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing ublications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead.

F. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.

G. Provide spacers for glass lites where length plus width is larger than 50 inches (1270 mm).

1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
2. Provide 1/8-inch (3-mm) minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

H. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.

I. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.

J. Set glass lites with proper orientation so that coatings face exterior or interior as specified.

K. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.

L. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.

3.4 TAPE GLAZING

A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.

B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.

C. Cover vertical framing joints by applying tapes to heads and sills first and then to jambs. Cover horizontal framing joints by applying tapes to jambs and then to heads and sills.

D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.

E. Do not remove release paper from tape until right before each glazing unit is installed.

F. Apply heel bead of elastomeric sealant.

G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.

H. Apply cap bead of elastomeric sealant over exposed edge of tape.

3.5 GASKET GLAZING (DRY)

A. Cut compression gaskets to lengths recommended by gasket manufacturer to fit openings exactly, with allowance for stretch during installation.

B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.

C. Installation with Drive-in Wedge Gaskets: Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

D. Installation with Pressure-Glazing Stops: Center glass lites in openings on setting blocks and press firmly against soft compression gasket. Install dense compression gaskets and pressure-glazing stops, applying pressure uniformly to compression gaskets. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.

E. Install gaskets so they protrude past face of glazing stops.

3.6 CLEANING AND PROTECTION

A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels and clean surfaces.

B. Protect glass from contact with contaminating substances resulting from construction operations. If, despite such protection, contaminating substances do come into contact with glass, remove substances immediately as recommended in writing by glass manufacturer.

C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for buildup of dirt, scum, alkaline deposits, or stains; remove as recommended in writing by glass manufacturer.

D. Remove and replace glass that is broken, chipped, cracked, or abraded or that is damaged from natural causes, accidents, and vandalism, during construction period.

E. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended in writing by glass manufacturer.

END OF SECTION 08 80 00

SECTION 08 83 00 - MIRRORS

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management’s general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. Section includes the following types of silvered flat glass mirrors:
   1. Frameless Tempered glass mirrors qualifying as safety glazing.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Include mirror elevations, edge details, mirror hardware, and attachments to other work.

C. Samples:
   1. Mirrors: 12 inches square, including edge treatment on two adjoining edges.
   2. Mirror Clips: Full size.
   3. Mirror Trim: 12 inches long.

1.3 INFORMATIONAL SUBMITTALS

A. Preconstruction test reports.

B. Warranty: Sample of special warranty.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance data.

1.5 QUALITY ASSURANCE

A. Glazing Publications: Comply with GANA's "Glazing Manual" and "Mirrors, Handle with Extreme Care: Tips for the Professional on the Care and Handling of Mirrors."

B. Safety Glazing Products: For tempered mirrors, provide products complying with testing requirements in 16 CFR 1201 for Category II materials.

C. Preconstruction Mirror Mastic Compatibility Test: Submit mirror mastic products to mirror manufacturer for testing to determine compatibility of mastic with mirror backing and substrates on which mirrors are installed.

1.6 WARRANTY

A. Special Warranty: Manufacturer's standard form in which mirror manufacturer agrees to replace mirrors that deteriorate within specified warranty period. Deterioration of mirrors is defined as defects developed from normal use that are not attributed to mirror breakage or to maintaining and cleaning mirrors contrary to manufacturer's written instructions. Defects include discoloration, black spots, and clouding of the silver film.

1. Warranty Period: Five years from date of Substantial Completion

PART 2 - PRODUCTS

2.1 SILVERED FLAT FRAMELESS GLASS MIRRORS

A. Glass Mirrors, General: ASTM C 1503

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Arch Aluminum & Glass Co., Inc.
b. Avalon Glass and Mirror Company.
c. Binswanger Mirror; a division of Vitro America, Inc.
d. D & W Incorporated
e. Donisi Mirror Company.
f. Gardner Glass, Inc.
g. Gilded Mirrors, Inc.
h. Guardian Industries.
i. Head West.
j. Independent Mirror Industries, Inc.
k. Lenoir Mirror Company.
l. Maran-Wurzell Glass & Mirror.
m. National Glass Industries.
n. Stroupe Mirror Co., Inc.
o. Sunshine Mirror; Westshore Glass Corp.
p. Virginia Mirror Company, Inc.
q. Walker Glass Co., Ltd.

B. Tempered Clear Glass: Mirror Glazing Quality, for blemish requirements; and comply with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied.
1. Nominal Thickness: 1/4 inch
2. Size: As indicated on the drawings.

2.2 FRAMED MIRROR

A. See 10 28 00 Toilet Accessories for framed mirrors. See 12 55 00 – Detention Furniture & Accessories for Holding Area restroom mirrors.

2.3 MISCELLANEOUS MATERIALS

A. Edge Sealer: Approved by mirror manufacturer.

B. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors.

C. Film Backing for Safety Mirrors: Film backing and pressure-sensitive adhesive; both compatible with mirror backing paint as certified by mirror manufacturer.

2.4 FABRICATION

A. Cutouts: Fabricate cutouts before tempering for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.

B. Mirror Edge Treatment: Flat polished. Seal edges of mirrors with edge sealer.
1. Require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

C. Film-Backed Safety Mirrors: Apply film backing with adhesive coating over mirror backing paint as recommended in writing by film-backing manufacturer.

2.5 MIRROR HARDWARE

A. Mirror Bottom and Top Clips: Continuous aluminum clip. Provide side clips for end of mirrored walls.

B. Fasteners: Fabricated of same basic metal and alloy as fastened metal and matching it in finished color and texture where fasteners are exposed.

C. Anchors and Inserts: Provide devices as required for mirror hardware installation. Provide toothed or lead-shield, expansion-bolt devices for drilled-in-place anchors. Provide galvanized anchors and inserts for applications on inside face of exterior walls and where indicated.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine substrates, over which mirrors are to be mounted, with Installer present, for compliance with installation tolerances, substrate preparation, and other conditions affecting performance of the Work.

1. Verify compatibility with and suitability of substrates, including compatibility of mirror mastic with existing finishes or primers.
2. Proceed with installation only after unsatisfactory conditions have been corrected and surfaces are dry.

B. Comply with mastic manufacturer's written installation instructions for preparation of substrates, including coating substrates with mastic manufacturer's special bond coating where applicable.

C. General: Install mirrors to comply with mirror manufacturer's written instructions and with referenced GANA publications. Mount mirrors accurately in place in a manner that avoids distorting reflected images.

D. Wall-Mounted Mirrors: Install mirrors with mastic and mirror hardware. Attach mirror hardware securely to mounting surfaces with mechanical fasteners installed with anchors or inserts as applicable. Install fasteners so heads do not impose point loads on backs of mirrors. Apply mastic to comply with mastic manufacturer's written instructions for coverage and to allow air circulation between back of mirrors and face of mounting surface.
1. Mirror Clips: Place a felt or plastic pad between mirror and each clip to prevent spalling of mirror edges. Locate clips so they are symmetrically placed and evenly spaced.
2. Mount mirrors a maximum of 40” above finish floor to reflective surface – above continuous clips.

E. Protect mirrors from breakage and contaminating substances resulting from construction operations.

F. Do not permit edges of mirrors to be exposed to standing water.

G. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.

H. Wash exposed surface of mirrors not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash mirrors as recommended in writing by mirror manufacturer.

END OF SECTION 08 83 00

SECTION 092116.23 - GYPSUM BOARD SHAFT WALL ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Gypsum board shaft wall assemblies.

1.2 ACTION SUBMITTALS

A. Product Data: For each component of gypsum board shaft wall assembly.

B. Sustainable Design Submittals:

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: Provide materials and construction identical to those of assemblies tested according to ASTM E90 and classified according to ASTM E413 by a testing and inspecting agency.

2.2 GYPSUM BOARD SHAFT WALL ASSEMBLIES

A. Fire-Resistance Rating: 1 hour. UL U415 UL System A 3.125” system

B. STC Rating: **45, minimum**.

C. Gypsum Shaftliner Board or approved equal:

1. Type SLX: ASTM C1396/C1396M; manufacturer's proprietary fire-resistive liner panels with paper faces, 1 inch (25.4 mm) thick, with double beveled long edges.
   a. Sheetrock Gypsum Liner Panel SLX
   b. Fire Bloc Type X Gypsum Wall board by American Gypsum
   c. USG Shaft Wall System, by USG
   d. Fire-Shield 60 by Bold Bond Building Products

D. Non-Load-Bearing Steel Framing, General: Complying with ASTM C645 requirements for metal unless otherwise indicated and complying with requirements for fire-resistance-rated assembly indicated.

E. Studs: Manufacturer's standard profile for repetitive, corner, and end members as follows:

1. Depth: .**2-1/2 inches (64 mm)**.
2. Assembly
   a. Layer 1 - Gypsum Panel: 1 layer 1" [25.4 mm] Sheetrock® Gypsum Liner Panels (UL Type SLX)
   b. Layer 2 - Steel Studs: 1 layer 2-1/2" [64 mm] CH studs, 20 ga. (0.033"), 24" [610 mm] O.C.
   c. Layer 3 - Insulation: 1 layer 1-1/2" [38 mm] Fiberglass insulation
   d. Layer 4 - Gypsum Panel: 1 layer 5/8" [15.9 mm] Sheetrock® Gypsum Panel (UL Type SCX)

F. Firestop Tracks: Top runner manufactured to allow partition heads to expand and contract with movement of the structure while maintaining continuity of fire-resistance-rated assembly indicated; in thickness not less than indicated for studs and in width to accommodate depth of studs.

G. Sound Attenuation Blankets: As specified in **Section 092900 "Gypsum Board."**

2.3 AUXILIARY MATERIALS

A. Trim Accessories: Cornerbead, edge trim, and control joints of material and shapes as specified in **Section 092900 "Gypsum Board"** that comply with gypsum board shaft wall assembly manufacturer's written instructions for application indicated.

B. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

C. Track Fasteners: Power-driven fasteners of size and material required to withstand loading conditions imposed on shaft wall assemblies without exceeding allowable design stress of track, fasteners, or structural substrates in which anchors are embedded.

D. Acoustical Sealant: Section 079219 "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install gypsum board shaft wall assemblies to comply with requirements of fire-resistance-rated assemblies indicated and manufacturer's written installation instructions.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, or mold damaged.

C. Sprayed Fire-Resistive Materials: Coordinate with gypsum board shaft wall assemblies so both elements of Work remain complete and undamaged.

D. Install supplementary framing in gypsum board shaft wall assemblies around openings and as required for blocking, bracing, and support of gravity and pullout loads of fixtures, equipment,

services, heavy trim, furnishings, wall-mounted door stops, and similar items that cannot be supported directly by shaft wall assembly framing.

E. Penetrations: Install supplementary steel framing around perimeter of penetration and fire protection behind boxes containing wiring devices, elevator call buttons and floor indicators, and similar items.

F. Isolate perimeter of gypsum panels from building structure to prevent cracking of panels while maintaining continuity of fire-rated construction.

G. Firestop Tracks: Where indicated, install to maintain continuity of fire-resistance-rated assembly indicated.

H. Control Joints: Install control joints **according to ASTM C840 and in specific locations approved by Architect** while maintaining fire-resistance rating of gypsum board shaft wall assemblies.

I. Sound-Rated Shaft Wall Assemblies: Seal gypsum board shaft walls with acoustical sealant at perimeter of each assembly where it abuts other work and at joints and penetrations within each assembly.

J. Installation Tolerance: Install each framing member so fastening surfaces vary not more than 1/8 inch (3 mm) from the plane formed by faces of adjacent framing.

K. Remove and replace panels that are wet, moisture damaged, or mold damaged.

END OF SECTION 092116.23

SECTION 09 29 00 - GYPSUM BOARD

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.1 SUMMARY

A. This Section includes the following:

1. Interior gypsum wallboard.
2. Tile backing panels.
3. Trim Accessories & Reglets
4. See Sheathing Specification for glass-matt gypsum boards.

1.2 DEFINITIONS

A. Gypsum Board Terminology: Refer to ASTM C 11 for definitions of terms for gypsum board assemblies not defined in this Section or in other referenced standards.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Comply with Section 01 81 13
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
      1) Health Product Declaration (HPD): For each product.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier.

B. Store materials inside under cover and keep them dry and protected against damage from weather, direct sunlight, surface contamination, corrosion, construction traffic, and other causes. Stack gypsum panels flat to prevent sagging.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Comply with ASTM C 840 requirements or gypsum board manufacturer's written recommendations, whichever are more stringent.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Gypsum Board and Related Products:

a. American Gypsum Co.
b. G-P Gypsum Corp.
c. National Gypsum Company.
d. United States Gypsum Co.

2.2 INTERIOR GYPSUM WALLBOARD

A. Panel Size: Provide in maximum lengths and widths available that will minimize joints in each area and correspond with support system indicated.

B. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. American Gypsum.
2. Georgia-Pacific Gypsum LLC.
3. Lafarge North America Inc.
4. National Gypsum Company; basis of design
5. USG Corporation.

C. Gypsum Board: ASTM C 1396/C 1396M.

1. Thickness: 5/8 inch.
2. Long Edges: Tapered.

D. Gypsum Board, Type X: ASTM C 1396/C 1396M.
1. Thickness: 5/8 inch.
2. Long Edges: Tapered.

E. Gypsum Ceiling Board: ASTM C 1396/C 1396M.

1. Thickness: 1/2 inch.
2. Long Edges: Tapered.

F. Gypsum Wall Board for Ballistic wall detailing: ASTM C 1396/C 1396M.

1. Thickness: 1/2 inch nom.

2. Long Edges: Tapered.
3. To be used above the 1/2” nom thickness ballistic wall panel up to 6ft.

G. Hi-Abuse-Resistant Gypsum Board: ASTM C 1396/C 1396M gypsum board, tested according to ASTM C 1629/C 1629M.

1. Core: 5/8 inch (15.9 mm), Type XP.
2. Surface Abrasion: ASTM C 1629/C 1629M, meets or exceeds Level 3 requirements.
3. Indentation: ASTM C 1629/C 1629M, meets or exceeds Level 1 requirements.
4. Soft-Body Impact: ASTM C 1629/C 1629M, meets or exceeds Level 2 requirements.
5. Long Edges: Tapered.
6. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

H. Mold-Resistant Gypsum Board: ASTM C 1396/C 1396M. With moisture- and mold-resistant core and paper surfaces.

1. Core: 5/8 inch (15.9 mm), Type X.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.3 TILE BACKING PANELS

A. Cementitious Backer Units: ANSI A118.9 and ASTM C 1288 or ASTM C 1325, with manufacturer's standard edges.

1. Thickness: 5/8 inch (15.9 mm).
2. Mold Resistance: ASTM D 3273, score of 10 as rated according to ASTM D 3274.

2.4 TRIM ACCESSORIES

A. Interior Trim: ASTM C 1047.

1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc, Plastic, Paper-faced galvanized steel sheet.
2. Shapes:

    a. Cornerbead: Use at outside corners.
    b. LC-Bead: J-shaped; exposed long flange receives joint compound; use at exposed panel edges.
    c. L-Bead: L-shaped; exposed long leg receives joint compound; use where required.
    d. Expansion (Control) Joint: Long flanges receive joint compound; use where required to relieve expansion/contraction at continuous planar runs in excess of allowable dimension and at crossings of building expansion/control joints. Confirm locations with Architect.
    e. Drywall reveal molding 1/2" x 1/2" non vented. Basis of Design Fry Reglet or equal
        1) Model #: DRM-50-50.
        2) Finish: Standard Powder Coat White

2.5 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C 475.

B. Joint Tape:

1. Interior Gypsum Wallboard: Paper.

C. Joint Compound for Interior Gypsum Wallboard: For each coat use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use setting-type taping compound.
3. Fill Coat: For second coat, use setting-type, sandable topping compound.
4. Finish Coat: For third coat, use setting-type, sandable topping compound.
5. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.

2.6 ACOUSTICAL SEALANT

A. As specified in Division 7 “Joint Sealants.”

B. For adhesives and sealants, indicate compliance with requirements for low-emitting materials.

2.7 AUXILIARY MATERIALS

A. General: Provide auxiliary materials that comply with referenced installation standards and manufacturer's written recommendations.

B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

1. Use adhesives that have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Steel Drill Screws: ASTM C 1002, unless otherwise indicated.

1. Use screws complying with ASTM C 954 for fastening panels to steel members from 0.033 to 0.112 inch thick.
2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates, with Installer present, and including welded hollow-metal frames, cast-in anchors, and structural framing, for compliance with requirements and other

conditions affecting performance. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 APPLYING AND FINISHING PANELS, GENERAL

A. Gypsum Board Application and Finishing Standards: ASTM C 840 and GA-216.

C. Install ceiling board panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in the central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

D. Install gypsum panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1/16 inch of open space between panels. Do not force into place.

E. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

F. Attach gypsum panels to steel studs so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

G. Attach gypsum panels to framing provided at openings and cutouts.

H. Form control and expansion joints with space between edges of adjoining gypsum panels.

I. Cover both faces of steel stud partition framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect open concrete coffers, concrete joists, and other structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by coffers, joists, and other structural members; allow 1/4- to 3/8-inch-wide joints to install sealant.

J. Space fasteners in gypsum panels according to referenced gypsum board application and finishing standard and manufacturer's written recommendations.

1. Space screws a maximum of 12 inches o.c. for vertical applications.

K. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.3 PANEL APPLICATION METHODS

A. Single-Layer Application:

1. On ceilings, apply gypsum panels before wall/partition board application to the greatest extent possible and at right angles to framing, unless otherwise indicated.

2. On partitions/walls, apply gypsum panels horizontally (perpendicular to framing), unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.

    a. Stagger abutting end joints not less than one framing member in alternate courses of board.
    b. At stairwells and other high walls, install panels horizontally, unless otherwise indicated or required by fire-resistance-rated assembly.

B. Single-Layer Fastening Methods: Apply gypsum panels to supports with steel drill screws.

3.4 INSTALLING TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C 840 and in specific locations approved by Architect for visual effect.

3.5 FINISHING GYPSUM BOARD ASSEMBLIES

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints, and damaged surface areas.

C. Apply joint tape over gypsum board joints, except those with trim having flanges not intended for tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below, according to ASTM C 840, for locations indicated:

1. Level 4: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges at panel surfaces that will be exposed to view, unless otherwise indicated.
2. Level 5: Where indicated on the Drawings or listed below.
    a. All panel surface that will be exposed to view walls in the Lobby RM 002 & Community Rm 100

    b. Primer and its application to surfaces are specified in Division 9 "Painting".

E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for painting when used as a painted coverboard.
1. Embed 2” (51 mm) wide fiberglass mesh tape in 90 minute gypsum setting type joint compound over all joints. Upon setting, apply a skim coat of setting compound over the panels to achieve a uniform, smooth finish over the entire area. Prime with exterior-grade primer and finish with two coats of exterior-grade paint.

END OF SECTION 09 29 00

SECTION 09 31 00 - CERAMIC TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:
   1. Porcelain Floor Tile.
   2. Porcelain Wall Tile

B. Related Sections include the following:

   1. Division 7 Section "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
   2. Division 9 Section "Gypsum Board Assemblies" for substrates for ceramic tile.

1.3 DEFINITIONS

A. Module Size: Actual tile size (minor facial dimension as measured per ASTM C 499) plus joint width indicated.

B. Facial Dimension: Nominal tile size as defined in ANSI A137.1.

1.4 PERFORMANCE REQUIREMENTS

A. A. Dynamic Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ANSI 137.1, section 9.6:

   1. Level Surfaces: DCOF 0.42 Wet.

B. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ASTM C 1028:

   1. Level Surfaces: Minimum 0.6 Wet & Dry.

1.5 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

C. Samples for Initial Selection: For each type of tile and grout indicated. Include Samples of accessories involving color selection.

D. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.
2. Assembled samples with grouted joints for each type and composition of tile and for each color and finish required, at least 12 inches (300 mm) square and mounted on rigid panel. Use grout of type and in color or colors approved for completed work.
3. Full-size units of each type of trim and accessory for each color and finish required.

E. Master Grade Certificates: For each shipment, type, and composition of tile, signed by tile manufacturer and Installer.

F. Product Certificates: For each type of product, signed by product manufacturer.

G. Qualification Data: For Installer.

H. Material Test Reports: For each tile-setting and -grouting product.

1.6 QUALITY ASSURANCE

A. Source Limitations for Tile: Obtain all tile from one source or producer.

1. Obtain tile from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from a single manufacturer and each aggregate from one source or producer.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section through one source from a single manufacturer for each product:

1. Joint sealants.
2. Metal edge strips.

D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination."

1. Meeting Agenda to include, but is not limited to:
    a. Tile and installation material compatibility.
    b. Grouting Procedure.
    c. Surface Preparation.
    d. Maintenance and cleaning products and methods.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirement in ANSI A137.1 for labeling sealed tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained and contamination avoided.

D. Store liquid latexes in unopened containers and protected from freezing.

E. Handle tile that has temporary protective coating on exposed surfaces to prevent coated surfaces from contacting backs or edges of other units. If coating does contact bonding surfaces of tile, remove coating from bonding surfaces before setting tile.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

1.9 EXTRA MATERIALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units: Furnish quantity of full-size units equal to 3 percent of amount installed, for each type, composition, color, pattern, and size indicated.

2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply for product selection:

1. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the manufacturers specified.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1, "Specifications for Ceramic Tile," for types, compositions, and other characteristics indicated.

1. Provide tile complying with Standard grade requirements, unless otherwise indicated.
2. For facial dimensions of tile, comply with requirements relating to tile sizes specified in Part 1 "Definitions" Article.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI standards referenced in "Setting and Grouting Materials" Article.

C. Colors, Textures, and Patterns: Where manufacturer's standard products are indicated for tile, grout, and other products requiring selection of colors, surface textures, patterns, and other appearance characteristics, provide specific products or materials complying with the following requirements:

1. As selected by Architect from manufacturer's full range.

D. Factory Blending: For tile exhibiting color variations within ranges selected during Sample submittals, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

E. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer, unless otherwise indicated.

F. Factory-Applied Temporary Protective Coating: Where indicated under tile type, protect exposed surfaces of tile against adherence of mortar and grout by precoating with continuous film of petroleum paraffin wax, applied hot. Do not coat unexposed tile surfaces.

2.3 TILE PRODUCTS

CT-1

Manufacturer:	Daltile
Collection:	Color Wheel
Color:	Spa
Size:	3” x 6”
Installation:	½ offset
Location:	Lobby Water fountain

CT-2a

Manufacturer:	Daltile
Collection:	Color Wheel
Color:	Artic White 0190
Size:	4” x 12”
Installation:	Vertical Stack
Location:	Field - Restroom Wet Walls (Coordinate with elevations)

CT-2b

Manufacturer:	Daltile
Collection:	Mythology
Color:	Aura Wave Crest MY95
Size:	4” x 12”
Installation:	Vertical Stack
Location:	Accent - Restroom Wet Walls (Coordinate with elevations)

CT-3

Manufacturer:	Daltile
Collection:	Portfolio
Color:	Dove Grey Rectangle
Size:	12” x 24”
Installation:	½ Offset
Location:	Restroom Walls (Coordinate with elevations)

2.4 SETTING AND GROUTING MATERIALS

A. Available Manufacturers:
1. MAPEI Corporation, Basis of Design.
2. LATICRETE International Inc
3. Custom Building Products
4. Bonsal, W. R., Company
5. Bostik
6. DAP, Inc.

A. Dry-Set Portland Cement Mortar (Thin Set):

1. For wall applications, provide non-sag mortar that complies with ANSI A118.1

MAPEI Kerabond

B. Latex/Polymer Modified Portland Cement Mortar

1. For wall applications, provide non-sag, latex mortar that complies with ANSI A118.4

MAPEI Ultraflex 2

C. Large and Heavy Tile Mortar that complies with ANSI A118.4, A118.11

MAPEI Ultraflex LFT.

D. Professional grade, ready to use, specialty grout. Meets and exceeds specific tests in ANSI A118.3 and A118.6. For grout joint widths of 1/16”-1/2”

MAPEI Flexcolor CQ

GROUT COLORS:

GR-1
Manufacturer: Full Manufacturer's Selection
Color:
Number:
Location: CT-1

GR-2
Manufacturer: Full Manufacturer's Selection
Color:
Number:
Location: CT-2a, 2b, 3

2.5 SURFACE PREPARATION MATERIALS

A. Reduced-preparation, self-leveling underlayment for smoothing and repairing interior floors before the installation of floor coverings from feather edge to up to 2" (5 cm).; MAPEI, "Ultraplan Easy"; Basis of Design.
   1. 1 MAPEI Ultraplan 1 Plus
   2. MAPEI Primer T

B. Cementitious Patching Compound; MAPEI, "Mapecem Quickpatch"; Basis of Design

2.6 CRACK ISOLATION AND WATERPROOFING MEMBRANE

A. General: Manufacturer's standard product, selected from the following, that complies with ANSI A118.10 (Waterproofing) and A118.12 (Crack Isolation) for standard performance and is recommended by the manufacturer for the application indicated.
   1. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; 3/16-inch (4-mm) nominal thickness; Schluter Systems L.P DITRA and KERDI-BAND

   2. Liquid applied:
      a. Premium Latex Based Waterproofing and Crack Isolation Membrane; fast setting, flexible, thin, load-bearing, waterproofing membrane system consisting of a premixed, quick-drying liquid latex, for installation under ceramic tile or complying with ANSI A118.10 and ANSI A118.12; and having IAMPO certification as a shower pan liner
      b. MAPEI Mapelastic AquaDefense

      Premixed, liquid-rubber, quick-drying crack-isolation membrane for installation under ceramic tile or stone in residential and commercial interior and exterior environments complying with ANSI A118.12 MAPEI Mapelastic CI

2.7 ELASTOMERIC SEALANTS

A. General: Provide manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated that comply with applicable requirements in Division 7 Section "Joint Sealants."

B. Colors: Provide colors of exposed sealants to match colors of grout in tile adjoining sealed joints, unless otherwise indicated.

C. One-Part, Mildew-Resistant Silicone Sealant: ASTM C 920; Type S; Grade NS; Class 25; Uses NT, G, A, and, as applicable to nonporous joint substrates indicated, O; formulated with fungicide, intended for sealing interior ceramic tile joints and other nonporous substrates that are subject to in-service exposures of high humidity and extreme temperatures.

1. Available Products:

    a. Dow Corning Corporation; Dow Corning 786.
    b. GE Silicones; Sanitary 1700.
    c. Pecora Corporation; Pecora 898 Sanitary Silicone Sealant.
    d. Tremco, Inc.; Tremsil 600 White.
    e. MAPEI Mapesil T; available in all 40 MAPEI grout colors

2.8 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Temporary Protective Coating: Product indicated below that is formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.

1. Petroleum paraffin wax, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg F (49 to 60 deg C) per ASTM D 87.
2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.
    a. MAPEI Ultracare Grout Release.

C. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

MAPEI Ultracare products:
1. Heavy Duty Stone, Tile and Grout Sealer
2. Concentrated Tile and Grout Cleaner
3. Everyday Stone, Tile and Grout Cleaner

2.9 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of installed tile.

1. Verify that substrates for setting tile are firm; dry; clean; free of oil, waxy films, and curing compounds; and within flatness tolerances required by referenced ANSI A108 Series of tile installation standards for installations indicated.
2. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed before installing tile.
3. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Architect.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Remove coatings, including curing compounds and other substances that contain soap, wax, oil, or silicone, that are incompatible with tile-setting materials.

B. Provide concrete substrates for tile floors installed with [adhesives] [or] [thin-set mortar] that comply with flatness tolerances specified in referenced ANSI A108 Series of tile installation standards.

1. Fill cracks, holes, and depressions with trowelable leveling and patching compound according to tile-setting material manufacturer's written instructions. Use product specifically recommended by tile-setting material manufacturer.
2. Remove protrusions, bumps, and ridges by sanding or grinding.

C. Blending: For tile exhibiting color variations within ranges selected during Sample submittals, verify that tile has been factory blended and packaged so tile units taken from one package

show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

D. Field-Applied Temporary Protective Coating: Where indicated under tile type or needed to prevent grout from staining or adhering to exposed tile surfaces, precoat them with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.3 INSTALLATION, GENERAL

A. ANSI Tile Installation Standards: Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that apply to types of setting and grouting materials and to methods indicated in ceramic tile installation schedules.

B. TCA Installation Guidelines: TCA's "Handbook for Ceramic Tile Installation." Comply with TCA installation methods indicated in ceramic tile installation schedules.

C. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions, unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

D. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

E. Jointing Pattern: Lay tile in grid pattern, unless otherwise indicated. Align joints when adjoining tiles on floor, base, walls, and trim are same size. Lay out tile work and center tile fields in both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths, unless otherwise indicated.

F. Lay out tile wainscots to next full tile beyond dimensions indicated.

G. Expansion Joints: Locate expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Locate joints in tile surfaces directly above joints in concrete substrates.
2. Prepare joints and apply color sealants matching grout to comply with requirements in Division 7 Section "Joint Sealants.", at interior and exterior wall corners.

H. Grout tile to comply with the manufacturer’s requirements.

I. Install cementitious backer units and treat joints to comply with ANSI A108.11 and manufacturer's written instructions for type of application indicated.

3.4 FLOOR TILE INSTALLATION

A. General: Install tile to comply with requirements in the Floor Tile Installation Schedule, including those referencing TCA installation methods and ANSI A108 Series of tile installation standards.

B. Metal Edge Strips: Install at locations indicated or where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile.

3.5 WALL TILE INSTALLATION

A. Install types of tile designated for wall installations to comply with requirements in the Wall Tile Installation Schedule, including those referencing TCA installation methods and ANSI setting-bed standards.

B. Joint Widths: Install tile on walls with the following joint widths:

1. Porcelain Tile: 3/16 inch.

3.6 TILE BACKING PANEL INSTALLATION

A. Install cementitious backer units and fiber-cement underlayment and treat joints according to ANSI A108.11 and manufacturer's written instructions for type of application indicated. Use latex-portland cement mortar for bonding material unless otherwise directed in manufacturer's written instructions.

3.7 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

3.8 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness and bonded securely to substrate.

B. Do not install tile or setting materials over crack isolation membrane until membrane has cured.

3.9 CLEANING AND PROTECTING

A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
1. Remove grout residue from tile as soon as possible.

2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.
3. Remove temporary protective coating/grout release by method recommended by coating manufacturer that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent it from clogging drains.

B. When recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear.

C. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

D. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.

END OF SECTION 09 31 00

SECTION 09 51 23 - ACOUSTICAL CEILING TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. This Section includes:

1. Acoustical ceiling tiles.
2. Acoustical ceiling framing systems.
3. Acoustical ceiling transitions.
4. Acoustical sealants.
5. Seismic ceiling installation requirements.

1.3 DEFINITIONS

A. AC: Articulation Class.

B. CAC: Ceiling Attenuation Class.

C. LR: Light Reflectance coefficient.

D. NRC: Noise Reduction Coefficient.

1.4 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals: Comply with Division 01 Section "Sustainable Design Requirements – LEED".

1. MR Credit 2: Environmental Product Declarations
   a. Acoustical ceiling tiles and steel suspension system, if available.

2. MR Credit 3: Sourcing of Raw Materials
   a. Recycled content: Acoustical ceiling panels and steel suspension. Provide material cost values.
   b. Bio-based.

c. Manufacturers with extended producer responsibility programs.

3. MR Credit 4: Material Ingredients
   a. Report: Acoustical ceiling tiles and steel suspension system, if available.

4. EQ Credit 2: Low-Emitting Materials
   a. Acoustical Ceiling Panels installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range.

C. Coordination Drawings: Reflected ceiling plans drawn to scale and coordinating penetrations and ceiling-mounted items. Show the following:

1. Ceiling suspension members.
2. Method of attaching hangers to building structure.
   a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.

3. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
4. Minimum Drawing Scale: 1/8 inch = 1 foot.

D. Samples for Initial Selection: For components with factory-applied color finishes.

E. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below.

1. Acoustical Panel: Set of 6-inch- square Samples of each type, color, pattern, and texture.
2. Exposed Suspension System Members, Moldings, and Trim: Set of 12-inch- long Samples of each type, finish, and color.

1.5 QUALITY ASSURANCE

A. Acoustical Testing Agency Qualifications: An independent testing laboratory, or an NVLAP-accredited laboratory, with the experience and capability to conduct the testing indicated, as documented according to ASTM E 548. NVLAP-accredited laboratories must document accreditation, based on a "Certificate of Accreditation" and a "Scope of Accreditation" listing the test methods specified.

B. Source Limitations: Obtain each type of acoustical ceiling panel and supporting suspension system through one source from a single manufacturer.

C. Fire-Test-Response Characteristics: Provide acoustical panel ceilings that comply with the following requirements:

1. Fire-Resistance Characteristics: Where indicated, provide acoustical panel ceilings identical to those of assemblies tested for fire resistance per ASTM E 119 by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

a. Fire-Resistance Ratings: Indicated by design designations from UL's "Fire Resistance Directory" or from the listings of another testing and inspecting agency.
b. Identify materials with appropriate markings of applicable testing and inspecting agency.

2. Surface-Burning Characteristics: Provide acoustical panels with the following surface-burning characteristics complying with ASTM E 1264 for Class A materials as determined by testing identical products per ASTM E 84.

1.6 EXTRA MATERIALS REQUIREMENTS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.
1. Ceiling tile: Full-size units equal to 3 percent of amount installed per type, but no fewer than five panels.

1.7 SEISMIC REQUIREMENTS

A. Installed to ASTM E580 Seismic Design Category C:

1. Minimum 7/8” wall molding.

2. Suspension system must not be attached to the wall molding.

3. Minimum 3/8” clearance on all sides.

4. Minimum 3/8” overlap of the suspension system on the wall molding.

5. Ends of main beams and cross tees must be tied together to prevent their spreading.

6. Safety wires required on light fixtures

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension system components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.9 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.10 COORDINATION

A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.11 WARRANTY

A. Acoustical Panel: Submit a written warranty executed by the manufacturer, agreeing to repair or replace panels that fail within the warranty period. Failures include, but are not limited to the following:

1. Acoustical Panels: Manufacturer’s defects in material.
2. Grid System: Rusting and manufacturer's defects.

B. Warranty Period:

1. Acoustical panels: Ten (10) years from date of substantial completion.
2. Suspension: Ten (10) years from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Recycled Content: Provide acoustical ceiling panels with minimum 50 percent recycled content; provide steel with minimum 25 percent post-consumer recycled content.

B. Bio-based Materials: Ceiling panels with bio-based material per ASTM Test Method D6866 that is legally harvested and meeting the Sustainable Agriculture Network’s Sustainable Agriculture Standard.

C. Acoustical ceiling panels: Comply with emissions requirements of CDPH Standard Test Method in Section 018113.

D. In other Part 2 articles where titles below introduce lists, the following requirements apply for product selection:

1. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the products specified.

2.2 ACOUSTICAL PANELS, GENERAL

A. Acoustical Panel Standard: Provide manufacturer's standard panels of configuration indicated that comply with ASTM E 1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches away from test surface per ASTM E 795.

B. Acoustical Panel Colors and Patterns: Match appearance characteristics indicated for each product type.

1. Where appearance characteristics of acoustical panels are indicated by referencing pattern designations in ASTM E 1264 and not manufacturers' proprietary product designations, provide products selected by Architect from each manufacturer's full range that comply with requirements indicated for type, pattern, color, light reflectance, acoustical performance, edge detail, and size.

2.3 PANELS FOR ACOUSTICAL PANEL CEILINGS:

A. Basis-of-Design Product: Subject to compliance with requirements, provide Armstrong World Industries or an approved equal.

1. Contact Information: Meredith Baxter, Armstrong Sales Manager – 717.881.2488.

B. ACT Armstrong World Industries, Inc. ceiling grid: Suprafine, XL 9/16”, white Grid System, Basis of Design.

C. Classification: Provide panels complying with ASTM E 1264 for type, form, and pattern as follows:

ACT-1
Manufacturer: Armstrong
Style: Ultima Lay-in and Tegular
Edge: Beveled Tegular 9/16”
Number: 1915LEC
NRC Rating: 0.75
CAC Rating: 35
AC Rating: 170
Color: White (WH)
Size: 24” x 48”
Grid: GR-1
Location: Typical

ACT-2
Manufacturer: Armstrong
Style: Dune
Edge: Beveled Tegular 9/16”
Number: 1777
NRC Rating: 0.55
CAC Rating: 35
AC Rating: NA

Color: White (WH)
Size: 24” x 48”
Location: Corridors & storage

ACT-3
Manufacturer: Armstrong
Style: Ultima Lay-in and Tegular
Edge: Beveled Tegular 9/16”
Number: 1929
NRC Rating: 0.75
CAC Rating: 35
Color: White (WH)
Size: 30” x 54”
Grid: GR-1
Location: Community Room

ACT-4
Manufacturer: Armstrong
Style: Ultima Health Zone
Edge: Beveled Tegular 9/16”
Number: 1936
NRC Rating: 0.70
CAC Rating: 38
AC Rating: NA
Color: White (WH)
Size: 24” x 24”
Location: Locker Rooms

ACT-5
Manufacturer: Armstrong
Style: Metalworks Securelock
Edge: Square Lay-In
Grid: Prelude XL 15/16” Exposed Tee
Number: 5488P4
NRC Rating: 0.85
CAC Rating: 38
AC Rating: NA
Color: White (WH)
Size: 24” x 24”
Location: Holding Areas all secure & detention
Grid: GR-2

ACT-6
Manufacturer: Armstrong
Style: Ultima Lay-in and Tegular
Edge: Beveled Tegular 9/16”
Number: 1915LEC
NRC Rating: 0.75
CAC Rating: 35
AC Rating: 170

Color: White (WH)
Size: 24” x 24”
Grid: GR-1
Location: Conference Rooms, Portion of Lobby above reception desk.

2.4 PANELS SUSPENSION SYSTEMS, GENERAL

A. Metal Suspension System Standard: Provide manufacturer's standard direct-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable requirements in ASTM C 635.

A. Finishes and Colors, General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes. Provide manufacturer's standard factory-applied finish for type of system indicated.

B. Wire Hangers, Braces, and Ties: Provide wires complying with the following requirements:

1. Zinc-Coated Carbon-Steel Wire: ASTM A 641, Class 1 zinc coating, soft temper.
2. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
3. Size: Select wire diameter so its stress at three times hanger design load (ASTM C 635, Table 1, "Direct Hung") will be less than yield stress of wire, but provide not less than 0.106-inch- diameter wire.

C. Hold-Down Clips: Where indicated, provide manufacturer's standard hold-down clips spaced 24 inches o.c. on all cross tees.

2.5 METAL SUSPENSION SYSTEM FOR ACOUSTICAL PANEL CEILINGS.

A. Narrow-Face, Capped, Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/A 653M, not less than G30 (Z90) coating designation, with prefinished 9/16-inch- (24-mm-)wide metal caps on flanges.

1. Structural Classification: Intermediate-duty system.
2. Face Design: Flat, flush.
3. Cap Material: Prefinished galvanize steel in baked polyester paint.
1. Cap Finish: Painted White.

2.6 ACOUSTICAL SEALANT

B. Products:

1. Acoustical Sealant for Exposed and Concealed Joints:
   a. Pecora Corp; AC-20 FTR Acoustical and Insulation Sealant.
   b. United States Gypsum Co.; SHEETROCK Acoustical Sealant.

2. Acoustical Sealant for Concealed Joints:
   a. OSI Sealants, Inc.; Pro-Series SC-170 Rubber Base Sound Sealant.
   b. OSI Sealants, Inc.; Pro-Series SC-175 Rubber Base Sound Sealant.

c. Pecora Corp.; BA-98.
d. Tremco, Inc.; Tremco Acoustical Sealant.

C. Acoustical Sealant for Exposed and Concealed Joints: Manufacturer's standard nonsag, paintable, nonstaining latex sealant, with a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), complying with ASTM C 834 and effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies according to ASTM E 90.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.3 INSTALLATION, GENERAL

A. General: Install acoustical panel ceilings to comply with ASTM C 636 and seismic requirements indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Splay hangers only where required and, if permitted with fire-resistance-rated ceilings, to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
4. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

5. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
6. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.
7. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
8. Do not attach hangers to steel deck tabs.
9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 48 inches o.c. along each member supported directly from hangers, unless otherwise indicated; provide hangers not more than 8 inches from ends of each member.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.

1. Arrange directionally patterned acoustical panels as follows:

   a. As indicated on reflected ceiling plans.

2. For reveal-edged panels on suspension system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
3. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated.

G. Seismic Design installed to ASTM E580: Follow manufacturer’s Seismic installation instructions for Seismic Design Category C.

3.4 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 23

SECTION 09 65 00 - RUBBER TILE FLOORING

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Athletic Rubber floor tile for the fitness room
   a. 15.2mm Fitness Vulcanized Composition Rubber Molded Interlocking Tiles

2. Stair tread & landings.

B. Related Sections:

1. Division 09 Section “Resilient Tile Flooring”.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product including but not limited to the following information as applicable:

1. Preparation instructions and recommendations.
2. Storage and handling requirements and recommendations.
3. Installation methods.
4. Maintenance recommendations.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.

1. MR Credit 2: Environmental Product Declarations

   a. Resilient flooring, if available.

2. MR Credit 3: Sourcing of Raw Materials

   a. Recycled content: Resilient flooring.
   b. Bio-based: Resilient flooring.

3. MR Credit 4: Material Ingredients

   a. Report: Resilient flooring, if available.

4. EQ Credit 2: Low-Emitting Materials

a. Products installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range.

1) Paints and Coatings: Include product data stating VOC content in grams per Liter (g/L).
2) Flooring: Resilient flooring.

C. Samples: Full-size units of each color, texture, and pattern of floor tile required.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: Minimum two years' experience and completed at least three projects of similar magnitude, material and complexity.

1.7 MOCKUPS

A. In-situ Mockup: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects and to set quality standards for materials, fabrication, and installation.

1. Size: 100 sq. ft.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials in manufacturer's original, unopened, undamaged wrapping and/or containers with identification labels intact clearly marking edge type, thickness, percentage of speckle and shade of color(s).

B. Inspection: Inspect all deliveries to ensure undamaged goods, and for accurate product type for thickness, edge type, color and speckle. Contact manufacturer immediately if product is damaged or inconsistent with order specifications.

C. Storage and Protection: Carefully handle all materials and store protected from exposure to harmful weather and at temperature conditions recommended by the manufacturer. Remove

pallet banding if long term storage is required, but leave other packaging intact until acclimation is to be started.

D. Flooring material and adhesive shall be acclimated to the installation area for a minimum of 24 hours prior to installation. See manufacturer’s installation guidelines for details on proper acclimation process.

1.9 FIELD CONDITIONS

A. Environmental Requirements/Conditions: In accordance with manufacturer's recommendations. Areas to receive flooring shall be clean, level, dry, fully enclosed, weather tight with the permanent HVAC set at a uniform temperature of at least 68 deg. F degrees and less than 85 deg. F continuously prior to, during and after installation, but for not less than 48 hours prior to and during, and for not less than 48 hours after installation. The flooring material shall be conditioned in the same manner prior to installation.

B. Close spaces to traffic during rubber flooring installation and for a period of time after installation as recommended in writing by the manufacturer.

C. Install rubber flooring materials and accessories after all other finishing operations, including painting, have been completed.

D. Concrete substrates should not exceed 80 percent RH and/or 5 lbs. X 24 hrs. X 1000 sf. moisture vapor emissions rate tested in accordance to ASTM F 2170 and ASTM F 1869.

1.10 WARRANTY

A. Warranty Period: Manufacturer's standard (10) Year Warranty against manufacturing defects.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide ECOfit Plus Interlocking Tile rubber flooring by Ecosurfaces or comparable products by one of the following manufacturers, but not limited to.

1. Armstrong Flooring Inc.
2. Tarkett North America.
3. Dinoflex Group LP

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.3 ATHLETIC RECYCLED RUBBER FLOORING TILES

A. Material shall be manufactured from a composition of recycled truck tire crumb rubber encapsulated in a urethane binder.

B. All tiles shall be square edge tile. 15.2 mm thick; 23" x 23" (58 cm x 58 cm), Approximately 2.0 lbs /ft2 (.907 kg/ft2) Thickness tolerance is a maximum of +/- 0.5mm.

C. Edge finish and product size: Square (23” x 23”).

D. Thickness: 15.2mm.

E. Color: To be selected by Architect from standard color range.

2.4 HOMOGENEOUS PERFORMANCE COMPOUND RUBBER TILE FLOORING

A. Material shall be a non-vulcanized, non-laminated tile product with homogeneous color, composed of post-consumer recycled SBR (styrene butadiene rubber) combined with low odour EPDM (ethylene propylene diene monomer) rubber granules, bound with a proprietary slow-cured MDI water-based polymer.

B. All tiles shall be produced in block form (not cut from rolled material) sliced and precision cut using computerized numerically controlled (CNC) water-based equipment. Thickness tolerance is a maximum of +/- 0.5mm.

C. All Recycled Rubber Tiles shall be FloorScore(R) certified under the criteria developed by the Resilient Floor Covering Institute (RFCI) and certified by Scientific Certification Systems (SCS), Inc. Registration # SCS-FS-02144.

2.5 SCHEDULE OF RUBBER TILES

RT-1

Manufacturer:	Ecosurfaces
Style:	ECOfitPlus
Color:	Take One 1214
Size:	15mm (0.60") x 48" (1.22m) x 25 LF (7.62m)
Installation:	Roll
Location:	Fitness Room

RT-2

Manufacturer:	Roppe
Style:	ReNew
Color:	R123 Charcoal
Finish:	Smooth
Size:	50cm x 50cm
Location:	B03, S02 Stair Landings

2.6 ACCESSORIES

A. Provide adhesives according to manufacturer’ recommendations and installation guidelines for specific substrate, and use only one of the following adhesives approved by the manufacturer:

1. Chemrex CX-941, one-component urethane, volatile organic compound (VOC) compliant. Chemrex Sealer/Primer to reduce vapor emissions over allowable levels
2. Bostik Green Fusion, one-component urethane, volatile organic compound (VOC) compliant
3. Or equal.

B. Portland based cementitious base leveler. Gypsum based not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Ensure that substrate is dry and clean, and shall be free of depressions, raised areas or other defects that might telegraph through installed flooring.

B. Ensure that substrate is flat and uniformly sloped. Allowable variations in substrate levels are +/- 1/8” in 10’-0” and 1/4” total maximum variation from levels shown.

C. Concrete Substrates: Prepare according to ASTM F710.

1. Verify a minimum of 30 days prior to the scheduled resilient flooring installation the following substrate conditions. All substrate testing shall be documented and submitted to the Architect and Owner before commencement of the flooring installation.

a. Verify that substrates are dry, free of debris, and that all curing compounds, sealers, and hardeners have properly cured.
b. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
c. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.
d. Moisture Testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing

3.3 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

H. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.

B. Perform the following operations immediately after completing floor tile installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Cover floor tile until Substantial Completion.

END OF SECTION 09 62 00

SECTION 09 65 13 - RESILIENT WALL BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Resilient wall base.
2. Accessories.

B. Related Sections:

1. Division 09 Section “Resilient Tile Flooring”.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.

1. MR Credit 2: Environmental Product Declarations

    a. Resilient base, if available

2. MR Credit 3: Sourcing of Raw Materials
    a. Recycled content: Resilient flooring, base
    b. Bio-based: Resilient base
    c. Manufacturers with extended producer responsibility programs: Rubber products

3. MR Credit 4: Material Ingredients

    a. Report: Resilient base, if available

4. EQ Credit 2: Low-Emitting Materials

    a. Products installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range.

        1) Installation materials: Include product data stating VOC content in grams per Liter (g/L).

C. Samples: For each exposed product and for each color and texture specified, not less than 12 inches long.

D. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish not less than 10 linear feet for every 500 linear feet or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.5 QUALITY ASSURANCE

A. Installation Qualifications: Contractors for floor covering installation should be experienced in managing commercial flooring projects and provide professional installers, qualified to install the various flooring materials specified.

1.6 MOCKUPS

A. In-situ Mockup: Build mockups of each type of resilient base to demonstrate aesthetic effects and to set quality standards for materials, fabrication, and installation.

1. Size: (1) room of each type.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F.

1.8 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive resilient products during the following periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Install resilient products after other finishing operations, including painting, have been completed.

1.9 EXTRA MATERIALS REQUIREMENTS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
   1. Furnish not less than 10 linear feet for every 500 linear feet or fraction there of, of each type, color, pattern, and size of resilient product installed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products listed elsewhere in Part 2 by Tarkett North America or comparable products by one of the following manufacturers, but not limited to

   a. Armstrong Flooring Inc.
   b. Roppe Corporation USA.

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient tile flooring, as determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.

   1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.3 MATERIALS, GENERAL

A. Emissions: Comply with emissions requirements of CDPH Standard Test Method in Division 01 Section “Sustainable Design Requirements – LEED”.

B. Bio-based Materials: Base with bio-based material per ASTM Test Method D6866 that is legally harvested and meeting the Sustainable Agriculture Network’s Sustainable Agriculture Standard.

C. Recycled Content: Provide products with recycled content.

2.4 RESILIENT WALL BASE (RB-1)

A. Basis-of-Design Product: Tarkett Johnsonite Vinyl 1/8 (type TV).
   1. Product Standard: Meets performance requirements for ASTM F1861 Standard Specification for Resilient Wall Base, Type TV, Group 1.
   2. Profile: Traditional Toe Cove
   3. Height: 4”

4. Thickness: 1/8”
5. Type: TV
6. Lengths: Cut lengths coils
7. Outside Corners: Job formed
8. Inside Corners: Job formed.
9. Color: 20 Charcoal WG

B. Test Data:

1. Resistance to light, ASTM F1515: Passes
2. Resistance to chemicals, ASTM F925: Passes
3. ASTM E 648, Standard Test Method for Critical Radiant Flux of 0.45 watts/cm^2 or greater, Class 1.

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

1. Adhesives shall have a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24), except that adhesive for rubber stair treads shall have a VOC content of 60 g/L or less.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

C. Do not install resilient products until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.

D. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:

1. Outside Corners: Use straight pieces of maximum lengths possible.

a. Form without producing discoloration (whitening) at bends.

2. Inside Corners: Use straight pieces of maximum lengths possible.

a. Miter or cope corners to minimize open joints.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.

B. Perform the following operations immediately after completing resilient-product installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum horizontal surfaces thoroughly.
3. Damp-mop horizontal surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, adhesive, and blemishes from resilient stair treads before applying liquid floor polish.

1. Apply manufacturer’s recommended number of coats.

E. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION 09 65 13

SECTION 096519 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Luxury Vinyl Tile (LVT)

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.

1. MR Credit 2: Environmental Product Declarations

a. Resilient flooring, if available.

2. MR Credit 3: Sourcing of Raw Materials

a. Recycled content: Resilient flooring.
b. Bio-based: Resilient flooring.

3. MR Credit 4: Material Ingredients

a. Report: Resilient flooring, if available.

4. EQ Credit 2: Low-Emitting Materials

a. Products installed in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range.

1) Paints and Coatings: Include product data stating VOC content in grams per Liter (g/L).
2) Flooring: Resilient flooring.

C. Samples: Full-size units of each color, texture, and pattern of floor tile required.

1. For heat-welding bead, manufacturer's standard-size Samples, but not less than 12 inches long, of each color required.

D. Product Schedule: For floor tile.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor tile to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish one box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.

1.6 MOCKUPS

A. In-situ Mockup: Build mockups of each LVT and VCT color and style to demonstrate aesthetic effects and to set quality standards for materials, fabrication, and installation.

1. Size: (1) room of each type.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store floor tile and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 50 deg F or more than 90 deg F. Store floor tiles on flat surfaces.

1.8 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 70 deg F or more than 95 deg F, in spaces to receive floor tile during the following periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 55 deg F or more than 95 deg F.

C. Close spaces to traffic during floor tile installation.

D. Close spaces to traffic for 48 hours after floor tile installation.

E. Install floor tile after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products listed elsewhere in Part 2 by ShawContract or comparable products by one of the following manufacturers, but not limited to

1. Armstrong Flooring Inc.
2. Tarkett North America.

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Test-Response Characteristics: For resilient floor tile, as determined by testing identical products according to ASTM E648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

2.3 MATERIALS, GENERAL

A. Resilient flooring installed within the building interior: Comply with emissions requirements of CDPH Standard Test Method in Division 01 Section “Sustainable Design Requirements – LEED”.

B. Bio-based Materials: Base with bio-based material per ASTM Test Method D6866 that is legally harvested and meeting the Sustainable Agriculture Network’s Sustainable Agriculture Standard.

C. Recycled Content: Provide products with recycled content.

2.4 LUXURY VINYL TILE (LVT)

A. Basis-of-Design Manufacturer: Subject to compliance with requirements, provide products listed below by ShawContract or comparable products by one of the following manufacturers, but not limited to

1. Armstrong Flooring Inc.
2. Tarkett North America.

LVT-1
Manufacturer: Shaw Contract
Collection: Dialogue
Pattern: Coded 4143V
Color: Engage 43595
Size: 6 in x 48 in
Location: Typical, see plan and schedule

LVT-2
Manufacturer: Shaw Contract
Collection: Compound + Cast
Pattern: Compound 5.0 4077V
Color: Granite 77585

Size: 24 in x 24 in
Location: Accent in corridors

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by floor tile manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by floor tile and adhesive manufacturers to suit floor tile and substrate conditions indicated.

C. Floor Polish: Provide protective, liquid floor-polish products recommended by floor tile manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of floor tile.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to floor tile manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates: Prepare according to ASTM F710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by floor tile manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by floor tile manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing.
4. Moisture Testing: Perform tests so that each test area does not 1000 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install floor tiles until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient floor tile and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient floor tile.

3.3 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half tile at perimeter.

1. Lay tiles in pattern indicated.

C. Match floor tiles for color and pattern by selecting tiles from cartons in the same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed tiles.

1. Lay tiles in pattern of colors and sizes indicated.

D. Scribe, cut, and fit floor tiles to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

E. Extend floor tiles into toe spaces, door reveals, closets, and similar openings. Extend floor tiles to center of door openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor tiles as marked on substrates. Use chalk or other nonpermanent marking device.

G. Install floor tiles on covers for telephone and electrical ducts, building expansion-joint covers, and similar items in installation areas. Maintain overall continuity of color and pattern between pieces of tile installed on covers and adjoining tiles. Tightly adhere tile edges to substrates that abut covers and to cover perimeters.

H. Adhere floor tiles to substrates using a full spread of adhesive applied to substrate to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

3.4 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting floor tile.

B. Perform the following operations immediately after completing floor tile installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect floor tile from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, adhesive, and blemishes from floor tile surfaces before applying liquid floor polish.

1. Apply manufacturer’s recommended number of coats.

E. Cover floor tile until Substantial Completion.

END OF SECTION 09 65 19

SECTION 09 66 23 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Thin-set, epoxy-resin terrazzo flooring.
2. Thin-set, integral epoxy terrazzo base.
3. Thick-set, precast epoxy terrazzo stair tread and riser units.

B. Related Requirements:

1. Division 07 Section "Joint Sealants" for sealants installed with terrazzo.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
c. Review special terrazzo designs and patterns.
d. Review dust-control procedures.
e. Review detail conditions at all penetrations, terminations, and perimeter conditions.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals: Comply with Division 01 Section “Sustainable Design Requirements – LEED”.

1. EQ Credit 2: Low- Emitting Materials

a. Paints and Coatings applied in building interior: Certificate stating compliance with California Department of Public Health (CDPH) Standard Method including TVOC range and product data stating VOC content in grams per Liter (g/L).

C. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work. Show layout of the following:

1. Divider strips.
2. Control-joint strips.
3. Accessory strips.
4. Abrasive strips.
5. Stair treads, risers, and landings.
6. Precast terrazzo jointing and edge configurations.
7. Terrazzo patterns.

D. Samples: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo Sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in sizes indicated below:

1. Terrazzo: 6-inch-square Samples.
2. Precast Terrazzo Base: 6-inch-long Samples.
3. Precast Terrazzo Stair Treads and Risers: 12-inch-long Samples.
4. Accessories: 6-inch-long Samples of each exposed strip item required.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material Certificates: For each type of terrazzo material or product.

C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

D. Preinstallation moisture-testing reports.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For terrazzo to include in maintenance manuals.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. Engage an installer who is a contractor member of NTMA.
2. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
3. Engage an installer who has not less than ten years satisfactory experience in the application of resinous terrazzo flooring and continuous membership in the NTMA for the same period of time.
4. Engage an installer who has satisfactorily completed not less than three projects of similar complexity and scope to that specified for this project.

B. Manufacturer Qualifications: Manufacturer shall have not less than ten years satisfactory experience in the manufacture of resinous terrazzo flooring and continuous membership in the NTMA for the same period of time.

1.8 MOCKUPS

A. In-situ Mockup: Build mockups of each terrazzo application to demonstrate aesthetic effects and to set quality standards for materials, fabrication, and installation.

1. Size:

a. Minimum 100 sq. ft. of typical poured-in-place flooring and base condition for each color and pattern in locations directed by Architect.
b. Include minimum (3) stair treads and risers plus (1) intermediate landing.

2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.

C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.

D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.

E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

1.11 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace terrazzo that fails in materials or workmanship within specified warranty period.

1. Warranty Period: (2) years from date of Substantial Completion.
2. Includes loss of bond and damage due to normal wear and tear.

B. Installer's Warranty: Installer agrees to repair or replace terrazzo that fails in materials or workmanship within specified warranty period.

1. Warranty Period: (2) years from date of Substantial Completion.
2. Includes loss of bond and damage due to normal wear and tear.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.

B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

C. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products which may be incorporated in the Work include, but are not limited to, the following:

1. Master Terrazzo Technologies, LLC.
2. Polymerica Incorporated.
3. Sherwin-Williams High Performance Flooring.

2.2 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

1. Comply with NTMA Technical Bulletin No. 36, Terrazzo Coefficient of Friction.

2.3 MATERIALS, GENERAL

A. Interior wet-applied primers, sealers, and coatings: Comply with emissions requirements of CDPH Standard Test Method and VOC content limits in Division 01 Section “Sustainable Design Requirements – LEED”.

2.4 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.

B. Thickness: 3/8 inch.

C. Mix Color and Pattern: Comply with NTMA's "Guide Specification for Epoxy Terrazzo" and manufacturer's written instructions for component proportions and mixing. Adjust mixes as required to match Architect's samples. The trial mix designs are based on the following:

1. TZ-1
   Manufacturer: Wausau Tile
   Collection: Terrazzo Tile
   Pattern: Reflections
   Color: TZ301 Frost
   Size: See plans
   Location: Lobby

D. Materials:

1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 3 lb of water/1000 sq. ft. in 24 hours.
2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.

   a. Reinforcement: Fiberglass scrim.

3. Primer: Manufacturer's product recommended for substrate and use indicated.
4. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.

   a. Physical Properties without Aggregates:

      1) Hardness: 60 to 85 per ASTM D2240, Shore D.
      2) Minimum Tensile Strength: 3000 psi per ASTM D638 for a 2-inch specimen made using a "C" die per ASTM D412.
      3) Minimum Compressive Strength: 10,000 psi per ASTM D695, Specimen B cylinder.
      4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.

         a) Distilled water.
         b) Mineral water.
         c) Isopropanol.
         d) Ethanol.
         e) 0.025 percent detergent solution.
         f) 1.0 percent soap solution.
         g) 5 percent acetic acid.
         h) 10 percent sodium hydroxide.
         i) 10 percent hydrochloric acid.
         j) 30 percent sulfuric acid.

   b. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 1/4-inch nominal thickness, and cured for 7 days at 75 deg F plus or minus 2 deg F and at 50 percent plus or minus 2 percent relative humidity.

1) Flammability: Self-extinguishing, maximum extent of burning 1/4 inch according to ASTM D635.
2) Thermal Coefficient of Linear Expansion: 0.0025 inch/inch per deg F according to ASTM C531.

5. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.

a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
b. 24-Hour Absorption Rate: Less than 0.75 percent.
c. Dust Content: Less than 1.0 percent by weight.

6. Finishing Grout: Resin based.

2.5 PRECAST EPOXY-RESIN TERRAZZO

A. Precast Terrazzo Base: Minimum 3/8-inch-thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 36 inches. Comply with manufacturer's written instructions for fabricating precast terrazzo base units in sizes and profiles indicated.

1. Type: Coved with minimum 3/4-inch radius.
2. Top Edge: Radius edge with polished top surface.
3. Outside Corner Units: With finished returned edges at outside corner.
4. Color, Pattern, and Finish: Match adjacent poured-in-place terrazzo flooring.

2.6 STRIP MATERIALS

A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.

1. Material: Brass.
2. Top Width: 1/8 inch.

B. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

C. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:

1. Edge-bead strips for exposed edges of terrazzo.

2.7 MORTAR MATERIALS

A. General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

B. Latex-Portland Cement Slurry Bond Coat: Latex additive (water emulsion), serving as replacement for any gauging water, combined at job site with prepackaged dry mortar mix supplied or specified by latex additive manufacturer.

1. Products: Provide the following:

    a. Liquid Component: Laticrete 4237 Thin-set Mortar Additive; Latecrete International. Inc.
    b. Prepackaged Dry Mortar Mix: Laticrete 211 Crete Filler Powder; Laticrete International, Inc.

C. Latex-Portland Cement Mortar Bed: Latex additive (water emulsion), serving as replacement for any gauging water, combined at job site with prepackaged dry mortar mix supplied or specified by latex additive manufacturer.

2.8 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.

1. Adhesives shall have a VOC content of 70 g/L or less.

B. Anchoring Devices:

1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer.

1. Surface Friction: Not less than 0.6 according to ASTM D2047.
2. Acid-Base Properties: With pH factor between 7 and 10.
3. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers," CDPH standard method version 1.2.

G. Joint Sealants: Recommended by terrazzo and sealant manufacturers and complying with requirements in Division 07 Section "Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.

    a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
    b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
    c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

D. Preinstallation Moisture Testing:

1. Testing Agency: Engage a qualified testing agency to perform tests.
2. Moisture Testing: Perform tests so that each test area does not exceed 200 sq. ft. and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

    a. Moisture-Vapor-Emission Test: Maximum moisture-vapor-emission rate of 3 lb of water/1000 sq. ft. in 24 hours when tested according to ASTM F1869 using anhydrous calcium chloride.
    b. Relative Humidity Test: Maximum 75 percent relative humidity measurement when tested according to ASTM F2170 using in-situ probes.

3. Proceed with terrazzo installation only after concrete substrates pass moisture testing or after installation of moisture-vapor-emission-control membrane on substrate areas that fail testing.

E. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.

1. Install concrete substrates that fail preinstallation moisture testing.

F. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.

1. Prepare and prefill substrate cracks with membrane material.
2. Install membrane at substrate cracks in areas to receive terrazzo.
3. Reinforce membrane with fiberglass scrim.

G. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.

1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Strip Materials:

1. Divider and Control-Joint Strips:

a. Locate divider strips in locations indicated and as recommend by manufacturer.
b. Install control-joint strips back to back and directly above concrete-slab control joints.
c. Install control-joint strips with 1/4-inch gap between strips, and install sealant in gap.
d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install as required to provide a complete installation.

C. Apply primer to terrazzo substrates according to manufacturer's written instructions.

D. Broadcast aggregate evenly throughout topping mix to assure even distribution of aggregate in finished floor surface. Remove and reinstall panels of terrazzo exhibiting uneven distribution of aggregate upon direction of Architect.

E. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.

1. Installed Thickness: 3/8 inch nominal.
2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.

a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.

c. Fine Grinding: Grind with 120 or finer grit stones until all grout is removed from surface. Repeat rough grinding, grout coat, and fine grinding if large voids exist after initial fine grinding. Produce surface with a minimum of 70 percent aggregate exposure.
d. Repeat rough grinding, grout coat, and fine grinding if large voids exist after initial fine grinding. Produce surface with a minimum of 70 percent aggregate exposure.
e. Contractor shall be solely responsible for repairing any during the terrazzo finishing process.

3. Installation Tolerance: Limit variation in terrazzo surface from level to 1/4 inch in 10 feet; noncumulative.

3.4 PRECAST TERRAZZO INSTALLATION

A. Install precast terrazzo units using method recommended in writing by NTMA and manufacturer unless otherwise indicated.

B. Do not install units that are chipped, cracked, discolored, or improperly finished.

C. Seal joints between units with joint sealant.

3.5 REPAIR

A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by Architect.

3.6 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION 09 66 23

SECTION 09 67 26 – DECORATIVE HIGH-PERFORMANCE FLOORING SYSTEM

PART 1 GENERAL

1.1 SECTION INCLUDES
Poured Epoxy Resin Flooring

A. Epoxy primer

B. Epoxy resin binder

C. Urethane finish coat

1.2 RELATED SECTIONS

A. Section 03 30 00 - Cast-in-Place Concrete.

1.3 REFERENCES

A. ASTM C 307 - Tensile Strength of Chemical-Resistant Mortar, Grouts, and Monolithic Surfacings.

B. ASTM C 413 - Absorption of Chemical-Resistant Mortars, Grouts, and Monolithic Surfacings.

C. ASTM C 579 - Compressive Strength of Chemical-Resistant Mortars, Grouts, Monolithic Surfacings, and Polymer Concretes.

D. ASTM D 696 - Coefficient of Linear Thermal Expansion of Plastics.

E. ASTM D-790 – Flexural Strength/Flexural Modulus of Elasticity

F. ASTM D-1644 – Determination of Solids Content

G. ASTM D-1044 – Abrasion Resistance by Tabor Abrasor

H. ASTM D 2240 - Rubber Property - Durometer Hardness.

I. ASTM D 4258 - Surface Cleaning Concrete for Coating.

J. ASTM D 4259 - Abrading Concrete.

K. ASTM C-413 - Water Absorption

L. ICRI Guideline 03732 – Selecting and Specifying Concrete Surface Preparation for Sealers, Coatings and Polymer Overlays

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's product data, including physical properties and colors available.

B. Manufacturer: Submit Manufacturer’s current ISO 9001 Certificate of Registration.

B. Sustainable Design Submittals:

1. Submit sustainable design certificate for recycled content.
2. Submit sustainable design certificate for products manufactured within 500 miles of the building site location.
3. Submit sustainable design certificate for low-emitting sealers.

C. Product Samples: Submit Architectural Standard samples representative of the final finish, as applied. The Standard shall be approved in writing by the Architect and shall be the final standard of acceptance of the finish.

D. Maintenance Instructions: Submit manufacturer's maintenance instructions, including maintenance procedures and materials, procedures for stain removal and surface repair, and recommended schedule for cleaning.

1.5 QUALITY ASSURANCE

A. Qualifications:
   1. Applicator: Use applicator experienced in application of specified materials for a minimum of [5] [Five] years on projects of similar size and complexity. Provide list of completed projects including project name and location, name of architect, name of material manufacturer, and approximate quantity of materials applied.
   2. Applicator's Personnel: Employ only persons trained for application of specified materials.

B. Pre-application Meeting: Convene a pre-application meeting [2] [Two] weeks before start of application of floor coating. Require attendance of parties directly affecting work of this section, including Contractor, Architect, applicator, and manufacturer's representative. Review surface preparation, priming, application, curing, protection, and coordination with other work.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site in manufacturer's original, unopened containers and packaging, with labels clearly identifying product name, manufacturer, batch or lot number, and date of manufacture. Do not store in direct sunlight or high heat conditions.

B. Storage:
   1. Store materials in accordance with manufacturer’s instructions.
   2. Keep containers sealed until ready for use.
   3. Do not subject material to excessive heat or freezing; do not apply material that has been subjected to excessive heat or freezing. Material subjected to excessive heat or freezing shall be separated from inventory and destroyed by mixing all three components. The solid reacted product shall be disposed of in environmentally sound and regulatory compliant manner.
   4. Shelf life: 1 [one] year after date of manufacture, in unopened containers, under normal conditions.

C. Handling: Protect materials during handling and application to prevent damage or contamination.

D. Condition materials for use to 60º – 85ºF (15º - 30ºC) for 24 hours prior to application.

1.7 SITE CONDITIONS

A. Do not apply materials if floor or air temperature is below 60ºF (15ºC).

B. Do not apply materials if relative humidity is above 85 percent or within 5º of dew point at time of application [Omit if not applicable]

C. Utilities, including electric, water, heat and finished lighting shall be supplied by General Contractor

D. Maintain room temperature between 60º – 85ºF (15º - 30ºC) for 48 hours before, during and 48 hours after installation, or until cured.

E. At the time of application ensure the minimum substrate temperature is above 60°F (15°C) and the substrate temperature is 5°F (3°C) above the measured dew point at the time of application. [Omit if not applicable]

F. Erect suitable barriers and post legible signs at points of entry to prevent traffic and trades from entering the work area during application and cure period of the floor.

G. Protection of finished floor from damage by subsequent trades shall be the responsibility of the General Contractor.

1.8 WARRANTY

A. Provide a warranty covering materials and workmanship for a period of two (2) years after date of substantial completion.

PART 2 PRODUCTS

2.1 MANUFACTURER

A. Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

B. Manufacturer shall be certified under ISO 9001: All liquid materials, including primers, resins, curing agents, finish coats, and sealants are manufactured and tested under an ISO 9001 registered quality system.

C. Approved Manufacturer shall be Sika Corp., Industrial Flooring, 201 Polito Avenue, Lyndhurst, NJ 07071
Phone 201.933.8800
Fax 201.933.6225
usa.sika.com

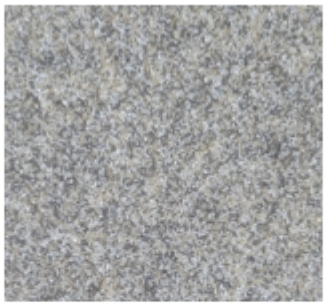
D. Or approved equal.

2.2 SYSTEM

A. Description: Decodur Granite is a component based granite effect, flooring system that is designed to be installed between 80 – 100 mils/112 - 118 mils total system (primer/finish) thickness.

2.3 MATERIALS

EPOXY PE-1
DURAFLEX
DUR-A-CHIP ONE
PEWTER ¼" FLAKE
RESTROOMS



EPOXY PE-2
DURAFLEX
DUR-A-QUARTZ
Q28-23
HOLDING

EPOXY PE-3
DURAFLEX
DUR-A-CHIP ONE
COBALT ¼" FLAKE
LOCKER ROOM

A. Sikafloor® 161 Epoxy Primer CHANGE TO DURAFLEX
   1. 100% solids, Low modulus, low viscosity, penetrating epoxy primer for concrete.
   2. Apply in accordance with the Manufacturer's published technical data.
   3. Optional Primers: Sikafloor 160 (low VOC), Sikafloor 1610 (high moisture concrete, Sikafloor 2570WB (water based). Consult Manufacturer's published technical data for applicable uses.

B. Sikafloor® 218DF/Decodur Granite Body Coat

   1. Description: Two component, high solids epoxy for use as aggregate binder for Sikafloor Decodur Granite. Material shall only be applied in conjunction with Sikafloor DecoDur Granite specification aggregate, no other aggregates shall be used.
   2. Apply in strict accordance with the Manufacturer's published technical data and instruction. Apply in one [1] application/coat at 80 – 100 mils (2.03 – 25.0mm)
   3. Hardness: ASTM D-2240 80 (Shore D)
   4. Bond Strength: ASTM D-4541 >400 psi (2.76 MPa) (100% concrete failure)
   5. Tensile Strength: ASTM D-638 5,728 psi (27.4 MPa)
   6. Compressive Strength: ASTM D-579 7,250 psi (34.7 MPa)
   7. Impact Resistance: ASTM D-2794 160 in-lbs. (18.1 N-m)
   8. Flexural Strength: ASTM D790 9,384 psi (44.9 MPa)
   9. Abrasion Resistance: ASTM D-4060 76 mg loss (CS-17 wheel,1000 cycles)
   10. Flammability (Base with any finish coat) ASTM E-648 Class I
   11. Slip Resistance, Sikafloor 304W finish coat: ANSI A137.1 0.58 Wet/Dynamic

   a. Engineered Resin Flooring (PE-1)

1. Color: to be selected by Architect

b. Engineered Resin Flooring (PE-2)
1. Color: to be selected by Architect

.

C. Sikafloor® 304W

1. Description: Clear, low VOC, clear, two-part, water based polyurethane, matte finish coat for use with Sikafloor Decodur Granite seamless flooring system.
2. Apply in accordance with the Manufacturer's published technical data.
3. Apply in one coat at 5 mils WFT.

C. Schedule of Poured Epoxy Resin Flooring

PE-1
Manufacturer: Sika Flooring
Collection: DecoDur Flake FX
Pattern: Contemporary Blends
Color: Pumicite
Size: 1/8" Flake
Location: 125/126 Public Restrooms, 215.1 Captain's Restroom

PE-2
Manufacturer: Sika Flooring
Collection: DecoFlake
Pattern: Understated Style
Color: Sublime
Size: 1/8" Flake
Location: Staff Restrooms

PE-3
Manufacturer: Sika Flooring
Collection: DecoDur Flake FX
Pattern: Contemporary Blends
Color: Pebble
Size: 1/8" Flake
Location: Holding

PART 3 EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive Sikafloor® Decodur Granite system. Notify Architect if surfaces are not acceptable. Do not begin surface preparation or application until unacceptable conditions are corrected. Do not apply to substrate treatments for moisture, repair, or leveling not of the same Manufacturer.

B. Conduct quantitative moisture testing in accordance with ASTM-F2659-10 utilizing Tramex type impedance moisture meter. Maximum acceptable test result is 4%. If in excess of stated value, utilize Sikafloor® 1610 moisture tolerant epoxy primer, or PurCem® 24NA to produce acceptable coating surface. Adhere to Manufacturer's published technical data and instruction.

C. Do not apply Sikafloor® Decodur Granite system to concrete less than 60 days old. Consult Technical Service prior to application when concrete has not cured for 60 days.

D. Do not apply Sikafloor® Decodur Granite system to sand-cement setting beds, regardless of condition. Sand-cement beds shall be removed to structural concrete substrate and re-leveled/sloped as necessary to achieve grade and/or adequate drainage.

E. Do not apply to asphaltic or bitumen membranes, soft wood, aluminum, copper or fiberglass reinforced polyester/vinyl ester composites.

F. Application to glazed or vitrified brick and tile, structural wood, or steel shall be approved only with the Manufacturer's written recommendation.

3.2 UNDERLAYMENT TO CARPET BUILD-UP AREA

A. Sika Level-125, a one-component, durable and versatile cementitious underlayment for interior concrete and cementitious substrates, applied manually or by pump to produce a self-smoothing, rapid-set- ting, flat and economical substrate prior to the application of a final floor finish. Typical application thickness is 1/25 to 2 inches* (1 to 50 mm).

a. Underlayment installed per manufacturer's recommendations.

3.3 SURFACE PREPARATION

A. Prepare concrete surfaces in accordance with manufacturer's instructions and ASTM D 4258.

B. Remove dirt, oil, grease, wax, laitance, curing compounds, water-soluble concrete hardeners, and other surface contaminants.

C. Remove sealers, finishes, and paints.

D. Remove unsound concrete by scarifying, sand blasting, shot blasting, or high pressure water blasting.

E. Chemical Surface Preparation:

1. Chemical surface preparation (acid etching) is unacceptable and will void Manufacturer's warranty.

F. Mechanical Surface Preparation:

1. Mechanically abrade concrete surface in accordance with manufacturer's instructions.
2. Leave concrete surface with an aggressive texture.
3. Remove concrete dust.
4. Conform to ASTM D-4259.
5. Surface profile shall conform to IRCI Guideline 03732 CSP 4, minimum.

3.3 CONTROL JOINTS, CRACKS

A. Provide repair and treatment of control joints and surface cracks utilizing manufacturer's standard

materials and installation details.

3.4 APPLICATION

A. Repair concrete substrate as required using SikaQuick® 1000 cementious repair/resurfacer in accordance with Manufacturer's instructions.

B. Do not add thinners to materials. No thinners shall be approved.

C. For coverage rates, consult data sheet for Sikafloor® Decodur Granite system

D. Finish surface to be smooth, with uniform texture, free of surface defects, and without porous areas.

E. Follow Manufacturer’s recommendations on terminations and connections to walls, drains, doorways, columns and floor-to-floor transitions.

3.4 CLEANUP

A. Remove masking, draping, and other protection from adjacent surfaces.

B. Remove remaining materials and debris from job site and dispose of them in according with local rules and regulations. Leave area in clean condition free of debris.

3.6 PROTECTION

A. Protect Sikafloor® Decodur Granite system from damage after installation.

1. Foot Traffic: 12 to 16 hours.
2. Medium Wheeled Load 24 hours.
3. Full Cure: 72 hours

END OF SECTION 09 67 26

SECTION 09 68 10 - CARPET TILE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes modular construction carpet tile.

B. Related Sections include the following:
   1. Division 9 Section "Resilient Floor Tile" for resilient wall base and accessories installed with carpet tile.
   2. Division 9 Section "Carpet" for related areas.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include manufacturer's written data on physical characteristics, durability, and fade resistance. Include installation recommendations for each type of substrate.

B. Shop Drawings: Show the following:

   1. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.
   2. Existing flooring materials to be removed.
   3. Existing flooring materials to remain.
   4. Carpet tile type, color, and dye lot.
   5. Type of subfloor.
   6. Type of installation.
   7. Pattern of installation.
   8. Pattern type, location, and direction.
   9. Pile direction.
   10. Type, color, and location of insets and borders.
   11. Type, color, and location of edge, transition, and other accessory strips.
   12. Transition details to other flooring materials.

C. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

   1. Carpet Tile: Full-size Sample.
   2. Exposed Edge, Transition, and other Accessory Stripping: 12-inch- (300-mm-) long Samples.

D. Product Schedule: For carpet tile. Use same designations indicated on Drawings.

E. Qualification Data: For Installer.

F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency.

G. Maintenance Data: For carpet tiles to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet tile, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.
2. Precautions for cleaning materials and methods that could be detrimental to carpet tile.

H. Warranty: Special warranty specified in this Section.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the Floor Covering Installation Board or who can demonstrate compliance with its certification program requirements.

B. Fire-Test-Response Characteristics: Provide products with the critical radiant flux classification indicated in Part 2, as determined by testing identical products per ASTM E 648 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

C. Mockups: Before installing carpet tile, build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Approved mockups may become part of the completed Work if undamaged at time of Substantial Completion.

D. Preinstallation Conference: Conduct conference at Project site to comply with requirements in Division 1 Section "Project Management and Coordination." Review methods and procedures related to carpet tile installation including, but not limited to, the following:

1. Review delivery, storage, and handling procedures.
2. Review ambient conditions and ventilation procedures.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI 104, Section 5, "Storage and Handling."

1.6 PROJECT CONDITIONS

A. Comply with CRI 104, Section 7.2, "Site Conditions; Temperature and Humidity" and Section 7.12, "Ventilation."

B. Environmental Limitations: Do not install carpet tiles until wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

C. Do not install carpet tiles over concrete slabs until slabs have cured and are sufficiently dry to bond with adhesive and concrete slabs have pH range recommended by carpet tile manufacturer.

D. Where demountable partitions or other items are indicated for installation on top of carpet tiles, install carpet tiles before installing these items.

1.7 WARRANTY

A. Special Warranty for Carpet Tiles: Manufacturer's standard form in which manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, more than 10 percent loss of face fiber, edge raveling, snags, runs, loss of tuft bind strength, dimensional stability, excess static discharge, and delamination.
3. Warranty Period: 15 year wear warranty.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 10 sq. yd.

PART 2 - PRODUCTS

2.1 CARPET TILE

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following listed Basis of Design Shaw Contract collections and style selections:

CPT-1
Manufacturer: Shaw
Collection: Anthology
Style: Journal Tile 5T512
Color: Essay 75429
Size : 18” x 36”
Installation :Ashlar
Location: Community Room 106

CPT-2
Manufacturer: Shaw Contract
Collection: Bright Work

Pattern: Glimmer Tile 59329
Color: Flash Point 27485
Size: 24” x 24”
Installation: Ashlar
Location: Typ. Carpet

CPT-3
Manufacturer: Shaw Contract
Collection: Steppin Out
Pattern: Welcome II Tile Tt031
Color: Charcoal 31549
Size: 24” x 24”
Installation: Ashlar
Location: Vestibule

2.2 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by carpet tile manufacturer.

1. Acceptable Manufacturers and Products:
   a. Sure Crete Design Products
      5246 Citrus Country Drive
      Dade City, FL 33523
      Tel: 352-567-7973
   b. UMACO
      60 Rear Newhall Street,
      Lowell, MA 01852
      Tel: 978=-453-8881.
      www.umaco.com

B. Adhesives: Water-resistant, mildew-resistant, nonstaining, pressure-sensitive type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet tile and is recommended by carpet tile manufacturer for releasable installation.

1. VOC Limits: Provide adhesives that comply with the following limits for VOC content when tested according to ASTM D 5116:

   a. Total VOCs: 10.00 mg/sq. m x h.
   b. Formaldehyde: 0.05 mg/sq. m x h.
   c. 2-Ethyl-1-Hexanol: 3.00 mg/sq. m x h.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet tile performance. Examine carpet tile for type, color, pattern, and potential defects.

B. For wood subfloors, verify the following:

1. Underlayment over subfloor complies with requirements specified in Division 6 Section "Rough Carpentry."
2. Underlayment surface is free of irregularities and substances that may interfere with adhesive bond or show through surface.

C. Concrete Subfloors: Verify that concrete slabs comply with ASTM F 710 and the following:

1. Slab substrates are dry and free of curing compounds, sealers, hardeners, and other materials that may interfere with adhesive bond. Determine adhesion and dryness characteristics by performing bond and moisture tests recommended by carpet tile manufacturer.
2. Subfloor finishes comply with requirements specified in Division 3 Section "Cast-in-Place Concrete" for slabs receiving carpet tile.
3. Subfloors are free of cracks, ridges, depressions, scale, and foreign deposits.

D. For painted subfloors, verify the following:

1. Perform bond test recommended in writing by adhesive manufacturer.

E. For raised access flooring systems, verify the following:

1. Access floor complies with requirements specified in Division 10 Section "Access Flooring."
2. Access floor substrate is compatible with carpet tile and adhesive if any.
3. Underlayment surface is flat, smooth, evenly planed, tightly jointed, and free of irregularities, gaps greater than 1/8 inch, protrusions more than 1/32 inch (0.8 mm), and substances that may interfere with adhesive bond or show through surface.

F. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with CRI 104, Section 6.2, "Site Conditions; Floor Preparation," and with carpet tile manufacturer's written installation instructions for preparing substrates indicated to receive carpet tile installation.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 1/8 inch (3 mm) wide or wider and protrusions more than 1/32 inch (0.8 mm), unless more stringent requirements are required by manufacturer's written instructions.

C. Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by carpet tile manufacturer.

D. Clean metal substrates of grease, oil, soil and rust, and prime if directed by adhesive manufacturer. Rough sand painted metal surfaces and remove loose paint. Sand aluminum surfaces, to remove metal oxides, immediately before applying adhesive.

E. Broom and vacuum clean substrates to be covered immediately before installing carpet tile.

3.3 INSTALLATION

A. General: Comply with CRI 104, Section 14, "Carpet Modules," and with carpet tile manufacturer's written installation instructions.

B. Installation Method: As recommended in writing by carpet tile manufacturer - install every tile with full-spread, releasable, pressure-sensitive adhesive.

C. Maintain dye lot integrity. Do not mix dye lots in same area.

D. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

E. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

F. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on finish flooring as marked on subfloor. Use nonpermanent, nonstaining marking device.

G. Install pattern based on building design and installation efficiencies. Architect to approve layout before installation.

H. Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.

3.4 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet tile:

1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet tile manufacturer.
2. Remove yarns that protrude from carpet tile surface.
3. Vacuum carpet tile using commercial machine with face-beater element.

B. Protect installed carpet tile to comply with CRI 104, Section 16, "Protection of Indoor Installations."

C. Protect carpet tile against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods indicated or recommended in writing by carpet tile manufacturer.

END OF SECTION 09 68 10

SECTION 09 84 00 – ACOUSTICAL WALL PANELS

PART 1 – GENERAL

1.1 SUMMARY

A. This section includes the following:

1. Acoustical Wall Panel

1.2 SUBMITTALS

A. Shop Drawings: Show fabrication and installation details for acoustical wall panels, including plans, elevations, sections, details and attachment to other work.

B. Submittals: Furnish 12” x 12” samples, showing manufacture full range of colors, texture and patterns available for each type of acoustical product specified.

C. Product Test Report: From a qualified testing agency indicating wall panels comply with requirements.

D. Qualification Data: For firms specified in “Quality Assurance” Article to demonstrate their capabilities and experience.

E. Product Certificates: Signed by manufacturer certifying that the products furnished comply with requirements.

F. LEED Submittals:

1. MR Credit 4 - Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than 25 percent.
2. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost
3. Regional Materials: Manufacture products within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.
4. Environmental Product Declaration (EPD): For each product.
5. Certified Wood: Certify wood products as "FSC Pure" or "FSC Mixed Credit" in accordance with FSC STD-01-001 and FSC STD-40-004.
6. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.
7. Chain-of-Custody Qualification Data: For manufacturer and vendor.
8. Chain-of-Custody Qualification Data: For manufacturer and vendor.
9. Vendor Qualifications: A vendor that is certified for chain of custody by an FSCaccredited certification body.
10. Verify adhesives have a VOC content of **70** g/L or less.
11. Product Data: For adhesives, indicating VOC content.

12. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
13. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
14. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
15. Verify wall materials comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
16. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.
17. Environmental Product Declaration (EPT) submittal.
18. Health Product Declaration (HPE).

1.3 QUALITY ASSURANCE

A. Manufacturer Qualification: Manufacture shall have a minimum of 5 years experience in production of specified products and shall furnish supporting documentation showing completed jobs of approximately the same size and scope.

B. Fire Test Reports: Provide acoustical wall panels with the following surface-burning characteristics as per ASTM E 84.

1. Flame Spread: 25 or less
2. Smoke Developed: 450 or less

C. Acoustical Test Report: Provide acoustical test report from a qualified testing agency indicating acoustical wall panels meets 1.15 NRC per ASTM C-423.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Protect Acoustical Wall Panels from excessive moisture when shipping, storing, and handling. Deliver in unopened skids and store in a dry place with adequate air circulation. Do not delivery material until all wet-work has been completed.

1.5 EXTRA MATERIALS REQUIREMENTS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.
   a. Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than five devices, including unopened adhesives.

PART 2 – PRODUCTS

2.1 WALL PANELS, GENERAL (AWP)

A. Acoustical Wall Panels shall be 2” thick – 6.0-7.0 lb. per cubic foot high-density fine fibered fiberglass. Manufactures standard panel construction, fully wrapped hardened, panel manufactures standard full line of fabric.

B. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Standard and High-Impact Acoustic Panels
    a. Armstrong Direct Attached Tectum
    b. Decoustics, Getzville, NY 716-692-6332
    c. G&S Acoustics, St. Louis, MO 636-225-8800
    d. Kinetics Noise Control, Inc., Dublin OH 877-457-2695
    e. RPG Acoustical Systems, Inc., Passaic, NJ 973-916-1166

C. AWP-1 – 1” Direct Attached Tectum Panel factory painted custom color.
D. AWP-2 – 2” Fabric Wrapped and acoustical insulation backed panels on wood stretchers with FB-1
1. Collection: See finish legend for acoustically transparent fabric.
2. Color: FB-1 Designtex – Mélange – Caspian 3492-401
3. Size: See plans and elevations.
4. Edge: Square outer assembled perimeter. Square for interior adjoining edges.
5. Installation: 2” thick fabric-wrapped high-impact panel.
6. Location: Lobby.
E. AWP-3 – 2” Direct Attached Tectum Panel with 1” acoustical backing with field applied painted finish.

2.2 WALL PANEL FABRICS

A. Reference the drawings for FB-# to the AWP-#.

A. FB-1 FABRIC
Manufacturer: Designtex
Pattern: Mélange
Color: Caspian 3492-401
Location: Lobby .

2.3 CONSTRUCTION

A. The acoustical wall panel product shall be supplied in 48” wide panels with up to 120” length. All edges will be fully wrapped with mounting as indicated. For panels that are larger in size, are to panelized with equally spaced vertical and horizontal seams.

2.4 MOUNTING

A. Back-Mounting Accessories: Manufactures standard accessories for securely mounting panels, of type and size indicated and complying with the following requirements:

1. Mechanically Mounted Edge-Reinforced Panels: Metal clips designed to support weight of panels, mechanically attached to wall substrate according to manufactures standard pattern and adhesively bonded to back of panel, with base support brackets where recommended by manufacture for additional support of panels.

2.4 ACOUSTICAL PERFORMANCE

A. Acoustic performance for acoustic panels shall comply with the minimum noise reduction coefficient (NRC) ratings per ASTM C-423 “A” mounting:

1. AWP-1, AWP-2, AWP-3 – NRC 0.95

2.5 FLAMMABILITY RATING

A. All components shall have a Class A Flammability rating per ASTM E- 84: Surface Burning Characteristics of Building Materials, with a Flame Spread of 25 or less and Smoke Developed of 450 or less

PART 3 – EXECUTION

3.1 INSTALLATION

A. Install Acoustical Wall panels in locations indicated, top edges level and in alignment with other panels. Comply with manufactures written instructions for installation of panels using type of mounting accessories indicated or, if not indicated, as recommended by manufacture.

3.2 CLEANING

A. After completion of installation of panels, remove dust and other foreign material according to manufactures written instructions.

B. Remove surplus material, rubbish, and debris resulting from panel installation, on completion of the work, and leave areas of installation in a neat and clean condition.

END OF SECTION 09 84 00

SECTION 09 91 00 - PAINTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes surface preparation and field painting of exposed exterior and interior items and surfaces.

1. Surface preparation, priming, and finish coats specified in this Section are in addition to shop priming and surface treatment specified in other Sections.

B. Paint exposed surfaces, except where these Specifications indicate that the surface or material is not to be painted or is to remain natural. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

1. Painting includes field painting of exposed bare and covered pipes and ducts (including color coding), hangers, exposed steel and iron supports, and surfaces of mechanical and electrical equipment that do not have a factory-applied final finish.

C. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

D. Related Sections include the following:

1. Division 5 Section "Metal Fabrications" for shop priming ferrous metal.
2. Division 8 Section "Steel Doors and Frames" for factory priming steel doors and frames.
3. Division 9 Section "Gypsum Board Assemblies" for surface preparation of gypsum board.
4. Division 23 HVAC.
5. Division 22 Plumbing.
6. Division 26 Electrical.

1.3 DEFINITIONS

A. General: Standard coating terms defined in ASTM D 16 apply to this Section.

1. Flat refers to a lusterless or matte finish with a gloss range below 15 when measured at an 85-degree meter.
2. Eggshell refers to low-sheen finish with a gloss range between 20 and 35 when measured at a 60-degree meter.
3. Semigloss refers to medium-sheen finish with a gloss range between 35 and 70 when measured at a 60-degree meter.

4. Full gloss refers to high-sheen finish with a gloss range more than 70 when measured at a 60-degree meter.

1.4 SUBMITTALS

A. Product Data: For each paint system indicated. Include block fillers and primers.

1. Material List: An inclusive list of required coating materials. Indicate each material and cross-reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
2. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

B. LEED Submittals:

1. VOC Content: For field applications that are inside the weatherproofing system, verify paints and coatings comply with VOC content limits of authorities having jurisdiction and the following VOC content limits:
   a. Flat Paints and Coatings: 50 g/L.
   b. Nonflat Paints and Coatings: 50 g/L.
   c. Dry-Fog Coatings: 150 g/L.
   d. Primers, Sealers, and Undercoaters: 100 g/L.
   e. Rust-Preventive Coatings: 100 g/L.
   d. Zinc-Rich Industrial Maintenance Primers: 100 g/L.
   e. Pretreatment Wash Primers: 420 g/L.
   f. Shellacs, Clear: 730 g/L.
   g. Shellacs, Pigmented: 550 g/L
   h. Environmental Product Declaration: For each product.
   i. Health Product Declaration: For each product.
   j. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
   k. Manufacturer Inventory: For each product, provide manufacturer's manifest of ingredients.
2. Product Data: For paints and coatings, indicating VOC content.
   a. Laboratory Test Reports: For paints and coatings, indicating compliance with requirements for low-emitting materials.
3. Comply with Section 01 81 13
   a. MR Credit 2: BPDO – Environmental Product Declarations (EPD): For each product.
   b. MR Credit 3: BPDO – Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.
   c. MR Credit 4: BPDO – Material Ingredient Reports and/or Material Ingredient Optimization Reports and Action Plans.
      1) Health Product Declaration (HPD): For each product.

C. Samples for Initial Selection: For each type of finish-coat material indicated.

1. After color selection, Architect will furnish color chips for surfaces to be coated.

D. Samples for Verification: For each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.

1. Provide stepped Samples, defining each separate coat, including block fillers and primers. Use representative colors when preparing Samples for review. Resubmit until required sheen, color, and texture are achieved.
2. Provide a list of materials and applications for each coat of each Sample. Label each Sample for location and application.

E. Qualification Data: For Applicator.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

B. Source Limitations: Obtain block fillers and primers for each coating system from the same manufacturer as the finish coats.

C. Benchmark Samples (Mockups): Provide a full-coat benchmark finish sample for each type of coating and substrate required. Comply with procedures specified in PDCA P5. Duplicate finish of approved sample Submittals.

1. Architect will select one room or surface to represent surfaces and conditions for application of each type of coating and substrate.

a. Wall Surfaces: Provide samples on at least 100 sq. ft.
b. Small Areas and Items: Architect will designate items or areas required.

2. Apply benchmark samples, according to requirements for the completed Work, after permanent lighting and other environmental services have been activated. Provide required sheen, color, and texture on each surface.

a. After finishes are accepted, Architect will use the room or surface to evaluate coating systems of a similar nature.

3. Final approval of colors will be from benchmark samples.

1.6 EXTRA MATERIALS REQUIREMENTS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Paints: 5 percent, but not less than 1 gal. of each material and color applied.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label and the following information:

1. Product name or title of material.
2. Product description (generic classification or binder type).
3. Manufacturer's stock number and date of manufacture.

4. Contents by volume, for pigment and vehicle constituents.
5. Thinning instructions.
6. Application instructions.
7. Color name and number.
8. VOC content.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45 deg F. Maintain storage containers in a clean condition, free of foreign materials and residue.

1. Protect from freezing. Keep the storage area neat and orderly. Remove oily rags and waste daily.

1.8 PROJECT CONDITIONS

A. Apply waterborne paints only when temperatures of surfaces to be painted and surrounding air are between 50 and 90 deg F.

B. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 45 and 95 deg F.

C. Do not apply paint in snow, rain, fog, or mist; or when relative humidity exceeds 85 percent; or at temperatures less than 5 deg F above the dew point; or to damp or wet surfaces.

1. Painting may continue during inclement weather if surfaces and areas to be painted are enclosed and heated within temperature limits specified by manufacturer during application and drying periods.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, products listed in other Part 2 articles.

1. Benjamin Moore & Co. (Benjamin Moore)
2. M. A. Bruder & Sons, Inc. (M. A. B. Paint).
3. PPG Industries, Inc. (Pittsburgh Paints).
4. Sherwin-Williams Co. (Sherwin-Williams), basis-of-design products and colors.

2.2 PAINT MATERIALS, GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. Material Quality: Provide manufacturer's best-quality paint material of the various coating types specified that are factory formulated and recommended by manufacturer for application

indicated. Paint-material containers not displaying the manufacturer's product identification will not be acceptable.

1. Proprietary Names: Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

C. VOC Content: For field applications that are inside the weatherproofing system, verify paints and coatings comply with VOC content limits of authorities having jurisdiction.

D. Colors: As selected by Architect from manufacturer's full range.

1. Anticipate up to 4 exterior colors and 22 interior colors for conventional paint products (refer to Finish Schedule). Ceilings to be flat finish, walls to be eggshell finish, and trim to be semi-gloss finish.

2.3 CONCRETE UNIT MASONRY BLOCK FILLERS

A. Concrete Unit Masonry Block Filler: Factory-formulated high-performance latex block fillers.

1. Sherwin-Williams; LEED Compliant - Interior/Exterior Block Filler B25W25: Applied at a dry film thickness of not less than 8.0 mils., Basis of Design.

2.4 EXTERIOR PRIMERS

A. Exterior Wood Doors, Windows, Ceilings & Trim: Factory-formulated wood primer for exterior application.

1. Sherwin-Williams; Exterior Latex Wood Primer B42W8041: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

B. Exterior Hard Wood Surfaces: Factory-formulated oil-based wood primer for exterior application.

1. Sherwin-Williams; Exterior Oil Based Wood Primer Y24W8020: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

C. Exterior Ferrous-Metal Primer: Factory-formulated rust-inhibitive metal primer for exterior application.
1. Sherwin-Williams; LEED Compliant – Pro Industrial Pro-Cryl Universal Metal Primer B66-310: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

D. Exterior Galvanized Metal Primer: Factory-formulated galvanized metal primer for exterior application.
1. Sherwin-Williams; LEED Compliant - Pro Industrial Pro-Cryl Universal Metal Primer B66-310: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

2.5 INTERIOR PRIMERS

A. New Wood: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; Premium Wall/Wood B28W8111. Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

B. Old Wood: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; Adhesion Primer B51W8050. Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

C. Plaster: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; Adhesion Primer B51W8050. Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

D. Existing Plaster: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; Loxon Concrete/Masonry A24W8300. Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

E. Interior Concrete and Masonry Primer: Factory-formulated alkali-resistant acrylic-latex interior primer for interior application.

1. Sherwin-Williams; LEED Compliant – Loxon Concrete & Masonry Primer B28W8300: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

F. Interior Gypsum Board Primer: Factory-formulated latex-based primer for interior application.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Latex Wall Primer B28W600 Series: Applied at a dry film thickness of not less than 1.1 mils., Basis of Design.

G. Interior Ferrous-Metal Primer: Factory-formulated quick-drying rust-inhibitive alkyd-based metal primer.
1. Sherwin-Williams; LEED Compliant - Pro Industrial Pro-Cryl Universal Metal Primer B66-310: Applied at a dry film thickness of not less than 3.0 mils., Basis of Design.

2.6 EXTERIOR FINISH COATS

A. Exterior Wood Doors, Windows, Ceilings & Trim: Factory-formulated satin waterborne latex for exterior application.

1. Sherwin-Williams; Exterior Super Paint A89 Series: Applied at a dry film thickness of not less than 2.5-4.0 mils., Basis of Design.

B. Exterior Semigloss Acrylic Enamel: Factory-formulated semigloss waterborne acrylic-latex enamel for exterior application.

1. Sherwin-Williams; LEED Compliant - Pro Industrial 0 VOC Acrylic Semi-Gloss Coating, B66-650 Series: Applied at a dry film thickness of not less than 2.5-4.0 mils., Basis of Design.

2.7 INTERIOR FINISH COATS

A. Old & New Wood: Factory-formulated eggshell acrylic-latex interior enamel.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Interior Latex Eg-Shel, B20Series: Applied at a dry film thickness of not less than 1.7 mils., Basis of Design.

B. Old & New Plaster: Factory-formulated eggshell acrylic-latex interior enamel.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Interior Latex Eg-Shel, B20Series: Applied at a dry film thickness of not less than 1.7 mils., Basis of Design.

C. New Interior Gypsum Board Ceiling: Factory-formulated latex-based flat finish for interior application.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Interior Latex Flat, B30Series: Applied at a dry film thickness of not less than 1.7 mils., Basis of Design.

D. New & Old Painted Wood Floors: Factory-formulated finish for interior application.

1. Sherwin-Williams; LEED Compliant – Armorseal Tread Plex B90 Series: Applied at a dry film thickness of not less than 1.7 mils., Basis of Design.

E. Interior Low-Luster Acrylic Enamel: Factory-formulated eggshell acrylic-latex interior enamel.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Interior Latex Eg-Shel, B20W650 Series: Applied at a dry film thickness of not less than 1.7 mils., Basis of Design.

F. Interior Low-Luster Acrylic Enamel for Areas subject to Heavy Abrasion and Frequent Cleanings: Factory-formulated eggshell waterbased epoxy.

1. Sherwin-Williams; LEED Compliant - Industrial Pre-Catalyzed Waterbased Epoxy Eg-Shel, K45W151 Series: Applied at a dry film thickness of not less than 1.5 mils., Basis of Design.

G. Interior Semigloss Acrylic Enamel: Factory-formulated semigloss acrylic-latex enamel for interior application.

1. Sherwin-Williams; LEED Compliant - ProGreen 200 Interior Latex Semi-Gloss, B31W650 Series: Applied at a dry film thickness of not less than 1.5 mils., Basis of Design.

H. Interior Semigloss Acrylic Enamel for Ferrous & Galvanized Metal: Factory-formulated semigloss acrylic-latex enamel for interior application.
1. Sherwin-Williams; LEED Compliant - Pro Industrial 0 VOC Acrylic Semi-Gloss Coating, B66-650 Series: Applied at a dry film thickness of not less than 2.5-4.0 mils., Basis of Design.

2.8 INTERIOR WOOD STAINS AND VARNISHES

A. Open-Grain Wood Filler: Factory-formulated paste wood filler applied at spreading rate recommended by manufacturer.

1. Sherwin-Williams; Sher-Wood Fast-Dry Filler., Basis of Design.

B. Clear Sanding Sealer: Factory-formulated fast-drying alkyd-based clear wood sealer applied at spreading rate recommended by manufacturer.

1. Sherwin-Williams; Wood Classics Fast Dry Sanding Sealer B26V43, Basis of Design.

C. Stain: Factory-formulated stain applied at spreading rate recommended by manufacturer.

1. Sherwin-Williams; Wood Classics 250 VOC Satin, Basis of Design.

D. Finish: Factory-formulated finish applied at spreading rate recommended by manufacturer.

1. Sherwin-Williams; Wood Classics WB Poly A68F90 Satin, Basis of Design.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Applicator present, for compliance with requirements for paint application.

1. Proceed with paint application only after unsatisfactory conditions have been corrected and surfaces receiving paint are thoroughly dry.
2. Start of painting will be construed as Applicator's acceptance of surfaces and conditions within a particular area.

B. Coordination of Work: Review other Sections in which primers are provided to ensure compatibility of the total system for various substrates. On request, furnish information on characteristics of finish materials to ensure use of compatible primers.

1. Notify Architect about anticipated problems when using the materials specified over substrates primed by others.

3.2 PREPARATION

A. General: Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

B. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

C. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.
2. Cementitious Materials: Prepare concrete, concrete unit masonry, cement plaster, and mineral-fiber-reinforced cement panel surfaces to be painted. Remove efflorescence, chalk, dust, dirt, grease, oils, and release agents. Roughen as required to remove glaze. If hardeners or sealers have been used to improve curing, use mechanical methods of surface preparation.

    a. Use abrasive blast-cleaning methods if recommended by paint manufacturer.
    b. Determine alkalinity and moisture content of surfaces by performing appropriate tests. If surfaces are sufficiently alkaline to cause the finish paint to blister and burn, correct this condition before application. Do not paint surfaces if moisture content exceeds that permitted in manufacturer's written instructions.
    c. Clean concrete floors to be painted with a 5 percent solution of muriatic acid or another etching cleaner. Flush the floor with clean water to remove acid, neutralize with ammonia, rinse, allow to dry, and vacuum before painting.

3. Wood: Clean surfaces of dirt, oil, and other foreign substances with scrapers, mineral spirits, and sandpaper, as required. Sand surfaces exposed to view smooth and dust off.

    a. Scrape and clean small, dry, seasoned knots, and apply a thin coat of white shellac or other recommended knot sealer before applying primer. After priming, fill holes and imperfections in finish surfaces with putty or plastic wood filler. Sand smooth when dried.
    b. Prime, stain, or seal wood to be painted immediately on delivery. Prime edges, ends, faces, undersides, and back sides of wood, including cabinets, counters, cases, and paneling.
    c. If transparent finish is required, backprime with spar varnish.
    d. Backprime paneling on interior partitions where masonry, plaster, or other wet wall construction occurs on back side.
    e. Seal tops, bottoms, and cutouts of unprimed wood doors with a heavy coat of varnish or sealer immediately on delivery.

4. Ferrous Metals: Clean ungalvanized ferrous-metal surfaces that have not been shop coated; remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC's recommendations.

    a. Blast steel surfaces clean as recommended by paint system manufacturer and according to SSPC-SP 6/NACE No. 3.
    b. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
    c. Touch up bare areas and shop-applied prime coats that have been damaged. Wire-brush, clean with solvents recommended by paint manufacturer, and touch up with same primer as the shop coat.

5. Galvanized Surfaces: Clean galvanized surfaces with nonpetroleum-based solvents so the surface is free of oil and surface contaminants. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

D. Material Preparation: Mix and prepare paint materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying paint in a clean condition, free of foreign materials and residue.
2. Stir material before application to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into material. If necessary, remove surface film and strain material before using.
3. Use only thinners approved by paint manufacturer and only within recommended limits.

E. Tinting: Tint each undercoat a lighter shade to simplify identification of each coat when multiple coats of same material are applied. Tint undercoats to match the color of the finish coat but provide sufficient differences in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

A. General: Apply paint according to manufacturer's written instructions. Use applicators and techniques best suited for substrate and type of material being applied.
1. Do not paint over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to formation of a durable paint film.
2. Provide finished coats that are compatible with primers used.
3. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, grilles, convector covers, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.
4. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation of equipment, paint surfaces behind permanently fixed equipment or furniture with prime coat only.
5. Paint interior surfaces of ducts with a flat, nonspecular black paint where visible through registers or grilles.
6. Paint the back sides of access panels and removable or hinged covers to match exposed surfaces.
7. Finish exterior doors on tops, bottoms, and side edges the same as exterior faces.
8. Finish interior of wall and base cabinets and similar field-finished casework to match exterior.
9. Sand lightly between each succeeding enamel or varnish coat.

B. Scheduling Painting: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for painting as soon as practicable after preparation and before subsequent surface deterioration.

1. The number of coats and film thickness required are the same regardless of application method. Do not apply succeeding coats until the previous coat has cured as recommended by manufacturer. If sanding is required to produce a smooth, even surface according to manufacturer's written instructions, sand between applications.
2. Omit primer over metal surfaces that have been shop primed and touchup painted.
3. If undercoats, stains, or other conditions show through final coat of paint, apply additional coats until paint film is of uniform finish, color, and appearance. Give special attention to

ensure that edges, corners, crevices, welds, and exposed fasteners receive a dry film thickness equivalent to that of flat surfaces.

4. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until paint has dried to where it feels firm and does not deform or feel sticky under moderate thumb pressure, and until application of another coat of paint does not cause undercoat to lift or lose adhesion.

C. Application Procedures: Apply paints and coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. Brushes: Use brushes best suited for the type of material applied. Use brush of appropriate size for surface or item being painted.
2. Rollers: Use rollers of carpet, velvet-back, or high-pile sheep's wool as recommended by the manufacturer for material and texture required.
3. Spray Equipment: Use airless spray equipment with orifice size as recommended by manufacturer for material and texture required.

D. Minimum Coating Thickness: Apply paint materials no thinner than manufacturer's recommended spreading rate to achieve dry film thickness indicated. Provide total dry film thickness of the entire system as recommended by manufacturer.

E. Mechanical items to be painted are specified to be painted in Division 15.

F. Electrical items to be painted are specified to be painted in Division 16.

G. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

H. Prime Coats: Before applying finish coats, apply a prime coat, as recommended by the manufacturer, to material that is required to be painted or finished and that has not been prime coated by others. Recoat primed and sealed surfaces where evidence of suction spots or unsealed areas in first coat appears, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.

I. Pigmented (Opaque) Finishes: Completely cover surfaces as necessary to provide a smooth, opaque surface of uniform finish, color, appearance, and coverage. Cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections will not be acceptable.

J. Transparent (Clear) Finishes: Use multiple coats to produce a glass-smooth surface film of even luster. Provide a finish free of laps, runs, cloudiness, color irregularity, brush marks, orange peel, nail holes, or other surface imperfections.

1. Provide satin finish for final coats.

K. Stipple Enamel Finish: Roll and redistribute paint to an even and fine texture. Leave no evidence of rolling, such as laps, irregularity in texture, skid marks, or other surface imperfections.

L. Completed Work: Match approved samples for color, texture, and coverage. Remove, refinish, or repaint work not complying with requirements.

3.4 FIELD QUALITY CONTROL

A. Owner reserves the right to invoke the following test procedure at any time and as often as Owner deems necessary during the period when paint is being applied:

1. Owner will engage a qualified independent testing agency to sample paint material being used. Samples of material delivered to the Project will be taken, identified, sealed, and certified in the presence of Contractor.

2. Owner may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.5 CLEANING

A. Cleanup: At the end of each workday, remove empty cans, rags, rubbish, and other discarded paint materials from the Project site.

1. After completing painting, clean glass and paint-spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

3.6 PROTECTION

A. Protect work of other trades, whether being painted or not, against damage from painting. Correct damage by cleaning, repairing or replacing, and repainting, as approved by Architect.

B. Provide "Wet Paint" signs to protect newly painted finishes. After completing painting operations, remove temporary protective wrappings provided by others to protect their work.

1. After the work of other trades is complete, touch up and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.7 EXTERIOR PAINT SCHEDULE

A. Ferrous Metal: Provide the following finish systems over exterior ferrous metal. Primer is not required on shop-primed items.

1. Semigloss Acrylic-Enamel Finish: Two finish coats over a rust-inhibitive primer.

a. Primer: Exterior ferrous-metal primer.
b. Finish Coats: Exterior semigloss acrylic enamel.

B. Zinc-Coated Metal: Provide the following finish systems over exterior zinc-coated metal surfaces:

1. Semigloss Acrylic-Enamel Finish: Two finish coats over a galvanized metal primer.

a. Primer: Exterior galvanizad metal primer.
b. Finish Coats: Exterior semigloss acrylic enamel.

3.8 INTERIOR PAINT SCHEDULE

A. Concrete Unit Masonry: Provide the following finish systems over interior concrete masonry:

1. Low-Luster Acrylic-Enamel Finish: Two finish coats over a block filler.

a. Block Filler: Concrete unit masonry block filler.
b. Finish Coats: Interior low-luster acrylic enamel.

B. Gypsum Board: Provide the following finish systems over interior gypsum board surfaces:

1. Low-Luster Acrylic-Enamel Finish: Two finish coats over a primer.

a. Primer: Interior gypsum board primer.
b. Finish Coats: Interior low-luster acrylic enamel.

C. Wood and Hardboard: Provide the following paint finish systems over new interior wood surfaces:

1. Semigloss Acrylic-Enamel Finish: Two finish coats over a wood undercoater.

a. Primer: Interior wood primer for acrylic-enamel and semigloss alkyd-enamel finishes.
b. Finish Coats: Interior semigloss acrylic enamel.

D. Ferrous Metal: Provide the following finish systems over ferrous metal:

1. Semigloss Acrylic-Enamel Finish: Two finish coats over a primer.

a. Primer: Interior ferrous-metal primer.
b. Finish Coats: Interior semigloss acrylic enamel.

E. Zinc-Coated Metal: Provide the following finish systems over interior zinc-coated metal surfaces:

1. Flat Acrylic Finish: Two finish coats over a primer.

a. Primer: Interior zinc-coated metal primer.
b. Finish Coats: Interior flat acrylic paint.

2. Semigloss Acrylic-Enamel Finish: Two finish coats over a primer.

a. Primer: Interior zinc-coated metal primer.
b. Finish Coats: Interior semigloss acrylic enamel.

F. All-Service Jacket over Insulation: Provide the following finish system on cotton or canvas insulation covering:

1. Flat Acrylic Finish: Two finish coats. Add fungicidal agent to render fabric mildew proof.

a. Finish Coats: Interior flat latex-emulsion size.

3.9 PAINT SCHEDULE

PT-1
Manufacturer: Sherwin Williams
Color: SW 6070
Name: Heron Plume
Sheen: Matte for Ceilings, Eggshell for walls
Location: General Wall Paint

PT-2
Manufacturer: Sherwin Williams
Color: SW 6257
Name: Gibraltar
Sheen: Semi-Gloss
Location: Trim Paint

PT-3
Manufacturer: Sherwin Williams
Color: SW 6388
Name: Golden Fleece
Sheen: Eggshell
Location: Accent Paint

PT-4
Manufacturer: Sherwin Williams
Color: SW 0020
Name: Peacock Plume
Sheen: Eggshell
Location: Accent Paint

PT-5
Manufacturer: Sherwin Williams
Color: SW 6517
Name: Regatta
Sheen: Eggshell
Location: Accent Paint

PT-6
Manufacturer: Sherwin Williams
Color: SW 7069
Name: Iron Ore
Sheen: Flat
Location: Lobby False Grille

END OF SECTION 09 91 00

SECTION 10 10 00 – VISUAL DISPLAY BOARDS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Porcelain enamel marker boards.
2. Natural Cork Tack Boards.
3. Galvanized Pegboard with Accessories

B. Related Sections include the following:

1. See Section 06100 Rough Carpentry for wood blocking and grounds.

1.3 SUBMITTALS

A. Product Data: For each type of visual display board indicated. Include motor capacities and individual panel weights for markerboard units.

B. LEED Submittals:

1. Product Data: For installation adhesives, indicating VOC content.
   a. Verify adhesives have a VOC content of 50 g/L or less.
   b. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.
2. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.
   a. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.

B. Shop Drawings: For each type of visual display board required.

1. Include dimensioned elevations. Show location of joints between individual panels where unit dimensions exceed maximum panel length.
2. Include sections of typical trim members.
3. Show anchors, grounds, reinforcement, accessories, layout, and installation details.

C. Samples for Initial Selection: Manufacturer's color charts showing the full range of colors and

textures available for the following:

1. Markerboards: Actual sections of porcelain enamel finish for each type of chalkboard and markerboard required.
2. Tackboards- Corner sections of frame.

D. Samples for Verification: Of the following products, showing color and texture or finish selected. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected. Prepare Samples from the same material to be used for the Work.

1. Visual Display Boards: Sample panels not less than 8-1/2 by 11 inches (215 by 280 mm), mounted on the substrate indicated for the final Work. Include a panel for each type, color, and texture required.

E. Product Certificates: Signed by manufacturers of tackboards certifying that vinyl-fabric-faced cork tackboard materials furnished comply with requirements specified for flame-spread ratings.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced installer who is an authorized representative of the chalkboard manufacturer for both installation and maintenance of the type of sliding chalkboard units required for this Project.

B. Source Limitations: Obtain visual display boards through one source from a single manufacturer.

C. Product Options: Drawings indicate size, profiles, and dimensional requirements of visual display boards and are based on the products indicated.

D. Fire-Test-Response Characteristics: Provide vinyl-fabric-faced tackboards with the following surface-burning characteristics as determined by testing assembled materials composed of facings and backings identical to those required in this Section per ASTM E 84 by a testing and inspecting agency acceptable to authorities having jurisdiction. Identify vinyl-fabric-faced tackboards with appropriate markings of applicable testing and inspecting agency.

1. Flame Spread: 25 or less.
2. Smoke Developed: 10 or less.

E. Mockups: Before installing visual display boards, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects and qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for the completed Work.

1. Locate mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
2. Notify Architect 7 days in advance of the dates and times when mockups will be constructed.
3. Demonstrate the proposed range of aesthetic effects and workmanship.
4. Obtain Architect's approval of mockups before proceeding with fabrication of visual display boards.
5. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.

    a. When directed, demolish, and remove mockups from Project site.

b. Approved mockups in an undisturbed condition at the time of Substantial Completion may become part of the completed Work.

1.5PROJECT CONDITIONS

A. Field Measurements: Verify field measurements before preparation of Shop Drawings and before fabrication to ensure proper fitting. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.
2. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating chalkboards without field measurements. Coordinate wall construction to ensure actual dimensions correspond to established dimensions.

1.6WARRANTY

A Porcelain Enamel Markerboard Warranty: Submit a written warranty executed by manufacturer agreeing to replace porcelain enamel chalkboards that do not retain their original writing and erasing qualities, become slick and shiny, or exhibit crazing, cracking, or flaking within the specified warranty period, provided the manufacturer's written instructions for handling, installation, protection, and maintenance have been followed.

1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Porcelain Enamel Markerboards:

Representative Product Manufacturer:

a. Claridge Model LCS-II, Series 3 frame and markertray
   1) Color/Finish: No. 75 Low Gloss White.
   2) Magnetic.
   3) Size: As shown on the drawings.
   4) Marker tray.

Equal Product Manufacturer:

b. ADP/Lemco, Inc.
c. Best-Rite Manufacturing.
d. Egan Visual Inc.

2. Natural Cork Tack Board:

Representative Product Manufacturer:

a. Claridge 800 Series in aluminum frame and Natural-Cork Tackboard 1/4-inch- (6-mm-) thick, natural cork sheet factory laminated to 1/4-inch- (6-mm-) thick hardboard backing.

1) Color/Finish: From manufacturer's full range of colors.
2) Size: As shown on the drawings.

Equal Product Manufacturer:

b. ADP/Lemco, Inc.
c. Best-Rite Manufacturing.
d. Egan Visual Inc.

3. Galvanized Pegboard with Accessories
   a. Basis of Design: Pro-grade pegboard organizer kit by Wall Control
   b. Or approved equal in size, similar material, and accessories

2.2MATERIALS

A. Markerboards:
Porcelain-Enamel Face Sheet: ASTM A 424, enameling-grade steel, uncoated thickness indicated; with exposed face and edges coated with primer, 1.7-to-2.5-mil- (0.043-to-0.064-mm-) thick ground coat, and color cover coat; and concealed face coated with primer and 1.7-to-2.5-mil- (0.043-to-0.064-mm-) thick ground coat.

1. Gloss-Finish Cover Coat: Gloss as indicated; dry-erase markers wipe clean with dry cloth or standard eraser. Minimum 3.0-to-4.0-mil- (0.076-to-0.102-mm-) thick cover coat. Cover and ground coats shall be fused to steel at manufacturer's standard firing temperatures but not less than 1475 deg F (802 deg C).

   a. Color: Low Gloss White: Low glare and distortion free surface allows Use as a projection screen.
   b. Locations:
      a. Community Room 48"H x96"w
      b. Roll Call Room 48"H x96"w
      c. Conference Rooms (2) 48"H x72"w
      d. Each Shift Leaders Room (3) 48" x 48"
      e. Each Office Suite Open Area (5)) 48" x 48"
      f. Report Writing Rm 48" x 48"
      g. Front Desk Rm 48" x 48"

B. Tack Boards:
   1. Natural Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish WITH Class A surface-burning characteristics.
   2. Locations:
      1. SEE DRAWINGS

2.3 MARKERBOARD ACCESSORIES

A. Trim and Accessories:

1. Where size of visual display boards or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Architect from manufacturer's standard structural support accessories to suit conditions indicated.

2. Markertrays:
   a. Manufacturer's standard, continuous, aluminum, Markertray.

2.4 GALVANIZED PEGBOARD WITH ACCESSORIES

A. Material, size and Accessories:

1. Basis of Design Model # 30-COS-400GV.
2. Size: (4) 16”x32” panels for 64” x 32” total layout area.
3. Mount per manufacturer details/instructions.
4. Accessories Kit:
   a. (4) 32in Tall x16in Wide Galvanized Steel Pegboard Panel
   b. (1) 6in Deep x 16in Wide Tool Board Shelf Assembly
   c. (1) 4in Deep x16in Wide Tool Board Shelf & 16in Wide Dowel Rod Assembly
   d. (1) Screwdriver Holder Assembly
   e. (12) Standard Tool Board Hook
   f. (4) Medium Tool Board Hook
   g. (2) Tool Board Handle Hanger, 1-1/4in
   h. (2) Tool Board U-Hook 3in Reach
   i. (2) Tool Board C-Bracket, 1inx1in
   j. (2) Tool Board C-Bracket, 2inx2in
5. Location: PD Bike Storage Rm 187, Armory Rm 122, G.C. Rm 145

2.5 FINISHES

A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.
B. Finish designations prefixed by AA conform to the system established by the Aluminum Association for designating aluminum finishes.
C. Class II, Clear Anodic Finish: AA-M12C22A31 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class II, clear coating 0.010 mm or thicker) complying with AAMA 607.1.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine wall surfaces, with Installer present, for compliance with requirements and other conditions affecting installation of visual display boards.

1. Surfaces to receive markerboards shall be free of dirt, scaling paint, and projections or depressions that would affect smooth, finished surfaces of chalkboards or markerboards.
2. Surfaces to receive tackboards shall be dry and free of substances that would impair the bond between tackboards and substrate.
3. Do not proceed with installation until unsatisfactory conditions have been corrected.

3.2 INSTALLATION OF MARKERBOARDS

A. Deliver factory-built visual display boards completely assembled in one piece without joints, where possible. If dimensions exceed panel size, provide 2 or more pieces of equal length as acceptable to Architect. When overall dimensions require delivery in separate units, prefit components at the factory, disassemble for delivery, and make final joints at the site. Use splines at joints to maintain surface alignment.

B. Install units in locations and at mounting heights indicated and according to manufacturer's written instructions. Keep perimeter lines straight, plumb, and level. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

C. Coordinate Project-site-assembled units with grounds, trim, and accessories. Join parts with a neat, precision fit.

3.3 ADJUSTING AND CLEANING

A. Verify that accessories required for each unit have been properly installed and that operating unit’s function properly.

B. Clean units according to manufacturer's written instructions.

END OF SECTION 10 10 00

SECTION 10 14 00 - SIGNAGE

PART 1 - GENERAL

1.1 STIPULATIONS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Interior panel signs.
2. Vinyl adhered decals and signs
3. Dimensional characters (letters and numbers) for exterior use including backlit and unlit.
4. Signage accessories.
5. Cast Stone Corner Stone

B. Related Sections include the following:

1. Division 23 Section "Mechanical Identification" for labels, tags, and nameplates for mechanical equipment.
2. Division 26 Section "Electrical Identification" for labels, tags, and nameplates for electrical equipment.
3. Division 26 Section "Lighting" for illuminated exit signs.
4. Division 4 Section "Cast Stone Masonry" for Corner stone

1.3 SUBMITTALS

A. Product Data: profiles and construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of sign.

B. Shop Drawings: Include plans, elevations, and large-scale sections of typical members and other components. Show mounting methods, grounds, mounting heights, layout, spacing, reinforcement, accessories, and installation details.

1. Provide message list for each sign, including large-scale details of wording, lettering, artwork, and braille layout.

C. Samples for Initial Selection: For each type of sign material indicated that involves color selection.

D. Samples for Verification: For each type of sign, include the following Samples to verify color selected:

1. Panel Signs: Full-size Samples of each type of sign required.

E. Qualification Data: For Installer.

F. Maintenance Data: For signage cleaning and maintenance requirements to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative of the signage manufacturer for installation and maintenance of units required for this Project.

B. Source Limitations: Obtain each sign type through one source from a single manufacturer.

C. Regulatory Requirements: Comply with the Americans with Disabilities Act (ADA) and with code provisions as adopted by authorities having jurisdiction.

1. Interior Code Signage: Provide signage as required by accessibility regulations and requirements of authorities having jurisdiction.

1.5 PROJECT CONDITIONS

A. Field Measurements: Where sizes of signs are determined by dimensions of surfaces on which they are installed, verify dimensions by field measurement before fabrication and indicate measurements on Shop Drawings.

1.6 COORDINATION

A. For signs supported by or anchored to permanent construction, advise installers of anchorage devices about specific requirements for placement of anchorage devices and similar items to be used for attaching signs.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. In other Part 2 articles where titles below introduce lists, the following requirements apply for product selection:

1. Interior Panel Signs, Basis-of-Design Product:
   a. Mohawk Sign System MP 200 A Format or equal. The design for each sign is based on the product type named.
   b. Subject to compliance with requirements, provide either the named product or a comparable product by one of the other manufacturers specified.
2. Exterior Dimensional Lettering, Basis-of-Design Product:
   a. Gemini

2.2 INTERIOR PANEL SIGNS

A. General: Provide panel signs that comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.

1. Produce smooth panel sign surfaces constructed to remain flat under installed conditions within tolerance of plus or minus 1/16 inch measured diagonally.

2.

B. Manufacturers:

1. Basis of Design, Mohawk Sign Systems, Inc.
2. Apco Signs
3. ASI Modulex, Architectural Signage Solutions
4. Best Sign Systems. Inc.
5. InPro Corporation
6. Signature Signs
7. InVision Signs

C. Laminated Sheet Sign. Sandblasted polymer face sheet with raised graphic laminated over subsurface graphics laminated over subsurface graphics to acrylic backing sheet to produce composite. Styles and types shall be as indicated in sketches and shall match Owner's interior signage standard prototype.

D. 'Paper Grabber' at bottom of signs shall be as indicated Type 2 signs in sketches/schedules.

E. 'Finger Hole' access for view panels to allow users to insert and extract paper inserts shall be as indicated in sketches/schedules.

F. Mounting for each sign style and type shall be as indicated in sketches/schedules.

G. Cast-Acrylic Sheet: Manufacturer's standard and as follows:

1. Color: As selected by Architect from manufacturer's full range.
2. 1/16" Horizontal V Groove
3. Thickness:

a. Static Signs: 1/4" Acrylic
b. Signs with Acrylic Window: milled edge creating a continuous U-shape frame to engage the acrylic Window.

H. Before specifying, verify availability of plastic-laminate materials in color combinations required.

I. Delete paragraph and subparagraphs below if no unframed panel signs.

J. Perimeter: Fabricate edges to profile indicated; comply with the following requirements for materials and corner conditions:

1. Material: Romark or Equivalent.
2. Corner Condition: sharp corners

K. Graphic Content and Style: Provide sign copy that complies with requirements indicated in the Sign Schedule for size, style, spacing, content, mounting height and location, material, finishes, and colors of signage.

L. Graphic Symbols:

1. Owner Provided Graphic for raised pattern header. EPS file available upon request after bidding phase. See Interior Signage drawings.

2. Color: As selected by Architect from Manufacturer’s full range

M. Acrylic Sheet Plastic Window: Plexiglass II by Rohm & Hass Co. or equal.

N. Text Fonts: Sans Serif: Gill Sans, ¾ » high

O. Blank Aluminum Sign Panels: To be used as a backer for mounting signs on window areas other than sidelights. At Doors with sidelights, sidelights are considered to be part of the door; sign to be mounted beside sidelight.

P. Tactile and Braille Copy: Manufacturer's standard process for producing copy complying with ADA Accessibility Guidelines and ICC/ANSI A117.1. Text shall be accompanied by Grade 2 Braille. Produce precisely formed characters with square cut edges free from burrs and cut marks.

1. Panel Material: Opaque acrylic sheet
2. Ball Pointed Braille.
3. Raised-Copy Thickness: Not less than 1/32 inch.

Q. Accessories:

1. Mounting Methods: Use concealed fasteners or double-sided vinyl tape fabricated from materials that are not corrosive to sign material and mounting surface.

R. Adhesives: VOC Content of 70 g/L or less.
1. For adhesives, indicating compliance with requirements for low-emitting materials.
2. Verify adhesive complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

S. Copy & Schedule:
1. If there are any inconsistencies between the drawings and schedule
2. Room names shall be changed through the shop drawings. Room number is for drawings and installation scheduling purpose and may not be included in the room signage or be changed.
3. Provide Microsoft excel formatted spreadsheet, organized based on the signage schedule and modified per the mfg. means and methods for their production. This document is to be used to finalize copy with the user group in submittal process.

2.3 VINYL DECAL

A. Type 20: "11" Super Graphic. See Transparent Unit Panel Glazing. Install on Layer 3 of the glazing system. Split graphic to fit onto polycarbonate panels. GC to furnish panels to signage contractor, or coordinate to install in the field in clean conditions.
   1. Size: 7' x 9'-2"
   2. Mounting: exterior glazing on layer 3.
   3. COPY: 11
   4. Color: BLACK
   5. Font: Arial

B. Type 21: Address Exterior Vinyl
   1. Size: 5" x 5'-4"
   2. Mounting: exterior glazing.
   3. COPY: 216 N MARLYN AVE
   4. Color: BLACK
   5. Font: Gill Sans MT

2.4 INTERIOR PANEL SIGN TYPES (Types are as designated on the Drawings)

A. Type 1: GENERAL ROOM SIGN
   1. Provide two signs per location indicated in the plan
   2. Custom Raised Header
   3. Text: As indicated in the Sign Schedule.
   4. Message: Fixed.
   5. Size: 6" x 6"
   6. Mounting: Wall.

B. Type 2: INTERIOR PRIVATE OFFICE SIGN with Clear Acrylic Insert Window w/ finger hole and paper grabber.

   1. Provide two signs per location indicated in the plan
   2. Custom Raised Header : ROOM NAME (no number).
   3. Text: As indicated in the Sign Schedule. Provide laser printed inserts on cardstock.
   4. Message: Changeable.
   5. Accessory: Satin Silver color paper display gripper 8.5" long.
   6. Size: 8.5" x 8.5"
   7. Mounting: Wall.

C. Type 3 EGRESS STAIR SIGN –
   1. Custom Raised Header
   2. Text: As indicated in the Sign Schedule.
   3. Message: Fixed.
   4. Size: 9.75" x 8.5"
   5. Mounting: Wall.
   6. Stair Symbol, human figure and fire symbols

D. Type 4, ELEVATOR SIGN (IN CASE OF FIRE…) Elevator Signs in accordance with NFPA
   1. Custom Raised Header
   2. Text: As indicated in the Sign Schedule.
   3. Message: Fixed.
   4. Size: 9.75" x 6.75"
   5. Mounting: Wall.
   6. Universal Pictogram Symbol and Instructional Text.

E. Type 5, EVACUATION PLAN SIGN

1. Text: As indicated in the Sign Schedule.
2. Message: Fixed.
3. Size: 12” x 12”
4. Acrylic Insert Slot, Arch. to provide plan.
5. Mounting: Wall.

F. Type 6, WAYFINDING BLADE SIGN (wall blade or ceiling blade)

1. Custom Raised Header
2. Text: As indicated in the Sign Schedule.
3. Message: Fixed.
4. Size: 9.75” x 6.75”
5. Mounting: Wall.
6. Universal Pictogram Symbol for restrooms
7. Size: 12” x 16” wide.
8. Mounting: Wall.
9. Locate under lobby bulkhead near entry to the public restroom

G. Type 7A, NO SMOKING SIGN

1. Universal Pictogram Symbol and Instructional Text.
2. Size: 9.75” x 8.5”
3. Mounting: Wall.
4. Copy: No Smoking within 25 feet of building entrance

H. Type 7B, NO SMOKING SIGN – GLASS DECAL

1. Universal Pictogram Symbol and Instructional Text.
2. Size: 9.75” x 8.5”
3. Mounting: Wall.
4. Copy: No Smoking within 25 feet of building entrance

I. Type 8A: ADA STAFF RESTROOM SIGNS

1. Universal Pictogram Symbol and Instructional Text.
2. Size: 9.75” x 8.5”
3. Mounting: Wall.
4. Pictogram to include Men / Women and ADA
5. COPY: ADA RESTROOM

J. Type 8B: ADA RESTROOM w/ BABY CHANGING ROOM SIGN

1. Universal Pictogram Symbol and Instructional Text.

2. Size: 9.75” x 8.5”
3. Mounting: Wall.
4. Pictogram to include BABY CHANGING STATION
5. Copy: UNISEX RESTROOM WITH BABY CHANGING STATION

K. Type 8C: ADA RESTROOM w/ ADULT CHANGING ROOM SIGN

1. Universal Pictogram Symbol and Instructional Text.
2. Size: 9.75” x 8.5”
3. Mounting: Wall.
4. Pictogram to include Men / Women and ADA
5. Copy: : UNISEX RESTROOM WITH ADULT CHANGING STATION

L. Type 9, METAL LOCKER DECAL
1. Provide 2 (duplicate) for each indicated in plan
2. Custom printed vinyl sticker
3. Size: 4”x5”
4. Copy: *ADA LOCKER (ADA ICON)*
5. LOCATION: At ADA lockers in the locker rooms only. One per each designated locker.

M. Type 10, LEED INNOVATION SIGNAGE

1. Artwork: Architect to provide artwork and copy with submittal
2. Material: Typical Romark with direct print.
3. Color: Architect to select stock Romark color
4. Size: 16”x20”
5. Mounting: Wall.
6. QTY: 12

N. Type 11A, LEED STAIR WELLNESS SIGNAGE

1. Artwork: Architect to provide artwork and copy with submittal
2. Material: Typical Romark with direct print.
3. Color: Architect to select stock Romark color
4. Size: 8”x10”
5. Mounting: Wall.
6. QTY: 4

O. Type 11B Mounted frameless glassless photographs
1. ARTWORK: Provided by owner after submittal, proof will be required in separate submittal.
2. Provide 1 full size sample for owner approval
3. Printing: Direct color and black and white printed image on 4mm aluminum dibond (or equal substrate).
4. Edge, Back bevel edges
5. Mounting: Aluminum cleat mounting kit
6. Size: 16”x20”
7. QTY: 30

P. Type, 12 Electrical Room Panel Signs

1. Universal Pictogram Symbol and Instructional Text.
2. Mounting: Wall.

Q. Type 13, Fire Extinguisher Panel Signs

1. Universal Pictogram Symbol and Instructional Text.
2. Mounting: Wall.

R. Type 14, Danger Electrical Room
1. Provide two signs (duplicates) per locations indicated in the plan.
2. Danger Sign direct print to white romark.
3. Mounting: Door.

S. Type 15, Roof Access Panel Signs -

1. Universal Pictogram Symbol and Instructional Text.
2. Mounting: Wall.

T. Type 20, County Seal and Logo Interior
1. ARTWORK: Provided by owner after submittal, proof will be required in separate submittal.
2. Provide 1 full size sample for owner approval
3. Printing: Direct color and black and white printed image on 6mm aluminum dibond (or equal substrate).
4. Edge, Back bevel edges
5. Mounting: Aluminum cleat mounting kit
6. Size: 36” diameter
7. QTY: 2
8. Location: Community Room.

U. Type 21, Restricted Area Sign
1. ARTWORK: Provided by owner after submittal, pdf. file available.
2. Printing: Direct color and black and white printed image on approx. 3mm aluminum thick.
3. Edge, ease edges round corner.
4. Mounting: bolted at corners to masonry wall for exterior and used typical adhesive for interior
5. Size: 12”x18”
6. Text to read: Restricted Area Authorized Employees Only
7. QTY: 15
8. Location: SEE PLAN. AT EACH ENTRANCE TO THE BUILDING, PUBLIC AND PRIVATE.

2.5 DIMENSIONAL CHARACTER SIGNS

A. Fabricated Channel Characters: Form exposed faces and sides of characters to produce surfaces free from warp and distortion. Include internal bracing for stability and attachment of mounting accessories. Comply with the following requirements:

1. Aluminum Sheet: Not less than 0.090 inch (2.29 mm) thick.
2. Metal Finishes: Alloy 5052 Specialty Finish
3. Standard Thickness: see types.
4. Face Style: Metal Face/ Side Lit L400
5. Mounting: Pin mounted.
6. LED color option: Warm White Halo Back Lighting where called for.
7. Finish: Anodized metallic custom color.

B. General: Provide dimensional character signage that comply with requirements indicated for materials, thicknesses, finishes, colors, designs, shapes, sizes, and details of construction.

1. Fabricated Aluminum Channel Letters – Exterior

   a. Form exposed faces and sides of characters to produce surfaces free from warp and distortion. Include internal bracing for stability and attachment of mounting accessories.
   b. Aluminum Sheet: Not less than 0.090 inch thick

C. Illuminated Backlighted Channel Characters: Manufacturer's standard LED lighting including transformers, insulators, and other components. Make provisions for servicing and concealing connections to building electrical system.

D. Types:
1. Type 16 Exterior Fabricated Metal Pin Lettering w/ Back Lighting – CANOPY ENTRANCE SIGNAGE
   a. Text: As indicated in the drawing 5/A6.40.
   b. Mounting: Through wall penetrations to be coordinated with electrical contractor and signage contractor to seal all penetrations. Pin standoff 1”
   c. Dimensions
      1) Depth: 2”
      2) Height: 18”
   d. Basis of Design: Gemini Dimensional Stainless Steel Halo Lit, fabricated letters or equal
   e. Finish: #4 Brushed Stainless Steel Metal finish. Warm White LED Color – Needs to be coordinated with electrical.
   f. LOCATION: Canopy elevation make call out, dim lettering, tag with type. Indicate with tag in plan outside vest.
      COPY: ESSEX POLICE PRECINCT

2. Type 17 Exterior Fabricated Metal Pin Lettering – COMMUNITY MESSAGE BOARD
   a. Text: As indicated in the drawing 5/A6.40.
   b. Mounting: Through wall penetrations to be coordinated with electrical contractor and signage contractor to seal all penetrations. Pin standoff 1”
   c. Dimensions
      1) Depth: 1/4”
      2) Height: 4”
   d. Basis of Design: Gemini Dimensional Stainless Steel , fabricated letters or equal
   e. Finish: Kynar pain system RAL colors to be selected by architect.
   f. LOCATION: Make detail elevation from the vestibule elevation dimension text and elevation from AFF
   g. COPY: COMMUNITY MESSAGES

3. Type 18 Cast Metal Signage @ Monument Entry Sign

a. Provided & Coordinated with 03 45 00 PRECAST ARCHITECTURAL CONCRETE and precast installer.
b. Dimensions
   1) Depth: 1/2” beveled
   2) Height: see elevations
c. FINISH: Architect to select from full range of Aluminum Specialty Finishes.
d. LOCATION: Type 18, Two-sided Monument sign, is located on Landscape Architecture drawings. Provide signage on both sides.
e. COPY: BALTIMORE COUNTY POLICE PRECINCT 11

4. Type 19 Recessed County Seal & Lettering Cast Into Precast Panel – Cornerstone Signage **TO BE PROVIDED AND INSTALLED BY CAST STONE PROVIDER AND NOT SIGNAGE PROVIDER**
   a. Text: BALTIMORE COUNTY SEAL – POLICE DEPARTMENT - 2025.
   b. Provided & Coordinated with 03 45 00 PRECAST ARCHITECTURAL CONCRETE and precast installer.
   c. Dimensions: see elevations
      1) Depth: 1/2” beveled lettering
      2) Height: see elevations
   d. LOCATION: See elevations
   e. ARTWORK: To be provided in a vector file from owner, approximately
   f.

E. Manufacturers:
   1. Basis of Design: Gemini Incorporated.
   2. Advance Corporation; Braille-Tac Division.
   3. A. R. K. Ramos.
   4. ASI-Modulex, Inc.
   5. Bunting Graphics, Inc.
   6. Charleston Industries, Inc.
   7. Grimco, Inc.
   8. Innerface Sign Systems, Inc.
   9. Metal Arts; Div. of L&H Mfg. Co.
   10. Mills Manufacturing Company.
   11. Mohawk Sign Systems.
   12. Nelson-Harkins Industries.
   13. Signature Signs, Incorporated.
   14. Southwell Company (The).

2.6 FINISHES, GENERAL

A. Protect mechanical finishes on exposed surfaces from damage by applying strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within range of approved Samples and are assembled or installed to minimize contrast.

C. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: Manufacturer's standard clear anodic coating, 0.018 mm or thicker, over a satin directionally textured mechanical finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Verify that items provided under other sections of Work are sized and located to accommodate signs.

C. Examine supporting members to ensure that surfaces are at elevations indicated or required to comply with authorities having jurisdiction and are free from dirt and other deleterious matter.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Locate signs and accessories where indicated, using mounting methods of types described and in compliance with manufacturer's written instructions.

1. Install signs level, plumb, and at heights indicated, with sign surfaces free from distortion and other defects in appearance.
2. Interior Wall Signs: Install signs on walls adjacent to latch side of door where applicable. Where not indicated or possible, such as double doors, install signs on nearest adjacent walls. Locate to allow approach within 3 inches (75 mm) of sign without encountering protruding objects or standing within swing of door.

B. Wall-Mounted Panel Signs: Attach panel signs to wall surfaces using methods indicated below:

1. All room numbers, nameplates, and room identification signs will be adhered to 1/8” thick finish PVC material (Sintra, Celtec, Komacel, Komatex, or equivalent) with 3M VHB Very High Bond Joining Systems #9473 double-sided tape (or equivalent). All signs to be mounted on block wall shall have the entire perimeter of the sign taped with 3M double sided tape #4432 (or equivalent).

C. Dimensional Characters: Attach individual characters to wall surfaces using methods indicated below:
   1. Mount characters using standard fastening methods recommended in writing by manufacturer for character form, type of mounting, wall construction, and condition of exposure indicated. Provide heavy paper template to establish character spacing and to locate holes for fasteners.

3.3 CLEANING AND PROTECTION

A. After installation, clean soiled sign surfaces according to manufacturer's written instructions. Protect signs from damage until acceptance by Owner.

END OF SECTION 10 14 00

SECTION 10 14 53 - SITE SIGNAGE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division-1 Specification sections, apply to work of this section.

B. Baltimore County Department of Public Works Standard Details for Construction dated September 2024 and as amended.

C. Throughout the specifications, types of materials may be specified by manufacturer's name and catalogue number in order to establish standards of quality and performance and not for the purpose of limiting competition. Alternate methods and/or materials may be submitted to the Architect for consideration. Those judged to be equal to that specified will receive written approval.

1.2 SUMMARY

A. Furnish all labor, materials, equipment and services necessary for and reasonably incidental to complete the site signs work as indicated on drawings or specified, including but not limited to the following:

1. Exterior Parking Signs
2. External Traffic Control Signs

1.3 QUALITY ASSURANCE

A. Uniformity of Manufacturer: For each sign form and graphic image process indicated, furnish products of a single manufacturer.

B. All signage to comply with the latest A.D.A. requirements, and the latest Manual for Uniform Traffic Control Devices (M.U.T.C.D.).

C. In the event of a discrepancy between the Project Specifications, Construction Documents, Baltimore County Standard Specifications and Details, or other guidelines set forth by the authorities having jurisdiction the more stringent will apply.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer's technical data and installation instructions for each type of sign required.

B. Samples: Submit samples of each sign form and material showing finishes, colors, surface textures and qualities of manufacture and design of each sign component, including graphics.

1. Submit full-size sample units. Acceptable units may be installed as part of the work.

C. Shop Drawings: Submit shop drawings for fabrications and erection of specialty signs. Include plans, elevations and large-scale details of sign wording and lettering layout. Show anchorages and accessory items. Furnish location template drawings for items supported or anchored to permanent construction.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Andco Industries Corp.

B. A.S.I. Sign Systems

C. Spanjer Brothers, Inc.

D. The Supersine Company

E. Southwell Company

2.2 GENERAL REQUIREMENTS

A. All letters shall be Helvetica Medium; upper case.

B. Letters shall be centered on signs.

C. Panel backgrounds shall be colored from manufacturer's standards with matte finish.

2.3 MATERIALS

A. Aluminum Casting: Alloy and temper recommended by aluminum producer or finisher for typed of use and finish indicated and with not less than the strength and durability properties specified in ASTM B 221 for 6063 TS

2.4 EXTERIOR PARKING SIGNS

A. Type: Silk screened letters and symbol on 0.125" dark blue baked enamel color aluminum message panel, supported on 2" square steel post in concrete footing.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install sign units and components at locations indicated on the drawings securely mounted with concealed theft resistant fasteners, unless otherwise indicated. Attach signs to substrates in accordance with manufacturer's instructions.

B. Install sign units level, plumb and at proper height. Cooperate with other trades for installation of sign units to finish surfaces. Repair and replace damaged units as directed by Architect.

C. Installation of Exterior Parking Signs:

1. Erect sign plumb with top as indicated on the drawings.
2. Anchor to concrete footing with concealed anchors in accordance with manufacturer's recommendations.

3.2 CLEANING AND PROTECTION

A. At completion of installation, clean soiled sign surface in accordance with manufacturer's instructions. Protect units from damage until acceptance by Owner.

END OF SECTION

SECTION 10 15 50 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes HDPE units as follows:
   1. Toilet Enclosures : HDPE. Floor Mounted, Overhead Braced. Located in the Typical Locker Rooms

   2. Urinal Screens: HDPE. Wall hung Provide for Men’s Locker Room

B. Related Sections include the following:
   1. Division 10 "Toilet and Bath Accessories" for toilet tissue dispensers, grab bars, purse shelves, and similar accessories.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.

   1. Show locations of cutouts for compartment-mounted toilet accessories.
   2. Show locations of reinforcements for compartment-mounted grab bars.

C. Samples for Initial Selection: For each type of unit indicated.

D. Samples for Verification: Of each type of color and finish required for units, prepared on 6-inch-square Samples of same thickness and material indicated for Work.

1.4 QUALITY ASSURANCE

A. Regulatory Requirements: Comply with applicable provisions in "Americans with Disabilities Act (ADA) and ICC/ANSI A117.1 for toilet compartments designated as accessible.

1.5 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication and indicate measurements on Shop Drawings.

1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating toilet compartments without field measurements. Coordinate wall, floor, ceilings, and other contiguous construction to ensure that actual dimensions correspond to established dimensions.

1.6 EXTRA MATERIALS

1. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
    1. Door Hinges: One hinge(s) with associated fasteners.
    2. Latch and Keeper: One latch(es) and keeper(s) with associated fasteners.
    3. Door Bumper: One bumper(s) with associated fasteners.
    4. Door Pull: One door pull(s) with associated fasteners.
    5. Fasteners: Ten fasteners of each size and type.

PART 2 - PRODUCTS

2.1 HIGH-DENSITY POLYETHYLENE PARTITIONS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Scranton Products Hiney Hiders (basis of design) (FKA Santana Products)
2. Accurate Partitions Corporation.
3. Comtec Industries/Capitol Partitions
4. General Partitions Mfg. Corp.
5. Rockville Partitions, Inc.

B. Toilet-Enclosure Style: Floor Mounted/Wall Braced.

C. Urinal-Screen Style: Wall hung.

D. Door, Panel, Screen, and Pilaster Construction: Solid, high-density polyethylene (HDPE) panel material, not less than 1 inch thick, seamless, with eased edges, and with homogenous color and pattern throughout thickness of material.

1. Integral Hinges: Configure doors and pilasters to receive integral hinges.
2. Heat-Sink Strip: Manufacturer's standard continuous, extruded-aluminum or stainless-steel strip fastened to exposed bottom edges of solid-polymer components to prevent burning.

3. Color and Pattern: One color and pattern in each room as selected by Architect from manufacturer's full range.

E. Pilaster Shoes and Sleeves (Caps): Manufacturer's standard design; or stainless steel.

F. Brackets (Fittings):
1. Full-Height (Continuous) Type: Manufacturer's standard design; extruded aluminum.

G. Finish: HDPE, Smooth Stainless steel, Anti-graffiti coating, corrosion resistant hardware.

2.2 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's standard design, heavy-duty operating hardware and accessories.

1. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel or chrome-plated steel or brass, finished to match hardware, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use hot-dip galvanized or other rust-resistant, protective-coated steel.

2.3 FABRICATION

A. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

B. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

C. Doors: Unless otherwise indicated, provide 24-inch- wide in-swinging doors for standard toilet compartments and 36-inch- wide out-swinging doors with a minimum 32-inch- wide clear opening for compartments indicated to be accessible to people with disabilities.

1. Hinges: Manufacturer's standard self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees.
2. Latch and Keeper: Manufacturer's standard [recessed] [surface-mounted] latch unit designed for emergency access and with combination rubber-faced door strike and keeper. Provide units that comply with accessibility requirements of authorities having jurisdiction at compartments indicated to be accessible to people with disabilities.
3. Coat Hook: Manufacturer's standard combination hook and rubber-tipped bumper, sized to prevent door from hitting compartment-mounted accessories.

4. Door Bumper: Manufacturer's standard rubber-tipped bumper at out-swinging doors[and entrance screen doors].
5. Door Pull: Manufacturer's standard unit at out-swinging doors that complies with accessibility requirements of authorities having jurisdiction. Provide units on both sides of doors at compartments indicated to be accessible to people with disabilities.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

a. Pilasters and Panels: 1/2 inch.
b. Panels and Walls: 1 inch.

2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Secure continuous head rail to each pilaster with not less than two fasteners. Hang doors to align tops of doors with tops of panels and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

C. Floor-Anchored Units: Set pilasters with anchors penetrating not less than 2 inches (51 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.

G. Wall-Hung Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb and to resist lateral impact.

3.2 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors to return doors to fully closed position.

END OF SECTION 10 15 50

SECTION 10 26 00 - WALL AND DOOR PROTECTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:
   1. Corner guards.
   2. Kick Plates see door hardware

B. Related Requirements:

   1. Section 05 50 00 "Metal Fabrications" for steel angle corner guards.
   2. Section 08 71 00 "Door Hardware" for kick plates.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

   1. Include construction details, material descriptions, impact strength, dimensions of individual components and profiles, and finishes.

B. Shop Drawings: For each type of wall and door protection showing locations and extent.

   1. Include plans, elevations, sections, and attachment details.

C. Samples for Initial Selection: For each type of impact-resistant wall-protection unit indicated, in each color and texture specified.

   1. Include Samples of accent strips and accessories to verify color selection.

D. Samples for Verification: For each type of exposed finish on the following products, prepared on Samples of size indicated below:

   1. Wall Guards: 12 inches (300 mm) long. Include examples of joinery, corners, end caps, and field splices.
   2. Handrails: 12 inches (300 mm) long. Include examples of joinery, corners, and field splices.
   3. Corner and End-Wall Guards: 12 inches (300 mm) long. Include example top caps.
   4. Door-Surface Protection: 6 by 6 inches (150 by 150 mm) square.

1.4 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of handrail.

B. Material Certificates: For each type of exposed plastic material.

C. Sample Warranty: For special warranty.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of wall and door protection product to include in maintenance manuals.

1. Include recommended methods and frequency of maintenance for maintaining best condition of plastic covers under anticipated traffic and use conditions. Include precautions against using cleaning materials and methods that may be detrimental to finishes and performance.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Wall-Guard Covers: Full-size plastic covers of maximum length equal to 5% of each type, color, and texture of cover installed.
2. Corner-Guard Covers: Full-size plastic covers of maximum length equal to no fewer than two, 48-inch-long units.
3. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.

1.7 QUALITY ASSURANCE

A. Certified Wood: Provide an invoice including vendor's chain-of-custody number, product cost, and entity being invoiced.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store wall and door protection in original undamaged packages and containers inside well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1. Maintain room temperature within storage area at not less than 70 deg F (21 deg C) during the period plastic materials are stored.
2. Keep plastic materials out of direct sunlight.
3. Store plastic wall- and door-protection components for a minimum of 72 hours, or until plastic material attains a minimum room temperature of 70 deg F (21 deg C).

a. Store corner-guard covers in a vertical position.
b. Store wall-guard covers in a horizontal position.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of wall- and door-protection units that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including detachment of components from each other or from the substrates, delamination, and permanent deformation beyond normal use.
b. Deterioration of metals, metal finishes, plastics, and other materials beyond normal use.

B. Warranty Period: Five years from date of Substantial Completion.

1.10 EXTRA MATERIAL REQUIREMENTS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.
1. Mounting and Accessory Components: Amounts proportional to the quantities of extra materials. Package mounting and accessory components with each extra material.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of Design InproCorp :1600 Wall Guards, & 160 High Impact Corner Guard
1. IPC Interior Protection Products and Decorative Surfaces
Inpro Corporation, PO Box 406, Muskego, WI 53150, USA
Telephone: 800.222.5556, Fax: 888.715.8407
www.inprocorp.com
2. Or approved equal.

B. Source Limitations: Obtain wall and door-protection products of each type from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Surface Burning Characteristics: Comply with ASTM E84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings from an applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: 450 or less.

2.3 CORNER GUARDS

A. Typical Aluminum Corner Guard: A. Corner Guard System, Basis of Design: 1.5” clear anodized finshed, 90 degrees, 12’ lengths. Standard-duty, adhered to finished wall; designed to withstand impacts
   1. Cover: Extruded Aluminum 1.6mm 0.63” thick from 6063-t6 alum. or 5005-H34 alum.
      a. Profile: Nominal 1.5-inch- (38-mm-) wings.
      b. Height: 4’ typical unless noted
      c. Color and Texture: clear anodized 204R1
   2. Attachment: Field Applied Adhesive: #535 HEAVY DUTY ADHESIVE
   3. Top and Bottom Caps: Prefabricated, injection-molded plastic; color matching cover; field adjustable for close alignment with snap-on cover.
   4. LOCATION: Provide typical in all corridor spaces with GWB assemblies on all outside corners.

2.4 PLASTIC DOOR-PROTECTION PLATE

A. Kick Plate for Door per door hardware sets

2.5 MATERIALS

A. Plastic Materials: Chemical- and stain-resistant, high-impact-resistant plastic with integral color throughout; extruded and sheet material as required; thickness as indicated.

B. Polycarbonate Plastic Sheet: ASTM D6098, S-PC01, Class 1 or Class 2, abrasion resistant; with a minimum impact-resistance rating of 15 ft.-lbf/in. (800 J/m) of notch when tested according to ASTM D256, Test Method A.

C. Fasteners: Aluminum, nonmagnetic stainless-steel, or other noncorrosive metal screws, bolts, and other fasteners compatible with items being fastened. Use security-type fasteners where exposed to view.

D. Composite Wood Products: Verify products are made using ultra-low-emitting formaldehyde resins, as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products," or are made with no added formaldehyde.

E. Adhesive: As recommended by protection product manufacturer.
   1. Verify adhesives have a VOC content of 70 g/L or less.
   2. Verify adhesive complies with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.6 FABRICATION

A. Fabricate wall and door protection according to requirements indicated for design, performance, dimensions, and member sizes, including thicknesses of components.

B. Factory Assembly: Assemble components in factory to greatest extent possible to minimize field assembly. Disassemble only as necessary for shipping and handling.

C. Quality: Fabricate components with uniformly tight seams and joints and with exposed edges rolled. Provide surfaces free of wrinkles, chips, dents, uneven coloration, and other imperfections. Fabricate members and fittings to produce flush, smooth, and rigid hairline joints.

D. Wood Handrails: Miter corners and ends of wood handrails for returns.

2.7 FINISHES

A. Protect finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and wall areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine walls to which wall and door protection will be attached for blocking, grounds, and other solid backing that have been installed in the locations required for secure attachment of support fasteners.

1. For wall and door protection attached with adhesive, verify compatibility with and suitability of substrates, including compatibility with existing finishes or primers.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Complete finishing operations, including painting, before installing wall and door protection.

B. Before installation, clean the substrate to remove dust, debris, and loose particles.

3.3 INSTALLATION

A. Installation Quality: Install wall and door protection according to manufacturer's written instructions, level, plumb, and true to line without distortions. Do not use materials with chips, cracks, voids, stains, or other defects that might be visible in the finished Work.

B. Mounting Heights: Install wall and door protection in locations and at mounting heights indicated on Drawings.

1. Wall Guard Rails: T.O. 2’-8” above finished floor.
2. Corner Guard’s: As indicated on drawings and in coordination with Wall Guard & vinyl base by others.
3. Kick Plate: 36” above finished floor per Door Type G1.

C. Accessories: Provide splices, mounting hardware, anchors, trim, joint moldings, and other accessories required for a complete installation.

1. Provide anchoring devices and suitable locations to withstand imposed loads.
2. Where splices occur in horizontal runs of more than 20 feet (6.1 m), splice aluminum retainers and plastic covers at different locations along the run, but no closer than 12 inches (305 mm) apart.
3. Adjust end and top caps as required to ensure tight seams.

D. Abuse-Resistant Wall Covering by others: Install top and edge moldings, corners, and divider bars as required for a complete installation. Coordinate with GC installation of the VWC prior to wall guard and corner guard installation.

3.4 CLEANING

A. Immediately after completion of installation, clean plastic covers and accessories using a standard ammonia-based household cleaning agent.

B. Remove excess adhesive using methods and materials recommended in writing by manufacturer.

END OF SECTION 10 26 00

SECTION 10 26 41 – BULLET RESISTANT PANELS

PART 1 – GENERAL

1.1 SUMMARY

A. Section includes bullet resistant fiberglass panels and batten strips for seams.

1.2 REFERENCES

A. American Society for Testing and Materials:
   1. ASTM E119-98 Standard Test for One-Hour Fire-Rating of Building Construction and Materials
   2. ASTM F1233-98 Standard Test Method for Forced Entry Testing of Materials/Assemblies, Class IV
B. International Organization for Standardization:
   1. ISO 9001:2015 Quality Management System
C. National Institute of Justice Ballistic Standards:
   1. NIJ Standard 0108.01 – Type III-A
D. Small Business Administration:
   1. SBA Small Business Size Standard
E. Underwriters Laboratories:
   1. UL 752 Specifications and Ammunition, 11th Edition, Standard for Bullet Resisting Equipment published September 9, 2005, revised December 21, 2006, Level 3
F. The United States Department of State:
   1. The International Traffic in Arms Regulations (ITAR)

1.3 SUBMITTALS

A. Submittals for Review: Submit for approval prior to fabrication.
   1. Product Data: Include specifications, brochures, and samples.
   2. Recommendations for installation of Bullet Resistant Fiberglass Panels available in print document and video link.
B. Certificates: Submit printed data to indicate compliance with following requirements.
   1. UL LISTING Verification and UL752 Current Test Results as provided by Underwriters Laboratories.
   2. ASTM E119-98 One-Hour Fire Rating of Building Construction and Materials.
   3. ASTM F1233-98 Standard Test Method for Forced Entry Testing of Materials/Assemblies.
   4. Manufacturer's third party certificate of registration with ISO 9001:2015.
   5. Manufacturer's U.S. Dept. of State ITAR Statement of Registration.
   6. Manufacturer's SBA Profile verifying small business status by the SBA.

1.4 DELIVERY, HANDLING, AND STORAGE

A. Deliver materials to project with manufacturer's UL LISTED Labels intact and legible.
B. Handle material with care to prevent damage. Store materials inside under cover, stack flat and off the floor.

1.5 WARRANTY

A. Warrant all materials and workmanship against defects for a period of ten (10) years from the date of Substantial Completion.

PART 2 – PRODUCTS

2.1 MANUFACTURER

A. Design Basis: Contract Documents are based on ArmorCore by Waco Composites, (Waco, TX 76710, phone: 254-752-3622, toll free: 866-688-3088, email: sales@armorcore.com, web: www.armorcore.com)

OR Approved equal.

2.2 PERFORMANCE CRITERIA

A. Bullet Resistant Fiberglass Panels shall be “non ricochet type” to permit the encapture and retention of an attacking projectile lessening the potential of a random injury or lateral penetration.
B. Panel Rating: UL752 Level 3.
C. Bullet resistance of joints: equal to that of the panel.

2.3 MATERIALS

A. Panels fabricated of multiple layers of woven roving ballistic grade fiberglass cloth impregnated with a thermoset polyester resin and compressed into flat rigid sheets.
B. Thickness: 7/16”, ½” nominal thickness. Coordinate with equal thickness GWB above ballistic panel.
C. Nominal Weight: 4.8 lbs. per sq. ft.
D. Available Panel Sizes: 3’ x 8’
E. Panels manufactured in the United States of America with raw materials sourced from the U.S.A. for quality assurance purposes and to comply with any applicable “Buy American” provisions.
F. Provide for 4” wide batten strip from single source as panel at each horizontal and vertical seam.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to starting installation, verify work of related trades required in contract documents and architectural drawings is complete to the point where work of this Section may properly commence.

3.2 JOINTS

A. Reinforce joints with a back-up layer of bullet resistive material. Minimum width of reinforcing layer at joint shall be 4-inches, centered on panel joints.
B. Finished drywall layer is to be placed offset from ballistic panel.

3.3 APPLICATION

A. Install armor in accordance with manufacturer’s printed recommendations and as required by contract documents.
B. Secure armor panels using screws, bolts, or an industrial adhesive.

1. Method of application shall install panels minimizing vulnerabilities by fitting tightly to adjacent surfaces including concrete floor slab, concrete roof slab, bullet resistive door frames, bullet resistive window frames, and the like.

END OF SECTION 10 26 41

SECTION 10 28 00 - TOILET ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Toilet accessories
2. Underlavatory guards
3. Grab bars
4. Changing Stations
5. Custodial Accessories

B. Related Sections include the following:

1. Division 10 Section "Toilet Compartments" for compartments and screens.
2. Division 08 83 00 Mirrors

1.3 SUBMITTALS

A. Product Data: Include construction details, material descriptions and thicknesses, dimensions, profiles, fastening and mounting methods, specified options, and finishes for each type of accessory specified.

B. Setting Drawings: For cutouts required in other work; include templates, substrate preparation instructions, and directions for preparing cutouts and installing anchoring devices.

C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required. Use designations indicated in the Toilet and Bath Accessory Schedule and room designations indicated on Drawings in product schedule.

D. Maintenance Data: For accessories to include in maintenance manuals specified in Division 1. Provide lists of replacement parts and service recommendations.

1.4 QUALITY ASSURANCE

A. Source Limitations: Provide products of same manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise approved by Architect.

1.5 COORDINATION

A. See TA Sechedule on drawings.

B. Coordinate accessory locations with other work to prevent interference with clearances required for access by disabled persons, proper installation, adjustment, operation, cleaning, and servicing of accessories.

1.6 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by General Contractor under requirements of the Contract Documents.

B. Manufacturer's Warranty:

1. Minimum Warranty Period: 2 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers Names: Use of manufacturer’s proprietary names to designate products is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers.

1. Toilet Accessories:

a. **CSR** Shower Curtain and Rod with curtain hooks
   a. Opaque Matte White Vinyl (width per location) Basis of Design Bobrick #204-3 or 4 provide curtain hooks #204-1 per location width.
   b. Heavy-duty shower curtain rod, satin finish, Basis of Design Bobrick B6107 Series, per location width.
b. **TD-1** Paper Towel Dispenser: Scotts Essential High Capacity Hard Roll Towel Dispenser, for 8” paper towel roll. #46253. NO SUBSTITUTIONS
c. **WR-1** Waste recepticle Rubbermaid 25 gallon domed trash can with push-top. # H-1197BL. NO SUBSITUTIONS.
d. **SD-1** Soap Dispenser: Gojo item #9034 NO SUBSITUTIONS.
e. **TP-1** Toilet Paper Holder: Jumbo Toilet Paper Dispenser SCA 56TR or Single Jumbo Roll Advantage PFTRD002601. NO SUBSITUTIONS.
f. **EHD** Electric Hand Dryer, Excel-dryer-xlerator 455A30 XL-SB-1.1N-110-120V in Stainless steel. NO SUBSITUTIONS.
g. **TSC-1** Toilet Seat Cover Dispenser: Neat Seat, Half Fold/ White Winco TSC10. NO SUBSITUTIONS.
h. **MIR** Mirrors, see 08 83 00 and interior elevations.
i. **GB-#s** ADA grab bars, (see section 2.4).
j. **SN-1** Sanitary Napkin Disposal Unit: Rubbermaid model 6140 NO SUBSITUTIONS
k. **TH-1** Coat/Garmet Hook – Surface Mounted Coat Hook with Bumper, satin finish, Basis of Design Bobric #B-9541

2. Underlavatory Guards (at gun cleaning sink or any other exposed P-trap):

a. Brocar Products, Inc.
b. Truebro, Inc.
c. Approved equal

3. Grab Bars: (see section 2.4)

a. Minimum 0.05" thick, 1 ½" outside diameter with manufacturer's standard slip-resistant texture. Concealed mountings shall have manufacturer's standard flanges and anchors. Install per ADAAG.
b. **GB-18, GB-36, GB-42**
c. See detention furnishings specifications for anti-ligature grab bars.

4. Changing Stations: (see section 2.3)

a. **ADC-1** Adult Changing Station by Koala Kare, item KB3000-AHL
b. **DC-1** Baby Changing Station by Koala Kare, item KB200-SSRE

5. Custodial Accessories:

a. **MB-1** Shelf with Mop and Broom Holders and Rag Hooks by Bobrick # B-224 x 36 at each mop sink location. **LOCATIONS JC 110, 175**

6. ADA Shower Seat:

a. **BN-1** ADA folding shower bench. 32" x 22½" ADA Reversible Shower Seat, Wall Supported, Phenolic Solid TEAK - MODEL: APFSLR-320225PTS by Freedom Showers or equal.

2.2 MATERIALS

A. Stainless Steel: ASTM A 666, Type 304, with No. 4 finish (satin), in 0.0312-inch (0.8-mm) minimum nominal thickness, unless otherwise indicated.

B. Plastic: High-impact ABS grey plastic.

C. Sheet Steel: ASTM A 366/A 366M, cold rolled, commercial quality, 0.0359-inch (0.9-mm) minimum nominal thickness; surface preparation and metal pretreatment as required for applied finish.

D. Galvanized Steel Sheet: ASTM A 653/A 653M, G60 (Z180).

E. Chromium Plating: ASTM B 456, Service Condition Number SC 2 (moderate service), nickel plus chromium electrodeposited on base metal.

F. Galvanized Steel Mounting Devices: ASTM A 153/A 153M, hot-dip galvanized after fabrication.

G. Fasteners: Screws, bolts, and other devices of same material as accessory unit, tamper and theft resistant when exposed, and of galvanized steel when concealed

2.3 DIAPER CHANGING STATION

A. Surface Mounted Baby Changing Station:
1. **DC-1** Diaper-changing station
2. Basis of Design: Koala Kare Model KB200.
3. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.
   Engineered to support minimum of 200-lb static load when opened.
4. Mounting: Surface mounted, with unit projecting not more than 4 inches (102 mm) from wall when closed.
5. Operation: By pneumatic shock-absorbing mechanism.
6. Material and Finish: HDPE in manufacturer's standard color gray.
7. Liner Dispenser: Provide built-in dispenser for disposable sanitary liners.

B. Surface Mounted Adult Changing Station:
1. **ADC-1** Diaper-changing station (DC)
2. Basis of Design: Koala Kare Model Koala KB-3000 .
3. Description: Horizontal unit that opens by folding down from stored position and with child-protection strap.

   Engineered to support minimum of 350-lb (113-kg) static load when opened.
4. Mounting: Surface mounted, with unit projecting not more than 4 inches (102 mm) from wall when closed. GC to coordinate wall framing and blocking per MFG. details.
5. Operation: By pneumatic shock-absorbing mechanism.
6. Material and Finish: HDPE in manufacturer's standard color gray.
7. Liner Dispenser: Provide built-in dispenser for disposable sanitary liners.

2.4 GRAB BARS (GB-#)

A. Stainless Steel Grab Bars: With snap flange covers:
1. Satin Finish:
   a. Basis of Design: Bobrick Model B-6806X18 **(GB-18)**
      1) Length: 18 inches
   b. Basis of Design: Bobrick Model B-6806X36 **(GB-36)**
      1) Length: 36 inches
   c. Basis of Design: Bobrick Model B-6806 x 42 **(GB-42)**
      1) Length: 42 inches
2. Compliance: Barrier-free accessibility guidelines (including ADAAG) for structural strength.
   a. Capacity: Designed to support 900 lbs (408 kg) in compliant installations.
3. Description: Clearance between grab bar and finished wall is 1-1/2 inches
4. Grab Bar Materials: 18-8, Type 304, stainless steel tubing with satin finish.
5. Grab Bar Construction: 18 gauge (1.2 mm), ends heliarc welded to flanges.
6. Outside Diameter: 1-1/4 inch (32 mm).
7. Mounting: Concealed with manufacturer's standard flanges and anchors.

2.5 CUSTODIAL ACCESSORIES

MB-1 Custodial Mop and Broom Holder with Shelf:
1. Basis of Design: Bobrick Series Model B-224x36.
2. Description: Unit with shelf, hooks, holders, and rod suspended beneath shelf.
3. Length: 36”
4. Hooks: Four.

5. Mop/Broom Holders: Three, spring-loaded, rubber hat, cam type.
6. Material and Finish: Stainless steel, ASTM A480/A480M No. 4 finish (satin).
7. Shelf: Not less than nominal 0.05-inch- (1.3-mm-) thick stainless steel.
8. Location: Mounted over mop receptor. Coordinate mounting height.

2.6 FABRICATION

A. General: One, maximum 1-1/2-inch-diameter, unobtrusive stamped manufacturer logo, as approved by Architect, is permitted on exposed face of accessories. On interior surface not exposed to view or back surface of each accessory, provide printed, waterproof label or stamped nameplate indicating manufacturer's name and product model number.

B. Surface-Mounted Toilet Accessories: Unless otherwise indicated, fabricate units with tight seams and joints, and exposed edges rolled. Hang doors and access panels with continuous stainless-steel hinge. Provide concealed anchorage where possible.

C. Recessed Toilet Accessories: Unless otherwise indicated, fabricate units of all-welded construction, without mitered corners. Hang doors and access panels with full-length, stainless-steel hinge. Provide anchorage that is fully concealed when unit is closed.

D. Keys: Provide universal keys for internal access to accessories for servicing and resupplying. Provide minimum of six keys to Owner's representative.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Secure mirrors to walls in concealed, tamper-resistant manner with special hangers, toggle bolts, or screws. Set units level, plumb, and square at locations indicated, according to manufacturer's written instructions for substrate indicated.

C. Install grab bars to withstand a downward load of at least 250 lbf (1112 N), when tested according to method in ASTM F 446.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation and verify that mechanisms function properly. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

END OF SECTION 10 28 00

SECTION 10 44 16 - FIRE EXTINGUISHERS AND CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Portable fire extinguishers.
2. Fire-protection cabinets
3. Brackets for wall hung units.

1.3 SUBMITTALS

A. Product Data: Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for fire-protection specialties.

1. Fire Extinguishers: Include rating and classification.
2. Cabinets: Include roughing-in dimensions, details showing mounting methods, relationships of box and trim to surrounding construction, door hardware, cabinet type, trim style, and panel style.

B. Samples for Initial Selection: Manufacturer's color charts consisting of units or sections of units showing the full range of colors, textures, and patterns available for each type of cabinet finish indicated.

C. Samples for Verification: For each type of exposed cabinet finish required, prepared on Samples of size indicated below and of same thickness and material indicated for the Work. If finishes involve normal color and texture variations, include sample sets showing the full range of variations expected.

1. Size: 6-by-6-inch-square Samples.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain fire extinguishers and cabinets through one source from a single manufacturer.

B. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Standard for Portable Fire Extinguishers."

C. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

1. Provide extinguishers listed and labeled by FM.

1.5 COORDINATION

A. Coordinate size of cabinets to ensure that type and capacity of fire extinguishers indicated.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Portable Fire Extinguishers:

a. J.L. Industries, Inc.
b. Larsen's Manufacturing Company.
c. Potter-Roemer; Div. of Smith Industries, Inc.
d. Watrous; Div. of American Specialties, Inc.

2. Semi Recessed Fire-Protection Cabinets:

a. J.L. Industries, Inc.
b. Larsen's Manufacturing Company.
c. Potter-Roemer; Div. of Smith Industries, Inc.
d. Watrous; Div. of American Specialties, Inc.

3. Fully Recessed Fire-Protection Cabinets:

a. J.L. Industries, Inc.
b. Larsen's Manufacturing Company.
c. Potter-Roemer; Div. of Smith Industries, Inc.
d. Watrous; Div. of American Specialties, Inc.

4. Security Grade Fire-Protection Cabinets:

a. J.L. Industries, Inc.
b. Larsen's Manufacturing Company.
c. Potter-Roemer; Div. of Smith Industries, Inc.
d. Watrous; Div. of American Specialties, Inc.

2.2 MATERIALS

A. Cold-Rolled Steel Sheet: Carbon steel, complying with ASTM A 366/A 366M, commercial quality, stretcher leveled, temper rolled.

2.3 PORTABLE FIRE EXTINGUISHERS

A. General: Provide fire extinguishers of type, size, and capacity for each cabinet and other locations indicated.

B. Multipurpose Dry-Chemical Type I: UL-rated 2-A:10:B:C, 5-lb nominal capacity, in enameled-steel container.

2.4 FIRE-PROTECTION CABINETS

A. FEC1 - Fully Recessed Fire Protection Cabinets
   a. Cabinet Construction: Provide manufacturer's standard semi-recessed box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Weld joints and grind smooth. Miter and weld perimeter door frames. Fire rated cabinets where located in fire rated wall assembly. #4 satin finishes stainless steel door and trim.
   b. Door Glazing: Manufacturer's standard, as follows:
      i. Verticle panel with pull handler and Saftey lock.
      ii. Clear Tempered Glass
      iii. Color: Clear.
   c. Door Hardware: Provide manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated. Provide either lever handle with cam-action latch, or exposed or concealed door pull and friction latch. Provide concealed or continuous-type hinge permitting door to open 180 degrees.
   d. Locations: See Coversheets Life Safety Code Plans
   e. Basis of Design: JL Industries Cosmopolitan Stainless Steel 1035V10 3/8” Flat trim, vertical Duo Door.

B. FEC2 - Semi Recessed Fire Protection Cabinets
   a. Cabinet Construction: Provide manufacturer's standard semi-recessed box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Weld joints and grind smooth. Miter and weld perimeter door frames. Fire rated cabinets where located in fire rated wall assembly. #4 satin finishes stainless steel door and trim.
   b. Door Glazing: Manufacturer's standard, as follows:
      i. Verticle panel with pull handler and Saftey lock.
      ii. Clear Tempered Glass
      iii. Color: Clear.
   c. Door Hardware: Provide manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated. Provide either lever handle with cam-action latch, or exposed or concealed door pull and friction latch. Provide concealed or continuous-type hinge permitting door to open 180 degrees.
   d. Locations: See Coversheets Life Safety Code Plans
   e. Basis of Design: JL Industries Cosmopolitan Stainless Steel C1037V10 3” rolled edge, verticle duo door.

C. FEC3 - Security Grade Fire Protection Cabinets
   a. Cabinet Construction: Provide manufacturer's standard semi-recessed box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Weld joints and grind smooth. Miter and weld perimeter door frames. Fire rated cabinets where located in fire rated wall assembly. 14 guage #4 satin finishes stainless steel door and trim.
   b. Door Hardware: Provide manufacturer's Detention grade deadbolt installed door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated. Provide either lever handle with cam-action latch, or exposed or concealed

door pull and friction latch. Provide concealed or continuous-type hinge permitting door to open 180 degrees.

c. Locations: See Coversheets Life Safety Code Plans
d. Basis of Design: JL Industries: Security/Detention SFC-12 SSFC-32, stainless steel 2 ½" Square Trim

2.5 ACCESSORIES

A. Identification: Provide lettering to comply with authorities having jurisdiction for letter style, color, size, spacing, and location. Locate as indicated by Architect.

1. Identify fire extinguisher in cabinet with the words "FIRE EXTINGUISHER" applied to door.

a. Application Process: Silk-screened.
b. Lettering Color: Red.
c. Orientation: Vertical.

2.6 COLORS AND TEXTURES

A. Colors and Textures: As selected by Architect from manufacturer's full range for these characteristics.

2.7 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Cabinet and Door Finishes: Provide manufacturer's standard baked-enamel paint for the following:

1. Exterior of cabinets and doors, except for those surfaces indicated to receive another finish.
2. Interior of cabinets and doors.

2.8 STEEL FINISHES

A. Surface Preparation: Clean surfaces of dirt, oil, grease, mill scale, rust, and other contaminants that could impair paint bond using manufacturer's standard methods.

1. Shop Primer: Manufacturer's or fabricator's standard, fast-curing, lead- and chromate-free, universal primer, selected for resistance to normal atmospheric corrosion, for compatibility with substrate and field-applied finish paint system indicated, and for capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

C. Baked-Enamel Finish: Immediately after cleaning and pretreating, apply manufacturer's standard two-coat, baked-enamel finish consisting of prime coat and thermosetting topcoat. Comply with paint manufacturer's written instructions for applying and baking to achieve a minimum dry film thickness of 2 mils.

1. Color and Gloss: As selected by Architect from manufacturer's full range.

2.9 MOUNTING BRACKETS

A. Mounting Brackets: Provide manufacturer's standard steel, designed to secure fire extinquishers to wall or structure, of sizes required for types and capacities of extinquishers indicated, with plated or baked enamel finish.

1. Color: Red.

B. Identification: Lettering compling with authorities having jususdiction for lettering style, size, spacing, and location. Locate as indicated.

1. Identify bracket-mounted extinquishers with the words “FIRE EXTINQUISHER” in red letter decals applied to mounting surface.
2. Orientation: Vertical.

2.10 FABRICATION

A. Fire Protection Cabinets: Provide manufacturer's standard box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Miter and weld joints and grind smoothly.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine roughing-in for cabinets to verify actual locations of piping connections before cabinet installation.

B. Examine walls and partitions for suitable framing depth and blocking where recessed and semirecessed cabinets are to be installed.

C. Examine fire extinguishers for proper charging and tagging.

1. Remove and replace damaged, defective, or undercharged units.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing fire-protection specialties.

B. Install in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

1. Prepare recesses for cabinets as required by type and size of cabinet and trim style.

3.3 ADJUSTING, CLEANING, AND PROTECTION

A. Adjust cabinet doors that do not swing or operate freely.

B. Refinish or replace cabinets and doors damaged during installation.

C. Provide final protection and maintain conditions that ensure that cabinets and doors are without damage or deterioration at the time of Substantial Completion.

END OF SECTION 10 44 16

SECTION 10 51 13 – WELDED METAL LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

Personal Storage Lockers, Personal Storage Lockers with built-in bench drawers, Personal Storage Lockers with built-in external access drawers and Personal Storage Lockers in Multi-tier Configuration, Evidence locker (non-pass through) with electric outlet and refrigerated components. Fire Rated Ammunition Locker, Gun Rack Lockers, Tactical gear open shelf lockers, Duty bag open shelf lockers.

1. Interior wood works, matchings solid wood bench returns and corners. Locker contractor shall provide the corner infill components as matching powder coated locker blanks with sole wood top provider continuing the bench.

B. Related Work, Not Furnished:

1. Finish floor covering material and installation.

1.3 REFENCES

A. American National Standards Institute (ANSI) Standards:

Applicable standards for fasteners used for assembly.

B. American Society for Testing and Materials (ASTM) Standards:

Applicable standards for steel sheet materials used for fabrication

Applicable standards for the testing of electrostatically applied Powder Coat Paint

C. American Institute Of Steel Construction (AISC) Standards:

Applicable standards for steel materials used for fabrication.

1.4 DESCRIPTION

A. General: Welded Metal Lockers only with end-user reconfigurable interior. Specialized lances to provide the flexibility of on-site, end-user reconfiguration/addition of internal components anytime, anywhere, now or in the future.

B. Finishes:

Fabricated Metal Components and Assemblies: All components to be painted with an electro-statically applied Powder Coat paint that can meet or exceed test requirements set out by ASTM standard D3451-06 Standard Guide for Testing Coating Powders and Powder Coatings.

C. Sizes:

Personal Storage Lockers with built-in bench drawers: nominal heights of 72 inches; Built-in bench drawer nominal height is 18 inches and nominal depth is 24 inches.

Personal Storage Lockers in Multi-Tier configurations: see drawings

Fire rated Ammunition Storage Lockers: nominal height of 72 inches, and nominal widths of 30 inches.

1.5 PERFORMANCE REQUIREMENTS

A. Design Requirements:

Limit overall width not to exceed specified nominal width; locker width designed for zero growth.

B. Seismic Performance: Provide Welded Metal Lockers capable of withstanding the effects of earthquake movement when required by applicable building codes.

C. ADA Requirements: Personal Storage Lockers with nominal height of 72 inches meet ADA requirements.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions for each type of welded metal locker required. Include data substantiating that products to be furnished comply with requirements of the contract documents.

B. Shop Drawings: Show fabrication, assembly, and installation details, including descriptions of procedures and diagrams. Show complete locker installation layout, including quantities, locations and types of accessory units required. Include notations and descriptions of all installation items and components.

Show installation details at non-standard conditions, if any.

Provide layout, dimensions, and identification of each unit, corresponding to sequence of installation procedures.

Provide installation schedule and procedures to ensure proper installation.

C. Samples: Provide minimum 3 inch square example of each color and texture on actual substrate for each component to remain exposed after installation.

D. Selection Samples: For initial selection of colors and textures, submit manufacturer's color charts, consisting of actual product pieces, showing full range of colors and textures available.

E. Warranty: Submit draft copy of proposed warranty for review by the Architect.

F. Maintenance Data: Provide written documentation of the manufacturer’s statement, claiming the maintenance free nature of the product.

G. Reference List: Provide a list of recently installed welded metal lockers to be visited by owner, architect, and contractor. Intent of list is to aid in verifying the suitability of manufacturer's products and comparison with materials and product specified in this section. Include contact name, address, and phone numbers.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage an experienced manufacturer who is ISO 9001:2008 certified for the design, production, installation and service of welded metal lockers. Furnish certification attesting ISO 9001:2008 quality system registration.

B. Installer Qualifications: Engage an experienced installer who is the manufacturer's authorized representative for the specified products for installing welded metal lockers.

Minimum Qualifications: 1-year experience installing welded metal lockers of comparable size and complexity to specified project requirements.

1.8 DELIVERY, STORAGE AND HANDLING

A. Follow manufacturer’s instructions and recommendations for delivery, storage and handling requirements.

1.9 PROJECT CONDITIONS

A. Field Measurements: Verify quantities of welded metal locker units before fabrication. Indicate verified measurements on shop drawings. Coordinate fabrication and delivery to ensure no delay in progress of the work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating welded metal lockers units without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.10 SEQUENCING AND SCHEDULING

A. Sequence welded metal lockers [with other work] to minimize possibility of damage and soiling, during remainder of construction period.

B. Schedule installation of specified welded metal lockers after finishing operations, including painting, have been completed.

C. Provide components, which must be built in at a time, which causes no delays in the general progress of the work.

D. Pre-installation Conference: Schedule and conduct conference on project site to review methods and procedures for installing welded Metal Lockers including, but not limited to, the following:

Recommended attendees include:

1. Owner's Representative.
2. Prime Contractor or representative.
3. The Architect.
4. Manufacturer's representative.
5. Subcontractors or installers whose work may affect, or be affected by, the work of this section.

1.11 WARRANTY

A. Provide a written warranty, executed by Contractor, Installer, and Manufacturer, agreeing to repair or replace units, which fail in materials or workmanship within the established warranty period. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have under General Condition's provisions of the Contract Documents.

B. Limited Lifetime Warranty: Subject to the terms in the written warranty, warrant the original purchaser exclusively that the locker frames manufactured by it will be free from defects in materials and workmanship for the lifetime of the locker.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. General: FreeStyle™ Personal Storage Lockers, FreeStyle™ Personal Storage with built-in bench drawers, Personal Storage with built-in external access drawers, FreeStyle™ Personal Storage Lockers in Multi-Tier configurations; based upon welded metal lockers manufactured by Spacesaver Corporation, 1450 Janesville Avenue, Fort Atkinson, Wisconsin 53538-2798. Telephone: 800-492-3434.; Basis of Design.

1. OR APPROVED EQUAL

2.2 BASIC MATERIALS

A. General: Provide materials and quality of workmanship, which meets or exceeds established industry standards for products specified. Use furniture grade sheet metal, solid hardwood benches and fasteners for component fabrication unless indicated otherwise. Material thicknesses/gauges are manufacturer's option unless indicated otherwise.

2.3 LOCKER TYPES

A. Personal Storage Lockers. Vented peaked top. Provide standard personal storage lockers.

B. Personal Storage Lockers. Provide personal storage lockers with built-in bench drawers.

C. Personal Storage Lockers. Provide personal storage lockers with built-in external access drawers.

D. Personal Storage Lockers. Provide personal storage lockers in Multi-Tier configurations. Provide 4-tier lockers equipped with accessories as requested.

E. Note:

1. All locker types (except Multi-Tier) to be equipped with environmental ventilation functionality for applications where Mechanical Air Extraction is desired to remove unpleasant odors from the locker.
2. All locker types (except Multi-Tier) to be equipped with the functionality of attaching a modular electrical system as required.
3. All locker types to be equipped with the functionality of attaching a continuous sloped top.

2.4 MANUFACTURED COMPONENTS

A. Welded Frame:

1. The welded frame must consist of top, bottom, back, and sides constructed of a minimum of 18-gauge steel. All frame components shall be joined using resistance welding. Riveting of structural members will not be permitted.
2. Horizontal front flanges will be a minimum of 2 inch. Vertical front flanges will be a minimum of 1 inch. Horizontal and vertical flanges will overlap and be secured with a minimum two (2) resistance welds per corner.
3. Corner gussets shall be MIG and spot welded in each of the four front corners of the locker for increased stiffness and rigidity.
4. Provide side panel lances evenly spaced on 3 inch centers. Lances to provide the flexibility of on-site, end-user reconfiguration/addition of internal components anytime, anywhere, now or in the future.
5. Bench Housing for built-in bench drawer
6. Welded frame construction shall consist of top, bottom, and side components joined by using resistance welding. Riveting of bench housing structural members will not be permitted.
7. Corner gussets shall be welded in the two (2) front bottom corners of the bench housing for increased stiffness and rigidity.
8. Horizontal front flanges will be a minimum of inch.
9. Vertical front flanges will be a minimum of 1 inch.
10. Horizontal and Vertical front flanges will overlap and shall be secured with minimum of one (1) resistance weld per corner.

11. Side panels – Lances symmetric and evenly spaced to provide optimum component locations (standard based on 3 inch on center vertical placement to match mating locker lance design).
12. Return flanges on housing to securely fasten housing to welded frame of locker.
13. Base of bench housing shall include four (4) 3/8”-16 UNC threaded weld-nuts and corresponding leveling feet.
14. Top of bench housing shall include hole pattern for mating bench seat.
15. Sides of bench housing shall include mounting holes in the event lockers are ganged together.
16. Lockers with built-in bench drawer and built-in external access drawer shall have intermediate base shelf with interlocking mechanism for securing drawer when locker door is closed.
17. Provide four (4) [0.875] inch or [22.23] millimeter diameter electrical knock-outs per locker, two (2) located on top of the locker in both right and left rear corners, and two (2) located in the back of locker centered at a distance no greater than [24] inches from the top and bottom. Knock-outs allow end-user flexibility of adding electrical capability to lockers.
18. Provide a minimum of four (4) duplex receptacle electrical knock-outs per locker; to be used with a UL listed manufactured electrical wiring system as required. This manufactured electrical wiring system is a simple, unique, flexible, and cost effective method of providing electrical capability to the lockers. This electrical system can be added in the future.
19. Top of the locker shall have four (4) duplex electrical knock-outs.
20. Top of locker shall have electrical duplex receptacle knock-outs located on both right and left side of locker.
21. Back panel of locker shall have a minimum of two (2) duplex electrical knock-outs.
22. Back of locker shall have electrical duplex receptacle knock-outs located on both right and left side of locker and no farther than [24] inches or [609.6] millimeters from the top of the locker.
23. Provide passive ventilation holes in top of locker to allow mechanically extracted air to be pulled up through the locker system as required. Ventilation shall be controlled by eight (8) evenly spaced [0.625] inch diameter holes. Proper ventilation system ensures unpleasant odors are removed from locker system.
24. Lockers shall be prepared with mounting holes for use with the continuous sloped top system.
25. Lockers shall be prepared with mounting holes for attaching necessary trim components
26. Locker shall be prepared with mounting holes for ganging lockers back-to-back or side-by-side
27. Base of lockers shall include four (4) 3/8”-16 UNC threaded weld-nuts and corresponding leveling feet.
28. Base shelf for lockers with built-in external access drawers and bench drawers shall have holes to accommodate double-door lock rod and door stop bracket. (only on 24 inch or [609.6] millimeters wide and larger)

29. End Panels: End Panels with no exposed fasteners shall be provided on the end of each locker run; thus providing a clean and aesthetically pleasing appearance.
30. All locker sizes and types to be specified by architect.
31. Width:
    1) Personal Storage Locker: 34 inches
    2) Personal Storage Locker with built-in bench drawer or external access drawer: 24 inches
    3) Personal Storage Lockers in Multi-Tier configuration:24 inches

b. Height:
    1) Personal Storage Locker: 72 inches
    2) Personal Storage Locker with built in bench drawer or external access drawer: 72 inches
    3) Personal Storage Locker in Multi-Tier configuration: 72 inches

c. Depth:
    1) All lockers 24 inches
    2) Bench drawers: 24 inches
        c) Bench seat depth 9.5 inches
        c) Leading edge of bench seat to extend 1.125 inches from front of bench drawer
    3) External access drawer: 24 inches

B. Ventilation:
1. Provide ventilation holes in top of locker to allow mechanically extracted air to be pulled up through the locker system as required. Ventilation shall be controlled by eight (8) evenly spaced 0.625 inch diameter holes. Proper ventilation system ensures odors are removed from locker system.
2. Provide an adjustable air baffle for system balancing when mechanical air extraction is used. Upon balancing system, air baffle shall be secured with a fastener to maintain ventilation setting.
3. Provide louvered air vents in bottom of the main locker door/s to allow mechanically extracted air to be pulled up through the locker system.
4. Provide louvered air vents in drawer front when built-in bench drawer or built-in external access drawer models are required.
5. Minimum 0.500 inch gap between back of shelving components and back of locker to provide uninterrupted air flow up the rear of the locker system.
6. Minimum 2.00 inches gap between front of shelving and locker door to provide uninterrupted air flow up the front of the locker system.
7. Multi-Tier ventilation is provided thru door panels
8. Lockers shall have passive ventilation.

C. Drawers (for bench drawer and external access drawer):

1. Drawer body wrapper shall have welded frame construction. Riveting of structural members will not be permitted.
2. Drawers for locker with built-in bench drawers and built-in external access drawers shall have box-formed drawer front.
3. Provide interlock system for securing drawer when main locker doors are closed and provide access only when main locker door/s is opened.
4. Built-in bench drawer shall have a nominal 36 inches depth.
5. Provide a flush mounted pull handle.
6. Drawer Slides: Provide 200 lbs maximum load capacity and pass 50,000 cycle performance testing (Max. load, uniform distribution) (Test data to be provided by manufacturer upon request)
7. Drawer base minimum 21 drawer extension
8. Bench drawer minimum 26.5 inches drawer extension
9. Provide louvered air vents in drawer front when built-in bench drawer or built-in external access drawer models are required.
10. Provide capability of attaching glides for Body Armored Drying Rack, as requested.

D. Bench Seat:

1. Provide 9.5 inches deep laminated kiln dried maple bench seat; material thickness 1.25 inches.
2. Front (leading edge) of bench seat to have .625 inch radius bull nose.
3. Finish of bench seat shall be sanded smooth and have two (2) coats of catalyzed varnish applied. See Painting Specification for stain and polyurethane coating.
4. Provide locker bench infill detail per drawings and make of same material as bench seats.

E. Single-Piece Welded Doors (Single and Double Door Models):

1. Shall be formed from two (2) pieces of minimum 18-gauge cold rolled steel box formed and welded together using modern GMAW techniques. Single-piece door with inner and outer door panels shall have a combined steel thickness of no less than 0.096 inches thick. Welded door design with inner panel optimizes structural integrity of locker door system over and above any single frame door design.
2. Exterior door panel shall be constructed with formed flanges and return flanges to add stiffness.
3. Internal door panel shall be constructed with formed flanges for added stiffness.
4. All inner door panel (except Multi-Tier) heights shall be minimum 70% of external door height.
5. Multi-Tier inner door panels shall be full height.
6. Single-piece welded door frame shall consist of internal door panel nested inside exterior door panel and welded per the following requirements:

7. Top / bottom. Exterior and Interior panels to be welded in a minimum of three (3) places with weld spacing not to exceed 6 inche between adjacent welds and 1 inch from any corner.
8. Sides. Exterior and interior panels to be welded with spacing not to exceed 12] inches between adjacent welds and 1inch or from any corner.
9. Inner door panel to have peg board style hole pattern, allowing the attachment of Document Holder and any standard peg board accessory.
10. Inner door panel to have 4 inch rectangular slot centered towards the top of the locker.
11. External door panel shall have louvers to provide adequate air circulation throughout locker system.
12. Louvered air vents shall be located at the bottom of the locker door to enhance circulation of mechanically extracted air from the bottom of the locker out of the top.
13. Louvered air vents shall be approximately 3 inches in width and 0.75 inches in height and spaced on 1 inch or centers.
14. Double door designs shall consist of the following:
15. Design available in 30 locker widths
16. Primary door located on the right and the secondary door located on the left-hand side of the locker.
17. Secondary door locking mechanism shall consist of the following:
    1) Return flange for supporting primary door
    2) Catch bracket
    3) One lower lock rod
18. All doors shall have neoprene silencers on each door for noise reduction
19. Door torsional deflection shall not exceed [0.1875] inch or [4.76] millimeter with a [20] lb or [9.071] kilogram point load. (Test data to be provided by manufacturer upon request)
20. Hinge:
21. Provide 16-gauge full length hinge for increased strength and security of locker system.
22. Hinges to be welded to door frame with spot welds not to exceed 6 inch separation.
23. Door assembly to be riveted to door frame on factory pre-established hole pattern.
24. Locking Mechanism.
25. Provide three locking options (all locking options have protective stainless steel cover plate for durability and scratch resistance):
    1) Padlock hasp only.
    2) Keyed lock with master and padlock hasp.
    3) Combination lock with master and padlock hasp.

    b. Keyed and combination locking mechanisms shall have the capability of locking automatically.

c. Keyed and Combination locking mechanisms shall have master key override.

d. Combination locking mechanism shall have user changeable preset combinations.

26. Single door models: Provide three locking options as listed above.

27. Double door models: Provide three locking options on the primary door and simple secure lift latch mechanism with 0.3125 inch lock rod for secondary door.

F. Interior/Accessory components:

1. All interior components must be constructed of minimum 18-gauge steel (unless otherwise clarified in specification).

2. For added security, internal component can be secured utilizing blind rivets, threaded fasteners, or bending specially designed tab.

3. All interior components available at time of order and as post-installation upgrades in the future.

4. Shelves (available all locker models)

5. Shelf with integral hanger bracket

1) Size specified by locker width

2) Hanger bracket designed with perforations on approximately 3 inch centers to insure clothing separation for optimum ventilation

3) Performance: Uniform load rating [300] lbs

6. Plain

1) Size specified by locker width

2) Performance: Uniform load rating 100 lbs

b. Heavy Duty

1) Size specified by locker width

2) Performance: Uniform load rating 300 lbs

c. Perforated (use as drying rack)

1) Size specified by locker width

2) Tested performance: Uniform load rating 100 lbs

d. Shelf rear return flange stops minimum 0.50 inch or short of locker back panel on order to allow air circulation throughout entire locker assembly

e. All performance test data shall be provided by manufacturer upon request.

7. Modular Shelf (available in all models except Multi-Tier)

8. Provides storage compartment for smaller items

9. Approximate compartment size: 9 inches or wide and 12 inches high

10. Optional extended height of 24 inches available

11. Modular shelves to have tabs to interlock with frame side panel lances

12. Modular shelves vertical sides to have lances that match with opposing side panel lances.

13. Modular shelves shall have two (2) locations on vertical side panel for attaching hooks, and one (1) location on bottom for attaching double hook accessories.
14. Shelf rear return flange stops approximately 1 inch short of locker back panel on order to allow air circulation throughout modular shelf.
15. Provide modular shelf with slots for connection with file dividers and shelf back stop. File dividers will aid in maintaining a neat and orderly locker system.
16. Provide lockable compartment for small valuables (available in all models except Multi-Tier)
17. Lockable compartment shall be integral to modular shelf accessory
18. Provide a 14-gauge padlock-able compartment door.
19. Provide [0.188] inch diameter zinc plated steel hinge rod.
20. Door to be mounted with zinc plated steel hinge rod and two shoulder washers for smooth, quiet operation.
21. Provide an 18-gauge hasp bracket for securing lockable compartment door.
22. Adjustable Shelf (available in all models except Multi-Tier)
23. Integral with modular shelf
24. Shelf to have tabs to interlock with frame side panel and modular shelf lances.
25. Shelf shall contain slots for file divider accessories as previously defined
26. Vinyl Mat (modular shelf) (available in all models except Multi-Tier)
27. Material – Vinyl
28. Color – Black
29. Type – longitudinal round corrugated ribs
30. Document Holder (available in all models except Multi-Tier)
31. Width – 10.5 inches
32. Height – 6 inches
33. Depth – 1.5 inches
34. Design to include matching hole pattern to allow various attachment locations on inner door panel
35. Mirror
36. Material – 0.0625 inch thick plastic with mirror surface on one side
37. .0625 inch thick flexible magnet attached to non-mirrored side
38. Size – 3.875 inche height and 5.875 inches width
39. Boot Tray
40. Material – Rubber
41. Dimensions:
    1) Width – 12.9 inches
    2) Depth – 19.90 inches

3) Height –1.25 inches

42. Manufactured from Natural rubber compounds, environmentally friendly, durable, water repellant easily cleaned with soap and water, resistant to alkalis and weak acids, mold, mildew, and dust mites.
43. Body Armor Drying Rack
44. Shall be available in bench drawer model widths of 30
45. Size of tray is controlled by locker width
46. Bottom of drying tray shall have louvered pattern to provide air circulation throughout
47. Shall have the ability to adjust/glide frontward and backward, while mounted in the bench drawer.
48. Internal Drawers
49. Shall be available in all 30 inch wide locker models
50. Drawer shall have a depth of approximately 19 inches
51. Shall be available in 6, 9 inch height, respectively.
52. Drawer shall have locking option when specified by customer/architect
53. Drawer shall have a tested weight capacity rating of 50 lbs
54. File Dividers (modular shelf) (available in all models except Multi-Tier)
55. Hooks
56. Single Hooks – shall have the ability to attach single hooks on the side of the Modular Shelf and on the side panel lances
57. Double Hook – shall have the ability to attach a double hook to the underside of the Modular Shelf
58. Hook Bracket Hanger Assembly – shall have the ability to attach a three-hook bracket assembly to any lanced location on the side panels of the locker.

G. HVAC
   1. NOT USED

H. Locker Tag Numbers
   1. Shall provide locker numbers on each locker per customer requirement

2.5 FABRICATION

A. General: Coordinate fabrication and delivery to ensure no delay in progress of the work.

2.6 FINISHES

A. Colors: Selected by architect from manufacturer’s standard available colors.

B. Paint Finish: Textured (Standard) – Provide factory applied electrostatic powder coat paint. Meet or exceed specifications of the American Society for Testing and Materials (ASTM) Standards:

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine Lockers scheduled to receive accessories [with Installer present] for compliance with requirements for installation tolerances and other conditions affecting performance of specified accessory items.

B. Proceed with accessory installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Follow manufacturer’s written instructions for installation of each type of accessory item specified.

3.3 FIELD QUALITY CONTROL

A. Verify accessory unit alignment and plumb after installation. Correct if required, following manufacturer’s instructions.

B. Remove components that are chipped, scratched, or otherwise damaged and which do not match adjoining work. Replace with new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.4 ADJUSTING

A. Adjust all accessories to provide smoothly operating, visually acceptable installation.

3.5 CLEANING

A. Immediately upon completion of installation, clean components and surfaces. Remove surplus materials, rubbish and debris, resulting from installation, upon completion of work and leave areas of installation in neat, clean condition.

3.6 DEMONSTRATION/TRAINING

A. Schedule and conduct demonstration of installed accessory items and features with Owner's personnel.

B. Schedule and conduct maintenance training with Owner's maintenance personnel. Training session should include lecture and demonstration of all maintenance and repair procedures that end-user personnel would normally perform.

3.7 PROTECTION

A. Protect system against damage during remainder of construction period. Advise owner of additional protection needed to ensure that system will be without damage or deterioration at time of substantial completion.

END OF SECTION 10 51 13

SECTION 10 51 13.1 – METAL EVIDENCE LOCKERS AND HANDGUN LOCKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

Standard and Refrigerated Non Pass-thru Evidence Lockers, and Handgun Lockers

B. Related Work, Not Furnished:

Finish floor covering materials and installation.

C. Related Sections:

Sections in Division 9 – Finishes, relating to finish floor and base materials.

1.3 REFERENCES

A. American National Standards Institute (ANSI) Standards:

Applicable standards for fasteners used for assembly.

B. American Society for Testing and Materials (ASTM) Standards:

Applicable standards for steel sheet materials used for fabrication.

Applicable standards for the testing of electrostatically applied Powder Coat Paint

C. American Institute Of Steel Construction (AISC) Standards:

Applicable standards for steel materials used for fabrication.

1.4 DESCRIPTION

A. General: Metal Evidence Lockers & Gun Lockers

B. Location: Metal Evidence Locker in the Evidence Processing Room. The Gun Lockers are noted in the floor plans and elevations they are include in places where on officer disarms in the adjacent spaces, holding and public areas.

C. Finishes:

Fabricated Metal Components and Assemblies: All components to be painted with an electrostatically applied Powder Coat paint that can meet or exceed test requirements set out by ASTM standard D3451-06 Standard Guide for Testing Coating Powders and Powder Coatings.

D. Sizes:

Available in nominal heights of 82 inches

Available in nominal widths of 36 inches as noted on drawings.

Available in a nominal depth of 24 inches as noted on drawings.

1.5 PERFORMANCE REQUIREMENTS

A. Design Requirements:

B. Limit overall width to 0.032 inches greater or less than the nominal specified width.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions for each type of evidence lockers required. Include data substantiating that products to be furnished comply with requirements of the contract documents.

B. Shop Drawings: Show fabrication, assembly, and installation details including descriptions of procedures and diagrams. Show complete extent of evidence lockers installation layout including quantities, locations and types of accessory units required. Include notations and descriptions of all installation items and components.

Show installation details at non-standard conditions, if any.

Provide layout, dimensions, and identification of each unit corresponding to sequence of installation procedures.

Provide installation schedule and procedures to ensure proper installation.

C. Samples: Provide minimum 3 inch square example of each color and texture on actual substrate for each component to remain exposed after installation.

D. Selection Samples: For initial selection of colors and textures, submit manufacturer's color charts consisting of actual product pieces, showing full range of colors and textures available.

E. Warranty: Submit draft copy of proposed warranty for review by the Architect.

F. Maintenance Data: provide written documentation of the manufacturer’s statement claiming the maintenance free nature of the product.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage an experienced manufacturer who is ISO 9001 certified for the design, production, installation and service of evidence lockers. Furnish certification attesting ISO 9001 quality system registration.

B. Installer Qualifications: Engage an experienced installer who is a manufacturer's authorized representative for the specified products for installing evidence lockers.

Minimum Qualifications: 1-year experience installing evidence lockers of comparable size and complexity to specified project requirements.

1.8 DELIVERY, STORAGE AND HANDLING

A. Follow manufacturer’s instructions and recommendations for delivery, storage and handling requirements.

1.9 PROJECT CONDITIONS

A. Field Measurements: Verify quantities of evidence lockers before fabrication. Indicate verified measurements on Shop Drawings. Coordinate fabrication and delivery to ensure no delay in progress of the Work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating evidence lockers units without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.10 SEQUENCING AND SCHEDULING

A. Sequence evidence lockers units with other work to minimize possibility of damage and soiling during remainder of construction period.

B. Schedule installation of specified evidence lockers after finishing operations; including painting have been completed.

C. Provide components which must be built in at a time which causes no delays general progress of the Work.

D. Pre-installation Conference: Schedule and conduct conference on project site to review methods and procedures for installing evidence lockers including, but not limited to the following:

Recommended attendees include:

1. Owner's Representative.
2. Prime Contractor or representative.
3. The Architect.
4. Manufacturer's representative.

5. Subcontractors or installers whose work may affect, or be affected by the work of this section.

1.11 WARRANTY

A. Provide a written warranty executed by Contractor, Installer and Manufacturer, agreeing to repair or replace units which fail in materials or workmanship within the established warranty period. This warranty shall be in addition to and not a limitation of other rights the Owner may have under the General Conditions provisions of the Contract Documents.

B. Limited Lifetime Warranty: Subject to the terms in the written warranty, warrant the original purchaser exclusively that the locker frames manufactured by it will be free from defects in materials and workmanship for the lifetime of the locker. Warrant the original purchaser exclusively that all moving parts manufactured by it will be free from defects in materials and workmanship for 5 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. General: Products known as DSM Evidence Lockers are based upon evidence lockers manufactured by Spacesaver Corporation, 1450 Janesville Avenue, Fort Atkinson, Wisconsin 53538-2798. Telephone 866-276-0445; Basis of Design.

1. Or approved equal.

2.2 BASIC MATERIALS

A. General: Provide materials and quality of workmanship, which meets or exceeds established industry standards for products specified. Use furniture grade sheet metal and fasteners for component fabrication unless indicated otherwise. Material thicknesses/gauges are manufacturer’s option unless indicated otherwise.

2.3 LOCKER TYPES

A. Evidence lockers Assortment of sizes to be 5/8th of a 6’ x 8’ of locker area. See drawings for sizes.

B. Refrigerated evidence lockers Assortment of sizes to be 3/8th of a 6’ x 8’ of locker area.

2.4 MANUFACTURED COMPONENTS, STANDARD EVIDENCE LOCKERS

A. Welded Frame:

1. The welded frame is structural and shall consist of top, bottom, back and sides constructed of a minimum of 18 gage steel. All frame components shall be joined using resistance welding. Riveting or bolting of structural members will not be permitted.
2. Horizontal and vertical outer front flanges will be a minimum of 1.5 inches. Horizontal and vertical flanges will overlap with a minimum of 2 resistance welds per corner.
3. Center vertical lock housing is structural and will run the full height and depth of the locker. All locks will be completely enclosed by a full height removable panel. Pass-thru rear release mechanisms will be completely enclosed by the lock housing and accessible only when the rear door is open. Provide engagement points for the anti-pry tabs that are on all front doors.
4. Exposed lock mechanisms that can snag evidence and be obstructed by stored articles will not be permitted.

B. Welded Bases:

1. Each welded base shall be permanently affixed to each locker using modern Inert Gas Metal Arc Welding techniques for lateral unit stability. The base shall be a minimum of 14 gage (1.98MM) steel 4 inches high with a 1.5 inch return on the bottom for support.
2. Provide four 0.375 inch mounting holes and four 0.375 inch nuts welded in place for the mounting of floor levelers. Provide four appliance levelers per locker.
3. Provide removable access panels for access to mounting holes and leveling points.

C. Shelves:

1. Shall be a single-piece formed from a minimum of 18-gage cold rolled steel with a double 90-degree bend on the rear of the shelf and a double 90-degree bend on the front of the shelf. Shelf sides shall be turned up 90-degrees for ease of cleaning and to prevent debris from becoming caught between the shelf and the sidewall.
2. All shelves shall be welded into place. Rivets, screws, bolts or other loose fasteners will not be permitted for the fastening of shelves to the locker frame.

D. Locks:

1. Patent Pending. Lock shall be push button locking with a stainless steel push button and alignment bezel. Locks shall be a one-piece removable design. Locks will secure the door with the single push of a button with no other action required by the user.
2. Locks will be deadbolt type locks with multi-point engagement. Rotary latches or cam locks will not be tolerated.
3. Pass-thru locks will be reset from the rear of the locker when the rear door is in the open position only.
4. Non Pass-thru locks will be reset from the front of the locker using tube type locks keyed to differ.
5. Provide documentation for cycle testing where locks are tested successfully to a minimum 40,000 cycles without failure.
6. Locks shall be pre-lubricated with no maintenance required for the lifetime of the unit (estimated at 20 years).

E. One Piece Welded Doors:

1. Shall be formed from two pieces of minimum 18-gauge cold rolled steel box formed and welded together using modern GMAW techniques. The one piece door with inner and outer door skins shall have a combined steel thickness of no less than 0.096 inches thick.
2. Each door shall have a nickel plated, flush mounted door handle installed with fasteners visible only in the unlocked position.
3. Provide neoprene silencers on each door.
4. Provide anti-pry tabs that engage with the Center Vertical Lock Housing when the door is locked.
5. Doors shall have no moving parts except the door and the hinge.
6. Provide stainless steel spring loaded hinges that are welded to prevent pin removal. Spring loaded hinges shall be capable of holding the door closed and flush with the door frame. Doors that hang ajar are a safety concern and will not be tolerated.

F. Rear Doors (Pass-thru lockers)

1. Shall be formed from two pieces of minimum 18-gauge cold rolled steel box formed and welded together using modern Inert Gas Metal Arc Welding techniques. The one piece door with inner and outer door skins shall have a combined steel thickness of no less than 0.096 inches thick.
2. Each locker module shall have one rear door each and allow evidence to be removed from all compartments at once.
3. Each rear door shall have multi-point engagement with a built-in L handle lock. Access to all lock mechanisms shall be hidden behind cover plates that are secured with tamperproof fasteners.

2.5 MANUFACTURED COMPONENTS, REFRIGERATED EVIDENCE LOCKERS

A. Small Refrigerators

1. Available with 2, 3 or 4 compartments each individually locking without keys.
2. Factory installed into a standard evidence locker.
3. Pass-thru is emptied and reset from the rear at the push of a button.
4. Non pass-thru is emptied and reset from the front with a keyed release mechanism.
5. Shall have a stainless steel interior with spring loaded door hinges to hold each door closed.
6. Shall have magnetic seals on outer door[s.]
7. Shall have circulation fans that can maintain a consistent temperature throughout the interior of the fridge.
8. Shall have digital controls with settings preset to maintain 38º to 42º Fahrenheit.
9. Shall have an audible alarm.
10. Shall have circulation fans that can maintain an even temperature throughout the interior of the fridge.
11. Shall have digital controls with all settings preset to maintain 38º to 42º Fahrenheit.

12. Shall have an audible alarm
13. Non pass-thru is emptied and reset from the front with a keyed release mechanism
14. Shall have a stainless steel interior and exterior and use 100% CFC free polyurethane foam insulation
15. Shall have magnetic seals on outer door[s.]
16. Chamber cooling provided via cold (forced) air circulation
17. Shall have digital controls with all settings preset to maintain 38º to 42º Fahrenheit.
18. Shall have an audible alarm.

2.6 FABRICATION

A. General: Coordinate fabrication and delivery to ensure no delay in progress of the Work.

2.7 FINISHES

A. Colors: Selected from manufacturer's standard available colors.

B. Paint Finish: Provide factory applied electrostatic powder coat paint. Meet or exceed specifications of the American Society for Testing and Materials (ASTM) standards.

2.8 HANDGUN LOCKERS

A. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

B. General: Products known as DSM wall-mounted Handgun Locke, Models #EDHGS & EDHGF, flush mounted or surface mounted, manufactured by Spacesaver Corporation, 1450 Janesville Avenue, Fort Atkinson, Wisconsin 53538-2798. Telephone 800-255-8170; Basis of Design.
Or –Stainless Steel Drop Door Detention Pistol Locker KM-DPL-DD, Three door. Standard Exterior Pistol Locker Cabinet Body: 10"D x 20"W x 24"H.
OR approved equal

2.9 HANDGUN LOCKER MATERIALS

A. 16 gauge sheet steel: commercial quality, stretcher leveled, or roller leveled to stretcher-leveled flatness, free of buckling, scale and surface imperfections.

B. Fasteners; 5/32-inch steel rivets.

C. Hardware and Equipment; Manufacturer's standard product.

D. Body: Welded Modular Construction; Form backs, tops, bottoms, sides, and intermediate partitions from steel sheet; fabricated to form tight joints between components and no apparent gaps. Comply with the following:

1. Back-Material Sheet Thickness: .0598-inch 16-gauge steel.

2. Exposed Ends: Form exposed ends of non-recessed lockers from minimum .0598-inch, 16-gauge, steel sheet.

E. Trim surround for flush mount:

1. Single piece of formed .0598-inch, 16-gauge steel.
2. Surround mounted to locker with 5/32-inch steel rivets.
3. Holes for fastening to the wall must accept minimum 1/4-inch diameter fastener.

F. Doors: One-piece steel sheet, formed into Pan shape. Fabricate to prevent flexing when opening or closing, and to swing open approximately 170 degrees. Comply with the following:

1. Sheet Thickness: .0478-inch, 18-gauge, minimum.
2. Provide bumpers for cushioning of door closing.
3. Solid weld corners and polish smooth.

G. Hinges: Tube locks keyed different with master keys supplied.

H. Gun Locker Accessories: Number Plates: Manufacturer's standard etched, embossed, or engraved, plastic number plates with numerals at least 1/2-inch high. Numbering system shall be a three-digit number, sequenced as specified. Plates to be attached by (2) aluminum rivets and centered near the top on each door. Cushioning: 1/8-inch neoprene pad in bottom of openings.

I. Warranty: Provide the manufacturers 4 year limited parts and labor warranty.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine evidence lockers scheduled to receive accessories with Installer present for compliance with requirements for installation tolerances and other conditions affecting performance of specified accessory items.

B. Proceed with accessory installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Follow manufacturer's written instructions for installation of each type of accessory item specified.

3.3 FIELD QUALITY CONTROL

A. Verify accessory unit alignment and plumb after installation. Correct if required following manufacturer's instructions.

B. Remove components that are chipped, scratched, or otherwise damaged and which do not match adjoining work. Replace with new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.4 ADJUSTING

A. Adjust all accessories to provide smoothly operating, visually acceptable installation.

3.5 CLEANING

A. Immediately upon completion of installation, clean components and surfaces. Remove surplus materials, rubbish and debris resulting from installation upon completion of work and leave areas of installation in neat, clean condition.

3.6 DEMONSTRATION/TRAINING

A. Schedule and conduct demonstration of installed accessory items and features with Owner's personnel.

B. Schedule and conduct maintenance training with Owner's maintenance personnel. Training session should include lecture and demonstration of all maintenance and repair procedures that end user personnel would normally perform.

3.7 PROTECTION

A. Protect system against damage during remainder of construction period. Advise Owner of additional protection needed to ensure that system will be without damage or deterioration at time of substantial completion.

END OF SECTION 10 51 13.1

SECTION 105113.2 – METAL LOCKERS – SECURED WEAPONS STORAGE CABINETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Spacesaver® Universal Weapons Rack as Basis of Design.

1.3 REFERENCES

A. ARMY Regulation AR190-11

1. Applicable military requirements for the physical security of conventional arms, ammunition, and explosives.

B. Department of the NAVY OPNAV Instruction 5530.13C:

1. Applicable military requirements for physical security instruction for conventional arms, ammunition, and explosives.

C. Department of Defense DOD5100.76-M

1. Applicable military requirement for the physical security of sensitive conventional arms, ammunition, and explosives.

D. American National Standards Institute (ANSI) Standards:

1. Applicable standards for fasteners used for assembly.

E. American Society for Testing and Materials (ASTM) Standards:

1. Applicable standards for steel sheet materials used for fabrication.

F. American Institute of Steel Construction (AISC) Standards:

1. Applicable standards for steel materials used for fabrication.

1.4 DESCRIPTION

A. Secured Weapons Storage Cabinets: Assemblies consist of fully-welded, heavy-gauge steel cabinets available in six heights to accommodate weapons of varying lengths. All five cabinets are either [22.38] inches [56.8} millimeters or [42.38] inches [1076] millimeters wide and [16.25] inches [412] millimeters deep. Cabinets must have built-in, folding, retractable cabinet doors that retract completely inside the cabinet when fully open so there

are no swinging doors to obstruct the aisle way. The doors have heavy-gauge steel, rotating locking bars to provide maximum security according to military requirements for the physical security of conventional arms, ammunition, and explosives (OPNAVINST 5530.13C). Cabinet doors at minimum shall have nine (9) interlocking contact points. Manufacturer must provide supporting documentation that a DoD authority has approved the rack for use in a small arms vault and that they have the ability to have NSN's assigned to their rack if not completed already. This documentation must come on official letterhead or racks must come with NSN (National Stock Number) on the rack. Locking bars shall lock at a single common point and be able to accept a DoD issued and approved padlock. (Lock not included.) Locking bars shall require no effort to open so that when the padlock is removed, the locking bars drop due to gravity and arms room personnel have immediate access to weapons. Key locks are not acceptable, Sliding lock bars are not acceptable as they are prone to sticking and can slow down the ability to issue weapons in a timely manner. Handles that impede aisle or create catch points are not acceptable. Handles require extra motion and slow accessibility to weapons while cumbersome to operate.

B. Durability of Weapons Storage Cabinets: Cabinets must be fully welded with heavy-gauge steel built around a 4-Post structure to ensure durability and strength of cabinet. Cabinet walls must be a minimum of 18-gauge steel. Top and bottom of cabinet must be a minimum 16-gauge steel. Cabinets must be able to be stacked two levels high. Cabinet structure must be able to support a minimum of 1,500 lbs.

C. Visibility: The doors, sides, and back of the cabinet are perforated with a diamond mesh pattern to allow visible counts or weapon inventory to be taken even when the cabinet is closed and locked.

D. Space-Efficiency: System must have fully retractable doors so they don't impede aisle ways or adjoining cabinets when issuing weapons. Bi-fold doors are not acceptable as they still impede an aisle-way which could cause them to become damaged, thus leaving a potential quality issue. All racks provided must be of the same footprint to allow for double stacking and efficient use of the armory. When using one tall cabinet vs. two shorter cabinets, manufacturer must demonstrate the ability to meet all ODA configurations in the least amount of space. Depth of the racks should allow for storage of weapons with any site or optic attached to the weapon with doors closed.

E. Flexibility: Weapon rack cabinets must allow for "A La Carte" configurability to allow for storage of a wide range of weapon types, gear, optics, and spare barrels without making structural modifications to the rack. All individual components (pistol hooks, standard barrel supports, stock cups) must have NSN's for future sustainability or reset of rack system in the field. If individual components do not have NSN's then proof of the ability to obtain NSN's or that they are in the process of getting NSN's, must be demonstrated.

F. Multipurpose Back Panel: Weapon racks shall come with an optional multipurpose back panel kit. This back panel kit shall support a minimum of 700 lbs and be able to accept all weapon rack accessories. Accessories must be confined to the inside of the rack and not protrude outside of the rack in any way (including fasteners). Back panel kits must be capable of fitting all previous weapon rack cabinets.

G. Protection of Weapons: All components that come into contact with the weapons must be either dipped in a black poly vinyl chloride coating, made with an injection-molded thermoplastic, or an over molded rubber. These materials must be designed and capable of withstanding extreme temperature and protect weapons from abrasions.

H. Safety: There must not be any exposed bolts, screws, or sharp edges on finished product. If barrel support are screwed or secured in place inside the rack, they must not protrude out the back or the rack to expose any sharp edges.

I. Finishes:

1. Fabricated Metal Components and Assemblies: Manufacturer’s standard powder coat paint finish.

J. Sizes: See Drawings ROOM ARMORY 115

1. Width 42.38 inches.

2. Nominal Height 61

K. Military Testing (Mandatory)

L. Cabinets must have passed the most stringent military tests, including but not limited to the “Basic Shock/Accidental Load Test” and meets the requirements of OPNAVINST 5530.13C, AR190-11, DOD5100.76-M. Upon request manufacturers must be able to provide functional cycle testing documentation that doors pass with no visible sign of wear after 50,000 cycles.

1.5 PERFORMANCE REQUIREMENTS

A. Design Requirements: Provide secured weapons storage cabinets manufactured in sizes and dimensions, which will install free-standing or fit Spacesaver® mobile storage units. Reference AR190-11, OPNAV Instruction 5530.13C, DOD 5100.76-M for military requirements.

1.6 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions for each type of secured weapons storage cabinet. Include data substantiating that products to be furnished comply with requirements of the contract documents.

B. Shop Drawings: Show fabrication, assembly, and installation details including descriptions of procedures and diagrams. Show complete extent of secured weapons storage cabinet installation layout including quantities, locations and types of accessories required. Include notations and descriptions of all installation items and components.

1. Show installation details at non-standard conditions, if any.

2. Provide layout, dimensions, and identification of each secured weapons storage cabinet corresponding to sequence of installation and assembly procedures.

3. Provide installation schedule and complete assembly procedures to ensure proper installation.

C. Samples: Provide minimum [3] inch [76] millimeters square example of the color and texture on actual substrate for the rack that will remain exposed after installation.

D. Warranty: Submit draft copy of proposed warranty for review by the owner.

E. Maintenance Data: Provide in form suitable for inclusion in maintenance manuals for secured weapons storage cabinets. Data shall include operating and maintenance instructions, parts inventory listing, purchase source listing, emergency instructions, and similar information.

1.7 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage an experienced manufacturer who is ISO 9001 certified for the design, production, installation and service of secured weapons storage cabinets, carriage mounted high-density mobile storage units and support rails. Furnish manufacturer’s certification attesting ISO 9001 quality system registration.

B. Installer Qualifications: Engage an experienced installer who is a manufacturer's authorized representative for the specified products for installing weapons storage cabinets and anchoring cabinets to carriages.

1. Minimum Qualifications: 1-year experience installing systems of comparable size and complexity to specified project requirements.

1.8 DELIVERY, STORAGE AND HANDLING

A. Follow manufacturer’s instructions and recommendations for delivery, storage and handling requirements.

1.9 PROJECT CONDITIONS

A. Field Measurements: Verify quantities of secured weapons storage cabinets before fabrication. Indicate verified measurements on shop drawings. Coordinate fabrication and delivery to ensure no delay in progress of the work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating secured weapons storage cabinets without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.10 SEQUENCING AND SCHEDULING

A. Sequence secured weapons storage cabinets with high density mobile storage systems to minimize possibility of damage and soiling during remainder of construction period.

B. Schedule installation of specified secured weapons storage cabinets after finishing operations, including painting, have been completed.

C. Provide components, which must be built in at a time, which causes no delays general progress of the work.

D. Pre-installation Conference: Schedule and conduct conference on project site to review methods and procedures for installing secured weapons storage cabinets.

1. Recommended attendees for pre-installation conference including, but not limited to the following:

a. Owner's Representative.

b. Manufacturer's representative.

c. Subcontractors or installers whose work may affect, or be affected by, the work of this section.

1.11 WARRANTY

A. Provide a written warranty, executed by Contractor, Installer, and Manufacturer, agreeing to repair or replace secured weapons storage cabinets, which fail in materials or workmanship within the established warranty period. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have under General Condition's provisions of the contract documents.

Subject to the conditions stated in the written warranty, Spacesaver Corporation ("Spacesaver") warrants that the cabinets ("structural frames") manufactured by it will be free from defects in materials and workmanship for the lifetime of the structural frames. For the purposes of this warranty, structural frames shall be deemed to exclude all moving parts (doors, slides, hinges, and lock mechanism), removable accessories, vinyl coating, electronics and refrigeration equipment.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General: Products are secured weapons storage cabinets designed to be used either free-standing or with high-density mobile storage systems manufactured by Spacesaver® Corporation.

2.2 BASIC MATERIALS

A. General: Provide materials and quality of workmanship, which meets or exceeds established industry standards for products specified.

2.3 MANUFACTURED COMPONENTS

A. Secure Weapons Storage Cabinets: (4) ROOM AROMRY 115 (All specifications are mandatory)

1. Cabinet:

a. The cabinet shall be a one-piece assembly with an outside width of 42.38 inches [1076] millimeters, a useable inside width of 36.5 inches [927] millimeters respectively, an outside height of 61 inches, and an outside depth of 16.25 inches [412] millimeters.

b. The cabinet shall be constructed of 18-gauge [1.2] millimeter double-walled upright posts welded to 18-gauge [1.2] millimeter flat plate steel sidewalls with a diamond mesh perforation.

c. The back wall of the cabinet shall be constructed of 18-gauge [1.2] millimeter steel perforated with diamond mesh and shall be welded to the upright posts.

d. The upright posts shall have interior attachment keyhole slots on [1.5] inch [38] millimeter vertical centers.

e. The top and bottom covers shall be made of 16-gauge [1.5] millimeter steel welded to the upright posts.

f. Cabinet doors shall be heavy-duty 18-gauge [1.2] millimeter, folding and fully retractable in the open position. The cabinet doors shall also include a diamond mesh perforation for visibility as well as rotating locking bars for security.

g. Locking bars shall lock at a single common point.

h. Cabinet construction to have an inherent strength that would prevent an individual from manipulating components (without tools) such that the weapon, receiver, or barrel could be removed.

i. Overall cabinet design such that a weapon, receiver, or barrel cannot be removed by disassembly of the weapon/component and/or the rack without damage to the rack.

j. Hinged locking bars for racks have the hinge pin welded or otherwise secured to prevent disassembly.

k. Finish: shall be factory applied electrostatic powder coat paint

2. Bases:

a. Shall be constructed of 16-gauge [1.5] millimeter steel.

b. Base designs shall be available for supporting a variety of weapon types.

c. Finish:

1) (10) Weapons base design where stock of weapon contacts base shall have a minimum 8mil thick black thermoplastic material finish

3. Support Rails:

a. Support rails shall be constructed of 14-gauge [1.9] millimeter steel and be punched to accept [standard], [extended standard], [wide], [extra wide], [long], [pistol], [standard transport], [large transport], and/or [receiver mounts] barrel supports.

b. Support rails shall contain four (4) rivet heads that interlock with the cabinet interior attachment keyhole slots.

c. Finish: Shall be factory applied electrostatic powder coat paint

4. Back Panel Kit:

a. Back Panel Kit shall be constructed of 14-gauge [1.9] millimeter steel.

b. Back panel hole pattern shall be consistent with universal weapon rack support rails.

c. Back panel shall be compatible with all existing weapon rack designs (excluding mini and [18] inches [457.2] millimeter over storage cabinets), barrel supports, receiver brackets, standard bases, and intermediate shelves.

d. Back Panel must be able to support 700 lbs.

e. Back Panel shall be compatible with existing standard bases and maintain bracket spacing.

f. Back Panel shall be able to co-exist with bin systems and intermediate shelves.

g. Finish: Shall be factory applied electrostatic powder coat paint

5. Barrel Supports:

a. Barrel supports (10) per UWR 1 Unit shall be constructed of 14-gauge [1.9] millimeter steel

b. Finish: Shall have factory applied electrostatic powder coat paint and dipped in black, PVC, [.060-.075] inch [1.52-1.9] millimeter thickness.

6. Bin Storage Systems:

a. Bin storage systems shall be constructed of 18-gauge [1.2] millimeter steel.

b. Bin storage system shall have the ability to create 1/3, 2/3, and full width storage cubicle compartments. The system shall have the flexibility for those compartments to be placed on the left hand, center, and/or right hand positions within the weapon racks usable storage space.

c. Bin storage system shelving shall have flexibility of vertical adjustment on [2.75] inches [69.9] millimeter increments

d. Bin storage system shall be capable of being installed and adjusted easily without the use of fasteners

e. Finish: Shall have factory applied electrostatic powder coat paint

2.4 FABRICATION

A. General: Coordinate fabrication and delivery to ensure no delay in progress of the work. All components necessary to complete the arms room installation should come from one manufacturer to ensure proper coordination of installation and no delays in the progress of the work.

2.5 FINISHES

A. Colors: [Selected from manufacturer’s standard available colors.]

B. Paint Finish: Provide factory applied electrostatic powder coat paint.

C. Coating: PVC, [.060-.075] inch [1.52-1.9] millimeter thickness.

D. Coating: 8mil thick black thermoplastic material finish

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine storage units scheduled to receive secured weapons storage cabinets with Installer or manufacturer representative present for compliance with requirements for installation tolerances and other conditions affecting performance of specified secured weapons storage cabinets.

B. Verify that intended installation locations of secured weapons storage cabinets will not interfere with or block established required exit paths or similar means of egress once units are installed.

C. Proceed with secured weapons storage cabinet installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Follow manufacturer’s written instructions for installation of each type of secured weapons storage cabinets specified.

3.3 FIELD QUALITY CONTROL

A. Verify secured weapons storage cabinet alignment and plumb after installation. Correct if required following manufacturer’s instructions.

B. Remove components that are chipped, scratched, or otherwise damaged and which do not match adjoining work. Replace with new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.4 ADJUSTING

A. Adjust all secured weapons storage cabinets to provide smoothly operating, visually acceptable installation.

3.5 CLEANING

A. Immediately upon completion of installation, clean components and surfaces. Remove surplus materials, rubbish and debris resulting from installation upon completion of work and leave areas of installation in neat, clean condition.

3.6 DEMONSTRATION/TRAINING

A. Schedule and conduct demonstration of installed secured weapons storage cabinets and features with Owner's personnel.

B. Schedule and conduct maintenance training with Owner's maintenance personnel. Training session should include lecture and demonstration of all maintenance and repair procedures that end user personnel would normally perform.

3.7 PROTECTION

A. Protect system against damage during remainder of construction period. Advise Owner of additional protection needed to ensure that system will be without damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 10 56 13 – METAL STORAGE SHELVING (FOUR-POST SHELVING AND ACCESSORIES)

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.

B. Baltimore County Property Management's general requirements included in each bid package shall also apply to this Section. In case of conflict the more stringent document shall take precedence.

1.2 SUMMARY

A. This Section includes the following:

Four-post type metal shelving.

B. Related Work, Not Furnished:

Finish floor covering materials and installation.

C. Related Sections:

[Sections in Division 9 – Finishes, relating to finish floor and base materials.]

1.3 REFERENCES

A. American National Standards Institute (ANSI) Standards:

Applicable standards for fasteners used for assembly.

B. American Society for Testing and Materials (ASTM) Standards:

Applicable standards for steel sheet materials used for fabrication.

C. American Institute Of Steel Construction (AISC) Standards:

Applicable standards for steel materials used for fabrication.

1.4 DESCRIPTION

A. General: Four-Post Type Metal Shelving.

B. Finishes:

Fabricated Metal Components and Assemblies: All components to be painted with an electrostatically applied Powder Coat paint.

C. Sizes: See Drawings For Shelf Numbers, and Elevations

1. GEAR ROOM 117
2. ARMORY 115

1.5 SUBMITTALS

A. Product Data: Submit manufacturer's product literature and installation instructions for each type of four-post shelving required. Include data substantiating that products to be furnished comply with requirements of the contract documents.

B. Shop Drawings: Show fabrication, assembly, and installation details including descriptions of procedures and diagrams. Show complete extent of four-post shelving installation layout including quantities, locations and types of accessory units required. Include notations and descriptions of all installation items and components.

Show installation details at non-standard conditions, if any.

Provide layout, dimensions, and identification of each unit corresponding to sequence of installation and erection procedures.

Provide installation schedule and complete erection procedures to ensure proper installation.

C. Samples: Provide minimum 3 inch (76MM) square example of each color and texture on actual substrate for each component to remain exposed after installation.

D. Selection Samples: For initial selection of colors and textures, submit manufacturer's color charts consisting of actual product pieces, showing full range of colors and textures available.

E. Warranty: Submit draft copy of proposed warranty for review by the Architect.

F. Maintenance Data: Provide in form suitable for inclusion in maintenance manuals for four-post shelving. Data shall include operating and maintenance instructions, parts inventory listing, purchase source listing, emergency instructions, and similar information.

Submit manufacturer's instructions for proper maintenance materials and procedures.

Submit manufacturer's printed instructions for maintenance of installed work, including methods and frequency recommended for maintaining optimum condition under anticipated use conditions. Include precautions against using materials and methods, which may be detrimental to finishes and performance.

G. Sustainable Design Submittal: To encourage the use of building products that are working to minimize their environmental and health impacts, provide the following information:

1. Environmental Product Declarations (EPD)
2. Material Ingredients Documentation demonstrating the chemical inventory of the product to at least 0.1% (1,000ppm) (HPD)

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: Engage an experienced manufacturer who is ISO 9001 certified for the design, production, installation and service of four-post shelving. Furnish certification attesting ISO 9001 quality system registration.

B. Installer Qualifications: Engage an experienced installer who is a manufacturer's authorized representative for the specified products for installing four-post shelving.

Minimum Qualifications: 1-year experience installing four-post shelving of comparable size and complexity to specified project requirements.

1.7 DELIVERY, STORAGE AND HANDLING

A. Follow manufacturer’s instructions and recommendations for delivery, storage and handling requirements.

1.8 PROJECT CONDITIONS

A. Field Measurements: Verify quantities of four-post shelving units before fabrication. Indicate verified measurements on Shop Drawings. Coordinate fabrication and delivery to ensure no delay in progress of the Work.

B. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating four-post shelving units without field measurements. Coordinate construction to ensure actual dimensions correspond to established dimensions.

1.9 [SEQUENCING AND SCHEDULING]

A. Sequence four-post shelving units [with other work] to minimize possibility of damage and soiling during remainder of construction period.

B. Schedule installation of specified four-post shelving after finishing operations; including painting have been completed.

C. Provide components, which must be built in at a time, which causes no delays general progress of the Work.

D. Pre-installation Conference: Schedule and conduct conference on project site to review methods and procedures for installing four-post shelving units including, but not limited to, the following:

Recommended attendees include:

1. Owner's Representative.
2. Prime Contractor or representative.
3. The [Architect] [Architect/Engineer] [Engineer/Architect] [Engineer] [Designer].
4. Manufacturer's representative.
5. Subcontractors or installers whose work may affect, or be affected by, the work of this section.]

1.10 WARRANTY

A. Provide a written warranty, executed by Contractor, Installer, and Manufacturer, agreeing to repair or replace units, which fail in materials or workmanship within the established warranty period. This warranty shall be in addition to, and not a limitation of, other rights the Owner may have under General Conditions provisions of the Contract Documents.

B. Limited Lifetime Warranty for Shelving: Subject to the terms in the written warranty, warrant the original purchaser exclusively that the shelving manufactured by it will be free from defects in materials and workmanship for the lifetime of the shelving.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General: Products are based upon four-post shelving manufactured by Spacesaver Corporation basis of Design, or approved equal providing equal components and other requirements in this specification.

2.2 BASIC MATERIALS

A. General: Provide materials and quality of workmanship, which meets or exceeds established industry standards for products specified. Use furniture grade sheet metal, wood panels, plastic laminate and fasteners for component fabrication unless indicated otherwise. Material thicknesses/gauges are manufacturer's option unless indicated otherwise.

2.3 MANUFACTURED COMPONENTS

A. Design:

1. Wedge-lock type consisting of uprights, shelves, and shelf supports, designed to be assembled without fasteners or clips. Shelves shall not have any holes on exposed surfaces. Front and back flanges shall be flush with outside faces of posts. Design shall permit individual shelf adjustment and/or removal anywhere along the entire height of uprights.

B. Materials and Workmanship:

1. Fabricate units from Class 1, cold-rolled steel sheet with all bends sharp and true and no exposed "knife" edges.

a. All units shall be free of burrs, sharp edges and projecting hardware with smooth, non-abrasive surfaces and edges.

b. After fabrication, shelving shall exhibit no dents, "oil canning", buckling or other surface irregularities.

C. Uprights: Closed

1. Formed from steel sheet to a hollow "tee" shape for intermediate supports and formed angles for end supports. Uprights shall have keyhole slots on inner wall only. Provide with sheet steel panels full height and depth of end uprights. Provide intermediate "tee" uprights between adjacent units

D. Shelves:

1. Form from sheet steel with flanges on all sides and return hem on front and back flanges. Ends shall be formed to clear inside of upright offset panels. Shelves shall be independently adjustable. Provide all shelves with slots for file dividers.

E. Canopy Tops:

1. Same construction as shelf units.

F. Shelf Supports:

1. Form from heavy gauge steel sheet with four solid steel shoulder rivets, two per ear, that interlock with inner wall of uprights.

G. Nominal Shelf Dimensions: See drawings

1. Shelf Edge Vertical Profile: 3/4 inch (19MM) maximum.
2. Vertical Adjustment Increment: 1-1/2 inches (38MM).
3. Width Of Intermediate Uprights: 2 inches (51MM).
4. Clearance Between Uprights: Nominal shelf section width minus 2 inches (51MM).
5. Number of Vertical Shelf Spaces: As indicated on the drawings
6. Vertical Shelf-To-Shelf Spacing: As indicated on the drawings

H. Load Carrying Capabilities:

1. Provide shelf units capable of supporting 40 pounds per lineal foot (18kg/305MM) with maximum deflection of L/140. Shelves shall exhibit no permanent deflection under fully loaded conditions.

I. Accessories:

1. Full height backs: Provide manufacturer's standard steel back panels noted as "X" on drawings.
2. Bin Dividers: 52.5"H x 24"D, 4 per U5 unit (Gear Room 117)
3. Support Rails: Provide support rails constructed of 14-gauge millimeter steel and interlock with the shelving interior attachment keyhole slots. Supports to be punched to accept heavy duty side supports for pelican cases (2) per U1 unit in Room ARMORY 115

2.4 FABRICATION

A. General: Coordinate fabrication and delivery to ensure no delay in progress of the Work.

2.5 FINISHES

A. Colors: Selected from manufacturer's standard available colors

B. Paint Finish: Provide factory applied electrostatic powder coat paint. Meet or exceed specifications of the American Library Association.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine shelving units scheduled to receive accessories [with Installer present] for compliance with requirements for installation tolerances and other conditions affecting performance of specified accessory items.

B. Verify that intended installation locations of sorter unit units will not interfere with or block established required exit paths or similar means of egress once units are installed.

C. Proceed with accessory installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Follow manufacturer's written instructions for installation of each type of accessory item specified.

3.3 FIELD QUALITY CONTROL

A. Verify accessory unit alignment and plumb after installation. Correct if required following manufacturer's instructions.

B. Remove components that are chipped, scratched, or otherwise damaged and which do not match adjoining work. Replace with new matching units, installed as specified and in manner to eliminate evidence of replacement.

3.4 ADJUSTING

A. Adjust all accessories to provide smoothly operating, visually acceptable installation.

3.5 CLEANING

A. Immediately upon completion of installation, clean components and surfaces. Remove surplus materials, rubbish and debris resulting from installation upon completion of work and leave areas of installation in neat, clean condition.

3.6 DEMONSTRATION/TRAINING

A. Schedule and conduct demonstration of installed accessory items and features with Owner's personnel.

B. Schedule and conduct maintenance training with Owner's maintenance personnel. Training session should include lecture and demonstration of all maintenance and repair procedures that end user personnel would normally perform.

3.7 PROTECTION

A. Protect system against damage during remainder of construction period. Advise Owner of additional protection needed to ensure that system will be without damage or deterioration at time of substantial completion.

END OF SECTION

SECTION 10 81 13 – BIRD CONTROL DEVICES

PART 1 – GENERAL

1.1 SUMMARY

A. This Section includes:
   a. Physical Bird Control Devices to prevent and deter access to pest birds in the specified areas to prevent damage from droppings and nesting materials.

1.2 RELATED REQUIREMENTS

A. Division 01: Alternates. Note all areas of exposed structure under a canopy requires bird netting and zipper accessories to access light fixtures or other devices requiring maintenance. There is a portion of staff entrance canopy that is to be priced as an alternate.

1.3 CONFORMANCE SUBMITTALS

A. Product Data: Submit manufacturer's samples, catalog cuts, shop sketches and other descriptive materials.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data

1.5 QUALITY ASSURANCE

A. Obtain technical literature from Bird Control Device manufacturer or distributor, telephone consultation and plan/photograph evaluation.
B. Utilize an authorized or certified installation companies in your area who are fully skilled with specified Bird Control Systems, carry the proper insurance coverage, and able to offer warranty as specified.

1.6 PRODUCT HANDLING

A. Protect Bird Control Devices and hardware system from damage before, during and after installation.
B. If damage occurs to Bird Control Devices, make all replacements immediately.

1.7 WARRANTY

A. Submit a minimum 2 year manufacturer's warranty document, labor and material, executed by authorized company official.

PART 2 – PRODUCTS

2.1 ARCHITECTURAL BIRD CONTROL DEVICES

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:'
   1. Bird-X

2. Bird b Gone
3. Gourock

A. Premium Grade Commercial Bird Netting Basis of Design: PE-Plus Premium Grade Bird Net
   a. Dimensions: See details and plans for areas.
   b. Hole Openings: ¾" openings
   c. Color: Black
   d. Accessories: mounting hardware, zippers to access light fixtures or other devices requiring maintenance see electrical plans for fixture locations.

B. MOUNTING SYSTEMS
   a. Hardware: stainless steel recommended for all exterior applications
   b. Corner/Primary Attachments
   c. Intermediate Attachments
   d. Stringing Wire/Cable
   e. Ferrules (Copper or Aluminum)
   f. Turnbuckles

C. Net Rings

D. Provide Bird Control Devices, in necessary quantities to efficiently protect noted areas.
   1. As required by the manufacture and product coverage areas.

PART 3 – EXECUTION

3.1 EXAMINATION

A. Examine installation area. Notify Owner's Agent of detrimental work conditions.
B. Do not proceed until conditions are corrected.

3.2 AREA AND SURFACE PREPARATION

A. Remove existing bird droppings in a safe manner. Large quantities shall be removed and disposed of by reputable waste removal companies. Work areas shall be cleaned, and repair work shall be done in areas, which will be excluded by Bird Control Devices.
B. Remove or repair articles that may damage the Bird Control Devices after installation.

3.3 INSTALLATION

1. Install as recommended by the manufacturer.
2. Correct mesh sizes shall be specified to ensure exclusion of the correct pest bird.
3. Shall be installed tightly and securely to ensure a long-lasting installation that is visually hard to see.

3.4 INSPECTION

A. Visually inspect Bird Control Devices for poor adherence to mounting surfaces, or other problems related to poor installation or surface preparation.

B. Repair as necessary immediately.

END OF SECTION 10 81 13

SECTION 11 30 13 - RESIDENTIAL APPLIANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Microwave Cooking appliances.
2. Refrigeration appliances.
3. Electric Range appliances.
4. Dishwasher appliances.
5. Air Compressor

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product. Basis of Design GE or approved equal.

B. Residential Appliance Schedule

1. MO-1 Countertop Microwave Oven
2. MO-2 Over-Range Microwave Oven
3. RF-1 Full Size Refrigerator/Freezer: French door refrigerator with bottom freezer and built-in ice maker
4. RF-2 Mini Refrigerator, no freezer
5. RF-3 Full Size Refrigerator: Freezerless refrigerator by Frigidaire or approved equal
6. DW-1 Dishwasher
7. OR-1 Electric Oven Range. Slide-In Single Oven
8. AR-1 Air Compressor

C. Sustainable Design Submittals:

1. Product Data: For indicated products, indicating compliance with requirements for ENERGY STAR product labeling.

D. Samples: For each exposed product and for each color and texture specified.

1.3 INFORMATIONAL SUBMITTALS

A. Product certificates.

B. Field quality-control reports.

C. Sample warranties.

1.4 CLOSEOUT SUBMITTALS

A. Operation and maintenance data.

1.5 WARRANTY

A. Special Warranties: Manufacturer agrees to repair or replace residential appliances or components that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Electrical Appliances: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

2.2 MICROWAVE OVENS

A. **MO-1** Countertop Microwave Oven

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. General Electric (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. GE Profile 2.2 Cu. Ft. Countertop Sensor Microwave Oven
3. Model: PES7227SLSS
4. Mounting: Wall cabinet or Countertop
5. Capacity: 2.2 Cu Ft.
6. Microwave Power Rating: 1100 W
7. Power: 120V
8. Material: Stainless Steel
9. Finish: Stainless Steel
10. Locations: Kitchenette Rm 150.1 & Break Rm 107
11. QTY: 2

B. **MO-2** Over-Range Microwave Oven

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. General Electric (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. GE Profile 1.6 Cu. Ft. Over-the-Range Microwave Oven
3. Model: JVM3160RFS

4. Mounting: Wall cabinet or Countertop
5. Capacity: 2.2 Cu Ft.
6. Microwave Power Rating: 1100 W
7. Power: 120V
8. Material: Stainless Steel
9. Finish: Stainless Steel
10. Locations: Break Rm 107
11. QTY: 1

2.3 REFRIGERATOR/FREEZERS

A. **RF-1** Refrigerator/Freezer: French door refrigerator with bottom freezer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. General Electric (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. Model: GFE26JYMFS (Basis of Design)
3. Type: Freestanding
4. Storage Capacity: 18.60 cu ft
   a. Refrigeration Compartment Volume: 13.59 cu ft
   b. Freezer Volume: 5.02 cu ft
   c. APPROXIMATE DIMENSIONS: 69 7/8 H x 32 3/4 W x 31 D
5. General Features:
   a. Interior light in refrigeration compartment.
   b. Automatic defrost.
   c. Interior light in freezer compartment.
   d. Automatic icemaker and storage bin.
6. Power: 120V
7. Locations: Break Rm 107
8. QTY: 1
9. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
10. Front Panel(s): Stainless steel

B. **RF-2** Mini Refrigerator: 1.7 Cu Ft mini refrigerator, no freezer.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Magic Chef (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. Model: HMAR170STE (Basis of Design)
3. Type: Freestanding
4. Storage Capacity: 1.7 cu ft
5. Power: 120V
6. Locations: Wellness C13
7. QTY: 1

8. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
9. Front Panel(s): Stainless steel

C. **RF-3** Full Size Refrigerator: Freezerless refrigerator.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. Frigidaire (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. Model: FRAE2024AW (Basis of Design)
3. Type: Freestanding
4. Storage Capacity: 20 cu ft
   a. Refrigeration Compartment Volume: 20 cu ft
   b. APPROXIMATE DIMENSIONS: 71 ¾" H x 32 5/8" W x 28 ¼" D
5. Power: 120V
6. Locations: Kitchenette 150.1
7. QTY: 1
8. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
9. Front Panel(s): White

2.4 DISHWASHER

A. **DW-1** Dishwasher Complying with AHAM DW-1.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. General Electric (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. Type: Built-in undercounter
3. Model: GDT226SSLSS
4. Dimensions: (HxDxW) 32 1/4 H x 23 3/4 W x 23 1/2 D
5. ADA Compliant
6. Top Controls
7. Power:
   a. Electrical Requirements 120V ; 60 Hz ; 8.9 A
   b. Power Connection Optional cord kit (GPFCORD - WX09X70910, WX09X70911)
8. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
9. Front Panel: Stainless steel
10. Locations: Break Rm 107
11. QTY: 1

2.5 OVEN RANGE

A. **OR-1** Electric Oven Range. Slide-In Single Oven

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   a. General Electric (Basis of Design)
   b. BSH Home Appliances Corporation (Bosch).
   c. Samsung.
   d. Whirlpool Corporation.
2. Type: Between Counter
3. Model: GRS500PVSS
4. Dimensions: (HxDxW) 37 1/8 H x 30 W x 28 5/8 D
5. Total capacity: 5.3 cu ft
6. ADA Compliant
7. Front Controls
8. ENERGY STAR: Provide appliances that qualify for the EPA/DOE ENERGY STAR product-labeling program.
9. Power:
   a. Amp Rating at 208V 40
   b. Amp Rating at 240V 40
   c. Bake Wattage 2585W
   d. Broiler Wattage 3410W
   e. KW Rating at 208V 9.1
   f. KW Rating at 240V 12.1
10. Front Panel: Stainless steel
11. Locations: Break Rm 107
12. QTY: 1

2.6 AIR COMPRESSOR

A. AR-1 Small electric air compressor.

B. Basis of Design: Husky 4.5 Gal. 175 PSI portable electric oil-free quiet twin stack jobsite air compressor with 2-quick couplers or approved equal.

C. Accessories, Provide the following accessories:
   1. Tire Inflation Gun
   2. Pro Accessory Kit with flexible poly recoil hose (27-Piece) – Model # IK1018P-27

PART 3 - EXECUTION

3.1 INSTALLATION

A. Built-in Equipment: Securely anchor units to supporting cabinets or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and that rough openings are completely concealed.

B. Freestanding Equipment: Place units in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

C. Range Anti-Tip Device: Install at each range according to manufacturer's written instructions.

3.2 FIELD QUALITY CONTROL

A. Perform the following tests and inspections

1. Perform visual, mechanical, and electrical inspection and testing for each appliance according to manufacturers' written recommendations. Certify compliance with each manufacturer's appliance-performance parameters.
2. Leak Test: After installation, test for leaks. Repair leaks and retest until no leaks exist.
3. Operational Test: After installation, start units to confirm proper operation.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and components.

B. An appliance will be considered defective if it does not pass tests and inspections.

C. Prepare test and inspection reports.

END OF SECTION 11 30 13

SECTION 12 49 40 - ROLLER SHADES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes manual and motorized roller shades.

B. Motorized roller shades linked to Daylight Harvesting.

C. Related Sections include the following:
   1. Section 06100-- Rough Carpentry; blocking for support of window shade brackets or pocket assemblies.
   2. Section 092950-- Substrate for window shade systems and installation of shade pockets, pocket closure, and/ or accessories supplied only under this section.
   3. Section 09513-- Acoustical Ceilings; installations of shade pockets, pocket closure, and/or accessories supplied only under this section.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.

   1. Manual Shade Operators: Include operating instructions and mounting arrangements.

B. Shop Drawings: Show location and extent of roller shades. Show installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work. Indicate structural mounting requirements and installation methods as well as relevant dimensions for each product type and mounting condition.

C. Coordination Drawings:
   1. Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, based on input from installers of the items involved:
      a. Ceiling suspension system members and attachment to building structure.
      b. Ceiling-mounted or penetrating items including light fixtures, air outlets and inlets, speakers, sprinklers, recessed shades, and special moldings at walls, column penetrations, and other junctures of acoustical ceilings with adjoining construction.
      c. Shade mounting assembly and attachment.
      d. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).

2. Provide shade schedule coordinating room number, opening size(s), quantities and key to details.

D. Samples for Initial Selection: For each colored component of each type of shade indicated.

1. Include similar Samples of accessories involving color selection.

E. Samples for Verification:
1. For the following products:

a. Material samples for initial color & finish selection of controls and full range of fabrics available.

b. Shade Material: Not less than 8” x 10” (200mm x 252mm) for specific color samples requested by Architect. Mark face of material.

F. Window Treatment Schedule: For roller shades. Use same designations indicated on Drawings.

G. Product Certificates: For each type of roller shade, signed by product manufacturer.

H. Qualification Data: For Installer.

I. Product Test Reports: For each type of roller shade based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified testing agency for each type of roller shade.

J. Maintenance Data: For roller shades to include in maintenance manuals. Include the following:

1. Methods for maintaining roller shades and finishes.
2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
3. Operating hardware.

K. Manufacturer’s Instructions.
1. Installation, Programming, and Maintenance instructions to be included in product packaging.
2. Installation, Programming, and Maintenance instructions to be included on Manufacturer’s website
3. 24-Hour / 7 Day Technical support shall be available to aid with unforeseen installation difficulties.

L. LEED Submittals: Comply with Section 018113.

1. MR Credit 4: Material Ingredients

a. Report: Shades, if available

1.4 QUALITY ASSURANCE

A. Installer Qualifications: Fabricator of products.

B. Source Limitations: Obtain roller shades through one source from a single manufacturer.

C. Installer shall be qualified to install the specified products by prior experience, demonstrated performance and acceptance of any requirement of the manufacturer, subsidiary of the manufacturer, or licensed agent.

D. Fire-Test-Response Characteristics: Provide roller shade band materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Flame-Resistance Ratings: Passes NFPA 701.

E. Product Standard: Provide roller shades complying with WCMA A 100.1.

F. Mockups: Build mockups to verify selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver shades in factory packages, marked with manufacturer and product name and location of installation using same designations indicated on Drawings and in a window treatment schedule.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies. Coordinate fabrication schedule with construction progress to avoid delaying the Work.

1.7 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Rollers Shades: Before installation begins, for each size, color, texture, and pattern indicated, full-size units equal to 5 percent of amount installed but enough for no fewer than two units.

1.8 WARRANTY

A. Manufacturer to provide written limited warranty of not less than 8 years non-depreciating.

1. Warranty coverage shall begin on the date of Substantial Completion.

2. In the event of a warranted product failure, the shade contractor will facilitate acquisition and delivery of all necessary components and services to the owner.

PART 2 - PRODUCTS

2.1 ROLLER SHADES

A. Available Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

B. Products: Subject to compliance with requirements, provide one of the following:
1. MechoShade Systems, Inc. Basis of Design
2. RollEase Inc. 200 Harvard Ave.; Stamford, CT 06902-6320; Toll Free Tel: 800-552-5100
3. Draper Inc.
4. Hunter Douglas, Inc.; Hunter Douglas Window Fashions Division
5. Levolor; Levolor-Kirsch Window Fashions; a Newell Rubbermaid Company
6. Lutron Shading Solutions by VIMCO,
7. Somfy Electric

C. RS-1: 25 percent Polyester, 75 percent Vinyl on Polyester.
1. Collection: ThermoVeil
2. Series: 1300 Dense Basket Weave (5% open/Tv 5%)
3. Color: TBD
4. Hardware: Manual
Location: All other locations

D. RS-2: Automatic - 50 percent Polyester, 50 percent Vinyl on Polyester.
1. Manufacturer: Mecho
2. Collection: DoubleShades Blackout Shade Cloth
3. Series:
a. 0250/0270 Series Chelsea Blackout
1) Content: 50% Acrylic Coating and 50% Polyester
2) Fabric Thickness: 0.018 in
3) Backing Color: TBD
b. ThermoVeil 5% 1300 Dense Basket Weave (5% open)
1) Content: 50% Acrylic Coating and 50% Polyester
2) Fabric Thickness: 0.018 in
4. Color: TBDLocation: See RCPs, Conference Rooms, Community Rm & Rooms:
5. Electrical: Wire to lock down switch in security system. Coordinate with OIT.

2.2 MANUAL ROLLER SHADES RS-1

A. Metal Pocket Enclosure
1. General
a. Recessed single manual installation without pocket, installed with closure and closure mount, refer to detail.

B. Clutch Brake Manual Shade System
1. General
a. Basis of Design: MechoShade Systems, Inc. clutch brake system.
b. Clutch Roller Shades shall be a ball chain-operated system utilizing a bidirectional wrap spring clutch.
c. The system must be capable of smoothly raising and lowering the shade to any desired height and maintaining that position without slippage.
d. The shade cannot be operable by any other means other than the chain. Pulling on the hem bar will not disengage the clutch.
e. The system will provide a maximum fabric gap of 0.75” per side.

2. Clutch and Tube Specifications
a. System shall incorporate a bi-directional wrap spring clutch and never require any adjustment of the shade.
b. Shade shall stop upon release of clutch. Systems that slide to a stop are not acceptable.
c. Clutch may be mounted on either the right or left end of the roller tube and fabric may be forward or reverse rolled.
d. The clutch shall be made of high-strength fiberglass reinforced polyester with high carbon steel springs.
e. Manufacturer shall identify appropriate shade tube and clutch size based on shade size, fabric type, and application requirements.
1) Shades using a V8 Clutch can lift up to 8 lbs of fabric using a 1” diameter, .03” enameled, roll-formed steel tube.
2) Shades using a V16 clutch will be used with a 1.375” or 1.75” diameter, .03” enameled, roll-formed steel tube or a 2” diameter, 0.62” extruded aluminum tube. The appropriate tube will be used to prevent excessive deflection along its length.
3) Shades using a V24 clutch will be used with a 1.375” or 1.75” diameter, .03” enameled, roll-formed steel tube or a 2” or 2.5” diameter, 0.62” extruded aluminum tube. The appropriate tube will be used to prevent excessive deflection along its length.
f. Fabric shall be connected to tube with double-sided adhesive strip applied for exact and firm mounting of the fabric and for easy adjustment of fabric to prevent telescoping.
1) A minimum of one turn of fabric will be placed on the roller before the working section of fabric starts to protect the fabric and smooth out the starting seam.

3. Clutch Control Loop
a. Chain will be made of #10 stainless steel 90-pound test ball chain.
b. Chain will be provided with connector and upper and lower ball stops.

4. Clutch Idle End Cap
a. Two-piece unit consisting of an outside sleeve and center bearing shaft made of high-strength fiberglass reinforced polyester.

1) The outside sleeve shall be free to rotate on the shaft, providing the bearing surfaces on which the roller rides in order to provide a smooth and quiet rotation without wearing on the system.

5. Clutch Mounting Brackets
   a. Shall be .072" galvanized steel
   b. Shall be universally applicable for mounting inside, outside or to the ceiling, with the clutch on either the right or left side of the roller.
   c. The clutch mounts flush to the face of the bracket resulting in the smallest possible light gap between fabric and window frame.

6. Lift Assist Spring
   a. General
      1) Depending upon shade weight and size, manufacturer may require a lift assist spring to prevent excessive deflection along the length of the tube.
      2) Spring shall be a torsion roller spring with a polymer injection molded tube fitting and ball bearing stops used to maintain shade position.
   b. Lift Assist Spring Mounting Brackets
      1) Shall be .060" galvanized steel.
      2) Shall be universally applicable for mounting inside, outside or to the ceiling.
      3) Shall have a locking device that provides safe retention of the spring end in its bracket.
   c. Lift Assist Spring Idle End Cap
      1) Shall be a polymer injection molded insert.
      2) Shall have a protruding galvanized steel roller pin that engages the bracket.

C. Direction of Roll: Regular, from back of roller.

D. Fascia: Shall be installed to conceal the roller tube and mounting hardware. Fascia shall hook onto the top of the bracket and snap in place, remaining firmly attached. Four inch high fascia panel shall be made of .075” extruded aluminum and shall be painted with a high quality baked enamel finish. Brackets are designed to snap into the Top/Back Cover.

E. Top/Back Cover: Shall be .085” extruded aluminum with baked enamel finish that fits over fascia brackets and completely covers the top and back sides of the roller shade. 4” Top / Back cover has a channel, which allows the fascia interlock.

F. Bottom Bar: Standard Hem Bar shall be a 1” wide by .1875” thick extruded aluminum bar enclosed in a thermally-sealed pocket across the bottom of the shading fabric.

G. Mounting: Inside, unless otherwise noted on the window treatment schedule, mounting permitting easy removal and replacement without damaging roller shade or adjacent surfaces and finishes.

H. Hold-Down Brackets and Hooks or Pins: Manufacturer's standard for anchoring roller shade bottom in place and keeping shade band material taut.

I. Shade Operation: Manual; with continuous-loop bead-chain, clutch, and cord tensioner and bracket lift operator.
   1. Position of Clutch Operator: Right side of roller, as determined by hand of user facing shade from inside, unless otherwise indicated on Drawings or in a window treatment schedule.
   2. Clutch: Capacity to lift size and weight of shade; sized to fit roller or provide adaptor.

3. Lift-Assist Mechanism: Manufacturer's standard spring assist for balancing roller shade weight and lifting heavy roller shades.
4. Loop Length: Length required to make operation convenient from floor level
5. Bead Chain: #10 Stainless steel 90-pound test ball chain.
6. Cord Tensioner Mounting: As indicated on the window treatment schedule.
7. Operating Function: Stop and hold shade at any position in ascending or descending travel.

2.3 MOTORIZED ROLLER SHADES

A. Description: Electrically operated motorized roller screen window shading system.
B. Standard Bracket/Pocket: Extruded aluminum (smooth) pocket to be recessed into drywall bulk-head with pocket closure with baked enamel finish.

1. Recessed double motorized installation without pocket, installed with closure and closure mount, refer to detail.

C. Motor:

1. Shall be tubular asynchronous and concealed inside an extruded aluminum tube.
2. Roller shades with 24-volt AC microprocessor intelligent motor system.
3. The electronic drive unit to operate without exceeding a 44dBA (SPL) measured 3 feet from motor.
4. System to make no audible clicks when motor starts or stops.
5. System controls to have a 10-year power failure memory for preset positions, open and cloe limits, shade grouping and system configuration.
6. Electronic Drive Unit will position the shade fabric to 1/16” of preset positions.

D. Control System: Manufacturers standard system customized to project requirements as follows:

1. Shades shall be zoned in groups for each room.
2. Power Panel equivalent to Lutron SVQ10PNL or equal. Provide 1 per every 10 shades.
3. One low voltage switch per room with low voltage momentary contacts.
4. Motor controller shall have low voltage control port for AV control system contact closure to operate in parallel with low voltage wall switch.
5. Shades shall be tied back to the Smart Lectern in each space. Shade controls from touch screen at smart lectern shall include the following: Open/Close and Raise/Lower.
6. Shades shall be coordinated to operate the Daylight Harvesting controls.
7. Control system shall integrate with Crestron or Lutron control systems.

E. Locations: 201 Conference Room, 301 Conference Room, 362 Training Room

2.4 ROLLER SHADE FABRICATION

A. Product Description: Roller shade consisting of a roller, a means of supporting the roller, a flexible sheet or band of material carried by the roller, a means of attaching the material to the roller, a bottom bar, and an operating mechanism that lifts and lowers the shade.

B. Concealed Components: Noncorrodible or corrosion-resistant-coated materials.

1. Lifting Mechanism: With permanently lubricated moving parts.

C. Unit Sizes: Obtain units fabricated in sizes to fill window and other openings as follows, measured at 74 deg F (23 deg C):

1. Shade Units Installed between (Inside) Jambs: Edge of shade not more than 1/4 inch (6 mm) from face of jamb. Length equal to head to sill dimension of opening in which each shade is installed.
2. Shade Units Installed Outside Jambs: Width and length as indicated, with terminations between shades of end-to-end installations at centerlines of mullion or other defined vertical separations between openings.

D. Installation Brackets: Designed for easy removal and reinstallation of shade, for supporting fascia, roller, and operating hardware and for hardware position and shade mounting method indicated.

E. Installation Fasteners: No fewer than two fasteners per bracket, fabricated from metal noncorrosive to shade hardware and adjoining construction; type designed for securing to supporting substrate; and supporting shades and accessories under conditions of normal use.

F. Color-Coated Finish: For metal components exposed to view, apply manufacturer's standard baked finish complying with manufacturer's written instructions for surface preparation including pretreatment, application, baking, and minimum dry film thickness.

G. Colors of Metal and Plastic Components Exposed to View: As selected by Architect from manufacturer's full range unless otherwise indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, operational clearances, and other conditions affecting performance.

1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 ROLLER SHADE INSTALLATION

A. Install roller shades level, plumb, and aligned with adjacent units according to manufacturer's written instructions, and located so shade band is not closer than 2 inches (50 mm) to interior face of glass. Allow clearances for window operation hardware.

B. Connections: Connect motorized operators to building electrical system.

3.3 ADJUSTING

A. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 CLEANING AND PROTECTION

A. Clean roller shade surfaces after installation, according to manufacturer's written instructions.

B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, that ensure that roller shades are without damage or deterioration at time of Substantial Completion.

C. Replace damaged roller shades that cannot be repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain roller shades. Refer to Division 1 Section Demonstration and Training."

END OF SECTION 12 49 40

SECTION 12 55 00

DETENTION FURNITURE AND ACCESSORIES

PART 1 GENERAL

1.1 REFERENCES

A. ASTM INTERNATIONAL (ASTM) ASTM A36/A36M (2019) Standard Specification for Carbon Structural Steel

1.2 SUBMITTALS

Submit the following in accordance with Section 01 33 00 SUBMITTAL PROCEDURES:

A. Product Data: Include construction details, material descriptions and thicknesses, dimensions, profiles, fastening and mounting methods, specified options, and finishes for each type of accessory specified.

B. Setting Drawings: For cutouts required in other work; include templates, substrate preparation instructions, and directions for preparing cutouts and installing anchoring devices.

C. Product Schedule: Indicating types, quantities, sizes, and installation locations by room of each accessory required. Use designations indicated in the Toilet and Bath Accessory Schedule and room designations indicated on Drawings in product schedule.

D. Maintenance Data: For accessories to include in maintenance manuals specified in Division 1. Provide lists of replacement parts and service recommendations.

SD-02 Shop Drawings

BNK-1	Fixed detention grade bunk frame
CB-1	Fixed stainless-steel bench with cuff bars
CB-2	Floor Mount Stool / Seats
CR-1	Stainless Steel Handcuff Ring
DBN	Detention-grade ADA Shower Seats
DGB	Security Grab Bars - Anti-ligature, 18”, 36”, & 42”
SD-2	Detention-grade recessed self
TP-2	Toilet Paper Holder Anti-ligature (wall recessed)
FPM	Figure Printing Machine (Not required, salvaged GC to see salvage list)
DMR	ADA Wall Mount Mirrors
DWH	Anti-ligature Towel hook
MD-90	18” Mirror Quarter Dome, convex mirror
MD-180	18” Mirror Half Dome, convex mirror

1.3 DELIVERY, STORAGE, AND HANDLING

Deliver furniture and accessories in packaging to provide protection during transit and job storage. Leave in unopened original containers, clearly labeled for location of installation.

1.4 QUALITY ASSURANCE

A. Source Limitations: Provide products of same manufacturer for each type of accessory unit and for units exposed to view in same areas, unless otherwise approved by Architect.

1.5 COORDINATION

A. See TA Sechedule on drawings.
B. Coordinate accessory locations with other work to prevent interference with clearances required for access by disabled persons, proper installation, adjustment, operation, cleaning, and servicing of accessories.

1.6 WARRANTY

A. General Warranty: Special warranty specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by General Contractor under requirements of the Contract Documents.

B. Manufacturer's Warranty:

1. Minimum Warranty Period: 2 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 SECURITY GRAB BARS ANTI-LIGATURE – DBG
a. Provide as specified in Section 10 28 13 TOILET ACCESSORIES, and in lengths and configurations indicated.
b. Provide for Security Grab Bars with safety gap-filler between the round tube bar and the wall. These are to be stainless steel, and provided with anti-tamper screws
c. Straight - see toilet accessory schedule for size
d. L-Shape.
e. Basis of Design models: IGS-18-3, IGS-36-3, IGS-42-3
i. Or approved equal.

2.2 NOT USED

2.3 FIXED DETENTION GRADE BUNK FRAME & MATTRESS - BNK-1
a. Universal formed 18 gauge steel pan with factory applied polyester powder coat finish.
b. Size: 27” x 80”
c. Floor mounted with bolting to floor.
d. Basis of Design: Norix B510-160, or approved equal.
e. Mattress:
1 Inverted RF welded sealed seam with polyurethane coated polyester

2. Size: 27” x 74” x 4.5”
3. Without integrated pillow.
4. Color: to be selected from standard color line by architect.
5. Warranty: Five year warranty prorated seam and cracking.

2.4 DETENTION GRADE SHOWER SEAT – DBN

a. Provide stainless steel detention-grade recessed shower seat, that meets ADA 4.21.3 & 4.26.3 requirements for L-shaped shower seats. Provide with straps. Provide for folding seat assembly attaches to wall mount assembly using tamper resistant hardware. Cut, formed and welded steel and stainless steel frame to fit wall opening, with 1/2" diameter solid stainless steel hinge. Made in the U.S.A.
b. Size: 36.3” x 25.9” x 25.9”
c. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
d. Basis of Design: Norix ISS-200, or approved equal.

2.5 DETENTION GRADE BENCH WITH CUFF RINGS – CB-1

a. Cut, formed and welded steel. Cuff rings welded to frame. 12 gauge steel seating surface with 1/8" wall legs or 7 gauge (.180") brackets and 3/8" dia. steel cuff rings with powder coat finish. Made in the U.S.A.
b. Sizes: CB-1 48”L x 18”D x 18”H, CB-2 24”L x 18”D x 18”H
c. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
d. Basis of Design: Norix IBF-48 or approved equal.

2.6 DETENTION GRADE FLOOR-MOUNTED STOOL WITH CUFF RING - CB-2

a. Construction:
    1. Designed and Built for Intensive Use
    2. Fully Welded Stainless Steel Construction
    3. Heavy Duty 7 Gauge Stainless Steel Stool Tops for Durability and Strength
    4. Heavy Schedule 40 Stainless Steel Pipe Pedestals
    5. Stainless Steel cuff ring welded to frame.
b. Mount: Bolted to concrete slab, floor through epoxy finish and anchored per manufacturing requirements.

c. Basis of Design: KryptoMax KM-FMS

2.7 DETENTION GRADE RECESSED SHELF – SD-2

a. Formed and welded 16 gauge type 304 stainless steel. Exposed surfaces polished to #4 finish. Brushed stainless steel frame and satin interior. Made in the U.S.A.
b. Sizes:
    1. Opening Height 5”
    2. Opening Width 16”
c. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
d. Basis of Design: Norix S565-550 or approved equal.

2.8 DETENTION GRADE RECESSED TOILET PAPER SHELF ANTI-LIGATURE (WALL RECESSED) – TP-2

a. Recessed toilet paper holder made of stainless steel.
b. Mounted with anti-tamper screws.
c. To be anti-ligature and tamper resistant, having been fully welded with no loose parts

d. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
e. Basis of Design: ITP-110

2.9 DETENTION GRADE MIRROR – DMR

a. Mirror shall be #430 stainless steel, highly polished #8 finish with steel backer plate.
b. Frameless, wall mounted with anti-tamper screws.
c. Provide for ADA wall Mirror: 11.3” x32”
d. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
e. Basis of Design: Norix R565 Ironman Inmate Cell Wall Mirror.
    i. Or Approved Equal.

2.10 DETENTION GRADE TOWEL HOOK – DWH

a. Backplate: One piece formed and ground smooth 14 gauge type 304 stainless steel. Safety Hook: Fabricated from cast & machined stainless steel with stainless steel ball and spring. Brushed stainless steel finish.
b. Dimensions:
    1 Height: 5.5”
    2 Width: 18”
    3 Depth 1.3”
c. Warranty: 1 year limited replacement warranty plus a one year extended warranty.
d. Basis of Design: Norix ITS-410, or approved equal.

2.11 DETENTION GRADE DOME MIRRORS – MD-90 & MD-180

a. GC shall coordinate final locations with owner and user to give preference to views in space and to avoid conflicts with CCTV locations.
b. MD-90:
    1 Mirror: 1/8" polycarbonate with a pure silver reflective coating on inside surface. Fully enclosed foam insert fills cavity to reduce flexing and enhance strength. 90o view. Frame: 3/16 x 1" steel has recessed holes for fastening and slotted flange for mirror. Powder coated to provide durable smooth finish.
    2 Dimensions:
        a Length: 27”
        b Height: 9”
        c Depth: 19”

c. MD-180
    1 Mirror: 1/8" polycarbonate with a pure silver reflective coating on inside surface. Fully enclosed foam insert fills cavity to reduce flexing and enhance strength. 180o view. Frame: 3/16 x 1" steel has recessed holes for fastening to any solid flat surface. Powder coated to provide durable smooth finish.
    2 Dimensions:
        a Length: 20”
        b Height: 10”
        c Depth: 5.5”
d. Warranty: 3 year limited replacement warranty
e. Basis of Design: Norix MQD-N18 & MHD-18 or approved equal.

2.12 DETENTION GRADE MOUNTED HANDCUFF RING

a. CR-1:
    1 Basis of Design, KryptoMax # KM-WHCR

2 Size: 6” x6” backplate with 2.75” tall ring
3 Construction:
  a Single Piece, Fully-Welded Construction
  b 12 Gauge Stainless Steel Back Plate
  c 3/8″ Stainless Steel Rod Handcuff “Ring”
  d Four 1/2″ Pre-Drilled Mounting Holes
4 Mount: Bolted to concrete slab, floor through epoxy finish and anchored per manufacturing requirements.

2.13 MANUFACTURERS

a. Norix, Basis of Design
b. Cortech USA
c. Britex
d. Brey Krause
e. Kryptomax
f. Or approved equal.

PART 3 EXECUTION

3.1 INSTALLATION

A. Install accessories according to manufacturers' written instructions, using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated.

B. Secure mirrors to walls in concealed, tamper-resistant manner with special hangers, toggle bolts, or screws. Set units level, plumb, and square at locations indicated, according to manufacturer's written instructions for substrate indicated.

C. Install grab bars to withstand a downward load of at least 250 lbf (1112 N), when tested according to method in ASTM F 446.

3.2 ADJUSTING AND CLEANING

A. Adjust accessories for unencumbered, smooth operation and verify that mechanisms function properly. Replace damaged or defective items.

B. Remove temporary labels and protective coatings.

C. Clean and polish exposed surfaces according to manufacturer's written recommendations.

END OF SECTION

SECTION 14 21 23.16 - MACHINE ROOM-LESS ELECTRIC TRACTION PASSENGER ELEVATORS

PART 1 GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and other Division 01 Specification Sections, apply to this Section.
B. Section includes Machine room-less electric traction passenger elevators as shown and specified. Elevator work includes:
    1. Gearless electric traction passenger elevators.
    2. Elevator car enclosures, hoistway entrances and signal equipment.
    3. Operation and control systems.
    4. Accessibility provisions for physically disabled persons.
    5. Equipment, machines, controls, systems and devices as required for safely operating the specified elevators at their rated speed and capacity.
    6. Materials and accessories as required to complete the elevator installation.

1.02 SUMMARY

Related Sections:

A. Division 1 General Requirements: Meet or exceed all referenced sustainability requirements.
B. Division 3 Concrete: Installing inserts, sleeves and anchors in concrete.
C. Division 4 Masonry: Installing inserts, sleeves and anchors in masonry.
D. Division 5 Metals:
    1. Providing hoist beams, pit ladders, steel framing, auxiliary support steel and divider beams for supporting guide-rail brackets.
    2. Providing steel angle sill supports and grouting hoistway entrance sills and frames.
E. Division 9 Finishes: Providing elevator car finish flooring and field painting unfinished and shop primed ferrous materials.
F. Division 22 Plumbing
    1. Sump pit
G. Division 23 Heating, Ventilation and Air Conditioning
    1. Heating and ventilating hoistways and/or control room.
H. Division 26 Sections:
    1. Providing electrical service to elevators, including fused disconnect switches where permitted. (Note: fused disconnect switch to be provided as part of elevator manufacture product)
    2. Emergency power supply, transfer switch and auxiliary contacts.
    3. Heat and smoke sensing devices.
    4. Convenience outlets and illumination in control room (if applicable), hoistway and pit.

I. Work Not Included: General contractor shall provide the following in accordance with the requirements of the Model Building Code and ASME A17.1 Code. For specific rules, refer to ASME A17.1, Part 2 for traction elevators. State or local requirements must be used if more stringent. The cost of this work is not included in the Elevator provider’s proposal since it is a part of the building construction.

1. A plumb and legal hoistway, properly framed and enclosed an including a pit of proper depth, and a pit ladder for each elevator. Hoistway walls require a minimum two hours of fire rating. Hoistway should be clear and plumb with variations not to exceed 1/2" at any point. Drains, lights, access doors, waterproofing and hoistway ventilation, as required.
2. Elevator controller space
    a. Door jamb controller option - controller landing wall thickness must be a minimum of 8 1/2 inches thick. This is due to the controller being mounted on the top floor landing in the door frame on the return side of the door. For center opening doors, the controller is located on the right hand frame (from inside the elevator cab looking out). Provide telephone line, light fixture (200 lx / 19 fc), and convenience outlet in the hoistway at the landing where the elevator controller is located. Final location must be coordinated with elevator contractor. These requirements must be coordinated between the general contractor and the elevator contractor.
    b. Control room option - provide a suitable control closet with access and ventilation in accordance with all applicable codes and regulations. The control closet shall be maintained at a temperature between 32 F (0 C) and 104 F (40 C). To be measured at 6 feet (1830 mm) above the floor and 1 foot (305 mm) out from the front center of the car controller(s). Relative humidity is not to exceed 95% non-condensing. Local codes may require tighter temperature ranges, and higher ventilation levels, please check with your local code authority for the exact requirements in your area. If your control closet temperatures exceed these requirements, contact your local Elevator providers sales representative for assistance. All telephone wiring to controller room control panel, and installation of telephone instrument or other communication equipment in elevator cab with all connections to elevator in controller room.
3. Hoistway must be maintained between 32ºF (0ºC) and 122ºF (50ºC) measured at the machine.
4. Adequate supports to carry the loads of all equipment, including overhead machine and machine beams located in hoistway including supports for guide rail brackets.
5. Complete 3 phase connections from the electric power mains to each controller, including necessary circuit breakers and fused mainline disconnect switches unless otherwise specified herein by elevator manufacture.
6. Electric power of the same characteristics as the permanent supply without charge for the construction, testing and adjusting.
7. Provide proper piping and conduit.
8. Divider beams for rail bracket support as required.
9. Cutting of walls floor, etc. and removal of such obstructions as may be necessary for proper installation of the elevator.
10. Grouting of door sills, hoistway frames, and signal fixtures after installation of the elevator equipment.
11. All painting, except as otherwise specified.
12. Provide hoistway walls designed and constructed in accordance with the required fire rating (including those places where elevator fixture boxes, rail bracket fastenings, and any other penetration into the hoistway walls).
13. Temporary enclosures, barricades and other protection from open hoistways and elevator work area during the time the elevator is being installed to meet all permanent installation safety codes. A temporary work platform to be provided at the top landing across the hoistway; if required, it should conform to all code and safety requirements.

14. Smoke detector /sensing devices and contacts wired to elevator control as required by local code. A means to automatically disconnect the main line power supply to the elevator prior to the application of water in the elevator controller room shall be furnished by the electrical contractor. This means shall not be self-resetting.
15. Before erection of rough walls and doors; erect hoistway sills, headers, and frames. After rough walls are finished; erect fascias and toe guards. Set sill level and slightly above finished floor at landings.
16. A standby power source, including necessary transfer switches and auxiliary contact, where elevator operation from an alternate power supply is required.
17. Adequate storage facilities for elevator equipment prior to and during installation at ground level within 150 feet of hoistway.
18. Setting of anchors and sleeves.
19. Install bevel guards at 75° on all recesses, projections or setbacks over 2" (4" for A17.1 2000 areas) except for loading or unloading.
20. For car light and fan: provide a feeder and branch wiring circuits to elevator control cabinet.
21. Locate a light fixture (200 lx / 19 fc) and convenience outlet in pit with switch located adjacent to the access door.
22. Where pit access is by means of the lowest hoistway entrance, a vertical ladder of non-combustible material extending 42" minimum, (48" minimum for A17.1-2019 areas) shall be provided at the same height, above sill of access door or handgrips.

1.03 SUBMITTALS

A. Product data: When requested, the elevator contractor shall provide standard cab, entrance and signal fixture data to describe product for approval.

B. Shop drawings:
   1. Show equipment arrangement in the corridor, pit, and hoistway and/or optional control room. Provide plans, elevations, sections and details of assembly, erection, anchorage, and equipment location.
   2. Indicate elevator system capacities, sizes, performances, safety features, finishes and other pertinent information.
   3. Show floors served, travel distances, maximum loads imposed on the building structure at points of support and all similar considerations of the elevator work.
   4. Indicate electrical power requirements and branch circuit protection device recommendations.

C. Paint selection: Submit manufacturer’s standard selection charts for exposed finishes and materials.

D. Integrated laminate selection: Submit manufacturer’s standard selection charts for exposed finishes and materials.

E. Metal Finishes: Upon request, standard metal samples provided.

F. Operation and maintenance data. Include the following:
   1. Generic owner’s manuals and no wiring diagrams.
   2. Parts list, with recommended parts inventory.

1.04 QUALITY ASSURANCE

A. Manufacturer Qualifications: An approved manufacturer with minimum 15 years of experience in manufacturing, installing, and servicing elevators of the type required for the project.
   1. The manufacturer of machines, controllers, signal fixtures, door operators, cabs, entrances, and all other major parts of elevator operating equipment.
      a. The major parts of the elevator equipment shall be manufactured by the installing company, and not be an assembled system.
   2. The manufacturer shall have a documented, on-going quality assurance program.
   3. ISO-9001:2000 Manufacturer Certified
   4. ISO-14001:2004 Environmental Management System Certified
   5. LEED Gold certified elevator manufacturing facility.

B. Installer Qualifications: The manufacturer or an authorized agent of the manufacturer with not less than 15 years of satisfactory experience installing elevators equal in character and performance to the project elevators.

C. Regulatory Requirements:
   a. ASME A17.1 Safety Code for Elevators and Escalators, latest edition or as required by the local building code.
   b. NFPA 70 National Electrical Code.
   c. NFPA 80 Fire Doors and Windows.
   d. Americans with Disabilities Act - Accessibility Guidelines (ADAAG)
   e. Section 407 in ICC A117.1, when required by local authorities
   f. CAN/CSA C22.1 Canadian Electrical Code
   g. CAN/CSA B44 Safety Code for Elevators and Escalators.

D. Fire-rated entrance assemblies: Opening protective assemblies including frames, hardware, and operation shall comply with ASTM E2074, CAN4-S104 (ULC-S104), UL10(b), and NFPA Standard 80. Provide entrance assembly units bearing Class B or 1 1/2 hour label by a Nationally Recognized Testing Laboratory (2 hour label in Canada).

E. Inspection and testing:
   a. Elevator Installer shall obtain and pay for all required inspections, tests, permits and fees for elevator installation.
   b. Arrange for inspections and make required tests.
   c. Deliver to the Owner upon completion and acceptance of elevator work.

F. Sustainable Product Qualifications:
   a. Environmental Product Declaration:
      (1) GOOD: If Product Category Rules (PCR) are not available, produce a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope.
      (2) BEST: If Product Category Rules (PCR) are available, produce and publish an Environmental Product Declaration (EPD) based on a critically reviewed life-cycle assessment conforming to ISO 14044, with external verification recognized by the EPD program operator.
   b. Material Transparency:

(1) GOOD: Provide Health Product Declaration at any level
(2) BETTER: Provide Health Product Declaration (HPD v2 or later). Complete, published declaration with full disclosure of known hazards, prepared using the Health Product Declaration Collaborative's "HPD builder" on-line tool.
(3) BEST: Cradle to Cradle Material Health Certificate v3, Bronze level or higher.

c. LEED v4 – Provide documentation for all Building Product Disclosure AND Optimization credits in LEED v4 for product specified.

1.05 DELIVERY, STORAGE AND HANDLING

A. Manufacturing shall deliver elevator materials, components and equipment and the contractor is responsible to provide secure and safe storage on job site.

1.06 PROJECT CONDITIONS

A. Temporary Use: Elevators shall not be used for temporary service or for any other purpose during the construction period before Substantial Completion and acceptance by the purchaser unless agreed upon by Elevator Contractor and General Contractor with signed temporary agreement.

1.07 WARRANTY

A. Warranty: Submit elevator manufacturer's standard written warranty agreeing to repair, restore or replace defects in elevator work materials and workmanship not due to ordinary wear and tear or improper use or care for 24 months after final acceptance.

1.08 MAINTENANCE

A. Furnish maintenance and call back service for a period of 24 months for the elevator after completion of installation or acceptance thereof by beneficial use, whichever is earlier, during normal working hours excluding callbacks.
1. Service shall consist of periodic examination of the equipment, adjustment, lubrication, cleaning, supplies and parts to keep the elevators in proper operation. Maintenance work, including emergency call back repair service, shall be performed by trained employees of the elevator contractor during regular working hours.
2. Maintenance is to include monthly PM and yearly State re-certification.
3. Submit parts catalog and show evidence of local parts inventory with complete list of recommended spare parts. Parts shall be produced by manufacturer of original equipment.
4. Manufacturer shall have a service office and full time service personnel within a 100 mile radius of the project site.

PART 2 PRODUCTS

2.01 MANUFACTURERS

A. Manufacturer: Basis of Design TK Elevator’s EOX Self-Supported Machine Room-Less elevator, or approved equal with dimensional and all other requirements coordinated by the GC.

2.02 MATERIALS, GENERAL

A. All Elevator Cab materials including frame, buttons, lighting, wall and ceiling assembly, laminates and carpet shall have an EPD and an HPD.

B. Colors, patterns, and finishes: As selected by the Architect from manufacturer's full range of standard colors, patterns, and finishes.

C. Steel:
1. Shapes and bars: Carbon.
2. Sheet: Cold- and hot-rolled stainless steel sheet, galvanized.
3. Finish: Factory-applied paint for structural parts, painted for architectural parts. Color selection must be based on elevator manufacture’s standard selections.

D. Integrated laminate: Decorative surface finishes, pressure sensitive, acrylic type, nominal 0.014" thickness. Laminate selection must be based on elevator manufacture’s standard selections.

E. Flooring by others.

2.03 HOISTWAY EQUIPMENT

A. Platform: Fabricated frame of formed or structural steel shapes, gusseted and riveted/clinched. The car platform shall be designed and fabricated to support one-piece loads weighing up to 25% of the rated capacity.

B. Deflector Sheaves: None

C. Guide Rails: Dry, non-lubricated steel, fastened to the building with steel brackets.

D. Guides: Slide guides shall be mounted on top and bottom of the car.

E. Buffers: Provide substantial buffers in the elevator pit. Mount buffers on continuous channels fastened to the elevator guide rail or securely anchored to the pit floor. Predefined buffer stands for 4’ and 5’ pit depths.

F. Machine: The hoisting machine shall be a compact energy efficient permanent magnet Gearless traction type, consisting of PMAC motor, brake and driving sheave mounted on a rigid bedplate in the top of the hoistway. A large solid, forged shaft shall serve as a support for the motor rotor assembly and for the drive sheave and brake system. It shall be supported by roller bearings mounted in the machine housing.

G. Drive System:
1. The drive system shall be of the Variable Voltage Variable Frequency (VVVF) regenerative.
2. The system shall be a vector controlled pulse-width modulated AC drive. The variable voltage variable frequency drive shall convert the AC power supply using a two-step process to a variable voltage variable frequency power supply for use by the hoist motor.

3. The speed control shall be by means of vector control providing direct torque and field excitation automatically provided by permanent magnet. A digital absolute velocity encoder shall be provided giving feedback to the controller on armature position and motor speed.
4. Dual solid state electronics (IGBT Insulated Gate Bipolar Transistor) in series shall be used in place of mechanical contactors.

H. Motor/Machine: The motor shall be PMAC, totally enclosed, non-ventilated with class "F" insulation. The motor armature shall be dynamically balanced and supported by roller bearings of ample capacity. The armature and driving sheave shall be properly balanced for smooth, high-speed elevator performance. The PM machine shall be mounted horizontally in the top of the hoistway in a unitized formed steel structure on bearing plates furnished by the elevator installer. The unitized formed steel structure shall be securely fastened to the supports supplied by other trades.

I. Brake: The brake shall be a spring applied electric brake; held open by an electro-magnet actuated by a digital brake controller and designed to make smooth, positive stops. The Brake shall be designed to automatically apply in the event of interruption of power supply from any cause. Operation and control of the brake shall be all digital. The setting and lifting of the brake shall be software based and all electronic. All adjustments and setup of the brake shall be made using a PC interface. No contactors or resistors shall be used in the actuation of the brake.

J. Suspension Belts and Governor Rope: Suspension belts shall be flat belts of polyurethane with an inner core of 14 steel cords with an FT1 fire rating such that hoistway sprinklers are not required by NFPA-13. Each belt shall have a suspension strength of 64 KN (14,388 pounds).
   1. Three belts.
   2. Suspension tension monitor shall detect differences in belt tension and for loss of tension. If fault is detected, the car shall stop at the nearest floor and an Out of Service call be registered.
   3. Trip criteria shall be monitored, and data shall be stored in redundant non-volatile locations. Belts shall be replaced prior to the end of service life. Messages shall be issued at 180, 90, and 30 days prior to the last day of service life.
   4. Governor ropes shall be of steel wire construction.
   5. Any special tools, devices, software or equipment required for monitoring the wear of suspension shall be included with the installation of the equipment and become the property of the owner at time of elevator completion. This includes special ongoing monitoring systems, special tools and instruction needed to monitor the suspension system.

K. Counterweight: Counterbalance each elevator for smooth and economical operation by using steel and/or cement weights securely fastened in a steel counterweight frame. Counterweight shall equal the weight of the complete elevator car and approximately 50 percent of the specified capacity load.

L. Safety and Governor: Car safety shall be mounted on the bottom members of the car frame and be operated by a centrifugal speed governor. The governor shall be designed to cut off power to the motor and apply the brake whenever the governor indicates the car has excessive speed. The governor shall function when the car over speeds.

M. Emergency Terminal Limits: Place electric limit devices in the hoistway near the terminal landings. Limit switch(es) shall be designed to cut off the electric current and stop the car if it runs beyond either terminal landing.

N. Automatic Self-Leveling: Provide each elevator car with a self-leveling feature to automatically bring the car to the floor landings and correct for over travel or under travel. Self-leveling shall, within its zone, be automatic and independent of the operating device. The car shall be maintained approximately level with the landing irrespective of its load.

2.04 HOISTWAY ENTRANCES

A. Doors and Frames: Provide complete hollow metal type hoistway entrances at each hoistway opening bolted\knock down construction.
1. Manufacturer's standard entrance design consisting of hangers, doors, hanger supports, hanger covers, fascia plates (where required), sight guards, and necessary hardware.
2. Communication failure indicator: A Communication failure is a jewel that is located in the jamb and lights up if the connection with the phone in the elevator becomes faulty. Communication failure is tested on the SIL3 rated devices by inspectors to ensure the car will not run or accept a car call when there is a loss of communication between the car and controller.
3. Main landing door & frame finish: with no. 4 brushed finish entrance frame.
4. Typical door & frame finish: with no. 4 brushed finish entrance frame.

B. Interlocks: Equip each hoistway entrance with an approved type of interlock, tested as required by code. Provide door restriction devices as required by code.

C. Door Hanger and Tracks: Provide sheave type two-point suspension hangers and tracks for each hoistway horizontal sliding door.
1. Sheaves: Polyurethane tires with ball bearings properly sealed to retain grease.
2. Hangers: Provide an adjustable device beneath the track to limit the up thrust of the doors during operation.
3. Tracks: Drawn steel shapes, smooth surface and shaped to conform to the hanger sheaves.

D. Hoistway Sills: Extruded metal, with groove(s) in top surface. Provide mill finish on aluminum.

2.05 PASSENGER ELEVATOR CAR ENCLOSURE

A. Car Enclosure:
1. Walls: Cab type, stainless steel. Wall panels shall be constructed of stainless steel, no 4 brushed finish. Columns shall be stainless steel.
2. Canopy: Galvanized steel with chain rope exit.
3. Ceiling: Stainless steel downlight type, metal pans with suspended LED downlights. Number of downlights shall be dependent on platform size with a minimum of four. The metal pans shall be finished with a stainless steel, no. 4 brushed finish.

4. Cab Fronts, Return, Transom, Soffit and Strike: Provide panels faced with brushed stainless steel.
5. Doors: Horizontal sliding car doors reinforced with steel for panel rigidity. Hang doors on sheave type hangers with polyurethane tires that roll on a polished steel track and are guided at the bottom by non-metallic sliding guides.
    a. Door Finish: Stainless steel.
    b. Cab Sills: Extruded, aluminum mill finish.
6. Support rail: Provide 1.5" (38 mm) diameter formed cylindrical metal bar on side and/or rear walls on front opening cars and side walls only on front and rear opening cars. Support rails shall have a stainless steel, no. 4 brushed finish.
7. Ventilation: Manufacturer’s standard exhaust fan, mounted on the car top.
8. Protection pads: Not required

B. Car Top Inspection: Provide a car top inspection station with an “Auto-Inspection” switch, an "emergency stop" switch, and constant pressure "up and down" direction and safety buttons to make the normal operating devices inoperative. The station shall give the inspector complete control of the elevator. The car top inspection station shall be mounted in the door operator assembly.

2.06 DOOR OPERATION

A. Door Operation: Provide a direct or alternating current motor driven heavy duty operator designed to operate the car and hoistway doors simultaneously. The door control system shall be digital closed loop and the closed loop circuit shall give constant feedback on the position and velocity of the elevator door. The motor torque shall be constantly adjusted to maintain the correct door speed based on its position and load. All adjustments and setup shall be through the computer based service tool. Door movements shall follow a field programmable speed pattern with smooth acceleration and deceleration at the ends of travel. The mechanical door operating mechanism shall be arranged for manual operation in event of power failure. Doors shall automatically open when the car arrives at the landing and automatically close after an adjustable time interval or when the car is dispatched to another landing. AC controlled units with oil checks, or other deviations are not acceptable.
    1. No Un-Necessary Door Operation: The car door shall open only if the car is stopping for a car or hall call, answering a car or hall call at the present position or selected as a dispatch car.
    2. Door Open Time Saver: If a car is stopping in response to a car call assignment only (no coincident hall call), the current door hold open time is changed to a shorter field programmable time when the electronic door protection device is activated.
    3. Double Door Operation: When a car stops at a landing with concurrent up and down hall calls, no car calls, and no other hall call assignments, the car door opens to answer the hall call in the direction of the car's current travel. If an onward car call is not registered before the door closes to within 6 inches of fully closed, the travel shall reverse and the door shall reopen to answer the other call.
    4. Nudging Operation: The doors shall remain open as long as the electronic detector senses the presence of a passenger or object in the door opening. If door closing is prevented for a field programmable time, a buzzer shall sound. When the obstruction is removed, the door shall begin to close at reduced speed. If the infra-red door protection system detects a person

or object while closing on nudging, the doors shall stop and resume closing only after the obstruction has been removed.

5. Door Reversal: If the doors are closing and the infra-red beam(s) is interrupted, the doors shall reverse and reopen. After the obstruction is cleared, the doors shall begin to close.
6. Door Open Watchdog: If the doors are opening, but do not fully open after a field adjustable time, the doors shall recycle closed then attempt to open six times to try and correct the fault.
7. Door Close Watchdog: If the doors are closing, but do not fully close after a field adjustable time, the doors shall recycle open then attempt to close six times to try and correct the fault.
8. Door Close Assist: When the doors have failed to fully close and are in the recycle mode, the door drive motor shall have increased torque applied to possibly overcome mechanical resistance or differential air pressure and allow the door to close.

B. Door Protection Device: Provide a door protection system using microprocessor controlled infra-red light beams supporting 2D or 3D light curtains per code. The beams shall project across the car opening detecting the presence of a passenger or object. If door movement is obstructed, the doors shall immediately reopen.

2.07 CAR OPERATING STATION

A. Car Operating Station, General: The main car control in each car shall contain the devices required for specific operation mounted in a surface-mounted panel requiring no applied faceplate. COP shall have a brushed stainless steel finish. The main car operating panel shall be mounted in the return and comply with handicap requirements. Pushbuttons that illuminate using long lasting LED’s shall be included for each floor served, and emergency buttons and switches shall be provided per code. Switches for car light and accessories shall be provided. Visual highlight is the standard equipped, integrated multimedia display.

B. Emergency Communications System: Integral phone system provided. For improved accessibility, there are visual and acoustic confirmation for button inputs as well as a voice synthesizer for travel and floor announcements.

C. Column Mounted Car Riding Lantern: A car riding lantern shall be installed in the elevator cab and located in the entrance. The lantern, when illuminated, will indicate the intended direction of travel. The lantern will illuminate, and a signal will sound when the car arrives at a floor where it will stop. The lantern shall remain illuminated until the door(s) begin to close.

D. Special Equipment:

1. Limited Access Operation: Provision for surface mounted card readers in the car (card reader system by others).
2. CCTV:
3. Flat traveling, (9) 14 AWG, 4 Spares; (5) 18 AWG ,4 Spares; (9) STP 20 AWG, 5 Spares; (2) RG6 coax.

E. Digital Services: Cloud-based IoT monitoring system comes standard with these options:

Remote Monitoring with Application Programming Interface (API) Integration

ADA Phone – Code Compliant Cellular Connectivity

F. Digitally Native: Digital expansion for evolving ecosystem of digitally augmented services. DEP infotainment display comes standard.

2.08 CONTROL SYSTEMS

A.

Controller: The elevator control system shall be microprocessor based and software oriented. The system shall operate in real time, continuously analyzing the car(s) changing position, condition, and work load. All controller and operational circuits including the brake control and drive system shall be digital. Control of the elevator shall be automatic in operation by means of push buttons in the car numbered to correspond to floors served, for registering car stops, and by "up-down" push buttons at each intermediate landing and "call" push buttons at terminal landings.

1. Momentary pressing of one or more buttons shall dispatch the car to the designated landings in the order in which the landings are reached by the car, irrespective of the sequence in which the buttons are pressed. Each landing call shall be canceled when answered.
2. When the car is traveling in the up direction, it shall stop at all floors for which car buttons or "up" hall buttons have been pressed. The car shall not stop at floors where "down" buttons have been pressed, unless the stop for that floor has been registered by a car button or unless the down call is at the highest floor for which any buttons have been pressed. Pressing the "up" button when the car is traveling in the down direction shall not intercept the travel unless the stop for that floor has been registered by a car button or unless the up call is the lowest for which any button has been pressed.
3. When the car has responded to its highest or lowest stop, and stops are registered for the opposite direction, its direction of travel shall reverse automatically and it shall then answer the calls registered for that direction. If both up and down calls are registered at an intermediate floor, only the call corresponding to the direction of car travel shall be canceled upon the stopping of the car at the landing.
4. A car that is stopping for the last hall call in the preference direction, and that hall call is for the opposite direction with no onward car calls, shall reverse preference when the selector position advances to the landing at which the car is committed to stop. A car that is stopping for the last hall call in the preference direction, and that hall call is for the same direction, shall hold its preference until the door is almost closed allowing time for a passenger to register an onward car call which shall maintain the preference. If no car call is registered before the door is almost closed, the car shall lose its preference and shall be available to accept calls in either direction.

B. Operation: Selective Collective – ETA based. The system is optimized to get a car to the floor where a hall call has been registered, in the shortest time. The system receives input information from standard call pushbuttons located in the hall, car position and car load information from individual car loadweighers.

1. When group operation is required, the group supervisory operation shall be embedded within selected car controllers. No separate group controller shall be supplied. The microprocessor shall constantly scan the system for hall calls. When hall calls are registered, the control system shall immediately calculate the estimated time for arrival using such information as, number of floors to travel from the current position, the time it takes to travel one floor at top speed, calls assigned to a car, and car reversal time to respond to a call in the opposite direction of travel. When a car's status changes or additional hall calls are registered, the estimated time of arrival shall be recalculated and calls reassigned if necessary.
2. Traffic Pattern: The microprocessor shall provide flexibility to meet well defined patterns of traffic, including up peak, down peak, and heavy interfloor demands, and adjust for indeterminate variations in these patterns which occur in buildings.
3. Artificial Intelligence: Artificial Intelligence shall be an integral part of the group control system software. The enhanced artificial intelligence shall optimize the interfloor traffic performance. Inputs for the artificial intelligence shall include accurate passenger load from an electronic loadweigher, probable car calls generated from each hall call, type of building and observed traffic patterns.

C. Load Weighing Device: Provide a load weighing device on each car which, when the particular car is filled to an adjustable percentage of the capacity load, shall cause the car to bypass landing calls but not car calls. The passed landing calls shall remain registered for the next following car.

1. The device shall be unaffected by the action of compensating chain or rope. The device shall detect a 50-pound (23 Kg.) load change under all conditions.
2. The load sensor shall use a load cell to accurately measure the weight in the car. The information shall be transferred via a serial link to the elevator controller.

D. Anti-Nuisance Call Control: The microprocessor control system shall evaluate the number of people on the car and compare that value to the number of car calls registered. If the number of car calls exceeds the number of people by a field programmable value, the car calls shall be canceled after the first call has been answered.

E. Position Selector: The position selector shall be part of the microprocessor system. The car position in the hoistway shall be digitized through a primary position encoder. The microprocessor control system shall store the floor position and slow down points in memory.

F. Motion Control: The drive control system shall be dual-loop feedback system based primarily on car position. The velocity profile shall be calculated by the microprocessor control system producing extremely smooth and accurate stops. The velocity encoder shall permit continuous comparison of machine speed to velocity profile and to actual car speed. This accurate position/velocity feedback shall permit a fast and accurate control of acceleration and retardation.

G. Motor Pre-Torque: Current shall be applied to the elevator drive before the brake is released and the speed pattern is dictated to eliminate roll back and sling shot effects of unbalanced loads in the car. The electronic loadweigher shall determine the load on the car determining a pre-torque reference to send to the drive.

H. Emergency Power Operation: In the event of power loss, this elevator(s) should be equipped with a battery powered automatic rescue operation device. This operation is designed to only move the car up or down to the nearest landing depending on the load in the car. It is NOT designed to lower the car to a specified landing such as Battery Lowering used for Hydraulic applications. An isolation transformer is required if the building voltage is NOT 480VAC. A single rescue unit is not capable of rescuing a group of cars --- this is a per car option. Maximum travel on rescue operation is 100 feet. Average time of operation for Rescue is 3 minutes. This feature is only available for jobs with 60HP and below. This battery automatic rescue operation is not allowed with the Green Drive.

I. Automatic Light and Fan shut down: The control system shall evaluate the system activity and automatically turn off the cab lighting and ventilation fan during periods of inactivity. The settings shall be field programmable.

J. Special Operation: Not Applicable

K. Digital Services:

Cloud-based IoT Monitoring System (standard): Contractor shall provide a cloud-based IoT (internet of things) monitoring system capable of tracking door movements and timing, trips, power cycles, car calls, out-of-service events and modes. This observation will continue 24/7 and it shall be capable of providing service technicians a minimum of three recommended solutions for defined failure events and automatically dispatch service technicians in the event of failure(s) while sending notifications to end users of changes in their equipment’s state via both email and mobile device. Access to IoT and related equipment data and status will be made available in both a web portal and mobile application secured by password and username with at least two-factor authentication. Finally, this system must be self-contained and not require internet provision by others.

Along with the monitoring system, options are available.

Remote Monitoring with Application Programming Interface (API) Integration: Contractor shall provide a portal and mobile device application (app) that communicates relevant service and operational information such as elevator operational status, open service call tickets, call ticket history and performance and service history. This system shall provide a REST application programming interface (API) capable of transmitting relevant information from the cloud-based IoT monitoring system. This data includes equipment operational status, door movements, service and maintenance history, traffic statistics and failure alerts.

ADA Phone – Code Compliant Cellular Connectivity: Contractor shall provide a phone service through a self-contained cellular based VoIP system. This system shall meet code, include a backup battery capable of powering the emergency communication equipment for 4+ hours in the event of a power outage. The solution shall have remote monitoring capability to ensure continuous connectivity with a means of remote troubleshooting. Remote monitoring capability shall include, at a minimum, the ability to monitor connectivity and power supply. Remote monitoring shall be capable of providing local alerts to response personnel when on-site intervention is required.

L. Digitally Native:

The Basis of design model, EOX or equal shall have all the components needed for digital expansion from day one. No additional technician dispatching. On-site installation or modernization is required to enable new digital services giving you confidence that your elevator will remain up-to-date for years to come.

2.09 HALL STATIONS

A. Hall Stations, General: Buttons shall illuminate to indicate call has been registered at that floor for the indicated direction.
   1. Provide one pushbutton riser with faceplates having a brushed stainless steel finish, surface-mounted in the entrance jamb.
      a. Phase 1 firefighter's service key switch, with instructions, shall be incorporated into the entrance frame at the designated level.

B. Floor Identification Pads: Provide door jamb pads at each floor. Jamb pads shall comply with Americans with Disabilities Act (ADA) requirements.

C. Combo Hall Lantern and Position Indicator: An electronic position indicator shall be provided and mounted for optimal viewing. As the car travels, its position in the hoistway shall be indicated by the illumination of the alphanumeric character corresponding to the landing which the elevator is stopped or passing. Hall lantern is combined in the display with the directional arrow to indicate the travel direction in the same faceplate. Faceplates shall match the hall stations.

D. Special Equipment: Not Applicable

2.10 CONTROLLER LOCATION

E. Door Jamb Mount is integrated with controller in the door jamb. Control power and cab light are provided by the elevator contractor and included with the integrated assembly. Main power disconnect is provided by the general contractor.

PART 3 EXECUTION

3.01 EXAMINATION

A. Before starting elevator installation, inspect hoistway, hoistway openings, pits and/or control room, as constructed, verify all critical dimensions, and examine supporting structures and all other conditions under which elevator work is to be installed. Do not proceed with elevator installation until unsatisfactory conditions have been corrected in a manner acceptable to the installer.

B. Installation constitutes acceptance of existing conditions and responsibility for satisfactory performance.

3.02 INSTALLATION

A. Install elevator systems components and coordinate installation of hoistway wall construction.
   1. Work shall be performed by competent elevator installation personnel in accordance with ASME A17.1, manufacturer's installation instructions and approved shop drawings.
   2. Comply with the National Electrical Code for electrical work required during installation.

B. Perform work with competent, skilled workmen under the direct control and supervision of the elevator manufacturer's experienced foreman.

C. Supply in ample time for installation by other trades, inserts, anchors, bearing plates, brackets, supports, and bracing including all setting templates and diagrams for placement.

D. Welded construction: Provide welded connections for installation of elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualification of welding operators.

E. Coordination: Coordinate elevator work with the work of other trades, for proper time and sequence to avoid construction delays. Use benchmarks, lines, and levels designated by the Contractor, to ensure dimensional coordination of the work.

F. Install machinery, guides, controls, car and all equipment and accessories to provide a quiet, smoothly operating installation, free from side sway, oscillation or vibration.

G. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with cars. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum safe, workable dimensions at each landing.

H. Erect hoistway sills, headers, and frames before erection of rough walls and doors; erect fascia and toe guards after rough walls finished. Set sill units accurately aligned and slightly above finish floor at landings.

I. Lubricate operating parts of system, including ropes, as recommended by the manufacturer.

3.03 FIELD QUALITY CONTROL

A. Acceptance testing: Upon completion of the elevator installation and before permitting use of elevator, perform acceptance tests as required and recommended by Code and governing regulations or agencies. Perform other tests, if any, as required by governing regulations or agencies.

B. Advise Owner, Contractor, Architect, and governing authorities in advance of dates and times tests are to be performed on the elevator.

3.04 ADJUSTING

A. Make necessary adjustments of operating devices and equipment to ensure elevator operates smoothly and accurately.

3.05 CLEANING

A. Before final acceptance, remove protection from finished surfaces and clean and polish surfaces in accordance with manufacturer's recommendations for type of material and finish provided. Stainless steel shall be cleaned with soap and water and dried with a non-abrasive surface; it shall not be cleaned with bleach-based cleansers.

B. At completion of elevator work, remove tools, equipment, and surplus materials from site. Clean equipment rooms and hoistway. Remove trash and debris.

1. Use environmentally preferable and low VOC emitting cleaners for each application type. Cleaners that contain solvents, pine and/or citrus oils are not permitted.

3.06 PROTECTION

A. At time of Substantial Completion of elevator work, or portion thereof, provide suitable protective coverings, barriers, devices, signs, or other such methods or procedures to protect elevator work from damage or deterioration. Maintain protective measures throughout remainder of construction period.

3.07 DEMONSTRATION

A. Instruct Owner's personnel in proper use, operations, and daily maintenance of elevators. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train Owner's personnel in normal procedures to be followed in checking for sources of operational failures or malfunctions.

B. Make a final check of each elevator operation, with Owner's personnel present, immediately before date of substantial completion. Determine that control systems and operating devices are functioning properly.

3.08 ELEVATOR SCHEDULE

A. Elevator Qty. 1
1. Elevator Model: EOX
2. Elevator Type: Gearless Traction Machine Room-Less, Passenger
3. Rated Capacity: 2500 lbs.
4. Rated Speed: 150 ft./min.
5. Operation System: EOX controller
6. Travel: -10’- 4”'
7. Landings: 2 total, first floor and basement

8. Openings:
    a. Front: 1 (first floor)
    b. Rear: 1 (basement)
9. Clear Car Inside: 6'-9" wide x 4'-3 1/2" deep
10. Inside clear height: 7'-4" standard
11. Door clear height: 7'-0" standard
12. Hoistway Entrance Size: 3'-6" wide x 7'-0" high
13. Door Type: One-speed | LH Side opening
14. Power Characteristics: volts, 3 Phase, 60 Hz.
    a. Note: Isolation Transformer required for jobs with less than 460vac as well as 575vac, 3 Phase building power.
15. Seismic Requirements: Yes.
16. Hoistway Dimensions: 8'-6" wide x 5'-9" deep
17. Pit Depth: 4'-0"
18. Button & Fixture Style: EOX, or approved equal Signal Fixtures
19. Special Operations: Limited Access Operation surface mounted card readers. (Card readers by others). & CCTV
20. Digital Services: Flat traveling, (9) 14 AWG, 4 Spares; (5) 18 AWG ,4 Spares; (9) STP 20 AWG, 5 Spares; (2) RG6 coax.
21. Remote Monitoring with Application Programming Interface (API) Integration
22. ADA Phone - Code Compliant Cellular Connectivity
23. Digitally Native

3.09 SPECIAL CONDITIONS

1. No special conditions.

END OF SECTION

SECTION 21 00 00 - BASIC FIRE SUPPRESSION REQUIREMENTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes general administrative and procedural requirements, as well as the project general requirements for the job.

1.3 PROJECT GENERAL REQUIRMENTS

A. The intent of the drawings and specifications is to provide complete and properly functioning building systems. The Contractor shall provide all labor and material necessary to achieve such ends.

B. The plans and specifications are to be considered complimentary. In case of discrepancies, the most stringent shall apply, as determined by the Engineer.

C. Consider riser diagrams and detail as part of the Contract Documents. Provide equipment, valves, piping and other accessories shown on riser diagrams and details as if they were shown on the floor plans.

D. Provide minor items, accessories or devices as necessary for completion and proper operation of systems, whether or not they are specifically indicated by specifications or drawings.

E. Work that is installed in a method not in accordance with the contract documents, as determined by the Engineer, shall be removed at no additional cost or time penalty to the Owner.

F. The Contractor shall thoroughly examine the contract drawings, visit the site and verify, in the field, all existing conditions before submitting a bid. By the submission of a bid, the Contractor shall acknowledge acceptance of this plan set as an adequate definition of the scope of work and extra cost claims based on inadequacy of plans shall not be considered. No consideration or allowance shall be granted for failure to investigate existing conditions or misunderstandings of the contractual requirements.

G. Definitions: Refer to the drawings and other sections of these specifications for definitions not included below:

1. “Contract Documents”: Complete project specifications and drawings.
2. “Provide”: Furnish and install.
3. “Furnish”: Supply and deliver to the project site.
4. “Install”: Erect in place.
5. “Concealed”: Hidden by walls and/or ceilings.
6. “Exposed”: Visible to view.
7. “Indicated”: Shown in the contract documents.

H. The Contractor shall provide all equipment and materials in accordance with the best engineering practice. Follow the manufacturer's published installation instructions and provide all required auxiliary items. Show all required items on layout drawings.

I. All equipment provided shall be new and the current models for which technical support from the manufacturer and replacement parts are available.

J. All equipment supplied shall be suitable for the purpose intended. All manufacturers shall have had similar products in service for a minimum of three (3) years.

K. Coordinate work and equipment of all sections within Division 21 with work and equipment of other Divisions, to assure complete and satisfactory installation.

1. Perform work, such as: excavation, backfill, concrete, flashing and fire proofing required by Division 21 in compliance with requirements of other applicable Divisions of the specifications.

L. The Contractor shall install all piping parallel to or perpendicular to building walls in a neat workmanlike manner, unless specifically noted. Provide all support steel, hangers, vibration isolation and accessories necessary for equipment per manufacturer's recommendations. Do not support any ceilings or other building structure from piping or appurtenances. Do not allow piping or appurtenances to come into direct contact with building walls or floors. Do not support piping or appurtenances from installed ductwork, other piping, raceways, circuitry, etc. Each installed utility shall be individually supported from the building structure.

M. Where access panels are required for equipment service access, the Contractor shall coordinate final access panel location with equipment location. Access panel sizes shall be sufficient to allow service as indicated in the manufacturer's published operation and maintenance manuals and all applicable codes and standards as adopted and modified by the Authority Having Jurisdiction.

N. Provide openings in building construction for passage of piping. Repair all walls, ceilings and floors, penetrated. Repairs shall be with materials and finishes that match existing construction and as indicated in the Architectural portions of these specifications. Submit floor slab penetration drawings and details as Informational Submittals, for record only.

O. The Contractor shall carefully coordinate the openings in the building as to allow the rigging of the equipment. The fire pumps, controllers, valves, piping and other equipment shall be shipped to the site in sections that shall fit in the openings provided.

P. Field direction that is perceived as different or contradictory to the contract documents shall not relieve the Contractor from complying with the contract documents.

1.4 CONTRACT DRAWINGS

A. Drawings indicate arrangements, approximate sizes and relative locations of major apparatus, equipment, devices and services provided as part of the Work.

1. Check and compare layout of equipment indicated on drawings against all drawings, specifications of all Divisions, and exact locations determined using approved shop drawings of such equipment.

a. Where physical interference occurs, consult with the Engineer and prepare dated, dimensioned drawings correcting such interferences. Submit to the Engineer for review of such drawings.
b. Where physical interference occurs, consult with the Engineer and prepare dated, dimensioned drawings correcting such interferences. Submit to the Engineer for review of such drawings.

c. Do not scale drawing to determine working dimension. Such measurements shall be taken from figured dimensions.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Refer to other divisions of this specification for location of Contractor storage and staging area.

B. Deliver all materials with factory-applied end closures. Maintain end closures through shipping, storage, and handling to prevent pipe end damage and prevent entrance of dirt, debris, and moisture.

C. Protect materials from moisture and dirt. Elevate above grade. Do not exceed structural capacity of floor, if stored inside.

D. Protect equipment, flanges, fittings, and piping specialties from moisture and dirt.

E. Protect open pipe from dirt and debris. Cover all ends of uninstalled pipe and exposed ends of installed pipe.

1.6 SEQUENCING AND SCHEDULING

A. Coordinate mechanical equipment installation other building components.

B. Provide a detailed loaded project Critical path method (CPM) schedule for this Contractors work separately from the general Contractor's CPM, which can be integrated into the GC's schedule. The Sub-contractors CPM schedule shall show all work associated with the ordering, installation and commissioning of all equipment listed on the drawings by phase/floor as appropriate. This shall be submitted in paper and electronic (PDF) format and approved by the Owner before any request for payment is submitted. Sample tasks to be shown include but are not limited to the following:

1. Shop drawing preparation.
2. Show A/E shop drawing approval period of 3 weeks.
3. Equipment delivery.
4. Installation start by system and floor area.
5. All Testing.
6. Installation complete by system and floor area.
7. Utility Shutdown.
8. Temporary fire protection.
9. Utility connections.
10. Equipment start-up.
11. System fill.
12. Commissioning by system and floor.
13. Training.
14. Payment request.
15. Punch list.

C. Arrange for chases, slots, and openings in building structure during progress of construction to allow for fire suppression work installations.

D. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

E. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

F. Coordinate connection of electrical services (of all voltages).

G. Coordinate connection of fire suppression systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

H. Coordinate requirements for access panels and doors where fire suppression items requiring access are concealed behind finished surfaces.

I. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar concealment.

1.7 REFERENCED ORGANIZATIONS AND CODES

A. The following list of abbreviations are utilized within the specifications and are provided as a reference:

1. AABC - Associated Air Balance Council.
2. ADA - American Disability Act.
3. AGA - American Gas Association.
4. AHJ - Authority Having Jurisdiction
5. ANSI - American National Standards Institute.
6. ASHRAE - American Society of Heating, Refrigerating and Air Conditioning Engineers.
7. ASME - American Society of Mechanical Engineers.
8. ASPE - American Society of Plumbing Engineers.
9. ASSE - American Society of Sanitary Engineering
10. ASTM - American Society for Testing and Materials.
11. AWWA - American Water Works Association.
12. CS - Commercial Standard.
13. CSA - Canadian Standards Association.
14. EOR - Engineer of Record
15. FM - Factory Mutual Global
16. HI - Hydraulic Institute.
17. IBC - International Building Code.
18. IBR - Institute of Boiler and Radiator Manufacturers.
19. IECC - International Energy Conservation Code.
20. IEEE - Institute of Electrical and Electronics Engineers.
21. ITM - Inspection, Testing, and Maintenance as specified in NFPA 25.
22. MSSP - Manufacturers Standards Society of the Valve and Fittings Industry.
23. NEC - National Electrical Code.
24. NEMA - National Electrical Manufacturers Association.
25. NICET - National Institute for Certification in Engineering Technologies
26. NFPA - National Fire Protection Association.
27. NSF - NSF International
28. OSHA - Occupational Safety and Health Administration.
29. PHCC - National Standard Plumbing Code Illustrated.
30. SMACNA - Sheet Metal and Air Conditioning Contractors National Association.
31. TEMA - Tubular Exchanger Manufacturers Association.
32. UL - Underwriters' Laboratories.

1.8 PRE-BID SITE VISIT

A. Prior to preparing the bid, the Contractor shall visit the site and become familiar with all existing conditions. Make all necessary investigations as to locations of utilities and all other matters that can affect the work. No additional compensation shall be made to the Contractor as a result of his failure to familiarize himself with the existing conditions under which the work must be performed.

1.9 OUTAGES

A. For all work requiring an outage, the Contractor shall submit an outage request to the Owner and Architect in enough time to allow a 3 week review or as required by Division 1. The outage request shall include as a minimum:

1. System(s) effected.
2. Proposed isolation points.
3. Start and duration of outage.
4. Contractor contact person.
5. Emergency procedures.
6. Method of procedure.

B. All mechanical outages, which will interfere with the normal use of the building in any manner, shall be done at such times as shall be mutually agreed upon by the Contractor and the Owner.

C. The Contractor shall include in his price the cost of all premium time required for outages and other work to be performed, which interferes with the normal use of the building.

D. The operation of valves or switches required to achieve an outage must be accomplished by the Owners personnel only. Prospective Sub-contractors under this section are cautioned that the unauthorized operation of valves, power switches, or other control devices by their personnel can result in extremely serious consequences for which the Contractor shall be held accountable.

1.10 CUTTING, WELDING, BURNING

A. Before the Contractor commences any cutting, welding, burning, brazing or pipe sweating, the Contractor shall obtain a hot work permit from the Owner.

B. The hot work permit copy shall remain on the job site at the hot work location until such work is completed.

1.11 PERFORMANCE REQUIREMENTS

A. Contract drawings are generally diagrammatic and do not indicate all offsets, fittings, transitions, access panels and other specialties required.

B. Furnish and install all items as may be required to fit the work to the conditions encountered.

C. Arrange piping, valves, equipment and other work generally as shown on the contract drawings, providing proper clearances and access.

D. Where departures are proposed because of field conditions or other causes, prepare and submit detailed shop drawing submittal for approval in accordance with Submittals specified below.

E. The Owner may make reasonable changes in location of equipment piping and ductwork up to the time of rough-in or fabrication at no charge and with no time extension.

F. Equipment submitted that is not basis of design must meet all specified/scheduled performance criteria. No additional compensation shall be made to the Contractor if substituted equipment does not meet performance criteria.

1.12 MATERIALS AND EQUIPMENT

A. The contract drawings and system performances have been designed on the basis of using the particular manufacturer's products specified or scheduled on the contract drawings.

B. All proposed substitutions shall be reviewed by the Engineer. The determination of equal products to the prototype shall be at the sole discretion of the Engineer.

C. Products of other manufacturer's listed in the specification shall be permitted provided as follows:

1. Product shall meet the specifications. If the contractor intends to use a product or equipment not explicitly defined in the project specifications, they shall submit to Substitution Request to the Owner/Architect/Engineer in writing for review and approval.
2. Any substitutions for the approved product shall require the contactor to make all required changes to all associated trades to accommodate the substitution at no cost or time impact to the project. All substitutions shall be provided with a benefit to the Owner in the form of a credit, reduction in construction schedule, or other advantage approved by the Owner. Substitutions submitted for review without a credit or stated benefit shall be returned "Rejected/Resubmit".
3. All changes shall be made, without additional cost to the Owner or effort by the design team. The Contractor shall be responsible to provide all adjustments for deviations, such that the final installation is complete and functions as the basis of design product is intended. For equipment substitutions, the Contractor shall make all required accommodations to utilize unit selected, at no additional cost to Owner including but not limited to:

a. Electrical modifications including circuit breaker fuse, disconnect switch, conduit and wire size.
b. Structural modifications.
c. Providing National Electrical Code (NEC) and Authority Having Jurisdiction (AHJ) required service clearances.
d. Space requirements with all other trades if physical dimensions are different than shown in the construction documents.

D. Products with dimensions or other characteristics different from the basis of design product that render their use impractical or cause functional fit, access, or connection problems, shall not be acceptable.

1.13 DELEGATED DESIGN REQUIREMENTS

A. All shop drawing submittals associated with fire suppression systems shall be signed and sealed by the contractor's delegated design professional responsible for the project. Said individual must hold a current Fire Protection Engineer license from the State where the project will be constructed. Contractor must provide supporting documentation for their delegated design professional within three (3) weeks of the award of contract. Documentation shall include but not limited to a copy of their current license or wallet card, a signed detailed resume documenting a

minimum of five (5) year's experience in fire suppression design, and a detailed project completion history containing a minimum of three (3) projects where they were personally responsible for design.

1.14 SUBMITTALS

A. General: Follow the procedures specified in Division 1 Section "Submittals," except as modified below.

B. The purpose of the submittal process is to show, via products, shop drawings, performance data, and calculations, how the Contractor shall conform to the contract documents.

C. Shop drawing review by the Engineer of Record is only for the limited purpose of checking for conformance with the information given in the construction documents. Review is not conducted for the purpose of determining the accuracy of or completeness such as dimensions or quantities.

D. The Contractor shall submit shop drawings, coordination drawings, fabrication drawings and receive acceptance from the Engineer of Record prior to submission to the Authority Having Jurisdiction for trade permit, construction or ordering of same.

E. Acceptance by Engineer of Record does not absolve Contractor of code or Authority Having Jurisdiction's requirements. Conversely, approval by the Authority Having Jurisdiction does not absolve the Contractor of satisfying the requirements of the contract documents.

F. Submittals must clearly indicate the specific products, accessories and where they shall be used on this project. Submittals that do not contain the above information shall be rejected.

G. Submittals shall be reviewed by the Contractor and bear his stamp that the submittal meets the requirements of the contract documents. Submittals that are not stamped shall be rejected as they will not have proof that the Contractors have adequately reviewed the submittal for compliance with the contract documents.

H. Submittals shall be reviewed by the Engineer of Record for 'Informational Purposes Only'. If the Engineer of Record finds a submission to be in non-conformance with the contract documents and specifications for the project it will be returned to the contractor with an itemized list of observed deficiencies including recommended corrective actions to obtain compliance.

I. Return of an 'Make Corrections Noted' submittal does not require resubmission to the Engineer of Record for re-review but rather acknowledgement in writing from the Contractor that they will make the corrective actions noted prior to construction and include them in the Record Documents.

J. Submittals shall be reviewed not more than two (2) times. If the Contractor fails to submit shop drawings that are approved by the Engineer of Record within the first two attempts, he shall be back charged at a current rate of the Engineer of Record's hourly contact rate for all subsequent reviews.

K. Resubmittals must be accompanied by an itemized response letter authored and signed by the delegated design professional on their company letterhead. Each revision shall be clouded on plan and thoroughly explained in the response letter. 'Will Comply' is not an acceptable response.

L. The Engineer of Record reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received, independent of all pre-determined project specific submittal review times and schedules.

M. Submit samples of color, lettering style, and other graphic representation required for each identification material and device.

N. Shop drawings shall include detailing, fabrication, and installation information for all supports and anchorage required for each specific fire suppression material and/or piece of equipment.

O. If the fire protection contractor proposes to use welded pipe and fittings, they shall provide welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article and all applicable requirements of NFPA 13.

P. Fire protection submittals shall be one complete package including but not limited to scaled plans, all material data as outlined in the project specifications, NFPA 13 format hydraulic calculations with detailed worksheets, a current hydrant flow test data on municipality's official report sheet, and a letter authored and signed by the delegated design professional noted above stating they have reviewed and approved the design package in conformance with all applicable codes, standards, and all contract documents. Equivalent k-factor method not permissible for use in hydraulic calculations. Incomplete submittals will be automatically rejected.

1.15 COORDINATION DRAWINGS

A. Coordination drawings shall be submitted as an “Informational Submittal.” Informational Submittals shall be written and graphic information and physical samples that do not require Architect's responsive action. Submittals will be reviewed for conformance with specified requirements. Submittals may be rejected for not complying with these specified requirements

B. Prepared coordination drawings [and update BIM model] in accordance with Division 1 to a scale of 1/4"=1'-0" or larger aligned to the architect's project specific sheet size and layout; detailing major elements, components, and systems of fire suppression equipment and materials in relationship with other systems, installations, and building components. Locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the Work shall be indicated. Said drawings shall include, but not necessarily be limited to the following:

1. Details regarding the proposed locations of piping, valves, equipment, and materials including, but not limited to the following:

   a. All sizes, shapes, connection points, service clearances, weights, support points of each proposed piece of equipment and the structure, adjacent equipment.
   b. Specific equipment proposed by the contractor and not just generic prototype equipment coordinated with the product data submittal.
   c. Planned piping layout, including valve and specialty locations and valve stem movement.
   d. Clearances for installing and maintaining systems and components.
   e. Clearances for servicing and maintaining equipment, and space for equipment disassembly required for periodic maintenance.
   f. Equipment connections and support details.
   g. Exterior wall and foundation penetrations.
   h. Fire-rated wall and floor penetrations.
   i. Sizes and location of required concrete pads and bases.
   j. Access doors.
   k. Name of owner and occupant.
   l. Project location including street address.
   m. Point of compass.

n. Full height cross section, or schematic diagram, including structural member information if required for clarity including ceiling construction and method of protection for non-metallic piping.
o. Location of partitions.
p. Location of fire walls.
q. Occupancy class of each area or room.
r. Location and size of concealed spaces, closets, attics, and bathrooms.
s. Any small enclosures in which no sprinklers are installed.
t. Size of city main in street and whether dead end or circulating; of dead end, direction and distance to the nearest circulating main; and city main test results and system elevation relative to test hydrant.
u. Other sources of water supply, with pressure or elevation.
v. Make, type, model, and nominal K-factor of sprinklers including sprinkler identification number.
w. Temperature rating and location of high-temperature sprinklers.
x. Total area protected by each system on each floor.
y. Number of sprinklers on each riser per floor.
z. Pipe type and schedule of wall thickness.
aa. Nominal pipe size and cutting lengths of pipe (center-to-center dimensions). Where typical branch lines prevail, it shall be necessary to size only one typical line.
bb. Location and size of riser nipples.
cc. Type of fittings and joints and location of all welds and bends. The contractor shall specify on drawing any sections to be shop welded and the type of fittings or formations to be used.
dd. Type and locations of hangers, sleeves, braces, and methods of securing sprinklers when applicable.
ee. All control valves, check valves, drain pipes, and test connections.
ff. Make, type, model and size of alarm valve.
gg. Private fire service main sizes, lengths, locations, weights, materials, point of connection to city main; the sizes, types and locations of valves, valve indicators, regulators, meters, and valve pits; and the depth that the top of the pipe is laid below grade.
hh. Piping provisions for flushing.
ii. Where the equipment is to be installed as an addition to an existing system, enough of the existing system indicated on the plans to make all conditions clear.
jj. For hydraulically designed systems, the information on the hydraulic nameplate.
kk. A graphic representation of the scale used on all plans.
ll. Name and address of contractor.
mm. Hydraulic reference points shown on the plan that correspond with comparable reference points on the hydraulic calculation sheets.
nn. The minimum rate of water application (density or flow or discharge pressure), the design area of water application, in-rack sprinkler demand, and the water required for hose streams both inside and outside.
oo. The total quantity of water and the pressure required noted at a common reference point for each system.
pp. Relative elevations of sprinklers, junction points, and supply reference points.
qq. If room design method is used, all unprotected wall openings throughout the floor protected.
rr. Information about backflow preventers (manufacturer, size, type).
ss. Information about antifreeze solution used (type and amounts).

tt. Information about flexible sprinkler drops including but not limited to manufacturer specific installation requirements.
uu. Size, location, and piping arrangement of fire department connections.
vv. Ceiling /roof heights and slopes not shown in the full height cross section/
ww. Edition year of NFPA standards the fire suppression systems are design to.
xx. Any other information required for working drawings as required by codes and standards referenced in the contract documents.
yy. Hydrant flow test data performed within 12 months of the submittal data. Test data shall be on municipality's official report sheet and include but not be limited to location and elevation of static and residual test gauge with relation to the riser reference point, flow location, static pressure, residual pressure, flow, date, time, name of personnel who conducted the test or supplied the information,

2. Details regarding scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
3. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations. Show all wall mounted access doors for fire suppression devices and equipment.
4. Coordinated reflected ceiling plans to coordinate and integrate installations, air outlets and inlets, light fixtures, communication systems components, cable trays, sprinkler heads, access doors and other ceiling-mounted items.
5. Provide Information Submittals of drawings for the work that shall be solely for the benefit of the Contractor and shall not be reviewed including:

a. Sleeve drawings.

1.16 UNDERWRITER'S LABORATORY (UL) REQUIREMENTS

A. All equipment containing electrical components and provided as part of the mechanical specifications shall bear the Underwriter's Laboratory (UL) label, as a complete packaged system.

1. Equipment not provided with a UL label shall be tested in the field, certified and provided with a UL label at the installer's expense.
2. Field testing shall be performed by a testing agency approved by the authority having jurisdiction.

1.17 FIRE SAFE MATERIALS

A. Unless otherwise indicated, materials shall conform to UL, NFPA or ASTM standards for fire safety with smoke and fire hazard rating not exceeding flame spread of twenty five (25) and smoke developed of fifty (50).

1.18 COLOR SELECTION

A. Color of finishes shall be as selected by the Architect. Submit colors of factory finished equipment for acceptance prior to ordering.

1.19 VARIANCES

A. Where variances occur between the drawings and specifications or within either document itself, the item or arrangement of better quality, greater quantity or higher cost shall be included in the contract price. The Engineer shall decide on the item and manner in which the work shall be provided.

1.20 STANDARD OF QUALITY

A. Provide materials that comply with quality, style and sizes specified and shown on Drawings.

1. Manufacturer's names and model numbers may be stated in contract documents for the purpose of establishing standards of quality, style, size and type, and shall not be construed to exclude equipment or materials of other acceptable manufacturers, subject to compliance with contract requirements.
2. Where a specific manufacturer is specified, provide specified item of product of one of other acceptable manufacturer where permitted, provided that alternate item conforms in all respects to Indicated requirements.

a. Consideration will not be given to claims that another manufacturer's item meets performance requirements with lesser construction.
b. Performance as delineated on contract drawings and in specifications shall be interpreted as minimum performance requirements.
c. Provide documentation that compares each specific characteristic of the specified manufacturer's product to that of the proposed "acceptable manufacturer's" product.

1.21 GUARANTEE/WARRANTY:

A. All materials, equipment, etc. provided by the Contractor shall be guaranteed and warranted to be free from defects in workmanship and materials for a period of two (2) years after date of substantial completion and acceptance of work by the Owner or as required by Division. 1. Any defects in workmanship, materials, or performance which appear within the guarantee period shall be corrected by the Contractor without cost to the Owner, within a reasonable time. In default thereof, Owner may have such work done and charge the cost of same to the Contractor. Any special warranties shall be as detailed in relevant specification sections. Manufacturer's standard warranties shall not absolve Contractor of specification requirements.

1.22 EQUIPMENT PROVIDED UNDER ANOTHER DIVISION AND BY OTHERS

A. The Installer of products under Division 21 shall make all system connections required to equipment furnished and installed under another division and by others.

B. It shall be the responsibility of the Installer to obtain all necessary data from the equipment supplied under other Divisions.

1.23 AS BUILT DRAWINGS

A. Upon completion of the fire suppression installations, the Installer shall deliver to the Architect five (5) complete sets of marked-up blueprints and electronic PDF of as-built conditions.

1. The mark-ups shall be legibly marked in red pencil to show all changes and departures of the installation as compared with the original design.
2. All mark-ups shall be made on the contract set of documents.
3. Refer to General Requirements of Division 1 for additional requirements pertaining to Submittals and Record Drawings.

1.24 RECORD DOCUMENTS

A. Prepare record documents in accordance with the requirements in Division 1 Section "Closeout Procedures". In addition to the requirements specified in Division 1, indicate the following installed conditions on the Contract Drawings:

1. Mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e., traps, strainers, expansion compensators, tanks, etc.). Valve location diagrams, complete with valve tag chart. Indicate actual inverts and horizontal locations of underground piping.
2. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
3. Maintenance clearances and access points.
4. Numbering coordinated with contract documents and O&M manuals.
5. Approved substitutions, Contract Modifications, Responses to Contractor’s Request for Information, and actual equipment and materials installed.

B. Engage the services of a Land Surveyor or Professional Engineer registered in the state in which the project is located to record the locations and invert elevations of underground installations.

1.25 CLOSEOUT PROCEDURES

A. Prepare operations and maintenance manuals in accordance with Division 1 Section "Project Closeout." In addition to the requirements specified in Division 1, include the following information for equipment items:

1. Periodic maintenance schedule.
2. Parts list.
3. Parts supplier listing.
4. Service diagrams.

B. The Contractor shall provide six (6) bound copies of manufacturer's published operating and maintenance instructions for all serviceable equipment provided under this contract at least two (2) months prior to Substantial Completion. Operating and maintenance instructions shall be presented to the design engineer bound in three ring binders, tabbed by system and as electronic PDF on a flash drive, before the pre-final review of construction.

1. List of systems and equipment requiring service manuals.
2. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.
3. Manufacturer's printed operating procedures to include start-up, run-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions.
4. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.
5. Servicing instructions and lubrication charts and schedules.
6. Systems and equipment test reports.
7. All warranties for equipment installed on this project (minimum 2 years). Warranty letters shall be provided on company letterhead and detail the scope, duration, and extents of coverage.
8. A detailed company directory of key project personnel with contact information including but not limited to company's Estimator, Project Manager, Superintendent, Foreman, Designated Design Professional, and Service Manager.
9. Contractor's workmanship and materials warranty.
10. Start-up report in readable legible fashion.

11. Letter of Completion stating that installation is 100% complete per applicable codes and standards to satisfy all requirements of the contract documents. Letter shall be signed by the active president of the organization.
12. Copies of all permits with closeout documentation (green stickers, reports, etc.)
13. Sign-in sheets for all owner training presentations.

C. Arrange for each installer of equipment that requires regular maintenance to meet with the Owner's personnel to provide instruction in proper operation and maintenance. If installers are not experienced in procedures, provide instruction by manufacturer's representatives. Include a detailed review of the following items:

1. Maintenance manuals, including a customized list of preventive maintenance items and annual schedule for maintenance.
2. Record documents.
3. Complete inventory of spare parts and materials.
4. Tools.
5. Lubricants.
6. Fuels.
7. Identification systems.
8. Control sequences.
9. Hazards.
10. Cleaning.
11. Warranties and bonds.
12. Maintenance agreements and similar continuing commitments.

D. As part of instruction for operating equipment, demonstrate the following procedures:

1. Start up.
2. Shut down.
3. Emergency operations.
4. Noise and vibration adjustments.
5. Safety procedures.
6. Maintenance operations per NFPA 25.

E. Provide all commissioning reports.

F. Submit all documentation and obtain approval as required for LEED certification.

1.26 PROJECT PUNCH OUT

A. Architect/Engineer shall perform punch out reviews and shall provide the Contractor with a list of punch list items to be completed before contract close out. Each and every punch list item shall be initialed and dated by the Contractor when the work is complete. The Architect/ Engineer shall not perform any punch list verification until all items have been completed, initialed, dated and the list returned to the Architect/Engineer. If any items have been initialed as being completed by the Contractor and the Architect/Engineer determines that the work is not complete, the Architect/Engineer shall be reimbursed by the Contractor at his regular hourly rate for any and all items requiring revisiting of the site by the Architect/Engineer. Reimbursement shall be made by deducting the Architect/Engineer fee from the Contractor's final payment.

PART 2 - PRODUCTS

2.1 CONCRETE AND MASONRY WORK

A. Concrete: 3,500 psi compressive strength after twenty eight (28) days.

2.2 GROUT

A. Non-shrink, Nonmetallic Grout: ASTM C 1107, Grade B.

1. Characteristics: Post hardening, volume adjusting, dry, hydraulic cement grout, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.50MPa), twenty eight (28) day compressive strength
3. Packaging: Premixed and factory-packaged

2.3 ACCESS DOORS AND PANELS

A. Provide manufactured steel door assemblies consisting of:

1. Hinged door.
2. Flush screwdriver cam locks and frame.
3. Appropriate fire-rating where applicable.

B. Doors shall be Milcor Metal Access doors or approved equal. Provide key locks where indicated.

C. Design shall be provided for the following installations:

1. Acoustical or Cement Plaster: Style B.
2. Hard Finish Plaster: Style K or L.
3. Masonry or Dry Wall: Style M.

PART 3 - EXECUTION

3.1 ROUGH-IN

A. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.

B. Refer to equipment specifications included in the mechanical specifications for equipment rough in requirements.

3.2 INSTALLATIONS

A. General: Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate fire suppression systems, equipment, and materials installation with other building components.
2. Verify all dimensions by field measurements.
3. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for fire suppression installations.
4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
5. Sequence, coordinate, and integrate installations of mechanical materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning prior to closing in the building.

6. Where systems, materials and equipment are intended for overhead installation, and where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible. Notify the Owner prior to installation when headroom is less than 7'-6".
7. Coordinate connection of fire suppression systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.
8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Architect.
9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components.
10. Install fire suppression equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
11. Install access panel or doors where units are concealed behind finished surfaces. Access panels and doors are specified in the Division 8 specifications.
12. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

3.3 CUTTING AND PATCHING

A. General: Perform cutting and patching in accordance with Division 1 Sections. In addition to the requirements specified in Division 1, the following requirements apply:

1. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.

B. Perform cutting, fitting, and patching of fire suppression equipment and materials required to:

1. Uncover Work to provide for installation of Out-of-Sequence Work.
2. Remove and replace defective Work.
3. Remove and replace Work not conforming to requirements of the Contract Documents.
4. Remove samples of installed Work as specified for testing.
5. Install equipment and materials in existing structures.
6. Commission the Work.

C. Upon written instructions from the Architect, uncover and restore Work to provide for Architect/Engineer observation of concealed Work.

3.4 PAINTING AND FINISHING

A. Refer to Division 9 Section "Painting" for field painting requirement.

B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

C. Do not paint manufacturer's labels or tags.

3.5 CONCRETE BASES

A. Construct concrete equipment bases of dimensions indicated, but not less than four (4) inches larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000-psi, twenty eight (28) day compressive strength concrete and reinforcement bars as specified in the architectural specifications. Housekeeping pads shall be 4-inches in height except for air handling units. For air handling units, housekeeping pad shall be at a depth to allow p-trap installation per manufacturer's requirements and for service access beneath installed p-trap.

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGE

A. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.

B. Field Welding: Comply with AWS D1.1 "Structural Welding Code - Steel"

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGE

A. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor fire suppression materials and equipment.

B. Select fastener sizes that shall not penetrate members where opposite side shall be exposed to view or shall receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.

C. Attach to substrates as required to support applied loads.

3.8 GROUTING

A. Install nonmetallic non-shrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.

B. Clean surfaces that come into contact with grout.

C. Provide forms for placement of grout, as required.

D. Avoid air entrapment when placing grout.

E. Place grout to completely fill equipment bases.

F. Place grout on concrete bases to provide a smooth bearing surface for equipment.

G. Place grout around anchors.

H. Cure placed grout according to manufacturer's printed instructions.

3.9 PENETRATION OF WATERPROOF CONSTRUCTION

A. Coordinate the work to minimize penetration of waterproof construction, including roofs, exterior walls and interior waterproof construction.

B. Furnish and install drains, curbs, vent assemblies, sleeves, flashing, etc. specifically designed for application to the particular construction. Install system in accordance with the roofing manufacturer's instructions.

3.10 EXCAVATION AND BACKFILLING

A. General:

1. Perform all necessary excavation, for installation of work as part of the mechanical specifications in accordance with the architectural specifications.

3.11 CLEANING AND FINISHES

A. Clean surfaces prior to application of insulation, adhesives, coating, and paint.

B. Provide factory applied finish where specified.

C. Protect all finishes, and restore all finishes to their original condition if damaged as a result of work installed as part of the mechanical specifications.

D. Remove all construction marking and writing from exposed equipment, ductwork, piping and building surfaces.

3.12 PROTECTION OF WORK

A. Protect work, material and equipment from weather and construction operations before and after installation.

B. Properly store and handle all materials and equipment.

C. Cover temporary openings in piping, ductwork and equipment to prevent the entrance of water, dirt, debris, and other foreign matter.

3.13 ELECTRICAL REQUIREMENTS

A. Coordinate selection of fire suppression equipment requiring electrical connections (of all voltages) with other specification sections. Coordinate installation closely with all other trades to facilitate electrical connections in a code compliance manner for project delivery in compliance with contract documents. In general, power wiring and motor starting equipment shall be provided as specified in the electrical specifications.

1. Where the electrical requirements of the equipment furnished differ from the provisions made in the electrical specifications, make the necessary allowances as part of the fire suppression specifications.
2. Where no electrical provisions are included in the electrical specifications, include all necessary electrical work as part of the fire suppression specifications. Notify Engineer of Record immediately.

3.14 PROVISIONS FOR ACCESS

A. Furnish and install adequate access to all fire suppression components. The following list shall be used as a guide only:

1. Equipment.
2. Valves.
3. Controls.
4. Any and all fire suppression appurtenances required for ITM, no matter the frequency.

B. Access shall be adequate as determined by the Architect.

C. Refer to contract drawings where access panels have been specifically located.

D. Provide additional access panels for adequate access to equipment and components as indicated in paragraph ‘A’ above.

E. Where access is by means of lift out ceiling tiles or panels mark each access panel, using small color coded or numbered tabs. Provide an index chart for identification. Place markers in corner of tile.

3.15 PENETRATION OF WATERPROOF CONSTRUCTION

A. Coordinate the work to minimize penetration of waterproof construction, including roofs, exterior walls and interior waterproof construction.

B. Furnish and install drains, curbs, vent assemblies, sleeves, flashing, etc. specifically designed for application to the particular construction. Install system in accordance with the roofing manufacturer's instructions.

3.16 OPERATION OF EQUIPMENT DURING CONSTRUCTION

A. Clean all systems and equipment prior to initial operation for testing and commissioning.

B. Do not operate equipment unless all proper safety devices or controls are operational.

C. Provide all maintenance and service for equipment which is operated during construction.

D. Provide the services of a manufacturer's factory trained service organization to start the equipment. Submit testing report prior to equipment demonstration.

E. Do not use fire suppression systems for temporary services during construction unless authorized in writing by the Architect.

F. Upon completion of work, clean and restore all equipment to new conditions and replace all covers, filters, clean strainers and flush systems just prior to equipment demonstration.

3.17 SPARE PARTS

A. Provide spare for systems provided under this project including but not limited to:

1. See specific Div 21 specifications for details.

3.18 DEMONSTRATION AND INSTRUCTIONS

A. Demonstrate operation and maintenance of equipment and systems to Owner’s personnel a minimum two (2) weeks prior to date of final inspection. Correct any difficulties prior to requesting final inspection.

1. For equipment requiring seasonal operation, perform instructions for other seasons at the same time.
2. Training period shall be performed within one (1) week period.

B. Contractor shall pre-test all equipment prior to requesting demonstration and instruction.

C. Use operation and maintenance manuals and videos as basis of instruction. Review contents of manual and video with personnel in detail to explain all aspects of operation and maintenance.

D. Provide sign-in sheet for each training conducted.

E. Demonstrate the following:

1. Start up.
2. Operation.
3. Control.
4. Adjustment.
5. Trouble shooting.
6. Servicing.
7. Maintenance.
8. Shutdown.

F. Provide at least sixteen (16) hours straight time instruction to the operating personnel.

1. This instruction period shall consist of not less than two (2), eight (8) hour days.
2. Time of instruction shall be designated by the Owner.

3.19 LUBRICATION

A. All bearings, motors and all equipment requiring lubrication shall be provided with accessible fittings.

B. Before turning over the equipment to the Owner, the Installer shall provide the following:

1. Fully lubricate each item of equipment.
2. Provide one (1) year's supply of lubricant for each type of lubricant.
3. Provide complete written lubricating instructions, together with diagram locating the points requiring lubrication.

C. Motors and equipment shall be provided with grease lubricated roller or ball bearings with Alemite or equal extended grease fittings and drain plugs.

3.20 WALL AND FLOOR PENETRATION

A. All penetrations of partitions, walls and floors by ducts, piping or conduit under Division 21 shall be sealed and caulked. Provide U.L. listed fire stopping systems at penetrations through fire walls as specified in the architectural specifications.

3.21 FINAL CLEANING

A. General: General cleaning during construction is required by the General Conditions and included in Section “Temporary Facilities.”

B. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to the condition expected in a normal, commercial building cleaning and maintenance program. Comply with manufacturer's instructions.

C. Remove all mechanical clipping, wiring, nuts, bolts, etc. left on top of ceilings and ceiling tiles.

END OF SECTION 21 00 00

SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 SUMMARY

A. The Work of this Section includes:
   1. Sleeves
   2. Sleeve-seal systems.
   3. Grout.
   4. Escutcheons.

1.2 ACTION SUBMITTALS

A. Product Data:

   1. For each type of product.

      a. Include construction details, material descriptions, and dimensions of components.
      b. Include operating characteristics and furnished accessories.

1.3 INFORMATIONAL SUBMITTALS

A. Field quality-control reports.

PART 2 - PRODUCTS

2.1 SLEEVES AND SLEEVE SEALS

A. Sleeves:
   1. Steel Pipe Sleeves: ASTM A53/A53M, Type E, Grade B, Schedule 40, hot-dip galvanized, with plain ends.

B. Sleeve-Seal Systems:

   1. Manufacturers: Subject to compliance with requirements, provide products by the following:

      a. Advance Products & Systems, LLC.
      b. CALPICO, Inc.
      c. Metraflex Company (The).

   2. Description: Modular sealing-element unit, designed for field assembly, for filling annular space between piping and sleeve.

      a. Hydrostatic Seal: 20 psig minimum.

b. Sealing Elements: EPDM-rubber interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size.
c. Pressure Plates: Carbon steel.
d. Connecting Bolts and Nuts: Carbon steel, with ASTM B633 coating of length required to secure pressure plates to sealing elements.

C. Grout:

1. Description: Nonshrink, for interior and exterior sealing openings in non-fire-rated walls or floors.
2. Standard: ASTM C1107/C1107M, Grade B, post-hardening and volume-adjusting, dry, hydraulic-cement grout.
3. Design Mix: 5000 psi , 28-day compressive strength.
4. Packaging: Premixed and factory packaged.

2.2 ESCUTCHEONS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. BrassCraft Manufacturing Co.; a Masco company.
2. Dearborn Brass.
3. Keeney Manufacturing Company (The).
4. Mid-America Fittings, LLC; A Midland Industries Company.

B. Escutcheon Types:

1. Split-Plate, Stamped-Steel Type: With polished, chrome-plated finish; exposed-rivet hinge; and spring-clip fasteners.

C. Floor Plates:

1. Split Floor Plates: Steel with concealed hinge.

PART 3 - EXECUTION

3.1 INSTALLATION OF SLEEVES, GENERAL

A. Install sleeves for piping passing through penetrations in floors, partitions, roofs, and walls.

B. For sleeves that will have sleeve-seal system installed, select sleeves of size large enough to provide 1-inch annular clear space between piping and concrete slabs and walls.

1. Sleeves are not required for core-drilled holes.

C. Install sleeves for pipes passing through interior partitions.

1. Cut sleeves to length for mounting flush with both surfaces.

2. Install sleeves that are large enough to provide 1/4-inch annular clear space between sleeve and pipe or pipe insulation.
3. Seal annular space between sleeve and piping or piping insulation; use joint sealants that joint sealant manufacturer's literature indicates is appropriate for size, depth, and location of joint.

D. Fire-Resistance-Rated Penetrations, Horizontal Assembly Penetrations, and Smoke Barrier Penetrations: Maintain indicated fire or smoke rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with fire- and smoke-stop materials. Comply with requirements for firestopping and fill materials specified in Section 078413 "Penetration Firestopping."

3.2 INSTALLATION OF SLEEVE-SEAL SYSTEMS

A. Install sleeve-seal systems in sleeves in exterior concrete walls and slabs-on-grade at service piping entries into building, and passing through exterior walls.

B. Select type, size, and number of sealing elements required for piping material and size and for sleeve ID or hole size. Assemble sleeve-seal system components, and install in annular space between piping and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make a watertight seal.

3.3 INSTALLATION OF ESCUTCHEONS

A. Install escutcheons for piping penetrations of walls, ceilings, and finished floors.

B. Install escutcheons with ID to closely fit around pipe, tube, and insulation of piping and with OD that completely covers opening.

3.4 FIELD QUALITY CONTROL

A. Sleeves and Sleeve Seals:

1. Perform the following tests and inspections:

   a. Leak Test: After allowing for a full cure, test sleeves and sleeve seals for leaks. Repair leaks and retest until no leaks exist.
   b. Sleeves and sleeve seals will be considered defective if they do not pass tests and inspections.

2. Prepare test and inspection reports.

B. Escutcheons:

1. Using new materials, replace broken and damaged escutcheons and floor plates.

3.5 ESCUTCHEONS APPLICATION

A. Escutcheons for New Piping and Relocated Existing Piping – for all walls or floor penetrations:

a. Split plate, stamped steel with exposed-rivet hinge with polished, chrome-plated finish.

END OF SECTION 210500

SECTION 21 05 23 - GENERAL-DUTY VALVES FOR WATER-BASED FIRE-SUPPRESSION PIPING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Two-piece ball valves with indicators.
2. Bronze butterfly valves with indicators.
3. Iron butterfly valves with indicators.
4. Check valves.
5. Bronze OS&Y gate valves.
6. Iron OS&Y gate valves.
7. Trim and drain valves.

1.2 DEFINITIONS

A. OS&Y: Outside screw and yoke.

B. SBR: Styrene-butadiene rubber.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of valve.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Prepare valves for shipping as follows:

1. Protect internal parts against rust and corrosion.
2. Protect threads, flange faces, and weld ends.
3. Set valves open to minimize exposure of functional surfaces.

B. Use the following precautions during storage:

1. Maintain valve end protection.
2. Store valves indoors and maintain at higher-than-ambient dew point temperature. If outdoor storage is necessary, store valves off the ground in watertight enclosures.

C. Use sling to handle large valves; rig sling to avoid damage to exposed parts. Do not use operating handles or stems as lifting or rigging points.

D. Protect flanges and specialties from moisture and dirt.

PART 2 - PRODUCTS

2.1 SOURCE LIMITATIONS

A. Obtain each type of valve from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. UL Listed: Valves shall be listed in UL's "Online Certifications Directory" under the headings listed below and shall bear UL mark:

1. Fire Main Equipment: HAMV - Main Level.
   a. Ball Valves, System Control: HLUG - Level 3.
   b. Butterfly Valves: HLXS - Level 3.
   c. Check Valves: HMER - Level 3.
   d. Gate Valves: HMRZ - Level 3.

2. Sprinkler System and Water Spray System Devices: VDGT - Main Level.

   a. Valves, Trim and Drain: VQGU - Level 1.

B. FM Global Approved: Valves shall be listed in its "Approval Guide," under the headings listed below:

1. Automated Sprinkler Systems:
   a. Valves.

      1) Gate valves.
      2) Check valves.
      3) Miscellaneous valves.

C. ASME Compliance:

1. ASME B1.20.1 for threads for threaded-end valves.
2. ASME B16.1 for flanges on iron valves.
3. ASME B31.9 for building services piping valves.

D. AWWA Compliance: Comply with AWWA C606 for grooved-end connections.

E. NFPA Compliance for Valves:

1. Comply with NFPA 13.

F. Valve Pressure Ratings: Not less than the minimum pressure rating indicated or higher, as required by system pressures.

G. Valve Sizes: Same as upstream piping unless otherwise indicated.

H. Valve Actuator Types:

1. Worm-gear actuator with handwheel for quarter-turn valves, except for trim and drain valves.
2. Handwheel: For other than quarter-turn trim and drain valves.
3. Handlever: For quarter-turn trim and drain valves NPS 2 and smaller.

2.3 TWO-PIECE BALL VALVES WITH INDICATORS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Ames Fire & Waterworks; A Watts Water Technologies Company.
2. NIBCO INC.
3. Victaulic Company.

B. Description:

1. UL 1091, except with ball instead of disc and FM Global approved for indicating valves (butterfly or ball type), Class Number 1112.
2. Minimum Pressure Rating: 175 psig.
3. Body Design: Two piece.
4. Body Material: Forged brass or bronze.
5. Port Size: Full or standard.
6. Seats: PTFE.
7. Stem: Bronze or stainless steel.
8. Ball: Chrome-plated brass.
9. Actuator: Worm gear
10. Supervisory Switch: Internal or external.
11. End Connections for Valves NPS 1 through NPS 2: Threaded ends.
12. End Connections for Valves NPS 2-1/2: Grooved ends.

2.4 BUTTERFLY VALVES WITH INDICATORS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. ALEUM USA.
2. Globe Fire Sprinkler Corporation.
3. Milwaukee Valve Company.

B. Description:

1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly type, Class Number 1112.
2. Minimum: Pressure rating: 175 psig.
3. Body Material: Bronze.
4. Seat Material: EPDM.
5. Stem Material: Bronze or stainless steel.
6. Disc: Stainless steel with EPDM coating.
7. Actuator: Worm gear.

Retain "Supervisory Switch" Subparagraph below only if switch is not specified elsewhere.

8. Supervisory Switch: Internal or external.

9. Ends Connections for Valves NPS 1 through NPS 2 : Threaded ends.
10. Ends Connections for Valves NPS 2-1/2 : Grooved ends.

2.5 IRON BUTTERFLY VALVES WITH INDICATORS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Globe Fire Sprinkler Corporation.
2. Kennedy Valve Company; a division of McWane, Inc.
3. NIBCO INC.
4. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
5. Victaulic Company.

B. Description:

1. Standard: UL 1091 and FM Global standard for indicating valves, (butterfly or ball type), Class Number 112.
2. Minimum Pressure Rating: 175 psig.
3. Body Material: Cast or ductile iron with epoxy coating.
4. Seat Material: EPDM.
5. Stem: Stainless steel.
6. Disc: Ductile iron, and EPDM coated.
7. Actuator: Worm gear.
8. Supervisory Switch: Internal or external.
9. Body Design: Grooved-end connections.

2.6 CHECK VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Globe Fire Sprinkler Corporation.
2. Mueller Co. LLC; Mueller Water Products, Inc.
3. NIBCO INC.
4. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
5. Victaulic Company.
6. Viking Group Inc.
7. WATTS; A Watts Water Technologies Company.

B. Description:

1. Standard: UL 312 and FM Global standard for swing check valves, Class Number 1210.
2. Minimum Pressure Rating: 175 psig.
3. Type: Single swing check.
4. Body Material: Cast iron, ductile iron, or bronze.
5. Clapper: Bronze, ductile iron, or stainless steel[**with elastomeric seal**].
6. Clapper Seat: Brass, bronze, or stainless steel.
7. Hinge Shaft: Bronze or stainless steel.

8. Hinge Spring: Stainless steel.
9. End Connections: Flanged, grooved, or threaded.

2.7 BRONZE OS&Y GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Milwaukee Valve Company.
2. NIBCO INC.
3. United Brass Works, Inc.

B. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Bronze or brass.
4. Wedge: One-piece bronze or brass.
5. Wedge Seat: Bronze.
6. Stem: Bronze or brass.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.
9. End Connections: Threaded.

2.8 IRON OS&Y GATE VALVES

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. American Cast Iron Pipe Company.
2. Mueller Co. LLC; Mueller Water Products, Inc.
3. NIBCO INC.
4. Victaulic Company.
5. Zurn Industries, LLC.

B. Description:

1. Standard: UL 262 and FM Global standard for fire-service water control valves (OS&Y- and NRS-type gate valves).
2. Minimum Pressure Rating: 175 psig.
3. Body and Bonnet Material: Cast or ductile iron.
4. Wedge: Cast or ductile iron, or bronze with elastomeric coating.
5. Wedge Seat: Cast or ductile iron, or bronze with elastomeric coating.
6. Stem: Brass or bronze.
7. Packing: Non-asbestos PTFE.
8. Supervisory Switch: External.
9. End Connections: Flanged or Grooved.

2.9 TRIM AND DRAIN VALVES

A. Ball Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Milwaukee Valve Company.
b. NIBCO INC.
c. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
d. Victaulic Company.

2. Description:

a. Pressure Rating: 175 psig.
b. Body Design: Two piece.
c. Body Material: Forged brass or bronze.
d. Port size: Full or standard.
e. Seats: PTFE.
f. Stem: Bronze or stainless steel.
g. Ball: Chrome-plated brass.
h. Actuator: Handlever.
i. End Connections for Valves NPS 1 through NPS 2-1/2: Threaded ends.

B. Angle Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

a. Fire Protection Products Inc (FPPI); a brand of Anvil International and Smith-Cooper International.
b. NIBCO INC.
c. United Brass Works, Inc.

2. Description:

a. Pressure Rating: 175 psig**.**
b. Body Material: Brass or bronze.
c. Ends: Threaded.
d. Stem: Bronze.
e. Disc: Bronze.
f. Packing: Asbestos free.
g. Handwheel: Malleable iron, bronze, or aluminum.

C. Globe Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

a. NIBCO INC.
b. United Brass Works, Inc.

2. Description:

   a. Pressure Rating: 175 psig.
   b. Body Material: Bronze with integral seat and screw-in bonnet.
   c. Ends: Threaded.
   d. Stem: Bronze.
   e. Disc Holder and Nut: Bronze.
   f. Disc Seat: Nitrile.
   g. Packing: Asbestos free.
   h. Handwheel: Malleable iron, bronze, or aluminum.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine valve interior for cleanliness, freedom from foreign matter, and corrosion. Remove special packing materials, such as blocks, used to prevent disc movement during shipping and handling.

B. Operate valves in positions from fully open to fully closed. Examine guides and seats made accessible by such operations.

C. Examine threads on valve and mating pipe for form and cleanliness.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Verify that gasket is of proper size, that its material composition is suitable for service, and that it is free from defects and damage.

E. Do not attempt to repair defective valves; replace with new valves.

3.2 INSTALLATION, GENERAL

A. Comply with requirements in the following Sections for specific valve-installation requirements and applications:

   1. Section 211000 "Water-Based Fire-Suppression Systems" for application of valves in fire-suppression standpipes; wet-pipe, fire-suppression sprinkler systems; and dry-pipe, fire-suppression sprinkler systems.
   2. Section 331415 "Site Water Distribution Piping" for application of valves in fire-suppression water-service piping.

B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply, except from fire-department connections. Install permanent identification signs, indicating portion of system controlled by each valve.

C. Install double-check valve assembly in each fire-protection water-supply connection.

D. Install valves having threaded connections with unions at each piece of equipment arranged to allow easy access, service, maintenance, and equipment removal without system shutdown. Provide separate support where necessary.

E. Install valves in horizontal piping with stem at or above the pipe center.

F. Install valves in position to allow full stem movement.

G. Install valve tags. Comply with requirements in Section 210553 "Identification for Fire-Suppression Piping and Equipment" for valve tags and schedules and signs on surfaces concealing valves; and the NFPA standard applying to the piping system in which valves are installed. Install permanent identification signs indicating the portion of system controlled by each valve.

END OF SECTION 210523

SECTION 21 05 29 - HANGERS AND SUPPORTS FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Metal pipe hangers and supports.
2. Trapeze pipe hangers.
3. Fastener systems.
4. Equipment supports.

B. Related Requirements:

1. Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.
2. Section 210516 "Expansion Fittings and Loops for Fire-Suppression Piping" for pipe guides and anchors.

1.3 INFORMATIONAL SUBMITTALS

A. Welding certificates.

1.4 QUALITY ASSURANCE

A. Structural-Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M.

B. Pipe Welding Qualifications: Qualify procedures and operators according to 2015 ASME Boiler and Pressure Vessel Code, Section IX.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. NFPA Compliance: Comply with NFPA 13.

B. Comply with seismic bracing criteria specified by ASCE 7, 2021 IBC Table 1604.5 and Section 1613.1 Exception 4 for Risk Category IV.

C. UL Compliance: Comply with UL 203.

2.2 METAL PIPE HANGERS AND SUPPORTS

A. Carbon-Steel Pipe Hangers and Supports:

1. Description: Factory-fabricated components, NFPA approved, UL listed, or FM approved for fire-suppression piping support.
2. Galvanized Metallic Coatings: Pregalvanized or hot-dip galvanized.
3. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel.
4. Hanger Rods: Continuous-thread rod, nuts, and washer made of copper-coated steel.

2.3 TRAPEZE PIPE HANGERS

A. Description: MSS SP-58, Type 59, shop- or field-fabricated pipe-support assembly, made from structural-carbon-steel shapes, with NFPA-approved, UL-listed, or FM-approved carbon-steel hanger rods, nuts, saddles, and U-bolts.

2.4 FASTENER SYSTEMS

A. Mechanical-Expansion Anchors: NFPA-approved, UL-listed, or FM-approved, insert-wedge-type anchors, for use in hardened Portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Cooper B-line; brand of Eaton, Electrical Sector.
b. Hilti, Inc.
c. ITW Ramset/Red Head; Illinois Tool Works, Inc.

2. Indoor Applications: Zinc-coated steel.
3. Outdoor Applications: Stainless steel.

2.5 EQUIPMENT SUPPORTS

A. Description: NFPA-approved, UL-listed, or FM-approved, welded, shop- or field-fabricated equipment support, made from structural-carbon-steel shapes.

2.6 MATERIALS

A. Carbon Steel: ASTM A1011/A1011M.

B. Structural Steel: ASTM A36/A36M, carbon-steel plates, shapes, and bars; black and galvanized.

C. Grout: ASTM C1107/C1107M, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout, suitable for interior and exterior applications.

1. Properties: Nonstaining, noncorrosive, and nongaseous.
2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 APPLICATION

A. Comply with requirements in Section 078413 "Penetration Firestopping" for firestopping materials and installation, for penetrations through fire-rated walls, ceilings, and assemblies.

B. Strength of Support Assemblies: Where not indicated, select sizes of components, so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination shall be weight of supported components, weight of water in pipe and plus 250 lb.

3.2 INSTALLATION OF HANGERS AND SUPPORTS

A. Metal Pipe-Hanger Installation: Comply with installation requirements of approvals and listings. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.

B. Metal Trapeze Pipe-Hanger Installation: Comply with MSS SP-58. Arrange for grouping of parallel runs of horizontal piping, and support together on field-fabricated trapeze pipe hangers.

1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size, or install intermediate supports for smaller-diameter pipes as specified for individual pipe hangers.
2. Field fabricate from ASTM A36/A36M carbon-steel shapes selected for loads being supported. Weld steel according to AWS D1.1/D1.1M.

C. Fastener System Installation:
1. Install mechanical-expansion anchors in concrete, after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions. Install in accordance with approvals and listings.

D. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.

E. Equipment Support Installation: Fabricate from welded-structural-steel shapes.

F. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.

G. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms, and install reinforcing bars through openings at top of inserts.

H. Load Distribution: Install hangers and supports, so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

I. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.

3.3 INSTALLATION OF EQUIPMENT SUPPORTS

A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.

B. Grouting: Place grout under supports for equipment, and make bearing surface smooth.

C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.

B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.

C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. Finish welds at exposed connections, so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

3.6 PAINTING

A. Touchup:

1. Clean field welds and abraded, shop-painted areas. Paint exposed areas immediately after erecting hangers and supports. Use same materials as those used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.

a. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.

B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas, and apply galvanizing-repair paint to comply with ASTM A780/A780M.

3.7 HANGER AND SUPPORT SCHEDULE

A. Install pipe hangers per NFPA 13.

END OF SECTION 210529

SECTION 21 05 53 - IDENTIFICATION FOR FIRE-SUPPRESSION PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:
   1. Pipe labels.
   2. Valve tags.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Samples: For color, letter style, and graphic representation required for each identification material and device.

C. Equipment-Label Schedule: Include a listing of all equipment to be labeled and the proposed content for each label.

D. Valve-numbering scheme.

E. Valve Schedules: Provide for fire-suppression piping system. Include in operation and maintenance manuals.

PART 2 - PRODUCTS

2.1 PIPE LABELS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

   1. Brady Corporation.
   2. Carlton Industries, LP.
   3. Seton Identification Products; a Brady Corporation company.

B. General Requirements for Manufactured Pipe Labels: Preprinted, color coded, with lettering indicating service and showing flow direction in accordance with ASME A13.1.

C. Letter and Background Color: As indicated for specific application under Part 3.

D. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to partially cover circumference of pipe and to attach to pipe without fasteners or adhesive.

E. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

F. Pipe-Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings. Also include the following:

1. Pipe size.
2. Flow-Direction Arrows: Include flow-direction arrows on main distribution piping. Arrows may be either integral with label or applied separately.

2.2 VALVE TAGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Brady Corporation.
2. Carlton Industries, LP.
3. Seton Identification Products; a Brady Corporation company.

B. Description: Stamped or engraved with 1/4-inch letters for piping-system abbreviation and 1/2-inch numbers.

1. Tag Material: Brass, 0.04 inch thick, with predrilled or stamped holes for attachment hardware.
2. Fasteners: Brass beaded chain.

C. Letter and Background Color: As indicated for specific application under Part 3.

D. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.

1. Include valve-tag schedule in operation and maintenance data.

PART 3 - EXECUTION

3.1 PREPARATION

A. Clean piping and equipment surfaces of incompatible primers, paints, and encapsulants, as well as dirt, oil, grease, release agents, and other substances that could impair bond of identification devices.

3.2 INSTALLATION GENERAL REQUIREMENTS

A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be installed.

B. Coordinate installation of identifying devices with locations of access panels and doors.

C. Install identifying devices before installing acoustical ceilings and similar concealment.

D. Locate identifying devices so that they are readily visible from the point of normal approach.

3.3 INSTALLATION OF PIPE LABELS

A. Piping Color Coding: Painting of piping is specified in Section 099123 "Interior Painting." Paint all exposed piping ANSI red. Paint all exposed pipe ANSI red.

B. Install pipe labels on hidden pipe showing service and flow direction with permanent adhesive on pipes.

C. Pipe-Label Locations: Locate pipe labels where piping is above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:

1. Within 3 ft. of each valve and control device.
2. At access doors, manholes, and similar access points that permit a view of concealed piping.
3. Within 3 ft. of equipment items and other points of origination and termination.
4. Spaced at maximum intervals of 25 ft. along each run. Reduce intervals to 10 ft. in areas of congested piping and equipment.

D. Flow- Direction Arrows: Provide arrows to indicate direction of flow in pipes, including pipes where flow is allowed in both directions.

E. Fire-Suppression Pipe Label Color Schedule:

1. Fire-Suppression Pipe Labels: White letters on an ANSI Z535.1 safety-red background.

3.4 INSTALLATION OF VALVE TAGS

A. Install tags on valves and control devices in fire-suppression piping systems. List tagged valves in a valve-tag schedule in the operating and maintenance manual. Include the identification "FSV" on all fire-suppression system valve tags.

B. Valve-Tag Application Schedule: Tag valves according to size, shape, and with captions similar to those indicated in "Valve-Tag Size and Shape" Subparagraph below.

1. Valve-Tag Size and Shape:
   a. Wet-Pipe Sprinkler System: 2 inches, round.

2. Valve-Tag Color: White letters on an ANSI Z535.1 safety-red background.

END OF SECTION 210553

SECTION 21 10 00 - WATER-BASED FIRE-SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fire-suppression piping, fittings, and appurtenances.
2. Fire department connections.
3. System control valves.
4. Fire-suppression piping specialties.
5. Sprinklers.
6. Alarm devices.
7. Pressure gauges.
8. Backflow preventers.

B. Related Requirements:

1. Section 331415 "Site Water Distribution Piping" for site fire-suppression water-service and backflow prevention devices.

1.2 DEFINITIONS

A. Standard-Pressure Fire-Suppression System Piping: Piping designed to operate at working pressure of 175 psig maximum.

1.3 ACTION SUBMITTALS

A. Product Data:

1. For each type of product.

a. Include construction details, material descriptions, dimensions of individual components and profiles.
b. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings:

1. Prepare in accordance with NFPA 13 section "Working Plans."

a. Include plans, elevations, and sections of the system piping and details.
b. Include detailed riser diagram and schematic diagram showing system supply, supply connection, devices, valves, pipe and fittings, as well as the delineation of the standard-pressure and high-pressure portions of the fire-suppression system.
c. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.

2. Prepare computer-generated hydraulic calculations in accordance with the following:
   a. Name of hydraulic program used.
   b. Water supply information, including fire hydrant flow test data report.

3. Submit documents and calculations signed and sealed by qualified professional engineer responsible for their preparation.
4. Include diagrams for power, signal, and control wiring.

D. Delegated Design Submittals: For fire-suppression systems indicated to comply with performance requirements and design criteria, including analysis data, signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Fire-suppression system plans and sections, or Building Information Model (BIM), drawn to scale, showing the items described in this Section and coordinated with all building trades.

B. Qualification Data: For qualified Installer and professional engineer

C. Design Data: Approved fire-suppression piping working plans, prepared in accordance with NFPA 13, including documented approval by AHJs, and including hydraulic calculations if applicable.

D. Welding certificates.

E. Field Test Reports:

1. Indicate and interpret test results for compliance with performance requirements and as described in NFPA 13. Include "Contractor's Material and Test Certificate for Aboveground Piping."
2. Fire-hydrant flow test report.

F. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For fire-suppression systems and specialties to include in emergency, operation, and maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Sprinkler Cabinets: Finished, wall-mounted, steel cabinet with hinged cover, and with space for minimum of six spare sprinklers plus sprinkler wrench. Include number of sprinklers required by NFPA 13 and sprinkler wrench. Include separate cabinet with sprinklers and wrench for each type of sprinkler used on Project.
2. System control valves.

1.7 QUALITY ASSURANCE

A. Installer Qualifications:

1. Installer's responsibilities include designing, fabricating, and installing fire-suppression systems and providing professional engineering services needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.

a. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by qualified professional engineer.

B. Welding Qualifications: Qualify procedures and operators in accordance with ASME Boiler and Pressure Vessel Code.

1.8 FIELD CONDITIONS

A. Interruption of Existing Fire-Suppression Service: Do not interrupt fire-suppression service to facilities occupied by Owner or others unless permitted under the following conditions and then only after arranging to provide temporary fire-suppression service in accordance with requirements indicated:

1. Notify Owner no fewer than five days in advance of proposed interruption of fire-suppression service.
2. Do not proceed with interruption of fire-suppression service without Owner's written permission.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. Automatic wet-pipe sprinkler system.

2.2 PERFORMANCE REQUIREMENTS

A. Fire-Suppression System Components, Devices, and Accessories: Listed in UL's "Fire Protection Equipment Directory" and FM Approvals' "Approval Guide."

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Fire-suppression system equipment, specialties, accessories, installation, and testing to comply with NFPA 13 and ASME A17.1.

D. Standard-Pressure Piping System Component: Listed for 175 psig minimum working pressure.

E. Delegated Design: Engage a qualified professional engineer to design fire-suppression systems.

1. Fire-Hydrant Flow Test:

    a. Available fire-hydrant flow test records – see fire protection drawings for information.

    b. Fire-hydrant flow test must be performed within previous 12 months prior to completion of design documents and hydraulic calculations.

2. Margin of Safety for Available Water Flow and Pressure: 10 percent or 10 psi, whichever is greater, including losses through water-service piping, valves, and backflow preventers.
3. Sprinkler Occupancy Hazard Classifications:
    a. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
    b. Elevator Machine Room and Hoistway: Ordinary Hazard, Group 1.
    c. Exterior Loading Docks, Only Handling Ordinary Combustibles: Ordinary Hazard, Group 2.
    d. General Storage Areas: Ordinary Hazard, Group 1.
    e. Machine Shops: Ordinary Hazard, Group 2.
    f. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
    g. Offices, including Data Processing: Light Hazard.

4. Minimum Density for Automatic-Sprinkler Piping Design:
    a. Light-Hazard Occupancy: 0.10 gpm/sq. ft. over 1500 sq. ft. area.
    b. Ordinary-Hazard, Group 1 Occupancy:0.15 gpm/sq. ft. over 1500 sq. ft. area.
    c. Ordinary-Hazard, Group 2 Occupancy: 0.20 gpm/sq. ft. over 1500 sq. ft. area.

5. Maximum Protection Area per Sprinkler:
    a. Office Spaces: 225 sq. ft.
    b. Storage Areas: 130 sq. ft.
    c. Mechanical Equipment Rooms: 130 sq. ft.
    d. Electrical Equipment Rooms: 130 sq. ft.

6. Total Combined Hose-Stream Demand Requirement: In accordance with NFPA 13 unless otherwise indicated:

    a. Light-Hazard Occupancies: 100 gpm for 30 minutes.
    b. Ordinary-Hazard Occupancies: 250 gpm for 60 minutes.

F. Obtain documented approval of fire-suppression system design from AHJs.

2.3 FIRE-SUPPRESSION PIPING, FITTINGS, AND APPURTENANCES

A. Steel Pipe, Fittings, and Appurtenances:

1. Schedule 40 Steel Pipe: Galvanized and blac**k** steel pipe, ASTM A53/A53M.

a. Standards:

1) UL 852.
2) FM 1630.

b. Factory-applied exterior coating.
c. Factory-applied bacterial-resistant internal coating to reduce microbiologically influenced corrosion.
d. Pipe ends may be factory or field formed to match joining method.

2. Steel Pipe Nipples: Galvanized and black steel, ASTM A733, made of ASTM A53/A53M, standard-weight, seamless steel pipe with threaded ends.

3. Steel Couplings: Galvanized and uncoated steel, ASTM A865/A865M, threaded.

4. Gray-Iron Threaded Fittings: Galvanized and uncoated gray-iron threaded fittings, ASME B16.4, Class 125, standard pattern.

5. Malleable- or Ductile-Iron Unions: ASME B16.3.

6. Cast-Iron Flanges: ASME B16.1, Class 125.
7. Steel Flanges and Flanged Fittings: ASME B16.5, Class 150.

a. Pipe-Flange Gasket Materials: AWWA C110, rubber, flat face, 1/8 inch thick.

1) Class 125 and Class 250, Cast-Iron, Flat-Face Flanges: Full-face gaskets.
2) Class 150 and Class 300, Ductile-Iron or -Steel, Raised-Face Flanges: Ring-type gaskets.

b. Metal, Pipe-Flange Bolts and Nuts: ASME B18.2.1 carbon steel unless otherwise indicated.

8. Steel Welding Fittings: ASTM A234/A234M and ASME B16.9.

a. Welding Filler Metals: Comply with AWS D10.12M/D10.12 for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.

9. Grooved-Joint, Steel-Pipe Appurtenances:

a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1) Gruvlok; an ASC Engineered Solution.
2) Shurjoint; a part of Aalberts Integrated Piping Systems.

3) Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
4) Victaulic Company.

b. Pressure Rating: **175 psig** minimum.
c. Grooved-End Fittings for Steel Piping: Galvanized and Painted grooved-end fittings, ASTM A47/A47M, malleable-iron casting or ASTM A536, ductile-iron casting, with dimensions matching steel pipe.
d. Grooved-End-Pipe Couplings for Steel Piping: AWWA C606 and UL 213 rigid pattern, unless otherwise indicated, for steel-pipe dimensions. Include ferrous housing sections, EPDM-rubber gasket, and bolts and nuts.

2.4 FIRE DEPARTMENT CONNECTIONS

A. Fire Department Connection, Flush Type:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. Croker; a Division of Morris Group International.
b. Elkhart Brass Mfg. Co., Inc.
c. Potter Roemer LLC; a Division of Morris Group International.

2. Standard: UL 405.
3. Description: Flush, for wall mounting.
4. Pressure Rating: 175 psig minimum.
5. Body Material: Corrosion-resistant metal.
6. Inlets: Brass with threads in accordance with NFPA 1963 and matching local fire department sizes and threads. Include extension pipe nipples, brass lugged swivel connections, and check devices or clappers.
7. Caps: Brass, lugged type, with gasket and chain.
8. Escutcheon Plate: Rectangular, brass, wall type.
9. Outlet: With pipe threads.
10. Body Style: Horizontal.
11. Number of Inlets: Two.
12. Outlet Location: Top.
13. Escutcheon Plate Marking: "AUTO SPKR".
14. Finish: Polished chrome plated.
15. Outlet Size: NPS 4.

2.5 SYSTEM CONTROL VALVES

A. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."

B. Pressure Rating:

1. Standard-Pressure Piping Valves: 175 psig minimum.

C. Body Material: Cast or ductile iron.

D. Size: Same as connected piping.

E. End Connections: Flanged or grooved.

F. System Control Valve, Alarm Valve:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Reliable Automatic Sprinkler Co., Inc. (The).
    b. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
    c. Victaulic Company.
    d. Viking Group Inc.

2. Standard: UL 193.
3. Design: For horizontal or vertical installation.
4. Include trim sets for bypass, drain, electrical sprinkler alarm switch, pressure gauges, and fill-line attachment with strainer.
5. Drip cup assembly pipe drain with check valve to main drain piping.

6. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Reliable Automatic Sprinkler Co., Inc. (The).
    b. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
    c. Victaulic Company.
    d. Viking Group Inc.

7. Standards:

    a. UL 260.
    b. UL 1486.

8. Design: Differential-pressure type.
9. Include quick-opening devices, trim sets for air supply, drain, priming level, alarm connections, ball drip valves, pressure gauges, priming chamber attachment, and fill-line attachment.

2.6 FIRE-SUPPRESSION PIPING SPECIALTIES

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

    a. Shurjoint; a part of Aalberts Integrated Piping Systems.
    b. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
    c. Victaulic Company.

2. Standard: UL 213.

3. Pressure Rating: 175 psig minimum.
4. Body Material: Ductile-iron housing with EPDM seals and bolts and nuts.
5. Type: Mechanical-tee and -cross fittings.
6. Configurations: Snap-on and strapless, ductile-iron housing with branch outlets.
7. Size: Of dimension to fit onto sprinkler main and with outlet connections as required to match connected branch piping.
8. Branch Outlets: Grooved, plain-end pipe, or threaded.

B. Flow Detection and Test Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. AGF Manufacturing, Inc.
    b. Reliable Automatic Sprinkler Co., Inc. (The).
    c. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
    d. Victaulic Company.

2. Standard: UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."
3. Pressure Rating: 175 psig minimum.
4. Body Material: Cast- or ductile-iron housing with orifice, sight glass, and integral test valve.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded or grooved.

C. Branch Line Testers:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. AGF Manufacturing, Inc.
    b. Croker; a Division of Morris Group International.
    c. Potter Roemer LLC; a Division of Morris Group International.

2. Standard: UL 199.
3. Pressure Rating: 175 psig.
4. Body Material: Brass.
5. Size: Same as connected piping.
6. Inlet: Threaded.
7. Drain Outlet: Threaded and capped.
8. Branch Outlet: Threaded, for sprinkler.

D. Sprinkler Inspector's Test Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. Reliable Automatic Sprinkler Co., Inc. (The).
    b. Viking Group Inc.

2. Standard: UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."

3. Pressure Rating: 175 psig minimum.
4. Body Material: Cast- or ductile-iron housing with sight glass.
5. Size: Same as connected piping.
6. Inlet and Outlet: Threaded.

E. Adjustable Drop Nipples:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

   a. Aegis Technologies, Inc.

2. Standard: UL 1474.
3. Pressure Rating: 250 psig minimum.
4. Body Material: Steel pipe with EPDM-rubber O-ring seals.
5. Size: Same as connected piping.
6. Length: Adjustable.
7. Inlet and Outlet: Threaded.

F. Flexible Sprinkler Hose Fittings:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

   a. Flexhead; an ASC Engineered Solution.
   b. Gateway Tubing, Inc.
   c. Victaulic Company.

2. Standards:

   a. UL 2443.
   b. FM 1637.

3. Description: Flexible hose for connection to sprinkler, and with bracket for connection to ceiling grid.
4. Pressure Rating: 175 psig minimum.
5. Size: Same as connected piping, for sprinkler.

G. Automatic (Ball-Drip) Drain Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

   a. Reliable Automatic Sprinkler Co., Inc. (The).
   b. Viking Group Inc.

2. Pressure Rating: 175 psig minimum.
3. Type: Automatic draining, ball check.
4. Size: NPS 3/4.
5. End Connections: Threaded.

H. Automatic Air Vent:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. AGF Manufacturing, Inc.
    b. Engineered Corrosion Solutions.
    c. Metraflex Company (The).
    d. Reliable Automatic Sprinkler Co., Inc. (The).

2. Description: Automatic air vent that automatically vents trapped air without human intervention. Approved for use in wet-pipe fire-suppression system.
3. Vents oxygen continuously from system.
4. Float valve to prevent water discharge.
5. Minimum Water Working Pressure Rating: 175 psig.

2.7 SPRINKLERS

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Reliable Automatic Sprinkler Co., Inc. (The).
2. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
3. Victaulic Company.
4. Viking Group Inc.

B. Standards:

1. UL 199.

C. Listed in UL's "Fire Protection Equipment Directory" or FM Approvals' "Approval Guide."

D. Pressure Rating for Sprinklers:

1. Standard Automatic Sprinklers: 175 psig minimum.

E. Sprinklers, Automatic Wet with Heat-Responsive Element:

1. Characteristics: Nominal 1/2-inch orifice with Discharge Coefficient K of 5.6, and for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

2. Standard Spray, Quick Response:

    a. Upright.
    b. Pendent.
    c. Recessed pendent.
    d. Institutional Pendant
    e. Flat, concealed horizontal sidewall.

F. Sprinklers, Automatic Dry with Heat-Responsive Element:

1. Standard Spray, Quick Response:

a. Upright.
b. Pendent.
c. Recessed pendent.
d. Flat, Concealed pendent.
e. Horizontal sidewall.

G. Sprinkler Finishes: Chrome plated bronze and painted.

H. Institutional Sprinklers

In areas of incarceration (holding cells) provide institutional sprinkler heads. These heads shall be designed to prevent tampering, injury and self harm.

I. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.

1. Ceiling Mounting: Chrome-plated steel, two piece, with 1-inch vertical adjustment.
2. Sidewall Mounting: Chrome-plated steel, one piece, flat.

J. Sprinkler Guards and Water Shields:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

a. Reliable Automatic Sprinkler Co., Inc. (The).
b. Tyco Fire Products; brand of Johnson Controls International plc, Building Solutions North America.
c. Victaulic Company.
d. Viking Group Inc.

2. Standard: UL 199.
3. Description: Wire cage with fastening device for attaching to sprinkler.

2.8 ALARM DEVICES

A. Match alarm-device material and connection types to piping and equipment materials and connection types.

B. Water-Flow Indicators:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

a. Potter Electric Signal Company, LLC.
b. System Sensor; Honeywell International, Inc.
c. Viking Group Inc.

2. Standard: UL 346.
3. Water-Flow Detector: Electrically supervised.

4. Components: Two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125 V ac and 0.25 A, 24 V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
5. Type: Paddle operated.
6. Pressure Rating: 250 psig.
7. Design Installation: Horizontal or vertical.

C. Pressure Switches - Water-Flow Alarm Detection:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. Potter Electric Signal Company, LLC.
    b. System Sensor; Honeywell International, Inc.

2. Description: Electrically supervised, pressure-activated water-flow switch with retard feature.
3. Components: Two single-pole, double-throw switches with normally closed contacts.
4. Design Operation: Rising pressure to 6 psi , plus or minus 2 psi signals water flow.
5. Adjustability: Each switch is to be independently adjustable.
6. Wire Separation: Pressure switch to provide for separation of wiring to each switch connection to allow for low- and high-voltage connections to comply with NFPA 70, Article 760 requirements.

D. Valve Supervisory Switches:

1. Manufacturers: Subject to compliance with requirements, provide products by the following:

    a. Kennedy Valve Company; a division of McWane, Inc.
    b. Potter Electric Signal Company, LLC.
    c. System Sensor; Honeywell International, Inc.

2. Standard: UL 346.
3. Type: Electrically supervised.
4. Design: Signals that controlled valve is in other than fully open position.
5. Wire Terminal Designations: Indicates normal switch position when switch is properly installed on valve and valve is fully open.
6. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
7. OS&Y Valve Supervisory Switches:

    a. One or two single-pole, double-throw switches.
    b. NEMA Rating: NEMA 4 and NEMA 6P enclosures suitable for mounting in any position indoors or outdoors.
    c. Visual Switch Indication: Indicates device is properly installed and OS&Y valve is fully open.
    d. Mounting Hardware: Mounting bracket to grip valve yoke and prevent movement of switch assembly on OS&Y valve.
    e. Trip Rod Length: Adjustable

8. Butterfly Valve Supervisory Switches:

    a. Two single-pole, double-throw switches.
    b. NEMA Rating: NEMA 4 and NEMA 6P enclosures suitable for mounting in any position indoors or outdoors.
    c. Mounting Hardware: Removable nipple.
    d. Trip Rod Length: Adjustable

9. Ball Valve Supervisory Switches:

    a. One single-pole, double-throw switch.
    b. NEMA Rating: NEMA 4 enclosure suitable for mounting in any position indoors or outdoors.
    c. Mounting Hardware: Suitable for mounting directly to pipe, ball valves, or backflow preventers sized from up to NPS 2.

2.9 PRESSURE GAUGES

A. Manufacturers: Subject to compliance with requirements, provide products by the following:

1. Ametek U.S. Gauge.
2. Ashcroft Inc.
3. Brecco Corporation.
4. WIKA Instrument Corporation.

B. Standard: UL 393.

C. Dial Size: 3-1/2- to 4-1/2-inch diameter.

D. Pressure Gauge Range: 0 to 300 psig.

E. Water System Piping Gauge: Include "WATER" or "AIR/WATER" label on dial face.

2.10 BACKFLOW PREVENTERS

2.11 Backflow Preventers - Double-Check Assembly:

1. Provide backflow preventers by one of the following:

    a. Ames
    b. Conbraco
    c. Zurn
    d. Watts

2. Source Limitations: Obtain backflow preventers - double-check assembly, from single manufacturer.
3. Standard: ASSE 1015.
4. Operation: Continuous-pressure applications unless otherwise indicated.

5. Pressure Loss: 5 psig maximum, through middle one-third of flow range.
6. Size: 6 NPS.
7. Design Flow Rate: 359 gpm.
8. Pressure Loss at Design Flow Rate: 5 psig.
9. Body: Stainless steel.
10. End Connections: Flanged.
11. Configuration: Designed for horizontal or vertical, straight through flow.
12. Accessories: OS&Y gate valves with flanged ends on inlet and outlet.

PART 3 - EXECUTION

3.1 PREPARATION

A. Perform fire-hydrant flow test if the one provided with the design documents is less than 12 months old at time of shop drawing submission.. Use results for system design calculations required in "Quality Assurance" Article.

1. Flow test is to be performed to meet the criteria established by NFPA 13.
2. Flow test is to be conducted in accordance with NFPA 291.
3. Test is to be performed during a period of ordinary demand for the water system.

    a. To obtain satisfactory test results of expected flow or rated capacities, sufficient discharge should be achieved to cause drop of at least 10 percent.

4. Pitot readings are to be taken at the 2-1/2-inch orifice connection.
5. The pitot reading is to range from 10 to 35 psig.
6. Open additional hydrant outlets as needed to control pitot readings.
7. The pitot pressure and corresponding residual pressure readings are to be taken consecutively as pressure fluctuates between a high number and low number.

B. Flow Test Data Written Report:

1. Flow data report is to be written in accordance with NFPA 291.
2. Flow data report is to include a copy of all flow data recorded during the test, including a site plan showing the tested fire hydrants with respect to the fire water service to the building. Site plan is to indicate which hydrant was flowed and which hydrant was used for pressure reading. Provide date of test, name of testing agency, and name of individual performing test.

C. Water Supply Curve: Provide water supply curve based on the lowest supply for a given set of test data. For a given residual pressure reading, the supply is to be graphed utilizing the corresponding pitot pressure/flow reading and static pressure reading.

D. Documentation is to include calibration certifications for gauges used in the flow tests. The certifications are to be from within the previous six (6) months from a reputable agency recognized for certifying pressure gauges.

E. Report flow test results promptly and in writing. A copy of the flow test data report is to be submitted with the hydraulic calculations.

3.2 INSTALLATION OF DOMESTIC WATER-SUPPLY CONNECTIONS

.

A. Connect fire-suppression water piping to building's interior domestic water-distribution piping. Comply with requirements for interior piping in Section 221116 "Domestic Water Piping."

B. Install shutoff valve, backflow preventer, pressure gauge, drain, and other accessories indicated at connection to water-distribution piping. Comply with requirements for backflow preventers in Section 331415 "Site Water Distribution Piping."

3.3 INSTALLATION OF FIRE-SUPPRESSION PIPING

A. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated on approved working plans.

1. Deviations from approved working plans for piping require written approval from AHJs. File written approval with Architect before deviating from approved working plans.
2. Coordinate layout and installation of sprinklers with other construction that penetrates ceilings, including light fixtures, HVAC equipment, and partition assemblies.

B. Piping Standard: Comply with NFPA 13 requirements for installation of fire-suppression piping.

C. Install listed fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.

D. Install unions adjacent to each valve in pipes NPS 2 and smaller.

E. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

F. Install inspector's test connections in sprinkler system piping, complete with shutoff valve, and sized and located in accordance with NFPA 13.

G. Install fire-suppression system piping with drains for complete system drainage. Extend drain piping to exterior of building where possible.

H. Install sprinkler control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.

I. Install automatic (ball drip) drain valve at each check valve for fire department connection, to drain piping between fire department connection and check valve. Install drain piping to and spill over floor drain or to exterior of building.

J. Install alarm devices in piping systems.

K. Install hangers and supports for fire-suppression piping in accordance with NFPA standards. Comply with requirements for hanger materials in NFPA standards**.**

L. Install pressure gauges on riser or feed main, at each sprinkler test connection, and at top of each standpipe/sprinkler supply. Include pressure gauges with connection not less than

NPS 1/4 and with soft-metal seated globe valve, arranged for draining pipe between gauge and valve. Install gauges to permit removal, and install where they are not subject to freezing.

M. Fill wet-type fire-suppression system piping with water.

N. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Section 210500 "Common Work Results for Fire-Suppression Piping."

O. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Section 210500 "Common Work Results for Fire-Suppression Piping."

P. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Section 210500 "Common Work Results for Fire-Suppression Piping."

3.4 INSTALLATION OF PIPING JOINTS

A. Install couplings, flanges, flanged fittings, unions, nipples, and transition and special fittings that have finish and pressure ratings same as or higher than system's pressure rating for aboveground applications unless otherwise indicated.

B. Install unions adjacent to each valve in pipes NPS 2 and smaller.

C. Install flanges, flange adapters, or couplings for grooved-end piping on valves, apparatus, and equipment having NPS 2-1/2 and larger end connections.

D. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.

E. Remove scale, slag, dirt, and debris from inside and outside of pipes, tubes, and fittings before assembly.

F. Flanged Joints: Select appropriate gasket material in size, type, and thickness suitable for water service. Join flanges with gasket and bolts in accordance with ASME B31.9.

G. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:

1. Apply appropriate tape or thread compound to external pipe threads.
2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged.

H. Welded Joints: Construct joints in accordance with AWS D10.12M/D10.12, using qualified processes and welding operators in accordance with "Quality Assurance" Article.

1. Shop weld pipe joints where welded piping is indicated. Do not use welded joints for galvanized-steel pipe.

I. Steel-Piping, Cut-Grooved Joints: Cut square-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe joints.

J. Steel-Piping, Roll-Grooved Joints: Roll rounded-edge groove in end of pipe in accordance with AWWA C606. Assemble coupling with housing, gasket, lubricant, and bolts. Join steel pipe and grooved-end fittings in accordance with AWWA C606 for steel-pipe grooved joints.

3.5 INSTALLATION OF FIRE DEPARTMENT CONNECTIONS

A. Install wall-type fire department connections.

B. Install automatic (ball-drip) drain valve at each check valve for fire department connection.

3.6 INSTALLATION OF VALVES AND SPECIALTIES

A. Install listed fire-suppression system control valves, trim and drain valves, specialty valves and trim, controls, and specialties in accordance with manufacturer's installation instructions, NFPA standards, and AHJ.

B. Install listed fire-suppression system shutoff valves in supervised open position, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.

C. System Control Valves:

1. Install alarm valves with bypass check valve and retarding chamber drain-line connection.

D. Air Vent:

1. Provide at least one air vent at high point in each wet-pipe fire-suppression system in accordance with NFPA standards. Connect vent into top of fire-suppression piping.
2. Provide dielectric union for dissimilar metals, ball valve, and strainer upstream of automatic air vent.

3.7 INSTALLATION OF SPRINKLERS

A. Install sprinklers in suspended ceilings symmetrically in center of acoustical ceiling panels within tolerance of 1/2 inch. Coordinate entire pattern of sprinkler locations with approved reflected ceiling plan.

B. Install dry-type sprinklers with water supply from heated space. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing.

C. Install sprinklers into flexible, sprinkler hose fittings, and install hose into bracket on ceiling grid.

3.8 INSTALLATION OF BACKFLOW PREVENTERS.

A. Install backflow preventers of type, size, and capacity indicated. Include valves and test cocks. Install in accordance with requirements of plumbing and health department and authorities having jurisdiction.

B. Do not install backflow preventers that have relief drain in vault or in other spaces subject to flooding.

C. Do not install bypass piping around backflow preventers.

D. Support backflow preventers, valves, and piping near floor and on brick or concrete piers.

3.9 IDENTIFICATION

A. Install labeling and pipe markers on equipment and piping in accordance with requirements for identification specified in Section 210553 "Identification for Fire-Suppression Piping and Equipment."

B. Identify system components, wiring, cabling, and terminals. Comply with requirements for identification specified in Section 260553 "Identification for Electrical Systems."

3.10 FIELD QUALITY CONTROL

A. Perform tests and inspections.

B. Perform the following tests and inspections:

1. Leak Test: After installation, charge systems and test for leaks. Repair leaks and retest until no leaks exist.
2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
3. Flush, test, and inspect fire-suppression systems in accordance with NFPA standards.
4. Energize circuits to electrical equipment and devices.
5. Start and run air compressors.
6. Coordinate with fire-alarm tests. Operate as required.
7. Verify that equipment hose threads are same as local fire department equipment.
8. Verify that sprinklers original factory finish has not been contaminated with dirt, debris, or paint. Sprinklers containing other-than-original factory finish are to be considered defective and replaced with new products. Repair and/or cleaning is not acceptable.

C. Fire-suppression piping system will be considered defective if it does not pass tests and inspections.

D. Fire-suppression piping system components considered defective during testing will be replaced with new components. Repair of defective components is not acceptable.

E. Backflow Preventer Tests: provide test of backflow preventer by licensed plumber.

F. Prepare test and inspection reports.

3.11 CLEANING

A. Clean dirt and debris from fire-suppression system piping, system control valves, sprinklers, and associated components.

B. Only sprinklers with their original factory finish are acceptable. Remove and replace any sprinklers that are painted or have any other finish than their original factory finish.

3.12 DEMONSTRATION

A. Train Owner's maintenance personnel to adjust, operate, and maintain system control valves.

3.13 PIPING SCHEDULE

A. Piping between Fire Department Connections and Check Valves: Galvanized, standard-weight steel pipe with grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved joints.

B. Piping between service entrance and backflow preventer; piping between service entrance and suction side of fire pump: Galvanized, standard-weight steel pipe with grooved ends, grooved-end fittings, grooved-end-pipe couplings, and grooved joints.

C. Sprinkler specialty fittings may be used, downstream of control valves, instead of specified fittings.

D. Standard-Pressure, Wet-Pipe Sprinkler System, NPS 2 and Smaller, to Be the Following:

1. Schedule 40, black-steel pipe with threaded ends; uncoated, gray-iron threaded fittings; and threaded joints.

Standard-Pressure, Wet-Pipe Sprinkler System, NPS 2-1/2 to NPS 8, to Be the Following:

2. Schedule 40, black-steel pipe with roll grooved ends; uncoated, grooved-end fittings for steel piping; grooved-end-pipe couplings for steel piping; and grooved joints.

3.14 SPRINKLER SCHEDULE

A. Use sprinkler types in subparagraphs below for the following applications:

1. Rooms without Ceilings: Upright sprinklers.
2. Rooms with Suspended Ceilings: Pendent Concealed sprinklers.
3. Holding Cells: Pendant institutional sprinklers.
4. Wall Mounting: Concealed horizontal sidewall sprinklers.
5. Spaces Subject to Freezing: Dry pendent sprinklers Dry sidewall sprinklers.

B. Provide sprinkler types in subparagraphs below with finishes indicated.

1. Upright, Pendent, and Sidewall Sprinklers: Chrome plated in finished spaces exposed to view; rough bronze in unfinished spaces and locations not generally exposed to view; and wax coated where exposed to acids, chemicals, or other corrosive fumes.
2. Flat Concealed Sprinklers: Rough brass, with factory-painted white cover plate.

C. Provide spare sprinkler head boxes, sprinkler heads and wrenches per NFPA 13, but as a minimum as follows:
   1. Six spare sprinklers for every type of sprinkler installed.
   2. Two spare sprinkler head wrenches for every type of sprinkler head installed.
   3. Each sprinkler style shall be provided with its oqn spare sprinkler cabinet.

END OF SECTION 211000

SECTION 22 05 00

COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this and the other sections of Division 22.

B. Motors shall comply with Division 23 Section - “Common Motor Requirements”.

C. Variable Frequency Drives shall comply with Division 23 Section - “Variable Frequency Drives”.

1.2 SUMMARY

A. Section includes:

1. General administrative and procedural requirements, as well as the following basic plumbing materials and methods.
2. Submittals.
3. Coordination drawings.
4. Record documents.
5. Operation and Maintenance manuals.
6. Rough-ins.
7. Plumbing installations.
8. Cutting and patching.
9. Concrete equipment base construction requirements.
10. Equipment nameplate data requirement.
11. Labeling and identifying mechanical systems and equipment is specified in Division 22 Section “Identification for Plumbing Piping and Equipment.”
12. Non-shrink grout for equipment installations.
13. Field-fabricated metal and wood equipment supports.
14. Installation requirements common to equipment specification Sections.
15. Plumbing demolition.
16. Touchup painting and finishing.

1.3 ACRONYMS

A. The following list of abbreviations are utilized within the specifications and are provided as a reference:

1. ADA - American Disability Act
2. AGA - American Gas Association
3. ANSI - American National Standards Institute
4. ASHRAE - American Society of Heating, Refrigerating and Air Conditioning Engineers
5. ASME - American Society of Mechanical Engineers

6. ASTM - American Society for Testing and Materials
7. AWS - American Welding Society
8. AWWA - American Water Works Association
9. IBC - International Building Code
10. CS - Commercial Standard
11. CSA - Canadian Standards Association
12. IBR - Institute of Boiler and Radiator Manufacturers
13. IEEE - Institute of Electrical and Electronics Engineers
14. IMC - International Mechanical Code
15. IPC - International Plumbing Code
16. MOSHA - Maryland Occupational Safety and Health Administration
17. MSSP - Manufacturers Standards Society of the Valve and Fittings Industry
18. NEC - National Electrical Code
19. NEMA - National Electrical Manufacturers Association
20. NFPA - National Fire Protection Association
21. OSHA - Occupational Safety and Health Administration
22. SMACNA - Sheet Metal and Air Conditioning Contractors National Association
23. TEMA - Tubular Exchanger Manufacturers Association
24. UL - Underwriters' Laboratories

1.4 DEFINITIONS

A. Products: Items purchased for incorporating into the Work, whether purchased for Project or taken from previously purchased stock. The term product includes the terms material, equipment, system, and terms of similar intent.

1. Named Products: Items identified by manufacturer's product name, including make or model number or other designation, shown or listed in manufacturer's published product literature that is current as of date of the Contract Documents.
2. New Products: Items that have not previously been incorporated into another project or facility, except that products consisting of recycled-content materials are allowed, unless explicitly stated otherwise. Products salvaged or recycled from other projects are not considered new products.
3. Comparable Product: Product that is demonstrated and approved through submittal process, or where indicated as a product substitution, to have the indicated qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics that equal or exceed those of specified product.

B. Substitutions: Changes proposed by Contractor in products, materials, equipment, and methods of construction required by the Contract Documents.

C. Basis-of-Design Product Specification: Where a specific manufacturer's product is named, or a product is accompanied by the words "basis of design," including make or model number or other designation, to establish the significant qualities related to type, function, dimension, in-service performance, physical properties, appearance, and other characteristics for purposes of evaluating comparable products of other named manufacturers.

D. Manufacturer's Warranty: Preprinted written warranty published by individual manufacturer for a particular product and specifically endorsed by manufacturer to Owner.

E. Extended Warranty: Written warranty required by or incorporated into the Contract Documents, either to extend time limit provided by manufacturer's warranty or to provide more rights for Owner.

1.5 SYSTEM DESCRIPTION

A. Design Requirements: Contract drawings are generally diagrammatic and do not indicate all offsets, fittings, transitions, access panels and other specialties required.

1. Furnish and install all items as may be required at no additional cost to fit the work to the conditions encountered.
2. Arrange piping, equipment and other work generally as shown on the contract drawings, providing proper clearances and access.
3. Where departures are proposed because of field conditions or other causes, prepare and submit detailed shop drawing submittal for approval in accordance with Submittals specified below.
4. Subject to the provisions of Division 01, Architect may make reasonable changes in location of equipment piping and ductwork up to the time of rough-in or fabrication.

1.6 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings and Product Data:

1. Clearly identify all submittals:

a. Indicate intended application, location, etc.
b. Each submittal shall indicate the associated specification section, and paragraphs. Do not combine product data and shop drawing submittals from different spec sections into a single submittal package, even though they may be the same distributor, vendor or part of a single material order.
c. Clearly indicate the exact type, model number, size and special features of the proposed item.
d. Include catalog spec sheets to completely describe proposed equipment.
e. Factory order forms only showing the required capacities are not acceptable.
f. Identify all options furnished to meet specifications.
g. If product is within system supplying fixture intended to dispense potable water for human consumption, including drinking and cooling, submittals shall indicate that product is “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
h. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead.
i. The Architect shall not select equipment ratings and/or options. Submittals not properly marked shall be returned without review.

C. Product Substitutions: Comply with requirements of Division 01.

D. Comparable Products Submission:

1. Document each request for a proposed comparable product with supporting data substantiating compliance of proposed product with Basis-of-Design product.
2. Use the attached “Comparable Product Submittal Form” in addition to the requirements specified herein.
3. Comparable products will not be reviewed without completion of the attached form.

E. Coordination Drawings:

1. Building Information Model (BIM):

   a. Coordination drawings shall be created from 3D BIM model of all Mechanical, Electrical, Fire Protection, and Plumbing systems. Assign an individual to serve as the main point of contact for the BIM related issues. This individual shall have sufficient BIM experience required for the size and complexity of the project and shall have relevant proficiency in the BIM process.
   b. Coordinate construction sequencing and scheduling activities and assure they are integrated with the BIM documents.
   c. All design modifications in the field, RFI Responses, Submittals, and Owner requested changes shall be documented and updated in the BIM documents in a timely manner.
   d. All coordination efforts and BIM updates shall be provided without changes to the contract cost and/or schedule.

2. Prepare coordination drawings to a scale of ¼”=1’0” or larger, detailing major elements, components, and systems of mechanical equipment and materials in relationship with other systems, installations, and building components.

3. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the work, including (but not necessarily limited to) the following:

   a. The proposed locations of piping, valving, ductwork, equipment, and materials.
   b. Planned piping layout, including valve and specialty locations and valve stem movement.
   c. Planned duct systems layout, including elbow radii and duct accessories.
   d. Clearances for installing and maintaining insulation.
   e. Clearances for serving and maintaining equipment, including tube removal, filter removal, and space for equipment disassembly required for periodic maintenance.
   f. Equipment connections and support details.
   g. Exterior wall and foundation penetrations.
   h. Fire-rated wall and floor penetrations.
   i. Sizes and location of required concrete pads and bases.
   j. Duct fire dampers.
   k. Access doors.
   l. Clearances at electrical components in accordance with the National Electrical Code.
   m. Indicate scheduling, sequencing, movement, and positioning of large equipment into the building during construction.
   n. Prepare floor plans, elevations, and details to indicate penetrations in floors, walls, and ceilings and their relationship to other penetrations and installations. Show all wall mounted access doors for devices in ductwork or piping.

o. Prepare reflected ceiling plans to coordinate and integrate installations, air outlets and inlets light fixtures, communication systems components, cable trays, sprinklers, access doors and other ceiling mounted items.

F. Closeout Submittals:

1. Record Drawings: Prepare record documents in accordance with the requirements in Division 01 Section: "Execution and Closeout Requirements" In addition to the requirements specified in Division 01, indicate the following installed conditions:

   a. Mains and branches of piping systems, with valves and control devices located and numbered, concealed unions located, and with items requiring maintenance located (i.e., traps, strainers, expansion compensators, tanks, etc.). Valve location diagrams, complete with valve tag chart. Refer to Division 22 Section: "Identification for Plumbing Piping and Equipment". Indicate actual inverts and horizontal locations of underground piping.
   b. Equipment locations (exposed and concealed), dimensioned from prominent building lines.
   c. Approved substitutions, Contract Modifications, Responses to Contractor's Request for Information, and actual equipment and materials installed.
   d. Record the locations and invert elevations of underground installations.
2. Operation and Maintenance Data: Prepare operation and maintenance data in accordance with Division 01 Section: "Execution and Closeout Requirements". In addition to the requirements specified in Division 01, include the following information for equipment items:

   a. List of systems and equipment requiring service manuals.
   b. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.
   c. Manufacturer's printed operating procedures to include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions; and summer and winter operating instructions.
   d. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, repair, and reassembly; aligning and adjusting instructions.
   e. Servicing instructions and lubrication charts and schedules.
   f. Systems and Equipment test reports.
3. Commissioning Report

G. Color Selection: Color of finishes shall be as selected by the Architect. Submit colors of factory finished equipment for acceptance prior to ordering.

H. Products and Materials:

1. Submit complete descriptive data for all materials as follows:

   a. Material specifications.
   b. Data sheets.
   c. Samples.
   d. Capacity ratings.
   e. Performance curves.
   f. Operating characteristics.
   g. Catalog cuts.

h. Dimensional drawings.
i. Wiring diagrams.
j. Lead Free, for potable water service.
k. Installation instruction.
l. Any other information necessary to indicate compliance with contract documents.

2. Edit submittal data specifically for application to this project.
3. Submit actual operating conditions and characteristics for all equipment.
4. Catalogs or catalog cuts are not acceptable unless the particular item and all relative data has been marked in such a manner as to be clearly defined.
5. Color of finishes shall be as selected by the Architect. Submit colors of factory finished equipment for acceptance prior to ordering.
6. No plumbing item shall be fabricated, purchased, delivered to the site or installed, until reviewed by the Architect.

   a. After the proposed materials have been approved, no substitution will be permitted except where approved by the Architect.
7. Provide shop drawing and product data submittals as indicated under individual specification sections.
8. Provide any other equipment requested by the Architect.

I. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.7 QUALITY ASSURANCE

A. Underwriter's Laboratory (UL) Requirements: All equipment containing electrical components and provided under Division 22 shall bear the Underwriter's Laboratory (UL) label, as a complete packaged system.

1. Equipment not provided with a UL label shall be tested in the field, certified and provided with a listed label at the installer's expense.

   a. Field testing shall be performed by a testing agency approved by the authority having jurisdiction.
   b. Provide services of a UL recognized, independent Electrical Testing Laboratory (ETL) to provide field inspection and testing. Provide and ETL Label on all such equipment.

B. Fire Safe Materials: Unless otherwise indicated, materials shall conform to UL, National Fire Protection Agency (NFPA) or American Society for Testing and Materials (ASTM) standards for fire safety with smoke and fire hazard rating not exceeding flame spread of 25 and smoke developed of 50.

C. All plumbing products and materials shall be listed by a third party certification agency.

1. Each length of pipe and each pipe fitting, trap, fixture, material and device utilized in a plumbing system shall bear the identification of the manufacturer and any markings required by the applicable referenced standards.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements:”

1. Deliver, store, and handle products according to manufacturer's recommendations, using means and methods that will prevent damage, deterioration, and loss, including theft.
2. Schedule delivery to minimize long-term storage at Project Site and to prevent overcrowding of construction spaces.
3. Coordinate delivery with installation time to assure minimum holding time for items that are flammable, hazardous, easily damaged, or sensitive to deterioration, theft, and other losses.
4. Deliver products to Project Site in an undamaged condition in manufacturer's original sealed container or other packaging system, complete with labels and instructions for handling, storing, unpacking, protecting, and installing.
5. Inspect products upon delivery to ensure compliance with Contract Documents and to ensure that products are undamaged and properly protected.
6. Store products in manner that will facilitate inspection and measurement.
7. Store materials in a manner that will not endanger project structure.
8. Store products subject to damage by elements above ground, under cover in a weather tight enclosure, with ventilation adequate to prevent condensation.
9. Comply with product manufacturer's written instructions for temperature, humidity, ventilation, and weather protection requirements for storage.

1.9 PROJECT CONDITIONS

A. Existing Conditions: Prior to preparing the bid, visit the site and become familiar with all existing conditions. Make all necessary investigations as to locations of utilities and all other matters, which can affect the work. No additional compensation will be made for failure to determine the conditions under which the work will be performed.

B. Outages

1. All plumbing outages which will interfere with the normal use of the building in any manner shall be done at such times as shall be mutually agreed upon with the Owner.
2. Unless otherwise specified, outages of any services required for the performance of this contract and affecting areas other than the immediate work area shall be scheduled with the Owner at least fourteen days (14) days in advance. All such outages shall be performed on other than normal work hours, Monday through Friday 8 a.m. to 5 p.m.
3. The bid price shall include the cost of all premium time required for outages and other work which interferes with the normal use of the building.
4. The operation of valves or switches required to achieve an outage shall be accomplished by the Owner or the Contractor. Unauthorized operation of valves, power switches, or other control devices shall not be permitted.

1.10 SEQUENCING

A. Coordinate plumbing equipment installation with other building components.

B. Arrange for chases, slots, and openings in building structure during progress of construction to allow for plumbing installations.

C. Coordinate the installation of required supporting devices and set sleeves in poured-in-place concrete and other structural components as they are constructed.

D. Sequence, coordinate, and integrate installations of plumbing materials and equipment for efficient flow of the Work. Coordinate installation of large equipment requiring positioning prior to closing in the building.

E. Coordinate connection of electrical services.

F. Coordinate connection of plumbing systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies.

G. Coordinate requirements for access panels and doors where plumbing items requiring access are concealed behind finished surfaces.

H. Coordinate installation of identifying devices after completing covering and painting where devices are applied to surfaces. Install identifying devices prior to installing acoustical ceilings and similar concealment.

1.11 PRODUCT WARRANTIES

A. Warranties specified in other Sections shall be in addition to, and run concurrent with, other warranties required by the Contract Documents. Manufacturer's disclaimers and limitations on product warranties do not relieve Contractor of obligations under requirements of the Contract Documents.

B. Special Warranties: Prepare a written document that contains appropriate terms and identification, ready for execution. Submit a draft for approval before final execution.

1. Manufacturer's Standard Form: Modified to include project-specific information and properly executed.
2. Refer to Divisions 01 through 26 Sections for specific content requirements and particular requirements for submitting special warranties.

C. Submittal Time: Comply with requirements in Division 01 Section: “Execution and Closeout Procedures.”

1.12 DISCREPANCIES

A. Where discrepancies occur between the drawings and specifications or within either document itself, the item or arrangement of better quality, greater quantity or higher cost shall be included in the contract price. The Architect shall decide on the item and manner in which the work shall be provided, based on the design intent of the documents.

1.13 SPECIAL TOOLS & OPERATING ACCESSORIES

A. Wherever any products provided under this Division have tamperproof, special or restrictive hardware, as specified or where provided from the manufacturer as standard or optional construction, provide a minimum of two (2) matching tools, bits, sockets, etc. needed for operation and/or access to such items. This shall include, but is not limited to:

1. Tamperproof screws, bolts, etc. on devices, enclosures, covers, etc.
2. Penta-head bolts used on handhole and/or manhole lids.
3. Penta-head bolts used on switchgear, transformers, etc.
4. Any other special tools which are unique to that product.

PART 2 - PRODUCTS

2.1 PRODUCT SELECTION

A. General Product Requirements: Provide products that comply with Contract Documents that are undamaged and new at time of installation.

1. Provide products complete with accessories, trim, finish, safety guards, and other devices and details needed for complete installation and intended use and effect.
2. Standard Products: Where available, provide standard products of types that have been produced and used successfully in similar situations on other projects.
3. Where products are accompanied by the term as selected, Architect will make selection.
4. Where products are accompanied by the term match sample, sample to be matched is Architect's.
5. Descriptive, performance, and reference standard requirements in the Specifications establish salient characteristics of products.

B. General Compliance Requirements: Compliance requirements for individual products, as indicated in Contract Documents, are multiple in nature and may include generic descriptions, performance requirements, compliance with reference standards, conformance with graphic details and other similar forms and methods of indicating requirements, all of which must be complied with.

C. Procedures for Selecting Products: Contractor's options for selecting products are limited by Contract Document requirements, and are not controlled by industry traditions or procedures experienced by Contractor on previous construction projects.

D. Products specified by Reference Standards, Codes and Regulations: Select from among products, which can be shown to comply with referenced documents.

E. Products specified by Naming Products and Manufacturers: Select from among products listed.

F. Products specified by Naming One Manufacturer's Product as the Basis-of-Design with Reference to Other Manufacturers: Select either the specified Basis-of-Design product or an approved comparable product by one of the other named manufacturers.

1. Comply with provisions in Comparable Products Article to obtain approval for use of a comparable product by one of the named manufacturers.

G. Products specified by Naming One Manufacturer's Product and Indicating Option of Selecting Comparable Products by stating or Approved Equivalent or similar language: Select either the specified product or an approved comparable product.

1. Comply with provisions in Comparable Products Article to obtain approval for use of a comparable product by one of the named or un-named manufacturers.

H. Visual Matching Specification: Where Specifications require matching an established Sample, select a product that complies with requirements and, matches Architect's sample. Architect's decision will be final on whether proposed product matches satisfactorily.

I. Visual Selection Specification: Where Specifications include the phrase as selected from manufacturer's standard colors, patterns, textures or similar phrase, select a product that complies with other specified requirements. Architect will select color, pattern, and texture.

1. Standard Range: Where Specifications include the phrase standard range of colors, patterns, textures or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that does not include premium items.
2. Full Range: Where Specifications include the phrase full range of colors, patterns, textures or similar phrase, Architect will select color, pattern, or texture from manufacturer's product line that includes both standard and premium items.

2.2 COMPARABLE PRODUCTS

A. Where Basis-of-Design products are specified by name, submit the following, in addition to other required submittals, to obtain approval of a comparable product by one of the named manufacturers:

1. Evidence that the proposed product does not require extensive revisions to the Contract Documents that it is consistent with the Contract Documents and will produce the indicated results, and that it is compatible with other portions of the Work. Use the attached Comparable Products Submittal Form in addition to requirements listed herein.
2. Detailed comparison of significant qualities of proposed product with the Basis-of-Design product in the Specifications. Significant qualities include attributes such as performance, weight, size, durability, serviceability, visual effect, and specific features and requirements indicated.
3. Evidence that proposed product provides specified warranty.
4. List of similar installations for completed projects with project names and addresses and names and addresses of architects and owners, if requested.
5. Samples, if requested.

2.3 GROUT

A. Non-shrink, Nonmetallic Grout: ASTM C 1107, Grade B, “Packaged Dry, Hydraulic-Cement Grout (Nonshrink)”, “latest edition”.

1. Characteristics: Post-hardening, volume-adjusting, dry, hydraulic-cement grout, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi, 28-day compressive strength.
3. Packaging: Premixed and factory-packaged.

2.4 ACCESS DOORS AND PANELS

A. Provide manufactured steel door assemblies consisting of:

1. Hinged door.
2. Flush screwdriver camlocks and frame.

B. Doors shall be Milcor Metal Access doors. Provide key locks where indicated.

C. Design shall be provided for the following installations:

1. Masonry or Dry Wall: Style M.
2. Hard Finish Plaster: Style AP.
3. Fire rated dry wall ceilings: Style CFRAD, 1 hour combustible floor ceiling system, 1 hour non-combustible floor ceiling system, 3 hour non-combustible floor ceiling system.
4. Suspended ceilings: Style CT.
5. Security: Style 3211.

PART 3 - EXECUTION

3.1 PREPARATION

A. Interface With Site Utility Companies:

1. Contact MISS UTILITY prior to any excavation or underground work.
2. Contact local utility companies (gas, water, sewer, etc.) immediately upon award of contract. Do not install related equipment until fully coordinated with appropriate utilities.
3. Provide all construction schedules, dates of requested services, outage windows, equipment locations, etc. necessary for utility work.
4. Gas Utility:

    a. Coordinate service entrance equipment and related layout with gas company prior to ordering or installing any equipment or systems.
    b. Furnish and install all incoming concrete pads, sleeves, connections, etc.
5. Water and Sewer Utilities:

    a. Coordinate flow, usage and pressure requirements with local water and sewer authorities as necessary to obtain services.

3.2 BUILDING INFORMATION MODEL (BIM) COORDINATION DRAWINGS

A. The contract drawings are diagrammatic and do not indicate every component and duct/piping offset fittings required for a complete installation. Incorporate all necessary and required components and routing modifications to ensure that all systems are coordinated and in compliance with specified ceiling heights wall thinness, building structure, etc.

B. It is the contractor’s responsibility to conduct and manage an adequate and thorough BIM and conduct a clash detection process so that all major interferences between building components have been detected and resolved before fabrication and installation of systems. The contractor shall assemble a composite BIM for each subcontractor’s BIM. Vertical shafts shall also be

reviewed to ensure that adequate space has been allocated for all of the vertical mechanical systems and that all of the shafts lie up floor to floor.

C. All coordination efforts and BIM updates shall be provided without changes to the contract cost and/or schedule. The accuracy of the BIM shall be verified by the contractor and approved, prior to submittal to the Architect for review.

D. Update BIM based on submittals, RFIs, or Owner directed changes and maintain the BIM based on construction activities. BIMs will be revised throughout construction, based on owner directives, revised contract documents, and As-Built conditions.

3.3 INSTALLATION

A. General: Sequence, coordinate, and integrate the various elements of mechanical systems, materials, and equipment. Comply with the following requirements:

1. Coordinate mechanical systems, equipment, and materials installation with other building components.
2. Verify all dimensions by field measurements.
3. Arrange for chases, slots, and openings in other building components during progress of construction, to allow for mechanical installations.
4. Coordinate the installation of required supporting devices and sleeves to be set in poured-in-place concrete and other structural components, as they are constructed.
5. Sequence, coordinate, and integrate installations of plumbing materials and equipment for efficient flow of the Work. Give particular attention to large equipment requiring positioning prior to closing in the building.
6. Where systems, materials and equipment are intended for overhead installation, and where mounting heights are not detailed or dimensioned, install systems, materials, and equipment to provide the maximum headroom possible.
7. Coordinate connection of plumbing systems with exterior underground and overhead utilities and services. Comply with requirements of governing regulations, franchised service companies, and controlling agencies. Provide required connection for each service.
8. Install systems, materials, and equipment to conform with approved submittal data, including coordination drawings, to greatest extent possible. Conform to arrangements indicated by the Contract Documents, recognizing that portions of the Work are shown only in diagrammatic form. Where coordination requirements conflict with individual system requirements, refer conflict to the Architect.
9. Install systems, materials, and equipment level and plumb, parallel and perpendicular to other building systems and components.
10. Install plumbing equipment to facilitate servicing, maintenance, and repair or replacement of equipment components. As much as practical, connect equipment for ease of disconnecting, with minimum of interference with other installations. Extend grease fittings to an accessible location.
11. Install access panel or doors where units or valves are concealed behind finished surfaces. Access panels and doors are specified in Division 08 Section: "Access Doors and Frames” and within this section.
12. Install systems, materials, and equipment giving right-of-way priority to systems required to be installed at a specified slope.

B. Rough-In

1. Verify final locations for rough-ins with field measurements and with the requirements of the actual equipment to be connected.
2. Refer to equipment specifications in Divisions 01 through 26 for rough-in requirements.

C. Housekeeping and Equipment Pad

1. Construct pads of dimensions indicated, but not less than 4 inches larger than supported unit in both directions. Follow supported equipment manufacturer's setting templates for anchor bolt and tie locations. Use 3000-psi,, 28-day compressive strength concrete and reinforcement bars as specified in Division 03 Section: "Cast-in-Place Concrete".

D. Erection of Metal Supports and Anchorage

1. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor mechanical materials and equipment.
2. Field Welding: Comply with AWS D1.1, "Structural Welding Code -Steel", 2001.

E. Erection of Wood Supports and Anchorage

1. Cut, fit, and place wood grounds, nailers, blocking, and anchorage to support and anchor mechanical materials and equipment.
2. Select fastener sizes that will not penetrate members where opposite side will be exposed to view or will receive finish materials. Make tight connections between members. Install fasteners without splitting wood members.
3. Attach to substrates as required to support applied loads.

F. Grouting

1. Install nonmetallic non-shrink grout for mechanical equipment base bearing surfaces, pump and other equipment base plates, and anchors. Mix grout according to manufacturer's printed instructions.
2. Clean surfaces that will come into contact with grout.
3. Provide forms for placement of grout, as required.
4. Avoid air entrapment when placing grout.
5. Place grout to completely fill equipment bases.
6. Place grout on concrete bases to provide a smooth bearing surface for equipment.
7. Place grout around anchors.
8. Cure placed grout according to manufacturer's printed instructions.

G. Lintels

1. Lintels shall be provided for openings in masonry, brick, concrete, etc. walls to accommodate work of this division.

    a. Lintels shall be provided under this division when not being provided under other divisions. Lintels shall be approved by the Architect.

H. Pex Parallel Water Distribution Bundling

1. Piping Bundles for manifold systems shall be supported per plumbing code. Support at changes in direction shall be in accordance with the manufacturer's instructions.

3.4 CUTTING AND PATCHING

A. General: Perform cutting and patching in accordance with Division 01 Section: "Execution and Closeout Requirements". In addition to the requirements specified in Division 01, the following requirements apply:

1. Protection of Installed Work: During cutting and patching operations, protect adjacent installations.

B. Perform cutting, fitting, and patching of plumbing equipment and materials required to:

1. Uncover Work to provide for installation of ill-timed Work.
2. Remove and replace defective Work.
3. Remove and replace Work not conforming to requirements of the Contract Documents.
4. Remove samples of installed Work as specified for testing.
5. Install equipment and materials in existing structures.
6. Upon written instructions from the Architect, uncover and restore Work to provide for Architect observation of concealed Work.

C. Cut, remove and legally dispose of selected mechanical equipment, components, and materials as indicated, including but not limited to removal of mechanical piping, heating units, plumbing fixtures and trim, and other mechanical items made obsolete by the new Work.

D. Protect the structure, furnishings, finishes, and adjacent materials not indicated or scheduled to be removed.

E. Provide and maintain temporary partitions or dust barriers adequate to prevent the spread of dust and dirt to adjacent areas.

F. Patch finished surfaces and building components using new materials specified for the original installation and using experienced Installers. Installers' qualifications refer to the materials and methods required for the surface and building components being patched.

3.5 PAINTING AND FINISHING

A. Division 09 Section: "Painting and Coating” for field painting requirements.

B. Damage and Touch Up: Repair marred and damaged factory-painted finishes with materials and procedures to match original factory finish.

C. Do not paint manufacturer's labels or tags.

3.6 PLUMBING DEMOLITION

A. Disconnect, demolish, and remove work specified under Division 22 and as indicated. Remove pipes and ducts back to the active pipe and duct to remain and cap.

B. Where pipe, ductwork, insulation, or equipment to remain is damaged or disturbed, remove damaged portions and install new products of equal capacity and quality.

C. Accessible Work: Remove indicated exposed pipe and ductwork in its entirety.

D. Abandoned Work: Cut and remove buried pipe abandoned in place, 2 inches (50 mm) beyond the face of adjacent construction. Cap and patch surface to match existing finish.

E. Removal: Remove indicated equipment from the Project site.

F. Temporary Disconnection: Remove, store, clean, reinstall, reconnect, and make operational equipment indicated for relocation.

3.7 CONSTRUCTION

A. Cutting, Welding, Burning

1. Before commencing any cutting, welding, burning, brazing (pipe sweating), obtain a hot work permit from Environmental Health and Safety.
2. The hot work permit copy shall remain on the job site at the hot work location until such work is completed at which time the permit shall be returned to Environmental Health and Safety.

3.8 PENETRATION OF WATERPROOF CONSTRUCTION

A. Coordinate the work to minimize penetration of waterproof construction, including roofs, exterior walls and interior waterproof construction.

B. Furnish and install drains, curbs, vent assemblies, sleeves, flashing, etc. specifically designed for application to the particular construction. Install system in accordance with the roofing manufacturer's instructions.

3.9 EXCAVATION AND BACKFILLING

A. General

1. Perform all necessary excavation, for installation of work under Division 22, in accordance with Division 31.

3.10 CLEANING

A. Clean surfaces prior to application of insulation, adhesives, coating, and paint.

B. Provide factory applied finish where specified.

C. Protect all finishes, and restore all finishes to their original condition if damaged as a result of work under Division 22.

D. Remove all construction marking and writing from exposed equipment, ductwork, piping and building surfaces.

E. General: General cleaning during construction is required by the General Conditions and included in Section Temporary Facilities.

F. Cleaning: Employ experienced workers or professional cleaners for final cleaning. Clean each surface or unit to the condition expected in a normal, commercial building cleaning and maintenance program. Comply with manufacturer's instructions.

G. Remove all plumbing clipping, wiring, nuts, bolts, etc. left on top of ceilings and ceiling tiles.

3.11 PROTECTION

A. Protect work, material and equipment from weather and construction operations before and after installation.

B. Properly store and handle all materials and equipment.

C. Cover temporary openings in piping, ductwork and equipment to prevent the entrance of water, dirt, debris, and other foreign matter.

3.12 LUBRICATION

A. All bearings, motors and all equipment requiring lubrication shall be provided with accessible fittings.

B. Before turning over the equipment to the Owner, provide the following:

1. Fully lubricate each item of equipment.
2. Provide 1 year's supply of lubricant for each type of lubricant.
3. Provide complete written lubricating instructions, together with diagram locating the points requiring lubrication.

C. Motors and equipment shall be provided with grease lubricated roller or ball bearings with Alemite or equal extended grease fittings and drain plugs.

3.13 ELECTRICAL WORK

A. It is the intent to provide a complete and operational system. The work between Division 22 and 26 is complementary and is meant to produce a single and operating system. Contractor shall make its own determination as to the distribution of responsibility among the various trades.

B. All electrical work performed under Division 22 shall be provided in accordance with Division 26.

3.14 PROVISIONS FOR ACCESS

A. Furnish and install adequate access to all plumbing components. The following list shall be used as a guide only:

1. Plumbing equipment.
2. Valves.
3. Cleanouts.
4. Traps.

B. Access shall be adequate as determined by the Architect.

C. Refer to contract drawings where panels have been specifically located.

D. Provide additional panels for adequate access as indicated in paragraph A above.

E. Where access is by means of liftout ceiling tiles or panels mark each panel using small color-coded or numbered tabs. Provide an index chart for identification. Place markers in corner of tile.

3.15 OPERATION OF EQUIPMENT

A. Clean all systems and equipment prior to initial operation for testing and balancing.

B. Do not operate equipment unless all proper safety devices or controls are operational.

C. Provide all maintenance and service for equipment, which is operated during construction.

D. Where specified and otherwise required, provide the services of a manufacturer's factory trained service organization to start the equipment.

E. Do not use mechanical systems for temporary services during construction unless authorized in writing by the Architect.

1. Where such authorization is granted, temporary use of equipment shall not limit or otherwise affect warranties or guarantees of the work.

F. Upon completion of work, clean and restore all equipment to new conditions and replace all filters.

3.16 DEMONSTRATION

A. Demonstrate operation and maintenance of equipment and systems to Owner’s personnel a minimum two (2) weeks prior to date of final inspection.

1. For equipment requiring seasonal operation, perform instructions for other seasons at the same time.
2. Training period shall be performed within 1 - two week period.

B. Use operation and maintenance manuals and video as basis of instruction. Review contents of manual and video with personnel in detail to explain all aspects of operation and maintenance.

C. Demonstrate the following:

1. Start up.
2. Operation.
3. Control.
4. Adjustment.
5. Trouble shooting.
6. Servicing.
7. Maintenance.
8. Shutdown.

D. Provide at least 40 hours straight time instruction to the operating personnel.

1. This instruction period shall consist of not less than five-8 hour days.
2. Time of instruction shall be designated by the Owner.
3. This instruction shall be in addition to instructional requirements of specific equipment specified elsewhere in Division 22.

3.17 WALL AND FLOOR PENETRATION

A. All penetrations of partitions, walls and floors by ducts, piping or conduit under Division 22 shall be sealed and caulked. Provide U.L. listed fire stopping systems at penetrations through fire rated walls.

B. Sealing of Annular Spaces at Penetrations.

1. The annular spaces between the outside of a pipe and the inside of a pipe sleeves, or between the outside of a pipe and an opening in a building envelope wall, floor, or ceiling assembly penetrated by a pipe shall be sealed in an approved manner with caulking material or closed with a gasketing system. The caulking material, foam sealant, or gasketing system shall be designed for the conditions at the penetration location and shall be compatible with the pipe, sleeve and building materials in contact with the sealing materials. Annular spaces created by pipes penetrating fire resistance-rated assemblies or membranes of such assemblies shall be sealed or closed in accordance with the International Building Code.

3.18 EQUIPMENT PROVIDED UNDER ANOTHER DIVISION AND BY OTHERS

A. Make all system connections required to equipment furnished and installed under another division and by others.

B. It shall be the responsibility of the Contractor to coordinate all necessary data from the equipment supplied under other Divisions.

3.19 MECHANICAL EQUIPMENT SERVICE PLATFORMS

A. Where mechanical equipment is located on a roof or elevated structure that requires access such that personnel will have to climb over ductwork or higher than 16 feet above grade to access the equipment, a means to access the equipment shall be provided.

B. Provide catwalks around the entire perimeter of equipment to match manufacturer required clearance area. Minimum 36” from perimeter of unit.

C. Provide side edge railings that extend above the catwalk not less than 30” above the catwalk.

3.20 PROJECT PUNCH OUT

A. Architect/Engineer will perform punch out reviews and will provide the Contractor with a list of punch list items to be completed before contract close out. Each and every punch list item shall be initialed and dated by the Contractor when the work is complete. The Architect/ Engineer will not perform any punch list verification until all items have been completed, initialed, dated and the list returned to the Architect/Engineer. If any items have been initialed as being completed by the Contractor and the Architect/Engineer determines that the work is not complete, the Architect/Engineer shall be reimbursed by the Contractor at his regular hourly rate for any and all items requiring revisiting of the site by the Architect/Engineer. Reimbursement will be made by deducting the Architect/Engineer feefrom the Contractor's final payment.

3.21 COMMISSIONING

A. Provide support for Commissioning Activities and Functional Performance Testing as outlined in specification Division 01 Section “Commissioning”.

B. Contractor shall provide copies of final reports to the Commissioning Agent (CxA) for review and inclusion with final Cx project documentation as applicable

COMPARABLE PRODUCT SUBMITTAL FORM

Table of Compliance (Sample)
Shop Drawing and Product Data Submittal

The Contractor shall prepare a Table of Compliance Form similar in format to the sample shown below to facilitate and expedite the Shop Drawing and Product Data Review. Failure to comply with this requirement will be basis for rejecting the Submittal.

The Table of Compliance Form will list and compare the performance parameters as the submitted equipment to that listed on equipment schedule and specifications as basis of design. All non-compliance items (differences) must be explained in full, indicating their impact, if any, on maintainability, durability, energy use, operating costs, code compliance and environmental considerations.

SECTION 22 05 03

PIPES AND TUBES FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section, and all sections of Division 22.

1.2 SUMMARY

A. Section includes:

1. Domestic Cold, Hot, and Circulating Hot Water (Potable and Non-Potable)
2. Sanitary, Sanitary Vent, and Storm Water
3. Sanitary and Storm Water Sumps and Ejectors Pressure Discharge Piping
4. Air Conditioning Condensate, Equipment Drains, and Overflows
5. Foundation Drains
6. Underground Pipe Markers
7. Piping Specialties and Accessories.
8. Sleeve Penetration Systems
9. Point of Use Solids Interceptor

B. Related Sections: The following Sections contain requirements that relate to this Section:

1. Division 03 Section: “Cast-In-Place Concrete”: Product and execution requirements for formwork, reinforcement, and concrete specified by this section.
2. Division 07 Section: “Firestopping” – For Opening Protection: Product and execution requirements for penetration through fire rated construction, and smoke seal protection specified by the section.
3. Division 07 Section: “Sheet Metal Flashing and Trim: Product and execution requirements for custom fabricated roof and wall flashings and roof drainage systems.
4. Division 08 Section: “Access Doors and Frames” for project requirements for access doors for placement by this section.
5. Division 09 Section: “Painting and Coating”: Product and execution requirements for painting specified by this section.
6. Division 22 Section: “Common Work Results for Plumbing”: Product and execution requirements for common work results for plumbing for placement specified by this section.
7. Division 22 Section: “Expansion Fittings and Loops for Plumbing Piping”: Product requirements for piping expansion compensation devices for placement by this section.

8. Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment”: Product requirements for pipe hangers and supports for placement specified by this section.
9. Division 22 Section: “Plumbing Piping System Cleaning and Treatment”: Product and execution requirements for system cleaning and treatment specified by this section.
10. Division 22 Section: “Vibration and Seismic Controls for Plumbing Piping and Equipment”: Product requirements for vibration isolation for placement specified by this section.
11. Division 22 Section: “Plumbing Insulation”: Product requirements for piping insulation for placement specified by this section.
12. Division 22 Section: “General – Duty Valves for Plumbing Piping”: Product requirements for valves for placement specified by this section.
13. Division 22 Section: “General Service Compressed-Air Systems”: Product requirements for compressed air systems for placement by this section.
14. Division 23 Section: “Facility Fuel Storage Tanks”: Product and execution requirements for placement specified by this section.
15. Division 31 Section: “Soils for Earthwork”: Soils for backfill in trenches.
16. Division 31 Section: “Aggregates for Earthwork”: Aggregates for backfill in trenches.
17. Division 31 Section: “Excavation”: Product and execution requirements for excavation and backfill required by this section.
18. Division 31 Section: “Trenching”: Execution requirements for trenching for underground piping systems.
19. Division 31 Section: “Fill”: Execution requirements for backfilling required by this section.

1.3 DEFINITIONS

A. Point of Delivery is the outlet of the service meter assembly, or the outlet of the service regular (service shutoff valve when no meter is provided).

B. Domestic Water Systems: A system conveying domestic potable or non-potable water, such as Cold Water, Hot Water, Hot Water circulating, etc.

C. Gravity Drainage Systems: A system of gravity fed effluent conveying storm water, sanitary, and laboratory acid waste, etc.

D. Lead Free:

1. The pipes, pipe fittings, plumbing fittings or fixtures in plumbing systems that are intended to dispense potable water for human consumption, including drinking and cooking, shall be “lead free”, containing not more than a weighted average of 0.25% lead with respect to the wetted surfaces.
2. Solder and flux for soldered joints in potable water piping shall be “lead free”, containing not more than 0.2% lead free.

E. Pex Piping: Cross Linked Polyethylene, it is made from Cross Linked Hope (High Density Polyethylene), it is melted and continuously extruded into tubing.

F. CPVC Piping: Chlorinated Polyvinyl Chloride thermoplastic pipe is made by the chlorination of PVC resin and extruded into pipe that meets FBC chemical compatibility

4. ASTM A74, Standard Specification for Cast Iron Soil Pipe and Fittings.

5. ASTM A126, Standard Specification for Gray Iron Castings for Valves, Flanges, and Pipe Fittings.
6. ASTM A167, Standard Specification for Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet and Strip.
7. ASTM A182, Standard Specification for Forged or Rolled Alloy-Steel Pipe Flanges, Forged Fittings, and Valves and Parts for High-Temperature Service.
8. ASTM A183, Standard Specification for Carbon Steel Track Bolts and Nuts.
9. ASTM A193, Standard Specification for Alloy Steel and Stainless Steel Bolting Materials for High-Temperature Service.
10. ASTM A194, Standard Specification for Carbon and Alloy Steel Nuts for Bolts for High-Pressure or High-Temperature Service, or Both.
11. ASTM A216, Standard Specification for Steel Castings, Carbon, Suitable for Fusion Welding, for High-Temperature Service.
12. ASTM A234, Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High-Temperature Service.
13. ASTM A276, Standard Specification for Stainless Steel Bars and Shapes.
14. ASTM A278, Standard Specification for Gray Iron Castings for Pressure Containing Parts.
15. ASTM A351, Standard Specification for Stainless Steel Bars and Shapes.
16. ASTM A395 - Standard Specification for Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures.
17. ASTM A536, Standard Specification for Ductile Iron Castings.
18. ASTM A564, Standard Specification for Hot-Rolled and Cold-Finished Age-Hardening Stainless Steel Bars and Shapes.
19. ASTM A582, Standard Specification for Free-Machining Stainless Steel Bars.
20. ASTM A780, Standard Practice for Repair of Damaged and Un-coated Areas of Hot-Dip Galvanized Coatings.
21. ASTM B16, Standard Specification for Free-Cutting Brass Rod, Bar and Shapes for Use in Screw Machines.
22. ASTM B32, Standard Specification for Soldered Metal.
23. ASTM B42 - Standard Specification for Seamless Copper Pipe, Standard Sizes.
24. ASTM B43 - Standard Specification for Seamless Red Brass Pipe, Standard Sizes.
25. ASTM B62, Standard Specification for Composition Bronze or Ounce Metal Castings.
26. ASTM B75 - Standard Specification for Seamless Copper Tube.
27. ASTM B88, Standard Specification for Seamless Copper Water Tubes.
28. ASTM B124, Standard Specification for Copper and Copper Alloy Forging Rod, Bar and Shapes.
29. ASTM B148, Standard Specification for Aluminum-Bronze Sand Castings.
30. ASTM B251 - Standard Specification for General Requirements for Wrought Seamless Copper and Copper-Alloy Tube.
31. ASTM B280 - Standard Specification for Seamless Copper Tube for Air Conditioning and Refrigeration Field Service.
32. ASTM B302 - Standard Specification for Threadless Copper Pipe, Standard Sizes.
33. ASTM B306, Standard Specification for Copper Drainage Tube (DWV).
34. ASTM B819, Standard Specification for Seamless Copper Tube for Medical Gas Systems.
35. ASTM B584, “Standard Specification for Copper Alloy Sand Castings for General Applications.
36. ASTM C14 - Standard Specification for Concrete Sewer, Storm Drain, and Culvert Pipe.
37. ASTM C33, Standard Specification for Concrete Aggregates.
38. ASTM C76 - Standard Specification for Reinforced Concrete Culvert, Storm Drain, and Sewer Pipe.
39. ASTM C150, Standard Specification for Portland Cement.

40. ASTM C443 - Standard Specification for Joints for Concrete Pipe and Manholes, Using Rubber Gaskets.
41. ASTM C564 - Standard Specification for Rubber Gaskets for Cast Iron Soil Pipe and Fittings.
42. ASTM C1053 - Standard Specification for Borosilicate Glass Pipe and Fittings for Drain, Waste, and Vent (DWV) Applications.
43. ASTM C1107, Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-shrinking).
44. ASTM C1540, Standard Specification for Heavy Duty Shielded Couplings Joining Hubless Cast Iron Soil Pipe and Fittings.
45. ASTM D2321, Standard Practice for Thermoplastic Pipe for Sewers and Other Gravity- Flow Applications.
46. ASTM D635, Standard Test Method for Rate of Burning and/or Extent and Time of Burning Plastics in a Horizontal Position.
47. ASTM D1784 – Specification for Rigid Poly (Vinyl Chloride) (PVC) Compounds and Chlorinated Poly (Vinyl Chloride) (CPVC) Compounds.
48. ASTM D1785 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe, Schedules 40, 80, and 120.
49. ASTM D2235 - Standard Specification for Solvent Cement for Acrylonitrile-Butadiene-Styrene (ABS) Plastic Pipe and Fittings.
50. ASTM D2239 - Standard Specification for Polyethylene (PE) Plastic Pipe (SIDR-PR) Based on Controlled Inside Diameters.
51. ASTM D2241 - Standard Specification for Polyethylene (PE) Plastic Pipe (SIDR-PR) Based on Controlled Inside Diameter.
52. ASTM D2447 - Standard Specification for Polyethylene (PE) Plastic Pipe, Schedules 40 and 80, Based on Outside Diameter.
53. ASTM D2464, Standard Specification for Threaded Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings.
54. ASTM D2466 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 40.
55. ASTM D2467 - Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Pipe Fittings, Schedule 80.
56. ASTM D2513 - Standard Specification for Thermoplastic Gas Pressure Pipe, Tubing, and Fittings.
57. ASTM D2564, Standard Specification for Solvent Cements for Poly (Vinyl Chloride) (PVC) Plastic Piping Systems.
58. ASTM D2609 - Standard Specification for Plastic Insert Fittings for Polyethylene (PE) Plastic Pipe.
59. ASTM D2661, Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste and Vent Pipe and Fittings.
60. ASTM D2665, Standard Specification for Poly (Vinyl Chloride) (PVC) Plastic Drain, Waste, and Vent Pipe and Fittings.
61. ASTM D2680 - Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) and Poly (Vinyl Chloride) (PVC) Composite Sewer Piping.
62. ASTM D2683 - Standard Specification for Socket-Type Polyethylene Fittings for Outside Diameter-Controlled Polyethylene Pipe and Tubing.
63. ASTM D2729, Standard Specification for Poly (Vinyl Chloride) PVC) Sewer Pipe and Fittings.
64. ASTM D2751 - Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Sewer Pipe and Fittings.
65. ASTM D2765, Test methods for determination of Gel Content and Swell Ration of Cross-Linked Ethylene Plastics.
66. ASTM D2846, Standard Specification for Chlorinated Polyvinyl Chloride (CPVC) Plastic Hot- and Cold-Water Distribution Systems.

67. ASTM D2855 - Standard Practice for Making Solvent-Cemented Joints with Poly (Vinyl Chloride) (PVC) Pipe and Fittings.
68. ASTM D2996 - Standard Specification for Filament-Wound Fiberglass (Glass-Fiber-Reinforced Thermosetting Resin) Pipe.
69. ASTM D2997 - Standard Specification for Centrifugally Cast Fiberglass (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe.
70. ASTM D3034 - Standard Specification for Type PSM Poly (Vinyl Chloride) (PVC) Sewer Pipe and Fittings.
71. ASTM D3035 - Standard Specification for Polyethylene (PE) Plastic Pipe (DR-PR) Based on Controlled Outside Diameter.
72. ASTM D3138, Standard Specification for Solvent Cements for Transition Joints between Acrylonitrile-Butadiene-Styrene (ABS) and Poly Vinyl Chloride (PVC) Non-Pressure Piping Components.
73. ASTM D3139 - Standard Specification for Joints for Plastic Pressure Pipes Using Flexible Elastomeric Seals.
74. ASTM D3262 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Sewer Pipe.
75. ASTM D3517 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pressure Pipe.
76. ASTM D3754 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Sewer and Industrial Pressure Pipe.
77. ASTM D3840 - Standard Specification for "Fiberglass" (Glass-Fiber-Reinforced Thermosetting-Resin) Pipe Fittings for Nonpressure Applications.
78. ASTM D6394, Specification for Sulfone Plastics (SP).
79. ASTM E1, Standard Specification for ASTM Thermometers.
80. ASTM E84, Standard Test Method for Surface Burning Characteristics of Building Materials.
81. ASTM E119, Standard Test Methods for Fire Tests of Building Construction and Materials.
82. ASTM E814, Standard Test Method for Fire Tests of Through-Penetration Fire Stops.
83. ASTM F402, Standard Practice for Safe Handling of Solvent Cements, Primers, and Cleaners used for Joining Thermoplastic Pipes and Fittings.
84. ASTM F437 - Standard Specification for Threaded Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 80.
85. ASTM F438 - Standard Specification for Socket-Type Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 40.
86. ASTM F439 - Standard Specification for Socket-Type Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe Fittings, Schedule 80.
87. ASTM F441 - Standard Specification for Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe, Schedules 40 and 80.
88. ASTM F442 - Standard Specification for Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe (SDR-PR).
89. ASTM F477 - Standard Specification for Elastomeric Seals (Gaskets) for Joining Plastic Pipe.
90. ASTM F493, Standard Specification for Solvent Cements for Chlorinated Poly (Vinyl Chloride) (CPVC) Plastic Pipe and Fittings.
91. ASTM F628 - Standard Specification for Acrylonitrile-Butadiene-Styrene (ABS) Schedule 40 Plastic Drain, Waste, and Vent Pipe With a Cellular Core.
92. ASTM F645 - Standard Guide for Selection, Design, and Installation of Thermoplastic Water- Pressure Piping Systems.
93. ASTM F656, Standard Specification for Primers for Use in Solvent Cement Joints of Poly (Vinyl Chloride) (PVC) Pipe and Fittings.
94. ASTM F679 - Standard Specification for Poly (Vinyl Chloride) (PVC) Large-Diameter Plastic Gravity Sewer Pipe and Fittings.

95. ASTM F844, Standard Specification for Washers, Steel, Plain (Flat), Unhardened for General Use.
96. ASTM F876, Standard Specification for Cross-Linked Polyethylene (PEX) Tubing.
97. ASTM F877, Standard Specification for Cross-Linked Polyethylene (PEX) Plastic Hot-and-Cold-Water Distribution Systems.
98. ASTM F1281 - Standard Specification for Crosslinked Polyethylene/Aluminum/Crosslinked Polyethylene (PEX-AL-PEX) Pressure Pipe.
99. ASTM F1282 - Standard Specification for Polyethylene/Aluminum/Polyethylene (PE-AL-PE) Composite Pressure Pipe.
100. ASTM F1476 – "Standard Specification for Performance of Gasketed Mechanical Couplings for Use in Piping Applications."
101. ASTM F1960. Standard Specification for Cold Expansion Fittings with PEX Reinforcing Rings for Use with Cross-Linked Polyethylene (PEX) Tubing.
102. ASTM F1970 – Standard Specification for Special Engineered fittings, Appurtenances or Valves for use in Poly (Vinyl Chloride) (PVC) or Chlorinated Poly (Vinyl Chloride) (CPVC) Systems.
103. ASTM F2618, Standard Specification for Chlorinated Poly (Vinyl Chloride) (CPVC) Pipe and Fittings for Chemical Waste Drainage Systems.
104. ASTM F2389-07 – Standard Specification for Pressure-Rated Polypropylene (PP) Piping Systems.

E. AWS (American Welding Society)

1. AWS A5.8 - Specification for Filler Metals for Brazing and Braze Welding.

R. OSHA (Occupational Safety and Health Administration)

S. UL (Underwriters' Laboratories)

1. UL 273 – Standard for Test for Surface Burning Characteristics of Building Materials

1.5 SUBMITTALS

A. Division 01 Section: “Submittal Procedures”: Submittal Procedures.

B. Shop Drawings: Indicate layout of piping systems, including equipment, critical dimensions, and sizes.

C. Maintenance data to be included in the operation and maintenance manual specified in Division 01. Include detailed manufacturer's instructions on adjusting, servicing, disassembling, and repairing. Include data for the following:

1. Pipe Materials
2. Flow Measuring Systems
3. Plumbing Specialties

D. Project Record Documents: Record actual locations of piping mains with invert elevations, valves, manholes, and leak detection and location system.

E. Welder certificates signed by Contractor certifying that welders comply with requirements specified under the "Quality Assurance" Article.

F. Polypropylene (PP-R) welding certificates signed by the manufacturer certifying that installers comply with all the requirements specified by the piping manufacturer and have been thoroughly trained in the installation and welding of Polypropylene (PP-R) piping.

G. Certification of compliance with ASTM, ASME and ANSI manufacturing requirements for pipe, fittings, and specialties.

H. Submit flange gasket bolt tightening sequence and torque requirements for review as part of gasket submittals.

I. Product Data: Submit data on each type of pipe material and fittings. Submit manufacturer's catalogue information.

J. Grooved joint couplings and fittings shall be shown on drawings and product submittals and shall be specifically identified with the applicable grooved system manufacturer's style or series number.

K. Welders' Certificate: Include welders' certification of compliance with AWS D1.1.

L. Fuel Piping Specialties: Submit manufacturer's catalog information including capacity, rough-in requirements, and service sizes.

M. CPVC Piping: Submit materials in contact with CPVC piping system that are compatible with CPVC compounds per FBC System Compatibility Program or consult product manufacturer

N. Submission of all submittals shall be made electronically via email with PDF attachments to Bowman_submit@bowman.com

1.6 QUALITY ASSURANCE

A. Perform Work in accordance with ASME B31.9 code for installation of piping systems and ASME Section IX for welding materials and procedures.

B. Furnish shutoff valves complying with ASME B16.33 or ANSI Z21.15

C. Perform work in accordance with Authority Having Jurisdiction requirements

D. ASME (American Society of Mechanical Engineers) Compliance; comply with:

1. ASME B31.9, Building Services Piping, latest edition.
2. ASME B31.1, Power Piping, latest edition.

E. Qualify welding processes and welding operators according to AWS D1.1, Structural Welding Code—Steel, "latest edition".

1. Certify that each welder has satisfactorily passed AWS qualification tests for welding processes involved and, if pertinent, has undergone recertification.

F. All grooved joint couplings, fittings, valves, and specialties shall be the products of a single manufacturer. Grooving tools shall be of the same manufacturer as the grooved components.

1. All castings used for coupling housings, fittings, valve bodies, etc…shall be date stamped for quality assurance and traceability.

G. Regulatory Requirements: Comply with the requirements of the following additional codes:

1. NFPA 54, National Fuel Gas Code for gas piping materials and components, gas piping installations, and inspection, testing, and purging of gas piping systems.
2. International Mechanical Code (IMC).
3. ANSI/ASHRAE Standard 15: Safety Code for Mechanical Refrigeration.
4. PHCC - National Standard Plumbing Code, latest edition.
5. NFPA 31, Standard for the Installation of Oil Burning Equipment for oil piping materials and components, oil piping installation, and inspection, and testing of fuel oil piping systems.
6. HB 372 Business Occupations and Professions – Plumbers – Lead Free Materials.

H. Cast Iron Pipe; No Hub: All pipe and fittings shall bear the Collective Trademark of the Cast Iron Soil Pipe Institute and be listed by NSF International.

I. CPVC Piping: Contractor should have received installation training from pipe/fitting manufacturer within two (2) years of start of this project for all CPVC piping systems.

1.7 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing Products specified in this section with minimum five years documented experience.

B. Installer: Company specializing in performing work of this section with minimum 5 years experience.

1.8 PRE-INSTALLATION MEETINGS

A. Division 01 Section: “Administrative Requirements”: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Division 01 Section: “Product Requirements”: Requirements for transporting, handling, storing, and protecting products.

B. Furnish temporary end caps and closures on piping and fittings. Maintain in place until installation.

C. Protect piping from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.

D. Polypropylene piping shall be protected from harmful UV radiation. Piping shall be kept on site in its protective cover until ready to be installed. Cover un-bagged pipe with a light-colored tarp until ready to be installed. Where indicated on the drawings that the pipe will be exposed to direct UV light for more than 30 days, it shall be provided with a Factory applied, UV-resistant coating or alternative UV protection.

E. Handling Flammable Liquids: Remove and legally dispose of liquid from drips in existing gas piping and handle cautiously to avoid spillage or ignition. Notify the gas supplier. Handle flammable liquids used by the installer with proper precautions, and do not leave on the premises from the end of one working day to the beginning of the next.

F. Do not expose PEX piping to direct sunlight for more than 30 days.

1.10 ENVIRONMENTAL REQUIREMENTS

A. Division 01 Section: “Product Requirements”: Environmental conditions affecting products on site.

B. Do not install underground piping when bedding is wet or frozen.

1.11 FIELD MEASUREMENTS

A. Verify field measurements prior to fabrication.

1.12 WARRANTY

A. Division 01 Section: “Execution and Closeout Requirements”: Product warranties and product bonds.

B. Furnish five year manufacturer warranty for valves excluding packing.

C. Furnish five year manufacturer warranty for leak detection and location system.

1.13 COORDINATION

A. Division 01 Section: “Administrative Requirements”: Requirements for coordination

B. Notification of Interruption of Service: Provide notification for all utility outages.

C. Work Interruptions: When interruptions in work occur while repairs or alterations are being made to an existing piping system, leave the system in safe condition.

D. Coordinate installation of buried piping with trenching.

E. Coordinate the installation of pipe sleeves for foundation wall penetrations.

F. Coordinate the size and location of concrete pads. Cast anchor bolt inserts into pad.

G. Coordinate the installation of roof piping support, and roof penetrations.

PART 2 - PRODUCTS

2.1 PIPE AND TUBE MATERIALS AND APPLICATION SCHEDULE

Domestic Cold, Hot, and Circulating Hot Water (Potable and Non-Potable)	**Pipe Material**	**Fitting Material**	**Joint Material**

(Below Grade)	4" and larger: Ductile Iron: AWWA C151 or with AWWA C104 cement mortar lining.	4" and Larger: Ductile Iron: AWWA C 110 or AWWA C153, with AWWA C104 cement mortar lining.	AWWA C111 rubber gasket with rods
	3" and smaller: ASTM B88, Type K, water tube, annealed temper.	ASME B16.18, cast copper, or ASME B16.22, wrought copper.	Brazed, AWS A5.8 BCuP silver/phosphorus/copper alloy with melting range 1190 to 1480 degrees F
	3" and smaller ASTM B88, Type K water tube, annealed temper.	ASME B16.51, ICC LC 1002, IAPMO PS 117, NSF61, NSF61-G or NSF372.	ProPress fittings ½-inch thru 4-inch shall be joined using appropriate sized Ridgid ProPress Tools. ProPress fittings shall be installed according to the most current edition of the Viega installation guidelines. Installers shall attend a Viega ProPress installation training class
(Above Grade)	Copper Tube: ASTM B88, Type L, Seamless, Water Tube, hard-drawn temper.	Copper Tube: ASME B16.22, wrought copper, or copper alloy, solder joint, 150 lb.	ASTM B32, alloy Sb5 (95 percent tin and 5 percent antimony), lead free solder.
	Copper Tube: ASTM B88, Type L, Seamless, Water tube, hard-drawn temper	Copper tube: ASME B16.22, wrought copper, or cast bronze ASME B16.18, 300 psig	Victaulic Style 607H Installation-Ready coupling.

Sanitary, Sanitary Vent, and Storm Water	**Pipe Material**	**Fitting Material**	**Joint Material**
(Below Grade)			
	Poly Vinyl Chloride (PVC); DWV pipe, ASTM D2665, Schedule 80, solid wall plain ends. PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 12454.	PVC, ASTM D2665, PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 12454	ASTM D2855, solvent weld with ASTM D2564 solvent cement.
(Above Grade)			
	Poly Vinyl Chloride (PVC); DWV pipe, ASTM D2665, Schedule 40, solid wall plain ends. PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 12454.	Socket ASTM D2665. PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 12454.	ASTM D2855, solvent weld with ASTM D2564 solvent cement.

Sanitary and Storm Water Sumps and Ejectors Pressure Discharge Piping	**Pipe Material**	**Fitting Material**	**Joint Material**
	Copper Drainage Tube, Type K, DWV, ASTM B306	Wrought Copper ASME B16.29	Soldered; ASTM B32, Alloy Sb5 (95% tin and 5% antimony), lead free
	Copper Drainage Tube, Type K, DWV, ASTM B306	Copper tube: ASME B16.22, wrought copper, or cast bronze ASME B16.18	Victaulic Style 607 Installation-Ready coupling.

Air Conditioning Condensate, Equipment Drains, and Overflows	**Pipe Material**	**Fitting Material**	**Joint Material**
	Poly Vinyl Chloride (PVC); DWV pipe, ASTM D2665, Schedule 40, solid wall plain ends. PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 1245 In return air plenums, wrap pipe with plenum wrap complying with material requirements of ASTM E84, NFPA 262, and UL 910.	Socket ASTM D2665. PVC material shall comply with the material requirements of ASTM D1784 and have a cell classification of 12454.	ASTM D2855, solvent weld with ASTM D2564 solvent cement.

Foundation Drains	**Pipe Material**	**Fitting Material**	**Joint Material**
	Perforated Plastic: ASTMD-2729, hole spacing per AASHTOM-252.	Not applicable.	Not applicable.
	CPVC Pipe: ASTM F441, Schedule 80, chlorinated polyvinyl chloride (CPVC) material.	ASTM F439, CPVC, Schedule 80, socket type	solvent weld with ASTM F493 solvent cement and ASTM F656 primer.

Radon Piping	**Pipe Material**	**Fitting Material**	**Joint Material**
Below Grade	Rigid Plastic: ASTMD-2729, hole spacing per ANSI/AARST, soil gas control systems in new construction of building, minimum of 1 square inch of hole volume per linear foot of pipe	N/A	N/A

Above Grade	Pressure rated PVC Pipe: Schedule 40, polyvinylchloride (PVC) material, ASTM D1785	ASTM D2466. Schedule 40, PVC	ASTM D2855, Solvent weld with ASTM D2564 solvent cement.

2.2 UNDERGROUND PIPE MARKERS

A. Furnish materials in accordance with the requirements of the authority having jurisdiction.

B. Plastic Ribbon Tape: Bright colored, continuously printed, minimum 6 inches wide by 4 mil thick, manufactured for direct burial service.

C. Trace Wire: Magnetic detectable conductor, brightly colored plastic covering, imprinted with "Domestic Water Service", "Fuel Oil Piping", "Natural Gas Service", "LPG Service" or "Sewer Service" in large letters.

2.3 PIPING SPECIALTIES

A. Pipe Flange Gasket Materials: Suitable for the chemical and thermal conditions of the piping system contents:

1. ASME B16.21, nonmetallic, flat, asbestos-free, 1/8" maximum thickness, except where thickness or specific material is indicated.
    a. Full-Face Type: For flat-face, Class 125 cast-iron and cast bronze flanges.
    b. Narrow-Face Type: For raised-face, Class 250 cast-iron and steel flanges.
2. ASME B16.20, for grooved, ring joint, steel flanges.
3. AWWA C110, rubber, flat face, 1/8 inch thick, except where other thickness is indicated; and full-face or ring type, except where type is indicated.

B. Flange Bolts and Nuts:

1. ASME B18.2.1, carbon steel, except where other material is indicated.

C. Plastic Pipe Flange Bolts, Washers and Nuts: Type and material recommended by piping system manufacturer, except where other type or material is indicated. Flat washers must be used under nuts and bolts. Gaskets to be full face, 1/8th inch thick, 70 durometer and of a material recommended for the application by the manufacturer.

D. Unions: Lead Free, ANSI B16.39, Class 150, malleable iron; female pattern; brass to iron seat; ground joint. Threads shall conform to ANSI/ASME B1.20.1. Unions in copper piping shall be sweat fittings with bronze seats designed for 200 psig working pressure.

E. Dielectric Unions: Lead Free, provide dielectric unions with appropriate end connections for the pipe materials in which installed (screwed, soldered, or flanged), which effectively isolate dissimilar metals, prevent galvanic action, and stop corrosion.

F. Dielectric Fittings: Lead Free, provide dielectric fittings with appropriate end connections and piping materials. Dielectric fittings shall be as manufactured by Victaulic Style 47, Legend Valve Company Model T-575 or acceptable comparable product.

G. Dielectric Waterway: Copper silicon casting conforming to UNS C87850 with grooved and/or threaded ends. UL classified in accordance with NSF-61 for potable water service and shall meet the low-lad requirements of NSF-372. Basis of Design: Victaulic Series 647.

H. Strainers – “Y” Type:

1. Strainers shall be lead free and of the basket or "Y" design, as manufactured by Watts, Nibco, Victaulic, Wilkens (A Zurn company), Grinnell, Conbraco Industries; Apollo or an comparable acceptable product. Bodies shall have arrows clearly cast on the sides to show flow direction. Strainers shall be equipped with easily removable covers and standard stainless steel screens. Total area of perforations shall be not less than four times the cross section of the entering pipe.
2. Provide valved blow off connections for all strainers full size of blow off tapping, with capped ends.

I. Expansion Tanks:

1. Provide diaphragm type expansion tank as manufactured by Zurn Model WTTA, Amtrol – Therm-X-trol, Taco Model No. PAX, or Bell and Gosset Model PTA.
2. Size and number as indicated; construct of welded carbon steel for 125 psig working pressure, 375°F maximum operating temperature. Separate air charge from system water to maintain design expansion capacity, by means of a flexible diaphragm securely sealed into tank. Provide taps for air charging fitting, and drain plug. Support vertical tanks with steel legs or base; support horizontal tanks with steel saddles. Tank, with taps and supports, shall be constructed, tested, and labeled in accordance with ASME Pressure Vessel Code, Section VIII, Division 1. Tanks shall be provided with integral base ring for vertical mounting.

J. Basket Strainers:

1. Strainers shall be lead free as manufactured by, Watts, Nibco, Metraflex, or Spirax Sarco.
2. 125 psig working pressure; high tensile cast-iron body (ASTM A126, Class B), flanged end connections, bolted cover, perforated Type 304 stainless steel basket, and bottom drain connection.

K. “Y” type Strainer

1. Strainers shall be lead free as manufactured by Zurn/Wilkins, Mueller, Nibco Metraflex, Watts, Spirax Sarco, or Apollo.
2. 125 psig working pressure: Ductile Iron ASTM A536 main valve body, NSF approved epoxy finish, flanged end connections, bolted access cover, perforated Type 300 Series stainless steel screen, and bottom drain connection

L. Recessed Non-freeze Wall Hydrants:

1. Provide as manufactured by Jay R. Smith, Josam, Watts or Zurn Model No. Z1300.
2. ASME A112.21.3M, or ASSE 1019, cast-bronze, with chrome-plated face hinged locking cover tee handle removable key, automatic draining, vacuum breaker, ¾" inlet, and hose outlet. Bronze casing shall be length to suit wall thickness.

M. Vacuum Breakers:

1. Pipe Applied, Atmospheric Vacuum Breaker shall conform to ASSE 1001, with floating disc and atmospheric vent.
2. Hose connection vacuum breakers shall conform to ASSE Standard 1011, with finish to match hose connection.
3. Laboratory Faucet Vacuum Breakers: ASSE 1035, chrome plated; consisting of primary and secondary checks, intermediate vacuum breaker, threaded ends, 1/4" or 3/8" size as required, for continuous pressure application.
4. Vacuum breakers shall be lead free.

N. Reduced Pressure Backflow Preventers:

1. Reduced pressure type backflow preventers shall be lead free and shall be manufactured by Ames, Conbraco Industries; Apollo, Watts, Zurn/Wilkins, or an acceptable comparable product.
2. Reduced-pressure-principle assembly consisting of shutoff valves on inlet and outlet and strainer on inlet. Assemblies shall include test cocks and pressure-differential relief valve located between 2 positive seating check valves and comply with requirements of ASSE Standard 1013. Shut-off valves shall be provided in accordance with valves as specified in this section.
3. Shut-off and check valves shall be the same model as provided for system in which backflow preventer is being installed.
4. Valve stand shall be manufactured by: Ames, or Watts, or an acceptable comparable product.
    a. Valve stands shall be provided in pairs. Stands shall be adjustable to accommodate varying heights.
    b. Stands shall be corrosion resistant.
    c. Mounting plates and Yokes shall be epoxy coated.
    d. Yokes and mounting plates shall be of coated cast iron material. Support cylinders shall be of zinc plated material.

O. Double Check Valve Backflow Preventers:

1. Double check valve backflow preventers shall be lead free and shall be manufactured by Conbraco Industries; Apollo, Watts, Spence, or Zurn/Wilkins.
2. Double check backflow assemblies, conforming to ASSE 1015, consisting of shut-off valves on inlet and outlet and strainer on inlet. Include test cocks with 2 positive seating check valves for continuous pressure application.
3. Valve stand shall be manufactured by: Ames, or Watts, or an acceptable comparable product.

    a. Valve stands shall be provided in pairs. Stands shall be adjustable to accommodate varying heights.
    b. Stands shall be corrosion resistant.
    c. Mounting plates and Yokes shall be epoxy coated.
    d. Yokes and mounting plates shall be of coated cast iron material. Support cylinders shall be of zinc plated material.

P. Water Hammer Arresters:

1. Water hammer arresters shall be Zurn Model WH-2950-XL. Comparable products as manufactured by Jay R. Smith, Josam, Precision Plumbing Products, or Watts, may be submitted for review.
2. ASSE 1010, or PDI WH-201, “Water Hammer Arresters,” “latest edition”, bellows or piston type with pressurized cushioning chamber. Sizes are based on water-supply fixture units, sizes “A” through “F” and PDI WH-201, sizes “A” through “F.”
3. Water Hammer Arresters shall be lead free when used with lead-free end user devices and piping that are required by Maryland law to be lead free.

Q. Welding Materials: Comply, with Section II, Part C. ASME Boiler and Pressure Vessel Code for welding materials appropriate for the wall thickness and chemical analysis of the pipe being welded.

R. Drainage System Specialties

1. Horizontal Backwater Valves: ASME A112.14.1, cast iron body, with removable bronze swing check valve, threaded or bolted cover, as manufactured by Jay R. Smith, Josam, Watts, or Zurn.

    a. Extension: Full size, service class, cast iron soil pipe extension to field installed cleanout at floor. Extensions shall be Zurn Model Z1095-FC. Comparable products as manufactured by Josam or J.R. Smith may be submitted for review.
2. Vent Caps shall be Zurn Model Z193 cast-iron body with threaded or hub inlet and vandal-proof design. Include vented hood and set-screws to secure to vent pipe. Comparable products as manufactured by Josam or J.R. Smith may be submitted for review.
3. Odor Eliminator Vent Caps shall be Sweet Air model VS-TT, UV stabilized, Hi-Impact ABS construction. Provide with 8 ounces of carbon filter material.
4. Cleanouts: ASME A112.36.2M, cast-iron body with straight threads and gasket seal or taper threads for plug flashing flange and clamping ring, and a brass closure plug. Cleanouts for installation in floors not having membrane waterproofing may be furnished without clamping ring.

Cleanouts in Concrete Floors	Zurn Model No. Z-1400-BZ1-BP, or Watts Model C0-200-RX cast iron body, bronze plug to suit floor finish with adjustable round scoriated top. Comparable products as manufactured by J.R. Smith or Josam may be submitted for review.
Cleanouts in Finished Floors	Zurn Model No. ZN-1400-BZ1-BP cast iron body, bronze plug and scoriated adjustable nickel bronze leveling cover. ZN-1400-X-BP cast iron body, bronze plug and recessed nickel bronze top to suit floor finish for vinyl tile or ZN-1400-CM-BP cast iron body, bronze plug with nickel bronze top and carpet marker to suit floor finish for carpet. Comparable products as manufactured by Jay R. Smith, Josam, or Watts may be submitted for review.
Cleanouts in Finished Floors With Acid Waste System	Orion Model FCO with style to suit floor finish constructed of PVDF material conforming to ASTM D3222, with "AWCO" cast in cover, may be submitted for review.
Acid Waste Wall Cleanout	Manufactured by Orion, or comparable acceptable product, suitable for acid waste. Orion may be submitted for review.
Cleanouts in Piping	Zurn Model No. Z-1440-BP, or Watts Model C0-380 epoxy coated cast iron body with bronze plug, comparable products as manufactured by Josam or J.R. Smith may be submitted for review.
Cleanouts in Walls	Zurn Model No. Z-1441-BP-VP, or Watts Model C0-380-RD style to suit wall finish, with epoxy coated cast iron body, bronze plug and vandalproof screws. Comparable products as manufactured by J.R. Smith or Josam may be submitted for review.

5. Floor Drains/Sinks: Floor drains/sinks shall be as manufactured by Zurn, or Watts. Comparable products as manufactured by Jay R. Smith, Josam, Orion, or Wade may be submitted for review.

   a. Floor Drains (Acid Waste):
      1) Watts Model FD-103-A6, polypropylene body and clamp collar with adjustable stainless steel secured strainer.
      2) IPEX: Floway Floor Drain models F1000 adjustable and F4000 non-adjustable with non-puncturing style flashing collar with weep holes. Available with sediment basket and 6" diameter funnel.
   b. Floor Drains (Sanitary Waste):
      1) Zurn Model ZN-415-BZ6-TC-P, or Watts Model FD-103-A6, Dura coated cast iron body and clamp collar with 6" diameter nickel bronze leveling strainer with removable debri cover and trap primer connection.

c. Floor Sinks:
   1) Zurn Model Z-1900-32-W/Z1023 or Watts Model FS-730-7, cast iron body, slotted grate, porcelain enamel coated interior and top, aluminum interior dome strainer, 1/2" trap primer connection.

6. Deep Seal Traps: Zurn Model Z-1000-P Cast iron or bronze, with inlet and outlet matching connected piping, cleanout where indicated, and trap seal primer valve connection. Comparable products as manufactured by Charlotte Pipe, Jay R. Smith, or Josam may be submitted for review.

   a. 2-Inch Size: 4-inch-minimum water seal.
   b. 2 1/2 Inches and Larger: 5-inch-minimum water seal.
7. Inlet Fittings: Cast iron, with threaded inlet and threaded or spigot outlet, and trap seal primer valve connection.
8. Air Gap Fittings: ASME A112.1.2, cast iron or cast bronze, with fixed air gap, inlet for drain pipe or tube, and threaded or spigot outlet.
9. Roof Drains:

   a. ASME A112.21.2, epoxy coated cast-iron body, with combination flashing ring and gravel stop, cast-iron dome except where other dome material is specified, extension collars, underdeck clamp, and sump receiver.
      1) Provide as manufactured by Zurn, Model ZC-100-EA-R-C, or Watts Model RD-300-B-D-K-F suitable for roof construction. Comparable products as manufactured by Jay R. Smith or Josam may be submitted for review.
   b. Provide Zurn model Z100 Flowforce high performance roof drain
      1) Roof drain engineered to evacuate water off of roof structure by incorporating a smooth funnel-shaped interior surface, providing a seamless transition to outlet connection, and eliminating internal obstructions.
      2) Complete with Dura-Coated cast iron body with combination membrane flashing clamp/gravel guard and low silhouette Poly-Dome.
      3) Flashing clamp/gravel guard provided to prevent debris from entering the drain while allowing water to immediately pass through at zero head level.
      4) Poly-dome designed to maximize effective open area and promote efficient flow
10. Parapet Scupper: Watts Model RD-270, or Zurn Z-198. Comparable products as manufactured by Jay R. Smith, or Josam, may be submitted for review.
11. Downspout nozzle: Zurn Model Z-199, or Watts Model RD-940. Comparable product as manufactured by Jay R. Smith, or Josam may be submitted for review.
12. Downspout boot:

   a. 5x4 Downspout boot, Zurn Model Z191, or Watts Model RD-980. Comparable product as manufactured by Josam or Jay R. Smith may be submitted for review.
   b. 4x3 Downspout boot, Zurn Model Z192, or Watts Model RD-970. Comparable product as manufactured by Josam or Jay R. Smith may be submitted for review.
   c. Round inlet and outlet downspout boot, Zurn Model Z191-RD, or comparable product as manufactured by Josam or Jay R. Smith.

13. POINT OF USE SOLIDS INTERCEPTOR

   a. Basis od design shall be STRIEM model sidekick. Comparable products as manufactured by Zurn shall be submitted for approval as a comparable product.

b. Striem solids interceptor model SIDEKICK shall be lifetime guaranteed and made in the USA.
c. Interceptor shall be constructed of an injection molded PVC housing and polycarbonate perforated basket.
d. Interceptor is manufactured for above-grade installation.
e. Basket shall provide the ability for side-access maintenance and shall be clear to allow visibility into unit.
f. Solids capacity shall be 0.17 gallons.
g. Interceptor shall be certified to IAPMO IGC 167-2011ae2 and carry a UPC listing

14. OIL SEPARATOR

a. Striem Oil Reserve/Tanker oil/sand separator shall be lifetime guaranteed and made in USA of Polyethylene with minimum 3/8" uniform wall thickness.
b. Separator shall be furnished for below grade installation, with field adjustable riser system, built-in flow control and vent connections.
c. Cover shall provide water/gas-tight seal and have traffic rated cover.
d. Separator shall be certified to IAPMO IGC 183-2016 and carry a UPC listing.
e. Add Clean Sweep oil coalescing media for effluent quality of 5ppm (mg/L) oil content.

S. Escutcheons: Manufactured wall, ceiling, and floor plates; deep-pattern type where required to conceal protruding fittings and sleeves.

1. Inside Diameter: Closely fit around pipe, tube, and insulation.
2. Outside Diameter: Completely cover opening.
3. Cast Brass: One-piece, with set-screw.
4. Cast Brass: Split casting, with concealed hinge and set-screw.

a. Finish: Rough brass.
b. Finish: Polished chrome plate.

5. Stamped Steel: One-piece, with set-screw and chrome-plated finish.
6. Stamped Steel: Split plate, with concealed hinge, set-screw, and chrome-plated finish.
7. Cast-Iron Floor Plate: One-piece casting.

T. Dielectric Fittings: Lead free assembly or fitting having insulating material isolating joined dissimilar metals to prevent galvanic action and stop corrosion.

1. Description: Combination of copper alloy and ferrous; threaded, solder, plain, and weld neck end types and matching piping system materials.
2. Insulating Material: Suitable for system fluid, pressure, and temperature.
3. Dielectric Unions: Factory-fabricated, union assembly for 250-psig minimum working pressure at a 180°F temperature.
4. Dielectric Flanges: Factory-fabricated, companion-flange assembly for 150-or 300-psi minimum pressure to suit system pressures.
5. Dielectric-Flange Insulation Kits: Materials for flange isolation kits on pipes containing drinking/potable water (up to 280°F) shall consist of the following components:

a. Isolating and Sealing Gasket:
1) The full faced, NSF 61 certified, isolating and sealing gasket shall be LineBacker® 61™ Sealing Gasket (LB61) – Type "E", 1/8" thick, G-10 retainer containing a precision tapered groove to accommodate the controlled

compression of a EPDM quad-ring sealing element. Sealing element placement shall accommodate either flat, raised face or RTJ flanges.

2) The quad-ring seal shall be pressure energized. The G-10 retainer shall have a 550 volts/mil dielectric strength and a minimum 50,000 psi compressive strength.

3) The full faced flange isolating gasket (weld-neck) shall be equal to or slightly smaller than the bore of the flange; (slip-on) shall be equal to or smaller than the I.D. of mating pipe.

b. Full Length Bolt Isolating Sleeves:

1) One full length G-10 Sleeve (extending half way into both steel washers) for each flange bolt. The G-10 shall be a 1/32 inch thick tube with a 400 volts/mil dielectric strength and water absorption of 0.10% or less.

c. Washers:

1) Two, 1/8 inch thick, G-10 isolating washers for each bolt. Their compressive strength shall be 50,000 psi, dielectric strength 550 volts/mil and water absorption 0.10% or less.

2) Two, 1/8 inch thick zinc plated, hot rolled steel washers for each bolt. The I.D. of all washers shall fit over the isolating sleeve and both the steel and isolating washers shall have a same I.D. and O.D.

d. Quality:

1) Flange isolating kits shall be manufactured at a facility that has a registered ISO 9001:2008 Quality Management System. Submittals shall include copy of valid ISO registration and NSF 61 certification.

e. Basis of Design:

1) Flange gasket kits shall be manufactured by PSI-Pipeline Seal and Insulator, Inc., Houston, Texas. Comparable products shall be submitted as required under Section Product Requirements for comparable product review. Products should be submitted to engineer 10 days prior to bid due date.

6. Dielectric Couplings: Lead free galvanized-steel coupling, having inert and noncorrosive, thermoplastic lining, with threaded ends and 300-psig minimum working pressure at 225° temperature.
7. Dielectric Nipples: Lead free electroplated steel or ductile nipple, having inert and noncorrosive thermoplastic lining, with combination of plain, threaded, or grooved end types and 300-psig working pressure at 230 °F temperature. Victaulic Style 47 or Grinnell Style 407.
8. Dielectric Waterway: Copper silicon casting conforming to UNS C87850 with grooved and/or threaded ends. UL classified in accordance with NSF-61 for potable water service, and shall meet the low-lead requirements of NSF-372. Basis of Design: Victaulic Series 647.

U. Pipe Guides:

1. Systems greater than 70°F operating temperature: Provide Erico (formerly known as Michigan) Model No. 650, or an acceptable comparable product.
2. Systems less than 70°F operating temperature: Provide Erico (formerly known as Michigan) Model No. 651, or an acceptable comparable product.
3. For Polypropylene (PP-R) piping: Raywal BISMAT 5000 single screw pipe clamp/guide.
4. For CPVC: Shall be chemically compatible with CPVC

V. Pipe Anchors:

1. Steel Shapes and Plates: ASTM A 36/A 36M.
2. Bolts and Nuts: ASME B18.10 or ASTM A 183, steel, hex head.
3. Washers: ASTM F 844, steel, plain, flat washers.
4. Mechanical Fasteners: Insert-wedge-type stud with expansion plug anchor for use in hardened Portland cement concrete, and tension and shear capacities appropriate for application.

    a. Stud: Threaded, zinc-coated carbon steel.
    b. Expansion Plug: Zinc-coated steel.
    c. Washer and Nut: Zinc-coated steel.
5. Chemical Fasteners: Insert-type-stud bonding system anchor for use with hardened Portland cement concrete, and tension and shear capacities appropriate for application.

    a. Bonding Material: ASTM C 881, Type IV, Grade 3, 2-component epoxy resin suitable for surface temperature of hardened concrete where fastener is to be installed.
    b. Stud: ASTM A 307, zinc-coated carbon steel with continuous thread on stud, unless otherwise indicated.
    c. Washer and Nut: Zinc-coated steel.
6. Concrete: Portland cement mix, 3000 psi minimum. Refer to Division 03 Section: “Cast-in-Place Concrete” for formwork, reinforcement, and concrete. Grout: Refer to Division 22 Section: “Common Work Results for Plumbing.”
7. For CPVC: Shall be chemically compatible with CPVC

W. Thermometers, General

1. Scale Range: Temperature ranges indicated in degrees Fahrenheit shall be provided for services listed as follows:

    a. Domestic Hot Water: 30 to 180°F, with 2-degree scale divisions.
    b. Domestic Cold Water: 0 to 100°F, with 2-degree scale divisions.
2. Accuracy: Plus or minus 1 percent of range span or plus or minus one scale division to maximum of 1.5 percent of range span.
3. Liquid-in-glass Thermometers

        1) Provide as manufactured by H.O. Trerice, Weiss Instruments, Weksler Instrument Corp., or Miljoco.
        2) Description: ASTM E1, liquid-in-glass thermometer. Delete ASTM E1 as this specification is strictly set aside for engraved glass tube laboratory thermometers. Insert ANSI/B40.2 in its place.
        3) Case: High Pressure Die-cast aluminum-finished in baked-epoxy enamel, glass front, spring secured, 9 inches long.
        4) Adjustable Joint: Finished to match case, 180° (3.1rad) adjustment in vertical plane, 360° adjustment in horizontal plane, with locking device.
        5) Tube: Blue-reading, organic liquid-filled instead of mercury-filled, with magnifying lens.
        6) Scale: White coated aluminum with permanently baked bold black markings.
        7) Stem: Copper-plated steel, Zamac Alloy, aluminum, or brass for a separable socket of length to suit installation.

8) Thermowell: Brass NSF/ANSI 372 separable socket of suitable length for installation.

4. Direct-mounting Filled-system Dial Thermometers

   a. Provide as manufactured by H.O. Trerice Co., Weiss Instruments, Inc., Weksler Instrument Corp., or Miljoco.
   b. Description: Vapor-actuated universal-angle dial thermometer.
   c. Case: Drawn steel or cast aluminum, with 4-1/2-inch - diameter glass lens.
   d. Adjustable Joint: Finish to match case, 180° adjustment in vertical plane, 360° adjustment in horizontal plane, with locking device.
   e. Thermal Bulb: Copper with phosphor-bronze Bourdon pressure tube.
   f. Movement: Brass, precision geared.
   g. Scale: Progressive satin-faced nonreflective aluminum with permanently etched markings.
   h. Stem: Copper-plated steel, aluminum, or brass for a separable socket of length to suit installation.

5. Remote-reading, Filled-system Dial Thermometers

   a. Provide as manufactured by H.O. Trerice Co., Weiss Instruments, Inc., or Weksler Instrument Corp.
   b. Description: Vapor-actuated remote-reading dial thermometer.
   c. Case: Drawn steel or cast aluminum, with 4 1/2 -inch-diameter glass lens.
   d. Movement: Brass, precision geared.
   e. Scale: Progressive satin-faced nonreflective aluminum with permanently etched markings.
   f. Tubing: Bronze double-braided armor-over-copper capillary of length to suit installation.
   g. Bulb: Copper with separable socket for liquids; averaging element for air.

6. Thermometer Wells

   a. Description: Brass or stainless-steel thermometer well, with heat conducting compound.
   b. Pressure Rating: Not less than piping system design pressure.
   c. Stem Length: To extend 2 inches into fluid or center of pipe, whichever is shorter.
   d. Extension for Insulated Piping: 2 inches nominal, but not less than thickness of insulation.
   e. Threaded Cap Nut: With chain permanently fastened to well and cap.

X. Pressure Gages, General

1. Provide as manufactured by H.O. Trerice Co., Weiss Instruments, Inc., Weksler Instrument Corp., or Miljoco.

   a. Description: ASME B40.1, Grade A phosphor-bronze Bourdon-tube pressure gage, with bottom connection.
   b. Case: Drawn steel, brass, or aluminum with 4 1/2 -inch -diameter glass lens.
   c. Connector: Brass, 1/4" inch NPS.
   d. Scale: White-coated aluminum, with permanently etched markings.
   e. Accuracy: Plus or minus 1 percent of range span.
   f. Range: **<<Edit to suit project specifics>>**
      1) Hydronic System: 0 – 100 psi.
      2) High Pressure Steam System: 0 – 200 psi.
      3) Medium Pressure Steam System: 0 – 100 psi.

4) Low Pressure Steam System: 0 – 50 psi.

g. Snubbers: 1/4" inch brass bushing with corrosion-resistant porous-metal disc of material suitable for system fluid and working pressure.

h. Needle Valve: Exceed pressure and temperature rating of installation.

Y. Test Plugs:

1. Provide as manufactured by Flow Design, Inc., Peterson Equipment Co., H.O. Trerice, or Miljoco, Weiss.
2. Description: Nickel-plated brass-body test plug in 1/2" inch fitting.
3. Body: Length as required to extend beyond insulation.
4. Pressure Rating: 500 psig minimum.
5. Core Inserts: 2 self-sealing valve types, suitable for inserting a 1/8” inch (3mm) outside-diameter probe from a dial thermometer or pressure gage.
6. Core Material: According to the following for fluid and temperature range:

   a. Air, Water, Oil, and Gas: 20°F to 200°F, neoprene rubber.
   b. Air and Water: Minus 30°F to 275°F, ethylene-propylene-diene-terpolymer (EPDM) rubber.
7. Test-Plug Cap: Gasketed and threaded cap, with retention chain.
8. Test Kit: Provide test kit consisting of 1 pressure gage and gage adapter with probe, 2 bimetal dial thermometers and a carrying case.
9. Pressure Gage and Thermometer Ranges: Approximately 2 times systems operating conditions.

Z. Domestic Water Mixing Valves

1. Thermostatic Mixing Valves:

   a. Provide Thermostatic Mixing Valves as manufactured by Acorn Controls, Lawler, Leonard or Powers.
   b. The thermostatic mixing valve shall be IAPMO lab certified to ASSE 1017 and CSA standards and capable of meeting the control accuracy requirements of these standards at the manufacturers listed minimum flow rates.
   c. The valve shall contain an advanced paraffin sensor with a temperature range of 100F to 160F and factory set at 120F with a lock nut to prevent unauthorized temperature changes.
   d. Checks and screens are required at both inlets.
   e. Maximum inlet pressure is 125 PSI
   f. Maximum inlet temperature is 180F
   g. Inlet/Outlet temperature differential minimum (approach) is 5F
   h. Provide external ball valves at all inlets and outlets
   i. Body material to be Lead-Free brass with corrosion resistant internal components.

2. ASSE 1016 Shower Mixing Valves:

   a. Provide Acorn Controls model SV16, Hydroguard T/P Series E700 thermostatic tempering valves as manufactured by Powers, comparable products as manufactured by Bradley, or Leonard Valve Company may be submitted for review as a comparable product.

b. Valve shall operate with a non-rising stem and include ceramic shutoffs.
c. Cartridge shall be self-contained.
d. Valves shall be suitable for ½" inlet and ½" NPT top outlet piping connections.
e. Maximum hot water supply temperature of 180°F, minimum hot water supply temperature of 5°F above setpoint.
f. Capacity without checkstops shall be 4 gpm at 45 PSI.
g. Maximum operating pressure of 125 psi.
h. Temperature ranges ASSE 1016 T/P 85° - 115°F to include a field adjustable limit stop factory set at 110F and capable of supplying mixed water temperature within 5F of hot water supply temperature.
i. Valve shall always open through cold water to maximize bather safety.
j. Listing – ASSE 1016-2011.

3. ASSE 1070 Public Hand Washing Mixing Valve:
Provide Acorn Controls model ST70, Watts Series LFUSG – B, Thermostatic Mixing Valve, Leonard Models 170-LF-BP or 170A-LF-BP, Conbraco Industries; Apollo Model 34DLF, or Thermostatic Mixing Valve. Comparable products as manufactured by Bradley or Zurn may be submitted for review as a comparable product.

a. ASSE 1070 and IAPMO cUPC listed to control the temperature of hot water.
b. Lead Free Brass 4 – Port 'H' pattern body or factory supplied tee connection.
c. Include Integral Check Valves, Integral Screens and adjustment nut with locking feature.
d. Ranges

1)	Minimum supply pressure:	30 Psi
2)	Hot Inlet Temperature:	120° - 180°F
3)	Cold Inlet Temperature:	39° - 80°F
4)	Minimum Inlet Temperature Difference:	5°F
5)	Supply Temperature range:	85° - 115°F
6)	Maximum Pressure:	125 Psi
7)	Minimum Flow:	0.25 GPM
8)	Maximum Flow:	4.00 GPM

2.4 SLEEVE PENETRATION SYSTEMS

A. General: Provide protective sheathing or wrapping between metal pipes and sleeves to prevent pipes from corroding.

B. Sleeves shall be provided around all pipes through walls, floors, ceilings, partitions, structure members or other building parts. Sleeves through walls and floors shall be standard weight galvanized iron pipe two sizes larger than the pipe or insulation so that pipe or insulation shall pass through freely with space for movement for all piping which passes through masonry or concrete walls or floors. Provide 20 gauge galvanized steel sheet or galvanized pipe sleeves for all piping passing through frame walls.

C. Sleeves through floors shall be flush with the floor except for sleeves passing through Mechanical Rooms which shall extend ¾" above the floor. Space between the pipe and sleeve shall be caulked. Escutcheon plates shall be constructed to conceal the ends of sleeves.

D. Sleeves through walls and floors shall be sealed.

E. Penetrations through fire rated walls and floors.

1. All plumbing pipe and fixture penetrations through fire rated floors and walls shall be provided and firestopped using UL classified through penetration firestop devices as manufactured by ProSet Systems, Inc. The fire rating of the firestop device shall be equivalent or greater than the fire rating of the floor or wall penetrated. All firestop devices shall be provided in accordance with manufacturer's instructions.
    a. Penetrations by hot and cold domestic water lines shall be provided using ProSet System A firestop devices.
    b. Penetrations by cast iron drain, waste and vent piping, bathtub drains, water closet openings, shower drains and floor drains shall be provided using ProSet System B firestop devices.
2. All penetrations by fire protection water lines through fire rated floors and walls shall be provided and firestopped using UL classified through penetration firestop devices, System A, as manufactured by ProSet Systems Inc.
    a. The fire rating of the firestop device shall be equivalent to or greater than the fire rating of the floor or wall penetrated.
    b. All firestop devices shall be provided in accordance with manufacturer's instructions.
3. When using CPVC: Provide caulk, sleeves, mechanical sleeve seals, sealers, etc. used for penetrations that are chemically compatible with CPVC compounds per FBC Compatibility or consult with product manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Division 01 Section: “Administrative Requirements”: Verification of existing conditions before starting work.

B. Verify excavations and trenches are ready to receive piping.

C. Examine piping system for compliance with requirements for installation tolerances and other conditions affecting performance of installed devices. Do not proceed with installation until unsatisfactory conditions have been corrected.

D. Examine mating flange faces for conditions that might cause leakage. Check bolting for proper size, length, and material. Check gasket material for proper size, material composition suitable for service, and freedom from defects and damage.

E. Examine grooved ends for form and cleanliness. Ends shall be clean and free from indentations, projections, and roll marks in the area from valve, fitting, or pipe end to (and including) the groove.

F. Examine substrates and conditions under which pipe expansion joints, pipe alignment guides, and pipe anchors are to be installed. Do not proceed until unsatisfactory conditions have been corrected.

G. Do not enclose, cover, or put into operation any piping system until it has been inspected by the authority having jurisdiction and tested as specified herein.

3.2 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel or groove plain end ferrous pipe.

B. Remove scale and dirt on inside and outside before assembly.

C. Prepare piping connections to equipment with flanges or unions.

D. Unions and flanges for servicing and disconnect are not required in installations using grooved mechanical joint couplings. (The couplings shall serve as disconnect points if required.)

E. Keep open ends of pipe free from scale and dirt. Protect open ends with temporary plugs or caps.

F. Preparation For Testing: Prepare water piping and condensate piping in accordance with ASME B31.9, and as follows:

1. Test for leaks and defects in new piping systems and parts of existing systems that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of system tested.
2. Leave joints including welds un-insulated and exposed for examination during the test.
3. Provide temporary restraints for expansion joints, which cannot sustain the reactions due to test pressure. If temporary restraints are not practical, isolate expansion joints from testing.
4. Flush system with clean water. Clean strainers.

a. Provide temporary circulator for steam systems.
b. Open a drain at the low point of the system while replacing the water through the make-up at the same rate.
c. Continue flushing until clean water shows at the drain, but for not less than 24 hours.
d. After flushing, remove strainers and clean and replace them.
e. System shall be drained and flushed before final filling.
f. Flushing pumps are to have fine mesh construction strainers installed and shall be pulled and cleaned after flush.
g. Coordinate with Division 23 Section: “HVAC Piping Systems Cleaning and Treatment”.

5. Isolate equipment that is not to be subjected to the test pressure from the piping. If a valve is used to isolate the equipment, its closure shall be capable of sealing against the test pressure without damage to the valve. Flanged joints at which blinds are inserted to isolate equipment need not be tested.
6. Install relief valve set at a pressure no more than one-third higher than the test pressure, to protect against damage by expansion of liquid or other source of overpressure during the test.

3.3 EXCAVATION

A. Excavation for Utility Trenches

1. Excavate trenches to indicated gradients, lines, cross sections, elevations and subgrades.
2. Excavate trenches to uniform widths to provide the following clearance on each side of pipe.

a. Clearance: 8 inches minimum each side of pipe.

3. Trench Bottoms: Excavate and shape trench bottoms to provide uniform bearing and support of pipes. Shape subgrade to provide continuous support for bells, joints, and barrels of pipes and for joints, fittings, etc. Remove projecting stones and sharp objects along trench subgrade.

a. For pipes and conduit less than 6 inches in nominal diameter and flat-bottomed, hand-excavate trench bottoms and support pipe on an undisturbed subgrade.
b. For pipes 6 inches or larger in nominal diameter, shape bottom of trench to support bottom 90 degrees of pipe circumference. Fill depressions with tampered sand backfill.
c. Excavate trenches 6 inches deeper than elevation required in rock or other unyielding bearing material to allow for bedding course.

B. Unauthorized Excavation

1. Fill unauthorized excavation under foundations or wall footings by extending bottom elevation of concrete foundation or footing to excavation bottom, without altering top elevation.

C. Backfill

1. Place and compact backfill in excavations promptly, but not before completing the following:

    a. Construction below finish grade including, where applicable, subdrainage, damp proofing, water proofing and perimeter insulation.
    b. Surveying locations of underground utilities for Record Documents.
    c. Testing and inspecting underground utilities.
    d. Removing concrete formwork.
    e. Removing trash and debris.
    f. Removing temporary shoring and bracing, and sheeting.
    g. Installing permanent or temporary horizontal bracing on horizontally supported walls.
    h. Place and compact initial backfill of satisfactory soil, free of particles larger than 1 inch in any dimension, to a height of 12 inches over the utility pipe.
        1) Carefully compact initial backfill under pipe haunches and compact evenly up on both sides and along the full length of utility piping to avoid damage or displacement of piping. Coordinate backfilling with utilities testing.
    i. Backfill voids with satisfactory soil while installing and removing shoring and bracing.
    j. Place and compact final backfill of satisfactory soil to final subgrade elevation.
    k. Install detectable warning tape directly above utilities, 12 inches below finished grade, except 6 inches below subgrade under pavement and slabs.

D. Compaction of Soil Backfills and Fills

1. Place backfill and fill soil materials in layers not more than 8 inches in loose depth for material compacted by heavy compaction equipment, and not more than 4 inches in loose depth for material compacted by hand-operated tampers.
2. Place backfill and fill soil materials evenly on all sides of structures to required elevations, and uniformly along the full length of each structure.
3. Compact soil materials to not less than the following percentages of maximum dry unit weight according to ASTM D 1557:

    a. Under structure, building slabs, steps, and pavements, scarify and recompact top 12 inches of existing subgrade and each layer of backfill or fill soil material at 92 percent.
    b. Under walkways, scarify and recompact top 6 inches below subgrade and compact each layer of backfill or fill soil material at 92 percent.
    c. Under lawn or unpaved areas, scarify and recompact top 6 inches subgrade and compact each layer of backfill or fill soil material at 85 percent.
    d. For utility trenches, compact each layer of initial and final backfill soil material at 85 percent.
    e. Against foundation walls, scarify and recompact with and operated equipment within 3 feet of wall to avoid overstressing the wall at 95 percent.

3.4 INSTALLATION OF PIPING, GENERAL

A. Piping

1. Locations and Arrangements: Drawings (plans, schematics, and diagrams) indicate the general location and arrangement of piping systems. Locations and arrangements of piping take into consideration pipe sizing and friction loss, expansion, pump sizing, and other design considerations. So far as practical, install piping as indicated.

2. Install concentric reducers where pipe is reduced in size in the direction of flow, with bottoms of both pipes and reducer flush.
3. Connect branch piping to mains from top of main, unless specific otherwise for specific systems.
4. Install supports in accordance with Division 22 Section: “Hangers and Supports for Plumbing Piping and Equipment”.
5. Make changes in directions and branch connections using fitting, pull tees shall not be permitted.
6. Install flanges, flange kits, and unions in pipes 2 inch and smaller, adjacent to each valve, at final connections each piece of equipment, and elsewhere as indicated. Unions are not required on flanged devices.
7. Install dielectric unions where piping of dissimilar metals are joined.
8. Install flanges on valves, apparatus, and equipment having 2 1/2" inch and larger connections.
9. Unions or flanges for servicing and disconnect are not required in installations using grooved joint couplings.
10. Install flexible connectors at inlet and discharge connections to pumps and other vibration producing equipment.
11. Install strainers on the supply side of each control valve, pressure regulating valve, and elsewhere as indicated. Install ¾” inch NPS nipple and ball valve in blow down connection of strainers. Use same size nipple and valve as blow-off connection of strainer.
12. Anchor piping to ensure proper direction of expansion and contraction. Anchors shall attach to the building structure to prevent pipe movement. Anchors shall be installed in such a manner to prevent damage to the building structure. Anchors shall be securely welded to the piping being anchored. Install expansion loops and joints as indicated on the Drawings.
13. Install pipe sleeves at all wall and floor penetrations. Provide protective sheathing or wrapping between metal pipes and sleeves to prevent pipes from corroding.
14. Seal pipe penetrations of fire separations specified in Division 07 Section: "Joint Firestopping."
15. Hanger supports, and anchors are specified in Division 22 Section: "Hangers and Supports for Plumbing Piping and Equipment."
16. Install drains at low points in mains, risers, and branch lines consisting of a tee fitting, ¾” ball valve, and short ¾” threaded nipple and cap.
17. Exterior Wall Penetrations: Seal pipe penetrations through exterior walls using sleeves and mechanical sleeve seals. Pipe sleeves smaller than 6 inch shall be steel; pipe sleeves 6 inch and larger shall be sheet metal.
18. Install escutcheons at each wall, floor, and ceiling penetration in exposed finished locations and within cabinets and millwork. Use deep pattern escutcheons where required to conceal protruding pipe fittings.
19. In concealed locations where piping, other than cast iron or galvanized steel, is installed through holes or notches in studs, joists, rafters or similar members less than 1 ½” from the nearest edge of the member, the pipe shall be protected by steel shield plates. The plates shall be made of gage 16 and shall cover the area of the pipe where the member is notched or bored, and shall extend a minimum of 2” above sole plates and below tip plates.

B. INSTALLATION - ABOVE GROUND PIPING

1. Route piping in orderly manner and maintain gradient. Route parallel and perpendicular to walls.

2. Install piping to maintain headroom without interfering with use of space or taking more space than necessary.
3. Group piping whenever practical at common elevations.
4. Sleeve pipe passing through partitions, walls and floors.
5. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.
6. Provide clearance in hangers and from structure and other equipment for installation of insulation and access to valves and fittings. Provide access where valves and fittings are not accessible.
7. Install non-conducting dielectric connections wherever jointing dissimilar metals.
8. Establish invert elevations, slopes for drainage to ¼ inch per foot 2 percent minimum. Maintain gradients.
9. Slope piping and arrange systems to drain at low points.
10. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the Work, and isolating parts of completed system.
11. Install piping penetrating roofed areas to maintain integrity of roof assembly.

C. Joint Construction

1. Threaded Joints: Thread pipe with tapered pipe threads in accordance with ANSI/ASME B1.20.1.

    a. Cut threads full and clean using sharp dies.
    b. Ream threaded ends to remove burrs and restore full inside diameter.
    c. Apply pipe joint lubricant or sealant, suitable for the service for which the pipe is intended, on the male threads at each joint.
    d. Tighten joint to leave not more than 3 threads exposed.
    e. Note the internal length of threads in fittings or valve ends, and proximity of internal seat or wall, to determine how far pipe should be threaded into joint.
    f. Align threads at point of assembly.
    g. Apply appropriate tape or thread compound to the external pipe threads.
    h. Assemble joint to appropriate thread depth. When using a wrench on valves place the wrench on the valve end into which the pipe is being threaded.
    i. Damaged Threads: Do not use pipe with threads which are corroded or damaged.
    j. Damaged Threads: Do not use pipe with threads which are corroded or damaged. If a weld opens during cutting or threading operations, that portion of pipe shall not be used.

2. Welded Joints: Weld pipe joints in accordance with ASME B31.9 and ASME B31.1, where required by COMAR.
3. Brazed Joints: For copper tube and fittings, braze joints in accordance with ASME B31, “Standard Code for Pressure Piping” and AWS “Brazing Manual.”

    a. Remove stems, seats, and packing of valves and accessible internal parts of valves before brazing.
    b. Braze joints in accordance with ASME B31.1.
    c. Fill the tubing and fittings during brazing with nitrogen under a continuous purge to prevent formation of scale.
    d. Thoroughly clean tube surface and inside surface of the cup of the fittings, using very fine emery cloth, prior to making brazed joints. Wipe tube and fittings clean and apply flux. Flux shall not be used as the sole means for cleaning tube and fitting surfaces.

e. Heat joints to proper and uniform temperature.
f. WARNING: Some filler metals contain compounds which produce highly toxic fumes when heated. Provide adequate ventilation and avoid breathing fumes.

4. Solder Joints: Solder joints shall be made in accordance with ASTM B828. Cut tube ends shall be reamed to the full inside diameter of the tube end. Joint surfaces shall be cleaned. A flux conforming to ASTM B813 shall be applied. The joint shall be soldered with a solder conforming to ASTM B32. The joining of water supply piping shall be made with lead free solder and fluxes.
5. Press-connect fittings: Sealing element shall be verified for the intended use. Tube ends shall be cut on a right angle (square) to the tube. Tube ends shall be reamed and chamfered with all grease, oil, or dirt shall be removed from the tube end with a clean rag. Visually examine the fitting sealing element to ensure there is no damage and that it is properly seated into the fitting. Insert the tube fully into the fitting and mark the tube wall at the face of the fitting. Always examine the tube to ensure it is fully inserted into the fitting prior to pressing the joint. ProPress fittings ½-inch thru 4-inch shall be joined using appropriate sized Viega approved ProPress Tools. ProPress fittings shall be installed according to the most current edition of the Viega installation guidelines. Contractor or installer shall be trained by the manufacturer's representative prior to commencement of product installation.
6. Mechanical Joints: Follow grooved-end mechanical coupling manufacturer's written instructions. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service as specified. Gaskets shall be molded and produced by the grooved system manufacturer. Grooved end shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. A factory-trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools and installation of grooved piping products. Factory-trained representative shall periodically review the product installation. Contractor shall remove and replace any improperly installed products.

    a. Tongue and recess couplings (required a gap and specific torque value to obtain specified performance) will only be permitted if a torque wrench is used for installation. Required torque shall be in accordance with manufacturer's latest installation instructions and best practices recommendations.

7. Flanged Joints: Align flanges surfaces parallel. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly to appropriate torque specified by the bolt manufacturer.
8. Grooved Joints: Assemble joints in accordance with fitting manufacturers written instructions. The gasket style and elastomeric material (grade) shall be verified as suitable for the intended service as specified. Gaskets shall be molded and produced by the grooved system manufacturer. Grooved end shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. A factory-trained field representative shall provide on-site training for contractor's field personnel in the proper use of grooving tools and installation of grooved piping products. Factory-trained representative shall periodically review the product installation. Contractor shall remove and replace any improperly installed products.

3.5 INSTALLATION OF THREADED CONNECTIONS

A. Align threads at point of assembly.

B. Apply appropriate tape or thread compound to the external pipe threads, except where dry seal threading is specified.

C. Assemble joint, wrench tight.

3.6 INSTALLATION OF FLANGED CONNECTIONS

A. Align flange surfaces parallel.

B. Assemble joints by sequencing bolt tightening to make initial contact of flanges and gaskets as flat and parallel as possible. Use suitable lubricants on bolt threads. Tighten bolts gradually and uniformly with a torque wrench.

C. For dead-end service, butterfly valves require flanges both upstream and downstream for proper shutoff and retention.

3.7 INSTALLATION AND TESTING OF PRESS FITTINGS AND COPPER TUBING

A. Press connections: Press-seal fittings, ½-inch – 4-inch bronze, stainless steel or copper: Pipe ends shall be cut on a right angle (square) to the pipe. Pipe ends shall be reamed and chamfered, all grease, oil or dirt shall be removed from the pipe end with a clean rag. Visually examine the fitting sealing element to insure there is no damage, and it is properly seated into the fitting. Insert pipe fully into the fitting. Make a mark with a felt tip pen on the pipe at the face of the fitting. Always examine the tube to insure it is fully inserted into the fitting prior to pressing the joint. Press-seal fittings shall be installed according to the most current edition of the manufactures installation guidelines with manufacture recommended tools. Sealing elements shall be verified for the intended use. Installers shall attend the press-seal fitting manufactures installation training class. After Press fittings have been installed a “two step test” shall be followed. Utilizing air, or dry nitrogen, pressurize the system between .5 psi and 45 psi. Check the pressure gauge for pressure loss. If the system does not hold pressure, walk the system and check for un-pressed fittings. Should any un-pressed fitting/s be identified ensure the pipe is fully inserted into the fitting and properly marked prior to pressing the joint. After appropriate repairs have been made, test the system per local code, or specification requirements, not to exceed 200 psig.

3.8 INSTALLATION OF METERS, GAGES, THERMOMETERS, ETC.

A. Meters/Gages

1. General: Where indicated, install meters and gages of types, sizes, capacities, and with features indicated.
2. Install meters, gages, and accessories according to manufacturers' written instructions for applications where used.
3. Install thermometers and adjust vertical and tilted positions.
4. Remote-Reading Dial Thermometers: Install in control panels with tubing connecting panel and thermometer bulb supported to prevent kinks. Use minimum tubing length.
5. Thermometer Wells: Install in vertical position in piping tees where thermometers are indicated.

    a. Install wells with stem extending minimum of 2 inches into fluid.
    b. Install wells with stem extending to center of pipe.
    c. Fill wells with oil or graphite and secure caps.

B. Pressure Gages

1. Install pressure gages in piping tee with pressure gage face located on pipe at most readable position.
2. Install in the following locations and elsewhere as indicated:

    a. At suction and discharge of each pump.
    b. At building water service entrance.
    c. On expansion tanks.
3. Needle Valves: Provide ¼" needle valve in piping tee, with snubber.

C. Installation - Test Plug

1. Install test plugs in piping tees where indicated, located on pipe at most readable position. Secure cap.

D. Installation - Flow-measuring System, Flow Element And Meter

1. General: Install flow meters for piping systems located in accessible locations at most readable position.
2. Locations: Install flow measuring elements and meters at discharge of each pump and elsewhere as indicated.
3. Differential-Pressure-Type Flow Elements: Install minimum straight lengths of pipe upstream and downstream from element as prescribed by the manufacturer's installation instructions.
4. Install connection fittings for attachment to portable flow meters in readily accessible locations.
5. Permanently Mounted Meters for Flow Elements: Install meters on walls or brackets in accessible locations.
6. Install connections, tubing, and accessories between flow elements and meters as prescribed by manufacturer's written instructions.

E. Connections - Meters

1. Install meters and gages adjacent to machines and equipment to allow servicing and maintenance.
2. Connect flow-measuring-system elements to meters.
3. Connect flow-meter transmitters to meters.
4. Make electrical connections to power supply and electrically operated meters and devices.

F. Adjusting and Cleaning - Meters

1. Calibrate meters according to manufacturer's written instructions, after installation.
2. Adjusting: Adjust faces of meters and gages to proper angle for best visibility.
3. Cleaning: Clean windows of meters and gages and factory-finished surfaces. Replace cracked and broken windows and repair scratched and marred surfaces with manufacturer's touchup paint.

G. Portable Meters

1. Turn-over portable meters to the Owner upon completion of the project.

3.9 INSTALLATION OF PIPING SPECIFIC TO DRAINAGE AND VENT SYSTEMS

A. Service Entrance Piping

1. Extend building storm drain piping and connect to building storm sewer piping of size and in location indicated for service entrance to building. Install cleanout and extension to grade at connection of building storm drain and building storm sewer.
2. Extend building sanitary drain piping and connect to sanitary sewer piping of size and in location indicated for service entrance to building. Install cleanout and extension to grade at connection of building sanitary drain and building sanitary sewer.
3. Install sleeve and mechanical sleeve seal at service penetrations through foundation wall for watertight installation.

B. General

1. Install cast-iron soil pipe and cast-iron soil pipe fittings according to the latest version of the CISPI “Cast Iron Soil Pipe and Fittings Handbook, 2006,” Chapter IV, “Installation of Cast Iron Soil Pipe and Fittings.”
2. Make changes in direction for drainage and vent piping using appropriate Y branches, Y branches with 1/8 bends, and long-sweep 1/4, 1/5, 1/6, 1/8, and 1/16 bends. Sanitary tees and short-sweep quarter vends may be used on vertical stacks of drainage lines where change in direction of flow is from horizontal to vertical. Use long-turn double-Y-branch and 1/8-bend fittings where 2 fixtures are installed back to back or side by side and have a common drain. Straight tees, elbows, and crosses may be used on vent lines. Make no change in direction of flow greater than 90°. Where different sizes of

drainage pipes and fittings are connected, use proper size standard increasers and reducers. Reduction of the size of drainage piping in the direction of flow is prohibited.

3. Lay buried building drains beginning at low point of each system, true to grades and alignment indicated, with unbroken continuity of invert. Place hub or bell ends of piping facing upstream. Install required gaskets according to manufacturer's recommendations for use of lubricants, cements, and other special installation requirements. Maintain swab or drag in piping and pull past each joint as completed.
4. Install sanitary piping, storm water piping, condensate drain piping, and vent piping at 2% slope, except where another slope is indicated.
5. Install engineered sanitary drainage and vent systems in locations indicated and as follows:

    a. Combination Waste and Vent Systems: Comply with standards of authority having jurisdiction.
    b. Copper, Sovent®, Single-Stack Plumbing Systems: Comply with CDA Solvent Single-Stack Plumbing System.
    c. Cast-Iron, Solvent, Single-Stack Plumbing Systems: Comply with Solvent® fitting manufacturer's written installation instructions.
    d. Reduced-Size Venting Systems: Comply with design.
6. Install underground PVC drainage piping according to ASTM D2321.

    a. Rigid plastic and hubless drainage piping, including offsets and jumps, shall rest on a continuous bed of sand, gravel or crushed stone, a minimum of four (4) inches deep below the pipe; maximum aggregate size shall be three-quarter (3/4) inches (MD #6 and smaller). Bedding material shall be placed on both sides of the pipe equal in depth to the pipe diameter and hand compacted to prevent deformation of pipe from top loading. Piping shall be laid in a trench, except where soil conditions or grade do not permit such practices.
    b. Drainage piping above grade and not fully confined within a trench shall rest on bedding material at least thirty (30) inches wide. Horizontal and vertical alignment of piping shall be maintained by three-eighths (3/8) inch minimum diameter steel "J" hooks, "U" hooks or equivalent hold-down devices driven into the ground every eight (8) feet, at changes of direction 45° or more, and at ends of runs. The length of hold-down devices shall be sufficient, depending on soil type, to prevent easy removal, but not less than twenty-four (24) inches long.
7. Sleeves are not required for cast-iron soil pipes passing through concrete slab, without membrane waterproofing, on grade.
8. Install ABS drainage pipe and fittings according to ASTM D2661.
9. Install PVC drainage pipe and fittings according to ASTM D2665.
10. Install all buried plastic pipe in accordance with ASTM D2321.
11. Joint Construction

    a. Grooved Pipe and Grooved-Pipe Fittings Joints: Assemble joints with coupling, gasket, lubricant, and bolts according to coupling and fitting manufacturer's written instructions.
    b. Cast-Iron Soil Pipe and Cast-Iron Soil Pipe Fitting Joints: Make joints according to recommendations in the latest version of the CISPI "Cast Iron Soil Pipe and Fittings Handbook, Volume I," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
        1) Compression Joint: Make with neoprene gasket matching class of pipe and fittings.
        2) Hubless Joint: Make with neoprene gasket and sleeve or clamp.
    c. ABS DWV Pipe: Join ABS drainage pipe and fittings according to ASTM D2661.
    d. PVC DWV Pipe: Join PVC drainage pipe and fittings according to ASTM D2665.

e. ABS to PVC Transition Joints: Make nonpressure transition joint between ABS and PVC drainage components, using fittings, solvent cements, and procedure conforming to ASTM D3138.
f. Handling of Solvent Cements, Primers, and Cleaners: Comply with procedures in ASTM F402, for safe handling during joining of plastic pipe and fittings with solvent cements.

12. Pipe Attachments:

a. Riser Clamps: MSS Type 8 or Type 42 for vertical runs.
b. Adjustable Steel Clevis Hangers: MSS Type 1 for individual straight horizontal runs 100 feet and less.
c. Adjustable Roller Hangers: MSS Type 43 for individual straight horizontal runs longer than 100 feet.
d. Spring Cushion Rolls: MSS Type 49, where indicated, for individual straight horizontal runs longer than 100 feet.
e. Pipe Rolls: MSS Type 44 for multiple straight horizontal runs 100 feet or longer. Support pipe rolls on trapeze.
f. Spring Hangers: MSS Type 52 for support of base of vertical runs.

13. Install vent flashing sleeves on stacks passing through roof. Secure over stack flashing according to the manufacturer's written instructions.
14. Install frost-proof vent caps on each vent pipe passing through roof. Maintain 1-inch clearance between vent pipe and roof substrate.
15. Install Sweet Air odor eliminator vent caps on all sanitary vent terminations. Maintain 1-inch clearance between vent pipe and roof substrate.

C. Connections

1. Drainage Runouts to Fixtures: Provide drainage and vent piping runouts, with approved trap, of sizes indicated, but not smaller than required by plumbing code, to plumbing fixtures and drains.
2. Locate drainage piping runouts as close as possible to bottom of floor slab supporting fixtures or drains.
3. Supply Runouts to Fixtures: Install hot- and cold-water supply piping runouts to fixtures of sizes indicated, but not smaller than required by plumbing code.

a. Drainage Runouts to Fixtures: Provide drainage and vent piping runouts to plumbing fixtures and drains, with approved trap, of sizes indicated, but not smaller than required by plumbing code.
b. Locate drainage piping runouts as close as possible to bottom of floor slab supporting fixtures or drains.
c. Interceptor Connections: Connect piping, flow control fittings, and accessories as indicated.
    1) Grease Interceptors: connect inlet and outlet to unit, and flow control fitting and vent to unit inlet piping. Install valve on outlet of automatic drawoff type unit.
    2) Grease Recovery Units: Connect inlet, outlet, and vent piping; controls; electric power; and factory-furnished accessories.
    3) Oil Interceptors: Connect inlet, outlet, vent, and gravity drawoff piping to unit; flow control fitting and vent on unit inlet piping; and gravity drawoff and suction piping to oil storage tank.
    4) Solids Interceptors: Connect inlet and outlet.

d. Electrical Connections: Power wiring and disconnect switches are specified in Division 26.
   1) Grounding & Bonding for Electrical Systems: Connect unit components to ground according to the National Electrical Code and Specification Section "Grounding."

D. Protection

1. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
2. Place plugs in ends of uncompleted piping at end of day or when work stops.
3. Exposed ABS or PVC Piping: Protect plumbing vents exposed to sunlight with 2 coats of a water-based latex paint.

E. Drainage And Vent System Specialties

1. Install backwater valves in building drain piping as indicated. For interior installation, provide cleanout deck plate (cover) flush with floor and centered over backwater valve cover and of adequate size to remove valve cover for service.
2. Install expansion joints on vertical risers, stacks, and conductors as indicated.
3. Cleanouts

   a. Install cleanouts in above-ground piping and building drain piping as indicated, and where not indicated, according to the following:
      1) Size same as drainage piping up to 4-inch size. Use 4-inch size for larger drainage piping except where larger size cleanout is indicated.
      2) Locate at each change in direction of piping greater than 45°.
      3) Locate at minimum intervals of 50 feet for piping 4 inches and smaller and 100 feet for larger piping.
